Sir,

Bateman's Bay, 17 May, 1887.

I have the honor to report having visited and inspected the fisheries at Ulladulla, Narrawillee Creek, Conjola Lake, and Berara Creek.

At Ulladulla, where fish of many descriptions abound, no licensed fishermen are at work, and on questioning two fishermen as to the reason was informed that they found it impossible to obtain a livelihood, owing to the uncertainty attached to the time at which the steamer leaves, and the low price received for their fish at the Sydney market. Some aborigines told me that schnapper were very abundant on the coast around Ulladulla, but that their fishing was greatly interfered with by the great numbers of leather jackets, which abound on the schnapper grounds. These pests of the fishermen are reported by the Inspectors to be increasing yearly throughout the southern fisheries.

Narrawillee Creek.—The lessees on this creek are doing all in their power to make oyster culture a success by laying down spat collectors in the shape of free-stone and swamp oak, and by sending only those oysters to market which have arrived at maturity. As a result of this good management I found on inspection, that although some 130 bags of oysters have been sent to market during the summer months, the beds are still fairly stocked, and that the mangroves and spat collectors which line the foreshores are well covered with spat and brood, many of which will have attained sufficient growth for laying down during the coming summer. When it is taken into account that the oyster-bearing portion of this creek is only about 1 mile in extent, and that it had been almost completely denuded of oysters under the old licensing system, the result is extremely satisfactory, and goes far to prove that it only requires judgment combined with a little practical knowledge to make oyster culture a success.

Conjola Lake.—One application for a lease, made on this lake by William Millard, has been disallowed. The applicant, under his sufferance occupation, has laid down several bags of oysters on his foreshore, and is desirous of giving oyster culture at Conjola Lake a fair trial. I would respectfully recommend that the action taken with regard to this area be reconsidered.*

Berara Creek is situated 16 miles north of Ulladulla, and is about 3 miles in length. The oyster-bearing portion commences about 1 mile from the mouth and extends to within a short distance of the head of the creek. The oysters are found on small patches of rock and are now in splendid condition. Only one lease has been applied for, which I measured and marked in accordance with instructions.

After a careful examination I failed to discover any sign of spat at Conjola or Berara, and am of opinion that the oysters in these waters have not spatted for some years, as all of the oysters showing on rocks are apparently four years of age and upwards. Why there should be a good fall of spat at Narrawillee Creek and none at Conjola or Berara, only a few miles apart, I am at present unable to say, but will give the matter careful consideration, and report the conclusion arrived at.

I have, &c.,

GEORGE G. BENSON,

Inspector, Southern Fisheries.

Assistant-Inspector Smithers to The Chief Inspector.

Sir,

Sydney, 2 January, 1888.

I have the honor to submit, for your information, my report, from 30th August last (upon which date I left Eden District to temporarily supervise another matter) to 31st December.

As you are aware, I left under instructions for Lake Illawarra on the 2nd September, and remained in charge of that place till the 26th of the same month, when, under instructions, I again left for Sydney.

During my stay at Lake Illawarra I had the satisfaction of noting the great advantages gained by the closing certain parts of the lake against net fishing. In the whole of these closed waters, more especially Mullet Creek, the fish were very plentiful, and there could be seen countless numbers of young fish, fully proving what protection and attention has done there. If the same protection could be always afforded it there would be a permanent abundant supply.

The fishing is done at the lake principally with 4-inch meshing nets, which are used with very great success, as this lake undoubtedly gives every facility to such nets being used.

The

* NOTE.—In reference to the petition of certain persons this lease was disallowed, and the area has been recommended to be exempted from the power of leasing.—L.G.T., 21/5/87, Chief Inspector.

The fishermen send in their fish to Wollongong five times a week ; this involves a land transit of 4 miles, and thence steamer to Sydney. Only a small portion of the catch is sold at Wollongong.

I should mention that this fine lake has of itself splendid and valuable natural reserves, in the way of large flats, covered for the most part with marine vegetation, upon which vast quantities of fish may be seen, and upon which nets can be neither hauled nor set.

In addition to the proclaimed reserve these flats are invaluable in the protection they afford to young fish.

The oversight of the closed waters is no easy matter. The only place of residence available is distant some 2 miles up Mullet Creek, and as many of the fishermen live on the creek it is very difficult to visit the lake unobserved.

If the Inspector should be seen during his passage down signals are at once made by the fishermen to any *confrères* who may be engaged in fishing in the closed waters.

The only apparent remedy for this difficulty is for a house to be provided for the Inspector in some position where the closed waters could be overlooked.

On my return to Sydney I at once took my share in watching the closed waters of Port Jackson. The results of my oversight have been duly reported to you from time to time. I summarise those results here ; altogether I found ten men offending, seized four nets and one boat ; other offences, I charged four men and took three nets and one boat.

My duties in closed waters have been much frustrated by the systematic manner in which my movements have been watched.

As in Lake Macquarie, so in Port Jackson, great quantities of fish may be seen in closed waters, a further proof of the wisdom of affording protection to the spawning ground.

I have, &c.,

FREDK. W. SMITHERS.

1889.

NEW SOUTH WALES.

FISHERIES ACT, 1881.

(REGULATION UNDER.)

Presented to Parliament, pursuant to Act 44 Vic. No. 26.

Colonial Secretary's Office,

Sydney, 21st February, 1889.

His Excellency the Governor, with the advice of the Executive Council, has been pleased, in accordance with section 9 of the "Fisheries Act, 1881," to make the following Regulation under the provisions of the above-cited Act.

GEORGE R. DIBBS.

Every person licensed to catch fish, or being either the owner or in charge of a fishing-boat licensed under the provisions of the "Fisheries Act, 1881," 44 Vic. No. 26, shall, on demand at any time by any Inspector of Fisheries, Officer of Police, or constable, forthwith produce such license; and any person so failing to produce such license shall on conviction forfeit and pay a penalty of not less than two pounds.

1889.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

REPORT FROM THE SELECT COMMITTEE

ON

WORKING OF THE FISHERIES ACT,

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE,

MINUTES OF EVIDENCE,

AND

APPENDICES.

ORDERED BY THE LEGISLATIVE ASSEMBLY TO BE PRINTED,
27 *August*, 1889.

SYDNEY : CHARLES POTTER, GOVERNMENT PRINTER.

1889.

1889.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES NO. 28. TUESDAY, 21 MAY, 1889.

10. WORKING OF THE FISHERIES ACT:—Mr. Frank Farnell moved, pursuant to *amended* Notice,—
- (1.) That a Select Committee be appointed, with power to send for persons and papers, to inquire into and report upon the working of the Fisheries Act.
- (2.) That such Committee consist of Mr. O'Sullivan, Mr. Thompson, Mr. Howe, Mr. William Stephen, Mr. Stevenson, Mr. Ritchie, Mr. Nobbs, Mr. Seaver, Mr. Carruthers, and the Mover.
- Debate ensued.
- Question put and passed
-

VOTES NO. 56. WEDNESDAY, 10 JULY, 1889.

5. WORKING OF THE FISHERIES ACT (*Formal Motion*):—Mr. Dale, for Mr. Frank Farnell, moved, pursuant to Notice, That the Select Committee now sitting on "Working of the Fisheries Act" be authorized to make visits of inspection to, and to hold inquiries at, certain fisheries of the Colony, and that the Committee have power to sit during any adjournment of this House, to enable them to make the said visits of inspection.
- Question put and passed.
-

VOTES NO. 83. TUESDAY, 27 AUGUST, 1889.

4. WORKING OF THE FISHERIES ACT:—Mr. Frank Farnell, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before, the Select Committee for whose consideration and Report this subject was referred on 21st May, 1889, together with Appendices.
- Ordered to be printed.

WORKING OF THE FISHERIES ACT.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly appointed on 21st May, 1889, "with power to send for persons and papers, to inquire into and report upon the working of the Fisheries Act" and to whom was granted on 10th July, 1889, "leave to make visits of inspection to, and to hold inquiries at, certain fisheries of the Colony,"—have agreed to the following Report:—

Your Committee having bestowed a large amount of time and attention upon the subject referred to them, and carefully considered the varied evidence given before the Committee find that the Fisheries Act has not worked as satisfactorily as was anticipated by its framers. The Act has by reason of certain restrictions operated harshly upon those engaged in the industry, and has not held out sufficient encouragement to oyster-culture; indeed this industry has almost become a dead letter owing particularly to the system of leasing and supervision being defective.

2. The evidence taken before your Committee, without exception, points to the expediency of allowing an extension of the length of the various nets along the corks, and your Committee recommend for the consideration of your Honorable House,—

- (1.) That the hauling-net should be allowed to be increased in length to 250 fathoms, with a mesh of $2\frac{1}{2}$ inches in the wings, and 2 inches in the bunt, and that the bunt should not exceed $\frac{1}{3}$ the length of the net.
- (2.) That the garfish-net should not exceed 60 fathoms, with bunt not more than $\frac{1}{3}$, and the mesh should be $1\frac{3}{4}$ inch in the wings and 1 inch in the bunt.
- (3.) That the prawn-net should not exceed 30 fathoms, having a mesh throughout not less than 1 inch.
- (4.) That the meshing-net to be used in tidal waters should have a length not exceeding 120 fathoms, and a mesh not less than 3 inches in any part.
- (5.) That the inland waters' net should consist of a net having a mesh of not less than 4 inches in any part, and not fitted with a bag or purse; and no net should be used in the tributaries of inland rivers.
- (6.) That each net should be considered legal when passed by an inspector, and should not be forfeited until a second conviction.
- (7.) That no net be set across any inland river without leaving a width of at least 12 feet of water between each bank and the ends of the net, and any person wilfully placing any obstruction of whatever kind between the net and the bank so as to prevent fish freely passing should be liable to a heavy penalty.
- (8.) That the legal weight of the garfish be reduced to 1 ounce, considering that it is a migratory fish and vast quantities can be captured.

3. Your Committee have cause to regret that more discrimination has not been shown in the closing and opening of rivers and bays for fishing—it having been proved to the Committee that the local Inspectors have but seldom been consulted in regard to the closing or opening of waters, but that closures have been made by the Fisheries Commission which have caused hardship to the fishermen as well as deprived the public of being able to obtain fresh fish, notably on the Parramatta, Hawkesbury, and George's Rivers.

4. Your Committee urge that immediate attention be directed to the way in which the fish in the Murray and its tributaries are being captured and destroyed.

5. Your Committee have learned that trawling is not practised by the fishermen of New South Wales, and they recommend that the coast be surveyed without delay and some encouragement offered to trawlers.

6.

6. It has been shown to your Committee that much delay and inconvenience have been caused the fishermen by the delays that have taken place in the Fisheries Department through the absence of a quorum of the members of the Commission, and they cannot but add that the mode of procedure in many instances, in transacting business in the absence of a quorum, was irregular and objectionable.

7. Your Committee have ascertained that the members of the Commission have been very irregular in their attendance on the Commission, and much delay has been caused in consequence.

8. Your Committee recommend that the fishermen's license fee remain as at present, 10s., and that the boat license be dispensed with.

9. Your Committee are of opinion that all openings and closures of waters should at all times be notified without delay to the Fisheries Inspectors of the various districts for the purpose of affording direct information to the fishermen, and further suggest that in districts where practicable the local police officers be appointed to perform the duties of Assistant Inspectors of Fisheries, and that Inspectors and Assistant Inspectors should be authorized to issue licenses and collect fees.

10. Your Committee beg to point out the deplorable condition of the oyster fisheries, which once yielded profitable employment, and recommend as a remedy the granting of large areas of foreshore on the leasing system, which shall be subject to tender, and that the rent be determined by the amount tendered, and in no case should a lease be granted unless the rent be paid one year in advance.

11. Your Committee have learned that under the present system of oyster-leasing, pilfering and indiscriminate selection of small areas have interfered with the success of the lessees of larger areas.

12. It has been proved to your Committee that a very unsatisfactory state of affairs exists in regard to the sale of fish at the Woolloomooloo Market, and they recommend the following :—

- (1.) That an additional market be established close to the Railway and convenient to water carriage—to be under the supervision of an officer appointed by the Government, who may be authorised to sell consignments of fish at any hour after their arrival; and that all fishermen shall have the right to appoint their own auctioneers or salesmen.
- (2.) That the present market accommodation at Woolloomooloo being inadequate, and the fact being disclosed, that fish are at the present time liable to be spat upon and trodden under foot, the Municipal Council of Sydney be asked to provide means for the display of fish by erecting suitable raised tables on which they could be placed for inspection before sale.
- (3.) That railway freight on fresh fish and oysters and on fish baskets returned empty should be reduced.

13. Your Committee recommend that the present Commission be abolished, and the whole Department reconstructed; and they suggest that, in place of the Commission, direct Ministerial control be established, and one gentleman appointed to preside over the Department, who should report to the Minister having such control.

14. Your Committee are of opinion that, although the Commissioners have done good work, they will not object to being relieved of their duties; and your Committee, in determining on their Report, acknowledge their valuable services as Commissioners.

15. In the event of the Commission being retained, your Committee would recommend that two representatives of the fishermen in the Colony be placed on that Board.

16. Your Committee cannot conclude this Report without expressing their conviction that the Government has been to blame for its inactivity in carrying out the Commission's recommendations; and they confidently believe that the evidence submitted with their Report, and the various suggestions embodied therein, together with the Draft Bills appended thereto, will prove of great value in settling this important question.

FRANK FARNELL,
Chairman.

No. 3 Committee Room,
Sydney, 27 August, 1889.

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 28 MAY, 1889.

MEMBERS PRESENT:—

Mr. Frank Farnell,		Mr. O'Sullivan,
Mr. Ritchie,		Mr. Stevenson,
	Mr. Nobbs.	

Mr. Frank Farnell called to the Chair.

Entry from Votes and Proceedings, appointing the Committee, read by the Clerz.

Committee deliberated.

[Adjourned till Thursday next, at a quarter-past Two o'clock.]

THURSDAY, 30 MAY, 1889.

MEMBERS PRESENT:—

Mr. Frank Farnell in the Chair.		
Mr. Ritchie,		Mr. Nobbs.

Committee deliberated.

Ordered,—That Drs. J. C. Cox and E. P. Ramsay and Mr. S. H. Hyam be summoned to give evidence next meeting.

[Adjourned till Wednesday next, at Two o'clock.]

WEDNESDAY, 5 JUNE, 1889.

MEMBERS PRESENT:—

Mr. Frank Farnell in the Chair.		
Mr. Howe,		Mr. Thompson,
Mr. O'Sullivan,		Mr. Ritchie,
	Mr. William Stephen.	

Dr. J. C. Cox (*President of the Fisheries Commission*) called in, sworn, and examined.

Witness handed in memorandum in reference to transference of Inspectorial Staff; copy of proposed legislation in reference to the Fisheries of the Colony; list of officers and employees in the Fisheries Department; statement of receipts and expenditure of Fisheries Department from 1881 to 1888; correspondence in reference to prosecutions under the Fisheries Act; list of applications for oyster culture leases, by R. R. Armstrong and Sons; report by Inspector Mulhall on fish supply at Woolloomooloo Market; return of oyster culture leases from 1883 to 1889; returns of fish brought to Woolloomooloo Market from 1885 to 1887. [*See Appendices A 1 to 10.*]

Witness withdrew.

[Adjourned till Thursday, 13 June, at Two o'clock.]

THURSDAY, 13 JUNE, 1889.

MEMBERS PRESENT:—

Mr. Frank Farnell in the Chair.		
Mr. O'Sullivan,		Mr. William Stephen,
Mr. Ritchie,		Mr. Stevenson,
	Mr. Nobbs.	

Dr. E. P. Ramsay (*one of the Fisheries Commissioners*) called in, sworn, and examined.

Witness withdrew.

Solomon Herbert Hyam (*one of the Fisheries Commissioners*) called in, sworn, and examined.

Witness withdrew.

[Adjourned till Tuesday next, at Two o'clock.]

TUESDAY, 18 JUNE, 1889.

MEMBERS PRESENT:—

Mr. Frank Farnell in the Chair.		
Mr. O'Sullivan,		Mr. Seaver,
Mr. Ritchie,		Mr. William Stephen,
Mr. Stevenson,		Mr. Howe.

Lindsay G. Thompson (*Secretary to the Fisheries Commission and Chief Inspector of Fisheries*) called in, sworn, and examined.

Witness handed in copies of two Bills framed for the amendment of the Fisheries Act, with memoranda explanatory of same; copy of letter to Messrs. Duff and Collins, auctioneers, submitting for sale forfeited fishing-nets; list of officers and employees in the Fisheries Department; also memorandum suggesting alterations in the Inspectorial Staff. [*Appendices B 1 to 5.*]

Witness produced correspondence respecting removal of Inspector Quinan.

Witness withdrew.

[Adjourned till Thursday next, at Two o'clock.]

THURSDAY,

THURSDAY, 20 JUNE, 1889.

MEMBERS PRESENT:—

Mr. Frank Farnell in the Chair.
 Mr. Nobbs, | Mr. Ritchie,
 Mr. William Stephen, | Mr. Stevenson,
 Mr. Howe.

Alexander Oliver, M.A. (*one of the Fisheries Commissioners*), called in, sworn, and examined.
 Witness withdrew.

[Adjourned till Tuesday next, at *Two* o'clock.]

TUESDAY, 25 JUNE, 1889.

MEMBERS PRESENT:—

Mr. Frank Farnell in the Chair.
 Mr. William Stephen, | Mr. O'Sullivan.

Thomas Mulhall (*Assistant Inspector of Fisheries*) called in, sworn, and examined.
 Witness withdrew.

[Adjourned till Tuesday next, at *Two* o'clock.]

TUESDAY, 2 JULY, 1889.

MEMBERS PRESENT:—

Mr. O'Sullivan, | Mr. Seaver,
 Mr. William Stephen, | Mr. Ritchie,
 Mr. Stevenson.

In the absence of the Chairman, Mr. O'Sullivan was called to the Chair *pro tem*.
 Thomas Mulhall called in, and further examined.

Witness withdrew.

John Duncan Grant (*Assistant Inspector of Fisheries*) called in, sworn and examined.

Witness withdrew.

Peter Smith (*Assistant Inspector of Fisheries*) called in, sworn, and examined.

Witness withdrew.

[Adjourned till Thursday next, at *Two* o'clock.]

THURSDAY, 4 JULY, 1889.

MEMBERS PRESENT:—

Mr. Frank Farnell in the Chair.
 Mr. Ritchie, | Mr. Stevenson,
 Mr. Nobbs.

Richard Seymour (*Inspector of Nuisances for the City of Sydney, and an Assistant Inspector of Fisheries*) called in, sworn, and examined.

Witness *handed in* return showing quantity of fish received and sold by auction, the quantity condemned, and commission on sales at the Eastern Fish Market, Sydney. [*Appendix C 1.*]

Witness withdrew.

Peter Smith called in and further examined.

Witness *produced* list of leases for oyster culture, and of lessees who are in arrear with their rents in the Hawkesbury District.

Witness withdrew.

[Adjourned till Tuesday next, at *Two* o'clock.]

TUESDAY, 9 JULY, 1889.

MEMBERS PRESENT:—

Mr. Frank Farnell in the Chair.
 Mr. Ritchie, | Mr. Seaver,
 Mr. William Stephen, | Mr. O'Sullivan,
 Mr. Howe, | Mr. Stevenson.

James Charles White called in, sworn, and examined.

Witness withdrew.

Frederick William Smithers (*Travelling Inspector of Fisheries*) called in, sworn, and examined.

Witness withdrew.

Resolved,—That the Chairman obtain the necessary leave from the House for the Committee to make visits of inspection.

[Adjourned till Thursday next, at *Two* o'clock.]

THURSDAY,

THURSDAY, 11 JULY, 1889.

MEMBERS PRESENT:—

Mr. Frank Farnell in the Chair.
Mr. William Stephen, | Mr. Stevenson.

Entry from Votes and Proceedings, granting leave to the Committee to make visits of inspection to, and to hold inquiries at, certain Fisheries of the Colony, read by the Clerk.

Henry Woodward (*Oyster-dealer*) called in, sworn, and examined.

Witness withdrew.

Richard Hellings (*Boatman, Fisheries Department*) called in, sworn, and examined.

Witness withdrew.

Ordered,—That W. N. Cain, T. Temperley, F. Nelson, and G. G. Benson be summoned, under the Parliamentary Evidence Act, for Tuesday and Thursday next.

[Adjourned till Tuesday next, at *Two o'clock*.]

TUESDAY, 16 JULY, 1889.

MEMBERS PRESENT:—

Mr. Frank Farnell in the Chair.
Mr. O'Sullivan, | Mr. Seaver,
Mr. William Stephen, | Mr. Stevenson,
Mr. Howe, | Mr. Ritchie.

Frederick Nelson (*Inspector of Inland Fisheries*) called in, sworn, and examined.

Witness withdrew.

William Nicholas Cain (*Assistant Inspector of Fisheries*) called in, sworn, and examined.

Witness withdrew.

Thomas Temperley (*Inspector of Northern Fisheries*) called in, sworn, and examined.

Witness withdrew.

The Clerk drew the attention of the Committee to certain alterations made by Mr. H. Woodward in his evidence.

The Committee directed that certain of the alterations should be struck out.

[Adjourned till Thursday next, at *Two o'clock*.]

THURSDAY, 18 JULY, 1889.

MEMBERS PRESENT:—

Mr. Frank Farnell in the Chair.
Mr. William Stephen, | Mr. Howe,
Mr. Ritchie, | Mr. Stevenson.

Frederick Nelson called in and further examined.

Witness withdrew.

Thomas Temperley called in and further examined.

Witness withdrew.

George Gordon Benson (*Inspector of Southern Fisheries*) called in, sworn, and examined.

Witness withdrew.

[Adjourned till Tuesday next, at *Two o'clock*.]

TUESDAY, 23 JULY, 1889.

MEMBERS PRESENT:—

Mr. Frank Farnell in the Chair.
Mr. O'Sullivan, | Mr. William Stephen,
Mr. Ritchie, | Mr. Nobbs,
Mr. Stevenson.

Thomas Temperley called in and further examined.

Witness withdrew.

Frederick William Smithers called in and further examined.

Witness withdrew.

Peter Richardson (*Fisherman*) called in, sworn, and examined.

Witness withdrew.

James Edwards (*Fisherman*) called in, sworn, and examined.

Witness withdrew.

[Adjourned till Thursday next, at *Two o'clock*.]

THURSDAY, 25 JULY, 1889.

MEMBERS PRESENT:—

Mr. Frank Farnell in the Chair.
Mr. Howe, | Mr. Ritchie,
Mr. Stevenson, | Mr. William Stephen,
Mr. Thompson.

James Richard Hill (*one of the Fisheries Commissioners*) called in, sworn, and examined.

Witness withdrew.

The Clerk submitted the following claims for witnesses expenses:—Thomas Temperley, £13; Frederick Nelson, £4 11s. 9d.; G. G. Benson, £5 17s.

Claims considered and passed.

[Adjourned till Tuesday next, at *Two o'clock*.]

TUESDAY,

TUESDAY, 30 JULY, 1889.

MEMBERS PRESENT :—

Mr. Frank Farnell in the Chair.
Mr. Howe, | Mr. Stevenson.

James J. Macfadyen (*President of the Fishermen's Association*) called in, sworn, and examined.
Witness handed in copy of Memorial from the Fishermen's Association to the Colonial Secretary, setting forth certain grievances of the fishermen. [*See Appendix D 1.*]

Witness withdrew.

William Neal (*Fisherman*) called in, sworn, and examined.

Witness withdrew.

[Adjourned till Thursday next, at *Two* o'clock.]

THURSDAY, 1 AUGUST, 1889.

MEMBERS PRESENT :—

Mr. Frank Farnell in the Chair.
Mr. William Stephen, | Mr. Stevenson.

John Moore Chanter, M.P., called in, sworn, and examined.

Witness withdrew.

Philip Cohen called in, sworn, and examined.

Witness withdrew.

[Adjourned till Tuesday next, at *Two* o'clock.]

TUESDAY, 6 AUGUST, 1889.

MEMBERS PRESENT :—

Mr. Frank Farnell in the Chair.
Mr. William Stephen, | Mr. O'Sullivan,
Mr. Ritchie, | Mr. Stevenson,
Mr. Howe, | Mr. Nobbs.

Lindsay G. Thompson called in and further examined.

Witness handed in minute in reference to importation of salmon ova. [*See Appendix B 6.*]

Witness withdrew.

James J. Macfadyen called in and further examined.

Witness withdrew.

Thomas Gascoigne (*Fisherman*) called in, sworn, and examined.

Witness withdrew.

[Adjourned till Thursday next, at *Two* o'clock.]

THURSDAY, 8 AUGUST, 1889.

MEMBERS PRESENT :—

Mr. Frank Farnell in the Chair.
Mr. Ritchie, | Mr. Howe,
Mr. William Stephen, | Mr. Stevenson.

Committee deliberated as to their Report.

[Adjourned till Thursday next, at *Two* o'clock.]

THURSDAY, 15 AUGUST, 1889.

MEMBERS PRESENT :—

Mr. Howe, | Mr. Ritchie,
Mr. William Stephen.

In the absence of the Chairman, Mr. Howe was called to the Chair *pro tem.*

Draft Report of Chairman submitted.

Same read and considered.

[Adjourned till Tuesday next, at *Two* o'clock.]

TUESDAY, 20 AUGUST, 1889.

MEMBERS PRESENT :—

Mr. Stevenson, | Mr. William Stephen.

In the absence of a quorum the meeting called for this day lapsed.

TUESDAY,

TUESDAY, 27 AUGUST, 1889

MEMBERS PRESENT :—

Mr. Frank Farnell in the Chair.

Mr. William Stephen,		Mr. Ritchie,
Mr. Howe.		Mr. Stevenson.

Draft Report further considered, amended, and agreed to.
Chairman to report to the House.

1889.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

WORKING OF THE FISHERIES ACT.

WEDNESDAY, 5 JUNE, 1889.

Present:—

MR. FRANK FARNELL,
MR. O'SULLIVAN,
MR. WILLIAM STEPHEN,MR. THOMPSON,
MR. HOWE,
MR. RITCHIE.

FRANK FARNELL, Esq., IN THE CHAIR.

Dr. James C. Cox called in, sworn, and examined:—

1. *Chairman.*] What position do you hold in connection with the Fisheries Commission? President. Dr. J. C. Cox.
2. How long have you occupied that position? Since Mr. Macleay's resignation. I produce copy of correspondence on that subject. It was stated in the House that the members of the Commission resigned in a body, but that is a mistake. Mr. Macleay resigned in 1882. I was appointed President on the 19th October, 1882. 5 June, 1889.
3. Are there four other gentlemen on the Commission with you? Yes.
4. As Commissioners you are not under any Ministerial direct control? Yes, too much so. That is what we all complain of. We practically feel that we are not Commissioners. I do not look upon myself as a Commissioner at all. We have no power beyond what the Act gives us, but the interference on all sides is too great for the Commission to be comfortably worked. If we want to move one of our servants or employees from one district to another the influence which is brought to bear is certainly what it ought not to be. We wanted to remove a man the other day from Wollongong to Hawkesbury, and petitions came in from Mayors, J.P's., and everybody about the district, asking that the man may not be removed. Some short time ago I requested the secretary to draw up a document which he and I had agreed upon to bring before our Board, because I wanted to maintain the principle that it was better to move our servants—inspectors particularly—from one district to another, on account of the fact that they become affected by local influences which ought not to exist. I hand in the document referred to. [*Appendix A1.*] I regret to say that I have never been able to get the suggestions carried out up to this day.
5. Have you taken an active interest in the fishing industry? Yes, I have always been interested in it.
6. Do you think that the provisions of the Fisheries Act have been applied justly and have given satisfaction to fishermen and oyster-men? I believe they have not, but it is the fault of the law made by the legislators of the country utterly against the advice of the Commissioners.
7. Have you any reason to doubt the advisability of continuing the present Commission? No; I think the Commission is the proper thing if you give them proper powers.
8. As Commissioners have you all worked harmoniously? Yes, I have never had a dispute with any of the Commissioners.
9. How many sittings do you have? One every week.
10. Do all the Commissioners attend? No, they do not all attend; Mr. Hill is extremely regular in his attendance; Mr. Hyam is regular in his attendance; Mr. Oliver, till quite recently, scarcely ever attended; Mr. Ramsay, at the Museum, is a very irregular attendant—he is scarcely ever there.
11. What time is usually taken up at your meetings? I do not think we ever get off under two hours.

- Dr. J. C. Cox. 12. Have you at any time as President of the Commission brought under the notice of the Government any proposal to remedy the defects alleged to exist in the Fisheries Act? Yes. In 1883, shortly after I took up the office of President, I began to make suggestions on the subject. The Commissioners before me felt that there were very serious defects in the Act; the Commissioners who were associated with me at that time were Messrs. Want, Thomas, Geddes, and I think, Dr. Ramsay. We found it was very difficult to work the Act; the defects were so great that we drew up a Bill at that time and recommended the Government to adopt it; but not only was it not adopted but it was never even taken the slightest notice of. I produce the Bill which we recommended in 1883. [*Appendix A 2.*] The Government did not even say "Thank you" for it.
- 5 June, 1889. 13. *Mr. Ritchie.*] Speaking of the influence brought to bear, what kind of influence did you refer to? Local influence.
14. *Mr. Thompson.*] Outside pressure? Yes; and too much political influence.
15. *Mr. Ritchie.*] Where does the political influence come from—the Government or private members? From both.
16. Do you find the Government interfere at all? No; the Government are dilatory in carrying out the wishes of the Commission. For instance, we recommended a man to be appointed draftsman six months ago, and we never got an answer to that letter until yesterday.
17. *Chairman.*] Have you at any time had complaints brought under your notice as to the unjust operation of the provisions of the Fisheries Act by fishermen? I have heard hundreds of complaints from fishermen; but they have every one been dealt with honorably and correctly; that is one of the things that I object to in your speech in the House. You said that the Act has been unjustly administered. I think it is a pity to let that go unchallenged, because it is a slur on any body of gentlemen who exist to administer the Act. It is said, in the speech I refer to: "For some time past we have had complaints from the fishermen of this Colony of the unjust manner in which the Fisheries Act is being administered." I challenge this Committee to produce a single instance of that.
18. The officers charged with carrying out the provisions of the Act have power, I believe, to seize nets of an unlawful mesh? Yes.
19. Have many cases come under your notice of the seizure of nets? Very many.
20. Is it not a fact that some of the nets seized have been sold by the Commissioners, while in other cases they have been allowed to rot after having been seized? Yes; we are obliged by a law which you gentlemen made to wait for a certain time before the nets can be sold, and that necessitates their rotting. If you had allowed us to deal with the nets as we thought right they would not have rotted.
21. *Mr. Ritchie.*] What would you have done with the nets? We would either have burnt them or taken them to pieces and sold them for covering fruit trees and things like that.
22. *Chairman.*] Is not your procedure an encouragement to other people to break the law when they purchase the nets, for there is no doubt that they purchase them for the sake of fishing? We have never been able to detect such an instance; the purchasers have to sign a document that they will not use the nets for fishing purposes.*
23. With reference to the constitution of the Commission, are you aware of any particular knowledge possessed by your fellow Commissioners with regard to the fishing industry? I think that Mr. Hill is about as good a practical fisherman as I know of; he is as well versed in the manners and customs and doings of the fishermen as any man in this country; more than that he is a first-class man of business. Mr. Oliver has a good knowledge of fishing and of everything connected with fisheries; Mr. Ramsay has a very good knowledge indeed of the way in which fish breed, and of the different kinds of fish on the coast and the waters they live in. All these matters are very important. Mr. Hyam is a very good practical fisherman, and a very useful member of the Board.
24. Have you taken an opportunity of visiting any of the fishing-grounds or oyster-beds? I have. I would have visited them more frequently but for the meanness of the Government in not allowing us even to visit any one of them, and in not giving us even a vessel or a free pass by train by which we could travel to those grounds.
25. Are you allowed no fees? No; they make me pay if I want to go to see the Illawarra Lake, for instance, to ascertain if it is blocked up or not. I cannot get a railway pass to go anywhere. I once went over on business to confer with the Fisheries Commissioners at Melbourne and they gave me a pass across. Directly I arrived in Melbourne I was given a pass to go all over the country.
26. During your visits to these different places, the fishing-grounds and oyster-beds, were grievances brought under your notice by the fishermen and oystermen, or was it on account of previous complaints made to the Commission that you visited those places? I visited several of them to see for myself what was going on, but the mass of complaints were all received in writing. Hundreds of complaints come to me—my private consulting-room is sometimes inundated by fishermen. I was visited to-day by a man who is unlicensed, who fishes with an unlawful net in the Parramatta River, and then, because his net was seized he wants me to give it back again, on pretence of ignorance. That is the sort of thing we have to deal with every day.
27. Do you find many of these complaints are well grounded or are not sustained? All complaints are gone into carefully. Many of the complaints are well grounded, but the most of them are exaggerated and overdrawn.
28. With reference to the meshes and nets, is it not a fact that new nets, after being passed as legal, shrink and thus cause the mesh to become smaller? They do, but that is always taken into consideration. I produce a diagram of our nets, which I believe will be useful to the Committee.
29. Are you aware of any proceedings having been taken against men who used nets under the circumstances stated in my last question? Yes.
30. Do you remember what the result of that action was? If we think that an illegal mesh is the result of shrinkage caused by proper attention to the net the case is always overlooked—there is never any harshness used. In fact we are rather too lenient in many cases.
31. When once a net is pronounced to be legal should it not always be considered legal? Yes, I maintain that through thick and thin.
32. *Mr. Ritchie.*] If an alteration took place would it not be on the side of safety? No, the alteration of the net would tend against the law, but once a net is passed by our Commissioners I say that a man should be allowed to fish with that net until it is worn out.

* NOTE (on revision) :—No illegal nets are sold if taken illegal; they are made legal at the office and then sold.

33. *Mr. Thompson.*] Do you not know that although the net will at first take up and shrink, it will afterwards go just the contrary on account of the weight brought to bear upon it by the water itself, apart from the weight of the fish and blubber? Yes, I do. Dr. J. C. Cox.
June, 1889.

34. *Chairman.*] Do you think it would be better to have a provision to punish people who bring fish to market under a certain size rather than be so particular as to the nets used? They are not punished, but their fish is seized, if the fish is found to be too light in weight according to the standard ordered by the Legislature.

35. *Mr. Thompson.*] And they are seized even in Government establishments? Yes. A provision as to the size of the fish leads to dreadful effects, and which is destroying the fish in Melbourne waters. The fishermen in Melbourne are allowed to use a net of any length or mesh, but if they are found with fish below a standard weight in their possession anywhere they are punished. I took the trouble to go to Melbourne to see into this question, and I have conferred very carefully with Mr. Kent, who has been investigating the fisheries of Victoria recently. He has been staying here for some time. I certainly agree with him that the destruction of young fish left on the shore in Melbourne is a most melancholy spectacle. In fact they are utterly destroying their fisheries through it.

36. *Mr. Ritchie.*] I suppose the fact is that these men are supposed to return the small fish to the sea when they catch them? They will not live after they are taken out of the water. I have seen young founders killed in thousands along the coast near Melbourne; the air is quite tainted in consequence. That is my argument against the adoption of such a provision. With regard to emptying the nets in the water, that provision was considered necessary at one time. The law we have now provides that the garfish net should be emptied in the water, with the object of putting out all the other fish except garfish. That is one of the troubled points we have always had. The fact is that the poor fellows who were fishing could not and would not do it. They were much injured by being wounded with fish of different kinds. It was a harsh thing to pass such a regulation.

37. Do you know that it is the practice of many fishermen to use garfish nets for larger fish? I have known this occur many a time; in my own opinion, and the Board agrees with me thoroughly, a man should be allowed to take any fish that he catches with the garfish net if the fish is of proper weight. They would only otherwise die.

38. *Chairman.*] That is entirely against the law? Yes.

39. *Mr. Ritchie.*] What are your regulations with regard to allowing fishermen to have the various kinds of nets. Is one fisherman supposed to have all the different grades of nets? No, he can have any net he likes.

40. He can have two if he chooses? Yes, he can have all or any of the nets authorised by law.

41. Do the meshes range from 1 inch up to 4 inches? Yes.

42. Then it is quite possible that the fishermen may use the small meshes which are intended for the small fish, to catch all kinds of fish? Yes, that is to say, the fishermen can go and cast his garfish net in any position he likes, and he is allowed to take the fish that he catches if they are of proper weight.

43. *Mr. William Stephen.*] If the fishermen catch no garfish, but make a haul of other kinds of fish, how do you deal with them? We let them have the fish.

44. *Mr. O'Sullivan.*] Do you consider that these restrictions with regard to nets are too harsh? I do. What is called a prawn-net is 15 fathoms; I will advise that it be extended to 20 fathoms. The garfish net is 30 fathoms in the bunt, and 30 fathoms on each side, that is 90 fathoms altogether. I will advise that it be extended to 125 or 150 fathoms. The hauling-net is now three-fifties. I will advise that it should be increased to 300, or 350 fathoms, or probably a little more. I would advise the meshing-net as long as 100 fathoms at least. The Commissioners had a conference on the subject recently, and I now produce my rough notes of the meeting, showing the result of the conference. This was brought about by suggestions which were drawn up by the Secretary at my suggestion, embodying all the defects that were discovered in the experience of the Secretary and Commissioners during my tenure of office. I produce the memorandum which was drawn up by the Chief Inspector. He drew up a new Bill which I now produce, altering all defects known.

45. *Chairman.*] You have no control I believe over the inspectors of fisheries, except in seeing that they carry out the law? We have no power of dismissing them. We can only call the attention of the Government to their conduct—we have no power ourselves of getting rid of any servant under the Commission.

46. *Mr. Ritchie.*] Do you appoint them? No.

47. You can only recommend them? We wish we could do that alone; I am sorry that appointments have been made utterly opposed to the wishes of the Commission. I do not want to name anyone but if you wish it I will.

48. *Chairman.*] Are there any particular cases you could refer to? There is the case of the man at present in charge at Port Stephens, who was appointed in opposition to the wishes of the Commission. He is a most incompetent man, and we have since recommended that his services be dispensed with.

49. Have any of the inspectors been reported to you for dereliction of duty? Yes.

50. *Mr. William Stephen.*] Can you state any of the grounds of this man's incompetency? He does not seem to know anything about fisheries.

51. *Mr. Thompson.*] What was he before? A broken-down squatter I think.

52. *Chairman.*] How many inspectors have you? I hand in a copy of some statistics, giving all that information. [*Appendix A 3.*] All the persons employed are given in this printed list. I think the services of two of the officers named there have been dispensed with.

53. *Mr. William Stephen.*] What is the total number of your employees? About forty.

54. What number of these are clerks employed in the office, and how many are employed in the actual work of inspection? Seven are employed in the office. The rest are engaged on the work of inspection.

55. What is the total cost of the Fisheries Commission per annum? I hand in a statement of receipts and expenditure on account of the Department of Fisheries from 1881 to 1888. [*Appendix A 4.*] I have had this document specially drawn up for the Committee. In 1881 the receipts in round numbers were £1,554, and the expenditure £1,488. In 1882 the receipts were £2,651, and the expenditure £3,033. In 1883 the receipts were £2,943 and the expenditure £3,875. That was about the worst year we had, and it was owing to a change in the Oyster Fisheries Act. In 1884 the receipts were £5,865 and the expenditure was £5,231. In 1885 the receipts were £4,988 and the expenditure £5,621. In 1886 the receipts were £7,000 and the expenditure was only £6,000. In 1887 the receipts were £5,000 and the expenditure £6,000. In 1888 the receipts were £3,634 and the expenditure

- Dr. J. C. Cox. expenditure £6,255. I want to explain the reason for the last deficiency. It was because you gentlemen in your wisdom passed an Act to abolish the royalty on oysters;—you took that responsibility upon yourselves.
- 5 June, 1889. 56. *Mr. Ritchie.*] From what source does your revenue come? There is £1 charged for every 100 yards under oyster lease, then there are the fishermen's licenses for boats and men, and there was a royalty on oysters up to this year;—that was 2s. 6d. per bag.
57. *Mr. William Stephen.*] Was there any revenue derived from fines? No; that goes to the consolidated revenue, and the proceeds of sale of the confiscated property goes to the Consolidated Revenue also.*
58. *Mr. O'Sullivan.*] With regard to the royalty on oysters before it was abolished, were not our fishermen very unfairly handicapped in competition with New Zealand and Queensland? Yes; they were shamefully used. The people of this Colony paid £1 per 100 yards for the cultivation of oysters under your new Act; then they were charged 2s. 6d. for every bag of oysters which they produced off that ground. Oysters were brought here from Queensland and New Zealand; they were utter rubbish, and they were represented as our oysters. Those oysters came in here without paying one farthing. Knowing that this injustice existed, I called on the Treasurer. Being a protectionist myself, I found it was a very sore subject with him; I pointed out to Mr. Burns the working of the Act, and he said that rather than give in to a proposal to charge 2s. 6d. per bag on oysters which came from abroad he would rather take off the charge from the oysters raised here. The result is that the Commissioners lost a very large sum of money indeed, and of course the country will have to pay for it.
59. According to your statement there appears to be a dual control with regard to the fisheries the Government appointing the officers and dismissing them, and your Commission appearing to be a kind of Board of guardians for disbursing the funds. Do you think such a state of things is likely to promote the interests of the fishing industry? No, we recommended years ago that we should have absolute control over these things. We are responsible only for what we do.
60. What powers would you suggest as necessary to make you an effective body for the protection of this great industry? I will give a case to illustrate the difficulties we have to meet with, and I will suggest that in such aggravated cases more power should be given to the Board. There is a family named Gascoygne on the Parramatta River, who have been detected seven times fishing, against the law. They have been convicted about six times, and fined several times, and two cases against them were dismissed. We ought to have power to take such men's license away and prevent them from fishing again if they will persist in breaking the law. They persist in breaking the law and we have no power to stop them. If they are brought up to Court they are fined a shilling or a pound or two. [*Appendix A 5.*]
61. What would you suggest in regard to the appointment and dismissal of officers? We ought to have absolute power to appoint and dismiss our own officers. We ought to be placed in exactly the same position as the Museum Board is.
62. *Chairman.*] Do you think that all the officers in the Department are required? I do not think that we could do with less than the present number of officers. We have reduced our staff recently, and there is a vast amount of clerical work to be done.
63. *Mr. Lindsay Thompson* is head of the Department and Secretary to the Commission;—has he had any practical experience in connection with fisheries? He knows the Fisheries Acts well, and has them at his fingers ends. I do not know any man who knows the law better; I say it respectfully; but *Mr. Lindsay Thompson* is a real red tapeist.
64. Is he charged with carrying out the detail arrangements of the Department? Yes.
65. Is it customary for him to visit the different fisheries and oyster-grounds? No; he is not required to do so by the law. Whenever he is ordered to go there it is his duty to go, and he does go.
66. Are you aware that it is a source of complaint on the part of fishermen, that the fish-market at Woolloomooloo has not worked satisfactorily? I believe that the fishermen are most grossly used in their employment. They are robbed. The fish caught in the waters of the lakes between Newcastle and Hawkesbury are sent on to the steamers in open baskets. When the baskets are going along the road or knocking about a railway station, everybody seems to think it is his privilege to help himself to the fish. When the baskets go on board the steamers everybody helps himself. They are landed on the wharf, and lie there until people come to take them to the market. Every stroller about the wharf thinks that it is his privilege to help himself to the fish; then we discovered that the people who take the fish from the wharf to the market pull up at two or three public-houses, and the detectives whom we employed discovered that, while the drivers were taking a drink, persons came up to the cart and helped themselves to the fish. When the baskets arrived at the market one-third of the whole mass have gone; then last comes a most heavy impost on these poor fellows who have to pay, what I call middle-men. I hope and trust this Committee will see their way to have the fish conducted in an honest manner to our public places where they are sold. I think that our fishermen are publicly robbed.
67. Who has charge of the market? *Mr. Seymour*, an excellent officer.
68. Do you remember a man named *Quinan*;—what was he dismissed for? I believe for not accounting for some moneys in connection with the revenue from oysters. The whole of the documents are printed.
69. Do you think it is possible for the inspectors to be in collusion with the fish and oyster sellers? Yes.
70. Do you know *Mr. Woodward*, of King-street? Yes.
71. Does he know anything about fisheries? I think that probably he knows as much about the cultivation of oysters as any man in Australia; *Mr. Gibbons* and *Mr. Coote* are also first-class men in oyster cultivation.
72. Does *Mr. Phillip Cohen* know anything about the practical part of fishing? I believe he is a very good fisherman.
73. Do you know if *Captain Armstrong* has any experience? Yes. This gentleman applied to our Commission for the oyster-leases, a list of which I now produce. [*Appendix A 6.*] He deliberately took up the very eyes of the country, and according to the law we could not object to it. He never did anything with the leases—he never took them up. He put the office to an enormous expense, and never did one bit of good to the fisheries.
74. What was his object? Simply to resell the land applied for. *Mr. Cohen* made ten applications for leases. The first application he kept for a long time and withdrew; the same occurred with the second and third. The next we had to cancel because he would not pay his money. One lease was issued; the next

- next one was kept for a long time, and it was withdrawn. The same was done with another, and in the next case a lease was issued, and the next one was cancelled.
75. Are you aware that the fishermen complain that the fishing grounds are closed for periods of over twelve months at a time? They are always closed in accordance with the Act.
76. Does the Act state that you have power to close reserves for a period of six months, and that after that a further proclamation by the Commissioners is necessary? On reference to the Act I find that we have power to close them for a period not exceeding two years.
77. How long has the Parramatta River been closed? For about four years.
78. Therefore you have gone outside the limit? No we reclosed it. We had a fresh proclamation issued.*
79. It has never been actually opened since the first proclamation? If I have my way it never shall be opened.
80. Can you give any reason why the fish have decreased? I think they have most enormously increased. I do not know any more extraordinary sight than I saw a short time ago at George's River which we closed at the bridge right up to the head. The river was literally swarming with fish. The whiting principally were in such enormous abundance that the flood drowned hundreds of baskets of them.
81. Is it not a fact that some eight or nine years ago one could go out on a fishing excursion and catch as many sorts of fish with a line as one chose, whereas in many cases a person may go out now for a whole day and not succeed in catching a single fish? I need only refer to the return of fish which are offered for sale. [See Appendix A 7.]
82. I am speaking more particularly with regard to the Parramatta River? I do not believe it, because yesterday sixty baskets of fish had to be taken away from our fish-market. Certainly, many of them were bad from waiting too long to be sold, but the most of them had to be sent away and destroyed or given away, because no one would buy them, there was such a superfluous quantity.
83. *Mr. Ritchie.*] What is the reason of your saying that you would close the Parramatta River entirely if you had your way? It is one of the most important breeding-places we have in the country, particularly for breeding and stocking Port Jackson with fish for the anglers. If I had my way I would stop net-fishing in Port Jackson altogether, and leave it for line-fishing only, as was done with Port Hacking. You passed a law a short time ago actually closing Port Hacking. Why not do the same with Port Jackson.
84. Would not that be a hardship on fishermen who have settled there and expended a considerable amount in establishing homes for themselves? I do not. They get comparatively little fish in Port Jackson, and it would encourage them to fish outside Port Jackson, where our supply of fish should come from.
85. Take the case of Gascoyne, who has been on the Parramatta River for twenty or thirty years, and where he has the whole of his investment for that purpose;—would it not be a hardship to that man to be deprived of his living? Yes; one man might feel the hardship; but you must consider the community. You must remember that the fishermen are taking fish continuously out of our waters, and you must find means to replenish the supply. How are you to do it; do you expect the fish to be always coming in from the sea? They will not do it, and the places we have closed are necessary for the breeding of the fish. If you do not protect such places you will have no fish at all in Port Jackson. It is not from the fishing alone that the fish supply is diminishing in those places. The great cause is the enormous traffic of steamers up and down, and the filth thrown into the harbour, which encourages sharks and other enemies of our fish to come in and eat them.
86. You have said that the fishermen are robbed in the transit of their fish;—could you suggest any remedy for that? I had a long conversation with the fishermen on this subject, and I advised them to subscribe enough money to pay half the cost to employ a man to come down in charge of the baskets of fish, and I said I would ask the Government to subscribe the other half.
87. Would that be in connection with the Municipal Council or the fish-market? With the Fisheries' Commission. They could then do away with the middle men altogether.
88. What is the heavy impost which you refer to as being placed on the fishermen? That is by the agents.
89. Not the market dues? There are market dues as well.
90. Are they unduly heavy? I do not think so. What I refer to is an impost which is charged by the agents for selling the fish.
91. Is there good accommodation at the fish-market? Very good.
92. Are there expeditious facilities for distributing the fish? Yes. What I would strongly advise is that another fish-market be established at the other end of the town—either at the head of Darling Harbour, or, better, near the Railway station. Then the fish which come from Wollongong and other places could be sold in the evening. Very often fish arrive from there after the hour for closing the fish-market, and these fish have to be put in cold storage and kept until next day to be sold. The fish are not improved by this, and they have to pay for the cold storage.
93. Have you a list of the breeding places which you have referred to as being closed? Yes; I hand it in.
94. Is Lake Macquarie entirely a breeding ground? Yes; the whole lake is a breeding ground, but we could not close it because it would be too great a hardship; it is a fine fishing ground. The Hawkesbury River above Bar Point is closed. We have been done a little injustice too with regard to that. The Chairman represented to the Assembly that no notice was taken of some complaints which had been made by the Hawkesbury fishermen.
95. *Chairman.*] The statement was that no relief had been given? So far from that being the case we actually moved the reserve up to Bar Point.
96. That gives very little more space? Bar Point is a long way up towards Wiseman's Ferry. It was closed at Peat's Ferry.
97. Is not that only 4 miles from the railway bridge? My advice was to open the river as far as Wiseman's Ferry, and to close the tributaries. All the tributaries are very wisely closed now.
98. You are an authority on the propagation of oysters? I have taken a great interest in it.
99. Can you tell the Committee why it is that there is a dearth of oysters in the Parramatta and other rivers? The principal cause in the Parramatta River is the enormous quantity of filth which is thrown into it, and the consequent stirring up of that filth by steamers. Another cause is the scandalous way in which they are pilfered.

- Dr. J. C. Cox. 100. Do you not think that if the whole of the rivers were closed to oyster-getters for three years the beds would be resuscitated? Yes; we recommended that, but you gentlemen actually passed a law in opposition to us.
- 5 June, 1889.
101. *Mr. Thompson.*] Have you found that flood-water has a very deteriorating effect upon the oyster-beds, very often killing not only the spat but the grown oysters, covering them up with fresh mud? Yes; floods from all time past have killed whole beds and masses of oysters.
102. Can you suggest any remedy for that? The only way I can suggest is to do what we are trying to do now to restore the beds in George's River. One of the causes why oysters are not now propagating is because the rocks are so slimed with dirt and filth that the spat cannot take hold of them. If you throw a branch of a tree into the water you will find it covered with young spat in the season of spating.
103. *Mr. Ritchie.*] Will the emptying of the city sewerage at Bondi have any ill effect on oyster culture? No; it will rather benefit us inside the harbour.
104. *Chairman.*] What time does it take before an oyster is eatable? About three years, I fancy.
105. You have stated that oysters were imported from New Zealand, and that there was no royalty or duty charged on the importation? There is not any duty.
106. Do you remember the case of a man named Hanley, who imported oysters, and placed them on land which he leased at Woolwich, in order to keep them fresh. In carrying out his calling he used the oysters as they were required, and sent them to the different oyster-sellers in Sydney. Did you charge him a royalty on those oysters, although they were actually New Zealand oysters? Yes. I might have a horse which I might send down to a livery stable, where it would be fed and bedded. Why should I not have to pay for that horse-feed. This man got a bed for his oysters, and food for his oysters, and why should he not pay for that.*
107. Did he not have a lease? I am not sure on that point, but I think he had. He got food for his oysters, and although it is a nice point, I think we were perfectly justified in our action. We might as well say that a man could bring tons of oysters from Queensland and lay them down here and that we ought not to get any benefit from them.†
108. Do you know how many oyster-leases are in existence? I will have the information supplied. [*Appendix A 8.*]
109. Do you know whether all the rents have been paid? No; there are, or were, a great many in arrears.
110. Are there any means in the hands of the Commissioners to recover these rents, or are you obliged to apply to the Government? We referred this very subject to the Crown Solicitor, and asked him to try a test case. He wrote back and said if we paid for it he would do it.
111. With regard to oyster-culture, can you give the Committee any information as to proposals you would like to see carried out? I am disappointed with the present working of the Oyster Fisheries Act. It is very badly framed. It was not framed by the Commission.
112. *Mr. Thompson.*] Was it framed by one of the Commission? No; by Sir Alexander Stuart, and the Parliamentary Draftsman.
113. Not Mr. Alexander Oliver? Well, the two together. It has resulted in the biggest amount of imposition that I have ever been thrown in connection with. People have contracted to take up and cultivate oysters, and they induced Sir Alexander Stuart to issue what they called permits to work them. By the time we got the leases ready for them so that they could go to work they had stripped the places applied for of every oyster, and then declined to pay for the lease;—that has happened all along our coasts. I think it should be left in the hands of the Commissioners to be able to lease rivers or portions of rivers. If we could do that men like Gibbons, Woodward, and Coote would enter upon the work of cultivating the oysters properly, and we could put down this abominable system of what I call "cockatooning." You do not know the robbery that is going on at present—at Parramatta River, for instance—if they have an oyster left there. There are what are called Crown lands along the water, and you have made the law so that we cannot touch a man taking the oysters from the Crown lands. It is only on oyster reserves that we can touch them.
114. *Mr. Ritchie.*] Can you not resume those Crown lands and place them under your authority? No; we cannot make them all reserves. We make local reserves for the wants of the local people. Even then the oysters are stolen. It would take 10,000 soldiers to keep the people away.
115. *Chairman.*] In 1887 a Bill was passed to protect the fish in the inland waters. Have you directed your attention, or the attention of the Commission, to its provisions? I was very pleased indeed to see that Bill passed; it was a step in the right direction.
116. Can you give the Committee any idea as to how you have directed your operations? We found, as you state, that all the fish from our waters was going to Victoria. In 1884 the quantity of fish exported to Melbourne from this Colony was 555,918 lb. From the first we have had no power whatever to close the waters. In the original Act our powers were confined to tidal waters; any other waters were left out, so that the lawyers always beat us upon that point. When the Act was passed I went over to Melbourne and tried to arrange with the Melbourne Government about this point. Sir Alexander Stuart promised that he would see into the matter for us.‡ We were very anxious to get passed a much more stringent Act than the present one. Now we have power according to the latest Act to appoint inspectors, and to close any waters we like. I confess there has not been very much of it closed. We have not seen any great necessity for it. In fact the fish on the Murray are so prolific that nothing in the world would keep them down. I am speaking of the Murray and its tributaries. It is better to kill and eat those fish as soon as they become large. They eat the young of their own species.
117. *Mr. Thompson.*] Have you not heard that plenty of the best fishing places have been decimated by the everlasting netting? I have, but, so far, we have not been able to get any money to appoint anybody there to prevent it.
118. *Chairman.*] The Act states that reports shall be furnished annually by the Commission. We find that that has not been complied with. In 1883, I think, the first report was issued; then there was no report issued for 1884, 1885, and 1886. No report was issued in 1887, and the last report was made

* NOTE (*on revision*):—If this were permitted no man would work his leases with spat off our own shores; he would get off without a royalty; whereas if the spat from our shores was utilized he would have to pay 2s. 6d. a bag for it.

† NOTE (*on revision*):—Whereas the man who got the same quantity from our shores and lays them down would pay nothing;—our spat would all go to waste.

‡ NOTE (*on revision*):—He found that the jurisdiction of our laws did not extend to the Victorian side of the River Murray.

made in the middle of this month? That is not really out yet, there has been such unnecessary delay over one thing and another.*

119. Then the report for 1887 and 1888 has not yet actually reached the hands of the Government. No. When first I went on the Commission the first report got out was for 1883-1884. When I went on there was no record or book belonging to the Commission, as everything had been burnt in the Garden Palace. After a great deal of trouble I got out the report for 1883-1884. Then came a time when there was a great agitation with regard to the fisheries. New Oyster Fisheries Bills were going through the House and we recommended a new Bill. In fact there was nothing to report except statistics from 1884 to 1885, owing to the change in the laws, and we thought it was really useless to tell the public that we were unable to do anything. I drew attention to the matter, and was very anxious to publish even statistics, but I could not get it carried out. Then we got out a report covering the period from 1884 to 1886, and you will find that there was really nothing to do. The thing was at a stand still, owing to the defects of the law, and we could not do anything except publish statistics.

120. *Mr. William Stephen.*] You told us that men named Gascoyne had been brought up to the Court several times;—can you tell us in what way they had broken the law? They fished in closed waters. There were also charges of having under-weight fish, and for using illegal nets.

121. Under whose control is the fish-market? *Mr. Seymour.*

122. Under whose authority does he act? Under the Municipal Council. We have nothing whatever to do with it. We have an inspector there to see that the fish are of proper size; that is all our duty.

123. *Mr. Ritchie.*] Are you of opinion that inland fisheries are necessary? Yes, I am most anxious to see the inland fisheries properly protected. I want to close certain portions of the tributaries where fish breed, and I would like to have power and money to import fish so as to stock the rivers with trout.

124. Do you think that trout would do well in our waters? Yes, I think that we might establish very excellent breeding grounds for trout, and that they would do excellently in many of our waters.

125. Do you know of any instances where trout have done well in our waters? They have done very well at Monaro.

126. Speaking of the salt water and oyster fisheries;—to what waters would you confine fishing along the coast? I would pick out all those places where the fish breed and I would protect them as nurseries, the head of rivers and their tributaries.

127. Would not your policy drive the fishermen to the deep waters of the sea and confine them to that almost entirely? No. I would not have closed Port Hacking as you gentlemen did. It should have been closed only to the Spit. Then Port Jackson is only closed right at the very head where the fish breed. Middle Harbour is all open. We did close it at one time, but we opened it again. The head of George's River is closed and probably Cook's River might be closed if it is clean enough for fish to live in, but I doubt whether it is. Then the entrances of the rivers that run into Lake Macquarie and Lake Illawarra should be closed and also the head of the Shoalhaven and the tributaries of the Hunter. These are the kind of places I would close.

128. Would you leave open such places as Lake Macquarie, the Hawkesbury, and Lake Illawarra as fishing grounds? Yes, except parts closed now.

129. *Mr. O'Sullivan.*] Can you explain why fishing with well-boats is not generally carried on here, seeing that it is very successful in Tasmania and elsewhere? I myself take a great interest in that matter. A great many fish such as trumpeter were brought up here in a well-boat from Tasmania, and I do not know myself why we have not adopted the process for catching fish outside.

130. Is it a prejudice? I think it is laziness to a great extent. They can get such a good living inside the protected harbours that they do not care to go outside.

131. Do you remember a schooner called the "Rachel Thompson," a well-boat, which made a very successful trip from Tasmania to Sydney? Yes.

132. If means of that kind were adopted here, could not the fisheries along our coast be largely developed? Yes. You will find that when they have destroyed all the fish in the harbours they will go outside and develop those fisheries, but they do not require to do so just yet.

133. *Mr. William Stephen.*] Can you define defects in the Fisheries Act? Yes, there are very many which are all pointed out in the document which I have handed in, which also contains the improvements which I recommend. I would like now to hand in interesting documents, being two comparative returns of the quantity of fish brought to the Woolloomooloo fish-market, and the prices realized during the years 1886 and 1887, and also during the years 1884, 1885, 1886. During 1886, 28,000 baskets of fish were brought there and realized £32,000. The number of dozens of fish, such as schnapper and others of that kind, was 2,000; and they realized £9,000. The amount realized at auction was £20,000 in 1886, and £18,000 in 1887. These documents will give some interesting information. [*Appendices A 9 and 10.*]

134. Are you aware that the number of fish in Port Hacking have decreased since it was closed? Yes, I know that it is reported to be the case, and I believe it is reported with truth—from what I have heard from Mr. Gannon and several other influential fishermen; but the place is most grossly poached. The Parliament has done a most wonderful thing in legislating on this subject of Port Hacking. The Act says that no fishing shall take place in those waters, but no power is given to inflict a penalty to anyone.

135. *Mr. Howe.*] Have the Commissioners done anything to improve the fishing industry by obtaining information of a practical character for dissemination among the fishermen? Yes; I obtained a most valuable document which was published in America with regard to the cultivation of oysters. I had it copied out by one of our clerks, and the Colonial Treasurer was asked to have it printed for dissemination amongst the fishermen, but he positively refused to do so and he kept the document; so far I cannot get it back. That was Mr. Burns. There is another document which we published, a very interesting one, referring to the propagation of oysters. If we were allowed to disseminate such information I think that it would do a great deal of good.

136. *Mr. Ritchie.*] Have you no funds at your disposal? No.

137. *Mr. Howe.*] Are all the inspectors practical men, and have they an intimate knowledge of their duties? No; some of them have not, and they have been appointed against our wishes.

138. Have you ever represented to the Colonial Secretary the desirability of opening Port Hacking to the fishermen? I am not in favour of it or against it. You gentlemen passed a law setting forth that you wanted to have it closed, and I have not thought of the question. I do not think that it is a very great privation to the fishermen to have it closed.

139.

* NOTE (on revision) :—It was not for want of orders to get it out.

- Dr. J. C. Cox. 139. *Mr. William Stephen.*] Do you think that it would be any benefit to the fishermen, and that it would not be detrimental to the fish in Port Hacking if it were opened as far as the bar? I think it would be an advantage to open it up to the bar for the use of the fishermen.
- 6 June, 1889. 140. Do you think that it would be detrimental to the fish above the bar? No; I do not think that it would do one bit of harm. It is not a breeding ground below the bar.
141. *Mr. Howe.*] Has it ever been represented to the fishermen that the Commissioners were in favour of opening Port Hacking? I do not think so; the waters were taken out of our hands.
142. The fish breed in the estuaries of the rivers. In extending the limit (say) on the Parramatta River and George's River, do you not think that you could well extend it to Ryde, on the Parramatta River, and Salt Pan Creek, on George's River? I am a strong advocate for giving the fish plenty of space to breed in. The fish are sufficiently disturbed by the traffic of the steamers, and I, myself, would not advise the opening of those rivers higher up than at present. Virtually we do not deprive the fishermen of any fishing ground.
143. What charges are made on the fishermen in the way of license fees? The law compels every man to take out a license when he fishes for sale.
144. Has he to pay so much for his boat as well? Yes.
145. And so much for each man? Yes; that is according to the laws of the country.
146. *Mr. William Stephen.*] Is one fee sufficient for the owner of the boat and the boat? It was done in this way: The fishermen thought it was a hardship and said they would like, if they wanted two boats, to be able to take out the license for them. You will find that when the Royal Commission took evidence a great deal was spoken about this point. It was after a conference with the fishermen that the matter was arranged.
147. *Mr. Howe.*] Seeing that the fishermen have to pay taxation, do you not think that it would be an advantage to them to be represented on the Commission? I would not object to it. If there is an association of fishermen I think that I would like it, because I am one of those who like everything to be above board.
148. *Mr. Ritchie.*] Did you wish to give the Committee some information with regard to the culture of fish in our inland waters? I have recently taken a great deal of interest in this matter, and I recently went to Ballarat expressly to see the breeding grounds there. We have got over a large number of young trout recently and distributed them in our waters. We intend next year to get over a great many more and distribute them in those waters which we think best fitted for them. It is our intention, at the request of the Water and Sewerage Board, to stock the Prospect Dam with trout at once, and utilise that as a nursery for trout. My impression is that we could establish there a very excellent trout breeding-place. It is the very kind of water we want, and I think we could stock the whole of the country from there.
149. Has it not been proven that trout does not succeed very well in the eastern parts of this country? There have been statements to that effect. In rivers subject to muddy floods they seem to be destroyed, and, in fact, such floods destroy the native fish.
150. *Mr. Howe.*] I was glad to hear you express an opinion in favour of establishing another fish-market in another part of the city. Would it not be better, instead of having the other market at Darling Harbour, to run a siding from the railway at some convenient place where a market could be established to give a second supply of fish? Yes; I would do all in my power to assist you in carrying out such a proposal.

THURSDAY, 13 JUNE, 1889.

Present:—

MR. FRANK FARNELL,	MR. RITCHIE,
MR. O'SULLIVAN,	MR. WILLIAM STEPHEN,
MR. NOBBS,	MR. STEVENSON.

FRANK FARNELL, ESQ., IN THE CHAIR.

Dr. Edward Pearson Ramsay called in, sworn, and examined:—

- Dr. 151. *Chairman.*] Are you a member of the Fisheries Commission? Yes.
- E. P. Ramsay. 152. How long have you held that position? I think since the end of 1882.
- 13 June, 1889. 153. Are there four other gentlemen associated with you? Yes; several have resigned and others have been appointed.
154. Have you taken any particular interest in the fishing industry? Yes; I was sent to England to make myself acquainted with the fisheries there: chiefly from a scientific point of view, such as examining the hatcheries for fish and the cultivation and breeding of oysters. I took every opportunity of going out on the coast of England with the fishermen day and night. I made myself acquainted with the fisheries of Great Britain and the Continent, and with the aquariums. I went to Howieton, Sir James Maitland's Estate; he invited me there to see the hatcheries for salmon. I also visited Surgeon-General Day on several occasions, who is a great authority on fish-breeding. I made a great many visits to various places and I spent a great deal of time amongst the aquariums at the Fisheries Exhibition. Of course my principal object was to make myself acquainted with the subject from a natural history point of view. I visited one of the Earl of Kinnoul's establishments to examine the salmon disease; there the overseer or factor of the estate showed me all over the place and explained what was being done to reduce the disease.
155. Was it with the object of gaining information that you went to all those places? Yes; so that the knowledge might be applied here.
156. Do you consider that the provisions of the Fisheries Act have been applied justly and have given satisfaction to the people who carry on business as fishermen and oystermen? With the actual working of the Act out here I have not identified myself much. I found that the fish cultivated in England would not live out here, except in one or two instances. The oysters cultivated in England are by no means the oysters cultivated here. The oyster cultivated at home and most in use are the British natives and the Whitstaple oysters. They are identical with our mud-oysters, and consequently the culture is totally different.

different from ours. The oysters generally in use here are drift and rock oysters, and the means of cultivation for British oysters would not suit ours. I doubt very much whether the oyster-spat taken off the rocks here and put into deep water ever comes to maturity. In Middle Harbour and various other places I find that the oysters grow down a certain distance, and you will not find the oysters 2 feet below the lowest tide-mark; I do not believe those oysters would live in 10 or 15 feet of water. There are varieties of oysters which live at the bottom which are gathered up and sold; for instance, the drift oysters in the various rivers.

157. How long does it take an oyster to become eatable from spat? I should say between four and five years; some people say three years. You must remember that it takes spat about twelve months to establish themselves. Oysters here seem to spat all the year round. I have not noticed any defined spatting season. Some fifteen years ago I gathered oysters from the mangroves and rocks round the harbour and put them on Dobroyde, where the people had cleared off all the oysters. It was at least two or three years before we got any return from their spatting.

158. Have you any reason to doubt the advisability of continuing the Fisheries Commission? No; I think the Commission would work well enough if it had more extensive powers.

159. Have you always worked most cordially together? Yes; most amicably. The Commissioners are only too anxious to do what they can, and they very often take trips at their own expense to different parts of the coast and furnish reports.

160. I suppose you have not been the most regular attendant? I very seldom go unless I find that there is special business. I have plenty to do at the Museum, and unless Dr. Cox (the President) tells me that he requires my services, I do not attend the Commission very often.

161. How long does a sitting generally last? Two or three hours. The meetings are held once a week.

162. Do you remember at any time having a complaint brought under your notice as to the unjust operation of the Act? We have had complaints from persons about certain places being closed, and then the next day or so we have complaints because other places are not closed. When we close any place from fishing we always have complaints from the parties interested, on both sides.

163. Have you had any complaints as to the injustice of limiting fishermen to nets of a certain mesh? Not that I remember. I know that once or twice when nets were confiscated we gave them back because we thought it was proved that the mesh was originally correct but the nets had shrunk.

164. Is it not within your knowledge that men have been punished under such circumstances? Not to my knowledge.

165. Have the officers charged with carrying out the Act power to seize nets of an unlawful mesh? Yes.

166. Have many cases come under your notice? No, but nets have been seized which were reported to the Commissioners as illegal; in such a case if we have any doubt we send a special inspector. It is not within my knowledge that instances have occurred where hardship or injustice has been done to those men.

167. Is it not a fact that confiscated nets have in some instances been sold by the Commissioners while in other instances they have been allowed to rot? Not to my knowledge.

168. How many meetings have you attended? Before I was reappointed I stopped away the whole time as a matter of principle. Since I was reappointed I simply go when I think that my services may be required. I tell the Secretary to send to me at the Museum where I am always available if I am required at a meeting of the Commission, and if any information is required from me the material is sent to the Museum, where I examine and report.

169. Are you aware of any particular knowledge possessed by any of your colleagues on the Commission with regard to fisheries? I should think that Mr. Hill has special knowledge. He is continually fishing, and he must know a great deal of fishermen and their goings on. I should think that Mr. Oliver is particularly well up in the business.

170. Have you visited any of the fishing-grounds and oyster-beds? Not recently.

171. Have you done so since you were appointed a Commissioner? I do not think that I have visited more than half-a-dozen places. Once or twice I have gone with Dr. Cox when he wanted some special advice. I often go dredging and trawling in the harbour to see how the fisheries are getting on. I have raked all these harbours with trawls, and I know every inch of them and every rock.

172. Is it not a fact that nets which have been passed as legal have shrunk so as to have an illegal mesh? Yes.

173. Have proceedings been taken against men who have used nets under such circumstances? No. I have heard of instances where the nets have shrunk, and the inspectors have been instructed to overlook the shrinkage of the 16th or 20th of an inch, but it would be a different matter if the mesh had shrunk to the extent of a quarter of an inch.

174. Speaking as a man of some experience do you not think that when a net is pronounced to be of a legal mesh, it should always be considered legal? I do; but you cannot tell whether these men change the nets or not. One net was seized at Manly, having in it two or three different kinds of mesh in strips.

175. Did it belong to a fisherman or to a private gentleman? I believe a fisherman had it. I only heard that casually.

176. Do you not think it would be better to make provision for punishing people who bring fish to market under a certain size, rather than be so particular as to the mesh of the nets? It might be an advantage, but according to my knowledge of the law, if a man is using his garfish net it would be perfectly legal for him to keep any bream or other fish which he might catch in that haul.

177. Have any cases been brought under your notice where any of the inspectors or officers of the Commission have been reported for dereliction of duty? I remember a man named Quinan, regarding whom there was an investigation, and who was dismissed. I think that it is a great pity that the Commission have not the power to dismiss any of their employees instead of having to go to the Government.

178. What was Quinan dismissed for? There was a whole series of charges. I believe he was accused of a great many breaches of the Act and of inattention to his duty.

179. Is it not possible for the inspectors to be in collusion with fish and oyster sellers? Yes, if they are rogues.

180. Does Woodward, of King-street, know anything about fisheries? He has been growing oysters for a great number of years, and he ought to know something about them. I do not know if he has any knowledge of fisheries.

181. Are all your inspectors practical men? I do not know.

182. Do you not think that the officers and men employed by the Commission could be considerably reduced in number? No, I think the staff ought to be increased.

Dr.
E. P. Ramsay.
13 June, 1889.

183. Are you aware that it costs something like £6,000 a year to maintain the Department? I do not know, but I remember a few years ago when I looked over some statistics there was a balance in favor of the Commission.
184. Have you an inspector named Mulhall? Yes.
185. How old is he? I should think about eighty.
186. Is it not time that he retired? Yes; he is a very worthy old gentleman, but I think the Government ought to give him a pension, and let him retire.
187. Can you give any reason why he has been retained? I do not know why he was put on or retained. He can do his duty because he is inspector of the fish-market, and knows the different kinds of fish when he sees them.
188. Has Mr. Lindsay Thompson, the Secretary, any practical experience in connection with fisheries? He certainly has had experience since he has been connected with the Commission, because we send him to make special reports, and the Commission generally relies upon his reports.
189. Are you aware that it is a source of complaint on the part of fishermen that the fish-market at Woolloomooloo has not worked satisfactorily? I do not know about that, but I do know that the fish-market is a disgrace to the city; it is totally unsuited for the purpose; it wants remodelling from beginning to end.
190. Who has charge of the Woolloomooloo fish-market? I do not know.
191. Have you heard of Mr. Seymour? Yes.
192. As a Commissioner have you ever been asked to express your opinion as to whether or not that gentleman is suitable to take charge of the market? Not that I can remember.
193. Are you aware that he receives £75 a year from your Department for services rendered as inspector of the market? I knew he had something to do with selling fish there, but I understood that the Corporation paid him for looking after the market, and the sale of fish, and that he also received a percentage from the sellers of fish, but I had no means of knowing whether that was correct. I never heard any charge made against him. He is rather a rough, plain customer.
194. Are you aware that the fishermen complain of the rivers and fishing-grounds being closed for periods of twelve months at a time? If you want to close the head of the river it is of very little use to close it for six months; it should be closed for eighteen months or two years. I would close the rivers for three years.
195. Do you know, as a matter of fact, that the Parramatta River has been closed for nearly four years? No, I was not aware of that.
196. From a scientific point of view, can you give us any idea as to what has been the cause of the decrease in fish, especially in the Parramatta River? I believe that the prawn-nets have a great deal to do with it; they are all over the place, and they must destroy a great number of small fish. When I visited the Melbourne markets, and I wanted any small species of fish, I always used to overhaul the prawn-baskets. I have done the same in London when collecting specimens for natural history. I have no doubt that great quantities of young mullet and whiting are caught in prawn-nets. We want more inspectors to watch these men, and see that they use the sieve in the water, so that the young fish shall not be killed.
197. Do you not think it would be a good idea to have the inspectors located in the different districts instead of having them at the head-quarters in Sydney? I thought inspectors did live in the different districts. There are inspectors stationed at different places along the coast.
198. You are not aware that there is no inspector on the Parramatta River? I believe that Mulhall and the inspectors under him work the river and the harbour.
199. They do not live up the Parramatta River? I believe they live in Sydney.
200. Can you inform us as to the dearth of oysters in the Parramatta and other rivers? There are various causes. When there is a dry season oysters will not spat, and they grow very little. They want a certain amount of fresh water, and that is the reason why oysters at the mouth of the river are so much better than those out in the open. In the cases of diseases in oysters which I have examined there have been very few oysters bored by small borers. A sponge grows over the oyster in certain places, and that would probably be produced by the want of fresh water. In a very dry season the sponge would take possession of the whole of the oyster, and cover it up very quickly; then small sponges bore through the top shell of the oyster. With regard to the disease which I have been lately examining, that is, worms getting into the oysters, I have come to the conclusion that it is caused through disturbance by floods or by the disturbance of fish and other enemies of the oyster. The octopus feed on oysters when an opportunity affords.
201. Does the stinging-ray also feed on oysters? I do not think that they do much in that way. The octopus will eat oysters, clams, and cockles. I can quite understand that a good deal of damage might be done by octopi taking up their abode on oyster-beds, and disturbing the mud which enters the oysters when their shells are open. A steamer passing up and down, or someone dredging for oysters, might disturb the mud, which gets into the mouth of the oyster. The oyster puts a thin film of mother-of-pearl, or nacre, over the mud, and when the oyster gets disturbed again with mud it puts another film over the deposit. I have seen five or six deposits of mud, with thin films of nacre over each, and the oyster thus gets killed out.
202. Do you not think that if the whole of the rivers were closed to oyster-getters for a period of two years the beds would become resuscitated? You would never hear the last of it if you closed all the rivers. I would close portions of the rivers for breeding, but a good batch of inspectors would then be required for keeping the people from stealing the oysters.
203. A few years ago a Bill was passed, prohibiting net-fishing altogether in the waters of Port Hacking;—why was that done? I do not know.
204. Had the Commission anything to do with that? I do not remember, but I think it was done on account of some gentlemen petitioning in favour of it, so that the public might have plenty of fishing at the National Park.
205. Have you had some experience in connection with the inland fisheries? Yes.
206. There was a Bill passed in 1887 to protect the fish in inland waters;—have you directed any attention to the operation of that measure? I have visited the inland waters repeatedly, because I have been working up the inland fishes from a scientific point of view, but I was line-fishing only. I found that a large number of fish came into the market, perhaps tons at a time. I have seen half a ton in Wellington. In Dubbo on one occasion I was informed that nets were put right across the river. I reported that casually, and the inspectors of the district got a memo. to prevent such a thing being done again.

Dr.
E. P. Ramsay.
13 June, 1889.

207. Are you referring to the River Macquarie? I am referring to the Macquarie, the Murrumbidgee, the Murray and its branches. I have been as far as Dubbo, Wagga Wagga, Wellington, Orange, Bathurst, and all the way up the river as far as Trangie. I saw a few settlers fishing with lines at Trangie, but they did not catch a great deal, and the fish they caught were the same species of fish as were caught in other waters.
208. *Mr. Ritchie.*] Have any inspectors been appointed for the inland waters? Yes; at Dubbo, but not at Trangie—I think the police look after the matter there.
209. *Chairman.*] Are you aware that tons of fish are caught in the Murray and sent to market in Melbourne? I have repeatedly heard of it when in Melbourne.
210. Are you aware that there are lots of oysters imported from New Zealand? Yes.
211. Did the Commissioners ever take any steps with a view of encouraging the industry by suggesting to the Government that the royalty on oysters raised here should be abolished? I remember bringing before the Board a recommendation to ask the Government to put a royalty on imported oysters, but they said that on account of freight having to be paid on those oysters it would be injudicious to impose a royalty.
212. There was a law that every bag of oysters raised here should be subject to a royalty of half-a-crown? I heard that the royalty was removed, but I do not know at whose instance.
213. Was Mr. Saville Kent employed to make a report on the disease of oysters in George's River? I remember that he was employed, but I think that it was during the time I was off the Commission.
214. Has Mr. Oliver any particular knowledge of the fishing industry? I know that he has been fishing for a great number of years. He has always been looked upon as a good yachtsman and boatman, and I think he ought to know as much as anybody about the coastal fisheries.
215. Are the Commissioners allowed any fees or travelling expenses? No. I have never received any.
216. Do you know why the Parramatta River was closed, while Lane Cove and Middle Harbour were left open? No.
217. Do you consider that the Parramatta River is suitable for pisciculture? Undoubtedly the mud flats are breeding grounds for mullet and whiting—mullet especially.
218. Would it not be better to leave the river open to the railway bridge, and close it from there up to Parramatta, instead of closing it from the Parramatta River bridge? I think that point was chosen as a good landmark.
219. Some time ago I brought some complaints under the notice of the Government with reference to the closing of the Hawkesbury River;—were those complaints ever brought under the notice of the Commissioners? I do not remember.
220. Are the recommendations of the Commission usually carried out by the Government with reference to the appointment of inspectors? I do not know. Persons apply for the position and produce testimonials. We pick out the best man according to the credentials submitted, and we recommend his appointment to the Government. I think the Commission should have the power of appointment and dismissal.
221. Do you know if any of your recommendations for appointments have been ignored by the Government? I have heard of such a thing, but I cannot speak of my own knowledge. I have heard several times that the Government have been asked to do certain things which have not been done for months.
222. Do you know Mr. Woodward? Yes.
223. Has he any particular influence with the Commission? No; I should not think so. He is a very large grower of oysters, and he holds very large leases.
224. Do you remember any recommendation having been made by him as to the appointment of particular inspectors? No; I do not think the Commission would take any recommendation from him. I hold that no dealer in oysters, who hold leases, should recommend an inspector.
225. *Mr. O'Sullivan.*] Have you had good opportunities of observing the fishermen of Great Britain? Yes; chiefly the herring and cod and Pilchard fisheries.
226. Do you think that our fishermen are abreast of the times with regard to appliances? They are about 200 years behind the time.
227. Do they show a sufficient amount of enterprise? No, that is always what I complain of—there is no go in them. There are one or two exceptions, but generally they only work for so much money as will keep them, and more than half of them throw it away.
228. Do you think that if we got a few fishermen from the coast of Great Britain and Ireland with modern appliances that they would develop our fisheries much better? I am sure they would. When I was coming out from England I was instructed to purchase trawls; I purchased two or three, and showed them to Sydney fishermen, but I could not get the fishermen to use them. Another thing to be considered is that with large trawls steamers are required. I have tried small trawls by getting a Government launch occasionally, and I could always get plenty of fish. The Italians and Greeks use ordinary trawls with two boats with a stretch of 100 yards.
229. Our fishermen do not as a rule go out of the harbours and rivers? They do not work the place properly at all.
230. What is your opinion of the value of our fishing-grounds? I cannot tell you, but I know they are valuable. The few fishermen who take the trouble to work their grounds properly seem to be making very good returns.
231. Do you think we have valuable deep-sea-fishing? I believe that is the case, as proved by the Commissioners having sent a trawl out as an experiment.
232. Can you name any particular spot? They went from Shoalhaven up to the Hawkesbury—there is a large stretch of flat country there, but the place is not surveyed. Men will not go out with a trawl costing £150 and paying £5 a day for a steamer to work it, for if the trawl should be drawn across a patch of rocks it would be destroyed or lost. If the whole of the coast were surveyed from Shoalhaven up to the Hawkesbury for a distance of 5 to 10 miles out to sea we would have a very different style of fishing.
233. Have you been to Lord Howe Island and Elizabeth Reef? No; men from New Zealand, and employees of the Museum, have been there.
234. Are there excellent fishing-grounds there which are comparatively undeveloped? Undoubtedly, they are not developed at all. Captain Armstrong tried it, but he said that it would not pay. The difficulty is that the fish cannot be brought here quickly enough. In the English Channel there are fast steamers, which go round to the boats for the fish and get them to market in a few hours.

- Dr.
E. P. Ramsay.
13 June, 1889.
235. Why have not our fishermen taken to the use of well-boats? They tried it on two or three occasions, and I do not know why they gave it up.
236. Do you remember the schooner "Rachel Thompson" coming here? Yes; she brought very good fish, but I do not know whether the speculation paid. She was a well-boat. There are not many well-boats used on the British coast, because they use fast steamers for transit. The Dutch fishermen use well-boats for eels, and they keep them in the wells for weeks.
237. Are they not used very generally off the south coast of Tasmania? I do not know.
238. What steps have been taken with regard to the cultivation of oysters? No steps as far as I know. They gather the spat off the rocks and throw them down into different depths of water, where they are left to take their chance.
239. Have you any oyster-farms? They are called oyster-farms. They put up fascines to catch the spat and gather the spat from the mangroves. I remember a gentleman in North Shore complaining that men were permitted to go and shovel the oysters from his wharf into bags, and those men described themselves as oyster-dredgers.
240. Then there is no systematic scientific culture of the oyster at all? No; the only systematic business is getting oysters from various places, laying them down in certain beds, leaving them for so many years, and then lifting them up and selling them—that is done on the feeding grounds at Whitstaple. They buy up first and second "ware," as they are called, for which they pay from 2d. to 6d. a dozen, and when they become "whole ware" the oysters are retailed at 2s. and 2s. 6d. a dozen. That is the method employed by the ancient company of oyster-dredgers of Whitstaple, if I remember rightly.
241. Do you think the establishment of an afternoon market in Sydney for the sale of fish would be a great boon to the citizens? I would go a little farther. I would go so far as to say that the fishermen should be allowed to sell their fish at any moment, and when fresh fish came into the market a flag should be run up, so that people could know that they were for sale.
242. *Mr. William Stephen.*] Do you think that the Fisheries Commission should have any extensive powers? I think that they should have more control over their inspectors. They should be permitted to employ such men as are suited for the work; they should also have power to dismiss those who were not suitable, reporting at first to the Government.
243. Do you think that the Commission, or any member of it, is in a position to offer suggestions as to amendments in the Fisheries Act, so as to promote the interests of the fishing industry? I think Mr. Oliver is a very good man, with large experience.
244. Has the Commission any power to draw up rules or regulations which are not enumerated or provided for in the Act? I think that they can make by-laws; but if there is anything important it must be submitted to the Government.
245. Has the Commission any power with regard to fixing the size of the mesh? No, that is fixed by the Act.
246. Is not some of the material used for making nets more liable to shrink than other material? I do not think so; I think all the nets are made of the same material.
247. In what district was this Mr. Quinan, to whom the Commission seem to have an objection? He was in the home fisheries here.
248. Are you aware that the fish in Port Hacking are less numerous than they were before the waters were closed? I have not heard of it. I should have thought that the closing of the waters would have increased the bulk of the fish; but you cannot expect to see any increase in a year—it would be necessary to wait for two or three years.
249. Nevertheless practical fishermen say that fish are less numerous there now than they were before the waters were closed? My experience of practical fishermen is that they say the first thing that comes into their head.
250. Have the sharks increased in number in Port Hacking? I do not know about Port Hacking, but I know that they have undoubtedly increased in Port Jackson.
251. It is said by some of the fishermen that the sharks eat up all the fish that the fishermen ought to catch? Sharks do eat a great many fish, but when they can get into a school of mullet or whiting they will not go up Port Hacking.
252. *Chairman.*] Is not Port Hacking a first-class place for breeding fish? Yes. I would close the head of all the rivers, and I would allow no heavy nets to be used, except at certain seasons. When the spawning season for the mullet comes on I would allow the fishermen to take them below a certain mark, but not above it.
253. *Mr. William Stephen.*] That might be right from a scientific point of view, but would it not have a very harsh effect upon men who have to earn their living by fishing? They should not be allowed to go and fish on the spawning ground—there is plenty of room to fish elsewhere. Shutting up the head of the river does not prevent fishing in the other portions of the river.
254. Do you think that the whole of Port Hacking ought to be closed? I do not think that it is necessary to close the lower portion. I would close it above the bar. There is no necessity for closing it below that point.
255. Do you think that the fishermen ought to be represented on the Commission by one or two representatives chosen from the working fishermen? I think there always would be rows. I know they would not allow it in England for a moment.
256. Would not such representatives be capable of giving good suggestions for the guidance of the Commission? They might for their own purposes. If you put a practical fisherman on the Commission it would be to adjudicate for himself.
257. Could not the Commission refuse to accede to any suggestions that would be detrimental to the public interest? Yes; but I think that the proper course for the Commission to take, and it is a course which is adopted at present, is to examine practical fishermen and get suggestions from them on any question. I know that such suggestions are carefully considered by the Commission.
258. *Mr. Ritchie.*] Do you know that in Victoria a uniform mesh is used? No.
259. Do you not think that a great waste of fish takes place here through the use of the garfish net? Yes.
260. Can you suggest any improvements with regard to inland fishing? No. The inspectors have instructions not to allow mesh-nets to be put from side to side of the river.
261. Do you think that the inspection now instituted on the inland waters is sufficient? I think so—if the inspectors do their duty.

Dr.
E. P. Ramsay.
3 June, 1889.

262. Do you think that deep-sea fishing might be practised to a greater extent here? Undoubtedly. There is undoubtedly any amount of fine fish to be had if people had only enterprise to catch them.

263. *Mr. Stevenson.*] What is done when nets are seized? The seizure is reported to the Board, and if we have any doubt we send an inspector to examine the nets, or ask some magistrate in the district to do so.

264. What becomes of the nets afterwards? I do not know; I believe that in the first instance they are given back to the man if it is his first offence.

265. Have you ever heard of the nets being sold by auction by order of the Commissioners? It may be the case.

266. They are sold by auction and fishermen buy them? No; they are bought for use in orchards.

267. Have nets been seized more than once and resold? I do not know. If a fisherman bought them he would lay himself open to have the net seized again.

268. It is stated in the advertisement that the nets are sold under instructions from the Fisheries Commission;—under such circumstances have not the fishermen a right to assume that the nets sold are quite legal? If a net is seized and sold as an illegal net it is not likely that it will be bought by fishermen. I have seen them purchased by gentlemen who wanted them to cover their fruit-trees and tomatoes.

269. *Mr. Ritchie.*] Is there any method of marking those nets so that they may be known as illegal nets? Not that I know of.

270. With regard to oyster leases;—you lease certain foreshores for oyster cultivation;—is there any inspection of those leases? There is an inspector in each district.

271. Is the inspector supposed to report on these oyster fisheries? Yes; to see that no one interferes with the oyster-beds, and to report from time to time to the Commission.

272. Does the Fisheries Commission ever make a visit of inspection? Yes.

273. Have they ever been down to Shoalhaven River? I do not know of my own knowledge, but I know that the Commissioners go out now and again. I have not been out very often myself, but I know that Mr. Oliver has been out very frequently, and I believe Mr. Hill, and Mr. Want, when he was a Commissioner, used to go down frequently.

274. Have you any reason to believe that a large number of those oyster leases are used as oyster reservations by the owners of private property? I do not know that. If I had a piece of land opposite to some oyster fisheries I might feel inclined to apply for a lease and use the oysters.

275. If you applied for an oyster lease would you not be bound to apply land to the purpose for which you leased it? If I applied for a lease for oyster cultivation I do not know that I would be bound to work it or put oysters upon it.*

276. Is it in the public interest that beds of rivers suitable to oyster cultivation should be leased in this way? I would not lease the whole bed of a river in that way, but I think if a man pays so much to the Government for a lease he has a right to do what he likes with it.

277. Are you of opinion that the Commission is perfectly justified in leasing to the private owner of a large water-frontage any block of land as an oyster lease whether he cultivates it or not? Within certain restrictions a man cannot take up more than a certain amount of land, and he has to pay for it. If there was a royalty on the oysters the Government might be robbed by his neglect in not cultivating oysters; but if there is no royalty on oysters I do not see how the Government can complain.

278. Then what becomes of the inspection which you say exists? The inspectors have power to inspect the leases whenever they please, but if he reports that the lessee is doing nothing towards the cultivation of oysters the Commission is not able to do anything. I do not think that we can take any action in such a case.

279. Do you think the law is defective in that respect? Yes; I think the law should be altered so as to make cultivation compulsory.

280. *Mr. Nobbs.*] With respect to deep-sea fishing—are you aware that the Victorian Government has granted a sum of money for testing whether such an industry would pay? Yes.

281. Do you think it would be advisable to expend a sum of money in surveying the coast of New South Wales with a view to encouraging deep-sea fishing? Yes. In England you can get charts showing every rock and shoal at the bottom of the sea, and the only trouble that the trawlers have is in connection with wrecks.

282. With respect to the fish-market, are you aware that Inspector Seymour has a monopoly with respect to the sale of fish there, so that every person must go to him to sell fish? I do not know that, but they do go to him.

283. Would it not be in the interests of the public for the fishermen to have the right to go to any auctioneer they pleased? I do not see any objection to that. I would even go further than that, and would say that there ought to be stalls which would be let to agents to whom the fishermen could send their fish at any hour of the day or night. The market is in a bad position. It is in a muggy pokey hole.

284. What are your particular objections to it? We want an open clear place with plenty of draught through it to keep it perfectly clean and sweet; then there should be marble or slate tables on which to place the fish. Water should not be poured over the fish but underneath the slabs, or ice might be placed under the slabs. Each person should have a stall of his own, and the inspector should go round and inspect the fish. The inspector should be continually on the premises, and the market should be in a better location. The money required for this would be well spent.

285. In what month of the year do the mullet and other fish generally come into the river to spawn? Fish do not always come in regularly; the mullet is tolerably regular and always comes in before Good Friday.

286. Are you aware that the rivers were closed some months back? Portions of them.

287. For instance, the Hawkesbury River? I do not remember.

288. The fishermen state that the rivers need not have been closed for a month or two later—that they were filled with fish which were trapped because the fishermen could not get them, and the sharks were encouraged to come up the rivers in shoals, so that the rivers were closed for no other purpose than to feed the sharks? I should say that is not the case. Three months ago an excursion went up the river fishing and they could not get anything. During the mullet season, six or eight months ago, I was in a small

* NOTE (on revision):—By regulations under the Oyster Act, unless a man cultivates his leased land to the satisfaction of the Commissioners he will forfeit his lease. The Commissioners can turn him out.

Dr.
E. P. Ramsay.
13 June, 1889.

small steamer, and I put out a net and caught one mullet. The mullet, of course, go up the rivers, and when they pass a certain point I would have them protected. Below that I would throw the rivers open. 289. Admitting that the fish were in such great quantities in the river, as stated by the fishermen and the captains of steamers, could not the closing of the rivers, have been delayed a month or two in the interests of the fishermen without materially affecting the breeding of the fish? When the fish first come in they make their way straight up to the head of the river, and if the fishermen were allowed to go on to the breeding grounds where the fish accumulate most they would rake up the whole place and destroy millions of eggs or young fish.

290. The fishermen consider that too much of the river is closed. Do you think that the boundary chosen for closing the river extends too close to the mouth? I do not know. The Commission generally take their cue from the position of a headland that is easily marked.

