It is very urgent that troughing, &c., should be placed at all the public watering places.

H.G., B.C., 10/3/84.

Mr. Stock-Inspector J. R. Doyle's report on Bunghill Tank.

Walget, 1st March, 1884.

I FOUND this tank contains 12 feet of water, taking the depth from the end of the platform, as shown in the accompanying sketch; the water is 3 feet below the top of the tank, and allowing the tank to have been 18 feet deep this shows a silting up of about 3 feet. I fancy the silt has accumulated more at the mouth of the roadway. This tank sustained a considerable amount of damage at the first rush of water after its completion; it carried away part of the brake between the silt tank and the main tank (shown in the sketch.) The water is sweet and wholesome, but the supply pipe from the main tank to the drinking tank acts very feebly, doubtless on account of the silt in the drinking tank choking up the mouth of the pipe. In consequence of the steepness of the batter in the main tank the ripple of the water has undermined a considerable quantity of earth at the edges, and caused it to cave into the tank. The drinking tank cannot be said to be in good order; the rough paving stones that were placed on the sloping surface of the sides and end have become very much displaced, and a great number of them have slipped in towards the bottom of the tank; it would, in my opinion, be advisable to have the stones broken into ordinary-sized metal, so as it would mix with the earth and form a more solid foundation for stock. The silt tank into which the drains empty is filled up to within 2 feet of the top with silt; this should be cleaned out, and, in my opinion, instead of allowing the water to enter the main tank as it does at present, it should be conveyed from the silt tank by means of a wooden flume sufficiently long enough to carry the water clear of the bottom of the batters; this would prevent a very large quantity of silt from finding its way into the main tank. I have inspected several large private tanks in the neighbourhood, and find that they are all supplied by this means, and I am told they all answer well. The fence round the main tank is in good order. I would strongly recommend that the drinking tank be also fenced and fitted with gates for the entrance and exit of stock, as half the caretaker's time is taken up in endeavouring to prevent stock, the property of lessees and others, from using the tank, but it is impossible for him to do so, for, though driven away in the day time, they return at night. It would also be desirable to erect a suitable hut for the caretaker, as it is a matter of great difficulty to get competent and trustworthy men as caretakers unless provided with a weather-proof hut to live in.

Tanks & Wells,
84-294.

J. R. DOYLE.

Mr. Gilliat.—A.B., B.C., 6/3/84. Memo. herewith.—H. G., B.C., 10/3/84.

The erection of troughing and pumps at this tank will be the only permanent remedy against the stoppage of the connecting-pipe between the main reservoir and the watering tank, and I am strongly of opinion that the embankment should be completed, and the flood-water admitted by a flume, similar to those I had made for the tanks in the south-west, and which I recommended to a former manager on the Llanillo station, near this work.—H. G., B.C., 10/3/84.

Mr. Stock-Inspector J. R. Doyle's report on Boro Tank.

THIS tank contains only 9 feet of water at the end of the platform, and is 5 feet below high water mark, thus showing an accumulation of 4 feet of silt, allowing the tank to have been 18 feet deep. The water in the main tank is sweet and wholesome, but in the drinking tank it is quite green and unfit for use. The supply pipe does not act, and there are no present means of remedying it. The paving stones round the drinking tank are very much displaced; a great number have been forced down into the bottom of the tank. It is dangerous to drive stock promiscuously to water at this tank on that account. I would recommend that all the available stone be broken into ordinary-sized metal, and laid around the sides and end of the drinking tank. As this tank is in a very desirable position, and absolutely necessary for stock travelling this route, I would recommend that prompt steps be taken to supply troughing to enable the caretaker to water stock, but as this will necessarily take a little time, I could at a slight cost, if instructed, take a couple of blackfellows out with me, and got them to dive down to the mouth of the pipe and clear away the silt, now that the water is tolerably low, and thus enable stock to get water until a pump and troughing could be provided. The silt tank is nearly full of silt, and I have directed the caretaker to clean it out. I would strongly recommend that the same means of feeding the main tank be employed, as suggested in my report on Bunghill Tank. This tank requires fencing immediately, as the caretaker is all his

Tanks & Wells,
84-293.

his time endeavouring to keep lessees' sheep from using the tank, but notwithstanding his endeavours they come at all hours during the night and consume the water, and, as they are in such a weak state, they bog and die round the tank. The lessee informs me that he has tanks in the same paddock, but cannot keep his sheep from trespassing at the Government tank. A hut is also required. The caretaker has a most wretched hovel to live in, and in wet weather he has to cover his books and papers up in a bucket or camp-oven in order to keep them dry. The banks of the main tank have caved in to a greater extent than any of the other tanks, but it may be owing to the soil being of a more crumbling nature. I have ascertained the opinions of a number of gentlemen in the district, and they all agree that 1 to 1 batter is far too steep for these tanks. As the supply pipe at this tank acted slightly four months ago, there cannot be a very large quantity of silt accumulated since that time. I would like to get your instructions to endeavour in the manner suggested to get this pipe to act, if only temporarily, as it is a great boon to the public to keep this water fit for use. Teamsters have now to water their stock out of buckets. It would also be advisable to have an additional drain to this tank, as the caretaker informs me that the main tank was originally filled by water coming from a different direction to that followed by the present drains.

J. R. DOYLE.

Mr. Gilliat.—A.B., B.C., 6/3/84. Memo. herewith.—H.G., B.C., 10/3/84.

The damage at this tank is even greater than at the Bunghill. I inspected it the day it was completed by the contractor, and the workmanship was excellent, but from the design I predicted exactly what has occurred.

The only remedy in my opinion is troughing and pump, and admitting the flood-water by flume, and completing the embankment.

H.G., B.C., 10/3/84.

My dear Sir,

Dungalcar, 4 June, 1883.

According to promise I saw Regan about the state of the pipes in tank. He had the valve turned on for thirty-six hours, and can get no water into tank. At present they are useless. I believe the quantity of earth that has gone into main tank will render the pipes useless. Any further information I can obtain I will be most happy to furnish you with.

Yours, &c.,

A. M'CLYMONT.

Mr. Inspector Doyle.

Minute of Mr. Inspector Gilliat.

Boro, Bunghill, and Lightning Ridge Tanks.

Department of Mines, Stock Branch, Sydney, 10 March, 1884.

Tanks & Wells, 84-319. WITH reference to Mr. Overseer Doyle's reports upon the condition of the three tanks between the Barwon and the Narran Rivers, I beg leave to point out that at the time the arrangement between this Department and that of Public Works was made with regard to carrying out the repairs and alterations required from time to time at public watering places, I recommended that in cases of emergency the Inspector of Public Tanks and Wells might effect repairs to an amount not exceeding £50 sterling at any one work.

This was objected to by the Department of Public Works, and not confirmed. I think the arrangement then made should be maintained, and the undivided responsibility rest with the one Department; and especially as the Department of Public Works has resident officers in each of the districts to perform these duties, the interference of this Department in opposition to the existing arrangement appears to me undesirable.

I would therefore recommend for the consideration of the Honorable the Secretary for Mines that Mr. Doyle's reports upon the state of these works, which merely confirm my own knowledge of them, should be forwarded for the information of the Department of Works, with the suggestion that, if unable, from the severity of the drought, to immediately undertake their permanent refit, such temporary repairs may be made as to enable stock to water.

I would again call attention to the urgent importance of fencing the special leases with as little delay as possible.

HARRY GILLIAT.

Mr. Gilliat.—Could you not suggest, for the consideration of the Works Department, some temporary arrangement by which stock could be watered at these tanks, pending full necessary repairs being made and permanent appliances fitted?—A.B., 12/3/84.

With two single and a snatch-block, a few poles, rope, canvass for a bucket, and a few sheets of iron, a single whip could be rigged. The caretaker with a horse could lift the water from the main reservoir and run it back into the silt tank, from which, pending repairs, permission might be given to water stock.—H.G., B.C., 14/3/84.

The temporary mode of supply here suggested by Mr. Gilliat, might perhaps be brought under the notice of the Works Department.—A.B., 18/3/84. The Under Secretary for Mines. Submitted.—H.W., 19/3/84. For Works Department.—J. P. ABBOTT, 22/3/84. The Under Secretary for Works.—H.W., B.C., 25/3/84. Roads.—J.R., B.C., 1/4/84.

Telegram from Mr. Road-Superintendent Adams to Commissioner for Roads.

Goodooga, 14 April, 1884.

Tanks and Punts, 84-355.

EIGHT feet of water in Boro, about twelve in Lightning Ridge; both tanks are working well; traffic would be suspended between Barwon and Narran Rivers only for them.

J. H. ADAMS.

Mr. Wood with reference to complaints as to these works.—W.C.B., 15/4/84.

Telegram

Telegram from Mr. Road-Superintendent Adams to The Commissioner for Roads.

Walgett, 3 April, 1884.

Was at Boro and Lightning Ridge tanks twice last month; saw mob of cattle watering at Boro; waited till they finished and got out of drinking tank; water appeared in good condition; then asked caretaker how valve was working; he said all right. Drank at Lightning Ridge; water could not be better; works seemed in good order save a few stones loose at Boro tank, which I ordered the man to put right, and reported him to Mr. Doyle for allowing such things. Have heard no complaints from travellers; shall visit again soon.

J. H. ADAMS.

No report as to Bunghill; Mr. Wood, telegraph again.—W.C.B., 3/4/84. Telegram sent.—A.P.W., 3/4/84.

Telegram from Mr. Road-Superintendent Adams to The Commissioner for Roads.

Walgett, 7 April, 1884.

Just returned from Bunghill; about 12 feet of water in main, and drinking tank-water very good, only gets foul when a mob of cattle rushes through it. Valve working well and tank generally in serviceable condition; considered great boon by travellers.

J. H. ADAMS.

Mr. Wood.—See me with papers.—W.C.B.

Minute by Mr. Assistant-Engineer Wood.

Reports of Stock Inspector on Tanks in Walgett District.

Sydney, 17th April, 1884.

BUNGHILL TANK.—Mr. Doyle, the Inspector under the Mining Department, reports that the supply pipe connecting the main and drinking tanks acts very feebly, that the pitching of slopes is much displaced, and that the works generally have been considerably injured by the action of the water. Our local officer, Mr. Adams, in telegram attached, reports that the supply pipe is working well, and the tank generally in serviceable condition, and a great boon to travellers.

Tanks & Wells, 84-495.

Boro Tank.—Mr. Doyle reports that the supply pipe at this tank does not act, that the water in drinking tank is green and unfit for use, and that the pitching on the drinking slopes is very much displaced. Mr. Adams reports that the caretaker stated to him that the supply pipe was working alright; that the water appeared in good condition; that he saw a mob of cattle water there; that a few stones were loose which should have been attended to by caretaker, and for which negligence Mr. Adams reported him to Mr. Doyle. In a subsequent telegram (attached) he reports this tank as working well, and that, but for it and Lightning Ridge Tank, all traffic between Barwon and Narran Rivers would be suspended.

Lightning Ridge Tank.—In regard to this tank Mr. Doyle's and Mr. Adam's reports are the same—the tank being in good order, with a plentiful supply of wholesome water. It appears strange that there should be such discrepancies between the reports sent in by the Mines officer and Mr. Adams as to the first two tanks; and without wishing to in the slightest degree impute any wilful misstatement to Mr. Doyle, I still think that Mr. Adams' opinion is the more reliable, and must, until proved incorrect, be accepted by this Department.

As regards the design of these tanks which Mr. Gilliat objects to, and has on several previous occasions objected to, I am not prepared to make any defence beyond that which has been constantly urged to these complaints—that it was adopted at a time when funds were short and when it was considered advisable, in the face of the fate that attended our earlier works with separate drinking appliances, to make these works as simple as possible. This department has never upheld this design, and all our later works have been on the separate drinking system, and the drinking-slope tanks are being converted as rapidly as possible to the same system. In the face of these facts, I cannot see that any good result is to be attained by so constantly drawing our attention to defects which have been readily acknowledged, and which are being remedied as rapidly as possible. Great allowances should be made on account of the seasons, which have been exceptionally severe, and have very considerably hampered our operations.

ARTHUR P. WOOD.

The Commissioner for Roads.

I have nothing to add to what Mr. Wood has stated, except that the Mines Department first neglect the works, and then complain.—W.C.B., 17/4/84. Under Secretary, B.C. Forward to Mines.—F.A.W., 27/4/84. The Under Secretary for Mines.—J.R., 23/4/84., B.C. Submitted.—A.B., 25/4/84. The Under Secretary for Mines. Do not the complaints of this Department refer to the construction of the works?—H.W., 28/4/84. Yes. Submitted.—H.W., 7/5/84. These papers may go to Mr. Doyle for his report.—J. P. ANNOTT, 8/5/84.

Re Mr. Doyle's Report on Bunghill Tank.

Sir,

Roads Office, Walgett, 25 April, 1884.

Mr. Doyle's report on the present state of the Bunghill tank is a very fair one. It is true that the first rush of water after its completion did a lot of damage to the apron of inlet, uprooting the stone pitching at the entrance, and scouring the bed beneath, the abrading action continuing until it was destroyed by meeting the water in the main tank. I may mention that the work was subjected to an unusually severe trial on this occasion, as 5 inches of rain fell in that storm. The wonder therefore is, not that it did damage, but that it had done so little. Mr. Doyle states that the supply pipe from the main to the drinking tank acts very feebly. I am at a loss to understand this expression, or why the statement was made; for, as a matter of fact, the valve has never failed to keep the supply tank full, which, I submit, is all that it is expected to do, and as long as this goes on there should be no cause for complaint.

Tanks and Pumps, 84-302. Works Dept. Tanks & Wells, 84-602, Mines Dept.

In another part of the report it is urged that, in consequence of the steepness of the batter in the main tank, the ripple of the water has undermined a considerable quantity of earth at the edges and caused

caused it to cave into the tank. Now, while not defending the batter in any way, I may state that this is a perfectly natural result to expect from the unprotected sides of a reservoir; for, besides the tendency of earth to fall down by the effect of gravity, there is also a full abrasive action of the water exercised beneath the dry portion of the slopes, and this will go on, no matter what their ratio may be, unless puddled or stone-faced, neither of which could the Department afford to do.

The report goes on to say that the drinking tank could not be said to be in good order, because some of the rough stones placed on the sloping surface of the sides had become very much displaced and had slipped in towards the bottom of the tank, &c. I think this is too bad that such a state of things should exist where a caretaker is regularly employed and has very little else to do but to see that these trifling repairs are attended to. If he only gave the slightest attention to his work he could easily re-set any stones that may have got displaced after the passage of cattle over them. I have already reported this man for being drunk and away from his work, but it would seem that little notice has been taken of it, for he is in charge of the tank still. What can I expect under such circumstances but that the work will be neglected. During my late visit I found the silt tank full of perfectly dry silt. I asked Mordaunt (caretaker) why it was he had not cleaned it out, he said because he had no plank to wheel on. I ordered him to go and split a slab if he could not find one, and not make such idle excuses as that. He promised to do so.

I wish it to be understood that I conferred with Mr. Doyle before giving orders to the caretakers *re* keeping their tanks in order, he fully concurring that during my visits I should instruct them as regards repairs; but I think my hands should be further strengthened by the Department in this particular, as it is but fair to myself to see that the works are kept in repair when the cost of doing so takes but little labour. It is too bad that risks should be incurred through the indolence of men who have not two days' work to do in a month. The valves, imperfect as they are as regards position, should work for years if they had received that daily attention from caretakers which it is necessary should be paid them. I agree with Mr. Doyle that a wooden flume would be a better arrangement for conveying the water into the main tank than the present stone apron. This principle is fully understood by the Department, and if Mr. Doyle noticed the drawings that were exhibited here for the Narran Tank he would see it embodied. It is to be adopted when the pumping gear is erected; but when the present tank was designed, now some four years since, there was very little money at my disposal, so that every item had to be cut down to the utmost. I think, under the circumstances, the works must be considered satisfactory, for they never once failed throughout the present prolonged drought in supplying the wants of the district with good water. How long this may last it is impossible for me to say.

The report further recommends that the drinking tank be fenced in, as at present it is impossible to keep stray stock away from the water. I may say, in reply to this, that the matter has already been dealt with, and that tenders have been invited for the work.

Mr. Doyle concludes his report by further recommending that a suitable hut be erected for the caretaker. I quite concur in this, as it is most desirable to have respectable men in charge (and married ones if possible), because, as it sometimes happens when the men are forced to go some distance for meat, &c., there would in their absence be someone on the works to prevent trespass. I think, in order to induce family men to take employment of this kind, a suitable cottage should be erected at each tank, say of four rooms for the family, and a store-room for tools and material.

The arrangement I think should be as follows, viz.:—Living room, 11' x 12'; parents' bed-room, 11' x 10'; boys' room, 7' x 10'; and tool-room, 6' x 7', all to be 8' high to the wall-plate, with galvanized iron roof, and built of pine timber, to be contracted for by Hudson Bros. or some firm of that kind, to be put together at the works in Sydney, marked and numbered, and transmitted here by train and teams, with a man to put them up at the respective sites. This, in my opinion, would be the best and most economical way of getting the work done, as the rate of skilled labour here (when you can get it) is excessively high and the cost of material equally so.

The necessity for decent houses at the works need hardly be urged, for I feel sure they will induce industrious and steady men to seek employment, and so enable the Government to get rid of the worthless fellows now engaged. There is also another advantage that may be expected, and that is that the tanks are much more likely to be let by tender when it is known that such important advantages as a good cottage and well-fenced paddock are to be acquired, and there can be very little doubt but that a person once settled there will be most anxious to retain and improve them.

I have, &c.,
J. H. ADAMS.

The Commissioner for Roads.

Minute by Mr. Assistant Engineer Wood on portion of report marked.

PLANS will be prepared for huts with two rooms, which is all that can be expected to be provided. Designs will be prepared for huts built of pine logs, weatherboards (pisé), and galvanized iron. The cost of carriage will in most cases prove prohibitory.

Mr. Wood,—See mc.—W.C.B., 30/4/84. Should be copied and sent to Mines. I have nothing to add beyond the opinions expressed in my minutes on papers 84-391 and 393.—A.P.W., 30/4/84.

Tanks & Wells, 84-602. I recommend that this copy of report from Road Superintendent Adams be sent to Mines.—W.C.B., 16/5/84. Under Secretary, B.C. Forward to Mines.—F.A.W., 20/5/84. The Under Secretary for Mines.—J.R., 21/5/84, B.C. Copy to Mines, 16/4/84. File.—W.C.B., 16/5/84.

Re

Re Mr. Doyle's Report on Boro Waterhole Tank.

Sir,

Walgett, 25 April, 1884.

I consider this a most extraordinary report of Mr. Doyle's, because if such a state of things as Tanks & Wells, 84-603. it has disclosed existed, I feel that I should have been communicated with at once by the Inspector in such a vital matter as the non-action of the inlet valve, instead of what the first intimation I received about it was a telegram from the Department on the 3rd instant, probably some weeks after the report had been written. Fortunately, it found me at home, which enabled me to take prompt action by starting the maintenance man off at once with instructions to clear the valve—myself following after, wondering at the sudden collapse of work that I had inspected 20 days before, and was informed then by the caretaker that everything was all right—in fact this has been the report received from him every time I visited the work. I was therefore surprised to receive the telegram; on my arrival at the tank I was informed that there was nothing wrong with the valve. This I could see was correct, the water being on the same level in both tanks, and very good; but the man informed me that it was not always so in the drinking slopes, for after cattle had drunk and waded through, it became very muddy and bad. This I could easily understand; the wonder would be if it were not so, as the accumulated silt of two years was there, in addition to the usual excrementitious deposits of the stock that had watered there during the time; but notwithstanding these drawbacks (common to tanks on this system) the water was good, the supply from the main tank no doubt keeping it so. I can only account for Mr. Doyle's statement *re* the valve on the supposition that he framed his report on information received from the caretaker, who is a thoroughly worthless man, and one whom I had to report on several occasions for not keeping his tank in order. This is the only explanation I can give for the statements in the report. I have been to the tank every month regularly, and have always been informed by the caretaker that the valve was working well, and this was borne out by my seeing the drinking tank well supplied. Yet Mr. Doyle has informed me that he told him it was not working right. I must again give it as my opinion that Mr. Doyle has been deceived by the caretaker, who, probably through ignorance of the valve action, had reported it would not work, when most likely the water had attained the same level in both tanks. I wish here to say that I am not defending the position or action of the valve in any way, nor attempting to prove that it may not become choked at any moment, but merely stating what I found on inspection and by report to be true. Before finishing with this portion of the report, I would like to add that I have always received the assistance of Mr. Doyle to the fullest extent in all matters relating to the tank service, and believe him to be thoroughly conscientious and painstaking, hence my strong belief in the theory of his being misinformed. The fact that the paving stones round the drinking tank were loose only confirms my opinion of the caretaker, that he is thoroughly useless; the few stones that are likely to get displaced after cattle watering could soon be put right by a slight expenditure of labour; but if neglected they quickly develop into serious defects. I have ordered my maintenance man to remain, and help to do all necessary repairs. As to the danger of driving stock promiscuously to water at this tank, I can safely say that no such risk exists, for even supposing the pitching got displaced, the ground beneath, from the water line upwards, is always safe. As to the recommendation of breaking the pitching up into metal, I cannot say whether it would be an improvement or not; but I propose to lay out a small portion and see how it will act. As to the recommendation contained in the report that the tank should be fenced, I have to state that the question of doing so has already been considered by the Department, and that tenders have been invited for the same.

I agree with Mr. Doyle that the caretaker has a very wretched place to live in, and would recommend that a cottage be erected at an early date.

Mr. Doyle further on remarks that the banks of the main tank have "caved" in more than any of the others; this I think is correct and may have been caused through the greater porosity of this ground, or probably by the first rush of water over the berm causing injury to the slopes in several parts, and this, I maintain, would have happened no matter what their batter had been.

Mr. Doyle goes on to suggest that a couple of blackfellows be engaged to dive down to the pipe and clear away the silt and so get the pipe to act, if only temporarily. Now supposing this was necessary (which up to the present has not been the case), it is hardly the expedient I should resort to with my present knowledge of the blackfellows of this district, who, I find, are not fond of water, and even if they were would find something more congenial to their tastes than to go diving in the manner suggested.

Mr. Doyle concludes his report by recommending that an additional drain be cut to this tank, this is simply an echo of an order of mine given to the caretaker months ago, in order to employ his leisure time in a profitable way, but it has not been done. Mr. Doyle has been misled by the caretaker in stating that the water that had filled the tank had come from a different direction to that of the drains. This is a very stupid statement, for how could the water enter the tank except through the drains led into the silt tank. I have seen the locality under the most favourable conditions for judging of these matters, and have been over the ground when the heaviest of the rain fell which enabled me to have the drains placed in the best position; as already stated, the catchment can be considerably improved by increased drainage if found necessary, but as the tank got full before, so it will again with those in present use. In conclusion, I would like the Commissioner to understand that I am not defending my work, or the principle of these tanks in any shape; they were made in the most economical manner, and in the simplest way, in order that they might be finished for the sum voted; plans could have been prepared for a similar class of work just as easily which would have prevented the caving in of banks and the feebleness of pipes, but where was the money coming from? I had to do the best I could with the amount at my disposal, and consider I have done so.

The Commissioner for Roads.

J. H. ADAMS.

I recommend that this copy of report of Road-Superintendent Adams be forwarded to Mines.—W.C.B., 16/5/84. Under Secretary, B.C. Forward to Mines.—F.A.W., 20/5/84. The Under Secretary for Mines.—J.R., B.C., 21/5/84. Mr. Inspector Gilliat.—A.B., B.C., 22/5/84. Before dealing with these reports, I think they should be sent to Mr. Overseer Doyle for any remark he may have to make upon them.—H.G., B.C., 27/6/84. Mr. Inspector Doyle.—A.B., B.C., 30/6/84.

Sir,

Sir,

Walgett, 13 May, 1884.

Tanks & Wells,
84-574.

I have the honor to acknowledge the receipt of your B.C., 9/5/84, enclosing papers for report. In reply, I beg to state that my reports upon the tanks in the Walgett district are strictly true, and have not been overrated in any way. With regard to Bunghill Tank, the supply pipe, I was informed by the caretaker (an intelligent man), only acted feebly, and at times not at all. The pitching on the slopes of the drinking tank was very much displaced, but by my instructions the caretaker has been engaged in replacing the stones as opportunities presented themselves. I still maintain that the works generally did receive considerable injury from the first rush of water, augmented by *permitting the stock to use the drinking tank* long before it contained a sufficiency of water to enable them to drink without crowding, and thus displacing the stones on the slopes. I quite agree with Mr. Adams that the tank is a great boon, and still serviceable, as it contains a large supply of good wholesome water. It would be a hard matter indeed if this tank was rendered useless at this early date; but I contend that unless some substantial form of inlet be adopted, to prevent the silting up of this tank, it will become useless years before it should do. Since my report of March 1st, I have again visited this tank, and have no reason to alter my former opinions.

With reference to Boro tank I have no reason to alter my opinion, expressed in my report of January 6th, 1883, and March 1st, 1884, and I enclose you a letter from Mr. M'Clymont, then of Dunglear. I may state that I was present when the valve was turned on, but not having time at my disposal to wait and see the result, I arranged with Mr. M'Clymont to report the effect to me. The pitching on the drinking slopes was very much displaced at the time of my report, so much so that carriers and others deemed it unsafe to turn their horses loose to drink, but preferred to lead them or water them in buckets. Mr. Adams did report the caretaker, W. Regan, to me for neglecting to replace the stones; but as the greater portion of the displacement was under the water, and many of the stones very heavy and embedded in mud, I consider it was beyond the power of any one man to remedy this. I still maintain that the water in the drinking tank was green and unfit for use. My own horse refused to drink it after I had ridden him 20 miles. In one of the several conversations I have had with Mr. Adams with regard to this pipe not working, he seemed to repudiate the idea that either the caretaker or myself could form any correct estimate of the respective depths of the water in each tank without proper instruments, and hinted at the probability of the water being on a level in each tank when the valve was turned on; but as the upright posts which support the platform in the main tank clearly show the high-water mark, and the fencing posts in the drinking tank also show the high-water mark, it is a safe conclusion to draw that if the water is 2 feet below the mark in the main tank, and 6 feet below the mark in the drinking tank, that a difference of 4 feet exists in the level of the two waters. On more than one occasion when visiting Boro Tank, I have been accompanied by H. G. Crombie, Esq., Dunglear, and on a recent occasion also by R. W. Chase, Esq., Llanillo, who will doubtless, if necessary, verify what I have stated. Mr. Adams recently sent a maintenance man out to Boro tank to assist the caretaker in repairing the works, and who reported that there was 7 feet of silt in the drinking tank.

I note a memo. by the Commissioner for Roads, that the Mines Department first neglect the works and then complain; but the chief damage sustained by these tanks was done by the first rush of water, the state especially of Bunghill tank having been well known and a by-word in the district, and this long before they were handed over to the Mines Department.

In conclusion, I may say that I can quite understand how a casual observer can be deceived with regard to the water in the drinking tanks, particularly when it has not been disturbed for two or three days. It then looks clear and in good condition, but when it is stirred up by thirsty stock rushing into it, as they always do, it becomes black and emits a very unpleasant odour, caused by the stirring up of the putrid matter that has found its way into this tank.

I have, &c.,

J. R. DOYLE,

Inspector of Stock.

The Chief Inspector of Stock.

Mr. Adams for report, with all the papers. Very urgent.—W.C.B., 11/7/84. To be returned at once. Mr. Adams,—B.C., 12/7/84. Herewith.—J.H.A., 29/7/84.

Minute by The Commissioner on portion marked.

By whom was this permitted?—W.C.B. By the so-called caretakers.—J.H.A. See report on separate paper herewith.—J.H.A. The Commissioner for Roads,—B.C. Mr. Gilliat, B.C., 17/8/84.—A.B.

Memo. by Mr. Inspector Gilliat.

27 May, 1884.

Tanks & Wells,
84-616.

THE minute of the Commissioner and Engineer for Roads and Bridges attached to Mr. A. P. Wood's memo on the Boro, Lightning Ridge, and Bunghill tanks. I have nothing to add to what Mr. Wood has stated, except that the Mines Department first neglect the Works and then complain, appears to me sufficient justification to submit, for the consideration of the Honorable the Secretary for Mines, a brief review of the position with regard to these works.

From the date of my first inspection of the public tanks, I have been reluctantly compelled to report both verbally and in writing to the Under Secretary for Mines and the Chief Inspector of Stock, that the construction of these works was so defective that I saw no prospect of the Department being able to maintain them, except by carrying out extensive alterations and repairs; and I believe I may say it was chiefly owing to the fact that the cost of the repairs and alterations deemed urgently necessary to maintain the works in order, amounting to so large a sum, besides being so widely distributed, that the staff at the disposal of the Mines Department was not able to supervise its expenditure, that the recommendation was made to remit the repairs to the Constructing Department. I was not aware that the defects in these works had been readily acknowledged by the Department of Public Works, as here stated by Mr. A. P. Wood, except in his present memo, and once formerly with reference, I think, to some particular tank; but at the same time I fail to see how its admission affects the question, or how my reports for the information of the Secretary for Mines are to be prepared without allusion to the defects in works this Department is to maintain, and for which it became an important part of my duties to submit remedies.

That

That this Department has reiteratedly urged attention to the condition of works requiring repair is true; but the attention of the Mines is as frequently directed to the delay in effecting what are admittedly urgent repairs, and these are forwarded for the information of the Department of Public Works, at the same time that allowance has been made for the severity of the season is shown in my memo. attached to these papers.

I cannot, however, agree with Mr. A. P. Wood, that shortness of funds is a legitimate defence for defective design or faulty construction. I quite agree with this.—J.P.A.

In view, therefore, of Mr. A. P. Wood's statements in the paper to which this minute is attached—that he is not prepared to make any defence of the design of these works beyond want of funds; that his Department has never upheld the designs, and has readily acknowledged their defects; and finally, his complaint that the attention of the Department of Public Works has been so constantly directed to these things by myself, I beg to submit, for the consideration of the Honorable the Secretary for Mines, that the minute of the Commissioner and Engineer for Roads and Bridges, coming from an officer of such high standing, conveys an undeserved censure upon myself.

With regard to the works particularly referred to in these papers, I can confirm, from my own observation, Mr. Doyle's statement concerning the Bunghill tank—that it was seriously damaged before being transferred to this Department; and I informed Mr. Adams, the constructing officer, of it at the time.

A private letter from H. G. Crombie, of Dungalear, received more than a year ago, confirmed all that Mr. Doyle had stated in his reports upon the Boro tank.

In fact, the damage at each of these works is the necessary consequence of their defective design.

The point of difference between Mr. Doyle and Mr. Adams appears to be in the working of the connecting pipes between the main and drinking tank at Boro and Bunghill.

Each of these has, or had, steep 1 to 1 batters. These have fallen in and filled, more or less, the bottom of the main tank, and must interfere with the discharge of the connecting pipe sooner or later. Mr. Doyle, in January, 1883, found this pipe choked. Mr. McClymont, late overseer at Dungalear, confirms his statement, and says that after the valve was open for thirty-six hours no water could be had in the drinking tank.

Mr. Adams recently sent a maintenance man to remedy this. No doubt he probably by some means freed the inlet pipe and temporarily restored the connection; but that it is liable to be choked again at any moment, no one knows better than Mr. A. P. Wood and Mr. Adams.

I have very great confidence in Mr. Doyle's ability and experience, and believe him to be a thoroughly reliable officer. I also know Mr. Adams intimately, and I am equally sure that he could not be guilty of a wilful misstatement; but these works were constructed by him, and he is naturally enough not disposed to judge them as critically as a less interested observer will do.

The only remedy for these works is, I consider, the one I have already submitted—the erection of troughing and pumping gear as soon as the season will admit.

HARRY GILLIAT.

Submitted.—A.B., 24/5/84. The Under Secretary for Mines. Submitted.—H.W., 30/5/84.

Mr. Gilliat's actions are so prominently before me in the performance of his duties, and always meeting with my approval, I do not think he need concern himself about the censure or praise of Mr. Wood of the Works, who seems to delight in reporting in an antagonistic spirit towards Mr. Gilliat. I do think it is not just to myself for Mr. Bennett to make the remarks he has upon Mr. Wood's report. There was the less cause for his doing so, because I have endeavoured to make the two Departments work harmoniously, and Mr. Bennett is well aware of the fact.—J. P. ABBOTT, 30/5/84.

The Under Secretary for Public Works.—H.W., B.C., 4/6/84. Roads.—J.R., B.C., 5/6/84.

Minute by The Commissioner for Roads.

I must disclaim, in the most earnest way, any intention to attribute neglect to the Honorable the Minister for Mines, but I would respectfully point out that from the very beginning these works have been neglected, and such neglect has resulted in the state of things described in Mr. Gilliat's first report. The Galathra and Boggy Creek tanks were not what they should have been, but the other later works were, when completed, what they were intended to be, in order to avoid cost and injury from neglect, and were no more imperfect in design than an ordinary road can be called imperfect in design, because it is not a railway. I attach Mr. Adams' report. I am doing all that can possibly be done to carry out the more expensive works now determined on properly. W.C.B., 8/8/84.

Under Secretary.—W.C.B., B.C., 8/8/84. Submitted.—A.B., 15/8/84. The Under Secretary for Mines. Submitted.—H.W., 15/8/84. Seen.—J. P. ABBOTT, 6/9/84. Mr. Gilliat.—A.B., B.C., 6/9/84. Seen.—H.G., 8/9/84.

Having further reference to Tanks.

Sir,

Roads Office, Walgett, 29 July, 1884.

In obedience to your minute of the 11th instant (*see* papers 709, and Mines 574) herewith, I beg to report that I have only returned from an inspection of the tank on the Llanillo Road, and am pleased to say found them pretty well full of water, and in good serviceable order. The caretakers, on being asked by me, state that the valves are working well. In the face of this, I feel rather surprised at the report of Mr. Doyle, for one or two things must have happened—either that the men in charge are untruthful, or that Mr. Doyle expects some wonderful degree of perfection from common earthwork reservoirs. I think, if any engineer were to examine these tanks, he would say that they are doing their duty well. It has been hinted that because I constructed them, I am therefore not disposed to judge them as critically as a less interested observer would do. I absolutely deny that any notice of the kind would influence me, for I have stated over and over again that I never claimed any merit for them save that of cheapness and simplicity, and have always pointed out what appeared to me to be their inherent defects long before Mr. Gilliat came to the district. I

I recommended that pumps and troughing should be substituted when the season and other circumstances permit, and at the present time I have pumps and horse-gear ready to erect when there is a chance of getting the work done; for hitherto it has been almost impossible to find men to tender for anything here, in consequence of the drought and its effects on stock and carriage; but this state of things, I trust, will soon pass away and permit the work to be done.

I think I need not follow Mr. Doyle through his report very minutely, as the statements therein are merely repetitions of those already replied to. It is urged that unless some substantial form of inlet be adopted to prevent the silting up of Bunghill Tank it will become useless years before it should do. I may say in reply to this that there is no form of inlet that will prevent silting; all that can be done is to provide pits as at present, and catch all we can by precipitation—for, in the absence of costly and extensive filter-beds, that is all we can hope to do. The storms here are of short duration and far between. It is therefore imperative to catch them as quickly as may be, and at all risks silt therefrom is inevitable. It is intended, however, to put in a wooden flume 5 feet wide when the pumping-gear is being erected.

The statement about the stones on the drinking slopes getting loose only proves that the caretakers neglected their duty. I pointed this out to Mr. Doyle from time to time; in fact, the men were perfectly useless when I last visited Bunghill. I found the silt-tank full of sand, and quite useless; if that was not neglect, I don't know what is. I ordered the man to clean it out at once. On several occasions I found the berm of the tanks damaged through the silt from the embankment being allowed to collect, and so conduct the water over the slopes, causing dangerous scour. These and other points caused me to engage a maintenance man who would be under my full control, as I really felt afraid that some serious accident would happen to the earthwork through carelessness and neglect. I was most reluctant to incur this expense, as I felt the caretakers should suffice; but proving their worthlessness, and knowing that they did not consider themselves under my orders, I could not see any other alternative. It was for this reason that in a previous report I asked that my hands should be further strengthened in this respect, for although Mr. Doyle in every instance concurred in my instructions, still I felt the men did not regard me as having any authority over them. They have since been dismissed, and I hope those now engaged will pay more attention to the works, and so prevent much trouble and annoyance. I am sorry Mr. Doyle misunderstood my remarks about the possibility of the caretaker being mistaken in the height of water when trying the valve—this man always stated to me that the valve was in good order. I think I morely said that care was required to get the difference of level between the two tanks. The Bunghill Tank was in good order when handed over to the Mines, the slight damage it sustained at the mouth of the inlet being put in first-rate repair by the contractors. I cannot compliment Mr. Doyle on his statement that this tank is a "by-word in the district," as I think the expression unnecessary, and not a fact—the tank being ever full of water, and doing good work. I venture to assert that this tank, if spoken of at all, will have the name of being one that will never go dry, and as being a boon to the country. I do not think I need say any more, beyond that I am doing my best to preserve the usefulness of these works, and if Mr. Doyle will only assist by causing his men to exercise greater vigilance and industry, the Public Service will be better served, and my duties made much lighter.

I have, &c.,

J. H. ADAMS.

The Commissioner for Roads.

Forward to Mines. The Under Secretary for Mines.—J.R., B.C., 11/8/84.

Sir,

Walgett, 15 August, 1884.

Tanks & Wells,
84-1,042.

In compliance with the memo. of Mr. Inspector Gilliat, *re* Tank at Boro, No. 603, 22/5/84, I enclose a letter which I received from Mr. Chase, of Manillo, 21/5/84, and I would remark:—

1. That the batter would not have caved in so much if it had been less steep.
2. That the first rush of water found its way alongside of the supply pipe as well as through it.
3. The accumulation of 7 feet of silt can be accounted for by the earth washed away along the outside of the supply pipe.
4. That the earth washed out from under the embankment caused the sinking of embankment and solid earth between the two tanks.
5. That the promiscuous entrance of horses caused injury to the drinking tank.
6. I have seen sheep jammed between the stones and bogged in the drinking tank.
7. I do not think that one man unassisted could have remedied the damage done to the work or replace the paving stones.
8. I have known the supply-pipe refuse to act, and remedied by probing with an iron bar to remove the silt which had accumulated at its mouth.
9. I have known the water in the Boro Tank to be unfit for use.
10. I have given my opinion in a former report that Regan was feeble, and physically incapable of performing the duties.
11. That the Dungalcar lessees tendered for Boro Tank, but did not undertake the care of the tank because their manager reported that it was in a dilapidated condition.
12. I am of opinion that, after 1 inch of rain, by extra drains cut in another contrary direction to those now in use, the supply of water to this tank would be doubled.
13. I would respectfully submit that the levels should be taken and the line of drains pegged out, to show where the caretaker could expend his labour most profitably in cutting drains.

I enclose you the return of rainfall near the Boro Tank, or within a mile thereof. A very few of these showers have increased the water in the Boro Tank, while other tanks in the vicinity were filled.

I consider the country around Boro Tank admirably suited to make drains upon to keep the tank well supplied. Since my last report Mr. Adams has sent out a maintenance man to assist in repairing the tank, and has improved the drinking tank as far as the water would permit them to reach. There is no present inconvenience to the travelling stock, but when the water becomes low in the drinking tank it would require to be pumped out, the silt removed, and the stones securely fixed.

I have, &c.,

J. R. DOYLE.

The Chief Inspector of Stock.

Mr. Gilliat.—A.B., B.C., 22/8/84.

XX.

Day Dream Tank.

Sir, The Day Dream Tank, Silverton, Stock Office, 14 February, 1887.

On the 10th instant, I visited Wilson's reservoir and inspected it, also the tank at Purnamoota. The Purnamoota Tank is in good order, troughs, pump, and everything.

P.W.P., 87-767.

Wilson's reservoir on the contrary has nothing exactly right. There was a space of 20 feet between the end of the piping and the troughs. Every joint in the piping leaked, and in one place the contractor, instead of connecting the pipes by screwing on the coupling, had actually apparently put the coupling on an anvil, beaten out the thread, slipped it on, added a little red lead, and left it.

I took the caretaker from the Silverton Tank with me (he is a first-class man); he took the pump to pieces and did what he could, not leaving off until dark. On Sunday he went out again, took all the pipes asunder, and put the couplings on again, making a thorough job of them.

The horse was then put in, but he could only get the water to run in dribblets; he is going out again to-morrow.

It appears the works were not tried at all; I took the tank over, presuming all was right, but instead of that all was wrong. I shall have to drive Cole, the engineer, out to-morrow, which will cost 30s. There is luckily a little water outside the tank. The caretaker there, James Bolton, informed me the works had not been tested.

I have, &c., JAMES C. W. CROMMELIN.

The Chief Inspector of Public Watering Places.

Mr. Crommelin will please report at once if the requisite repairs to the Day Dream Tank can be made by him and the men in the employ of the Department, or if it will be necessary to refer them to the Department of Works.

He will also be good enough to furnish an explanation of his departure from his detailed instructions upon taking delivery of new works. (Section viii, clause 20, page 26, of "Instructions to Overseers.")

His careful observance and compliance with his instructions is requested in future.—H.G.

Sir, Department of Mines, Public Watering Places, Sydney, 28 February, 1887.

Referring to your letter of the 14th instant, re Day Dream Tank, and stating you took it over without a trial, &c., &c., I have to request that you will be good enough to furnish an explanation of your departure from your detailed instructions upon taking delivery of new works. (Section viii, clause 20, page 26, of "Instructions to Overseers.")

Your careful observance and compliance with your instructions is requested in future.

I have, &c., HARRY GILLIAT, Chief Inspector of Public Watering Places.

Mr. Overseer Crommelin, Silverton.

Telegram

Telegram from Mr. Overseer Crommelin to The Chief Inspector of Public Watering Places.

P.W.P.,
87-822.

Re my letter of the 14th, cannot get pump to work; it will require to be taken up and the pipes under ground all looked to.

Silverton, 23 February, 1887.

JAMES C. CROMMELIN.

Since writing my minute of the 23rd instant, this telegram has been received from Mr. Overseer Crommelin. It will perhaps be desirable to forward a copy of his letter and telegram to the Works Department, that the repairs may be carried out without delay.—H.G., 24/2/87. The Under Secretary. Approved.—H.W., 24/2/87. Copies to Works, with letter.—J.W.B., 25/2/87.

Sir, Department of Mines, Public Watering Places, Sydney, 25 February, 1887.
I have the honor to forward herewith copy of letter and telegram from Mr. Overseer Crommelin relative to the state of the Day Dream Tank for your information, with a request that the necessary repairs may be carried out without delay.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines.

The Under Secretary for Public Works.

[Enclosures.]

Copy of Overseer Crommelin's letter of the 14th February, 1887, to the Chief Inspector of Public Watering Places; and copy of telegram from Overseer Crommelin to the Chief Inspector of Public Watering Places, dated 23rd February, 1887.

Sir,

Silverton, Stock Office, 14 March, 1887.

In reply to your letter of the 28th ultimo, asking me to furnish an explanation why I took over the Day Dream Tank without first testing all the works, I have the honor to inform you that I find I made a mistake in so doing. It is no use making a lot of excuses when a man is in the wrong, and I shall take very good care in the future that it does not occur again.

I have, &c.,

JAMES C. W. CROMMELIN.

H. Gilliat, Esq., Chief Inspector of Watering Places.

I am very glad that Mr. Crommelin has replied in this straightforward way, and do not anticipate that I shall have to call upon him for further explanation.—H.G., B.C., 21/3/87. Mr. Crommelin. Noted with thanks. The Works Department are going to alter the pipes.—J. C. W. CROMMELIN, B.C., 26/3/87. H. Gilliat, Esq.

XXI.

Dolmoreve Well.

Telegram from Overseer McLeod to The Chief Inspector of Public Watering Places.

P.W.P.,
86-876.

HAVE been asked by Mr. Assistant-Engineer Stillwell, of Hay, to say when it would be convenient to offer Dolmoreve Well, near Clare. Can I do so? Please reply by telegram to Balranald.

Euston, 25 February, 1886.

J. McLEOD.

Sir,

Department of Mines, Public Watering Places,
Sydney, 27 February, 1886.

Referring to your telegram of the 25th instant, I have the honor to request you to arrange with Mr. Assistant-Engineer Stillwell a date for taking delivery of the Dolmoreve Well, and desire you will follow the instructions respecting taking delivery of new works.

I have, &c.,

HARRY GILLIATT,

Chief Inspector of Public Watering Places.

Mr. J. McLeod, Overseer of Public Watering Places.

P.W.P.,
86-1,452.

Sir,

Stock Office, Euston, 23 March, 1886.

I have the honor to inform you that I did, by appointment, visit Dolmoreve Well, on the 11th instant, for the purpose of taking delivery of the works at that watering place.

The works were completed with the exception that the battens holding the slabs at bottom had not been properly nailed, and consequently interfered with the working of the bucket.

As one horse was not sufficient to relieve the well of enough water to allow the repairer to get at the work I could not remain until it was completed.

Mr. Lindsay was good enough to lend the repairer a horse, so that with the two horses there would be sufficient strength to keep the well free of water until the work was finished.

I presume there will be no necessity for me to go out again, as the work to be finished will be executed by a Government repairer.

I have, &c.,

J. McLEOD.

The Chief Inspector, Public Watering Places.

Mr.

Mr. McLeod,—It will be very necessary for you to personally inspect, test, and report upon this well. By reference to your instructions you will find how much stress is laid upon the personal inspection of the overseer, and although you will shortly receive a memo. directing you to take over a work even if not thoroughly in order, yet a subsequent report and inspection will be required. But in no case should you take over a watering place without the local officer of the Works Department being present to make the transfer, *i.e.*, in all cases you should make arrangements to meet the Works officer.—H G., B.C., 26/3/86.

I waited in Balranald a day for a reply to my telegram of the 25th February. Had I got it, I would have gone straight out and would have met Mr. Stillwell. My telegram was replied to by letter, which was sent to Euston. Will have pleasure in attending to instructions contained in your memo.—J. McLEOD, 30/3/86. H. Gilliat, Esq., Chief Inspector of Public Watering Places.

Overseer McLeod to the Chief Inspector of Public Watering Places, reporting on well recently constructed at Dolmoreve, near Clare Corner.—Road—from Balranald to Ivanhoe; distance from and name of post town—35 miles from Hatfield; reserve (nature, No., and date)—No. 60, date 9th February, 1886; parish—Cubarba; county—Manara.

P.W.P.,
86-4,001.

Questions:—

1. Name of road and length? Ivanhoe Road, 95 miles from Balranald.
2. If near a town, give estimate of population that may be dependent on the watering place? Hatfield is the nearest town, 35 miles distant.
3. Estimate of traffic in stock and teams? It is a very difficult matter to give an estimate of the traffic on these roads, as it varies so much with the seasons. During the last four years the traffic has been a mere bagatelle. I would estimate the traffic in bad years such as the last four or five years:—Travelling sheep, 50,000; travelling cattle, 1,000; bullocks in teams, 800; horses in teams, 250. Very few more teams are required in good seasons, if any; but in travelling sheep and cattle the differences will be considerable, say 200,000 sheep and 10,000 head of cattle.
4. The traffic; by what roads; the destination? The principal traffic is by teams from the various stations between Ivanhoe and Balranald; all the wool and return loading (stores) is taken along this road; cattle and sheep from the Darling and surrounding stations also use the road.
5. Its distance from nearest watering place, or permanent natural water on each side? The nearest watering place on the south is Till Till Tank, distant about 20 miles, and on the north a tank distant about 21 miles.

If a Well.

8. Depth of well; depth and quality of water? The well is 125 feet deep with 27 feet of water. The water is of a very inferior quality, being very salt, and I consider unfit for stock. The water has the effect of giving the stock diarrhoea. When the tank at Till Till gets down to 6 feet it affects stock in the same way.

Watering Appliances.

13. Full description of watering appliances and delivery in gallons per hour? The Dolmoreve Well stands on an open salt-bush plain $12\frac{1}{2}$ miles north from Till Till station, and $7\frac{1}{2}$ miles south from Clare station, where there is a Police station, and a Court held every two months. The water is raised by a whim; the whim ring measures in diameter 46 feet 8 inches at bottom, and 30 feet on top. The span beam measures in length 30 feet, and is 17 feet high; the barrel is 8 feet in diameter with 120 feet of $\frac{3}{4}$ -inch wire rope, and two galvanized iron cages each holding 50 gallons; the whim will lift 900 gallons per hour. The shaft is 5ft. 2in. by 2ft. 7 in. in the clear.
14. Supply tank; size, construction, capacity in gallons? The supply tank is 54 feet by 15 feet in the clear; depth 5 feet. The material is pine boards 6 inches by 2 inches, supported by $4\frac{1}{2}$ feet uprights 6 inches thick, resting on sole plates 6 inches by 6 inches; the whole rests upon 14-in. sleepers bedded into the ground. The inside of the tank is lined with galvanized iron $\frac{1}{4}$ of an inch thick.
15. Troughing; length, width, depth, material, and position? The troughing is 300 feet in length, 3 feet in width, and 10 inches in depth. The sides of the troughing are sawn pine lined with galvanized iron $\frac{1}{4}$ -in thick, jointed, riveted, and tarred; the whole rests upon 9 in. \times 9 in. sleepers, with timber guards. Railing for horses, cattle, and sheep $4\frac{1}{2}$ feet high. The troughing points north from the tank.

Fencing.

16. Area enclosed; description; distance between posts; number and gauge of wires? The well is not enclosed.

General.

18. Probabilities of obtaining tenant and estimated rent? I do not think there is the slightest probability of obtaining a tenant so long as the watering place remains a well, the water being too salt for stock.
19. Area, position, and quality of land included or to be included in tenant's lease. Area notified for public watering place? The land included in the area is average salt-bush plain; there is 640 acres in the well reserve and $516\frac{1}{2}$ acres adjoining it.
20. Caretaker's cottage and description? None, but much wanted, it being a very bleak spot.

J. McLEOD,

Overseer of Public Watering Places.

Euston, 12th August, 1886.

Sir,

Euston, 10 August, 1886.

I have the honor to inform you that I have taken over the Dolmoreve Well, Ivanhoe road, and near Clare Corner.

P.W.P.,
86-3,871.

I have retained the services of Samuel Ireland, who was in charge of the well for the Works Department; his wages will be 10s. per day, including horse hire. Ireland's wages will commence on 1st August.

The

The Works Department gave him the above wages, which can be reduced when there is more grass. At present chaff is worth from 12s. to 14s. per bag, delivered at the well.

I am very much afraid this well will never be made use of, the water being very salt. I am of opinion that a tank should be put down on the opposite side of the road, where there is a good catching place.

A large tank is not required; one of 8,000 or 10,000 yards would answer all present requirements.

Should you think of taking any action in this matter it will require to be done at once, as I understand the contract is let for fencing in the reserve round the well, and the contractor has men at work getting timber for the purpose.

H. Gilliat, Esq., Chief Inspector, P. W. Places, Sydney.

I have, &c.,

J. McLEOD.

Authority is requested to the appointment of Samuel Ireland as caretaker of Dolmoreve Well, with wages at the rate of 10s. per day, commencing from the 1st August, 1886. Authority for Ireland to collect watering charges herewith for signature of the Secretary for Mines.—E.W. (for H.G.), 17/8/86. The Under Secretary for Mines.

Submitted for approval, but the Inspector of Public Watering Places should deal with this matter at once, as it would probably be a waste of public money to fence in a well if the water is not good.—H.W., 18/8/86. Approved.—J.F., 18/8/86.

Inform Treasury and Overseer Gilman.—19/8/86. Treasury,—C. S. Board and Overseer Gilman informed, and Overseer Gilman sent authority for Ireland to collect fees.—20/8/86.

A copy of Mr. Overseer McLeod's letter should perhaps be sent at once to the Works Department, with the view of their attention being directed to the alleged saltiness of the water.—H.G., 23 Aug., 1886. The Under Secretary for Mines. Approved.—H.W., 25/8/86. Letter and extract from Mr. McLeod's letter sent to Works Department, 26/8/86.

Sir,

Public Watering Places Branch, Department of Mines, 26 August, 1886.

P.W.P.,
86-3,871.
P.W.P.,
86-4,317.

I have the honor to forward herewith a copy of an extract from a letter of Mr. Overseer McLeod, Euston, with a view to your attention being directed to the alleged saltiness of the water at the Dolmoreve Government Well, lately transferred to this Department.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines.

The Under Secretary for Public Works.

Copy of extract from communication received from Mr. Overseer J. McLeod, of Euston, by H. Gilliat, Esq., Chief Inspector of Public Watering Places, of 10th August, 1886, as to taking over Dolmoreve Well.

Sir,

I have the honor to inform you that I have taken over the Dolmoreve Well, Ivanhoe Road, and near Clare Corner.

I am very much afraid this well will never be made use of, the water being very salt. I am of opinion that a tank should be put down on the opposite side of the road, where there is a good catching place. A large tank is not required, one of 8,000 or 10,000 yards would answer all present requirements.

Should you think of taking any action in this matter it will require to be done at once, as I understand the contract is let for fencing in the reserve round the well, and the contractor has men at work getting timber for the purpose.

I have, &c.,

J. McLEOD,

Overseer, Public Watering Places.

H. Gilliat, Esq., Chief Inspector, Public Watering Places.

Roads.—J.R., B.C., 30/8/86. Mr. Wood.—W.C.B., 31/8/86.

Should be sent to Mr. Stillwell for report. Would it not be advisable to bore before abandoning, that is, if the water is not too strong to puddle back. Stanley, who has the deepening of the Willandra Well, might examine and make an offer.

A.P.W., 31/8/86.

The Commissioner for Roads.

Appd.—Mr. Stillwell.—W.C.B., 31/8/86. Mr. Stillwell, B.C.

I do not think that it has yet been by any means proved that this water is unsuitable. The well should be baled at rate of at least 5,000 gallons daily for a month, when it is possible much better water would be obtained than that now standing in the well or service tank. If no improvement resulted, boring, if practicable, for a fresh supply might be tried. It is quite premature to talk of abandoning the well and substituting a tank,—Holy Box case to wit.—A.W.S., 3/9/86. Mr. Wood.—W.C.B., 6/9/86.

Should be returned to Mines, with a request to have at least 5,000 gallons a day for a month baled from the shaft.—A.P.W., 6/9/86. Under Secretary for transmission.—W.C.B., 6/9/86. The Under Secretary for Mines.—J.R., B.C., 9/9/86. Mr. Acting-Overseer Gilman,—Your attention is called to section 11, clause 30, page 27, of your printed instructions. Have these instructions been carried out, and the baling been constant and regular; if not, please state the reason?—J.W.B. (for Chief Inspector P.W. Places), B.C., 14/9/86.

Sir,

Balranald, 30 October, 1886.

P.W.P.,
86-5,173.

I now have the honor to write in reply to your B.C. memo. of 14/9/86, written on letter of correspondence on the subject of the Dolmoreve Well, and asking if my printed instructions had been carried out in regard to the baling of the water. Attached to this letter I beg to draw your attention to one from the caretaker of Dolmoreve Well, Samuel Ireland, in which he states that he has been baling according to the regulations, and the fact is borne out by the coach-drivers and the station-hands on Til Til, who have constantly seen Ireland drawing the water. The manager of Til Til also tells me that since Ireland took charge of the well he has greatly improved the horse walk by forming a raised embankment off the ground, it being before often under water this season, and thus unworkable.

I

I beg to report that all the woodwork of whim and troughing at Dolmoreve Well requires fresh tarring to stand the summer months ; the contractors appear to have put on a very light coating, as it is already wearing off. Caretaker Ireland could gradually put on a coating of tar, if he may be supplied with tar and brushes.

Referring to Dolmoreve Well, my belief is that this water must have improved very much from constant baling and exposure to the air, for I found it by no means bad smelling, and although decidedly brackish it is not bad tasting or drinking water in its cold natural state.

I boiled some of the water and tasted it after it had become cold, also made tea of it ; in each of these cases it was quite undrinkable. With constant baling, however, I cannot understand why it should be unsuitable for stock. I gave this as my opinion to Mr. Lindsay, the manager of Til Til Station, who informed me that some of the wells that their sheep watered at were no better, if even as good as the Dolmoreve, and that if the Government would let him water his stock at it, instead of baling and letting the water run to waste, he would gladly avail himself of it, and would not be afraid of his sheep being injured in any way from drinking the water. It is now nineteen years since I first went to the Kilfera back-blocks, where I remained for about two years, and was at the sinking of several wells, the water being quite as brackish as Dolmoreve Well, and decidedly worse smelling, yet the sheep drank freely of the water, and without any ill effects ; in fact, some of this description of water at the Homestead Well (Kilfera) was condensed at the well by a condenser, and turned out quite drinkable for human beings, thus saving long cartage of water.

In reference to Dolmoreve Well, I would respectfully suggest that if the water as at present drawn is not considered by the general stock travelling public sufficiently good for watering purposes, that the well should be constantly baled dry, and boring-rods used to deepen the present shaft, on the chance of striking fresher water. Should the new supply turn out no better than the old, I would then respectfully suggest that trial bores be sunk in the vicinity of the Dolmoreve Well, so that, if successful in securing better water, the whole of the Dolmoreve whim plant may come in, with short distance carting, for the new well.

I have, &c.,
R. J. GILMAN,
Acting Overseer, Public Watering Places.

The Chief Inspector of Public Watering Places.

Mr. Inspector Boulthec for inquiry and report.—H.G., 12/11/86. Report herewith.—J. W. BOULTBEE, Hatfield, 9/12/86.

Sir,
Dolmoreve Well, 14 October, 1886.
I received from you per last mail my salary voucher from 1st October to 31st October. In filling it up you have omitted stating what month, so I think it best to send it on through you, so that if it wants correcting you will have an opportunity of doing so, or if you send another voucher I will sign it and sent it on, should you think it requires it. You write in your note that you wish me to bale 5,000 gallons of water per diem. I think the well is capable of giving that amount of water per 24 hours if the cages baled to the bottom of the shaft, but they don't. I have been carrying out the instructions I received until I got yours—that was, baling 6,000 gallons per week, or 120 tankfulls. I will draw as much as I can until you come up and report—that will be at the end of the month, you state.

I have, &c.,
SAMUEL IRELAND,
Caretaker, Dolmoreve Well.

Mr. Acting-Overseer Gilman, Balranald.

I have also received per same mail Forms H, envelopes, and paper, for which I am much obliged.—SAMUEL IRELAND.

Sir,
Hatfield, 9 December, 1886.
Referring to the enclosed papers relative to the alleged saltness of the Holy Box and Dolmoreve Wells, I now have the honor to report that I visited the Holy Box (22nd November), and found the caretaker baling. On two subsequent dates I passed the well (30th November and 2nd December), and on each occasion the caretaker was drawing water. At my first visit I took my horse to it, thirsty, and he refused to drink it. I also tasted it myself, and am of opinion that stock would be very hard pushed indeed to drink it. It is totally unfit for human consumption, and if, as the caretaker says, the quality is improving, it must have been very bad indeed at first. I do not think baling can have much effect on it. The Jumping Sand-hill and Lignum Hut Wells are far before this in quality, having tasted them all. I do not concur with Mr. Yeo's remarks, which are made from hearsay. Last season—a dry and bad one—the Ivanhoe Tank was not available, and stock had a long stage to travel from Boonoona to Mossgiel (55 miles), and only those who were compelled broke the stage at the Holy Box. In rough numbers, only half the stock watered at Boonoona were watered at Holy Box. I think this speaks for itself. I hear it is intended to renew troughing, &c., here. I would request that this outlay should be deferred until definite action is decided upon. The present troughs, though old and worn, are sufficient for all present requirements.

P.W.P.,
86-5,967.

A tank was commenced here in a good and large catchment, and, after being sunk a few feet, was abandoned. I think this is much to be regretted, as I am of opinion that for the use of travelling stock tanks are superior to wells.

In regard to Dolmoreve Well, the caretaker in three hours forks the well. The supply, so far as I could ascertain, is barely 6,000 gallons in 24 hours. The rope and runners do not, however, let the bucket to the bottom of the shaft. This water is, I think, freer from organic matter than the Holy Box, very clear, and sparkling. It is, however, very salt, and quite unfit for human consumption. Stock used to fresh water would, I think, hardly drink it. Eight thousand sheep were lately watered there, and I understand from Mr. Lindsay, Til Til, that two-thirds did not touch it, and on the other hand, the caretaker says they drank fairly. The other mobs of the same owners did not try it, but got permission to try the station well half-a-mile away. Mr. Lindsay's offer I can quite understand ; he has the well half-a-mile away, somewhat similar in quality ; his stock are bred upon brackish water and used to it ; it would save him using his own well, and at the same time give him an opportunity and excuse for eating

P.W.P.

P.W.P. and T.L. There is no doubt whatever that sheep used to this class of water can *live* on it, but they do not thrive and do well on it, and stock from frontages and tanks will not drink it unless almost *in extremis*.

Ireland used to take his horse four miles daily to water.

For station sheep, bred on and watering regularly, used to and broken into brackish water, these may be "stock-water" wells, but for the general travelling stock I am decidedly of opinion that neither well yields stock-water.

A further trial of the baling might be made, and in the event of there being no improvement boring might be tried. Three months more of regular baling would enable a better opinion to be formed before further expense is incurred.

JAMES W. BOULTBEE.

The Chief Inspector of Watering Places.

P.W.P.,
87-2,240.

Sir,

Dolmoreve Well, 22 May, 1887.

This morning while baling the rope broke near to the bucket, so it is at the bottom of the shaft. Now that the rope is broken it can be seen that the mineral in the water has eaten through it. All the country about here is covered with water. I have written by this mail to Mr. Engineer Stillwell and Mr. Overseer M'Leod.

I have, &c.,

SAML. IRELAND,

Caretaker.

The Chief Inspector of Public Watering Places.

Telegram from the Chief Inspector of Public Watering Places to Mr. Overseer M'Leod, Euston.

Sydney, 1 June, 1887.

PLEASE report what action has been taken to recover bucket at Dolmoreve Well.

HARRY GILLIAT,

Chief Inspector of Public Watering Places.

Telegram from the Chief Inspector of Public Watering Places to Mr. Overseer M'Leod, Euston.

Sydney, 25 June, 1887.

My telegram of 1st June about bucket at Dolmoreve Well not answered. Please reply at once.

HARRY GILLIAT,

Chief Inspector of Public Watering Places.

Mr. M'Leod has been more than a month in making this reply. I shall be glad to learn the cause of the delay.—H.G., B.C., 2/7/87.

P.W.P.,
87-3,223.

Sir,

Stock Office, Euston, 10 July, 1887.

In reply to your memo., asking what action had been taken to recover the bucket at Dolmoreve Well, I have now the honor to inform you that I returned from the well in question on the 7th instant. On my arrival at the well I found Repairer Flynn there for the purpose of recovering the bucket. He is delayed from want of sufficient power to reduce the water. Upon the return of Mr. Lindsay, of Til Til, from Melbourne, which was expected every day, he would no doubt get what horse-power he required, and would at once proceed with the work.

The break in the wire-rope was caused by its rusting, through coming in contact with the salt-water. The delay in reply to your memo. was caused by being absent from Euston from 31st May to 9th June, and not being able to leave for the well until the 22nd June. I was also greatly delayed in going out, and, on my return, through the continuous rain and boggy state of the country.

I do not think that water will be required from tanks or wells for some considerable time, there being such quantities in all directions.

I have, &c.,

J. M'LEOD.

Inquire from caretaker if bucket has been recovered. The paper may then be forwarded to Mr. Inspector Low. Such a delay in the recovery of a bucket requires investigation and explanation.—H.G., 22/7/87. Mr. Inspector Low, B.C. Memo. received, 11/8/87, from caretaker, replying bucket has now been raised, 6/8/87 (87-3,834, P.W.P.).—J.W.B. Memo. to caretaker Ireland, 27/7/87.

P.W.P.,
87-4,364.

Report by Inspector Low on the Dolmoreve well, road from Balranald to Ivanhoe, in charge of Samuel Ireland, for 6th September, 1887.

State of shaft.—Cannot give report; no rope or fittings to go down.

Whim, &c.—In good order; lately been tarred by caretaker.

Rope, buckets, &c.—Only one bucket here, other bucket taken to Hay by travelling mechanic, Works Department, to be repaired.

Watering Appliances.

State of supply tank.—In good order; about 3 feet of water; lately been tarred by caretaker.

Troughing.—In good order; lately been levelled by travelling mechanic, Works Department, and tarred by caretaker.

Paddocks and Fencing.

State of fencing.—Nil; about one mile of pine posts erected but not bored; no wire on ground.

State of gates.—Nil.

Remarks.—The bucket here was lost 22nd May; travelling mechanic arrived 20th June, and levelled troughing, but owing to wet weather, could not touch well; left 27th June; returned 13th July; got up buckets 23rd July; left on 28th July, taking bucket, which was smashed, to Hay, to be repaired.

There is no rope here, only one bucket, and no bumpers for valves of buckets.

Rates

Rates collected since last report.—Months ending April, May, June, 1887—Nil.

Traffic since last report.—Months ending April, May, June, 1887—Nil.

Weekly depth of water since last report.—Weekly report shows 24 feet.

Caretaker's Work.

Work done by caretaker.—Baling every day until rope broke, and general duties.

Work laid out for caretaker.—15th January, 1887.—Inspected this Dolmoreve well to day. Baling of the water has been kept up, and is to be continued. Outlet for getting away of water of trough has not been undertaken by caretaker S. Ireland, as the Government repairer is daily expected, and will do such work, Ireland not having suitable tools. 2nd July.—Inspected works at this watering place. Baling to be continued when the buckets are found and put in working order, also any new work done by the repairer to be tarred. Repairer Flynn, at present preparing to raise buckets. Books incorrectly kept; should such a thing occur again, will be immediately reported to head quarters. 6th September, 1887.—Examined books and found correct. Caretaker will assist repairer on his arrival to get everything in order, after which he will empty supply tank, and continue baling until it is filled, also bale every day.

Remarks and recommendations.—Caretaker here explains accounts referred to as wrong (Mr. J. M'Leod, 2nd July) was owing to him having no receipt-book, hence he was unable to give receipts for money drawn. The error complained, which would have been more satisfactory had it been entered in a more definite form. Caretaker at present gets 8s. per day. The work here I should say is never likely to be heavy, and drawings small, if any. So soon as T.L. fence is completed I consider 6s. 6d. per day is quite sufficient. Caretaker an old man, and quite unfit for doing any work about a well should anything go wrong. I would recommend that caretaker's cottage be erected about 3 chains west of well, and inside T.L. No timber or scrub on this T.L. I would here strongly protest against wire-ropes being used at wells, and recommend 5-in. Manila. I have not met one practical man in this district who will use wire-ropes.

JOHN LOW,

Inspector of Public Watering Places.

Balranald, 6 September, 1887.

The Chief Inspector of Public Watering Places, Mines Department, Sydney.

Telegram from Mr. Inspector Low to The Chief Inspector of Public Watering Places.

Ivanhoe, 9 September, 1887.

P.W.P.,
87-4,592.

DOLMOREVE Well still without rope, and one of the buckets in Hay. Protest against wire ropes. Recommend 5 inch Manila.

JOHN LOW,

Inspector of Public Watering Places.

Sir,

Department of Mines, Public Watering Places, Ivanhoe, 19 September, 1887.

P.W.P.,
87-4,849.

Referring to your B.C. document, 22/7/87, and accompanying papers, *re* Dolmoreve Well, herewith returned, I have the honor to report that, when bucket was lost through wire rope breaking, several of the runners and some of the centre were knocked out. When employé of Works Department arrived and tried to get up bucket the rope broke, and thus the other bucket was lost.

The shaft has been repaired, but as yet there is no rope, neither has one of the buckets, which was taken to Hay for repairs by employé of Works Department, been returned.

The rope at present shows signs of being much rusted, and I should imagine, had the caretaker carefully examined it, he would have seen long ere the accident happened signs of its being unsafe, although I can in no way discover that he is to blame for the long delay and the well being still useless, so far as drawing water is concerned.

The delay entirely rests with the Works Department.

I may here enter my strong protest against wire ropes being used, for the reason they break suddenly and without showing the slightest signs of decay, and in this I am borne out by every practical man in this district. Indeed I have met several who distinctly state that they would not go down a well with a wire rope that has been any time in use and coming in contact with the water here. I would recommend that a 5 or 6 inch Manila rope be used, and were this put on drum of whim, one from top and other from bottom, in other words, a double rope, judging from my past experience of wells, I think this would be found quite as lasting and much more safe.

Caretaker Ireland is too old to have anything to do with wells, and since inspecting, Mr. Hudson, Overseer, Kilferna, informs me he has several times seen Ireland drunk in Clare. I have therefore to recommend that his services be dispensed with.

I have, &c.,

JOHN LOW,

Inspector of Public Watering Places.

The Chief Inspector of Public Watering Places.

Urgent.—As water may soon be required upon this road, the Works Department may perhaps be asked if they intend to supply the rope, or if the duty shall be undertaken by us.—H.G., 27/9/87. The Under Secretary.

Approved.—G.E.H. (for U.S.), 27/9/87.

Sir,

Department of Mines, Sydney, 29 September, 1887.

Mr. Inspector Low having reported that there is no rope at Dolmoreve Well, neither has one of the buckets (which was taken to Hay for repairs by an employé of your Department) been returned, I have the honor to request that you will be good enough to inform me, with as little delay as possible, if your Department intend to supply the rope, or if the duty shall be undertaken by this Department.

I have, &c.,

HARRIE WOOD,

Under Secretary.

The Under Secretary for Public Works.

Telegram from The Chief Inspector of Public Watering Places to Mr. Inspector Low, Ivanhoe.

Sydney, 27 September, 1887.

BE ready to supply a rope to Dolmoreve, in case water should be urgently required at short notice before the Works Department do so. Report to me whether the gin wheels will carry 6-inch Manilla.

HARRY GILLIAT,

Chief Inspector, Public Watering Places.

Telegram from Mr. Inspector Low to The Chief Inspector of Public Watering Places.

Ivanhoe, 28 September, 1887.

P.W.P.,
87-5,009.

THINK I can get rope, if required for Dolmoreve, at Til Til. Will inquire when there, and measure wheels; also put Malarkey in charge of Clare.

JOHN LOW,

Inspector of Public Watering Places.

Sir,

Ivanhoe, 28 September, 1887.

P.W.P.,
87-5,090.

I have the honor to acknowledge receipt of your telegram of 27th instant *re* Dolmoreve well. Should water be urgently wanted before Works Department send rope, I think I shall be able to get one from Mr. Lindsay, manager, Til Til, and shall see him on the 3rd proximo, when I intend placing Od'ell in charge of this well.

When wiring you, I stated that I would measure wheels. If, in report, I have stated wheels to be of this size ("9 inches"), I think I must have made a mistake. Would it not be "gin" wheels.

I have, &c.,

JOHN LOW,

Inspector, Public Watering Places.

The Chief Inspector of Public Watering Places.

Sir,

Ivanhoe, 6 October, 1887.

P.W.P.,
87-5,288.

Referring to your telegram of 27th ultimo *re* securing rope for Dolmoreve well, I have the honor to report that Mr. Waugh, of Clare, upon application of caretaker, will, for this well, supply rope should it any time be required before Works Department do.

I have further the honor to report that gin wheels are 2 ft. in diameter, groove $2\frac{1}{2}$ in. wide and 2 in. deep, being quite large enough for a 6-in. Manilla rope.

I have, &c.

JOHN LOW,

Inspector, Public Watering Places.

The Chief Inspector, Public Watering Places.

Sir,

Department of Mines, Sydney, 29 September, 1887.

P.W.P.,
87-5,362.

Mr. Inspector Low having reported that there is no rope at Dolmoreve Well, neither has one of the buckets (which was taken to Hay for repairs by an employe of your Department) been returned, I have the honor to request that you will be good enough to inform me, with as little delay as possible, if your Department intend to supply the rope, or if the duty shall be undertaken by this Department.

I have, &c.,

HARRIE WOOD,

Under Secretary.

The Under Secretary for Public Works.

Roads.—J.R., B.C., 7/10/87. Mr. Wood. Urgent.—W.C.B., 10/10/87. Mr. Stillwell, wired *re* bucket; the Mines should deal with the renewal of rope.—A.P.W., 10/10/87. The Mines might be referred to paper 87-656 of August last, in which Mr. Stillwell reported that the caretaker was at fault and the author of the damage.—A.P.W., 10/10/87.

Dolmoreve Well.

Copy of Tanks and Punts 87-656.

Sir,

Hay, 8 August, 1887.

Appendix to
P.W.P.,
87-5,362.

The travelling mechanic, on going to this well to modify the gins, &c., found the well-rope broken, the centering below water level forced out by fall of the bucket, the bucket (still attached to the rope) caught below the displaced centering, and the bucket detached when rope broke at bottom of well.

He had to obtain use of horses and canvas buckets, with two men to assist, from Til Til station, to lower the water and effect repairs. This has been done and new rope and bucket sent out. The rope broke close to the bucket, and apparently from effects of being left under water in the well.

The bucket which fell was much damaged, and has been brought into Hay.

A. W. STILLWELL.

The Commissioner for Roads.

Mr. Wood.—W.C.B., 10/8/87. This should be sent to Mines, calling their attention to the necessity of having the buckets swung out of water when not in use.—A.P.W., 10/8/87.*

Under Secretary, for transmission to Mines.—W.C.B., 10/10/87. Under Secretary, B.C., forward to Mines Department. The Under Secretary for Mines.—J.R., B.C., 11/10/87. Mr. Low should be instructed to obtain this rope, reporting price, without delay.—H.G., 17/11/87. The Under Secretary. Submitted.—H.W., 18/11/87. Approved.—F.A., 19/11/87.

Telegram

* Referring to the marginal note above, initialled A.P.W., and dated 10/8/87, I might be permitted to state that neither the original nor any copy of it was received at this office before this copy, which was received on 12th instant with 87-5,362, to which it was attached.—R.W.G., 13/10/87

Telegram from The Chief Inspector of Public Watering Places to Mr. Inspector Low, Ivanhoe.
Sydney, 24 November, 1887.

OBTAIN rope for Dolmoreve well, and report price without delay.

HARRY GILLIAT,
Chief Inspector, Public Watering Places.

WITH respect to Mr. A. P. Wood's minute, 10/10/87, referring to an extract from Mr. Stillwell's report, I submit that Mr. Stillwell's report does not justify Mr. Wood's conclusion. There is nothing to show that the caretaker had disobeyed his departmental orders by leaving the bucket in the water, but it appears to have been taken for granted on the statement of the travelling mechanic.

H.G., 25/11/87.

The Under Secretary. Submitted.—H.W., 29/11/87. Approved.—F.A., 30/11/87.

Telegram from Mr. Inspector Low to The Chief Inspector of Public Watering Places.

Wilcannia, 2 December, 1887.

CARETAKER, Dolmoreve well, informs me Works Department have supplied rope and bucket. Everything there is now in good order.

P.W.P.,
87-6,499.

JOHN LOW,
Inspector, Public Watering Places.

In connection with Mr. A. P. Wood's minute of 10/10/87, it is desirable to call attention that after we have arranged for the supply of a rope, in accordance with the wish there expressed, I am now informed by the Inspector that the Works Department have forwarded a rope to the well. Mr. Inspector Low may perhaps be directed to cancel the arrangements made.—H.G., 2/12/87. The Under Secretary.

Submitted.—H.W., 5/12/87. Approved.—F.A., 6/12/87.

Telegram from The Chief Inspector of Public Watering Places to Mr. Inspector Low, Silverton.

Sydney, 10 December, 1887.

WORKS Department having supplied rope to Dolmoreve, please cancel any arrangements made by you.

HARRY GILLIAT,
Chief Inspector of Public Watering Places.

XXII.

Fencing Papers.

Mannum Well Fence.

Baradine, 2 November, 1886.

THE local Superintendent of Works has asked me to take delivery of paddock at Public Watering Place, Mannum. What stock should this fence be proof against? Please instruct me.

P.W.P.,
86-5,159.

ARTHUR MACKIE,
Overseer, Public Watering Places,
Coonabarabran.

The fence would not be of much service unless sheep-proof, but take delivery and forward a careful report. If you consider it not suitable it can be referred to the Works for alteration.—H.G., 4/11/86. Mr. Horne,—Send telegram. Telegram sent, 4/11/86.

Sir,

Coonabarabran, 11 November, 1886.

I have the honor to forward you herewith my report on the Mannum Public Watering Place for the months of September and October, 1886. I beg to state that, as the local Superintendent of Works was not present when I inspected the paddock fence, I did not take delivery as instructed by you.

P.W.P.,
86-5,356.

I have, &c.,
ARTHUR MACKIE,
Overseer, Public Watering Places.

The Chief Inspector of Public Watering Places.

Mr. Mackie will please arrange with local Works officer for a day on which they can meet, and make the transfer. After this is done a full report must be submitted.—H.G., 17/11/86. Informed.—18/11/86. Mr. Mackie's report on fence now received.—H.G., 17/11/86.

Report

Report by Arthur Mackie on the Mannum Well, road from Coonabarabran to Gunnedah, in charge of Thomas Hook, caretaker, for September and October, 1886.

P.W.P.,
86-5,357.

State of shaft.—Good.
Whim, &c.—In good order.
Rope, buckets, &c.—All in good order.

Watering Appliances.

State of supply tank.—Water-tight.
Troughing.—Water-tight.

Paddocks and Fencing.

State of fencing.—It is erected with good ironbark timber and six wires,—top wire, No. 4, other wires, No. 7; corner posts and gate posts, 10 feet long, will average about 15 inches in diameter; strainers, 9 feet long, will average 12 inches in diameter; struts, 6 inches by 4; split posts, 7 feet 6 inches long will average fully 7 inches by 3½.

State of gates.—A slip panel 12 feet wide; six pine rails, 3 inches in diameter, with iron bar and padlock; also a double gate of sawn timber 12 feet wide; six bars, 3 inches by 1½ of hardwood.

Remarks.—The paddock fence, and gates above described have been completed since my last visit. All the timber is very good, but the fence will not keep sheep or goats; deficient, one wire (see sketch of gauge attached.)

Sketch showing gauge of wire fence at Mannum Well.

Collections, Traffic, Work, &c.

Rates collected since last report.—Month ending 30th September, 1886: Nil; month ending 31st October, 1886: Nil.

Traffic since last report.

Month ending 30th September, 1886: Nil; month ending 31st October, 1886: Nil.
Weekly depth of water since last report.—50 feet 4 inches.

Caretaker's Work.

Work done by caretaker—Satisfactory.
Work laid out for caretaker.—Burning off and ringbarking trees until my next visit.

Remarks and Recommendations.—I should recommend another No. 7 wire to be put in paddock fence, in order to prevent sheep and goats from trespassing.

ARTHUR MACKIE,
Overseer of Public Watering Places.

Coonabarabran, 10th November, 1886.
The Chief Inspector of Public Watering Places, Sydney.

Mannum Well.

Telegram from Mr. D. L. Wilson to The Commissioner for Roads.

Coonabarabran, 1 November, 1886.

P.W.P.,
86-5,239.

Mr. Stock-Inspector Mackie declines to take over Mannum fencing without being instructed through his Department.

D. L. WILSON.

Mr. Wood.—W.C.B., 1/11/86. Should be forwarded to the Mines in order that the Chief Inspector of Public Watering Places may instruct the Overseer of Public Watering Places to meet the Local Board Superintendent, and take over the fencing of a special lease area of 200 acres at the Mannum Well.—A.P.W., 1/11/86. The Under Secretary for Mines.—J.R., B.C., 4/11/86. Ask Mr. Mackie by memo. the action taken.—H.G., 12/11/86. Asked, 12/11/86.

Sir,

Sir,
 I have the honor to acknowledge your memo. of the 12th November, 1886, asking what action I had taken *re* your telegram of 4th November, 1886, and in reply I beg to state that the local Superintendent of Works did not accompany me when I inspected the fence at Mannum, consequently no transfer was made.

Coonabarabran, 7 December, 1886.
 I have, &c.,
 ARTHUR MACKIE,
 Overseer, Public Watering Places.

The Chief Inspector of Public Watering Places. P.W.P., 86-5,090.

Sir,
 I have the honor to acknowledge your letter of the 18th November, 1886, relative to taking delivery of the Mannum Paddock, and in reply beg to state that I shall attend to your instructions.

Coonabarabran, 7 December, 1887.
 I have, &c.,
 ARTHUR MACKIE,
 Overseer, Public Watering Places.

The Chief Inspector of Public Watering Places. P.W.P., 86-5,091.

Sir,
 Referring to your letter of 12th November, No. 86-5,356, *re* taking delivery of paddock at Mannum Well, I have the honor to say that the local Superintendent of Works, Mr. D. L. Wilson, called on me yesterday evening, and asked me for a receipt for the paddock at Mannum Watering Place, inspected by me on the 5th November, 1886, and reported to you on the 11th, but as I am under the impression that a receipt cannot be legally given unless both parties concerned were on the ground at the time of delivery, and as Mr. Wilson said he would not go out to the works I refused to give a receipt until I referred the matter to you. I would also submit to you that the manager of Ulamambria Station informs me that the land enclosed by this fence embraces certain improvements belonging to the owner of Ulamambria Station, and that he should claim compensation for them. I therefore thought it advisable to ask for your further instructions before taking delivery. Kindly reply by wire.

Coonabarabran, 22 December, 1886.
 I have, &c.,
 ARTHUR MACKIE,
 Overseer, Public Watering Places.

The Chief Inspector of Public Watering Places. P.W.P., 86-5,926.

If you are satisfied with the substantial character of the improvements to be transferred to this Department, I do not think it is necessary for Works officer to be on the ground. Of course you will carry out your instructions with respect to transfer papers. You will please report fully upon the nature and value of the improvements alleged to belong to the station in your letter of 22nd instant, and inform me if they are upon travelling stock reserve.—H.G. Letter to Mr. Mackie, 19/1/87.

Sir,
 I have the honor to acknowledge your letter of 19th January, 1887, No. 87-5,926, relative to taking delivery of the paddock at Mannum Public Watering Place, and reporting on the improvements claimed by the lessees of Ulamambria Run, and, in reply, I beg to state that I shall carry out your instructions.

Coonabarabran, 24 January, 1887.
 I have, &c.,
 ARTHUR MACKIE,
 Overseer of Public Watering Places.

The Chief Inspector of Public Watering Places. P.W.P., 87-458.

Sir,
 I have the honor to forward herewith extract from report of Mr. Overseer Mackie on Mannum Well, on road from Coonabarabran to Gunnedah, *re* fencing around paddock, for the information of the Commissioner and Engineer for Roads and Bridges.

Department of Mines, Sydney, 22 November, 1886.
 I have, &c.,
 HARRIE WOOD,
 Under Secretary.

The Under Secretary for Public Works. P.W.P., 87-614.

Extract from 86-5,357, Mr. Overseer Mackie's report on Mannum Well.

State of fencing.—It is erected with good ironbark timber and six wires top—top wire No. 4, other wires No. 7; corner-posts and gate-posts, 10 feet long, will average about 15 inches in diameter; strainers, 9 feet long, will average 12 inches in diameter; struts, 6 inches by 4; split posts, 7 feet 6 inches long, will average fully 7 inches by 3½.

State of gates.—A slip-panel, 12 feet wide; 6 pine rails, 3 inches in diameter, with iron bar and padlock; also a double gate of sawn timber, 12 feet wide; 6 bar, 3 inches by 1¼, of hardwood.

Remarks.—The paddock fence and gates above described have been completed since my last visit. All the timber is very good; but the fence will not keep sheep or goats. Deficient one wire (see sketch of gauge attached).

Recommendation.—I should recommend another No. 7 wire to be put in paddock fence, in order to prevent sheep and goats trespassing.

Roads.—J.R., B.C., 23/11/86. Mr. Wood.—W.B., 24/11/86. Mr. Wilson for report.—A.P.W., 10/12/86. Is not this the same as at Baradine, which has been accepted?—W.C.B., 10/12/86. Mr. Wilson, B.C.

Fence enclosing special lease area, at Mannum Well, differs somewhat from that erected at Baradine, in terms with circular, dated 22nd January, 1884, No. 4 wire being substituted in lieu of a top rail. A six-wire fence, with gate, &c., enclosing paddock for use of caretaker's horse, has been faithfully erected, and paid for by the Commissioner. Whereupon Mr. Overseer Mackie, under telegraphic instructions from his Department, inspected the fence in question on 5th of last November, on which day he handed the keys of the gates to the man in charge of the well. I

I have on several occasions asked Mr. Mackie for a receipt for this fence, which he was by telegram instructed to give me, and I delayed returning these papers until I had the receipt for the fence to annex thereto; but on each occasion he has made some trivial excuse,—that he thinks he must re-inspect the fence; that he hears that somebody has told somebody else that portion of the fence is on the Ulamambria Run, that it should have an extra wire to be goat-proof, &c. How an extra wire will achieve this I am at a loss to know; in fact, it is evident to me he does not know what he wants, and I think a receipt had better be obtained from some other source.

The Commissioner for Roads.

D. L. WILSON, 11/1/87.

Mr. Wood.—W.C.B., B.C., 14/1/87. Mr. Wilson should state definitely whether the fence is sheep and goat proof or not;—he will forward a sketch showing the gauging of the wires.—A.P.W., 14/1/87. Mr. Wilson.—W.C.B., 14/1/87.

Posts are 10 feet apart; top wire No. 4 gauge, others No. 7. Sheep owners to whom I have submitted the question pronounce the fence sheep-proof, though certainly not goat-proof. The caretaker and family are the only persons living within several miles of the well, and are the owners of the goats now running there. To make this a goat-proof fence would involve great expense. It will be remembered that fresh tenders were invited for this fence, the specifications in the first instance being thought too heavy for fencing in a paddock for the caretaker's horse.—D. L. WILSON, 24/1/87. The Commissioner, B.C.

Mr. Wood.—W.C.B., 28/1/87. As the caretaker at this well is the only owner of goats the fencing is required to be proof against, and as it is already sheep-proof, I would recommend that the question of alteration be referred back to the Mines Department before any action is taken.—A.P.W., 7/2/87.

I recommend that paper be returned to Mines. It is not desirable to incur extra outlay to prevent the caretaker's goats trespassing.—W.C.B., 7/2/87. Under Secretary, P.W.O., 9/2/87. The Under Secretary for Mines.—J.R., B.C., 10/2/87.

For Mr. Overseer Mackie's perusal and any remarks he may wish to make with respect to the fence or Mr. Wilson's statements.

He will please report the number of goats running at the well belonging to the caretaker, and whether he gave permission for their agistment and watering.

Mr. Overseer A. Mackie.

H.G., B.C., 14/2/87.

Mr. Wilson was given a decided answer by me when he asked for a receipt for the paddock, and if he knew anything about a fence he would not be at a loss to know how an extra wire would improve it.

Perhaps Mr. Wilson might be asked to furnish the names of the sheep owners who pronounced the fence in question sheep proof. With reference to the goats, the caretaker informs me that he has fourteen, ten of which he will remove. I have not given permission for their agistment and watering.

ARTHUR MACKIE,

The Chief Inspector of Public Watering Places.

Overseer, Public Watering Places, 4/3/87.

Sir,

Coonabarabran, 18 February, 1887.

P.W.P.,
87-829.

I have the honor to inform you that in accordance with instructions contained in your letter of 19th January, No. 87-5,926, I have given a receipt for the public well paddock at Mannum to Mr. D. L. Wilson, local Superintendent of Works, and have also taken one from Thomas Hook, caretaker. Duplicate herewith.

I inspected the improvements on the 12th instant made by the lessees of Ulamambria Run, on the Public Watering Place Reserve No. 107, and they consist of the following:— $1\frac{1}{2}$ miles of wire fencing, value £57; ringbarking about 400 acres, value £25; well, 22 feet deep, value £25; total amount of improvements, £107.

I have, &c.,

ARTHUR MACKIE,

The Chief Inspector of Public Watering Places.

Overseer, Public Watering Places.

Mr Mackie will please reply to the question in my letter, 19/1/87, whether these improvements were on the travelling stock reserve; and he will also please inform me, if so, whether they were made before the notification of that reserve.—H.G., B.C., 18/3/87.

The improvements are not on travelling stock reserve, No. 1,550, but are within water reserve No. 892, notified 16th July, 1875. Well sunk previous to this date.—ARTHUR MACKIE, 24/3/87.

Public Watering Place Act of 1884.—Receipt on delivery of Public Watering Place.

I, the undersigned, have this day taken delivery from Mr. D. L. Wilson, Superintendent of Roads, acting on behalf of the Honorable the Secretary for Mines, of the public paddock known as the Mannum Public Watering Place Paddock, and acknowledge it, and all its appurtenances and appliances, as per statement and list at back, signed as relative hereto, to be in good order and condition,—but it is not sheep or goat proof.

Witness—

ARTHUR MACKIE,

D. L. WILSON, dated 2nd February, 1887.

Overseer, Public Watering Places.

Statement and list of works, appurtenances, and appliances at the Public Watering Place at Mannum, Coonabarabran, handed over by Mr. D. L. Wilson, Superintendent of Roads, to Arthur Mackie, Overseer, Public Watering Places, Coonabarabran, on the 2nd day of February, 1887:—

A wire paddock enclosing about 200 acres. Fence consisting of six wires and good ironbark timber of the following dimensions, viz., corner posts, and gate posts, 10 feet long, will average 12 inches in diameter; strainers, 9 feet long, 4 feet in ground, will average 12 inches in diameter; struts, 6 inches by 4; split posts, 7 feet 6 inches long, 2 feet 6 inches in ground, will average fully 7 inches by $3\frac{1}{2}$; slip panels, 12 feet wide, six pine rails, 3 inches in diameter, iron bar and padlock to secure them; a double gate of sawn timber, 12 feet wide, 6 bars, 3 inches by $1\frac{1}{2}$ of hardwood, padlock, and chain.

ARTHUR MACKIE,

Witness—

D. L. WILSON.

Overseer, Public Watering Places.

Subject:—

Subject:—Fence at Mannum Well.

Department of Mines, Public Watering Places, Sydney, 18 March, 1887.

The gauge of this fence appears sufficient to show that it is not sheep proof, and Mr. Overseer Mackie's memo. upon it may perhaps be forwarded for the information of the Works Department.

P.W.P.,
87-1,306.

No objections have been made to caretakers running a few head of stock to conduce to their comfort, and I have indeed encouraged them to do so, and there is no reason why they should not be admitted to the paddock.

The objection that Mr. Mackie, I think, very properly takes to the fence, is that it is not proof against trespass from travelling or station sheep. As provision has been asked on this year's Estimates to enable this Department in future to carry out its own fencing, it will perhaps, until the decision of Parliament is known, be unnecessary to ask the Works Department to undertake any alteration.

HARRY GILLIAT,

Chief Inspector of Public Watering Places.

Submitted for approval.—H.W., 19/3/87. Approved.—F.A., 22/3/87. Copy to Works in terms of minute, 1/4/87.

Sir,

Stock Office, Euston, 13 March, 1887.

In reply to your letter, 87-940, of the 3rd instant respecting the trespassing of Glen Emu sheep on Box Creek Reserve, I am very glad to find that steps are about to be taken to have the tank reserve fenced.

P.W.P.,
87-1,228.

I am not aware that any contract for the fencing of the above tank has been let, but will make inquiries.

The Chief Inspector of Public Watering Places.

I have, &c.,

J. M'LEOD.

Sir,

Hatfield, 10 December, 1886.

I have the honor to report for your information that the fencing of the tenants' leases on the Hay to Mount Manara road, and Ivanhoe to Balranald road, is in a very backward state, and in a season like the present it appears to me inexplicable that the contractors are not bound down to time or at any rate urged to greater expedition. It is a serious loss to the Department that so much delay has occurred, and a very great hardship to those tenants who have leased a public watering place.

On the Hay to Mount Manara road the fencing is pretty much in the same state as when I inspected last April. The Wooloondool tenant's lease has been fenced with six wires of barbed wire, and which I referred to in my report on that public watering place.

At the One Tree and Quondong the fencing is *in statu quo*, meanwhile travelling stock are running over them and giving the caretaker extra work in warning them off.

At Til Til, I am informed, the station makes a regular roadway of the public watering place, taking their sheep into the shed, and has killed the dog used by caretaker in keeping sheep off.

At Ivanhoe a most important paddock is still unfenced and over-run by township and travelling stock. The contractor for this work has, I understand, also the contract for Mount Manara tenant's lease, at which his men are now working. He himself is, I was told, away wool carting. The Ivanhoe fence he has sub-let to Elliot, who is also wool carting. Elliot has sub-let to Anderson, who is building for Villa & Rossi, Ivanhoe. He has also sub-let. I heard the price given was £120 per mile, but of this I have no authentic information, at any rate a price has been given, out of which four contractors hope to make money. I think it is only right that your attention should be drawn to this.

On the Ivanhoe to Balranald road the fencing was let, I believe, twelve months or more ago to Mr. Casey, who has since gone insolvent, and nothing has been done. In May last I drew your attention to the dangerous state of the Clare Tank, there being no fence round it, and I find it in the same state now. A few posts are erected, but the men have been removed elsewhere.

There is no fencing at any tenant's lease on this road yet, and the case of M. Guerin, who leased the Youhl Plain Tank for £40 a year, is a hard one. The only return expected is from the use of the paddock. His intention was to lay a portion down under crop. He has lost a most favourable season, and his return from travelling stock is almost nil.

I am furthermore of the opinion that the fences erected, *i.e.*, posts and wire, are unnecessarily heavy and expensive, especially in country where there is a dearth of timber. Pine posts are very generally used, and are in nearly all cases charred, a practice that cannot be condemned too much since it deprives the wood of its best preserver the resin. A fence, such as I described for the Colombo Dam Public Watering Place, would, I venture to think, be ample for all requirements, it being almost identical with the fence erected for police paddocks. That, at Mossgiel, in a country devoid of timber being erected, I think, for £70 per mile, almost half that paid by the Works Department, if my information is correct, and a high price at that.

The use of a larger gauge of wire than No. 8 is, I think, to be avoided since a caretaker cannot restrain it single handed. I would again urge that some action be taken to expedite this matter.

I have, &c.,

JAMES W. BOULTBEE,

Acting Inspector, Public Watering Places.

The Chief Inspector of Public Watering Places.

I may mention that in some cases straining posts are not utilized in the fences enclosing tanks, and in cases round tenant's lease wherever a length of wire ends there it is strained. This is a concession made by Mr. Stillwell to the contractors, and it must fail to bring about a good result.

Memo. by The Chief Inspector of Public Watering Places as to fencing tenants' Leases.

With reference to the complaints that are made of the trespass of station sheep upon the watering place reserves, and more particularly upon the tenants' leases, that have not been fenced, it may perhaps be undesirable to deal with them as trespass cases until the watering place has been duly notified as such.

But

But as the destruction of the feed upon the tenant's lease will enta forage allowance for the caretaker's horse, it is urgent that steps should be taken to complete the fencing with as little delay as possible.

The fencing by the Department of Works proceeded so slowly that a sum was placed upon our Estimates for this year to enable the work to be carried on under the supervision of our own officers, pending its approval by Parliament. It may perhaps be of advantage if the overseer should be directed to furnish the number of tenants' leases in each district which require fencing, those at which contracts have been taken by the Works Department, but are yet uncommenced or incomplete, the class of gauge of fence they recommend, and a careful specification and estimate of the cost per mile at which they can obtain tenders in their districts. If the money is voted by Parliament, tenderers should be informed that no delays will be allowed in payments if the work is according to the specifications, and that 25 per cent. will be paid upon approval of 50 per cent. of each contract; 50 per cent. upon approval of 75 per cent., and the balance immediately the work is approved.—H.G.

Attach papers and reports on fencing to this before copying.—H.G.

Copy of circular sent to Overseers of Public Watering Places by The Chief Inspector.
Sir, Department of Mines, Public Watering Places Branch,
Sydney, 2 April, 1887.

I have to request that you will be good enough to inform me of the amount of fencing required to complete each public watering place in your district.

Specifications should state number and brand of wire, dimensions of posts, distance from each other centre to centre, and distance apart of strainers, and depth of each in the ground, that you would recommend.

Your estimate should state the cost of each item separately, with cost of carriage and erection added.

I have, &c.,

HARRY GILLIAT,
Chief Inspector, Public Watering Places.

Sir, Stock Branch Office, Bourke, 12 April, 1887.

P.W.P.,
87-1,682.

In reply to your letter of 2nd instant, No. 87-1,228, I have the honor to enclose specifications for fencing special lease, as used by Works Department, which contains the information asked for.

The price per chain paid by the Works Department for the fence at the Goonery artesian bore was 21s. 6d. per chain. The contract price for the fence now in course of construction at Mulga, No. 5 Tank, Byrock and Gougolgan road, is 18s. 9d. per chain, gates, &c., included.

£86 and £75
per mile
respectively.

I have, &c.,

JAS. MALLON.

The Chief Inspector of Public Watering Places.

Sir, Branch Stock Office, Coonamble, 30 May, 1887.

P.W.P.,
87-2,333.

Herewith I have the honor to forward you an estimate as near as I can, of the cost of fencing for Bullagreen Tank. Fencing is being done close to the Bullagreen at, as I mentioned in a former letter, from £18 to £20; but being a Government job, they generally ask a higher price, as they say it must be stronger and more particular, and though I have asked two or three about here, their prices are higher than my estimate—but if let by tender, may be done about the price I mention.

I have, &c.,

THOS. W. MEDLEY,
Overseer of Public Watering Places, Coonamble.

The Chief Inspector of Public Watering Places.

Specifications of post and seven (7) wire fence to be erected at Bullagreen Tank.

Posts to be of split pine 6' 6" long, 8" x 4"; the heart not to be taken out if split on the quarter; the large end to be put in the ground 2 feet deep.

Strainers of round pine 7' 6" long, not less than 3 feet in the ground—the large end being downwards; to measure not less than 8 inches at small end in diameter.

Each post to measure not less than 10 feet long, or more than 10 feet from centre to centre, and a strainer to be put in every 25 panels.

The whole to be erected, bored, and wired, and strained in a workman-like manner, posts being thoroughly rammed; the wire to be knotted with the telegraph knot; the holes to be bored with a 7-inch bit, and all wires to be pegged in each straining post with hardwood pegs; holes for wires to measure from the ground 6, 5, 5, 5, 5, 7, 12, all posts to be bored through the centre.

The contractor to place every necessary on the line, wire being placed at the Bullagreen Tank for him, he finding all tools and plant.

Estimated cost of fencing in Bullagreen T.L. of 640 acres, being about 4 miles and 25 chains—
at per mile.

	£	s.	d.

per ton	3 15 0
	£47 10 3

I believe the steel wire can be supplied by Andrew Rowen & Co. at the above price.

Sir,

Stock Office, Wilcannia, 9 March, 1887.

I have the honor to acknowledge the receipt of your communication of March 2nd, No. 87-291, re specifications for construction of caretakers' huts, &c. This will be attended to at once, and I am confident a saving of 50 per cent. can be effected in the erection of these huts and sheds, as well as in the fencing of T.L.'s. Engine-sheds sufficiently substantial and commodious should not cost more than £20, and fencing sufficiently substantial should not cost more than from £55 to £65, according to distance of carriage of material. Of all these I will forward specifications, &c., as soon as I possibly can.

P.W.P.,
87-1,195.

I have, &c.,

MARK J. C. TULLY.

The Chief Inspector of Public Watering Places.

This may be connected with the specifications and estimates as received.—H.G., 16/3/84.

Sir,

Stock Office, Wilcannia, 19 March, 1887.

I have the honor to forward herewith plan and specifications of fencing which I consider suitable for fencing the tenants' leases at Public Watering Places in this district, and which can be erected at about £50 to £55 per mile, thus:—Wire delivered anywhere within 100 miles of Wilcannia, £20 per mile; furnishing posts and erecting, £30 per mile. This is very high. If a supply of the wire required were purchased *privately*, it could be delivered here under £14 per ton; at least the stores offer to supply it at that price, and carriage is very low at present.

P.W.P.,
87-1,374.

I have, &c.,

MARK J. C. TULLY.

Specifications of Fencing suggested as suitable for enclosing Tenants' Leases at Public Watering Places in the Wilcannia District.

Timber.—No sapling gum nor round belar will be admitted, nor any timber which in the opinion of the officer superintending the work may be considered of a perishable nature.

Posts.—To be 5 feet 11 inches long, not less than 6 inches in diameter, if round, nothing under 8 inches in diameter to be split (*mulga only* will be allowed not less than 5 inches in diameter, and nothing under 7 inches to be split); all properly squared at both ends, placed 12 feet apart from centre to centre, and sunk two feet in the ground well and firmly rammed, every twentieth (20th) post to be a *straining post*, not less than 8 inches in diameter, and sunk 3 feet in the ground.

At every corner and angle struts will be placed on both sides, as shown on figure 3 of plan; the struts being bored to receive the wire same as posts.

Boring.—Holes not more than ½ inch in diameter to be bored through the centre or thickest part of the post, and according to the gauge shown in figure 1 on plan.

Wiring.—Top wire to be No. 6, bottom wire to be No. 7, all the rest No. 8 best iron annealed (or steel if considered advisable).

Note.—Galvanized wire should be used at all places subject to inundation, and this will apply to nearly every Public Watering Place in this district; some will require one half, others one third or one fourth galvanized wire.

Posts might be placed 10 feet apart, which will make a stronger fence.

MARK J. C. TULLY.

[Plan of fencing for T.L. at P.W.P.'s, Wilcannia District.]

Copy of Telegram from Overseer Tully to Inspector J. W. Boulton.

11 May, 1887.

FERGUSON supplies wire on commission only, No. 8 best brands steel, £13 5s. per ton landed at Wilcannia, in bond; no No. 6. If could be sent from Sydney, care of George Ferguson & Co., Adelaide, can you let me know if this will be done? Am just in from the 70-mile.

M. J. C. TULLY.

P.W.P.,
86-5,442.

Extract from Mr. Inspector Boulton's report on One-tree Tank for 16th November, 1886.

Fencing enclosing tank has been raised and moved out, is very badly strained—left so by contractor—wire is strained from corner to corner.

J. W. BOULTBEE.

Original, with
papers re One-
tree Tank.

Caretaker Young's declaration *re* fence at One-tree was handed to the Minister, and all trace has been lost.

Estimated cost of fencing T.L.'s at per mile, and at which price Overseers are prepared to get work done:—

Dubbo	56	10	0	„
Condobolin	39	19	0	„
Ivanhoe	54	0	0	„
Silverton	75	0	0	„
Balranald	35	10	0	„
Coonabarabran	42	1	0	„

An average of about £52, but it is to be noted that the estimates sent in, and the specifications accompanying them, were upon a most liberal scale, and capable of very great reduction and modification.

Copy of telegram from Inspector Low to Chief Inspector of Public Watering Places.

18 November, 1887.

P.W.P.,
87-6,240,
6,241.

BEVAN, original contractor for fencing Boonoon and Mount Manara, told Stewart, hotel-keeper, Ivanhoe, the price was £120 per mile. Bevan has lately been erecting 10 or 12 feet swing gates there, for which his men informed caretakers he was getting £15 per gate.

J. LOW.

Original, with
papers re cost.

Copy of telegram from Inspector Low to Chief Inspector of Public Watering Places.

PLENTY of bejar within 5 miles of Boonoon, and pine within 5 miles Mount Manara Tanks, for fencing.

J. LOW.

NOTE.—This refers to query *re* fencing at these tanks, and to show timber did not require to be carted far, and is in addition to my telegram of 18/11/87, giving prices paid for fencing.—J. Low.

Report by Inspector Low on the Mount Manara Tank or Dam, road from Booligal to Wilcannia, in charge of John Murray, caretaker, for 24th November, 1887.

P.W.P.,
87-6,586.

State of drains.—In good order, showing good attention on part of caretaker.

Silt tanks.—One on east side of main tank lately been cleaned out by caretaker. One on north side of main tank dry, and silted up to within 2 feet of surface.

Inlet or flume.—One on north side iron pipe. One on east side open; both in good order.

Main tank.—In good order; batters slightly water-washed; no depth indicator; upright carrying suction valve only requires figuring for this.

Embankments.—In fair order, but much burrowed by rabbits; caretaker is doing his utmost to protect these. A good deal of herbage and natural grasses; couch sown in April, but none appearing.

Watering Appliances.

State of supply tank.—Full of water, in good order, and now being tarred by caretaker; concrete pillars lately been repaired by Works Department, and now seem all right.

Troughing.—In good order; timber requires tarring; all stock drink fairly well at this.

Machinery.—In first rate order, well kept, works steadily, giving full supply of discharge pipe.

Paddocks and Fencing.

State of fencing.—In good order; not yet transferred. This has lately been erected by Works Department at £120 per mile, is of pine about half split, and balance young round pine, with no straining posts. The round pine will last only a few years. None of the timber had to be carted 5 miles.

State of gates.—In good order; not yet transferred; lately erected by Works Department at £15 per gate.

Remarks.—Caretaker Murray informs me Mr. Superintendent Stillwell, in August, told him not to interfere with silt tank, as he would get it cleared out. Engine shed erected by one man in four days, for which he got £10. Mr. Hay, Mount Manara Station, contracted to excavate tank at 1s. 4½d.; he sub-let to Fred Hardie, who did the work at 1s. per cubic yard.

Examined books and found correct, but Treasury receipt for October drawings not yet received.

Weekly depth of water since last report.—Last depth, 13 ft. 6 in.

Caretaker's

Caretaker's Work.

Work done by caretaker.—Cleaning out silt tank, cleaning drains, cleaning and painting engine and pump, scrubbing, repairing embankments, tarring supply tank, assisting Works Department employé repairing pillars, and general duties.

Work laid out for caretaker.—12/1/87: Work laid out—lower rail of troughing, and leave a space of 9 inches between rail and edge of trough, and let rail incline inwards; clean silt out of silt tanks when sufficiently dry, keep drains clean, get firewood, and general duties.—J. YEO. 4/3/87: Keep drains clean, sow couch grass on embankments, and rake it in, on receipt of it from Ivanhoe; after rain keep machinery clean, cut burrs, and general duties.—J. YEO. 13/5/87: Clean silt tank when sufficiently dry, repair batters and ends of drains, keep drains clean, cut scrub, and general duties.—J. YEO. 29/7/87: Continue clearing scrub on reserve, clean silt out of silt tank, keep machinery and drains clean, and general duties; fix rain-gauge on receipt, according to instructions forwarded.—J. YEO. 5/11/87: Caretaker will tar supply tank, troughing fence, and railing, cut up burrs and black thistles, and open the mouth of small silt tank as instructed. I have authorized caretaker to obtain tallow for engine from Mr. Ward, and to send account to me.—E. PROCTOR. 24/11/87: Examined books and found correct, but no Treasury receipt for October drawings yet received. Caretaker will watch carefully for and destroy any rabbit burrows near supply tank or embankments, continue tarring supply tank, tar timber of troughing and fluming, get nine sheets of iron from old troughing, Mount Manara well, and make shoot to prevent wash in eastern silt tank, and general duties.—J. LOW.

Remarks and recommendations—I would recommend that caretaker's cottage be erected at south-east corner of T.L. There is plenty of pine within 5 miles of this tank suitable for horizontal buildings. This reserve is simply alive with rabbits, and in my opinion it is only waste of time and money to attempt to keep them down, as they come from the stations for feed and water. Were it fenced with iron netting something might be done. Caretaker Murray is one of the best I have yet seen—understands his duties, and willingly performs them.

Ivanhoe, 24th November, 1887.
The Chief Inspector of Public Watering Places.

JOHN LOW,
Inspector of Public Watering Places.

Report by Inspector Low on the Boonoon Tank, road from Booligal to Wilcannia, in charge of Frank Kellick, for 14th November, 1887.

State of drains.—In good order, and show good attention on part of caretaker.

Silt tank.—Almost dry, and full of silt to within 3 ft. of surface; requires cleaning out.

Inlet or flume.—All under water, iron pipe closed, but evidently in good order; ground much washed from some of the posts of open flume from water overflowing; open flume requires enlarging by raising depth of sides 6 inches for about 40 feet; timber requires tarring.

Main tank.—Full of water and overflowing; no depth indicator, but upright for M'Comas' water lift frame only requires figuring to do for same; is at present used as such by caretaker.

Embankments.—In good order and show signs of considerable attention; couch sown in March last, but none appearing; little or no vegetation on these.

Watering Appliances.

State of supply tank.—Full of water; paint peeling off; requires tarring; otherwise in good order.

Troughing.—In good order, but requires tarring. This has originally been badly constructed, being wedged on both sides between frame and posts of fence, with 1 inch boards to keep it straight, and is carried by support or cross pieces being bolted to posts of fence.

Machinery.—In good order; lately been painted and packed by caretaker; gives a steady and full supply of discharge pipe.

Paddocks and Fencing.

State of fencing.—In fair order; not yet transferred; lately erected by Works Department at £120 per mile.

State of gates.—In good order; lately erected by Works Department at £15 per gate; not yet transferred.

Remarks.—Much water in swamp, which is lower than in main tank; cattle can have been watering in this for some time without damage to anything; it is far too boggy for sheep. Caretaker seems willing and anxious to perform his duties. About 200 acres enclosed here; very scrubby; ought to be all ring-barked, and small scrub cut down.

Collections, Traffic, Work, &c.—Examined books and found correct.

Caretaker's Work.

Work done by caretaker.—Cleaning drains, painting pump and horse works, packing pump, leveling embankments, clearing scrub.

Work laid out for caretaker.—14/1/87: To lower rail of troughing and leave a space of 9 inches between rail and edge of troughing, pump water, keep drains clean, clean silt tank when sufficiently dry, and general duties.—J. YEO. 5/3/87: Clean drains and silt tank, sow couch grass on embankment, and rake it in after shower, keep machinery clean, and general duties.—J. YEO. 11/5/87: Repair embankments, clean drains, cut burrs and weeds inside embankments, clean silt tank when sufficiently dry, put silt on either side of fluming, put post behind gate to prevent it opening round and breaking the hangings, paint cover of horse works, and general duties.—J. YEO. 28/6/87: Inspected tank to-day, and laid out repairs—filling water course, and repair embankments of drains where broken away during late rains.—J. YEO. 27/7/87: Complete repairing embankments, keep drains clean, ring and cut scrub on reserve, if time keep machinery clean, and general duties.—J. YEO. 4/11/87: To clean away all grass from supply tank, fluming and troughing, tar all wood work about same, also tar supply tank when provided with same, and general duties.—E. PROCTOR. 14/11/87: Examined books to date, and found correct, but no Treasury receipt for October yet received. Caretaker will carry out Mr. Overseer Proctor's instructions, also level embankments and excavate three silt pits in drains 10 ft. x 3 ft., and get material ready for rectifying flume.—JOHN LOW.

Remarks

P.W.P.,
87-6,311.

Remarks and recommendations.—I would recommend that caretaker's cottage be erected about 20 chains west of main tank. There is plenty of ballah suitable for horizontal work within 5 miles from this, and I shall endeavour to get some one to tender for erection of this. Open flume requires increasing in size at end nearest to silt tank where it is very level and has formerly overflowed. This can easily be done with old material of troughing. I have instructed caretaker to select sufficient material to enlarge this by raising sides 6 inches for about 40 feet, also to heighten logging from silt tank about 40 ft. 9 in., and $\frac{3}{4}$ in. coach screws will be required for this, and 4 lbs. $1\frac{1}{2}$ in. clouts, and these I have asked Mr. Proctor to have forwarded. Silt tank: I am endeavouring to get some one to clean out, and owing to small job consider it worth 1s. per cubic yard. Tar: I have arranged with Mr. Webb, Kilfera, to cart from Mt. Manara where there is plenty.

Ivanhoe, 14th November, 1887.
The Chief Inspector of Public Watering Places.

JOHN LOW,
Inspector of Public Watering Places.

Report by Inspector Low on the 35-Mile Tank, road from Booligal to Wilcannia, in charge of J. W. Carne, caretaker, for 26th November, 1887.

P.W.P.,
87-6,588.

State of drains.—Much silt in these in swamp near silt tank.

Silt tank.—Full of water; this was partly cleaned out by Works Department in May, 1886, but owing to getting filled with water was stopped; it is unfenced at two ends, and stock in paddock watering at it.

Inlet or flume.—Old and worn out; 90 feet 12-inch iron pipe here intended to be put in by Works Department.

Main tank.—Full of water; depth indicator requires refiguring.

Embankments.—No signs of waterwash, but uneven, owing to much of spoil from excavation being stone.

Watering Appliances.

State of supply tank.—Full of water, in good order, and lately been painted by caretaker.

Troughing.—Some of the timber in this is getting old and rotting; requires tarring.

Machinery.—In good order, works well and steadily, giving full discharge of supply pipe. Top of pump leaking; pump requires painting and facings polishing; suction valve not fixed to end of pipe. Mr. Superintendent Hanna has promised to supply the necessary pipe for this, caretaker informs me.

Paddocks and Fencing.

State of fencing.—In good order; not yet transferred; this has been erected at £95 per mile none of the timber was carted over 4 miles.

State of gates.—In good order; lately painted by caretaker; caretaker has kept no diary of his work; he has been allowing horses and cattle to be put in paddock, but says he got nothing for that. He appears to be a fair caretaker, and could, I think, were the material supplied, erect his own cottage.

Remarks.—The paddock here is quite overrun with kangaroos and rabbits.

Collections, traffic, work, &c.

Examined books and found correct, but no receipt for sum 4d., which caretaker states he remitted to Treasury. Treasurer's receipt for October, £2 16s. 5d., not yet received.

Caretaker's Work.

Work done by caretaker.—Painting pump, flooring engine-shed, cleaning machinery, painting gates, cleaning drains, and clearing up embankments.

Work laid out for caretaker.—5/3/87: Examined books and works, and found all in order; work for caretaker to repaint tank and give boiler a second coat of tar, also the woodwork of troughing, also clean up inside embankments.—M. J. C. TULLY.—9/5/87. M. J. C. TULLY.—10/7/87: Inspected.—M. J. C. TULLY. 14/11/87: Inspected books and tank; to finish tarring trough, clean up embankment, and kill rabbits which are over-running the country.—M. J. C. TULLY. 26/11/87: Examined books and found correct to date, but no receipt for June drawings, 4d., and October drawings, £2 16s. 5d. Caretaker will clean out and keep clean all drains, tar timber of troughing, paint pump dark green, polish facings and pump tap, keep diary of work in journal, allow no strange stock in paddock, apply to Mr. Overseer Tully for tar, 2 lbs. dark green paint, small paint brush, 1 doz. sheets emery paper.

Remarks and recommendations.—I would recommend caretaker's cottage be erected about 10 chains south of main tank and near present camp. Caretaker has six horses and five cattle in this paddock. Engine-shed was erected by Works Department, and cost £50. The troughing here, now that the paddock is fenced in, is next to useless, so far as watering cattle is concerned—that is, if a big mob or wild. I would recommend 300 feet steel troughing be erected. The present troughing will last for not more than another year, and the expense of removing fence would go towards paying for new troughing. Owing to not knowing where this troughing is to be procured, I am unable to give estimate of cost. Silt tank has been left open at Mr. Road-Superintendent Hanna's special request, in order that he might have it cleaned out when dry.

Wilcannia, 26 November, 1887.
The Chief Inspector of Public Watering Places.

JOHN LOW,
Inspector of Public Watering Places.

Report by Inspector Low on the 43-Mile Tank, road from Booligal to Wilcannia, in charge of Robertson and Wagner, Tenants, for 27th November, 1887.

P.W.P.,
87-6,533.

State of drains.—In fair order, but much water washed in front of silt tank, where fall is sudden.
Silt tanks.—Both full of silt and dry; contract has just been let by Works Department to have these cleaned out.

Inlet or flume.—Under water, and much silt about them.

Main

Main tank.—Full of water; depth indicator water-washed; requires refiguring; lessces report this to be quite half full of silt.

Embankments.—In fair order but uneven, owing to stock having gained admittance at one time.

Watering Appliances.

State of supply tank.—Full of water; requires painting; never been painted since erection.

Troughing.—In good order; has lately been repaired by lessces; timber requires tarring.

Machinery.—In good working order, but requires tarring, painting, and facings polishing.

State of fencing.—Not yet completed. This is of split ballah, none of it being carted more than 5 miles. Contractor would not tell price, but told me it was between £90 and £100 per mile.

State of gates.—Old and worn out, but has been repaired by lessces.

Work done by caretaker.—9/5/87: Inspected.—M. J. C. TULLY.

Work laid out for caretaker.—27/11/87: Inspected this Public Watering Place to-day, but leave no instructions till I see Mr. Overseer Tully.

Remarks and recommendations.—Mr. Road-Superintendent Hanna, of Works Department, informs me all painting and tarring referred to in this report was to be done by Works Department, and that he had let contract for same. He also informs me that he intends enlarging silt tank, so as main tank can be emptied and cleaned out. Mr. Overseer Tully endorses lessces' statement that Works Department were to paint, &c., and give everything over in good order.

JOHN LOW,
Inspector of Public Watering Places.

Wilcannia, 27 November, 1887.

The Chief Inspector of Public Watering Places.

Report by Inspector Low on the 26-Mile Tank, road from Booligal to Wilcannia, in charge of John Balfour, for 26th November, 1887.

State of drain.—In fair order; very well laid out, but don't cross main road, thus allowing water to spread and find its own way to silt tank.

Silt tank.—Almost full of water and no sign of silt.

Inlet or flume.—In good order.

Main tank.—Batters much cut up from cattle watering at this; this tank has not previously held the water well, and all stock have been allowed to water at it; no depth indicator, and nothing in tank to make one.

Embankments.—All trodden by stock, but droppings well cleaned off by caretaker; one angle-shoot at north-east corner required here which would carry off all storm water; no vegetation.

P.W.P.,
87-6, 585.

Watering Appliances.

State of supply tank.—In good order; full of water; lately been tarred by caretaker.

Troughing.—In good order; lately tarred by caretaker.

Machinery.—Well kept, but could not be tested, owing to caretaker fixing pipe to supply tank; also fixing suction valve and lengthening pipe for same.

State of fencing.—Finished, and in good order. This is of ballah, lately erected at £95 per mile; strainers every fifteen panels.

Remarks.—Caretaker has been taking stock on agistment, and says he has drawn about £2 10s., and was unaware he had not power to do so; he seems a good man, and ought, if possible, be retained as caretaker when this tank is transferred; he has not been supplied with books or copy of regulations, and no P.W.P. notice exhibited.

<i>Rates collected since last Report.</i>						£	s.	d.
Month ending	June, 1887	2	15	6

						£60	6	10

Traffic

Traffic since last Report.

Month ending	Horses.	Cattle.	Sheep.
June, 1887	666
September, 1887	845
October	239	6,558	15,600
November	144	3,376

Remarks and recommendations.—The drains here in first instance were let at 4s. 6d. per chain, and afterwards sublet at 3s. 6d. to man who did the work. These are quite equal to drains at Ivanhoe tank. Caretaker is here erecting weatherboard cottage, three rooms, 20 x 12 x 8. I would strongly recommend that cattle be prohibited from watering at this tank, but sheep might be allowed until the cutting by the cattle is levelled, which would improve the tank. This tank has not yet been transferred. Mr. Overseer Tully hopes it will be in about a month from now. June drawings, £2 15s. 6d., were remitted with 35-mile drawings for that month to Treasury. Mr. Overseer Tully has since received £50 9s. 11d. which he will remit to Treasury with 35-mile tank drawings for this month, leaving a balance of £7 1s. 5d., in caretaker's possession at my inspection.

Wilcannia, 26 November, 1887.
The Chief Inspector of Public Watering Places.

JOHN LOW,
Inspector of Public Watering Places.

Sir,

Stock Office, Ivanhoe, 17 May, 1887.

Stock Branch,
87-4,726.

I herewith beg to apply for information *re* T.S.R. through the township of Ivanhoe, for, as far as I can obtain information, there has been no provision made.

The township allotments, &c., with the T.L. at the Ivanhoe Government tank, take up the whole half-mile on the east side of the road, and on the west side of the road I am informed that the land is freehold; consequently the travelling stock have to pass through the main street, which is a very difficult thing to get the Queensland cattle to do.

The township people are complaining that stock are allowed to pass through the main street.

I might mention that the main street is about 3 chains wide.

I have, &c.,

JAMES YEO,

Inspector of Stock.

The Chief Inspector of Stock.

Mr. Leigh,—Please prepare tracing if there is no map.—A.B., 20/5/85. Mr. Yeo,—A tracing is herewith, showing the various reserves.—E.W. (for A.B.), 24/6/87. Tracing received.—J.Y., 27/6/87.

Sir,

27 June, 1887.

Stock Branch,
87-5,712.

I have the honor to acknowledge tracing of reserves and T.S.R. through and around the township of Ivanhoe.

I find that the travelling stock, according to the tracing, will be compelled to go through the main street, unless a lane or roadway is opened at the back of the Government tank, and run through a corner of the T.L., which has already been suggested to the Chief Inspector of Public Watering Places.

I have marked in blue pencil the places where the lane should run through reserve 457. I might mention that the Government tank is on reserve 457.

This lane would be no disadvantage to stock having access to the troughing at the tank, as the lane would pass in close proximity to it.

The Chief Inspector of Stock.

I have, &c.,

J. YEO.

Will the Chief Inspector of Public Watering Places please say what action has been taken in regard to Mr. Yeo's suggestion?—A.B., B.C., 4/7/87.

An Inspector will, it is anticipated, be stationed at Ivanhoe within a few weeks, from whom a report will be at once obtained. If it sustains Mr. Yeo's recommendation, steps will be at once taken to have the fence set back.—H.G., B.C., 12/7/87. The Chief Inspector of Stock.

This matter was brought under the notice of the Hon. the Minister for Mines at Ivanhoe yesterday.—E.W., 13/8/87.

Mr. Inspector Low,—If the proposed alterations can be made without interfering with the efficiency of the tank or paddock, the caretaker can be put at it, or you may report what assistance he will require, and the cost.—H.G., B.C., 23/8/87.

Extract from P.W.P., 87-208, Report by Mr. Overseer Yeo, Ivanhoe, on Ivanhoe Tank.

P.W.P.,
87-514.
State of fencing.

In course of construction; but I would again suggest that, before the fencing is completed, a roadway should be left at the back of the tank to allow stock to pass that way, instead of going through the township.

Ivanhoe, 10/1/87.

JAMES YEO,
Overseer, Public Watering Places.

Mr. Yeo,—Is this fence completed, or is the contractor at work upon it?—H.G., 14/2/87. The fence is not completed, with the exception of portion shown, on rough sketch attached, by red lines. The sub-contractor is at work upon it, with two men assisting him.—J. YEO, 21/2/87.

Rough

Rough sketch showing state of fencing towards completion at Ivanhoe Tank.

The double lines show fence completed. Lines marked thus ===== is the portion of fence where posts are put in but not wired yet.

I do not anticipate that any good would result from forwarding this to the Works Department. If the Draft Estimates are passed by Parliament, the fencing in future will be provided for in that Vote, and the required alterations may be made by our own officers. The case had perhaps better await the passing of the Estimates.—H.G., 16/3/87. The Under Secretary.

Submitted for approval.—H.W., 21/3/87. Approved, F.A.—22/3/87.

Sir,

Stock Office, Ivanhoe, 24 September, 1887.

I have the honor to inform you that I have been making inquiries and trying to obtain prices *re* alterations in fencing at Ivanhoe tank, but to date I have not been able to get an offer for it, owing to the scarcity of men at present; but I am of opinion that within the course of a few weeks, when the shearing is completed, there will be plenty of men who will be glad to get it to do at a reasonable price.

I will still continue to make inquiries, and will communicate with you as soon as I can get a reasonable offer.

I have, &c.,

JAMES YEO,

Overseer, Public Watering Places.

The Chief Inspector of Public Watering Places.

P.W.P.,
87-4,996.

Sir,

Department of Mines, Public Watering Place, Ivanhoe, 28 September, 1887.

In reply to yours of the 19th inst. *re* fencing at Ivanhoe tank, I have the honor to inform you that, although I have made every possible inquiry, I have as yet been unable to get anyone to tender for this work.

This is, I think, partly owing to shearing time, and the high wages earned by others rabbiting.

I shall continue my inquiries, and hope ere long to hear of some one.

I have, &c.,

JOHN LOW.

The Chief Inspector of Public Watering Places.

Memo. by The Chief Inspector of Public Watering Places.

Ask Mr. Inspector Low to report by wire with respect to alteration of fencing at Ivanhoe tank for convenience of stock passing through township. Inform Geo. Williamson, Esq., J.P., that Inspector Low has been directed to report by wire, and that alteration will be made as soon as Minister's approval received.

Wired.—T.H.S., 29/8/87.

P.W.P.,
87-4,223.

H.G., 29/8/87.

Copy of telegrams from Inspector J. Low, Ivanhoe, to The Chief Inspector of Public Watering Places.

Ivanhoe, 30 August, 1887.

LETTER posted with details of alteration of Ivanhoe fence; think new fence worth £70 per mile; old fence removing, under twenty-five; am allowing higher rates, owing to small job; Brougham Ticehurst agrees with me as to figures.

JOHN LOW.

P.W.P.,
87-4,291.

Ivanhoe,

Ivanhoe, 30 August, 1887.

P.W.P., 87-4,200. RECOMMEND lane 5 chains wide, north-easterly Ivanhoe tank, if troughing left unfenced; 13 chains present fence to be shifted, and $4\frac{1}{2}$ chains new fence required if troughing fenced; 8 chains present fence to be shifted, 22 chains new fence required; fence not yet transferred from Works; caretaker cannot do this; workmen about want £100 per mile for new, £80 per mile for shifting—too much.

JOHN LOW.

See if you can define this in pencil upon plan.—H.G., 30/8/87. Mr. Higinbotham.

The plan of the T.L. does not show the troughing, and the tank is merely sketched in. The survey has not yet been approved of or charted; the information cannot therefore be shown on it.—W.C.H., 30/8/87.

Wire request to Mr. Low to forward detailed report by post with careful estimate of the actual cost of fencing.—H.G., 30/8/87. Wired.—T.H.S., 30/8/87.

Sir,

Department of Mines, Public Watering Places, Ivanhoe, 30 August, 1887.

P.W.P., 87-4,202.

Referring to B.C. and accompanying documents herewith returned, relative to alteration of fence at Ivanhoe tank, and thus allow travelling stock to water without going through township, I have the honor to enclose three tracings.

No. 1 shows present position of fencing; dotted lines, proposed new fence. No. 2 shows proposed lines of fences, should it be decided that troughing be fenced in, and which I would strongly recommend. Owing to this tank being almost in middle of township, in hot weather stock will be continually hanging about the troughing, and should it be left unfenced there will be no end of disputes *re* watering stock. In the recommendation of this, I am fully borne out by Mr. Overseer Yeo. I have allowed 5 chains for lane, so that stock will have lots of room and little chance of their rushing fence, even if wild or thirsty. No. 3 shows proposed position of fence, should it be so decided to leave troughing unfenced; dotted lines, present fence. This, although less expensive for the present, would, I feel certain, require soon to be altered to No. 2, in which case it would then be replacing fence already up, but of course it could be much quicker done.

I enclose proposed style of new work for your approval (the posts, owing to being almost a tank fence, and where a rush might take place, should, I think, be 2 feet in the ground), and estimate by sub-contractor who erected present fence, which I consider much too high; but, owing to high prices paid by Works Department, it is difficult to get contractors to understand that they ought not to get about double price because it is Government work. Of course a small job like this is worth more per chain than were it a large one. Mr. Overseer Yeo and I shall endeavor to get some other offers and forward to you.

The fencing here has not yet been transferred from Works Department, neither is it finished, no gates being up. Is it desirable to interfere with it before transfer? In no case will any stock water at this tank for say six weeks.

I have written all the above under the impression that this road was applied for, for the convenience of stock getting easier access to public watering place, but have just had an interview with Mr. Williamson, who informs me this is wanted for all travelling stock—in fact, become a travelling stock road. Were a travelling stock road made between T.L. and tank, how would this affect reserve? If so, would it not require to be accurately surveyed before any fencing is erected? No doubt it would be a great convenience for all travelling stock to go along this proposed road, instead of having to go as at present.

I have, &c.,

The Chief Inspector of Public Watering Places.

JOHN LOW.

Extract and inform inspector and overseer that no interference can be permitted until transfer is made, and the transfer must be made in terms of recent instructions.—H.G. Informed, 19/9/87.

Alterations proposed in Fencing at Ivanhoe Tank.

Tracing No. 2.—8 chains present fence to be taken down and erected on line shown.

22 chains new line of fence, pine or ballah, post 8 in. × 4 in., 2 ft. in ground, 4 ft. 6 in. above ground; strainers 9 in. in small end, 3 ft. in ground, every 18 panels, same wire and gauge as in present fence.

Two gateways, 12 ft. wide, each having four gates 6 ft. 6 in.

Gate posts 3 ft. 6 in. in ground, 5 ft. above ground, 12 in. small end.

Gates 4 ft. 6 in. × 6 ft. 6 in., heads 4 × 3, rails 4 × 1½, braces 4 × 1, one brace to each gate, 4 rails to each gate, fastened at ends with $\frac{3}{4}$ in. bolts; distance from bottom between each rail, 9 in., 8 in., 9 in., 12 in.; each gate two single strap iron hinges, 2 ft. 6 in. × 2 in. × $\frac{3}{8}$ in., fastened with $\frac{5}{8}$ in. bolts,

bolts, eye 1 in. wrought iron; crooks 1 in. through gate-post, fastened by nuts and screws; two iron hasps for fastening with 1/2 in. bolts.

Tracing No. 3.—13 chains of present fence to be taken down and erected on line shown.

Appendix E.

4 1/2 chains new fence, same gauge and style of present fence, with 9 in. strainers in small end, 3 ft. in ground, every 18 panels.

JOHN LOW, 30/8/87.

Estimate of Prices.

New fence at 25s. per chain. Old fence, taking down and erecting, 20s. per chain. Gates at 60s. each.

Sir,

Ivanhoe, 11th October, 1887.

I have the honor to enclose tender by John Clyde for this work, which, although the lowest I can get, I consider still very high.

P.W.P., 87-5,418.

No. 3 refers to style of fencing, leaving troughing open; No. 2 having troughing fenced in.

Should you have decided to have the troughing unfenced, it will be a small job, and no one would come from a distance to do it; but I think after shearing is finished it ought to be done cheaper.

I have, &c., JOHN LOW.

The Chief Inspector of Public Watering Places.

Memo. by The Chief Inspector of Public Watering Places.

THE position of the tank being so close to the township, it will, I think, be necessary to fence in the troughing. Mr. Low may be perhaps informed to this effect; but the work must be held over, in my opinion, until more reasonable tenders are obtained.—H.G., 18/11/87.

		<hr/>		
		£36	12	6

Sir,

Stock Office, Moss Vale, 19 December, 1887.

Again referring to your circular re any communications I had to make re tanks and wells should be made direct to the head office, it has occurred to me that in my previous communication to you on the fencing at the Ivanhoe tank, I omitted to mention a conversation which took place between Mr. Assistant Engineer Stillwell and myself re the access for stock to the troughing. At the time the posts were being erected on the red line from A to B, on rough sketch attached, I proposed to Mr. Stillwell, and also pointed out to him the advisability of having a lane behind the tank, as shown on rough sketch from A to D and from B to C, which would allow all travelling stock to get to the troughing without being compelled to go through the main street; but Mr. Stillwell's reply was, that as the contract was let, he would not think of making any alterations, and that I should have pointed it out to him before, which I had no opportunity of doing, not knowing how he had proposed to fence off the T. L. Consequently, the fence was erected, although Mr. Stillwell admitted the great inconvenience it would be to travelling stock, and also to the township people.

P.W.P., 87-6,934.

I have, &c., JAMES YEO.

To the Chief Inspector of Public Watering Places.

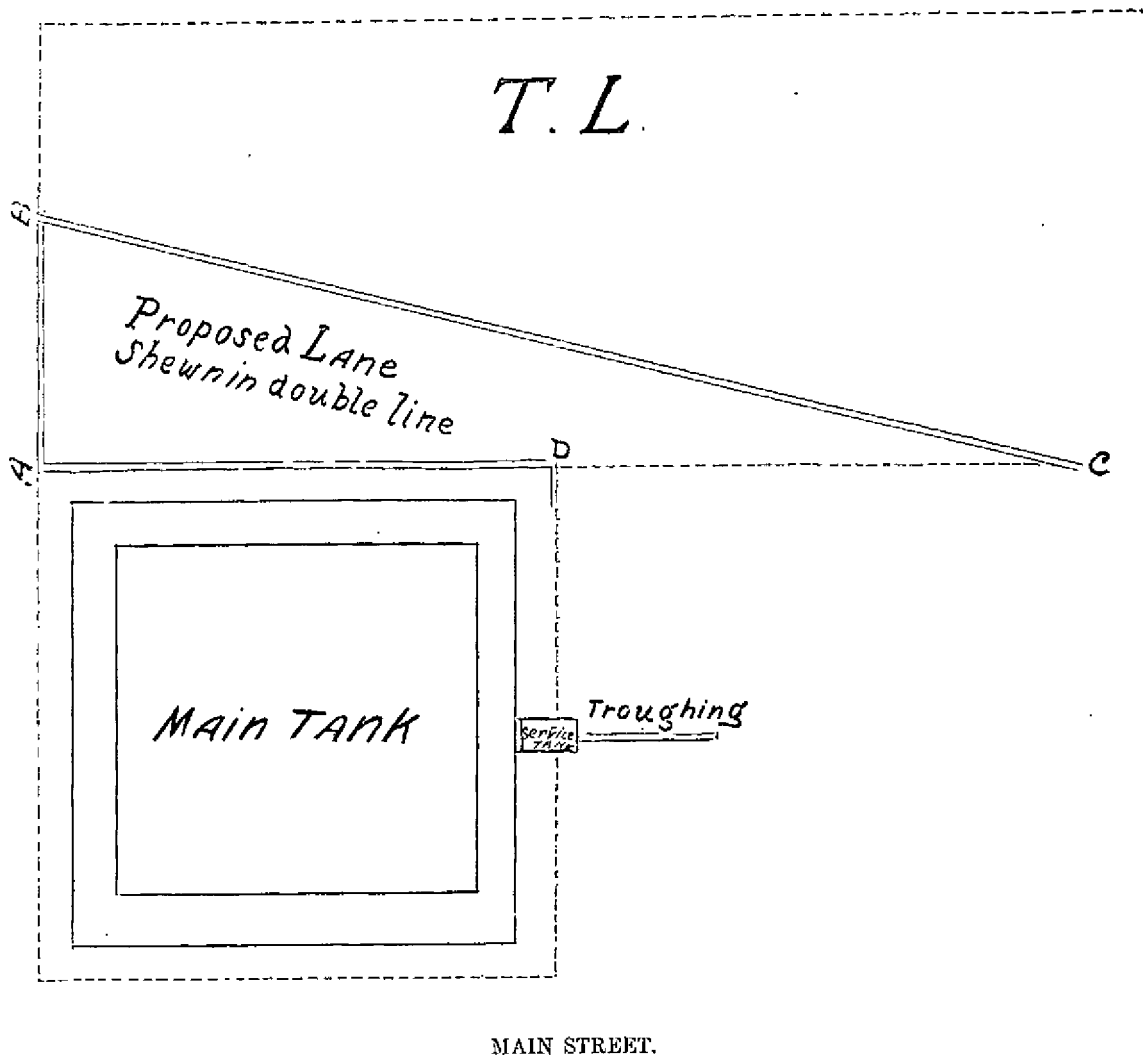

This should perhaps be attached to Mr. Overseer Yeo's previous communication.—H.G., 29/12/87. The Under Secretary. Yes.—H.W., 29/12/87.

Sir,

Stock Office, Ivanhoe, 16 May, 1887.

I herewith beg to apply to you for instructions re taking delivery of fencing at public watering places from Department of Works, whether I must object to take delivery of a fence which has no straining posts provided, as in the case of the fence in course of construction at Ivanhoe, where the wire is run out to its full length and strained to the post to which it might reach.

P.W.P., 87-2,154.

I am of opinion that this is not a good way to strain wires in a fence, consequently I don't care to take delivery of a fence erected in this way unless instructed to do so.

I have, &c.,
JAMES YEO.

The Chief Inspector of Public Watering Places.

Memo. by Chief Inspector of Public Watering Places.

Mr. Boulthec,—Have you ever seen fences constructed on this principle, except in Mr. Road-Superintendent Stillwell's experiment at the One-tree tank?—H.G., 22/5/87.

I have never seen fences erected in this manner outside of Mr. Stillwell's district; and I beg, in the most unqualified way, to condemn it, since I cannot see how it is possible to strain the fence properly without proper straining posts. The fence at the One-tree is a strong case in point. It was finished by the contractor, and, I presume, passed by Mr. Stillwell, for within a few weeks after its completion the caretaker was reported by Mr. Stillwell for having the wires all slack, and some very harsh comments made upon the Mines officers.—JAMES W. BOULTBEE.

See papers re
tone of Minutes.

As the future direction of these works is at present under consideration, Mr. Yeo may perhaps be instructed to take over the fencing at Ivanhoe, stating in his receipt form the objection he takes to the character of the fence.—HENRY GILLIAT, 23/5/87. The Under Secretary.

Submitted.—H.W., 26/5/87. Approved.—F.A., 27/5/87. Mr. Yeo, B.C. J.R., for H.G., 28/5/87. Contents noted.—J. YEO, 4/6/87. Mr. Inspector Low.—H.G., B.C., 22/8/87.

I have inspected this fence, and can strongly bear out Mr. Inspector Boulthec's condemnation of this style of fencing. I have seen no instance where such a style of straining was done by a practical man, neither do I expect to. It is simply absurd to attempt to strain a wire fence in the manner tried here. Some of the posts are already splitting from wires being strained to them, being split pine, and many are much pulled over.—JOHN LOW, Inspector of Public Watering Places, 30/8/87.

Sir,

Sir, Stock Office, Ivanhoe, 16 May, 1887.
 Referring to papers 1,535 and 1,536, of 4/4/87, for report, I have now the honor to inform you that I am in receipt of a communication from Mr. Assistant Engineer Stillwell, *re* the transfer of fencing at the Holy Box well and Mossiel tank, which Mr. Stilwell reports ready for transfer; but he desires that the transfer should stand over until the fencing and gates are ready for transfer at the Ivanhoe tank, which the contractor reports will be complete in about a fortnight, when Mr. Stillwell intends to be at Ivanhoe to pass the work.
 The Chief Inspector of Public Watering Places.

P.W.P.,
87-2,155.

I have, &c.,
 JAMES YEO.

Extract from Mr. Low's report on Ivanhoe Tank, 27 September, 1887.

FENCING.—The cause of posts splitting is that they are split pine posts, which, unless much stronger and at least 4½ inches, are liable to commence splitting by insertion of pin to hold wire while fastening it. When one wire is strained on them, *i.e.*, one wire round one half of post, other wire round other half, causes a strain which in some instances here the posts have been unequal to, and are splitting.

With Ivanhoe
Tank paper.

JOHN LOW.

Memo. of Chief Inspector of Public Watering Places.

PLEASE forward full report. containing all particulars relating to letting and construction of fencing at Ivanhoe tank.

H.G.

Mr. Inspector Yeo.

Letter to Mr. Yeo, 2/11/87.

Sir, Stock Office, Moss Vale, 4 November, 1887.
 Your letter of 2nd instant *re* fencing at Ivanhoe tank will receive my attention; but before I can report fully I must obtain some papers which I left at Ivanhoe. I am writing by this mail, asking Mr. Overseer Proctor to furnish me with a copy of the same.

P.W.P.,
87-5,858.

I have, &c.,
 JAMES YEO.

The Chief Inspector of Public Water Places.

Sir, Stock Office, Moss Vale, 1 November, 1887.
 Before leaving Ivanhoe I omitted to point out what I considered a defect in the fence erected round the T.L. at the Ivanhoe Government tank, *viz.*, the way in which the wire is strained to the post. The greater quantity of the posts are split pine, 8 × 4, with no straining posts except at corners and angles in fence. The wire is run out to its full length, then strained to any post to which it may reach; but instead of the wire going round the whole of the post, it only goes round half, and the next wire goes round the other half; consequently, when the wire is strained from both sides, it in many cases splits the post in half. I beg to enclose a rough sketch, which possibly may explain more fully what I mean.

P.W.P.,
87-5,788.
This fence
alleged to have
cost £112 per
mile.—J.W.B.

I have, &c.,
 JAMES YEO.

The Chief Inspector of Public Watering Places.

Extract from P.W.P., 86-2,275.—Report by Mr. Inspector Boulton on Clare Tank.

An enclosure round this tank is badly wanted. Any stock getting into it would be drowned, owing to the steep batters, and the wave-cut step in them. 10,000 weaners and some cattle are in the paddock, and should they rush the tank in the night there would be a great loss.
 7 May, 1886.

JAMES W. BOULTBEE.

This may perhaps be forwarded for the information of the Department of Public Works.—H.G., 19/5/86. The Under Secretary for Mines. The Under Secretary for Public Works.—G.E.H., U.S., B.C., 19/5/86. Mr. Wood,—I thought this tank was fenced.—W.C.B., 26/5/86. Mr. Wood, Hay.

Fencing around tank was not included in contract for excavation, &c., but the contractor for fencing the tenant's lease area will attend to it at once. I saw the proprietor of the station, and he does not think there is any danger at present, as there is plenty of surface water. He will erect a temporary fence if he sees any necessity.—A.P.W., 21/6/86.

The Under Secretary, for transmission to Mines.—W.C.B., 24/6/86. The Under Secretary for Mines.—J.R., B.C., 28/6/86. Mr. Overseer Yeo, for report, B.C., 6/7/86.

Sir, Stock Office, Ivanhoe, 12 July, 1886.
 Referring to your request for report, B.C., 6th July, 1886, I have the honor to inform you that the contractor has commenced the fence round the main tank.

P.W.P.,
86-3,544.

I have, &c.,
 J. YEO.

The Chief Inspector of Public Watering Places.

Report by Inspector J. W. Boulton on the Clare Tank, road from Ivanhoe to Balranald, in charge of Robert Oxley, caretaker, for 6th December, 1886.

State of drains.—Full of water; 3 inches of rain up to time of my visit; were running full.
 Silt tank.—Full of water.
 Inlet or flume.—In good order; I reported this as being too small on my last visit; it, however, seems to have met all requirements; the tank is quite full.
 Main tank.—Quite full.
 Embankments.—In very good order; rain does not appear to have much effect on them.

P.W.P.,
86-5,777.

Mr. Hiles,—Copy Mr. Wood's Minute and Mr. Stillwell's E.T. Message on this for transmission.—W.C.B., 29/6/86. Fencing around Clare Tank is in hand.—A. W. STILLWELL, 26/6/86.

Watering

Watering Appliances.

State of supply tank.—Good ; has been newly tarred outside, which is a decided improvement on paint.

Troughing.—In good order, rails high.

Machinery.—In good external order ; plunger requires leather instead of rope-yarn.

Paddocks and Fencing.

State of fencing.—None. At my last visit, I reported tank as having no fence round it ; still in the same condition.

State of gates.—None.

Remarks.—The question of caretaker's wages has been referred to separately ; 4.65 in. rain here since October 1st.

Weekly depth of water since last report.—Tank quite full—17 ft. 10 in.

Caretaker's Work.

Work done by caretaker.—Laid out by Mr. Yeo, 4/11/86 : Tar troughs, trim embankments, raise a bank round service tank, and general duties.

Work laid out for caretaker.—To complete tarring troughs and clean drains when dry.

Remarks and recommendations.—The fencing of the tank is, I think, an urgent matter. It is now 8 months since I referred to it ; men were engaged and got a few posts in, and were removed to start fence at Dolmoreve, a place that could be well left unfenced until the fate of the well was decided. I think this work the most pressing of any on the road ; stock once getting into the tank would be drowned. Mr. Waugh, of Clare, offers £25 a year rent. He wishes, he says, to keep away shanty keepers. I think all these tanks worth more rental than this. This completes Mr. Yeo's district, and I must say he has every thing in very fair order, and is most anxious to maintain the efficiency of the public watering places under his charge.

JAMES W. BOULTBEE,

Inspector of Public Watering Places.

Ivanhoe, 10 December, 1886.

The Chief Inspector of Public Watering Places.

Report by Inspector J. W. Boulton on the Woolloondool Well, road from Hay to Booligal, in charge of Stewart, tenant, for 16th November, 1886.

P.W.P.,
86-5,441.

State of shaft.—Good.

Whim, &c.—In very good order ; lately tarred.

Rope, buckets, &c.—Rope good ; buckets good, but one allowed to remain in water ; caretaker cautioned about this.

Watering Appliances.

State of supply tank.—Good ; been tarred since last inspection.

Troughing.—Good ; been tarred since last inspection.

Machinery.—Spindle of outlet-valve bent ; great force required to open it.

Paddocks and Fencing.

State of fencing.—See remarks, &c.

State of gates.—Good.

Remarks.—The works are certainly in better condition than at my last visit ; caretaker is Cobb & Co.'s groom.

Weekly depth of Water since last Report.—18 feet 3 inches.

Caretaker's Work.

Work laid out for caretaker.—To get spindle of outlet valve straightened, and bale the regulation quantity of water. This was entered in his journal in writing by me.

Remarks and Recommendations.—The T.L. is newly fenced with split pine posts and six wires of barbed wire—in my opinion a most useless expenditure, the plain wire being ample for all requirements. The wire is of a poor description, named, I think, the fish barbed wire. It is impossible to make a really satisfactory splice in this kind. It is fastened to the posts by staples, and in most cases the post is split an inch up from each staple. In some cases the staple is bent over and broken, and there is a very poor strain on the wires. The wire is flat iron galvanized with a small core and barbs cut. The lessee has not yet sent a horse out to caretaker. He however was expecting one daily. He has not consequently baled the regulation quantity.

JAMES W. BOULTBEE,

Inspector of Public Watering Places.

Hay, 16 November, 1886.

Report by Acting-Inspector Low, on the Hulong (37) Tank, road from Whitton to Lake Cudgellico, in charge of Samuel Leighton, caretaker, for 9th July, 1887.

P.W.P.,
87-3,261.

State of drains.—Nearly all full of water ; where bottom can be seen free from silt. One of these already blocked ought to be banked up nearer to tank to prevent water running from tank.

Silt tank.—Full of water. No silt could be found.

Inlet

Inlet or flume.—In good order, under water, worked all right; this was closed; when opened, found no more water would run into main tank.

Main tank.—In good order and full of water. Indicator registered 17 feet 1 inch.

Embankments.—In good order and very free from corrugation. Caretaker has not recently been raking these, in case of destroying couch-grass lately sown. Couch-grass on these showing in different places.

Watering Appliances.

State of supply tank.—In good order and full of water.

Troughing.—In good order and full of water, free from silt. No silt tap, which is much wanted. The rail along middle of troughing is highly spoken of by the adjacent owners of stock.

Machinery.—In good order. After being put through all trials, worked satisfactorily. Graduating hand wheel of injector broken by contractor, while erecting engine-shed. Caretaker reports that he has several times spoken to Mr. Stillwell, R.S., as to this, when Mr. Stillwell told him not to interfere with it, and that he would see that the man who broke it should replace it. Chimney of engine rusty much, owing to roof of engine shed not being flushed.

Paddocks and Fencing.

State of fencing.—In good order. In consequence of these being lately strained corner-posts slightly shifted.

State of gates.—In good order.

Remarks.—About 450 acres here have been ringbarked by caretaker; very little scrubbing required. Caretaker evinces a desire to perform his duties. Couch-grass appearing in small patches on embankments. Angle-shoots as placed act well, but more ridging is required. Mr. Overseer Elworthy has ordered this.

Rates collected since last report.—Month ending April, 1887—5s. 3d.; May—£1; June—4s 6d.; total, £1 9s. 9d. Checked caretaker's books and found them correct.

Traffic since last report.—Month ending April, 1887—14 horses, 35 cattle; May—32 horses, 176 cattle; June—3 horses, 48 cattle.

Weekly depth of water since last report.—April—2nd, 16 feet 10 inches; 9th, 16 feet 11 inches; 16th, 16 feet 10 inches; 23rd, 16 feet 9 inches; 30th, 16 feet 9 inches. May—7th, 16 feet 9 inches; 14th, 16 feet 8 inches; 21st, 16 feet 8 inches; 28th, 16 feet 8 inches. June—4th, 16 feet 8 inches; 11th, 16 feet 8 inches; 18th, 16 feet 8 inches; 25th, 16 feet 9 inches.

Caretaker's Work.

Work done by caretaker.—Ringing box timber, all good pine being left; attending to drains, levelling embankments. January 22: Caretaker tar-paving, polished facings, and keep drains clean. March 4: To ring timber and sow couch-grass seed. June 11: To continue ringing.

Work laid out for caretaker.—July 9: Caretaker will continue keeping drains clean, bank-up drain (already blocked) closer to silt-tank; tar chimney, and cut small drain round supply tank.

Remarks and Recommendations.—The tenders for fencing this have been accepted, as contractor is splitting posts. Enclosed is copy of specification, which appears to me to be novel as well as absurd, *i.e.*, dimension of posts and depth in ground. I can add in this I am borne out by the opinion of Mr. Cowper, manager, Conapaira, who has had much and long local experience in the erection of fences. The price, £700 for fencing Mount Elliot Pulletop, and this T.L. appears also very high, as a sub-contract, which I saw, has been let for splitting, erecting, boring, and wiring at £16 10s. per mile, this does not include large post rails and gates. In conjunction with Mr. Overseer Elworthy, I would beg to recommend that caretaker's cottage be erected south-west of main tank, east and adjoining present camp. The drain referred to, as being ordered to be closed at present, leads water from instead of to silt-tank. The drain round supply-tank is to prevent water lodging near pillars.

JOHN LOW,
Inspector of Public Watering Places.

Narandera District, 9 July, 1887.

The Chief Inspector of Public Watering Places, Sydney.

FENCING SPECIFICATIONS.

Special Lease Areas on road Whitton to Cudgellico, Hay District.

THIS contract comprises the fencing, gates, and slip-panels, as follows:—At Hulong Tank, fencing in lease area 642 acres, one gate, and two slip-panels; at Mount Elliott Tank, fencing in lease area 640 acres, one gate, and two slip-panels; at Pulletop Tank, fencing in lease area 640 acres, one gate, and two slip-panels; making a total of three areas to be fenced, comprising in all some 1,140 chains of fencing, more or less, three gates, and six slip-panels.

The fencing to be erected on the surveyed lines or those set out by the officer in charge, and to be finished 4 feet 6 inches above the ground line; posts to be 7 feet long by 9 inches by 3 inches thick, sunk 10 feet apart from centre to centre to a depth of 2 feet 6 inches; straining posts to be 9 inches diameter, sunk 3 feet in ground, to be provided at intervals of twelve panels. All corner posts to be 12 inches diameter, sunk 3 feet 6 inches in ground, and securely struttled.

Six wires to be used for all the fencing; the top wire to be No. 4 gauge, all the rest No. 7; all wires run through every post.

Gates.—One good five-barred field-gate to be fixed where directed, to be 5 feet high and 12 feet wide. The gates to be constructed of best red gum timber, wrought and planed, and strongly framed to 4 x 3 uprights, and strengthened by a $\frac{3}{4}$ -in. round, wrought-iron, diagonal, tension brace, nutted and washered. The gates are each to be supported on red gum posts, 18 inches diameter, 9 feet long, and sunk 4 feet into the ground; the underground portion to be well charred, and portion above ground level squared and chamfered, and top shaped, and the whole well tarred.

The gates to be each hung on two double-strap wrought-iron hinges, 3 feet 6 inches by 2 $\frac{1}{2}$ inches thick, each secured by $\frac{5}{8}$ -inch bolts and washers, each hinge to have an eye worked in the solid to take a wrought-iron crook 1 inch in diameter, which shall pass through the posts securely nutted and washered; each gate to have an approved spring fastening and catch fixed complete. The

The scantling of the gate timbers shall be as follows, viz., uprights 4 inches x 3 inches, bars and strut, 4 inches x 1½ inch, to be secured by ½-inch bolts, and to receive three coats of Peacock's patent paint; the ironwork to be painted black.

Slip-panels.—There shall be a 12-foot slip-panel at each side of gates, with 12-inch diameter posts and five rails 7 inches x 3 inches, accurately morticed into posts. The fence, gates, and slip-rails to be sheep and pig proof. No wires to be strained from gate or slip-panel posts.

Timber.—The timber throughout to be of the best description, to be straight and sound, without wave, shake, gum veins, or sun cracks, and to be perfectly free from all other imperfections or defects. Pine timber for the fence posts, and the best red gum for gates and slip-panels and posts.

Time.—All the works specified to be completed within three months from date of signing the bond irrespective of bad weather or any other cause of delay, except a written order be given by the officer in charge not to proceed with the work or to increase the same, when a proportionate extension of time must be allowed.

Tenders to state a bulk sum for all the work specified, also a schedule of prices for the fencing and for gates and slip-panels at which any deductions or additions shall be valued; such additions or deductions, no matter to what extent ordered, shall not vitiate or set aside the contract.

Conditions.—In all matters relating to this contract not herein specified, the Contractor to be bound by the printed general conditions hereto attached.

Sir,

Narrandera, 25 October, 1887.

P.W.P.,
87-5,615.

Referring to the fencing round the tenant's leases at the Hulong, Mount Elliott, and Pulletop Tanks I have the honor to draw your attention to the following:—

The contract time allowed for the completion of the fencing is now up, and the fence at each place in a very backward state.

The depth of the post-holes is 2 ft. 6 in., this I am of opinion is unnecessarily deep, and must greatly increase the cost of erection; 22 inches is, I think, generally considered deep enough. Every twelfth post is a straining post, and each panel 9 ft. from centre to centre; the length of each strain is consequently 108 ft. The wire to be used is Nos. 8 and 6, and I wish to point out that it is almost impossible to have the heavy wire properly strained in such short lengths. The kinks will not be taken out of it.

The lines of the fencing have followed the lines of the T.L. survey, excepting in the neighbourhood of the tanks, and it is arranged in such a way as to leave the tank troughing, &c., outside of the area fenced. At Pulletop there will be hardly sufficient room between the fence and the troughs, and the ingress and egress for stock will be very inconvenient, as the mob watered and leaving the troughs will be in the way of the incoming mob.

At Mount Elliott the tank, &c., is quite separated from the T.L. by a road; there are, in fact, two roads, one each side of the tank, and placing the tank in a loop. The system of leaving the works outside the fenced area is, I think, to be deprecated, since the drains, and in places, crab holes near the tank, hold water for some time, and many a drink is stolen that should otherwise have been paid for. The caretaker cannot always be on the lookout. The fencing in of the whole gives greater security, the troughs are not left in an unprotected state, and can be kept constantly full, and every beast coming into water is under the caretaker's eye. The enclosing of the troughing is, I think, a matter that is generally considered by a person in offering to lease. The posts of the fencing are very good and substantial.

I have, &c.,

JAMES W. BOULTBEE,

Inspector, Public Watering Places.

With respect to the fencing alluded to it is evident this Department can take no action to enforce contractors to comply with the condition of their tender, nor yet to interfere with the unnecessarily expensive character of the work. The case is another instance of the importance of these works being dealt with by one authority. Mr. Boulton may perhaps be directed to let the caretaker make the required alterations as soon as the fence is transferred, to enable stock to have free ingress and egress.—H.G., 31/10/87. The Under Secretary.

Submitted.—G.E.H. (*pro* U.S.) Approved.—F.A., 1/11/87. Mr. Inspector Boulton, for his information.—H.G., B.C., 4/11/87. Noted.—J.W.B., 8/11/87.

Pulletop Tank.

Sir,

Public Watering Places Office, Narrandera, 3 December, 1887.

P.W.P.,
87-6,539.

When passing this tank last week I was informed by the caretaker that the sub-contractors for the fencing had thrown up their work and cleared out on account of their inability to get paid. The posts are all in, and it only remained for the wire to be put in and the gates fixed.

I also noticed the men were not at work at Mount Elliott Tank, but I do not know if they also have stopped work. I was not at Hulong Tank.

I have, &c.,

W. J. ELWORTHY,

Harry Gilliat, Esq., Chief Inspector, Public Watering Places, Sydney.

Overseer.

Connect with previous papers.—H.G., 6/12/87.

XXIII.

Papers *re* Cottages.

Sir,

Government Tank, Boro, near Walgett, 27 July, 1883.

I beg to call your attention to the unsafe camp I have here. It is made up from the fragments of old bark which the contractor of this tank left as useless. It is open to be blown down at any hour. I am obliged at present to carry on my person all moneys received, having no place to keep it with safety.

I am, &c.,

WILLIAM REGAN,

Caretaker.

The Chief Inspector of Stock.

Minute by Chief Inspector of Tanks, and Wells.

Be so good as to report as to whether it would assist in letting the Public Watering Places to erect at them plain substantial 2-roomed weatherboard cottages for the use of the tenants or caretakers. It is evident that something of this kind is greatly needed where caretakers (now living in tents) are in charge, and the cost, I think, would be repaid in more rent and greater certainty in letting.

Mr. Gilliat.

A.B., B.C., 31/7/83.

After fencing, no doubt a house would be a great assistance in leasing. If there was any traffic over the road that could be reckoned on as affording a regular income. But no complaints have been received from other caretakers, who live in tents, while this man has not at all a bad hut, that with a few hours work he could make very comfortable.—H.G., B.C., 1/8/83.

Minute from Mr. Bruce, Chief Inspector of Stock, *re* caretakers' huts.

If the question here raised be considered as regards the caretaker, the accommodation suggested will, I think, be considered necessary, both for his reasonable comfort, and for the safe custody of the fees he collects, neither of which a tent can afford.

Then, again, the want of this accommodation precludes any but single men from engaging as caretakers, which of course is also a disadvantage. When, therefore, it is considered that the erection of a hut or cottage as described, or of any other construction suitable for the locality, would also be a great inducement to desirable persons tendering for these works, it is submitted that the accommodation should be provided. The building would cost less than £100 at all the public watering-places.

A.B., 6/8/83.

Submitted.—H.W., 7/8/83. I think the buildings ought to be provided, but perhaps the papers should be sent to Mr. Bennett for his report.—J. P. ARBOTT, 7/8/83. The Under Secretary for Works.—H.W., B.C., 8/8/83. Mr. Bennett.—J.R., B.C., 10/8/83.

Buildings may be required to make the tanks let. I do not think any additions will make them pay interest. There is no money at the disposal of this Department for such houses, the cost of which for all the works would be over £10,000, and it would be a question for some consideration to make the buildings habitable in such a trying climate. Galvanized iron would be cheapest; timber might be more habitable, but perishable houses of gypsum, where available, or "adob" or "pisé," when gypsum is to be had, would be the best; the roofs to be thatched if rushes or coarse grass could be had. The minimum accommodation should be stated by the Mines Department, it must be very small, not to exceed £100. When money is made available and the material and accommodation required is stated the houses can be arranged for by this Department; it should also be stated at what works the houses are most urgently wanted, and also if they should be included in the original contract in every case.—W.C.B., 13/8/83. Under Secretary, B.C. Submitted.—J.R., 16/8/83. Approved.—17/8/83. Under Secretary for Mines, B.C., 18/8/83.

Mr. Gilliat to report:—

1. Whether a sufficient 2-roomed hut, say 12 × 24, of the material here mentioned by Mr. Bennett, or of logs or slabs, might not be erected by the caretakers under the oversight of the maintenance men of the Roads Department, doors, windows, iron for roof, &c., &c. being found by that Department.
2. What such huts, if built by contract, with the articles mentioned found by the Department, would cost? And
3. Which he would consider the best mode of providing the proposed accommodation.

A.B., B.C., 21/8/83.

Mr. Road-Superintendent Stillwell to the Commissioner for Roads, as to houses for caretakers of Tanks and Wells, Hay District.

REFERRING to my report of 30th ultimo recommending galvanized iron for construction of caretakers huts, the portable iron houses shown on attached sheet by McLean, Bros. and Rigg, of Melbourne, appears suitable as regards prices and portability, the weight being about 1 ton a room.

A. W. STILLWELL,

27 June, 1885.

Mr.

Mr. Flynn.—This purchase is approved of long ago, and the house erected; look up papers.—W.C.B., 29/6/85. Mr. Hiles.—Let me have any papers as to houses, cost of, recently put up at Parramatta River Bridges, and of one sent to Polygonum Hut, with weight.—W.C.B., 29/6/85.

Tanks & Wells,
85-3,102.

Mr. Wood for report. To state the cases in which we have supplied or purchased houses, and their cost, and, in view of the opinion of the Under Secretary for Mines that needless expense was incurred in many instances, the question whether sheds for engines should also be dealt with.—W.C.B., 4/8/85.

Minute by Mr. A. P. Wood, Assistant Engineer, Roads and Bridges, *re* caretakers' huts, Tanks and Wells.

As it has been advanced by the Minister for Mines that needless expenditure has been incurred in the construction of tanks, and as, under proposals that have been made by the officers of that Department, it has also been arranged that still further expenditure is to be incurred in the construction of huts for the caretakers in charge, an expenditure which has been sanctioned by Parliament, and provided for by a sum of £18,000 on this year's Estimates, it now seems advisable that before expending that money, as proposed, the opinion of the Mining Department should be obtained, and instructions issued by the Hon. the Minister for the construction of the works. At the Lignum Well, on the road from Booligal-Wilcannia, a two-roomed weatherboard cottage was erected for £90; the rooms are 12' x 12', and 12' x 8' respectively, and the roof is corrugated iron. I think this may be taken as the average cost of these huts, or say, including a weather shed for the steam pumps, £100 for each tank, as provided on the Estimates. There will be many cases, more particularly between Cobar and Hillston, and Nymagee and Condobolin, where by a modification of the design, using half-round pine set horizontally in slotted studs in lieu of weatherboards, a considerable saving might be effected, and in the timberless Riverina district corrugated iron might be used and reduce the expense as compared with any kind of timber walling.

The construction of these huts will very probably have an influence on the tendering for leases of watering-places, and produce a rental in excess of the interest on the capital outlay; they may also be the means of a reduction in the wages of the caretakers that will meet the same end. This possibility is worth consideration in dealing with the question.

The weather sheds for the pumping gear will have to be about 12' x 12', and will average about £20 each; they can be put in hand at once.

ARTHUR P WOOD.

As I learn from Mr. Wood that many of the caretakers are erecting in their spare time sufficient huts, I think some small bonus should be given in such cases to encourage such economy, and that doors and windows might be supplied, the cost to be paid by this Department on the certificate of the Mines officer. I also advise that the Roads officers, in cases where houses should be provided, be authorized to do so by this office of the character best suited to the locality, pine, timber, concrete or brick, or stone.—W.C.B., 9/8/85. Under Secretary, B.C., 9/8/85.

Submitted.—J.R., 13/8/85. Forwarded for the consideration of my hon. colleague the Minister for Mines.—F.A.W., 14/8/85. The Under Secretary for Mines.—J.R., B.C., 15/8/85. Mr. Gilliat, B.C., 18/8/85.

Letter from The Under Secretary for Mines, forwarding copy of minute with regard to the erection of the caretakers' huts at Public Watering Places.

Sir,

Mines Department, 4 November, 1885.

Herewith I have the honor to forward you the copy of a minute with regard to the erection of caretakers' huts at Public Watering Places, with copy of the minute of the Secretary for Mines thereon. I also supply a list of the public watering-places, and have marked these at which a hut is required.

HARRIE WOOD,
Under Secretary.

Will Mr. Wood [urgent] say what action should be taken on this, and report in detail papers, also as to the sort of huts, and if there are not plans in this office.—W.C.B., 11/11/85. Mr. Wood, Walgett.

Mr. Wood.—Have tracing made and general estimate of total cost for places when signed, and send to Mines for approval.—W.C.B., 14/11/85.

A rough draft of a two-roomed hut will be found on my office table, but I do not see that there is any immediate action required; the matter can stand over until my return; or, if the Commissioner thinks it advisable to have plans put through, Mr. Smith can be instructed to have them prepared on the basis of the rough plan referred to above.—A.P.W., 18/11/85.

Minute Paper.

Re Caretakers erecting cottages at Public Watering Places.

I do not think there would be any difficulty in settling the questions of bonus and right to cottages erected as here proposed by caretakers. They are now fully paid for their time, and the offer of even £5, or, at the outside, £10, additional for erecting a cottage, coupled with the additional comfort to themselves, would be sufficient to induce caretakers who can do so to put cottages up.

As to the caretakers being capable of erecting these cottages, the officers of the Works Department would no doubt give such explicit directions as would enable any fair bushman to do the work, and they would, of course, also supervise the erection as it proceeded. The overseer, also, could see how the work was being done. I think, therefore, that, unless where it has been decided to erect iron cottages, the caretakers, if they are at all capable, should be called upon to do this work, being, of course, supplied with the necessary materials. In this way, I believe, half the cost of the cottages would be saved, and, at most places, the caretakers have little else to do. In any case it will, I think, have first to be decided at which of the watering-places iron cottages should be erected, and at which weatherboard or round pine; and if the Works Department require any information in coming to a decision on this point, the different overseers might be instructed to report how far materials for weatherboard or half-round pine cottages are procurable in their districts, and their cost per cottage laid down at the watering place.

On its being decided how many iron cottages are to be erected, tenders could be at once called for them, and the necessary steps could also be taken for the erection of the others by the caretakers, should that course be approved by the Honorable the Minister.

The

Approved.
Let this be
done first.—
J.P.A.,
17/10/85.

The weather sheds to protect the steam pumps should, I think (as they would be more easily constructed), be at once proceeded with by the caretakers where material is to be had, or is readily procurable, on plan and specifications prepared by the Works Department.

It has been decided not to allow Messrs. Wright, Heaton, & Co. for the improvements claimed by them.

ALEX. BRUCE,

Chief Inspector of Stock.

Submitted.—H.W., 6/10/85. Mr. Gilliat, B.C., 7/10/85.

Minute from Chief Inspector, Tanks and Wells, *re* caretakers' huts at Public Watering Places.

Department of Mines, Stock Branch, 28 September, 1885.

WITH reference to Mr. A. P. Wood's minute on huts for caretakers, I must submit that the object of this Department in urging their immediate construction has been precisely for the reasons given by Mr. Wood, that, when completed, "they will very probably have an influence upon the tendering for leases, and produce a rental in excess of the interest on the capital outlay." It is with the view to secure this increased rental, to obtain a better class of tenants, and to reduce the wages of caretakers as speedily as possible, that the early construction of these buildings and the fencing of the lease areas has been pressed for.

Tanks & Wells,
85-3,450.

I agree with Mr. Wood generally as to the use of iron in timberless country, and where carriage is dear, and in the use of half-round pine in those neighbourhoods where it is to be procured. The two-roomed cottage will be sufficient, I consider, where there is a long or costly carriage, but where the material can be delivered at a moderate outlay, I would suggest that three rooms may be given.

With respect to giving a bonus to such caretakers as have huddled themselves, the difficulty I anticipate is that upon removal or discharge it will frequently be hard to convince them that they have no right or interest in the building. I think it will be better on the whole, and found to work with less risk of misunderstandings, if these improvements are made, as a rule, by the Works Department upon some generally uniform plan or plans, according to the district. Comparatively few of the caretakers, so far as I am aware, have yet huddled themselves, and those are noted in the accompanying list of Public Watering-places.

At the Muriel and Hermitage Tanks, Cobar and Nyngan Road, claims for improvements have been made by Messrs. Wright, Heaton, & Co.; but as they are upon reserves, and made without the sanction of the Minister, it is perhaps doubtful if they can be sustained. They have been referred to the Works Department to learn whether they are willing to take them over as caretakers' huts, and make some allowance for labour and material.

At the Two Waterholes the late lessee, Barrett, made a claim for his hut; but it was, I think, reported adversely upon by the local works officer. A hut was also erected at the Corilla by the lessee; upon this action has been taken.

The caretaker at Currawcena has erected a hut, and made a claim for it; and another has been put up by the caretaker at Keighran's, for his wife and family. In the three latter cases a bonus might perhaps be awarded if the Works Department approve of the huts, and upon the distinct understanding that it is not in recognition of any claim to the building or material. The construction of weather sheds at all the watering-places fitted with steam pumps is, I think, of immediate urgency.

I submit herewith for the consideration of the Hon. the Secretary for Mines a list of the Public Watering-places at which I recommend caretakers' huts may be erected at once. The number amounts to ninety-four in all for the present, and does not include any of those recommended for construction.

H. GILLIAT.

Copy of minute by Minister for Mines.—I think these ought to be erected; it may be referred to Works Department.—J. P. ABBOTT, 31/10/85.

Forward copy of this minute with list to Works Department with letter.—H.W., 2/11/85. Letter, with copy of minute, to Works Department, 4/11/85.

Tanks and Wells.

Commissioner. Referring tenders for cottages to Mines. 6/7/86. Under Secretary, B.C.

Papers returned to this office on the 31st ult., with a verbal message that as they were urgently required no action beyond the memos. referring to huts built by caretakers. Sent back this day for a written reply to the Commissioner's minute as to the necessity of erecting these cottages.—J.C., 3/8/86.

Miscellaneous,
86-1,022.

Minute by Mr. Bennett, Commissioner and Engineer for Roads and Bridges, *re* Cottages for caretakers, Tanks and Wells. Sydney, 6 July, 1886.

PARLIAMENT having granted a vote of £10,000 for erection of caretakers' cottages, this Department, after correspondence with the Mining Department as to the necessity for, and subsequently as to the nature of, the buildings required, prepared plans and specifications, and invited tenders for these buildings in the different districts where they are required.

P.W.P.,
86-3,397.

The enclosed tenders have been received, the prices ranging from £68 to £114, the average for 74, as shown on attached schedule, being £85 each. The vote provided for 100 at £100 each, so that as far as tenders have been received the cost with three rooms will be 15 per cent. under the original estimate.

Before finally committing the country to this outlay it would be well to refer the papers to the Mines to obtain the opinion of that Department as to the necessity for erecting these works.

Under Secretary for Mines, B.C., 8/7/86.

W. C. BENNETT, 7/7/86.

It is most desirable that this paper be put through without delay; it has been delayed here unavoidably. The contractors are pressing for replies.—W.C.B. The Under Secretary for Mines.—J.R., B.C., 8/7/86.

Works average, £85 each; Mines average, £43 odd for thirty-four cottages let and completed. The average £50 each mentioned by Mr. Gilliat, will not be exceeded.

Minute by The Chief Inspector, Public Watering Places.
Caretakers' Cottages.

Sydney, 24 August, 1886.

THE annexed papers, covering tenders for the erection of huts at a number of public watering places have been forwarded to this Department by the Commissioner and Engineer for Roads and Bridges.

P.W.P.,
86-4,031.

I should have hesitated in expressing any opinion upon them had it not been for the final paragraph of the covering paper which, as it is minuted forward B.C. has, I assume, the sanction of the Commissioner for Roads.

I have no doubt of the necessity for these huts, and have given the reasons on which I found my view, so frequently to the Works Department, that it appears needless to repeat them. The outlay has been sanctioned by the Secretary for Mines, approved by the Cabinet, and the money voted by Parliament. The carrying out of the work is in the hands of the Works Department.

But since the tenders have been sent to this Department it is invited to give an opinion upon the necessity for executing the work and committing the country to this outlay. It appears to me I am quite at liberty to say that while nothing has occurred to render shelters at public watering places unnecessary in most instances, the lowest tenders in the schedule are too high for the services required.

HARRY GILLIAT,

Chief Inspector of Public Watering Places.

The Under Secretary for Mines.

Should not such buildings as are required for this purpose be procurable at considerably less prices than those quoted? Will the Chief Inspector say what in his opinion they should cost?—H.W., 24/8/86. I think a fair price on an average would be £50 sterling.—H.G., 25 Aug., 1886.

This work would probably be done much more cheaply and more satisfactorily by lessees and caretakers than in the manner proposed.—H.W., 25/8/86. Submitted. Approved.—J.F., 26/8/86. The Under Secretary for Public Works.—H.W., B.C., 31/8/86. Minute herewith.—A.P.W., 8/9/86.

Minute by the Assistant-Engineer for Roads and Bridges to The Commissioner for Roads, &c.
Caretakers' Cottages.

Sydney, 8 September, 1886.

As the officers of the Mining Department state that they can carry out the construction of caretakers' cottages much more cheaply than this Department, and that their lessees and caretakers can probably do the work in a more satisfactory manner than can be done by regular contractors, under the supervision of our officers, I think the erection of these buildings might be transferred to that Department, so that it may have an opportunity of practically proving the statements made; but as my experience of the caretakers employed by that Department, and the character of the work done, lead me to doubt the results, I consider that in justice to ourselves the same conditions of uniformity of design, character of workmanship, and cost should be imposed on the Mines officers in regard to these works as was imposed on us by them.

Our field officers should have the opportunity of inspecting and reporting on the character of the work done, and in addition this Department should be furnished with the cost of these various works when completed.

Tanks and
Punts,
86-1,271.

I have seen the work done by these caretakers, and therefore feel fully justified in doubting whether better results can accrue from the proposals of the Mines than from the regular practice of this Department, with the work under the supervision of competent and trained officers.

ARTHUR P. WOOD.

The Mines might note that the erection of huts is being carried out at the following watering places, and that no further action is therefore necessary:—Sixteen-mile Gums, Pine Ridge, Black Swamp, (Deniliquin district;) Bullagreen, Derribong, (Dubbo district;) Mowabla, (Cobar district;) Coolaman, (Wagga Wagga district.) I endorse Mr. Wood's recommendation that this work should be transferred to the Mines. I have been forty-five years engaged in such works, and I question very much if there is any officer of the Mines has that experience. Much unjust faultfinding with our works was made when they first were authorized to lease them, and I think that the result of this proposal will vindicate the correctness of this Department as fully as the result of work done since that time.—W.C.B., 8/9/86.

Submitted, 11/9/86—J.R. Transfer works to Mines if that Department will undertake it.—W.J.L., 13/9/86. The Under Secretary for Mines.—J.R., B.C., 14/9/86.

Minute by Chief Inspector, Public Watering-places, *re* Caretakers' cottages.

Sydney, 15 September, 1886.

P.W.P.,
86-4,419.

REFERRING to the annexed papers, but chiefly to the minute of the Honorable the Secretary for Public Works, I beg leave to submit that there are no apparent objections to the construction of huts at the public watering-places being undertaken by this Department, subject to the transfer to the credit of the Honorable the Secretary for Mines of the unexpended balance of the vote taken for that purpose, and independent of any conditions, as suggested by Mr. A. P. Wood.

HARRY GILLIAT,
Chief Inspector, Public Watering-places.

The work may be undertaken free of the conditions referred to.—H.W., 15/9/87. Submitted. I think it would be better for the Service if all work connected with watering-places was undertaken by this Department.—J.F., 16/9/86. A copy may be prepared for transmission to the Department of Public Works. Copy to Works.—H.G., 17/9/86. The Under Secretary for Works.—H.W., B.C., 17/9/86. The Commissioner for Roads, B.C., 21/9/86. Mr. Wood.—W.C.B., 23/9/86.

The offer to hand over the construction of these works to the officers of the Mines was made under certain conditions, which would have ensured uniformity of design and good workmanship, and in addition provided for this Department being furnished with the cost when completed. This latter provision was in self-defence a necessary one, inasmuch as Mr. Gilliat has queried our recommendations, and put down the average cost of construction at £50. This, for a three-roomed cottage is, in my opinion, absurd. If Mr. Gilliat's estimate refers to reasonable accommodation and two rooms, I would draw the Commissioner's attention to the fact that the necessity for three rooms was urged on us by the Mines; and we are not responsible. But, even taking two rooms as the basis, I maintain Mr. Gilliat's estimate will be found incorrect when the whole of the works are averaged. Exception has been taken to any conditions being attached to the transfer. This being the case, our offer should be withdrawn, as such an open arrangement would, considering the spirit in which this Department has been dealt with by the Mines officers, be unfair to ourselves. I would add that my experience of the caretakers engaged by the Mines leads me to a very different opinion to that expressed by Mr. Harrie Wood. We have constant complaints sent to this office by the local officers, showing the inefficiency of these men—complaints that in all cases that have come under my personal notice have been fully substantiated, notwithstanding the reports of the Stock Inspectors to the contrary, and I now consider that, under such conditions as are now imposed by the Mines, the result will be inferior work in the cottages, and an excuse for greater neglect of their proper functions.—A.P.W.

Letter from Commissioner for Roads and Bridges.

Sydney, 6 October, 1886.

I RETURN this paper to the Honorable the Minister for Mines in compliance with his request.

The withdrawal of these works from this Department can only be regarded as a censure, which I do not think Mr. Fletcher intended. Mr. Abbott refused to withdraw them from our charge. I attach press copies of the minutes from this office, which accompanied the papers.

W. C. BENNETT.

The assent to the proposal that the Mines should build the cottages was conditional, which condition they decline to accept.

I am afraid that the intention of my minute has been misinterpreted. It never was intended to reflect in any way upon the Commissioner for Roads. I have too much confidence in that gentleman's great ability to write or even sanction anything calculated to reflect upon Mr. Bennett or his Department. All that was intended by the minute in question was, as the majority of the caretakers are handy men, they could erect a house for themselves, if we provided the material, at far less cost than could be done by contract. If the minute was thought to convey any other meaning than I have stated, I now desire to say that it was not so intended.—J.F., 20/10/86.

The Commissioner for Roads.—G.E.H. (for U.S.), B.C., 20/10/86.

The wishes of the Minister with reference to the houses will be carried out, and the tenders not be accepted by this office for those not already arranged for as stated below, the cost of which will be about £600. It is hoped that the construction of these houses will not be allowed to interfere with the caretakers' other duties, as in many cases lately complaints have been made of the most reprehensible carelessness

carelessness of some of those men with reference particularly to pumps and machinery, *e.g.*, that lately sent on from Boonoonoo.—W.C.B., 27/10/86. The Under Secretary, B.C.

The works for which provision has been made by this Department are Black Swamp, Pine Ridge, 16-mile Gums, Girilambone, Bullagreen, Derribong, Mowabla, Coolaman.—A.P.W., 1/11/86. The Under Secretary for Mines.—J.R., B.C., 3/11/86.

Minute by The Chief Inspector of Public Watering Places.

Sydney, 21 October, 1886.

P.W.P.,
86-5,013.

It appears from the annexed report of Mr. Inspector Boulton that the tenants of The Lake, Grass Hut, and Ledknappa Tanks are prepared to construct huts on the general specifications quoted for sums from £50 and £55 sterling.

Before dealing with these cases, it will be perhaps desirable that I may be informed if the minutes of the Hon. the Secretaries for Works and Mines relating to the construction of huts by this Department are to be acted upon.

The Under Secretary for Mines.

HARRY GILLIAT.

The Commissioner for Roads called attention to the terms in which the decision in regard to the erection of such huts was couched, and the Minister has explained that he had no intention of reflecting upon the Commissioner, but I understand nothing has been done to set aside the decision of the Minister for Works and the Minister for Mines to the effect that the vote should be turned over to this Department with a view to the work being done at the least possible cost.—H.W., 27/10/86. Submitted.

Letter from The Under Secretary of Public Works.

Sir,

Sydney, 21 December, 1886.

P.W.P.,
86-5,908.

In reply to your B.C. communication of the 29th ultimo, with reference to the unappropriated balance of the vote for buildings, &c., for caretakers of tanks, item 465, on the Appropriation Act of 1885, I am directed to inform you that the Secretary for Public Works has approved of the transfer to your Department of the sum of £9,000 from the vote in question, and that the Treasury has been advised to that effect.

The Under Secretary for Mines.

JOHN RAE.

XXIV.

Walla Walla Tank.

Copy of minute by Mr. Bruce.

Memo.—Applications for New Watering Places.

21 October, 1884.

I HAVE already suggested, in order to place the action in regard to applications for the construction of fresh watering places in the proper train, that they should all, as they are received, be sent to the overseers for the district in which the sites of proposed works are, with the view to the necessary information being obtained to enable Mr. Inspector Gilliat to report upon them, and I would further suggest, in regard to this matter, that the Department of Public Works should be invited to send all applications received by it for new public watering places of classes A and B, or alterations or improvements of existing works of those classes to this Department, to be dealt with in the first instance as here suggested. It was arranged between the two Departments that this course would be followed, but a good many new works have been begun, and some nearly constructed before this Department was aware that they had been decided upon through some such course as that here proposed not having been taken.—A.B., 28/10/84.

Stock Branch,
1,283.

Submitted—H.W., 30/10/84. Approved; where are the works situated which have been begun by the Works Department without reference to this?—J. P. Abnor, 31/10/84. See tanks marked * in accompanying list.—A.B., 3/11/84. The Under Secretary for Mines. Submitted.—H.W., 4/11/84. Seen.—J.P.A. Letter to Works.—13/11/84.

20 May, 1884.

Tanks & Weils,
84-583.
With Peri
Springs papers.

I may add that it is only within the past ten months that the Department of Mines has been admitted to have any voice in the selection of sites of works, and that I am not aware of any instance in which it has been consulted with regard to their construction.

H.G.,

20/5/84.

Extract from report by Mr. Inspector Low on Tanks in Albury District.

Sir,

Stock Office, Albury, 26 July, 1887.

P.W.P.,
87-3,590.

Referring to your letter of instructions of 30th June, and relative B.C. documents, I have the honor to report that on the 16th, 18th, 19th, and 21st instant I inspected Horse-shoe Lagoon, Jindera Tank, Hovell's Dam, Brocklesby Tank, and Walla Walla Tank, accompanied by Mr. Overseer Mackay, district Albury.

Walla Walla Tank.—In charge of lessees H. and C. Douglas.

Drains.—None at this nor required, water being led to silt tank by natural water-course.

Silt tank.—60 ft. square on top, 42 ft. square in bottom, 6 ft. deep. Full of water and overflowing, so impossible to get near it to ascertain if any silt.

Inlet or flume.—63 ft. 12 in. cast-iron pipe and valve, timber 56 ft. x 2 ft. x 2 ft., lined with galvanized iron, valve under water and closed, all in good order.

Main tank.—153 ft. square on top, 117 ft. square in bottom, 18 ft. deep. Full of water and overflowing; no depth indicator, but from lessees' marks shows 21 ft. 6 in. Were it necessary, these embankments could be filled with water by pumping, as there is sufficient water lying outside for this, but in this locality I think this is scarcely necessary.

Embankments.—Around four sides of excavation much cut up, corrugated, water washed, and uneven. These require much more attention than has lately been given to them in all the above as also levelling and dishing in centre, although some work has evidently been done in this respect. Were this thoroughly done, and four angle shoots of approved design properly fixed and placed, I feel convinced there would be no danger of storm water doing any damage from their incapacity to carry it off. I would here also strongly indorse Mr. Overseer Mackay's recommendation to have an embankment erected to prevent water running round and washing foundations from troughing, otherwise in case of heavy rain there will be much danger of troughing being washed away. No couch grass as yet sown here.

Supply tanks.—Timber 15 ft. x 30 ft. x 6 ft., lined with galvanized iron, valve and wheel. This I found about half-full of water, and showing signs of leaking, also valve requiring painting. Lessees instructed to keep tank full and paint valve.

Troughing.—100 yds. lined with galvanized iron, fenced on one side with two rails, other side one rail. This is in a most unsatisfactory condition, and I was unable to have it filled, owing to a hole having been punched in bottom (about 1½ inch) about middle of troughing, evidently for slush tap. There is a 2-in. brass tap in this at end furthest from supply tank, but fixed much too high to empty trough or run out silt. This appears to be anything but level and lowest at end nearest supply tank. The ground underneath is much washed away from water running round embankment at opposite side from byewash, the whole being, I should say, in great danger of being washed away. The single rail fence along this is quite unsuitable, a space of 1 ft. 3 in. intervening between rail and troughing. I would recommend that this space be lessened to 9 inches, and rail be fastened on inside of post with bolts, instead of being as at present let into middle of posts on the angle, thus increasing the height large stock have to drink over.

Machinery.—3-in. Holman's pump with horse-gear. This requires painting and cleaning up; pump tried but found to be out of order, and would not draw water. Lessees report that this was only discovered a few days ago, that ere this it would have been repaired, had their engineer not been otherwise engaged, and their knowing on account of so much water lying outside no pumping would be required.

Fencing.—Top rail and five (No. 4) wires round tank, 94 rods, one barbed and five (No. 7) wires, 123½ chains. In fairly good order, but a good deal of dead wood and rubbish lying on them in water-course, which requires clearing away; the barbed wire is badly fixed on posts.

Gates.—Three 12-ft. swing and four 12-ft. slip panels. These require painting, but otherwise in good order.

Angle-shoots.—Four timber 14 ft. x 8 in. x 6 in. and three one-sheet corrugated galvanized iron bent, placed to run water outside. These I think unsuitable, and ought to be replaced by four of approved design, which if properly fixed and placed would carry off all storm water gathered on this embankment.

Scrubbing, &c.—Little or no scrub, nearly all this has been ring-barked by lessees previous to its being a Public Watering Place; a good deal of dead wood on ground, little or no scrub.

Byewash.—180 ft. x 34 ft. x 1 ft. 6 in. This had sometime ago been blocked up with earth, which is now washed away; were proposed embankment on opposite side erected, it might be advisable to block this with logs, allowing surplus water to run over them; were this done much more water would run into main tank.

Site of cottage.—In conjunction with Mr. Overseer Mackay, I would beg to recommend that caretaker's cottage be erected about 6 chains north-west of main tank, and adjoining present camp.

On my arrival here, about 2 p.m., I found lessees and caretaker both absent. Caretaker's wife reports caretaker often absent during day. Some work has been done levelling and dishing embankments, and caretaker reports much of his time occupied in building and patching up hut on account of so much wet weather. With the exception of these, no work seems to have been done by lessees. The appearance here of works in general is much below the required standard.

Lessees urge that they ought to be supplied with tar, paint, &c., in fact all material to keep things in order. I read Regulation 37, but failed to convince them that they had to do this. It would also be well to have all dead wood in water-course to tank cleaned up and burned off.

Cottages

Mr. Inspector
Boulton for
action.—H.G.

Mr. Inspector
Boulton for
estimate of cost
and report as to
whether the
work should be
let by contract.
This appears
urgent.—H.G.

Mr. Boulton to
obtain tenders
for converting
this to model.
Urgent.—H.G.

Mr. Boulton
should obtain
tenders for this
work and pre-
pare an estimate
of the fair cost.—
H.G.

Mr. Boulton will
see to this.—
H.G.

Cottages.—For this district I would recommend that these be of weatherboard, as per specification 87-1,843, which can be erected at all public watering places in this district at an average rate of £54 10s. each. Here, where good bricks can be obtained, it might be quite as economical to erect brick chimneys instead of the proposed wood and iron, in which case the prices would be £57 each. I may here add that flooring and doors would be tongued and grooved.

Mr. Boulbee will obtain tenders with as little delay as possible.—H.C.

Couch grass seed has not been sown on embankments in this district, owing to so much cold and wet weather, but it is purposed this will be sown next month (August), which I should say will be suitable for this climate.

Mr. Overseer Mackay has been very regular in his visits to tanks under his charge, and where caretakers are employed a very fair amount of work has been done, especially in cleaning up reserves, scrubbing, and ringbarking, as well as painting and keeping machinery in order. A little more attention by caretakers to drains and embankments might, I think with advantage, be given.

In the case of Tenants, although I feel sure he has regularly visited, he has omitted to make entries of such visits in journal. This, I have pointed out to him, should be done.

Little or no attention has, at the time of erection of embankments, been given as to their being level, thus causing a large amount of work to caretakers to put them straight.

I have, &c.,

JOHN LOW,

The Chief Inspector, Public Watering Places.

Acting Inspector, Public Watering Places.

Sir.

Wagga Wagga, 10 September, 1887.

Referring to Mr. Inspector Low's report upon the Walla Walla Tank, and to your marginal instructions, &c., I have the honor to inform you that at present the tank is almost surrounded by water, the creek which flows down to the tank is now running a strong wide stream (30 ft.) down the by-wash into the Walla Swamp in which the water is now backed up within a few feet of the end of the troughs. In view of the fact that the takings for stock watering here since the tank was made are almost nil, and that the water in the swamp will—in my opinion—last for two years or more, it is, I think, a matter for consideration whether any additional expense should be incurred at this place in carrying into effect Mr. Low's recommendations that a wing embankment should be made to protect the troughs, or that the by-wash should be made into an overshot dam, or that the railing at the troughs should be altered, or new shoots fixed to embankments. In the event of it being decided to carry them out, considerable time must elapse before anything, owing to the boggy state of the place, can be done. The various matters which lessee appears to have neglected, I have given him notice of in writing, a copy of which I enclose. The additions suggested by Mr. Low would, were the tank used at all by travelling stock, be very necessary; but as the tank in its present position appears to me to have been hardly required, I think perhaps that any further expenditure should be deferred. If it is decided that the additions in question should be made, I will, at my next inspection, obtain tenders for the work.

P.W.P.,
87-4,629.

JAMES W. BOULTBEE,

The Chief Inspector of Public Watering Places.

Inspector of Public Watering Places.

Report by Inspector J. W. Boulbee, on the Walla Walla Tank, road from Albury to Walbundrie, in charge of C. H. Douglas, tenant, for 7th September, 1887.

State of drains.—None.

Silt tank.—Completely covered with water.

Inlet or flume.—Under water. Reported in good order by lessee, but valve stiff in working.

Main tank.—Quite full.

Embankments.—Scoured by rain. There is a small spring of native grass here. Couch grass should be sown, and I have asked Mr. Mackay to forward supply.

P.W.P.,
87-4,630.

Watering Appliances.

State of supply tank.—Only half-full, apparently in good order, but requiring tar.

Troughing.—Requiring tar. There is a flushing-hole in the centre that I have desired lessees to close. The alteration to railing is referred to in my memo. on this tank of to day's date.

Machinery.—As caretaker was absent, I was unable to test it, but it is admitted by lessees to require new packing. It also requires painting and the well emptying, which I have directed lessee to do.

Paddocks and Fencing.

State of fencing.—In fair order. Barbed wire badly put on.

State of gates.—In good order, but require paint.

Remarks.—Caretaker was absent at the station at the time of my visit. His wife, however, was present. There is a considerable air of neglect at this place, and I have given lessees written notice to repair, &c.

Weekly depth of water since last report.—Tank quite full.

Caretaker's Work.

Work done by caretaker.—Apparently nothing lately.

Work laid out for caretaker.—I have forwarded written notice of repairs, &c., required to lessees. (Copy herewith.)

Remarks and recommendations.—This tank is on the edge of a very large swamp, which, from appearances, should hold water for two years. It is therefore certain that neither tank or appliances will be required for—at the very least—eighteen months; and I very much question the advisability of incurring any expense in carrying out Mr. Low's recommendations for a wing embankment. The alteration to the trough railing may also, I think, be deferred. There is an immense body of water all round this tank.

There

There is a strong wide creek going down byewash, which has every indication of continuing for months, and until this subsides nothing can be done in the matter of earthworks. The pump should be painted and well made water-tight, but I would recommend that no fresh leather buckets be put on plunger, as they would only rot. The supply-tank, too, should, I think, be kept as it is—half-empty, as I think the tank, being kept full while the ground is so soft, would only cause a subsidence. This is a case in which the regulation *re* keeping supply-tanks full should be relaxed.

JAMES W. BOULTBEE,

Inspector of Public Watering Places.

Wagga Wagga, 10th September, 1887.

The Chief Inspector of Public Watering Places, Mines Department, Sydney.

Copy of Minute by Chief Inspector, Public Watering Places.
Walla Walla Tanks.

11 November, 1887.

P.W.P.,
87-3,072.

THE annexed extract from my report of 9th October, 1882, shows that this Department considered the construction of a tank unnecessary. Mr. Inspector Boulton's report herewith states that the water in the adjoining swamp will last for two years or more, while the receipts for stock watering since the tank was made are almost nil. The tank is leased to the Messrs. Douglas, of the adjoining station, who are reported to have neglected it, and are now called upon under the regulations to put it in proper order. Under the circumstances I think it will be desirable to give the lessees the option of taking the machinery to pieces and storing it, after thoroughly painting and tallowing, leaving the troughing and service-tank standing, which, of course, must be kept in good order.

If the tank was not leased, I should propose to utilize such part of the service as could be transported to some more useful watering place, and this course may yet be adopted at the expiry of the lease.

HARRY GILLIAT,

Chief Inspector of Public Watering Places.

The Under Secretary for Mines.

Submitted.—H.W., 18/11/87.

Approved.—F.A., 19/11/87.

Extract from Report of the Inspector of Tanks and Wells on the application for a public tank on watering reserve, 894; sale reserve, 172; lease, County Hume, parish Walla Walla; road, Walbundry to Albury:—

Sydney, 9 October, 1882.

P.W.P.,
87-5,915.

Bearing in mind the large expenditure required in the dry districts of the Colony, the comparatively good rainfall usual here, and the trifling expense at which water can be conserved by the settlers themselves, and the fact that the construction of a tank here would be taken as a precedent and be followed by numerous applications for similar works which would be convenient, but not absolutely necessary for the well being of the settlers, I am not prepared to recommend the granting of this application.

I have, &c.,

HARRY GILLIAT,

Inspector, Public Tanks and Wells.

A. Bruce, Esq., Chief Inspector of Stock.

XXV.

Fluming Papers.

Gunnaramby Tank.

Extract from new Works Report Form B of Mr. Overseer James Yeo, 86-3,063, of 21st January, 1886, on Gunnaramby Swamp Tank (late 35-mile, on road Balranald to Ivanhoe).

P.W.P.
86-4,154.
*Appendix G.

General Remarks.—There are two silt tanks, one on south side, emptying itself into the main tank through a 12-inch pipe and apron 6 feet by 2 feet.

The silt tank on north-east side empties itself, as shown on sketch* attached, and, in my opinion, when we get a heavy fall of rain, will wash over the sides of the drains and carry a large quantity of earth into the tank. The water just commenced to run in the drain on the south-east side of main tank, and has washed the mouth of the drain 6 inches deep. I would recommend that a flume be put to carry the water straight into the main tank, instead of round on the top of the excavation. This was pointed out to Mr. Wood and Mr. Stillwell when taking delivery.

JAMES YEO,

Overseer, Public Watering Places.

Extract

Extract from Mr. Overseer Yeo's Report on Gunnaramby Tank for 13th September, 1886.

Remarks and recommendations.—I would again recommend that a flume should be put from the silt tank, on the north-west side of main tank, to the main tank, as previously suggested. I have instructed caretaker not to allow any water to run into the drains on the top of the excavation. I consider if it is allowed to go into these drains that it will eventually carry away the whole of the soil between the excavation and the drains.

P.W.P.,
86-4,452.

Ivanhoe, 13 September, 1886.

JAMES YEO,
Overseer, Public Watering Places.

Extract from Report A1 of Mr. Acting-Inspector Boulton, of 5th October, 1886, on tank leased by Messrs. Cobb & Co.

Grass Hut Tank.

Remarks and recommendations.—Notice should perhaps be sent to Messrs. Cobb & Co. to tar tank and troughs, also clean and paint machinery. The construction of fluming at all these tanks except the Lake Tank is very faulty, since it only extends a few feet from the edge of tank, and where the cutting pierces the banks there is no protection. Each succeeding flood cuts in more and more, and the banks consequently fall in. At Ledknapper the case is a bad one.

P.W.P.,
87-5,046.

JAMES W. BOULTON,
Acting Inspector, Public Watering Places.

Mr. Mallon.—Please see tenants and give them written instructions if necessary as to painting and tarring. You should call their attention to clause 37 of Regulations.—H.G., B.C., 20/10/86. This has already been done, and I have no doubt the work will be performed at once.—Jas. M., Bourke, 27/10/86.

Extract from Report by Mr. Overseer Elworthy on Hulong Tank, 17th September, 1886.

Hulong Tank.

Inlet or flume.—In good order. This was originally too high, but has been lowered 6 inches, and will now carry water into main tank.

Remarks.—The caretaker says there would have been 6 or 8 feet water in the main tank had the inlet pipe not been so high. It is now rectified and all square.

W. J. ELWORTHY.

Narrandera, 17 September, 1886.

Report by Inspector Gilliat upon Box Creek, 7th September, 1880.

Sir, Box Creek Tank, Balranald Road.

I have the honor to report that on 27th ultimo I made an inspection of the Box Creek Tank. The site is an injudicious one, but the tank would have probably collected more water but for the position of inlet pipe, which is 3 feet some inches above the level of the water in the silt tank. Tanks & Wells,
80-199.

To get a head of water high enough to pass through the inlet pipe in its present position, the Box Creek would be backed up for probably three miles. I would urge that the 9-inch inlet pipe be removed, and a box flume, 2 feet by 1 foot, such as recommended at Til Til Tank, be substituted; this box flume to be laid 4 feet below the level of the present inlet pipe.

The horse-power pump and platform require the same repairs as those described at the Til Til and Youhl Plain Tanks, and these are not the result of wear and tear, for the works show no evidence of ever having been used.

Belting.—The belting for this work is at the Box Creek public house, three miles lower down the creek.

Cattle troughing.—The cattle troughing requires connecting with the pumps by means of iron piping.

Drains.—The drains laid out are extensive, and I am of opinion insufficient to collect the drainage of the neighbourhood. Should they prove insufficient when the inlet pipe is enlarged and lowered, I would suggest that a line of levels should be run from the better holding ground down the creek to ascertain if a dam could not be constructed at some point across the creek where a sufficient head of water could be stored to fill the tank by means of a drain. I am of opinion that this could be done, but cannot be certain until I have taken an instrument over it. I would strongly urge reserving at once both sides of the creek between the tank and the public house, about three miles below. The creek changes the character of its bed very greatly below the site of the Government tank, both above and below the inn. There was a good supply of water at the time of my visit.

HARRY GILLIAT,
Inspector, Tanks and Wells.

A. Bruce, Esq., Chief Inspector of Stock.

Mr. Gilliat here recommends several alterations and repairs, but does not say what the cost will be. He might, perhaps, be asked to submit an estimate. The belting should, I think, be handed over by Mr. Hansen to the caretaker, who should be held responsible for this as well as the other appliances. Mr. Gilliat's recommendation with respect to the reserve at this tank has been submitted on separate extract.—A.B., 17/9/80.

The Under Secretary for Mines. Submitted.—H.W., 20/9/80. Approved.—E.A.B., 21/9/80.
Inspector Gilliat, 11/10/80. In Mr. Gilliat's telegram of 20/9/80, he estimates the cost of these alterations and repairs at £120.—11/10/80.

As the funds still available under the Vote for Tanks and Wells would be insufficient to meet the expense of all these alterations and repairs, I would suggest that the more urgent portion—the lowering and enlarging of the inlet pipe—be carried out at once, under Mr. Overseer Hansen's supervision, the work being done by contract, if possible, and if not, by day labour.—A.B., 5/11/80.