291. I suppose the mullet come in from the sea? Yes.

292. What is the case with respect to schnapper? The schnapper seldom spawn inside the rivers. I have seen them up as far as Cockatoo Island—they go into the deep parts of the harbour. The mullet are migratory but schnapper are not.

293. Do you think that the schnapper have decreased in numbers, and that you could do anything to encourage their breeding? I do not think so.

294. What do you think ought to be done to encourage the breeding of the schnapper? It is very hard to say. Very few come into the harbour to breed. The chief schnapper-fishing is outside.

295. Do the schnapper spawn outside? Yes.

296. In what months? I forget, but I think it is just about winter-time.

297. Do you think there ought to be a close season for schnapper? I do not think it is necessary—they breed so extensively. They spawn about the small islands and headlands of the coast, so that there is no need to protect them; it is where fish come up in immense shoals to spawn that it is necessary to protect them.

298. *Mr. William Stephen.*] How long does it take a schnapper to be fit for eating and to reach the weight of 10 or 14 lb.? At least four or five years.

299. *Chairman.*] Do you believe that the whole of the Fisheries Act is wrong—that its provisions are not suitable, and do not give satisfaction either to the Commission or the fishermen? I would not make such a sweeping assertion, but I say that the Act is capable of improvement.

300. With regard to the breeding of fish in different rivers, do you not think it would be better to leave the main river open while the estuaries or branches might be closed? Yes, I would leave a portion of every river open; I would find out the breeding grounds and close them—the other portions I would leave open. Some of the sandy beaches would have to be closed, because the soles and flounders spawn there.

301. What are the chief enemies of fish here? Stinging-rays catch and eat small fish; some of the larger sharks, different species of rays, and porpoises eat large quantities of fish; king-fish, bonitoes, and jew-fish also eat large quantities—so do shags.

Mr. Solomon Herbert Hyam called in, sworn, and examined:—

Mr.
S. H. Hyam.
13 June, 1889.

302. *Chairman.*] Are you a member of the Fisheries Commission? Yes.

303. For how long? About three years.

304. Who are the other gentlemen associated with you? Dr. Cox, Dr. Ramsay, Mr. Oliver, and Mr. J. R. Hill.

305. I believe you are not directly under any ministerial control? I always understood that we were under the control of the Colonial Secretary. I think all communications reach us through his office.

306. This inquiry is not merely directed to the work of the Fisheries Commission but also to the operation of the Fisheries Act, in order that we may relieve and assist the Commission in promoting a new Bill for the purpose of remedying the existing Act. We have no complaint to make directly against the Commissioners but wish to get their evidence with a view to having a better law framed? I am very glad to hear that, because there is an impression outside that it is otherwise.

307. Have you taken any particular interest in the fishing industry? Yes, for thirty-five years.

308. Do you consider that the provisions of the Fisheries Act have applied justly and have given satisfaction to the people who have carried on their callings as fishermen and oystermen? I think there are some parts of the Act which might be improved, but I do not think it has operated oppressively on *bona fide* and honest fishermen. It is the worst class among the fishermen who give us the most trouble.

309. Have you any reason to doubt the advisability of continuing the existence of the present Commission? I believe in the Commission; I am the youngest Commissioner. As a business man, conducting a very large business, and the position being only honorary, I would not stay now on the Commission if I did not believe it was beneficial.

310. Has the Commission always worked harmoniously? Certainly.

311. How often do you sit? Every week—a meeting may be missed occasionally, but very seldom since I have been on the Commission. I think it can be shown that I have attended very regularly. A meeting lasts about two hours.

312. Do all the Commissioners attend? No.

313. Have you noticed particularly any Commissioner absent on many occasions? Yes, one Commissioner; but he is looked upon as the scientific member of the Commission—that is Dr. Ramsay. He is not a very regular attendant, but he is a very useful member as a scientific man. Through him we have the Museum always open to us. If there is any new specimen which wants scientific examination we can fall back on him.

314. Have you brought under the notice of the Government any proposal to remedy any of the defects alleged to exist in the Fisheries Act? I think we gave instructions to have a new Act prepared, or some amendment, but I do not know whether it has ever been carried out. I have always been anxious to see some parts of the Act altered.

315. Do you know, of your own knowledge, whether any complaints have been brought under the notice of the Commissioners as to the provisions of the Fisheries Act operating unjustly? Not very many instances; I think most of the complaints have appeared in letters to the newspapers.

316. Do you know Mr. Philip Cohen? Yes, well.

317. Do you think he knows anything about the fishing industry? I think he knows nothing at all about it; it is all theory with him.

318. Do you know Captain Armstrong? I have a still poorer opinion of him; I know him well.

Mr.
S. H. Hyam.
13 June, 1889.

319. The officers charged with the carrying out of the Act have power to seize nets;—have many cases of seizure come under your notice? Yes.

320. Is it not a fact that while some of the nets seized have been sold by the Commissioners others have been allowed to rot? No. In the first place the nets, before they were sold, were, I think, altered; they have been cut so that they could not be used as illegal nets. I know that every care is taken of the nets before they are sold. We cannot sell one net at a time, and therefore they must be allowed to accumulate; but I know that every care is taken to properly dry them and stow them away. Of course some of the nets have suffered from the ravages of rats.

321. When nets are seized, is it not a fact that the Commission has power under the Act to sell the nets? Not within sixty days.

322. Therefore by selling these illegal nets the Commissioners actually encouraged people to continue fishing against the law? The illegality does not always relate to the mesh. It is generally the length of a particular net which makes it illegal. According to the Act we are compelled to sell, and I am satisfied that there are defects in the Act.

323. Do you think that when once a net has been pronounced to be of the legal mesh it should always be considered legal? It can be made legal by cutting it. For instance, the wings may be legal, whereas the bunt of the net may be illegal. By decreasing the bunt so as to make it the proper size the net would be a legal one.

324. Is it not a fact that nets which are newly made frequently shrink after the first two or three weeks? No doubt that is the case.

325. Under these circumstances do you not think that when those nets have been passed as of the legal mesh they should always be considered legal afterwards? The shrinkage is not much. I do not think the law ought to be stretched to meet a particular case. The shrinkage of a small portion, such as a sixteenth of an inch, ought not to be taken into consideration. We have nothing to do with the confiscation of nets—they are confiscated by a bench of magistrates.

326. Would it not be better to have a provision for punishing people who bring to market fish below a certain size rather than be so particular as to the mesh of the nets? From my experience the provision as to the mesh is a very wise one. I have fished extensively as an amateur in nearly every place in the Colony, inland and on the sea-coast, and I am thoroughly convinced that the size of the mesh is very important, and should never be departed from. I think men should be punished for bringing fish to market when they are below the legal weight.

327. Are you aware of any particular knowledge possessed by your fellow Commissioners with respect to fisheries? Yes; I defended this Commission when I was in the House. Mr. William Clarke, the late Minister of Justice, moved that it should be abolished. I defended the Commission, and then stated what I thought of it individually. I am satisfied that no man in the Colonies possesses greater knowledge of fishing generally, especially of oyster-culture and pisciculture, than Mr. Oliver. I look upon Mr. Hill as a very superior man, who has spent years and years on the coast, and is an able amateur fisherman. He has a thorough knowledge of it. Then Dr. Cox is a thoroughly scientific man like Mr. Ramsay. No objection can be taken to them, not so much as practical but scientific men. As practical men, I think that Messrs. Hill and Oliver are second to none. Besides that Mr. Hill is a very able man in dealing with departmental work. In our desire to reduce the expenses of the Commission Mr. Hill has always taken the lead. I think we have always shown that we want to lessen the expenses as far as possible without injury to the Commission. If I were not working with gentlemen whom I considered were fit to occupy their positions I would not remain on the Commission a day. It is merely for love of the thing that I sit there.

328. As a member of the Commission have you taken any opportunity to visit the fishing-grounds and oyster-beds? Yes, I have visited the Murray, the Edwards in the Deniliquin district, the Darling at Bourke, and 60 miles down, the Macquarie, the Lachlan, the Murrumbidgee, and many of the tributaries of those rivers. Then nearer home—since I have been a member of the Commission I have visited the Shoalhaven, the Hawkesbury, Lake Macquarie, Tuggerah Lakes, Lake Illawarra, Hunter River, and the home fisheries in Middle Harbour, Parramatta River—on which I go two or three times every month—and Botany. Port Hacking is out of our control, as a special Act was passed by Sir John Robertson, and I have not felt called upon to visit that place, except when specially requested. I have been looking out for trout-streams; I was instrumental in introducing the trout into this Colony, and we introduced a great many last year into Cox's River, the Grose River, the head-waters of the Shoalhaven, and the Wingecarribee or Wollondilly. The Victorian Government have promised us a lot of trout-fry, and we are looking out for places where they can be introduced. I know that it can be done with success.

329. Is it not a fact that new nets have been passed as legal, and that they afterwards shrink, which makes them much smaller? Yes.

330. Have proceedings been taken at any time against men who have used nets under the circumstances I have just stated? I cannot say.

331. Whilst you have been on the Commission have you had many cases reported to you where inspectors have been guilty of any dereliction of duty? Not very many. It is a dangerous thing to deal with outside reports. Complaints have been made, but not always I think by reliable people.

332. Are all your inspectors practical men? I am afraid not. It has been my desire, in conjunction with Mr. Hill, and I think the other Commissioners, to make sweeping alterations right through, and I think we have done so; but we do not like to do anything too hurriedly. I think it would be monstrously unfair to dismiss a man until we were quite satisfied that he was not fitted for his position.

333. The Commissioners have no power to dismiss an inspector? No; we can merely recommend that he should be dismissed. I think that we ought to have power of dismissal.

334. Have the recommendations of the Commission with regard to appointments been over-riden at any time? I do not know. It may have been done before my time. There was an appointment made to which Mr. Hill and myself took exception, and when we recommended that the appointment should be cancelled the Colonial Secretary cordially endorsed our recommendation.

335. Has it been your desire on the Commission to economise in connection with the Department? Yes; and I think that might be assisted if the local police were allowed to assist the Commission. I refer to the country police—the sub-inspectors, sergeants, and senior constables.

336. Do you think that all the men who are employed in the Fisheries Department are actually required? I do not. We recommended the dismissal of two some little time ago, and it was approved of by the Colonial Secretary. Those men were employed at Port Stephens.

- Mr. S. H. Hyam.
13 June, 1889.
337. Who is the head inspector? Mr. Lindsay Thompson.
338. Who is the chief inspector under him? There are head inspectors in three districts. I think the home fisheries are under Mr. Thompson's immediate supervision. I do not think we call Mr. Mulhall head inspector. We look upon Mr. Thompson as chief inspector.
339. Has Mr. Mulhall had considerable experience? Yes; I am sure I have known him in connection with fishing for forty-five years.
340. Is he not rather old? Yes.
341. Would it not be better for him to retire? I think that when a man reaches Mr. Mulhall's age there is some wisdom in what you suggest. A man naturally has a lot of sympathy for an old hand like Mr. Mulhall, and he is full of vigour yet and an active man; still I think that a man of his years should retire.
342. From your knowledge as a Commissioner do you think that Mr. Thompson has some practical knowledge of the fishing industry? I think so.
343. Is it customary for him to visit any of the fishing or oyster grounds? Yes; and it has been my desire and the desire of the other Commissioners that he should visit them oftener than he has done in the past, and it is our intention that he shall.
344. Are you aware that it is a cause of complaint on the part of fishermen that the fish-market in Woolloomooloo has not worked satisfactorily? I think there is room for great improvement in the market, but I think the fault lies with the City Council.
345. Who has charge of the market? I believe that it is under the control of Mr. Inspector Scymour. I am told that he is the leading spirit there.
346. Does the Fisheries Commission pay him anything for his services? Yes.
347. Is it possible for the inspectors to be in collusion with the fish and oyster getters? Yes, and I have expressed very strong opinions about it.
348. Do you know Mr. Woodward in King-street? Yes.
349. Does he know much about fisheries? I think he knows a great deal about oysters. From what I know of him I do not think that he is an expert with regard to fisheries generally.
350. Are you aware that fishermen complain of the rivers and fishing-grounds being closed for over twelve months at a time? I do not know that they complain, but as a Commissioner I have felt it necessary to keep the fishing-grounds closed for one year. There are rivers in this Colony which have almost been completely denuded of fish. Like everything else, rivers must have rest. If we go on fishing in the way that has been done in the past we will not have any fish at all in a few years.
351. As a matter of fact do you know that the Parramatta River has been closed for nearly four years? Yes, and, I think, necessarily so. I have fished that river hundreds of times for forty years, and when the Commissioners closed it first it was almost impossible to catch a line-fish in the river. I know from experience that there is more fish now in the river than there used to be. I have caught them freely. There are a great many steamers trading there during the day, and they frighten the fish, but at night you can catch fish.
352. If the rivers were closed for three years from oyster-getters, do you think that would be the means of resuscitating the oyster-beds? I do not. After granting men leases for the oysters I think that would be arbitrary to do that. I think that the failure of the oysters is attributable in a great measure to the seasons. In very dry seasons there is a great growth of marine vegetation in the rivers which destroys the oysters. Owing to this marine vegetation a worm attacks the oyster—I have noticed that for thirty years. When there is abundance of fresh water this vegetation is destroyed, and the oysters grow vigorously. I do not think that it would be wise to close the rivers for three years. Some discretion might be used in compelling men to take better care of their leases, and to lay down young oysters. I think there are men who take up leases, and do nothing except denude the oyster-beds. They often do that before signing the leases, and then they throw them up.
353. Do you believe there might be some alteration made in the Fisheries Act which would be beneficial, and would be the means of satisfying the fishermen and those more directly interested in its operation? I do not know about satisfying the fishermen, but we could make alterations in the Act which would render it more easy to work. With *bona fide* fishermen we have had very little trouble. My impression is that there are too many fishermen about the home fisheries. They have been cutting each other out since the advent of the Italians, and I think our own men have a lot of trouble to make a living. The Italians and the Greeks have crowded out our men to a large extent.
354. Mr. O'Sullivan.] Have you any experience of fishing outside of New South Wales? Yes; I have visited the Victorian fisheries.
355. Have you any practical knowledge of the fisheries in the old world? No; I am an Australian. I only have knowledge of that from reading, and I was the first to move that trout should be introduced into this country.
356. How do you account for the fact that the fishermen in New South Wales are so much behind the times with regard to appliances and enterprise? Simply because there are no companies here. At home there are large companies which fit up trawlers and employ a great amount of labor. The great fishing industries of the old world are carried on by large companies and by private individuals who have large capital.
357. Have you any knowledge of well-boat fishing? I have tried it.
358. Why is it that that system does not succeed in New South Wales? The chief fish we get here outside the heads is schnapper, and I never could find anybody who could do any good with schnapper in a well. They knock themselves about a great deal.
359. Are there not many other fish to be got besides schnapper? What we want here is to introduce outside trawling. I have had a strong desire all along to try to have the deep-sea fishing tested along the coast. I am satisfied that any amount of good trawling could be done there, but it would be expensive.
360. Do you think that well-boats of the size of the "Rachel Thompson," which made a successful trip here some time ago, would be a success? The schnapper is our great fish, and the experiment has been tried so often that I do not think that you could succeed in keeping schnapper in a well. It is a deep water fish, and very lively. Bottom fish, such as soles and flounders, turbot, and other fish of that kind, can be kept in a well, but that is not the case with fish like schnapper, which soon knock themselves to pieces in a well.

TUESDAY, 18 JUNE, 1889.

Present:—

MR. FRANK FARNELL,
MR. SEAVER,
MR. WILLIAM STEPHEN,MR. O'SULLIVAN,
MR. RITCHIE,
MR. STEVENSON,

MR. HOWE.

FRANK FARNELL, ESQ., IN THE CHAIR.

Mr. Lindsay George Thompson called in, sworn, and examined:—

361. *Chairman.*] What position do you occupy in connection with the Fisheries Commission? Secretary and Chief Inspector.

362. For how long? I have been Secretary ever since the initiation of the Commission.

363. How many members are there on the Commission? Five.

364. Do you know whether those men have practical or theoretical knowledge of oyster-culture or pisciculture? They have either theoretical or practical knowledge. Some of them practical, like Mr. Hyam, Mr. Hill, and Mr. Oliver. Drs. Cox and Ramsay are both practical and scientific.

365. In connection with your position as Secretary and Chief Inspector of Fisheries, have you taken a deep interest in the fisheries? Yes; always.

366. Do you consider that the provisions of the Fisheries Act have applied justly, and that the Act has given satisfaction to the people who carry out the calling of oyster-men and fishermen? Great complaints of dissatisfaction have been made, but I do not know that we have had any cases proved. The difficulty has been to carry out the law, owing to its defects.

367. You are under practically no Ministerial control? We are under the control of the Colonial Secretary.

368. But any matter which you submit to the Government for consideration has first to go to the Commission? Yes; my duties are set out in a regulation under the Fisheries Act.

369. Have you any reason to doubt the advisability of continuing the existence of the present Commission? I do not think that that is a question which I can exactly answer, as it is one of policy.

370. Have you heard many complaints made as to the administration of the Act by a Commission? I have heard it said that it should be administered directly by a Ministerial department, such as that of the Colonial Secretary.

371. How often does your Commission meet? Wednesday in every week.

372. Does the Commission regularly meet on those days? There have been many cases when we could not get a quorum. Usually, when a quorum has not been obtained, two Commissioners have held a sitting, and the signature of the third has been obtained afterwards to the minute-book.

373. What is the mode of procedure by the Commission? The minutes of the last meeting are read, and the Commissioners then proceed to deal with every case which has occurred throughout the week that requires their consideration. The proceedings are entered in a minute-book, and under each head the President writes the directions of the Commission.

374. Have the Commissioners always worked together cordially? I have seen no want of cordiality.

375. What is the time usually occupied at your meetings? I suppose, on an average, from an hour to an hour and a half.

376. Have you at any time been instructed by the Commission to bring any grievances or defects in the Fisheries Act under the notice of the Government? Not under the notice of the Government. I was asked on one occasion—about August last or September—to draw up a statement of what I thought were defects in the present Act. I found that the defects were so numerous and difficult of explanation that I had to draw up new Bills on the basis of the present Acts. I had no authority to go as far as that, but I thought it was the most intelligent way of putting the matter before the Commission. I drew up two Bills, one dealing with the fisheries, and the other with oyster-culture, and I drew up memoranda, explaining the alterations and amendments I had made in each. I now hand in those documents. [*Appendices B 1 and 2.*]

377. To whom did you submit these? To the Commission in October last.

378. Are you aware whether the Commission submitted those suggestions at any time to the Government? They have not done so. They have not fully considered the Bills themselves yet.

379. You mentioned that you had had several complaints made as to the alleged bad operation of the Fisheries Act? I meant with regard to the inspectors.

380. Not on the part of fishermen? No. I cannot call to mind any complaints made by the fishermen; doubtless there are some, and I could furnish a statement to the Committee subsequently with regard to them. There have been many complaints from the inspectors with regard to the difficulty of obtaining convictions where the Act has been palpably infringed.

381. Have the officers, who are charged with carrying out the provisions of the Act, power to seize nets of an unlawful mesh? Yes.

382. Have many cases come under your notice? All of them, I think.

383. Is it not a fact that the very same nets have in some instances been sold at the will of the Commissioners, while on other occasions they have been allowed to rot? No; we never sell illegal nets. If we seize a net that is illegal, before we sell it we are obliged, by one of the regulations, which, I think, ought to have been repealed long ago, to keep it for sixty days. The intention of that in the first place was, to enable fishermen to petition the Government to get their nets back again, but the Government have never thought fit to give them back. The effect of that provision has simply been to prevent the immediate sale of nets which have suffered in consequence. When we have several seized nets, and the specified period has expired, we cut them up and make legal those which were previously illegal. We set against each net the particular purpose for which it can be used, and that is the purpose for which it is sold. It would be manifestly unfair to sell an illegal net to a fisherman, when we could seize it the next day. I hand in a statement showing how we deal with these nets. [*Appendix B 3.*]

384. Is it not a fact that new nets shrink? Only by repeated tanning.

385. Have proceedings been taken against men who have purchased nets under the circumstances stated in my previous question? No; we take proceedings against men with illegal nets, but where there is only a very small degree of difference between the actual mesh and the legal mesh we would not allow a prosecution. We only prosecute where the nets are palpably under size.

Mr. L. G.
Thompson.
18 June, 1889.

Mr. L. G.
Thompson.
18 June, 1889.

386. So it is not within your knowledge that action has been taken in cases where it has been proved that the nets were at one time of a legal mesh, but that they shrank after having been used for a time? No; it is not within my knowledge. I do not think that the Commission would behave so unjustly to any fisherman.
387. Have you taken any opportunity to visit the fishing-grounds and oyster-beds? I have always been glad to visit them when I have had an opportunity. I have visited the Clyde River, Richmond River, the Clarence, Port Stephens, Newcastle, Shoalhaven, and of course Botany and the Hawkesbury.
388. Do you think it would be only fair once a net has been passed as being of legal mesh that it should always be considered as legal? No, because repeated tannings would bring the mesh down to very much less than the legal mesh. The proper way would be to purchase a net of a larger mesh in the first instance, so as to allow for the shrinkage caused by tanning.
389. Would it not be better to have a provision to punish people who bring fish to market under a certain size rather than be so particular as to the mesh of the net? The 14th section of the Fisheries Act provides for that already.
390. How many inspectors have you at the present time? Twenty-four, besides boatmen. Here is a list of the officers in the Department. [Appendix B 4.]
391. Are all those inspectors practical men? No; the acting assistant inspectors, who are principally the pilots at different out-stations, are not always practical fishermen, but the principal inspectors are practical men—in the home division, at any rate.
392. In your opinion are all those officers actually required? I do not think that the officers are properly placed. I think we should get better supervision if the officers were placed in suitable positions. I made a recommendation to that effect some time ago. I wanted to have a complete removal of inspectors, and I wrote a memo. on the subject, but nothing came of it.
393. To whom did you recommend that? To the Commission.
394. Did they send that recommendation on to the Colonial Secretary? No, they did not. I furnish a copy of the memo. [Appendix B 5.]
395. Are you aware that it is a source of complaint on the part of fishermen that the fish-market at Woolloomooloo has not worked satisfactorily? Yes; and I do not think that it is satisfactory myself. It appears that the men at the fish-market used to pay 5 per cent. dues to the agents; that has since been reduced to 2½ per cent.; they also pay 5 per cent. market dues to the auctioneer. That I believe goes into the civic funds. Mr. Seymour is paid a salary, but as auctioneer is not responsible for the sales proceeds—the agents have to see to that. I think it is too much to expect the fishermen to pay 5 per cent. merely for the privilege of selling in that market, and I do not think that it is right to compel all the fish to be sold there. There is a by-law under the Municipal Act which requires that all fish shall be brought to this eastern market to be sold. I do not think that the by-law is quite absolutely enforced, but it is generally enforced. My own idea is that there should be different markets about the town; for instance, there is a new market at Darling Harbour, which might be utilised for the sale of fish. It is utter nonsense to bring fish in a steamer to Darling Harbour, to cart the fish to the eastern market, sell it there, and then cart it back again to the town to be sold retail. There should also be a market near the railway, where fish brought by rail could be sold. The present arrangements are not at all satisfactory. It might be contended that if this were done the fish would not be properly supervised so as to discover bad fish, but that could easily be provided for by detailing some of our inspectors for the duty.
396. Who has charge of the market at present? It is under the civic authorities. Mr. Seymour, the auctioneer there, is one of our assistant inspectors; he was made so in virtue of his position.
397. He receives a salary from the Commission? Yes, £75 a year, I think.
398. Who is the inspector directly under your control? Mr. Mulhall.
399. How long has he been in that position? Ever since the Commission was created.
400. Is he a good practical man? Some say he is, others say he is not. He seems to be very industrious and intelligent, and he is always able to give me such information as I may require.
401. How old is he? Quite 60, I am sure.
402. Do you remember a man named Quinan, who was employed as an inspector—was he not dismissed? He was not dismissed, but he had to retire; his services were dispensed with.
403. On what grounds? He got into trouble when Mr. Stuart was Colonial Secretary, for trafficking in oysters.
404. Will you furnish us with the papers in connection with that case? Yes.
405. Do you think that it is possible for inspectors to be in collusion with fish and oyster sellers? Yes, quite possible.
406. Do you know Mr. Woodward, of King-street? Yes.
407. Do you think he knows anything about fisheries and oyster-culture? Yes, I think he knows a good deal about oyster-culture.
408. Are you aware that rivers and fishing-grounds have been closed for over twelve months? Yes.
409. How long has the Parramatta River been closed? The Act gives us power to close waters for two years, with the right to extend the closing for one year more, when those three years have expired. We can then begin *de novo*. That is our practice.
410. As a matter of fact, has not the Parramatta River been closed for over four years? I think it has.
411. Can you give any reason why the fish in that river, as well as in other rivers, have diminished in number? I do not think they have decreased. In point of fact I am sure they have increased.
412. What is the cause of the dearth of oysters in the Parramatta and other rivers? The droughts. The oyster requires a certain proportion of fresh water; that is to say, the salt water on which it thrives must not be too saline. There is a certain salinity necessary, but anything over that salinity arrests oyster growth and development. That is the cause of the worm disease which is talked about a good deal. I have here four oysters exhibiting the worm disease from its inception to the actual destruction of the fish. Since the recent flood I have received reports stating that at Port Stephens and Newcastle the worm has been entirely killed. It is simply an ordinary earth-worm. Whether it gets into the laminae in the first instance, or right into the oyster, and the oyster then works a naere over it, we are not quite certain. I am inclined to think, myself, that it gets into the laminae. Another disease to which the oysters are subject is caused by a borer, which attacks the oyster when there is too much fresh water. I now exhibit to the Committee a specimen of oyster which has been attacked by this animal.
413. How long does it take an oyster to become eatable? That all depends on the locality. Oysters which were sent to me yesterday by Mr. Dick, of Port Macquarie, had attained, he states, a marketable size

Mr. L. G.
Thompson:

18 June, 1889.

size in two years and four months. In other rivers you can get them to attain a marketable size in twelve or eighteen months. In George's River they will mature in nine months, as I know from experiment.

414. Would you favour a proposal to close the rivers for two or three years from oyster-getters—do you think that that would be the means of resuscitating the oyster-beds? No; I think that depends entirely upon the seasons. I believe that after this season we shall have any quantity of oysters. My theory is this: There are deep-water oyster-beds as well as foreshore oysters. Wherever there are developed oysters fresh water must be present, and I believe the deep beds are fed by fresh water oozing up underneath, which produces less salinity at the bottom of those waters than in other waters. If that is the case we shall have oysters whether we keep the beds closed for three years or not. If that is not the case, we might keep the beds closed as long as we liked, and not get oysters. Lately we have not been able to get oysters, because it has been simply impossible for them to grow.

415. Are you in favour of continuing the present system of oyster leasing? I am not so certain about that. I am rather inclined myself to let the rivers either wholly or in arms. I want to bring this about: That if a man has an oyster lease, it shall extend over an arm of a river (say) like the Moonee Creek in the Hawkesbury, so that all the oysters in that creek shall belong to one man. In that case, if any other man were discovered there with oysters, he would have to account for them. The present system of leasing small areas simply encourages people to pilfer one from the other. These small leases are called peacock leases, about 100 yards in length. The Commissioners, at my suggestion, are not now disposed to grant those small areas. People take up these oyster leases simply for the purpose of getting all the oysters they can; then they throw the leases up, leaving the rent unpaid; and I do not know whether we have any power to recover the rent. The matter is now in the hands of the Crown Solicitor, and there is a case to be prosecuted.

416. Do you know how many oyster leases there are, and what amount of rent has been received? No; but I will furnish the information.

417. Have all the rents been paid on the leases issued? No; they are £2,000 or £3,000 in arrear.

418. Is it a fact that in the event of an oyster-lessee detecting anyone pilfering his oysters he cannot prosecute without first consulting the Fisheries Commission? Yes.

419. Is not that an absurd provision? Yes.

420. Do you know how many leases Mr. Woodward has? No; but he has a very large number.

421. Has he always paid his rents? Yes.

422. Do you remember that, some time ago, complaints were made public by myself which came from fishermen in the Hawkesbury River, who stated that they were unjustly and unfairly dealt with? Yes.

423. Has anything been done in order to relieve those people? I went up to the Hawkesbury, and looked into the matter. The result of my inspection was that I recommended the opening of Berowra Creek to net-fishing. I consulted one or two fishermen there, and they said they would be contented if that were done; and I did not see very much harm would result from opening the creek. In point of fact, the mere supervision of its closure was a bar to keeping it closed, because it would be necessary to maintain an inspector there constantly. I recommended the opening of Berowra Creek, but the Commissioners did not agree with my recommendation.

424. Would it not be much better if the main river were left open and the tributaries closed? I do not think so. I am a great believer in keeping those rivers closed for the protection of young fish. I would rather see the heads of the rivers permanently closed, because I have seen such good results from it.

425. Have many complaints been made through you to the Commission as to dereliction of duty on the part of any of your inspectors? No.

426. Have you had any? No.

427. In the appointments of inspectors have the recommendations of the Commission always been carried out by the Government? I think so, without exception.

428. By whom in the first instance are these people recommended;—would they be recommended by a man of Mr. Woodward's or Mr. Emerson's standing? No; I do not know of any who have been recommended by them.

429. In 1887 a Bill was passed to protect the fish in inland waters;—have you directed your attention to the application of that measure? We have no officer to supervise it. I have considered that measure, and I included its provisions in the Fisheries Bill which I drew up. I have not had an opportunity of visiting the inland waters, except Lake George, where I have been once or twice. I should like to have opportunities to visit those waters, as it is really impossible to form an opinion on those matters unless I go there. I would like to have personal knowledge before I made any recommendations. It will be seen in the statement which I have already handed in that I proposed to make recommendations when I was afforded an opportunity of going to the inland waters, but that opportunity has not yet come.

430. At Lake George there are fine fish, and is it not in every way suitable for carrying on experiments in pisciculture? Yes.

431. Have you visited Lake Bathurst? No.

432. Are you aware of the existence of fish there? There was some talk of taking fish there. It would be quite easy to get them there.

433. Are you aware that large quantities of fish are taken from the Murray River to Melbourne? Yes; they all go to Melbourne. We keep the Murray River for the benefit of Melbourne; Sydney gets no benefit.

434. Are you aware there are large quantities of oysters imported from New Zealand? Yes.

435. Do you remember the case of Hanley, who imported oysters from New Zealand and deposited them in one of the foreshores? Yes, at Gore's Bay.

436. Had he to pay royalty on those oysters which came in from New Zealand, and which were under other circumstances imported free of royalty? He took possession of this area and applied for the lease but never got one. It was decided that no leases should be issued in Port Jackson. Hanley was informed that he would have to pay this royalty for the accommodation afforded to him through his being allowed to keep his oysters there and for the benefit which the tidal waters flowing over them had conferred on him. The Commissioners thought that he ought to pay something to the Crown for the benefit he had derived, and they made an arrangement with him that no rent was to be charged. He was to give up the land within three months, but I think the Commissioners allowed him to remain longer.

437.

- Mr. L. G. Thompson.
18 June, 1889.
437. In bringing these oysters to town and selling them to Woodward and others, had he not to pay just the same as if the oysters had been reared on our own oyster-beds? Yes, only he had no rent to pay.
438. The royalty on oysters has been abolished? Yes.
439. Is there still a royalty on ware? You cannot call it a royalty as it is really a fee. Two shillings a bag is charged on ware, brood, and spat.
440. Do you think that is a wise provision? It is one of the regulations under the Act. It would be a good regulation if attention were paid by the Government to preserving beds for ware. If they took pains to conserve it it would be very good.
441. *Mr. O'Sullivan.*] Have you any supervision or inspection of inland waters? We have power under the Act.
442. Who enforces those powers? We enforce it; we generally employ the police.
443. Do the police represent you on the inland rivers and lakes? Yes; wherever we ask them.
444. Who represents you at Lake George? We have an inspector appointed there, and another on the Edwards River, between Deniliquin and Moama. He is the forest ranger, and he inspects the fisheries in his district. A sergeant of police, named Nelson, has charge of Lake George.
445. When you were at Lake George were you interfered with by the landed proprietors on the banks? No.
446. Did you ever hear that the people who go fishing at Lake George have been ordered away by the land-owners? No.
447. Were you allowed to land anywhere? Yes; I had no interference whatever.
448. Is there only one kind of fish in Lake George? Yes; the cod.
449. Is that lake suitable for rearing other fish? I think so. I should like to try it. Of course the cod is very voracious, and that would militate against any effort of the kind.
450. With regard to the worm disease in oysters, is there any inspection when they come to market to see if the oysters are diseased? No. The oystermen would not send them to market, because it would be only waste labour.
451. How did you manage to discover the specimens you have shown us? You can get them anywhere; you can always discover the disease, the smell is so bad. It is like dredged silt.
452. Could anyone eating an oyster ascertain for himself if it was diseased? Yes; the mere appearance of it is quite sufficient.
453. Have you any complaints as to the stealing of fish at Woolloomooloo market? No; but I have heard of their having been stolen in transit. In point of fact I have seen them stolen myself on the Hunter River wharf when coming from Newcastle in the early morning.
454. Is there any systematic oyster-culture in New South Wales? No. Although the purpose of the Act was to encourage oyster-culture, people have taken up areas not for that purpose at all. They have selected places where there was the most oysters. In many instances they have cleared off all the oysters and then abandoned the area.
455. Is Mr. Mulhall competent to carry out his duties as an inspector? Yes. He is an old man, of course; but he seems to take a great deal of interest in his duties.
456. Does he give satisfaction? Yes; I have not heard any complaint from the Commissioners. They think very highly of him.
457. Do you think that trawl-fishing would be a success off this coast? I can hardly say that; but I am looking forward to the time when we shall have trawling here. We do not know at present where we can trawl. Trawling requires a clean bottom, and that can only be ascertained when we have had a survey. I not only expect that we shall get ground fish, and unknown fish, but also oysters. There is no doubt that there are oyster-beds off the coast. There is such an oyster-bed off the Clarence, and I was in hopes, although unfortunately I have not been able to do so, that I could show the Committee this afternoon some oysters taken from the sea near Catherine Hill Bay, a few miles to the south of Lake Macquarie. They grow there in a place called Shark Hole, or very near there. There are no creeks or inlets about there, and the only inference is that those oysters come from the sea, and there must be some place there where they breed. I do not know why we should not get deep-sea oysters here as they do in France, New Zealand, and recently in Bass's Straits.
458. How do you account for our fishermen being so backward with their appliances and method of fishing? They seem to be able to supply the market, and they do not seem to care to go out of the beaten track. They have very primitive appliances, and some fishermen really do not care to go away from their own homes. That is one of the causes of the out-cry against closed waters. We had a deputation from the Fishermen's Union on one occasion, and the impression created in my mind was that the fishermen thought there were no other grounds where they could fish except George's River and the Parramatta River. They do not seem to have any enterprise.*
459. Do you think that our fishermen keep up a proper supply of fish for the market? The supply of fish has been increasing yearly. In 1885 there were 38,000 baskets of fish brought to market. In 1886, 45,000 baskets. Roughly, in 1887, 51,000 baskets; and in 1888, 54,000 baskets. The proceeds for the sale of those baskets was—in 1885, £31,000; in 1888, £37,000; so that that shows the supply is gradually increasing, and I put that down to our keeping the rivers closed.
460. Are there any obstacles in the way of well-boat fishing off this coast? No, but it has not been a success so far. I was speaking on the subject to Mr. Buckingham, who owns the ketch "Gratitude." He explained to me that the smaller fish seemed to succeed very well in a well-boat, but he brought a number of them on one occasion into Sydney, arriving here on Saturday night. He left them in the well all Sunday, and on Monday they were all dead. They were killed in their own filth. I can quite understand that, because he moored his boat just in the usual way, and there was not a sufficient passage of water through the well. If he had moored the vessel across the tide he might have saved the fish. He noticed also that the large snapper dived down and killed themselves against the bulk-head. He intended then to spread a net round the well to act as a buffer to prevent that if possible. The "Gratitude" is at present in New Zealand, but she is returning to Sydney, and he hopes to be able to do something with her in future, as he is going to use steam-power, which will enable him to get to the fishing-grounds and back in proper time.

461.

* NOTE (on revision):—I intended to convey this idea: That fishermen resident on a particular water, say, for instance, the Parramatta or George's River, seemed not to think that there were other fisheries besides those to be considered, and that they would rest perfectly satisfied if allowed to follow their calling on their own river, and not trouble much about the convenience of members of their own craft resident in more remote localities.

461. Did not the "Rachel Thompson" from Tasmania demonstrate the success of such fishing? She was not a success. The master had all the assistance possible from the Commissioners. The Government found the money to start the enterprise, but the master, instead of prosecuting the affair went back again, as he found that it was not a paying speculation.

Mr. L. G. Thompson.
18 June, 1889.

462. Might he not have had a good market in Tasmania? Yes; he found that he had much better market there than here.

463. Do you know that well-boat fishing has been very successful in Tasmania for years? Yes, I have heard so.

464. Even when the wells were fitted in ordinary whaleboats? Yes; but I do not know anything of it personally.

465. *Mr. Ritchie.*] You have stated that you are in favour of giving extensive oyster leases;—do you think that it would prevent pilfering if you gave one man the entire bed of the river? I did not say that I would give the entire bed of a river to one man. Suppose a river had an arm such as Moonee Creek on the Hawkesbury. I would give one man the whole of that arm. If his oysters were then stolen it would certainly be his own fault. Under the present system we allow one man to have small areas here, there, and everywhere, and neither the Government nor the lessee can protect those leases.

466. Is there any oyster-culture going on at the present time at Moonee Creek? No; the worm disease has taken such a hold on the oysters that nothing has been done.

467. You have spoken of closing the heads of the rivers;—what bounds would you fix for the Hawkesbury? My proposition was that we should close that river from Bar Point upwards. The river was first closed as far as the Railway Bridge. The fishermen represented to me that that was altogether too much. In deference to their wishes, and seeing that it would not interfere with the public interest, I proposed that we should open the river up to Bar Point, excluding the tributaries.

468. Is Bar Point much above the railway bridge? Yes; about 4 miles.

469. What are the bounds in the Parramatta River? We have closed it from the bridges. Iron Cove from the bridge, Johnston's Bay from the bridge, and Parramatta from the bridge, and Lane Cove from the mouth.

470. Have you closed the same proportion in all the other rivers? Yes; we take some well known point.

471. Is the worm disease very prevalent or widespread? Yes; but at present the floods have killed it.

472. Do you think that fresh water is a specific? Yes; there is no doubt about that. There is a great deal of talk about the origin of the disease, but I think the practical question is, what will cure it, so far as is yet known. Nothing but fresh water will do it. I put those worms [*Exhibit*] in fresh water, and they were dead instantly. They would live ever so long in salt water.

473. Is it by trawling only that deep-sea oysters can be obtained? Yes; and dredging.

474. Is that the method used in New Zealand and France? Yes; and dredging. I think they get them in 30 fathoms of water in France.

475. Cannot they be obtained by means of a diving bell? They can. We have divers here, but that is expensive, and a poor man could not go in for it. There is a man diving at George's River, but I do not at all approve of that system as it is impossible to know what the man is doing.

476. *Mr. Howe.*] Would you be prepared to extend the limit on the Parramatta River to beyond the bridge? Yes.

477. Say to Ryde? Yes; I would not object to that.

478. Would you object to extending the limit on George's River to Salt-pan Creek? I was discussing that matter the other day, and I would be willing to extend it to this side of Salt-pan Creek in the summer months, but I would not like to open the creek.

479. Would you be in favour of opening Port Hacking? We have nothing to do with that.

480. Would you advocate the repeal of the Act, which closes Port Hacking? Yes; I should like to close Port Hacking only from the Spit upwards. There is really no supervision at present, and owing to the way in which the Act is drawn a conviction could not be obtained if the opposing lawyers knew what they were about.

481. Are not the fishermen anxious to be allowed to use any kind of net, so long as the fish are not below a specified weight? That is the practice in Victoria; they disregard the nets altogether there, or very nearly so, and rely entirely on the weight of the fish. I am not inclined to agree to that practice, because we have to do more than prevent young fish from being sold. We want to prevent the young fish from being damaged, which takes place when they are caught in a net.

482. *Chairman.*] Do you think that in many cases the lengths of the nets should be increased? Yes.

483. *Mr. William Stephen.*] Do you think that the inspectors should be practical fishermen, and should understand the habits of the various kinds of fish? I think they should be practical fishermen. There is but little known of the habits of the fish. Garfish are the only fish to which a certain net will apply, because they are surface fish, and very seldom go below.

484. Are all the inspectors really practical men, who will be able to give a decision at once, and understand when the fishermen break the law? They will know when the fishermen break the law, but I do not think they have all been practical men. Of course, in their capacity of inspectors, they have learnt a great deal, and perhaps all that is necessary, but when they were appointed I do not think they were all practical fishermen.

485. Is it your opinion they should be? I think that it is very desirable that they should have the necessary knowledge at any rate.

486. Is Mr. Seymour in the employ of the Fisheries Commission? Yes; we pay him a salary of £75 a year.

487. Is he not paid by the Corporation of Sydney? We have nothing to do with his position in the Corporation. He was merely appointed an inspector because it was thought that he would be serviceable as representing the interests of the Fisheries Commission, seeing that he had the control of the market.

488. Then he is paid by regular salary, and not by fees? He is paid a regular salary.

489. Does he not receive any Commission from the vendors of fish? I believe he gets a salary from the Corporation, but I do not know that officially.

490. In your opinion has the closing of the fishing-grounds increased the number of fish? Very much, there is no doubt about that.

491. Have you not heard that since Port Hacking was closed the fish have decreased there? Yes, because the fishermen fish there whenever they please. There is nobody to prevent it.

Mr. L. G.
Thompson.
18 June, 1889.

492. Have the Commissioners the power of appointing their own inspectors? No; the Minister does everything; the Commission can only recommend.
493. Do you think it would be desirable that the Commission should have the power of appointing inspectors? They virtually have the power of appointing inspectors now, because the Government always carry out their recommendations.
494. Are the inspectors subjected to any examination before the Commission recommends them? No.
495. So that in reality the Commissioners are not aware what their qualifications may be before they employ them? No, except from the recommendations which may accompany their application.
496. Do you think it would be desirable for the Commission to have power to appoint the inspectors directly, without reference to the Government? I do not see what is to be gained by it, because the Government will never refuse the appointments recommended by the Commissioners.
497. Do you think that any of the waters closed at present might be opened with advantage to the fishermen, and without lessening the supply of fish? I do not, except with the modifications I have already explained. I think those modifications might be allowed without detriment to the fish supply.
498. Have the Commissioners power under the Act to try experiments in catching fish outside the Heads? The Act does not exactly give them power, but the Government would not object to their doing so. In fact they have made an experiment with the trawl, and I think the result of that experiment is embodied in the Commissioners' report for 1883.
499. Would it not be desirable for the Commission to make experiments, with a view to educating the fishermen as to what might be done? I think so. I know that when the Commission was first formed the Government, at the instance of Sir William Macleay, who was then the President of the Commission, imported a lot of nets and fishing appliances in use in various countries; but, unfortunately, they were destroyed in the Garden Palace fire. Among them was a purse-seine, half a mile long. This was used to catch fish off the coast of Maine, in America.
500. *Mr. Stevenson.*] Do you ever change your inspectors from one district to another? We have not done so. I made a recommendation to that effect [*Appendix B 5*], which the Commissioners had under consideration, but nothing came of it. Our present inspectors live at Paddington, Woolloomooloo, and Surry Hills. I would place them in proximity to the closed waters. For instance, we want supervision over the closed parts of the Parramatta River. We require supervision of the Lane Cove River, and so on. My idea was to locate the inspectors somewhere near the lines of closure, so that they might see that illegal fishing was not going on. The Commissioners were willing to entertain my proposal to a certain extent, but the trouble was with regard to residences. I thought residences might be provided in this way: That we should make use of some of the 100-foot reservations which exist in most of these places, or any other suitable reserves in existence, and build a weatherboard-house for the inspector on this location, charging him a small rent, so as to cover the interest on the money expended.
501. What has been the result of your recommendation? I submitted it to the Commissioners, but there has been no result so far.
502. What salaries do you pay the inspectors? Mr. Benson, at the Clyde River, and Mr. Temperley, at the Clarence River, are the divisional inspectors; they get £200 a year, and they received the statutory increase of £40, which is the only increase they have had. All the other inspectors are called assistant inspectors, and they get £150 a year.
503. Is Mr. Benson at Bateman's Bay? Yes. He has charge of the Southern Division, from Jervis Bay down to the boundary. Mr. Temperley has charge of the Northern Division, which begins about the Manning River and runs away to the northern boundary.
504. Is Mr. Benson a relative of the President of the Commission? He is a relative or connection.
505. Has he any allowance for rent? Yes; I think he is allowed about £25 a year for rent.
506. Why do you make an allowance to him for rent and not to the other inspectors? I really do not know how it came about. I know he is allowed it. He applied for it, I think.
507. Has any other inspector ever applied for rent allowance, and has it been refused or granted? I do not think any other inspector applied. It has certainly not been granted to any other inspector.
508. Is he allowed anything else besides rent? Travelling allowance.
509. Is he allowed an attendant? He is allowed a boatman.
510. At what salary? I think £108.
511. Does Mr. Temperley get a boatman? Yes. In Mr. Temperley's case the Richmond and the Clarence are important rivers, and the boatman is posted on one river and Mr. Temperley on the other. In my proposition I arranged for another disposition of all those men.
512. Then the only inspectors who have assistance are Temperley and Benson? Mulhall, in Sydney, has attendants of course. You can understand that we require more men at head-quarters.
513. When the chief inspector is absent from Sydney who performs his duty? The chief inspector is very seldom absent. I wish he were absent a little more. Mr. Ellis, the first clerk in the office, performs his duty when he is absent.
514. What practical knowledge has he of the duties? Really there is no practical knowledge necessary, because he, as likewise I, as Secretary, would only take the instructions of the Commissioners. If he wanted any directions, or had to give any directions, he would have to go to the Commissioners, or the President, in the same way as I should. As chief inspector I do not consider that I have any absolute control over the inspectors.
515. Is it not a source of complaint amongst the fishermen that if they want redress for anything they have to wait here until the Commissioners meet? If the fishermen went to one of the Commissioners—to the President, for instance—he would give them all the help and redress he could. If a fisherman had a grievance, and he wrote to me, I should have to wait until the Commission met.
516. Have you heard any complaints from the fishermen as to the delay they have been subjected to? Yes, very frequently.
517. Are any of the inspectors incapable of performing their duty from old age? We have only one old man, that is Mulhall; he is over 60. I do not think anyone else is over age. I had a return of their ages prepared at one time.
518. What is Mulhall's time principally occupied by? He visits the fish-market every morning at 4 o'clock.
519. Has he an assistant? Two or three. He patrols the closed waters at night, and he looks after the oysters and fish coming in during the day. He is generally about.

520. There is no part of his time, I suppose, occupied in getting fish for the Commissioners themselves? No; I never heard of such a thing. That is a case that would hardly come under my notice. If it was done I would hardly know anything about it.

521. You do not know, of your own knowledge, that it is not done? I do not know that it is or is not done.

522. Who is the inspector at Port Stephens? Mr. Otway.

523. Is it proposed to remove him? Yes; the Commissioners have passed a minute that he and the boatman shall be dispensed with. They propose to make other provision, and his services will not be required. The matter is now under the notice of the Government.

524. What fish comes from Port Stephens? All kinds of fish.

525. A large quantity of fish comes from there, and is it not necessary that someone should be at Port Stephens? I think so. That is my opinion, but it is not the Commissioners, so far as I know.

526. What provision is to be made for that place—is it proposed to remove an inspector up there? My proposal was to remove the inspector from where he is stationed, at Alicetown, down to the Heads, to supervise the fish taken from Port Stephens to Newcastle, and that any provision for the inspection of oysters at Limeburners' Creek, whence they are sent overland to Newcastle, should be done at the creek. In fact that he should be helped by another man, and I proposed to take a man from Shoalhaven and place him there. I thought that would be a very effective means of seeing that the law was observed where the principal fishing goes on, that is, at the lower part of Port Stephens.

527. Do you think that Port Stephens is a very important fishing-ground? Yes.

528. Yet the Commissioners propose to close the inspection there? I do not know that they propose that, but they intend to do something. I was instructed to go up there and report for their information, but I have not been able to go yet.

529. It has been reported to me that they propose to remove the inspector, and it is considered to be a very ill-advised step. I want to know what action has been taken and what provision has been made to meet the case of that port? They have not moved him yet. I should propose an inspector there. I am in rather a delicate position in having to state what I believe to be the Commissioners' opinion on this matter. I do not know how far to go, or whether I should leave my idea of it unexpressed.

Chairman.] You will be protected in every possible way with regard to any information you give here, and you need not be afraid in answering any question.

530. *Mr. Stevenson.*] This Committee would be a farce otherwise. I want some information as to the steps taken by the Commissioners as to removing this inspector? I was going to say that the Commissioners take this view generally—

531. Has there been any complaint against this gentleman? I have not had any official complaint. I have had many verbal complaints that he has not given satisfaction. I asked those gentlemen who made verbal complaints to put them in writing, so that we might inquire into them, but I have never been able to get them in writing. Whether the complaint arose from his being too active, or from his not being active enough, I do not know.

532. Is it on account of those complaints that the Commissioners propose to remove him altogether? Not wholly; they think he is rather an expensive officer.

533. What is his salary? £150 a year, but the Commissioners think that he spends too much money in travelling, and they do not think that he is a competent man.

534. Can you give me any idea as to what fish comes from Bateman's Bay in proportion to the quantity from Port Stephens? There is no comparison in favour of Bateman's Bay.

535. Yet you keep an inspector at Bateman's Bay? Yes, the divisional inspector.

536. And you give him an assistant at £108 a year? Yes, but my proposal would remedy all that.

537. But in the meantime the evil exists? Yes.

538. You allow this inspector at Bateman's Bay house-rent in addition. All this expense is kept up where there are no fish, yet the inspector in a place where there is plenty of fish is to be done away with? If I recollect rightly my proposal was to remove Benson to the inland waters and remove the boatman somewhere else, giving him inspectoral powers.

539. What were Mr. Benson's qualifications for the office when he was appointed? I do not know what his qualifications were in the first instance, but I believe that he had had experience in Tasmania or Melbourne. I believe he came from Tasmania originally. He seems to have given satisfaction at Bateman's Bay;—we have no complaints about him.

540. How do you arrive at a knowledge of the existence of deep-sea oysters at Catherine Hill Bay? From the report of the inspector. This is a matter of very great interest to me, and whenever I hear of anything of this kind I always make full inquiry.

541. Have you had any complaints with reference to the fisheries or the inspector at Hawkesbury River? Yes; there were great complaints, and an inquiry was held, but nothing was actually proven. The idea was that the inspector, Peter Smith, was interested in oyster culture leases.

542. Have many nets been seized at the Hawkesbury at any time? Yes, but I cannot say how many.

543. On several occasions? Yes.

544. What became of those nets? They were sold by order of the Commissioners.

545. Are you aware that those nets were sold by public auction under instructions from the Commissioners—that they were purchased, put in use, and seized again? There never has been a case of that kind. Suppose an inspector seizes an illegal net from A, another inspector seizes an illegal net from B, another inspector seizes an illegal net from C, those three illegal nets may be converted into one or perhaps three nets, which may be legal for some purpose or another. We cut up those nets, and make that legal which was hitherto illegal, and the legal net is sold.

546. You do not sell the illegal net in the condition in which you seize it? No. That would be manifestly unfair. It would be laying a trap for the fishermen.

547. *Chairman.*] Are you sure as to that statement;—are you sure that nets have not been seized, prosecutions having been instituted on account of those nets being of an illegal mesh, and the very same nets sold again to people who used them? I do not know of such a case. I now recollect something that took place a long time ago. Many years ago some gentlemen in the country wanted nets to cover their fruit-trees, and some of those nets that could not be made legal for fishing were sold to those people for the purpose named. We instructed the auctioneer to say, when he sells a net, that it is legal for whatever purpose we intend it to be legal.

Mr. T. G.
Thompson.

18 June, 1889

Mr. L. G.
Thompson.
18 June, 1889.

548. *Mr. Stevenson.*] Have you never heard of a case where a man was prosecuted for using a net, which was sold to him by order of the Commissioners? I have heard of a case of complaint, but I forget the exact case now. I know that there was nothing in the complaint. It was something in connection with a lot No. 8 at some sale. The man said he had bought the net at this sale, and that he was afterwards prosecuted for using it. As a matter of fact, as far as I can recollect, the man never bought No. 8, but he bought something else. If any information is given me on the subject I can search for the case.
549. We want you to furnish us with information? I cannot give it; if I could I would give it.
550. You really do know or have heard of some case that has arisen? Which was said to have arisen, but there was really nothing in it.
551. What became of the prosecution? I do not know.
552. Was the man subjected to a great deal of annoyance, and was he brought to Court? If he had an illegal net he would certainly be brought to Court.
553. What became of it? I do not know the case, and I cannot give the information.
554. You must admit that that would be a very great hardship? Yes; it would be a monstrous thing, which I would not lend myself to.
555. Do the Commissioners inquire into any complaint that is made? If any representation was made it would be inquired into.
556. *Mr. William Stephen.*] Do the Commissioners inspect every net seized, so as to make sure that a net is not illegal before it is sold? No.
557. Do you leave it to the inspector to do that? Yes.
558. *Mr. Stevenson.*] I presume the inspector performs that duty? Yes.
559. When you grant leases for oyster-beds, do you see that the purpose for which the leases were granted are carried out? Yes; it is our business to do that, and we do it where we can, but we have very little opportunity. Also, an oyster lessee need not do anything for three years. At the end of three years if he finds that the land is incapable of oyster culture the Act gives the Commissioners power to recommend the surrender of his lease.
560. Then you do make some inspection? We always inspect, and we have never got any reports of mismanagement as yet, because really there has been no oyster culture. We have had no growth in the oysters.
561. What reports have you received with reference to the oysters on the Shoalhaven River? That the lessees are carrying out the conditions of their leases as far as they can. We have an inspector there who reports constantly.
562. Then the conditions of leases on that river are supposed to be satisfactorily carried out? Yes.
563. With reference to the sale of fish, would it not be an advantage to the fish-dealers themselves, the parties procuring the fish, if there was an auctioneer licensed to sell the fish, quite irrespective of Mr. Seymour, so that the fish might be sold at any time of the day when they arrived? There is no manner of doubt about it. I would completely upset the present arrangement.
564. Would you be inclined to recommend that fish auctioneers should be licensed to sell the fish, which is a perishable article, in the same way as auctioneers are licensed to sell wood and coal, which are not perishable, at Darling Harbour? Yes, I would recommend that fish and oyster dealers should be licensed.
565. *Chairman.*] You have mentioned that experiments in trawling have been made by the Commissioners;—how many trawls have you? We have at present two trawls and gear complete.
566. What is the cost of them? I do not know. They were brought out by Dr. Ramsay when he was sent home as the representative of the Colony to the London International Fisheries Exhibition. They are kept at the Museum, and have never been used.
567. What is their condition? They are in perfect condition. We have had other trawls besides. We have a boatman in our employ who was an old trawler at Grimsby. He possesses a certificate as second mate as a trawler. He made a trawl of 35 feet beam in 1883. It is now in bad condition, because we have no twine suitable for repairing it. The only cost of that trawl was the actual cost of the material. One experiment was tried with the "Ajax" for a fortnight in 1883, and the result was comparatively successful. The cost of making this trawl was about £15 for material. It required a long warp, which cost about £20; that is still in existence at the Museum. The same man made a small trawl in 1884 that has been used three times. It was used once with the President in Iron Cove, but without success. It was also used in Botany Bay two months ago. The first time it was unsuccessful owing to the trawl getting foul of the screw of the steamer. It was used the next day, and a large haul was made, but not of good fish. They consisted of catfish, rays, and sharks. In order to use the trawl successfully we must of course be sure of the ground. If we could only find out where the beds of deep-sea oysters are I suppose we would have an immense market for them here.
568. *Mr. Stevenson.*] Before that can be done must there not be a survey of the coast? Yes; but I do not think we would require such a survey as was commenced before, and which had to be abandoned owing to the expense.
569. *Chairman.*] Has the Commission a steam-launch? Yes.
570. What is its condition? Quite good.
571. Is she used? Yes, in this harbour and in the Hawkesbury River and George's River. She can only be taken to those rivers in exceptionally fine weather. She is only a little launch about 36 feet long.
572. Are you aware that Lane Cove River is not closed? It is closed. There is a bridge across Lane Cove River, and it is closed from that.
573. Have not the men Gascoyne, who live on the Parramatta River, suffered great hardship owing to the provisions of the Fisheries Act? I do not think so.
574. Did not these men settle on the river years ago to carry out this industry, the father rearing his sons there, and they having, as it were, a vested interest in the river; and is it not a hardship now that for the last four years the river should be closed against them? No; because I think they ought to give way to the public interest and go farther afield. Other fishermen have had to do that, and I do not see why the river should be kept open for these men.
575. Is there not a great population on the northern side of the river who for years were dependent on these people for a supply of fresh fish, and who cannot now get a supply on account of the river being closed? I suppose it is possible for those people to get fish in the same way as the people in the western suburbs get fish.

Mr. L. G.
Thompson.
18 June, 1889.

576. Do you not think that those people are as worthy of as much consideration as the people of Sydney, and that some means should be afforded them to obtain fresh fish? Report has it that the Gascoynes are, and always have been, very successful in securing a supply of fresh fish, and that the inhabitants on the northern shore have not suffered at all, notwithstanding the river has been kept closed.

577. Is it not a fact that fishermen, if found in closed waters, are liable to have their nets seized, and that cases have occurred in which their nets have been seized? Yes.

578. After that, is it left to the discretion of the magistrate whether he shall punish the fisherman or not? If the seizure is proved he must punish them.

579. Not necessarily? I think you mean with regard to the forfeiture of the net. Under the 26th section there is no penalty, but the magistrate has power to forfeit the nets.

580. Is not that an unjust provision? If we had to contend against *bonâ fide* fishermen, who would take an interest in conserving the fisheries, I think such a provision would be bad; but we have to fight not against the *bonâ fide* fishermen, and there are many of them, but we have to fight against those men who are not *bonâ fide*, and who will take every opportunity of infringing the law. We have to make laws to provide against these, and the *bonâ fide* fishermen suffer through the misdoings of the others.

581. *Mr. Ritchie.*] What is the distinction between a *bonâ fide* fisherman and a non-*bonâ fide* fisherman? A *bonâ fide* fisherman is one who will act so as to help the laws where they are fair. I quite admit that there are many restrictions in the Act; but I think the fishermen should recognize that the Commission are endeavouring to protect the fisheries, and I think we have proved that, inasmuch as we have brought up the supply one-fifth in five years.

582. *Mr. Stevenson.*] Would it not be possible for fishermen in heavy weather to be driven into closed waters, and would it not be a hard case if their nets were then seized? I do not think that ever occurs.

583. Have you not seen rough weather in Hawkesbury River? Yes; but there is no closed waters until you get up to Bar Point.

584. There are a number of settlers on the Hawkesbury, more particularly about Wiseman's Ferry, who are mainly dependent for fresh food upon fish obtained out of the river? I have heard that stated, and I was asked for a report on the matter, and I recommended that the Hawkesbury should be opened from Webb's Creek upwards. The Commissioners however did not concur with my proposal, and it has not been done.

585. Was not a letter sent in complaining that those people could not even get fresh meat, and that they had no means of getting fresh food unless they were allowed to fish, and was not permission to do so refused by the Commissioners? Yes.

586. On what grounds? That it would require the appointing of an inspector.

587. The Commissioners were distinctly informed that the settlers were respectable men, that it would not pay them to catch fish and to hawk them about, and that they, therefore, would only catch sufficient fish to provide for the necessaries of life, that it has always been allowed up to a certain time, but that lately it had been stopped? The Hawkesbury has always been closed. There is nothing to prevent line-fishing.

588. A farmer cannot fish from morning to night with a line, and do you not consider that this prohibition is a great hardship? I recommended that the river should be opened there.

589. *Mr. Ritchie.*] Under the law could you not permit these people to supply themselves with the necessaries of life? The law does not allow it. There is no provision of the kind in the law. It is altogether defective.

590. *Mr. William Stephen.*] Do you think that the law should be amended so as to allow farmers to catch fish for their personal use? Yes; I think some discretion should be allowed in such a case. The present Act when it was passed was tentative, and I suppose if we passed an Act now it would be found unsuitable in some respects in a short time.

591. *Mr. Stevenson.*] I suppose you are fully aware that families in some of these isolated places would have to travel 10 or 20 miles to obtain fresh food? I did not know that but the information was conveyed to us. I think that it is a great hardship that they should not be allowed to get fish.

592. *Mr. William Stephen.*] Are there any divisional inspectors in the immediate vicinity of Sydney? No. Quinan was a divisional inspector for Sydney, but when he retired from the Service no one else was appointed in his stead.

593. Are the provisional inspectors expected to visit the waters in the vicinity of Sydney at any time? No.

594. If the important fishing-grounds in the immediate vicinity of Sydney can be entrusted to assistants or sub-inspectors, why should not the same be the case with regard to Bateman's Bay? I do not myself see the necessity for those divisional inspectors, and I never did. I would do away with them. In the Bill I have prepared I have done away with them.

595. *Mr. Stevenson.*] What becomes of the fish from Clarence River? It is sent to Sydney in ice-boxes. 15,000 baskets have been sent in one year.

596. *Mr. William Stephen.*] Are the sub-inspectors allowed travelling expenses? Yes; they are allowed their actual expenses; the Commissioners are very particular on that point.

597. *Mr. Stevenson.*] What travelling expenses do the inspectors get? They get paid their actual expenses, and nothing more.

598. *Mr. William Stephen.*] Are you not aware that Mr. Mulhall is considerably over 60 years of age? I do not know, but I think that he is over 60.

THURSDAY, 20 JUNE, 1889.

Present:—

MR. FRANK FARNELL,
MR. RITCHIE,
MR. STEVENSON,

MR. NOBBS,
MR. WILLIAM STEPHEN,
MR. HOWE.

FRANK FARNELL, ESQ., IN THE CHAIR.

Mr. Alexander Oliver called in, sworn, and examined:—

599. *Chairman.*] What position do you hold in the Public Service? I am Parliamentary Draftsman and one of the Fisheries Commissioners.

600. How long have you occupied the latter position? I was one of the first Commissioners appointed, in 1881. I afterwards resigned, and remained off the Board for two or three years; then, at Mr. Dalley's request, I again become a Commissioner, I think in 1886.

Mr.
A. Oliver.
20 June, 1889.
601.

Mr.
A. Oliver.
20 June, 1889.

601. Have you taken any particular interest in the fishing industry in this Colony? Yes; perhaps no man in the Colony has taken more interest.
602. Do you consider that the provisions of the Fisheries Act have applied justly, and have given satisfaction to the people who carry on their callings of fishermen and oystermen? That is a very large question. It would be impossible for any Act of a regulative character to give satisfaction to the persons who are affected by it. Fishermen could never be pleased with any Act which interferes with their liberty of action. I know a great many of the fishermen, and they have frequently told me that the Act impedes them in the exercise of their calling. Some say we ought to have closed fewer places, or ought to have closed them at other times. There is no consensus of opinion amongst the fishermen as to what parts of the fisheries should be closed. Those who live up the river say, "Do not close the waters where we make our living; close them down below. On the other hand those who live down below say, "Close up the tops of the rivers, because that is where the fish breed." Having had a great deal to do with the working of the Act, I can say that the Commissioners have been very largely guided by the recommendations made by the original Royal Commission of 1880, on the evidence of the fishermen themselves as to their closures, periods of closure, and places of closure. It will be seen by the report of that Commission that the persons who most strongly recommended periodical closures, sometimes to the extent of two years, were the fishermen themselves.
603. In your experience as a Commissioner, have you not had many cases of hardship brought under your notice? Certainly, not many. We have had a few petitions and memorials, and I think that on several occasions Members of Parliament have addressed us on the subject of hardship in the way of forfeiture of nets and the infliction of penalties for fishing in closed waters.
604. As a result of your consideration of those complaints, have the Commissioners made any recommendations to the Government in order to relieve those people? I think that on one or two occasions we have suggested that the penalty might be remitted. I think that during the period I was off the Board some recommendations may have been made to the Government. During the last period of my membership there have been some cases of the kind I refer to, but I do not remember at present that we made suggestions or recommendations to the Government, except in one or two instances, and I think those were cases in which we recommended that the penalty or forfeiture of the nets might be remitted. The magistrate has hardly any discretion. If it is a case of an illegal net or a second offence he must forfeit. Then the case is entirely out of our hands; because, being a forfeiture to Her Majesty, the Government alone can remit the forfeiture. There have been two or three hard cases. I think one was at the Hunter and the other at the Parramatta River, and the law had to take its course. Very frequently, when cases seemed to be hard, we have refused to allow our officers to prosecute. In fact our rule is never to prosecute unless it is really a bad case.
605. I suppose you are a pretty regular attendant at the meetings of the Commission? Not, perhaps, as regular as I should be. Unfortunately, the hour of meeting clashes with another engagement, and with my public duties, but I think I am fairly regular.
606. What time is generally occupied by your meetings? We have frequently sat from 3 to half-past 5, but on an average we get through our business in an hour or an hour and a quarter.
607. Do you remember if at any time the Commission made any recommendation to the Government to alter the present Fisheries Act? Yes; they submitted an amended Bill in 1884.
608. Then it is entirely owing to the negligence of the Government that that measure was not brought forward? I would not say that. I think the Bill was drawn up when Sir Alexander Stuart was in office in 1884. I am quite sure that in the report for 1883-84, when I was not a Commissioner, it was stated that a draft Bill had been submitted. I do not think the Commissioners have ever made any suggestion in the direction of remitting penalties or of altering the system we have been going upon, because we have always been of opinion that it is our duty, in the interests of the fishermen themselves and of the product of fish, to have a periodical closure of the main fisheries, provided it is at the right time of the year. That has been our idea, so that the breeding period should not be interfered with, and so that no one place should be absolutely skinned of its fish, as used to be done in the old times. At one time Lake Tuggerah, a very large fishery, was absolutely skinned of fish. We closed it for two years, and the result was perfectly astonishing. I do not say that we have always been wise in the periods for closing the rivers, as it is a tentative business with us, and perhaps we have not hit the right time for closure, but I am sure that the effect of periodical closure has been on the whole very good.
609. Have you any reason to doubt the advisability of continuing the existence of the present Commission? If any responsible Minister had time to go into the matters that the Commission deals with now, I do not myself see the necessity for a Commission. Of course a Commission is always a bad body for doing anything. It is only useful as an advising body. It only meets once a week, and does not act as quickly as a Minister could act. On the other hand a body selected on account of the familiarity of each of its members with the subject, ought to be of some use, and ought to help the Minister very considerably. If there were any Ministerial Department that had very little to do, and could take over the Fisheries, and if the Minister himself were an enthusiast on the subject, I do not think that the Commission would be a necessity.
610. *Mr. Ritchie.*] Do you think that the power of administration by a Board is too cumbrous in comparison with administration by a Minister? Most certainly; that is always the case.
611. *Chairman.*] Have you at any time had complaints brought under your notice as to the unjust operation of the Fisheries Act, particularly with regard to nets? There have been complaints of length of net, and as to the mesh. There are those who think that the nets are not long enough. They think that 150 fathoms is not long enough to inclose sufficient fish, especially in shallow waters where the men have to take their nets for some distance before they get on the ground where the fish are lying. Then there is the question as to whether the mesh is not too large—that is to say, the men do not get the fish they expect to catch. That is perfectly true in one sense. A man perhaps has an ordinary net with a mesh of 2½ inch in the bunt, and 3 inches in the wings. He shoots his net, and he finds that an immense lot of garfish and whiting escape, he naturally blames the mesh of the net. The object of the Act was to have a mesh of such a size that immature fish could escape. Unfortunately it is very difficult to meet the necessities of the case with regard to the mesh.
612. Would you recommend the extension of the length of the net? Yes; in the case of the lakes that are so shallow near the banks.
613. The officers charged with carrying out the provisions of the Act have power to seize nets of an illegal mesh. Have many cases come under your notice? Yes; a good many. 614.

Mr.
A. Oliver.
20 June, 1889.

614. Is it not a fact that the very same nets have, in some instances, been sold at the Commissioners' will, while in other cases they have been allowed to rot? If so, that has been done without the knowledge of the Commissioners. We have done our best to prevent the nets from being sold to be used again by the same persons. We have had them cut up and altered in every way, so as to try and make them legal nets. We have done whatever we could to prevent illegal nets going back into use; but of course we cannot follow the nets. It may be that we ought to have destroyed the nets; I am not sure that we should not. We thought it well to get any money that we could from their sale, especially when we could sell them to orchardists.

615. Is it not a fact that new nets, after being passed as legal, shrink a good deal, and, as a consequence, the mesh becomes smaller? It is only the tanning process that does that.

616. Even after the first tanning is it not likely that the nets will shrink? Yes; because they tan the nets five or six times. I think that the shrinkage occurs on every occasion that the nets are tanned.

617. Are you aware whether proceedings were ever taken against men who used nets under the circumstances stated in my preceding question? Yes; I think there were two or three cases in which the defence offered was that the nets shrank after tanning. We tried to do the best we could in this way. Where the shrinkage has been very small, and has probably been owing to the tanning, we have done our best not to take proceedings.

618. Do you believe that if a net is once passed as of the legal mesh it should always be considered legal? The object is to prevent the destruction of little fish. We could not attain that object, if, by constant tanning of the net, the mesh were reduced from $1\frac{1}{4}$ inch to the size of a prawn-net; that would wreck destruction on the little fish. Regarded from the point of view of the fisherman it is unquestionably a hardship that a net which was once legal should become illegal by the necessary process of tanning.

619. Do you not think it would be better to have a provision to punish people severely for bringing fish under a certain size to market, instead of being so particular as to the mesh of the nets? Yes, we have a provision of that kind, but it is very difficult to carry it out; we have a scale fixed as to the weight of marketable fish, but it is very difficult in practice to carry it out.

620. You have no control over the inspectors of fisheries, except so far as seeing that they carry out the law? If we found any inspectors behaving as we considered harshly and wrongly we would first of all give them warning. If they persisted we would recommend their dismissal.

621. Cannot the inspectors act without reference to the Commission? Yes; but they could not prosecute in any case without sending the case to the Commissioners.

622. Have any of the inspectors been reported to you at any time for dereliction of duty? Yes; there have been some complaints made as to some of them.

623. Are they all practical men as regards the fishing industry? I do not think we have any inspectors now who do not know something about the industry; but they know their work in different degrees. Some of them are very familiar with their work, because they are old fishermen. On the other hand, some have not been drawn from that class, and, consequently, they are not so familiar with their work as others. I cannot say that all are perfectly familiar with fish and their habits; but I think that the majority are.

624. Do you think that all the officers and inspectors now engaged in the Department are required? We have tried, since the very great decline in our receipts from oyster leases, and owing to the abolition of the royalty on oysters, to economise the expenditure. There has been a very great decline in our revenue, and in fact we have been working on deficits for two or three years. We have done our best to retrench without leaving any of the fisheries absolutely helpless. I think that we have reduced the expenditure about £500 a year.

625. *Mr. Ritchie.*] How often does the Committee meet? Our meeting day is Wednesday—once a week.

626. Do you meet regularly once a week? Meetings have occasionally lapsed for want of a quorum.

627. Does that occur frequently? I will not say frequently, but I think that it has occurred somewhat too often. That is inevitable, seeing that the members of the Commission have plenty to do. I do not think that the business suffers in consequence of non-attendance, because any business of an urgent character is transacted by the Secretary going to a quorum of Commissioners. Frequently he goes to Dr. Cox and myself and tells us what the business is, and when it is urgent action is taken.

628. You have a Secretary who carries out the orders of the Commission? Yes.

629. Are you aware what is the size of the mesh used in Victoria? No, I am not at all acquainted with the Fisheries Act of Victoria.

630. Would it be possible for fishermen to save the smaller fish if they used a smaller mesh? Yes, in many cases. It would give them a lot of trouble, and it would be necessary to have an inspector present to see that the law was complied with.

631. Do you think it would not be desirable to reduce the size of the mesh in any way? Yes. I think the mesh is as small as you could make it, without endangering the succession of fish.

632. With regard to the closing of the rivers, do you think that they should be closed entirely during the breeding time, or should any portion of them be closed permanently? We have found it to be far the best plan not to have the closure during the close months that the Act provides for, but rather to have a closure of the upper portions of the inlets for periods of a year or two years. We cannot close them for longer than two years, and they should be kept periodically closed. That has been our practice, and as a matter of fact the fish have increased and not diminished during the last few years. I have no hesitation in saying that because it is probable by the statistics of the quantity of fish sold, and therefore I think our practice has a good deal to recommend it. In some places no legislation can bring the fish back to their original condition. For instance, in the Parramatta River the traffic and the pollution of the waters are so great that the fish will never be able to get back to their old form.

633. Still you think there is a probability of improving it? I think that the closure that we have adopted on the Parramatta River has certainly increased the fish very largely. I have been a good deal up and down the Parramatta River, and I know that for a long time that it was a rarity to see a school of decent fish. Since the river has been closed for a year or two I have seen on the flats at Five Dock frequently a good school of young mullet. It is impossible to preserve any fisheries in the immediate neighbourhood of a large metropolis.

634. Have you had any experience of deep-sea fishing? Yes, a great deal.

635. Is that practised here at all? Not as much as it should be. The schnapper men go out fishing with lines, but the misfortune is that the fish, during the late droughts, have been driven away, and their place has been taken up by those abominable leather-jackets to an immense extent, for miles along the coast, to the northward and southward of Sydney. The fishermen have now to go a long way to catch schnapper.

Mr.
A. Oliver.
20 June, 1889.

636. Are schnapper easily caught by means of trawling? Not easily. I have been on three or four trawling expeditions and we did not get one schnapper. The schnapper is very active and when he sees a trawl approaching he gets out of the way. Another difficulty is, that you have to trawl for schnapper in the neighbourhood of rocks, so that you run a risk of destroying the trawling apparatus. We have not yet discovered any banks on which we could trawl. I have been out on six or eight expeditions looking for such banks, but never found any.

637. Do you think it is possible that we could establish a good deep-sea fishery here? I am quite sure of it, but it will require some capital and some patience. It will require a complete reform in our system of selling fish. The fisherman now does not get half as much as he should get for his catches of fish. I consider that the fishermen are very badly treated.

638. Do you think that there is anything required in a new Act to encourage deep-sea fishing? It is difficult to see how the Government, or an Act of Parliament, can encourage any industry.

639. The Act at present does not militate against deep-sea fishing? No; the Act has nothing to do with deep-water fishing.

640. The Commission has no control over it? If the Commission had any money to work upon they could do a great deal in this matter which they cannot do now.

641. Are there no funds placed at the disposal of the Commission? No, except for the mere working of the office. If we wanted to make a little experiment with regard to trawling, or with a view to discovering whether fish caught at the Solitaries could be brought down here alive, or in ice, we could not get any money to carry out the experiment. For example, we could not do what the Victorian Government did lately, who despatched a large steamer with a trawl for the purpose of fishing in Bass's Straits. It would not be possible for us to do anything of that kind under the present circumstances.

642. *Chairman.*] Are you aware that it is a source of complaint that the fish-market at Woolloomooloo is worked unsatisfactorily? Yes; it is the subject of very great dissatisfaction all round. I think that it only gives satisfaction to the middle-men.

643. *Mr. Stevenson.*] Whom do you call the middle-men? Perhaps there may be two of them between the catcher and the consumer. It may be the dealer and also the barrow-man or van-man. No doubt the consumer too has much reason to be dissatisfied with the condition in which he gets the fish. The barrow-man takes the fish round after having perhaps washed them in Woolloomooloo Bay, which is not a very clean place, or in the place set aside for the purpose in the fish-market, which is not very much cleaner. He then covers them with a wet bag, instead of keeping them dry and in a cool place. They are kept exposed to the sun, and if there is any one way of making fish rotten, that is the way. The consumption of fish would be very much greater if it was delivered to the consumer in a proper manner.

644. *Chairman.*] Is Mr. Mulhall your inspector at Woolloomooloo? He attends the fish-market. Mr. Seymour, the auctioneer, is also an officer of the Commission. Mulhall attends the market regularly every morning.

645. Do you remember a man named Quinan who was at one time in the Department? Yes.

646. What was he dismissed for? I do not know of my own knowledge. During the time Mr. Quinan was in difficulties I was not a member of the Commission. The Commission took a particular view, and made various representations to Sir Alexander Stuart. At a later stage I was a member of the Commission, and great complaints were made about Quinan in connection with certain oyster leases, respecting which it was considered he had not behaved as an officer of the Board ought to have behaved.

647. Do you think it is possible for inspectors to be in collusion with fish and oyster sellers? It is quite possible.

648. Are you aware that fishermen complain of the rivers and fishing-grounds being closed for periods of over twelve months? Yes; the Act allows a period of two years, and we have sometimes gone to the extreme limit. No doubt the fishermen have complained. The plan we have adopted with most of the fisheries is not to close the whole of them but only certain portions, and to close those portions for two years. For instance, there is Lake Illawarra, which is a very productive fishery. I think there are four creeks flowing into that lake, and there is an entrance from the sea. We closed those tributaries, and for a considerable distance on either side of them going out half a mile into the lake. We consider them to be the nurseries of the fish. All the rest of the lake is open. We have pursued the same course with regard to Lake Macquarie and Lake Tuggerah. We have not closed the whole but only portions of them. In the case of Curl Curl, Deewhy, Narrabeen, and Manly, we have closed the whole of them permanently, because we think they are very great nurseries to Port Jackson.

649. Do you know how long the Parramatta River has been closed? I think it has always been in a state of closure more or less. Sometimes for one year and sometimes for two years. That is to say, the portions which we do close.

650. Can you give any reason why the fish in that river have decreased in number? With all respect we hold that they have increased rather than decreased.

651. Do you think that it would be wise to close the rivers from oyster-getters for a period of about three years? The fact is, that nearly all the oyster-beds are under lease, and we could not now prevent the operations of the lessees. I do not know any particular oyster-fishery which would be benefited by closure. There is a great evil which I do not think we could ever get over by legislation; that is the theft of oysters. It is quite remarkable what a great deal of theft goes on in the rivers under lease. We have constant complaints from lessees, who expect us to look after their oyster-beds, but we cannot do anything of that kind. The lessees, who complain, say that we have given leases of 100 yards here and there to men who really are not lessees but thieves. I know of my own knowledge that that is a fact. One man put down 800 bags of New Zealand oysters, and in four or five days there was not one of them left. The man knew who did it, and he expected the Commissioners to protect his leasehold area, but we could not do that. The thieving of oysters is a very serious thing in this country.

652. Do you not think it would be better to lease either shore of a river, or an arm, instead of giving those leases over small portions? Yes, I am sure of it. It would be one of the best amendments you could make in the Act. That would prevent the invasion by those men who are only thieves.

653. You know that the Parramatta River is closed as far down as the vehicular bridge at Gladesville? Yes.

654. Do you think any harm would result from opening up the Parramatta River as far as the railway bridge at Ryde? I do not think it would do any harm, but the Homebush Bay Flats are the great breeding place in the Parramatta River.

Mr.
A. Oliver.
20 June, 1889.

655. Have you had under your notice several times as a Commissioner the case of the Gascoynes, who live on the Parramatta River? Yes.

656. Do you not think that a hardship has been inflicted upon them by the closing of the Parramatta River? Yes. There is no doubt it is a hardship to any man for the law to operate in such a way as to practically take away his livelihood. These men are not fishermen who go away much from their particular beat. They are river fishermen, and nothing else. On the other hand it is fair to say that the particular interest of one or two residents ought not to militate against any public advantage or general advantage to the fishermen as a class by the closing of the upper part of a river. Fishermen in other countries are generally nomadic. They are as erratic as sailors in their way, and they go wherever the fish are. But here a great many of them have been in the habit of sticking to their own beats, and they do not go elsewhere.

657. Do you not think that the interests of the people on the northern side of the Parramatta should be considered, as well as the interests of the people on the southern side, with regard to obtaining a supply of fresh fish in the morning, and for which they depended on the Gascoynes? Certainly, if they are dependent for their fish supply upon the resident fishermen, that ought to have been considered.

658. Are you aware of the fact that the people up there are now very seldom supplied with fresh fish? I know there is a very intermittent supply, and I suffer myself from it on the North Shore. It is very difficult to get fish.

659. In 1887 a Bill was passed to protect the fish in inland waters;—have you directed your attention to the application of that measure? I drew the Bill for Mr. Tonkin, and I was very much interested in the matter. I have had my attention drawn to the question of the fish in inland waters. It is a very troublesome question indeed. It is troublesome, mainly because we cannot carry out any Act of Parliament without money, and we have not money to get as many inspectors as are required. The Act therefore becomes a dead letter, inasmuch as we cannot depend upon the police. We did our best years ago to see how far we could utilize the police, but we found that they had so many duties cast upon them that the authorities objected to the addition of another duty. Again, the police were not always to be found at the places where our stations would be, on the coast especially, and we could not get policemen on some of the rivers. We therefore had to give up the notion of working the Act in the country by the aid of the police.

660. *Mr. Ritchie.*] I suppose you find that inspectors ought to have some special knowledge of fish? Yes. Some of the police have that knowledge if they could be spared.

661. Could you suggest anything for the improvement of the inland fisheries? I should like this Committee, if possible, to arm us with some powers for the purpose of acclimatizing English and American fish. I know that our rivers are perfectly well fitted for trout, grayling, and other fish. That is one of our duties, but we have been unable to carry it out for want of funds. I wish we had the means of stocking the rivers with better fish than they hold now. Taking the fish as they are I do not see anything which can be done to protect them unless Parliament chooses to spend a little more money upon inspection.

662. What waters do you think are fitted for imported fish? The head waters of nearly all the streams of this Colony are fitted for the acclimatization of fish. A little while ago a gentleman, named Mr. G. A. Murray, got some small trout fry from Ballarat (I think), and he placed them in some big tanks at Mittagong. Even in that unsuitable place they have thriven wonderfully, and when he showed me one of his trout I could hardly believe that it had only been seventeen months there. What has been done in this unsuitable place could be done much better in the waters forming the heads of our rivers.

663. Would not the Murray cod, which is plentiful in many of the rivers, prevent the acclimatization of trout? I am afraid the Murray cod is a very bad fish for others, as he will eat anything, but there are no Murray cod in the eastern rivers.*

664. *Mr. William Stephen.*] Do you think that the Commissioners have as much power at present as they ought to have? They are a recommending body chiefly, and their administrative powers are very small. If they are worth keeping at all they ought to have more power.

665. Have the Commissioners any discretion as to fixing the size of the meshes of the nets? Yes; by a recent Act, and they have exercised that power by reducing the garfish net in the bunt from 1½ to 1¼ inches; that was done at the request of the fishermen.

666. In the event of a net shrinking below the legal size of the mesh, have the Commissioners no discretion as to the punishment? No; the law comes in there, and all that the Commissioners can do is to recommend the Executive to remit the penalty and to return the man his nets. Of course the magistrate has some discretion in the matter, because if evidence is produced to him that the net was originally legal, but had become illegal from shrinkage, he has power to dismiss the case.

667. Are you aware that the fishermen have been making complaints lately as to harshness in working the Act? Yes; sometime ago they made complaints to Sir Henry Parkes, and then I think Sir Henry sent on a memorial to the Commissioners, who went into the matter thoroughly. I think we had one or two interviews with Mr. McFadden, the President of the Fishermen's Union. The complaints were mainly, I think, about the closure of waters. I think they complained that we had not closed the waters where they should have been closed; that our bounds of closure were as a rule drawn too high up the stream; that is to say, they wanted more water to fish in.

668. Has it come to your knowledge that in any closed waters, Port Hacking for instance, the fish have decreased in number? We did not close Port Hacking. I think there is no doubt that the fish have decreased there. A few years ago I could get as many fish there as I wanted, but eighteen months ago I tried many places with a line, and I did not see a fish.

669. Can you give any reason for the decrease of fish there? No. I am inclined to think that it must be fished on the sly very largely. Of course a dam has been thrown across the upper part of this inlet, and it is probable that may have stopped the fish from going up to their usual haunts. Fish are very fond of going to the fresh water, and owing to this obstacle they may possibly have left the place.

670. Do you think it would be any advantage to the fishermen if they were permitted to fish as far up as the natural Spit, 2 or 3 miles from the mouth? I do not know that that would be any advantage to the fishermen. I have heard some people say that now that no netting is allowed to take place sharks and other rubbish go up there and destroy the fish.

671.

* NOTE (on revision):—Perhaps this statement is too large. Cod are said to be plentiful in the upper waters of the Clarence.

Mr.
A. Oliver.
20 June, 1889.

671. Do you think it would be any detriment to the breeding of fish in Port Hacking if the fishermen were allowed to fish as far up as the Spit? I do not think so. I never knew the reason why Port Hacking was closed by Act of Parliament. No one sees whether or not the Act of Parliament is carried out. I think it would be far better to permanently close Port Hacking from the Spit upwards.
672. Do you think that it would be desirable to give the Fisheries Commissioners the same power over Port Hacking as they have exercised over other fishing-grounds? Yes.
673. Do you think that all the Commissioners understand the practical working of the fisheries? I think they all understand that thoroughly well.
674. Do you think that they are pretty well acquainted with the hardships which fishermen have to undergo in plying their vocation? I hope they are humane enough to know that.
675. Do you think it would be desirable to have the fishermen directly represented on the Commission by a practical fisherman who has to earn his living by fishing? I hardly see how that can be done until you pay the Commissioners—you would have to take this man away from his vocation, and you could hardly do that without paying him. A second objection would be that if he felt it was his business to look after the interests of his class he would be outvoted, unless he was an extremely reasonable man. Suppose he said, "I object to the closing of all waters from fishing," he would be out-voted on the Commission, as it is now constituted, because we are of opinion that reasonable closing is the best thing that can be done for the fisheries. I do not see what good he would be under such circumstances. On the other hand, if he were a perfectly reasonable man, and fell in to a certain extent with the policy of the Act, and the way in which it is worked by the Commissioners, I can see no objection to his being on the Board, if he could afford the time.
676. Do you think it would be advisable if the fishermen could find such a man? There could be no harm at all in it.
677. Do you think that your inspectors ought to be really practical fishermen? Yes.
678. Do you think it would be desirable for the Commissioners to have absolute power of appointing their own inspectors, and of dismissing them if proved inefficient? We have not had much trouble as yet on that score. Our recommendations have generally been concurred in by the responsible head of the department, so that I cannot see that much mischief has yet been done. Of course it would strengthen our hands immensely if we had the power of appointment and dismissal, but I do not think that that would be quite consistent with our present system of government, to allow any Board to have so large a power. Inspectors are paid from the Consolidated Revenue, and I suppose it is quite proper that Ministerial control should be paramount.
679. Do you think that any of the present closed waters might be opened with advantage to the fishermen without lessening the supply of fish? We do not close any of them outside the Home Division, that is, between Jervis Bay and Port Stephens. With reference to the Hawkesbury, I would not object very much to making the line of closure above Bar Point. It is at present at Bar Point, and I would not object to taking it a bit farther up, provided that it did not go farther than Mangrove. That would give some good fishing-grounds. With regard to the Parramatta River, the product of fish is comparatively so small that I do not know that it is worth the trouble and expense of protecting. I think it doomed as a fishery owing to the neighbourhood of Sydney. I believe that the fishermen themselves would ask to have the river closed in two years' time if it were to be opened. George's River is closed from the railway bridge upwards.
680. Do you not think it would be advisable to open George's River up to Salt-pan? There is nothing above that any good. The water is so polluted that I do not think the fish go up any higher. If we did what you propose it would be on the understanding that if in a year or two the result was a large decrease in the supply of fish, we should go back to the old plan.
681. Would it not meet all the requirements of the fish supply to open all the main rivers right up, and to close all the estuaries? That would entirely reverse our present system, because we believe in closing the nurseries, and leaving the lower grounds open, in order that the fishermen may ply their business. As a rule the beaches are down at the mouth of the estuaries.
682. I did not mean the mouths of the estuaries but the branches, a certain distance from the mouths. Are you aware that at some seasons of the year, when fishing is permitted in George's River, the river is so foul with quantities of blubber floating about that the fishermen cannot cast their nets, whereas, when the river is closed, it is free from blubber? That is true, and it is a great trouble. The only way to remedy that would be to revert to the old close months—that is to say, to pick out of the year three or four months during which fishing might be allowed. Fishing might be prohibited during the rest of the time, that is, when the blubber is floating about.
683. Can you define the duties of the inspectors? The inspector at Botany performs duties similar to those of the other country inspectors. He has to see that every man who fishes has a licensed boat and is licensed himself. He has to prevent fishing in closed waters with any sort of net whatever. He has also to prevent the use of dynamite or anything of that kind, and he has also to overhaul the nets to see that they are not of an illegal size or mesh. If there is an oyster fishery in the neighbourhood he has to look after the leases. If an inspector does his work conscientiously he has plenty to do, especially where he has a large area of water to protect. Some of the inspectors go out at night to watch people who are suspected of poaching.
684. Do you believe that the increased quantity of fish brought to market is due to the closing of fishing-grounds? Most certainly I do. The increase of fish during the last few years has been the result of periodical closing.
685. Do you think that it is solely due to that cause, and not to the increased number of fishermen? No; because when the fishermen had their own way they did not produce so many fish. They skinned out several of the best fishing-grounds; there were twenty-six or twenty-seven boats on Tuggerah Lake and Macquarie Lake, hauling all day and all night long. The fish were so much harassed that they went out to sea and did not come back again. The Little River, a few miles long, which joins Lake Macquarie and the sea, and which is always closed, is now and has for long been actually teeming with fish.
686. Are you acquainted with the branch of Botany Bay, which is called Quibray Bay or Weney's? Yes.
687. Do you think that it would be desirable to close those places during any portion of the year? We have left them open. I believe they are great breeding places. If we closed those places we would require to have an inspector there constantly.
688. Do you think the present Act could be amended with advantage? Yes; in several directions. The Chairman mentioned one point particularly—that is, with regard to prevent the leasing of small oyster areas. That is one of the things we most want.
- 689.

689. Can you mention any particular points where amendments should be made? I think the length of the net should depend a great deal upon the place where it is used. You should not have a fixed length of net, or character of net, for every place in the Colony. In the shallow places I would allow the nets to be of the total length of 600 yards. I would retain the 3-inch mesh on the wings, so as to let the unmarketable fish have a chance of escape.

690. *Mr. Howe.*] I understand that the fishermen want to use a garfish-net 150 yards long;—do you see any objection to that? Certainly not, if you could provide that they would only catch garfish; that is one of our difficulties, and I think that it is insuperable. With a garfish-net of 150 yards the destruction of small fish would be something dreadful.

691. If the fishermen is only allowed to bring fish of a certain weight to market, is it of any importance what the size of the mesh may be? Yes. The fish are nearly all killed when they are caught in a net and dragged along the sand—that is the destruction we want to prevent if possible. By limiting marketable fish to a certain size we do not get rid of the destruction, because the fishermen simply leave the small fish on the beach.

692. Do the freshes in the rivers sweep the fish down to the sea, and so cause their loss for food? I do not think so. On the contrary, the freshes send some of our best fish to sea, notably the mullet, and they are caught as they come up north. Then the freshes bring down a lot of fish, which are caught in the mouths of the estuaries. For example, the fish which came down George's River in the last fresh will be caught at Botany, or in its immediate vicinity, and in Port Jackson. They are not swept away into the ocean.

693. *Mr. William Stephen.*] Do you think that the freshes destroy fish that inhabit the salt water, because I have been told that during the continuance of the last heavy rainstorm the water for half-a-mile outside the bay was fit to drink, owing to the large quantity of fresh water which came down from the rivers? I do not think that has any effect on the fish, because the fresh water being lighter than the salt it always floats on the top. The water would be quite salt a few feet below the surface. I think floods are the best things that could happen to the fish. The protracted droughts lately have been injurious to the fish as well as to the oysters. If this Committee could induce the Government to investigate the worm disease in oysters it would be a great advantage. That disease reduced the product of our oysters during last year from 25,000 bags to 10,000 bags. It has destroyed nearly all the oysters on the Hunter, a great many in Port Stephens, a great many in the best part of the Hawkesbury, and it has got as far down as the Clyde. It has become as great a pest amongst the oysters as the rabbit is in the western parts of the Colony. The floods have killed those worms. The destruction the disease has worked among lessees is more than anybody would believe who has not given attention to the subject. I know of a poor man who spent £200 to £300 in making a false bottom in Mooney Creek. He bought New Zealand and other oysters, but he lost every one of them owing to the ravages of this worm disease. We cannot pursue the investigation ourselves, because it really requires an expert to do so. If the result of such an investigation was to furnish us with some reliable information as to the laying of oysters it would be a great benefit.