The Under Secretary for Mines. Submitted.—H.W., 8/11/80. Approved.—E.A.B., 8/11/80.
Mr. Inspector Gilliat, 8/11/80.

Extract from report by Mr. Overseer Cotton on the Muriel Tank for February, 1884.

Muriel Tank,

Tanks & Wells, 84-337. * * * * *
Fluming.—Unsatisfactory; water running underneath.
* * * * *

JAMES COTTON,
Inspector of Stock.

Cobar, 14/3/84.

Mr. Gilliat.—A.B., B.C., 17/3/84. Noted.—H.G., 19/3/84.

Report by Acting-Inspector Boulton on the Muriel Tank, road from Cobar to Nyngan, in charge of F. Mullarkey, caretaker, for 10th July, 1886.

P.W.P.,
86-3,549.

State of drains.—In fair order, mostly on hard stony ridges that do not cut. They are damaged where the road crosses, and require either pitching with stone or logging.

Silt tank.—Not visible, but reported by caretaker to be filled with silt.

Inlet or flume.—A small portion just visible, reported by caretaker to be broken by heavy flood some time ago. The water has never been low enough to allow repairs. I believe it is only 2 feet x 1; too small, I think, for the catchment.

Main tank.—Not visible. Reported by caretaker to have much silt in it.

Embankments.—Considering rough spoil and construction, in fair order; guttered in places.

Watering Appliances.

State of supply tank.—Good; buckle plate.

Troughing.—Good; the ground has been recently made up at each side. The site, however, is not, in my opinion, well chosen, being on what must be a very boggy flat in wet season, and liable to be flooded from overflow from wings of dam.

Machinery.—Tangye horse works and pump in good working order, excepting that the cup in which the main or king pin works it wants paint. Caretaker has been promised new cup.

Paddocks and Fencing.

State of fencing.—T.L. good. There is a rail or two broken in the old fence round main tank; cannot, however, be got at for some time yet, owing to water.

State of gates.—In good order.

Remarks.—Caretaker Mullarkey has leased this tank. The valve at supply-tank does not work well; instead of being placed with wheel at the top it is at the side, and when the valve is first opened the water misses the troughs altogether; a bag has to be used, and it is inconvenient.

Rates collected since last report.

Month ending	April, 1886	May	June	£	s.	d.
Month ending	April, 1886	May	June	21	14	4

Month ending	April, 1886	May	June	543	76	29,505	480
"	May	"	"	474	142	17,500	496
"	June	"	"	491	94	480

150 gallons for domestic purposes.

Weekly depth of water since last report.—Excavation quite full, and a large sheet of surface water.

Caretaker's work.

Work done by caretaker.—Making up earth at troughs (not yet finished); cleaning drains.

Work laid out for caretaker.—Mullarkey is now ill, suffering from pleurisy. To fill in gutters on bank and complete work at troughs.

Remarks and recommendations.—There is a remarkable bit of work here in the shape of a horse-walk, which has been constructed on the inside of the dam and also partly in the tank. It is to me inexplicable. It is somewhat lower than the dam, and the water runs off the dam and settles on the walk, in one place causing considerable settlement, in fact, leaving a good sized hole; the outside edges of the walk, where it joins the water, seem to me to have settled a great deal. Loam has been used entirely

entirely for the walk, and it simply melts wherever it touches water. The caretaker's report about the amount of silt in main tank is evidently quite correct. A byewash is in course of construction, and side wings on the opposite side to throw the water clear of the troughs, is, I am told, in contemplation; it will, however, cut off one of the drains. The caretaker's hut is inconveniently placed in the narrowest portion of the lane by which stock go to water. Judgment will have to be exercised in placing the new cottage.

Cobar, 14th July, 1886.

Inlet or flume.—One is choked; they are I think formed upon an exploded principle, the water spreads over a space between tank and embankments, and the fluming starts from a shallow well. * * * * *

P.W.P.,
86-3,658.

I would also recommend the fluming be altered; it is too small, and the plan a poor one.

JAMES W. BOULTBEE.

Extract from Mr. Overseer Doyle's report upon the Bunghill Tank, 6th May, 1884.

Walgett, 6 May, 1884.

Inlet or flume very much damaged.

* * * * *
Owing to the rapid rush of water, consequent upon the close proximity of this tank to hard stony ridges, a considerable amount of rubbish and silt is carried into the main tank by every heavy fall of rain, it is only a matter of time before the tank is entirely filled with silt. To prevent this, a flume as recommended in my last report, would materially prevent this. * * * * *

Tanks & Wells,
84-589.

J. R. DOYLE.

Mr. Inspector Gilliat.—A.B., B.C., 13/5/84. The flume suggested by Mr. Doyle was recommended by me in October last, to be put in at each of the tanks in this district. The caretakers should be instructed to clean out silt tank at every opportunity.—H.G., B.C., 21/5/84. Inform Overseer, 27/5/84. Done, 31/5/84.

Extract from the statement of the Inspector of Tanks and Wells of repairs and alterations recommended as urgent for the consideration of the Secretary for Mines.
Bunghill Tank.

Original with
Works Depart
ment

Fitting with machinery for lifting water, supply tank and troughing. I would submit for consideration the advantage to be obtained by completing the embankment round this work, and admitting the flood water through a flume or sufficiently large inlet pipe. The embankments can then be utilized hereafter for additional storage, by pumping in.—H.G., 18/10/83.

Extract from report by Inspector Boulton on the Corilla Tank, 17th July, 1886.

Bourke, 22 July, 1886.

* * * * *
Inlet or flume.—There are two, both in very bad order, and too small. They are much broken and patched, earth washed away on each side of them. They require renewing altogether. That between service tank and main tank has caved in altogether. * * * * *

P.W.P.,
86-3,657.

JAMES W. BOULTBEE.

Extract from report by Mr. Inspector Boulton on Helman's Tank, 15th July, 1886.

* * * * *
The fluming here is not of good design, in my opinion; it only commences inside the embankments. There is an open cutting from the silt-tank through the embankment to the mouth of the flume. There is nothing to prevent this cutting being washed in, and carrying the soil from each side of the embankment; it already shows signs of wear. * * * * *

P.W.P.,
86-3,659.

Bourke, 22/7/86.

JAMES W. BOULTBEE.

Extract

Extract from Mr. Mackenzie's report upon Helman's Tank, 10th December, 1887.

P.W.P.,
87-7,012. I am of opinion that if they were logged up for about 4 feet on each side it would prevent further cutting, and answer equally as well as sawn timber, besides being less expensive. This work I can instruct caretaker to carry out on subsidence of water if you approve of it.
Bourke, 10/12/87.

F. MACKENZIE.

Report of Chief Inspector of Public Watering Places upon the Ledknapper Public Tank, road from Eringonia, on Warrego River, to Goorianawa, on the Culgoa.

Sir,

Sydney, 6 June, 1885.

Tanks & Wells,
85-1,410.

I have the honor to submit for the information of the Hon. the Secretary for Mines the following report upon the Ledknapper Public Tank, 22 miles from the 18-Mile Tank, now in course of construction, and 20 miles from Goorianawa, on the Culgoa River. The main excavation of 20,000 cubic yards was empty at the time of my visit, the water that had been running down the Mungunyah overflow for the previous 24 weeks having been stopped out by the contractor until the excavation was measured. I noticed an ugly-looking sand-pipe in both the east and west slopes of the excavation, but am uncertain whether they will prove serious until the tank is filled. The framework for supporting, lowering, and raising down-pipe from pump appears to me rather slight and insecure for the purpose. The embankment is carried round the four sides, but that on the upper side is cut to admit by a trench the flood-water from the silt-pit. At 10 feet from the edge of the excavation a shoot has been put in to receive this water, and carries it down the slope to the bottom of excavation. The inrush of flood-water must I fear in time cut away the soil on either side and below the shoot, and carry it into the excavation.

The pump is of an excellent pattern with double cylinder, driven by a small engine connected to a vertical boiler, standing on a cast-iron feed tank, from which the inject pipe to the boiler is fed. A feed-pipe from the service tank to that below the boiler would be of great service, as at present the latter will have to be filled by bucket and funnel. I also noticed there was no pressure gauge on boiler, nor any shed over boiler or engine, both of which required at least two good coats of paint. I was also informed by the contractor that there were no oil-cans or fitter's tools accompanying the plant.

The service tank of timber and galvanized iron, with a capacity of 17,000 gallons, is both well finished and substantial. The troughing, also of timber and galvanized iron, is equally well built, while the fencing and gates to Tank Special Lease and troughing are excellent, while steam pumps are as yet untried at these P.W. Places.

So far removed from skilled labour it may be as well to withhold any expression of opinion as to their suitability, but it will be as well to submit for the consideration of the honorable the Secretary for Mines,

1st. That it will be necessary to make early arrangements for a supply of firewood to be delivered at the work. If this is to be part of the duty of the caretaker he must be furnished with or else paid for a horse and cart, or arrangements must be made for the delivery of firewood at per cord.

Although reported ready for transfer I found this work in too unfinished a state to take over, I have, however, detailed in this report what appeared to me necessary to complete it, and I have to request that a copy may be furnished to Mr. Overseer Mallon for his information when taking delivery.

HARRY GILLIAT.

The Chief Inspector of Stock.

Submitted.—A.B., 17/6/85. The Under Secretary for Mines. Submitted.—H.W., 27/6/85.
Read.—J. P. ABBOTT, 30/6/85. Send copy of report to Mr. Mallon.—E.W., 2/7/85. Copy sent, 3/7/85. Ask Mr. Overseer Mallon to report when the Ledknapper Tank will be ready for transfer.—H.G., 12/11/85. Reply 85-4,277, with papers re transfer Ledknapper Tank. Further action taken upon extracts from this report, with same case.—J.W.B.

Report by Inspector Boulton, on the Ledknapper Tank, road from Eringonia to Brewarrina, in charge of J. C. Collins, tenant, for 7th October, 1886, date of inspection.

P.W.P.,
86-4,887.

State of drains.—Hardly visible for water.

Silt tank.—Under water.

Inlet or flume.—Much cut and displaced by flood; the embankments each side have fallen in considerably; caretaker reports, every endeavour was made to save it.

Main tank.—Full, over excavation.

Embankments.—In fair order, guttered in places.

Watering appliances.

State of supply tank.—Empty, has not yet been filled.

Troughing.—Almost under water, apparently in fair order; it has never been filled yet.

Machinery.—In bad order, rusty and dirty, has not owing to want of water been transferred to Mines, and now from a superabundance, transfer delayed. Mr. Coleman's travelling mechanic will put it in order shortly, and hand it over.

Paddocks and fencing.

State of fencing.—Very good.

State of gates.—Very good.

Remarks.—Since the engine could not be tested on 19th March, date of transfer, and latterly too much water has prevented, lessee consequently signed no receipt for the tank; will do so when engine is put in good order.

Traffic since last report.

Month ending	Horses.	Cattle.	Teams.
July, 1886	37	1,920	50
August, 1886	...	Nil.	...
September, 1886	...	Nil.	...

Weekly

Work y depth of water since last report.—Quite full.

Caretaker's work.

Work laid out for Caretaker.—There is a running sea of water here, took me up to the horse's belly to reach the embankment of tank. Nothing can be done at present.

Remarks and recommendations.—No mail running regularly. Lessee has to go into Corella, 12 miles, with returns. It seems to me a great pity this and the 18-mile Tank were not utilized as pump up tanks, there being now enough water to fill embankments twice over. Another flood would tear out fluming altogether, and as soon as water permits, repairs should be undertaken. Lessee has some timber on ground, and would undertake to erect cottage. He will remain in charge after his lease is transferred to Mr. Featherstonhaugh. I was delayed here; 120 points rain.

JAMES W. BOULTBEE,
Inspector of Public Watering Places.

Bourke, 13th October, 1886.

The Chief Inspector of Public Watering Places, Mines Department, Sydney,

Tindarie and Cuttgullyaroo Tanks.

Sir,

Department of Mines, Sydney, 16 March, 1885.

I have the honor to inform you that the flume at Tindarie Tank has been reported as displaced and floating, and request that it may be attended to with the least possible delay. Tanks & Wells, 85-744.

I have, &c.,
HARRIE WOOD,
Under Secretary.

The Under Secretary for Public Works.

Roads.—J.R., B.C., 20/3/85. Mr. Wood.—W.C.B., 21/3/85.

This so called flume is a box shoot through which the tank excavation is intended to be filled, the water being above the natural surface. The shoot having been insufficiently fastened down has floated; this is no injury as things stand, nor can it be repaired until water level is very much lower.—A.P.W., 23/3/85.

I observe that every trivial complaint as to these tanks is made the subject of a special formal letter; I think that the replies and explanations should be also formal letters. In this case had the caretaker done his duty, this accident could not have occurred.—W.C.B., 23/3/85.

The Under Secretary, B.C. Forward to Mines.—F.A.W., 27/3/85. Under Secretary for Mines, B.C., 27/3/85. Mr. Gilliat.—A.B., B.C., 30/3/85.—J.R.

Sir,

Department of Mines, 16 March, 1885.

I have the honor to inform you that the flume at Cuttgullyaroo Tank has been reported as displaced, and floating, and request that it may be attended to with the least possible delay. Tanks & Wells, 85-744.

I have, &c.,
HARRIE WOOD,
Under Secretary.

The Under Secretary for Public Works.

Roads.—J.R., B.C., 20/3/85. Mr. Wood.—W.C.B., 21/3/85. The remarks as to Tindarie shoot, apply to this case.—A.P.W., 23/3/85. All my remarks on 85-2,145, apply in this case. A formal letter should be written.—W.C.B., 23/3/85. Under Secretary, B.C. Forward to Mines.—F.A.W., 27/3/85. Under Secretary for Mines.—J.R., B.C., 27/3/85. Mr. Gilliat.—A.B., B.C., 30/3/85.

A copy of these minutes should be sent to Mr. Cotton, who will report if there is evidence to show that the caretaker has failed in his duty as stated by the Commissioner and Engineer for Roads and Bridges.—H.G., B.C. 3/4/85.

Send copy and ask.—A.B., 11/4/85. Letter and copy to Mr. Cotton.—17/4/85.

Sir,

Cobar, 25 April, 1885.

I have the honor to acknowledge receipt of your letter (tank, 85-741), accompanied by a copy of minute made by the Commissioner for Roads to Mr. Assistant-Engineer Wood, re the displacement of flumes at Tindarie and Cuttgullyaroo Tank, and complaining of neglect on the part of the caretaker. Tanks & Wells 85-1,000.

In reply I have the honor to inform you that no blame can be attached to the caretakers for their displacement. The flume in the first place was insufficient for the purpose for which it was intended, and was not properly fastened down.

Mr. Assistant-Engineer Wood admits so much in his minute. I quite agree with Mr. Wood that as things stand, the displacement is no injury, and does not in any way take from the usefulness of the watering places. Water has been conserved over the surface of both tanks for the past eighteen months, and it is now very probable that the water level will never be low enough to replace the flumes; in fact, they are now rendered unnecessary. The displacement was reported in an ordinary way in answer to question No. 3 of my report on tanks.

The caretaker at each of these tanks I have never found neglecting their duty, and in this case I am convinced that no exertion on their part could have prevented the flumes from being displaced.

I have, &c.,
JAMES COTTON,
Overseer of Tanks, Cobar.

The Chief Inspector of Stock, Stock Branch, Department of Mines.

Mr. Gilliat.—A.B., B.C., 27/4/85. Copy for Works.—15/5/85. Letter and copy of report to Works.—19/5/85.

Tanks & Wells,
85-1,450.

Sir,

Referring to your B.C. communication of the 27th March last, *re* the displacement of flumes at Tindarie and Cuttygullyaroo Tanks, I have the honor to forward you herewith copy of report by Mr. Overseer Cotton on this matter, showing that no blame can be attached to the caretakers.

I have, &c.,

HARRIE WOOD,
Under Secretary.

The Under Secretary for Public Works.

Roads.—J.R., B.C., 22/5/85. Mr. Wood.—W.C.B., 23/5/85. These flumes are going to be removed, and when the level of water in tanks admits, further provision will be made.—A.P.W., 8/6/85. Under Secretary for transmission to Mines.—W.C.B., 8/6/85. The Under Secretary for Mines.—J.R., B.C., 10/6/85. Mr. Gilliat, B.C., 11/6/85.

Mr. Cotton should, I think, be informed that the caretakers are not thought to blame by this Department, and as the charge against them by the Works appears to be withdrawn, no further action is necessary, and the papers may be put away.—H. GILLIAT, B.C., 15/6/85.

Inform.—A.B., 18/6/85. Letter to Mr. Cotton. 22/6/85.

Sir,

Stock Branch, 22 June, 1885.

Referring to your letter of 25th April, *re* the displacement of flumes at Tindarie and Cuttygullyaroo Tanks, and stating that no blame can be attached to the caretakers, I have the honor to inform you that the caretakers are not considered to blame by this Department, and the charge against them by the Department of Works appears to be withdrawn.

I have, &c.,

ALEX. BRUCE.

James Cotton, Inspector of Stock, Cobar.

Sir,

Tanks & Wells,
85-3,003.

I have the honor to acknowledge receipt of your letter, tanks 85-1,450, informing me that the charge of carelessness made by the Department of Works against the caretakers of the Tindarie and Cuttygullyaroo Tanks has been withdrawn.

I have, &c.,

JAMES COTTON,

Overseer of Tanks.

The Chief Inspector of Stock.

Ivanhoe Tank.

Sir,

17 February, 1887.

I have the honor to forward herewith an extract from a communication from Mr. Overseer Yeo, Ivanhoe, with a request that the necessary action may be taken.

I have, &c.,

HARRIE WOOD,

Under Secretary.

The Under Secretary for Public Works.

Roads, B.C., 18/2/87. Mr. Wood.—W.C.B., 19/2/87. Should be sent to Mr. Stillwell for report.—A.P.W., 21/2/87. Mr. Stillwell.—W.C.B., 21/2/87. Report attached.—A.W.S., 24/2/87.

Extract from Communication of 8th February, 1887, by Mr. Overseer Yeo, Ivanhoe.

P.W.P.,
87-626.

I beg to report, for your information, that the inlet pipe and valve at the Ivanhoe Tank is not large enough to carry the water into the main tank from the silt tank, on the south-west side, consequently the water overflows across the main road into a tank owned by Mr. R. Elliott, who has been supplying a great quantity of travelling stock with water from his tank, which water should have been in the Government tank. I would beg to suggest that some alteration be made to this inlet as soon as possible.

JAMES YEO,

Overseer, Public Watering Places.

Report by Mr. Road-Superintendent Stillwell on Ivanhoe Tank to the Commissioner and Engineer for Roads.

Ivanhoe Tank.—Yeo's Report *re* Inlet.

Sir,

Hay, 24 February, 1887.

P.W.P.,
87-1,213.

Referring to 87-148, attached. The main inlet of this tank is a 5 feet by 2 feet open shoot on the upper or eastern side, which affords an ample duct for the water brought in by the drains on that side. On the lower side, the western, of the tank has command of an increased shed, owing to its lower level. Subsidiary drains, almost parallel to, and some chains below the main drains, were provided, the inlet from these being a 12-inch pipe through the embankment. This, as the shed for this side is very limited, suffices, if the small embankment on the lower side of the silt tank, which is only required in very heavy falls, is kept intact by the caretaker.

It is, I surmise, owing to want of attention here that there has been a loss of water. Even so, there could not have been the great loss reported by Mr. Yeo if the drains on the upper side were clean throughout. Certainly no alteration of the inlet pipe, as Mr. Yeo suggests, is advisable.

I have, &c.,

A. W. STILLWELL.

Mr.

Mr. Stillwell.—W.C.B., B.C., 28/2/87. Mr. Scott, copy Mr. Stillwell's report, also on general complaint, and re-submit both.—W.C.B., 9/3/87. Also my last minute and Mr. S.'s reply.—Copy made.—10/3/87. I forward this report, which shows that cause of complaint is not with this Department.—W.C.B., 10/3/87. Under Secretary, B.C. Mr. Stillwell make alteration at once.—W.C.B., 28/2/87. I could not have made myself understood. I reported that no alteration is advisable. Attention on part of caretaker being all that is requisite.—A.W.S., 7/3/87. The Under Secretary for Mines.—J.R., B.C., 12/3/87.

Sir,

16 March, 1887.

Mr. Stillwell emphatically states that he does not consider it advisable to make any alteration to the iron inlet pipe at the Ivanhoe Tank, and he further refers to the main flume, which was not brought into question by Mr. Yeo at all, and says it is evidently owing to want of attention that the iron inlet pipe does not carry all the flood-water into the tank. The drains are large wide drains, 6 feet by 12 inches deep, and discharge into silt tank, from which the inlet pipe, 12 inches in diameter, is supposed to carry all the water from them into the tank. It is simply a case of two into one will not go, and the water consequently banks up and flows into Elliott's tank.

P.W.P.,
87-1,232.

He furthermore states that if the upper level drains—which are quite distinct from the lower one, and I cannot see how they can affect the question, since no loss of water is reported from that side—were kept clean there would not have been the great loss of water reported by Mr. Yeo.

The drains were either clean or in course of being cleaned at the time of my inspection of this tank, to my report upon which I here refer. The upper level drains are badly graded, and at one point, nearly half a mile from the tank, a cutting 3 feet deep or more is required to bring the water into the tank.

This, Mr. Stillwell commenced to do, and, on the transfer of the tank to us, he instructed our caretaker to complete, but having in view the more urgent work required at the tank I instructed him to leave it.

The cutting I think should have been done by the Department whose carelessness rendered it necessary.

I have always found caretaker Playford's work good, and can see no reason whatever for Mr. Stillwell's assertion that care and attention was required.

It is evident I think that the inlet pipe cannot meet the demands made upon it by an extraordinary fall of rain, and it is a matter for consideration whether alteration is advisable.

I have, &c.,

JAMES W. BOULTBEE,

Inspector, Public Watering Places.

The Chief Inspector, Public Watering Places.

Copy minute of Chief Inspector of Watering Places.

Iron Inlet Pipe to Ivanhoe Tank.

16 March, 1887.

THIS appears to be another case similar to those that are now so frequently occurring, in which the reports of repairs that appear necessary at public watering places, on being forwarded to the Department of Works, are treated as complaints, and become the cause of what I venture to think are entirely unnecessary correspondence.

P.W.P.,
87-1,247.

Putting aside all irrelevant matter, Mr. Stillwell assumes apparently that if the drains were kept clean, and the small embankment at the lower silt tank intact the 12-inch inlet pipe to the main tank would be sufficient, but does not show that the drains are not clean or the embankment not intact. As a matter of fact, the cleaner the drains the greater the amount of water delivered, and the more work thrown upon the inlet pipe.

This paper may perhaps be considered by the Honorable the Secretary for Mines, in conjunction with those recently submitted, as pointing to the desirability of placing the construction and maintenance of the public watering places upon a footing where the work to be done may be carried out promptly and economically by officers directly responsible, and not under a divided control, with but an indirect responsibility.

HARRY GILLIAT,

Chief Inspector, Public Watering Places.

Submitted for approval.—H.W., 21/3/87. Approved.—F.A., 22/3/87. Ask Mr. Yeo if small embankment on lower side of western silt tank has always been kept up and in good order.—H.G., 16/3/87. Wire sent, 16/3/87. Embankment has been kept up on lower side silt tank, and is in good order.—JAMES YEO., Overseer, Public Watering Places, Ivanhoe, 16/3/87.

Sir,

Ivanhoe, 8 September, 1887.

Referring to B.C. document herewith returned relative to batters under fluming, and fencing Ivanhoe tank, I have the honor to inform you bags have some time ago been placed here by caretaker, but owing to batters being so steep earth from under them gets washed away.

P.W.P.,
87-4,510.

I would recommend that 40 sheets 20 B.W.G. galvanized iron, and 400 feet lineal 4 x 3 gum timber be got for this, so as when the water falls it can be sunk into batters well rammed, nailed to side of shoot and inside filled up with earth.

This appears to be an expensive remedy. Send me a sketch plan and section.

The fence is now all erected, but no gates. Ere long fresh posts will require to be got, as already some of them are splitting, owing to being split pine, and having wire strained to them instead of the usual and practical method of erecting wire fences.

I have, &c.,

JOHN LOW,

Inspector, Public Watering Places.

The Chief Inspector, Public Watering Places.

This

This is not very clear; apparently there are no straining posts, but there are no data to account for the defective character of the fence. In making such a report the defects should be distinctly pointed out.—H.G., 13/9/87. Mr. Low, B.C.

Extracts from Report A1 by Mr. Overseer Yeo, Ivanhoe, for 21st July, 1887.

Ivanhoe Tank.

Ivanhoe District, 21 July, 1887.

P.W.P.,
87-3,642.

The batters on the east side of the tank round the fluming have caved in a good deal. The caretaker has procured some bags and filled with earth and rammed them under the fluming.

The fence round the tenant's lease is not yet completed. About three-quarters of a mile of posts have been put in since my last report, but there is still about a quarter of a mile of posts to be put in, and which have to be carted from Kajulijah.

There appears to be a great waste of time over this fence. It was supposed to be finished and ready for transfer within a fortnight when I last reported on this tank.

JAMES YEO,

Overseer of Public Watering Places.

Mr. Inspector Low.—H.G., B.C., 30/7/87.

Inspector Low's report as to batters under fluming and fencing at Ivanhoe Tank.

Sir,

Ivanhoe, 27 September, 1887.

P.W.P.
87-5,047.

Referring to B.C. document, 13/9/87, *re* batters under fluming and fencing, Ivanhoe Tank, herewith returned, I have the honor to enclose sketch,* which I trust will give the required information.

The posts at side of shoot are 6 in. x 4 in. and 6 ft. apart, as far as I can find out, above present water. The space between shoot and outside of post is 4 in.; this I propose filling up with one piece, 4 x 3 in., so as to get even surface to nail iron to. It would also be well to have bottom of iron nailed to 4 x 3 piece.

Water is now down 9 ft. from commencement of water washing or top of excavation, and in some places ground is washed away from under shoot to quite a depth of 2 ft., and as the posts of shoots were originally 2 ft. 6 in. in the ground, their hold now must be very small; indeed iron ought to be sunk quite 1 ft. in solid ground, in which case two widths of iron would be required.

I may here add that the ground from underneath shoot, on west side of main tank, is also washed away to a depth of one foot, so far as at present can be discovered, and that the material recommended to be got by me was intended to make both shoots secure.

Of course I cannot say if the washing away continues to bottom of excavation, but it continues under the present level of water, so far as I can discover, and, should it continue to the bottom, all the iron mentioned in my report of 1st September will be required, should it be decided to protect shoot in manner proposed by me.

The proposed ought to be commenced from bottom of water wash, as, if commenced from top, it would be almost useless, and liable to be torn up, until finished, unless made much stronger. All the material mentioned in my letter may not be required, but it may; and I would strongly urge that everything be ready for repairing this as the water falls, there being no appliances here for keeping water out, neither do any of the local storekeepers keep the required material in stock.

The remedy may appear expensive, but the mistake is in having 1½ to 1 batters in ground such as this, which any practical man might have seen would not stand.

Fencing.—The cause of posts splitting is that they are split pine posts, which, unless much stronger and at least 4½ in., are liable to commence splitting by insertion of pin to hold wire while fastening it, when one wire is strained on them, *i.e.*, one wire round one-half of post, other wire round other half, causes a strain which, in some instances here, the posts have been unequal to, and are splitting.

I have, &c.,

JOHN LOW,

Inspector of Public Watering Places.

P.S.—I may add that that the fresh posts that will require ere long to be got, referred to in my report of the 1st September, are those that are splitting on account of wire being strained on them.—J.L.

Direct Inspector Low's attention to his continued neglect to comply with his instructions in all cases to give an estimate of cost.—H.G., 10/11/87.

This paper will probably be required in the return to be moved for; but in the meantime, to prevent further injury to the shoots, the material may perhaps be supplied to Mr. Low, after ascertaining the prices at which it can be procured locally in Hay and in town.—H.G., 3/11/87. The Under Secretary. Submitted.—G.E.H. (for the U.S.), 3/11/87. Approved.—F.A., 5/11/87. Wire sent, 10/11/87.

XXVI.

Baloola and Normanstone Wells.

Report of the Inspector of Public Tanks and Wells on the water supply for the road between the townships of Coonabarabran, Rocky Glen, Melally, and Gunnedah, counties Gowen, White and Pottinger.

Sir,

Walgett, 16 August, 1882.

Tanks & Wells,
82-664.
*Forwarded to
Works Department,
No. 83-732. Tanks
and Wells, on
1/6/83. Asked
to return it,
6/12/87.

I have the honor to return you herewith the joint report* of Messrs. Mackie and Dowe, referring to sites for works for water supply on the above road, and I beg leave to submit for the consideration of the Honorable the Secretary for Mines the following recommendations for sites and for the class of works upon the same road.

The first site recommended by Messrs. Mackie and Dowe is for a well at the junction of the Mannum and Burloo Creeks, parish of Mannum, county of White, 15 miles from Coonabarabran, the site is well selected, and the indications are good for a large supply of water; the site and position of reserve I have marked in red upon the annexed tracing.

I have to further suggest that the shaft 3 ft. x 6 ft. in the clear be properly timbered and centred, and sunk as far as the water will permit, it may perhaps be advisable to bore some distance deeper, but this will depend on the supply; a frame for double whip to work two self-acting buckets should be erected with all the necessary gear complete, with wooden shoots to lead the water into a steel or iron supply tank of not less than 20,000 gallons, this to be furnished with a 4-inch pipe and tap to lead the water into 400 feet of iron troughing. Estimates are furnished in the annexe marked C.

Messrs. Mackie and Dowe submit a recommendation for a 4,000-yard tank at the second site at a point about 13 miles from Rocky Glen, parish of Garrawella, county Pottinger.

This site is 19 miles distant from the last, but I endorse Messrs. Mackie and Dowe's suggestion, it being the only spot suitable at anything approaching a convenient distance. With reference to the class of work I am unable to agree with those gentlemen, water is readily obtained by sinking in the Garrawella Run in good supply, and perfectly sweet, under 100 feet, and at the site I have marked on the annexed tracing I am disposed to think it may be obtained at less.

The same appliances will be required as recommended at site No. 1.

For their third site Messrs. Mackie and Dowe suggest a point 10 miles from Melally, and suggest a 4,000-yard tank, this point is very nearly the water-shed between Cox's Creek and the Namoi.

After careful examination I consider the point marked in red on the annexed tracing will prove the best site.

It is 4 and about $\frac{1}{2}$ miles from Melally, parish of Melville, county Pottinger. Water will be obtained at a depth of about 100 feet, I am inclined to think, from the inquiries I have made.

The same appliances will be required as recommended at the previous sites.

My enquiries do not justify me in placing the estimates of annual stock passages at as high a rate as stated by Messrs. Mackie and Dowe, though it is probable that it will increase when direct railway communication between Gunnedah and Sydney is established. At present I should estimate it at 60,000 sheep, 2,000 cattle, 500 horses.

I may say in conclusion that tanks of the size suggested by Messrs. Mackie and Dowe, say, of 4,000 cubic yards are of no use in keeping open traffic.

There is every reason to believe that water can be obtained by sinking at a moderate depth, and wells are at once a cheaper and more durable source of supply.

I have, therefore, to recommend that these works be approved for construction.

I have, &c.,

HARRY GILLIAT,

Inspector of Public Tanks and Wells.

Alex. Bruce, Esq., Inspector of Stock, Sydney.

C.

Estimate of Cost.

	£	s.	d.
Sinking, slabbing, and centring well shaft at 25s. per foot, average depth, 90 feet ...	112	10	0
Double whip frame, buckets, and gear ...	80	0	0
Iron supply tank, £90, carriage £50 ...	140	0	0
400 feet troughing £70, carriage £20 ...	90	0	0
Total ...	£422	10	0

For three wells, say, £1,500 sterling.

A.—Tracing herewith of road with sites and proposed reserves marked in red.

B.—Messrs. Mackie and Dowe's report herewith.

These papers with the accompanying tracing might perhaps be forwarded to the Department of Public Works.—A.B., 21/8/82. The Under Secretary for Mines. Submitted.—H.W. Approved.—A.R., 25/8/82. The Under Secretary for Public Works, B.C., 29/8/82. Roads.—J.R., B.C., 31/8/82. Re-submit with papers relating to tank at Baradine.—W.C.B., 31/8/82. Note in list of new tanks as per list herewith.—W.C.B., 2/10/82. Three wells at £800 each, noted for estimates.—A.P.W., 3/10/82.

Departmental Regulations.

Department of Mines, Public Watering Places, Sydney, 20 May, 1884.

Tanks & Wells,
84-581.

In submitting the accompanying papers, I beg to suggest, for the consideration of the Honorable the Secretary for Mines, that it appears to me important to have, with the consent of the Honorable the Secretary for Public Works, the regulations between the officers of the two Departments for the settlement of the position and construction of new works of water supply, in which the Departments are jointly interested, and for the repairs to existing works, so distinctly defined that the officers of either Department may have no difficulty in distinguishing their respective duties, and also that the responsibility of the officers of each Department may be clearly understood.

HARRY GILLIAT.

I think it is desirable that the arrangements agreed upon by the Minister for Mines and the Minister for Public Works for the guidance of those officers of their respective Departments who are engaged upon works connected with inland water supply should be adhered to and enforced until others shall have been adopted, if those already made are not suitable, and that a copy of the document should be supplied to each of the officers referred to.—H.W., 19/5/84. Submitted.

I was under the impression that these duties had been clearly defined by myself, and by Mr. Bennett; is not this so?—J. P. ABBOTT, 20/5/84. I think they are defined; see accompanying papers. If Mr. Gilliat is in doubt, or if the arrangement is not being carried out, he might perhaps state in what respect.—A.B., 2/6/84.

The Under Secretary for Mines. Ask Mr. Gilliat to state in what respect the arrangement is not adhered to.—H.W., 4/6/84. Mr. Gilliat.

The sites referred to were wells, road Gunnedah to Coonabarabran. The tracings accompanying my report appear never to have come back to this Department, and, unfortunately, no copies were kept. I do not see at present how the question can be proceeded with.—H.G.

Telegram from Mr. W. D. Dowe, Inspector of Stock, to Mr. H. Gilliat, Inspector, Government Wells and Tanks.

19 May, 1884.

Tanks & Wells,
84-595.

HAVE arranged with Mr. Mackie; will meet you in Gunnedah on the evening of the 28th instant.

W. D. DOWE.

Mr. Bruce.—It was my intention to have left on the 21st instant, but will now leave on the 26th.—H.G., B.C., 21/5/84. Submitted for the information of the Minister.—H.W., 23/5/84.

Approved. I shall be glad if Mr. Gilliat will give me a report on the wells on the road to Coonabarabran as far as Melally; I presume he will see the trough at Tambar.—J. P. ABBOTT, 24/5/84. Mr. Gilliat.—A.B., B.C., 26/5/84.

Telegram from Mr. H. Gilliat to Mr. T. H. Myring, Stock Branch, Department of Mines.

8 June, 1884.

RETURNING please get my report and tracing of road from Gunnedah to Coonabarabran from Works Department—Urgent.

HARRY GILLIAT,
Inspector, Public Tanks and Wells.Tanks & Wells,
84-1,186.

Will the Under Secretary for Works be good enough to furnish answers to the enclosed questions?—G.E.H. (for U.S.), B.C., 25/9/84. Roads.—J.R., B.C., 26/9/84. Answers herewith. Under Secretary. Copy handed to Minister for Works to reply in Parliament as requested.—30/9/84. Under Secretary for Mines.—W.F. (for U.S.), B.C., 30/9/84. Answered by Secretary for Works.—30/9/84.

LEGISLATIVE ASSEMBLY.

30 September, 1884.

Question:

Mr. Dangar to ask the Secretary for Mines:—

1. Has the Government contracted for the further sinking of the wells at Baloola and Normiston, on the Gunnedah to Coonabarabran Road: if so, at what rate?
2. Was the work let by tender?
3. Are those wells on the sites selected by the gentlemen appointed for that purpose?

Answer:

1. Yes; at £5 10s. per foot through basalt; but the contractor is refusing to proceed.
2. Yes, in the first instance; but original contractor failing to deal with the rock, the work was taken out of his hands, and the few remaining feet let to a highly recommended man who now declines to proceed.
3. Yes.

Department of Mines, Stock Branch, 3 October, 1884.

Tanks & Wells,
84-1,216.

BALOOLA WELL.—I examined the site of this well on the 17th June, 1884, but the works not being completed reserved my report. I find from my journal of that date.

The position chosen is about a quarter of a mile from where I would have put it; the shaft has been sunk on the shoulder of the hill, and is now down 94 feet; 9 feet of stiff clay, 5 feet of sandstone, the remainder basalt; no water; on the flat below in the black soil water is usually obtained at from 80 to 100 feet; the station, I think, has a well in the neighbourhood.

Normanstone Well.—This shaft has been sunk 4 miles from the site selected by me on Basin Plain.

Under the arrangements between the Department of Mines and that of Public Works, the former is to select the general position, the latter to fix the exact site.

H. GILLIAT.

Submitted.

Submitted.—A.B., 6/10/84. The Under Secretary for Mines. Submitted.—G.E.H., (for U.S.), 6/10/84. I would like to direct the attention of the Secretary for Public Works to the answers given in the Assembly, and to this report, which shows, I think, that the Works Department have not carried out the regulations as to the fixing of sites.—J. P. ABBOTT, 8/10/84.

The Under Secretary, Public Works, B.C., 9/10/84.

Sites of Watering Places between Gunnedah and Coonabarabran.

Sydney, 15 October, 1884.

MR. GILLIAT states that at the Baloola and Normanstone Wells, the sites selected have been deviated from. The Road Superintendent was instructed to adhere as closely as possible to the sites marked out by the Stock Inspectors, and which it was understood were approved of by Mr. Gilliat. A copy of the instructions from this office and of the tracings furnished by the Mines, transmitted therewith, are attached. Tanks & Wells,
84-1,290.

The Baloola Well was placed at a level higher than the creek, in order to get favourable ground for troughing, otherwise it is sunk as nearly as possible on the site indicated, and there can be no doubt, will have a good supply of water when completed.

The Normanstone Well is sunk near the 55-mile tree, and nearly opposite Hamilton's selection, being the approximate site shown on the tracing furnished, not 4 miles from it as Mr. Gilliat states in his minute.

Mr. Gilliat in his concluding paragraph instances the arrangement between the two Departments, under which the Mines select the "general" site, and this Department the "exact" site. This in itself, should be enough to cover any difference that may possibly exist on account of approximate descriptions.—W.C.B., 16/10/84. The Under Secretary.—B.C.

[Enclosure.]

Tanks and Wells—Coonabarabran to Gunnedah.

MR. WILSON will prepare plans and specifications (copies herewith) and invite tenders for wells at the undermentioned places on the road from Coonabarabran to Gunnedah. Tanks and
Punts,
83-291.

1. Near the junction of the Mannam and Burloo Creeks, about 15 miles from Coonabarabran.
2. 13 miles from Rocky Glen, and 34 from Coonabarabran.
3. About 55 miles from Coonabarabran, and about 43 from Melally.

Attached is a sketch showing the approximate positions of these proposed works. Mr. Wilson will report on the necessity for extending the reserves round the wells, and forward a sketch showing any alienation interfering with such extensions.

The specifications will provide for sinking 100 feet, and intending tenderers must be instructed to give a schedule rate at which reductions from, or additions to, this depth can be valued.

Tenders must also give a separate price for service tank and for troughing,

Mr. Wilson will examine this line of country, and if he thinks any slight alteration in the sites advisable, report same to the office, giving his reasons for same, he will not, however, delay calling for tenders on this account.—W.C.B., 7/6/83.

Forward to Mines.—F.A.W., 21/10/84. The Under Secretary for Mines.—J.R., B.C., 21/10/84.
Mr. Inspector Gilliat.—A.B., B.C., 23/10/84. Please furnish me with my report and the accompanying tracing.—H.G., B.C., 30/12/84. Report herewith.—E.W. (for A.B.), 19/1/85.

The tracing I ask for is a large one in three or four sheets, of the road from Coonabarabran to Gunnedah, upon it was marked the sites of the wells referred to. This tracing was sent with my report.—H.G., B.C., 19/1/85.

No tracing in records, thorough search made, cannot find tracing.—S.M., 22/1/85. Mr. Gilliat.—A.B., B.C., 24/1/85. Has inquiry been made at Works?—H.G., 27/1/85. Enquiry made at Works, no record of tracing.—S.M., 31/1/85.

Mr. Gilliat.—If tracing of reserve were obtained, could not the sites selected by you be marked on it?—A.B., B.C., 20/3/85. Yes; but will not be evidence as to the original.—H.G., 21/3/85. The Chief Draftsman.—Please supply tracing required.—A.B., B.C., 23/3/85. Mr. Gilliat, with tracing.—A.B., B.C., 30/3/85.

Telegram from Mr. Arthur P. Wood, Assistant Engineer, to Mr. D. L. Wilson, Road Superintendent.

24 September, 1883.

PLEASE send at once a tracing showing position of proposed tank, 15 miles from Baradine, at Holders, and of the three wells being constructed between Coonabarabran and Gunnedah. Tanks & Wells,
83-1,555.

A. P. WOOD.

Papers re tank near Holders returned Head Office, 7 October, 1883. Sketch of wells, &c., on Gunnedah Road herewith.—D.L.W., 10/10/83. Mr. Wood.—W.C.B., 13/10/83.

This might be forwarded to the Mining Department, requesting them to have steps taken to define the boundaries of special leases at these wells, so that the necessary fencing can be arranged, for while these works are in hand.—A. P. Wood, 16/10/83. Under Secretary for transmission.—W.C.B., 17/10/83.

Forward to Mines.—F.A.W., 18/10/83. The Under Secretary for Mines.—J.R., B.C., 19/10/83.
Mr. Gilliat.—A.B., 26/10/83.

Approximate

APPROXIMATE positions for the three wells on road Coonabarabran to Gunnedah:—

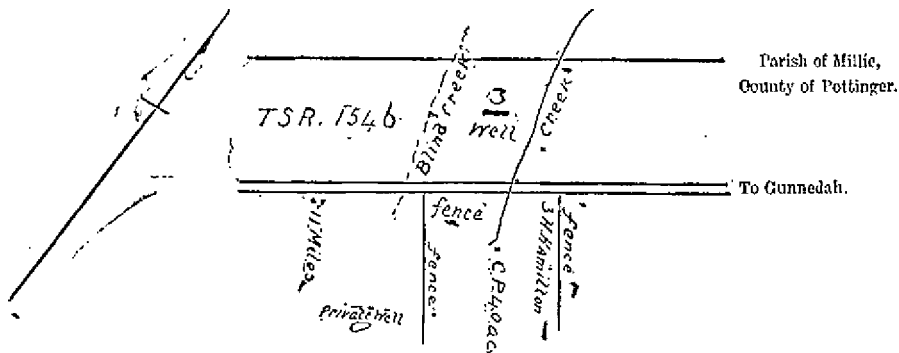

Sketch showing approximate position of Site No. 1 for the Mannum Well, about 15 miles N.E. of Coonabarabran—

Sketch showing approximate position of Site No. 2 for the Baloola Well, about 34 miles N.E. of Coonabarabran.

Sketch showing approximate position of Site No. 3 for the Normanstone Well, about 53 miles N.E. of Coonabarabran.

I would propose that camping reserves of (say) 200 acres each (from lease) be provided for these three wells.—D. L. WILSON, 10/10/83.

[Circular.]

Sir, Department of Mines, Stock Branch, Sydney, 11 April, 1885.

Referring to my circular of the 11th February last, asking particulars with respect to the Public Watering Places in your district, and forwarding printed forms on which these particulars were to be given, I have now the honor to inform you that the Commissioner for Roads has instructed the Road Superintendents in the several districts to supply the information required so far as they are in a position to do so, and to request that you will forthwith apply accordingly, and make and forward as perfect a report as possible.

I return the forms already sent you for completion.

In reporting on a watering place for the first time you will use this and not your monthly form.

I have, &c.,

ALEX. BRUCE,
Chief Inspector of Stock.

Mr. W. D. Dowe,
Overseer, Public Tanks and Wells, Tamworth.

P.S.—Perhaps the best way would be to hand the reports to the Road Superintendent for completion by him.

Pendi

Pending completion Normanstone Well I think your information is all that can be given, likewise with regard to Tambar Springs.—D. L. WILSON, R.S., 7/8/85. Mr. Dowe, B.C. Mr. Bruce,—Mr. Road Superintendent Wilson's memo. forwarded for your information.—W.D.D., 13/5/85.

Normanstone Well.

The Overseer of Public Tanks and Wells, reporting on proposed new works.—Road—Gunnedah-Coonabarabran; Situation—Collygrah Creek and Post Town, Gunnedah; Reserve (nature and No.)—T. S. Reserve, No. 1,549; Parish—Collygrah; County—Pottinger. Tanks & Wells,
85-374.

Questions:

1. Name of road, its commencement, termination, and length? Coonabarabran Road; commencing at Gunnedah, and leading to Mudgee and Sydney.
- 1½. If in or near a town give the number of inhabitants in the town and neighbourhood, and the number which would likely have to depend on watering place in dry weather? Gunnedah the nearest town, 12 miles distant.
2. Extent and description of annual traffic:—1. general; 2. stock, and probable increase or decrease? 400 drays, 100,000 sheep, 5,000 cattle, and 500 horses.
3. The direction of the traffic:—1. where from; 2. by what roads, and 3. its destination? Sydney; from Liverpool Plains; Gwydir and Queensland; Sydney.
4. The site of proposed new watering place—its position, and how marked? Site already chosen; works in course of erection.
5. The distance from nearest watering place, or permanent natural water on each side? 14 miles from Gunnedah, 58 from Coonabarabran.
6. The natural features, description and suitability of proposed site, with rough sketch of creeks, lagoons, roads, reserves, &c., &c. Say also the nearest natural supply and its extent and permanency? Site chosen is on the left bank of Collygrah Creek on travelling stock reserve, 1,549. Namoi River at Gunnedah, Castlereagh River at Coonabarabran.

If a tank.

7. The length, width, depth, and capacity? Nil.
8. The height of the embankment, its length, form, and construction? Nil.
9. Any other remarks with regard to tank, its site, dimensions, or capacity? Nil.
10. Estimate of cost of work? Nil.

If a well.

11. Whether it should be sunk or bored, or partly sunk or partly bored? This well is now down 100 feet, and I believe the Works Department now intend boring.
12. Any other remarks in regard to well or on its use? Nil.

Watering appliances.

19. Description of pump—its advantages, delivery, and position? Nil.
20. Description of whip—its advantages, delivery, and position? Tenders and specifications are accepted for whips, &c., but as I have not seen them cannot give any information.
21. Description of horse-works or whip-gear and position? Tenders and specifications are accepted for whips, &c., but as I have not seen them cannot give any information.
22. Windmill—Description and size? Nil.
23. Supply tank—Sort, size, position, construction, and estimated cost? Have not seen specification, so cannot give size, &c.
24. Pipes and connections—Extent, size, &c.? Not having seen the specifications of the work am not in a position to give the answer asked for.
25. Troughing—Sort, size, position, extent, &c.? Not having seen the specifications of the work, am not in a position to give the answer asked for.

Fencing.

26. Description, position, extent, and cost per rod (with sketch)? Not having seen the specifications of the work, am not in a position to give the answer asked for. The specification for fencing I hear is also out, but not yet accepted.
27. Gates—Their number, description, position, size, fastenings, and cost per gate? Not having seen the specification of the work, am not in a position to give the answer asked for.

General.

28. Reasons for proposing the sort of work recommended in preference to either of the others? Nil.
29. Chances of letting when constructed, and rental? To let by tender would be the better way. I fancy this could be done without much difficulty.
30. Extent and position of reserves required for use of tenant, and in connection with the watering place for the use of travellers, teamsters, and drovers' stocks? 200 acres have been surveyed.
31. The description of the land and its grazing capabilities; whether or not it is fenced; whether there is a caretaker's cottage; if so, describe it? Box forest, with a few pines; about four acres to the sheep: it is not fenced; there is no caretaker's cottage.

Tamworth, 21st February, 1885.
The Inspector of Public Tanks and Wells, Sydney.

WILLIAM D. DOWE,
Overscer of Public Tanks and Wells.

Baloola Well.

The Overseer of Public Tanks and Wells, reporting on Baloola Well.—Road—From Coonabarabran to Gunnedah. Situation— miles from Coonabarabran and Post Town, Coonabarabran.—Reserve, nature and No.—No. 841 (special lease).—Parish of Goolly.—County of Pottinger.

Tanks & Wells,
85-858.

Questions :—

1. Name of road, its commencement, termination, and length? Coonabarabran to Gunnedah, 67 miles.
- 1½. If in or near a town give the number of inhabitants in the town and neighbourhood, and the number which would likely have to depend on watering place in dry weather? No population in the vicinity to depend on this source for water in dry weather.
2. Extent and description of annual traffic—1, general; 2, stock; and probable increase or decrease? General traffic inconsiderable, consisting of haulage of goods from railway station, and of wool and other produce to railway station, and light vehicle traffic; a considerable annual stock traffic, but there has been a perceptible decrease during the last few years, and there is likely to be a further decrease as the railways extend inland.
3. The direction of the traffic—1, where from; 2, by what roads; and 3, its destination? Stock traffic from Victoria and south-western portions of New South Wales to New England, Queensland, &c., and *vice versa*.
4. The site of proposed new watering place; its position, and how marked? Well already sunk 100 feet and no water obtained. Between Melally and Rocky Glen, 200 acres measured and marked as a special lease. Sketch herewith.
5. The distance from nearest watering place or permanent natural water on each side? 13 miles from Rocky Glen, and 8 miles from Melally, which places are private wells.
6. The natural features, description, and suitability of proposed site, with rough sketch of creeks, lagoons, roads, reserves, &c. Say also the nearest natural supply and its extent and permanency? Undulating basaltic ranges, with precipitous rocks northerly from well; box and apple; very suitable holding ground for tank (sketch herewith); also creek. Melally contains a sufficient supply in ordinary seasons, but is not permanent.

If a tank.

7. The length, width, depth, and capacity? A well in this instance.

If a well.

11. Whether it should be sunk or bored, or partly sunk or partly bored? Well sunk 100 feet, but no water obtained. I should recommend that a boring rod be used if practicable, in order to ascertain whether water can be obtained on the site chosen.
12. Any other remarks in regard to well or on its use? A tank would have been the best and most inexpensive in this instance, as formerly recommended.
21. Description of horse work or whip-gear and position? Whim with necessary gearing would be best and cheapest in this instance if water is obtained.
23. Supply tank; sort, size, position, construction, and estimated cost? Tank on the ground of wood 55 ft. x 15 ft. x 5 ft. south-westerly from well, ironbark sawn timber, not completed, to be lined with 20-gauge iron.
25. Troughing; sort, size, position, extent, &c.? I should recommend iron troughing 300 ft. x 2 ft. 4 in.

Fencing.

26. Description, position, extent, and cost per rod (with sketch)? Top rail and six wires, No. 6, on the boundaries of 200 acres, which is measured, say 720 rods, at 5s. per rod, £180.
27. Gates; their number, description, position, size, fastenings, and cost per gate? Double gate, 12 feet span of sawn timber, southerly from well; size of each gate, 6 feet long by 5 feet high; fastening, two iron bolts with screw nuts to each gate, with hinges to hold, bolts to be fully 18 inches long, so as to pass through a gate post 18 inches in diameter; hasp and padlock to secure gate when closed.

General.

28. Reasons for proposing the sort of work recommended in preference to either of the others? Well commenced in this instance and sunk to a depth of 100 feet. I have already reported on this site as being most suitable for a tank.
29. Chances of letting when constructed, and rental? Very slight chance of letting, unless at a very low rental.
30. Extent and position of reserves required for use of tenant, and in connection with the watering place for the use of travellers, teamsters, and drovers stock. The description of land and its grazing capabilities; whether or not it is fenced; whether there is a caretaker's cottage; if so, describe it? 200 acres, to include the well, for tenant adjoining reserves, sufficient for travellers and drovers stock. 200 acres, principally sloping hilly basaltic open box, well grassed country, including a few dry water-courses and a small flat, very suitable for tank. Grazing capabilities, 4 acres to one sheep, unfenced, and no caretaker's cottage.

ARTHUR MACKIE,

Overseer of Public Tanks and Wells.

10th April, 1885.

The Inspector of Public Tanks and Wells, Sydney.

Subject :—

Subject:—

18 December, 1885.

Referring to your communication of the 12th instant, stating you anticipated taking delivery of the Mannum and Baloola Wells, and so requisitioned for stores for caretakers, I beg to inform you that the Department has received so far no intimation that the wells were ready for transfer, and that your action was quite right in declining to take over the Mannum Well until directed to do so. I shall be glad if you will inform me if water has been obtained at Baloola, and, if so, the quality and what quantity?

P.W.P.,
86-16.

HARRY GILLIAT,

Chief Inspector of Public Watering Places.

Mr. A. Mackie, Overseer, Public Watering Places, Coonabarabran.

Reply:—

Observed and noted.

I am informed by A. Mosman that he obtained water at Baloola, at 106 feet; quality, good; quantity, when allowed to stand a week, 6 feet; merely a soakage from the north side.

ARTHUR MACKIE, 29/12/85.

Re the proposed well at Mellaly.

Department of Mines, Public Watering Places Branch,

Sydney, 3 February, 1886.

With respect to the proposed well at Mellaly, it appears from the annexed advertisements that the shaft at Baloola is to be abandoned and the head works removed to Mellaly. No well has been recommended by this Department at that township, and I think that a small tank of 12,000 cubic yards, at or near Baloola, would better meet the requirements of the Gunnedah and Coonabarabran Road. Tanks & Wells,
86-476.

The sinking of a well has been contemplated on the road between Mellaly and Boggabri, and a report obtained and the site marked in green on water reserve 1,342 (see papers herewith); but, with the view of reducing expenses at present, the papers were held over. I cannot recommend sinking of the well as proposed, but would submit for the consideration of the Honorable the Secretary for Mines, that it would perhaps be better, in the public interest, to utilize the head works of the abandoned shaft at Baloola for a well, on the road between Boggabri and Mellaly, at the point shown on reserve 1,342, reserving the completion of the tank at Baloola until next year.

If the suggestion meets the approval of the Honorable the Secretary for Mines, the papers may perhaps be forwarded for the information of the Department of Public Works.

HARRY GILLIAT.

Submitted.—H.W., 4/2/86. Approved.—R.M.V., 5/2/86. Under Secretary Works.—H.W., B.C., 6/2/86. Inform Mr. Thompson, M.L.A., and forward to Works. Informed, 8/2/86. Roads.—J.R., B.C., 11/2/86. Mr. Wood. Urgent. Post Office, Gunnedah.—W.C.B., 11/2/86.

Would it not be better, if it is still intended to have a watering place at Baloola, to invite tenders for deepening the shaft or for boring from bottom of that sunk (100 feet)? I think there is little doubt as to water being obtained. If Commissioner agrees Mr. Wilson might be instructed to call tenders for sinking.—A.P.W., 24/2/86.

Telegram to Mr. Wilson.—W.C.B., 24/2/86. Telegram sent to invite tenders for sinking 100 feet or less if water is obtained.—A.P.W., 24/2/86.

Telegram from Mining-Surveyor John Barling to The Chief Mining Surveyor.

12 May, 1886.

LOCAL Works Officer informed me no present intention of abandoning work either at Baloola or Normanstone. Shall I, therefore, make surveys of these places? Commissioner for Roads has definite information as to works. Tanks & Wells,
86-2,340.

Attach papers from Public Works Department relating to abandonment of Baloola, and transfer of head works to Mellaly.—H.G., 12/5/86. Mr. A. P. Wood informed me that the Works Department had no intention of abandoning either of these wells.—S.M., 12/5/86.

The survey should proceed both at Baloola and Normanstone.—H.G., B.C., 12/5/86. Mr. Barling informed by telegram.—E.F.P., 13/5/86.

Sir,

Stock Office, Tamworth, 27 October, 1886.

I have the honor to inform you that on 21st instant I inspected Normanstone Well, on the road from Gunnedah to Coonabarabran. The depth at present is 106 feet. Two men were working on date of inspection who have taken a contract from the Roads Department to deepen it 74 feet. At present there is a supply of about 5 feet of water in the well. Tanks & Wells,
86-5,095.

I have, &c.,

W. D. DOWE,

Overseer of Public Watering Places.

The Chief Inspector of Public Watering Places, Sydney.

Normanstone Well.

Sir,

Department of Mines, Public Watering Places, Bourke, 27 August, 1887.

I have the honor to inform you that, owing to this well being beyond any of the works I was instructed to report on, I did not visit it. Mr. Overseer Mackie informed me that the work was still in an unfinished state; and I was unable to see the Superintendent for Public Works, as he was absent during the time I was in Coonabarabran.

P.W.P.,
86-4,228.

I have, &c.,

F. MACKENZIE,

Acting Inspector of Public Watering Places.

The Chief Inspector of Public Watering Places.

Sir,

P.W.P.,
87-6,006.

Sir, Coonabarabran, 8 November, 1887.
I have the honor to inform you that I have inspected Baloola Well, which is now abandoned. The shaft is 145 feet deep, and has 70 feet of water in it, which I am informed is only rain-water, no water having been struck at the time of sinking. A good substantial whim has been erected, and wooden framework for supply-tank partially put up, both of which are rotting from exposure and neglect.

Stanley, the contractor, from Normanstone, is going to commence boring in a few weeks' time.

I have, &c.,
F. MACKENZIE,
Inspector of Public Watering Places.

The Chief Inspector of Public Watering Places.

This is one of the cases in which a well-shaft has been carried down to its full dimensions, whim and service tank erected, before it has been proved that water could be obtained. It is some years since I inspected this well; it was then—17th June, 1884—down 94 feet, 80 of which were, the contractor informed me, through basalt and no water.—H.G., 18/11/87.

The Under Secretary, for the information of the Minister.—H.W., 25/11/87. Approved.—F.A., 25/11/87.

P.W.P.,
87-6,007.

Sir, Coonabarabran, 8 November, 1887.
Referring to your letter of 25th October, I have the honor to inform you that I have inspected Normanstone Well. The shaft, 5 ft. 2 in. x 2 ft. 6 in., has been sunk to a depth of 180 feet, and a small quantity of water obtained—good stock water, slightly brackish.

Stanley, the contractor, is now timbering the shaft, which he will finish in a few days' time, and he is then going to bore, and is very sanguine of striking a large supply of water in a few weeks. Coal was struck a few feet above where the present water was tapped.

I have, &c.,
F. MACKENZIE,
Inspector of Public Watering Places.

The Chief Inspector of Public Watering Places.

Tanks & Wells,
84-1,202.

NOTE.—Baloola and Normanstone Wells were notified by the Works Department on 25th September, 1885, to be ready for transfer to this Department in January, 1886. The transfer has not been effected yet, nor is it likely to be for considerable time to come.—J.W.B., 7/12/87.

XXVII.

Papers *re* Transfers.

Transfer of Mulga No. 5, Mulya, and Bendemere Tanks.

Roads.

Sixty-four-mile Tank, Louth to Cobar Road.

Sydney, 16 December, 1885.

P.W.P.,
85-4,748.

THE Chief Inspector of Public Watering Places should be informed that the tank at the 64-mile, on the road from Cobar to Louth, will be ready to hand over early in January, and he might be requested to instruct the local stock inspector to meet Mr. Coleman, the Road Superintendent, and arrange for transfer when work is completed.

ARTHUR P. WOOD.

The Commissioner for Roads, B.C. Under Secretary for transmission.—W.C.B., 16/12/85.
The Under Secretary for Mines.—J.R., B.C., 19/12/85. Inform Mr. Overseer Mallon, and instruct him to arrange with Mr. Coleman as to date of delivery. Mr. Mallon should be furnished with the forms of receipts and statements required.—H.G., 22/12/85. Mr. Mallon informed,—24/12/85. Works informed.—29/12/85.

This paper was discovered by Mr. Boulbee yesterday, in searching for papers in connection with the inquiry. Having been incorrectly registered by a former record clerk, it was lost sight of when papers were being collected in connection with Mr. A. P. Wood's charges of delay in the transfer of Mulga No. 5, Mulya, and Bendemere tanks, *vide* 87-6,475; but the contention of the minute of the Chief Inspector of Public Watering Places, 87-6,475, is not affected by the finding of these papers.—J.S.R., 15/12/87.

Secn. These papers should now be put in their proper places.—H.G., 16/12/87.

Report on 64-mile Tank, Road Cobar to Louth.

Sir,

Roads Office, Bourke, 16 May, 1887.

This tank is ready to hand over to the Mines Department, all the work having been completed and in good order. The works necessary to complete throughout are weather-shed, a task for which has been let, the fencing of special lease, tenders for which will be invited upon the receipt of tracing of survey, and the construction of caretaker's cottage.

I am, &c.,

J. COLEMAN.

The Commissioner for Roads, Sydney.

Mr. Wood.—W.C.B., 18/5/87. Mines might be asked for tracings of all outstanding tenants' lease areas.—A.P.W., 18/5/87. Forward to the Under Secretary for transmission to Mines. It is desirable we should have the tracings, as tenders are accepted for most of the works.—W.C.B., 18/5/87. Under Secretary, B.C. The Under Secretary for Mines.—J.R., B.C., 21/5/87.

Until the surveys have been finally dealt with by the Lands Department, it appears undesirable to forward the tracings asked for by the Department of Works. And as at present the question as to which Department is in future to be charged with this service, it may perhaps be better if further action should be suspended until the Cabinet have given their final decision.—HARRY GILLIAT, 3/6/87. The Under Secretary.

I do not see how tracings can be supplied until the surveys are made.—H.W., 4/6/87. Submitted. Approved.—F.A., 6/6/87. Inform that tracings cannot be sent until the surveys are finally dealt with by the Department of Lands.—H.G., 7/6/87. Informed, 7/6/87.

Inspector Mackenzie's Report on Mulga No. 5 Tank.

General Remarks.

At time of inspection there was 14 feet water in tank. Embankments were irregular, and had fallen in in several places.

P.W.P.,
87-4,954.

Pump and engine were not in working order, and were undergoing repairs.

Contractor had not delivered tank to superintendent, but with exception of embankment, it was completed. Could not measure depth, but it is stated to be 16 feet.

Inspector M'Kenzie's special report on site for Tank, Mulga No. 5.

Sir,

Bourke, 24 September, 1887.

I have the honor to inform you that I have made inspection of new tank on road Byrock to Gongolgon, Mulga No. 5.

P.W.P.
87-4,955

There was 14 feet of water in main tank, and I was unable to take measurements, but Mr. Superintendent Coleman informed me it has capacity of 12,000 cubic yards, and that it is 16 feet deep. The first 2 feet of excavation is in a red loam soil, and does not appear to retain the water, the remaining 14 feet is in what appears to be an old creek bed, and is a mixture of gravel and quartz ironstone with a bottom of conglomerate which hold well.

The batter is $1\frac{1}{2}$ to 1 which I do not consider sufficient, and in many places the water has washed under the banks and cut them away.

The embankments are placed 30 feet back from excavation, with an average height of about 10 feet and 25 feet across the top. They are very irregular, and have never been properly finished off.

The silt tank has a capacity of about 500 cubic yards, and a depth of 4 feet. The fluming, composed of wood and iron, is 4 feet wide by 2 feet deep.

Supply tank and troughing are of iron, very substantial, with a joint capacity of 30,000 gallons.

Tangye pump and engine were not in working order. An engine-house has been erected of galvanized iron, pine studs, and roof frame 12 x 12 x 10, and is at present utilised as a residence by the man left in charge for contractor.

This tank was not ready to take over at time of my inspection, but Superintendent Coleman has promised to have everything ready in a month's time, and on my next visit I shall make a full report.

I have, &c.,

F. M'KENZIE,

Inspector, Public Watering Places.

The Chief Inspector of Public Watering Places.

Sir,

Bourke, 24 September, 1887.

I have the honor to inform you during my late visit to Byrock and thence to Mulga No. 5 Tank, I was unable to reach Bendemere Tank owing to floods in Barwon and Bogan Rivers, the country is submerged for miles. Superintendent Coleman informs me that it is not ready for delivery to Public Watering Places Branch.

P.W.P.
87-4,956.

I have, &c.,

F. M'KENZIE,

Inspector, Public Watering Places.

The Chief Inspector, Public Watering Places.

Tanks and Wells. Transfer of Mulga Tank, Cobar and Louth Road.

The Mines Department might be requested to instruct their officer to arrange to meet Mr. Adam, of Cobar, and accept transfer from this Department of the Mulga tank on the Cobar to Louth Road.

ARTHUR R. WOOD.

The Commissioner for Roads.

Under Secretary for transmission to Mines.—W.C.B., 11/10/87. Forward to Mines Department. The Under Secretary for Mines.—J.R., B.C., 12/10/87.

[Telegram.]

[Telegram.]

Mr. Cotton,—Can you arrange to take over this work if in good order from the Works. If there is anything to delay you, wire your reply.—H.G., B.C., 17/10/87.

Cobar Station.

P.W.P.,
87-5,603.

Mulya Tank is not in my district. Have pressure of work just now. Mr. Road-Superintendent Adam is absent. Writing by to-morrow's mail.

JAS. COTTON,

Overseer, Public Watering Places, 25/10/87.

The Chief Inspector of Public Watering Places, Branch, Department of Mines, Sydney.

Mulya tank is not in my district, but if the Chief Inspector wishes, I can accept the transfer and hand it over to the officer in whose district it is. Mr. Road-Superintendent Adam is absent just now, but when he returns I shall endeavour to find time to take the tank over, if so instructed.—JAS. COTTON, Overseer, Public Watering Places, 26/10/87. The Chief Inspector, Public Watering Places, Department of Mines. Mulya Tank appears to be in the Bourke District.—J.S.R., 28/10/87.

I am aware the tank is in the Bourke District, but as it is apparent we cannot depend on the services of Mr. Overseer Mallon, Mr. Cotton may perhaps be requested to effect the transfer, and to put a competent caretaker in charge, or to engage the present one, who I understand is a very good one, at our current rate of wages.—H.G., 7/11/87. The Under Secretary.

Submitted.—G.E.H., (*pro* U.S.), 8/11/87. Approved.—F.A., 10/11/87. Mr. Cotton informed, 17/11/87.

Sir,

Cobar, 23 November, 1887.

P.W.P.,
87-6,368.

I beg to acknowledge receipt of your letter 87-5,603, instructing me to accept transfer of Mulya Tank and appoint a caretaker to take charge.

Referring to the above, I beg to inform you that I am making the necessary arrangements with Mr. Road-Superintendent Adam to make the transfer at an early date, but I trust the Department will shortly relieve me of the supervision of this tank, as I have already twenty-one P.W.Ps. under my supervision, three of which are not in my district, and that recently some large additions have been proposed to my sheep district, which will increase my work.

I have, &c.,

JAS. COTTON.

The Chief Inspector, Public Watering Places Branch, Mines Department.

Inform Mr. Cotton that his services have only been required to effect the transfer.—H.G., 16/12/87. Informed, 17/12/87.

Delay in transfer of works.

16 November, 1887.

P.W.P.,
87-6,296.
Tanks & Wells.

As complaints have been made by the Mines as to the delay in carrying out, and excessive cost of, the works at the Public Watering Places, I would draw the Commissioner's attention to the fact that in July last that Department was requested to accept transfer of three tanks in the Bourke District—Mulya, Mulya No. 5, and Nellie's Paddock, and that up to the present time no action has been taken to carry out this request. This delay rests solely with the Mines, and has increased the charges against these works by nearly £120.

I enclose a telegram from Mr. Adam, explaining why the Mulya Tank has not been transferred.

ARTHUR P. WOOD.

The Commissioner for Roads.

I send this to the Under Secretary for information of the Minister.—W.C.B., 17/11/87. Under Secretary, B.C. Submitted for information.—J.R., 21/11/87. Forward to Mines.—J.S., 21/11/87. Under Secretary for Mines.—J.R., B.C., 22/11/87.

No communication has been received from the Works since the beginning of 1886 about Mulya No. 5 and Nellie's Paddock (Bendemeer), and none was received at all in July as to Mulya; No. 87-2,201 in this latter case was received in May, 1887.—J.S.R., 26/11/87.

The following papers on Bendemeer Tank may perhaps be obtained from the officer to whom they are marked:—87-2,144, with Inspector McKenzie, on 25/7/87; 86-2,442, with Overseer Doyle, on 7/10/86.—J.S.R., 28/11/87.

Copy of telegram sent to Mr. Adam, 14/11/87.

HAVE the Mines taken over 64-mile Tank, or instructed local officer to do so?

ARTHUR P. WOOD.

Please report dates and amounts expended in caretaking.—W.C.B., 15/11/87. From 1st Sept., 1886, amount paid for caretaking, £127 17s. 6d.—J.G.D., 15/11/87. Mines were requested to take over, 29/7/87; wages since, about £40.—A.P.W.

Telegram from Mr. Road-Superintendent Adam to Commissioner for Roads.

Cobar, 15 November, 1887.

Just returned Cobar. *Re* Mr. Wood's telegram Seventy-four-mile Tank, Mr. Gilliat instructed local officer to take over tank. He replied few days ago that it was not in his district, but would take it over from me and hand it to proper officer if instructed to do so. Mr. Cotton informs me that he has not yet received reply from Gilliat.

A. ADAM,

Road Superintendent.

Charges

Charges by Mr. A. P. Wood as to alleged delay in transfer of Mulga No. 5, Mulya, and Bendemere Tanks.

Department of Mines, Public Watering Place, Sydney, 30 November, 1887.
 Mr. A. P. Wood's minute of the 16th November, 1887, is admittedly written in retaliation of the complaints alleged to have been made by this Department as to the delay in carrying out, and the excessive cost of, their works, and not for the more legitimate purpose of discharging a public duty by having corrected an oversight or case of negligence.

P.W.P.,
87-6,475.

Mr. A. P. Wood is, however, in error in his charge. He calls the attention of the Commissioner to the fact that in July last this Department was requested to accept transfer of three tanks in the Bourke district, the Mulya, the Mulga No. 5, and the Nellie's Paddock (or Bendemere), and that up to the present time no action has been taken. In reply I may say that in July no papers to this effect were received from the Works Department; that since the beginning of 1886 no communication has been received from it concerning the Mulya No. 5, or Bendemere Tanks; that on September 24th, 1887 (*vide* 87-4,954 and 4,955) Inspector Mackenzie reports the contractor as not having delivered the Mulya No. 5 Tank to the Road Superintendent, and on the same date that he has seen Road-Superintendent Coleman, who has promised to have everything ready in a month's time. Upon the same date, 24th September, 1887 (87-4,956), Mr. Inspector Mackenzie reports that he was unable to reach Nellie's Paddock, or Bendemere Tank, owing to floods, but that Superintendent Coleman informs him that it is not yet ready for delivery.

Two of the tanks therefore, according to the local Roads officer, are not ready for transfer two months after the date on which Mr. A. P. Wood alleges we were asked to accept delivery.

With respect to the Mulya Tank, on the 25th May, 1887, a letter from Road-Superintendent Coleman was forwarded, with a B.C., from the Commissioner asking for a tracing of the lease area to enable tenders for fencing to be called for.

Mr. Coleman's letter states the tank to be ready for transfer, but goes on to detail additional work needed to complete it; but neither Mr. A. P. Wood nor the Commissioner endorses his statement of the tank being ready for transfer.

Upon the 10th October, Mr. A. P. Wood recommends the transfer of this tank to the Mines. Owing to circumstances it was deemed advisable that Mr. Overseer Cotton, of Cobar, should be the officer to take delivery, although the tank was out of his district. Upon the 17th, he was asked if he could arrange to do so. On the 26th, he replied that Mr. Road-Superintendent Adam is absent, but on his return he will endeavour to find the time if instructed. On the 15th November, Mr. Road-Superintendent Adam wires his Department that he has returned, and that Mr. Cotton is waiting instructions. On the 17th November, Mr. Cotton was instructed.

This case, I think, very fairly illustrates the unnecessary difficulties this Department has to contend with in its intercourse with the Roads and Bridges.

HARRY GILLIAT,
Chief Inspector, Public Watering Places.

Submitted.—H.W., 2/12/87. Seen. Copy of this report should be sent to the Secretary for Public Works.—F.A., 3/12/87. Copy sent, 10/12/87.

Transfer Ledknapper Tank.—Road Eringonia to The Culgoa.

Bourke, 16 May, 1885.

EXAMINED this work on the 5th instant, and found everything satisfactorily completed, with the exception of pipe connections. For these, a 7 ft. x 4 in. fitting length has been ordered for the suction, and when that arrives the work will be at once finished and handed over to the local Stock Inspector.

P.W.P.,
85-3,908.

The special lease area is fenced, and the paddock contains splendid feed and plenty of surface-water.

The Commissioner for Roads.

ARTHUR P. WOOD.

Mr. Smith.—Has this been sent? Sent on 13th inst.—W.A.S., 18/5/85. Mr. Hiles.—Note, as to be handed over.—W.C.B., 18/5/85. Noted, J.H.

Extract from Chief Inspector's Report on Ledknapper Tank.

6 June, 1885.

* * * * *
 * Although reported ready for transfer, I found the work in too unfinished a state to take over.

* P.W.P.,
85-1,410.

* * * * *
 H. GILLIAT.

* Original, with
papers, re
furnishing.

NOTE.—Mr. Gilliat in June, 1885, reported a feed-pipe required at this pump. In July, 1885, Mr. Coleman agrees he will, at his next visit, arrange for proper feed-pipe. In August, 1885, Mr. Wood reports the feed-pipe *has been made*, &c. The necessary connection does not appear to have been made until November, 1886.

Extract from 85-1,410. Report by Mr. Chief-Inspector Gilliat on Ledknapper Tank.

The pump is of an excellent pattern, with double cylinders, and driven by a small engine connected to a vertical boiler, standing on a cast-iron feed-tank, from which the inject-pipe to the boiler is fed. A feed-pipe from the service-tank to that below this boiler would be of great service, as at present the latter will have to be filled by bucket and runnel.

Stock Branch
85-1,461.
Original with
papers, re
furnishing.

I also noticed that there was no pressure-gauge on boiler, nor any shed over boiler and engine, both of which required, at least, two good coats of paint.

I was also informed by the contractor that there were no oil-cans or fitters' tools accompanying the plant.
HARRY GILLIAT.

It would seem very necessary that the engine and pumps should be protected by a shed. If so, the Department of Works might be asked to have sheds erected, and to make the other additions, and give the coats of paint suggested by Mr. Gilliat. It would be well also if the Works Department would in all such cases provide and leave the necessary tools and a supply of oil.—A.B., 13/6/85. The Under Secretary for Mines.

Submitted.—H.W., 27/6/85. Approved.—J. P. ABBOTT, 29/6/85. The Under Secretary for Works.—G.B.H. (*pro* U.S.), B.C., 1/7/85. Roads.—J.R., B.C., 6/7/85. Send copy this day of all to Mr. Coleman for report; re-submit when Mr. Wood returns.—W.C.B., 7/7/85. Copy sent to Mr. Coleman, 7/7/85.

The feed connection alluded to by Mr. Gilliat has been made, instructions having been given at the time. The pressure-gauge was being cleaned at the time of inspection. The sheds over machinery would be an improvement, and arrangements will be made to invite tenders for this work; but I would point out that it comes within our province as required by the Minister, and should therefore be effected by our own officers. Tools and stores can either be supplied by us or by the Mines.—A.P.W., 5/8/85.

I concur with Mr. Wood, the tools and stores required by the Mines officers should be supplied by that Department.—W.C.B., 5/8/85. Under Secretary. Forward to Mines.—F.A.W., 8/8/85. The Under Secretary for Mines.—W.F. (*pro* U.S.), B.C., 8/8/85.

Recently, in delivering several tanks at which there are steam pumps, the necessary tools, and balance stores have been handed over by the officers of the Works Department, and it would, I think, be more convenient if this practice was continued, especially as in most cases the same caretaker is employed by this Department.—A.B., 12/8/85. The Under Secretary for Mines.

Submitted.—H.W., 19/8/85. Approved.—J. P. ABBOTT, 20/8/85. The Under Secretary for Works.—H.W., B.C., 21/8/85.

In no case where steam pumps are erected have arrangements been made to protect them by sheds; it is, I think, very necessary such should be done. In Mr. Adam's district I am informed several sheds have been built by the caretakers, who, as a rule have plenty of spare time and might be supplied with the necessary brushes and material for painting engine and pump. With the exception of Kerrigundi and Booroondara steam pumps none have been provided with working material, which should consist of tallow kettle, oil feeder, cotton waste, tallow, hammer, files, chisels, hemp packing, rubber, insertion, spare water gauges, screw wrench, and castor oil. When Mr. Gilliat visited Ledknapper Tank, pressure-gauge was in Bourke undergoing repairs, which have now been effected, and the gauge fixed in position. Upon my next visit I will arrange for proper supply of feed water, the present system, as mentioned by Mr. Gilliat, not being satisfactory.—J.C., 13/7/85.

Mr. Smith.—I think Mr. Bruncker had boxes of tools fitted.—W.C.B., 17/7/85. Only a sample tool-box was made and fitted, which is now in my room.—W.A.S., 17/7/85. See me on Monday morning.—W.C.B., 18/7/85. Mr. Wood.—W.C.B., 25/8/85. Presume from this memo. that stores, &c., must be supplied by this Department.—A.P.W., 27/8/85.

We have no funds for this. Considerable sums have had to be paid from votes for this Department for caretakers' wages, pending taking over these tanks, so that, unless delayed until January, it is impossible these articles can be supplied by this Department.—W.C.B., 27/8/85. Under Secretary.

Submitted.—J.R., 29/8/85. Inform Mines.—F.A.W., 31/8/85. The Under Secretary for Mines.—J.R., B.C., 1/9/85. Mr. Gilliat.—A.B., B.C., 9/9/85. Perhaps the Works Department will give me particulars and price of sample tool-box, so that an estimate can be made of the cost.—H. GILLIAT, 11/9/85.

P.W.P.,
85-4,248.

PLEASE ask Mr. Overseer Mallon by wire to inform me if the Ledknapper and 18-mile Tanks are ready for transfer, and how long it will be before the tanks between Brewarrina and Byrock are completed.

20 November, 1885.

H.G., 20/11/85.

Attended to.—R.W.G., 20/11/85.

Telegram

Telegram from Mr. James Mallon, Bourke, to Chief Inspector of Public Watering Places, Sydney.
STARTING to-morrow take over tanks, Cobar Road, with J. Coleman.

P.W.P.,
86-348.

In fourteen days.—H.G., 1/2/86.

JAMES MALLON, 25/1/86.

Sir,

Stock Office, Bourke, 2 February, 1886.

I have the honor to inform you that, on the 25th ultimo, I had made arrangements to proceed on the following day with Mr. Coleman and take over the tanks on the Cobar Road. We were to have met Mr. Barton, of Cobar, at the Two Waterholes Tank (Mr. Barton is one of the sureties for the contractor who has failed to carry it out). Mr. Barton did not keep his appointment; and after arrival at the Two Waterholes Tank, Mr. Coleman found out that two of the tanks were not completed and would not be ready to take over for a week or more. Mr. Coleman then returned to Bourke, and the following day we started to inspect and take over the 18-Mile and Ledknapper Tanks, believing that they were all right. First day, went from here to Grass Hut, 35 miles; second day, from Grass Hut to 18-Mile Tank, *via* Nellie's Springs. On arrival at 18-Mile Tank, we found the tank perfectly dry, the caretaker having to carry water, for use, about $1\frac{1}{2}$ miles. All the work in connection with this tank appears very good and substantial; but as we could not try the pump, on account of no water, I would not (until I receive notice from you to that effect) take it over without a trial with the pump. Mr. Coleman then found out that the pump at Ledknapper had not been re-stuffed according to instructions forwarded by him to engineer, and it was under these circumstances no use going to Ledknapper. We then returned to Grass Hut, 60 miles; and following day to Bourke, 35 miles.

P.W.P.,
86-484.

Matters now stand thus:—Mr. Coleman has started from Bourke, with the engineer, to put the pump at Ledknapper in order, so that it will be ready in a few days. The 18-Mile Tank is dry, and, if necessary that it must be taken over, will have to be so without a trial. The tanks on the Cobar Road are supposed to be finished this week, and I, yesterday afternoon, saw a telegram from Mr. G. Barton to Mr. Coleman, making an appointment to meet him (Mr. C.) in Bourke on next Monday, and then proceed along Cobar Road, and hand over the works fully completed. Until that date arrives I cannot say whether they will be ready or not.

I have, &c.,

JAS. MALLON.

Mr. Overseer Mallon to be informed that his action with respect to 18-Mile Tank is in accordance with his instructions (Section 8, Clause 21). Ask him to suggest some local native name for 18-Mile Tank. I shall want him to make new works report on the watering places, Bourke and Cobar Road.—H.G., 8/2/86. Mr. Mallon informed, 12/2/86.

Telegram from Mr. Jas. Mallon to Chief Inspector of Public Watering Places, Sydney.

Bourke, 2 April, 1886.

THE tanks were formally handed over to lessees few days after 15th ultimo by me; they are all quite dry; could not be tested, and cannot do so until after rain. Caretaker for works still at tanks, and will not leave until I give receipt to Mr. Coleman, and cannot do that until there is water to try the engines.

JAS. MALLON.

P.W.P.,
86-1,563.

Call Mr. Mallon's attention to the instructions with respect to this matter.—H.G., 5/4/86. Telegram to Mr. Mallon to take over works according to instructions of 31st March.—5/4/86. Request Mr. Mallon to report his action without further delay.—H.G., 14/5/86. Memo. to Mr. Mallon, 17/5/86.

Memorandum to Mr. Jas. Mallon, Bourke.

Subject:—

Be good enough to inform me what action has been taken by you *re* the transfer of Ford's Bridge, Ledknapper, and 18-Mile Tanks from local works officer.

P.W.P.,
86-2,643.

HARRY GILLIAT,
Chief Inspector of Public Watering Places.

Reply:—

As there is no water in any of these tanks, they have been taken over by me in accordance with your last instructions, and handed over by me to the lessees. As soon as rain comes works officer to show that pumps and appliances are all in thorough working order.

J. MALLON.

Mr. Mallon should be asked if the late rain has put water in any of these tanks.—H.G., 31/5/86. Mr. Mallon asked.—R.W.G., 7/6/87.

Memorandum to Mr. Jas. Mallon, Bourke.

Subject:—

Referring to your reply to my memo. of the 17th ultimo, stating that as soon as rain came the local works officer would show that the pumps and appliances at Ford's Bridge, Ledknapper, and 18-Mile Tanks were in thorough working order, also that you had already handed these works over to lessees, be good enough to inform me if the late rain has put water in any of these tanks.

P.W.P.,
86-2,920.

HARRY GILLIAT,
Chief Inspector of Public Watering Places.

Reply:—

Not enough rain yet at any of these tanks to lay the dust.

JAS. MALLON.

Bourke, 10/6/86.

Extract

Extract from Inspector Boulton's Report on Ledknapper Tank for 7th October, 1886.

* * * * *
 Machinery in bad order, rusty and dirty; was not, owing to want of water, transferred to Mines, and now, from a superabundance, transfer delayed. Mr. Coleman's travelling mechanic will put it in thorough order shortly, and hand it over.

86-4,887.

J. W. BOULTBEE.

Steam-pumps at 18-mile and Ledknapper Tanks.

Department of Mines, Public Watering Places, Sydney, 10 November, 1886.

P.W.P.,
 86-5,291.

REFERRING to my reports upon the above-mentioned tanks wherein I state that the steam-pumps have not yet been transferred to this Department, owing to the absence of water to test them with when the tanks were transferred, I now have the honor to draw the attention of the Chief Inspector to the fact that nothing has yet been done in the matter. The steam-pumps were in a very rusty and dirty condition; they will, I think, require repainting, repacking, and thoroughly overhauling. The surface water will doubtless last for a long time yet at these tanks, but I do not think it wise that this matter should be left so long unattended to.

JAS. BOULTBEE,

Acting Inspector, Public Watering Places.

Mr. Mallon has furnished no reports since his explanation of his neglect to do so on 4/4/87. No reply has been received to the repeated reminders on the within matter. The neglect to reply to the question of Hart's (Curraweena) vouchers, has been again referred to him.

J.W.B., 26/5/87.

Suspend for ten days, or until reply received re Hart's matter.—H.G., 27/5/87.

Action taken on another paper relative to non-payment of caretaker Hart's voucher. Mr. Mallon was called upon to explain his conduct, and an inquiry was subsequently held by the Chairman, Local Land Board, Bourke, papers 87-4,221.—J.W.B.

P.W.P.,
 86-5,588.

Sir,

Stock Branch Office, Bourke, 30 November, 1886.

In acknowledging receipt of your letter of the 20th instant, marked P.W.P., 86-5,347, I have the honor to state the transfer will be attended to with as little delay as possible.

I have, &c.,

JAS. MALLON.

H. Gilliat, Esq.

Ask Mr. Mallon when this work is to be handed over, 20/12/86.

Asked, 21/12/86.

Sir,

Stock Branch Office, Bourke, 30 May, 1887.

P.W.P.,
 87-2,341.

In reply to your letter of the 19th instant, No. 86-5,291, I have the honor to state that Mr. Road-Superintendent Coleman informed me that the steam-pumps at the 18-mile and Ledknapper Tanks, are in thorough good working order, and can be handed over to the P.W.P. Department as soon as he has time to attend to same; at present he is very busy.
 The Chief Inspector, Public Watering Places.

I have, &c.,

JAS. MALLON.

Mr. Mallon may perhaps be directed to arrange with Mr. Coleman to take over these works, and to report fully when he does so.—H.G., 3/6/87. The Under Secretary. Approved.—H.W., 4/6/87. Informed, 8/6/87. Ask Mr. Mallon if he has yet made arrangements for the transfer.—H.G., 24/6/87. Asked, 25/6/87.

Tanks 26, 35, and 48-mile, Booligal and Wilcannia Road.

22 September, 1886.

P.W.P.,
 86-4,619.

THE Mining Department might be informed that the pumping machinery and iron service tanks at the 35 and 48-mile Tanks have been under the charge of, and worked by, the caretakers for some months, and that Mr. Hanna, the Road Superintendent, has been instructed to obtain receipts for same from the local Stock Inspector.

Mr. Hanna reports that the 26-mile Tank will be ready to hand over in about a fortnight.

ARTHUR P. WOOD.

The Commissioner for Roads.

Under Secretary for transmission to Mines.—W.C.B., 22/9/86. The Under Secretary for Mines.—J.R., B.C., 28/9/86.

The local overseers may be, I think, instructed to put themselves in communication with Mr. Road-Superintendent Hanna, for the purpose of arranging a date to take delivery of the works.—H.G., 30/9/86. The Under Secretary for Mines. Submitted for approval.—H.W., 8/10/86. Approved.—J.F., 8/10/86. Instruct overseer, and inform Works Department.—H.G., 11/10/86. Overseer Tully and Works Department informed, 13/10/86.

Extract from Mr. Overseer Tully's reply to charges against caretaker, 48-mile Tank.

[In reference to Mr. Wood's statement, that the pumps referred to have been in charge of and worked by the Mines caretaker for some months.]

14 July, 1886.

* * * * *
 On my placing Caretaker Downing in charge of this tank, I pointed out to him that until the new pump and machinery were handed over to this Department he was not to use the watering appliances. Subsequently the contractor requested him to work the pump and fill and test the service-tank. He mentioned in a letter to me that he had done so, and that the pump did not work well. I at once wrote, instructing him not to use the machinery again under any circumstance.

Hence the disorder in which the pump was found by Mr. A. P. Wood.

M. J. C. TULLY.

Sir,

86-3,608.
 Original with
 papers relating
 to tone of
 minutes. (See
 86-4,619.)

Sir,

Stock Office, Wilcannia, 4 November, 1886.

I have the honor to acknowledge the receipt of your communication of 27th October, P.W.P., 86-4,619, informing me that the pumping machinery and iron tank at 35 and 48-mile Tanks are ready to be handed over, and also the 26-mile Tank. I have seen Mr. Road-Superintendent Hanna and arranged for the transfer of these works.

P.W.P.,
86-5,264.

I have, &c.,

MARK J. C. TULLY,

Overseer of Public Watering Places.

The Chief Inspector of Public Watering Places, Sydney.

Mr. Tully reminded that no notice of the transfer of 2,635 and 48-mile Tanks has yet been received from him, and that no answer has been received to telegram of 12th October last, re transfer of works at 12-mile Tank by memo.—H.G., 18/2/87.

Sir,

Stock Office, Wilcannia, 23 February, 1887.

I have the honor to acknowledge the receipt of your communication, dated 18th February, P.W.P., 86-5,264, re taking over the 26-mile Tank and machinery at the 35 and 48-mile.

P.W.P.,
87-924.

On the 23rd November, I visited these tanks in company with Mr. Hanna. At the 26-mile there were several things to do,—the engine-house to be erected, which Mr. Hanna wished the caretaker employed by him to complete; therefore the transfer of this work was postponed. At the 35-mile I took delivery of the machinery, but as a new silt tank was in course of construction I delayed forwarding a statement. At the 48-mile I took over the machinery; but here also, the silt tank was not made, which was the reason for my not forwarding a statement. I regret that I should have neglected acknowledging your telegram of 12th October. I received it at Tibbooburra when out on a tour of inspection, and was under the impression I had acknowledged it from that place, and as the 12-mile Tank is not under my supervision I did not again need to refer to it.

I have, &c.,

MARK J. C. TULLY,

Overseer of Public Watering Places.

Mr. Tully may be asked by memo. to report upon completion of all the repairs at the old watering places, and upon New Works form upon the 26-mile. These papers may then be put away.—H.G., 19/4/87.

Informed.—J.W.B., 20/4/87.

Extract from Mr. Inspector Low's report on 26-mile Tank, for 26th November, 1887.

* * * * *
This tank has not yet been transferred. Mr. Overseer Tully hopes it will be in a month from now.

87-6,585.
Original with
fencing papers.

J. LOW.

Extract from 86-1,209, report by Mr. Overseer Tully on the 48-mile Tank.

The new steam pump and service-tank are all but completed. From actual test the depth of water in this tank is only about 6 or 7 feet, while the gauge shows 14 feet, thus there must be 7 feet of silt in the bottom.

P.W.P.,
86-1,631.

I understand from the contractor for erecting pumps that a new silt tank is to be made here by Mr. Road-Superintendent Hanna's direction.

This may I think be forwarded for the information of the Department of Public Works.—H.G., 8/4/86. The Under Secretary for Mines.—Approved, H.W., 14/4/86. The Under Secretary for Works.—H.W., B.C., 15/4/86. Roads, B.C., 16/4/86. Mr. Hanna; very urgent.—W.C.B., 17/4/86. The depths quoted by Mr. Tully are correct. The new silt tank when completed will contain about 1,400 cubic yards. Steps should then be taken to have the main tank cleaned out after the first heavy rain fall, but not before.—W.J.H., 19/4/86.

This silt has been thirteen years accumulating, during great part of which time, though under Mines Department, the tank was neglected, and stock allowed to water in it. The cleaning out will be a more or less constant outlay on all these works, according to the care bestowed on them.—W.C.B., 19/4/86. Under Secretary for transmission to Mines.

The Under Secretary for Mines.—J.R., B.C., 21/4/86. Mr. Tully to note reply, and re-open case after first heavy rain.—H.G., 28/4/86. Replies noted.—M. J. C. TULLY, 3/5/86. The cleaning out of these works will I suppose have to rest with the Works Department; no further action can be taken by this Department.—H.G., 15/5/86.

Extract from 86-1,208.

Overseer Tully's report on 35-mile Tank, week ending 28th February, 1886.

The new steam pumps and service tanks are nearly finished, and will shortly be handed over by contractor. Travelling stock cannot water here, but have made temporary arrangements for watering mail horses only. As the troughing is placed on an incline, an excavation had to be made at outer end of sheep troughing to allow the trough to be laid level. This is a great cause of the trough getting sanded up in every dust storm, and only for the danger of damaging the iron in the removal I should recommend the sheep troughing to be raised 6 inches or thereabout.

P.W.P.,
86-1,632.

I understand Mr. Road-Superintendent Hanna is making arrangements for cleaning out the silt, putting in new inlet pipes, giving drains a proper cleaning, &c. Therefore, until the contractor is finished I do not know how much of the necessary repairs will be left for the caretaker to do, but will see Mr. Hanna in a few days.

This should, I think, be forwarded for the information of the Public Works Department.—H.G., 8/4/86. The Under Secretary for Mines. Approved.—H.W., 14/4/86. The Under Secretary for Works.—H.W., B.C., 15/4/86. Roads.—J.R., B.C., 16/4/86. Mr. Hanna.—W.C.B., 17/4/86.

I

I do not know why stock cannot be watered at this tank. Mr. Tully does not state what is wrong or incomplete. When I left (end of last month) the pump was working well, and service-tank half full of water. The sand was not all cleaned away from sheep trough, but that has since been completed, and even then I think stock could easily have obtained water. If the outer end of trough was too low a little clay could have been put in trough to form a dam, and shut off water for 80 or 100 feet if necessary. With reference to raising the troughing I cannot at present recommend any alteration. It must be remembered that this sand has been accumulating for several years. When removed I do not think the caretaker will have much trouble in keeping the trough clear.

W.J.H., 19/4/86.

No date to Mr. Tully's report. It was written most likely before Mr. Hanna had completed the works he describes. It would be advisable to have dates in future.—W.C.B., 19/4/86. Under Secretary, B.C. For transmission to Mines.—P.W.O., 20/4/86. The Under Secretary for Mines.—J.R., B.C., 21/4/86 Urgent. Mr. Overseer Tully for report, B.C., 28/4/1886. To be returned.—H.G.

My report, made on the 28th February, was before contractor had finished erecting tank and steam-pump, and as proof of the correctness of my statement that stock could not water here several lots of sheep passing up only got water after paying the contractor for permission to use the watering appliances and troughs. When I reported there was no connection between the service tank and the sheep troughing, and the only way yet of filling the cattle troughing is by a temporary hose made by the caretaker and at his own expense. From the caretaker's latest communication to me I understand a telegram has been received by the contractor from one of the Departments, on receipt of which he has given permission for stock to water at the sheep troughs. Although raising the sheep troughing would be a very decided improvement, I did not recommend the outlay at present.

M.J.C.T., 3/5/86.

12-mile Tank, Booligal and Wilcannia Road.

Sydney, 25 September, 1886.

P.W.P.,
86-4,645.

THE Mines may be informed that Mr. Hanna reports that the alterations to the 12-mile Tank on the Booligal and Wilcannia Road will be finished next week, and the local Stock Inspector should be instructed to take over and furnish the usual form of receipt.

The Commissioner for Roads.

ARTHUR P. WOOD.

Under Secretary, for transmission to Mines.—W.C.B., 25/9/86. The Under Secretary for Mines.—J.R., B.C., 28/9/86. Inform Mr. Tully by wire, and notify Works.—H.G., 12/10/86. Telegram to Mr. Tully, 12/10/86. Under Secretary Works informed, 12/10/86. Instructions transferred to Mr. Overseer Yeo, Ivanhoe, 16/10/86.

Sir,

Stock Office, Ivanhoe, 8 March, 1887.

P.W.P.,
87-1,110.

I beg to inform you that I met Mr. Road-Superintendent Hanna by appointment at the 12-mile Tank on Saturday, 5th instant, to take delivery of new works, but as they are not completed I deferred the transfer until a further date.

The steam-pump is erected and is in good working order, but until it is tarred and painted I refused to take delivery. The contractor is completing the service-tank at once. Mr. W. H. Keast, manager for the lessees, has agreed to take charge and work the pump in its present state, but the final transfer will not be effected until the repairs are complete. There is an alteration to be made in the cattle troughing, and the ground is to be risen, so that it will be more convenient for young cattle to drink.

Mr. Hanna informs me that a contract is let for the erection of a shed over the engine and pump, but nothing is being done.

Re a caretaker's hut, I endeavoured to come to terms with the manager for the lessees to put up the caretaker's hut, but he would have nothing to do with it, as he says they do not require a hut for the caretaker. Consequently, I presume it will not be necessary to erect a hut at present at this tank.

JAS. YEO,

Overseer, Public Watering Places.

These repairs have now been in hand since the 26th July, 1886, or seven and a half months, and it appears there must be a further delay arising from alterations required to troughing, &c.—H.G., 11/3/87. Submitted for the information of the Minister.—H.W. Seen.—F.A., 22/3/87. This should be noted when the question of hutting comes up.—H.G., 14/3/87.

Memo. by Chief Inspector, Public Watering Places.

P.W.P.,
85-4,503.

INFORM Mr. Overseer Yeo this Department has been notified that Ward's Tank, Mount Manara Road, Booligal to Wilcannia, will be ready for transfer about 21st instant, and request him to ascertain from the local officer, Department Public Works, the date upon which it will be convenient for him to make the transfer. Mr. Yeo should be supplied with the proper caretaker's books and forms, and be requested to have suitable caretaker in readiness.

Letter to Mr. Yeo, 3/12/85.

H.G., 3/12/85.

Transfer Ward's, Clare and Gunnararnby Tanks.

Sir,

Stock Office, Ivanhoe, 24 December, 1885.

P.W.P.,
85-4,794.

I proceeded to take delivery of Ward's Tank on 22nd instant, but found on inspection that the service-tank was leaking and there was no water in the main tank to try the pump and engine to see if it was in order to take over, so I declined to take delivery. I engaged a man to take charge of the tank; and as there was no one in charge of the tank, I deemed it expedient to leave him in charge. I engaged him to commence his duties on the 22nd instant at 7s. per day. His name is William Rac.

I have, &c.,

J. YEO,

Overseer, Public Watering Places.

H. Gilliat, Esq., Chief Inspector, Public Watering Places, Sydney.

Mr.

Mr. Yeo,—1st. Please say if the local officer of the Roads Department was present. 2nd. If there was no water in the main tank, where did you get the water for the service-tank. Please report fully on Form 3 for new works sent you for this purpose.—H.G., B.C., 4/1/86.

Extract from Report by Overseer Yeo *re* Ward's Tank, Mount Manara.

24 December.

I engaged a man to take charge of the tank, and as there was no one in charge of the tank, I deemed it expedient to leave him in charge. I engaged him to commence his duties on the 22nd inst. at 7s. per day. His name is William Rae.

P.W.P.,
86-48.

This watering place the overseer declined to take over on the ground that the service-tank leaked, and there being no water in the main tank he was unable to test the steam-pump, but as there was no caretaker on the part of the Works Department he put a man in charge. I have to submit the appointment may be approved.—H.G., 5/1/86. Submitted, and the matter may be reported to the Works Department.—H.W., 13/1/86. Approved.—R.M.V., 14/1/86. Inform Treasury and Works Department.—H.G., 15/1/86. Treasury, Works, and Civil Service Board informed.—R.W.G., 17/1/86. Authority appointment of Wm. Rae forwarded through Mr. Overseer Yeo.—R.W.G., 22/1/86. The Accountant.—E.W., 22/1/86. Noted.—F.L., 4/2/86.

Sir,
Manara Tank, which has been forwarded to him by post.
Mr. H. Gilliat,
Chief Inspector, Public Watering Places, Sydney.

Stock Office, Ivanhoe, 25 January, 1886.
I have, &c.,
J. YEO,
Overseer, Public Watering Places.

P.W.P.,
86-391.

Extract from return of William Rae, caretaker of Mount Manara Tank, for week ending 31st December, 1885.

86-194.

Fence wanted very badly here, as stock is always trespassing in the paddock: it is difficult to keep them out of tanks.

WM. RAE,
Caretaker.

Please ascertain from the local Works officer, when you inspect this tank together, what arrangements are made for fencing. I was informed by the lessee of the run that the contract was let.—H.G., B.C., 15/1/86. Mr. Overseer Yeo.

The works at this tank have been passed by the Roads Department, but I don't think it advisable to take them over until there is some water in the main tank to test the pump, &c.

The contract for fencing has been let, and the contractor, I am informed, has commenced to cart the posts.

J. YEO, 23/1/86.

Sir,
Department of Mines, Public Watering Places, Sydney, 13 January, 1886.
Will you be good enough to inform me if you made any arrangements with the local Works officer to fix a time for taking delivery of the Mount Manara Tank, as desired in my letter 85/43/75. Your report states that the local officer of the Works Department had visited the tanks a few days previously. It is not desirable that a transaction of this kind should take place with only one officer present, and I fail to see how you proposed to carry out your instructions in case the tank had been in a suitable condition. I must now request you to be good enough to communicate with the Works officer, and to arrange a date at which it will be convenient for you both to meet at the tank, when the Works Department will have a representative who will be able to reply to your objections, and I request your careful attention to sec. 21 of your instructions.

I have, &c.,

Mr. Overseer Yeo, Ivanhoe.

HENRY GILLIAT,
Chief Inspector of Public Watering Places.

Sir,
I beg to acknowledge your letter of the 13th of January last *re* taking delivery of Mount Manara Tank. I have not appointed a date with the local Roads officer to take delivery of this tank, as I do not deem it advisable to take delivery until there is some water in the main tank, so that the steam pump and service-tank can be tested.

I have, &c.,

Harry Gilliat, Esq.,
Chief Inspector, Public Watering Places, Sydney.

J. YEO,
Overseer, Public Watering Places.

P.W.P.,
86-429.

Inform Mr. Yeo that I wish him to report as soon as they get rain at Mount Manara, and I approve of his idea to delay taking delivery until the works can be tested.—H.G., 5/2/86. Informed, 5/2/86.

Sir,
I beg to acknowledge yours of February 5, *re* taking delivery of Mount Manara Tank. As soon as there is sufficient water in the tank to test the works I will report to you accordingly.

I have, &c.,

Harry Gilliat,
Chief Inspector, Public Watering Places, Sydney.

J. YEO,
Overseer, Public Watering Places.

86-704.

Ward's Tank.

Sir,

Hay, 12 March, 1886.

P.W.P.,
86-1,794.

This work is completed, and now awaits rain, that pump, &c., may be tested and the whole handed over to the Mines.

The fencing in of lease area is delayed owing to water not being procurable for the teams to draw in the posts, which have been cut for some time.

I have, &c.,

A. W. STILLWELL.

The Commissioner and Engineer for Roads.

Noted.—16/3/86. Mr. Wood,—See me on this.—W.C.B., 15/3/86. This work should be taken over by Mines. Should any minor detail require attention there is a travelling mechanic to carry it out.—A.P.W., 15/3/86. Mines alone. Mr. Stillwell.—W.C.B., 15/3/86.

I have tried to effect transfer, but Mr. Yeo said his instructions were positive as to not taking over without water test of appliances. As soon as I hear that he is prepared to take over work, I will make no delay.—A.W.S., 18/3/86.

It should be noted though that I have not yet finally taken the work out of the contractor's hands.—A.W.S., 18/3/86. This absurd system of refusing to take over the works should be brought under the notice of the Minister. A paper on the same subject *re* Clare Tank has been sent on, and should be returned with action noted.—A.P.W., 22/3/86.

Much inconvenience and delay is caused by this system. It should be recollected that this branch has to keep these works in order. I think they should be taken over unless there is something radically wrong, and note on the receipt that no test has been made would be sufficient protection to the officers of the Mines.—W.C.B., 22/3/86. Under Secretary.

The Minister for Mines.—W.J.L., 10/4/86. The Under Secretary for Mines.—J.R., B.C., 12/4/86.

Extract from Mr. Bennett and Mr. A. P. Wood's Minutes on 83-1,721, *re* transfer Public Watering Places.

85-1,721.

* * * * *
But we can keep these works in repair pending Mr. Gilliat's arrival on the ground.

A. P. WOOD, 10/12/83.

Every possible notice will be given, and the works will be taken care of and kept in order until handed over.

* * * * *

W.C.B., 10/12/83.

Paper 86-1,554, with Minute by Minister for Mines, directing that in future new works should be taken over from Department of Works, the officers of the Mines to report upon any alterations, &c., required, which alterations should be effected by the Works Department on notification.

This Minute was forwarded to Works Department 12/4/86, and the return of it was asked on 5/12/87.

Circular to Overseers of Public Watering Places.

Sir,

Department of Mines, Public Watering Places Branch, Sydney, 31 March, 1886.

P.W.P.,
86-428.

In future, upon instruction from this Department, you will take delivery of new works, reporting upon any alterations, repairs, or adjustments that may be required. These, it is arranged, will be completed by the Department of Public Works on notification.

I have, &c.,

Mr. _____, Overseer of Public Watering Places. Chief Inspector, Public Watering Places.

Hay District.

Ward's and 34-mile Tanks.

Sydney, 17 May, 1886.

P.W.P.,
86-2,518.

I HAVE to submit that the Department of Mines be requested to instruct Mr. Yeo to arrange to take over charge of Ward's and 34-mile Tanks. Mr. Wood, Assistant Engineer of this Department, will communicate with Mr. Yeo as to time. It would be well if a telegram was sent, as Mr. Yeo is in the locality. The Under Secretary, Public Works. W.C.B. 17/5/86.

Submitted.—J.R., 20/5/86 Under Secretary for Mines, B.C.

Send telegram to Mr. Yeo to take over the Mount Manara and Gunnaramby Tanks from Mr. A. P. Wood, who will communicate with him as to time. Inform the Works Department of action.—H.G. Telegram to Mr. Yeo, and Memo. to Roads, 25/1/86.

Telegram from Overseer, Public Watering Places, to H. Gilliat, Esq., Chief Inspector, Public Watering Places.

Ivanhoe Station, 22 May, 1886.

86-2,552.

I NOTE your telegram *re* taking delivery, Mount Manara and Gunnaramby Tank.

JAMES YEO,

Overseer, Public Watering Places.

The tanks have been taken over by Mr. Overseer Yeo. See 86-3,062, and 86-3,066.—H.G. Mr. Yeo may be asked if works are yet transferred, and what arrangements he has made with local Works officer.—H.G. Mr. Yeo asked.—R.W.G., 15/6/87

Extract from Mr. Overseer Yeo's Report on Ward's Tank.

P.W.P.,
86-138.

General remarks.—I proceeded to take delivery of this tank on 22nd December, 1885, and finding the work was not completed to my satisfaction, I declined to take delivery.

There was about 1 foot of water in the main tank, but the pipe from the pump was not long enough to reach the bottom of the tank, which prevented me from testing it. The

The local officer of the Roads Department had visited the tank a few days previous. I was away in another part of my district at the time, or would have visited the tank with him.

The water in the service-tank was from the late rains, and was covering the bottom of tank about 2 inches deep, which enabled me to detect a large quantity of leakages at the different joints and bolt-holes.

JAS. YEO.

Sir,

Stock Office, Ivanhoe, 19 June, 1886.

I beg to acknowledge your letter dated 15th June, *re* the transfer of the Mount Manara and Gunnaramby Tanks.

P.W.P.,
86-3,135.

I have the honor to inform you that the Mount Manara Tank was transferred on 9th June, and the Gunnaramby Tank on 12th June last, of which reports have been forwarded.

I have, &c.,

JAMES YEO,

Overseer, Public Watering Places.

Harry Gilliat, Chief Inspector, Public Watering Places, Sydney.

Miscellaneous.—Roads.

Wells and Tanks.—Clare and 34-mile Tanks ready to hand over.

Sydney 31st December, 1885.

THE Mining Department might be informed that the Clare and 34-mile Tanks on the road from Balrauld to Ivanhoe are completed and ready to be handed over. The local Stock Inspector might be instructed to visit with Mr. Stillwell, and accept transfer if the work is satisfactory.

P.W.P.,
86-61.

ARTHUR P. WOOD.

The Commissioner for Roads.

Under Secretary for transmission.—W.C.B., B.C., 31/12/85. The Under Secretary for Mines.—J.R., B.C., 6/1/86.

Instruct Mr. Overseer Yeo to arrange with the local Works officer, Mr. Stillwell, for the delivery of these watering places, and to make arrangements for caretaker, and to report fully upon the watering place and all public property there.—H.G., 11/1/86.

Inform Works.—H.G. Mr. Yeo and Works informed —R.W.G., 12/1/86.

Sir,

Stock Offices, Ivanhoe, 16 January, 1886.

Your letter of January 12th has been duly received *re* taking delivery of Clare and 34-mile Tanks. I beg to inform you that I shall proceed to take delivery of the Clare and 34-mile Tanks on Monday 18th instant with the local officer.

P.W.P.,
86-276.

I have, &c.,

J. YEO,

Overseer, Public Watering Places.

The Chief Inspector of Public Watering Places, Sydney.

Sir,

Stock Offices, Ivanhoe, 28 January, 1886.

I proceeded by appointment with the assistant local Roads officer, to take delivery on the 21st instant of Gunnaramby or 34-mile and Clare Tanks; but on inspection, I found no water in the Gunnaramby Tank to test the works, and the pump at the Clare Tank would not work, so I declined to take over the Gunnaramby Tank until there is some water in the main tank, and the Clare Tank I declined to take over until the pump is put in proper order.

P.W.P.,
86-428.

I have, &c.,

J. YEO,

Overseer, Public Watering Places.

The Chief Inspector of Public Watering Places.

A copy of this should perhaps be forwarded for the information of the Department of Public Works.—H.G., 3/2/86. The Under Secretary for Mines. Approved.—H.W., 4/2/86. Letter and copy of this to Works, 5/2/86.

XXVII.

Troughing Railing.

Troughing Rails, Ivanhoe Tank.

Extract from Report by Mr. Overseer Yeo, of Ivanhoe Tank.

Ivanhoe Tank.

16 October, 1886.

The troughing is in good order, but the rail over which cattle have to drink is much too high; this I pointed out to Mr. Stillwell, and he has since made arrangements to raise the ground.

P. W. P.,
86-5,108.

JAMES YEO,

Overseer, Public Watering Places.

Mr. Yeo.—Cannot the caretaker make a better job by lowering the rails?—H.G., B.C., 28/10/86. If this rail is lowered it will be too close to the troughing to allow rams to get their heads between the rail and troughing.—J. YEO., 1/11/86.

Mr. Boulbee for report.

The height of this rail is, inside measurement, 12 inches from edge of trough, and outside, 16 inches. As an alternative; I think lowering the rails preferable to banking up the earth, since constant trampling moves it outwards, and these rails might be lowered 3 inches, and yet leave ample room for rams to drink. As they are, the ground has been banked, it is a difficult matter for small cattle to drink.—J. W. BOULTBEE, Acting Inspector, Public Watering Places, Ivanhoe, 26/11/86.

A

A comparatively small space is required for rams to drink. Mr. Yeo will please instruct the caretaker to lower the rails 3 inches, and to incline the posts inwards.—H.G., B.C., 9/12/86. Caretaker instructed, and will proceed with the alterations as requested at once.—J. Yeo, 13/12/86.

Extract from Report on Ivanhoe Tank.

23 November, 1886.

P. W. P.,
86-5,587.
Original with
Ivanhoe Tank
papers.

Travelling stock are watering at Elliot's Tank in preference to the Government Tank. Since the rails are inconvenient, the ground has been raised, but the rails seem to block wild cattle. We are losing hundreds of pounds all over the Colony owing to this one defect.

J. W. BOULTBEE.

Ivanhoe Tank.

Extract from Mr. A. W. Stillwell's Report on Ivanhoe Tank, dated 22 December, 1886.

* * * * *
The caretaker was lowering the dwarf fence rail of the troughing to 7 inches from bearer; this will prevent sheep watering on that side practically curtailing the length of troughing one half for sheep; he said it was by the Mines Overseer's instructions, and to facilitate watering of cattle, the rail having been found too high for them. It is of the same height as at the troughing in the district, and the raising of ground level along that side would have answered the purpose if there were any *bonâ fide* complaints, which I doubt.*

P.W.P.,
87-34.

Mr. Wood,—Should not alterations of this sort at the caprice of the overseer be prevented?—W.C.B., 24/12/86. Yes; I do not think as we are responsible for these works that this should have been done. The same levels suit in other places, and should do in this case.—A.P.W., 24/12/86. Under Secretary for transmission to Mines.—W.C.B., 30/12/86. Under Secretary for Mines.—J.R., B.C., 31/12/86.

This action was taken under the authority of the Secretary for Mines, and by statutory power, conferred by the Public Watering Places Act, the only statute empowering construction, the administration of which is vested in him.—H.G.

* The following grounds for complaint appear.—J.W.B., 12/1/87 :—

From the *Australasian* (Melbourne), 11 December, 1886.

Bad management of New South Wales Water Tanks.

To the Editor of *The Australasian*.

Sir,

1 December, 1886.

Along the travelling stock route, the New South Wales Government have constructed large and costly tanks for supplying travelling stock with water. These tanks are utterly inadequate owing to the badly designed railings protecting the troughing into which the water is pumped from the reservoirs. Cattle cannot drink over the rails, and sheep can walk under into the troughs where they wallow about, splash out and dirty the water, and frighten the other sheep away. At present, the season being good, drovers are making arrangements with station owners to purchase water from open tanks, so that the New South Wales Government has lost some hundreds of pounds in water fees (in a bad season squatters would not sell water). A small outlay superintended by a practical man would put all the troughing in a thoroughly efficient state, and it is the duty of that Government, while they charge for water, to give value for the money.

QUEENSLANDER,

Hillston and Bourke Road.

Mr. Boulton please connect this with papers relative to troughing.—H.G., 14/1/87.

Minute by Mr. J. W. Boulton, Inspector of Public Watering Places.

Public Watering Places, Mines Department, 5 January, 1887.

I HAVE already, upon more than one occasion, drawn the attention of the Chief Inspector to this grave fault in the construction of the rails at the Government tanks, and acting upon his instructions, I have given the necessary orders to the overseers to amend the fault by lowering the dwarf rail to enable cattle to drink.

The complaints have been universal, and it appears to me excessively strange that they have not reached Mr. Stillwell's ears. They have culminated in a drover removing the rails, for which he was fined £10, backed up however by a strong recommendation from the Mossiel Bench of Magistrates that steps should be taken at once to remedy the defect. The instructions given were to bring the dwarf rail the lower edge to 9½ inches from edge of trough, which will give ample room for the largest ram to water. Mr. Stillwell does not seem to be alive to the fact that raising the ground makes the difficulty greater for large stock to water. Mr. A. P. Wood makes a minute to the effect that "the same levels suit in other places and should do in this case." I however beg leave to inform that gentleman, that wherever Government tanks are in the Colony, and that have the measurements and construction as these referred to, the complaints are general and loud. As to Mr. Stillwell's remark as to *bonâ fide* complaints, it is a remark that perhaps might have been expected from him. The Commissioner and Engineer might perhaps be informed that no overseer's caprice dictated the alteration, but a strong desire to attain the highest efficiency in these works, and I am sure that the benefit of the alteration will be marked.

The papers relating to the question of troughing rails is still under your consideration. I may add the lowering of the dwarf rail will not prevent sheep from watering.

JAMES W. BOULTBEE,

Inspector of Public Watering Places.

Ramsay,

Ramsay, Wuttagoona; Miller, Bourke; Alison, Cannonbar; Moffat, Brush, Evans, Webb, Brougham, Williamson, Parsons, Tully—for reference.

Telegram from W. H. Playford, Ivanhoe, to Mr. J. W. Boulton, Inspector, Public Watering Places.

Ivanhoe, 6 January, 1887.

SPACE left, about 8 inches; last sheep watered all right.

W. H. PLAYFORD.

W. H. Playford, Ivanhoe, to Mr. J. W. Boulton, Inspector of Public Watering Places.

Ivanhoe, 7 January, 1887.

SPACE left is 7½ inches.

W. H. PLAYFORD.

The space ordered by Mr. Boulton, in accordance with my instructions, was not less than 9 inches. Mr. Yeo must see that it is raised to that at once. Inform Mr. Yeo by wire.—H.G., 7/1/87.

Re Troughing at Ivanhoe Tank.

Sir,

Stock Office, Ivanhoe, 8 January, 1887.

P.W.P.,
87-134.

Your telegram of 7th January, 1887, duly to hand as follows:—

“Space ordered by Mr. Boulton, in accordance with my instructions, was not less than 9 inches between lower edge of rail and edge of troughing; please see rail is raised at Ivanhoe to that at once.

“HARRY GILLIAT,

“Chief Inspector, Public Watering Places.”

I beg to inform you that Caretaker Playford has been instructed to raise the rail to the height according to your instructions.

When Playford altered the rail I instructed him (verbally) to leave a space of 9 inches between lower edge of rail and edge of trough. After the alteration had been made, Playford informed me that he had not left quite so much space as he was instructed to do, but that he had watered a mob of sheep, and that they could drink very well, consequently I thought it would be as well to let it remain. In any case the rail cannot be lowered to be 9 inches all through, owing to the rails having warped, which will make at least an inch difference in places.

I have, &c.,

JAMES YEO,

Chief Inspector of Public Watering Places.

Overseer, Public Watering Places.

Extract from Mr. Overseer Keighran's Report for month of May, 1885, on Crow's Nest Well.

Crow's Nest Well.

May, 27 May, 1885.

This work is in a fair condition; the timber having shrunk, the joints require closing.

Tanks & Wells,
85-1,471.

State of supply tank.—New, of wood and galvanized iron, full of water at date of inspection, a leakage from valve.

Troughing.—New and strong, but construction bad for watering stock expeditiously. Noticed a slight leakage caused by timber shrinking.

Remarks.—I would recommend the reserve from lease should be fenced in at once; and consider that this well will be readily leased, and fetch more money than any other watering place on the road.

JOHN A. KEIGHRAN,

Inspector of Stock.

Will Mr. Overseer Keighran please state the objection to the troughing. I shall be glad to be furnished with Mr. Keighran's full report on taking delivery of this well.—H. GILLIAT, B.C., 10/6/85. Mr. Keighran,—Please furnish particulars of your objection to the troughing.—A.B., B.C., 21/6/85.

The Chief Inspector of Stock.

THE troughing at all the public watering places has on one side a strong substantial two-rail fence, about 4 feet high, to prevent large stock from damaging troughing. On the opposite side there is a dwarf fence, say 2 feet 6 inches high, where large stock have to water (one rail). Sheep are supposed to water from under bottom of rail on either side, and in many instances get their heads fast or tumble into the troughs. In my opinion there was no occasion for these fences whatever; the troughing being a rail or piece of timber laid on blocks, and placed down the centre of the troughs, stock of all descriptions could water freely from either side. Cross-legs—pieces of timber placed over the trough with rail laid on—would prevent large stock from damaging troughs, and has been proved to answer admirably, and last for years.

JOHN A. KEIGHRAN,

Inspector of Stock.

Extract

Extract from Report by Mr. Overseer Keighran.
Crow's Nest Well.

Tanks & Wells, 85-1,738. Troughing could be made to water stock more expeditiously than at present by doing away with the fence (which is a mistake).

Troughing can be protected from being damaged by stock without the two fences, which has been a costly affair, and for no good purpose.

Have had forty years' practical experience among stock, and seen all devices for watering, consequently should know which is the best.

J. A. KEIGHRAN,
Overseer, Public Watering Places, Hay.

Memo. from Chief Inspector of Stock.

Tanks & Wells, 85-1,974. WITH reference to Mr. Keighran's proposal, I would imagine that the dog-legs would be in the way of the sheep, and I would suggest that in place of the single rail supported in the way he proposes, it would be better to have two rails of sawn stuff, say 4 inches by 4 inches, 10 feet long rounded, one on each side of the trough, and bolted at the proper height to strong posts, which should be let well into the ground, and should stand perpendicularly at the side of the troughs. The rail should be fitted at such a height as would admit of large stock drinking over it, and sheep under it; and at the same time keep large stock from going over, or putting their feet into the trough. Should that leave so big a space as to allow sheep to get through underneath into the trough, a second narrow rail could be bolted on.

The posts would have to be let well into the ground, and to be supported as shown on the accompanying tracing.—A.B., B.C., 27/7/85.
The Chief Inspector, Public Watering Places.

Sir,

Condobolin, 10 September, 1885.

Tanks & Wells, 85-3,383. I have the honor to state for your information that drovers in charge of travelling cattle complain of the troughing at the public tanks in this district being unsuitable for cattle of all ages to drink at. The fencing constructed along each side of the troughs is as follows:—Upon the one side, two rails high, under the lower rail of which sheep can drink, upon the other side of trough there is a low one rail fence, over which cattle, and under which sheep, are supposed to drink. The two rail fence being placed in position to prevent cattle or horses from crossing over the troughing. The one rail fence above referred to is too high for all aged and sized cattle to drink over, and as a consequence many cattle do not get a drink. Should one side (the low fence side) be filled up with earth sufficiently high to enable cattle to drink over it, it would then be too high for sheep to drink under.

In my opinion this difficulty might be surmounted by removing the lower fence away and substituting a line of rails along the centre of the troughing, which would enable cattle and sheep also to drink on both sides of centre rail, the cattle by protruding their heads over (the rail being placed sufficiently low for that purpose)—it must also prevent cattle from getting into the troughing; either this course, or a separate line of troughing for cattle and horses would be an improvement upon the present arrangement in my opinion. Of course the centre rail would be much cheaper, and I think quite as useful.

In order to induce stock to travel these roads, it is I think advisable to make the arrangements for water at the different tanks as easy of access, and suitable as possible.

I have, &c.,
R. D. JONES,
Inspector of Stock.

The Chief Inspector of Stock.

Mr. Gilliat.—A.B., B.C., 14/9/85.

Minute by The Chief Inspector of Public Watering Places.
Fences at Troughing.

Department of Mines, Stock Branch, Sydney, 21 September, 1885.

THE cross-legs suggested by Mr. Keighran have been frequently tried, and, where sheep alone are to be watered, been found satisfactory, but with large stock, particularly cattle, the centre rail is found inconvenient, entangling their horns and being torn out of its place, or else breaking the horn of the animal. The centre rail at the Jumping Sand Hill cattle trough has frequently been broken in this way.

To a certain extent the cross legs would reduce the space for sheep watering along the troughing, which is what I understand Mr. Bruce to refer to in his minute.

Mr. Bruce's proposed fencing appears to be only a modification of the present form, as adopted by the Works Department, to the extent of shortening the posts and taking off one of the rails along one side of the present fencing, with an addition of cross-stays bolted to the posts. It would certainly enable cattle to draw up to each side of the troughing, but I question if, with the present width of that, it would enable a greater number to drink. To make it effective, however, the top rail should, I think, be bolted on top or to the inside of the post.

But, as I have stated in my minute to Mr. Overseer Jones' report *re* fencing (minute and sketch herewith), I consider the present fencing a very good one, if proper attention is paid to the height of the rails in proportion to the position of the troughing upon the ground; and I think a little energy, combined with a desire to make the best of what I think are substantially good, although not perhaps perfect improvements, yet certainly far in advance of anything done for the convenience and comfort of travelling stock, as far as my experience goes, in any part of the world I have visited, would enable the overseer, with the labour of the caretaker, to remedy the defects that exist in the height of the rail. This depends to a great extent upon the formation of the ground, and may not be the same along the length of the troughing. The sketch submitted will show the plan I think may preferably be adopted.

I may repeat what I said on Mr. Jones' report, that it will perhaps be well for the overseer in future to examine the trough fencing very carefully before taking over, in order that any required alterations may be made by the Works Department.

At the same time, too hasty criticism upon the details of these new works should be, I think, avoided, at least until they are proved defective, and until the overseers have shown that, with the means at their disposal, they are not to be remedied.

Mr. Bruce's plan might perhaps be forwarded to the Works Department.

HARRY GILLIAT.

Minute by The Chief Inspector of Public Watering Places, re Mr. Overseer Jones' Report on defects in Troughing.

Department of Mines, Stock Branch, Sydney 17 September, 1885.

I have closely observed the fencing here referred to by Mr. Overseer Jones at a number of the Public Watering Places, and, when properly erected, consider it very effective. It has undoubtedly in a number of cases, been put in such a way as to require alteration, but I think a little energy on the part of the overseers will in nearly all cases enable them, with the labour of the caretakers, to correct it. Tanks & Wells,
85-3,445.

I attach sketch, showing how this can be done most effectively.

The post is taken out of the ground, lowered slightly by deepening post-hole, a check cut, as shown at A, to rest upon edge of troughing, and the post reset, with a slight tilt inwards, as shown by the post in red ink on sketch.

The overseer can judge for himself by the formation of the ground the best height to allow between trough and rail.

It will perhaps be as well if in future overseers examine the trough fencing carefully before taking over from the officers of the Works Department, in order that these or any other alterations may be made before taking delivery.

HARRY GILLIAT.

Minute of The Chief Inspector of Stock.

Fences at Troughing.

Department of Mines, Stock Branch, Sydney, 28 September, 1885.

I understand the object of the two rails at what may now be termed the back of the troughs is to keep cattle from getting into them. This can, I think, be equally well attained by fixing a rail at each side of the trough as proposed by me, over which the cattle can drink at each side, but will not attempt (through there being a rail at each side) to leap or to put their feet into the trough, and where this is the case the sheep can freely drink under the rail at each side. Tanks & Wells,
85-3,536.

There can be no doubt but this plan would enable a great many more stock to water at one time, especially in the case of cattle, as those that are at different sides could not horn and knock each other about as they can now do when drawing up side by side.

Where, therefore, Mr. Gilliat's recommendations with respect to the existing fencing at the troughs might be adopted, the sort of fixing proposed by me might perhaps be brought under the notice of the Works Department, and if approved some of the troughing at the new works in course of construction could be put up in this way, and if the plans were found to answer to such an extent as to call for an alteration in the troughs, as now fixed, it could afterwards be made.

A.B., 28/9/85.

Submitted.—H.W., 1/10/85. I entirely agree with Mr. Gilliat's report of the 21st instant, and see no reason to ask the Works Department to make the alterations suggested.—J. P. ABBOTT, 2/10/85. Mr. Gilliat.—A.B., 2/10/85. Messrs. Jones and Keighran should be informed, and a copy of my minute with sketch sent to each.—HARRY GILLIAT, B.C., 7/10/85. Inform.—A.B., 7/10/85. Informed, 8/10/85.

Sir,

Condobolin, 22 October, 1885.

I have the honor to acknowledge receipt of your letter dated 8th instant, with accompanying minute and sketch of Mr. Gilliat's, referring to troughing and fencing at the public tanks in this district, prior to receipt of which, I had instructed the different caretakers to make some alterations which I think will meet the cases complained of. Tanks & Wells,
85-3,885.

I have, &c.,

R. D. JONES,

Overseer, Public Watering Places.

The Chief Inspector of Stock.

Seen. Put away.—H.G., 26/10/85.

Sir,

Condobolin, 23 October, 1885.

I have the honor, in reply to your minute upon my report upon troughing and fencing at the public watering places in my district, to inform you that, prior to receipt of your minute, and whilst making my last inspection of these tanks, I instructed the caretakers to make some alterations at some of the troughs to enable cattle to drink more readily. Tanks & Wells,
85-3,889.

I have, &c.,

R. D. JONES,

Overseer, Public Watering Places

The Chief Inspector, Public Watering Places.

Extract from Report by Mr. Overseer Keighran on Tom's Lake Tank.

Tom's Lake Tank.

Tanks & Wells,
85-1,742.

Troughing could be made to water stock more expeditiously than at present by doing away with the fence, which is a mistake.

I could suggest a more simple and cheaper plan for protecting the troughing from being damaged, and, at the same time, allow stock free access to water.

J. A. KEIGHRAN,
Overseer, Public Watering Places, Hay.

Extract from letter of 7th March, 1886, from Mr. J. A. Keighran, Overseer of Public Watering Places, Hay, to The Chief Inspector of Public Watering Places.

Tom's Lake Tank.

P. W. P.,
86-1,396.

The pump requires slight repairs. It requires a small brass plate, the iron one having worn away. Mr. Stillwell's assistant promised to have this repaired when the works were handed over to the lessee. The troughing also requires to be lowered, to allow large stock to water with greater ease.

J. A. KEIGHRAN,
Overseer, Public Watering Places.

This may, perhaps, be forwarded for the information of the Commissioner and Engineer for Roads and Bridges.—H.G., 20/3/86. The Under Secretary for Mines. Approved.—H.W., 25/3/86. The Under Secretary for Works.—H.W., B.C., 25/3/86. Roads.—J.R., B.C., 29/3/86. Mr. Stillwell, urgent.—W.C.B., 30/3/86.

I have, as reported (86-406), had the alteration made to dwarf fence of the troughing to facilitate watering of large stock. There is nothing at all wrong with the pump; it was working well when I visited subsequently to date of this report of Mr. Keighran's. The central bearing of horse-works requires bushing, and the repairer has instructions to do it. In the meantime, the working of the pump is not affected.—A.W.S., 2/4/86.

Mr. Wood,—Bushing should be done.—W.C.B., 5/4/86. It appears that troughing has been altered, and that bushing will be done as soon as possible, but the delay is not in any way prejudicing the lessee's interests. This may, perhaps, be forwarded for the information of the Inspector of Public Watering Places.—A.P.W., 5/4/86. Under Secretary for transmission.—W.C.B., 5/4/86. The Under Secretary for Mines.—J.R., B.C., 7/4/86.

Extract from Report A1 of Mr. Overseer Yeo. 16 February, 1886.

12-mile Tank.

P.W.P.,
86-1,005.

Messrs. Robertson and Wagner's manager complains to me that the cattle troughing is much too high, and that a mob of young cattle which passed a few days since had great difficulty in drinking, and a great quantity of them had to go away without water. I would recommend that the troughing be lowered so that young cattle can reach it.

JAMES YEO.

Mr. Overseer Tully,—When you are inspecting the 35-mile Tank next be good enough to furnish me a report on this, and whether, if an alteration is required, it can be made by a caretaker.—H.G., B.C., 5/3/86.

This troughing is situated on an incline; therefore, at the outer end, it is quite low enough for the smallest cattle to drink from. Some new sheets of iron will require to be put in, as there are innumerable patches which are difficult to keep water-tight. Caretaker could do this, but would recommend any repairs to be made by the contractor now at work as they are likely to be better done.—M. J. C. TULLY, 10/3/86.

This may perhaps be forwarded for the information of the Department of Public Works.—H.G., 15/3/86. The Under Secretary for Mines. Approved.—H.W., 17/3/86. The Under Secretary for Works.—H.W., B.C., 17/3/86.

This troughing, as Mr. Tully states, is rather high at one end, but this defect can be easily remedied by spreading a few cubic yards of earth. This will also prevent the water lodging under the trough, and be much better than lowering the troughing, which would leave one end too low.—W.J.H., 31/3/86.

Under Secretary for transmission to Mines.—W.C.B., 31/3/86. The Under Secretary for Mines.—J.R., B.C., 2/4/86. Mr. Yeo,—Instruct the tenant to this effect.—H.G., B.C., 12/5/86. The tenant has been instructed.—J. Yeo, 25/5/86.

Extract from Report of Mr. Overseer J. A. Keighran, for November, 1887.

Crows' Nest Well.

* * * * *
I would also recommend that the troughing fence be removed. It is no earthly use, but a hinderance to stock watering. A rail or plank placed along the top would be sufficient to prevent the troughs from being damaged.

JOHN A. KEIGHRAN,
Overseer, Public Watering Places.

Cowl Cowl, 3 December, 1887.

Sir,

Albury, 10 July, 1886.

P.W.P.,
86-3,438.

I have the honor to inform you that stockowners complain that their young cattle cannot get water at the public tanks owing to the defective construction of the break fence on the watering side of the troughing, it being too high for them to reach over and too low for them to put their heads under the

the rail as sheep do. I might suggest that in future this break might be made with the rail high enough for stock to get their heads underneath, and that the foundation of the troughing be deck-planked to the curve of the trough, so that if a beast got into it, its feet would not go through the iron.

I have, &c.,

G. E. MACKAY,

The Chief Inspector of Public Watering Places.

Overseer, Public Watering Places.

The same fault has occurred at several of the troughings. I have cured it by directing the overseer to let the caretaker slightly lower the post and tilt it inwards.—H.G., B.C., 26/8/86. Mr. Overseer Mackay.—Will instruct caretaker as to this.—G.E.M., 30/8/86.

Sir,

Albury, 3 January, 1887.

I have the honor to inform you that on visiting the Jindera Tank last week I found that the caretaker had taken out the rails. He said that a mob of Queensland cattle had been there a few days before, and would not or could not water until the rails were taken out. You suggested some time ago, as per attached memo., altering the position of the posts. This will not do. What I would suggest is that each alternate rail be lowered, which would not be hard to do.

P.W.P.,
87-29.

I might suggest that, in constructing troughing in future, a solid bottom should be fixed to the curve of the iron, as in the event of a beast getting into a trough he would not put his feet through the iron, as I have seen a horse do lately in a stable with a manger made of sheet iron.

I have, &c.,

G. E. MACKAY,

The Chief Inspector of Public Watering Places.

Overseer, Public Watering Places.

Extract from Mr. Inspector Boulton's report on Corilla Tank for 17th July, 1886.

* * * * *
Here, as at other places, the rails to the troughs are too high.

One Tree Tank.

Hay, 26 November, 1887.

* * * * *
Would recommend that the tank be leased at once (or put up for tender), and get rid of the expense of paying a caretaker to do nothing, as there has not been 1s. taken here as fees for the last nine months, nor is it at all likely there will be for some months longer, as the publican close by has a tank where persons prefer to water their stock, because the tank is open, and they get a better drink than they do out of the Government troughs.

P.W.P.,

JOHN A. KEIGHRAN,
Overseer, Public Watering Places.

Extract from Report of Mr. Inspector Mackenzie, of 23 July, 1887.

Baradine Well.

Coonabarabran, 23 July, 1887.

* * * * *
The railing at troughings far too high—2 feet 9 inches from ground, and cattle would not be able to reach the water in trough over the rail, while sheep can get into trough by squeezing underneath the rail. I propose overcoming this by raising the ground along the troughing which has been considerably cut away.

P.W.P.,

Original with
Walla Walla
Tank papers.

* * * * *
THE single rail fence along this (the trough) is quite unsuitable, a space of 1 ft. 3 in. intervening between rail and troughing. I would recommend that this space be lessened to 9 in., and rail be fastened on inside of post with bolts instead of being as at present, let into the middle of post, the angle thus increasing the height large stock have to drink over.

J. LOW.

Extract from report of Mr. Overseer Yeo, to 30 December, 1886.

Mossgiel Tank.

P.W.P.,
87-32.

* * * * *
THE rail at this troughing is the same height as the troughing at the Boonoono and Ivanhoe Tanks, which has been found to be too high for cattle, consequently I have instructed the caretaker to lower it about 3 inches and bring the rail in fair with the edge of the trough.

Ivanhoe, 1/1/87.

JAMES YEO,
Overseer, Public Watering Places.

Sir.

Ivanhoe, 17 January, 1887.

P.W.P.
87-317.

I am in receipt of communication from the caretaker of the Mossgiel Tank, which I enclose under same cover.

Re alteration of rail. This rail is exceptionally thick and heavy, it being 6 inches x 6 inches square, and when inclined inward the top edge comes about the same height as it is at present. I would beg to recommend that the caretaker be allowed to saw the rail in half, which would make it lower for cattle and leave plenty of room for sheep at the same time. It would leave the rail sufficiently strong.

I have, &c.,

JAMES YEO,
Overseer, Public Watering Places.

Chief Inspector of Public Watering Places.

The rail should be sawn in half, as suggested, but from corner to corner, as shown by dotted line.—H.G. Mr. Overseer Yeo.—H.G., B.C., 25/1/87. Contents noted. Caretaker instructed to saw the rail in half.—J. YEO, 30/1/87.

Sir,

Government Tank, Mossgiel, 8 January, 1887.

P.W.P.,
87-316.

According to your instructions I have altered four panels of the Mossgiel Government Tank troughing, and in no way can make it suit better than it is at present. The top rail is too heavy to slant it the way you require, and if done that way cattle or sheep could not drink out of it, and especially rams with horns. Drovers say now what we want is opened tanks and pump water into them for their cattle to drink. It is very hard to please them.

I have heard the Wilandera Creek is coming down a banker.

I have, &c.,

P. WELSH,
Caretaker.

Mr. Overseer Yeo, Ivanhoe.

Sir,

Ivanhoe, 21 May, 1887.

P.W.P.,
87-2,202.

Referring to your instructions of 25/1/87, re lowering rail of troughing at Mossgiel, I beg to inform you that on my visit of inspection on 18/3/87, the caretaker had taken off the rails, but had not commenced to saw them in half, as instructed, from corner to corner. Since then he commenced the work, as instructed, and found that the rails were Colonial pine, and by cutting them in the way which was suggested would have a tendency to weaken the rail. Consequently he communicated with me on the matter, and I informed him to let it remain until I saw it again. At the time I suggested that the rail should be cut in half I was under the impression that it was red gum timber, but I would beg to recommend that instead of cutting the rail in half that a piece should be taken off the ends of rails where they rest on the post, as shown on rough sketch attached, which would lower the rail about 2½ inches, and leave a space of 9 inches between bottom of rail and troughing, which would be quite sufficient, and I consider it would not interfere with the strength of the rail.

Trusting this alteration will meet with your approval,

I have, &c.,

JAMES YEO,
Overseer, Public Watering Places.

The Chief Inspector of Public Watering Places.

Sir,

Ivanhoe, 3 June, 1887.

P.W.P.,
87-2,437.

I have the honor to acknowledge receipt of your memo. of 26th May, 1887, on alteration of rails at Mossgiel troughing, which shall receive my attention with the least possible delay.

I have, &c.,

JAMES YEO,
Overseer, Public Watering Places.

The Chief Inspector of Public Watering Places.

Troughing

Troughing railing, Ivanhoe District.

Telegram from Mr. Overseer Yeo to The Chief Inspector of Public Watering Places.

Ivanhoe, 4 December, 1886.

M'DONALD, drover, has let his cattle into Boonoona Main Tank. Cattle would not drink at trough; had travelled 12 miles without a drink: would not drink at troughs on Mount Manara. Embankments are damaged. Report from caretaker will follow. Must M'Donald be prosecuted?

W.P.P.,
86-5,632.

I have, &c.,

JAMES YEO,

Inspector, Public Watering Places.

This appears to be an infringement of the Act, and the drover must, I think, be prosecuted. The overseer perhaps should be instructed to this effect by wire.—H.G., 5/12/86. The Under Secretary for Mines. The drover should be prosecuted.—G.E.H. (for the U.S.), 6/12/86. Submitted.—Approved.—J.F., 6/12/86.

Sir,

Ivanhoe, 4 December, 1886.

I telegraphed to you this morning that F. M'Donald, a drover, had let his cattle into Boonoona main tank as they would not drink at the troughs, asking instructions if I must prosecute M'Donald. It appears the cattle did not get a drink after leaving the 12-mile Tank. Some of the rails over which the cattle have to drink were taken out, but still the cattle would not drink, consequently the drover persisted in letting his cattle into the tank, contrary to the caretaker's instructions to him. Under same cover please find Caretaker Kellick's report to me, where he explains the matter fully. I have written to him and instructed him to adhere to his previous instructions—not to allow cattle into the main tank.

P.W.P.,
86-5,664.

I await your instructions by wire, on receipt of caretaker's report, before taking action in the matter.

I have, &c.,

J. YEO,

Overseer, Public Watering Places.

The Chief Inspector of Public Watering Places.

In this case the difficulty appears to have been occasioned in a great measure by the rail of the troughing being too high, and I am of opinion that it is the fault of the overseer and the caretaker; the former should have directed the latter to lower the rail as soon as the defect was discovered. The overseer should perhaps be directed by wire to have the rail lowered at once. The drover, however, removed the rails and still the cattle would not drink. It appears to me there is no course to pursue but to wire Mr. Yeo to carry out his instructions and prosecute.—H.G., 16/12/86.

The Under Secretary for Mines. Submitted for approval.—H.W., 17/12/86. Approved.—J.F., 20/12/86. Telegram to Mr Yeo.—23/12/86.

Sir,

Boonoona Tank, 1 December, 1886.

I have the honor to report for your information that F. M'Donald, in charge of 340 fat cattle, called at this tank and wanted water. He went down and had a look at the troughing, and coming back said the cattle would not drink out of it on account of the rail running in front of it, and asking at the same time if he could take some of the railing away, in order to water his cattle, which he said must have water, as they had come nearly 40 miles without water, and being unable to get a drink at Mount Manara Tank, owing to the cattle refusing to go up to the troughing.

P.W.P.,
85-5,665.

I said I could not allow it, and on his saying that if he was fined £100 he would get it there or at the main tank, as his cattle were perishing for the want of it, I said, "If you do it, you do it at your own risk." He then removed some of the railings and brought the cattle down, and after a lot of trouble they would not go near the troughing. He then came up to me and said that he was going to go into the big tank and put up with the damages. I said, "Of course I cannot stop you, but if you do go it is at your own risk." He then ran the mob of cattle into the big tank; the cattle ran up and down the embankments and across the tank, thoroughly ploughing it up; but, other than cutting up the embankment and puddling the water, there is no further damage done. The damage done to the railings he paid the groom to repair, which he did.

I beg to report also, that I think one of the reasons for the cattle not going to the troughing was that lately the roads mechanic put a mixture of tar-pitch and fat on the troughing, and not only does it smell, but it tastes the water, and even quiet horses and working bullocks refuse to drink it. As there is still a coating of the same mixture to go on the inside of the service tank, I would respectfully beg that you would mention this to the Department, that if the same stuff is put on the service tank it will not only taste the water, but will melt and run into the water, owing to the excessive heat in this district.

I would also respectfully report, that even if the cattle would come up to the troughing, one-half of them could not get a drink owing to the railing being too high, and they would choke, as their necks are too short to enable them to reach the water. This is a defect that cannot well be remedied, as if the earth were risen underneath the railing, sheep would be unable to get their heads underneath to drink.

I would also beg to state that M'Donald's cattle were in a very bad state for want of water, more so in consequence of them being fat cattle.

As there are, I believe, several mobs of cattle coming down, would you let me know what course I had better pursue in the event of the man in charge wanting to get into the big tank.

I have, &c.,

FRANK KELICK,

Caretaker.

Mr. Overseer Yeo.

Sir,

P.W.P.,
86-5,835.

Sir,
Ivanhoe, 13th December, 1886.
The caretaker, Mr. F. Kellick, at Boonoona tank, will have to be at Mossgiel on the 31st instant as a witness in the case *re* M'Donald, for allowing his cattle into the main tank, &c., consequently Kellick will have to employ some one to take charge of the tank during his absence. Will you please be good enough to inform me how this temporary man is to be paid.

I have, &c.,
The Chief Inspector of Public Watering Places. JAMES YEO,
Overseer, Public Watering Places.

Inform Mr. Yeo that he should apply to the Bench in the event of his gaining the case for sufficient expenses for his witness Kellick to cover the expense incurred in employing a substitute.—E.W., 23/12/86.
Telegram to Mr. Yeo, 24/12/86.

P.W.P.,
86-3 963.

Sir,
Hay, 20 December, 1886.
Referring to your telegram *re* the troughing at Bronoona tank, and desiring me to suggest nature and cost of alterations, I now have the honor to submit for your consideration that it is not at Boonoona alone that the arrangement of the railing is inconvenient, but at all the later constructed watering places, where wood and iron troughs have been erected. The design, plan B, employed on the Ivanhoe and Balranald road, is in every way a preferable one. The high railing of this existing arrangement acts as a check to wild cattle, and the low railing is too high to admit of small beasts drinking at all, and is no prevention against sheep getting into the troughs and fouling the water. The alterations that I submit, plan A, will not necessitate the use of any timber beyond what is employed in the present railing, and such alterations would be easily made and inexpensive; £6 would, I think, cover it if outside labor was employed; and where the caretaker is a carpenter as at Gunnararnby, Til Til, &c., the expense would simply be the caretaker's labor.

I also would suggest that the uprights should be morticed or iron cleets used for the introduction of a moveable 3 x 2 rail, to be put in 9 inches from edge of trough when sheep are watering, and removed when cattle require it. The top rail will prevent cattle from getting into the trough and will not be in any way a block to them. At Boonoona, and at tanks along the same road, and where cattle traffic is large, I think this alteration would be appreciated, and be an immense boon to travelling stock, and furthermore, would largely increase our receipts. The plans A and B could either be used, and at a very small cost.

I have, &c.,
The Chief Inspector of Public Watering Places. JAMES W. BOULTBEE,
Inspector, Public Watering Places.

P.W.P.,
86-5,935.

Sir,
Ivanhoe, 24 December, 1886.
Your telegram of 23/12/86 duly to hand as follows, viz., "Have rail of troughing at Boonoona tank lowered at once. Carry out your instructions and prosecute M'Donald.—E. E. WELLER, Pro Chief Inspector, Public Watering Places."

I have the honor to inform you that I have written instructions to the caretaker to lower the rail at once as requested, and to leave 9 inches between the troughing and the rail for sheep to drink.

Farquhar M'Donald is summoned to appear at Mossgiel on the 31st December next.
I have, &c.,
The Chief Inspector of Public Watering Places. JAMES YEO,
Overseer, Public Watering Places.

Mr. Overseer Yeo to The Chief Inspector of Public Watering Places.

P.W.P.,
87-31.

Sir,
Ivanhoe, 1 January, 1887.
I have the honor to submit my report *re* proceedings taken against Farquhar McDonald for removing the rail of troughing and driving his cattle into the Boonoona Main Tank, thereby damaging the embankments and polluting the water, on 1st December last.

McDonald was summoned to appear at Mossgiel on 31st December, 1886, but as McDonald did not appear, and the facts of the case having been stated to the Bench he was fined £10 and expenses. The Bench informed me that it was beyond their jurisdiction to impose a higher fine.

I also beg to enclose a letter from the Bench, recommending that some alterations should be made in the troughings at different tanks along this road. I informed the Bench that alterations were being made, and that some of the troughing had already been altered.

I have, &c.,
The Chief Inspector of Public Watering Places. JAMES YEO,
Overseer, Public Watering Places.

The Bench of Magistrates, Mossgiel, to Mr. Overseer Yeo.

P.W.P.,
87-30.

Sir,
Mossgiel, 31 December, 1886.
The Bench of Magistrates here are of the opinion that something should be done at once to troughing in connection with several of the Government tanks situated along the travelling stock route between Booligal and Wilcannia, there being a universal complaint as to their inadequateness to water stock, more especially cattle.

Mr. Yeo. H. A. LAIRD, J.P.
C. BRUSH, J.P.

Troughing Railing, Cobar District.

Extract from Mr. Caretaker Crichton's letter to the Chief Inspector of Public Watering Places.

Tanks & Wells
85-3,331.

Nymagee Tank, 3 September, 1885.
THE rail in front of troughs is too high for cattle. They are 22 inches high. If they were 4 inches lower they would not be too high for cattle nor too low for sheep.

DAVID CRICHTON,
Caretaker, Government Tank, Nymagee.

A copy should be forwarded to the Commissioner for Roads. The letter to be sent to Mr. Cotton for report.—H. GILLIAT, 11/9/85. Copy and write letter.—A.B., 11/9/85. Copy to Works, 17/9/85. Referred to Mr. Cotton for report, and whether this was previously reported to him by the caretaker.—A.B., B.C., 17/9/85. A copy of the letter was forwarded to me by Caretaker Crichton. On receipt I forwarded it to Road Superintendent for the district. * * * * —JAMES COTTON, Overseer P.W.P., 22/9/85. Mr. Gilliat.—A.B., B.C., 26/9/85.

Minute by Mr. A. P. Wood:—The design of the troughing and fencing has been approved by both Mr. Gilliat and Mr. Cotton. I consider them more capable of forming an opinion than the caretaker.—A. P. Wood, 30/9/85.

Send copies to Mr. Adam, then to Under Secretary for transmission to Mines.—W.C.B., 30/9/85. Under Secretary, B.C. Forward to Dept. of Mines.—F.A.W., 3/10/85. Under Secretary for Mines.—J.R., B.C., 6/10/85. Mr. Gilliat.—A.B., 7/10/85.

Minute by The Chief Inspector of Public Watering Places.

REQUEST Mr. Overseer Cotton to direct the caretaker to lift posts on the low side of troughing, slightly deepen holes and check them inward, notching them to rest on edge of troughing sufficiently to enable cattle to drink without difficulty. The caretaker also to remove the silt from silt tank.

H.G., 13/10/85.

Mr. Cotton informed.—14/10/85.

Department of Mines, Public Watering Places Branch,

Sir,

Sydney, 14 October, 1884.

With reference to Nymagee Tank, I have the honor to request that you will direct the caretaker to lift the posts on the low side of the troughing, slightly deepen holes, and check them inwards, notching them to rest on edge of troughing sufficiently to enable cattle to drink without difficulty.

The caretaker also to remove the silt from the silt tank.

I have, &c.,

HARRY GILLIAT,

Chief Inspector, Public Watering Places.

Mr. Overseer Cotton.

Sir,

Cobar, 23 October, 1885.

I beg to acknowledge receipt of your letter directing me to instruct the caretaker at Nymagee Tank to lower the rails at the troughing, and incline the posts inward. I have the honor to inform you that this can be done by the caretaker, but it would not do away with the difficulty to cattle watering. The real hindrance is that the troughs are set too low in the ground for about half the distance of the troughing, so that the water the animal has to reach is actually below the level of the ground upon which it is standing.

Tanks & Wells,
85-3,909.

I inspected this tank on the 7th instant, and found that the trough can be raised at least 4 inches without interfering with the valve of the service tank.

I have now the honor to recommend that the alteration should be done by the Department of Works, being too great an undertaking to be entrusted to the caretaker. The rail could be lowered and inclined on to the trough at the same time, and I think with considerable advantage. I instructed the caretaker at Priory Tank to alter the rails in this way, and the alteration is a decided success.

The raising of the troughs at Nymagee Tank will necessitate banking up with earth for some distance at the further end. The ground on which the troughs are laid falls from the service tank, so that at present some distance of the troughing is sunk to the level of the ground, while the extreme end stands considerably above the ground, consequently cattle can only water about midway in the troughs as matters stand.

I have, &c.,

JAMES COTTON,

Overseer, Public Watering Places.

The Chief Inspector of Public Watering Places.

Mr. Overseer Cotton.—Cannot the ground level be cut away and lowered sufficiently to meet this difficulty, at the same time that the posts are sunk and checked forward. The mere raising of the troughing will hardly, to my recollection, cure the evil, as at some points the surface level needed raising, while at others it was as much too high.—H.G., B.C., 27/10/85.

Have instructed the caretaker to lower the rails and incline them inward, also to level the ground as much as possible. This will I think in a great measure do away with the inconvenience complained of.

Cobar, 31/10/85.

JAMES COTTON,
Overseer, Public Watering Places.

Extract from Report "A" of Mr. James Cotton, Overseer, Public Watering Places, Cobar, for period ending 13th October, 1886.

Tindary Tank.

16 October, 1886.

I propose, with the consent of the Chief Inspector, to make an alteration at this tank, which I think will answer very well. The railing at the troughing at this, and in fact at all the tanks, does not answer the purpose intended, and prevents many stock from obtaining a drink. I propose to lay the rails down the centre of the troughs, using the posts which now support them to span the troughing and carry the rail. The caretaker is a handy man with tools, and could do the work required. Some alteration is necessary, and I should like to try this as an experiment.

P.W.P.
86-5,049.

JAMES COTTON,
Overseer, Public Watering Places.

Mr.

Mr. Cotton,—Please send me sketch showing what you propose. The old plan of rail down centre did not suit at all for cattle, and permitted sheep to get sideways into troughing.—H.G., B.C., 26th Oct., 1886.

Sir,

Cobar, 2 November, 1886.

Appendix L.

Herewith I beg to hand you a rough sketch showing the alteration I propose to make in the railing at Tindary Tank. Drovers complain very much at the present arrangement, and wherever they can avoid the Government tanks they do so, and give as a reason the railing and fence at the trough preventing the stock from obtaining a drink.

I may mention that I have lived on a station in South Australia where 70,000 sheep, besides horses and cattle were all watered out of troughs, and those troughs were in every instance made with a rail over the centre, and the plan answered very well there.

I have, &c.,

JAMES COTTON,

Overseer, Public Watering Places.

The Chief Inspector of Public Watering Places.

I beg to recommend that Mr. Cotton may try this alteration at the Tindary troughing, it will entail no outlay, the work being performed by the caretaker.—H.G., 12 November, 1886. The Under Secretary for Mines. Submitted for approval.—H.W., 25/11/86. Approved.—J.F., 26/11/86. Mr. Cotton informed.—26/11/86.

Department of Mines, Public Watering Places,

Sydney, 26 November, 1886.

Sir,

P.W.P.,
86-5,049.

Referring to your recommendation of the 2nd instant, that a railing be placed along the troughing at Tindary Tank, as shown in the sketch submitted by you, I have the honor to inform you that the Honorable the Secretary for Mines approves of your experiment being tried—the caretaker to do the work as you suggest.

I have, &c.,

E. C. WELLER,

(Pro Chief Inspector of Public Watering Places).

The Chief Inspector of Public Watering Places.

Sir,

Cobar, 11 December, 1886.

P.W.P.,
86-5,726.

I beg to acknowledge receipt of your letter informing me that the Honorable the Secretary for Mines has approved of my trying the experiment at Tindary Tank of placing the railing along the trough as shown in the sketch sent by me. The caretaker is instructed to proceed with work, and I shall report to you how the arrangement answers when completed.

I have, &c.

JAMES COTTON,

Overseer, Public Watering Places.

The Chief Inspector of Public Watering Places.

Copy of extract from Mr. Overseer Cotton's report on Tindary Tank.

* * * * *

29 January, 1887.

P.W.P.,
87-662.

The alteration of the railing at the troughs of this tank will be shortly finished. It is a decided improvement, and meets with the approval of the public.

JAMES COTTON.

Do you recommend any alterations at other tanks.—H.G., 16/2/87. Mr. Overseer Cotton, B.C., 16/2/87. Yes; but would recommend iron supports being used for the railing instead of wood, the troughing at all the tanks would be much improved by the alteration. At this tank the railing was especially awkward for stock.—JAMES COTTON, 4/3/87.

Extract from report A1 by Mr. Overseer Cotton, Cobar, for the period ending 28 January, 1887.

Nullamut Tank.

P.W.P.,
87-570¹

The tenant complains that the public pass this tank without watering on account of the railing at the troughs.

JAMES COTTON,

Overseer, Public Watering Places.

Cobar, 29 January, 1887.

This paper may go with other complaints *re* troughing, with a view of the subject being dealt with as a whole.—H.G., 11/2/87.

Mr. Acting-Inspector Boulton to The Chief Inspector Public Watering Places.

Sir,

Bourke, 22 July, 1886.

P.W.P.,
86-3,656.

While inspecting the Kerrigundi Tank, Mr. Ramsay, the new lessee, called my attention to the manner in which the rails are arranged at the troughs at that tank, and announced his intention of applying for permission to alter them and render them more convenient for stock. While upon the Nyngan to Cobar Road, a Mr. Alison, of Canonbar, called my attention to the same defect. A Mr. Miller, a drover, with 1,000 head of cattle, also referred to the matter, and informed me he was unable to do justice to his cattle at any of the Government tanks on the road from Bourke to Cobar and Nyngan that he called at. At the Corilla Tank, he watered at an old excavation, but could not water all his mob there, although the troughs were full. Mr. Alison also informed me that he had given his drovers instructions in the event of his stock not watering to chop down the rails.

I have had considerable experience in watering stock at troughs and wells, and for your information I do not hesitate to say that the arrangement of the rails at nearly all the Government tanks is inconvenient. The defects are in my opinion as follows:—The rails are cumbersome and set too high from the

the edge of the troughing, and are outside the line of troughs instead of being over the edge, allowing sheep to get into the troughs, and their height making it a difficult matter for cattle and horses to drink, and in places where the earth is cut away an impossibility. When the earth is banked up to the edge of the trough it is again difficult for sheep to water. The high fence is, I think, a block to paddock sheep and cattle, both having, unless very thirsty, a disinclination to face it. I therefore beg to submit for your consideration a plan based somewhat on the railing fitted to the new steel troughing, and which I venture to think is very workable and inexpensive. To apply it to existing troughs would be a very great improvement, though perhaps it would be a work of time and additional expense. The present rails, however, could in nearly all cases be utilized. To troughing about to be constructed I venture to think it could be applied with satisfaction to all concerned, observing that the new steel troughing has only the top rail, and nothing to prevent sheep getting into them.

By reference to the sketch enclosed it will be seen that the only alteration made is with the rails. I propose that T iron or flat iron standards and wooden rails should be used, and a space of 10 inches from the edge of the trough to the lower side of the rail be left, bringing the rail exactly over the edge of the water, and ample for any sheep or ram to water at, and not too high for the smallest horse or beast to drink over. The top or centre rail effectually prevents any large stock getting into the trough.

If this proposed arrangement cannot be applied to the existing troughs, I would urge most strongly that some plan by which the rails can be lowered and altered, may be adopted. I feel sure in my own mind that plenty of stock would water at Government tanks that now, owing to the inconvenient arrangement of the rails, pass by. From inquiry made by me from the caretakers I find that almost without exception drovers have complained to the caretakers about the troughing rails, and I think that on reference being made to the different overseers of Public Watering Places it will be found that the complaint is nearly general.

I have, &c.,

JAMES W. BOULTBEE,
Acting-Inspector Public Watering Places.

Extract from letter of Mr. James Ramsay, lessee Booroondara tank.

16 October, 1886.

* * * * *
The troughing is now protected by a low railing on one side and a two-railed fence on the opposite, making it a most difficult and dangerous place for stock to water.

Many sheep either go away without getting a drink or jump into trough, fall down, and pollute the water. Cattle walk into it, endangering the safety of the troughing, and when very thirsty occasionally throw one or more beasts on their backs in the troughs. This invariably frightens all the stock away, and when the troughing has been again cleaned it is with the utmost difficulty they can be brought back to water. Each drover complains most grievously of this very awkward arrangement.

JAMES RAMSAY.

P.W.P.,
86-5,165.
Original with
papers re
Kerrigundi
Tank

Extract from Mr. Overseer Cotton's report upon Mr. Ramsay's letter of 11th October, 1886, relative to Booroondara Tank.

* * * * *
The lessee's idea of a rail down the centre of the troughing over the water has been previously recommended by me at other watering places, and I think it would be an improvement.

JAMES COTTON.

Sir,

Cobar, 7 December, 1887.

In reply to your letter instructing me to alter the troughing to the design approved of by this Department, I have now the honor to inform you that the Department of Works have taken the matter in hand, and I am informed that it is the intention of that Department to make the alteration at all the public watering places in my district. The troughing at Nullamut has been completed, the side rail having been put over the centre of the troughing, as reported in my report of the 5th instant.

I have, &c.,

The Chief Inspector of Public Watering Places.

JAMES COTTON.

P.W.P.,
87-6,656.

The alteration to the troughing alluded to as being undertaken by the Department of Public Works is simply carrying out a re-modelling of the railing of the existing troughing upon a pattern adopted by this Department at Tindarie and Mossiel. The disadvantage of the course taken by the Works Department is that in most cases the caretaker would have been able to do the work.—H.G., 20/12/87. Submitted.—H.W., 23/12/87. Seen.—H.A., 23/12/87.

Extract from Mr. Overseer Cotton's report on Brura Tank for period ending 14th September, 1887.

Cobar, 13 September, 1887.

* * * * *
While inspecting the tank I saw 1,300 cattle watering at the troughs, and am more than ever convinced that the railing at the side of the trough is a mistake, and that the rail should be over the centre of the trough. Further than this the person in charge, Mr. J. H. Harding, informed me that he had watered his cattle at the Tindarie Tank, where I have had the railing placed over the centre of the trough, and he was much pleased with the alteration, his cattle having obtained the most satisfactory drink since he had been on the road, at the Tindarie Tank.

JAMES COTTON,

Overseer, Public Watering Places.

P.W.P.,
87-4,764.

Extract

Extract from Mr. Inspector Mackenzie's report on the Tindarie Tank.

Cobar, 11 December, 1887.

P. W. P.,
87-7,070.

The troughing has been much improved at this tank by the alterations made to the railing. The side rail has been removed, and is now placed along centre of troughing and supported on a piece of 6 x 2 sawn timber, which is securely bolted to the posts on each side of the trough, and about 4 inches above the top of it.

F. MACKENZIE,
Inspector, Public Watering Places.

XXIX.

Drains.

Tom's Lake Tank.

Extracts from Mr. Overseer Keighran's Report on Tom's Lake Tank or Dam.

12 August, 1886.

State of Drains.

Bad; no water during the late rains made its way into the tank from the drains, on account of the embankment at the head of main drain having given way, as shown by rough sketch enclosed herewith.

Remarks.

With the exception of main drain, this watering-place is in good order; but I am of opinion that the drains will always be a source of annoyance and trouble on account of the loose nature of the soil, which cuts away.

Remarks and recommendations on Report.

Booligal, 19 August, 1886.

The main drain, which is over one mile in length, was, in my opinion, badly laid out at the first; the levels not properly taken, as, at its head, there is a swamp, where an embankment of earth had to be formed to force the water from there into the drain, which embankment has given way. The consequence is that the drain renders no assistance in conveying water from the plain into the tank; besides, this drain is on the main route where travelling stock has to pass along, and is constantly getting damaged by being trampled in, and again, at its junction near the tank, teams, coaches, &c., have to cross over, and get bogged. At the time of my inspection it was a perfect quagmire, and a hindrance to the travelling public. Two culverts are required here, otherwise the drains are useless.

JOHN A. KEIGHRAN.

Extract from Mr. Assistant-Engineer Stillwell's report, dated 21st October, 1886.

P. W. P.,
86-5105.

The main drain was in a most neglected state, silted up, batters scoured down, and a large gap close to tank, which had allowed all the water brought down to escape into the swamps near the troughing; but for this there would have been perhaps two feet more water in the tank, and, correspondingly, less to deal with in the swamp outside. Owing to the drain not being attended to, the embankment across the swamp at northern end has been cut away for about a chain at one end, from water accumulating, which the drain otherwise would have allowed to escape into the tank. The lessees should also be made to repair this.

The Under Secretary for transmission to Mines.—W.C.B., 25/10/86. The Under Secretary for Mines.—B.C., J.R., 27/10/86. Mr. Inspector Boulton for report.—H.G., B.C., 1/11/86. Report herewith.—JAMES W. BOULTON, Mossiel, 20/11/86.

Sir,

Mossiel, 20 November, 1886.

P. W. P.,
86-5,491.

Referring to the enclosed papers, and more especially to Mr. Stillwell's report upon the damage at the Tom's Lake Tank, I now have the honor to inform you that I visited the tank in question and find that, with reference to the repairs required, that at present, with the exception of the broken dam, it is quite impossible from the amount of water lying about for the lessees, Messrs. Cobb & Co., to undertake the work at present. The silt tanks are full and under water respectively, and the lower drains mostly under water.

With reference to the main drain and the broken dam, the drain is, I should say, considerably over a mile long, from 12 to 14 feet wide, and from 3 to 5 feet deep. It starts from a watercourse, and a wide low dam across this forces the water into the drain. The water will have, I think, to rise 3 feet in this dam before it enters the drain. From appearances, the water has been within an inch of flowing over the dam, the break, which is a cutting in the solid earth about 20 yards wide, evidently saving the dam, the bottom level of the drain being in places too high to carry the amount of water. If this cutting or by-wash is to be repaired, I think the whole dam should be raised 2 feet for safety. The water will then flow down the drain to the place where the water has escaped into the swamp, and where I think the ground surface is lower than at the tank. The earth excavated from the drain is placed in irregular heaps each side without making a continuous bank, and it is between these heaps the water has made its way and cut down. The drain continues and ends abruptly about a chain from and parallel to the tank. A small

small dam throws the water by a small drain into the tank. I was informed the drain was originally an uniform size, but owing to the obstruction to the traffic was filled in. The main road, I must mention, passes between the drain and tank, and follows the drain the whole way, and I am told that when the water came through to the tank the space here was a perfect bog-hole. The original intention was, I suppose, to bring sufficient water down to fill up the embankments, and to do this I think it will be necessary to raise the dam and bank the earth along the low portion of the main drain in a form that can be utilized as a roadway, and to construct a culvert and open up the drain again. I found the drain scoured and cut, which, owing to the friable nature of the soil, is inevitable, but not so much silted. The caretaker informs me that he and a man were at work in the water endeavouring to arrest the flow of water from the drain into the swamp, but were unsuccessful. I do not think it is a case so much of neglect but of fault in construction. Mr. Overseer Keighran's report on this tank is attached, and is, I think, corroborative of my view. I append a rough sketch*, which may perhaps make my remarks* clearer. The dam and drain also, I believe, are off the public watering place, and the amount of water lodging in the dam militates against the tank, since the lessee cannot charge for water from it.

I have, &c.,

JAMES W. BOULTBEE,

Acting Inspector, Public Watering Places.

The Chief Inspector of Public Watering Places.

Hulong Drains.

Hulong Tank.

Sir,

Public Watering Places Office, Narrandera, 7 October, 1886.

When the first rain came after this tank was taken over it was found the drains were most uneven, and the water actually ran from, instead of to, the tanks. On my last inspection (15th September) I heard Mr. Stillwell had, a few days previously, inspected and had tested the machinery.

P.W.P.,
86-4,760.

The caretaker had just finished painting the engine and pump, and had given the service tank one coat of paint, and it has subsequently had another coat.

When Mr. Stillwell found him absent the caretaker was on his way to Whitton to bring out some tools, &c., which I had sent him, and this trip was rendered necessary as the agents refused to give up the goods until the carriage was paid (a rather sharp trick), so I told the caretaker to get them himself.

He has been levelling the drains, and got the water to run into tank, but advises me the new drains made by the Works Department are so low he will have to deepen the other drains for several chains to make them of service.

The caretaker's camp is 100 yards from tank.

I have, &c.,

W. J. ELWORTHY,

Overseer.

The Chief Inspector, Public Watering Places.

Can you bring evidence to confirm your statement with respect to the drains, an assertion of this kind requires proving; report fully before further action is taken in this case.—H.G., B.C., 11 October, 1886.

Mr. Overseer Elworthy,—My statement is being based on that of the caretaker. Report herewith.—W.I.E., 20/10/96. Machinery in good order and works well.

Drains at Hulong Tank.

A to B is now in order, the caretaker having deepened it a foot near silt tank.

C to D, a good drain and requires no alteration.

E to F has also had to be channelled by caretaker, and water led into same from various crab-holes near.

G to H has had to be channelled and deepened as the water used to run backwards.

J to K is a bad drain, and the Works Department are proposing to close it. The caretaker commenced to level this, but when rain came, he saw it would be useless, as the water level between, was 13 inches below that of drain G to H.

The water is now lying in this drain and being fed by L to M and N to O, is so much waste, as the water lays at the junction of these drains.

P to Q is a new drain along main road and the water lays in northern end of it. To make this drain a dead level, would bring it below the water level in silt tank, and the caretaker has not interfered with it.

R to S is a useful little drain as it stands at present.—W.J.E., 25/10/86.

Appendix J

Sir,

Public Watering Places, Narrandera, 25 October, 1886.

I have just returned from Hulong Tank, where I have made a careful inspection of the drains, machinery, embankments, &c., and report as follows:—

P.W.P.,
86-5,080.

The statement made by me on 7th October is based on the assertion of the caretaker, who has confirmed same, and further says Mr. Stillwell, Assistant Engineer of Works Department, Hay, was at tank during a hail-storm and saw the water going the wrong way, in consequence of which he has since had the inlet flume and valve lowered 1 foot, to try and remedy the defect.

I enclose a plan showing position of tank and drains, and as the latter had water in them, I was enabled to notice the levels, and I have marked the drains alphabetically to explain the various defects.

A day or two previous to my visit another officer from Hay (Works Department) inspected the drains and told the caretaker some alterations would have to be made.

I have, &c.,

W. J. ELWORTHY,

Overseer.

Mr.

Mr. Boulton for report.—H.G., 10/11/86. Report attached.—J.W.B., 23/12/86, Whitton.

Hulong Tank.

Extract from Mr. A. W. Stillwell's report of 9th December, 1886.

P.W.P.,
86-5,855.

I inspected this tank on the 3rd instant. There was then 6½ feet of water in it, which has been increased to 8 feet by late rain. The drains require much more attention during wet weather than the old man stationed here, as caretaker, gives them.

The embankment was in good repair, but the wires were very slack in the fence around the tank.

The Under Secretary for transmission to Mines.—J.W.B., 15/12/86. The Under Secretary for Mines.—J.R., B.C., 16/12/86. Mr. Overseer Elworthy for report.—H.G., 20/12/86.

I have just inspected this tank with Mr. Boulton, who will give you a concise report on same.

Had the Works Department taken a little more trouble regarding the level of the drains at this tank, it would have saved the caretaker an endless amount of work. There is now a large supply of water at this tank, more than sufficient for our requirements for many months. I will write the caretaker again, and stir him up.—W.J.E., 22/12/86.

Sir,

Whitton, 23 December, 1886.

P.W.P.,
86-5,964.
* Appendix K.

Referring to the enclosed papers relative to the drainage at the Hulong Tank, and to the complaint of Mr. Road-Superintendent Stillwell against the caretaker, that he is not giving the drains proper attention, I now have the honor to submit a rough plan* of the drains which I inspected, and from my own observation, and from the statements of both Mr. Elworthy and the caretaker, who have seen the drains full of water, I have no hesitation in saying they have been very badly and carelessly laid out, and that our caretaker, who has, I think, honestly done his best to remedy the very glaring defects, is being blamed for not neglecting other portions of his work to do what he never should have been called upon to do, namely, grade and level the drains. The inlet flume was lowered 9 in. before the water would run into the tank at all; the main and side drains have been lowered a long distance up, and two of the drains are, I submit, quite useless. The drains at Hulong are not an isolated case; at the Ivanhoe tank the levels are imperfect and water expected to run up hill.

I have, &c.,

JAMES W. BOULTBEE,
Inspector, Public Watering Places.

The Chief Inspector, Public Watering Places.

The fencing has not been erected more than nine months, and I think should not be in the state described had the work been properly done by contractor.—J.W.B., 6/1/87.

Extract from Mr. Inspector Low's Report on Hulong Tank.

9 July, 1887.

P.W.P.,
87-3,261.
Original with
papers re
Fencing.

Drains. Nearly all full of water; where bottom can be seen, very free from silt. One of these already blocked up; ought to be banked up nearer to tank to prevent water running from tank.

J. LOW.

Extract from 87-5,614, Report A1 for 3 October, 1887, by Mr. Inspector Boulton on the Hulong Tank.

Narrandera District, 6 October, 1887.

P.W.P.,
87-6,062.

Mostly full of water. I was enabled to confirm my report upon the drains here, and two of the drains are now blocked, as they run the wrong way.

JAMES W. BOULTBEE.

Extract from report of Mr. Acting Inspector J. W. Boulton, on the Hermitage Tank.

19 July, 1886.

P.W.P.,
86-3,548.

State of drains.—Wide shallow drains, free from silt, cut on road. The road crosses these among some gilgai holes, and they are much cut by teams. Stone pitching or logging very necessary.

Watering Appliances.

State of supply tank.—A buckle plate in good order on iron cylinders, filled with cement, the best arrangement I have seen yet. A mistake has been made in putting the heads of the bolts outside and nuts inside tank.

Remarks and Recommendations.

The tenants' lease fenced is a hard bit of country, full of gilgai holes and covered with yarran, &c. I saw Mr. Alison, of Cannonbar, here, and he drew my attention to the inconvenient way the troughs are fenced here and at most of the tanks (see separate memo.) and in Keegan's hearing, informed me he had given his drovers instructions, in the event of his sheep not drinking, to cut down the rails. The rails are inconvenient, but I hardly think he would venture on such strong measures.

JAMES W. BOULTBEE,

14/7/86.

Inspector, Public Watering Places.

Extract from Mr. Inspector Boulton's report, on Booroondara Tank.

29 June, 1886.

P.W.P.,
86-3,331.
Original with
papers in case 36.

Two long drains converge at the tank from each side of the catchment. No by-wash has been provided; the banks on the low side of the drains have been carried away about a chain from silt tank, and the water has flowed broad side on to troughs and swept over and under them. Caretaker pointed out to me site proposed by Works' officer for by-wash; I am of opinion it will be simply useless, as the ground (without taking level) appears to me to be higher than top of drain embankment on other side.

J. W. BOULTBEE.

Extract

Extract from Mr. Inspector Low's report, on Ivanhoe Tank.

31 August, 1887.

State of fencing.—Not yet transferred from Works Department. This style of fencing cannot be too strongly condemned, by running wire and straining it to any post. Although this is only lately erected, some of the posts are now splitting, owing to being split pine and straining wires to them.

P.W.P.,
87-4,960.
Original with
papers re
Ivanhoe Tank.

Remarks.—The drains here have evidently been constructed with no respect as to what a drain is for. One drain for a good half mile running water from tank, another is brought along road to Mossgiel, and cut up very badly by both stock and teams. The water from this drain overflows silt tank, which is very small and partly upon main road and runs into Elliot's tank on opposite side of road, which water Elliot afterwards sells to the public. Another long drain runs through township allotments, which have been sold and is now being blocked up.

J. LOW,
Inspector, Public Watering Places.

I submit this extract from Inspector Low's report upon the Ivanhoe Tank and fencing for the information of the Honorable the Secretary for Mines, as it so strongly confirms my former remarks. It is work of this sort that occasions so much discredit, and for which this Department is so frequently blamed.—H.G., 28/9/87.

The Under Secretary,—Submitted.—H.W., 29/9/87.

Seen. I cannot help saying, after having seen this tank, that, in my opinion, a very improper situation was selected, and the work in my estimation is badly done.—F.A., 12/10/87.

Extract from Mr. Boulton's Report on Ivanhoe Tank.

22 November, 1886.

I believe 15s. per chain was paid for the drains here—work that I got done on the Darling from 3s. 6d. to 4s. 6d. per chain, 6 feet wide 18 inches deep.

P.W.P.
85-7,030.
P.W.P.
85-5,587.
Original with
papers, Ivanhoe
Tank.

J. W. BOULTBEE.

Can you give any information with respect to the cost of these drains.—H.G., B.C., 20/12/87. Mr. Yeo.

The drains at the Ivanhoe Tank were made by Messrs Farrell and Gallagher, who received 15s. per chain, which was an exorbitant price, as stations in the district were only giving 3s. 6d. to 5s. per chain, and I might mention that a reliable person informed me at the time the contract was let that one of the contractors, while consulting his partner as to what price they should do the work for, said they should ask 7s. 6d. per chain, which he said would pay them well, but the partner said "As it's Government work let us ask 15s. per chain," which they did, and got. I might also mention that the drain running from the north-east corner of the main tank, from a point about half-a-mile from the main tank, should not have been passed by the Road Superintendent, as it was never graded properly, and the water runs in the opposite direction of the tank. No tenders were called for the cutting of these drains.—J. Yeo, 22/12/87.

Submitted for the information of the Secretary for Mines.—H.G., 23/12/87. The Under Secretary. Submitted.—H.W.

Extract from Report on Ivanhoe Tank by J. W. Boulton, for 22nd November, 1886.

There is one drain that for a considerable distance runs up hill, and a cutting 3 feet deep is required to run the water down. Mr. Stillwell had a man at this, but it is now left for our caretaker to do. I instructed him not to touch it until he has everything else in good order. The place is fully half-a-mile from the tank, and working there he can have no check on travellers.

* * * * *
 Original with Peri Springs papers.
 Tanks & Wells, 83-319.
 Yentabangee is almost similarly situated, being within 3 miles of the Tongo Waterhole, which is almost permanent on the one side, Olpoloko Waterhole on the other side, also about 3 miles distant from tank. In my opinion this tank should have been put down at the Olpoloko Waterhole, as it would have divided the distance from Peri Springs to Tongo Waterhole, making about 10 miles from the former, and 6 or 6½ miles from the latter.

* * * * *
 W. HOGARTH.

Letter from W. H. L. Ranken, Tongo Station, Paroo.

My dear Gilliat,

Melbourne, 6 February, 1883.

Tanks & Wells, 83-301.

Your note was forwarded to me from Tongo.

The Tank at Nipper's Creek has no permanent water near it, strictly speaking, but the water in Wonko or Purnanga Creek at Murphy's Inn has only failed twice during the last five years, and then for a very short period in mid-summer; that is 3 miles from Nipper's Creek.

Warramurtee Tank is 2 miles from a station dam containing the old original "Warramurtee." "Murtee" is the native for a lagoon.

There is a comparison in calling Nipper's Creek by the name of Yentabangee in official notices, &c., which causes drivers and others much trouble. No such name is known there, and it is sometimes set down as meaning Yentabangee, that is 4 miles from Nipper's Creek Tank.

We have been in Tasmania all the summer, and look forward to returning to Tongo in May. I hope you will visit us during the winter.

I remain, &c.,

W. H. L. RANKEN.

Copy of extract from Report by Mr. Gilliat, 22nd February, 1883.

Tanks & Wells, 83-302.
 Original with Peri Springs papers.

Referring to Mr. Overseer Hansen's report on the Paroo Tanks and other papers herewith, it appears that the Peri Sand Hills Tank and Warramurtee Tanks have permanent water close by, and that the Nipper's Creek, or Yentabangee Tank, has the Tongo Waterhole about 3 miles distant on the one side, and the Olpoloko Waterhole on the other.

* * * * *
 I agree with Mr. Hansen that it is unlikely that the first three tanks will find tenants on this account. So far, I believe, no tenders have been received.

* * * * *
 H. GILLIAT.

Yentabangee Tank.

Sir,

Tongo, 10 February, 1883.

Tanks & Wells, 83-310.

I have the honor to hand you my report on Yentabangee Tank.

This tank is very much out of order, and there is, at the present time, very little water in it—about 2 feet. The drinking tank has about 6 feet of silt in it, and the service pipe buried. The caretaker is now busy in clearing a space of 15 feet square at the mouth of the service pipe, so as to give the water a chance to get through when the main tank fills again. The pipe on the inside is quite clear, but whether the water will force the mud through that is now in the pipe remains to be seen. These small 4-inch pipes are of no use whatever, and once they get blocked up with silt, there is no chance of clearing them. The connecting valve I found broken; I have removed this, and will send it to Wilcannia for repairs. The caretaker will replace it when returned. The inlet pipe is a 12-inch cast-iron; this, also, was blocked up, but is now clear. There was rain enough in November last to fill this tank, but no water could get in. The silt tank requires to be cleaned. The fencing is in a very bad state, cut in several places, and about thirty rails are gone. The front of the drinking tank was never fenced,—this should be seen to. I would advise that early steps be taken to have this tank put in order, as it is next in importance to the Goombalara Tank. The site is a very good one, and this tank is often used; yet, at the present time, there is plenty of water 6 miles on the Peri side, in Poloko Creek, also in the creek at Murphy's hotel, 4 miles from Yentabangee.

On separate sheet you will find statement of repairs required.

I have, &c.,

JOHN HANSEN,
 Overseer, Public Tanks and Wells.

Harry Gilliat, Esq., Inspector, Public Tanks and Wells, Ivanhoe.

Tank at Nipper's Creek, Road Wilcannia to Hungerford.

Extract from *Western Grazier*.

The Nipper's Creek Tank.

Sir,

To the Editor.

Stock, 82-1,083.

Owing to some defect in construction, or stoppage in pipes connected with this tank, no water from the rain that fell in the vicinity of the tank on 21st instant was conserved, notwithstanding that a sea of water surrounded the tank, and only required a little attention to make it run in. The questions arise: Who is responsible for the neglect? and, if immediate attention is given, cannot some of the water that still remains round the tank, and must otherwise be wasted, be still conserved.

Yours, &c.,

ANXIOUS DROVER.

Wilcannia, November 29th.

[We

[We judge this to be a matter for Mr. Ilberry's immediate attention, and we trust that, under his control, such an instance of gross neglect as that complained of will become impossible. We are not so often favoured with rain that we can afford to let it run to waste when it does come.—ED.]

The watercourses and pipes were all clear when I visited this tank early in the year. The *débris* brought down by late rain must have stopped inlet pipe.—H.C., 13/12/82. Mr. Wood to see.—W.C.B., 19/12/82.

This tank has been handed over to the Mining Department, and they are solely responsible for this "*instance of gross neglect*." This is another fact supporting my long since expressed views as to the evil of taking control of these works out of our hands.—ARTHUR P. WOOD, 19/12/82.

I think this might be sent on to Mines.—W.C.B., 19/12/82. Under Secretary, B.C. The Under Secretary for Mines.—J.R., B.C., 20/12/82. Urgent. Mr. Inspector Gilliat.—A.B., B.C., 22/12/82.

Mr. Bruce.—Mr. Hansen instructed to make an early report. The inlet pipe to this tank is the usual 9-inch supplied by the Works Department, and is quite insufficient to take in the water required. I refused, in my report on this work, to recommend any outlay, on account of its neighbourhood to more permanent water.—H.G., B.C., 28/12/82. Returned, 2/1/83.

You will, I think, on reconsideration, see that as this and other works on the Paroo have been taken over by this Department, they should have been made as efficient as possible, and that the inlet here, and at the other tanks (which are so very unsuitable), should have been altered. I hope Mr. Hansen will see to this immediately.—A.B., 4/1/83. Mr. Gilliat.

Copy from Mr. Gilliat's Report on Peri Springs Public Tank.

* * * * * My report was submitted in April, 1881, and pointed out that it was impracticable that tenants would ever be obtained for Peri, Nipper's Creek, or Warramurtee Tanks, on account of their neighbourhood to good water supply. * * * * *

Tanks & Wells,

With Peri Springs
papers.

* * * * * The Nipper's Creek has Olepoloko Waterhole situated on one side, and Tongo Waterhole situated on the other. The Warramurtee Tank is about $\frac{1}{2}$ mile distant from the Warramurtee Waterhole, one of the finest on the lower Paroo. The attention of the Department has on various occasions been directed to these works. I may add that it is only within the past ten months that the Department of Mines has been admitted to have any voice in the selecting of sites of works, and that I am not aware of any instance in which it has been consulted with regard to their construction. * * * * *

H. GILLIAT,
20th May, 1884.

XXXI.

Roto Well.

Sir,

Hay, 3 May, 1886.

I have the honor to forward the attached report received from Caretaker Ross, at Roto Well, in which he says that one of the runners down the shaft has got out of place. I suppose that Mr. Stillwell will say it was caused by the carelessness of the Mines caretaker.

P.W.P.,
86-2,207.

Please inform me what I am to do in the matter of having it repaired.

I have, &c.,

JOHN A. KEIGHRAN,

Overseer.

The Chief Inspector of Public Watering Places, Sydney.

A copy of Ross' report may perhaps be forwarded to the Department of Public Works.—H.G., 14/3/86. The Under Secretary for Mines. Approved.—G.E.H. (for U.S.), 19/5/86. Forward copy to Department of Public Works.—H.G., 21/5/86. Letter and copy of Ross' report to Works, 25/5/86.

Copy of Letter from Joseph G. Ross, Caretaker, at Roto Well.

Sir,

Hillston, 27 April, 1886.

I herewith inform you that during baleing water on Saturday one of the runners down the shaft came out of its place, and stopped me from pulling any more water. I went down shaft and found it out of place under water. Please to inform me what I am to do. I cannot replace it myself; the water must be taken down before anything can be done. It will require a canvas bucket for the broken side. And I am,

P.W.P.,
86-2,208.
Original
mutilated.

Yours, &c.,

JOSEPH G. ROSS,

Caretaker.

Mr. John Keighran, Overseer of Public Watering Places, Hay.

Copy of telegram from Mr. A. W. Stillwell, Assistant Engineer, Hay.

MECHANIC sent to repair Roto Well from Hay yesterday. No urgency, as there is plenty of surface water there now.

P.W.P.,
86-813

A. W. STILLWELL,

Assistant Engineer.

The Commissioner and Engineer for Roads and Bridges, Sydney.

I recommend that this paper be transmitted to Mines for the information of the Inspector of Tanks and Wells.—W.C.B., 3/6/86. Under Secretary, B.C. The Under Secretary for Mines.—B.C., 4/6/86. The urgency in this case was that the well is about to be transferred to the tenant.—H.G., 7/6/86.

Extract from Report by Acting-Inspector J. W. Boulbee, at the Roto Well.

* * * * *
 P.W.P., 86-3,134. State of shaft.—Out of order. A runner has come away, and will not allow the bucket to descend. The engineer is expected shortly to put this right. Caretaker has tried to repair this himself.
 * * * * *

There is a fine dam close to this well, which is used by travelling stock, hence the poor returns.

JAMES W. BOULTBEE,
 Inspector of Public Watering Places.
 13 June, 1886.

Roto Well.

Sir, Hay, 29 March, 1887.
 P.W.P., 87-1,576. Mr Nicholson visited this well on the 24th instant. Reports considerable neglect on part of lessee. There is no one in charge, nor had there been apparently. The horse-walk was washed down at sides, in one place exposing king post to ground surface. The troughing was all overgrown by burrs, and the surface tank needed filling.
 I have, &c.,

The Commissioner for Roads.

A. W. STILLWELL,
 Assistant Engineer.

Under Secretary for transmission to Mines.—W.C.B., 1/4/87. The Under Secretary for Mines.—J.R., B.C., 2/4/87. Mr. Oversecr Keighran.—H.G., B.C., 18/4/87.

87-1,576. This report of Mr. Stillwell is partly correct. For full information see my report on this well, which goes by same post as this.
 23 April, 1887.
 JOHN A. KEIGHRAN,
 Overseer.

The Chief Inspector of Public Watering Places.

Report by Overseer John A. Keighran on the Roto Well, Road from Hillston to Cobar, in charge of Evan Evans, tenant, for May, 1887.

P.W.P., 87-2,247. State of shaft.—In good condition. The water in this well is very good, equal if not better than the river water.
 Whim, &c.—Good, but the horse walk is damaged in two places by rain, close to king posts.
 Ropes, buckets, &c.—In good condition.

Watering Appliances.

State of supply tank.—Good; full of water to within 18 inches.
 Troughing.—Good, but burrs have been allowed to grow along the sides, and should have been cut down.

State of fencing—Six wire enclosing tenant's lease, in good condition; trough fence good.

State of gates.—Good.

Remarks.—On my visiting this well, on the 14th instant, there was no one in charge, that is, residing at the well, nor has there been since the works were handed over. The lessee and his manager were away from the station, so that I did not see either of them. No stock will require watering at their well for the next twelve or eighteen months, there being sufficient water in the creek to last that time.

Rates collected since last report.

No stock has ever been watered at this well.

Weekly depth of water since last report.

16 feet 6 inches.

Remarks and recommendations.—This work shows neglect, on the part of the lessee, by not having the horse-walk repaired, and keeping of the surroundings clean, and free from burr. The whole of the work required to be done would not take a man more than one hour to do it. I do not know who has the clearing of the burr from off the public road, but the roadway here for over a mile, between the Government and station fence is thickly covered with this Bathurst burr, and is an impediment to stock travelling.

Hillston, 24th May, 1887.
 JOHN A. KEIGHRAN,
 Overseer of Public Watering Places.

The tenant is reported by the Overseer to have no one in charge of the well or residing at it. This is a breach of regulations 41 and 47. Mr. Keighran should, I think, at once have instituted proceedings against him under the 13th clause of the Act, and I submit may be now instructed to take that course.—H.G., 31/5/87. The Under Secretary.

Submitted for approval.—H.W., 1/6/87. Approved.—F.A., 2/6/87. Is this a notified public watering place? No, this has not yet been notified.—R.W.G., 9/6/87. Is it notified in Mr. Bruce's list?—J.W.B. Yes; this public watering place is included in travelling stock reserve 2,447, notified 19/9/81, and in travelling stock reserve 253, notified 26/4/76, both of which are notified in Mr. Bruce's list as reserves for the purposes of the Public Watering Places Act.—J.W.B., 30/6/87.

Instruct

Instruct Overseer to proceed, and to furnish a full report. He should have *Gazette* notice of the reserve and his appointment under the Act to produce in Court.—H.G., 30/6/87. Mr. Keighran instructed.—J.W.B., 4/7/87. Request Mr. Keighran to explain without delay his reasons for not informing the Department of his action in this case.—H.G., 1/9/87. Letter to Mr. Keighran.—7/9/87. The clerk in charge should keep such cases as this constantly in view until they are settled.—H.G., 1/9/87. Mr. Ramsay.

Sir,

Hay Stock Office, 10 September, 1887.

Referring to your public watering places 2,247, of 7th September, I have the honor to give the following reasons for not proceeding against the lessee of Roto Well, which I trust will be found satisfactory.

P.W.P.,
87-4,669.

Before taking action in the matter I wished to make certain whether the lessee had, during the interval, complied with regulation 47 of the Public Watering Places Act by having a caretaker residing at the works for that purpose. I again visited at the well on the 24th August, and in company with the lessee (Mr. Evans) found it in the same condition as on my last inspection. To the fact of this I drew Mr. Evans' attention, and informed him that my instructions were to prosecute. He replied by saying that he would, at the termination of his lease, deliver over the works in the same order and condition in which they were received, and what more did the Government require; and as to not having a man residing at the well he considered his residence, half mile from the works, was sufficient protection. Moreover, no stock would require watering from the well for the next two years, there being sufficient in the creek to last during that period, and that he would not place a man there to do nothing. On my returning to Hillston to procure a summons I found that the police magistrate (Mr. O'Neill) was absent in Sydney, on leave. In consequence of that I have allowed the matter to stand over, but as soon as I hear of Mr. O'Neill's return, it is my intention to institute proceedings, as I should wish that gentleman to be on the Bench at the time to adjudicate. It being the first case of the kind that has happened in the district, I would not care to be bested.

I have, &c.,

JOHN A. KEIGHRAN,

Overseer, Tanks and Wells.

The Chief Inspector of Watering Places, Sydney.

Mr. Keighran's explanation is satisfactory; it would have been more correct if he had informed the Department at once of the cause of delay. I trust he will take great pains with this case. As soon as summons issues he will inform me and Inspector Boulton, at Narrandera, by wire, of the date case will be heard.—H.G., B.C., 16/4/87. Mr. J. A. Keighran.

Report by Overseer John A. Keighran on the Roto Well, Road from Hillston to Cobar—in charge of Evan Evans, for November, 1887.

State of shaft.—Apparently in good condition. No water has been baled for some considerable length of time.

P.W.P.,
87-6,599.

Whim, &c.—Good, but requires tarring.

Rope, buckets, &c.—Rope good; buckets good.

Watering Appliances.

State of supply tank.—About three parts full of water, and apparently sound, but requires tarring.

Troughing.—Sound, but as no stock has been watered at them, burrs and grass have been allowed to grow up alongside without being cut down.

Machinery.—None.

State of fence.—Paddock fence, tenant's lease, in good condition.

State of gates.—(2). Good.

Remarks.—With the exception, that the horse walk has been repaired, nothing else has been done since my last inspection; no caretaker or man residing at the well; prosecuted the lessee, but the case was dismissed by the Hillston Bench of Magistrates.

Rates collected since last report.—No fees have been collected here during the tenant's time of lease.

Work done by caretaker.—None, with the exception of repairing horse-walk, which had been damaged by rain.

Work laid out for caretaker.—Instructed the lessee to have all the wood work above ground tarred and the troughing freed from burr and grass. He promised to have the tarring done at once, but as to clearing away the burr, &c., he said he would not do unless the Government cleared the road which adjoins the works.

Remarks and recommendations.—In accordance with the Chief Inspector of Public Watering Places' instructions I prosecuted the lessee, Mr. Evan Evans, under section 13 of the Public Watering Places Act, for not having a man residing in the immediate neighbourhood of the well, and although I proved my case, it was dismissed by the Bench of Magistrates then sitting, on the grounds that the well was not required, it being situated alongside of the Willandra Creek, on which there was a large dam of water, which was open to the travelling public free of charge, and that it would be persecuting the lessee by compelling him to pay and keep a man there to do nothing. The Police Magistrate remarking that their decision must not be taken as a precedent at other wells or tanks where water was required.

JOHN A. KEIGHRAN,

Overseer of Public Watering Places.

Hillston, 3 December, 1887.

Sir,

Hay Stock Office, 8 December, 1887.

I have the honor to report that in accordance with your instructions of the 4th July last, I proceeded against the lessee of Roto Well, under section 13 of the Public Watering Places Act, for having no one residing at the well. The Magistrates adjudicating were Mr. N. C. O'Neill, P.M., and Mr. R. W. Stewart. My authority to prosecute and *Gazette* notice of the 24th April, 1885, I produced to the Court, and gave the several dates of inspection to the well, and found no one in charge. After hearing evidence on both sides, the Bench dismissed the case, on the grounds that the well was situated alongside of

P.W.P.,
87-6,692.

of the Willandra Creek, on which there was a large dam of water, to which the travelling public had free access, it being part of the travelling stock reserve, and as it has been admitted in evidence that no complaints were made of the non-attendance of a caretaker, it would be unjust to compel the tenant to keep a man stationed at the well to do nothing. The Police Magistrate remarking that in giving this decision, it must not be taken as a precedent to other Public Watering Places, where the attendance of a caretaker would be required at any time.

I have, &c.,

JOHN A. KEIGHRAN,
Overseer, Tanks and Wells.

The Chief Inspector, Public Watering Places.

The Bench appear to have failed to take into consideration that the defendant was prosecuted for breach of a contract with the Government. The conditions were the same as when he executed his lease, except that the Willandra Creek was then empty. No doubt it would have been more desirable that the Willandra should have been utilized for the public watering place, but with this question, I submit, the Bench had nothing to do.—H.G., 8/12/87. The Under Secretary. Submitted.—H.W., 9/12/87. Approved.—F.A., 10/12/87. Shall the attention of the Justice Department be called to the action of the Bench in this case?—H.W., 12/12/87. Yes.—F.A., 13/12/87. Letter to Under Secretary for Justice, 16/12/87.

87-6,757.

XXXII.

Tanks, Bourke to Wanaaring Road.

Minute of the Superintendent of Drills on the subject of Water Supply on the Bourke to Wanaaring Road.

Sir,

23 December, 1887.

P.W.P.,
87-7,042.

I consider it my duty to inform you that I have received private information to the effect that the Works Department intended constructing a tank on the Cuttaburra Creek, on the Bourke to Wanaaring road; if said information is correct, then all the money expended in boring for artesian water at the 101½-mile, or about 2 miles from the Cuttaburra Creek, will be wasted, as it would not require three different public watering places within 24 miles, viz., the Kulkine Tank, the Cuttaburra Tank proposed to be constructed, and the artesian water supply, of which I have no doubt will be obtained at the 101½-mile.

The 101½-mile bore was started on the 22nd June last, and on Saturday the 19th instant was down to the depth of 611 feet 6 inches.

This bore passed through a very hard layer of quartzite, but the boring is now better, as it is in cretaceous clay, and I fully expect that within the next two months an artesian water supply will be tapped, equal if not superior to the supply at the 75-mile bore, which is 960 feet in depth, and flows at the rate of 30,000 gallons per day.

I have, &c.,

W. H. J. SLEE,
Superintendent of Drills.

The Chief Inspector of Public Watering Places for any remarks he may have to offer.—H.W., 23/12/87. Ask Inspector Mackenzie to ascertain whether it is true that two new tanks are proposed by the Works Department between Bourke and Wanaaring.—H.G., 23/12/87. Wire sent, 23/12/87.

I have wired Inspector Mackenzie, at Bourke, to ascertain if this report is correct; I can hardly imagine it is, as the neighbourhood of each of the supposed new tanks to permanent water is so well known that it is improbable any responsible officer would commit so manifest a blunder. Such a course would also be in direct opposition to the Departmental arrangements that sites should be selected by this Department, an arrangement however that has been departed from in more than one instance by the Works.—H.G., 23/12/87.

The Under Secretary. The Public Works Department may be asked not to proceed with the tanks referred to without making further inquiry.—H.W., 29/12/87. Submitted. Approved.—F.A., 30/12/87. Letter to Works Department, 3/1/88.

Telegram from Mr. Inspector F. M'Kenzie to The Chief Inspector of Public Watering Places.

Bourke, 24 December, 1887.

P.W.P.,
87-7,049.

Two new tanks are proposed between Bourke and Wanaaring, one at 63 mile, and one at Cuttaburra supply tanks, 1,000 yards have been let.

F. M'KENZIE,

Inspector, Public Watering Places.

Mr. Inspector M'Kenzie's telegram appears to confirm the information received by Mr. Slee, but the action taken upon that paper renders any further steps unnecessary, pending a reply from the Department of Public Works.—H.G., 3/1/88. The Under Secretary. Approved.—H.W., 3/1/88.

Sir,

Department of Mines, Sydney, 3 January, 1888.

P.W.P.,
87-7,049.

It having been reported that your Department propose to construct two new tanks on the Bourke Wanaaring road on sites which do not appear to have been approved by this Department, I am directed by the Honorable the Minister for Mines to ask that you may be good enough not to proceed with the tanks without making further inquiry.

I have, &c.,

HARRIE WOOD,
Under Secretary.

The Under Secretary for Public Works.

XXXIII.

Chesney Correspondence.

Dear Sir,

Sydney, 14 April, 1887.

I enclose a memo. I made for you a few days ago up country. I spoke to Mr. Sutherland anent the matter yesterday, but believe that the business belongs to your Department. This is, I assure you, one of the most urgent matters of the kind that has been for some time brought under your notice, and, as a practical man who knows quite well what he is talking about, I would strongly advise the cutting down of a passage at one end of these tanks to admit of stock going straight up to the water to drink. This is as most practical men use their tanks. With travelling stock, however, the thing is an imperative necessity; people who use troughs in the manner which the Government propose to make use of their own stock that have been taught to drink out of them. But nine-tenths of travelling stock have never been so taught when young, and by stock so bred, and hence will perish before they will learn. Had it not been for the private tanks in the neighbourhood of our public one we would have had serious losses in fat stock last summer. This whole business is seriously mismanaged, mismanaged by men who evidently know nothing about it.

The Honorable the Minister for Mines.

Yours, &c.,

JOHN E. KELLY.

P.W.P.,
87-1,732.

MEMO.—

Tanks public.—Those along Cobar and Bourke stock routes are securely fenced off, and all water must be pumped out into troughs. These are so badly constructed that neither sheep nor cattle can drink out of them. Travelling stock owners prefer paying run holders double the money for a drink for stock. These tanks should be cut down at one end to enable stock to get at the water. Travelling stock for most part are unaccustomed to drinking out of troughs, and, to my own knowledge, have perished around troughs, and could not be made to drink out of them. A return of the takings for the past twelve months of these tanks should satisfy you that there is something radically wrong somewhere. These things should be revenue producing, instead of which I feel sure, if what I hear be anything like true, that they are a heavy cost to the country.

The Honorable the Minister for Mines.

JOHN E. KELLY.

Ask Overseers Tully, Brett, Cotton, and Mallon if the use of troughing at station tanks is being adopted in their districts.—H.G., 18/4/87. Informed, 19/4/87.