694. *Mr. Stevenson.*] Do I understand that the Commissioners perform their duties without salary? Yes, the Commissioners are unpaid.

695. Do you consider that that is a satisfactory system? When the question was first considered by the first Commissioners, I was one of those who voted against payment, and the Bill was consequently drawn so that the Commissioners should not get paid. I am now older, and I have come to the conclusion that almost all public work to be well done should be paid for. To begin with, payment will always secure a quorum; then I think payment places a sort of obligation on a man's conscience, and he thinks that what he is paid for he should do conscientiously; I am therefore inclined to alter the opinion I entertained on the subject eight years ago.

696. Is it not a fact that the Commissioners often fail to hold a meeting? I am sorry to say that meetings have lapsed too often.

697. Has not that given rise to complaints by those who are fishermen and others who have had grievances? No; because when there is anything urgent, Mr. Thompson comes round and tells us.

698. What is the staff under the Commission at present? The secretary and chief inspector, and I think there are three clerks and a draughtsman.

699. Have you an accountant? I have included him amongst the clerks.

700. Did not the staff originally consist of a secretary and accountant, five clerks, and two draughtsmen? Yes.

701. Was not that a very large staff? No; it was not. At that time we could not have done with fewer. Just then we were overloaded with applications for oyster leases. They all had to be recorded, to be sent on to the draughtsmen to plot, and then had to be sent on to the inspectors for a report.

702. Has it ever come to your knowledge that owing to the delay in granting oyster leases, applicants have refused to take them up? Yes, there was great delay, but I do not know how that could have been avoided. We made it a rule never to grant a lease if it interfered with the fishermen's hauling grounds. Sometimes the inspector would have to go a long way to find out where the area was, and to see if it would interfere with the fishermen's hauls. There was a great deal of delay in consequence of that.

703. How many inspectors have you? The chief inspector and an inspector for the northern division and one for the southern. We may have, I think, about seven sub-inspectors.

704. What duties does the chief inspector perform which are different from the duties of the other inspectors? He has to travel to report upon any particular fishery or particular trouble which may arise. There are frequent conflicts between lessees as to their areas. The chief inspector is supposed from his position, knowing all the work in the office, to be better able to report to the Commission than some of the local inspectors, who are sometimes not very literate.

705. Who is the chief inspector? Mr. Thompson is secretary and chief inspector.

706. Have you divisional inspectors, one for the south and one for the north? Yes; Mr. Temperley in the northern division, and Mr. Benson in the southern.

707. What are the salaries of the divisional inspectors? I think it is £240.

708. Are they provided with any house-rent or accommodation? No; it is sometimes very hard upon them that they are not.

709. Are they provided with boatmen? Sometimes they are, if they have a very large area of water to look after. Of course their expenses to and fro are paid by the Commissioners.

710. You do not know of your own knowledge that the divisional inspectors are regularly provided with boatmen, who receive a salary of £108 a year? I know that most of them are.

711. How often has the inspector who is located at Bateman's Bay to report? He has to report regularly to the Commission on the oyster and various fisheries.

Mr.
A. Oliver.
20 June, 1889.

- Mr. A. Oliver.
20 June, 1889.
712. Is Mr. Benson connected in any way with any gentleman sitting on the Commission? I do not know that. I have only heard that he is a distant connection of the President.
713. Do you choose your own inspectors or do you take them on recommendation from people outside? It is a very long time since we have made any appointment. The first men were chosen from the personal knowledge of the old members of the Commission—Mr. Macleay, Mr. Dalley, Mr. Dangar, and myself.
714. I presume they were taken simply on account of their knowledge of the fisheries? Yes. I think Mr. Otway at Port Stephens was appointed subsequently on recommendation.
715. When the inspectors seize nets what becomes of them? The nets are forfeited in the ordinary course to the Crown, and sold after sixty days.
716. Have you ever heard of nets sold by order of the Commission having been bought by the fishermen from whom they were seized who used them again and were again summoned? No, I have not heard of that. I should not be likely to be told of such a thing. We do our best to prevent such a thing from happening.
717. How do you prevent it? It is very difficult. A net of illegal mesh may not be illegal if it is made up in another way. If it is $1\frac{1}{2}$ -inch stuff it would not do for a general net, but it would do for a garfish net. If possible we sell the nets to orchardists.
718. Do you remember Mr. Quinan seizing an illegal net which he found was worked while in the possession of a gentleman who was sitting on the Commission? I did hear that; I think it was Mr. Hill's net. I do not think Mr. Quinan was justified in making that seizure at all.
719. What is your reason for thinking so? I do not think it was an illegal net, or used illegally.
720. What action did the Commissioners take in reference to that matter? I do not know; the occurrence took place during the time I was not on the Commission.
721. How many years ago is it since Mr. Quinan was dismissed? Recently.
722. Then he was not dismissed about the time of the seizure? No; it had nothing to do with that. His final dismissal took a long time. I think it occurred about eighteen months ago.
723. Was he dismissed since you returned to the Commission? Yes; the ground for his dismissal was an improper transaction with oyster lessees down south.
724. What sized oysters do you allow to be sold? They must go through a ring, I think, of $1\frac{3}{4}$ -inch diameter.
725. Do you know of your own knowledge the Commission reduced the legal size of oysters, and that consequently a lot of oysters come on the market which have not yet arrived at maturity? I think unmarketable oysters do sometimes come to market.
726. Can you tell us what number of oysters were brought into Sydney in comparison with the number brought here from our oyster-beds? During last year our own product of oysters was 10,000 bags, and I think over 20,000 bags were brought from different parts.
727. Where did they come from? Queensland and New Zealand.
728. Do you ever change your inspectors from one river to another? We have not done that as much as we should have, but latterly we have started a plan of shifting them about so that they may know something more than their own beats. There is a very great difficulty in the way of this change. These men have homes of their own, and they represent that it would be a very great hardship to them to be removed. It means that in fairness we should have to supply them with residences.
729. Do you not think it would be better for the inspectors to be kept in their own districts, seeing that they would have a better knowledge of those fisheries? That is perfectly true; but, unfortunately, they also contract as we think friendships and partialities, and in some cases we have reason to believe that they have gone a little farther, and trafficked in oyster leases. We therefore came to the conclusion that it would be wise to have a system of changing, and we have changed some of them.
730. What staff do you keep in connection with Mulhull? He has an assistant inspector. He has to attend the market regularly; he has to look after Parramatta River, Lane Cove River, Middle Harbour, and all other places which have been closed. He has to look after the Port Jackson fishermen mainly, and very frequently he goes to Botany and other places.
731. What staff has he under him? Two boatmen.
732. Do you not think that there is room for improvement with reference to the sale of fish at Woolloomooloo? Yes.
733. Do you not think it would be advisable, instead of having only one sale of fish by auction early in the morning, to have a sale of fish whenever it arrives in the market? Yes.
734. Have you any knowledge as to when the fish arrive here from Lake Macquarie? Yes; it always arrives too late for sale.
735. *Mr. Howe.*] Would you favour the establishment of a market in the southern part of the city? Certainly.
736. *Mr. Stevenson.*] Do you consider that the present market is suitable for a fish-market? No; it might do for sea-borne fish, but it is not perfect even for that purpose. When you come to consider the question of railway-borne fish, it is absolutely unsuitable.
737. Do you know the fish-market at Melbourne? Yes.
738. Is it far from the railway station? No; it is just across the road.
739. Do you think that another fish-market should be established, where fish which arrived by rail might be sold? A large quantity of fish is conveyed by rail, and it has always appeared to me that there should be as close as possible to the Redfern station a cooling chamber, and the fish should be sold as early as possible next morning. I do not think that such a cooling chamber would be very expensive. Fish from Port Stephens and the Hunter suffer from two or three handlings.
740. Do you know what becomes of the fish sent by steamer from the Clarence, the Hunter, and the Hawkesbury? Draymen meet the steamers at the wharves, and carry the fish across to Woolloomooloo, where it is sold at the fish-market. During the passage across the stock of fish is very often reduced 25 per cent.
741. Are there cooling-rooms at the fish-market? Yes.
742. You think there is a necessity for a depôt for the sale of fish at the north-west side of the city, say, at Darling Harbour? I am rather disposed to say that there should be a depôt near the railway. I think as time goes on we shall have nearly all our fish brought by rail.

TUESDAY, 25 JUNE, 1889.

Present:—

MR. FRANK FARNELL, | MR. WILLIAM STEPHEN,
MR. O'SULLIVAN.

FRANK FARNELL, ESQ., IN THE CHAIR.

Thomas Mulhall called in, sworn, and examined:—

Mr. T.
Mulhall.

25 June, 1889.

743. *Chairman.*] What position do you hold under the Fisheries Commission? Assistant Inspector.
744. For how long? Since 1881.
745. Were you acting in any other capacity previous to that appointment? No.
746. You then joined the Fisheries Department for the first time? Yes.
747. What was your occupation before that time? I used to be running along the coast as a waterman, and fishing.
748. Have you had considerable experience in connection with fisheries? Yes.
749. Was it your duty to inspect the fish-markets at Woolloomooloo? Yes; I am there every morning at 4 or 4'30, and remain there until 7 and sometimes 8 o'clock. I look after the fish, before Mr. Seymour comes, to see if they are of the full size or not.
750. Have you any assistant there? Yes, Mr. Richard Ellings.
751. Does the fish always come to the markets in good condition? No. In summer-time it very often comes in a very bad condition.
752. Is that the case with the fish that come from distant waters? Yes; from the Clarence, the Richmond, the Macleay, and those places. Sometimes the fish are bad when they come from places near at hand, such as Lake Macquarie.
753. Do you find many fish coming in under size? Not a great many now. There used to be, but the fishermen know that it is of no use to send them in, as they will be seized.
754. What do you do with the fish that you seize? Send them round to the charitable institutions.
755. Do you know that it is a source of complaint on the part of fishermen that the fish-market is not properly conducted, and is not suitable for their requirements? I never heard them say so.
756. Have you heard of any cases of pilfering? There has been some talk about that and I have seen it myself. Baskets have often come to the market, out of which one-third and sometimes one-half have been taken. I cannot say where that has been done.
757. Has Mr. Seymour something to do with the fish-market? Yes; he is the salesman.
758. From whom does he get commission? Each fisherman pays so much in the £, a shilling I think, and that goes to the Corporation.
759. That is the commission that Seymour would get if he were a private auctioneer? Yes.
760. Does he simply sell on behalf of the Corporation? Yes.
761. Does he sell regularly? Yes.
762. How often do the fish supplies come into the market? Every morning, except Sunday.
763. What description of fish comes to market? Whiting, garfish, bream, black-fish, schnapper, jew-fish, king-fish, salmon, silver bellies, yellow-tail, mackerel.
764. Yellow-tail and mackerel are not brought in for food? No, for bait. There is a great deal of crayfish.
765. Do you know much about our fisheries along the coast? Yes, as far as Newcastle.
766. Your duties, I believe, compel you to visit Parramatta River? Yes, and Middle Harbour, Lane Cove, and all those places.
767. As a matter of fact do you know that the fish have become reduced in numbers in the Parramatta River since the closing of it? No, I cannot say that, because before the late rain you could not hear anyone speaking if you went up the river at night, because the fish were so abundant there. Any of the fishermen will tell you that.
768. Do you know the Gascoignes, on the Parramatta River? Yes.
769. They live, I believe, and have their nets within closed waters? Close to the closed waters, or in the closed waters.
770. The river at present is closed from the Parramatta vehicular bridge up to the head of it? Yes.
771. Do you not think that a great deal of hardship would have been avoided if the waters had been open as far as the railway bridge at Ryde? Yes, that has been my argument all along. I say that it ought to be open up to that point.
772. Did you make any recommendation to the Commissioners? I cannot say that I did; but I have spoken of it several times. Lane Cove should be open from the bridge up. The fisherman should be given as much space as possible.
773. Have you had many cases coming under your notice where people use unlawful nets? Yes.
774. When you seized those nets what became of them? Those portions that were fit for sale were sold.
775. Just as they were? No. All the small stuff was taken out. All the illegal net was cut out.
776. From your experience as a fisherman do you know that nets are liable to shrink? Yes, very well; but I always allow for that.
777. When these fishermen are using a new net do they generally submit it to the inspector to see if the mesh is lawful or not? Yes.
778. Do you believe that when a net is passed as being of the legal mesh, it should be always considered legal? It should be considered legal until it goes much under the size. An inch and a quarter is the proper size for a garfish net in the bunt, but if it goes to an inch that should not be allowed. It then comes in for a prawn-net. The fishermen tan their nets in ironbark, I believe; in fact they burn them instead of tanning them, so that the nets shrivel up. The Italians, with a 3-inch mesh of net, take smaller fish than our fishermen can take with a 2-inch net.
779. Is that owing to the shrinkage? No; it is owing to the way in which they hang the nets on to the rope. The net is of the same length as the rope, so that when they begin to haul the net comes close together, and a 2-inch bunt with them will bring in smaller fish than our nets would with a mesh of 1 inch.
780. Have you ever had any complaints made to you as to the length of the net which the fishermen are allowed to use being insufficient? No; but I have often told the fishermen that if they wanted a longer net

Mr.
T. Mulhall.
25 June, 1889.

net they ought to send in an application in order to get the net lengthened. I proposed allowing the fishermen to have 250 fathom nets on the lakes. I should also propose that the 90-fathom net should be lengthened to 120 fathoms; that the prawn-net should be 20 fathoms instead of 15; and that the meshing-net should be 100-fathoms instead of 60.

781. Have you directed your attention to the inland fisheries? No.

782. Were you ever asked to report on them? No.

783. Do you think that the Woolloomooloo market meets all the requirements of the fishermen as well as of the public? I think so.

784. Could not some improvement be made? I cannot say so. No complaints have ever been made to me about it.

785. Are the fish from distant waters brought here by steamer? Yes.

786. Where do the steamers heave to? They go right round to Darling Harbour.

787. Then has the fish to be brought from the boats in carts to the fish-market? Yes.

788. Would it not be better if there was a depot at Darling Harbour? Yes, if there was any open place for a market there. It would not do to have the fish kept in a closed place in hot weather. There is no doubt that it would be a great benefit to have a market over there somewhere.

789. If there was a market over there at Darling Harbour, such as there is for produce, where the steamers could run alongside and discharge the fish, would it not be much better for the convenience of the public as well as of the fishermen? Yes, and it would save the fish a great deal. The more you drag fish about the more it is spoilt.

790. Do you make any reports to the Commissioners? Yes, monthly reports.

791. Have you ever reported any grievances which were brought under your notice, or which were alleged to exist? No.

792. Do you know anything about oyster-culture? A little. I do not pretend to be much of a man amongst oysters; still I may know as much as those who pretend to be good judges.

793. Can you give us any idea as to the cause of the dearth of oysters in the Parramatta River? It has been a long while since we have had such a flood as we had lately. There are sewers going into the Parramatta River, and all over the harbour, the dirt from which has been destroying both the oysters and the feeding-grounds of the fish. There is no doubt that the late flood will relieve it a great deal. All over the rocks in the water there is about an inch of dirt, and the oysters cannot attach themselves to the rocks until they are clean. That is what spoils the fishing-grounds.

794. How long has the Parramatta River been closed from net-fishing? It is about twelve months since it was last closed.

795. Was it not closed for two or three years previously? Yes.

796. It has been closed for nearly five years in all, I believe? Yes.

797. Was it on your recommendation that it was closed from time to time? No.

798. Can you give us any good reason why the river should not have been left open for one year out of those four or five years? If it was left open you would not have a fish in six months as long as your finger.

799. From your showing, the people of the district, and even the people of the city, have been deprived of fish for the last four or five years? Well, that is a great deal owing to their own fault. The men who live at Watson's Bay watch the places up the river better than the men who live there. When there is abundance of fish in any of those places and a breeze of wind comes, there is a continual stream of fish out of those places. If the fishermen who live about the river looked after the fish they would get them as well as the fishermen do who live at Watson's Bay; but they let the fish pass. If you do not close some of the heads of the rivers there will not be a fish in the place. I have seen the fishermen lying off Johnson's Bay bridge with meshing-nets, meshing the fish as they came out.

800. *Mr. William Stephen.*] What means have you of ascertaining whether the fish brought to market are of legal size? I weigh them.

801. What is the lowest weight that is allowed by law? Two ounces for garfish.

802. Do you think that the breeding grounds above the bridges on the Parramatta River and the Lane Cove River would be sufficient to keep up a supply of fish for the harbour? I think so. It is not the fish that the men bring to market that do the injury. When they shoot a net and get eight or ten baskets of fish, they cannot send more than two or three baskets out of the lot to market. The rest of the fish caught are left on the beach for the hawks, seagulls, and rats. That is how the fishermen injure themselves, because they will not throw the fish back.

803. Do you not think that the fish are injured too much to live after having been drawn-up on the beach? No. I have seen it done in former times.

804. How much have you known nets to shrink after they have been declared legal? With an inch and a quarter net three tannings with ironbark would bring it down to an inch.

805. When a net comes down to a certain extent by shrinkage, but is still legal for garfish and prawns, what are the fishermen supposed to do with the other fish which they catch in those nets? They keep them. They cannot throw them away.

806. Will they not catch fish below the legal weight? Yes, and then they throw them away.

807. Are they not liable to be fined for that? Yes.

808. Is not that very hard on the fishermen? Yes. It is often said that I should fine the fishermen for bringing undersized fish to market, but I look at it in this way, that if I took action against those men and got them fined, the undersized fish would in future be left on the beaches, and would thus be of no use to anyone.

809. Have you a full knowledge of the habits of migratory fish? Yes.

810. Do you understand the seasons when they come in and depart? Yes.

811. You have alluded to fish coming down the harbour and being caught by fishermen from Watson's Bay. How do you ascertain that the fish have come down that are caught there? Because I see them. I see the boats coming out at night, and I see them with meshing-nets catching the fish in Johnson's Bay, outside the bridge.

TUESDAY,

TUESDAY, 2 JULY, 1889.

Present:—

MR. O'SULLIVAN, MR. WILLIAM STEPHEN,		MR. SEAVER, MR. STEVENSON,
MR. RITCHIE.		

EDWARD WILLIAM O'SULLIVAN, ESQ., IN THE CHAIR, *pro tem.*

Mr. Thomas Mulhall recalled, sworn, and further examined:—

812. *Chairman.*] How old are you? I am going on for 66.
813. Are you fully competent to carry out the duties you are now performing notwithstanding your age? Mr.
T. Mulhall.
Yes, I am quite qualified. 2 July, 1889.
814. Are you at your post every morning? Yes, at 4 o'clock, or a few minutes afterwards. Sometimes I am not in bed at all for one night.
815. Have you full charge of the Port Jackson inspectorship? Yes. I have to look after all the fish and oysters which come in and I have to make a weekly report on both.
816. Had you long experience as a fisherman and boatman before you took the position? Yes, all my life.
817. How do you account for our fishermen not being in the habit of going out to fish in the deep sea? They have no nets adapted for that. There are no trawls and no trawls men here that I can see. In fact I do not think they know where to go and none of us do know. It is no use finding a sandy or a rocky bottom; you must get a dark bottom before you can get any fish.
818. Do you think that before our fishermen can carry out deep-sea fishing with trawls the coast must be surveyed? Yes.
819. In order that they may know the character of the bottom? Yes. In my opinion the only net that will do any good in this country is a net which one of the Italians has got and that needs a little alteration.
820. What kind of net is that? It is about 100 fathoms long and about 40 feet deep with a large bag in it. That would be dragged by two steamers with a four or five hundred fathom line at each end.
821. Is not that something on the same principle as trawling? Yes, only it is longer. A trawl only picks up about 60 feet. We once used a trawl between Wollongong and Botany and we only got somewhere about three or four baskets of fish of various kinds, most of them not being worth the picking up.
822. Did not the Fisheries' Commission import a few small-sized trawls? Only one. There was one large half mile net, an American one, which was the finest net I ever saw, but that was burnt in the Garden Palace.
823. Were the experiments with those trawls successful? No, we got a few fish but not many. It is necessary that the ground should be surveyed.
824. Do the Greek and Italian fishermen use trawls? No.
825. You have only seen one net used by them which resembles a trawl? Yes, and the man who made that net is gone home to bring out eight or nine men with him. He says he is satisfied he could get as much fish as will supply the market. I think that is questionable but he may get a great many.
826. As a rule do our fishermen make anything like a comfortable living? I think those who will work do, but a great many of them will not work. When they come to Sydney with a few fish they stay about the public-houses as long as their money lasts.
827. How much do they earn as an ordinary rule per week? A couple of pounds or more clear. Some of them make more. The Italians do the best. They are tremendous men to work. They work night and day.
828. What part of Port Jackson is closed from fishing? Johnson's Bay above the bridge, Iron Cove above the bridge, and then the water is closed from the bridge at Five Dock right up. Lane Cove is closed from the telegraph post at the entrance to head of the river. It ought not to have been closed from there, but it ought to have been closed from the bridge in Lane Cove. The Parramatta ought to have been closed from the bridge at Ryde—that would have given the fishermen very good scope. Above the places I have mentioned the river should never be opened, because those are the proper breeding grounds, and if we do not save the fish in some places they will be all destroyed.
829. Do you think from your practical experience that the rivers are closed too low down towards the mouth? Yes.
830. Do you think that oyster-culture could be carried out successfully off our coasts? I do not think we will ever get many oysters off the coast—I have never heard of any. Some twenty-five or thirty years ago three or four men came out from England. They went away in a ketch for five or six months, and they never got an oyster. They lost £300 or £400.
831. Have you noticed that the Victorian Government are offering bonuses for the development of the fisheries and oysters? Yes.
832. Do you think that would be conducive to the encouragement of fishing here? Yes, if there were any men here who knew anything of trawling they would then go to work at once.
833. Was there not an old trawler here at one time? There were two or three. We now have in our office two men who were trawls men in England.
834. Have you ever been at Lord Howe's Island and Elizabeth Reef? No; but I believe there are very good fishing-grounds there. I suppose that the bottom is foul there.
835. Do you think that those fisheries might be developed by offering a bonus to fishermen? Yes.
836. *Mr. Stephen.*] Are you aware that the Fisheries Commissioners have been averse to opening Port Jackson beyond the railway bridge? No.
837. Do you think that it would be desirable to open the river up to that bridge? Yes.
838. Are you under the impression that it would be desirable to open the river to that bridge at present? Yes.
839. *Mr. Stevenson.*] Have you heard that the nets used by the Italian fishermen destroy large quantities of small fish? Yes.
840. What action was taken with reference to that? I never took any action, except against one of the Italians, because although there were several letters in the papers about the Italians destroying small fish, I never could find out the names of the people who wrote the letters, except in the case of two young fellows of Balmain, whom I went to see, and who identified a boat and one of the fishermen. I prosecuted that man, and he was fined £2.

- Mr. T. Mulhall.
2 July, 1889.
841. Do you know whether the practice is now discontinued? I think they continue it at present unless they see me or the boat about.
842. What means have you of checking this practice? No means, except that I watch them pretty closely.
843. How often are you supposed to be out? Every day.
844. But is not this sort of thing done during the night? Yes; but I am generally out three nights in the week.
845. Yet you are at the market every morning at 4? Yes; and it is often 4 o'clock when I get out of the boat.
846. Do you think that the present fish-market is a suitable place? Yes; it is a fine open place. You must have an open place for fish, and you must have plenty of salt water.
847. Is the present market central? It would be much better if it was near the railway terminus, but you would require to have an open place.
848. What district have you to supervise? The whole of Sydney harbour.
849. You do not visit other places? I sometimes go to the Hawkesbury and anywhere I am sent to.
850. To what outside places do you go? It is twelve months since I have been at Broken Bay. It is nearly two years since I have been at Wollongong.
851. You received instructions from the head office? Yes.
852. When the Secretary is absent from whom do you receive orders? The President.
853. When you seize fish for being under-weight what becomes of it? I give them to the charitable institutions. I divide them round about.
854. Do you ever send any fish to the Commissioners? No.
855. Never to Dr. Cox? Dr. Cox gets fish once a week.
856. Who takes them? One of the men.
857. One of your men? Yes.
858. Are they cleaned? No.
859. Who pays for the fish? I pay for them and Dr. Cox pays me. I sometimes pay 2s. 6d, sometimes 3s, sometimes 5s., and I have given as much as 8s. for a schnapper.
860. Then Dr. Cox is the only Commissioner who has fish sent to him? Yes.
861. Do you not think that it is very unfair for the Commissioners to have the pick of the fish? They do not get the pick of them.
862. Still you consider that it is part of your duty to provide any Commissioner who may request you to do so with fish from the market? I look at it in this way: If they ask me to buy half-a-crown's worth of fish I say to one of the men who is buying fish, "I want half-a-crown's worth of fish from you." I only get from him the same fish as he sells about the town.
863. How often does that happen? Sometimes once a week and sometimes twice.
864. Is it not a fact that every week or oftener one or other of the Commissioners is supplied with fish by yourself or by one of your assistants? Dr. Cox is the only Commissioner who gets them.
865. Does he get them regularly? Yes; every Friday.
866. In preparing the reports which you send in do you draw up the report yourself? Yes; I write them myself when I am at home at night.
867. *Mr. Ritchie.*] What is your opinion with regard to the closed waters of Broken Bay? I think the fishermen have a very good space of ground open to them there.
868. How far up would you close the Hawkesbury River? I would open if I had my will as far as Mangrove Creek.
869. *Chairman.*] Do you often hear of depredations by sharks in Port Jackson? Yes; and I often see them.
870. Do you know that very often some very distressing deaths are caused by them? Yes.
871. Do you think it would be worth while for the Government to offer a bonus for the destruction of sharks? I have often said that they ought to do so. The sharks have often rushed right at our boat when coming down at night. Large sharks have done that. I have often watched for them with harpoons, but then they never came near the boat. On several other occasions they have rushed right at the boat.
872. Do you think that men could be induced to hunt the sharks? I think if a bonus were offered they would be soon cleared out.
873. What would you suggest as a proper bonus? I should say that the Government should not offer less than £1 for each of the big sharks.
874. Have you noticed the habits of sharks in Port Jackson, and as to what time they are most numerous? I know they begin to come in about January. I generally see them in January and February. During the cold weather they go to deep water.
875. Is January their breeding season? No, March and April is the proper breeding season.
876. Are they very dangerous at that time? Yes, very savage.
877. Have you noticed that in spring-time they come in again in pairs? Yes, that is another breeding time. October and November is a breeding time.
878. Then they breed twice a year? Yes, all fish breed twice a year. In March and April they spawn, but they come to nothing in the cold weather. Then the fish spawn again in October and November, so that the two spawns come on at about the one time.
879. Is there not one particular time of the year when the sharks come into the harbour in large numbers? Yes, I think they come in in large numbers at the breeding time. They come like the mullet in March and April.
880. Then autumn and spring are the most dangerous periods for sharks? Yes, they are very savage.
881. With regard to purchasing fish for the Commissioners, is that part of your duty, or do you do that merely to oblige Dr. Cox? It is not my duty. I do it merely to oblige Dr. Cox.
882. You say he pays for any fish he gets? Yes.
883. *Mr. Ritchie.*] It does not take up any of your extra time? No.
884. *Mr. Stephen.*] Did you ever earn your livelihood as a fisherman in the same way as fishermen do now? Yes.

Mr. John Duncan Grant called in, sworn, and examined :—

885. *Chairman.*] What position do you hold? Assistant Inspector of Fisheries.
886. What is your district? George's River and Botany.
887. Have you had long experience of fish and fishing? Yes, I was fishing in 1864, and before that time.
888. Do you report to the Commission occasionally as to the closed waters in Botany and George's River? I report that there is plenty or scarcity of fish.
889. Have you reported as to the closed waters? No. I have never recommended the closing of the river.
890. In your opinion as a fisherman do you think that the rivers are closed too far down towards the mouth? Not a bit for the winter months.
891. Then you are not prepared to recommend that they should be opened farther up? I should recommend that they be opened in the summer months. Some of them have been closed for two or three years, summer and winter.
892. Would you recommend that they should be open in winter and closed in summer? No, the reverse—closed in winter and open in summer.
893. Why in summer? They could then get a fresh supply for the market in summer, and in winter they could go farther north and south. I do not say that they spawn in the winter months, but at that time they are rowed, and in September and November they are pretty empty with very little roe in them.
894. *Mr. Stephen.*] Do you think that the closing of Port Hacking has had any effect upon the production of fish there? I think Port Hacking is like a boat-harbour. The fish go in there to-day and they go out to-morrow. Up towards the park there may be a few holes and flats where the fish might spawn, but that is the only place.
895. Then you do not consider it is desirable to have the whole of Port Hacking closed against net-fishing? I do not think it had any effect. South-west arm or up near the park is the only breeding-place. I should say that above north-west arm and the whole of south-west arm might be breeding-places.
896. How far would you recommend Port Hacking to be thrown open to net-fishing? From Lilly Pilli Point across to Coston's Point.
897. Then you think it would be an advantage to have the port open to net-fishing up to Lilly Pilli Point? Yes; but that might stop a great many people from catching fish with lines.
898. Do you consider that the closing of Port Hacking has had anything to do with the enormous number of sharks to be found there lately? No, before the closing of the harbour I can remember one or two boats getting between 200 and 300 sharks in one haul.
899. It has been reported on many occasions that in reality Port Hacking is at present a feeding-ground for sharks because the fishermen are prohibited from hauling, and a great many sharks are left there which would otherwise be caught in the nets and be destroyed? I do not think that is the case because the fishermen have never stopped hauling there. Since the waters have been closed I have seen three boats there at a time.
900. Did you seize the nets? No.
901. *Mr. Ritchie.*] Were the men illegally hauling there? On one occasion.
902. *Mr. Stephen.*] When there is a heavy flood in the George's River do the fish leave the fresh water and go right out to sea and are therefore lost to the public? No, they never go away unless it is their proper season to go away. They go out for a short time but they come back again.
903. Do you think they always return to the same place? Yes.
904. Are you acquainted with the best breeding-grounds in George's River? I can scarcely answer that; but I know where the fish lie in schools by the thousand.
905. I suppose they must have breeding-grounds somewhere there, and a man residing there ought to know their situation? In 1883 and 1884 the river was closed to Tom Ugly's Point. The fishermen asked me if the river could not be opened as far as the bridge, as all the breeding-grounds to their knowledge were above the bridge. I recommended that, but I still believe myself that there were breeding-grounds below the bridge. Since that they have wanted to open the river to Salt-pan Creek, and they say that the breeding-grounds are above that. I could not alter my opinion in that way, as I knew better.
906. Do you think it would be any better for the supply of fish in George's River if it were opened up to Salt-pan Creek? At the present time the fish are as thick as ever they can swim in the river, but if it were opened and fifteen or twenty nets were used up there in a fortnight, there would be no fish at all. What fish they did not catch they would so harass that they would be driven out to Botany Bay, where the sharks would get them. You do not see any sharks in the river.
907. Then you do not think it would be desirable to open up the river to Salt-pan Creek without including Salt-pan Creek? I think you might as well open it up as far as Liverpool as to open it up to that point.
908. Do you think there are any seasons of the year when it would be desirable to throw the whole of the river open to net-fishing? Yes; I think it should be thrown open the whole of the summer. It would be quite sufficient to close the waters during May, June, July, and August.
909. But we are told that October and November are the breeding seasons for fish? Yes; in December the sand-whiting is full of roe.
910. If these are the breeding seasons would it not be well to protect them during that time? It would be good to protect them, but I am speaking of the benefit of the fishermen and of the Sydney market.
911. Our object is not to benefit any particular party. We want to report for the benefit of the whole fishing industry and for all of those using the fish? In December our best whiting are fully roed. I am told by the best fishermen in Botany that they are also fully roed in June and July.
912. Have you given an opinion at any time to the Fisheries Commission that it would be desirable to keep George's River open for fishing purposes from December to the end of April in each year? No; but I recommended that it should be open to the bridge.
913. I would draw your attention to the following passage from an official document: "If it be that a larger supply of fish is required in the metropolis during the summer and Lenten months, Mr. Grant thinks that the whole of the river might be opened from the beginning of December till the end of April, and to this the Commissioners will not offer opposition?" You are right. I forgot myself. I did recommend that. I never recommended that the river should be closed during the summer months. I never approved of it.

Mr
D. Grant.

2 July, 1889.

Mr.
J. D. Grant.
2 July, 1889.

914. Do you ever hear any complaints as to private parties line-fishing in Botany or George's River? I have heard complaints that they go into the rivers which are closed and kill fish. I do not think they should be allowed to do it while others are not allowed.

915. Is not line-fishing open to fishermen in that way in the same way as it is to private parties? Just the same.

916. Yet there have been complaints about private parties fishing in that way? Yes; I have seen such a thing as twenty dozen or fifteen dozen whiting being caught by private parties, a very large number of which were under an ounce and a-half in weight, whereas if fishermen were found in possession of fish of that sort they would be liable to prosecution.

917. If a fisherman were to catch these undersized fish with a net would he be liable to be fined? Yes.

918. If he caught them with a line would he be liable to be fined? Yes, if they were found in his possession.

919. Private parties are not so liable? No.

920. *Mr. Stevenson.*] When waters were closed, not only in your district but in other districts, I presume that was done on the report of the inspectors? I cannot say so. I never recommended such a thing.

921. When George's River was closed was it done upon your recommendation, or were you consulted? No.

922. Are we to infer from that that the Commissioners closed the waters without making any reference to the inspectors in the districts? That was what was done in my case. I have always reported that the water was always overflowing with fish.

923. Do you issue fishermen's licenses? No; I have to chase after them to see if they have licenses.

924. Would it not be more convenient if the inspectors were allowed to issue licenses? Yes.

925. Has it not been a great source of complaint with fishermen, and would it not be far better, seeing that you have control of the district, if you had power to issue the licenses? Yes; if I issued a license I would have no occasion to chase the fishermen to find out whether they had a license in their possession.

926. Would it not be better to have the boats licensed by having a number or some other distinguishing mark on them? Yes, I think they ought to have something that would not be destroyed by salt water. At present the fishermen have a bit of paper as a license, but they cannot take it about with them lest it should be destroyed. I think it would be better to have the licenses issued in the form of a piece of metal.

927. When the chief inspector is away to whom do you go for instructions? I address my letters to the chief inspector, and Mr. Ellis, the chief clerk, replies.

928. Then, in the absence of the chief inspector, the instructions are issued by the chief clerk? Yes.

929. Has he any knowledge of the fisheries? Only through seeing our reports, but he may never see any of them for all I know.

930. Do you consider such a person is competent to issue instructions to inspectors of fisheries? I should not think so, but I cannot say what his experience may have been.

931. You do not think he has had any practical knowledge? No.

932. Do you consider that such a person should issue instructions at all? No.

933. You have told us that you visited Port Hacking with somebody else, and that you found some persons fishing there;—what action did you take against those persons? They had their nets confiscated and they were taken to the police court. Mr. Smithers dealt with the case. I was sent by Mr. Hill with him to show him the general work and he seized the net.

934. Have you any knowledge of oyster-culture? A little.

935. If the rents paid for oyster-leases were reduced would not that tend to oyster-culture? I would recommend that the rents be reduced—they might even be reduced to 1s. per 100 yards and a royalty imposed. If they got a good crop they could afford to pay the royalty, and if they did not they would lose nothing.

936. With regard to oyster-leases, are you not just in the same position as you are with regard to licenses to fish, that is to say, you do not know who has paid? Not until I get a copy of the *Gazette*.

937. Would it not be better if you dealt with the collections of that revenue also, so that you might know what is going on in your own district? There is no doubt about it because I would then know what is being done.

938. I suppose that the inspectors, generally being intelligent men, would be quite competent to discharge that duty? Yes.

939. Would it be a saving in carrying out the Act? Yes, we have tracings of the whole of the river, and when anyone applies to us we have to make fresh tracings, and to make out fresh applications for it. Then they go to the Treasury and pay the fee.

940. If the course suggested were pursued would it not be a more systematic method of carrying out the work of the fisheries than the present system of making the fishermen travel long distances to Sydney? I am quite sure that so far as the fishermen are concerned that plan would save them a great deal of trouble and time.

941. Is not the present system a great source of complaint? Yes.

942. Have you ever heard of fishermen applying for licenses, and having to wait a long time for them? Yes.

943. In the meantime are they not deprived of their means of living? Yes, that is the case according to the Act.

944. Do you know what the cause of that delay is that the Board has not held a meeting? I cannot say that.

945. If you seize a net what do you do with it? I take it home, report the matter to the Commissioners, and wait until they give me instructions.

946. How long do you wait before you take action? Sometimes three weeks, sometimes a fortnight, sometimes a week.

947. Presuming that the net was not an illegal net would not the man be under suspension for all that time? Yes, he would be idle.

948. Do you not think that it would be a much better system to arm the inspectors with sufficient power to prosecute as well as to seize? Yes, I think if we are not fit to hold that power we are not fit to hold our positions.

949. Can you tell us what action has been taken by the Commissioners with regard to the culture of oysters in the Colony generally, or whether they have done anything to promote the culture of oysters? A few oysters have been sent to me on several occasions to test them, but I have never been able to keep them; they have always been stolen.
950. Have you any residence provided for you? No, I provide my own.
951. Are you aware whether any of the other inspectors are provided with accommodation? Not to my knowledge.
952. Do you know Mr. Benson? I have seen him occasionally at the office. He is inspector for the Southern Division.
953. What are his duties? I cannot tell you. We are not supposed to know anything out of the office.
954. You say that he is inspector of the Southern Division? That is what I believe.
955. Are you in the Southern Division? No.
956. Under whose supervision are you? Mr. Quinan's, when he was there. Since then I have been directed to write to Mr. Mulhall, and a copy of my report is sent to Mr. Thompson.
957. Do you ever make a report? Yes, every week I am supposed to report, but I generally report every fortnight, and I send a copy of it to Mr. Thompson.
958. How often does Mr. Mulhall visit your district? I never saw him there.
959. How long have you been there? Since 1882. I saw Mr. Quinan there once or twice.
960. Has he left the Service? Yes.
961. Since then you have had no visit of inspection? The President and Mr. Thompson have been there once or twice.
962. But they did not go there on a visit of inspection? They came there to see what fish were in the river.
963. Are the district inspectors provided with rent allowance or houses? I cannot tell you.
964. Are they provided with boatmen? I believe so.
965. What are the duties of the boatmen? To pull the inspector about I suppose.
966. Where is Mr. Benson located? Bateman's Bay.
967. Can you say of your own knowledge what districts he visits? I cannot say. He has not visited mine.
968. *Mr. Ritchie.*] When a fisherman wants a license what steps has he to take? He goes to the Commissioner's office, and gets a printed form; he fills it up; takes it to the Treasury and pays his money. They give him a receipt, which he takes back to the Commissioner's office, where he gets his license.
969. As a rule does he apply to you first? No, very seldom, because they have first to go to Sydney.
970. When a man makes application at the Commissioner's office do they refer to you as to whether the man is suitable or competent? No.
971. There is no test or question as to the right of any man to apply for a license? No.
972. When he receives a license are you apprised of the fact that he is going to fish in your district? There is a little pamphlet printed and circulated every three months, giving information as to who have obtained licenses. I think only one has been issued this year—about February or March last.
973. Are the licenses local or general. If he gets a license for Botany Bay is he permitted to go to Port Jackson? He is permitted to go anywhere in the Colony.
974. Have you had any practical experience of deep-sea fishing? I have done a little line-fishing for seven or eight years. When the trawl was first used I was the only man who was supposed to know anything about the bottom along the coast, as I had been doing a good deal of schnapping. I did not know anything about trawling, but I went with the expedition to show where the sandy and rocky bottoms were.
975. Was that a successful trial? No; it was a perfect failure.
976. What was the cause of the failure? Our fish as a rule hang along the edges of the reefs. If I had charge of a trawl belonging to another man I would be afraid to use it along the edges of the reefs lest it should be destroyed, and I would consequently lose my appointment, but if the trawl belonged to myself I would run the risk, and use it along the edges of the reefs, as there is no doubt that would be the place where the fish would be caught.
977. Are schnapper caught by a trawl-net? We did not catch any. I believe the reason is, that the schnapper is too quick a fish, and that it would swim away in front of the trawl.
978. From your practical experience do you think that the authorised meshes of the nets are correct? Yes, bar the 2-inch net. There is one net $2\frac{1}{4}$ inches in the bunt and 3 inches in the wings; I think it ought to be $2\frac{1}{2}$ inches in the wings in order to catch whiting. I think the garfish net ought to be 50 fathoms in length of bunt, and that the wings should be $2\frac{1}{2}$ -inch mesh.
979. Is the garfish net $2\frac{1}{2}$ inches mesh in the wings? No, they are 2 inches in the wings, and you really do not want that. They shrink a little in tanning.
980. Would you alter the size of the bunt? No, $1\frac{1}{4}$ inch is enough.
981. Do you know from your own experience whether garfish-nets destroy any small fish? Yes; they should not be allowed to be used in summer in the flats and bays. All along Botany they kill small whiting and mullet in hundreds.
982. Can you suggest any method of exterminating the sharks? Not without some reward or recompense being given for killing them. That is the only way I know of.
983. Is there any known method by which the large ones especially could be killed expeditiously? No. But I think that if 10s. and 5s. a head were offered for the large and small ones they would soon be killed.
984. *Chairman.*] What, do you think, would be a fair price to give for the destruction of sharks? I think 10s. a head should be given for the big sea-sharks, gray-nurse, and pointer, which eat a great many fish.
985. Do you think that men would be induced to fish for sharks for a reward of that kind? Yes. The fishermen very often see the sharks when they are fishing, and a reward of that kind would make it worth their while to kill the sharks.
986. Are there many sharks at Botany? They are dreadful at times, but there are not many in the winter.
987. Have you observed the habits of the sharks? Yes, they are most plentiful at Christmas time. The big sharks follow the mullet right round from river to river. When I was fishing myself, when I was catching a lot of mullet in a net, a shark about 15 feet long rushed at the mullet, seized a great many of them, and went right through the net.

- Mr. J. D. Grant.
2 July, 1889.
988. Are there any particular breeding-grounds for sharks about here? At the back of the reef between Port Hacking and Botany sometimes 200 can be seen in one evening.
989. Do you think it would be a good thing to use dynamite there? That would be the means of destroying a tremendous lot of other fish, and it would not kill many of the big sharks, because those I am now speaking of are called the school shark.
990. Do you think that 10s. per head would be sufficient inducement to kill the large sharks? Yes. But I think that 2s. 6d. per head would be enough for the school sharks.
991. Would it pay to get shark oil? No. We used to get 3s. or 3s. 6d. a gallon for it at one time, but you can very rarely sell it now.
992. Did you not suggest that the rent of oyster-leases should be reduced to 1s. per 100 yards? Yes. I would sooner see the rent fixed at 1s. than have it arranged as at present. There would then be a better chance of having oysters cultivated.
993. Would not such a reduction lead to a lot of dummyming? They could be made to improve their holdings, and they should also have power to prosecute anyone who stole their oysters, instead of having to wait for months in order to have permission from the Commissioners to do so.
994. Do you also suggest that a royalty should be imposed? Yes.
995. Are you aware that there is no royalty imposed on imported oysters? Yes. But let them pay a royalty too.
996. Then you do not approve of free-trade in oysters? You should not have protection for one and free-trade for another.
997. *Mr. Stephen.*] Do you think there ought to be a royalty on imported oysters as well as on local oysters? Yes. And that would help to pay the expenses. If a lessee got a lot of oysters he could afford to pay the royalty, and if he did not get many he would not have to pay much.
998. *Mr. Stevenson.*] If the rent for oyster-leases were fixed at a low sum would it not lead to a number of small men taking up oyster-culture? Yes. It would give the real oystermen a chance.
999. Is it not almost a monopoly at present? Yes.*
1000. Is not a small man shut out under the present system? The system is bad in several respects. The public can take 500 bags of oysters if they like off the Crown lands for which a man may have applied for a lease? If I find them doing so, and I ask them if they are taking the oysters for sale of course they answer, "No."
1001. Is it not the case that a man who has applied for a lease finds that while he has been waiting for his lease all the oysters have been taken away, and he then refuses to accept the lease? Yes, I have heard of known cases of that kind.
1002. *Chairman.*] Was the trawl which you have referred to imported by the Fisheries Commission? I think it was one made here by George Glading; the imported one was never used in my time.
1003. Who had charge of the trawl? Mr. George Glading, but the Commissioners were also there.
1004. Was he an expert? Yes, I believe he was from England.
1005. Before we resort to trawling do you think it is necessary that the coast should be surveyed? Yes, that is the only way in which you can do it.
1006. Do you think that the Government should undertake a survey without delay? That is the only way in which trawling can be carried out, but I cannot say that it would be a success.
1007. *Mr. Stephen.*] Are the fishermen always supposed to carry their licenses with them? Yes, they are liable to a penalty if they do not carry them, but they are always liable to be damaged.
1008. Is there no clause in the Act which would permit the fisherman to leave his license at home if he thought that it might be damaged with water? There is no such clause in the Act.
1009. When once a net has been passed as being of the legal mesh do you not consider that it should be always considered as legal until it is worn out? The difficulty is that you cannot tell whether it is the same net.
1010. Is a man not likely to be fined if a net which has been passed as legal, afterwards shrinks? I do not think anybody has been fined under such circumstances.
1011. When you seize nets what are done with them? They are cut up. In the case of a garfish-net the centre might be under-size; that part would be cut out and the wings would be sold. If the net is an inch in mesh it is sold for a prawn-net.
1012. What is the lowest legal weight for fish? 2 ounces for gar-fish, 4 ounces for whiting, flathead, mullet, and sand-whiting; 6 ounces for black bream; they have silver bream in the Act but I never saw such a thing.
1013. If men are fishing with a garfish-net and they happen to catch bream, or any other fish below the legal size, are they liable to be fined? Yes, they would be liable, but I do not think an inspector would know his duty if he took notice of such a thing. The real object of the Act ought to be to protect small mullet and whiting.
1014. Is there more than one assistant inspector in George's River and Botany? Yes, I have an assistant with me. I had to swim once or twice; I was in the water for five or six hours, and then I applied for a mate.
1015. What are the bounds of the home district? I think it is from Jervis Bay to Port Stephens.
1016. What do you call the other districts? I cannot say. I have no knowledge of the others.
1017. *Mr. Stevenson.*] You have stated that the fishermen carry the licenses about with them; they would very probably be destroyed by the water. If they were destroyed what remedy would the fishermen have? I cannot answer that; they are liable to be fined if they have not licenses.
1018. Do you not consider that that is a very great hardship on the fishermen? Yes.
1019. Could they not get a duplicate license? I suppose they can. Of course, when I once see a license I take the number of it, and I would not trouble a man again about his license.
1020. Would not this hardship be avoided if the inspectors issued the licenses themselves? Yes.
1021. *Mr. Stephen.*] Might not a man say that he has lost his license in order to get a license in an illegal manner? There would be the same number on the license, so that would prevent a fraud.
1022. *Chairman.*] Are the licenses written on paper or parchment? It is a sort of improved paper. It used to be parchment at first.

1023.

* NOTE (on revision) :—I desire to correct myself. I do not consider that anyone has a monopoly in oyster leases in my district.

1023. Do you not think they ought to be parchment? I think some sort of metal badge with the number would be better.

1024. *Mr. Ritchie.*] How often do you report to the Commission? Once a month.

1025. On what matters do you report? How the oysters are, what is the condition of the river, what boats are working, and so on.

1026. Do you report on the condition of the fish? Yes, I do when I see a roed fish; but I do not see a fish for months at a time, because the river has been closed for two or three years.

1027. *Mr. Stephen.*] Is a fisherman supposed to have a license for himself, for every man in the boat, and also for the boat? Yes; the license for a boat is £1, and for each man 10s. per annum.

1028. Do you not think it is hard to make the men pay for a license for the boat and, in addition, for every man using the boat? If it were not for the Revenue I do not think it saves the fish at all to have licenses. If we had a register of fishermen I think 10s. for the boat and 5s. for each man would be quite sufficient.

1029. *Chairman.*] Is it not very unfair to charge the man for a license first, and then compel him to pay a license for his boat also? The difficulty is that there are a great many men who are always shifting about from one place to another.

1030. Would it not be sufficient for the man to pay a license without having to pay for the boat? If I caught a boat up the river and the men saw me coming they would leave the boats and the nets behind them and go into the bush, and if the boats were not licensed I would not know who had been fishing there.

1031. Do you seize the boat as well as the nets? In the last case that I had the owner of the boat came back again; if he had not I would have taken the boat, but I think he would have got the boat again.

1032. Does the law empower an inspector to seize the boat as well as the nets? The Act says any implement of fishing. I never seized a boat; but if a man ran away I would take the boat as well as the net.

1033. *Mr. Stevenson.*] How do the fishermen know what waters are closed? The proclamations are gazetted and I nail up the proclamations all over the place on trees.

Mr.
J. D. Grant.
2 July, 1889.

Mr. Peter Smith called in, sworn, and examined:—

1034. *Chairman.*] What is your position? Assistant Inspector of Fisheries, Hawkesbury River.

1035. Is anyone over you at Hawkesbury? No; we are all called assistant inspectors.

1036. What are the bounds of the closed waters in the Hawkesbury? From Bar Point across to Fishermen's Point in a westerly direction.

1037. Do you think that those boundaries are too close to the mouth? That all depends upon the supply of fish. If there was plenty of fish in the river there would be no occasion for closing that portion.

1038. Could the boundaries be safely shifted up the river for some distance? Yes; if the mesh of the nets was larger. The bunt part of the net is too small. A great many of the fish are destroyed at present in the common hauling-net. If the mesh were made larger I think that the river might be thrown open up to Mangrove Creek. The hauling grounds above Mangrove Creek are not much, and there would be plenty of room for the fish to breed.

1039. Are those waters good breeding-grounds? Yes; there is plenty of space in the Hawkesbury.

1040. What kind of fish have you at the Hawkesbury? Mullet, bream, perch, blackfish, and so on; also whiting, flathead, soles.

1041. Do you consider the restrictions imposed by the Act bear harshly upon the fishermen? No; I cannot say that. Some fishermen would like to have everything their own way, and they do not trouble themselves as to who may come after them. I should like to legislate in such a way that the young fish particularly would be protected. If you do not protect the young fish you will never have old ones. In some instances I would increase the restrictions in this way: Instead of having a mesh of 2½ inches in the bunt I should recommend a mesh of 2½ inches; but at the same time I would allow a greater length. I have been a practical fisherman myself, and I know what I am talking about. Some fishermen, when they see young ones going through the net think that they are losing a fortune. I would give them a little more room to fish in the Hawkesbury River.

1042. What are the best fishing-grounds around Hawkesbury? There are many hauling-grounds everywhere.

1043. Is Pitt Water good? Yes; it is very good.

1044. Is Brisbane Water? Yes; it is a good place, but it is a fine place for young fish and garfish-nets should not be allowed to be used there. There is a very weedy bottom there, and it is a great resort for little mullet, and it is impossible to haul a garfish-net there without killing lots of these young fish.

1045. Are sharks plentiful there? Not at present, but they are in summer.

1046. Do they come there after the mullet? No; it is their nature to come there.

1047. Is it their breeding season? I suppose it is; Cowan Creek is full of them.

1048. What kind of sharks are there? There are several kinds. Some they call the ground-shark, grey-nurses, and another sort are called rough backs—they jump out of the water a great deal.

1049. Do you think that it would lead to a reduction of their number very considerably if the Government offered a bonus for their destruction? It might for the large ones, but I think they come on the coast from some other places. They are not on the coast in winter.

1050. Do you think it would be an improvement if the inspector had the power of issuing licenses to the fishermen? I believe that would be a great convenience to the fishermen. They sometimes have to come to Sydney and lose two or three days in getting licenses, and I do not see why I could not do that work just as well. I have had to account for moneys before in connection with the royalty on oysters; it would certainly give me a little more work to do.

1051. Is there much oyster-culture at the Hawkesbury? Yes; the Hawkesbury has been one of the finest rivers in the Colony for oysters.

1052. Is it carried on in a scientific way? No. It is now carried on in a very unsatisfactory manner, because it seems that there is a lot of rent owing, and I do not know whether the lessees can be prosecuted in order to recover the money. The oyster-beds which the lessees hold are in anything but a good condition.

1053. *Mr. Stephen.*] Do you not think that it would be sufficient for breeding purpose to close the tributaries of the Hawkesbury, and to leave the main river open? Some of the tributaries are the best hauling-grounds. I think if the upper part of the Hawkesbury, that is, from Mangrove Creek upwards, were closed it would be quite

Mr.
P. Smith.
2 July, 1889.

Mr.
P. Smith.
2 July, 1889.

quite sufficient—there would be then about 60 miles of river besides all the branches. From Mangrove to Windsor is about 60 miles.

1054. Are there not good hauling-grounds as far up as Wiseman's Ferry? A few but not many. Men very seldom go up there if they have to fish for the Sydney market.

1055. Do you think it would not be of much advantage to fishermen to open it up as far as Wiseman's Ferry? It would be an advantage to Windsor fishermen, but they generally use large meshing-nets. It is closed against everybody at present.

1056. Do you not consider that by closing the tributaries of the river, say at a certain distance from the mouth, leaving the remaining portion of the river up to Wiseman's Ferry open to fishing of all descriptions, that would protect the breeding-grounds, and at the same time give fishermen more facilities for making a living? The difficulty would be that a separate inspector would be wanted for every creek. Many of the creeks are 15 miles long, 20 miles, and 12 miles. I have to look after the whole of the Hawkesbury River all the way to Windsor; all that they would have to do would be to watch until I went off to another creek.

1057. Would not further expenditure be justified in procuring a better supply of fish for the market and in giving facilities to the fishermen to earn a living? I think that if you opened the river as far as Mangrove Creek the fishermen would thank you very much, because it would include the best hauling-grounds. If you at the same time made the mesh of the net $2\frac{1}{2}$ inches in the bunt and 3 inch wings, that would be the means of protecting the young fish.

1058. *Mr. Stevenson.*] Are you aware that the fishermen of the Hawkesbury have complained because the river has not been opened as far as Mangrove Creek? I believe they have complained to the Commissioners.

1059. Do you not think it is part of your duty that you should know when those complaints are made? It is of no use to complain to me.

1060. Do you not think as inspector that you should be consulted before the waters are closed? Certainly I think I ought to be.

1061. Are you not consulted? No never.

1062. Do you not think it would be an advantage if all the inspectors were consulted before the waters were closed? Yes.

1063. Has it not been a great source of complaint amongst the fishermen for years that they are unfairly dealt with, simply because the river is closed for about 60 miles that they are not allowed to haul above Bar Point, and yet that up to Mangrove there is good hauling-grounds? Just about 200 or 300 yards above Mangrove Creek there are a few good hauls and then they cease.

1064. The fishermen are never allowed to go up there? Yes, the river has been closed ever since the Fisheries Act has been in force.

1065. Did you ever hear that the farmers about Wiseman's Ferry sent in a report to the Commissioners that they were prohibited from getting fresh food for themselves and their families, and that they were not allowed to take any fish? I never heard that complaints were made by the farmers to the Commissioners—there might be and I would hear nothing about it.

1066. Do you not think that the Commissioners would be perfectly justified in allowing those families to obtain the necessities of life from the river? If you open the door to one you must do it to all. If you allow one to fish even for his own use there would be no limit to it.

1067. What sort of people generally live about the McDonald and the Colo? They are all farmers.

1068. Do you not consider that an application of that kind coming from people who were debarred from getting any fresh food should have been granted by the Commissioners? Yes.

1069. *Mr. Stephen.*] If they desire to sell the fish they would have no market there would they? Yes, at Windsor.

1070. *Mr. Stevenson.*] How far is Windsor from McDonald? 50 miles.

1071. Do you think it would pay a farmer to neglect his wife and family, and leave his work, in order to take a few fish up to Windsor? I know that there are men who have made a living by doing so. I remember the time when Peter Kemp used to take fish from Mangrove Creek to Windsor; that is how he learnt his rowing.

1072. Have you ever prosecuted anybody for hauling in those waters? Yes, chiefly in Berowra Creek.

1073. There is no supervision above Bar Point? I go up there sometimes.

1074. How often? I do not suppose I go above Mangrove Creek once a month.

1075. Have you visited as far as McDonald River, Colo, and other places once in six months? No.

1076. Then what supervision is there to prevent people from hauling fish daily? There is none.

1077. Yet when these persons applied to fish for their families they were refused, and yet if they did it illegally they could not be detected? Yes.

1078. Do not the fishermen at Hawkesbury complain bitterly about having to come to Sydney to obtain licenses? They do not say much about it to me.

1079. Do you not consider that the inspector should issue those licenses? It would be an advantage to the fishermen.

1080. Would it not be an advantage in the working of the Fisheries Act? Yes, I would like to be in a better position to know who really hold licenses, without having to hunt them up and ask them.

1081. For want of that knowledge how do you know who are licensed fishermen? I would not know unless I demanded their licenses when they were at work.

1082. How are you acquainted with them in the first instance? I go round when I see them hauling, and I ask them to show me their licenses. I sometimes get a list from the office showing the licenses issued. I have a list at home now which was issued on the 1st March, and I have not received one since.

1083. From March to July you have no knowledge? No, unless I see them myself and note them down.

1084. Suppose you go to a man and demand his license and he has not got it, what course do you take? I have to prosecute him according to law. He would be fined according to the Fisheries Act.

1085. Would you not seize his net? No, I could not.

1086. Supposing that the man told you that he left the license behind him, would you summon him? No; I would write to the head office to ascertain if he had a license; if he had not I would have to prosecute him.

1087. *Mr. Stephen.*] Does your jurisdiction extend further than the Hawkesbury River? Not now. I was appointed for Tuggerah Lake as well as Gosford, but there is an inspector there now.

THURSDAY,

THURSDAY, 4 JULY, 1889.

Present:—

MR. FRANK FARNELL,		MR. RITCHIE,
MR. NOBBS,		MR. STEVENSON.

FRANK FARNELL, ESQ., IN THE CHAIR.

Mr. Richard Seymour called in, sworn, and examined:—

1088. *Chairman.*] What is your position? Inspector of Nuisances for the City of Sydney, and Assistant Inspector under the Fisheries Act.

1089. How long have you held the last-named position? About three years.

1090. Is it part of your duty to visit any of the fishing-grounds or oyster-beds? No.

1091. Are your duties confined to the fish-market at Woolloomooloo? Yes.

1092. Are you supposed to supervise the sale of fish? I am one of the auctioneers. My first duty is to go into the market half an hour before the sale. We commence the sale every morning in winter at half-past 5, except on Friday, when we begin at 5. I go round and examine all the fish. If there are a great quantity of small fish in any one heap they are seized and sent to the charitable institutions. If there is only a small proportion of small fish in each heap they are passed, because in that case it would be a great injustice to the fishermen to seize the fish.

1093. Do you sell the fish by auction, and charge the fishermen a commission for selling? Yes, 5 per cent. The City Council makes that charge.

1094. Does that commission go into your pocket? Not a farthing. It is paid into the revenue of the City Council.

1095. Have you any idea what quantity of fish passes through your hands a year? Yes. I hand in a return giving full information. [*Appendix C 1.*]

1096. Have you ever heard any complaints from fishermen that while their fish is in transit to the market it is pilfered? Yes.

1097. How does that occur? The fish may be taken on board the boats. They may be taken out on the wharves. There is no doubt they have been taken out at the wharves. Then there is every likelihood that fish are taken out while they are being carted from the Newcastle and Clarence steamers to the fish-market.

1098. Does the fish come to market chiefly by steamer? It now comes both by steamer and by rail.

1099. When the fish comes by rail, does it go to Darling Harbour? It is first taken to the Redfern Station, and then straight down to Darling Harbour; it is then brought by the agents, carters, or vanmen, to Woolloomooloo.

1100. When the fish comes by steamer does the steamer generally take it to the western side of Sydney, to Darling Harbour? Yes; except when it is brought from Cape Hawke. In that case it comes into Woolloomooloo Bay.

1101. Do you think the fish get very much damaged in transit? I am sure they do.

1102. Do you think that it would be better to have a depot, say, at Darling Harbour, or where the steamers are moored, rather than continue the present state of affairs? I do not think that so far as the markets are concerned you could better them.

1103. Do you think it would be a benefit to have another market established at Darling Harbour? I do not think so.

1104. Do you not think that if there was another market at Darling Harbour it would prevent the hauling about of fish? There would not be any less hauling; the fish would have to be taken from the trucks into vans, wherever they went, even if the market was in Darling Harbour.

1105. Are the fish-markets at Woolloomooloo large enough for the sale of fish? Yes; they have been recently enlarged; they are very large.

1106. Do you always see that the markets are always kept clean? Yes; if you went there now you would not know that it was a fish-market. It has been favourably spoken of by the most experienced men from Billingsgate, Portsmouth, and Plymouth.

1107. Are very great numbers of under-sized fish brought to market? Yes, sometimes.

1108. How do you account for that? The fishermen along the coast wait until the last minute to make a haul; the fish are then caught in a hurry to be put on board the small steamers or the boats which meet the Newcastle boat. The fish are bundled into the baskets and are sent to market.

1109. Have you heard many complaints from fishermen as to the operation of the Fisheries Act? The principal thing they complain of is the closing of certain waters in summer. I refer to Port Hacking, Botany, Port Jackson, and Broken Bay.

1110. Have you ever heard any complaints from the fishermen with regard to the mesh of the nets? No, I have nothing to do with that.

1111. Then the principal complaint you have heard is with regard to the closing of the rivers? Yes, at certain times of the year,—that is, during the summer months. The country fish during the months of February, March, and April, are seized in great quantities as being unfit for food. The atmosphere during those months is very low and clammy, and the fish brought from the country spoils in transit. If the places which I just mentioned were opened it would give a better supply and a fresher supply to the city and suburbs. At the present time the fish are in grand condition.

1112. According to the return you have just handed in it appears that the schnapper brought into the market has gradually increased. For instance, in 1873 there were thirty-one dozen of schnapper brought in, whereas in 1888 there were brought in 1,820½ dozen. How do you account for the increase? The increase has been principally from the other side of the Hawkesbury, and the Hawkesbury, and also south of Botany Heads, along the southern coast to Jervis Bay, and south. Near the city the schnapper is very scarce; the men have to go north for them.

1113. Are the schnapper caught by line-fishing? Yes. We have had schnapper caught in nets at the Hawkesbury, but not many. They are caught by line principally and brought in by fishermen in their own boats.

1113½. How long will fish remain fit for human food after they are caught? In winter-time fish will keep for about three days; if cooked they would last much longer. I know the Jews buy fish on Tuesday and
cat

Mr.
R. Seymour.
4 July, 1889.

Mr.
R. Seymour.
4 July, 1889.

eat it on Friday, but they cook the fish as soon as they get it. Good schnapper, such as were in the market yesterday, from Botany, would keep two days and two nights without being cooked.

1114. In the summer-time are fish which are caught in the morning likely to go bad before sunset on the same day? Yes; it is bad bait which often turns the fish; when bad bait gets into the belly of the fish decomposition sets in very quickly.

1115. Are you aware that fish have decreased very much in the Parramatta River? I have heard so from fishermen. I know that some years ago people used to go up the river and catch any amount of bream.

1116. *Mr. Ritchie.*] Where does the bulk of the fish come from which supplies this market? The greater part comes from the Clarence, Port Stephens, Newcastle, and Wollongong.

1117. Have you any control over the means of transit? No; not until it comes into the city.

1118. How are the fish which are caught at Port Stephens conveyed to Sydney? They are brought in a small steamer to Newcastle, and transhipped there to Sydney. Those caught in Lake Macquarie, I believe, are carted over in waggons to Newcastle, and from there conveyed by steamer to Sydney.

1119. When the fish are landed on the wharf are they under your charge? No; we are not at the wharves.

1120. Are the carriers under your control? No; they belong to the fish agents. The fish are not handed to us until they come to the market.

1121. You are in no way responsible for taking fish out of the baskets or anything of that kind before it comes to the market? No; I know an instance which occurred last week where a great quantity of fish came down by rail, and three-quarters of it never came near the markets. That fish went up country.

1122. The great question is who accounts for that fish—what price is obtained for it? All the fish sold in the Sydney market is booked by the agents and clerks. The books are made up every morning before 9 o'clock, sent up to the City Treasurer, examined, and sent back for the use of the fishermen and the public, from 10 to 6 o'clock.

1123. Is it not quite possible that the fish that are passed from the steamers up country may be of an illegal weight? There is not the slightest doubt about that. I have no control over that.

1124. You say that you frequently seize under-sized fish. If a fisherman sends a consignment of fish containing large and small, how do you deal with it? I have the large taken out. I do not confiscate the whole. There is a memo. kept, showing who owns the fish, what quantity has been seized, and where it has been sent to.

1125. In what way are you connected with the Fisheries Commission? On behalf of the Commissioners I am bound to see all the fish that comes into the market, and to see that none is sold under a certain weight.

1126. Do you receive any orders from the Commission? Sometimes; but very seldom. It is only in connection with the fish coming into the market.

1127. Do you think the fish-market is sufficiently commodious for the trade? Yes.

1128. Do you think that it is in the proper place for distribution? Yes; I can guarantee that the fish sold at half-past 5 in the morning, or at 5 o'clock in the morning, is for sale in the suburbs at half-past 6. Taylor and Assenheim have carts which take fish out to Waverley, Petersham, and as far as Burwood, and people there can have fish for breakfast.

1129. Have the sellers of fish any license? No, they pay no fees of any sort.

1130. After the fish leave the market have you no further control? No; except that if I met a man with small fish in his basket I would seize them, and I would do the same if they were in a bad condition. I have no control outside of the City.

1131. *Mr. Stevenson.*] How many auctioneers are there? Two.

1132. Do you only sell in one hour during the day? No; we sell on Friday morning from 5 o'clock till half-past 8 o'clock, and on other mornings from half-past 5 o'clock until 8 o'clock.

1133. Would it not be an advantage if the fish were sold at any hour in the day when they arrive? We tried that for twelve months, and it was an utter failure. We gave the people the markets free to do what they liked. If any fish come in after the sale is over they are put in a refrigerating-room, where they are kept until the following sale.

1134. But they have to pay for that? One shilling per basket of 90 lb. of fish.

1135. Are not a great deal of the fish which are caught in Lake Macquarie brought down to Sydney by the morning train? Yes.

1136. Does that reach the market in time for the morning sale? Yes.

1137. What time do you close the sale? Not until we get a report from all the wharves that all the fish are in.

1138. What time does the northern train come in in the morning? We have the fish from it in the market before half-past 6.

1139. Does Mr. Mulhall, one of the Assistant Inspectors, buy any fish from you at the market? Yes.

1140. How often does he buy fish from you? Sometimes twice a week.

1141. Do you know what he does with that fish? No.

1142. Does he purchase it in the open market in the same way as anyone else? Yes.

1143. Have you ever heard any complaints from fishermen in reference to this course of proceeding? No.

1144. Can you suggest any method for the prevention of the stealing of fish while it is in transit? Yes. I would suggest that the Fisheries Commissioners should have men at the wharf who should follow the carts from the wharf to the market, as I did myself for three months with the Corporation officers. No fish were lost then and the baskets were quite full when they reached the market. Since the Corporation staff has been reduced I have not been able to carry out that system.

1145. Do you think it is part of the work of the Fisheries Commission to have somebody on the wharf to carry out this duty? Two inspectors at each wharf would be enough; one man would remain at the wharf and the other would follow the cart.

1146. Could it not be prevented by having licensed carts for the conveyance of fish, the carters to be held responsible? I do not think so.

1147. *Mr. Ritchie.*] Could it not be prevented if the carts were under your control? Yes, if they were engaged by the Council and were held responsible.

1148. Could you not issue licenses for the purpose at a nominal sum? Yes, we could then have men whom we could be able to trust. I suggested that myself; in fact I think the first suggestion came from the

the Mayor, Mr. John Harris, but there was a great row made about it in the market. The first suggestion was that we should have our own waggons and have the fish brought up to the market.

1149. Have you the means of engaging carts? We could get half a dozen waggons in a day.

1150. Are your principal duties connected with the City Council? Yes; I am only connected with the Fisheries Commission in the market.

1151. *Mr. Stevenson.*] Have you ever seen Mr. Mulhall or his assistants cleaning fish in the market? No.

1152. *Mr. Ritchie.*] Do you receive any salary or emolument from the Fisheries Commission? Yes, £75 a year.

1153. Yet the Commission have no control over the officers appointed under you by the Council? No, they receive nothing from the Commission.

1154. *Mr. Nobbs.*] At what time do fish arrive by train from the south coast? They are in the market every morning before 6 o'clock.

1155. Is there not a mid-day fish train? I do not think so.

1156. Does the 6 o'clock train arrive in time for the market? Yes.

1157. I understand that fish does come in at mid-day from the south coast;—if that is the case must the fish wait for the next morning's sale? If it comes in at mid-day it goes into the refrigerating-room.

1158. And it has to wait for the next morning's sale? Yes.

1159. What arrangements have you for the fish? Cool chambers.

1160. Do you not think that there ought to be a mid-day sale? We tried a mid-day sale and a 4 o'clock evening sale, but we could never get a person to come to the place unless they could get a basket of fish for 1s.

1161. That was under the old system; but now that we have trains from the north and south bringing large quantities of fish every day, do you not think it would be advisable to try a mid-day sale? We can try at any time you wish, but I think you will find that it is a great failure. The shopkeepers buy all their fish in the morning, the carters do the same, and after 9 or 10 o'clock they are employed all day hawking fruit and vegetables, and they do not go back to fish.

1162. It has been stated here in evidence that the market accommodation is not sufficient; what is your opinion? I think that the market accommodation is equal to anything in the world.

1163. What is your opinion as to the situation of the market? I think it is very good—we have plenty of room. There are the sides of four streets for the carts and waggons to come in without blocking up any thoroughfare or entrances to wharves, stores, or anything of that kind.

1164. Is there nothing you could suggest that would in any way improve the market? I think not.

1165. *Mr. Ritchie.*] Do you know of your own knowledge whether the mode of carrying the fish from Lake Macquarie destroys any of it? I am sure it does, especially in summer.

1166. Do they not send any of the fish down by rail instead of sending it to Newcastle? Yes, the greater part of it comes down by the Northern train.

1167. Does not that portion of the fish come down in better condition? Yes.

1168. Is the refrigerating-room at the market effective? Yes.

1169. How long can you keep fish there in the months of February, March, and April? For three months, if necessary.

1170. Do you actually freeze them? Yes, by cold air. The refrigerating-room is going to be made about four times its present size. We are about to import from home a Bell-Coleman cool-air-machine.

1171. Can you store away great quantities in the refrigerating-room? Yes, more than we can get. In fact we have always one chamber empty at present.

1172. *Mr. Nobbs.*] I see from the return before us that, from the 30th November, 1887, to the 30th November, 1888, the revenue of the market amounts to £2,658;—what are the working expenses of the market? A little more than half, but then the buildings have to be taken into consideration. After paying for gas, electric light, interest on capital, and so on, I do not think that the profit derived by the Council will be £500 per annum.

1173. *Mr. Ritchie.*] Does the Fisheries Commission receive none of those profits? No. The buildings and maintenance are the property of and kept by the City Council.

Mr. Peter Smith recalled and further examined:—

1174. *Chairman.*] Have you had experience with regard to oysters? Yes.

1175. Have a great many oysters been sent to market from the Hawkesbury? Yes.

1176. Has there been a dearth of oysters of late years in the Hawkesbury? There has been a great deal of disease among them during the last two years that has caused a great scarcity of oysters. Oyster culture has not gone ahead, as we expected it would, when the Act was passed.

1177. How many oyster leases are there on the Hawkesbury River? I produce a list of the leases in existence. There are now ninety-nine leases in existence on the Hawkesbury. I measured and reported upon 216, embracing an area of 144,800 yards of foreshore. All of those leases, however, were not completed.

1178. Does the completed number amount to ninety-nine? Yes; embracing an area of 40,750 yards. A few more leases have been taken out since that return was made up.

1179. Is it your duty to collect the rentals on those leases? No.

1180. Do you know whether the rentals have been paid on all those leases? I have reason to believe that there is a great deal owing. What is really owing for this year I cannot say, but I produce a list of what is owing for last year. There is something like £232 owing for last year alone.

1181. Do you know whether any of that money has been paid in since? I do not think so.

1182. Is this owing to the lessees giving up their leases? No; they are using them.

1183. Has the Commission directed you to collect the rent? No.

1184. Have you made any report to the Commission on the subject? Yes, I have mentioned the matter a great many times in my monthly reports. One point on which I had to report was whether the lessees had fulfilled all their conditions. I mentioned that the payment of rent was one of the conditions of the lease, but that in many instances that condition was not fulfilled. No action was taken upon my report.

1185. Do not you think the leasing system could be very much improved? Yes.

Mr.
R. Seymour.

4 July, 1889

Mr.
P. Smith.

4 July, 1889.

Mr.
P. Smith.
4 July, 1889.

1186. For instance, instead of having those leases in the hands of those ninety-nine people, would it not be better probably to have them in the hands of four or five lessees? Most certainly.

1187. Would not that prevent a lot of pilfering? Yes.

1188. Can you make any proposal which you would like to see carried out with regard to oyster leases? The leases are too small an area. My advice was against granting small areas of 100 yards, because no man could make a living out of such an area, and he would be forced to go and work at something else. My words have come true in that respect. A great deal of stealing is carried on, as the lessees steal one from the other, and also from the Crown lands. The consequence is that oyster-culture is at a standstill. I would certainly recommend that one creek should be given to one man, and that the main river, above the bridge, should be given to one lessee. A person with a little capital and enterprise might go into oyster-culture with some spirit, and he would have a better chance of protecting his lease against pilfering. The law would have to provide that if any man, except the lessee, was found in a creek with oysters in his boat, he should have to account for their possession.

1189. Have the oysters been suffering from one disease or several diseases? I have only seen one disease—that is the one caused by worms? They deposit a lot of mud inside the shell, and the oyster dies. I have seen five worms in one oyster.

1190. Can you suggest any remedy for the disease? No; I believe the only remedy is a good freshet. We had a good one lately, and since then I have seen no more worms.

1191. Have you ever heard of a disease caused by an insect called the borer? No.

1192. In laying down oysters on a new bed where is the spat obtained from? They get it from the Crown lands. They obtain a license and pay 2s. a bag for the spat. They pay nothing for the license.

1193. How long does it take an oyster before it is eatable? That all depends upon the locality and the quality of the spat. If the water is too salt they are very slow in growing.

1194. Do the stinging-rays cause much destruction of oysters? Yes, they live upon them. They are particularly severe on laid oysters. They do not seem to be so well able to get at the rock-oysters.

1195. Are there many oysters sent away from the Hawkesbury at present? Not a large quantity lately. The New Zealand oysters keep the market down.

1196. For how long are the oyster leases granted? For fifteen years. The greater part of them were granted in 1884 and 1885.

1197. *Mr. Nobbs.*] Are you in a position to state what leases are in arrears? Not for this year.

1198. *Chairman.*] Where are the oyster-beds situated? There are a few in Porto Bay. There are some in Mullet Creek. There are a good many in Moonee Creek and Berowra, and the main river, commencing above the Railway Bridge. The uppermost one is at the mouth of Mangrove.

1199. When the fishermen are sending oysters to market are they subject to examination by you? No, not by law.

1200. Is there not a provision in the law that persons who offer oysters for sale which will go through a certain sized ring are liable to prosecution? I could seize undersized oysters. The law says that oysters that can be passed through a metal ring of an inside diameter of $1\frac{1}{2}$ inch are not to be offered for sale. I have such a ring. In examining oysters I would, of course, use my discretion, and would not seize a bag of oysters because one or two might be under size. If there are many small oysters I would seize them as a warning. I have done so in several cases, and it has had a very good effect.

1201. *Mr. Stevenson.*] Is there any scarcity of oysters at present? The leases are in a very poor condition, through the lessees not looking after them, and cultivating them as they should have done under the Act, and as they promised to do.

1202. Is there no supervision? I have reported many times that the leases are in very poor condition.

1203. What action have the Commissioners taken upon that? None.

1204. Is it a fact that oysters are now 50 per cent. dearer than they were when the present Commissioners took office? I can hardly remember what the price was when the Commissioners took office, but I do not think that oysters are a great deal dearer now.

1205. Have you heard of some leases having been declined owing to the delay and excessive rent demanded by the Commissioners? There is no excessive rent, because the law prescribes that the rent shall be £1 for every 100 yards.

1206. Have you ever heard of complaints regarding delay in the issue of leases? At first there was a great deal of delay, owing to the great number of applications.

1207. Have you heard of cases in which men have refused to take up leases on account of the delay in issuing them? Yes.

1208. Were there very many of such cases? I think that was given more as an excuse. At first people went nearly mad about leases, but they soon found that they were not so good as it was thought that they would be, and any excuse was good enough for not taking them up.

1209. Is it not a fact that while people were waiting for the issue of their leases other people could go on the Crown lands and take all the oysters away? No.

1210. Is there any law to punish people who take oysters off Crown lands? I am very sorry to say that there is not.

1211. Have not cases come to your knowledge where people did take oysters off the Crown lands? Yes; I brought cases before the Court and they fell through.

1212. Then people did really take oysters from the Crown lands between the date of application and the time of the issue of the leases? Yes; because there was no one to watch them.

1213. Because there was no power to prevent them? A person who applied for the land could have got a working permit.

1214. But how long might he have to wait to get a permit? I cannot say what delay the department might have caused him.

1215. Are you aware that oysters which are more than $1\frac{1}{2}$ inch in size have not come to maturity at that time? Yes; it depends on the locality.

1216. Would not reduced rents help the oyster-culture? I think not.

1217. Do you believe in small people being granted small leases at a merely nominal rent, and that they should pay a royalty on the oysters? I am very much afraid that the only way is to give the whole of the creek to one man. I have reason to believe that if you put up the leases to auction, and gave one creek to one man, you would realize far more rent than under the small lease system.

Mr.
P. Smith.
4 July, 1889.

1218. How often do the Commissioners visit your district? I have had one Commissioner there several times lately—that is Mr. Oliver. Other Commissioners may have been there, but I have not seen them.
1219. Do you remember Inspector Benson visiting your district? I remember that he visited the Hawkesbury to examine the disease in oysters.
1220. Who accompanied him on that occasion? Inspector Gyler, from the Manning.
1221. Why did Mr. Gyler accompany Mr. Benson on that occasion? Mr. Gyler was an old experienced oysterman.
1222. Do you believe that Mr. Benson has any real practical knowledge of oyster-culture? I cannot say, he is a stranger to me.
1223. If he had any practical knowledge would it be necessary to take an assistant with him to afford the information which he was sent up to obtain? I do not know that there was any necessity for Mr. Gyler to come down.
1224. Was it necessary that Mr. Gyler should come in order that his superior officer should obtain information with reference to oyster-culture? I think one man could do it as well as two.
1225. As a practical man, if information had been sought for from you, would you have been quite capable of supplying it? Yes; quite as well as Mr. Gyler.
1226. Did you ever hear of a fisherman named Crosslands? Yes; there are several of that name on the Hawkesbury.
1227. Did you ever seize nets belonging to them? One of the Crosslands was working with a man from whom I took a net.
1228. Can you state the facts of the seizure? The net I seized was in closed waters in broad daylight. I was pulling up the Berowra Creek, which are closed waters, when I saw them hauling. I went to them and seized the net.
1229. Was there any inquiry into that seizure? An inspector came down from Sydney and seized James Crossland's net.
1230. Were you at all connected with the inquiry in connection with the seizure of nets? They called me as a witness at Ryde, but I could give no evidence. I knew nothing about the matter.
1231. What was the result of the investigation? I believe Crossland was fined £1.
1232. Have you ever come into open conflict with the Crosslands with regard to fishing? No; except that one of the Crosslands was working with a man named White, whose net I seized. Of course when I seize a man's net he will look cool at me afterwards.
1233. Were you ever charged with being the holder of, or interested in, oyster leases yourself? Yes.
1234. Did you undergo examination? Yes.
1235. What was the result of the inquiry? The charge was dismissed.
1236. Who held the Inquiry? The Fisheries Commissioners.
1237. What became of the report? I cannot say, but I suppose the Secretary knows. I went home about my business, and I knew nothing more about it.
1238. What did the Commissioners say about it after the inquiry was closed? It was proved that I had no lease. Through being appointed executor in a certain estate I found that there were three oyster leases belonging to it. That is how the case came about. I asked the Commissioners to relieve me of those leases, which was granted, and the leases were handed over to a man named John Wilson, of Brisbane Water.
1239. Did you apply to be relieved of those leases before any inquiry at all was instituted? Yes, long before there was any inquiry.
1240. *Chairman.*] How long have you been in the Service? Close on eight years.
1241. Have you been located at the Hawkesbury all your time? Yes.
1242. Was the area over which you had supervision larger than it is at present? Yes. At first I had charge of Tuggerah Lake and Brisbane Water.
1243. Have you any assistant in the shape of a boatman? No, I have to pull about myself.
1244. Are you allowed any house-rent? No.
1245. Do you simply get bare salary? Yes.
1246. Do you get any travelling allowance? I have got a little book in which I am supposed to get the hotelkeeper to sign his name, if I pay 1s. for a dinner or anything of that sort, but I generally leave the book at home.
1247. Do you remember several complaints having been made by fishermen at the Hawkesbury as to the unjust operation of the Fisheries Act? Yes, I believe there have been some complaints to that effect.
1248. Have there also been complaints about the river being closed against net-fishing, in such a manner as to interfere with their carrying out their ordinary avocations? Yes.
1249. Did you ever make any recommendation to the Commissioners to extend the area of open waters? None, whatever. It would not look well on my part. If they asked my opinion I would give it to them.
1250. Have they ever referred to you? No.
1251. Do you not think it would be better to leave those matters to the local inspectors to decide? Yes, a good deal, providing that you had capable men of experience—proper practical men of sound judgment. Sometimes fish may be scarce, and a man of inexperience might come to the conclusion that the fish were scarce, whereas in reality the fact might be that owing to windy cold weather the fish might have taken to the deep waters, and might not be far away.
1252. Do you remember an application, made some time ago by myself for an extension of the open waters, when the Commissioners extended the open waters to Bar Point? Yes.
1253. Do you not think they might have extended the open waters as far as Mangrove Creek without injuring the interest of the public, whilst, at the same time, it would have been a great boon to the fishermen? I was not asked about it at the time. If I were to give an answer now it might be taken as condemning the action of the Fisheries Commission.
1254. That does not matter; you are protected thoroughly here. We want to bring forward a measure which will give power to relieve the fishermen, and, at the same time, protect the public? If I am to give my opinion about the matter, I may say that a good deal might be done in opening the waters further, but at the same time I would like the mesh of the net to be made a little larger in the bunt, in order that the small fish might be able to get through. At present young mullet would get stuck in the mesh, and in pulling it out of course it would be killed.

- Mr. P. Smith.
4 July, 1889.
1255. Instead of hauling, do not the fishermen adopt the practice of running the net a short distance from the shore, thus meshing the fish? Yes; you can use a meshing-net where you cannot use a hauling-net.
1256. Have they not resorted to this practice in order to get a living, because there is not sufficient hauling-ground available? Yes; there might be a shoal of fish on the rocks where they could not use a hauling-net.
1257. Is there not a particular ground which used to be looked upon by the Hawkesbury fishermen as a place on which they could always depend to get a supply of fish for the market—that is at Dangar Island; and is it not a fact that that hauling-ground has been destroyed? One ground has been destroyed on the north side of the island.
1258. How? The large pontoon was built there, and the bottom is now full of piles, which were sawn off, in order to make a sort of gridiron on which the pontoon might rest at low water. Of course the whole bottom there now is a mass of timber, and it would be impossible to make it a hauling-ground.
1259. Could not the piles have been easily drawn up after the pontoon was built, if the contractors had chosen to do so? The Dangar Island Wharf is also in the road.
1260. Could not the piles have been easily drawn up if the contractors had chosen to do so? Certainly.
1261. Instead of that the contractors sawed the top of the piles off below low-water-mark? They are all dry at low water at spring tide.
1262. Do you not think that the contractors sawed off the tops of the piles to prevent detection? No.
1263. What was their object? I think they simply levelled off the tops of the piles in order to make a gridiron for the large pontoon to rest on. Still the whole concern might have been easily pulled up.
1264. How many fishermen are there at the Hawkesbury? At present twenty-five or thirty get their living by fishing; that does not include Brisbane Water.
1265. Do they send their fish to Sydney by rail or steamer? Both.
1266. Mr. Stevenson.] Who has charge of Lake Macquarie? William Boyd.
1267. Mr. Ritchie.] Is the present rental for an oyster lease £1 per 100 yards? Yes.
1268. Are all of these oyster-beds of equal productiveness? No, some are better far than others.
1269. Are all these beds indiscriminately leased at the same rental? Yes.
1270. Are any of the lessees of the Hawkesbury doing well, and getting great quantities of oysters? No, I cannot say they are doing well, but that is owing to their own neglect, and because there is a great deal of stealing. This disheartens any man of enterprise.
1271. Do you not think the better way would be for the Crown or the Commissioners to appraise those beds according to their productive value? Some are more productive than others.
1272. That is easily known to you and others? Yes.
1273. Would it not be more equitable to appraise them? There might be a good bit of ground between two bad pieces, and when the lessees have worked out their own piece of ground they then work the Crown land, and the Crown gets nothing for it.
1274. Do you not think that if you were authorized to appraise these grounds and cut them up, with your practical experience you could do so with better advantage to all parties concerned? I think not. I could cut up the grounds fast enough, but I think the best plan is to give one creek to one man.
1275. Assuming that you gave a whole creek to one man, would it not be possible for one creek to be much better than another? You would find that out when you called for tenders. That is how I would deal with them.
1276. Is that the way in which the leases are offered now? They were once dealt with in that way, but they are not under the present system.
1277. Is there any better way of leasing those grounds to oyster-culturists than under the present system? Yes; I believe there is a better way, that is, by giving one man a whole creek.
1278. Would you let the leases by tender? Yes; I would call for tenders in the newspapers.
1279. Would you give a man entire control of the creek? Yes; at so much per year; the rents to be paid in advance.
1280. Under the present Act is there no compulsion by the Commission with regard to cultivating those grounds;—are they not compelled to plant the grounds with spat? They are not exactly compelled, but still they are supposed to keep their leases in good condition.
1281. Is it left entirely to the inspector's discretion to decide whether the leases are cultivated properly or not? That seems to be the case under the Act.
1282. Do you ever interfere with regard to cultivation? I have never done so yet.
1283. Have you seen cause to interfere? I believe I ought to have done so in some cases. I gave information to the head office as to how things stood, but I was told that they were going to sue for rent instead of confiscating the leases.
1284. Are not the rents paid in advance? They should have been in the month of January in each year, but there are many in arrears.
1285. Do you know, of your own knowledge, that those leases are not paid for? Yes. I have a list of the rents unpaid for last year, and I have good reason to believe that those rents have not yet been paid.
1286. Are you communicated with by the Commission as to rents in arrear? Not much, but I asked for this list. I received a communication two years ago to the effect that any lessee who had not paid his rent was to be prevented from using his lease. For that reason I wished to know the names of those who had not paid their rents.
1287. Do you look after them at all? Yes; but lately I was told that the Commissioners did not wish to interfere with the lessees, but that they intended to sue for rent. If I once stopped the lessees from working they would not pay any rent.
1288. Do you think it would be advantageous to the oyster-getter if he had to pay a lower rent, but had also to pay a royalty on the actual number of oysters he obtained? That might be the case, if you would put a duty upon oysters coming from New Zealand.
1289. Leaving that out of the question, would it not be better if a royalty were charged upon the actual number of oysters obtained? Under the present system of oyster-culture I have no confidence whatever. It is only by leasing the whole of a creek to one man that you will be ever able to do any good.
1290. Do you not think it would be better to have a royalty on the actual number of oysters obtained, rather than to impose a heavy rental? I do not think it would work very well, because a lessee might buy a lot of New Zealand oysters and lay them down; you would want to charge him royalty on those oysters.
- 1291.

Mr.
P. Smith.
4 July, 1889.

1291. Do you think that the present rentals are extra heavy? No; but I believe you could get a large rent by leasing one creek to one man.

1292. Would that not prevent small men entering into the occupation? Yes, it would; but they would have to go as servants to the others.

1293. Do you think that that would be the means of producing a great quantity of oysters? Yes; and it would put all the places in better condition.

1294. What do you think has been the cause of the disease in oysters? Owing to the drought—there was not enough fresh water.

1295. Are you of the opinion that Brisbane Water should be entirely closed from net-fishing? I think it ought to be closed against garfish-netting, but not against larger nets. The garfish-nets are the great fish destroyers; I would not allow garfish-netting above Juno Point.

1296. Do you consider that Brisbane Water is a splendid breeding-ground? Yes.

1297. How many licensed fishermen are there in your district? About thirty.

1298. Have you ever made any seizures of nets in the Hawkesbury? Yes; for unlawful nets and for fishing in closed waters last winter I seized a net.

1299. Since you have been in the Service has a moiety of the moneys received from the sales of the nets confiscated by you been given to you? Yes; when a net is sold the inspector gets half.

1300. Do you get that at the present time? Yes; but I have not seized a net for twelve months.

1301. Are many fish carried up to Windsor? I do not think so, unless they are taken by rail; when the river was open the fishermen used to get a living there.

1302. *Chairman.*] What is the fishing season in the Hawkesbury River? They fish all the year round.

1303. Is there not a particular season during which the fishermen engage themselves more actively than during any other season? I do not think so; in winter the fish go up the river in large shoals, and in summer they come down in what fishermen call the mullet season, when the spawning-time comes on. April is the great spawning month.

1304. Are the spawning-grounds up the tributaries of the Hawkesbury? Yes; I believe they lay their spawn in the mouths of the rivers and so on.

1305. So that the main river might be opened farther up than at the present time? The spawning is done on the lower part of the river, not above Bar Point, where it is closed at present.

1306. Then what is the object of closing the river above Bar Point? A lot of the young fish resort there. The Upper Hawkesbury is of large extent, and there are young fish up there everywhere.

1307. *Mr. Ritchie.*] When a man wants a license for fishing do you recommend him? No; he applies to the head office in Sydney.

1308. Do you get instructions from the Commission, stating that he has been licensed? No; on some occasions I may get a list of the fishermen who have been licensed.

1309. Do you frequently report your doings to the Commission? Yes; I make weekly and monthly reports on the fisheries and oyster-fisheries.

1310. Do the Commission give you any instructions whatever? Yes, through the Secretary.

1311. What are the instructions as a rule? Sometimes about the oyster disease. I have been trying to get the worms which were found in the oysters to put in spirits.

1312. Do they give you any instructions with regard to looking after particular work, such as oyster-culture and fishing? No; unless any particular cases come under their notice or anything has been reported to them.

1313. *Mr. Stevenson.*] Your duty never carries you beyond Bar Point? I must go into the closed waters sometimes to see if anybody is fishing there.

1314. Did you not say that you had not been up to M'Donald or Wiseman's Ferry for the last six months? I think I stated that as an average. In winter time, when the fish go up the river, I go up a good deal—generally at night.

1315. How can you say there is no good hauling-ground above Mangrove Creek if you never go there? From long practical experience I know where all the hauling-grounds are.

1316. Yet you say it is necessary to go up to the closed waters occasionally? There is plenty of fish up there, but they must use meshing-nets.

1317. Are the fish too small? No; there are great shoals of mullet up there.

1318. What is the object of closing the waters if you say there are no good hauling-grounds above Mangrove Creek? I wish to protect those parts for breeding.

1319. Seeing that there is such a large extent of river, 60 miles, exclusive of tributaries, what is the necessity for closing all that? No particular reason.

1320. *Chairman.*] Do you not think that it might be opened for a considerable distance farther up the river, say to Wiseman's Ferry, without any injury? There would not be much harm in extending the open water if you took my advice and made the mesh a little larger in the bunt.

1321. *Mr. Stevenson.*] Have you ever heard complaints from the fishermen that there is too little water given to them? Yes; because at one time the river was closed to the railway bridge and there was very little ground left.

1322. May not a great deal of hauling be done on the closed waters without your knowledge, seeing that there is about 60 miles of water without any supervision? Yes.

1323. Would it therefore not be better to open the river for legitimate fishermen, even if it was necessary to have two inspectors? Meshing-nets would have to be used up there. For men who fish for the Sydney market they are quite far enough when they are at Mangrove Creek. There is one matter which I should like to suggest to the Committee—that is with reference to the spawning season for the mullet. Mullet is our great staple fish. In April they are fully roed, and I think they ought not to be caught when they are like that.

1324. *Mr. Ritchie.*] What months would you close? Only the month of April.

1325. Would not that entail very great hardship on the fishermen? They would have to catch other fish.

1326. *Mr. Stevenson.*] How could that be carried out? That would do more good than all the closing that is carried out now.

1327. But how could you do that? I refer to the shoals of mullet which come in the harbours. Tons of them come in.

TUESDAY, 9 JULY, 1889.

Present:—

MR. FRANK FARNELL,	MR. O'SULLIVAN,
MR. HOWE,	MR. WILLIAM STEPHEN,
MR. RITCHIE,	MR. SEAVER,
MR. STEVENSON.	

FRANK FARNELL, Esq., IN THE CHAIR.

Mr. James Charles White called in, sworn, and examined:—

- Mr. J. C. White. 1328. *Chairman.*] Were you at one time connected with the Fisheries Department? Yes; I was assistant inspector at Port Stephens.
- 9 July, 1889. 1329. When were you appointed? I think it was about five years ago—two years previous to Mr. Otway's appointment.
1330. How long did you occupy that position? About two years.
1331. Were your duties confined principally to the fisheries about Port Stephens? Yes, to Port Stephens only.
1332. Are there great quantities of fish caught there and sent to the Sydney market? Yes.
1333. Also oysters? Yes, and crayfish. Port Stephens is the principal depôt for crayfish.
1334. How are they sent to Sydney? Generally speaking the steamer "Kingsley" brings the crayfish and oysters, but there are small timber ketches on the Myall River which bring oysters from some of the beds there. They bring oysters to Sydney, and there is no check whatever on them. I do not think they even paid the royalty when it was in force.
1335. Have you heard any complaints made by fishermen in that district as to the unjust operation of the Fisheries Act? No; I had not very much to do with the fishermen themselves. I did not know who held a license and who did not. I knew who held licenses for oysters, because I put the area down on a map and sent a sketch of the area to the Board in Sydney. I prosecuted a few of the fishermen occasionally for having an illegal mesh of net.
1336. Do you remember what was done with those nets? No; except that they were confiscated.
1337. Did you ever make any recommendations to the Commission in Sydney with regard to affording greater facilities to the fishermen? I do not think so.
1338. Were you ever asked to do so by the Commission? No.
1339. What sort of fish are generally caught in Port Stephens? Generally mullet, blackfish, whiting, bream, and jew-fish occasionally. Schnapper is not caught there by net.
1340. Do you think that the fish caught at Port Stephens are brought fresh to the Sydney market? I can only answer that question in this way: The "Kingsley" is in the habit of leaving Port Stephens in the summer at 6 or 7 o'clock in the evening, and she always waits for the boats to come in. I believe that the boats do not go to fish in summer until 12 or 2 o'clock, but in winter I have known the fishing-boats up the harbour, near Tahlee, to catch fish overnight. Those fish go down to Newcastle at 12 or 1 o'clock the following day, and they do not get into Sydney until the day after.
1341. So that if the atmosphere were close they would be likely to go bad? Yes; a great many of them are completely spoiled. Dalton does not take payment for bringing fish down, but he takes a share after they are sold in the market, and he tells me that he often loses very heavily.
1342. Have you ever heard any complaints made by Dalton or by the fishermen as to the bad accommodation afforded to them in the market for the sale of fish? Yes; I have heard a great deal about the fish being stolen while they are being conveyed to the market. I have heard of instances where the carts had stopped and people have come out with baskets and taken the fish.
1343. Where do the steamers which bring the fish leave to? They go alongside their own wharves—none of them at Woolloomooloo. All the fish are sent from Port Stephens either by the Newcastle Company or the Hunter River Company's boats.
1344. Would it not be more convenient for the public as well as for the fishermen to have another fish depôt somewhere at Darling Harbour for the sale of fish? Yes; I think that would be a good idea. It would be better than the present market. I think that the sooner the fish are disposed of after their arrival in Sydney the better it would be for the public generally.
1345. Do you know any of the Commissioners? The only one I know is Dr. Cox.
1346. As assistant inspector, you had not much power vested in you? No power at all. I had the greatest trouble when I tried to convict a man before a magistrate. They would not go on this Act at all. They could not find out on what clause I was prosecuting under, or anything.
1347. Do you think it would not be much better and more satisfactory if the inspectors and assistant inspectors were charged with some powers without reference to the Commission at all? I am quite sure of it.
1348. You have had a good deal of experience in connection with oyster-culture? At Port Stephens only. I have been there now for fifty-nine years.
1349. Is it not a fact that the best oysters produced on the eastern coast come from Port Stephens? They are always in demand, but I cannot say whether they are the best, not having sufficient knowledge of the other beds.
1350. Can you say that at the present time they are very prolific beds? There is a disease amongst all the oysters resting on the black mud.
1351. If you say that there has been a decrease in the number of oysters at Port Stephens, how do you account for that fact? One reason is that there has been a great deal of stealing going on. Under the 15th clause of the Fisheries Act anyone has power to go where he likes, provided he is not on leased ground. All that he has to say is that he is taking the oysters for his own use, consequently the Government beds are all denuded. The good oysters are sent away, and the small oysters are put on his own beds. I know that is the practice in Port Stephens. My son has never done it. He has set his face against it. He has got 4 or 5 miles of oyster-beds under lease, and he depends upon his own oysters.
1352. Is he ever troubled with people pilfering those oysters at any time? If it were known that the oysters were stolen of course he would look out for it, but I have seen men at other people's beds taking away the oysters. I have seen them doing so from the verandah of my son's house.
1353. Do you not think that the present system of leasing might be improved by letting the whole bank of

of a river or a tributary to one man? Yes. Curiously enough I was asked my opinion with reference to this matter when I was at Auckland the other day. I was asked how the Oyster Act was worked in New South Wales. I made a recommendation in accordance with what you have just suggested. For instance, there is a place called Whangarei, about 80 miles north of Auckland, from which a great many oysters are brought to Auckland and thence sent on to Sydney. I recommended that they should divide that place into four or six sections, giving one section to one individual. That would be by far the better plan to adopt here. The great evil of the present system is this: There are two or three long reaches on a river. A man will take up 100 yards at the top, another in the centre, and another down below. When I would be on the look-out for oyster-thieving, going up the river, I would see a man coming down with oysters, and I knew it to be a fact that on some of those beds there were no oysters at all. If I pulled the man up he would say, "I got the oysters from my bed up at the top of the river," and I could not contradict him. No one can swear to an oyster.

Mr.
J. C. White.
9 July, 1889.

1354. Do you think it would be better to do away with the provision which allows a man to take up indiscriminately leases for 100 yards here, there, and everywhere? Yes, it would be far better, and I should certainly advocate the system which you have suggested. For instance, there is the north arm at Port Stephens, which is a sheet of water between 2 and 3 miles long, with oyster-beds all round it. If that were divided into two parts, one man might take up the east side and another man the west side, and it would then be worth while for the lessee to employ a person to look after his oyster-beds.

1355. How do you account for the disease in the oysters? When I was the assistant inspector I sent a report to the Commission about it, and no doubt it could be found in the office now. My opinion is that this disease exists only in the black mud. One of the most prolific beds in Port Stephens belongs to a man named Joss. That man, I suppose, has made about £1,000 from his beds, but latterly his oysters are all diseased. A little red worm attacks the oyster. It does not get into the oyster itself, but it burrows through the shell, and lies between the shell and the pearly part inside. When you open that with a penknife the smell is horrible.

1356. Do you think the seasons have a great deal to do with the state of the oyster-beds? I do not think so. All you have to do is to allow your oysters to get old enough—say two to three years. I do not think the seasons have anything to do with it. Fresh water has.

1357. That is what I mean? The rain affects them to a degree, but you seldom see floods up there. Another great thing against oyster-breeding properly in this country is the facility which exists for introducing the New Zealand oysters. When I came across a few weeks ago, in the steamer "Manapouri," there were 300 bags of oysters on deck. When I examined a few of them I found that they were not worth anything. They were perfectly useless as eating-oysters. They are selling in Sydney for half-a-crown a bag. Now you can get them for 15s. a bag of 3 bushels, while my son's oysters have been selling at 45s. per bag.

1358. Are there many lessees of oyster-beds at Port Stephens? A great many. I think the term is for fifteen years, but at the time the beds were taken up originally I do not think it was known what period of lease would be granted, and I know that several of the parties stripped their beds after the first year, and then threw up their leases. Whether they can be made to pay or not now I do not know.

1359. Is there any improvement which you can suggest in the working of the Fisheries Act? I think there is a great deal of red tape about the administration. If you make a suggestion about anything you cannot get a reply for a very long time. I know that in one case there were three abortive sittings of the Commission before I could get a reply to any of them. I think it would be better if the work were vested in one trusty man.

1360. Do you think it would be desirable to abolish the Commission altogether? Yes. As far as I can see, Dr. Cox is about the principal man in the present Commission.

1361. *Mr. Stephen.*] Did you say that the disease in oysters was confined to the mud-oysters? No; to oysters deposited on the mud-beds. They are quite different from the mud-oyster, which we do not eat. The mud-oyster is very large. There are beds in the river which are from 12 to 15 feet deep. The deposit on those beds generally is of gravel. Occasionally mud is brought down, and it covers over the gravel, and that is the time when the oysters get diseased. They are splendid before they are covered with a coating of mud.

1362. Is there any distinction between the oysters got in the beds of that description and those got on the rocks? The rock-oysters are quite different. These are what we call drift-oysters. The spat is brought down, and it lodges on the loose stones, not rocks. They propagate among the stones. The rock-oysters cluster one on top of the other, and are quite different.

1363. You think that this disease does not affect the rock-oysters at all? I know that it does not, because I tried it myself on my son's beds. There is an island in front of Tahlee, and he has got the whole of that. It is 600 or 700 yards in circumference, with rock-oysters all round. There is just about 18 inches of water at low-water, and the oysters are quite good on that sand-bank, until they drop on to the mud.

1364. Are they shifted from the sandy deposits during floods? They are shifted when the water is very rough.

1365. Can you suggest any remedy for this disease? No.

1366. Do you think there is no possibility of discovering any remedy for this worm disease? I am afraid not. If it appeared among any of my oysters I would shift them and put them on drift-beds.

1367. Are you aware that when nets have been seized they have been sold again to fishermen? No; I have never heard of that.

1368. Have you any knowledge of what becomes of the nets after they are seized? I saw several of them in the office, and I recommended that they should give one or two of them to the blackfellows at Port Stephens, who have no means of getting a living.

1369. Do you know if they cut up the nets so as to make them legal for some other purpose? I do not know that that can be done, because the nets are all woven together in a piece.

1370. Do you think that an illegal net could not be made legal for any other sort of fishing? Nets are seized because the mesh is very small, and I do not see how you could make a big mesh out of a small one.

1371. Have you had much experience of net-fishing at Port Stephens? I have seen a good deal of it.

1372. Are you aware that the mesh will shrink a great deal, for instance, after tanning? In tanning a net will shrink, but it expands afterwards when in constant use.

- Mr. J. C. White. 1373. Then the shrinkage caused by tanning is not permanent? No; in my opinion it will stretch to its natural size afterwards.
- 9 July, 1889. 1374. Do you think that nets will shrink to some extent after they are first used? I am quite sure of it. Everything will shrink in tanning. I have travelled a good deal throughout the country, and I always tanned my tents to prevent the blackfellows from seeing them, and I found that they always shrank a good deal.
1375. If a net has been passed as legal, and through tanning it has become smaller than the legal size, do you think that it should always be considered legal after having been once pronounced to be legal? Yes, certainly; provided it has been passed as legal originally.
1376. Mr. O'Sullivan.] Is oyster-culture carried on at Port Stephens or any other place where you have had jurisdiction with the most modern means? No; I think there is very little culture at all. It is left more to its natural course.
1377. I suppose you have heard of the way in which the French carry out their oyster-farms? Yes.
1378. Have you anything like those oyster farms out here? Nothing at all.
1379. Everything is carried on in a primitive fashion? Everything is left to nature. I think a great deal might be done in the way you suggest.
1380. Do you think that by the importation of a few experts we could encourage or establish scientific oyster-culture? Yes; I think that ought to be done.
1381. Do you think it would be worth while for the Government to undertake to get out a few experts from France? Yes; provided the matter was carried out as the Chairman has suggested—that is, that large areas should be granted to the lessees. It would then be worth a man's while to go into oyster-culture.

Mr. Frederick William Smithers called in, sworn, and examined:—

- Mr. F. W. Smithers. 1382. Chairman.] What position do you occupy? Travelling Inspector in the Fisheries Department.
- 9 July, 1889. 1383. What do you mean by that? I am outside supervising officer for the Commissioners.
1384. How long have you held that position? Twelve months.
1385. Did you hold any position under the Commission previously? Yes. Since 1882 I have been Assistant Inspector of Fisheries.
1386. Where were your duties confined to during that period? To Twofold Bay and Port Stephens. I had charge from Cape Howe to Tuross River.
1387. I suppose you are aware of the object of this Committee? Yes—to elicit information.
1388. In connection with the working of the Fisheries Act? Yes.
1389. In your position have you come into contact with a great many fishermen and oyster lessees? Yes.
1390. Where are your duties confined to now? Anywhere in the Colony.
1391. Do you visit at any time wherever you are required to go at the instance of the Commission? Yes.
1392. Can you explain the nature of your duties? At the present time, if there is anything wrong as reported by an inspector, I have to go and make inquiries. If there is supposed to be any breach of the Fisheries Act, I am sent to see if the report is true or not.
1393. You are not sent as any special advocate or agent on the part of the Commission to prosecute in any case at the Police Courts? No.
1394. Have you taken any particular interest in the fishing industry? Yes.
1395. Do you consider that the provisions of the Fisheries Act have applied justly, and have given satisfaction to the people that carry on their callings as fishermen and oystermen? I do not think the Fisheries Act has worked at all.
1396. In what respects has the Act worked disadvantageously or unsatisfactorily? As it is at the present time the fishermen have the best of it if they only knew it, because the Act is so loose in so many sections.
1397. But at the same time there are provisions in the Fisheries Act which do operate very unjustly with regard to the fishermen? I can hardly say that, but they would be if they were carried out in full vigour by the inspectors.
1398. But inspectors are not charged with any special powers, are they? No; I am sorry to say they are not.
1399. Do you think that it would be much better to charge the inspectors with more power, instead of its being a matter of necessity to refer cases which come under their notice to the Commission before any action is taken? I think that would be very much to the advantage of the whole community.
1400. Would it be better, in your opinion, with regard to the closing of certain portions of rivers and tributaries, and also as to the leasing of oyster-beds, that the matter should be left under the control and to the discretion of the local inspectors? I do, most decidedly. Licenses are not issued under the inspectors.
1401. Have you had many complaints brought under your notice by the fishermen or oyster lessees? By oyster lessees I have.
1402. What were their complaints? That the Act treated them very badly—that they got no protection from it.
1403. How do you account for their complaints—was it on account of the administration of the Act, or on account of the provisions of the Act, which give people power to take up indiscriminately 100 yards of a river here, there, and everywhere? It is on account of the Act itself in many respects. Under sections 9 and 11 people can go and rob one another with impunity. If you are an applicant for an oyster lease you may pay down £10 for 1,000 yards, and I, as a private individual, can go and take every oyster on the land you have applied for, whereas if you take one oyster off that ground you can be fined £50. Of course the lessees do not like that. The Act is to blame for that.
1404. With regard to the leasing system in connection with oyster-culture, do you not think it would be better to have a provision so that one side of a river, or a large portion of it, might be given to one lessee, instead of allowing people to take up 100 yards here and there indiscriminately? Certainly.
1405. Has not a great deal of pilfering taken place owing to the present system? Yes. Pilfering has been one of the greatest curses of the Colony.
1406. Have you at any time brought under the notice of the Commissioners proposals to remedy any defects or grievances alleged to exist in connection with the Fisheries Act or the Oyster Fisheries Act? Yes; I have drawn the Secretary's attention to them. 1407.

Mr. F. W.
Smithers.
9 July, 1889.

1407. In those cases to which you have drawn the attention of the Secretary, have they been remedied, or have your recommendations been carried out? They have been carried out so far as that the Secretary drew up a new Bill, which he very kindly showed to me, and asked me to look through, which I did. I have not seen it since then.

1408. Do you know the members of the Commission? Yes.

1409. Do you ever come into contact with them? Yes, frequently.

1410. You come into contact more directly with Mr. Thompson, and through him you make your recommendations? Yes; but he will not do anything until he sees the Commissioners. He refers me to the Commissioners if I want anything.

1411. There is a provision in the Fisheries Act giving an inspector power to seize nets of an unlawful mesh;—have you had many of those cases brought under your notice? Not many; but I have had some.

1412. What is done with the nets after they are seized? They are brought down to the office, and after remaining there among the rats they are cut up and sold.

1413. Is it not a fact that some nets seized have, in some instances, been sold at the Commissioners' will, while in other cases they have been allowed to rot? They are always kept for sixty days; then they are sold.

1414. Would they not be likely to rot during that time? Yes. Sometimes they are kept more than sixty days—it might be 120 days.

1415. When a net has once been passed as legal under the provisions of the Fisheries Act, do you not think that it should always be considered legal? No.

1416. Is it not a fact that a net after being used shrinks? Yes.

1417. Do you think it would not be rather hard on a fisherman if, after he had used a net for a certain time, to punish him for being in possession of a net which had been passed as legal? No. He should first get a net somewhat larger than the legal mesh, so as to allow for shrinkage, otherwise the destruction of fish would be very great. A man would always say that his net had been passed as legal, and we could not identify the net afterwards.

1418. Do you not think it would be better to have a provision to punish people for bringing under-sized fish to market, rather than be so particular as to the mesh of the net? No; because there would be great destruction of small fish, although the provision might be carried out very strictly at the market. At Tuggerah Lakes, where nets have been hauled ashore, I have seen thousands of small fish thrown on the beach to rot.

1419. Do you come into contact with everyone of the officers of the department? Yes.

1420. Do you think they are all required? No—that is if each inspector had to do his own work.

1421. Do not you think it would be better to locate those men on the particular rivers over which they have control;—for instance, in Sydney, do you not think that the inspectors, who have control over the Parramatta and Lane Cove Rivers, should be located on these rivers? Certainly.

1422. Do you think it would be better to apply that rule in all cases? Yes, in all cases the inspectors should be right upon their work.

1423. How long has the Hawkesbury River been closed? I know it was closed when I came to Sydney two years ago.

1424. Are you aware of any complaint having been made as to the limited space given to the fishermen on that river to carry on their avocation? Yes; complaints were made about the beginning of this year.

1425. I think a complaint was made by myself? Yes.

1426. In response to that complaint did you and the Secretary visit the Hawkesbury River? I went up there.

1427. What was the result of your visit? I reported that a certain portion should be opened to the fishermen.

1428. Was your recommendation carried out? Not that I am aware of. I reported, and I saw nothing of it afterwards.

1429. Do you know the Hawkesbury well? Yes.

1430. Do you think that the main river might be opened, while the tributaries might be closed, for fish-breeding; and do you think that that might apply to all other rivers? Not in all cases. In the Hawkesbury, for instance, there is a very small area of breeding-ground in the main river, but Mangrove Creek is a good breeding-place; and on the right, between Bar Point and Mangrove, there is a stretch of 4 miles which is a very good place for the production of young fish. I should not like to see that bit opened.

1431. Do not you think that much more space could be given to fishermen without any injury being done to the fish or to the public? Yes.

1432. Do you know the Parramatta River well? Yes.

1433. Is it now closed from the vehicular bridge to its source—do you not think that those waters could be well extended to the railway-bridge at Ryde? I see no objection to opening it as far as Ryde.

1434. The breeding-grounds are entirely above the railway-bridge? Yes; at the same time opening the railway-bridge to Ryde would open a very good nursery at Hen and Chicken Bay. That is almost as good a nursery as the Homebush Flats.

1435. But there is not much flat in Hen and Chicken Bay? There is a good deal of breeding-ground around the sides of that bay, but at the same time I would not object to opening the river to the bridge at Ryde.

1436. Do you not think that the Gascoynes, on the Parramatta River, have been rather harshly treated? I do not think so. You are probably not aware of the circumstances, which are that those fishermen located themselves on the river twenty-five years ago. They have been carrying on their avocations over that period, and for the last four or five years they have been confined to certain waters, whereas a few years ago they had the whole of the river open to them, so that they could supply with fresh fish the residents of the northern side of the river, as well as those on the southern side and at Parramatta. Now, owing to the closing of the waters, these people are debarred from enjoying the luxury of fresh fish in the morning.

1437. Do you not think, in order to supply those people in the places I have mentioned with fresh fish, the area of open waters ought to be extended as far as the railway-bridge at Ryde? Yes; I do not object to the river being opened as far as the railway-bridge at Ryde.

1438. Do you think that the fish-market at Woolloomooloo is adequate for the requirements of fishermen? Very far from it.

1439.

- Mr. F. W. Smithers.
9 July, 1889.
1439. Do you believe that the supervision is good? No; I have had experience of that market, carrying fish with Dalton from 1879 to 1882, and I saw the way the fish were treated there.
1440. Of course you are aware of the mode of transmitting fish from the different rivers? Yes.
1441. Does it come principally by steamer? Yes; but a good deal comes by train now—from the Northern Districts.
1442. In what condition does the fish arrive? It arrives in good order just at present, but in summer the fish arrives in muggy condition. For that a good deal of blame rests with the fishermen.
1443. Have you ever heard the fishermen complain that their original consignments have considerably decreased by the time they reached the Sydney market? Certainly. I saw that years ago, and it is the same now. Pilfering goes on in the carts and in the markets every morning. Here is an instance that has come to my knowledge: A fortnight ago a man at Broken Bay sent up twelve baskets of fish, and when his empty baskets came back to him he found half a basketful of his own fine whiting. It is done in this way: A man takes up a basket in the market and throws down a few fish here and a few fish there, leaving a few nice whiting at the bottom of the basket. Some people help themselves to these whiting that are left and the fishermen are the sufferers.
1444. Do you think that this is due to improper supervision? Yes. I hold that the Government ought to have an officer in the market to see that the fishermen are not robbed. It is no good for the fishermen trying to protect themselves. I think that some protection might be obtained if the following plan were adopted:—The fishermen might put tape round their baskets and seal the tape with wax, or they might lock up their baskets and they should not be opened in Sydney until just before the sale.
1445. I suppose it would not pay a fisherman to come down with his own fish? No, because a man might sometimes have twelve baskets of fish but at other times only two baskets. There is no doubt he is robbed at present, and the public also suffer, because in the market every morning the fish are positively spat upon by half the larrikins of the city. A crowd of people walk all over the fish and spit on it.
1446. Have they not raised tables there? Nothing at all. The fish is sold on the floor.
1447. So that if Inspectors Seymour and Mulhall say that the market is adequate for the requirements of the public, that the interests of the public are protected with regard to cleanliness and health, they are not correct in their statements? No, very far from it. Half of the market ought to be railed off, so as to keep the public outside and away from the fish.
1448. What is the floor composed of? Stone or concrete.
1449. Are there no marble slab tables? There are some tables on which the fish are cleaned.
1450. Do they permit the cleaning of fish at the market? Yes; the fish-dealers are allowed to do so by paying so much for the use of a small table with the water laid on.
1451. Can you give the Committee an idea as to the mode of disposing of the fish, from the time it leaves the fishermen until it gets into the hands of the public? The fish, for instance, comes from Broken Bay, where it is put on board a steamer and brought to Sydney in good order. Then it is handed over to the carter, in whose tender mercies it remains for 5 or 10 minutes. It is brought up to the market, put out on the floor, a few choice fish being left at the bottom of the baskets, which go as pickings. Some of the fish may be left there all night, whilst some may be there only a few minutes before the sale. Then the fish is put up for sale by auction. The people crowd all round knocking each other over the heaps. Any morning you go there you will find a couple of hundred people treading on the fish. They are then put into dirty baskets, with a dirty bag thrown over them, and very frequently they are taken down and washed in the dirty waters of Woolloomooloo Bay. There are cases in which the fisherman only get 1s. 6d. a heap for their fish, but the public do not get the advantage of that. The fisherman gets nothing, and only the dealer gains anything by it. Here is a case which has come to my knowledge: A man went to the market at 4 o'clock instead of 5, and when he got there one of the carters said to him, "I have got a basket of fish, will you take it?"
1452. Where did he get those fish? Of course from some poor unfortunate fisherman.
1453. Do many schnapper come into the market? No.
1454. Are the schnapper caught by a line? Not all of them. I have frequently seen them caught with nets at Lake Macquarie.
1455. Is fish which is caught by net likely to remain fresh longer than fish caught with bait? Yes; if the bait is fresh the fish will keep, but if the bait is bad it will turn the fish immediately. Fish caught in water that is not very salt will not last so long as fish caught in salt water.
1456. In 1886 an Act was passed prohibiting net-fishing in Port Hacking;—do you think that that was a wise provision? No; they might have opened it up as far as the Spit.
1457. As far as oyster-culture in Port Hacking is concerned the law is inoperative? Yes.
1458. An Act was passed by the last Parliament to protect fish in inland waters;—have you directed your attention to the application of that Act? Not as yet.
1459. Have the Commission directed you to take any steps? No; the only thing I have done has been to put trout in some of the waters.
1460. Are you aware that tons of fish are caught in the Murray River and sent to Melbourne? Yes; and they are caught with dynamite too.
1461. Do you not think it would be wise on the part of the Government to establish another fish-market, say on the Darling Harbour side? I think it would be advisable to do so near the railway station. That would also be a great advantage when the fish from Wollongong are sent down by rail.
1462. Would that be more convenient to the public, and at the same time give more security to fishermen in protecting their fish? Yes; it would be a very great benefit to the public.
1463. Have you taken any interest in trawling for fish? Yes.
1464. Do you think that that could be carried on on our coasts? Yes; I am certain of it.
1465. Are you aware of its having been tried at any time? It was tried once in Botany about three months ago. I tried it down at Green Cape about six weeks ago, but I was unfortunate in getting bad weather, and therefore I was not successful, but I am going away again in a fortnight to trawl in Disaster Bay.
1466. With regard to the oyster-beds, do you think it would be a good idea to close all the rivers and beds, say, for three years, in order to resuscitate the oysters? No. I think it would be far better if we let the oyster-beds at reduced rentals, so as to have them all taken up and the grounds worked.

Mr. F. W.
Smithers.
9 July, 1889.

1467. Are you aware that there is a disease at present amongst the oysters? Yes; in some of the rivers.
1468. Do you know the nature of it? Yes; the worm disease.
1469. Can you suggest any remedy? The only way is to clear the oyster-beds. The mud has got into the oysters; the eggs of the worm have got in with the mud, and they have bred inside the oyster. There is none of the worm disease in the southern district. The oysters there are all off the mud on a rubble bottom.
1470. Do you know George's River? Yes.
1471. Do you not think that might be opened up so as to give the fishermen more room? I hardly think so.
1472. Are you aware that ten or twelve years ago you could catch as many fish as you liked with a line up the Parramatta River? Yes. I have been told that you could catch them with a line many years ago.
1473. Are you aware that at present it would be very difficult to catch one fish there in a day, and perhaps you might not even catch one? Yes; but at the same time there are plenty of net-fish there. Before I left here in 1882 I went up the river, and the fish were rather scarce, but when I came back two years ago to this district I was surprised to see the quantity of fish up the river. There is any quantity of net fish there. I think too much feed comes down to allow fishing with a line.
1474. Do you know the Moruya District? Yes; the fish are plentiful along the coast there.
1475. Do many fish come from there to Sydney? No, very few.
1476. Fish come in different ways, fresh, dried, and smoked? Yes.
1477. Are you aware that an industry is carried on there by drying the fish and sending them to market and that it pays very well? Yes; I was down at Molagoota, in Victoria, and I found that they had a very fine fish-preserving industry there. They can the fish.
1478. You say you know the Commissioners;—do you know of their having made any special visits to the different grounds throughout the Colony? No; I made one visit, I think, about two months ago, out to Botany, and once I went out with Dr. Cox to Port Hacking, to look into the salmon disease, or what is supposed to be the trout disease out there.
1479. Who recommends the closing of the waters—the inspectors or the persons in the office? Persons in the office I think.
1480. Just by looking at the plans without consulting the inspectors? Yes, that is it.
1481. Why was Middle Harbour opened? I know it was closed and it was opened the next week.
1482. I suppose you do not know anything about the appointment of inspectors, as to how their appointments are brought about, on whose recommendation, and so on? No.
1483. Are all the inspectors practical men? No.
1484. Do you think that it would be much better for the department if all the men employed were practical men? Yes; but you would not want to get the fishermen themselves as inspectors.
1485. Do you not think it would be better for the inspectors themselves to issue licenses instead of that being done at the head office? Certainly; the inspector would then know what is going on. The same should be done with regard to the oyster leases.
1486. Do you know Mr. Woodward? Yes.
1487. Has he a large number of oyster leases? Yes.
1488. Has he fulfilled the conditions of every one of them? I do not know; I have had very little to do with the leases.
1489. At the same time do you know that he is one of the largest oyster lessees? Yes.
1490. Is there a steam-launch at the disposal of the Fisheries Department? They call it a steam-launch.
1491. Do you ever use it? Yes, we went round to Broken Bay in her once, but that is the last trip I shall make in her outside the heads.
1492. Is she a proper boat for that kind of work? No; she is unsafe. With regard to oyster-culture, I would suggest that the rent should be reduced, and that the lessees should be compelled to have spat collectors. At present we have no way of preserving spat. The spat is allowed to drift away, to be washed away, or to be destroyed by fish.
1493. How long does it take an oyster to be eatable from the time of the spat? In some places it may be two years. I have known an oyster to be fit for the market in that time. It all depends upon the water. In some places it takes four year.
1494. Can you give the Committee a statement of your views as to what should be done with regard to oyster-culture? Yes; I beg leave to submit the following statement which I have prepared:—"I first point out that there is no inducement given to persons to take up and keep leases, and the most fatal part of it is the rental of £1 for 100 yards, as must be seen by any ordinary or disinterested observer. £1 per 100 yards is the rental claimed for all places, whether good or bad ground—that is, oyster-bearing or not. The consequence is that A takes up 2,000 yards in a first-class oyster-bearing ground, from which he obtains (say) 150 bags of oysters per annum—his rent is £20 per year. B has 2,000 yards at the same rent in another river where there are less oysters growing—he gets, say forty bags from this area. C has 2,000 yards at the same rent, upon which there are but few oysters—he gets fifteen bags per year. D would take up 2,000 yards in a place where there are no oysters to try and cultivate, but the rent being the same, £20—therefore, on the face of this, why charge the same rental throughout? Whilst granting that some of the leases are fully worth £1, or perhaps more, per 100 yards, whilst others are really not worth more than 2s. 6d. per 1,000 yards, it might be that C would take up the 2,000 yards, and have to buy his oysters to lay down for spawning purposes; hence it will be, under very favourable circumstances, four years before he could get a return—this means £80 for rent already. Would a person take a lease of orchard properties and as I describe below at equal rents. One orchard, already with fruit-bearing to large extent, on splendid land; another of equal area, but less trees, and ground not as good; another same size area, with no trees at all. Could the poor man afford this outlay? I assert that it is to the small man we must eventually look to for our supply of oysters. If inducement were given we might hope for farmers and others who have their homes on the banks of rivers or lakes, who might then combine agriculture with oyster-culture, and be a benefit to their families, besides to the benefit of our revenue, as all lands would then be taken up, and not left to the mercy of the man of means. But let us trust to the poor man to take up the areas the same as the selector populates the Colony. The remedy is, the introduction of a nominal rent—say 2s. 6d. or 5s. per 100 yards all round, whether good or bad land;

Mr. F. W.
Smithers.
9 July, 1889.

land; then charge a royalty of 2s. per bag upon oysters removed from the lease. This would be payment by result, and the only just way of treating fairly with all parties, making them pay according to the production of their ground, as I have clearly shown in the holdings of A, B, C, and D, which prove unequal rights for the same rent—a loss to the Revenue, and injustice to those who were not fortunate enough to get the choice beds already well stocked with oysters, from which returns could be obtained at once—whilst his less fortunate companion has to wait for years for even a small result. How then can the rent be found? Only by taking oysters off his bed where they are but few already, and selling them, thus impoverishing his bed still more. And further than this—he must take the parent oyster from which he should look for the supply of spat. This cannot be called inducement to persons to go in for oyster-culture. Considering the large amount of foreshore which would be taken up at reduced rents, and the benefit it would be to a large number of families, is it not worth trying? As a matter of fact what have we done? Have we increased our supply under the present Act? If not, after eight years, is it not time to change our Act? Before going further I must not omit to draw attention to a very important matter, viz.: in oyster-culturing—the salinity of the water. To give some of our lakes the salinity required, large pipes might be used to let the salt water into the lakes already closed up from the sea. Another suggestion which must not be overlooked is that applicants for oyster-culture should have two bondsmen. This would help to have the oyster-beds worked more honestly. The next step, besides the reduced rent, is of an important nature. It is that every lessee should be compelled to have upon his lease a spat collector, the kind to be approved of by the Commissioners and inspectors. My suggestion is that it should be made in proportion to the size of the lease—say 20 square yards to every 100 yards leased, up to 500 yards, then at the rate of 10 square yards to every additional 100 yards leased, except in cases wherein lessees may have a very large number of leases, or extra large areas, or in cases wherein the salinity of the water may not be considered suitable for spawning purposes; then if sufficient reason be shown it would be advisable to omit the spat collector. Within this spat collector there should be at the rate of 3 bushels for every 100 yards to 500 or part thereof, and 2 bushels for every 100 yards above that, and that such quantity should be kept within such collector. This done we should accomplish the most essential thing concerning our spat supply thereby helping to make our oyster-beds source of the most profitable in the world. For years past lessees and their servants have with but few exceptions been taking all oysters off their areas as soon as marketable or coming to maturity. Is this not destruction of the parent oyster? Thus exterminating the spat supply. If a poultry farmer sold all the adult fowls he had and sold the chickens as they come to maturity, then where could he look for his future supply of eggs to increase his stock? Let lessees in some places scrub the stones with a broom upon their areas before the spawning season to admit of spat attaching itself, as there is but little chance of spat attaching to the rocks covered with accumulation of slime, mud, and sand—upon sand-flats and other places stick in numbers of small branches which have been previously dipped into cement; one part cement, three parts sand, the whole of the area could then be utilized in helping to collect spat.

1495. Are there any other remarks which you wish to make to the Committee? I wish to draw attention to the destruction of fish by dynamite. I have brought the only cases which have been heard of this kind in the Colony. The public give no assistance in this matter, and even the fishermen do not. They will tell you that dynamiting is carried on, but they will not tell you where.

1496. Are you aware that fish are dynamited at Port Hacking? Yes, I have been out there frequently, Sunday after Sunday, but I could never find out who did it, and nobody would give me any information.

1497. Have you known it to take place anywhere else? Yes, at Middle Harbour, but I never succeeded in stopping it.

1498. Did you ever succeed in catching any one? Yes, I caught Peter Jackson, the fighting man, and Dunlop.

1499. Did you take proceedings against them? Yes; they were fined £30.

1500. *Mr. Stephen.*] Do you say that your jurisdiction over the fisheries extends all along the coast? Yes.

1501. Have you ever had any experience in practical fishing? Yes. Before I joined the department I was for four years with Dalton. Although I was a clerk in the Colonial Secretary's Department, I spent all my holidays and did night work with Dalton in the fish trade.

1502. That is in the disposal of fish brought up to the market? No; I used to be on the Hawkesbury River and at the Tuggerah Lakes with Dalton.

1503. As a fisherman? He used to carry the fish to market in the "Kate" and the "St. Albans."

1504. Have you had any experience as a practical fisherman earning your living by it? No.

1505. Consequently you are not thoroughly conversant with every little complaint that the fishermen make? Yes.

1506. You do not thoroughly understand the nature of the complaints that the fishermen make as to being hardly used under the Act? Yes; because I have been associated with the fishermen ever since 1879.

1507. But not as a practical fisherman? No; but I have been with them hauling and with them in their boats.

1508. Do you think that the working of the Fisheries Act bears rather harshly on the fisherman? No; I do not see where it comes hard on the fishermen.

1509. Then you think that if they complain of harsh treatment they have no real grounds for their complaints? No; unless somebody has gone so far as to seize a net when he should not, or it may be that the complaints are made with regard to the closed waters.

1510. What are the real duties of the Fisheries inspectors? They are supposed to go out and see that no one is fishing in closed waters and they have to send in weekly reports as to the quantities of fish and oysters sent away.

1511. Have they any power to seize fishing utensils if found to be illegal? Yes, the Act gives them that power.

1512. Can they do this under the Act independently or have they to wait for instructions from headquarters? No; an inspector or sub-inspector can seize a net and then he reports the matter to the head office.

1513. Then I am to understand that the inspectors are to see that the Act is properly worked and that the work of the fishermen is carried out properly and legally? Yes.

1514. Do you think that the local inspectors have sufficient powers? No.

1515. What way do you think that their powers are too limited? In the first place they should be allowed

M. F. W.
Smithers.

9 July, 1889.

allowed to issue licenses—then they would know who had licenses and who had not. Secondly the rents for oyster leases ought to be paid through them. They would then know who had paid their rents and who had not. All correspondence should go through them instead of through the head office. Then they would know all that is going on in their districts.

1516. Then you think that if the fishermen had any complaints to make they should make them not through the head office but through the inspectors? Yes; let them forward the complaints to the head office. The local inspector is the best one to judge.

1517. Do you think that the fishermen in that case would have any guarantee that their complaints would go to the head office in exactly the same way that they were made to the inspector? They would have to go to the head office in the same way. He would send off the documents to the head office with his own minute written upon them.

1518. You do not think the Fisheries Act is perfect? No.

1519. Can you suggest any amendment or improvement in the Act in the event of a new Bill being passed? I think that the hauling-net might be kept at the same length that it is now, but I think there should be 50 fathoms of $2\frac{1}{4}$ inch mesh in the bunt and on each side of the bunt there should be 25 fathoms of $2\frac{1}{2}$ -inch mesh and on the outside 25 fathoms each of 3-inch mesh. That would assist the fishermen. I would restrict the use of the gar-fish net, which is one of our most destructive nets for small fish. I would only allow it to be used in the months of March, April, May, June, July and August. I would not allow it to be used up the rivers.

1520. I suppose you have no desire yourself to be in any way harsh upon the working fishermen? No; I have had a great number of cases and in none of those cases have I ever pressed for a penalty. I have never acted harshly with anyone.

1521. Have you simply tried to do what was fair between the public and the Commissioners? Yes. The Commissioners never said a word to me when I reported that I only asked for a shilling penalty or some small penalty of that kind.

1522. When nets are seized are they dried carefully before they are stacked for 60 or 120 days? I think so. I generally dry my nets, but they get the dry rot at the office.

1523. Is there sufficient care taken to preserve the nets from damage? No.

1524. Does the Act give the Commission power to sell those nets when seized? Yes.

1525. Is there any restriction as to what they are to be sold for? No; they are sold, I think, under the discretion of the Commissioners.

1526. Has it come to your knowledge that nets which have been seized have been sold again for fishing and that the purchaser has been fined? I have never heard of it. They are cut so as to make them legal.

1527. When the nets are cut down before they are sold to the fishermen are they put together so as to make them legal? Yes; a net may be cut into a dozen pieces.

1528. By the employees of the Fisheries Commission? Yes.

1529. And sold after being put together again? They are sold in pieces, and the purchaser is allowed to put them together himself.

1530. Are you aware whether the supply of fish has increased or diminished since the closing of Port Hacking? I think it has increased. I know it has been worked pretty frequently.

1531. Are you aware that reports have been circulated that the fish have decreased? Yes; but it is not correct. The fish have decreased since the last heavy rains.

1532. When the fish are driven out by floods do the same fish return? Yes; I am of opinion that they only go down to the deeper water, and that they come in again.

1533. Have you a practical knowledge of George's River and its tributaries? Yes; that is, I have been backwards and forwards amongst the fishermen there.

1534. What do you consider would be the best seasons for keeping George's River open for net-fishing? As it is now the river is open all the year up to the railway bridge.

1535. Do you think it would be desirable to open up George's River to Salt-pan Creek without including the creek? I think myself that they have sufficient water open there at present.

1536. I have a report from the fishermen with regard to the Woniora River. They say that the greater portion of it is a natural breeding-ground, but owing to its great depth and rough bottom it could not be worked by fishermen, and they think that it might be left open to the crossing. Do you think that it would be advisable to open it as far as the crossing? No; I would not open the Woniora at all. I should say that if it were closed it should be closed altogether.

1537. Do you think it would be desirable to open George's River as far as Salt-pan Creek? No.

1538. Have you a practical knowledge of the habits of migratory fish? Yes.

1539. What kind of fish do you think belong to that class? Mullet, whiting, black-bream, silver-bream, yellow-tail, tailor, king-fish, salmon. I think we might also include schnapper, because I have seen them travelling up and down the coast.

1540. What I mean by migratory fish are school fish? Yes; I thoroughly understand that.

1541. Do you think that those fish generally return to the same waters? Yes; they travel north. When I was in the southern district I have been miles up the coast and I have seen the fish working their way up north. I have seen immense shoals of them working their way north as far as Montagu Island. They seemed then to ease off and in the latter part of the season they work their way south with the whales.

1542. Do all those kinds of migratory fish which you have named migrate in the same season or have they their own seasons? They have their own seasons. The sea gar-fish and the bream come along at one time, the mullet come along at another time, and the whiting come in just about the same time.

1543. Are you aware of the times when the fish migrate? Yes; the mullet come along the coast up to May. They pass the Southern District about March or April, and sometimes we get them here in May. Then the bream, schnapper, and whiting, come along the coast at Christmas, and what we call the hard-gutted mullet come in about the same time. The gar-fish always come along at that time. A great deal of migration takes place when the fish are driven out by heavy rains at one port, and they then go to the next port.

1544. But with respect to schnapper, and most of the fish you have mentioned, can they not be caught along the coast at any season of the year? Yes, but not in large quantities. I have seen them in tremendous shoals, 12 miles off Twofold Bay.

Mr. F. W.
Smithers.
9 July, 1889.

1545. What means of conveyance have you, seeing that your steam-launch is not very safe? I take the trains where I can get them; I travel by steam-boat and I sometimes take a horse.
1546. What is your salary? £150 a-year.
1547. You get travelling expenses? Yes; 12s. per day.
1548. Do you think that there should be a practical fisherman on the Fisheries Commission as a representative of the fishermen? No, that would not do at all.
1549. Do you think that the fishermen should not have a say in the matter at all? I look at it in this way. A report would come in from one of the fishermen themselves, and I would have to go out and attend to that report, which might affect the Fisheries Commissioner himself, and he would not love me after that. I would not like to have to do my work under those circumstances.
1550. You must not be impressed with the idea that this Committee has met to condemn the Commission or any of its employees? No; but one of the fishermen themselves would only be human.
1551. What we wish you to understand is, that the Committee have not met for the purpose of condemning anyone in connection with the working of the Fisheries Act or to advocate the claims or complaints of any particular class. We simply wish to find out all we possibly can with respect to the fisheries, so that we may be able to make some suggestion as to applying remedies where they are necessary. The fishermen themselves think that they ought to be represented on the Commission, and I wish to find out if it is the opinion of any of the Commissioners or their employees that that should be done. Do you think it ought to be done? No.
1552. *Mr. Stevenson.*] What were you before you were appointed travelling inspector? Assistant inspector at Twofold Bay.
1553. Whom did you succeed at Eden? Mr. Oliver.
1554. Did he resign, or what were the grounds for his removal? Some misconduct on his part. There was a Police Court case against him.
1555. I presume all the papers in connection with that matter would be with the Commissioners? Yes.
1556. Could they be produced? Yes.
1557. When you are travelling I presume you get assistance from the other inspectors in the discharge of your duties? Not in all cases.
1558. Have you ever pointed out any defects in the Act to the Commissioners? Yes, to the Secretary.
1559. What has been the result? I do not know; the Secretary has submitted a new Bill, and that is all that I know of it.
1560. Have you ever heard that the Italian fishermen destroy a large quantity of small fish in their nets? Yes, they are the greatest curse we have in the harbour.
1561. Has nothing been devised to remedy that? No; the only way to do it is to close Sydney Harbour against prawn-netting for so many months in the year.
1562. Who supervises the cutting up of the nets which have been seized? I do not know. One of the boatmen cuts up the nets; but I never saw anyone supervise him.
1563. Do you think it would be a benefit in the working of the Act if inspectors were allowed to have experimental oyster-beds so as to be able to furnish information to the public? Yes; I asked for permission to have one four years ago; but the Commission had no power to sanction it.
1564. As travelling inspector do you approve of the inspectors being removed from one district to another? No; a man would never get to understand his own district.
1565. Is the Southern District a great place for fish? Yes; a great industry could be carried on there.
1566. Do you think that trawling could be carried on with advantage? Yes; all along that coast.
1567. Do you think that it could be done without a survey being first made? I have fished all along the coast between Cape Howe and Green Cape with a line, and I always found a very fair bottom.
1568. Can you suggest any improvement in the working of the Fisheries Act? Yes; I would cut it up and start a fresh one.
1569. *Mr. Howe.*] What is the object of keeping the nets for sixty days before they are disposed of. Is that in conformity with the Act? It is in conformity with the regulations passed by the Commissioners.
1570. Is there any necessity for it? None whatever.
1571. Do you say that they are sometimes kept for 120 days? They generally wait till they have a sufficient number of nets to hold a sale.
1572. You say that the fishermen have the best of it under the Act if they only knew it. How is that the case? Under section 18, of course, we are supposed to prosecute if fishermen are found fishing in closed waters; but the fishermen can go there and use their nets for the purpose of catching prawns with impunity. We have no power to stop that. Then again, if a man is caught fishing in closed waters he can say, "This is my first offence, give me back my net." He then passes on his net to his mate, who can do the same thing, and in that way it can be passed on to eternity.
1573. *Chairman.*] But, as a matter of fact, that has not been done? I am not aware of its having been done. If they knew what they were about they could get the best of it.
1574. They are honest people and do not care about evading the law? Some of them are honest.
1575. *Mr. Howe.*] I heard you make a serious charge with respect to the fish market at Woolloomooloo, namely, that people are allowed to walk over the fish and spit on them. Do you think it would be advisable to rail off a certain space in which the fish could be offered for sale in lots? Most certainly.
1576. Then the whole of the dealers and the public would be excluded? Yes; I would let nobody but the agents and the auctioneer inside.
1577. Has the Government no authority there? They appear to have no authority. We are supposed to protect the fish; but the Corporation get the money for selling what we protect.
1578. Are you aware that a large quantity of saltwater fish is sent into the country? Yes.
1579. Do you think that a fish market should be established at the southern end of the city? Yes; near the Railway Station.
1580. What is your objection to a fisherman being appointed to the Commission? The fisherman who might be appointed to the Commission might be a fisherman living at Botany. I might be sent out to Botany to report, and I might have to seize a net there, and it is not likely that that Commissioner would look on me with loving eyes. Then he might not be well disposed towards fishermen living in another place. There is a certain amount of ill-feeling between the fishermen of Botany and the fishermen of Broken Bay, and I think difficulties might arise in that way.

1581. Where there is taxation ought there not to be representation? That may be so; but it would be very hard to carry on the work under the circumstances I have mentioned.

1582. *Chairman.*] Do you advocate the abolition of the Commission altogether, and the administration of the Fisheries Act by a separate department under a responsible Minister? Some people say that would be better.

1583. *Mr. Howe.*] What is the cause of the dissatisfaction existing amongst the fishermen at Broken Bay? They want more water open.

1584. Is not that the cause of general dissatisfaction? Yes. I would like to point out to the Committee that a large number of whales come up to the Southern District every year. They are caught in Twofold Bay every year. I think that ought to be brought under the Fisheries Act, and also the mutton fishing. The Chinamen make a great living out of the mutton fish down there. When the whales come up they bring a lot of calves with them. Twenty whales were killed there last year. Of course they only pollute the place with carcasses and offal, and they have all the best of it.

1585. You say that you decidedly object to George's River being opened up to Salt-pan Creek? I do not see why they should want any more water open there. They have got a very large quantity of water open at present. If you open up the river to Salt-pan Creek they will then want to have it opened up to the dam at Liverpool.

1586. Do not the fish breed in the estuaries? Yes. If you open up the river as far as you suggested you will want an inspector with half a dozen assistants to watch the fishermen. I do not speak disparagingly of the whole of the fishermen, but I say that some of them want watching.

1587. When you sent in reports and recommendations to Mr. Thompson, have you heard anything more of them? No.

1588. *Mr. Stevenson.*] What is your opinion about opening the Hawkesbury River above Bar Point? I would suggest the opening of Berowra; that would give them a nice bit of meshing and hauling.

1589. Would you object to the river being opened as far as Mangrove Creek? That would destroy a lot of the nurseries of the fish up as far as Mangrove Creek.

1590. Are you aware that there is a great deal of water above Mangrove Creek? Yes; I fell in with the Secretary's views, that it should be opened from Colo up to Windsor.

1591. What is the distance between Mangrove and Colo? About 32 miles.

1592. Would you close that portion? I would leave that portion closed, and I would open the other parts so as to give the people up the river a supply of fresh fish.

1593. Do you not think that it would be better to open the whole of the river? No; because if you opened the river from Berowra up to Mangrove Creek, you would destroy the nurseries for fish, and you would have to incur the expense of an additional man to watch Mangrove Creek all the time, watching the people who live up there. They would have the best of it, while the fishermen, who have to make a living would have the worst of it, because the people up there would fish in the closed waters.

1594. Would you be in favour of opening the river from Wiseman's Ferry to Windsor? Yes; but I would close the Macdonald and Webb's Creek.

1595. *Chairman.*] Have you had a complaint brought under your notice that the contractors for the Hawkesbury Railway Bridge drove piles into the mud, which prevent the fishermen from using one of their best hauling-grounds? Yes; I attended to that matter. The contractors sent a man round with me, and they used dynamite to blow up the only piles I could find.

1596. *Mr. Howe.*] When you went trawling did you do so under instructions from the Commission, or was it an experiment of your own? The first time it was done with some of the Commissioners, Dr. Cox, Messrs. Hyam, and Hill; the second time it was done under myself.

1597. Are those the only occasions on which any attempt has been made in that direction? Some five or six years ago I believe they made one trip outside, but that is the only one I know of.

1598. Was that when the "Kate" was here? No; I think they went out in the "Ajax" or "Thetis."

1599. *Chairman.*] Have they still got those trawling-nets? Yes; I have got one, and I am going to take it south under instructions.

THURSDAY, 11 JULY, 1889.

Present:—

MR. FRANK FARNELL.

MR. STEVENSON,

MR. WILLIAM STEPHEN.

FRANK FARNELL, ESQ., IN THE CHAIR.

Mr. Henry Woodward called in and examined:—

1600. *Chairman.*] What is your occupation? I am everything in the oyster-line. I am a grower, lessec, retailer, and dealer.

1601. Have you had considerable experience in the fisheries of this Colony? For thirty years.

1602. Not alone in the fishing industry, but also in oyster-culture? Yes; a great deal within the last eight or nine years. It is eight or nine years ago since I began to try and cultivate oysters.

1603. During this time have you come into contact with a great number of fishermen? I know nothing whatever about fish and fishermen. My men have been buying fish for me for thirteen years, but I know nothing more about it.

1604. Where are the fish bought for you? At the Woolloomooloo market.

1605. Do you think the market is in the most suitable place? No; I think it would be much better on the Darling Harbour side. There it would be more central and more convenient.

1606. I suppose you know the fish-market well? I have been there three times.

1607. Have you ever been there in the morning when they have been selling fish? Yes.

1608. Do you think that the arrangements are satisfactory for the sale of fish? I do not think it is satisfactory, but I could not tell you how it could be improved. Unless they had stalls or flat tables, like they have at the Billingsgate Market.

1609. If, as stated to the Committee, the fish are thrown on the floor, that they are spat upon and trodden upon,

Mr. F. W.
Smithers.

9 July, 1889.

Mr. H.
Woodward.

11 July, 1889.

Mr. H.
Woodward.
11 July, 1889.

- upon, do you not think that state of things could be remedied by having elevated tables at the market? Yes; that is what I say. The present method of selling fish is a very rough way in a town like this.
1610. Do you pay any commission to the auctioneer who sells the fish? No; only the sellers pay commission.
1611. As a rule do you obtain the best fish procurable in the market? Yes; nothing else would suit me. I only get them for the shops in King-street.
1612. Do you only sell fish at your shops? Yes; I do not sell fresh fish at all, only cooked fish.
1613. Have you had considerable experience in oyster-culture? Yes.
1614. Are you a very large lessee? Yes.
1615. How many thousand yards do you lease? I pay £600 a year as rent. In fact, I think I pay a little more, and the rent is £1 per 100 yards.
1616. Where are your leases situated? On six different rivers—the Clarence, the Manning, Wallis Lake, Port Stephens, Shoalhaven, the Clyde, and Moruya.
1617. Which do you consider to be the best river for oyster-culture? Wallis Lake. I believe that is the best in Australia, and I do not believe there is any better in the world.
1618. Have you obtained sufficient supplies from your oyster-beds for your shops in Sydney? No; not even for the shops.
1619. Have you had to import oysters? Yes.
1620. From New Zealand? Yes.
1621. Are the New Zealand oysters superior to ours? No. They bring 15s. as against £3 in Victoria, and 15s. for their best oysters as against £2 for our best in Sydney. That is at the present prices and with the present scarcity. There is no comparison between our oysters and theirs. I have some of our oysters now from the deep waters of Port Stephens, which are as good as I ever saw in this Colony. I am getting eight or nine bags per week from there.
1622. Has there not been a considerable decrease in the oysters on the beds of our rivers during the last three or four years, and how do you account for that? We have had no spawn. That is not an unusual thing. All over the world they go without spawning for some years—for ten or twelve years at a time. It is a common case in Europe that there is next to no spawn at all for years. Many Commissions have inquired into this very question. I have read a great deal lately on this question of the scarcity of oysters.
1623. Can you account for this want of spat? Nobody in the world can. All the great naturalists and zoologists say that there is no accounting for it.
1624. Have you been troubled with any disease in your oyster-beds? Yes, it has been very bad at Port Stephens.
1625. What is the nature of the disease? We have termed it the mud disease. A worm bores into the inner part of the shell and fills it up with black mud. Whether the worm makes the mud, or whether it comes in after the worm, I cannot state.
1626. Will not the late floods be the means of resuscitating the beds to some extent? It cannot do any good to the oysters who are touched with the disease already, but the fresh water has killed the worms. I know that fresh water is fatal to the worms. I have seen the worms taken out of the shell and put into fresh water and they have died instantly. I know that the fresh water now has penetrated to the deep water at the bottom of the rivers, and the oysters have become quite fresh.
1627. Do you not know of any other disease? No; this is the only disease I have heard of.
1628. Have you ever heard of an insect called the borer? This is it. It is called the Leucodore.
1629. Mr. Lindsay Thompson in giving his evidence described the worm disease and the borer as two distinct things. Have you never heard of the disease which is called the borer? There is what is called the boring sponge. That is a little bit of a sponge, and it appears that there is something inside of it or attached to it which bores into the oyster. Fresh water kills the sponges as well as the worms. I had some splendid beds at the Clarence River which were covered with the sponge till 1887, but that was cleared away altogether by the fresh water. A great naturalist was out here some time ago, and the Government asked him what should be done. He recommended that the Government should turn on a lot of fresh water. That was during the time of the worst drought, and he did not say where they were to get the water from.
1630. Do you think there could be any improvement made in the leasing system? I do not see how it could be done.
1631. Do you lease in large areas? They are not all large areas. In some places I have leases only 100 yards in length. Plenty of them are 2,000 yards in length.
1632. Do you find that you get as many oysters, comparatively speaking, from a lease of 100 yards as you do from a lease of 1,000 yards? We have got nothing at all from the leases. It has been a dead loss to us for the last five years since we took up the leases.
1633. Are the oysters pilfered from your beds? I do not think there is so much pilfering as people say. A lot of people cry out about their oysters being stolen, but I do not think they are stolen. A great many people deceive themselves as to the quantity they put down, and then they die off wholesale in the water. I read the other day that in Europe they reckoned that they lose six millions out of every seven millions they lay down.
1634. At the present time there is a royalty charged of 2s. for every bag of spat taken by lessees to be laid down. Does that encumber the lessee in any way? No; I wish I had as many as I could get at 2s. a bag. I paid the department a good deal of money last summer for collecting spat and putting it on some of the beds. 2s. would be nothing to pay for a sack of oysters, especially in places where, if they lived, they would grow into many bags. I think the Government ought to receive a large revenue by selling the spat at 2s. a sack off the Crown lands.
1635. Have you visited any other parts of the world where oyster-culture is carried on? No; I have been to Queensland, but there is nothing there but what we have here.
1636. You have visited the Parramatta River;—have you noticed that it is very difficult now to get a single oyster on that river? Yes; but it was just the same twelve years ago. It is owing to the fact that the river is given up to the public that there are no oysters there. You are aware that before an oyster is fit to eat the public will take it off, and they are allowed to do so.
1637. Do you think it would be a good provision to close the Parramatta River and the Hawkesbury River for three years? I do not think you could ever manage to do so with the large population. There was a time when the river was closed many years ago, but the oysters were taken just the same as they are now.

Mr. H.
Woodward.

11 July, 1889.

1638. Do you suffer from people pilfering your oysters on the different rivers? I do not think I lose many. There are some rivers where there is nothing to lose; they could not rob me. That is the case on the Manning River.

1639. What is the most suitable ground for oyster-culture? Clean stones, jack-stones, or any hard substance. At Cape Hawke the ground is all composed of cockle-shells. That is a very good place.

1640. How long does it take an oyster to be eatable from the time of spat? If it is a nice rainy season oysters will be of full marketable size in twelve months. If there are dry seasons such as we have had of late years they will hang on and neither grow, breed, nor do anything else for any length of time. It is wonderful how they grow when the conditions are favourable. We had all the oysters in the Clarence River destroyed two years ago last February, and none of us have had any oysters from the river since, but they are now becoming marketable.

1641. What was the cause of that? The floods, beyond all doubt. There came first of all a very heavy flood. I am sure they would have lived through that only two or three weeks. Afterwards there came another tremendous flood. Soon afterwards the Government tested the river all over in the most sensible way. They dredged right across the river and took up the oysters. You could easily see the oysters which had recently died and those which were alive; 84 per cent. were dead, and I really believe that the remaining 16 per cent. died afterwards. I have known the floods to frequently kill the oysters in the rivers.

1642. At the same time, if the floods are moderate, they resuscitate the beds? Yes; it does them a world of good. I got a letter from one of my men at Shoalhaven this morning in which he tells me that the young oysters are getting on first rate this season. I suppose that is since the rain came on. Oysters never do any good unless we have had plenty of rain. All I got off that river last year were fifty-eight sacks of oysters, and they cost me over £200 for rent and wages. I lost £300 on this river last year. I put down 300 sacks of oysters from Sydney to lay them on the beds, and I got about one back.

1643. Have you ever tried to cultivate the New Zealand oysters? Yes, plenty of them.

1644. Did you do so successfully? No. The most successful place was on some very shallow rocky places at the Manning River. I sent out seventy sacks there last year, and I got forty-seven bags out of them. I sent 298 bags to Cape Hawke, and I got back seventy-five. I sent 300 to Shoalhaven, and I got 100 from there.

1645. What was the size of the oysters when you sent them? A very fair size—larger than we are allowed to take them by law.

1646. I suppose the object was to give them the opportunity of spawning and increasing? Yes. I have a few now at Shoalhaven. I have sent a lot down to the Clarence this year. I got one of my men to send up a bag a few weeks ago, but they were nothing but black skin and water. A man named Comino has a lease opposite to mine on the Manning River, and he put down 1,480 sacks of oysters, and he only got a little over 400 out of the lot. The rest died.

1647. *Mr. Stephen.*] To whom do you pay your oyster-rents? To the Treasury.

1648. Then it is not paid to the Fisheries Commission? No.

1649. Has the Fisheries Commission anything to do with the supervision of the oyster-fisheries? Yes; they have to supervise the fisheries. The worst of it is that they do not supervise them. They seem to have thrown us up.

1650. And the revenue derived from the oyster-culture is not received by the Fisheries Commission? It is counted to their credit.

1651. To all intents and purposes it is part of their income? Certainly.

1652. How long will oysters remain good for eating after they have been taken from the bed? In winter-time, or when it is cold, six or eight weeks, or even longer. In summer-time, at the longest, it might be a fortnight.

1653. Have you to feed them by artificial means during that time? Nobody can feed an oyster. They talk about doing so in Europe, but I do not believe it is possible.

1654. After you take the oysters from your premises will they remain fresh and eatable without deterioration for the number of days you have mentioned? No; they cannot be as good as when they are fresh. The liquor inside of them tastes stagnant, and I am sure would eventually kill them.

1655. Have you heard of people attempting to feed oysters by putting oatmeal in the water? Yes; but I feel certain that is impossible. When they are in season they want no fattening; and when they are out of season I do not think that anything on the face of the earth could fatten an oyster.

1656. What is the best season of the year for oysters? The bulk of our oysters come at the end of September, earlier or later, according to rainfall, and they go out about April. We have one purely winter fishery in this country, that is at the Koruya River, Port Stephens. That is the only real winter fishery. They come into season in May, and they go out of season in November.

1657. Are there various kinds of oysters on the coast and in the rivers? Yes. I am quite certain that the oysters in this country have yet to be classified. They are nothing like the European or American oysters. If they are found outside I am certain they will be found to be different altogether, and I think I could describe the kind of oyster that would be found. All the deep-water oysters that we have in the rivers are rounder than those taken off the shores in shallow water. They approach more in shape to the European oyster; but they are thicker, and ours have hard shells. In America they are similar to ours; they are longer than they are broad, and they have hard shells.

1658. Are the oysters known by any particular names for the different kinds? No; I believe they will have to be classified and named.

1659. Is any particular kind of oyster more liable to disease than the others? All the oysters in Port Stephens have been touched with the disease from the shore down to the deep-water. I have had oysters obtained from 40 feet of water. I have a diving apparatus there, and the divers get oysters regularly.

1660. Which oysters are the most liable to worm disease? All kinds are liable to it. We have had the disease in the Hawkesbury, and in the Hunter it is dreadful.

1661. Are rock-oysters liable to it the same as the drift-oysters? Yes.

1662. You say that you have never been in Europe, that you have never visited any of the European oyster-culture grounds; in that case, how did you obtain the information in your pamphlet on the subject? I had a magnificent work to read and quote from. I was able to take the scientific knowledge and apply it to my practical knowledge.

1663.

Mr. H.
Woodward.
11 July, 1889.

1663. *Mr. Stevenson.*] Do you know the Commissioners pretty well? I have spoken perhaps fifty times to Dr. Cox, and the same to Mr. Oliver. I think I have spoken twice to Mr. Hill, and I think twice to Dr. Ramsay.

1664. Did you ever recommend anyone for employment to the Commissioners? No.

1665. Do you know whether there is anyone employed by the Commissioners who was formerly in your employ? Yes; there is a man named Curran, at Newcastle, who worked for me at one time by the day, but he was not my servant. A. Gylter, at the Manning, worked for a company I was a partner in.

1666. Did you recommend him for employment? No.

1667. Was he employed on any ground where you have leases? No; I have no lease on the Hunter River, where he is.

1668. I understand that you are not a practical oysterman, but that you obtained your information by reading? I have had more practice at it than any man in Australia. I left Sydney for thirteen months and lived at Wallis Lake cultivating oysters. I left my business in Sydney to look after itself in order to do so.

1669. Do you think that the present Fisheries Commission is the best way of carrying out the Fisheries Act? I think it would be better to carry out the work under one head. I believe that anything of that description would be better managed by one man.

1670. Do any of the Commissioners ever visit your leases? Yes; Mr. Oliver visited three of the rivers this time twelve months.

1671. He is the man who interests himself most in the fisheries. What places did he visit? Wallis Lake, Manning River, and Camden Haven.

1671½. Can you say who paid his expenses on that occasion? I do not know anything about that, but I suppose the Government did. I now remember what he went there for. I wrote a long letter about opening some of the old mouths of the lakes so as to let the sea water in. The Commissioners I suppose thought it was possible to do so. I wrote specially about Wallis Lake. Mr. Oliver went down there and took a surveyor with him to see if it was possible to open it to the sea. They measured off the ground, and they came to the conclusion that it was not possible.*

1672. *Mr. Stephen.*] Is the lake closed at any season of the year? It is never open. It is totally closed up, and there is bush growing between it and the sea. I think there is about 120 yards of land between it and the sea.

1673. *Mr. Stevenson.*] Do you know of your own knowledge that Mr. Oliver or any of the other Commissioners has visited the oyster leases besides those you have named? Mr. Oliver goes away in his yacht and knocks about many of the rivers. I do not think that any of the other Commissioners have ever been away. Mr. Oliver really has a practical knowledge of it. He has been pottering over oysters for any number of years on his own foreshore at Shell Cove. He has got a large foreshore there, and he has bought oysters from me several times to lay down there to see if they would do any good.

1674. *Mr. Stephen.*] You believe that the Oyster Fisheries Commission would be much better managed under one head? Yes; I think it would be better managed, if it were under one man who could take something on himself, being responsible at the same time to the Minister of the department.

1675. *Chairman.*] Do you think that the present system of leasing is a very good one? Yes. I do not see that it could be improved.†

1676. Do you remember the time when you wrote condemning the system of leasing the oyster-beds? Never in my life. I was one of the old lessees.

1677. Do you remember the time when my late father brought in a Bill dealing with the oyster-culture? Yes, very well. I was examined before him.

1678. A royalty was then imposed on oysters of 3s. a bag? We had nothing to do with that.

1679. Do you remember writing at that time? Yes; I was always writing, and before I knew what I was writing about.

1680. *Mr. Stephen.*] You think that the imposition of a royalty was not fair? Yes; we pay an enormous rent, and as far as I am concerned I have been paying it for nothing for years. I have lost over £5,000 since this Act came into force in paying rent and wages and in endeavouring to cultivate oysters. Another lessee on the Hunter River has lost over £2,000 on that one river.

1681. Do you think that the abolition of royalty on our own oysters is much better for the cultivation of oysters here than to impose a duty on imported oysters? I am a protectionist. I am a great believer in protection. If we ever pass protection here I shall do my best to have a duty imposed upon oysters. At the present time, however, I would not propose that, because we really require imported oysters in the country. Our beds are not sufficiently productive at present, and it is a blessing to the people that these oysters do come in from New Zealand.

1682. *Chairman.*] Suppose we had a dearth of oysters such as we have now, would you advocate the imposition of a duty on imported oysters? No; I would not put a penny on them. That would be putting it on our own people.

1683. *Mr. Stephen.*] That is not answering what I want to find out. I want to know if it would be more beneficial for the cultivation of oysters in New South Wales to have a royalty charged in connection with a duty, or to have no duty and no royalty, so as to have free trade in all ways? I would sooner have it free trade at present until our rivers get properly stocked, as I believe they will. If I did not believe that that was the case, I would not pay £300 in rent which I will have to do in a day or so. I am sure the rivers will all come round again, and then we will have no reason to fear opposition from New Zealand. The oysters from there will not fetch a penny against our oysters.

1684. That is provided you are not handicapped with a royalty? Yes; it would not be fair to put on a royalty. One half of our oysters will go to Victoria, and then we will be handicapped at the rate of 3s. a bag, because there is no royalty charged on oysters in Victoria.

1685. *Chairman.*] Then it has been a saving to you to have the royalty abolished? I have had no oysters for a long time, and if I did get a few it would be very hard to charge me 3s. for a bag.

1686. But the abolition of the royalty would be a saving to you in the future? Yes. 1687.

* NOTE (on revision):—Mr. Oliver went to Wallis Lake to see was it possible to open a passage to the sea. He took his own boat there, boatman, and a surveyor. He inspected that fishery and two others thoroughly. I suppose he reported on them, but I never saw the report, nor did he ever tell me what it was. I do not know what his expenses were, nor who paid them.

† NOTE (on revision):—It would be better for the country to lease the whole of the beds in a river to one man.

1687. *Mr. Stevenson.*] Where are your principal oyster-beds on the Clarence? I have four-fifths of the Clarence River beds. I have the whole of the lake beds, and I have never made a penny out of them. I pay £43 a year for them. When I was up there last October and November, one of my men gave me an oyster from one of the lake beds, and it was as bitter as gall. I am certain that the water about the lake is more salty than it is in the ocean. There was no rainfall for a great length of time and the lake was like an evaporating pan. The vapour goes up in the air, and the brine sinks to the bottom of the lake. The Manning River has had no oysters since we took up the lease. It is too salty.

Mr. H. Woodward.
11 July, 1889.

1688. What is the Shoalhaven like? All those rivers when we got them were cleared out under what is known as the licensing system. That was especially the case with the good rivers where the licensees went.

1689. *Mr. Stephen.*] Which do you consider is the best for oyster-culture—where the tide ebbs and flows, or where there is no ebb and flow? No oysters will grow where there is no current. Culture has been a dead failure in Europe. They have opened up all the places they made to the ocean water.

1690. Then you consider where there is an ebb and flow that is the best place for oyster-culture? Yes, if there is a current.

Mr. Richard Hellings called in, sworn, and examined:—

1691. *Chairman.*] What position do you hold under the Fisheries Commission? Boatman.

1692. How long have you been in the service? Seven years last month.

1693. Are you the chief boatman? Yes.

1694. What are your duties? I have general charge of the boats, and I assist Inspector Mulhall.

1695. Have you a good deal to do with the arrangements in the fish-market in the morning? We have nothing to do with the arrangements. We only look after the small fish.

1696. How many boats have you in Sydney? Only one.

1697. Were you in the department in any other capacity before you took your present position? No.

1698. What were you before you joined the service? I had charge of yachts for twenty-five or twenty-six years.

1699. Have you had experience of fishing? Not a great deal in this country; but I had in England.

1700. Have you heard the fishermen on many occasions complain? Yes, very often.

1701. Have you heard them complain of the bad arrangements for the disposal and sale of their fish at the market? Yes.

1702. Have you ever heard them complain of their consignments of fish having reached the market much less in quantity than when they were originally sent? Yes, repeatedly.

1703. How do you account for the pilfering? I can scarcely tell you that; but I can give you an instance which shows how difficult it is to find out: For three or four months I was down at Lake Macquarie doing duty for Inspector Boyd, who was sick. When I was coming back to Sydney I got a nice lot of fish from one of the fishermen, which were put on a string and placed in one of the fishermen's baskets. I went round with the fish in a small steamer to Newcastle. I saw the whole of the fish taken out of the small steamer and put into the Newcastle boat. I came up in the steamer to Sydney, and I marked the basket in which my fish were with a string tied to the handle. I saw the fish taken out of the steamer and put into the carts which took them to the fish-market, and I travelled in one of the carts in which my fish were. When we arrived at the market we opened the basket so that I could get my fish, but my string of fish was gone, and one-third of the fish that were in the basket was also gone. They must have been taken on board of the steamer.

1704. Do you think the markets are unsuitable for the public as well as the fishermen? I think it is rather on one side of the town for the general public.

1705. Do you think it would be a good idea to have a depôt for the fish at Darling Harbour as well as at Woolloomooloo? I think it would be more central to have it somewhere about the Redfern Railway Station. You could not use the Darling Harbour water for the fish, although water might be laid on there.

1706. Have they no elevated tables at the Woolloomooloo fish-markets such as they have at other places? No.

1707. Are the fish simply thrown on the floor? Yes.

1708. Is there any protection such as a railing to protect the fish from damage and to keep the public off? No.

1709. Then it is quite possible, as has been stated to this Committee, that the fish are often trodden on and spat upon? Yes, that is the fact. I think that Mr. Seymour and his assistants do all that they can to avoid that, but of course they cannot watch everyone.

1710. I suppose that the persons who go to the market are rather of a rough class? Yes. The majority of them are.

1711. I suppose that there is not the slightest doubt that a lot of the bruised fish which are spat upon are sold to the people in the suburbs and the city? Yes.

1712. Have you ever heard any of the fishermen complain that the provisions of the Fishery Act bear harshly upon them? Yes, frequently.

1713. In what respect? Generally in respect to the closed waters.

1714. Do you ever hear them complain as to the mesh of the net? Not so much as to the mesh as to the length of the net.

1715. Do they think that the length of the net is not sufficient? Yes.

1716. How do you account for the decrease in the amount of fish in the Parramatta River of late years? I do not know that there is a decrease in the fish. Until the very heavy rain of a few weeks ago all the bays were teeming with fish.

1717. *Mr. Stephen.*] Who has charge of the arrangements for the sale of fish in the market? Mr. Seymour has full charge.

1718. Does he make what arrangements he thinks fit? Yes.

1719. Do you think that the arrangements are satisfactory? As far as the sale of fish is concerned, I think they are.

1720. Do you think that the accommodation is sufficient for the sale of the fish as human food? No. If the fish could be put away from where the people walk it would be a great deal better than at present.

1721.

Mr. R. Hellings.
11 July, 1889.

Mr.
R. Hellings.
11 July, 1889.

1721. Do you think it would be an improvement to have a sufficient number of elevated slab tables? Yes, it would be a great improvement.
1722. Do you think that the cost of making the necessary improvements would be very great? Yes.
1723. Are the arrangements at the market satisfactory generally to the fishermen and the purchasers? Yes, but I have heard them complain.
1724. Would the market which you suggest should be established at Redfern be in addition to the present market? Yes. The fish could then be disposed of in a fresher condition. At present a very large quantity of fish come by rail, and, of course, if there was a market at Redfern there would not be so much cartage.
1725. Do you think that a market at Redfern would be in the best position for the fish coming to town from north and south? Yes.
1726. Why? Because there is a great quantity of fish coming in by rail now, and there would be still more in future.
1727. *Chairman.*] Are there not a great quantity of fish brought in by small steamers which heave to at the wharves at Darling Harbour, and would it not be desirable to have a fish-market at Darling Harbour, where those fish could be sent? The most of the fish that come to Darling Harbour are brought by the Newcastle steamers, and I do not think it will be long before they all come by rail. Most of the fish that is brought by the Newcastle steamers come from Port Stephens and Lake Macquarie. A great deal of the Lake Macquarie fish comes by rail, and I believe that a great deal more of it will come in future.
1728. *Mr. Stephen.*] Does the fish that is brought by fishermen in their own boats go to Woolloomooloo? Yes.
1729. *Mr. Stevenson.*] In speaking of establishing a fish-market at Redfern, where would you propose to put it? I only mean that it would be desirable to have it in that vicinity.
1730. Do you mean in the vicinity of Redfern or in the vicinity of the railway? Near the railway.
1731. Are you aware that the trains go right down to Darling Harbour? I know that wood and that sort of thing is taken down there.
1732. If there was a fish-market there, could not the trains be taken right down? No trains do come down the Sydney side where the steamers land their fish.
1733. I am not asking about that. You say that the fish comes by rail. Would it not be more convenient than putting the fish out at Redfern to take it to some depôt at Darling Harbour? I do not know much about the locality. What made me suggest Redfern was because I thought it would be more central, and because Redfern is the terminus.
1734. *Mr. Stephen.*] In the event of a market being established at Redfern, would that prevent a second handling or a carting of the fish? Yes, if the fish-market were placed close to the railway.
1735. *Mr. Stevenson.*] What do you call Redfern? I am referring to the Redfern Railway Station.
1736. If you had a second depôt would you refer to have it in the neighbourhood and not in Redfern itself? No; I mean close to the railway.
1737. *Mr. Stephen.*] Would you have it where a siding could go into the market, so that the fish might be deposited there? Yes; the great thing would be to save handling the fish.
1738. If the fish were brought down to Darling Harbour would they have to be carted to a market? Yes; at present they would.
1739. *Mr. Stevenson.*] When your fish was stolen from the steamer when coming from Newcastle to the market, did you make representations to anyone? No; it is too common an occurrence.
1740. Has any action been taken by the Commissioners to prevent this wholesale pilfering? Not that I am aware of.
1741. Can you suggest any means of stopping it? Not unless there was an inspector or someone of that kind to take charge of the fish, who would never lose sight of it from the time it left the fishermen till it arrived at the market.
1742. *Chairman.*] Could there not be a system adopted by which the baskets could be locked or sealed? The present system of sending open baskets to the market is a very loose one. In England the baskets are packed up, they are covered with straw, the lid goes over that, and they are properly fastened. Here they only put a little bit of string on each side of the basket. The string can be easily loosened and tied up again.
1743. *Mr. Stevenson.*] Do you attend the market every morning? Yes.
1744. How often does Mr. Mulhall buy fish at the market? There was one time when he used to buy fish every morning. That was the time when he used to get fish for the Exhibition.
1745. Do you sometimes buy fish? Very seldom.
1746. *Mr. Stephen.*] Do you ever buy fish on commission for people who use it? No.
1747. *Mr. Stevenson.*] Does Mr. Mulhall buy fish at auction? Yes; I have seen him purchase fish.
1748. Do you know what he does with that fish? No, I do not, but I think he takes it home.
1749. Do you or Mr. Mulhall ever purchase fish and take it to the Commissioners? I do not purchase any; Mr. Mulhall does; that is for the president, Dr. Cox.
1750. Who pays for that fish? Mr. Mulhall pays for it in the market.
1751. Does he buy it at auction or from the baskets? Sometimes he buys it one way and sometimes the other. Sometimes there is such a crush there that you have to be very smart to get in to buy fish. Sometimes Mr. Mulhall arranges with an agent and says he will take a certain heap of fish at whatever price the same sort of fish is sold for at auction.
1752. Does the auctioneer sell the fish in lots, with the right to take one or more lots? That is not always the case. Very often there are ten or twelve heaps in a row of the same sort of fish. Sometimes the auctioneer says you can have one of the lots; at other times he will sell several heaps in one lot. As a rule the heaps of fish are sold separately.
1753. Do you or Mulhall ever get fish free at the market? Yes.
1754. How do you manage it;—do the fishermen make a present of it to you? Yes.
1755. What do you do with that fish;—do you take it to the Commissioners? No. I do not know what Mr. Mulhall does with his, but I take mine home and eat it.
1756. Do you remember an illegal net being seized which was being used by one of the Commissioners? No.
1757. Do you remember a net having been seized while it was in the possession of Mr. Hill, one of the Commissioners? No.

Mr.
R. Hellings.
11 July, 1889

1758. Were you not present when that net was seized? I never knew that Mr. Hill had a net seized.
 1759. *Chairman.*] Did Mr. Knox have a net seized? Yes.
 1760. Were you present when that was seized? No.
 1761. Do you recollect the circumstance of the seizure? I know that the net was seized by Inspector Quinan.
 1762. *Mr. Stevenson.*] Have you ever had any practical experience in fishing? I have done very little fishing here, but I had practical experience in England.
 1763. Do you know whether Mr. Mulhall ever made his living by fishing? I do not know, but he has not since I have known him.
 1764. With reference to prosecutions which have taken place in the Sydney District, which of the inspectors have brought most cases—generally speaking? I cannot say for certain, but my opinion is that for twelve months or so Inspector Smithers had the most cases.
 1765. Is he not a district inspector? He is not located in Sydney. I believe they call him travelling inspector.
 1766. Do you think he has had more prosecutions in and about Sydney than Mr. Mulhall has had? Not, taking them altogether; I was referring to a certain time extending over twelve or eighteen months after Mr. Smithers first came up to Sydney. Of late he has not been in Sydney.
 1767. But since he has been here he has had a great many prosecutions? Yes.
 1768. How do you account for that being the case, seeing that Mr. Mulhall has had full control over the whole of the Sydney waters? I account for it in this way: Mr. Mulhall is a man who is well known. Mr. Smithers, when he came here was a perfect stranger. Even in the day-time he could go up to a man who was doing wrong, and he would not know anything about Mr. Smithers until he told him whom he was.
 1769. Is not most of the illegal fishing carried on at night? Yes.
 1770. How could they know one man more readily than another at night? Even at night you could see a man and know him at a considerable distance.
 1771. Is it not more likely that the difference can be accounted for by the fact that one man's eyesight is better than another's? Mr. Mulhall's eyesight is not so good as it used to be, but he very seldom trusts to his own sight. It is a rare thing for him to be out in a boat without me if he has nobody else with him.
 1772. Have you had any experience in trawling? Yes; I served my time at it.
 1773. Have you any certificate? No; there were no certificates in those days. It is many years ago.
 1774. *Chairman.*] How old are you? 59 years.
 1775. How many men are there assisting with the boats? One besides myself and the engineer of the launch.
 1776. Do you ever use the launch? Yes.
 1777. How often? She was laid up for twelve months, and we only got her out during the last three or four months.
 1778. Is she safe to go to Port Hacking, Broken Bay, or any of those places? She would be in fine weather.

TUESDAY, 16 JULY, 1889.

Present:—

MR. FRANK FARNELL,	MR. O'SULLIVAN,
MR. HOWE,	MR. SEAVER,
MR. RITCHIE,	MR. STEVENSON.
MR. WILLIAM STEPHEN.	

FRANK FARNELL, ESQ., IN THE CHAIR.

Frederick Nelson called in, sworn, and examined:—

1779. *Chairman.*] What position do you hold? Acting assistant inspector under the Fisheries Act.
 1780. Do you hold any other position in the Government Service? I am Senior-constable of Police at Bungendore.
 1781. Are your duties confined to the waters of Lake George? Yes.
 1782. How long have you held that position? Since 12th June, 1885.
 1783. Are you the only officer in the Fisheries Department there? Yes.
 1784. Had you any previous experience in connection with the fisheries of the Colony? Not previous to my appointment, except practical knowledge of the fresh water fish.
 1785. Do you know Lake Bathurst? Yes.
 1786. Are there any fish there? Yes.
 1787. When did it become known to you that there were fish there? About 1865. I knew of my own knowledge that they were put in there.
 1788. Are you sure that there are any fish there now? Not of my own knowledge, but I do from hearsay.
 1789. Do you know any reason why they should not be there as well as in Lake George? No.
 1790. What sort of fish are in Lake George? Codfish.
 1791. Are there any other sort? Yes; I believe there are a few perch, but it is a very rare thing to catch any. During last summer, I think, there were two perch caught.
 1792. Do you often visit Lake George? Yes; sometimes two or three times a week.
 1793. What is the nature of your duties? To see that breaches of the Fisheries Act are not committed, to see that proper nets are used, to report on breaches of the Act to the Commission, and so on.
 1794. Have you any power to prosecute without reference to the Commission? No; I first report to the Commission, and on receipt of authority I prosecute.
 1795. What is the area of the waters? About 20 miles by 11; that is, at present. When the lake is full to its usual level it is a great deal more. I suppose it is then about 25 miles in length.
 1796. Are the fish very plentiful there? During last season I think there were less fish caught than there were during several years previously, but that was owing to the people not regularly fishing.

Mr.
F. Nelson.
16 July, 1889.

Mr.
F. Nelson.
16 July, 1889.

1797. Is there much fish taken out of Lake George? During last summer there was about 1,386 lb. weight taken out.
1798. Where does that fish go to? It is principally sold about Bungendore, Queanbeyan, and Braidwood.
1799. Is any of it sent to Sydney? Yes; some is sent to Sydney, some to Goulburn, and in fact all parts of the Colony. It seems to be rather a choice thing for people to get fish of that kind in Sydney.
1800. *Mr. O'Sullivan.*] How long have there been fish in Lake George? I think it is about eighteen years since they were first discovered.
1801. Were they not put in by Sir Terence Aubrey Murray? He first stocked the ponds on the Windereeden Estate; that was before my time.
1802. Did he not also stock Lake George? The ponds of the Windereeden Estate flow into Lake George, and that is how the lake got stocked.
1803. Is not that about thirty-five years ago? Yes, about that time.
1804. I suppose the supply of fish there never fails? No, it was reported that through net-fishing the lake was becoming exhausted of fish, but from inquiries I made I found that such was not the case, and that net-fishing was not detrimental to the supply. However the lake does not appear to be so plentifully stocked with fish during the last year as it was two or three years previously.
1805. To what cause do you attribute the decline? The lake is very boisterous, the wind has a very great effect on it, and consequently I think the spawn is destroyed. During the last two or three years the lake has dried up, and the fish were not able to get up from the lake to the Deep Creek. That is a very fine creek, but at the mouth it is shallow, and owing to the dry season the fish could not get up there.
1806. Is that known as Butmaroo Creek? Yes, it is known by that name higher up.
1807. Do you think that the law as it stands at present is sufficient to protect the fish from anything like indiscriminate destruction? So far as the Act is concerned I think it affords protection enough, but I think fish might be cultivated there. I think the fish might be increased by closing the lake for twelve months, and other kinds of fish might be put into Deep Creek.
1808. What would then become of the occupation of the fishermen? Of course that would be affected.
1809. Would you close a portion of the lake? No, I do not think it would be desirable to close any portion. The whole should be closed.
1810. Are there many fishermen up there? There is only one fisherman there at present who devotes the whole of his time to it.
1811. Do you think that the lake ought to be closed for a period of at least twelve months? I represented that to the Commissioners on one or two occasions, but they did not agree to my recommendation.
1812. What other kinds of fish do you think would flourish there? I think that if perch and bream were put in the creeks they would supply the lake.
1813. What sort of fish are caught in the Molonglo and Queanbeyan River? Perch and Murray cod.
1814. Do they not catch a kind of fresh water bream there? I believe some has been caught there. Bream was put in the Queanbeyan River and in other parts of the district by Mr. Gale, who brought them from Melbourne, but I do not know that any of them have been caught.
1815. Did he not also bring over some salmon? Yes.
1816. Have you any idea whether they are flourishing or not? I have heard that they are. So far as the other fish are concerned in the Murrumbidgee, the Queanbeyan, and the Molonglo Rivers a great deal of fish have appeared during the last twelve months.
1817. Do you think that if Lake George were stocked with Murray cod and other fish it is likely that they could be brought down to Sydney and anything like a trade could be created? Yes; provided that men who understood the business undertook the fishing. I do not think that proper appliances are used at present for fishing.
1818. How do they fish? They use nets, but they do not seem to fish properly out on the lake. The principal fish are caught by placing the nets partly across Deep Creek or wholly across it when they get the chance.
1819. You say that about 1,300 lb. weight of fish was caught last year—what was the size of those fish? From 8 lb. up to 50 lb.
1820. Has it ever come under your notice that the public are obstructed in fishing around the shores of the lake? The owners of the land around the lake have objected to fishermen landing there.
1821. Do they interfere with them at all on the Crown lands around the lake? Not that I am aware of.
1822. Have they quite recently stopped parties from fishing off some of the points on the Crown reserves there? Not that I am aware of. Mr. P. H. Osborne owns Currandooley.
1823. Is he not represented by Mr. Atkinson? Yes.
1824. Has he ever interfered with people on Crown lands? I am not in a position to say that he has turned people off Crown lands, but he claims the land on behalf of Mr. Osborne.
1825. Did he not turn off Mr. Carruthers, the present Minister for Education? Yes.
1826. What area above high water-mark do you consider is Crown land around Lake George? I am not in a position to say. It seems to be a matter of dispute whether the Currandooley Estate runs below high water-mark or not. Ten years ago when I first went to Bungendore the lake extended for half a mile or three-quarters of a mile higher up on the land than it does now.
1827. What do you consider to be the high water-mark on Lake George? I consider that it should extend to the high water-mark of ten years ago. I do not think that even that was the highest mark.
1828. Do the proprietors of Currandooley Estate contend that they go below that? Yes. The water has receded for a quarter of a mile or half a mile, and they claim that their estate goes to the edge of the water. I remember a time when the lake was partly dry, and they claimed it just the same then.
1829. Do they persist in claiming that their estates run out to high water-mark, no matter where it is? Yes; so far as I know.
1830. Is that the reason why they turn people off the Crown lands? I think so. Of course I do not know that they have turned people off Crown lands, but they have turned people off land which they claim.
1831. Have you ever heard of their turning people off the reserve at Deep Creek? There is a large reserve of about 400 or 600 acres there, but the public have no access to it.
1832. Why not? There is no access except by boat up Deep Creek, and that is not navigable.
1833. Is there no road to it? No; the old road which used to lead on to it is closed, and a new road has been made in lieu of it.

William Nicholas Cain called in, sworn, and examined :—

1834. *Chairman.*] What position do you hold in connection with the Fisheries Act? Assistant inspector. I have to look after Tuggerah Lakes and Brisbane Water.

1835. How long have you held that position? Five years in December.

1836. Had you any experience of Fisheries before you joined the Service? Yes; I was a fisherman at home, and in this country.

1837. Have you taken a great interest in Fisheries? Yes.

1838. Do you consider that the provisions of the Fisheries Act have applied justly, and have given satisfaction to the people who carry on their callings as fishermen? No; there is plenty of room for improvement.

1839. Have you at any time made any recommendations to the Commission with a view to remedying alleged defects in the Fisheries Act? Yes; I represented to Dr. Cox that the fishermen complained that the length of 300 yards for the nets they used on Tuggerah Lakes was not sufficient. I represented to him that it would be just as well to let them use nets of 400 or 500 yards in length, provided they were of the lawful mesh. It is just as well to let them make one haul as two or three.

1840. Have you had many cases brought under your notice where nets of an unlawful mesh were used? Yes, several; and I have also detected them using nets of an unlawful length. That has given rise to many rows with the men.

1841. In carrying out your duties have you been obliged to seize those nets? Yes; but since then I have got a tell-tale which tells the weight of the fish. If when the boats arrive I see that there are a great many small fish, I weigh them. That saves a lot of trouble in chasing about after the men. All my duty is to see that the fishermen do not destroy small fish, and I believe that the men do not intend to destroy more small fish than they can possibly help.

1842. When a net has once been passed as being of the legal mesh, do you not think that it should always be considered legal? No; when it is tanned it gets smaller. They make an allowance for that when they obtain the nets first.

1843. Do you think that as a rule it would be better to have a provision for punishing people who catch small fish, instead of being so particular as to the mesh of the net? Yes. When I first visited Tuggerah Lakes I found fifteen baskets of small fish covered up with sea-weed. Those were caught with unlawful nets. The men who used those nets said, "When old Cain and the policeman comes we will give them a piece of lead." I seized their net and took it to Gosford.

1844. Then the main source of complaint by the fishermen is that the net is not of sufficient length? Yes; in some places they would not want more than 300 yards, but in Tuggerah Lakes 300 yards is of no use.

1845. What did you do with the nets which you seized? I forwarded them to the head office in Sydney.

1846. What was done with them? They were sold. I got my compensation for my work, and the rest of the money went to the Treasury.

1847. Do you get a certain percentage for seizing? Yes.

1848. Do you know whether it is likely that any of the nets sold went back to be used again in the Tuggerah Lakes? The men who owned the net at the top of the Lake asked me to intercede so that they might get their net back. I said that I should recommend that every man should have his lawful length of 300 yards returned to him, but that anything over that ought to be confiscated.

1849. Was this particular net of an unlawful length? Yes.

1850. Do you know whether any portion of the net was returned to the man? He got 300 yards back.

1851. Did the Commission retain the other part? Yes; I believe they did.

1852. What was the length of the net? Over 600 yards.

1853. Have you any assistant down there? No. At first my son used to help me, but he got no allowance so I could not keep him. I now have to pull my boat about myself.

1854. What salary do they give you? £150 a year. I get no allowance for house-rent, and no travelling expenses are allowed to me except a railway pass. I have to look after two boats. I have to look after the oyster leases at Brisbane Water. I have to measure the leases and do the principal work.

1855. Are there many fishermen's licenses issued there? During the last six or seven weeks there are thirty at Tuggerah Lakes. I carry the application forms in my pocket. When I come across three or four men I ask them for their licenses. They may say that they have been to the office and that they could not get the license. I supply them with a form of application and get them to sign it. I take the money to the Police Magistrate, at Gosford. He forwards the money on to the head office and gets the license down.

1856. Do you not think that it would facilitate matters and be more convenient for the fishermen if you had power to issue those licenses without sending on to Sydney? Yes. It is no good for me to take out a police constable to give those men in charge. By speaking to them softly I can get many of them to sign an application and the license will be sent out to them. If the license were not sent to them they could easily complain to the head office, so that there would be sufficient check on the receipt of the money.

1857. Have you had any complaints made as to the unnecessary closing of waters? No.

1858. Have the waters which you have control over been closed? Part of them have. The Wyong Creek at the entrance has been closed, but it is open now for a width of $\frac{1}{2}$ mile. Seven weeks ago the fishermen wanted to have the entrance to the Lakes opened; but that would have cost £50 or £60, and I told them to wait a little longer. The last gale took all the sand away, and the entrance is now $\frac{1}{2}$ mile wide. The water is 3 feet deep at the entrance, and it was only 10 inches deep in summer time. Before this happened the fish used to lie on each side of the shallow parts trying to get in.