Minute by The Chief Inspector of Public Watering Places on (Mr. J. E. Kelly's, M.P., views) the subject of troughing at Watering Places.

Sydney, 2 June, 1887.

With reference to Mr. John E. Kelly's, M.P., letter, objecting to the use of troughing at public watering places, I may say that the question was apparently settled at the time of the passing of the Public Watering Places Act, which provided severe penalties for the pollution of water.

A few of the reasons may be briefly given. The Government having provided watering places at a large cost upon the principal roads of the Colony, it is necessary the water should be economized and distributed with as little waste as possible. Stock, especially sheep, admitted to the tank, bring out more water on their bodies than they drink. When admitted to the tank they pollute the main body of the water by their droppings, as well as by stirring up the mud on the slopes in their passage in and out; and with the frequent watering of stock that would be required at a public watering place, the main body of water would very soon in hot weather become undrinkable.

The public watering places, while enabling the owners of stock to travel in all seasons when there is sufficient feed, were not, I submit, constructed for these gentlemen alone. They are for the use and convenience of the travelling public and carriers, and they are frequently utilized to supply the public-houses upon the dry stages of the western roads. They are to be utilized for human consumption as well as for stock.

If Mr. Kelly's contention was admitted, there is no question the public tanks would shortly become hotbeds of disease, both for human beings and stock.

Where troughing is properly constructed, and the stock rightly brought to it, there is no difficulty in watering them. I say this advisedly, of my own experience; and I submit the attached letters from gentlemen, station-managers in the driest district of the west, in corroboration of it.

HARRY GILLIAT,

Chief Inspector of Public Watering Places.

Submitted.—H.W., 3/6/87. Approved.—F.A., 6/6/87. Mr. Kelly, M.P., may be asked to call and see these papers. It will, perhaps, be more convenient if Mr. Kelly were furnished with a copy of these papers.—H.G., 7/6/87. The Under Secretary. Yes.—H.W., 7/6/87. Copy to Mr. Kelly, M.P., 10/6/87.

Sir,

Sydney, 31 May, 1887

I do myself the honor to lay before you another communication from Mr. Charles A. Chesney, a gentleman whose opinion on such subjects as stock watering and their management is equal to that of any South Australian.

422---2 B

P.W.P.,
87-2,342.

I

I shall certainly ask for a Royal Commission or something of the kind to inquire into the manner in which public money is and has been ruthlessly wasted for years past in the various public Departments, particularly that of Works.

The work which is now being done at the Nevertire Tank is a wanton waste of money, "robbery" is scarcely a severe enough term to characterize this piece of bungling.

The Secretary for Mines.

Yours, &c.,

JOHN E. KELLY.

P.S.—If this correspondence is to leave your Department to go on to another, I hope that you will direct Sir Henry's attention to it, before you part with it, as I scarcely see anything beyond promises from Works Department.

J.E.K.

Dear Sir,

Cobar, 26 May, 1887.

Your letter of the 19th May with enclosures is to hand. I have also received a letter written by you to Mr. Smith, of Moquilamba, enclosing a copy of Mr. A. P. Wood's report on your complaint.

With reference to the reply of Mr. Wood's to you, that gentleman seems to lay great stress on the opinion expressed by Mr. Peter Waite, of South Australia, on the advantages of trough-watering, but he fails also to show that Mr. Waite's troughs are properly constructed for watering stock, while those erected by the Department under, I presume, Mr. Wood's direction are utterly unsuited for their work. He also fails to notice that the mere fact of Mr. Waite being satisfied with the troughs as suitable for his paddock sheep where they have been broken into such a style of watering from the time they are dropped, does not prove that troughs are suitable for watering stock on the travelling stock roads of the Colony.

As everyone knows who has had the least experience of trough-watering it takes a considerable time to break in stock to approach troughs, and never advocated against the use of troughs on sheep or cattle holdings, where it was necessary to utilize every drop of water and to be free from waste. But I hold that trough-watering for travelling stock is a mistake. If all animals had been accustomed to runs where this method is in use, all might be well, but to bring sheep from country where such a method had never been resorted to, in hot weather the chances are many would die before they could be accustomed to the troughs. And besides, it makes a considerable difference as well in the quantity of water wasted, comparing troughs erected in sheep paddocks and those on main roads.

In the former case sheep come when they are thirsty and water at the troughs in small mobs, while on the road a big mob has to be brought up, and so pollute the water with dirt and muck of various descriptions, that after the first mob has watered, the troughs have to be cleaned out, or the balance of the sheep will refuse to touch the water. In fact the whole of Mr. A. P. Wood's contentions lies in the fact that the Department has made a mess of this troughing business, and of course they must defend themselves somehow, even if they have to go to Mr. P. Waite, of South Australia, as an authority. Surely Mr. Wood might have got an equally competent authority to refer to nearer home. He says this is the first complaint he has ever heard made against the tanks. Well, this may be so; who can prove to the contrary? But his subordinates have heard plenty, and if they have not informed their superior officer he should ask at once for an explanation. Overseer Adam, of Cobar, has heard plenty, but the Department took fine care to keep these complaints back. The time has come for a big row on the subject, and the Royal Commission will be the only thing to unearth the Departmental bungling and incompetency that exists. Keep worrying the matter up, and the drovers and owners whose sheep have suffered through the mismanagement of these watering places will bless you. I would like as a preliminary that you would ask in the House a return showing,—(1) Amount received as watering charges at the various public watering places of the Colony for years 1885 and 1886. (2) Amount of wages of caretakers for same period. (3) Number and names of tanks leased, with the name of lessee and amount received from him. (4) Cost of repairs and supervision of tanks for same period.

Yours, &c.,

CHARLES A. CHESNEY.

Mr. John E. Kelly, M.P.

Minute by The Chief Inspector of Public Watering Places on (Mr. C. E. Chesney's views) the subject of troughing at Government tanks.

Sydney, 2 June, 1887.

P.W.P.,
87-2,357.

With respect to Mr. Chesney's letter to Mr. John E. Kelly, M.P., a few remarks may tend to give a somewhat different colour to his views.

1. Stock watering from troughing consume and waste certainly less than one-half of what they do when allowed admission to the tank, woolled sheep in particular bring out more in their fleece than they drink.

2. By admission to the tank the water is polluted by the dung and urine, and by the trampling up of the mud upon the slopes, the pollution of the main supply and consequent waste would be generally considered a more serious matter than the pollution in the troughs of which Mr. Chesney complains, and which, when the troughing is properly constructed, rarely, if ever, occurs, and when it does necessitates only the waste of the water left in the troughs.

3. The public watering places are not for the convenience of squatters or pastoral tenants alone, and while the action of the Government in watering the main stock roads enables them to move their sheep and cattle with a minimum of loss in most seasons, they are also for the use and convenience of the travelling public, the carriers, and men seeking work, and, unlike the station tanks, are to be used for human consumption; for this reason the Act rightly provides such stringent measures against the pollution of the water.

These are some of the reasons against Mr. Chesney's opinion, that trough watering for travelling stock is a mistake. Mr. Chesney's assertion, that every one with any experience knows that it takes a considerable time to break stock to approaching troughing, may be replied to by this extract from a letter of Mr. John Low, a gentleman of at least as much experience as Mr. Chesney:—"I have never experienced any difficulty in getting stock requiring water to drink at troughing, while in hand, where the water is properly supplied to the troughs, *i.e.*, by self-acting valves, the great desideratum being to have it supplied regularly and without noise." Mr. Mackenzie, late manager of Nuntherungee, says also:—"I have never had any difficulty in inducing sheep to drink from the troughs, and I have frequently watered weaners in this manner that had been accustomed to water from the tanks."

Mr.

Mr. Chesney further says, that on the road large mobs have to be brought up (*i.e.*, to the troughing). Mr. Chesney is not perhaps accustomed to the road, but I have no hesitation in saying that a drover who would bring his sheep or cattle up in a large mob, either to troughing or when they are admitted to the tank, should be dismissed.

Mr. Chesney's reference to Mr. Peter Waite appears somewhat disparaging. I may perhaps say that Mr. Waite is a partner and general manager of the Sir John Elder's Pastoral Company, probably the owners of the largest number of sheep in Australia. This gentleman's management has always been upon the most advanced methods, and scientific skill has been liberally made use of in the most practical manner.

I have had occasion to prepare a paper upon this subject, in reply to a letter from Mr. Kelly, to the Secretary for Mines, to which the originals of the letters referred to are attached.

In conclusion, I may say it is well known that no one perhaps differs more widely from Mr. A. P. Wood's views upon the construction of tanks and troughing than myself. My dissent from Mr. Chesney's opinion is founded therefore upon what I consider his radical misapprehension of the subject.

HARRY GILLIAT,
Chief Inspector, Public Watering Places.

Submitted.—H.W., 3/6/87. Approved.—F.A., 6/6/87.

Memo. by Mr. Gilliat.

As Mr. Chesney's letter was forwarded by Mr. Kelly a copy may perhaps be forwarded to that gentleman.—H.G., 7/6/87. The Under Secretary Yes.—H.W., 7/6/87. Copy forwarded to Mr. Kelly, 10/6/87. This need not be resubmitted until a reply is received from either Mr. Kelly or Mr. Chesney, 1/7/87. No reply yet.—R.W.G., 8/11/87. Mr. Chesney's letter to the *Daily Telegraph* may be attached. It is probable the question may occupy the attention of the Commission.—H.G., 17/11/87. Letters of Mr. Chesney attached, 24/11/87.

Memo.—Troughing at Station and Government tanks.

Sir,

20 April, 1887.

P.W.P.,
87-1,773.

In reply to your inquiry under the above heading, I have the honor to submit for your consideration, that I have had twelve years experience in the Western District as overseer and manager of stations, and can speak from practical experience. In all cases it was found to be far preferable to adopt the plan of supply-tanks and troughs, and pump the water to the stock rather than allow them into the excavation, for the following reasons:—

Stock admitted to it, especially cattle, rapidly puddled and polluted the water by their excreta, and swimming in it, causing excessive waste by the quantity of water carried out, the trampling of the slopes when saturated by the water draining from the beasts, rapidly cutting them down, and filling in the tanks and rendering the necessity for cleaning out very frequent. It was furthermore found an impossibility to use the water even for stock, when low down in the tank, it being simply a solution of dung and urine.

The tanks are now fenced in, and troughing erected, obviating all this, rendering the damage to wool, and loss by bogging, an impossibility, and the water is used to the last drop.

Water pumped to 10,000 sheep from a 10,000-yard tank, would last three months in hot dry weather, longer than if they were allowed into it.

Gnalta, Nuntherungee, Salisbury Downs, Momba, all large western properties, abandoned the old styles for this.

The notion of allowing stock into tanks, except in the cases of selectors or to small tanks, is a poor one, and now quite exploded, and the reverse of economical.

The practice of allowing stock into specially constructed tanks at Government watering places, was first adopted, but eventually abandoned, for some of the foregoing reasons.

The steepness of the slopes, 1 to 1, of the later constructed tanks, renders it an utter impossibility to allow stock into them.

My experience tells me that stock, if thirsty, will drink anywhere, and I never knew cases of stock perishing at the water, unless too far gone when brought to it.

JAMES W. BOULTBEE,
Inspector of Public Watering Places.

P.S.—Since writing the above I have seen Mr. Farquhar Mackenzie, for many years the manager Nuntherungee Station, and have requested him to give his views in the form of a memo. upon this subject.

Dear Sir,

Sydney, 3 May, 1887.

P.W.P.,
87-1,947.

After many years' experience on the back Darling (among stock), I am of opinion that troughing is in every way preferable to allowing them to water at the tanks.

In the first place sheep will carry out more water than they drink, besides carrying great quantities of dirt into the excavation, and if kept for any length of time without water they will swim into the tank and carry many gallons of water away in the fleece.

In the event of the water becoming low in the excavation they render it altogether unfit for human consumption, in fact I have frequently known the water to be so much polluted that stock, though requiring water, would not drink it.

I have never experienced any difficulty in inducing sheep to drink from the trough, and have frequently watered weaners in this manner that had been accustomed to water from the tanks.

I have, &c,

F. MACKENZIE,

Late Manager, Nuntherungee.

Mr. Gilliat.

I have seen troughing used successfully at Nuntherungee, Wonnaminta, Morden, Tarella, and other stations in Albert District of New South Wales.

Dear

Dear Sir,

Sydney, 2 June, 1887.

P.W.P.,
87-2,352.

Referring to our interview *re* watering of stock at tanks, and whether it is preferable to allow them free ingress to the tank or to have it fenced off and stock watered by troughing.

Having had considerable experience in Riverina and Darling country, I have no hesitation in stating that where troughing and appliances are properly fixed, this without doubt is the proper method. Subjoined are a few of the advantages derived from troughing.

The tank being fenced off the water is not polluted with excrement, which any practical man will admit is the custom of stock in hot weather when they get into water; neither are the tanks cut up and the tank thereby filled in, this applies more forcibly to slopes, say 1 to 1, which are sudden for even strong stock, and more so to weak, after being a considerable time without water, which, unfortunately, is often the condition of travelling stock, the great danger being a rush when those in the lead are liable to be pushed in and drowned. I have myself seen this happen where every precaution was taken, it being simply impossible, in fact dangerous, to try to block cattle when they are thirsty.

The water by being supplied to stock in troughs will last much longer, is clean, consequently much better for them, especially should water be scarce, when, were stock allowed to get into the tank, the chances are, if a large mob, the tail would get nothing but mud, or the water would be so nauseous that they would sooner starve than drink it.

I have never experienced any difficulty in getting stock requiring water to drink at troughing while in hand, where the water is properly supplied to the troughs, that is by self acting valves, the great desideratum being to have it supplied regularly and without noise.

The disadvantages of allowing stock to water at tanks are many. Sheep, by getting into tanks and water in hot weather, destroy or perish wool to quite on an average of (6d.) per head.

The water becomes polluted and poisonous from contact with wool, also by dead sheep (getting drowned), thereby causing or spreading disease, a matter of great importance at the present time.

The slopes in many cases get cut up and become quite boggy.

I may further add that this matter has been subject of discussion with many practical squatters, and I have never met one who after having tried troughing would return to the old fashioned and exploded idea of watering at open tanks; certainly I would not.

Yours truly,

JOHN LOW.

J. W. Boulton, Esq., Inspector of Public Watering Places.

Sir,

Marrickville, 16 June, 1887.

With reference to our conversation, *re* the inadvisability of allowing stock to water at open tanks, allow me to refer to the evidence of Mr. Harvey Paterson, in Supreme Court, *Kidman v. Paterson*, 14th instant.

Mr. Paterson is one of the largest squatters in the Western District, and undoubtedly a practical one. In his evidence he distinctly states that on no account would he allow cattle to water at open tanks, for the reasons that they cut up banks, thereby causing them to become boggy, silt up tank, and render the water unfit for drinking.

Yours, &c.,

JOHN LOW,

Inspector of Public Watering Places.

The Chief Inspector of Public Watering Places.

Mr. Ramsay,—Please obtain copy of this evidence, N.S.W. Law Reports, published by Maxwell, Wentworth Court.—H.G., 16/6/87. Mr. Ramsay to apply for copy of evidence to Allen & Allen, solicitors.—H.G., 22/6/87. Asked, 22/6/87.

Sir,

Sydney, 27 June, 1887.

In answer to your letter of 22nd instant, inquiring where a copy of the evidence given by Mr. Harvey Paterson, in the case of *Kidman v. Paterson*, could be obtained, we have the honor to inform you that a copy of, or extracts from, the Judge's notes, of the evidence may be procured from the Clerk Associate to Sir George Innes, the Judge who tried the case.

We have, &c.,

ALLEN & ALLEN,

(Per W. H. PALMER).

The Chief Inspector of Public Watering Places.

The extracts of the evidence referred to may perhaps be obtained from the clerk associate to Sir George Innes.—HARRY GILLIAT, 28/6/87. The Under Secretary. Submitted.—H.W., 1/7/87. Approved.—F.A.; 2/7/87. The Clerk Associate asked, 4/7/87.

Sir,

Supreme Court, 8 July, 1887.

P.W.P.,
87-3,098.

In reply to your letter of the 4th instant, I herewith send, by direction of His Honor Sir George Innes, that portion of the evidence of Mr. H. Paterson referring to the admission of cattle to tanks, as given in the case of *Kidman v. Paterson*.

I have, &c.,

E. C. L. INNES,

Clerk Associate.

The Chief Inspector of Public Watering Places.

Please acknowledge, with thanks, His Honor Sir George Innes' courtesy.—H.G., 8/7/87. Acknowledged, 12/7/87.

Extract of Evidence.

"The dams or tanks for sheep were full of water, but cattle would damage them greatly.

"There was no other water for the cattle there, and had I kept the cattle in that night and let them water there, they would have damaged the tanks.

"The nearest water, besides the sheep dams, was 9 miles off, in the direction of the ground where we had mustered the cattle."

Extract

Extract from Report by Mr. Overseer Cotton on Tindarie Tank.

Cobar, 3 June, 1887.

P.W.P.,
87-2,620.

The alteration of the rail from the side of the troughing to over the centre is much appreciated by drovers.

JAMES COTTON,
Overseer, Public Watering Places.

Attach to papers in connection with Mr. J. E. Kelly's complaint, *re* fencing, &c., and troughing.—
H.G., 22/6/87.

Tanks for Cattle.

Department of Public Works, Sydney, 13 April, 1887.

P.W.P.,
87-2,406.

MR. KELLY, M.P., at a deputation to-day, referred to the tanks made in the Western District for supplying water to travelling stock. Mr. Kelly states that, under the present arrangements of supply, the tanks are comparatively useless. The water is poured into troughs, but cattle or sheep that are not used to troughs refuse to go near them, and drovers have, consequently, to go to the squatter's dams. He urges that a pathway should be made to the water, as is done by squatters, otherwise the dams are of little use, and will not repay the wages of the men attending to them.

I promised to get a report on the matter.

JOHN SUTHERLAND.

Roads.—J.R., B.C., 15/4/87. Mr. Wood.—W.C.B. 16/4/87.

THE question of open watering in the tanks, or of watering from troughing has, from the first initiation of these works by this Department, received grave consideration at our hands, with the result that troughing is now invariably supplied to both tanks and wells.

In some of our earlier works, when the grants were very low and a comparatively large amount of work had to be done with a very small amount of money, open watering was resorted to, as only by such a cheap system could the lines being dealt with be opened for traffic, and on the Cobar to Nyngan Road stock originally watered in the main tanks.

As a compromise on this system, and with the intention of lessening the evils of open watering without very much increase in the expense of the works, the system of double tanks was introduced, a communication between the two being maintained by an iron pipe and a regulating valve. Under this system the larger of the two tanks was used for storage, the smaller, which was given flatter slopes, for drinking purposes, and the water, as required, was admitted from the storage to the drinking tank.

Both these systems were found to involve so much loss of water, carried away in the sheeps' fleeces, so much pollution and consequent loss from urine, &c., always voided by stock when standing in water, and so much silting up from dirt brought by stock into the tanks, that they had to be abandoned; and not only have all subsequent works been provided with lifting appliances and troughing, but similar appliances have, at the recommendation of the Stock Branch of the Mines, been added to the earlier works, and the open watering system generally abandoned.

The troughing now complained of by Mr. Kelly, M.L.A., has been adopted all over the dry districts, and is only a very slight modification of that used in some of the pastoral holdings in Riverina.

My experience of stock is that when they are really thirsty the difficulty is to keep them away from the troughs, not in getting them to them.

With all wells troughing *must* be used, and stock are as much dependent on wells as tanks; they water at troughing in the one case, why not in the other?

We have now about 150 of these works, and this is the first complaint on this score that has, as far as I know, been made.

Our experience, backed up by the expressed views of most pastoral men, not only in this, but in the neighbouring Colonies, is most decidedly in favour of watering from troughing as a system, which is absolutely necessary, to economise the water and protect it from pollution. Such economy must be practised, otherwise, with a small and uncertain rainfall, the storage capacity must be increased to an extent involving an outlay in excess of that required for watering appliances, and this, too, without any protection from pollution and silting up.

ARTHUR P. WOOD.

The Commissioner for Roads. The Under Secretary.—W.C.B., 18/4/87. Submitted.—J.R., 21/4/87. Forward a copy of report to Mr. Kelly.—J.S., 21/4/87. J. E. Kelly, Esq., M.P., 21/4/87.

Sir,

Assembly, 22 April, 1887.

Tanks and
Punts,
87-324.

I have your favour of yesterday, covering Mr. Assistant-Engineer Wood's report upon my representations *re* watering stock from troughs, &c., and have sent same on to the persons who have lodged complaint with me. One part of Mr. Wood's report is, to my own knowledge, incorrect, and probably all he says may be disputed by these gentlemen. If you will kindly ask to be furnished with the receipts of the tanks since these troughs have been in use, it is probable that it will throw a light on the subject.

Yours, &c.,

JOHN E. KELLY.

The Under Secretary for Public Works.

Roads.—J.R., B.C., 25/4/87. Mr. Wood.—W.C.B., B.C., 26/4/87.

Mr. Kelly makes no specific statement. What portion of my minute does he consider incorrect? I am afraid that the receipts of these tanks can scarcely be considered as a fair proof of his statement. Change in seasons and variation in the number of stock travelling have to be considered. I may add that Mr. Peter Waite, Sir Thomas Elder's representative in South Australia, was very decided in the opinions he expressed to me on the advantages of trough-watering as compared with open watering, and I think Mr. Kelly will agree that he is no mean authority on the question. I presume there will be further communications from Mr. Kelly when he receives replies from the gentlemen referred to.—A.P.W., 26/4/87. The Under Secretary.—W.C.B., B.C., 26/4/87. Submitted.—J.R., 28/4/87. Inform Mr. Kelly, 2/5/87. J. E. Kelly, Esq., M.P., 16/5/87.

Sir,

Sir,

Assembly, 18 May, 1887.

P.W.P.,
87-2,407.

I do myself the honor to own receipt of your letter and also extract from a reply given by Mr. A. P. Wood to my former communication on the subject of public tanks and public watering places for stock in the interior. Mr. Wood states that "he is afraid that the receipts of these tanks can scarcely be taken as fair proof of my statement." I hope to be able to furnish you with quite sufficient proof of all that I have said within a few days, but, surely, the fact that since these troughs have been erected there has been little or no money taken at them should be a corroboration of my statement.

As to any opinion expressed by Sir Thomas Elder's manager, that gentleman might be the very worst possible authority, seeing that, for the most part, S.A. stock, amongst which that gentleman probably gained his experience, are taught to drink out of troughs; in which case many of my objections do not come in. I am speaking of travelling stock, not station stock. Can Mr. Wood not distinguish the difference?

I have, &c.,

JOHN E. KELLY.

The Honorable the Minister for Works.

Roads.—J.R., B.C., 25/5/87. Mr. Wood.—W.C.B., 26/5/87. Mr. Wood's explanation, which I concur, herewith.—W.C.B., 26/5/87. The Under Secretary, B.C. This is more a question for Mr. Kelly to discuss with the Mines officers, W.C.B. The Under Secretary for Mines.—J.R., 28/5/87. Mr. Kelly having written to this Department on the question of the troughing, a copy of the minutes sent to him, may perhaps be forwarded to the Department of Works.—H.G., 13/6/87. The Under Secretary. Submitted for approval.—H.W., 14/6/87. Approved.—F.A., 15/6/87. Copy of minutes with letter, forwarded to Works, 23/6/87.

Minute.

Mr. Kelly, M.L.A., on Trough-watering for Stock.

Sydney, 26 May, 1887.

P.W.P.,
87-2,404.

MR. KELLY takes exception to my view, that the receipts at the tanks and wells provided with troughing cannot be accepted as proof that the troughing is objectionable.

It appears to me that the seasons must have an important bearing on the fees collected; that when there is an abundance of green feed and plenty of natural surface-water drovers are not at all likely to take stock to the public watering places, whether with or without troughing.

The rates charged have an important bearing; and if drovers can be supplied by private tank owners at lower cost than at the Government works, they will in all probability prefer the former.

Many of the earlier tanks made were not supplied with troughing, provision having been made for open watering. In these cases there was frequent complaint in regard to the impure water; and acting on the advice of the Mines officers, who have been charged with the decision of this question, watering appliances were added and open watering abolished.

The opinion expressed by Mr. Peter Waite, who is Sir Thomas Elder's managing partner, was in reference to watering on the stock routes, not on stations; and I may add that the same views have been expressed on many occasions by gentlemen interested in squatting in this Colony.

The objections raised by Mr. Kelly, M.L.A., have not reached us from other parts of the Colony, where troughing has been used for years, and it is only fair to assume that if these objections were general it would have been brought before us long since.

I am aware that there is a difference in some respects between station and travelling stock; but without any desire to put my views on this question in opposition to such an experienced authority as Mr. Kelly, I may say that two or three days without water on some of the long stock stages has a wonderful effect; and I have seen troughing rushed by stock quite as freely as an open tank would be, and with less risk to the stock itself.

I may add that trough-watering has been imposed on us by the Mines, but that we, as far as our knowledge of stock was concerned, fully endorsed the system.

The Commissioner for Roads.

ARTHUR P. WOOD.

Government Tanks—Their management.

I.

(To the Editor of the *Daily Telegraph*.)

Sir,

Daily Telegraph, 10 November, 1887.

"The Problem of the West" articles have had in me an earnest and appreciative reader, but I am sorry that the writer of these did not during his trip journey as far as Cobar, as, having only mentioned his mission, he would have been supplied with such facts as on publication would have opened the eyes of your readers to the grievous waste of public moneys—exclusive of the rabbit business—which is now and has been for years taking place throughout the length and breadth of this arid district. Recent events, more especially the action of Mr. John E. Kelly, M.P. for the Bogan electorate, in making inquiries of the Government in the House on September 27 last about the public watering places of the Colony, have induced me to institute inquiries locally concerning these, so that I might be in a position to put facts, not theories, before your readers to enable them to judge whether my conclusions are correct or not. I propose also, to show how the Watering Places Branch of the Department of Mines may be made, instead of being a serious financial drag on the country, to add considerably to the State coffers. According to an answer given in our Legislative Assembly to Mr. Kelly, M.P., by the Minister for Mines, it appears that the total expenditure during the past two years upon the public watering places for travelling stock was £70,259 5s. 9d. sterling. Well, to my mind this way of stating the expenditure is very misleading, as I will show later on. It does not let the public understand whether this amount is for new works constructed during these two years, or whether it is the total loss the consolidated revenue suffers from the way these public works are at present managed. If it represents the former why not give the latter also? so that the public may have an insight into the amount spent on new works, and the loss on the working per year of existing works. If the £70,000 odd represent new works, then the total expenditure during the past 2 years has been understated by £70,000 or £80,000. This, of course, is taking into consideration a low rate of interest on the money invested, the caretaker's wages, less their takings from stock watered, to say nothing of the cost of supervision, engineers' and travelling expenses of the various heads of Departments.

To

To many people who have not thoroughly considered the matter in its different bearings it might appear that these watering places are self-supporting, but when it is found that during the year preceding the issuing of the "Report of the Royal Commission on Water Conservation" only £400 was raised as revenue from the various public watering places of the Colony—seven wells, four dams, ten springs, and thirty-five tanks—it is self-evident that both "cost of construction and maintenance are wholly defrayed from the public revenue." But to details. In the first place the Government tanks pass through the hands of two Departments. The Works branch construct them, and when finished, they are taken charge of by the Mines Department. And while in both hands they are equally mismanaged. In the first place, I shall deal with them while in charge of the Works. Presuming that the best and most convenient sites have been chosen for the tanks; that the plans have been properly prepared; that the trial shafts have been sunk to ascertain the nature of the strata, and that in fact, everything has been made ready for commencing the work, and that tenders have been called for and accepted, the first thing that strikes one on reading the amount of the successful tender is the high, in fact exorbitant, prices ruling for this class of work compared with what work of a similar nature can be done for by private individuals. My business since the discussion has taken place is to find out the reasons for the difference shown, and which I conclude are as follows:—

1. The Government contractor requires to employ so much hand labour after the main work has been finished—in pickdressing the sides of the excavations and making the bottom level enough for a bowling-green or tennis-court, while the embankments require such unnecessary levelling, filling up, and grading—that the contractor calculates a large loss in this item, and consequently adds a considerable margin to his tender to cover it, although this extra labour is mostly done for show.

There are too many superintendents of various grades to supervise the work. If a superior inspector desires to make himself officious or disagreeable to another who may be under him, he may not pass the work when completed through some trivial reason, though the superintending overseer may have been perfectly satisfied with the way the contract had been carried out. The result is that the contractor suffers. His camp in the meanwhile may have been broken up; his men and plant may have gone away, as these contractors, as a general rule, cannot afford to allow their plants to remain idle for even a short time. The contractor has then in a case of this sort to complete the contract to the satisfaction of this superior officer, and consequently, in justice to himself, to allow a considerable factor of safety in the computation of his tender price to cover this risk.

3. After the work has been completed and passed as satisfactory by all concerned, through some red-tape arrangement, the contractor cannot get paid his due for six or perhaps twelve months. What is the result, unless he be a man of means? He cannot pay his labourers, his storekeeper, or his produce-dealer. Thus, the contractor (firstly) has to pay higher rates for labour on the Government contracts than on private ones, as the workmen know they have to run the risk of not getting their money for a considerable time after having been earned; and (secondly) the contractor has to pay exorbitant prices for his stores and produce, because storekeepers as a general rule do not care about waiting too long for the payment of their accounts of this class without a corresponding advantage to themselves; and further, he has also a high rate of interest on the renewed bills to these storekeepers, as it was expected that when the bills matured his contract money would have been in hand to meet them; and (thirdly) the contractor may be forced into the most undesirable position of having to shelter himself in the Insolvent Court, and having at the same time the satisfaction of knowing that could he only get his due he is a solvent member of the community—so we see that a further factor of safety is required to cover this risk.

4. The change of plan that so very frequently takes place during the progress of the work requires also consideration for the trouble and anxiety that the contractor has to endure.

5. The division of what ought to be naturally one contract into a number of smaller ones leads to higher rates. For example, the Department, instead of calling for tenders for everything required about any particular tank, divide the whole up into a number of smaller contracts, somewhat as follows:—

1. Excavating main tank.
2. Enclosing embankment with fence.
3. Fencing in 200 acres round excavation.
4. Erecting troughing and service tank.
5. Erecting pump and engine or horse works.
6. Erecting caretakers' cottages.

6. What one inspector orders to-day, another countermands to-morrow, and refuses to pass often after the work has been completed, alleging as a reason that the one who ordered such work exceeded his authority. A friend of mine, a Sydney gentleman, was in this predicament, and only obtained his contract money after a long delay and much trouble. What is a contractor to do under the circumstances? He has to do the work by order, and, after completion, is refused payment. He can't fight the Government, or, if he does, he is sure to come off second best, although he may get a verdict. For instance, the late arbitration case of Messrs. O'Rourke and M'Sharry. But one thing certain is, that when he next tenders he allows a further margin for this risk.

7. The extraordinarily steep slopes that the Government insist on having on every side of their tank excavations, viz., $1\frac{1}{2}$ to 1, raises the price of work to a great degree. No horse could haul a load of earth up such a slope, and as the Government will not allow roadways it stands to reason that it must be a troublesome and expensive job to get the bottom clay out of a cutting 18 feet deep with such slopes. However, the Government contractor sees an easy way out of the difficulty, and his method is worth public notice. In sinking the tank he leaves a roadway with a slope of 5 or 6 to 1 on one side of the excavation as he proceeds with his work. Up this slope a horse can haul the excavated earth. When he arrives at the contract depth he does not then knock off sinking, but continues several feet deeper, according to circumstances. Into this extra depth he puts all his road material, and levels the bottom up to contract depth, so that as a matter of fact in a number of Government tanks with these steep slopes there are several feet of loose earth left, which as soon as the tank gets filled with water for the first time turns into sludge.

These are some of the reasons for the high prices ruling for Government work of all descriptions in the back country as compared with that of a similar nature required in the same locality by private individuals.

individuals. The latter want their tanks for use, not show, and so long as they know that a certain work being done for them is carried out in the true spirit of the contract they are satisfied, and the money is waiting the completion of the job. I have been told by several of the most successful Government contractors in the Bourke and Cobar districts that they would much rather excavate earthwork for a squatter at 9d. per cubic yard than for the Government at 1s. 6d. Their principal reasons for this preference I have pointed out above, and the fact remains that earthwork can be done for pastoralists from 9d. to 1s. 2d. per cubic yard, while the Government have to pay 1s. 6d. to 2s., the contractors making more money at the former price than the latter. The works are equally good, the embankments are as level after the first rains, for, although the Government dams and cuttings look better just at first, still this niceness at the outset is a snare and a delusion, as holes are filled up temporarily to pass the inspector, and after the first heavy rain this filling-up either washes away or sinks, leaving the last state of the dam as bad as the first. I have actually seen a contractor carting earth that had been already been taken out into the excavation again to fill up and level the bottom so that it might pass the inspection; and, furthermore, it is reported, with good foundation, too, I believe, that in one of the Government tanks, on the Nyngan and Cobar road 1,000 or 2,000 cubic yards of earth were filled into the centre of the excavation when full of water to make a horse walk so that the pump might be worked. To my mind all this shows the absurdity of the pick dressing and levelling. I do not see the reason of this absolute precision, as I fancy the great object in constructing a tank is that it may hold so many gallons of water and be of a certain average depth, with provision being made to hold as much water as possible over the surface.

The first remedy I would therefore suggest to obviate the difficulties enumerated would be to design the tanks so that they could be constructed by scoops or other machinery and do away with the great amount of hard labour required to dress them up unnecessarily. So long as a proper hole is made, with slopes fairly near that mentioned in specification, the bottom of cutting fairly level and the embankments of the proper height fairly and honestly made, I would be quite satisfied. This item would reduce the prime cost considerably.

The second remedy would be to place one competent man in charge of the various works of a district and let him reside in the district. He, and he only, would be responsible to a local board or trust, either nominative or elective, or a combination of both systems, for the proper construction and maintenance of the work. If found to be untrustworthy or incompetent, let him be replaced by a more reliable man. It is all very well in theory to have flying visits to the various works of the Colony from Sydney inspectors every year or two; but I hold that a man to be properly in charge of works ought to have the right of determining whether a contract is being properly carried out or not. He must also have the authority to pass the work for payment when finished, and he must not be placed in the disagreeable and unsatisfactory position of having some superior official who may happen to be in the district on one of his flying visits condemn the works when everything has been completed.

The third and most important remedy is when the work has been passed let it be paid for at once.

Yours, &c.,

CHARLES ALFRED CHESNEY, C.E.,
Chairman Cobar Board of Sheep Directors.

Tindarey Station, Cobar, October 28.

Government Tanks—Their Management or otherwise.

II.

Daily Telegraph, 11th November, 1887.

THE Government are placing expensive steam and horse pumps, receiving tanks, and troughs at all their watering places. This expenditure, as carried out, I consider a great mistake, and, without entering upon the question whether stock thrive better, as a general rule, by being watered at troughs or allowed to drink direct from the excavation, I hold that travelling stock ought to be allowed to drink direct from the water in cutting, instead of at troughs as proposed, at least until such time as the financial success of the tanks justifies the Government in entering upon a greater expenditure. These engines and pumps are very expensive articles at the outset, and the risk that the public run in case of a breakdown is an unknown factor to most of them. The disastrous consequences may be well imagined that might follow some slight breakage for only a short time of any portion of the pumping-gear or fixings. Supposing during a dry, hot season a mob of, say, 10,000 sheep had travelled 20 or 25 miles without water, and it was expected they would get a drink where the breakdown took place—and these breakdowns are of frequent occurrence—do you think the Government would hold themselves legally or morally bound to recoup the owner for any loss he might suffer through sheep dying before reaching the next watering place? I do not think they would; and it would be impossible, owing to the way that many of the tanks are constructed, to allow the sheep to water direct at the excavation. At first, when everything is new, there may not be many breakdowns; but after a while they are sure to be plentiful, as machinery of this class will not last for ever, and so also it follows that in a few years these engines, &c., will have to be replaced with new ones. If it is necessary to pump the water into troughs, why not minimise the risk of breakage by erecting a hand-pump such as manufactured by M'Comas & Co., of Melbourne? This cannot easily get out of order with fair use; but if an accident did happen, its construction is so simple that any ordinary blacksmith or handy labourer can put it to rights again. The fencing round the tanks is of a description too expensive altogether. An ordinary six-wire fence would have answered the purpose admirably. This would have cost, erected, about £40 per mile, whereas the fencing now put up is said to cost from 35s. to 60s. per chain, or from £140 to £240 per mile. And all this to keep sheep from watering direct at the tank! The caretakers' paddocks, generally of an area of 200 acres, are enclosed with the same expensive style of fencing, while an ordinary six-wire would have answered the purpose. I do not, at the same time, see the necessity of enclosing such a large area.

The

The troughing, as at present laid down, has evidently been designed by someone who has never had an opportunity of seeing sheep watered at troughs. The construction is so defective that it is impossible to water a mob of travelling sheep with despatch. There has not been a single drover who has travelled between Bourke and Cobar with either sheep or cattle for the past two or three years but what has complained about these troughs. The Department has repeatedly been written to on the matter, the local superintendents and stock inspectors have been appealed to on the subject, the Cobar Board of Sheep Directors has had the matter repeatedly brought before them, and yet nothing can be done, as the various heads of the Department in Sydney must nurse their offspring, and one has recently declared that he never heard any complaint about these troughs, while at the same time it is a matter of public notoriety over the length and breadth of the Colony the unsuitableness of the troughs as at present constructed, and the danger to which travelling stock are liable that depend on them for their watering requirements. In fact, if proof of this be needed, the following extract from a letter addressed to myself from Mr. Fenton, drover of 5,000 sheep belonging to Messrs. Fulton and Hastie, of Springfield, may be interesting. He says:—"Will you kindly allow 5,000 sheep to water at, &c.?" I have had great difficulty in making them water at the troughs, and in consequence they are in a bad state for a drink. If you will not allow me to water, I shall have to stay all day to try to water here (Hillman's Government Tank), and go on to-morrow." This is one of some hundreds of letters I have received in a similar strain, and when everyone complains something must be wrong. So we see the drover placed in a rather awkward position. If he cannot water his sheep in fair time, he leaves himself liable to a heavy penalty for not travelling his legal distance. I ask—Is it fair to place the drover between two fires, so to speak? If he takes his time to water—which is generally about a day for 10,000 sheep—he cannot do his distance; if he does his proper stage, his sheep may die for want of water. I know quite a number of cases where sheep had to be left on the roads to die because they would not drink out of the troughs. The troughing is constructed on wrong principles. At present at one side of the troughs large sheep cannot water, and it is almost impossible for small cattle or calves to get a drink at all. It is quite a usual thing when a mob is watering to see the troughing full of sheep. The result is that in a very short time the water gets so bad that the balance of the sheep will not drink it. The following day, if any water be left standing in the troughs, it looks as if it had come from a sheepwash, the yolk floating on the top as a thick scum. The next mob will not touch this water, and so the troughs have to be cleaned out after every watering, and the water that the trough is supposed to save is wasted. Besides this, there is a much larger amount of evaporation by using troughs than otherwise. The evaporation from the main excavation remains the same as before the troughs were erected, while there is an extra double evaporation from the receiving-tanks and troughs if these are kept full, according to departmental regulations. We all know how much more quickly water evaporates in open iron tanks elevated several feet above the ground compared with that in sunk tanks. I estimate that the water lost at each cleaning-out of the troughs is sufficient to water 3,000 or 4,000 sheep, and still it is alleged that no water is wasted by the system of watering at troughs. In fact, in connection with the pumping gear, I hold that troughing for travelling stock to water at is a mistake, for as everyone knows who has had any experience, it takes a considerable time to break in sheep to drink from troughs if they have not been reared in country where as lambs they had been accustomed to this method of watering. This adds a new element of danger for the drover to face who starts on a track with sheep unaccustomed to water by this means. He runs a great risk, as his sheep, though thirsty, may not face the troughs.

When the works are completed by the Department of Works they are taken over by the Department of Mines and worked by it. Caretakers appointed at wages ranging from 6s. per day upwards, and if they are required to supply a horse to work the horsepump they get an extra allowance, from 10s. to 15s. per week. For all this wage they have absolutely nothing to do. They are supposed to keep the embankments in repair and the drains cleaned out; but this is merely a nominal matter, as the embankments cannot get very much damaged when they are surrounded by the highly expensive fence already alluded to. The caretakers are also supposed to keep the troughs filled with water, and likewise collect the regulation watering charges. This last duty does not employ the caretakers to any great extent, as is proved by the fact that there is not taken in fees at the great majority of the tanks during the year one-tenth of the amount the Government find it necessary to pay the caretaker in wages. Thus the Government tanks as they are at present managed are most unproductive works. The aggregate cost of all works in connection with each tank, by the way, not including the four-roomed cottages now being erected for the caretakers, is supposed to range from £2,000 to £3,000. It is very hard to arrive at the actual figures, but I do not think I am overstating the cost. Taking the interest on the mean of these sums—say £2,500—at 5 per cent. per annum, to say nothing of the actual cost of repairs, supervision, &c., together with the difference between the caretaker's wages and his collection in fees, there is shown a tidy sum as annual loss on each tank. This loss, I calculate, on the whole amounts to £25,000 per annum at the very least, when it was estimated that at the end of 1885 there would be 134 watering places in this Colony in charge of the Chief Inspector of Tanks and Wells. I have no later information as to actual number now in charge of the Watering branch of the Mines Department. The Government may say that the public get the benefit of these works, but a little consideration will show that the public have not benefitted by these works to the extent the Department would have us to believe. If they have, the watering fees last year would have amounted to more than £400, which is equivalent to the watering of 800,000 sheep at Government rates, or else there is a lot of money received for fees which never finds its way into the Treasury, a theory I do not believe to be correct. As a proof that the public have no faith in the tanks as a speculation, how often do we see tenders called again and again for the lease of the same tank, and no offers. These leases have again been put up to auction and no bids, although I have known the auctioneer to tell most preposterous yarns about the rapid fortune to be acquired by any lucky purchaser. Even the 200 acres paddock adjoining the tank for the use of the lessee does not act as an inducement. It is even now proposed to fence in a further lot of 640 or 1,280 acres round each tank as a bait; but it won't do. The public know what shams they are, and won't touch them. One poor, old man, I know well, tendered in a moment of weakness the sum of £50 per year for a well-known tank. This was about twelve months ago. Since then he has not taken enough fees hardly to keep his soul and body together; so that I fear that the prospects of a money-making speculation in connection with the lease of one of these tanks are very remote. Occasionally a tank does get leased, but it is by reason of some particular local circumstance which suits the lessee to have it under control.

To remedy this unsatisfactory state of affairs, more particularly the annual loss the Mines Department incurs through the management of the Watering Branch, I would respectfully suggest to the Government :—

1. That they discharge all caretakers of Government tanks, as they are expensive and unnecessary luxuries.

2. That all the tanks be left free to water at, after fencing in the embankment alone and enclosing with a good six-wire fence about 50 acres round each tank. I propose to erect this merely for the purpose of protecting the water from the pastoral lessees' stock which might water at the Government tank if not fenced off. Erect two pair of gates, one set for ingress of travelling stock to water, the other set for their egress.

3. That a travelling working tank superintendent, with two assistants be employed for each district. His duty would be to travel round the various tanks in his charge with his assistants—working men—in a suitable conveyance, and make any repairs to dams, drains, or fences requisite. A strong box could be put at each tank, under lock and key, to hold tools, such as picks, shovels, axes, straining tools, &c.

4. That all pastoral, conditional and homestead lessees and others be liable to a heavy penalty for wilfully watering their stock at these tanks unless under permit, as hereinafter described, and appoint some person, such as the Inspector of Stock or the chairman of the Sheep Board, or of a Water Trust, if formed, in whose name and by whose authority persons infringing regulations may be used.

5. That a watering charge be put on all travelling stock in the Colony, including sheep, cattle, and horses, with certain provisos in favour of teamsters, &c., and those who, under the present Diseases in Sheep Act and its amendments are not required to take out permits. This charge would be *pro rata* according to the distance to their destination by the specified route for which a permit had been granted.

6. That all travelling stock (horses and cattle, as well as sheep) be made to obtain before starting on their journey a permit from the nearest inspector, and be made to pay him the authorized charges, said charges to be handed into a separate account at the Treasury.

7. That all stock travelling without a permit be liable to a heavy penalty.

8. That every person damaging the tanks or their works, or wilfully or negligently leaving the gates open, be also liable to a heavy penalty.

9. That where troughing has been erected let the present expensive pumps be change for hand-pumps, of the M'Comas or other pattern, and let those who use the water raise it into troughs. I am sure no drover would object to pump the water, if he would only get it free.

10. Where no troughing has been placed let the stock water dissect at the excavation.

11. Put the management and control of the tanks in the hands of a Local Board or Trust.

The above suggestions, if carried out properly would do away with a lot of grumbling among drovers. By the present regulations a man has to pay for water according to the number of stock entered on his permit, or travelling statement, as the case may be, even if he only waters a small portion of his flock. So that under the present system it is impossible for a drover to water only a portion of the mob, unless he is prepared to pay for watering the whole lot. On the other hand rain may come when a drover with stock is near a tank, so that there is no use for him to use the Government water. Still, as the country has made the tanks for his benefit, I think as a matter of fairness he ought to contribute something towards their revenue and maintenance. No doubt the Department will take exception to my saying that the tanks were made for the benefit of the man who travels stock. I have at present in my hands a minute paper signed by the Chief Inspector of Public Watering Places, in which he says, in reply to some strictures of mine *re* the tank question, that "the public watering places are not for the convenience of squatters or pastoral tenants alone, and while the action of the Government in watering the main stock roads of the Colony enables them to move their sheep and cattle with a minimum of loss in most seasons, they are also for the use and convenience of the travelling public." I quite agree with him that the tanks and troughs are not for the convenience of squatters or those who have to travel sheep. I am endeavouring to prove that the Department, through the incompetency and bungling of its officials, has made the tanks as inconvenient to the travelling public as it is possible for the official mind to devise. They have succeeded admirably. The suggestions thrown out by me as above are only equitable, and show one method whereby these expensive works may be made to pay. Drovers would then have the same inducement to steal in the dead of night down to a private tank and surreptitiously water the stock in their charge. This is often done to save the cost of watering at the public watering places by those drovers who, driving their stock under a specific contract, endeavour to reduce their expenses to the lowest limit. Who can blame them?

In conclusion, I must reiterate that the Government have no right to supplement this cost of the tanks as originally constructed by the addition of steam or horse pumps, expensive receiving tanks or troughs, all of which require a certain amount of skilled labour to repair and work, when, as originally constructed, they answered their purpose admirably. I must now close, as I fear I have trespassed too far already on your valuable space, but the importance of the subject demands proper ventilation, and as I know your sympathies are with those who have sunk their fortunes in the West, I ask you, on behalf of the stockowners and drovers in this arid district, to publish the result of my inquiries. I feel certain that when once the matter is ventilated good will come out of it. The public do not at present know the amount of loss the revenue suffers from the departmental bungling and incompetency that exists in this particular branch, not only when the works are in progress but while in operation. The subject is far from being exhausted, and I have no doubt now that the ball has been set rolling but that the travelling public will keep agitating till a superior system of management supersedes the present one. The more constant the agitation the sooner will the remedy appear.

I am, &c.,

CHARLES ALFRED CHESNEY, C.E.,
Chairman, Cobar Board of Sheep Directors.

Tindarey, 26 October, 1887.

XXXIV.

Galathera and Boggy Creek Tanks.

Sir,

Narrabri, 4 July, 1883.

I have the honor to inform you that I have been out again to the Galathera and Boggy Creek Tanks, and am very sorry to have to inform you that, unless immediate steps are taken to arrest it, both main tanks will be filled in with earth in a very short time; owing to there being an inefficient batter to them, the constant action of the water is undermining the banks of the tank and causing them to fall in. I would earnestly beg to urge that the Department take immediate steps to stop this, and put the tanks in working order before it is too late; if not done shortly, all the money expended upon them hitherto will have been wasted.

The weather just now is favourable, as the repairs could be carried out readily. Summer will be upon us in a very short time, and if something is not done travelling stock will be tortured, as heretofore, with the pangs of thirst, and in many cases reach water after crossing these arid plains but to die, as I have frequently witnessed.

I have, &c.,

ARTHUR W. P. COPEMAN,
Inspector of Stock.

The Chief Inspector of Stock.

Sir,

Boggy Creek, 5 August, 1883.

I have received by this morning's coach a printed form, I presume for the money collected at this tank for which I suppose they hold me responsible. No doubt you are aware that I have received instructions, ever since my appointment to the Boggy Creek Tank, not to allow any stock inside the fence, by the District Inspector; if they persisted in driving stock in, I was to summon them, which I have done once. I don't know why they should send to me for the money collected when they know very well that no stock is allowed to water either at this tank or Galathera, although I think it is very wrong that this tank is not thrown open. I think if the public were allowed to have the use of the water, that is in the drinking tank, then something could be done to it in the way of repairs, which it needs very badly. The water cannot come out of the standing tank on account of the pipe being stopped up, and there is no way of getting at it to clean it only by letting stock drink what water there is in the drinking tank. I am sending this form back to you.

I have, &c.,

CYRUS W. MORROW,
Caretaker.

The Chief Inspector of Stock.

Sir,

Boggy Creek, 29 February, 1884.

I have the honor to report to you that the water in the drinking tank here is unfit for stock to drink, it is perfectly green. I brought a number of both horses and cattle across the plains to the tank to-day, but they would not touch it.

The tank at Galathera is now a great blessing, but there are in my opinion several serious matters of alteration which require to be made in that tank.

I have, &c.,

W. D. WRIGHT.

The Chief Inspector of Stock.

Mr. Gilliat.—A.B., B.C., 3/3/84.

The notice of the Department of Public Works has been several times lately called to the complaints in connection with the Galathera and Boggy Creek Tanks. I think this might be forwarded for the information of the Commissioner and Engineer of Roads.—H.G., B.C., 6/3/84. Mr. Bruce.

Submitted.—A.B., 7/3/84. The Under Secretary for Mines. Submitted.—H.W., 10/3/84. Approved. I wish the Works Department would do something about these.—J.P. ABBOTT, 11/3/84. The Under Secretary for Public Works.—H.W., B.C., 11/3/84. Roads.—J.R., B.C., 15/3/84. Mr. Wood.—W.C.B., 17/3/84.

I attach report from the local officer, the complaint made is a necessary result of the drinking tank system, when there is not a steady demand for water to allow of a free flow or to allow of noxious foreign matter being removed. It has been our intention to fix pump service tank, &c., at this place and the delay is due to Mr. Nussan's delay in carrying out his contract of service-tanks.—A.P.W., 20/3/84. The Commissioner and Engineer for Roads and Bridges.

The pump is at Narrabri.—W.C.B., 20/3/83. The Under Secretary, B.C.

Sir,

Narrabri, 17 March, 1884.

I have the honor to inform you that I have visited the Galathera and Boggy Creek Tanks for the purpose of reporting upon them, but have refrained from doing so, owing to the unfinished state they are, and are likely to be in for some time to come. At Boggy Creek, stock will not be able to water, as the supply is exhausted in the drinking tank and no means of feeding it again.

Galathera is open to the public, and a return coming in from it. It is still in an unfinished state, and the troughing requires fencing in. Mr. Budge, the Road Superintendent, instructed the caretaker to use his horses for the purpose of lifting the water, but never made any arrangement with him as to payment for use of same. Will I do this?

The Galathera caretaker requires a supply of weekly return forms. I enclose a letter received from him, *re* travelling to Narrabri to remit his moneys and sign his attested returns. Can he be allowed anything for travelling in and out?

Will I send in report as to present state of tanks or wait till they are handed over? The contractor at Boggy Creek says he will be quite six months at work there.

I have, &c.,

A. W. P. COPEMAN,
Overseer of Public Tanks and Wells.

The Chief Inspector of Stock.

Mr.

Mr. Gilliat.—A.B., B.C., 19/3/84.

The Chief Inspector of Stock,—Mr. Overseer Copeman might be instructed to arrange for the forwarding of rates collected by caretakers in his district in the manner adopted by other overseers. An understanding with the Department of Public Works seems desirable with reference to the caretaker lifting water at the Galathera Tank. This Department has not been informed of the completion of the lifting appliances, and it seems undesirable to interfere until so notified; at the same time it is urgent the caretaker should have water in readiness for persons requiring it. Any engagements made by the District Road Superintendent will—Mr. Copeman might be informed—be discharged by his own Department. A copy of Mr. Copeman's letter might perhaps be forwarded to the Works.—H.G., B.C., 1/4/84.

Sir,

Narrabri, 18 March, 1884.

In compliance with the instructions contained in telegram sent by Mr. Wood yesterday, I beg to report as follows on water in the Boggy Creek Tank:—

The water in the drinking tank is totally unfit for use.

The water in the reservoir is 8 feet deep, and sweet and good.

Until the drinking tank is emptied and cleaned out it will be unfit for use, and until that time water must be taken directly from the reservoir.

A wooden trough and temporary pump might meet the difficulty for the present, as water is obtainable 6 miles north of Boggy Creek, and also at Galathera.

A service-tank and pump, similar to the one at Galathera, or a substitute for one, should be erected as soon as possible.

I have, &c.,

W. P. BUDGE,

Road Superintendent.

The Commissioner and Engineer for Roads.

Mr. Wood,—See me at once.—W.C.B.

This would have been remedied ere this had Mr. Nussan satisfied the terms of his contract by delivering the iron tanks he has contracted for; the pump was forwarded some months ago.—A.P.W., 20/3/84. The Commissioner and Engineer for Roads and Bridges.

Forward to Mines.—T.A.W., 22/3/84. The Under Secretary for Mines.—W.F. (for U.S.), B.C., 24/3/84. Mr. Gilliat.—A.B., B.C., 25/3/84. I may point out that this is an additional instance of the importance of having water supplied from pumps and troughings.—H.G., B.C., 1/4/84. Mr. Bruce. Submitted.—A.B., 2/4/84. The Under Secretary for Mines. Submitted.—G.E.H. (for U.S.) Seen; inform Mr. Wright.—J. P. ABBOTT, 5/4/84.

XXXV.

Papers *re cost*.

Minute by The Honorable the Secretary for Mines, 1st June, 1887.

P.W.P.
87-2,326.

I would like a return prepared showing,—

- 1st. The cost of tanks and wells and dams, showing each one separately.
- 2nd. The cost of machinery, &c., to work the same.
- 3rd. Wages of men attached to each.
- 4th. The revenue derived from each.

F.A., 1/6/87.

Urgent. Mr. Ramsay,—Please prepare a return showing the information asked for by the Secretary for Mines under questions three and four.—H.G., 2/6/87. Return herewith.—J.S.R., 9/6/87. The information asked for by the Hon. the Secretary for Mines in questions one and two will, I think, have to be obtained from the Secretary of Public Works.—HARRY GILLIAT, 2/6/87. The Under Secretary. Ask the Under Secretary for Works for the information.—H.W., 2/6/87. Asked.—2/6/87. The Under Secretary for Works may perhaps be reminded that no reply has been received.—H.G., 22/8/87. Asked.—30/8/87.

Minute by Chief Inspector Public Watering Places.

Expenditure and Revenue for 1886 at Public Watering Places.

P.W.P.
87-4,928

26 September, 1887.

In submitting this return for the consideration of the Hon. the Secretary for Mines, I may point out,—

- 1st. That the year 1886 was an exceptionally favourable one, and that during the greater part of it water could be obtained by travelling stock almost everywhere without having to fall back upon the public watering places.
- 2nd. That when the Department is enabled to gazette the works as public watering places no further obstacle will exist to their being leased, and the majority of these works will be producing revenue.

The Under Secretary.

HARRY GILLIAT.

Submitted.—G.E.H. (for U.S.), 27/9/87. Have the works gazetted as early as possible.—F.A., 28/9/87. The papers for this purpose should be prepared in accordance with my previous minute.—H.G., 29/9/87.

Public

Public Watering Places.

RETURN showing Wages paid and Revenue received for the Year 1886.

P.W.P.

9 June, 1887.	J. S. RAMSAY.

Mr. Kelly, M.P., carried a motion last session for a return *re* water-tanks, dams, &c. Is it ready? If not, when will it be?—P.A., 26/9/87. I cannot find any motion carried by Mr. Kelly, M.P., on the subject—R.H.O., 26/9/87. The Minister directs that the Under Secretary for Works may be again reminded.—H.G., 27/9/87. Letter to Under Secretary for Works, 27/9/87.

P.W.P.,
87-5,194.

Sir,

27 September, 1887.

I have the honor to again invite your attention to my letter of 2nd June last, asking for certain particulars *re* Public Watering Places, for the information of the Hon. the Secretary for Mines. I am directed by him to request that you will be good enough to have the information furnished with the least possible delay.

GERARD HERRING,
(For Under Secretary for Mines.)

The Under Secretary for Public Works.

Roads.—J.R., B.C., 29/9/87. Mr. Wood.—W.C.B., 29/9/87. The information is being prepared.—A.P.W., 30/9/87. Under Secretary.—W.C.B., B.C., 30/9/87. The Under Secretary for Mines.—J.R., B.C., 6/10/87.

P.W.P.,
87-5,842.

My dear Sutherland,

31 October, 1887.

I beg to remind you that up to the present I have not received the return I asked for a long time ago, showing the cost per cubic yard paid by the Roads Department for excavation of tanks, dams, &c. Kindly send it on and oblige.

Yours,
F. ABIGAIL.

The Secretary for Public Works.

I am not aware of the return asked for, but this is clear, and I desire it to be prepared as soon as possible.—J.S., 1/11/87. With Minister.—J.R. Roads.—J.R., B.C., 1/11/87. Urgent. This list was furnished upon 6th June last, but new list will now be prepared.—A.P.W., 2/11/87. Paper now herewith was with the papers given to me out of the Minister's room on yesterday. It was sent down, as Mr. Wood states, on 6th June.—W.C.B., 2/11/87. Forward to Mines Department. Under Secretary for Mines.—J.R., B.C., 2/11/87. Memo. by Record Clerk, P.W. Places.—The receipt of former list is not recorded; I have never received it, and I feel confident it was never received in this office.—R.W.G., 4/11/87.

MEMO. by Clerk in Charge, Public Watering Places.—On 2nd June the Department of Public Works was asked to furnish the following information:—(1.) Cost of tanks, wells, and dams, showing each one separately. (2.) Cost of machinery to work the same. On 30th August the Works was reminded of this request, and again on 27th September. This latter communication was returned B.C. from the Works on 7th October, bearing a minute as follows:—"The information is being prepared.—A.P.W., 30/9/87." I have to point out that the information applied for on 2nd June has not yet been supplied. (2.) The return attached to 87-5,842 does not afford that information. (3.) This return, said to have been already furnished on 6th June, has not previously been received by this Department.

J.S.R., 8/11/87.
The

The information asked for by the Honorable the Secretary for Mines, 2/6/87, is not given in the return that has been made by the Department of Public Works, which is an abstract, showing prices for excavating tanks, 1882 to 1886. The information requested is—(1st) the cost of each tank, dam, or well, showing each one separately; (2nd) the cost of machinery, &c., to work the same. The Honorable the Secretary for Public Works may perhaps be asked to have this information supplied.—H.G., 10/11/87. The Under Secretary.

Submitted.—H.W., 11/11/87. Approved.—F.A., 11/11/87. Letter to Works, 15/11/87. A reminder may be sent to the Secretary for Public Works.—F.A., 29/11/87. Letter to Works, 29/11/87. I beg to submit for direction whether a fresh effort shall be made to obtain this return, or whether the papers shall appear in their incomplete state in the Parliamentary Return.—H.G., 12/12/87. The Under Secretary. Submitted.—H.W., 14/12/87. The Works Department may be requested to furnish a full return of what is required.—F.A., 15/12/87. Asked, 19/12/87.

Sir,

29 December, 1887.

P.W.P.,
87-7,156.

In reply to your letter of 29th ultimo, asking to be supplied with certain information as to the cost of tanks, dams, wells, &c., I am directed to inform you that the information is being obtained; but that, in view of the recent appointment of a Commission to inquire into the matter of tanks and wells, the Secretary for Public Works is of opinion that the return should in the first instance be submitted to the Commission.

I have, &c.,

JOHN RAE,

The Under Secretary for Mines.

Under Secretary for Public Works.

Minute by The Chief Inspector of Public Watering Places.

3 January, 1888.

P.W.P.,
88-2.

THE return referred to in this letter was asked for, by direction of the Honorable the Secretary for Mines, on the 2nd June, 1887. The Works Department were reminded on 30th August, 1887, and again on 27th September. Upon 20th September this Department was informed by a minute that the "information is being prepared." On 31st October the Secretary for Mines wrote to the Secretary for Public Works, asking again for the return. A reply by minute was received, on 4th November, that the list was furnished on 6th June last, but that a new list would be prepared.

The list referred to, which had not been previously received by this Department, proved to be merely an abstract of prices for excavating tanks from 1882 to 1886. And on 29th November a letter was again sent to the Department of Public Works, calling attention to the point that the return desired by the Secretary for Mines was (1st) the cost of each tank, dam, and well, showing each one separately; (2nd) the cost of machinery, &c., to work the same.

In view of the preparation of papers for the Parliamentary return on 12th December, instructions were asked whether a fresh effort should be made to obtain this return or whether the papers should appear in their incomplete state. A final letter was, by direction, sent on 19th December, 1887. As the return, it is stated, is now to be made to the Royal Commission, it will perhaps be advisable the accompanying papers should be also submitted.

HARRY GILLIAT,

Chief Inspector of Public Watering Places.

The Under Secretary.

Submitted.—H.W., 3/1/88. Seen and dealt with by minute.—F.A., 4/1/88.

Minute by The Honorable the Secretary for Mines.

4 January, 1888.

P.W.P.,
88-43.

I HAVE just seen the Secretary for Works, and pointed out that the return asked for is required to complete the papers ordered by Parliament, and which will be placed upon the Table of the House as soon they meet. He informed me that he had overlooked the fact that the House had ordered these papers, and if the request be made again, pointing out the above facts, he will at once order the return to be supplied. Let such be done immediately, so that they may be all ready.

F.A., 4/1/88.

The Chief Inspector of Public Watering Places.—H.W., 4/1/88. A letter in the above terms to be prepared and forwarded to the Department of Public Works to-day. Urgent.—H.G., 5/1/88. Letter to Works, 5/1/88.

In compliance with the general direction of the Hon. the Minister these papers have been included amongst those submitted to the Tanks and Wells Commission, although incomplete by reason that the information required to perfect the return asked for by the Minister for Mines has not been furnished by the Department of Works.—J.S.R., 19/1/88.

This refers to the cost of the public watering places and their machinery, asked for 2 June, 1887.—H.G., 19/1/88. The Under Secretary.

Remind the Secretary for Works of his promise to let me have this return to complete the papers to be laid on the Table of Parliament when it again meets in February. If this is not forthcoming I must state that I have been unable to obtain it from the Works Department.—F.A., 19/1/88.

Prepare letter.—H.G., 19/1/88. Letter to Works, 20/1/88.

Minute

Minute by The Chief Inspector of Stock on The Hon. T. Cummings' Application as to the Average Expense of Drinking Appliances at Government tanks.

Department of Mines, Stock Branch, Sydney, 20 July, 1885.

THE Honorable Thomas Cummings has asked the average expense approximately of drinking appliances at the Government tanks where stock are watered at troughs filled from a service tank into which it is raised by horse-power, and the cost where raised by steam-pump, specifying the cost of the service-tank separately. As this can only be given by the Works Department, application might perhaps be made accordingly, if approved.—A.B., 20/7/85.

Submitted.—H.W., 20/7/85. Inform him.—J. P. ABBOTT, 21/7/85. The Under Secretary for Works.—G.E.H. (for U.S.), B.C., 24th July, 1885. Roads, B.C., 27/7/85. Mr. Wood.—W.C.B., 28/7/85.

	£	s.	d.
Timber Service Tank (say)	250	0	0
Iron B.P. do	300	0	0
Troughing	225	0	0
Steam-pump	170	0	0
Horse, gear, &c.	90	0	0
	£785	0	0

Say £785.—W.C.B., 4/8/85. Under Secretary. Forward to Mines.—F.A.W., 8/8/85. The Under Secretary for Mines, B.C., 8/8/85, W.F. (for the U.S.).

Extract from Minute by The Commissioner and Engineer for Roads and Bridges.

The tank, it is intended to make of buckled plates, it will weigh 6 tons, and 120 ft. of troughing will weigh 1 ton. It is considered the tank will cost £280, and the usual 300 ft. of troughing £120, or certainly not more than the present appliances.

Cost of Excavations as said to have been paid by the Works Department :—
 Mount Manara Tank, 1s. 4½d. per cubic yard, with fencing papers.
 Twelve-mile Tank, 2s. 6d. per cubic yard, with sub-letting papers.

Of Drains :—
 Ivanhoe Tank, 15s. per chain, with Ivanhoe papers.
 Twenty-Six-mile, 4s. 6d. per chain, with fencing papers.

Miscellaneous :—
 Engine-shed, Thirty-Five-mile, £50 ; others to £30, with fencing papers.

NOTE.—This Department have erected a 12 x 12 vertical slab shed, door and window, iron roof, for Willandra Well cost £1,087 5s. 8d. ; 100 ft. deep, no supply, bad water.
 Supply tank, Tom's Lake, £300.

Cost of Fencing.

The following prices are alleged to have been paid by the Department of Public Works :—

	Per mile.			No. of Papers.
	£	s.	d.	
*Goonery	86	0	0	P.W.P., 87-6,586.
*Mulga, No. 5	70	0	0	P.W.P., 87-6,089.

Works average, £85 each; Mines average, £43 odd, for thirty-four cottages let and completed. The average of £50 will not be exceeded.

Copy of letter from Mr. Overseer Tully, of 19th March, 1887.

Sir,

I have the honor to forward herewith plan and specification of fencing which I consider suitable for fencing the tenant leases at Public Watering Places in this district, and which can be erected at about £50 to £55 per mile, thus:—

Wire delivered anywhere within 100 miles of Wilcannia, £20 per mile.

Furnishing posts and erecting, £30* per mile.

* This is very high. If a supply of the wire required were purchased privately it could be delivered here under £14 per ton, at least the stores offer to supply it at that price, and carriage is very low at present.

I have, &c.,

MARK J. C. TULLY,
Overseer, Public Watering Places.

Telegram from Mr. Overseer Mark J. C. Tully to Mr. Inspector J. W. Boulthec.

Wilcannia, 27 May, 1887.

ENGINE sheds on Ivanhoe Road cost £50; some erected since by Mr. Hanna in other parts down to £30; fencing on Booligal Road, £94 per mile; Beefwood now going up, down to £52 per mile; no huts; starting out to Paroo and Cobham Road to-day.

MARK J. C. TULLY,
Overseer, Public Watering Places.

Engine sheds, 12 x 12, Ivanhoe Road, £50; some erected later, £30.

Mr. Overseer Dowling offers to get engine shed erected at Brolgan, 12 x 12, for £9.

Size of shed, 12 x 12. The same sized shed is about to be erected in the Forbes district for £9.

In Condobolin district offers are made to erect the shed for £10. Attention is also called to the price quoted for fencing on Booligal Road, which is nearly double the estimate considered ample by this Department.

HARRY GILLIAT,

The Under Secretary.

30/5/87.

Submitted for the information of the Minister.—H.W., 30/5/87.

Seen.—F.A., 30/5/87.

Sir,

Sir,

Bourke, 15 August, 1887.

I have the honor to report that in accordance with your instructions I visited the Brolgan Creek Tank on the 12th instant, and met Mr. Overseer Dowling and Bagwill the contractor for the cottage and engine shed newly completed. P.W.P., 87-3,977.

I inspected them both, and am glad to be able to report favourably of them. The cottage is a most substantial one, and for its price, £30 11s. 2d., very reasonable; the posts, horizontals, rafters, &c., are all up to contract; the chimney is well built and lined with stone by the contractor, this latter work not being a part of his contract. The finish of the work I can hardly call first-class, but the joints all appear to fit and fill, and of its durability there can be no question. The flooring is well laid and the doors and windows fit.

The caretaker has lined the place with hessian and papered it, he has also erected a vertical slab kitchen with bark roof, and has made himself and family really comfortable. I think authority should be granted to the Overseer to send out 7 lb. of white lead, and 1 gallon of paint oil and brush, so that the caretaker can paint the doors, windows, &c., exposed portions of posts inside. The back door is at present fastened by a bolt, authority might perhaps be given for the purchase of a latch.

The engine shed is a vertical slab hut with windows and doors of sawn pine, the whole very strongly framed, and slabs let into grooves, it is water-tight, and although it only cost £9 9s. 5d., I have no doubt it will outlast those erected by the Works Department at £50 each. There is ample space all round the engine, and a strong shelf has been erected for tools, oil, &c. Credit, I think, is due to Mr. Overseer Dowling for the interest he has apparently taken in bringing the erection of the buildings to a successful finish.

The contractor may, I think, be safely entrusted with the like work in the Condobolin District. From what I understand, he has barely made wages at the work, and that any further tender will be slightly in excess of this.

JAMES W. BOULTBEE,

Inspector of Public Watering Places.

The Chief Inspector of Public Watering Places.

Mr. Jones may be directed to assist Bagwill in obtaining information.—H.G., 20/8/87. Letter to Overseer Jones, 22/8/87.

Extract from Mr. Inspector J. W. Boulton's report on Ivanhoe Tank.

22 November, 1886.

I believe 15s. per chain was paid for the drains here, work that I got done on the Darling from 3s. 6d. to 4s. 6d. per chain, 6 feet wide, 1 foot deep.

J. W. BOULTBEE.

P.W.P.,
87-6,936.
Original,
86-5,587, with
Ivanhoe Tank
papers.

Can you give any information with respect to the cost of these drains?—H.G., B.C., 20/12/87. Mr. Yeo.

The drains at the Ivanhoe Tank were made by Messrs. Farrell and Gallagher, who received 15s. per chain, which was an exorbitant price as stations in the district were only giving from 3s. 6d. to 5s. per chain, and I might mention that a reliable person informed me at the time the contract was let, that one of the contractors while consulting his partner as to what price they should do the work for, said they should ask 7s. 6d. per chain, which he said would pay them well; but the partner said, as it is Government work, let us ask 15s. per chain, which they did, and got it. I might also mention that the drain running from the north-east corner of the main tank from a point about half a mile from the main tank should not have been passed by the Road Superintendent, as it was never graded properly, and the water runs in the opposite direction of the tank. No tenders were called for the cutting of these drains.—J. YEO, 22/12/87.

Submitted for the information of the Honorable the Secretary for Mines.—H.G., 23/12/87. The Under Secretary. Submitted.—H.W., 23/12/87. Seen.—F.A., 3/12/87.

Extract from Mr. Overseer Yeo's report on the Merri Merriwa Tank.

Ivanhoe, 19 July, 1887.

Remarks.—The Works Department have had a shelter-shed erected over the machinery.

JAMES YEO,

Overseer, Public Watering Places.

P.W.P.,
87-3,494.

Mr. Yeo may be asked if he is aware of the cost of the sheds.—H.G. Asked, 30/7/87.

Sir,

Stock Office, Ivanhoe, 13 September, 1887.

Referring to your letter dated 30th July last, re informing you the cost of the shelter-shed erected at the Merri Merriwa Tank.

I beg to inform you that I cannot give you the cost of this particular shed, but I am informed, through the caretaker at the Merri Merriwa Tank, that the shelter sheds along the Cobar and Hillston Road, cost £27 each.

I have, &c.,

JAMES YEO,

Overseer, Public Watering Places.

P.W.P.,
87-4,712.

The Chief Inspector of Public Watering Places.

Extract

Extract from Mr. Overseer Jones' report on Tinda Tank for March and April, 1887.

P.W.P.,
87-2,485.

Some sawn timber has been left here, which I am told is intended for a shed over the engine and shoots at the corners of the the embankments. But not having received any official intimation of the intention of despatching this kind of material to this tank, I can only state that some timber is upon the ground, and as I hear for the purpose abovenamed.

Condobolin, 18 May, 1887.

RICHARD D. JONES.
Overseer, Public Watering Places.

Mr. Jones,—Please report when work is commenced, also ascertain prices paid, if possible.—H.G., 14/6/87. I will report and obtain required information, if possible.—R.D.J., 24/6/87. Mr. Gilliat. This information should not be lost sight of.—H.G., 28/6/87. Mr. Ramsay.

P.W.P.,
87-3,150.

Sir,

Condobolin, 8 July, 1887.

I have the honor to report in reference to your B.C. dated 10th [? 14] ultimo, "Construction of shoots at public tanks." I beg to inform you that the caretakers report to me that shoots have been constructed at the following tanks, *i.e.*, Boona, Tinda and Wicklow Tanks, and engine-sheds at Mowabla, Boona, Tinda, Mombill, and Wicklow Tanks. The cost of the shoots I have not been able to ascertain, but the cost of the engine-sheds was £27 10s. each.

I have, &c.,

R. D. JONES,

Overseer, Public Watering Places.

The Chief Inspector of Public Watering Places.

Mr. Jones may be asked to furnish an exact description of sheds, size, dimensions, and approximate amount of material.—H.G., 14/7/87. Mr. Jones asked, 15/7/87.

Minute by Mr. Secretary for Mines, J. P. Abbott.

13 December, 1884.

Tanks&Wells,
84-1,632.

I WANT Mr. Bennett to be good enough to furnish me with a return showing the name of every tank constructed during the last two years.

2. The same as to wells.
3. The locality and the district.
4. The size.
5. The quantity of water each is capable of holding.
6. The depth of the wells, and of the water, and the quality of the water.
7. The line of road on which each is situated.
8. The lengths of the roads served.
9. The cost of each.
10. The number of tanks, wells, &c., now being made.

J. P. ABBOTT, 13/12/84.

The Chief Inspector of Public Watering Places. [Urgent.]

Very Urgent. The Under Secretary for Works.—H.W., B.C., 16/12/84. Roads.—J.R., B.C., 17/12/84. Mr. Wood.—W.C.B., 17/12/84. Will Mr. Steel assist?—W.C.B. Herewith, as asked for urgently, sent direct.—W.C.B., B.C., 5/1/85. Forward to Mines.

Excavation per cubic yard for squatters costs from 10d. to 1s., or £900 for an 18,000 cubic yard tank, or rather more than 3,000,000 gallons of water, and when tools and draught cattle are found by the employer, it has frequently been done at 4d. per cubic yard, and good wages made; 1s. per cubic yard. a maximum price.—H.G.

NOTE.—The tanks named in this list will have (approximately) a capacity of 151,000,000 gallons, and the quantity now stored is estimated at about 46,000 gallons. The eleven wells that are on water are estimated to yield 250,000 gallons per diem. Figures marked thus (*) denote payments on account.

Minute by The Secretary for Mines, J. P. Abbott.

15 January, 1884.

I SHALL be glad if the Secretary for Works will cause me to be furnished with a return showing the cost Tanks & Wells, of the several tanks and wells mentioned in Schedule B hereto, as also the cost of improving the springs 84-55. in Schedule A, mentioned in Schedule B. I would like the total cost of each work.

J. P. ABBOTT.

The Secretary for Works.

The Under Secretary for Works.—B.C., 15/1/84. Roads.—J.R., B.C., 17/1/84.

Schedule showing cost of tanks and wells mentioned in Mr. Gilliat's report attached. The four tanks constructed by the Survey Department we have no record of. No money has been expended by this Department in improving the springs, so no return of cost can be furnished.—A.P.W., 22/1/84.

Herewith.—W.C.B., B.C., 23/1/84. Under Secretary, B.C. Have this prepared in the nature of a return, giving the parish and county of tank, to lay upon the table of the House.—J. P. ABBOTT, 3/1/84. Mr. Gilliat.—1/2/84. The Chief Inspector of Stock.—H.G., B.C., 25/2/84. Submitted.—A.B., 26/2/84. The Under Secretary for Mines. Submitted.—H.W., 29/2/84. Return herewith.—A.B., 7/3/84.

Return prepared and laid upon the Table of the Legislative Assembly, 11th March, 1884.

Forward to Mines.—F.A.W., 28/1/87. Under Secretary for Mines, B.C., 30/1/87.

Office Memo. to Mr. Ramsay.

14 November, 1887.

WIRE Mr. Inspector Low to ascertain name of original contractor and cost per mile of fencing at Mount Manara and Boonoona Tanks. Wire sent.—14/11/87. Repeat telegram to Inspector P.W.P., 87-5,994.
Low at Wilcannia.—J.S.R., 1/12/87. Wire sent.—1/12/87.

Telegram from Mr. Inspector John Low to The Chief Inspector of Public Watering Places.

Ivanhoe, 18 November, 1887.

BEVAN, original contractor for fencing Boonoona and Mount Manara; he told Stewart, hotelkeeper, Ivanhoe, the price was £120 per mile. Bevan has lately been erecting 10 feet or 12 feet swing gates there, for which his men informed caretakers he was getting £15 per gate. P.W.P., 87-6,240.

JOHN LOW,
Inspector, Public Watering Places.

Telegram

Telegram from Mr. Inspector John Low to The Chief Inspector of Public Watering Places.

Ivanhoe, 19 November, 1887.

P.W.P.,
87-6,241.

PLENTY ballah within 5 miles of Boonoon, and pine within 5 miles of Mount Manara Tanks for fencing.

JOHN LOW,

Inspector, Public Watering Places.

This refers to query on price of fencing at these tanks, and to show timber did not require to be carted far, and is in addition to my telegram of 18th November, giving prices paid for fencing.

JOHN LOW,

Inspector, Public Watering Places, 2/12/87.

Telegram from Mr. Inspector John Low to The Chief Inspector of Public Watering Places.

Wilcannia, 2 December, 1887.

P.W.P.,
87-6,497.

BEVAN, of Hay, original contractor for fencing Mount Manara and Boonoon, at £120 per mile. See my telegram to you 18th November.

JOHN LOW,

Inspector, Public Watering Places.

XXXVI.

Papers *re* non-adaptation of work to formation of ground, &c.

Seaville Tank.

Dear Sir,

Momba, 17 March, 1883.

83-477.

Whilst you are in the district I wish to draw your attention to the site selected for a Government tank at the 9-mile, and should the work be proceeded with it will be a waste of public money similar to the Peri and Yentabangee Tanks. I fail to see why any sane man could select such a site at the 9-mile for an accommodation tank for public use, especially when there is such a good site at or near the 15-mile gate, and (if I mistake not) you recommended this latter site some two years ago.

I think this matter should be looked to at once, as there is nothing done at the 9-mile site with the exception of cutting the cane grass.

Yours faithfully,

Mr. Harry Gilliat.

W. HOGARTH.

Memo. by Mr. Harry Gilliat.

Tanks & Wells,
83-477.

REFERRING to the annexed letter from Mr. Hogarth, manager of the Momba Pastoral Company, it appears that the site complained of has been selected on the Wilcannia to Hungerford Road, between Wilcannia and the Copago Government Tank; the distance between these points is about 28 miles. At the 15-mile gate there is a better catch than at the 9-mile, and it divides the distance with equal stages. There is also a waterhole about 2 miles out of Wilcannia, a portion of which has been alienated; the remainder is reserved, and makes a good camping place for teamsters or others who desire to be near the town.

When I visited the site at the 9-mile the contractor had knocked off work and removed the camp, and nothing had been done beyond clearing the cane grass in the swamp. There is in my opinion no question that the most suitable site for the new tank will be at a point about 50 chains northerly along the road after passing the 15-mile gate, and I would recommend that the question be submitted to the Works Department for consideration.

HARRY GILLIAT, 26/3/83.

Submitted.—A.B., 30/3/83. The Under Secretary for Mines. Submitted.—H.W., 31/3/83.
For the Works Department.—J. P. ABBOTT, 2/4/83. The Under Secretary for Public Works.—
H.W., B.C., 3 April, 1883. Roads.—J.R., B.C., 5/4/83.

Memo. *re* Paper on Tank near Wilcannia, on Hungerford Road.

T. & P.,
83-173.

THE site for the tank on the Hungerford Road is over 12 miles, and not 9, as stated in paper ^{83-2,216}₃₋₄, and has a good drainage, and is good holding ground. A very large scope of ground can be drained into the tank.

I may mention that Mr. Hogarth was putting down a tank for the Momba Station, on the same swamp where the Government tank is now going down.

The country round the present site is good grass country, and therefore a good camping ground.

The contractor had to stop work on account of there being no water near the spot.

H. CAMBRIDGE, 16/4/83.

The Commissioner for Roads, Sydney.

Mr. Wood.—W.B., 17/4/83. This site from Mr. Cambridge's description supplies all the conditions necessary, and subdivides the distance between Wilcannia and Copago into two nearly equal stages. This work is relet and in hand.—A.P.W., 17/4/83.

It appears, for the reasons stated, that the place called the Nine-mile, which is 13 miles from Wilcannia, is more central, and, as Mr. Cambridge states, altogether a better site than that proposed by Mr. Gilliat at the Fifteen-mile.—W.B., 17/4/83. Under Secretary, B.C. Inform.—J.R., 19/4/83. The Under Secretary for Mines.—J.R., B.C., 21-23/4/83. Mr. Gilliat.—A.B., B.C., 24/4/83.

I do not agree with Mr. Cambridge's distances. The question might be referred to the Road Superintendent now at Wilcannia, and the Secretary of the Wilcannia Progress Committee could probably give some information.—H.G., B.C., 3/7/83. I do not think that this need be carried further. The two statements are now on record, and should the question come up again it can if necessary be seen who is right.—A.B., 1/8/83. The Under Secretary for Mines. Submitted.—H.W., 2/8/83. Approved.—J. P. ABBOTT, 4/8/83.

Sir,

Sir,

Stock Office, Wilcannia, 10 January, 1887.

I have the honor to recommend that a caretaker be appointed to the P.W.P. at the Nine-mile Lake, about 11 miles out of Wilcannia, on the Paroo Road, as the water of the lake has receded within the surveyed lines and a revenue should be obtained from it. There are several good men applying for such appointments here. I would not recommend more than 6s. per day at this work.

P.W.P.,
87-194.

I have, &c.,

Mr. Harry Gilliat, Chief Inspector.

M. J. C. TULLY.

It is recommended that a caretaker be engaged by Mr. Overseer Tully for the Nine-mile or Seaville's Tank, at wages not exceeding 6s. per day.—HARRY GILLIAT, 15/1/87. The Under Secretary for Mines. Submitted for approval.—H.W., 19/1/87. Approved, 24/1/87.—F.A. Mr. Overseer Tully should be asked whether he has yet engaged a caretaker, if so to forward his name, and date of his being engaged.—E.W., 18/2/87.

Sir,

Wilcannia, 19 February, 1887.

I have the honor to acknowledge receipt of your telegram authorizing me to appoint a caretaker at Seaville's Tank. Since communicating with you I visited it again in company with Mr. Hanna, Road Superintendent, and found that the recent rains have again filled up the lake, and the tank is quite surrounded with water, so that we could not get within 200 yards of the tank, so for the present a caretaker could be of no use, but as soon as I consider it advisable to have a caretaker placed there I will appoint one and inform you at once.

P.W.P.,
87-925.

I have, &c.,

The Chief Inspector, Public Watering Places.

MARK J. C. TULLY,
Overseer, Public Watering Places.

Sir,

Wilcannia, 8 March, 1887.

I have the honor to acknowledge receipt of your communication of 26th February, No. 17-194, requesting information *re* appointment of caretaker at Seaville's Tank. On the 19th ultimo, I had the honor to report that the recent rains had refilled the lake, and that as the tank was surrounded by water I did not consider it advisable to appoint a caretaker for the present.

P.W.P.,
87-1,193.

I have, &c.,

The Chief Inspector of Public Watering Places.

M. J. C. TULLY,
Overseer, Public Watering Places.

Telegram from Mr. Overseer Tully to The Chief Inspector, Public Watering Places.

Wilcannia, 18 November, 1887.

SEAVILLE'S tank submerged in January, 1835, has been surrounded ever since, excepting for a week or two in January last (see my letter of 10th January). Rain fell soon after and refilled the lake, which will last through the summer. Inspected this morning. Embankments now showing above water.

P.W.P.,
87-6,218.

MARK J. C. TULLY
Overseer, Public Watering Places.

Extract from Mr. A. P. Wood's Minute of 9th December, 1882.

The following works are let and in progress:—

4. J.K. Waterhole, enlarging hole.

83-72.
Original with
Tarella Tank
care.

These works were let under considerable difficulties, but the recent rains will enable them to be completed more rapidly than was anticipated.

A. P. WOOD, 9/12/82.

The J. K. Well.

Copy of Mr. Gilliat's Minute of 24th June, 1884.

REFERENCE to my report, page 14, will show that my opinion has always been that of Mr. A. P. Wood, and that I have consistently urged the adoption of wells on this road, but combined with the utilization of natural waterholes, which have been proved to fill with a light rainfall, say of 1 inch, and to be of good lasting capacity.

84,693.
Original sent to
U.S. Works
9/9/84.
Requested to
return it on
17/11/87.

These conditions are fulfilled at the J. K. waterhole. The question of the lessee's improvements, it appears to me, must be dealt with in the interests of the general public, and as in this case the small improvements he has made are required for the service of a main stock route, he may be compensated, but the water should be reserved. Here, as at the One-tree Waterhole, in the Evelyn Creek, I am opposed to the expenditure of the vote for a new work, when a moderate outlay in fencing troughing, with some simple means of raising water, would in my opinion suffice.

These waterholes are reported to have always stood well in the past, and it must be taken into consideration that when protected from the admission of stock they will last still longer, until the road becomes much more important than it is likely to do for years to come. I would submit for the consideration of the Hon. the Secretary for Mines that a well is not at present required in the neighbourhood of this waterhole.

HARRY GILLIAT.

Mr. Gilliat's minute dated 24th June, 1884, on J.K. Waterhole, Road Wilcannia to Mount Brown.

Minister's Minute.—I think tenders should be accepted for a well, as by this means a more permanent water supply is likely to be had, and entirely independent of the lessee.—J. P. ABBOTT, 3/7/84.

M. J. C. TULLY.

Extract from Mr. Overseer Tully's Telegram of 26/11/87.

* * * * *
 Small dam made J.K. Nothing done except by owners of Yancannia Station. This from reliable information, not from personal knowledge.

M. J. C. TULLY.

NOTE.—There is no record of the question of construction of a well at this place ever having been referred to this Department, since I was a resident for years in this district. I may add that I believe the commencement of this well was the cause of a protest against its construction lodged by R. H. Kennedy, of Wonnaminta Station, with Works Department, who at the same time offered to construct a dam, enlarge hole, and fence and erect troughs, provided he was permitted use of it.

J.W.B., 2/1/88.

Sir,

Wonnaminta Station, N.S.W., 29 December, 1887.

P.W.P.,
88-79.

As I understand an inquiry is about to be made relative to the present very bad system of conserving water on the travelling stock routes, and the maintenance thereof, I beg to be allowed to make a few remarks on these subjects.

I should have been willing to go to Sydney to give evidence if it would be accepted, but as there is no possibility of my doing so (as I am unable to leave my bed at present, and am writing lying on my back), but being anxious to add my quota of information on such very important matter, I beg to be permitted to do so by letter.

I will attempt to point out where I consider great mistakes have been made, and large sums of money wasted. First, all Government tanks that I have seen are, in my opinion, wrongly constructed, with not nearly sufficient batter, which should be something like 4 or 5 to 1, enabling stock to drink at the tanks with safety, and do away altogether with the present what I consider useless and costly paraphernalia, such as pumps, engines, &c.

I wrote to the *S. M. Herald* some time ago, stating my views on these works; unfortunately my letter was too lengthy, and they did not publish it in full. My suggestion then was, that tanks should be made very large, with great batter—sheep to be allowed to drink all round, large stock at both ends. This could be all arranged by a proper system of good fencing. I would suggest that about 4 acres be fenced round each tank, with good strong double gates on either side, which could be opened and shut by travellers as required. Caretakers quite unnecessary.

If, as it may be suggested, that we hungry squatters—as we are often termed—did now and then purloin a drink of water, there would not be much to dread on that score, as we could be held in check, if necessary, by the infliction of a heavy penalty for so cribbing from the Government tanks. The fencing in of large paddocks at these tanks is quite useless and heavy expenditure. What are they required for, and who benefits by them?

I will point out to you the danger travelling stock are in by having to trust to the elaborately constructed tanks. Supposing a large mob of sheep should come along during one of our very hot bursts (which we are very subject to in our district) and the engine or pump went wrong, the sheep must die, as the batter in the tank is so steep that they dare not be allowed in or they would no doubt smother.

When in Sydney, during the time Mr. Abbott was in office, I waited on him, also on Mr. Bennett and, I think, Mr. Wood. I was introduced by my late lamented and great friend, the Hon. W. A. Brodribb, also by Mr. Quin. I wished to be allowed to make a tank and dam at the J K waterhole on this run (Wonnaminta), on the proclaimed reserve, for which I wished to be paid by the Government at the rate of 6d. per yard, the Government Inspector to measure and pass the work; and to dispense with fencing and leave the whole thing open to my stock and the public—the paddock is a small one, and seldom has more than 5,000 sheep in, so that I could have little idea of monopolizing the lion's share of the water. Mr. Bennett read some telegrams from the then Inspector—I do not know who he was—condemning the proposal, and there the matter ended, but unfortunately not so the expense. Since then, I do not know at whose suggestion, an expensive and wholly useless well has been sunk, and close beside a good creek too, this same J K Creek, one that is seldom dry.

I was never an advocate for wells for travelling stock for many reasons. They are an expensive mistake, except of course in artesian country. I am writing now of our own district.

I do not know who chose the sites for the wells at J K and Mena Murtee Plain. The latter is also beside a permanent waterhole and will never be used.

There are other departments in which I could point out a great and useless expenditure of money, in my opinion, quite unnecessary. Among such large numbers who advocate the rabbit-proof fencing, I am almost afraid to speak of the matter, but I can't help saying I am not an enthusiast in that way. It requires great consideration before attempting such a gigantic scheme. One hour's tropical rain will destroy scores of miles in hilly country, and rabbits will get over and be put over. My idea is that disease is our only hope of eradicating or checking them.—

Hoping that the importance of the matter dealt with in this somewhat lengthy letter will be accepted as sufficient excuse for my occupying your valuable time,—

I am, &c.,

The Honorable F. Abigail, M.P.

R. H. KENNEDY.

P.S.—No work has been done at the J K Waterhole (by the Government) of any sort, except the well.

Sir,

Sir,

Wonnaminta Station, N.S.W., 3 January, 1888.

P.W.P.,
88-214.

In my letter of last week I suggested that large stock should be allowed to drink at the ends of the tanks. This will be argued against, and justly so, on the ground that stock will cut up the ends and make them boggy. I have been considering the matter, and beg to propose the following:—That a long line of good troughing be erected at each tank, and a inch McComas lift be put up, to be worked by hand. (If a large lift is substituted and a horse-power used, there will be no end of smashes by people using horses unused to the work.) Let every party pump water for their own stock. I would have a caretaker for every five tanks. He could live at one, and have two on either side of him. He could attend to the pumps, and see that everything was kept in order. Travellers would of course water their stock free of charge. But is not that far more economical than the present system, which cannot possibly be of any benefit in the shape of revenue (I should say quite the reverse)? My proposal of one caretaker to five tanks saves, in wages alone, £600 per annum. A good yard would be required to each tank, so that sheep might not be allowed to go to water in too large mobs, as it is well known that the smaller the mob allowed at the water at one time the less they go in.

I have, &c.,

G. H. KENNEDY.

This should perhaps be included among the printed papers for the Parliamentary return. The Under Secretary.—H.G., 19/1/88. Submitted.—H.W., 19/1/88. Approved.—F.A., 20/1/88.

Report by the Chief Inspector, Tanks and Wells on the Youhl Plain Tank.

Sir,

Ivanhoe, 7/9/80.

I have the honor to report, for your information, that on the 26th ultimo I made a careful inspection of the Youhl Plain Tank on the Balranald Road. Tanks & Wells,
80-198.

Construction.—The tank is a four-sided embankment surrounding the excavation, the latter containing at present about 6 feet of water.

Horse-power.—The horse-power requires relaying on substantial bed-pieces, trueing up, and centring with the belt-pulley at the pump.

The pump platform is too slight and insecure to resist the swaying and strain of the great length of belting, and will need staying and cross-bracing before it can be used. Belt-carriers require fitting on the platform.

Belting.—The belt belonging to this work has been left for protection at Byrne's public-house by the District Road Superintendent. I did not ascertain this until too late to measure it; but I am led to suppose that the same error has been committed as at the Til Til Tank.

Cattle-troughing.—A rough board V trough, less than 6 inches deep, is all the provision made to supply the cattle-troughing. About 50 feet of iron piping will be necessary to complete it.

Inlet Pipe.—I would strongly urge the same provision for this tank as I have done at the Til Til Tank.

Drains.—The drains require some alterations in places, and want cleaning and widening throughout Ditch.—The ditch to be filled in as advised at the Til Til Tank.

Silt Tank.—There is still water in the silt tank; and I gave instructions to the caretaker to allow people in want of it to use what they require.

HARRY GILLIAT.

Youhl Plain Tank.

Extract from Mr. Inspector Gilliat's Letter on Youhl Plain Tank of 20 September, 1881.

Mr. Overseer Hansen reports to me that the late rains have filled the Youhl Plain Tank. As this work has not, to my knowledge, ever before held more than 6 or 7 feet of water, the report is satisfactory evidence of the value of the alterations sanctioned by the Secretary for Mines. Tanks & Wells,
81-590.

* * * * *

Extract from Public Watering Places., 86-1,412.

Report by Mr. Overseer McLeod on Youhl Plain Tank.

Balranald, 19 March, 1886.

W.P.,
86-1,630.

Unfortunately this tank has been placed in a very bad position, both as regards the porous ground over which the drains have to be taken and the very small watershed. I have, on former occasions, recommended that another silt tank be put down at the northern end of the tank. If this was done, it would greatly assist in securing a supply of water.

Had the Youhl Plain Tank been put down 1 mile nearer Hatfield, where there is a splendid catching place, any amount of water could have been secured.

J. McLEOD,

Overseer, Public Watering Places.

This may perhaps be forwarded to the Commissioner and Engineer for Roads.—H.G., 13/4/86. The Under Secretary for Mines. Approved.—H.W., 14/4/86. The Under Secretary for Works, B.C., 15/4/86.

Mr. McLeod made a similar complaint and recommendation in November last, and Mr. Stillwell reported that the existing works would fully meet the case if the caretaker paid proper attention to drains.—A.P.W., 24/4/86.

This reply might be sent to Mines Department. This is the second complaint of the same character on this work—both without foundation.—W.C.B., 22/4/86. Under Secretary for Mines.

Box Creek Tank.

Extract from Inspector Gilliat's Report upon Box Creek Tank.

Ivanhoe, 7 September, 1880.

The site is an injudicious one, but the tank would have probably collected water but for the position of the inlet pipe, which is 3 feet some inches above the level of the water in the silt tank. Tanks & Wells,
80-199.
Original, with
flaming paper

The drains laid out are extensive, and I am of opinion insufficient to collect the drainage of the neighbourhood. Should they prove insufficient when the inlet pipe is enlarged and lowered, I would suggest that a line of levels should be run from the better holding ground up the creek to ascertain if a dam

dam could not be constructed at some point across the creek, where a sufficient head of water could be stored to fill the tank by means of a drain. I am of opinion this could be done, but cannot be certain until I have taken an instrument over it.

* * * * *

The creek changes the character of its bed very greatly below the site of the Government Tank, and both above and below the inn there was a good supply of water at the time of my visit.

H. GILLIAT.

Clare Tank.

Extract from Public Watering Places, 87-5,950. Report by Mr. Overseer Proctor for September, 1887, on the Clare Tank.

Ivanhoe District, 1 November, 1887.

P.W.P.,
87-6,605.

This tank is entirely surrounded by water, which extends beyond the boundary of the reserve on to the road and stock route. At present travelling stock water on the road within 100 yards of the tank. I should be glad to know if the caretaker can charge for this water, as it is a portion of the reserve swamp, and is on the travelling stock reserve?

E. W. PROCTOR.

Booororban Tank.

Extract from Public Watering Places, 87-5,944. Report A, by Mr. Overseer Keighran, for November 1887, on the Booororban Tank.

Hay District, 8 November, 1887.

P.W.P.,
87-6,617

I have no remarks to make further than that I consider the site chosen for this tank was bad, being situated or excavated in a swamp, and too close to the Pine Ridge Creek, which holds water for a considerable length of time. Nor do I see what benefit there is in having these large embankments; they are very expensive to construct, and no earthly use, unless there was an engine to pump it full of water.

J. A. KEIGHRAN.

Dry Lake Tank.

Extract from Mr. Gilliat's Report on Water Supply for Mount Brown Road, 17th April, 1882.

P.W.P.,
85-3,630.
Copy of report,
with Tarella
Tank papers.

There is a public-house here kept by a Mr. G. T. Smith, who has three small tanks, with a total capacity of 7,670 cubic yards on his selection of 640 acres. Smith has also sunk a well that yields, so he informed me, a good supply of fair stock water.

Dry Lake.—There is a water reserve of some 3,200 acres, and a capital site for a tank if it is ever required. For the present Smith has gone to a good deal of expense to provide water for the supply of travellers and stock; and I would suggest that, so long as his charges are reasonable, it appears unnecessary for the Department to incur the expense of a work here.

The following works I consider of immediate importance to keep communication open:—

1st. A well half-way between Wilcannia and Dry Lake, with a reserve of 640 acres, say, 9 miles from Wilcannia.

2nd. A well 13 miles beyond the Dry Lake, on one of the Box Flats, with a reserve of 640 acres, say 31 miles from Wilcannia.

H. GILLIAT.

Extract from Mr. Tully's Report on Public Watering Places in course of construction from Wilcannia to Tibbooburra.

2. Dry Lake Tank is 15 feet under water.

M. J. C. TULLY.

P.W.P.,
85-3,630.
With Tarella
Tank papers.

Cobham Lake Tank.

Extract from Mr. Gilliat's Report on Water Supply for Mount Brown Road, 17th April, 1882.

Cobham Lake was dry with exception of a small hole at the mouth of the Evelyn Creek, and this was so foul that cattle or horses who drank it died very shortly. My horses had to be sent 5 miles to the Wash Pool, a magnificent hole 300 yards long, and still 5 or 6 feet deep in the Evelyn Creek.

* * * * *

I do not consider that Cobham holes can be regarded as a source of water supply, as it may remain for long periods unfilled, and when filled, must become brackish after a short time. I have, therefore, to recommend that a shaft be sunk about 1 mile south from the public-house.

* * * * *

6. A well 1 mile south from the public-house at Lake Cobham.

H. GILLIAT.

Extract from Mr. Tully's Report on Public Watering Places in course of construction, Road from Wilcannia to Tibbooburra.

Cobham Lake Tank.

Many feet under water.

Extract

P.W.P.,
85-3,630.
With Tarella
Tank papers

Extract from Mr. Overseer Keighran's report upon Roto Well for November, 1887.

In accordance with the Chief Inspector of Public Watering Places instructions, I prosecuted the lessee, Mr. Evan Evans, under section 13 of the Public Watering Places Act, for not having a man residing in the immediate neighbourhood of the well, and although I proved my case it was dismissed by the Bench of Magistrates then sitting, on the ground that the well was not required, it being situated alongside the Willandra Creek, on which there was a large dam of water which was open to the travelling public free of charge, and that it would be persecuting the lessee by compelling him to pay and keep a man there to do nothing. The Police Magistrate remarking that this decision must not be taken as a precedent at other wells or tanks where water was required.

P.W.P.,
87-6,599.

Roto Well.

J. A. KEIGHRAN.

Telegram from Jas. Cotton, Overseer, Public Tanks and Wells, Cobar, to The Inspector, Public Tanks and Wells.

Cobar, 31 January, 1885.

Recent rains have done serious damage to tanks. Kerrigundi: half the embankment, trough, service tank, and fencing displaced. Booroondarra: fence round silt tank washed away. Cuttygullaroo: portion of embankment washed away.

Tanks & Wells,
85-164.

JAMES COTTON.

The Under Secretary for Public Works.—H.W., B.C., 14/2/85. Roads.—J.R., B.C., 17/2/85. Mr. Hilcs,—Let me have papers.—W.C.B., 18/2/85. Mr. Wood, on his return.—W.C.B., 19/2/85.

At Kerrigundi very little damage has been done, considering that the creek in which the tank is made had to carry off a 5-inch rainfall in one night. The embankments can be repaired for £20. The work will soon be in order and ready to hand over. Booroondarra is all right, and Cuttygullaroo could have all repairs effected in less time than is taken to correspond about it.—A.P.W., 6/3/85.

Under Secretary.—W.C.B., B.C., 6/3/85. Forward to Mines. Under Secretary for Mines.—J.R., B.C., 10/3/85. Mr. Gilliat.—A.B., B.C., 13/3/85. It is the overseer's duty to report these damages. I think, therefore, Mr. Wood's remark is undesirable. By arrangement with the Department of Public Works, especially insisted upon by them, all repairs must be made by their officers. Mr. Wood is consequently inconsistent.—H.G., B.C., 20/3/85.

Kerrigundi Station, 16 October, 1886.

On taking over the Government tank here I found that a considerable amount of work required to be done before the tank, &c., could be passed as in a fair state of repair, all the improvements having suffered very much from the late rains. I consider the embankment in a most precarious state, and liable to considerable if not total destruction in the event of another flood on the creek in its present state. The south corner is very much washed away, and if not protected with stone the evil will be greatly increased after each rain.

P.W.P.,
86-5,165.

An embankment is required at the north corner to be carried out to the high ground to prevent the water running round on that side and washing away the earth from about the troughing, service tank, and pumping machinery. The troughing now requires banking up and the fencing there altered. At present it is a two-rail fence on one side and one-rail on the other. These fences make it a most awkward watering place—indeed stock cannot water there with any degree of comfort or in a reasonable time, and many of the sheep and cattle taken there leave without having obtained a drink. Every drover complains of this matter, and would sooner pay twice the charge to be permitted to water at the station tanks. This evil can be easily remedied by supplying iron stanchions for the troughing, and if these are furnished I will make the necessary alteration without any further expense to the Department. The pumping machinery requires banking round or elevating to prevent flood waters rising over it, and a small iron shed to protect it from the weather. This latter I would also erect free of charge if the necessary iron were supplied. The embankment is flat on the top, and at each rain the water collected on it washes great gutters down the side injuring the works and necessitating a considerable outlay for repairs. I would suggest the advisability of rounding off the top of the embankments or putting drains on the inner side with wooden or galvanized iron flumes down the corners to carry the water into the tank.

If an extra pipe were attached to the pump, the water from the supply tank could be pumped over the embankment, and thus store a very large quantity which at present goes to waste.

There is no caretaker's residence, though I notice that tenders were on several occasions called for the erection of one. I could easily get this matter attended to, and carried out in accordance with the specifications, if allowed a fair price for the work. I would even, for my own sake, get it done for less than if contracted for in the ordinary way. The paddock is very small, and a large proportion of it is frequently under water. May I request that a little more of the reserve be enclosed. Two short lines at a small outlay would be sufficient. Trusting that these matters may receive your favourable consideration.

I am, &c.,

JAMES RAMSAY.

The Chief Inspector, Public Watering Places.

A copy of Mr. Ramsay's letter, with extract from Mr. Boulton's report, may I think be forwarded to the Works Department, with a request that the necessary action may be taken to protect the tank.—H.G., 10/11/86. The Under Secretary for Mines. Submitted for approval.—H.W., 25/11/86. Approved.—J.F., 26/11/86. Forward copy to Works and inform Mr. Ramsay.—E.W., 26/11/86. Copy to Works, and Mr. Ramsay informed.—1/12/86. Mr. Cotton may be asked by memo. if any steps have been taken by the Works.—H.G., 7/2/87. Asked.—J.W.B., 8/2/87.

Extract

Extract from Mr. Overseer's Cotton report on Kerrigundi Tank, January, 1887 (87-554).

P. W. P.,
87-659.

I again beg to urge the necessity for the alterations suggested in my last report upon the tank. The wing embankment is necessary to protect the troughing and engine from injury by flood water, and the storm bye-wash is required to prevent more of the embankment being washed away.
JAMES COTTON.

This case has been referred to the Works Department, but no reply received as yet.—H.G., B.C., 16/2/87. Mr. Cotton,—Mr. A. Adam, the local Road Superintendent, informs me that tenders have been recommended for acceptance, and that the work will probably be commenced in a few days.—JAMES COTTON, Overseer, Public Watering Places, Cobar, 1/3/87.

Minute by Chief Inspector, Tanks and Wells.

Sydney, 8 February, 1887.

P. W. P.,
87-669.

KINDLY inform me whether any repairs have been commenced or completed at the Kerrigundi Tank since Mr. Ramsay took delivery from you?

H. GILLIAT.

Mr. Overseer Cotton.

I inspected Kerrigundi Tank on the 1st instant. No repairs had been commenced then, and I am of opinion none have been commenced since.—JAMES COTTON, Overseer, Public Watering Places. Cobar, 12/2/87.

The Department of Works may perhaps be asked if it is proposed to undertake these repairs at an early date.—H.G., 23/3/87. The Under Secretary. Approved.—H.W., 28/3/87. Letter to Under Secretary for Works, 30/3/87.

Sir,

Department of Mines, Sydney, 30 March, 1887.

Referring to my letter of the 1st December last, re repairs, &c., required at Kerrigundi tank, I have the honor to request that you will be good enough to inform me if it is proposed to undertake these repairs at an early date.

I have, &c.,

HARRIE WOOD,

Under Secretary.

The Under Secretary for Public Works.

Roads.—J.R., B.C., 5/4/87. Mr. Scott.—Any information?—W.C.B., 6/4/87. Mr. Adam reports, 5/3/87, that work will be completed in two or three weeks. Papers, S7-213, herewith.—D.M.P.S., 6/4/87. The works this day reported as complete. The Under Secretary, for transmission to Mines.—W.C.B., 6/4/87. The Under Secretary for Mines.—J.R., 12/4/87. Inform Mr. Cotton, and ask him to inspect and forward a full report.—H.G., 15/4/87. Mr. Cotton, 21/4/87.

Extract from Report for March, 1887, of Mr. Adam, Road Superintendent.

P. W. P.
87-1,757

The repairs to Kerrigundah Tank, Louth Road, and Wicklow Tank, Nymagee-Nyngan Road, have just been completed.

A. ADAM,

Road Superintendent.

Under Secretary, for transmission to Mines.—W.C.B., 15/4/87. The Under Secretary for Mines.—J.R., B.C., 16/4/87. Mr. Cotton, for report.—J.W.B. (for H.G.), B.C., 20/4/87.

23 May, 1887.

I HAVE inspected the Kerrigundah Tank, and find the wing embankment on the north side of the tank, and the stone bye-wash on the south side completed in a satisfactory manner. The damage to the earthwork along the troughing has also been repaired.

The works, I think, are now secure from damage by ordinary floods.

JAMES COTTON,

Overseer, Public Watering Places.

The Chief Inspector of Public Watering Places.

Report by Mr. Road-Inspector Adam, for the month of March, 1887.

Sir,

4 March, 1887.

I forward you herewith usual monthly report:—

During the month a good deal of rain has fallen, particularly between Cobar and Nyngan and Nymagee and Nyngan, and the roads are in a bad state.*

Some of the teams have been a month on the road, and the mail coach is from twelve to twenty-four hours late every trip.

All the tanks in the district are full of water.†

The repairs to Kerrigundah Tank, Louth Road, and Wicklow Tank, Nymagee-Nyngan Road, have just been completed. About twenty weathersheds over steam pumps in my district were let a short time ago, but the contractor has been delayed very much, owing to the state of the roads preventing the timber and iron required being forwarded. It is now on the ground at most of the tanks.‡

Reports on road clearing contracts and tanks are attached.

ALEXANDER ADAM.

Advise Mines, 14/5/87.

Report

* Cannot be otherwise, railway cheapest road here.—W.C.B. Noted, A.A., 11/7/87.

† Push on this work as much as possible.—W.C.B.

‡ Good, keep them so. Are the

Report by Acting Inspector J. W. Boulton, on the Kerrigundi Tank or Dam, road from Louth to Cobar, in charge of Edward Kevan, for 29th June, 1886.

State of drains.—None.
 Silt tank.—Nearly full; was cleaned 10 months ago; is not likely to have much silt in.
 Inlet or flume.—An iron one; in capital order, but a grating is required; I understand it got choked some time ago.
 Main tank.—In good order.
 Embankments.—In fair order; slightly guttered by late rains. (See remarks and recommendations.)

P. W. P.
86-3,329

Watering Appliances.

State of supply tank.—In good order.
 Troughing.—Good, newly banked up; several posts in fence split; hoop-iron bands required.
 Machinery.—A 4-horse power Tangye, in good order, painted red (see separate memo.); wants tarring; new leathers and packing lately supplied and adjusted.

Paddocks and Fencing.

State of fencing.—Good.
 State of gates.—Good.
 Remarks.—This caretaker is to take service with Mr. Ramsay, the new lessee of this tank.

Weekly Depth of Water since last Report.

Tank full.

Caretaker's Work.

Work done by caretaker.—Making new bank to assist bye-wash.
 Work laid out for caretaker.—To tar engine, make up gutters in embankment, and make drain along top of same.

Remarks and recommendations.—This tank has been placed in the full force of a strong watercourse, and has been greatly damaged; troughs were carried quite away, supply tanks moved, and embankments damaged. This was before transfer by Works. The same is likely to occur again. The main bye-wash sweeps round the south and east of tank, and, at that corner, some of the bank has washed away. It has been done up by caretaker; but a permanent work of brush and stones is required to protect it. On the other side of the tank a storm channel has been cut to assist, but it is too small, I am afraid, to be of any benefit. The floods that did the damage, I am told, almost covered the tank banks. The soil that was used to make up the ground at troughs has been excavated broadside on, and in close proximity to troughs, occupying a considerable portion of the watering place area with what will, when nearly dry, be a bog and trap for sheep. It is now full. This work was, I believe, done by Works officer.

JAMES W. BOULTBEE,

Cobar, 2nd July, 1886.

Inspector of Public Watering Places.

Report by James Cotton, Overseer, Public Watering Places, on the Kerrigundi Tank, road from Cobar to Louth, in charge of Edward Kevan, caretaker, for the period ending 2nd September, 1886.

P. W. P.,
86-4,256.

State of drains.—No drains.
 Silt tank.—Not visible.
 Inlet or flume.—Under water; apparently in good order.
 Main tank.—Under water; apparently in good order.
 Embankments.—Damaged to a considerable extent by flood water. Will require about 200 loads of stone at the south corner of the embankment to form a bye-wash and prevent further cutting, and a wing embankment on the north of about 4,000 yards of earth to protect the troughing and machinery and throw all the water round the south side.

Watering Appliances.

State of supply tank.—In good order.
 Troughing.—Slightly damaged by the flood; the banking-up recently completed by the Department of Works is now washed away.
 Machinery.—In good order.

Paddocks and Fencing.

State of fencing.—Damaged to a considerable extent by the flood water; has now been repaired by the caretaker.
 State of gates.—In good order.
 Remarks.—About quarter of the fenced paddock is at present under water.

Rates

Rates collected since last Report.

I have checked the caretaker's books to date, and find them correct.

Weekly depth of water since last Report.

Twenty-one feet.

Caretaker's Work.

Work done by caretaker.—Trimming embankment, painting and tarring machinery, repairing damage done to fencing by flood-water.

Work laid out for caretaker.—Continue trimming embankment and make further repairs to fences.

Remarks and recommendations.—Referring to the foregoing report, and the sketch herewith, I beg to point out that flood-water runs now on both sides of the tank, but the greater portion on the south side. The water flowing round the north side damages the troughing, fences, and the engine. This should not be, and I now beg to recommend that a wing embankment be made, as shown in the accompanying sketch, and that a bye-wash, built of loose stones, be constructed at the southern corner of the embankment. I consider these works absolutely necessary for the safety of the watering place, and I do not think anything less would have the effect of preventing damage. The troughs also require banking up with gravel before they will be available for watering any number of stock.

This tank was handed over to Mr. James Ramsay, lessee, on 3rd September, 1886.

JAMES COTTON,
Overseer of Public Watering Places.

Cobar, 2nd September, 1886.
The Chief Inspector of Public Watering Places.

Anticipating a reorganization in repairs and alterations at public watering places, and in view of the Department of Public Works having, in various instances, stated that funds are not available for services asked by this Department, it appears that no adequate end would be obtained by asking for the costly alterations that are required at present to put this tank in good repair. This applies also to your minute on Booroondarra tank.—HARRY GILLIAT, Chief Inspector of Public Watering Places.

Mr. Overseer Cotton.—B.C., 15/9/86. Noted.—JAMES COTTON, Overseer of Public Watering Places, 27/9/86.

P.W.P.,
68-331.

Report by Acting-Inspector J. W. Boulton, on the Booroondarra Tank, road from Louth to Cobar, in charge of H. Elton, caretaker, for 29th June, 1886.

State of drains.—Require cleaning. (See note in remarks and recommendations.)

Silt tank.—Almost full of spuey drift; will be months before dry enough to clean.

Inlet or flume.—Silted; but too much water to clean it out; approach to flume has been pitched with rubble, and bank is worn each side of this; it should be stoned or stubbed.

Main tank.—Not visible.

Embankments.—Good; gutters newly filled in.

Watering Appliances.

State of supply tank.—Slight leak; lately tarred.

Troughing.—Good; earth carried from under them by flood; rails, &c., want tar.

Machinery.—A 4-horse-power Tangye, newly painted, and in capital order; there is, however, a slight leak at the cylinder, owing to the use of a too small bolt; it can be remedied at once.

Paddocks and Fencing.

State of fencing.—Good and new.

State of gates.—Good.

Remarks.—Caretaker is a married man; he is, however, going to take the charge of this place for Mr. Ramsay, the new lessee.

Weekly depth of water since last report.—Tank quite full. This is a very rapid and good catch.

Caretaker's

Caretaker's Work.

Work done by caretaker,—Painting appliances, repairing embankments, and cleaning drains.

Work laid out for caretaker.—To clean drains, tar troughs, and clean flume and silt tank when possible.

Remarks and recommendations.—This is a very good and quick catch. Two long drains converge at the tank from each side of the catchment. No bye-wash has been provided, and the banks on the low side of the drain have been carried away about a chain from silt tank, and the water has flowed broadside on to troughs and swept over and under them. Caretaker pointed out to me site proposed by Works officer for bye-wash. I am of opinion it will be simply useless, as the ground (without taking levels) appears to me to be higher than top of drain embankment on other side. The approach to tank from the Cobar side is very inconvenient, and the tenant's lease paddock is divided into two parts (see sketch), and small consideration shown to the requirements of the lessee of the run, Wuttagoona.

JAMES W. BOULTBEE,

Inspector of Public Watering Places.

The Chief Inspector of Public Watering Places.

Cobar, 2nd July, 1886.

Sir,

11 October, 1886.

Allow me to call your attention to the state of the Booroondarra Tank.

1. The surface of the embankment is table-topped, and at every fall of rain collects a quantity of water. This water runs down and washes deep gutters in the embankment, entailing a considerable amount of expense for repairs. I should beg to suggest the advisability of either rounding the top or forming a drain on the inner side, with two wooden or iron shoots at opposite corners to convey the water into the tank. A portion of the drains are silted up and banks washed away, and owing to the steepness of these drains the same thing will occur at any heavy fall of rain.

P.W.P.,
86-5,163.

2. Silt tank is also nearly full of silt.

3. A drain and bank is required to protect pumping machinery and troughing.

4. There is no caretaker's residence (man now in charge living in a bark humpy). The purchase of the said tank was made with the understanding that a good weatherboard four-roomed cottage would be erected for caretaker.

5. One of the two small paddocks is nearly covered with water and perfectly useless at present, and as soon as the paddocks become dry enough to put stock in, there will be no water in either of them for animals to drink, entailing the expense of bringing any stock placed in them to the troughs twice a day. This may be easily obviated by supplying a few lengths of 1 inch or 1½ inch piping, and two small troughs—one for each paddock.

6. I would also beg that the balance of the 640 acres leased with the tank be fenced in, as it is of no value at present.

7. The troughing is now protected by a low railing on one side and a two-rail fence on the opposite, making it a most difficult and dangerous place for stock to water. Many sheep either go away without getting a drink or jump into the trough, fall down, and pollute the water. Cattle walk into it, endangering the safety of the troughing; and, when very thirsty, occasionally throw one or more beasts on their backs in the trough. This invariably frightens all the stock away, and when the troughing has been again cleared it is with the utmost difficulty that they can be brought back to water. Each drover complains most grievously of this very awkward arrangement.

If the iron supports were supplied to make the ordinary guard, the timber now there is sufficient to make the necessary alterations, which could be done at a trifling expense. The ground near the troughing requires banking up.

8. There is no gauge in the tank to show the quantity of water there, and the report of the caretaker is mere guess-work.

9. A shed is also required to protect pump and engine, and a gauge to record the fall of rain would be an advantage.

The Chief Inspector of Public Watering Places.

JAMES RAMSAY.

Mr. Cotton for report.—H.G., B.C., 11/11/86.

Report by James Cotton, Overseer, Public Watering Places, Cobar District, on Booroondarra Tank.

19 November, 1886.

REFERRING to the attached papers and your minute requesting my report, I have now the honor to report as follows:—

P.W.P.,
86-5,463.

1st. This embankment requires no more than the average attention required to keep the embankments at the tanks in the district in repair.

2nd. The fact of the silt tank being nearly silted up, I think, was mentioned in my last report on this tank, and the reason I gave for its being so was the steepness of the drains, causing them to cut, and, in the rapid flowing of the water, the silt is carried down with it.

3rd. The protecting drain and embankment has been previously recommended by me.

4th. Nothing appears either in the notification of the sales of lease, or in the lease itself, referring to the erection of a residence for the caretaker.

5th. Perhaps as the gates into each paddock are in the immediate vicinity of the troughing, the lessee will not find the inconvenience he anticipates in watering his stock.

6th. This is a very difficult matter for me to express an opinion upon. The notification of the area enclosed, or to be enclosed, seems vague, and as the land leased at the tank comprises 640 acres, it may be interpreted that 640 acres are to be enclosed.

7th. The lessee's idea of a rail down the centre of the troughing, over the water, has been previously recommended by me at other watering places, and I think it would be an improvement.

8th. As I do not think the supply of water will ever run so short as to render the exact measurement of any public value, perhaps the caretaker's estimates are sufficient, and the expense of a gauge unnecessary.

9th. The erection of sheds to protect the machinery from the weather, I think, would be a justifiable expense.

The Chief Inspector, Public Watering Places.

JAMES COTTON,
Overseer, Public Watering Places.

XXXVII.

Papers *re* Tone of Correspondence.

Brolgan Creek Pump.

Extracts from Public Watering Places, 86-3,389:—Report by Mr. Overseer Dowling on Brolgan Creek Tank.

Forbes, 31 July, 1886.

P.W.P.,
86-3,389.

Machinery.—The engine has been worked to fill supply-tank, but the injector does not work satisfactorily. I have had it taken to pieces and cleaned, and since I hear it is working freer. The tank being low, more or less mud is bound to accumulate.

General remarks.—When the engine was taken over there was no means of testing the pumping-gear. The pipe into the main tank was placed too near the bottom.

W. G. DOWLING.

Telegram from Mr. Overseer Dowling to The Chief Inspector of Public Watering Places.

Forbes, 9 November, 1886.

P.W.P.,
86-5,257.

Piston-rod of steam pump, Brolgan Tank, out of order; will require screw-wrench, perhaps a man; wire to Parkes, McLean's hotel, Thursday; letter to follow.

W. G. DOWLING.

Telegram from The Chief Inspector of Public Watering Places to Mr. Overseer Dowling.

Sydney, 12 September, 1886.

Get repairs made without delay, and report fully upon matter.

HARRY GILLIAT,
Chief Inspector, Public Watering Places.

Sir,

Brolgan Creek Tank, 8 November, 1886.

P.W.P.,
86-5,317.

I have the honor to inform you that, after having raised the end of suction pipe, I got up steam to pump, but found the piston rod would not move. Then took out the steam valves and cleaned them, thinking that they might have become corroded from disuse, but they were in very good order. Then tried with steam up to 40 pounds, but still piston rod would not move. Then took off steam chest and examined it, and cannot see anything that would cause a stoppage. As a great deal of water comes from the pet-cocks, the exhaust pipe may have something to do with it. I endeavoured to make an examination, and had to give it up for want of a spanner or wrench to fit that part or end of steam cylinder that is close to the visible portion of piston-rod. The nuts are too close to the floor for the "clyburn" to be of any use, or I could manage to take it off, and so get at the exhaust pipe.

Please give the matter your earliest consideration, and instruct me accordingly. The bye-wash appears to work very well now, although the pump end of margin is still under water, and I believe always will be while the tank is full, because the land lies lower there than elsewhere.

If I could take off steam cylinder the stoppage would perhaps be found out and pumping gone on with, which I am very anxious about, on account of having plenty of water ready when wanted.

I have, &c.,

Mr. Overseer Dowling.

CORNELIUS O'BRIEN.

Sir,

Stock Office, Forbes, 9 November, 1886.

I have the honor to inform you that the piston-rod of steam pump sticks, and with 40 pounds steam up will not move. I fancy it is not well packed. I am starting out in the morning, and will see what I can do. If I do not succeed in getting it to work I will let you know at once. In my instructions there is no mention of a screw-wrench—only shifting spanner; this is required. I will apply in the regular form.

You will be pleased to hear that bye-wash, which I have had widened by the caretaker, acts well, and is equal to the overflow. The recent heavy rains proved it.

I have, &c.,

The Chief Inspector of Public Watering Places.

W. G. DOWLING.

Telegram from Mr. Overseer Dowling to The Chief Inspector of Public Watering Places.

Forbes, 12 November, 1886.

P.W.P.,
86-5,343.

STEAM pump will not work. Report next post.

W. G. DOWLING.

A copy of this may perhaps be forwarded to the Commissioner for Roads.—H.G., 16/11/86. The Under Secretary for Mines. Approved.—H.W., 16/11/86.

Sir,

Sir,

Stock Office, Forbes, 13 November, 1886.
I have the honor to inform you that I have been out to the Brolgan Creek Tank, but am sorry to state I am unable to get the piston rod to work. I think it has been caused by the foundation of the boiler settling down a little. However, I will send a man out who understands engine work, and report fully on work when repaired.

P.W.P.,
86-5,354.

I have, &c.,

W. G. DOWLING,
Overseer, Public Watering Places.

The Chief Inspector of Public Watering Places.

Sir,

Department of Mines, Sydney, 16 November, 1886.
I have the honor to forward herewith, for the Commissioner and Engineer for Roads and Bridges, copy of reports *re* steam pump at Brolgan Creek Tank being unworkable, and request that you will be good enough to have the necessary action taken.

P.W.P.,
86-5,469!

I have, &c.,

HARRIE WOOD,
Under Secretary.

The Under Secretary for Public Works.

[Enclosures.—Copies of Public Watering Places, 86-5,343 and 86-5,354.]

Mr. Wood. Very urgent.—W.C.B., 17/11/86.

It is a great pity that the officers engaged by the Mines to inspect these works and report on their maintenance, &c., do not know a little more of the very simple mechanical details of the pumps that have been provided. There is very little doubt that if the pump will not work it is due to carelessness in not keeping it in order and properly lubricated. Last trip I made, the same complaints were made in regard to two of the steam pumps, which I had to take to pieces and clean myself, the caretakers being incapable of giving any practical assistance. In both these cases gross carelessness was the cause. Mr. Dowling's idea that it is due to a settlement in the foundation plate is absurd. These pumps will work in almost any position if the steam connections are all right. Mr. Dowling's best plan is to take the pump to pieces and have it cleaned and oiled; but before doing so he should be certain that he will be able to put the parts together again. Before these works were handed over to the Mines, such complaints were unknown, and should not be made now. It might be well for Mr. Morton to be wired to go out to the work and see that no damage is done to the pump by the Overseer of Public Watering Places efforts to repair.—A.P.W. 17/11/86.

Telegram sent Mr. Morton's successor, Mr. Alexander Adams.—W.C.B., 17/11/86. Under Secretary for transmission to Mines.—W.C.B., 17/11/86. The Under Secretary for Mines.—J.R., B.C., 18/11/87. Forward for Mr. Overseer Dowling's information.—E.W. (for H.G.), B.C., 22/11/86. Noted.—W.G.D., 24/11/86.

Sir,

Stock Office, Forbes, 24 November, 1886.
I have the honor to acknowledge receipt of your communication, No. 5,469. I will report on the state of the engine at Brolgan Creek as soon as I can get out to test it; but having been away for the past eight or nine days, I have a lot of work on hand. I will not leave it later than next week.

P.W.P.,
86-5,503.

Mr. Road-Superintendent Adam has reported on the matter. I hear the engine is working all right. I attach a letter from the man I sent out to repair the works.

I have, &c.,

W. G. DOWLING,
Overseer, Public Watering Places.

P.S.—The cost of repairs will exceed £7. I could not get a man to go out for less.—W.G.D., 24/11/86.

The Chief Inspector of Public Watering Places.

Sir,

Brolgan Creek Tank, 22 November, 1886.
I have the honor to inform you that I have given the steam engine a thorough overhauling, and have taken it all to pieces and given every part a minute examination. It is now perfectly clean, and working well, excepting the injector, which I took into Parkes to-day to have the previous repairs altered. The old cracks in flange are opening, and it is dangerous to work it in that state.

P.W.P.,
86-5,502.

I am of opinion that the engine never was put together properly, and thus causing all the trouble that has been. It has taken a much longer time to overlook than I at first thought, owing to some of the parts being very awkward to get at. I hope to get finished to-morrow.

I have, &c.,

T. BAYLEY.

P.S.—I find that the end of plunger has been greatly cut about by chiseling.
Mr. Overseer Dowling.

Sir,

Brolgan Creek Tank, 22 November, 1886.
I have the honor to inform you that the engine works well now, excepting the injector, the repairs of which have not proved efficient. The old cracks having opened, allow the hot water to escape. Under the advice of the man you sent out, I have taken it to Parkes to the man who did it before to have the job made a better one. I assisted to take it all to pieces, and we have cleaned every portion of the inside. Several parts had to be adjusted (that is, the steam-engine). The day I received your telegram and letter this man had not arrived, so I immediately went into Parkes to try to get someone to come; but fortunately, as it happened, I could not. Found this man had arrived a little before my return, of which I
was

was very glad. This was Thursday, so we started to work upon the engine Friday morning, and have been at it ever since.

Hope to get the injector to work to-morrow. I have the honor to acknowledge receipt of pay voucher forms.

I have, &c.,

CORNELIUS O'BRIEN.

P.S.—I had forgotten to mention that we tried to put on a new bucket on plunger, but found it (that is, the bolt that holds it on) so cut and battered that it was impossible to get it off, therefore had to leave on the old one.

Mr. Overseer Dowling.

Sir,

Brolgan Creek Tank, 22 November, 1886.

I have the honor to inform you that the steam-pump and engine are going well. As leakages occurred, Bayley and myself have broken the joints and remade them, until it is now in good working order. The service tank and troughing are both full. I will for the future get up steam and pump a little every week to prevent it sticking fast. A wrench is required for the sludge cock, for the clyburn which I have been using will wear the square edge of the tap quite round in time. I would remind you that if occasion required that I should have to take the engine to pieces again, I have not proper sized spanners to do it with.

I have, &c.,

CORNELIUS O'BRIEN.

Mr. Overseer Dowling.

Sir,

Stock Office, Forbes, 6 December, 1886.

P.W.P.,
86-5,651.

I have the honor to send in a report on the engine at Brolgan Creek Tank. The cause of the stoppage was not with the pump but with the steam gear. Herewith you will find a statement attached, made by the man I sent out. This man was recommended to me as being a thoroughly competent man in his trade, and everyone states who has employed him that he has given satisfaction. I made these inquiries previous to sending him, as it was no use sending out an incompetent man, and then have the work to do all over again.

The man who put the engine together was named Pye, but I do not think he was a good tradesman. The injector pipe which Bayley states had been put right before he went there; this pipe was put the wrong end to the engine, which I put right, so as to fill the boiler. I trust the Department has not been inconvenienced in any way, and am sorry there was no water to test the whole thing when the works were taken over.

I have, &c.,

W. G. DOWLING,

Overseer, Public Watering Places.

The Chief Inspector of Public Watering Places.

Report.

Stock Office, Forbes, 6 December, 1886.

ON the 11th November I visited Brolgan Creek Tank to ascertain the cause of stoppage, as stated in O'Brien's letter of the 8th November.

On careful examination of the pump part of the works, I found that they were all right, so got up steam to 40 lb., but the piston-rod would not move—too much steam escaped. I came to the conclusion that something in the cylinder was the cause.

I thought it best to get someone who thoroughly understood the fittings to repair it. I made strict inquiries if the caretaker had been tampering with it in any way, but I do not think he is to blame in any way. Previously it took always about 30 lb. steam to start with, now it starts with 20 lb.

On the 17th instant I sent Thomas Bayley, an engine fitter at Forbes, out to repair it. He was working at it till the 29th. This includes a trip to Forbes to make a new collar for injector. On the 3rd instant I went out to the tank, got up steam. All the parts worked smoothly and well. I filled the boiler, so the injector is all right now. I believe it is a good job. I think the cause of the stoppage as stated by Thos. Bayley to be correct, as some of the old packing taken out is very badly cut. Everything is now in good working order. The embankment of the tank requires grass seed sowing on it. Attached is correspondence, &c.

I have, &c.,

W. G. DOWLING,

Overseer, Public Watering Places.

The Chief Inspector of Public Watering Places.

Statement by Thomas Bayley, engine-fitter.

Forbes, 6 December, 1886.

THE injector would not act when I went out, which I attribute to the pipe being burred up at the end which had to be screwed.

The coupling plate which screwed on to the boiler was broken, which I had to renew. The packing was badly put in, and extended across the hole, which stopped the water from going in. This must have been done when the boiler was put together. The piston-rod was fast in the cylinder. I do not know the cause. Perhaps it may have not been properly fixed before.

The slide in the steam chest was not level—badly fitted. I believe it had been meddled with by the parties who put it up in the first instance. 15 lb. of steam ought to start it if properly put together. The steam pipe was stopped. The hole was three parts full of packing. When the gutta-percha had been cut in the first instance, it was cut to the size of the hole, so when it was screwed up it had spread, which caused the stoppage.

There was too much packing in between in the top box, which had to be taken out and new joints made right through.

The injector pipe had been put in the wrong way up, which had been altered and put on right before I went there.

I consider the engine is now working well and in good repair, and should last for any length of time.

I believe the cause of the present stoppage due to the works being badly put together at first. I made a new wrought-iron collar and fixed it, for which I charge 10s.

THOMAS BAYLEY.

Boonoonna

Boonoona Tank.

Sir,

Hay, 20 October, 1886.

P.W.P.,
86-5,107.

I visited this tank on the 17th instant, it was then full 2 feet above the ground surface. The pump, a Holman horse-power, had been taken apart by the caretaker, he said six weeks before, and in the interim had remained so, the cylinder plates, nuts, plunger, rod, and standard lying rusted and imbedded in mud on the horse walk. The caretaker explained that as the pump was not throwing a full stream, the same complaint made before Mr. Wood's visit, he had endeavoured to take out the plunger to renew the bucket leathers, but not having proper tools he could not do it, and had been instructed by his overseer to leave it as it was, until I came or sent up. On asking him what tools he required he could not say, and with the appliances I found there I removed the plunger, and had within an hour the pump ready to start work again. A new bucket leather was put on and the pump delivered at the rate of 2,600 gallons an hour with the horse going at a fair walk.

Through the negligence and gross incompetence here displayed, this pump has been quite unnecessarily kept disabled for nearly two months.

Fortunately there was surface water along the road and in the swamp here, and consequently no public loss or inconvenience ensued, but it is this kind of thing which gives rise to the adverse comments respecting appliances at Government Watering Places so frequently made by the press, &c.

A. W. STILLWELL,

The Commissioner for Roads.

P.S.—The fencing of tenant's leases is finished, but the gates not up yet. Gates are now on the way up from Hay.—A.W.S.

The complaints in regard to the way in which the Mines caretakers neglect their work and prejudice our connection with these works are becoming so frequent that in self-defence some action must be taken. During my last trip in the district, I had to find fault, and the attention of the Mines officers was directed to it, with the result that we were informed that the matter had been referred to their local officers and the reports furnished by them—not sent on to us—were satisfactory. Matters are now getting worse, and we shall have a repetition of old evils, unless more care is paid to their duties by these caretakers. They receive good wages and have but little to do—that little should be done well.—A.P.W., 23/10/86.

The old evils mentioned refers to the ruinous condition these wells were allowed to fall into for want of proper control, between their construction and being taken charge of by Mines, when the evils referred to were attributed to faults of construction or neglect of this Department.—W.C.B., 25/10/86.

Under Secretary for transmission to Mines. The Under Secretary for Mines.—J.R., B.C., 27/10/86. Mr. Yeo will report upon this at once.—H.G., B.C., 29/10/86. Copy of Public Watering Places, 86/5,107, B.C. to Mr. Inspector Boulton for report, 1/11/86.

Sir,

Stock Office, Ivanhoe, 1 November, 1886.

P.W.P.,
86-5,215.

Referring to Mr. Stillwell's report on the state of the pump at the Boonoona Tank, I beg to inform you that when I inspected this tank on 16th August last, I had the pump tested and found that it did not work properly, consequently with the assistance of the caretaker the pump was taken to pieces and overhauled, when I discovered that the leathers had quite perished (which I have already reported), and on my arrival in Ivanhoe I forwarded a piece of leather for the caretaker, and instructed the caretaker to repair the pump at once (I distinctly deny having instructed the caretaker to leave it as it was) which can also be seen by reference to the caretaker's journal in which I entered the work for him to perform until I visited the tank again.

I was surprised when Mr. Stillwell informed me after his return from Boonoona Tank that such was the case, but on my next inspection on 19th October last, I found the pump had been repaired and was in working order.

I have, &c.,
J. YEO,

The Chief Inspector of Public Watering Places.

Overseer, Public Watering Places.

Report by Mr. Inspector Boulton to The Chief Inspector of Public Watering Places, upon Mr. Road-Superintendent Stillwell's complaint against caretaker, Boonoona Tank.

Ivanhoe, 27 November, 1886.

P.W.P.,
86-5,546.

REFERRING to the enclosed papers, and more especially to Mr. Stillwell's report upon the negligence of the caretaker at Boonoona Tank, I have the honor to submit a written reply from caretaker Killick, in answer to my queries on the points of Mr. Stillwell's reports.

From what I have been able to gather the facts are as follows:—Killick took charge on August 16th. On the following day, together with Mr. Yeo, he started to overhaul the machinery which, owing to long disuse during the winter months, was out of order. It was found that the bucket leathers were completely perished. They endeavoured to draw the plunger, but it was found to be too firmly bedded and rusted in, and although leather, and the only tool obtainable was sent up, the caretaker was unable to get the plunger out. Mr. Yeo wrote instructions, copy attached, to the caretaker to put the pump right if possible. This he was unable to do, and informed Mr. Yeo who at once wired to Mr. Stillwell for the travelling mechanic, but as he was at Deniliquin he could not be got. The caretaker placed the parts of the pump upon the old wooden cover of the pump and covered them with a bag. He strenuously denies they were rusted or embedded in the mud, a fact Mr. Yeo corroborates.

In this state they remained until Mr. Stillwell visited the tank since, as the caretaker says, it was useless to put the pump up again in an unworkable state. Mr. Stillwell, his groom, and Killick were employed for 20 minutes using great force, and finally, with the aid of a lever, got the plunger free. Mr. Stillwell then directed the caretaker to have the pump in good order by the time he returned next day. Killick informs me he worked until 1 p.m. that night before he had things righted. He also says he has no recollection of Mr. Stillwell asking what tools he required. See the last paragraph of his reply. Mr. Stillwell was aware, for a considerable time before his visit, that this pump was disabled, and must have been aware at the time of making his report of the impossibility of the caretaker removing the plunger

plunger single handed. I think that both Mr. Yeo and the caretaker did all they could to put matters right. I do not think Mr Stillwell will find room for complaint now. Killick is hardworking and anxious to please, and has everything in admirable order at Boonoona. Mr. Yeo reported the pump as out of order to our Department.

The Commissioner for Roads.

JAMES W. BOULTBEE,
Acting Inspector, Public Watering Places.

Extract from instructions written to Mr. Frank Killick, caretaker, Boonoona Tank, Ivanhoe, on 23rd August, 1886.

I have communicated with the travelling mechanic, and it will be impossible for him to be this way for some considerable time, so it will be as well if possible for you to repair the pump yourself.

J. YEO.

Mr. Yeo sent a telegram to Mr. Stillwell, I believe.—J.W.B.

Boonoona Tank.

Sir,

26 November, 1886.

I have the honor to report, in answer to your inquiry *re* pump, that I took charge of Boonoona Tank on the 16th of August. I found the pump in a defective state. I found on taking the pump to pieces that the suckers were entirely perished. On trying to get the plunger out I found that the cylinder was so rusted that I failed to get it out.

The rust I believe was caused by the pump not being worked much during the winter months. I told the overseer who was present at the time, and I asked him to get me a key to unscrew the bottom nuts in the cylinder. He brought me one down from Mount Manara, but I found, on attempting to use it, that it was not long enough in the shank to admit of the end of the rod so the key was useless, and I duly reported the matter to Mr. Yeo, the overseer.

I then placed the parts of machinery on the covering of the pump and covered them with a bag awaiting the arrival of the Roads mechanic. It remained like this from the 17th of August till the arrival of Mr. Stillwell. A day or two previous to his coming we had a shower of rain accompanied with heavy wind which blew the bag off the parts, otherwise the pump machinery was not hurt. I had written instructions from Mr. Yeo to repair the pump if possible, which I found was not. When Mr. Stillwell came it took myself and his groom and himself all we knew to draw the plunger out in twenty minutes. Mr. Stillwell gave me instructions to have the pump in working order by the time he came down, which was next day, and in consequence I had to work till very far into the night to accomplish it. The pump then worked fairly.

The swamp round the tank was full of water at the time, so the travelling public were not inconvenienced, and it was no use putting the pump together as I expected the mechanic. I deny that the pump machinery was lying rusting and covered in sand, and I would respectfully refer this to Mr. Yeo who could confirm what I say.

In reference to Mr. Stillwell asking me what tools I required, I don't recollect him asking any such question, and as I am a mechanic I would have told him if I required any and what they were.

I have, &c.,

FRANK KILLICK.

Mr. J. W. Boulton, Inspector of Public Watering Places.

Ivanhoe, 28 November, 1886.

P.W.P.,
86-5,589.

Report by Acting-Inspector J. W. Boulton on the Boonoona Tank, road from Ivanhoe to Wilcannia; in charge of F. Killick, for 25th November, 1886.

Tank or Dam.

State of drains.—Very good.

Silt tank—Full of silt; caretaker has started to clean out.

Inlet or flume.—Is old, newly tarred.

Main tank.—In good order.

Embankments.—In good order.

Watering Appliances.

State of supply-tank.—Good.

Troughing.—Good; newly tarred inside by travelling mechanic; rail very high at end furthest from tank.

Machinery.—In very good order.

Paddocks and Fencing.

State of fencing.—Tenant's lease good; enclosure old and might be better.

State of gates.—None.

Remarks.—Caretaker Killick will, I think, give satisfaction. Mr. Yeo appears well pleased with him.

Rates collected since last report.

	£	s.	d.
Month ending October, 1886	...	9	5 11
„ November, 1886	...	12	12 4
		21	18 3

Traffic since last report.

	Horses.	Cattle.	Sheep.	Bullocks.
Month ending October, 1886	100	1,793	238
„ November, 1886	168	600	19,482	28

Caretaker's

Caretaker's work.

Work done by caretaker.—Tarring flume, cleaning drains, repairing embankments, shift fence at end of troughs.—J.Y., 19/10/86. Tar flume, clear sand away from troughs, keep drains clean, pump water when pump is repaired, and general duties.—J.Y., 16/8/86.

Work laid out for caretaker.—To complete Mr. Yeo's written instructions and finish silt tank.

Remarks and recommendations.—Killick has evidently worked well here and I think will give satisfaction. The drains are very much in the way of travelling stock coming to water. The fence here is, I believe, erected without strainers. A great amount of water could be conserved here within embankments. In view of Killick's and Mr. Yeo's reply to Mr. Stillwell's allegations, and the evident pains he has been at to improve the place, I did not consider that there was just cause for suspending this man.

JAMES W. BOULTBEE,
Inspector of Public Watering Places.

One Tree Tank.

Hay, 16 November, 1886.

Report by Acting-Inspector J. W. Boulton, on the One Tree Tank, road from Hay to Booligal; in charge of Young, caretaker, for 16th November, 1886.

P.W.P.,
86-5,442.

Tank or Dam.

State of drains.—Require cleaning.

Silt tank.—Full of water.

Inlet or flume.—Good, newly replaced.

Main tank.—Full.

Embankments.—Good, newly made up; dished on top; shoots required at angles to carry off storm water.

Watering Appliances.

State of supply-tank.—Good.

Troughing.—Good, but low in centre.

Machinery.—Not satisfactory. The Works mechanic is due here on Saturday to put in thorough order.

Paddocks and Fencing.

State of fencing.—Enclosing tank, has been raised and moved out, is very badly strained (left so by contractor), wire is strained from corner to corner.

State of gates.—Good.

Remarks.—The fencing of tenant's lease is not yet finished; is apparently in the same state it was nine months ago.

Weekly depth of water since last report.—18 feet.

Caretaker's Work.

Work done by caretaker.—Has been trimming embankments and cleaning troughs. He will clean out supply-tank next Saturday. Tank and trough is left empty, so that Works mechanic can tar them inside.

Work laid out for caretaker.—To clean drains and strain wire round tank.

Remarks and recommendations.—The tenant's lease being unfenced is a great drawback, since it is most impossible to prevent trespass, and it looks bare consequently. The horse walk, which was so bad at my previous visit, has been enlarged and carefully done up. The fluming between main tank and old drinking tank is out of order. New brasses and packing required for piston-rod, which is much worn. The horse purchased for this caretaker by Mr. Overseer Keighran was a satisfactory purchase.

JAMES W. BOULTBEE,
Inspector of Public Watering Places.

Telegram from Mr. Overseer Keighran to The Chief Inspector of Public Watering Places.

Hay, 24 November, 1886.

Top glands of pump at One Tree Tank broken; no pumping can be done until repaired. Please advise.

JOHN A. KEIGHRAN,
Overseer.

P.W.P.,
86-5,479.

The Under Secretary for Mines to The Under Secretary for Public Works.

Sir, Department of Mines, Sydney, 29 November, 1886.

I have the honor to forward herewith for the information of the Commissioner and Engineer for Roads and Bridges, copy of telegram re pump at One Tree Tank being unworkable, and request that you will be good enough to have the necessary action taken.

I have, &c.,
HARRIE WOOD,
Under Secretary.

[Enclosure.]

Copy of Telegram from Mr. Overseer Keighran, Hay, re pump at One Tree Tank.

24/11/86.

Top glands of pump at One Tree Tank broken; no pumping can be done until repaired. Please advise.

Road-Superintendent Stillwell to The Commissioner for Roads.

Sir, Hay, 25 November, 1886.

On the 23rd inst. I found, on testing the pump here, that it did not throw more than half the normal stream, and that the collar-plate of the gland on end of cylinder was fractured across. The caretaker

P.W.P.,
86-5,803.

caretaker—a man lately sent up from Sydney—said he was quite ignorant, and was apparently equally indifferent as to how it occurred. One of the bolts had evidently been screwed down tight, while the opposite one was left quite slack, throwing all strain to one side, and thus breaking the plate.

Yesterday Mr. Nicholson—Jones being up at Boonoonoonooka—took out spare leathers, valve, buffers, &c., and got the pump into good working order, excepting as regards the plate. A duplicate should, if possible, be sent me from Sydney. The pump is a Holman horse-gear.

I have, &c.,
A. W. STILLWELL.

Forwarded to Under Secretary for transmission to Mines.—W.C.B., 10/12/86. Under Secretary, B.C. The Under Secretary for Mines.—J.R., B.C., 13/12/86.

Minute by Chief Inspector of Public Watering Places.

THIS man was very highly recommended by the hon. the Secretary for Mines as having been in his service for a number of years, and fully competent for the duty required. Forward papers to Mr. Overseer Keighran for report, and to ascertain if the alleged incompetence and carelessness on the part of the caretaker appears to be correct. H.G., 20/12/86.

I presume this refers to Cavanagh, who has been dismissed.—J.W.B., 4/1/87. No, to Young.

Minute by Inspector Boulton.

I VISITED this Public Watering Place on November 17th, and saw no reason for Mr. Stillwell's strictness. See my report of this date. J.W.B.

Sir,

Hay, 26 November, 1886.

P.W.P.,
86-5,802.

On the 23rd inst. this tank was full to the surface level, but I found the pump, from incompetence and carelessness on part of the caretaker, almost disabled, the service tank only half full, about an inch of liquid mud in the troughing, and the wires slack in the fence surrounding the tank.

The pump was in a most dirty and neglected state, the bearings being almost dry and clogged with dirt; the key of the housing, only lately erected, lost; the valve chamber obstructed from want of cleaning out, and new bucket leathers needed. By last post I have also reported that the gland plate on cylinder had been fractured. My assistant, Mr. Nicholson, has since got the pump into a workable state, and it throws a fair stream of water, but a new plate is required.

The caretaker says he knows nothing of this breakage, or of the pump at all, in fact, and so had not touched it. He has been in charge nearly a month, and apparently, excepting just after a fashion to work the pump, the work might as well have been without a caretaker at all.

If any disposition to work or to learn their duties were evinced on the part of these men some allowances, when new to the work, would cheerfully be made for them, but when they make it so very obvious that their ignorance is equalled by their indifference, and that their view of the position that they are not there to work, but merely to take charge, make complaints, and look in hope for improvement, is futile, and it is as well that the state of the case should be recognised and stated plainly at once, because a number of this class of men are being sent up from Sydney of late, and the resulting negligence and complaints will have to be met and provided against.

The Commissioner for Roads.

I have, &c.,
A. W. STILLWELL.

Forwarded to Under Secretary for transmission to Mines.—W.C.B., 10/12/86. Under Secretary, B.C. The Under Secretary for Mines.—J.R., B.C., 13/12/86.

Minute by Mr. Inspector Boulton.

CARETAKER was desired by Works mechanic Jones to leave troughs and tank alone, and not pump into them, as he would be down on the Saturday following to tar inside of tank and troughs, and put pump, which has been some time out of order, right. Caretaker had key of housing on 17/11/86. The fencing round tank was only lately completed by contractors, and is in exactly the same state as left by them. Mr. Stillwell's assistants give orders, and Mr. Stillwell apparently reports our caretakers for carrying them out. I think his remarks on the ignorance and uselessness of caretakers employed by us quite uncalled for, and reflects upon the Mines officers in a very undeserving manner, and I would again urge that all interference of Works officers should cease when a work is transferred.

JAMES W. BOULTBEE,
Inspector of Public Watering Places.

Dear Mr. Boulton,

Hay, 22 January, 1887.

By same post as this I have forwarded to the Chief Inspector of Public Watering Places a statement from George Young, caretaker, One Tree Tank, re Mr. Stillwell's complaint, which statement was taken down by me just as the caretaker Young explained the matter, I certainly should have gone out and got you this explanation before the present date, but my eye (the good one) has been effected with swelling blight, so that I was pretty well handicapped, especially having a lot of official work to get through this month. I quite agree with you that we have just cause for complaint against Mr. Stillwell and his assistant, Mr. Nicholson's interference. You

Private, but at liberty to make (use of) any part of it if required.

You will observe in Young's statement, where Nicholson came to him, from the "One Tree Hotel," at twenty minutes past 5 a.m., and ordered him to get his horse and pump for one hour, he, Nicholson giving no reason for the pumping, as the pump had been lately repaired, and required nothing doing to it; I think if Mr. Stillwell looked after his own work it would become him better, as the fencing in of the tenants' leases will show, One Tree and Quandong fence, neither of which is completed, besides, nothing has been done as regards the erection of cottages for caretakers, now in Mr. Cronin's district, all these improvements have been completed long since, then may I ask why or what is the cause of Mr. Stillwell not having done his likewise?

The wires in the fence at One Tree Tank, he, Mr. Stillwell complains, are slack, and require tightening. I can tell Mr. Stillwell that they are now,—fence and wire in as good order as they were when he took over the work from the contractor, besides the wire being old, they would not stand straining, neither is there any posts left in the fence to strain them to. The old cask that floats the main pipe from the mud, that sunk on Wednesday last, and I suppose that he, Mr. Stillwell, will say that it is from carelessness of the caretaker. Now, if I recollect right, at the time of Mr. Gilliat taking this work over from Mr. A. P. Wood, he, Mr. Wood, promised to have these old casks replaced by proper buoys (painted), this promise has not been fulfilled at any of the tanks, Tom's Lake, Quandong, and One-Tree.

While writing, a report has come to me that the Dry Lake Well has given out, so that I shall have to proceed there to-morrow and get it in working order again, by opening out the bore which must have got choked, all this bother and trouble is caused by the shaft not having been sunk deep enough, but taken over from the contractor before the supply of water was obtained, and not leaving a pipe in the bore. Now I must conclude this rigmarole of a letter, as I am still unable to use both eyes.

I remain, &c.,

JOHN A. KEIGHRAN.

Mr. Inspector Boulton.

Statutory declaration made by Caretaker George Young.

Sir,

One Tree Tank, 21 January, 1887.

Referring to Mr. Assistant-Engineer Stillwell's report against me of the 26th November last, *re* the state of the One Tree Tank and appliances, at the time of his, Mr. Stillwell's inspection, I have the honor to give a truthful statement, which are as follows:—On the 26th October last, I took charge of the works here as caretaker, the pump was then in a disabled state, as can be proved by Mr. Overseer Keighran, who stated that he would report the matter to Mr. Stillwell, which he did, as a few days afterwards Mr. Nicholson (Mr. Stillwell's assistant) came out and partly repaired it, but could not put it in working order, as there was a leakage that he could not stop, and left it for the repairer—Jones—to put right, which he did shortly afterwards; the next visit I had from Mr. Nicholson was early one morning, twenty minutes past 5, rousing me out of bed, and calling me a lazy fellow, at the same time threatening to punch my head, he then tested the pump by having the horse worked for one hour, and found it working well, and made no complaint of the machinery being in a dirty state. The top gland was broken shortly afterwards through not being properly fitted on by the man who put it up, and not through any fault of mine.

P.W.P.,
87-343.

The wires in the fence if considered slack, I think Mr. Stillwell should have seen to that part of the work before taking it over from the contractor, which was only a few days previous, and was in the same state as it was at the time of being handed over, and was in no way injured afterwards, by getting slacker, one thing is, if the wires do get slack there is no straining posts left to tighten them, the distance on one side from corner post to corner post being 160 yards.

The reason that the service tank was kept half empty, was by orders from Mr. Jones, repairer, who said he wanted to pitch the inside, and wished to have no delay when he came to do it, in consequence of this the tank was not kept filled, otherwise it would have been. The key of the housing was not lost, but is still in my possession, therefore, I cannot understand the reason or why Mr. Stillwell makes these unfounded reports against me as he appeared to be well satisfied with my work, not having drawn my attention to any part of the works that showed any signs of neglect.

The tank and all appliances are now in good working order, with the exception of the old cask that floats the main pipe, and keeps it out of the mud, it has sunk in consequence of never having been painted.

Since my appointment here as caretaker, I have found it a difficult matter to give satisfaction on account of both Mr. Stillwell's and Mr. Nicholson's interference in the works.

I have, &c.,

GEORGE YOUNG,
Caretaker.

Declared before me at Hay, this 3rd day of March, 1887,—

N. J. TREVINA, J.P.

The Chief Inspector of Public Watering Places.

Telegram from Overseer Keighran to The Chief Inspector of Public Watering Places.

Hay, 2nd February, 1887.

Young prepared to make declaration before a magistrate of the truth of his statement.

JOHN A. KEIGHRAN,

Overseer, Public Watering Places.

P.W.P.,
87-500.

Forward statement to Mr. Keighran with request to obtain declaration, and inform him by wire of the action taken.—H.G., 7/2/87. Mr. Overseer Keighran.—J.W.B., B.C., 7/2/87. Urgent.

Sir,

Hay, 28 February, 1887.

I have the honor to inform you that in consequence of George Young, late caretaker at One Tree Tank, breaking out drinking, I have been unable to get him to make the required declaration to his statement.

P.W.P.,
87-963.

He has been drinking heavily for the last three weeks, both here and in Hay, and out at the One Tree I am told that he sold his horse and everything else that he possessed, and is now dangerously ill in the Hay Hospital. His salary voucher for January I still hold, which will be of some service to him when he comes out of the hospital.

I have, &c.,

JOHN A. KEIGHRAN.

The Chief Inspector of Public Watering Places.

Young's conduct since leaving the tank appears to leave some grounds for the alleged ill-treatment he complains of. Mr. Keighran will please say if he is aware of his having been drinking while in charge of the tank.—H.G., B.C., 4/3/87. Mr. Overseer Keighran. The Chief Inspector of Public Watering Places. From inquiry, and my own personal knowledge, I can safely state, that Young did not taste spirituous liquors while in charge of the tank, but broke out while in Hay.—JOHN A. KEIGHRAN, Overseer, Hay, 9/3/87.

87-1,096.

Young's declaration *re* One Tree fence handed with other papers to Mr. Abigail, and presumably by him to Premier. Trace has been lost of it.

J.W.B., 31/12/87.

Bullagreen Tank.

P.W.P.,
86-5,448.

Sir,

Bullagreen Tank, 15 November, 1886.

I have the honor to inform you I was ordered by the overseer to clean out the iron tank on last Friday. I did so on Saturday or Sunday; got steam up this morning; was pumping three hours. The tank was nearly full when the piston-rod, connecting the main tank with the engine, broke short off at the collar; only 25 lb. on steam gauge. I cannot send telegram, as this will be as soon as it.

I have, &c.,

JAMES MURPHY,

Caretaker, Bullagreen.

The Chief Inspector of Public Watering Places.

Telegram from Mr. Overseer Medley to The Chief Inspector of Public Watering Places.

Coonamble, 18 November, 1886.

Just received from Bullagreen the following:—The piston pump rod connection train with engine is broken. Cannot work engine till repaired. Signed caretaker.

THOS. W. MEDLEY,

Overseer, Public Watering Places.

Send copy to Works Department with letter. Inform Medley. 20/11/87.

Sir,

Department of Mines, Sydney, 20 November, 1886.

I have the honor to forward herewith for the information of the Commissioner and Engineer for Roads and Bridges copy of telegram *re* piston pump rod at Bullagreen Tank unworkable, and request that you will be good enough to have the necessary action taken.

I have, &c.,

HARRIE WOOD,

Under Secretary.

The Under Secretary for Public Works.

[Enclosure.]

Copy of Telegram, Public Watering Places 86-5,416, received from Mr. Overseer Medley, Coonamble.

Just received from Bullagreen the following:—The piston pump rod connection train with engine is broken; cannot work engine till repaired. Signed caretaker.

Sir,

Department of Mines, Public Watering Places,

Sydney, 30 November, 1886.

Referring to your telegram of the 18th instant *re* piston pump rod at Bullagreen Tank being unworkable, I have the honor to inform you that the matter has been referred to the Department of Public Works.

I have, &c.,

HARRY GILLIAT,

Chief Inspector of Public Watering Places.

Mr. Overseer Medley, Coonamble.

P.W.P.,
87-303.

Sir,

Coonamble, 18 January, 1887.

I have the honor to inform you that I am informed by the caretaker of the Bullagreen Tank that he has not yet heard anything of the rod for the pump, and it may be wanted any day now the dry weather has set in. 9,000 sheep passed there last week and report they could not get water till they got to the Castlereagh.

I have, &c.,

THOS. W. MEDLEY,

Overseer, Public Watering Places.

The Chief Inspector of Public Watering Places.

Ascertain from Messrs. Samuel and Courtenay if they can furnish a spare rod; if so, despatch to-night.—H.G., 20/1/87. Messrs. Samuel and Courtenay do not keep any portions in stock. They have to wire to England.—J.W.B., 20/1/87.

Telegram

Telegram from Chief Inspector of Public Watering Places to Mr. Overseer Medley.

Get broken piston-rod sent down at once. Send specially to Nevertire. Sydney, 20 January, 1887.
HARRY GILLIAT,
 Chief Inspector of Public Watering Places.

As it is absolutely necessary that this broken rod should be repaired or a new one in its place by 1st February, the date of transfer to Mr. Barry, lessee, Mr. Inspector Boulton may perhaps be instructed to have a new one turned, to take up with him and place in position. Messrs. Samuel and Courtenay have drawings of all the parts.
 The Under Secretary for Mines. H.G., 24/1/87.

Approved.—G.E.H. (for U.S.), 24/1/87. Mr. Boulton will have a piston-rod turned out by Samuel and Courtenay, and take up with him in time to have fitted before transferring the tank.—
 H.G., 24/1/87. Seen and noted.—J.W.B.

Messenger returned from Bullagreen. Piston-rod taken down by Mr. Fraser and Mr. Wood some weeks ago. Coonamble, 24 January, 1887.
THOS. W. MEDLEY,
 Overseer.
 The Chief Inspector of Public Watering Places.

Sir, Department of Mines, Sydney, 20 November, 1886.
 I have the honor to forward herewith, for the information of the Commissioner and Engineer for Roads and Bridges, copy of telegram, re piston pump-rod, at Bullagreen Tank, unworkable, and request that you will be good enough to have the necessary action taken.
 I have, &c.,
HARRIE WOOD,
 Under Secretary.

Department of Public Works, 86-1,619. Tanks&Punts. Department of Public Works, 86-10,693. P.W.P., 5,853. Department of Mines.

The Under Secretary for Public Works.

Enclosure.

Copy of telegram, P.W.P., 86-5,416, received from Mr. Overseer Medley, Coonamble. Just received from Bullagreen the following:—The piston pump-rod connection train with engine is broken; cannot work engine till repaired. Signed caretaker.

Roads.—E.G. (for U.S.), B.C., 23/11/86. Examining this tank on the 26th instant, and found that one of the pump piston-rods was broken at its junction with cross-head. A new rod has been made and forwarded to Mr. Frazer, and will be fixed as soon as possible. If the caretaker would keep the stuffing-boxes thoroughly packed, so as to avoid screwing the gland down so tight, there would be less jar and less chance of failure.—A.P.W., 13/12/86. Under Secretary for transmission to Mines.—W.C.B., 13/12/86. The Under Secretary for Mines.—J.R., B.C., 16/12/86.

Minute by Inspector Boulton.

4 January, 1887. There does not appear to be the slightest grounds for the default on part of Caretaker Murphy, as the minute of Mr. A. P. Wood would infer. I took delivery of this machinery 16th October, and no new packing, &c., should be required in so short a time. A defective piston-rod has broken, an accident likely to happen at any moment.
JAMES W. BOULTBEE,
 Inspector of Public Watering Places.

Minute by Mr. Inspector Boulton, 102-87.

I ASSISTED to put in new piston-rod on 1st February. No packing or stuffing was required; I paid particular attention to this. Rod was broken, 15/11/86, and on 31/1/87. I discovered rod sent up by Works Department lying at Contractor's Camp, Nevertire Tank; new rod was fixed, 1/2/87.
 J.W.B., 10/2/87.

By-wash, Brolgan.

Sir, Stock Office, Forbes 5 October, 1886. I have the honor to draw your attention to Brolgan Creek Tank. On Saturday last there was a storm in which 2 inches of rain fell, and the by-wash was quite incapable of taking off the overflow. This tank being constructed right in the bed of a creek would require a by-wash 12 feet wide and about 3 feet deep, or otherwise some day the flood will wash away the embankment. These are periodical storms, and not at all frequent, but still I think it would be as well to be prepared. I have instructed the caretaker to widen it, but will wait your instructions before deepening the same.
 The Chief Inspector of Public Watering Places. I have, &c.,
W. G. DOWLING.

P.W.P., 86-4,738

As repairs of this nature are under existing arrangements usually left for the officers of the Department of Public Works, a copy of this report may perhaps be forwarded for the information of the Commissioner for Roads.—H.G., 7/10/86. The Under Secretary for Mines.
 Approved.—H.W., 8/10/86.

Sir,

Sir,
 P.W.P.,
 86-5,447.

Department of Mines, Sydney, 22 October, 1886.

Herewith I have the honor to forward for your information copy of a report received from Mr. W. G. Dowling, our local overseer at Forbes, relative to the state of the by-wash at Broilgan Creek Tank.

I have, &c.,
 HARRIE WOOD,
 Under Secretary for Mines.

The Under Secretary for Public Works.

Enclose copy of P.W.P., 86-4,738. Roads.—J.R., B.C., 27/10/86. Mr. Wood at Blayney.—W.C.B., 29/10/86.

Mr. Dowling has not made out a case. The unusual storm is reported, but no damage to the embankments. Why then the surmise that some day the whole will be swept away? This paper should be sent to Mr. Morton for report. I do not think the Mines officer should have undertaken this work without conferring with the local officer.

I think deepening the by-wash would be a mistake, as it would lower the level of water conserved. I question whether any alteration is necessary unless to find work for the caretaker.—A.P.W., 1/11/86. Mr. Morton or Mr. Adams, Forbes.—W.C.B., 1/11/86.

In company with Mr. Morton I made an inspection of this tank. To deepen by-wash by 3 feet, as Mr. Dowling directs, would reduce the water conserved by about one-fifth of its total holding capacity. This I presume is not at all requisite; and again, to widen it according to Mr. Dowling's dimensions would be worse than useless as a means of escape for such storm-water as that referred to in his letter. In my opinion I do not think any alterations or precautions are necessary for the safety of the tank. If the side slopes of embankments were kept dressed and in a better state of repair they would add considerably to its appearance, and also to the stability of the tank.—A.A., 13/11/86. The Commissioner, B.C.

Mr. Wood.—W.C.B., 15/11/86. Copy should be sent to Mines.—A.P.W., 15/11/86. Under Secretary for transmission to Mines.—P.W.O., 17/11/86. The Under Secretary for Mines.—J.R., B.C., 18/11/86.

Extract from Mr. Overseer Dowling's letter, 9th November, 1886.

P.W.P.,
 86-5,317.
 Original, with
 papers re tone of
 minutes.

* * * * *
 You will be pleased to hear that the by-wash which I have had widened by the caretaker acts well, and is equal to the overflow. The recent heavy rains proved it.

W. G. DOWLING.

The Chief Inspector of Public Watering Places.

(Ward's Tank.)

Mount Manara Tank.

Extract from Mr. Assistant-Engineer Stillwell's Report of 20th October, 1886, on Ward's Tank.

P.W.P.,
 86-5,106.

* * * * *
 The steam-pump was in a disgracefully dirty state. The caretaker admitted he had not overhauled it since Mr. Wood and I visited in June last; and I had to do it myself, a repetition of the job. Mr. Wood will remember we then had.

Under Secretary for transmission to Mines.—W.C.B., 25/10/86. The Under Secretary for Mines.—J.R., B.C., 27/10/86.

Mr. Yeo will report upon this without delay, and, if true, should give an explanation of his own neglect and that of the caretaker. If these allegations are correct it is extremely discreditable to this Department. If they are not Mr. Yeo should see that they are fully refuted.—H.G., B.C., 29/10/86.

Mr. Yeo's report Public Watering Places (86-5,577) herewith.—H.G. Mr. Inspector Boulbee for report, B.C., 1/11/86. Report attached.—JAMES W. BOULBEE, Ivanhoe, 27/11/86.

P.W.P.,
 86-5,577.

Sir,
 Referring to Mr. Assistant-Engineer Stillwell's report of 20th October last on Ward's Tank, it appears to me that Mr. Stillwell attributes, in the first instance, the disgraceful, dirty state in which the steam-pump was found by Mr. Wood and himself to the neglect of the caretaker. I beg to state that at that time the steam-pump had not been handed over to this Department by the Department of Works; also that it had been arranged by Mr. Wood and Mr. Stillwell with contractor, who erected the steam-pump to be present, for the purpose of having the work passed, but the contractor failed to attend, consequently Mr. Wood and Mr. Stillwell set to work to put the works in order to transfer, and to do this they spent nearly the whole of the day; then it did not work properly, but to effect the transfer, Mr. Stillwell promised that he would send the travelling mechanic as soon as possible, and put it in working order. Mr. Stillwell further stated that I should not allow the caretaker to interfere with the pump internally, as the travelling mechanic would see to all that sort of work, but up to the time of Mr. Stillwell's visit of 20th October, the travelling mechanic had not been to put the pump in order, as was promised.

Referring to your request to know why the steam-pump was left in this state after I was aware of it, I beg to inform you that the caretaker cleaned it externally, according to my instructions of 17th August last, but from that date to the date of Mr. Stillwell's visit, I was not at the tank, consequently I was not in a position to know whether it had been kept clean or not, but when I visited the tank on 20th October last, I found that the brass work, &c., was still dirty. I reprimanded the caretaker for his negligence, when he tendered his resignation. I might state that as this tank is a very dusty place, and there being no house or covering for the steam-pump, it is a difficult matter to keep it clean.

I have, &c.,
 J. YEO,
 Overseer, Public Watering Places.

The Chief Inspector, Public Watering Places.

Report

Report upon Mr. Road-Superintendent Stillwell's complaint of neglect of Caretaker at Ward's Tank.

REFERRING to the enclosed copy of Mr. Stillwell's report upon the machinery at Ward's or Mount Manara Tank, I have the honor to report that, so far as I have been able to ascertain, the facts are as follows:—On 9th June last Mr. A. P. Wood, Mr. Stillwell, Mr. Yeo, and the contractor were to meet, for the purpose of transferring the works—steam-pump—to this Department. The contractor, however, failed to be present, and as the pump was not then in working order, Mr. Wood and Mr. Stillwell endeavoured to rectify matters so that it could be handed over to our local officers. It will be inferred, I think, from Mr. Stillwell's report, that our Department was in fault for "the job" Mr. Wood and Mr. Stillwell then had. As, however, the machinery was not on that date even taken over from the contractor, the fault cannot be attributed to this Department. Our local officer, Mr. Yeo, took over the works, reporting at the time that pump, &c., was out of order, under a distinct understanding from Mr. Stillwell that the machinery should be put into thorough going order by his mechanic. This, however, has never been done. Our caretaker worked the pump three times in June, three in July, four in August, and none in September, and thoroughly cleaned all outside work on August 3rd, according to his statements and journal. He admits that he did not take engine to pieces, since, though able to work the machinery, he was no engineer, and his predecessor was told at the time of the transfer that the travelling mechanic would put the engine right, and not to do it himself. The maker's coat of dull red paint, now much faded, does not add to the appearance of the engine. The repairs effected by Mr. Stillwell consisted of moving some rust from the cylinder. From the date of transfer of tank, 9th June last, until Mr. Stillwell's visit, I am told the pump never worked properly, not so far as I can see, having in view Mr. Stillwell's promises and instructions to caretaker, caused by our neglect, as from the neglect of the Works Officer to have the thing in thorough working order before taking it over from the contractor, and transferring to the Mines. An almost parallel case to this has occurred in Mr. Tully's district, and, which, according to Mr. A. P. Wood, was one of the things he saw that was not satisfactory. The condition of the pump at the 18-mile and Ledknapper Tanks are cases in point, and if Mr. Wood saw them, the Mines' caretakers would be blamed for the unsatisfactory state of them, and the "connection of the Works Department with these works would be prejudiced." I think these reports upon the various caretakers' negligence at the tanks in this district, if they do no other good, tend to show the animus that the Works' officers here entertain towards the Mines' officers. I think I can fairly quote the last paragraph of Mr. Stillwell's report on Boonooma Tank, and say "it is this kind of thing which gives rise to adverse comments of the Press, so frequently made respecting appliances at Government watering places."

I do not think a single instance can be cited in which adverse comment has been made by the Press respecting appliances while under our charge, excepting only the railing at the troughs, and about this, a fault in construction or a wrong design. Whichever it is, the complaints are universal, and, in reference to Mr. A. P. Wood's minute, I think that in most cases the charges made against the caretakers by the Works officers have been due to misapprehension on their part, and that where they have been sustained have been dealt with summarily. Both myself and our local officers are most anxious to maintain the efficiency of these Public Watering Places. I further beg to submit that distinct instructions should be issued to the overseers that in cases where the work is incomplete or not thoroughly in order that the transfer should not be effected until it is so.

JAMES W. BOULTBEE,
Acting Inspector, Public Watering Places.

Ivanhoe, 27th November, 1886.

I must add that Mount Manara Tank is a most dusty place, and that without proper protection it is almost impossible to keep the machinery in a constant state of cleanliness.—J.W.B. Considerable pressure was brought to bear by Works to effect transfer of this, Gunnaramby and Clare Tanks. A distinct understanding was made by Works that all appliances were to be put in thorough working order.—J.W.B.

Memorandum.

Sir,

15 December, 1886.

I have to inform you that I have this day received a letter from the caretaker of Tinda Public Tank, dated 13th inst., stating that upon the 7th inst. the heavy rain (375 points) made a large gap in the embankment of the main tank, washing the shoot away. He has repaired same until it can be properly done. From his description of the nature of the injury I am of opinion that it is a work that will entail considerable labour, and I advise you that you, if you think it necessary, may take the requisite steps for its repair.

Mr. A. Adam, Road Superintendent, Cobar.

R. D. JONES.

Tinda Tank.

4 January, 1887.

I RECEIVED the attached letter from stock inspector, Condobolin, informing me that heavy rains had carried the shoot away, and left a large gap in main embankment.

P.W.P.,
87-190.

I proceeded as soon as possible to this tank, about 130 miles from Cobar, after receiving enclosed letter, and have just returned from visiting tank.

I found on arrival that it was a false alarm.

The inlet shoot is not damaged in the least, and the shoot turns out to be a bark one the caretaker had placed against side of embankment to carry off water from top of embankment.

The gap in embankment referred to was a gut in embankment caused by water collected on top, and could be repaired by caretaker in about a week.

He had half of it filled up on my arrival.

Caretaker had misled Mr. Jones, or the latter had misunderstood him.

Service tank, troughing, pumping gear are in good order.

Depth of water, 21 feet.

The Commissioner for Roads and Bridges.

ALEXANDER ADAM.

I recommend that this paper be sent on to Mines in reference to the nature of the complaints from that office.—W.C.B., B.C., 11/1/87. Under Secretary. Forward to Mines. The Under Secretary for Mines.—J.R., B.C., 12/1/87. Mr. Jones for immediate report.—H.G., B.C., 14/1/87. Urgent.

Condobolin, 18 January, 1887.

I APPEND hereto copy of extract from caretaker of Tinda Tank whereon I based my letter of 15th ultimo to Mr. Road-Superintendent Adam.

I do not in that letter state that the *inlet* is damaged; if I understood that to have been the case, I should have stated the "*inlet* or *flume*" was washed away as per caretaker's letter. I was not misled by, nor did I misunderstand, the caretaker. Mr. Adam seems to have misunderstood me. Upon the 13th ultimo I telegraphed Mr. Adam that the embankment around silt tank at Wicklow Public Tank was washed into two gaps. He replied the same day by same means that he would inspect Wicklow Tank in a few days, and take steps to get damage repaired.

On account of receipt of this telegram I wrote Mr. Adam with the view of saving, and not causing him extra travelling, as he insinuates, as from his own telegram he was about visiting Wicklow Tank in a few days. I thought he would perhaps be anxious to ascertain, and, if necessary, repair any damage at Tinda Tank, more especially as when at Wicklow Tank he would be within 30 miles of Tinda. The bark shoot Mr. Adam refers to has been very useful (and is the only material available to the caretaker on account of carriage) in carrying off rain before, but upon this occasion was unequal to such a heavy fall. I think Mr. Adam might, instead of deprecating my action, have given me credit for at least endeavouring to make his visit to one tank, with a little more travelling, serve for the two, and so not put him to the trouble of a special journey.

The Chief Inspector of Public Watering Places.

R. D. JONES.

Extract from letter from H. C. Shaw, Caretaker of above Tank.

Tinda Public Tank, 13 December, 1886.

I have to inform you that a very heavy rain (375 points), on Tuesday, 7th last, made a large gap in the embankment of the main tank, washing the shoot away, but I have now got it mended, and will hold till it can be properly done.

H. C. SHAW,

Caretaker.

Mr. R. D. Jones, Overseer, Public Watering Places, Condobolin.

Minute by Mr. Inspector Boulton.

MR. ROAD-SUPERINTENDENT ADAM appears to have misunderstood Mr. Jones' letter, which was distinct and clear. No reference was made to the inlet shoot or flume. Mr. Adam does not appear to have made a special journey of 130 miles, since Mr. Jones received a wire saying he was inspecting Wicklow Tank in a few days.—J.W.B., 25/1/87.

Boona Tank.

Memo. re Overseer Jones' Report re Supply Tank, Boona.

3 March, 1886.

P.W.P.,
86-1,404.

I WAS at Boona Tank over a week ago, and examined service tank. The cap plates have slightly warped with the hot weather this summer and risen slightly, but I consider there is no danger to the tank for a year or two; but I wrote a memo. to Hendry to bring a sufficient number of bolts with him from Nyngan to secure plates.

On my previous visit to this tank, some time before date of Mr. Jones's letter, I noticed this, and asked the caretaker, who was going into Condobolin, to obtain a certain number of $\frac{1}{2}$ -in. bolts and secure plates, which he said he would do.

On my last visit I found this had not been done, and on inquiring the reason caretaker said Mr. Jones would not let him do it because I had omitted to communicate with him first.

I have since written to Hendry, as stated.

Since my previous visit there is no additional warping.

ALEXANDER ADAM.

The Commissioner for Roads.

Mr. Wood.—W.C.B., 5/3/86.

It appears to me that the action taken by Mr. Jones was never contemplated by his Department, and that if persisted in must act most prejudicially. If such formalities are necessary it will be quite impossible for our officers to act in any case of emergency, and the works must consequently suffer.—A.P.W., 5/3/86.

I would draw the Commissioner's attention to the memo. of Mr. Bruce, approved by the Minister in his minute, dated 23/7/84. In this Mr. Bruce suggests the co-operation of our officers in carrying out urgent repairs, but the intention has not been embodied in the instructions issued by the Mines; hence, I presume, the attitude taken by Mr. Jones.—A.P.W., 11/3/86. Memo. referred to.

Extract from paper 84-895 Tanks and Pumps, 84-959 Tanks and Wells.

18 July, 1884.

* * * * *

I would suggest that as objection was taken by the Works Department to any repairs, however urgent or temporary, being made at the instance of the officers of the Mines Department that the caretaker or lessee, as the case may be, should be allowed to communicate direct with the proper officer of the Works Department, as well as with the Overseer or Head Officer, in order that there may be as little delay as possible in the necessary repairs being done.

A.B.
Extract

Extract herewith. I recommend that this paper be sent on to Mines.—W.C.B., 11/3/86. Under Secretary, B.C. The Under Secretary for Mines.—J.R., B.C., 18/3/16. Mr. Overseer Jones for report.—H.G., B.C., 26/3/86.

Report by Mr. Overseer Jones upon Mr. Road-Superintendent Adam's remarks *re* Mr. Jones's report *re* Boona Supply Tank.

Condobolin, 9 April, 1886.

REFERRING to Mr. Adam's remark upon my reports of supply tank, Boona, as per his report herewith, dated 3rd ultimo, I beg to state with all respect that Mr. Adam is in error, and probably his remarks may be intended to refer to some other tank. There certainly is not at present, nor was there upon the date he names, any defect in the Boona Supply tank that I have observed.

P.W.P.,
86-1,852.

The corners of the supply tank were originally pegged, which allowed the timber (pine) of which it is constructed to slightly—very slightly—warp. Upon the 3rd January last I bought 4 bolts, conveyed them to this tank, and the caretaker put them into their proper places, *i.e.*, the corners of the tank, upon the 5th of the same month. The "no additional warping" referred to by Mr. Adam is due to the fact that these bolts were put into the tank.

I would here remark that Mr. Adam appears to have given undue prominence to me in this matter, which is not at all warranted by the facts of the case, which are as follows:—Upon two or three occasions when periodically visiting the tanks in my district, the caretakers said that Mr. Adam told them to tell me to get or to do something. Feeling that this was not quite the proper course for Mr. Adam to pursue, I told the caretakers that upon similar occasions and circumstances if they would please tell Mr. Adam to write me upon any matter requiring attention, when it would receive it. Mr. Adam, however, has never written me upon any requirements at any of the tanks.

I would be sorry to take any action or adopt any course likely to be detrimental in the slightest degree to any works or matters under my supervision, nor am I in any way a quibbler for official etiquette, yet I do think any suggestions, or rather orders, from Mr. Adam to me through a caretaker is undesirable, the same facilities for communicating with me being available to both. I may add, Mr. Adam asking or telling the caretakers to obtain any material for the tanks could only be done at their own cost primarily, as they have no power to incur expense.

I regret such a lengthy explanation has been necessary in this case, but feel, so to speak, that Mr. Adam has made a charge against me without in the first instance inquiring from me if I had adopted the course he states I did in the concluding paragraph of his report.

RICHARD D. JONES,

The Chief Inspector of Public Watering Places.

Overseer, Public Watering Places.

Crow's Nest Well.

Extract from weekly return of George Keys, caretaker of Crow's Nest Well, for week ending 26th December, 1885.

All the works in good repair; the water in the well has changed, it is not so saltish, but very sweet and sickly to drink; one tablespoonful of sugar makes 2 quarts of tea too sweet; I cannot drink it now without being sick; I wish I could tell what mineral it is, if it is injurious to drink.

P.W.P.,
85-4,857.

GEORGE KEYS,

Caretaker, Crow's Nest Well.

About what date did the baling commence?—H.G., B.C., 4/1/86. Mr. Overseer Keighran.

The Chief Inspector of Public Watering-places.—Service tank emptied the 6th November last; commenced next morning, 7th, to bale. I again inspected Crow's Nest Well, on the 9th October, the water was then good for stock, but was not, nor never has been, fit for human consumption.—JOHN A. KEIGHRAN, Overseer of Tanks and Wells.

A copy of this may perhaps be submitted for the information of the Department of Public Works.—H.G., 11/1/86. The Under Secretary for Mines. Approved.—H.W., 13/1/86.

Sir,

Department of Mines, Sydney, 14 January, 1886.

Herewith I have the honor to forward to your information a copy of an extract from the weekly return of George Keys, caretaker of Crow's Nest Well, with the remarks of Mr. Overseer J. A. Keighran thereon.

P.W.P.,
85-4,857.

I have, &c.,

HARRIE WOOD,

Under Secretary.

The Under Secretary for Public Works.

Copy of Public Watering Places, 85/4,857, forwarded with this letter. Roads.—J.R., B.C., 18/1/16. Mr. Wood.—W.C.B., 18/1/86. This is a rather peculiar case if it has been correctly stated, and Mr. Stillwell might be asked to report the particulars.—A.P.W., 25/1/86. Mr. Stillwell for careful report; see that the well is well worked before taking sample.—W.C.B., 25/1/86. Mr. Stillwell.—B.C. This man Keys is an ignorant, officious, troublesome caretaker, whom Mr. Keighran has discharged.

This water has always been good stock water, and of late, owing to increased demand for it, and consequent baling of the well, it has improved. Mr. Keighran fully agrees with me as to this.—A.W.S., 2/2/86.

Mr. Wood.—W.C.B., 4/2/86. Should be sent to Mines.—A.P.W., 4/2/86. Under Secretary.—W.C.B., B.C., 4/2/86. P.W.O., 6/2/86. Forward to Mines.—J.G., 6/2/86. The Under Secretary for Mines.—J.R., B.C., 6/2/86.

If Mr. Stillwell's statement is correct, Mr. Keighran will please inform me why he did not report Key's conduct and character when the original was sent to him, and state distinctly that no reliance should be given to his reports. I must express my surprise that I am to learn the character of one of Mr. Keighran's caretakers from an officer of another Department, with the information that Mr. Keighran agrees with it.

Mr. Overseer Keighran for report.—H.G., B.C., 10/2/86.

1

I did not see that there was any great occasion to report caretaker Keys' conduct and character. If he was, as Mr. Stillwell says, an ignorant, officious, troublesome character, then why did he retain him in his service, as he had charge of the well when it was taken over from the Works to the Mines Department. As far as the works were concerned, Keys attended to them properly, no complaints were made, but he was one of these fussy old men that would try to make a mountain out of an ant-hill; look at the number of extracts that were taken from his weekly reports that were sent me for report; in all probability his liver was out of order when he reported the water changing. Mr. Stillwell may thank the old fellow's watchfulness, that he was not hookwinked by the men putting up the paddock fence, instead of the posts being 2 feet in the ground (contract), the fellow was cutting 1 foot off the posts, and placing the spare piece in the hole with the post to hide detection, so that actually the post would only be 1 foot in the ground, instead of 2. Keys detected the fellow at this and lodged a complaint; the consequence was that a large number of the posts were pulled up, and Keys' statement found correct.—J.A.K., Overseer, 17/2/86.

Minute by the Chief Inspector of Public Watering Places.

Subject:—Mr. A. P. Wood's reports on several tanks.

Department of Mines, Public Watering Places Branch, Sydney, 31 August, 1886.

P.W.P.,
86-4,160.

THE reports made by Mr. A. P. Wood, Assistant Engineer for Roads and Bridges, on the various tanks and wells in charge of this Department, calling attention to cases of neglect, having been referred to the different overseers, and their reports upon the matters alleged having been found satisfactory, the Department of Public Works may perhaps be informed to that effect.

HARRY GILLIAT,

The Under Secretary for Mines.

Chief Inspector of Public Watering Places.

Submitted for approval.—H.W., 2/9/86. Approved.—J.F., 3/9/86.

Sir, Public Watering Places, Department of Mines, Sydney, 16 December, 1886.

P.W.P.,
87-4,644.

Referring to your minute of the 16th June last, covering extracts from the reports of the Assistant Engineer for Roads and Bridges, upon certain tanks and wells, I now have the honor to inform you that the allegations contained therein have been referred to the various Overseers of Public Watering Places concerned, and that their replies have been satisfactory. I have furthermore to state that instructions were issued by this Department on the 21st July last with respect to suspending buckets in well-shafts, and not permitting them to remain in the water.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines.

The Under Secretary for Public Works.

Roads.—J.R., B.C., 23/9/86. Mr. Wood.—W.C.B., 24/9/86. As the replies are not submitted, this office is necessarily in the dark as to what is considered satisfactory. What I saw was not satisfactory, hence my reports.—A.P.W., 25/9/86.

As either originals or extracts of reports of Roads officers, relating to the matters in question are sent to Mining Department, it would be more conclusive if the reports of their officers, or similar extracts, were attached to papers in reply when sent to this office.—W.C.B., B.C., 25/9/86. Under Secretary.

Mr. A. P. Wood's reports, &c.

Minute by Mr. Assistant-Engineer Wood.

Roads, Sydney, 12 November, 1886.

Subject:—Tank and Wells. Application for reports by Overseers of Public Watering Places on complaints as to maintenance.

P.W.P.,
86-5,402.

ON the 25th September a letter was received from the Mines stating that my reports on the neglect of duty shown by some of the caretakers had been referred to their local officers, and that their replies were satisfactory. As what I saw and reported upon was not satisfactory, it was considered advisable to obtain information from the Mines, to show how such a strange difference of opinion was supported, and, on the same date, application was made for the reports, or extracts from them, as always furnished by this Department in similar cases; these have not been supplied, and a further application should now be made for copies of the reports.

It is always a disagreeable duty to have to make complaints as to the maintenance of these works, and it is with a desire to lessen, as much as possible, the grounds for such complaints, now becoming very frequent, that application was made for the reports in question, which would, I presume, explain the extraordinary difference in opinion alluded to, and tend to a more perfect maintenance of works, for which we are still responsible.

Our readiness to recognise all cases where the duties of these men are efficiently discharged has been proved.

Some short time since we forwarded to the Mines a favourable report, received from one of our local officers, on the work being done by one of the caretakers in his district; but, considering that over 100 of these works have been transferred to the Mines, the pleasure of recognising merit should be of more frequent occurrence.

ARTHUR P. WOOD,

Assistant Engineer.

The Commissioner for Roads.

Under Secretary for transmission to Mines.—W.C.B., 12/11/86. The Under Secretary for Mines.—J.R., B.C., 15/11/86.

P.W.O.,

On two occasions.—
W.C.B., 12-11-86

P.W.O., 27/9/86.

That the replies are considered satisfactory by the Department in charge of the works is perhaps sufficient.

The tone of Mr. Assistant Engineer Wood's communications upon various occasions (forwarded without remark by the Commissioner and Engineer of Roads) has been such as to induce me to confine the correspondence between the Departments to the smallest required limits. I submit that no further action appears necessary in this case.—HARRY GILLIAT, 15 October, 1886. The Under Secretary for Mines.

Submitted.—H.W., 27/10/86. Approved.—J.F., 30/10/86.

Subject:—Extracts from Reports on Tanks and Wells.

HEREWITH I have to submit for transmission to the Department of Mines extracts from reports by Mr. A. P. Wood, Assistant Engineer, on the undermentioned tanks and wells, lately visited by him:—

					Roads, Sydney, 10 June, 1886.	P.W.P., 86-3,081.
Wooloondool Well...	P.W.P., 86-3,081—A		
Holy Box Well	" "	B	
Mossgiel Tank	" "	C	
Lignum Hut Well...	" "	D	
Jumping Sandhill Well	" "	E	
48-mile Tank	" "	F	
Boonoono Tank	" "	G	
						W.C.B., 16/6/86.

The Under Secretary for Public Works.

The Under Secretary for Mines.—J.R., B.C., 17/6/86.

Submit with replies.—H.G.

Wooloondool Well.

Extract from minute paper by Mr. A. P. Wood, Assistant Engineer.

Subject:—Tanks and Wells.—Wooloondool Well, Hay to Booligal Road.

Kilfera, 5 June, 1886. P.W.P., 86-3,081—A.
THE supply is derived from bore put down from the bottom of the shaft; this, if the well is allowed to stand too long without baling, becomes choked with the sand from the water bearing drift, but when the level of the water is reduced in the shaft it generally frees itself, the then pressure from below forcing the sand out. Should this not be the case, a rod put down a few feet will always clear it.

The Mines have reported in favour of this bore being tubed, but there is no necessity for this, as the clay through which it has been put down will not close in, the bore being more probably enlarged by the upward current; nor would a tube in any way prevent the bore from being choked by the sand.

ARTHUR P. WOOD.

The Commissioner for Roads.

Under Secretary, for transmission to Mines.

Holy Box Well.

Extract from minute paper by Mr. A. P. Wood, Assistant Engineer.

Subject:—Tanks and Wells.—Holy Box Well, Booligal and Wilcannia Road.

Kilfera, 5 June, 1886. P.W.P., 86-3,081—B.
Examined this work on the 4th instant; found the quality of the water very good, fully equal to that at either the Jumping Sandhill or the Lignum Hut. I drank a considerable quantity of it, and also used it for tea when camping there in the middle of the day. The horses also drank it readily; notwithstanding this the local stock inspector tells me, that evening when I met him at Ivanhoe, that the water was too salt for sheep. I have had no practical or personal experience with these animals, but am of opinion that water a man can drink without inconvenience or injury should be good enough for sheep.

A. P. WOOD.

The Commissioner for Roads.

Under Secretary, for transmission to Mines.

Mr. Yeo for report.—H.G., B.C., 22/6/86.

Sir,

Stock Office, Ivanhoe, 3/7/86. P.W.P., 86-3,418.
Referring to extract from minute paper by Mr. A. P. Wood, Assistant Engineer, on the Holy Box Well, I beg to state that I have already reported all I know with regard to the water at this well, and have also forwarded six bottles, containing 1 gallon, for analysis. I might mention that Messrs. Cobb & Co.'s road manager informed me that at the time they had the lease of this well a horse that was used for the purpose of baling water would have died from the effects of drinking this water had not he been removed from the well.

I have, &c.,

J. YEO,

Overseer, Public Watering Places.

The Chief Inspector of Public Watering Places.

P.W.P.,
86-5,583. Report by Acting Inspector J. W. Boulbee, on the Holy Box Well, road from Mossgiel to Ivanhoe, in charge of T. Pollard, caretaker, for 22nd November, 1886.

28 November, 1886.

State of shaft.—Good as far as I could ascertain. No battens in corner; timbers joggled.

Whim, &c.—In poor order. One king post is badly sprung, and two fish plates bolted on. It must be very weak. The span beam has sagged, and resting on top on spindle. The splice is only 2 feet long, so it could not be otherwise.

Rope, buckets, &c.—Good. There is a spare lot of new wire rope lying here.

Watering appliances.

State of supply tank.—Is old. One wall plate has split from the mortices.

Troughing.—Poor, old, and worn, and leak badly. Rails broken.

Machinery. Valves in good order.

State of fencing.—Good and new.

State of gates.—None yet. A double set of slip panels is provided for at the entrance to paddock. I am at a loss to know why there are also four fine gate posts lying here.

Remarks.—The drum of whim is working on the spindle. Iron stays, as suggested before, wanted. The present wooden stays to drum are quite loose, and the nails broken and can be drawn.

Remarks and recommendations.

Mr. Yeo visited this well in August and October. Caretaker was baling when I arrived, and says he bales regularly. I am unable to say if the water has improved. My horse went there thirsty and would not drink it. I do not consider the whim perfectly safe as it is. Caretaker has it screwed up, but informs me some of the bolts turn. As he had no oil feeder I forwarded him one from Ivanhoe. He was wasting as much oil as would pay for two oil feeders. I think it is a very great pity the tank that was commenced was not completed. Only stock bred on brackish water could do here.

JAMES W. BOULTBEE,
Inspector of Public Watering Places.

Mossgiel Tank.

Extract from Minute Paper by Mr. A. P. Wood, Assistant Engineer.

Subject:—Tanks and Wells.

Mossgiel Tank, Booligal and Wilcannia Road.

P.W.P.,
86-3,081-c.

Examined this work yesterday, 4th instant, and found the tank quite full. The inlet valves were open. Care should be taken to have these closed as soon as the inside level is the same as that outside the tank, otherwise the water within the embankment is drawn on to supply the evaporation outside. Some slabbing should be fixed to protect the inlets of these valves.

Inlet shoots under water, so could not examine them, but caretaker informed me they were in good order, and not starting from the frames as reported by Mr. Boulbee. This gentleman has I think mixed up the Tom's Lake Tank with this at the latter place, though in thorough working order a couple of planks were drawing away.

Pump in good order and working well. The horse walk and slopes require dressing which should be attended to by caretaker.

The caretaker should not allow fellmongering to be carried on at this tank. The stench was most abominable.

ARTHUR P. WOOD.

Memorandum from The Chief Inspector of Public Watering Places.

Sydney, 1 July, 1886.

P.W.P.,
86-3,419.

I FORWARD herewith copy of report by Mr. Assistant-Engineer Wood on Mossgiel Tank received from the Works Department, and request that you will be good enough to report on the several matters contained therein.

Mr. Overseer Yeo, Ivanhoe.

HARRY GILLIAT,
Chief Inspector of Public Watering Places.

Enclosure copy of P.W.P., 86-3,081c.

Memorandum from Mr. Overseer Yeo.

WHEN proceeding to Mossgiel on 29th June last, I instructed the caretaker to watch the valve and close it directly he saw it was necessary. Referring to the slabbing to be fixed to protect the inlet valves, it will receive my attention when visiting the tank. I did not observe anything wrong with the shoots, as they were under water. The horse walk and slopes were in order, having been dressed by caretaker.

The

The fellmongering alluded to by Mr. Wood is a mistake, as there was no fellmongering carried on at this tank. What Mr. Wood saw was a quantity of sheepskins taken from the Kilfera sheep which died in the immediate neighbourhood, and were merely hung on the fence to dry. When I passed on June 29th they had all been cleared away.

The Chief Inspector of Public Watering Places.

J. YEO,
Overseer, Public Watering Places.

Memorandum from The Chief Inspector of Watering Places.

Sydney, 28 June, 1886.

P.W.P.,
86-3,381.

MR. A. P. WOOD, Assistant Engineer of the Department of Public Works, reports that you permit fellmongering to be carried on at this tank, and that the stench was most abominable. You will be good enough to report, without delay, if this is correct, and upon what grounds you allowed such a nuisance to be committed.

Patrick Walsh, Caretaker, Mossgiel Tank.

HARRY GILLIAT,
Chief Inspector of Public Watering Places.

Sir,

In reference to the attached report, I have the honor to state that Mr. Wood has made a mistake in stating I permitted fellmongering to be carried on at the tank. The wool referred to in this report was the property of Kilfera Station, who had some two or three hundred sheep die while watering at the tank. I allowed the man collecting the wool and skins off the dead sheep to store them in a shed that I have erected. After he had collected the whole of it, it was lying there for four days before removal. On no account would I permit anyone to wash wool or commit any nuisance about the tank.

I have, &c.,

P. WELSH,

Caretaker.

The Chief Inspector of Public Watering Places.

Memorandum from The Chief Inspector of Public Watering Places.

Sydney, 3 July, 1886.

P.W.P.,
86-3,081.

HEREWITH I beg to forward you a copy of an extract from minute paper by Mr. A. P. Wood, Assistant Engineer, for your information.

Mr. Inspector Boulton, at Cobar.

HARRY GILLIAT,
Chief Inspector of Public Watering Places.

Kilfera, 5 July, 1886.

Copy of Extract (from 86-3,081c, P. W. P.) referred to.

"Inlet shoots under water, so could not examine them; but caretaker informed me they were in good order, and not starting from the frames, as reported by Mr. Boulton. This gentleman has, I think, mixed up the Tom's Lake tank with this. At the latter place, though in thorough working order, a couple of planks were drawing away.

ARTHUR P. WOOD.

The Commissioner for Roads."

Report by Acting-Inspector J. W. Boulton, on the Mossgiel Tank, Road from Mossgiel to Ivanhoe, in charge of P. Welsh, Caretaker, for 21st November, 1886.

P. W.P.,
86-5,585.

State of drains.—Have a great deal of water in them; one drain requires cleaning.

Silt tank.—Full of water, but reported almost full of silt.

Inlet or flume.—Under water, but I believe in the same condition as when I last reported, and when Mr. A. P. Wood was of opinion I was "mixed" in regard to this and Tom's Lake fluming.

Main tank.—Quite full.

Embankments.—In good order; these embankments have a long slope, and are rounded on the top, and they give very little trouble.

Watering Appliances.

State of supply tank.—In good order; is to be tarred inside by travelling mechanic.

Troughing.—In good order, rails inconvenient.

Machinery.—Very good, clean, and newly painted.

Paddocks and Fencing.

State of fencing.—Tenant's leasehold good, enclosure good.

State of gates.—Not yet hung.

Remarks.—Mouth of box fluming on western side been damaged; has been done up and faced with old sheets of iron.

Rates Collected since last Report.

Nil.

Traffic since last Report.

Nil.

Weekly Depth of Water since last Report.

Tank quite full.

Caretaker's Work.

Work done by caretaker.—Repairing embankments, cleaning drains, tarring troughs, &c.

Work laid out for caretaker.—To clean drains.

Remarks

Remarks and recommendations.—The dates of Mr. Overseer Yeo's visits, noted in Journal, are 13/8/86 and 15/10/86. Caretaker informs me that flumes on east side is at a lower level than west side, and as the tank fills from west before the water runs in from east side, he has to keep valve shut on that side. The drain that follows the road would, I think, be far better if lengthened. I questioned caretaker *re* Mr. Wood's charge of his having fellmongering done at the tank. He says he informed Mr. Wood and Mr. Stilwell, at the time of their visit, that the wool was taken from the Kilfera sheep that had died round the tank (and still the charge was made); he allowed them to stack it for three days in a bough shed he has. He says there was no other grounds whatever for the charge made, and is surprised, after his explanation to Mr. Wood, that it was made. From outside inquiry I cannot ascertain that fellmongering was ever done or contemplated by Welsh. This is one of the things Mr. Wood saw that was not satisfactory.

Ivanhoe, 28 November, 1886.

JAMES W. BOULTBEE,
Inspector of Public Watering Places.

Extract from Minute Paper by Mr. A. P. Wood, Assistant Engineer.

Subject:—Tanks and Wells.—Jumping Sand Hill Well, Booligal and Wilcannia Road.

5 June, 1886.

P.W.P.,
86-3081.

FOUND the buckets left, one at bottom and the other at top of well. The caretaker should be instructed to leave them midway out of the water, and save corrosion of wire rope.

Service tank in good order, but only half full, in which state it has been for some time, no regular baling having been carried on.

ARTHUR P. WOOD.

Sir, Department of Mines, Public Watering Places, Sydney 25 June, 1886.

I have to inform you that it has been reported to me that you have not been carrying on the baling, as required by your instructions, and that you do not keep your service tank full. Be good enough to inform me if this is the case; and, if so, do not neglect it in future. It appears you keep one bucket at the bottom of the well and the other at the top. This practice must not be continued. When they are not actually in use you must keep them suspended midway in the shaft to prevent corrosion of the wire rope.

I have, &c.,

HARRY GILLIAT,

Chief Inspector of Public Watering Places.

Mr. B. Doalman, caretaker, Jumping Sand Hill Well.

Sir, Jumping Sand Hill Well, 9 July, 1886.

In reply to yours of 25th instant (? ultimo), I beg to state that on one occasion my tank was not quite full. The reason I did not fill it was for there was plenty of water on the ground outside the well; and I also state that I did leave one of the buckets at the bottom of the well. The reason I did so was for when I took possession of the well the buckets were the same way. I have them out of the water now, and always keep them the same way in future.

I remain, &c.,

B. DOALMAN.

The Chief Inspector of Public Watering Places.

Sir, Department of Mines, Public Watering Places, Sydney, 30 June, 1886.

P.W.P.,
86-3,081.

I have the honor to inform you that Mr. A. P. Wood, Assistant Engineer, has reported that certain irregularities occur at Jumping Sand Hill Well. A copy of the report is hereto attached. The caretaker has been instructed to attend to the matters therein referred to.

I have, &c.,

HARRY GILLIAT,

Chief Inspector of Public Watering Places.

Mr. Overseer Keighran.

Copy of Public Watering Places 86-3,081 forwarded.

Sir, Hay, 12 July, 1886.

P.W.P.,
86-3,484.