1859. Would it not be better to give the local inspectors power to determine which waters should be closed and which waters should be left open, rather than leave it to the decision of the Commissioners? Yes.

1860. Have any of the Commissioners visited the Tuggerah Lakes? None, except Dr. Cox. He was there once last November, I think.

1861. Where did Dr. Cox go to? He went to the entrance of the Lake. He went 4 miles from Wyong right across.

1862. What sort of fish do they catch at Tuggerah Lakes? All kinds of fish since it has been opened. A lot of strange fish have come in: mullet, gar-fish, and bream are the chief fish.

1863.

Mr.
W. N. Cain.
16 July, 1889.

Mr.
W. N. Cain.
16 July, 1889.

1863. How is the fish sent to Sydney? It is carried from Wyong to the railway station, and from there to Sydney.

1864. Did it previously come by water? Yes.

1865. Does much fish come from there? The last account I think was over 1,000 baskets. On an average there are thirty-four men working there. They require six baskets each per week to make it pay, so that would give 204 baskets a week.

1866. Are you aware that it is a source of complaint on the part of the fishermen that the fish-market at Woolloomooloo is not worked satisfactorily? I have often heard complaints on that subject by the fishermen.

1867. Do they complain that their consignments are very much reduced when they reach Sydney? Yes; it is a great shame and it ought to be stopped. I have heard several complaints about that.

1868. Have you had any experience with regard to oyster-culture? Yes.

1869. Are there many oyster leases in your district? The oyster leases in Brisbane water want improving very much. A man may have an oyster lease and his next neighbour, who takes up 100 yards, may have a family of seven or eight children. The Act says plainly that anyone can take a peck of oysters. This man's family can go on to Crown land and take as many oysters as they please and put them on their own lease. That cannot be stopped.

1870. Do you think that the Act is defective in that respect? Yes; it wants a great deal of improving. If it is not soon stopped there will not be any oysters in New South Wales. About 60 bags of New Zealand oysters were put down in different parts of Brisbane Water, and if we get a supply from them it will be a very good thing.

1871. Has there been a dearth of oysters in your district for some considerable time? The only oyster in deep water is the cross oyster; the oystermen get them with nets. As for the other oysters there are none fit to eat except on the lessees' ground.

1872. Have you heard anything of a disease amongst the oysters? There is no disease amongst the oysters there.

1873. With reference to the leasing system, do you not think it would be better for the side of a river, or a creek, or a tributary to be leased to one man instead of allowing a man to take up a lease of 100 yards or several leases of that area? I do not approve of the present system at all.

1874. Have you ever heard of any cases of oysters being stolen? A lessee named Brown, who held a lease for ten years, sold his place. He wrote a letter to me stating that he had four bags of oysters ready to be sent to Sydney, but next morning they were all gone and he could not find out who had taken them.

1875. Do you know how many oyster leases there are in your district? About forty or sixty.

1876. Do you know anything about the habits of the fish? The small fish in Tuggerah Lakes want a great deal of looking after. It is a great place for young fish. The Commissioners did one good thing in closing all the rivers. Whenever there is a flood they come down with a rush. They go right up to the fresh water in the creeks, which are great nurseries for them.

1877. Do you know anything of the migratory fish, such as the sea-mullet? Yes.

1878. At what time of the year do they go into the lakes? Generally about March. There have been very few this year, because the lakes have not been opened. Now, all kinds of fish are coming in: fish that were never seen in the lake before.

1879. *Mr. Stephen.*] Is there a great portion of the lake closed against fishing? Yes.

1880. Is there a close season at any particular time of the year? I do not see why they want to close the Tuggerah Lakes at all. In any of the creeks they cannot use a hauling-net; they must use a meshing-net from one side of the creek to the other. I do not see that it would require to be closed at all.

1881. Then you believe it is unnecessary to close any portion of Tuggerah Lakes? Yes; while the entrance is half a mile wide the fish can go in and out as they like.

1882. Is the entrance closed during some portion of the year? It has not been closed since we had a gale of wind lately. Sometimes it is closed.

1883. Can the spring tides flow in at any time? Yes; if a boat comes close to the entrance there is such a strong tide that they cannot fish there.

1884. If the small fish are hauled up on shore does it not do them a great deal of damage even if they are put back into the water? Yes; if they are hauled on shore not one half of them will live even if they are put back in the water.

1885. What is your reason for believing that nets 450 or 500 yards in length should be used on Tuggerah Lakes? The men would not then have to make so many hauls as they have to make at present. They might just as well be allowed to make one haul as to make three or four hauls. With nets only 300 yards long they require to have very long lines.

1886. Do you believe that the same length of net should be allowed on all fishing-grounds as you recommend for the Tuggerah Lakes? No. I think that 300 yards is rather too long for Brisbane Water.

1887. Why do you think that 300 yards is long enough for Brisbane Water? The tide is very strong there and the fishermen have not got such long places to haul as they have at the Tuggerah Lakes.

1888. Can you suggest any remedy for the stealing of fish while in transit to the market? I am afraid that the remedy I would suggest would not pay. I think that every fisherman should have his fish-baskets locked; then when they arrive at the market they could be unlocked by the agents.

1889. Why would it not pay to lock the baskets? I do not know whether or not it would pay. I think it would be better for the fishermen to try it. I think if two or three of the people who steal the fish were caught and an example made of them they would soon drop it.

1890. Why do you think it would not pay to lock the baskets? The fishermen themselves say it would not pay according to the prices they get.

1891. They would not have to provide a new lock every time they sent a basket down to Sydney? They would want brass locks and keys.

1892. Would it not pay them in the long run? Yes.

1893. Is there any worm disease among the oysters in Tuggerah Lakes? There are no oysters in Tuggerah Lakes except at the entrance. There is no disease among the oysters in Brisbane Water.

1894. *Mr. Stevenson.*] You have spoken of an oyster lessee named Brown. Did you ever hear of his applying to the Commissioners for leave to prosecute persons who were destroying his lease? Yes.

Mr.
W. N. Cain.
16 July, 1899.

1895. Do you know whether they refused permission? They sent word to the Police Magistrate to issue no summons. Of course that was quite sufficient.
1896. Then virtually they did refuse permission to prosecute? Yes.
1897. Do you not consider that that was a very great injustice to Brown? I do not see what harm the fishermen were doing him because they hauled their nets at low water, and his oysters were on higher ground and they did not interfere with his oysters.
1898. Then it was against the fishermen that he applied? Yes.
1899. And those fishermen had licenses? Yes.
1900. Did you ever apply for a residence or a tent at Tuggerah? Yes.
1901. What was the result of your application? I never got an answer. I have no cover at night.
1902. Are you supplied with any means of protecting yourself from the weather? No; I have to bring up at an hotel.
1903. Are you supposed to be supplied with a macintosh? Yes.
1904. Are the Government supposed to supply you with that? Yes, and a coat.
1905. Have they issued them for this year? No. They ought to be issued at the beginning of every winter, but they have not been issued yet.
1906. Did you recommend the closing of the lakes? No.
1907. Then the Commissioners closed them without consulting you? Yes.
1908. Is that wise? I do not see that it requires closing at all.
1909. What is the object of tanning the nets? It preserves the net.
1910. Does it reduce the mesh? Yes.
1911. Are the nets tanned for the purpose of preservation and not with the object of reducing the mesh? Yes.
1912. Do you not consider it is a very great hardship when a man is compelled to tan his net in order to preserve it that that net should be seized? Yes; but when he buys it he should make allowance for the tanning.
1913. If the net is tanned and it gets below the legal mesh it is liable to be seized? Yes.
1914. Have you any idea whether the pilfering of the fish takes place when it is being sent to market? I have heard that it takes place on the railway as well as in other places.
1915. Are the baskets generally tied with a piece of loose string? Yes.
1916. Do you not think that the pilfering would be prevented if the fishermen put twine tight round their baskets? A man could easily cut off the twine.
1917. Do you not think that the fish would be better protected if every man sewed his basket round with twine? Yes.
1918. As the baskets are tied now, is it not easy for a man to untie the twine and take out as many fish as he likes? Yes.
1919. Have you any assistant? No.
1920. How far have you to pull? On an average I used to walk 30 miles, from Gosford to Salt Water Creek, every week when I was first appointed. I used to go to the top of the Lake.
1921. How far would you have to pull then? 16 or 18 miles. Then I came to Brisbane Water, and I pulled all round there. There is a lot of pulling to do, and I have to do it all by myself.
1922. On Brisbane Water alone what do you think is the average distance you have to pull? From Webb's Reef to the township, which is 7 or 8 miles at the very least. Then I have to go to Cockle Creek. That is about $3\frac{1}{2}$ miles. From Cockle Creek up to Broadwater is $3\frac{1}{2}$ or 4 miles. Wye Wye is about 7 miles from the township. I sometimes go by train, and then I get a boat to go round.

Thomas Temperley called in, sworn, and examined:—

1923. *Chairman.*] What position do you hold? Inspector of the Northern Fisheries.
1924. How long have you held that position? During the continuance of the present Fisheries Act—that is since 1881.
1925. Were you engaged in the Public Service previously? Not during the previous seven or eight years. I had been teaching up to 1875.
1926. So you had no experience previous to your appointment in connection with fisheries? No practical experience.
1927. What knowledge you have gained is theoretical? As a native of the Colony I was thoroughly conversant with fish and their habits, and I had interested myself much with the oyster question long before I ever dreamt of taking office as Inspector of Fisheries. In fact I had written to the press on the oyster question.
1928. What area does your district embrace? From Cape Hawke to the Tweed River—that is more than one-third of the entire coast.
1929. So it is a very important district? Yes.
1930. Do you consider that the provisions of the Fisheries Act have applied justly to fishermen? In my district the fishermen do not complain so much of the Act as of the difficulties they have to contend with in getting their fish to market. Fish are abundant, and there is no necessity there for any closed waters, nor is there any inducement for fishermen to work with small mesh nets.
1931. Have you any closed waters there? No.
1932. How many fishermen's licenses have been issued? On the Clarence River there were 56 fishermen licensed in 1888.
1933. Are there any licenses issued on the other rivers? No; the fishing industry on the north coast was nothing until 1887.* The principal industry in connection with the northern division up to that time was the oyster production. In 1887 the fisheries began to be developed, and they have assumed large proportions since.
1934. So that your duties were pretty well confined to the oyster culture up to 1887? Yes, in connection with oyster leases.
1935. Have any of the Commissioners visited your district at any time? Yes, Mr. Oliver visited the district on one occasion.

Mr.
T. Temperley.
16 July, 1899.

* NOTE (on revision):—A few fishermen are located at Cape Hawke, and on the Manning and Richmond Rivers.

Mr.
T. Tamperley.
16 July, 1889.

1936. Have any of the other Commissioners visited it? No.
1937. How long did Mr. Oliver remain there? I happened to be away in another part of my district at the time, but I understand that he was on the Manning River for about a week.
1938. Have not the fishermen complained of the unjust operation of the law in any respect? There is abundance of fish on the north coast and the fishing industry has developed itself during the last two or three years in consequence of the introduction of the mode of transmitting fish in ice-chests. The fishermen do not make any complaints about their nets or about any of the regulations, but they are loud in their complaints about the manner in which the fish are treated on their arrival in Sydney.
1939. Have you never had occasion to take action in prosecuting people for infringement of the Fisheries Act? I have prosecuted for the theft of oysters, for the removal of undersized oysters. Also in one or two test cases where attempts were made to test the validity of oyster leases. I have prosecuted fishermen for fishing without licenses, but I have not had occasion to prosecute fishermen for taking undersized fish or working with undersized nets.
1940. Are you aware that after a net has been passed as being of the legal mesh when it has been tanned once or twice it shrinks below the legal size? Yes.
1941. Do you not think it would be only just that when once a net has been passed as legal it should always be considered to be legal? Yes; but there would always be a difficulty in determining whether it was the same net. You cannot very well mark a net so as to render its identification a matter of certainty.
1942. Have you at any time brought under the notice of the Commissioners or the Government proposals to remedy any alleged defects in the Fisheries Act? Not latterly.
1943. Did you at any time with reference to oyster leases or the fisheries generally? I cannot say that I have.
1944. Have the Commissioners at any time acted with reference to prosecutions, the leasing of oyster-beds, or the granting of fishermen's licenses without consulting you? As far as prosecutions are concerned inspectors are required to procure the permission of the Commissioners before prosecuting. In one case of pilfering I am sorry to say no prosecution ensued.
1945. Therefore it takes some time before a prosecution is initiated if you have to report to the Commissioners first and await their instructions? Yes.
1946. Would it not be much better if the power were vested in you as inspector to prosecute there and then? I think that the inspectors of fisheries in charge of districts should be empowered to prosecute when cases arise. I may mention that the Commissioners have given me a general power recently authorizing me to prosecute in any cases of infringement of the Act.
1947. Do you not think it would be more convenient to give you power also to issue licenses and oyster leases? I think with regard to the issue of licenses that local inspectors should be allowed to receive the money, and that immediately on receipt they should transmit it to Sydney. By that means a fisherman would be allowed at once to proceed to fish pending the arrival of his license. It would be practically issued as soon as he paid the money.
1948. As a matter of fact a fisherman might apply for a license to the Commissioners here and have it granted to him without your knowledge? Yes.
1949. You would have no knowledge of the existence of that license unless you asked him to produce it? Yes.
1950. Then it would be more convenient for the local inspector if he could issue the license? Yes; or even if he were allowed to receive the money.
1951. Have the rents for the oyster leases been paid in your district? No; in many, but not in all cases.
1952. I suppose it is only in cases of default of payment of the rents that the matter comes under your notice? The inspectors know nothing whatever with regard to default in the payment of rent.
1953. Do not the Commissioners at any time ask you to cause inquiry to be made? Not with regard to the payment of rent.
1954. Do they ask you with regard to the condition of the leases and the oyster-beds? Yes.
1955. Is there any system with regard to sending reports to the Commission? Yes, we send monthly reports.
1956. What salary do you get? £240 a year.
1957. Are you allowed an assistant? I have a boatman who also does duty as assistant inspector.
1958. Where? At Palmer's Island, Clarence River.
1959. Do they allow you house-rent? No.
1960. Have you had occasion to seize nets at any time? No.
1961. Do you not think it would be better to have a provision embodied in the Act to punish persons severely for bringing undersized fish to market rather than be so particular as to the mesh of the nets? I certainly think that the restrictions should continue as at present with regard to the size of the nets, and also with regard to the size of the fish when brought into market.
1962. Have you ever heard any fishermen complain that the length of the net is insufficient? Not in my district; but I have elsewhere.
1963. Has Mr. Thompson ever visited your district? Yes.
1964. On many occasions? Only on one occasion.
1965. How long did he stop? About a week.
1966. Are you aware that it is a source of complaint on the part of fishermen that the fish-market at Woolloomooloo is worked unsatisfactorily? Yes, it is the cause of great complaint.
1967. Is it the principal complaint that their consignments arrive at the fish-markets very much reduced? Yes. I find that we shipped from the Clarence River in 1888 10,453 baskets of fish, and the returns from the fish-market only showed 8,580 baskets.
1968. How do you account for that deficiency? Partly through a portion of the fish being bad on arrival, but of course there are causes for that.
1969. *Mr. Stephen.*] Did it arise from thieving? I believe part of it would be caused by that, but I cannot say of my own knowledge.
1970. Can you give the Committee any information with regard to the mode in which fish is sent from the Northern District to Sydney? The fish are placed in large chests with large quantities of ice. The boxes are so large that they are packed on the steamers' wharves. On the Clarence River alone last year the weekly consumption of ice in summer amounted to about 4 tons. The ice-chests on arrival in Sydney are

are landed on the steamers' wharves and are opened there. The steamers arrive in Sydney usually in the afternoon. The shipments are bi-weekly, but the most important arrives on Thursday afternoon at different times, varying from perhaps noon until 9 or 10 o'clock at night. The chests are so large that they are not removed to the fish-market. They are opened on the wharves in Sydney by the fishermen's agents, and the fish are carried in baskets to the fish-market. They are thawed during this transit. When the steamers arrive in the day the ice-chests are left on the steamers' wharves in the broiling sun, and it is only reasonable to suppose that the fish which arrive during the afternoon of one day which have to be unpacked and carried to the fish-market and sold the next morning, are found to be bad in many instances. The fishermen are loud in their complaints as to the mode of treatment the fish receive on their arrival in Sydney. There is no doubt that the proper remedy would be to have the fish sold at Darling Harbour on the afternoon of their arrival, and then they could be distributed over the city and suburbs, and along the railway line on the Thursday night long before the time at which they are now sold.

Mr.
T. Temperley.
16 July, 1889.

1971. So that you would advocate the establishment of a *dépôt* at Darling Harbour? Yes; I think it is only necessary to abolish the municipal restrictions with regard to the sale of fish. Private enterprise would then step in, and the fish would be sold on their arrival in the afternoon. All that would be necessary would be to have an assistant inspector of Fisheries on the spot to pass the fish.

1972. What sort of fish are consigned from the Northern Districts to Sydney? Only the more valuable kinds, such as whiting, bream, and the flat-tailed mullet.

1973. Do you get any schnapper there? Yes; there are fine schnapper-grounds, but the schnapper is not sent to market.

1974. With reference to oyster leases, how many are there in your district? There are 222 leases in sixteen inlets, including a total of 77,300 yards.

1975. Are those leases let to several people? Yes; they are let in large and small areas.

1976. With respect to the issue of those leases to small people, do you not think it would be better to have some provision, whereby leases would be issued only to people in large areas instead of allowing men to take up 100 yards here and there indiscriminately? Yes.

1977. Have you ever heard complaints that the smaller men have been in the habit of pilfering from the larger beds? Yes, in some cases.

1978. Is Mr. Woodward a large lessee in your district? Yes.

1979. What quantity of oysters is sent from your district? From the Northern Division we shipped in 1883, 6,190 bags of oysters; in 1884, 3,186 bags; in 1885, 3,177 bags; in 1886, 3,962 bags; in 1887, 1,226 bags; in 1888, 1,864 bags. It will be seen that there has been a great falling off in the last few years.

1980. How do you account for the decrease? In 1883 there was a very large production as the result of the licensed boat system which was in force in that year. There is no doubt that the oyster-beds were very much damaged by that system. There was a large number of licensed boatmen who went from river to river as the beds were thrown open, and they dredged the beds as long as they could get anything from them. Then they went on to the next place. They did nothing whatever in the way of improving the beds, and they took no interest in them. They took large and small oysters, although they were under the supervision of inspectors. There is no doubt they seriously injured the oyster-beds. The Manning River has never recovered from the severe dredging it received in 1883. The system was abolished in 1884. With regard to the deficiency during the last two years I attribute it to the extremes of rainfall which the Colony has experienced. The floods of 1887 did an immense deal of damage to the oysters, especially on the Clarence River. I made a careful examination of the Clarence River after the flood of 1887, and I found that 84 per cent. of the oysters had been destroyed by the flood.

1981. Have you ever heard of the existence of a disease in the oysters? There is no disease in my division on the Northern Coast. The worm or mud disease does not extend beyond Port Stephens.

1982. So that excessive rainfall is just as likely to affect the oyster-beds injuriously as is the want of rain? Yes, the drought of 1888 was just as disastrous. It prevented the beds from recovering.

1983. Do you not think it would be a good idea to close the different rivers from oyster-getters, for say a period of two or three years, so as to resuscitate the beds? The lessees have done that. No oysters have been taken from the Clarence River since 1887 up to the present time. No oysters have been taken from Camden Haven since November, 1886, and only some eighty-six bags have been taken during the last five years; so that both these rivers have been practically closed by the lessees for a period of nearly three years.

1984. Has any quantity of spat from New Zealand oysters been laid down on the oyster-beds there? Mr. Woodward and Mr. Comino laid down on the Clarence and Manning Rivers and Cape Hawke last year 2,250 bags of oysters which was a larger number of oysters than were raised again from the division during the whole of that time.

1985. Can you suggest any way by which oyster-culture might be more successfully carried on in the rivers? I think the present mode of giving long leases—that is security of tenure—is about the best thing that can be adopted to get the beds properly cared for; but to give a lessee 100 or 200 yards in a river where other lessees have large areas would be in some cases to give the small lessee opportunities to rob the others.

1986. *Mr. Stephen.*] What are the principal rivers or inlets embraced in your district? The Clarence, the Manning, the Richmond, the Tweed, the Hastings, and Bellinger Rivers, Camden Haven, Cape Hawke, and the Macleay.

1987. Had you any experience as a fisherman previous to your appointment as inspector? No, except as an amateur.

1988. You are not acquainted with the real hardships that fishermen have to undergo? I know something of them.

1989. Are you aware that the life of a fisherman is a very hard one? Yes.

1990. Do you think that it is desirable to throw any obstacles in their way? No. On the contrary I consider that the industry should be furthered in every possible way.

1991. Do you consider that the present Act bears heavily and unfairly on the fishermen? I believe that the Act has perhaps been harshly administered in some cases as a result of the system of giving inspectors a share of the fines.

1992. Do you think that it is desirable that inspectors should have a share of the fines? No.

- Mr. T. Temperley. 1993. Do you think that it is an incentive to the inspectors to be rather harsh? I think an inspector should have sufficient salary to remunerate him for his work without his having a share of the fines. While it has the effect of giving an incentive to a man to do his duty, it also tends to cause the regulations to be strained and prosecutions to be undertaken where they otherwise would not be.
1994. Are those fines awarded only to the inspector who may happen to seize? The prosecuting party is entitled to half the fines. Moreover the clerks of petty sessions almost insist that the inspector shall take it.
1995. Are the fines divided *pro rata* amongst all the inspectors? No; the prosecuting party in each case receives a moiety of the fine.
1996. Are there any distinctions between the fisheries inspectors as to position or grade? The Act provides for three inspectors and a number of assistant inspectors and acting inspectors—that is an inspector for each of the three divisions with sundry assistants and acting assistants who are generally pilots on the coast and who receive small salaries.
1997. There are three grades? Yes.
1998. To which of the three do you belong? To the inspectors of divisions.
1999. Then you have assistant inspectors under you? Yes.
2000. Do those assistant inspectors report directly to you or to the Commissioners? To the Department.
2001. Then they may send reports to the Department which you know nothing of? Yes; they often do so.
2002. Are the fish which are sent to Sydney in ice-chests frozen? They are chilled.
2003. When they are sent down in that way, after they are taken out of the ice-chests, are they liable to go bad quicker than if they were brought down without being placed in ice-chests? They will not keep for a very great length of time after thawing.
2004. Do you think that it would be desirable to establish trawl-fishing on our coasts? I think it is very desirable that the experiment should be made, and that the coast should be surveyed for trawl-fishing.
2005. At the present time is there sufficient knowledge of the coast to establish that mode of fishing? No, it would be rather a risky experiment to run a trawl over the ground till we ascertain the nature of the bottom.
2006. Are there different kinds of oysters in the northern rivers? I think they have only one kind of oyster—that is the ordinary drift-oyster. Some people make a distinction between the rock-oyster and the drift-oyster, but I do not think there is any difference between them. I think that they are both the same. The mud-oyster is a different oyster, but that is not known in the northern division.
2007. Mr. Stevenson.] How many assistants have you under you? I have one assistant at the Manning River; one boatman, who is also acting-assistant on the Clarence River, and five acting-assistant pilots.
2008. Do you take the pilots on each of the rivers? Yes.
2009. When you want to do anything, before you take any action have you first to report to the Commissioners? Yes.
2010. Do you find that any delay occurs? Sometimes.
2011. From whom do you receive your instructions when the Chief Inspector is absent from Sydney? From the Acting Secretary, Mr. Ellis.
2012. Do you think he is competent to give you instructions on practical matters relating to fisheries? I do not know anything of Mr. Ellis' qualifications. I have seldom received any instructions from him.
2013. Would it not be better to receive instructions from a gentleman whose duties were not merely clerical? Yes, certainly.
2014. Would it not be better for the oyster lease rents and the fees for fishermen's licenses to be paid to the inspector in each district so that he might have some knowledge as to who held the leases and what fishermen paid for licenses? I do not think it would be desirable that the rents should be paid to the inspectors, but I think that they should be notified.
2015. Do you think that if the Commission were abolished and the fisheries placed under Ministerial control it would be an improvement? I do. I think that it is advisable that the fisheries should be under the control of one person, whether that person be a single Commissioner, inspector, or secretary, as long as he is a responsible officer and has power to deal with matters of urgency as they arise.
2016. Are you aware how often the Commissioners meet? Once a week.
2017. Have you ever heard of business being delayed through there not being a quorum? Yes.
2018. Frequently? Not frequently.
2019. When there is no quorum no matter how important the business may be, what becomes of it. Has it to stand over for another week? In extremely urgent cases I understand that the Secretary visits the members of the Commission.
2020. Does the pilot at the Tweed act for you? Yes, but not at the Richmond.
2021. Who is at the Richmond River? I supervise the Richmond River myself.
2022. There are not many fishermen on the Richmond? Not just now.
2023. When you go to the Bellinger and the Macleay do the pilots act? We generally get the assistance of the police.
2024. Do they give their assistance without salary? Yes.
2025. Is that the only control you have? Yes; but I do not often visit those outlying places. It would be as easy to visit the Manning from Sydney as it is to visit it from the Clarence.

THURSDAY, 17 JULY, 1889.

Present:—

MR. FRANK FARNELL,	MR. RITCHIE,
MR. HOWE,	MR. WILLIAM STEPHEN,
MR. STEVENSON.	
FRANK FARNELL, Esq., IN THE CHAIR.	

Frederick Nelson recalled and further examined:—

- Mr. F. Nelson. 2026. Chairman.] Do you know anything about the boundaries of Lake George? No.
2027. Do you remember any occasion on which persons have been prevented from using the lake or going upon the land above the lake, which is supposed to be a reserve? I know for a fact that they have been prevented from going on the eastern side of the lake. 2028.

2028. Do you know Lake Bathurst? Yes.

2029. Do you know whether Crown lands adjoin that lake? I am not thoroughly acquainted with Lake Bathurst.

2030. Have you said that you could not state positively whether or not there are any fish in Lake Bathurst? I have heard that there are. I know for a fact that fish were put in there many years ago. The reason why I am not well acquainted with Lake Bathurst is that it is in the Argyle District. My duties as inspector of Fisheries do not extend there.

2031. Do you think that fish-breeding could be satisfactorily carried on in Lake Bathurst as well as in Lake George? Yes.

2032. You have spoken of two creeks running into Lake George as good breeding-grounds for fish. Would you advise that those creeks should be closed from fishing? If it was intended to go in for fish-breeding I would strongly recommend that. Butmaroo or Deep Creek and Toralla Creek should be closed.

2033. Have you any knowledge of any other inland fisheries? Yes; the Murrumbidgee, the Queanbeyan, and the Molonglo Rivers. Those are all in the Queanbeyan District, of which I have supervision.

2034. Do you receive any salary from the Fisheries Commission? Yes, £20 per annum.

2035. *Mr. Stephen.*] You said something about high-water mark at Lake George. Do you refer to flood water mark? Yes. Lake George is not influenced by the tide.

2036. What is the quality of the water in Lake George? It is not salt, but it is very brackish. In dry weather it is very much so.

2037. Do you think that the quality of the water is favorable to the production of Murray cod? Yes, because they grow there to such a large size, and are in such good condition.

2038. With respect to high-water mark, is there any defined line showing where the frontages of private properties should cease? It appears that many years ago there were grants on the borders of the lake; but there is no defined boundary as to high-water mark.

2039. Is it the practice of the private owners to say that their properties are bounded by the water of the lake, no matter what height the water may be? Yes.

2040. Do you think that the Government should define a certain line there or let matters remain as they are? I think that there ought to be a defined boundary. That is, certain lands around the lake should be defined for public purposes.

2041. Do you think that the boundaries of private properties around the lake ought to be defined? Yes; it is very necessary.

2042. *Chairman.*] Have you any statement to make to the Committee? With reference to the evidence I gave the other day, a question was asked by Mr. O'Sullivan as to whether if Murray cod and perch were placed in Lake George a market could be got in Sydney for the fish. I think he must have meant Lake Bathurst, because there are perch and Murray cod in Lake George now. Then Mr. O'Sullivan asked if I knew that Mr. Carruthers was turned off Government land. I am not aware that he was turned off Government land, but he was prevented from passing over private property, in order to get to a reserve fronting Deep Creek. That is the reserve which I mentioned in my previous evidence.

2043. *Mr. Stephen.*] Are you aware on what grounds he was prevented from passing over the property? Yes; he was passing over private property. The reserve fronts Deep Creek, but there is no road to it, and no person can travel to it. The road that originally passed over a corner of it is closed and a new road has been made in lieu of it. Therefore there is no access to this creek except by Deep Creek which is not navigable.

2044. Do the private owners of the land fronting Deep Creek claim it as their property? Yes. The land is measured on either side, and I know they claim Deep Creek.

2045. As their private property? Yes.

2046. What kind of fish were placed in Lake Bathurst? Murray cod.

2047. What is the quality of the water in Lake Bathurst? It is rather inclined to be brackish, but it is not so salt as the water of Lake George.

2048. Do you think that the fish that would thrive in Lake George would also thrive in Lake Bathurst? Yes.

2049. What is the extent of Lake Bathurst? I have no practical knowledge of it, but it is 12 miles round.

2050. Is it subject to the rise and fall according to the season like Lake George? Yes; many years ago there was an island in the centre of it which was stocked with rabbits. The late wet seasons, however, have caused that island to be covered with water.

Mr. Thomas Temperley recalled and further examined:—

2051. *Mr. Ritchie.*] In your previous evidence you said that you had no previous experience of fishing before you were appointed inspector;—what do you mean by practical experience? I did not ever earn my living as a fisherman or oysterman.

2052. You do not admit that you had no experience of fisheries or oyster-culture? No; I consider that I had a very good knowledge of them. I had done a lot of fishing from my childhood in Port Jackson, and in deep water, and in the Manning River. I had ample opportunities of becoming acquainted with the fisheries there.

2053. You said that previously you were a teacher;—what classification had you as a teacher? I had the certificate of class II, section A, which I obtained by examination. This classification would entitle me, under the Department of Public Instruction, to a salary of £250 a year and an allowance of £80 for house-rent.

2054. What was your occupation after you left the Education Department? I was the proprietor of a large saw-mill on the Manning River for some years.

2055. Did you then study oyster-culture? Yes; I interested myself in the question during that time.

2056. Did you gain any practical or scientific experience? I gained a lot of experience as to the working of the oyster-beds. The Manning River was a very important oyster district. I also have the benefit of eight years' experience as an inspector of fisheries.

2057. Did large quantities of oysters leave the Manning River for Sydney? Yes, the Manning River was then leased for £1,000 per year.

2058. Were you appointed inspector for the Northern Division when the Act first came into force? Yes; and I am the only one remaining in the department of the inspectors originally appointed. I am senior inspector by length of service.

2059.

Mr.
T. Temperley.
17 July, 1889.

2059. In your opinion what qualifications are necessary for an inspector? The inspector of a division should be a good all-round man. He should have general ability, good clerical attainments, certainly a good knowledge of fish and oysters, of oyster-culture and net fishing. He should be competent to measure oyster leases and make accurate tracings of them. I have had a great deal of that work to do. The inspector must necessarily be a good boatman, also a good horseman and bushman, so that he may be able to travel by compass over the country. I have had to travel where there are no roads and I have frequently camped out, sometimes with a saddle for a pillow, and have swam rivers and creeks where there were no residents to ferry a stranger across. He should also be competent to interpret the Act and the Regulations, and to conduct prosecutions. He should be thoroughly able to report on the various matters referred to him and he should be a good correspondent.

2060. Do you think that the present Commission works well and that the administration is effective? I think that the Commission did good valuable work in organizing the department and in obtaining information, especially the information on which Parliament abolished the licensed oyster-boat system in 1884, but in administration I think that the gentlemen who form the Commission and whose time is valuable should not be required to deal with matters of detail, such as the passing of accounts and the approval of the expenditure of small sums of money. For example: I have a compass which cost 7s. 6d.; when I applied for authority to purchase it the question had to be submitted to the Board.

2061. Whom do you think that should be vested in? In one of the superior officers.

2062. In the inspectors? No; in the head of the department.

2063. That would be the Secretary? Yes, or the chief inspector. I think that important matters of urgency should be dealt with at once, without keeping them till there is a meeting of the Board. I refer to prosecutions and other important matters that often arise, and which require to be dealt with without delay.

2064. You mentioned something about the detection of some person stealing oysters;—did you prosecute in that case? No.

2065. What were the reasons for not prosecuting? The facts were these: I caught a family stealing oysters from a lease belonging to Mr. Gibbins. This occurred on the Evans River. They had a quantity of oysters and they were actually taking them from Mr. Gibbins' lease and loading a cart at daylight when I discovered them. I reported the matter to the department and notified my intention of prosecuting, but the Commissioners declined to allow me. They decided that the lessee should protect his own interests. I had seized the oysters and I wished to prosecute. The lessee who resided in Sydney did not consider that he had time to go so far to prosecute and the matter was left to his agent on the Evans River to carry out the prosecution; but the agent declined to prosecute. The consequence was that the prosecution fell through.

2066. Then the Commissioners did not consider it was their business to instruct you to carry out the prosecution? Not in that case; afterwards they gave me general power to prosecute in all cases.

2067. Did you believe at the time that you had power to prosecute under the Act? No, I have no power to prosecute unless the Commissioners authorize me. The family when caught stealing alleged that the stolen oysters had been procured from a small lease of 100 yards which had been applied for but for which the lease had not been issued.

2068. Then this man, the head of the family, was not actually a lessee at the time? No, but his lease was ready for issue.

2069. He had no legal authority to go on the ground and collect oysters? No.

2070. Was it a clear case of taking oysters off another man's ground? Yes, it was a very clear case.

2071. *Mr. Stevenson.*] What did you do with the lease of this man who you allege stole the oysters? It was cancelled by the Governor on the advice of the Commissioners.

2072. Upon what grounds? I do not know. I had recommended that the lease should be withheld pending the result of the prosecution for stealing the oysters. I presume that it was in connection with the case of stealing the oysters that the lease was cancelled.

2073. But if he had been prosecuted might it not have been shown that the man was taking oysters from his own ground? I do not think there was any possibility of that.

2074. Still there was no case brought against the man? He was not prosecuted but his lease was cancelled.

2075. *Mr. Ritchie.*] In your former evidence you said that the fishermen made great complaints about the means of transporting fish to Sydney. Of course it is no part of your duty to make provision of that kind? It is not.

2076. That rests entirely with private enterprise? Yes.

2077. Do you think it is possible to increase the supply of fresh fish from the northern rivers if some better provisions were made for conveying the fish? Yes, the fishermen have lost so much by the treatment the fish have received in Sydney that numbers of them have actually discontinued fishing. On the Clarence River the number of fishermen has decreased from twenty boats during last year to three or four during the early part of this year. This was owing almost entirely to the fact that the men could not get fair remuneration, and they would have been satisfied to work on for low returns. The fishermen have to purchase the ice in Sydney, pay freight for it to the Clarence River, freight on the ice-packed fish to Sydney, cartage of the fish from Darling Harbour to Woolloomooloo, and then not only pay 5 per cent. to their agents for looking after the sale of the fish, but have to pay the corporation salemen commission as well.

2078. Can you make any better suggestion for the means of conveying the fish to market? The conveyance of them generally speaking is right enough. The important question is the disposal of the fish after their arrival in Sydney. I am satisfied that if the fish were sold at Darling Harbour in the afternoon or evening of arrival there would be a very large increase in the supply of fish for the city and suburbs, and in many instances the fish would be retailed and consumed long before the time at which it is now sold at the Woolloomooloo fish-market.

2079. Are you well acquainted with the habits of fish generally? Yes.

2080. What is your opinion about the migratory fish? We have several kinds of migratory fish. The large whiting comes in on the north coast in November to spawn. The salmon move along the coast in October. I have taken particular interest in the habits of the sea-mullet. One year, 1883, also in 1884, I instructed my assistant inspectors along the coast to carefully note the time when they entered the inlets. It is the general opinion that this fish works from the south towards the north.* I found on these occasions

*NOTE (on revision) :—Monthly reports—April, 1883; also April, 1884.

occasions that the mullet entered first the Tweed River about the early part of March; later on they entered the Richmond, then the Clarence, then, the Macleay, the Hastings, and so on down the coast, showing conclusively that they worked southwards. A current sets along the coast southwards, and whenever the fish began to move, their heads would be turned to the north against the current, and they would appear to be working their way northwards, but I believe that they really work their way from north to south instead of from south to north as is generally supposed.

Mr.
T. Temperley.
17 July, 1889.

2081. In what months of the year does this migration take place? In March, April, and May. They enter down south towards May, but they are found entering the rivers in the north in March and April.

2082. Do you know anything about the natural enemies of fish? There are birds and of course there are the sharks. There is provision in the Fisheries Act for the destruction of cormorants.

2083. Are those birds very destructive in your district? Yes. They are found in some places in flocks, and they destroy the young fish. They are called divers. There is a reward of 4d. a head for the smaller kinds and 6d. for the larger.

2084. Are there many killed? Recently a number have been killed. Twenty-two were paid for on the Clarence River during the month of June, but long periods have elapsed when no claims were made for their destruction.

2085. Are there any rewards given for shark-killing? No, that is not provided for by the Act.

2086. Then I suppose there is no shark-catching? There is not.

2087. Is there any action taken to cure fish in your district? Attempts have been made from time to time by different parties to salt and dry fish, but they have nearly always died out. That work is generally carried on by Chinamen.

2088. Do they cure many fish? A moderate quantity for their countrymen. There was one fisherman, a European on the Clarence River, who used to cure fish and send them to Fiji by the Colonial Sugar Company's steamers.

2089. Is there any canning of fish carried on? Yes, a fish-canning company has been established within the last two years at Iluka on the Clarence River.

2090. Are they successful in their operations? Yes, I find that they consume about 175 baskets of fish in the month; that is the return for last month. They shipped 220 cases of canned fish in June.

2091. Where does it go to? To Sydney. I produce two tins of fish cured by this company; one is bream and the other whiting. The tins are well got up and the fish is of good quality. Each case contains five dozen of 1-lb. tins.

2092. Does it pay? I believe so. They are carrying on their work in a small way.

2093. Is it a co-operative company? The proprietors are working people. They state that they cannot supply the demand.

2094. *Chairman.*] Then if there was another industry of the kind established up there it would flourish? I think it would.

2095. *Mr. Stevenson.*] Would it not be more suitable if the business were carried on at Yamba? I dare say it would, but I suppose it is a question of securing a building. The proprietors state that the great drawback is the difficulty of obtaining a supply of fish regularly.

2096. *Mr. Ritchie.*] Do they dry fish? No.

2097. *Mr. Stevenson.*] Is the industry confined to bream and whiting? No; it includes other kinds; the sea-mullet is exceptionally good.

2098. *Mr. Ritchie.*] When the fishermen want a license do they apply to the Commission and not to you? The inspector is not authorized to take money for licenses, but wherever fishermen are located near the Courts of Petty Sessions they pay their money to the Clerks of Petty Sessions. It is one of the anomalies of the Act that an inspector is authorized to collect money for spat but not for licenses.

2099. Does the Clerk of Petty Sessions issue the license? No; he receives the money and transmits it to Sydney.

2100. Then the license comes from Sydney? Yes; it is sent through the Clerk of Petty Sessions and not through the inspector.

2101. Has the fishermen to wait till the license comes through from Sydney? If the inspectors were to confine themselves to the regulations the fishermen would have to wait, but they invariably allow the fishermen to work, on ascertaining that they have paid the money.

2102. But strictly speaking that is not in accordance with the Act? It is not in accordance with the regulations.

2103. How long does an oyster take to mature? About two years and sometimes three years. It depends upon the locality. There has been a large amount of what I call semi-oyster culture carried on in the northern division. The lessees have taken the small immature oysters from the rocks and twigs on the foreshores, and placed them in deep water, thus stocking their beds with immature oysters. These take about twelve months to develop after being removed to deep water. The time that an oyster takes to grow to maturity depends very much upon the nature of the water. They require a good running tide, and to be placed where there is a good current to bring food to them.

2104. *Chairman.*] At what price does this canning company sell the preserved fish? 4s. 6d. a dozen wholesale. They supply them to one firm in Sydney.

2105. *Mr. Ritchie.*] Are the assistant inspectors under your immediate supervision? Only those whose districts I visit.

2106. Are you responsible for the performance of their duties? No.

2107. *Chairman.*] With reference to oyster-culture do you know the enemies of oysters? Yes; the star-fish is an enemy of the oyster, but whether he eats it or not is a matter of opinion. You will find that star-fish on an oyster-bed collect a great number of oysters together. You will see a mound of oysters collected together and at first sight you would imagine that some person had placed them there. Whether the star-fish collects them to form a home for himself and thus destroys the oysters which are placed underneath and worked into the mud by the weight of the upper ones or by his actions, or whether he destroys them to live upon them is another question. There is no doubt that they are collected and destroyed by the star-fish. Then crabs will destroy oysters, especially small ones, in places where there are muddy foreshores.

2108. Have you ever heard of the stinging-ray as an enemy of oysters? I do not think that they destroy oysters; in fact I never heard it even suggested. Of course there are borers, and then there is the worm that

- Mr. T. Temperley. that gets into the oysters and causes the mud disease. I have known immense damage to be done to oysters by the influx of weeds. On one occasion, January, 1886, a large quantity of oysters was destroyed on the Evans River by a heavy deposit of fine red seaweed which was blown in by a north-east wind. Tons of fish were destroyed at the same time. When there has been an absence of rain for any length of time marine vegetation collects on the oyster-beds and smothers the oysters. Sponges cover the oysters, and frequently large portions of the oyster-beds.
- 17 July, 1889.
2109. *Chairman.*] How many hands are employed at this canning establishment at Iluka? Four or five.
2110. How is the canned fish disposed of? It is sold to one wholesale firm, Robert Harper & Co., who take the whole of it. The men employed in it say that they could give work to a larger number of men if they had some means of keeping the fish in a cool chamber till they clean them. The fish are caught in quantities, but before they have time to clean them and work them up they go bad. They require to be worked up soon after they are caught for this purpose, and the great difficulty is to procure a regular supply.
2111. Is the canned fish always found to be in good condition when opened? Yes; each tin is tested before it is packed by giving it a slight tap with a mallet. If it is bad it can be detected by the sound.
2112. Do you think that if proper appliances were used and if there were means of canning the fish at once a great industry could be developed? Yes, they require a cooling room to put the fish in until they are worked up.
2113. *Mr. Stephen.*] Is there no means of ascertaining whether the star-fish destroy the oysters? It is a very difficult question to determine.
2114. Are there not empty shells found in those mounds? Yes. The oyster probably dies by being forced into the mud or star-fish's hole by the overlying oysters and the movements of the star-fish. When the mound is moved the shells are lying about.
2115. But are not the shells completely empty with no remains of an oyster? Yes; but that is always the case with dead oysters after a time. The small fish are on the look out to eat the oyster the moment the shell opens.
2116. *Mr. Stevenson.*] You state that the fishermen in order to obtain a license have to go to the Clerk of Petty Sessions? Yes, to the nearest Clerk of Petty Sessions.
2117. That would be at Maclean? Yes; on the Clarence River.
2118. How far would that be? From Iluka, where most of the fishermen are, it would be a distance of about 15 miles.
2119. Not only have they to go there to pay the money but they have to go there to get the license afterwards? Yes, generally.
2120. Is that not a great hardship? Yes, I have already said that I think the local inspector should be allowed to receive the money.
2121. A few years ago there was no Clerk of Petty Sessions at Maclean? Yes. If there is no Clerk of Petty Sessions the fishermen send the money to Sydney.

Mr. George Gordon Benson called in, sworn, and examined:—

- Mr. G. G. Benson. 2122. *Chairman.*] What position do you hold under the Fisheries Commission? Inspector of Southern Fisheries.
- 17 July, 1889.
2123. What area does your district embrace? I should like to explain that when I was first appointed Inspector of the Southern Fisheries they were supposed to extend from St. George's Basin to the boundaries of Victoria. Mr. Smithers and I were both appointed at the same time. After being there for some time I wrote to the Commissioners and told them that there was no necessity for me to visit Mr. Smithers' district as it only caused expense, so they gave me the district to a place called Bermagui. Mr. Smithers had to go from Eden to Bermagui and my district was from Bermagui down to St. George's Basin. We have the work to do between us. The district which I have to look after personally is about 100 miles in length.
2124. What are the particular fisheries over which you have control? Tuross Lake, the Clyde River, Narrowwilla Creek, Wagonga River, and several other little creeks: Berara Creek, Tomakin Creek, and the Moruya River.
2125. How long have you held the position of inspector? I was appointed on the 18th December, 1882.
2126. Had you any practical experience of fisheries before your appointment? Only as an amateur.
2127. So that whatever you knew of the habits of fish and the culture of oysters before you were appointed, you simply knew it as an ordinary gentleman going to fish for pleasure? Yes.
2128. Since your appointment have you made it a study to acquire a theoretical as well as practical knowledge in the culture of oysters and the development of the fisheries of the Colony? I have read a little—everything that I could pick up in the papers. I have read Professor Huxley's work, but they tell me that the oysters in this country are very different from the oysters at home.
2129. Since your appointment as inspector have you taken a deep interest in the industry? There is very little fishing in our district. I have taken a great interest in oyster-culture.
2130. Is there much net-fishing carried on in your district? Very little.
2131. Is the work more confined to oyster-culture? Yes.
2132. Have you ever heard any complaints from the fishermen as to the unjust operation of the Fisheries Act? No; there are no closed waters in our district, and that is the principal cause of complaint. When I first went to the district they used to complain, but since the garfish-net has been altered I have not heard any complaints from them.
2133. Have any complaints been brought under your notice by fishermen, oyster lessees, or any one in your district? I have heard complaints from the oyster lessees.
2134. What was the nature of those complaints? They complained of the rents being too high for the leases.
2135. Have you at any time brought under the notice of the Government or the Commission any recommendations or proposals to remedy any alleged defects in the law or the complaints which those people have made? About a fortnight ago I wrote to the Commissioners recommending certain alterations in the Act.

2136. What were those alterations? On several of the rivers there are lessees who hold thousands of yards for oyster-culture and they pay heavy rents. At the same time leases are granted to men for 100 or 200 yards. Those small lessees take advantage of that and steal oysters wherever they can get them, on the other leases or on Government land. They simply pay £1 or £2 a year, whereas the other lessees pay hundreds per annum. I recommended that the Government lands which are at present unleased should be let at a reduced rental.
2137. With reference to the leasing system, has it come to your knowledge that pilfering has taken place by the small lessees both from the Crown lands and from the larger lessees? Yes.
2138. Do you not think it would be better under those circumstances to lease the whole side of a river or half the side of a river or tributary instead of allowing those people to take up 100 yards here and there indiscriminately? Yes; that would be a very good remedy.
2139. How many oyster-leases are there in your district? On the Clyde River there are 20,686 yards leased. 1,200 yards have been applied for, and are now under consideration. At Tuross there are 7,200 yards leased. At Wagongo there are 5,000 yards leased; 300 yards have been applied for, but that is not yet settled. At Narrowilla Creek there are 2,200 leased; at Tomakin River 800 yards are leased. At Berara Creek 100 yards are leased, and another 100 yards have been applied for, but that is not yet granted. At Cullendulla Creek 1,700 yards are leased. That is all.
2140. What is the total number of lessees in the district? Ten men hold all the Clyde River. That is the principal fishery. At Tuross there are eight or nine; Moruya, six; Narrowilla Creek, four; Tomakin River, one; Berara Creek, one; Cullundulla, one.
2141. Do you know whether all the rents have been paid on those leases? They are not.
2142. Are several in arrears? Yes; I have a list of those on the Clyde River, which are in arrear. I sent for a list the other day which has just been sent back to me. There are not many that have not been paid.
2143. Are they long overdue? Some of them have not been paid for over three years.
2144. Have the applications for oyster-leases to come through you? No; they are sent to the head office.
2145. Are you informed after the Commission has dealt with an application? They send up the application to me to report on and to measure the ground.
2146. While those lessees neglect to pay their rent any person who desires to engage in oyster-culture is prevented from taking up the land through those people holding it? Certainly.
2147. Is there no provision by which you could compel those persons to pay their rents? I wrote to the Commissioners some time ago on the subject, but they said they could do nothing. They cannot compel the lessees to pay.
2148. Do you not think it would be much better to give the local inspectors some power with regard to the issue of fishermen's licenses, and with reference to the oyster-leases? Yes.
2149. Would that save a lot of inconvenience to the fishermen and the oyster-lessees, as well as a lot of red-tapeism in the department? Yes.
2150. In your correspondence with the Commissioners have you always found that they dealt expeditiously with matters, or have you found that they are dilatory, or that they have allowed matters to remain in abeyance? In some cases they have been dilatory.
2151. To whom are the lessees supposed to pay the rents for oyster leases? They are supposed to pay them into the Treasury.
2152. The people themselves? Yes.
2153. Is that also done with fishermen's licenses? They are paid to the nearest Clerk of Petty Sessions.
2154. But in some cases may not the Clerk of Petty Sessions be 30 or 40 miles away from the fishermen's home? Yes.
2155. Would that necessitate the fishermen travelling that distance? Yes, but in a case of that sort I think they often send the money direct to Sydney.
2156. It does not go through you at all? No.
2157. When do you hear of the license being issued? In my district I hear it from the Clerk of Petty Sessions who sends me the license and I deliver it to the fisherman.
2158. Would it not be better to give you, as the local inspector, power to issue the licenses? Certainly.
2159. Have any cases of the seizure of nets come under your notice? No.
2160. Have any of the Commissioners ever visited the fisheries under your control? None of them.
2161. Was Mr. Lindsay Thompson ever there? He was down there once. He visited the Clyde River, the Moruya River, and Tuross Lake, in 1883.
2162. Are there very few fish sent to market from your district? Yes, very few.
2163. Can you suggest any way by which the fisheries might be developed there? There is plenty of fish there, but there is no proper steam communication. There is one steamer per week; but she is a slow old boat; she generally gets into Sydney about 10 o'clock in the morning, and the fish have to be put into a cool chamber. They have to pay freight, they have to pay the agents, also cartage, and when the returns come back they find that there is nothing left.
2164. Have you ever heard them complain that the market accommodation in Sydney is not satisfactory? No; but I have heard them complain of the agents—the middlemen. They say the middlemen take all the profit.
2165. Have you heard them complain that their consignments have been tampered with on the road? Yes.
2166. Where does the steamer run from? The Clyde River.
2167. Where are your head quarters? At Bateman's Bay.
2168. Where are the most prolific grounds for oysters? The Clyde River.
2169. Do the fine oysters come from there? Yes.
2170. Are you aware that a great number of oysters are imported from New Zealand? Yes.
2171. Has any oyster-spat imported from New Zealand been taken down to your district? Yes, about 300 bags have been taken to Wagonga.
2172. How have they got on? They have shown good growth; but there is no sign of spat where they are.
2173. What has been the general state of the oyster-beds in your district for the last twelve months? They are very much improved on the Clyde River. About the Tuross River they have been all destroyed.

- Mr. G. G. Benson.
17 July, 1889.
2174. How did that occur? The lake and the mouth of the river have been closed. At Durras Lake they have all been destroyed except the mud-oysters. They seem to thrive in the fresh.
2175. Has there been any disease in the oysters in your district? No.
2176. Do you know of any natural enemies of the oyster? Yes, I think the bream are as great an enemy as any.
2177. Have you heard of the worm disease? Yes, in the northern rivers.
2178. Have you heard that the stinging-rays injure the oyster-beds by crunching the small oysters? Yes.
2179. In the event of your detecting any one pilfering oysters from the Crown lands, or from lessees' beds, have you any power to prosecute without reference to the Commission? No.
2180. Do you think it would be better to vest that power in the local inspectors? Yes.
2181. Have you any assistance at Bateman's Bay? Yes, a boatman named John Hesp.
2182. Do you do a great deal of rowing and sailing about? Yes.
2183. Does this man assist you? Yes, and he takes charge of the river in my absence when I am travelling.
2184. How long has he been with you? Since 1884.
2185. What salary does he get? £108 a year.
2186. Has he lately received an increase? No.
2187. If it has been stated that Hesp has nothing do do but engages himself in ringleading the larrikins, and that he also indulges in gambling at Bateman's Bay—is that true or not? It is untrue.
2188. Do you always find him plenty of work to do? I do not; he has not enough to do.
2189. Then he might indulge in larrikinism and gambling in his spare time after his day's labour is done without your knowing anything about it? I think I should know of it if he did. I have never heard about it. He is respected and liked by everyone in the district as far as I know.
2190. Is the fishing industry carried on in any other way than by oyster-culture and by sending a small supply of fresh fish to market? Yes, fish is salted and smoked.
2191. What particular kind of fish do they smoke there? Generally the black-fish, gar-fish, and bream.
2192. Black-bream? Yes; they also generally smoke whiting.
2193. Is the drying process a good one;—do they dry the fish in the sun? Some of them dry the fish in the sun.
2194. Is there a great quantity of dried or salt fish sent to the market? No, very little.
2195. Are there plenty of fish there? Yes, but there is no sale for them.
2196. Have you any fish-preserving establishments down there? No.
2197. *Mr. Stephen.*] Is there a stated rent charged for oyster leases? Yes, £1 for every 100 yards per annum.
2198. Is there any difference in the quality of the ground leased? Yes, there is a great deal of difference, and the lessees have to pay the same for the bad as the good.
2199. Is that fair? No.
2200. Do you think it would be possible to have different rates? I think the grounds ought to be classified. Of course there would be a difficulty because the pick of the rivers have already been leased and there is only the refuse now left. That would grow spawn, but there is very little of it fit for cultivation. I think the land now unleased should be let at a reduced rental. There is no revenue derived from that land at present but I think it would pay to take it up at a reduced rental.
2201. Would you have a reduced rental on an improving lease? Yes.
2202. Can oyster leases be forfeited for non-compliance with the regulations? Yes, after three years.
2203. Would that apply to the non-payment of rent? Yes; or to not paying proper attention to the lease; that is not keeping it properly stocked with oysters.
2204. You do not know that there is any remedy for non-payment of rent? No, except forfeiture.
2205. *Mr. Stevenson.*] Upon whose recommendation were you appointed inspector? Mr. Want's.
2206. What previous practical experience had you in fisheries and where? In Tasmania and New Zealand, but only as an amateur.
2207. Were you not connected with mining before your appointment? Yes, for a time.
2208. In New Zealand and Tasmania? Yes.
2209. Were you not engaged in mining pursuits in New Zealand and Tasmania before your appointment? Yes.
2210. Were you selected, although you had no previous knowledge of the worm disease, to go up north and report on the worm disease in another inspector's district? Yes.
2211. Why were you specially selected for that duty, seeing that you had no worm disease in your district? I do not know.
2212. Had you any practical experience in the worm disease before? No.
2213. Who accompanied you on that occasion? Mr. Gyler, of the Manning River.
2214. Had he any great experience in oyster-culture? Yes, he had been an oysterer for the last twenty years. I do not know whether he ever had any experience of the oyster disease.
2215. What was the object of sending two of you up there to make a report? I have no idea.
2216. Do you think it was done to afford you the assistance of practical knowledge to enable you to make the report; who made the report, you or Mr. Gyler? I did.
2217. Then you were assisted by the practical knowledge that Mr. Gyler was able to afford you? Yes.
2218. What were you paid for that report? £1 per day.
2219. How long were you away? Thirty-seven or thirty-eight days.
2220. Then you got about £37 to £40? Yes.
2221. Do you get house-rent? I do; office-rent.
2222. Are you aware whether any of the other inspectors get house-rent? I am not aware whether they get it or not.
2223. You also have a boatman? Yes.
2224. Have you any relative on the Fisheries Commission? I have a brother-in-law.
2225. What position does he occupy? President.
2226. When you report on any case to the Fisheries Commission is there any delay in getting an answer? I have found delays occur at times.
2227. Do you ever hear of the Commissioners not having a quorum at their weekly meetings? Yes; often.
- 2228.

2228. Do you think that if the department were under direct Ministerial control and under one head a great deal of time would be saved? I think it is scarcely a fair question to ask me.

2229. You can have an opinion? If I give my opinion straightforwardly it would be that I believe that under one head the department would be managed a great deal better than at present.

2230. Do you consider that the present Fisheries Act is a good one? In some respects I do not. I think there is room for a great deal of improvement.

2231. Do you think it would be an improvement if the rents for oyster leases were reduced and it was rendered compulsory to construct a spat collector? Yes.

2232. With regard to the defaulting oyster lessees have you no means of knowing that there are defaulters except by applying to the head office? That is the case.

2233. They do not furnish you voluntarily with the list? No; the list which I have now I sent for shortly before I came down here.

2234. Are we to understand that the Act makes no provision for compelling oyster lessees to pay their rent? I understand not. I can see nothing in the Act to compel them.

2235. Then anyone can go on with an oyster lease if he likes? Yes; and pay nothing.

2236. Anyone can take up a lease and not pay for it, and still it requires an inspector to look after him? Yes.

2237. Then, what are the duties of an inspector in this case. What is the use of an inspector travelling about if he has no power under the Act? The applications are sent to me; I have to measure the ground for the lease, and every three months I go round the district and report on the leases, as to whether the lessees are making any improvements, and what they are doing.

2238. What becomes of the reports? They are in the office.

2239. Can you give us any idea of the revenue derived from the leases in your district? From the oyster leases about £320 a-year is derived. There are not more than twenty fishing licenses; 10s. a-year is paid for the license, and £1 a-year for each boat.

2240. What is your salary? £240 a-year.

2241. And your boatman's salary? £100 a-year.

2242. That makes £340 a-year, so that by the time the salaries are paid there would be very little left for the Crown? There would not be anything left when the travelling expenses were paid.

2243. What do the travelling expenses come to on an average? I am paid actual expenses, and they amounted to under £40 last year.

2244. So that the whole of the revenue would be absorbed in paying for the inspector? I think so.

2245. And rather more if some of the lessees do not pay? Yes.

2246. *Mr. Ritchie.*] You said you had reason to believe that there was not a quorum at many meetings of the Commissioners. Do you know if any business was ever transacted at meetings where no quorum was present? No.

2247. *Chairman.*] Is there any other information which you would like to tender the Committee? There is one suggestion which I might make, and which I think would save a lot of unnecessary inspection. That would be to increase the size of the oyster ring, and if a man is caught selling illegal oysters, that is under a certain size, make him pay a heavy fine. I would suggest that the ring should be 2 inches in diameter, instead of 1½ inch, as at present.

2248. *Mr. Stephen.*] That would increase the legal size of the oyster very materially? Yes.

2249. *Chairman.*] Have you any idea of the quantity of oysters which are sent from your district to Sydney for sale? Yes; from the Clyde River in 1884, 346 bags; in 1885, 1,240 bags; in 1886, 1,274 bags; in 1887, 597 bags; in 1888, 441 bags. From Tuross in 1886, 335 bags; 1887, 272 bags; in 1888, 44 bags; Moruya in 1887, 96 bags; in 1888, 47 bags. Tomago River in 1887, 35 bags; in 1888, 11 bags. From the other rivers, the Wagonga and the Narrowwilla, they sent their returns direct to the office, and I do not know what they send.

2250. *Mr. Stephen.*] How did you arrive at those quantities? They have to report to the inspector before they ship the oysters.

2251. *Chairman.*] Was that provision made so that the royalty could be charged on the oysters? Yes.

2252. Who used to collect the royalty? The Customs department.

2253. In Sydney? Yes.

2254. Was it not possible that the Customs' duty was evaded? We had to send a telegram to the inspector in Sydney, Mr. Mulhall, and another telegram to the Customs department, stating that oysters were being shipped, and the number from our district.

2255. *Mr. Stephen.*] Did that cause additional expense in the working of the Act? Yes, the cost of the telegrams.

2256. Could you suggest any amendment in the Act? There are a lot of useless regulations under the present Act. It is almost impossible for any man to carry them out.

2257. Are all those regulations authorised by the Act? Yes.

2258. Are they framed by the Commission first? Yes.

TUESDAY, 23 JULY, 1889.

Present:—

MR. NOBBS,
MR. O'SULLIVAN,
MR. RITCHIE,

MR. WILLIAM STEPHEN,
MR. STEVENSON,
MR. FRANK FARNELL.

FRANK FARNELL, ESQ., IN THE CHAIR.

Mr. Thomas Temperley called in and further examined:—

2259. *Chairman.*] The Committee desire to obtain from you a verification of the additions which you have made to the evidence submitted to you for your revision. Have you made those additions for the purpose of making your answers more intelligible and explicit? Yes, giving facts and data.

2260. *Mr. Nobbs.*] Have you omitted anything from your evidence? No; I have simply supplemented my answers by giving facts.

Mr. T.
Temperley.
23 July, 1889.

Mr.

Mr. F. W. Smithers called in and further examined:—

- Mr. F. W. Smithers.
23 July, 1889.
2261. *Mr. O'Sullivan.*] I find that you have dealt pretty exhaustively with the question of oyster-culture. In what position is New South Wales to-day in regard to that question? In a very backward position.
2262. What is the ordinary method by which oyster-culture is carried on here at present? A man takes up 100 yards, and he takes everything from it. He leaves it absolutely bare of oysters; he does nothing to stop the spat from getting away; he never takes the trouble of putting anything down for the spat to adhere to,—that is what we call oyster-culture at the present time here. Others take up the same sized area of land, and they take oysters from the Crown lands which are not under lease, and they put those oysters on the land they have under lease and take them up again.
2263. Is that the only process by which they promote the culture of oysters? Yes; robbing Peter to pay Paul.
2264. Have you made a study of the way in which the French and Italians have carried on oyster-culture? Yes.
2265. Do you know the great revolution which was made in oyster-culture in France about 1858, by Monsieur Costé and others? Yes.
2266. The process is simply to clean the bottom of the ground? Yes, they clear it of mud and slime.
2267. And place tiles or fascines or any other rough substance in the beds for the spat to adhere to? Yes.
2268. That system has been very successful in France—have you heard of any marked successes in France? I cannot particularise any case; they are all successful.
2269. Did you hear of the case of Aurary, in France, in which a man planted 2,000 tiles in his oyster-beds, and in one year succeeded in getting 6,000,000 oysters? Yes.
2270. Has the method by which they cultivate the oyster in Lake Fusaro, in Italy, come under your notice? Yes.
2271. Is that a very ancient method? Yes, but it is very efficacious.
2272. They artificially plant pyramids of stones surrounded by stakes to intercept the spawn? Yes.
2273. Faggots and fascines are also used? Yes, all to catch the spat.
2274. Do you know the method by which they cultivate the oyster in Ireland? No.
2275. They plant hurdles and fascines there? It is the same in any part of the world.
2276. These are simple methods? Yes.
2277. And very successful? Yes.
2278. Would it be possible to induce our oystermen to take up those methods in New South Wales? Yes, but by compulsion only.
2279. Do you think it would be assisted by the importation of French or Italian experts? I do not think so.
2280. Do you think that those methods are so simple that our oystermen could learn them themselves? Yes.
2281. As a matter of fact this method was first discovered by a simple stonemason named Bœuf, who lit upon it accidentally? Yes.
2282. By planting little parks in the water he succeeded in establishing the industry? Yes.
2283. Was it then taken up by the French Government under the management of Costé, and it then became a great success? Yes.
2284. Do you think our oystermen could be induced to carry out oyster-culture by those methods, and if so by what means could they be induced? My suggestion is to compel every man to take up 500 yards. At the present time he does nothing to stop the spat from going away. I hold that he should be compelled to have a spat collector, which is a wall of wood covered with cement, or it might be made of stone—it would be a permanent improvement upon the land. Inside the space, enclosed by this wall, there would be a lot of sticks, fascines, and other things, to which the spat could adhere. When it was mature it could be taken off and laid all over the bed.
2285. *Mr. Ritchie.*] Would that wall be up to low-water mark outside? It would be started from high-water mark, and it would be run out according to the size of the bed.
2286. *Mr. O'Sullivan.*] I suppose this would be a very cheap method of catching the spat? It would be cheap enough, because I recommend a large reduction in the rents.
2287. Is there any danger of the oyster supply giving out within a reasonable distance of Sydney? Yes, if there is nothing done I hold that we shall have no oysters at all in five years.
2288. Then it is essential that some steps should be taken to cultivate the oysters? Yes.
2289. Do you recommend that a close season should be established to allow the oysters to breed? I cannot recommend that—the only thing I can recommend is what I have already stated.
2290. Have you ever read the works of Mr. Eyton on oyster-culture? Yes.
2291. Does he not recommend close seasons? Yes.
2292. You think it is not absolutely essential to have a close season? Yes.
2293. Do you recommend that the rents should be reduced only on condition that the lessee carries out the improvements which you recommend for promoting oyster-culture? Yes.
2294. Are you aware that there is no restriction whatever in New South Wales with respect to the sale of oysters in the market? There is inspection.
2295. Is that the case in the market? I do not know about the market, but I go amongst the shops myself, in order to see that the oysters are of proper size, but I have no authority to deal with oysters which are unfit for human food.
2296. That is what I mean—is there no inspection in order to protect the public against oysters which are not fit for food? That is the case. As I was passing an oyster-shop the other night I found that there was rather a heavy smell proceeding from the shop. I walked in to examine the oysters, and I found that about 75 per cent. of the oysters were dead and the remaining 25 per cent. were unfit for human food.
2297. What do you do in such a case? I report to the Commissioners, but they can do nothing.
2298. Could not the Inspector of Nuisances of Sydney interfere? Yes, but what I am speaking of occurred at 10 o'clock at night.
2299. Those oysters might have been sold? Yes, goodness knows how many were sold before I appeared on the scene.

2300. Would you suggest that some power should be given to allow of an inspection and condemnation if necessary? Yes, the only power we have got at present is the oyster ring, and that should be a quarter of an inch larger.

Mr. F. W.
Smithers.
23 July, 1889.

2301. Any oyster that will not pass through a ring of an inch and a-half is condemned? Such an oyster is too small for the market, although sometimes it is an old oyster.

2302. How do you manage if there is a clump of oysters stuck together? We do not always interfere unless the case is too glaring.

2303. Are you aware that there are bushels of those small oysters in clumps stolen off Crown lands and sold in the suburbs? Yes, and I have prosecuted in some of those cases myself. We have no law at all to prohibit the stealing of oysters from Crown lands.

2304. *Mr. O'Sullivan.*] Is there wholesale robbery of oysters from Crown lands going on at present? Yes, and it has been going on ever since 1884.

2305. What steps would you suggest to stop that? The first thing would be to issue new leases, as I have suggested, and secondly to bring in a penalty for oyster-stealing off Crown lands. There is no penalty at the present time.

2306. *Mr. Stephen.*] Is there no means of telling the age of oysters from their appearance? No, you might form an opinion from the roughness of the shell, but that is a mistaken notion.

2307. An oyster might pass through the ring, and although it might be an old one, you would have no means of determining that it was? No. If the oyster is deep and cuppy we let it pass.

2308. Do you measure them as much for the protection of the public as for the protection of the oysters? Yes.

Mr. Peter Richardson called in, sworn, and examined:—

2309. *Chairman.*] What are you? A fisherman.

2310. For how long? Twenty-six years.

2311. Where have you been principally working? Sydney Harbour, Broken Bay, and Brisbane Water, all over Parramatta River, and Hawkesbury River.

Mr. P.
Richardson.
23 July, 1889.

2312. Within the last ten years where have your operations been carried on? In the three places.

2313. Are you an oyster-lessee? No.

2314. Have you been simply engaged in fishing? Yes.

2315. Where are your head-quarters? I used to work the Hawkesbury River most, but now that so much of the river has been closed I have knocked it off. I have not been up there now for eighteen months.

2316. Did you leave on account of the closing of the river? Yes.

2317. Did you find that the field was not open enough for you on account of the Commissioners closing certain waters, and on account of so many people coming into competition with you? Yes; and the railway on the lower part inside the bridge injured the fishing a great deal. There is a place called Dangar's Island, and it was as good a place as any in the Hawkesbury River, but it is spoiled.

2318. Have you got a good knowledge of the hauling-grounds in the Hawkesbury River? Yes; as high as Mangrove Creek.

2319. Do you know whether the waters were closed in accordance with the wish of the fishermen at the Hawkesbury? I do not think so.

2320. Have you ever heard the fishermen complain of the limited space in which they are allowed to haul? Yes. That is a frequent cause of complaint with them.

2321. Do you know whether the local inspector was asked to make a report on the matter before the Commissioners closed those waters? I cannot say.

2322. How has the hauling-ground at Dangar's Island been destroyed? By a wharf, which has been built on it.

2323. Has it been spoilt in any other way? No.

2324. Was that considered to be one of the best hauling-grounds in the Hawkesbury? Yes.

2325. Could you, or any of those engaged with you in fishing, ever tell why the Commission closed the waters of the Hawkesbury in the way they did? No.

2326. Do you think that any serious result would accrue from opening the river so far as the main channel is concerned, up to Wiseman's Ferry? I do not know about Wiseman's Ferry; but I do not know that any harm would be done if it were opened up to Mangrove Creek. I do not believe that there are any hauling-grounds worth speaking of above Mangrove Creek.

2327. Do you remember that at one time it was closed to the railway bridge? Yes.

2328. It was extended on application by myself, I believe, on behalf of the fishermen, to Bar Point. Do you not think that it might have been reasonably extended further? Yes; because by extending it to Bar Point they did not give us much extra work; we only had the channel work.

2329. In carrying out your avocation as a fisherman, have you had to buy boats and nets, and to employ men? Yes.

2330. Have you ever had any of your nets seized? No.

2331. Did you ever know of any nets having been seized? Yes.

2332. For what reason? For being unlawful nets, and for being in closed waters.

2333. Do nets after being tanned once or twice shrink considerably? Yes.

2334. On their first submission to the Commission or inspectors for approval, as to the nets being of a legal mesh, is there any allowance made for shrinkage? Yes? I believe they do allow a little. The nets shrink very much. Hardly six months ago I was fitting out a garfish-net, and it was $1\frac{1}{2}$ inch in the mesh; it has now shrunk to $1\frac{1}{4}$ inch.

2335. Do you not think it would remove a lot of complaints if there was a law to punish people for bringing fish under a certain weight to market, rather than to be so particular as to the mesh of the net? Yes; that would be a great deal better.

2336. Do you remember Crossland's net being seized? Yes. I was there at the time.

2337. Can you tell the Committee some of the circumstances connected with that case? I do not know whether the man told me the truth or not, but he said that he caught the fish, only a basketful, at Dangar's Island. He went home for some purpose and he was coming down on the ebb tide when the

- Mr. P. Richardson.
23 July, 1889.
- inspector followed him ; he did not know that it was the inspector. As soon as he got opposite the bridge he stopped, and the inspector came up to him. He had his boots on and dry trousers—and the inspector seized his nets.
2338. Because I suppose he found the man with his net in closed waters? Yes, he saw him coming down.
2339. Do you know whether that net was ever restored to Crossland? I asked, and I heard that it was not.
2340. You do not know what became of it? No.
2341. For all you know it may be rotting in the stores? I asked Inspector Smith, and he said it was not restored.
2342. Do you know what is generally done with the nets when they are seized? They are sold.
2343. Are they sold in the state in which they are seized? I believe they are cut up in some way.
2344. Do you not think it would be much better to give the local inspector more power with regard to regulating the fishing-grounds for the fishermen? I cannot say that there is a competent inspector to do so except one. There is only one practical fisherman amongst the inspectors, and that is Smith, at the Hawkesbury.
2345. Do you not think it would be much better to let Smith have charge of the Hawkesbury district, so that he might recommend on his own responsibility the opening or closing of certain waters? I do not think there could be a better one to do so.
2346. When making application for renewal of a license have you ever had cause for complaint for delay in getting a license? No. I never went for any license until this year. I used to send for it and get it. This year I had to go myself, and the license was given to me.
2347. Do you not think that if the inspector had power to issue licenses it would save the fishermen a great deal of trouble? Yes.
2348. During the time you have been fishing at the Hawkesbury River have you sent many fish to market? Yes.
2349. What sort of fish? Black-bream, garfish, whiting, mullet, and jew-fish.
2350. I suppose the fish generally arrive in very good condition? Yes.
2351. Had you ever had reason to complain of the shortness of the quantity which arrive at the fish-market at Woolloomooloo, as compared with the original shipment? I do not know about their arrival at the fish-market; I think the fish disappear after their arrival at the market. I am almost sure of it.
2352. Is it entirely in connection with the sale of the fish that they go? Yes.
2353. You never get returns from your agent for the same quantity of fish that you send down? You get returns for the same number of baskets, but of course you cannot tell the quantity of fish that have been sold. They make two heaps for every basket, but after the fish are put into those heaps the basket is taken away a quarter full of fish. Any private individual going down to the market of a morning, and especially of a Friday morning, can see this done regularly.
2354. You know the fish-market pretty well? Yes; I was the first to put fish into it.
2355. Do you think that the accommodation is sufficient for the requirements of the fishermen and the public? I think there might be a lot of improvement.
2356. Have you been in the habit of sending your fish to market by steamer? Yes.
2357. Where was the steamer generally moored? In Darling Harbour, at Lime-street.
2358. Do you not think that it would be a good idea to have another depôt established for the sale of fish at Darling Harbour, as well as at Woolloomooloo? I think it would be a very good idea; somewhere near where the trains come.
2359. I suppose a great quantity of fish, which is caught in the Hawkesbury River, comes by rail? It ought all to come by rail, as it is by far the cheapest way.
2360. Have you heard other fishermen complain of the shortness of their consignments when sent to market? Yes; all of them.
2361. Have they never arrived at a conclusion as to the best remedy for this state of affairs? I have been trying to make them take some steps, but they do not like to go to the expense. I wanted to employ a detective last winter, but they would not have anything to do with it. The reason is this: I do not think they like to offend Mr. Seymour, or anybody in the market. Last winter, in July, I made a haul of nineteen baskets of fish. A fisherman was coming up with the fish to Sydney, and I asked him if he would put out my fish in the morning at the market. He accompanied the fish up to the quay, and put them on a cart, and he said that up to that time no fish had been interfered with. He went up to the market in the morning at 20 minutes to 5 o'clock to put out my fish, but they were already put out, and he found that there were not half of them there. There were 6 dozen whiting in one basket, and 2 dozen in another basket. The whiting were very large. He said that 2 dozen of the large whiting were not put out in the market at all; the heaps were simply arranged so as to make up a sufficient number of them.
2362. So that the pilfering must have taken place between Circular Quay and the market? Yes; and after their arrival at the market.
2363. Do you not think it would be a good idea to have brass locks and keys on the baskets? Yes. I daresay that it could be done in that way.
2364. It has been stated here that there is no proper provision made for the show of the fish, and that it is quite possible for the people to trample and spit upon them? That is done regularly.
2365. In the interests of the public is it not necessary that some steps should be taken to provide better accommodation? Yes.
2366. Do you know how long the Hawkesbury River has been closed? I think it was closed for two or three years the first time, and for twelve months the last time.
2367. So that it has been closed permanently for three years? Yes.
2368. Might it not be left open for six or three months in each year? My opinion is that if you worked with a lawful net in the Hawkesbury River, and kept it open as far as Mangrove Creek, you would do no harm. From Mangrove Creek up to Windsor there would be 50 miles of ground that could not be worked. In summer-time the Hawkesbury River almost closes itself on account of the blubber.
2369. Do you come into contact with people engaged in the oyster industry? Yes.
2370. Have you ever heard them complain of people stealing their oysters? Yes.
2371. Which do you think are the best fishing-grounds? The Hawkesbury River.

Mr. P.
Richardson.

23 July, 1889.

2372. When are the fish most prolific in the Hawkesbury River? In the summer-time they are very thick.
2373. Do you understand anything about the migratory habits of fish? Yes.
2374. Which are the particular fish that travel? The sea-garfish, mullet, travally, black-bream, and black-fish.
2375. In which direction do they travel? From south to north.
2376. Do you catch many schnapper in the Hawkesbury? No; but there is a place called Cowan Creek where they are very plentiful. I have heard that as many as twenty baskets have been caught in a haul there, but I never caught them myself.
2377. Do you know the coast very well? Yes.
2378. Do you think that trawling could be carried on successfully here? I do not think so. The bottom is too rocky.
2379. Have you had an opportunity of speaking with all the fishermen, and can the views which you have given be pretty well borne out by other fishermen? Yes.
2380. Do you know a man named Izard at the Hawkesbury? Yes.
2381. Has he had a pretty good experience of fishing? Middling. He lives at Brooklyn.
2382. Do you think that there is sufficient length of net permitted to be used? Of course a net that will suit Sydney harbour will not suit everywhere else. In the Hawkesbury River a net 200 fathoms long would not do any harm at any time.
2383. Do you think it would be better not to be so particular about the mesh of the net as about the size of the fish? I think that the mesh of the sinking net does a great deal of harm.
2384. Have you ever fished in the Parramatta River? Yes, a great deal.
2385. How long has that river been closed? For three years, with the exception of a fortnight.
2386. Do you not think that the open waters might be extended to the railway bridge at Ryde? Yes.
2387. Have you noticed any decrease in the number of fish in the Parramatta River of late years? Yes; I do not believe you would find any fish in it at all now worth speaking of. They were very plentiful, but the fresh which came on so suddenly drove them all out, and now you cannot find them anywhere. I think that the mouth of a harbour wants closing instead of the head of the harbour. I think it would do more good to close Sydney harbour for a mile from the entrance.
2388. Are there any good fishing-grounds in Middle Harbour? No.
2389. *Mr. O'Sullivan.*] With regard to the stealing of fish, do you imagine it takes place at the fish-market—are you aware that they deny it down there? They deny it, I daresay, but anybody can see it who goes down there. They can see the stealing done.
2390. Are you aware that some time ago they had detectives to watch the fish from the boat to the market, and that they discovered some men stealing? I did not know that they put on detectives, but I knew that a couple of persons were discovered stealing fish. They were tried at the Water Police Court, but they got off somehow.
2391. Did they not get off on account of the fishermen stating that they had given those persons permission to take the fish? I did not give permission; they wanted me to go up, but I did not go.
2392. Were your fish part of those which were stolen? No.
2393. Is it a fact that they discovered that the fish were given away, or rather that they were handed over to different parties on the way to market? Yes; I think that was the way they were found; but I could bring any amount of witnesses to prove that the fish were also taken in the market.
2394. By whom do you suspect the fish are taken? By a great many.
2395. By the hawkers? By the hawkers, and plenty of others. They go round with their little baskets or bags; they go to one man's heap and to another man's heap, and they take a few here and there, until they get a bagful. You can see the inspectors doing it themselves.
2396. Whereabouts is Bar Point on the Hawkesbury? About 19 miles from the mouth, and about 7 miles higher up the river than the bridge.
2397. Do you think that if the waters were opened as far as Mangrove Creek that would offer great inducements to fishermen? Yes. They would be able to make a living then, whereas they cannot do so now.
2398. What is your reason for thinking that trawling cannot be carried on on this coast? As far as I have seen the bottom is too rocky.
2399. Is not trawling carried on off Great Britain and Ireland where the bottom is rocky? I do not know what sort of bottom they have there.
2400. You have been fishing for 26 years and I suppose your appliances and experience are pretty much the same as those of most of the other fishermen? Yes.
2401. How old were you when you began fishing? Seventeen years.
2402. Do you not think that the fishermen of New South Wales are somewhat behind the times with their appliances? I do not know. Trawling was tried here thirty years ago by a man named Malcolm.
2403. If the fishing-grounds were surveyed, and you had something like fair charts to show the nature of the bottom, do you not think that trawling could be carried out? I do not see why it should not be carried out if we get a suitable bottom; but I do not see how a trawl could go on a rocky bottom.
2404. Is there any reason why it should not be carried out by the fishermen of New South Wales as well as the fishermen of Great Britain? I should think not.
2405. If the coast were surveyed they might be able to carry out trawling? Yes, I think if there are any trawling places at all they will be found in Queensland. There is a beautiful bottom there.
2406. But the whole of the bottom along this coast is not rocky? I do not suppose it is.
2407. Do you know that there are many places, such as that opposite Port Hacking, where trawling could be carried on? Yes, with short trawls.
2408. What was the cause of the failure of trawling thirty years ago? They could not get any fish. I noticed in the paper the other day that they also failed in a trawling experiment made in Victoria.
2409. Are you much troubled with sharks in the Hawkesbury? Yes, they are very plentiful.
2410. Are they dangerous to fishermen? No.
2411. Are they sea sharks? No, they are what they call nurses.
2412. They are nothing like the sharks that come into Port Jackson? No.
2413. Do you think that if a bonus were offered for the destruction of sea-sharks in Port Jackson it would lead to their destruction? It might be the case.

Mr. P.
Richardson.
23 July, 1889.

2414. I suppose it would pay the fishermen to destroy sharks if they were paid 10s. per head? Yes, they will not catch them otherwise.
2415. Do the sharks interfere with the fishermen's nets and boats? They interfere with the nets. If you have a shoal of mullet they generally come and bite the net at the back. They do not interfere with the boats.
2416. *Chairman.*] Do you think that the closing of the river has anything to do with inducing sharks to go up after the fish, owing to the fish becoming plentiful through the closing of the river? No. I do not think that the fish are plentiful. I do not think there is a man in Sydney harbour who would say that he could go up Parramatta River and catch three baskets of fish at a haul.
2417. *Mr. O'Sullivan.*] You suggested just now that instead of closing the heads of harbours the mouths should be closed? Yes, at the heads.
2418. What would be the good of that, if the men were allowed to catch the fish inside? At present the fishermen will not allow the fish to enter the harbour; for instance, when a lot of fish are coming in at the south reef at the entrance to Port Jackson the fishermen will go out night or day and shoot their nets to catch them. The fishermen will try to make a haul with sea-garfish at night-time when they can perhaps only get five baskets, whereas if they shot their nets in the day-time they would get a boat-load. This drives the fish back again from the entrance, and they do not come in again at all. I have spoken to the fishermen about it, but they say "If we can get three or four baskets of the garfish nobody else will get any so that it will pay us," but they forget that it only pays them for one morning.
2419. *Mr. Stephen.*] Do you think that it is desirable to have some closed waters in the harbour? From the railway bridge upwards it would do no harm.
2420. Would that apply to any river? Yes; in any place I think there ought to be some closed waters. When I speak about closing the entrance to the harbour, I refer to garfish, bream, and whiting. They come in about Christmas time. If the sea-garfish are shot at for two nights running they will never come inside the heads the same year again.
2421. Are you aware of the objects in closing portions of the waters? Yes; for the protection of fish in breeding.
2422. Do you not consider that the heads of rivers are better for spawning than the entrance to harbours? Yes; but how are the fish to get up there unless you let them in at the heads?
2423. Then it would be desirable to have the heads closed as well as the head waters? Yes, for a short distance. If Sydney harbour were closed for a mile from the entrance it would interfere with hardly any work at all.
2424. Does the mesh of the nets shrink a great deal? Yes.
2425. When the nets shrink below the legal size what do you do with them? They are pretty nearly worn out by that time if you buy the net a little larger than the size mentioned in the Act.
2426. Did you say you think it would be better to provide against fish of an illegal size being sold than to prevent nets of a small mesh being used? I would not have the mesh smaller than $1\frac{1}{4}$ and $2\frac{1}{2}$ inches.
2427. If you were allowed to fish with a net which had shrunk below the legal size, and there was only a provision for fining fishermen who brought fish of an illegal size to the market, what would you do with the fish below a legal size which was caught with the net—would you leave them to die on the beach? We do not do that. I know many fishermen who do not do it, but there are others who do.
2428. What do you do with the very small fish which you catch? Throw them back into the water.
2429. Under such circumstances would they live? Sometimes they do. It depends upon the size of the net. Once they are meshed in the net they will not live.
2430. If fishermen were allowed to work with nets below the legal size of mesh would it not tend to destroy large quantities of small fish? Yes. I do not believe in working an unlawful net. I was never caught fishing in closed waters nor fishing with an unlawful net.
2431. Is Inspector Smith, at the Hawkesbury, a practical fisherman? Yes. He is a good schnapper-man, and a good net fisherman.
2432. Has he been a long time resident on the Hawkesbury River? Yes; when he was doing the principal part of his fishing he was living at Watson's Bay.
2433. What do the fishermen complain of with regard to the working of the Fisheries Act? They complain that they have not got enough places to work.
2434. Do they complain as to the size of their nets? No.
2435. Do you think it would be any benefit to the fishermen if the Hawkesbury River were opened as far as Wiseman's Ferry, and all the tributaries were closed? I would not say Wiseman's Ferry, but it would be a benefit if it were opened as far as Mangrove Creek.
2436. In which way would the fish best arrive at the market if sent by rail or if sent by steamer? I should say by rail. They would arrive quicker by that means.
2437. Do you say that the migratory fish always travel from south to north? That is the way we have always seen them travel.
2438. Do they never go in an opposite direction? We have never seen them do so.
2439. Can you suggest any amendments in the Fisheries Act which would not be detrimental to the supply of fish, but which would give a better livelihood to the fishermen? I can only suggest the opening up of the rivers.
2440. *Mr. Ritchie.*] How do you know that the fish travel from south to north? We watch for them.
2441. How can you tell? We can see them when they are coming. If we are watching for the mullet we will first hear of them from the south. First from Shoalhaven, then from Port Hacking, Botany, Sydney, and then they enter Broken Bay. When we are looking out for them they always come from the south.
2442. When they are coming from Shoalhaven how do you ascertain that? We get telegrams from different places.
2443. From fishermen? Yes.
2444. Can you tell that the fish are travelling up from the south when you are on the coast yourself? Yes. You can see them—they make a great deal of work in the water; you can see them on a dark night better than in the day-time.
2445. If another person has given evidence that the fish travel from north to south would you think that that is correct? No one about Sydney harbour would say that and tell the truth; he could not say that he had seen them travel that way.

Mr. P.
Richardson.
23 July, 1889.

2446. To whom do you apply for your license every year? I go to Phillip-street, I think.
2447. Do you have to come to Sydney for it? I live in Sydney.
2448. Do the fishermen on the Hawkesbury have to come to Sydney for their licenses? I heard that every man had to come to Sydney to get his own license, and I therefore asked the inspector at Brisbane Water if that was the case, he said no, that the fishermen give him the money there and he gets the licenses for them.
2449. He receives the money? Yes.
2450. No inconvenience arises at any time about obtaining those licenses? The only complaint I have heard was made this year, and that was by the Sydney fishermen. Every Sydney fisherman was compelled to go and get his license himself.
2451. Do you know of any instance where fishermen were delayed for any length of time in getting their licenses? No.
2452. They can always go to fish at once? Yes, I always knew that my license was always forthcoming whenever I wanted it.
2453. Have you not mentioned that you have seen inspectors stealing the fish? I do not know what you would call it, but I have seen them with bags and handkerchiefs going from one heap to another and taking the fish away.
2454. Have you ever seen them do that with your fish? No; the reason is that I had a mate at one time who stopped them from doing it when I was not there.
2455. Whom do those inspectors belong to—to the City Council or the Commissioners? To the Commissioners I think.
2456. They are inspectors of the Fisheries Commission? Yes.
2457. Are you sure? They are a boating crew.
2458. Connected with the Fisheries Commission? Yes.
2459. Not with the market only? No, not with the market.
2460. Who are the other people who steal fish? The carters and those around them. There are six agents in the market, and each agent has four or five men around him. The whole of the commission they get will not give over £30 or £35, and how could they pay those twenty-four or thirty men unless they took the fish?
2461. *Mr. O'Sullivan.*] Is that their only means of livelihood? Pretty well. They can go to the races and spend as much money as any man.
2462. *Mr. Stevenson.*] How long have you been fishing? Twenty-six years.
2463. Do you know of a fact that large quantities of fish have been lost at the markets? Yes.
2464. Do the fish from Brisbane Water mostly disappear? Yes; I suppose that is because they happen to be the freshest fish that come to market.
2465. Are the men who are in the habit of helping themselves from the fish at the market connected with the Fisheries Commission? Yes; there are never more than three inspectors connected with the Fisheries Commission at the market.
2466. You say that the fish are taken from the heaps—can you say whether the parties who take the fish are in the habit of paying for them? I do not think that they do pay for them.
2467. Can you say that they do not? I believe that they do not pay for them. They may have been doing so lately, within the last week or so; but they did not do it before.
2468. Do you attend the market very often? Yes.
2469. Have you ever seen fish sent away by anyone connected with the markets? Yes.
2470. Very often? Yes.
2471. More particularly on Fridays? Yes.
2472. Then, in your opinion, the fish-market is not properly conducted? I am sure it is not.
2473. Do you know at whose request Middle Harbour was opened? No; I cannot say for certain, but I think it was opened just for the sake of one man. If all the fishermen in Sydney were asked I think everyone of them, except one or two, would say that they did not care whether Middle Harbour was closed or not.
2474. Then you think that Middle Harbour was not opened at the request of the fishermen? I am sure it was not.
2475. Have you ever seen any of the officials connected with the Commission fishing on the fishing-grounds either in Sydney or outside? No.
2476. What is your opinion about prawn-nets? I think it is a very bad net when it is used as a sinking net. When it is used in that manner it kills a tremendous lot of small fish of all sorts. I do not know why the prawn-nets should not be used as floating nets. I have caught a lot of prawns, but I have always done it with floating nets.
2477. *Mr. O'Sullivan.*] You have spoken about getting information from Shoalhaven and other places along the coast when the fish are coming up;—do you get that information from friends? Yes.
2478. Will it be better for the fishermen if the Government establish signal-stations from which information could be sent with regard to the movements of the fish? They would not know any sooner.
2479. Suppose the men at the light-house at Twofold Bay or Green Cape telegraphed that the fish were coming up the coast, would not the fishermen in Sydney know it in proper time? Yes.
2480. Would not that be to their advantage? Not much, because they know pretty well at present.
2481. You say that the Woolloomooloo market is not properly conducted;—in what respects do you mean? In different ways; you do not get the returns from the fish that are put into the market that you ought to get, because the fish are not properly sold.
2482. Do they not give you every accommodation—have they not electric lighting and refrigerating apparatus and other conveniences? Yes; but we pay for all that. We pay 2s. in the £—1s. for sale and 1s. for agency.
2483. If you bring fish to the market in the evening can you not keep it in the refrigerating room until next morning? No; unless we pay 1s. in the £.
2484. You are a native, and you have only got experience here? Yes.
2485. Then how can you compare this market with any other markets? I have not compared it with other markets.
2486. How can you tell that it is not properly conducted? When you are robbed you know that things are not being conducted properly.

Mr. P.
Richardson.
23 July, 1889.

2487. Do you think that any improvements can be suggested? Yes; a fisherman must not offend Mr. Seymour. If he does he suffers for about three months afterwards.
2488. In what way? Because when he comes to sell your fish he knocks them down as fast as the dealers can pick them up.
2489. Does he know your fish? The fisherman's name is always sung out.
2490. Could you not number them so as to avoid that? You have to put your name down in full, so that the inspectors can see that you have a license.
2491. Could not that be done irrespective of Mr. Seymour—could you not have some number or token so as to identify your fish, and you could then have protection against Mr. Seymour or anybody else? Yes, that could be done.
2492. *Mr. Ritchie.*] Can you not call in your own auctioneer? No.
2493. *Chairman.*] Do you not think it would be better if there were proper tables, such as they have in other parts of the world, on which the fish could be placed and offered for sale? Yes; that might do. At present, on Friday especially, the fish are packed on to the floor, as they do not want to have a second sale if they can help it, and when a dealer buys a heap of fish in one place he has to tread on another heap of fish to get to it.
2494. So that they are sold to the public in very bad condition, having been trodden and spat upon? Yes, in very bad condition.
2495. Have you noticed whether many people chew tobacco in the fish-markets? You will always see that going on, but smoking has been stopped within the last month.
2496. *Mr. Stephen.*] Would it not be possible to prevent chewing too? It would take a lot of watching to do that.
2497. Are your real complaints directed more against the treatment that the fish get in the market than against the Fisheries Act itself? The Fisheries Act is bad, because we have not got enough water to work in.
2498. But you have greater complaints against the management of the market? Yes.
2499. *Mr. Stevenson.*] What is your objection to the Hawkesbury being opened as far as Wiseman's Ferry? Because I do not know the river about Mangrove Creek. If anyone recommends that the river should be opened above Mangrove Creek they might be right. I know there are very few hauling-grounds above Mangrove Creek.

Mr. James Edwards called in, sworn, and examined:—

Mr. J.
Edwards.
23 July, 1889.