Referring to paper Public Watering Places, 86-3,081, of 30th ultimo, *re* certain irregularities which occur at Jumping Sand Hill Well, as reported by Mr. Assistant Engineer A. P. Wood, I have the honor to inform you that my instruction to all caretakers at wells under my charge are that the buckets are to be left midway down the shaft when not working, and on no account leave a bucket exposed to the weather, as the leather on valves gets perished and put out of working order; also that baling has to be regularly kept up whether required or not, and that the service tank at all times must be kept full of water. I have written Caretaker Doalman, and cautioned him against a repetition of these irregularities.

I have, &c.,

JOHN A. KEIGHRAN,

Overseer.

The Chief Inspector of Public Watering Places.

Extract from Minute Paper by Mr. A. P. Wood, Assistant Engineer.

Subject:—Tanks and Wells.—Forty-eight Mile Tank, Booligal and Wilcannia road.

Gypsum Place, 9 June, 1886.

P.W.P.,
86-3,081.

EXAMINED this work on the 7th instant; tank full to the surface; found the caretaker absent. This was the case the day before when Mr. Hanna visited the work.

The inlet pipe is acting well, but the valve at outer end has been taken off by the caretaker. It seems that it was stiff, and presumably to save himself the trouble of cleaning and lubricating it he took it off.

The steam pump special 4" x 3" would not work. Took it to pieces and cleaned and lubricated it, when it worked splendidly, throwing a fine stream of water. There would have been no difficulty with this pump had the caretaker paid ordinary care to it when previously working, instead of running it without using any oil or tallow. No foot valve has as yet been fitted to the suction pipe, but at present, as the lift is small, it does not affect the working. The old M'Comas framing should be taken down, and the timber stacked for use. The engine plant should be cleaned up at present, it, and the whole surroundings, appear to be completely neglected by the caretaker. It would be very much better for all concerned if, instead of leaving the tank to go kangarooing and rabbiting, he attended to his work. There is plenty for him to do at present if inclined to do it.

P.W.P.,
86-3,081.

ARTHUR P. WOOD.

Mr. Tully for report.—H.G., B.C., 22/6/86.

Sir,

I have the honor to acknowledge the receipt of Mr. A. P. Wood's report on Forty-eight Mile Tank. Until I inspect this work I will hold over my report, and would respectfully point out that my instructions, both written and oral, to the caretaker were to in no way interfere with nor work the machinery nor use the tank until these had been handed over to me by the Department of Works.

P.W.P.,
87-3,426.

See
86-4,619.

I have, &c.,

MARK J. C. TULLY,

Overseer of Public Watering Places.

The Chief Inspector of Public Watering Places.

These repairs are now reported ready; resubmit when Mr. Tully reports.—H.G., 30/9/86.

Report by Overseer Tully in reply to Mr. Assistant-Engineer A. P. Wood's Minute Paper on Forty-eight Mile Tank, road Booligal to Wilcannia, dated June 9, 1886.

1. "Examined this work on the 7th instant; found caretaker absent; this was the case the day before, when Mr. Hanna visited the work."

P.W.P.,
86-3,608.

On one occasion the caretaker was at his quarters 200 or 300 yards away. On the other occasion he had gone to a neighbouring boundary rider's for rations.

2. "The valve at outer end of inlet pipe has been taken off, &c."

On the occasion of my visit to this work, when the contractor was at work erecting the service tank, he, the contractor, and myself spent a considerable time endeavouring to free and open this valve, but could not succeed. He, Mr. Grant, offered to lubricate and unscrew the bolts, and try everything to get it work, but did not succeed, and to admit the water the valve had to be taken off. This valve was broken once before, which shows it is liable to get out of order.

3. "The steam pump would not work, &c."

On my placing Caretaker Downing in charge of this tank, I pointed out to him that until the new pump and machinery were handed over to this Department he was not to use the watering appliances. Subsequently the contractor requested him to work the pump to fill and test the service tank. He mentioned in a letter to me that he had done so and that the pump did not work well. I at once wrote instructing him not to use the machinery again under any circumstances, hence the disorder in which the pump was found by Mr. A. P. Wood.

4. "The old M'Comas pump should be taken down, &c."

I did not consider this to come within the sphere of a caretaker's duties, as many of the parts would require two men to remove, nor was I made aware that the Department of Works wished them to be removed.

5. "The engine plant should be cleaned up. The whole surroundings appear to be completely neglected by the caretaker."

I distinctly instructed the caretaker that, until the repairs and alterations being made at this work were finished, it would be of little use cleaning up and setting things in order, as I was not sure what alteration and repairs were to be made. No notice has been given me that these repairs are completed.

6. "It would be better for all concerned if the caretaker, instead of kangarooing and rabbiting, attended to his work."

The caretaker denies having gone kangarooing or rabbiting.

MARK J. C. TULLY,

Overseer of Public Watering Places.

Wilcannia, July 14, 1886.

Boonoon Tank.

Extract from Minute Paper by Mr. A. P. Wood, Assistant Engineer.

Subject:—Tanks and Wells.—Boonoon Tank, Booligal and Wilcannia Road.

T. & P.,
86-917.

Ivanhoe, 11 June, 1886.

The troughing, which is of timber, iron lined, is also satisfactory; but the drift accumulating on the upper side should be cleared away.

The pump, a horse-gear Holman, and in half-an-hour sent fully 4½ inches of water in the tank, which is 25 feet square, this is equal very nearly 3,000 gallons an hour, or a little over six hours to fill the tank. The caretaker informed that he could not fill it in less than two and a half days, and this statement was supported by the local Stock Inspector, who stated that he fully believed this man's report. In this way, without any test to check the accuracy of the caretaker's statements, we have reports made by these officers finding fault with and condemning the work done by this Department.

P.W.P.,
86-3,081.

The caretaker was working this machinery with dry bearings, and seemed rather surprised when instructed to oil them.

ARTHUR P. WOOD.

The Commissioner for Roads.

Mr. Yeo for report.—H.G., B.C., 22/6/86.

Sir,

Sir,

Stock Office, Ivanhoe, 7 July, 1886.

Referring to your request of 22/6/86 for report on extract from Minute Paper by Mr. A. P. Wood, assistant engineer, on Boonoonna Tank.

The pump, of which I took delivery on 8th March last, was simply tested by running the horse-gear for a few minutes by two men. At that time the caretaker had no horse, consequently it did not throw a full stream of water, but I considered that when it was worked with a horse that it would work all right, and on my periodical visits the service tank has been full, and I have not tested it since, but the caretaker has frequently reported that it takes him nearly two days to fill the service-tank (not as Mr. Wood states, nearly two and a half days) which I told Mr. Wood when he was at Ivanhoe.

With reference to Mr. A. P. Wood's remarks as to reports being made by these officers "finding fault with and condemning the work done by this Department," I presume these reports allude to me; I beg to state, that I have not found fault with or condemned work without reason for it; in fact when I was suggesting some alteration to Mr. Wood and Mr. Stilwell on their last visit, I was told by Mr. Wood that I was not here to criticise, but that I had to take over works as they then stood.

11/6/86.

On my last visit the caretaker was working the pump without oil, which I spoke to him about, and instructed him not to work it again without using plenty of oil.

I have, &c.,

J. YEO,

Overseer, Public Watering Places.

P.W.P.,
86-3,105.

Extract from 86-2,980, report by Mr. Overseer James Yeo, 11/6/86 on Boonoonna Tank.

Machinery.—The pump is in working order, but it takes two days to fill the service tank, it pumps the water so slowly.

Remarks.—The pump has not turned out a success; it pumps the water so slowly that if a large quantity of stock came to water in a short time, the pump would not supply them fast enough.

JAMES YEO,

Overseer, Public Watering Places,

Ivanhoe.

This may perhaps be forwarded for the information of the Commissioner and Engineer for Roads and Bridges.—H.G., 19/6/86. The Under Secretary for Mines. Approved.—H.W. The Under Secretary for Works.—H.W., B.C., 23/6/86. Mr. Hiles,—Let me see last report; I think this is an error—that the pump was not properly worked.—W.C.B., 26/6/86. Mr. Hiles,—Extract Mr. Wood's report on this paper, and send to Mines.—W.C.B., 28/6/86. See Mr. A. P. Wood's report of 11th June, 1886, No. P.W.P. 86-3,081c (Tanks and Pumps, 86-917). Under Secretary, for transmission to Mines.—P.W.O., 29/6/86. The Under Secretary for Mines.—J.R., B.C., 29/6/86. Has not a copy of this been sent to Mr. Yeo for report? if so, connect this on return.—H.G. Yes; P.W.P., 86-3,081c, sent to Mr. Yeo, 22/6/86.—S.M.

XXXVIII.

Tarella Tank and Menamurtie Well.

Copy original
forwarded to
Under Secretary
Works, 20/4/82.

Report of Mr. Harry Gilliat, Inspector of Public Tanks and Wells, on a plan of water supply for the road from Wilcannia to the Albert Gold-field.

Sir,

Sydney, 17 April, 1882.

In accordance with instructions of the Hon. the Secretary for Mines, I left Sydney on the 6th of March to inspect the road from Wilcannia to the Albert Gold-field. On reaching Wilcannia I found, owing to the protracted drought, there was great difficulty in keeping open mail communication with Milparinka and Tibooburra.

A sum of £85 7s. 9d. was paid by three gentlemen from Adelaide for conveyance by Yancowinna and Lake Yantara to the gold-field, while Cobb & Co.'s agent refused to book more than one passenger, who was taken principally with a view to assist the driver, and each coach was expected to be the last that could get through.

I at once saw Mr. Byrne, Messrs. Cobb & Co.'s local manager, who, without a moment's hesitation, placed a special conveyance at my disposal and offered to accompany me himself. Three days were occupied in preparation in having waterbags made of sufficient size to enable me to carry water for the horses across the dry stages, one of which was reported as of being 80 miles long. I left Wilcannia on the 18th of March, the road passing over low, red, sandy ridges, wooded with mulga scrub, divided by short clay-pans, reaching in 9 miles a small service tank of about 1,500 yards, constructed by District Road Superintendent. The site appeared to have been the best that could have been selected, but cannot be recommended, the greater part of the catchment area being covered with loose sand, absorbs a large quantity of water before it begins to run. This, with the limited rainfall of the district, is a serious consideration, more particularly as the soil is not one that will puddle or harden by stocking. I recommend, therefore, that a well shaft be sunk here for 150 or 200 feet, when, if a sufficient supply is not obtained, the diamond drill or one of the water borers may be used to complete it.

From O'Leary's Tank, as this is the catch, the road becomes heavier, the ridges steeper, and more thickly covered with mulga (portions of this part of the road have been cleared by the Road Superintendent) until the large cane grass swamp, known as the Dry Lake, is reached, 18 miles from Wilcannia. There is a public-house here, kept by a Mr. G. J. Smith, who has three small tanks with a total capacity of 7,670 cubic yards on his selection of 640 acres. Smith has also sunk a well that yields, so he informed me, a good supply of fair stock water.

Mr. Road Superintendent Cambridge appears to have been in error in stating in his printed report of the 30th January, 1881, that the land has been selected here by Smith and Mr. Patterson, of Mena Murtie, and that there is none available for a tank. There

There is a water reserve of some 3,200 acres, and a capital site for a tank if it is ever required. For the present Smith has gone to a good deal of expense to provide water for the supply of travellers and stock, and I would suggest that so long as his charges are reasonable it appears unnecessary for the Department to incur the expense of a work here.

When it becomes necessary I would advise a well on the reserve.

From the Dry Lake the road continues for 14 miles over the same description of loose sandy ridges, wooded with mulga, with occasional box flats, to a cane grass swamp, called the Beefwood Tree. A service tank of some 1,200 or 1,500 cubic yards has been placed here, but a portion of a catch has been alienated to a selector named Patrick Mather, who has a conditional purchase of 40 acres. Mather has a shaft down 135 feet, and will, I think, get water before he gets much deeper.

I would recommend a well here or a mile further back toward the Dry Lake. If Mather strikes a good supply it may be found more convenient to resume his conditional purchase and well, otherwise a reserve of 640 acres might be notified a mile back, and a shaft put down on one of the box flats.

For 8 miles beyond the Beefwood the road continues over sandy ridges and then over open plains for another mile to Sandy's 100 acres selection and Victoria Hotel. On the Bunker Creek a well has been put down but no supply obtained. It is 3 miles further to the Menamurtie Station, which stands about half a mile back from the Menamurtie Waterhole. This has been dammed, as well as the hole immediately below it, and is as described by Mr. Road Superintendent Cambridge in his report, a very fair one; but that gentleman is, I think, in error in saying that the station is on the only reserve on the Gambool Run, and that Mr. B. Patterson is trying to have it cancelled.

I annex a rough sketch showing the reserves as I am informed they have been notified, and if I am correct the Menamurtie Waterhole is protected on each side by reserve 3. The Wirra Wirra Waterhole is a billabong of the Bunker Creek, about 2 miles distant by reserve 4, while a small waterhole, called the Yallaroo, a mile above the Menamurtie, has had one bank alienated by Martin's conditional purchase of 40 acres, the north bank being protected by reserve 2.

The road shown in my sketch is that in general use, and I consider it the most suitable. Stock passing can water at any of the waterholes in the creek without inconvenience, and without interfering with the lessee's improvements.

A new shaft was sunk at the head station, and I was informed by the manager on my return, that good water had been obtained at 135 feet. With these waterholes in the Bunker Creek, it is not necessary to go to any expense at present; but I would recommend, in addition to the existing reserves, one half a mile wide, extending from Sandy's Victoria Hotel, along the north bank of the Bunker Creek to Patterson's Bunker Creek Hotel, or the Tin Hut, as it is generally called, a distance of about 30 miles.

It is 5 miles from Menamurtie to Tarella, Mr. Quin's Station, over some gravelly plain and low downs. Mr. Quin has several dams along the creek, and the road through his run is excellently watered. His first dam is at the station, the second 7 miles above it, and the third 9 miles higher. Five miles further over fine open salt-bush plains to Patterson's Bunker Creek Hotel, or the Tin Hut, 26 miles from Menamurtie.

Patterson has sunk a small shaft in the bed of the creek, which supplies him with sufficient soakage water for domestic purposes; he has also a trial shaft down 115 feet, but has bottomed on slate and given it up.

From Patterson's the road leaves the Bunker Creek, ascending, after a few miles, low stony ridges of slate and quartz, and bending gradually to the west, to avoid the more broken country to the north; this continues for about 16 miles, till it falls into open cotton-bush plains at Millard's, 18 miles from the Tin Hut.

These ridges form the watershed to a number of small creeks flowing to the north, the north-east, and the south-west.

A flat near the foot of a bald hill, about 11 miles from Patterson's and 16 miles from Quin's last dam, in the Bunker Creek, is, in point of distance, the most suitable; and it is sufficiently probable that water can be obtained by sinking to justify a trial shaft being put down. In the event of this failing there is an excellent site for a tank in the immediate neighbourhood. Millard, 7 miles beyond this site, has a 40-acre conditional purchase and public-house on Turkey Creek. He has put two small tanks on a small creek that joins Turkey Creek, a few hundred yards below the house. On this creek is one of the sites selected for a tank by Mr. Road Superintendent Cambridge; it is an excellent one, but not convenient in distance for an economical division of the supply.

From Millard's the road bends abruptly to the west for 6 miles over fine pebbly downs and plains to Mr. Wren's Kayrunnera Well. As this well has but a limited supply, about 2,500 gallons in the twenty-four hours, nothing is gained by this deviation, and I wish to suggest that the road should go direct from Millard's to the J. K. Waterhole in the Kayrunnera Creek. It can be reached in about 8 miles, and will be shown in the annexed sketch to be shorter and more direct. I have to recommend that a reserve of 640 acres should be notified around this waterhole, which fills readily with a very small rainfall, and that it should be fenced in without delay. From the Kayrunnera Well the present road bends back to the north-west, passing within a short distance of the J. K. Waterhole, and continued over magnificent rolling downs, with Mount Kooningberry on the left to Mordern Station, 22 miles from Millard's, and 14 from the J. K. Waterhole. A considerable distance could be saved if the road was taken direct between the two places.

Messrs. Gayr and Hamilton have a very fine dam at the head station, although with only about two week's water in it at the time I passed for the few stock they have on the station, all their sheep having been sent to the Warrego, and they will be entirely dependent on some springs they have opened out at the foot of Mount Kooningberry, about 7 miles distant, which were yielding about 4,000 gallons per diem.

Leaving Mordern the road follows the Mordern Creek down for about 9 miles to Maxwell's public-house, then for 6 miles over thinly grassed plains with low sand ridges, and then for 15 miles over very heavy loose red sand ridges with clay-pans between. The present road, as shown on the map, keeps too far to the right, and a great saving in labour, as well as distance, would be gained if a line was run between Mordern and Cobham Lake, particularly as the sand hills are lower, less heavy, and indeed run out entirely a few miles to the westward.

The distance between the two places, though called 35 miles, is not more than 30, and if the line I suggest be surveyed would probably be less.

I have to recommend that a shaft be sunk on a large clay-pan about 15 miles from Mordern, or, if the line of the road be straightened, at a point half way.

Cobham Lake was dry, with the exception of a small hole at the mouth of the Evelyn Creek, and this was so foul that cattle or horses that drank it died very shortly. My horses had to be sent 5 miles to the Washpool, a magnificent hole, 300 yards long, and still 5 or 6 feet deep in the Evelyn Creek.

The Messrs. Donnelly have been obliged to remove their cattle from the station, this hole being the only water they have left. Cobb & Co.'s groom was camped here, and several teamsters who had left their loading and brought their horses on here, although there was no feed for miles round, but no one seemed to think it necessary to remove the carcasses of the bogged and drowned cattle (of which I saw at least half a dozen) from the water.

I do not consider that Cobham Lake can be regarded as a source of water supply, as it may remain for long periods unfilled, and when filled it must become brackish after a short time, having no effluent. I have therefore to recommend that a shaft be sunk about a mile south from the public house, and a reserve of 640 acres notified around it, at the same time reserving the northern and eastern shore of the lake, so that the water will be available for stock so long as they can drink it.

From Cobham to the One-tree is 12 miles of steady drag over heavy red sand ridges, and is the worst stage on the road. A service tank has been placed here, but as the One-tree Waterhole in the Evelyn Creek, which is within half a mile, fills, I learn, and during the last twelve months carried about 4,000 head of cattle for quite six months, I would recommend placing two small dams as shown in the annexed sketch, fencing it in and notifying a reserve of 2 square miles around it.

From the One-tree the road follows the west bank of the Evelyn Creek over very fine open plains for 7 miles to a selector named Fleming, who, since my return I learn has got water at 90 feet in his trial shaft.

Crossing here to the east bank the road goes over long rolling downs covered with salt and cotton bush, 10 miles to Milaing, a small shanty on the creek; in 3 miles from there it turns the point of the peak, a part of the range, and, for 5 miles farther, over beautiful downs into Milparinka.

The township has been placed on a low sandstone ridge on the west bank of the Evelyn Creek; it is about 10 miles from the township laid out at Mount Brown, 15 from the camp at the reefs, and 30 from the township at the Granite or Tibooburra.

A Government well has been sunk here to a depth of 160 feet which yields a limited supply of excellent water; this will probably be increased by sinking 15 or 20 feet, and I would recommend its being proceeded with at once. I am unable to see any special advantages that Milparinka possesses to make it probable that it will become the central point of the gold-field, or even the depôt of supplies for large pastoral country around. It has been fairly shown that good water may be obtained in wells at a moderate depth over large part of the surrounding country; and the mining population usually expect the storekeepers to come to them, and are not likely to give their custom to stores at a distance from the mining centre.

The estimated population at Milparinka on the 30th March was under 50; at Mount Brown not more than 25. The greater part of the supplies arriving here for the Reef or the Granite, where the bulk of the population of the field had collected in spite of the difficulty of conveying water for several miles.

I have great hesitation, therefore, in recommending more than a provisional supply at Milparinka, sufficient to meet all probable requirements, until it is more apparent that a permanent population will need to be provided for.

This I may suggest can be done by sinking the Government well until a sufficient supply is obtained, authorizing the construction of a stone supply tank of at least 25,000 gallons, and laying down 350 feet of sheep troughing, and 150 feet for large cattle: a suitable whim with ropes and self-acting buckets have I understand been already authorised. In addition to this I would recommend that the large waterhole in the Evelyn Creek should be securely fenced in from a point opposite the warden's office to another point 4 chains below the sandstone shoulders on each side of the creek below the township. And it will be desirable later to sweep out the main channel, and form the material into a dam below the fence.

The fence should be of seven wires with posts 8 feet apart, and of the best description.

It is 30 miles from Milparinka to the Granite, or Tibooburra, and the road is at present without water. I would recommend a reserve of 640 acres about a mile beyond Mr. Andrew's house on the Waratta Creek; and near where the road crosses a small tributary of the latter is a good position for a well.

At present I do not consider it necessary to make any provisions for water supply at Mount Brown; the miners have a good creek there, and very little labour will enable them to secure sufficient water to test this part of the field. 35 miles north from the Granite is the Wampah Creek, and about a mile within the boundary of New South Wales is the Wampah Waterhole, probably the finest and most permanent in the north-west; it is over a mile in length and reported to be 26 feet deep from its natural water supply, which is within the usual limits of the tropical rains, and its position about 240 miles *via* Wanaaring, on the Paroo to Bourke, where our western railway will shortly be. I think it desirable to call your attention to it, as it appears probable that it will become a central depôt for the distribution of supplies to the great pastoral district surrounding it, and, when the telegraph is extended here, the point to which the stock from the north-west and north will concentrate for instructions as to their market, since from here they can take the most direct routes for Sydney, Melbourne, or Adelaide.

I understand that Mr. Thompson, the last Warden at Milparinka, recommended a village reserve. I would suggest that the necessary reserve should be made to secure the water. I may add that the Queensland Government have had a Customs officer stationed here for sometime past, and that the population at present is estimated at 150 persons.

Proposed plan of water supply for the road from Wilcannia, on the Darling, to the Albert Gold-field.

THE limited rainfall and the frequent and prolonged droughts common to the north-west portion of the Colony, but particularly to that part lying west of the Darling and Paroo, are strong arguments against the use of tanks for public purposes, while the results obtained in so many recent instances showing that good water in fair supply can be obtained at moderate depth in the proper geological formation, confirm the view that wells afford the most permanent and reliable sources for the water supply of this district.

The

The plan I have the honor to submit for the consideration of the Honorable the Secretary for Mines is accordingly based upon this principle, combined with the utilizing of such natural waterholes as have been proved to fill with a light rainfall, say of 1 inch, and to be of good lasting capacity.

If the traffic over this road should ever become very heavy, provision will have to be made for additional works along the Bunker Creek, which is at present well watered from the 30 miles that the road follows its course, by the Menamurtie Waterhole and the three Tarella dams belonging to Mr. Quin.

A well will also be required at some point near the Mordern head station.

The following works I consider of immediate importance to keep communication open :—

1. A well half-way between Wilcannia and the Dry Lake, with a reserve of 640 acres, say 9 miles from Wilcannia.
2. A well, 13 miles beyond the Dry Lake, on one of the box flats, with a reserve of 640 acres, say 31 miles from Wilcannia.
3. A well at the foot of the Bald Hill, 11 miles from Patterson's Tin Hut on the Bunker Creek, with a reserve of 640 acres, say 70 miles from Wilcannia.
4. To reserve and fence in the J.K. Waterhole in the Kayrunnera Creek, about 8 miles from Millard's public-house, with a reserve of 640 acres, say 96 miles from Wilcannia.
5. A well, about 15 miles beyond Morderns, and about half-way to Cobham Lake, with a reserve of 640 acres, 125 miles from Wilcannia.
6. A well 1 mile south from the public-house at Cobham Lake, with a reserve of 640 acres. Also a half-mile wide reserve along the northern and eastern shore of Cobham Lake, 139 miles from Wilcannia.
7. Reserving, fencing in, and putting two small dams at the One-tree Waterhole in the Evelyn Creek, with a reserve of 2 square miles, commencing at a point 40 chains east of the trees marked A R on the bank of the creek, 151 miles from Wilcannia.
8. Deepening the Government well at Milparinka until a sufficient supply is obtained, constructing whim, stone supply tank of 25,000 gallons; 350 feet of sheep troughing, and 150 feet of cattle troughing; also fencing the waterhole in the Evelyn Creek, 176 miles from Wilcannia.
9. A well, 14 miles beyond Milparinka near the Waratta Creek, with a reserve of 640 acres, 190 miles from Wilcannia.

It appears therefore that in ordinary seasons water can be obtained on the road at the following points :—

1. At Smith's well, Dry Lake	18 miles.
2. Menamurtie Waterhole, Bunker Creek	25 "
3. Tarella Dam...	5 "
4. Tarella Seven-mile Dam	7 "
5. Tarella Sixteen-mile Dam	9 "
6. Kayrunnera Well, no supply	29 "
7. Mordern Dam on purchased land, now empty	15 "
8. Lake Cobham—dry...	30 "
9. One-tree Waterhole, Evelyn Creek, dry	12 "
10. Government Well, Milparinka	25 "

Leaving the following stages where water can be obtained at present :—

1. The Dry Lake	18 miles.
2. Menamurtie Waterhole	25 "
3. Tarella Dam...	5 "
4. Tarella Seven-mile Dam	7 "
5. Tarella Sixteen-mile Dam	9 "
6. Wash-pool, Lake Cobham	80 "
7. Government Well, Milparinka	37 "

The following table shows the distances between water, if the plan submitted be carried into effect. Table showing distances between water, under the plan proposed for the supply of the road from Wilcannia to the Albert Gold-field.

		Wilcannia on Darling River.			
		Miles.			
To 1st Well...	9	At or near O'Leary's Camp.	
Dry Lake	9-18	Smith's public-house, tanks and wells.	
2nd Well	13-31	Near the Beefwood Tree.	
Menamurtie Waterhole	12-43	In the Bunker Creek.	
Tarella Dam	5-48	do	
Tarella Seven-mile Dam	7-55	do	
Tarella Sixteen-mile Dam	9-64	do	
3rd Well	16-80	On flat, foot of Bald Hill.	
J K Waterhole...	15-95	In the Kayrunnera Creek.	
Mordern Dam	14-109	In the Mordern or Yandarlo Creek.	
4th Well	15-124	Half-way between Mordern & Lake Cobham.	
5th Well	14-138	1 mile south, Lake Cobham.	
Lake Cobham	1-139	Northern and eastern shores.	
One-tree Waterhole	12-151	In the Evelyn Creek.	
Milparinka	25-176	The Government Well.	
6th Well	14-190	Half-way between Milparinka and Granite.	

NOTE.—The new works and proposed reserves are underlined with red.

Before closing my report, I beg leave again to urge the importance of watering all travelling stock from troughing, the small extra expense of providing the necessary appliances is more than compensated for in the duration of the water during the first dry season; the objection to pump, water-lift or other machinery on account of their liability to get out of order, can be met by the adoption of a simple double whip, this can be rigged by any bushman, it is impossible for it to get out of order, so that it cannot be repaired by a common labourer, and where water does not require to be lifted over 100 feet, it is more effective than a whim.

I desire, therefore, to recommend that at all the waterholes that are fenced in and reserved the erection of a platform and double whip, a small supply tank and 400 feet of troughing.

The wells, I assume, will have whins, ropes, self-acting buckets, supply tanks, and troughing included in the contract.

In conclusion, I take the liberty of calling the attention of the Honorable the Secretary for Mines to the great courtesy shown by Mr. Byrne, the Resident Manager of Messrs. Cobb & Co. at Wilcannia: this gentleman not only placed a buggy and horses, free of charge, at my disposal, but volunteered to accompany me, on what he was well aware would be a difficult and fatiguing journey. I may add that had I been compelled to travel by coach it would have been impossible for me to have made the careful examination of the road, that by this means I have been enabled to do.

I have, &c.,

HARRY GILLIAT,

Inspector of Public Tanks and Wells.

Sydney, 17 April, 1882.
The Chief Inspector of Stock.

Minister for Mines *re* Wilcannia to Albert Gold-field.

Department of Mines, Sydney.

Tanks&Wells 82-268. REFERRING to the report of the Inspector of Public Tanks and Wells on a plan of water supply for the road from Wilcannia to the Albert Gold-field, I now direct—

1. That the wells and tanks there referred to as necessary, and underlined in red ink on the table, showing distances between water supplies on above road, be enumerated in a minute to be prepared for the consideration of my Honorable colleague, the Secretary for Public Works, with a request that they be constructed as described, without delay. I am so impressed with the urgency of this matter that I am of opinion that, if they cannot be carried out at once under the provision made under the vote for this purpose granted to the Works Department, this Department, although its vote is but small, and high exhausted by this undertaking, ought at once to provide them.

2. The fencing round waterholes and tanks and wells already in use ought (with the precaution referred to in a minute prepared by the Chief Inspector of Stock, which I have approved), at once to be provided by this Department.

3. The reserves referred to in report ought to be made at once, especially that referred to at page 13, at Waipah Creek, and the necessary steps taken to bring this subject under the notice of my Honorable colleague the Secretary for Lands.

A.R., 19/4/82.

The Chief Inspector of Stock.—H.W., B.C., 19/4/82. Extracts have been made from this minute and Mr. Gilliat's report, so far as action is called for in this Branch and in the Department of Lands, and the papers might perhaps now be forwarded to the Department of Public Works.—A.B., 20/4/82. The Under Secretary for Mines. Yes.—G.E.H. (*pro* Under Secretary), 20/4/82. The Under Secretary for Public Works.—G.E.H. (*pro* Under Secretary), 20/4/82. Roads.—J.R., B.C., 20/4/82. Mr. Bennett will have this carried out at once.—J.L., 20, 21/4/82. Received by me on the 22nd.—W.C.B., 22/4/82.

Copies of Mr. Gilliat's report retained, as it is improbable all the works proposed to be carried out can be done before the end of the year. I think the works proposed on this line should be at once commenced by this Department. I have therefore instructed Mr. Cambridge to proceed at once to Wilcannia, and have forwarded him instructions, plans, &c., to that place, so that tenders may be at once invited.—W.C.B., 28/4/82. Under Secretary, B.C.

Copy of Extract from Mr. Gilliat's Minute on 82-828, of 22nd November, 1882.

* * * * *

Tanks&Wells, 82-828. I would call attention to Mr. King's report, which appears to indicate that the recommendations of this Department are not being carried out, but that the Works Department are putting down tanks.

H.G., 22/11/82.

The papers might perhaps be forwarded to the Department of Works, with the view to ascertain what is being done in providing water for the portion of the road here referred to.—A.B., 28/11/82. The Under Secretary for Mines. Submitted.—H.W., 29/11/82. Approved.—A.R., 1/12/82. The Under Secretary Public Works.—H.W., B.C.

Memo. by Mr. A. P. Wood, Assistant Engineer for Roads and Bridges, to The Commissioner for Roads.

Tanks, &c., Wilcannia to Mount Brown.

Tanks&Wells, 83-72. THE following works are let and in progress:—

1. Well at Mulga Valley or O'Leary's.
2. Tank at Beefwood or Mathers.
3. The Peak or Bald Hill Tank.
4. J. K. Waterhole enlarging hole.*
5. Tank at Maxwell's.
6. Tank (small) 7 miles south of Lake Cobham.
7. One-tree.
8. Enlarging creek bed, Milparinka.

* See telegram attached.

These works were let under considerable difficulties, but the recent rains will enable them to be completed more rapidly than was anticipated.

I see by Mr. Gilliat's minute that he is under the impression that the recommendations made by his Department have not received due consideration at our hands, but it will be found that the works, with the exception of one at Lake Cobham, have been carried out at sites recommended by himself. The alteration in the character of the work was made after trial shafts had been sunk and wells considered inadvisable.

As

As to a certain extent bearing on this, I am glad to see that Mr. Gilliat, in a previous minute attached to these papers, takes the same views as to division of control that I have always held, and more firmly since my visit to the tank districts. I quite concur with Mr. Gilliat that as the construction of these works is in our hands, and as division of control is objectionable, the maintenance of these works should also be vested in this Department. Were this the case I am sure that many of the evils that now characterize the system would be eliminated.

ARTHUR P. WOOD, 9/12/82.

Under Secretary.—W.C.B., B.C., 9/12/82. Forward to Under Secretary for Mines.—J.R., B.C., 4/1/83.

The Department of Works might perhaps be invited to supply the same information as that here given with respect to the works on the Wilcannia to Mount Brown road, with respect to the other new works undertaken and proposed to be undertaken on the different lines of road.—A.B., 11/1/83. The Under Secretary for Mines.

Submitted.—H.W., 12/1/83. Approved.—J. P. ABBOTT, 15/1/83. The Under Secretary for Public Works for information, 17/1/83.

Memo. of Inspector of Public Tanks and Wells extracted from paper (Tanks and Wells, 83-73) relative to Mr. A. P. Wood's minute of 9/12/82 in reply to extract numbered as above, sent B.C. to Mr. Gilliat by Chief Inspector of Stock on 27/1/83.

I am not aware that this Department has been informed of the works to be constructed on this road. Wells were recommended for the reasons fully given in report, and the soundness of that recommendation has been confirmed by the number of successful shafts put down by private enterprise since it was written. With regard to the latter paragraph, as I attribute the evils of divided control to the errors in construction in the first instance, I cannot expect the writer to agree with my view.—H.G., B.C., 31/7/83.

Submitted.—A.B., 2/8/83. The Under Secretary for Mines.

A comparison with the report of Mr. Gilliat, pages 17, 18, 19, 20, and his recommendations will show the statement of Mr. A. P. Wood to be incorrect, and from Mr. Tully's telegram the work at the J.K., stated to be let and in progress, was not undertaken by the Works Department. See 85-3,630 herewith.

Telegram from Mr. M. J. C. Tully, Overseer of Public Watering Places, Wilcannia, to Mr. J. W. Boulton, Inspector of Public Watering Places, Mines Department.

Wilcannia, 26 November, 1887.

AM informed small tank was made at fence 8 miles from Cobham, and two trial wells between that place and Cobham. Milparinka Waterhole was enlarged and small dam made. J.K., nothing done except by owners of Yancannia Station. This is from reliable information not from personal knowledge.

M. J. C. TULLY.

Department of Mines, Sydney, 10 May, 1884.

I wish Mr. Gilliat to inform me whether it is true, as stated in the *Sydney Morning Herald* of the 10th instant, that a Government tank has been constructed on Tarella Station, close to the Coonawatta Dam, on the stock route, although the latter dam had been used by travellers and drovers for a long time, and was available for the general public and abundance of water; and, if so, why was the tank constructed?

J. P. ABBOTT.

Tanks & Wells, 84-543.

The extract from *Sydney Morning Herald*. See Peri Springs Tank case

Minute by Chief Inspector of Public Watering Places to The Under Secretary for Mines.

Department of Mines, Stock Branch, Sydney, 20 May, 1884.

Subject:—The Public Well, near the Menamurtie Waterhole, and the Public Tank, close to the Coonawatta Dam, Tarella Station.

In reply to the minutes of the Hon. the Secretary for Mines, Tanks and Wells 541 and 543, respecting the sinking of a public well within a mile or two of permanent water in the Menamurtie Waterhole, and the construction of a public tank close to the Coonawatta Dam, on the Tarella Station, I have to say, although not verified by personal inspection, I understand the statement of the correspondent of the *Sydney Morning Herald* of the 10th instant is correct.

Tanks & Wells, 84-582.

On the 6th of March, 1882, I received instructions from the Secretary for Mines to inspect the road between Wilcannia and the Albert Gold-field, and to report upon a plan of water supply. On the 17th of April the report was submitted, and from it I extract the following as bearing directly upon the question asked by the Hon. the Secretary for Mines:—

Copy herewith.

“With these waterholes in the Bunker Creek, the Menamurtie, the Wirra Wirra, and the Yallaroo, it is not necessary to go to any expense at present, but I would recommend in addition to the existing reserves one half a mile extending from Sanders' Victoria Hotel, along the north bank of the Bunker Creek to Patterson's Bunker Creek Hotel, or the Tin Hat, as it is generally called, a distance of about 30 miles. * * * Mr. Quin has several dams along the creek, and the road through his run is excellently watered. His first dam is at the station, the second 7 miles above it, the third 9 miles higher. * * * * *

“If the traffic over this road should ever become very heavy, provision will have to be made for additional works along the Bunker Creek, which is at present well watered for the 30 miles that the road follows its course by the Menamurtie Waterhole and the three Tarella dams belonging to Mr. Quin. * * * * *

“Table

"Table showing distances between water under plan proposed for the supply of the road from Wilcannia to the Albert Gold-field.

Wilcannia, on the Darling --

	Miles.	
To first Well	9	
Dry Lake	9-18	Smith's public-house, tanks and well.
Second Well	13-31	Near the Beefwood Tree.
Menamurtie Waterhole ...	12-43	In the Bunker Creek.
Tarella Dam	5-48	"
Tarella, Seven-mile Dam...	7-55	"
Tarella, Sixteen-mile Dam	9-64	"
Third Well	16-80	On flat, foot of Bald Hill."
* * * * *		

The plan here submitted for approval placed the No. 2 well 12 miles from the Menamurtie Water-hole, and the No. 3 well 16 miles beyond the third Tarella Dam, and was understood to be forwarded for the information of the Department of Public Works.

I am unable to say why these alterations of sites selected by this Department were made, and I am not aware that such changes were ever referred for the consideration and acceptance of the Hon. the Secretary for Mines.

HARRY GILLIAT.

Submitted.—H.W., 19/5/84. Forwarded for the information of Mr. Wright. I wish he would cause a searching enquiry to be made into this matter.—J. P. ABBOTT, 20/5/84. The Under Secretary for Works.—H.W., B.C., 20/5/84. Roads.—J.R., B.C., 27/5/84.

Minute by Mr. A. P. Wood to the Commissioner for Roads.

Wells and Tanks, Wilcannia to Mount Brown. Reply to the statements made by the *Herald* correspondent.

Sydney, 3 June, 1884.

Tanks and Punt's, 84-804.

I have to submit the following report on the statements made in the *Sydney Morning Herald* of the 10th ultimo, regarding certain wells and tanks in the Wilcannia District. These statements include four different works, as under:—

1. Menamurtie Well.
2. Tarella Tank.
3. Peri Springs Tank.
4. Mount Manara Well.

I will deal with them in the order in which they stand.

1. Menamurtie Well.—This work is stated to be within a few miles of two permanent water-holes, the inference being that the assumed permanent water is at the command of the travelling public, and the work being carried out by this Department a waste of public money. In reply to this I may state that there are no permanent water-holes in the Bunker Creek; that, in a natural state, this creek would in an ordinary season be dry from end to end; that the water alluded to by the *Herald* correspondent has been artificially conserved by the lessee of the run; that, though on reserves, the improvements belong to the squatter, as the reservation is from sale only, not from lease; that, though the present lessee may not object to the travelling public using his conserved water at the present time, there is no guarantee that, in the event of there being a large stock traffic, the same tolerance would be shown, or that, in the event of the run changing hands, the new owners would permit stock to use the water, for it must be remembered that travelling stock watering at private improvements might, and often would, materially interfere with station stock.

2. Tarella Tank.—The above remarks apply to this case also, the conditions being the same.

3. Peri Springs Tank.—This work was constructed before I had any connection with this branch, and I have never seen the site, but I know that it was approved by the Crown Lands Commissioner, and by those who petitioned for the works on the Paroo Road.

4. Mount Manara Well.—This was one of the first works constructed by me in this district, and the yield, though of good quality, was of limited quantity, the test only giving 400 gallons an hour. This deficiency was met by the construction of a chamber in the bottom of the shaft, and by an extra large service tank on the surface. This work, with all others constructed by us, was handed over to the "Mines," and, as was the case with several other similar works, was eventually condemned by that Department, after having been maintained and repaired by them for some years. The works were handed over in good order, and this Department is not responsible for the present state of the well. This question has not been dealt with in Mr. Gilliat's memo., but as it is mentioned by the *Herald's* correspondent, I have pointed out the real facts of the case.

In regard to the Menamurtie Well and the Tarella Tank, for which this Department is blamed, I may state that if such blame has any lodgment it must be on my shoulders. I was sent up to that district with full power to select sites and let all necessary works. I went over the road in company with Mr. Barlow, the District Surveyor, and Mr. Cambridge, the Road Superintendent, and the action taken by me was supported by their opinions. I acted at the time in the interests of the public and the Department I represented, and, notwithstanding the adverse opinions that have been expressed, I have no reason to alter my views, and still think that the two works referred to and as yet unfinished, though within a few miles of station improvements, are necessary in the public interest. I am well aware that my recommendations were not referred to the "Mines" for the approval of its officers; such a course would have entirely negatived the object of my special trip, by causing endless delay in settling the question; nor was such a course necessary, as the powers given me were sanctioned by the then Minister for Works.

I may add that I gave Mr. Quin, M.L.A., a list of the works let during that visit, and that the people in that district, through that gentleman, expressed their satisfaction at the course adopted by me at the time.

ARTHUR P. WOOD.

Minute

The Menamurtie Waterhole was never dry throughout the last drought, nor, I am informed, before the dam was constructed in the previous drought.—H. G.

Minute by The Commissioner for Roads to The Secretary for Public Works.

Sydney, 8 August, 1884.

In compliance with instructions to report on the strictures contained in a paragraph of letter from (no name) in the *Herald* of 10th May, on the operations of this Department in the dry country, I think it necessary to deal with the paragraph in its entirety.

Tanks & Wells,
84-1,026.

It begins by pointing out the desirability of a Local Government Act. As I have long advocated such a course, I append two paragraphs from reports of mine, dated 31st March, 1865, and 9th February, 1871, respectively.

It is generally represented that the Department is opposed to such a measure, the extracts appended show on the contrary that I have always advocated it, but from reasons different from those generally put forward, as I cannot admit that the work would be better done, as throughout the Colony where Municipalities do exist it will almost, without exception, be found that the best roads and bridges therein have been made under this Department, either prior or subsequent to the formation of the Municipality.

As to not giving consideration to the wishes of those on the spot, Mr. Cambridge reports that the sites were recommended by the oldest residents, and Mr. Quin's letter of approval was an evidence that Mr. Wood gave satisfaction.

Note.—See a letter from Mr. Quin, dated 15 Dec., 1887 (87-4,322).—H.G.

The first specific accusation in the paragraph is with reference to the Peri Tank. The Minister for Mines asks that the Minister for Works will ascertain who is responsible for this gross waste of public money, and the cost or amount so wasted. The amount is £1,500.

The tanks in this Paroo route were demanded in very strong terms by the local press, by a petition forwarded and urged by the then member for the district, Mr. Colin Simpson, and by letters from Mr. W. Brown, of Wilcannia. Mr. Cambridge, Road Superintendent at Hay, was directed to report (I attach copy of his report with parts underlined), but not satisfied with Mr. Cambridge's examination, as he was then new to locality, and liable to be misled by interested persons, I requested that the opinion of the gentleman whom I considered, and had a right to be, the best and most disinterested authority, Mr. Woore, the then Commissioner for Crown Lands, should be obtained, and asked Mr. Cambridge to confer with him. His letter is attached.

The waterholes referred to by Mr. Gilliat either have been made since, or it was considered that they were private property, and not available for public purposes, as Mr. Brown distinctly states there was not a drop of water on the line in dry seasons, and that great losses of travelling stock had been sustained. I am not sufficiently informed on this point, but I will endeavour to ascertain.

It is no doubt extremely easy to find these faults now that the country is known and of easy access, water conserved, and communication facilitated. When the inquiry as to works was being made the course of post was at least six weeks, and there was no railway nearer than Junee. It should not be forgotten that tenders were invited for the construction of these works in the *Gazette* and local papers for some weeks. No one during that time objected, and excessive pressure was put on the Department to get the work executed during the season when it was alone possible.

If there has been a gross waste of public money, which, notwithstanding Mr. Gilliat's assertions, I doubt very much, I alone am responsible if it is considered I could have done more and laid the Department open to accusations of delay, and accountable for loss of stock.

Mr. Wood had nothing whatever to do with these Paroo works, but that the springs were not overlooked is evident from the sketch plans sent by Mr. Cambridge.

I have not had time to get detailed information about the relative positions of other works and respecting adjacent waters, but Mr. Woore's approval applies to all on this line.

I need not further dwell on accusations made after seven years, when the whole circumstances of the case have changed, but in the interests of the future I think that Mr. Gilliat's recommendation as to further expenditure on these works should be considered in the light of Mr. Higman's recommendation of 26th November, 1878, as to the probability of this route being superseded when rail opens to Bourke. I will, therefore, not proceed with the alterations and additions suggested by Mr. Gilliat until further instructed.

At most the Copago Tank or well there, which I believe would be most advisable, and at the Peri Mr. Hanna reports that the slopes are easy and the ground firm, and stock can be watered with safety and despatch, thus avoiding expense which the erecting of pumping gear would involve. As regards Mount Brown road, and Mr. Abbott's memo. on Mr. Gilliat's paper requesting that searching inquiry be made into the matter, I append Mr. Wood's paper.

There were a number of communications from the district urging on the construction of some sort of water supply about the commencement of 1881, and at the urgent and pressing request of those interested, Mr. Wood was despatched to let such works, and take such steps as seemed to him necessary for the permanent opening of a route to a large gold-field, which was then pronounced to have been proved. Mr. Wood's mission gave great satisfaction at the time, and I might say an unparalleled letter was written by Mr. Quin, M.P., expressing approval of the action taken.

W. C. BENNETT.

Extract from Commissioner for Roads' Report, dated 31st March, 1865.

Future Management.

Recommending local management.—Having endeavoured to set before the Honorable Secretary for Public Works, a full statement of the past working of the Department, it is now my duty to submit my views as to the future management of the roads of the Colony.

I am decidedly of opinion that the time has now arrived when, in the more settled parts of the Colony, either by the extension of the Municipalities Act, the consolidation of Municipalities, or some new legislation, analogous to the District Road Boards' Act of Victoria, the management and cost of local roads in the first instance, and ultimately of the main roads, should be transferred to local bodies.

The anomaly existing in this Colony, of the main trunk roads most used being in the most thinly settled portions of the Colony, will be obviated by the railway extensions to Mount Victoria and Berrima; beyond those points, within the settled districts, and in the County of Cumberland, with few exceptions, where roads are required, sufficient population exists to create a local interest in their construction and maintenance, and to initiate a system of local taxation for such purposes.

Main

Main thoroughfares not to be transferred for a time.—Provision might be made for the partial endowment of those bodies at first, but I would not recommend the transfer to their charge of the main thoroughfares to the interior, until the system had got into working order on the roads of local importance (say) for three years; and, when transferred, the efficient maintenance of the main roads should be made imperative.

Roads parallel to railways to be transferred at once.—The portions of the main roads within the railway termini should however be transferred to the charge of the local bodies in the first instance, and as soon as possible.

It would be beyond my province to point out how such an Act should be framed in detail; but I think the District Road Act in Victoria, and a modification of the "Irish Grand Jury Act" would be the best models for legislation.

It would be for the Parliament to determine whether such local taxation should comprise provision for gaols, court-houses, or other public works, as in Ireland; but there are two provisions in the Irish Act which, I think, should certainly be contained in any Act for this purpose in New South Wales.

Compulsory repair.—One, for the compulsory repair by Government, and recovery of cost of same from local body, of any important postal road allowed to get out of order by them.

Qualified surveyor to be appointed.—The other, that a properly qualified professional officer or surveyor should be appointed for each Board or Trust, who should have had a regular professional training, and have passed a professional examination before a Board in Sydney, to be composed of civil engineers of standing, either in or out of the Government service. The districts should be sufficiently large to admit of the adequate remuneration of such an officer, the engagement of whom I consider indispensable to the success of the measure.

Roads in thinly populated districts.—With reference to the roads beyond the more settled districts, or roads of more than local importance, the "Main Roads Act" might be amended, as recommended by "Joint Report on Transfer of Minor Roads," so as to admit of the Government proclaiming any road a main road.

I more particularly refer to the roads to the frontier districts, communication with which should be facilitated as much as possible, to prevent trade gravitating to the other Colonies, namely:—

Roads of Colonial importance.—The road from Grafton to the Tableland, from south coast to Tableland, from Murrurundi, *via* Breeza and Pocataroo, to the frontier of Queensland, from Molong or Wellington to Fort Bourke, from Wagga Wagga, *via* Deniliquin, Batranald, and Wentworth, to the South Australian frontier.

Extract from Commissioner for Roads Report, dated 9th February, 1871.

* * * * *
 In conclusion I feel it my duty again to repeat my recommendation of 1865,—That some local administration, similar to the Irish Grand Jury system, be at once adopted, with the modifications then recommended by me. Each day strengthens my conviction of this point, and I cannot too strongly urge its adoption, for every reason. The census about to be taken might be made a means of partially introducing this system, by refusing to expend money on such works in any district when the population exceeded a certain number per square mile, unless through the medium of a Municipality.

Pending the introduction of such system, it is absolutely necessary that the Act amending the Main Roads Act should be law.

Forward to Mines. The Under Secretary for Mines.—J.R., B.C., 11/8/84. Submitted.—A.B., 13/8/84. The Under Secretary for Mines. Submitted. Unless it is thought the discussion should not be prolonged, perhaps the papers should be referred to Mr. Gilliat.—H.W., 15/8/84. Let this discussion end so far as this Department is concerned.—J. P. ABBOTT, 15/8/84. Mr. Gilliat.—A.B., 15/8/84. Seen.—H.G., 16/8/84.

Sir,

Wilcannia, 3 October, 1885.

Tanks & Wells,
85-3,630.

I have the honor to forward with this, my report on the public watering places now in course of construction on the road from Wilcannia to Tibooburra.

I may mention that Waratta Tank, Maxwell's Tank, Milparinka Well, and Menamurtie should be completed very soon.

MARK J. C. TULLY.

The Chief Inspector of Stock, Sydney.

Report by Overseer Tully on the Public Watering Places in course of construction, road from Wilcannia to Tibooburra, travelling stock reserves 500 and 558.

Mulga Valley Well.—Is about 80 feet deep; has been abandoned for a considerable time, but contract is let for cleaning out and timbering.

Dry Lake Tank.—Is 15 feet under water.

Beefwood Well.—Contract for boring to 300 feet is let; now down about 170 feet; had some delay through piping (tubing) giving way, which had to be taken out.

Menamurtie Well.—Is down about 167 feet, on good water. The whim is being erected, and sinking will go on again till sufficient supply is reached.

Tarella Tank.—Contractor is now at work; down about 12 feet.

Peak Tank (Kandie).—Got filled with water when 8 feet deep. Fresh contract has been made for pumping out water and finishing.

J. K. Well.—Is about 200 feet deep; contractor had to erect temporary whim, and is now at work again; no water. Maxwell's

Maxwell's Tank (Yandenberg).—Was nearly completed when I visited it, but the rain of the 13th September put 2 feet of water in it, which has delayed operations a little.

Cobham Lake Tank.—Many feet under water.

One-tree Tank.—This is a small open tank of perhaps 2,000 yards, and nothing more is likely to be done here, as from Cobham to Coally Dam will be the regular stages.

Coally Dam.—Was washed away soon after being finished (or perhaps it was hardly finished) by the floods of the 27th January. Fresh tenders are being called for.

Milparinka Well.—Struck good water a day or two before my visit at 110 feet. Contract for whom is let, and sinking will be continued till a sufficient supply is reached.

Waratta Tank.—Nearly finished, and a credit to the contractor.

Tibooburra Well.—A small supply of good water at 160 feet; tender for whom called for (207 miles from Wilcannia).

Wilcannia, 2nd October, 1885.

M. J. C. TULLY.

Overseer Mark J. C. Tully to The Chief Inspector of Public Watering Places, reporting on well recently constructed at Menamurtie.—Road—from Wilcannia to Tibooburra; distance from and name of post town—40 miles from Wilcannia; reserve (nature, No., and date)—Not on any reserve; is off T.S.R. 500, and only part of the T.L. is on W.R. 365, 4th August, 1879; parish—Menamurtie; county—Yungnulgra.

P.W.P.
87-922.

Questions:—

1. Name of road and length? T.S.R. 500, road from Wilcannia to the Queensland border at Yalpunga, via Milparinka and Tibooburra.
2. If near a town give estimate of population that may be dependent on the watering place? Not near any town, only a road side public-house, and a small selection near, about 1 mile distant; say, twenty people.
3. Estimate of traffic in stock and teams? 150,000 sheep annually, 10,000 cattle annually, 250 teams annually, 4 coaches per week. Note.—The opening of railway communication with Adelaide from Silverton will divert much of this traffic.
4. The traffic; by what roads; the destination? From Wilcannia, to and from South-west Queensland. From Silverton up the Paroo, and *vice versa*; all the goods required by stations and towns in the north-west, and all wool for shipment at Wilcannia. Queensland stock for Melbourne, and all stock to and from the stations in the north-west, also stock from the Paroo to Adelaide by proposed T.S.R., which will junction with T.S.R. 500 here. Coach to Mount Gipps via Gnalta branches off here, and coaches twice a week to and from Tibooburra via Milparinka and Yendarlo.
5. Its distance from nearest watering place, or permanent natural water on each side? From Beefwood Well, unfinished, on the south side 9 miles. From Tarella Tank on the north 13 miles. Tarella Station Dam, which is on a reserve, and in most seasons is available, is only 5 miles north-west of this well, and stock will always avail themselves of it.

If a well.

6. Depth of well; depth and quality of water? 183 feet 6 inches deep, water rises to within about 60 feet of the surface. Is in my opinion quite fit for domestic use, although a little brackish; gives a supply of 700 gallons per hour.

Watering appliances.

7. Full description of watering appliances and delivery in gallons per hour? An ordinary horse whim of excellent construction, and very strong drum 8 feet in diameter. Steel wire rope galvanized, galvanized iron self-acting buckets, each 45 gallons capacity. Delivery about 1,000 gallons per hour.
8. Supply tank; size, construction, capacity in gallons? 54 feet long, 15 feet wide, and 5 feet deep, of sawn gum timber, and galvanized iron clouted on to the timbers, very substantial, and perfectly water-tight.
9. Troughing, length, width, depth, material, and position? 200 feet long, 3 feet 6 inches wide at top, 10 inches deep, of best steel, placed on heavy gum sleepers in a direct line with a tank, and has a protecting top-rail.

Fencing.

10. Area enclosed; description; distance between posts; number and gauge of wires? No fencing erected; should be done as soon as possible, as this will be the only inducement for a tenant to lease the work.

General.

11. Probabilities of obtaining tenant and estimated rent? If the T.L. were enclosed a tenant would most probably be got, but at a low rent, as I do not anticipate a large revenue from this well except in very dry times.
12. Area, position, and quality of land included or to be included in tenant's lease. Area notified for public watering place? Area 445½ acres of excellent grazing land for T.L., and 640 acres for public watering place, also excellent grazing land.
13. Carctaker's cottage and description? None erected.

General remarks.

This well being only 9 miles from the Beefwood Well now in course of construction, and 5 miles from a dam near Tarella will not be of so much service to the public as the Beefwood Well will be, and it (the Beefwood) should be pushed on, as it is in a dry scrubby region which holds no water, even in crab-holes after rain.

MARK J. C. TULLY,

Overseer of Public Watering Places.

31st December, 1886.

The Chief Inspector of Public Watering Places, Sydney.

Mr. Tully.—What about the Menamurtie Waterhole?—H.G., 20/4/87. I did not take it into account, as it is only a mile from the surveyed road, and is hemmed in by C.P. and station fences.—M.J.C.T., 28/4/87.

Memo.

Memo. by The Honorable the Secretary for Mines.

P.W.P., 87-6,787. I WOULD like to know what is the receipt and expenditure in connection with Tarella Tank, on Mr. Quin's run, and also the same with reference to Victoria Well. F.A., 13/12/87.

Minute by The Chief Inspector of Public Watering Places to The Under Secretary for Mines.

Subject:—Tarella Tank and Menamurtie Well.

Department of Mines, Public Watering Places, Sydney, 15 December, 1887.

P.W.P., 87-6,854. WITH respect to the minute of the Honorable the Secretary for Mines referring to the Tarella Tank and Menamurtie Well, both works are upon Bunker Creek, on the road from Wilcannia to Mount Brown and Milparinka.

In my report of the 17th April, 1882, recommending a scheme of water supply for this road, I gave the stages and proposed sites for nine new works, specially referring to the Bunker Creek, as being sufficiently watered by the unfailing water-hole at Menamurtie, and by Mr. Quin's Tarella Dams (Coonawater, Goondamurtee, and White Cliff), and therefore, that portion of the road would require no further provision.

On the 19th April, 1882, this report was forwarded by the Minister for Mines requesting that the works enumerated might be constructed as early as possible by the Works Department.

On the 20th May, 1884, a paper in *The Sydney Morning Herald* stated the Menamurtie Well to be close to permanent water, and the Tarella Tank to be within a few miles on either side of large dams in the Brunker Creek.

Reporting on these statements under instructions from the Honorable J. P. Abbott, then Minister for Mines, I quoted from my original report showing what my recommendations had been, and that I was unable to say why the alterations were made in the sites selected by this Department, and that such alterations had not been referred to us for consideration.

This report Mr. Abbott minuted to the Secretary for Works, urging that a searching inquiry should be made.

Mr. A. P. Wood replies, 3rd June, 1884, that the Menamurtie waterhole is not permanent, that the improvements to it belong to the Crown tenant, and that complications between the public and pastoral tenant would probably arise if the well was not there.

With respect to the Tarella Tank, Mr. Wood states that the same remarks apply.

It may be observed the improvements here referred to were made on reserves, and were open to the public use.

Mr. Wood continues that his selection of sites was supported by District Surveyor Barlow and Road Superintendent Cambridge, and that he adheres to his views.

Mr. W. C. Bennett follows in a long minute, which concludes by stating that "Mr. Wood's mission gave great satisfaction at the time, and I might say an unparalleled letter was written by Mr. Quin, M.P., expressing approval of the action taken."

Upon this Mr. Abbott directed, 5/8/82, that so far as this Department was concerned the matter should end. Despite the urgency, that was one of the reasons why the alterations recommended by Mr. Wood were not referred to this Department.

The Menamurtie Well was not handed over as completed until the 23rd of December, 1886, and the Tarella Tank, although we were informed, 84-960, that it would be ready early in 1884, has not yet been transferred.

At the Menamurtie Well a caretaker was placed to protect the head works, and it is not improbable that, although entirely unnecessary, it will be used in seasons of drought by drovers on account of its neighbourhood to the public house. A T.L. has been surveyed there as the best chance of obtaining a tenant when it was fenced.

No stronger case could perhaps be advanced of the urgency of placing the construction and maintenance of these works under one supervision; and, in submitting this report to the Honorable the Secretary for Mines, I may remind him that action on the part of this Department in dealing with many cases requiring correction has been practically suspended during the last seven or eight months, pending the settlement of the question between the two Departments.

HARRY GILLIAT.

Expenditure at Menamurtie Well to November 30th, 1887.

Caretaker's wages	£146	0	0
Tools	8	6	6
Inspecting allowance to Overseers	1	10	0
						£155	16	6

Submitted.—H.W., 23/12/87.

Seen. This case should be referred to the Commission appointed to inquire into this question, more especially as Mr. Quin has told me that the statements that he approved of and recommended these works are wholly incorrect, and his letter of 15/12/87 describes such a statement as absurd.—F.A., 23/12/87.

MEMO.—

I believe that previously to 8th August, 1884, the date of Mr. Bennett's memo., in which he states that an unparalleled letter approving of the action taken had been received from Mr. Quin, M.P., Mr. Quin had interviewed him and protested against the construction of the Tarella Tank, and in consequence of which a telegram was sent to Mr. Hanna, either late in 1883 or early in 1884, to stop the work. It was, however found, that as compensation in excess of the amount required to complete the tank would have to be paid the work was allowed to proceed. I may mention that the tank, as originally pegged out, had its inlet down stream, and Davis, the contractor, had to wait until this was corrected before commencing work. This can be corroborated by both Mr. Quin and Mr. Tully, the then Manager. I refer to these matters, since I was at that time overseer of Tarella Station, and acquainted with all that was said to have been done.

JAMES W. BOULTBEE,

20/12/87.

Letter

Letter from Edward Quin, Esq., to The Hon. the Secretary for Mines.

Dear Sir,

Reform Club, Sydney, 15 December, 1887.

I have been told that it has been said that I approved of the construction of the Tarella Tank and the Victoria Well.

P.W.P.,
87-6,822.

As a matter of fact I drew the attention of Mr. Bennett to the absurdity of this tank, but in justice to that gentleman I must say it had proceeded considerably before his attention was drawn to it. The fault does not lie with Mr. Bennett, but with the officer or officers who recommended this work, which I am sure must remain a most unproductive and costly work to the State.

The Hon. F. Abigail, Esq., M.P., Secretary for Mines.

I have, &c.,
EDWARD QUIN.

XXXIX.

Papers, re Appliances, &c.

See annual report of Inspector of Tanks and Wells, 1882.

Steel and iron supply-tanks.—Iron troughing for sheep and cattle.

MEMO.—

In submitting the accompanying plans and specification of steel and iron supply-tanks, iron sheep and cattle troughing, I beg leave to offer a few remarks upon them for the consideration of the Honorable the Secretary for Mines. Having been always strongly of opinion that the use of supply-tanks and troughing would in time be generally adopted at the Government tanks and wells, I have for a considerable period given careful consideration to the different methods in use, with the purpose of ascertaining the most suitable form, and also to learn if an improvement could be made in the material and a reduction in the cost. Under instructions from me, Messrs. D. & W. Robertson, of Sydney, have prepared the accompanying plan and specification.

Tanks & Wells,
82-410.

The price at which the tanks of 20,000 gallons capacity can be delivered in Sydney, in lengths ready for erection, will, I think, be found to admit of their being conveyed to the point required at a lower rate than in any other material (except where stone is abundant), with a certainty of having a tank of the most suitable description, of the most durable nature, without being dependent on the more or less unskilled labour and imperfect material liable to be obtained at places so remote. The same remarks it is considered will apply with equal force to the proposed form of troughing.

£90 to £100
sterling.

It is intended to bolt together the plates of the tanks and the sections of the troughs, lining the joints with felt soaked in boiled coal, tar, or, if more convenient, the joints may be cemented.

The tank is to rest on log trestles, sufficiently high to admit of a defective bolt being replaced if needed, and to enable the bottom to be coated every two years with boiled coal-tar.

There is a difference of £10 sterling in cost, and of about 1 ton in weight, between the steel and iron; the former, I consider, has the advantage in lightness and strength, though both are so strong that no objection can be entertained on that score, while the difference in price will be probably made up in the saving in carriage.

With regard to the troughing, the cradles are intended to be bolted with square-headed coach screws to sleepers, sunk to the level of the ground, and although it is not considered absolutely necessary, the plans alluded to by Mr. Woods, in his report on the road from Hillston to Cobar, of placing a rail in front of the troughing, at such height as to enable sheep to drink below it and larger cattle over it, might perhaps be usefully adopted.

3s. 6d. per foot,
run.

Should the Honorable the Secretary for Mines approve of the plans and specifications herewith submitted, I would recommend that Messrs. D. & W. Robertson's tender for ten of the tanks and 4,000 feet of the troughing be accepted.

I might also suggest that these papers might be submitted for the opinion of the Commissioner and Engineer for Roads and Bridges.

HARRY GILLIAT, 18/5/82.

Mr. Inspector Gilliat's suggestion as to forwarding these papers on to the Works Department for the opinion of the Commissioner for Roads, might perhaps in the first instance be approved.—E.W. (for A.B.), 19/5/82. The Under Secretary for Mines. Submitted.—H.W., 19/5/82. I would like to know the opinion of the Commissioner for Roads on the herein contained suggestions.—A.R., 23/5/82. The Under Secretary for Public Works.—H.W., B.C., 23/5/82. Roads.—J.R., B.C., 3/6/82. Mr. Wood.—W.C.B., 6/6/82. Mr. Bruce. Will you be kind enough to have me supplied with copies of these papers.—H.G., B.C., 22/6/82.

While there is much to recommend Mr. Gilliat's proposal, to use iron in the construction of supply-tanks, there are at the same time many drawbacks militating against its successful use, more particularly if of the design submitted.

In the first place I would draw the Commissioners attention to the excessive lightness of the iron and of the framing for a tank of such a size. Next I fail to see the particular advantages of employing a practically imperishable material like iron in a tank while the foundations are to be of timber. This at once introduces the main objection to our existing service-tanks. Lastly, the cost is decidedly in favour of the existing system, in as much as a 20,000-gallon tank can at present be constructed for £90, whereas the cost of the steel tank at the wharf, in Sydney, will be £100; to this add carriage by train and team, and trestles, and fixing, which will together cost £75, and the total then amounts to £175, or nearly double that of any existing works of similar capacity. This too with a defective design as a substitute which, if amended, would make the comparative cost much greater.

Under these circumstances I cannot recommend the use of the iron tanks as proposed.

The troughing will cost, in Sydney, about the same per foot new as our existing troughing on the ground. Protection to the trough would be needed, as there is not sufficient strength in the design to stand either the lateral or vertical strain, likely to be thrown on it by stock when watering. The chief consideration in this case is,—whether the advantage of the trough proposed is so much greater than the better type of troughing used by us as to warrant the greater expenditure. I am of opinion that it is not. If, however, a trial should be made, the iron ought to be galvanized before being forwarded from Sydney. This remark equally applies to the steel or iron tanks.

6/6/82.

The Commissioner for Roads.

A. P. WOOD.

I concur with Mr. Wood. I cannot recommend the tanks and troughs proposed, they are defective in design, not so strong as, and would be double the cost of those used by this Department, and unless galvanized, which would be a further addition to cost, would not last any longer.—W.C.B., 7/6/86.
Under Secretary.—J.R.

Two plans herewith.—P.W.O., 9/6/82. Under Secretary for Mines.—J.R., B.C., 9-12/6/82.
Mr. Gilliat.—A.B., B.C., 13/6/82.

Telegram from Inspector Gilliat to Alexander Bruce, Esq., Chief Inspector of Stock

Cobar, 29 November, 1882.

Tanks & Wells, 82-989. ROBERTSON'S prices were, iron, £90; steel, £100; present price absurd; iron troughing of proper size preferable to any other at 6s. per foot, if we cannot get steel; puddle with good overseer in charge, cheapest and best.

H. GILLIAT

Inspector.

From what I have heard with regard to "Puddle" supply tanks getting out of repair and leaking, I would not recommend their use pending further enquiry; but as Mr. Gilliat still considers them best, and as the construction of supply tanks on this line is pressing, his recommendation might perhaps be approved. I believe they are about one-half the price of galvanized iron tanks, which is about £90.—A.B., 1st December, 1882.

The Under Secretary for Mines. Submitted.—H.W., 2/12/82. Approved.—4/12/82. Mr. Gilliat informed by telegram.—5/12/82.

Memo from Inspector Gilliat, *re* supply tanks.

Tanks & Wells, 82-388. In reply to the minute of the Honorable the Secretary for Mines, 26 February, 1883, I beg to say that on roads where the traffic is not large or where the conserving tanks are small or imperfect in construction, it appears to me that the cheapest form of supply tank is the best.

When the cubic contents of the supply tank are not required to exceed 10,000 gallons, I consider the puddle quite as durable, and much more cheaply and easily repaired than the supply tank of wood and iron; where a small tank will answer the purpose I think this form the preferable one; a wooden tank lined with iron of the same size as the puddle tank, costing £65 sterling, say 7,345 gallons will cost £116 sterling, or £51 sterling in excess of the former.

For large tanks I am of opinion that contracts can be obtained for the steel or iron tanks designed by me last year, and if so they will prove not only the cheapest but far the more durable than any yet adopted.

Failing these the wooden tank built from seasoned timber, and using heavy uprights, plates, and sleepers, so as to avoid shrinkage, giving a wide lap to the galvanized iron, and fastening it with a double row of screws with leaden washers, instead of the clout nails generally used, might be made to stand the severe wear and tear of the service and climate they are exposed to.

The size of the supply tanks could be modified, were the 200 acres of special lease fenced, so that the caretaker's horses would always be at hand, and if the machinery now in use was replaced by the more simple whip recommended, the necessity of keeping a large body of water stored in a supply tank would be greatly reduced, but where the usual horse powers are employed it is not safe to depend on a loss supply than 20,000 gallons; the castings of these powers are constantly breaking or getting out of order with the rough usage they receive, so that the supply may at any moment be interrupted; while on the other hand sheep in the dry season will drink even from troughing, where there is no waste, at least a gallon of water.

HARRY GILLIAT.

Supply Tanks.

Whether they should be of Puddle or of wood lined with galvanized iron.

Tanks & Wells, 82-291. In this case Mr. Gilliat was instructed to prepare specifications and call for tenders for the three public tanks on the road from Balranald to Ivanhoe, which had been constructed without these necessary appendages, and the want of which has been much against their letting. Mr. Gilliat accordingly called for tenders, but he did so for Puddle supply tanks, which are constructed by laying down a floor, say 4 feet thick of good clay puddle, erecting upon the floor a double frame of saplings, 4 feet apart, and 4 feet 6 inches high, and filling up with solid puddle well rammed.

1. The Puddle supply tanks are somewhat about one-fourth cheaper than tanks of wood lined with galvanized iron, but the Puddle tanks are not so secure as the wood and iron. According to the tenders received, Puddle tanks, with a capacity of 7,000 gallons would cost £65 each, while wood and iron of the same capacity according to his estimate would cost from £80 to £82.

2. When the clay is of the proper sort properly repaired, the whole work carefully done, and the tanks always kept full and moist, and not allowed to dry and crack, the Puddle tanks answer well; but these conditions are not always obtained, and the puddle tanks begin to leak, and when they do it is very hard to find where the defect is, while the saplings being between wind and water are apt to rot and decay.

I would therefore suggest that these supply tanks be constructed of wood and iron, which I understand, if properly put together, will last fifteen or twenty years; but it might perhaps be well to ask Mr. 5. Gilliat to report upon the two sorts of supply tanks before a decision is come to.

I have gone at some length into this subject, because the description of supply tanks will shortly have to be considered, when the sort of appliances for watering from troughs which are to take the place 6. of the present drinking tanks is decided upon.

If this change is to be made (and I think it ought to be so, as speedily as possible) something like fifteen or sixteen supply tanks will have to be provided. A.B., 22/2/83.

Let Mr. Gilliat report upon both classes of tanks, and the probable cost of each.—J. P. ABBOTT, 2 /2/83. Mr. Gilliat for report.—A.B., B.C., 1/3/83.

Telegram from Alexander Bruce to H. Gilliat, Inspector of Tanks and Wells, Ivanhoe.

Sydney, 5 March, 1883.

In reporting on puddle and wood, and iron supply tanks, say whether it would not be safer and more economical to make these tanks at least 20,000 gallons on the principal roads.

ALEX. BRUCE.

Minute Paper.—Department of Public Works.

Wrought Iron Service Tanks.

For Tanks and Wells.

THE wrought-iron buckle plate service-tanks, proposed for use in lieu of the timber-framed and iron-lined Tanks&Wells, tanks that have been erected up to the present time, will weigh 6 tons. This includes the rolled iron joists 83-868. carrying the tank.

Where building stone is procurable it is proposed to lay the joists on masonry piers. Where the stone is not suitable for this purpose concrete will be employed, and where there is no stone at all piers of cement mortar will be adopted.

The cost will be as follows:—

Tanks (19,500 gallons) in Sydney	6 tons, at £25 =	£150
Carriage	6 tons, at £12 =	£72
Fixing	6 tons, at £5 =	£30
Foundations in cement (5 to 1)7½ c. yds. at £4 =	£29
Total	£281

Where masonry or concrete can be used the cost will be reduced about £270.

These prices compare favourably with those now being paid for the old style of tank, and leave little room for doubt that the proposed change should be effected.

ARTHUR P. WOOD.

The Under Secretary for Mines.—J.R., B.C., 14/7/83. Submitted.—A.B., 17/7/83. The Under Secretary for Mines. Submitted.—H.W., 19/7/83. Drawings and specifications.

Minute Paper—Reply to minute, Minister for Mines.

Tanks and Wells.

Department of Public Works, 11 June, 1883.

A REPLY would have been sent to the minute of the Minister for Mines ere this, but waiting to have Tanks&Wells, the accompanying plan ready. As the work is to be done permanently, I think a buckled plate tank, as 83-868. shown on plan herewith, would be the most advisable. A sketch suggestive for iron troughing is also forwarded herewith. It is proposed to support both tank and trough on concrete blocks, so that they will be almost imperishable.

The tank it is intended to make of buckled plates. It will weigh 6 tons, and 120 feet of the troughing will weigh 1 ton. It is considered the tank will cost £280, and the usual 300 feet of troughing £120, or certainly not more than the present appliances.

A special Tangye pump has been sent for trial at Mount Hope, and a horse gear force and lift pump to Tom's Lake. Both will be tried in a short time, as the excavation at both places is complete. The gearing of horse motion so arranged that a wind-mill can be applied.

The adoption of either of those arrangements will do away with all timber work about the tanks.

It is proposed, as far as possible, to apply the same arrangements to wells when tried at the tanks.

Twenty-five out of forty-eight tanks proposed have been let, and are in progress. Eleven out of fourteen wells have been let or are in progress.

Tenders have been declined for twelve tanks and one well, in order to wait for the reduction of prices, which will be caused by a more favourable season.

Those in progress are over average rates, but were accepted for excavation only, in order to have the tanks ready to receive rainfall. Fencing and appliances are being arranged for as rapidly as possible. 12/6/83. W. C. BENNET.

Forward to Mines Department.—F.A.W., 13/6/83. Under Secretary for Mines.—J.R., B.C., 13/6/83. Submitted with plans.—A.B., 12/6/83. The Under Secretary for Mines. Submitted.—H.W., 18/6/83.

These

These papers may be sent back to Mr. Bennett, who might send a copy of the same to this Department when they are completed, with a copy of the specifications. I return these so that there should be no delay, in case Mr. Bennett requires the plans, &c.—J.P. ABBOTT, 12/6/83.

Copy to Mr. Gilliat.—A.B., 14/6/83. The Commissioner for Roads.—T.C.B. (for U.S.), B.C., 14/6/83. Drawings and specifications herewith.—W.C.B. Under Secretary.—J.R. Submitted with plan.—J.R., 11/7/82. Forward to Mines.—F.A.W., 13/7/83.

Supply and Drinking Tanks.

Tanks & Wells, 83-471. IN reference to Mr. Gilliat's report, No. 3, recommending iron or steel supply tanks and troughing instead of the kind now used, I think there are many reasons why these suggestions should be adopted, and among the chief of these reasons is the saving of water which would be effected by having both supply tanks and troughing which could be made perfectly water-tight.

The iron, I think, should be preferred to steel, for either being sufficiently strong, and the ultimate destruction of the material being caused by its rusting away the thicker material would last the longer and cost the least.

The advantage of having a practically imperishable material, which can be put together with little assistance from the unskilled labour to be found in remote districts, and of being able to make both supply tank and troughing perfectly water-tight where water is so precious, are so great as to over-balance a very considerable increase in the first cost of erection.

In Mr. Wood's minute upon Mr. Gilliat's suggestion, in which Mr. Bennett concurs, there seems to be some inconsistency, as the chief ground of Mr. Wood's objection is the placing "a practically imperishable" tank on a perishable foundation, and he afterwards says the iron for the tanks and troughing ought to be galvanized.

If the material as suggested by Mr. Gilliat is practically imperishable, whence the necessity for galvanizing it.

Tanks of steel now are used on the railway lines as supply tanks for the engines, and are always supported upon timber foundations. They seem to answer well here where other material for foundation is plentiful and skilled labour available, and the difficulty of replacing failing timbers does not seem very great, so that they should answer as well in remote districts of the Colony.

An improvement in the method of raising water from the main tanks and the absence of any leakage in the supply tanks or troughing might allow of a reduction in the capacity of the supply tanks, and their size might be regulated in each place by the greatest probable number of stock requiring water in one day.

In reference to the report marked IV of Mr. Gilliat, and the appended report of Mr. Bruce, what I have above stated applies.

There can be no advantage in adopting an inferior method in the smaller tanks, as the saving of water is just as important in this as in the former case, and if the iron supply tanks are best in one case they are best in all.

I might here add that any error in the design of Mr. Gilliat's plans for iron supply tanks might be corrected by comparison with the plan in use on the railway, and a specification of the same might be obtained from the Railway Department.

In reference to the plan for raising water with buckets by means of what Mr. Gilliat calls a double whip, which is reported on by Mr. Bennett (papers marked II). As both Mr. Bennett, Mr. Wood, and Mr. Gilliat are agreed that this is superior to the present system, it should certainly be adopted. Unless a still better plan can be found, and I think in the plan which is so generally used in the Liverpool Plains District, known as the "Wheel and Pole," or "Bagot's whirligig," we have one superior to any other both for simplicity, cheapness of first cost, and facility for making repairs; the machine can be constructed for about £25 or £30, so as to raise 20,000 gallons of water to a height of 20 feet in six or seven hours with one horse.

In reference to Mr. Bruce's suggestion that windmills should be used to raise water from the main tanks to the supply tanks, I think there is one insuperable objection. As there is often a week or ten days of calm weather, even though the average duration of the wind throughout the year is six or seven hours per day, it would be necessary to make a supply tank capable of holding at least fourteen days' water for the largest possible number of stock likely to travel the road in that time. This, with the difficulty which would be experienced by unskilled caretakers in making necessary repairs, will at once put this plan out of the question.

I think the Works Department might be asked to construct all the tanks hereafter to be made with iron supply tanks and troughing of the same material.

J. P. ABBOTT.

28th March, 1883.

Minute by The Chief Inspector of Stock.

Wood and galvanized iron or steel and iron supply tanks.

Tanks & Wells, 83-524. BEING under the impression that it had been decided in Mr. Bennett's memo. of 7th June last, on 82-410, that steel or iron tanks were not to be used, and that the only question was between wood-lined with galvanized iron and puddle tanks, I did not, when submitting my memo. of 21st instant (83-444), put all the papers relating to steel tanks before the Minister for Mines.

I now do so, with a letter from Messrs. Robertson, of 29th instant, from which it will be seen that they invite inspection of a 10,000 gallon tank which has just been completed, and state the price at which they are prepared to supply tanks of that capacity, and 20,000 gallons:—£125 and £200 respectively.

On comparing the prices now quoted with those first mentioned it will be seen that those now quoted are about twice as much as first asked, and it will, perhaps—now that the cost is greater than was at first supposed—be matter for consideration whether with the carriage (the weight is about 2½ tons) and the expense of fitting up at the tank (say £20, exclusive of stand or foundation) added to the first cost in Sydney, the greater durability and efficiency of these tanks, as compared with wood and galvanized iron is such as compensate for the difference in price.

Taking

Taking the price quoted by Mr. Gilliat, of wood and galvanized iron tanks, to contain 7,345 and 19,000 gallons respectively, at £116 and £250, the cost of a 10,000 gallon tank of wood and galvanized iron erected would be £150, while that of a steel tank would be as follows:—

First cost in Sydney	£125
Carriage, say	30
Filling up and fixing	20
Foundations and sleepers...	25
		£200

or £50, say $\frac{1}{2}$ more than wood and galvanized iron.—A.B., 3/4/83.
The Under Secretary for Mines.

I would ask Mr. Bennett to favour me with a report upon my minute of the 28th ultimo, and upon this of the Chief Inspector.—J. P. ABBOTT, 5/4/83. The Under Secretary for Public Works.—H.W., B.C., 6/4/83. Roads.—J.R., B.C., 9/4/83. See paper herewith.—W.C.B., 12/6/83. Sent on to Mines.

Tender for steel tanks.

Sir, Central Exchange Buildings, York-street, Sydney, 29 March, 1883.

In reply to your inquiry we could undertake to make a number of steel tanks, to hold 20,000 gallons, for £200 each, and would make a similar tank, to hold 10,000 gallons for £125 nett.

We have one of the latter size about 20 ft. x 4 ft. x 15 ft. just completed, and would be glad to go with you and let you examine it.

The thickness of steel used is $\frac{3}{8}$ in., and we can recommend it for strength and durability.

Yours, &c.,

D. & W. ROBERTSON.

Alex. Bruce, Esq., Inspector of Stock.

Summary Report on drinking tank and well papers, by The Commissioner and Engineer of Roads.

THERE is much in the papers relating to tanks on which it is necessary I should comment, but as an immediate decision is required as to the action to be taken, I have to state that from Messrs. Bruce and Gilliat's reports and those of Mr. Wood, the Assistant Engineer of this office, who has recently inspected some of the works, I consider a lifting arrangement better than the drinking tanks, and as far as I am able to judge from the papers an arrangement for lifting with buckets, as now used on many of the stations, and as suggested by Mr. Gilliat, and called by him a double whip, should be adopted on all new works.

With reference to the existing drinking tanks I consider they should be used as constructed for the present, until the cost of the double-whip arrangement can be ascertained, its erection, and more data obtained to estimate cost of the devices proposed by Mr. Bruce; I fear they would be expensive and likely to get out of order.

In initiating these works simplicity was studied as much as possible; the whole thing was tentative, and except in details there has not been much alteration.

I will deal with the details of those reports in another paper. I should add that I, for the first time, now see the printed report of the Stock Department on tanks, &c.

W. C. BENNETT.

Under Secretary for Mines.—J.R., B.C., 16/5/82. Mr. Inspector Gilliat.—E.W. (for A.B.), B.C., 18/5/82.

In reporting here on the best mode of supplying travelling stock with water from tanks, the Commissioner and Engineer of Roads, while considering the "lifting" system the better recommends that the drinking tanks (which Mr. Gilliat proposed to alter) should be used as constructed till the cost of the double whip is ascertained and more data obtained with respect to alterations proposed for improving the drinking tanks. If Mr. Bennett's recommendations are acted on a considerable sum, say £6,000 or £7,000 will be available from the Vote taken by this Department for tanks and wells, and might, perhaps, be used in the construction of new tanks, as suggested by Mr. Bennett in his minute of 22nd April last, of which a copy is herewith.—A.B., 5/6/82.

In view of the fact that the whole of the Vote will be required for works and repairs already authorized, no portion of it shall be used for the construction of new tanks in the dry country between the rivers, and the alterations recommended by the Inspector of Tanks should, I think, be proceeded with.—H.W., 5/6/82.

Approved.—A.R. Under Secretary Works informed, 26th June, 1882.

Minute by Mr. Road-Superintendent A. P. Wood.

Tanks and Wells.

Recommending decision as to Lifting appliances.

Sydney, 28 September, 1883.

As the Minister for Works has refused to sanction the use of pumps, as recommended by this Department, and as many of our works are so far advanced that it is absolutely necessary that immediate steps should be taken to provide some means for lifting water out of them for public use, I must again urge the necessity for a speedy settlement of the question.

The

Tanks and
Punts,
82-402.

Tanks & Wells,
83-1,508.

The recommendations already made in favour of steam and horse gear pumps were the result of a careful consideration of the question, but if it is considered advisable to fall back on the M'Comas lift, which has always been a source of annoyance, or to adopt the more primitive double-whip which will be a source of greater annoyance, then the sooner instructions are issued and the work put in hand the better, but it should be distinctly understood that these appliances are not recommended by this office.

ARTHUR P. WOOD.

The Commissioner for Roads, B.C. I could not advise either of those appliances. I think the Mines should be requested to return paper *re* double-whip, sent them some time ago, with a decision on same.—W.C.B., 28/9/83.

I since find the paper has been returned, but the information or decision is not given. What was specially asked for was a drawing of the double-whip, as applied to tanks.—W.C.B., 28/9/83. Under Secretary, B.C.

Ask my honorable colleague, the Minister for Mines, if he will be kind enough to favour me with his decision on this matter.—F.A.W., 9/10/83. The Under Secretary for Mines, B.C., 9/10/83. Mr. Gilliat to supply drawing of double-whip arrangement.—A.B., B.C., 11/10/83. The Chief Draftsman.—A.B., B.C., 26/10/83. Drawing made from information supplied by Mr. Gilliat herewith. The Under Secretary for Works, B.C., 27/10/83.

I can offer no opinion as to the method of raising water from these tanks. It appears to me that this is a question which could best be settled by Mr. Bennett and Mr. Gilliat.—J. P. ABBOTT, 29/10/83. The Under Secretary for Public Works.—H.W., B.C., 29/10/83. P.W.O., 17/11/83.

29 October, 1883.

Tanks & Wells, MEMO:—The reports on the new works for 1884 and for repairs and alterations at existing works having 83-1,581. been prepared, I beg leave now to submit for the consideration of the Hon. the Secretary for Mines whether it is not desirable to learn from the Department of Public Works if the time has not arrived for a decision on section 6 of the arrangement between the two Departments, viz., "to determine the sort of watering appliances."

As the repairs and alterations to existing works include the introduction of machinery for lifting water, and are of urgent importance, while the partial breaking up of the drought will perhaps admit of many new works being proceeded with, it may be of advantage if an officer from each Department should meet on this subject, and prepare a statement for the consideration of their respective Ministers.

HARRY GILLIAT,

Inspector, Public Tanks and Wells.

The Chief Inspector of Stock.

This memo. submitted the same day. The annexed minute was written by the Hon. the Secretary for Mines. I would suggest my memo. being submitted for his consideration. The plan and section might go on to the Department of Public Works.—H.G., B.C., 30/10/83.

Submitted.—A.B., 31/10/83. The Under Secretary for Mines. Submitted.—H.W., 3/11/83. Approved.—J. P. ABBOTT, 8/11/83.

Minute to the Commissioner and Engineer of Roads.

Subject:—The double-whip for tanks, by Superintendent A. P. Wood.

Tanks & Wells, I HAVE carefully examined the design for a double-whip submitted by the Mines for lifting water at the 83-1,710. tanks that have and are being constructed by this Department, and would suggest that Mr. Gilliat, as recommended by the Hon. the Minister for Mines, interview the Commissioner and explain his views on this question.

I am afraid there are many objections to its adoption. Some of these I enumerate.

1. It cannot be applied to old works unless they are empty, which in many cases will not occur for years.
2. The cost will be about double that of a simple 4-inch "Holman" pump and horse gear capable of raising 2,500 gallons an hour.
3. The cost will be about the same as that of a Tangye special pump and boiler capable of raising 10,000 gallons an hour, and that could be used for pumping water into the main tank and storing water above the ground level.
4. When the tanks silt up and water is low, the buckets being fed through a bottom valve as is necessary will stir up the silt, and a mixture of mud and water will be supplied to stock.
5. It necessitates the use of a considerable amount of timber work under water, a plan which has been proved to be very objectionable, and is likely to be more so in this case, as there is more liability to derangement.

ARTHUR P. WOOD.

The Commissioner for Roads.

I could not recommend this device. I do not think it equal to the old M'Comas lift. It has all the timber; and I think when the officers of the Mines see the simple pumps, horse, and steam, with square tanks, and nothing to get out of order or decay, that they will agree.—W.C.B., 20/11/83.

Submitted.—J.R., 23/11/83. Forward to Mines.—F.A.W., 26/11/83. The Under Secretary for Mines.—J.R., B.C., 26/11/83. Mr. Gilliat.—A.B., B.C., 29/11/83.

Perhaps the Department of Public Works will be good enough to furnish plans of the different pumps and steam and horse powers they propose for this service. At present no comparison can be made. H.G., 30/11/83.

Submitted

Submitted.—A.B., 30/11/83. The Under Secretary for Mines. The Under Secretary for Public Works.—H.W., B.C., 3/12/83. The Commissioner for Roads.—J.R., 5/12/83. Mr. Wood, 6/12/83.

Mr. Gilliat says that without his being furnished with plan of the horse gear and steam pumps recommended by this Department no comparison can be made by him as between them and his proposed double whip. The preparation of these plans will entail a very considerable loss both in time and money, and I would suggest as an alternative that Mr. Gilliat visit Messrs. 'Tange Brothers' establishment in Bathurst-street, where he will see the pumps themselves. I would have made the suggestion before, but thought that when I named two well-known types of pump, as we recommended, nobody having a sufficient knowledge of such machinery as to be competent to judge of the question could have required any further information.—A.P.W., 6/12/83. Commissioner for Roads.

Send litho.—W.C.B., B.C. I attach engravings of "Special" and "Holman" pumps. They may perhaps answer Mr. Gilliat's purpose.—A.W.P. I now forward lithographs of the pumps proposed.—W.C.B., 12/12/83. The Under Secretary, B.C. Forwarded to my honorable colleague the Minister for Mines.—F.A.W., 14/12/83. The Under Secretary for Mines.—J.R., B.C., 14/12/83. Mr. Inspector Gilliat.—A.B., B.C., 19/12/83.

It appears that pumps are being supplied, and the Department has been informed are in some places already erected, so that before long practical evidence of their efficiency will be obtained. My own experience is so largely in favour of the simplest machinery, that I have considered it my duty to urge the adoption of a form that can be easily repaired by the class of men usually obtained as caretakers.—H.G., B.C., 1/2/84. Submitted.—A.B., 12/2/84. The Under Secretary for Mines. Submitted.—H.W., 13/2/84. Seen.—J. P. ABBOTT, 14/2/84.

See also Mr. Gilliat's report on Ledknapper Tank, No. 85-1,410, with fluming paper.

Miscellaneous.

Carson's Swamp Tank.—Hovel's Dam.—Muriel Horsewalk.—Shearlogs Tank.

Carson's Swamp Tank.

Minute by Mr. W. C. Bennett, dated 28th May, 1886.

Subject :—Carson's Swamp Tank to be handed over.

MR. SMYTHE, the local officer at Albury under this Department, having reported that the tank at Carson's Swamp is ready to be handed over, I would suggest that the Department of Mines be requested to take over charge through their local officer.

Copy of
P.W.P.,
86-2,689.

The Under Secretary for Public Works.

W.C.B.

Under Secretary for Mines.—J.R., B.C., 29/5/86.

Mr. Lowes,—Please arrange with Mr. Smythe to take over this tank, and furnish a new Works report.—H.G., B.C., 2/6/86. Mr. M., Mr. Lowes should be supplied with the required forms.—H.G.

Mr. Lowes was supplied with necessary forms, B and D, on 30/12/85, and has had no occasion (to date) for their use. Cash and receipt books and journal to-day.—R.W.G., 3/5/86. Noted.—R.L., 5/6/86.

Carson's Swamp Tank.

Sir,

Stock Office, Corowa, 5 June, 1886.

Copy of
86-2,846.

I have the honor to acknowledge receipt of your memo. of 2nd instant to arrange with Mr. Smythe to take over Carson's Swamp Tank, which I will attend to.

On the 21st April last I nominated three persons to act as trustees for the Carson's Swamp Tank. Will you be good enough to inform me if such are likely to be appointed, as if so, I notice by the Regulations, section 49, sub-section 2, that trustees must engage a caretaker. Therefore, in the event of trustees being appointed, it will not be necessary for me to engage a caretaker.

I have, &c.,

R. LOWES,

Overseer of Public Watering Places.

The Chief Inspector of Public Watering Places, Sydney.

Mr. Lowes,—Action with respect to appointment of trustees is waiting for the notification by Lands Department of travelling stock and camping reserves. Until that is completed I am unable to move. You may perhaps ascertain from your Land Board how the case stands.—H.G., B.C., 9/6/86.

Noted.—R.L., 12/6/86.

Carson's

Carson's Swamp Tank.

Sir,

Stock Office, Corowa, 15 June, 1886.

Copy of
P.W.P.,
86-3,035.

I have the honor to inform you that, in company with Mr. Smythe, the local officer at Albury, I took over charge of Carson's Swamp Tank on the 11th instant, and a receipt from Mr. Smythe of the necessary forms D (statement of list of works, &c.). I will forward you a New Works report.

I have, &c.,

R. LOWES,

Overseer of Public Watering Places.

The Chief Inspector of Public Watering Places, Sydney.

Overseer R. Lowes to The Chief Inspector of Public Watering Places, reporting on tank recently constructed at Carson's Swamp, road from Corowa to Piney Range; distance from and name of post town—7 miles from Corowa; reserve (nature, No., and date)—water supply, No. 2,945, 8th May, 1882; parish—Burraja; county—Hume.

Copy of
86-3,562.

Questions:—

1. Name of road and length? Corowa to Piney Range, 36 miles.
2. If near a town give estimate of population that may be dependent on the watering place? No town near tank.
3. Estimate of traffic in stock and teams? Stock during 1885: 81 horses, 439 cattle, 10,650 sheep. Teams: Wool season average 1 team per day, rest of year 2 teams per week, and occasionally selectors' teams.
4. The traffic; by what roads; the destination? Stock traffic from Wagga Wagga, Germanton, Piney Range, and Mahonga, also from Corowa towards stations on the route to the abovenamed places. By roads from parishes Burraja, Granville, Kentucky, Brocklesby West, Burrumbuttock, and Mahonga.
5. Its distance from nearest watering place, or permanent natural water on each side? To a lagoon near the River Murray about 4 miles, and to the Oil Tree Swamp about 6 miles, but this latter only contains water after a very heavy rainy season.

If a tank.

6. The dimensions and capacity in cubic yards? On top length, 222 feet; width, 150 feet; on bottom length, 78 feet; width, 85 feet; depth, 18 feet; capacity, 12,270 cubic yards.
7. Form of embankment and distance from excavation? $1\frac{1}{2}$ to 1 slopes, concave top with shoots at corners; toe of bank, 28 feet from edge of excavation.

Watering appliances.

13. Full description of watering appliances and delivery in gallons per hour? Fenced roadway into tank 30 feet wide, 103 feet long and paved.

Fencing.

16. Area enclosed; description; distance between posts; number and gauge of wires? $32\frac{1}{2}$ chains; posts, top rail, and wires; posts 10 feet apart; 5 No. 4 wires.
17. Gates? Two 12-foot gates.

General.

18. Probabilities of obtaining tenant and estimated rent? No chance of obtaining a tenant.
19. Area, position, and quality of land included or to be included in tenant's lease. Area notified for public watering place? Area not yet decided, situated on water reserve No. 2,945, clayey and sandy soil, box forest with patches of pine scrub. Area not notified.
20. Caretaker's cottage and description? None.

General remarks.

No gauge exists at the tank.

An alteration to the roadway into the tank is desirable, so as to allow sheep the full width down to the water by taking four wires out of the fence at present existing at top of 6 to 1 slope, and on each side of the paved way by fencing off two sides with posts and five wires to protect the slopes, as per sketch below, thus leaving free access for sheep by passing under the fence with top rail and one wire, and the cattle would go to water by the fenced off paved roadway 30 feet wide. This work can be done by the caretaker, and posts can be procured by him in the neighbourhood. The four wires taken out of the present fence would be available, and no extra expense incurred with the exception of the cost of one coil of No. 4 wire, which I hope will meet with your approval.

R. LOWES,

Overseer of Public Watering Places.

11th June, 1886.

The Chief Inspector of Public Watering Places, Sydney.

Carson's Swamp Tank.

Sir,

Stock Office, Corowa, 12 July, 1886.

Copy of
P.W.P.,
86-3,563.

I have the honor to hand you herewith my report on the Carson's Swamp Tank, form B, with receipt on delivery, and statement and list of works, &c., form D.

Should

Should you approve of my having the work done by the caretaker as stated by me in form B under general remarks, such will facilitate the watering of sheep greatly, and give more satisfaction to those persons who may use the tank.

I have, &c.,

R. LOWES,

Overseer, Public Watering Places.

The Chief Inspector of Public Watering Places, Sydney.

It appears to me that the alteration proposed by Mr. Lowes is highly necessary, and if he thinks caretaker can carry it out, instructions might perhaps be given to him to instruct caretaker accordingly.

JAMES W. BOULTBEE.

It is suggested that the fencing be altered by the caretaker as suggested by Mr. Overseer Lowes.—E.W. (for H.G.), 30/7/86. The Under Secretary for Mines. Submitted for approval.—H.W., 30/7/86. Approved.—J.F., 30/7/86. Inform Overseer, 30/7/86. Overseer Lowes informed, 3/8/86.

Carson's Swamp Tank.

Sir,

Stock Office, Corowa, 25 August, 1886.

Referring to your letter S6-3,563 of 3rd instant, acknowledged on the 12th instant, I have the honor to inform you that I have instructed the caretaker at Carson's Swamp Tank to carry out the alteration in the arrangement of the fencing, but as he will require to obtain posts for the fence from the ground upon which water reserve No. 2,945, parish of Buraja, county of Hume, is situated and near to the tank on the road from Corowa to Pincy Range, will you be good enough to obtain the necessary permission for the caretaker to cut timber on the reserve named.

Copy of P.W.P., 86-4,118.

I have, &c.,

R. LOWES,

Overseer, Public Watering Places.

The authority to cut timber on water reserve 2,945 may perhaps be granted.

HARRY GILLIAT.

The Under Secretary for Mines, 31/8/86. I think the permission should be granted, but only for so much timber as is required for the fence.—H.W., 2/9/86. Submitted.—Approved.—J.F., 3/9/86. Inform Forest Branch, and notify overseer.—H.G., 6/9/86. The Chief Clerk of Forest Branch, B.C., 8/9/86. Overseer Lowes informed.—J.W.B., 6/9/86. The Chief Clerk, Forest Branch.—HARRY GILLIAT, B.C., 6/9/86. Inform Crown bailiff and ranger.—F. R. PAYTEN. The Crown Bailiff, 17/9/86. The Chief Inspector of Public Watering Places, B.C., 17/9/86.

Sir,

Stock Office, Corowa, 10 September, 1886.

I have the honor to acknowledge receipt of your letter of the 6th instant, 86-4,118, granting authority to the caretaker of the Carson's Swamp Tank to cut timber for the purpose of fencing in the reserve.

Copy of P.W.P., 86-4,335.

I have, &c.,

R. LOWES,

Overseer, Public Watering Places.

The Chief Inspector of Public Watering Places, Sydney.

Alterations completed on date of my last inspection, 31st October last. Until this was done, I do not see how it was possible to water a large mob of sheep expeditiously, the entrance to water being 103 feet long, and 30 feet wide.—J.W.B., 6/12/87.

Hovell's Dam.

Extract from P.W.P., 87-4,390. Report A1 by Mr. Inspector Boulton, for 1st September, 1887, on Hovell's Dam.

State of Supply Tank.—None.

Troughing.—None.

Machinery.—None.

I am of opinion that these appliances should be erected. The site indicated would be a safe and suitable one.

Copy of P.W.P., 87-4,746.

This an open watering place, and I would recommend erection of tank, troughs, pump, and horse-works. In view, however, of the large body of water now in dam, and the present rainy season, I think there is no urgency for these works. The byewash is a brilliant example of engineering skill and waste of money. The dam is abnormally strong, abuts on to a rocky spur on the north; on the south side there is a fine wide open flat, eminently suited for a natural byewash.

The existing byewash is excavated through the spur spoken of, from 1 to 15 feet deep, through solid rock, almost as wide as a railway cutting, and about 70 yards long. It must have cost more than the dam.

JAMES W. BOULTBEE,

Inspector of Public Watering Places.

Albury, 3rd September, 1887.

Horse-walk

Horse-walk, Muriel Tank.

Sir,

Muriel Tank, 22 January, 1885.

Original paper,
85-118, cannot
be traced,
marked to U. S.
Mines, 30/1/85—
J. W. B.

In consequence of a report from Messrs. Wright, Heaton, & Co., complaining that carriers and others were almost prevented from watering their stock at this tank, and the lives of their stock were endangered while watering, by reason of some earthworks that were being made, I have made an inspection to-day and report as follows:—1st. An embankment of earth has been made from the middle of the original embankment, extending towards the main tank. 2nd. This embankment has been made in the water which was conserved over the surface of the tank. 3rd. The roadway of the tank where stock used to water has silted up with soft mud, caused by the melting of the earthworks referred to. 4th. Stock are constantly getting bogged, and their lives endangered thereby.

On enquiry, I find the contractor has been knocked off the work, pending an inquiry by the Department of Works. Heavy rain is now falling, which will, I think, raise the level of the water above the silt mentioned, and so do away for a time, at any rate, with the public inconvenience complained of.

I have, &c.,

JAMES COTTON,

Overseer of Public Watering Places, Cobar.

The Inspector of Tanks and Wells, Department of Mines, Sydney.

Memorandum.

Dear Sir,

Cobar, 10 January, 1885.

Herewith I beg to hand you letters from caretaker and our general manager with reference to improvements going on at Muriel Tank. Kindly inspect and report on same.

Yours, &c.,

JOHN LEAHY,

Agent at Cobar for Wright, Heaton, & Co.

Jas. Cotton, Esq., Inspector of Stock, Cobar.

Memorandum.

Dear Sir,

Nyngan, 15 January, 1885.

Please see Mr. Cotton, Inspector of Stock. Let him read Malarkey's report, and ask him to kindly remedy the evil complained of, or else we shall lose all our tank receipts, as carriers will not water there; also get him to make entrance in a more suitable place for carriers to get at the tank.

G. R. BONAMY.

Mr. John Leahy, Cobar.

Muriel Tank, 12 January, 1885.

Dear Sir,

I am very much afraid the contractor here is going to make a great mess of this tank. He is running a great bank of earthwork, some 3,000 or 4,000 yards of soft loam, into the centre of the tank, where stock formerly went in to drink, which is drying the water up very much, and in the event of a few hours heavy rain, I think the greater part of it will wash into the tank. The carriers grumble very much, as it is dangerous for stock watering. Bill Sykes had a horse almost drowned here yesterday. The carriers also complain about the lane and the distance they have to drive their horses to water, in fact, many of the large teams pass without watering; but the lane way might be remedied yet by making a gateway on the old road above our house. That is towards Cobar: then teams could come through that way and out the lane. Mr. T. Aulzark promised me he would mention the matter to you. I thought that he could explain it better than I could in writing. It appears the lane-way at Booroomugga was similar to this tank, and the caretaker wrote to Mr. Cotton, who had it altered at once.

When sending returns to Mr. Leahy, I sent a memo. referring to state of tank. I have got no lessee's journal to keep return of stock, &c. The book that was here the last three years is used up. I sent for one to Cobar 29th October, also 2nd instant, but have not got one yet.

Yours faithfully,

F. MALARKEY.

G. R. Bonamy, Esq., Nyngan.

Report by James Cotton, Overseer of Tanks, Cobar, on the Muriel Tank, road from Cobar to Nyngan, in charge of F. Malarkey, for the period from 1st July to December 31st, 1884. Wright, Heaton, & Co., lessees.

Tanks & Wells,
85-137.

Tank or Dam.

State of drains.—Good order.

Silt tank.—Good order.

Inlet or flume.—Under water.

Main tank.—Roadway considerably silted up by the earth works recently made.

Embankments.—Good order.

Fencing.—Fair order.

General remarks.—In consequence of a complaint made by Wright, Heaton, & Co. that carriers' horses were being bogged at the usual watering place at the tank, I made an inspection and forwarded special report on the 22nd January, 1885.

Watering

Watering Appliances.

State of supply tank.—Being erected.

MEMO.—The Caretaker's journal being filled, he could not supply me with traffic for December. I have supplied him with a new journal, and he promises to make up the number and forward them to me.

Work done by caretaker.—Cleaning drains and burning rubbish on the catch of the tank.

Work laid for Caretaker.—To keep the drains clear, burn all rubbish on the catch, and to attend to stock watering.

JAMES COTTON,
 Inspector of Stock.

Dated at Cobar, 24th January, 1885.

Muriel Tank.

Sir,

26 July, 1886.

I beg respectfully to report that during the night of the 24th instant the bank at this tank, where the horsewalk is on, got injured through heavy rain. It is sunk very much, and a portion of it washed away, so that a horse could not walk on it at present to work the pump. Fortunately there is no further damage done to works.

Copy of
 P.W.P.
 86-3,756.

Would Mr. Cotton please advise me how to act with regard to damaged bank. I mean the bank McFadyen put in tank some time ago.

James Cotton, Esq., Overseer, Public Watering Places, Cobar.

Yours respectfully,
 F. MALARKEY.

I have anticipated the sinking of this bank for some time. It has been an unfortunate piece of work from the commencement. The water is so high that I do not think any permanent repairs could be effected at present. The roads are in a fearful condition, but I shall inspect and furnish a further report on this matter as soon as possible.—JAMES COTTON, Overseer, Public Watering Places, 30/7/86.

Mr. Boulton.—H.G., 3/8/86. Extract from my report on this work submitted.—J.W.B. A copy of Malarkey's letter and Mr. Cotton's report may perhaps be furnished the Works Department with the view of the necessary repairs being effected.—H.G., 23/8/86. The Under Secretary for Mines. Approved.—H.W., 25/8/86. Copies made and forwarded to Works Department.—R.W.G., 26/8/86.

MEMO.—It appears that there is at present too much water about horsewalk to do anything in the way of repairs. This might perhaps await Mr. Cotton's further report, and permission given to caretaker to water stock if necessary. The water must now be a very long way over the tank and outside the ring fence.

JAMES W. BOULTBEE.

Inform Mr. Cotton.—10/8/86. Informed.—J.W.B., 10/8/86.

Sir,

Sir,

Cobar, 18 August, 1886.

Copy of
P.W.P.,
86-4,071.

I have the honor to acknowledge receipt of your letter, as per margin, relative to the recent damage at Muriel, caused by the heavy rain. Since forwarding the caretaker's letter minuted by myself, I have visited Muriel Tank and forwarded my report. The caretaker has been instructed to allow any stock requiring it to water at the old drinking place.

The damage has been caused by the great height of the conserved water over the surface, percolating into the bank which was built to form the horsewalk, and this bank has subsided to the extent of a foot at least. The edges of the bank have also washed away, rendering it difficult to make the necessary repairs.

I beg to suggest that the most effectual way to make the necessary repairs would be by driving piles or very stout stakes about half way down the slope of the present embankment as it stands, and logging up inside these piles to the required height, when it can be again built up with gravel and clay.

The pump is not injured in any way, but cannot be worked, owing to the sinking of the horsewalk. The watering place, with all appliances and appurtenances, are in fair order as reported, with the exception of the damage to the bank.

I think the logging is absolutely necessary, and that any earth now put on the bank without the logs to protect it would wash into the tank with the first rain.

JAMES COTTON,

Overseer, Public Watering Places.

The Chief Inspector, Public Watering Places Branch.

A copy of this letter may be sent to the Works Department.—H.G., 26/8/86. Copied and sent to Works.—R.W.G., 26/8/86.

Sir,

Cobar, 10 September, 1886.

P.W.P.,
86-4,331.

I have the honor to acknowledge receipt of your letter, informing me that my reports and communication, referring to the damage done to the horsewalk at Muriel Tank, have been referred to the Works Department.

Trusting that some immediate action may be taken towards repairs.

I have, &c.,

JAMES COTTON,

Overseer, Public Watering Places.

The Chief Inspector of Stock, Department of Mines.

Ask Mr. Cotton whether work has been completed.—H.G., 20/11/86. Asked.—20/11/86.

Sir,

Cobar, 24 November, 1886.

P.W.P.,
86-5,526.

I beg to acknowledge receipt of your letter, *re* horsewalk at Muriel Tank, and I have now the honor to inform you that the horsewalk was reported upon as completed, in my periodical report of the tank, dated 21st September, 1886.

I have, &c.,

JAMES COTTON,

Overseer, Public Watering Places.

Chief Inspector of Public Watering Places, Department of Mines.

P.W.P.,
86-3,830.

Report by James Cotton, Overseer Public Watering Places, Cobar, on the Muriel Tank, Road from Cobar to Nyngan, in charge of F. Malarky, tenant, for June, and July, 1886.

State of drains.—Fair order.
Silt tank.—Under water.
Inlet or flume.—Under water.
Main tank.—Under water.
Embankments.—Fair order.

Watering Appliances.

State of supply-tank.—Good order.
Troughing.—In good order.
Machinery.—Horse gear pump in good order.

Paddocks and Fencing.

State of fencing.—In good order.
State of gates.—In good order.

„ 31st July, 1886 ...	403	28	496

Weekly

Weekly depth of water since last report.—17 feet.

Remarks and recommendations.—Referring to Malarky's letter, reporting damage to embankment, and my minute on the letter of 30th ultimo, I have to report that I inspected the tank on the 5th instant, and find the horsewalk subsided about 18 inches, and the pump not workable on that account. I have interviewed Mr. Road Superintendent Adam on the subject, and suggested that piles should be driven round the embankment as it stands and logs laid inside the piles to the proper height and filled up with gravel. This appears to be the only way to make the horsewalk permanent. The bank was originally built of loose red earth, and any portion that is now disturbed will wash into the tank with the next rain.

Cobar, 7 August, 1886.

JAMES COTTON,
Overseer, Public Watering Places.

[See also Mr. Inspector Boulton's report on Muriel Tank, 86-3,549, with fluming papers.]

Shearlegs Tank.

Cobar, 25 June, 1886.

Report by Acting Inspector J. W. Boulton, on the Shearlegs Tank, Road from Hillston to Cobar, in charge of John Hennings, tenant, for 22nd June, 1886.

Copy of
P. W. P.,
86-3,214.

State of drains.—Require cleaning, since rain has put some silt in them, the bank protecting the drain is burst, but Mr. Cotton informs me this was broken purposely as the banks of the tank were endangered by the great rush of water.

Silt tank.—Not visible.

Inlet or flume.—Just visible, the banks each side has been carried away. (See sketch).

Main tank.—Water is 2 feet 6 inches to 3 feet at embankments.

Embankments.—Gutters require filling in.

Watering appliances.

State of supply tank.—Leaks a little, wants tar.

Troughing, but wants tar.

Machinery.—Tangyc 4-horse power, boiler painted white. I recommend this be scraped, and boiler tarred when hot. Engine painted white, it wants a coat of green paint, looks dirty. Brasses clean. Grimmond, travelling engineer, had this working a short time ago, then in good order. Lessee was absent, his man did not understand the machinery. I preferred not to interfere with it, so I did not test it.

Paddocks and fencing.

State of fencing.—Good, and new.

State of gates.—Good, catch wanted for one gate.

Remarks.—This is a magnificent catch, 50 points I am told sends a great rush of water into the tank; the paddock is good. Lessee's man asked if tenants are permitted to plough and crop the land. I should be glad to have instructions on this point.

Rates collected since last report.—See form L.

Weekly depth of water since since last report.—3 feet over edge of excavation.

Caretaker's work.

Work laid out for caretaker.—In regard to the break of the bank at the flume. The bank in the first place is not high enough, and is now all but covered. Mr. Cotton informs me this break was done some time ago, but owing to the amount of water, repairs could not be effected. To do any good the bank should be raised about 3 feet. It will be months before they can get near the break.

Remarks and recommendations.—There are two silt tanks, the one on the south side I cannot conceive the use of, as it is on low side of the tank, and there is no fluming or inlet at all connecting it with the main tank. The embankment behind the silt-tank has been carried away. I cannot see that anything would be gained by having it made up again. The place wants a little cleaning up, and a few bones of dead stock require burning. The lease of this tank has been or is about to be transferred to a man named Francisco.

JAMES W. BOULTBEE,
Inspector of Public Watering Places.

The Chief Inspector of Public Watering Places, Mines Department, Sydney.

ADDENDUM.

[Return received from Works Department too late to appear in its place among the papers.]

The Under Secretary for Public Works to The Under Secretary for Mines.

Sir, Department of Public Works, Sydney, 3 February, 1888.

At the special request of the Honorable the Secretary for Mines, I am directed to transmit herewith, for his information, copy of a return showing the cost of tanks, wells, and dams constructed by this Department, and of machinery for working same.

I have, &c.,
JOHN RAE.

Submitted.—H. W., 3/2/88. Seen.—F. A., 3/2/88. The Chief Inspector of P. W. Places.—H. W., 3/2/88.

[Enclosure.]

* Under water since January, 1885.

† Abandoned; no water.

‡ This is an artesian bore put down by the Drills Branch, Mines Department. This item of expenditure is doubtless for service tank and troughing. H.O., 6/2, 88.

NOTES.—The cubic contents of the above tanks may be ascertained on reference to pages 213–214 of the printed papers. A million gallons represents 5,943 cubic yards.

On page 207 will be found an abstract showing prices per cubic yard for excavating tanks from 1882 to 1886.

Comparison is invited between the above table furnished by the Department of Works on February 3rd, 1888, and the table on pages 213-214, supplied by the same Department on 5 January, 1885. Some discrepancy appears to exist with regard to the gross cost of the following works as shown in these tables. It will be seen on reference to the former table that the "cost" was in respect of works completed at the dates it was compiled.

	Return of January 5, 1885.	Return of February 3, 1888.
Black Swamp Tank	£1,710 5 4	£1,834 12 0
Pine Ridge	1,774 2 11	2,670 16 5
Tom's Lake	2,542 4 7	2,763 7 9
Mossiel	2,445 18 4	2,540 14 5
Wagga	1,906 7 6	3,189 10 3
Rock Holes	2,427 14 8	2,947 8 8

Minute by The Chief Inspector of Public Watering Places to The Under Secretary for Mines.

Subject:—Discrepancies in Returns furnished by Department of Works as to cost of Tanks and Wells.
Department of Mines, Public Watering Places,
Sydney, 6 February, 1888.

P.W.P.,
88-649. My attention having been called to some discrepancies in the cost of certain of the works as given in the returns furnished by the Works Department in January, 1885, and February, 1888. I have thought it desirable to append the above "notes" to the final return which is now prepared for printing for the use of the Commission, and for the return ordered by Parliament.

The discrepancies referred to amount to a considerable sum, and as in the return of 1885 it appeared to be distinctly implied that the amounts, except where noted, were for the work completed and full of water, it may be reasonably inferred that the later works constructed since, the prices of which are now given for the first time, have perhaps outstanding claims in the same way against them. As upon statements of the Works Department I have been asked to supply certified vouchers for work carried out by this Department (which were at once furnished) it appears to me quite justifiable that the Royal Commission may be invited to take the same course to verify these prices.

HARRY GILLIAT,
Chief Inspector, P.W. Places.

The following is a list of averages compiled from the works return of February 3rd, 1885:—

		Tanks.		Average cost.	
		No. of Works.		£ s. d.	
Earthwork	...	90	...	1,842	17 0
Machinery	...	81	...	532	2 3
Total	...	96	...	£2,314	15 4
		Wells.			
Total	...	23	...	£1,078	4 9
		Dams.			
Total	...	5	...	£961	14 2

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PUBLIC TANKS.

(GALATHERA AND BOGGY CREEK.)

Ordered by the Legislative Assembly to be printed, 23 November, 1887.

RETURN (*in part*) to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 15th February, 1884, That there be laid upon the Table of this House, a Return showing,—

- “(1.) The number of Public Tanks, Wells, or Dams constructed, or in course of construction, in the Namoi, Gunnedah, Gwydir, Bogan, and Bourke Electorates (distinguishing the Electorate), specifying the road upon which constructed, name of the place, and distance from each other on the same line of road.
- “(2.) The name of contractor in each case, the cost of construction, and amounts paid since by way of repairs, and if such were let by tender or otherwise.
- “(3.) How such are worked,—by whim, windmill, windlass, or horse-power; if fenced in, or how protected.
- “(4.) Denoting those handed over to the Mines Department for management,—the uncompleted ones, with the names of contractors, and time fixed for completion.
- “(5.) Yearly rent received from each of these, names of lessees and caretakers, scale of charges adopted at each, with copy of general regulations, and if such has been published for general information.
- “(6.) Numbers, particulars, area, and date of proclamation in *Gazette* of all Travelling Stock Reserves connected with or surrounding such Tanks, Wells, or Dams, and if such are fenced, or intended to be.
- “(7.) Names of present Tank Inspectors; copies of their reports, or of Stock Inspectors, or any other person relating in any way to these Tanks, &c.”

(Mr. Dangar.)

SCHEDULE.

NO.	PAGE.
1. The Inspector of Stock, Narrabri, to the Chief Inspector of Stock, reporting on the bad state of the Galathera and Boggy Creek tanks, and stating that unless immediate steps are taken, both main tanks would be filled with earth &c. 4 July, 1883	2
2. The Caretaker, Boggy Creek tank, to the Chief Inspector of Stock, with reference to money collected at that tank. 5 August, 1883.	2
3. Mr. W. D. Wright to the Chief Inspector of Stock, <i>re</i> state of drinking tank, Boggy Creek—water unfit for stock to drink, &c. (Minutes thereon.) 29 February, 1884	2
4. Mr. A. W. P. Copeman, Overseer Public Tanks and Wells, to the Chief Inspector of Stock, stating that Boggy Creek and Galathera tanks are in a too unfinished state to report on, and are likely to be for some time. (Minutes thereon.) 17 March, 1884	2
5. Mr. W. B. Budge, Road Superintendent, to the Commissioner and Engineer for Roads and Bridges—Report on water in Boggy Creek tank. (Minutes thereon.) 18 March, 1884	3

PUBLIC TANKS.

No. 1.

The Inspector of Stock, Narrabri, to The Chief Inspector of Stock.

Sir,

Narrabri, 4 July, 1883.

I have the honor to inform you that I have been out again to the Galathera and Boggy Creek tanks, and am very sorry to have to inform you that, unless immediate steps are taken to arrest it, both main tanks will be filled in with earth in a very short time; owing to there being an insufficient batter to them, the constant action of the water is undermining the banks of the tank and causing them to fall in. I would earnestly beg to urge that the Department take immediate steps to stop this, and put the tanks in working order before it is too late; if not done shortly, all the money expended upon them hitherto will have been wasted.

The weather just now is favourable, and the repairs could be carried out readily. Summer will be upon us in a very short time, and if something is not done travelling stock will be tortured, as heretofore, with the pangs of thirst, and in many cases reach water after crossing these arid plains but to die, as I have frequently witnessed.

I have, &c.,

ARTHUR W. P. COPEMAN,
Inspector of Stock.

No. 2.

The Caretaker, Boggy Creek Tank, to The Chief Inspector of Stock.

Sir,

Boggy Creek, 5 August, 1883.

I have received by this morning's coach a printed form, I presume for the money collected at this tank for which I suppose they hold me responsible. No doubt you are aware that I have received instructions, ever since my appointment to the Boggy Creek tank, not to allow any stock inside the fence, by the District Inspector; if they persisted in driving stock in, I was to summons them, which I have done once. I don't know why they should send to me for the money collected when they know very well that no stock is allowed to water either at this tank or Galathera, although I think it is very wrong that this tank is not thrown open. I think if the public were allowed to have the use of the water, that is in the drinking tank, then something could be done to it in the way of repairs, which it needs very badly. The water cannot come out of the standing tank on account of the pipe being stopped up, and there is no way of getting at it to clean it only by letting stock drink what water there is in the drinking tank. I am sending this form back to you.

I have, &c.,

CYRUS W. MORROW.

No. 3.

Mr. W. D. Wright to The Chief Inspector of Stock.

Sir,

Boggy Creek, 29 February, 1884.

I have the honor to report to you that the water in the drinking tank here is unfit for stock to drink, it is perfectly green. I brought a number of both horses and cattle across the plains to the tank to day, but they would not touch it.

The tank at Galathera is now a great blessing, but there are in my opinion several serious matters of alteration which require to be made in that tank.

I have, &c.,

W. D. WRIGHT.

Mr. Gilliat.—A.B., B.C., 3/3/84.

The notice of the Department of Public Works has been several times lately called to the complaints in connection with the Galathera and Boggy Creek tanks. I think this might be forwarded for the information of the Commissioner and Engineer of Roads.—H.G., B.C., 6/3/84. Mr. Bruce.

Submitted.—A.B., 7/3/84. The Under Secretary for Mines. Submitted.—H.W., 10/3/84. Approved. I wish the Works Department would do something about these.—J. P. ABBOTT, 11/3/84. The Under Secretary for Public Works.—H.W., B.C., 11/3/84. Roads.—J.R., B.C., 15/3/84. Mr. Wood.—W.C.B., 17/3/84.

I attach report from the local officer, the complaint made is a necessary result of the drinking tank system, when there is not a steady demand for water to allow of a free flow or to allow of noxious foreign matter being removed. It has been our intention to fix pump service tank, &c., at this place and the delay is due to Mr. Nussan's delay in carrying out his contract of service tanks.—A.P.W., 20/3/84. The Commissioner and Engineer for Roads and Bridges.

The pump is at Narrabri.—W.C.B., 20/3/83. The Under Secretary, B.C.

No. 4.

The Overseer Public Tanks and Wells to The Chief Inspector of Stock.

Sir,

Narrabri, 17 March, 1884.

I have the honor to inform you that I have visited the Galathera and Boggy Creek tanks for the purpose of reporting upon them, but have refrained from doing so, owing to the unfinished state they are, and are likely to be in for some time to come. At Boggy Creek, stock will not be able to water, as the supply is exhausted in the drinking tank and no means of feeding it again, Galathera

Galathera is open to the public, and a return coming in from it. It is still in an unfinished state, and the troughing requires fencing in. Mr. Budge, the Road Superintendent, instructed the caretaker to use his horses for the purpose of lifting the water, but never made any arrangement with him as to payment for use of same. Will I do this?

The Galathera caretaker requires a supply of weekly return forms. I enclose a letter received from him, *re* travelling to Narrabri to remit his moneys and sign his attested returns. Can he be allowed anything for travelling in and out?

Will I send in report as to present state of tanks or wait till they are handed over? The contractor at Boggy Creek says he will be quite six months at work there.

I have, &c.,

A. W. P. COPEMAN,
Overseer of Public Tanks and Wells.

Mr. Gilliat.—A.B., B.C., 19/3/84. The Chief Inspector of Stock,—Mr. Overseer Copeman might be instructed to arrange for the forwarding of rates collected by caretakers in his district in the manner adopted by other overseers. An understanding with the Department of Public Works seems desirable with reference to the caretaker lifting water at the Galathera tank. This department has not been informed of the completion of the lifting appliances, and it seems undesirable to interfere until so notified; at the same time it is urgent the caretaker should have water in readiness for persons requiring it. Any engagements made by the District Road Superintendent will—Mr. Copeman might be informed—be discharged by his own department. A copy of Mr. Copeman's letter might perhaps be forwarded to the Works.—H.G., B.C., 1/4/84.

No. 5.

Mr. Road Superintendent Budge to The Commissioner and Engineer for Roads.

Sir,

Narrabri, 18 March, 1884.

In compliance with the instructions contained in telegram sent by Mr. Wood yesterday, I beg to report as follows on water in the Boggy Creek Tank:—

The water in the drinking tank is totally unfit for use.

The water in the reservoir is 8 ft. deep, and sweet and good.

Until the drinking tank is emptied and cleaned out it will be unfit for use, and until that time water must be taken directly from the reservoir.

A wooden trough and temporary pump might meet the difficulty for the present, as water is obtainable six miles north of Boggy Creek, and also at Galathera.

A service tank and pump, similar to the one at Galathera, or a substitute for one, should be erected as soon as possible.

I have, &c.,

W. P. BUDGE,
Road Superintendent.

Mr. Wood,—See me at once.—W.C.B.

This would have been remedied ere this had Mr. Nussan satisfied the terms of his contract by delivering the iron tanks he has contracted for; the pump was forwarded some months ago.—A.P.W., 20/3/84. The Commissioner and Engineer for Roads and Bridges.

Forward to Mines.—T.A.W., 22/3/84. The Under Secretary for Mines.—W.F. (for U. S.), B.C., 24/3/84. Mr. Gilliat.—A.B., B.C., 25/3/84. I may point out that this is an additional instance of the importance of having water supplied from pumps and troughings.—H.G., B.C., 1/4/84. Mr. Bruce. Submitted.—A.B., 2/4/84. The Under Secretary for Mines. Submitted.—G.E.H. (for U. S.). Seen; inform Mr. Wright.—J. P. ABBOTT, 5/4/84.

1887.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PUBLIC WATERING PLACES.

(COST OF MAINTENANCE AND REVENUE FROM, FOR TWO YEARS ENDING 30 SEPTEMBER, 1887.)

Ordered by the Legislative Assembly to be printed, 20 October, 1887.

Department of Mines, Sydney, 13 October, 1887.

RETURN showing cost of maintenance and revenue of Public Watering Places constructed during the two years ending 30 September, 1887:—

No. of Tanks	29
„ Wells	8
„ Dams	3
							40 watering places.

MAINTENANCE.

							£	s.	d.
Caretakers' wages	6,093	17	6
Tools	200	0	0
Overseers' travelling allowance	200	0	0
							£6,493	17	6

REVENUE.

Collected by caretakers	902	6	2
Rental of nine watering places leased	427	10	0
							£1,329	16	2

The amount collected by the caretakers was unusually small during the past two years owing to the abundant rainfall.

RETURN showing Public Watering Places constructed during the last two years (from 1st October, 1885), locality, and net revenue derived from each.

Public Watering Place.	Road.	Revenue from 1st October, 1885.

NEW SOUTH WALES.

LANDS FOR PUBLIC PURPOSES ACQUISITION ACT.

(RESUMPTION OF LAND UNDER, IN CONNECTION WITH CONSTRUCTION OF THE DAYSDALE TANK.)

Presented to Parliament, pursuant to Act 44 Vic. No. 16, sec. 6.

NOTIFICATION OF RESUMPTION OF LAND UNDER
44 VICTORIA No. 16.

NEW SOUTH WALES, } By His Excellency The Right Honourable
to wit. { CHARLES ROBERT, BARON CARRINGTON,
a Member of Her Majesty's Most
Honourable Privy Council, Knight
(L.S.) Grand Cross of the Most Distinguished
CARRINGTON, Order of Saint Michael and Saint
Governor. George, Governor and Commander-in-
Chief of the Colony of New South
Wales and its Dependencies.

WHEREAS I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, have duly sanctioned the carrying out of certain public works for and in connection with the conservation of water, that is to say by the construction of the Daysdale Tank, for and towards the completion of which said work public funds are available under the provisions of the "Appropriation Act of 1887." And whereas the lands hereinafter described are required for the construction of the said works: Now, I, the Governor of the said Colony, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf given to or vested in me by the "Lands for Public Purposes Acquisition Act," do by this notification, published in the Gazette and in a newspaper, that is to say, in the "Sydney Morning Herald," circulated in the Police District wherein the said lands are situated, declare that the land hereinafter described have been resumed for the public purpose hereinafter mentioned, that is to say, for and in connection with the conservation of water by the construction of the Daysdale Tank, to the intent that, upon the publication of this notification in the Gazette, the legal estate in the said land shall forthwith be vested in the Minister for Public Works and his successors, on behalf of

Her Majesty, for the purpose of the said last-mentioned Act, for an estate of inheritance in fee-simple in possession freed and discharged from all trusts, obligations, estate, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the intent, further, that the legal estate therein, together with all powers incident thereto or conferred by the said Act, shall be vested in the said Minister as a trustee, with the powers stated in the said last-mentioned Act: And I declare that the following is a description of the land hereinbefore referred to, that is to say:—

All that piece or parcel of land situate in the parish of Gordon, county of Hume, and Colony of New South Wales: Commencing at the south-west corner of portion 24 of 250 acres, on the Coreen Creek; and bounded thence on the south by part of the south boundary of portion 24, east about 1 chain and 17 links; on the north-east by a line bearing north 30 degrees 32 minutes west 8 chains and 14 links; on the north by a line west about 1 chain and 60 links to the bank of the Coreen Creek aforesaid, and by that creek in a south-easterly direction for about 8 chains; thence east about 50 links to the point of commencement, containing 1 acre 2 roods or thereabouts, and said to be in the possession and occupation of William Wilson.

In witness whereof, I have hereunto set my Hand and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this tenth day of April, in the year of our Lord one thousand eight hundred and eighty-eight, and in the fifty-first year of Her Majesty's Reign.

By His Excellency's Command,

JOHN SUTHERLAND.

GOD SAVE THE QUEEN!

1887-8.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

BORING OPERATIONS ON THE BOURKE TO WANAARING ROAD.

(REPORT OF SUPERINTENDENT OF DRILLS ON.)

Ordered by the Legislative Assembly to be printed, 28 February, 1888.

[Laid upon the Table of the Honorable the Legislative Assembly of New South Wales by the Secretary for Mines, in answer to Question No. 18, Votes 57, of Thursday, 23 February, 1888.]

REPORT by the Superintendent of Drills on the Boring operations on the 101½ mile, Bourke to Wanaaring Road.

Sir,

Department of Mines, Sydney, February, 1888.

I have the honor and the pleasing duty to inform you that the boring operations under Foreman D. C. Carmichael, on the 101½ mile, Bourke to Wanaaring Road, have been crowned with success. Last year, during the month of May, I started from Sydney to Bourke, and *via* Wanaaring to Milparinka, for the purpose of examining the country west of the Paroo as to its indication for artesian water supply. I had Carmichael with me, and we took a track known as the old peg line, which had been travelled over by very few white persons. The track has generally been known as the Dry Track to Mount Browne (and on which track two men nearly perished for want of water within this last fortnight, one of whom was rescued, but the other perished near the 48-mile post). We successfully reached Milparinka, and I marked off eight different boring sites *en route*, about 15 miles apart of each other. On my return trip to Bourke I also marked the site known as 101½ west of West Bourke, or 105 miles west of Bourke, and 11½ miles east of Wanaaring on the Paroo.

Operations at the 101½-mile bore were commenced the latter end of June, but having to pierce through thick layers of quartzite, limestone, and drift, the progress made has been slower than it otherwise would have been.

On the 8th instant Foreman Carmichael wired me that on the previous day he tapped a supply of artesian water at a depth of 851 feet, equal to 7,400 gallons per day. I replied to Carmichael that he had done well, but that he should bore deeper, as I was certain a large supply of artesian water would be tapped. To-day Carmichael wires me that an increased supply of artesian water had been tapped at the depth of 900 feet (or 50 feet deeper than where first met with), flowing to the surface at the rate of 21,600 gallons per day, still increasing; and I am certain that in a few feet deeper a still larger supply will be obtained, more than sufficient for the purpose intended, and the bore, which is 5 inches at bottom, is larger than is really required.

The full importance of this artesian water supply can hardly be estimated at present; it will not only be a valuable boon for human beings, and stock which have to travel here in dry seasons, but it will enhance the value of all the pastoral properties which are in the area of the Cretaceous formation. It also proves that Mr. C. S. Wilkinson, Government Geologist, was right in advising the Government to start boring for artesian water west of Bourke, and which report and advice were acted upon, and boring was commenced in 1882, near the mudholes and artesian well of Goonery, where, at no great depth, artesian water was obtained. During my term of Gold-fields Warden at Mount Browne, in 1881, I also wrote that Milparinka ought to be connected with Bourke by opening up underground water supplies along the route, which was likely to be found in abundance. I am glad that under my supervision the two deepest artesian wells in New South Wales have been opened—one 87 miles west of Bourke, 960 feet in depth, flowing at the rate of 35,000 gallons of excellent quality water per day; the other, 105 miles west of Bourke, now 900 feet in depth (still boring), flowing to surface 21,600 gallons per day water of good quality, and volume still increasing.

I am confident that the success attained at the bore site marked out by me at the 101½ mile, or 105 miles west of Bourke, will also be attained at the eight boring sites marked out by me about the same time, west of the Paroo, between Wanaaring and Milparinka; and I beg to recommend that these sites may be operated upon as soon as possible during these favourable seasons, more especially as the nature of the country is a dry sandy soil unsuitable for tank construction.

Before I close this report I again beg to bring under your notice Foreman D. C. Carmichael, who has always been willing and ready to assist me in all matters in connection with the boring operations under his immediate charge, and through whose ability, energy, and perseverance a good deal of the success obtained is due.

In a few days more I expect to report still greater results.

I have, &c.,
W. H. J. SLEE,
Superintendent of Drills.

Since writing the above Carmichael wired again that heavy flow of water flowing from bore to the road, and ample supply for all purposes. He may be wired to stop boring and fix tubing, and fence similar to 75-mile bore.—W. H. J. SLEE.

1887-8.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

THE RABBIT PEST.

(REPORT OF HEALTH BOARD AND OTHER PAPERS ON PROPOSALS TO EFFECT DESTRUCTION OF RABBITS BY MEANS OF DISEASES TO BE INTRODUCED.)

Ordered by the Legislative Assembly to be printed, 14 March, 1888.

No. 1.

The Secretary for Lands to The Colonial Secretary.

Sir,

I wish you would cause the enclosed papers, in which proposals are made to the Government to sanction the introduction of contagious diseases among rabbits, for the purpose of ensuring their destruction, to be referred to the Health Board, for their consideration and report, as to whether the introduction of these diseases, as proposed, would be dangerous to human life or health.

The papers are—

- Mons. Pasteur's scheme.
- Drs. Ellis & Butcher's scheme.
- Professor Watson's scheme.

THOS. GARRETT, 8/2/88.

The Principal Under Secretary.—C.O., B.C., 8/2/88. Referred for report of the Board as desired by the Minister for Lands.—H.P., 8/2/88. C.W., B.C., 8/2/88. The Under Secretary for Finance and Trade. Approved.—J.F.B., 13/2/88. The Secretary, Board of Health.—F.K. (for U.S.), B.C., 13/2/88.

M. Pasteur's Scheme.

[Translated from *Le Temps* (Paris), 29th November, 1887.]

M. Pasteur has favoured us with the following letter :—

M. PASTEUR AND THE DESTRUCTION OF RABBITS.

To the editor of *Le Temps*.

Paris, 27 November.

Your journal announced a few days ago that the Government of New South Wales felt itself so powerless to cope with the a particular pest, the increase of rabbits, that it offered a reward of 625,000 francs (£25,000) for the discovery of a means to exterminate them.

Large areas of New Zealand, no less infested than Australia, are abandoned by the farmers, who have given up the raising of sheep owing to the impossibility of feeding them. Every winter the rabbits are killed in millions, but this carnage does not appear to lessen the numbers.

Will you permit me to make known to those distant countries, by the medium of *Le Temps*, certain ideas, the application of which may meet with some success?

Up to the present the means employed for the destruction of the pest has consisted of mineral substances, notably phosphorized combinations. In adopting such means, has not the wrong course been taken? Of what use are such mineral poisons to destroy animals which propagate at a frightful rate? These poisons kill only on the spot where they are placed, but to reach the great body of the living is it not rather necessary, if I may dare to say it, to adopt a poison gifted with life, like them, and, like them, able to multiply with a surprising fecundity?

I would like to see death carried into the burrows of New South Wales and New Zealand by trying to communicate to the rabbits a disease which should become epidemic.

Such

Such a disease exists under the name of poultry cholera (*choléra des poules*), and has been the object of careful study on my part. It is equally peculiar to rabbits. Among my experiments with this disease was the following:—I gathered together in a limited space a certain number of fowls, and by giving them food infected by the microbe, which is the cause of poultry cholera, they were not slow to die. Poultry yards are sometimes devastated by real epidemics of this evil, whose propagation is due, without doubt, to the droppings of the first sick fowls, which infect the soil and the food.

“I imagine that the same thing would happen with rabbits, and that on returning to their burrows to die they would communicate the disease to others who would propagate it in their turn.” But what is to be done so that the first rabbits shall become tainted with the destructive evil? Nothing is more simple.

Around a burrow I would place a light movable fence, enclosing a certain space, where the rabbits would come to seek their food. Experiments have proved that it is easy to cultivate with perfect purity, and on as large a scale as may be desired, the microbe of poultry cholera in water in which meat has been boiled. With this liquor, full of microbes, the food of the rabbits should be sprinkled, and in a short time they would perish here and there within the enclosure, and spread the evil on all sides.

I may add that the parasite of the disease of which I have just spoken is harmless to farm animals, except, of course, poultry, but these are not compelled to live in the open field.

I doubt not that there may be persons in the infested countries quite ready to adopt the means which I propose, a very simple method, and one which, in any case, is worthy of being tried.

Please accept, Mr. Editor, the assurance of my most distinguished consideration.

PASTEUR.

Addressed to Abigail, Secretary, Mines, Sydney.

Paris, 19/1/88.

HAVE you received the communication which appeared in the *Temps* newspaper? I have since made conclusive experiments. May I send immediately delegates, with the certainty that the Commission will investigate the process?

PASTEUR.

Professor Watson's Scheme.

No. 1.

PROFESSOR WATSON ON RABBIT DESTRUCTION.

From the *S. A. Register*, Monday, October 5, 1885.

To the Editor.

Sir,

As all questions bearing directly or indirectly on the public good find full discussion in your journal, I venture to send you the following remarks on the rabbit nuisance. We are not in a position to look hopefully forward to the extermination of this pest, either in the immediate or remote future, by any of the means at present in vogue. The labour involved in their application is so great that we must regard them rather as palliatives than radical measures, and as such, but barely sufficient to cope with the continual marginal spread of the pest in already infested districts, much less to prevent a possible dissemination of the evil at a distance by unscrupulous and interested persons. Complete extermination by direct violence such as shooting, snaring, &c., under existing conditions may be looked on as practically impossible, although it is true that wire fencing, acting as a preventive of invasion from without, facilitates the application of direct violence within; but under certain circumstances buck rabbits manage to scramble over more serious obstacles than wire fences. Rivers also, which are looked upon as even more restrictive than fences, are easily swum across by individuals of both sexes, as readily as by hares, kangaroos, emus, and pigs, when hard pressed by dogs. In flood times, too, rabbits might also be drifted across streams in hollow logs, if we may judge from the fact of large fish being frequently found stranded a considerable distance inland, and we know also that rabbits have been ferried across rivers by dishonest men. (See *Register*, September 15, 1885.) Having thus touched upon the more or less inadequate nature of fences and rivers to confine rabbits within given limits, it remains to consider what effects may be produced by the agency of poison.

The rabbit requiring no water when surrounded by green herbage naturally prefers fresh grass to dry oats (poisoned or otherwise) intentionally placed in its way, and will in all probability leave them untouched as long as the more succulent food is within its reach. It is only in times of drought that the animal, being forced to moisten its meal of dry grass, and finding the neighbouring waterhole fenced off, falls a victim to poisoned water left in its run. A single dose of some deadly gas or volatile liquid (bisulphide of carbon) although it may exterminate a particular colony of rabbits, does not affect the neighbouring ones; and the process, at the expense of time, labour, and money, has to be repeated in every warren in succession. No doubt the widespread cultivation of a plant which, while agreeable but deadly to the rabbit, would be innocuous to other animals, and which would thrive under the same varying conditions of season and place as its intended victim, would prove the most efficacious of remedies, but unfortunately for both squatters and farmers such a plant has yet to be discovered. The introduction of animals preying upon rabbits has been frequently mentioned, I suppose on the principle of the law of the survival of the fittest; but this scheme, to prove effective, presumes an increase on their part in direct ratio to the decrease of the rodent they are called upon to destroy; and assuming that the rabbit was finally wiped out by their means, they themselves would remain to constitute a pest necessitating drastic measures for its cure.

The introduction among rabbits of some form of disease such as *filaria*, *syphilis*, or *tuberculosis*, has been proposed, and rejected as dangerous to man, on the ground that it could only be compared to the scattering fire of a blunderbuss, which hits other objects besides that at which it is aimed; or to the introduction of the Colorado beetle or the locust for the purpose of eradicating the Scotch thistle, which while perhaps effecting their object ruin the surrounding crops. Of undoubted value would be the introduction of a fatal disease incident to rabbits alone—analogous, in fact, to one I remember as having caused

caused sad havoc among the native dogs on the Upper Murray. No doubt one factor in the disappearance of those dogs was strychnine, but it was not poison alone which transformed the large red jocund-looking dingo into a poor hairless diarrhœic wretch, too weak to howl or even to escape from the stick of the weary swagman in whose path it happened to lie, much less to overtake as prey the light-footed bandicoot which crossed its own.

More directly connected with the subject under discussion was the total disappearance of a whole tribe of rabbits, the descendants of some score or more turned loose in 1858 under apparently the most favourable conditions, all their wants being supplied by a bounteous nature in a protected glade on the Victorian side of the Upper Murray, where, for two years, and notwithstanding the presence of dingo, iguana, and hawk, they increased and multiplied, but finally, during the course of the third year, disappeared. It might be impossible ever to make a retrospective diagnosis of twenty-five years as to the cause of their death, but I am inclined to attribute it to a parasite, perhaps still to be found in Australia, but at any rate having its European prototype in the *Sarcoptes cuniculi* mentioned in the "Anatomie des Kaninchens," by the illustrious biologist, Krause. As his pupil I remember well the importance he used to attach to early topical treatment (Peruvian balsam, &c.) for the eradication of that parasite in rabbits brought to his laboratory for physiological purposes, as late treatment always proved in vain.

The following short description of the course of the disease induced by this fatal parasite may interest your lay as well as your medical readers:—

At first there is apparently little the matter with the rabbit. It soon, however, shows a few crusts about its face, which extend by continuity of epidermal tissue, as well as by auto infection from scratching to more distant parts of its integumental surface. It begins to lose flesh from loss of appetite, unrest and slow septic intoxication resulting from the venous and lymphatic absorption of the products of a hitherto purely localised and easily curable cutaneous affection. Extensive suppuration, principally of the cervical and sub-maxillary lymphatic glands, corresponding to the lymphatic capillary areas of the face, supervenes. In like manner the absorbed toxic matter circulating in the blood induces coagulation and extensive thrombosis (plugging) in various parts of its venous system, and usually some low form of pneumonia intervening mercifully puts an end to its sufferings.

I propose, therefore, the introduction into South Australia of a few German rabbits infested with this parasite, thereby constituting a nucleus, which would soon produce the disease in some thousands of their Australian cousins. A stock of infected animals could thus be formed, from which samples could be distributed, and the propagation of a disease encouraged, which, when left to itself, leads infallibly to the death of the patient, and indirectly to that of his kindred.

In older animals this disease is relatively slow, lasting more than a year, but, in consequence, it allows them for a longer period to be a source of infection to their younger brethren, in whom there is a relatively greater predisposition to acquire the parasite, and in whom from some inherent pyogenic tendency on their part the resulting disease runs a more rapid but none the less fatal course.

The above plan for the inoculation and consequent death of the rabbit has the advantage of being peculiarly adapted for application in rocky fastnesses and belts of scrub, which on account of their almost inaccessible character become the happy breeding grounds of this prolific pest. It is in country of this kind where the rabbits are thickest that the victims of the disease will necessarily be both absolutely and relatively the most numerous. Of special importance is the fact that the parasite being peculiar to the rabbit is harmless to man and sheep, each of whom is already sufficiently handicapped by their own specific forms, *sarcoptes hominis* (itch), and *sarcoptes ovis* (scab), respectively. It is just possible that in parts of Australia some obscure climatic or telluric conditions may exist which would minimise its ravages, just as in Central Australia the fluke-livered ox of the Murray swamps outlives its parasites (*distoma*), which when they die undergo calcification, and, except as ordinary foreign bodies (swallowed pins, &c.), are thenceforth inert. In conclusion, I would like to ask how many years it would take if we ceased to import fresh stock, and if at the same time we encouraged to the utmost the propagation of ordinary scab, before our sheep would eventually become extinct? What would become of our vineyards and potatoes were phylloxera in the one case and the potato disease in the other in like manner encouraged? What would be the fate of a human idiot affected with itch and abandoned by his fellow-creatures? What has and is still hourly taking place among our aborigines since first we unintentionally strewed the germs of consumption (*Kochs bacillus*) amongst them?

The University, Adelaide, September 30.

I am, &c.,

ARCHD. WATSON, M.D., F.R.C.S.

(No. 2.)

South Australian Register, 16th November, 1887.

DESTROYING RABBITS BY DISEASE.

The following report by Dr. Paterson (Colonial Surgeon) relative to the danger to stock through the introduction of disease amongst rabbits, was laid before the Assembly on Tuesday by the Commissioner of Crown Lands:—"In pursuance of your instructions I conferred with Professor Watson on the subject of the disease which he proposes to introduce for the extermination of rabbits—1. In reference to the nature of the disease; 2. With a view to expressing an opinion whether the disease in question was communicable to man, horses, sheep, cattle, and pigs. I had an interview with Professor Watson, who readily furnished the information asked for, showed me the infected animals, and demonstrated the nature of the disease under the microscope. The rabbits experimented on are confined within the precincts of the old powder magazine at the rear of the University buildings. They occupy a small area of ground which is intersected with their burrows. A high wall with deep foundations prevents any possibility of escape, either above or below the surface. I counted eight rabbits in this enclosure, of which, judging by the colour, two were wild, the remainder domesticated animals. Lying about were the dead bodies of a considerable number of young ones, which had come to their full time, but were either stillborn or had died immediately after birth. This effect of the disease in checking fecundity should not be overlooked. One rabbit, a white one, was in an advanced stage of the disease. It was inactive and emaciated. The fur was falling off its body in places, and the face about the nose and eyes was without hair, and covered with a scurfy incrustation. The animal having been caught and a pinch of fur removed from its body, the scurf adhering to the roots of the hair was separated, and placed under the microscope, and the presence of

of an insect parasite revealed. This parasite is the *Sarcoptes cuniculi*. Its existence denotes that the animal is affected with rabbit itch or rabbit scab. *Sarcoptes cuniculi* belongs to the family of the Acarani or true itch mites. Itch mites infest the bodies of a large number of animals, including man, horses, cattle, pigs, camels, dogs, cats, goats, lions, tigers, and others. They differ in size and external appearance according to the species of animal whose body they inhabit. They are confined to the skin exclusively, never penetrating to the tissues below the skin. The bodies and eggs cannot be taken up into the circulation, as they are larger than the capillary vessels, and so cannot effect an entrance. The itch mites of man and the lower animals have been variously estimated to live from twenty to forty days, and even two months, according as they are placed under unfavourable or favourable conditions. The total number of eggs laid by the female in the burrow which she makes for herself in the skin has been computed by Gerlach not to exceed fifty, but Hebra says he never saw in one burrow more than fourteen eggs, besides ten or twelve empty shells. The disease in question—rabbit scab—is rabbit itch. In the rabbit it corresponds to itch in the human subject, mange in horses, cattle, pigs, and dogs, and to scab in sheep, all of which diseases are dependent on the presence of an insect parasite. Itch in the human subject is due to an itch mite which has been variously named *Acarus scabiei hominis*, *Acarus exulcerans* (Linnaeus), *Sarcoptes hominis* (Raspail). In the horse it is called *Sarcoptes equi*; in the ox, *Sarcoptes bovis*; in the pig, *Sarcoptes suis*; in the dog, *Sarcoptes canis*; in the cat, *Sarcoptes catorum*. It is an eminently contagious disease. In the human being it is communicated from person to person by contact in eight cases out of ten, according to Bourgingnon, by their sleeping together. It would be a waste of words to describe at length the extreme contagiousness of mange in horses, cattle, pigs, and dogs, or that of scab in sheep. Reference to any veterinary work will confirm what is said here both as to the virulence and the nature of these affections. In rabbits itch is not only a virulent but a fatal disease. Professor Watson assures me that every animal which has been exposed to the contagion has caught it and died. Its remarkable influence in restraining increase has been already mentioned. But the rabbit in captivity and the rabbit in its natural state in the open country are under very different conditions. The itch mite is said to be fond of warmth, and to display increased liveliness when exposed to the rays of the sun, and the warmth engendered by the contact of two living bodies, as of two persons sleeping in the same bed, is believed to play a prominent part in the spread of the disease by inducing the creature to leave its burrow and wander about. The heat of our climate may operate in a similar way; but, as a set-off against this, it is to be borne in mind that itch as observed in man in Europe is not confined to warm latitudes, but is prevalent in the northern countries of that continent in an aggravated form. There the disease has been chiefly observed in rabbits reared in hutches. So far as I have been able to ascertain it has not been observed in the wild rabbit, but any information on this point is scanty. There are many things in the environment of the wild rabbit, especially in certain localities, which would make against the virulence of the disease, some of which may be surmised; others, and these probably the most important, might escape conjecture. Contact with saline or sulphurous substances in the earth, brackish water, the contact of fresh earth in the formation of new burrows, brushing the coat against aromatic shrubs, or when the herbage fails an enforced diet of leaves like those of the eucalyptus, containing essential oils which are known to be poisonous to the mite, and the increased resisting power to the effect of the disease imparted to the animal by an active open-air life—all those would modify and perhaps in the end render the vitality of the mite impossible. Anyhow this can be said—that history records no plague, however desolating, which by itself, and unaided by other causes, has exterminated man or animal. 2. As regards the communicability of the disease to man, horse, ox, sheep, or pig. As to man there need be little or no ground for apprehension. The skin and fur of infected animals as articles of commerce are valueless, and therefore would not be handled; the carcass would be rejected for food, or, if used, would be innocuous, as the disease does not penetrate below the skin. Itch in man is a curable disease, and neither endangers life nor injures the health of the patient. Persons are known to have it from youth to old age without impairment of their general health. At the same time it is a disreputable and loathsome malady. Kuchenmeister in his manual of human parasites states that itch mites of the following animals have been accidentally transferred to man, and have been found upon him:—*Sarcoptes cati* (cat), *Sarcoptes bovis* (ox), *Sarcoptes canis* (dog), *Sarcoptes equi* (horse). He also states that the *Sarcoptes catorum* may be transferred to a variety of animals, and among others to sheep, and quotes his authorities. Professor Watson has experimented on himself both with live rabbit mite (*Sarcoptes cuniculi*) and its ova without effect, and emphatically denies that rabbit itch is communicable to human beings. With regard to the transference of certain itch mites from the lower animals, and the communication of itch by them to man, some observers are of opinion that the insects so transferred die out without being able to reproduce themselves in their new locality. When the disease is of longer duration than is warranted by this belief, they explain its persistence by the repeated reproduction of fresh batches of the creature by constant contact of the patient with the animal from which the contagion was derived in the first instance. Kuchenmeister expresses his belief that if mites from the lower animals are able to establish themselves permanently on man, it will apply only to those which have a close resemblance to the human parasite. Hebra, another eminent dermatologist, holds that there is no difference between the mites which infest man and the lower animals—that they are not different species of one family, but only variations of one and the same animal; that, in fact, the mites of the lower animals and men are identical. On this point Hebra is entirely at variance with veterinary surgeons of the English school. The following extract shows his views:— * * * My observations on the lower animals, as well as on the human patients, have led me to believe that not only several of the acari said by Gerlach to have been taken from different animals, but those described by Fürstenberg under the names of *Sarcoptes scabiei* and *Scabiei crustosæ* belong to the same genus and to the same species, or (it is better to say) are specimens of one and the same animal. * * * There is no better proof of the identity of the acari which have hitherto been found in different animals than the fact that the diseases produced by them have always been communicable, whether by design or accident, from those animals to man, and *vice versa*. Is *Sarcoptes cuniculi* transferable to the horse, ox, or pig? Professor Watson replies to this that there are no experiments in this country, but that Krause, a recent German writer on the rabbit, denies its communicability to horses, cattle, or pigs. Mange in horses is a highly contagious disorder, and is due to the presence of an itch mite, *Sarcoptes equi*. Mahew, author of various treatises on the horse, says that all doubts seem to have been put to rest by the investigations conducted by M. Bourgingnon, who demonstrated the unfitness of one creature to support parasites generated by another. Is *Sarcoptes cuniculi* communicable to sheep?

Professor

Professor Watson replies emphatically no, and in confirmation of his opinion refers to experiments on three sheep belonging to the S.A. Stockowners' Association, which were under care in M. Marceau's back yard. They were young healthy animals, unshorn. About a month ago they had been inoculated by separating the wool all down the back and applying the contagious material copiously to the skin of the back and other parts of the body. The animals were rather wild, but M. Marceau caught and threw one so as to allow of a careful examination. There was no disease apparent, and I believe none was present. Professor Watson admits that according to Krause, *Sarcoptes cuniculi* is communicable to cats. Now Kuchenmeister states that *Sarcoptes catorum* is communicable among other animals to sheep. If Kuchenmeister is correct there is a presumption that *Sarcoptes cuniculi* may also be communicable to sheep, either with or without passing in the first instance through the cat, and it would tend to confirm Hebra's view of the identity of the various itch mites, and that they are not different species, but only variations of one and the same animal. Is the disease communicable to marsupials? Professor Watson replies possibly, yet to try. I do not share Professor Watson's confident opinion that *Sarcoptes cuniculi* is not communicable to sheep, so far as it is based on the experiments that have been made here. The literature of itch contains numerous instances of unsuccessful experiments to communicate the disease by inoculation. To be of any value the experiments must be of more varied character and under more varied conditions. They should be made on shorn as well as unshorn sheep, and the contagious material applied on a loose bandage round the body. Quiet animals, accustomed to be handled, such as have been brought up about a farm, would be preferable to those on a run. The natural mode of conveying the contagion might be initiated by introducing infected rabbits into the pen, and experiments should be made not only with sheep, but with horses, cattle, and pigs. An instance is related of a cat communicating mange (*Sarcoptes*) to a horse by perching on its back in the stable. So far as I can see the weight of evidence inclines to Hebra's view that the itch mites in different animals are identical, and therefore interchangeable. But opinion on a matter of this sort is nothing but conjecture. The question can only be decided by direct experiments. If the scheme is to accomplish its purpose centres of infection must be multiplied indefinitely over the country infested by rabbits. The dissemination of scab and mange would be too high a price to pay even for bunny's annihilation, and before the Government can sanction such a step it should be in possession of evidence to satisfy the most sceptical minds that the disease is not communicable. I do not see much force in the sentimental objections to the scheme, bunny's undue multiplication in outlying country being attributable to the absence of his natural enemies—man, dogs, and birds of prey. The reduction of his number by disease is only a scientific way of restoring the natural balance of life. Professor Watson's scheme deserves further investigation. If it is harmless to stock it may prove a useful auxiliary in dealing with the rabbit pest, even if it fails to eradicate it."

(No. 3.)

EXTRACT from a semi-official note received from Mr. Taylor, in charge of the Rabbit Branch.—H. W., 15/12/87.

AMONGST other things I desire to mention that I saw the diseased rabbits and heard a great deal about them and the experiments made. The rabbits are now the property of a committee of pastoralists, of which Mr. H. B. Hughes is the chairman, and admission to this exclusive committee or association is obtained upon payment of the sum of £50.

I do not think I will be far out when I state that before long these rabbits, of which they have about seventy, will be turned out, if not in New South Wales, at least in such close proximity to the border, that they will serve the purpose intended. I must state that I have become imbued with some of the confidence that many of our squatters have with regard to this disease, and I think the Government should without delay carry out experiments, but not in the same manner as has been done in Adelaide. There the rabbits are confined in an enclosure, about 20 feet by 12 feet, with not a vestige of grass, &c., and the bodies of dead rabbits lying about, the stench from them being very offensive. The infected rabbits are most abject looking objects, and I do not think that a person who has once seen the disease could ever mistake it. The skin is covered with an incrustation similar to scurf, and between the crutch they are quite bare. The genitive organs are in such a state that breeding is impossible, and although it is some time before the rodents die it does not take long for clean rabbits to become infected. I propose, when opportunity offers, to send fuller information on the subject.

I am inclined to think that the Government should obtain specimens of these diseased rabbits and turn them out in a large enclosure, where stock of every description would have room to move about freely, and where natural grasses, scrubs, herbage, &c., is plentiful, as it may be found that with room to move about, &c., some of the natural food may act as antidote to the disease.

(No. 4.)

Sir,

Wentworth, N.S.W., 12 December, 1887.

I desire to place before you the result of the inquiries I made in Adelaide respecting the action being taken with regard to the Sarcoptic rabbits, and the opinions I formed from an inspection of the infected animals. After meeting several prominent pastoralists, who are interested in the work I am at present engaged upon, I ascertained that the diseased rabbits are not now the property of Professor Watson, a number of gentlemen holding stations either in this Colony or in South Australia having purchased his interest therein, and formed themselves into a committee, having for its object the development of the disease and the advocating of its introduction into infested country. Each member of the committee has contributed to the fund the sum of £50, and Mr. H. B. Hughes is the chairman. After some trouble in finding Mr. Hughes I was at last favored with a sight of the rabbits, which are confined within the walls of an old building, at the rear of the University, the area of which is of a very limited extent, the surface being riddled with burrows. There must have been upwards of sixty live rabbits within the enclosure, and those which I examined closely were more or less diseased. One rabbit was apparently in an advanced stage of the disease, the fur having entirely disappeared from between the hind legs and the back of the neck. The face was covered with a thick scurfy incrustation, somewhat resembling

resembling a coating of lime, and altogether he presented a most dejected appearance. The gentlemen present handled these rabbits with perfect impunity, seemingly having no dread of the disease being communicated to them. In the enclosure I noticed the dead bodies of several fairly grown rabbits, and of some young ones which were either still-born or had died a short time after birth. I am somewhat at a loss to describe clearly the nature of the disease, but the ravages of it were most marked, and I think that an examination of the infected animals, by a gentleman (professional) in the employ of the Government of New South Wales would for many reasons be most desirable.

Mons. Marciaux, an assistant to Professor Watson (who I may mention is absent from Adelaide) informed me that several of the parasites had been taken from the rabbits and placed in his hair, round which a handkerchief was then bound. The hair remained in this state, unwashed, for twelve days and at the expiration of that time no trace of the parasite could be found. I next proceeded in company with several other gentlemen to the residence of Marciaux, where I saw three sheep confined in a small back yard. I was informed that efforts had been made to communicate the disease to these sheep without success. I made a close examination of them, and, so far as I was able to judge, the skin was perfectly clean and the sheep in sound condition, although they had been cooped up there for over two months. These represent the facts as far as I was able to ascertain by careful inquiry and observation, and I will now proceed to make a few suggestions on the subject. It appears that in South Australia any person may keep live rabbits in his possession, the penalty being simply for wilfully turning them loose. When this is borne in mind it can be understood how easily a number of them could be conveyed to points contiguous to the western boundary of this Colony, and, either by accident or by design, escape and possibly spread the disease. As it is I know that a number of persons deeply interested in the extermination of the rabbit pest are each already in possession of a pair of those diseased, and it would be absurd to suppose that they have not been obtained for a specific purpose. I would therefore, as before stated, suggest that a professional gentleman be sent to Adelaide to inspect and report upon the disease, and that a number of the rabbits should be obtained, either by purchase or otherwise, and experiments conducted in a proper manner. The rabbits I saw are within a small and dirty enclosure, without a vestige of herbage of any kind, and they may be said to be existing under unnatural conditions. If the Governments were, as suggested, to obtain diseased rabbits and turn them out, with healthy ones, in a securely enclosed area of (say) 640 acres, where their natural food is accessible, it could then be seen whether the disease is as readily communicable as it appears to be. Sheep, cattle, horses, &c., could roam at large within the enclosure, and it could, in addition, be ascertained whether the natural herbage would not act as an antidote to the disease. If this were done it would, I think, meet with the approval of interested pastoralists, and the owners of country which is at present uninfested would have some guarantee that their interests are not being neglected.

I have, &c.,

HENRY C. TAYLOR.

The Under Secretary for Mines.

(No. 5.)

Telegram from Adelaide Station to Alex. Bruce, Esq., Chief Inspector of Stock, Department of Mines.

On microscopic examination of Professor Watson's rabbit disease I have found two distinct species of scab acari, namely, *sarcoptes* and *psoroptes*. These varieties infest several mammalian animals, and until the immunity of sheep has been established beyond all doubt, I am decidedly opposed to the liberation of rabbits affected with scabies.

EDWD. STANLEY,
Government Veterinarian,
New South Wales.

(No. 6.)

Sir,

Tintinallogy, 31 December, 1887.

I have the honor to report having met Mr. Taylor, chief of the Rabbit Department, at Cockburn. I found that he had reported on Professor Watson's experiments, detailing information we had gained that it will be unnecessary for me to repeat. I will therefore briefly state my own opinion of what I saw and heard. I was very much surprised to find such slight evidence of disease amongst the rabbits; only two were distinctly affected; one of these was considerably diseased about the head, legs, and scrotum, the disease being superficial and caused by acari; these I examined under the microscope, and found two species, the larger variety, the *psoroptes* having apparently escaped the observation of those in charge. I understood some infested rabbits had been already distributed in South Australia. Mr. H. B. Hughes, who has charge of the rabbits, having purchased them jointly with others from Professor Watson, unhesitatingly attested that he would risk infecting sheep, as he would rather have scab in sheep than the rabbit pest. His statement that does cast their young in consequence of the disease is to me incredible, because scab does not cause abortion—on the contrary, scabby ewes have very healthy lambs. It cannot be expected that wild recently caught pregnant rabbits are going to make a comfortable nest in such a place as they were confined in; it is only natural that they would cast their young under such circumstances. The badly diseased buck still copulated, but was said to scream from pain; it is by no means an uncommon thing for rabbits to scream during connection, so that I consider that evidence of no value. I was told 150 rabbits had died since April, but the cause of their deaths remains a mystery. That the disease can be communicated to cats is admitted; three sheep were repeatedly infected on their bodies, without any result; these I again infected specially with the *psoroptes* on the hairy portions of their body, and shall note the result later on. I wish to note that scabies depends on atmospheric and other conditions, such as the condition of the animals, quantity of feed, &c., as to whether it spreads or not, and it is most exceptional for it to prove fatal in its effects, even to a small extent. As there is a distinct danger of its affecting other animals, and its capability of surviving the hot dry climate to be sufficiently virulent in its effects in rabbits is uncertain, it appears undesirable to encourage its indiscriminate introduction until its effects have been thoroughly tried experimentally.

I remain, &c.,

Alex. Bruce, Esq., Chief Inspector of Stock.

EDWD. STANLEY, G.V.S.

(No. 7.)

(No. 7.)

Department of Mines, Stock Branch, 19 January, 1888.

MEMO.—

Watson's Rabbit Disease—"Scabies Canalic."'

From the information I have been able to obtain in Adelaide I have the honor of submitting the following report on this disease:—

After two failures, rabbits arrived from Germany last April affected with rabbit scab. It is caused by acari or mites, parasites that live and breed on the skin of mammalian animals and mankind, exciting irritation and causing diseases identical in their nature, but known by various names, according to the animals affected.

We have scabies in sheep, camels, rabbits, &c., and itch in human beings, mange in dogs, horses, cats, &c., and somewhat similar mites are found in cheese, flour, &c.

There are several varieties of acari, as there are several varieties of flies. Each variety has its own special habitation and food; so that the acari of a ruminant will not, generally speaking, live on a carnivora, and what is more remarkable is the fact that two or three distinct species of acari may infest the skin of one animal, but they keep their colonies distinct, and are each found on special parts of the body. Nevertheless, there are exceptions, regulated by external conditions, such as temperature, climatic influences, poverty of condition, intimate association, &c.

During the hardships of the Crimean war our soldiers contracted itch from their mangy horses. It is noticed that the filthy Afghans in charge of camels imported into South Australia suffer with itch contracted from the scabies of their animals.

The same parasite may be common to different animals, as the *sarcoptes* of rabbits find a suitable home on cats. It is quite possible that they may do so on other animals, such as marsupials. Hence it is a very important point to determine experimentally whether it may under any conditions be communicated to and propagated by sheep. Moist cool weather and poverty of condition assist the development of the insects, so hot, dry weather and plentiful feed will retard its progress; hence it is a question that cannot be settled off-hand, but it will require prolonged observation, as a few cases of experimental infection is too limited a method of settling the question. I found the S. A. Government, although they assisted in the introduction of the disease, have declined further expense in the matter. Therefore I suggested to the Secretary for the squatters, who are interesting themselves in extending this disease amongst rabbits, to ask them to select a large area of a rabbit infested country, enclose it, infest it with the disease, and then keep a considerable number of sheep on the same area for several months, subjecting them to periodical examinations of the Chief Inspector of Stock or some other qualified authority. He promised to call a meeting to discuss this proposal and to communicate the result to the N.S.W. Stock Department.

From the foregoing remarks it will be seen that I consider the probability of its infecting sheep is uncertain, perhaps remote, but not impossible.

As to its efficacy for killing rabbits I am very doubtful. From my knowledge of the progress of this disease in other animals, and judging from the extreme paucity of the rabbits I saw actually diseased, not half a dozen (I was told some had been sent away and others had died), and its very slow progress, the rabbit most severely diseased had been suffering for three months, and judging from his condition he is likely to live for another three months, and although he has the skin disease well established on his legs, head, and scrotium (N.B.) it does not attack the body nor prevent him from copulating.

I was told abortion and sterility are results of infection, also that the infected were in burrows out of sight, but I accepted these statements (although I believe they were in good faith) *cum grano salis*, as I know too well that such skin diseases have no direct effect on the generative organs, and cannot be regarded as fatal in their character. If, as appears, very few rabbits exposed in a confined space take the disease, its progress amongst wild ones at large would be still less, as the healthy will avoid cohabitation with the afflicted. The Darwinian theory of the selection of the fittest will prevail, and although some of the afflicted may die the majority will live long enough to propagate the species before doing so.

Disease of this character when it attacks the whole surface of the body will cause marasmus, debility, and wasting of the body, exhausting the vital powers and ultimately death, but the rate of mortality is extremely small, and there are very few instances on record where the disease has assumed an epidemic character amongst animals, and even supposing such an outbreak could be induced it would be limited by local geographical and atmospheric conditions to a very small area. I therefore arrive at the conclusion that it is not desirable to introduce this foreign disease, because large numbers of rabbits in their natural state would escape infections. It is not without danger to other animals. It is very slow in its progress, and does not prevent rabbits breeding, and it is not fatal in its effects to any appreciable extent.

I carefully examined four sheep that had been exposed to the disease, and on some of which I had purposely placed the acari, fourteen days previously; traces of local irritation could be seen, but although the disease may not become established on these sheep, I could not consider such crude experiments as conclusive, because these sheep are too artificially kept, and the present high summer temperature is fatal to the development of the acari.

EDWD. STANLEY, F.R.C.V.S.,

Government Veterinarian.

Alex. Bruce, Esq., Chief Inspector of Stock.

Minute of The Chief Inspector of Stock on The Government Veterinarian's report.

In submitting this report, I think it right to call special attention to the fact, noticed by Mr. Stanley, that the time of the year and the season are such as to render the diseases here referred to comparatively inert, and that it would not be safe to act upon any results which may be obtained until after next winter, particularly as the experiments have been but few, and only a short time has elapsed since they were commenced.

A.B., 20/1/88.

Drs.

Drs. Ellis and Butcher's scheme.

(No. 1.)

To the Minister for Mines,—

Double Bay,

Sir,

As the medical profession has of recent years been studying the relation of germs to the various diseases, as originally proved by Pasteur, and it now having been proved that a certain number of diseases of animals are dependent on the presence of organisms capable of being transmitted by inoculation, it struck me some time ago that the study might be turned with advantage to the extermination of rabbits, not as has been proposed by inoculating them with diseases common to man or to other animals, but with some disease of their own. Pursuing this idea, I have imported the necessary apparatus for the cultivation of germs, with a view to taking up the study with reference to rabbits. The idea I hold is that nowhere does any animal or plant prevail in very large numbers for any length of time without some disease appearing, as has notably been exemplified where any country has devoted itself to any particular production. To study the diseases of rabbits to any advantage it would first be necessary that I should be allowed to keep a few rabbits, and, secondarily, that if anywhere through the Colony rabbits appear either to be suffering or dying out, from any particular disease (as has occurred at least once to my knowledge), I should receive information of the fact, and that some of the sick rabbits should be sent to me to study the disease, and if possible isolate its cause with a view to its inoculation and its propagation through the Colony. I should like, in addition, to have access to any papers which treat of the disappearance of rabbits anywhere, or other allied matters. I am already acquainted with a specific disease in Germany; it is an external parasite, and *only* infects rabbits, and is very fatal. It would of course be necessary to import it for its study in the climate. What I require is:—

- 1st. That I should have leave to keep rabbits on some specified place.
- 2nd. That I should receive knowledge and specimens of any disease of rabbits through the Colony.
- 3rd. That I should with certain restrictions both have the leave and the aid of the Government in importing rabbits with the disease I have mentioned, and any other disease I may hear of in the future.

I remain, &c.,

HENRY A. ELLIS.

My dear Abigail,—

I know Dr. Ellis well, and am sure he is quite competent to perform anything he undertakes. I know that he has been studying the growth of germs for some time, and I believe there is only one other scientific man in Sydney who has his appliances for conducting experiments, and there are few who have his knowledge.

Yours, &c.,

B. R. WISE.

Hon. F. Abigail.

(No. 2.)

The Hon. Minister for Mines, Rabbit Branch,—

Sir,

Tintinallogy, Wilcannia, 10 September, 1887.

In accordance with permission received from Mr. A. J. Clark, your inspector for this district, I have been keeping rabbits alive for experimental purposes. My first experiments were conducted in Wilcannia, to try the effects and doses of poisons such as could be used for general destruction on large areas of country. The results are somewhat surprising at first sight, but I may say that the doses and results can be spoken to by various independent witnesses as Messrs. Barnes, Dickens, Desdilly, and others of Wilcannia, saw most of the doses administered and noted with me the effects. All doses were weighed by Mr. Gibson, a qualified chemist in Wilcannia.

In the first place, I find that a full grown rabbit will, with unlimited food, such as it likes, take a dose of arsenic out of all proportion to its size, and feel no ill effects.

- a. In one instance 1 grain of pure arsenic was administered for four successive days without any result whatever; the effect of $1\frac{1}{2}$ grain on the fifth day killed the rabbit.
- b. Half a grain daily was administered to ten full grown rabbits for eight days, and not one sickened.
- c. Two grains killed a buck in twenty-two hours.
- d. When kept short of food, or fed on gum leaves or bark, the dose was sooner felt, but required just as much. I may here say that the rabbits would not touch the ordinary bark till nearly starving.

With strychnine the effect was very different as $1\frac{1}{8}$ of a grain of strychnine killed in 20 minutes a well fed rabbit.

In these trials of strychnia I started with $\frac{1}{2}$ of a grain, and decreased to find the least dose effective. The quantity named, $\frac{1}{8}$ of a grain, was effectual in every case.

In leaving for future report the poisoning by other means, I may say that as far as the poison used goes it would not matter to the stock on the run which poison is used. I say, as one with practical experience of this country, that it will be necessary when carried out on a large scale to have men looking after the baits used to gather up the remains and burn them.

My attention was drawn some time since to report that South Australia was endeavouring to introduce "rabbit scab" from Germany. The rabbits died on the voyage. I have now in my possession a number of rabbits on which I have, by inoculation from a rabbit caught in the bush, introduced a disease which I believe to be a form of scab. But before giving a fuller report I should like to know from your Government Veterinary Surgeon what is known of this rabbit scab.

I may say that both by inoculation and contagion I have passed on the disease, and that its effects are, so far, to cause death in half the cases.

I am trying its effects now on sheep, especially isolated, to see the effect on stock.

I trust that you will get me the information I ask if possible, as the problem of rabbit destruction lies, I am certain, in disease not in poison.

I have further to ask you that in case I find that this disease can be safely spread to give me authority to bring a case of live rabbits to Sydney for examination.

It is useless your sending any other than a qualified veterinary to see a matter like this, and I think that if brought to Sydney that further skilled report could be obtained.

Meanwhile I will continue work in various ways. Awaiting reply,

I have, &c.,

HERBERT BUTCHER,
M.R.C.S., L.S.A.

(No. 3.)

The Hon. Minister for Mines,—

Sir,

10 October, 1887.

As we expect within a short period to be ready to apply our method for the extermination of rabbits, we would feel obliged if information could be given to us as to tests the Government will think sufficient before allowing us to apply our method, as regards the safety of stock of applying it. Also any other test which they may think it necessary for us to fulfil.

We would respectfully propose that the best method of arriving at a definite conclusion would be the allowing us to test our method in an isolated portion of the thickly infested district of the Middle Darling River, such as one of the river islands, where we would propose exterminating the rabbits, keeping all varieties of stock thereon without detriment to same, under special Government supervision if necessary. Likewise we would be much obliged if we could be informed as to the *personnel* of the board which is to be appointed to test the efficacy of the plans, and where they propose to apply the test. Also, if the various rabbit inspectors along the route from Wilcannia to Sydney, *via* Bourke, may be informed of the permission given to us to transfer rabbits in locked boxes from one to the other, such cases being marked with our names in full.

We have, &c.,

HENRY A. ELLIS, M.B., *per* H.B.
HERBERT BUTCHER, M.R.C.S.E.

Care of Herbert Butcher, "Metropolitan Hotel," King-street, Sydney.

(No. 4.)

TELEGRAM from Wilcannia, addressed to Harrie Wood, Under Secretary, Mines.

We are ready for Stanley's inspection with regard to inspection of stock; would like him to come at once, also, to know if the Department requires any other guarantee before allowing inoculation of whole run.

BUTCHER & ELLIS,
Tintinallogy, 12/12/87.

(No. 5.)

To Alex. Bruce, Chief Inspector Stock, Sydney,—

Wilcannia.

BUTCHER'S disease is very interesting; it takes fourteen to twenty days to develop in rabbits; experiments on other animals would require several weeks observation. I will commence experiments, and suggest Inspector Tully be instructed to assist. He could periodically visit the animals, and report the result. I will return to Sydney and prosecute further inquiry with Dr. Ellis. Please wire reply, *via* Menindie, also Wilcannia.

EDWARD STANLEY,
Government Vet., Tintinallogy.

(No. 6.)

The Under Secretary, Department of Mines, Rabbit Branch, Sydney,—

Sir,

Wilcannia, 18 December, 1887.

I have the honor to report having made a careful inspection of the experiments being carried on by Dr. H. Butcher, of Tintinallogy. The country selected is a river bend, on Werinbella block, and contains about 600 acres. The mouth of the bend is securely fenced across. The country is very well grassed, and has been unstocked for at least eighteen months. The feed in this bend is better than in any of the adjoining bends. The disease which Dr. Butcher has introduced has the effect of preventing the rabbits from breeding, and also has more effect on young and half-grown rabbits than on old ones. I rode over the whole of this country, but I did not see any young rabbits, although in the adjoining bends I saw four nests, and also a great many young rabbits just able to leave the nest.

On the day I made my inspection Dr. Butcher had 120 rabbits in small yards, boxes, &c., and the death-rate for that day was twenty-six. On my next inspection I shall be able to inform you if there is any decrease in the number of rabbits on the country experimented on.

I have, &c.,

A. J. CLARKE,
Rabbit Inspector.

(No. 7.)

Tintinallogy, 7 January, 1888.

Rabbit disease v. Stock.

MEMO.—

I have the honor of reporting the result of my visit to Tintinallogy, the object being to inquire whether there is danger to stock contracting disease from the rabbits in Mr. Butcher's experimental camp, formed on a bend of the river Darling, especially secured by a wire netting fence.

I ascertained that the disease is natural to rabbits, and of local origin, as it exists on the run. Having had several rabbits caught in the originally infested paddock, I made a number of post-mortem examinations, and so found evidence of the affection still prevailing there. Since the disease has attracted Dr. Butcher's attention I am informed thousands of sheep have passed over the same ground. Some sheep and horses have been continually in the next paddock, and it has now been arranged to keep 100 rams in the infested paddock for the next two months. In the river bend, where the diseased rabbits are kept, some have been liberated amongst their healthy fellows. A few sheep, horses, goats, cattle, guinea pigs, dogs, and cats are constantly kept, and several of these have been purposely inoculated, without the slightest indication of the disease being transmitted to them. I am therefore of the opinion that there is little or no danger of stock becoming affected, but to test the matter more completely I have inoculated some fresh animals, and placed them under the observation of Mr. Tully, the district local inspector of stock, with instructions to visit and muster them fortnightly. (Attached see a copy of these instructions.)

Mr. Reid, in charge, and part owner of the run, informs me that all the stock have been, and continue to be, perfectly healthy.
The Chief Inspector of Stock.

EDWD. STANLEY, F.R.C.V.S.,
Government Veterinarian.

Tintinallogy, 4 January, 1888.

MEMO.—

In accordance with instructions received from the Chief Inspector of Stock, I have the honor to give you the following statement of experimental animals and others under observation on the river bend near this station, enclosed by a wire netting fence. (This is exclusive of the rabbits retained by Mr. Butcher or of the wild ones already there) :—

20 sheep and 2 lambs	10 marked, as per margin.
4 goats.						
4 horses	2 saddle hacks and draught horse.
1 cow, white	1
1 calf, white	1
1 calf, red and white.						
3 guinea pigs	3
Total, 36 animals.						

Please to muster and inspect them fortnightly. In the slip paddock near the wool-sheds are two poddy lambs, and 100 rams are to go in on Monday, 8th January, and two remain about two months.

EDWD. STANLEY, F.R.C.V.S., E.V.S.

Mr. M. Tully, Inspector of Stock, Wilcannia.

(No. 8.)

Sir,

Department of Mines, Stock Branch, 19 February, 1888.

With reference to the disease in rabbits on Tintinallogy Station, I have the honor to report that measures are being taken by Mr. Butcher for the cultivation of a disease found occasionally in the locality with the object of obtaining a virus to assist its spread amongst rabbits, but as the work is only in an early experimental stage it would be premature on my part to express a decided opinion as to its efficacy.

So far as I have seen the pathological conditions are not uniform, the results are uncertain and unsatisfactory; therefore I am not so sanguine of its value for destroying rabbits as the promoter appears to be.

I have, &c.,

EDWD. STANLEY, F.R.C.V.S.,
Government Veterinarian.

Alex. Bruce, Esq., Chief Inspector of Stock.

(No. 9.)

Reporting on stock under observation at Tintinallogy.

Sir,

Stock Office, Wilcannia, 23 January, 1888.

I have the honor to report that, on the 19th and 20th inst., I inspected the stock described by Mr. Government Veterinarian Stanley as inoculated from diseased rabbits or running on diseased country. All the animals appeared perfectly healthy. Each animal was carefully examined, and no indication of any disease showed itself.

I also mustered the 100 rams and two poddy lambs running in the slip-panel paddock, and could see nothing wrong with them.

The spot where the inoculation was made on the sheep especially scarcely could be found, so little did it show any mark.

Mr. Butcher wishes me to see them again in a fortnight or about the 3rd or 4th of February. It appears to me that there is no danger to stock from this particular disease, and the sooner permission is given to spread it the better.

I have, &c.,

MARK J. C. TULLY,
Inspector of Stock.

The Chief Inspector of Stock, Department of Mines, Sydney.

The Under Secretary for Lands to The Principal Under Secretary.

Sir,

Department of Lands, Sydney, 10 February, 1888.

I have the honor to forward herewith a copy of a letter received from Dr. Wilkinson, respecting the method proposed by M. Pasteur for the extermination of rabbits, and to request, by direction of the Secretary for Lands, that you will favour me by forwarding to the Board of Health, for consideration in connection with other papers on the subject already referred to (on 8th instant).

I have, &c.,

CHARLES OLIVER,
Under Secretary.

The Medical Adviser.—C.W., B.C., 13/2/88.

Dr. Wilkinson to The Secretary for Lands.

Sir,

Glebe, 9 February, 1888.

Now that there seems to be a general idea that of all the methods proposed for the extermination of the rabbits, Pasteur's method is the one which promises best, it is right to pause and consider how this method may be so tested in the country as to prove first of all its efficacy in destroying the rabbits under the conditions that exist in the Colonies; and, secondly, its innocuousness now and always with regard to man and other animals. Generalisations made in a laboratory do not always hold when they have to face the conditions of the outside world. Further time must elapse before one can trace with the least precision the possible events associated with the life, history, and character of any micro-organism. The study of these micro-organisms is yet in its infancy; and any one familiar with the subject knows only too well how little one can infer concerning the action and qualities of these minute organisms under altered circumstances. There is no logical process that would lead one to infer that an inoculation with a certain bacillus, which would destroy an ordinary mouse in a few hours, would still leave absolutely unharmed a field mouse. Yet such is a fact, and surely when we know that altered circumstances may diminish the virulence of these micro-organisms, we may be justified in assuming that altered circumstances may increase their virulence, aye, and possibly alter their qualities.

Pasteur now with every good intention, and in the best of faith is offering us a dangerous living weapon with which to combat the rabbit pest. His idea is that the microbe of fowl cholera will effectually exterminate the rabbit. Even granting that his experiments have been entirely successful, are we certain that the disease will spread and infect the rabbits over large tracts of country, as it did in his enclosure of a few acres? And more important still, will the disease begin and end with the rabbits? Of this everyone must be certain, that if it kills the rabbits in this wholesale fashion it will not spare the birds, and possibly other animals will become infected. I am not in the mind to put my whole trust in M. Pasteur's sanguine anticipations that we shall have all good and no evil results. M. Pasteur has not always been happy in applying his deductions in the field of science to a practical purpose. We admired the ingenuity and enthusiasm with which he laboured to work out the paths, by which anthrax was communicated to cattle, and his positiveness convinced his admirers he was right. Yet later investigations disproved many of the most important facts; in this very disease too can we say that the virtues, which he so positively claimed for vaccination with his attenuated virus, are of any great practical value? Therefore it is that I say that until we are in a position to know from our own investigations that the microbe of fowl cholera will destroy rabbits without doing any great mischief we should positively forbid the introduction of this disease into the Colonies. It appears to me at least possible that some man of enterprise, out of patience with the utter futility of his own efforts to keep down the rabbits on his run by any of the known methods, may in desperation be tempted to try Pasteur's soup of microbes. In the present state of our knowledge we cannot deny that an evil might be introduced far greater than the one we wish to remedy. It is right then that the Government should take timely steps to prevent any such contingency.

But in order that Pasteur's method should have a full and fair trial, I would suggest that the Government should choose some suitable island where the necessary experiments could be made and watched.

By some such scheme all danger to the people and stock on our continent would be removed. This island could be stocked with rabbits and every form of useful animal that is to be found in the Colony, and in time Pasteur's microbe could be introduced to this isolated community. Time will then soon settle the question without any risk of extensive mischief.

There is, it may be said, still the risk to human beings, but in my opinion this risk is infinitesimal, and few men who have worked with these micro-organisms would have any objection to live on this island, not so much for the purpose of proving their own immunity, but merely to see that the method was being fairly and thoroughly tried. They would then accidentally prove the immunity of human beings against this special disease or any other disease which might be tried for the same object.

There is no occasion to consult with the College of Physicians in London or the authorities, great and many, of whom Mr. Creed speaks. The Colonies can find men who will do the necessary work as well and as thoroughly as the men who would be likely to visit us for this purpose.

Before closing, I should like to say that it seems to me that some encouragement should be given in this Colony to scientific work, which aims at discovering the essential cause of disease, not in man only but also in animals, with a view to checking and possibly eradicating such disease. Such encouragement is given pre-eminently in Germany, and Koch's splendid work has in part flown from it. France vies with Germany, and England is following the example. There should be a Bacteriological Laboratory, either at the University or in connection with the Board of Health, as I urged three years ago. Work of this kind requires much time and constant care. I remember well when Mr. Creed's crude notion of inoculating rabbits with tuberculosis for the purpose of exterminating them was calmly considered by a body of intelligent men. I could not help smiling at the state of knowledge—no, of ignorance, concerning bacteriology. No doubt inoculations with these bacilli of tubercle would have caused the death of the rabbits so inoculated, say in two or three weeks; but if one had the rabbits to inoculate there are much simpler and speedier ways of putting an end to their life than by pricking them with a syringe full of tubercle bacilli. Every one knows that tuberculosis is not a disease that spreads from rabbit to rabbit very rapidly.

Apologising for trespassing so far on your attention,

I am, &c.,
W. CAMAC WILKINSON, M.D.,
London.

[The Board of Health acknowledged the receipt of this letter, but did not specifically report upon it.—T.G.]

Report of Board of Health.

As to proposal to exterminate Rabbits by the introduction of contagious diseases.

Board of Health Office, 127, Macquarie-street,
Sydney, 22 February, 1888.

Sir,

In returning to you the enclosed papers relating to the proposals to exterminate rabbits by the introduction of contagious diseases, I have the honor to inform you that the matter was further considered at a meeting of the Board of Health this day, when the following resolution was passed:—

“The Board of Health having taken into consideration the schemes for the destruction of rabbits by the introduction of contagious diseases referred to the Board, at the request of the Secretary for Lands, and the letter from Dr. Wilkinson attached, are of opinion:—

“1. That while there is every reason to believe that the introduction of the diseases referred to among rabbits crowded in large numbers in a limited area would prove very fatal to them, it is not equally clear that infection would spread to any very great extent among rabbits living in a state of freedom, and with practically an unlimited area at their command. More especially having regard to the history of such epizootics and epidemics as we are acquainted with, it would be too much to expect, as some writers seem to do, that the introduction of any infection would be so successful as to cause complete extermination of the rabbits.

“2. The diseases recommended for introduction are three in number:

“Firstly.—With respect to that recommended by Messrs. Butcher and Ellis, there is no evidence to show what is the real pathological nature of the disease referred to. It is therefore clearly impossible for any one to say that it might not be communicated to human beings or to other animals.

“Secondly.—The disease recommended by Professor Watson is the ‘itch’ or scab of rabbits; the Board are of opinion that there is not sufficient evidence to show that this loathsome affection, if introduced among rabbits, might not be communicated to other animals or even to human beings.

“Thirdly.—The disease recommended by M. Pasteur is a remarkably fatal affection, which prevails among poultry, and is known as ‘chicken cholera.’ It is stated by M. Pasteur that this disease is equally peculiar to rabbits, and he **imagines* that it could be readily propagated among them with very fatal results. He states also that the parasite of this disease is harmless to farm animals, excepting of course poultry, but he makes no reference in his letter to the possibility of its communication to human beings: considering the recent discoveries that have been made with reference to the communicability of grave diseases, such for instance as scarlet fever, from the lower animals to man, the Board are of opinion that it would take much clearer and more convincing evidence than has as yet been adduced to prove beyond a doubt that the introduction of a virulent disease like ‘chicken cholera’ might not directly or indirectly produce among human beings disastrous results which are at present unsuspected. In introducing an epidemic or infectious disease of any kind into this country, the Government would be adopting a measure, the results of which cannot be at present foreseen; and if, in the course of events, it were to be found that these results were in any way prejudicial to the health, either of human beings or of stock, it would be almost certainly beyond the power of any authority to remedy the mischief which had been done.

“3. The Board would therefore recommend that the measures proposed for the introduction of infection among rabbits should not be adopted by the Government.

I have, &c.,
EDMUND SAGER,
Secretary.

* Extract from a letter by M. Pasteur to *Le Temps*, Paris, of the 29th November, 1887.

“I imagine that the same thing would happen with rabbits, and that on returning to their burrows to die they would communicate the disease to others, who would propagate it in their turn.”

Second reference to the Report of Board of Health on M. Pasteur's Scheme.

M. Pasteur's experiments with Chicken Cholera, *re* destruction of Rabbits.

ENCLOSED are two translations of letters received from M. Pasteur on the subject of his experiments with chicken cholera. In the letter of the 5th January M. Pasteur goes very fully into the matter, and gives the result of experiments which indicate a success not hitherto communicated to the Government. These letters should, perhaps, be forwarded to the Colonial Secretary's Department with a view to their being laid before the Board of Health, with the object of it being ascertained whether the Board sees any reason to modify the opinion already expressed as to the danger of permitting the introduction of chicken cholera, as a means of destroying rabbits.

C.O., 25/2/88.

Forward these papers to my hon. colleague, the Colonial Secretary, who will, I hope, send them on to Health Board at once, with request to that body to report hereon as quickly as possible.—T.G., 27/2/88. The Principal Under Secretary.—C.O., B.C., 27/2/88. This should perhaps now be referred to the Board of Health, as herein suggested.—C.W., 27/2/88. Board of Health for report.—H.P., 27/2/88. The Medical Adviser to the Government.—C.W., P.U.S., B.C., 27/2/88. The Board of Health.—H.N.M., 28/2/88.

[Translation.]

[Translation.]

Sir,

Pasteur Institute, Paris, 8 January, 1888.

I have the honor to submit this communication, in reply to the official notification published by your direction in the *Temps de Paris*, and in conformity with the accompanying cutting that I have extracted from that paper.

The delegates whom I am sending to Australia will leave Marseilles for Melbourne on the 8th of February next.

With the hope that they will be accorded a hearty welcome in Australia, and that any scheme will answer all expectations in connection with the destruction of the rabbits that are devastating your fair land, I have the honor to request your acceptance of the assurance of my sincere regard.

The Hon. F. Abigail, &c.

L. PASTEUR.

To Sir Saul Samuel, K.C.M.G., Agent-General for New South Wales,—

Paris, 5 January, 1888.

Upon the destruction of rabbits in Australia and New Zealand.

THE *Revue des Deux-Mondes* in its issue of the 15th of August, 1887, has published an article by Mons. C. de Varigny, from which I make the following extracts:—

“Suddenly enriched by the War of Secession in the United States, which enhanced the price of wool by checking its production in America, the Australian Colonies all at once found themselves in possession of considerable revenues.

“Zealous imitators of English customs, they conceived a passion for the chase, and founded Acclimatization Societies in Australia and New Zealand for the purpose of importing hares and rabbits from Europe. It became a perfect mania, a storm of madness that pervaded the whole Colony. * * * Every large landed proprietor had but one idea, that of creating hunting preserves for his amusement. The soil and climate were both so admirably suited to the rabbits, which in England only have from four to six litters of three or four young ones in the course of the year, that in Australia they had as many as ten litters in the year with eight or ten young ones at a birth.

“Fruitless efforts were made to enclose the land with network, for they burrowed underneath it and gained the open to the intense chagrin of the landowners, whose redoubled endeavors and exertions only served to increase their numbers. They have been so successful that to-day this pest is making New Zealand and Australia desolate. Market gardens are laid waste; and districts, which a few years ago yielded 150 bushels of barley, and from 75 to 80 bushels of wheat per hectare (about 2½ acres), have been abandoned, all cultivation, except in certain localities, having become an impossibility.

“Mons. Crawford mentions the case of a large landowner who, after having expended £40,000 sterling (1,000,000 francs) in endeavouring to get rid of this scourge, was compelled to abandon the attempt. On certain holdings their number is estimated at hundreds of thousands, and every year the tax increases with their numbers. Possessed of marvellous voracity they eat the vegetation down to the very root, and convert enormous tracts of pasture lands, which would support from five and twenty to thirty sheep per hectare, into barren and dusty areas. The vineyards have been ruined, and up to the present time the methods employed for the destruction of these animals have achieved no perceptible results. They are hunted, slaughtered, poisoned, and yet they swarm like ants.

“Mons. Williamson states, that during a journey that he made with a representative of the Government, they noticed that throughout the entire district the vegetation had disappeared. Enormous hordes of rabbits scoured the country, scarcely taking the trouble to move out of the way of their buggy. The ground, riddled with burrows, would only admit of their travelling with extreme caution. The rabbits, says he, are everywhere, over the track, and over the plain; they gambol about in troops, and chase each other over the sandhills; and they are seen sitting in hundreds at the entrances of their burrows. Driven to bay in one direction they find refuge in another, and they increase with such rapidity that a universal deluge is the only thing that would give a satisfactory account of them.”

The following publication has recently confirmed the foregoing remarks.

On the 9th of November and 2nd of December, 1887, the paper, *Le Temps*, of Paris, published the following official notice issued by the Government of New South Wales:—

[Here follows a literal version of the Gazette notice, offering a reward of £25,000 for a method of exterminating the rabbits.]

A very few days before this news was published by *Le Temps* I had received from a resident in New Zealand an account of the depredations that the rabbits were also committing in that island.

On the 27th of November, 1887, I wrote the following letter to *Le Temps*, which was published on the 29th of that month.

Copy of letter attached herewith.—

“To the editor of *Le Temps*.

“Paris, 27 November.

“Your paper announced a few days ago that the Government of New South Wales was so powerless to contend with a plague of a peculiar nature—the rapid increase of rabbits—that it was offering a reward of 625,000 francs for the discovery of a process that would ensure their extermination. Considerable portions of New Zealand, as badly devastated as Australia, have been abandoned by the owners, who have given up the breeding of sheep through their inability to feed them. Every winter the rabbits are killed by millions, but this wholesale slaughter appears to have no effect so far as any diminution in their number is concerned. Will you permit me through the medium of *Le Temps*, to convey some suggestions to those distant lands, which if given effect to may be attended by a certain amount of success.

“Up to the present time mineral substances, especially preparations of phosphorus, have been used for the destruction of this pest. In having recourse to these means has not a wrong course been pursued? What can such mineral poisons avail in the destruction of animals whose propagation is characterized by such alarming vitality? They certainly prove fatal in the locality where they are laid; but

but to cope with living creatures is it not essential, if I dare say so, that a poison should be employed endowed with a vitality similar to their own, and like it, able to increase with the same marvellous fecundity? I would like an attempt to be made to carry death into the burrows of New South Wales and New Zealand by communicating a disease to the rabbits that would become epidemic. One such exists which is known by the name of 'chicken cholera,' and has engrossed my closest attention while engaged in the studies of my laboratory. This disease is equally suitable for rabbits. Now, among the experiments that I have made, I find the following:—I collected a certain number of fowls within a limited space, and by administering food soiled with the microbe which is the cause of chicken cholera, they were not long in dying. Poultry-yards are sometimes depopulated by epidemics of this disorder, the propagation of which is undoubtedly ascribable to the excretions of the first sick fowls that pollute the ground and the food. I am of opinion that the same thing would happen with the rabbits, and that they, upon returning to their burrows to die there, would communicate the disease to others, who in their turn would assist to spread the contagion. But how are the first rabbits to introduce the destroying disease into their systems? Nothing is easier.

"Around a burrow I would erect a light fence, enclosing a certain spot to which the rabbits resort in search of food. Experiments have taught us that it is easy to cultivate the microbe of chicken cholera in a state of perfect purity, and on as large a scale as may be desired, in the broth of any kind of meat. With this broth of microbes the food of the rabbits should be sprinkled, and they dying here and there would spread the disease in all directions.

"I may add that the parasite of the disease that I have just spoken about is harmless to farm-yard animals, except, of course, fowls; but there is no necessity for the latter to feed in the open country.

"I have no doubt that there are persons in the infested districts who are quite prepared to make use of the method proposed, a most simple one, and, in every respect, worthy of a trial.

"Kindly accept, Mr. Editor, this assurance of my most sincere respect.

"PASTEUR."

Immediately after the despatch of this letter I had the curiosity to make experiments on the rabbits themselves. I remembered that chicken cholera is very easily communicable to rabbits, though I had never made a special study of the rodents. I had often seen them die in cages that had not been disinfected after fowls had succumbed to cholera in them. It is an open question, and one which has been answered in the affirmative by many, whether chicken cholera is not simply the septicæmia of rabbits, formerly diagnosed by Dr. Davine.

I was very soon convinced of the facility with which the least meal given to rabbits, after the food has been tainted with the germ of the microbe of chicken cholera, will speedily entail the death of the rodents.

I recapitulate some of the experiments that were made by Mons. Loir, a student attached to my laboratory, at my instigation:—

"On the 27th of November five rabbits were put into a box; they remained there without food until 6 o'clock in the evening. At that hour 100 centigrammes of a virulent growth of chicken cholera were placed in a small basin where the leaves of a cabbage were soaking. These leaves were allowed to drain, and were then given to the five rabbits to be eaten, and in 5 minutes they had finished their meal. At midnight three fresh uninfected rabbits are placed with the others.

"At 8 o'clock in the morning of the 28th November the five infected rabbits seemed ill. At 11 o'clock, that is to say, seventeen hours after their meal, two of them were dead. The remaining three died at 3 in the afternoon, twenty hours after their meal.

On the 28th of November, at 7 in the evening, one of the rabbits that had been confined on the previous day at midnight with those that had eaten the tainted food was found to be dead. The two other rabbits did not become sick.

At 5 o'clock on the evening of Saturday, the 3rd of December, some cabbage leaves—upon which 10 centigrammes of virulent growth of chicken cholera had been spread, diluted with 100 centigrammes of sterilized water—were given to four rabbits. At midnight all the food had disappeared some hours before, and four fresh rabbits were placed with the others.

At 8 o'clock on the morning of the 4th of December two of the rabbits seemed unwell. At 11 o'clock one of them was dead; at 2 o'clock two others died, and at 4 o'clock the last of those that had eaten was dead.

The carcasses were left in the box with the fresh rabbits that were put there at midnight on the previous day.

On the 5th of December one of the rabbits was found to be dead; one on the 6th; a third on the 7th; and the fourth died on the 9th of December. All of these were tame rabbits.

On the 17th of December ten centigrammes of the growth of chicken cholera were administered to a wild rabbit on a cabbage leaf. On the 18th it was dead.

In all the foregoing instances it has been placed beyond doubt that death was owing to the microbe of chicken cholera.

On the 3rd of December and succeeding days experiments were made on the following animals:—Swine, dogs, goats, sheep, rats, and always by the infection of their food; not one of these animals became indisposed.

What is more, its operation on the rabbits is so rapid that there is little or no necessity to increase their supply of food; and, on resuming my previous experiments with fowls, I am convinced that they even would not succumb if allowed to remain on ground which the rabbit food had only partly succeeded in contaminating. Fowls are far less susceptible to the disease than rabbits.

Chicken cholera soon dies upon exposure to the atmosphere. It loses its intensity at 51° centigrade, a temperature by no means uncommon, so I am informed, during the summer in Australia; but it would never be necessary to devote attention to the rabbits during the heat of the day.

The preservation of the microbe of chicken cholera, on the other hand, is attended with no difficulty, and when not exposed to the atmosphere it will last for years; so that the most powerful germs will always be procurable. The experiments that I have already reported on to the Academy of Sciences furnish sufficient evidence of the fact.

The cultivation of chicken cholera may be made from the broth obtained from many different animals. One of the cheapest might undoubtedly be prepared from the flesh of rabbits.

It follows, from the foregoing experiments, that not only do the rabbits that have taken the food impregnated with the microbe die off very quickly—in less than four and twenty hours—but also that the companions of such rabbits, though they have not eaten the infected food, died off in great numbers.

I reserve the question of the mode of contagion—it is a point that I will inquire into later on. Is it true that the rabbits inhabiting one burrow do not consort with the denizens of adjacent burrows?

One may look forward without any misgiving to the success of the method in the case where the rabbits belonging to one burrow do not come in contact with those from neighbouring burrows, and do not spread the contagion after they have become infected.

The disease is so easily communicable through the instrumentality of their food that even if the possibility of contagion from the infected to the noninfected rabbits did not exist the destruction of these animals would be none the less easy.

In my letter to *Le Temps* I refer to the erection of light network around the burrows. This contrivance would now be unnecessary.

I picture to myself an experiment on a large scale in the following manner:—Around one or more burrows I would have a certain quantity of the grass mowed down, which would be gathered together by rakes within reach of the rabbits before they went out in the evening. This grass, tainted with the microbe germ, would be devoured by the rabbits as soon as they came across it in their way. A fence would be powerless to stop them and compel them to eat. There would thus be a repetition to a certain extent of the Reims experiment, which I am about to narrate.

It was most desirable that an experiment on a large scale should be made.

An opportunity for the accomplishment of this desideratum under particularly favourable circumstances soon presented itself.

The widow Pommery, proprietress of the great champagne establishment that bears her name, has sent me the following letter, after the perusal of mine that appeared in *Le Temps*:—

“Sir,

“Reims, 3 December, 1887.

“I have a paddock at Reims, over my cellars, 8 hectares in extent, which is entirely surrounded by walls. I conceived the foolish idea of placing rabbits there for the purpose of providing some town hunting for my grandchildren.

“These creatures have increased to such an extent, and undermine the ground to that degree, that I am anxious to destroy them. Ferrets are unable to dislodge them from the large mounds of chalk in which they have taken refuge.

“If it will be convenient for you to make an experiment of the process that you recommend for the destruction of rabbits in Australia I offer you an easy means of doing so.”

“EVE POMMERY.”

Very soon afterwards I learned from my clever correspondent that through fear of seeing the rabbits in her paddock by force of hunger endeavouring to extend their subterranean galleries to an illimitable extent, and endanger the stability of the arches of the cellars, she had for some considerable time thought that they might be confined to their burrows near the surface by giving them daily a meal of lucerne or hay sprinkled about in the vicinity of their burrows. It will be readily understood, therefore, what an easy matter it would be to try and exterminate the rabbits in Madame Pommery's paddock.

On Friday, the 23rd December, I despatched Mons. Loir to Reims for the purpose of sprinkling the day's food with a fresh growth of the microbe of chicken cholera.

As usual, the food was consumed in a few minutes. The result was something marvellous.

On the 26th of December, Madame Pommery wrote to me in the following terms:—“On Saturday morning (consequently the day after the fatal meal) nineteen dead rabbits were counted outside the burrows. No one visited the paddock on Sunday. On Monday morning thirteen more dead rabbits were counted, and since Saturday not a single rabbit has been seen on the ground. Moreover, as a light fall of snow took place during the night, no traces of their footmarks have been discernible in the neighbourhood of the chalk mounds.”

As a rule, rabbits die in their burrows. The thirty-two dead bodies that were found on the ground in the paddock represent but a very small minority of the dead, as will be seen later on.

In another letter, dated Tuesday, the 27th of December, Madame Pommery writes:—“The lucerne (that which was scattered round the burrows on Monday evening) has not been touched, and, moreover, no footprints have been seen in the snow. Every one of them is dead.”

And Madame Pommery, alluding to the English papers which had freely criticised my scheme, copies of which she courteously forwarded to me, adds:—“What becomes of the English critiques in the face of such a result? A paddock of eight hectares, swarming with rabbits, has become a field of death. Mons. Pasteur poisons one ordinary meal for the rabbits, and a few days afterwards nothing lives; every one is put an end to—every one is dead.”

How many rabbits are dead in the burrows? It is difficult to determine exactly. Nevertheless, Madame Pommery informs me, in a letter that I have received to-day, the 5th of January, “That the workmen estimate the number of rabbits that used each day to come and eat the eight enormous trusses of hay that were daily scattered about their burrows at much more than a thousand.

Madame Pommery adds further, that wherever the least trace of the chalk mounds is visible, the usual resort of the rabbits, heaps of carcasses of two, three, four, and five rabbits may be seen.

In concluding this article, I have the honor to state, for the information of the Agent-General, that it is my intention to despatch two experts to Australia and New Zealand for the purpose of putting into practice in those remote countries the process that I have just explained.

Finally, I express the hope that my labour may be permitted to compete for the reward of £25,000 sterling that has been lately offered by the Government of New South Wales for the extermination of rabbits in Australia.

Kindly accept, Mr. Agent-General, the expression of my sincere regard.

L. PASTEUR,

Of the Institute of France, and of the Royal Society of London.

45 rue d'Ulm, à Paris.

Echo,

Echo, February 14th, 1888.

M. PASTEUR AND THE RABBIT PEST.

(From the *Times*.)

THE rabbit race must be prepared to encounter a formidable antagonist to its progress in the annexation of Australasia. M. Pasteur has entered the lists against it, and has taken the side of the human proprietors. Everybody has heard of the speed with which the few rabbits originally imported have occupied the land. From Australia, from New Zealand, and from Tasmania the same cry resounds. Tenants of the State domain have in vain been ordered to extirpate the intruders, or have sought to effect it in their own interest. When rabbits are very pertinaciously harassed they find a refuge in less disturbed quarters. Rewards have been bountifully offered by the several Governments, and have been largely earned. Many millions have been destroyed in the more extensive Colonies. The comparatively small island of Tasmania exported in a single year 1,100,000 skins. Rabbits make excellent food, which, though the Colonial palate does not appreciate it, is sure of a market abroad. Both for their fur and their flesh, as well as for the premium on their destruction, they are a valuable commodity. All kinds of inducements exist for their slaughter. Yet they survive and thrive through the whole. It would almost seem as if butchery encouraged their multiplication, as roses benefit from free plucking. In despair legislatures declare that the pest is worse than ever after the measures adopted to stay it. Every sort of engine of death has been employed. Antipodean rabbits have to run the gauntlet of guns, traps, nets, and mineral poisons of the sharpest nature, and do not mind in the least. The race appears to have lighted upon qualities of atmosphere and vegetation peculiarly grateful to it in Australasia. It is of a philosophical temperament, and bears with the damp and the frost and the stunted herbage of an English common. Transplanted to the South Sea, it has quickly perceived that there it was meant to be. It can scarcely be said to have acclimatized itself, so congenial to it are all the circumstances of its new lodgings. Hunters and trappers are welcome to the heaviest poll-tax they can levy. The race fills up the gaps in its ranks in an instant. There is a natural thinning machinery in these islands, continually operating, from which on the other side of the globe it is free. Here a drought may befall, or a bitter winter, and it may starve. Winter there is scarcely known, and, though droughts are frequent, it appears to have learnt how to evade their fatal consequences. Here are weasels, stoats, foxes, and rats; and among them they curtail the most prolific warren within moderate dimensions. Australasia possesses no such carnivorous quadrupeds; and the rabbit shows its gratitude for their absence by propagating at a rate of geometrical progression.

As local remedies are ineffectual, New South Wales has sought counsel from the world at large. Its Government has promised a prize of £25,000 for a satisfactory specific. M. Pasteur has noticed the offer, and, if he does not actually himself compete, he suggests, in a letter to the *Temps*, how its conditions might be fulfilled. Previous attacks upon the enemy have been conducted from outside. M. Pasteur believes they must necessarily fail, in the existing state of the field of campaign, against the recuperative power of animal life. While at a few isolated points the besiegers are slaying the casual defenders they meet with, a whole nation is in an intrenched citadel, in command of unlimited food, and with a birth-rate infinitely exceeding the death-rate. External assaults he obviously considers equally futile, whatever the particular description of arm used—whether poison, nets, or shot. The sole real resource, in his judgment, is something which will work automatically, and enlist the tribe itself in his own slaughter. An adequate weapon, he believes, has been invented in the shape of a microbe, which rabbits could be persuaded to distribute as if they were retail vendors at a liberal commission of a patent medicine. There is a malady, denominated hen cholera, especially baneful, though to two classes of animals, it is alleged, exclusively. Poultry suffer from it, as the name implies. When it has once been introduced into a poultry yard nothing but isolation will save the inmates. M. Pasteur, in the course of his researches, has satisfied himself by experiments that if the sick remain with the rest, all in time will catch and perish by the disease. He has ascertained that rabbits are as liable as poultry to hen cholera, and he is confident that their gregarious instinct ensures an impartial communication of the complaint to the entire society. He has devised a way of generating the microbe and bringing it within reach of the rabbits which are to domesticate it in their burrows. He concocts in his chemical kitchen a microbe soup which simply has to be sprinkled over vegetable bait in order to produce the desired catastrophe among the rabbit tasters. They, he warrants them, will do as much for their comrades. As their might be a natural apprehension that the microbe and the pastures incidentally affected by it would be equally noxious to sheep and cattle, he has been at the pains to study its habits in this respect. The conclusion is so far satisfactory that he has discovered the hen cholera microbe will not meddle with any four-footed domestic animal. Its predilection for poultry is not, he supposes, of importance on an Australian sheep farm.

Science concerns itself with truth and fact. M. Pasteur, having set himself to investigate the problem of a cure for a plague which afflicts Australasian colonists, has sought for one by scientific methods. He thinks he has found it, and he has explained its nature. It is hardly his business to decide on the morality of the employment of such a remedy. Those who hold it not to be justifiable have no right to fall foul of the great chemist for publishing the lesson of his laboratory. On the practical moral question anybody is entitled to an opinion, though he be neither a man of science nor an Australian squatter. M. Pasteur's present proposal is not the first of the sort. A year ago, possibly in consequence of his experiments, New Zealand, which has suffered terribly from the depredations of rabbits, tried to import some from Europe inoculated with a sickness it was hoped they might disseminate. The strangers died on the journey, and Englishmen who heard of it did not mourn over the casualty. It cannot be denied that the class of procedure vouched for by M. Pasteur as efficacious has an unpleasant semblance of treachery. There is something of the air about it of poisoning wells. Doubtless it can be argued that the tenderness is squeamish which would administer shot, strangulation, and strychnine on the amplest scale to these troublesome rodents, yet revolts from the propagation among them of an epidemic. Yet the sentiment is pretty universal. It raised an uproar when a few redundant Museum pigeons were regaled on poisoned grain, and is not likely to be less active and articulate should advantage be taken by graziers at the Antipodes of M. Pasteur's recondite inquiries. A rat is hedged by no law or sanctity. Every man's hand is against it. The one question is how to eradicate it in the most direct and ruthless manner. But we doubt

very

very much if an ordinary English householder would be inclined to clear his cellars of rats by inveigling one of them into becoming a medium of mortal contagion for its confiding fellows. Before M. Pasteur's plan is applied to Australian rabbit warrens, time might at any rate be allowed for the operation of the experiment mentioned in our columns some months since, of peopling the infested regions with a fair proportion of the wild animals which keep down the superfluity in Great Britain. Perhaps for a rabbit it might be difficult to decide whether death by the teeth of a weasel or stoat were preferable to hen cholera. At all events, mankind in the former case seems to occupy a rather more respectable position with relation to the result.

The Secretary, Board of Health, to The Principal Under Secretary.

Proposal to exterminate Rabbits by the introduction of Diseases.

Sir,

Board of Health Office, 127, Macquarie-street, Sydney, 29 February, 1888.

I have the honor to inform you that the enclosed papers, respecting further experiments by M. Pasteur with chicken cholera, as a means of exterminating rabbits, forwarded by you on the 27th instant, were read and considered by the Board this day, when the following resolution was passed:—

“The Board, having taken these papers into their careful consideration, see no reason to modify their opinions expressed in their resolution of the 22nd instant.”

I have, &c.,

EDMUND SAGER,

Secretary.

The Secretary for Lands.—H.P., 1/3/88.

Sydney: Charles Potter, Government Printer—1888.

[1s. 3d.]

1887.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

THE RABBIT PEST.

(RUNS INFESTED, AND COST OF EXTERMINATION, &c.)

Ordered by the Legislative Assembly to be printed, 16 November, 1887.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 28th April, 1887, That there be laid upon the Table of this House, a Return showing,—

- “ (1.) The names of each of the pastoral holdings in the Colony, and the district in which the same is situated, which are reputed as being infested with rabbits.
- “ (2.) The total expenditure in each year on each of such holdings since the passing of the Rabbit Act, in and towards the extermination of such rabbits.
- “ (3.) The amount paid by the Department of Mines to each of the owners of such holdings as a subsidy for the cost of such extermination.
- “ (4.) The rents of each of such holdings, including the resumed area, paid by the lessees thereof before the passing of the Land Act of 1884.
- “ (5.) The present appraised rents of such holdings, including the resumed area.”

(Mr. Abbott.)

THE RABBIT PEST.

INFORMATION respecting the Rabbit Pest.

Name of Pastoral Holding reputed as being infested with Rabbits.	District in which same is situated.	Total expenditure in each year on such holding since passing of Rabbit Act in and towards extermination of Rabbits.				Amount paid by Department of Mines to owners as subsidy for the cost of such extermination.				Rent of holding, including resumed area, paid by lessees before passing of Land Act of 1884.	Present appraised rent of holding, including the resumed area.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

THE RABBIT PEST.

(PARTICULARS OF RABBIT-PROOF FENCING ERECTED FOR PREVENTION OF.)

Ordered by the Legislative Assembly to be printed, 14 December, 1887.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 29th November, 1887, That there be laid upon the Table of this House,—

“A Return showing the total number of miles of wire netting now erected in the Colony by the Government for the prevention of rabbits; also the total cost of erecting same at per mile, including cost of material, carriage, &c.; also the number of officers who have been employed to inspect such work, and the respective amounts paid to each officer for salary and travelling expenses.”

(Mr. Wall.)

RETURN showing the number of miles of wire netting now erected in the Colony by the Government for the prevention of rabbits:—

206½ miles.

Cost of erecting 206½ miles of wire netting as under:—							£	s.	d.
Cost of materials	10,035	4	9
" carriage	1,871	16	6
" erection	4,853	2	0
Salaries to officers	262	2	8
							£17,022	5	11
Total cost per mile							£82	6	1½
Amounts paid to inspecting officers:—									
Mr. C. J. Lyne, salary	191	2	9
Mr. M. Mealy, salary	70	19	11
(No travelling expenses allowed.)							£262	2	8

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RABBIT PEST SUPPRESSION BILL.

(MESSAGE No. 32.)

Ordered by the Legislative Assembly to be printed, 10 February, 1888.

CARRINGTON,
Governor.

Message No. 32.

In accordance with the provisions contained in the 54th section of the Constitution Act, the Governor recommends for the consideration of the Legislative Assembly the expediency of making provision to meet the requisite expenses in connection with a Bill to repeal the "Rabbit Nuisance Act of 1883," and to make better provision for the suppression of the rabbit pest.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

NOXIOUS WEEDS IN THE DISTRICT OF RICHMOND RIVER.

(REPORT, &c., IN CONNECTION WITH.)

Ordered by the Legislative Assembly to be printed, 10 July, 1888.

RETURN to an Order of the Honorable the Legislative Assembly of New South Wales, dated 27th June, 1888, That there be laid upon the Table of this House,—

“ A copy of the Report, &c., in connexion with Noxious Weeds in the district of Richmond River.”

(*Mr. Ewing.*)

REPORT *re* Noxious Weeds in the District of Richmond River.

Sir,

Department of Mines, 15 July, 1886.

In accordance with personal instructions from the Honorable the Minister for Mines, I have the honor to report that I carefully noted the spread of the weeds, *Sida Retusa*, *Lantana*, and others, before receiving the Minister's telegram of instructions, through the Chief Inspector of Stock. I found that the *Sida Retusa* had spread over nearly the whole district, with the exception of a large portion of the pastoral country. On nearly all the roadsides it is growing luxuriantly. At Tintenbar, and in all the cleared areas in the neighbourhood, it is terrible, and it is also nearly as bad in the neighbourhood of the Tweed River, where it was first introduced by an inhabitant for the purpose of making fibre from its stems. It seeds very freely, and is spread by the cattle and horses carrying the seeds about in their hoofs. Stock eat it freely, especially when the grass is dry, and it is said that cows thrive well and produce splendid butter and milk when fed on its leaves and tender stalks. I was informed, on most reliable authority, that in the pastoral country, not far from Casino, a small farmer kept his cows through the dry season in a paddock overgrown by this weed and he was able to supply excellent butter, when without this food it would have been impossible.

Notwithstanding this in its favour it should be eradicated, otherwise it is like to become a terrible pest in orchards and arable land.

The *Lantana* has taken entire possession of some portions of the country, and is a fearful pest. On each side of the road from Wyralla to Lismore, and also for some miles around Lismore, hundreds of acres of land that had once been cleared have become utterly useless through the spread of this shrub. It is growing luxuriantly also near and about Ballina, and unless checked soon will take possession of that part of the district. It is continuously in seed, and this is spread about chiefly by birds. It will be exceedingly difficult to eradicate. I think continued burning would be the best means to adopt.

But the worst of all the weeds is the nut grass (*Cyperus rotundus*). I first noticed this on the southern bank of the Richmond River, at and around the Colonial Sugar Company's Mill at Broadwater, then in the parish of Broadwater (on the opposite side of the river); at Coraki, and in the vicinity of Lismore; and I believe it is to be found along the south arm of the Richmond River and beyond Casino; I found it on the Tweed in several localities.

There are several indigenous sedges very like it in appearance, and might easily be mistaken for it, but they are harmless.

The “black thistle” is making its appearance here and there throughout the district, very frequently on the roadsides. It has, I think, been introduced with rye-grass seed, and will become an abominable pest if not looked after.

1008—

[530 copies—Approximate Cost of Printing (labour and materials), £1 13s. 3d.]

The "inkweed," or "dye plant" (*Phytolacca decandra*), or "Virginian poke weed," is a great nuisance, and is the cause of considerable expense to the farmers. The plants appear in millions on nearly every clearing as soon as the fallen timber is burned off. It is a soft-wooded succulent plant, growing sometimes to a height of 20 feet and upwards.

The "blue weed" (*Verbena bastata*), or vervain, is at times a very great nuisance, but it can be destroyed without very great difficulty.

Another weed, called "stinking roger" (*Tagetes calendula*), causes great trouble in cane fields and cultivated lands. It grows to a height, at times, of from 12 to 15 feet. It seeds very freely.

There are many other weeds which cause considerable annoyance, but the above are the worst.

I beg most respectfully to invite attention to one of the largest and most beautiful of the brush timber trees, the "*Castanospermum Australe*," locally known as the "Bean-tree," and also as the "Moreton Bay Chestnut." This tree, or rather the seeds or beans, are a very great nuisance, and cause of loss to stockowners. In very dry seasons, and when the grass is dry, some cattle and horses become ravenously fond of the beans; after eating these death is almost certain to follow. The effect on cattle is the head swells, sometimes bleeding at the nose, scour, and a gradual waste away. A horse drops down dead suddenly without sign of sickness, except hoven. *Post-mortem* examinations of horses invariably show a compacted mass of undigested bean in the stomach. Many persons destroy all the bean-trees to be found on their properties; others do not appear to be aware of the effects of the beans. The trees are very difficult to destroy; shoots sprout up around the stump when the tree is cut down. They are very deep rooted, and their stumps are the most difficult to destroy of all the brush timber trees. I could not ascertain that the beans affected pigs. I think not, for I saw pigs feeding on them freely, and they must have done so for some time before.

There is a grass creeping over the district and eradicating far more nutritious grasses, and that is the "*Stenotaphrum Americanum*," called the "buffalo-grass." Some persons encourage the growth on their farms, but I think they are making a great mistake. It grows with wonderful luxuriance, and soon overgrows almost anything in its way, logs, stumps, &c.

With respect to the "maize blight," I found that the Tweed district suffered the most from the attack of the fungus; here half crops only were obtained as a rule. Some farmers on the banks of the Richmond, and also some on the "Big Scrub," suffered to some extent, but not so much as is generally supposed. I was informed on the "Lower Richmond" that the farmers up the river had suffered terribly, but the higher up the river I went the better the returns appeared to be, and the crops were up to the average. I am quite satisfied that the supposition that a sudden downpour of rain after drought was the cause of the blight is wrong, and I have no doubt that the blight is caused by a fungus. It first appears on the apex of a leaf, then generally in patches, and sometimes it spreads all over the leaf, from apex to base or sheathing petiole. It not only attacks the cuticle but enters the parenchyma of the leaf, and prevents it from performing its proper functions.

When the leaves are severely attacked the grain suffers and shrivels up, sometimes the whole of the grain in a "cob," and sometimes that only on the apex of a "cob"; the fungus does not necessarily attack the grain, but sometimes the spores are found amongst the grain, but not frequently. Plantations of maize are attacked by the fungus very irregularly. An entire field may be blighted, sometimes a half a corner, a strip through the centre, one may be entirely blighted, and an adjoining one escape. Moist or dry soil makes no difference. I believe the best preventives will be the destruction of the spores of the fungus by burning all the refuse leaves, stalks, rubbish, and weeds, deep and subsoil ploughing, wider planting, good drainage, careful and clean cultivation, and rotation. If means are taken to keep the plants in full vigour the disease need not be feared. One important matter should be attended to, and that is the careful selection of good seed. All seeds sown for a number of years successively on the same soil are found to acquire a constitutional tendency to deteriorate, and there is no doubt of the general correctness of the proposition, and the discovery of this fact has given origin to some of the most useful maxims of husbandry which have directed the operations of the cultivator ever since the dawn of the science. I may mention as an instance of the productiveness of the plant that a yield of 200 bushels and 12 quarts per acre was obtained in Columbia, America, by underdraining, manuring, and high cultivation. "There is no plant or vegetable grown by the farmer that is more variable in its yield, or more susceptible of the influences of soil, season, and treatment than this grain. * * * The contingencies attending a large yield of corn are neither few nor trifling, but the persevering and resolute purpose of the well informed cultivator is equal to them all, and the impunity with which his successful crop escapes and defies contingencies is an evidence how much can be accomplished when intelligence is guided by science, and industry by skill."—*Enfield*.

I have, &c.,

WALTER SCOTT CAMPBELL.

1887-8.

—
LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

ADELAIDE JUBILEE INTERNATIONAL
EXHIBITION, 1887.

REPORT OF THE PRESIDENT

OF THE

NEW SOUTH WALES COMMISSION.

ORDERED BY THE LEGISLATIVE ASSEMBLY TO BE PRINTED,
4 July, 1888.

SYDNEY: CHARLES POTTER, GOVERNMENT PRINTER.

1888.

ADELAIDE JUBILEE INTERNATIONAL EXHIBITION, 1887.

 REPORT OF THE PRESIDENT OF THE NEW SOUTH WALES COMMISSION.

To His Excellency The Right Honorable CHARLES ROBERT, BARON CARRINGTON, a Member of Her Majesty's Most Honorable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

MAY IT PLEASE YOUR EXCELLENCY,—

The Commissioners appointed under the Great Seal of the Colony to devise and carry out the details necessary for the collection and transmission to the Adelaide Jubilee International Exhibition, of all articles intended for exposition thereat, have the honor to submit to Your Excellency this their report.

The first members of your Commission were gazetted on the 14th January, 1887, and from time to time, there were added to their number, gentlemen to assist in the work of securing an adequate representation of this Colony.

It was felt that the most strenuous efforts would require to be made to ensure the collection of suitable exhibits, and deliver them in Adelaide in anything like time for the official opening of the Exhibition, which was fixed for the 21st June, 1887, and that during the brief space of time at disposal the greater portion of the Commissions work would have to be compressed. The Commission for the neighbouring Colony of Victoria had got to work some nine months before.

The first meeting of your Commission was held on the 21st January, 1887, a week after the Gazette notice had appeared—The Honorable Arthur Renwick, M.D., M.L.C., Vice-President (afterwards President, on the resignation of His Honor Sir F. M. Darley, Chief Justice), in the chair. The Secretary read the instrument appointing the Commission, and the names of the members will be found in Appendix A. The meeting proceeded with the appointment of a Committee to take charge of finance and shipping arrangements, and agreed that certain members of Commission should formulate and present business in the various Departments comprised within the classification of exhibits published by the authorities in South Australia. Other names were afterwards added for the more immediate control of the business of Departments, and in Appendix B will be found the complete list of these appointments.

In connection with the work of previous Commissions, only one collector of exhibits had been engaged to canvass town and country; but the Commission, having regard to the short interval at disposal, decided at this—the first meeting—that two collectors should be engaged—one to interview likely exhibitors in the city and

Official programme and form of application for space.

and suburbs, and the other to perform similar work in the country districts. The official programme and form of application for space were adopted, and in the programme the New South Wales Commission earnestly invited the producers and manufacturers of the Colony to become exhibitors at Adelaide, and urgently impressed the necessity for immediate action on the part of intending participators. The terms of the official invitation issued to New South Wales exhibitors will be found to form Appendix C. It was resolved "to obtain the approval of the Honorable the Colonial Secretary to a cablegram being sent to the Agent-General for the Colony in London, asking that the return to Sydney of unsold Departmental and Commission exhibits—including maps, and of private collections of photographs and return exhibits, be expedited; and that suitable Court decorations and panels not disposed of, be also returned." The Secretary, in reply to a question, said that he understood that Sir Patrick Jennings, K.C.M.G., had applied—prior to the appointment of the Commission—for 10,000 superficial feet of space for a New South Wales Court, and it was resolved that application be at once made for the increase of this area to 15,000 feet. It was resolved that meetings of Commission be, in the meantime, held weekly—so that all urgent business accruing may be promptly dealt with.

Space to be increased to 15,000 feet.

Exhibits of minerals, timbers, &c., and preparation of pamphlet on Colony.

At the following meeting of Commission steps were taken to procure, with the assistance of the Department of Mines, an appropriate collection of timbers and other forest products of the Colony; a selected Natural History exhibit to be prepared under the auspices of the Trustees of the Australian Museum, while it was resolved that the small pamphlet on the Progress and Resources of the Colony be revised for distribution at the Adelaide Jubilee Exhibition.

Private and Departmental mineral exhibits.

The Finance Committee reported fully on the 8th February as to the mode in which they proposed to deal with the moneys advanced from time to time for the purposes of the local Commission, and a resolution was agreed to recommending that the Minister for Mines be asked to undertake the preparation and collection of minerals, mining and geological maps and diagrams illustrative of the mineral resources of New South Wales; also to make the necessary arrangements for the display of the mineral exhibits of private exhibitors, and that the Commission provide for the cost of the preparation and display of the exhibits. It was reported from the art section that the Art Society of New South Wales would be represented in the New South Wales Court, that the leading photographers of the city would also exhibit, while the Picturesque Atlas Company of Australasia would forward a selection from the drawings made for the purposes of that valuable publication. Mr. Charles Moore, Director of the Botanic Gardens, informed the Commission that efforts were being put forth to ensure an adequate illustration of our varied cereal produce. The Secretary of the Adelaide Exhibition, Mr. J. Fairfax Conigrave, had suggested the desirability of the Secretary of the New South Wales Commission visiting Adelaide for the purpose of inspecting the space apportioned to the Colony. But as no Executive Commissioner had yet been appointed, and the Secretary could not leave Sydney at the present initiatory stage of the Commission's proceedings, it was decided to ask Mr. F. A. Franklin, C.E., J.P., a member of the Commission, and one who possessed all the necessary practical skill, to proceed to Adelaide to confer with the Commissioners of the Jubilee Exhibition, to plan the Court space, suggest subdivision according to Departments of Classifications of Exhibits, formulate plan of decoration, and generally to report.

Exhibits in art section.

Cereals.

Mr. Franklin asked to proceed to Adelaide as delegate of Commission.

Mr.

Mr. Franklin consented to place his services at the disposal of the Commission, for the purpose specified. As but a limited time was available for the preparation of show-cases in Sydney, it was decided that a cablegram be sent to the Agent-General, urging that suitable show-cases from the Colonial and Indian Exhibition, if not already forwarded, be shipped to Sydney for use at Adelaide.

Telegram was read at meeting of the 15th February, from Mr. Franklin, delegate from the Commission, reporting as to New South Wales space; while on the same date Mr. Augustus Morris informed the Commission of the action taken by Department III, on Education and Science, to obtain exhibits; and Mr. Charles Moore received the authority of the meeting for the obtaining and preparation of thirty-one varieties of timbers of commercial value and use in industries.

Mr. Franklin submitted to the next ensuing meeting, detailed report, with plans, and this report was adopted on the 1st March, when Mr. Franklin was present. Plans and specifications for preliminary Court decorations, submitted by Mr. Franklin, were approved, and tender of Mr. James Brunell, of Adelaide, agreed to, for sum of £100. (It may here be mentioned that at this, as at previous and subsequent meetings of the Commission, there were submitted detailed progress reports from the collectors in town and country.) It having been intimated that the allotment of space to New South Wales, did not include the gallery over our Court in the main building, it was resolved, there being no other suitable space, to urge upon the Adelaide Exhibition authorities, the absolute necessity that the allotment to this Colony should include the gallery space referred to.

It was reported to the Commission, on the 8th March, that the Agent-General had been authorised to ship show-cases to Adelaide, and that the "Leyland Brothers," a sailing vessel, was bringing out to Sydney, in addition to return exhibits, a number of packages of decorations from the late Colonial and Indian Exhibition, which would be available for the New South Wales Court in Adelaide. The President reported from special meeting of representatives of departments held that day as to space requirements, and it was recommended that the Adelaide Exhibition authorities be urged to see that our space in the eastern annexe, then in course of erection, be directly in alignment with the boundaries of our space in the main building. It was also held that the whole of our space should be confined to an apportionment between the principal floor of the main building and the eastern annexe, while the Secretary was instructed to point out that no basement space would be required. The Commission had, however, eventually to content itself with the allotment in the basement of part of New South Wales space, although this was indifferently lighted, and by no means so suitable for purposes of display as our other space. Before this meeting closed the Secretary was instructed to prepare, and forward to Adelaide at the earliest possible moment, an abridgment of the New South Wales catalogue, to be incorporated with the general official catalogue, the Commission insisting on their right to prepare and publish for gratuitous distribution, if that be thought advisable, a detailed catalogue of exhibits.

In the interests and for the further convenience of exhibitors it was resolved that the date for the reception of entries for general exhibits be extended from March 31st to April 20th, and for receiving exhibits into store, from April 15th to May 10th, and the Commission, on the report of the Wine Committee, decided to avail of the suggestion of the Adelaide Exhibition authorities, that the Colony, in common with others to be represented, have a separate wine bar.

The

Silver trophy
and gold
specimens.

The Commissioners, at a meeting held on the 22nd March, agreed to the recommendation of the Mining Department, to ask for special advance from the Government, for the purchase of sufficient silver, in ingot, to illustrate the growing importance of the silver-mining industry, and also to an expenditure upon characteristic specimens of gold. The Secretary submitted, for the information of the meeting, memorandum drawn up, at his request, by Mr. R. S. Pryce, officer-in-charge of New South Wales exhibits, at the Colonial and Indian Exhibition, describing the character of the Court decorations now on their way to the Colony, and which could be made use of for Adelaide.

Court decorations from
London.

Appointment
of Executive
Commissioner.

The appointment of Mr. John Cash Neild, M.P., as Executive Commissioner for New South Wales, for the Adelaide Exhibition, was officially notified to the Commissioners on the 5th April. The Executive Commissioner addressed the meeting, and stated that it was his intention to proceed, without delay, to Adelaide, and a conversation took place as to the matters which would be likely to engage Mr. Neild's attention more immediately after his arrival in South Australia. Mr. Burdett Smith moved, that Mr. Neild be empowered, during his visit to Adelaide, to incur any expense he, in his judgment, may think fit in the interests of the Commission; but this motion was withdrawn, on its being understood that Mr. Neild had power, by the authority vested in him by his Commission, to incur such expenses as he may consider necessary in connection with the representation in Adelaide, that such expenditure will be met by advances directly authorised, the accounts in connection with which will be quite apart from those of the Commission in Sydney, whose functions, as set forth in their appointment, were essentially distinct.

Messrs. Flood
& Co. offer
free storage.

The Finance Committee, at meeting held on the 19th April, reported that Messrs. Flood & Co., of the Blackwall Wool Stores, had been so good as to offer free storage for incoming exhibits, and the Committee had decided to accept this offer with thanks; but that payment must be made for such labour in store as the Commission may find it necessary to employ, or the proprietors convenient to spare. The same Committee also recommended the acceptance of tender of the Adelaide Steamship Co., to carry goods to Adelaide, to attend to all necessary Customs business, transfer the exhibits to the train (on which the authorities had granted free carriage) between Port Adelaide and Adelaide, and to deliver to the Exhibition Building for sum of 14s. per ton. This was agreed to, but on account of special circumstances of expense, the Commission raised the amount payable per ton to 16s. 6d.

Acceptance of
tender of
Adelaide S.S.
Co., for
freights to
Adelaide.

Executive
Commissioner
reports on
visit to
Adelaide.

The Executive Commissioner reported to meeting of 26th April, the results of his visit to Adelaide, describing the Court space, which now included portion of the gallery over our space in main building, the obtaining of which had formerly been doubtful,—illustrating his remarks with plans. This report, which sets forth the difficulties which Mr. Neild had to encounter in the matter of securing appropriate and adequate space, will be found as Appendix D, and it was decided, on the motion of the Executive Commissioner that Colonial (New South Wales) wines to the value of say, £200, be purchased for a New South Wales wine bar, and that it was advisable that a local man be sent from Sydney to take charge of this bar.

Court decorations.

Mr. Neild reported at some length on the 3rd May as to the decoration of the Court space, and its divisions into main floor (Court No. 1), gallery space (Court No. 2), basement space (Court No. 3), and eastern annexe (Court No. 4); and recommended that the packages be despatched from Sydney so marked that they may be placed

placed according to their classification on the floor of section of space or Court in which it is proposed they shall be exhibited. This report, which dealt with other matters, appears as appendix E. It was announced at the same meeting by Mr. Maiden, a member of the Commission, and Curator of the Technological Museum, that the Museum authorities were sending an exhibit which he believed would be the finest of the kind ever shown in a New South Wales Court. Technological
Museum
exhibits.

At the meeting of the following week (the 10th May) it was intimated that the Agent-General would forward on the 12th instant, the photographs shown in the New South Wales Court at the recent Exhibition in London, and afterwards donated to the Imperial Jubilee Institute, and now lent by the authorities of the Institute. Steps were taken to ascertain the bearing capacity of the floor and the height of roof, respectively, of the Main Court, basement, and eastern annexe, so that it might be decided where to suitably place the heavier mineral trophies, tin, copper, gold, &c., and it was subsequently agreed that the space best adapted for this purpose, was in the eastern annexe, to which were relegated all minerals and timber exhibits. The Executive Commissioner (see appendix F) reported as to Court decorations and mineral show-cases now on their way to the Colony; the difficulty of providing the whole of the wall space likely to be required for pictures, photographs, and maps; and the general eligibility of the space allotted to this Colony for Exhibition purposes. Photographs
from London.

Space for
mineral
trophies, &c.
Pictures, &c.

Mr. R. D. Adams, Chairman of the Committee on Finance and Shipping arrangements, reported at weekly meeting on the 17th May as to initiatory shipments of Court decorations and exhibits by the steamers "South Australian" and "Adelaide," 167 packages in all; and also as to the steps that had been taken to insure exhibits while in store, on the voyage to Adelaide, and while on view in the Exhibition Building. Initiatory
shipments.

Insurances.

Subsequent to this, the exhibits had weekly despatch from the stores in Macquarie-street, Sydney. There was an intermission of some months, when shipments were resumed in connection with the forwarding of wool exhibits to the special show opened on the 9th November. A general alphabetical index to the whole of the shipments of New South Wales exhibits will be found as Appendix G. Weekly
shipments.

Mr. Charles Moore, Chairman of the Horticultural Section, reported to the Commissioners on the 31st May as to the steps he had taken to obtain large plants, including macrozamia and stag-horn and bird-nest ferns, for the decoration of the New South Wales Court; and in procuring these plants, which were of unusually large dimensions, he had had the very valuable assistance of Mr. David Berry, of Coolangatta, Shoalhaven. The Colonial Secretary afterwards agreed that Mr. Moore should proceed to Adelaide to personally assist the Executive Commissioner in the arrangement of these plants upon the various sections of our Court space. Plants for
decoration of
Court.

At subsequent meetings of the Commission, at the instance of the Executive Commissioner, and in compliance with his request, the Commission purchased flags to the value of nearly £100 for Court decorations, and obtained from the Trustees of the Australian Museum a large number of unmounted Natural History specimens to be used for a similar purpose. Flags for
decoration of
Court.

The following report from the Secretary was received at meeting of the 12th July:—
"I have the honor to report, for the information of the Commission, that the President, accompanied by your Secretary, left Sydney on the afternoon of Thursday, the 16th ultimo, to be present at the official opening of the Adelaide Jubilee Visit of the
President and
Secretary to
Adelaide, with
remarks on
principal
exhibit.

Jubilee International Exhibition, fixed for Tuesday, the 21st June—Jubilee Day,—and arrived in Adelaide on the Saturday forenoon. On that day the President paid his first visit to the Exhibition Building, and found that the work of placing and arranging the whole of the Court was being actively proceeded with. This was the case with our Main Court in the principal building, and with our basement space beneath it; but in both several of the principal exhibits were *in situ*. The archway, with statues, a reproduction of that which formed the entrance to the New South Wales Court at the Colonial and Indian Exhibition, formed an imposing introduction to our Main Court; and the wine trophy and agricultural produce trophy, and the exhibits of the Colonial Sugar Refining Company, of Alderman Jones, and of other firms, placed in that Court, were effective in appearance. There were afterwards added the very valuable collection from the Government Printing Office, and other exhibits of interest. The plants obtained by Mr. Moore and arranged by him in Adelaide added much to the attraction of our principal Courts. But at the time of the President's visit the New South Wales space in the eastern annexe, devoted to our extensive and imposing display of mineral wealth and forest products, and the numerous and valuable economic exhibits of the Technological Museum, was more advanced than any other section of our space, and may be said to have been practically complete; and however interesting and attractive other portions of the Exhibition set apart for New South Wales have been, the eastern annexe is certain of special admiration from visitors. As the opening day approached, the various Courts, including our own, assumed a more settled appearance. The ceremonies of that day, in spite of frequent showers in the forenoon, were very largely and influentially attended, and eminently successful. The President of the Commission was present, and was accommodated with a seat on the platform amongst the leading representatives of the countries and colonies participating in the Exhibition. After the cantata had been sung, and the opening addresses delivered, His Excellency the Governor of South Australia (Sir William Robinson) visited the different sections of the New South Wales space, and in the Main Court Mr. J. C. Neild, as Executive Commissioner for the Colony, introduced the following ladies and gentlemen to His Excellency:—The President of the New South Wales Commission, Mrs. J. C. Neild, Mr. F. A. Franklin, C.E., Member of Commission, and Mrs. Franklin, Mr. Kirwan, Member of Commission, and Mrs. Kirwan, Mr. E. Lee, Mr. J. H. Maiden, Mr. Charles Moore, Professor Warren, Mr. Harrie Wood, Member of Commission, and Mrs. Harrie Wood, Mr. J. E. Carne, Mr. A. Cumming, Secretary of Commission, and Mr. A. T. Edwards, Superintendent of New South Wales Court. The President and Secretary returned to Sydney on the 24th of June, having paid several visits to the New South Wales Courts during their stay in Adelaide.

“The Finance Committee furnished to this meeting summary of shipments, with their dates, and the amount of measurement tonnage, and pointed out that exhibits had the earliest possible despatch after reception into store, and that the great bulk of the goods was due, and had been received at the Exhibition Building long before the opening, although it has been learnt from experience that the time taken to deliver goods from Port Adelaide to the Exhibition Building in Adelaide—there being only a single line of rail available, and that over-crowded with work—and to transmit by rail from Sydney to Adelaide, which was done with a few exhibits, including that of the Government Printer's Department—took up a much longer time than was ever anticipated by your Commissioners or the Executive Commissioner.

During

During the trip to Adelaide it was found necessary to call at all the principal shunting stations to hurry on the exhibits sent by rail, many of these having been delayed at these stations by the large amount of goods being forwarded through about this particular time. It is necessary to refer to this matter, as, from a statement in the press, it might possibly be inferred that by the opening day there were only a few packages in the New South Wales Court, whereas more than half the goods (by measurement) had been shipped from Sydney before the end of May, and when it is remembered that the Commission did not hold its first meeting till the end of January—many months after Colonial and other Commissions had been at work, and that the whole city and chief country towns had to be canvassed, and dates perforce extended so as to allow of the preparation and reception of exhibits—it will doubtless be admitted that a good deal has been done within the brief time at the Commission's disposal, and that, in spite of the difficulties to be contended with, this Colony's exhibits form an important and valuable part of the general display at Adelaide."

The following memorandum by Mr. J. Park Wilson, in charge of shipments, was read and submitted by the Chairman of the Finance Committee at the same meeting :— Report as to shipments of exhibits.

"The first shipment was despatched by the "Adelaide" (s.s.) on the 14th May, and included all packages received prior to that date.

"And each week subsequently, the ship leaving on Saturday took away what arrived during the current week. The only exceptions were in the case of the few packages of Art and School exhibits (twenty-four packages in all), which had to be retained for the purpose of being inspected by the Committees appointed for that purpose, and also a few small exhibits, which required to be placed in a repack case for safer carriage.

"These were all forwarded in the shipments leaving Sydney on and prior to the 11th June.

"The greater bulk of goods—250 out of about 400 tons, in all—were shipped from Sydney by the 28th May, while 150 tons were shipped by steamers leaving on the 14th and 21st of same month."

The Finance Committee, at meeting held on the 26th July, submitted a report which was received and adopted—dealing with claims from the Executive Commissioner for amounts which Mr. Neild considered the Commission ought to pay, while he asked for £350 to meet immediate demands—the matter having been remitted to the Committee by the previous meeting of Commission. The report is as follows :— Accounts received from Executive Commissioner.

"It may be necessary to premise that this Commission applied to that for the Colonial and Indian Exhibition for the use of all spare show-cases to be landed in Adelaide. Such being the case the Executive Commissioner may, perhaps, reasonably expect to be repaid the cost of glazing, polishing, and putting the same in good order; and, therefore, provided complete vouchers be shown for the said expenditure, your Committee think that the amounts of £23 8s. 6d. for mineral cases, &c., £16 for repolishing woods, &c., and £10 19s. for repairing and polishing cases, &c., for the Technological Museum exhibits, specified by the Executive Commissioner, are fairly chargeable to this Commission; and also should the Commission authorise the expenditure of £38 for cases ordered by Mr. Maiden for museum

museum specimens; and also of £15 10s. on account of the Fisheries Commission exhibits—that these two last-named amounts may also be fairly chargeable to this Commission—making a total sum in all of £103 17s. 6d.; but with regard to the £70 on account of timber and labour, and for repair of glass cases from London, this Committee must have some more definite information as to items before expressing an opinion on this account. Owing to the pressure caused by the very limited time at the Executive Commissioner's disposal on his arrival in Adelaide, and as your Committee were told by him that fire insurances on exhibits while on view could not possibly be effected in Adelaide, it was felt absolutely necessary by your Committee that in the interests of exhibitors it should take upon itself to immediately complete such insurances in Sydney. This was accordingly done at a cost of £238 1s. 6d.; and your Committee trusts that its action in this matter has the full approval of the Commission. Further, the Executive Commissioner could not obtain flags in Adelaide for the decoration of our Court there, and these therefore had to be immediately purchased by the Commission and forwarded to Mr. Neild, the cost being £95 10s. 9d., whilst again at the very inception of the Commission's work, there had also to be expended a sum of £100 (£75 of which has been paid) for preliminary Court decorations. At the time your Committee recommended these payments to the Commission, its members felt the great responsibility they were incurring, knowing it to be entirely the province of the Executive Commissioner to defray all these costs; but had they hesitated to act, and any serious delay or loss had occurred, through their failing to accept this responsibility, the Commission might probably have deemed your Committee lacking in necessary attention to the interests of exhibitors at a crisis demanding the greatest promptitude and vigour of action. This sums up the matter specially referred to your Committee, and also other accounts of a cognate nature (which have not hitherto been paid by any former Commission), so that a total settlement can be made to date of all disputable items, should the Commission approve of our recommendation; but, as likewise bearing on the subject generally, your Committee brings under your notice that they are also now in receipt of accounts amounting to £170 3s. for wines supplied, and which are now in the possession of the Executive Commissioner at Adelaide, to be sold at the New South Wales wine bar, and eventually accounted for by him to the Treasury, as in all former cases. This latter amount, therefore, your Committee now recommends should also be debited to the Executive Commissioner's account by the Government here, as it certainly is a sum which this Commission is not legitimately liable for."

Recapitulation.

Adelaide accounts which may be debited to the New South Wales Commission:—

	£	s.	d.
Mineral cases, &c.	23	8	6
Repolishing woods, &c.	16	0	0

Flags and poles	95	10	9
Court decorations (Brunell)	100	0	0
Wines for New South Wales bar	170	3	0
	£603 15 3		

The terms of transference of New South Wales exhibits from the New South Wales Court at Adelaide to the local Commission for the Centennial International Exhibition to be held in Melbourne formed the subject of a special report from the Finance Committee, which was adopted at meeting of Commission, held 13th September. This report forms Appendix H.

Transference of exhibits to New South Wales Commission for Melbourne Centennial International Exhibition.

At meeting, on Tuesday, the 20th December, on motion of Mr. C. S. Wilkinson, in charge of the Mining Department, a resolution was passed requesting the Executive Commissioner to have the specimens of minerals, fossils, and timbers, together with the exhibits from the Technological Museum then being shown in Adelaide, repacked, so as to arrive in Sydney in time for the Centennial Intercolonial Exhibition, and asking the Agricultural Society of New South Wales to defray the cost of freights and insurances from Adelaide to Sydney of exhibits so returned, on account of the Society. It was further resolved, on the motion of Mr. Wilkinson, to ask the Colonial Secretary to authorise the loan to the Department of Mines of gold, copper, tin, silver, coal, marble, and antimony, then at Adelaide, so that they may be shown at the Sydney Centennial Exhibition.

Return of exhibits for Centennial Intercolonial Exhibition.

At the same meeting, Mr. W. W. Richardson, in charge of wool section, submitted official list of the awards to New South Wales wool exhibits, and said: "Your Committee was not aware, until a late date, that the South Australian Commission had issued a special circular of classification, and the local Commission had long before issued its own wool circular, which had been largely distributed throughout the Colony; but the Secretary communicated with intending exhibitors, asking them for additional particulars of information demanded by the Adelaide Schedule. The entries were also received by your Commission, under what afterwards appeared to have been a mistaken apprehension that they came, in this respect, under the same category as other exhibits; and the Executive Commissioner made fresh entries with the Adelaide Commission, and these entries, as per information supplied, which in several instances was defective, and led to certain exhibits being disqualified, and several were also thrown out through being skirted, although it was believed here that these would be received, and judged on their respective merits. Nearly the whole of these exhibits will, with the consent of their owners, be shown at the Centennial Intercolonial Exhibition at Moore Park, and the Government has been asked to authorise the loan of the Wool show-cases, in which they were exhibited."

Awards to wool exhibits.

Mr. Donkin, the Chairman of the Wool Jury, who seconded the adoption of the report, said that the show of New South Wales wools was highly creditable.

Summary of
forward ship
ments.

At the same meeting Mr. R. D. Adams, Chairman of the Committee on Finance and Shipping Arrangements, reported that there had been, to date, twenty-five shipments, and four consignments by rail, of exhibits to Adelaide, consisting of 2,181 packages and pieces, and measuring in all 458½ tons.

Return ex-
hibits.

The Exhibition closed on the 7th January, and the following are the dates, as per shipping lists received in Sydney, on which the various shipments of return exhibits were made:—

<i>Date.</i>	<i>Steamship.</i>
11 January	“Colac.”
16 January	“Victorian.”
16 January	“South Australian” and “Warrego.”
31 January	“Colac.”
18 February	“Colac.”
2 March	“Adelaide.”
6 March	“Colac.”
17 March	“Adelaide.”
5 April	“Victorian.”

The first three shipments received in Sydney were, for the most part, intended for the Centennial Intercolonial Exhibition, which was opened on the Agricultural Society's Grounds, Moore Park, on Wednesday, the 25th January. The greater portion of the exhibits thus brought on from Adelaide consisted of minerals, metals, and wool, and with regard to these the Agricultural Society had agreed to pay charges connected with their transit between the Adelaide Exhibition and Sydney; and these exhibits arrived in time to be carefully arranged for display at Moore Park, where they formed a most important portion of the collection of New South Wales products. The Committee on Finance and Shipping Arrangements, dealing with this matter, in a comprehensive report submitted to meeting of Commission, held on the 27th March, 1888, said: “The greater part of New South Wales exhibits (viz., those undisposed of) have now been returned to Sydney, and have been distributed as follows:—The three first shipments to the Agricultural Society and private exhibitors, and subsequent shipments to the Mines Department and New South Wales Commission for the Melbourne Centennial Exhibition at Mort's Stores, including a number of private exhibits, in accordance with the instructions of the owners that they are to be shown in the New South Wales Court at Melbourne, while other private exhibits have been forwarded to their destinations by cart, steamer, and rail. The shipping lists and lists showing modes of disposal are herewith submitted.” At the time this report was made there only remained in store undisposed of about twelve packages of returned exhibits. The Committee further reported that it had been decided to ask the Executive Commissioner if he will be so good as to defray from his account the charges on returned exhibits to Sydney, as this is regarded as portion of the official work falling specially within his province, viz., the delivery to the Commission in Sydney of goods undisposed of after the close of the Exhibition. The Executive Commissioner verbally reported to this meeting as to his action in Adelaide in connection with the suitable representation of this Colony at the Exhibition, and, at the close of his remarks, the following resolution was moved by Mr. R. Burdett Smith, M.P., seconded by Mr. Alderman Jones, and carried unanimously, “That the cordial acknowledgments
and

Charges on
returned
exhibits.

Verbal report
from Execu-
tive Commis-
sioner.

and thanks of the Commission be tendered to Mr. J. C. Neild, M.P., Executive Commissioner for New South Wales, of the Adelaide Exhibition Commission, for the energy, zeal, and ability with which he discharged the important duties confided to him."

Vote of thanks to Executive Commissioner.

At this same meeting there was read letter addressed to the President, by Sir John Hay, President of the New South Wales Commission for the Melbourne Centennial Exhibition, conveying the decision of the last-named Commission, not to take over official exhibits and court decorations shown and in use in the New South Wales Court at the Adelaide Exhibition.

N.S.W. Commission for the Melbourne C.I.E. decided not to take over Adelaide official exhibits, &c.

The final meeting of the Commission was held at the Colonial Secretary's Office at 4:30 p.m. on Tuesday, the 29th May, 1888, when there were present,—

Journal of final session of Commission, 29 May, 1888.

- The Hon. ARTHUR RENWICK, M.D., M.L.C., President.
- J. C. NEILD, Esq., M.P., Executive Commissioner.
- R. D. ADAMS, Esq.
- J. B. DONKIN, Esq., J.P.
- F. A. FRANKLIN, Esq., J.P.
- EDWARD LEE, Esq., J.P.
- THOS. LITTLEJOHN, Esq.
- Hon. G. A. LLOYD, M.L.C.
- J. H. MAIDEN, Esq., F.R.G.S., Curator, Technological Museum.
- JAMES MARTIN, Esq.
- AUGUSTUS MORRIS, Esq.
- J. M. PURVES, Esq., M.A.
- Alderman ALBAN J. RILEY, Esq., J.P., M.P.
- R. BURDETT SMITH, Esq., J.P., M.P.
- CRITCHETT WALKER, Esq., J.P., Principal Under Secretary.
- HARRIE WOOD, Esq., J.P., Under Secretary for Mines.
- And the Secretary of the Commission.

Mr. NEILD rose and expressed to the members of the Commission his very high sense of the courtesy and kindness which they had shown to him, and his appreciation of the vote of thanks from the Commission at previous meeting.

The following report from the Committee on Finance and Shipping Arrangements, with balance sheet and statement, showing disposal of purchased exhibits, was submitted by Mr. R. D. Adams, Chairman of the Committee, and received:—

Final report of Finance Committee.

Your Committee has the honor to report, for the information of the Commission, that since the last meeting of Commission the following accounts have been passed:—

	£	s.	d.	£	s.	d.
Accounts for March	95	12	1			
Do for April	121	14	10			
Do for May	73	10	7			
Total of accounts (March, April, and May), now submitted				290	17	6
Total of accounts previously passed				7,575	3	3
				<hr/>		
				£7,866	0	9
Total of advances from the Treasury ...	7,867	9	4			
From which deducting	7,866	0	9			
	<hr/>					
Leaves as Cr. balance ...	£1	8	7			

Balance

Balance disposed of by cheque to Secretary for petty expenses in moving furniture, &c., from present premises.

The Commission remitted to your Committee to be dealt with, claims preferred on account of damage, &c., to exhibits. These claims have been carefully considered, and, although under the regulations to which exhibitors subscribed, the Commission is not liable; there were three claims for small amounts, which your Committee, under the circumstances detailed, decided to satisfy, and this they have done by cheques—276 and 283—with regard to two of the claims; while with regard to a third, from the Board of Technical Education, just received, it is recommended for the approval of the Commission, that the Colonial Secretary be respectfully requested to pay a sum of £5 10s. 6d. for broken models and casts, as the Commission is not in the possession of the necessary funds.

Summary of figures in Balance sheet and statement showing disposal of exhibits.

Your Committee now begs to submit balance sheet appended showing the local account and the total of receipts and expenditure to date. Advances from the Treasury, it will be seen, amounted in all to £7,867 9s. 4d., and with exception of small balance (£1 8s. 7d.) this has been expended. But of the gross disbursements it will be seen from tabulated statement also annexed, that no less a sum than £4,998 3s. 10d. has been expended in connection with the purchase and preparation of exhibits, and of this again as much as £3,405 19s. 5d. was dispensed in the purchase of gold, silver, tin, copper, &c., which, if they were sold, would realise a very much greater aggregate sum. But as is fully explained, they are held by the Mines Department, to whom they were handed over by authority for further exhibition purposes. The statement referred to distinctly shows how the purchased exhibits have been dealt with. The balance sheet shows that the Sydney charges have been £2,406 16s. 2d.; the Adelaide charges (payments on account of the Executive Commissioner, including portion of purchased exhibits), £846 0s. 10d.; while there has further been expended in the purchase and preparation of exhibits a sum of £4,613 3s. 9d.

Account sales of exhibits.

Account sales of exhibits, amounting, according to recent memo. from the Executive Commissioner, to £55 15s. 6d. in all, have yet to be rendered to exhibitors. This is a matter which has usually been dealt with by the Finance Committee before closing; but as your Committee has not been furnished with the necessary funds it has been decided to leave the matter in the hands of the Commission. The Executive Commissioner's memorandum of sales is as follows:—

Date.	Exhibitor.	No. in Catalogue.	Article.	Amount.
1887.				
16 December ...	Stephenson & Sons	260	Sculls... ..	£ s. d. 4 0 0
31 " ...	" " " " " " " "	260	" " " " " " " "	2 0 0
3 November...	Lassetter & Co.	536	Ice-chest	3 7 6
3 " ..	Macgregor, Harris, & Co.	120	2 water and earth carriers ..	3 10 0
3 " ...	John Donaldson	265	Cedar plank	3 0 0
3 " ...	W. Hanscombe	511	Cheese	0 16 0
3 " ...	W. Wilson	514	" " " " " " " "	0 16 0
3 " ...	A. C. Pratt	84	18 brooms	2 0 0
3 " ...	A. Sloane	1 bale wool	9 11 1
1888.				
1 March ...	Australian Kerosene Oil & Mineral Co.	50	Shales	3 6 6
14 April ...	Sydney Meat Preserving Co. ...	511	1,006 lb. meat, at 3½d. ...	13 12 5
	J. B. Holmes	424	Wine used in bar, in bond ...	9 16 0
				£ 55 15 6

It has also been usual, wherever practicable, for the Local Commission to issue diplomas and medals before winding up affairs; but as these are not yet quite ready the Colonial Secretary's Department will be asked to be so good as to distribute them, for which purpose there has been prepared a full list of successful exhibitors, with their names and addresses. So far no complete lists of awards have yet been published in Sydney. From printed list of revised awards recently received from the Secretary of the Adelaide Exhibition copies have been prepared for purpose of local publication.

The Adelaide S.S. Co., in letter of the 23rd instant, applies to the Commission for payment of sum of £128 3s. 7d. on account of January shipments from Adelaide of return exhibits. Your Committee understood that the Executive Commissioner would, as is customary, defray freights and other charges in connection with the return of exhibits to Sydney, though, after all, this is but a matter incidental to the definition of two separate sets of functions and accounts, as the charge must necessarily be paid by the Executive Commissioner, or, failing this, by the Commission itself; therefore on this matter your Committee would be glad to have the direction of the Commission, as it has no funds in hand for this unforeseen expenditure.

The items yet remaining open are—Freights, £128 3s. 7d.; account sales, £55 15s. 6d.; claim of Board of Technical Education, £5 10s. 6d.; in all, £189 9s. 7d.

It was agreed that these three matters be dealt with by the President or Executive Commissioner in communication with the Government. The report was then adopted.

NEW SOUTH WALES COMMISSION FOR THE ADELAIDE JUBILEE INTERNATIONAL EXHIBITION, 1887.

Dr.

A vote of thanks to Government Departments, &c., was moved by Mr. R. Burdett Smith, seconded by the Hon. G. A. Lloyd, and carried unanimously, to the following effect:—

Thanks to Government Departments, private firms, &c.

“That the cordial acknowledgments of this Commission are hereby tendered to the various Government Departments, and private firms and individuals, who contributed to the success of the New South Wales representation at Adelaide; and to the Railway Departments of Victoria, South Australia, and this Colony for free transit of the exhibits by rail, and other facilities courteously afforded.”

A vote of thanks to Messrs. Flood and Co. was moved by Mr. R. D. Adams, seconded by Mr. Edward Lee, and carried unanimously in the following terms:—

Thanks to Messrs. Flood and Co. for free storage.

“That the special thanks of this Commission be conveyed to Messrs. Flood and Co., of the Blackwall Wool Stores, Circular Quay, for their important and valuable concession of free storage of the New South Wales exhibits, both for and from Adelaide.”

A vote of thanks to Finance Committee was moved by Mr. J. M. Purves, seconded by Mr. James Martin, and carried unanimously as follows:—

Thanks to Finance Committee for services.

“That the thanks of this Commission are especially due and are hereby accorded to the Finance Committee, whose functions have been more important and more continuous than those of any other committee.”

Mr.

Mr. R. D. Adams briefly thanked the members of the Commission for the compliment paid to the members of the Committee and himself, and stated it had given him great pleasure to preside over the meetings of the Finance Committee.

Thanks to
President.

A vote of thanks to the President was moved by Mr. Augustus Morris, seconded by Mr. Critchett Walker, and carried unanimously,

“ That the cordial thanks of the Commission be offered to the President for the admirable and successful manner in which he has conducted the proceedings.”

Mr. Neild also spoke, and complimented the President on the way in which he had carried out his duties.

Reply of
President.

The President, in reply, said : “ I am sure I have never felt so overcome by my feelings as I do at this time, although on many occasions I have received votes of thanks in connection with my services on somewhat similar occasions ; and this arises from the fact that the expressions so generously employed have come from gentlemen of such large experience in connection with public Commissions. I have always, gentlemen, rendered whatever services lay in my power, as far as my humble ability extended, to promote the objects of the Commission generally. It is therefore with great satisfaction that I receive this kind vote of thanks as an appreciation of the services I have rendered. (Hear, hear.) I thank the Commissioners for their patience and attention to the business of the Commission during the long time it has been in existence ; and I may state that, connected as I have been with many Commissions having similar objects with the present, I have never known any Commissioners more painstaking and attentive to their duties than the gentlemen connected with the Adelaide Exhibition. And now, gentlemen, the Commission having completed its labours in connection with the Adelaide Jubilee International Exhibition, I may state that I am preparing a report of its proceedings up to the present time, and with the authority of the meeting I propose to have it completed and submitted to Parliament at the earliest possible date. I feel that I am only performing my duty in referring to the harmonious action of the whole body of the Commissioners in reference to the important duties which were conferred upon them by the Government. As has already frequently been stated, at the commencement of its labours the Commission was hampered in many ways in the performance of its duties. In the first place there was found to be great reluctance on the part of many to exhibit their goods, or to enter in any way into the competition naturally belonging to an Exhibition, and the Commission had great difficulties in regard to this matter. And next, in consequence of the short time at its disposal to make the necessary preparations, it became a matter of necessity that the Commissioners should use every possible endeavour, even reaching as far as personal applications by members of the Commission in order to obtain what might be considered a fitting and adequate representation at the Adelaide Exhibition ; but in consequence of the zeal and the diligence of many of the Commissioners all these difficulties were overcome, and the New South Wales Court, under the excellent management of the Executive Commissioner, at the opening day presented as complete and effective an appearance as any of the other Courts in the building, and during the whole course of the Exhibition our Court both in regard to the character of its exhibits and the manner in which they were displayed reflected credit on all concerned. (Applause.)

This

This result, of course, was not obtained without considerable personal exertion being made by several of the Commissioners, and although it would be invidious for me to specify all the members of the Commission to whom the country is indebted for their labours in this respect, I cannot avoid referring to Mr. Franklin, who, in the early stages of the work of the Commission, aided its labors considerably by the results of his visit to Adelaide, and his description of the space required for the purposes of the Colony, and other matters of a similiarly important character; and the thanks of the Commission are especially due to the Chairmen of the various Committees, many of whom visited Adelaide, and all of whom took a personal interest in the collection of exhibits in their particular sections. I feel it my duty, in this respect, to make special reference to the very great services rendered by Mr. Charles Moore, Director of the Botanic Gardens. (Hear, hear.) I need scarcely remind you of the invaluable services rendered by the Finance Committee all through the continuance of the labours of the Commission, and more especially to the valuable assistance given by the Chairman of this Committee, Mr. Adams, who, with unwearied industry, has superintended every matter connected with the shipment of exhibits, and the various disbursements of the Commission. (Applause.) One matter which has given me extreme satisfaction is that, so far as this Commission is concerned, the expenses have been kept within truly reasonable bounds, and while everything has been done to make the display of the Colony as satisfactory as possible, no undue or lavish expenditure has been incurred in attaining this object, as will be discovered on careful examination of the final accounts of the Commission. (Hear, hear.) And in the last place it affords me great pleasure to bear testimony to the energetic and devoted attention to all matters connected with the duties of the Commission paid by the Secretary, Mr. Alexander Cumming. Every member of the Commission must be aware that the success of an undertaking such as this is necessarily dependent, to a large extent, on the zeal and devotion of such an officer; and having myself attended all the meetings of the Commission, and otherwise taken a personal interest in its management, I can bear my testimony to the fact that much of the success which has attended the labours of the Commission has been due to the unwearied efforts of its Secretary. (Hear, hear.)

A vote of thanks to the Secretary was moved by Mr. Harrie Wood, seconded by Mr. R. D. Adams, and carried unanimously, in terms as follows:— Services of Secretary.

“That a special vote of thanks be accorded to Mr. Cumming for the services he has rendered to the Commission.”

Mr. Neild said that it was only due to Mr. Cumming to say that he (Mr. Neild) had never met with so prompt a correspondent.

The Commission agreed that the preparation of Report of its Proceedings for Parliament should be left in the hands of the President.

[The Commission having thus completed the various duties which devolved on them, by virtue of the commission which your Excellency was pleased, in Her Majesty's name, and under the Great Seal of the Colony, to issue, adjourned *sine die*.]

I have the honor to be,

Your Excellency's most obedient Servant,

ARTHUR RENWICK,

President.

APPENDIX A.

NEW SOUTH WALES COMMISSION.

(Gazetted 14 January, 1887.)

PRESIDENT :

The Honorable Arthur Renwick, M.D., M.P.

VICE-PRESIDENT :

The Honorable John H. Want, M.P.

EXECUTIVE COMMISSIONER :

John Cash Neild, Esq., M.P.

MEMBERS OF COMMISSION :

Robert Dudley Adams, Esq.	John Mitchell Purves, Esq., M.A.
John Fitzgerald Burns, Esq., M.P.	Charles Smith Wilkinson, Esq., F.G.S., F.L.S., Geological Surveyor.
Frederick Augustus Franklin, Esq., C.E., J.P.	William Wright Richardson, Esq., J.P.
Thomas Littlejohn, Esq.	John Davies, Esq., C.M.G.
Charles Moore, Esq., F.L.S., Director of the Botanic Gardens.	Alfred Hilder, Esq., J.P.
Eliezer Levi Montefiore, Esq., J.P.	John Jackson Calvert, Esq., J.P., Clerk of the Parliaments.
Augustus Morris, Esq.	

(Gazetted 18 March, 1887.)

Alexander Gray, Esq.	Varney Parkes, Esq., M.P.
Henry Halloran, Esq., C.M.G., J.P.	Alban Joseph Riley, Esq., J.P., M.P., Mayor of Sydney.
John George Hanks, Esq.	Robert Burdett Smith, Esq., M.P.
John Kidd, Esq., J.P.	Critchett Walker, Esq., J.P., Principal Under Secretary.
Edward Lee, Esq.	William Henry Warren, Esq., M.I.C.E., Professor of Engineering, Sydney University.
John Mackenzie, Esq., F.G.S., Examiner of Coal-fields.	Harrie Wood, Esq., J.P., Under Secretary for Mines.
James Martin, Esq.	
Joseph Benjamin Olliffe, Esq.	

(Gazetted 29 April, 1887.)

Evan Jones, Esq.	Joseph Henry Maiden, Esq., Curator and Secretary, Technological Museum.
John Tait, Esq., J.P.	

(Gazetted 14 June, 1887.)

Martin E. Kirwan, Esq.	J. G. Griffin, Esq., A.M.I.C.E.
M. J. Hammond, Esq., J.P.	George Pile, Esq.
R. H. D. White, Esq., J.P.	Albert Chapman, Esq.
J. B. Donkin, Esq., J.P.	Peter F. Hart, Esq.

(Gazetted 1 July, 1887.)

Edward Combes, Esq., C.M.G.	John Macgregor, Esq.
William John Fergusson, Esq.	John McLaughlin, Esq.
Frederick Jamison Gibbes, Esq., M.P.	George McLeod Matheson, Esq., M.P.
Hon. George Alfred Lloyd, M.L.C.	Hon. George Bowen Simpson, Q.C., M.L.C.

(Gazetted 15 July, 1887.)

Charles Cowper, Esq., Sheriff.	William Consett Proctor, Esq.
Joseph Greer, Esq., M.P.	

Alexander Cumming, Esq., Secretary.

APPENDIX B.

SYNOPSIS of the Classification of Exhibits, with names of Members of Commission in charge.*

Department.	Section.	Class.	Particulars.
I.—MINING.			
C. S. Wilkinson, Esq.; Alexander Gray, Esq.; John Mackenzie, Esq., F.C.S., Examiner of Coal-fields; Harrie Wood, Esq., J.P., Under Secretary for Mines, to formulate and present business in this Department.	A	100 to 112	Rock, Minerals, and Mining Products.
	B	113 to 117	Metallurgical Products.
	C	118 to 120	Mine Engineering, Models, Maps, and Sections.
II.—MANUFACTURES.			
John Davies, Esq.; John George Hanks, Esq.; Joseph Benjamin Olliffe, Esq.; Alban Joseph Riley, Esq., J.P., M.P., Mayor of Sydney, to formulate and present business in this Department.	A	200 to 205A	Chemical Manufactures.
	B	206 to 213	Ceramics, Pottery, Porcelain, &c.
	C	214 to 216	Glass and Glassware.
	D	217 to 223	Furniture and objects of general use in Construction and in Dwellings.
	E	229 to 238	Yarns and Woven Goods of Vegetable or Mineral Materials.
	F	239 to 248	Yarns and Woven and Felted Goods of Wool and Mixture of Wool.
	G	249 to 258	Silk and Silk Fabrics, &c.
	H	259 to 267	Clothing, Jewelry, Ornaments, and Travelling Equipments.
	I	268 to 275	Paper, Blank Books, Stationery.
	J	276 to 282	Weapons, &c. (Military, Naval, and Sporting).
	K	283 to 289	Medicine and Surgery.
L	290 to 296	Hardware, Edge Tools, Cutlery, and Metallic Products.	
M	297 to 302	Fabrics of Vegetable, Animal, or Mineral Materials.	
N	303 to 306	Carriages, Vehicles, and Accessories.	

* The President, Vice-President, and Executive Commissioner are *ex-officio* members of all Committees.

APPENDIX B—continued.

Department.	Section.	Class.	Particulars.
III.—EDUCATION AND SCIENCE.			
Augustus Morris, Esq.; Robert Burdett Smith, Esq., M.P.; Critchett Walker, Esq., J.P., Principal Under Secretary; William Henry Warren, Esq., M.I.C.E., Professor of Engineering, Sydney University, to formulate and present business in this Department.	A	350 to 357	Educational Systems, Methods, and Libraries.
	B	358 to 364	Scientific and Philosophical Instruments and Methods.
	C	365 to 370	Engineering, Architecture, Maps, &c.
	D	371 to 380	Physical, Social, and Moral Condition of Man.
IV.—ART.			
J. J. Culvert, Esq.; P. A. Franklin, Esq.; Henry Halloran, Esq., C.M.G., J.P.; Eliezer Levi Montefiore, Esq., J.P.; Varney Parkes, Esq., M.P.; and Critchett Walker, Esq., J.P., Principal Under Secretary, to formulate and present business to this Department.	A	400 to 405	Sculpture.
	B	406 to 409	Painting.
	C	410 to 414	Drawing, Engraving, and Lithography.
	D	415 to 417	Photography.
	E	418 to 423	Industrial, Architectural, and Ecclesiastical Designs, &c.
	F	424 to 429	Ceramic Decorations, Mosaics, &c.
V.—MACHINERY.			
P. A. Franklin, Esq.; Alexander Gray, Esq.; James Martin, Esq.; and William Henry Warren, Esq., M.I.C.E., Professor of Engineering, Sydney University, to formulate and present business in this Department.	A	500 to 509	Machines, Tools, and Apparatus of Mining, Metallurgy, Chemistry, and the Extractive Arts.
	B	510 to 521	Machines and Tools for Working Metal, Wood, and Stone.
	C	522 to 531	Machines and Implements of Spinning, Weaving, &c.
	D	532 to 539	Machines, &c., used in Sewing, Making Clothing, &c.
	E	540 to 549	Machines for Printing, Making Books, Paper Working, &c.
	F	550 to 555	Motors and Apparatus for the Generation and Transmission of Power.
	G	556 to 564	Hydraulic and Pneumatic Apparatus.
	H	565 to 572	Railway Plant, Rolling Stock, &c.
	I	573 to 583	Machines used in preparing Agricultural Products.
	J	584 to 591	Aerial, Pneumatic, and Water Transportation.
	K	592	Castings (various), Iron, Brass, or other Metal.
	L	593	Machinery and other Apparatus especially adapted to the requirements of the Exhibition.
VI.—AGRICULTURE.			
J. F. Burns, Esq.; Charles Moore, Esq.; Augustus Morris, Esq.; J. M. Purves, Esq.; W. W. Richardson, Esq.; John Kidd, Esq., J.P.; Edward Lee, Esq.; Varney Parkes, Esq., M.P.; William Henry Warren, Esq., M.I.C.E., Professor of Engineering, Sydney University; Harrie Wood, Esq., J.P., Under Secretary for Mines; and Joseph Henry Maiden, Esq., to formulate and present business in this Department.	A	600 to 607	Arboriculture and Forest Products.
	B	608 to 616	Agricultural Products.
	C	619 to 624	Vegetable Products (used as food).
	D	625 to 629	Wine—Spirituous, Fermented, and other Drinks.
	E	630 to 633	Animal Products, Land and Marine (used as food).
	F	634 to 640	Animal Products, Land and Marine (used as materials).
	G	641 to 647	Textile Substances of Vegetable or Animal Origin.
	H	648 to 660	Land Animals.
	I	661 to 662	Insects, &c.
	J	663 to 666	Water Animals, Fish Culture, and Apparatus.
	K	667 to 672	Machines, Implements, and Processes of Manufacture.
	L	673 to 676	Agricultural Engineering and Administration.
	M	677 to 681	Tillage and General Management.
VII.—HORTICULTURE AND FLORICULTURE.			
Charles Moore, Esq.; John George Hanks, Esq.; John Cash Neild, Esq., M.P., to formulate and present business in this Department.	A	700 to 701	Pomology.
	B	702 to 711	Ornamental Trees, Shrubs, and Flowers.
	C	712 to 716	Hothouses, Conservatories, Graperies, and their Management.
	D	717 to 719	Garden Tools, Accessories of Gardening.
	E	720 to 722	Garden Designing, Construction, and Management.

Committee on Finance and Shipping arrangements :

R. D. ADAMS, Esquire.
 THOMAS LITTLEJOHN, Esquire.
 HON. GEORGE ALFRED LLOYD, M.I.C.

APPENDIX C.

INVITATION ISSUED TO NEW SOUTH WALES EXHIBITORS.

THE New South Wales Commission earnestly invites the producers and manufacturers of the Colony to become exhibitors at Adelaide; and would urgently impress the necessity for immediate action on the part of intending participators, as the applications for space must reach the Commission in Sydney not later than 31st March, 1887, while exhibits are due in Adelaide on the 20th of May, and the official opening takes place on the 20th of June.

It will be remembered that South Australia took part in the Sydney International Exhibition of 1879; and the opportunity is now offered for suitable representation of the produce and manufactures of this Colony in the city of Adelaide.

Every facility, it will be seen, is afforded by the New South Wales Commission to intending exhibitors, who are put to no appreciable expense beyond the preparation of goods for display; while the nearness of their destination and facility for return to the Colony should be additional incentives.

The synopsis of classification only is here printed. The exhibitor need only in entering give the department and section. The class will be filled in in the offices of the Commission for catalogue purposes.

The printed regulations show the nature and extent of the facilities which the Commission offer to the producers and manufacturers of this Colony. These regulations are printed herein, and will also be found on the back of the general form of entry, or application for space.

Exhibitors are requested to furnish on or with entry form, for the purpose of proper compilation of the catalogue, information such as the following:—Wines—full particulars, as per heads of special entry forms; Minerals—locality of mine, extent of yield, and its ratio to quantity of ore; Grain—area under cultivation, yield per acre, weight per bushel; Timber—full particulars as to habitat, growth, and economic value.

Appended are a few special notes, embodying those of the Adelaide Commission, which are essential for the guidance of Exhibitors.

Art.—Section IV.—Pictures must be suitably framed. No copies admissible. Only four exhibits to be admitted from any one artist. Exhibitors desirous of having their pictures disposed of by Art Union to so specify their intention.

Machinery.—

Machinery.—Section T.—Exhibitors of machinery intended to be in motion to so state, that suitable arrangements may be made for motive-power, &c.

Pastoral—Wool.—Exhibits of 1896 clip (if any) may be shown from opening of Exhibition in June. Special show for clip of 1887 to be opened in November of that year.

Agriculture.—Section VI.—Cereals—3 bushels of each kind should be shown. Wines for competition—six bottles of each kind to be exhibited. Wines for sale, and to be consumed in the Exhibition—not more than six kinds, nor less than twelve dozen, or one quarter-cask of each kind, nor more than 100 cases of one dozen each, or twelve quarter-casks. Total quantity in bulk and bottle not to exceed 330 gallons from any one exhibitor. Wine Committee of South Australian Commission to approve of wines for sale; and all sent for sale to be for exhibition also. Spirits, liqueurs, bitters, and cordials—for exhibition, three bottles; for sale, not less than one dozen, nor more than five dozen in bottle. Ale, beer, and porter—for exhibition, two dozen bottles of each kind, or, in bulk, not less than 18, nor more than 36 gallons; for sale, not less than one hogshead, nor more than five hogsheads. Aerated waters—twenty-four bottles of each kind for exhibition; and for sale, not less than twenty-four dozen, nor more than 100 dozen of any kind.

The Agricultural Society of Adelaide will hold a Live Stock, Agricultural, and Horticultural Show in September, 1887, the Jubilee Exhibition Commission, in addition to the ordinary awards, giving honors in Champion Classes.

The awards for exhibits generally shall consist of three classes, viz. —

1st class—Diploma of first order of merit and medal.

2nd class—Diploma of second order of merit.

3rd class—Diploma of third order of merit.

APPENDIX D.

REPORT of Executive Commissioner to meeting of Commission, 26th April, 1887.

"AGREEABLY with the wish of the Commission, I left Sydney on the 13th instant, and reaching Adelaide on the 15th instant, I immediately had an interview with the Executive Commissioner for South Australia, Sir Samuel Davenport, who informed me that New South Wales could not have any space in the eastern annexe, as the whole of the space therein was required for South Australia. On inquiring where it was proposed the New South Wales exhibits were to be placed, I was informed that it was thought that they might be shown in the basement of the main building, under the New South Wales Court, and upon my representing that only part of this space was suitable on account of the poor light, I was informed that a meeting of the Executive Committee was to be held on the following Tuesday, when the erection of another annexe would be taken into consideration. I therefore determined to remain in Adelaide until the meeting in question was held, and meanwhile had interviews with a number of the leading inhabitants, whose aid I sought in securing proper consideration for the requirements of this Colony; and I also addressed a lengthy communication to Sir Samuel Davenport, urging that faith should be kept with New South Wales in respect of the space promised in the eastern annexe. In a brief interview with Sir Samuel Davenport, on Tuesday morning, I was informed that in the course of the day I should be placed in possession of the views of the Executive Committee, and consulted as to the space requirements of New South Wales. Soon after midday I received a note from the Secretary, stating that the Committee had adjourned till Friday, and that 'if it is convenient to you to remain until then, I may be in a position to give you some information before your return.' This letter was followed by the appearance of reports of the meeting of the Executive Committee, showing that the Executive Commissioner for South Australia had applied for the entire eastern annexe for his Colony, in addition to double the space in the main building granted to New South Wales—the total space demanded by Sir Samuel Davenport for South Australia being 46,000 feet. The prospects of fair treatment for the Mother Colony appeared increasingly remote, when fortunately an informal meeting was arranged between the Mayor of Adelaide, Mr. E. T. Smith, M.P., Chairman of the Building and Grounds Committee, the prime mover and ruling spirit of the Exhibition, Mr. A. W. Neels (Chairman of the Finance Committee), and myself. After a lengthy examination of the entire buildings, we arrived at an understanding to the effect that No. 1 Court in the eastern annexe should be allotted to South Australia, No. 2 Court to New South Wales, and No. 3 Court to Victoria. These Courts contain, respectively, 7,991 feet, 6,635 feet, and 4,479 feet. This understanding was confirmed by the Executive Committee on Friday last, and I am very glad to be able to congratulate the Commission upon New South Wales having obtained space and position inferior to none in the Exhibition. The space secured to this Colony is as under—Main building, 3,789 feet; basement (say), 4,000 feet; eastern annexe, 6,635 feet; total (say), 14,500 feet. We have also wall space 50 feet in length in the gallery over our Court in the main building, and are entitled to further space in the implement and machinery halls. There is also the wine bar and cellerage for wines. Our eastern annexe Court communicates directly by covered way (to be erected) with our space in the basement, and the passage way in question will certainly become the leading thoroughfare between the two buildings. The decorations contracted for are progressing satisfactorily, and I have arranged with the architects for the buildings with respect to the erection of offices and the fitting of the eastern annexe Court. The end wall of the latter will require lining with T. and G. boarding; the decoration of the roof I propose leaving until the properties used at the Colonial and Indian Exhibition are fully examined, with a view to their adaptability to the requirements of our Court."

(Mr. Neill then explained the nature of the difficulties he had experienced in obtaining the requisite amount of space for the proper display of the exhibits of the Colony. He also stated that the utmost courtesy had been shown him by the press and people of Adelaide, with the exception of the difficulty to which he had referred in his report. In fighting for New South Wales he had been practically fighting for Victoria, and he was certain that if the Parent Colony of Australia had not obtained its full share of space the Sister Colony would have fared badly. He thought he should make this known, as it would explain the position more fully, and because, to some persons, the report might seem egotistical. Mr. Neill then exhibited plans showing the space allotted to New South Wales in the eastern annexe, and explained the same to the members of the Commission.)

APPENDIX E.

REPORT of Executive Commissioner to Meeting of Commission, 3rd May, 1887.

I BEG to report that I have accepted, through the architects for the buildings, a contract for the lining of the end walls of the New South Wales Court in the eastern annexe, as mentioned in my last report.

With regard to the decorations ordered by the Commission before my appointment, I beg to say that the contractor is at a standstill for want of photographs or views of the cities and towns which it was proposed to paint into the panels prepared for them. I find these photos. or views are not obtainable at the Government Printing Office, and unless procurable elsewhere, the whole decoration must be remodelled. As this work was commenced long before my appointment, I must ask the Commission to supply the views.

As exhibits are beginning to come into store I beg to recommend that they be shipped for Adelaide week by week, provision being made for their insurance against fire when delivered at the Exhibition buildings, and I recommend that arrangements be at once made with the contractors to place the packages in the various divisions of the New South Wales Court, according to instructions given in advance of shipment, by the Executive Commissioner.

For this purpose I suggest that the Court on main floor be called No. 1, gallery space No. 2, basement space No. 3, and eastern annexe No. 4.

The packages being so marked and delivered will save much labour, loss of time, and expense.

Arrangements having been already made for inspection of the Art and Public School exhibits, I recommend that these be examined as rapidly as possible, and, as regards other exhibits, unless there is evidently something of an objectionable character, I recommend that they be despatched without inspection, as any attempt to examine them here would be costly in time and money.

Should any exhibit eventually prove unsuitable on unpacking in Adelaide, it would be returned with less expense than could a general overhaul be made in Sydney.

Agreeably with the wish of the Commission, I met Mr. Chas. Moore at the Botanic Gardens, and accompanied by Mr. F. A. Franklin, we examined the various ferns and other plants suitable for our Court, and agreed upon those not likely to be shown by any other Colony.

With

With reference to palms Mr. Moore will, I believe, make a separate report. It will be requisite for some one to go down in charge of the plants to care for them during the voyage, otherwise they would run the great risk of irreparable damage.

I produce for the information of the Commission, summary of the space required in various sections of classification which, even after making allowance for excessive estimates on the part of some of the applicants for space, shows that I was after all, fortunate in securing, while in Adelaide, an increase of space from 12,500 feet superficial to 14,500 feet. The total allotted is not inclusive of main passages, but necessary avenues between exhibits will have to be deducted therefrom. I also produce summary of the catalogue of New South Wales exhibits for incorporation with the general official catalogue to be published by the Adelaide Exhibition Authorities. The Catalogue of New South Wales Court which will give a more detailed description of our exhibits is now being compiled.

APPENDIX F.

REPORT of Executive Commissioner to Meeting of Commission, 10th May, 1887.

I HAVE the honor to report the arrival of the ship "Leyland Brothers," bringing the decorations used in the New South Wales Court at the Colonial and Indian Exhibition, and the cases containing these will be forthwith shipped to Adelaide.

The Agent-General has cabled the Colonial Secretary, in answer to the inquiry made by this Commission, that the show-cases required for the mineral exhibits, &c., were shipped at London for Adelaide direct by the "Liguria," on the 30th March, and that the collections of photographs will be despatched to Adelaide per "Chimborazo" on the 12th inst., a date, I may remark, quite too late to admit of their proper placement in our Court, as they cannot reach the building more than two or three days before the opening.

The quantity of wall space required is so greatly in excess of the space available that some considerable number of these photographs from London must necessarily remain unexhibited.

A meeting of the Mining Committee has been held, and steps taken in order to test the possibility of carrying out the Executive Commissioner's recommendation re a model of one of the Jenolan caves, and upon this matter a report will probably be presented at the next meeting of the Commission.

At the same meeting the question of the strength of the main floor of the Exhibition Building, to bear the strain of the mineral trophies, was discussed, and a telegram was since despatched to Adelaide inquiring whether the floor will bear the weight. If it will not, these trophies must be placed in the basement court.

One of the evening journals has recently published statements to the effect that Victoria has secured a better position to that obtained by this Colony, and though I am in no way responsible for the position selected for New South Wales on the main floor of the principal building, I feel it is but right to say that in my opinion, it possesses many advantages of the space obtained by Victoria; while, as regards the gallery space and eastern annexe Court, secured by me, I have no hesitation in asserting that they are superior in every way to the space granted to the Sister Colony.

APPENDIX G.

GENERAL INDEX to Shipments of New South Wales Exhibits, Adelaide Jubilee International Exhibition, 1887.

Name of Exhibitor.	Ship, &c.	Date	No. of Package.	Department.	Section	Class.	Nature of Exhibit.

APPENDIX H.

TERMS of transfer of New South Wales Exhibits at Adelaide and Melbourne Commission.

Copy of Report of Finance Committee received at a meeting of Commission, held on Tuesday, 16th August, 1887, and adopted on Tuesday, 13th September, 1887.

"Your Committee took into consideration a letter from the New South Wales Commission for the Melbourne Centennial Exhibition of 1888, re the transfer of public or departmental exhibits and private exhibits now being shown at Adelaide, which letter was remitted to your Committee by the last meeting of the Commission, with a view to formulating the terms on which a transfer may be made. We decided that it was not within our province to make a definite recommendation with regard to exhibits other than those actually the property of the Commission, and purchased with funds placed at its disposal. We are of opinion that bullion and gems, with ingots of silver, tin, and copper, should be transferred, subject to the approval of the Hon. the Colonial Secretary, to the Melbourne Commission at current market prices at time of transfer. Although your Commission has expended a very considerable sum of money on the preparation for display of the timbers and other forest products shown through the Department of Mines, the timbers having been obtained on loan from the Department cannot be regarded as the Commission's property, and it is therefore suggested that the Melbourne Commission apply to the Department for the transfer of the exhibits, and that the trustees of the Technological Museum be communicated with in the same manner with regard to the Museum exhibits. We are of opinion that show-cases for exhibits may be transferred at prime cost, and that the same course may be pursued as to the mounted natural history specimens prepared at the cost of the Commission by the trustees of the Australian Museum. As to court decorations and fittings being made available for Melbourne, we would recommend that the Commission for the Exhibition to be held there apply through this Commission to Mr. Neild, the Executive Commissioner. If it be desired to show in the New South Wales Court at Melbourne the photographs donated to the Imperial Jubilee Institute, and lent to this Commission for exhibition in Adelaide, the Melbourne Commission should apply, through the Agent-General, to the authorities of the Institute for the further loan, as it is not in the power of this Commission to transfer them. As in the opinion of your Committee the Commission has no power to deal with the transference to Melbourne of private exhibits, it is suggested that the Melbourne Commission communicate directly with private exhibitors on this subject. The secretary of this Commission will prepare an interleaved catalogue giving full information as to exhibits, and suggestions as to action that may be taken by the Melbourne Commission thereupon, based upon the plan laid down in this report, if it be the pleasure of this Commission to adopt it. We may add that departmental exhibits not obtained or prepared at the cost of your Commission would form, in the opinion of your Committee, the subjects of correspondence between the Melbourne Commission and Departments, as in the case of all private exhibits."

1887.
(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MR. J. C. NEILD, M.P.

(AMOUNTS PAID TO, AS EXECUTIVE COMMISSIONER FOR SOUTH AUSTRALIAN EXHIBITION.)

Ordered by the Legislative Assembly to be printed, 18 October, 1887.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 28th September, 1887, That there be laid upon the Table of this House, a Return showing—

“The amount paid by the Treasurer to Mr. J. C. Neild, M.P., since his appointment as Executive Commissioner for the South Australian Exhibition.”

(*Mr. Hassall.*)

RETURN showing the amount paid by the Treasurer to Mr. J. C. Neild, M.P., since his appointment as Executive Commissioner for the South Australian Exhibition.

NEW SOUTH WALES.

APPLICATIONS FOR CERTIFICATES OF COMPETENCY AS
MASTERS AND MATES.

(DESPATCH RESPECTING.)

Presented to Parliament by Command.

(Circular.)

Downing-street,
11th February, 1888.

Sir,

I have the honor to transmit to you, for communication to your Government, the accompanying copy of a letter (B. of T., 31 Jan., 1888) from the Board of Trade, respecting the question of requiring persons applying for Certificates of competency as Masters and Mates to give up all previous certificates held by them.

Copies of the correspondence (Gov. 509, 24 Nov., 1887), in which this question was raised and to which the Board of Trade letter (C.O., 10 Jan., 1888) refers, are also enclosed for the information of your Government.

I have, &c.,
H. T. HOLLAND.The Officer Administering
The Government of New South Wales.

[Enclosures.]

The Board of Trade to The Colonial Office.

CERTIFICATES.

(M. 754.)

Board of Trade (Marine Department),
London, S.W., January 31, 1888.

Sir,

I am directed by the Board of Trade to acknowledge the receipt of your letter of the 10th instant, transmitting, for their observations, a copy of a Despatch from the Governor of the Straits Settlements, on the question of requiring persons applying for certificates of competency as masters and mates, to give up all previous certificates held by them.

In reply, I am to state that the Board of Trade see many objections to the holding by an officer in the Mercantile Marine of more than one certificate. One may be lost or lent and improperly used, or may enable him to act as an officer when a court has decided that he is not fit so to act, and has cancelled his other certificate. This principle applies to the case of a man holding a local Colonial certificate, just as much as to the case of a man who holds an Imperial one, when he is an applicant for a certificate of a higher grade or superior kind. As long as the certificate he holds does not confer any power which is not also conferred by the certificate he applies for, no injustice would seem to be done by withdrawing the former before the latter is granted.

The Board are therefore of opinion that all previous certificates held by a candidate, whether granted in the United Kingdom or in a British possession, and whether issued under the Merchant Shipping Acts or for local purposes only, should be given up before a certificate of a higher grade or of a superior kind is granted to the holder.

With

With reference to Mr. Thomsett's remark that the master of a British ship holding a local certificate can lose his vessel however carelessly, and retain his certificate, I am to observe that though Wreck Courts held outside of a colony have no power to deal with certificates of officers in the Mercantile Marine granted by the authorities of such colony, unless they are brought by Order in Council under the provisions of the Imperial Merchant Shipping Acts, such certificates should be revocable by the authority which granted them, and that if the present law applicable to local certificates granted at Singapore does not provide for this, the defect should be remedied.

The enclosed form of application which has to be signed by every applicant for a certificate of competency granted by this Board, requires the particulars of all previous certificates held by him to be fully stated, and the certificates given up to the examiner before the examination is proceeded with. If the candidate passes, the certificates so given up are not returned to him, but are forwarded to the authorities by whom they were issued.

The Board of Trade would suggest, if Sir H. Holland sees no objection, that a copy of this letter and of the printed form of application Examination 2, should be sent to each of the British Possessions (Victoria, Canada, New Zealand, New South Wales, Malta, South Australia, Tasmania, Newfoundland, Queensland, Hong Kong) which issue certificates of competency under the provisions of the Merchant Shipping (Colonial) Act, 1869, for their information and future guidance in this matter.

I have, &c.,
(Signed) THOMAS GRAY.

The Under Secretary of State,
Colonial Office.

[Issued by the Board of Trade in pursuance of the Merchant Shipping Act, 1854.]

Port of

Rotation No.

APPLICATION TO BE EXAMINED FOR A CERTIFICATE OF COMPETENCY AS MASTER OR MATE.

NOTE.—This form can be obtained at any Mercantile Marine Office, free of charge. Divisions (A.), (B.), (C.), (D.), (E), and (G.), of this paper are to be filled up by the Applicant for Examination and handed to the Examiners, with his Testimonials, and former Certificate, if any. No remuneration or gratuity whatever must be offered to or received by any officers or servants of the Board of Trade beyond the fees mentioned in the Regulations. Any officer, messenger, or servant of the Board who accepts any present or gratuity will be immediately discharged from his office, and any Candidate so offering money will be subject to the penalty mentioned in par. 13, at the back of this form.

Before filling in the required particulars the applicant should read carefully the NOTICE on pages 4 and 5.

(A.)—Name, &c., of Applicant.

Christian Names at full length.		Surname.	Permanent Address, stating Town, Street, and No. of House, and name of Person (if any) with whom residing.		
1.		2.	3.		
Date of Birth.			Where Born.		
Day.	Month.	Year.	Town.	County.	
4.	5.	6.	7.	8.	

(B.)—Particulars of all previous Certificates (if any), whether issued in the United Kingdom, the British Possessions, or elsewhere.

Number.	"Competency," "Service" or "R.N.R." now or formerly.	Grade.	For "Fore and Aft" or "Square" Rugged Vessels or Steamships, or other class of Vessel.	Where issued.	Date of issue.	If at any time suspended or cancelled, state by what Court or Authority.	Date.	Cause.

Custom-house, London, E.C.

Signature of Examiner.

NOTICE

NOTICE TO BE TORN OFF AND KEPT BY THE APPLICANT.

N.B.—Any person who makes, procures to be made, or assists in making any false representation for the purpose of obtaining for himself or for any other person a Certificate either of Competency or Service, is for each such offence liable to be punished as for a Misdemeanour. Candidates are prohibited from taking into the Examination Room any books or papers of any kind whatever, and the slightest infringement of this regulation will subject the offender to all the penalties of a failure.

For information as to the Time, Place, and Subjects of Examination the Applicants should either apply to the Examiners at the Local Marine Board Office at which they propose to be examined, or refer to the Regulations Exn. 1.

Candidates for Examination must make their Applications on Form Exn. 2, and pay the Examination Fee before any step is taken, whether by inquiring into their services or testing their qualifications, &c. Should it be found that their service is not sufficient to entitle them to be examined *no part of the fee will be returned*, but they will be allowed to present themselves again for examination for a Certificate of the same grade without further fee when they have completed the requisite service.

Testimonials of character, and of sobriety, experience, ability, and good conduct on board ship, will be required of all applicants, for at least the Twelve Months of Service immediately preceding the date of application to be examined, and without producing them no person will be examined.

As cases have occurred of persons who suffer from what is called colour blindness, *i.e.*, an inability to distinguish certain colours, the Board of Trade have decided that all Candidates for Examination for Masters' or Mates' Certificates should be tested as to their ability to distinguish such colours. This examination is also open to any person serving, or about to serve in the Mercantile Marine.

Qualifications for Certificates of Competency for a "Foreign-going Ship."

The qualifications required for the several ranks undermentioned are as follow:—

A Second Mate must be seventeen years of age, and must have served four years at Sea.

An Only Mate must be nineteen years of age, and have served five years at Sea.

A First Mate must be nineteen years of age, and have served five years at Sea, of which one year must have been as either Second or Only Mate, or as both.

A Master must be twenty-one years of age, and have served either six years at Sea, of which at least one year must have been as First or Only Mate, and one year as Second Mate in a Foreign-going Ship, or he must have served six and a half years at Sea, of which two and a half years must have been as Second Mate in a Foreign-going Ship, during the last twelve months of which he must have been in possession of a First Mate's Certificate.

Service in the Coasting Trade must amount to half as much again as Service in the Foreign Trade. A Candidate whose whole time has been in the Coasting Trade must have served three years as First or Only Mate, and nine months as Master, to qualify him for examination for an Ordinary Master's Certificate.

Service in the capacity of Third or Fourth Mate while in possession of a Certificate of Competency, and in charge of a Watch, is, under certain conditions, allowed to count to qualify a Candidate for examination for a Certificate of a higher grade.

N.B.—Certificates for Foreign-going Ships are divided into two classes, *viz.*:—Ordinary Certificates and Certificates for Fore and Aft rigged vessels.

A Candidate for an Ordinary Certificate of any grade must have served twelve months as Apprentice, Seaman, Mate, or Master of a Square-rigged Sailing Vessel.

Qualifications for Certificates of Competency for Foreign-going Steamships.

A Second Mate must be seventeen years of age, and must have been four years at Sea.

An Only Mate must be nineteen years of age, and must have served five years at Sea.

A First Mate must be nineteen years of age, and have served five years at Sea, of which one year must have been as Second or Only Mate of a Foreign-going Steamship.

A Master must be twenty-one years of age, and have been six years at Sea, of which one year must have been as First Mate in a Foreign-going Steamship, and one year as Second or Only Mate; or he must have been six and a half years at Sea, of which two and a half years must have been as Second or Only Mate in a Foreign-going Steamship, during the last twelve Months of which he must have been in possession of a First Mate's Certificate.

These Certificates are available for Steamships only, either Fore and Aft or Square Rigged.

Qualifications for Certificates of Competency for a "Home Trade Passenger Ship."

A Mate must be nineteen years of age, and have served four years at Sea.

A Master must be twenty years of age, and have served five years at Sea, of which one year must have been as First or Only Mate in the Foreign or Home Trade, during which service he must have been in possession of a Mate's Certificate for Home Trade Passenger Ships, or of a First or Only Mate's Certificate for Foreign-going Ships.

Voluntary Examination for Extra Master.

An Extra Master's Examination is voluntary, and intended for such persons as wish to prove their superior qualifications, and are desirous of having certificates for the highest grade granted by the Board of Trade. The Examination may take place when the applicant goes up for Master, or afterwards.

Masters' and Mates' Voluntary Examinations in Steam.

Arrangements have been made for giving to those Masters and First or Only Mates who are possessed of or entitled to Certificates of Competency, an opportunity of undergoing a voluntary examination as to their practical knowledge of the use and working of the steam engine. These examinations are conducted on the premises, and under the superintendence of the Local Marine Boards, at such times as they may appoint for the purpose; and the Examiners are selected by the Board of Trade from the Engineer Surveyors, appointed under the fourth part of "The Merchant Shipping Act, 1854."

Syllabus of Masters' or Mates' Examination in Compass Deviation.

Any Master or Mate who wishes to pass a *Voluntary Examination* in the Syllabus of Examination on the Laws of the Deviation of the Compasses of an Iron Ship, &c., which Candidates for Extra Masters' Certificates are required to pass, can at any time be examined upon payment to the Superintendent of the Mercantile Marine Office of the usual fee of One Pound. If the Candidate passes the endorsement successfully an endorsement to that effect will be duly made upon the Master's or Mate's Certificate held by him.

N.B.—The Board of Trade trust that holders of Certificates of Competency will gladly take all steps in their power to earn the special distinctions conferred by these Examinations.

Certificates of Competency as Masters of Pleasure Yachts.

Persons who are the sole Owners of Pleasure Yachts may be examined for Certificates of Competency as Masters, but such Certificates will only enable them to take command of their own Pleasure Yachts.

(A.)—Table of Fees.

* Holders of Steamship Certificates can be examined for ordinary Certificates of the same grade on payment of half the usual fee.

† The words "Inferior Grade" refer to a "Fore and Aft" Certificate of the same grade, or, except in the case of Master, to a Certificate of a lower grade.

NOTICE TO CANDIDATES.

- Candidates are required to appear at the Examination Room punctually at the time appointed.
- Candidates are prohibited from bringing into the Examination Room books, paper, or memoranda of any kind whatever. The slightest infringement of this regulation will subject the offender to all the penalties of a failure, and he will not be allowed to present himself for re-examination for a period of three months.
- In the event of any candidate being detected in defacing, blotting, writing in, or otherwise injuring any book or books belonging to the Board, the papers of such candidate will be detained until the book or books so defaced be replaced by him. He will not, however, be at liberty to remove the damaged book, which will still remain the property of the Board.
- In the event of any candidate being discovered copying from another, or affording any assistance or giving any information to another, or communicating in any way with another, during the time of examination, he will subject himself to all the penalties of a failure, and he will not be allowed to be examined for a period of six months.
- No candidate will be allowed to work out his problems on a slate or on waste paper.
- No candidate will be permitted to leave the room until he has given up the paper on which he is engaged.
- Candidates will find it more convenient, both here and at sea, to correct the declination and other elements from the Nautical Almanac by the "hourly differences" which have been given in that work in order to facilitate such calculations: they will thereby render themselves independent of any proportional or logarithmic table for such purpose.
- The corrections by inspection from tables given in some of the works on navigation will not be allowed (see Tables IX., XI., and XXI., in Norrie's Eptome, &c.); every correction must appear on the papers of the candidates.
- Candidates are expected to work out their answers to all problems, except those referred to hereafter, to within, or not to exceed, a margin of one mile of position from a correct result, with the exception of the ship's position by "Sumner's method," where a margin of 2½ miles may be allowed.
- In finding the longitude by chronometer the logarithms used in finding the hour angle should be taken out for seconds of arc. Also accuracy should be observed in computing the hour angles for the projection by "Sumner's method."
- In all other problems the logarithms to the nearest minute will be sufficiently correct for all grades, except Extra Master, from whom a degree of precision will be required, both in the work and in the results, beyond what is demanded from the inferior grades.
- Any candidate who may be guilty of insolence to the Examiner or of other misconduct will render himself liable to the postponement of his examination, or, if he has passed, to the detention of his Certificate for such period as the Board of Trade may direct.
- The fee for examination must be paid to the Superintendent of the Mercantile Marine Office in the Cash Office. In any case in which a Candidate offers money to any other officer than a Superintendent, and in any place but in the Cash Office, the Candidate so offering money will be regarded as having committed an act of misconduct, and will be rejected, and not allowed to be examined for twelve months, either at the port where the offence was committed or at any other port.
- If the candidate passes he will receive the Form Exn. 16 from the Examiner, which will entitle him to receive his Certificate of Competency from the Superintendent of the Mercantile Marine Office, at the port to which he has directed it to be forwarded. If his testimonials have been sent to the Registrar to be verified, they will be returned with his Certificate.
- If, after a Candidate has passed his examination, it is discovered on further investigation, e.g., by verification on the part of the Registrar General of Seamen, that his services are insufficient to entitle him to receive a Certificate of the grade for which he has passed, it will not be granted to him; but if the Board of Trade are satisfied that the error in the calculation of his services did not occur through any fault or wilful misrepresentation on his part, he will be allowed to go up for examination without payment of further fee when he has performed the amount of service in which he was deficient.
- In all cases of failure the candidate must be examined *de novo*. If a candidate fails three times in Navigation he will not be re-examined until after a lapse of THREE MONTHS from the date of the last failure. If he fails in Seamanship he will not be re-examined until after a lapse of SIX MONTHS. Whether the whole or part of this period must be served at sea must depend upon the subjects in Seamanship in which the candidate failed, but what amount (if any) of sea service will be required will be left to the discretion of the Local Marine Board, subject, however, to revision by the Board of Trade, should they see fit.

Board of Trade, Marine Department,
December, 1884.

THOMAS GRAY,
Assistant Secretary.

1887-8.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

ASSOCIATION CRICKET GROUND.

(REVENUE AND EXPENDITURE FROM MARCH, 1876, TO AUGUST, 1887.)

Ordered by the Legislative Assembly to be printed, 25 April, 1888.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 8 December, 1887, That there be laid upon the Table of this House, a Return showing,—

“(1.) The amount of money received from all sources by the Trustees of the Cricket Ground at Moore Park.

“(2.) The amount of money spent by the Trustees of the said Cricket Ground, particularly specifying the items of expenditure, and what it was spent for, and the amount received by each of the Trustees as salary for personal expenses.”

(*Mr. McElhone.*)

The Managing Trustee of the Association Cricket Ground to The Under Secretary for Lands.

Sir, The Association Cricket Ground Secretary's Office, 99, Elizabeth-street,
Sydney, 28 February, 1888.

In response to the request contained in your letter of 29th December last, and as an act of courtesy, I have the honor to herewith furnish a statement of receipts and disbursements in connection with the Association Cricket Ground for the period commencing from March, 1876, and ending 31st August, 1887.

Referring to the final portion of section 2 of the Order of the Legislative Assembly, I have to say that the duties of the Trustees are honorary, and that no payments of any kind have been made to these gentlemen.

I may add that the statements of receipts and disbursements and balance sheets, duly audited, have been annually published in the daily papers for the information of the public.

I have, &c.,

PHILIP SHERIDAN,
Managing Trustee.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

ASSOCIATION CRICKET GROUND.

(RETURN RESPECTING TRUSTEES OF.)

*Ordered by the Legislative Assembly to be printed, 15 June, 1888.**[Laid upon the Table of this House, in answer to Question No. 2, Votes 102, of 14 June, 1888.]*

QUESTIONS AND ANSWER.

2. MR. McELHONE to ask THE COLONIAL SECRETARY,—

- (1.) Is it a fact that the trustees of the Association Cricket Ground have spent large sums of money in the purchase of wines, spirits, ale, &c., for the use of themselves and friends, and that the money to pay for such wines, &c., has been taken out of the funds obtained for the use of the cricket ground?
- (2.) What money has been paid for wines, &c., used as above?
- (3.) Are not Mr. Justice M. H. Stephen and Mr. C. Oliver trustees of the cricket ground; if so, are either or both of them aware that the cricket funds have been used for the above purpose?
- (4.) Were not the trustees appointed by the Government; and, if so, have not the Government the right and power to call on and compel the trustees of public parks, cricket grounds, &c., to give an account of the expenditure of all moneys received by them?
- (5.) Did not the Government have a sum of money voted to make the said cricket ground?
- (6.) Is not the answer given to Mr. McElhone's questions, *re* trustees of cricket ground, on the 15th May, 1888, by Mr. Garrett, Secretary for Lands, stating the trustees of the cricket ground are not within the control of the Government, misleading?
- (7.) How often do the trustees meet per year?
- (8.) Is it not a fact that neither Mr. Justice Stephen nor Mr. Oliver and Mr. P. Sheridan ever meet to consult on the affairs of the cricket ground, and that Mr. Philip Sheridan has almost absolute and sole control of the affairs, management, receipts, and expenditure of the cricket ground trust funds?

The following information has been supplied by the Department of Lands:—

"It is a fact that during the many years in which the present trustees have held office sums of money have been expended in the purchase of wines, and out of the funds obtained from the ground. These sums, though they may be large in the aggregate, have been expended not extravagantly, and only in ways customary among similar institutions and for purposes directly or indirectly connected with the advancement of the interests of the ground.

Visitors, for instance, from England and the colonies, and others, have been entertained, and it may be mentioned that gifts in kind have been at times received in return for hospitality shown.

All the trustees have been aware of such expenditure. This, together with all expenses and receipts in connection with the trust, have been regularly laid before meetings held by the trustees and a ground committee, which the trustees have associated with them for the better management of the ground and the supervision of the accounts.

While the trustees hold themselves responsible for all that is done, the advice of the ground committee is always taken, and as a rule acted upon. The accounts, moreover, are regularly and duly audited by public accountants, and annually published in the daily newspapers.

The trustees, *viz.*, Mr. Justice Stephen, Mr. Oliver, and Mr. Sheridan, are appointed by the Government, and hold the ground under trust conferred by a deed of grant vesting the control of the ground in them, and, inferentially, of the moneys arising from its use.

Whether the Government has power or not to call the trustees to account, they are at all times most willing to furnish any information that may be required, although all that is necessary is from time to time published as above mentioned.

In

In the year 1878 a sum of £500 was granted by the Government for the improvement of the ground, but during the period from March, 1876, to August, 1887, no less than the sum of £41,574 8s. 10d. was (exclusive of the £500 just mentioned) expended in connection with the ground, as detailed by a statement laid upon the table of the Legislative Assembly upon the 25th April last.

Of late Mr. Justice Stephen and Mr. Oliver have not regularly attended meetings of the trust, but no matter of importance is dealt with unless special reference is made to them. Mr. Sheridan is the managing trustee of the ground, but beyond the authority usually attaching to such a position he has no more control over the affairs of the trust than other members of it. He is, however, unceasing in his efforts to promote the interest of the ground, and his zeal and untiring energy are fully appreciated by his co-trustees.

The ground committee referred to consists of Messrs. Richard Teece, John M. Gibson, W. C. Goddard, H. M. Faithful, A. H. Bray, A. R. Docker, and C. W. Beal, who meet weekly for the purposes already mentioned, and it is only proper to state that these gentlemen take a lively interest in the affairs of the ground, and that they have devoted much of their time and considerable labour to their voluntary duties, and that the trustees and the public are much indebted to them for the advanced state of the ground and the buildings and the management generally."

1887-8.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

**ATTORNEYS' BILLS OF COSTS AND PRACTICE OF
CONVEYANCING AMENDMENT BILL.**

(PETITION—CERTIFICATED CONVEYANCERS OF THE SUPREME COURT OF NEW SOUTH WALES.)

Received by the Legislative Assembly, 15 February, 1888.

To the Honorable the Members of the Legislative Assembly, in Parliament assembled.

The humble Petition of the undersigned certificated conveyancers of the Supreme Court of New South Wales,—

RESPECTFULLY SHOWETH:—

That your Petitioners are all duly certificated conveyancers of the Supreme Court of New South Wales, under the 14th section of the Act 11 Victoria No. 33, intituled "An Act to regulate the taxation of Attorneys' Bills of Costs, and the practice of conveyancing."

That your Petitioners' attention have been drawn to a Bill now before Parliament, introduced by Frank Farnell, Esq., having for its object the repeal of the 14th section of the said Act, and to provide for the admission of conveyancers already certificated to practise as solicitors, upon the conditions therein set forth.

That the 1st section of the Bill referred to purposes absolutely to repeal the said 14th section.

That the 2nd section of such Bill provides a discretionary power for conveyancers to apply for admission as attorneys, solicitors, and proctors.

That should the said 1st section of the Bill be passed into law in its present shape, it might be construed so as to prevent conveyancers already admitted to continue the practice of their profession as such, and thereby seriously prejudice existing and vested interests.

That your Petitioners comprise nine in number out of twenty-six, the total number of conveyancers already certificated, and they have taken no part whatever in introducing the Bill referred to into Parliament.

That, without desiring to offer any opposition to the Bill, if amended, being passed into law, your Petitioners would respectfully point out that unless the same be amended, empowering conveyancers already admitted to continue practice as such, notwithstanding the repeal of the said 14th section, a great hardship and much injustice would be inflicted upon those who have established businesses in their profession as conveyancers, and who might not be desirous of seeking admission as solicitors.

Your Petitioners therefore humbly pray that you will take the circumstances before stated into your favourable consideration and amend the 1st clause of the said Bill, so that conveyancers already admitted may continue to practise as such, the repeal of the said 14th section notwithstanding.

And your Petitioners, as in duty bound, will ever pray, &c.

Sydney, 9 February, 1888.

[Here follow 9 signatures.]

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CASUAL LABOUR BUREAU.

(RETURN RESPECTING.)

Ordered by the Legislative Assembly to be printed, 29 September, 1887.

[Laid upon the Table of the House by the Colonial Secretary, in answer to Question No. 11, on Votes No. 6, of the 29th September, 1887.]

Questions :—

MR. O'SULLIVAN asked THE COLONIAL SECRETARY,—

- (1.) The names of the gentlemen forming the Labour Bureau?
- (2.) The amount of remuneration they receive?
- (3.) What clerical assistance is employed by the Bureau, and the cost of the same?
- (4.) The amount spent in cab-hire and contingencies by members of the Bureau since the Bureau was established?
- (5.) Has the Bureau fixed the rate of pay per day to be paid to the unemployed?
- (6.) What is the rate fixed?
- (7.) Did the Labour Bureau send any of the unemployed to do the work of shearing on stations where shearers were on strike for the rate of wages fixed by their union?

Answers :—

- (1.) John Davies, C.M.G. (Chairman), Colonel F. Wells, and David Houison, Esquires.
- (2.) Nothing has been received.
- (3.) 1 Secretary and Paymaster, at £350 per annum, who provides a fidelity guarantee bond in the sum of £1,000.
1 Assistant Paymaster and Registrar, at £250 per annum.
2 Clerks, at 6s. per day each.
- (4.) The amount paid for cab-hire, &c., to the members of the Board, up to date, is £8 18s. 6d.
- (5.) Yes.
- (6.) Wages men, 3s. 6d. per day, less rations; but most of the men are engaged on piece work.
- (7.) In response to applications received from employers in various portions of the Colony upwards of 200 shearers were engaged and forwarded at the highest current rates paid, viz., 20s. per 100 sheep.

RELIEF OF THE POOR OF SYDNEY DURING
CENTENNIAL WEEK.

(INFORMATION RESPECTING.)

Ordered by the Legislative Assembly to be printed, 28 February, 1888.

[Laid upon the Table of this House in answer to Question No. 15, Votes No. 57, of 23rd February, 1888.]

MR. CHANTER to ask THE COLONIAL SECRETARY,—

- (1.) What number of tickets were issued for the relief of the poor of Sydney during the Centennial week?
- (2.) What was the number of tickets presented to Mr. Kidman, grocer, of Sydney, and relief obtained?
- (3.) What was the nature of the contract between the Government and the contractor, Mr. Kidman?
- (4.) What amount has the Government paid Mr. Kidman for this relief?
- (5.) If no amount has yet been paid, what is the amount due to Mr. Kidman?

The following information has been furnished by the Chairman of the Casual Labour Board:—

- (1.) 11,395, viz., 10,962 full tickets (5s.) and 433 half tickets (2s. 6d.)
- (2.) 11,154, viz., 10,784 full tickets and 370 half tickets.
- (3.) Mr. Kidman to supply the following provisions of the best quality, viz.:—2 loaves of bread (4 lb.), 1 joint of beef or mutton (6 lb.), 2 lb. white sugar, $\frac{1}{4}$ lb. tea, $\frac{1}{2}$ lb. butter, 1 lb. cheese, 1 lb. currants, 1 lb. raisins, 4 lb. flour, 1 cake of tobacco and pipe, 1 tin of fish or jam, 1 quart of milk, 7 lb. assorted vegetables.

Such parcels were supplied to holders of full tickets, and half the quantities to holders of half tickets.

(4 and 5.) The amount due to Mr. Kidman is £2,742 5s.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

CLAIM OF JAMES H. HUSBAND.

(CORRESPONDENCE RESPECTING—IN CONNECTION WITH CAPTURE OF BUSHRANGERS.)

Ordered by the Legislative Assembly to be printed, 8 February, 1888.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 29th June, 1887, That there be laid upon the Table of this House,—

“Copies of all letters, papers, and correspondence relative to a claim by
“James H. Husband, relating to his capture of some notorious bushrangers
“in the year 1864.”

(*Mr. Barbour.*)

The Agent-General to The Colonial Secretary.

3, Westminster Chambers, Victoria Street, S.W.,

Sir,

London, 1 June, 1876.

I have the honor to enclose herewith a letter dated 24th ultimo, from Mr. Robert Nixon, submitting his claims for a medal in consideration of services rendered by him in the capture of bushrangers in New South Wales.

I have, &c.,

WILLIAM FORSTER.

[*Enclosure.*]

Corby, near Thrapstone, Northamptonshire, 24 May, 1876.

The Hon. John Robertson, Colonial Secretary, Sydney, New South Wales,—

Sir,

Having seen an announcement that the New South Wales Government has issued a number of gold and silver medals for services rendered in the capture of bushrangers in the Colony, I trust that under the following circumstances you will have the kindness to recommend that one of the gold medals shall be awarded to me as having been the means of arresting, and subsequently bringing to punishment, in the year 1862, the notorious criminals Alexander McGregor and Hugh Vaughan.

These culprits were tried by His Honor the Chief Justice (Sir Alfred Stephen) at the Bathurst Assizes, on the 11th September, 1862, when McGregor, who was known as one of the worst characters at Norfolk Island, was sentenced to 15 years hard labour (two in irons) and Vaughan to 10 years hard labour, the first two in irons.

A report of the trial appeared in the *Bathurst Free Press* of the 17th September, 1862, and the depositions in the case are of course registered in the proper office and can be now referred to. I may, however, shortly state the circumstances under which I was attacked and robbed, and of my subsequent pursuit and arrest of the robbers.

In April, 1862, I was on my way from the Lachlan to open a store at Fort Bourke. When on my way down the Bogan, midway between two stations, 8 miles apart, three men came from behind some trees by the road-side, stopped me, and tied my hands behind my back. They then took me nearly a mile into the bush, and there bound me hand and foot with ropes to a tree, one of the men standing in front of me with a loaded gun, threatening to shoot me if I attempted to move or speak. Finally I released myself, and removed the portion of goods they had left me to the nearest station. There I engaged a young man to assist me in following their tracks through the bush and to help in arresting them, as no police were stationed near. On the third day I captured one of them in a shepherd's hut, and, after binding him, I travelled all night, and having obtained more assistance from a station, I captured the other two. The next day, when taking them to Fort Bourke to have them committed for trial, two of them escaped, but, after following them for 30 miles, I retook them, and brought them back. I may state that my losses, between money and goods stolen from me by the bushrangers and whilst in pursuit of them, amounted to nearly £500. I do not, however, make any claim on this account, but I trust you will be able to recommend in the proper quarter that one of the gold medals should be awarded to me.

I have, &c.,

ROBERT NIXON,

Late of 56, Bathurst-street, Sydney.

309—A

It

[805 copies—Approximate cost of printing (labour and material), £10 1s. 9d.]

It is scarcely my province to make any direct recommendation upon this application, which, however, upon the assumption that the facts are correctly stated, requires very little recommendation from anyone, as it speaks sufficiently for itself. The facts can be better ascertained in the Colony than in London; and in order that they may be ascertained, and justice done to the application, I have much pleasure in submitting it for consideration by the Government.—W.F., 30/5/76.

The Inspector-General of Police.—H.H., B.C., 20/7/76. Referred to Supt. Lydiard for full inquiry into the facts and for report.—EDMUND FOSBERY, I.G.P., Police Department, Inspector-General's Office, Sydney, 22 July, 1876. Supt. Lydiard, Bathurst.

The Inspector-General of Police to The Principal Under Secretary.

Police Department, Inspector-General's Office, Sydney, 4 November, 1876.

MORE than fourteen years having elapsed since the occurrences referred to by Mr. Nixon took place, it is very difficult to obtain information on the subject.

Mr. Husband cannot be found at present, but I am informed that he was placed on the commission of the peace by the Government for his conduct on the occasion referred to.

Herewith I submit a newspaper report of the trial of the offenders alluded to.

Probably Sir Alfred Stephen, who tried the case, might be able to afford some information.

Mr. Nixon apparently behaved in a most praiseworthy manner, but it is doubtful whether the circumstances were such as would justify the Government in awarding him one of the gold medals presented for conspicuously brave and gallant conduct.

EDMUND FOSBERY,
Inspector-General of Police.

Submitted, 7/11/76. It can hardly be allowed.—8/11/76. The Honorable Sir A. Stephen may be asked for any information on the matter that he may possess.—JOHN R., 10/11/76.

[Enclosure.]

BATHURST ASSIZES.

Thursday, September 11.—Before His Honor the Chief Justice.

BARRISTERS present: Mr. Butler, Acting Attorney-General; and Messrs. Holroyd, Dalley, Stephen, and Lee.

ASSAULT AND ROBBERY WITH FIREARMS.

Alexander McGregor and *Hugh Vaughan* were indicted for that they, on the 26th day of April, 1862, at the Bogan River, with firearms in their possession, did feloniously assault one Robert Nixon and put him in bodily fear of his life, and stole from him a certain sum of money and various other articles, the property of the said Robert Nixon.

The prisoner McGregor had applied to have his trial postponed for the production of two witnesses; but his Honor said, after the prisoner's statement and from the depositions, he was convinced that the Crown Prosecutor might safely admit as facts the statement made by the prisoner, and still the case was one that ought to go to a jury; he therefore should not postpone the trial, as he believed by doing so the ends of justice would be defeated.

McGregor said he might as well submit to be crucified as to go to trial under such circumstances, but he must bow to the decision of the Court.

The prisoners pleaded Not Guilty.

The Public Prosecutor stated the facts of the case to the Jury, and called

Henry Williams, who being sworn, said: I am a constable, stationed at Fort Bourke; I arrested the prisoners on the 5th of June; they were in the township of Fort Bourke; the two prisoners were in the company of a third person; I found a pair of cord trousers in a swag which McGregor claimed as his property; they were afterwards proved to be the property of Robert Nixon; there was another swag belonging to the third man, who has made his escape; in that swag I found a Crimean shirt, a blue shirt, and a lamb's wool undershirt; these articles were claimed by Nixon; Nixon was present and saw what I found in the swags; the articles were sent to Bathurst by the police conveyance; they are here now and I can identify them if produced.

[His Honor said the witness ought to have the articles in Court.]

Mr. Butler said this was one of the singular cases sent from Fort Bourke; he always found in cases from Fort Bourke there was considerable deficiency and something wrong.

By McGregor: I apprehended you upon a warrant; the cord trousers were in a blanket belonging to you; I had possession of a swag which you claimed as your property; you were brought into Fort Bourke and discharged; a new information was laid and a warrant granted, upon which I apprehended you within half-an-hour of your discharge; you had not an opportunity of escape at the time Henderson escaped; you were secured in handcuffs and handcuffed to another constable.

By Vaughan: I don't know how long you were in custody before I apprehended you; you had been sick when I apprehended you, but you were sensible; you had no opportunity of escaping at the time Henderson escaped; I was watching at the time Henderson went away but did not see him go; I was not asleep at the time; you were handcuffed to one of the prisoners.

Two bundles of goods were here produced one of which had been sent from Fort Bourke and the other from Dubbo.

Robert Nixon being sworn said: I am a dealer; at the time I was robbed I had not a license; but was on my way from the Lachlan to open a store at Fort Bourke; I had three horses and a dray with me and a spring cart with one horse, the conveyances were both loaded with store goods, consisting of drapery, boots and shoes, wearing apparel, and groceries; I had about £850 worth of property; before I got to Fort Bourke about 250 miles on this side I was stopped on the road by three men; I think it was on the 25th April; it was about 10 or 11 in the morning; I saw the same men after that, I have no doubt but what the prisoners in the dock are the men; one of the prisoners came out from behind a tree; he asked me for a little castor oil to put in his eye; I told him I had none that I could get to, and I did not think it was good for him; the same men had passed me on the river two days before; they had three horses; one of the men, Vaughan, was walking; it was near a station on the Bogan; Vaughan seized me and kept my arms down; other two men then came up; Vaughan then tied my hands behind my back; he then tied my legs; I asked what they wanted; they said your money; they put me into the cart; Vaughan drove the cart; McGregor and Anderson were in the dray; I asked Vaughan why they would not let me go on, and I would give them my money; Vaughan said, the old devil, meaning McGregor, begun it, and he would finish it; about three-quarters of a mile from the place I saw three horses, they were hobbled and the saddles were on the ground; the prisoners then asked me where my money was; I told them I had not much; McGregor searched my pockets and took out my keys, knife, and comb; they then asked me where my firearms were; they took my revolver and my gun, also my purse out of a trunk that was in the cart; they counted my money; I think it was £21 or £22, and then said this is only £7 odd each; McGregor said he had heard I had £300, and would have it; I told him I had not, I had parted with it on the Lachlan; they then said they would shoot me dead if they found any more; Anderson had the gun; McGregor sent Anderson down to get some water for dinner; they made a fire and got some dinner; they untied my hands and I took some dinner with them; Anderson gave me my knife and keys; they did not untie my legs; when I had taken dinner

McGregor

McGregor told Anderson to take a rope from the dray; they untied my legs; I was placed on a tree they said they would tie me; before they tied me, I told them I would make them a present of the money if they would let me go; I told them they could have a suit of clothes also; they said they would not be dictated to by me; I then said if they would not agree to those terms I would hunt them until I had them taken; they bound my hands again, and tied me to a tree with the rope; they said if I tried to escape they would shoot me; one man stood over me with a gun; they then began to pick the goods; Anderson went to light his pipe, and I thought I would try to get away; they were men's goods they took chiefly; I twisted the rope and released my hands, took my knife from my pocket, and cut the rope which bound me across the breast; I ran to the next station, about 4 miles off; two men returned with me; as we rode we found tracks of a cart; on arriving at the spot I found that my horses were gone, and the spring cart; the dray was left; I missed some boots, trousers, a gun, a revolver, jumpers, four pair blankets, eight vests, a dozen hats; they took four plush hats, and a great many other articles; the men who were with me put the goods on the cart and I went to another station to get assistance; the next day we got a horse each, and went to Mr. Strahorn's station; we then met the two men and followed on the track till we came to the cart; there were a few things left in the cart; and very near the cart we found three suits of clothes, similar to those which the prisoner wore; I then obtained more assistance and we followed on the tracks; we afterwards returned to Mr. Strahorn's station; the other men returned bringing some goods with them; I then went with another person to Mr. King's station, and stopped there that night; in the meantime I had recovered three of the horses; I then went to Mr. Brown's station and heard that they had been there; I then started with one person to see the place where the prisoner's had camped; we then came in sight of a hut, and I got the other man to go towards it, and we found the prisoner Vaughan in the bed there; this was about 11 o'clock at night; we tied the prisoner's hands and legs together and secured him; he handed me £7 odd, which he said was his share of the money stolen from me; we took from him some of the articles he had stolen from me; everything prisoner had at the time belonged to me; we left the prisoner confined and rode on to one of Mr. Thomas' outer stations; while talking to the overseer, McGregor, and Anderson came up; the overseer went in for a revolver and a gun, but when he came out the prisoner had made away into the bush; Mr. Husband was overseer at the station; I and four others then followed and overtook and arrested McGregor and Anderson; McGregor had a revolver which we took from him; Anderson was leading a horse over which a gun was slung, together with a quantity of my property; when we were taking the prisoners to Cannonbee they made their escape; they were retaken on the Marra Creek; they were then taken on to Fort Bourke.

By McGregor: I believe the trousers produced are those referred to as the trousers found upon you.

James Husband, being sworn, said: I remember the morning when Nixon came to the station; we followed two men, overtook them and brought them back to the station; McGregor was one of the men; they had a quantity of wearing apparel and other goods with them at the time; the prisoners asked why I took them; they admitted that they had stuck the man up; Anderson said that McGregor had put up the robbery; and McGregor said he had done it out of revenge.

By McGregor: You admitted to me that you had stuck the man up out of revenge.

By Vaughan: I never saw you before.

John Reardon being sworn said: I was with Mr. Nixon when Vaughan was arrested; Nixon asked him to pull his shirt off, but Vaughan said no it's not yours; he said the seven pounds in his purse was his share of the money from the dealer; he said that he and two other men did it.

McGregor said that he had no opportunity of producing his witnesses, or they would have proved an *alibi*; he denied the statements made by the witnesses as to his admissions.

Vaughan said he had nothing to say to the Jury, as he had not been able to procure the attendance of his witnesses.

His Honor summed up; the Jury retired, and returned a verdict against both the prisoners of guilty of robbery with firearms.

His Honor said that McGregor was an abominably bad character, who was known as one of the worst characters at Norfolk Island, where he was known by the name of Robert Knox. His Honor said he knew his character well.

Sentence:—McGregor hard labour on the roads or other public works of the Colony for fifteen years, the first two years in irons.

Vaughan was sentenced to ten years hard labour on the roads or other public works of the Colony, the first two years in irons.

His Honor said that he took the opportunity of publicly thanking Mr. Husband and the prosecutor for the part they had taken in apprehending the prisoners, their conduct was most praiseworthy, and deserved the thanks of the Colony.

The Principal Under Secretary to The Honorable Sir Alfred Stephen, C.B., K.C.M.G.

Sir,

Colonial Secretary's Office, Sydney, 11 November, 1876.

I am directed by the Colonial Secretary to enclose for your perusal papers having to do with an application made by Mr. Robert Nixon, through the Agent-General in London, for a gold medal, in recognition of the services rendered by him in the year 1862, in the capture of the two criminals named in the margin, who were convicted before yourself sitting as Chief Justice, at Bathurst, on the 11th of September, 1862. (To be returned.)

2. I am desired to request that you will have the goodness to furnish Mr. Robertson with any information that you may possess regarding this matter.

I have, &c.,
HENRY HALLORAN,
Principal Under Secretary.

Alexander
McGregor and
Hugh Vaughan.

The Honorable Sir Alfred Stephen, C.B., K.C.M.G., to The Colonial Secretary.

Sir,

Hyde Park, 16 November, 1876.

In compliance with the request conveyed in your letter of the 11th instant, I have, after referring to my notes of Vaughan's and McGregor's trial in 1862, and to my report on the case to the Government in 1869, to report to you, that Mr. Nixon's statement of the particulars of the robbery by those men, and a third who escaped, is substantially correct. After the outrage, terminating in their tying him to a tree in the unfrequented bush, Mr. Nixon contrived to extricate himself; and then, proceeding to the nearest cattle station, he procured the assistance of two stockmen whom he paid for their services, and for several days followed the tracks of the robbers through a wild country (although knowing that they were armed), until at length he, and the people with him, succeeded in recovering the greater part of his property, and in arresting the three bushrangers themselves, two of them being in the sequel convicted on his testimony. In accomplishing the arrest, Mr. Nixon incurred no personal risk, for the men (first one of them alone, and the others a day or two afterwards) were not at the time in a position to resist. It was nevertheless a plucky, I might say a gallant thing on the whole to do; but whether Mr. Nixon is within the conditions specified, entitling a man to one of the medals awarded for "conspicuous bravery and gallant conduct," it is not within my province to determine.

I am, &c.,
ALFRED STEPHEN.

The

The Inspector-General of Police to The Principal Under Secretary.

Police Department, Inspector-General's Office,
Sydney, 17 November, 1876.

Sir,

Referring to my B.C. report of the 4th instant, on Mr. Nixon's application for a gold medal (C.S. papers, No. 76, 5207), I have now the honor to submit for the consideration of the Honorable the Colonial Secretary a letter I have received from Mr. James H. Husband, and to draw attention to the fact that it materially affects the statement of facts as put forward by Mr. Nixon, who appears to have no claim to the distinction he seeks.

I have, &c.,

EDMUND FOSBERY,
Inspector-General of Police.

[Enclosure.]

To The Inspector-General of Police, Sydney.

Sir,

Post Office, Balranald, N.S.W., 4 November, 1876.

Yesterday I received a communication from Mr. J. Dowling Brown, Superintendent of Police, Deniliquin, to the effect that inquiries had been made from headquarters in reference to a claim for compensation made by a man named "Nixon," now at Home, and who demands some recognition of his services in apprehending some bushrangers as far back as the year '62; and although it has been my intention for some years to make similar application, I have refrained from doing so until I could visit town, as in the affray above alluded to I am myself the party entitled to recognition; and from Mr. Charles Cowper, who was at that time Colonial Secretary, I was promised ample return for the part I took in the apprehension. The facts are these—Some time in the month of May, 1862, "Nixon" came to my station, where I was manning, and told me that he had been stuck up, robbed, &c., &c., and asked my assistance in taking the men and recover his property. Not having but one man on the head station at the time, I told him that it would be impossible, but strongly advised him—he at the time being in company with another man, and both armed—to meet the men face to face and have satisfaction. He then told me that they had captured one Vaughn, by name, who was stone blind from blight, and having been left behind by his mates was easily secured. That it would take ten men to take the other two who were armed to the teeth and very desperate. Just at this time the men appeared in sight, and I immediately saddled a horse and certainly with a revolver, single handed, met the men, forced them off their horses, took them back to the house where "Nixon" had remained all the time, recovered all the property in goods and money to a large amount, and then forwarded them to Cannonbar on the Duck Creek, as the nearest point where I could obtain assistance to send for police, the nearest in those days being at Dubbo, 140 miles away. Mr. Herriott, who happened to be at the time going to Bourke with his troopers, took charge of the two, viz., McGregor and Henderson, and I was in due course summoned to Bourke for trial. I was ill at the time and found it impossible to go, so sent the only man I had, named Andrews, with letter to the Bench &c. Andrews met a trooper on the road and they travelled together, when meeting a sly grog cart they got drunk, and as perhaps it may be in your recollection, Andrews was shot by the constable and died. The case proceeded, and I was then summoned to Bathurst, at which Court I attended, and the case was tried before his Honor the ex-Chief Justice Sir Alfred Stephen, the prisoners receiving 15 and 10 years respectively, the first three years in irons. I must tell you that I was most highly complimented by his Honor. And I will now quote, verbatim, an extract of a letter that I have since received from him

* * * "If it can be of any service to you, I have pleasure in saying, that several years ago I know of your doing the Colony a great service, by tracking and following, and finally, in a gallant manner, apprehending a gang of robbers. I write this purposely on the fly-leaf of your own note which is evidently that of an educated gentleman, and if eventually you succeed in your object I shall be glad of the result.—ALFRED STEPHEN."

Surely from this it will be seen to whom recognition or award (if any) should be made, and although on my meeting Mr. Cowper in Sydney, and his promise that at some future time something should be done in the matter, to the present moment I have never even received as much as "thank you" from the Government for the risking my own life when bush-ranging was at its height, for the loss of my man through him being shot by a trooper, irrespective of the time and heavy expenses incurred over a matter which I undertook purely and solely as an example to others and for the benefit of society.

Certainly in those days I was in prosperous circumstances, or should, I have no doubt, have made some application. Now times have changed, and as Mr. Brown, with whom I am personally acquainted, informed me of an application being made by one whose share in the transaction consisted in his being stuck up, I consider it right I should ask if I am to be totally ignored in the transaction, and why, if records are correctly kept, I should not have been one of the recipients of those medals which not so long ago were distributed to those who assisted the Colony in suppressing lawlessness.

I trust if anything can be done in the matter you will lend me your aid. I should much like to obtain some appointment under Government, to which I consider I am justly entitled, and as I see that now there are plenty of appointments being made I do not think I could choose a more fitting time to forward this request.

I am, &c.,

JAS. H. HUSBAND.

It is quite clear from this, not less than from Sir Alfred Stephen's report herewith, that Mr. Nixon's application cannot be entertained;—moreover, had his claim been of a conspicuous character, his name would hardly have been omitted from the list approved of by the late Sir Charles Cowper.—24/11/76.

The Colonial Secretary to The Agent-General.

Sir,

Colonial Secretary's Office, Sydney, 27 November, 1876.

With reference to your letter of the 1st June last, enclosing an application from Mr. Robert Nixon, of Corby, near Thrapstone in Northamptonshire, for a gold medal in recognition of the services rendered by him in the year 1862, in connection with the capture of two criminals, named Alexander McGregor and Hugh Vaughan, I have the honor to request that you will inform Mr. Nixon that his application cannot be entertained.

I have, &c.,

JOHN ROBERTSON.

The Principal Under Secretary to The Inspector-General of Police.

Sir,

Colonial Secretary's Office, Sydney, 27 November, 1876.

With reference to your letter of the 17th instant, reporting on the application of Mr. Robert Nixon for a gold medal in recognition of the services rendered by him in 1862, in connection with the capture of the criminals, Alexander McGregor and Hugh Vaughan, I am directed by the Colonial Secretary to inform you that Mr. Nixon has been apprised through the Agent-General in London, that his application cannot be entertained.

I have, &c.,

HENRY HALLORAN,
Principal Under Secretary.

Mr.

Mr. J. H. Husband to The Colonial Secretary.

Sir,

Balranald, N.S.W., 4 January, 1877.

I have received a communication from the Inspector-General of Police which informs me that my explanation to him in reference to a bushranging affair in which I was engaged some few years ago had been forwarded to you for your perusal.

As I am now desirous of an appointment under Government, for which promise has been held out to me for some time, I have the honor to request if you will kindly now inform me whether it will be necessary for me to make further application, or will the communication already forwarded be sufficient to meet your view of my reasons for making such request.

I have, &c.,

JAS. H. HUSBAND.

Submitted, 12/1/77.

Mr. Husband, 16 Jan., 1877.

The Principal Under Secretary to Mr. J. H. Husband.

Sir,

Colonial Secretary's Office, Sydney, 16 January, 1877.

In acknowledging the receipt of your letter of the 4th instant, in which you state that a promise of an appointment under the Government has been held out to you for some time, I am directed by the Colonial Secretary to inquire by whom such a promise has been held out to you.

I have, &c.,

HENRY HALLORAN,
Principal Under Secretary.

Mr. J. H. Husband to The Colonial Secretary.

Sir,

Balranald, 26 January, 1877.

I have the honor to acknowledge receipt of your letter of the 16th instant, and in reply beg to inform you that it was the late Sir Charles Cowper who, upon my having occasion to see him on business during a visit to Sydney, told me that should circumstances ever occur in which the Government could assist me in return for the part I had taken in apprehending the bushrangers McGregor and Vaughan, that I was to make application, and he felt sure such application would be entertained. This occurred sometime in the end of the year 1862, when then Mr. Chas. Cowper was Colonial Secretary.

I have, &c.,

JAS. H. HUSBAND.

The Inspector-General of Police.—H.H., B.C., 6/2/77. I am not aware of any such promise having been made, but if Mr. Husband can produce suitable testimonials I think his application for employment might be considered by the Government. I do not know what employment he seeks.—EDMUND FOSBERY, L.-G. P., B.C., 7 Feb., 1887. The Principal Under Secretary.

Without admitting that any such promise was made by the late Sir Charles Cowper, Mr. Husband may be asked what employment he seeks.—JOHN R., 9/2/77.

The Principal Under Secretary to Mr. J. Husband.

Sir,

Colonial Secretary's Office, Sydney, 13 February, 1877.

In acknowledging the receipt of your letter of the 26th of last month, relative to your application for employment in the Public Service, and to a promise of employment alleged to have been made to you by the late Sir Charles Cowper in consideration of the part which you had taken in the apprehension of bushrangers, I am directed to request that you will state the kind of employment that you wish to obtain.

I have, &c.,

HENRY HALLORAN,
Principal Under Secretary.

Mr. J. H. Husband to The Colonial Secretary.

Sir,

Balranald, 4 March, 1877.

In acknowledging the receipt of your letter of the 13th ult., and which only reached me to-day, I have the honor to inform you that from my long residence in the bush, and my thorough knowledge of squatters and selectors, that I would be happy to accept the appointment as Inspector of Selections or Conditional Purchases if any opening, or should you feel disposed to entrust me with an appointment as Police Magistrate, where the duties at first not being too heavy I might by degrees qualify myself to be promoted to a larger sphere, I would willingly undertake the duties.

I may add that, no matter to what position you may do me the honor to appoint me, that I will faithfully and honorably perform all as required, and that you will never have cause to regret the trust imposed in me.

I have, &c.,

JAS. H. HUSBAND.

The Secretary for Lands.—JOHN R., 10/3/77.

The Under Secretary for Lands.—H.H., B.C.,

10/3/77.

Mr.

Mr. J. H. Husband to The Colonial Secretary.

Sir, Balranald, 8 April, 1877.
 I have the honor to draw your attention to a letter addressed me by the late Colonial Secretary, dated 13th February, and to my reply of 4th March last, and trust that you will kindly take into consideration the circumstances of my application; and also, I may add, to the fact of my not having brought the slightest political influence to bear upon my case, which prevents the possibility of any one demurring to an appointment made purely as a reward of merit.

I have, &c.,
 JAS. H. HUSBAND.

The Secretary for Lands.—H.P., 21/4/77. The Under Secretary for Lands.—H.H., B.C., 21/4/77. To be noted with other applications.—W.W.S., 16 May.

Mr. J. H. Husband to The Colonial Secretary.

Sir, Balranald, Murrumbidgee River, 1 July, 1877.
 I have the honor to inform you that up to the present date I have not received any reply to my communication written in answer to a letter from the late Colonial Secretary, dated 13th February, 1877, and to which I replied on the 4th March, as also to a letter addressed you on the same subject, dated April last, which still remains unanswered.

I have the honor to request that my letters may receive some attention at your hands, and

Have the honor, &c.,
 JAS. H. HUSBAND.

The Under Secretary for Lands, who will perhaps be so good as to say whether his Department affords means of employment to Mr. Husband.—H.H., B.C., 6/8/77. To be returned.

The Principal Under Secretary to Mr. J. H. Husband.

Sir, Colonial Secretary's Office, Sydney, 6 August, 1877.
 I am directed by the Colonial Secretary to acknowledge the receipt of your letter of the 1st ultimo, urging reply to your former letter respecting employment in the public service, and to inform you that your communication has been brought under the notice of the Secretary for Lands.

I have, &c.,
 HENRY HALLORAN,
 Principal Under Secretary.

I am not aware of any employment which can be offered to Mr. Husband in this Department.—W.W.S., 15 August, 1877. Returned to the Principal Under Secretary as requested.—W.W.S., B.C., 17 August, 1877. Inform that gentleman of the reference and the report.—H.H., 20/8/77.

The Principal Under Secretary to Mr. J. H. Husband.

Sir, Colonial Secretary's Office, Sydney, 21 August, 1877.
 With reference to my letter of the 6th instant, stating that your application for employment in the public service had been brought under the notice of the Secretary for Lands, I am directed by the Colonial Secretary to inform you that a reply has now been received from the Under Secretary for Lands to the effect, that he is not aware of any employment, that could be offered to you in the Lands Department.

I have, &c.,
 HENRY HALLORAN,
 Principal Under Secretary.

Mr. J. H. Husband to The Colonial Secretary.

Sir, Balranald, 1 September, 1877.
 I have the honor to acknowledge receipt of your letter of 21st August, and in reply beg to state that I can hardly reconcile your communication of that date with your previous one of February 13th last, in which you desired me to state the sort of employment I wished to obtain.

My reply to the latter was dated March 4th, and as numerous appointments have been made since that time, I have the honor to request that you will kindly inform me whether it is the intention of your Government that I shall receive any appointment or not.

I have, &c.,
 JAS. H. HUSBAND.

Will the Under Secretary for Lands kindly let me have the other papers in this case.—H.H., B.C., 11 Sept., 77. Papers 77-1,672, Misl., now herewith, 12. The Principal Under Secretary.—W.W.S., B.C., 20 Sept., 77. May be informed that the intention was, and is, if any suitable situation for which Mr. Husband is qualified to consider his application as circumstances may warrant, 21/9/77.—JOHN R., 24/9/77.

The Principal Under Secretary to Mr. J. H. Husband.

Sir, Colonial Secretary's Office, Sydney, 25 September, 1887.
 In acknowledging the receipt of your letter of the 1st instant regarding the communication which I was instructed to make to you on the 21st of last month, in the matter of your application for employment in the public service, I am directed by the Colonial Secretary to inform you that the intention of the Government was and is to consider your application as circumstances may warrant the doing so, when any suitable situation for which you are qualified, is to be filled.

I have, &c.,
 HENRY HALLORAN,
 Principal Under Secretary.

The

Mr. J. H. Husband to The Colonial Secretary.

Sir, St. Leonards, North Shore, Sydney, 2 September, 1878.

I have the honor to request that I may become the recipient of a medal for the apprehension of the bushrangers, McGregor, Vaughan, and Henderson, in the year 1862.

I beg to quote a paragraph of a letter from Sir Alfred Stephen, then Chief Justice, who states, "If it can be of any service to you I have much pleasure in saying that several years ago I knew of your doing the Colony a great service by tracking, following, and in a gallant manner apprehending a gang of robbers."

I can also with pleasure refer you to Mr. Fosbery, the Inspector-General of Police, who is aware of the circumstances, and who the year before last placed all the papers before John Robertson Esq., then Colonial Secretary, but from whom I received no reply.

I have, &c.,
JAS. H. HUSBAND.

The Inspector-General of Police.—M.F., 4/9/78. B.C., 4/9/78.—M.R.A.

The Inspector-General of Police to The Principal Under Secretary.

Police Department, Inspector-General's Office, Sydney, 6 September, 1878.

OBSERVING that Mr. Harriott's name was mentioned in the attached papers as having taken charge of the offenders, I wrote to him to obtain any information he could afford relative to the circumstances; his reply is submitted herewith for the Hon. The Colonial Secretary's information.

Mr. Husband's conduct on the occasion referred to was most praiseworthy and certainly deserving of recognition in some form by the Government. It may be open to question whether Mr. Husband has earned the distinction of a gold medal awarded for conspicuous courage and gallantry; upon this point the Colonial Secretary will decide, but I strongly recommend for favourable consideration his application for public employment, for which, as far as I can judge, he appears eligible.

EDMUND FOSBERY, I.-G.P.

[Enclosure.]

My dear Sir,

Office, Thursday, 5/9/78.

I recollect the circumstance you refer to me very well. Neither Mr. Husband's or Mr. Nixon's statements quite agree with evidence at the trial as recorded, or with the facts.

The account of the capture of the two men and recovery of the hawker Nixon's property by Mr. Husband is no doubt correct, but these men almost immediately escaped, a fact which has escaped the memories of the two claimants of metallic honors.

On my way down the Bogan I met Nixon the day after their escape, as I think, who told me of the case, and also that Vaughan, one of his assailants, was ill and lying in an old hut near. I found him prostrate with some low fever, and so ill that I think he would have died had I not taken him on with me. When at Messrs. Richardson's station, Duck Creek, two days afterwards, I think, we heard of a cheque being changed at their store by two men, and suspecting who they were, my troopers (as my men were then called) arrested Anderson and McGregor at their camp fire, some 7 miles away, the next morning. I took all three men with me to the Darling, where I kept them at the camp I formed until P.M. and Police arrived at the river. I recollect that an application was made by my trooper, John Mahoney, to your Department for cost of rations for the three men, which was referred to me some years ago. The Court discharged the men as illegally in custody, and they were then apprehended under warrant and committed for trial at Bathurst. Anderson escaped from the police whilst being conveyed to trial. There can be no doubt that Mr. Husband's behaviour in taking these men into custody and recovering the stolen property merited public recognition, occurring as it did at a time when Gardiner's gang were commencing their career. The bushranging interest no doubt were deprived of very effective recruits, but I do not feel competent to class his merit as you appear to wish me to. I find that I have been led into a much longer narrative than I intended, for which I must apologize.

Yours, &c.,
T. WARRE HARRIOTT.

At this distance of time I hardly feel called upon to authorize the issue of a medal to Mr. Husband but I have pleasure in repeating the offer of employment made by my predecessor.—M.F., 7/9/78.

The Principal Under Secretary to Mr. J. H. Husband.

Sir, Colonial Secretary's Office, Sydney, 9 September, 1878.

In acknowledging the receipt of your letter of the 2nd instant, requesting that you may be awarded a medal for the apprehension of the bushrangers named McGregor, Vaughan, and Henderson, in 1862, I am directed to inform you that at this distance of time the Colonial Secretary hardly feels called upon to authorize the issue of a medal to you, but that Mr. Fitzpatrick has great pleasure in repeating the offer of employment made to you by his predecessor.

I have, &c.,
M. R. ALLAN,
Principal Under Secretary.

Mr. J. H. Husband to The Colonial Secretary.

Sir, St. Leonards, North Shore, 13 September, 1878.

I have the honor to acknowledge receipt of your communication of the 9th instant, and have to thank you for your offer of employment in the public service. I therefore hold myself in readiness to accept any appointment for which you might deem me fitted, and assuring you that your confidence will not be misplaced.

I have, &c.,
JAS. H. HUSBAND.

Cabinet.—Inform Department of Works, Post Office, and Treasury of the promise made to this gentleman, and beg that advantage may be taken of any favourable opportunity for his employment.—M.F., 17/9/78.

The

The Principal Under Secretary to The Secretary to the Post Office.

Sir, Colonial Secretary's Office, Sydney, 18 September, 1878.
Mr. James H. Husband, of St. Leonards, who in the year 1862, effected the apprehension of three bushrangers, named McGregor, Vaughan, and Henderson, having been promised by the late Colonial Secretary employment in the Government service, in recognition of his conduct, and Mr. Fitzpatrick having repeated such promise, I am directed to request that you will invite the Postmaster-General to have the goodness to cause advantage to be taken of any favourable opportunity for Mr. Husband's employment in the Department under his Ministerial control.

I have, &c.,
M. R. ALLAN,
Principal Under Secretary.

The Principal Under Secretary to The Under Secretary for Public Works.

Sir, Colonial Secretary's Office, Sydney, 18 September, 1878.
Mr. James H. Husband, of St. Leonards, who, in the year 1862, effected the apprehension of three bushrangers named McGregor, Vaughan, and Henderson, having been promised by the late Colonial Secretary, employment in the Government service in recognition of his conduct, and Mr. Fitzpatrick having repeated such promise, I am directed to request that you will invite the Secretary for Public Works to have the goodness to cause advantage to be taken of any favourable opportunity for Mr. Husband's employment in the Departments under his Ministerial control.

2. A similar communication has been addressed to the Under Secretary for Finance and Trade, and the Secretary to the Post Office.

I have, &c.,
M. R. ALLAN,
Principal Under Secretary.

Sent to heads of Branches. Commissioner for Roads.—J.R., B.C., 20/9/78. Seen.—W.B., 21/9/87. The Under Secretary, B.C. Harbours and Rivers.—J.R., B.C., 24-25/9/78. Seen.—S.S., 27/9/78. The Under Secretary, Public Works. Commissioner for Railways.—J.R., B.C., 30-1/9-10/78. What position would Husband take? What age is he? Employment as a porter could be found for him if he is willing to accept such a position, and he is able to pass examination. Mr. Husband's status, however, may be above a position of the kind; if so, there is no vacancy at present.—CH.A.G., 7/10/78. Under Secretary, B.C. Principal Under Secretary.—J.R., B.C., 11/10/78. I think Mr. Husband's status much above that of a porter. The Under Secretary for Public Works.—M.R.A., B.C., 12/10/78. Commissioner for Railways.—J.R., B.C., 15/10/78. Noted.—D.V. (*pro* Commissioner), 28/10/78.

The Principal Under Secretary to The Under Secretary for Finance and Trade.

Sir, Colonial Secretary's Office, Sydney, 18 September, 1870.
Mr. James H. Husband, of St. Leonards, who, in the year 1862, effected the apprehension of three bushrangers named M'Gregor, Vaughan, and Henderson, having been promised by the late Colonial Secretary employment in the Government service in recognition of his conduct, and Mr. Fitzpatrick having repeated such promise, I am directed to request that you will invite the Colonial Treasurer to have the goodness to cause advantage to be taken of any favourable opportunity for Mr. Husband's employment in the Departments under his Ministerial control.

2. A similar communication has been addressed to the Under Secretary for Public Works and the Secretary to the Post Office.

I have, &c.,
M. R. ALLAN,
Principal Under Secretary.

I shall be happy to give Mr. Husband employment upon the first opportunity.—H.E.C., 24/9/78.

The Principal Under Secretary to Mr. J. H. Husband.

Sir, Colonial Secretary's Office, Sydney, 18 September, 1878.
In acknowledging the receipt of your letter of the 13th instant, I am directed by the Colonial Secretary to inform you that the Colonial Treasurer, the Secretary for Public Works, and the Postmaster-General respectively have been invited to have the goodness to cause advantage to be taken of any favourable opportunity for your employment in the Department under their Ministerial control.

I have, &c.,
M. R. ALLAN,
Principal Under Secretary.

Mr. J. H. Husband to The Colonial Secretary.

Sir, "Wambiana," Dubbo, 14 February, 1879.
I have the honor to refer you to two communications dated 9th and 18th September, 1878, that I received from the late Colonial Secretary in reference to an appointment, the promise of which has now for years been held out to me, and up to the present time I seem as far off as ever. On my visiting Sydney last September I had interviews with Mr. Fitzpatrick and Mr. Sutherland, and after their inquiries as to my claim on the Government (and a claim they considered that I had), and also as to my fitness, they both informed me that, on the first favourable opportunity, the Government would remember the services I rendered to the Colony and the promise given me, and hoped they would be able to place me in such a position where, with credit to the Government and also to myself, my services could be utilized. At the same time a circular dated 18th September, 1878, was addressed by the Colonial Secretary to the Heads of certain Departments calling attention to my application, and Mr. Driver also interested himself on my behalf. Mr. Sutherland intimated to me his intention of procuring for me an appointment as
Inspector

Inspector of Selections, should a vacancy occur or for some equally remunerative post, and on the strength of this I left town naturally expecting, as appointments are continually being made, I should not be forgotten.

I must apologize for writing to you at such length, but trust that at your hands my application may not be in vain, and that advantage may be taken of the first opportunity, considering as I do that I have not been fairly dealt with, and that up to the present the Government have broken faith with me.

I have, &c.,

JAS. H. HUSBAND.

Submitted, 17/2/79. I know nothing of Mr. Husband's claims. What are they alleged to be, and is there any circular such as is mentioned in this letter?—H.P., 20/2/79. Short *précis*.—21st. *Précis* herewith.—22 Feb., 1879.

Précis.

Mr. James H. Husband's application for employment.

22 February, 1879.

MR. HUSBAND having furnished a written statement touching a claim put forward in connection with the capture of the bushrangers McGregor and Vaughn in 1862, took occasion to apply for employment on account of his own services in that affair. He referred to "promises held out to him," which, on inquiry, he explained by mentioning a promise made to him by Sir C. Cowper when in office in 1862. In answer to an inquiry, he stated that the appointment of Inspector of Conditional Purchases or that of Police Magistrate would suit him. After some further correspondence, he was informed by order of Sir John Robertson (25 Sept., 1877) that it was intended to consider his application as circumstances might warrant, if any suitable situation should be vacant.

In September, 1878, Mr. Husband, having come to Sydney, made application for a medal on account of his services, citing a high testimony from Sir Alfred Stephen. The Inspector-General, being consulted, refrained from recommending anything as to the medal, but considered that Mr. Husband's conduct had been most praiseworthy, and strongly recommended his application for employment. Hereupon Mr. Fitzpatrick, made it known to Mr. Husband that, while he did not feel called upon to grant a medal, he "had pleasure in repeating the offer of employment made by his predecessor."

Mr. Husband reported that he "held himself in readiness to accept any appointment for which he might be deemed fitted." Mr. Fitzpatrick, after laying the papers before the Cabinet, caused identical letter to be sent to the Treasury, Works, and Post Office Departments, informing them of the "promise made," and asking that "advantage might be taken of any favourable opportunity for his (Mr. Husband's) employment." Mr. Husband was informed of this, and this is the "circular" of which he makes mention in his letter of the 14th inst.

Submitted, 22/2/79. This does not seem to me to be very satisfactory. Mr. Husband does not appear to have done anything which proves his fitness for a public office. Reminders might be sent to those Departments which were formerly communicated with.—H.P., 26/2/79.

The Principal Under Secretary to Mr. J. H. Husband.

Sir,

Colonial Secretary's Office, Sydney, 27 February, 1879.

In acknowledging the receipt of your letter of the 14th instant, concerning your application for employment in the public service, I am directed by the Colonial Secretary to inform you that you do not appear to him to have done anything that proves your fitness for a public office, but that he has, nevertheless, caused reminders to be sent to those Departments, to which on the 18th of September last, communications were addressed asking that advantage might be taken of any favourable opportunity that might present itself for giving you employment.

I have, &c.,

MAXWELL ALLAN,
Principal Under Secretary.

The Principal Under Secretary to The Secretary to the Post Office.

Sir,

Colonial Secretary's Office, Sydney, 27 February, 1879.

I am directed by the Colonial Secretary to request that you will invite the attention of the Postmaster-General to my letter of the 18th of September last, asking that advantage might be taken of any favourable opportunity that might present itself for giving employment to Mr. James H. Husband.

I have, &c.,

MAXWELL ALLAN,
Principal Under Secretary.

The Principal Under Secretary to The Under Secretary for Public Works.

Sir,

Colonial Secretary's Office, Sydney, 27th December, 1879.

I am directed by the Colonial Secretary to request that you will invite the attention of the Secretary for Public Works to my letter of the 18th of September last, asking that advantage might be taken of any favourable opportunity that might present itself for giving employment to Mr. James H. Husband.

I have, &c.,

MAXWELL ALLAN,
Principal Under Secretary.

Railways.—J.R., B.C., 3 March, 1879. There is no vacancy in the Railway Department suitable to Mr. Husband at present.—C.R.A.G. Under Secretary, B.C., 8/3/79. Ascertain in other Departments.—J.R., 11/3/79. Roads.—J.R., B.C., 12/3/79. No vacancy in this office.—W.B., 14/3/79. Harbours and Rivers, B.C., 17/3/77. Colonial Architect.—W.F. (for U.S.), B.C., 17/3/79. I have no vacancy.—J.B., 19/3/79. The Principal Under Secretary.—J.R., B.C., 22/3/79.

The Principal Under Secretary to The Under Secretary for Finance and Trade.

Sir, Colonial Secretary's Office, Sydney, 27 February, 1879.
I am directed by the Colonial Secretary to request that you will invite the attention of the Colonial Treasurer to my letter of the 18th of September last, asking that advantage might be taken of any favourable opportunity that might present itself for giving employment to Mr. James H. Husband.

I have, &c.,

MAXWELL ALLEN,

Principal Under Secretary.

I should like to see the letter of 18 September.—J.W., 4/3/79. Mr. Monday. Previous letter.—G.E., 6/3/79.

I am not aware what duties Mr. Husband can perform, or in what capacity he can be employed. If I am furnished with this information, I shall offer Mr. Husband the first suitable vacancy, in recognition of the services alluded to in separate letter.—J.W., 8/3/79.

The Under Secretary, Colonial Secretary's Department.—G.E., B.C., 10/3/79. Submitted, 11/3/79. Such information as can be obtained from papers in this office may be furnished, but I have no means of forming an opinion.—H.P., 10/4/79.

The Principal Under Secretary to The Under Secretary for Finance and Trade.

Sir, Colonial Secretary's Office, Sydney, 22 April, 1879.
In reply to your communication of the 10th of last month, forwarding a minute of the Colonial Treasurer, asking for information as to the duties that Mr. James H. Husband can undertake, if his application for employment be granted, I am directed to state that the Colonial Secretary has no means of forming an opinion on the subject, but that Mr. Husband has intimated, in the course of his correspondence with this Department, that a country appointment would be most acceptable to him.

I have, &c.,

CRITCHETT WALKER,

Principal Under Secretary.

Mr. J. H. Husband to The Colonial Secretary.

Sir, Thargomindah, *via* Bourke, 26 September, 1883.
I have the honor to request that you will cause an inspection of the correspondence that has taken place between myself and former Colonial Secretaries in reference to my appointment in the Government service. You cannot fail to see that faith has been broken, and I now place my case in your hands, feeling assured that justice will be accorded.

I have, &c.,

JAS. H. HUSBAND.

Submitted, 21/8/84. This is rather a curious case. It seems to me that if a Forest Rangership, or such like be vacant, it might be offered to Mr. Husband.—A.S., 23/8/84. The Under Secretary for Mines.—C.W., B.C., 25/8/84. Submitted.—H.W., 25/8/84. There is no vacancy.—J. P. ABBOTT, 1/9/84. The Principal Under Secretary.—H.W., B.C., 1/9/84. Submitted, 3/9/84. Cabinet.—A.S. Put by.

Mr. J. H. Husband to The Colonial Secretary.

Sir, "Woodstock," Armidale, 14 April, 1885.
I have the honor respectfully to request that I may receive appointment as Inspector of Selections under the Act now in force, and I base this application on the following grounds:—
That the Government have for many years promised me a remunerative appointment.
That during lengthy correspondence with the Government I have been asked what appointment I desired, and I replied mentioning "Inspector of Selections."
That when in Sydney six months ago I had personal interviews with Mr. Stuart, who not only expressed surprise that I had not years ago been appointed to the Service, but promised me faithfully that on the very first opportunity I should be appointed.

My papers are all in your office, and if you would kindly glance over the same I feel sure you will at once see the justice of my demand and take the necessary steps for my receiving an appointment as above (for after many years bush experience I am thoroughly well up in all selection matters), or in any other capacity where a faithful and prompt discharge of duties required would be my sole aim.

I have, &c.,

JAS. H. HUSBAND.

The Under Secretary for Lands.—C.W., B.C., 17/4/85. Place with similar applications.—C.O. The Chief Inspector, B.C., 6/5/85.

Mr. J. H. Husband to The Colonial Secretary.

Sir, "Woodstock," Armidale, 27 April, 1885.
I have the honor to draw your attention to a communication of mine dated the 14th instant, to which, up to the present, I have not received any reply.

I shall esteem it as a favour if you will, at your earliest convenience, let me hear from you on the subject of my last.

I have, &c.,

JAS. H. HUSBAND.

Inform and refer to Lands.—C.W., 5/5/85. The Under Secretary for Lands.—C.W., B.C., 5/5/85.

The Principal Under Secretary to Mr. J. H. Husband.

Sir, Colonial Secretary's Office, Sydney, 5 May, 1885.
I am directed by the Colonial Secretary to acknowledge the receipt of your further letter of the 27th ultimo respecting your application for appointment as Inspector of Selections, and to inform you that your communication has been brought under the notice of the Secretary for Lands, to whose Department the business belongs.
I have, &c.,
CRITCHETT WALKER,
Principal Under Secretary.

Mr. J. H. Husband to The Secretary for Lands.

Sir, "Woodstock," Armidale, 9 May, 1885.
I have received a communication from the Colonial Secretary, dated 5th May, by which I am informed that my application for appointment as an Inspector of Selections has been referred to you.
I have now the honor to request that such application may receive your immediate attention, as I have now been waiting for some months. Mr Stuart having promised me last September that I should receive an appointment in acknowledgment for disinterested services rendered to the Government some years since.
I may inform you that I have had now nearly thirty years' bush life, during which time I have become thoroughly acquainted with the working of the land laws, and I feel sure, should you honor me with an appointment, you would not find your confidence misplaced.

I have, &c.,
JAS. H. HUSBAND.

Mr. J. H. Husband to The Colonial Secretary.

Sir, "Woodstock," Armidale, 15 May, 1885.
I have the honor to draw your attention to a promise made by you to me, now eight months ago, of an appointment under Government, and of which up to the present moment I have heard nothing.
During your absence from Sydney I wrote twice to Mr. Dalley asking to be appointed an Inspector of Selections, and about a fortnight ago I received a letter from your office stating that my communications had been forwarded to the Secretary for Lands. I then wrote to the Secretary for Lands but as yet have received no reply. I have the honor therefore to request that you will cause some notice to be taken in this matter, and that justice which I humbly seek may be accorded me.

I have, &c.,
JAS. H. HUSBAND.

The Under Secretary for Lands.—J.B. (for P.U.S.), B.C., 9/6/85. Inform there is no vacancy.—
F.A.W., 15/6/85.

Mr. J. H. Husband to The Under Secretary for Lands.

Sir, "Woodstock," Armidale, 4 June, 1885.
I beg to call your attention to the fact that I have been waiting now for a considerable time for the fulfilment of promises made to me by Messrs. Farnell and Stuart that they would find me an appointment under the Government. Mr. Stuart, just previous to his leaving for New Zealand, told me that he would strain a point to procure me a good billet, and this he said in the presence of Mr. R. H. D. White, M.L.A. I am thoroughly competent for any appointment, such as Inspector of Conditional Purchases, Forest Ranger, or Inspector of Stock, for which I am prepared to pass the necessary examination, besides having had several years practical experience in the same. I received a letter from the Colonial Secretary's Office dated the 5th May, and numbered 85-4968, stating that my application had been forwarded to you. I immediately wrote you on the subject, but fear my letter must have gone astray, as I have, up to the present, received no reply. I shall be exceedingly obliged if you will do all in your power to obtain me an appointment. Awaiting your reply.

I am, &c.,
JAS. H. HUSBAND.

P.S.—I can produce the highest testimonials as to my qualifications for either of the appointments I apply for.—J.H.H.

The Principal Under Secretary to Mr. J. H. Husband.

Sir, Colonial Secretary's Office, Sydney 9 June, 1885.
I am directed by the Colonial Secretary to acknowledge the receipt of your letter of the 15th ultimo applying for an appointment as Inspector of Selections, and to inform you that your communication has been brought under the notice of the Secretary for Lands.
I have, &c.,
CRITCHETT WALKER,
Principal Under Secretary.

The Under Secretary for Lands to Mr. J. H. Husband.

Sir, Department of Lands, Sydney, 25 June, 1885.
In reply to your communication of the 15th ultimo, I have the honor to inform you, by direction of the Acting Secretary for Lands, that there is no vacancy for the position of Inspector of Selections.
I have, &c.,
T. H. WILSON,
(For the Under Secretary.)

Mr.

Mr. J. H. Husband to The Colonial Secretary.

Sir,

"Woodstock," Armidale, 30 June, 1885.

I have the honor to inform you that yesterday I received a communication from the Lands Office, stating that there were no vacancies for appointments in their Department.

The length of time that has elapsed since you yourself promised me a billet, and the numerous appointments that have been made during these last ten months, causes me to think that I have not been dealt very fairly with, for there are men lately appointed to positions that I myself am perfectly competent of occupying, that I am aware have not any call upon the Government, and I believe that I am about the only one that, acting as I did disinterestedly and as Sir Alfred Stephen told me "setting a good example in the Colony," by risking my life for no benefit that has not received any recognition whatever, although, from year to year I have been kept in suspense by repeated promises.

I beg, therefore, now to ask you that something may at once be done, or that I may be informed what steps (if any) the Government may think of taking in this matter.

I have, &c.,

JAS. H. HUSBAND.

The Under Secretary for Lands.—J.B. (for P.U.S.), B.C., 7/7/85. Letters from the writer have been frequently referred to this Department from the Colonial Secretary's Department, but nothing is known of the circumstances under which the claim to employment is urged or of the promises alleged to have been made, C.O., 9/7/85.

Refer to my hon. colleague the Colonial Secretary.—J.S.F., 14/7/85. The Principal Under Secretary.—C.O., B.C., 15/7/85. Submitted, 17/7/85.

I send these papers on in order that the Department might inform itself as to the circumstances which are fully described here. It seems to me that the applicant has strong claims upon the Government, and where so many appointments in connection with the Lands Department, some of which he is no doubt capable of filling, have been made during the years he has been waiting, I thought that my hon. colleague the Minister of Lands might have taken his case into consideration. I know nothing of the applicant except what his case discloses.—A.S., 23/7/85.

The Under Secretary for Lands.—J.B. (for P.U.S.), B.C., 22 July, 1885.

Petition for Employment.

J. H. Husband.

To His Excellency the Right Honorable Lord Augustus William Frederick Spencer Loftus, Knight Grand Cross of the most Honorable Order of the Bath, a member of Her Majesty's Most Honorable Privy Council, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

The Petition of James Home Husband, of Ollera, in the Colony of New South Wales,—

HUMBLY SHOWETH:—

1. That your Petitioner, in the year 1862, assisted in the arrest of certain highway robbers, named McGregor, Henderson, and Vaughan, who were subsequently tried and convicted at the Bathurst Assizes in September, 1862, before His Honor Sir Alfred Stephen, the late Chief Justice, who highly commended the conduct of your Petitioner for the part he had taken in the arrest of the said prisoners.

2. That the Honorable the late Sir Charles Cowper, who was at that time Premier of this Colony, promised your Petitioner that he would confer a Government appointment upon your Petitioner in the Government Service of this Colony.

3. That your Petitioner at one time occupied the position of Scab Inspector for the New England District, which was not a Government appointment, but one made by the Board of Directors under the Scab Act of this Colony at that time, and your Petitioner has pleasure in stating that his services in that employment gave universal satisfaction.

4. That your Petitioner has been in communication with the present Premier of this Colony, Sir Alexander Stuart, relative to the Government's promised grants, and your Petitioner expected employment of hire in the Government Service, and though your Petitioner received an assurance that he should be, he has not been so employed up to the present time. Your Petitioner respectfully refers your Excellency to the correspondence on the subject, which is to be found in the Honorable the Colonial Secretary's Department.

Your Petitioner, therefore, humbly prays that in view of the public service which he rendered to the Colony in assisting in the arrest of the prisoners mentioned without fee or reward, and of the promises made to your Petitioner by successive Governments, that he should be employed in the Government Service of this Colony, that your Excellency would be pleased to lay the matter of this Petition before the Honorable the Executive Council, and after due enquiry that your Excellency would be further pleased to recommend your Petitioner employment by the Government of this Colony in such capacity as his abilities would best fit him.

And your Petitioner, as in duty bound, will ever pray.

Dated this 1st day of September, 1885.

JAS. H. HUSBAND.

"Ollera," Guyrale, W.L.W.

The Colonial Secretary, A.L., 5/9/85. Submitted, 17/9/85. The Cabinet.—A.S. Put by for the present.—C.W., 21/12/85.

Minute by The Colonial Secretary.

GIVE Mr. Husband a note to Mr. Davies asking if he can employ him as overseer.

H.P.

Done, 10/6/87.

Mr.

Mr. J. H. Husband to The Principal Under Secretary.

Dear Sir,

Sydney, 11 June, 1887.

I have to thank you for your note to Mr. Davies, but I am sorry to say that at present there is not any opening. Should you know of anything else you would do me a great kindness by letting Mr. Barbour know; at any rate I feel sure you will bear me in mind, as what to do at present I really do not know.

With kind regards.

Yours, &c.,

JAS. H. HUSBAND.

Mr. J. H. Husband to The Principal Under Secretary.

Dear Sir,

24 June, 1887.

It was Sir Henry that told me to come to you, and what I want is this—a letter to Mr. Abigail, as I fancy that as they are going to do more fencing (*re* rabbits), there might be a chance of my getting a billet on the line. I hate troubling you, but it is really imperative that I should get something, and backed by a letter from you I might be successful.

I will call in to-morrow morning.

Yours, &c.,

JAS. H. HUSBAND.

Refer to Board.—C.W., 30/6/87. The Chairman of the Casual Labour Board.—C.W., B.C., 30/6/87. Noted and returned.—J.D., Chairman. The Principal Under Secretary, B.C., 13/7/87

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

COPYRIGHT.

(CORRESPONDENCE RESPECTING INFRINGEMENT OF LAWS OF GREAT BRITAIN.)

*Ordered by the Legislative Assembly to be printed, 24 November, 1887.*Department of Trade and Customs,
Melbourne, 10 May, 1887.

Sir,

I am directed by the Commissioner of Trade and Customs to inform you that several instances have recently occurred in which attempts have been made to introduce into this Colony pirated editions of copyright works.

As some of these works were brought overland, the Minister desires me to state that he is of opinion that the adoption of an uniform system of dealing with importations of this kind is very desirable, and with a view to such being established (if practicable) wishes me to ask if you would be so good as to state the practice prevailing in New South Wales of dealing with such importations.

I beg to forward you herewith a copy of a notice bearing upon the subject published by this Department.

I have, &c.,

A. W. MUSGROVE,

Secretary.

The Collector of Customs, Sydney.

[Enclosure.]

From the *Victoria Government Gazette* of 10th December, 1886. No. 132.

COPYRIGHT.

SEVERAL instances having recently occurred where the copyright laws of Great Britain have been infringed by the importation of pirated works, the attention of the public and of the officers of the Department is called to the sections of Acts quoted below. Importers and others are warned that it is the intention to enforce the law strictly, and the officers of the Department are hereby directed to exercise the utmost vigilance in this respect. In any case of doubt the books must be detained and the matter reported.

Department of Trade and Customs,
Melbourne, 2nd December, 1886.W. F. WALKER,
Commissioner of Trade and Customs.

47 Vict. No. 768, sect. 50.

GOODS PROHIBITED TO BE IMPORTED.

50. Books wherein the copyright shall be first subsisting, first composed or written or printed in the United Kingdom, or in Victoria, and printed or reprinted in any other part of the world as to which the proprietor of such copyright, or his agent, shall have given to the Commissioner a notice in writing that such copyright subsists, such notice also stating when such copyright will expire.

5 & 6 Vict., cap. 46, sect. 17.

That after the passing of this Act it shall not be lawful for any person not being the proprietor of the copyright or some person authorized by him to import into any part of the United Kingdom, or into any other part of the British dominions, for sale or hire any printed book first composed or written or printed and published in any part of the said United Kingdom wherein there shall be copyright, and reprinted in any country or place whatsoever out of the British dominions; and if any person, not being such proprietor or person authorized as aforesaid, shall import, or bring or cause to be imported, or brought for sale or hire, any such printed book into any part of the British dominions contrary to the true intent and meaning of this Act, or shall knowingly sell publish or expose to sale or let to hire or have in his possession for sale or hire any such book, then every such book shall be forfeited and shall be seized by any officer of Customs or Excise, and the same shall be destroyed by such officer; and every person so offending being duly convicted thereof before two justices of the peace for the country or place in which such book shall be found shall also for every such offence forfeit the sum of Ten pounds and double the value of every copy of such book which he shall so import, or cause to be imported, into any part of the British dominions, or shall knowingly sell publish or expose to sale or let to hire, or shall cause to be sold published or exposed to sale or let to hire, or shall have in his possession for sale or hire, contrary to the true intent and meaning of this Act, Five pounds to the use of such officer of Customs or Excise, and the remainder of the penalty to the use of the proprietor of the copyright in such book.

39 & 40 Vict., ch. 36.

CUSTOMS LAW CONSOLIDATION.

152. Any books wherein the copyright shall be subsisting, first composed or written or printed in the United Kingdom, and printed or reprinted in any other country, shall be and are hereby absolutely prohibited to be imported in the British possessions abroad: Provided always that no such books shall be prohibited to be imported as aforesaid unless the proprietor of such copyright or his agent shall have given notice, in writing, to the Commissioner of Customs that such copyright subsists, and in such notice shall have stated when the copyright will expire; and the said Commissioners shall cause to be made and transmitted to the several ports in the British possessions abroad, from time to time to be publicly exposed there, list of books respecting which such notice shall have been duly given, and all books imported contrary thereto shall be forfeited; but nothing herein contained shall be taken to prevent Her Majesty from exercising the powers vested in her by the tenth and eleventh Victoria, chapter ninety-five, intituled "*An Act to amend the law relating to the Protection in the Colonies of Works entitled to Copyright in the United Kingdom*," to suspend in certain cases such prohibition.

The Collector of Customs to The Secretary, Trade and Customs, Melbourne.

Sir,

Custom House, Sydney, 12 May, 1887.

In reply to your letter of the 10th instant, calling my attention to the introduction into this Colony of pirated editions of copyright books written or printed in the United Kingdom, I have the honor to inform you that it has not been the practice in this Colony to enforce the Acts you refer to, the law officers of the Colony holding that persons aggrieved by infringement of copyright, have their remedy by appeal to the Courts.

I have, &c.,

JAMES POWELL,
Collector of Customs.

[3d.]

1887-8.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CREMATION BILL.

(PETITION IN FAVOUR OF—DAVID BUCHANAN.)

Received by the Legislative Assembly, 14 February, 1888.

To the Honorable the Speaker and Members of the Legislative Assembly, in Parliament assembled.

The Petition of David Buchanan, Barrister-at-law, praying that the Cremation Bill now before your Honorable House may be passed,—

HUMBLY SHOWETH:—

That the Cremation Bill now before your Honorable House should be passed in the interests of the public health.

That the present practice of disposing of the dead by burial poisons the air, the water, and the land, and is prejudicial to the health and wellbeing of the community, disseminating disease and death silently and unperceived, and is consequently a source of constant and continually increasing danger to the living.

That the process of cremation, as it may be seen at the present time in operation in England and other countries, brings about the same result as burial, namely, consumption of the body to ashes, with this difference, that while cremation consumes the body to ashes in about half-an-hour, thereby destroying every germ of disease and every possibility of infection, the process of burial leaves the body to go slowly through all the stages of loathsome corruption, sending up poisonous gases from the earth, vitiating all water for a considerable distance around, and thus endangering, in a serious degree, the health of the people.

That the possibility of crime escaping detection through the operation of cremation is most stringently and carefully prevented by the wholesome clauses, for that purpose embodied in the Bill now before your Honorable House, which clauses preclude the possibility of such a thing; while under the process of burial there is the far more terrible and appalling danger of burial alive, which has not unfrequently happened, proved by the fact that, on disinterring bodies, many of them have been found turned right round in their coffins, and lying on their faces, with distinct evidences of a struggle, the bare thought of which out-horrors horror.

That under the Bill before your Honorable House cremation is not compulsory but optional, so that those who approve of burial may still practise that process without let or hinderance; while the thousands who would take advantage of the crematory process would relieve our burial-grounds of a frightful and dangerous overcrowding, that could not but have a beneficial effect on the general health of the people.

That although the evils of those crowded burial-grounds may not be at once seen as directly traceable to that source, still we have the testimony of high medical authority that many virulent epidemic diseases have had their origin in the poisoned air from burial-grounds, and hence the unanimity amongst medical and scientific men in recommending cremation as preferable from its cleanness, speediness, and safety to the dangerous process of allowing an innumerable crowd of dead bodies to lie in the earth, going through the slow process of corruption and decay, and unquestionably endangering the health and lives of the living.

That, on the grounds stated, your Petitioner humbly prays that your Honorable House will pass the Cremation Bill as a large contribution to the health, safety, and wellbeing of the community.

And your Petitioner, as in duty bound, will ever pray.

DAVID BUCHANAN.

DEATHS UNDER CHLOROFORM.

(RETURNS RESPECTING.)

Ordered by the Legislative Assembly to be printed, 10 July, 1888.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 24th April, 1888, That there be laid upon the Table of this House, a Return showing,—

- “ (1.) The number of deaths that have taken place when the person has been under the influence of chloroform, during the years 1885, 1886, and 1887.
“ (2.) The date and number of inquests on persons who died while under chloroform during the same years.
“ (3.) The name of Coroner or Magistrate who held the inquests.
“ (4.) Nature of verdict in each case.
“ (5.) Locality of deaths.
“ (6.) Name of places where inquests were held.
“ (7.) Name of each deceased.
“ (8.) Name of the doctor or doctors when the chloroform was administered.”

(Mr. Garrard, for Mr. Withers.)

RETURN showing the number of deaths registered as occurring from chloroform during the years 1885, 1886, 1887.

[34]

Number of Inquest.	Date of Inquest.	Name of Magistrate or Coroner.	Verdict or Finding.	Locality of Death.	Name of place where Inquest or Inquiry was held.	Name of Deceased.	Names of Doctors present when Chloroform was administered.
I. 656	1885. 18 June	Philip Snape	1885. We find that the deceased, James Kelly, died from exhaustion immediately after an operation, consisting of the amputation of his left leg, which had been rendered imperative by the nature of a wound accidentally inflicted with a knife by himself. (Chloroform was administered.)	Gulgong Hospital ...	Gulgong ...	James Kelly	Joseph Ptk. Kealey & Chas. Swanston.
II. 784	1 & 4 August.	Henry Shiell	Died from the effects of chloroform administered to her by Dr. Lowes. The jury are of opinion that chloroform should never be administered in the hospital, unless in the presence of a second medical man, and that the practice hitherto existing, of one medical man only giving chloroform in that institution should be at once discontinued.	Sydney Hospital.....	Sydney	Olivia Green	Septimus Lowes.
III. 230	1886. 17 Feb.	M. Dulhunty, J.P.	1886. My opinion is the deceased came by his death from failing of the heart caused by the administration of chloroform which, by the evidence had been properly administered by Dr. Kennedy in his medical capacity, and after all necessary precautions had been taken.	Albury Hospital	Albury	Philip Norris	William Cleaver Woods & Patrick Kennedy.
IV. 706	15 July	Henry Shiell	Died from the effects of chloroform administered to him for the purpose of undergoing an operation. We further find that the chloroform was administered with due care and caution, and that every possible effort was adopted by the medical men present to save deceased's life when unfavorable symptoms manifested themselves.	St. Vincent's Hospital.	Sydney	William Lancaster	Alfred Keenan, Charles H. Maher, and E. Fairfax Ross.
V. 258	1887. 7 Mar.	Henry Shiell	1887. Died from the effects of chloroform, which was being administered to him for the purpose of an operation. We further find that the said chloroform was administered to him with due care and caution, and that when unfavorable symptoms manifested themselves everything was done by the medical men in charge of the case that could be done, with a view of preventing if possible a fatal termination.	Sydney Hospital....	Sydney.....	Walter Charles Wagstaff.	William R. Clay and Thomas C. Fisher.
VI. 497	11 May	George Cannon Martin	We find that the said George Merritt died in the Newcastle Hospital on the 11th May, 1887. We further find that he died in accordance with the medical testimony, whilst under the influence of chloroform; we also find that all due care and skill were used in administering the chloroform.	Newcastle Hospital..	Newcastle..	George Merritt ...	John Kerr, Joseph L. Bernstein, and Cosby W. Morgan.
VII. 859	23 Aug.	Henry Shiell	Died whilst under the effects of chloroform. We further find that the said chloroform was administered with due care and caution, and that when unfavorable symptoms manifested themselves, everything was done by the medical men present with a view of averting a fatal result. The jury are of opinion that in every case in every public hospital in which it is necessary to administer chloroform, the patient should be carefully examined by not less than two medical men before the exhibition of such chloroform.	Sydney Hospital.....	Sydney.....	Mary Gilt	Thomas C. Fisher, and Ralph Worrell.
VIII. 870	25 Aug.	Chas. S. Alexander, P.M.	I find that John D. Rhodes came by his death by the inhalation of chloroform duly and carefully administered by two legally qualified medical practitioners for the purpose of performing a surgical operation on him.	Goulburn Hospital...	Goulburn ...	John David Rhodes	Robert M'Killop and Henry Ray.
IX. 1,072	24 Oct.	Henry Shiell	Died from the effects of chloroform, which was being administered to her for the purposes of an operation. We further find that due care and caution were exercised in the administration of the chloroform, and that, when unfavourable symptoms manifested themselves, everything was done that was necessary, with a view of averting a fatal termination.	Dr. Wood's residence, "Clunes," Cambridge-street.	Petersham..	Julia Constance Campbell.	Wm. E. R. Wood, Joseph Foreman, and Edward Thomas Thring.

Ordered by the Legislative Assembly to be printed, 28 September, 1887.

LEGISLATIVE ASSEMBLY.

Question :—

2. MR. McELHONE asked the SECRETARY FOR PUBLIC WORKS,—

(1.) Is it not the fact that several, if not all, the officers in charge of the various branches of the Department of Public Works sent reports to the late or present Minister for Works, suggesting that reductions in the staff of officers under them might be judiciously made without impairing the efficiency of the Service, and pointing out how such retrenchment in the public expenditure could be brought about; and is it not also the fact that up to the present time such suggestions have not been given effect to?

(2.) How many men has he appointed on the permanent-way since he took office?

Answer :—

In reply to the above question I give the following information, received from the heads of the various branches :—

Ministerial.—There is one position on the staff vacant which it is not intended to fill up at present.

Harbours and Rivers.—Recommendations have been made as indicated, and so far as they were practicable were carried into effect.

Roads.—In accordance with a Minute by Mr. Lync, Secretary for Public Works, dated 14th December, 1886, notifying the appointment of Commissioners to inquire into the working of the Department of Public Works, the Commissioner for Roads reported that changes and reductions in the office staff of the Roads Branch might be effected, by which a reduction in number of three officers and a saving of £630 per annum would be made, and this has been done. The Field Staff was remodelled, and all officers placed on the Estimates, and it was proposed that three should retire, but owing to the late passing of the Estimates and the unexpected increase of votes by nearly 30 per cent., their services will be required to the end of the year when two will retire; one must be retained until work is decreased; but a saving of £4,851 has been effected this year, which will be increased to £5,946 for 1888.

Colonial Architect.—The question is having consideration.

Railways.—1. The principal scheme of retrenchment was in the Existing Lines Branch in regard to the maintenance of the permanent-way. The Engineer responsible for the safety of the line accompanied the suggested scheme with the statement that he was not convinced that in the long run there would be any real economy in the proposed reductions. I have hesitated therefore to give full effect to the scheme, more especially in view of the wet weather we have had during the past season, which has necessarily required more attention to the roadway than at the time the scheme was proposed, but partial effect has been given to it by drafting the men to new extensions as opened instead of taking on new hands. 2. Seven new hands have been appointed since the present Government came into office; the number of permanent-way men to the mile of line prior to the present Government coming into office was 0·86; it is now 0·82.

1887-8.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

DEVONSHIRE-STREET CEMETERY.

(RETURN SHOWING THE NAMES OF THE TRUSTEES OF.)

Ordered by the Legislative Assembly to be printed, 9 February, 1888.

[*Laid upon the Table, in accordance with promise made, in answer to Question No. 7, Votes No. 15, Thursday, 20 October, 1887.*]

DEVONSHIRE-STREET CEMETERY.—NAMES OF TRUSTEES.

CHURCH OF ENGLAND.

Mr. ROBERT ATKINS, Secretary, reports that the present Trustees for the above denomination are,—The Most Reverend the Bishop of Sydney, and William Hezlet and Alfred James Lewington,—Esquires.

ROMAN CATHOLIC.

The Very Reverend Dean Sheridan states that he is the sole surviving Trustee for this section, the other appointed Trustees, the Very Rev. Archbishop Vaughan and Mr. Charles Farrell, being dead.

PRESBYTERIAN.

The Reverend R. S. Paterson reports that Alexander Dodds, Esq., M.L.C., and himself are the Trustees for this section.

INDEPENDENT.

Mr. Samuel Thompson states that Dr. P. S. Jones, T. B. Rolin, J. Palmer, Esquires, and himself, are Trustees for this section.

WESLEYAN.

For this section the Rev. Dr. Sellors reports that all the original Trustees are dead, and that he has reason to believe that no successors have been appointed.

FRIENDS OR QUAKERS.

No information has been obtainable as to the names of the Trustees of this section. The Sexton states that no interment has taken place in the area allotted to them for several years.

JEWISH.

Mr. Frankel, the Secretary to the Great Synagogue, reports that the Trustees for the Jewish section of the Devonshire-street Cemetery are dead, and he is not aware of any others having been appointed.

1887-8.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

DIVORCE EXTENSION BILL.

(PETITION FROM W. M. COWPER, COMMISSARY FOR BISHOP OF SYDNEY, AGAINST.)

Received by the Legislative Assembly, 7 June, 1888.

To the Honorable the Legislative Assembly of the Colony of New South Wales in Parliament assembled.

The Petition of the undersigned William Macquarie Cowper, M.A., Commissary of the Bishop of Sydney, with the advice of the Standing Committee of the Synod of the Church of England in the Diocese of Sydney, within the said Colony;—

HUMBLY SHOWETH:—

That your Petitioner is conscientiously opposed to the provisions of the Divorce Extension Bill now before your Honorable House:—

1. Because he believes that the proposed extension of the conditions of Divorce is at variance with the Christian law as laid down in the New Testament.

2. Because he believes that it is likely to impair the sense of the sacredness of marriage and of the responsibility of entrance upon the married state, to introduce dangerous facilities for disruption of the marriage tie, and so to inflict a serious injury upon the domestic and social welfare of the whole community.

3. Because he considers that variation upon so important a matter from the law established in England and in other Colonies of the British Empire is in itself undesirable, and is likely to introduce serious difficulties into family and social life.

Your Petitioner, therefore, earnestly prays that your Honorable House will be pleased to refuse your assent to the said Bill.

And your Petitioner, as in duty bound, will ever pray, &c.

WILLIAM M. COWPER,
Commissary for the Bishop of Sydney,
With the advice and by the desire of the Standing Committee of the Synod.

1887-8.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

DIVORCE EXTENSION BILL.

(PETITION FROM CERTAIN MINISTERS OF VARIOUS RELIGIOUS DENOMINATIONS AGAINST.)

Received by the Legislative Assembly, 12 June, 1888.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The respectful Memorial of the undersigned Ministers of Religion of various Religious Denominations in this Colony,—

HUMBLY SHOWETH:—

That your Petitioners regard with much concern the Bill now before your Honorable House intituled the Divorce Extension Act.

That while entertaining other strong objections to the provisions of the said Bill, by which divorce is facilitated, your Petitioners are still more strongly opposed to that which provides for the remarriage of the persons divorced—the guilty as well as the innocent.

That your Petitioners feel the greatest repugnance to this provision, inasmuch as it gives to those who have been guilty of the greatest cruelty and sin, opportunity to repeat their offences upon fresh victims of their licentiousness.

That your Petitioners—accepting the solemn declaration of our Lord Jesus Christ, that “Whosoever marrieth her that is put away committeth adultery,” as the law of the Christian Church—are of opinion that any legislation which provides for the remarriage of one who is put away affords a direct sanction to sin, and is opposed to the Divine law in the Seventh Commandment.

Your Petitioners therefore pray your Honorable House to withhold your assent from the aforesaid Bill.

And your Petitioners, as in duty bound, will ever pray, &c., &c.

[Here follow 182 Signatures.]

1887-8.

NEW SOUTH WALES.

DIVORCE EXTENSION BILL OF 1887.

(DESPATCH RESPECTING.)

Presented to Parliament by Command.

The Secretary of State for the Colonies to The Right Honorable Lord Carrington,
G.C.M.G.

(N.S.W., 12.)

My Lord,

Downing-street, 27 January, 1888.

Her Majesty's Government have given very careful consideration to your Despatch, No. 147, of the 29th July, 1887, transmitting the Bill to amend and extend the law of divorce, which you had reserved for the signification of Her Majesty's pleasure.

After full deliberation they have come to the conclusion that they ought not to advise Her Majesty to assent to the Bill, and I request you to invite the attention of your Ministers to the reasons for that conclusion as stated in this Despatch, which should be communicated to both Houses of the Legislature.

2. Her Majesty's Government have no desire to interfere with legislation which is within the competence of the Parliament of New South Wales, and laws operative within the Colony on the subject of matrimony and divorce fall, as a general rule, within that class of legislation. But it is impossible for Her Majesty's Government to ignore the exceptional importance of the proposed alteration of the existing law. It will introduce a divergence between the law of this country and the law of New South Wales upon a matter most deeply affecting the morality of the people and the happiness of families. It will make those who are wives or legitimate children in one country unmarried mothers and illegitimate children in the other; and it will make the same action innocent in one country and, possibly (as constituting bigamy, if followed by remarriage), criminal in the other.

3. Her Majesty's Government do not feel that these consequences, grave as they undoubtedly are, render it incumbent upon them to advise the Queen to exercise her power of controlling the privilege of legislating for their own requirements, which has been conceded in full measure to the Australian Colonies. But they are of opinion that, in order to reduce to the lowest possible point the inconveniences which this change in the law would cause, three precautionary conditions should be satisfied before it is adopted.

4. In the first place, so far as possible, it should be ascertained that the change is the deliberate resolve of the people of New South Wales, and is not likely in the future to be modified by any accidental alteration in the balance of political parties; and it would therefore be, in the opinion of Her Majesty's Government, more expedient that the Queen's assent to such a measure should be deferred until it has been again passed by another Parliament after the occurrence of a General Election.

5. Secondly, it appears to Her Majesty's Government to be exceedingly inconvenient that a different law on this subject should prevail among the different Colonies of Australia. The many evils which would result from the existence of a conflict of law upon this subject between more distant parts of the same Empire will be intensified in the case of communities so closely connected as the Australian Colonies, if they should not be prepared to adopt similar legislation on this subject.

6. And thirdly, Her Majesty's Government are of opinion that the operation of the change should be confined to those who are really inhabitants of the Colony in which the new law is made, and should not be extended to persons whose residence for any reason is transitory. They are of opinion, therefore, that, in place of a two years' residence, a legal domicile should be required, as the condition of a capacity to obtain a divorce under this measure.

7. If the Bill had been made to apply only to persons possessing a domicile in New South Wales, a decree of dissolution pronounced by the Supreme Court would doubtless be recognized elsewhere; but the Bill substitutes for domicile a residence of two years, and it is far from certain that the Courts of this country, or of other colonies, or of foreign countries, would in such circumstances recognize a decree of the Court of New South Wales, which may alter the status of their citizens. Your advisers are probably familiar with the case of *Niboyet v Niboyet*, L.R. 4, P.D. 1, in which the Court of Appeal held, by a majority of two to one, that the Court had power to decree a dissolution of the marriage of a French subject who was resident in England, but who still retained his French domicile; but I would observe that, even in that case, both the Judges who formed the majority admitted that it did not follow that

the decree would be recognized in other countries; and that it might be that the parties, although in England no longer husband and wife, might in other countries be still so regarded.

8. It should further be borne in mind that cases might occur in which the husband had never lost his domicile in another country, and his residence in New South Wales, though extending over two years, had only been temporary, and with the intention of leaving the Colony after obtaining the decree; in which case the probability would be much increased of other countries declining to recognize the validity of such decree. I may also observe that, as I am advised, an English Court would refuse to recognize the validity of a divorce between two English residents in New South Wales effected upon the grounds provided by the Bill.

9. I request you to invite your Ministers, in connection with this Despatch, again to give their careful consideration to the Despatches No. 40, of Sir Michael Hicks-Beach, dated the 15th July, 1878, and No. 18, of the Earl of Kimberley, dated the 22nd June, 1880, on the Bills then proposed to amend the law relating to divorce and matrimonial causes. The reasoning of those Despatches (of which copies are enclosed for convenience of reference) appears to be equally applicable in the present case; and I need only add, in the words used by Lord Kimberley, that Her Majesty's Government are confident that the Legislature of the Colony will not object to such an amendment of the Bill as may secure that the fact of domicile should in all cases be substantiated as a necessary condition of the exercise of the jurisdiction.

10. In conclusion, then, I have only to repeat that Her Majesty's Government would strongly urge upon your Advisers the inexpediency of enlarging the grounds upon which a divorce can be obtained, until it has been fully established that the general feeling of the Colony is decidedly in favour of the change, and until after communication with the other Australian Colonies it is made clear that they are prepared to adopt a similar alteration in their laws. Her Majesty's Government, however, attach still greater importance to the necessity of securing that legal domicile, and not a transitory residence, such as that of two years, laid down in the Bill, should be a condition of the exercise of the jurisdiction of the Court in decreeing a divorce. They earnestly trust that these views will, upon further consideration, commend themselves to your Ministers.

I have, &c.,
H. T. HOLLAND.

APPENDIX I.

Sir Michael Hicks-Beach to Sir Hercules Robinson.

(N.S.W., 40.)

Sir,

Downing-street, 15 July, 1878.

I have not failed to give my best consideration to the important questions involved in the Bill passed by the Legislative Council and Legislative Assembly of New South Wales, and reserved by you for the signification of Her Majesty's pleasure, entitled, "An Act to amend the Law relating to Divorce and Matrimonial Causes," a transcript of which, accompanied by a protest signed by eight Members of the Legislative Council, was transmitted in your Despatch, No. 57, of the 30th of April, 1877.

2. I regret the delay which has occurred in replying to your Despatch, but the questions raised by this measure appeared to my predecessor, as well as to myself, to be of such grave importance as to demand the most careful deliberation; and I have felt it my duty to seek for advice from the highest legal sources before communicating to you the view taken by Her Majesty's Government.

3. In the first place, I have to point out that this Bill, if passed into law, would conflict with the law of divorce in England. It would no doubt place the law of New South Wales upon the same footing in respect of the grounds for dissolving marriage as the law of Scotland. But it would only partially assimilate the marriage laws of the Colony and Scotland; seeing that they would still differ in respect of the conditions which are required for contracting a legal union, so that the Colony under your Government would acquire a system of marriage law peculiar to itself, and differing from that prevailing in any part of the United Kingdom, or in any other portion of Her Majesty's dominions.

4. If the effect of such legislation could be confined to New South Wales this difference would be a matter of Colonial concern, and I should not feel it necessary to dwell upon the social results which might follow from the proposed change, or the facilities for collusion which it might give. But as questions of marriage and divorce affect persons domiciled in various parts of the Empire, it appears to Her Majesty's Government highly impolitic, unless for the strongest reasons, to add to the discrepancy already unfortunately existing between the laws in force in different parts of Her Majesty's Dominions.

5. I am advised that under this Bill, except in cases where the parties to the petition clearly had their domicile in New South Wales, very delicate and difficult questions might follow upon a decree of dissolution of marriage, and the future status of an innocent wife might be very grievously compromised beyond the Colony were she to follow up a successful suit by the solemnization of a second marriage during the life of the divorced husband. If the first marriage were an English one, and the parties had not changed their domicile, the decree of dissolution would be simply inoperative in England for any purpose, and the same inconvenience might possibly follow if the marriage had been contracted elsewhere out of the Colony, and the parties had not acquired a domicile in New South Wales.

6. The very serious consequences that may result from changes of this nature in the marriage law are illustrated so forcibly in the reasons given by the House of Lords in 1860, for disagreeing to certain amendments made by the House of Commons in "The Conjugal Rights Bill," introduced by Lord Campbell into the House of Lords, that I will quote them for your information.

Their Lordships stated that they disagreed to the amendments, among other reasons, "because the most grievous inconvenience arises from the existing state of the law of England and Scotland on this subject, as declared by judicial decisions in both countries, for according to this when parties have been married in England a sentence of divorce pronounced in Scotland is valid in Scotland and a nullity in England, so that the divorced women still remains the wife of the husband in England, but the husband and wife are free to contract another valid marriage in Scotland, and the children of such second marriage are legitimate in Scotland, but bastards in England; and the husband or wife marrying in England after the divorce in Scotland is liable to be indicted for bigamy and punished by penal servitude."

7. I have now explained to you the reasons for which I have found myself compelled to refrain from submitting this Bill for Her Majesty's assent.

I request you to communicate this Despatch to both Houses of the Legislature, and I trust that they will appreciate the considerations by which I have been actuated in arriving at this decision.

I have, &c.,
M. E. HICKS-BEACH.

Lord

APPENDIX II.

Lord Kimberley to Lord A. Loftus.

(N.S.W., 18.)

My Lord,

Downing-street, 22 June, 1880.

The question of the advice to be tendered to Her Majesty, with respect to the Bill passed by the Legislative Council and Legislative Assembly of New South Wales and reserved by you for the signification of Her Majesty's pleasure, entitled, an Act to amend the Law relating to Divorce and Matrimonial Causes, a transcript of which accompanied your despatch, No. 62 of the 4th of December last, has been under the consideration of Her Majesty's Government; and after careful examination of the very grave issues raised by this measure, they have arrived at the decision which I have now the honor to convey to your Lordship.

2. Her Majesty's Government are fully sensible of the force of the reasons which induced their predecessors to advise Her Majesty to withhold her assent from two Bills previously passed by the Colonial Legislature, identical with the Bill now in question, viz. (1), the inexpediency of introducing conflict and divergence on a most important subject affecting family and social relations between the law of New South Wales and that of England, and every other part (except Scotland) of the British Empire (including the other Australian Colonies) between which and New South Wales there is a constant interchange of population; and (2) the confusion and uncertainty as to the validity of subsequent marriages, the status of children, and rights of succession to property which would ensue if sentences of dissolution of marriage were pronounced by the Courts of New South Wales, the validity of which was not recognized in other countries. But whilst on the general ground that it is much to be lamented that a different marriage law should prevail in different parts of the Empire, Her Majesty's Government very greatly regret that the New South Wales Legislature has determined to persevere in this measure, they have come to the conclusion that it is not their duty any longer to resist the principle of a Bill which has now been passed for the third time, and with full knowledge of the objections to which I have referred, provided certain modifications are introduced into it, which I will now proceed to explain.

3. Her Majesty's Government understand the object of those who introduced and supported the Bill in the Council and Assembly to be, that a sentence for dissolution of marriage, on the ground of the husband's adultery, may be pronounced by the Matrimonial Courts of the Colony when, and only when, the parties are domiciled in New South Wales. In order effectually to secure this object, they are of opinion that it should be made a condition by express words in the Act, that any Judge pronouncing such a sentence should first be satisfied, by sufficient evidence in the suit, that the married parties were so domiciled. Of all questions of fact which may require incidental determination for the purpose of ascertaining rights of status, succession, or inheritance, it would be impossible to suggest one more frequently involving difficult and complicated inquiries and voluminous evidence than that of domicile; and it is most important that it should be clearly laid down by law as the duty of a tribunal, on which it is proposed to confer a new matrimonial jurisdiction, dependent for its effect on domicile, to require proof for that domicile as the foundation of its jurisdiction, and to afford easy means of obviating, by the judgment and evidence on record, the questions which might otherwise be liable to arise in neighbouring colonies or in Great Britain or elsewhere at a distance of time, and after the remarriage or death of either of the parties. The proof of domicile, when both parties are living, will generally be much more easy and simple than after their deaths, and (in the absence of collusion) even an admission of the fact of domicile by a husband defendant upon the record, so made as to satisfy the Judge, might often be held conclusive if an attempt were afterwards made to raise the same question.

4. Her Majesty's Government are confident that the Colonial Legislature will not object to such an amendment of the Bill as may secure that the fact of domicile should in all cases be substantiated, as a necessary condition of the exercise of the jurisdiction, and, if this should be done, they will be prepared to advise Her Majesty to give her assent to a Bill passed in that form.

5. But in the absence of such an express condition, they think that there would be a very serious risk of suits being instituted and sentences of dissolution of marriage pronounced under the proposed law in cases in which there was no real colonial domicile, and of the consequent confusion and uncertainty above adverted to, I am therefore unable to submit the Bill in its present shape for Her Majesty's assent.