2500. *Chairman.*] What are you? A fisherman.
2501. How long have you been so engaged? Twenty-six or twenty-seven years.
2502. Where? George's River chiefly. I was at Port Stephens for a very short time.
2503. Where are you located at the present time? George's River.
2504. Do you belong to the Botany Fishermen's Association? I am a member of it.
2505. Have you at any time had reason to complain of the operation of the Fisheries Act? Yes; we have had reason to complain of the closing of waters, of the length of the nets, and the size of the mesh.
2506. Are there good fishing-grounds in George's River? There are some good grounds, but the chief part of George's River is very rough.
2507. Where is the river closed? To the railway bridge at Como.
2508. Do you think it could be opened up higher without doing injury to the public? Yes.
2509. To where would you suggest it should be opened? To Salt-pan Creek, on George's River, and to the crossing-place on the Woniara River, that is the sand-bar where they used to cross the cattle from Liverpool on to the Southern Estate.
2510. How high up is that? About 2½ miles from the bridge. Salt-pan Creek is about 5 miles to 5½ miles from the railway bridge.
2511. Are you what is called a master fisherman? Yes.
2512. You have boats and nets, and you employ men? Yes.
2513. Do you send large quantities of fish to market? I have not been in the habit of sending large quantities lately. I have been retailing them myself. I have been hiring men to sell fish, and I sell them myself.
2514. I suppose that pays you better than sending fish to market? Yes; because lately the fish have been bringing very low prices.
2515. How used you to transmit the fish which you caught in George's River to the Woolloomooloo market? By a cart from George's River. I have sometimes driven it myself, and sometimes I employed a man to do so.
2516. So that you are not one of those fishermen who have suffered by pilfering on the part of carters? No.
2517. So that you have no reason to complain of your fish having been stolen? No.
2518. Have you a knowledge of the fish-markets? Yes.
2519. Do you think the accommodation there is adequate? No.
2520. Do you think it could be much improved? Yes; I think a more central place in the town would be a great improvement.
2521. Can you suggest any place which would be convenient for another depôt? Where Mr. Hudson has his timber-yard at Eveleigh would be a convenient place. The fish could be brought in by train, delivered there, and sent straight away without handling. That would save pilfering, and the handling of fish, which turns it bad. At present fish that is sent by train has to be taken down to Woolloomooloo, and it is then sent back to the train to be sent into the country. That does great injury to the fish. I think that if we had a market in a more central place we would have a superior class of dealers. Many respectable men would not care to go down to Woolloomooloo market to deal in fish.
2522. Have you frequently witnessed the sale of fish at the Woolloomooloo market? Yes.
2523. Is the fish thrown in heaps on the floor, and is it open to inspection by everyone there? Yes.
2524. People inspecting the fish, and others who have no interest except to pilfer fish, can spit and tread upon them? Yes; I have seen them do so repeatedly. Any one can handle the fish.
2525. Are any people who desire to buy fish permitted to handle them? Yes; I have not seen any objection made. I have seen dozens of people take them up, smell their gills, and drop them down again.
2526. So that the fish are injured in that way also? Yes, I have often thought it a great shame.

2527. Do you think it would be better to have proper tables—marble slab tables—for the display of fish, instead of their being indiscriminately thrown over the floor? Yes, something of that sort would be a great improvement. I hear that in Melbourne they show the fish in half-baskets, and dealers in that way know what kind of fish they are buying.
2528. They are sold according to sample? Yes.
2529. Have you dealt directly with the auctioneer or through an agent? Through an agent.
2530. Have you to pay the agent a commission? Yes.
2531. Have you also to pay a commission to the auctioneer? I do not know whether it is paid to the auctioneer or to the Corporation; but we have to pay 5 per cent. for the use of the market. I understand that the auctioneer is paid so much per morning.
2532. I suppose you always send your fish in time for the first sale? I try to, but others are doing the same. I have often been there between 2 and 3 o'clock in the morning, and yet I was not in time for the first sale.
2533. What is the time of the first sale? About half-past 5 o'clock.
2534. *Mr. Ritchie.*] What is the meaning of the first sale? The first lot of fish that is sold. The market will only hold so many heaps of fish at a time, and after the first lot is sold another lot is put down, and so on until all the fish are sold.
2535. *Chairman.*] Have you ever availed yourself of the refrigerating process? No.
2536. Have you never had any necessity to do so? Yes, I have had a necessity, but I have always thought it better to throw the fish away than to put them in the refrigerating chamber.
2537. Why? Because they are handled so much, and because they are always looked upon as stale fish by the dealers, and they bring the price down. The dealers bid 1s. a heap, or 2s. a heap for them, and the fresh fish which are sold afterwards, and which ought to bring 5s. or 10s. a heap, only bring the same price. Everyone is rushing to see the fish, and the buyers at the back do not know whether the fish have come out of the freezing-room or not.
2538. *Mr. O'Sullivan.*] Those fish give a start to the price? Yes, they bring down the market.
2539. *Chairman.*] Have you seen any people pilfering fish at the market? I would not like to say.
2540. This is a very important matter; we do not want you to give names? I have no objection to that. I have.
2541. By what means are they pilfered? I have seen fish tipped out of the baskets, and there might be one-quarter of a basket, or one-half basket which was not tipped out. The fish that are left in the baskets are generally put in the carts afterwards. When I have gone away I have seen them still in the baskets.
2542. It is quite possible that those pilfered fish are sent out and sold to the public? I do not think there is any doubt about that.
2543. Have you ever seen people with small bags going round to the different heaps and taking fish from them? No. I have seen them walking round with bags, but I have kept my eye specially on my own heap.
2544. Have you ever caught anyone stealing your fish? Yes.
2545. Did you prosecute them? No.
2546. Are the people whom you spoke of as emptying the baskets and leaving some in the bottoms connected with the fish-markets at all? Yes.
2547. Not with the Fisheries Commission? No.
2548. Are the fishing-grounds in George's River very prolific? Not in the open waters.
2549. What sort of fish do you catch there? Chiefly mullet; there is very little of anything else.
2550. Do you think that you would be in a much better position, and that you would be able to earn a better livelihood if there were more open waters? Yes, I am certain of it.
2551. Have you any complaints to make as to the size of the mesh or the nets? Yes. Our nets are too short—that is a very great evil. Through having a short net we have to cast it very often, and that drives the fish away. If we had longer nets we might make only one or two hauls a day and get a full freight. At present we do not get a full freight perhaps more than once in twelve months.
2552. Do you ever hear people complain of the unjust seizure of their nets? No.
2553. Have you ever heard complaints as to regulations made by the Fisheries Commission? Yes. There is a complaint as to the shortness of the nets.
2554. Have the fishermen of the Association ever made any recommendations to the Commission? Yes. We had a deputation to the Commission.
2555. Has nothing come of that? No. They promised us that they would give us a month's notice before they closed any waters.
2556. Do you apply personally at the office for your license? Yes.
2557. Would it not be better if power were given to the local inspector to issue licenses? Yes; I have always spoken in favour of that. I could never see the reason why we should not get the licenses from them without having to go to Sydney.
2558. Was George's River closed on the recommendation of the local inspector? No.
2559. It was closed without his recommendation? Yes, he says so.
2560. Do you think it would be a good thing to give the inspector power to decide upon the closing of certain waters and the closing of others? No.
2561. Do you know if any of the Fisheries Commissioners have visited George's River in connection with the Fisheries? I believe they have done so, but I have never seen them.
2562. Do you know anything of oyster culture? No, I am not an oyster lessee.
2563. *Mr. O'Sullivan.*] Is your association composed of master fishermen or of all fishermen? Of masters and labouring men too.
2564. Is it an organization to protect your interests? Yes.
2565. Have you as a body made any recommendations to the Fisheries Commission? Yes.
2566. Have they been acted upon? No. They never acted upon them further than that they said that they would give us an answer to the deputation as early as possible. They sent us an answer within, I think, a day or two of twelve months from the time we waited upon them.
2567. Was it a favourable answer then? No. They said they would do nothing at all for us in favour of lengthening our nets or opening any waters. The only thing they would do would be to give 25 fathoms in the wings on lakes such as Illawarra, but for the home fisheries they would do nothing.

- Mr. J. Edwards.
23 July, 1889.
2568. Do you think that the members of the Fisheries Commission understand the business? I do not think so. Their actions do not show that they have knowledge. I do not think that they would fix the lengths of nets which we have if they understood it. Any man should know that such a short net would drive the fish away.
2569. *Mr. Stephen.*] Have you any real grievances to complain of under the Fisheries Act? We have to complain of the closing of so much water and of the shortness of our nets.
2570. Those are the greatest grievances? Yes; and the size of the mesh.
2571. Would you be satisfied if more waters were open as hauling ground, and if you were allowed to use longer nets than you have at present? Yes; they allow us to use a garfish-net of 1½ inch; that is the largest size with which we can catch a garfish. If we use a mesh anything larger than that it is impossible to catch garfish, and if the mesh goes below that it is illegal.
2572. When the fish are taken into the market are they sorted? Not that I know of.
2573. Are they thrown out promiscuously on the floor and sold? Yes; sometimes the bream and whiting are sorted out, but that is done by the fishermen before they are sent to market.
2574. What is the total reduction that fishermen are subjected to for fees, charges, and everything of that sort in the market? 10 per cent.
2575. Does that include everything? Yes.
2576. Does that include payment to the fisherman's agent? Yes.
2577. You spoke of the pilfering in emptying the baskets. Is that done by officials who are paid to attend to the work of the markets? Yes.
2578. Are those men employed by the Corporation or by the Fisheries Commission? That is more than I can say. I believe they are employed by the agents, but I cannot say.
2579. Then they are not officials? I mean the six agents.
2580. Are they the servants of the Corporation or of the Fisheries Commission, or are they men employed by the various agents on behalf of the fishermen? I believe they are employed by the agents on behalf of the fishermen.
2581. Then you do not think that it is done by the servants of the Corporation or the servants of the Fisheries Commission? No.
2582. Do you think it would be a benefit for the fishermen to have a practical fisherman to represent them on the Commission? Yes.
2583. Is that the general desire of the fishermen of the Association? Yes.
2584. *Mr. Stevenson.*] Are the agents whom you speak of sent to the market by the Corporation or the Fisheries Commission, or how do they get there? I think anyone can get an office in the market as an agent.
2585. *Mr. O'Sullivan.*] Who pays the agents? The fishermen pay them 1s. in the £.
2586. They pay 5 per cent. to the market and 5 per cent. to the agents? Yes.
2587. Then I presume those men are engaged by the fishermen? Yes.
2588. They have the appointing of them? Yes.
2589. If you wanted a man to act as agent for you what step would you take? I would ask him to take the situation as agent in the market, and I suppose he would have to apply to the Corporation.
2590. They have to be sanctioned by the Corporation? I think so, but I am not certain of it. The agents are in the market, and I understand that what they get is 5 per cent. for selling.
2591. *Mr. Stevenson.*] Are we to understand that when you spoke of officials in connection with the market pilfering the fish, you mean to say it is always done by the agents? Not by the agents, but by their servants.
2592. Did you ever have a dispute with anyone with reference to your fish being taken? No; I saw a few of my fish taken away, but I did not think it worth while to speak about it. I went up to one man and asked him why he took my fish. He said he took only one, that he knew me, and that he did not think it would matter.
2593. Was that an official connected with the Fisheries Commission? No; it was a man dealing in the market.
2594. Do you think that reduced oyster rents would help oyster culture by small men? I have worked a great deal amongst oysters, and I am of opinion that if the rent were lower than it is at present a great many poor men would take up leases.
2595. Do you think that fish which have been stored in the ice-house at the markets should be sold separately from the fresh fish? Yes.
2596. And should not be mixed up with the fresh fish? Yes.
2597. *Chairman.*] From your experience as a fisherman and your knowledge of the coast, do you think that trawling could be carried out successfully here? I cannot answer that question. I do not understand anything about the bottom outside, and I never saw a trawling-net used. I have heard that there are trawling-grounds that would pay.
2598. *Mr. Stevenson.*] Would it not be an advantage to the fishermen if the auctioneer at the fish-market were under the control of the fishermen instead of being under the control of the Corporation, that is supposing that he sold for the fishermen at so much per cent.? Yes, I think that would be a great advantage.

THURSDAY, 25 JULY, 1889.

Present:—

MR. FRANK FARNELL,
MR. HOWE,
MR. RITCHIE,

MR. WILLIAM STEPHEN,
MR. STEVENSON,
MR. THOMPSON.

FRANK FARNELL, ESQ., IN THE CHAIR.

Mr. James Richard Hill called in, sworn, and examined:—

- Mr. J. R. Hill.
25 July, 1889.
2599. *Chairman.*] What position do you hold in connection with the Fisheries Commission? I am one of the Commissioners.
2600. How long have you held that position? About five years.
2601. Are there four other gentlemen associated with you? Yes.
- 2602.

Mr.
J. B. Hill.
25 July, 1889.

2602. Have you taken any particular interest in the fishing industry of this Colony? If my being one of the most regular attendants at the board meetings is an evidence of it, I may say yes.
2603. How often do the board hold their meetings? Once a week.
2604. Have they lapsed at any time? Very rarely.
2605. How many generally attend the meetings? It is a rare thing for me to be absent unless I am away from town. It has happened on occasions that only two members have attended, but not for a long time past. Three have generally attended. The time when there was not a quorum present on various occasions was about twelve months ago. The terms of office of Mr. Ramsay and Dr. Cox had expired, they had not been reappointed, and they very properly refused to sit until they were officially gazetted. Otherwise we have had a fair number of meetings. As a rule whenever two were in attendance they have gone through the work, and the book has been afterwards taken to one other member, Mr. Oliver or Dr. Ramsay, who would go through what we had done, and confirm it.
2606. How many members constitute a quorum? Three.
2607. Do you not think that the plan of taking the book to a third member was very objectionable? It was the only way of conducting the business. There were only three Commissioners then in existence. Mr. Oliver, being the Parliamentary Draftsman, had his time so fully occupied that he could not always attend, and Dr. Cox and Mr. Ramsay were out of office.
2608. Do you consider that the provisions of the Fisheries Act have applied justly and have given satisfaction to those who carry on their calling as fishermen and oystermen? I think the Act is a fairly good one, but it has not given satisfaction in many respects, because where you have to close waters you will not give satisfaction to those who have been fishing in the vicinity of the closure. It is impossible to get an Act that will give unbounded satisfaction to everyone.
2609. Have the Commissioners worked together harmoniously? Yes, from beginning to end.
2610. Have you any reason to doubt the advisability of continuing the existence of the present Commission? I do not think that matters would be improved by altering the present system. Changes might take place with regard to the staff which might perhaps lessen the expense, but I think the system is a fairly good one, and I do not think that it entails unnecessary expense on the Government.
2611. Have you at any time brought under the notice of the Government proposals to remedy alleged defects in the Act? I was informed when I came into office that a draft Bill had been submitted, and that draft Bill was shown to me showing modifications and alterations. I was informed that that had been submitted to the Government, but that nothing had been done with regard to it. I was of opinion that that Bill contained a number of valuable provisions.
2612. As a Commissioner sitting in Court as it were, have you had any complaints brought under your notice by fishermen or others, as to the unjust operation of the Fisheries Act? Yes, many have objected to the closings. Others to the sale of nets.
2613. Have you taken any steps to remedy those alleged defects? We have always taken them into consideration.
2614. What time has generally been occupied in the sittings of the Commission? We meet at 3 o'clock, and we have been there till 6 o'clock. As a rule we are never away till 5 o'clock.
2615. Have the officers who are charged with carrying out the provisions of the Act power to seize nets of an unlawful mesh? Yes.
2616. Have many cases of that character come under your notice? I cannot recollect particular cases, but such cases have certainly come under our notice.
- 2617-8. Is it not a fact that some nets have been sold after seizure at the Commissioners' will, while at other times they have been allowed to rot? I never heard of a case where they were allowed to rot, or of their having been sold where they have not been made legal. If the net which is seized is partly legal and partly illegal, it is cut up and sold in legal portions. There is one style of net which is legal for one particular sort of fishing which is illegal for another style. A man might be fishing with an illegal bunt, which illegal bunt might, if it were of proper length, be legal, say, for a prawn-net. The Department has always cut the net so as to make it legal. When nets are sold there is a little hand-bill printed containing the auctioneer's name, the number and style of the net, its length, stating whether it is a legal hauling-net, prawn-net, or gar-fish net, or that it is not legal for anything, but suitable only for fruit trees.
2619. Have the officers of the Commission power to seize nets in closed waters? Yes.
2620. Whether they are in use or not? Yes; if they are being or have just been used there.
2621. Do you not think that that is a very harsh provision? I think it is rather the opposite. If a man fishes in closed waters he knows that his net will be seized.
2622. I refer to a case of this kind: If a man has his net in his boat and is pulling through closed waters, and if he happens to have caught fish in the open waters, but is discovered with his net in the closed waters, do you not think that it is a hard case that these nets should be confiscated? I am satisfied that no such case has arisen.
2623. Do you recollect the case of Crossland at the Hawkesbury? I do not remember any particular case, but I am satisfied that no magistrate would convict a man upon insufficient evidence. If a man were inside closed waters, as many of them have to be, because they live there, it would certainly be an unfair and unjust thing because a man had to go to and from his home to seize his net. I have never heard of a case of such injustice, but I have heard of cases where men were caught in the act of hauling, or where they had the fish alive in their boat, and when it would have been impossible for them to have caught fish outside closed waters. It is a matter of evidence before a magistrate, and unless a man is convicted a magistrate cannot confiscate his nets.
2624. The case of Crossland to which I have referred was brought by myself under the notice of the Government some time ago, and they promised to refer the matter to the Fisheries Commission. The circumstances of the case were these: Crossland had gone fishing in open water, and had made a haul. He kept the fish and returned to his home, which was in closed waters. The fish were alive, and the inspector came up to him and caught him with the fish in his boat. He seized the fish and swore that the man had been fishing in closed waters, whereas the man had actually been fishing in open waters. That was a case of hardship that came under my notice? I would like to know what the magistrate said.
2625. I think the case was given against the man? Where evidence had been given on oath, and where the witnesses were subjected to an examination, is it not rather unreasonable to say that this man caught the fish in the open waters. I conclude that before a magistrate would convict a man he would have sufficient evidence to justify him in doing so.

Mr.
J. R. Hill.
25 July, 1889.

2626. The man had been fishing in open waters and several men had seen him. When he was summoned he thought that his case was so good that he did not deem it necessary to take witnesses with him to court; however the case went against him, and I am informed that he represented to the Commission that his statements could be borne out by the fishermen associating with him. Do you not think under those circumstances, which were represented to the Commission, the Commission would be justified in investigating that man's case? I do not think the Commissioners would in any degree be justified in going outside sworn evidence before a magistrate. It would be a slur on the administration of justice if the Commission in any way interfered with a case that had been before a magistrate or a justice, where the accused would have every opportunity of being heard.
- 2626½. Are you not aware of cases in other departments where actions have been taken against men and they have been committed, but through evidence having been brought before the Minister of Justice he has released the persons imprisoned or has remitted the fine imposed by the magistrates? I cannot tell you what the individual cases are.
2627. Has a man a right of appeal on these convictions and his net being ordered to be confiscated? No, he has not.
2628. In the face of all these circumstances do you not think that the Commission as the body charged with the administration of the Act would be perfectly justified in investigating that man's case? No, after the case was once before the court I do not think the Commission should investigate it.
2629. Are you aware of any special or particular knowledge possessed by your fellow Commissioners—are they scientific men or men of practical experience? There are men on the Commission who are thoroughly practical fishermen and others who are scientific men. Within my personal knowledge there are practical men on the Commission who know more about fish than any fishermen I knew in my life, and I am thoroughly acquainted with a large number of fishermen. Fishermen as a rule are not of an inquiring turn of mind, and many of them know very little about the habits of fish.
2630. Have you anyone on the Board who has ever earned his livelihood by fishing? Certainly not.
2631. Would you have any objection to have a man placed on the Commission who has had experience as a practical fisherman? It would not be for me to object or otherwise, but I should think that it would be an inadvisable step if a fisherman who was earning his living as such were placed on the Commission.
2632. If the man placed on the Commission as the representative of the fishermen were a master fisherman, owning a lot of boats and nets, would you see any objection to his being a member of the Commission? I do not see that there would be the slightest harm in it.
2633. Have you visited any of the oyster-grounds or fishing-beds? I know well the Harbour, Botany, Port Hacking, Shoalhaven, and various other places; I do not know Broken Bay, but I know the Hunter.
2634. Is it not a fact that nets which have been passed as legal shrink very much, and the mesh becomes smaller than the legal size? Yes.
2635. Have any proceedings been taken against men who have used nets under those circumstances? I am not aware of any particular cases. It is as likely as not that they have taken place, but a fisherman with any sense would allow for the shrinkage when he was buying the net.
2636. Do you not think that when a net has once been pronounced as being of a legal mesh it should always be considered legal? Certainly not; a garfish-net by a process of severe tanning would soon be brought down to half its legal size.
2637. As there have been several complaints as to the alleged unjust application of the provision which enacts a punishment to fishermen who use nets of an unlawful mesh, do you not think it would be much better to provide for a very severe punishment to those people who may bring undersized fish to market rather than be so particular as to the size of the nets? It is a debatable question whether that course should not be adopted. I cannot say myself which is the best course to adopt. The Act already provides a punishment for killing undersized fish.
2638. Has the Commission anything to do with the appointment of inspectors? We do not appoint them directly, but we appoint them subject to confirmation by the Colonial Secretary.
2639. *Mr. Stevenson.*] You simply recommend? Probably that is what it is in effect.
2640. *Chairman.*] Do you know whether all the inspectors are practical men? I cannot say; I only know a few of them.
2641. Do you think that there are too many officers employed by the Commission? I have always held the opinion that the police department might be asked to take charge of some of the places, so as to relieve us of some of the expense that appears to be too large as compared with the number of fish and oysters that come from the various places.
2642. You would not have any objection to police magistrates undertaking the duties of inspectors? Not the slightest; only I do not think that police magistrates would take the same care that sergeants of police would.
2643. Is it customary for Mr. Thompson, the Secretary, to visit the various fisheries and oyster-grounds? We have sent him to view various places, but I do not think it is his practice to go periodically.
2644. Have any of the inspectors been reported to you for dereliction of duty? Yes, one or two; Smith, at the Hawkesbury, was reported once or twice. I do not recollect the other cases.
2645. Were the charges made against Smith proved? I think not. Smith subjected himself to reprehension for one or two trifling things, but the chief charges were not proved. The case was one of his having become executor in an estate where some oyster leases were involved.
2646. Is it a matter of complaint amongst fishermen that the fish-market at Woolloomooloo is not worked satisfactorily? I think that is quite likely. I have visited the market on several occasions.
2647. Have you watched the conduct of the sales in the morning? It is a long time since I was there at a sale; but it struck me that it was a necessarily hurried affair, but that the best was made of the circumstances. There are a great number of fish to be sold, and of course they must be got rid of at a certain hour to be in a fit condition to be retailed.
2648. Have you ever heard of pilfering being very common? Yes; that was reported to me on two or three occasions. I took very strong action on the Commission about it, which resulted in the head of the police being requested to put on a policeman there to search out the matter. One or two convictions took place afterwards.
2649. It has been stated here that the fish are thrown on to the floor of the market, and that they are liable to be trodden and spat upon by the people who are in attendance? I should think they are liable to that; but I think it is less the case now since the Council have built larger premises. 2650.

Mr.
J. R. Hill.
25 July, 1889.

2650. Do you know, as a matter of fact, that the accommodation now afforded is adequate to the fishermen's requirements? I should think it is, because it has been very largely increased. It may not be if the number of fish goes on increasing as it has been. I have always held that there ought to be little shops attached to the market, where people could go and buy their fish. That, however, is a matter within the province of the Municipal Council.

2651. Do you not think that there might be some improvements made by constructing raised tables with marble tops, so that the fish might be properly shown to purchasers? Yes; and the Municipal Council would be justified in having a second market to meet the requirements as the city extends. I think there should be another market established somewhere in Sussex-street.

2652. It has been stated here that if fishermen come into collision with Mr. Seymour, who, I believe, receives a salary from the Commission of £75 a-year, he is likely to have a down on them, and will knock down their fish when selling them for next to nothing. Do you think there is any truth in that? I do not know Mr. Seymour personally, but from what I hear of him I should think that he is the very opposite. He has a very difficult part to play. He has to dispose of a very large quantity of fish in a very small space of time, and he has a very curious class of people to deal with.

2653. Are you aware that many complaints have been made by fishermen that the rivers have been closed unnecessarily? Yes.

2654. In some cases they have been closed for twelve months, according to the Act;—then they have been closed for a further period of twelve months; and in some cases the rivers have been closed for four years permanently? I do not recollect the time for which the rivers have been closed; but I do not think that any closure has been made which is not in accordance with law. If the closure were made outside the law the fishermen would not respect it; it would be *ultra vires*, and the fishermen are quite well up in the law.

2655. Do you remember any complaints against the Commission closing the Hawkesbury River unnecessarily? I do not recollect any special complaints.

2656. Have the Commissioners done anything with regard to administering the Inland Fisheries Act? We have got an inspector near Deniliquin, another was appointed last fortnight on the recommendation of Mr. Chanter, that is Mr. Manton. The head of the police at Lake George has taken a great deal of interest in the matter, and he has reported to us on several occasions with regard to cod-fish and, I think, perch.

2657. Have you two trawls in the possession of the Commission? Yes; we have two, and I am not sure that we have not three.

2658. Have they ever been used? One was used before I was a member of the Commission, but unsuccessfully I understood. I think it got caught in the rocks two or three times and was injured. We made an attempt during the last few months to use a trawl at Botany, we had only one haul and it was unsuccessful. We instructed our men to use it again, but they were unsuccessful also. I initiated the movement because I heard that the place was alive with flounders and flathead; but the experiment did not give hope that fishermen might go on with the industry with success.

2659. Is the steam-launch in the possession of the Commission seaworthy? No, it is perfectly useless.

2660. Do you keep an engineer for her? Yes; I consider that it is absolutely a waste of money.

2661. *Mr. Howe.*] Do you think that the Act is better administered under the Commission than it would be under a responsible Minister? Yes.

2662. Are you prepared to recommend as one of the Commissioners that Port Hacking should be thrown open to the fishermen? The Commission were never consulted about the closing of Port Hacking. My opinion is that it would be wise to keep Port Hacking closed from the spit upwards. I have always thought that it should be open from the spit to Jibben Beach.

2663. Do you know that when the fishermen are using the garfish-net when they catch fish no matter of what weight, they are compelled to throw them into the water again? No; I do not read the Act in that way. If they are undersized fish they have to be thrown into the water. I am sure that no fisherman throws back fish which are above the legal weight.

2664. What is your objection to the length of the net provided the mesh is of a legal size? I think that on several of the flats, especially at the Hawkesbury and Lake Macquarie, there might be no objection to increasing the length of the net so long as the mesh remained the same, and so long as there was decent supervision to see that the small-sized fish were thrown back. In ordinary places, like Sydney harbour and Botany, I think that the present length of the net is quite sufficient for all practical purposes. I think that very few of the old recognized fishermen ever use as great a length of net as the law allows them.

2665. Is the present length 60 fathoms for 2½-inch mesh? No. 90 fathoms for a garfish-net and 150 fathoms for hauling-nets. I think on big flats an extension of 50 fathoms might be allowed for a hauling-net.

2666. Of course the shorter the net the more frequent the hauls? Not necessarily I think.

2667. In a river if there are frequent hauls do they not disturb the fish? No doubt; but the old fishermen of the country do not as a rule haul unless they see fish. It is only since the advent of the Italians who have made a practice of hauling on all occasions and in all places that many of our men have been tempted to do the same.

2668. Have you ever heard objections raised against the use of sinking nets? Yes.

2669. On account of disturbing the bottom? Yes. I think that has been more prompted by jealousy of the Italians than by a knowledge of fish-culture. I am satisfied by a very lengthy experience of fresh water fish in New Zealand, where I had a great deal to do with salmon and trout that very few people in this country know anything as to the hatching of salt water fish. I do not think it has been demonstrated scientifically so as to make certain about it, excepting in the case of the mullet. We know perhaps more about the habits of the mullet than any other fish. We know that they go on to the flats and scrape a hole like that made by the furrow of a plough, only shallow, in which they deposit their eggs, but with regard to schnapper, garfish, bream, and all other kinds of fish the knowledge with regard to their reproduction is in its infancy. Last year I noticed that the schnapper had ova in the month of November up to the end of May, and many of them in the month of November had ova so mature that it was on the point of being deposited. That extended right up to the end of May, and I think as late as July, but during the present year it was altogether different. They had their ova about the month of December,

but

Mr.
J. R. Hill.
25 July, 1889.

but I never found a fish up to the end of March with ova in it. This shows that we cannot count on one season following another in regard to salt water fish. I never met anyone who could give me any information on this subject.

2670. Do you think that it would be advisable to close the entrance to the harbour of Port Jackson, say a mile one side and a mile the other? I think it would be a very serious mistake.

2671. Fishermen living inside the mouth of the harbour when they see a school of fish come in shoot their nets at them and the probability is that the fish turn round and do not come into the harbour again? As a rule they do not go out again. They go across to the other side or they go deep. I have noticed this, that the fishermen who live about the opening of a harbour are anxious that the rivers should be closed, while the fishermen who live up the river are anxious that the other portions should be closed.

2672. Are you aware that in the summer months it is impossible to haul in the rivers on account of the blubber? I have seen that in Botany and in the Parramatta River. It is impossible to haul for all practical purposes.

2673. Does it burn the nets? I do not know that that is the fact, but it is a terrible job for the fishermen to clean their nets, and it causes a great strain on the nets.

2674. What are the present license fees? I think that the fee for a boat is £1, and for each man 10s. or £1, I am not sure which.

2675. Would you be prepared to recommend a reduction of those fees? I do not think it presses hardly on the men. I have never heard them complain of it.

2676. If a fisherman sells his boat and purchases a new one, is he compelled to take out a new license? I do not know; but I think the license ought to be transferable to the new boat.

2677. Would you have any objection to the erection of a fish-market at the southern portion of the city, say at the Redfern end? I think it would be a great boon.

2678. I suppose there would be a large transport of fish to the country districts by rail? There is no doubt that in future there is likely to be an increased traffic in fish by rail. A great deal of that might be intercepted and sold at a market somewhere near the Railway station. The Parramatta River men ought to have a market somewhere about Sussex-street.

2679. Are not many of the places where fishing is carried on connected with the city by rail? Yes; and steamers are going more actively into the business of bringing the fish to market in a decent state. The railway is undoubtedly bringing the fish now from places where it was never brought from before; for instance, Lake Macquarie, the Hawkesbury, and probably a great deal of fish will be brought from Kiama and other places. It would be of very great service to the public if the Council could be prevailed upon to open a market there.

2680. *Mr. Ritchie.*] Does the Commission frequently transact business without a quorum? No. Very rarely. It occurred during the time that Dr. Cox and Mr. Ramsay ceased to be members through their term of office having expired.

2681. Has it ever occurred that business has been transacted with one member being present only? Never that I heard of.

2682. Do you admit that when the meetings were transacted without a quorum they were invalid? No doubt they were illegal.

2683. Do you also admit that the members who were absent would not have a full opportunity to arrive at a proper conclusion by seeing all the papers? They would have the papers sent to them. There would be only one absent member; that would be, perhaps, Mr. Oliver.

2684. Have any of the Commissioners ever acted after their appointments lapsed through effluxion of time? I cannot speak with certainty. I know that Dr. Cox was very particular about refusing to act.

2685. Are the Commissioners appointed for five years? Yes.

2686. You do not know of any case where a Commissioner acted after five years had elapsed? I cannot speak with certainty.

2687. If anyone said that meetings frequently lapsed for want of a quorum would that be true? Yes, we have had many lapsed meetings in five years.

2688. Has business been frequently transacted in the illegal manner you describe? In almost all cases where two attended they did the business and the book was taken to the third.

2689. Is it your opinion that the mode of conveying the fish from the steamer to the market is imperfect? Yes, very imperfect.

2690. Are many fish lost or destroyed in this way? Yes; the fishermen are subjected to great loss by pilfering. It is a very loose, bad system, but fishermen trouble themselves very little about their own affairs, and they do not seem to have enough energy to remedy the evils which exist.

2691. Are large numbers of fish often allowed to be destroyed and become bad through neglect in allowing it to lie about the wharves? I never heard of that.

2692. Do you know that fish from the Clarence and other northern rivers are brought to Sydney in ice-chests? Yes; a certain quantity of ice is put into the boxes in which the fish is carried.

2693. Is it not a fact that those boxes with fish in them are allowed to remain on the wharves all night, and in this warm climate the fish often goes bad? I never heard that. I always understood from the fishermen that as soon as the vessel came in the carts came to take the fish away to market.

2694. Have you ever heard of any inconvenience arising through delay in issuing licenses to fishermen? Never within my recollection. I think we are always ready to issue licenses at all times.

2695. Do you find that by closing the various waters there is a great increase in the fish? Yes; in a marked degree I think they have done an immense amount of good.

2696. Do you know anything about the habits of migratory fish, such as mullet? Yes; nearly all our fish are migratory. I hardly know a local fish except the rock fish.

2697. Which way do they travel? The whole of the fish that I know, especially of the mullet tribe, travel from south to north. I have never found anyone who has observed a mullet to travel south. We never hear of fish in the fry state or the mature state going from north to south.

2698. But it would be possible for them to do so? They might go deep under water. Mullet is a fish intended by nature not to go away from the shores. Schnapper go out to sea.

2699. During what months do they generally travel? The mullet generally commence to travel during March and April. They go right on to the middle of May. When discussing this matter yesterday with the Commissioners, the conclusion they came to was, that after the migrations there are always a certain number of fish left which breed and provide a store of migrating fish for next year.

Mr.
J. R. Hill.
25 July, 1889.

2700. I suppose it is generally found by the fishermen that when the fish are travelling that way they keep filling the various rivers and ports as they go on? No; they are somewhat curious in their habits in that respect. Sometimes some will go into Port Hacking, for instance; whilst others will go right past it. The weather has a great deal to do with it. In fine weather they often stay outside the Heads on the rocks for days and days. If it is very rough, especially when the wind is from the south or the west, they will take it into their heads to go straight on. Some will go on to Botany, and some will go right past. They do not always go in and out. Some go into the ports, some go right on, and some remain.

2701. Have you any knowledge of the natural enemies of the fish? Yes; sharks and porpoises are great enemies of the mullet.

2702. Are birds? I do not think so. I never regarded the birds as great enemies, except the cormorants and shags.

2703. Can you recommend anything for the destruction of those enemies? I do not think you can do anything for the destruction of sharks. The offer of head-money for sharks might produce some beneficial results. That was tried in Melbourne for the protection of bathers, and many thousands were killed in twelve months.

2704. I suppose when fishermen catch them they generally destroy them? I think so in every case.

2705. Do you think that any improvement could be made in the present system of oyster-leasing? Yes; I think it would be wise to take rivers and divide them into sections, and then let them by public auction.

2706. Would you lease a whole river? I would not let the whole of a big river to one man. I would divide a river into two or three, according to the number of oyster-beds. The present system is a bad one.

2707. Do you think it would be any advantage to charge less as rent for the land, and to charge a royalty on the oysters gathered? I think that 1s. per hundred yards is a very small rent, and I think that a very serious mistake was made in taking off the royalty on oysters.

2708. On our home oysters? Yes; I think that if a duty had been placed on foreign oysters it would have met the case in a better way.

2709. By putting up the oyster leases to auction they would sell according to their productiveness? Yes; I think it would be much better in every way. It would lead to oyster culture being carried on in a better and more scientific way than at present.

2710. Do you think it would be within the scope of the Fisheries Commission to take means to prevent the worm disease which affects the oysters? I think that nature is the only means of curing that. Floods in the rivers are the only means of preventing the disease. It is found that the disease is only prevalent during droughty seasons. So soon as there is a succession of floods the worm disease is never heard of, and the oysters increase.

2711. Can you suggest any better method of conveying fish from the steamer to the market? As the Municipal Council has charge of the market it is possible that they might consider it within their functions to deal with that matter.

2712. Do you not think it would be within the province of the Fisheries Commission to recommend the City Council to adopt some means of conveying fish to the market in a more expeditious way? I think it ought to be done by a memorial from the fishermen to the Council, because they are the people most interested.

2713. Do you not think that it would be better to have the carts which convey the fish from the steamers to the market under the supervision and control of the Inspector of Nuisances or some other official appointed by the Council? I think that if one man appointed by the Council had full charge of it the fishermen would benefit very largely. I cannot say which is the proper functionary to take charge.

2714. *Chairman.*] You have stated that it is to be regretted that the royalty on oysters is abolished? Yes.

2715. You are aware that the Act was passed in 1887? I recollect its having been passed.

2716. Was there any request made by the oyster-getters or lessees to have the royalty abolished? I believe there was.

2717. Do you remember my taking any action in the House to obtain the abolition of the royalty? No.

2718. It was at the request of the oyster-getters and the oyster lessees that that was done. How do you substantiate your statement that it was a pity that the royalty was not left on oysters and a duty imposed on imported oysters. Do you look on oysters as a luxury? I do not know whether you would call them a necessity or a luxury. Personally I do not care anything for them.

2719. Do you look at the question from a revenue point of view in the interests of the Commission? I was not thinking of it in that light, but I thought it a great pity that those oysters should be allowed to come in from other countries to interfere with our industry.

2720. Do you not think that it was an encouragement to the oyster lessees and an incentive to them to improve the industry to remove this royalty? I think that it is a reasonable thing that a duty should be imposed on oysters. In every young country people are allowed to gather oysters with the growing of which they had nothing to do. The Crown is as much entitled to obtain a royalty on the gathering of oysters as it is to obtain a revenue for a license to cut trees on Crown lands.

2721. Would you apply the same principle to everything coming into the Colony? I am a mild protectionist.

2722. With reference to spat or brood which people are allowed to take off Crown lands to lay down on the oyster-beds, the people are charged so much a bag for this;—do you not think that that tax on oyster culture might be abolished? Practically there is nothing much in it, because the income derived is very trifling.

2723. *Mr. Stevenson.*] You told us that on the representation of the Commission a detective was sent to the market;—why was he removed? I cannot tell you. I think he succeeded in getting two or three cases. He may be there still for all I know.

2724. You are not aware if there is any police supervision at the market at present? No, I am not aware.

2725. Who were the persons who were convicted? I do not know. I think they were hangers-on about the market. They were not I think people attached to the market as employees of the Council.

2725½. On whose recommendation was Middle Harbour opened? I think it was on the recommendation of Mr. Mulhall.

2726. Was it done on the representation of the fishermen? No, not a single fisherman.

Mr.
J. E. Hill.
25 July, 1889.

2727. On what ground did Mr. Mulhall make the suggestion to the Board? I forget whether the Commissioners themselves referred the matter to Mulhall. It was considered that Middle Harbour had been closed for a sufficient time, and that there was a very large number of fishermen in Port Jackson, probably far and away more than the water would support, and we thought we should increase the area.

2728. Did you ever hear that the fishermen are opposed to Middle Harbour being opened? No; but it is quite likely that the river men would be opposed to its being opened, because they are extremely jealous of the fishermen at the mouth.

2729. Do you think that Middle Harbour was opened at the suggestion of one man? I do not recollect who initiated it or brought about the discussion. I think I had something to do with it myself.

2730. Do you ever use a net? Not for the last eighteen months or two years.

2731. Did you ever have a net seized? Never, certainly not.

2732. Did you ever hear of a net being seized which was supposed to be in the possession of Mr. Knox, and which was said to belong to you? Never, directly or indirectly.

2733. We have heard in evidence of a net being seized which was said to belong to one of the Commissioners? I never heard of it, directly or indirectly.

2734. Was ever an inquiry held by the Commissioners with regard to a net being seized, and are the papers in the office? I never heard anything of the sort, directly or indirectly. I never heard of a net belonging to a Commissioner having been seized.

2735. You said that some members of the Commission had more practical knowledge than real fishermen;—can you name them? I do not know that I should be called on to name them, but there is one who has practical and theoretical knowledge in a very high degree.

2736. I think an answer should be given to the question? I would prefer not to particularise my fellow-Commissioners, but I think there are very few men in this country who know so much about fish as Mr. Oliver does, both theoretically and practically.

2737. Have you any idea what it costs the Commission to keep up the steam-launch you spoke of? I have always looked on that launch as being useless for the purpose for which it was designed, and I think that she unnecessarily costs a lot of money. She must be a charge on the Commission outside the matter of repairs, and she has been subjected to a great deal of repairs through what we think was the bungling of the Public Works Department or the Harbours and Rivers Department. I think the engineer gets £3 a week. There is only one employed.

2738. *Mr. Thompson.*] Was the launch built for the purpose, or was it purchased second-hand? I believe she was built for the purpose before I was a member of the Commission, and then she was lengthened. She is nothing but a useless incumbrance.

2739. What use is made of the launch? Her chief use during the last year has perhaps been to take Mr. Mulhall and the other men from place to place to see that people were not fishing in closed waters or with illegal nets, except when she was taken by Mr. Oliver to the Hawkesbury to see if there were any places there suitable to trout out in.

2740. Is the launch fit to go to the Hawkesbury from here? They chose their own time and go in fine weather.

2741. To be of real service to the Commission ought it not to be possible to go in the launch in safety to all the rivers? Yes. Mr. Oliver and I have had a good many conversations on the subject, and we have come to the conclusion that the Commission ought to have at its disposal a steamer which could be used by the Government for towing and that kind of thing, and the Commission would only require it for a short period to go to the various rivers or to make experiments in trawling. The launch is useless even for the experiment with a small trawl. She is only about 6 tons burden.

2742. Do you think that the fish on the coast, especially schnapper, have diminished during the past fifteen or twenty years? Yes, very considerably; but they have increased unmistakably during the last year or two. I attribute that to the closing of the breeding-grounds. Within the last year there have been more red bream in the harbour than there has been for the last fifteen years.

2743. Have the harbours and the estuaries been fished so very much more during the last fifteen years than they were previously? Yes, undoubtedly. There must be 100 Italians fishing now, and they are persistently at work at Woolloomooloo Bay, Garden Island, and Shark Island, and other places.

2744. Do they use nearly all sunken nets? Yes. As a rule very small sunken nets with great length of line and a great purse.

2745. Do you know whether there are oysters here of different species—one adhering to the rocks, and the other around the foreshores and deposited in the mouths of the rivers and harbours? From what Dr. Cox and Mr. Ramsay, both scientists, say on the subject, I think the oysters are the same, but I am not an authority on that subject.

2746. With regard to the old mud-oyster, is not that almost extinct about here? Yes. It is an oyster that will not live out of water like the ordinary rock-oyster. With a view of testing the adaptability of the streams here to other species, we imported the magnificent Stewart Island oyster, of New Zealand, and put some of them out on George's River and a few at Shoalhaven.

2747. How long ago was that? About eighteen months ago. Unfortunately most of them died.

2748. *Chairman.*] In what part of George's River were they placed? I think it was not far from Tom Ugly's Point.

2749. Have you ever noticed that the water there is contaminated with deleterious matter from the paper-mills and other places? Yes. I do not know whether it would extend so far as we have put in the oysters, but I have noticed it higher up.

2750. Have you ever taken action against those people? We submitted the matter to the Crown Solicitor, but we found that we had no case.

2751. Regulation 38 says: "Any person who shall discharge any refuse from any saw-mill, paper-mill, gas-works, or any rubbish or blood or offal, or any filth or other thing deleterious to the growth and development of oysters in any tidal waters, or into any watercourse, whether dry or not, leading into the same, or discharge such matter elsewhere in such a manner that it is or is likely to be carried into such tidal waters, shall on conviction thereof forfeit and pay a penalty of not less than £50";—have you taken no action under that? We have taken action to see if we could stop it, but we found that we could not. I think that we submitted it to the Crown Solicitor.

2752.

2752. Do you see any objection to opening the waters of the Parramatta River to the railway bridge at Ryde? I think it would be a great mistake. I think there is enough water open below that. What is wanted is a good sized breeding ground, and if the water were opened to the railway bridge it would require considerable watching to see that the men did not go on to the Homebush flats. The matter was fully gone into, and we came to the conclusion that the vehicular bridge was the best place.

Mr.
J. R. Hill.
25 July, 1889.

2753. Was the matter brought under your notice by a request for the opening of more waters? I think so, but I am not sure.

2754. Do you know the Gascoignes? I have heard of them.

2755. Are you aware that the residents on the north and south side of the Parramatta River are unable to get a supply of fresh fish? I do not; I think they are in the same condition as people at Randwick, Redfern, and all those places.

2756. Are you aware that when two or three years ago the Gascoignes and other fishermen were allowed to use more water they used to vend the fish they then got to the residents on the north and south sides of the Parramatta River? I think they could do so now by coming into the open waters.

2757. They complain of not having sufficient water? The cause of that is that there are too many people for the water. In the waters of Port Jackson there are double the number of men that there should be.

2758. *Mr. Thompson.*] With regard to mullet, when they are travelling is it not a fact that they are followed as rule by schools of sharks and porpoises which cut them up very much? I do not think so. They are followed now and again by sharks, but it is a very rare thing for a fisherman to catch a shark in a net when hauling mullet. They are now and again hemmed in on the coast by porpoises and sharks, particularly by porpoises in fine weather.

2759. *Mr. Stephen.*] Are the Commissioners entitled to keep nets and to fish with them? Undoubtedly the same as the rest of the world.

2760. Are there any unlicensed persons holding nets? Yes, as long as they do not sell the fish. I think that everyone that uses a net should pay a license.

2761. Are the settlers on the Hawkesbury and the Macdonald rivers allowed to catch fish for their own use with nets without taking out a license? Yes, while they do not sell the fish and do not fish in closed waters.

2762. Would it not be desirable for them to catch fish for their own use even in closed waters? That would open the doors to evils which you could not put a stop to.

2763. Is it not a great hardship to those people to be prevented from getting fresh fish when they cannot get fresh meat more than once or twice a week? I think if it were permitted the breeding-grounds would be interfered with and a large number of the public would be injured.

2764. Might they not be allowed to use nets of a certain size for meshing purposes only, and not for hauling? It would be equally a mistake.

2765. Then it is your opinion, and probably the opinion of the Commission, that those people should be prohibited from catching any fish? I cannot speak of the Commission, but I think it would be a mistake to allow any persons to fish with nets in closed waters.

2766. To what do you attribute the plentifulness of the bream? To the closing of the breeding grounds.

2767. How far do you think George's River should be closed? I think that the present arrangement is fair, as it gives a large area. There are, probably, not one-sixth the number fishing in Botany that there are in Port Jackson.

2768. Are you well acquainted with George's River? No; not more than 5 miles beyond Tom Ugly's Point. I have never been up Salt-pan Creek, or Woniora River.

2769. Are you aware whether any of the Commissioners have been up there? Dr. Cox, I think, has been right up to Liverpool two or three times.

2770. Have you any objection to opening George's River as far as Salt-pan Creek? I should like to have the matter discussed thoroughly by the Commissioners, and I should like to have a report from the officer in the district.

2771. If the officer in the district gave a favourable report would you have no objection to the proposal? Such a report would have very great weight.

2772. *Chairman.*] Does the Commission always consult the local inspectors before it closes any waters? I do not think there has ever been an occasion when waters have been closed without a report from the local inspector, but I would not speak positively.

2773. You would not say that there have not been cases where the inspectors recommended the opening of waters, and where the Commissioners have refused to recognize their recommendation at all? I do not think there is such a case; there may have been cases where the Commissioners may have gone in opposition to the inspectors' reports, but in those cases perhaps the Commissioners may have had greater knowledge than the inspector.

2774. Might it not have been done in your absence? It might have been done in my presence, and I would not have knowledge of it.

2775. It has been stated here in evidence that the Commissioners had closed waters without referring to the inspectors at all; and that in other cases the inspectors, recognizing hardships which exist, have asked the Commissioners to relieve the fishermen by opening certain waters, but their recommendations have not been taken notice of;—will you say that that is not a fact? I will not say that it is not the fact. If it has been sworn to, no doubt it is true.

2776. *Mr. Stevenson.*] Can you charge your memory with any case where the Commissioners closed waters without referring to the inspectors? I cannot.

2777. Whenever the Commissioners close waters do they have a report from the Commissioners in charge? Yes; I believe that is the case.

2778. Then what they swear is untrue? •No; I say that I believe that that is the case, but I do not say it is so positively.

2779. *Chairman.*] May not the report you refer to come from Mr. Thompson? It may. It certainly comes from the Department.

2779½. *Mr. Stevenson.*] In the case of closing waters as a rule, does the Commissioner always ask for a report from the inspector in charge of the district? My opinion is that we always ask for report. It is just within the bounds of possibility that Mr. Thompson may have made a special recommendation where he is very competent to offer an opinion. He is thoroughly well posted up in many matters connected with the rivers, and he is thoroughly acquainted with them. He has probably a better knowledge of them than some of the inspectors themselves.

2780.

Mr.
J. R. Hill.
25 July, 1889.

2780. Should the inspectors in charge of the districts be consulted with respect to the closing of waters? Undoubtedly; but as to always accepting their dictum is another matter. They certainly should be consulted, and a report from them sent in.

2781. It ought to be asked for in every case? Yes.

2782. *Chairman.*] Are the fishermen's licenses generally issued by the Commissioners? I think the practice is this: They pay the money into the Treasury, they get a receipt, and come on to our office where the license is issued there and then.

2783. Would it not be much more convenient for the fishermen, and save trouble and expense, if the local inspector could issue the license? If the Treasury has no objection, I should say that it would save a lot of trouble. The course followed now is the one laid down by the Treasury, I believe.

2784. *Mr. Thompson.*] With regard to the length of the nets, was that regulation made during your term of office? No; years before.

2785. Can you see what object is served by diminishing the length of the net, or what harm could be done to the fish or the public if any length of net were allowed? For the reasons I have stated I think that in such places as Lake Macquarie there would be no harm in allowing an extra 50 fathoms.

2786. Putting Lake Macquarie aside and taking such a place as Port Jackson, what harm would be done by using a net say a mile long? I do not see that there would be any greater harm in having one net 300 fathoms long than in having two nets 150 fathoms long each.

TUESDAY, 30 JULY, 1889.

Present:—

MR. HOWE,

MR. STEVENSON.

MR. FRANK FARNELL,

FRANK FARNELL, ESQ., IN THE CHAIR.

Mr. James J. Macfadyen called in, sworn, and examined:—

Mr. J. J.
Macfadyen.
30 July, 1889.

2787. *Chairman.*] What position do you hold? Commission agent.

2788. Are you Mayor of Botany? Yes.

2789. Are you president of the Fishermen's Association of New South Wales? Yes.

2790. Where does this Association hold its meetings? At the Protestant Hall, Sydney.

2791. Are all the fishing-grounds represented in the Association? Yes.

2792. How long has it been in existence? About two years.

2793. What is the reason for the establishment of this Association? On account of the men finding a difficulty in making their grievances felt. Many of them expressed an opinion to me that they were afraid to make their grievances known on account of being spotted as individuals. The origin of the Association was a deputation of Botany fishermen who waited upon myself, and asked me if I would help them in forming such an Association; they knew that I had taken considerable interest in the business.

2794. Is there a considerable number of fishermen in the locality of Botany? Yes.

2795. Has your Association ever appointed a deputation to wait on the Colonial Secretary, or other members of the Government, in reference to their grievances? Yes, on one occasion we waited upon Sir Henry Parkes, and he told us it would be better for us to reduce our grievances to writing, and he would then attend to them. I hand into the Committee a printed copy of the document which we drew up, stating those grievances, and which was presented to Sir Henry Parkes. [*Appendix D1.*]

2796. Has any good resulted from your submitting your statement in writing to the Government? None whatever, unless we can say that we may have helped forward the appointment of the present Committee.

2797. As President of the Fishermen's Association, will you be conveying to this Committee pretty well the alterations which the fishermen desire to have made in the Fisheries Act in order to protect themselves, and at the same time to protect the public? Yes; I may say that the paper of grievances which I have handed in was very seriously considered by the fishermen, including representatives from all the different parts of the Colony. Before the matter was entered into at all, the fishermen were instructed that nothing was to be put down in the document except what could be sustained, and it was only after about two months consideration that the matter was completed. The last expression of opinion which I had from the fishermen in the Association, was that that paper of grievances still remained their grievances, and that although there might be some small additions which they might desire to make because they said that at that time they were almost afraid to give vent to everything they desired, yet they would be satisfied if they got all the grievances remedied that were mentioned in that paper.

2798. Where do the complaints come from principally? They come from fishermen in all localities.

2799. Is not your membership confined pretty well to people in and around Sydney, Port Hacking, and the Hawkesbury? We have endeavoured to establish branches in different places, but the principal hindrance to that has been the cold way in which the late Commission have received the Association.

2800. When you say the late Commission I suppose you mean the present Commission? Yes; I refer more particularly to the late interview we had with them.

2801. Have you ever made any recommendations on behalf of the fishermen to the Fisheries Commission in order to remedy alleged defects? Perhaps the best way to answer that will be to say that having waited on Sir Henry Parkes with the document he desired us to draw up, he told us that he had placed the matter in the hands of the Fisheries Commission, and that the best thing for us to do would be to have an interview with the Commissioners to see if we could come to an amicable arrangement. That was a considerable time after the paper had been left with Sir Henry Parkes, and after we had sent two letters, asking what had become of the document. We then waited on the Fisheries Commission, Sir Henry Parkes having arranged with them for a certain day and hour. The Commissioners received us very courteously. I handed in a copy of the paper I have just given the Committee, and said that Sir Henry Parkes told us that he had laid the matter before the Commissioners, and that we had come to them for a reply. Sir Henry Parkes repudiated having any power in the matter, and said that the Commissioners had the power to deal with it. We were met at once with the reply from the Commissioners that

that they knew nothing at all about it; that they had never received such a communication; and therefore they were not in a position to reply to it. On behalf of the association I immediately accepted that reply as I could not expect a reply to such an important document at a moment's notice, they (the Commissioners) not having yet seen it. Some conversation took place, and the Commissioners endeavoured to impress upon us that it was their anxious desire to help the fishermen, but I may say that the members of the deputation felt that there were more words than good deeds in the matter.

Mr. J. J.
Macfadyen.
30 July, 1889.

2802. What is the nature of the business transacted at your meetings? Very much the same as at all other society meetings. When we read the correspondence there is generally something in the nature of a grievance or complaint or some matter to be considered by the whole association.

2802½. How many members are there in the association? About 250 or 300.

2803. What is the nature of the more serious complaints which the fishermen have made against the Fisheries Commission, or the provisions of the Act? That too much water has been closed, and that water has been closed unnecessarily where it was detrimental to the interests of the fishermen, and not helpful to the preservation of the fish.

2804. Do they ever make any complaint about the mesh of their nets? There has been a good deal of talk about the different meshes, but that has not been so fully brought out as the want of waters and the shortness of the nets. Then there are the unfortunate circumstances attending the distribution of fish after they leave the fishermen, and the little consideration that the fishermen think that the Commission, which ought to help them as a body, has given them.

2805. Do you know the fish-markets at Woolloomooloo? Yes.

2806. Have you ever seen them selling fish there in the morning? Frequently.

2807. Do you think the arrangements are adequate for the convenience and protection of the fishermen? I have always held an opinion opposed to that.

2808. It has been stated here that the fish when sent from the fishermen to the markets are liable to be pilfered;—have you ever heard of any case of that kind? Very frequently.

2809. It has also been stated that the fish are thrown on to the floor of the market where they are liable to be spat upon and walked upon owing to the bad arrangements made for the distribution of the fish? Yes; the fish are lying on the floor, and people walk on the same place. I believe the argument used by those who consider that that method is the best, is that they can sell a very large quantity of fish in a short time, and that it is an improvement on any method at present in vogue in any other part of the world. I am not of that opinion.

2810. While protecting the interests of the fishermen by having an expeditious sale, do you not think it is necessary to also protect the interests of the public, so that they may get fish in a fresh and uninjured condition? Yes; I have interested myself in this question for a great many years, because I have been most intimately connected with it from my early youth.

2811. What is your opinion as to the establishment of another fish depôt, say at Darling Harbour or somewhere where there are railway facilities? I have agitated that question for a considerable time, and if I had had opportunities I certainly would have tried to form a company. I had a portion of Hudson's works under offer to me for a certain time with that object, but as it required a great deal of time and more capital than I had at my disposal I had to let the matter drop for a time at any rate.

2812. Do you think it would meet with the approval of the fishermen if they had a practical man, one of their own number, appointed as a member of the Fisheries Commission? I am quite certain, from my knowledge and conversation with fishermen, that it is their earnest desire to have one or more practical men as their representatives on the Commission, should it exist as at present.

2813. Are you aware if, at any time when portions of a river have been closed, the inspectors have upon every occasion been asked to report as to the necessity or otherwise for closing those waters? No, I know nothing about what instructions they may have received, but I certainly have heard that the Commissioners have acted in these matters entirely on their own understanding without any practical knowledge that they might have been able to get.

2814. As President of the Association have you had the means of knowing what particular waters the fishermen would like to have opened which are at present closed; for instance, do you think that Port Hacking should be opened to some extent? Yes. I do not know that locality, but fishermen who are conversant with it have told me that they believe it was an entire mistake to close Port Hacking; that it was not done in the interests of the public nor of the fishermen, but in the interests of a company who had land in that district. They have always held that the creeks and tributaries running into that harbour were altogether sufficient for any breeding purposes, and that Port Hacking itself is not a breeding place, inasmuch as they are prepared to prove that the fish come in at one side and go out at the other. They named two points, I think the Limekilns and the Spit, up to which they think the waters might be opened for net-fishing.

2815. Do you know anything about the closing of George's River? The fishermen desire to have the river opened up as far as Salt-pan Creek. They maintain that there is no breeding carried on below that, and that in any waters below that, even if they are breeding places, the fishermen could not do any damage on account of the nature of the bottom and the depth of the water.

2816. In connection with the closed waters in Hawkesbury River, have the fishermen there made any complaints about the opened waters being insufficient? Yes, very considerable complaints have been made, not only with regard to the closed waters, but also with regard to the very great delay and annoyance caused to the fishermen with regard to piles and other things left there by the contractors for the Hawkesbury Bridge. I myself called upon the contractors, who said that the Commissioners had seen them on the matter, and they promised me that all the piles should be withdrawn, but I believe that they have only been cut off at the top and that they are still there.

2817. Has oyster culture come under your consideration as an association? Not much. We have received several inquiries lately notifying that if we made proper arrangements the oyster-men throughout the Colony would be desirous of identifying themselves with us so as to strengthen the association.

2818. Have the fishermen complained at any time of the arrangements made to obtain their licenses? Yes. They agree that 10s. is sufficient for a boat license, and that a less sum than 10s. is sufficient for a fisherman's license, and that they should be able to get a license without being put to the serious inconvenience of leaving their work and proceeding to the Fisheries Commissioners' office to sign their names.

Mr. J. J.
Macfadyen.
30 July, 1889.

2819. Would it relieve them to a very great extent if the local inspectors were empowered to issue licenses in each locality? Yes. When a proclamation was read in the fish-markets one morning from the Commissioners, stating that none of the fish agents would in future be allowed to secure licenses for fishermen who might be clients of theirs, I pointed out to the sub-inspector who read the proclamation that it would be a very hard thing to oblige a fisherman to come (say) from Cape Hawke to Sydney to get his license. I think the proclamation was somewhat in error in that respect, because they told us afterwards that we were in error in supposing that it had such a meaning; that it was only intended that the nearest police magistrate or clerk of petty sessions should issue licenses to the fishermen, and I believe that is the case now. With regard to another site for the market, I have always looked upon the Redfern site as the very best site that could be procured, because every day the railway traffic is increasing, and the steam-boat traffic decreasing. Fish should be handled as little as possible. At present fish from Port Stephens are put into a little steamer, from which they are transhipped to the steamer at Newcastle, thence they are taken to Sydney, and from the place where they are stowed near the paddle-boxes, when the steamer arrives in Sydney, the baskets are swept down a plank which is almost at right angles to the quay, so that the fish come down with great violence. Sometimes the fish-baskets are broken open, and in any case the fish are considerably damaged. Then they have to be handled again by being placed in carts which take them to the market, where they are deposited on the floor in the way I have already mentioned. There would be a great improvement if there was a market at Hudson Bros. place where there is a siding already in existence. All the handling which takes place at present between Newcastle and Sydney would then be saved, and the cost of cartage from Darling Harbour to Woolloomooloo market would be saved. I believe it would also do away to a considerable extent with pilfering. With regard to the railway, it is a very common thing in the old country to use wire to close the lid of the box or basket, and to put on the wire a lead tag pressed with pliers, with an impression on it. That makes a seal which, if broken, could be detected.

2820. Something of the same nature is done in trucking cattle? Yes. The railway company weighs all goods which pass over the line, and the same thing could be done with baskets of fish which are sent by rail, so that any pilfering which might take place on the railway could be detected.

2821. *Mr. Howe.*] According to your experience of the working of the Fisheries Act has it had a beneficial effect? My experience of the Act as far as I have seen it is that it has been an association got up for the purpose of watching and hunting the fishermen, and in no way trying to help them.

2822. Do you think that the Act would be better administered by a Government department than by the Commission? I think so; but if proper representation were allowed on the Commission I do not know that I would be in favour of its being managed by a Ministerial department. I mean a practical representation of the fishermen.

2823. Have you in your capacity as president ever heard that the Commissioners disseminated any knowledge of a practical character among fishermen to improve the industry? None whatever. I may say that in the communication that I have just handed in to the committee, which the Fisheries Commission had under their notice for some time afterwards, and ultimately gave us a reply, I think a year after we had sent it to Sir Henry Parkes we mentioned something about persons digging holes and spoiling the fishing hauls at George's River. That is a matter in which the Act empowers them to take action, but hitherto we have never heard that they have done anything to relieve the fishermen even in that small matter.

2824. Do the fishermen complain of not receiving notices of proclamations closing waters so that they might lodge a caveat or objection? Yes, they make serious complaints on that score. When we waited upon the Commissioners they promised that they would close no waters without giving us I think a month's notice. However, when we shortly afterwards informed them that that was our understanding of their reply they said they did not mean anything of the kind; that they could not have said that, because they had to do everything by notice in the *Gazette*, and that we could receive the *Gazette* the same as any other person.

2825. Is it a fact that the fishermen earn large sums of money and that they could earn considerably more if they liked to work harder? Certainly not, as I shall show from the following particulars which I have obtained:—Knowing that I would have to give evidence here, I added up the earnings of two or three different fishermen, and the wages earned by two British fishermen working here are as follows:—Two men earned £78 14s. 3d. in 35 weeks, or at the rate of £1 2s. 6d. per week each. I have also the wages earned in Sydney harbour by three Italians and part of the time four Italians. It amounts to £111 17s. for 27 weeks, or at the rate of about £1 7s. 6d. per week. I have here the wages of two Botany men and a lad, and they earned £30 11s. for eight weeks, which was at the rate of something like 20s. for the lad and £1 7s. 2d. for each man per week. The wages earned by the captain of a boat at Botany for 35 weeks, employing sometimes two and sometimes four and five men, amounted on an average to £7 3s. per week amongst them. I would like to point out that those figures do not show the earnings in any case. The actual earnings being lower on account of one share having to go to replace and repair boats, nets, and gear. I have taken out these figures because I have heard that certain people say that fishermen earn big money. The figures may not be correct to a penny or two, but they are correct enough for all practical purposes.

2826. Have those figures been selected promiscuously? Yes.

2827. What are the chief grounds of complaint by the fishermen against the Italians? As far as I know the complaints are not against the men, but against the system they use in working. They use certain nets that sink in the water and trawl along the ground; the British and Colonial fishermen maintain that the feed which is upon the ground, and any spawn that may be there, are destroyed by those fishermen continually pulling their nets in this manner.

2828. Do you think that the closing of the rivers has preserved the fish? I do not know that I am a good authority on such matters; but from what I do know I should say that it has not preserved the fish. For instance, Port Hacking, which has been closed for a long time, contains less fish, according to the fishermen, since it has been closed, than were to be found there before.

2829. Is it a fact that the fishermen are compelled to return to the water edible fish, which are above the legal weight, if they catch them in a gar-fish net? I have heard complaints that if an inspector finds that a man with a gar-fish net has other fish in his boat besides gar-fish, the inspector will seize those fish, no matter what size they may be.

Mr. J. J.
Macfadyen.
30 July, 1889

2830. What is your opinion with regard to the fish-market at Woolloomooloo? I am not only personally opposed to the present system, because I believe it is not the best, but I also object very strongly to the system of administering the affairs of the market. I maintain that, as a matter of principle, this business ought to be in private hands, rather than in the hands of a City Corporation. I think no officer of the Corporation should have the administration of the affairs of the market. I know, from my own experience, that it hinders anyone from using the enterprise which might be used in improving the distribution of the fish. There is not one-fifth of the fish consumed in New South Wales that ought to be consumed according to the population.

2831. Under the present system at the market do the fishermen get their value for their fish? Under existing circumstances I think they get a fair value, but I think the value is curtailed and crippled very much by the existing system.

2832. When the fish arrive late by train or steamer, what is done with them? If they arrive too late for the sale on the day of arrival, the fish have either to be sold at any price that people choose to give, or they must be put into the cooling-chamber to be kept until another market day. Certain fishermen, with whom I am connected, have given instructions that none of their fish shall at any time be put into the ice-house, as they consider it is of no use, seeing that they have put fish in there on one day and it has been taken out on the next day unfit for food.

2833. Do you think that if a space were raised above the floor, and railed off, and the fish were put out in lots there, that it would be an improvement? Yes; I have always thought that that would be a better system. I am not prepared to say that that is the best system, because I think the fish are sold in the market here too much in a retail way. I have suggested that fish should be sold in larger quantities.

2834. If stalls were erected and rented by fisherman, or by agents, in the same way as market gardeners do in the Belmore markets, would that be an improvement? The situation, to my mind, would make a very great difference. I think the proposed arrangement would be a total failure at Woolloomooloo, whilst in a centre of population it would be a great benefit. Where the market is at present, you must sell the fish in a certain time. For instance, last Good Friday, after the sale was over, there were tons of fish left in the market unsold, and by that time it was too late to distribute the fish anywhere else. It then struck me that a great quantity of that fish might have been distributed in the interior of the colony if it had been sent away by rail on the Thursday evening.

2835. From your experience as a commission agent do you know whether much fish is sent away for consumption in the country districts? There is comparatively little fish sent away in that manner. There is no proper system.

2836. Do you think that method of disposing of the fish might be greatly encouraged? I have no doubt that a market could be created in almost all the principal towns in the interior.

2837. *Mr. Stevenson.*] Do you still represent the Fishermen's Association? Yes; I am still the president of the association.

2838. Have you had any personal experience in fishing? Yes, at home.

2839. You have stated that the fishermen were afraid of making known their grievances. What do you mean by that? They were afraid, as individuals, to make known their grievances for fear that those in power and authority over them might make them suffer.

2840. Since your interview with the Fisheries Commission have you received any communication or reply as to the fishermen's grievances? We received a reply, but it was almost a formal one, intimating that they had received our communication, but saying that nothing could be done in the matter.

2841. On receipt of that reply did the association take any further action? I believe that, as an association, we communicated with the Secretary to the Commission, informing him that the reply was unsatisfactory. I myself waited upon him, and told him that the reply was altogether unsatisfactory.

2842. Did you receive any further communication? No.

2843. Did the fishermen get no redress whatever? No; there was only one matter referred to in the letter, and that was with regard to the length of the nets. They said they had no objection to allowing an extra length of 25 fathoms in such places as the lakes.

2844. If a suitable site could be found at the head of Darling harbour, which could be reached both by trains and steamers, would not that be a more desirable place for another fish-market than the place you have mentioned? There is one reason which influenced me in suggesting a site at Redfern. If you look at the map and take a compass you will find that that is almost the centre for all the suburbs.

2845. Would not that equally apply to Darling harbour, if the fish was dispatched by train? I was referring to the people who would go to the market to take away the fish.

2846. Do you still think that Redfern would be better than Darling harbour? Yes; but I think Darling harbour would be altogether preferable to what we have now.

2847. Where did you obtain the information as to the earnings of fishermen? From my own books; I cannot give names.

2848. *Mr. Howe.*] A question was asked in the House the other evening by Mr. Lyne, with reference to herrings appearing on our coast for two months in every year. Have you ever heard anything about that from fishermen? Yes; I have heard fishermen say that there are herrings on the coast at certain times and in large shoals. Ultimately I saw some of the herrings, and took them home to try them, but I was very much disappointed with them. They are not like the home herring, and I am almost sure they would not cure like the home herring. They are smaller.

2849. *Chairman.*] Is there anything else which you wish to state? No; except that the association that I have the honour to represent has been formed with the sole view of endeavouring to get some pressure brought to bear upon anyone in authority to frame laws such as the fishermen think they should do. I believe that the fishermen are inclined to be entirely fair in this matter and want nothing but what would be fair to the public as well as themselves. It is felt by all the members that the Fisheries Commission have in no way endeavoured to obtain knowledge as to the fishing industry in other parts of the world so as to instruct the fishermen here. Although the fishermen here have to contribute to a large and expensive department they have received nothing from that department but have only been harassed in their labours. There are several matters in the present Fisheries Act that want attending to. For instance, a police constable or any officer is at liberty to go into any person's domicile or shed at any time and search the premises.

Mr. J. J.
Macfadyen.
30 July, 1889.

2850. *Mr. Stevenson.*] What for? For nets or anything he chooses. I have heard fishermen complain that an officer has actually been in their wives' bedroom searching for nets whilst they were in bed. In the paper of grievances it will be found that the fishermen regard it as very unjust that they should lose the tools of their trade if they happen to break the laws. That is not done in any other business and they believe they should not be injured in that way more than any other people. They complain that until this association was formed the Commissioners actually sold the nets which they seized, and which were illegal, in the same state, or nearly the same state, as they were seized, to anyone who would buy them. I believe it was only after the paper which I handed in was put forth that the Commissioners commenced to sell on a restrictive principle, stating that the nets when sold were only to be used for certain purposes.

2851. Do you think that trawling could be instituted here? I have spoken to a considerable number of fishermen on that subject, because I hold a very strong opinion that trawling could be and ought to be instituted here, and that if the coast were properly surveyed we would find many fishing-banks on the coast that might be utilized by fishermen. Until a survey is made it would not be safe for the fishermen to attempt anything of the sort, especially for the fishermen on this coast, because, whatever they may have been in the past, they are now certainly a poor class of men, as far as money is concerned.

2852. If we gave a bonus for the encouragement of the fishing industry do you think that would be an incentive to fishermen, and that it would bring out new fishermen here? I certainly think so, and I think the request we made as an association to Sir Henry Parkes, and, through him, to the Fisheries Commissioners, was a very fair one, and that it would help the industry. That was that any information which could be distributed among the fishermen to raise them in their profession should be given to the association, so that it might be distributed among the fishermen. For instance, information might be obtained as to the latest appliances used all over the world. I do not think that would have caused much expense, and it would raise the tone of the fishing industry all over the colony.

2853. Have you received no information from the Government or the Commission to enable you to carry out your objects in disseminating information? No. When we made application to the Commissioners, they said they would grant us any books that they might have in their possession. In fact Sir Henry Parkes promised that, and he sent some books; but we require more than that. We would require to have maps and such things, so that the fishermen might know where the closed waters were. At present they have to go by some placard which may be posted up in the bush 200 yards away when they want to know where the waters are closed or open. Another very serious matter the fishermen talk about, is that as they have to pay for a license they ought to be protected in bringing their fish to market for sale, as it is their means of living; but they say that private persons go fishing for pleasure and catch a great many fish, schnapper particularly, and those fish are resold to the detriment of the ordinary market for fish. The Act of course says that no person shall be allowed to sell fish unless he is a licensed fisherman, but the fishermen say that those private persons do not sell the fish, but they give them away and receive payment afterwards.

William Neal called in, sworn, and examined:—

Mr. W. Neal.
30 July, 1889.

2854. *Chairman.*] What are you? A fisherman.

2855. Where are you located? Balmain, or rather Iron Cove, one of the tributaries of the Parramatta.

2856. Is that opened? No; it is closed.

2857. From what point? From the Iron Cove bridge upwards.

2858. What waters have you open to you to fish in? From the Iron Cove bridge downwards to the heads, from the Parramatta bridge at Gladesville downwards, and from the telegraph wire at Onyon's Point in Lane Cove downwards. All those places above have been closed for something like five years; that is from the time that the present Fisheries Act has been in force.

2859. Not closed for five years by one proclamation, but from time to time? Yes; six months at a time, for the first three or four years, and then it was closed for two years, and then there was an extended proclamation for twelve months, that is the present twelve months, which will expire about the 9th of next November.

2860. So that when you originally settled on the Parramatta River to carry out your calling as a fisherman you did not mind so much the rivers being closed for six months if the Commissioners carried out what was supposed to be the intention of the law, and opened the river after the six months had expired? Yes; we did not mind that so much. On one occasion, when I was on a deputation to the Fisheries Commission, that was what we asked for, but they seemed to think that those fisheries were exhausted, and that it would be better to close them for two years, not knowing at the same time whether they were really exhausted or not. It is all very well for those gentlemen to say that a fishery is exhausted, but they do not actually know whether that is the case or not, because they do not go at the right time to know whether or not there are any fish there. I believe that the greatest trouble we have to contend with is the net at present in use amongst the Italians. It is a 15-fathom net, which is legal for prawns, but they work it at all times, both day and night. They work the channel of the river both night and day, and they destroy the best species of fish, namely, bream, black bream, red bream, sand-whiting, trumpeter, whiting, and flathead. They also kill flounder and sole, but they were never very plentiful here as far as my experience goes, and I have been fishing here for twenty-five years. If the Italians are to continue dredging with prawn-nets in this manner, I do not know where the fish are to come from in future. I consider that those nets should be abolished altogether. The only sort of sunken net used amongst the old fishermen belonging to the place was the regular seine net. If they knew any place where they could get a freight of whiting, bream, or ground fish they would take a few corks off the net and sink it. I am sure that all our best fishermen are in favour of doing away with prawn nets altogether. There are a great many of the grounds closed which the Commissioners consider are very important breeding-grounds, but in my opinion there are more important breeding-grounds outside the places which are closed. Then the feeding-grounds are being destroyed, and they are of just as much importance as the breeding-grounds. In the shallow part of the river where there is much steamer traffic, fish cannot be expected to be as numerous as they were. I think that the only fish that actually do spawn and live in the river, unless driven out by floods, are the river garfish and the sand-mullet.

2861. Have you very many good hauling-grounds in the open waters? No; very few. They have been mostly taken up in the last four or five years by reclamations, sea-walls, moorings, old hulks, and other obstacles. The Italians are not particular where they haul. They will shoot their nets amongst ships and steamers, as the nets only come about 2 feet above the ground. The net is only really a dredge, and brings in everything before it.

2862. With regard to the waters of the Parramatta River, do you not think that the open waters might be extended as far as the railway bridge at Ryde? Yes; I think that might be done without any detriment to the breeding-grounds and without decreasing the supply. The waters might also be opened above the Lane Cove Bridge. Mr. W. Neal.
30 July, 1889.

2863. Would you close the river above Lane Cove Bridge? Yes, I would close it during the winter months and open it in summer. There is very little work to be done above the Lane Cove Bridge. Fully three parts of the Lane Cove River consists of natural reservations which are unworkable with any class of net owing to sunken rocks, snags, and the tide.

2864. Can you see any great object to be achieved by closing the Iron Cove Bay? No; I do not see that there is any great object whatever to be gained. It might have been a very good place at one time, but not now, because there is too much steam-boat traffic and too much sewerage. There is a deposit of black mud which covers all the former feeding-grounds and the fish do not inhabit those waters in such great abundance as they used to. The only fish that comes in in the winter time is the mullet. The hard-gut mullet is migratory and come and go in their seasons. We have been told by our inspectors that when the mullet are all schooled in the river they are there for spawning purposes, but I am of opinion that not one of those fish spawn in the river. They stay in the river until they are full roed and then they go down below. I am of opinion that they all spawn along the deep water shores, the kelpy shores or that they spawn as they go.

2865. Do you say that you have been thirty-five years engaged at this industry? Yes.

2866. Have you any reason to complain of the provisions of the Fisheries Act? Yes; one particular reason is that if we buy a bit of net of the size mentioned in the Act or if we get it one-eighth of an inch above that size by the time it is tanned twice it is under the prescribed legal size. I have now on hand several pieces of good sound net which have not been used for six years for that very reason. It is too small and is liable to be seized at any time if used.

2867. Have you ever had a net seized? No; once in Mr. Quinan's time a garfish-net was taken off a pole where it was hanging up to dry. He took it off and put it in his boat and went on his way down to Sydney. It would appear that the inspectors were talking over the matter in the boat, at any rate they brought back the net and hung it up again. I was not there at the time, but some persons living in the neighbourhood told me about it. I then went over to the Fisheries Commissioners' Office to know the reason why the net was illegal. The inspector told me it was illegal as to the size, mesh, and construction. I took that for granted and cut up the net and never used it any more. In fact, all our nets from the garfish nets forwards, are liable to seizure after being tanned twice.

2868. Would it not be better to have a provision in the Act whereby people could be punished very severely if they brought undersized fish to market, or fish below the legal weight, rather than be so particular as to the mesh of the net? Yes; that would be a most important improvement. The Fisheries Act could then be worked with less men than at present, so many inspectors would not be required, and if a man brought undersized fish to market he should be punished.

2869. Do you take the fish you catch to market in your own boat? Yes; sometimes I bring them down in my boat, or in a cart by way of Pyrmont.

2870. Then you never trust any agents in Sydney to bring your fish to market? No; I have always brought them to market myself, or sent my sons with them.

2871. Then you have no reason to complain personally of your fish being pilfered? No.

2872. It would be impracticable, I suppose, for the fishermen at the Hawkesbury and Port Stephens to do as you do? Yes; they have to trust to agents.

2873. Have you ever heard complaints made by the fishermen living at a distance as to their having been robbed of fish? Yes; I have heard several complaints of baskets coming to the market half empty. I believe the principal part of that happens on board the steamboats.

2874. Have you never heard of the fish being pilfered between the steamers and the market, and even at the market? I have heard of it, but I have never seen it done.

2875. Have you a good knowledge of the fish-market in Woolloomooloo? Yes; I have been attending there pretty regularly for the last sixteen years.

2876. Do you think that the market is in a convenient position? No; I think the market is not central, nor is it adapted for the purpose at all. I would say that some place nearer the railway station, or at the head of Darling Harbour, would be more central. In a few years the great bulk of the fish will come by rail, and the less handling they have the better.

2877. Have the sales been satisfactorily conducted at the market? No; I think Mr. Seymour, in selling the fish, does not treat the fishermen as he ought to. Often fish are sold there which are not fit for food; at other times he will condemn fish that are even better than those he sold the day before. I think there is too much of the Corporation business about the market. I think that if the Government built a market, and the agents had more control over the fish, it would be better. A great quantity of fish comes in in the evening, and they remain in the baskets until the following morning. I think arrangements might be made through the agents by which a great quantity of fish might be sent away into the country over night, and it would then be disposed of advantageously for the agents and the catchers.

2878. *Mr. Howe.*] You mean that the fish would be sold in the country? Yes, for a great many years I did not bring any fish to the market, I could always dispose of it about Ashfield, Petersham, and other suburban towns at very good prices so that I could get fair wages. Since the present Fisheries Act has been in force I have not been able to do that, because I could not get enough fish. I have had to resort to prawning, and I have sometimes had to work at other things; in fact anything I could get.

2879. *Chairman.*] Whereas if you had more water at your disposal you could go on supplying those people with fresh fish as you used to do? Yes.

2880. And those people that you used to supply previously now have to do without fresh fish? Yes; they have either to buy market fish or to do without it. If you take iced fish to them as the majority of the fish is they will tell you they do not want it as it is no good. The Gascoignes and other people up there know what fresh fish is.

2881. Do you know the Gascoignes? Yes.

2882. Have they at any time complained of having insufficient water? Yes; the Gascoignes have been on several deputations with myself and others. The Commissioners told us on several occasions that they could do nothing in the matter. That if we required any alteration we would have to apply to our different Members of Parliament to get it made. They told us moreover that if they had their way they would shut up the whole place altogether.

- Mr. W. Neal. 2883. *Mr. Stevenson.*] What did they mean by telling you to apply to Members of Parliament? They told us they could do nothing with our grievances and that we would have to state our grievances to the Members for the different districts, and see if anything could be done in that way. The fishermen are rather bad hands to go about any business of that kind.
- 30 July, 1889. 2884. *Chairman.*] So I suppose the appointment of this Committee would give satisfaction to the whole of the fishermen? Yes. There is another thing I would like to mention, that is the desirableness of closing the mouth of the harbour for a mile in and a mile out. Schools of fish come in from the sea and there are always three or four boats with nets at Camp Cove Beach, just inside the reef. As soon as the school of fish show round the reef there is a net shot in front of them and there are perhaps a few boat loads taken.
2885. *Mr. Stevenson.*] Whom by? By the fisherman living at the mouth of the harbour. The rest of the school take fright and they go away to sea again, and perhaps they never come back. If those fish had been allowed to come inside they might have settled there for a few days or a few weeks, and have drawn off a few at a time into the channels of the various inlets. Then the hard-gut mullet commonly known as the sea-mullet stop in the river all the summer. But they all leave the rivers and go down below if a gale of wind comes on about March or April, from the southward or south-west. They are all fully-roed or in full bloom, as the fishermen say, and they are caught in such quantities that they become a drug in the market, whereas, if they were allowed to be caught in the rivers in the autumn months, the catcher would be well repaid. They would catch a few baskets at a time and the public would have fresh fish.
2886. *Mr. Howe.*] Is there much of the Parramatta River unworkable owing to tides, snags, and rocks? Yes, fully one-third is unworkable.
2887. Do you know whether it is true that edible fish above the legal weight, if caught in a garfish-net, have to be put back in the water? I have heard it stated, but it has never been done to me. I heard a man named Pat. Sheedy say that he was hauling on Hunter's beach one day in Mr. Quinan's time for sea garfish, and he caught some bream and whiting, and other edible fish, and he had to throw them overboard in the presence of Mr. Quinan, who said that he could take garfish only in a garfish-net.
2888. I suppose that fishermen, for the protection of their own interests, would put back undersized fish? Yes. I do not believe that any fisherman here would destroy edible fish which are under the legal size. They may kill a lot of little hardy-heads which are no good, and because some people who know nothing about it see those fish killed they make a great noise about the destruction of small fish.
2889. What is the season for catching garfish? I should say that the season for river garfish is from the 1st March until the latter end of August.
2890. When does the spawning season commence? Between the beginning of September and the latter end of November, or the beginning of December. That is when I find them full-roed. They do not all spawn at one time; there may be a month or two months' difference in spawning. Sand whiting and trumpeter whiting spawn from March until July.
2891. Do you think that the legal weight of sea garfish, and river garfish and mullet should be reduced? I think the weight of garfish should be reduced. One oz. is a very good size for a river garfish, and $1\frac{1}{2}$ oz. for sea garfish. Not one-third of what has been sold during the last two years would go beyond the weights I have mentioned.
2892. As a fisherman, do you think that there should be no objection to any length of net, provided that the mesh is of the legal size? Yes; I do not think that a fisherman should be bound to any length of net, but that he should be allowed to use his own discretion in the matter.
2893. Does a net shrink in the tanning? Yes; that is one of the severest clauses we have to work under.
2894. If meshing-nets were $3\frac{1}{2}$ inches, would that allow for shrinkage? I do not think anybody would object to work a meshing-net until it came to 3 inches, because it could not destroy any small fish. A fish that will stick in a 3-inch mesh, that is $\frac{1}{2}$ an inch below the size prescribed, will weigh 1 lb.
2895. Is it a fact that the shorter the net the more frequent the hauls, and does that disturb the bottom and hunt the fish? Yes.
2896. If a garfish-net were 150 fathoms, would that be an improvement? It would do no harm; the present garfish-net is a mere toy; even were garfish are plentiful, a man has to make three or four hauls to make ordinary wages. The more hauls that are made with a garfish-net the more destruction there is to the small fish.
2897. Can small garfish be caught with a net of $1\frac{1}{4}$ -inch mesh? Yes, but nothing more.*
2898. Have you known nets to be seized because they were the $\frac{1}{16}$ th of an inch under $1\frac{1}{4}$ inch? Yes, I have heard of it.
2899. Was that on account of shrinkage? Yes; the nets were of the legal size when they were bought, and in many cases they were $\frac{1}{2}$ of an inch larger. We went to different ship chandlers and told them that when they were sending their orders home they should get the nets made $\frac{1}{2}$ of an inch larger than was prescribed by law, but when those nets are tanned three times they are seizable.
2900. Do the fishermen object to stalling? Yes; it is all very well for a week or a month or two, but eventually it would clear out the fish.
2901. Describe the process of stalling? It means going into any of the bays at high water. Of course the fishermen know low-water mark, and if they carried out stalling they would shoot their nets across exactly at low-water mark; they would fasten both ends on shore, and put a stake every 20 yards in the cork line. Everything inside of that which could not go through the mesh would have to stop inside, and at low water the fisherman would gather all the fish up.
2902. You do not know many fishermen who practise that? No; I have not seen any one stalling in Sydney harbour for the last ten years.
2903. Is it prohibited in the Fisheries Act? Yes.
2904. Would the fishermen co-operate with the inspectors to obtain convictions against those who would practise this mode of fishing? Yes, everyone of them would.
2905. Do you experience any difficulty in hauling in the summer months on account of the blubber? Yes; the summer months are of very little use to us. For five months the Parramatta River is of very little use.
2906. Then you are not able to haul at all in summer? Yes. An experienced fisherman by watching the blubber could get a haul occasionally.
- 2907.

* NOTE (on revision) :—The net ought to be not less than 1 inch, and not more than $1\frac{1}{4}$ inch.

2907. What action has the blubber upon the nets? If a fisherman is not particular in washing the nets clean the blubber burns the nets. The next time the net is hauled it will fall off the ropes in pieces. I have seen that happen with inexperienced fishermen. Mr. W. Neal.
30 July, 1889.
2908. Are you satisfied with the fees charged for boats and men? I am very well satisfied myself; it suits us here. I would be even satisfied to pay more in Sydney harbour, because it would keep inexperienced fishermen out of the waters; but I do not think the fees should be increased in other places where they are not bothered with Italian fishermen and boys. Any boy with 10 yards of net can get a license.
2909. If you dispose of one of your boats and you get a new boat, would not the license be transferable? I believe not, but I cannot say for certain; it says on the license "not transferable."
2910. *Mr. Stevenson.*] Would it be an advantage to the fishermen if they were allowed to have an auctioneer responsible to them instead of to the Corporation? Yes, a very great advantage.
2911. Are the nets used by the Italians legal? Yes; but they are not legal for catching fish; they are only prawn-nets, and they are not supposed to catch fish with them, but they do.
2912. Do you think that the inspectors are not doing their duty in allowing the Italians to use those nets? It is very hard to get at them, because the net is legal, and they shoot from 150 to 200 yards with rope at each end of those nets.
2913. Would you close all the tributaries from prawn-net fishing? Yes; I would close all parts of the harbour from sunken prawn-net fishing. I believe every fisherman in Sydney harbour would endorse that.
2914. *Mr. Howe.*] Are they allowed to fish for prawns in closed waters? No.

THURSDAY, 1 AUGUST, 1889.

Present:—

MR. WILLIAM STEPHEN,

MR. FRANK FARNELL,

MR. STEVENSON.

FRANK FARNELL, ESQ., IN THE CHAIR.

J. M. Chanter, Esq., M.P., called in, sworn, and examined:—

2915. *Chairman.*] Are you one of the Members for the Murray District? Yes.
2916. Have you taken a very great interest in the fishing industry in this Colony? Yes, so far as the rivers of the southern portions of the Colony are concerned.
2917. Do you represent a constituency through which two or three navigable rivers run, in which there are a lot of fresh-water fish? Yes.
2918. A Bill was passed in 1887 to protect the fish in the inland waters;—have you directed attention to its application? As far as the Murray and its tributaries are concerned the Act is a dead letter.
2919. Are large quantities of fish caught in the Murray and transmitted to Melbourne? Yes.
2920. What kind of fish? Murray cod, bream, and perch. Some hundreds of tons per annum are sent to Melbourne.
2921. Are they caught by Victorian or New South Wales fishermen? Principally Victorian fishermen, and only one or two New South Wales fishermen.
2922. What is the mode of fishing? Netting principally.
2923. Do they place a net across the river and catch the fish by stalling? They do not across the river Murray itself, because it is too wide, but the Moira Lakes, between the Murray River and one of its ana-branches, the Edwards River, are the great breeding-grounds for the fish. When the river rises the water flows into those lakes; the fish go into the lakes and return as the waters recede. Their return is interrupted by nearly the whole of these creeks being netted right across from one side to the other.
2924. Do you think that the present system which is carried out by those fishermen interferes with the breeding of the fish? Yes, very largely. I have on several occasions seen tons of fish lying rotting on the banks. The supply for the Melbourne market is so regulated that any excess of fish is thrown on one side.
2925. Is there no provision in the Act I have mentioned to punish people who destroy the fish in this way? I think so, but there is no officer appointed to carry out the provisions of the Act.
2926. Would it not be advisable to get the Government to appoint an officer to superintend the fisheries there? Yes. I have repeatedly forwarded communications to the Fisheries Commissioners, pointing out the state of affairs, and asking them to appoint an assistant inspector to control the river. On the score of saving expense, I have advised them to appoint the chief forest ranger at Moama as assistant inspector. He is already an officer of the Government, and he is constantly traversing the streams in a steamer. However, on the score of expense, the Commission have refused to appoint him.
2927. Do you know whether your communication to the Commissioners went any farther? No. I verbally called the attention of the Colonial Secretary on one or two occasions to the matter, and intimated to him that I communicated with the Fisheries Commission without any effect.
2928. Do you think that if netting were confined only to the main river it would be very destructive? I think that during certain periods of the year the current in the main river is too strong to admit of netting.
2929. In order to encourage fish-breeding, do you think it would be advisable to close the lakes and tributaries during a certain period of the year? Yes. I am not sufficiently acquainted with the question to recommend the particular months when the fisheries should be closed. I would like to point out for the consideration of the Committee another question in connection with the fisheries on the Murray. There is supposed to be a control over the river by the Victorian authorities. Whether they have any right to it or not I do not know. Their control does not extend beyond the southern bank. Any netting or illegality that takes place on that side of the bank they interfere with; but this is defeated by the fishermen simply crossing over the river into New South Wales, and carrying on their operations there.
2930. Are they not amenable to the laws here as in Victoria? They have their special laws. I raise the question so that you may deal with the point as to what right the Victorians have to control the river.
2931. Owing to there being no officer appointed to look after these matters the fishermen are allowed to fish indiscriminately, and do what they like, but if an officer were appointed you would be able to take proceedings? Yes, I presume over the whole river. The river belongs to us, and I think we should control it.

J. M.
Chanter,
Esq., M.P.
1 Aug., 1889.

2932.