I have, &c.,
KIMBERLEY.

1887-8.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

ESTATE OF THE LATE CAPTAIN JOHN FOSTER COCHRAN.

(COPIES OF PAPERS RELATING TO.)

Ordered by the Legislative Assembly to be printed, 26 June, 1888.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 12th June, 1888, That there be laid upon the Table of this House,—

“ Copies of all letters and other documents, including extracts from Police Court records and books in the office of the Inspector-General of Police, relating to the estate of the late Captain John Foster Cochran, who died in the Sydney Infirmary on 2nd October, 1861.”

(*Mr. Neild.*)

Senior-Constable Kelly to Mr. Police-Superintendent Ryeland.

No. 1 Police Station, Sydney, 10 June, 1888.

Re Captain John Foster Cochran.

SENIOR-CONSTABLE KELLY respectfully reports, for the information of Mr. Superintendent Ryeland, that he has made diligent search in the police records for the month of October, 1861, but cannot find any trace of the name inquired for.

The Senior-Constable has been informed by Mr. Russell, Secretary to the Sydney Hospital, that the person, subject of inquiry, was admitted to that institution by Dr. Houston (since deceased) on the 7th October, 1861, suffering from consumption, and died on 22nd of same month. The name recorded in the Hospital register is John Foster Cochran, 63 years of age, a labourer, a native of Ireland, and was admitted to the hospital as a pauper patient.

Inquiry has been made at the Registrar-General's Office, and search having been made, no trace of any will in the name of John Foster Cochran could be discovered in the Wills Branch of that Department.

Inquiry has also been made at the office of the Curator of Intestate Estates, and search having been made in that Department no estate belonging to the deceased is mentioned in the records of the office from 1860 to 1875.

THOS. KELLY,
Senior Constable.

Forwarded to the Inspector-General of Police.—J. RYELAND, Supt., 11/6/88. The Principal Under Secretary.—G. READ, A.I.-G., 11/6/88.

1887-8.

NEW SOUTH WALES.

EXTRADITION.

(AUTHENTICATION OF PAPERS—DESPATCH.)

Presented to Parliament by Command.

Department of Justice,
Sydney, 27th February, 1888.

His Excellency the Governor directs the publication, for general information, of the following despatch, dated 28th December, 1887, from the Principal Secretary of State for the Colonies.

WILLIAM CLARKE.

(Circular.)

Downing-street,
28th December, 1887.

Sir,

With reference to my predecessor's Circular Despatch of the 29th December, 1885, relative to the authentication of extradition papers required by section 5 of the Act passed in August, 1882, by the United States Congress, I have the honour to transmit herewith, for your information, a memorandum embodying a copy of a form of authentication adopted in 1883. This certificate, with the certificate of the United States Minister in similar terms, was accepted, in the particular case, as sufficient by the United States Courts, and the same forms have been employed in subsequent cases without successful objection being raised to them.

The memorandum also comprises an extract from a letter from the Counsel to Her Majesty's Consulate-General at New York, concerning the particulars required by the United States Courts when a request for extradition for the crime of forgery is transmitted by telegraph.

I have, &c.,
H. T. HOLLAND.

The Officer Administering the
Government of New South Wales.

AUTHENTICATION OF DOCUMENTS IN UNITED STATES EXTRADITION CASES.

MEMORANDUM.

In consequence of difficulties which had arisen as to the Evidence in Extradition cases, the United States Congress in August, 1882, passed an Act "Regulating Fees and practice in Extradition Cases"; and section 5 of this Act now contains the law as to the Authentication of the Documentary Evidence offered in support of a demand for the Extradition of a fugitive offender from the United States.

The section is as follows:—

Section 5.—That in cases where any depositions, warrants, or other papers, or copies thereof, shall be offered in evidence upon the hearing of any Extradition Case under title sixty-six of the Revised Statutes of the United States, such depositions, warrants, and other papers, or the copies thereof, shall be received and admitted as evidence on such hearing for all the purposes of such hearing, if they shall be properly and legally authenticated so as to entitle them to be received for similar purposes by the tribunals of the foreign country from which the accused party shall have escaped; and the certificate of the principal diplomatic or consular officer of the United States resident in such foreign country shall be proof that any deposition, warrant, or other paper, or copies thereof, so offered, are authenticated in the manner required by this Act.

The following form of certificate for the authentication of extradition papers was prepared by the Home Office and attached to the papers in a case which occurred in 1883:—

I hereby certify that, to the best of my knowledge and belief the signatures "Chas. Lister" on the annexed Warrant of Arrest, and on the annexed information and depositions on which the Warrant was granted, are the signatures of Charles Lister, Esq., one of Her Majesty's Justices of the Peace for the City of Manchester, having authority to issue and receive the same, and I further certify that such documents so signed by a Magistrate having jurisdiction in the place where the same were issued and taken and authenticated by a Minister of State and sealed with his official seal, would be received as evidence of the criminality of a fugitive criminal from the United States charged before a tribunal in Great Britain with an Extradition crime under the Extradition Treaty between Great Britain and the United States.

(S)

(Signed)

A. F. O. LIDDELL,
Under Secretary of State for the
Home Department.

Whitehall, 4th May, 1883.

The above Home Office Certificate of 4th May, 1883, and the Certificate of the United States Minister which followed the terms of the Home Office Certificate, were accepted in this case as sufficient by the United States Courts. The same forms of Certificate have been employed in all subsequent cases, and, so far as the Home Office is aware, no successful objection has been raised to them.

The following is an extract of a letter from Messrs. Marbury, Counsel to Her Majesty's Consulate-General at New York, concerning the particulars required by the United States Courts when a request for Extradition for the crime of forgery is transmitted by telegraph:—

(EXTRACT.)

1. It is of prime importance, where a person is apprehended upon a telegraphic despatch, to have as far as possible complete particulars of the character of the offence committed, to secure his detention until the depositions and documentary evidence shall be received. In cases of forgery the despatch should contain a description of the instrument claimed to be forged, date, amount if draft or bill upon whom drawn, name of payee, place of utterance, name forged or character of forgery, and the person defrauded, or as much of these as can be furnished, and more to be supplied as soon as obtained. Where adequate particulars are contained in the despatch, which is the foundation for the complaint, there will be no difficulty in having the accused remanded until the arrival of the papers.

1887.

(THIRD SESSION.)

NEW SOUTH WALES.

FISHERIES OF THE COLONY.

(REPORT OF THE COMMISSIONERS OF FISHERIES UP TO 31 DECEMBER, 1886.)

Presented to Parliament by Command.

REPORT of the Commissioners of Fisheries for New South Wales on the Fisheries of the Colony, to the 31st December, 1886.

To the Honorable The Colonial Secretary.

Sir,

We have the honor to submit to you the following Report on the Fisheries of the Colony to the end of the year 1886.

After the presentation of our last very voluminous Report, it became apparent to us that the system under which the Oyster Fisheries on our coast were being worked was proving absolutely destructive to the continued existence of the natural beds, and that unless some other system of dealing with them could be devised, oysters would soon become a product of the past.

Our deliberations in this regard resulted in the passing into law of the present statute, the "Oyster Fisheries Act, 1884."

By this Act the indiscriminate dredging of oysters under license, which had been working such havoc both on the natural beds and the foreshore deposits, had to give place to the more equitable and economic system of distributing the oyster-bearing areas amongst persons who were willing to hold them under leases of lengthened tenure, and to devote themselves to the not unprofitable work of cultivating and producing oysters as a means of livelihood; the Crown on its part affording to the lessees such an absolute control over their leased areas, and such complete protection against trespass, that your Commissioners were warranted in expecting not only that the hitherto wholesale destruction of oysters would cease, but that the supply would be regular and ample for the demands of the market. That we were justified in our expectations may be gathered from the fact that within five months from the measure becoming law, no less than 700 applications for leases had been received, and these applications embraced the enormous extent of over 505,000 lineal yards of foreshore.

It will be readily comprehended that such an influx of applications pouring in immediately upon the enactment of the new legislation, very much retarded the work of modelling the Department to fit it for the administration of the new law.

As it was found impossible within any reasonable time to have all these areas measured and reported on, with the view to the early issue of the leases, and as, nevertheless, it was our desire that the applicants should speedily obtain some beneficial results from the areas for which virtually they had paid the State a rental, we availed ourselves of the provision afforded by the Regulations to allow applicants to work their areas under permits. These permits entitled the holders to enter upon and occupy the portions of foreshore for which they had applied for the purposes of cultivation, and removal of oysters.

This

This system would have worked fairly well, and to a large extent would have compensated *bonâ fide* workers for the non issue of their leases, but it was found that the law as it stood did not protect their work from spoliation by others, and it was by no means an infrequent experience of these holders to find their areas, upon which they had expended considerable labour and time, divested by unprincipled persons of every oyster that could be found there. Notwithstanding this, however, the yield of oysters shows a very fair average, no less than 14,774 bags having been won during the year 1886, as against 12,801 bags taken during 1885.

We note that the greatest output has been from Port Stephens, 3,223 bags. This is followed by 2,683 bags from the Hawkesbury and 1,922 bags from the Clarence, 1,469 from the Clyde, and 1,324 bags from the Shoalhaven and Crookhaven Rivers.

At the close of the year 1,831 leases had been applied for, and of these 736 had been granted.

Very nearly all the coastal waters are oyster-bearing, but those above enumerated may at present be regarded as the chief sources of supply.

The royalty collected during 1886 amounted to £2,216 2s. The greatest take was obtained in January, when 2,103 bags were won. The monthly average during the summer was about 1,436 bags. Fully detailed information respecting the catch will be found in Appendix C.

In addition to oysters locally produced, there were received from other colonies during 1886 no less than 4,906 bags. These oysters are not subject to royalty, and lessees complain very strongly of the heavy handicap under which they are thus placed. To instance this it may be stated that it costs in freight alone on an average 2s. 9d. per bag to land oysters in Sydney from Port Stephens, and on arrival they are subject to an additional charge of 3s. per bag for royalty, while at the same time oysters can be carried from New Zealand for 2s. 6d. per bag, and on arrival are not subject to any Crown charge whatever.

As against this argument, it must be remembered that lessees hold their areas at a very nominal rental, only 20s. for every 100 lineal yards of foreshore, and as these areas in some instances extend into deep water 600 yards, and on an average quite 300 yards, it will be apparent that for 20s. a considerable superficial area, viz., from 6 to 12 acres, is assured to the lessee.

Of course it is not contended that all of such an area would be oyster bearing, but in judiciously selected portions much of it would be naturally so, and much more could be made so by artificial means.

Referring again to the advantage accruing by the leasing over the previous system of indiscriminate dredging, such advantage is especially evidenced in the report for 1885 of the Inspector for the Northern Division of Fisheries, who, writing of the output of oysters from the Clarence River, says, that when opened to dredgers in 1883 it was worked by sixty-four boats, and although these boats were limited to two days work each per week no less than 1,000 bags were won within a month, and this rate of catch had in four months so reduced the beds as to necessitate their immediate closing against further dredging.

This same river, worked under lease during 1885 under the new law, which makes oysters the property of the lessees, was under judicious management allowed to produce an average of only 166 bags per month.

A like experience, though perhaps in a less degree, has been gained in other coastal waters, but we cite the fact to show, that while under the licensed dredging system the oyster-beds and shore deposits were really plundered and destroyed, they may under the present system of leases embracing them, and affording to the lessees a secure tenure and an almost permanent vested interest, be expected to thrive and yield a steady market supply.

The Crown holds large areas of shore on which the oyster thrives only to a certain limit, and then ceasing to grow further remains useless for market purposes. Oysters of this kind are to be found in abundance in the lower parts of most of our tidal waters, the rocks between high and low water mark being literally plastered with them.

In the Oyster Fisheries Act provision has been very wisely made for the disposal of these immature oysters to holders of oyster culture leases for the purpose of stocking their areas, which in many instances, notably so in the Hawkesbury River, are more suitable for fattening than production; this provision has been largely availed of, and will be more so as soon as its advantages become more widely known.

Coming to the year 1886, it is to be noted, with much regret, that a fatality has exhibited itself amongst the oysters, but it has been almost confined to the waters north of Port Jackson. This disease
in

in the tidal waters between the Richmond River and Port Macquarie is attributed by the Inspector to the appearance of a fine sea-weed which was washed into the inlets, and decomposing in quantities on the beds caused the destruction. In the Evans River the deposit was so heavy as to destroy not only the oysters but the fish also.

In the Manning the fatality is attributed to deposits of mud and sand. In the Hawkesbury, to an extensive growth of congewoi, and in the Hunter and Port Stephens to the ravages of a small worm which, boring through the shell, affords the entrance for a deposit of fine mud, by which the mollusc is eventually killed.

Your Commissioners having given very careful consideration to the latter, which at one time it was thought would lead to the ultimate extinction of the oyster in at least the northern waters, have arrived at the conclusion that although it has asserted itself in different ways in different waters its existence is due to the one cause of the long continued absence of floods. It is a recognised fact that oysters will not thrive in water of a too great salinity—it is the salinity of the water which hinders the perfect development of oysters at the mouths of tidal waters,—while in waters, the salinity of which is modified by the admixture of a considerable proportion of fresh water, oysters arrive very rapidly at maturity and fatten quickly.

Until floods of sufficient volume and force occur to clear the accumulated mud, silt, or marine vegetable growth, as the case may be, we may not expect our oyster-beds to resume that vigor and productiveness which they previously possessed.

Mr. Benson, the Inspector for the Southern Division of Fisheries in his report writes somewhat despondingly of the state of the oysters in his district. He states that lessees are not paying that attention to their areas which it was reasonably expected they would do, and that their sole desire seems to be to get as many marketable oysters off the beds as possible, leaving none for breeding purposes, thus annihilating the very source of production. While saying thus much of the greed and negligence of these lessees, he notes, as exceptions, certain leaseholders in the Clyde River, who, he says, are carrying on their workings in a systematic manner, and while obtaining a fair return for their outlay are improving their holdings considerably.

Mr. Benson's summarised remarks on the several waters in his division, which are to be found in the appendices hereto, afford a very fair idea of their respective oyster-bearing capabilities; a perusal of these remarks and of the reports from inspectors on other coastal waters is invited.

We have much satisfaction in stating the revenue returns from our Oyster Fisheries during the last three years.

In 1884 there were received as rental, £2,980; and as royalty, £1,098 3s. 6d. In 1885, as rental, £2,141; as royalty, £1,920 3s.; and in 1886, as rental, £3,641 5s. 2d.; as royalty, £2,216 2s.—making a total of £14,996 13s. 8d., giving an average of £4,998 17s. 10d. per year.

During the year 1885 a very strong pressure was brought to bear against the granting of leases for oyster culture along the shores of Port Jackson and its tributaries. It was represented that such a disposition of those shores would debar the public from what was deemed to be their legitimate rights to those shores for purposes of recreation and amusement.

In deference to this represented public feeling we succeeded in obtaining the cancellation of all the applications which had been made for areas in those waters.

Following upon the success of the agitation in regard to the Port Jackson shores, numerous signed petitions were sent to us praying that leases might not be granted in George's River.

After very careful deliberation your Commissioners having regard to the public interest could not see their way to meet the prayer of the petitioners.

George's River is a very capable oyster-bearing water, and to have withdrawn it from the leasing provisions of the Oyster Fisheries Act would, in fact, have been to deprive the general public of a prolific source of supply. However, we decided on a compromise which we think is in the public interest equitable. We have proposed the issue of leases on all parts of its shores, excepting for a distance of one half mile on either side of the Railway Bridge. This area we propose to reserve from lease for the use of persons seeking pleasure and recreation.

A further concession to recreationists is to be found in the proclamation as a Public Oyster Reserve of the shores of the National Park at Port Hacking.

FISH.

The supply of fish to the Metropolis is obtained almost wholly from the Home Division of Fisheries, the limits of which are Port Stephens on the north, and Shoalhaven on the south. In the absence of proper facilities for carriage, the waters to the north and south of this Division are too remote to admit of fish being landed in a fresh state, except in the extreme winter months.

In these remoter waters, however, fish of all kinds abound, but are not utilised, except for meeting local demand, or affording a supply to a few Chinamen engaged in curing them for the China market.

Your Commissioners contemplate with deep regret the fact that so far capital and enterprise have not been forthcoming to render these enormous preserves available to the metropolis and its suburbs as an article of every day food.

When it is remembered that in the greater number of homes fish is regarded as a luxury to be indulged in only occasionally, it might reasonably be expected that any scheme which would result in bringing that food to those homes in cheapness and plenty would yield abundant profit to the enterprising persons embarking in the undertaking.

In the appendices will be found carefully prepared tables setting forth particulars of the supply of fish food to the Sydney Markets.

The large quantities shown therein to have passed into consumption will perhaps be a matter of surprise to many.

As an evidence that a popular taste for fish food exists amongst us to a large degree, we quote from these tables and offer the quotations in support of our argument that a properly conceived scheme for the carriage of fish from remote waters would yield handsome results.

During the last year no less than 45,583 baskets of mixed fish were brought to the Fish Market, besides 1,130½ dozens of schnapper, 1,060 dozens of mullet, 19½ dozens of jew-fish, 173½ dozens of king-fish, 660 dozens of salmon, 117½ dozens of various large fish, and 2,673 dozens of cray-fish. The sales of these fish realised no less an amount than £34,331 18s. 9d.

In 1884 the supply reached 32,956 baskets, which realised £30,115 17s. 1d., while the revenue derived by the Department for fishermen's and fishing-boat licenses was £543 10s.

In 1885 there were passed through the Market 38,162 baskets on which £30,789 were realised, the Departmental revenue being £564.

If with this large supply, fish be, as it certainly is, a rarity in most homes, what a vastly increased total might be quoted if, in plentiful supply, it could be brought to every door.

There may be said to be in the home division seven principal sources of supply. We give them in the following order of productiveness:—Lake Macquarie, Botany and George's River, Lake Illawarra, Broken Bay, Tuggerah, Port Stephens, and Port Jackson. To conserve these sources to the greatest possible extent we have adopted the practice of closing against the use of fishing-nets all the tributaries of those waters. These tributaries thus become havens of protection to spawning fish and young fry, as, by a provision of the Fisheries Act, persons found netting in them render themselves liable to the confiscation of their nets and to a considerable money penalty. The beneficial result of exempting these waters from the use of fishing-nets has already made itself apparent, and its advantages are beginning to be admitted even by some of those fishermen who have made the loudest complaints of the curtailment of what they have been accustomed to regard as their legitimate right.

For convenience of perusal we epitomise the inspectors' reports on some of the principal waters in the home division.

LAKE MACQUARIE.

This lake continues to be our most productive water; no less than 12,739 baskets of fish were taken from it during last year, which is very nearly double the quantity taken from the Illawarra Lake.

Its productive quality causes it to be very much worked by fishermen; and the temptation to evade the law by using nets of unlawful length and mesh seems to have been very great, for it has resulted in the conviction and punishment of several fishermen for offences—in some cases more than once repeated.

As in other waters so in this have the tributaries and entrance been in the interests of the fishermen protected against the use of fishing nets.

The

The great drawback which has to be contended with is the difficulty in sending the catch to market.

The lake entrance, being very shallow, can be availed of only at certain states of tide, and the plan of sending the catch by boat to a steamer in waiting off the bar was attempted; the attempt, however, fell through—strange to say, for want of support—so the old plan of sending *via* Newcastle had to be resumed. This route involves a journey by dray of some 12 miles over a very rough road; the subsequent transference of the fish to the steamboat; and at the Sydney end, from the steamboat to the fish market—the result being, especially in hot weather, that a large proportion of the consignments are, on arrival at the market, found to be unfit for human food.

It may be noted that during last summer the lake channel became the resort of an immense quantity of salmon, a fish not highly esteemed for food, but very destructive to the more edible varieties. In December some persons undertook the task of destroying these salmon, and were largely successful; but the remedy created an evil of another kind, for, having left the results of their efforts to decay on the shore, the pestilential odours arising therefrom rendered it for a time almost impossible for the residents to remain in the locality.

This lake is not oyster-bearing; a few are to be found in isolated spots, but not in quantity.

GEORGE'S RIVER AND BOTANY.

The inspector states that these waters are more abundant than ever in their supply of fish, notwithstanding that their number of net and line fishers have doubled. Oysters on the contrary have not thriven although the fall of spat during the year was unusually plentiful.

LAKE ILLAWARRA.

This water is a very important breeding ground and nursery for fish, so much so that it was found necessary to secure its closure against the use of fishing nets; but, on urgent representations by the local fishermen that this step had deprived them of their means of living and prevented the residents of Illawarra from obtaining any fish whatever, the closure was eventually modified so as to include only the tributaries and the sea entrance with a certain length of shore on either side of each, leaving the great body of the lake open to the use of fishermen.

The Inspector, whom consequently it was found necessary to appoint to protect the closures from netting, reports that the lake is extremely prolific, and certainly it has contributed very largely to the metropolitan supply.

It is worthy of remark that the local supply, the alleged curtailment of which was made a matter of such urgency by the fishermen, is reported by the Inspector to be very small, averaging only one basket per week. He states that the fishermen will not trouble to hawk fish about the district, as they find it more profitable to ship direct to Sydney, so that, notwithstanding the now modified closure, the matter of local supply must be almost as deficient as before.

There are no oysters in Lake Illawarra.

THE HAWKESBURY.

Both net and line fishing are carried on in this water, and in the lower part of the river it is continued through the year, for being so adjacent to Sydney fish can be carried fresh in the hottest weather.

The supply during the past year has, however (it is hoped temporarily), fallen off materially, owing to continuous blasting operations on the railway line, the effect of which has been to drive the fish away from some of their most usual grounds. Shoals of large mullet and quantities of young fish frequent the upper parts of the river.

Schnapper, bream, and other fish find the waters of Cowan Creek—which, like those of the ocean, are clear and salt—a favourable resort.

During the spring and summer months schnapper entered the creek in large numbers to spawn; it was noted that at this time they would not take the bait.

The oyster fishery has been only moderately successful ; those taken were chiefly rock oysters--artificial layings yielding only a small percentage, but owing to their having been stocked for only a very short time better results ought not to have been expected. Besides, a disease, popularly known as the worm disease, began to show itself towards the end of last year, and has fatally affected some of the layings. It is feared that this fatality will materially lessen the supply for 1887.

BRISBANE WATER

is reported to be improving greatly in its oyster-bearing capabilities. The Inspector states that two years since not twenty bags of marketable oysters could be found, while during last year some 300 were produced. He attributes this result to the careful oversight and attention of lessees.

There are said to be thousands of yards in Woy Woy Creek fit for oyster culture, but they have not, so far, been availed of, owing to their liability to interference by the railway labourers working on its banks.

TUGGERAH BEACH LAKES.

These waters are not oyster producing.

During last year they were not netted, except in certain months, but in those months they maintained their celebrity for fish supply. Regarding the importance these waters possess as breeding grounds and nurseries, we have bestowed much attention upon them.

We think that the temporary prevention of netting has been beneficial ; but if the tributaries and entrances to the lakes can be protected against the use of fishing-nets, we think it probable that the main water may be kept available for fish capture unimpeded by further restrictions.

PORT STEPHENS.

The supply has been fair in quantity, and obtained principally from the lower part of the Harbour, and from the outside fishing grounds.

The Inspector reports that, during the months from May to August, there were no fish in the upper waters of the harbour. After this they appeared in large numbers ; but as the upper waters are too remote for means of transit, they are not much netted by the fishermen.

PORT JACKSON.

This water comes seventh in order of productiveness. The Inspector reports that in the early part of the year fish were very scarce in all of the Port, from Middle Harbour to Hen and Chicken Bay on the Parramatta River ; but while this was the case as regards fish, prawns were more plentiful than has hitherto been known. We regard the tributaries of this Port as of great value as nurseries for spawning fish, and we keep them constantly closed against netters. Inspector Mulhall and his assistants are most unceasing in their efforts to protect these closures from plunder, and very much improvement in the shape of increasing supply is observable.

INLAND FISHERIES.

As we have before had the honor to report, the Inland Fisheries are very imperfectly protected by legislation so that our control of them is but little more than nominal. The principal catch is made on the Murray River in the vicinity of Moana, from whence it is forwarded by rail to the Melbourne market. During last year 46,828 lb. were so captured and sent. This catch is by far the lowest we have yet recorded, the quantity obtained in 1883 having been no less than 330,568 lb. ; the decrease, which is attributed to the high state of the waters and the vigour with which the Inspector has suppressed the use of the destructive bag nets previously in use, has been regular since that year, for in 1884 the catch weighed 155,918 lb., in 1885, 73,752 lb., and in 1886, as already stated, 46,828 lb.

As however all of this supply has gone to the Victorian market the decrease has not affected New South Wales prejudicially. The Murray River fisheries cannot be said to be revenue producing, for there are only about twelve men engaged in catching, and these men are not required by law to pay any license fee. All the law demands is an annual fee of £1 for the boats they use.

What

What supervision we are maintaining over this water is practically for the benefit of Victoria only. We think an effort should be made to conserve this fishery for our own people, or at least that legislation sufficient to prevent the supervision being an unremunerative charge on our revenue should be provided.

We invite attention to the report of the local Inspector, Mr. Osborne Wilshire, which will be found in the appendix.

The Lake George fishery, which by rail to Bungendore can be reached in six or seven hours, is within distance which can be made readily available for a supply of fresh water fish to the metropolis; this fishery is deserving of more attention than it has hitherto received from fishermen.

Your Commissioners have pleasure in stating that in response to an invitation from the local Commission they undertook the preparation and collection for the Colonial and Indian Exhibition, 1886, of exhibits which should be illustrative of the condition and progress of the fisheries of the Colony.

These exhibits consisted of specimens of oysters taken from our several coastal waters, also of the various edible kinds of fish preserved to our order, both in the fresh and smoked state by two of the principal meat preserving companies, the Sydney Meat Preserving Company (Limited), and Messrs. Walsh, Elliott, and Rennie, of Botany, as well as tinned oysters, prawns, and crayfish, and a collection of fish oils.

In addition, assisted by the Australian Museum, we supplied a splendid collection of Australian sponges.

Dr. Von Lendenfeld, who has made this matter of sponges one of diligent research, estimates the number of known species at 350, and considering how little knowledge we possess of the Australian marine invertebrates, compared with our acquaintance with those in European seas, we may conclude that the species in our waters exceed in number those found in any other locality of like extent.

In addition, and with like assistance, we were enabled to supply photographs, as well as life-size oil paintings, of Australian fish, fish in alcohol, stuffed fishes, and marine mammalia.

A reference to the Appendix B, 1885, will afford information as to the extent and description of these exhibits, and we venture to think that at that Exhibition New South Wales was in this particular direction worthily represented.

Your Commissioners find a satisfaction in being able to state that in the three years, 1884, 1885, and 1886, the revenue of the Department has in total exceeded the expenditure by the sum of £2,151 1s. 1d., as will be seen from the following table:—

Year.	Revenue.			Expenditure.								
1884	£5,865	17	9	£4,525	6	9
1885	4,988	4	0	5,565	18	8
1886	7,089	3	2	5,700	18	5
				<hr/>						<hr/>		
				£17,943	4	11				£15,792	3	10

Excess of total revenue over expenditure, £2,151 1s. 1d.

Your Commissioners hope early next year to be able to report a similar favourable result for 1887.

Since your Commissioners last had the honor to address you, three vacancies occurred on their Board by reason of the resignations of Messrs. Geddes, Want, and Thomas. These vacancies were respectively filled by the appointments of Messrs. James Richard Hill, Alexander Oliver, M.A., and S. H. Hyam, M.P., so that the Commission at present consists of the following:—

James C. Cox, M.D., President;
 Edward Pierson Ramsay, LL.D.;
 James Richard Hill;
 Alexander Oliver, M.A.;
 S. H. Hyam.

In October of the present year Drs. Cox and Ramsay's tenure of office as Commissioners will have expired.

In the permanent staff at head quarters no change has taken place beyond the appointment of the Secretary, Mr. Lindsay Thompson, to the additional position of Chief Inspector of Fisheries. The creation of this office was considered desirable in the interests of the fisheries. In order to cope with the large number of applications for leases for oyster culture, and to secure the efficient performance of the general business of the Department, it was found necessary to employ temporary assistance; some of this assistance being still required has so far been retained.

In the inspectorial staff we have to report the removal of Mr. Jas. Quinan, the Inspector for the Home Division of Fisheries, his services having been dispensed with. It is not at present intended to recommend that the vacancy so created be filled; also, the appointment of Mr. D. W. Benson to Lake Illawarra, of Mr. C. H. Otway to Port Stephens, in the room of Mr. J. C. White, resigned, and of Mr. Angus Sutherland to Moruya *vice* Captain Tranent, deceased. We may note also the appointment of Bourne Russell as an Acting Assistant Inspector of Fisheries at Eden, and Frederick Nelson to a like position at Lake George.

In submitting this Report for your consideration, we think we are warranted in offering our congratulations upon the general results achieved.

JAMES C. COX,
President.

1884.

APPENDIX I.
HOME FISHERIES DIVISION, 1884.
Inspector Quinan's Report.

Sir,

Fisheries Office, Sydney.

I do myself the honor to furnish herewith, for the information of the Commissioner of Fisheries, my report as to the condition of the fisheries, "Home Division," for the year 1884.

Port Jackson and Tributaries.—During the early months of the year fish of all descriptions were very plentiful—all the bays in the rivers were well stocked with young fish—mullet especially were in great abundance. Great care and constant watching, both by night and day, had to be exercised to prevent illegal netting; several breaches of the Act were brought under notice, and fines inflicted by the Magistrates. In a separate return furnished by me will be found the quantity of fish sold at the Fish Market, Woolloomooloo, that arrived from all the fishing stations within the Colony, also the prices obtained, which were very fluctuating. It has been noticed that if more than two hundred baskets of fish are brought to market in any one day the prices obtained are not remunerative, and an excess of this quantity is often difficult to dispose of.

Several sources of pollution to the waters have been specially reported upon; thousands of small fish are destroyed by polluted sewers.

Oyster culture in Port Jackson is a thing of the past; the numerous picnic parties have stripped the rocks of all oysters, the Fisheries Act giving them power to do so. Several applications have been made for oyster culture areas; at the Middle Harbour small oysters are in great abundance, but they never grow to marketable size, nor from inquiries I have made do they increase in size if transplanted to other waters. Messrs. Woodward and Comins obtained small areas for the purpose of reviving oysters which arrived out of condition, principally those from New Zealand, but it has not proved to be a remunerative enterprise—fully one half the oysters are lost. Assistant-Inspector Mulhall has charge of these waters.

Botany and George's River.—These waters are of great value in consequence of the abundance of fish at all times of the year, and the fresh state that they can be placed in the market for sale (often alive even in summer-time); this is also one of the most permanent fishing stations in the Colony, supporting quite a village of fishermen and their families. During the mullet season, about February, tons weight of these fish are captured and sold very cheap, enabling the public to enjoy for a few pence what at other times becomes a luxury.

The George's River is not availed of much by net fishermen; they state that the river is closed at the wrong time of year. During the summer months, when the waters are open, the blubber fish are so numerous that it is impossible to use their nets; tons weight of this blubber gather in the net and injure it, besides killing at once any food fish that may have entered the net. Thousands of young fish are caught by hook and line.

George's River produces some of the finest oysters in the Colony, those obtained from the rocks about 40 feet deep being the largest and best flavoured; these are only obtainable by a diver in full dress, and costs, I am informed, more than £1 per bag to gather. Foreshore, rock, and mangrove oysters are fairly plentiful; the men employed on the railway bridge have, as well as the general public, helped themselves pretty freely, and greatly injure the growth. Several applications for oyster culture leases have been made and reported upon. A special report has been furnished upon the source of pollution to these waters. Assistant-Inspector Grant is in charge of these waters, and pays periodical visits to —

Port Hacking.—These waters are visited by the Botany fishermen, who obtain good hauls of nearly all description of fish; they are easily brought to market, and are always fresh. The upper portion of these waters is closed during the winter months for breeding purposes.

The foreshores are well stocked with oysters, though rather small. Several applications have been made for oyster culture areas, and reported upon.

Shoalhaven and Crookhaven Rivers.—Although fish are very plentiful in these waters, it is only in the winter months that consignments can reach Sydney in good condition; during the summer months fish are preserved, and find a ready sale at all times. A good many of the residents have turned their attention to oyster culture, and have applied for areas for that purpose. The foreshores are well stocked with oysters, which grow on the mangrove flats; these are being gathered and laid down on suitable beds; they grow very rapidly and are generally in good condition, and demand a fair market value. Assistant Inspector Gordon is in charge of this district and visits.—

Jervis Bay.—A number of fishermen from Sydney established a fishing station at the bay, and although they made excellent hauls and a good prospect of doing well, fish being in great abundance and of good quality, they were obliged to abandon it, as no reliance could be placed upon steamers calling regularly for their fish; they tried overland cartage to Greenwell Point, Shoalhaven, but found it not to answer.

Mud oysters were some years ago very plentiful in the bay, but they are nearly all exterminated from natural causes.

Currumbene Creek at the head of the bay is well stocked with mangrove oysters, and some applicants for leases are planting them out; they are not of much value without cultivation.

Hawkesbury River, Broken Bay, and Brisbane Water.—These waters are under the supervision of Assistant Inspectors Smith and Black; the former is stationed at Peat's Ferry, and as fishing operations are almost confined to the Lower Hawkesbury, his principal work lies in looking after the oyster beds; extensive areas have been taken up for oyster culture. Spat is very plentiful; dredge oysters none; the oysters obtained from this river are those growing on the rocks, and alike in character and excellence to those obtained at George's River.

Mr. Smith pays an occasional visit to Brisbane Water; the oysters growing in these waters are very small, and not of much commercial value; areas for cultivation have been applied for and cultivation commenced.

Assistant

Assistant Inspector Black, who is stationed at Barrenjoey, looks after fishing operations and vessels outward-bound conveying oysters; by his vigilance that destructive process known as stalling has been put a stop to, many thousands of small fish were left on the sands to die, by this illegal netting.

Fish were very plentiful in these waters, the returns show a supply equal to Botany, and a steamer leaves Peat's Ferry late at night and conveys fish direct to the Woolloomooloo market, arriving there at 4 a.m., thus assuring a fresh supply each morning.

Tuggerah Beach Lakes.—These lakes are situated about 2 miles inland from Bungaree Norah, where a small steamer calls for consignments of fish, the fish are carted overland to the steamer, and arrive at the markets early in the morning; as a rule the fish are in good condition; at times, however, the weather prevents the steamer from calling, and great loss is occasioned by the fisherman.

These lakes abound with fish of all description, including squire or young schnapper. Fish have a peculiar smoky flavour from these waters; I attribute this to the feed, which on account of the stillness of the water, having little if any rise and fall of tide, the entrance being very narrow, cannot get away to make room for younger growth.

Oysters are not to be found in these waters. These fisheries are not under the supervision of a local Inspector. I paid a visit during the latter part of the year.

Lake Macquarie.—The great drawback to the fishing industry at these lakes is the rough and tedious journey to the shipping port at Newcastle, 12 miles distant; although the greatest care is taken in packing the fish, they very often arrive in such a bruised condition that while consignments have to be condemned as unfit for food to the great loss of the fisherman. Some of the finest fish on the coast are obtained in these waters, the large blue-nosed whiting and black bream are especially prized for their size and delicious flavour; the lakes are so extensive that no fear need be entertained that the fisheries could be exhausted.

The channel leading from the entrance to the lakes, about 4 miles in length, is permanently closed as a breeding ground, is well stocked with fish of all description; the sharks and salmon at certain seasons of the year drive the fish into the lakes; this channel is so tempting to the fishermen that Assistant Inspector Boyd has to keep a watch both by night and day so as to prevent illegal netting; offences of this nature have taken place, and offenders fined.

Port Hunter and Tributaries.—The once famous oyster-beds at this place are, as regards dredge-oysters, completely destroyed by the worm which enters the shell and kills the fish—hardly a live oyster is to be found below low-water-mark; the foreshores are fairly stocked with rock and mangrove oysters. Numerous applications have been made for oyster culture areas. Mr. Gibbins, one of the lesscos, laid a quantity of New Zealand oysters down on his beds so as to restock them, but they shared the same fate as those indigenous to the waters. I am of opinion, and have expressed it in my reports some time back, that unless the beds are thoroughly cleaned at flood-time this disease cannot be eradicated.

Fish are plentiful, but strange to say the supply obtained by local fishermen does not equal the demand, the outlying mining townships rely upon their fish supply from Lake Macquarie.

In the upper Hunter, near Raymond Terrace, during the season a good supply of prawns is obtained, where they are cured, and sent to all parts of the Colony; these are not accountable for in the market returns. Assistant Inspector Curran, who has charge of this district, has his time fully occupied, he also attends to shipments of oysters from Port Stephens that reach Newcastle *en route* for Sydney by way of Raymond Terrace and by water.

Port Stephens.—In consequence of the local Assistant Inspector not supplying me with returns, although I have repeatedly brought this neglect of instruction under notice, I am unable to furnish any information in respect to the fisheries at this place; during the early part of the year several consignments of oysters were seized, being under the regulation size; the market report shows a good supply of fish.

Lake Illawarra.—This lake is distant from Wollongong about 6 miles, and is well stocked with fish; Mullet Creek, one of the tributaries, is teeming with the fish it is named after; meshing nets are only used, and large consignments are sent to Sydney in the winter months. This lake, although quite as valuable as Lake Macquarie, is without an Inspector.

In conclusion, I would respectfully recommend that the waters of Port Jackson be closed during the winter months (April to September), from the Heads upwards—this will give the Harbour a rest, without in any way diminishing the market supply; also that an Assistant Inspector be appointed to look after the fisheries at Lake Illawarra.

I have, &c.,
JAMES QUINAN,
Inspector, Home Division of Fisheries.

APPENDIX J.

NORTHERN FISHERIES DIVISION, 1884.

Inspector Temperley's Report.

THE Fisheries Act of 1881 having been amended by the Fisheries Act of 1884, the natural oyster-beds were worked during 1884 under two systems—the licensing boat system in the first half of the year, and the leasing system by means of provisional permits in the latter part of the year.

The large number of licensed dredgers in the Clarence River at the close of 1883 having reduced the beds there by February proceeded to the Richmond and Evans Rivers. They discovered a natural oyster-bed in the latter river, reduced it, together with the natural beds on the Richmond, and then proceeded elsewhere. A number of them settled down on the Manning River, and continued to dredge its already reduced beds—working for as low a quantity as half a bag per day—the high price of the oysters returning sufficient remuneration for even so low a yield.

The evils previously pointed out in connection with the licensing boat system continued while that system lasted. The dredgers rushed from river to river working the beds regardless of their condition, and depositing cullings despite supervision, where they were least liable to give further trouble, and regardless of injury to the natural beds, while the old leases having expired the work of laying immature oysters was entirely discontinued.

In

In the third quarter most of the dredgers' licenses had expired, and the natural beds were allowed a brief but at the same time much-needed period of rest.

The immediate outcome of the Amended Fisheries Act of the 21st July, 1884, was a large amount of inquiry for suitable cultivation sites and numerous applications for oyster-bearing foreshores. The work of measuring the proposed leases and reporting upon the applications considerably increased the duties and responsibilities of the officers in charge of the respective inlets. Where the applications were for foreshores not previously surveyed and charted the identification of sites was rendered difficult, and on this account was often inevitably delayed.

Concerning oyster deposits there was but one natural oyster-bed in the whole of the Division in good working condition, viz., the House bed on the Clarence River. The remainder were in a more or less reduced condition. Those which had been closed for any length of time and left to improve themselves unassisted showed but little or no improvement whatever. The permits issued in the latter part of the year enabled the lessees to work the areas they had secured, but the House bed was not worked up to the close of the year, the delay being due to the difficulty attending the determination of prior right between contending applicants for the lease. In several instances where permits had been issued the lessees set to work without delay to restock their deep-water areas with immature oysters from the foreshores.

The spawning season of 1884 was not of a hopeful character. That the oysters had spawned was evidenced by the presence of young oysters, but the spawning season had evidently been a moderate one, and was generally unnoticed during its occurrence.

The total quantity of oysters procured in the North Division was 3,186 bags, and the royalty paid thereon £435 15s.

The following return shows the rivers from which the oysters were procured, and the quantities and royalty for each:—

River.	No. of Bags.	Royalty paid in	Royalty collected	Total Royalty.
		Sydney.	locally.	
		£ s. d.	£ s. d.	£ s. d.
Tweed River	105	16 12 0	4 8 0	21 0 0
Richmond River	715	104 2 0	3 3 0	107 5 0
Evans River	228	27 0 6	2 5 6	29 6 0
Clarence River	664	81 10 6	2 7 6	83 18 0
Port Macquarie	80	12 0 0	12 0 0
Manning River	1,226	153 8 0	1 17 6	155 5 6
Cape Hawke	168	27 0 6	27 0 6
Total	3,186	421 13 6	14 1 6	435 15 0

With reference to fish, the north coast rivers teem with an abundance of the finest kinds, but the present means of transit are not sufficiently rapid to admit of their conveyance in a fresh condition to Sydney. During the last few years the local fishermen on the rivers possessing good steam communication have shipped fresh fish to Sydney during the winter months—the quantity shipped depending entirely upon the length and severity of the winter. That of 1884 was an exceptionally mild one, and consequently was not favourable to extensive operations. The rivers which contributed to the winter supply were the following:—The Clarence River, Manning River, Macleay River, and Port Macquarie.

On the Clarence River the experiment was tried of boiling down mullet for oil. It was found that on an average it required about forty fish to produce one gallon of oil. The appliances used were meagre and crude, and the oil was injured for the want of sufficient apparatus to reduce the fish in quantity while they were fresh. The men engaged in the work had neither the knowledge nor the means to purify their produce, and the result of boiling down stale fish was the production of a much discoloured and offensively odorous oil that realized in the market the insignificant price of 2s. per gallon. The boiled fish which, after the extraction of the oil, would have been good food for poultry or pigs, was not utilized in any manner, and the work was eventually discontinued.

Detailed Report upon the Oyster-bearing inlets of the Northern Division of Fisheries.

Tweed River.—The Tweed River contains several natural oyster-beds, and a fair quantity of mangrove oysters. The beds were closed since 1882, and were undisturbed until May, 1884, when they were worked for two months only and were then reduced. These beds have not recovered after their rest to the extent that was expected, and they furnish another illustration of the fact that exhausted oyster-beds require something more than mere rest to ensure their recovery.

The river contains a good quantity of foreshore oysters on shallow flats, well adapted for restocking the natural beds.

The Brunswick River.—The Brunswick River has not had any oysters taken from it during the Fisheries Act of 1881. This is due to the difficulties attending their transit. There are both in the north and south arms quantities of foreshore oysters; both of the mangrove and rock oyster class, and there are many suitable sites for laying them down. When the necessities of the large extent of alienated land in the Brunswick River have developed means of transit this river will contribute its quota of oysters to the metropolitan supply.

The Richmond River.—The natural oyster-beds of the Richmond River having been undisturbed for about six months were reworked in February by several licensed dredges. They procured a quantity of good oysters by hand in shallow water and in Shaw's Bay, a portion of the river not previously worked, and since reserved to the residents of Ballina as an oyster recreation reserve. The oysters opened well up to April, and fell off in condition during the winter months.

No spawning season was observed, but it is believed there was a moderate spawn in the early part of the year. The upper bed was considerably worked, first under license, and later under a lessee's permit, and is only in a moderate condition.

The lower bed not being worked during the latter half-year, pending the determination of the right to lease, is in a fair condition, and contains a large quantity of bank oysters well adapted for laying down.

Evans River.—A natural oyster-bed on a rough bottom was discovered and dredged here during the year, and oysters shipped from the river for the first time.

The bed is situated at a narrow rocky part, known as the "Iron Gates," through which the tide flows with considerable rapidity. The oysters at this place spawn freely, and from the Gates downwards to within a quarter of a mile of the river mouth the foreshores are abundantly covered with foreshore oysters.

The principal drawback to oyster cultivation here is the absence of suitable sites for laying down, the bed of nearly the whole of the river being more or less affected with drift sand. Some of the oysters were shipped by the Clarence River, but the greater part of them *via* Woodburn, on the Richmond River.

The Clarence River.—The Clarence River contains several good natural oyster-beds, and but very few foreshore oysters. The House bed is one of the best natural beds in the Colony. At the close of 1884 it was in first-class condition, having a good coating of marketable oysters and an abundance of young oysters. It was not worked, for the reason stated in the Annual Report. The remaining natural oyster-beds in the Lower Channel have been closely dredged by licensed dredgers, and were in a reduced condition. The Upper Channel beds have been undisturbed for two years, and have not recovered to the extent that could have been expected from their period of rest. Portions were smothered by a coating of thick spongy weed; other portions contained at the end of the year a moderate quantity of young oysters.

Some of the oysters in the Lower Channel beds spawned during November.

Bellinger River.—The Bellinger River has not had its natural oyster-beds worked for two years. They are slow in recovering. The lower bed is covered with the thick spongy weed that has proved to be so injurious on the Clarence River. It is thought probably that a good fresh would remove this weed from the beds. There is only a small quantity of foreshore oysters on this river.

Nambuccra River.—The Nambuccra River contains but a moderate quantity of oysters, and has not had any marketable oysters shipped from it within the Fisheries Act of 1881.

The Macleay River.—The Macleay River is devoid of oysters, and in this respect differs from every river, creek, or inlet on the coast. It is the exception to the rule that the inlets of New South Wales are oyster-bearing. As previously pointed out, there are deposits of old shell on the river banks, showing that oysters formerly existed.

Port Macquarie.—Port Macquarie contains deep-water natural oyster-beds, and a fair quantity of foreshore oysters of the mangrove class. The deep-water natural beds, for some unaccountable reason, almost died out, and although they have had a long period of rest they have not recovered. The oysters shipped from here during 1884 were chiefly procured from the foreshores.

The oyster lessees on this river have restocked portions of the natural oyster with quantities of foreshore oysters.

Camden Haven.—The oyster deposits in this inlet consist of good natural beds, and a fair quantity of foreshore oysters of the rock and mangrove class. The beds had been closely worked under an expiring lease in 1883, and by licensed dredgers later on in the same year. They were then in a low condition. They have not been worked during any part of 1884.

Manning River.—This river contains several good natural oyster-beds, and a fair quantity of mangrove oysters.

It will be seen from the returns for the whole of the rivers that the Manning produced in 1884 more oysters than any other of the northern rivers.

The price which the oysters realized was sufficient remuneration for the dredgers to work when they could procure but two bags per week.

The result is that the beds have been much dredged and overworked, and are in a low condition.

Some of the lessees have restocked their leases with foreshore oysters.

Cape Hawke (Wallis Lake).—The oyster deposits at Cape Hawke lie in shallow water, and consist chiefly of a large extent of good bank oysters.

Licensed dredgers worked this inlet in January; it was then provisionally closed, and was reworked after a rest of eight months by lessees under permits. The old exhausted natural beds, being in shallow water, are well adapted for developing the immature bank oysters, the work of lifting them up after they have been laid down being effected by hand without the use of a dredge. The principal lessee, on obtaining his permit, at once entered extensively into the work of laying down.

THOS. TEMPERLEY,

Inspector, Northern Fisheries.

29 August, 1885.

APPENDIX K.

SOUTHERN FISHERIES DIVISION, 1884.

Inspector Benson's Report, Southern Division of Fisheries, Narrawilla Creek to Wagonga.

Sir,

Bateman's Bay.

I have the honor to forward my report on the Southern Fisheries for the year 1884.

Clyde River.—This river is the most prolific oyster-bearing water in the Southern Division. For full particulars of its natural oyster-beds and capabilities for oyster culture I would respectfully refer you to the Chief Inspector's and my own reports for the year 1883.

On the 1st September, 1883, the lease held by Mr. F. J. Gibbins, of the Clyde River, expired, and in January, 1884, four of the principal deep-water beds, *viz.*, Schnapper Point, Rocky Point, Bold Shore, and Big Island beds, were, in accordance with my recommendation, opened to licensed dredgers, who worked them till the 5th of October, during which time sixteen hundred and forty (1,640) bags of oysters were obtained. Permits were also granted in the beginning of September to several applicants who had applied, under the provisions of the 4th section Oyster Fisheries Act, 1884, for leases for oyster culture, and had paid

paid the first year's rent to ship oysters, resulting in the transmission to market of an additional 337 bags, making a total of 1,977 bags of oysters shipped to Sydney from the Clyde River during the year 1884.

When it is taken into consideration that during the ten years prior to 1884 no less than 13,436 bags of oysters were shipped from this river, there can be no doubt of its oyster-bearing capabilities.

During the year sixty-seven applications for leases, representing an area of 41,700 lineal yards, on the Clyde River, were received by me to report on; several of the applicants having conformed to the 2nd Regulation under the Act entered upon sufferance into occupation, laid down young oysters, and otherwise improved the areas for which they had applied. There seems, however, a disinclination among many to incur expense until there is a certainty of the leases being granted.

Most of the applicants are practical men, and have applied in good faith. The foreshores generally are naturally suitable for growing and fattening. Large quantities of spat and brood are available for laying down, and nothing now remains but the granting of the leases to make oyster culture on the Clyde River an extensive and profitable industry.

Turross River.—This river was held by Mr. Robert Martin, under a lease which expired on the 28th February, 1884, but on the application of the lessee for permission to remove, after the expiry of his validated lease, oysters which had been laid down by him, the Commissioners of Fisheries were pleased to grant him an extension of time, viz., to the 31st of March, up to which date 368 bags of oysters were shipped for the year 1884. At the expiration of the lease I visited the river and examined the foreshores, finding them well stocked with spat and brood suitable for laying down. During the year, 14,550 lineal yards were applied for, the oyster-bearing capabilities of which could be greatly improved by judicious management. Permission was granted in October to three of the applicants to ship oysters, of which privilege only one availed himself, and shipped thirty-four bags of oysters for the year.

(?) 368 bags were shipped up to the 1st of March, which is the date of the last return forwarded by the late Acting Assistant Inspector Tranent, of Moruya, who had the supervision of these shipments.

Narravilla Creek, situated about 35 miles north of the Clyde River, was gazetted as closed for a period of three years dating from the 31st day of March, 1884. Both sides of the creek, extending from the mouth upwards for a distance of about 1 mile, are lined with mangroves well covered with oysters in all stages of development; the bottom consists of hard mud and rock. I consider it one of the best waters in the Southern Division for oyster culture. Two applications for leases have been received, the areas applied for being respectively 200 and 300 yards; permission was granted to one of the applicants on the 17th September to ship oysters. I am not aware of the number shipped, as in cases where there is no local Inspector particulars of shipment would be wired direct by the consignor to the Collector of Customs at Sydney.

Cullendulla Creek is situated about 2 miles north of the Clyde River. It was gazetted as closed for a period of three years dating from the 30th June, 1883. Its oyster-bearing limits extend from the mouth of the creek upwards for 1 mile. The banks are composed of soft mud lined with mangroves, which at present are almost destitute of oysters; patches of hard ground suitable for oyster culture occur at intervals. Much labour and capital will be required to make the areas applied for remunerative. Applications for 3,900 lineal yards have been received, and one of the applicants, who received a permit on the 7th of October, 1884, has shipped twenty bags of oysters.

Tomago Creek is 10 miles south of the Clyde River. It was gazetted as closed on the 30th of June, 1883, for three years. The banks of the creek, with the exception of a few rocky points, are composed of soft mud; the foreshores generally are unsuitable for oyster culture. Mangroves fairly stocked with spat and brood occur at intervals. 2,200 yards have been applied for, and thirty bags of oysters have been shipped during the year.

Durras Lake, about 10 miles north of the Clyde River, was closed against dredging till 30th August, 1885. The banks and beds are composed chiefly of mud suitable for oyster culture. Oysters grow and fatten in a remarkably short space of time, and are considered of perfect shape in the shell. There is no spat or brood available for laying down; the oysters on the natural beds, owing to the lake having been closed for a lengthened period, have been destroyed by the weeds and slime. Mud oysters are found in large quantity on several parts of lake. Applications have been received for 3,600 yards, and no oysters have been shipped during the year.

Wagonga River.—This river is about 55 miles south of Bateman's Bay. The banks are principally rock, and are fairly stocked with spat and brood. The foreshore on most parts of the river does not extend for more than 10 or 12 yards; the bottom, outside of low-water-mark, is soft mud. 17,860 yards have been applied for. Oysters were shipped during the year by applicants who had received permits; particulars of such shipments would be wired direct to the Collector of Customs, Sydney, by the consignors.

Moruya River is 20 miles south from Bateman's Bay. The oysters are found on the reefs and mangroves. Acting Assistant Inspector Sutherland states that the principal bed has been destroyed by an accumulation of mud; the foreshores are narrow and unsuitable for oyster culture. 1,250 yards have been applied for, and sixteen bags were shipped during the year under the old Act.

I have, &c.,

GEORGE G. BENSON,
Inspector of Southern Fisheries.

RETURN showing the number of Bags of Oysters taken from the Clyde River during the year 1884, and the amount of Royalty thereon.

Year.	No. of bags of Oysters shipped under old Act.	No. of bags of Oysters shipped under new Act.	No. on which Royalty was paid.	No. on which Royalty was to be collected in Sydney.	Amount collected.	Amount to be collected, Sydney.	Total.
1884.					£ s. d.	£ s. d.	£ s. d.
January	5	5	0 12 6	0 12 6
February	317	317	39 12 6	39 12 6
March	320	320	40 0 0	40 0 0
April	157	4	153	0 10 0	19 2 6	19 12 6

APPENDIX L.

Report of Mr. Assistant-Inspector Smithers for 1884, of the waters under his supervision.

Eden, 5 April, 1886.

I HAVE the honor to forward for the information of the Commissioners of Fisheries, the following report on the waters under my supervision:—

The district is an extensive one, reaching from Cape Howe to Tuross River, including the rivers, lakes, and creeks, as per schedule marked A. The whole of the places mentioned in the schedule were well stocked with fish till about the middle of the year, when a very noticeable falling off in the quantity of fish took place, more particularly along the coast in the vicinity of Twofold Bay, on the well known schnapper grounds. Up to about August the fish above-mentioned were plentiful, but after that there was a change, for leather jackets had now appeared, not however, in considerable numbers, and schnapper were almost gone. In the bay the fish, which had been so plentiful, began to disappear in the same way as the schnapper had done by gradually falling off in numbers, although no leather jackets to speak of had come. At the Womboyne River, 20 miles south of Eden, there was a large supply of fish throughout the year, more particularly towards the end. The same may be said of the Merrica Creek and Lagha River. The Kiah River at Twofold Bay gave a large supply of fish throughout the year, principally mullet, bream, and black fish. Nellica Creek has always appeared to me to be well filled with young fish, mostly mullet. Urallo Lake, the greater portion of which is closed, has been well stocked with full-grown fish, as well as some thousands of young fish which will go out when the mouth opens. Panbula River kept up its name for fish throughout year; Merimbula Lake supplied great quantities of fish at the commencement of the year, but towards the last part a great falling off took place. Bournda Lake and Wallagoot Lake have very large quantities of fish in them; Bega River produced great quantities of fish throughout the year; mostly mullet, bream, perch, and whiting. I might mention that great quantities of prawns are in this river, but persons never endeavour to catch them. Nelson Lake always appeared to me to have a plentiful supply of fish, but from inquiries I find that it fell off at the latter part of the year. Middle Lake is fairly alive with fish, and there is one thing worthy of notice, viz., that this place has the largest quantity of garfish I ever saw; the mouth of this lake is also closed. Wapengo Lake I have not observed much, but am advised of its being a splendid place for mullet, &c. The Murrah River has towards its mouth a number of full grown fish, and further up it produces thousands of young fish; I have not heard of the supply falling off. Burragate Lake and Cuttagee Lake have a good supply of fish, more especially the latter, which is full of large fish, and also thousands of young fish, besides great quantities of whiting; the mouths of both these places are closed. The cormorants are at times very plentiful; while at Burragate the place is always full of shags. Bermague River has, as far as I can gather, been only moderately supplied with fish, but off the Port the schnapper have been very plentiful; the same may be said with regard to Montague Island, there being a very large supply of schnapper there. Wallagha Lake, the mouth of which is closed, is, I understand, well supplied with fish, and the supply never diminished throughout the year. This lake is 30 miles round with plenty of deep water throughout; no person ever attempts to catch fish there. I might mention that this lake also produces thousands of young fish. With regard to Tilba Tilba and Corunna Lakes I cannot give any information as I have never been on them with a boat, and am only informed that such places contain a few mullet.

In conclusion, I wish to draw attention to all the lakes which have the mouths closed. When the mouths open then all the fish go out, and when the mouths become closed again scarcely a fish is to be seen, yet in a short time the place is full of young fish, which are protected till a good size in their nursery, thus making these lakes most valuable as nurseries for fish. I am unable to give any reason for the falling off in the supply of fish towards the end of the year.

FREDK. SMITHERS,
Assistant Inspector of Fisheries, Twofold Bay.

SCHEDULE A.

Tagha Lake.
Nagha River.
Rocky Creek.
Merrica Creek.
Wonboyn River.
Bittangatu Creek
Twofold Bay.
Kiah River.
Nellica River.

Curallo Lake,
Panbula River.
Merimbula Lake.
Bournda Lake.
Wallagoot Lake.
Bega River.
Nelson Lake.
Middle Lake.
Wopingu Lake.

Munah River.
Cuttagee Lake.
Burragate Lake.
Bermagui River.
Wallagha Lake.
Tilba Tilba Lake.
Corunna Lake.
Wogonga River.
Brow Lake.

APPENDIX A.

CATALOGUE of the Fishes of New South Wales, with their principal synonyms; by J. Douglas-Ogilby, Assistant Zoologist, Australian Museum, Sydney, N.S.W.

PALÆICHTHYES.

CHONDROPTERYGII.

PLAGIOSTOMATA.

Selachoides.

CARCHARIIDÆ.

CARCHARIAS MACLOTI.

Carcharias (Hypoprion) macloiti, Müll. & Henle, Plagiost., p. 34, pl. 10; Duméril, Elasmobr., p. 350.
 ——— *macloiti*, Günth., Cat. viii, p. 362; Day, Fishes of India, p. 713, pl. 188, f. 2; Macleay, Aust. Cat. ii, p. 287.

Hab.—Indian Ocean; New Guinea; Australian Coasts; Port Jackson.

CARCHARIAS GANGETICUS.

Carcharias (Prionodon) gangeticus, Müll. & Henle, Plagiost., p. 39, pl. 13; Duméril, Elasmobr., p. 359.
 ——— (——) *japonicus*, Schleg., Faun. Japon. Poiss., p. 302, pl. 133.
 ——— *gangeticus*, Günth., Cat. viii, p. 367; Day, Fishes of India, p. 715, pl. 187, f. 1; Macleay, Aust. Cat. ii, p. 288; Tenison-Woods, Fisheries of N. S. Wales, p. 93.

Hab.—Indian Seas; Japan; Fiji Islands, in fresh waters; Port Jackson. *Sea Shark* (Tenison-Woods.) Grows to the length of 7 feet.

CARCHARIAS BRACHYURUS.

Günth., Cat. viii, p. 369; Macleay, Aust. Cat. ii, p. 288.

Hab.—New Zealand; Port Jackson. *Whaler*, at Sydney, where it is the most common *Carcharias*. Grows to the length of 12 feet.

Carcharias glaucus is included by Tenison-Woods in his list of New South Wales fishes (Fisheries of N. S. Wales p. 25), but I am unable to find any authority for the statement.

GALEOCERDO RAVNERI.

McDon. & Barr., Proc. Zool. Soc. 1868, p. 368, pl. 32; Günth., Cat. viii, p. 377; Ramsay, Proc. Linn. Soc. N. S. Wales v, p. 95, pl. 4; Macleay, Aust. Cat. ii, p. 289; Haswell, Proc. Linn. Soc. N. S. Wales vii, p. 210.

Hab.—Indian Seas to Port Jackson; Solomon Islands. *Tiger Shark* of the N. S. Wales coast. Attains to 12 feet in our waters.

GALEUS AUSTRALIS.

Galeus australis, Macleay, Aust. Cat. ii, p. 270; McCoy, Prodr. Zool. Vict. dec. vii, pl. 64, f. 2; Tenison-Woods, Fisheries of N. S. Wales, p. 92.

Hab.—Coasts of S. E. Australia and Tasmania; Port Jackson; *School Shark* of Sydney. Grows to the length of 6 feet at least.

ZYGENA LEEUWINI.

Zygana lewini, Griff., Anim. Kingd. x, p. 640, pl. 50; Rochebrune, Act. Soc. L. Bord. vi, p. 56.

Oestracion leeuwenii, Duméril, Elasmobr., p. 383.

? *Zygana malleus*, Macleay, Aust. Cat. ii, p. 291; McCoy, Prodr. Zool. Vict. dec. vi, pl. 56, f. 1.

Hab.—Australian Seas; Richmond River; Port Jackson. *Hammer-head* of our coasts. The Australian Museum possesses a mounted specimen of a female which measures over 15 feet; it was killed at the mouth of the Richmond River during the spring of 1884, and no less than thirty-nine living young were taken from it; twelve of these, forwarded to the Museum, averaged 20 inches each.

MUSTELUS ANTARCTICUS.

Günth., Cat. viii, p. 387; Macleay, Aust. Cat. ii, p. 292; Parker, Trans. N. Z. Inst. xv, p. 219, pl. 30; Casteln., Proc. Zool. Soc. Vict. i, p. 216.

Hab.—S. Pacific; Port Jackson; Port Phillip; Tasmania; New Zealand. *Hound* of our coasts, where it is common. Attains the length of 5 feet.

LAMNIDÆ.

LAMNA GLAUCA.

Oxyrhina glauca, Müll. & Henle, Plagiost., p. 69, pl. 29; Schleg, Faun. Japon. Poiss., p. 302; Duméril, Elasmobr., p. 409.

Lamna glauca, Günth., Cat. viii, p. 391; Macleay, Aust. Cat. ii, p. 292; Tenison-Woods, Fisheries of N. S. Wales, p. 95.

Hab.—Japan; Cape seas; Australian coasts. *Blue Pointer* of Port Jackson. Grows to the length of 12 feet.

CARCHARODON RONDELETTII.

Müll. & Henle, Plagiost., p. 70; Duméril, Elasmobr., p. 411; Günth., Cat. viii, p. 392; Macleay, Aust. Cat. ii, p. 294; Haswell, Proc. Linn. Soc. N. S. Wales ix, p. 83, pl. 1, ff. 1-4; Günth., Study of Fishes, p. 320, f. 114 (*tooth*).

Carcharodon capensis, Smith, Ill. Zool. S. Afr. Pisc., pl. 4.

Hab.—Mediterranean; Cape seas; Australian seas. *White Pointer* of Port Jackson. A fierce and destructive species, which attains the length of 40 feet.

ODONTASPIS AMERICANUS.

Squalus americanus, Mitch., Phil. et Lit. Trans. New York i, p. 483.

Odontaspis taurus (Rafin.), Müll. & Henle, Plagiost., p. 73, pl. 30; Duméril, Elasmobr., p. 417; M'Coy, Prodr. Zool. Viet. dec. vii, pl. 64, f. 1.

——— *americanus*, Abbott, Proc. Ac. Nat. Sc. Philad. 1861, p. 399; Duméril, l.c., p. 419; Günth., Cat. viii, p. 392; Macleay, Aust. Cat. ii, p. 294; Tenison-Woods, Fisheries of N. S. Wales, p. 95.

Hab.—Atlantic; Cape seas; S. Pacific; Tasmania; Port Jackson. *Grey Nurse* of the Sydney fishermen. Attains the length of 15 feet.

ALOPTAS VULPES.

Squalus vulpes, Gmel. Linn., p. 1496; et auctt.

Carcharias vulpes, Cuv., Règne Anim.; De Kay, New York Fauna Fish, p. 348, pl. 61, f. 199; Gay, Hist. Chile Zool. ii, p. 363.

Alopias vulpes, Bonap., Faun. Ital. Pesc. iii, p. 66; Müll. & Henle, Plagiost., p. 74, pl. 35, f. 1 (*dentition*); Day, Brit. Fishes ii, p. 300, pl. 157.

Alopias vulpes, Yarrell, Brit. Fishes (ed. 3) ii, p. 512; Günth., Cat. viii, p. 393; Macleay, Aust. Cat. ii, p. 295; Günth., Study of Fishes, p. 322.

Hab.—Temperate and tropical seas of both hemispheres. *Thresher* of Port Jackson. Grows to at least 15 feet.

NOTIDANIDÆ.

NOTIDANUS INDICUS.

Cuv., Règne Anim.; Günth., Cat. viii, p. 398; Day, Fishes of India, p. 723, pl. 189, f. 4; Macleay, Aust. Cat. ii, p. 296; M'Coy, Prodr. Zool. Viet. dec. v, pl. 43, f. 2; Günth., Study of Fishes, p. 324, pl. 115 (*dentition*).

Heptanchus indicus, Müll. & Henle, Plagiost., p. 82, pl. 32; Schleg., Faun. Japon. Poiss., p. 303; M'Don. & Barr., Proc. Zool. Soc. 1868, p. 371, pl. 33; Haswell, Proc. Linn. Soc. N. S. Wales ix, p. 88, pl. 1, f. 5.

Hab.—Indian seas; Japan; California; Cape seas; Australian seas; Jervis Bay; Port Jackson. *One-finned Shark* of Sydney. Attains a length of 8 feet.

SCYLLIIDÆ.

SCYLLIUM ANALE.

Ogilby, Proc. Linn. Soc. N. S. Wales x, pp. 445, 464.

Hab.—Port Jackson. *Spotted Dog-fish*. Grows to the length of 2 feet.

SCYLLIUM MACULATUM.

Squalus maculatus, Bl. Schn., p. 130 (*not auctt.*).

Scyllium maculatum, Günth., Cat. viii, p. 401; Macleay, Aust. Cat. ii, p. 297; Ogilby, Proc. Linn. Soc. N. S. Wales x, p. 464.

Hab.—Australian seas (Günther.) Port Darwin and Port Jackson (Macleay). Grows to the length of 2 feet (Macleay).

CHILOSCYLLIUM OCELLATUM.

Squalus ocellatus, Gmel. Linn. i, p. 1494; Bl. Schn., p. 129.

Hemiscyllium oculatum, Müll. & Henle, Plagiost., p. 16; Duméril, Elasmobr., p. 326.

Chiloscyllium ocellatum, Günth., Cat. viii, p. 410; Macleay, Aust. Cat. ii, p. 299; Ogilby, Proc. Linn. Soc. N. S. Wales x, p. 464.

Hab.—N. Australia; Port Jackson (Ogilby). Grows to the length of 3 feet.

CHILOSCYLLIUM MODESTUM.

Günth., Proc. Zool. Soc. 1871, p. 654, pl. 54; Macleay, Aust. Cat. ii, p. 299.

Chiloscyllium furvum, Macleay, Aust. Cat. ii, p. 300.

Hab.—East coast of Australia; Port Jackson. *Dusky Dog-fish*. Grows to 3 feet in length.

CROSSORHINUS BARBATUS.

Squalus barbatus, Gmel. Linn., p. 1493.

Crossorhinus barbatus, Müll. & Henle, Plagiost., p. 21, pl. 5; Schleg., Faun. Japon. Poiss., p. 301; Duméril, Elasmobr., p. 338; Günth., Cat. viii, p. 414; Macleay, Aust. Cat. ii, p. 301; M'Coy, Prodr. Zool. Viet. dec. v, p. 43, f. 1; Haswell, Proc. Linn. Soc. N. S. Wales ix, p. 92, pl. 1, ff. 6-8; Tenison-Woods, Fisheries of N. S. Wales, p. 94.

——— *ornatus*, De Vis, Proc. Linn. Soc. N. S. Wales viii, p. 289.

Hab.—Japanese and Australian seas; Tasmania; Port Jackson. *Wobbegong* at Sydney. Attains to 8 feet long.

The Australian Museum possesses a specimen of the *Crossorhinus ornatus* of De Vis, taken at Port Stephens, but I can only consider it to be a well-marked variety of the ordinary form. A second specimen brought in from Port Jackson to-day (28th Sept., 1885) confirms this opinion; it measures 4½ feet.

HETERODONTIDÆ.

HETERODONTIDÆ.

HETERODONTUS PHILLIPI.

Squalus phillipi, Bl. Schn., p. 134.

Heterodontus phillipi, Blainv., Nouv. Bull. Sc. 1816, p. 121; Duméril, Elasmobr., p. 424; Mikloubo-Maclay and Macleay, Proc. Linn. Soc. N. S. Wales iii, p. 309, pls. 22-24.

Oestracion phillipi, Cuv., Règne Anim.; Müll. & Henle, Plagiost., p. 76, pl. 31; Schleg., Faun. Japon. Poiss., p. 304; Strüver, Nov. Act. Acad. Carol. Leopold. Nat. cur. xxiii, 1864; Zaddach, Schr. Ges. Königsb. 1872, p. 6; Günth., Cat. viii, p. 415 and Study of Fishes, p. 329, ff. 119, 120 (*jaws*).

Hab.—Australian and New Zealand seas; Port Jackson, common. *Port Jackson Shark* of the fishermen; *Tabbigaw* of the aborigines. Attains a length of 4½ feet.

HETERODONTUS GALEATUS.

Oestracion galeatus, Günth., Cat. viii, p. 416 and Study of Fishes, p. 330, pl. 122.

Heterodontus galeatus, Mikloubo-Maclay and Macleay, Proc. Linn. Soc. N. S. Wales iii, p. 313, pl. 25.

Hab.—Coast of New South Wales. Grows to 3½ feet in length, and is common, but generally confounded with its congener.

SPINACIDÆ.

ACANTHIAS MEGALOPS.

Macleay, Aust. Cat. ii, p. 303; ? Richardson, Voy. Erebus and Terror Fishes, p. 44, pl. 23, ff. 1, 2.

Hab.—Port Jackson. Grows to 3 feet in length.

RHINIDÆ.

RHINA SQUATINA.

Squalus squatina, Linn., Syst. Nat. i, p. 398.

Squatina vulgaris, Müll. & Henle, Plagiost., p. 99, pl. 35, f. 4 (*snout*); Schleg., Faun. Japon. Poiss., p. 305, pl. 86.

Rhina squatina, Raf. Ind., p. 45; Duméril, Elasmobr., p. 464; Günth., Cat. viii, p. 430, and Study of Fishes, p. 334; Macleay, Aust. Cat. ii, p. 304; M'Coy, Prodr. Zool. Vict. dec. iv, pl. 34; Day, Brit. Fishes ii, p. 326, pl. 163.

Hab.—Temperate and tropical seas; Port Jackson, common. *Angel Shark* of Sydney. Grows to 6 feet.

PRISTIOPHORIDÆ.

PRISTIOPHORUS CIRRATUS.

Pristis cirratus, Lath., Trans. Linn. Soc. ii, p. 281, pl. 26, ff. 5 & 27.

Pristiophorus cirratus, Müll. & Henle, Plagiost., p. 98; Günth., Cat. viii, p. 432; Macleay, Aust. Cat. ii, p. 305; Haswell, Proc. Linn. Soc. N. S. Wales ix, p. 98, pl. 1, ff. 9-12.

Hab.—South and east coasts of Australia; Tasmania; Port Jackson. *Saw Shark* of the fishermen. Attains to 4 feet in length.

Batoidei.

RHINOBATIDÆ.

RHYNOBATUS DJEDDENSIS.

Raja djiddensis, Forsk., Descr. Anim., p. 18.

Rhinobatus laevis, Bl. Schn. p. 354, pl. 71; Schleg., Faun. Japon. Poiss., p. 306, pl. 139.

Rhynchobatus laevis, Müll. & Henle, Plagiost., p. 111; Duméril, Elasmobr., p. 483.

Rhynchobatus djeddensis, Cant. Mal. Fish., p. 412; Günth., Cat. viii, p. 441; Klunz., Fisch. Roth. Meer. 1871, p. 674; Day, Fishes of India, p. 730, pl. 192, f. 1; Günther, Study of Fishes, p. 338, f. 125 (*dentition*); Ogilby, Proc. Linn. Soc. N. S. Wales x, p. 465.

Hab.—East African, Indian, Japanese, and Australian seas; Port Jackson. Grows to the length of 7 feet.

RHINOBATUS GRANULATUS.

Rhinobatus rhinobatus, Bl. Schn., p. 353.

— *granulatus*, Cuv., Règne Anim., Müll. & Henle, Plagiost., p. 117, pl. 38; Duméril, Elasmobr., p. 493; Günth., Cat. viii, p. 443; Day, Fishes of India, p. 732, pl. 192, f. 2; Macleay, Aust. Cat. ii, p. 307; Ogilby, Proc. Linn. Soc. N. S. Wales x, p. 465.

Hab.—East Indian and Australian seas; Port Jackson (Macleay). I have not seen a New South Wales example of this fish, which appears to have been confounded with the following by writers on the Australian fauna. Attains to 7 feet in length.

RHINOBATUS BOUGAINVILLEI.

Rhinobatus (Syrhhina) bougainvillii, Müll. & Henle, Plagiost., p. 117; Duméril, Elasmobr., p. 491, pl. 10, f. 1 (*mouth*).

— *bougainvillii*, Günth., Cat. viii, p. 445; Ogilby, Proc. Linn. Soc. N. S. Wales x, p. 464.

Hab.—Port Jackson. *Shovel-nosed Ray* of Sydney fishermen. Grows to the length of 4 feet.

TRIGONORHINA FASCIATA.

Müll. & Henle, Plagiost. p. 124, pl. 43; Duméril, Elasmobr., p. 502; Günth., Cat. viii, p. 448; Macleay, Aust. Cat. ii, p. 309; Haswell, Proc. Linn. Soc. N. S. Wales ix, p. 107, pl. 2, ff. 1-8.

Hab.—South and east coasts of Australia; Port Jackson, common. *Fiddler* of the Sydney fishermen. Attains a length of 4 feet.

TORPEDINIDÆ.

HYPNOS SUBNIGRUM.

Duméril, Rev. Zool. 1852, p. 279, pl. 12, and Elasmobr., p. 520; Günth., Cat. viii, p. 453; Macleay, Aust. Cat. ii, p. 310; Tenison-Woods, Fisheries of N. S. Wales, p. 100; Haswell, Proc. Linn. Soc. N. S. Wales ix, p. 104, pl. 2, ff. 6 & 7.

Hab.—Australian seas; Port Jackson, common. *Numb-fish*, *Cramp-fish*, and *Torpedo*, of the fishermen. Attains 2 feet in length, and over.

RAIIDÆ.

RAIIDÆ.

RAIA AUSTRALIS.

Macleay, Proc. Linn. Soc. N. S. Wales viii, p. 461.

Hab.—Outside Port Jackson, in 50 fathoms. Largest specimen measures fifteen inches.

RAIA NITIDA.

Günth., Voy. Challenger Shore Fishes, p. 27, pl. 14, f. A.; Macleay, Aust. Cat. App., p. 63.

Hab.—Twofold Bay, in 120 fathoms. Specimen measures 8 inches in total length.

Raia lemprieri is included by Tenison-Woods (Fisheries of N. S. Wales, p. 26); I know of no authentic record of its occurrence on our coast.

TRYGONIDÆ.

TRYGON PASTINACA.

Raia pastinaca, Linn., Syst. Nat., p. 396; Bl. Schn., p. 460.

Trygon pastinaca, Cuv., Règne Anim.; Müll. & Henle, Plagiost., p. 161; Duméril, Elasmobr., p. 603; Günth., Cat., viii, p. 478; Day, Brit. Fishes ii, p. 350, pl. 175; Macleay, Aust. Cat. ii, p. 313; Haswell, Proc. Linn. Soc. N. S. Wales ix, p. 100, pl. 2, ff. 10 & 11.

———— *akajei*, Müll. & Henle, l.c., p. 165, pl. 53; Schleg., Faun. Japon. Poiss., p. 308; Duméril, l.c., p. 604.

Trygon sayi, Müll. & Henle, l.c., p. 166; Duméril, l.c., p. 603.

Hab.—Atlantic Ocean; Mediterranean; Japanese, Chinese, and Australian seas; Port Jackson, (Günther).

TRYGON TUBERCULATA.

Trygon tuberculatus, Lacép., Hist. Nat. des Poiss. ii, p. 106, pl. 4, f. 1; Duméril, Elasmobr., p. 605.

———— *sabina*, Müll. & Henle, Plagiost., p. 163; Duméril, l.c., p. 607.

———— *tuberculata*, Günth., Cat. viii, p. 480; Macleay, Aust. Cat. ii, p. 314.

Hab.—American region of the Tropical Atlantic; Port Jackson, (Günther).

UROLOPHUS TESTACEUS.

Trygonoptera testacea, Müll. & Henle, Plagiost., p. 174, pl. 56.

———— *muelleri*, Steind., Sitzgsber. Ak. Wiss. Wien liii, 1865, p. 479, pl. 6, f. 5 (*young*).

———— *henlei*, Steind., l.c., f. 4 (*half-grown*).

———— *australis*, Steind., l.c., p. 480, pl. 7.

Urolophus testaceus, Günth., Cat. viii, p. 486; Macleay, Aust. Cat. ii, p. 315.

Hab.—Australian seas; Port Jackson, abundant. *Sting Ray* of the fishermen. Grows to the length of 30 inches.

UROLOPHUS BUCCULENUS.

Macleay, Proc. Linn. Soc. N. S. Wales ix, p. 172.

Hab.—Outside Port Jackson, 40 to 60 fathoms.

PTEROPLATEA AUSTRALIS.

Ramsay & Ogilby, Proc. Linn. Soc. N. S. Wales x, (*in press*).

Hab.—Cape Hawke. Breadth of disk 23 inches in the single specimen forwarded by Mr. J. Brown to the Australian Museum.

MYLIOBATIDÆ.

MYLIOBATIS AQUILA.

Raia aquila, Linn., Syst. Nat., p. 396; Bl. Schn., p. 360.

Myliobatis aquila, Cuv., Règne Anim.; Müll. & Henle, Plagiost., p. 176; Duméril, Elasmobr., p. 634; Günth., Cat. viii, p. 489, and Study of Fishes, p. 344, f. 129 (*jaws*); Macleay, Aust. Cat. ii, p. 316; Day, Brit. Fishes ii, p. 352, pl. 176.

Hab.—Mediterranean and Atlantic; Port Jackson, (Günther).

MYLIOBATIS AUSTRALIS.

Macleay, Aust. Cat. ii, p. 316; McCoy, Prodr. Zool. Vict. dec. vii, pl. 63.

Hab.—Port Jackson.

AETOBATIS NARINARI.

Raja narinari, Euph., Vet. Ak. nya. Handl. 1790, xi, p. 217; Bl. Schn. p. 361.

Aetobatis narinari, Müll. & Henle, Plagiost., p. 179; Duméril, Elasmobr., p. 611; Günth., Cat. viii, p. 492; Day, Fishes of India, p. 743, pl. 194, f. 4; Macleay, Aust. Cat. ii, p. 317; Ogilby, Proc. Linn. Soc. N. S. Wales x, p. 466.

Hab.—Tropical seas; North Australia; Cape Hawke, N. S. Wales; two specimens presented to the Australian Museum by Mr. J. Brown. Attains to 6 feet in breadth of disk.

CLERATOPPERA ALFREDI.

Kreff, Macleay, Aust. Cat. ii, p. 317.

Hab.—Manly Beach. Specimen now measures about 11 feet in breadth of disk. It is impossible now to differentiate this species, so much has it been destroyed in the process of stuffing. A smaller example, 4½ feet in breadth of disk, taken in Middle Harbour, Port Jackson, is also irrecognizable from the same cause; there is however a short spine on the tail, (? *Cephaloptera*).

TELEOSTEL.

TELEOSTEI.

ACANTHOPTERYGII.

PERCIFORMES.

PERCIDÆ.

PERCA FLUVIATILIS.

Linn., Syst. Nat. 1766, p. 481; Cuv. & Val., Hist. Nat. des Poiss. ii, p. 20; Günth., Cat. i, p. 58; Steind., Ak. Wiss. Wien, SB, lxxviii, Abth. i, p. 399; Houghton, Brit. Fresh-water Fishes i, p. 1, pl. 1; Day, Brit. Fishes i, p. 2, pl. 1; Günth., Study of Fishes, chap. iii, & p. 375, pl. 151.

Hab.—Fresh waters of Europe, Siberia, and North America; introduced in many waters of New South Wales. *English Perch* of the colonists. Grows to the weight of eight lbs., but is commonly obtained of less than three.

LATES COLONORUM.

Günth., Ann. & Mag. Nat. Hist. 1863, p. 114; Macleay, Aust. Cat. i, p. 4; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 365; McCoy, Prodr. Zool. Vict. dec. ii, pl. 14; Tenison-Woods, Fisheries of N. S. Wales, p. 31, pl. 1.

Dules novem-aculeatus, Steind., Sitzgsber. Ak. Wiss. Wien 1866, liii, p. 428, t. 2, f. 1.

Lates curtus, Casteln., Res. on the Fishes of Australia, p. 5.

?—*similis*, Casteln., Proc. Zool. Soc. Vict. i, p. 44.

?—*antarcticus*, Casteln., l.c., p. 44.

?—*victoriae*, Casteln., l.c., p. 45.

Hab.—Eastern river system of New South Wales; Gippsland. The *Perch* of the colonists. Attains a weight of 5 lbs.

LATES RAMSAYI.

Macleay, Aust. Cat. i, p. 6.

Hab.—Fresh water pools above Parramatta. I hold the opinion, which is shared by Mr. E. P. Ramsay, that this is only a land-locked form of the preceding species.

ETELIS *sp.*

Günth., Voy. Challenger Shore Fishes, p. 27.

Hab.—Twofold Bay, 120 fathoms (?). Specimens 2½ inches long; supposed to be the young of *Etelis carbunculus*, Cuv. & Val.

ENOPLOSUS ARMATUS.

Chatodon armatus, White, Voy. N. S. Wales, pl. 39, f. 1.

Enoplosus whitii, Lacép., Hist. Nat. des Poiss. iv, p. 541.

—*armatus*, Cuv. & Val. ii, p. 133, pl. 20; Günth., Cat. i, p. 81; Macleay, Aust. Cat. i, p. 9; Tenison-Woods, Fisheries of N. S. Wales, p. 32, pl. 2.

Hab.—East and south coasts of Australia; Port Jackson, abundant. *Old wife*, at Sydney. Grows to the length of 9 inches.

ANTHIAS LEPIDOPTERUS.

Perca lepidoptera, Forst., Descr. Anim, p. 138.

Epinephelus lepidopterus, Bl. Schn., p. 302.

Serranus lepidopterus, Rich., Ann. Nat. Hist. 1842, ix, p. 18.

Anthias richardsonii, Günth., Proc. Zool. Soc. 1869, p. 429, and Ann. Nat. Hist. 1876, xvii (4), p. 39; Macleay, Aust. Cat. i, p. 12.

Scorpiis hectori, Hutt., Fishes of N. Zeal., p. 4, f. 4, and Trans. N. Zeal. Inst. v, p. 259, pl. 7, and op. cit. ix, p. 353.

Hab.—New Zealand, Tasmania, Port Jackson, one specimen in the Macleay Museum, taken in April, 1885. Attains a length of 12 inches.

CAPRODON SCHLEGELII.

Caprodon, Schleg. Faun. Japon Poiss., p. 64, pl. 30; Rich., Ichthyol. China, p. 235 (*male*).

Anthias schlegelii, Günth., Cat. i, p. 93 (*male*).

—*longimanus*, Günth., Cat. i, p. 94; Ramsay, Proc. Linn. Soc. N. S. Wales v, p. 294; Macleay, Aust. Cat. i, p. 12; Tenison-Woods, Fisheries of N. S. Wales, p. 33, pl. 3 (*female*).

Neanthias guentheri, Casteln., Proc. Linn. Soc. N. S. W. iii, p. 367 (*male*).

Caprodon schlegeli, Ogilby, Proc. Linn. Soc. N. S. Wales x, p. 231.

Hab.—Japan; Port Jackson, scarce, in summer only. *Longfin*, (Tenison-Woods). Attains a length of 15 inches.

SERRANUS DAMELI.

Günth., Ann. Nat. Hist. 1876, (4) xvii, p. 391; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 365;

Macleay, Proc. Linn. Soc. N. S. Wales viii, p. 254; Tenison-Woods, Fisheries of N. S. Wales, p. 33.

Hab.—N. S. Wales coast; Normanby Island, D'Entrecasteaux Group, in fresh water. *Black rock-cod*, of Port Jackson. Grows to the length of 2 feet, and is an excellent fish for the table.

SERRANUS GUTTULATUS.

Macleay, Proc. Linn. Soc. N. S. Wales iii, p. 33, pl. 2.

Hab.—Port Jackson. Grows to 14 inches in length.

SERRANUS UNDULATO-STRIATUS.

Peters, Monatsber. Ak. Wiss. Berlin 1866, p. 518; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 366.

Hab.—Port Jackson. Specimen measured 11 inches.

SERRANUS

SERRANUS MERRA.

Epinephelus merra, Bl., t. 329 (not Bleeker).

Serranus gilberti, Rich., Ann. Nat. Hist. 1842, p. 19, & Ichthyol. China, p. 230; Günth., Cat. i, p. 148, & i, p. 141 (part); Macleay, Aust. Cat. i, p. 19; Day, Fishes of India, pp. 13 & 746, pl. 2, f. 2.

——— *megachir*, Rich., Ichthyol. China, p. 230.

——— *ardalis*, Bleek., Atl. Ichthyol. Perc. p. 37, t. 41, f. 3.

Hab.—Red Sea; Indian, Chinese and Malayan seas; north and east coast of Australia; Port Jackson, rare. 9 inches in length.

SERRANUS FUSCO-GUTTATUS.

Rüpp., Atl. Fische, p. 108, t. 27, f. 2; Günth., Cat. i, p. 127; Kner, Voy. Novara Fische, p. 22; Macleay, Aust. Cat. i, p. 16; Day, Fishes of India, p. 22, pl. 5, f. 3.

Serranus horridus, Cuv. & Val. ii, p. 321; Günth., Cat. i, p. 136.

——— *geographicus*, Cuv. & Val. ii, p. 322; Günth., Cat. i, p. 150.

——— *dispar*, Playf., Fishes of Zanzibar, p. 6, pl. i, ff. 2, 3.

Epinephelus horridus, Bleek., Atl. Ichthyol. Perc., t. 29, f. 3.

Hab.—East African, Indian, and Malayan seas; north and east coasts of Australia; Port Jackson, rare. Ten inches long.

Count Castelnau, in a list of Port Jackson fishes (Proc. Linn. Soc. N. S. Wales iii, p. 349), includes *Serranus guttatus*, C. & V. In the absence of the specimen or of a description I am unable to determine whether *S. minimus* (Forsk.) Rüpp., or *S. guttatus*, (Bl.) Peters is intended.

PLECTROPOMA NIGRO-RUBRUM.

Cuv. & Val. ii, p. 402; Quoy & Gaim., Voy. Astrolabe Poiss., p. 659, pl. 4, f. 1; Günth., Cat. i, p. 158; Macleay, Aust. Cat. i, p. 22; Ogilby, Proc. Linn. Soc. N. S. Wales x, p. 119.

Hab.—Southern and eastern coasts of Australia; Port Jackson, scarce. Attains a length of 10 inches.

PLECTROPOMA ANNULATUM.

Günth., Cat. i, p. 158, & Brench., Cruise of the Curaçoa, p. 415, pl. 28, f. B; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 369.

Hab.—Port Jackson. Grows to 8 inches in length.

PLECTROPOMA SEMICINCTUM.

Cuv. & Val. ix, p. 442; Gay, Hist. Chile Zool., p. 153., Ictiol. pl. 2, f. 1; Günth., Cat. i, p. 160; Macleay, Aust. Cat. i, p. 22.

Hab.—Chili; Juan Fernandez; West Australia; Port Jackson. Eight inches long.

PLECTROPOMA OCELLATUM.

Günth., Cat. i, p. 504, and Brench., Cruise of the Curaçoa, p. 416, pl. 29; Macleay, Aust. Cat. i, p. 23; Tenison-Woods, Fisheries of N. S. Wales, p. 34, pl. 4.

Plectropoma cyanostigma, Günth., Cat. i, p. 161, (not Bleeker).

——— *myriaster*, Steind., Sitzgsber. Ak. Wiss. Wien 1866, liii, p. 426, t. 1, f. 3.

Hab.—Australian seas; Port Jackson, common. *Wirrah* of the Aborigines. Grows to 12 inches in length. A very inferior fish for the table.

PLECTROPOMA SUSUKI.

Cuv. & Val. ii, p. 404; Schleg., Faun. Japon. Poiss., p. 11, pl. 4, f. 1; Rich., Ichthyol. China, p. 230; Günth., Cat. i, p. 160, and Proc. Zool. Soc. 1867, p. 100; Macleay, Aust. Cat. i, p. 23; Day, Fishes of India, p. 20.

?*Perca septem-fasciata*, Thunb., Nov. Ac. Stock. 1793, pl. 1, f. 1.

Hab.—Chinese and Japanese seas; Port Jackson (Günther). Attains a length of 12 inches.

Count Castelnau claims to have obtained a specimen of *Plectropoma serratum* (C. & V.) from Port Jackson, but his description (Proc. Linn. Soc. N. S. Wales iii, p. 368) applies more closely to *P. ocellatum*.

LUTIANUS BENGALENSIS.

Holocentrus bengalensis, Bl., t. 246, f. 2.

Diacope octolineata, Cuv. & Val. ii, p. 418, & vi, p. 526 (part); Schleg., Faun. Japon. Poiss., p. 12, pl. 6, f. 2; Rich., Ichthyol. China, p. 229.

Genyoroge bengalensis, Günth., Cat. i, p. 178; Macleay, Aust. Cat. i, p. 28.

Mesoprion bengalensis, Kner, Voy. Novara Fische, p. 31; Günth., Fische d. Sudsee, p. 12.

Diacopus bengalensis, Casteln. Proc. Linn. Soc. N. S. Wales iii, p. 349.

Lutianus bengalensis, Bleek., Atl. Ichthyol. Perc., t. 24, f. 3; Day, Fishes of India, p. 33, pl. 10, f. 4.

Hab.—From the east African coast to Polynesia; Port Jackson. Grows to a length of 10 inches.

LUTIANUS JOHNNI.

Anthias johnei, Bl., t. 318.

Mesoprion johnei, Cuv. & Val. ii, p. 443; Günth., Cat. i, p. 200; Kner, Voy. Novara Fische, p. 35; Günth., Fische d. Sudsee, p. 15; Macleay, Aust. Cat. i, p. 29.

Lutianus johnei, Day, Fishes of India, p. 42, pl. 13, f. 1.

Hab.—East African, Indian, and Malayan seas; North Australia; Richmond River, one specimen from Mr. T. Temperley (Ogilby). Grows to a length of at least 12 inches.

LUTIANUS FULVIFLAMMA.

Sciæna fulviflamma, Forsk., Descr. Anim., p. 45.

Diacope fulviflamma, Rüpp., Atl. Fische, p. 72, t. 19, f. 2; Cuv. & Val. ii, p. 423.

Hab.—From the east coast of Africa to Australia; Bellinger River, N.S. Wales.

LUTIANUS MACLEAYANUS.

Ramsay, Proc. Linn. Soc. N. S. Wales viii, p. 178.

Hab.—Port Jackson. Specimen measures 30 inches.

LUTIANUS

LUTIANUS MARGINATUS.

DiaCOPE marginata, Cuv. & Val. ii, p. 425.

Mesoprion marginatus, Kner, Voy. Novara Fische, p. 31; Günth., Fische d. Sudsee, p. 13, t. 14.

Genyrorge marginata, Günth., Cat. i, p. 181.

Lutianus marginatus, Bleek., Lutian., p. 72; Day, Fishes of India, p. 44, pl. 13, f. 5.

Hab.—From the east African seas to Polynesia; Port Jackson (Kner). Attains at least 16 inches in length.

GLAUCOSOMA SCAPULARE.

Ramsay, (M. SS.), Macleay, Aust. Cat. i, p. 34, pl. 13; Tenison-Woods, Fisheries of N. S. Wales, p. 34.

? *Glaucosoma bürgeri*, Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 350.

Hab.—Port Jackson. Grows to a length of 20 inches at least. An excellent food fish.

MURRAYIA GUENTHERI.

Casteln., Proc. Zool. Soc. Vict. i, p. 61; Macleay, Aust. Cat. i, p. 56.

Hab.—Murray River. Average length, 14 inches. Klunzinger considers this fish identical with *Macquaria australasica*.

MURRAYIA CYPRINOIDES.

Casteln., Proc. Zool. Soc. Vict. i, p. 62; Macleay, Aust. Cat. i, p. 57.

Hab.—Murray River. Attains a length of 12 inches.

MURRAYIA BRAMOIDES.

Casteln., Proc. Zool. Soc. Vict. i, p. 63; Macleay, Aust. Cat. i, p. 57.

Hab.—Murray River, rare. Length, 12 inches.

MURRAYIA RIVERINA.

Dules riverinus, Krefft, Proc. Zool. Soc. 1867, p. 943.

Murrayia riverina, Macleay, Aust. Cat. i, p. 58.

Hab.—Murray River and its tributaries.

MURRAYIA JENKINSI.

Macleay, Proc. Linn. Soc. N. S. Wales x, p. 268.

Hab.—Yass district of the Murrumbidgee. Specimen measured 5 inches.

RIVERINA FLUVIATILIS.

Casteln., Proc. Zool. Soc. Vict. i, p. 64; Macleay, Aust. Cat. i, p. 58.

Hab.—Murray River.

MACQUARIA AUSTRALASICA.

Cuv. & Val. v, p. 377, pl. 131; Less., Voy. Coquille Zool. ii, p. 194, pl. 14, f. 1; Günth., Cat. i, p. 286;

Macleay, Aust. Cat. i, p. 59.

Hab.—Macquarie River.

CTENOLATES AMBIGUUS.

Dutnia ambigua, Rich., Voy. Erebus & Terror Fishes, p. 25, pl. 19.

Dules ambiguus, Günth., Cat. i, p. 270; Klunz., S.B. Ak. Wien lxxx, Abth. i, p. 337, pl. 1, f. 1.

——— *auratus*, Casteln., Proc. Zool. Soc. Vict. i, p. 55.

Otenolates macquariensis, Günth., Proc. Zool. Soc. 1871, p. 390, pl. 33.

——— *ambiguus*, Macleay, Aust. Cat. i, p. 54; Tenison-Woods, Fisheries of N.S. Wales, p. 103.

Hab.—All the rivers of the Murray system. *Golden Perch* and *Yellow-belly* of the colonists; *Kaakaalain* of the Murrumbidgee aboriginals. Attains a length of at least 16 inches.

CTENOLATES CHRISTYI.

Dules christyi, Casteln., Proc. Zool. Soc. Vict. i, p. 57.

Otenolates christyi, Macleay, Aust. Cat. i, p. 55.

Hab.—Edwards River, near Deniliquin.

CTENOLATES FLAVESCENS.

Dules flavescens, Casteln., Res. on the Fishes of Australia, p. 10.

Otenolates flavescens, Macleay, Aust. Cat. i, p. 55.

Hab.—Murray River. Specimen measured 19 inches.

Steindachner (Sitzgsber. Ak. Wiss. Wien lvi, p. 320) describes a *Dules reinhardtii*. I have not had an opportunity of seeing the description of this species, and am therefore unable to include it in my list. The example is said to be from Port Jackson.

THERAPON CUVIERI.

Pristipoma sex-lineatum, Quoy & Gaim., Voy. Freyc. Poiss., p. 320.

Pelates sex-lineatus, quadri-lineatus, et quinque-lineatus, Cuv. & Val. ii, p. 146, et seq., pl. 55; Less., Voy. Coquille Zool. ii, p. 223.

Therapon cuvieri, Bleek., Nat. Tydschr. Nederl. Indie vi, p. 211, and Atl. Ichthyol. Perc., pl. 37, f. 2;

Günth., Cat. i, p. 282; Macleay, Aust. Cat. i, p. 62.

Hab.—Sea of Timor; South coast of New Guinea; North and east coasts of Australia; Port Jackson, abundant. *Mado* and *Trumpeter Perch* at Sydney. Grows but rarely to a length of 12 inches. Of no commercial value.

Our fish is certainly distinct from that described as *Therapon quadri-lineatus*, Bl., by Day (Fishes of India, p. 70, pl. 18, f. 5), below which he places *T. cuvieri*, Bleek., as a synonym.

THERAPON RICHARDSONII.

Casteln., Proc. Zool. Soc. Vict. i, p. 60; Macleay, Aust. Cat. i, p. 64; Tenison-Woods, Fisheries of N. S. Wales, p. 104.

Hab.—Rivers of the Murray system. *Silver Perch* or *Bream* of the colonists; *Kooberry* of the Murrumbidgee aboriginals.

THERAPON

THERAPON NIGER.

Casteln., Proc. Zool. Soc. Vict. i, p. 59; Macleay, Aust. Cat. i, p. 65.
? *Dania elliptica*, Rich., Voy. Erebus and Terror Fishes, p. 118, pl. 52, ff. 4-8; Günth., Cat. i, p. 276;
Macleay, Aust. Cat. i, p. 63.

Hab.—? Rivers of Western Australia; Murray River, rare. Specimen 16 inches in length.

THERAPON UNICOLOR.

Günth., Cat. i, p. 277; Kner, Sitzgsber. Ak. Wiss. Wien lviii, p. 299, t. 2, f. 4, var.; Macleay, Proc.
Linn. Soc. N. S. Wales iii, p. 16, and Aust. Cat. i, p. 65.

Hab.—Northern rivers of N. S. Wales; Warialda. Attains at least 7 inches in length.

THERAPON MACLEAYANUS.

Ramsay, Proc. Linn. Soc. N. S. Wales vi, p. 831.

Hab.—Macquarie River. Spawning in November.

Count Castelnau records (Proc. Linn. Soc. N. S. Wales iii, p. 350) *Therapon sereus*, Bl. from Port Jackson; it is very doubtful whether his identification was correct.

HELOTES SEXLINEATUS.

Therapon sexlineatus, Quoy & Gaim., Voy. Freyc. Poiss., pl. 60, f. 1.

Helotes sexlineatus, Cuv. & Val. iii, p. 149, pl. 56; Günth., Cat. i, p. 235; Kner, Voy. Novara Fische,
p. 46, t. 3, f. 1; Bleek., Atl. Ichthyol. Perc., pl. 64, f. 5; Macleay, Proc. Linn. Soc. N. S.
Wales ii, p. 348, and Aust. Cat. i, p. 68.

Hab.—Australian coasts; Port Jackson. Attains a length of 7 inches.

AGENOR MODESTUS.

Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 371.

Hab.—Port Jackson. Length of specimen 4 inches.

HYPEROGLYPHE POROSA.

Diagramma porosa, Rich., Voy. Erebus and Terror Fishes, p. 26, pl. 16, ff. 5, 6.

Hyperoglyphe porosa, Günth., Cat. i, p. 337; Macleay, Aust. Cat. i, p. 72.

Hab.—Coasts of Australia; Port Jackson, (Kreffé). Typical specimen 5½ inches long.

LOBOTES SURINAMENSIS.

Holocentrus surinamensis, Bl., t. 243.

Lobotes surinamensis, Cuv. & Val. v, p. 319; Day, Fishes of India, p. 84, pl. 21, f. 5.

——— *somnolentus*, Cuv. & Val. v, p. 32.

——— *auctorum*, Günth., Cat. i, p. 338; Macleay, Aust. Cat. i, p. 75.

Hab.—East African, Indian, and Malayan seas; Port Jackson; Endeavour River, var. *somnolentus*
(Macleay). Grows to the length of 2 feet. An excellent food fish.

HISTIOPTERUS LABIOSUS.

Günth., Proc. Zool. Soc. 1871, p. 658, pl. 59; Macleay, Aust. Cat. i, p. 74.

Richardsonia insignis, Casteln., Proc. Zool. Soc. Vict. i, p. 112.

Hab.—South coast of Australia; Botany Bay; Port Jackson; scarce. Attains a length of 30
inches at least.

GERRES OVATUS.

Günth., Cat. i, p. 343; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 391; Macleay, Aust. Cat. i, p. 76;
Tenison-Woods, Fisheries of N. S. Wales, p. 43.

Hab.—South-east coast of Australia; Port Jackson, common. *Silver Bream* and *Silver Belly* of the
Sydney fishermen. Grows to 8 inches in length.

GERRES SUBFASCIATUS.

Cuv. & Val. vi, p. 477; Günth., Cat. i, p. 343; Macleay, Aust. Cat. i, p. 77.

Hab.—Port Jackson. Grows to a length of 6 inches.

GERRES ARGYREUS.

Sciæna argyrea, Forst.

Cichla argyrea, Bl. Schn., p. 344.

Gerres waigiensis, Quoy & Gaim., Voy. Freyc. Zool., p. 292.

Gerres argyreus, Cuv. & Val. vi, p. 478; Günth., Cat. i, p. 352; Macleay, Proc. Linn. Soc. N. S. Wales
iv, p. 62, & Aust. Cat. i, p. 78.

Hab.—From the Red Sea through the Malay Archipelago to the Solomon Islands; Port Jackson
(Günther); Richmond River (Ogilby). Attains a length of at least 5 inches.

PENTAPUS SETOSUS.

Cuv. & Val. vi, p. 270; Günth., Cat. i, p. 382; Bleek., Atl. Ichthyol. Perc., pl. 46, f. 1; Kner, Voy.
Novara Fische, p. 60; Macleay, Aust. Cat. i, p. 85.

Hab.—Madras & Singapore (Kner); Batavia (Günther); North coast of Australia; Port Jackson
(Macleay). Grows to a length of 10 inches.

APHAREUS ROSEUS.

Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 373.

Hab.—Port Jackson (Castelnau). Specimen measured nearly 24 inches.

OLIGORUS MACQUARIENSIS.

Grystes macquariensis, Cuv. & Val. iii, p. 58; Rich., Voy. Erebus & Terror Fishes, p. 118, pl. 53, ff. 8, 9.

——— *peclii*, Mitch., Exped. Austr., pl. 5, f. 1.

Oligorus

Oligorus macquariensis, Günth., Cat. i, p. 251, and Study of Fishes, p. 392, f. 164; Macleay, Aust. Cat. i, p. 52; and Proc. Linn. Soc. N. S. Wales viii, p. 200; Tenison-Woods, Fisheries of N. S. Wales, p. 102, pl. 41.

Hab.—Murray River and its tributaries; northern rivers of the eastern watershed of N. S. Wales. *Murray Cod* of the colonists; *Kookoobul* of the Murrumbidgee aborigines; *Pundy* on the Lower Murray. Attains a weight of 120 lbs. An excellent food fish. Spawns from November to January.

OLIGORUS MITCHELLI.

Casteln., Proc. Zool. Soc. Vict. ii, p. 150; Macleay, Aust. Cat. i, p. 53; Tenison-Woods, Fisheries of N. S. Wales, p. 103.

Hab.—Rivers of the western watershed of N. S. Wales and Victoria. *Murray Perch* of the fishermen. Grows to a large size. An excellent table fish. I think it probable that this will prove to be identical with the preceding; the differences which have been pointed out are easily attributable to sexual and seasonal causes, insufficiency of food, disease, &c.

OLIGORUS GIBBICEPS.

Macleay, Proc. Linn. Soc. N. S. Wales x, p. 265.

Hab.—Murrumbidgee River, near Yass. Specimen measures 8 inches. An Alpine form.

ARRIPIS SALAR.

Centropristes salar, Rich., Trans. Zool. Soc. iii, p. 78, and Voy. Erebus and Terror Fishes, p. 29, pl. 20, ff. 4-6.

——— *tasmanicus*, Hombr. & Jacq., Voy. au Pôle Sud Poiss., p. 40, pl. 4, f. 1.

? ——— *truttaceus*, Cuv. & Val. iii, p. 50.

Arripis salar, Günth., Cat. i, p. 253, and Study of Fishes, p. 393, f. 165; M'Coy, Prodr. Zool. Vict. dec. ii, pls. 16, 17; Macleay, Aust. Cat. i, p. 51; Tenison-Woods, Fisheries of N. S. Wales, p. 35, pl. 5.

Hab.—New Zealand; Norfolk Island; South and east coasts of Australia; Port Jackson, common. *Salmon* of the fishermen when full grown; *Salmon Trout* when of medium size. Attains a length of 2 feet. A poor fish for the table, but of considerable commercial value on account of its size and abundance.

ARRIPIS GEORGIANUS.

Centropristes georgianus, Cuv. & Val. vii, p. 451; Rich., Voy. Erebus and Terror Fishes, p. 117, pl. 54, ff. 3-6.

Arripis georgianus, Jenyns, Voy. Beagle, p. 14; Günth., Cat. i, p. 253; Macleay, Aust. Cat. i, p. 50.

Hab.—South and west coast of Australia; Norfolk Island; Port Jackson, (Günther). *Ruffy* of Victorian fishermen, (M'Coy). Grows to a length of 12 inches.

AMBASSIS COMMERSONI.

Centropomus ambassis, Lacép. iv, p. 273.

Ambassis commersonii, Cuv. & Val. ii, p. 176, pl. 25; Günth., Cat. i, p. 223; Bleek., Atl. Ichthyol. Perc., t. 74, f. 1; Day, Fishes of India, p. 52, pl. 15, f. 3; Macleay, Aust. Cat. i, p. 37, and Proc. Linn. Soc. N. S. Wales viii, p. 255; Kner, Voy. Novara Fische, p. 41.

Hab.—From the Red Sea through those of India to North-east Australia; Richmond River; specimens obtained by Mr. T. Temperley (Ogilby). Enters fresh water. Attains a length of 6 inches.

AMBASSIS AGASSIZII.

Steind., Sitzgsber. Ak. Wiss. Wien lv, 1867, p. 9; Günth., Ann. Nat. Hist. 1867, xx, p. 57; Macleay, Aust. Cat. i, p. 38.

Hab.—Queensland, (Steindachner); Clarence River, (Kreffl).

AMBASSIS CASTELNAUI.

Pseudoambassis castelnaui, Macleay, Aust. Cat. i, p. 39.

Hab.—Murrumbidgee River.

AMBASSIS RAMSAYI.

Pseudoambassis ramsayi, Macleay, Aust. Cat. i, p. 40.

Hab.—Port Jackson. Specimen measures 3 inches.

AMBASSIS JACKSONIENSIS.

Pseudoambassis jacksoniensis, Macleay, Aust. Cat. i, p. 40.

Hab.—Port Jackson. Average length 2 inches.

NANNOPERCA AUSTRALIS.

Günth., Proc. Zool. Soc. 1861, p. 116, pl. 19, f. 2; Macleay, Aust. Cat. i, p. 42.

Paradules latus, Klunz.

Hab.—Murray River. Grows to the length of 3 inches.

NANNOPERCA RIVERINÆ.

Macleay, Aust. Cat. i, p. 42.

Hab.—Murrumbidgee River. Length of specimen 2 inches.

APOGON FASCIATUS.

Mullus fasciatus, White, Voy. N. S. Wales, p. 268, f. 1.

Apogon novem-fasciatus, Cuv. & Val. ii, p. 154; Kner, Voy. Novara Fische, p. 43.

——— *fasciatus*, Quoy & Gaim., Voy. Freyc. Zool. p. 314; Günth., Cat. i, p. 241, and Fische d. Sudsee, p. 19, pl. 20, ff. A, B; Kner, Voy. Novara Fische, p. 43; All. & MacL., Proc. Linn. Soc. N. S. Wales i, p. 267; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 370; Macleay, Aust. Cat. i, p. 43.

——— *aroubiensis*, Hombr. & Jacq., Voy. au Pôle Sud. Poiss., p. 31, pl. 1, f. 1.

——— *balinensis*, Bleek., Perc. p. 28.

Apogon endeka-tania, Bleek., Banka, p. 449.

Amia fasciata, Gill, Proc. Nat. Soc. Phil. 1863; Bleek, Atl. Ichthyol. Perc. t. 48, f. 4.

— *endeka-tania*, Bleek., Atl. Ichthyol. Perc. t. 32, f. 2.

Hab.—East African, Indian, Malayan, and Australian seas; Fiji Islands; Port Jackson, common. Attains a length of 5 inches. A very variable species.

APOGON GUENTHERI.

Apogon guntheri, Casteln., Proc. Zool. Soc. Vict. i, p. 45; Ramsay, Proc. Linn. Soc. N. S. Wales vii, p. 110; Macleay, Aust. Cat. i, p. 45.

? — *novæ-hollandiæ*, Val., Nouv. Ann. Mus. Hist. Nat. 1832, p. 55, pl. 4, f. 2; Günth., Ann. Nat. Hist. xx, 1867, p. 58; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 350.

Hab.—Coasts of Tasmania, Victoria, and New South Wales. Grows to the length of 4 inches.

APOGON QUADRIFASCIATUS.

Cuv. & Val. ii, p. 153; Günth., Cat. i, p. 239; Kner, Voy. Novara Fische, p. 43; Macleay, Aust. Cat. i, p. 44.

Amia quadrifasciata, Bleek., Atl. Ichthyol. Perc. t. 57, f. 1.

Hab.—Indian, Japanese, and Malayan seas; North Australia; Sydney, (Kner).

APOGON GILLII.

Apogonichthys gillii, Steind., Sitzgsber. Ak. Wiss. Wien lv, 1867, p. 11, t. 1, f. 1; Macleay, Aust. Cat. i, p. 47, and Proc. Linn. Soc. N. S. Wales viii, p. 200.

Apogon gillii, Günth., Ann. Nat. Hist. (4) xvii, p. 392.

Mionurus lunatus, Krefft, Proc. Zool. Soc. 1867, p. 942 (*type specimen in the Australian Museum*).

Hab.—Rockhampton (Dämel); Cox's River (Krefft). Specimen measures nearly 6 inches.

PRIACANTHUS MACRACANTHUS.

Cuv. & Val. iii, p. 108; Less., Voy. Coquille Zool. Poiss., p. 225; Günth., Cat. i, p. 220; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 369; Tenison-Woods, Fisheries of N. S. Wales, p. 35.

Priacanthus bleekeri, Casteln., Proc. Zool. Soc. Vict. ii, p. 100.

Hab.—Japan; Batavia; Port Jackson, in May (Casteln.). Attains a length of 12 inches.

PRIACANTHUS BENMEBARI.

Schleg., Faun. Japon. Poiss., p. 19, pl. 7, f. 1; Rich., Ichthyol. China, p. 237; Günth., Cat. i, p. 218, and Ann. Nat. Hist. 1867, xx, p. 57; Macleay, Aust. Cat. i, p. 37.

Hab.—Japanese seas; Port Jackson (Günther). Attains a length of one foot.

DINOLESTES MUELLERI.

Klunz., Arch. f. Nat. 1872, p. 29, t. 3.

Neosphyraena multiradiata, Casteln., Proc. Zool. Soc. Vict. i, p. 96.

Lanioperea mordax, Günth., Ann. Nat. Hist. 1872, x, p. 183; Macleay, Aust. Cat. ii, p. 36; Tenison-Woods, Fisheries of N. S. Wales, pl. 29.

? *Esox lewini*, Griff. Cuv. An. Kingd., ed. x, p. 465, pl. 60, 1834; Gill, Ann. Nat. Hist. (4) xiv, p. 159.

Hab.—Tasmanian, Victorian, and New South Wales coasts. *Sea-pike* of the Sydney market.

SQUAMIPINNES.

CHÆTODON AURIGA.

Forsk., p. 60; Bl. Sehn., p. 226; Cuv. & Val. vii, p. 79; Günth., Cat. ii, p. 7; Day, Fishes of India, p. 106, pl. 27, f. 3.

Chætodon setifer, Bl., t. 425, f. 1; Cuv. & Val. vii, p. 76; Günth., Cat. ii, p. 6, and Fische d. Sudsee, p. 36, t. 26, f. B; Kner, Voy. Novara Fische, p. 97; Macleay, Aust. Cat. i, p. 89.

Hab.—From the Red Sea to Polynesia; Cape York (Castelnau); Sydney (Kner).

CHÆTODON NESOGALLICUS.

Cuv. & Val. vii, p. 63; Günth., Cat. ii, p. 10, and Voy. Challenger Shore Fishes, p. 27.

Hab.—Indian Ocean and Archipelago; Botany Bay (Günther).

CHÆTODON OLIGACANTHUS.

Platax ocellatus, Cuv. & Val. vii, p. 299; Cantor, Cat. p. 170.

Chætodon oligacanthus, Bleek., Verh. Bat. Gen. xxiii, Chætod., p. 16; Günth., Cat. ii, pp. 34 and 516; Kner, Voy. Novara Fische, p. 102; Macleay, Proc. Linn. Soc. N. S. Wales ii, p. 351, and Aust. Cat. i, p. 88; Day, Fishes of India, p. 109.

Hab.—Indian and Malayan seas; Philippine Islands; Port Darwin and Port Jackson (Macleay).

CHÆTODON STRIGATUS.

Cuv. & Val. vii, p. 25, pl. 120; Schleg., Faun. Japon. Poiss., p. 80, pl. 41, f. 1; Günth., Cat. ii, p. 34, and Fische d. Sudsee, p. 47; Macleay, Aust. Cat. i, p. 87.

? *Neochætodon vittatum*, Casteln., Proc. Zool. Soc. Vict. ii, p. 130, and Proc. Linn. Soc. N. S. Wales iii, p. 375; Macleay, Aust. Cat. i, p. 90.

Hab.—Chinese and Japanese seas; Port Jackson (Castelnau); ? W. Australia (Castelnau); Clarence River (Ogilby). Length 5 inches, sent by Mr. T. Temperley.

CHÆTODON SEXFASCIATUS.

Rich., Ann. Nat. Hist. x, 1842, p. 26; Günth., Cat. ii, p. 35; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 3; Macleay, Aust. Cat. i, p. 88.

Hab.—West Coast of Australia; Port Jackson (Krefft).

CHELMO

CHELMO TRUNCATUS.

Kner, Sitzsber. Ak. Wiss. Wien xxxiv, p. 442, t. 2; Günth., Cat. ii, p. 516; Macleay, Aust. Cat. i, p. 92.
Hab.—King George's Sound; Port Hacking; Port Jackson. Attains a length of 8 inches.

SCATOPHAGUS ARGUS.

Chatodon argus, Linn. Gmel., p. 1248; Bl., t. 204, f. 1.

Scatophagus argus, Cuv. & Val. vii, p. 136; Günth., Cat. ii, p. 53, and Ann. Nat. Hist. 1867, p. 58; Kner, Voy. Novara Fische, p. 106; Day, Fishes of India, p. 114, pl. 29, f. 3, and Journ. Linn. Soc. xi, p. 524; Casteln., Proc. Linn. Soc. N. S. Wales ii, p. 234; Macleay, Aust. Cat. i, p. 95.

——— *ornatus*, Cuv. & Val. vii, p. 143, pl. 180; Günth., Cat. ii, p. 59 (*young*).

Hab.—Indian, Chinese, and Australian seas, entering rivers; Port Jackson. Grows to the length of 14 inches. Said to be a well flavored fish, but seldom eaten on account of its reputation for foul feeding.

SCATOPHAGUS MULTIFASCIATUS.

Rich., Voy. Erebus and Terror Fishes, p. 57, pl. 35, ff. 4–6; Günth., Cat. ii, p. 60; All. & Macl., Proc. Linn. Soc. N. S. Wales i, p. 277; Casteln., Proc. Linn. Soc. N. S. Wales ii, p. 235, and iii, p. 376; Macleay, Aust. Cat. ii, p. 96.

Hab.—Coasts of Australia; Port Jackson. Attains a length of 16 inches.

SCORPIS AQUIPINNIS.

Rich., Voy. Erebus and Terror Fishes, p. 121; Günth., Cat. ii, p. 64; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 376; Macleay, Aust. Cat. i, p. 97; Tenison-Woods, Fisheries of N. S. Wales, p. 37, pl. 6.

Scorpius boops, Peters, Monatsber. Ak. Wiss. Berlin 1866, p. 519.

——— *lincolata*, Kner, Voy. Novara Fische, p. 108, pl. 5, f. 3.

Hab.—Australian coasts; Port Jackson, abundant. The *Sweep* of the Sydney market. Grows to a foot in length.

ATYPUS STRIGATUS.

Günth., Cat. ii, p. 64; Macleay, Aust. Cat. i, p. 98.

Atypichthys strigatus, Günth., Cat. iv, p. 510 (*note*); Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 375; Steind., Sitzsber. Ak. Wiss. Wien 1866, liii, p. 435, pl. 4, f. 2.

Hab.—Swan River; coast of New South Wales. *Mado* of the Sydney fishermen, by whom it is confounded with *Therapon cuvieri*. Grows to a length of 6 inches.

MULLIDÆ.

HYPNEOIDES TRAGULA.

Upeneus tragula, Rich., Ichthyol. China, p. 220.

Upeneoides tragula, Günth., Cat. i, p. 398; Kner, Voy. Novara Fische, p. 66; Day, Fishes of India, p. 121, pl. 30, f. 4; Bleek, Atl. Ichthyol. Mull. pl. 2, f. 2; Macleay, Aust. Cat. i, p. 102.

Hab.—From the east coast of Africa to the Malay Archipelago; north coast of Australia; Port Jackson. Attains at least 4½ inches in length (Day).

HYPNEUS VLAMINGII.

Upeneus Vlamingii, Cuv. & Val. iii, p. 452, pl. 71; Rich., Ann. Nat. Hist. 1842, ix, p. 211.

Upeneoides vlamingii, Günth., Cat. i, p. 400; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 372; Macleay, Aust. Cat. i, p. 103.

Upeneichthys vlamingii, Hector, Trans. N. Zeal. Inst. ix, p. 465, pl. 9, f. 5, & Ann. Nat. Hist. (4) xix, p. 340.

Hab.—Queen Charlotte's Sound (Richardson); Port Phillip; Port Jackson, common. Attains to a foot in length. An excellent table fish.

Dr. Hector is undoubtedly correct in removing this species from the genus *Hypneoides*; it has no palatine teeth.

HYPNEUS POROSUS.

Upeneus porosus, Cuv. & Val. iii, p. 455; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 371; Macleay, Aust. Cat. i, p. 105.

Upeneichthys porosus, Günth., Cat. i, p. 400.

Hab.—New Zealand; Tasmania; Australia; Port Jackson; not common, February to May. (Castelnau). *Pink-check* at Sydney (Castelnau).

HYPNEUS SIGNATUS.

Upeneus signatus, Günth., Ann. Nat. Hist. 1867, xx, p. 59; Macleay, Aust. Cat. i, p. 106.

Hab.—Port Jackson. Grows to 6 inches long.

SPARIDÆ.

PACHYMETOPON GRANDE.

Günth., Cat. i, p. 424; Macleay, Aust. Cat. i, p. 106.

Hab.—Port Jackson. Attains a length of 18 inches.

GIRELLA TRICUSPIDATA.

Box tricuspidatus, Quoy & Gaim., Voy. Freyc. Zool., p. 296.

Oblata tricuspidata, Cuv. & Val. vi, p. 372.

Crenidens triglyphus, Rich., Voy. Erebus & Terror Fishes, p. 36, pl. 25, f. 2.

Girella tricuspidata, Günth., Cat. i, p. 428; Macleay, Aust. Cat. i, p. 107; Johnston, Rep. Roy. Soc. Tasm. 1881, p. 49; Tenison-Woods, Fisheries of N. S. Wales, p. 39, pl. 7.

Hab.—Coasts of Victoria, Tasmania, and New South Wales. *Blackfish* of the Sydney Market. Grows to a length of 16 inches. A moderate food fish.

GIRELLA

GIRELLA SIMPLEX.

Orenidens simplex, Rich., Voy. Erebus & Terror Fishes, p. 120.

Girella simplex, Günth., Cat. i, p. 429; Kner, Voy. Novara Fische, p. 75; Macleay, Aust. Cat. i, p. 107.

——— *percoides*, Hector, Trans. N. Zeal. Inst. vii, p. 243, pl. 10, f. 6 D., & op. cit. ix, p. 468, pl. 8, f. 6 C.
Hab.—Coasts of New Zealand, Victoria, and New South Wales. *Blackfish*; confounded with the preceding species by the fishermen. Attains a length of 12 inches.

GIRELLA ELEVATA.

Macleay, Aust. Cat. i, p. 108.

Hab.—Port Jackson. *Drummer* of the Sydney fishermen. Attains a length of 21 inches at least. A poor table fish.

GIRELLA CYANEA.

Macleay, Aust. Cat. i, p. 109.

Hab.—Port Jackson. *Bluefish* of the fishermen.

GIRELLA RAMSAYI.

Macleay, Aust. Cat. i, p. 109.

Hab.—Port Jackson. Length of type specimen 18 inches.

Girella (Melanichthys) zonata, Günth., Cat. i, p. 429, is included by Castelnau in his list of Port Jackson fishes, (Proc. Linn. Soc. N. S. Wales iii, p. 350); it is most probably the young of *G. tricuspidata*, which is banded in its immature state.

TEPHRÆOPS ZEBRA.

Orenidens zebra, Rich., Voy. Erebus & Terror Fishes, p. 70.

Tephræops zebra, Günth., Cat. i, p. 432.

Neotephræops zebra, Casteln., Proc. Zool. Soc. Vict. i, pp. 69 & 248; Macleay, Aust. Cat. i, p. 110.

Girella zebra, Steind., Sitzgsber. Ak. Wiss. Wien liii, 1866, p. 430, t. 6, f. 2.

Girellichthys zebra, Klunz., Arch. f. Nat. 1872, p. 22.

Hab.—King George's Sound; Port Jackson, (Steindachner). Grows to a foot in length.

HAPLODACTYLUS LOPHODON.

Günth., Cat. i, p. 435; Macleay, Aust. Cat. i, p. 111.

Hab.—New South Wales coast; Port Jackson, common. Attains a length of 18 inches.

HAPLODACTYLUS OBSCURUS.

Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 374.

Hab.—Port Jackson. Probably an early stage of the preceding.

LETHRINUS NEMATACANTHUS.

Bleek., Japan, p. 403, & Atl. Ichthyol. Perc., pl. 59, f. 3; Günth., Cat. i, p. 456; All. & Macl., Proc. Linn. Soc. N. S. Wales i, p. 275; Macleay, Aust. Cat. i, p. 112.

Hab.—Japan; Louisiade Archipelago; North-east coast of Australia; Port Jackson (Macleay).

LETHRINUS CHRYSOSTOMUS.

Rich., Voy. Erebus & Terror Fishes, p. 118, pl. 60, ff. 6, 7; Günth., Cat. i, p. 457; All. & Macl., Proc. Linn. Soc. N. S. Wales i, p. 276; Macleay, Aust. Cat. i, p. 112.

Hab.—Norfolk Island; north and east coasts of Australia; Port Jackson. Attains a length of 13 inches.

LETHRINUS HARAK.

Sciæna harak, Forsk., Descr. Anim., p. 52.

Lethrinus harak, Rüpp., N.W. Fische, p. 116, t. 29, f. 3; Günth., Cat. i, p. 458; Bleek., Atl. Ichthyol. Perc., pl. 49, f. 3; Day, Fishes of India, p. 137, pl. 33, f. 3; Macleay, Aust. Cat. i, p. 114; Kner, Voy. Novara Fische, p. 81.

Hab.—From the Red Sea, through the Indian Seas to the Malay Archipelago; Sydney (Kner). It seems probable that Kner's specimens are not identical with Forskal's *S. harak*.

LETHRINUS GLYPHODON.

Günth., Cat. i, p. 462; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 372.

Hab.—Louisiade Archipelago; Port Jackson (Castelnau). Attains a length of 13 inches.

PAGRUS UNICOLOR.

Chrysophrys unicolor, Quoy & Gaim., Voy. Uranie, p. 209.

Pagrus unicolor, Cuv. & Val vi, p. 160; Rich., Ichthyol. China, p. 242; Günth., Cat. i, p. 468; Kner, Voy. Novara Fische, p. 85; Macleay, Aust. Cat. i, p. 116; Tenison-Woods, Fisheries of N. S. Wales, p. 39, pl. 8, and frontispiece.

Hab.—New Zealand and Australian seas; Port Jackson, abundant. *Schnapper* of the fishermen; *Wollamai* of the aborigines. Attains a weight of 25 lbs. An excellent food fish.

CHRYSOPHRYS SARBA.

Sparus sarba, Forsk., Descr. Anim., p. 31; Linn. Gmel. p. 1275.

Chrysophrys sarba, Cuv. & Val. vi, p. 102; Rüpp., N.W. Fische, p. 110, pl. 28, f. 1; Günth., Cat. i, p. 488; Kner, Voy. Novara Fische, p. 88; Day, Fishes of India, p. 142, pl. 34, f. 6; Macleay, Aust. Cat. i, p. 118; Tenison-Woods, Fisheries of N. S. Wales, p. 42, pl. 9.

Hab.—From the Red Sea to the east coast of Australia; Port Jackson, common. Grows to the length of 16 inches. *Tarwhine* of the fishermen. A poor table fish.

CHRYSOPHRYS AUSTRALIS.

Günth., Cat. i, p. 494; McCoy, Prodr. Zool. Vict. dec. i, pl. 4; Macleay, Aust. Cat. i, p. 119.

Chrysophrys sarba, Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 373.

Hab.—Australian seas, entering rivers; Port Jackson, abundant. *Black Bream* of the fishermen. Attains to 18 inches in length. Of good flavor.

CIRRHITIDÆ.

CIRRHITIDÆ.

CIRRHITICHTHYS APRINUS.

Cirrhites aprinus, Cuv. & Val. iii, p. 76.

——— *graphidopterus*, Bleck, Amboina iii, p. 106.

Cirrhitichthys graphidopterus, Günth., Cat. ii, p. 74; Ramsay & Ogilby, Proc. Linn. Soc. N. S. Wales x, (*in press*).

Hab.—Amboina; Port Jackson. Attains a length of 5 inches.

CHIRONEMUS MARMORATUS.

Günth., Cat. ii, p. 76; Macleay, Aust. Cat. i, p. 121.

Hab.—Australian coasts. Grows to a foot in length.

CHILODACTYLUS VITTATUS.

Garrett, Proc. Calif. Ac. Nat. Sc. iii, p. 103; Günth., Fische d. Sudsee, p. 73, pl. 51, f. B; Macleay, Aust.

Cat. i, p. 122; Tenison-Woods, Fisheries of N. S. Wales, pl. 13.

Zcodrius vestitus, Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 377.

Hab.—Sandwich Islands; Port Jackson. Specimen examined 8 inches long.

CHILODACTYLUS MACROPTERUS.

Sciæna macroptera, Forst.

Cichla macroptera, Bl. Schn., p. 342.

Chilodactylus macropterus, Rich., Proc. Zool. Soc. 1850, p. 62, and Ann. Nat. Hist. 1851 vii, p. 278;

Günth., Cat. ii, p. 78, and Study of Fishes, p. 411, f. 177; Macleay, Aust. Cat. i, p. 122;

Tenison-Woods, Fisheries of N. S. Wales, p. 46, pl. 10.

Hab.—Australian seas; Port Jackson, common. *Morwong* and *Jackass-fish* of the Sydney market. Attains a length of 18 inches. Of excellent flavor.

CHILODACTYLUS GIBBOSUS.

Chatodon gibbosus, Banks.

Chilodactylus gibbosus, Rich., Trans. Zool. Soc. iii, p. 102, and Proc. Zool. Soc. 1850, p. 65, pl. 2, ff. 3, 4;

Günth., Cat. ii, p. 84, & Ann. Nat. Hist. xx, p. 60; Stein & Döder., Denk. Ak. Wien xlvi, p. 27, pl. 7, f. 2; Macleay, Aust. Cat. i, p. 124.

Hab.—West and south coasts of Australia; Tasmania; Port Jackson (Kreffl).

CHILODACTYLUS FUSCUS.

Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 376; Macleay, Aust. Cat. i, p. 125; Tenison-Woods, Fisheries of N. S. Wales, p. 46, pl. 11.

Chilodactylus annularis, Casteln., l.c., p. 377; Macleay, l.c., p. 125 (*young*).

Hab.—Port Jackson, common. *Carp*, of the fishermen. Grows to 16 inches in length. An excellent table fish.

CHILODACTYLUS MULHALLI.

Macleay, Proc. Linn. Soc. N. S. Wales vii, p. 366.

Hab.—Port Jackson. Length of specimen 26 inches.

PSILOCRANIUM COXII.

Macleay, Proc. Linn. Soc. N. S. Wales viii, p. 439.

Hab.—Port Jackson. Length of specimen 32 inches.

LATRIS CILIARIS.

Sciæna ciliaris, Forst., Descr. Anim. ed. Licht., p. 137.

Latris ciliaris, Rich., Voy. Erebus and Terror Fishes, p. 37, pl. 26, ff. 6, 7; Günth., Cat. ii, p. 86;

Macleay, Aust. Cat. i, p. 126.

Hab.—New Zealand; Port Jackson (Richardson). Attains to 30 inches in length. A moderate fish for the table.

LATRIS RAMSAYI.

Ogilby, Proc. Linn. Soc. N. S. Wales x, p. 229.

Hab.—Port Jackson. Largest specimen examined, rather more than 21 inches. This may be a variety of *L. forsteri*, Casteln., Proc. Zool. Soc. Vict. i, p. 77.

SCORPÆNIDÆ.

SEBASTES PERCOIDES.

Scorpena percoides, Solander.

Sebastes maculatus, Rich., Trans. Zool. Soc. iii, p. 93 (*not Cuv. & Val. nor Smith*).

Sebastes percoides, Rich., Ann. Nat. Hist. 1842, ix, p. 384, & Voy. Erebus and Terror Fishes, p. 23, pl.

15, ff. 1, 2; Günth., Cat. ii, p. 101, and Study of Fishes, p. 412, f. 178; Casteln., Proc. Linn.

Soc. N. S. Wales iii, p. 379; McCoy, Prodr. Zool. Vict. dec. iv, p. 17, pl. 33; Hutton, Trans.

N. Z. Inst. v, pl. 8; Macleay, Aust. Cat. i, p. 129; Tenison-Woods, Fish. of N. S.

Wales, pl. 14.

? ——— *allporti*, Casteln., Proc. Zool. Soc. Vict. i, p. 40.

Hab.—New Zealand; Tasmania; Victoria; Port Jackson, scarce. *Red Gurnard Perch*, at Melbourne. Grows to the length of 12 inches.

SEBASTES SCABER.

Ramsay and Ogilby, Proc. Linn. Soc. N. S. Wales x, (*in press*).

Hab.—Port Jackson. Largest specimen, 2½ inches.

SCORPÆNA

SCORPÆNA CRUENTA.

- (Solander), Rich., Ann. Nat. Hist. 1842, ix, p. 217; Günth., Cat. ii, p. 112; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 378; Hutton, Trans. N. Z. Inst v, pl. 8; Macleay, Aust. Cat. i, p. 130.
Scorpæna militaris, Rich., Voy. Erebus and Terror Fishes, p. 22, pl. 14, ff. 1, 2.
Hab.—New Zealand; Tasmania; Victoria; New South Wales; Port Jackson, common. *Red Rock Cod* of Sydney fishermen. Grows to the length of eighteen inches. A fair food fish.

SCORPÆNA BYNÖENSIS.

- Rich., Voy. Erebus and Terror Fishes, p. 22, pl. 14, ff. 3-5; Günth., Cat. ii, p. 113, and Study of Fishes, p. 414, f. 180; All. & Maccl., Proc. Linn. Soc. N. S. Wales i, p. 278; Macleay, l.c. ii, p. 353, and Aust. Cat. i, p. 131.
Scorpæna jacksoniensis, Steind., Sitzgsber. Ak. Wiss. Wien liii, 1866, p. 438, t. 3, f. 2.
Hab.—North and east coasts of Australia. Grows to a length of 6 inches.

SCORPÆNA CARDINALIS.

- (Solander), Rich., Ann. Nat. Hist. 1842, ix, p. 212; Günth., Cat. ii, p. 116; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 378; Macleay, Aust. Cat. i, p. 131; Tenison-Woods, Fisheries of N. S. Wales, pl. 12.
Hab.—Coast of New South Wales, common. *Red Rock Cod* of Sydney fishermen, who confound it with *S. cruenta*. Attains to 8 inches in length. Of fair quality for the table.

GLYPTAUCHEN PANDURATUS.

- Apistus panduratus*, Rich., Proc. Zool. Soc. 1850, p. 58, pl. i, ff. 3, 4, and Ann. Nat. Hist. 1851, vii, p. 274; Günth., Cat. ii, p. 121; Macleay, Aust. Cat. i, p. 134.
Hab.—King George's Sound; Port Jackson. Grows to 8 inches in length.

PTEROIS VOLITANS.

- Gasterosteus volitans*, Linn., Syst. Nat. i, p. 491.
Scorpæna volitans, Bl., t. 184.
Pterois volitans, Cuv. & Val. iv, p. 352, pl. 88; Rüpp., N. W. Fische, p. 107; Günth., Cat. ii, p. 122, and Fische d. Sudsee, p. 81; Day, Fishes of India, p. 154, pl. 37, f. 1; All. & Maccl., Proc. Linn. Soc. N. S. Wales i, p. 278; Macleay, Aust. Cat. i, p. 135, and Proc. Linn. Soc. N. S. Wales vii, p. 248.
Hab.—From the east coast of Africa, through all the Indian seas; north and east coasts of Australia. Attains a length of 5 inches.

PTEROIS ZEBRA.

- Cuv. & Val. iv, p. 367; Quoy & Gaim., Voy. Uranie, p. 329, and Voy. Astrolabe Poiss., p. 692, pl. 11, f. 6; Günth., Cat. ii, p. 126, and Fische d. Sudsee, p. 82; Day, Fishes of India, p. 153; Bleek., Atl. Ichthyol. Scorp., pl. 1, f. 1; Macleay, Aust. Cat. i, p. 135.
Hab.—Indian and Malayan seas; Port Jackson. Grows to 8 inches at least.

CENTROPOGON AUSTRALIS.

- Cottus australis*, White, Voy. N. S. Wales, p. 266.
Apistus australis, Cuv. & Val. iv, p. 398.
Centropogon australis, Günth., Cat. ii, p. 128; Macleay, Aust. Cat. i, p. 136.
Hab.—Port Jackson, common; Richmond River. *Fortescue* of the colonists. Attains a length of 5 inches.

CENTROPOGON ROBUSTUS.

- Günth., Cat. ii, p. 128, and Ann. Nat. Hist. 1867, xx, p. 60; Krefft, Proc. Zool. Soc. 1864, p. 182; Macleay, Aust. Cat. i, p. 136, and Proc. Linn. Soc. N. S. Wales viii, p. 203; Tenison-Woods, Fisheries N. S. Wales, p. 48.
Centropogon troscheli, Steind., Sitzgsber. Ak. Wiss. Wien 1866, liii, p. 440, pl. 4, f. 1.
Hab.—Rivers of the eastern watershed of New South Wales; Cape York (Günther). *Bull-rout* of the colonists. Attains to a length of 7 inches.

PENTAROGÉ MARMORATA.

- Apistus marmoratus*, Cuv. & Val. iv, p. 416.
Pentarogé marmorata, Günth., Cat. ii, p. 132; Steind., Sitzgsber. Ak. Wiss. Wien 1868, lvii, p. 984; Macleay, Aust. Cat. i, p. 139.
Hab.—Seas of Timor, Australia, and Tasmania; Port Jackson. Grows to the length of 8 inches.

HAPLOACTIS MILESII.

- Aploactis milesii*, Rich., Proc. Zool. Soc. 1850, p. 60, pl. 1, ff. 1, 2, and Ann. Nat. Hist. 1851, vii, p. 275; Günth., Cat. ii, p. 142; Macleay, Aust. Cat. i, p. 140.
Hab.—King George's Sound; Port Jackson. Grows to the length of 6 inches.

SYNANCEIA HORRIDA.

- Scorpæna horrida*, Linn. i, p. 453; Bl., t. 183.
Synanceia horrida, Bl. Schn., p. 194; Cuv. & Val. iv, p. 440.
Synanecdium horridum, Müll., Akad. Wiss. 1844, p. 163; Günth., Cat. ii, p. 144, and Fische d. Sudsee, p. 83; Kner, Voy. Novara Fische, p. 119, Day, Fishes of India, p. 162, pl. 39, f. 3; Macleay, Aust. Cat. i, p. 142.
Hab.—Indian and Malayan seas; north coast of Australia; ? Port Jackson. Grows to 18 inches in length. Mr. Ramsay thinks it probable that the unique Port Jackson specimen of this fish in the Australian Museum collection came originally from the north, and has been accidentally labelled as from Port Jackson.

NANDIDÆ.

PLESIOPS BLEEKERI.

Günth., Cat. iii, p. 364, and Fische d. Sudsee, p. 87, pl. 58, f. A; Macleay, Aust. Cat. i, p. 100.
Hab.—Port Jackson; Port Hacking. Grows to the length of 12 inches.

TEACHINOPS TENIATUS.

Günth., Cat. iii, p. 366; Kner, Voy. Novara Fische, p. 215, pl. 8, f. 7; Macleay, Aust. Cat. i, p. 100.
Hab.—New South Wales coast. Length of specimen $3\frac{1}{2}$ inches.

RUEPPELLIA PROLONGATA.

Casteln., Proc. Zool. Soc. Vict. ii, p. 51, and Res. Fishes Aust., p. 29.
Hab.—West Australia; Port Phillip; Port Jackson, (Castelnau). Grows to the length of a foot.

TEUTHIDIDÆ.

TEUTHIS JAVA.

Linn., Syst. Nat. i, p. 507; Linn. Gmel. i, p. 1362; Günth., Cat. iii, p. 315; Day, Fishes of India, p. 165, pl. 39, f. 5; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 386; Macleay, Aust. Cat. i, p. 142.
Amphacanthus javus, Cuv. & Val. x, p. 118; Kner, Voy. Novara Fische, p. 205.
Hab.—East Indian, Malayan, and Australian seas; Port Jackson. Attains a length of 6 inches. A good food fish.

TEUTHIS NEBULOSA.

Amphacanthus nebulosus, Quoy & Gaim., Voy. Uranie Zool., p. 369; Cuv. & Val. x, p. 164.
 ——— *maculosus*, Quoy & Gaim., l.c., p. 370.
 ——— *olivaceus*, Cuv. & Val. x, p. 163.
 ——— *gymnopareius*, Rich., Ann. Nat. Hist. 1843, xi, p. 174.
Teuthis nebulosa, Günth., Cat. iii, p. 321, & Study of Fishes, p. 419, f. 182; Playfair, Fishes of Zanz., p. 51, pl. 10, f. 3; Macleay, Aust. Cat. i, p. 144; Tenison-Woods, Fisheries of N. S. Wales, p. 50.
Hab.—From the east coast of Africa to Australia. *Black Trevally* of the Sydney market. Grows to the length of 6 inches. A fair breakfast fish.

TEUTHIS HEXAGONATA.

Amphacanthus hexagonatus, Bleek., Kokos, p. 41; Kner, Voy. Novara Fische, p. 207.
Teuthis hexagonata, Günth., Cat. iii, p. 320.
Hab.—Java; Sumbawa; Kokos; Fiji Islands; Port Jackson (Kner). Attains a length of 6 inches.

BERYCIFORMES.

BERYCIDÆ.

MONOCENTRIS JAPONICUS.

Gasterosteus japonicus, Houtt., Act. Soc. Harl. xx, pt. 2, p. 329.
Sciæna cataphracta, Thunb., Nov. Ac. Sc. Suec. xi, p. 102, t. 3.
Monocentris carinata, Bl. Schn., p. 100, t. 24.
Lepisacanthus japonicus, Lacep. iii, p. 321.
Monocentris japonicus, Cuv. & Val. iv, p. 461, pl. 97; Schleg., Faun. Japon. Poiss., p. 50, pl. 23, f. 1; Günth., Cat. i, p. 9, and Study of Fishes, p. 421, f. 183; Bleek., Atl. Ichthyol. Trachich., pl. 2, f. 4; Macleay, Aust. Cat. i, p. 145.
Hab.—Seas of Japan; Port Jackson and Port Stephens, very rare. Attains a length of 5 inches.

TRACHICHTHYS AUSTRALIS.

Shaw, Nat. Misc., t. 378, & Zool. iv, p. 630; Cuv. & Val. iii, p. 299; Lowe, Fishes of Madeira, p. 55; Günth., Cat. i, p. 10; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 364; Macleay, Aust. Cat. i, p. 145; Ogilby, Proc. Linn. Soc. N. S. Wales x, (*in press*).
Trachichthys jacksoniensis, Macleay, Aust. Cat. i, p. 146.
Hab.—Coast of New South Wales. Grows to at least 6 inches in length.

BERYX AFFINIS.

Günth., Cat. i, p. 13; Casteln., Proc. Linn. Soc. N. S. Wales ii, p. 225, & op. cit. iii, p. 365; Hector, Ann. Nat. Hist. 1877, (4) xix, p. 341; Macleay, Aust. Cat. i, p. 147; Tenison-Woods, Fisheries of N. S. Wales, p. 51, pl. 15.
Hab.—Coasts of New Zealand and New South Wales. *Nannygai* of the Sydney market. Grows to 20 inches long. In great estimation for the table.

CYRTIFORMES.

CYRTIDÆ.

PEMPHERIS COMPRESSUS.

Sparus compressus, White, Voy. N. S. Wales, App., p. 267, f. 2; Günth., Cat. ii, p. 508; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 384; Macleay, Aust. Cat. i, p. 151.
Hab.—Swan River; Port Jackson, common. *Bullseye* of the fishermen. Grows to 6 inches in length.

PEMPHERIS MACROLEPIS.

Macleay, Aust. Cat. i, p. 151.
Hab.—King George's Sound; Port Jackson. Attains a length of 10 inches.

PEMPHERIS

PEMPHERIS LINEATUS.

Ogilby, Proc. Linn. Soc. N. S. Wales x, p. 447.

Hab.—Port Jackson. Type specimen measures $7\frac{1}{2}$ inches.

POLYNEMIFORMES.

POLYNEMIDÆ.

POLYNEMUS INDICUS.

Shaw, Zool. v, p. 155; Günth., Cat. ii, p. 326; Kner, Voy. Novara Fische, p. 137, t. 7, f. 1 (*air-bladder*); Macleay, Aust. Cat. i, p. 153.

Polynemus uronemus, Cuv. & Val. iii, p. 385.

Hab.—Indian and Malayan seas; Port Jackson, (Günther & Castelnau). Grows to 4 feet in length. An excellent food fish.

POLYNEMUS MACROCHIR.

Günth., Ann. Nat. Hist. 1867, (3) xx, p. 60; Macleay, Aust. Cat. i, p. 153.

Hab.—Port Jackson.

SCIÆNIFORMES.

SCIÆNIDÆ.

SCIÆNA AQUILA.

Cheilodipterus aquila, Lacép. v, p. 685.

Sciæna aquila, Risso, Eur. Mérid. iii, p. 411; Cuv. & Val. v, p. 28, pl. 100; Günth., Cat. ii, p. 291, and Fische d. Sudsee, p. 105; Day, Brit. Fishes i, p. 150, pl. 50.

—— *hololepidota*, Cuv. & Val. v, p. 53; Quoy & Gaim., Voy. Astrolabe Poiss., p. 697, pl. 12, f. 1; Smith, Ill. S. Afr. Zool., Fishes pl. 15.

? —— *antarctica* Casteln., Proc. Zool. Soc. Vict. i, p. 100, and Proc. Linn. Soc. N. S. Wales ii, p. 232, and op. cit. iii, p. 381; Macleay, Aust. Cat. i, p. 151; Tenison-Woods, Fisheries of N. S. Wales, p. 53, pl. 16.

? *Sciæna (Corvina) nova-hollandiæ*, Steindl., Sitzgsber. Ak. Wiss. Wien 1866, liii, p. 445, pl. 5, f. 2.

Hab.—Eastern shores of the Atlantic; Mediterranean; Cape Seas; south and east coasts of Australia; Port Jackson, common. *Jewfish* of Sydney; *Kingfish* of Melbourne; *Deuyfish* of Brisbane. Attains a length of 6 feet. A good table fish.

OTOLITHUS ATELODUS.

Günth., Ann. Nat. Hist. 1867, (3) xx, p. 60; Macleay, Aust. Cat. i, p. 156; Tenison-Woods, Fisheries of N. S. Wales, p. 54, pl. 17.

Otolithus teraglin, Macleay, Proc. Linn. Soc. N. S. Wales v, p. 48.

Hab.—Coast of New South Wales, abundant. *Teraglin* of the Sydney market. Grows to the length of 3 feet. An excellent food fish.

XIPHIIFORMES.

XIPHIIDÆ.

HISTIOPHORUS GLADIUS.

Scomber gladius, Brouss., Mem. Acad. Sc. 1786, p. 454, pl. x; Bloch, t. 345.

Xiphias velifer, Bl. Schn., p. 93.

Istiophorus gladius, Lacép. iii, pp. 374, 375.

Histiophorus indicus, Cuv. & Val. viii, p. 293, pl. 229.

—— *americanus*, Cuv. & Val. viii, p. 303.

—— *gladius*, Günth., Cat. ii, p. 513; Playfair, Proc. Zool. Soc. 1867, p. 856; Day, Fishes of India, p. 198; Ramsay, Proc. Linn. Soc. N. S. Wales v, p. 295, pl. 8; Macleay, Aust. Cat. i, p. 157; Tenison-Woods, Fisheries of N. S. Wales, p. 55.

Hab.—Seas between or near the tropics; coast of New South Wales. *Swordfish*. Grows to the length of 14 feet.

TRICHIURIFORMES.

TRICHIURIDÆ.

TRICHIURUS HAUMELA.

Olupea haumela, Forsk., p. 72; Linn. Gmel., p. 1408.

Trichiurus haumela, Cuv. & Val. viii, p. 249; Rüpp., N. W. Fische, p. 41; Günth., Cat. ii, p. 348; Kner, Voy. Novara Fische, p. 140; Day, Fishes of India, p. 201; Macleay, Aust. Cat. i, p. 159.

Hab.—East African, Indian, Malayan and Chinese seas; New South Wales coast; Port Jackson and Newcastle. Grows to the length of 3 feet.

COTTO-SCOMBRIFORMES.

ACANTHURIDÆ.

PRIONURUS MICROLEPIDOTUS.

Lacép., Ann. Mus. iv, p. 205; Cuv. & Val. x, p. 295, pl. 292; Günth., Cat. i, p. 347; Macleay, Aust. Cat. i, p. 164.

Hab.—Port Jackson. Grows to 12 inches in length.

CARANGIDÆ.

CARANGIDÆ.

CARANX TRACHURUS.

Scomber trachurus, Linn., Syst. Nat., p. 494; Bloch, t. 56.

Caranx trachurus, Lacép. iii, p. 60; Cuv. & Val. ix, p. 11, pl. 246; Gay, Hist. Chile, Zool. ii, p. 233; Rich., Ichthyol. China, p. 273, and Ann. Nat. Hist. 1843, xi, p. 25; Day, Brit. Fishes i, p. 124, pl. 44; Günth., Study of Fishes, p. 442.

————— var *japonicus*, Schleg., Faun. Japon. Poiss., p. 109, pl. 59, f. 1.

————— *declivis*, Jenyns, Voy. Beagle Fishes, p. 68, pl. 14.

Trachurus trachurus, Casteln., Anim. Nouv., p. 23; Günth., Cat. ii, p. 419; Kner, Voy. Novara Fische, p. 150; Kner & Steind., Sitzgsber. Ak. Wiss. Wien liv, p. 364; Steind., op. cit. lvii, p. 382; Macleay, Aust. Cat. i, p. 166; McCoy, Prodr. Zool. Viet. dec. ii, pl. 18.

————— *declivis*, Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 383; Tenison-Woods, Fisheries of N. S. Wales, p. 58, pl. 18.

Hab.—All temperate seas; Port Jackson, common. *Yellow-tail* of Sydney. Attains a length of 16 inches. Of fair quality as food.

CARANX NOBILIS.

Macleay, Aust. Cat. i, p. 167.

Hab.—Port Jackson. Length, 24 inches.

CARANX GEORGIANUS.

Cuv. & Val. ix, p. 85; Jenyns, Voy. Beagle Fishes, p. 71; Rich., Ann. Nat. Hist. 1843, xi, p. 27, and Voy. Erebus & Terror Fishes, p. 135, pl. 58, ff. 1-3; Günth., Cat. ii, p. 440; All. & Macl., Proc. Linn. Soc. N. S. Wales i, p. 327; Macleay, op. cit. viii, p. 204, & Aust. Cat. i, p. 168.

Hab.—Coasts of Norfolk and Raoul Islands, New Zealand, & Australia; New South Wales, abundant. *White Trevally* of Port Jackson. Grows to 25 inches. A well-flavored fish.

CARANX HIPPOS.

Scomber hippos, Linn., Syst. Nat. i, p. 494; Bl. Schn., p. 28.

Caranx forsteri, Cuv. & Val. ix, p. 107; Kner, Voy. Novara Fische, p. 158.

————— *hippos*, Günth., Cat. ii, p. 449, and Fische d. Sudsee, p. 131, pl. 84, and Study of Fishes, f. 196 (*l.l. plates*); Day, Fishes of India, p. 216; All. & Macl., Proc. Linn. Soc. N. S. Wales i, p. 323; Macleay op. cit. ii, p. 355, and vii, p. 355, and Aust. Cat. i, p. 170.

————— *paraspistes*, Rich., Voy. Erebus and Terror Fishes, p. 186, pl. 58, ff. 6, 7.

Hab.—Indian, Malayan, Chinese, and Australian seas. Port Jackson, scarce. Attains a length of 3 feet.

CARANX CILIARIS.

Zeus ciliaris, Bl., t. 191; Linn. Gmel., p. 1223.

Blepharis indicus, Cuv. & Val. ix, p. 154; Schleg., Faun. Japon. Poiss., p. 113, pl. 60, f. 2; Rich., Ichthyol. China, p. 271.

————— *fasciatus*, Rüpp., Atl. Fische, p. 129, pl. 33, f. 2.

Caranx ciliaris, Günth., Cat. ii, p. 454, and Fische d. Sudsee, p. 135, pl. 89; Day, Fishes of India, p. 224; Macleay, Aust. Cat. i, p. 172, and Proc. Linn. Soc. N. S. Wales vii, p. 356.

Blepharis ciliaris, Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 383.

Hab.—From the Red Sea through the Indian and Malayan Seas to the north and east coasts of Australia; Port Jackson, scarce. Largest specimen in the Australian Museum, 6 inches.

Castelnau includes *Caranx macrosoma*, Bleek. in his list of Port Jackson fishes (Proc. Linn. Soc. N. S. Wales iii, p. 352), but as the species has not been obtained since his time, and he states that it is called "yellow-tail" at Sydney, there can be little doubt that his identification was erroneous.

SERIOLA LALANDEI.

Cuv. & Val. ix, p. 208; Günth., Cat. ii, p. 463; Macleay, Aust. Cat. i, p. 174; Tenison-Woods, Fisheries of N. S. Wales, p. 59, pl. 19.

Seriola aurco-vittata, Schleg., Faun. Japon. Poiss., p. 115, pl. 62, f. 1.

Hab.—Brazilian coast; Cape seas; Japan; east coast of Australia; Port Jackson. *Kingfish* of the Sydney market. Attains the weight of 50 pounds. Of considerable commercial importance when cured.

SERIOLA GRANDIS.

Casteln., Proc. Zool. Soc. Vict. i, p. 115; Macleay, Aust. Cat. i, p. 175.

Hab.—Coast of Victoria; Port Jackson (Castelnau). *Yellow-tail* of the Melbourne market.

SERIOLA HIPPOS.

Günth., Ann. Nat. Hist. 1876, (4) xvii, p. 392; Macleay, Aust. Cat. i, p. 176; Tenison-Woods, Fisheries of N. S. Wales, p. 60.

Seriola nigrofasciata, Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 352; Macleay, Aust. Cat. i, p. 174.

Hab.—Port Jackson; Botany Bay. *Samson-fish* of the Sydney fishermen.

I have examined the two fish identified by Count Castelnau as *Seriola nigrofasciata*, and find them to be young examples of this species.

SERIOLA SIMPLEX.

Ramsay & Ogilby, Proc. Linn. Soc. N. S. Wales x, (*in press*).

Hab.—Port Jackson.

SERIOLELLA BRAMA.

Neptomenus brama, Günth., Cat. ii, p. 390; Macleay, Aust. Cat. i, p. 177.

Hab.—New Zealand; Tasmania; Port Jackson, (Aust. Mus). Attains a length of 10 inches.

In the Hon. Wm. Macleay's museum is a specimen of the Victorian *Seriotelella travale*, Casteln., labelled doubtfully from Port Jackson.

NAUCERATES DUCTOR.

Gasterosteus ductor, Linn., Syst. Nat. i, p. 489.

Scomber ductor, Bl., t. 338; Linn. Gmel. i, p. 1324.

Naucrates ductor, Cuv. & Val. viii, p. 312, pl. 232; Günth., Cat. ii, p. 374, and Fische d. Sudsee, p. 137, and Study of Fishes, p. 444; Day, Fishes of India, p. 229, pl. 51A, f. 2, and Brit. Fishes i, p. 127, pl. 45; Lütken, Spol. Atlant., p. 600, pl. 3, ff. 14, 15; Macleay, Aust. Cat. i, p. 194.

———— *indicus*, Cuv. and Val. viii, p. 326; Less., Voy. Coquille Poiss., p. 157, pl. 14; Rich., Ichtyol. China, p. 269; Kner, Voy. Novara Fische, p. 145.

Hab.—Temperate and tropical seas; Port Jackson. *Pilot-fish*. Attains to a foot in length. Said to be dry but well-flavored in its flesh.

CHORINEMUS SANCTI-PETRI.

Cuv. & Val. viii, p. 379, pl. 236; Günth., Cat. ii, pl. 473, and Fische d. Sudsee, p. 138; Day, Fishes of India, p. 230; Macleay, Aust. Cat., App. p. 24.

Hab.—From the east coast of Africa, through the Indian and Malayan seas to the east coast of Australia; Port Denison (Klunzinger); Port Jackson (Macleay). Grows to 20 inches long.

TEMNODON SALTATOR.

Gasterosteus saltatrix, Linn., Syst. Nat. i, p. 491.

Scomber saltator, Bl. Schn., p. 35.

Temnodon heptacanthus, Quoy & Gaim., Voy. Freyc. Zool., p. 400, pl. 61, f. 2.

———— *saltator*, Cuv. and Val. ix, p. 225, pl. 260; DeKay, N. York Faun. Fishes, p. 130, pl. 26, f. 81; Gay, Hist. Chile, Zool. ii, p. 244; Günth., Cat. ii, p. 479; Macleay, Aust. Cat. i, p. 179; Tenison-Woods, Fisheries of N. S. Wales, p. 60, pl. 20.

Hab.—Seas of the temperate and tropical regions of both hemispheres; Australian coasts, abundant. *Tailor* of Sydney; *Skip-jack* of Melbourne. Attains to a length of 30 inches. Of good quality for the table.

TRACHYNOTUS OVATUS.

Gasterosteus ovatus, Linn., Syst. Nat. i, p. 490.

Trachynotus ovatus, Günth., Cat. ii, p. 481, and Fische d. Sudsee, p. 139; Steind., Sitzgsber. Ak. Wiss. Wien 1869, lx, p. 709; Kner, Voy. Novara Fische, p. 164; Day, Fishes of India, p. 234, pl. 51 B, f. 2; All. & Macl., Proc. Linn. Soc. N. S. Wales i, p. 330; Macleay, Aust. Cat. i, p. 180, and Proc. Linn. Soc. N. S. Wales vii, p. 359.

———— *kennedyi*, Steind., Sitzgsber. Ak. Wiss. Wien lxxii, p. 75, f. 9.

Hab.—Nearly all tropical and temperate seas; coasts of Australia; Port Jackson. Grows to the length of 20 inches. Of good quality when cured; dry and insipid when fresh, (Day).

TRACHYNOTUS BAILLONI.

Osiomorus bailloni, Lacép. iii, p. 93, pl. 3, f. 1.

———— *quadripunctatus*, Rüpp., Atl. Fische, p. 90, pl. 24, f. 1.

Trachynotus bailloni, Cuv. & Val. viii, p. 431; Günth., Cat. ii, p. 484, and Fische d. Sudsee, p. 139; Day, Fishes of India, p. 233, pl. 51 A, f. 4; All. & Macl., Proc. Linn. Soc. N. S. Wales i, p. 330; Macleay, Aust. Cat. i, p. 180, and Proc. Linn. Soc. N. S. Wales vii, p. 359.

Hab.—East African, Indian, Malayan, and Australian seas; Port Jackson. Grows to the length of 20 inches.

PSETTUS ARGENTEUS.

Chaetodon argenteus, Linn., Ann. Acad. iv, p. 249; Bl. Schn., p. 230.

Psettus rhombeus, Cuv. & Val. vii, p. 245.

———— *argenteus*, Rich., Voy. Erebus & Terror Fishes, p. 57, pl. 35, ff. 1-3; Günth., Cat. ii, p. 487, and Fische d. Sudsee, p. 140, and Study of Fishes, ff. 198, 199; Kner, Voy. Novara Fische, p. 164; Day, Fishes of India, p. 235, pl. 51B, f. 5; Casteln., Proc. Linn. Soc. N. S. Wales ii, p. 235; Macleay, op. cit. iv, p. 63, and viii, p. 266, and Aust. Cat. i, p. 181; Tenison-Woods, Fisheries of N. S. Wales, pl. 45.

Hab.—East African, Indian, Malayan, and Australian seas; Port Jackson. *Bat-fish* of the Sydney fishermen. Attains to the length of 8 inches.

PLATAX TEIRA.

Chaetodon teira, Forsk., p. 60, t. 22; Bloch t. 199, f. 1; Gmel. Linn., p. 1265.

Platax teira, Cuv., Règne Anim.; Rüpp., Atl. Fische, p. 68; Cuv. & Val. vii, p. 220; Günth., Cat. ii, p. 492, and Fische d. Sudsee, p. 141; Day, Fishes of India, p. 235, pl. 51 B, f. 4; Macleay, Aust. Cat. i, p. 182.

———— *vespertilio*, Schleg., Faun. Japon. Poiss., p. 83, pl. 43 (*not Bloch*).

Hab.—Indian, Malayan, and North Australian Seas; Lake Macquarie and Port Jackson (Aust. Mus.), rare. Attains a length of 20 inches. Said to be of excellent flavor.

CYTTIDÆ.

ZEUS AUSTRALIS.

Rich., Voy. Erebus & Terror Fishes, pp. 36, 138, pl. 25, f. 1; Casteln., Proc. Zool. Soc. Vict. i, p. 108; Macleay, Aust. Cat. i, p. 185; Tenison-Woods, Fisheries of N. S. Wales, p. 61, pl. 21.

Hab.—Australian coasts; Port Jackson, common. *Dory* or *John Dory*. Grows to 18 inches long. An excellent food fish.

CORYPHÆNIDÆ.

CORYPHÆNIDÆ.

CORYPHÆNA HIPPIURUS.

Linn., Syst. Nat., p. 446; Bl., t. 174; Cuv. & Val. ix, p. 278, pl. 266; Lowe, Trans. Zool. Soc. ii, p. 188, iii, p. 6, and Proc. Zool. Soc. 1839, p. 80; Günth., Cat. ii, p. 405; Steind, Sitzgsber. Ak. Wiss. Wien 1868, p. 370.

Coryphæna japonica, Schleg., Faun. Japon. Poiss., p. 120, pl. 64.

—? *punctulata*, Macleay, Aust. Cat. i, p. 187.

Hab.—Indian seas, to the Malay Archipelago and Japan; Botany Bay. Grows to 5 feet; our specimen measures 22 inches; it is, without doubt, a young fish of this species, which has been recorded from these seas so long ago as Dampier's time; *vide*, Voy. New Holland i, pl. 2, f. 7.

BRAMA RAI.

Sparus raii, Bloch, t. 273.

Brama raii, Bl. Schn., p. 99; Cuv. & Val. vii, p. 281, pl. 190; Lowe, Trans. Zool. Soc. iii, p. 8; Günth., Cat. ii, p. 408; Lütken, Spol. Atlant. 1880, p. 190, pl. iv, ff. 1, 2; Day, Brit. Fishes i, p. 114, pl. 41; Macleay, Aust. Cat. i, p. 188.

Hab.—Mediterranean and western shores of the Atlantic; Port Jackson, (Castelnau). Grows to the length of 30 inches. I doubt very much the propriety of keeping this species in the Australian catalogue solely on the authority of Count Castelnau, who has left neither specimen nor description, but merely a catalogue name (Proc. Linn. Soc. N. S. Wales iii, p. 252), and whose identifications were not always as careful as is advisable.

PSENES LEUCURUS.

Jenyns, Voy. Beagle Zool., p. 73; Günth., Cat. ii, p. 495; Macleay, Aust. Cat. i, p. 183.

Hab.—Indian Ocean; Port Jackson, (Güntber). Largest specimen, 2 inches.

SCOMBRIDÆ.

SCOMBER ANTARCTICUS.

Casteln., Proc., Zool. Soc. Vict. i, p. 106; Macleay, Aust. Cat. i, p. 190; Tenison-Woods, Fisheries of N. S. Wales, p. 62.

Hab.—South and east coasts of Australia. The *Southern Mackerel*. Attains to 10 inches in length. An excellent fish if eaten quite fresh. This is not the fish figured by M'Coy (Prodr. Zool. Vict. dec. iii, p. 43, pl. 28), as *Scomber pneumatophorus*, De la Roche, (as stated by Tenison-Woods and others) if Castelnau is right in stating that his species has no air-bladder. I have never seen an example of this mackerel, but it is difficult to make out any valid difference between it and *Scomber scombrus*, Linn., from the descriptions only.

THYNNUS THUNNINA.

Scomber quadripunctatus, Geoffr., Descr. Eg. Poiss., t. 24, f. 3.

Thynnus thunnina, Cuv. & Val. viii, p. 104, pl. 212; Schleg., Faun. Japon. Poiss., p. 95, pl. 48; Günth., Cat. ii, p. 364, and Fische d. Sudsee, p. 150, pl. 95; Day, Fishes of India, p. 252, pl. 54, f. 6.

— *brasiliensis*, Cuv. & Val. viii, p. 110.

— *affinis*, Cant., Cat. p. 106; Günth., Cat. ii, p. 363; Macleay, Aust. Cat. i, p. 191.

Hab.—Tropical parts of the Atlantic; Mediterranean, Indian, Malayan, and North Australian seas; Port Jackson (Macleay). Grows to 2 feet in length.

THYNNUS PELAMYS.

Scomber pelamis, Linn., Syst. Nat. i, p. 492.

Thynnus pelamys, Cuv. & Val. viii, p. 113, pl. 214; Schleg., Faun. Japon. Poiss., p. 96, pl. 49; Rich., Ichthyol. China, p. 267; Günth., Cat. ii, p. 364, and Fische d. Sudsee, p. 151, pl. 96; Day, Fishes of India, p. 252, and Brit. Fishes i, p. 100, pl. 37; Macleay, Aust. Cat. i, p. 191.

— *vagans*, Less., Voy. Coquille Zool. ii, p. 162, pl. 32.

Hab.—Warm parts of the Atlantic, Indian, and Pacific Oceans; east coast of Australia (Macleay); Port Jackson (Castelnau). The *Bonito*. Attains the length of 3 feet.

PELAMYS AUSTRALIS.

Macleay, Aust. Cat. i, p. 192.

Hab.—Port Jackson (Macleay). This species should be critically compared with *Pelamys chilensis*, Cuv. & Val., to which it appears to bear a great resemblance.

AUXIS RAMSAYI.

Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 382.

Hab.—Port Jackson. *Horse-mackerel* of the Sydney market. Said to be a good food fish.

CYBIUM COMMERSONI.

Scomber commersonii, Lacép. ii, p. 600, pl. 20, f. 1; Shaw, Zool. iv, p. 589, pl. 83.

Cybiium commersonii, Cuv., Règne Anim.; Cuv. & Val. viii, p. 165; Rich., Ichthyol. China, p. 268; Günth., Cat. ii, p. 370; Day, Fishes of India, p. 255, pl. 56, f. 5; Macleay, Aust. Cat. i, p. 193, and Proc. Linn. Soc. N. S. Wales viii, p. 266.

Hab.—East African, Indian, Malayan, and Australian seas; Port Jackson. Grows to 4 feet in length.

CYBIUM GUTTATUM.

Scomber guttatus, Bl. Schn. p. 23, f. 5.

Cybiium guttatum, Cuv. & Val. viii, p. 173; Rich., Ichthyol. China, p. 268 (pt.); Günth., Cat. ii, p. 371; Kner, Voy. Novara Fische, p. 143; Day, Fishes of India, p. 255, pls. 55, f. 1 (*young*), and 56, f. 4 (*adult*); Macleay, Aust. Cat. i, p. 194.

Hab.—Indian, Malayan, and Chinese seas; Port Jackson (Macleay). Grows to the length of 6 feet. Is good eating, and salts well. (Day).

ELACATE

ELACATE NIGRA.

Scomber niger, Bl., t. 337.

Elacate bivittata, Cuv. & Val. viii, p. 338; Schleg., Faun. Japon. Poiss., p. 104, pl. 56; Rich., Ichthyol. China, p. 269.

——— *nigra*, Günth., Cat. ii, p. 375; Day, Fishes of India, p. 256, pl. 55, f. 2; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 381; Macleay, Aust. Cat. i, p. 195.

Hab.—Warmer parts of the Atlantic; Indian Seas; Port Jackson, scarce. Grows to 5 feet long.

ECHENEIS NAUCRATES.

Echeneis naucrates, Linn., Syst. Nat. i, p. 446; Bl., t. 171.

——— *naucrates*, Lacép. iii, pp. 146 and 162, pl. 9, f. 2; Schleg., Faun. Japon. Poiss., p. 270, pl. 120, f. 1; Rich., Ichthyol. China, p. 203; Günth., Ann. Nat. Hist. 1860, (3) v, p. 395, and Cat. ii, p. 384; Kner, Voy. Novara Fische, p. 146; Day, Fishes of India, p. 257, pl. 57, f. 1; All. & MacL., Proc. Linn. Soc. N. S. Wales i, p. 321; Casteln., op. cit. ii, p. 234, and iii, p. 382; Macleay, op. cit. viii, p. 266, and Aust. Cat. i, p. 196.

——— *australis*, Griff., Cuv. An. Kingd. Fishes, p. 504.

Hab.—All tropical and temperate seas; Port Jackson (Kreffit); Clarence River, (Ogilby), from Mr. T. Temperley; four specimens adhering to a *Zygana leeuwini*. The *Great Sucking-fish*. Attains to 3 feet in length.

ECHENEIS REMORA.

Linn., Syst. Nat. i, p. 446; Bl., t. 172; Schleg., Faun. Japon. Poiss., p. 271; Jenyns, Voy. Beagle Zool., p. 142; Günth., Ann. Nat. Hist. 1860, (3) v, p. 390, and Cat. ii, p. 378, and Fische d. Sudsee, p. 156; Kner, Voy. Novara Fische, p. 146; Day, Fishes of India, p. 258, and Brit. Fishes i, p. 108, pl. 39, f. 2; Macleay, Aust. Cat. i, p. 196.

Hab.—Seas of the temperate and tropical regions; Port Jackson, (Kreffit & Castelnau). There are in the Australian Museum three specimens which I took off a shark caught in lat. 6° 50' S., long 76° 0' E. (Ogilby). The common *Sucking-fish* or *Remora*. Grows to a foot in length.

TRACHINIDÆ.

LEPTOSCOPIUS MACROPYGIUS.

Uranoscopus macropygius, Rich., Voy. Erebus and Terror Fishes, p. 55, pl. 33, ff. 4, 6.

Leptoscopus macropygius, Gill, Proc. Ac. Nat. Sc. Philad. 1859, p. 133; Günth., Cat. ii, p. 232, and Study of Fishes, f. 206; Macleay, Aust. Cat. i, p. 198; Hutton, Trans. N. Zeal. Inst. vi, p. 106, and viii, p. 212.

——— *huttoni*, Haast, Trans. N. Zeal. Inst. v, p. 275.

Hab.—Port Jackson. Grows to the length of 2 feet.

PERCIS NOVÆ-CAMBRIÆ.

Ogilby, Proc. Linn. Soc. N. S. Wales x, p. 228.

Hab.—Port Jackson. Largest specimen 7½ inches.

This species has been confounded by Australian naturalists with the *Percis nebulosa* of Quoy and Gaimard, from which, however, it is very distinct.

PERCIS COXII.

Ramsay, Proc. Linn. Soc. N. S. Wales viii, p. 179.

Hab.—Port Jackson. Type specimen measures nearly 7 inches.

PERCIS ALLPORTI.

Günth., Ann. Nat. Hist. 1876, (4) xvii, p. 394, and Voy. Challenger Shore Fishes, p. 28; Macleay, Aust. Cat. i, p. 199.

Hab.—Tasmania; Bass's Straits; Twofold Bay. Specimens measure 11 inches.

Count Castelnau includes *Aphritis urvillii*, Cuv. and Val. in his Port Jackson list (Proc. Linn. Soc. N. S. Wales iii, p. 351), but gives no evidence to prove that it has ever occurred so far north.

SILLAGO MACULATA.

Quoy. & Gaim., Voy. Freyc. Zool., p. 261, pl. 53, f. 2; Cuv. & Val. iii, p. 411; Günth., Cat. ii, p. 245; Kner, Voy. Novara Fische, p. 127; Day, Fishes of India, p. 265, pl. 58, f. 4; Bleek., Atl. Ichthyol., pl. 389, f. 5; All. & MacL., Proc. Linn. Soc. N. S. Wales i, p. 279; Casteln., op. cit. iii, p. 380; Macleay, Aust. Cat. i, p. 201; Tenison-Woods, Fisheries of N. S. Wales, pl. 23.

Hab.—From the Malay Archipelago to South-east Australia; Port Jackson, abundant. *Whiting* or *Sand Whiting* of Sydney. Grows to about a foot long. An excellent food fish.

SILLAGO BASSENSIS.

Cuv. & Val. iii, p. 412; Quoy. & Gaim., Voy. Astrolabe Poiss., p. 672, pl. 1, f. 2; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 380; Macleay, Aust. Cat. i, p. 202; Tenison-Woods, Fisheries of N. S. Wales, p. 65.

Sillago ciliata, Günth., Cat. ii, p. 245.

——— *terræ-reginæ*, Casteln., Proc. Linn. Soc. N. S. Wales ii, p. 232.

Hab.—Australian coasts; Port Jackson, common. *Trumpeter Whiting* at Sydney. Attains to 15 inches in length. A good table fish.

SILLAGO CILIATA.

Cuv. and Val. iii, p. 415; Casteln., Proc. Zool. Soc. Vict. ii, p. 113; Macleay, Aust. Cat. i, p. 202; Kner, Voy. Novara Fische, p. 127; All. & Macleay, Proc. Linn. Soc. N. S. Wales i, p. 279; Tenison-Woods, Fisheries of N. S. Wales, pl. 24.

Hab.—North coast of Australia; Port Jackson, scarce.

BOVICHTHYS

BOVICHTHYS VARIEGATUS.

Rich., Voy. Erebus & Terror Fishes, p. 56, pl. 34, ff. 1-4; Günth., Cat. ii, p. 250, and Study of Fishes, f. 207; Hutton, Trans. N. Zeal. Inst. v, p. 262; Macleay, Aust. Cat. i, p. 203.

Hab.—New Zealand; Port Jackson. Specimen measures 3 inches.

OPISTHOGNATHUS JACKSONIENSIS.

Macleay, Aust. Cat. i, p. 205.

Hab.—Port Jackson. Attains to 10 inches long.

BATRACHIDÆ.

BATRACHUS DUBIUS.

Lophius dubius, White, Voy. N. S. Wales, p. 265.

Batrachus dubius, Rich., Voy. Erebus & Terror Fishes, p. 16, pl. 10; Günth., Cat. iii, p. 169; All. & Macl., Proc. Linn. Soc. N. S. Wales i, p. 335; Macleay, op. cit. viii, p. 267, & Aust. Cat. i, p. 207.

Hab.—South coast of New Guinea; Australian coasts; Port Jackson, common. Grows to 6 inches in length.

BATRACHUS GRUNNIENS.

Cottus grunniens, var. B., Linn. Gmel., Syst. Nat. i, p. 1209.

Batrachus grunniens, Bl. Schn., p. 43; Cuv. & Val. xii, p. 466; Steind., Sitzgsber. Ak. Wiss. Wien ix, 1870, p. 564; Day, Fishes of India, p. 269, pl. 59, f. 1.

——— *trispinosus*, Günth., Cat. iii, p. 169; Kner, Voy. Novara Fische, p. 189.

? ——— *dussumieri*, Cuv. & Val. xii, p. 474, pl. 367; Günth., Cat. iii, p. 169; All. & Macl., Proc. Linn. Soc. N. S. Wales i, p. 335; Macleay, Aust. Cat. i, p. 208.

Hab.—Indian and Malayan seas; Sydney (Kner). Grows to 7 inches in length.

PEDICULATI.

BRACHIONICHTHYS HIRSUTUS.

Lophius hirsutus, Lacép., Ann. Mus. iv, p. 202, pl. 55, f. 3.

Chironectes hirsutus, Cuv. & Val. xii, p. 434.

Brachionichthys hirsutus, Bleek., Nat. Tyd. Ned. Ind. vii, 1854, p. 121; Günth., Cat. iii, p. 182; Macleay, Aust. Cat. i, p. 210; Günth., Voy. Challenger Shore Fishes, p. 28.

Hab.—Tasmania; Twofold Bay (Günther).

ANTENNARIUS MARMORATUS.

Lophius histrio, var. *marmoratus*, Bl. Schn., p. 142.

Chironectes marmoratus, Less., Voy. Coquille Zool. ii, p. 145, Poiss. pl. 16, f. 2; Cuv. & Val. xii, p. 402; Schleg., Faun. Japon. Poiss., p. 159, pl. 81, f. 1.

——— *pictus* var. *vittatus*, Rich., Voy. Erebus and Terror p. 15, pl. 9, ff. 3, 4.

Antennarius marmoratus, Günth., Cat. iii, p. 185, and Fische d. Sudsee, p. 162, t. 100, f. A.; Bleek., Atl. Ichthyol. v, p. 23, t. 198, f. 4, and t. 199, f. 1; Kner, Voy. Novara Fische, p. 192; Day, Fishes of India, p. 272; Macleay, Aust. Cat. i, p. 211.

Hab.—East African, Indian, Malayan, and Australian seas; Port Jackson. *Frog-fish* or *Angler* of Sydney. Grows to 5 inches in length.

ANTENNARIUS STRIATUS.

Lophius striatus, Shaw, Nat. Misc. v, pl. 175, and Zool. v, p. 385.

Antennarius striatus, Günth., Fische d. Sudsee, p. 162, f. B; Macleay, Aust. Cat. i, p. 212.

Hab.—Sandwich and Solomon Islands; Mauritius; Australian coasts; Port Jackson, common. *Frog-fish* and *Angler* at Sydney. Grows to 7 inches in length.

ANTENNARIUS PINNICEPS.

(Commerson), Cuv. and Val. xii, p. 410; Günth., Cat. iii, p. 190, and Ann. Nat. Hist. 1867, (3) xx, p. 61; Steind., Sitzgsber. Ak. Wiss. Wien 1866, liii, p. 457, (var.); Macleay, Aust. Cat. i, p. 212.

Chironectes tridens, Schleg., Faun. Japon. Poiss. (*part*) pl. 81, f. 4.

Hab.—Indian Ocean; Sydney (Günther).

ANTENNARIUS NUMMIFER.

Chironectes nummifer, Cuv., Mém. Mus. iii, p. 430, pl. 17, f. 4; Cuv. and Val. xii, p. 425; Rüpp., N. W. Fische, p. 141.

Antennarius nummifer, Günth., Cat. iii, p. 195, and Fische d. Sudsee, p. 164; Klunz., Fische d. Roth. Meer., p. 499; Bleek., Atl. Ichthyol. v, p. 18, t. 198, f. 2; Day, Fishes of India, p. 272, pl. 59, f. 2.

Chironectes coccineus, Less. & Garn., Voy. Coquille Poiss., p. 143, pl. 16, f. 1; Cuv. & Val. xii, p. 430; Günth., Cat. iii, p. 191; Macleay, Aust. Cat. i, p. 213.

Hab.—East African, Indian, Malayan, and South Seas; Port Jackson (Macleay). Grows to 6 inches long.

ANTENNARIUS COMMERSONII.

Lophius commersonii, Lacép. i, p. 327.

Chironectes commersonii, Cuv. & Val. xii, p. 426.

Antennarius commersonii, Cant., Cat., p. 204; Günth., Cat. iii, p. 192, and Fische d. Sudsee, p. 163, pls. 100-106; Macleay, Aust. Cat. i, p. 213.

Hab.—Indian Ocean; South Seas; Port Jackson, (Kreff).

COTTIDÆ.

COITIDÆ.

PLATYCEPHALUS ARDENARIUS.

Ramsay & Ogilby, Proc. Linn. Soc. N. S. Wales x, (*in press*).

Hab.—Coasts of New South Wales, common. *Sand Flathead* of the Sydney market. Grows to the length of 15 inches. A well-flavored fish.

PLATYCEPHALUS BASSENSIS.

Cuv. & Val. iv, p. 247; Quoy & Gaim., Voy. Astrolabe Poiss., p. 683, pl. 10, f. 3; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 379; Macleay, Aust. Cat. i, p. 216.

Platycephalus tasmanius, Rich., Trans. Zool. Soc. iii, p. 97, and Voy. Erebus and Terror Fishes, p. 23, pl. 18, ff. 1, 2; Günth., Cat. ii, p. 179.

Hab.—Coasts of Tasmania, Victoria, and New South Wales; Port Jackson, common. Grows to 18 inches long.

PLATYCEPHALUS FUSCUS.

Cuv. & Val. iv, p. 241; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 379; Sauv., N. Arch. Mus. (2) i, p. 150; Macleay, Aust. Cat. i, p. 217; Tenison-Woods, Fisheries of N. S. Wales, p. 67, pl. 25.

Hab.—Port Jackson; Port Phillip; Maryborough (Ogilby). *Flathead* of the Sydney market. Attains to a length of 3 feet. One of the best food fishes of the Colony.

PLATYCEPHALUS LEVIGATUS.

Cuv. & Val. iv, p. 248; Quoy & Gaim., Voy. Astrolabe Poiss., p. 684, pl. 10, f. 4; Günth., Cat. ii, p. 179; Casteln., Proc. Zool. Soc. Vict. i, p. 84; Macleay, Aust. Cat. ii, p. 217.

Hab.—South and west coasts of Australia; Port Jackson (Kreff). *Rock Flathead* at Melbourne. Grows to the length of 20 inches. An excellent fish for the table.

PLATYCEPHALUS CIRRONASUS.

Rich., Voy. Erebus and Terror Fishes, p. 114, pl. 51, ff. 7-10; Günth., Cat. ii, p. 186, and Study of Fishes, ff. 212, 213; Macleay, Aust. Cat. i, p. 221.

Hab.—Botany Bay; Port Jackson. Grows to 15 inches in length.

PLATYCEPHALUS LONGISPINIS.

Macleay, Proc. Linn. Soc. N. S. Wales ix, p. 170.

Hab.—Outside Port Jackson, in 50 fathoms. Length of specimen, 10 inches.

PLATYCEPHALUS MACRODON.

Ogilby, Proc. Linn. Soc. N. S. Wales x, p. 226.

Hab.—Port Jackson. Length of specimen rather over 13 inches.

LEPIDOTRIGLA PAPILIO.

Trigla papilio, Cuv. and Val. iv, p. 80, pl. 73.

Lepidotrigla papilio, Günth., Cat. ii, p. 197; Sauv., N. Arch. Mus. (2) i, p. 155; Macleay, Aust. Cat. i, p. 223.

Hab.—Indian Ocean; Port Jackson, common. *Butterfly Gurnard* at Sydney. Grows to 5 inches long.

LEPIDOTRIGLA MULHALLI.

Macleay, Proc. Linn. Soc. N. S. Wales viii, p. 460.

Hab.—Outside Port Jackson, in 40 fathoms, common. Grows to 9 inches in length.

LEPIDOTRIGLA PLEURACANTHICA.

Trigla pleuracantha, Rich., Voy. Erebus and Terror Fishes, p. 23, pl. 16, ff. 1-4; Günth., Cat. ii, p. 202, and Study of Fishes, ff. 214, 215; Macleay, Aust. Cat. i, p. 225.

Lepidotrigla pleuracantha, Ramsay & Ogilby, Proc. Linn. Soc. N. S. Wales x, (*in press*).

Hab.—Port Jackson, scarce. Specimen measures 6½ inches.

TRIGLA KUMU.

Less. & Garn., Voy. Coquille Poiss., pl. 19; Cuv. & Val. iv, p. 50; Jenyns, Voy. Beagle Fishes, p. 27; Schleg., Faun. Japon. Poiss., p. 37, pl. 14 A, f. 3; Günth., Cat. ii, p. 204; Kner, Voy. Novara Fische, p. 124, t. 6, f. 2 (*air-bladder*), and Sitzgsber. Ak. Wiss. Wien lviii, p. 318; McCoy, Prodr. Zool. Vict. dec. i, pl. 5; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 380; Macleay, Aust. Cat. i, p. 225; Tenison-Woods, Fisheries of N. S. Wales, p. 68, pl. 26.

Hab.—From the Cape seas to those of Japan and New Zealand; Port Jackson, common. Attains a length of 12 inches. A good fish for the table.

TRIGLA POLYOMMATA.

Rich., Proc. Zool. Soc. 1839, p. 96, and Trans. Zool. Soc. iii, p. 87, pl. 5, f. 2; Günth., Cat. ii, p. 204; Macleay, Aust. Cat. i, p. 226.

Hoplonotus polyommatus, Guich., Ann. Soc. Linn. Maine-et-Loire ix, Ichthyol.

Hab.—Coasts of South and West Australia; Tasmania; Port Jackson. *Flying Gurnard* of the fishermen. Grows to 15 inches long.

CATAPHRACTI.

DACTYLOPTERUS ORIENTALIS.

Cuv. and Val. iv, p. 134, pl. 76; Rich., Ichthyol. China, p. 218; Schleg., Faun. Japon. Poiss., p. 37, pl. 15A; Günth., Cat. ii, p. 222, Proc. Zool. Soc. 1871, p. 663, and Fische d. Sudsee, p. 169; Day, Fishes of India, p. 279, pl. 60, f. 6; Macleay, Aust. Cat. i, p. 227.

Dactylopterus japonicus, Bleek., Japan, p. 396.

chirophthalmus, Bleek., Nat. Tyds. Ned. Ind. 1854, iv, p. 494; Günth., Cat. ii, p. 223 (*young*).

Hab.—Indian, Malayan, Japanese, Australian, and South Seas; Port Jackson. Grows to a foot in length.

PEGASIDÆ.

PEGASIDÆ.

PEGASUS DRACONIS.

Linn., Syst. Nat. i, p. 418; Bl., t. 109, ff. 1, 2; Günth., Cat. viii, p. 147; Day, Fishes of India, p. 280, pl. 61, f. 1.

Pegasus volans, Lacép. ii, p. 83 (not Linné).

——— *draco*, Swains., Fishes ii, p. 332; Günth., Fishes of Zanz., p. 138.

Hab.—Indian and Malayan seas; Port Jackson. Specimen measures 2 inches.

The single specimen from Port Jackson in the Australian Museum agrees pretty well with the species to which I have referred it, except that it has only eight pectoral rays; should further examination disclose other differences sufficient to authorize its specific separation, I would propose *pauciradiatus* as a suitable name.

GOBIIFORMES.

GOBIDÆ.

GOBIUS ALBOPUNCTATUS.

Cuv. & Val. xii, p. 57; Günth., Cat. iii, p. 25, Fische d. Sudsee, p. 172, pl. 110, f. A., and Voy. Challenger Shore Fishes, p. 28; Kner, Voy. Novara Fische, p. 174; Day, Fishes of India, p. 294, pl. 63, f. 7; Macleay, Proc. Linn. Soc. N. S. Wales ii, p. 357, and Aust. Cat. i, p. 230.

Gobius nebulopunctatus, Rüpp., N. W. Fische, p. 139; Cuv. & Val. xii, p. 58.

——— *punctillatus*, Rüpp., Atl. Fische, p. 138, and N. W. Fische, p. 138.

——— *padangensis*, Bleek, Blenn. en Gob., p. 249.

Hab.—From the Red Sea, through the Indian and Malayan Seas to the Fiji and Sandwich Islands; north and east coasts of Australia; Port Jackson (Günther). Length, 4 inches.

GOBIUS BREVIFFLIS.

Gobius caninus, Steind., Sitzgsber. Ak. Wiss. Wien 1867, lvi, p. 313 (not Cuv. or Günth.).

——— *breviflis*, Day, Proc. Zool. Soc. 1867, p. 940.

? ——— *krefftii*, Steind, Verh. z. b. Ges. Wien 1867, p. 326.

Hab.—Indian and Malayan Seas; Port Jackson (Günther). Length, 4 inches.

GOBIUS FRENATUS.

Günth., Cat. iii, p. 39; Kner, Voy. Novara Fische, p. 174; Macleay, Aust. Cat. i, p. 231.

Hab.—Port Jackson (Kner). Length, 4 inches.

GOBIUS BIFRENATUS.

Kner, Voy. Novara Fische, p. 177, t. 7, f. 3; Klunz., Sitzgsber. Ak. Wiss. Wien lxxx, Abth. i, p. 383; Macleay, Aust. Cat. i, p. 232.

Gobius bassensis, Casteln., Proc. Zool. Soc. Vict. i, p. 123.

Hab.—Coasts of Victoria and New South Wales; Port Jackson. Length, 5 inches.

GOBIUS SEMIFRENATUS.

Macleay, Aust. Cat. i, p. 233.

Hab.—Port Jackson.

GOBIUS BUCCATUS.

Cuv. & Val. xii, p. 60; Günth., Cat. iii, p. 14; Macleay, Aust. Cat. i, p. 236.

Hab.—Port Jackson (Macleay).

GOBIUS FLAVIDUS.

Macleay, Aust. Cat. i, p. 237.

Hab.—Port Jackson. Length, 1½ in.

GOBIUS DEPRESSUS.

Ramsay & Ogilby, Proc. Linn. Soc. N.S. Wales xi, (in press).

Hab.—Port Jackson. Length, 3.25 inches.

GOBIUS GOBIOIDES.

Gobius cristatus, Macleay, Aust. Cat. i, p. 245 (not Day).

Hab.—Port Jackson, abundant (Macleay); Richmond River, common (Ogilby); numerous examples have been brought from the latter locality to the Australian Museum by Mr. F. Temperley. Length, 5 inches.

The name *cristatus* having been given to an Indian Goby by Dr. Day in 1873 (*v.* Fishes of India, p. 291), it became necessary to change the name of the Australian fish; and in giving it the above specific name I have been guided by its very strong dentition and the obliquity of its mouth, which gives it a strong outward resemblance to the fishes of that genus.

ELEOTRIS MOGURNDA.

Rich., Voy. Erebus & Terror Fishes, p. 4, pl. 2, ff. 1, 2; Günth., Cat. iii, p. 3; Macleay, Aust. Cat. i, p. 252.

Hab.—Port Essington; Clarence River (Aust. Mus.) Length, 4 inches.

ELEOTRIS AUSTRALIS.

Kreffft, Proc. Zool. Soc. 1864, p. 183; Casteln., Proc. Linn. Soc. N.S. Wales iii, p. 384; Macleay, Aust. Cat. i, p. 252.

Hab.—Rivers and creeks of the eastern watershed of New South Wales. Length, 4 inches.

ELEOTRIS COXII.

Kreffft, Proc. Zool. Soc. 1864, p. 183; Macleay, Aust. Cat. i, p. 253.

Hab.—Rivers of the eastern watershed of New South Wales. *Gudgeon* of the colonists. Length, 5 inches.

ELEOTRIS

ELEOTRIS GRANDICEPS.

Krefft, Proc. Zool. Soc. 1864, p. 183; Macleay, Aust. Cat. i, p. 253.
Hab.—Eastern rivers of New South Wales. Length, 3 inches.

ELEOTRIS GYMNOCEPHALUS.

Steind., Sitzgsber. Ak. Wiss. Wien 1866, liii, p. 453, pl. 2, f. 3; Günth., Ann. Nat. Hist. 1867, (3) xx, p. 62.
Hab.—Hawkesbury River (Günther, Krefft).

ELEOTRIS COMPRESSA.

Krefft, Proc. Zool. Soc. 1864, p. 184; Bleek., Arch. Néerl. x, p. 147; Macleay, Aust. Cat. i, p. 254.
Eleotris brevisrostris, Steind.
Hab.—Port Denison; Clarence River. Length, 3½ inches.

ELEOTRIS OXYCEPHALA.

Schleg., Faun. Japon. Poiss., p. 150, pl. 77, ff. 4, 5; Günth., Cat. iii, p. 115; Kner., Voy. Novara Fische, p. 185; Macleay, Aust. Cat. i, p. 257.
Eleotris cantherius, Rich., Ichthyol. China, p. 209.
Hab.—Chinese and Japanese seas; Port Jackson (Kner). Length, 6 inches.

ELEOTRIS MASTERSII.

Macleay, Aust. Cat. i, p. 257.
Hab.—Rope's Creek (Macleay).

ELEOTRIS STRIATA.

Eleotris striatus, Steind., Sitzgsber. Ak. Wiss. Wien 1866, liii, p. 452.
Hab.—New South Wales.

ELEOTRIS RICHARDSONII.

Steind., Sitzgsber. Ak. Wiss. Wien 1866, liii, p. 455.
Hab.—New South Wales.

GOBIOIDES PURPURASCENS.

Leme purpurascens, De Vis, Proc. Linn. Soc. N.S. Wales ix, p. 698.
Hab.—Brisbane River (De Vis); Clarence River (Ogilby). Length, 7 inches.
 The Australian Museum possesses a single specimen of a fish which was found by Mr. T. Temperley buried in mud on the bank of the Clarence River near its mouth. Having been dried before being placed in spirits it is impossible now to describe it, and as it appears to agree fairly well with De Vis's species, I have placed it provisionally under that heading, until an opportunity shall occur of comparing it with his type. I am unable to find sufficient differences to warrant the separation of *Leme* from *Gobioides*.

ARISTEUS FLUVIATILIS.

Casteln., Proc. Linn. Soc. N.S. Wales iii, p. 141.
Hab.—Murrumbidgee River; Rope's Creek. Length, 3½ inches.

ARISTEUS LINEATUS.

Macleay, Aust. Cat. i, p. 261.
Hab.—Richmond River. Length, 3 inches.

CALLIONYMIDÆ.

CALLIONYMUS CALAUROPOMUS.

Rich., Voy. Erebus and Terror Fishes, p. 10, pl. 7, ff. 4, 5; Günth., Cat. iii, p. 147; Macleay, Aust. Cat. i, p. 262.
Hab.—Coasts of Australia; Port Jackson, common. Length, 11 inches.

CALLIONYMUS PAPILIO.

Günth., Ann. Nat. Hist. 1864, (3) xiv, p. 197; Macleay, Aust. Cat. i, p. 262.
Callionymus ocellifer, Casteln., Proc. Zool. Soc. Vict. ii, p. 49.
Hab.—Melbourne (Günther); Port Jackson (Aust. Mus.). Length, 5 inches.

CALLIONYMUS CURVICORNIS.

Cuv. & Val. xii, p. 298; Günth., Cat. iii, p. 145.
Callionymus japonicus, Cuv. & Val. xii, p. 299 (not Houtt.)
 ——— *valenciennesii*, Schleg., Faun. Japon. Poiss., p. 153, pl. 78, f. 3.
 ——— *punctatus* (Langsd.), Rich., Ichthyol. China, p. 210.
 ——— *calcaratus*, Macleay, Aust. Cat. i, p. 263; Ogilby, Proc. Linn. Soc. N. S. Wales x, p. 121.
Hab.—Chinese and Japanese seas; Port Jackson. Length, 9 inches.

CALLIONYMUS MACLEAYI.

Callionymus lateralis, Macleay, Aust. Cat. i, p. 263 (not Richardson).
Hab.—Port Jackson. Length, under 3 inches.
 Richardson having previously called an Indian fish *lateralis*, I have much pleasure in naming the present species after its discoverer.

CALLIONYMUS LUNATUS.

Schleg., Faun. Japon. Poiss., p. 155, pl. 78, f. 4; Günth., Cat. iii, p. 146, and Voy. Challenger Shore Fishes, pp. 28 and 67; Macleay, Aust. Cat. App., p. 35.
Hab.—Japanese seas; Port Jackson (Günther). Length, 8 inches.

CALLIONYMUS PHASIS.

Günth., Voy. Challenger Shore Fishes, p. 28, pl. 15, f. C; Macleay, Aust. Cat. App., p. 35.
Hab.—Twofold Bay, 120 fathoms. Length, 4 inches.

BLENNIIFORMES.

BLENNIIFORMES.

TRICHONOTIDÆ.

HEMEROGÆTES HASWELLI.

Ramsay, Proc. Linn. Soc. N. S. Wales vi, p. 575.

Hab.—North Head, Port Jackson, in 10 fathoms. Length, 2½ inches.

BLENNIIDÆ.

BLENNIUS TASMANIANUS.

Rich., Trans. Zool. Soc. iii, p. 129; Günth., Cat. iii, p. 214; Macleay, Aust. Cat. ii, p. 3; Günth., Voy. Challenger Shore Fishes, p. 28.

Hab.—Tasmania; Port Jackson (Günther). *Lempriere's Blenny*. Length, 5 inches.

BLENNIUS UNICORNIS.

Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 384.

Hab.—Port Jackson. Length, 2 inches. Said to feed upon the living oysters.

BLENNIUS CASTANEUS.

Macleay, Aust. Cat. ii, p. 5.

Hab.—Port Jackson (Macl. Mus.)

PETROSCIRTES VARIABILIS.

Cant., Cat., p. 200; Günth., Cat. iii, p. 234; Day, Fishes of India, p. 327, pl. 69, f. 7; Macleay, Aust. Cat. ii, p. 6.

Hab.—Coasts of India and the Malay Archipelago; Port Jackson (Günther). Length, 4 inches.

PETROSCIRTES ANOLIS.

Blennechis anolius, Cuv. & Val. xi, p. 288.

Petroscirtes anolis, Günth., Cat. iii, p. 238; Macleay, Aust. Cat. ii, p. 6.

Hab.—Port Jackson. Length, 2 inches.

PETROSCIRTES SOLORENSIS.

Bleek., Solor, p. 81; Günth., Cat. iii, p. 235; Kner, Voy. Novara Fische, p. 196; Macleay, Aust. Cat. ii, p. 7.

Hab.—Sea of Lawajong; Sydney (Kner).

PETROSCIRTES MACLEAYI.

Petroscirtes fasciolatus, Macleay, Aust. Cat. ii, p. 8 (*not Ehrenb. or Cuv. and Val.*)

Hab.—Port Jackson. Length, 3 inches.

Cuv. & Val. having given the specific name of *fasciolatus* to a *Petroscirtes* (*Blennechis*) from the Red Sea, I am reluctantly obliged to re-name our Port Jackson species, but in doing so I take the opportunity of calling it after the talented author of the Descriptive Catalogue of Australian Fishes, in which work it is first differentiated.

PETROSCIRTES GUTTATUS.

Macleay, Aust. Cat. ii, p. 9.

Hab.—Port Jackson. Length, 3 inches.

PETROSCIRTES ROTUNDICEPS.

Macleay, Aust. Cat. ii, p. 9.

Hab.—Port Jackson. Length, 3 inches.

PETROSCIRTES CRISTICEPS.

Macleay, Aust. Cat. ii, p. 9.

Hab.—Port Jackson (Macleay); Clarence River (Ogilby). A single specimen brought down by Mr. T. Temperley. Length, 3 inches.

PETROSCIRTES WILSONI.

Macleay, Proc. Linn. Soc. N. S. Wales ix, p. 171.

Hab.—Port Jackson. Length, 2½ inches.

LEPIDOBLENNIUS GEMINATUS.

Macleay, Aust. Cat. ii, p. 13.

Hab.—Port Jackson, common in rock-pools; Port Hacking; Jervis Bay. Length, 5 inches.

PETRAITES HEPTÆOLUS.

Ogilby, Proc. Linn. Soc. N. S. Wales x, p. 225.

Hab.—Port Jackson. Length, 3½ inches.

CRISTICEPS NASUTUS.

Günth., Cat. iii, p. 273; Macleay, Aust. Cat. ii, p. 18.

Hab.—New South Wales (Günther). Length, nearly 2 inches.

CRISTICEPS FASCIATUS.

Macleay, Aust. Cat. ii, p. 19.

Hab.—Port Jackson.

CRISTICEPS MACLEAYI.

Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 385.

Hab.—Port Jackson, common. Length, 7 inches.

CRISTICEPS AURANTIACUS.

Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 386.
Hab.—Port Jackson; Kiama. Length, 9 inches.

CRISTICEPS PICTUS.

Macleay, Aust. Cat. ii, p. 25.
Hab.—Port Jackson. Length, 3 inches.

CRISTICEPS ARGYROPLEURA.

Kner, Voy. Novara Fische, p. 199, t. 7. f. 4; Macleay, Aust. Cat. ii, p. 25.
Hab.—Port Jackson, common. Length, 4 inches.

TRIPTERYGIUM *sp.*

Günth., Voy. Challenger Shore Fishes, p. 28.
Hab.—Port Jackson.

STICHARJUM DORSALE.

Günth., Ann. Nat. Hist. 1867, (3) xx, p. 63; Macleay, Aust. Cat. ii, p. 29.
Hab.—? Port Jackson (Günther.) Length, 2½ inches.

PATECUS FRONTO.

Rich., Ann. Nat. Hist. 1844, xiv, p. 280, and Voy. Erebus and Terror Fishes, p. 20, pl. 13; Günth., Cat. iii, p. 292, and Study of Fishes, f. 227; Macleay, Aust. Cat. ii, p. 30.
Hab.—Australian seas; Port Jackson; Richmond River. Length, 9 inches.

PATECUS MACULATUS.

Günth., Cat. ii, p. 292; Casteln., Proc. Linn. Soc. N. S. Wales ii, p. 231; Macleay, Aust. Cat. ii, p. 31.
Hab.—West Australia; Port Jackson (Kreffl.)

MUGILIFORMES.

SPHYRÆNIDÆ.

SPHYRÆNA NOVÆ-HOLLANDIÆ.

Günth., Cat. ii, p. 335; Macleay, Aust. Cat. ii, p. 32.
Hab.—Coasts of Victoria and New South Wales. Attains to 25 inches in length. *Pike* of Port Jackson.