- J. M. Chanter, 2932. Do you think that if we had proper regulations with regard to fishing in the Murray we would be able to supply our own markets or the inland towns with fresh fish? Yes. At present there is means of communication from Albury. Certainly Albury is some distance from the lakes, but there is every probability that in a very short time there will be direct communication with the lakes from Sydney. There are only 40 miles required to connect Jerilderie with Deniliquin, which would open up the whole of that country, which would enable our own people to obtain the fish and send them to the Sydney market. There is no more valuable fish than Murray cod in Australia.
- Esq., M. P.
1 Aug., 1889.
2933. The system at present carried out tends to destroy the fish? Yes, unless it is carried on under proper regulations.
2934. How is the fish transmitted to the Melbourne market? By rail. There is a direct line communicating with Melbourne.
2935. Have you a knowledge of any other of the fresh-water rivers where fish are in abundance? There are a great number of rivers leading into the Murray. There are the Edwards and the Darling Rivers, a number of creeks, and so-called rivers which are filled with fish. It is those rivers that are affected by the question I have raised. The Fisheries Commission have dealt with this question by appointing an assistant inspector at Deniliquin, a forest ranger, named Wilshire, but as his duties are subordinate to those of the gentleman I have already mentioned, he is confined to a very limited space, so that his supervision will not extend to the Murray River or the lakes, and other rivers; whereas the chief forest ranger, Mr. Manton, if he had been appointed, would have had supervision over the whole of those places. The cost of that appointment would not exceed, I think, £50 or £60 per annum. I believe that that is about the salary now paid to the assistant inspector at Deniliquin.
2936. To what district are the operations of Mr. Wilshire confined? To a radius of something like 30 miles around Deniliquin. Fish caught in the lake, which is situated 28 or 30 miles from Deniliquin, are outside his boundary. Those fish are driven in carts, and put on the railway at Echuca railway station, in Victoria. He could only take cognisance of fish taken from the lake near Mathoura station, in New South Wales.
2937. Do you know if the Commissioners have ever visited the inland waters? No.
2938. Do you know any waters which might be stocked with fish? No. I think the whole of the rivers in that part of the Colony are naturally supplied with fish.
2939. *Mr. Stephen.*] What kind of nets do they use on the Murray River? They use several kinds of nets. I have seen one particular net used, which is, I believe, forbidden by law, that is the bag-net. There is a series of couplets in the net, running from one space into another, until they form a circular or semi-circular space, where the fish are captured. To show how ruthlessly the fish are destroyed in those rivers, I may state that on one occasion a party of friends and myself took a trip up the river, and seeing one of those nets strung across one of the creeks leading into the river, we lifted the net to see what kind of fish were caught. There were about 6 cwt. of fish in the net, and I should say that most of the fish had been there for two or three weeks. Some of them were putrid. The fisherman who owned the net had evidently got sufficient fish elsewhere, and he left these where they were.
2940. Is there any particular name for those nets? They are called bag-nets. With them there is no escape for the fish.
2941. What style of net would you recommend to be allowed? What they call the straight net. I have not studied the question sufficiently to recommend the mesh that should be allowed. I think the fish in those rivers above 5lb. weight should be captured, because when they are that size they are very voracious and destroy the young fish. They also get coarse. When the fish is from 2lb. to 4lb. weight it is very marketable. 2lb. weight should be the minimum weight for Murray cod.
- 2942-4. What size mesh for the net do you think would be desirable? From 3 to 4 inches.
2945. Do the fishermen return the small-sized fish to the water? No; they take no care whatever about that.
2946. Do you think that if the smaller fish were returned to the water they would live? If they were not too long captured they would.
2947. What is the area of the lakes? Several thousand acres; they are very large; they are plentifully supplied with fish and game.
2948. *Mr. Stevenson.*] Have you any idea how many men are engaged in fishing on the Murray and its tributaries? In the district of Moama I know that there are something like twelve. I do not know how many there are on the whole river.
2949. Are there fifty? Yes.
2950. Where do they obtain their licenses? From the Victorian Government, I think.
2951. Do you think that is right? No; I object to it.
2952. Are you sure that they do not obtain licenses from New South Wales also? In some cases I believe they do, but in many cases I believe that the fish are caught without any license from New South Wales.
2953. Could not fishermen net the tributaries without blocking up the mouth? Yes.
2954. Do you not think that should be prohibited? Yes. I think the law intended it should be prohibited by making provision that the nets should not be stretched from one side of the watercourse to the other; but that is defeated by putting two nets in such a way that they overlap, and so completely close the creek.
2955. Do you think that if the license fees were looked after they would cover the expense of appointing an inspector? Yes, and it would preserve the fish for our own people. I am satisfied that if fish are conserved until railway communication is completed between Sydney and those parts of the country it would be of immense value.
2956. Are there any large populations in New South Wales which could be supplied with those fish instead of sending them to Melbourne? Yes, Goulburn and various other towns.
2957. *Chairman.*] Have you heard of any other means than netting being employed for catching fish? Not in the Murray; but I believe that on two or three occasions dynamite has been used in some of the lakes in Victoria. That is not the only means of capturing fish. Along the banks thousands of lines are put into the river and fastened to rods stuck in the bank. To those rods a little bell is attached, and when the fishermen go along at night they can tell when a fish is hooked by the ringing of the bell.
- The

The river from one end to the other is covered with those lines. There is another system which they call cross lines. They stretch lines right across the river; they sink them from 18 inches to 2 feet below the surface with hooks fixed on the lines. A great many fish are caught in this way in the Murray River. J. M. Chanter,
Esq., M.P.,
1 Aug., 1889.

2958. Would it be a good thing to do away with that system? Yes.

2959. *Mr. Stephen.*] They are not likely to catch small fish in that way? No, that is done principally to catch the large fish. I do not object to the large fish being caught but a very small cod can be caught with a very large hook.

2960. Do they use any hauling nets such as are used on the coast? No, the snags are too numerous. They use plain nets with stakes in which the fish are meshed.

2961. Do you consider that the Victorian Government have no right to grant licenses to catch fish in the river? That is my impression.

2962. But there are tributaries running into the Murray over which they would have control? Yes.

2963. Do you think that the Government should take steps to have full control of the fish in the river? Yes, because it is very valuable.

2964. *Mr. Stevenson.*] Is it too far to send the fish to Sydney? No. It is only a question of railway communication; and there is only a break of 40 miles. The lakes are the great fishing grounds, but the distance from the lakes to Albury is so great that the fish would not arrive there in good condition. In Sydney we only get the fish in the river which are caught about Albury.

2965. *Mr. Stephen.*] What is the largest size fish that you have seen? 119 lb., but it was a very coarse fish. I have been living near the river since 1865, and during the last few years I have been living on the river. In 1865 the fish were plentiful in the various rivers. If you put in a line anywhere you could get a fish in a few minutes, and repeat the operation. Now it is a most difficult thing to catch a fish with a line in the river. I do not know whether that arises from the fish being captured in such numbers that the river is being denuded of them. Further down than where I live they are more plentiful. It is not from the parts of the river that I describe that the fish are taken exclusively for the Melbourne market. There is a point down the river about 100 miles distant from Echuca where there are other means of railway communication with Melbourne. There are a very large number of creeks there which are breeding grounds like the lakes. I am informed that there is a very large amount of netting going on there. If Mr. Manton were appointed assistant inspector of fisheries he would supervise this part of the river as well as the lakes. The red-gum timber grows in that flat country, so he has to visit that part of the river in any case.

2966. *Mr. Stevenson.*] Do the lakes you refer to traverse the Victorian boundary? No; they are all on this side.

2967. Did the Fisheries Commission ever give any reason why they would not appoint Mr. Manton? No sufficient reason. I think I have reason to complain of the want of attention paid by the Commission to the communications I made. The only reason they gave was on the score of expense.

2968. Did you ever point out what would be the cost? Yes; I said the salary need not exceed that paid to the assistant inspector at Deniliquin. I think that is £60 or £70 per annum.

2969. You must be of opinion that the Fisheries Commission have not acted in the public interest in appointing a gentleman who cannot discharge the duties so efficiently as the gentleman you recommended? That is my opinion, and I gave it to the Fisheries Commission.

2970. *Mr. Stephen.*] Do you think that a Commission such as we have at present, or a department administered by a single head, would be a better way of preserving the fish? Judging by the facts I have stated, I have no hesitation in saying that the Fisheries Commission is a farce.

2971. Do you think it would be much better to administer it by the head of a department? Yes; then he could control the officers appointed in the different parts of the country.

Mr. Phillip Cohen called in, sworn, and examined:—

2972. *Chairman.*] What is your occupation? I am not in business at present.

2973. Were you at one time actively engaged in the fishing industry? I have made it a study for a great number of years. Mr.
P. Cohen.

2974. More particularly in connection with oyster-leases? Yes, in latter years. I have had a practical knowledge of fishing for a great number of years and have made it a study. I endeavoured to resuscitate the oyster-beds on the Hastings River, but, unfortunately, I failed. I commenced it about five years ago, but I gave it up twelve months since. 1 Aug., 1889.

2975. Do you think that the provisions of the Fisheries Act have applied justly? No.

2976. Have you any reason to doubt the advisability of continuing the existence of the present Commission? It has done a vast deal of harm, and has retarded the fishing industry.

2977. In what way? In the first place, the great majority of the members never had any practical knowledge of the fisheries; they never made themselves acquainted with them, nor did their officers. Some of their by-laws have been stupidly absurd. They have closed waters which were of no benefit to the fisheries, and they have kept waters open which ought to have been closed.

2978. Have you at any time brought under the notice of the Commission any proposals to remedy alleged defects? I have written a great deal to the public press, but I have never suggested anything to the Commission, because I knew it would be useless.

2979. Did you ever communicate with the Colonial Secretary as head of the Department? Yes; when Sir Alexander Stuart was Premier.

2980. Have you ever had any complaints made to you by the fishermen as to the injurious operations of the Fisheries Act? Yes; on various occasions.

2981. What were the grounds for those complaints? The regulations having reference to the mesh of the nets are very absurd, and very hard on the fishermen. Then the unnecessary and unjust closing of waters where there is no benefit to be derived, has been a great hardship to the fishermen.

2982. Have any of the Commissioners been to the principal fishing-grounds? Not to my knowledge.

2983. Is there any member of the Commission who possesses practical knowledge? Yes; Mr. Oliver is pretty well acquainted with some of the fisheries along the coast. I know he has been out on fishing excursions, but whether he has any knowledge of the various distant habitats of the fish or of their habits I cannot say. I know he has interested himself a good deal in the fishing industry. 2984.

Mr.
P. Cohen.
1. Aug., 1889.

2984. If the fishermen had a representative on the Commission in the shape of a practical man who would be associated with the four other members, do you think that that would be the means of bringing about a better state of affairs? I do not think so; I do not think that the other Commissioners would listen to anything that the practical man brought under their notice. I consider that the Fisheries Commission is unnecessarily cumbrous, and that it is spending the funds of the country to no useful purpose.

2985. Do you think that the Commission should be abolished, and that better means should be devised to administer the Act? Yes.

2986. If it were placed under one responsible Minister or department, do you think that would accomplish the object? I have been advocating that through the press for six years.

2987. In what respect do you think that the Commission is too expensive? In the first place there is no necessity for all those outside inspectors. Under the Victorian Act water bailiffs are appointed in the coastal and Riverine districts. The police are appointed to those positions. They only get about £5 or £10 a year for performing those duties. The outside inspectors here who are appointed along the coast have nothing to do commensurate with the salaries they receive.

2988. Have you had communication with the Fisheries Department? Yes.

2989. Has there been any delay in attending to your communications? Yes.

2990. Have you ever noticed that those delays were caused through the want of a quorum? Yes, often.

2991. Have you ever heard other people complain of delays and red-tapeism? Yes; I will give an instance: If I am an oyster-bed lessee, and I detect a man stealing my oysters, I cannot prosecute him without first obtaining permission from the Commission.

2992. In the meantime the man would have time to escape? Yes.

2993. Would it be better to have the power vested in the local inspector? Yes.

2994. Are there too many officers in the department? Yes.

2995. Do you think that the local police magistrates would be able to perform the duties of inspectors in some cases? I think it would be better to appoint a senior police officer in each district.

2996. Do you think that would save expense? Yes; and it would be a more effectual way of carrying out the law.

2997. Do you know if any of the Commissioners have visited the fishing grounds? I think there have been one or two junkettings. I believe a party went down south one time, taking with them a trawl. As to visiting any of the stations, and visiting and examining any of the fisheries or taking bearings of the various deep-sea schnapper grounds, I am certain that they never did it.

2998. Do you think that Mr. Lindsay Thompson has any practical knowledge of the fisheries? I should not like to say with certainty.

2999. Has he ever visited any of the fishing grounds? Yes; he once came and settled a dispute for me on the Hastings River. I know that he has been at other places; but I cannot say whether any material good resulted from his visits.

3000. Where did you have oyster leases? On the Hastings River, at Port Macquarie. I had altogether about 8,000 yards, for which I paid rent, somewhere about £80 a year.

3001. Did you find it remunerative? No; I lost a lot of money.

3002. How? In one instance the Commissioners granted a man 200 or 300 yards next to my oyster-beds, in opposition to my entreaties and interests, for the paltry sum of £2 10s. a year. This man was a perfect vexation to me, and I am certain he took my oysters. Then when the floods occurred eighteen months or two years ago, the fresh water was in the river for three months, and destroyed a great quantity of oysters. After trying it for three or four years I determined to give it up. The oyster-beds, as they are under the present system in this country, are not utilized as breeding beds. The old drift oyster-beds, which were grand indeed, have not an oyster upon them. On the Hastings River some twenty years ago the oyster-beds were some of the grandest in the Colony. There was no oyster in the world superior to the drift oyster of New South Wales, and I doubt if any were equal to it; but the rivers have been dredged to death. The oysters now coming to market are merely a bastard oyster, grown upon the mangroves and the stones upon the foreshores. The oyster-getters or lessees take them away at once, and put them down till they are old enough to fatten. The moment they fatten they are sent to market, and they have no chance of breeding. In my opinion, the only way to restore the oyster-beds of the Colony is to close them entirely from one end of the coast to the other for three years.

3003. Had the people special licenses to dredge? Yes. In those days the Government foolishly granted dredging licenses, and leased rivers to those men. To my knowledge in less than eighteen months 30,000 or 40,000 bags were removed from the Hastings River. There were very few steamers then running on the coast, and the oysters used to be taken to Sydney by the timber vessels. The men employed on the oyster-beds used to take up more oysters than they could send to market, and the finest oysters were retailed in Sydney at 5s. a bag of 3 bushels. Hundreds of bags used to be left on the banks of the rivers to rot, and they were ultimately burned for lime. In this way the deep river oyster-beds were completely annihilated years before the present Act came in force.

3004. Instead of indiscriminately leasing 200 and 300 yards for oyster culture, would it not be better to adopt a system whereby the whole side of a river might be leased to one man? I think that even that suggestion might be improved upon. I think that if the Government were to lease each river there would be a chance of bringing back the oyster-beds to their former state. Then one man or a syndicate might have a chance of taking up a river and resuscitating the beds. That will never be done under the present system.

3005. Do you say that oyster culture has not been carried on properly on the Hastings River? It has not been on any of the rivers. I have been on others. All are worked somewhat similarly.

3006. Would it not be possible to carry it on by artificial means? I tried all that. I put up walls along the shores, I sank hurdles, I tried every method, but did not succeed. The spat would not cling, and what I did save were destroyed about two years ago.

3007. Have you ever heard of any disease among the oysters? There are many diseases spoken of. There is a spiral worm, for instance, which is destructive at times. There are a great many enemies of the oyster, for instance the octopus, which is very numerous in the coastal rivers.

3008. Have you ever heard of the stinging-ray as an enemy of the oyster? I have heard of it, but do not believe it.

3009.

Mr.
P. Cohen.
1 Aug. 1889.

3009. Have you ever heard of an enemy called the borer? Yes; but if the small spiral whelk is meant, I think it is an absurdity.

3010. Did you ever send any of the oysters from your oyster-beds to market? Yes.

3011. It did not pay? No. I would not have sent them at all; but if I had not sent them someone else would have sent them for me.

3012. What was the result of the trawling experiments of which you have spoken? Some sea-weed, I think, and a couple of sting-ray, or something like that, with the further result of a partially destroyed net.

3013. Do you think that trawling could be successfully carried on on our coast? No. I know of only one bank on which I think it might be successfully carried out. It is about 12 miles off the North Head, with the depth of about 45 fathoms of water. It has never been trawled. As for trawling along the coast it would be absurd, because the bottoms are mostly foul. The trawling expeditions in Victoria proved that. Like Scotland, we have an abundance of fish, but this is not a trawling coast.

3014. Do you know whether or not it was carried on successfully on the Victorian coast? It was unsuccessful. I was down there lately during the last trip of the "Lady Loch." On the former trip, when they trawled in shallow water off Port Albert Bight, they caught some fish there the water in that locality being very shallow; there are any quantities of fish on the coast, and we do not want any improved method of net fishing. What we do want is proper transit to market. The home fisheries are fished out, and if the market is to be effectually supplied with fish it must come from a distance, where it exists in great abundance.

3015. Do you think that all the inspectors of the department are practical men? I know some of them who are not. Others I cannot speak of, because I never had an opportunity of judging their capabilities.

3016. If we continue under the present system, should practical men be appointed inspectors or sub-inspectors? No doubt about that. In Melbourne there is only one inspector of fisheries, and the whole department consists of him and two or three subordinates and a clerk; so I am informed. He does the work effectually.

3017. But they have not got the same extent of fisheries as we have? What is the good of having extensive fisheries if they are not properly developed and worked?

3018. Do you think that if the same system were adopted here the department could be worked more economically? Yes, I certainly do.

3019. Have you heard any complaints from the fishermen? Yes; especially in regard to the action of the Commission in closing certain open waters; and also with reference to the mesh and length of the nets.

3020. What would they like with regard to the nets? I think that 150 fathoms is the legal length of a seine net. I do not see what difference it would make if the length of the seine were unlimited. Instead of having to shoot three times with a net of 150 fathoms it would do no harm if they were allowed to shoot once with a net 450 fathoms long if the fishermen desired it. The length of the net ought to be left to the discretion of the fishermen, but the mesh ought to be limited. I would certainly restrict the fishermen from fishing in the lagoons at certain periods, they being the natural breeding-grounds of the fish.

3021. Have the Hawkesbury fishermen complained of the want of open water there? I am not aware, but there is plenty of available water in that locality. I agree with the Fisheries Commission in closing the upper waters of all coastal rivers against netting.

3022. When the Fisheries Commissioners close waters should they in the first instance consult the local inspector as to the advisability of doing so? No doubt a report should come from him if he is competent to advise.

3023. Has it been the case that some waters have been closed against the recommendations of the local inspector? I believe so.

3024. Should not more authority be given to the local inspector so that he could issue licenses? Yes, if he is a practical man, but not otherwise.

3025. Have you ever seen sales conducted at the present fish market? Yes.

3026. Is it suitable for the requirements of the public? They have increased the size of the market, but it is not satisfactory. It is not a market; it is an auction-room.

3027. Have fishermen complained of their fish being pilfered? Yes; I have heard so.

3028. Where does that take place? In the market, unquestionably.

3029. Do you know of any such cases of your own knowledge? Yes, but the perpetrators were never detected. I have heard fishermen complain that, in certain baskets, they have put in very prime fish, and when they were opened for sale in the market, after being in the market all night, those fish were gone.

3030. Have you heard fishermen complain of their fish being pilfered from the steamer or in the transit from the steamer to the market? No; but such may be the case at times.

3031. Do you not think it would be more convenient to have a market established on the western side of the city? No doubt the Woolloomooloo market is out of the way, and in the early mornings it is a perfect pandemonium. No respectable person would think of going there to buy fish, because for an hour or so in the morning the scum of the lazy vagabonds of Sydney collect there. It is a huge monopoly, and the public must get their fish from the retail vendors. If anyone gets a good haul of fish and brings it to the city during the day he dare not sell it until next morning at the market, and in the meantime it may become putrid in his boat.

3032. Have you visited the Melbourne markets? Yes; the public go there and buy fish.

3033. If that system were adopted would it be satisfactory? Yes. In Melbourne fish is brought to the market at any time of the day, and the market is open to the public all day long.

3034. Are not the fish thrown out in heaps on the floor of the market here, and are they not liable to be trodden and spat upon? Yes, if the people are inclined to do so. The people who go there are not allowed to smoke, but they are not prevented from chewing tobacco, and furthermore some of the dealers wash the fish in the dirty waters of Woolloomooloo Bay.

3035. Have you directed your attention to the Inland Fisheries Act 1887? No; but I have fished in inland waters; I know that they are being denuded, and that many tons of fish go to Melbourne every week from New South Wales waters.

3036. *Mr. Stevenson.*] Where? From the Murray and the Murrumbidgee and their tributaries. The fish are netted scandalously, and that ought to be put a stop to.

Mr.
P. Cohen.
1 Aug., 1839.

3037. *Chairman.*] What sort of nets are used? Graballs, I think. They are most destructive.
3038. Are they bag nets? Some of them may be, but the nets I allude to are stretched across the river from bank to bank at night time. It is a mesh net and nothing can get away. They destroy large quantities of small fish in the same way as the Italians and Greeks are now doing in the home fisheries. Those fishermen are destroying all the little fish we have in the upper harbour and rivers.
3039. Do they haul the ground both day and night? Yes; they are destroying the breeding grounds. I would prohibit them altogether from fishing in this way. They use a sort of bastard trawl. They sink the nets and drag the bottoms. The other day I watched some of them at Lavender Bay, and they must at various times have killed millions of young fish. I spoke to them about it. They were very impudent, and I thought they would knife me. That is done repeatedly in the upper waters of Port Jackson, and I think it ought to be prohibited.
3040. *Mr. Stevenson.*] Did you think it desirable to bring that under the notice of the Commissioners? What was the use of doing that. I wrote to the *Herald* about it.
3041. Was any action taken in consequence? No; the nets are still allowed to be used. If an unfortunate British fisherman is found using a net the mesh of which is a quarter of an inch smaller than is allowed by law his nets are seized and sold. When those nets are taken from the fishermen as being of an illegal size, they ought to be destroyed, instead of being allowed to go into use and to be seized again.
3042. *Chairman.*] There was an association formed not long ago called the Fishermen's Association of New South Wales. Have you had any communication with them? I have been requested to attend some of their meetings, but I never did so.
3043. Do you think that association will be productive of any good? I suppose it will be like all other unions. You must not take for gospel all that the men say. No doubt they have many grievances, but some of them are never satisfied.
3044. In writing to the *Herald* on April 25th of this year, you described the nets used by the Greeks as infernal machines;—are those the same nets that you have just referred to? Yes.
3045. Do you think that the whole Commission should be remodelled or that a new system should be introduced placing the whole department under a separate or one responsible head? Yes, I think that would effect a great deal of good.
3046. *Mr. Stephen.*] Are you in any way concerned in the Fisheries? Not in any way.
3047. I suppose you are not employed as an officer of the Fisheries Commission under any circumstances? No.
3048. Do you think that the Act might be worked to greater advantage to the fishermen without being detrimental to the supply of fish? I think the Act requires a great deal of amendment.
3049. Do you think that the Act is worked more to the disadvantage of the fishermen than it should be? Yes.
3050. Are there any seasons of the year when the breeding-grounds might be opened? In the Australian waters there are no deep sea banks like there are in the European waters, as far as I have read, but nature has supplied us with a number of lagoons along the coast wherein the fish go to breed. The young fish remain in the lagoons and are to be found there in vast numbers all the year through. I would not like to close up places like Lake Macquarie or Tuggera Lake, but I think the small lagoons along the coast should be protected. I would prohibit fishing in the smaller lagoons altogether, and in the others at stated periods.
3051. What is the legal size of the different classes of nets? For the seine, $2\frac{1}{4}$ inch in the bunt and 3 inches in the wings. The gar-fish net is $1\frac{1}{2}$ or $1\frac{3}{4}$ inch in the bunt and $2\frac{1}{2}$ inches in the wings. That is another foolish affair. The fishermen lose the best part of their haul from such a net. The supply of garfish is diminishing in local waters year after year, although I have seen them in immense schools away along the coast.
3052. Do you think that if a net is once declared legal it should always be considered to be legal, even though it might have shrunk? Yes.
3053. Are you aware that nets which have been declared legal and which have shrunk through tanning have been seized? Yes, and I consider that is cruel.
3054. Can you point out anything respecting which the fishermen might be relieved in the working of the present Act? The injustice in closing open waters is that the greater portion of the fish along the coast are migratory. For instance, sea-mullet make their appearance sometimes as early as the middle of March, and they move around the coast up to the middle of May. Small bodies detach themselves from the principal school and go into every river and estuary to spawn. By closing the lower waters our fishermen are debarred from taking the fish as they travel along the coast and they lose their opportunity altogether.
3055. Do you know how many members compose the Fisheries Commission? Five, I think.
3056. Do you consider that number to be necessary to the proper working of the Act? No; I think it is quite unnecessary.
3057. Have you had any experience of oyster-culture in other countries? No; I made a great mistake when I first entered into the oyster industry. I read a great deal about oyster-culture in other countries, and I worked up to that as far as I could. That is where I made a mistake, because I found to my cost that what was suitable in other countries was not suitable here. If I had stuck to usual practice and my own experience, I would have done better. In the same way the late Mr. Holt lost a great deal of money at Cook's River by adopting the French process.
3058. *Mr. Stevenson.*] Do you consider that the present Fisheries Act is not at all satisfactory? It is very unsatisfactory, and it retards the development of the Fisheries, for the want of practical knowledge.
3059. *Mr. Stephen.*] Can you suggest any amendments in the present Act? Yes; but it would take some time. It would be necessary to have the Act before me, so that I might suggest improvements in the present provisions.
3060. *Chairman.*] Do you think that industries might be established at some of the prolific Fisheries in the Colony in the way of fish preserving, and so on? Yes. There is no coast in the world where there are larger quantities of fish than there are here. Three months ago I went out with a fishing party of seven, and in six hours we got over 400 schnapper. We might have filled the ship. Parts of the coast is alive with them, but the great want is better means of transit. The fishermen have no means. The industry is not developed as it should be, they cannot go out to sea, and go on the schnapper grounds which exist for 2 miles to 10 miles off the coast.

3061. *Mr. Stevenson.*] Do you mean to take the schnapper with nets? No, that would be impossible; the bottoms are too foul.

3062. Do you propose to use well-boats? No; small fast steamers, fitted with cooling chambers, and a market here with cool chamber, where the fish may be kept without being frozen. Well-boats have been superseded in Europe by fast collecting boats fitted up with those chambers. The only fish that you can put in a well-boat are deep sea fish, such as schnapper, but they are always nearly dead when they are hauled up. Some years ago a well-boat came here from Tasmania and I went out in her. We caught 400 or 500 fish, but we only brought in twenty or thirty alive in the well.

3063. Do you think it advisable to close the mouth of Port Jackson to net-fishing owing to the fishermen at the Heads using their nets and frightening them away when they wish to enter? People talk about that sort of thing, but they do not understand it. When a school of mullet goes along the coast they do not all enter the harbours and rivers, only small detachments come in. The sea-mullet have millions of ova, and it is not necessary that all those mullet should breed. The fish go up the rivers, and why should not the fishermen be allowed to take them. The fishermen should not be prohibited from taking them in any quantity from the open waters.

3064. But it is said that when nets are shot across the Heads the fish are frightened and do not come into the harbour, so that they do not go into the inlets and bays, where they would go if they were left undisturbed? They cannot be taken, and do not spawn at the Heads, or in inlets or bays, but in the rivers.

3065. Do you not think it would be a good thing to give them the means of breeding up the river? I proposed this two or three years ago: that Port Jackson should not be fished from Bradley's Head upwards. That would close the whole of the Parramatta River and the whole of the harbour from Bradley's Head across the harbour to the east end of Double Bay.

3066. With what object? Because that would prevent all the young fish being destroyed by the Italians and the Greeks up Lane Cove and Parramatta Rivers, and would tend ultimately to increase the supply of matured fish in the lower waters of the harbour.

TUESDAY, 6 AUGUST, 1889.

Present:—

MR. FRANK FARNELL,
MR. HOWE,
MR. NOBBS,

MR. O'SULLIVAN,
MR. RITCHIE,
MR. WILLIAM STEPHEN,

MR. STEVENSON.

FRANK FARNELL, ESQ., IN THE CHAIR.

Mr. Lindsay G. Thompson recalled and further examined:—

3067. *Chairman.*] The Committee are anxious to elicit some information with reference to the conduct of your proceedings when the Commission are sitting or supposed to sit. You stated that they hold meetings or are supposed to hold meetings once a week? Yes.

3068. Have there been occasions when there was no quorum? Yes.

3068½. How have you proceeded when you had no quorum? Two of the Commissioners present have agreed to certain action on the papers, such being recorded in the minute-book which is sent round to one or more of the Commissioners who were not present to get their concurrence, and the proceedings are then taken as formal.

3069. In every case where the book was sent round were the papers in connection with the different matters under consideration placed before the other Commissioners who were asked to sign? No, that would not be done unless asked for specially.

3070. So that they actually signed that book in some instances without having any knowledge of the facts of the case? Without a knowledge of the details, not the facts.

3071. Do you not think that that was rather a bad proceeding? The difficulty was that if this had not been done the business would have been at a standstill. When there was no quorum the business had perhaps been already delayed, so that if this course had not been adopted it would have been delayed still longer. If papers were required they would have been supplied.

3072. Do you remember a Bill being passed closing Port Hacking altogether from net-fishing? Yes.

3073. Do you say that that suggestion never emanated from the Commission at all? Yes.

3074. Are you perfectly willing to recommend that Port Hacking should be open to a certain point? Yes, up to the Spit.

3075. So that it would be necessary to amend the Bill to a certain extent in order to open those waters? Yes.

3076. With reference to oysters on Crown lands, is there any provision in the Act whereby people could be punished for taking those oysters? No; the Act is defective on that point.

3077. So that it would be also necessary to bring in a Bill to provide punishment for people who take oysters from Crown lands? It is necessary to bring in a Bill to amend the Act in very many ways; the draft Bill which I submitted to the Committee on my last examination would, I think, cure all the defects of the present Act. It is based on the lines of experience; and I am not aware of any point that has been omitted in the Bill. I have endeavoured to make it complete and as fair as possible, as between the lessees and the public. There is a provision in that Bill to punish persons who take oysters unlawfully from Crown lands.

3078. Are you aware of the existence of a fishermen's association in New South Wales? Yes.

3079. Have you at any time had any communications from them? Yes.

3080. Of what nature? We had, I think, a letter setting out what they call their grievances; and a deputation from the Association interviewed the Commissioners on one occasion. The matter was discussed by the Commissioners, who promised that they would give it full consideration, and communicate further with the Association, which they did. A letter was sent embodying the views of the Commissioners as to the various grievances set out in their paper.

3081. Do you know whether the fishermen were placed in any better position than they were before they made the application? No; it was not considered that their grievances were real grievances; matters were stated which we were able to refute.

Mr.
P. Cohen.
1 Aug., 1889.

Mr. L. G.
Thompson.
6 Aug., 1889.

Mr. I. G.
Thompson.
6 Aug., 1889.

3082. The text of the reply was that the Commissioners could not recognise the grievances of the fishermen, or their alleged grievances, and that the Commissioners did not see grounds for making any alteration? That was practically the reply.

3083. Are you aware that at the present time in the harbour there are men fishing with sunken nets? Yes; that has been the case for some time past; there is nothing in the law to prevent it.

3084. Would it require a law to be passed to stop that? Yes; I have suggested a sunken net that would be less destructive in its effects than the one now in use. I made that suggestion in deference to the wishes of certain fishermen, but for myself I would oppose the use of sunken nets altogether; they must necessarily be very destructive to fish food and spawning-grounds, modify them as you may.

3085. It has been stated to the Committee that when migratory fish such as sea-mullet are about to enter the harbour fishermen shoot at them with their nets, making a large haul probably, but frightening the greater portion of the fish out to sea again;—do you think that is a fact? I think the instinct of the fish is so strong that although they might be frightened away for a time they would come back again to spawn.

3086. It has been suggested that the harbour might be closed at the Heads, as well as at the sources of the rivers;—do you think that is a good suggestion? I have heard it stated that the fishermen suffer a great deal from certain fishermen at the Heads who, immediately they see a shoal of fish coming in run out their nets and shoot them in the way stated. It might be desirable possibly to close the harbour, not from the Heads right up, but a portion near the Heads, in the same way as at Lake Macquarie; the waters there are closed for half a mile on either side of the entrance, and half a mile into deep water. We might do the same here in Port Jackson, but I am afraid there would be a very great outcry amongst the fishermen who think that their privileges are already too much curtailed.

3087. In connection with the Inland Fisheries Act I believe you have an inspector stationed at Deniliquin? Yes.

3088. What is the area of his district? Principally the Edwards River, and a portion of the Murray River, in the vicinity of the Edwards River. His district corresponds with his forest ranging district. Very little attention has been given to the inland waters so far, and I wish more could be given. I am very much interested in them myself.

3089. Do you remember a communication having been received by the Commission from Mr. Chanter M.P., urging upon the Commission the appointment of a gentleman as Assistant Inspector of Fisheries, who is at present forest ranger in the Murray River district? Yes; his appointment has been recommended.

3090. How long ago? Quite recently. Mr. Chanter made several applications to the Commissioners, who did not see their way to grant them on account of the want of funds, I think. Eventually his appointment was recommended, and I believe it will be shortly gazetted.

3091. *Mr. Stephen.*] With regard to the replies sent to the Fishermen's Association with respect to their grievances, can you tell us the nature of it? I can supply a copy; it is a very lengthy document, and it applies to each of the grievances *seriatim*. The one great point of complaint was the closure of waters, and I think we endeavoured to show that the closures were beneficial, and did not operate harshly against the fishermen; that none of the actions of the Commissioners were intended to operate harshly, but were simply taken for the public good, and in the fishermen's interest.

3092. I presume you are a member of the Fisheries Commission? No; I am Secretary.

3093. What constitutes a quorum? Three.

3094. Have the meetings lapsed very frequently for want of a quorum? Not frequently of late. Some time ago it used to happen pretty frequently, but of late it has not been nearly so frequent.

3095. Do you think it would be an advantage to have the Commission abolished, and to have the Act administered under one official head? I do not know that in my position as secretary I ought to have an opinion in a matter of that kind.

3096. *Mr. O'Sullivan.*] In what direction would you suggest that the Fisheries Act should be amended in order to make it more workable? In very many particulars it requires amending. I set out all those points on the Bills which form appendices to my last evidence. I should be very pleased, indeed, if this Committee could give them consideration. I took great trouble with the Bills, and having for years past made it a business to note down defects as they became apparent, I am able to say that these Bills are the outcome of practical experience in the working of the Act.

3097. I presume you would suggest that that Bill should be passed without delay? Yes, I should like it to have been passed last year.

3098. Does not the present Fisheries Act conflict with the inland Fisheries Act? Yes, in one particular; the Fisheries Act specifies the mesh of inland nets to be 3 inches, while the Inland Fisheries Act makes it 4 inches. There are other matters in the Inland Fisheries Act which require amendment; for instance, it gives the Commissioners power to recommend closing of rivers only after they have been exhausted. I think the Commissioners should have power to close those waters, and other waters also, when circumstances seem to warrant it. In the Bill which I submitted I embodied all the provisions of the Inland Fisheries Act, with these and such other amendments as I thought desirable.

3099. Have you any inspector at Port Stephens? Not yet.

3100. Why? We had an inspector there but the Commissioners are contemplating other arrangements. What those arrangements will be I do not know. Only for my summons to attend this meeting I should have been at Port Stephens now, in order to propose some arrangements.

3101. Then you have no supervision over the fisheries or oyster leases at Port Stephens? Not at present, but we shall have in a week or so.

3102. Are you making any fresh appointment? I do not know whether it will be a fresh appointment or whether another inspector will be moved there. I do not know what the Commissioners are going to do.

3103. Do you keep a record of all the oyster leases taken up? Yes.

3104. Have all the rents for oyster leases been paid up? No, I suppose that there are about £2,000 at the present moment owing to the department.

3105. What percentage do the unpaid leases bear to the whole number? I should say the unpaid leases would form two-thirds of the whole.

3106. Then that leaves you without sufficient revenue? Certainly.

3107. Does it considerably hamper you in your operations? It hampers us in this direction that we are not getting the revenue which we ought to have; the matter has been referred to the Crown Law Officers with

with a view of instituting a test prosecution against one of the defaulters, but nothing has been done yet. I am expecting a reply every day.

3108. What you really would like would be power to sue for those rents? Yes.

3109. If you had those powers would they very materially aid your revenue and increase the usefulness of the Commission? Yes.

3110. Do you approve of the suggestion that the inspectors should issue licenses and receive the money? No. I do not think there is very much hardship in requiring the fishermen to come up once a year to Sydney to obtain their licenses. I mean those fishermen living adjacent to Sydney. It is provided that fishermen who live at Port Stephens for instance can obtain their licenses from the nearest Clerk of Petty Sessions. At Newcastle licenses can be obtained from the Clerk of Petty Sessions there. Wherever there is a Clerk of Petty Sessions, a fisherman can take out his license. I do not see that there is any hardship in requiring a fisherman who lives say at Botany to come to Sydney to take out his license once a year. Some of our inspectors are not literate men and might not be able to keep accounts. It is not considered desirable that they should be entrusted with accounts, as not being literate they might make some blunder in connection with the money. I know that one inspector made a great blunder in connection with his accounts. There was no guilt about it; it was simply and purely a blunder; he thought that he had neglected to pay £47, which he erroneously believed to be due to the Government, so he sent up his cheque for the amount, but the cheque was returned by the Treasury, it having been found that there was nothing whatever owing. We have other inspectors who are worse than he is so far as literacy is concerned, very good men so far as regards their duties proper, but I do not think it would be fair to burden them with the responsibility of collecting and accounting for public moneys.

3111. *Mr. Ritchie.*] What is the name of that inspector? He is an inspector in the southern division.

3112. *Mr. O'Sullivan.*] It has been shown in evidence that a great deal of inconvenience and more or less evasion of the law may result through the inspectors not having power to issue licenses, and that if they had power to issue licenses themselves they would know in a moment whom the parties were to whom the licenses were issued? I do not think a single case of the kind could be proved against us. What we do is to issue a list of licenses which is sent round to every inspector; by reference to that list he would know exactly to whom licenses have or have not been issued.

3113. Does it not seem a hardship to compel men to come away from Botany or Broken Bay to take out licenses in Sydney? I do not think so.

3114. May they not possibly have to wait for a day to get their licenses? These men are constantly in Sydney, they do not live in one place. Many Botany fishermen go down to Broken Bay. They migrate very much; besides they have a whole month, January, during which they can take out the license. Fishermen do not fish every day; they only fish occasionally.

3115. Is your office always accessible to them? Yes.

3116. Some inspectors seem to hold a very strong opinion that it would be better to give them power to issue licenses, as it would save a great deal of trouble and possibly hardship? There are some inspectors to whom the power might be given; for instance, I see no reason why Inspector Temperley might not have the power given to him. He is an educated and competent man. The same might be done with respect to Inspector Benson and others; but there are others again whom I would not like to entrust with the power. I do not, however, encourage the idea at all.*

3117. Are they not as fit to be trusted with the license fees as the clerk is? It is not a matter of trust at all; besides a clerk does not receive the money; the money is paid into the Treasury; the fisherman brings to the office a receipt from the Treasury for the money. As little money as possible is collected in the Fisheries Department, and the Treasury is used as the collecting medium to the largest possible extent. That is the principle which has governed the department since it has been in existence.

3118. Do you correspond largely with the fishermen? Whenever they write we always reply to them.

3119. Do you give proper attention to their complaints? Yes.

3120. Have you had any complaints made about want of attention? No; sometimes they do not think they are replied to quite quick enough and they write again. They forget that the matter has to go through several hands, and that there are references to the inspector and other departments which cause delay that is really unavoidable.

3121. Do you not think it was an illegal proceeding to send the book round for signature when there was no quorum? The law certainly requires that the affairs of the fisheries shall be administered by a commission, three of whom are a quorum, so I suppose that anything short of that would not in a strict sense be legal.

3122. Do you not run the risk of having many of your proceedings vitiated through not having a quorum present? We have a very convenient clause in the Act which says that the production of certain papers and the production of the *Government Gazette* shall be valid evidence; therefore, unless any case were taken to a higher Court, we would be pretty safe.

3123. *Mr. Ritchie.*] You have said that frequently there was no quorum. In that case how did you confirm the minutes? They were confirmed on the authority of a third signature.

3124. Then you went through the form of confirming the minutes without a quorum being present? No, they would not be confirmed until the quorum was present; if there were no quorum for three successive meetings, at the fourth meeting the minutes of the previous meetings, at which only two Commissioners were present and three had signed, would be confirmed.

3125. On some occasions was some very important business transacted under these circumstances? The business of the department was always brought before the Commissioners; if there was a very important case it was deferred until we got a quorum.

3126. Was the business transacted not of great importance? It was formal business as a rule, about which there could be no doubt as to the directions that should be given.

3127. Do you find from your experience that it is difficult to get a quorum? Of late we have had a quorum pretty generally; that is to say during the last six months.

3128. Is that likely to continue? I do not know.

3129.

*NOTE (on revision) :—Fishing licenses entitle the holder to fish in any tidal waters. If, therefore, a person took a license, say from the inspector at Botany, and afterwards migrated to Tuggerah or Macquarie Lakes—not at all an unusual practice—how could the inspectors there possibly know of his having a license? I am strongly of opinion that the Department or the local Court of Petty Sessions are the places from which licenses should issue. The alleged hardship to fishermen is one in name only, and is by no means comparable with the inconvenience which conditional purchasers residing remote from a lands office have to undergo in attending there to fulfil the requirements of the Crown Lands Act.

- Mr. L. G. Thompson.
6 Aug., 1889.
3129. Judging by circumstances do you think so? I suppose so, but I cannot judge what may come.
3130. *Mr. Stevenson.*] Can you tell how many meetings there were at which there was no quorum prior to the last six months? I think a considerable proportion.
3131. Have you any return showing the number? I can supply it.*
3132. Does it not strike you that through your not having a quorum considerable annoyance must have been occasioned to the fishermen? Of course any irregularity in the conduct of business is inconvenient to somebody.
3133. Is it not notorious that complaints have been very numerous amongst the fishermen as to delay and inconvenience, that men are frequently prosecuted and summonses are taken out against them for not having licenses, and every obstacle is thrown in their way unless they come to Sydney, which involves great hardship on them? As a matter of fact they are not always compelled to come, for sometimes the inspector will send the application and the man's money to the head office, and we issue the license and send it up for him. It used to be the practice to do that, but the Greeks about Sydney took to exchanging licenses, so that two or three men would go out one night and fish, who would then hand their licenses to two or three other men who would go out and fish on another night. As their names were Greek names and very much alike, the inspectors could neither read them nor pronounce them; that was the reason why we required people near Sydney to come up to the office and take out licenses here.
3134. What check was instituted in that case. Even though the inspectors may not be very intellectual according to your account, would they not recollect the faces of the men to whom they issued licenses personally? The inspectors know some of the men, but they do not know the Greeks. A little while ago we had a great deal of trouble in that direction, and that is the reason why we required fishermen to come up and take out their licenses instead of allowing agents to take out licenses for them. An agent would take out a number of licenses for very similar names, and those licenses were used by the Greeks in the manner I have described. I think that every fisherman should be made to have a metal license in the same way that railway metal tickets are issued.
3135. Could they not exchange them just the same? Yes, we have a great deal of trouble in this matter, and we are trying to check it.
3136. Every fisherman is supposed on demand to produce his license. Do you not know that the very nature of the fisherman's occupation is such that his license is likely to be destroyed? That is why I say that he should have a metal ticket which would not be destroyed.
3137. When does the fisherman apply for a renewal of his license? From year to year, and it begins on the 1st of January.
3138. You told us just now that a list was furnished to the inspectors by which they could know to whom licenses were issued; yet I find that this list which you produce was issued three months after the first of January. How on earth would it be possible during those three months for an inspector to know to whom licenses had been issued? By reference to the department, unless he questioned the fishermen and demanded to see their licenses. It was in order to give the fishermen as much time as possible to get the licenses issued that the issue of the list was delayed, but if I mistake not there was a previous list issued up to a previous date, and this list which I have now furnished the committee with was issued afterwards.
3139. If an inspector swears that he did not get this list until four or five months after the year had begun, or several months afterwards, is not that a fact? Being only three months it would not be true.
3140. You do not seem to attach any importance to three months? The fisherman does not get into trouble about that; an inspector has to report to the department, so that it is ascertained immediately whether or not a man has a license. If he has a license information to that effect is sent to the inspector.
3141. How long does it take the department to look it up? I suppose an hour; the answer is sent back the same day usually. An inspector cannot prosecute a fisherman for not having a license unless he gets authority from the department; and before the department issue any authority we ascertain if the man has a license or not.
3142. Are we to infer that you do not approve of the inspectors issuing licenses? Yes; decidedly.
3143. Is it not a fact that the reason why the Commission does not approve of the inspectors issuing licenses is that the whole of the returns shall be sent to the head office in order to provide a lot of clerical work which does not aid the protection of the fisheries. Have you not a large staff? We have a clerical staff of three.
3144. Had you not a larger staff some time ago? Yes, we had a larger staff because we were issuing the oyster leases; but the preparation of the licenses is entrusted to a clerk who has a salary I think of about £140 a year. The issue of the licenses only occupies his time completely for the first month or six weeks of the year; at other times he is able to do it with other work, so that it is out of the question to suppose that we want the licenses issued at the head office in order to get clerical work. We do nothing of the kind. We endeavour to keep down the clerical work as much as possible. We should have more clerical work to do if the licenses were issued by the inspectors, because we should have to check all their work and to correct possible errors. We should have to make returns, and it would involve more work than the issue of licenses from the head office.
3145. Have the inspectors to furnish monthly or weekly reports? Yes; weekly reports.
3146. Are they able to do that? Yes.
3147. You tell us that they are not able to issue licenses, and yet that they are able to write weekly reports. How do you reconcile those statements? I do not think they are irreconcilable; the reports are just what they have done, and are a sort of diary.
3148. Would not the other be something of the same kind of thing? No; the other thing is money.
3149. I presume these men are honest? Certainly; but if they made mistakes they would soon be head over ears in trouble with the Audit Department. If there were a penny more in their receipts than there should be there would be as much trouble about it as if there were pounds less.
3150. Has Mr. Oliver always been a member of the Commission? No.
3151. Are the causes of his resignation disclosed in the papers produced before this Committee? Yes.
3152. How did he come to be appointed to the Commission after this strong minute having been written by the Colonial Secretary? I recollect it; it is a very strong minute.

* NOTE (on revision):—During the period from 1st January, 1888, to 30th June, 1889, 74 meetings were called; 13 of such meetings lapsed, and at 17 the business was conducted with less than a quorum present.

3153. Yet we find a gentleman of that class put on the Commission a second time? He was appointed by Mr. Dalley, I believe, the second time. He only came to the Commission. I did not know anything of the arrangements anterior to his appointment.

Mr. L. G. Thompson.

6 Aug., 1889.

3154-5. Do you remember Mr. Macleay resigning? Yes.

3156. Had he anything to do with this? I do not know; I never saw the papers connected with his resignation.

3157. Is it possible to obtain those papers? Yes—in the Colonial Secretary's office, I think.

3158. Was an inquiry held with respect to Inspector Smith holding an interest in oyster leases? Yes; I held an inquiry, as desired. I produce the papers in connection with it.

3159. What was the result of that inquiry? I summarized all those charges, and I furnish the summary.

3160. Were there several cases? Yes; they were all on one charge made by a man named Jordan.

3161. Have you no power to recover the arrears of rents for oyster leases? We do not think we have any power; the matter is in the hands of the Crown Law officers, who alone can sue for rent.

3162. In the event of a petition being sent in against the removal of an inspector, or if representation is made that an inspector's salary is inadequate, what action is taken? It is brought before the Commissioners.

3163. What action is then taken? The Commissioners consider the matter, and direct some reply to be sent to the writer.

3164. Does the Colonial Secretary ever refuse to carry out any request made by the Commission? I do not think he has ever refused.

3165. You have told us that Inspector Temperley is very intelligent, and I think he has charge of the northern districts from the Queensland Border down to the Manning River? Yes.

3166. Do you remember that gentleman making an application, or a suggestion being thrown out, that he should visit the sub-inspectors, and that an expenditure of £20 should be allowed him for furnishing an annual report? Yes; the Commissioners disallowed it.

3167. Seeing that that officer is placed in such a responsible position, do you think that it would have been extortionate for him to have received £20 for carrying out the purpose I have referred to? I simply followed the instructions of the Commissioners. I did not think it was an extravagant sum.

3168. Do you not think he should have carried out what was proposed? I should make all the inspectors travel and see their districts.

3169. Yet the Commission refused to agree to that proposal? I recollect the circumstances very well now. He said he wished to visit the lower part of the district. He asked permission to do so, and said that the cost would not exceed £20.

3170. That was refused? Yes.

3171. Can you tell us how long it is since he did visit the districts over which he has control? I think it is eighteen months or two years.

3172. Is it not a complete farce to give a man control of certain waters and yet prohibit him from visiting them? Really his duty under the regulations is to visit his districts, and he was simply asking permission to carry out his duty.

3173. Did he point out that his salary was quite inadequate to enable him to make this long trip? He is not expected to do it out of his salary; if he travels he must be paid.

3174. How was it that they refused to allow him £20 for travelling expenses;—was the application for £20? He made the application and said he could do it at a cost of £20. I do not recollect exactly what the Commissioners said, but I know they refused to sanction the trip.

3175. Do you consider that that was in the interests of the Fisheries Commission? No. I would have liked Mr. Temperley to have made the inspection; but it was done, I think, on the score of economy.

3176. Do you think that it is two or three years since he visited some of the rivers? It might perhaps be two years.

3177. Then not only Mr. Temperley but also Mr. Benson are in charge of districts over which they have no control, simply because they have not the means of getting there? Mr. Benson visits his waters regularly. He often writes to say that he has visited certain portions of his district, and he furnishes reports of his visits.

3178. Is he not differently situated, as he gets a larger salary? No; he gets the same salary.

3179. Is he not allowed house-rent? Yes.

3180. Are the other inspectors allowed house-rent? No.

3181. Is he not allowed a boatman? Yes; but so is Mr. Temperley; but Mr. Temperley's boatman oversees the Clarence River and Mr. Temperley the Richmond River. Mr. Benson and his boatman are both on the Clyde River.

3182. Have not the whole of the inspectoral staff to abide instructions from the head office in Sydney before they can take any action—even a prosecution? Yes.

3183. Does not that often lead to inconvenience and delay, and should not they have power to prosecute for a breach of the Act? No. I think a reference to Sydney in the first place is always desirable.

3184. Does not the delay often lead to a miscarriage of justice? You can get a reference to Sydney in a very little time.

3185. But if you do not get a quorum, does not delay, occur? If the Commission meets once a week, or if it does not happen to meet on the day appointed, the delay is unavoidable. If the power of directing prosecutions were left with the executive officer that difficulty might be overcome.

3186. In closing waters are the inspectors ever consulted? No; I do not think so.

3187. Then it is a fact that the Commission closes waters just as it thinks fit without reference to the inspectors? The Commissioners close the waters on the ground that the head waters are the fish-breeding grounds. They really do not want a report from the inspectors.

3188. The Commissioners are so well acquainted with all the rivers and creeks that it is absolutely unnecessary for them to ask for a report? It is a matter of principle to protect spawning-grounds, and so conserve the interests of the fishermen.

3189. I ask you to look at this sketch. You will see marked there Pipeclay Creek, Second Creek, and Wallarah Creek on the Tuggarah Lakes. Are not all those places closed at present? Yes.

3190. You tell me it is not necessary to call for reports from the inspectors. Are the Commissioners aware that everyone of those creeks except one is sanded up at the present time, and that an inspector could not find them;—does not that show what a farce it is? I do not think that those creeks have been closed.

3191. I have been told that in the district which I represent, and this sketch has been furnished to me? If allowed I can produce a map in 5 minutes showing the whole of the lake closures.

Mr. L. G.
Thompson.
6 Aug., 1889.

3192. But you told us that they were closed? I was talking of the principal creeks. I do not think these are creeks worthy of being classed as such. Moreover, if they have been closed, and are, as you say, now sanded up, it would not, I should think, concern the fishermen one way or the other.
3193. In your opinion, would it not be better, before closing the whole of the waters, to obtain reports from the inspectors, who know all the places? I know most of the places myself. I have not been to Tuggerah, but I know most of the places, and I am able to give an opinion. I have given grave consideration to the question, and I have been led to tell the Commission from my consideration of those matters that I would recommend a modification even of the present closures. For instance, I have recommended a modification in certain closures in Port Jackson, Port Hacking, and George's River.
3194. I can understand your being thoroughly acquainted with the waters in the neighbourhood of Sydney, but do you know all the northern rivers up to the Queensland Border, and can you tell the state of the creeks there? We have not closed any creeks up there.
3195. But are they not liable to be closed? In a case of that kind, where I could not advise the Commissioners myself, I would recommend that a report should be obtained. I do not think that the creeks that you have mentioned at Tuggerah have been closed, because I do not think that more than three creeks and the entrance have been closed at Tuggerah Lakes. If they are sanded up of course it does not matter to the fishermen. Our object in making the closures is not to harass the fishermen, but to protect the public interest and the fishermen's interest also.
3196. How far do you think the Hawkesbury River ought to be opened? I think it ought to be opened as far as Bar Point. I recommended to the Commissioners that Berowra Creek should be opened. I went up there in consequence of complaints from the fishermen as to excessive closures. At first the river was closed as far as the bridge. On my recommendation it was moved back to Bar Point, but including Berowra. I went up recently and recommended that the closure should not affect Berowra Creek. In that I was overruled, and the closure remained as at present. I recommended with regard to the Upper Hawkesbury that it might be opened for net-fishing. I think from Pipeclay Creek upwards.
3197. Do you know Mangrove Creek? Yes.
3198. Would there be any objection to the opening of the river up to Mangrove Creek? Mangrove Creek is a very good spawning-ground, and I should be sorry to see it opened.
3199. But the main river? We have already got the main river and many creeks opened. It would mean so much more inspectoral supervision, and whether the advantages would be commensurate with the cost I do not know. For instance, we have Mullet, Mooney, and Berowra Creeks closed, all of which are separate, and the whole of the main river opening into those creeks is open, therefore we have quite enough creeks to look after without having Mangrove Creek in addition, which is some distance beyond Bar Point.
3200. Have the fishermen often requested that the river should be opened to Mangrove Creek? No. I spoke to a fisherman there who seemed to be a representative man, and he told me that if Berowra Creek were opened the fishermen would be very well satisfied. I saw no objection to that, and recommended it, but the Commissioners did not carry out my recommendation.
3201. Are there not a great many creeks above Mangrove for spawning. What is the distance from Mangrove Creek to Windsor? It is a very long distance—some 50 miles.
3202. Would not that afford plenty of spawning-ground in the creeks above Mangrove? It might, but Mangrove is well out of the reach of fishermen, who could not do much with fish got there in summer. There is a very large area of the Hawkesbury at present open to net-fishing.
3203. How long does it take boats to go from Mangrove Creek down to the railway station at Peat's Ferry? According to the tide; it will take over three hours, perhaps.
3204. Are you aware that a small steamer plies from Peat's Ferry to Mangrove? No.
3205. Did not Mr. Chanter recommend that Mr. Manton, a forest ranger, should be appointed an assistant inspector, and did he not give as a reason that he had a steam-launch, and that he traversed nearly the whole of the waters of the Murray, where it was alleged that there was a very great destruction of fish? I did not hear anything about a steam-launch. I do not know that our department was made acquainted with that.
3206. Did not that gentleman point out in his letter that Mr. Manton would have supervision over nearly the whole of the waters of the Murray, even if he said nothing about the steam-launch? He might have done so, but if he did so without making reference to the steam-launch it would be difficult for us to understand that he would have supervision over waters outside the district which he overlooked as forest ranger.
3207. Is it not a fact that Mr. Chanter made several representations to the Commission on the subject? Yes, several times.
3208. Was no notice whatever taken of his representations, although great destruction of the fish was going on? Each of his applications was replied to, and all to the same effect.
3209. And they were refused? Yes.
3210. Have you not told us that the reason was want of funds? Yes; that was the statement in the letters.
3211. Did Mr. Chanter point out in his letter that the cost of securing Mr. Manton's services would be £50 per annum? I do not recollect that he did; he may have mentioned that sum, but I do not think so. However, we have recommended Mr. Manton at £75 per annum.
3212. After these representations were made by Mr. Chanter, is it a fact that a Mr. Wilshire, whose area of supervision is very limited, was appointed at a salary of £75 per annum? No; he had been appointed for some years at £75 a year. The Commissioners hold this view, that the Murray River is kept and supported for the sole benefit of the Victorian people, and that we can get no control over the fisheries there. Tons of fish are annually sent down to Melbourne from the Murray, and any supervision we exercise over the Murray River is simply for the benefit of the Victorians.
3213. *Mr. Stephen.*] Do you issue no licenses for the Murray? Yes—for fishermen, but not for fishing-boats.
3214. *Mr. Stevenson.*] That was the very point which Mr. Chanter dwelt upon. Did he not point out that we ought to be deriving a benefit from the licenses but no notice was taken of his recommendations? We cannot stop this fishing on the Murray River, nor the fish going to Melbourne;—Melbourne is the market, and it goes there in tons.
3215. Did not Mr. Chanter point out the destruction of fish by tons? Yes.
3216. Did it not strike the Commission that that was a very important thing to arrest? Yes; if we could do it, but where is the power? They can fish on the Victorian bank and laugh at us.
3217. Did Mr. Chanter represent to the Commission that the fishermen stretched their nets from shore to shore

Mr. L. G. Thompson.

6 Aug., 1889.

shore of the creeks from the Victorian border on to the New South Wales border, and have you no power to arrest that? Yes; Mr. Wilshire seizes lots of nets. We never lose an opportunity of seizing those nets.

3218. Mr. Chanter tells us that the district over which Mr. Wilshire has control is very limited, and that he does not reach the parts where the destruction of fish is great? The fish are sent away from Moama; that is where Mr. Wilshire is located; he sends us a return of the fish.

3219. How long is it since Mr. Manton was recommended by the Commission? I suppose within the last month.

3220. How long is it since Mr. Chanter first suggested that Mr. Manton should be appointed? Some-time since; he has written several letters.

3221. Is it six months? I dare say it is.

3222. Is it more than that? I cannot recollect; but I may say that it is six months since the first application was sent in.

3223. Do you not think that Mr. Chanter as a representative gentleman was endeavouring to serve the best interests of New South Wales, and to assist the Commission. Yet his suggestions were quietly set aside. Do you think that was right? I think there is a very large future before the inland fisheries, and I would very much like to see them better supervised.

3224. That is not an answer to my question, which was, did the Commission properly treat Mr. Chanter? If I answered that question affirmatively I should be really casting a censure on the Commission, and I do not think I have any business to do that.

3225. *Mr. Nobbs.*] Are the inspectors directed to exercise a protective supervision over the areas leased for oyster culture? No; the Commissioners consider that when a lease is issued for oyster-culture the lessee should have control over the leased land, and he should not look for any protection from the inspector.

3226. As far as he is concerned there is no necessity for the inspector to supervise any further? Exactly.

3227. In what then do their duties consist? In looking after the fisheries; that really is all their duties. It reduces their duties to a minimum.

3228. What length of experience had you in connection with the fisheries? My experience dates from the year 1872. In years gone by there was but nominal law respecting fisheries, but with regard to oyster-culture there was the Act of 1868. It was administered in the Lands Department, and I had charge of it there. I have had experience ever since. There was a Commission on the subject in 1870 as to the working of the "Oyster-beds Act of 1868," and I had a great deal to do with that. I was secretary to that Commission, and I gained a great deal of experience in connection with it.

3229. Do you think that the management and supervision of oyster-culture in the Colony is sufficient, or would it be an advantage to get the services of an English or French expert? I do not agree with the idea of bringing an English or a French expert here. If one came here he would have everything to learn, and I do not consider it is at all necessary; it would be a very expensive undertaking, he could not supply us with information which we do not possess at present.

3230. Do you know the process of fish-canning? Yes; I have had a little experience in connection with the Melbourne Exhibition. We sent a very large exhibit to Melbourne, and it received very favourable notice; I expect to get an award of merit. Fish-canning was part of the exhibit. That industry might be very profitably carried on here. There is the mullet which frequents our shores in April, May, and June. It is said to be equal to the English salmon. It is certainly very valuable. At present it absolutely goes to waste. A fish weighing 7lb. or 8lb. can be got for 1d. or 2d. in the market. If canning factories were established here all those fish could be cured and exported. The process is very simple, and is just the same as is carried out in connection with meat preserving. We had some of the fish canned by the Meat Preserving Company here. Some also was preserved by Mr. Barnes, of Balmain, and it called forth very favourable notice. There is a canning establishment at present at Iluka on the Clarence River, which turns over about twenty-five baskets a week. There is no doubt also that in Twofold Bay the canning industry could be carried on at a profit.

3231. Was the exhibit you have referred to sent by the Fisheries Commission? Yes; it was an exhibit showing everything in connection with the fish industry, showing how everything could be put to economic use, and how even fish scales could be used for artificial flowers.

3232. What class of fish were they? All kinds of edible fish on this coast.

3233. Are you acquainted with the culture of salmon? I have been giving very great attention to it of late. I induced the Commissioners to allow me to erect a trout hatching apparatus. They allowed £10, which was rather small, but it was enough for the purpose. We are getting some trout ova from Ballarat, and I expect its arrival very shortly, so that I shall have the process of fish-hatching going on in the Department. I am anxious that the Government should by-and-by allow us to establish ponds on a suitable site, in order to propagate fish.

3234. You are not getting enough ova to distribute throughout the various rivers? I should not recommend a distribution in that way; we did in October last distribute fry in certain rivers, but I think it was a mistake. I think that trout fry should be kept in ponds until they arrive at a certain size, and then they should be distributed. Those obtained in October were only $\frac{3}{4}$ inch long when they were distributed; they were left to take their chance amongst unknown enemies, and without our knowing whether the rivers were suitable or not. I believe that a large proportion will be lost. If we can establish trout ponds—and I hope this Committee will help us in the matter—I am sure we can introduce the trout into all the rivers of the Colony, except, of course, in the extreme northern rivers. A few days since I wrote a minute to the Commissioners recommending the introduction of American salmonoid ova.

3235. *Chairman.*] Do you now submit to the Committee the proposition that you have made on that subject? Yes. [*Appendix B 6.*]

3236. *Mr. Nobbs.*] Are you satisfied that trout-breeding would succeed? Yes; I am perfectly certain it would if we could get a proper place for it.

3237. Have you paid inspectoral visits to the rivers, and have you made reports on your observations? Yes; very exhaustive reports. The great bulk of the reports are contained in the annual report for 1883. I went very fully into all the matters in connection with those rivers, and the reports form the appendices to the Commissioners' Report for 1883.

3238. Did you make several recommendations? Yes.

3239. Have they been carried out? I do not think very much attention was given to them. The matters which I recommended have never been mentioned. I do not think the Commissioners entertained them favourably.

Mr. L. G. Thompson.
6 Aug., 1889.

3240. In your Department are there certain hours? Yes.
- 3240½. Who has charge of the Department after official hours? Nobody; it is left in charge of itself. There was a caretaker or watchman at one time, but he was only kept for a couple of weeks, when he was knocked off. It was thought that the expense was too great, and that the office could very well take care of itself. The key is left with the Inspector-General of Police.
3241. So that the Department is without any caretaker after hours? Yes; anyone might break in, and there would not be anyone to interrupt him.
3242. Do the fishermen or the oyster lessees contribute the largest amount of revenue? The oyster lessees contribute the largest amount. The revenue from fishermen and boatmen's licenses does not exceed £700 or £800 per year. The remainder of the revenue is contributed by the oyster lessees in the shape of rents. If the lessees all paid their rents they would amount to something like £3,000, as against £700 or £800 paid by the fishermen.
3243. Do you think that the inland fisheries are sufficiently protected? No; I think there should be a general supervision of the inland fisheries, that has not been done. I also think that attempts should be made to propagate Murray cod and perch in the rivers where they do not exist now. There are Murray cod in Lake George at present, but as far as I am able to ascertain they are not in great numbers. When the local inspector was down here I instructed him to take certain measures to get spawn from the cod, and to telegraph to me when they spawn. He says they spawn in September, but I believe they spawn in December. Whenever they do spawn I shall propose to the Commissioners that I shall visit the lake to see if we cannot manage to get some ova for propagation.
3244. Is the take of cod in the Murray River very large? Yes; tons of it are sent to Melbourne during the year.
3245. By what means do you think the fisheries near Sydney could be best controlled? I would alter the present system a great deal. I would like to have a good steam-launch to patrol the fisheries, and until we have that we shall never have a proper control. It would be also valuable for the purpose of experiment.
3246. Are you aware that the common pilchard has appeared in Botany in large shoals? Yes; *clupea sajax*; Botany Bay is alive with them at present. They are like the common pilchard, and appear in midwinter, travelling north. They are in poor condition. They appear on the coast of New Zealand in December and January, full of roe. It is from those pilchards that the New Zealand bloaters are obtained.
3247. Is it many years since we have had a visit from these fish? No; they come here regularly, but very little is made of them.
3248. Do they come yearly? Yes; and there is another species of herring which visits our shores.
3249. The value of this fish is not known? The herring fishing is the staple industry in England, but here the fishermen will not catch them.
3250. Did Mr. Saville Kent visit George's River to inspect the oyster leases? Yes.
3251. What was the nature of his report? He never made any report. He went there for his own information. We paid his expenses.
3252. Mr. O'Sullivan.] What fish would you suggest as likely to thrive best in Lake George other than the Murray cod? The perch. I am very much afraid that the trout would not do there for the simple reason that there is not much run of water. There is no entrance to the lake, and the trout require a regular run of water.
3253. Did you distribute perch in the various rivers? Yes; about two years ago.
3254. How was it that Lake George was overlooked in the distribution? I do not know. I shall take care that Lake George is not overlooked in any future distribution. I have a very good opinion of Lake George, and it shall always have my best attention.

James J. M'Fadyen recalled and further examined:—

Mr. J. J. M'Fadyen.
6 Aug., 1889.

3255. Mr. Stephen.] Did the Fishermen's Association, of which you are President, send in a report some time ago to the Colonial Secretary? Yes.
3256. What was the result of it? The result has been nil. Sir Henry Parkes promised that something would be done in the matter, but we have received no notification of anything having been done. We asked that the Association should be officially recognised, so that any books, papers, and maps which might be in the possession of the Government might be presented to the Association for the instruction of our members. Sir Henry Parkes let us have a few volumes, but that was all.
3257. What was the result of your deputation to the Fisheries Commission? It was so insignificant that there was no real result except to deepen the impression on the minds of the fishermen that the Commission was altogether opposed to their interests.
3258. Is it your belief that the Commissioners in reply to that deputation have not attempted to ameliorate the condition of the fishermen or to give them better facilities? The only thing they did was to increase the length of the nets in the lakes where the water was shallow.
3259. Are you aware that the nets after being tanned shrink below the legal size, although they have been previously passed as legal? Yes.
3260. Do you consider that the net, when once pronounced to be legal, should be considered as such until worn out? Yes; otherwise the fishermen would be continually buying gear, which they cannot afford to do.
3261. What would be a reasonable time for a net to last if taken ordinary care of? At least two or three years.
3262. What is your opinion with respect to nets that have been seized being resold? That is one of the matters which was taken up by the Association very shortly after it was formed. As I was led to believe that the Fisheries Commission sold the nets after they were seized, in exactly the same state after they had been allowed to lie in a filthy place adjacent to the Fisheries Commission Office.
3263. Are you aware that the Commission cut up the nets into certain lengths and sell them for other purposes than fishing? So far as I am aware, that was not done until the Association sent in their paper of grievances.
3264. Then in that case your representation did have some effect on the Commission? We heard nothing of it, and it was certainly done to disparage us, so as to show that we had not been stating the truth.

3265. Has it come to your knowledge that nets seized by the Commission have been resold, and that fishermen have purchased them? It has come to my knowledge, but I could not give an individual case.
3266. Do you think that the fish are handled in the fish-market in the best possible way to supply the fish to the public for food? No, very far from it. In my opinion, the fish from the time it leaves the fishermen, until it reaches the markets, suffers a great deal of damage, and a great deal more than it ought to suffer.
3267. Is it a grievance with the fishermen that they are not represented on the Commission? Yes; we think they ought to be represented. If the Commissioners are appointed to look after and administer the Fisheries Act, we think that the fishermen should be represented by practical men on the Commission.
3268. Have you a Library attached to your Association? We attempted to form a library, and we have got a few books which we got from the Government. That is what we call our library, but we wanted something more.
3269. Did the Premier promise to furnish you with a collection of books on the Fisheries Question? Yes, and he very promptly furnished us with some books; but some of the very important books which we know to be in the possession of the Government we have never received.
3270. Can you make out a list of the books, so that application might be made to the Colonial Secretary? Yes.
3271. *Mr. Howe.*] Do the fishermen complain of the rates charged by the railway authorities as compared with the rates charged on steamers? Yes, the railway rates are considerably more than the steamer rates.
3272. Is that very much to the disadvantage of the fishermen? Yes. The steamers for instance charge 9d. per basket from Newcastle, and the empties are returned free. If we get a basket of fish down by rail, it costs about 2s. 6d. If we got four or five baskets, they will not cost very much more proportionately. We have to pay the cost of the empty baskets going back again, and that amounts from 1s. 1d. to 1s. 5d. for the carriage of each basket. I have paid as much as 18s. 6d. for the carriage of fish, which at the sale only realised £4. That was good fish.
3273. Is it a fact that fishermen have been misled by Proclamations, which induced them to think that the waters would be opened, in consequence of which they purchased gear for fishing, but that gear was rendered useless through a fresh Proclamation being issued closing the waters? Yes; I have known fishermen myself who expected that on the expiration of the Proclamation they would be able to go to work again, and who consequently got their nets ready, but the reissued Proclamation continuing the closing of the waters prevented them from using the nets they had purchased.

Mr.
J. M'Fadyen.
6 Aug., 1889.

Thomas Gascoigne called, sworn, and examined:—

3274. *Chairman.*] Where do you reside? At Ryde, Parramatta River.
3275. Are you a fisherman? Yes, and so are my father and brothers.
3276. How long have you been engaged in the industry? About twenty years. At one time I used to be engaged with my father mostly; but I have been working on my own account now for about ten years.
3277. Has it been a source of complaint for some time among all the fishermen on the Parramatta River that there is an insufficiency of open water? Yes.
3278. That the Fisheries Commission have closed waters that ought to have been left open? Yes.
3279. Where do you think that the open waters should be extended to? The opinion I have always held is that the river should be opened right through. Closing the waters is no protection. The fishing closes itself if there is too much netting. There are less fish in the river now than when it was first closed. If a bay is closed and a nice lot of fish go in there some one is sure to scoop them all out.
3280. *Mr. Nobbs.*] Do you not think that the waters should be closed at spawning time? I do not think that any fisherman knows which is the spawning time except with mullet.
3281. *Chairman.*] If the river were opened as far up as the Railway Bridge at Ryde, would that give you very much more water? Very little more, because nearly all the water which would be opened would be deep water. There would be no places to fish except in about two bays.
3282. Before the river was closed to such an extent were you able to supply the people on the northern bank of the Parramatta River, as well as those on the southern side, with fresh fish every morning? Yes, but we are not able to do that now.
3283. How long has the river been closed? For three years.
3284. Have you ever complained of your expectations not being realized by proclamations being issued closing the river for six months, and then another proclamation being issued at the expiry of that time, closing the river for another period of six or eight months? On two occasions that happened. Once we had been at work for two months, and at another time fourteen days.
3285. So that there is no encouragement for fishermen to try and earn a livelihood there, and no means left open to fishermen to provide the people of the north and south of the river with fresh fish every morning? No.
3286. Have you ever had your nets seized in closed waters? Yes; on one occasion, a very small net. I went down on Good Friday eve to get a few fish for myself, but somebody else got them before I did.
3287. Where do the fishermen fish now? The fishermen fish wherever they see any. If the fishermen see a lot of nice fish in closed waters they do not leave them there.
3288. Under those circumstances do you think that the river might be just as well left open? Yes; because it is only setting a trap to catch the fishermen, and the fishermen are not caught once in twenty times. It could only be stopped if there was a policeman every half-a-mile; and then it would take them all their time.
3289. Is there a plentiful supply of fish in the river? There were more fish in the river before it was closed than since. Fish protect themselves more when the fishermen are trying to catch them, because they then go into deep water. I have done very little fishing since the river was closed. I have been away at the Tuggerah Lakes, and at other work.
3290. If the river were left open as it used to be four or five years ago would there be an opportunity afforded to you of earning a good honest livelihood, and of supplying the large number of people who live in those districts with fresh fish every morning? Yes.
3291. Would you recommend the river to be opened altogether? Yes.

Mr. T.
Gascoigne.
6 Aug., 1889.

THE WORKING OF THE FISHERIES ACT.

APPENDIX.

[To Evidence of Dr. Cox.]

A 1.

TRANSFERENCE of Inspectoral Staff, Fisheries Department.

I PROPOSE, for the consideration of the Commissioners of Fisheries, the following disposition of the Inspectoral Staff of this Department. I take the coastal waters in the order of their ascertained productiveness :—

Lake Macquarie—Assistant Inspectors Smith and Boyd, and a third (say) Hespe.	
George's River—	do Grant and Boatman Aldrick.
Lake Illawarra—	do D. W. Benson.
Hawkesbury River—	do Curan
Brisbane Water and Tuggerah—Assistant Inspectors Cain and Peter Smith.	
Port Stephens—	do Otway and Boatman Scott.
Newcastle and Hunter River—	do Charles Gordon.
Port Jackson—	do Smithers and Boatmen Glading, Hellings, and Young, engineer.
Travelling Inspector for the coast north of the Hawkesbury—	Mr. Livingston Mann.
Travelling Inspector for the coast south of Botany—	Inspector T. Temperley.
Inspector of Inland Waters—	Inspector G. G. Benson.

In framing this transference I have had in view the facts that the oyster-beds having for the most part been leased, and the royalty charges abolished, the services of the Inspectoral Staff could be employed to better advantage if concentrated within certain limits adjacent to the metropolis.

I have been guided also by the opinion of the Commissioners that the public interest would be served by a removal of the Inspectors from their present respective locations to other districts.

Boyd, Grant, and Cain.—The only Inspectors whose removal I do not advocate are Messrs. Boyd, Grant, and Cain. I consider these men to be capable of best services in the waters they are at present supervising.

Smithers.—Mr. Smithers properly belongs to Twofold Bay, but as he has been so long at head quarters, and is rendering such effective service, I am regarding him as already attached here.

Gyler.—Gyler is a valuable officer. His removal from the Manning River, to assist in the supervision of the extensive waters of Lake Macquarie, and from which our largest fish supply is obtained, would be obviously an advantage.

Smith.—Peter Smith is supposed to be considerably interested in some of the oyster leases at the Hawkesbury, his present district, and although there is not actual proof that this is so, yet the presumptive evidence seems enough to imply the desirableness of removing him to a district where his duties would not clash with his supposed interests. The case will be met by placing him at Illawarra Lake, in the room of Inspector D. W. Benson.

D. W. Benson and Henry Curan.—Some few months since D. W. Benson was for a time placed on special service at the Hawkesbury, and showed considerable aptitude in his manner of performing it. I propose to place him permanently at the Hawkesbury in conjunction with Inspector Curan, who is at present stationed at Newcastle.

Chas. Gordon.—The Newcastle and Hunter River Fisheries I suggest should be placed under the care of Charles Gordon, at present stationed at the Shoalhaven. I consider Gordon to be an efficient officer. His duties at Newcastle would involve the checking and inspection of oysters arriving from the upper portions of Port Stephens and the oversight of the fisheries on the Hunter River and its tributaries.

C. H. Otway and B. Scott.—I propose the removal of Inspector C. H. Otway and Boatman Scott from the Karuah River, at the head of Port Stephens, to Nelson's Bay, at the heads, in order that the supply of fish captured there may be more systematically supervised.

Fred. Smithers, Glading, Hellings, and Young.—I advise the permanent retention of Mr. Smithers at head-quarters, where he has already proved himself very useful. He should be assisted by the present boatmen, Glading and Hellings, and with the aid of the steam-launch now under repairs and alteration should exercise an oversight of Botany and the Hawkesbury.

T. Mulhall.—Should it be that Inspector Mulhall will be retained in the service notwithstanding his advanced age, I think that his duties should be confined to an oversight of the fish at the fish market and on the wharves.

On the general management of the Port Jackson fisheries I propose later on to submit special recommendations.

Mr. Livingston Mann.—I know it is the intention of the Commissioners to nominate Mr. Livingston Mann as a travelling inspector of fisheries. I have done so, therefore, on this paper; but as the oyster-bearing waters are not only each in themselves so extensive, but range along the whole seaboard of the Colony, I consider a second travelling inspector to be necessary.

Thos. Temperley.—For this second inspectorship I know of no one more suitable in point of intelligence than Inspector Temperley, and if he be appointed to oversight of the coast south of Botany, the objection which, consequent upon his supposed interest in oyster-culture leases in northern waters, might be taken to his being placed in such a position, would, I think, be met and at the same time a capable officer retained to the Department.

G. G. Benson.—As Inspector for inland waters fisheries under the Inland Waters Fisheries Act 1887, regarding the administration of which nothing has so far been done, I propose Inspector G. G. Benson, at present located at the Clyde River.

Beyond a visit or two to Lake George, I have not been afforded an opportunity of acquainting myself with the inland fisheries; consequently I am not in a position to suggest a location for Mr. Benson. I should prefer by personal visit and inquiry to ascertain the needs and condition of these fisheries so that I could make recommendations with some degree of confidence.

Under an arrangement such as this it will be possible to dispense with the services of the following officers :—

H. W. C. Windeyer, Acting Assistant Inspector, Port Macquarie.....	£108
Jas. Massingham, Boatman, Clarence River.....	108
Thos. Laman, Acting Assistant Inspector, Nelson's Bay	20

And thus effect a saving in expenditure of £236

By the transference of Inspector Benson to a position under the Inland Waters Fisheries Act I count a further saving in expenditure of £240, the amount of his salary. I am warranted in quoting this as a saving because his services under the Fisheries Act will be thus dispensed with, and it may fairly be assumed that special provision will be made for the administration of the new Act.

This Act was introduced to Parliament by a private Member quite independently of the Fisheries Commission. Manifestly then its working ought not to be made a charge upon the fisheries vote.

I may here invite the Commissioners to consider the desirableness of dispensing with the services of those pilots and others who are paid £20 per annum each for holding the appointment of Acting Assistant Inspector of Fisheries.

Their duties proper, which compel them to a constant look out seawards, prevent them from exercising more than a very nominal oversight of the fisheries in their respective waters; the principal service they have been able to render to this Department has been the receipt and transmission of royalty on oysters. This royalty charge having been abolished I see no reason

reason for the retention of these officers; any small service which from time to time might be required on any of the remoter waters could be rendered by the police or by one of the travelling inspectors. A still further annual saving to the Department of £160 would thus be effected.

By reference to the list of the Inspectorial Staff the Commissioners will observe that in this reduction I have not included Frederick Nelson, the Acting Assistant Inspector at Lake George, nor likewise George Baker, who holds the like office at Sydney, and whose appointment the Commissioners only recently recommended.

I have only now to add for convenience of reference a tabulated statement showing the savings which the adoption of the suggestions herein made will effect —

SALARIES proposed to be abolished

Name	Office	Address	Annual Salary.
G. G. Benson	Inspector	Clyde River	£ 240 0 0
Thos Mulhall	Assistant Inspector	Sydney	150 0 0
H. W. C. Windeyer	Acting Assistant Inspector	Port Macquarie	108 0 0
Jas. Massingham	Boatman	Clarence River	108 0 0
Thos Laman	Acting Assistant Inspector	Port Stephens	20 0 0
Eight Acting Assistant Inspectors at pilot stations, &c., at £20 per annum			160 0 0
To this amount I add the total of salaries in the clerical staff, also proposed to be dispensed with			313 0 0
Total			£ 1,099 0 0
Less salary required for Travelling Inspector			200 0 0
Total saving			£ 899 0 0

Since writing this report I have learned that an extensive fishery, with direct steam communication with Sydney, is about to be established at Cape Hawke. This will require oversight, and in that case it will be necessary to keep Inspector Gyle in his present position, and to retain J. Massingham, the present boatman at the Clarence River, stationing him at Lake Macquarie.

I saw Massingham when at the Clarence, and formed the opinion that he is an active and intelligent officer.

If it be decided to adopt this suggestion the contemplated saving in expenditure will be reduced by £108.

29 February, 1888

LINDSAY THOMPSON.

[To Evidence of Dr. Coy.]

A 2.

The Commissioners of Fisheries for New South Wales recommend to the Colonial Secretary the following Bill, providing for the development and regulation of the Fisheries and the preservation and culture of Oysters, with the view to its being passed into law in lieu of the "Fisheries Act 1881."

46 VICTORIA, 1883

A BILL to provide for the development and regulation of the Fisheries and the preservation and culture of Oysters

WHEREAS the existing Statute Law is insufficient to preserve from exhaustion the natural supplies of marine and other edible Fishes and it is expedient that such law should be repealed and that more effective measures should be adopted to check the wanton or unnecessary destruction of immature fish and oysters and to prevent the disturbance of the various nurseries and breeding grounds during certain months of the year as well as that greater facilities should be given for the establishment of artificial oyster beds and more effective means be supplied for the preservation and development of natural oyster beds. And it is also expedient in order to carry out these and the several purposes herein set forth and to establish a better system of protecting and regulating the said Fisheries that a central and local Boards of Control should be created clothed with the powers and duties hereinafter declared. Be it therefore enacted by the Queen's Most Excellent Majesty by and with the advice and consent of the Legislative Council and Legislative Assembly of New South Wales in Parliament assembled and by the authority of the same as follows. —

Preliminary Provisions—Appointment of Commissioners &c.

1 This Act may be cited for all purposes as the "Fisheries and Oyster Culture Act 1883" and its provisions are arranged in the order and comprise the subjects following viz. —

Preliminary Provisions—Appointment of Commissioners &c.—
 PART I.—Net and Line Fisheries—
 PART II.—Oyster Fisheries—
 PART III.—Private Fisheries—
 PART IV.—Legal Procedure—Miscellaneous—
 SCHEDULES

2. In this Act unless the context requires a different meaning the following words within inverted commas shall bear the respective meanings hereby assigned to them —

"Fish"—All or any of the varieties of marine or fresh water fishes enumerated in the First Schedule hereto.
 "Oyster"—Every kind of edible oyster and the spat brood and ware thereof.
 "Lobster"—The salt-water crayfish commonly called "lobster."
 "Crayfish"—The fresh-water crayfish or Murray River lobster.
 "Crab"—Any edible crustacea not including prawns shrimps lobsters or crayfish
 "Governor"—The Governor with the advice of the Executive Council
 "Commissioners"—The Commissioners of Fisheries appointed under this Act.
 "Shore"—The portion of Crown lands situate between high and low water mark.
 "Bunt"—The middle portion of a seine or hauling or garfish net between the wings but not being more than one third of the whole length of such net.
 "Wing"—The portion of a seine or hauling net on each side of the bunt
 "Mesh of net"—The distance from knot to knot measured diagonally from cork to lead line the net being wetted and stretched and prepared for use in accordance with the regulations
 "Lessee" includes every assignee or sub lessee
 "Boat" includes any vessel or punt of any description whatsoever
 "Steamboat"—Any ordinary boat propelled by steam
 "Tidal Waters"—All waters which ebb and flow over Crown lands within the territorial jurisdiction of the Crown in New South Wales and every lake and lagoon in the said Colony ordinarily subject to the influence of the tides (although the communication with the sea may for the time be closed) the soil or bed whereof is the property of the Crown together with in each case the soil of such Crown lands
 "Natural Oyster bed"—Any shore bank bed or place of deposit in any tidal waters wherein oysters which have not been laid down by artificial means are or shall be found
 "Justice"—Any Justice of the Peace
 "Inspector" includes Sub-Inspector or Assistant Inspector of Fisheries.

Repeal of
28 Vic. No. 10
31 Vic. No. 10
31 Vic. No. 20
44 Vic. No. 26

3. The Act twenty-eighth Victoria number ten intituled "An Act to protect the Fisheries of New South Wales" the Act thirty-first Victoria number ten intituled "An Act to amend the Fisheries Act of 1865" the Act thirty-first Victoria number twenty intituled "An Act to regulate Oyster Fisheries and to encourage the formation of Oyster-beds" the Act forty-fourth Victoria number twenty-six intituled "An Act to provide for the development and regulation of the Fisheries of the Colony" and so much of the thirty-eighth section of the "Lands Act Amendment Act 1875" as empowers the Governor in Council to grant leases of Crown Lands for the purpose of a fishery are hereby repealed but without prejudice to the past operation of or to any right lawfully created offence committed or penalty incurred under any of the said Acts.

Constitution of
Fisheries Com-
missioners as a
Body Corporate.

4. The duty of protecting developing and regulating the Public Fisheries of New South Wales shall be vested in five Commissioners to be called the "Commissioners of Fisheries" who by that name shall be a body corporate with perpetual succession and a common seal with power to hold real and personal estate and to sue and be sued and to take and be the subject of all legal proceedings by such name And the duties power and authority of the said Commissioners shall extend to the territorial limits of the Colony such body corporate shall be composed of five persons to be appointed by the Governor by Commission under the Great Seal each of whom shall hold office for the term of five years from the date of his appointment unless his office become vacant in the meantime by death or resignation but subject nevertheless to removal by the like authority but any Commissioner may be reappointed after the expiration of his term of office The Governor shall either by the original Commission or otherwise as to him seems proper appoint one of the Commissioners to be President and the President or in his absence one of the Commissioners appointed from time to time by the meeting shall preside at all meetings and at any voting shall have an original as well as (in cases of equality of votes) a casting vote any three Commissioners shall be a quorum.

Inspectors of
Fisheries.

5. It shall be lawful for the Governor on the recommendation of the Commissioners to appoint local Boards also so many Inspectors Sub-Inspectors or Assistant-Inspectors of Fisheries and other officers as they may think necessary for the purposes of this Act and to assign to all such officers such salaries as they may think fit And all such officers shall act under the control and direction of and be responsible for the due performance of their duties to the Commissioners.

Assistant
Inspectors at
outports &c.

6. It shall also be lawful for the Commissioners with the consent of the Governor to appoint any officer of Customs or officer in the Department of the Marine Board stationed at any outport or pilot station on the coast of the Colony or other person to act as an assistant Inspector of Fisheries at such outport or station and for such extent of waters as may be placed under his supervision All such assistant Inspectors shall carry out the directions of the Commissioners so far as practicable to the best of their ability and shall act in concert with the Inspectors and shall be paid such sums in addition to their ordinary salaries (if any) as the Commissioners may appoint.

Certain persons
to be Inspectors
ex officio.

7. All Police Magistrates and all members of the Police Force shall within their respective districts be and have the powers and authorities of Inspectors of Fisheries *ex officio*.

Division of
Marine Fisheries.

8. The Governor by proclamation in the *Gazette* may define the various Fisheries of the Colony situated in any tidal waters and distribute the same into divisions as recommended by the Commissioners And each of such divisions shall be placed under the supervision of one or more Inspectors or Sub-Inspectors as the Commissioners may decide Provided always that the Governor on the recommendation of the Commissioners may by a like proclamation from time to time rescind any such definition and alter the boundaries of any such division or subdivide the same.

Regulations.

9. The Governor on the recommendation of the Commissioners may from time to time make such orders rules and regulations as shall be found expedient for the purpose of giving effect to the provisions of this Act and may impose and prescribe such other provisions for the development and regulation of the Fisheries and the preservation and culture of Oysters as he may deem necessary And it shall be lawful for the Governor to impose a penalty not exceeding in any one case the sum of *twenty* pounds for the breach of any such rules orders regulations or provisions And all such rules orders regulations and provisions shall on publication in the *Gazette* be and have the full force of law Provided always that a copy thereof shall be laid with all convenient despatch before Parliament if then sitting or if not then in session within one calendar month after the commencement of its next session.

PART I.

Net and Line Fisheries.

Proclamation of
close fisheries.

10. It shall be lawful for the Commissioners to declare by notice in the *Gazette* that any specified tidal waters shall be exempted from net-fishing from time to time as they may think fit The fisheries in all such tidal waters so specified shall be termed "Close Fisheries" and the periods during which the same are so exempt from net-fishing "Close periods" Provided always that it shall be lawful for the Commissioners in like manner to rescind or vary any such periods.

Seine or hauling
net.

11. Every seine or hauling net when used for the purpose of catching or enclosing fish in tidal waters shall be deemed to be an unlawful net whenever or wherever so used if the mesh of such net shall measure diagonally when prepared for use wetted and stretched in accordance with the regulations less than two inches and one quarter in the bunt which shall not exceed fifty fathoms in length or three inches in the wings which in like manner shall not exceed in length seventy-five fathoms each or if the same when cast and shot shall enclose a space measuring more than four hundred yards along the corks from one end of such net to the other unless such net be a *bonâ fide* gar-fish or prawn-net and used for catching gar-fish or prawns only (as the case may be).

Gar-fish net.

12. No net shall be deemed to be a *bonâ fide* gar-fish net of which the bunt exceeds thirty fathoms in length or has a mesh less than one and a quarter inch ascertained in the usual manner but such gar-fish net shall have on each side of the bunt a wing hung on the same cork and lead lines not longer than the bunt of such net and of which the mesh shall not be less than two inches.

Prawn-net.

13. No net shall be deemed to be a *bonâ fide* prawn-net which exceeds fifteen fathoms in length or of which the mesh is less than one inch ascertained as aforesaid.

Meshing net.

14. No net will be permitted to be used as a meshing net the mesh of which is less than three and one half inches ascertained as aforesaid and the length of which exceeds sixty fathoms.

Stalling illegal.

15. Any two or more nets placed behind or near to each other in such a manner as to diminish the mesh or means of escape for enclosed fish shall be deemed to be an unlawful net.

16. The setting of any net of a less mesh than four inches by the process known as "stalling" whereby a net is staked or set across any tidal waters is hereby declared to be illegal.

Nets for inland
waters.

17. The provisions of the foregoing sections as regards size of mesh and length of net shall not apply to the use of drift nets or purse-seines in the open sea.

18. Every net when used for the purpose of catching or enclosing fish in inland waters that is to say in any river or creek not influenced by the tides or in any fresh-water lake lagoon or pond shall be deemed to be an unlawful net if the mesh of such net shall measure diagonally when prepared for use wetted and stretched in accordance with the regulations less than four inches in any part thereof or if such net (whatever the size of the mesh) be staked fixed or set completely across any such river or creek Provided always that nothing in this section contained shall apply to the owner of the soil or bed of inland waters using or setting a net within such waters to capture fish for breeding purposes or for stocking a fishery or for his own consumption only.

Penalties netting
in close fisheries.

19. If any person shall in any close fishery during any close period place shoot cast or haul any fishing-net whatever or stake fix or set any such net for the purpose of catching taking or enclosing any fish enumerated in the First Schedule hereto or in such manner that any such fish might be caught or taken thereby such person shall be liable to a penalty not exceeding *fifty* pounds and not less than *ten* pounds And every person aiding or assisting in the shooting casting or hauling of any such net or being in any boat from which any such net shall be shot cast or hauled in contravention of the provisions of this section shall incur a like penalty And every person convicted under this section shall if holding a license under this Part be deemed by conviction to have forfeited his license And all fish taken in violation of the provisions of this section together with all fishing nets used for the purpose of taking the same shall be forfeited to Her Majesty and shall be disposed of as provided by the Regulations Any inspector constable or officer of Police may with or without warrant apprehend and take before one or more Justices any person found offending against the provisions of this section to be dealt with as hereinafter provided and may in like manner seize every such net.

General penal-
ties for using
unlawful nets.

20. If any person shall catch or attempt to catch any fish by casting hauling or shooting any net having a mesh or length less than the said respective dimensions of the several kinds of nets hereinbefore described for the seine or hauling gar-fish prawn or meshing nets or nets for inland waters such person shall for the first offence be liable to a penalty not exceeding *five* pounds and not less than *two* pounds and for a second or subsequent offence to a penalty not exceeding *twenty* and not less than *five* pounds.

21. The Justices shall in every case where an offender is convicted under any of the preceding sections order all unlawful nets used by or found in the possession of such offender to be forfeited to Her Majesty.

22. If any person shall sell or consign or expose for sale or have in his possession or on his premises any fish of any of the species mentioned in the Second Schedule hereto of a less weight than that set opposite the name of such fish in such Schedule or prescribed by any regulation he shall be liable to a penalty not exceeding *two* pounds for the first offence and for the second or any subsequent offence to a penalty not exceeding *five* pounds and not less than *two* pounds. And all such under-weight fish together with all other fish found in the same basket or other receptacle or exposed on the same table or stand or found in the same boat cart or vessel with such under-weight fish shall be forfeited and be disposed of in accordance with the regulations. And any Inspector officer of police or person authorized in writing by him may seize any fish which under this section are liable to forfeiture and take the same before any Justice who upon view thereof shall declare whether or not such fish are under-weight and if he declare them to be so shall order them to be forfeited and to be disposed of in accordance with the regulations. The provisions of this section shall not apply to any Curator of a Museum or Zoological Collector holding a permit from the Commissioners or to any owner of a private fishery in respect of fish taken therefrom or to any person being in possession of fish for purposes of pisciculture or to any aboriginal taking or being in possession of fish for his own consumption but in every such case of exemption the proof thereof shall be upon the defendant or person charged.

Prohibition against taking or selling &c. fish under size.

23. All prawn-fishers and other persons catching prawns shall in order to separate the marketable from the unmarketable prawns riddle or separate them but only in the waters where the same have been caught and in such a manner as to permit the small prawns to escape. And if any prawn-fisher or person shall fail to comply with such directions or shall riddle or separate any prawns after boiling or cooking the same or when such prawns are dead shall be liable to a penalty not exceeding *five* pounds and not less than *two* pounds.

As to riddling prawns.

24. It shall not be lawful for any person to catch or attempt to catch prawns by means of a net or by any other mode of capture during the months of June July August and September in any year in any tidal waters or tributary to the river Hunter or in any other tidal waters to which the Governor shall by proclamation in the *Gazette* declare the provisions of this section to extend. And if any person shall catch or attempt to catch any prawns in contravention of this section in any such tidal waters he shall be liable to the like penalties as are provided by section twenty-one hereof.