SPHYRÆNA OBTUSATA.

Cuv. & Val. iii, p. 350; Schleg., Faun. Japon. Poiss, p. 33, pl. 13, f. 2; Günth., Cat. ii, p. 339, and Fische d. Sudsee, p. 211, pl. 119, f. B.; Kner, Voy. Novara Fische, p. 140; Klunz., Verh. z. b. Ges. Wien 1870, p. 820; Day, Fishes of India, p. 343, pl. 71, f. 5; Macleay, Aust. Cat. ii, p. 34.

Sphyræna flavicauda, Rüpp., N. W. Fische, p. 100, t. 25, f. 3.

Hab.—From the Red Sea through those of India and the Malay Archipelago to Japan and Australia; Port Jackson, common. *Pike* of the fishermen. Grows to 20 inches long.

ATHERINIDÆ.

ATHERINA LACUNOSA.

Forst., Descr. Anim. p. 298; Bl. Schn., p. 112; Günth., Fische d. Sudsee, p. 213, pl. 118, f. E (*not Bleek*).
Atherina pinguis, Lacép. v., p. 372, pl. 11, f. 1; Günth., Cat. iii, p. 399; Klunz., Fische d. Roth. Meer., p. 833; Day, Fishes of India, p. 344; All. & Macl., Proc. Linn. Soc. N. S. Wales i, p. 340; Macleay, Aust. Cat. ii, p. 38.

———— *affinis*, Benn., Proc. Zool. Soc. 1831, i, p. 166.

———— *pectoralis*, Cuv. & Val. x, p. 447.

———— *forskali*, Rüpp., N. W. Fische, p. 132, t. 33, f. 1; Günth., Cat. iii, p. 397; Day, Fishes of India, p. 345, pl. 71, f. 4; Macleay, Proc. Linn. Soc. N. S. Wales vii, p. 362.

Hab.—East African, Indian, Malayau, Australian, and South Seas; New South Wales coast, abundant. *Hardhead* of Sydney. Grows to a length of 6 inches; an excellent breakfast fish.

ATHERINA SIGNIFER.

Pseudomugil signififer, Kner, Voy. Novara Fische, p. 275, pl. 13, f. 5, a and b.

Atherina signata, Günth., Ann. Nat. Hist. 1867, (3) xx, p. 64; Macleay, Aust. Cat. ii, p. 40

Hab.—Cape York (Günther); Sydney (Kner). Length, 1½ in.

ATHERINICHTHYS JACKSONIANA.

Atherina jacksoniana, Quoy & Gaim., Voy. Uranie Zool., p. 333; Cuv. & Val. x, p. 461.

Atherinichthys jacksoniana, Günth., Cat. iii, p. 402; Macleay, Aust. Cat. ii, p. 41.

Hab.—Tasmania; Port Jackson. Length, 4½ inches.

ATHERINICHTHYS DUBOULAYI.

Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 143.

Hab.—Richmond River. Length rather over 3 inches.

NEMATOCENTRIS NIGRANS.

Atherina nigrans, Rich., Ann. Nat. Hist. 1843, xi, p. 180.

Atherinichthys nigrans, Günth., Cat. iii, p. 406.

Nematocentris splendida, Peters, Monatsber. Ak. Wiss. Berl. 1866 (July), p. 516.

Strabo nigrofasciatus, Kner & Steind., Sitzgsber. Ak. Wiss. Wien 1866 (Oct.), p. 372, f. 10 (*immature*).

Nematocentris

Nematocentris nigrans, Günth., Ann. Nat. Hist. 1867, (3) xx, p. 65.

Hab.—Fresh waters of North Australia; Clarence and Severn Rivers, N. S. Wales. Length, 5 inches.

MUGILIDÆ.

MUGIL GRANDIS.

Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 386; Macleay, op. cit. iv, p. 412; Tenison-Woods, Fisheries of N. S. Wales, p. 71, pl. 30.

Hab.—From Brisbane to the Gippsland Lakes, common. *Sea Mullet* of the Sydney market. Length up to 2 feet. An excellent food fish.

MUGIL DOBULA.

Günth., Cat. iii, p. 420, and Fische d. Sudsee p. 214, pl. 120, f. A; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 387, Macleay, op. cit. iv, p. 415, and viii, p. 208.

Hab.—Coasts of New South Wales and Queensland, entering fresh waters, common; Aneiteum; Sandwich Islands. *Hard-gut Mullet* of Sydney. Length up to 15 inches. An excellent food fish.

MUGIL OEUR.

Mugil œur, Forsk., p. 74; Rüpp., N. W. Fische, p. 131.

——— *cephalotus*, Cuv. & Val. xi, p. 110; Cant., Ann. Nat. Hist. 1842, ix, p. 284; Eyd. & Soul., Voy. Bonite Zool. i, p. 175, pl. 4, f. 4; Günth., Cat. iii, p. 419; Kner, Voy. Novara Fische, p. 224; Macleay, Proc. Linn. Soc. N. S. Wales iv, p. 416.

——— *japonicus*, Schleg., Faun. Japon. Poiss., p. 134, pl. 72, f. 1; Rich., Ichthyol. China, p. 247.

——— *œur*, Klunz., Fische d. Roth. Meer., p. 829; Day, Fishes of India, p. 353, pl. 75, f. 3; Steind., Denk. Ak. Wien xlv, p. 40.

Hab.—From the Red Sea through those of India to China, Japan, and Australia; Sydney (Kner). Length up to 3 feet.

MUGIL ARGENTEUS.

Quoy. & Gaim., Voy. Uranie Poiss., p. 338, pl. 59, f. 3; Günth., Cat. iii, p. 424, and Fische d. Sudsee, p. 214; Macleay, Proc. Linn. Soc. N. S. Wales iv, p. 417.

Mugil ferrandi, Cuv. & Val. xi, p. 142.

Hab.—S. Australia; Fitzroy River; Port Jackson (Günther); Richmond River (Aust. Mus.). Length up to 12 inches.

MUGIL LONGIMANUS.

Günth., Cat. iii, p. 428; Steind., Denk. Ak. Wien xli, p. 5.

Hab.—East Indian Archipelago; Port Jackson (Steindachner).

MUGIL BREVICEPS.

Steind., Sitzgsber. Ak. Wiss. Wien 1866, liii, p. 459, t. 1, f. 1.

Hab.—Port Jackson.

MUGIL AUSTRALIS.

Steind., Denk. Ak. Wien xli, p. 5.

Hab.—Port Jackson.

MUGIL PERONII.

Cuv. & Val. xi, p. 138; Günth., Cat. iii, p. 452; Casteln., Proc. Zool. Soc. Vict. ii, p. 151, and Proc. Linn. Soc. N. S. Wales iii, p. 387; Macleay, op. cit. iv, p. 421.

Hab.—Coasts of Victoria, New South Wales, and Queensland, common. *Flat-tail Mullet* of Sydney market. Length up to 12 inches. An excellent fish for the table.

MUGIL COMPRESSUS.

Günth., Cat. iii, p. 451, and Fische d. Sudsee, pl. 123, f. A; Macleay, Proc. Linn. Soc. N. S. Wales iv, p. 421, and viii, p. 269.

Hab.—New South Wales (Günther); Port Darwin (Macleay); Richmond River (Ogilby). Length up to 1 foot.

MUGIL PETTARDI.

Casteln., Res. on the Fishes of Aust., p. 32; Macleay, Proc. Linn. Soc. N. S. Wales iv., p. 422.

Hab.—Richmond River, common. *Richmond Mullet*. Length up to 15 inches. Of excellent quality for the table.

I have omitted *Mugil crenidens*, Kner (Voy. Novara Fische, p. 229), because he gives the locality merely as New Holland (not Sydney, as stated by the Hon. Wm. Macleay, Proc. Linn. Soc. N. S. Wales iv, p. 424), which is much too vague.

MYXUS ELONGATUS.

Günth., Cat. iii, p. 466; Kner, Voy. Novara Fische, p. 230; Macleay, Proc. Linn. Soc. N. S. Wales iv, p. 426.

Hab.—Coasts of Victoria and New South Wales. *Sand Mullet* and *Tallegalla* of the fishermen. Length up to 12 inches. Little esteemed as an article of food.

GASTROSTEIFORMES.

FISTULARIIDÆ.

FISTULARIA SERBATA.

Fistularia tabaccaria, White, Voy. N. S. Wales, p. 296, f. 2; Bl., t. 387, ff. 2, 3.

——— *serrata*, Cuv. Règne Anim.; Günth., Cat. iii, p. 533, and Voy. Challenger Shore Fishes, p. 68, pl. 32, f. C; Kner, Voy. Novara Fische, p. 238; Day, Fishes of India, p. 360, pl. 76, f. 3; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 388; Macleay, op. cit. viii, p. 270, and Aust. Cat. ii, p. 49.

——— *immaculata*, Cuv., Règne Anim.; Rich., Ichthyol. China, p. 247; Schleg, Faun. Japon. Poiss., p. 320.

Fistularia

Fistularia commersonii, Rüpp., N. W. Fische, p. 142.

Hab.—From the east coast of Africa through the Indian seas to China and Australia; Bermudas; Port Jackson, common. *Pipe-fish* of the Sydney fishermen. Grows to 5 feet in length.

FISTULARIA DEPRESSA.

Günth., Voy. Challenger Shore Fishes, p. 69, pl. 32, f. D.

Hab.—From the east coast of Africa through all the Indian seas to China and Australia; Fiji Islands; Coast of California; New South Wales (Günth.). Grows to 5 feet in length.

CENTRISCIFORMES.

CENTRISCIDÆ.

CENTRISCUS GRACILIS.

Lowe, Proc. Zool. Soc. 1839, p. 86, and Trans. Zool. Soc. iii, p. 12; Günth., Cat. iii, p. 521; Macleay, Aust. Cat. App., p. 42.

Hab.—Madeira; West coast of Africa; Chinese and Japanese seas; Port Jackson. Length of specimen rather over 4 inches. Our example belongs to the short-spined form, var. *japonicus*, Günth.

GOBIESOCIFORMES.

GOBIESOCIDÆ.

DIPLOCREPIS COSTATUS.

Ogilby, Proc. Linn. Soc. N. S. Wales x, p. 270.

Hab.—Port Jackson. Length up to 2½ inches.

CREPIDOGASTER TASMANIENSIS.

Günth., Cat. iii, p. 507; Kner, Voy. Novara Fische, p. 277; Macleay, Aust. Cat. ii, p. 53.

Hab.—Tasmania; Sydney (Kner). Length 2.15 inches.

CHANNIFORMES.

OPHIOCEPHALIDÆ.

OPHIOCEPHALUS STRIATUS.

Bloch, t. 359; Cuv. & Val. vii, p. 417, pls. 202 and 206; Günth., Cat. iii, p. 474, and Study of Fishes, f. 234; Kner, Voy. Novara Fische, p. 234; Day, Fishes of India, p. 366 (*stom. & œc. pyl. figd.*); Bleek., Atl. Ichthyol. Oph., t. 3, f. 1; Macleay, Aust. Cat. ii, p. 54.

Hab.—Fresh waters of India, Burmah, China and the Philippines; Sydney (Kner). Attains to the length of 3 feet.

LABYRINTHIBRANCHII.

LABYRINTHICI.

POLYACANTHUS CUPANUS.

Cuv. & Val. vii, p. 357; Günth., Cat. iii, p. 381; Kner, Voy. Novara Fische, p. 218; Day, Fishes of India, p. 371, pl. 78, f. 4.

Hab.—Coasts of India; Sydney (Kner). Length up to 3 inches.

TÆNIIFORMES.

TRACHYPTERUS JACKSONENSIS.

Regalecus jacksonensis, Ramsay, Proc. Linn. Soc. N. S. Wales v, p. 631, pl. 20.

Hab.—Coast of New South Wales; Port Jackson. *Southern Ribbon-fish*. Largest specimen 7 feet. Closely allied to *Trachypterus arcticus*.

ACANTHOPTERYGII PHARYNGOGNATHI.

POMACENTRIDÆ.

POMACENTRUS UNIFASCIATUS.

Steind., Sitzsber. Ak. Wiss. Wien lvi, p. 326; Kner, op. cit. lviii, pp. 31 & 348, t. 8, f. 24.

Hab.—Fiji, (Kner); Port Jackson (Steindachner).

POMACENTRUS DOLII.

Macleay, Aust. Cat. ii, p. 65, pl. 1, f. 1.

Hab.—Port Jackson. Length up to 4 inches. Lives in large shells, such as those of *Dolium variegatum*.

PARMA MICROLEPIS.

Günth., Cat. iv, p. 57; Macleay, Aust. Cat. ii, p. 69.

Hab.—Port Jackson; Botany Bay. Length up to 6 inches.

PARMA SQUAMIPINNIS.

Günth., Cat. iv, p. 58; Macleay, Aust. Cat. ii, p. 69.

Gluphidodon australis, Steind., Sitzsber. Ak. Wiss. Wien lvi, p. 328.

Hab.—Port Jackson. Length 8 inches.

HELIASTES HYPSILEPIS.

Günth., Ann. Nat. Hist. 1867, (3) xx, p. 66; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 389; Macleay, Aust. Cat. ii, p. 71.

Hab.—Port Jackson. Length 6.50 inches.

HELIASTES IMMACULATUS.

Ogilby, Proc. Linn. Soc. N. S. Wales x, p. 446.

Hab.—Port Jackson. Length up to 6 inches.

LABRIDÆ.

HETEROCHÆROPS VIRIDIS.

Steind., Sitzgsber. Ak. Wiss. Wien 1866, liii, p. 461, pl. 5, f. 3.

Hab.—Port Jackson.

TROCHOCOPUS UNICOLOR.

Günth., Ann. Nat. Hist. 1876, (4) xvii, p. 398; Macleay, Aust. Cat. ii, p. 76.

Hab.—Port Jackson (Günther). Length of specimen 14.50 inches.

COSSYPHUS UNIMACULATUS.

Günth., Cat. iv, p. 109; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 389; Macleay, Aust. Cat. ii, p. 77; Tenison-Woods, Fisheries of New South Wales, p. 75, pl. 32.

Hab.—New South Wales coast; Port Jackson, common. *Pig-fish* of the Sydney market. Attains a length of 18 inches. An excellent table-fish.

COSSYPHUS GOULDII.

Labrus gouldii, Rich., Ann. Nat. Hist. 1843, xi, p. 353.

Cossyphus vel Lachnolaimus gouldii, Rich., Voy. Erebus & Terror Fishes, p. 132.

Cossyphus gouldii, Rich., Ann. Nat. Hist. 1851, (2) vii, p. 288, and Proc. Zool. Soc. 1850, p. 72, pl. 3, f. 3; Macleay, Aust. Cat. ii, p. 78; Tenison-Woods, Fisheries of N. S. Wales, p. 74, pl. 31.

Hab.—Western Australia; Port Jackson, common. *Blue Groper* of the fishermen. Attains a length of 40 inches. A good table fish. Though it seems impossible to specifically separate our common Blue Groper from the fish described by Sir John Richardson as *Cossyphus gouldii*, it should nevertheless be borne in mind that our fish invariably has a strong posterior canine tooth at each angle of the mouth, and that the fishes, though common at each of the localities mentioned, have not hitherto been recorded from intermediate localities.

Cossyphus vulpinus, Rich., has been included in Castelnau's list (Proc. Linn. Soc. N. S. Wales iii, p. 354), and again in the Report on the Fisheries of New South Wales, App. E, p. 54, but no proof of its occurrence is adduced.

LABRICHTHYS CELIDOTUS.

Labrus celidotus, Forst., Descr. Anim. ed. Licht, p. 133; Bl. Schn., p. 265; Rich., Voy. Erebus and Terror Fishes, p. 53, pl. 31, ff. 1—5.

——— *pacilopleura*, Cuv. & Val. xiii, p. 95.

Sparus notatus, Solander, MS.

Julis (?) *notatus*, Rich., Ann. Nat. Hist. 1843, xi, p. 425.

Labrichthys celidota, Günth., Cat. iv, p. 113, & Ann. Nat. Hist. 1876, (4) xvii, p. 398; Macleay, Aust. Cat. ii, p. 78.

Hab.—Coasts of Australia and New Zealand; Botany Bay.

LABRICHTHYS LATICLAVIUS.

Labrus laticlavius, Rich., Proc. Zool. Soc. 1839, p. 99, & Trans. Zool. Soc. iii, p. 139, & Voy. Erebus & Terror Fishes, p. 128, pl. 56, ff. 3—6.

Labrichthys laticlavius, Günth., Cat. iv, p. 115, and Ann. Nat. Hist. 1867, (3) xx, p. 66; Macleay, Aust. Cat. ii, p. 80.

Hab.—Coasts of Tasmania; King George's Sound; Port Jackson, common. Length up to a foot.

LABRICHTHYS LUCULENTUS.

Labrus luculentus, Rich., Voy. Erebus & Terror Fishes, p. 130.

Labrichthys luculenta, Günth., Cat. iv, p. 116; Macleay, Aust. Cat. ii, p. 80.

Hab.—East and west coasts of Australia; Norfolk Island; Port Jackson. Length 6 inches.

LABRICHTHYS PARILUS.

Tautoga parila, Rich., Proc. Zool. Soc. 1850, p. 70, & Ann. Nat. Hist. 1851, (2) vii, p. 286.

Labrichthys parila, Günth., Cat. iv, p. 117; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 389; Macleay, Aust. Cat. ii, p. 81.

Hab.—West Australia; Port Jackson (Castelnau). Length up to 8 inches.

LABRICHTHYS GYMNOGENIS.

Günth., Cat. iv, p. 117, and Ann. Nat. Hist. 1867, (3) xx, p. 66; Steind., Sitzgsber. Ak. Wiss. Wien lvi, p. 342; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 389; Macleay, Aust. Cat. ii, p. 82.

Hab.—Port Jackson, common. Length up to a foot.

LABRICHTHYS NIGROMARGINATUS.

Macleay, Proc. Linn. Soc. N. S. Wales iii, p. 35, pl. 3, f. 3.

Hab.—Port Jackson. Length up to a foot.

LABRICHTHYS DORSALIS.

Macleay, Aust. Cat. ii, p. 87.

Hab.—Port Jackson. Length 7 inches.

LABRICHTHYS LABIOSUS.

Macleay, Aust. Cat. ii, p. 88.
Hab.—Port Jackson.

LABRICHTHYS MELANURUS.

Macleay, Aust. Cat. ii, p. 88, pl. 1, f. 2.
Hab.—Port Jackson. Length 6 inches.

PLATYGLOSSUS TRIMACULATUS.

Julis trimaculata, Quoy & Gaim., Voy. Astrolabe Zool. ii, p. 705, pl. 20, f. 2; Cuv. & Val. xiii, p. 452.
Julis spilurus, Bleek., Banda i, p. 252.
Güntheria trimaculata, Bleek., Atl. Ichthyol. Labr., p. 138, t. 32, f. 1.
PlatyGLOSSUS trimaculatus, Günth., Cat. iv, p. 153; Kner, Voy. Novara Fische, p. 255; Macleay, Proc. Linn. Soc. N. S. Wales viii, p. 273.
Hab.—Sea of Vanicolo; East Indian Archipelago; South-east New Guinea (Macleay); Sydney (Kner). Length up to 5 inches.

NOVACULA JACKSONIENSIS.

Ramsay, Proc. Linn. Soc. N. S. Wales vi, p. 198.
Hab.—Port Jackson. Example immature.

CORIS LINEOLATA.

Julis lineolata, Cuv. & Val. xiii, p. 436.
 ——— *cyanogramma*, Rich., Ann. Nat. Hist. 1851, (2) vii, p. 289, and Proc. Zool. Soc. 1850, p. 73.
Ophthalmolepis lineolata, Bleek., Proc. Zool. Soc. 1861, p. 413; Kner, Voy. Novara Fische, p. 258, pl. 11, f. 1.
Coris lineolata, Günth., Cat. iv, p. 206; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 390.
Hab.—Australian coasts; Port Jackson, common. *Maori* of the New South Wales coast. Grows to 15 inches in length. Said to be fair eating.

CORIS SEMIOINCTA.

Ramsay, Proc. Linn. Soc. N. S. Wales vii, p. 301.
Hab.—Lord Howe's Island; Broken Bay.

CORIS REX.

Ramsay and Ogilby, Proc. Linn. Soc. N. S. Wales x, (*in press*).
Hab.—Bondi, N. S. Wales. Length 16.50 inches.

PSEUDOSCARUS OCTODON.

Bleek., Atl. Ichthyol. Scar., p. 33, t. 13, f. 2; Günth., Cat. iv, p. 234; Kner, Voy. Novara Fische, p. 262.
Hab.—Buton (Bleeker); Sydney (Kner). Length up to 9.50 inches.

HETEROSCARUS FILAMENTOSUS.

Casteln., Proc. Zool. Soc. Vict. i, p. 245, & ii, p. 74; Macleay, Aust. Cat. ii, p. 104.
Hab.—South Australia; Port Jackson. Length up to 7 inches.

HETEROSCARUS CASTELNAUI.

Macleay, Proc. Linn. Soc. N. S. Wales iii, p. 36, pl. 5, f. 2.
Hab.—Port Jackson. *Rainbow-fish* at Sydney. Length up to 9 inches. Very closely allied to the preceding species; perhaps the female of it.

ODAX BALTEATUS.

Cuv. & Val. xiv, p. 303; Günth., Cat. iv, p. 240; Macleay, Aust. Cat. ii, p. 106.
Odax algensis, Rich., Proc. Zool. Soc. 1840, p. 26, and Trans. Zool. Soc. iii, p. 148.
Hab.—Tasmania; Port Jackson. *Kelp-fish* of Tasmania.

ODAX SEMIFASCIATUS.

Cuv. & Val. xiv, p. 299, pl. 407; Günth., Cat. iv, p. 241; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 390; Macleay, Aust. Cat. ii, p. 107.
Hab.—Port Jackson, common. *Rock Whiting* of the Sydney market. Grows to the length of 15 inches. A poor food-fish.

ODAX RICHARDSONII.

Odax pusillus, Cuv. & Val. xiv, pl. 408 (*not Forst*).
 ——— *richardsonii*, Günth., Cat. iv, p. 241, and Ann. Nat. Hist. 1867, (3) xx, p. 66; Casteln., Proc. Zool. Soc. Vict. i, p. 152; Macleay, Aust. Cat. ii, p. 107.
 ——— *hyrtlüi*, Steind., Sitzgsber. Ak. Wiss. Wien 1866, liii, p. 464.
Hab.—Port Phillip; Tasmania (Aust. Mus.); New South Wales (Günther). The *Stranger* at Melbourne. Attains a length of 15 inches.

ODAX BRUNNEUS.

Macleay, Aust. Cat. ii, p. 109.
Hab.—Port Jackson. Length 3.50 inches.

ODAX OBSCURUS.

Casteln., Proc. Zool. Soc. Vict. i, p. 154, and Proc. Linn. Soc. N. S. Wales iii, p. 391; Macleay, Aust. Cat. ii, p. 108.
Hab.—Port Phillip & Port Jackson (Castelnau).

OLISTHEROPS

OLISTHEROPS BRUNNEUS.

Macleay, Proc. Linn. Soc. N. S. Wales iii, p. 36, pl. 5, f. 1.

Hab.—Port Jackson. *Herring-cod* at Sydney. Length up to 18 inches. In a fresh state the males of this species correspond exactly with Sir John Richardson's description of *O. cyanomelas*, except that I have never seen the blue pectoral streak which he describes, and more especially all our examples have from 56 to 59 scales in the lateral line; in fact if fifty-eight were read instead of forty-eight in Richardson's description it would be impossible to separate the two forms.

ANACANTHINI.

GADOPSIDÆ.

GADOPSIS MARMORATUS.

Rich., Voy. Erebus & Terror Fishes, p. 122, pl. 59, ff. 6-11; Günth., Cat. iv, p. 318; Macleay, Aust. Cat. ii, p. 112.

Hab.—Fresh waters of Tasmania, South Australia, Victoria, and New South Wales. Prof. M'Coy (Prodr. Zool. Vict. dec. iii, pl. 27, f. 2) has described a *Gadopsis* from the Yarra, which he names *G. gracilis*, and a second from the Bunyip River, Gippsland, under the name of *G. gibbosus*. The differences between these and the typical form appear to be slight, and only such as might be expected in a species of such wide range, and which exists under such different conditions of life and diversities of climate. The Hon. Wm. Macleay also mentions a *Gadopsis* (Proc. Linn. Soc. N. S. Wales x, p. 267) which is more elongate than *G. marmoratus*, and which is probably the same form which Prof. M'Coy describes as *G. gracilis*; it came from the Little River, near Yass, New South Wales.

Gadoidei.

GADIDÆ.

LOTELLA FULIGINOSA.

Günth., Cat. iv, p. 347; Macleay, Aust. Cat. ii, p. 114.

Hab.—Port Jackson, (Castelnau) *vide* Macleay. Count Castelnau gives no description of the fish which he includes in his list as *L. rubiginosa*, Günth., and I doubt the propriety of continuing to keep it in the New South Wales catalogue, the more so since Castelnau may have had in his mind the *Gadus rubiginosus* of Solander's MS., which is probably our *Pseudophycis bachus*.

LOTELLA CALLARIAS.

Günth., Ann. Nat. Hist. 1863, (3) xi, p. 116; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 391; M'Coy, Prodr. Zool. Vict. dec. ii, pl. 19; Macleay, Aust. Cat. ii, p. 114.

Lotella schuettii, Steind., Sitzgsber. Ak. Wiss. Wien 1866, liii, p. 456.

Hab.—Port Phillip; Port Jackson (Castelnau). *Small-scaled Rock-cod*. Attains to the length of 24 inches. Not much esteemed for the table.

LOTELLA LIMBATA.

Lotella marginata, Macleay, Aust. Cat. ii, p. 114; Tenison-Woods, Fisheries of N. S. Wales, p. 76, pl. 23 (*low. fig.*)

Hab.—Port Jackson. *Beardy* of the Sydney Market. Length up to 20 inches. Dr. Günther (Ann. Nat. Hist. 1878, (5) ii, p. 19) having given the specific name of *marginata* to a *Lotella* obtained by the Challenger Expedition, off the south-western coast of South America, I am obliged to change the name of our species, and I have selected in its place a name which conveys the same meaning as that under which the species was originally described by the Hon. Wm. Macleay.

LOTELLA GRANDIS.

Ramsay, Proc. Linn. Soc. N. S. Wales v, p. 462.

Hab.—Wollongong.

PSEUDOPHYCIS BACHUS.

Gadus bacchus, Forst., Descr. Anim. ed. Licht., p. 120.

Enchelyopus bacchus, Bl. Schn., p. 53.

Lota breviuscula, Rich., Voy. Erebus & Terror Fishes, p. 61, pl. 38, f. 1.

Lotella bacchus, Günth., Cat. iv, p. 347; Parker, Trans. N. Zeal. Inst. xv, p. 234, pl. 33.

Pseudophycis breviusculus, Günth., Cat. iv, p. 350; Ramsay, Proc. Linn. Soc. N. S. Wales vi, p. 717.

——— *bacchus*, Günth., Voy. Challenger Shore Fishes, p. 28, and Study of Fishes, p. 542, f. 248.

Hab.—New Zealand; coast of New South Wales; Twofold Bay (Günther); Port Jackson, Ramsay. *Red cod* of New Zealand.

Pleuronectoidei.

PLEURONECTIDÆ.

PSEUDORHOMBUS RUSSELLII.

Platessa russellii, Gray & Hardw., Ill. Ind. Zool., t. 94, f. 2; Cant., Cat. Mal. Fishes, p. 214.

Rhombus lentiginosus, Rich., Ann. Nat. Hist. 1843, xi, p. 495.

Platessa chrysoptera, Rich., Ichthyol. China, p. 278.

Rhombus arsius, Bleek., Beng. en Hind., p. 76.

Pseudorhombus russellii, Günth., Cat. iv, p. 424; Kner, Voy. Novara Fische, p. 283; Bleek., Atl. Ichthyol. Pleuronect., p. 6, t. 233, f. 2; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 391; Macleay, op. cit. ii, p. 362, and Aust. Cat. ii, p. 124; Tenison-Woods, Fisheries of N. S. Wales, p. 76, pl. 33.

——— *arsius*, Günth., Cat. iv, p. 426; Day, Fishes of India, p. 423, pl. 91, f. 5.

Teratorhombus excisiceps, Macleay, Aust. Cat. ii, p. 126 (*malformation*).

Hab.—From the east coast of Africa through the Indian seas to Australia; Port Jackson, common in summer. *Flounder* of Port Jackson. Attains to the length of 15 inches. A moderate fish for the table.

PSEUDORHOMBUS

PSEUDORHOMBUS MULTIMACULATUS.

Günth., Cat. iv, p. 427; Macleay, Aust. Cat. ii, p. 125.

Hab.—Coast of New South Wales, common. *Flounder* of Port Jackson; not distinguished from the preceding. Grows to 12 inches in length. A moderate table fish.

RHOMBOIDICHTHYS SPINICEPS.

Macleay, Aust. Cat. ii, p. 127.

Hab.—Port Jackson. Length 4.50 inches.

LOPHONECTES GALLUS.

Günth., Voy. Challenger Shore Fishes, p. 29, pl. 15, f. B. (*very bad*).

Lophorhombus cristatus, Macleay, Proc. Linn. Soc. N. S. Wales vii, p. 14.

Hab.—Port Jackson. Length up to 7 inches. In Dr. Günther's figure the fish is colored on the wrong side, the short first dorsal ray is omitted, and there is a separation between the elongate and short rays of that fin, which is purely imaginary.

AMMOTRETIS ADSPERSUS.

Ammotretis rostratus, var. *adpersus*, Kner, Voy. Novara Fische, p. 286, t. 13, f. 4.

——— *zonatus*, Macleay, Proc. Linn. Soc. N. S. Wales vii, p. 367.

——— *macleayi*, Ogilby, Proc. Linn. Soc. N. S. Wales x, p. 121.

Rhombosolea bassensis, Casteln., Proc. Zool. Soc. Vict. i, p. 167.

Hab.—Coasts of New South Wales and Victoria. Attains to the length of 10 inches.

It is probable that this species will prove to be identical with the *Ammotretis rostratus* of Dr. Günther, but his specimen must have been abnormally elongate, if the comparative measurement of height given in the Catalogue of Fishes, vol. iv, p. 458, is correct. Should further examination prove their identity, the range of the fish would be increased by Tasmania, whence it was originally described, and New Zealand, from which it has been recorded by Hutton, (Trans. N. Zeal. Inst. viii, p. 215), who had previously (op. cit. v, p. 267, pl. 11) described an *A. guentheri* from the same place. The Australian Museum is fortunate in possessing the type specimen of Count Castelnau's *Rhombosolea bassensis*, labelled in his own handwriting, and it is undoubtedly this species.

LEOPS PARVICEPS.

Günth., Voy. Challenger Shore Fishes, p. 29, pl. 15, f. A.

Hab.—Twofold Bay, 120 fathoms (?) Length, to 5.50 inches.

RHOMBOSOLEA LEPORINA.

Günth., Cat. iv, p. 460; Kner, Voy. Novara Fische, p. 287; Hutton, Trans. N. Zeal. Inst. v, p. 268, pls. 11, 12; Macleay, Aust. Cat. ii, p. 130.

Hab.—Sydney (Kner). Length, up to 8 inches.

Rhombosolea fiesoides, Günth., is included in Castelnau's list (Proc. Linn. Soc. N. S. Wales iii, p. 354), but no authority is given.

SOLEA MICROCEPHALA.

Günth., Cat. iv, p. 466; Kner, Voy. Novara Fische, p. 288; Macleay, Aust. Cat. ii, p. 135.

Hab.—New South Wales coast; Port Jackson, common. Length, up to 8 inches.

SOLEA MACLEAYANA.

Ramsay, Proc. Linn. Soc. N. S. Wales v, p. 462.

Hab.—Port Jackson. Length, up to 7 inches.

SOLEA FLUVIATILIS.

Ramsay, Proc. Linn. Soc. N. S. Wales vii, p. 111.

Hab.—Hunter River, fresh water. Length, 3.60 inches.

SOLEA LINEATA.

Ramsay, Proc. Linn. Soc. N. S. Wales vii, p. 406.

Hab.—Port Stephens. Length, 2.75 inches.

SOLEA HUMILIS.

Cant., Cat. Mal. Fishes, p. 219; Günth., Cat. iv, p. 471; Kner, Voy. Novara Fische, p. 288.

Solea maculata, Bleek., Verhand. Bat. Genootsch. xxiv, Pleuronect., p. 17.

Hab.—Seas of Java and Penang; Sydney (Kner). Length, up to 4 inches.

ACHIRUS PAVONINUS.

Lacép. iv, pp. 658, 661; Bleek., Atl. Ichthyol. Pleuronect., p. 24, pl. 241, f. 1; Day, Fishes of India, p. 427, pl. 93, f. 2.

Pleuronectes pavoninus, Shaw, Zool. iv, p. 310.

Pardachirus pavoninus, Günth., Cat. iv, p. 479; Macleay, Proc. Linn. Soc. N. S. Wales i, p. 347, and Aust. Cat. ii, p. 136.

Solea (Pardachirus) pavonina, Steind., Fische Sing. 1870, p. 570.

Hab.—Malay Archipelago; Australian coasts; Port Jackson. Length, up to 6 inches.

SYNAPTURA QUAGGA.

Aesopia quagga, Kaup, Wieg. Arch. 1858, p. 98.

Synaptura quagga, Günth., Cat. iv, p. 485; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 392; Macleay, Aust. Cat. ii, p. 136.

Hab.—Chinese seas; Sydney, Brisbane, and Swan River (Castelnau). Length, up to 6 inches.

SYNAPTURA

SYNAPTURA NIGRA.

Macleay, Proc. Linn. Soc. N. S. Wales v, p. 49; Tenison-Woods, Fisheries of N. S. Wales, p. 77.

Hab.—Estuaries of the New South Wales coast. *Sole* of the Sydney market. Attains to the length of 10 inches. An excellent table-fish.

SYNAPTURA FASCIATA.

Macleay, Proc. Linn. Soc. N. S. Wales vii, p. 14.

Hab.—Port Jackson. Length, up to 8 inches.

PLAGUSIA UNICOLOR.

Macleay, Aust. Cat. ii, p. 138.

Hab.—Port Jackson. *Lemon Sole* of the fishermen. Length, up to 10 inches.

PHYSOSTOMI.

SILURIDÆ.

HOMALOPTERÆ.

PLOTOSINA.

PLOTOSUS ARAB.

Silurus arab, Forsk., Deser. Anim. xvi, no. 36.

Platystacus anguillaris, Bl. viii, p. 61, t. 373, f. 1.

Plotosus anguillaris, Lacép. v, p. 130, pl. 3, f. 2; Rüpp., N. W. Fische, p. 76; Günth., Cat. v, p. 24; Macleay, Aust. Cat. ii, p. 139.

——— *ikapor*, Less. & Garn., Voy. Coquille Zool. ii, p. 132, pl. 31, f. 3.

——— *lineatus*, Cuv. & Val. xv, p. 412; Rich., Ichthyol. China, p. 286; Schleg., Faun. Japon. Poiss., p. 228, pl. 104, f. 3.

——— *arab*, Bleek., Atl. Ichthyol. Silur., p. 98, t. 95, f. 2; Kner, Voy. Novara Fische, p. 300; Day, Fishes of India, p. 483, pl. 112, f. 4.

Hab.—From the east coast of Africa through the Indian Seas to Japan and Polynesia; coasts of North Australia and Queensland; Clarence River (Ogilby); a small specimen forwarded by Mr. T. Temperley.

COPIDOGLANIS TANDANUS.

Plotosus tandanus, Mitch., Exp. into Int. of Australia, ed. 2, vol. i, p. 95, pl. 6, f. 2.

Copidoglanis tandanus, Günth., Cat. v, p. 26; Klunz., S.B. Ak. Wien lxxx, Abth. i, p. 410; Macleay, Aust. Cat. ii, p. 141, and Proc. Linn. Soc. N. S. Wales viii, p. 208; Tenison-Woods, Fisheries of N. S. Wales, p. 105.

Hab.—Rivers of New South Wales. *Fresh-water Cat-fish*. Length, up to 3 feet.

COPIDOGLANIS OBSCURUS.

Günth., Cat. v, p. 26.

Hab.—Port Jackson (Krofft).

CNIDOGLANIS MEGASTOMA.

Plotosus megastomus, Rich., Voy. Erebus & Terror Fishes, p. 31, pl. 21, ff. 1-3.

Cnidoglanis megastoma, Günth., Cat. v, p. 27, and Study of Fishes, f. 258; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 392; Macleay, Aust. Cat. ii, p. 144; Tenison-Woods, Fisheries of N. S. Wales, p. 81.

Charoplotosus decemfiliis, Kner, Voy. Novara Fische, p. 300, pl. 13, f. 1 (an *Plotosus limbatus*, Cuv. & Val. xv, p. 422).

Hab.—Coast of New South Wales; Port Jackson, common. The *Cat-fish* of Sydney. Attains a length of 30 inches. Though the flesh of this fish is excellent, there is a prejudice against it, which makes it unsaleable, except at a nominal price to foreign sailors and Chinese.

CNIDOGLANIS LEPTURUS.

Günth., Cat. v, p. 28; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 393; Macleay, Aust. Cat. ii, p. 145.

Hab.—Port Jackson. Length, up to 18 inches.

PROTEROPTERÆ.

ARIINA.

ARIUS AUSTRALIS.

Günth., Proc. Zool. Soc. 1867, p. 103 (*fig. of head*), and Study of Fishes, f. 261; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 50; Macleay, Aust. Cat. ii, p. 149.

Hab.—Hunter and Richmond Rivers (Günther); Norman River (Castelnau). Length, up to 18 inches.

ARIUS THALASSINUS.

Bagrus thalassinus, Rüpp., N. W. Fische, p. 75, pl. 20, f. 2.

Arius nasutus, Cuv. & Val. xv, p. 60.

Netuma nasuta, Bleek., Atl. Ichthyol. Silur., t. 61.

——— *thalassina*, Bleek., l.c., t. 28.

Arius thalassinus, Günth., Cat. v, p. 139; Kner, Voy. Novara Fische, p. 310; Day, Fishes of India, p. 463, pls. 104, f. 4, and 106, f. 1; All. & MacL., Proc. Linn. Soc. N. S. Wales i, p. 348; Macleay, Aust. Cat. ii, p. 148, and Proc. Linn. Soc. N. S. Wales viii, p. 209.

Hab.—From the east coast of Africa through all the Indian and Malayan seas to the east coast of Australia; Port Jackson. Grows to a large size.

SCOPELIDÆ.

SAURUS MYOPS.

Salmo foetens, Bloch., t. 384, f. 2; Bl. Schn., p. 404 (not Linn.)

——— *myops*, Forst., Descr. Anim., p. 412.

Saurus limbatus, Eyd. & Soul., Voy. Bonite Poiss., p. 100, t. vii, f. 3.

——— *myops*, Cuv., Règ. Anim.; Cuv. & Val. xxii, p. 485; Bleek., Atl. Ichthyol. Saurida, t. 2, f. 3; Günth., Cat. v, p. 398; Day, Fishes of India, p. 504, pl. 117, f. 5; Macleay, Aust. Cat. ii, p. 153.

——— *trachinus*, Schleg., Faun. Japon. Poiss., p. 231, pl. 106, f. 2.

Hab.—Tropical seas; Port Jackson. Grows to the length of a foot.

SAURUS NEBULOSUS.

Dentex nebulosus (Solander), Cuv. & Val. xxii, p. 506.

Saurus gracilis, Quoy & Gaim., Voy. Uranie, p. 222.

Saurida nebulosa, Cuv. & Val. xxii, p. 504, t. 648; Bleek., Atl. Ichthyol. Saurida, t. 1, f. 1; Günth., Cat. v, p. 399; Kner, Voy. Novara Fische, p. 316; Day, Fishes of India, p. 505; Macleay, Aust. Cat. ii, p. 154.

Hab.—East African, Indian, Malayan, and Australian seas; Port Jackson. Length, up to 8 inches.

SAURUS AUSTRALIS.

Saurida australis, Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 393.

Hab.—Port Jackson. Length, 14 inches.

SAURUS TRUCULENTUS.

Saurida truculenta, Macleay, Aust. Cat. ii, p. 155.

Hab.—Port Jackson. Length, 20 inches.

SAURUS FEROX.

Saurida ferox, Ramsay, Proc. Linn. Soc. N. S. Wales viii, p. 177.

Hab.—Port Jackson.

Count Castelnau includes *Saurus undosquamis*, Rich., in his list of Port Jackson fishes (Proc. Linn. Soc. N. S. Wales, iii, p. 355), but without giving any proof of its occurrence, and as a mere catalogue name I unhesitatingly omit it from the New South Wales Fauna.

AULOPUS PURPURISSATUS.

Rich., Ic. Pisc., p. 6, pl. 2, f. 3 (very bad); Günth., Cat. v, p. 403; McCoy, Prodr. Zool. Vict. dec. vi, pls. 54, 55; Macleay, Aust. Cat. ii, p. 157; Tenison-Woods, Fisheries of N. S. Wales, p. 82, pl. 35.

Aulopus milesii, Cuv. & Val. xxii, p. 519, pl. 650.

Hab.—Coasts of Victoria and New South Wales. *Sergeant Baker* at Sydney. Attains to the length of 2 feet. One of the best food fishes of the colony. One of the characters of this genus, as given in the British Museum Catalogue, is "Pyloric appendages few in number"; this will have to be omitted, as our southern species have these organs in very large numbers, up to 130 in a specimen examined lately.

CHLOROPHTHALMUS NIGRIPINNIS.

Günth., Ann. Nat. Hist. 1878, (5) ii, p. 182.

Hab.—Twofold Bay, 120 fathoms.

PLAGYODUS FEROX.

Alepisaurus ferox, Lowe, Trans. Zool. Soc. i, pl. 19, and p. 395, pl. 59; Cuv. & Val. xx, p. 529; Johnson, Ann. Nat. Hist. 1862, (3) x, p. 317.

? ——— Rich., Voy. Erebus and Terror Fishes, p. 34, pl. 22, ff. 1-4.

Alepidosaurus ferox, Günth., Cat. v, p. 421; Macleay, Aust. Cat. ii, p. 162.

Plagyodus ferox, Günth., Ann. Nat. Hist. 1867, (3) xix, p. 185, and Study of Fishes, p. 586, f. 270.

Hab.—Atlantic Ocean; Tasmania (Richardson); Port Jackson (Kreffl). Attains a length of 5 feet.

CYPRINIDÆ.

CYPRININA.

CARASSIUS VULGARIS.

Cyprinus carassius, Linn., Syst. Nat. i, p. 526; Cuv. & Val. xvi, p. 82, pl. 459.

Carassius vulgaris, Nordm. in Demid. Voy. Russ. Mer. iii, p. 479; Günth., Cat. vii, p. 29, and Study of Fishes, p. 591; Houghton, Brit. Fresh-water Fishes, p. 19; Day, Brit. Fishes ii, p. 164, pl. 130.

Cyprinus gibelio, Linn. Gmel., p. 1417.

Hab.—Europe and Siberia; introduced to many fresh-water lagunes and ponds of New South Wales; Botany swamps. Length up to 10 inches. Those which I have seen from this neighbourhood belong to var. *gibelio*; one received lately from the Nepean above Penrith is true *C. vulgaris*.

LEUCISCINA.

TINCA VULGARIS.

Cyprinus tinca, Linn., Syst. Nat. i, p. 526.

Tinca vulgaris, Cuv., Règ. Anim.; Cuv. & Val. xvi, p. 322, pl. 484; Günth., Cat. vii, p. 265, and Study of Fishes, p. 599, f. 274; Houghton, Brit. Fresh-water Fishes, p. 49; Day, Brit. Fishes ii, p. 188, pl. 134, f. 2.

Hab.—Fresh waters of Europe and Asia Minor; introduced into New South Wales. *Tench*. Grows to the weight of 5 pounds. A moderate fish for the table.

SCOMBRESOCIDÆ.

SCOMBRESOCIDÆ.

BELONE FEROX.

Günth., Cat. vi, p. 242; Casteln., Proc. Linn. Soc. N. S. Wales ii, p. 239, and iii, p. 394; Macleay, Aust. Cat. ii, p. 176; Tenison-Woods, Fisheries of N. S. Wales, p. 83, pl. 36.

Hab.—New South Wales, common. *Long Tom* of the Sydney fishermen.

BELONE KREFFTII.

Günth., Cat. vi, p. 250; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 50; Macleay, op. cit. viii, p. 209, and Aust. Cat. ii, p. 178.

Hab.—Rivers of Northern Queensland; Hunter River (Kreffft). Length up to 2 feet.

BELONE MACLEAYANA.

Belone gracilis, Macleay, Aust. Cat. ii, p. 179.

Hab.—Port Jackson. Length, 8 inches. I am again compelled to change Mr. Macleay's name, the same having been given previously to an Indian species by Schlegel, and to a Portuguese species by Lowe.

SCOMBRESOX FORSTERI.

Esox saurus, Forst., Descr. Anim. ed. Licht., p. 143.

Scomberesox forsteri, Cuv. & Val. xviii, p. 481.

Scomberesox forsteri, Günth., Cat. vi, p. 258; Hutton, Fishes of N. Zeal., p. 53; Macleay, Aust. Cat. ii, p. 180.

Hab.—New Zealand; Melbourne (Castelnau); Sydney (Macleay).

HEMIRHAMPHUS INTERMEDIUS.

Cant., Ann. Nat. Hist. 1842, ix, p. 435; Rich., Ichthyol. China, p. 264; Macleay, Aust. Cat. ii, p. 181; Tenison-Woods, Fisheries of N. S. Wales, p. 84, pl. 37 (*up. fig.*)

Hemirhamphus melanochir, Cuv. & Val. xix, p. 41; Castelnau, Proc. Linn. Soc. N. S. Wales iii, p. 394.

Hab.—Seas of China, Australia, and New Zealand; Port Jackson, abundant. *Common Garfish* of the Sydney market. Grows to 18 inches in length. An excellent fish for the table.

HEMIRHAMPHUS REGULARIS.

Günth., Cat. vi, p. 261; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 394; Macleay, Aust. Cat. ii, p. 181; Tenison-Woods, Fisheries of N. S. Wales, p. 84, pls. 37 (*low. fig.*) and 38.

Hab.—Coasts of Australia; Port Jackson, common. *River Garfish*. Grows to the length of 12 inches. A good table-fish, but not equal to the preceding.

HEMIRHAMPHUS ARGENTUS.

Benn., Whaling Voy. ii, p. 269; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 394.

Hemirhamphus breviceps, Casteln., l. c. ii, p. 240.

Hab.—Brisbane; Sydney (rare). Length up to 5 inches.

This is perhaps the young of *Hemirhamphus intermedius*.

HEMIRHAMPHUS FAR.

Esox far, Forsk., Descr. Anim., No. 98.

Hemirhamphus far, Rüpp., N. W. Fische, p. 74; Day, Fishes of India, p. 516, pl. 120, f. 3.

commersonii, Cuv. & Val. xix, p. 28; Bleek., Atl. Ichthyol. Scombr., t. 6, f. 3; Günth., Cat.

vi, p. 271; All. & Macl., Proc. Linn. Soc. N. S. Wales i, p. 350; Macleay, op. cit. vii, p. 593, and Aust. Cat., p. 183.

Hab.—From the east coast of Africa through all the Indian and Malayan seas to the east coast of Australia; Port Jackson. Length up to 15 inches.

HEMIRHAMPHUS AUSTRALIS.

Steind., Sitzgsber. Ak. Wiss. Wien 1866, liii, p. 471.

Hab.—Port Jackson.

ARRHAMPHUS SCLEROLEPIS.

Günth., Cat. vi, p. 277; Macleay, Proc. Linn. Soc. N. S. Wales ii, p. 364, and Aust. Cat. ii, p. 184.

Hemirhamphus krefftii, Steind., Sitzgsber. Ak. Wiss. Wien 1867, lvi, p. 332, t. 1.

Hab.—East coast of Australia; Port Jackson (Steindachner). Length up to 9 inches.

EXOCEETUS MELANOCERCUS.

Ogilby, Proc. Linn. Soc. N. S. Wales x, p. 123.

Hab.—Port Jackson. Length, 15-25 inches.

? EXOCOETUS UNICOLOR.

Exocoetus unicolor?, Cuv. & Val. xix, p. 97; Kner, Voy. Novara Fische, p. 325.

Hab.—Sydney (Kner). Length, 8 inches.

GALAXIIDÆ.

GALAXIAS OLIDUS.

Günth., Cat. vi, p. 209; Macleay, Aust. Cat. ii, p. 166.

Hab.—Rivers of New South Wales (Kreffft). Length up to 4 inches.

GALAXIAS KREFFTII.

Günth., Cat. vi, p. 211; Macleay, Aust. Cat. ii, p. 167.

Hab.—Rivers of New South Wales; Rope's Creek (Macleay). Length up to 6 inches.

GALAXIAS

GALAXIAS SCRIBA.

Cuv. & Val. xviii, p. 347; Günth., Cat. vi, p. 212; Macleay, Aust. Cat. ii, p. 168.
Hab.—Port Jackson. Length, 3 inches.

GALAXIAS PUNCTATUS.

Günth., Cat. vi, p. 212; Macleay, Aust. Cat. ii, p. 168.
Hab.—Eastern Creek. Length, 6.50 inches.

GALAXIAS COXII.

Macleay, Proc. Linn. Soc. N. S. Wales v, p. 45.
Hab.—Streams on the uplands of Mount Wilson. Length, 7 inches.

GALAXIAS PLANICEPS.

Macleay, Aust. Cat. ii, p. 169.
Hab.—Rankin's Lagoon, near Bathurst.

GALAXIAS BONG-BONG.

Macleay, Aust. Cat. ii, p. 169.
Hab.—Moss Vale and rivers at Bong-bong. Length, 3 inches.

GALAXIAS NEBULOSUS.

Galaxias nebulosa, Macleay, Aust. Cat. ii, p. 170.
Hab.—Long Bay, near Sydney. Length, 3 inches.

GALAXIAS FINDLAYI.

Macleay, Proc. Linn. Soc. N. S. Wales vii, p. 107.
Hab.—Upland ponds of Mount Kosciusko. Length, 3 inches.

GALAXIAS SCOTTII.

Kreffl, M.S. name.
Hab.—Ash Island, Hunter River. Length, 4.75 inches.

SALMONIDÆ.

SALMO FARIO.

Linn., Syst. Nat. i, p. 509; Günth., Cat. vi, p. 59; Houghton, Brit. Fresh-water Fishes ii, p. 111; Day, Brit. Fishes ii, p. 95, pls. 109, f. 3, 113, 114, and 116, f. 1.

Hab.—Temperate and colder parts of the northern hemisphere; introduced into New Zealand, Tasmania, Victoria, and New South Wales; streams of the National Park, 1885. The *Trout*. Grows to the weight of 20lbs. and over; I have seen a trout from Lough Neagh, Ireland, which weighed 28lbs., and Thompson (Nat. Hist. Ireland iv, p. 158) mentions having examined one of 36lbs. These belonged to var. *ferox*. Other forms of this most variable species have been separated as *nigripinnis*, *estuarinus*, *stomachicus*, *orcadensis*, *cornubiensis*, and so on; at this rate every stream and feeder of a stream might furnish us with a so-called species.

RETROPINNA RICHARDSONII.

Argentina retropinna, Rich., Voy. Erebus & Terror Fishes, p. 121, pl. 52, ff. 1-3.
Retropinna richardsonii, Gill, Proc. Ac. Nat. Sc. Philad. 1862, p. 14; Günth., Cat. vi, p. 171; Hector, Trans. N. Zeal. Inst. iii, p. 133, pl. 18, f. 3; Macleay, Aust. Cat. ii, p. 164.
Richardsonia retropinna, Kner, Voy. Novara Fische, p. 318.
Hab.—Fresh waters of New Zealand and the Southern parts of Australia; Rope's Creek (Macleay). Length up to 4 inches.

CLUPEIDÆ.

CHATOËSSUS RICHARDSONII.

Casteln., Proc. Zool. Soc. Vict. ii, p. 144; Macleay, Proc. Linn. Soc. N. S. Wales iv, p. 369.
Hab.—Murray River and its tributaries. *Manur* and *Ka-ee-ra* of the Aborigines. Attains to the length of 14 inches. Of delicate flavour.

CHATOËSSUS EREBI.

? *Chatoësus come*, Rich., Voy. Erebus and Terror Fishes, p. 62, pl. 38, ff. 7-10.
Chatoëssus erebi, Günth., Cat. vii, p. 407; Macleay, Proc. Linn. Soc. N. S. Wales iv, p. 368; Tenison-Woods, Fisheries of N. S. Wales, p. 106.
Hab.—Rivers of North and West Australia; Clarence and Namoi Rivers, New South Wales. *Bony Bream*; *Sardine* at Brisbane; *Perth Herring* of Swan River, West Australia.

CLUPEA SAGAX.

Jenyns, Voy. Beagle Fishes, p. 134; Günth., Cat. vii, p. 443; Macleay, Proc. Linn. Soc. N. S. Wales iv, p. 371; Tenison-Woods, Fisheries of N. S. Wales, p. 86.
Alosa melanosticta, Cuv. & Val. xx, p. 444 (not Schleg.).
— fimbriata, Kner and Steind., Sitzgsber. Ak. Wiss. Wien 1867, liv, p. 386, t. 15.
Hab.—Pacific coasts of America; Japan; New Zealand; Tasmania; Victoria; New South Wales, abundant. *Maray* of the Port Jackson fishermen. Length, up to 8 inches. An excellent table-fish.

CLUPEA SUNDAICA.

Bleek., Atl. Ichthyol. Clup., p. 105, pl. 271, f. 5; Macleay, Proc. Linn. Soc. N. S. Wales iv, p. 373; Tenison-Woods, Fisheries of N. S. Wales, p. 86.
Hab.—Java & Celebes (Bleeker); New South Wales, abundant. *Herring* of the Sydney fishermen. Length, up to 6 inches. A well-flavored fish.

CLUPEA

CLUPEA HYPSELOSOMA.

Harengula hypselosoma, Bleek., Nat. Tydschr. Ned. Ind. viii, 1855, p. 427.

Clupea hypselosoma, Günth., Cat. vii, p. 431; Macleay, Proc. Linn. Soc. N. S. Wales iv, p. 375; Bleek., Atl. Ichthyol. Clup. vi, p. 104, pl. 267, f. 2.

Hab.—Amboyna; Port Jackson, abundant. An excellent food fish.

CLUPEA MOLUCCENSIS.

Harengula moluccensis, Bleek., Nat. Tydschr. Ned. Ind. iv, p. 609.

——— *kunzei*, Bleek., l. c. xii, p. 209.

Clupea moluccensis, Günth., Cat. vii, p. 427; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 395; Macleay op. cit. iv, p. 376; Bleek., Atl. Ichthyol. Clup. vi, p. 107, t. 263, ff. 1, 2.

Hab.—From Ceylon to the Malay Archipelago; Port Jackson (Castelnau).

CLUPEA NOVÆ-HOLLANDIÆ.

Meletta novæ-hollandiæ, Cuv. & Val. xx, p. 376.

Clupea novæ-hollandiæ, Günth., Cat. vii, p. 431; Macleay, Proc. Linn. Soc. N. S. Wales iv, p. 378.

Hab.—Nepean River. *Nepean Herring*. Length, up to 8 inches. Of little value as a food fish.

CLUPEA RICHMONDIA.

Macleay, Proc. Linn. Soc. N. S. Wales iv, p. 380.

Hab.—Richmond River. *Richmond Herring*. Length, under 5 inches.

ETRUMEUS JACKSONIENSIS.

Macleay, Proc. Linn. Soc. N. S. Wales iii, p. 36, pl. 4, f. 1, & iv, p. 382.

Hab.—Coast of New South Wales; Port Jackson. Also called *Maray* by the fishermen. Said to be excellent for the table.

ELOPS SAURUS.

Linn., Syst. Nat. i, p. 518; Bloch, t. 393, f. 1; Cuv. & Val. xix, p. 365; Bleek., Atl. Ichthyol. Clup. vi, p. 84, t. 218, f. 3; Kner, Voy. Novara Fische, p. 338; Günth., Cat. vii, p. 470; Day, Fishes of India, p. 649, pl. 166, f. 1; Casteln., Proc. Linn. Soc. N. S. Wales ii, p. 241; Macleay, op. cit. iv, p. 382; Günther, Study of Fishes, p. 661, f. 301.

Argentina machnata, Forsk., Descr. Anim., p. 68, No. 100; Linn. Gmel., p. 1395.

Elops machnata, Cuv. Reg. Anim.; Rüpp., N. W. Fische, pp. 80, 84; Rich., Voy. Erebus and Terror Fishes, p. 59, pl. 30, ff. 3-5, and Ichthyol. China, p. 310; Schleg., Faun. Japon. Poiss., p. 241, t. 109, f. 2.

——— *capensis*, Smith, Ill. Zool. S. Africa Fishes, pl. vii.

Hab.—From the east coast of Africa through all the Indian and Malayan seas, to the Australian coasts; Port Jackson, scarce. Grows to 3 feet in length. The flesh is of good quality.

MEGALOPS CYPRINOIDES.

Clupea cyprinoides, Brouss., Ichthyol., t. ix.; Forst., Descr. Anim. ed. Licht., p. 296; Bl. Schn., p. 427.

Megalops filamentosus, Lacép. v, pp. 289, 290; Bleek., Atl. Ichthyol. Clup. vi, p. 86, t. 273.

——— *cyprinoides*, Swains., Fishes ii, p. 292; Günth., Cat. vii, p. 471; Day, Fishes of India, p. 650, pl. 159, f. 3; Macleay, Proc. Linn. Soc. N. S. Wales iv, p. 383, and viii, p. 210.

——— *setipinnis*, Rich., Ann. Nat. Hist. xi, p. 493, and Ichthyol. China, p. 310.

——— *indicus*, Cuv. & Val. xix, p. 388, pl. 542; Kner, Voy. Novara Fische, p. 339.

——— *macrophthalmus*, Bleek., l. c., p. 85, t. 273, f. 2.

——— *cuninga*, Bleek., l. c., p. 87, t. 274, f. 1.

Hab.—From the east coast of Africa, through all the Indian and Malayan seas, to Australia and Polynesia, entering fresh water. Hawkesbury River. Grows to the length of a foot. Of excellent flavor.

CHANOS SALMONEUS.

Mugil chanos, Forst., Descr. Anim., p. 74, No. 110.

——— *salmoneus*, Bl. Schn., p. 121; Forst., Descr. Anim. ed. Licht., p. 299.

Chanos arabicus, Lacép. v, pp. 395, 396; Cuv. & Val. xix, p. 187.

——— *salmoneus*, Cuv. & Val. xix, p. 201; Günth., Cat. vii, p. 473; Bleek., Atl. Ichthyol. Clup. vi, p. 81, t. 272, f. 4; Day, Fishes of India, p. 651, pl. 166, f. 2; Macleay, Proc. Linn. Soc. N. S. Wales iv, p. 383, vii, p. 594, and viii, p. 210; Günth., Study of Fishes, p. 662, f. 302.

——— *orientalis*, Cuv. & Val. xix, p. 197; Kner, Voy. Novara Fische, p. 341.

Hab.—Indian and Pacific Oceans, entering fresh waters. Port Jackson (Castelnau). Grows to the length of 4 feet. An excellent fish for the table.

CHIROCENTRIDÆ.

CHIROCENTRUS DORAB.

Clupea dorab, Forsk., Descr. Anim., p. 72.

Esox chirocentrus, Lacép. v, p. 317, t. 8, f. 1.

Chirocentrus dorab, Rüpp., N. W. Fische, p. 81; Cuv. & Val. xix, p. 150, pl. 565; Rich., Ichthyol. China, p. 311; Bleek., Atl. Ichthyol. vi, p. 92, t. 271, f. 3; Kner, Voy. Novara Fische, p. 340; Günth., Cat. vii, p. 475; Day, Fishes of India, p. 652, pl. 166, f. 3; All. & Macl., Proc. Linn. Soc. N. S. Wales i, p. 351; Macleay, op. cit. vii, p. 594, viii, p. 210, & Aust. Cat. ii, p. 199.

——— *hypselosoma*, Bleek., Atl. Ichthyol. vi, p. 93, t. 269, f. 3.

Hab.—From the Indian seas to Japan and Australia; Port Jackson. Grows to the length of 12 feet (Day); 3 feet (Günther). Of little value as food.

SYMBRANCHIDÆ.

CHILOBRANCHUS RUFUS.

Macleay, Aust. Cat. ii, p. 202.

Hab.—Tasmania; Port Jackson, common. Length, up to 3.50 inches.

MURÆNIDÆ.

MURÆNIDÆ.

ANGUILLA REINHARDTII.

Steind., Sitzgsber. Ak. Wiss. Wien 1867, iv, p. 15; Günth., Cat. viii, p. 27; Macleay, Aust. Cat. ii, p. 203, and Proc. Linn. Soc. N. S. Wales viii, p. 210.

Hab.—North and east coasts of Australia; Port Jackson; Hawkesbury and Richmond Rivers. Grows to the length of 30 inches.

ANGUILLA AUSTRALIS.

Rich., Trans. Zool. Soc. iii, p. 157, & Voy. Erebus and Terror Fishes, p. 112, pl. 45, ff. 1-5; Jenyns, Voy. Beagle Fishes, p. 142; Bleek., Atl. Ichthyol. Muræn., p. 12, t. 7, f. 1; Günth., Cat. viii, p. 36; Macleay, Aust. Cat. ii, p. 203; Tenison-Woods, Fisheries of N. S. Wales, p. 88, pl. 39.

Hab.—Timor; New Zealand; Auckland Islands; Tasmania; rivers of the eastern watershed and coasts of Victoria and New South Wales. The *Australian eel*. A good fish for the table.

CONGER LABIATUS.

Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 396.

Hab.—Port Jackson. Grows to 3 feet in length.

CONGROMURÆNA HABENATA.

Congrus habenatus, Rich., Voy. Erebus and Terror Fishes, p. 109, pl. 50, ff. 1-5.

Congromuræna habenata, Kaup, Apodes, p. 108, f. 72; Günth., Cat. viii, p. 42; Macleay, Aust. Cat. ii, p. 206.

? *Ophisoma habenata*, Kner, Voy. Novara Fische, p. 374, t. 13, f. 2.

Hab.—New Zealand; Melbourne, rare; a single specimen cast up on Bondi Beach, N. S. Wales. Length, 12.70 inches.

MURÆNESOX CINEREUS.

Muræna cinerea, Forsk., Descr. Anim., pp. 10 and 22.

——— *bagio*, Haan, Buch., Fish. Ganges, pp. 24, 364.

Ophisurus rostratus, Quoy & Gaim., Voy. Freyc. Zool., p. 242, pl. 51, f. 1.

Conger oxyrhynchus, Byd. & Soul., Voy. Bonite i, p. 203, pl. ix, f. 2.

Congrus tricuspidatus, Rich., Voy. Sulphur Fishes, p. 105, pl. 51, f. 2, Ichthyol. China, p. 312, and Voy. Erebus and Terror Fishes, p. 110.

Conger hamo, Schleg., Faun. Japon. Poiss., p. 262, pl. 114, f. 2; Rich., Voy. Erebus and Terror Fishes, p. 111.

Murænesox bagio, Peters, Wieg. Arch. 1855, p. 270; Kaup, Apodes, p. 116, pl. xiv, f. 73; Bleek., Atl. Ichthyol. Muræn. iv, p. 24, t. 170, f. 2; Kner, Voy. Novara Fische, p. 372; Casteln. Proc. Linn. Soc. N. S. Wales ii, p. 244, and iii, p. 395.

——— *cinereus*, Günth., Cat. viii, p. 46; Day, Fishes of India, p. 662, pl. 168, f. 4; Macleay, Aust. Cat. ii, p. 206.

Hab.—From the Red Sea through those of India to Japan and Australia; Port Jackson; Hawkesbury River. *Silver Eel* of the colonists. Grows to the length of 3 feet.

? MYROPHIS AUSTRALIS.

Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 396.

Hab.—Port Jackson. Length, 34 inches.

MURÆNICHTHYS AUSTRALIS.

Macleay, Aust. Cat. ii, p. 208.

Hab.—Lane Cove, Port Jackson. Length, 10 inches.

? MURÆNICHTHYS GYMNOTUS.

Murænicthys gymnotus, Bleek, Act. Soc. Sc. Indo-Nederl. ii, Amboina, viii, p. 90, and Atl. Ichthyol. Muræn., p. 33, pl. 6, f. 3; Günth., Cat. viii, p. 53, and ? Voy. Challenger Shore Fishes, p. 30.

Hab.—Amboina; Port Jackson (Günther). Length of type, 6 inches.

OPHICHTHYS SERPENS.

Muræna serpens, Linn., Syst. Nat. i, p. 425.

Ophisurus serpens, Lacép. ii, p. 198; Schleg., Faun. Japon. Poiss., p. 264, pl. 115, f. 1; Rich., Voy. Erebus and Terror Fishes, p. 106; Kaup, Apodes, p. 7.

Leptorhynchus capensis, Smith, Ill. Zool. S. Afr. Pisc., pl. 6.

Ophichthys serpens, Günth., Cat. viii, p. 65; Macleay, Aust. Cat. ii, p. 209.

Ophisurus novæ-zealandiæ, Hector, Trans. N. Zeal. Inst. 1870, ii, p. 34, pl. 3.

Hab.—Eastern Atlantic; Mediterranean; Japan; Australia; Lane Cove, Port Jackson (Macleay);

MURÆNA UNDULATA.

Murænophis undulata, Lacép. v., pp. 629, 644.

Muræna cinerascens, Rüpp., Atl. Fische, p. 120; Günth., Cat. viii, p. 123.

——— *cancellata*, Rich., Voy. Erebus and Terror Fishes, p. 87, pl. 46, ff. 1-5.

——— *valenciennii*, Byd. & Soul., Voy. Bonite Poiss., p. 207, t. viii, f. 1.

Gymnothorax cancellatus, Bleek., Atl. Ichthyol. Muræn. iv, p. 93, tt. 176, f. 3, 177, f. 2, and 183, f. 1; Kner, Voy. Novara Fische, p. 384.

Muræna undulata, Günth., Cat. viii, p. 110; Day, Fishes of India, p. 671, pl. 171, f. 5 (*young*), and 173, f. 2 (*adult*); Macleay, Aust. Cat. ii, p. 213.

Hab.—Indian and Pacific Oceans; Port Jackson.

MURÆNA AFRA.

Gymnothorax afer, Bloch, t. 417.

Muræna lineopinnis & prasina, Rich., Voy. Erebus and Terror Fishes, pp. 89, 93.

Gymnothorax boschi & monochrous, Bleek, Atl. Ichthyol. Muræn. iv, pp. 105, 106, tt. 190, f. 3, and 191, f. 2.

— *jacksoniensis*, Bleek, Verst. en Medel. Ak. Wet. Amst. 1863, xv, p. 450.

Muræna afra, Günth., Cat. viii, p. 123; Day, Fishes of India, p. 671; Steind. Denk. Ak. Wien xlv, p. 49; Macleay, Aust. Cat., p. 217.

Hab.—Tropical parts of the Atlantic and Indian Oceans; Australian coasts; Port Jackson, common. *Green Eel* of the Sydney Market. Grows to 30 inches long.

MURÆNA PICTA.

Ahl, de Mur. et Ophich. in Thunb. Diss. iii, p. 6, t. 2, f. 2; Günth., Fish. Zanz., p. 126, & Cat. viii, p. 116, & Study of Fishes, f. 306; Day, Fishes of India, p. 672, pl. 172, f. 4; Macleay, Aust. Cat. ii, p. 215.

Gymnothorax pictus, Bl. Schn., p. 529; Bleek., Atl. Ichthyol. Muræn. iv, p. 87, tt. 170, ff. 3, 4, 172, f. 3, 173, f. 3 & 189, f. 3; Kner., Voy. Novara Fische, p. 384.

Muræna variegata, Quoy & Gaim., Voy. Uranic Zool., p. 246, t. lii, f. 1.

— *siderea*, Rich., Voy. Erebus and Terror Fishes, p. 84, pl. 48, ff. 1-5; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 396; Macleay, op. cit. vii, p. 594.

Hab.—Indian and Pacific Oceans; Australian coasts; Port Jackson. Grows to 30 inches in length.

MURÆNA NEBULOSA.

Ahl, de Mur. et Ophich., p. 5, t. 1, f. 2; Günth., Cat. viii, p. 130; Day, Fishes of India, p. 673, pl. 172, f. 2; Macleay, Aust. Cat. ii, p. 218.

Echidna variegata, Forst., Descr. Anim. ed Licht., p. 181; Bleek., Atl. Ichthyol. Muræn. iv, p. 80, t. 168, f. 2.

Muræna ophis, Rüpp., Atl. Fische, p. 116, t. 29, f. 2; Rich., Voy. Erebus and Terror Fishes, p. 93.

— *variegata*, Rich., l.c., p. 94, pl. 47, ff. 11-16.

Hab.—Indian and Pacific Oceans; Torres Straits (Macleay); Port Jackson (Kreffl). Attains to a length of 5 feet.

LOPHOBRANCHII.

SYNGNATHIDÆ.

SYNGNATHINA.

SYNGNATHIUS MARGARETIFER.

Peters, Monatsber. Ak. Wiss. Berlin 1868, p. 457; Günth., Cat. viii, p. 171; Macleay, Aust. Cat. ii, p. 225.

Hab.—Port Jackson.

SYNGNATHUS TIGRIS.

Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 397.

Hab.—Port Jackson. Length, 12 inches.

SYNGNATHUS CINCTUS.

Ramsay, Proc. Linn. Soc. N. S. Wales vii, p. 111.

Hab.—Port Jackson.

SYNGNATHUS SUPEROLIARIS.

Günth., Voy. Challenger Shore Fishes, p. 30; Macleay, Aust. Cat. App., p. 60.

Hab.—Port Jackson. Length, 6.75 inches.

NANNOCAMPUS RUBER.

Ramsay and Ogilby, Proc. Linn. Soc. N. S. Wales x, (*in press.*)

Hab.—Port Jackson.

UROCAMPUS CABINIROSTRIS.

Casteln., Proc. Zool. Soc. Vict. 1872, i, p. 200; Macleay, Aust. Cat. ii, p. 230.

Urocampus cælorhynchus, Günth., Fische d. Sudsee 1873, ii, p. 103, and Voy. Challenger Shore Fishes, p. 30.

Hab.—Port Phillip (Castelnau); Port Jackson (Günther). Length, 3.50 inches.

STIGMATOPHORA ARGUS.

Syngnathus argus, Rich., Proc. Zool. Soc. 1840, p. 29, and Trans. Zool. Soc. iii, p. 183, pl. 7, f. 2.

Stigmatophora argus, Kaup, Lophobr., p. 53; Günth., Cat. viii, p. 189; Macleay, Aust. Cat. ii, p. 233.

Hab.—New Guinea; Tasmania; Port Jackson, common. Length, up to 7 inches.

STIGMATOPHORA NIGRA.

Kaup, Lophobr., p. 53; Günth., Cat. viii, p. 190; Macleay, Aust. Cat. ii, p. 233.

Hab.—Port Phillip; Port Jackson. Length, up to 5 inches.

HIPPOCAMPINA.

SOLENOGNATHUS SPINOSISSIMUS.

Günth., Cat. viii, p. 195; Macleay, Aust. Cat. ii, p. 237.

Hab.—Tasmania; Port Jackson (Aust. Mus.) Length 15 inches.

SOLENOGNATHUS FASCIATUS.

Günth., Voy. Challenger Shore Fishes, p. 30, pl. 14, f. B; Macleay, Aust. Cat. App., p. 61.

Hab.—Twofold Bay, 120 fathoms. Length 12 inches.

PHYLLOPTERYX

PHYLLOPTERYX FOLIATUS.

Syngnathus foliatus, Shaw, Gen. Zool. v, p. 456, pl. 180.

Phyllopteryx foliatus, Kaup, Lophobr., p. 21; Günth., Proc. Zool. Soc. 1865, p. 327, pl. 14, and Cat. viii, p. 196; M'Coy, Prodr. Zool. Vict. dec. vii, pl. 65, f. 1; Macleay, Aust. Cat. ii, p. 237.

Hab.—Tasmania; South coast of Australia; Port Jackson. Length up to 14 inches.

HIPPOCAMPUS NOVE-HOLLANDIÆ.

Steind., Sitzgsber. Ak. Wiss. Wien 1866, liii, p. 474, t. 1, f. 2; Günth., Cat. viii, p. 201; Macleay, Aust. Cat. ii, p. 241.

Hab.—South coast of Australia; Port Jackson, common. *Long-snouted Sea-horse*. Length up to 4.50 inches.

HIPPOCAMPUS BREVICEPS.

Peters, Monatsber. Ak. Wiss. Berlin 1869, p. 710; Günth., Cat. viii, p. 200; Macleay, Aust. Cat. ii, p. 241.

Hab.—Tasmania; South coast of Australia; Port Jackson. *Short-snouted Sea-horse*. Length up to 3 inches.

PLECTOGNATHI.

SCLERODERMI.

BALISTINA.

BALISTES MACULATUS.

Linn. Gmel. i, p. 1468; Bloch, t. 151; Bleek, Atl. Ichthyol. v, p. 122, t. 218, f. 4; Kner, Voy. Novara Fische, p. 401; Günth., Cat. viii, p. 213; Day, Fishes of India, p. 687, pl. 176, f. 3, & Brit. Fishes ii, p. 268, pl. 146.

Balistes oculatus, Gray & Hardw., Ill. Ind. Zool.; Bleek., Atl. Ichthyol. v, p. 121, t. 218, f. 2.

Hab.—Tropical and sub-tropical regions of the Atlantic and Indian Oceans, extending into the Pacific; Sydney, (Kner). *Spotted Filefish*. Grows to the length of 16 inches.

BALISTES VIDUA.

Rich., Voy. Sulphur Fishes, p. 128, pl. 59, ff. 9, 10; Günth., Cat. viii, p. 216.

Melichthys vidua, Bleek., Atl. Ichthyol. v, p. 109, t. 217, f. 2.

Hab.—Indian Archipelago and Pacific; Port Jackson (Aust. Mus.) Mr. Ramsay thinks that there are grave doubts as to the authenticity of the locality assigned to this specimen, as it is said to have been presented by Mr. J. Macgillivray, all of whose fishes came from the South Sea Islands.

Quoy & Gaimard (Voy. Uranie Poiss., p. 209) describe a *Balistes jacksonianus* from Sydney, but the species has not been recognized since; nevertheless Count Castelnau includes it in his catalogue of Port Jackson fishes without any comment (Proc. Linn. Soc. N. S. Wales iii, p. 356).

MONACANTHUS HIPPOCREPIS.

Balistes hippocrepis, Quoy & Gaim., Voy. Uranie Poiss., p. 212.

Aleuterius variabilis, Rich., Voy. Erebus & Terror Fishes, p. 67, pl. 53, f. 1—7.

Monacanthus hippocrepis, Holl., Ann. Sc. Nat. 1854, ii, p. 338; Steind., Sitzgsber. Ak. Wiss. Wien 1868, lvii, p. 1002; Günth. Cat. viii, p. 246; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 399.

Hab.—South Australia; New South Wales coast, common. Length up to 17 inches.

MONACANTHUS CONVEXIROSTRIS.

Günth., Cat. viii, p. 248; Macleay, Aust. Cat. ii, p. 248.

Hab.—New Zealand; Tasmania; Port Jackson. Length 10 inches.

MONACANTHUS TRACHYLEPIS.

Günth., Cat. viii, p. 248; Macleay, Aust. Cat. ii, p. 249; Klunz., S.B. Ak. Wien lxxx, Abth. i, p. 422.

Hab.—Broken Bay; Port Jackson. Length 14 inches.

MONACANTHUS GUENTHERI.

Macleay, Aust. Cat. ii, p. 250.

Monacanthus peronii, Günth., Cat. viii, p. 249.

Hab.—Tasmania; South coast of Australia; Port Jackson. Length 10 inches.

MONACANTHUS SPILOMELANURUS.

Balistes spilomelanurus, Quoy & Gaim., Voy. Uranie Poiss., p. 217.

Aleuterius paraguayatus, Rich., Voy. Erebus & Terror Fishes, p. 66, pl. 39, ff. 1—4; Holl., Ann. Sc. Nat. 1854, ii, p. 357.

Monacanthus spilomelanurus, Günth., Cat. viii, p. 250; Macleay, Aust. Cat. ii, p. 251.

Hab.—South and west coasts of Australia; Tasmania; New South Wales. Length 8 inches.

MONACANTHUS MACULOSUS.

Aleuterius maculosus, Rich., Proc. Zool. Soc. 1840, and Trans. Zool. Soc. iii, p. 170, and Voy. Erebus & Terror Fishes, p. 67, pl. 39, ff. 5—7; Hollard, Ann. Sc. Nat. 1854, ii, p. 359.

Monacanthus maculosus, Macleay, Aust. Cat. ii, p. 252.

Hab.—Tasmania; New South Wales; Port Jackson (Macleay). Length 5 inches.

MONACANTHUS CASTELNAU.

Macleay, Aust. Cat. ii, p. 252.

Monacanthus peronii, Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 398.

Hab.—Port Jackson.

MONACANTHUS FREYCINETI.

- Balistes freycineti*, Cuv. in Quoy & Gaim., Voy. Uranie Poiss., p. 213.
Monacanthus freycineti, Holl., Ann. Sc. Nat. 1854, ii, p. 336, pl. 12, f. 3.
Hab.—New South Wales (Macleay).

MONACANTHUS MOSAICUS.

- Ramsay and Ogilby, Proc. Linn. Soc. N. S. Wales xi, (*in press*).
Hab.—Port Jackson. Largest specimen 4½ inches.

MONACANTHUS PRASINUS.

- Casteln., Proc. Zool. Soc. Vict. i, p. 205, & Proc. Linn. Soc. N. S. Wales iii, p. 400; Macleay, Aust. Cat. ii, p. 254.
Hab.—Port Phillip; Port Jackson. Length 2.50 inches.

MONACANTHUS MARGARITIFER.

- Casteln., Proc. Linn. Soc. N. S. Wales ii, p. 80; Macleay, Aust. Cat. ii, p. 256.
Hab.—West and south coasts of Australia; Port Jackson. Length 6 inches.

MONACANTHUS CHINENSIS.

- Balistes chinensis*, Bloch, ii, p. 29, pl. 52, f. 1.
Monacanthus chinensis, Cuv., Règ. Anim.; Bleek., Atl. Ichthyol. v, p. 125, pl. 222, f. 2; Günth., Cat. viii, p. 236; Kner, Voy. Novara Fische, p. 395; Steind., Sitzgsber. Ak. Wiss. Wien 1866, liii, p. 476; Macleay, Aust. Cat. ii, p. 358.
 ——— *geographicus*, Cuv., Règ. Anim.; Casteln., Res. Fishes Aust., p. 50.
Hab.—From China to the north coast of Australia; Sydney, (Kner). Length 9 inches.

MONACANTHUS MEGALURUS.

- Rich., Ic. Pisc., p. 5, pl. 1, f. 3; Günth., Cat. viii, p. 237; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 398; Macleay, op. cit. vii, p. 596, and Aust. Cat. ii, p. 259.
Monacanthus chinensis, Rich., Voy. Erebus and Terror Fishes, p. 64, pl. 40, ff. 3, 4; Holland, Ann. Sc. Nat. 1854, ii, p. 346.
Hab.—Australian seas; Port Jackson, abundant. Length, 12 inches.

MONACANTHUS TOMENTOSUS.

- Balistes tomentosus*, Linn., Syst. Nat. i, p. 405.
Monacanthus tomentosus, Cuv., Règ. Anim.; Bleek., Atl. Ichthyol. v, p. 127, tt. 220, f. 1, and 229, f. 1; Günth., Cat. viii, p. 238; Macleay, Aust. Cat. ii, p. 259.
Hab.—Endeavour River (Macleay); Port Jackson (Kreffit). Length, 5 inches.

MONACANTHUS SULCATUS.

- Holl., Ann. Sc. Nat. 1854, ii, p. 363, pl. 14, f. 3 (*not good*); Günth., Cat. viii, p. 239; Macleay, Aust. Cat. ii, p. 260.
Monacanthus isogramma, Bleek., Atl. Ichthyol. v, p. 123, pl. 222, f. 1.
Hab.—From the Chinese to the Australian seas; east coast (Kreffit). Length, 3.50 inches.

MONACANTHUS GRANULATUS.

- Balistes granulatus*, White, Voy. N. S. Wales, p. 295, pl. (p. 254), f. 2.
Monacanthus granulatus, Rich., Voy. Erebus and Terror Fishes, p. 63, pl. 40, ff. 1, 2 (*not good*); Steind., Sitzgsber., Ak. Wiss. Wien 1866, liii, p. 476; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 398; Macleay, Aust. Cat. ii, p. 260.
 ——— *granulosus*, Günth., Cat. viii, p. 243.
Hab.—Coast of New South Wales; Port Jackson, common. Length, 9 inches.

MONACANTHUS RUDIS.

- Rich., Trans. Zool. Soc. iii, p. 166, and Voy. Erebus and Terror Fishes, p. 65, pl. 40, ff. 7, 8; Günth., Cat. viii, p. 244; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 399; Macleay, Aust. Cat. ii, p. 261.
Hab.—Tasmania; Port Jackson. Length, 10 inches.

MONACANTHUS AYRAUDI.

- Balistes ayraudi*, Quoy & Gaim., Voy. Uranie Poiss., p. 216, pl. 47, f. 2.
Aluteres volutinus, Jenyns, Voy. Beagle Fishes, p. 157.
Monacanthus vittatus (Solander), Rich., Voy. Erebus and Terror Fishes, p. 66; Steind., Sitzgsber. Ak. Wiss. Wien 1866, liii, p. 476, and 1867, lvi, p. 335.
 ——— *frauenfeldii*, Kner, Voy. Novara Fische, p. 397.
 ——— *ayraudi*, Günth., Cat. viii, p. 244; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 397; Macleay, Aust. Cat. ii, p. 262; Tenison-Woods, Fisheries of N. S. Wales, p. 89, pl. 40.
Hab.—Australian coasts; Port Jackson, common. The *Leather-jacket*. Attains the length of 18 inches. An excellent food-fish, though but little eaten through prejudice against its looks.

MONACANTHUS PENICILLIGERUS.

- Cuv., Règ. Anim.; Holl., Ann. Sc. Nat. 1854, ii, p. 350, pl. 13, f. 2; Günth., Cat. viii, p. 245; Macleay, Aust. Cat. ii, p. 263.
Monacanthus spinosissimus, Quoy & Gaim., Voy. Uranie Poiss., p. 211, pl. 45, ff. 3-8.
Chatodermis penicilligerus, Bleek., Atl. Ichthyol. v, p. 129, pl. 221, f. 3.
Hab.—Malay Archipelago; north and east coasts of Australia; Port Jackson (Kreffit). Length, 10 inches.

MONACANTHUS TROSSULUS.

Aleuterius trossulus, Rich., Voy. Erebus and Terror Fishes, p. 68, pl. 40, ff. 5, 6; Holl., Ann. Sc. Nat. 1855, iv, p. 6, pl. 1, f. 1.

Monacanthus trossulus, Günth., Cat. viii, p. 234; Macleay, Aust. Cat. ii, p. 264.

Hab.—West Australia; Victoria; Port Jackson, common. Length, 3 inches.

MONACANTHUS OCULATUS.

Günth., Cat. viii, p. 235; Macleay, Aust. Cat. ii, p. 265.

Hab.—South Australia; Port Jackson. Length, 1.50 in.

MONACANTHUS MACULICAUDA.

Monacanthus macrurus, Macleay, Aust. Cat. ii, p. 266.

Hab.—Port Jackson. Length, 7 inches. The name *macrurus* is preoccupied by Bleeker for a *Monacanthus* from the Malay Archipelago, and I have therefore substituted a name which has reference to the distinctive tail-markings of the species.

OSTRACIONTINA.

OSTRACION CONCATENATUS.

Bloch, t. 131; Holl., Ann. Sc. Nat. 1857, vii, p. 155; Günth., Cat. viii, p. 259; Macleay, Aust. Cat. ii, p. 268.

Ostracion bicuspis, Smith, Ill. Zool. S. Afr. Pisc., pl. 18.

Hab.—Cape seas; Chinese seas; Port Jackson, common. Length, 10 inches.

OSTRACION DIAPHANUS.

Bloch Schn., p. 501; Holl., Ann. Sc. Nat. 1857, vii, p. 157; Günth., Cat. viii, p. 264; Macleay, Aust. Cat. ii, p. 269.

Ostracion brevicornis, Schleg., Faun. Japon. Poiss., p. 297, t. 130, f. 3.

Acanthostracion cornutus, Bleek., Atl. Ichthyol. Ostrac., p. 33, tt. 2, f. 2, and 4, f. 3.

Hab.—From the Cape seas to Japan and Australia; Port Jackson. Length, 8.50 in.

OSTRACION CORNUTUS.

Linn. Syst. Nat. i, p. 409; Bloch, t. 133; Schleg., Faun. Japon. Poiss., p. 299, t. 131, f. 4; Bleek., Atl. Ichthyol. v, p. 33, t. 202, f. 2 (*young*), and t. 204, f. 3 (*adult*); Holl., Ann. Sc. Nat. 1857, vii, p. 158; Günth., Cat. viii, p. 265; Day, Fishes of India, p. 697, pl. 176, f. 4; Macleay, Aust. Cat. ii, p. 270.

Ostracion arcus, Bl. Schn., p. 502; Bleek., Atl. Ichthyol. v, p. 35, t. 202, f. 3 (*adult*) and t. 204, f. 4 (*young*).

Hab.—Indian Ocean and Archipelago to Micronesia; north and east coasts of Australia; Port Jackson. Length 14 inches.

OSTRACION LENTICULARIS.

Rich., Proc. Zool. Soc. 1841, p. 21, and Trans. Zool. Soc. iii, p. 158; Casteln., Proc. Linn. Soc. N. S. Wales iii, p. 400; Macleay, Aust. Cat. ii, p. 271.

Aracana lenticularis, Günth., Cat. viii, p. 268.

Hab.—South coast of Australia; Port Jackson, common. Length, 12 inches.

GYMNODONTES.

TETRODONTINA.

TETRODON LAEVIGATUS.

Linn., Syst. Nat. i, p. 411; Günth., Cat. viii, p. 274; Macleay, Aust. Cat. ii, p. 272, and Proc. Linn. Soc. N. S. Wales viii, p. 211.

? *Tetrodon inermis*, Schleg., Faun. Japon. Poiss., p. 278, pl. 122, f. 2.

Hab.—Atlantic coasts of Tropical America; Japan; Australia; Port Jackson. Length to 18 inches.

TETRODON SCELERATUS.

(Forst.) Linn. Gmel. i, p. 1444; Günth., Cat. viii, p. 276; Day, Fishes of India, p. 701; All. & MacL., Proc. Linn. Soc. N. S. Wales i, p. 357; Macleay, op. cit. viii, p. 280, and Aust. Cat. ii, p. 273.

Tetrodon argenteus, Lacép., Ann. Mus. d'Hist. Nat. 1804, iv, p. 211, t. 58, f. 2; Schleg., Faun. Japon. Poiss., p. 275, t. 121, f. 2; Bleek., Atl. Ichthyol. v, p. 64, t. 209, f. 1.

Tetraodon bicolor, Brev., Not. Japan. Fish., p. 283.

Hab.—East coast of Africa to Japan and Polynesia; S. Australia; Port Jackson (Aust. Mus.) Length up to 30 inches.

TETRODON HYPSELOGENION.

Tetraodon honckenii, Rüpp., Atl. Fische, p. 65, t. 17, f. 2 (*not Bloch*).

——— *hypselogenion*, Bleek., Atl. Ichthyol. v, p. 61, t. 213, f. 5; Günth., Cat. viii, p. 277; Day, Fishes of India, p. 702, pl. 183, f. 5; Macleay, Aust. Cat. ii, p. 273.

Hab.—From the east coast of Africa to the Malay Archipelago and Australia; Fiji Islands; Port Jackson, common. Length 6 inches.

TETRODON HAMILTONII.

Rich., Voy. Erebus & Terror Fishes, p. 63, pl. 39, ff. 10, 11; Günth., Cat. viii, p. 280; Kner., Voy. Novara Fische, p. 409; Macleay, Aust. Cat. ii, p. 274; Tenison-Woods, Fisheries of N. S. Wales, p. 90.

Hab.—Port Jackson. *Toado* of Sydney Fishermen. Length 5.50 inches.

TETRODON RICHEL.

Freminv., Nouv. Bull. Philom. ii, p. 250, pl. 4, f. 2; Bleek., Atl. Ichthyol. Gymnod., p. 61, pl. 9, f. 3; Günth., Cat. viii, p. 285; Kner, Voy. Novara Fische, p. 407; Macleay, Aust. Cat. ii, p. 275.

Hab.—New Zealand; Tasmania; South Australia; Sydney (Kner). Length, 11 inches.

TETRODON

TETRODON IMMACULATUS.

- Bl. Schn., p. 507; Günth., Cat. viii, p. 291; Day, Fishes of India, p. 703, pl. 183, f. 4.
Crayracion immaculatus, Bleek., Atl. Ichthyol. Gymnod., p. 75, t. 7, f. 1.
Tetrodon virgatus, Rich., Voy. Erebus & Terror Fishes, p. 62, pl. 39, ff. 8, 9, and Voy. Herald Zool. p. 163, pl. 28, ff. 6-8; All. & Macl., Proc. Linn. Soc. N. S. Wales i, p. 356; Macleay, Aust. Cat. ii, p. 275.
Hab.—From the Red Sea to Australia and Polynesia; Port Jackson. Length 12 inches.

TETRODON HISPIDUS.

- Lacép. i, p. 487, t. 24, f. 2; Rich., Voy. Samarang Fishes, p. 17, pl. 9, ff. 3, 4; Günth., Cat. viii, p. 297; Day, Fishes of India, p. 706, pl. 183, f. 2; Macleay, Aust. Cat. ii, p. 277.
Tetrodon laterna, Rich., Voy. Sulphur Zool., p. 124, pl. 61, f. 2, and Ichthyol. China, p. 199; Günth., Fish. Zanz., p. 131.
Crayracion implutus, Bleek., Atl. Ichthyol. Gymnod., p. 71.
 ——— *laterna*, Bleek., l. c., t. 1, f. 3.
Hab.—From the Red Sea through the Indian and Malayan Seas to Australia; Port Jackson. Length 20 inches.

TETRODON FIRMAMENTUM.

- Schleg., Faun. Japon. Poiss., p. 280, pl. 126, f. 2; Günth., Cat. viii, p. 299; Macleay, Aust. Cat. ii, p. 277.
Hab.—Japan; Port Jackson (Macleay). Length 12 inches.

TETRODON STELLATUS.

- Bl. Schn., p. 503; Günth., Cat. viii, p. 294.
Tetrodon lineatus, Schleg., Faun. Japon. Poiss., p. 287, pl. 125, f. 2; Kner., Voy. Novara Fische, p. 409; Macleay, Aust. Cat. ii, p. 278.
Crayracion stellatus, Bleek., Atl. Ichthyol. Gymnod., p. 73, t. 5, f. 2.
 ——— *lineatus*, Bleek., l. c., p. 70, pls. 2, f. 1, and 8, f. 1.
 ——— *astrotania*, Bleek., l. c., p. 69, pl. 10, f. 2.
Hab.—Indian and Pacific Oceans; Port Jackson. Length, 2 feet.

APPENDIX B.

COLONIAL AND INDIAN EXHIBITION, 1886.

CLASS III.—*Natural History Specimens.*

COMMISSIONERS FOR NEW SOUTH WALES FISHERIES, Sydney.—Edible Mollusca, Oysters.

(*Ostrea glomerata*, *O. virescens*, *O. subtrigona*, Sow., *O. mordax*, Gld., *O. edulis*, var. *purpurea*, Hanley.) A LARGE collection of oysters, in numerous varieties, and from beds in different localities. Most of these are natural beds, very few of them formed by artificial layings; all are under lease, and more or less under cultivation.

Owing to the supply of oysters, both on deep water-beds and on foreshores of the tidal waters of the Colony, having been either exhausted or greatly impaired by over-dredging or other causes, and with a view to afford extra encouragement to oyster-culture, it was found necessary to amend the Fisheries Act of 1881. Accordingly, in July, 1884, the Legislature passed an Act for the amendment of the Fisheries Act, 1881, the promotion of oyster-culture, and the regulation of oyster fisheries, known as the "Oyster Fisheries Act, 1884," the following short *resumé* of which may prove of interest:—Under the Act areas having a foreshore frontage of 2,000 lineal yards or under may be leased for oyster-culture for any term not exceeding fifteen years, at an annual rental of £1 for every 100 yards or part thereof. All oysters within the limits of any such leased area are the absolute property of the lessee, but are subject, when lifted, to a royalty of 3s. per bag (containing not more than three bushels). Oysters on Crown Lands or on any public oyster reserve are the property of the Crown.

Heavy penalties are inflicted under the Act for oyster-stealing from leased areas or from Crown Lands; also for burning live oysters anywhere for the purpose of converting the shells into lime.

The Act provides for inspectorial supervision of leased areas, so that should it be reported by an Inspector that a lessee is so stripping his leased area of oysters, or otherwise mismanaging it, as to threaten its destruction as an oyster-bearing area, the Governor may, on the recommendation of the Commissioners, declare the lease of such lessee to be forfeited.

Provision is also made for the closing of oyster-beds on Crown Lands for any term not exceeding three years.

Any lease may be renewed from time to time, on the application of the lessee during the twelfth year, if the Commissioners report that the area leased is fairly stocked with oysters, and has been properly worked in accordance with conditions of the lease and the regulations.

Liberal provision is made for leaseholders for oyster-culture to gather spat, brood, and ware of oysters from public oyster reserves or from Crown Lands for the purpose of stocking their leased areas.

No oyster which can be passed through a metal ring having a clear inside diameter of $1\frac{1}{2}$ inch are marketable. Any person exposing any such for sale is liable to a fine.

The Act contains numerous other clauses and regulations, framed with a view of affording the utmost encouragement and protection to all engaged in oyster-culture; and as instancing the increasing attention that is being paid to this industry, the following statistics are given:—Up to the 31st December, 1885, 1,400 applications to lease areas for oyster-culture had been lodged with the Commissioners of Fisheries, the total foreshore frontage of these areas being close on 500 miles. 550 applications for areas, representing a total foreshore frontage of about 160 miles, had, on the recommendation of the Commissioners, been approved by the Governor, and the leases issued. About 300 applications for areas, representing a total foreshore frontage of about 200 miles, were disallowed by the Commissioners on the ground of those areas having been either previously applied for or set apart for public oyster reserves, hauling-grounds for fishing-nets, or for other public purposes. The remaining number of applications are being speedily dealt with.

Large public oyster reserves have been proclaimed, including all the foreshores of Port Jackson, all the foreshores at George's River, facing the National Park, and numerous areas in other districts along the coast.

The following collection from 100 different beds and localities is exhibited, to show the numerous forms which our *Ostrea glomerata* assumes in various places, and the great wealth which it is hoped will be developed under the present legislation and administration, and by the proper cultivation of the oyster-beds in New South Wales.

Recent experiments tend to prove that the so-called rock-oyster of our shores, which is left dry by every tide, is only a variety of the drift-oyster, and when taken from the rocks at low tides and laid in beds always covered by the sea they thrive well; and although oysters may thrive on natural beds of mud and sand, whenever these beds are over-dredged the animals become diseased by the infiltration of the mud into the shell. Steamer traffic over the shallow-water beds of the Hunter River, formerly so prolific, has almost completely destroyed them. The black mud stirred up by the steamer traffic has infiltrated into the shell; the oyster, unable to get rid of it, has deposited a layer of nacre over it, inside which a worm breeds and eventually kills the animal. So bad is it that one of the largest leaseholders on the river contemplates throwing up all his areas, and the Commissioners have under consideration the closing of the whole river against oyster-dredging, with the view to make an attempt to cleanse the beds. It is thought that this might be successfully done in the event of a very heavy and prolonged flood occurring on the river. That natural oyster-beds can and are, in fact, being destroyed daily by over-dredging, and by traffic when situated in shallow waters, in other countries, as well as in Australia, must be patent to any one who has taken the trouble personally to examine into the subject. It is also clear from the numerous specimens exhibited from our waters that the depth up to 10 or 15 feet is not material, although the best oysters are obtained from the shallowest beds, and are grown on a rough, shelly, gravelly, or stony bottom. The most highly prized in New South Wales are those from the rocks or beds where the fresh and salt water mingles at certain seasons of the year—for instance, at the estuaries of the river and vicinity of fresh-water creeks. It may prove interesting to learn that, from the personal observation of many persons experienced in oyster-culture here, it has been ascertained that there is no fixed season at which the oyster in New South Wales appears to spawn. They spawn at different seasons in nearly every district, the time being apparently greatly affected by the temperature of the water; indeed it is said that in some districts they spawn twice a year.

The

The value of oysters in Sydney is from 4s. to 10s. per bushel, and they are retailed at from 6d. to 1s. per dozen. The Melbourne market is largely supplied from New South Wales, the very best oysters bringing as high as from £2 10s. to £4 the 3-bushel bag in Melbourne.

Further information on this subject may be gained from the reports of the Royal Commission on the Oyster Fisheries of New South Wales, 1877, 1880, &c., and the "Proceedings of the Linnean Society of New South Wales" for the last few years (1881 to 1884), where several interesting papers will be found on the subject by Dr. J. C. Cox, M.D., F.L.S., the Rev. J. E. Tennison-Woods, F.L.S., Mr. John Brazier, C.M.Z.S., and Mr. E. P. Ramsay's Report, in Exhibition Catalogue of International Fisheries, London, 1883.

Hunter River Oysters.

1. From Mosquito Channel; taken off the foreshore; hard mud bottom; dry at low tide.
2. From Mosquito Channel; growing on cobbler's pegs and mangroves; dry at low tide.
3. From F. T. Gibbon's Bed, Mosquito Channel; 100 yards long, 4 to 8 yards wide; hard mud bottom; part becomes dry at low water.
4. From Andralaki's Bed, Mosquito Channel; 50 yards long, 4 to 8 yards wide; stiff mud bottom; depth of water, from 1 to 10 feet.
5. Rock Oysters growing on stones laid along the bank of Mosquito Channel.
6. Rock Oysters from the main channel.
7. From Eastern Spectacle Island, Sandy Island, and Goat Island. Taken off the foreshore; bottom, mud, sand, and shells; part becomes dry at low water.
8. Rock Oysters, growing on ballast stones discharged from a ship at the Bluff Head.
9. Rock Oysters from Spit Island.
10. From F. J. Gibbon's Bed, Spit Island; 60 yards long, 4 to 8 yards wide; soft mud bottom; depth of water, 1 to 5 feet.

Hawkesbury River Oysters.

11. From Browera Creek. Natural Dredge Oysters; length of bed, 10 miles, about 10 yards wide from low-water mark; depth of water, 5 to 12 feet; bottom, shelly and rocky.
12. From Browera Creek. Rock Oysters; dry at low tide.
13. From Mooney Mooney Creek. Rock Oysters; dry at low tide.
14. From Mooney Mooney Creek. Cultivated Rock Oysters. These were laid down about ten months ago on a shelly bottom in 1 foot of water at low tide; about three months old when laid down.
15. From Mooney Mooney Creek. Cultivated Rock Oysters. These were laid down about ten months ago on an artificial wooden bottom, in the middle of a very soft mud flat; completely dry at low tide.
16. From Mooney Mooney Creek. The very best large Rock Oysters; found along a rocky foreshore several miles long; about 10 yards wide, and the greater part dry at low tide. These are very scarce, and bring the highest price in the market when obtainable.

Port Stephens Oysters.

17. Rock Oysters from the Reserve at North Arm; dry at low tide. These could be greatly improved by being laid in deeper water.
18. From Bundobah Creek, North Arm; growing on patches of hard ground and roots of mangroves; dry at low tide.
19. Rock Oysters from Farm Cove; dry at low tide.
20. Rock Oysters from Barom Point Reef, North Arm. A rocky spit, running about 100 yards seawards; dry at low tide.
21. From Karuah River. Dredged off "Joass' Bed"; 50 yards long, 10 yards wide; depth of water, 4 to 6 feet; bottom, hard shell.
22. From Karnah River. Dredged off "Engel's Bed"; 100 yards long, 20 yards wide; depth of water, 6 to 8 feet; bottom, soft pipeclay and mud.
23. From Karuah River. Dredged from Griffen's Bed"; 30 yards long, 10 yards wide; 2 to 14 feet water; bottom, shells and stones.
24. From Serpent River. Dredged from "Engel's Bed"; 300 yards long, 13 yards wide; depth of water, 3 to 18 feet; bottom, pebbles and shells.

Cape Hawke Oysters

25. Rock Oysters from Coomba, at the entrance to Wallis' Lake; depth of water, 3 feet at low tide.
26. From the Broadwater, Wollombi River; depth of water, 3 feet at low tide; bottom, soft mud.
27. From the foreshores of Swan Bay; dry at low tide; bottom, mud and shells.
28. Cultivated Oysters from the entrance to Wollombi River. Taken from cobbler's pegs and mangroves, and laid down about eight months; depth of water, 2 feet at low tide; bottom, soft mud; very small when laid down.
29. Cultivated Oysters from the entrance to Wollombi River. Taken from cobbler's pegs and mangroves, and laid down about three months; depth of water, 2 feet at low tide; bottom, soft mud.
30. Cultivated Oysters from Twin Island. Taken from cobbler's pegs and mangroves, and laid down about six months; depth of water, 2 feet at low tide; bottom, soft shells and mud.

Manning River Oysters.

31. Cultivated Oysters from Cathai Creek. Taken off the foreshores, and laid down about two years in 3 feet of water at low tide; bottom, sand and mud.
32. Cultivated Oysters from Scott's Creek. Taken off the foreshores, and laid down about eighteen months in 2 feet of water at low tide; bottom, rocks and gravel.
33. Cultivated Oysters from Suthcy Bay, Scott's Creek. Taken off the foreshores, and laid down about two years in 3 feet of water at low tide; bottom, rocks and sand.
34. Cultivated Oysters from Oyster Reach. Taken off the foreshores, and laid down about three years in 3 feet of water at low tide; bottom, rocky.

35. Cultivated Oysters from South Channel. Taken off the foreshores; laid down about six months in 2 feet of water at low tide; bottom, rocks and gravel.
 36. From South Channel. Dredged from "Layton's Bed"; 250 yards long, 10 yards wide; depth of water, 6 to 15 feet; bottom, rocky.

Camden Haven Oysters.

37. Cultivated Oysters. Taken off the foreshores; laid down about twelve months in 3 feet of water at low tide; bottom, sand and mud.
 38. Cultivated Oysters. Taken off the foreshores; laid down about six months in 4 feet of water at low tide; bottom, sand and mud.
 39. Taken off the foreshores; dry at low tide; bottom, sandy.
 40. Taken off the foreshores; dry at low tide; bottom, sandy and shelly.

Clarence River Oysters.

41. From the "House Bed"; depth of water, 4 to 12 feet; bottom, silt, covered with mud.
 42. From the "Mud Patch Bed"; area, about $1\frac{1}{2}$ acre; depth of water, 3 to 10 feet; bottom, soft mud and shell.
 43. From "Brodie's Bed"; area, about 3 acres; depth of water, 3 to 10 feet; bottom, silt, covered with shell.
 44. From "Dick's Bed"; area, about 2 acres; depth of water, 3 to 8 feet; bottom, silt, covered with shell.

Evans River Oysters.

45. Rock Oysters from "Iron Gates"; a narrow rocky channel in the river, through which the tide passes with great rapidity.

Richmond River Oysters.

46. Taken from 7 to 10 feet of water; bottom, hard clay, thickly covered with shells.
 47. Taken from the "Upper Bed"; depth of water, 7 feet; bottom, hard blue clay, covered with shells.
 48. Taken from the "Lower Bed"; depth of water, 3 feet; bottom, shell and silt.

Brunswick River Oysters.

49. Rock Oysters, from the foreshore; dry at low tide.

Tweed River Oysters.

50. From Terranora waters, off "No. 6 Bed"; depth of water, 2 feet; bottom, stones and dead shells.
 51. From Terranora waters, off "No. 7 Bed"; depth of water, 4 feet; bottom, mud.

George's River Oysters.

52. Mud Oysters; procured by a diver in 40 feet of water.
 53. Rock Oysters (deep water); procured by a diver in 40 feet of water.
 54. Rock Oysters; taken off the rocks between high and low water.
 55. Rock Oysters; procured by a diver in 20 feet of water.
 56. From Port Hacking; taken off the foreshores between high and low water; bottom, mud and sand.

Shoalhaven River Oysters.

57. Rock Oysters from Curley's Bay; dry at low tide.
 58. Cultivated Oysters from Curley's Bay; laid down about fifteen months in 4 feet water at high tide; dry at low tide; bottom, rocky.
 59. Oysters from the foreshores of Saltpan Creek; dry at low tide; bottom, muddy.
 60. Cultivated Oysters from Saltpan Creek; laid down about six months in 4 feet water at high tide; dry at low tide; bottom, muddy.
 61. Rock Oysters from "No. 1 Bed," Broughton Creek; 200 yards long; 10 yards wide; depth of water, 8 to 14 feet.
 62. Cultivated Oysters from "No. 2 Bed," Broughton Creek; 150 yards long, 25 yards wide; depth of water, 2 to 11 feet; bottom, rocky. Taken from the foreshores of Berry's Creek; laid down about five months.
 63. Rock Oysters from "No. 3 Bed," Broughton Creek; 100 yards long, 18 yards wide; depth of water, 6 to 10 feet.
 64. Rock Oysters from "No. 4 Bed," Broughton Creek; 200 yards long, 20 yards wide; depth of water, 4 to 12 feet.
 65. Rock Oysters from Broughton Creek; off a heap of ballast stones discharged from a ship; dry at low tide.
 66. From Berry's Creek; off a muddy foreshore; dry at low water.

Crookhaven River Oysters.

67. Cultivated Oysters from "No. 1 Bed," H. Woodward's; 350 yards long; 30 yards wide; depth of water, 3 to 13 feet; bottom, rocky; laid down about six months.
 68. Rock Oysters from "The Dyke"; dry at low water.
 69. Rock Oysters from "Nos. 2, 3, and 5 Beds"; each bed is about 100 yards long, 10 yards wide; depth of water, 6 to 10 feet.

Jervis Bay Oysters.

70. From Bherrewerre Creek; dredged from "Bryce's Bed"; 200 yards long; 25 yards wide; depth of water, 4 to 9 feet; bottom, rocky.
 71. Rock Oysters from Flat Rock Creek; depth of water, 2 feet.
 72. From Currumbene Creek. Cultivated Oysters from "No. 1 Bed," G. Haiser's; 150 yards long; 20 yards wide; depth of water, 3 to 12 feet; taken off foreshores; laid down about six months.
 73. From Currumbene Creek. Dredged from "No. 1 Bed," G. Haiser's; 200 yards long; 20 yards wide; depth of water, 2 to 15 feet; bottom, rocky.

74. From Moona Creek. Taken off the foreshores; dry at low tide; bottom, sand and mud.
 75. Mud Oysters from the "Hole in the Wall"; a bed 600 yards long; 400 yards wide; depth of water, 20 to 30 feet.

Clyde River Oysters.

76. Rock Oysters from "Big Island Bed"; 1 mile long; 100 yards wide; depth of water, 20 to 40 feet.
 77. Rock Oysters from "Schnapper Point Bed"; 300 yards long; 150 yards wide; depth of water, 10 to 20 feet.
 78. Oysters taken off the mangroves; dry at low tide.
 79. Cultivated Oysters from the "Old Bed"; 300 yards long; 150 yards wide; depth of water, 3 to 20 feet; taken off the mangroves, and laid down for six months.
 80. Cultivated Oysters from the "Chinaman's Point Bed"; 300 yards long; 50 yards wide; depth of water, 2 to 20 feet; taken off the mangroves and laid down for four months.
 81. Rock Oysters from between high and low water; age, about eighteen months.
 82. Rock Oysters from between high and low water on the Bold Shore, facing the "Bold Shore Bed." This bed is 1,000 yards long; 12 yards wide; depth of water, 3 to 15 feet.
 83. Cultivated Oysters from Budd's Island; taken off the mangroves and laid down about eight months in 2 feet of water at low tide; bottom, hard mud.
 84. Rock Oysters.

Lake Durras Oysters.

85. Sample from 6 feet of water; bottom, shingly.
 86. Mud Oysters; depth of water, 4 feet.

Meruya River Oysters.

87. Rock Oysters; depth of water, 3 to 10 feet.

Pambula River Oysters.

88. Rock Oysters; depth of water, 1 to 12 feet.
 89. Cultivated Oysters; taken off the foreshore rocks, and laid down about twelve months in 3 feet of water at low tide.

Bermagui River Oysters.

90. Rock Oysters; taken off the rocks from high-water mark to 2 feet below low-tide mark.
 91. Oysters taken off the mangroves; dry at low tide.

Cuttagee Lake Oysters.

92. Rock Oysters; depth of water, 2 feet at low tide.

Nelson Lake Oysters.

93. Oysters collected from small pieces of wood, and growing on whelks.

Wapengo Lake Oysters.

94. Oysters growing on whelks on a sandpit.

Keat's River Oysters.

95. Rock Oysters; from the foreshores between high and low tide.

Womboyne River Oysters.

96. Rock Oysters.

Port Jackson Oysters.

97. Mud Oysters; from Woolloomooloo Bay and Parramatta River. [*Specimens of natural Oyster growth.*]
 98. Oysters growing on boots, bottles, &c.; from A. Philp's leased beds at Palmer's Island, Clarence River.
 99. A large piece of rock with oysters growing naturally thereon; taken from Botany Bay.
 100. Cluster of Oysters, showing growth and size from spat to three, six, twelve, and twenty months; from H. Woodward's "Lake Bed," Clarence River.

CLASS 85.—Preserved Fish.

COMMISSIONERS FOR NEW SOUTH WALES FISHERIES.—Fish prepared for food.

These exhibits have been prepared to the order of the Commissioners of Fisheries for New South Wales by two of the principal Meat-preserving Companies of New South Wales.

Most of the fish were preserved during the months of July and August, 1885, having been purchased under the supervision of an officer of the Fisheries Department.

The fresh fish comprise many of the best known food fishes, of which the mullet, bream, blackfish, and eel appear to be best adapted for this mode of preserving.

In smoked fish, whiting and eels are exhibited.

The oysters were specially selected from beds on the Clarence River and at Cape Hawke.

Crayfish, tinned and sun-dried, and tinned prawns, are also exhibited.

Fish tinned for food, prepared at the works of the Sydney Meat-preserving Company (Limited), Rookwood.

Smoked Fish:—

Whiting (*Sillago bassensis*).

Eel (*Anguilla Australis*).

Fresh Fish:—

Grey Mullet (*Mugil grandis*).

Jewfish (*Sciama Antarctica*).

Tailor (*Temnodon saltator*).

Blackfish (*Girella tricuspidata*).

Fresh

Fresh Fish—*continued*.

- Schnapper (*Pagrus unicolor*).
 Black Bream (*Chrysophrys Australis*).
 Perch (*Lates colonorum*).
 Nannagai (*Beryx affinis*).
 Garfish (*Hemirhamphus regularis*).
 Eel (*Anguilla Australis*).
 Oysters (*Ostrea glomerata*).
 Crayfish (*Palinurus hugeli*).

Fish tinned for Food, prepared at the works of Messrs. Walsh, Elliot, & Rennie, Bunnerong Works, Botany:—

Smoked Fish:—

Whiting (*Sillago bassensis*).

Fresh Fish:—

- Grey Mullet (*Mugil grandis*).
 Jewfish (*Sciaena Antarctica*).
 Black Bream (*Chrysophrys Australis*).
 Whiting (*Sillago bassensis*).
 Oysters (*Ostrea glomerata*).
 Crayfish (*Palinurus hugeli*).
 Prawns (*Penaeus esculentes*).
 Sun-dried Fish for food:—
 Crayfish (*Palinurus hugeli*).

CLASS 47.—*Oils*.

COMMISSIONERS FOR NEW SOUTH WALES FISHERIES (Assisted by Trustees of Australian Museum).
[E. P. Ramsay, Curator.]—Australian Sponges.

Dr. Von Lendenfeld estimates the number of known species of Australian sponges at 350. Considering how little is known of the Australian Marine Invertebrates, compared with those of European seas, this number shows that there must be more species of sponges in Australian waters than in any other locality of similar extent.

Divided from the other continents by mostly deep, and for shallow-water sponges, unsurpassable oceans, Australia has a Spongo Fauna of its own. Only three or four European species have up till now been discovered in Australia.

The collection of sponges in the Australian Museum comprises nearly all Australian species, and will be found enumerated and described in the catalogues published by that Institution.

The species exhibited are described in that catalogue. They are few in number, for limit of space precluded a more extensive display.

CLASSIS SPONGIÆ.

I. SUBCLASSIS CALCAREA.

1. Ordo Calcispongiæ.

II. Subordo Heterocæla.

Familia Syconidae—

1. *Grantessa sacca*, Lendenfeld, (in spirits), Port Jackson, N.S.W.
2. *Sycandra arborea*, Hæckel, (in spirits), Port Phillip, V.
3. *Sycandra Ramsayi*, Lendenfeld, (in spirits), Port Jackson, N.S.W.

Familia Leuconidae—

4. *Leucandra saccharata*, Hæckel, (in spirits), Port Jackson, N.S.W.
5. *Leucandra cataphracta*, Hæckel, (in spirits), Port Mollé, L.

2. Ordo Hexactinellæ.

II. SUBCLASSIS NONCALCAREA.

3. Ordo Chondrospongiæ.

Familia Papilionidae—

6. *Papillina panis*, Lendenfeld, (in spirits), Port Jackson, N.S.W.
7. *Raphyrus Hixsoni*, Lendenfeld, (dry), Port Jackson, N.S.W.

Familia Chondrosidae—

8. *Chondrilla Australiensis*, Carter, (in spirits), Port Phillip, V.
9. *Chondrilla secunda*, Lendenfeld, (in spirits), Port Phillip, V.

4. Ordo Mymospongiæ.

5. Ordo Halichondriæ.

Familia Spongillidae—

10. *Meyenia nigra*, Lendenfeld, (in spirits), Botany swamps, N.S.W.

Familia Fibrospongiidae—

11. *Renieropsis globosa*, Lendenfeld, (in spirits), Port Jackson, N.S.W.
12. *Pellina nubivunda*, Lendenfeld, (in spirits), Port Jackson, N.S.W.
13. *Vomerula Ridleyi*, Lendenfeld, (dry), Western Australia.

6. Ordo Cornuspiculæ.

Familia Chalinidae—

14. *Syphanella digitata*, Lendenfeld, (in spirits), east coast of Australia, N.S.W.
15. *Syphnochalina typica*, Lendenfeld, (in spirits), Port Stephens, N.S.W.
16. *Llaplochalina dendrilla*, Lendenfeld, (in spirits), Port Jackson, N.S.W.
17. *Chalinissa communis*, Lendenfeld, (in spirits), Port Jackson, N.S.W.
18. *Dactylocholina Australis*, Lendenfeld, (in spirits), Port Phillip, V.
19. *Dactylocholina reticulata*, Lendenfeld, (in spirits), Port Jackson, N.S.W.

Familia Echispidæ—

20. *Clathria levis*, Lendenfeld, (in spirits), Port Jackson, N.S.W.
21. *Clathria paucispina*, Lendenfeld, (in spirits), Port Phillip, V.
22. *Clathria arbuscula*, Lendenfeld, (in spirits), Port Jackson, N.S.W.

7. Ordo Ceraaspongiæ.

I. SUBORDO MICROCOMERÆ.

Familia Spongidae—

23. *Euspongia levis*, Lendenfeld (in spirits), Port Jackson, N.S.W.
24. *Aulena fabellum*, Lendenfeld, (in spirits) Port Jackson, N.S.W.
25. *Halmopsis Australis*, Lendenfeld, (in spirits), Port Jackson, N.S.W.
26. *Cacospongia Canalis*, Lendenfeld, (in spirits), Port Jackson, N.S.W.
27. *Cacospongia Australis*, var. *conulata*, Lendenfeld, (in spirits), Port Phillip, V.
28. *Halme laxa*, var. *digitata*, Lendenfeld, (in spirits), Port Jackson, N.S.W.
29. *Halme gigantea*, var. *intermedia*, Lendenfeld, (in spirits), Port Jackson, N.S.W.
30. *Halme gigantea*, var. *macrapora*, Lendenfeld, (in spirits), Port Jackson, N.S.W.

Familia Hircinidae—

31. *Hircinia digitata*, Lendenfeld, (in spirits), Port Jackson, N.S.W.
32. *Hircinia densa*, Lendenfeld, (in spirits), Port Jackson, N.S.W.
33. *Hircinia pocula*, Lendenfeld, (in spirits), Port Jackson, N.S.W.
34. *Hircinopsis pocula*, Lendenfeld, (in spirits), Port Jackson, N.S.W.
35. *Hircinopsis Australis*, Lendenfeld, (in spirits), Port Jackson, N.S.W.
36. *Hircinia gigantea*, Lendenfeld, (in spirits), Port Jackson, N.S.W.

II. SUBORDO MACROCAMERAE.

Familia Spongelidae—

37. *Spongelia Australis*, Lendenfeld, (in spirits), Port Jackson, N.S.W.
38. *Spongelia Violacea*, Lendenfeld, (in spirits), Port Jackson, N.S.W.
39. *Dysidea tubaria*, Lendenfeld, (in spirits), Port Jackson, N.S.W.
40. *Dysidea corticata*, var. *tubaria*, Lendenfeld, (in spirits), Port Jackson, N.S.W.
41. *Dysidea squalida*, Lendenfeld, (in spirits), Port Jackson, N.S.W.

Familia Aplysillidae—

42. *Dendrilla cavernosa*, Lendenfeld, (in spirits), Port Jackson, N.S.W.
43. *Dendrilla tenella*, Lendenfeld, (in spirits), Port Jackson, N.S.W.
44. *Dendrilla rosea*, Lendenfeld, (in spirits), Port Jackson, N.S.W.
45. *Ianthella fiabelliformis*, Gray, (dry).

DIVERSE SPECIMENS.

46. Crabs overgrown with sponges.

COMMISSIONERS of Fisheries for New South Wales, 1885:—

James C. Cox, M.D., President.

E. P. Ramsay, F.R.S.E., &c. &c.,	Frederick Thomas, Esq.,
J. R. Hill, Esq.,	A. Oliver, Esq., M.A.

Official Staff, 1885.

Lindsay G. Thompson, Secretary and Chief Inspector of Fisheries.

Edward J. Ellis, 1st Clerk.	J. D. Delany, Clerk.
J. F. O'Grady, Clerk.	W. A. Trengrouse, Draftsman.
C. D. St. Pinnock, ,,	L. G. Mann, ,,

W. Lannen, Messenger.

James Quinan, Inspector for Home Division of Fisheries.

Thomas Temperley, ,,	Northern	,,
George G. Benson ,,	Southern	,,

Andrew Gylar, Assistant Inspector of Fisheries,	Manning River.
Thomas Mulhall, ,,	Sydney.
Henry Curan, ,,	Newcastle.
Peter Smith, ,,	Hawkesbury River.
Charles Gordon, ,,	Shoalhaven.
J. C. White, ,,	Port Stephens.
William Boyd, ,,	Lake Macquarie.
John D. Grant, ,,	Botany and George's River.
Richard Seymour, Assistant Inspector of Fisheries,	Fish Market, Sydney.
W. N. Cain, ,,	Brisbane Water.
F. W. Smithers, ,,	Eden.
W. McGregor, Acting Assistant Inspector of Fisheries,	Tweed River.
Thomas Stewart, ,,	Bellinger River.
W. J. Whaites, ,,	Nambucca River.
John Jamieson, ,,	Macleay River.
A. H. Kendall, ,,	Cape Hawke.
H. W. C. Windeyer, ,,	Port Macquarie.
Thomas Laman, ,,	Port Stephens Heads.
A. T. Black, ,,	Broken Bay.
Bourne Russell, ,,	Twofold Bay.
Angus Sutherland, ,,	Moruya.
George Glading, Boatman,	Sydney.
Richard Hellings, ,,	,,
Frank Aldrich, ,,	Botany and George's River.
J. F. Hespo, ,,	Bateman's Bay.
D. W. Benson, ,,	Clarence River.

Inland Waters.

Osborne Wilshire, Assistant Inspector of Fisheries, Deniliquin.

Senior-constable Nelson, Acting Inspector of Fisheries, Bungendore, Lake George.

APPENDIX D.

RETURN showing the quantity of Fish exported from Moama to Melbourne during 1885.

		lbs.			lbs.
January	5,436	July	3,192		
February	1,536	August	3,976		
March	5,264	September	8,960		
April	5,040	October	15,344		
May	2,772	November	15,232		
June	2,184	December	4,816		

APPENDIX E.

RETURN of the number of Bags of Oysters received at Sydney from various places on the coast during each month of the year 1885, and the amount of Royalty collected thereon at the Custom House.

January 8, one Turtle—Port Stephens, £3 10s

APPENDIX J.

ANNUAL REPORT, HOME DIVISION OF FISHERIES, FOR 1885.

Mr. Assistant Inspector Mulhall's Report to The Chief Inspector of Fisheries.

Sir,

Sydney, 31 August, 1886.

I have the honor to furnish you with my report as to the state of the fisheries of the Home Division for the year 1885.

Port Jackson.—I visited the Fish Market regularly all the year, from 4 a.m. and 5 a.m. until 7 a.m. each morning, excepting Sundays, and found there a very fair supply of fish. The quantity of fish varies as to the state of the weather—particularly after bad weather they are to be seen in great quantities; and this is owing to them being driven down out of the creeks by the boisterous weather.

I have also attended at the wharves regularly during the year to look at the quantity of oysters that was arriving, and examine them as to the size.

I also wish to report having visited the different places regularly in my district, and during the closed months remaining out often till late at night. I also found small fish in abundance all around the heads of the bays. During the year it has been my business to select fish for preserving and painting, I believe, for the Exhibition at home in England; also selecting some for the Sydney Museum.

In the month of October I went to Wollongong for a short time to inspect the lake there and report on it.

The following is a return of the oysters taken from the oyster-beds of New South Wales for the last three months of 1885—namely, October, November, and December:—

They are as follows:—

	Sydney.	Elsewhere.
Brisbane Water	66	4
Hawkesbury	906	...
Shoalhaven	311	13
Port Stephens	738	11
Manning	154	...
Clarence	387	19
George's River	70	...
Bateman's Bay	380	...
Hunter River	135	160
Moruya	97	...
Cape Hawke	108	...
Richmond	51	1
Port Macquarie	32	...
Bollinger	47	...
Bermagui	10	...
Merimbula	7	...
Eden	51	...
Wagonga	34	...
Total No. of bags	3,584	208

As to the oysters about the harbour, I wish to state they are almost exhausted, which I believe is owing to the picnic parties, who destroy the rocks.

Mr. Assistant Inspector Grant.

In reference to Botany, I wish to state that the Assistant Inspector there reports very favourably for the last three months of the year of 1885—namely, October, November, and December. He visits regularly the different places in his district, and reports fish sometimes plentiful, and other times scarce, of course owing to the state of the weather. The blubber has been troublesome; and this hinders the fishermen hauling their nets.

Mr. Assistant Inspector Smith.

October, November, and December.

In reference to the Hawkesbury River, I wish to state the reports I have received from the Assistant Inspector there are not very favourable in regard to the fish; as, from his reports, I learn that fish of all kinds have been very scarce in the closed as well as the open waters for those months.

There are eighteen men at work and seven boats in his district.

As regards the oysters in the Hawkesbury River, from the Inspector's report I learn that the oysters during those last three months of 1885 were very scarce, both rock and dredge. The deposits of young oysters were healthy and plentiful; also, I observe from his report, that marketable oysters were scarce. The Assistant Inspector appears to attend strictly to his duties.

Mr. Assistant Inspector Cain.

From the Assistant Inspector of Brisbane Water I receive very good reports; and from them I learn that he attends regularly at the wharves in his district to see to the oysters that are shipped from there; also, he visits frequently the fishing-places in his district; also, he is employed measuring leases sometimes. As to the quantity of fish there, they vary, as in other places—sometimes great, and at other times small quantities. The number of men employed fishing there was six, and boats three.

Mr. Assistant Inspector Gordon.

In reference to Shoalhaven, I wish to state, for October, November, and December, that very little fish could be brought from there to Sydney, owing to the heat of the weather; and from the Inspector's report I learn that it is used for local consumption, and a quantity sent on to Kiama. The number of men employed fishing there were ten, and boats three. During the hot months some of the fishermen have to give up work. He appears to keep a very good look-out in his district.

Mr.

Mr. Assistant Inspector Curan.

In reference to the Hunter District, I wish to state, for the months of October, November, and December, that, from the Inspector's reports, the fish have been very plentiful, particularly in October. There appears to be a great deal of prawn-catchers, and a number of baskets are regularly sent to market. The blubber, I believe, was troublesome down there, which hinders the fishermen hauling their nets.

The number of fishing-boats there is thirteen, and twenty-nine men.

The number of boats catching prawns are twenty-five, and fifty men.

As to the oysters in the Hunter, from the report I learn that there were no oysters on the deep-water beds; and as to the young oysters, there are a good few on the rocks and the foreshore.

Mr. Assistant Inspector Boyd.

From the reports received from Lake Macquarie for those three months, namely, October, November, and December, I wish to report that fish appears very plentiful down there, particularly mullet and salmon, which are making great destruction among the small fish. Blubber seems to be troublesome down there; and particularly about this time of the year it begins to appear.

I wish to state, in reference to the fisheries of the Home Division, the reports received from there are generally very favourable, as all the Assistant Inspectors seem to be attending to their duties in a satisfactory manner, because there are no complaints from anywhere.

I wish to add, in reference to the two boatmen, Hellings and Glading, that they have during the year assisted me in my duties.

I have, &c.,

THOMAS MULHALL,
Assistant Inspector.

APPENDIX K.

ANNUAL REPORT, NORTHERN FISHERIES DIVISION, 1885.

Inspector Temperley's Report.

Oysters.

THE oyster-bearing portions of the north coast have been worked during the year chiefly under occupation licenses, boat licenses having run out during 1884, and been entirely discontinued.

The inlets which have been worked, the quantities taken, and the royalty payable thereon, are as follows:—

River.	Quantity to Sydney.	Quantity locally consumed.	Royalty
	Bags.	Bags.	£ s. d.
Clarence River	1,915	93	301 4 0
Manning River	492	15	76 1 0
Cape Hawke	293	43 19 0
Richmond River	121	15	20 8 0
Bellinger River	47	7 1 0
Port Macquarie	84	17	15 3 0
Evans River	30	55	12 15 0
Tweed River	Nil
Camden Haven	No returns
	Total number of bags.....	3,177.	Total royalty..... 476 11 0

It will be noticed that by far the greatest quantity has been taken from the Clarence River, which produced nearly twice as much as the whole of the remaining inlets, the bulk of the Clarence oysters being produced from the House Bed, which, after a two years' rest, was in excellent condition, and still remains in good order, after 1,012 bags had been taken from it within the year.

The Manning River, which contributed, among the northern rivers, the greatest quantity last year, fell off considerably, and produced only 492 bags, against 1,226 for the previous year, the defection being mainly due to the over-dredging it received under the licensed dredgers in 1884.

The working of the oyster-beds during 1885 is in several respects in marked contrast with the treatment which they received under the licensing system of previous years.

In the first place, the oysters have been sent to Sydney with uniform regularity, and not, as on previous occasions, rushed in in glut quantities, with alternative intervals of scarcity. Thus the Clarence River, when opened to dredgers in 1883, was worked by sixty-four boats, which dredged, although limited to two days' work per week, 1,000 bags within the month, and so reduced the beds in four months as to necessitate their being closed.

The same river, opened under leases, or, what is temporarily equivalent, occupation licenses, has produced not less than 135 bags, and not more than 215 bags, during each out of eleven of the past twelve months.

Apart from the advantages of regular supply, the natural beds now have their cullings properly replaced and uniformly spread, instead as of heretofore being thrown in pile-heaps. The same self-interest which, despite the most vigilant supervision, led licensed dredgers to put under-sized as well as mature oysters into their bags now prompts the lessees to replace them on the bed.

But by far the greatest recommendation to the present leasing system is the encouragement the secure tenure gives the lessee to improve the oyster-bearing ground. Let it be noted that during the whole period of the licensing boat system the work of removing bank oysters into deep water, which had been carried out on a few of the validated leases, was entirely discontinued, and not the slightest effort made to improve the natural beds. In marked contrast to this, and during 1885, the lessees on the Richmond River, Clarence River, Manning River, at Cape Hawke and Port Macquarie, and on the Bellinger River, stocked the deep-water beds with quantities of immature foreshore oysters. In one instance, on the Richmond, the lessees incurred considerable expense in laying a quantity of small ballast-stone and covering it with shells as a foundation

foundation for an oyster-bed, while on the Clarence River a quantity of oyster-shells have been brought from Sydney and replaced upon the beds.

In the main portion of the Clarence River, which had not been known from prior to 1885 to produce oysters in marketable quantities (the natural beds being confined to the Lake Channel), a good oyster-bed was formed on one lease, and forty bags were shipped from it during the year.

While security of tenure has thus resulted in an amount of what may be termed semi-oyster cultivation, that is the planting out of immature naturally-grown foreshore oysters, thorough cultivation, by providing for the attachment of spawn, has not yet been properly attempted. There is no doubt but that it will be done, and before long some practical method will be adopted to attach the quantities of spawn which float away and waste every season for the want of suitable attachment.

On the Clarence and Richmond Rivers the oysters spawned freely in February, but in the Manning River and others of the southern inlets in this division the spawning season was indifferent.

Fish.

Fishing operations on the north coast continue, as heretofore, to be confined chiefly to the limited supply of local wants and to the production of small quantities of salt fish, the latter work being mostly carried on by Chinamen, who send away, consigned to their own countrymen, quantities of the finest whiting and other fish. A few of our own fishermen occasionally take up the work, but generally with indifferent results, though in one instance on the Richmond River salt fish was for a time regularly sent to Fiji.

During the winter months, June, July, and part of August, fresh fish was sent to Sydney from the Clarence, Manning, Macleay, and Hastings Rivers, the returns being good, and the fishermen only regret that the opportunity did not continue.

THOS. TEMPERLEY,

Inspector, Northern Fisheries.

10 April, 1886.

APPENDIX L.

ANNUAL REPORT ON SOUTHERN FISHERIES FOR THE YEAR 1885.

Sir,

Bateman's Bay, 12 April, 1886.

I have the honor to forward my report on the Southern Fisheries for the year 1885.

The fisheries between St. George's Basin, to the north, and Wagonga River, to the south, are under my personal supervision, and embrace the following oyster-bearing waters, on which applications have been made, under the Oyster Fisheries Act of 1884, to lease Crown Lands for oyster culture:—Narrawillie Creek, Durras Lake, Cullendulla Creek, Clyde River and tributaries, Tomago River, Moruya River, Tuross Lake, and Wagonga River.

Narrawillie Creek.—During the year eight applications for leases, representing an area of 1,700 yards, were received by me from the Fisheries Department to report on, making a total of 2,200 yards applied for under the Oyster Fisheries Act, 1884. These applications embrace all the available ground suitable for oyster culture. It will be satisfactory to the Commissioners to hear that all of the applicants, although holding their ground on sufferance, are laying down oysters and otherwise improving the areas applied for. The applicants have availed themselves of the permission granted by the Commissioners by shipping about eighty bags of oysters during the year. Considering there were some hundreds of bags of oysters laid down on these beds when inspected by me in July last, the most of them were then of marketable size, and that so few have been shipped since, leads me to believe that the applicants for Narrawillie Creek have applied in good faith, and intend cultivating oysters in a systematic manner.

Durras Lake.—Applications have been made, under the Oyster Fisheries Act, 1884, for areas amounting to 3,600 yards. 2,100 yards have been recommended by the Commissioners to be granted, the applicants for the remaining portion having withdrawn their applications. Durras Lake was at one time considered by oystermen as one of the best waters in the Southern District for oyster culture, and was remarkable for the perfect shape which oysters removed to it from other waters attained in a short space of time. In consequence of the mouth of the lake having been closed for over two years, the accumulation of mud, slime, and weeds has quite destroyed the natural oyster-beds, and there is no spot available for laying down. Mud-oysters are found in great numbers, but are of no marketable value, as they only live a few hours after being taken from the water. No oysters have been shipped during the year.

Cullendulla Creek.—300 yards have been applied for during the year, making a total of 4,200 yards since the passing of the Act. Applications representing 2,100 yards have been withdrawn, and 1,900 yards have been recommended to be granted by the Commissioners. Very few oysters are to be seen on the mangroves which line the foreshores, and some time will elapse before it recovers the skinning received in former years. Sixty-one bags of oysters were shipped during the year.

Tuross.—During the year 2,100 yards have been applied for under the Oyster Fisheries Act, 1884. Forty-three applications have been received for areas amounting to 16,650 yards, reports on which have been forwarded by me to the Fisheries Department. With the exception of Messrs. Foreman and Smart, none of the applicants have done anything to improve their holdings. This may be accounted for in a great measure by the uncertainty existing in the minds of many of the applicants with reference to the leases being granted. 444 bags of oysters were shipped during the year.

Wagonga River.—Applications for 3,200 yards have been received during the year, making a total of 21,060 yards applied for under the Act. Several of the applicants have improved their holdings by laying down young oysters on ground suitable for their development. Oysters have been shipped during the year, but I am not aware of the exact number of bags, as particulars of these shipments, in accordance with the 42nd Regulation, are forwarded direct to the Collector of Customs by the consignors.

Moruya River.—This river is under the charge of Acting Assistant Sutherland, who also supervises the shipments of the Tuross oysters. He informs me that during the year he has measured and marked the areas applied for, in accordance with the instructions received from the Chief Inspector. He states that none of the applicants have as yet done anything to improve their areas. Twenty-six bags were shipped during the year.

Tomago

Tomago River.—Three applications for a total area of 300 yards were received during the year. 2,500 yards have been applied for since the passing of the Act. There are very few oysters at present in this creek, but with care and attention it could be made to produce sufficient to return handsome profits to the oyster culturists. Nothing has been done by the applicants to improve their areas beyond laying down a few mangrove oysters on their foreshores. No oysters have been shipped during the year.

Clyde River and Tributaries.—Since the 21st July, 1884, on which date the present Oyster Fisheries Act came into operation, 86 applications, representing an area of 49,486 yards of foreshore, have been forwarded to me from the Department of Fisheries to report on. Eighteen applications for a total of 6,786 yards were applied for during the past year. Many of the applicants are residents of the Clyde River who have been engaged in the oyster and fishing industry for years, and are just the right class of men to become pioneers in the business of oyster culture. Several have started to improve the areas for which they have applied, and hold on sufferance, by laying down oysters, and fixing spat-collectors in the shape of freestone and swamp-oak; others appear to rely solely upon the natural producing powers of their extensive holdings. 1,263 bags of oysters were shipped during the year.

EXTRACTS FROM INSPECTORS' DIARIES FOR THE YEAR 1885.

January.

Assistant Inspector Smithers.—Reports having measured areas applied for at Broadwater.

Acting Assistant Inspector Sutherland.—Large shoals of fish, apparently salmon, to be seen moving along the coast in a northerly direction.

Inspector Benson.—Measuring and reporting on areas applied for at Tuross. Inspected oyster-beds at Cullendulla Creek and Square Head. Reporting on areas applied for on the eastern shore of the Clyde River.

February.

Assistant Inspector Smithers.—Measuring and reporting on areas applied for at the Murrah River, Cuttagee Lake, and Bermagoe River. Visited the Nellica and Kiah Rivers.

Acting Assistant Sutherland.—Large numbers of young mullet, bream, black-fish, and gar-fish in the Moruya River this month.

Inspector Benson.—Measuring and reporting on areas applied for at Durras Lake and Cullendulla Creek. Inspected oyster-beds at Buckenbowra River and Mogo Creek.

March.

Assistant Inspector Smithers.—Measuring and reporting on areas applied for at Cuttagee Lake. Visited and inspected Wallaga Lake, Bermagoe River, Nelson Lake, Middle Lake.

Acting Assistant Sutherland.—There have been large numbers of schnapper caught at Moruya Heads during the month. Measured and reported on areas applied for on Moruya River.

Inspector Benson.—Measuring and reporting on areas applied for at Wagonga River, Tomago River, and Square Head. First shoal of sea-mullet entered Clyde River.

April.

Assistant Inspector Smithers.—Visited Panbula River and Broadwater. Oysters in good condition. Kiah River oysters dying, caused by river sanding up. At Green Cape fishing leather-jackets very numerous; cray-fish plentiful; schnapper scarce.

Acting Assistant Sutherland.—There are not many mature fish to be seen in the river. Fair quantities of young fish, principally mullet and black-bream. Oysters in good condition, but beds poorly stocked. None of the applicants for leases have done anything to improve their areas.

Inspector Benson.—Reported on Pelican Island beds. Inspected areas which have been applied for, and on which oysters have been bedded by the applicants on the Clyde River.

May.

Assistant Inspector Smithers.—Measured and reported on areas applied for at the Bermagoe River. Visited Bittangabee. Oysters in splendid condition. Wonboyn River oysters towards falls in good condition, those towards mouth of river poor. Panbula River oysters appear to be falling off in condition.

Acting Assistant Sutherland.—I have to report having examined the oyster-beds in the river, and find them very poorly stocked. Young oysters are beginning to show. Procured and forwarded to Sydney oysters for Indian and Colonial Exhibition.

Inspector Benson.—In Sydney, certifying to the position of areas which have been applied for in the Southern Division of Fisheries for oyster culture.

June.

Assistant Inspector Smithers.—Measured and reported on oyster reserve applied for by the inhabitants of the district of Bermagoe. Measured areas applied for at Wapenga Lake. Procured and forwarded to Fisheries Department oysters for Indian and Colonial Exhibition.

Acting Assistant Sutherland.—As regards oysters, things are in their normal state, no one improving or working areas applied for. Large numbers of whiting and mullet have been in the river lately, presumably driven in from sea by the bad weather.

Inspector Benson.—Measured and reported on areas applied for at Tuross. Inspected and reported on the Pages Islands. Inspected and reported on a reserve applied for by the inhabitants of Moruya.

July.

Assistant Inspector Smithers.—Inspected oysters from Wonboyn River; found them in good condition. Procured oysters for Indian and Colonial Exhibition. A great scarcity of fish this month.

Acting Assistant Sutherland.—Dense shoals of perch and salmon in river; also large numbers of whiting. The perch are high up the river, and apparently spawning. No schnapper to be caught outside.

Inspector Benson.—Measured and reported on areas applied for at Narrawilla Creek and Clyde River. Procured exhibits for Indian and Colonial Exhibition.

August.

Assistant Inspector Smithers.—Visited the Kiah River. Measured areas applied for at Nellica and Broadwater. In Sydney certifying to the position of areas applied for in the waters under my supervision for oyster culture.

Acting Assistant Sutherland.—I have nothing fresh to report; the fish that are to be seen in the river are of the same kinds as stated in my report of July.

Inspector Benson.—Visited Moruya River and inspected an area applied for by P. Bettini; against the granting of a lease for which Mr. Ziegler had petitioned the Commissioners. Measured and reported on areas applied for at Cullendulla Creek.

September.

Assistant Inspector Smithers.—Measured areas applied for at Borunda Lake, Bega River, Cuttagee Lake, and Bermaguo River.

Acting Assistant Sutherland.—There have been fair numbers of mullet and bream caught in the river during the month.

Inspector Benson.—Measured and reported on areas applied for at the Wagonga River and Tomago River, marking boundaries which have been recommended to be granted at the Clyde River with the broad-arrow.

Acting Assistant Russell.—The whalers caught four whales in the bay this month. For forty years there has only been one case of a whale having a calf in her belly after being killed. I think they slip them in their struggles for life. I think this is the case from the fact of nearly all the cow whales having young calves on their return from the north.

October.

Assistant Inspector Smithers.—Laid up during the month with a bad leg, caused by a kick from a horse.

Acting Assistant Sutherland.—Trevally have been seen on the river, a fish which has been a stranger here for many years. Great scarcity of schnapper outside.

Inspector Benson.—Marking starting-points of areas which have been recommended to be granted at Cullendulla Creek, Tomago River, and Durras Lake.

November.

Assistant Inspector Smithers.—Measured areas applied for at Nelson Lake, Bermaguo River, and Cuttagee Lake. Marking starting-points of areas applied for at Bermaguo River, as instructed.

Acting Assistant Sutherland.—During the month I have marked starting-points of areas applied for on the Moruya River, as instructed by the Chief Inspector.

Inspector Benson.—Visited saw-mills to see what steps had been taken by the proprietors for preventing sawdust getting into river. Reported Francis Guy for allowing sawdust to get into the Clyde River. Prepared and forwarded a tracing of all hauling-grounds on the Clyde River.

December.

Assistant Inspector Smithers.—Started for Bittangabee in launch; sea too rough to get in. Visited the Wonboyn River. On leave of absence from the 16th to end of month.

Acting Assistant Sutherland.—There is nothing fresh to report from this station this month. Fish are plentiful, but only captured for local wants, as consignments cannot be sent to Sydney in marketable condition.

Inspector Benson.—Measured and reported on areas applied for at the Wagonga River and Tuross. Marked boundaries of areas which have been recommended to be granted on these waters. Procured and forwarded to the Fisheries Department sharks' and rays' oil for the Indian and Colonial Exhibition.

RETURN of Oysters shipped to Sydney, for the year 1885, of which I have been advised.

Name of Place.	Jan.	Feb.	March	April.	May.	June.	July.	Aug.	Sep.	Oct.	Nov.	Dec.	Total.	Royalty.	From where shipped.

Particulars of Oysters leaving Narrawilla Creek and Wagonga River are wired direct to Collector Customs, Sydney, by the consignors.

Mr. Assistant Inspector Smithers to Mr. Inspector Benson.

Sir,

Eden, 26 February, 1886.

I have the honor to forward for your information the enclosed report showing the state of the different oyster-bearing waters in part of my district, from which it will be seen that there are a great number of rivers and lakes, but at present not much taken notice of as oyster-bearing waters; although no oysters are to be seen in several of the places, it does not necessarily follow that nothing could be done to make them fit for oyster culture.

Nagho River some years back was well supplied with oysters. Where oyster-beds were then, the same spaces now are nothing but sand-flats; yet I am of opinion that oysters might still be found higher up the river if appliances could be got there to test it.

Meruca Creek at present time has a fair supply of oysters in it. It cannot be called one of the best places for oyster-culture, as there is not sufficient laying-down ground, being mostly bold water at the foreshores.

The same might be said of the Wonbloyn River, which produces about the finest oysters in the Colony, but yet deficient in laying-down grounds. Nearly the whole of the foreshores of this river have been applied

applied for, but up to the present none of the applicants have made the slightest effort to promote the increase of oysters. Some years ago mangroves grew at this river, but at present not one to be seen; while the mangrove grew it appears that the oysters took well to them.

Bittagata Creek.—Very little laying-down ground; great wash at times in from the ocean, coming up to where oysters end, about 1,000 yards, making it risky to lay down; oysters there in fair condition.

Kiah River.—A small portion only of which being fit for oyster culture, heavy sand-flats being the chief obstruction. I am of opinion that the cultivation of mangroves should be carried on upon the flats and marshes, in order to try if oysters could not be made grow upon what are now very barren wastes.

Myrial Inlet.—In every way adapted for oyster culture, but nothing has been done towards improving it by the applicants; three years ago there was much less mud and sand than there are there at present, covering up numbers of oysters.

Twofold Bay.—A few small oysters upon the rocks, and somewhere in the bay there is a bed of mud oysters, which I am unable to find—only finding the mud-oyster thrown up on the beach after a heavy sea.

Curralo Lake.—This lake years ago produced great quantities of oysters, which were all taken out by some speculators and sent to Melbourne, since which no oysters appear to have grown. Certainly the mouth of the lake since then is nearly always closed.

Pambula River.—No doubt one of the finest breeding rivers in the Colony, oysters growing very fast, and plenty laying-down ground; nearly all the foreshores applied for, applicants doing but little to improve their holdings.

Merimbula Lake.—Very few oysters indeed.

Bournda Lake.—Excellent place for culture; splendid rubble bottom; mouth being closed; at present place full of neck.

Wallagoot Lake.—Large lake containing few oysters; never been on lake in boat; cannot really say what it contains.

Bega River.—Producing good oysters; not much fit for oyster culture, there being so little laying-down ground.

Nelson Lake.—Could be made the producer of vast quantities of oysters; plenty of mangroves; the applicants doing but little to improve their holdings.

Middle Lake.—No oysters to be seen.

Wapengu Lake.—The shores of which are very well covered with mangroves, but very few oysters attaching thereto; a very great place for whelks, upon which oysters appear to be attaching themselves.

Murrah River.—Contains but little oyster-bearing grounds; no mangroves; one applicant.

Cuttagee Lake.—Contains no mangroves, as far as I am aware of; mouth of lake closed for some time past; oysters large; very little young stuff; several applicants; nothing done to improve their holdings.

Bermagui River.—Has several applicants for areas for oyster culture, and have taken up all the foreshores which could produce oysters; oysters growing mostly on mangroves; some very large mangrove marshes here, but still containing few oysters; very little done by applicants to increase supply of oysters.

Wallagha Lake.—This lake is very large indeed, but, as far as I am aware of, does not contain oysters, yet years ago, when mouth was constantly open, it produced quantities of oysters; plenty of laying-down ground.

Not being acquainted with waters north of this to the end of my district, viz., Wogonga River, I cannot speak of the different places between.

It will be seen that the applicants do but little towards oyster culture. They appear to be waiting for nature to do all for them.

I have, &c.,

F. W. SMITHERS,

Assistant Superintendent.

Names of Rivers or Lakes.	Number of bags taken from each, approximately.	Number of applicants for areas.	When oysters in good condition.	Could oyster-culture be carried on with success? * Impossible to tell what oysters Lavington gets; no royalty paid.

† Cannot tell what oysters are sent away; never get returns from Sydney.

Mr. Assistant Inspector Smithers to Mr. Inspector Benson.

Sir,

Eden, 27 February, 1886.

I have the honor to write, for your information and guidance, a short report concerning fisheries in this district. I must say justly, I regret exceedingly to state that fish have been very scarce indeed during the latter part of 1885, the falling off in the supply having gone on gradually since the dry weather set in, and more so since the leather-jackets have become nothing short of a pest. Although shoals of fish are seen making north or south, but not in quantities or size to those seen in 1884. In that year leather-jackets were not so numerous. I have most particularly noticed that all the lakes, especially those closed to the sea, abound in fish, yet the fish in those lakes are not fit to be sent away, being very fat and soft, not keeping above a few hours. I might mention that since fishing is of little use now, as men go out day after day not catching enough fish even to eat, even the flat-head which were so plentiful, are now equally scarce to other fish. Schnapper, which Twofold Bay was famous for, are as scarce. Proof for six months: Two whaling crews camped at one of the finest schnapper grounds known never caught above one dozen fish, and that was only on one occasion, and they were fishing almost day after day, leather-jackets being the only fish there. All the places I know along the coast are the same, that is to say on the coast grounds. There is only one place I am aware of where fish were caught in quantities; that is, two lots of whiting at Panbula River.

It is very seldom I ever see a net hauled in the bay here, men not caring to use their nets. In former years, previous to 1884, a vast quantity of fish could have been caught anywhere here or along the coast. A resident of thirty-four years standing states he never knew fish so scarce or leather-jackets so bad. I could not recommend anyone starting fishing as an industry here till either the weather changes or the leather-jackets disappear.

As a proof dry weather affects fish, I may state that there is always a quantity of fresh water coming into the Wouboyn River and it has a great quantity of fish in it, and had all the dry weather, especially towards head of river. The leather-jackets even came into this river, but not to the extent that they did when no fresh water was coming down.

Therefore, in conclusion, I say that I attribute the scarcity of fish,—first, to dry weather, second, to leather-jackets, which have overrun the feeding-grounds as rabbits do a cattle run, eating everything before them.

I have, &c.,

FRED. W. SMITHERS.

1886.

APPENDIX A.

COMMISSIONERS of Fisheries for New South Wales, 1886:—

James C. Cox, M.D., President,
 E. P. Ramsay, F.R.S.E., &c., &c.,
 J. R. Hill, Esq.,
 A. Oliver, Esq., M.A.,
 Frederick Thomas, Esq., resigned 11th June, 1886, succeeded by
 S. H. Hyam, Esq., M.L.A., appointed same date.

Official Staff, 1886.

Lindsay G. Thompson, Secretary and Chief Inspector of Fisheries.
 Edward J. Ellis, 1st Clerk. | G. F. Hainsworth, Clerk.
 J. F. O'Grady, Clerk. | L. G. Mann, Draftsman.
 C. D. St. Pinnock, Clerk. | L. F. Mann, "
 J. D. Delany, Clerk. | W. Lamm, Messenger.

James Quinan, Inspector for Home Division of Fisheries.
 Thos. Temperley, " Northern "
 George G. Benson " Southern "

Andrew Gyler, Assistant Inspector of Fisheries, Manning River.
 Thomas Mulhall, " " Sydney.
 Henry Curan, " " Newcastle.
 Peter Smith, " " Hawkesbury River.

APPENDIX G.

Inspector Temperley's Report on Northern Division of Fisheries.

17 February, 1887.

THE production of oysters in the Northern Division for 1886, as shown in the tabulated return appended, amounts to 3,962 bags, and the total royalty to £594 6s.

No less than 1,625 bags, or nearly one-half of this total, was procured from the Clarence River, and was obtained from the natural deep-water beds of that river—not as in the case of many other rivers, from shallow foreshores alone. Large as this quota is from the Clarence, it is less by nearly 300 bags than that of the previous year, the output being 2,008 bags for 1885.

With this deficiency in the yield of the Clarence River, it is somewhat remarkable that the total yield of the Division for 1886 should be 800 bags greater than the total for either 1884 or 1885, making an increase in the supply from inlets other than the Clarence of nearly 1,100 bags for 1886 above that of the previous year.

This increase may chiefly be accounted for as follows:—The number of inlets from which oysters have been procured is greater than any previous year, leases having been taken up and worked in remote places which had not previously contributed to the oyster supply, the places referred to being the Sandon River, Brunswick River, Wooli Wooli River, and Weegoolgal, while the Tweed River and the Bellinger, both of which had not been worked for some time, have had their oyster bearing areas rendered available chiefly by the establishment of direct steam communication with the metropolis.

The produce, however, of these additional sources would not have supplied the deficiency which increasing demand causes in the yield of the natural oyster beds, but that the lessees in many of the rivers had improved their leases by stocking them with immature foreshore oysters. They had availed themselves of the Regulations which provided for the removal of foreshore oysters for restocking purposes under spat licenses, and in several instances taken up foreshore leases for the sole purpose of procuring spat for laying down elsewhere.

This semi-ostreiculture is the outcome of the secure tenure which is now given to lessees under the present Fisheries Act. It has been carried out to a greater or less extent on the Richmond River, Manning River, Cape Hawke, Evans' River, Port Macquarie, and other inlets of minor class.

Where these foreshore oysters have been put down on exhausted natural beds, the work has generally but not always been attended with success. Where the efforts have been experimental—made on untried areas—the results have varied from total failure to partial, and in some instances, complete success.

This requirement of spat on the part of lessees is increasing, while the natural supply is limited and is diminishing, and it is a matter of certainty that before long thorough oyster culture, including the artificial attachment of spawn, which hitherto in this Colony has not advanced beyond trifling experiment, will require to be extensively resorted to if the capabilities of the oyster-bearing areas are to be made equal to the demand which an ever increasing consumption makes upon the oyster production of the Colony.

The work of improving the oyster leases during the year was considerably affected and their productiveness to some extent interfered with by two disturbing causes. One of these was the unusually large amount of rain that fell in the northern part of the coast during the last half year. The other was a destructive agent in the form of a fine seaweed of a reddish brown colour that was washed into the inlets in January, and lay and decomposed upon the oysters in such quantities as to destroy them. This was especially the case in the Evans River, where numbers of fish as well as oysters were destroyed by the same weed.

In other inlets, viz., Port Macquarie, Cape Hawke, and the Manning River, where the oysters below half tide were reported to have died at the same time, it is believed the mortality was due to the same cause.

Oyster spawning is not known to have occurred during the year but in few inlets, and to a moderate extent. Those on the upper natural beds of the Clarence spawned in April, and the shallow water oysters in the lower part of the same river during the early part of December.

In the Richmond River the oysters spawned moderately at the latter end of November.

Fish.

Concerning fish, there are no particulars of interest to note differing from preceding years. There is the usual abundance of fish in all the inlets, and they are interfered with in the summer months only to provide limited local requirements and a moderate amount of salt fish for shipment—the latter being principally the work of Chinamen.

As to the shipment of fresh fish, a number of fishermen on the Clarence River prepared to work for Sydney markets in the winter months; and they would, had the winter been an ordinary one, have had profitable employment, but the season was not a good one for their work. It was mild, wet, and variable in temperature; and it several times happened that quantities of the fish were condemned, either in transit or on arrival in Sydney. This uncertain supply, it is believed, will not long remain in the present unsatisfactory condition, the dairy produce of the north coast having increased to such an extent as to necessitate the establishment of steam communication that includes refrigerating chambers. This want is about to be supplied and, when established, will be available for the transmission of fresh fish, and will give a large impetus to net fishing both on the Clarence and Richmond Rivers.

It is known that there are some fine prawns both on the Clarence and Richmond Rivers, but whether they are to be found in such quantities as to pay for working, is a question which has not yet been satisfactorily tested.

With reference to cormorants, there have been no claims made for rewards for their destruction.

THOS. TEMPERLEY,
Inspector Northern Fisheries.

Assistant

Assistant Inspector Jamieson's Report on Macleay River Fisheries.

Sir,

Macleay River, 5 March, 1887.

I have the honor to report the state of the Macleay River fisheries for the year 1886.

The Macleay River, during the year, has had a very good supply of fish, principally whiting, silver bream, flathead, garfish, and black fish. For the last three months of the year, from five to seven cases of whiting and bream have been shipped here for Sydney every week, packed in ice and saw-dust. No oysters for shipment on this river. Some years back the flood-waters destroyed all the oysters in the river, and since then no one has cultivated any.

I have, &c.,

JOHN JAMIESON,
Assistant Inspector of Fisheries, Macleay River.

Assistant Inspector Whaites' Report on Fisheries, Nambucca River.

Sir,

Nambucca River, 21 February, 1887.

I have the honor to report that the oyster beds of this river were not worked or disturbed during the year 1886. Not being able to secure an oyster dredge, I am unable to give the beds a good testing, but obtained a few oysters with a pole split in the end in December last; they were quite milky, it being apparently the spawning season. I find that mud has settled on the beds, and am of an opinion that the beds would be much improved by working.

The mullet season was only a moderate one, commencing middle of April and lasting to end of May.

Other kinds, such as whiting, bream, flathead, garfish, are moderately plentiful and in good order.

Inspected several nets, and found them in accord with regulations.

I have, &c.,

W. J. WHAITES,
Assistant Inspector of Fisheries.

Acting Assistant Inspector Windeyer's Report on Port Macquarie Fisheries.

Sir,

Port Macquarie, 12 February, 1887.

I have the honor to furnish a general report of the condition of Oysters and Fisheries of Port Macquarie, for the year 1886.

Fishing operations during this year have not been very extensive, three men with two boats have netted about an average of fifteen baskets per week. These for the most part have been dried for exportation to Sydney, and have consisted principally of whiting of very large size, which have been most abundant during the year. The sea mullet, flathead, bream, and black fish, have been very abundant, and though few large shoals have been observed, the supply of fish in the harbour has been practically unlimited.

Large quantities of schnapper have been caught. I have on previous occasions directed attention to the vast extent of prolific schnapper grounds on this coast, which I think will, in conjunction with the harbour fishing, form the base of very extensive fishing operations at no very distant period.

I regret that the culture of oysters has not proved very successful, though apparently all the conditions have been favourable. I may, however, observe that the operations conducted by only two lessees have been on a very limited scale, and are perhaps not a fair criterion of the eligibility of this locality for oyster culture. The natural beds, as far as I have been enabled to ascertain, are still bare, and show no signs of recuperation. This, I believe, is occasioned by the long continued absence of floods in the river, causing the rocks, stones, pebbles, and cultch, that formed the bottom of the beds, to be covered by slime, militating against the catchment and lodgment of spat. Sixty-one bags oysters were obtained, and royalty collected in 1886.

I have, &c.,

HENRY W. C. WINDEYER,
Acting Assistant Inspector Fisheries.

Assistant Inspector Gyler's Report on Manning River Fisheries.

Sir,

Croki, Monday, 3 January, 1887.

I have the honor to submit the following report of the present state of the natural oyster beds in the Manning River.

I have carefully watched and examined most of the natural oyster beds on the various parts of this river, and I find that there are not the slightest prospects of any of these beds being improved by laying spat or young oysters on any of the beds which have a depth greater than from 2 to 4 feet of water at low water.

1. All or most of all the beds which have had oysters laid on them in a depth from 6 to 20 feet of water, after being laid down from six to twelve months, have died.

2. They have either been covered with mud or sand or died from some other cause unknown to me or any of the oystermen on this river.

3. I have come to the conclusion, by the above facts, that we want a good flood to clear the bottom of the river, to clean the beds of any pollution which may exist on them.

4. Oysters in deep water should begin to show signs of spatting; but at present there is not the least sign, as there are very few to spat from.

5. There have not been thirty bags of natural bed oysters shipped during the last twelve months, most of the oysters shipped were bank or mangrove oysters, which have been laid down in shallow water from 1 to 3 feet at low water.

6. By the above facts it is useless for any of the lessees to lay oysters on the deep water beds, as I know of several lessees who have laid down oysters in deep water and received no returns for their labour.

Mr. Woodward had about 400 bags of bank and mangrove oysters laid on one of our best beds, called the "Bar Bed," depth of water from 15 to 25 feet; after being down from twelve to eighteen months, I, on examination, found that about five out of every six oysters were dead when dredged up, in fact I do not think that Mr. Woodward got more than thirty bags of the whole of that bed. I could note other like instances with the same result, only they were not so largely tried.

7. After twenty-seven years experience in oyster dredging and of inspection, I have come to the conclusion that it is useless to try and improve our natural deep-water beds at present, as we shall have to wait for nature to help us in the above matter.

Trusting the above will be satisfactory,

I have, &c.,

ANDREW GYLER,
Assistant Inspector.

APPENDIX H.

Assistant-Inspector Mulhall's Report on Home Division of Fisheries.

4 March, 1887.

THE Inspector reports that in January, 1886, fish were very scarce all over the district, from Middle Harbour to Hen and Chicken Bay; further up on Homebush Flats there was some difference, fish being much more plentiful. Since that time they appear to have steadily increased in all parts of the harbour, and in December last fish were more plentiful, especially mullet, than they have been known to be for some years.

In this account I except bream and whiting, because they have not been allowed to come to perfection owing to the sunken nets which are now used all over the harbour.

Schnapper also are very scarce all along the coast, but, in my opinion, fishermen seek them too far seaward instead of close in shore, where they are to be found.

Prawns have been very plentiful, there was never known such a season for them before, both in regard to quantity and size.

I attribute the great increase of fish in the harbour to the strict watch I and my assistants have kept on the closed waters.

The months for the spawning are March and April, and September and October, and having many waters closed during some of this time, a good protection has been afforded to the young fish. I advocate a permanent closing of the heads of the Port Jackson waters, because I believe it would cause a continual stream of fish to be working out of those places into the body of the harbour, which would almost supply all Sydney.

During the summer months this year there has been a large quantity of fish, principally from distant places, condemned at the fish-market as unfit for food.

The oysters about the harbour are almost exhausted, scarcely one to be seen, owing, I believe, to picnic parties, but in Middle Harbour there are quantities on the rocks; but they are very small and quite unmarketable.

I have, &c.,

THOMAS MULHALL,
Assistant Inspector of Fisheries for Sydney.

Assistant Inspector Smith's Report on Net and Line Fisheries, Hawkesbury River.

Sir,

Hawkesbury River, 14 February, 1887.

In compliance with your request of the 9th instant, to send you a report on the fisheries of the Hawkesbury River for the year 1886, I hasten to comply therewith.

The fisheries of the Hawkesbury River may be classed into two distinct occupations, viz., the net and line fishing and the oyster fisheries.

With your permission I will first deal with the net and line fishing.

Net fishing is carried on all through the year in the lower Hawkesbury River, Pittwater, and Cowan Creek, the fishermen having secured the service of a steamboat to convey their fish to market in a sound state, otherwise it could not be done in the summer months.

Of the quantity of fish having been sent to market during the year 1886 I am unable to give you the correct information, nor yet the number of fishermen employed; sometimes boats are here this week and gone the next.

The principal class of fish which resort these waters are several varieties of mullet, bream, jewfish, flathead, perch; and in the lower part of the river also soles and flounders, blackfish, whiting, and garfish.

The supply during the past year, and indeed since the railway works started, has been a serious falling off in quantity.

The continuous blasting operations carried on at the railway works has certainly been the means of driving the fish away from their usual haunts.

The general habitat of shoals of large mullet is about 50 miles up river, far removed from all noise; but will occasionally be driven down river by freshets and also in the spawning time—March and April—when they move about in large shoals, returning up river generally in May.

Of young fish, I may state that I very seldom see any in the lower part of the river, their habitat being generally the upper parts of the river and quiet bays and creeks, and a weedy bottom being particularly favourable.

Considerable line-fishing has also been done with jewfish, and occasionally a schnapper.

The waters of Cowan Creek, being like the ocean, clear and salt, are a favourable resort for schnapper, shoals of bream, and numerous other fish. During the last spring and summer shoals of schnapper, of many tons weight, were seen in Cowan Creek, their tails out of water, having probably come into the river to spat. I may here observe that when in this state they will not take bait. Cowan Creek and the lower Hawkesbury are also, particularly in the summer months, infested with sharks.

Of

Of the nets chiefly used in the Hawkesbury, I may state that, in the general absence of garfish (except in the lower part of the river), a long hauling net is used, with 2½ inches in the bunt and 3 inches in the wing; and I may safely state that the non-destruction of small fish in this river will bear very favourable comparison with any river. Meshing nets of 4-inch are also used.

As there is very little use for garfish nets none are kept, except an occasional prawn net of the prescribed dimensions.

I have, &c.,
P. SMITH,
Assistant Inspector.

Assistant Inspector Smith's Report on Hawkesbury Oyster Fisheries.

Sir, Hawkesbury River, 14 February, 1887.

I would most respectfully beg to hand you the Report on the Oyster Fisheries of the Hawkesbury River for the year 1886.

The Oyster-culture Fisheries in the Hawkesbury River during the year 1886 have been only moderately successful, although the quantity shipped to market may seem a satisfactory figure.

Quantity shipped to market during the year 1886, 2,592 bags; royalty payable thereon, £338 16s.

Of the abovenamed quantity the greater part are natural rock oysters, and the artificial layings (the real oyster culture) amount to only a very small percentage. The cause for this small amount of culture oysters having reached the market may be found in the fact that the laid oysters were not sufficiently advanced to be considered marketable, the lessees having found by experience that it requires two years or more, according to the strength of the water, where laid, and quality of spat.

I beg also here to observe, that a large number of leases have been applied for, and granted, which are in no way suitable for oyster culture, either for suitability of bottom or strength of water.

These leases were applied for mainly for what rock oysters were on them, and as these are not sufficient to pay the yearly rent in time to come, I expect to see lots of them forfeited. And it is also a fact, and may not be generally known, that the leases and waters most suitable for oyster culture are altogether devoid of young oysters, and have to depend for a supply of spat on leases down river, or Crown land.

From my reports at different times you will gather that a disease showed itself in the oysters in December, 1886, whereby the greater part of artificial layings were carried off.

I have not the least hesitation in saying that this is a severe blow to oyster culture, particularly at the present time. It is sad to see fine oysters, which have laid for over two years, and probably would have been in the market ere long, all dead. It is also curious to note the disease,—I have seen a portion of shore where all were dead, and not 20 yards away with scarcely any dead.

In the infected locality natural rock oysters have also suffered, but not to such an extent as the artificial layings.

As to the cause of the disease, the general opinion is that the great quantity of congewoi which has covered the shores has been the cause. I may here state that the disease has never been seen here like this, but I believe that the disease was here last summer on a small scale, for I have seen patches of dead oysters, for which at that time I could not account, but which I have no doubt now were destroyed by the same cause.

I beg also to state that natural rock oysters (which I trust may not be regarded as oyster culture) have also become much scarcer, in fact, are getting scarcer every year, and scarcely any laid oysters can be alive. I expect that the supply available for market will, at the end of 1887, not nearly reach the above figures.

And in view of the welfare of oyster culture in years to come, it would be well to bear in mind the many difficulties a lessee has to contend with—too numerous to mention here—that the Crown may take a more liberal view, particularly of the supply of spat to a *bona fide* lessee, else I fear that oyster culture will not even get a footing, and in a few years will be a thing of the past.

I have, &c.,
P. SMITH,
Assistant Inspector.

Acting Assistant Inspector Cain's Report on Oyster Fisheries, Brisbane Water.

Sir, Gosford Fisheries Office, 8 January, 1887.

I feel very much pleased in having to report to the Department the progress in the cultivation of the oysters for the last twelve months. When I was first appointed, 9th of December, 1884, there could not be found in the river twenty bags of oysters fit to be forwarded to the market. In the year 1886 there has been about 300 bags forwarded and accounted for.

And I feel confident every year the river will increase in the shipment of oysters. This river has proved itself to be a most suitable place for the cultivation of oysters within the last two years. Floods in this river do not destroy the oyster cultivation like other rivers, where wholesale destruction of the oysters is caused by the freshes.

There are some thousands of yards of foreshore to be taken up in Woy Woy Creek, but it will not suit at present to take these foreshores up on account of so many railway labourers about.

I have, &c.,
W. N. CAIN,
Acting Assistant Inspector.

Assistant Inspector Curran's Report on Fisheries, Hunter River.

Sir, Fisheries Office, Newcastle, 11 February, 1887.

I have the honor to report on the state of the Hunter River beds for 1886. There are no oysters on any of the beds; they have all been destroyed by a small red worm. The only oysters alive in the Hunter River are a few on the mangroves, and on the rocks. 683 oags of oysters were taken from the shores

shores above low water mark during the year. I think the late heavy freshes in the Hunter will kill the worm; if it does the oysters will settle on the beds again and grow.

Fish have been very plentiful in the Hunter River in the summer months, but were very scarce in the winter.

Prawns also have been plentiful during the last few months of the year, especially in Fullerton Cove. Some boats caught as many as four and five baskets in one haul, each basket holding from 60 to 80 quarts, but as there was very little demand for them in Sydney, they were allowed to send only one basket a day for each boat.

I have, &c.,

HENRY CURAN.

Assistant Inspector Otway's Report on Fisheries at Port Stephens.

Sir,

Limeburners' Creek, Port Stephens, 14 February, 1887.

In accordance with your instructions I beg herewith to forward report of state of the fisheries in this district for the information of the Commissioners, up to above date.

It will, of course, be in the recollection of the Department that previous to May, 1886, I had no knowledge of the fisheries of this district, and that I accordingly speak only from that time.

I can safely say that in the months of May, June, July, and August, the appearance of any fish in the upper waters of the harbour was only distinguished by its absence. In the lower portion of Port Stephens towards the heads I several times inspected the fishermen's boats alongside the "Kingsley," when they were shipping their fish. On each occasion I found the fishing-boats well filled with various kinds of fish—principally garfish and whiting, and later on, crayfish; these were all in good condition. Most of these fish, however, came from outside the heads. In the upper waters of this harbour there has been no net fishing whatever, and, as the Department is aware, on the 29th August last a proclamation was issued closing nearly the whole harbour to net fishing. After the month of August, and as the days got longer and warmer, the mullet began to make their appearance everywhere; and about Christmas were in swarms in all small creeks. Four jumped into my boat one night. I think they are now returning as I do not see nearly so many.

My chief business has been with the oyster industry. Up to a few weeks ago that was in a most thriving condition, the dredgers which up to Christmas time were being sent to market being remarkably fine and in good condition. I am sorry to say, however, that a change has come quite suddenly upon this branch of the fishing industry. I had the honor to report, quite recently, for the information of the Commissioners, of the existence of a disease among the oysters, similar to that which affected those in the Hunter River, and eventually cleared the beds there. I am now collecting particulars, and all the information I can, with regard to it, and shall duly forward same.

I have, &c.,

C. H. OTWAY,

Assistant Inspector.

Assistant Inspector Grant's Report on George's River and Botany Fisheries.

Sir,

17 February, 1887.

I beg to offer the following as regards the fisheries of my district.

I can positively say that I have never known the river be in such a prosperous state with fish as it is now, and has been for the last twelve months. In previous years fish could not be caught in such numbers as were caught last year, and where there was one private party fishing two or three years back there are twenty fishing at the present time, and each of these parties catch 10 per cent. more fish now by the line than were ever caught in previous years. I may also state that the numbers of licensed fishing-boats and fishermen in this district have doubled.

A boat proprietor at Como, George's River, informs me that the parties who take his boats never got so many fish by line as they catch at the present time; he also says that closing the river for six months in the year has caused the improvement. I have seen on different occasions fishing parties having as many as ten or twelve dozen red bream, besides whiting and flathead, in their possession, as the result of a day's sport, and principally all caught above the railway bridge. Black bream, blackfish, and mullet are also in abundance in the closed waters. A person cannot judge by what quantity of fish is caught in Botany Bay and about the mouth of the river, because one day fish would be plentiful about the said places while on the next there would be none, which is caused by the different species of fish travelling; in fact there being so many fishing boats confined only to Botany Bay and the mouth of the river the fish have no chance to accumulate on the flats.

As relates to the oyster fishery of my district, I beg to state that the river is in a very poor state. Spawn or spat last year was more plentiful than it has been for the last three years; still it has not made any improvement, as the public consume them as soon as they are in the shape of an oyster. Many of the lessees have laid oysters down on their areas, but only cultivate to a small extent, as the public will go on the said areas and eat their oysters in spite of them; in fact the lessees inform me it is impossible for them to improve their areas to any great extent until they are assured of having their leases granted.

I have, &c.,

J. D. GRANT,

Assistant Inspector of Fisheries for George's River and Botany.

Assistant Inspector Benson's Report on Lake Illawarra Fisheries.

Sir,

Brownsville, 14 February, 1887.

I do myself the honor to submit the following report on the fisheries in my district, from 1st January to 31st December, 1886:—

Lake Illawarra.

Is exceedingly prolific in fish, but oysters are very scarce, in fact none are visible, although old residents state that there have been good beds in this lake, which have been either worked out or covered over with sand.

This

This lake has contributed very largely to the metropolitan fish supply, 4,591 baskets being shipped respectively from Wollongong and Shellharbour during 1886 (for Sydney).

The local supply for the year has been very small, averaging about one basket a week. The fishermen will not take the trouble to hawk fish, preferring to ship them direct to Sydney; they also state that they receive better prices for their fish in the Sydney market than they could get by retailing them in this district.

The supply of young fish in this lake is very abundant, the tributaries and bays adjoining are swarming with young fish, varieties consisting of mullet (hardgut), garfish, flathead, black bream, tailor, whiting, tarwhine, and blackfish.

The tributaries and bays adjoining, and the entrance to the lake, being closed from net-fishing for a period of twelve months, dating from the 1st February, 1886, there is no doubt that the judicious closing of these portions of the lake has been to a great extent, if not altogether, conducive to this supply of young fish.

There have been during the past year two breaches of the Fisheries Act committed; in both cases the parties concerned were severely punished; in the first instance about 1,000 yards of net were forfeited, and in the other case severe fines were inflicted. There is no doubt that, before my arrival in this district, the facilities for using and working excessively long and illegal nets for meshing were very great, and that such nets were used with impunity by the fishermen. But my arrival here, and being constantly on the lake, and examining each boat, has put an end to this pernicious practice.

The entrance to the sea of the lake, which has been sanded up for the last ten months, has to a great extent prevented the free ingress of fish into the lake. In heavy weather the seas break over this bar, and quantities of fish gain access to the lake, which have no doubt been a great addition to and kept the supply of marketable fish up in the lake.

Appended to this report is a return showing the quantities for each month of baskets of fish shipped to Sydney *via* Wollongong and Shellharbour for 1886.

Minumurra River.

Fishing operations during the year in this river have been confined to a few fishermen at work, mostly for local consumption.

This river contains a good supply of mangrove and cobbler peg oysters, and a fair quantity of deep-bed oysters. The oysters are in good condition, and spatting will shortly commence. No mortality exists among the oysters in this river.

From the beds in the river there have been taken during the past year 35 bags, or 105 bushels; the total amount of royalty being £5 5s., collected in Sydney.

In connection with this river no breach of the Fisheries Act, so far as it relates to oysters, has been committed during the year.

I have, &c.,

DAVID W. BENSON.

APPENDIX I.

Inspector Benson's Report on Southern Division of Fisheries.

Sir,

Bateman's Bay, 7 February, 1887.

I have the honor to forward my report on the Southern Fisheries for the year 1886.

During the year leases for oyster culture, under the Oyster Fisheries Act, 1884, have been granted in nearly all of the oyster-bearing waters of the Southern Division. I enclose a brief report on that portion of the fisheries lying between St. George's Basin and the Wagonga River, such portion being under my special supervision, assisted by Acting Assistant-Inspector Sutherland, stationed at the Moruya River, and Acting Assistant-Inspector Hesse, stationed at the Clyde River, whose duties are confined to those rivers. I also enclose a report from Assistant-Inspector Smithers on the fisheries lying south of the Wagonga River.

From my own and Mr. Smithers' reports it will be gathered that the majority of the lessees are not paying that attention to their oyster beds which it was reasonably expected they would do. All they seem to care about is to get as many marketable oysters off their beds as they possibly can, leaving none for breeding purposes, and thus almost completely annihilating the source of spat. During the last three years, I have never seen so little spat and brood in the southern waters as at present, and I believe this to be attributable in a great measure to the greed and negligence of the lessees. Their idea of oyster-culture seems to be confined to laying down oysters taken from the rocks and mangroves on to fattening grounds for a few months, and then sending them to market. Happily, however, there are exceptions to this almost general rule. As instances of this, I may mention leases held by Messrs. Woodward, Gibbins, Templeman, and Barclay, at the Clyde River, where the lessees by exercising a little common sense, and working in a systematic manner, have received a fair return for their outlay, and have at the same time improved their holdings considerably. On these leases oysters are not considered marketable until they arrive at maturity; oysters in considerable numbers are always left on the beds for spatting; care is exercised in culling, all undersized oysters being carefully returned to the beds; war is continually waged against the enemies of the oyster, especially the star-fish, hundreds of them being destroyed during the year; the beds are carefully watched and mud, weeds, &c., where possible removed. At the Tuross, Wagonga, and Moruya Rivers nothing has been done in the way of improvement, and from Mr. Smithers' report it appears that the leases in the waters under his supervision have been equally neglected.

From my observations, I believe that it is only necessary for the lessees to exercise a little judgment to ensure success for this new industry. All of the southern rivers are suitable for the breeding, growth, and fattening of oysters; consequently the chief object of the lessee should be to make every provision for securing spat for the purpose of laying down on fattening beds. This could be easily accomplished by placing spat collectors in the shape of stone or wood on those beds which are not provided with

with them by nature, and by leaving mature oysters in sufficient numbers on the beds and foreshores so as to ensure a supply of spat.

Trusting that during the coming year the lessees may awaken to the importance of this new industry, and throw more energy into their undertaking,

I have, &c.,
GEORGE G. BENSON,
 Inspector, Southern Fisheries.

Clyde River.—During the year, forty leases, representing an area of 21,600 yards, have been granted under the "Oyster Fisheries Act of 1884." Most of the lessees are persons who have been engaged in the oyster fisheries for many years, and have therefore the advantage gained by experience to guide them in making this new industry a success. For the year, 1,308 bags of oysters were sent to market, most of which were obtained from the mangroves during the year 1884, and laid down in water varying from 3 to 16 feet in depth. Many of the oysters laid down on what at the time was a clean hard bottom have been destroyed by the accumulation of mud and weeds, and many were buried by the lessees in endeavouring to secure them with a dredge. It is now the general opinion that, in order to carry out a proper supervision, oysters should not be laid down on beds where the water exceeds 3 feet in depth at low tide, when they would be easy to inspect, and weeds, mud, &c., could be removed at a small cost; the oysters could also be gathered by hand, and a great saving of labour effected. I regret having to report a very limited supply of spat and brood showing on the foreshores generally, but more especially on those leases from which all available oysters have been removed either for market or laying down, leaving none for producing spat. Some of the lessees evidently rely on nature to do everything for them, and at the same time, show a perfect ignorance of nature's laws. I have noticed that on leases where fair numbers of mature oysters have been kept continually on the beds, the foreshores are well covered with spat. The divers on the deep beds state that young oysters in large numbers are showing on the rocks and cultch. Messrs Woodward, Gibbins, Templeman, and Barclay, are the only lessees on the Clyde River who have, up to the present, worked their leases in a systematic and fair manner, by sending only mature oysters to market, laying down spat collectors, and always keeping a good stock of mature oysters on their beds for breeding purposes.

Wagonga River.—Only one lease for 300 yards has been granted, but there are still many applications to be dealt with. The foreshores of the river, which are narrow, have been well stripped of all oysters approaching a marketable size. The bed of the river outside of low water mark is composed of mud; beyond laying down a few oysters, and sending them to market when of a legal size, nothing has been done in the way of improvement. Particulars of oysters shipped from this river have to be sent direct to the Collector of Customs, Sydney.

Narrawallee Creek.—Six leases have been granted on this creek during the year, for a total area of 1,400 yards, and there are still several applications to be dealt with. The lessees, who are mostly farmers, have secured as a partner a thoroughly practical man, who has shown great judgment in the management of the beds. Only mature oysters are sent to market; a fair quantity of oysters are left on the mangroves for the purpose of spawning, and consequently the foreshores, which are chiefly mangroves, are well stocked with young oysters, which are taken and laid down on fattening ground as soon as they arrive at an age when no injury can be caused by removing them. In places where there is no natural spat, collectors, oak and stone, have been placed, and are now fairly covered with spat. From what I could see of the beds during my visit in September last, I believe there must be over 600 bags laid down, many of which are of marketable size. It will be pleasing to the Commissioners to hear that all of the lessees on this creek are working their areas in a systematic manner, and seem determined to give ostreiculture a fair trial. I must express satisfaction at finding the creek so much improved after the bad treatment received at the hands of licensed dredgers in 1883. One hundred bags of oysters have been shipped during the year. Particulars of these shipments are wired direct to the Collector of Customs, Sydney, by the lessees.

Tuross.—Nine leases, for a total area of 2,200 yards, have been received by me for delivery to the lessees. Only 144 bags of oysters were shipped during the year. In the month of September, in consequence of a strong easterly gale, the mouth of the river was closed by a bank of sand 260 yards in width. The water in the river and lake is now four feet above high-water mark, rendering it impossible for the lessees to procure oysters either for market or laying down. Several unsuccessful attempts have been made by the lessees, assisted by the Messrs. Mort, of Bodalla, (portion of whose property is under water) to open it. Beyond laying down oysters on their foreshores, lessees have done nothing in the way of improvement. I have observed very little spat during the year; and Smart, who is an old resident of the Tuross, states that he never remembers such a bad year for spatting.

Moruya River.—Acting Assistant Inspector Sutherland is in charge of this river; he also supervises all shipments of oysters from other waters, shipped at Moruya. He reports two leases having been granted during the year. 141 bags of oysters have been obtained, 135 bags of which were shipped to Sydney, and 6 sold for local consumption. Nothing has been done to improve either the leases or areas applied for. The foreshores of this river are narrow and unsuitable for oyster culture.

Cullendulla Creek.—Four leases have been granted during the year to Edwin Cain, who has marked the boundaries of the areas leased in accordance with the Act. Several other applications made by the same lessee for areas in this creek have still to be dealt with. The foreshores, with the exception of a few patches of hard ground, are lined with mangroves, and show little signs of improvement, which is to be accounted for by the scarcity of oysters for spatting purposes. The lessee continues to lay down oysters on the hard ground, and seems determined to do his best in making the enterprise a successful one. He has shipped 23 bags of good oysters during the year.

Tomaga River.—One lease of 500 yards has been granted during the year to Abraham Windley, who has laid down about 100 bags of mangrove oysters on a hard bottom and in deep water. John Lewis, who is an applicant for several areas, and the holder of a permit, has also laid down a large quantity of mangrove oysters, which are showing good growth, and are now in splendid condition. Nothing has been done in the way of improvement beyond laying down the oysters, and very little spat is showing on the foreshores. 112 bags of oysters have been sent to the Sydney market during the year; 94 of which were shipped at Bateman's Bay, and 18 at the Moruya River.

EXTRACT FROM INSPECTOR'S DIARIES FOR THE YEAR 1886.

January.

Assistant Inspector Smithers reports having returned from Sydney on the 9th of the month. Inspected Naghi River and Merrica Creek and found both waters closed at mouth. Observed fish in great numbers. There are no oysters in Naghi Creek; those in Merrica Creek are in fair condition. At Eden the bay is full of kingfish.

Acting Assistant Inspector Sutherland reports being absent from his station during the first two weeks of the month. All sorts of fish very scarce in river, and outside schnapper are also scarce. Inspected and passed 38 bags of oysters from Tuross Lake. No licensed fishermen on river.

Inspector Benson.—Inspecting areas applied for at Clyde River and tributaries, and Cullendulla Creek. Measuring areas applied for at the Clyde River. Visited and inspected Durras Lake.

February.

Assistant Inspector Smithers reports having measured areas applied for at Nelson Lake, Bermagui River, Wapengo Lake and Bittangabee. Found Spero Mackri taking oysters from Crown lands, and reported it to the Secretary of the Fisheries Department. Reported Lavington for taking oysters from Crown lands at Bowinda Lake and paying no royalty.

Acting Assistant Inspector Sutherland.—Have observed mullet and whiting in considerable numbers in river. Inspected and passed 27 bags of oysters from Tuross Lake; also 14 bags from Moruya River.

Inspector Benson.—Inspected leases and areas applied for at Clyde River and Cullendulla Creek. Delivered leases Nos. 586, 106, 111, 137, 30, 585.

March.

Assistant Inspector Smithers.—Visited and inspected Panbula River, Wonboyn River, Bittangabee Creek. Found the oysters at Wonboyn in splendid condition, and the river alive with fish. At Eden the schnapper are plentiful, but leather jackets so numerous that it is impossible to get through them with the bait.

Acting Assistant Inspector Sutherland.—Shoals of fish, apparently whiting, moving along the coast, also shoals of sea mullet moving in a northerly direction. Inspected 27 bags of oysters from Tuross and 7 bags from Moruya River.

Inspector Benson.—Visited Moruya River, measured areas applied for at Congo Creek. Cautioned Goodin against discharging sawdust into the Moruya River. Inspected fishermen's licenses and nets. Delivered leases Nos. 104, 187, 803, 273, 34, 398, 674.

April.

Assistant Inspector Smithers.—Visited Kiah River, Wonboyn River, Panbula River. Oysters in good condition. At Eden schnapper are plentiful, and large shoals of sea mullet in bay.

Acting Assistant Inspector Sutherland.—Measured areas applied for at Moruya River, and sent reports to Fisheries Department, Sydney. There are three licensed fishermen employed on river all using garfish nets. Noticed shoals of travally off Moruya Heads. Inspected 8 bags from Tuross, 4 bags from Moruya River; 33 baskets of fish shipped to Sydney.

Inspector Benson.—Measured areas applied for at Tomaga River and Clyde River. Visited and inspected Candlegut Creek. Delivered leases Nos. 316, 1,311, 1,155, 275.

May.

Assistant Inspector Smithers.—Visited Wonboyn River, Merrica Creek, Wapengo Lake. Noticed large increase of oysters at Merrica Creek. Measured areas applied for at Nelson Lake.

Acting Assistant Inspector Sutherland.—Have observed large numbers of mullet, bream, and whiting in river. Inspected and passed 8 bags of oysters from Tuross, 6 bags Moruya River, 10 bags Tomaga River; 15 baskets of fish shipped.

Inspector Benson.—Inspected leases granted and applied for at Clyde River, Buckenbowra River, Cullendulla Creek. Delivered leases Nos. 1,317, 1,318, 193, 1,146, 58, 337, 438.

June.

Assistant Inspector Smithers.—Visited Broadwater, Panbula River, and Nellica. Measured areas applied for at Kiah River.

Acting Assistant Inspector Sutherland.—Shoals of mullet, whiting, and bream moving up river. Inspected and passed 15 bags of oysters from Tuross, 13 bags Moruya River; 1 bag local consumption; 24 baskets of fish shipped.

Inspector Benson.—Inspecting leases granted at Clyde River and tributaries. Visited and inspected Moruya River, Tuross Lake, Wagonga River, and Birroul Lake. Delivered leases Nos 337, 501.

July.

Visited Broadwater, Bittangabee, Nellica River, Wonboyn River, and Merrica Creek. Observed numbers of oysters dead at Nellica, evidently killed by the late fresh.

Acting Assistant Inspector Sutherland.—Shoals of mullet, bream, and whiting in river. Inspected and passed 10 bags of oysters from Tuross, 23 bags Moruya; 1 bag used for local consumption; 84 baskets of fish shipped.

Inspector Benson.—In Sydney on three weeks leave of absence. Inspected leases granted at Clyde River and tributaries. Delivered lease No. 846.

August.

Assistant Inspector Smithers.—Visited Murrab River, Cuttagee Lake, Wapengo Lake. Measured areas applied for at Nelson Lake and Broadwater. At Eden—fish very scarce, especially schnapper.

Acting Assistant Inspector Sutherland.—Observed mullet, whiting, bream, and garfish in river. There are now four licensed fishermen at work on river. Inspected and passed 19 bags oysters from Moruya River, 9 bags Tuross, 8 bags Congo Creek; 1 bag local consumption; 46 baskets of fish shipped.

Inspector Benson.—Visited and inspected Durras Lake, Tomaga River, and Cullendulla Creek. Inspected leases at Clyde River. Delivered leases Nos. 804, 714, 93, 583.

September.

September.

Assistant Inspector Smithers.—Inspected area applied for at Kiah River by Eden Progress Committee. Visited Murrah River, Panbula River, Bega River. Measured areas applied for at Nelson Lake.
Acting Assistant Inspector Sutherland.—Observed mullet, whiting, bream in river. Examined and passed 2 bags of oysters from Tuross, 11 bags Moruya River; 17 baskets of fish shipped.
Inspector Benson.—Visited and inspected Conjola Lake, Narrawallee Creek, and Clyde River.

October.

Assistant Inspector Smithers.—Visited Merunbula and Nellica River. I have noticed during the month a larger number of young fish than I have seen during the last three years.
Acting Assistant Inspector Sutherland.—Observed blackfish, mullet, bream in river. Inspected and passed 14 bags of oysters from the Moruya River, 8 bags Tomaga River; 18 baskets of fish shipped.
Inspector Benson.—Visited and inspected leases, and measured areas applied for at Wagonga River and Tuross Lake. Delivered leases Nos. 695, 707, 806, 459, 676, 723, 667, 1,350.

November.

Assistant Inspector Smithers.—Visited Merimbula Lake, Kiah River, and Panbula River. Great havoc is caused amongst foreshore oysters at Panbula by picnic parties. Measured areas at Broadwater. At Eden large numbers of kingfish in bay.
Acting Assistant Inspector Sutherland.—Observed mullet, whiting, bream, in river. Inspected and passed 19 bags of oysters from Moruya River; 1 bag used locally; 16 baskets of fish shipped.
Inspector Benson.—Visited and inspected Durras Lake and Tomaga River. Inspected leases and areas applied for at Clyde River and Cullendulla Creek. Delivered lease No. 801.

December.

Assistant Inspector Smithers.—Visited Bega River, Nelson Lake, Bernagui River, Wagonga River, Cultagee Lake. Seized 11 bags of oysters at Bittangabee, and sent them to Sydney as instructed.
Acting Assistant Inspector Sutherland.—Large shoals of salmon entered Moruya River. Inspected and passed 5 bags oysters from Moruya River; 2 bags used for local consumption.
Inspector Benson.—Visited and inspected Moruya River, Tuross River, Tomaga River. Inspected leases at Clyde River and Cullendulla Creek. Delivered leases Nos. 1,383 and 1,427.

GEORGE G. BENSON,
 Inspector, Southern Fisheries.

Assistant Inspector Smithers to Mr. Inspector Benson.

Sir,

Eden, 1 January, 1887.

I have the honor to forward you a report on the fisheries in the district of which I have the charge. I cannot report any increase of oysters by the fall of spat. I have failed to observe in any of the waters even a fair fall of spat. Panbula River, one of the best spat producing waters, has produced less spat during the past year than I ever noticed before. The blame must be put upon the shoulders of the leaseholders or permit holders under Fisheries Act, for they remove for market all oysters as soon as they are up to ring measurement, and of course in many cases before the oyster has come to maturity. If, therefore, the parent oyster be thus taken away, how can a supply of spat be obtained? We might as well sell all the fowls in our poultry yard as soon as they come to maturity, and then expect to have eggs to keep up our stock. Again, the lease applicants, with but few exceptions, make no provision whatever to gather spat, and then their cry is that oyster culture will not pay. I can only ask if agriculture would pay if it were treated in a like way.

The only approach to oyster culture which I have noticed is the transference of small shore oysters to deeper water till they are marketable. In regard to applications for oyster culture areas, I have noticed several areas in this district on which no culture was intended, the idea has been simply to pay the rent, get all the marketable oysters off and have done with it. In such cases the law does not reach the offender.

There has been a great increase in the number of whelks in some of the rivers, principally in the Nullica River. Assuming the spat supply sets in well during the present year, there will no doubt be a large supply of whelk oysters.

I call special attention to the destruction of mutton fish. This fish is not protected, and the Chinamen are fast destroying its existence on the coast line. This fish is dried and exported to China; one shipment alone weighed nearly half a ton, and sold in Sydney at 1s. 3d. per pound before shipment to China.

At the commencement of the year applications for oyster areas were numerous, but towards the end became gradually less. I look forward to an increase in the supply of oysters during the present year—there will be an increase in the supply of oysters—and also to oyster culturists taking a little more interest in their work and endeavouring to save all the spat by using collectors.

I have, &c.,

FREDK. W. SMITHERS.

Assistant Inspector Smithers to Mr. Inspector Benson.

Sir,

Eden, 1 January, 1887.

I beg to forward a short report concerning fish in the Eden District for the past year.

But little interest is manifested in the fishing industry. There are but few men with licenses here, and they have got disheartened with their work, as they frequently find it impossible to get rid of their fish, as there are no less than three private nets in use in this place owned by fourteen persons, and when they get a fair supply presents are made; this must do the licensed men harm. There is but little inducement to fishermen to ply their calling. I have noticed more young fish in these waters during the last year, especially up the rivers, and in all the lakes to Wagonga River. At the mouths of some of the lakes (which are closed to the sea during heavy weather) there may be seen tons of fish of all sizes trying to get out as the seas come over into the lake. The water in most of the lakes is only about half salt, and it is in these places where there appears to be the great quantity of young fish. The shoals have not been

so large as hitherto passing north and south. It is most singular that last year the whales were scarce and so were the shoals of fish. Schnapper has again been very scarce. I cannot account for such scarcity. I particularly notice red bream (young schnapper) are but seldom caught anywhere within miles of Eden. Whiting have been very scarce; perch (sea) very scarce. There were also bonito, black bream, travally, tailor, and blackfish, which were the most plentiful of all our long list of fishes. I am happy to state that the leather-jackets have almost entirely deserted us. I have not tried for schnapper well off shore as I have not the means to do it.

I may just mention that I have ridden alone 1,579 miles during the past year while on duty and found, as a rule, things tolerably right.

I have, &c.,
FREDK. SMITHERS.

APPENDIX K. Report on Inland Fisheries.

Assistant Inspector Wilshire's Report on Fisheries of Murray River and Tributaries.

Sir,

Deniliquin, 11 February, 1887.

In submitting my annual report for the past year on the fisheries in my district, I have the honor to announce that a decided increase of fish is discernible in all the rivers and creeks about here, and excellent sport has been obtained by the inhabitants of the district with lines during the past few months. In fact more fish have been caught by the townspeople than there have been for years.

This I attribute to the seizure and confiscation of several large bag nets, and to my carefully guarding against any being used during the fishing season, and also to the destruction of cormorants or stags since the 1st January, last year, to date. I have given receipts for no less than 3,829 heads of these destructive birds, and now small fish in thousands can be seen in all the rivers, creeks, and lagoons about here.

There are about twelve men engaged in fishing in this district, most of whom reside in Victoria, and it is with these men that I have the greatest difficulty in repressing illegal netting.

The principal species of fish in these waters are Murray cod, trout, gold and silver perch, silver and black bream; and a fair amount of all these fish have been caught with gill nets and lines during the past year.

The rivers are now falling so fast that few nets are being used, and most of the fishermen are using night lines; these lines are stretched right across the rivers, with ten or a dozen hooks on them, but as they only catch the large cod they are rather a benefit than otherwise.

I have endeavoured to prevent illegal netting all I could, but I have great difficulties to contend against, owing to the peculiar nature of the rivers and creeks here during flood time, and that is the time the most netting is done.

I respectfully enclose some suggestions for your consideration, which I think are really necessary for the protection of the fisheries here, and, if introduced into an amended Act, would, I believe, give general satisfaction to the people of the district. At present they derive no benefit whatever from the fish caught here, all of which are sent to the Melbourne markets.

I have, &c.,
OSBORNE WILSHIRE,
Assistant Inspector.

Suggestions for the protection of the Murray Fisheries, by Assistant Inspector Wilshire:—

1. That power be given to close from net fishing all waters within the counties of Cadell, Townsend, and Wakool, for a period not exceeding two years.
2. All fishermen to hold a license, as well as having their boats licensed.
3. No bag nets to be allowed.
4. No nets to be of less mesh than 4 inches.
5. No nets to be set within 14 feet of each side of water edge.
6. No nets to be set within 500 yards of each other.
7. Netting to be prohibited in all lagoons.
8. No nets allowed to be doubled or set together. (See No. 6.)
9. A spawning season to be proclaimed, and no netting allowed during that time.

Acting Assistant Inspector Nelson's Report on Lake George Fisheries.

Sir,

Bungendore, 8 December, 1886.

I beg to report that independent of my constant visits to Lake George, I have during the last week made a special inspection of the Lake George fisheries.

I find a large quantity of fine codfish being caught for sale by the fishermen holding licenses (throc), and others are contemplating starting from the first of the new year.

Although the waters of the lake have receded very much through the late dry seasons yet the fish are in fine condition and healthy.

I am glad to be able to say the late rains have almost brought the lake up to its usual level, and the creeks are now running bank high into the lake. I had great difficulty in returning home this morning.

The nets used by the fishermen are of the proper size.

It has been reported to me that some of the fishermen are in the habit of placing their nets across the mouths of the creeks running into the lake. I have kept strict watch over them but have not been able to catch them at present.

One difficulty I have to contend with is that I have no boat to get about the lake and into the mouths of the creeks. If you had a cheap boat, or even a second-hand one, to send me for this purpose, it would enable me to put a stop to illegal netting at once.

I also beg to suggest that, if procurable, a few bream and perch be sent to be placed in the creeks and lake, which should be closed against net fishing for twelve months.

I have, &c.,
FREDK. NELSON,
Actg. Asst. Inspector of Fisheries.

1887.

(THIRD SESSION.)

NEW SOUTH WALES.

FOREIGN DESERTERS' ACT, 1852.

(DESPATCH RESPECTING.)

Presented to Parliament by Command.

The Treasury, New South Wales,
28th October, 1887.

His Excellency the Governor directs the publication, for general information, of the following Despatch from the Principal Secretary of State for the Colonies, transmitting a copy of an Order of Her Majesty in Council extending the provisions of the "Foreign Deserters' Act, 1852," to Greece.

J. F. BURNS.

(Circular.)

Downing-street, 30th July, 1887.

Sir,

I have the honour to transmit to you, for publication in the Colony under your Government, a copy of an Order of Her Majesty in Council, extending the provisions of the "Foreign Deserters' Act, 1852," to Greece.

I have, &c.,
H. T. HOLLAND.

The Officer administering
the Government of New South Wales.

At the Court, Windsor, the 12th day of July, 1887.

Present :

THE QUEEN'S MOST EXCELLENT MAJESTY IN COUNCIL.

WHEREAS by the "Foreign Deserters' Act, 1852," it is provided that, whenever it is made to appear to Her Majesty that due facilities are or will be given for recovering and apprehending seamen who desert from British merchant ships in the territories of any foreign power, Her Majesty may, by Order in Council stating that such facilities are or will be given, declare that seamen, not being slaves, who desert from merchant ships belonging to a subject of such power, when within Her Majesty's Dominions, shall be liable to be apprehended, and carried on board their respective ships, and may limit the operation of such order, and may render the operation thereof subject to such conditions and qualifications, if any, as may be deemed expedient :

And whereas it has been made to appear to Her Majesty that due facilities will be given for recovering and apprehending seamen who desert from British merchant ships in the dominions and possessions of His Majesty the King of the Hellenes :

Now therefore Her Majesty, by virtue of the power vested in Her by the said "Foreign Deserters' Act, 1852," and by and with the advice of Her Privy Council, is pleased to order and declare, and it is hereby ordered and declared, that from and after the publication hereof in the London Gazette seamen, not being slaves, and not being British subjects, who within Her Majesty's dominions desert from merchant ships belonging to subjects of His Majesty the King of Hellenes, shall be liable to be apprehended and carried on board their respective ships : Provided always, that if any such deserter has committed any crime in Her Majesty's dominions, he may be detained till he has been tried by a competent court, and until his sentence, if any, has been carried into effect.

And the Secretary of State for the Home Department, the Secretary of State for the Colonies, and the Secretary of State for India in Council are to give the necessary directions herein accordingly.

C. L. PEEL.

1887-8.

NEW SOUTH WALES.

FOREIGN DESERTERS ACT, 1852.

(DESPATCH RESPECTING.)

Presented to Parliament by Command.

[CIRCULAR.]

Sir,

Downing-street, 9 January, 1888.

I have the honor to transmit to you, for publication in the Colony under your Government, a copy of an Order of Her Majesty in Council (29 December, 1887), extending the provisions of the "Foreign Deserters Act, 1852," to the Republic of Paraguay.

The Officer Administering
the Government of New South Wales.

I have, &c.,
H. T. HOLLAND.

At the Court at Osborne House, Isle of Wight, the 29th day of December, 1887.

Present :

THE QUEEN'S MOST EXCELLENT MAJESTY IN COUNCIL.

WHEREAS by the "Foreign Deserters Act, 1852," it is provided that whenever it is made to appear to Her Majesty that due facilities are or will be given for recovering and apprehending seamen who desert from British merchant ships in the territories of any Foreign Power, Her Majesty may, by Order in Council, stating that such facilities are or will be given, declare that seamen, not being slaves, who desert from merchant ships belonging to a subject of such Power, when within Her Majesty's dominions, shall be liable, to be apprehended and carried on board their respective ships, and may limit the operation of such Order and may render the operation thereof subject to such conditions and qualifications, if any, as may be deemed expedient :

And whereas it hath been made to appear to Her Majesty that due facilities for recovering and apprehending seamen who desert from British merchant ships in the territories of the Republic of Paraguay will be given under a Treaty between the Governments of Great Britain and Paraguay signed at Assumption on the 16th October, 1884 :

Now, therefore, Her Majesty, by virtue of the powers vested in Her by the said "Foreign Deserters Act, 1852," and by and with the advice of Her Privy Council, is pleased to order and declare, and it is hereby ordered and declared, that, from and after the publication hereof in the *London Gazette*, seamen, not being slaves (and not being British subjects), who desert from merchant ships belonging to the Republic of Paraguay within Her Majesty's dominions shall be liable to be apprehended and carried on board their respective ships: Provided always, that if any such deserter has committed any crime in Her Majesty's dominions he may be detained until he has been tried by a competent Court, and until his sentence (if any) has been fully carried into effect.

And the Secretary for State for the Home Department, the Secretary of State for the Colonies, and the Secretary of State for India in Council, are to give the necessary directions herein accordingly.

C. L. PEEL.

1887.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

FRUIT GROWING.

(PETITION FROM "N. S. WALES FRUIT-GROWERS' UNION.")

Received by the Legislative Assembly, 8 November, 1887.

To the Honorable the Speaker and the other Members of the Legislative Assembly of the Colony of New South Wales, in Parliament assembled.

The humble Petition of the undersigned fruit-growers in the Colony of New South Wales,—

SHOWETH :—

1. That the New South Wales Fruit-growers' Union, representing the fruit-growers of the county of Cumberland, where the fruit-growing industry of the Colony is considerably more developed than in all the other parts of New South Wales, has unanimously agreed on certain principles which they think should be embodied in an Act of Parliament, the principles agreed on being :—

- (1.) That rates necessary for the protection of the fruit-growing industry, against all sorts of animal, vegetable, fungoid pests, should be raised by bodies locally elected by the people who are to pay assessment, and that the expenditure of the rates so raised should be made by the same locally elected bodies or boards.
- (2.) That the administration of all law relating to fruit-growing should also be by the same locally elected bodies or boards.
- (3.) That the few attempts at local administration which have been made, such as the Stock and Pastures Protection Act, have been eminently successful in every part of the colony, whilst the principle of centralisation adopted in many other Acts has been one of the chief causes of their failure.
- (4.) That as certain noxious insects are now spreading amongst the orchards and vineyards of the county of Cumberland exclusively, any Act now passed should remain limited to that county until the extension of such Act be applied for by the growers of any other particular county.

For these reasons your Petitioners urge that your Honorable House may grant them such a measure of relief as may be just to their industry and conducive to the general interest of same in the whole of the colony.

Your Petitioners therefore pray that your Honorable House will be pleased to take into consideration the above premises.

And your Petitioners, as in duty bound, will ever pray.

Parramatta Fruit-growers' Union Rooms, October 1, 1887.

[Here follows 33 signatures.]

1887-8.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

GOVERNMENT PRINTING OFFICE.

(COST AND DESCRIPTION OF WORK DONE, FROM 1 JANUARY TO 31 DECEMBER, 1887.)

Ordered by the Legislative Assembly to be printed, 28 February, 1888.

ANNUAL RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 6th May, 1884, That there be laid upon the Table of this House annually, a Return showing,—

“ (1.) The total cost, wages, and material of the printing, bookbinding, photography, and lithography done for each Department of the Public Service, at the Government Printing Office, during each year ending 31st December.

“ (2.) A statement, in tabular form, showing the title of each book, pamphlet, and collection of photographs or lithographs published at the Government Printing Office during each year ending 31st December; such statement to show the number of copies of each produced, and the total cost of each set.

“ (3.) That a statement of the number of copies, and the cost of printing (labour and material), be printed on the title-page of each Return or Departmental Report laid before Parliament.”

(*Mr. Hutchinson.*)

NEW SOUTH WALES.

GUNPOWDER AND EXPLOSIVES RATES ACT OF 1884.
(AMENDED RATES AND CHARGES FOR LIGHTERING, DELIVERING, AND STORING EXPLOSIVES)

Presented to Parliament, pursuant to Act 40 Vic. No. 1.

The Treasury, New South Wales,
30th January, 1888.

AMENDED RATES AND CHARGES FOR LIGHTERING, DELIVERING, AND STORING OF EXPLOSIVES.

It is hereby notified, for general information, that in virtue of the provisions contained in clause 1 of the "Gunpowder and Explosives Rates Act of 1884," His Excellency the Governor, with the advice of the Executive Council, has been pleased to prescribe the following rates and charges for Lightering, Delivering, and Storing any Explosive within the meaning of the Act 40 Victoria No. 1, in substitution for the rates and charges prescribed in the third, fourth, and fifth Schedules to such last-mentioned Act, as amended by *Gazette* notices of 24th December, 1884, and 15th January, 1887,—such rates and charges to be levied and paid on and from 1st February, 1888.

J. F. BURNS.

Schedule of Amended Rates for Lightering, Delivering, and Storing of Explosives, made in virtue of the provisions of the "Gunpowder and Explosives Rates Act of 1884."

RATES OF LIGHTERAGE FROM SHIP OR VESSEL BY WHICH EXPLOSIVES ARE IMPORTED.

	£	s.	d.
For each barrel or package containing fifty-one pounds of any nitro-glycerine compound and upwards to one hundred pounds	0	0	6
For each barrel or package containing fifty pounds of any nitro-glycerine compound and under.....	0	0	4
Any explosive other than gunpowder to be liable to similar charges.			
For each package containing cartridges, small arm, at per cwt. or portion of cwt., gross weight	0	0	6
For each barrel or package containing fifty-one pounds loose gunpowder and upwards to one hundred pounds, and for each package of canister powder containing forty-eight pounds and upwards.....	0	0	4
For each barrel or package containing fifty pounds loose powder and under, and for each package of canister powder containing under forty-eight pounds	0	0	3
But if the rates shall in any case not amount to ten shillings, the minimum charge instead of the above rates shall be ten shillings.			

RATES OF CHARGES FOR DELIVERY OF EXPLOSIVES FROM MAGAZINES BY LAND AND WATER TRANSPORT, OR SEPARATELY, AS THE CASE MAY BE.

	£	s.	d.
For one or any number up to ten barrels or packages each containing not more than fifty pounds of any nitro-glycerine compound but not exceeding ten packages, to be conveyed by land and water at one time on each person's order, and to the same destination, the minimum charge to be	0	10	0
For every barrel or package each containing not more than fifty pounds of any nitro-glycerine compound in excess of ten packages conveyed by land and water, and to the same destination— at per package	0	0	6

£ s. d.

For one or any number up to ten barrels or packages each containing fifty-one pounds of any nitro-glycerine compound and up to one hundred pounds, but not exceeding ten packages, to be conveyed by land and water at one time on each person's order, and to the same destination, the minimum charge to be.....	1	0	0
For every barrel or package, each containing fifty-one pounds of any nitro-glycerine compound and up to one hundred pounds in excess of ten packages, to be conveyed by land and water, and to the same destination—at per package	0	1	0
And in cases of land carriage (exclusive of railway carriage) and water transport being separately done in either of the foregoing cases the charges shall be at half the rates hereinbefore stated.			
For each delivery to places more than two miles distant from the Magazines in Sydney or Newcastle harbours respectively, an extra charge per mile or portion of a mile by land and water to and from such place of delivery to be made for every fifty packages or portion thereof, say	0	2	6
For each delivery from any Magazine, other than those of Sydney and Newcastle aforesaid, for every fifty packages or portion thereof, a charge of—per mile to and from such Magazine	0	0	2
And for every hour or portion of an hour exceeding thirty minutes, during which the boats or vans may be detained	0	5	0
Any explosive other than gunpowder to be liable to similar charges.			
For one or any number up to ten barrels or packages, each containing not more than fifty pounds of gunpowder but not exceeding ten packages, to be conveyed by land and water at one time on each person's order, and to the same destination, the minimum charge to be	0	7	6
For every barrel or package, each containing not more than fifty pounds of powder in excess of ten packages, conveyed by land and water, and to the same destination—at cr package	0	0	6

£ s. d.		£ s. d.	
<p>For one or any number up to ten barrels or packages, each containing fifty-one pounds of gunpowder and up to one hundred pounds (also cartridges, actual gross weight of package), but not exceeding ten packages, to be conveyed by land and water at one time on each person's order, and to the same destination, the minimum charge to be</p> <p>For every barrel or package, each containing fifty-one pounds of powder and up to one hundred pounds (also cartridges, actual gross weight of package) in excess of ten packages, to be conveyed by land and water, and to the same destination--at per package</p> <p>And in cases of land carriage (exclusive of railway carriage) and water transport being separately done in either of the foregoing cases the charges shall be at half the rates hereinbefore stated.</p> <p>For each delivery to places more than two miles distant from the Magazines in Sydney or Newcastle Harbours respectively, an extra charge per mile or portion of a mile by land and water to and from such place of delivery to be made for every hundred packages or portion thereof, say</p> <p>For each delivery from any Magazine, other than those of Sydney and Newcastle aforesaid, for every hundred packages or portion thereof, a charge of--per mile to and from such Magazine</p>	<p>0 15 0</p> <p>0 1 0</p> <p>0 2 6</p> <p>0 0 2</p>	<p>And for every hour or portion of an hour exceeding thirty minutes, during which the boats or vans may be detained</p> <p style="text-align: center;">RATES OF STORAGE.</p> <p>For each barrel or package containing upwards of fifty pounds of any explosive (gunpowder and cartridges excepted) per week (any period under one week to be charged for as a week)</p> <p>For each barrel or package containing fifty pounds and under of any explosives (gunpowder and cartridges excepted) per week (any period under one week to be charged for as a week)</p> <p>For each barrel or package of cartridges the actual gross weight of which is upwards of fifty pounds, per week (any period under one week to be charged for as a week)</p> <p>For each barrel or package of cartridges the actual gross weight of which is under fifty pounds, per week (any period under one week to be charged for as a week)</p> <p>For each barrel or package containing upwards of fifty pounds of gunpowder, per week (any period under one week to be charged for as a week) ...</p> <p>For each barrel or package containing fifty pounds and under of gunpowder per week (any period under one week to be charged for as a week) ...</p>	<p>0 2 6</p> <p>0 0 6</p> <p>0 0 3</p> <p>0 0 4</p> <p>0 0 2</p> <p>0 0 2</p> <p>0 0 1</p>

1887.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

INSPECTION OF THEATRES.

(REPORT ON, BY COLONIAL ARCHITECT'S DEPARTMENT.)

Ordered by the Legislative Assembly to be printed, 8 November, 1887.

The Colonial Architect to The Colonial Secretary.

Sir,

Colonial Architect's Office, Sydney, 7 November, 1887.

In attention to the request conveyed by your note of 29th ultimo, respecting Theatres, &c., I have, &c.,

instructed one of my officers to visit the various buildings referred to, named in margin, and now do myself the honor to forward his reports on same.

JAMES BARNET,

Col. Archt.

Her Majesty's
Theatre Royal.
Criterion.
Standard.
Opera House.
Gaiety.
Academy of
Music.
Alhambra
Music Hall.

HER MAJESTY'S THEATRE.

This building has recently been opened, and has all the modern improvements. It is situated in Pitt-street, near the junction of Pitt-street with Market-street. A large hotel occupies the Pitt-street frontage.

THEATRE.

This theatre is divided into two parts, *i.e.*, stage and auditorium. The auditorium is divided from the stage by the proscenium wall, which is 27 in. thick, to iron girder, which carries the brickwork over the proscenium opening. The wall above the girder is reduced to 18 in., and is carried up through the roof. There are doorways in the wall on both sides of the stage into the various divisions of the house. The whole of the doorways are protected by iron-plate doors, made to swing either way.

STAGE.

The stage is constructed of wood, with various openings for the shifting of scenes. There is a basement and scene pit. Above the stage are the first, second, and third galleries for the flies, and above these there is a grid floor, on which are situated six 400-gallon tanks, with the necessary piping for use on the stage. Above the grid floor, on roof, is a large skylight for giving light during the daytime to the stage and galleries. On both sides of the roof there are three 18-in. revolving ventilators. There are also three large windows over the top gallery, which give good ventilation.

FIREPROOF CURTAIN.

The curtain is constructed of skeleton iron work, made to slide in a groove formed of iron, on the back of proscenium wall. On the skeleton frame is fixed an asbestos cloth curtain. The framework is counterbalanced with iron weights, but at present there are no means adopted for lowering or raising the curtain.

DRESSING-ROOMS.

The dressing-rooms are outside the main walls of stage. They are in attached wings with doorways from the stage on either side. They have also doorways as means of egress to Pitt-street, on the south, and the lane or right-of-way on the north. The dressing-rooms are first, second, and third floors. The various floors are reached by winding stairs constructed of wood. If smoke or fire entered the staircase of the dressing-rooms from the stage, the occupants could not escape. The dressing-rooms are all good and well ventilated.

ELECTRIC LIGHT.

The theatre is partly lighted with the electric light. The engine and dynamo are situated in the basement under the dressing-rooms, on the north-east of the theatre, and is outside of the main walls of the theatre. The engine is one of "Roby's" portable, but at present set on blocks of stone.

The floors of dressing-room over the engine are not rendered fire-proof, but are distant from the engine 12 or 14 feet.

AUDITORIUM.

The orchestra stalls and pit are situated on the ground floor. The whole area is filled with iron chairs with fold-up bottoms. The chairs behind the sixth row are called the pit. The passages are, in some places, narrow. There are not sufficient gangways.

Means of egress.—There are no less than six doors from this division of the house, all of which are wide, and open on to short flights of stairs. The egress is good.

DRESS CIRCLE.

This division of the house is situated in the first gallery over the stalls. The area is seated with iron fold-up bottom chairs. The space for the chairs is roomy. The gangways are wide, and the passages behind the rail is ample for standing room.

The entrance to the dress circle is from Pitt-street. A stair, 5 feet wide, ascends from the vestibule, off which there is a cloak-room and ladies' lavatory.

Means of egress.—From this division of the house are five doors, which are ample.

FAMILY CIRCLE.

This division of the house is situated in the second gallery, and is seated with iron chairs with fold-up bottoms. The gangways are four, and are sufficient. Behind the rail is a passage 4 feet 6 inches wide, which, with the passage outside the wall and adjoining the staircases, afford ample standing room for the people occupying the chairs.

Means of egress.—There are four doorways opening on to landings, from which stairs descend,—two of the stairs are 7 feet wide in straight flights, with short or narrow landings. Two of the stairs are 5 feet wide, and are winding. The stairs are on both sides of the house.

THIRD GALLERY OR AMPHITHEATRE.

This division of the house is seated with benches, the one raised above the other. The seats are only 2 feet from back to back. Outside of the area is a passage from 5 to 6 feet wide; this passage connects the four stairs from this division,—two stairs, 7 feet wide, in straight flights, and two stairs, winding, 5 feet wide. There are three gangways, each 2 feet 6 inches wide. N.B.—The winding stairs can be joined by the people from all divisions of the house. As these stairs are winding they are dangerous in the event of a panic. Two 4 feet 6 inch stairs join the 7 feet stairs from the family circle. The passages and staircases are all fireproof.

LAVATORIES.

Water-closet and urinals are connected to the various divisions of the house. They are well supplied with water, are well ventilated, and are clean and free from bad smell.

STAGE-BOXES.

There are stage-boxes connected to the various divisions of the house, all of which are entered from the different divisions, and have egress by the stairs which lead from the various divisions.

BARs.

From all divisions of the house, except the amphitheatre, there are passages and doorways leading to bars and saloons. These doorways have no fire-proof doors.

VENTILATION.

The ventilation from the various divisions of the house is good compared with most of the theatres.

The heated air is drawn off by means of a drum ventilator over the sunlight in centre of ceiling. There are also several spray ventilators for drawing off the vitiated air from the dress and family circles.

GAS-METERS.

There are three large gas-meters, all of which are placed where there is not the slightest ventilation, and where they are not easy of access; in fact, dangerous in case of fire.

Seating accommodation in the various parts of the auditorium:—

Amphitheatre seated for	450 adults.
Family circle	„	300 „
Dress circle	„	213 „
Stalls	„	500 „
Boxes	„	48 „
Total	1,511

The stairs are equal to twenty-four adults per foot width of stairs.

Outside openings clear of the theatre equal to 24½ per foot of opening.

The means of egress is sufficient.

THEATRE ROYAL.

In submitting a Report on the various Places of Public Amusement in Sydney, it will not be necessary to enter into detail of construction, as they are all built of brick; the framework of roof, floors, galleries, stage, and flies, are of Oregon pine; the roofs are covered with slate or corrugated iron, the principal entrance to which is from Castlereagh-street.

The stage of this theatre is not divided from the auditorium by means of a brick or fireproof wall; the division is only a stud and board partition, covered with canvas, which only extends from the stage to the ceiling, which is constructed of the same inflammable material, and without fireproof curtain.

Dressing-rooms, scene dock, property-rooms, and room for making oxygen gas, are situated in a temporary wood and corrugated iron building on the north side of the building with a large doorway for scene shifting, and a doorway for egress to dressing-rooms; these openings are said to be protected by iron fireproof doors, but this exists only in some.

The doors are constructed of thin sheet-iron, riveted to a skeleton iron frame. The doors shut on the outside of wall, but there are no fastenings. At the top of large door the brick wall is reduced $4\frac{1}{2}$ inches, thereby leaving an opening suitable for the spread of fire. There is a doorway under the stage communicating with the temporary buildings, without any door either of iron or wood. Access to the flies is by means of ladders, and from the dress circle and gallery. On the upper flies there is a 400-gallon tank, with a $1\frac{1}{2}$ -inch canvas hose and director; they will be of very little service in case of fire. There are several buckets and wet blankets on the flies and stage.

There are several skylights in roof over the stage, but no openings, louvered or otherwise, for the escape of smoke over the stage.

STALLS.

The stalls and pit are seated with fixed chairs, the gangways are not sufficient, and there are sixteen chairs in one continuous row all through this part of the house, which make it difficult to get out. The means of egress from this division of the house are sufficient, *i.e.*, by King-street and right-of-way on the north side of the theatre.

DRESS CIRCLE.

The dress circle is the first gallery over the pit, the ingress to which, by a wide entrance from Castlereagh-street, are stairs 6 feet wide; there is no handrail on the wall side of this stair. The means of egress from this part of the house is somewhat obstructed by side tables and garden chairs in the passage or lobby.

FAMILY CIRCLE.

This division of the house is the gallery above the dress circle; the seats are fixed on benches in the form of an amphitheatre; the means of egress is by a passage 3 feet wide, stairs 3 feet 10 inches wide, the treads of which are 9 inches wide, and risers 8 inches. This stair is dangerous. There is also an escape stair 3 feet 10 inches wide, but is reduced to 3 feet 4 inches in width at a certain place where a ventilating flue comes up the wall.

The back of the family circle is open to the passage, and if a panic occurred the people would jump over and obstruct the passage.

The means of egress from this part of the house is far from being sufficient, and in my opinion very dangerous.

VENTILATION.

This theatre is very defective in ventilation; the artificial means are very crude; there is no mechanical means in use for either supply or exhaust; there is no portion of this house that is fireproof; if a fire takes place a few seconds can only pass when all parts will be in flames.

The auditorium, passages, and staircases are in need of repair and renovation, and the words, "This way out," should be painted on all doors.

All divisions of the house are seated for 1,441 adults.

The door-openings to street gives 42 adults per foot of opening.

CRITERION THEATRE.

This building, which is of recent construction, is situated at the junction of Pitt and Park streets. There are entrances to the various parts of the house from these streets.

STAGE.

The stage is divided from the auditorium by a 14 in. thick brick wall which is carried up from the rock to 12 or 14 feet above the roof of the auditorium. The brick-work is supported over the proscenium opening by means of a wrought-iron girder. There are openings to the various parts of the house through the wall. No fire-proof doors are provided. Some of the openings have no doors of any kind. Over the roof of stage is a large sky-light with louver openings which are of little value. There is no fire-proof curtain on the proscenium opening. Egress from the stage is very defective.

UNDER THE STAGE.

There is a basement under the stage, with scene pit. This place is lumbered up with property sent down through the traps on stage floor. There is an escape door on each side to the basement, under the floor of auditorium.

DRESSING-

DRESSING-ROOMS.

Dressing-rooms and rooms for supernumeraries, are situated in the basement under the auditorium. There is an alley-way encircling the rooms. The doors to rooms have small fan-lights. The rooms are of various sizes, and are divided from each other by wood partitions. In this basement there are five water-closets and three urinals. There is no light to the rooms except gas. The ventilation is very defective, and a disagreeable smell pervades the whole area. In a room in this basement are situated the gas-meters and the tanks for oxygen gas; there is neither daylight or ventilation to this place. When the door was opened the smell arising nearly made me sick.

I would not be surprised to hear of an accident arising from these rooms. When this building was inspected a grating was recommended to be placed in the floor of passage near the entrance door to stalls. This recommendation has been completely ignored, by so doing it may result some time in loss of life.

ORCHESTRA.

The orchestra is under the front of stage. When the gas is lit the heat must be unbearable.

STALLS.

This division of the house is on the ground-floor; seats, fixed iron chairs with fold-up bottoms. The means of egress is to Pitt and Park Streets, and is sufficient. A considerable portion of the stall seats are under the gallery which forms the dress circle. The ceiling is very low.

DRESS CIRCLE.

This division of the house is situated in the first gallery over stalls, entrance to which is from Pitt-street. The seats are iron chairs with folding-up bottoms. There is sufficient room in the gangways and passages. There are attached to the dress circle ladies' cloak-room, ladies' and gentlemen's lavatories, all of which are in good condition. But the gentlemen's lavatories are not well ventilated; they smell of carbolic and disinfectants.

The means of egress from this division is satisfactory.

FAMILY CIRCLE.

This division is situated in the second gallery, the entrance to which is from Park-street by a stone stair of several short flights. There is also an escape stair on the opposite side of the theatre. This division of the house is seated in the form of an amphitheatre. The means of egress is not good. There are urinals connected with this division; they are kept clean, but smell rather strong from want of ventilation.

SECOND GALLERY.

This division of the house is only a more elevated continuation of the family gallery; it is divided by a barrier rail. The entrance to gallery is a continuation of the stair to family circle. The stair is of wood. There is also an escape stair on the opposite side of the house similar to the stair just described.

The means of egress from the gallery and family circle is by the same stairs, which are reduced in width at certain landings to 3 ft. 6 in. and 2 ft. 6 in. The means of egress is not sufficient.

VENTILATION.

The ventilation of the various parts of the house is very defective; mechanical means have been introduced, three "Aeolus" spray machines are placed in the rooms of the basement, the suction ends of tubes are in the alley-way of basement; the vitiated air is drawn from the basement and distributed over the stalls and the dress circle. There are also two machines drawing off the vitiated air from the stalls and dress circle, and discharging the air into the urinals attached to the stalls. This vitiated air must find its way back to the parts of the house from which it was drawn, carrying with it a proportion of the vitiated air from the urinals and closets.

The stairs and passages are constructed of fire-proof materials.

The various divisions of the house, stage, dressing-rooms, passages, and stairs, water-closets, and urinals are in a good state of cleanliness, but smell rather strong of disinfectants.

The Theatre is seated for—

Stalls	314
Dress circle	138
Family circle	210
Gallery	329
												<hr/>
Total	991

Means of egress from the various places—

Stalls, doorways	15 feet, equal to 21 persons per foot.
Dress circle	5	" " 27 " "
Family circle stairs	6	" " 89 " "
The three street-doors	16	" " 62 " "

STANDARD THEATRE.

This theatre is situated in Castlereagh-street. The principal entrance and side entrance are from the street. It is not occupied at present.

Considerable alterations have been made to this building since my inspection in June, 1886.

STAGE.

The stage is divided from the auditorium with a proscenium of wood and canvas, continued to the line of ceiling; a temporary building of wood and iron has been constructed in the small and limited area at the back with openings formed in the back wall at back of stage; the temporary building is used for a scene dock and a property room; the openings are not enclosed with doors; this building obstructs the light and ventilation to the dressing rooms—also the urinals, which are for the use of the public. The area under the stage is at present filled with rubbish, and has no ventilation; it is stifling and dangerous to health.

DRESS CIRCLE.

The dress circle has been very much altered in shape, but its seating accommodation has not been much increased, only fourteen additional seats. The means of egress from the dress circle has been altered by three or four additional steps.

STALLS AND PIT.

The seating accommodation and means of egress has not been altered. Egress is by the principal entrance and doors, opening on the right of way at side.

VENTILATION.

The ventilation provided for the theatre is by windows on the north side only. The southern wall is blank, no opening whatever. There are no other means provided for ventilating the building.

The building is lighted by gas, which is protected on the stage and dressing-room with wire netting.

WATER HYDRANT.

There is a 2-in. hydrant with a hose on stage, also on gallery, but there is no tank on the roof. The building at present is clean, but requires renovation.

The dress circle will seat	220
„ stalls	„	308
„ pit	„	482
									<hr/>
									960

Door opening to street 19 ft. 3in; door opening gives forty-six persons per foot of opening.

OPERA HOUSE.

This theatre is situated near the corner of King and York streets, an hotel occupying the corner entrances to the theatre are from King and York streets.

The theatre is on the first floor; a row of shops occupy the ground floor in King-street.

STALLS AND PIT.

The stalls and pit are on the first floor; the gallery is termed the dress circle, the entrance to which is from York-street; the doors on street line are made portable, and are removed during entertainments.

The stairs and means of egress from this portion of the house are defective; the escape stair has no hand rails, and is a dangerous stair; the entrance stair is contracted from 4 feet 6 inches to 3 feet 4 inches by the erection of a ticket office.

Stairs and passages are of wood, with canvas and paper decorations.

The seats are iron fixed chairs; the passages and gangways are sufficient.

STALLS.

The entrance to which is King-street, by a long passage and stair 5 feet wide; there is also another stair 2 feet 9 inches wide ascending from the same passage; these are the only means of egress from this portion of the house.

PIT.

The entrance to pit is as described for stalls, stair 5 feet wide; there is also an escape on to passage from the dress circle, and a door on the barrier between the stalls and pit, but both of these doors are kept locked.

BALCONY.

On the north side and over the footpath to the line of kerbstone is a large balcony, the floor of which is on a level with the floor of stalls, doors open on to the balcony; from the balcony are two trap-ladders, which can be lowered by means of a crab-winch simultaneously; the stairs are remarkable for lightness of construction, and there is only 4 feet headway.

STAGE.

STAGE.

The stage is divided from the auditorium by a brick wall, which is only carried up to the line of ceiling on the sides; the archway and decorations of the proscenium are of wood and canvas.

The floors and paint-gallery are constructed of Oregon pine. There is an accumulation of rubbish on the flies and over a portion of the ceiling of the auditorium.

The rubber tubing connecting the gaslights on the flies is in a decayed state, and in some places dangerous. The footlights of the stage are very improperly protected.

There is no fireproof curtain.

DRESSING-ROOMS.

The dressing-rooms are situated off the stage on the south-east corner, they are of a temporary character, so are the stairs leading to same, and as the only means of escape is by this stair, in the event of fire on the stage escape from the dressing-rooms is impossible.

The stairs leading from the various places of the house are insufficient and dangerous by reason of being constructed of wood.

The water-closets and urinals are situated on the ground floor and are under the stairs; there is little or no ventilation; the water-closets and urinals are defective.

Ventilation from the various places of the house is by the open doors on the balcony and the windows above the level of the dress circle. The lower portion of the house, principally the pit, is very defective in ventilation, it being all on the north side of the house.

MEANS OF EGRESS.

The means of egress from this theatre are all on the one side of the house, and that furthest from the street. The words "This way out" are not painted on any of the doorways. On some doors a loose ticket is pinned up, with the words "This way out."

RENOVATION, &c.

This theatre has much need of alterations and renovation in all parts.

GAIETY THEATRE.

This theatre is situated in Castlereagh-street; the principal and stall entrances are all from this street. The theatre has recently been remodelled and renovated.

The stage has been altered. A new proscenium has been constructed of wood, covered on the side next stage with sheet-iron, and is not continued through the ceiling, and is not fireproof, neither is there a fireproof curtain.

The area under the stage has been excavated to a depth of 8 feet from under side of stage floor, formed of tar paving; at present it is all clear of rubbish.

DRESSING-ROOMS.

The cottages on the north side have been converted into dressing-rooms. The means of egress from stage to dressing-rooms are good.

A temporary building has been constructed adjoining the theatre on the north side, of wood, covered with corrugated iron, to be used as a property-room and scene dock; there are openings in this wall, which separates the temporary building from the theatre, enclosed with light wood doors covered with sheet-iron. This is a very primitive attempt to render the place fireproof.

The footlights, gas-fittings on or about the stage are protected with wire netting, and most fittings are secure.

DRESS CIRCLE.

The dress circle is situated in the gallery, and has been remodelled; the accommodation is good; a new stair has been constructed to give increased egress; there are also doors opening into rooms from which egress is by a stair in the private part of the building; on all doors are painted the words "This way out."

STALLS AND PIT.

The stalls and pit are on the ground-floor; this division of the house has also been remodelled; the gangways and passages have been increased in width, and new escape-doors have been formed on the north side; the ground-floor of a cottage has been converted into a passage 11 feet wide opening on to a right-of-way to the street, and clear of the theatre. The means of egress are sufficient.

VENTILATION.

The ventilation of this theatre is good. There are doors and large windows on both sides of the building by which a good current of air is obtained. Hydrant with sufficient hose has been provided, both on the stage and auditorium; some of the gas jets are rather close to the ceilings in the passage.

If the proscenium wall had been constructed of brick and carried through the roof and provided with a fire-proof curtain, this theatre would have been the safest of any in the city.

MEANS OF EGRESS.

The building will seat 600 adults; the door openings are equal to 30 persons per foot of doorway, which is ample.

ACADEMY OF MUSIC.

This theatre or music hall is situated in Castlereagh-street; principal and side entrance is from this street. The building is old and dilapidated. It is at present closed to the public.

Considerable alterations are contemplated, and will be made before it is again opened for the public.

ALHAMBRA MUSIC HALL.

THE building was erected for a bazaar or auction room, and afterwards converted into a music hall, and when reported upon in July, 1884, it was called the Haymarket Academy. The building has undergone considerable alterations in the various divisions of the house.

STAGE.

The stage, although no larger than when reported upon, has been fitted up with the usual wood and canvas proscenium, with arrangements for scene-shifting.

DRESSING-ROOM.

The dressing-rooms now connected with the hall are a row of stone cottages at the back of the theatre, and are detached. There are two doors opening off the stage as means of egress.

DRESS CIRCLE.

The dress circle is situated on the ground floor in front of stage, it has been recently reseated with fold-up bottom chairs, they are 2 ft. 2 in. from back to back, which is 4 in. less than they should be.

The seats along the division wall are very narrow, only 15 in. wide; the gangways are not sufficient in width, and on the side next to escape door there is no gangway; the seats are fourteen in one row at present seated for 234; should not be more than 147. Means of egress side door, 5 ft. 6 in., and entrance passage, 3 ft. 3 in.; the means of egress is sufficient.

STALLS.

The floor of stalls has been raised and sloped, seated at present with fixed forms without backs. The forms are very close together. This division seats 340, which should be 240. The means of egress would be sufficient if seats were properly placed, with sufficient gangways.

GALLERY.

The gallery has been raised, having now a much greater slope. The seats are fixed forms without backs, seated to hold 320 persons, which should be 135. The means of egress would be sufficient.

The theatre is lighted from a lantern light in roof, a portion of which has shutters which lift up for ventilation. The gallery is the best ventilated place in the house. The stalls are very badly ventilated; the northern wall has no openings; the only ventilation is from the side escape-doors, or from what may come in by the side passage.

GAS.

The theatre is lighted with gas; the footlights and all brackets are protected with wire netting. The two gas meters are in a recess under the stage, which is locked; beside the meter are three buckets of water, which could not be got if wanted.

There is a 2-inch hydrant on the stage with 36 feet of hose; there is no hydrant in the auditorium. No buckets are provided for any part of the building; no tanks are provided for a supply of water, only a small tank for use of dressing-rooms.

WATER-CLOSETS, &c.

The water-closets and urinals are in good order, and are kept clean.

The building is in a fair state of cleanliness; the front of gallery is only 2 feet high; there is a rail required to prevent accident. Renovation is necessary to the building, at present seated for,—

Dress circle	234
Stalls	340
Gallery	320
								894

Door-opening, 25 feet; which is almost equal to thirty-five persons per foot opening.

1887.
(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

JEREMIAH SHEA.
(PETITION OF.)

Received by the Legislative Assembly, 2 November, 1887.

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Jeremiah Shea, of Hanging Rock, near Nundle, gold-miner,—

RESPECTFULLY SHOWETH:—

That your Petitioner at the age of seventeen was convicted of stealing a roll of silk from a shop door, of which crime he solemnly assures your Honorable House that he was entirely innocent, and he ventures to appeal to his life ever since as a proof of this.

That your Petitioner, on this conviction, was sent out to this Colony in year 1818, in the ship "Morley," on her second voyage, and was then assigned to Captain William Cox, of Clarendon, near Windsor, and was then sent to a run called Manar, in the Mudgee district, as a stockman. Whilst there he endured great hardships, and underwent many trials from encounters with the natives, in one of which he was tomahawked and laid up in consequence for several months, but he always succeeded in protecting his master's property.

That your Petitioner remained his full time of seven years with Captain Cox without punishment and without even a complaint being made against him, and then received his freedom.

That from that time to the present, when he is eighty-eight years of age, he has never been before a Court or a Magistrate for the slightest offence.

That your Petitioner is informed and verily believes that under the Regulations then in force he was entitled, on receiving his freedom, to a grant of thirty acres of land, or, if he had returned to England with his certificate of freedom, to a pension of four pence a day, and that he has never received that grant if he is so entitled to it.

That your Petitioner was the person who first discovered gold on the northern gold-fields at Swampy Creek, Hanging Rock, in the year 1852, and that he has never received any acknowledgment of this important discovery, although he is informed that it has been the rule to make some acknowledgment to persons who have discovered gold-fields.

That your Petitioner being now so aged and somewhat infirm is no longer able to earn his living as he has been hitherto accustomed.

That your Petitioner humbly conceives that from his faithful service, and his undeviating good conduct, and from the fact that his claims for consideration have been in no way recognized, he has the right humbly to approach your Honorable House and to ask that his case may be considered.

Your Petitioner therefore humbly prays that your Honorable House will take the circumstances detailed in the foregoing petition into careful and favourable consideration and so deal with your Petitioner as to your Honorable House may seem just and right.

And your Petitioner, as in duty bound, will ever pray, &c.

JEREMIAH SHEA.

Sydney, 2 November, 1887.

1887.

(THIRD SESSION.)

NEW SOUTH WALES.

JUBILEE COINAGE.

(DESPATCH RESPECTING.)

Presented to Parliament by Command.

The Treasury, New South Wales,
4th August, 1887.

His Excellency the Governor directs the publication, for general information, of the following Proclamation, which appeared in the London Gazette of 17th May last, with reference to the Coinage.

J. F. BURNS.

By the Queen.

A PROCLAMATION.

VICTORIA, R.

WHEREAS by an Act passed in the thirty-third year of Our reign, intituled "An Act to consolidate and amend the law relating to the Coinage and Her Majesty's Mint," it is amongst other things enacted.

That We, by and with the advice of Our Privy Council, shall from time to time by Proclamation determine the design for any coin.

We have, therefore, thought fit to order that certain of the coins made at the Mint, mentioned in the first schedule to the aforesaid Act of the weight and fineness specified in that schedule, shall bear designs as follows:—

That every Five Pound Piece should have for the obverse impression our effigy, with the inscription "Victoria D. G. Britt: Reg: F. D.," and for the reverse the image of Saint George armed, sitting on horseback, attacking the Dragon with a sword, and a broken spear upon the ground, and the date of the year, with a graining upon the edge; and that every Two Pound Piece should have the same obverse and reverse impression and inscription in all respects as the Five Pound Piece, with a graining upon the edge; and that every Sovereign should have the same obverse and reverse impression and inscription in all respects as the Five Pound Piece, with a graining upon the edge; and that every Half Sovereign should have for the obverse impression the aforesaid effigy, with the inscription "Victoria Dei Gratia," and for the reverse the ensigns armorial of the United Kingdom contained in a garished shield surmounted by the Royal Crown, with the inscription "Britanniarum Regina Fid: Def:" and the date of the year, with a graining upon the edge; and that every Crown should have the same obverse and reverse impression and inscription in all respects as the Five Pound Piece, with a graining upon the edge; and that every Half-crown should have for the obverse impression the aforesaid effigy, with the inscription "Victoria Dei Gratia," and for the reverse the ensigns armorial of the United Kingdom contained in a plain shield surrounded by the Garter, bearing the motto "Honi soit qui mal y pense," and the Collar of the Garter, with the inscription "Britanniarum Regina Fid: Def:" and the date of the year, with a graining upon the edge; and that every Florin should have for the obverse impression the aforesaid effigy, with the inscription "Victoria Dei Gratia," and for the reverse the ensigns armorial of the United Kingdom contained in four shields arranged crosswise, each shield crowned, and between the shields four sceptres surmounted by orbs, a thistle and a harp, and a Star of the Garter in the centre, with the inscription "Britt: Reg: Fid: Def:" and the date of the year, with a graining upon the edge; and that every Shilling should have for the obverse impression the aforesaid effigy, with the inscription "Victoria Dei Gratia Britt: Regina F. D.," and for the reverse the

ensigns armorial of the United Kingdom, contained in a plain shield surrounded by the garter bearing the motto "Honi soit qui mal y pense" and the date of the year with a graining upon the edge; and that every Sixpence should have the same obverse and reverse impression and inscription in all respects as the shilling, with a graining upon the edge; and that certain other pieces of silver money called "The Queen's Maundy Monies," of fourpence, threepence, twopence, and one penny, should have for the obverse impression the aforesaid effigy, with the inscription "Victoria Dei Gratia Britt: Regina F. D.," and for the reverse the respective figures "4," "3," "2," "1" (according to the denomination or value of the piece) in the centre, with the date of the year placed across the figure, and encircled by an oak wreath, surmounted by the Royal crown, with a plain edge:

And whereas by the aforesaid Act it is also enacted, that it shall be lawful for Us, by and with the advice of Our Privy Council, from time to time, by Proclamation, to determine the denominations of coins to be coined at the Mint, and it is by the said Act provided, that any coin of gold, silver, or bronze, of any other denomination than that of the coins mentioned in the first schedule to the aforesaid Act, which is hereafter coined at the Mint shall be of a weight and fineness bearing the same proportion to the weight and fineness specified in that schedule as the denomination of such coin bears to the denominations mentioned in that schedule.

We have therefore further thought fit to order that a new coin, to be called a Double-Florin, should be coined, of the standard weight of 340.09090 grains, and of the fineness of thirty-seven-fortieths fine silver and three-fortieths alloy, and should pass and be received as current and lawful money of the United Kingdom of Great Britain and Ireland at the rate of four shillings or one-fifth of a Pound; and that every such coin should have the same obverse and reverse impression and inscription in all respects as a Florin, with a graining upon the edge.

And whereas pieces of money of the above descriptions respectively have been coined at Our Mint, and will be coined there, in pursuance of orders that We have given for that purpose, We have therefore, by and with the advice of Our Privy Council, thought fit to issue this Our Royal Proclamation; and We do hereby ordain, declare and command that the said pieces of money respectively so coined and to be coined as aforesaid shall be current and lawful money of the United Kingdom of Great Britain and Ireland, and that this, Our Royal Proclamation, shall come into operation on the date hereof.

Given at Our Court at Windsor, this thirteenth day of May, in the year of our Lord, one thousand eight hundred and eighty-seven, and in the fiftieth year of Our reign.

GOD SAVE THE QUEEN!

1887-8.

NEW SOUTH WALES.

JUBILEE COINAGE.

(NEW DESIGN FOR SIXPENCE—DESPATCH.)

Presented to Parliament by Command.

[Circular.]

Sir,

Downing-street, 23rd December, 1887.

With reference to my Circular Despatch of the 13th of August last, I have the honour to transmit to you, for the information of the Colony under your Government, the accompanying copy of an Order of the Queen in Council (28 November, 1887), approving the Draft of a Royal Proclamation for giving currency to certain silver coins called "Sixpences," with a new design therein described, and directing the coinage of such coins at the Royal Mint.

I request that you will take steps to publish the Proclamation and Order in Council in the usual manner in the Colony under your Government.

I have, &c.,

H. T. HOLLAND.

The Officer Administering
the Government of New South Wales.

At the Court at Windsor, the 28th day of November, 1887.

Present :

THE QUEEN'S MOST EXCELLENT MAJESTY IN COUNCIL.

WHEREAS there was this day read at the Board the Draft of a Proclamation for giving currency to certain silver coins, called "Sixpences," with a new design therein described :

Her Majesty having taken the same into consideration, was pleased, by and with the advice of Her Privy Council, to approve thereof, and to order, and it is hereby ordered, that the coins described in the Proclamation be coined at Her Majesty's Mint :

And the Lords Commissioners of Her Majesty's Treasury are to give the necessary directions accordingly.

C. L. PEEL.

Draft Proclamation referred to in the foregoing Order.

By the Queen.

A Proclamation.

WHEREAS by "The Coinage Act 1870" it is (amongst other things) enacted that it shall be lawful for Us, by and with the advice of Our Privy Council, from time to time by Proclamation to determine the design for any coin :

Now therefore We have, by and with the advice of Our Privy Council, thought fit to determine and do order that certain coins called "Sixpences," made and to be made at the Mint and mentioned in the first Schedule to the aforesaid Act, of the weight and fineness specified in that Schedule, shall bear designs as follows :—

For the obverse impression Our effigy with the inscription "Victoria Dei Gratia Britt: Regina F.D.," and for the reverse the words "Six-pence" placed in the centre of the piece, having an olive branch on one side and an oak branch on the other, surmounted by the Royal Crown, and the date of the year between and below the branches, and a graining upon the edge.

And whereas coins of the above description have been coined at Our Mint, and will be coined there in pursuance of Orders which We have given for that purpose, We have, therefore, by and with the advice of Our Privy Council, thought fit to issue this Our Royal Proclamation, and We do hereby ordain, declare, and command that the said coins so coined, and to be coined as aforesaid, shall be current and lawful money of the United Kingdom of Great Britain and Ireland, and that this Our Royal Proclamation shall come into operation forthwith on the date thereof.

Given at Our Court at Windsor, this twenty-eighth day of November, in the year of Our Lord one thousand eight hundred and eighty-seven, and in the fifty-first year of Our Reign.

God save the Queen.

1887-8.

NEW SOUTH WALES.

LANDS FOR PUBLIC PURPOSES ACQUISITION ACT.

(RESUMPTION OF LAND FOR PUBLIC CEMETERY AT SINGLETON.)

Presented to Parliament, pursuant to Act 44 Vic. No. 16.

NOTIFICATION OF RESUMPTION OF LAND UNDER
44 VICTORIA No. 16.

NEW SOUTH WALES, } By His Excellency The Right Honourable
to wit. } CHARLES ROBERT, BARON CARRINGTON,
a Member of Her Majesty's Most
(L.S.) Honourable Privy Council, Knight
CARRINGTON, Grand Cross of the Most Distinguished
Governor. Order of Saint Michael and Saint
George, Governor and Commander-in-
Chief of the Colony of New South
Wales and its Dependencies.

WHEREAS I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, have duly sanctioned the carrying out of certain works for and in connection with the establishment and construction of a Public Cemetery at Singleton, in the said Colony, for and towards the completion of which said works public funds are available; and whereas the lands hereinafter described are required for the construction of the said Works: Now I, the Governor of the said Colony, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf given to or vested in me by the "Lands for Public Purposes Acquisition Act," do, by this notification published in the Gazette and in a newspaper, that is to say, in the "Singleton Argus," circulated in the Police District wherein the said lands are situated, declare that the lands hereinafter described have been resumed for the public purpose hereinafter mentioned, that is to say, for and in connection with the establishment and construction of a Public Cemetery at Singleton, in the said Colony, to the intent that upon the publication of this notification in the Gazette, the legal estate in the said lands shall forthwith be vested in the Minister for Public Works and his successors on behalf of Her Majesty for the purpose of the said last-mentioned Act, for an estate of inheritance in fee-simple in possession, freed and discharged from all trusts, obligations, estate, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever, and to the intent further that the legal estate therein, together with all powers incident thereto or conferred by the said Act, shall be vested in the said Minister as a trustee with the powers stated in the said last-mentioned Act: And I declare that the following are the descriptions of the lands hereinbefore referred to, that is to say:—

1. All that piece or parcel of land situate near Singleton, parish of Whittingham, county of Northumberland, containing an area of 9 acres 0 roods 38½ perches, forming part of J. Earl's (now E. S. Fawcett's 1,500 acres): Commencing at the south-east corner of the present Presbyterian Cemetery; and bounded thence on the north by part of the northern boundary of J. Earl's (now E. S. Fawcett's) 1,500 acres bearing north 89 degrees 49 minutes east 18 chains 33½ links; thence on the east by a line bearing south 5 chains 7 links; thence on the south by a line bearing west 18 chains 33½ links; and thence on the west by a line bearing north 5 chains 1 link, to the point of commencement.

2. All that piece or parcel of land situate near Singleton, parish of Whittingham, county of Northumberland, containing an area of 18 acres 3 roods 30½ perches, forming part of A. M'Dougall's (now G. Loder's) 900 acres: Commencing on the south-eastern side of the road 1 chain wide from Warkworth to Singleton, at the north-west corner of the present Presbyterian Cemetery; and bounded thence on part of the south by the north boundary of that cemetery bearing east 9 chains 24½ links; thence on the west by the east boundary of that cemetery bearing south 3 chains 99 links to the southern boundary of A. M'Dougall's (now G. Loder's) 900 acres; thence on the remainder of the south by part of that boundary bearing north 89 degrees 49 minutes east 18 chains 33½ links; thence on the east by a line bearing north 8 chains 33 links; thence on the north by a line bearing west 25 chains 51½ links to the aforesaid road; and thence on the north-west by part of the south-eastern side of that road bearing south 25 degrees 12 minutes west 4 chains 80½ links, to the point of commencement.

In witness whereof I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this thirty-first day of December, in the year of our Lord one thousand eight hundred and eighty-seven, and in the fifty-first year of Her Majesty's Reign.

By His Excellency's Command,

JOHN SUTHERLAND.

GOD SAVE THE QUEEN!

1887.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MERCANTILE BROKERS.

(PETITION FOR LEGISLATION IN REGARD TO.)

Received by the Legislative Assembly, 14 December, 1887.

To the Honorable the Legislative Assembly of New South Wales.

The humble Petition of the undersigned Merchants and Mercantile Brokers, of Sydney,—

RESPECTFULLY SHOWETH:—

That we, the undersigned Merchants and Mercantile Brokers of Sydney, are mutually engaged in transactions of great magnitude, in which the utmost confidence is required, and in which honest integrity and ability on the part of the brokers are most essential in the interests of the public.

Your Petitioners are of opinion that the time has arrived when the Mercantile Brokers of Sydney should be regulated by legislative enactment by the issue of licenses, with power to refuse or withdraw on such a basis that whilst affording protection to the public against any dishonest proceedings on the part of the broker, it would be a guarantee of good character, and encourage and foster legitimate transactions, and ensure that confidence which is most necessary in all matters of a fiduciary character.

Your Petitioners, therefore, pray that your Honorable House will pass such a measure as may effect the above objects.

And your Petitioners, as in duty bound, will ever pray, &c.

[Here follow 54 signatures.]

1887.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MR. JOHN GARSEED.

(CORRESPONDENCE.)

Ordered by the Legislative Assembly to be printed, 25 November, 1887.

RETURN to an *Order* adopted by the Honorable the Legislative Assembly of New South Wales on the 8th November, 1887, That there be laid upon the Table of this House,—

“(1.) Copies of the letters addressed to the Attorney-General by Mr. John Garsed on dates 8th June and 21st July, 1887; also, Departmental reply “from the Attorney-General’s Department, dated the 14th September, 1887, “having reference to Mr. John Garsed.”

(Mr. Hurley.)

J. Garsed, Esq., to The Attorney-General.

O.H.M.S.—The Queen against John Garsed relative to a bill of Exchange for the sum of £680 15s. 3d., tried 5th October, 1859.—Crown Prosecutor, Mr. A. T. Holroyd.

Helsarmel, Leichhardt, 21 July, 1887.

To the Honorable Bernhard R. Wise, Esq., M.L.A., Attorney-General,—

Sir,

I respectfully call your serious attention to the sudden death of Mr. Arthur Todd Holroyd on the 15th June, 1887.

“Truth is a stubborn thing to deal with.”

On Thursday, the 9th of June, 1887, I, in company with Mr. John Hurley, M.L.A., by appointment went to your office; I took with me a parcel consisting of paper writings and a book, the contents of which are printed papers, printed from time to time by order of the Legislative Assembly, and includes two Progress Reports A, I had with me, endorsed—

In the Police Court, City of Sydney.

THE QUEEN on the prosecution of Archibald Ashdown against John Garsed. Copy, information for perjury.

This information was sworn by Archibald Ashdown before Mr. D. Forbes, J.P., on the 31st of March, 1858, at foot.

Summons to issue returnable on Monday.—D.F.

Bench decline to enter into the case.

7th April, 1858.

D. FORBES, J.P.

RANDOLPH NOTT, J.P.

At this early stage Archibald Ashdown and his counsel, Mr. Holroyd, had brought the case to a dead lock.

I will briefly refer to the substance of said information and use figures:—

New South Wales, City of Sydney, to wit—Be it remembered that on this 31st March, 1858, in the City of Sydney, in the Colony of New South Wales, Archibald Ashdown, of Sydney, appears personally before me, the undersigned, and on his oath informs me, that heretofore, to wit, on the 9th of February, 1858, a certain action was commenced in the Supreme Court on a certain bill of

314—

exchange

[805 copies—Approximate Cost of Printing (labour and material), £3 3s. 3d.]

exchange (£680 15s. 3d.), in which said action one William Dean and the said Archibald Ashdown were the plaintiffs, and one John Garsed was the defendant; and in the course of the proceedings in the said action it became and was necessary, that the said John Garsed should file a plea to the declaration of the said William Dean and Archibald Ashdown, and that the said plea should be accompanied by an affidavit of the truth of such plea, as required by a certain Act of the Legislature passed in the twentieth year of the reign of Her Majesty Queen Victoria, and numbered 30, and intituled "An Act to facilitate the remedies on bills of exchange and promissory-notes," and the said Archibald Ashdown further informs me that afterwards, to wit, on the 26th of February, 1858, the said John Garsed came in his proper person before Edwin Daintrey, Esq., a Commissioner for taking affidavits in Sydney, and produced a certain affidavit of the truth of said plea, in the writing of John Garsed, and before Edwin Daintrey, in due form of law, was sworn concerning the truth of the matters contained in the said affidavit, and upon his oath did depose, and swear in substance, and to the effect following, that is to say: "Before the commencement of this suit I and the plaintiff Ashdown were in partnership together in various transactions. In settlement of those transactions (except certain land and buildings and premises at Onion's Point of the North Shore of the harbour of Port Jackson, in the Colony of New South Wales, and known as Rosherville House and grounds, in which I and Ashdown were jointly interested), I gave Ashdown a bonus of £2,000 or thereabouts, of which £680 15s. 3d., the amount of the bill of exchange now sued upon forms part, as in and by the said affidavit of John Garsed more fully and at large appears."

This Act gives the Judge no power to refer a case like mine to arbitration.

The Crown states the same.

Court.

This joint affidavit, made by Ashdown and Pritchard, and filed 2nd March, 1858, is the perjured affidavit.

Ashdown denies the above, and states, "And whereas in truth and in fact the said sum of £680 15s. 3d., the amount of the said bill of exchange, was the balance due from John Garsed to the firm of Dean & Company, of which firm the said William Dean and Archibald Ashdown are the partners, and was not a debt due to the said Archibald Ashdown alone."

And the said Archibald Ashdown further informs me that after the said action on the said bill of exchange was commenced in the Supreme Court, and in the course of the proceedings of the said action, the said John Garsed filed a plea to the declarations of the said Wm. Dean and Archibald Ashdown, and that afterwards, to wit, on the 2nd day of March, in the year aforesaid, the said Wm. Dean and Archibald Ashdown took out of the Supreme Court a summons, calling upon John Garsed to show cause, on the 4th day of March, why the said plea filed therein should not be struck out, with leave to the plaintiffs to sign judgment, as for the want of a plea, on the grounds that the said plea was so framed as to prejudice, embarrass, and delay the fair trial of the action, and that the said plea was wholly false, and on the further grounds stated and disclosed in the joint affidavit of the said Archibald Ashdown and one Charles Pritchard, sworn and filed in support of the said application, &c., &c., &c.—A. ASHDOWN.

On the 9th of June, 1858, I left with you for examination my book, the contents of which are printed papers, and printed from time to time by order of the Legislative Assembly; and among the papers, viz., "Progress Report," ordered by the Legislative Assembly to be printed, 16th May, 1878, at pages 9 to 12, you will read Mr. Joseph Carroll's evidence:—Chairman (question 3): "You are a professional accountant?—I am." Appendix, page 1, you will read a copy of Dean and another v. Garsed; declaration filed 18th February, 1858. Page 3 you will read a copy of my plea for defence, on equitable grounds. My plea is strictly true; it was prepared by my counsel, a sound lawyer, namely, the late Mr. Justice Wise, from *Agreements and Pritchard's Journal*; copies of same are in your possession. My plea, verified my affidavit, sworn before Edwin Daintrey, Esq., and filed in the Supreme Court 26th February, 1858. Application was made by the plaintiffs to take my plea off the file, on the ground my plea is wholly false, and on the further grounds disclosed in the joint perjured affidavit of A. Ashdown and C. P. Pritchard, sworn and filed 2nd March, 1858. At pages 30 and 31, copy of Ashdown and Pritchard's joint affidavit, filed 2nd March, 1858. From page 36 the above application came on to be heard before Mr. Justice Dickinson (the Judge sitting in Chambers), on the 3rd of March, 1858; and after hearing my counsel (Mr. Wise) and Ashdown's counsel (Mr. Holroyd) application dismissed, without calling upon my counsel to file my affidavit in reply to Ashdown and Pritchard's joint affidavit. On the 4th March, 1858, my attorney, at the request of plaintiffs' attorney, filed my further affidavit.

At page 42 you will read copy "Information for Perjury," signed "Lyttelton H. Bayley, Attorney-General," who held the office of grand jury. From pages 9 to 15 you will read the proceedings at the Police Office in December, 1858. A committal by Mr. D. Forbes, J.P., on the 21st December, 1858, according to law, is not proceeded with unless the Attorney-General, after examining the evidence, says that a *prima facie* case has been made out. In my case the only remedy is, that you, on behalf of Her Majesty the Queen, remove from the proceedings filed in the Supreme Court the said information signed "Lyttelton H. Bayley, Attorney-General," and burn the same in your office in the presence of the Crown Solicitor, myself, and Mr. John Hurley, M.L.A.

I have, &c.,

JOHN GARSED.

P.S.—I appeared on summons at the Police Office, 7th April, 1858. My counsel (Mr. Wise) appeared for me; Mr. Holroyd appeared for A. Ashdown. The Bench, after hearing my counsel, declined to enter into the case.—J.G.

J. Garsed, Esq., to The Attorney-General.

Helsarmel, Leichhardt, 8 June, 1887.

To the Honorable Bernhard R. Wise, Esq., M.L.A., Attorney-General,—

Sir,

In further reply to your letter of the 2nd instant, No. 87-856, I respectfully state that the proceedings in the following action (thanks to John Hurley, Esq., M.L.A.) are published by order of the Legislative Assembly, in 3rd volume Votes and Proceedings, during the session of 1877-8, and a printed copy of one of my long advertisements I sent you in my letter, is the result of the truthfulness of my equitable plea, prepared by your father from documentary evidence before my Select Committee, and not a living witness is required to prove the truth of my plea.

On the 9th day of February, 1858, a certain action was commenced in the Supreme Court of New South Wales, on a bill of exchange for £680 15s. 3d., payment secured, in which said action William Dean and Archibald Ashdown, who traded in Sydney under the name and style of "W. Dean & Co.," auctioneers, were the plaintiffs, and I, John Garsed, was the defendant.

I took the opinion of Mr. Wise, your father, and he prepared from documentary evidence a plea for defence on equitable grounds, that is to say, the plea filed to the declaration of the said plaintiffs, amounted to a plea of want of consideration on the part of William Dean and Company, and strictly true.

A certain Act of the Legislature of this Colony entitled, "An Act to facilitate the remedies on bills of exchange and promissory-notes," required I should verify on affidavit the truth of my plea. This said plea accompanied by my affidavit was filed in the Supreme Court on the 26th day of February, 1858.

If you refer to page 30 of the said 3rd volume you will read a copy of my plea, prepared by my counsel, your father, and if you turn to page 70 you will read a copy of information for perjury, signed Lyttelton H. Bayley, Attorney-General, who prosecuted for Her Majesty his witness Archibald Ashdown.

You will observe on reading said information that the alleged perjury is assigned on my said plea, verified by affidavit filed in the Supreme Court on the 26th February, 1858, and that the Attorney-General informs the Court—"Whereas in truth and in fact the said sum of £680 15s. 3d., the amount of the said bill of exchange was the balance of an account due from John Garsed to the firm of Dean and Company, of which firm William Dean and Archibald Ashdown were the partners, and was not a debt to Archibald Ashdown alone."

It was out of the power of Her Majesty's Attorney-General to prove the truth of his statement; although he held the office of grand jury he filed his information for perjury before reading the proceedings filed in the Supreme Court, or the depositions taken at the Police Office and the result the alleged perjury is assigned on the wrong affidavit.

An application was made to take my plea off the file, on the grounds disclosed in the joint affidavit of Archibald Ashdown and Charles Pearson Pritchard, clerk and book-keeper, in the employ of Ashdown and Garsed, sworn and filed in the Supreme Court on the 2nd March, 1858.

The above application came on to be heard before Mr. Justice Dickinson, the Judge sitting in Chambers, on the 3rd March, 1858, when the said application, after hearing counsel on both sides, was dismissed, and the cause set down for trial.

On the 31st March, 1858, and before trial, the said Archibald Ashdown lodged an information against, on a charge of perjury, on grounds disclosed in said joint affidavit, filed in the Supreme Court on the 2nd March, 1858, and in doing so the said Archibald Ashdown, at this early stage, had brought this action to a dead lock; this you will learn on reading the information sworn by Archibald Ashdown at the Police Office on 31st March, 1858, in connection with Ashdown and Pritchard's joint affidavit filed in the Supreme Court 2nd March, 1858.

I appeared on summons at the Central Police Office to answer the charge. Mr. Holroyd appeared for Ashdown, and Mr. Wise appeared for me, and the Bench after hearing Mr. Wise declined to recognise the case, and the same was dismissed.

Unfortunately this said Act of the Legislature gave his Honor Mr. Justice Dickinson no power in the civil case to refer the same to arbitration.

Copy from page 64 of said 3rd vol. At an early stage in the said action his Honor Mr. Justice Dickinson endeavoured to bring about a reference to arbitration. These efforts were, however, unsuccessful, the plaintiffs' counsel would not consent to a reference, and it was found that his Honor had unfortunately no power to compel a reference in a case of this description, but in summing up, his Honor expressed his opinion that a case of this nature was one which did not come legitimately within the province of a Judge and Jury to decide, and that in England a reference to arbitration would under similar circumstances have been at once assented to when recommended by the Judge.

My counsel, Mr. Wise and Mr. Dalley, if you turn to page 29, volume 3—the case of Mr. John Garsed—Appendix to the evidence of Mr. John Garsed, 16th May, 1877—you will read the opinion of my counsel, the Hon. W. B. Dalley.

Law.

In this Colony Her Majesty's Attorney-General holds the office of grand jury, and within the last few months we have had three Attorney-Generals. You must admit an Attorney-General, not long in the Colony, may understand the several branches of law in the Supreme Court in its civil jurisdiction, and not understand criminal law; and again, an Attorney-General may not have the time to spare to read and study the evidence sworn in a Police Court, in a case like mine, and leave the information to be prepared by a person anxious to obtain a conviction, as in my case, contrary to the law of the land, the Attorney-General merely signing the information for perjury, as in my case,—Lyttelton H. Bayley, Attorney-General.

In England, the grand jury consist of not less than twenty-three persons. In England had I been committed to take my trial for perjury, instituted by Archibald Ashdown, in that case the information sworn by Ashdown in the Police Court and the depositions, will be taken to the grand jury room; it will then come under the consideration of the grand jury. The witnesses are then called in in the order published in the said 3rd volume, extract from page 39:—"This deponent, Andrew M'Kechnic, on his oath, states: I am one of the clerks of the Supreme Court; I produce the proceedings in the said Court in a case of William Dean and Archibald Ashdown against John Garsed; I produce the declaration, marked A, which was filed on the 18th February, 1858; I produce a plea filed to that declaration by Piddock Arthur Tompson, attorney, marked B; there is affidavit annexed to it; I produce a summons, marked C, dated 2nd March, 1858, issued by the Prothonotary, calling upon the defendant to show cause why the plea should not be struck out (this witness, after a long examination, produced the whole of the affidavits filed in this action, with the exception of one); I have not got an affidavit sworn before Mr. Pownall, 2nd March, 1858, by Ashdown and Pritchard; I am not aware that any such affidavit was ever filed; if it had been filed, and in its proper place, it would have been in the hands of the Prothonotary, and then in my custody, among the papers I produce; I said yesterday that there was an affidavit missing, and I say so again.

The grand jury would insist on this missing affidavit being found (you will read a copy printed on pages 58 and 59 produced by the Prothonotary before my Committee). On reading the same, the grand jury would file a "true bill" against Ashdown and Pritchard for perjury, on the evidence of their joint affidavit, sworn and filed in the Supreme Court on the 2nd March, 1858.

Mr.

Mr. Charles Pearson Pritchard's journal, also a ledger made up by Mr. Humphrey, accountant, from the journal of Mr. Pritchard's keeping, are deposited in the Legislative Chambers, and the Judge in the civil case ruled William Dean and Company are bound by the books kept by Pritchard.

Mr. C. P. Pritchard commenced his journal under the inspection of Archibald Ashdown, and upon the premises occupied by Wm. Dean and Company, on or about the 1st April, 1857. Pritchard's first entry in his journal—sundries to capital stock, £45,170; those sundries consist chiefly of valuable properties, but not any of Ashdown's properties.

I call your attention to two properties entered by Pritchard in his journal (copy):—Bexley Estate, 1,100 acres, more or less, valued at £6,820, situate at Rocky Point, near Cook's River, in the parish of St. George, subdivided into the following farms at the foot of my subdivision; section 1. is all sold; this section contains 49a. 1r. 34p.; in speaking of the residue over 1,050 acres, two bills are filed in the Supreme Court, affecting the title of said 1,050 acres; the plaintiff died suddenly.

Grose Farm Estate, 157 allotments, better known by the name of Camperdown Estate; a bill filed in the Supreme Court affecting the title of this property; the particulars are printed on page 67 of said 3 vol.

Ashdown and Pritchard's joint affidavit, filed in the Supreme Court, 2nd March, 1858, and afterwards taken out of the Supreme Court, and not returned to its proper place of deposit appointed by law until after said information for perjury, signed Lyttleton H. Bayley, Attorney-General was filed, and unless you, on behalf of Her Majesty the Queen, remove from the proceedings in the Supreme Court this said information for perjury filed in said action, Dean and Ashdown v. Garsed, this action, commenced 9th February, 1858, cannot terminate.

You will observe as the law now stands in this Colony as regards grand jury, any one of those gentlemen on my Select Committee are liable to suffer what I have had to suffer, provided they have to defend a similar action in the Supreme Court of New South Wales.

Copy from page 5, of said 3rd volume:

“1877-8.

MR. JOHN GARSED.

Progress Report.

THE Select Committee of the Legislative Assembly, appointed on 5th February, 1878, with power to send for persons and papers, to inquire into and report upon a case instituted against one John Garsed, in October, 1859, and to whom was referred on 8th February, 1878, the proceedings and evidence laid upon the Table by the Clerk on 5th February, 1878, have agreed to the following progress report:—

Your Committee having examined the witnesses named in the list [my only witness, Mr. Joseph Carroll, accountant], and received a large amount of documentary evidence, have resolved, owing to the advanced period of the session to report the evidence to your Honorable House, and to recommend that the inquiry be resumed early next Session.

JOHN HURLEY,
Chairman.”

No. 3 Committee Room, Sydney, 14 May, 1878.”

This large amount of documentary evidence and examination of account books was necessary to prove the said information for perjury, signed Lyttleton H. Bayley, Attorney-General, was filed in the Supreme Court in the said action, contrary to common law, also to statute law in criminal cases, and I trust my case will be the means of a reform in the law in this Colony, as regards grand jury.

I have, &c.,
JOHN GARSED.

The Secretary to The Attorney-General to J. Garsed, Esq.

Sir,

Attorney-General's Department, Sydney, 14 September, 1887.

8th June, 1887.
21st July, 1887.

In reference to your letters, of dates noted in the margin, I am directed to inform you, that after full consideration of all the matters connected with your case, the Attorney-General regrets that he cannot even now see sufficient grounds for reopening it.

I have, &c.,
W. W. STEPHEN.

1887.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

NATIONAL AND LOCAL WORKS.

(EXPENDITURE ON, FROM 1860 TO 1886.)

Ordered by the Legislative Assembly to be printed, 28 September, 1887.

Government Statistician's Office, 27 September, 1887.

The expenditure shown in the following returns does not include the cost of administration and other charges connected with the government or education of the people, but was incurred upon Public Works only. In the category of national works have been included railways, telegraphs, and fortifications, some harbour and navigation works, as well as certain roads and bridges, and other works having a use or an importance apart from the districts in which they were constructed. The Metropolitan Water Supply and Sewerage Works, though in magnitude of conception equal to great national undertakings, have been included amongst local works, as, in actual use, they are intended for local purposes. As far as the works for water supply are concerned, the bulk of the expenditure was in the Districts of Cumberland and Camden; but the whole benefit of it has been set down to the Metropolis. The tramways have also been deemed local works; an exception being made in favour of the Camden tramway, which, as a feeder to the railways, was intended as an experiment to ascertain the probable success of such undertakings, and has, therefore, been deemed a national work.

For several years and in various districts, very small sums appear under the heading of national expenditure. These for the most part denote either the cost of repairs to certain national buildings, such as prisons, and custom-houses in border towns, or else that of short extensions to telegraph lines.

The last table gives the amount expended in each year which could not be distributed. The bulk of this expenditure was for rolling stock and other railway purposes for the benefit of the Colony as a whole. Some portion, however, was for works so vaguely described as to make an accurate distribution impossible.

DISTRICTS according to the Subdivisions shown on Map in connection with the Return of Local and National Expenditure.

NEW SOUTH WALES.

NEW HEBRIDES.

(CORRESPONDENCE RESPECTING THE EVACUATION OF THE FRENCH MILITARY POSTS IN.)

Presented to Parliament by Command.

The Acting Agent-General to The Colonial Secretary.

Sir, 5 Westminster Chambers, Westminster, S.W., 9 May, 1888.

I have the honor to enclose herein, for your information, copy of a letter which I have received from the Colonial Office, transmitting copy of a communication from the Foreign Office, with its enclosure, containing the official announcement of the evacuation of the French Military posts in the New Hebrides.

C.O. to A.G.,
5/5/88.
F.O. to C.O.,
23/4/88
M. Jusserand to
F.O., 19/4/88.

I have, &c.,
DANIEL COOPER.

[Enclosure.]

Colonial Office to Agent-General.

Sir,

Downing-street, 5 May, 1888.

With reference to the letter from this Department, of the 31st of March, I am directed by Lord Knutsford to transmit to you, for your information, a copy of a letter from the Foreign Office, with its enclosure, containing the official announcement of the evacuation of the French military posts in the New Hebrides.

Despatches have been sent to the Governors of the Australasian Colonies containing similar information.

The Agent-General for New South Wales.

I am, &c.,
EDWARD WINGFIELD.

[Sub-Enclosure.]

The Under Secretary of State, Foreign Office, to The Under Secretary of State, Colonial Office.

Sir,

Foreign Office, 23 April, 1888.

I am directed by the Secretary of State for Foreign Affairs to transmit herewith, to be laid before the Secretary of State for the Colonies, copy of a note from the French Chargé d'Affaires in this country, reporting the evacuation of the New Hebrides by the French troops.

I am, &c.,
P. W. CURRIE.

The Under Secretary of State, Colonial Office.

M. le Marquis,

Ambassade de France, Londres, 19 Avril 1888.

Conformément aux termes de la Convention du 16 Novembre 1887 relative aux Nouvelles-Hébrides et aux Îles sous le vent de Tahiti, le premier de ces archipels a été évacué par les troupes françaises.

J'ai l'honneur de faire connaître à Votre Seigneurie que cette opération a été effectuée le 15 du mois dernier.

Veillez agréer, &c.,
M. JUSSERAND.

M. le Marquis Salisbury, &c., &c.

[Translation.]

Mons. le Marquis,

Embassy of France, London, 19 April, 1888.

In conformity with the terms of the Convention of 16 November, 1887, relative to the New Hebrides and to the Islands to leeward of Tahiti, the first of these archipelagos has been evacuated by the French troops.

I have the honor to acquaint your Lordship that this operation was effected on the 15th of last month.

Accept, &c.,
M. JUSSERAND.

1887-8.

NEW SOUTH WALES.

PATENTS LAW AMENDMENT ACT OF 1887.

(REGULATIONS.)

Presented to Parliament, pursuant to Act 51 Vic. No. 3, sec. 16.

Department of Justice,
Sydney, 28th March, 1888.

PATENTS OFFICE REGULATIONS.

HIS Excellency the Governor, with the advice of the Executive Council, has been pleased to make the following Regulations under the Act 51 Victoria No. 3, for carrying into effect the provisions of the Patents Act of New South Wales.

WILLIAM CLARKE.

REGULATIONS OF THE NEW SOUTH WALES PATENTS OFFICE.

1. The Patents Office will be open to the public on every week-day from 10 a.m. to 3 p.m., except on Saturdays, when it will be open from 10 a.m. to noon.

2. All business with the Patents Office should be transacted in writing, and the action of the Office will be based exclusively on the written record. A personal appearance of the applicant or his representative is not required, unless specially called for by the Examiner.

3. All communications with the Patents Office should be addressed to

“THE EXAMINER OF PATENTS,
PATENTS OFFICE,
CHANCERY SQUARE,
SYDNEY.”

4. The Office is forbidden to respond to enquiries as to the probability of a Certificate or Patent being granted for an alleged invention, when such enquiries are made in advance of an application for such Certificate or Patent; and also to enquiries founded upon vague descriptions, and propounded with a view to ascertain whether, or by whom, alleged improvements have been patented or provisionally protected.

5. Except as to questions connected with official practice and procedure, the Office undertakes no responsibility in regard to expounding the Patent Law; and, subject to the same exception, the officers of the Department are forbidden to give counsel to individuals.

6. In pursuance of the preceding regulation, every person must judge for himself of the propriety of making an application for a Patent or for Provisional Protection.

The records and models may be inspected by himself or his agents, but beyond this the Office can render him no assistance until his application comes regularly before it in the manner prescribed by law.

7. An application for a Patent or for Provisional Protection may be made by any person, whether resident in the Colony or not, provided that he claims to be either—

- (1) the author or designer of an invention;
- (2) the inventor's agent;
- (3) the inventor's assignee;
- (4) the introducer into the Colony of an invention new to the Colony;
- (5) the introducer as to one part of the invention, and the inventor as to the other part; or
- (6) the agent or assignee of any person claiming under any of the four preceding sub-sections.

8. Letters Patent and Certificates of Provisional Protection may also be applied for by trading associations or other corporate bodies; or joint application may be made—

- (1) by individuals;
- (2) by two or more corporate bodies; or
- (3) by an association of one or more corporate bodies with one or more individual applicants.

9. Applications may be made either personally or through a duly authorized agent. In any case of agency or assignment, proof thereof must be furnished to the satisfaction of the Examiner.

10. Interviews with the Examiner concerning applications or other matters pending before the Office may be had in the Examiner's room at such times within office hours as the Examiner may designate.

11. Applicants or their agents will be required to conduct their business with the Office with decorum and courtesy. Papers presented in violation of this requirement will be returned.

12. For gross misconduct the Examiner may refuse to recognise any person as a Patent Agent, either generally or in any particular case; but the reasons for such refusal must be duly recorded, and be subject to the approval of the Minister.

13. Letters Patent or a Certificate of Provisional Protection may be issued to any applicant who (though not the actual inventor, or his agent, or assignee) is the first introducer of an invention into the Colony of New South Wales, and notwithstanding that the invention has been the subject of a Patent elsewhere.

14. An applicant for a Patent or for a Certificate of Provisional Protection in terms of the preceding regulation, must state in his petition that he is the author or designer, by (or partly by, as the fact may be) virtue of a communication from abroad, of the invention in question, which he desires to introduce into the Colony of New South Wales, where it is at the date of application, to the best of his belief, neither made, sold, nor used.

15. Where the invention is partly communicated and partly original, the specification accompanying the application must explicitly discriminate between the part communicated to the applicant and the part invented by him.

16. Joint inventors are entitled to joint Provisional Protection and to a joint Patent; and neither inventor can make separate claim to either privilege.

17. Independent inventors of distinct improvements in the same article cannot ordinarily obtain a joint Patent or joint Provisional Protection for their separate inventions; but where the combination of their improvements appears to the Examiner to produce a single and beneficial result, the inventors may be permitted to unite their claims in an application for a joint Patent or for joint Provisional Protection.

18. The issue of Letters Patent (or their equivalent) by another Colony or country will not disable the inventor from obtaining either a Patent or Provisional Protection in New South Wales, unless—

- (1) the invention has been introduced into public use in New South Wales prior to the application to the Office; or unless
- (2) such invention has been wholly or in part anticipated in any Letters Patent or Certificate of Provisional Protection issued under the authority of regulation 13.

19. Applications for Letters Patent of the Colony of New South Wales must be made to the Examiner; and a complete application should comprise—

- (1) a receipt from the Colonial Treasurer of the payment, in connection therewith, of £5 sterling;
- (2) a petition addressed to the Governor in the form prescribed by law;
- (3) a copy of the specification and drawings attached to the petition; and
- (4) an accompanying letter, enumerating the name and number of the documents annexed.

20. A petition for Letters Patent, if from a single applicant, should indicate the petitioner's title to a Patent; as for example, whether he claims to be—

- (1) the author or designer of the invention;
- (2) the introducer;
- (3) the inventor's agent;
- (4) the inventor's assignee;
- (5) the introducer as to one part of the invention, and the inventor as to the other part; or,
- (6) the agent or assignee of any person claiming under any of the four preceding sub-sections.

21. Where the petition is from more than one applicant it should indicate how each derives his title to a Patent; as for example, whether the petitioners claim to be—

- (1) joint inventors;
- (2) joint introducers;
- (3) joint agents of the inventor;
- (4) joint assignees of the inventor;
- (5) joint introducers as to one part of the invention and joint inventors as to the other part;
- (6) joint agents or assignees of any person claiming under any of the preceding sub-sections 3, 4, or 5;
- (7) the association of the inventor with the assignee of an undivided part of the invention; or
- (8) the association of the inventor's assignee with the holder of a sub-assignment.

22. In addition to disclosing how each petitioner derives his right to apply for the Patent prayed for, the Petition must, as far as possible, observe, in its contents, the following plan of arrangement:—

- (1) The name in full, address, and occupation of each petitioner (or the nominal composition if a trading firm, or registered or legal title if a corporate body).
- (2) The address to which communications from the Patents Office, relative to the application, may be forwarded; and this (to obviate unnecessary delay) should be an address in New South Wales.
- (3) A recital of the payment (in connection with the application) of £5 to the Colonial Treasurer.
- (4) The title of the invention, which must distinctly and specifically indicate the nature and object of the invention.
- (5) A statement that the alleged invention has not been published, or publicly used, or offered for sale, within the Colony; or (if such be the fact) only under the authority of a Certificate of Provisional Protection then in force.
- (6) A statement that a detailed specification (in duplicate) of the invention is annexed to the petition, and (where drawings are necessary) that the specification is illustrated.
- (7) Such information as is within the applicant's knowledge as to whether the invention has been patented elsewhere or not; and if so patented, where, when, and by whom; and
- (8) A distinct prayer for the grant and issue to the petitioner of Letters Patent in protection of the alleged invention.

23. The complete specification must so explicitly reveal the details of the invention that any person, ordinarily proficient in the art or science to which the discovery most closely appertains, may be enabled, by aid of the information so afforded, to make, construct, compound, and use the invention therein described, without resorting to any invention or addition of his own.

24. The specification should observe the following order of arrangement:—

- (1) The preamble, giving the name and residence of the applicant and the title of the invention.
- (2) A summary of the object and nature of the invention.
- (3) A detailed description of the manner of constructing and using the alleged invention, together with a clear enunciation of any preferable method which the petitioner regards as calculated to ensure the fullest efficacy in the application of his discovery.

- (4.) A concise description of the drawings, wherever drawings are either necessary or advantageous to the elucidation of the specification.
- (5.) A claim or claims; and these must not exceed six in number, unless the Examiner certifies in writing that, in his opinion, a greater number is necessary to the adequate protection of the invention from infringement.
- (6.) Signature of applicant or agent (or seal of corporate body).
- (7.) Signature of one witness.

25. A specification of mere improvements should particularly indicate the part or parts to which the improvements relate, and should discriminate between what is old and what is claimed as an improvement. In such cases the descriptions, drawings, and claims should be confined to the specific improvements and such parts as necessarily co-operate with them.

26. A specification must not include a claim to two or more distinct inventions, unless they mutually contribute to produce a single and beneficial result.

27. In a specification containing several independent inventions, the petitioner will be required to limit the description and claims of the pending application to whichever invention he may elect; and the other inventions may then be made the subjects of separate applications bearing even date with the day of the deposit of the original petition therein.

28. Specifications must be either printed, or else written in a fair legible hand on but one side of the paper; and no interlineations or erasures should be made. A wide margin should (except as to drawings) always be reserved on the left-hand side of the page, and all documents should be of foolscap size.

29. The following directions should also be observed in regard to drawings forwarded to the Patents Office in connection with applications for Letters Patent:—

- (1.) One copy of the drawings should be made upon stout, white, smooth-surfaced drawing paper, parchment, or tracing cloth, 13 inches by 8 inches, or 13 inches by 16 inches, with an inch margin all round.
- (2.) The drawings should be of black Indian ink, and any shading should be by lines clearly and distinctly drawn, and as open as is consistent with the required effect.
- (3.) Section lines should not be too closely drawn.
- (4.) All letters and figures of reference should be boldly and distinctly marked, and should correspond with the letters and figures of reference quoted in the specification to which the drawings relate.

30. A working model should accompany a specification when the applicant regards it as necessary either to show the precise operation of the machine, or to facilitate the examination of the specification; and when a material forms an essential feature of a machine, the model should be constructed of that material.

31. Every model should have the name of the applicant firmly fixed thereon.

32. After examination of the specification to which it relates, the model may be either stored in a room in the Patents Office, where it will be open to public inspection within the prescribed office-hours, or, at the Examiner's discretion, it may be returned to the depositor.

33. When a composition is the subject-matter of the invention, the Examiner may require the applicant to furnish such sufficient specimens of the composition and its ingredients as to allow of full experimental examination. These specimens should be forwarded in glass bottles, properly arranged; but explosive or dangerous substances are not to be sent.

34. An application for a Certificate of Provisional Protection should (so far as is applicable to conformity with the Patents Acts of New South Wales) comply with the foregoing regulations regarding applications for Letters Patent. The following material alterations in the details of procedure should be observed by applicants, and the language of the several documents demanded by these regulations should be varied accordingly:—

- (1.) The fee to be paid to the Colonial Treasurer is £2 sterling.
- (2.) A provisional specification (not in duplicate, and giving only the outlines and such material points of the invention as show its nature and scope) should take the place of the complete specification required in an application for Letters Patent.

35. The specification accompanying an application for provisional protection will not be open at any time to public inspection, and will be destroyed at the expiration of one year from the date of deposit unless the Certificate to which it relates has been meanwhile superseded by the issue of Letters Patent.

36. A Petition to supersede a Certificate of Provisional Protection by the issue of Letters Patent for the same invention should be lodged not later than ten months from the date of the original petition for Provisional Protection, so as to allow of the issue of the Patent before the expiration of the period for which the Certificate endures; and such petition should allege the fact that the invention referred to is, at the date of application, the subject of Provisional Protection.

37. A Protest against the issue of a Patent or of a Certificate of Provisional Protection may be filed by any person whomsoever; but an inventor, who has assigned his interest wholly or in part, will not be permitted to lodge any document disparaging the merits of the invention to the prejudice of the interests of his assignee.

38. Any invention or improvement in the Arts or Manufactures may be made the subject-matter of a Patent or of Provisional Protection, unless such invention or improvement appears to be detrimental to public health, public welfare, morality, or the interest of the State. Scientific principles or theories cannot be patented, but the practical application of them to industrial ends may form the subject of a Patent.

39. Assignments of Certificates of Provisional Protection or of Letters Patent, and all licenses or assignments thereof, must be registered in the Patents Office within the following respective periods from the date of execution:—

Within the Colony.....	14 days.
From any of the Australasian Colonies...	30 ,,
Other places	90 ,,

Or such extended period as the Minister, on good cause being shown for the delay, may in any particular case approve.

40. The Examiner may, when the complicated character of an alleged invention appears in his judgment to require it, refer any application or protest to a competent Expert or Experts for investigation, comparison, and report; but such references to Experts shall in each case be submitted to the Minister for his approval.

41. Experts will be paid from the Consolidated Revenue such fees as the Minister may approve or fix, and in their reports to the Examiner the Experts should indicate the list of prior Patents with which they have compared the applications referred to them; and where the application is closely allied with a former invention, the Expert's report should differentiate between the two.

42. The Examiner's reports to the Minister should, where necessary, furnish such a synopsis of the law and merits of each application as will enable the Minister to clearly comprehend the essential features involved.

43. The scientific publications and general Patents Literature in the Library of the Patents Office will be available, at the discretion of the Office, for public perusal.

44. Whenever the Examiner reports to the Minister that an informality in any application does not materially affect the merits of such application or intentionally infringe the spirit of the Patent laws, the Minister may in writing direct the relaxation of such of the foregoing regulations as demonstrate and affirm the informality; and thereupon the application will be examined and dealt with as if no such informality existed.

45. The following will be the scale of fees payable to the Colonial Treasury through the Patents Office in connection with the proceedings herein stated:—

Filing a protest against the issue of Letters Patent or of a Certificate of Provisional Protection	£1 0 0
Registering an assignment of Letters Patent, or of a Certificate of Provisional Protection	0 10 0
Registering a license, or assignment thereof	0 7 6
A general search, <i>i.e.</i> , inspection of five or more Patents and the records thereof	0 5 0
Inspection of the Register, or of one Patent and the records thereof	0 1 0

A. G. TAYLOR,
Examiner of Patents.

1887-8.

NEW SOUTH WALES.

PATENTS OFFICE.

(REGULATIONS.)

Presented to Parliament, pursuant to Act 51 Vic. No. 3, sec. 16.

Department of Justice,
Sydney, 21st December, 1887.

PATENTS OFFICE REGULATIONS.

His Excellency the Governor, with the advice of the Executive Council, has been pleased to make the following Regulations under the Act 51 Victoria No. 3, for carrying into effect the provisions of the Patents Act of New South Wales.

WILLIAM CLARKE.

REGULATIONS OF THE NEW SOUTH WALES
PATENTS OFFICE.

1. The Patents Office will be open to the public on every week-day from 10 a.m. to 3 p.m., except on Saturdays, when it will be open from 10 a.m. to noon.

2. All business with the Patents Office should be transacted in writing, and the action of the Office will be based exclusively on the written record. A personal appearance of the applicant or his representative is not required, unless specially called for by the Examiner.

3. All communications with the Patents Office should be addressed to

“THE EXAMINER OF PATENTS,
PATENTS OFFICE,
CHANCERY SQUARE,
SYDNEY.”

4. The Office is forbidden to respond to enquiries as to the probability of a Certificate or Patent being granted for an alleged invention, when such enquiries are made in advance of an application for such Certificate or Patent; and also to enquiries founded upon vague descriptions, and propounded with a view to ascertain whether, or by whom, alleged improvements have been patented or provisionally protected.

5. Except as to questions connected with official practice and procedure, the Office undertakes no responsibility in regard to expounding the Patent Law; and, subject to the same exception, the officers of the Department are forbidden to give counsel to individuals.

6. In pursuance of the preceding regulation, every person must judge for himself of the propriety of making an application for a Patent or for Provisional Protection. The records and models may be inspected by himself or his agents, but beyond this the Office can render him no assistance until his application comes regularly before it in the manner prescribed by law.

7. An application for a Patent or for Provisional Protection may be made by any person, whether resident in the Colony or not, provided that he claims to be either—

- (1) the author or designer of an invention;
- (2) the inventor's agent;
- (3) the inventor's assignee;
- (4) the introducer into the Colony of an invention new to the Colony;
- (5) the introducer as to one part of the invention, and the inventor as to the other part; or
- (6) the agent or assignee of any person claiming under any of the four preceding sub-sections.

8. Letters Patent and Certificates of Provisional Protection may also be applied for by trading associations or other corporate bodies; or joint application may be made—

- (1) by individuals;
- (2) by two or more corporate bodies; or
- (3) by an association of one or more corporate bodies with one or more individual applicants.

9. Applications may be made either personally or through a duly authorized agent. In any case of agency or assignment, proof thereof must be furnished to the satisfaction of the Examiner.

10. Interviews with the Examiner concerning applications or other matters pending before the Office may be had in the Examiner's room at such times within office hours as the Examiner may designate.

11. Applicants or their agents will be required to conduct their business with the Office with decorum and courtesy. Papers presented in violation of this requirement will be returned.

12. For gross misconduct the Examiner may refuse to recognise any person as a Patent Agent, either generally or in any particular case; but the reasons for such refusal must be duly recorded, and be subject to the approval of the Minister.

13. Letters Patent or a Certificate of Provisional Protection may be issued to any applicant who (though not the actual inventor, or his agent, or assignee) is the first introducer of an invention into the Colony of New South Wales, and notwithstanding that the invention has been the subject of a Patent elsewhere.

14. An applicant for a Patent or for a Certificate of Provisional Protection in terms of the preceding regulation, must state in his petition that he is the author or designer, by (or partly by, as the fact may be) virtue of a communication from abroad, of the invention in question, which he desires to introduce into the Colony of New South Wales, where it is at the date of application, to the best of his belief, neither made, sold, nor used.

15. Where the invention is partly communicated and partly original, the specification accompanying the application must explicitly discriminate between the part communicated to the applicant and the part invented by him.

16. Joint inventors are entitled to joint Provisional Protection and to a joint Patent; and neither inventor can make separate claim to either privilege.

17. Independent inventors of distinct improvements in the same article cannot ordinarily obtain a joint Patent or joint Provisional Protection for their separate inventions; but where the combination of their improvements appears to the Examiner to produce a single and beneficial result, the inventors may be permitted to unite their claims in an application for a joint Patent or for joint Provisional Protection.

18. The issue of Letters Patent (or their equivalent) by another Colony or country will not disable the inventor from obtaining either a Patent or Provisional Protection in New South Wales, unless—

- (1) the invention has been introduced into public use in New South Wales prior to the application to the Office; or unless
- (2) such invention has been wholly or in part anticipated in any Letters Patent or Certificate of Provisional Protection issued under the authority of regulation 13.

19. Applications for Letters Patent of the Colony of New South Wales must be made to the Examiner; and a complete application should comprise—

- (1) a receipt from the Colonial Treasurer of the payment, in connection therewith, of £5 sterling;
- (2) a petition addressed to the Governor in the form prescribed by law;
- (3) a copy of the specification and drawings attached to the petition; and
- (4) an accompanying letter, enumerating the name and number of the documents annexed.

20. A petition for Letters Patent, if from a single applicant, should indicate the petitioner's title to a Patent; as for example, whether he claims to be—

- (1) the author or designer of the invention;
- (2) the introducer;
- (3) the inventor's agent;
- (4) the inventor's assignee;
- (5) the introducer as to one part of the invention, and the inventor as to the other part; or,
- (6) the agent or assignee of any person claiming under any of the four preceding sub-sections.

21. Where the petition is from more than one applicant it should indicate how each derives his title to a Patent; as for example, whether the petitioners claim to be—

- (1) joint inventors;
- (2) joint introducers;
- (3) joint agents of the inventor;
- (4) joint assignees of the inventor;
- (5) joint introducers as to one part of the invention, and joint inventors as to the other part;
- (6) joint agents or assignees of any person claiming under any of the preceding sub-sections 3, 4, or 5;
- (7) the association of the inventor with the assignee of an undivided part of the invention; or
- (8) the association of the inventor's assignee with the holder of a sub-assignment.

22. In addition to disclosing how each petitioner derives his right to apply for the Patent prayed for, the Petition must, as far as possible, observe, in its contents, the following plan of arrangement:—

- (1) The name in full, address, and occupation of each petitioner (or the nominal composition if a trading firm, or registered or legal title if a corporate body).
- (2) The address to which communications from the Patents Office, relative to the application, may be forwarded; and this (to obviate unnecessary delay) should be an address in New South Wales.
- (3) A recital of the payment (in connection with the application) of £5 to the Colonial Treasurer.
- (4) The title of the invention, which must distinctly and specifically indicate the nature and object of the invention.
- (5) A statement that the alleged invention has not been published, or publicly used, or offered for sale, within the Colony; or (if such be the fact), only under the authority of a Certificate of Provisional Protection then in force.
- (6) A statement that a detailed specification (in duplicate) of the invention is annexed to the petition, and (where drawings are necessary) that the specification is illustrated.
- (7) Such information as is within the applicant's knowledge as to whether the invention has been patented elsewhere or not; and if so patented, where, when, and by whom; and
- (8) A distinct prayer for the grant and issue to the petitioner of Letters Patent in protection of the alleged invention.

23. The complete specification must so explicitly reveal the details of the invention that any person, ordinarily proficient in the art or science to which the discovery most closely appertains, may be enabled, by aid of the information so afforded, to make, construct, compound, and use the invention therein described, without resorting to any invention or addition of his own.

24. The specification should observe the following order of arrangement:—

- (1) The preamble, giving the name and residence of the applicant and the title of the invention.
- (2) A summary of the object and nature of the invention.
- (3) A detailed description of the manner of constructing and using the alleged invention, together with a clear enunciation of any preferable method which the petitioner regards as calculated to ensure the fullest efficacy in the application of his discovery.
- (4) A concise description of the drawings, wherever drawings are either necessary or advantageous to the elucidation of the specification.
- (5) A claim or claims; and these must not exceed six in number, unless the Examiner certifies in writing that, in his opinion, a greater number is necessary to the adequate protection of the invention from infringement.
- (6) Signature of applicant or agent (or seal of corporate body).
- (7) Signature of one witness.

25. A specification of more improvements should particularly indicate the part or parts to which the improvements relate, and should discriminate between what is old and what is claimed as an improvement. In such cases the descriptions, drawings, and claims should be confined to the specific improvements and such parts as necessarily co-operate with them.

26. A specification must not include a claim to two or more distinct inventions, unless they mutually contribute to produce a single and beneficial result.

27. In a specification containing several independent inventions, the petitioner will be required to limit the description and claims of the pending application to which-

over invention he may elect; and the other inventions may then be made the subjects of separate applications bearing even date with the day of the deposit of the original petition therein.

28. Specifications must be either printed, or else written in a fair legible hand on but one side of the paper; and no interlineations or erasures should be made. A wide margin should (except as to drawings) always be reserved on the left-hand side of the page, and all documents should be of foolscap size.

29. The following directions should also be observed in regard to drawings forwarded to the Patents Office in connection with applications for Letters Patent:—

- (1.) One copy of the drawings should be made upon stout, white, smooth-surfaced drawing paper, parchment, or tracing cloth, 18 inches by 8 inches, or 13 inches by 16 inches, with an inch margin all round.
- (2.) The drawings should be of black Indian ink, and any shading should be by lines clearly and distinctly drawn, and as open as is consistent with the required effect.
- (3.) Section lines should not be too closely drawn.
- (4.) All letters and figures of reference should be boldly and distinctly marked, and should correspond with the letters and figures of reference quoted in the specification to which the drawings relate.

30. A working model should accompany a specification when the applicant regards it as necessary either to show the precise operation of the machine, or to facilitate the examination of the specification; and when a material forms an essential feature of a machine, the model should be constructed of that material.

31. Every model should have the name of the applicant firmly fixed thereon.

32. After examination of the specification to which it relates, the model may be either stored in a room in the Patents Office, where it will be open to public inspection within the prescribed office-hours, or, at the Examiner's discretion, it may be returned to the depositor.

33. When a composition is the subject-matter of the invention, the Examiner may require the applicant to furnish such sufficient specimens of the composition and its ingredients as to allow of full experimental examination. These specimens should be forwarded in glass bottles, properly arranged; but explosive or dangerous substances are not to be sent.

34. An application for a Certificate of Provisional Protection should (so far as is applicable to conformity with the Patents Acts of New South Wales) comply with the foregoing regulations regarding applications for Letters Patent. The following material alterations in the details of procedure should be observed by applicants, and the language of the several documents demanded by these regulations should be varied accordingly:—

- (1.) The fee to be paid to the Colonial Treasurer is £2 sterling.
- (2.) A provisional specification (not in duplicate, and giving only the outlines and such material points of the invention as show its nature and scope) should take the place of the complete specification required in an application for Letters Patent.

35. The specification accompanying an application for provisional protection will not be open at any time to public inspection, and will be destroyed at the expiration of one year from the date of deposit unless the Certificate to which it relates has been meanwhile superseded by the issue of Letters Patent.

36. A Petition to supersede a Certificate of Provisional Protection by the issue of Letters Patent for the same invention should be lodged not later than ten months from the date of the original petition for Pro-

visional Protection, so as to allow of the issue of the Patent before the expiration of the period for which the Certificate endures; and such petition should allege the fact that the invention referred to is, at the date of application, the subject of Provisional Protection.

37. A Protest against the issue of a Patent or of a Certificate of Provisional Protection may be filed by any person whomsoever; but an inventor, who has assigned his interest wholly or in part, will not be permitted to lodge any document disparaging the merits of the invention to the prejudice of the interests of his assignee.

38. Any invention or improvement in the Arts or Manufactures may be made the subject-matter of a Patent or of Provisional Protection, unless such invention or improvement appears to be detrimental to public health, public welfare, morality, or the interest of the State. Scientific principles or theories cannot be patented, but the practical application of them to industrial ends may form the subject of a Patent.

39. Assignments of Certificates of Provisional Protection or of Letters Patent, and all licenses or assignments thereof, must be registered in the Patents Office within the following respective periods from the date of execution:—

Within the Colony	14 days.
From any of the Australasian Colonies ...	30 „
Other places	90 „

Or such extended period as the Minister, on good cause being shown for the delay, may in any particular case approve.

40. The Examiner may, when the complicated character of an alleged invention appears in his judgment to require it, refer any application or protest to a competent Expert or Experts for investigation, comparison, and report; but such references to Experts shall in each case be submitted to the Minister for his approval.

41. Experts will be paid from the Consolidated Revenue such fees as the Minister may approve or fix, and in their reports to the Examiner the Experts should indicate the list of prior Patents with which they have compared the applications referred to them; and where the application is closely allied with a former invention, the Expert's report should differentiate between the two.

42. The Examiner's reports to the Minister should, where necessary, furnish such a synopsis of the law and merits of each application as will enable the Minister to clearly comprehend the essential features involved.

43. The scientific publications and general Patents Literature in the Library of the Patents Office will be available, at the discretion of the Office, for public perusal.

44. Whenever the Examiner reports to the Minister that an informality in any application does not materially affect the merits of such application or intentionally infringe the spirit of the Patent laws, the Minister may in writing direct the relaxation of such of the foregoing regulations as demonstrate and affirm the informality; and thereupon the application will be examined and dealt with as if no such informality existed.

45. The following will be the scale of fees payable to the Colonial Treasury through the Patents Office in connection with the proceedings herein stated:—

Filing a protest against the issue of Letters Patent or of a Certificate of Provisional Protection	£1	0	0
Registering an assignment of Letters Patent, or of a Certificate of Provisional Protection	0	10	0
Registering a license, or assignment thereof	0	7	6
A general search, <i>i.e.</i> , inspection of five or more Patents and the records thereof	0	5	0
Inspection of the Register, or of one Patent and the records thereof	0	1	0

A. G. TAYLOR,
Examiner of Patents.

1887.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PREMISES RENTED BY THE GOVERNMENT.
(RETURN OF.)

Ordered by the Legislative Assembly to be printed, 29 November, 1887.

FURTHER RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 22nd March, 1887, That there be laid upon the Table of this House,—

“ A Return showing the number of houses rented by the various Ministerial Departments, showing the rent paid for each house, with the landlord's name in each case, and total rental paid by all the Departments, and the period for which each has been rented.”

(Mr. McElhone.)

COLONIAL SECRETARY'S DEPARTMENT.
DEPARTMENT OF AUDIT.

Houses Rented.	Rental paid for each.	Name of Landlord.	Period for which each has been rented.
36 Castlereagh-street	£400 per annum ...	W. H. Paling	To 30th April, 1887.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PRESBYTERIAN CEMETERY AT MACLEAN.

(PETITION TO APPEAR BEFORE SELECT COMMITTEE—REV. WILLIAM BAIN.)

Received by the Legislative Assembly, 8 November, 1887.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the General Assembly of the Presbyterian Church of New South Wales,—

HUMBLY SHOWETH:—

That a Petition was received by your Honorable House on the eleventh day of May now last past, praying that your Honorable House would restore to the persons therein named the Presbyterian Cemetery, Maclean, as their legal rights, and reinstate them as Trustees.

That the said persons named in the Petition aforesaid were legally removed from their Trusteeship by your Petitioners.

And that your Petitioners have good grounds for opposing the granting of the prayer of the Petition aforesaid.

Your Petitioners therefore humbly pray that leave may be given to them to be represented by Counsel or Solicitor before the Select Committee appointed by your Honorable House in connection with the Petition aforesaid.

And your Petitioners, as in duty bound, will ever pray, &c.

WILLIAM BAIN,
Moderator of the General Assembly of the
Presbyterian Church of New South Wales.

Dated this 7th day of November, A.D. 1887.

1887-8.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PRODUCTION OF WINE.

(PETITION FROM CERTAIN WINEGROWERS OF NEW SOUTH WALES.)

Received by the Legislative Assembly, 23 July, 1888.

To the Honorable the Members of the Legislative Assembly.

The Petition of the undersigned winegrowers of New South Wales,—

HUMBLY SHOWER:—

That the industry of the production of wine is one which requires a considerable investment of capital, and demands, in addition to constant trouble and care, the application of the highest branches of agricultural science.

That to the development of the industry has been devoted the entire capital and energy of your Petitioners and others with the result that many new fields of labour are opened, and a considerable addition made to the natural productive wealth of the country.

That your Petitioners, nevertheless, aver that the wine industry suffers several and many burdens, the removal of which they believe will materially assist the industry, and lead to the opening of new wine-producing areas, giving additional avenues for the profitable employment of capital and labour.

That the following provisions be embodied in an Act to amend that section of the present Licensing Act that deals with the sale of Australian wines. That there should be three distinct Licenses,—

First.—A wine-grower's license, authorizing the holder to sell wine in any quantities at his cellars or homestead, wherever situated, at an annual fee of £1, the definition of the words "wine-growers" to apply only to persons having not less than 5 acres of vines under cultivation, the same being cultivated for wine-making purposes.

Second.—A wine merchant's license, authorizing the holder to sell wines made from grapes grown within the Colony by wholesale and by retail, at an annual fee of £5 in respect of premises situate in the metropolis, and £3 for premises situate in country towns and districts.

Third.—A grocer's license, authorizing the holder to sell bottled wines in quantities of not more than six bottles of the same kind of wine at one time, and not to be consumed on the premises, at an annual fee of £3.

That provision be made for the removal of wine licenses.

For the reasons set forth in this Petition your Petitioners humbly pray that relief be given them from the burdens under which the wine-producing industry labours.

And, as in duty bound, your Petitioners will ever pray.

[Here follow 52 signatures.]

1887.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PUBLIC WORKS BILL.

(MESSAGE No 7)

Ordered by the Legislative Assembly to be printed, 10 November, 1887.

CARRINGTON,
Governor.

Message No. 7.

In accordance with the provisions contained in the 54th section of the Constitution Act, the Governor recommends for the consideration of the Legislative Assembly the expediency of making provision to meet the requisite expenses in connection with a Bill to provide for the constitution of an authority to investigate and report upon proposals for Public Works submitted to Parliament, to make better provision for the acquisition of land for carrying out such works, and for other purposes in connection therewith.

Government House, Sydney,
9th November, 1887.

1887-8.

NEW SOUTH WALES.

STAMP DUTIES ACT.

No. 1.

Notice of Lands taken for Railway Purposes by the Commissioner for Railways.
Goulburn and Cooma Railway—From Goulburn to Cooma.

To John Bull,—

WHEREAS by an Act of Council, made and passed in the twenty-second year of the reign of Her Majesty Queen Victoria, intituled "An Act to make more effectual provision for the construction by the Government of Railways in the Colony of New South Wales and for the regulation of the same," the Commissioner for Railways in the said Colony is empowered to enter into and upon the lands and grounds of any person whomsoever, and to take and appropriate for the purposes in the said Act mentioned such parts thereof as may be necessary and proper for the laying out, making, and using any Railway and all other works, matters, and conveniences connected therewith: And whereas the Commissioner for Railways in the said Colony has under and by virtue of the powers given to him in and by the said Act of Council, taken as a portion of the land required for an extension of the Goulburn and Cooma Railway from Bungendore to Micalago, the land set out in the Schedule hereto annexed: You are therefore hereby required to take notice that the Commissioner for Railways has as aforesaid taken the said land set out in the said Schedule, and hereby demands from you the particulars of your title in such lands and of the claims made by you in respect thereof: That the said Schedule contains a true particular of the lands so taken, and that the Commissioner for Railways is willing to treat as to the compensation to be paid to all parties for the land taken and the damage sustained, or that may be sustained, by you by reason of the said Act of Council, and everything done by the Commissioner for Railways as thereunder.

In witness whereof, the Commissioner for Railways hath caused his common seal to be hereto affixed at Sydney, in the Colony aforesaid, this 20th day of January, A.D. 1886.

[L.S.]

C. A. GOODCHAP,
Commissioner for Railways.

The common seal of the Commissioner for Railways was duly affixed hereto in presence of,—
L. P. IREDALE.

Schedule referred to in the foregoing notice.

ALL that parcel of land situate in the parish of Queanbeyan in the county of Murray, containing by admeasurement 3 roods 8 perches, more or less, and more particularly described in the plan hereunto annexed or endorsed hereon, and therein coloured red, being the land referred to in the Book of Reference of the said line of railway as No. 79B.

No. 2.

W. Price, Esq., to The Commissioner for Railways.

Sir,

Pitt-street, Sydney, 23 March, 1886.

With reference to your notice sent to John Bull on the 25th January last *re* resumption of land at Queanbeyan for railway purposes, and for which said land I am now the trustee,—

I have the honor to send herewith my statement of claim for damage done to said property in consequence of said resumption.

I claim the amount stated in the schedule of claim on the following grounds:—

The whole of the property of which the piece resumed forms part was subdivided and pegged out into a township last April, and the land now resumed will cut off the frontage to about 400 feet of the best building sites, the value of which I consider to be £800.

Access has been cut off from Mr. Tompsitt's property (the Oaks), the said property having been sold by us to him, and an agreement made between us that he should have free access to and from the said property, and the present resumption will compel us to leave another street (1 chain wide) through the estate to give such access.

The plans and surveys of the estate are at present useless, on account of new streets and alterations of allotments having to be made.

I also send herewith a plan of the estate, as subdivided by Mr. C. B. Dawson, licensed surveyor.

I have, &c.,

WILLIAM PRICE.

Land Valuer.—D.C.M'L., 23/3/86.

Report herewith.—J.B.T., 17/5/86.

[Enclosure.]

Goulburn-Cooma Railway—Extension from Goulburn to Cooma.

I HEREBY offer to accept from the Commissioner for Railways, as purchase money for the land (including buildings and fences erected thereon) of which I am the trustee delineated on the tracing plan attached to the notice of land taken, and numbered , which I hereby acknowledge to have received, containing acres roods and perches, more or less, and as compensation for damage by severance, by the railway, or otherwise caused by the execution of the railway works, as particularly set forth in the subjoined schedule of claim, the sum of £1,000, which sum I declare to be my full claim in respect of the matters aforesaid.

Dated this 23rd day of March, 1886.

WILLIAM PRICE,
C/o H. Bull & Co., Sydney.

To the Commissioner for Railways, Sydney.

No. 3.

Minute for the Executive Council.
Schedule of Railway Land Claims.

Department of Public Works, Sydney, 2 June, 1886. THE Secretary for Public Works submits, for the approval of His Excellency the Governor and the Executive Council, schedule, as per margin, of claims for lands taken for Railway purposes, showing the amount of the original claim, the quantity of land taken, the valuation of the valuator, the sum recommended by the Commissioner for Railways, the amount of award of arbitration, and a column in blank for the insertion of the amount fixed by the Executive Council to be offered in each case, in terms of the Act 22 Victoria No. 19.

Goulburn and Cooma Railway.—Extension Bungendore to Micaligo. William Price, £85 15s.

WILLIAM JOHN LYNE.

The Executive Council advise that the amount recommended by the Commissioner for Railways, as set forth in schedule, be paid to the claimants mentioned, in full satisfaction of compensation for land taken and damage sustained by reason of the making of the Railway extension referred to.—A. C. BUDGE, Clerk of the Council. Min. 86/25, 8/6/86. Confirmed, 16/6/86. Approved.—CARRINGTON, 8/6/86. Offer made.—J.B. (per A.B.), 28/6/86.

No. 4.

The Commissioner for Railways to W. Price, Esq.

Department of Public Works, Railway Branch,
Sydney, 28 June, 1886.

Sir,

With reference to your letter of the 23rd day of March, 1886, claiming as trustee the sum of £1,000 as compensation for loss of 3r. Sp. of land taken for the Goulburn and Cooma Railway, and damages occasioned thereby, I have the honor to inform you that the loss and damage has been subjected to competent valuation, and such valuation having been confirmed by His Excellency the Governor and Executive Council, I have to offer you the sum of £85 15s., in full satisfaction of all claims for the said loss and damage and all injuries of every nature which may be sustained by you by reason of the taking of the said land and of the railway works; and in case you should not accept the amount offered, I have to request that you will proceed as required by the Government Railways Act, 22 Victoria, No. 19, that the matter may be settled without delay. The

The offer is made subject to your producing a satisfactory title to the estate, or interest claimed by you in the land referred to. Should the above offer be accepted, I have to request that you will be good enough to transmit an abstract of your title to this office, in order that the Crown Solicitor may be instructed to prepare the necessary conveyance.

I have, &c.,
CHAS. A. GOODCHAP,
Commissioner for Railways.

No. 5.

T. Ewing, Esq., M.P., to The Commissioner for Railways.

Sir,

I should be glad if you would cause action in this case to be expedited as much as possible.

7 September, 1886.
Yours, &c.,
THOS. EWING.

Land valuer.—D.C.M'L., 8/9/86.

No. 6.

W. Price, Esq., to The Commissioner for Railways.

Sir,

Sydney, 7 September, 1886.

With reference to your letter of the 28th June, offering the amount of £85 15s. as compensation for resumption of 3 roods 8 perches of land, adjoining station at Queanbeyan, we have the honor to submit to you, that the information upon which you based your award must have been incorrect, which a statement of the facts must make apparent. Your award values the land taken at about £50 per acre. We can demonstrate to your satisfaction, from our records of the transaction, that we gave £7,500 for somewhat over 80 acres of land, a price approaching to £100 per acre. This transaction, being for a large block, would reasonably cause the land to be sold more cheaply than if such an area as the one (3 roods 8 perches) under dispute were negotiated.

In addition, the land taken is a choice piece, almost immediately adjoining the station, and is indisputably more valuable than land further away. Under these circumstances the lowest price, at an ordinary sale, which we could put on the land is £500. You will, we think, see the equity of our claim.

In addition to the above, we will require to resurvey part of the land and alter our design. The design (as is apparent from plan) which we must now accept will not be so saleable as our original one. This will entail considerable expense and loss upon us.

We have no doubt, also, you will allow us the ordinary consideration for a forced sale.

We desire only a fair settlement of our claim; and hope you will offer us for this land (which we do not desire to sell under any circumstances in the shape it has taken) an amount which we feel we can accept.

We have, &c.,
WILLM. PRICE,
Trustee for Shareholders, 104, Pitt-street.

No. 7.

Minute by Mr. Railway Land-Valuer Thompson to The Commissioner for Railways.

Railway Department, Land Valuator's Office,
Sydney, 22 September, 1886.

MINUTE PAPER.

Subject: Application of Mr. W. Price for a reconsideration of an offer of compensation made to him for certain land on the extension from Bungendore to Micaligo.

THE only weighty reason given by Mr. Price for a reconsideration of the offer made to him with a view to its increase is his statement that he "can demonstrate to your satisfaction from his records of the transactions that he gave £7,500 for somewhat over 80 acres of land—a price approaching £100 per acre."

In order to verify this statement—of the strict accuracy of which I felt some doubt—I had had careful inquiries made, and regret to say that, as far as I can ascertain, the statement quoted above is an enormous exaggeration of the amount actually paid, which appears to have been only £2,000 for about 85 acres, or about £23 10s. per acre.

Under these circumstances I cannot recommend any increase in the amount offered, but in order to avert the endless correspondence and negotiations to which such claimants usually resort, Mr. Price might be requested to furnish proof of the correctness of his statement, upon which, should the proof be satisfactory, the offer made would be promptly reconsidered under the altered conditions, but that in the absence of such proof the offer already made will be adhered to.

J. B. THOMPSON,
Railway Land Valuer.

No. 8.

Minute by The Commissioner for Railways.

INFORM that I have reason to believe that he is mistaken in the statement he made that he gave nearly £100 per acre for the land; that if he will furnish proof of his having done so the claim will be reconsidered.

Cn.A.G., 24/9/86.

Informed, 28/9/86. Land valuer.—D.C.M'L., B.C., 28/9/86.

No. 9.

The Commissioner for Railways to T. Ewing, Esq., M.P.

Sir,

Railway Branch, Sydney, 28 September, 1886.

Referring to your letter of the 7th instant, applying for a reconsideration of the offer made to Mr. Price for certain land taken for the extension, Bungendore to Michelago, in which it is stated that Mr. Price can prove from the records of his transactions that he gave £7,500 for somewhat over 80 acres of land, a price approaching £100 per acre, I have the honor to inform you that the matter has had attention, and I have reason to believe from reports made to me that Mr. Price is mistaken in the statement he makes, but if he will furnish proof of such a sum having been paid for the land in question the claim will be reconsidered.

I have, &c.,

CHAS. A. GOODCHAP,

Commissioner for Railways,
(Per D.V.)

No. 10.

Certificate by Mr. W. Price.

Sydney, 28 September, 1887.

I HEREBY certify that the statement contained in my letter of 7th September, 1886, relative to the amount of purchase money for the land adjoining the railway station at Queanbeyan are correct in every particular.

WILLIAM PRICE.

No. 11.

Minute by Mr. Railway Land-Surveyor Thompson to The Commissioner for Railways.

IN accordance with the Commissioner's letter of 28/9/86, Mr. Price has, as proof of the accuracy of his statement that he paid £7,500 for the land in question, handed in the annexed certificate. I have had inquiries made at the same time, and have ascertained that John Bull transferred the land to Wm. Price by a conveyance dated 4th May, 1885 (Reg. book 309, No. 906), for the consideration money of £2,000. Since the date of that conveyance Mr. Price has applied to bring the land under Torrens' Act, and upon his application made a statutory declaration that the land, containing about 93 acres, is not over the value of £2,000. I therefore submit that, in view of these transactions respecting the land, Mr. Price's certificate and statement cannot be accepted as sufficient or satisfactory proof of the alleged payment of £7,500 having been actually made by him.

J.B.T., 5/10/86.

[Enclosure.]

CERTIFICATE by Mr. W. Price.

Sydney, 28 September, 1886.

I HEREBY certify that the statements contained in my letter of September 7th, 1886, relative to the amount of purchase money for the land adjoining the railway station at Queanbeyan are correct in every particular.

WILLM. PRICE.

Witness--J. M. MARSH, J.P.

Inform offer cannot be increased.—CH.A.G., 9/10/86.

No. 12.

The Commissioner for Railways to W. Price, Esq.

Sir,

Railway Branch, Sydney, 11 October, 1886.

With reference to your letter of the 7th ultimo, asking for reconsideration of an offer of compensation made to you for certain land on the Bungendore to Michelago extension, I have the honor to inform you that the matter has had attention, but, under the report of the land valuer, I am unable to sanction any increase in the offer made to you.

I have, &c.,

CHAS. A. GOODCHAP,

Commissioner for Railways,
(per D.V.)

No. 13.

Minute by The Commissioner for Railways to Mr. Railway Land-Surveyor Thompson.

I HAVE seen Mr. Price, who has endeavoured to explain to me how it was that the declaration was made for £2,000 while the property had been purchased for £7,500.

CH.A.G., 4/4/87.

Mr. Thompson, for further report, B.C.

No. 14.

Minute by Mr. Railway Land-Surveyor Thompson to The Commissioner for Railways.

SHOULD the Commissioner admit—on the solemn assurance of Mr. Price—that the land in question cost £7,500, the valuation made accordingly would be as follows:—

	£	s.	d.
3 roods 8 perches, taken at £80 per acre	64	0	0
Alteration of survey	5	10	0
Allotments damaged, 10 per cent. of value	11	5	0
Damage to Railway-street	25	0	0
Forced sale at 10 per cent.	6	8	0
	£112	3	0

This is an advance of £26 8s. on the former valuation. The offer, if made, should be without prejudice.

J.B.T., 7/4/87.

No. 15.

Minute by The Commissioner for Railways to Mr. Railway Land-Surveyor Thompson.

WHAT would be the difference between what Mr. Price has paid under Stamp Act for property, the sworn value of which was £2,000, and now asserted to be £7,500?

CH.A.G., 15/4/87.

No. 16.

Minute by Mr. Railway Land-Surveyor Thompson to The Commissioner for Railways.

	£	s.	d.
STAMP duty on £2,000	10	0	0
" " 7,500	37	10	0
Difference	£27	10	0

J.B.T., 18/4/87.

No. 17.

The Commissioner for Railways to The Secretary for Public Works.

It seems to me that we must accept the statement that the land cost £7,500, though declared, for purposes of stamp duty, to be worth only £2,000.

We shall have to pay for the small quantity we have taken £26 8s., in addition to the sum we have offered—in all. £112 3s.: but it is only right that the Commissioner for Stamps should be informed of the under charge for stamp duty purposes of the sum of £27 10s.

CH.A.G., 19/4/87.

For Minister's approval. Approved—J.L., 26/4/87. Land Valuer, B.C., 26-29/4/87.—A.R.

No. 18.

The Commissioner for Railways to The Commissioner of Stamps.

Sir,
 Department of Railways, Sydney, 27 April, 1887.
 I have the honor to inform you that a portion of land adjoining the Railway Station at Queanbeyan has been resumed for railway purposes from Mr. William Price (a trustee) of 104, Pitt-street. Upon his assurance that the land cost him £7,500, the offer of compensation made by the Department has been amended. I think it right, however, to advise you that for the purposes of stamp duty the land in question was declared to be worth only £2,000.

I have, &c.,
 CHAS. A. GOODCHAP,
 Commissioner for Railways.

New South Wales.

(No. 6,456 A.)

APPLICATION TO BRING LANDS UNDER THE PROVISIONS OF THE REAL PROPERTY ACT (26 VICTORIA No. 9).

CAUTION.—Applicants are reminded that by section 132 the penalties of perjury are attached to a false declaration concerning any matter or procedure under the Act, and that the utmost care is therefore necessary in framing (or reading over, if the form be filled up by an attorney) every particular statement herein.

It is further provided by section 117, that any applicant procuring a certificate through any fraud, error, omission, misrepresentation, or misdescription, will, notwithstanding the issue of such certificate, remain liable for damages to any person thereby prejudiced. And any person who fraudulently procures, assists in fraudulently procuring, or is privy to the fraudulently procurement of any Certificate of Title, is declared guilty of a misdemeanor, and liable to a penalty not exceeding £500, or imprisonment not exceeding 3 years; and any certificate thereby procured is rendered void as between all parties or privies to the fraud.

PER-SIMPLE.

FEE-SIMPLE.

I, WILLIAM PRICE, of Sydney, in the Colony of New South Wales, merchant, do solemnly and sincerely declare that I am seized for an estate in fee-simple of all that piece or parcel of land situated in the parish of Queanbeyan, county of Murray, Colony of New South Wales, being part of R. Campbell's 1,040 acres, containing, by admeasurement, 93 acres and 37 perches, exclusive of area resumed for railway purposes, commencing at a point on the western side of the Queanbeyan River, 106 links north from the north-west corner of the Queanbeyan Town Reserve, and bounded thence on the east by a line bearing south 12 chains 50 links; thence on the south by other part of R. Campbell's 1,040 acres, being a fenced line bearing westerly in all 41 chains 71 links; thence on the west by other part of said 1,040 acres, being a fenced line bearing northerly in all 17 chains 36½ links to the Queanbeyan River; thence on the north by that river bearing easterly to the north-west corner of G. Tompsitt's property, known as "The Oaks;" thence again on the east by said property, being a fenced line bearing southerly 5 chains 52½ links; thence again on the north by said property, bearing easterly 3 chains 43 links; thence again on the west by said property, being a fenced line bearing northerly 9 chains 35½ links to the Queanbeyan River; thence on the north-west by that river, bearing north-easterly to the north-western corner of other property of the said G. Tompsitt; thence on the north-east by that property, bearing south-easterly 14 chains 46 links; thence again on the north-west by said property, bearing north-easterly 7 chains 6½ links to the Queanbeyan River; and thence again on the east by that river, bearing southerly to the point of commencement, which land (including all improvements) is of the value of £2,000 and no more, and is part of 1,040 acres, originally granted to Robert Campbell by Crown grant, under the hand of Major-General Sir Richard Bourke, Governor of the Colony, dated the 30th day of January, 1837. And I further declare, that I verily believe there does not exist any lease or agreement for lease of the said land, register purchase of land No. 1, page 42. Also that there does not exist any mortgage, lien, writ of execution, charge or encumbrance, will or settlement, or any deed or writing, contract, or dealing (other than such lease or tenancy as aforesaid) giving any right, claim, or interest in or to the said land, or any part thereof, to any other person than myself, and I further declare that there is no person in possession or occupation of the said lands adversely to my estate or interest therein, and that the owners and occupiers of adjacent lands are as follows:—On the north, G. Tompsitt, owner and occupier of two separate portions of 2 acres 2 roods and 18 perches, and 12 acres 1 rood 3 perches, respectively (the Queanbeyan River being the boundary in other parts) on the south and west. The executors of the late George Campbell owners and occupiers; and on the east the said land is bounded partly by the Queanbeyan River and partly by the Queanbeyan Town Reserve. And I further declare, that I was married to my present wife on the 5th day of March, 1855. And I further declare that the annexed Schedule, to which my signature is affixed, and which is to be taken as part of this declaration, contains a full and correct list of all settlements, deeds, documents, or instruments, maps, plans, and papers relating to the land comprised in this application, so far as I have any means of ascertaining the same, (distinguishing such as being in my possession or under my control, are herewith lodged, and indicating where or with whom, so far as known to me, any others thereof are deposited; also, that there does not exist any fact or circumstance whatever material to the Title which is not hereby fully and fairly disclosed to the utmost extent of my information and behalf, and that there is not, to my knowledge and belief, any action or suit pending affecting the said land, nor any person who has or claims any estate, right, title, or interest therein, or in any part thereof, otherwise than by virtue and to the extent of some lease or tenancy hereby fully disclosed. And I make this solemn declaration, conscientiously believing the same to be true.

Dated at Sydney, this tenth day of August, 1885.

Made and subscribed by the abovenamed William Price, this }
tenth day of August, 1885, in the presence of,—
ALEX. DEAN, J.P.

WILLM. PRICE.

To the Registrar-General,—

I, William Price, the above declarant, do hereby apply to have the land described in the above declaration brought under the provisions of the Real Property Act, and request you to issue the Certificate of Title in the name of myself.

Dated at Sydney, this 10th day of August, 1885.

Witness to signature,—

ALEX. DEAN, J.P.

WILLM. PRICE.

Schedule referred to—(to be signed by applicant.)

30th January, 1837—Attested copy grant to Robert Campbell of 1,040 acres, county Murray.

24th and 25th April, 1840—Conveyance, Robert Campbell to Charles Campbell of 100 acres, registered, 790 B.R.

12th and 13th August, 1841—Mortgage, Charles Campbell to the trustees and executors of the will of late William Cox, registered, 1,425 B.X.

11th November, 1870—Reconveyance, Alexander Gamaack to Charles Campbell, registered, No. 569, book 122.

28th August, 1877—Conveyance, the Honorable Charles Campbell to John Bull, registered, No. 252, book 179.

ALEX. DEAN, J.P.

WILLM. PRICE.

N.B.—Section 104 requires that the following certificate be signed by applicant or his solicitor, and renders liable any person falsely or negligently certifying, to a penalty of £50; also, to damages recoverable by parties injured.

I CERTIFY that the within application is correct for the purposes of the Real Property Act, and that I am the solicitor of the within named applicant.

SYDNEY JOHN BULL,

Temple Court, King-st., Sydney.

State to whom all correspondence relating to this application should be sent with address, as under, viz. :—Messrs. Bull and Bull, Solicitors, Temple Court, King-st., Sydney.

No. 33.

The Commissioner of Stamps to The Commissioner for Railways.

Sir,

Stamp Office, Sydney, New South Wales, 6 June, 1887.

I do myself the honor to return herewith the papers obtained from you on the 30th ultimo respecting the application of Mr. William Price for compensation for land resumed at Queanbeyan for railway purposes.

Respecting this matter I may just state that I have prepared a report of the whole of the circumstances, which will be duly forwarded to the Under Secretary for Finance and Trade.

I have, &c.,

W. HEMMING,

Commissioner, Stamp Duties.

No. 34.

The Commissioner of Stamps to The Under Secretary for Finance and Trade.

Sir,

Stamp Office, Sydney, New South Wales, 6 June, 1887.

I do myself the honor to forward the accompanying papers relating to the evasion of the provisions of the 9th section of the Stamp Duties Act, and to request you will be pleased to move the Honorable the Treasurer to instruct the Crown Law Officers to prosecute the parties informed against by the Commissioner for Railways for the evasion above referred to. This

This is a case of a most glaring nature, and it would produce a very beneficial effect if the penalties, viz., £50, were imposed on each of the parties concerned.

The statement of Mr. Price, the purchaser of the property, to the Commissioner for Railways, shows most conclusively that the consideration was falsely stated for the purposes of the stamp duty, and the signature to the conveyance by the vendor, Mr. John Bull, and the receipt expressing the amount of consideration money as being £2,000, and not £7,000 (whereby the Government is defrauded to the extent of £27 10s.), renders them both liable to forfeit £50.

The conveyance, Bull to Price, was prepared by Messrs. Bull & Bull, solicitors for the parties, whereby they are liable to forfeit £50 each.

It was executed by John Bull, in the presence of G. Tompsitt, whose address is not given.

The application to bring the land under the operation of the Land Titles Act is declared to be by the said William Price, and the value placed on the land is £2,000, and not £7,500. It is dated the 10th day of August, 1885.

The deed of conveyance, Bull to Price, is included in the schedule of deeds annexed to the application, which is also signed by the said William Price.

The application for bringing land under the provisions of the Real Property Act contains, among other things, the following caution:—"Caution—Applicants are reminded that by section 132, the penalties of perjury are attached to a false declaration concerning any matter of procedure under the Act, and that the utmost care is therefore necessary in framing (or reading over, if the form be filled up by an attorney) every particular statement herein. It is further provided by section 117, that any applicant procuring a certificate through any fraud, error, omission, misrepresentation, or misdescription will, notwithstanding the issue of such certificate, remain liable for damages to any person thereby prejudiced. And any person who fraudulently procures, assists in fraudulently procuring, or is privy to the fraudulent procurement of any certificate of title, is declared guilty of a misdemeanour, and liable to a penalty not exceeding £500, or imprisonment not exceeding three years; and any certificate thereby procured is rendered void as between all parties or privies to the fraud."

Notwithstanding the caution above set out, the said William Price made the declaration that the land, including all improvements, is of the value of £2,000, and no more."

The solicitor for the applicant, who indorsed the application in the following manner: "I certify that the within application is correct for the purposes of the Real Property Act, and that I am the solicitor of the within named applicant—SIDNEY JOHN BULL, Temple Court, King-street, Sydney," is also warned by the following caution, endorsed on the form of application in the following words:—"N.B.—Section 104 requires that the following certificate be signed by applicant or his solicitor, and renders liable any person falsely or negligently certifying to a penalty of £50; also, to damages recoverable by parties injured."

I informed the Registrar-General of the transaction by letter as follows:—

Stamp Office, Sydney, 28th May, 1887. Sir,—I am instructed by the Commissioner for Railways that an application has been made by William Price to bring certain land, situated at Queanbeyan, under the Real Property Act. The number of the application is 6,456. The consideration money expressed in the conveyance to William Price is £2,000, which is also the value placed upon the land for the purposes of the application. The Commissioner for Railways, however, in the matter of compensation for land resumed for railway purposes, elicited from Mr. Price that the consideration paid for the land was £7,500, and not £2,000, as stated, but that the latter amount was expressed for the purposes of stamp duty. As I am about to report the matter to the Honorable the Treasurer, I do myself the honor to request you will be pleased to furnish me, with as little delay as possible, with a copy of the conveyance, John Bull to William Price, and the application to bring the land under the Real Property Act as lodged.—I have, &c., W. HEMMING, Commissioner, Stamp Duties."

In reply to the above I obtained the copy of the conveyance and application forwarded herewith.

For the reasons before set forth I most respectfully beg to recommend that the several parties be prosecuted for direct evasion of the Stamp Act.

I have, &c.,

W. HEMMING,

Commissioner of Stamp Duties.

Forward to the Crown Solicitor for such action as he may think is called for in the public interests.—J.F.B., 9/6/87. The Crown Solicitor, B.C., 9/6/87.—J.T. (for U.S.)

No. 35.

Conveyance, John Bull to William Price.

[£10 stamp, 21/5/85., J.]

THIS INDENTURE made the fourth day of May in the year of our Lord one thousand eight hundred and eighty-five between John Bull of Tarago in the Colony of New South Wales farmer and grazier (hereinafter called vendor) of the one part and William Price of Sydney in the said Colony warehouseman (hereinafter called purchaser) of the other part Whereas the said vendor has agreed with the said purchaser for the absolute sale to him of the land and hereditaments hereinafter described (except as hereinafter excepted) and intended to be hereby released and the inheritance thereof in fee-simple in possession at or for the price or sum of two thousand pounds Now this indenture witnesseth that in pursuance of the said agreement and in consideration of the sum of two thousand pounds in hand well and truly paid by the said purchaser to the said vendor at or immediately before the execution of these presents the receipt whereof is hereby acknowledged He the said vendor doth by these presents grant bargain sell alien release and convey unto the said purchaser and his heirs all that parcel of land containing by admeasurement one hundred acres more or less situated in the county of Murray in the said Colony bounded on the east by the village reserve and Queanbeyan River twenty-six and a half chains on the west by a line twenty-one and a quarter chains on the north by the Molonglo River and on the south by a line forty-four chains the said land being a portion of one thousand and forty acres granted by the Crown to Robert Campbell by grant dated the thirtieth day of January one thousand eight hundred and thirty-seven (excepting thereout all the land particularly described in the schedule hereunder written conveyed

conveyed by the said John Bull unto one George Tompsitt by indenture dated the twelfth day of March one thousand eight hundred and eighty-five registered number 161 book 306) Together with the messuages buildings way waters watercourses privileges and appurtenances whatsoever to the said parcel of land belonging or in anywise appertaining and all the estate right title interest claim and demand at law and in equity of him the said vendor therein or thereto to have and to hold the said piece or parcel of land hereditaments and premises with the appurtenances unto and to the use of the said purchaser his heirs and assigns for ever and the said vendor doth hereby for himself his heirs executors and administrators covenant with the said purchaser his heirs and assigns in manner following that is to say that notwithstanding any act matter or thing by the said vendor or any person claiming under him made or done to the contrary he the said vendor now hath in himself good right and absolute authority by these presents to grant and release the said hereditaments and premises and every part thereof with the appurtenances unto the said purchaser and his heirs to the use and in manner aforesaid And that it shall be lawful for the said purchaser his heirs and assigns at all times hereafter peaceably and quietly to enter upon hold occupy possess and enjoy the said hereditaments and premises and to receive and take the rents and profits thereof for his and their own use without any eviction interruption or denial by the said vendor or any person or persons claiming or to claim from under or in trust for him And the said hereditaments and premises are free from all charges and incumbrances whatsoever made or occasioned by the said vendor or any person claiming as aforesaid And also that the said vendor and his heirs and every person whomsoever legally claiming any estate or interest in the said hereditaments and premises through under or in trust for him or them will from time to time and at all times hereafter at the request and costs of the said purchaser his heirs or assigns execute and perfect every such lawful act deed or assurance in the law for more satisfactorily assuring the said hereditaments and premises and every part thereof to the uses and in manner aforesaid as by the said purchaser his heirs and assigns shall be devised or required In witness whereof the said parties to these presents have hereunto set their hands and seals the day and year first before written.

THE SCHEDULE REFERRED TO.

No. 36.

The Crown Solicitor to W. Price, Esq.

Sir,

Crown Solicitor's Office, Sydney, 5 July, 1887.

I am directed by the Honorable the Attorney-General to inform you, with reference to a report which has been received from the Commissioner for Stamps, to the effect that you have made declarations or statements as to the consideration paid by you on the conveyance of land at Queanbeyan (a portion of which has been taken for railway purposes), which are not in accordance with the facts, that from statements made to the Attorney-General by the Honorable the Minister for Justice and the Honorable the Minister for Education as to this transaction, he is willing to give you an opportunity of explaining how the land above referred to came to be valued at £2,000 for the purposes of stamp duty, when it appears from your letter of date 7th September, 1886, that you and others gave £7,500 for the same, which statement is confirmed by your own declaration of September 23rd, 1886, in which that sum is spoken of as the purchase money.

You will, of course, distinctly understand that the Attorney-General will be at liberty to make what use he may think proper of your reply to this letter.

I am, &c.,

JOHN WILLIAMS,
Crown Solicitor.

No. 37.

No. 37.

W. Price, Esq., to The Crown Solicitor.

Sir,

Pitt-street, Sydney, 9 July, 1887.

I have the honor to acknowledge receipt of your letter of the 5th instant, and thank the honorable the Attorney-General for the opportunity afforded me of explaining the matters to which your letter refers. The facts are briefly these:—

Early in April, 1885, my partner, Henry Bull, who resides in England, paid a short visit to this Colony. His brother, John Bull, of Queanbeyan, was at the time largely indebted to him, and in a settlement of accounts between the brothers Henry Bull took over the Oaks Estate from John Bull, the owner, as an equivalent of two thousand pounds (£2,000) of the latter's indebtedness.

Soon after this settlement of accounts Henry Bull, who had been my partner for some ten years in the firm of Henry Bull & Co., suggested that, as in the course of time the land would doubtless become very valuable, that a nominal value should be placed upon it and shares be taken by myself and other two partners in the venture.

It was consequently arranged that there should be fifteen shares of five hundred pounds (£500) each, and that Henry Bull himself should be regarded as the owner of eleven shares, to enable him to settle ten of these shares on his daughter in London (recently married), and the remaining four shares were to be allotted to myself, my two partners, and a mutual friend of the firm.

When this arrangement was concluded Mr. Bull instructed his solicitors to prepare a conveyance from his brother to myself as trustee for all concerned. I had nothing to do with these instructions, and presume that the sum of two thousand pounds (£2,000) was mentioned in the conveyance by the direction of Henry Bull, who I believe regarded the consideration allowed to his brother as the real purchase money, and looked upon the subsequent arrangement as a private matter between his friends and himself. —Subsequently, that is, in July, 1885 (my partner having returned to England in May), I instructed Henry Bull's solicitors to bring the property under the "Real Property Act," and in the month of August following the solicitors brought me a printed form to sign in which the property was valued at two thousand pounds (£2,000) as expressed in the conveyance from John Bull to myself, which I signed. I can assure you when this was done I took it for granted that the actual value allowed to John Bull in settlement was that which ought to be inserted, that everything had been regularly done by the solicitors, and that all legal requirements had been complied with; having had very little to do during my lifetime with the purchase of, or dealing in, land (speculative or otherwise), it never occurred to me for one moment that the property ought to be estimated at more than the value agreed upon when taken over by Henry Bull from his brother.

It may no doubt be thought strange that within so short a period of time the property taken by Henry Bull for two thousand pounds (£2,000) should be regarded as of such an increased value, and that I should be so foolish as to give five hundred pounds (£500) for a fifteenth share of it, but at the time of that arrangement the mania for land speculation was at its height, and I thought that in all probability when the railway was opened to Queanbeyan the land could be subdivided and sold in allotments at a very considerable profit, its prospective value looking very large, so that it seemed to me I should not be likely to make any loss, and was at the same time able to conform with my partner's views, who suggested the idea for the purpose as before stated of settling ten of the shares on his daughter.

Having now unreservedly stated all the facts, the matter being entrusted to a reputable firm of solicitors in this city, and the documents presented by them for me to sign in good faith when my time was fully occupied by ordinary office duties incidental to a large business, I submit with all due respect that the worst construction that can possibly be imputed to my action is carelessness.

In conclusion I may say that I have been engaged in mercantile transactions in this city for a period of upwards of thirty-four years, and have always borne an honorable reputation; in view of this I ask is it likely, that for the sake of a paltry saving in stamp duty of £2 10s., such being my share of the cost of the extra stamp duty, that I would knowingly with intent attempt to defraud the revenue? I may, and possibly have been careless, but nothing more, and I trust the Attorney-General will do me the justice to view the matter in this light; if, however, after the perusal of the foregoing (which I am prepared to verify by statutory declaration) the Attorney-General still thinks that a second transaction in the land actually took place, necessitating payment of extra stamp duty, I am willing, rather than the slightest stain should remain on my hitherto unsullied reputation, to pay what may be legally demanded of me.

I am, &c.,

WILLM. PRICE.

The Crown Solicitor to The Under Secretary for Finance and Trade.

Sir,

Crown Solicitor's Office, Sydney, 16 July, 1887.

I have the honor to return herewith the papers referring to the evasion of the provisions of the 9th section of the Stamp Duties Act, and to inform you that Mr. Attorney-General Wise, to whom they were submitted, directs that my letter to Mr. Price, a copy of which will be found with the papers, and his reply thereto, be forwarded to the Commissioner of Stamps for information and for any observation he may wish to make thereon, after which they might be sent to the Commissioner for Railways.

The Attorney-General asks if any information can be obtained as to the selling value of the land at the date of conveyance.

I have, &c.,

JOHN WILLIAMS,
Crown Solicitor.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

STATE HOUSE.

(REPORT OF BOARD ON COMPETITIVE DESIGNS FOR.)

Ordered by the Legislative Assembly to be printed, 30 November, 1887.

The President of the State House Board to The Principal Under Secretary.

Sir, State House Board, 7, Bent-street, 24 November, 1887.

I have the honor to hand you herewith the report of the Board appointed to open, examine, and report upon the competitive designs for the proposed State House for the information of the Honorable the Colonial Secretary.

I have, &c.,

JOHN HAY,

President.

Report of the State House Board.

To the Honorable Sir Henry Parkes, K.C.M.G., Premier and Colonial Secretary,—

Sir,

The Board appointed by His Excellency the Governor and the Executive Council, to open and examine the competitive designs sent in for the State House to be erected in the Centennial Park, now begs to report as follows:—

1. In the execution of this duty the Board has endeavoured to follow the terms of its appointment, which were "to select such of the designs as in its judgment merited the award of the prizes offered by the Government, and to report generally in regard to such designs, as they might deem advisable." The amended invitation by the Government to the Architects of New South Wales, as published in the Government Gazette of the 4th of August last, was examined with particular relation to the conditions therein laid down.

2. The Board found that forty-six (46) sets of designs had been sent in, and after a careful examination selected out of these eighteen (18) designs as in its opinion worthy of further consideration. With a view to facilitate an estimate of the probable cost of buildings erected in accordance with these various designs, the Board sought the assistance of professional men from the Colonial Architect's Department, and these were employed to ascertain the cubical contents indicated by the plans. The Board at the same time took means to determine what would be the probable minimum cost per cubic foot of such buildings. As this work proceeded, it was felt that a great difficulty would be found in selecting any design which would be entirely satisfactory for a State House, and which, in the opinion of the Board, would come within the limit of £150,000, supposing the building to be erected of the materials specified in the conditions. Under these circumstances a communication was addressed to yourself, representing the difficulties in which the Board found itself, and seeking for such an enlargement of powers as would enable it to tender an opinion which might be of some use to the Government. In reply the Board received your letter, in which you suggested that it should "report the results of its examinations and consultations under two heads:—

1st.—The designs most entitled to consideration without reference to estimated cost.

2nd.—The designs most entitled to consideration which, in the judgment of the Board, would not exceed the cost of £150,000.

3.

3. In accordance with this variation of instructions, the Board has gone into the matter with the object of reporting on the first head, viz. :—The design most entitled to consideration, without reference to estimated cost, and has determined that out of the eighteen selected designs it will recommend as the most deserving of approval those bearing the mottoes :—1st. *Rei Publicæ Domus* ; 2nd. *Esto perpetua* ; 3rd. *Pantheon* in blue circle ; and in the order of merit affixed to them as above.

4. It is to be noted, however, with respect to this determination, that the design first named, judged by its cubical contents, would, for its execution, much exceed in cost that required for either of the other two. And it may be added that the design bearing the motto *Ad rem* would have been placed high in the award had it not involved a costly, and, in the opinion of the Board, useless and undesirable substructure.

5. In further reporting, in accordance with the second head of your suggestions, viz., “the design most entitled to consideration which would not exceed the cost of £150,000,” the Board is compelled to conclude that, of the eighteen designs reserved as entitled to consideration, only one comes, in the opinion of the Board, within the authorized limit of cost, and this the Board is not prepared to recommend as an adequate design for a Great National Memorial.

6. As it may be felt that something more has to be done with respect to the plans submitted in response to the Government notice, the Board has not opened the sealed packets sent in with them. It has, therefore, only referred in this report to the mottoes on the designs, leaving the Government to take any future steps that may be deemed advisable.

7. The Board cannot conclude its report without bearing testimony to the ability and care shown by the competitors in preparing their plans, many of which are of much merit and great beauty, showing that there is an amount of talent in the Colony of which we may be justly proud.

Certified under our hands and seals, this 24th day of November, 1887.

* Without in the slightest degree dissenting from the recommendations of my colleagues, I desire to place on record, as an individual member of the Board, my admiration of many parts of the design bearing the motto “Athenia,” which is, in my opinion, the best example of the columnar type of the Corinthian Order submitted for competition. The Phillip Hall in this design being to a large extent open, or “hypæthral,” has, however, been considered open to serious objection, and the Central Portico, or Tribune, is so designed that a speaker from it could only address a very limited audience. There are other blemishes and defects in this design ; but its elevation and principal features, regarded as an architectural composition, appear to me to possess great merit.

A.O.

1887-8.

NEW SOUTH WALES.

SURRENDER OF FUGITIVE CRIMINALS.
(DESPATCH RESPECTING.)

Presented to Parliament by Command.

Department of Justice,
Sydney, 22nd July, 1887.

His Excellency the Governor directs the publication, for general information, of the following Despatch, dated 24th March, 1887, from the Principal Secretary of State for the Colonies.

WILLIAM CLARKE.

[Circular.]

Downing-street,
24th March, 1887.

Sir,

I have the honor to transmit to you, for information and publication in the Colony under your Government, an extract from the *London Gazette*, containing an Order of the Queen in Council of the 7th of March, 1887, for carrying into effect the Treaty for the mutual surrender of fugitive Criminals, signed between Great Britain and Russia on the 24th of November last.

The Treaty came into operation on the 21st of March of this year, in conformity with Article XIX.

I have, &c.,

H. T. HOLLAND.

The Officer Administering
the Government of New South Wales.

[Extract from the London Gazette of Friday, March 11, 1887.]

At the Court at Windsor, the 7th day of March, 1887.

Present :—

THE QUEEN'S MOST EXCELLENT MAJESTY.

Lord President, | Lord John Manners,
Lord Chamberlain.

WHEREAS by the "Extradition Acts, 1870 and 1873, it was amongst other things enacted that, where an arrangement has been made with any foreign State with respect to the surrender to such State of any fugitive criminals, Her Majesty may, by Order in Council, direct that the said Acts shall apply in the case of such foreign State; and that Her Majesty may, by the same or any subsequent Order, limit the operation of the Order, and restrict the same to fugitive criminals who are in or suspected of being in the part of Her Majesty's dominions specified in the Order, and render the operation thereof subject to such conditions, exceptions, and qualifications as may be deemed expedient; and that if, by any law made after the passing of the Act of 1870 by the Legislature of any British possession, provision is made for carrying into effect within such possession the surrender of fugitive criminals who are in or suspected of being in such British possession, Her Majesty may, by the Order in Council applying the said Acts in the case of any foreign State, or by any subsequent Order, suspend the operation within any such British possession of the said Acts, or of any part thereof, so far as it relates to such foreign State, and so long as such law continues in force there and no longer.

And whereas, in accordance with section 18 of "The Extradition Act, 1870, the Legislature of the Dominion of Canada has, by laws passed in the years 1877 and 1882, and respectively styled "The Extradition Act, 1877," and "An Act to Amend the Extradition Act, 1877," made provision for carrying into effect within the Dominion the surrender of fugitive criminals who are in, or are suspected of being in the Dominion.

And whereas a Treaty was concluded on the twenty-fourth day of November, one thousand eight hundred and eighty-six, between Her Majesty and His Majesty the Emperor of Russia, for the mutual extradition of fugitive criminals, which Treaty is in the terms following :—

HER Majesty the Queen of the United Kingdom of Great Britain and Ireland, Empress of India, and His Majesty the Emperor of all the Russias, having judged it expedient, with a view to the better administration of justice and to the prevention of crime within the two countries and their jurisdictions, that persons charged with or convicted of the crimes hereinafter enumerated, and being fugitives from justice, should, under certain circumstances, be reciprocally delivered up; their said Majesties have named as their Plenipotentiaries to conclude a Treaty for this purpose, that is to say :

Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, Empress of India, the Right Honorable Stafford Henry Earl of Idlesleigh, Viscount St. Cyres, a Peer of the United Kingdom, and a Baronet of Great Britain, Knight Grand Cross of the Most Honorable Order of the Bath, a Member of Her Majesty's Most Honorable Privy Council, Her Majesty's Principal Secretary of State for Foreign Affairs, &c., &c. ;

And His Majesty the Emperor of All the Russias, M. Georges de Staal, Privy Councillor, Grand Cross of several Russian and foreign Orders, his Ambassador Extraordinary and Plenipotentiary to Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, Empress of India, &c., &c. ;

Who, having communicated to each other their respective full powers, found in good and due form, have agreed upon and concluded the following Articles :—

ARTICLE I.

The High Contracting Parties engage to deliver up to each other those persons who, being accused or convicted of a crime or offence committed in the territory of the one Party, shall be found within the territory of the other Party, under the circumstances and conditions stated in the present Treaty.

ARTICLE II.

The crimes or offences for which the extradition is to be granted are the following :—

1. Murder, or attempt, or conspiracy to murder.
2. Manslaughter.
3. Counterfeiting or altering money, or uttering counterfeit or altered money.
4. Forgery, counterfeiting, or altering or uttering what is forged, or counterfeited, or altered.
5. Embezzlement or larceny.
6. Malicious injury to property if the offence be indictable.
7. Obtaining money or goods by false pretences.
8. Crimes against bankruptcy law.
9. Fraud by a bailee, banker, agent, factor, trustee, or director, or member or public officer of any Company, made criminal by any law for the time being in force.
10. Perjury, or subornation of perjury.
11. Rape.
12. Carnal knowledge, or any attempt to have carnal knowledge, of a girl under sixteen years of age.
13. Indecent assault.
14. Administering drugs or using instruments with intent to procure the miscarriage of a woman.

Sa Majesté la Reine du Royaume-Uni de la Grande Bretagne et d'Irlande, Impératrice des Indes, et Sa Majesté l'Empereur de Toutes les Russies, ayant jugé convenable, en vue d'une meilleure administration de la justice, et pour prévenir les crimes dans les deux pays et leurs juridictions, que les individus accusés ou convaincus des crimes ci-après énumérés, et qui se seraient soustraits par la fuite aux poursuites de la justice fussent, dans certaines circonstances, réciproquement extradés; les dites Majestés ont nommé pour leurs Plenipotentiaries, à l'effet de conclure un Traité dans ce but, savoir :

Sa Majesté la Reine du Royaume-Uni de la Grande-Bretagne et d'Irlande, Impératrice des Indes, le Très Honorable Stafford Henry Comte d'Idlesleigh, Vicomte St. Cyres, Pair du Royaume-Uni, Baronnet de la Grande-Bretagne Chevalier Grand-Croix du Très Honorable Ordre du Bain, Membre du Très Honorable Conseil Privé de Sa Majesté, Principal Secrétaire d'Etat de Sa Majesté pour les Affaires Etrangères, &c., &c.

Et Sa Majesté l'Empereur de Toutes les Russies, M. Georges de Staal, Conseiller Privé Actuel, Grand-Croix de plusieurs Ordres Russes et étrangers, son Ambassadeur Extraordinaire et Plenipotentiare près la Cour de Sa Majesté la Reine du Royaume-Uni de la Grande-Bretagne et d'Irlande, Impératrice des Indes, &c., &c. ;

Lesquels, après s'être communiqués leur pleins pouvoirs respectifs, trouvés en bonne et due forme, ont arrêté et conclu les Articles suivants :—

ARTICLE I.

Les Hautes Parties Contractantes s'engagent à se livrer réciproquement les individus qui, poursuivis ou condamnés pour un crime ou un délit commis sur le territoire de l'une des Parties, seraient trouvés sur le territoire de l'autre, dans les circonstances et sous les conditions prévues par le présent Traité.

ARTICLE II.

Les crimes et délits pour lesquels l'extradition sera accordée sont les suivants :—

1. Meurtre, ou tentative de meurtre, ou complot ayant ce crime pour but.
2. Homicide sans préméditation ou guet-apens.
3. Contrefaçon ou altération de monnaie, mise en circulation de monnaie contrefaite ou altérée.
4. Faux, contrefaçon, ou altération, ou mise en circulation de ce qui est falsifié, ou contrefait, ou altéré.
5. Detournement frauduleux, ou vol.
6. Destruction ou dégradation de toute propriété, lorsque le fait incriminé est punissable de peines criminelles ou correctionnelles.
7. Escroquerie d'argent, ou d'autres objets, sous de faux prétextes.
8. Crimes contre les lois sur la banqueroute.
9. Fraude (abus de confiance) par un administrateur, banquier, agent, commissionnaire, curateur, ou directeur, ou membre ou fonctionnaire d'une Société quelconque, pour autant que le fait est puni par les lois en vigueur.
10. Faux serment ou subornation de témoins.
11. Viol.
12. Commerce charnel avec une jeune fille âgée de moins de 16 ans, ou tentative à ce fait.
13. Attentat à la pudeur avec violence.
14. Administration de substances ou emploi d'instruments dans l'intention de provoquer l'avortement.

15. Abduction.
16. Child stealing.
17. Kidnapping and false imprisonment.
18. Burglary or housebreaking.

19. Arson.
20. Robbery with violence.
21. Maliciously wounding or inflicting grievous bodily harm.
22. Threats by letter, or otherwise, with intent to extort.
23. Piracy by law of nations.
24. Sinking or destroying a vessel at sea, or attempting or conspiring to do so.
25. Assaults on board a ship on the high seas, with intent to destroy life, or to do grievous bodily harm.
26. Revolt, or conspiracy to revolt, by two or more persons on board a ship on the high seas against the authority of the master.
27. Dealing in slaves in such a manner as to constitute a criminal offence against the laws of both States.

Extradition is also to be granted for participation in any of the aforesaid crimes, provided such participation be punishable by the laws of both the Contracting Parties.

Extradition may also be granted, at the discretion of the State applied to, in respect of any other crime for which, according to the laws of both the Contracting Parties for the time being in force, the grant can be made.

ARTICLE III.

Either Government may, in its absolute discretion, refuse to deliver up its own subjects to the other Government.

ARTICLE IV.

The extradition shall not take place if the person claimed on the part of the British Government, or the person claimed on the part of the Russian Government has already been tried and discharged or punished, or is still under trial, within the Russian or British dominions respectively, for the crime for which his extradition is demanded.

If the person claimed on the part of the British Government, or if the person claimed on the part of the Russian Government should be under examination, or is undergoing sentence under a conviction, for any other crime within the Russian or British dominions respectively, his extradition shall be deferred until after he has been discharged, whether by acquittal or on expiration of his sentence, or otherwise.

ARTICLE V.

The extradition shall not take place if, subsequently to the commission of the crime, or the institution of the penal prosecution, or the conviction thereon, exemption from prosecution or punishment has been acquired by lapse of time, according to the laws of the State applied to.

ARTICLE VI.

A fugitive criminal shall not be surrendered if the offence in respect of which his surrender is demanded is one of a political character, or if he prove that the requisition for his surrender has in fact been made with a view to try or punish him for an offence of a political character.

ARTICLE VII.

A person surrendered can in no case be kept in prison, or be brought to trial in the State to which the surrender has been made, for any other crime or on account of any other matters than those for which the extradition shall have taken place, until he has been restored or had an opportunity of returning to the State by which he has been surrendered.

This stipulation does not apply to crimes committed after the extradition.

ARTICLE VIII.

The requisition for extradition shall be made through the Diplomatic Agents of the High Contracting Parties respectively.

The requisition for the extradition of an accused person must be accompanied by a warrant of arrest issued by the competent authority of the State requiring the extradition, and by such evidence as, according to the laws of the place where the accused is found, would justify his arrest if the crime had been committed there.

If the requisition relates to a person already convicted, it must be accompanied by the sentence of condemnation passed against the convicted person by the competent Court of the State that makes the requisition for extradition.

A sentence passed in contumacium is not to be deemed a conviction, but a person so sentenced may be dealt with as an accused person.

ARTICLE IX.

If the requisition for extradition be in accordance with the foregoing stipulations, the competent authorities of the State applied to shall proceed to the arrest of the fugitive.

15. Enlèvement.
16. Vol d'enfants.
17. Séquestration ou détention illégale.
18. Effraction ou escalade d'une habitation et de ses dépendances dans le but de commettre un crime.
19. Incendie volontaire.
20. Vol avec violence.
21. Blessures ou graves injures corporelles infligées avec mauvaise intention.
22. Menaces écrites ou autres faites en vue d'extorsion.
23. Piraterie considérée comme crime par le droit des gens.
24. Submersion, échouement ou destruction d'un navire en mer, ou tentative ou complot ayant ce crime pour but.
25. Attaque à bord d'un navire en haute mer dans le but d'homicide ou afin de porter de graves lésions corporelles.
26. Révolte ou complot de révolte par deux ou plusieurs personnes à bord d'un navire en haute mer, contre l'autorité du capitaine.
27. Traite des Esclaves telle qu'elle est punie par les lois des deux pays.

L'extradition aura également lieu pour complicité à un des crimes ci-dessus mentionnés, pourvu que la complicité soit punissable par les lois des deux Parties Contractantes.

Il dépendra de l'Etat requis d'accorder également l'extradition pour tout autre crime à raison duquel l'extradition peut avoir lieu d'après les lois en vigueur des deux Parties Contractantes.

ARTICLE III.

Chacun des deux Gouvernements aura liberté pleine et entière de refuser à l'autre l'extradition de ses propres sujets.

ARTICLE IV.

L'extradition ne sera pas accordée si l'individu réclamé par le Gouvernement du Royaume-Uni ou par celui de l'Empire de Russie, a déjà été jugé, acquitté ou puni, ou se trouve encore sous jugement, soit dans l'Empire de Russie, soit dans le Royaume-Uni, pour le crime à raison duquel l'extradition est demandée.

Si la personne réclamée par le Gouvernement du Royaume-Uni ou par celui de l'Empire de Russie est en état de prévention ou si ayant été condamnée elle subit la peine qui lui a été infligée dans l'Empire de Russie ou dans le Royaume-Uni, pour un autre crime, son extradition sera différée jusqu'à sa remise en liberté, soit qu'elle ait été acquittée, soit qu'elle ait purgé sa peine ou pour toute autre raison.

ARTICLE V.

L'extradition n'aura pas lieu si depuis la perpétration du crime, les poursuites ou la condamnation, la prescription des poursuites ou de la peine est acquise d'après les lois du pays auquel la demande est adressée.

ARTICLE VI.

Le criminel fugitif ne sera pas extradé si le délit pour lequel l'extradition est demandée, est considéré comme un délit politique, ou si l'individu prouve que la demande d'extradition a été faite en réalité dans le but de le poursuivre ou de le punir pour un délit d'un caractère politique.

ARTICLE VII.

L'individu qui aura été livré ne pourra en aucun cas, dans le pays auquel l'extradition a été accordée, être maintenu en état d'arrestation ou poursuivi pour aucun crime ou faits autres que ceux qui ont motivé l'extradition à moins qu'il n'ait été réintégré ou n'ait eu l'occasion ou retourner de lui-même dans l'Etat qui l'avait extradé.

Cette stipulation n'est pas applicable aux crimes commis après l'extradition.

ARTICLE VIII.

L'extradition sera demandée par l'organe des Agents Diplomatiques respectifs des deux Hautes Parties Contractantes.

La demande d'extradition d'un prévenu devra être accompagnée d'un Mandat d'Arrêt décerné par l'autorité compétente de l'Etat requérant, et des preuves qui, d'après les lois de l'endroit où le prévenu a été trouvé, justifieraient son arrestation, si l'acte punissable y avait été commis.

Si la demande d'extradition concerne une personne déjà condamnée, elle doit être accompagnée de l'Arrêt de Condamnation qui a été rendu contre le coupable par le Tribunal compétent de l'Etat requérant.

Un Arrêt rendu par contumace ne sera pas considéré comme une condamnation, mais une personne ainsi condamnée pourra être traitée comme une personne poursuivie.

ARTICLE IX.

Si la demande d'extradition s'accorde avec les stipulations précédentes, les autorités compétentes de l'Etat requis procéderont à l'arrestation du fugitif.

ARTICLE X.

If the fugitive has been arrested in the British dominions, he shall forthwith be brought before a competent Magistrate, who is to examine him and to conduct the preliminary investigation of the case, just as if the apprehension had taken place for a crime committed in the British dominions.

In the examinations which they have to make in accordance with the foregoing stipulations, the authorities of the British dominions shall admit as valid evidence the sworn depositions or the affirmations of witnesses taken in Russia, or copies thereof, and likewise the warrants and sentences issued therein, and certificates of, or judicial documents stating the fact of a conviction, provided the same are authenticated as follows :—

1. A warrant must purport to be signed by a Judge, Magistrate, or officer of the Russian State.

2. Depositions or affirmations or the copies thereof must purport to be certified under the hand of a Judge, Magistrate, or officer of the Russian State, to be the original depositions or affirmations, or to be true copies thereof, as the case may require.

3. A certificate of, or judicial document stating the fact of conviction must purport to be certified by a Judge, Magistrate, or officer of the Russian State.

4. In every case such warrant, deposition, affirmation, copy, certificate or judicial document must be authenticated either by the oath of some witness, or by being sealed with the official seal of the Minister of Justice, or some other Minister of the Russian State; but any other mode of authentication, for the time being permitted by the law of the British dominion, where the examination is taken, may be substituted for the foregoing.

ARTICLE XI.

If the fugitive has been arrested in Russia his surrender shall be granted if upon examination by a competent authority it appears that the documents furnished by the British Government furnish sufficient *prima facie* evidence to justify the extradition.

The Russian authorities shall admit as valid evidence records drawn up by the British authorities of the depositions of witnesses, or copies thereof, and records of conviction or other judicial documents or copies thereof: Provided that the said documents be signed or authenticated by an authority whose competence shall be certified by the seal of a Minister of State of Her Britannic Majesty.

ARTICLE XII.

The extradition shall not take place unless the evidence be found sufficient, according to the laws of the State applied to, either to justify the committal of the prisoner for trial, in case the crime had been committed in the territory of the said State, or to prove that the prisoner is the identical person convicted by the Courts of the State which makes the requisition, and that the crime of which he has been convicted is one in respect of which extradition could, at the time of such conviction, have been granted by the State applied to. And the fugitive criminal shall not be surrendered until the expiration of fifteen days from the date of his being committed to prison to await his surrender.

ARTICLE XIII.

If the individual claimed by one of the two High Contracting Parties in pursuance of the present Treaty should be also claimed by one or several other Powers on account of other crimes or offences committed upon their respected territories, his extradition shall be granted to that State whose demand is earliest in date.

ARTICLE XIV.

If sufficient evidence for the extradition be not produced within two months from the date of the apprehension of the fugitive, or within such further time as the State applied to, or the proper Tribunal thereof shall direct, the fugitive shall be set at liberty.

ARTICLE XV.

All articles seized which were in the possession of the person to be surrendered, at the time of his apprehension, shall, if the competent authority of the State applied to for the extradition has ordered the delivery thereof, be given up when the extradition takes place; and the said delivery shall extend not merely to the stolen articles, but to everything that may serve as a proof of the crime.

ARTICLE XVI.

All expenses connected with extradition shall be borne by the demanding State.

ARTICLE X.

Si le fugitif est arrêté sur le territoire Britannique, il sera aussitôt amené devant un Magistrat compétent qui devra l'entendre et procéder à l'examen préliminaire de l'affaire de la même manière que si l'arrestation avait eu lieu pour un crime commis sur territoire Britannique.

Les autorités de la Grande-Bretagne quand elles procéderont à l'examen établi par les stipulations précédentes devront admettre comme preuves entièrement valables les dépositions assermentées ou les affirmations faites en Russie, ou les copies de ces pièces, de même que les Mandats d'Arrêt et les sentences rendues dans ce pays, ainsi que les certificats de condamnation ou les pièces judiciaires constatant le fait d'une condamnation, pourvu que ces documents soient rendus authentiques de la manière suivante :—

1. Un mandat doit être signé par un Juge, Magistrat, ou officier de l'Empire Russe.

2. Les dépositions ou affirmations ou les copies de ces pièces doivent porter la signature d'un Juge, Magistrat, ou officier de l'Empire Russe, constatant que ces dépositions ou ces affirmations se trouvent être en expédition originale ou en copie vidimée selon le cas.

3. Un certificat de condamnation ou un document judiciaire constatant le fait d'une condamnation doit être certifié par un Juge, Magistrat, ou officier de l'Empire Russe.

4. Ces mandats, dépositions, affirmations, copies, certificats, ou documents judiciaires doivent être rendus authentiques dans chaque cas, soit par le serment d'un témoin, soit par l'apposition du sceau officiel du Ministre de la Justice, ou de tout autre Ministre de l'Empire Russe; cependant, les pièces susénoncées pourront être rendues authentiques de toute autre manière qui serait reconnue par les lois locales en vigueur dans la partie du territoire Britannique, ou l'examen de l'affaire aura lieu.

ARTICLE XI.

L'extradition d'un fugitif arrêté en Russie sera accordée, s'il résulte de l'examen qui en sera fait par une autorité compétente que les documents fournis par le Gouvernement Britannique contiennent des preuves *prima facie* suffisantes pour justifier l'extradition.

Les autorités Russes devront admettre comme preuves entièrement valables les procès-verbaux des dépositions de témoins dressés par les autorités Britanniques, ou les copies de ces procès-verbaux; ainsi que les procès-verbaux des condamnations ou autres documents judiciaires, ou les copies de ces actes; pourvu que ces documents soient signés ou rendus authentiques par une autorité dont la compétence, sera certifiée par le sceau d'un Ministre d'Etat de Sa Majesté Britannique.

ARTICLE XII.

L'extradition n'aura lieu que dans le cas où les preuves fournies auront été trouvées suffisantes, d'après les lois de l'Etat requis, soit pour justifier la mise sous jugement du prisonnier dans le cas où le crime aurait été commis sur le territoire du dit Etat, soit pour constater l'identité du prisonnier avec l'individu condamné par les Tribunaux de l'Etat requérant et prouver que le crime dont il a été reconnu coupable aurait pu causer son extradition par l'Etat requis à l'époque de sa condamnation. L'extradition du fugitif n'aura lieu qu'à l'expiration d'un terme de quinze jours à dater de son emprisonnement en vue de l'extradition.

ARTICLE XIII.

Si l'individu réclamé par l'une des Hautes Parties Contractantes en exécution du présent Traité est aussi réclamé par une ou plusieurs autres Puissances, du chef d'autres crimes ou délits commis sur leurs territoires respectifs, son extradition sera accordée à l'Etat dont la demande est la plus ancienne en date.

ARTICLE XIV.

Le fugitif sera mis en liberté si les preuves suffisantes à l'appui de la demande en extradition ne sont pas produites dans l'espace de deux mois à partir du jour de l'arrestation ou de tel autre terme plus éloigné qui aura été indiqué par l'Etat requis ou le Tribunal compétent de cet Etat.

ARTICLE XV.

Les objets saisis en la possession de l'individu réclamé au moment de son arrestation seront, si l'autorité compétente de l'Etat requis en a ordonné la remise, livrés lorsque l'extradition aura lieu; cette remise ne comprendra pas seulement les objets volés, mais encore tout ce qui peut servir de pièce de conviction.

ARTICLE XVI.

Toutes les dépenses occasionnées par une demande d'extradition seront à la charge de l'Etat requérant.

ARTICLE XVII.

When, for the purposes of a criminal matter, not being of a political character, pending in any of its Courts or Tribunals, either Government shall desire to obtain the evidence of witnesses residing in the other State, a "Commission Rogatoire" to that end shall be sent through the diplomatic channel, and which shall be executed in conformity with the law of the State where the evidence is to be taken.

The Government which sends the "Commission Rogatoire" will, however, take all necessary steps and pay all expenses for finding and procuring the attendance before the Magistrate of the witnesses named for examination in such Commission.

ARTICLE XVIII.

The stipulations of the present Treaty shall be applicable to the Colonies and foreign possessions of Her Britannic Majesty, so far as the laws for the time being in force in such Colonies and foreign possessions respectively will allow.

The requisition for the surrender of a fugitive criminal who has taken refuge in any of such Colonies or foreign possessions may be made to the Governor or chief authority of such Colony or possession by the Chief Consular Officer of the Russian Empire in such Colony or possession.

Such requisitions may be disposed of, subject always, as nearly as may be, and so far as the law of such Colony or foreign possession will allow, to the provisions of this Treaty, by the said Governor or chief authority, who, however, shall be at liberty either to grant the surrender, or to refer the matter to his Government.

Her Britannic Majesty shall, however, be at liberty to make special arrangements in the British Colonies and foreign possessions for the surrender of Russian criminals who may take refuge within such Colonies and foreign possessions, on the basis, as nearly as may be, and so far as the law of such Colony or foreign possession will allow, of the provisions of the present treaty.

Requisitions for the surrender of a fugitive criminal emanating from any Colony or foreign possession of Her Britannic Majesty shall be governed by the rules laid down in the preceding Articles of the present Treaty.

ARTICLE XIX.

The present Treaty shall come into force ten days after its publication, in conformity with the forms prescribed by the laws of the High Contracting Parties. It may be terminated by either of the High Contracting Parties at any time on giving to the other six months' notice of its intention to do so.

The Treaty shall be ratified, and the ratifications shall be exchanged at London as soon as possible.

In witness whereof the respective Plenipotentiaries have signed the same, and have affixed thereto the seal of their arms.

Done at London, the twenty-fourth day of November, 1856.

(L.S.) HDBESLEICH.
(L.S.) STAAL.

And whereas the ratifications of the said Treaty were exchanged at London, on the second day of February, one thousand eight hundred and eighty-seven.

Now, therefore, Her Majesty, by and with the advice of Her Privy Council, and in virtue of the authority committed to Her by the said recited Acts, doth order, and it is hereby ordered that from and after the twenty-first day of March, one thousand eight hundred and eighty-seven, the said Acts shall apply in the case of Russia, and of the said Treaty with His Majesty the Emperor of Russia.

Provided always, and it is hereby further ordered, that the operation of the said Acts shall be suspended within the Dominion of Canada so far as relates to the Russian Empire and to the said Treaty, and so long as the provisions of the Canadian Acts aforesaid continue in force, and no longer.

C. L. PEEL.

ARTICLE XVII.

Lorsque dans la poursuite d'une affaire pénale non politique, l'un des deux Gouvernements jugera nécessaire l'audition de témoins domiciliés dans l'autre Etat, une Commission Rogatoire sera envoyée à cet effet par la voie diplomatique et il y sera donné suite en observant les lois du pays où l'audition des témoins devra avoir lieu.

L'Etat requérant s'engage à faire les démarches nécessaires et de pourvoir aux dépenses pour la recherche et la citation devant le Magistrat des témoins indiqués dans la Commission Rogatoire.

ARTICLE XVIII.

Les stipulations du présent Traité seront applicables aux Colonies et possessions étrangères de Sa Majesté Britannique pour autant que faire se pourra d'après les lois en vigueur dans ces Colonies et possessions étrangères respectivement.

La demande d'extradition d'un criminel qui s'est réfugié dans une de ces Colonies ou possessions étrangères pourra être faite au Gouverneur ou à l'autorité supérieure de cette Colonie ou possession par l'autorité Consulaire principale de l'Empire de Russie dans cette Colonie ou possession.

Le Gouverneur ou l'autorité supérieure mentionné ci-dessus, décidera à l'égard de telles demandes, en se conformant, autant que faire se pourra, d'après les lois de ces Colonies ou possessions étrangères, aux stipulations du présent Traité. Il sera toutefois libre d'accorder l'extradition ou de soumettre le cas à son Gouvernement.

Il est réservé toutefois à Sa Majesté Britannique de faire, en se conformant autant que faire se pourra, d'après les lois de ces Colonies ou possessions étrangères, des stipulations du présent Traité, des arrangements spéciaux dans les Colonies ou possessions étrangères pour l'extradition de criminels Russes qui auraient trouvé un refuge dans ces Colonies ou possessions étrangères.

Les demandes concernant l'extradition de criminels que se sont échappés d'une des Colonies ou possessions étrangères de Sa Majesté Britannique seront traités suivant les dispositions des Articles précédents du présent Traité.

ARTICLE XIX.

La présente Convention sera exécutoire à dater du dixième jour après sa promulgation, dans les formes prescrites par les lois des deux pays. Chacune des Hautes Parties Contractantes pourra en tout temps mettre fin au Traité en donnant à l'autre six mois à l'avance avis de son intention.

Elle sera ratifiée, et les ratifications en seront échangées à Londres, aussitôt que faire se pourra.

En foi de quoi, les Plénipotentiaires respectifs ont signé la présente Convention, et y ont apposé le cachet de leurs armes.

Fait à Londres, le vingt-quatre Novembre, 1856.

1887-8.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

SWAMP-STREET, DOUBLE BAY.
(CORRESPONDENCE IN CONNECTION WITH PROPOSED ALIENATION OF.)

Ordered by the Legislative Assembly to be printed, 31 May, 1888.

No. 1.

The Under Secretary for Lands to Mr. Patrick Dimond.

Sir,

Department of Lands, Sydney, 8 March, 1888.

I am directed by the Secretary for Lands to inform you that applications to purchase the land which is embraced within Swamp-street, Double Bay, will, if made under section 66 of the Crown Lands Act of 1884, be dealt with in accordance with the provisions of that section.

I have, &c.,

STEPHEN FREEMAN,
(For the Under Secretary).

No. 2.

The Under Secretary for Lands to Captain Bouverie.

Sir, Department of Lands, Sydney, 8 March, 1888.

I am directed by the Secretary for Lands to inform you that applications to purchase the land which is embraced within Swamp-street, Double Bay, will, if made under section 66 of the Crown Lands Act of 1884, be dealt with in accordance with the provisions of that section.

I have, &c.,

STEPHEN FREEMAN,
(For the Under Secretary).

No. 3.

The Under Secretary for Lands to Melbourne Green, Esq.

Sir, Department of Lands, Sydney, 8 March, 1888.

I am directed by the Secretary for Lands to inform you that applications to purchase the land which is embraced within Swamp-street, Double Bay, will, if made under section 66 of the Crown Lands Act of 1884, be dealt with in accordance with the provisions of that section.

I have, &c.,

STEPHEN FREEMAN,
(For the Under Secretary).

No. 4.

The Under Secretary for Lands to Mr. F. Scholes.

Sir, Department of Lands, Sydney, 8 March, 1888.

I am directed by the Secretary for Lands to inform you that applications to purchase the land which is embraced within Swamp-street, Double Bay, will, if made under section 66 of the Crown Lands Act of 1884, be dealt with in accordance with the provisions of that section.

I have, &c.,

STEPHEN FREEMAN,
(For the Under Secretary).

No. 5.

The Under Secretary for Lands to R. C. Backhouse, Esq.

Sir, Department of Lands, Sydney, 8 March, 1888.

I am directed by the Secretary for Lands to inform you that applications to purchase the land which is embraced within Swamp-street, Double Bay, will, if made under section 66 of the Crown Lands Act of 1884, be dealt with in accordance with the provisions of that section.

I have, &c.,

STEPHEN FREEMAN,
(For the Under Secretary).

No. 6.

The Under Secretary for Lands to C. G. Lloyd, Esq.

Sir, Department of Lands, Sydney, 8 March, 1888.

I am directed by the Secretary for Lands to inform you that applications to purchase the land which is embraced within Swamp-street, Double Bay, will, if made under section 66 of the Crown Lands Act of 1884, be dealt with in accordance with the provisions of that section.

I have, &c.,

STEPHEN FREEMAN,
(For the Under Secretary).

No. 7.

The Under Secretary for Lands to Mr. E. S. Newell.

Sir, Department of Lands, Sydney, 8 March, 1888.

STEPHEN FREEMAN,
(For the Under Secretary).

No. 8.

The Under Secretary for Lands to P. J. Hourigan, Esq.

Sir, Department of Lands, Sydney, 8 March, 1888.

I am directed by the Secretary for Lands to inform you that applications to purchase the land which is embraced within Swamp-street, Double Bay, will, if made under section 66 of the Crown Lands Act of 1884, be dealt with in accordance with the provisions of that section.

I have, &c.,

STEPHEN FREEMAN,
(For the Under Secretary).

No. 9.

The Under Secretary for Lands to The Rev. S. Bryant.

Sir,

Department of Lands, 8 March, 1888.

I am directed by the Secretary for Lands to inform you that applications to purchase the land which is embraced within Swamp-street, Double Bay, will, if made under section 66 of the Crown Lands Act of 1884, be dealt with in accordance with the provisions of that section.

I have, &c.,

STEPHEN FREEMAN,

(For the Under Secretary).

No. 10.

The Under Secretary for Lands to Mr. W. H. Flavelle.

Sir,

Department of Lands, Sydney, 8 March, 1888.

I am directed by the Minister for Lands to inform you that applications to purchase the land which is included within Swamp-street, Double Bay, will, if made under section 66 of the Crown Lands Act of 1884, be dealt with in accordance with the provisions of that section.

I have, &c.,

STEPHEN FREEMAN,

(For the Under Secretary).

No. 11.

Mr. T. E. Hall and others to The Minister for Lands.

Double Bay, Sydney, 9 March, 1888.

WE, the undersigned owners of adjacent land to Swamp-street, in the Borough of Woollahra, hereby protest and object to the sale or alienation of Swamp-street or any portion of it, as proposed or suggested by your Department.

T. E. HALL,

JOHN HOUGHTON,

WM. MORTIMER.

The objection should probably be noted by Miscellaneous Branch, in event of applications to purchase parts of Swamp-street being made.—A. J. STORRS (for Surveyor-General), 21/3/88. The Under Secretary for Lands. See also paper within. Yes; Mr. De Low will please see to this.—S.F., 24/3/88.

In accordance with the provisions of section 66 of the Crown Lands Act of 1884, I, Thomas Charles Robinson, hereby apply for the purchase of certain land which is insufficient in area for conditional sale, hereunder described, a receipt is hereon showing that the sum of £10 has been lodged with the Colonial Treasurer on account of such application.

Annexed hereto is a plan illustrative of the position of the area applied for.

T. C. ROBINSON.

To the Under Secretary for Lands.

Description of land applied for :

County of Cumberland, parish of Alexandria, being the Crown land indicated upon the sketch hereunder, and defined by red edging,* having 33 feet frontage to Ocean-street, and extending back 115½ feet therefrom.

* Dotted lines in red.

Total depth of about 165½ feet. N.B.—My land running right through for an equal measurement of 165½ feet frontage to Cross-street as well as my frontage to Ocean-street.—T.C.R. Referred to Mr. District-Surveyor Deering for report, &c.—R.H.D. (for the Under Secretary), B.C., Lands, 15 March, 1888.

No. 14.

W. H. Flavelle, Esq., J.P., to The Under Secretary for Lands.

Dear Sir,

340 George-street, Sydney, 13 March, 1888.

I received a notice from the Lands Department, dated March 8th, 1888, informing me that I could make application for land in Swamp-street, Double Bay. I wish to know where I can see a plan of the land to be sold, also what is the upset price, also, a most material point, viz., are you going to allow some of the people having a mere possessory title to some of the frontages, to acquire portions of the closed road, thereby giving a good title to land at the back, where perhaps the frontage title may be voided any moment, or do you mean to make each applicant show a clean title to his respective frontage first.

I have a Torrens title to my land.

Yours, &c.,

WILLIAM H. FLAVELLE.

Mr. Flavelle made personal inquiry yesterday on the subject of this letter, and was referred to the Under Secretary for Lands for the information sought.—A. J. STORRS (for Surveyor-General), 21/3/88. Mr. De Low.—S.F., 24/3/88.

THOMAS ROWLING.

To the Under Secretary for Lands.

Description of land applied for :

County of Cumberland, parish of Alexandria, being the Crown land indicated upon the sketch hereunder, and defined by red edging,* having $77\frac{1}{2}$ feet frontage to Bay-street, and extending back 77 feet or thereabouts.

Referred to Mr. District-Surveyor Deering, for report.—R.H.D. (for the Under Secretary), B.C., Lands, 24 March, 1888.

No. 19.

R. H. Hardie, Esq., to The Under Secretary for Lands.

Swamp-street, Double Bay.

Sir,

133 Pitt-street, Sydney, 1 May, 1888.

On behalf of Mrs. Leslie, and as her agent, I desire to object to the alienation or closing up of Swamp-street, Double Bay. Mrs. Leslie's property, purchased from the Crown by her father, Mr. C. Gordon, in 1835, has some 300 feet frontage to Swamp-street, and if such alienation is made all possible means for drainage will be closed, and this in face of a growing population and an increased number of dwellings being erected.

It is especially desirable that this means for future drainage be not closed as close by is a large Public School, and what is unhealthy for the district must be injurious to the children.

Swamp-street is wide, and might well be used for its original purpose; and also be planted out by the local Council as a Recreation Reserve for the people.

Trusting that the attempt which I understand is being made by one or two interested parties to get this street alienated will not be granted.

I have, &c.

ROBERT W. HARDIE.

[Enclosures.]

Sir,

Crathie, Point Piper Road, Paddington, Sydney, 30 April, 1888.

As I understand an agitation is on foot to do away with Swamp-street, Double Bay, shown on the old maps, and mentioned as Swamp-street in the deeds of the allotments, I beg to inform you that I am the owner of the original allotments fifteen and sixteen, fronting Swamp-street, and my deeds give me a frontage to that street, I therefore firmly and respectfully protest against the infringement of my rights to that street frontage, as I wish to see the street opened and drainage provided without any further delay.

I have, &c.

H. LESLIE.

(Mrs. HEZIBAH LESLIE, Owner.)

The Under Secretary for Lands.

Sir,

The Treasury, New South Wales, 28 April, 1888.

I have the honor to inform you that the deed fee due on the selection mentioned in the margin was credited to revenue on 27th April, 1888.

I have, &c.

W. NEWCOMBE,

(For the Under Secretary).

To the Under Secretary for Lands.

J. Spilsbury,
Wellington; 40
acres; selected
on 17th Decem-
ber, 1863; deed
fee, £1.

Sir,

The Treasury, 27 December, 1866.

I am directed to annex a Schedule, accompanied by a declaration in each case, of moneys paid into this office, on 24th instant, as balance due upon conditional purchases.

I may add that the several amounts have been carried to the Consolidated Revenue Fund, subject to the declaration being countersigned by the Minister for Lands, on the conditions of the Crown Lands Alienation Act of 1861 having been complied with.

I have, &c.

HENRY LANE.

To the Under Secretary for Lands.

SCHEDULE REFERRED TO.

Spilsbury, J., Wellington; selected on 17th December; area, 40 acres; balance, £30.

1887-8.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

THE MISSES SAVAGE.

(PETITION OF)

Received by the Legislative Assembly, 4 July, 1888.

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Mary Charlotte Savage, Ellen Savage, and Alicia Jane Savage,—

HUMBLY SHOWETH:—

That your Petitioners are the daughters of the late Arthur Savage, Surgeon, Royal Navy, who after having successfully taken charge of several convict ships to Sydney from England, emigrated to Sydney with his family, with the sanction of the Admiralty, in 1838, and held the appointment of Health Officer of Port Jackson for thirteen years.

That his health completely gave way under the severe fatigue and anxiety consequent upon the increase of work caused by the influx of shipping after the gold discoveries, and he died on the 20th July, 1852, aged 55 years.

That adverse circumstances arising from no fault of their own have compelled your Petitioners for many years to support themselves, that the health of two of your Petitioners has quite broken down under the pressure of seventeen years severe trouble, one daughter having been delicate all her life.

That it is now difficult for your Petitioners to maintain themselves.

That your Petitioners believe they have a claim for good service rendered to the Colony by their late father, for which no gratuity or pension has ever been received.

That the late Dr. Savage was a good and meritorious officer, who died in harness, having faithfully served the Colony.

Your Petitioners therefore humbly pray that your Honorable House will take the circumstances detailed in the foregoing Petition into careful and favourable consideration, and so deal with your Petitioners as to your Honorable House may seem just and right.

And your Petitioners, as in duty bound, will ever pray.

[3 signatures.]

1887-8.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

THEFTS OF WORKMEN'S TOOLS.
(RETURN RESPECTING.)

Ordered by the Legislative Assembly to be printed, 28 February, 1888.

[Laid upon the Table of this House in accordance with promise made by the Colonial Secretary, in answer to Question No. 9, Votes No. 53, of Wednesday, 15 February, 1888.]

(9.) Thefts of Workmen's Tools:—Mr. Schey asked the Colonial Secretary,—

(1.) Has he any objection to lay upon the Table of this House a Return showing:—(1) How many complaints have been made to the police of thefts of workmen's tools during the last two years; (2) how many prosecutions have been initiated by the police during a like period for such offences; (3) how many convictions have been obtained;—this Return to be limited to the city of Sydney.

(2.) Does he require such Return to be moved for, or will he now cause it to be supplied?

Sir Henry Parkes answered,—If the Honorable Member thinks that this Return will be of value—I confess I do not see the value of it myself—I am quite willing to have it prepared, and to lay it upon the Table, confining it to the city of Sydney,

RETURN showing the number of Complaints made to the Police of Thefts of Workmen's Tools within the city of Sydney, prosecutions initiated, and convictions obtained, during the last two years.

Complaints.	Prosecutions.	Convictions.	Remarks.
149	75	62	The greater number of these larcenies were committed in consequence of the workmen's tools being left unprotected by night about the buildings where they were being used.

The Inspector-General of Police,
23 February, 1888.

G. READ,
Superintendent.

1887.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

THE REVEREND DANIEL P. M. HULBERT.

(PETITION OF.)

Received by the Legislative Assembly, 15 November, 1887.

To the Honorable the Legislative Assembly of New South Wales, now assembled in Parliament.

The Petition of the undersigned Ecclesiastic,—

VERY HUMBLY SHOWETH,—

1. That for thirty-nine years your Petitioner has been in the direct pay of Her Imperial Majesty, and for over thirty years of honorable period of service, through having been appointed a stipendiary pastor in Goulburn Church District, by Viceroy Sir William Denison and his Executive Council, some two months after the decease of the Very Reverend Commissary Cartwright, Master of Arts, he has mostly resided in Goulburn township, as did his predecessor.

2. That such appointment by recommendation of the deceased Primate, Frederic Barker, D.D., was wholly unsought for and unsolicited by the Petitioner, then living in Goulburn, and that he, as a new arrival and consequently unacquainted with the powers and prerogatives of the above-named Governor-General, accepted the proffered office and function, in implicit faith and entire reliance on the assurance that a free residence would speedily be built for him, as ordered by the Colonial Statutes, and that so soon as he could obtain and forward to Sydney upwards of 500 signatures of adults willing to accept his services, he would be entitled to an annual allowance from the Treasury of £250, in addition to a probable equal amount in surplice-fees and voluntary gifts from the laity; such signatures only to be obtained outside the immediate neighbourhood of the Goulburn township, so as to leave to Rev. Wm. Sowerby an adequate number of adults to secure his allowance from the Crown also.

3. That nearly five months of arduous and perilous horsemanship, having purchased two horses and equipments for such labour, were expended in obtaining about 560 signatures, and within the outlying area of Goulburn Church District, even to some 50 to 60 miles remote from the Goulburn township so reserved by the Crown; and your Petitioner has been informed that the enrolment of adults has been duly preserved; yet not until the expiry of those five months did he receive £1 of the allowance from H.M. Treasurer, the voucher for such first payment having been shown to him in the Office of Her Imperial Majesty's Auditor-General in Sydney.

4. That an immediate promise of £500 was made to himself, followed by plans and specifications for a costly manse by the architect, the late Mr. Blacket, such promise also being personally renewed to Mr. John William Chisholm, of Wallogorang, and your former Speaker, Sir Terence Aubrey Murray, who severally informed your Petitioner thereof; but inasmuch as Goulburn Church Trustees constantly affirmed that they had no funds in possession, and not £1 of the above promised £500 was ever remitted to either of us from Sydney, the plans supplied by Mr. Blacket were of no greater value than the promises.

5. That your Honorable Assembly generously gave the Right Reverend Doctor Barker the sum of £1,600 for his having come to this metropolis at his own expense and only some few months before betaking himself and all appurtenances finally out of it; but that your Petitioner never has received £1 out of H.M. Church Lands at Goulburn township, although by many removals which he has been compelled to make and by the great costs of bringing out his family and valuable library and other effects (most materially damaged by removals) £1,200 will not compensate him for planting his children and children's children here in perpetuity.

6. That about eleven months since, your Petitioner respectfully placed this grievous plaint before His Excellency the present Governor-in-Chief, who, through his private secretary by letter was pleased to advise him rather to place it before the responsible advisers of the Crown, the Cabinet of the Honorable Mr. Dibbs.

7. That your Petitioner did so, and after many days that honorable gentleman, the then Colonial Secretary, graciously assured him that "for every legal wrong-doing there existed a corresponding remedy, and that Her Majesty's Trustees in Goulburn were equally as much bound to attend to this plaint as either he himself or the Colonial Treasurer or any other Cabinet Minister."

8. That by reason of the suits at law in local courts and again in the Supreme Court, resulting from sundry notorious actions, your Petitioner awaited patiently the decision of Her Majesty's learned judges, three of whom unanimously and recently affirmed the same as your Petitioner *ab initio* had ever insisted upon, that not any ecclesiastic, whether Sowerby or Puddicombe, the plaintiff in that cause, ever was entitled to a larger annual sum than £150 per annum.

9. That now, however, by an advertised notice to the public, your honorable Assembly is again to be importuned to award the sum of £300 a year, instead of the statutablely enjoined £150 per annum; and yet more, that a large amount of capital sum is in deposit account at a Goulburn bank to the credit of one Trustee only and not in the joint names of all H.M. Trustees, in the Colonial Treasury, with accumulating interest, which did not appear before their honors the three Supreme Court Judges, and which is very obviously imperilling that capital.

10. Wherefore, lastly, taking all these premises into your very serious consideration, your Petitioner most humbly entreats your Honorable House to bear in mind that he himself is the sole surviving ecclesiastic who was appointed to Goulburn Church District by Her Majesty's Governor-General Denison, over thirty years ago.

- (a.) That H.M. Trustees wrongfully and injuriously allowed Rev. William Sowerby, father-in-law of the senior Trustee, to appropriate the entire yearly revenues to his own family uses and indulgences until his own natural demise.
- (b.) That fully £7,000 from first to last, inclusive of the above and down to this date, as publicly made known by your Petitioner, have, by reason of such Crown appointment, been spoliated from his family; and
- (c.) That the Bishop has constantly assured your Petitioner privately, as well as Goulburn Synod openly, that not £1 of the greatly increased revenues from the Crown "Trust" Estates ever has been placed at his control or at his disposal by Her Majesty's Trustees, or any years current account, contrary to the plainest precept of the Statute, viz., 20 Victoria, No. 4, 15 December, 1857, which ordereth thus:—

"Furthermore the Trustees of church lands once in each year shall furnish a true account of all rents (*i.e.*, profits) received or receivable by them in respect of the lands entrusted to them by the Crown, under this Act of Parliament; and shall deliver also such account to the Bishop (*i.e.* Diocesan) yearly for his inspection and approval."

Your Petitioner consequently most humbly prays your honorable House to take such action as may secure your most favourable consideration for such an accumulation of wrongs, by reason of the abovenamed appointment by Her Imperial Majesty's Viceroy, Sir William Denison, and will be pleased also to grant a Select Committee of Honorable Members of Parliament to investigate and determine, both retrospectively and prospectively, what requitals should be duly and truly made to your Petitioner by Her Imperial Majesty's Trustees of the valuable trust estates in the town of Goulburn aforementioned.

DANIEL P. M. HULBERT.

Manly Beach, *pro* Goulburn, 5th November, 1887.

1887-8.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

TRADES MARKS.

(PETITION FROM MANUFACTURERS AND MERCHANTS FOR AMENDMENT OF ACT.)

Received by the Legislative Assembly, 26 April, 1888.

To the Honorable the Legislative Assembly, in Parliament assembled.

The humble Petition of some of the Manufacturers and Merchants of Sydney,—

RESPECTFULLY SHOWETH:—

That whereas your Petitioners are suffering seriously from the loss of our empty packages, vessels, &c., bearing our trade-marks, brands, and names, we humbly pray that you will grant us relief by amending the "Trade-marks Act of 1865," now in force.

Believing it may not be generally known to the Honorable Legislative Assembly that while protecting the goods sold under a registered trade-mark the Act, as at present constituted, does not protect the empty packages, vessels, &c., such goods have been packed in; and as many of these packages, vessels, &c., are, in the ordinary course of trade, lent to the customers, they are in many instances sold to dealers, or destroyed or otherwise made away with thus, inflicting a grievous loss upon the manufacturer or merchant whose property they are.

This want of protection also allows opportunities for unscrupulous persons to fraudulently use our trade-marks, and that in a manner extremely difficult to detect and punish, as repacking or refilling one of our original packages or vessels can scarcely be called forging the trade-mark thereon.

A case has been tried bearing upon this in which the Judge ruled against the prosecutor by holding that "a bottle is a bottle."

Your Petitioners, in the interest of honest manufacturers and merchants, do humbly pray you will so amend the present Trade-marks Act as to extend its privileges and protection to any packages or vessels, &c., whether empty or not, so long as they bear a registered trade-mark, brand, or name, by prohibiting the illegal use of, illegal dealing in (either buying or selling), the wilful destruction of, appropriation of, illegal detention of, or unlawful export of, any package or vessel, &c., bearing a registered trade-mark, and the partially or wholly effacing, obliterating, altering, or mutilating any such registered trade-mark, brand, or name upon any package, vessel, &c., whether empty or not, under pain of severe punishment.

And your Petitioners, as in duty bound, will ever pray, &c.

1887-8.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

TOTALIZATOR LEGALIZING BILL.

(PETITION—CLARENCE RIVER JOCKEY CLUB.)

Received by the Legislative Assembly, 21 February, 1888.

The Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Members of the Clarence River Jockey Club,—

HUMBLY SHOWETH:—

1. That the propensity to speculation is inherent to the human mind.
 2. That this propensity manifests itself to a marked degree in a tendency to engage in betting upon the truly national sport of horse-racing.
 3. That your Petitioners are fully alive to the evils which follow and surround at present the excessive exercise of the propensity to speculate in betting, especially upon credit.
 4. That your Petitioners believe that this propensity should be controlled and guided as far as practicable comfortable with personal freedom. That your Petitioners believe one of the best methods for limiting the evils of betting would be to legalise under certain restrictions the use of the machine known as the totalizator.
 5. That your Petitioners have learnt that the legalising of the totalizator machine in connection with the sport of horse-racing in the Colonies of Queensland and New Zealand have been followed by highly beneficial results, both in respect to the sport itself, and also as to the moral effect upon the community of speculating by wagers.
 6. That your Petitioners submit that restrictions of the following character would amply protect the public and prevent abuse:—
 - (a.) That none but registered racing clubs should be licensed to use the machine.
 - (b.) That the authority or license should be issued by the Colonial Secretary after reference to the Bench of Magistrates at the place where it is proposed to use the machine, subject to revocation at any time.
 - (c.) That not more than three machines should be used by any club at one time, and then only within the raceground under the control or management of the club.
 - (d.) That each machine should be under the care and management of some competent person appointed by the club, and under the direct supervision of the committee.
 - (e.) That no club should be licensed to use the machine for more than six days in each year.
 7. That your Petitioners submit as some of the advantages which would follow the use of the totalizator,—
 - (a.) That the machine would in most cases give firmer odds to speculators than is obtainable from the credit bookmakers, whilst the public would be free to act according to their own judgment.
 - (b.) That the use of the machine would afford less inducement to dishonest running on the part of owners or persons having the control of horses, and for dishonest riding on the part of jockeys, inasmuch as what may be termed individual betting would be much lessened.
 - (c.) That while not interfering with the freedom of those having ample means to back their horses, or to bet under the credit system, the use of the machine for all investments being for cash, would amongst the less wealthy members of the community lessen the temptation that would otherwise exist, to run into debt, or to commit crime in order to honor losses brought about by indulgence in credit betting.
 - (d.) That judging by experience obtained in places where the machine is in legal use, the cause of embezzlement by young men to pay racing debts would be minimised.
 - (e.) That the legalising of the machine under the control of the racing club as hereinbefore suggested would enable those clubs to offer larger prizes for competition, as well as to provide better racing and running tracks, and also to improve the accommodation for the public generally.
 8. Your Petitioners therefore humbly pray that your Honorable House will take the premises into your consideration, and pass such measures as may be necessary to legalise under license the use of the machine known as the totalizator, subject to the control and management of the respective registered racing clubs of the Colony, for a period not exceeding six days in each year.
- And your Petitioners, as in duty bound, will ever pray, &c., &c., &c.

[Here follow 32 signatures.]

(6.) Total cost up to date (approximate), £105,000.

The Principal Under Secretary, B.C., 21/11/87.

JOHN DAVIES,
Chairman.

1887-8.

NEW SOUTH WALES.

WHEAT.

(DESPATCH RESPECTING THE POSSIBILITY OF OPENING UP A TRADE IN, BETWEEN AUSTRALIA AND BARCELONA.)

Presented to Parliament by Command.

The Agent-General for New South Wales, London, to The Colonial Secretary, Sydney.

Sir,

5, Westminster Chambers, Westminster S.W.,

28 October, 1887.

I have the honor to forward, for your information, copy of a letter addressed to me by the Secretary of State for the Colonies, covering copy of a communication from the Foreign Office, having reference to a trade in wheat which might be opened between Australia and Barcelona.

I have, &c.,

SAUL SAMUEL.

[Enclosures.]

Sir,

Downing-street, 25 October, 1887.

I am directed by the Secretary of State for the Colonies to transmit to you, for such action as you may think proper, a copy of a letter from the Foreign Office, enclosing a despatch from Her Majesty's Consul at Barcelona, in which he suggests that an important and lucrative trade in wheat might be opened between Australia and that port.

I am, &c.,

JOHN BRAMSTON.

The Agent-General for New South Wales.

[Sub-enclosures.]

Sir,

Foreign Office, 17 October, 1887.

I am directed by the Marquis of Salisbury to transmit to you, to be laid before Secretary Sir Henry Holland, a copy of a despatch from Her Majesty's Consul at Barcelona, in which he suggests that an important and lucrative trade in wheat might be opened between Australia and that port.

I am, &c.,

JAMES FERGUSSON.

The Under Secretary of State, Colonial Office.

My Lord Marquis,

British Consulate, Barcelona, 13 October, 1887.

The following intelligence may be useful to those concerned:—

A very important and lucrative trade might be initiated by the importation of wheat into Barcelona from Australia. Through the continual failure of the crops in these parts (and the harvest of 1887 cannot be said to excel those of the last few years) many cargoes of corn are annually imported at this port from South Russia and North America, and if it could be done, *tant soit peu*, cheaper from Australia, a successful and durable business might be carried on to the advantage of exporters and shipowners.

In order to protect the native produce, the reduced tax of Pesetas 4.20 per 100 kilograms of wheat is imposed now, being the same as that imposed on all Treaty nations with Spain.

I have, &c.,

FRANK WOOLDRIDGE.

The Marquis of Salisbury, K.G., &c.

1887-8.

NEW SOUTH WALES.

WHEAT.

(FURTHER DESPATCH RESPECTING THE POSSIBILITY OF OPENING UP A TRADE IN, BETWEEN AUSTRALIA AND BARCELONA.)

Presented to Parliament by Command.

The Acting Agent-General for New South Wales, London, to The Colonial Secretary, Sydney.

Sir, 5, Westminster Chambers, Westminster, S.W., 2 March, 1888.

In continuation of Sir Saul Samuel's letter to you of the 28th October last, S. 259-87, having reference to a trade in wheat which might be opened between Australia and Barcelona, I have the honor to transmit for your information a further communication addressed to me by the Secretary of State for the Colonies on the same subject.

I have, &c.,

DANIEL COOPER.

[Enclosure.]

Sir,

Downing-street, 28 February, 1888.

With reference to previous correspondence on this subject, I am directed by the Secretary of State for the Colonies to transmit to you a copy of a further despatch from Her Majesty's Consul, Barcelona, furnishing additional information in connection with the proposed trade in wheat between Australia and that port.

It will be observed that this information, which is intended to supplement that contained in the enclosure to the letter from this Department of the 25th of October last, has been obtained at the request of the Agent-General for New Zealand.

I am, &c.,

ROBERT G. W. HERBERT.

The Agent-General for New South Wales.

[Sub-Enclosures.]

My Lord Marquess,

British Consulate, Barcelona, 17 February, 1888.

I have the honor to acknowledge the receipt of Sir James Ferguson's commercial despatch, No. 1, of the 6th instant, enclosing to me a copy of a letter from the Agent-General of New Zealand on the subject of the establishment of a trade in wheat between Barcelona and Australia, and instructing me to furnish the further information required by the New Zealand Government, which I beg to forward herewith to your Lordship.

I have, &c.,

M. S. WOOLDRIDGE.

Her Majesty's Principal Secretary of State for Foreign Affairs.

Quantities of wheat imported into Barcelona during the year 1886, and whence exported :—

From Russia	Imperial quarters,	123,684
The Levant	do	109,284
France and Algiers	do	39,432
The United States	do	147,264
South America	do	11,260
Total	do	430,904

Quantities of wheat imported into Barcelona during the year 1887, and whence exported :—

From Russia	Imperial quarters,	179,328
The Levant	do	48,460
France and Algiers	do	17,488
The United States	do	259,096
South America	do	13,612
Central Europe	do	14,080
Total	do	532,064

Freights from Russia to Barcelona during the latter part of the year 1887 :—

Odessa—		
Francs, 300, for every 130½ kilogs., = English lb., 287.		
Nicolaeff—		
Francs, 2·15, for do do		
From the United States,		
New York—		
3s. 9d. per Imperial quarter.		

Average selling price of foreign wheat in Barcelona during the last four months, November, 1887, to February, 1888, inclusive :—

Nicolaeff and Sebastopol	Pesetas, 13·50 per 55 kilogs., = English lb., 121.
Azoff Sea	14·35 do
The Levant	13·75 do
The United States	15·45 do
Bombay	15·25 do

Average exchange, Pesetas, 25·50 per £ sterling.

According to agricultural reports the wheat harvest of 1887 has not been an abundant one in most parts of this province, and large quantities of wheat will be required to satisfy the wants of the inhabitants, especially in the north; neither has sowing been extensive. With even good harvests importation of wheat will always be necessary.

Rather important quantities of other cereals were imported into Barcelona during 1887, viz. :—Maize, barley, and oats, from Russia, about 12,000 tons; from the Levant (Turkey and the Danube), about 9,000 tons; and from Morocco, maize and garbanos (chick peas), about 7,400 tons.

M. S. WOOLDRIDGE,

Consul.

Barcelona, 17 February, 1888.