Close season for prawns in certain rivers &c.

25. Every boat or steamboat used or intended to be used for the purpose of catching for sale or engaged by hire for the purpose of catching any of the varieties of fish whether marine or fresh-water enumerated in the First Schedule hereto by net or line shall be licensed. The fee for every such boat license shall be one pound for the former and five pounds for the latter which shall be paid to the Colonial Treasurer at a proportionate rate to above according to date of application and payment of such fees shall cover the interval from the date of payment to the thirty-first day of December of the same year.

Licensing of fishing-boats.

26. Every person employed in catching for sale fish lobsters crabs or prawns in or upon any waters shall pay an annual license fee of ten shillings to the Colonial Treasurer. Such fee shall be payable on the dates and according to the provisions expressed in the last preceding section.

Licenses to be taken out by fishermen.

27. If any person shall take or attempt to take any fish whether by line or by net without holding a valid fisherman's license or in a boat not licensed as aforesaid he shall be liable for every such offence to a penalty not exceeding *forty* shillings. But nothing in this section contained shall extend to persons on excursion scientific or pleasure parties fishing for purposes other than sale. But in every such case of exemption the proof thereof shall be upon the person charged.

Penalty on unlicensed persons fishing for sale.

28. It shall not be lawful for any person by the explosion of dynamite or any explosive substance or by means of any poisonous or noxious thing to destroy or take fish in any tidal or other waters in New South Wales and any person so offending shall for every such offence be liable to a penalty not exceeding *forty* pounds and not less than *ten* pounds. But nothing herein contained shall apply to any person duly authorized by the Commissioners (the proof whereof shall be on him) to explode torpedoes or dynamite in any such waters.

Torpedoes &c. not to be used.

29. If any person without the authority of the Commissioners shall drive or place any stake log stone mooring or other thing whatever likely to damage a fishing-net if dragged over or against it in any water whatever within the reach of a seine of lawful length and if any damage shall be sustained by any lawful fishing-net through coming into contact with such stake log stone mooring or thing or if any person shall sail or drive a vessel or boat over any net legitimately set for purposes of fishing such person shall be liable to a penalty not exceeding *ten* pounds and in addition shall pay such compensation to the owner of such net as may be awarded by the adjudicating Justices.

Penalty for damaging nets by placing obstacles on hauling grounds.

30. Every person who shall be found using a fishing-net of any kind whatsoever in any waters shall on demand give his true name and residence to any Commissioner Inspector Justice officer of police or constable and to any owner or occupier of land bordering such waters or over which they ebb and flow. And if any such person shall refuse or neglect to comply with such demand or shall give a false or fictitious name or residence he shall be liable to a penalty not exceeding *five* pounds.

Netters to give name and residence when demanded.

31. Any inspector officer of police or constable and any person authorized in writing by any Justice of the Peace may at any time enter any premises or dwelling or go on board any boat and search for and seize and take away any net which has been used in contravention of the provisions of this Act or which is or is suspected to be of less dimensions in the mesh or of a length not permitted by this Act or the regulations. And every such seizure shall be at once reported to the Commissioner who on being satisfied that the net so seized has been used as aforesaid or is an unlawful net shall direct the same to be taken before a Justice who may order it to be forfeited to Her Majesty.

Search for and seizure of unlawful nets.

32. Any person who shall commit any act in breach of or be guilty of any default or non-compliance with the requirements or prohibitions of any of the foregoing sections shall in every case where no penalty or forfeiture has been in such case provided be liable to a penalty not exceeding *ten* pounds and not less than *one* pound.

PART II.

Oyster Fisheries.

33. Charts or plans of all rivers inlets estuaries creeks and other oyster-bearing waters in New South Wales according to such scale and in such manner as the Commissioners may direct shall be prepared as soon as practicable after the passing of this Act. And the position and boundaries of all areas leased or lawfully occupied under this Act shall from time to time be charted thereon.

Plans of oyster-bearing waters to be prepared &c.

34. All leases granted or promised to be granted under the "Oyster-beds Act of 1868" hereby repealed shall be deemed valid to all intents and purposes although such leases comprise natural oyster-beds or portions thereof. Provided always that it shall be lawful for the Commissioners to make regulations for the management of such natural oyster-beds during such leases and by such regulations to provide for the forfeiture of such leases if such regulations or any of them be not complied with.

Validation of certain leases under the "Oyster-beds Act of 1868."

35. Crown lands lying below high-water mark in any bay river estuary inlet lake or creek or in any tidal waters may be leased by the Governor on the recommendation of the Commissioners for the cultivation propagation and promotion generally of the interests of the oyster fisheries of the Colony. All such leases shall be subject to the following and such other conditions and provisions as shall be decided on by the Commissioners from time to time—

Leases of Crown lands for oyster-beds or layings.

- (i.) The boundaries of all lands so leased shall be determined by the Commissioners
- (ii.) The term for which any such lease may be granted shall not exceed fifteen or be less than ten years
- (iii.) The right to hold such lease shall be determined by auction or tender and all oysters raised from land so leased shall be subject to the scale of Royalties prescribed by the regulations to be approved of by the Commissioners
- (iv.) Every such lease shall contain and be issued subject to such conditions and provisions as may be prescribed by the regulations
- (v.) Occupation under lease shall not give any right or title to the lessee to form or plant oyster-beds or layings on the shore otherwise than included in his lease except for such purposes and during such times as may be prescribed by the regulations
- (vi.) Every such lease shall be in writing or partly printed and partly written and shall define as nearly as practicable the position and boundaries of the land to be leased

(VII.) Every such lease shall vest in the lessee his executors administrators and assigns the exclusive right during the currency of the lease of laying and planting oysters and of dredging and taking oysters except for the purpose of burning for lime in and from the oyster-bed subject always to the right of any inspector or authorized officer to enter upon any land included in such lease and to test the condition of the layings by dredging or otherwise or for any other authorized purpose

(VIII.) The Governor may if so recommended by the Commissioners accept at any time a surrender of any lease granted under this section if it shall appear to the satisfaction of the Commissioners that oyster-culture cannot be carried on upon the portion demised with any reasonable hope of success or where from any other reason the Commissioners shall report in favour of such surrender

Every lease granted under the provisions of this section shall be subject to the provisions of the ninth section of the "Crown Lands Alienation Act of 1861."

Notice before granting lease.

36. Before any such lease shall be granted the Commissioners shall cause a notice of the application therefor to be inserted in the *Gazette* and in some newspaper circulating in the Police District within which the land applied for is situated And any person may by memorial addressed to the Commissioners within thirty days after the date of such notices pray that the lease applied for be not granted on grounds considered objectionable Any memorial so presented shall be duly inquired into and if the Commissioners think fit an Inspector shall be sent to visit and report specially as to the site of the proposed lease and the truth of the allegations contained in such memorial And no lease shall be granted of any land if the Commissioners shall be of opinion that such allegations are sustained.

Penalty for injury to oyster-beds or layings.

37. It shall not be lawful for any person other than the lessee his agents servants and workmen within the limits of any oyster-bed or laying knowingly to do any of the following acts viz. :—

- (I.) To take or interfere in any way with any oysters on such bed or laying without the consent of the lessee or lawful owner or occupier thereof
- (II.) To deposit any stone ballast rubbish or substance on such bed or laying
- (III.) To dredge or drag with any implement upon or over such bed or laying unless by direction of the Commissioners or the proper officer of the Department of Harbours and Rivers or the Marine Board and on payment of compensation for damage done (if any)
- (IV.) To use any implement of fishing except a line and hook on such bed or laying
- (V.) To place any implement or thing prejudicial or likely to be prejudicial to such bed or laying or to any oysters thereon except for a lawful purpose of navigation or anchorage
- (VI.) To disturb or injure in any manner except as last aforesaid any such bed or laying or any oysters thereon

And if any person does any act in contravention of this section he shall be liable for the first offence to a penalty not exceeding five pounds and for the second offence to a penalty not exceeding ten nor less than five pounds and for a third or subsequent offence to a penalty of twenty pounds And every such person shall also be liable to make due compensation to the lessee for all damage sustained by such lessee by reason of such person's unlawful act and in default of payment the same may be recovered by the lessee in any Court not incompetent by statute in respect to the amount or nature of the claim for compensation whether such first-mentioned person has been convicted of an offence under this section or not.

Commissioners may recommend revocation of lease in certain cases.

38. If it shall appear to the satisfaction of the Commissioners that any lessee has not within the period of two years from the date of his lease taken measures proper in the opinion of the Commissioners to carry into effect the conditions of such lease then it shall be lawful for them to recommend the revocation of the lease by the Governor who shall have the power to revoke the same accordingly by notification in the *Gazette* And upon the publication of such notification all the rights and privileges granted by such lease and the term thereby demised shall absolutely cease and determine Provided always that before making such recommendation the Commissioners shall cause a notice in writing stating their intention to make such recommendation to be served on the lessee or person for the time being entitled to the lease or in case such person cannot be found they shall cause such notice to be inserted as an advertisement at least three times in a newspaper circulating in the Police District nearest to the area leased and also to be published once in the *Gazette* And no such recommendation shall be made until after the expiration of one calendar month from the service of such notice or from the date of the last advertisement (whichever shall happen last) Leases of the land comprised within any such revoked leases may be disposed of by public auction or otherwise if the Commissioners shall think fit and all such new leases shall be subject to the provisions of section thirty-five of this Act.

Portions of shore &c. may be exempt from leasing or be declared public oyster reserve.

39. It shall be lawful for the Commissioners by notification in the *Gazette* to declare that any portion of the shore abutting on any tidal waters or that any portion of the bed of any estuary bay lake inlet river or creek influenced by the tides with or without any portion of the shore abutting thereon and being the property of the Crown shall be exempt from the power of leasing conferred by this Act and if they think fit either by the same or by any subsequent notification to declare that any such portion shall be a public oyster reserve Any such reserve may be revoked by the Commissioners by a like notification.

Marking of natural beds and areas under lease.

40. The position of all areas under lease shall be distinctly defined by an officer appointed by the Commissioners.

Dredging licenses.

41. Dredging licenses not transferable may be issued for a term of one year (but renewable from year to year) bearing date as from the first day of January and expiring on the thirty-first day of December in each year Provided that after the thirtieth day of June in any year one moiety only of such fee shall be payable The fee for an annual license shall be ten pounds to be paid in each case by the applicant to the Colonial Treasurer.

42. Dredging licenses issued under the last preceding section shall authorize the holder to dredge for and take oysters in leased lands and in such waters and on such beds or places not under lease and at such times as an inspector may appoint and subject to all regulations made under this Act.

Royalty on dredged oysters.

43. For every bag containing or reputed to contain not more than three bushels of oysters the owner shall pay to Her Majesty a royalty to be determined by regulation.

Penalty on unlawful dredging for oysters.

44. If any person other than an inspector or person lawfully authorized in that behalf not being the holder of a dredging license under this Act shall dredge for or otherwise take from any natural bed leased land or abandoned lease or laying as aforesaid any oysters or shall be found dredging for oysters within the limits of such bed leased land or abandoned lease or laying such person shall be liable to a penalty not exceeding twenty pounds and not less than five pounds and all oysters found in his possession shall be deemed to be oysters unlawfully taken by such person and shall on his conviction be forfeited to the use of Her Majesty.

Oyster-dredgers to be marked.

45. The inspector of each district shall keep a register in which shall be entered the name and registered number of every holder of a dredging-license who shall dredge for oysters within such district And every such holder shall register his name and number of the boat to which he belongs with such inspector and the same shall be painted in white letters not less than three inches long on a black ground on the quarters of every boat or vessel—herein termed oyster-dredger—employed by such holder in dredging for oysters Every person who shall at any time dredge for or take or attempt to take oysters on any such bed or laying as aforesaid in any boat or vessel not marked in accordance with the requirements of this section shall for every such offence be liable to a penalty not exceeding ten pounds.

Licensing of oyster-dealers.

46. Every person dealing in or selling oysters whether wholesale or by retail shall for each place of business take out an annual license for each of which he shall pay a fee of five pounds Such license shall entitle the holder to sell and dispose of oysters in any one part of New South Wales during the year commencing on the first day of January and ending on the thirty-first day of December and shall be renewed annually by a like payment within fourteen days after the first-mentioned day Provided that on applications for licenses made after the thirtieth day of June in any year one moiety only of such license fee shall be payable Such licenses may be granted by the Commissioners or by any police magistrate and the fee shall be paid to the Colonial Treasurer And every person who shall deal in or sell oysters without holding a license under this section shall be liable to a penalty not exceeding twenty pounds and not less than five pounds.

Property in oysters &c.

47. All oysters within the limits of any land comprised in any lease granted under this Act or being within the limits of a private fishery under this Act shall be the absolute property of the lessee or owner of such private fishery respectively and shall for all purposes whatsoever be deemed to be in the actual possession of such lessee or owner And all oysters removed without lawful authority by any person from any land so leased or from any such fishery or laying shall be deemed to be the property of such lessee or owner and he shall be deemed to have the right to the possession thereof for all purposes whatsoever Oysters on a natural oyster-bed or public oyster-reserve shall be deemed to be and continue (until lawfully removed therefrom) the property of Her Majesty.

Penalty on burning live oysters for lime.

48. Every person who shall gather or burn live oysters for the purpose of converting the shells into lime whether he be the holder of a lease or license under this Act or not shall for every such offence be liable to a penalty not exceeding fifty pounds.

49. No person shall dredge for or take oysters at any time between sunset and sunrise (except an owner upon his private oyster fishery) under a penalty for every offence not exceeding *twenty* pounds. And if such person be a lessee or licensee under this Act his lease or license may be cancelled by the Commissioners.

Oysters not to be dredged between sunset and sunrise.

50. All oysters shipped on board any vessel shall be placed in bags branded in accordance with the regulations. And the master of every vessel on board which oysters are shipped shall enter the same in the manifest stating the quantity and the name of the consignor and consignee and report the same to an officer of the Customs. And any oysters carried in any vessel in contravention of this section may be seized by an inspector officer of Customs or of police and forfeited to Her Majesty. And every such master who shall fail to comply with any of the requirements of this section shall be liable to a penalty of not less than *ten* pounds.

Provisions for sea-carriage of oysters.

51. It shall be lawful for the Commissioners on report that the whole or any portion of a natural oyster-bed or that any group of oyster-beds has by over-dredging or from any other cause been reduced to such a state that the further dredging of oysters from such bed or beds ought to be suspended to prohibit by notice in the *Gazette* for any term not exceeding three years the dredging or taking of oysters from such bed or beds or portion thereof as may be described in such notice by any persons whatsoever other than an inspector or person authorized by him or by the Commissioners.

When natural oyster-beds may be closed.

52. If any person shall without lawful authority—the proof of which shall lie on him—at any time during the period mentioned in such notice take or dredge oysters from any natural oyster-bed or portion thereof described in such notice such person shall be liable to a penalty not exceeding *twenty* pounds nor less than *five* pounds. And all oysters and the bags containing them together with all dredging appliances found in the possession of any person so offending may be seized and upon conviction of the offender shall be forfeited to Her Majesty.

PART III.

Private Fisheries.

53. Any person entitled to an estate of freehold in possession in any land and any lessee of land with the consent in writing of the reversioner (which consent such reversioner is hereby authorized to give) may apply in writing to the Commissioners for a license to establish a private fishery in or over any part of such land.

Private fisheries may be established.

54. The applicant for any such license shall state in his application the nature of his estate or interest in such land and shall describe the area in and over which he proposes to establish his fishery the purpose or purposes for which such license is desired the mode (if any) in which he proposes to admit in and over such area the sea or any tidal waters the distance between high-water-mark and the point at which the admission of such waters has been or is to be effected the position of such area with reference to any harbour river creek bay inlet lake arm of the sea or part of the coast in or near the shore or bank of which such area is situated. And such application shall be accompanied by an explanatory plan or tracing and by any other particulars which the Commissioners may require.

Particulars to be stated by applicants for private fisheries.

55. Such application together with all plans and documents accompanying it shall be referred by the Commissioners to any officers whom they may think fit to consult to report whether any rights of the Crown or the public are likely to be prejudiced or injuriously affected by any work in connection with the proposed fishery. And such officers are hereby required to furnish such reports to the Commissioners within sixty days from date of reference.

Report on application.

56. Upon the receipt of such reports it shall be lawful for the Commissioners to refuse such license absolutely or to grant it in terms of such application or with such modifications thereof and subject to such conditions as they may think fit all of which shall until revoked be binding on the grantee and his successors in title in respect of the area over which such license extends.

Power to grant or refuse license.

57. Any license so granted may be revoked by the Commissioners at any time if they shall be of opinion that the conditions therein expressed or any other terms of the grant have not been faithfully complied with.

Revocation of license.

58. The grant and the revocation of any such license shall severally take effect upon notification in the *Gazette*. Provided that there shall upon every such grant be paid to the Colonial Treasurer the sum of *ten* pounds.

Grant &c. when to take effect. Officer.

59. The grant of a license for a private fishery shall have the effect—

Legal effect of license.

- (i.) Of vesting in the grantee and his successors in title to the area described in the license and as appurtenant to such area the exclusive right during the continuance thereof of stocking such area with fish of any kind whatsoever (including oysters lobsters crabs prawns shrimps whelks cockles mussels and any other varieties of crustaceans or molluscs) and of taking therefrom any such fish and their shells
- (ii.) Of vesting the property (at law or in equity) in any such fish while the same are within the limits of such area in such grantee and his successors in title any rule of law to the contrary notwithstanding
- (iii.) Of vesting in such grantee and successors the right to the influx and efflux of the tide into and over the aforesaid area by such means of admission as the license provides and in case the license provides no such means or the same are doubtful then by cutting a trench or passage through or laying one or more pipes under the shore. Also a right to construct a sluice so as to permit the tide to ebb and flow into and from such area
- (iv.) Of vesting in such grantee and successors a right to enter upon the shore where the works for the admission of tidal waters are situated and to repair such works stopping the traffic thereover (if necessary) for any period not exceeding seven days in any one year in order to repair or renew the same
- (v.) Of abrogating any rule of law so far as it might be held to confer any public right-of-way or of navigation on and over such area or any public right of fishing for or taking fish by nets lines or other appliances whatsoever in or upon such area

In the case of a grant to a lessee the reversioner and in the case of a grant to a tenant for life or *pur autre vie* the remainderman shall with reference to the lessee tenant for life or *pur autre vie* respectively be included under the expression "Successor in title."

60. No trench or passage through the shore for the purpose of permitting the tide to ebb and flow to and from such area shall at any point exceed a width of twelve feet and every such trench or passage shall at the cost of the licensee or his successors in title be bridged by such a substantial bridge or means of crossing as the license shall prescribe or (if none shall be so prescribed) as the Commissioners shall determine. And every such bridge or crossing shall be maintained in good order and repair by such licensee or successors and shall in every case be furnished with substantial handrails on either side and be not less than twelve feet wide between the rails.

Provision for bridge across trenches, &c.

61. In places where at low tides large flats are left uncovered by water or where any land subject to overflow by the tide belongs to the applicant or where the land of the applicant abuts on or is in the vicinity of some tidal creek from which it is proposed to admit the water the terms and conditions of the license (except the sum to be paid for such license) may be modified by the Commissioners so as to suit the special circumstances of the locality.

Terms and conditions of license when to be modified.

62. The limits of a private fishery shall in every case be marked by substantial stakes placed at a distance not exceeding fifty yards from one another or (where such staking is not reasonably practicable) in such manner as the regulations shall prescribe. But in any proceedings taken by the owner of such fishery for larceny or any offence or matter under this Act it shall not be necessary for him to prove that the requirements of this section have been duly complied with.

Marking limits of private fishery.

PART IV.

Legal Procedure—Miscellaneous.

63. All offences penalties and forfeitures under this Act or any regulation made thereunder may be heard determined and recovered and all proceedings therefor may be taken in a summary way by and in the name of any inspector or by and in the name of any person authorized by the Commissioners before any two or more Justices in pursuance of the provisions of the Acts regulating summary convictions before Justices and every defendant shall be a competent witness in his own case. Provided that if any person shall be adjudged to pay any sum by way of penalty or otherwise the adjudicating Justices shall order such sum to be paid (together with costs to be fixed by the said Justices) either forthwith or within such period as the said Justices shall appoint and if such sum and costs (if any) shall not be paid at the time so appointed the same shall be levied by distress and sale of the offender's goods and chattels and for want of sufficient distress or in the discretion of such Justices without any such distress such offender may be imprisoned with or without hard labour for any term not exceeding *three* calendar months unless such sum be sooner paid.

Procedure.

Appropriation penalties &c Appeal.

64. The amount of every penalty fine or forfeiture recovered under this Act shall be paid one moiety to the informer or prosecutor and the other moiety to the Consolidated Revenue Fund.

65. Any person aggrieved by any conviction order or adjudication of Justices under this Act may appeal therefrom to the next Court of Quarter Sessions holden in the district in which the subject matter of the appeal arose unless such Sessions shall be held within fourteen days from the date of such conviction order or adjudication and in that case to the Court of Quarter Sessions then next following. And such Court shall have power to hear and determine the matter in a summary way in accordance with the Acts in force regulating appeals from summary convictions. And the decision of such Court shall be final and conclusive. Provided always that the appellant shall have given written notice seven days at least before the hearing of the appeal of his intention to appeal and stating the grounds thereof to the or one of the adjudicating Justices and to the prosecutor and provided that such appellant shall also pay into the hands of such Justice the full amount of any penalty or sum awarded against him together with costs within twenty-four hours next after such conviction order or adjudication and also enter into a bond with two sureties approved by such Justice conditioned to prosecute such appeal with effect and to abide the event thereof and to pay the full amount of all costs which may be awarded against him.

Assaulting &c. inspectors and others in execution of their duty.

66. Any person who shall assault resist or obstruct or encourage any other person to assault resist or obstruct any inspector assistant inspector constable officer or other person whomsoever in the execution of his duty under this Act shall incur a penalty not exceeding *fifty* pounds nor less than *ten* pounds or be liable to imprisonment not exceeding *six* calendar months. And the adjudicating Justices may in addition to any such penalty order a sufficient sum to be paid by the offender to cover any damage or injury sustained by the person so assaulted resisted or obstructed which sum shall be recoverable in the same manner as a penalty under this Act.

Offenders may be apprehended and bailed.

67. Any inspector of fisheries or member of the police force may with or without warrant seize any net dredge or other implement of fishing which any person found offending against any of the provisions of this Act may then be using and may also with or without warrant apprehend and lodge with the gaoler or person in charge of any gaol watch-house lock-up or police station any person found offending against any of the provisions of this Act who on demand made shall refuse to give his true name and address but any Justice or subject to the conditions prescribed by the regulations any such gaoler or person in charge may liberate any person so lodged in custody on such person entering into a recognizance (with or without sureties) in the sum of twenty pounds conditioned for his appearance before two or more Justices at a day and place to be therein mentioned.

Justice may grant a warrant to enter suspected places.

68. Any Justice of the Peace upon an information on oath that there is probable cause to suspect any breach of the provisions of this Act or of any regulation thereunder to have been committed may by warrant under his hand and seal authorize and empower any Inspector of Customs or Police or any officer to enter any dwelling-house or premises or vessel or boat whatsoever for the purpose of searching for and seizing any unlawful net dredge implement or engine or any fish or oysters taken in contravention of this Act or any proclamation or regulation thereunder.

Police to aid and assist inspectors.

69. All members of the police force and all persons employed in the department of the Marine Board the Customs or Harbours and Rivers if called upon to aid and assist any inspector or other officer in the execution of any power or authority vested in him by this Act are hereby authorized and required to aid and assist such inspector or officer in the lawful exercise of any such power or authority.

Larceny from contiguous oyster-beds.

70. Whenever a person shall be charged with larceny of oysters from any oyster-bed lease or laying which may be contiguous to another or others it shall be sufficient in alleging and proving the place from which such oysters were stolen to allege and prove that such oysters were stolen from one or other of such contiguous beds leases or layings and that the same belonged to and were in the lawful possession of one or other of the lessees or owners thereof.

What instruments &c. to be evidence.

71. The production of any of the undermentioned documents writings or publications shall be conclusive evidence in all Courts as to the several matters contained therein and in the case of a lease promise of lease or license that the same was duly issued viz. :-

- (I.) A lease or promise of lease or a copy thereof bearing the common seal of the Commissioners.
- (II.) Any license or a copy thereof bearing the like seal.
- (III.) A copy of the *Gazette* containing any regulation or notification purporting to be made under this Act.

Search for and seizure of fish or oysters.

72. All fish or oysters of which the taking possession exposure for sale consignment or purchase for sale is prohibited by this Act may be searched for seized condemned and dealt with according to law by any inspector or by any person holding the written authority of the Commissioners or of any Justice or any search warrant under the hand and seal of any Justice or authorized by any regulation under this Act.

Operation of Act. Report by Commissioners.

73. This Act shall come into force on the sixtieth day after its passing.
 74. The Commissioners shall on or before the thirty-first day of December in every year report to the Minister charged with the administration of this Act as to the state of the fisheries in the several divisions thereof and such report shall be laid before both Houses of Parliament. The Commissioners shall also furnish to the said Minister such reports accounts plans vouchers and documents relating to any Act or matter done by them or within their control or cognizance as he may by writing under his hand addressed to the said Commissioners require. The Commissioners shall in all matters be subject to the like control by the Governor as any Department of the Public Service.

[To Evidence of Dr. Cox.]

A 5.

Sir,

Sydney, 16 April, 1888.

I have the honor to inform you that I, accompanied by Hellings and Glading, went up to Ryde Police Court on Saturday, the 14th, for the purpose of prosecuting Thomas Gascoigne for fishing in closed waters. The case was called and the information read to him. He pleaded guilty to the charge, but said he was not a fisherman, and had not had a license for some time, and he was only fishing to get a few to eat. I said it mattered not as he was caught fishing in closed waters. Thereupon the magistrate asked me if I had a written authority to prosecute, and I showed him the Act and said it was my authority; also, I pointed out to him the Commissioner's minute. He asked me if I held the same position as Mr. Assistant Inspector Smith, whose case had been dismissed, and I replied by saying that I held the position as Assistant Inspector of the Home Division. Thereupon the three magistrates consulted together, and the chief one said it would not be fair to fine Mr. Gascoigne heavily when the men in Mr. Assistant Inspector Smith's case had been dismissed (which had just come on before mine); therefore he said he would fine Mr. Gascoigne 1s. and costs.

I think this is very hard, after myself and men working day and night, to be treated in this manner. It appears the fishermen have the privilege to do as they like with us.

I have, &c.,

THOMAS MULHALL,
Assistant Inspector Fisheries.

To the Chief Inspector.

Commissioner's Minute:—Read, 18/4/88.

Court-house, Ryde, 14 April, 1888.

(Before J. E. Manning, J.P., J. T. Rodd, J.P.)

Thomas Mulhall, Assistant Inspector of Fisheries, v. Thomas Gascoigne—hauling a net to take fish in closed waters, on 29th March, 1888. Defendant pleaded guilty; fined, 1s.; costs, 4s. 10d. Fine and costs paid.

JOHN E. MANNING, J.P.
J. T. RODD, J.P.

Sir,

Sir, Sydney, 2 April, 1888.
 I have the honor to inform you that on Thursday evening, the 29th March, I went up the Parramatta River, accompanied by Hellings and Glading, and about 10 o'clock at night we caught Mr. Thomas Gascoigne, of Ryde, on the Flats above Ryde, opposite Homebush, casting and hauling a meshing net in the closed tidal waters of New South Wales. I seized the net and brought it on to Woolloomooloo. Awaiting instructions from the Commissioners. The dimensions of net, 60 fathoms long, 4 inch mesh.
 I have, &c.,
THOMAS MULHALL,
 Assist. Insp. Fisheries, Sydney.

To the Chief Inspector.
Commissioners' minute.—Prosecute. Inquire why it is the ropes used were not also seized.—4/4/88. Assist. Insp. Mulhall, for his information.—L.G.T., Secretary, B.C., Department of Fisheries, Sydney, 5/4/88. Gascoigne fined 1s. and costs.—T. MULHALL, 14 April, 1888.

Sir, Sydney, 30 April, 1888.
 I have the honor to inform you that I went up to Ryde on Saturday to the Court-house to have the net confiscated (which I seized from Thomas Gascoigne on the 29th March last). The Magistrate there refused to confiscate the net, saying the Commissioners had to do with it.
 I have, &c.,
THOMAS MULHALL,
 Assist. Insp. Fisheries, Sydney.

To the Chief Inspector.
Commissioners' minute.—Make another effort to get net confiscated.—2/5/88. Assist. Insp. Mulhall.—L.G.T., 3/5/88.
 In reference to the confiscation of this net I called to see Mr. Jeannerett three times, and on the last occasion I took the Act with me, and he said he could not see anything in it to give them power to confiscate the net; also that the Commissioners had to do with it. He promised to call to see Mr. Thompson.—T. MULHALL, Assist. Insp. of Fisheries, Sydney, 23 May, 1888. Submitted, 31/5/89. *Commissioners' minute*.—Sell the nets.—7/6/89.

PENALTIES for net-fishing in closed waters.
 Fisheries Act, 1881.

Section 10.—Penalty under section 10, not exceeding fifty pounds (£50), and not less than ten pounds (£10), for first offence of fishing.
 Section 18.—Penalty under section 18, for first offence not exceeding ten pounds (£10).
 Penalty for second or any subsequent offence not exceeding twenty pounds (£20), and not less than five pounds (£5).
 Magistrates who tried the case Inspector Mulhall v. Gascoigne, fishing in closed waters:—J. E. Manning, Esq., J. T. Rodd, Esq. (Case tried 14 April, 1888.)

PARTICULARS of prosecutions against Thomas, Robert, and John Gascoigne for breaches of the "Fisheries Act, 1881."

A 7.

To the President of the Fisheries Commission,—
Sir,

Sydney, 17 June, 1889.

I have the honor to inform you (except in times of heavy weather) there has always been a good supply of fish at the Woolloomooloo Fish-market; so much so, in several instances the quantity has been rather greater than the demand, and had to be sold at so cheap a rate not sufficient, I believe, to pay the expenses attached to them, and at other times had to remain unsold in the fish-market, and in the end had to be carted away as unfit for food.

I have, &c.,

THOMAS MULHALL,

Assist. Insp. Fisheries, Sydney.

RETURN showing the total number of Baskets of Fish sold at the Sydney Fish-market in 1885, 1886, 1887, and 1888; also the amount realized each year by the sale thereof.

1885.—	Number of baskets,	38,162½;	amount realized,	£31,674 18s. 1d.
1886.—	do	45,583;	do	£34,331 18s. 9d.
1887.—	do	51,275;	do	£31,594 3s. 3d.
1888.—	do	54,997;	do	£37,775 6s. 11d.
Total number of baskets,		190,017½;	total amount realized by sale thereof, £135,376 7s.	

RETURN showing the average weight of a Basket of Fish; also the average number of Fish which make up a Basket:—Garfish, whiting, bream, mullet:—Average weight per basket, 70 lb.

The average number of fish to a basket:—Garfish, 25 dozens; whiting, 5½ dozens; bream, 4 dozens of moderate size; mullet (small), 7 dozens; mullet (large), 2½ dozens.

[To Evidence of Dr. Cox.]

A 8.

RETURN showing the number of Applications to lease shore for Oyster Culture made in 1883 and subsequent years. Also, the number of Leases accepted by Applicants, and the number on which rent is paid to date; and persons employed in the Department.

	1883.	1884.	1885.	1886.	1887.	1888.	1889.
1. Applications for shore for oyster culture	198	715	1,491	339	146	84	41
2. Applications accepted by applicants	69	214	271	172	79	36	6
3. Leases on which rent is paid to date	45	103	120	78	44	31
Number of persons employed in the Department—							
Office	3	6	7	8	8	8	6
Inspectors	3	3	3	3	2	2	2
Assistant inspectors	8	11	11	12	13	13	13
Acting assistant inspectors	9	12	11	10	11	10	9

Total	29	37	40	42	43	42	38

* Including 1 aboriginal.

[To Evidence of Dr. Cox.]

A 9.

COMPARATIVE Return showing the quantity of Fish brought to the Fish-market, Woolloomooloo, and the price realized therefor, from the 1st January to the 31st July of the years 1886 and 1887:—

	1886.	1887.	REMARKS.
Number of baskets of Fish	28,705	32,028	It will be observed that whilst the supply shows an increase of 3,323 baskets, and 7,302 dozen, there is a decrease in the price realized of £2,129 2s. 6d.
Number of dozens of Fish	2,076	9,378	
Amount realized at auction	£ 20,692 19 9	18,563 17 3	

NOTE.—The heavy increase in the dozens of fish received in 1887 is caused by the large number of sea-mullet caught during the months of April and May, viz., in April, 6,920 dozens, and in May, 1,070 dozens—in all 7,990 dozens.

[70

[To Evidence of Dr. Cox.]

A 10.

RETURN showing the quantity of Fish brought to the Fish-market, Woolloomooloo, and the amount realized for sale thereof during the years 1884, 1885, and 1886 :—

	1884.	1885.	1886.
Number of baskets of Fish.....	32,956	38,163	45,583
Number of dozens of Fish	5,280	5,646	3,161
Amount realized at auction £	30,115 17 1	30,789 0 0	34,331 18 9

[To Evidence of Lindsay G. Thompson.]

B 1.

Proposed new Legislation for Regulation of Fisheries.

MEMORANDUM.

In furtherance of the Commissioner's minute requiring a report showing the amendments necessary in the existing fisheries laws, I submit two Bills which I have prepared on the basis, and, as far as possible, after the lines of the present Acts. I found that the amendments and additions which experience had suggested to me were so numerous and required such careful and particular statement that I could not embody them in a report with much assurance that my meaning and intention would be made clear and intelligible beyond doubt, and this is my apology for exceeding the directions of the minute by submitting Bills instead.

I now proceed to explain and comment upon the Bills, showing section by section wherein they differ from the existing statutes.

Section 1 defines the title, the Fisheries Regulation Act, 1888, and the order and arrangement of the measure.

Section 2 embodies the interpretation of terms when used in the Bill, and regard has been had to their adaptability for shortening the verbiage and giving precise application to the intention of sections of the Act.

Section 3 provides for the repeal of the existing enactments, excepting Part II (private fisheries) of the Fisheries Act, 1881, but including the recent measure—"An Act for the better preservation of fish in inland waters." It will be found that in the Bill now submitted every provision of that Act has been embodied, so that no reason exists for its retention on the Statute-book.

Section 4—"Constitution of Fisheries Commission as a body corporate"—stands the same as in the Fisheries Act, 1881.

Section 5 provides for the appointment of officers. It differs only from section 5 in the present Act in so far that it provides that the Chief Inspector and the Secretary shall be statutory appointments.

Section 6 confers on all officers of police and constables the position of local Inspectors of Fisheries *ex officio*.

[NOTE.—In view of the recent proposal to dispense as far as possible with local Inspectors and to provide oversight by means of a travelling Inspector, I have thought it desirable to expunge section 6 of the existing Act, which provides for the appointment of Customs or Marine Board officers as Inspectors, as well as section 8, distributing the Fisheries into Division.]

Section 7 takes power to make regulations. It is like section 9, Fisheries Act, except that it provides for rewards for capture of sharks.

PART I.

Net and Line Fisheries.

Sections 8 and 9 define the several kinds of nets proposed to be used and the penalties for infringement. They take in the provisions of sections 11, 12, and 13 of the Fisheries Act, but separately specify the meshes and dimensions of all the nets therein named, and, in addition, provide for the use of a deep-water prawn-net and a sunken bag-net. I confess I am not partial to either of these nets. I have included them only in deference to the known desire of certain fishermen to use them; and in limiting their length, providing ample mesh, and enacting that they shall terminate in a ring floating upright in the water, I have had in view the purpose of making them as little destructive to young fish and fish food as possible.

Section 10—As to hanging of nets—is a new provision. It is the practice of the Greeks to hang their nets on an equal length of line, the result being that as soon as the nets are subjected to a hauling strain the meshes close, and the chance of escape for small fish is very much diminished.

Section 11—Waters not to be stalled—is in part a new provision. The interception of the passage of fish by the setting of brushwood is now practised in suitable creeks, and it seems desirable to legislate against it.

Section 12—Two or more nets not to be set together.—This provision is very similar to one to be found in section 11 of the existing Act, and the necessity for its retention is obvious.

Section 13—Penalties for having under-weight fish—is practically the same as section 14 of the Fisheries Act, the difference being that it excludes from the proviso of "nonapplication" persons having in possession fish not intended for sale.

Section 14—Prawns to be riddled in their own waters only—is practically the same as section 15, Fisheries Act.

[NOTE.—Prawns having been included in the Schedule defining what under this Act are fish, the necessity for retaining section 16, Fisheries Act, is avoided.]

Section 15—Proclamation of close fisheries—is similar to section 10, Fisheries Act, except that it gives direct power to the Commissioners to exempt tidal and inland waters also from net-fishing, and line-fishing as well, when thought necessary. It seems desirable that the Commissioners should have this direct power, in order to avoid the delay of a reference to the Governor and Executive Council.

Sections 16 and 17—Closing waters against fishing-nets, and penalties for infringement—are in a measure equivalent to sections 17 and 18, Fisheries Act, except that they embrace inland waters. They give wider power for closing, and enact more stringent penalties.

Section 18—Persons not to have fresh caught fish or wetted nets in closed waters—is a new provision suggested by experience of the difficulty in procuring the conviction of persons found fishing in closed waters.

Section 19—Crew of seized boats to assist Inspectors—is also new, and suggested by experience. An Inspector when single-handed has often been prevented by want of assistance from taking away a seized net to a place of safe custody.

Sections 20 and 21—Licensing of fishing boats and men—are similar to sections 19 and 20 of Fisheries Act, except that they provide against any sale of a boat carrying with it the transfer of the license; also that persons fishing in inland waters shall be licensed.

Section 22—Penalty for fishing without a license—is the same as section 21 of the Fisheries Act.

I have not amended this section, as I am not aware what views the Commissioners entertain in respect to it. My own opinion is that the fee should be increased, and an attempt made to compel persons who go in chartered boats on pleasure fishing excursions to contribute to the cost of protecting the fisheries from which they derive enjoyment. The imposition of a small fee would not create a hardship upon the individual, while it would provide a legitimate source of revenue. If one person who has to earn his living by means of fishing be required to pay a fee, surely another who follows the pursuit as a pastime should not be exempted.

Section 23 is new. Its object is to put a check upon the joining of nets. It may be desirable to make two the limit number of nets which may be carried in one boat.

Sections 24 and 25—Prohibiting use of dynamite and placing obstacles on hauling grounds—are very similar to sections 22 and 23, Fisheries Act. Section

Section 26—For protection of fishermen netting-fish—is new, and is suggested by experience.

Section 27—Netters to give name and residence—is like unto section 24, Fisheries Act, but the latter clause of it is new, and suggested by experience.

Section 28—Inspectors may search for and seize nets used in contravention of the Act—is equivalent to section 25, Fisheries Act.

[NOTE.—It is not proposed to interfere with Part III, Fisheries Act (Private Fisheries). This part has not so far been availed of by the public, but will doubtless be found of great value in future time.]

PART 2.

Legal Procedure—Miscellaneous.

Section 29—Procedure—is similar to section 58, Fisheries Act, except that provision is made for offences committed in any part of the Metropolitan Police District being heard at any one of the Courts in that district; this provision is essential, not only in the convenience of the Department, but in the interests of the fishermen themselves, for their attorneys very frequently set up the technical plea of “no jurisdiction,” with the result that the cases have to be dismissed only to be brought forward again to the advantage of none but the attorneys, who of course obtains a second fee for a second appearance.

I submit for consideration whether it is desirable to retain the provision that “every defendant shall be a competent witness in his own case;” it is quite possible for unprincipled persons when obviously guilty to swear themselves out of Court through this provision.

Section 30—As to appropriation of penalties—is the same in substance as section 59, Fisheries Act.

Section 31—Appeal—is grounded upon section 60, Fisheries Act, except that it forces the appellant to notify his intention to appeal within seven days from date of adjudication.

Section 32—Assaulting Inspectors—is a similar provision to that contained in section 61, Fisheries Act.

Section 33—Apprehension of offenders—is equivalent to section 62, Fisheries Act, except that it gives more ample powers to Inspectors.

Sections 34 and 35—Justices to grant warrants to enter suspected places, and Customs and Marine Board Officers to aid Inspectors—are respectively similar to sections 63 and 64, Fisheries Act.

Sections 36, 37, and 39—Relating to instruments in evidence—search for and seizure of fish—report by Commissioners—are respectively alike unto sections 66, 67, and 69, Fisheries Act.

Section 38—Penalty on breach of Act—is new, and is intended to cover omissions which may occur in the passing of this measure into law.

The schedules to the Act have been amended so as to bring within the varieties of fish protected, the jew-fish, the sampson-fish, the kingfish, the prawn, the lobster, the tench, and fish not indigenous to the Colony, which may be introduced, or be in any inland waters.

52° VICTORIA 1889.

A BILL to provide for the development and regulation of the Fisheries of the Colony.

Preamble.

WHEREAS the existing statute law is insufficient to preserve from exhaustion the natural supplies of marine and other edible fishes; and it is expedient that such law should be repealed, and that more effective measures should be adopted to check the wanton or unnecessary destruction of immature fish, and to prevent the disturbance of the various nurseries and breeding-grounds and to regulate the operation of fishermen: Be it therefore enacted by the Queen's Most Excellent Majesty, by and with the advice and consent of the Legislative Council and Legislative Assembly of New South Wales in Parliament assembled and by the authority of the same as follows:—

Preliminary Provisions—Appointment of Commissioners, &c.

Short title and arrangement of Act.

1. This Act may be cited for all purposes as the “Fisheries Regulation Act, 1889,” and its provisions are arranged in the order, and comprise the subjects following, viz. :—

*Preliminary Provisions—Appointment of Commissioners, &c.—ss. 1-7.*PART I.—*Net and Line Fisheries—ss. 8-28.*PART II.—*Legal Procedure—Miscellaneous—ss. 29-39.*

SCHEDULES.

Interpretation terms.

2. In this Act, unless the context requires a different meaning, the following words within inverted commas shall bear the respective meanings hereby assigned to them:—

“Governor”—The Governor with the advice of the Executive Council.

“Commissioners”—The Commissioners of Fisheries appointed under this or the repealed Act.

“Fish”—All or any of the varieties of marine or fresh water fishes enumerated in the First Schedule hereto; also fish not indigenous to this Colony which may be introduced or be in any inland waters.

“Lobster”—The crayfish commonly called “lobster.”

“Hauling grounds”—Any Crown land proclaimed as such for the purpose of netting fish.

“Bunt”—The middle portion of a general working garfish or bag-net, between the wings, but not being more than one-third of the lawful length of such respective nets.

“Wing”—The portion of a general working, garfish, or bag-net, on each side of the bunt, but not being more than the respective lawful length of the bunt of such nets.

“Boat”—Any vessel or punt of any description whatsoever.

“Tidal Waters”—All waters which ebb and flow over Crown lands, within the territorial jurisdiction of the Crown in New South Wales, and every lake and lagoon in the said Colony ordinarily subject to the influence of the tides (although the communication with the sea may for the time be closed), the soil or bed whereof is the property of the Crown; together with, in each case, the soil of such Crown lands.

“Inland Waters”—All rivers and creeks for that portion of their watercourse which is beyond the influence of the tides; also all fresh water lakes, lagoons, and ponds.

“Justice”—Any Justice of the Peace.

“Inspector”—Inspectors or Sub-Inspectors of Fisheries, and Inspectors *ex officio* appointed under this or the repealed Act.

Repeal of 44 Vic. No. 26
46 Vic. No. 25,
51 Vic. No. 26.

3. The Parts I, II, and IV of the Act forty-fourth Victoria number twenty-six, intituled “*An Act to provide for the development and regulation of the Fisheries of the Colony*” not already repealed; the Act forty-sixth Victoria number twenty five, intituled “*An Act to amend the Fisheries Act, 1885*,” and the Act fifty-first Victoria number twenty-six, intituled “*An Act for the better preservation of Fish in Inland Waters*,” are hereby repealed, but without prejudice to the past operation of, or to any right lawfully created, offence committed, or penalty incurred under, any of the said Acts.

Constitution of Fisheries Commissioners as a body corporate;

4. The duty of protecting, developing, and regulating the public fisheries of New South Wales shall be vested in five Commissioners to be called the “Commissioners of Fisheries for New South Wales,” who, by that name, shall be a body corporate, with perpetual succession and a common seal, with power to hold real and personal estate, and to sue and be sued, and to take, and be the subject of all legal proceedings by such name. And the duties, power, and authority of the said Commissioner shall extend to the territorial limits of the said Colony. Such body corporate shall be composed of five persons to be appointed by the Governor by Commission under the Great Seal, each of whom shall hold office for the term of five years from the date of his appointment, unless his office become vacant in the meantime by death or resignation, but subject nevertheless to removal by the like authority. But any Commissioner may be reappointed after the expiration of his term of office. The Governor shall, either by the original Commission or otherwise as to him seems proper, appoint one of the Commissioners to be President. And the President, or in his absence one of the Commissioners appointed from time to time by the meeting, shall preside at all meetings, and at any voting shall have an original, as well as (in cases of equality of votes) a casting vote. Any three Commissioners shall be a quorum.

Appointment of officers.

5. It shall be lawful for the Governor, on the recommendation of the Commissioners, to appoint a Chief Inspector, Secretary, and so many Inspectors and Sub-inspectors of Fisheries and other officers as he may think necessary for the purposes of this Act, and to assign to every such officer such salary as he may think fit, and as Parliament may vote. And every such officer shall act under the direction of, and be responsible for the due performance of his duties to, the Commissioners.

in accordance with the regulations. The provisions of this section shall not apply to any curator of a museum or zoological collector holding a permit from the Commissioners, or to any owner of a private fishery in respect of fish taken therefrom, or to any persons being in possession of fish for purposes of pisciculture, or to any aboriginal taking or being in possession of fish for his own consumption; but in every such case of exemption the proof thereof shall be upon the defendant or person charged.

Prawns to be riddled in their own waters only.

14. All prawn-fishers and other persons catching prawns shall, if they require to riddle them so as to separate the marketable from the unmarketable, so riddle or separate them immediately upon being caught, and in such a manner as to permit the small prawns to escape. And if any prawn-fisher or person shall fail to comply with such direction, or shall riddle or separate any prawns after boiling or cooking the same, or when such prawns are dead, he shall be liable to the like penalties as are provided by the last preceding section.

Proclamation of close fisheries.

15. It shall be lawful for the Commissioners to declare by notice in the *Gazette* that any specified tidal or inland waters shall be exempted from net or line-fishing, or both, during any specified months in any year. The fisheries in all such waters so specified shall be termed "Close Fisheries," and the months during which the same are so declared exempt from net-fishing, "Close months." And if any person shall, in any close fishery, during any close month, place any line or shoot, cast, or haul any net whatever, or stake, fix, or set any such net or line for the purpose of catching, taking, or enclosing fish, or in such manner that fish might be caught or taken thereby, such person shall be liable to a penalty not exceeding fifty pounds and not less than ten pounds. And every person aiding or assisting in the placing, shooting, casting, or hauling of any such net or line, or being in any boat from which any such net or line shall be placed, shot, or cast, in contravention of the provisions of this section shall incur a like penalty. Provided always that it shall be lawful for the Governor, or the Commissioners, in like manner, to rescind or vary any such proclamation.

Proclamation closing waters against use of fishing-nets.

16. It shall be lawful for the Governor, from time to time, to declare by proclamation, to be published in the *Gazette* and in some newspaper circulating in the nearest Police District, that the whole or any defined portion of any inland water or tidal river, inlet, estuary, lake, lagoon, or arm of the sea shall be closed against the use of fishing-nets or lines, or both, for such term as the Governor shall think fit. And any such proclamation may be renewed by the Governor, if so advised by the Commissioners, for a further period, or may in like manner be varied or rescinded at any time whatever.

Penalty for fishing in closed waters.

17. If any person, after the expiration of thirty days from the date of any such original proclamation as is described in the next preceding section hereof and during the currency thereof, or at any time after any renewal or variation of such proclamation, and during the currency thereof shall cast, haul, stake, fix, or place any net or line of any kind whatever for the purpose of taking or capturing fish, or by which fish may be taken or captured, within the limits of the waters or area defined in such proclamation, such person shall be liable for the first offence to a penalty not exceeding ten pounds and not less than five pounds, and for the second or any subsequent offence to a penalty not exceeding twenty pounds and not less than ten pounds; and every person aiding or assisting in the casting and hauling or otherwise fixing of such net or line, or being in any boat from which any net shall be shot in contravention of the provisions of this section, shall incur a like penalty. And every person convicted under this section shall, if holding a license under this Act, be deemed by conviction to have forfeited his license. And all fish taken in violation of the provisions of this section, together with all fishing-nets, lines, and boats used for the purpose of taking the same, shall thereupon become forfeited to Her Majesty, and shall be disposed of as provided by the regulations. Any inspector may, with or without warrant, apprehend and take before one or more Justices any person found offending against the provisions of this section, to be dealt with as hereinafter provided; and may in like manner seize every such net and boat.

Persons not to have fresh caught fish in closed waters.

18. If any person shall be found with fresh caught fish or a wetted net in his boat or in his possession in waters which by proclamation under this Act are exempted from line or net-fishing or closed against the use of fishing-nets or lines, such person shall be deemed to have been unlawfully catching or attempting to catch fish in contravention of the provisions of this Act, and every person convicted under this section shall be subject to the penalties and forfeitures provided by the next preceding section hereof. Provided always that a right shall be reserved to the defendant to prove that he was not upon such waters for any unlawful purpose under this Act.

Crew of seized boats to assist Inspector.

19. In every case where a seizure of any fish-net, boat, or other article is made under the provisions of this Act, the inspector making the seizure may direct the owner thereof or his boat's crew, or any of them, to forthwith convey such boat, net, and other seized articles to some point convenient for further conveyance by land or sea carriage, and any such person refusing to obey such Inspector's direction shall be liable to a penalty of not less than three nor more than five pounds.

Boats to be licensed.

20. Every boat used, or intended to be used, for catching for sale any of the varieties of fish enumerated in the First Schedule hereto, by net or line, shall be licensed. The fee for every such boat license shall be one pound, which shall be paid to the Colonial Treasurer or some officer authorized by him to receive license fees under this Act; and payment of such fee shall cover the interval from the date of payment to the thirty-first day of December of the same year, unless such boat shall in the meantime have been sold or disposed of by the owner, in which case the license thereof shall be deemed to have expired. Provided that after the thirtieth day of June in any year one moiety only of such fee shall be payable. Every boat licensed under this section shall have painted in legible letters in such conspicuous place as may be prescribed by the regulations the name of her owner and the words "Licensed fishing-boat."

Fishermen to be licensed.

21. Every person catching for sale (the proof to the contrary whereof shall be upon such person) fish in or upon any tidal or inland waters shall pay an annual license fee of ten shillings to the Colonial Treasurer or some officer authorized by him to receive license fees under this Act. Such fees shall be payable on the dates and according to the provisions expressed in the last preceding section.

Penalty for fishing without license.

22. If any person shall take or attempt to take any fish within such waters as aforesaid, whether by line or by net without holding a valid fisherman's license as required by the next preceding section hereof, or shall take or attempt to take any such fish, whether by line or net, in a boat not licensed under section twenty hereof, he shall be liable for every such offence to a penalty not exceeding forty shillings. But nothing in this section contained shall extend to persons on excursion or pleasure parties fishing for purposes other than sale. Provided always that it shall lie upon the defendant to prove that he is within the saving in this section contained in any case where, not being the holder of a license under the next preceding section, he shall be found fishing in a boat licensed under this Act.

Boats to carry one net only.

23. It shall not be lawful for any person to carry more than one lawful fishing-net in any fishing-boat licensed under this Act.

Dynamite not to be used.

24. It shall not be lawful by the explosion of dynamite or any explosive substance, or by means of any poisonous or noxious thing, to destroy or take fish in any tidal or inland waters in New South Wales. And if any person shall explode any dynamite or any such substance under such waters, or place or cause to flow thereinto any poisonous or noxious thing, such person and all other persons at the time in his company shall for every such offence be liable to a penalty not exceeding forty pounds and not less than ten pounds. But nothing herein contained shall apply to any person duly authorized (the proof whereof shall be on him) to explode torpedoes or dynamite in any such waters.

Penalty for damaging lawful nets by placing obstacles on hauling ground.

25. If any person without lawful authority (the proof of which shall lie on him) shall drive or place any stake, log, stone, or other thing whatever, likely to damage a fishing-net if dragged over or against it in any tidal water proclaimed as a hauling-ground within the reach of a fishing-net of lawful length, and if any damage shall be sustained by any lawful fishing-net through coming into contact with such stake, log, stone, or thing, such person shall be liable to a penalty not exceeding ten pounds, and in addition to pay such compensation to the owner of such net as may be awarded by the adjudicating Justices.

Penalty for disturbing fish in process of being netted.

26. It shall not be lawful for any person, by the wilful firing of guns, or by the production of other disturbing noises or sounds, to frighten fish around which nets are being set by any person holding a valid fisherman's license. If any person shall offend against the provisions of this section he shall be liable to a penalty not exceeding five pounds nor less than three pounds.

Netters to give name and residence when demanded, &c.

27. Every person who shall be found using a fishing-net of any kind whatsoever in any waters in New South Wales shall, on demand, give his true name and residence to any inspector or Justice, or to any owner or occupier of land bordering such waters, or over which they ebb and flow. And if any such person shall refuse or neglect to comply with such demand, or shall give a false or fictitious name or residence, he shall be liable to a penalty not exceeding five pounds.

Inspectors may search for and seize nets used in contravention of Act.

28. Any inspector may at any time enter any premises or dwelling, or go on board any boat and search for and seize and take away any net which has been used in contravention of the provisions of this Act, or which is, or is suspected to be, of less dimensions in the mesh or of a length not permitted by this Act or the regulations. And every net so seized shall be viewed by a Justice, who, on inspection thereof, shall, if satisfied that the same has been so used as aforesaid, or is an unlawful net, order the same to be forfeited to Her Majesty.

PART II.

Legal Procedure—Miscellaneous

29. All offences, penalties, and forfeitures under this Act or any regulation made thereunder may be heard, determined, and recovered, and all proceedings therefor may be taken, in a summary way, by and in the name of any Inspector, or by and in the name of any person authorized by the Commissioners, before any two or more Justices, in pursuance of the provisions of the Acts regulating summary convictions before Justices, except that, in the discretion of the prosecuting officer, offences committed in any part of the Metropolitan Police District may be so heard at any one of the Courts in that district; and every defendant shall be a competent witness in his own case. Provided that if any person shall be adjudged to pay any sum, by way of penalty or otherwise, the adjudicating Justices shall order such sum to be paid (together with costs to be fixed by the said Justices) either forthwith, or within such period as the said Justices shall appoint, and if such sum and costs (if any) shall not be paid at the time so appointed, the same shall be levied by distress and sale of the offender's goods and chattels, and for want of sufficient distress, or, in the discretion of such Justices, without any such distress, such offender may be imprisoned, with or without hard labour, for any term not exceeding *three* calendar months, unless such sum be sooner paid. In all cases where the defendant or person charged with any offence under this Act shall plead any of the exemptions therein contained, the proof thereof shall be upon such defendant or person charged. Provided also that no information or conviction under this Act shall be quashed through any defect or want of form.

30. The adjudicating Justices shall have power to award to the informer, seizing officer, or prosecutor, an amount out of every penalty, fine, or forfeiture, not exceeding in the aggregate thereof one moiety, and the remainder shall be paid into the Consolidated Revenue Fund. Appropriation of penalties, &c.

31. Any person aggrieved by any conviction, order, or adjudication of Justices under this Act may appeal therefrom to the next Court of Quarter Sessions holden in the district in which the subject matter of the appeal arose, unless such Sessions shall be held within fourteen days from the date of such conviction, order, or adjudication, and, in that case, to the Court of Quarter Sessions then next following. And such Court shall have power to hear and determine the matter in a summary way in accordance with the Acts in force regulating appeals from summary convictions. And the decision of such Court shall be final and conclusive. Provided always that the appellant shall, within seven days from the date of such aforesaid conviction, order, or adjudication, have given written notice of his intention to appeal, and stating the grounds thereof to the, or one of the, adjudicating Justices, and to the prosecutor, and provided that such appellant shall also pay into the hands of such Justice the full amount of any penalty or sum awarded against him, together with costs, within twenty-four hours next after such conviction, order, or adjudication, and also enter into a bond, with two sureties approved by such Justice, conditioned to prosecute such appeal with effect, and to abide the event thereof, and to pay the full amount of all costs which may be awarded against him. Appeal.

32. Any person who shall assault, resist, or obstruct, or encourage any other person to assault, resist, or obstruct, or shall use abusive language to any Inspector, or other person whomsoever in the execution of his duty under this Act shall incur a penalty not exceeding *fifty* pounds nor less than *ten* pounds, or be liable to imprisonment not exceeding *six* calendar months. And the adjudicating Justices may, in addition to any such penalty, order a sufficient sum to be paid by the offender to cover any damage or injury sustained by the person so assaulted, resisted, or obstructed, which sum shall be recoverable in the same manner as a penalty under this Act. Assaulting, &c. inspectors and others in execution of their duty.

33. Any Inspector of fisheries may enter any fish-market, premises, place, or dwelling, or go on board any boat, and seize any underweight fish, nets, boat and gear, or other implement of fishing which any person found offending against any of the provisions of this Act may then be using, and may also, with or without warrant, apprehend and lodge with the gaoler or person in charge of any gaol, watch-house, lock-up, or police station, any person found offending against any of the provisions of this Act, who, on demand made, shall refuse to give his true name and address, or whom such Inspector may have reason to suspect has given a fictitious name and address or incorrect information as to the ownership of any net or other article seized under any of the provisions of this Act; but any Justice, or subject to the conditions prescribed by the regulations, any such gaoler or person in charge may liberate any person so lodged in custody, on such person entering into a recognizance (with or without sureties) in the sum of *twenty* pounds conditioned for his appearance before two or more Justices at a day and place to be therein mentioned. Offenders may be apprehended and bailed.

34. Any Justice of the Peace, upon an information on oath that there is probable cause to suspect any breach of the provisions of this Act or any regulation thereunder to have been committed, may, by warrant under his hand and seal, authorize and empower any inspector to enter any dwelling-house or premises or boat whatsoever for the purposes of inspection, and of searching for and seizing any unlawful net, implement, or engine supposed to have been used, or any fish taken in contravention of this Act or any proclamation or regulation thereunder. Justice may grant warrant to enter suspected places.

35. All persons employed in the department of the Marine Board, the Customs, or Harbours and Rivers, if called upon to aid and assist any inspector in the execution of any power or authority vested in him by this Act, are hereby authorized and required to aid and assist such inspector in the lawful exercise of any such power or authority. Customs officers, &c., to aid inspectors.

36. The production of any of the undermentioned documents, writings, or publications shall be conclusive evidence in all Courts as to the several matters contained therein, and in the case of a lease or license that the same was duly issued, viz. :— What instrument, &c., to be evidence.

(i) Any license or a copy thereof bearing the like seal.

(ii) A copy of the *Gazette* containing any notice, regulation, or proclamation purporting to be made under this Act.

37. All fish of which the taking possession, exposure for sale, consignment or purchase for sale is prohibited by this Act may be searched for, seized, condemned, and dealt with according to law by any Inspector or by any person holding the written authority of any Justice, or any search warrant under the hand and seal of any Justice, or authorized by any regulation under this Act. Search for and seizure of fish.

38. Any person who shall commit any act in breach of or be guilty of any default or non-compliance in or with the requirements or prohibitions of this Act shall in every case where no penalty has in such case been provided be liable to a penalty of *forty* shillings and to the forfeitures prescribed by section seventeen hereof. Penalty on breach of Act.

39. The Commissioners shall as soon as possible after the thirty-first day of December in every year report to the Minister charged with the administration of this Act as to the state of the fisheries of the Colony, and such report shall be laid before both Houses of Parliament. The Commissioners shall also furnish to the said Minister such reports, accounts, plans, vouchers, and documents relating to any act or matter done by them, or within their control or cognizance as he may, by writing under his hand addressed to the said Commissioners, require. The Commissioners shall in all matters be subject to the like control by the Governor as any Department of the Public Service. Report by Commissioners.

[To Evidence of Lindsay G. Thompson]

B 2.

Proposed new legislation for Regulation of Oyster Culture.

I HAVE made this a separate Bill, to be brought forward after the Bill for the Regulation of the Fisheries shall have been passed into law, and I have applied to it the legal procedure provisions of that Bill. I am not aware of the Commissioners' views on the point, but I myself should much prefer to have both Bills embodied in one enactment, and, if approved, this can be very readily done now.

Section 1 defines the meaning of the terms used, and, as in the Fisheries Regulation Bill, care has been taken to adapt the terms to the provision in the section, so as to reduce the verbiage and supply the precise meanings intended.

Section 2 repeals the existing enactment—the Oyster Fisheries Act, 1888.

Section 3 prescribes the conditions on which leases may be issued. It is similar to section 4, Oyster Fisheries Act, except that it provides a minimum of area to be leased and of rental to be charged.

Section 4—Notice before granting a lease—is identical with section 5, Oyster Fisheries Act.

Section 5, which is a new provision, prohibits the removal of oysters from any applied for area. The necessity for this has for a long time been apparent.

Section 6, requiring that lessees taking up new area shall not be in arrear with their rents, is also a new feature, and will doubtless commend itself.

Section 7, as to forfeiture for mismanagement, is practically the same as regulation 28, Oyster Fisheries Act. It seems desirable to include it in the statute.

Section 8—Penalties in respect of injuries to leased areas—is practically the same as section 6, Oyster Fisheries Act, but, going beyond that section, it provides against the straying of cattle, lopping of mangroves, &c.

Section 9—Revocation of leases in certain cases—is practically identical with section 7, Oyster Fisheries Act.

Sections 10, 11, and 12—Declaring Public Oyster Reserves—Oysters not to be dredged after sunset—Penalty on burning oysters for lime—are practically the same as sections 8, 10, and 12, respectively, of the Oyster Fisheries Act.

Section 13 is an amplification of the power to close oyster beds taken in section 14, Oyster Fisheries Act.

Section 14—Penalty for unlawful dredging of oysters—is based on section 9, Oyster Fisheries Act, but its provisions are extended to oysters on Crown lands not under lease.

Section 15, like section 15 in existing Act, allows persons to take oysters for their own consumption, *but on the spot only*. It likewise prohibits the taking of oysters for such purpose if in spawn or spat.

Section 16—Penalty on disorderly persons—is a new section, and is suggested by experience.

Section 17 provides for the making of regulations, and is generally similar to the like section in the existing Act.

Sections 18, 19, and 20—Instruments to be used in evidence, larceny from contiguous oyster beds, and application of certain provisions of the Fisheries Regulation Act—are similar, respectively, to section 66 (part of), Fisheries Act, 1881; section 63, Fisheries Act, 1881, and section 18, Oyster Fisheries Act.

52nd VICTORIA, 1889.

A BILL for the more effective protection of Oyster Culture and the regulation of Oyster Fisheries.

Preamble

WHEREAS the existing statute law for the promotion of Oyster culture and the regulation of Oyster Fisheries is found to be insufficient for its purposes, and it is expedient that such law should be repealed, and more effective measures adopted for the protection of persons holding leases under it, and of the deposits of oysters on Crown lands not under lease. Be it therefore enacted by the Queen's Most Excellent Majesty, by and with the advice and consent of the Legislative Council and Legislative Assembly of New South Wales in Parliament assembled, and by the authority of the same, as follows:—

Short title and interpretation

1 This Act may be cited as the "Oyster Culture Act of 1889," and for the purposes thereof the expressions—

"Commissioners" means the Commissioners of Fisheries

"Governor" means the Governor with the advice of the Executive Council

"Inspector" means any inspector or sub-inspector of Fisheries, or inspectors *ex officio* appointed under the "Fisheries Act, 1881," or the "Fisheries Regulation Act, 1888"

"High water mark" means the mean line between high water at spring and at neap tide

"Prescribed" means prescribed by this Act, or by regulations made thereunder

"Foreshore" means the portion of Crown lands situate between the line of high and low water mark

"Lease" means any lease issued under this Act or the Act hereinafter repealed

"Lessee" means any person holding a lease for oyster culture under this Act or the enactment hereinafter repealed

"Oyster" means every kind of oyster of and above the size which from time to time by regulation under this Act may be declared to be marketable

"Spat" means the spat, blood, and ware of every kind of oyster of and below a size which from time to time by regulation under this Act may be declared

"Leased area" means any portion of land leased for oyster culture under this Act or the Act hereby repealed

"Lawful authority" means an authority the nature and effect whereof must be proved by the person who sets it up by way of exemption

2. The Act forty-eighth Victoria, number six, is hereby repealed, but no act done, offence committed, or proceeding commenced before the passing of this Act, under such enactment shall (save as is hereinafter expressly enacted) be affected by the repeal thereof. All regulations and proclamations made under the authority of such repealed enactment shall be, and until rescinded by the Governor as hereinafter provided continue to be, of the same force and effect as if this Act had not been passed.

Repeal of enactments.

3. Oyster culture leases of Crown lands in any tidal waters, or in any lake or lagoon communicating therewith, may, on application, be granted by the Governor. Such leases shall be subject to the conditions and provisions following:—

Application for leases of Crown lands for oyster-beds or layings.

- (i) In any case where two or more persons have applied for the same area the application to be first dealt with shall be that which was first lodged; and if several such applications were lodged at the same time the right to priority shall be determined by lot in such manner as the Commissioners shall direct. If after the satisfaction of any application entitled to priority any residuary area remains, such area may be allotted to the applicant next in order of time, and so on.
- (ii) The term of any such lease shall not exceed fifteen years, renewable from time to time, on the application of the lessee during the twelfth year of the term, if the Governor shall be satisfied after report by an Inspector to the Commissioners that the area leased is fairly stocked with oysters, and has been properly worked in accordance with the conditions of the lease and the regulations.
- (iii) No leased area measured along the foreshore shall be less than two hundred nor shall exceed two thousand linear yards, unless upon special recommendation of the Commissioners the Governor shall think fit to enlarge such length. But nothing in this section contained shall prevent the Governor from granting leases of areas containing natural beds or deposits of oysters according to prescribed dimensions and areas; provided that no such area shall be less than five acres nor exceed twenty-five acres, or be leased at a less annual value than two pounds per acre.
- (iv) The annual rent shall be at the rate of not less than twenty shillings for every linear hundred yards or portion thereof, measured along the foreshore in the prescribed manner; and in any case where the foreshore on both sides of a tidal water is included in a lease such foreshore shall be measured on both sides for the purposes of ascertaining the rent, which shall be calculated from the date of approval of application.
- (v) Leases may also be disposed of by auction or tender should the Governor at any time so direct.
- (vi) Occupation under any lease shall not give any right to the lessee to occupy or use any portion of the Crown lands abutting on but not included in his lease except for such purposes and during such times as may be prescribed.
- (vii) Any leased area may be described in the lease by reference to posts, stakes, buoys, marks, or natural features showing the limits of such leased area in a manner sufficient to allow of their identification.
- (viii) Every such lease shall vest in the lessee, his executors, administrators, and assigns all oysters within the area leased, and as well the exclusive right, during the currency of the lease, of laying and planting oysters on, and of dredging and taking oysters from, the area leased, but subject always to the several provisions of this Act and the right of any inspector or authorized officer to enter upon such area for any authorized purpose.
- (ix) The Governor may, if recommended by the Commissioners, accept a surrender of a lease, after the third year of its currency, in any case where it shall appear, to the satisfaction of the Commissioners, that oyster culture cannot be carried on upon the leased area with any reasonable hope of success, or where, from any other reason, the Commissioners shall report in favour of such surrender.
- (x) Every such lease shall be subject to such conditions and provisions as may be prescribed by the regulations or approved by the Governor.

Every leased area shall be subject to all reclamation rights conferred by the ninth section of the "Crown Lands Act, 1885," or any Act amending the same.

4. Before any such lease, applied for under this Act shall be granted, the Commissioners shall cause a notice of the application to be inserted in the *Gazette*, and in some newspaper circulating in the Police District within which the land applied for is situated. And any person may, by memorial to the Commissioners within thirty days after the date of such notice, pray that the lease applied for be not granted on grounds to be therein stated.

Notice before granting lease.

5. All oysters within the limits of any area for which application to lease has been made in accordance with the regulations under this Act shall, for the purpose of protection, be deemed to be in the actual possession of such applicant. And all oysters removed without lawful authority by any person from any such applied-for area may be seized by any Inspector. And any person who shall be found dredging, taking, or attempting to take oysters from any such applied-for area, shall incur a penalty not exceeding twenty pounds and not less than five pounds, and all oysters found in his possession shall be deemed to be oysters unlawfully taken by him, and shall, on his conviction, be delivered to the applicant for such area.

Property in oysters, &c.

6. Any lessee who shall be at any time in arrear with the rent due on any one or more leased areas shall, notwithstanding anything in this or the repealed Act provided, not be entitled to take oysters from off such areas, or to apply for a further area until such overdue rent shall have been paid.

Lessees in arrear with rent not to apply for further areas.

7. Upon receipt of a report by an Inspector that a leased area is being so stripped of oysters or otherwise mismanaged by the lessee that the production of oysters thereon has, in such Inspector's opinion, been so reduced as to threaten its destruction as an oyster-bearing area, further dredging may be thereupon stopped by the Commissioners, and the Commissioners may call upon the lessee to show cause why they should not recommend the Governor to declare the lease of such lessee to be forfeited. And upon the receipt of a recommendation by the Commissioners, recommending the forfeiture of any such lease, the Governor may, by notification to the *Gazette*, declare the same to be and the same shall thereupon be forfeited accordingly.

Forfeiture for mismanagement.

8. It shall not be lawful for any person other than the lessee, his agents and servants, within the limits of any leased area to do any of the following acts, viz. :—

Penalties in respect of certain injuries, &c., to leases.

- (i) To take or in any way disturb or interfere with any oysters without the consent of the holder of the lease.
- (ii) To allow cattle to stray, to cut or lop mangroves or any timber.
- (iii) To deposit or remove any stone, ballast, rubbish, or substance.
- (iv) To dredge or drag with any implement, unless by direction of the Commissioners, or the proper officer of the Department of Harbours and Rivers, or the Marine Board, and in any such case on payment of compensation for damage done (if any).
- (v) To use any implement of fishing except a line and hook.
- (vi) To place any implement or thing likely to injure oysters, except for a lawful purpose of navigation or anchorage.

And if any person does any act in contravention of this section he shall be liable for the first offence to a penalty not exceeding five pounds, and for the second offence to a penalty not exceeding ten nor less than five pounds, and for a third or subsequent offence to a penalty of twenty pounds. And shall be liable to make compensation to the lessee for all damage sustained by such lessee by reason of such person's unlawful act, and in default of payment the same may be recovered by the lessee in any Court not incompetent by statute in respect to the amount or nature of the claim, and whether such person has been convicted of an offence under this section or not.

9. If it shall appear to the Commissioners that any lessee has not within a period of two years from the date of his lease taken proper measures to carry out the condition of his lease, or that upon inspection by any inspector appointed under this Act the condition of the leased area is such as to disentitle the lessee to a renewal of the lease, they may recommend the Governor to revoke the lease. And the Governor shall have power to revoke the same accordingly by notification in the *Gazette*, and upon the publication of such notification all rights and privileges granted by such lease, and the unexpired term thereof, shall cease and determine. Provided always, that before making such recommendation the Commissioners shall cause a notice in writing, stating their intention to make such recommendation, to be served on the holder of the lease, or in case such person cannot be found, they shall cause such notice to be inserted at least three times in a newspaper circulating in the police district nearest to the area leased, and also to be published once in the *Gazette*. No such recommendation shall be made until after the expiration of one calendar month from service or the publication of such notice in the *Gazette*.

Commissioners may recommend revocation of lease in certain cases.

10. The Governor, by notification in the *Gazette*, may declare any portion of Crown lands, whether applied for under this Act as an oyster lease or not, to be a public oyster reserve, and to be exempt from the power of leasing conferred by this Act, either absolutely or for a limited period, and on the recommendation of the Commissioners in like manner may cancel any such notification wholly or in part.

Portions of certain Crown lands may be exempt from leasing, or be declared public oyster reserves.

11.

Oysters not to be dredged between sunset and sunrise.
Penalty on burning live oysters for lime.
When natural oyster-beds may be closed.

11. If any person shall dredge for or take oysters from any leased area, or from any beds or deposits on Crown lands not under lease, at any time between sunset and sunrise, except under special permit, he shall incur a penalty for every offence not exceeding *fifty* pounds.

12. Every person who shall gather or burn live oysters for the purpose of converting their shells into lime, whether he be the holder of a leased area or not, shall incur for every such offence a penalty not exceeding *fifty* pounds.

13. Whenever the Commissioners report that the whole or any part of any oyster-bearing area, whether under lease under the repealed Act or this Act or not, has by over-dredging or from any other cause been reduced to such a state that the taking of oysters therefrom ought to be suspended, or that the oysters thereon are in such a condition as to be not fit for consumption as food, the Governor may prohibit, by proclamation in the *Gazette*, for any term not exceeding *three* years, the taking of oysters from such area. And if any person shall without lawful authority, at any time during the period mentioned in such proclamation, take or attempt to take oysters from any area described in such proclamation, such person shall incur a penalty not exceeding *twenty* pounds and not less than *five* pounds. And all oysters and the bags containing them, together with all dredging or other appliances for the taking of oysters, found in the possession of any person so offending may be seized, and upon conviction of the offender shall be forfeited to Her Majesty. And the Governor may in like manner rescind any such proclamation, or any proclamation made under the hereinbefore repealed Act, relating to the opening or closing of oyster-beds.

Penalty for unlawful dredging of oysters.

14. Oysters on a public oyster reserve, or on Crown lands not under lease under this Act, also oysters taken therefrom without lawful authority, shall be deemed to be the property of Her Majesty; and if any person, without lawful authority, shall dredge for or otherwise take from any public oyster reserve, or Crown lands not under lease, any oysters, or shall be found dredging for or attempting to take oysters within the limits of such reserve or Crown lands, he shall incur a penalty not exceeding *twenty* pounds and not less than *five* pounds, and all oysters found in his possession shall be deemed to be oysters unlawfully taken by him, and shall, on his conviction, be forfeited to the use of Her Majesty.

Persons may take oysters for their own consumption.

15. Nothing in this Act shall render liable to a penalty any person who takes oysters from any oyster reserve or the foreshore above low-water-mark from the Crown lands not leased under this Act for his own consumption on the spot, unless such oysters shall be in a spawning condition, or shall have spat in quantity attached; in which case it shall be within the discretion of any Inspector to prohibit the taking of oysters from any such Crown lands; and any person who shall take oysters therefrom after being warned against doing so by any Inspector shall, on conviction, be liable to a penalty of not less than *three* pounds.

Penalty on disorderly person.

16. Any person employed by any lessee or applicant under this Act for a lease of land abutting on or near to occupied premises, or any lessee or applicant himself who shall, either within view or hearing distance of such premises, conduct himself in a disorderly manner, or use obscene language, to the annoyance of the occupier or other person on such premises, shall for every such offence incur a penalty of not less than *three* pounds. Proceedings under this section may be taken by and in the name of any person in whose sight or hearing such offence shall have been committed.

Regulations may be made and rescinded.

17. The Governor may, from time to time, make regulations for the purpose of giving effect to the provisions of this Act in all matters of detail whatsoever. And among such purposes shall be included the following, namely:—

- (i) For taking oysters from Crown lands, not under lease, under such limitations as to number of licensed dredgers as the Commissioners shall deem fit, and subject to the payment of the prescribed license fees and inspection, and for the seizure and disposal of seized and forfeited oysters, and oysters unlawfully removed from Crown lands.
- (ii) For marking the boundaries of and periodically inspecting public oyster reserves and leased areas. And to give due effect to the intent of this sub-section every Inspector and every officer duly authorized by the Commissioners shall have a right of entry on all lands whatever for purposes of survey, or of erecting and maintaining beacons or other marks for, or in connection with, the boundaries of leased areas or public oyster reserves.
- (iii) For the allotment or sale of young or foreshore oysters on public oyster reserves and Crown lands, not under lease, to the holders of leased areas.
- (iv) For determining the size of marketable oysters, and the penalties for selling, or exposing for sale, undersized oysters and oysters not in condition fit for food, and for disposing of, or selling oysters, boats and gear, dredges, and other appliances seized or forfeited under this Act.
- (v) For the protection and regulation of public oyster reserves and Crown lands, not under lease, for the limitation and regulation of dredging by divers on such reserves and Crown lands, and for the protection and regulation of all boundary beacons, buoys, or other marks.
- (vi) For compelling lessees to place and maintain a sufficient stock of oysters on their areas, and to return all spat and undersized oysters and oysters not in a condition fit for food, together with all dead shells, cultch, and substances dredged up from beds in such a manner as may be most beneficial for the preservation of such beds, and for enforcing payment of rent overdue on leased or applied for areas.
- (vii) For preventing the destruction of oysters by refuse from saw-mills, paper-mills, gas-works, or by any other deleterious matter, and for prohibiting such matter from being deposited in tidal waters.
- (viii) For preventing lessees and others from disposing of cultch or any dredged refuse so as to impede the access by water to Crown or private land abutting on leased areas.
- (ix) For prescribing the amount of penalties for breaches of any such regulations.

Provided that no such penalty shall exceed *fifty* pounds. And all such regulations shall be published in the *Gazette*, and when so published shall have the force of law, and a copy thereof shall be laid before each House of Parliament within fourteen days after the making thereof if Parliament be then in Session, and if not, then within fourteen days after the commencement of the then next ensuing Session. The Governor may, in like manner, rescind any regulation made, or purporting to be made, under the authority of the enactment hereinbefore repealed which he may consider inconsistent with the meaning or intent of this Act.

What instruments, &c., to be evidence.

18. The production of a lease signed by the Governor or a copy thereof bearing the common seal of the Commissioners shall be conclusive evidence in all Courts as to the several matters contained therein, and that the same was duly issued.

Larceny from contiguous oyster-beds.

19. Whenever a person shall be charged with larceny of oysters from any oyster-bed or laying which may be contiguous to another or others, it shall be sufficient in alleging and proving the place from which such oysters were stolen, to allege and prove that such oysters were stolen from one or other of such contiguous beds or layings, and that the same belonged to, and were in the lawful possession of, one or other of the lessees or owners thereof.

Application of certain of the provisions of the "Fisheries Regulation Act."

20. The sections twenty-nine to forty inclusive of the "Fisheries Regulation Act, 1888," shall be applied to this Act with as full effect as if they had been herein specially enacted. And wherever in the sections so declared to be applied the words "this Act" occur, such words shall be taken to include this present Act or the enactment herein repealed and any regulations made under them.

[To Evidence of Lindsay G. Thompson.]

B 3.

Sale of Forfeited Fishing-nets.

Gentlemen,

Department of Fisheries, 9 January, 1889.

I have the honor to request that you will be good enough to sell by public auction, without reserve, on Thursday, the 17th instant, the forfeited fishing-nets enumerated on the accompanying slip.

I would invite your attention to the foot-note on the slip, and ask that in submitting the nets for sale you will state that they can be legally used only for the purpose specified against each lot.

It is desired that the advertising may be confined to one advertisement in a morning and evening paper.

I have, &c.,

Messrs. Duff and Collins,
Pitt-street, Sydney.

LINDSAY THOMPSON,
Secretary.

TO FISHERMEN AND OTHERS—SALE OF FORFEITED FISHING-NETS.

THE undermentioned fishing-nets, which have been forfeited in pursuance of the provisions of the "Fisheries Act, 1881," will be sold by public auction, at Messrs. Duff and Collins' Auction Sale Rooms, 109, Pitt-street, on Thursday, the 17th instant, at 11.30 a.m. :—

Lot 1.—1	Net, 2½ inch mesh, 18 fathoms long—	Legal for bunt of hauling-net, or wings of garfish-net.
" 2.—1	" 1 "	A legal prawn-net only.
" 3.—1	" 1 "	do do
" 4.—1	" 1 "	Legal for prawn-net only.
" 5.—1	" 1½ "	Legal for bunt of a garfish-net.
" 6.—1	" 2½ "	Legal for bunt of hauling-net, or wings of garfish-net.
" 7.—1	" 3 "	Legal for wings of a hauling-net.
" 8.—1	" 2 "	Legal for wings of a garfish-net.
" 9.—1	" 1 "	Legal prawn-net only.
" 10.—1	" 1 "	Legal for prawn-net only.
" 11.—1	" 2 "	Legal for wings of garfish-net.
" 12.—1	" 3 "	Legal for wings of hauling-net.
" 13.—1	" 2 "	Legal for wings of a garfish-net.
" 14.—1	" 1 "	A legal prawn-net only.
" 15.—1	" 2 "	Legal for wings of garfish-net.
" 16.—1	" 2¼ "	Legal for bunt of hauling-net, or wings of garfish-net.
" 17.—1	" 1 "	Legal for prawn-net only.
" 18.—1	" 3 "	Legal for wings of hauling-net.
" 19.—1	" 2 "	Legal for wings of garfish-net.
" 20.—1	" 2¾ "	do do
" 21.—1	" 4 "	Legal for meshing-net.
" 22.—1	" 3 "	Legal for wings of a hauling-net.
" 23.—1	" 3 "	do do
" 24.—1	" 4 "	Legal for meshing-net.
" 25.—1	" 2¾ "	Legal for wings of garfish-net.
" 26.—1	" 1 "	Legal for prawn-net only.
" 27.—1	" 2½ "	Legal for bunt of hauling-net, or wings of garfish-net.
" 28.—1	" "	A legal hauling-net.
" 29.—1	" 1¾ "	Legal for bunt of garfish-net.
" 30.—1	" 2 "	Legal for wings of garfish-net.
" 31.—1	" 1 "	Legal prawn-net only.
" 32.—1	" 1 "	do do
" 33.—1	" 1 "	Legal for prawn-net only.
" 34.—1	" 2¼ "	Legal for bunt of hauling-net, or wings of garfish-net.
" 35.—1	" 2 "	Legal for wings of garfish-net.
" 36.—1	" 2 "	do do
" 37.—1	" 2 "	do do

LINDSAY THOMPSON,

Chief Inspector of Fisheries.

Department of Fisheries, Sydney, 4 January, 1889.

N.B.—The above described nets, to be sold in pursuance of the provisions of the "Fisheries Act, 1881," are legal only for the purposes specified against each lot.

MEMORANDUM.—Forfeited fishing-nets sold at auction this day, realized £31 13s.—C.D.S.P., 17/1/89. The Chief Inspector of Fisheries. Secn.—L.G.T., 17/1/89.

[To Evidence of Lindsay G. Thompson.]

B 5.

Memorandum from Chief Inspector as to residence for Inspector Grant.

I DESIRE again to bring under notice of the Commissioners the question of providing residences in suitable positions for the use of the Inspectors. I am quite sure that if the men were judiciously located, the supervision would be much more effective than it is at present.

The particular case I have in view, and which, with the Commissioners' approval, might be undertaken as an experiment, is that of Assistant Inspector Grant.

This Inspector has to remove from his present house, as it is in process of demolition by white ants, and he represents that, except at Botany, he cannot find other suitable quarters.

To locate him at Botany would mean the cessation of further oversight of the closed waters of George's River.

On a peninsula near the railway bridge are reserves half an acre, on one of which might be obtained, and on it, a weather-board house of four rooms and out-offices erected at comparatively small cost. If a rental calculated on a percentage of the cost were charged to the Inspector, there would be no loss to the Government, and the Fisheries interests would be better served.

I have similar views in respect to other waters in the Home Fisheries, especially the Port Jackson tributaries, if the Commissioners would entertain the idea.

LINDSAY THOMPSON,
Secretary.

Department of Fisheries, 16/1/89.

Commissioners' minute.—Defer for the present, 16/1/89. Submitted to the Commissioners, 27/3/89. *Commissioners' minute*.—Bring the subject forward again, and as applicable to cases where the Inspector cannot find quarters for himself.—27/3/89. End of April.—L.G.T., 28/3/89.

Transference of Inspectoral Staff—Fisheries Department.

I PROPOSE for the consideration of the Commissioners of Fisheries the following disposition of the Inspectoral Staff of this Department. I take the coastal waters in the order of their ascertained productiveness:—

Lake Macquarie—Assistant-Inspectors Tyler and Boyd.

George's River—Assistant-Inspector Grant and Boatman Aldrich.

Lake Illawarra—Assistant-Inspector Peter Smith.

Hawkesbury River—Assistant-Inspectors Curan and D. W. Benson.

Brisbane Water and Tuggerah—Assistant-Inspector Cain and Boatman Hespce.

Port Stephens—Assistant-Inspector Otway and Boatman Scott.

Newcastle and Hunter River—Assistant-Inspector Charles Gordon.

Port Jackson—Assistant-Inspector Smithers and Boatmen Glading, Hellings, and Young, Engineer.

Travelling Inspector for the coast north of the Hawkesbury—Mr. Livingstone Mann.

Travelling Inspector for the coast south of Botany—Inspector T. Temperley.

Inspector of Inland Waters—Inspector G. G. Benson.

In framing this transference I have had in view the facts that the oyster-beds having for the most part been leased, and the royalty charges abolished, the services of the Inspectoral Staff could be employed to better advantage if concentrated within certain limits adjacent to the metropolis.

I have been guided also by the opinion of the Commissioners that the public interest would be served by a removal of the inspectors from their present respective locations to other districts.

Boyd, Grant, and Cain.—The only inspectors whose removal I do not advocate are Messrs. Boyd, Grant, and Cain. I consider these men to be capable of best service in the waters they are at present supervising.

Smithers.—Mr. Smithers properly belongs to Twofold Bay, but as he has been so long at head quarters, and is rendering such effective service, I am regarding him as already attached here.

Tyler.—Tyler is a valuable officer. His removal from the Manning River to assist in the supervision of the extensive waters of Lake Macquarie, and from which our largest fish supply is obtained, would be obviously an advantage.

Peter Smith.—Peter Smith is supposed to be considerably interested in some of the oyster leases at the Hawkesbury, his present district; and although there is not actual proof that this is so, yet the presumptive evidence seems enough to imply the desirableness of removing him to a district where his duties would not clash with his supposed interests. The case will be met by placing him at Illawarra Lake, in the room of Inspector D. W. Benson.

D. W. Benson, Henry Curan.—Some few months since D. W. Benson was for a time placed in special service at the Hawkesbury, and showed considerable aptitude in his manner of performing it. I propose to place him permanently at the Hawkesbury, in conjunction with Inspector Curan, who is at present stationed at Newcastle.

Charles Gordon.—The Newcastle and Hunter River Fisheries, I suggest, should be placed under the care of Charles Gordon, at present stationed at the Shoalhaven. I consider Gordon to be an efficient officer. His duties at Newcastle would involve the checking and inspection of oysters arriving from the upper portion of Port Stephens, and the oversight of the fisheries in the Hunter River and its tributaries.

C. H. Otway and B. Scott.—I propose the removal of Inspector C. H. Otway and boatman Scott from the Karuah River, at the head of Port Stephens, to Nelson's Bay, at the Heads, in order that the supply of fish captured there may be more systematically supervised.

Fred. Smithers, Glading, Hellings, and Young.—I advise the permanent retention of Mr. Smithers at head quarters, where he has already proved himself very useful. He should be assisted by the present boatmen—Glading and Hellings—and, with the aid of the steam-launch now under repair and alteration, should exercise an oversight of Botany and the Hawkesbury.

T. Mulhall.—Should it be that Inspector Mulhall will be retained in the Service notwithstanding his advanced age, I think that his duties should be confined to an oversight of the fish at the fish-market and on the wharfs.

On the general management of the Port Jackson Fisheries I propose later on to submit special recommendations.

Mr. Livingstone Mann.—I know it is the intention of the Commissioners to nominate Mr. Livingstone Mann as a travelling Inspector of Fisheries. I have done so therefore in this paper; but as the oyster-bearing waters are not only each in themselves so extensive, but range along the whole seaboard of the Colony, I consider a second travelling Inspector to be necessary.

Thomas Temperley.—For this second Inspectorship I know of no one more suitable in point of intelligence than Inspector Temperley; and if he be appointed to oversight of the coast south of Botany, the objection which, consequent upon his supposed interest in oyster-culture leases in northern waters, might be taken to his being placed in such a position would, I think, be met, and at the same time a capable officer retained to the Department.

G. G. Benson.—As Inspector for Inland Waters Fisheries under the Inland Waters Fisheries Act of 1887, regarding the administration of which nothing has so far been done, I propose Inspector G. G. Benson, at present located at the Clyde River.

Beyond a visit or two to Lake George I have not been afforded an opportunity of acquainting myself with the Inland Fisheries, consequently I am not in a position to suggest a location for Mr. Benson. I should prefer by personal visit and inquiry to ascertain the needs and conditions of these fisheries, so that I could make recommendations with some degree of confidence.

Under an arrangement such as this, it will be possible to dispense with the services of the following officers:—

H. C. Windeyer, Assistant Inspector at Port Macquarie.....	£108
J. H. Massingham, Boatman, Clarence River.....	108
J. Laman, Assistant Inspector at Nelson's Bay.....	20

And thus effect a saving in expenditure of..... £236

By

By the transference of Inspector Benson to a position under the Inland Waters Fisheries Act, I count a further saving in expenditure of £240, the amount of his salary. I am warranted in quoting this as a saving, because his services under the Fisheries Act will be thus dispensed with, and it may fairly be assumed that special provision will be made for the administration of the new Act.

This Act was introduced to Parliament by a private member, quite independently of the Fisheries Commission. Manifestly then its working ought not to be made a charge upon the Fisheries vote.

I may here invite the Commissioners to consider the desirableness of dispensing with the services of those pilots and others who are paid £20 per annum each for holding the appointment of acting Assistant Inspectors of Fisheries.

Their duties proper, which compel them to a constant lookout seawards, prevent them from exercising more than a very nominal oversight of the fisheries in their respective waters. The principal service they have been able to render to this Department has been the receipt and transmission of royalty on oysters. This royalty charge having been abolished I see no reason for the retention of these officers; any small service which from time to time might be required on any of the remoter waters, could be rendered by the police, or by one of the travelling inspectors. A still further annual saving to the Department of £160 would thus be effected.

By reference to the list of the Inspectors staff the Commissioners will observe that in this reduction I have not included Frederick Nelson, the Acting Assistant Inspector, at Lake George, nor likewise George Baker, who holds the like office at Sydney, and whose appointment the Commissioners only recently recommended.

I have only now to add for convenience of reference, a tabulated statement showing the savings which the adoption of the suggestion herein made will effect.

Salaries proposed to be abolished :—	
Inspector J. J. Benson, Clyde River	£240
Assistant-Inspector Mulhall, Sydney	150
Acting Assistant Inspector Windeyer, Port Macquarie	108
Boatman Massingham, Clarence River	108
Acting Assistant Inspector Laman, Port Stephens	20
Eight Acting Assistant Inspectors at Pilot Stations	160
To this amount I add the total of salaries in the Clerical staff, also proposed to be dispensed with	313
	£1,099
Less salary required for travelling Inspector	200
	£899

Fisheries Department, 29 February, 1888.

Since writing this report, I have learned that an extensive fishery, with direct steam communication with Sydney, is about to be established at Cape Hawke; this will require oversight, and in that case it will be necessary to keep Inspector Tyler in his present position, and to retain H. Massingham, the present boatman at the Clarence River, stationing him at Lake Macquarie.

I saw Massingham when at the Clarence, and formed the opinion that he is an active and intelligent officer.

If it be decided to adopt this suggestion the contemplated saving in expenditure will be reduced by £108.

[To Evidence of Lindsay G. Thompson.]

B 6.

Chief Inspector of Fisheries.—Proposing the introduction of American Salmonoids into New South Wales waters.

I DESIRE to suggest that an attempt be made to introduce some species of the American salmon into New South Wales waters and I urge immediate consideration of the subject upon the Commissioners, because (if favourably entertained), unless arrangements are concluded at once, there will be a possibility of the present season being lost.

The species I propose are the Californian salmon, *Salmo quinnat*; the Schoodic salmon, *Salmo sebago-salar* (var.); the Californian Mountain or Rainbow trout, *Salmo irideus*.

Amongst the places into which the quinnat has already been introduced are New Zealand and Victoria, and even the Sandwich Islands, but with what success I have not been able to precisely ascertain. I believe, however, its acclimatization to New Zealand has been accomplished. Some of the characteristics of this fish are hardness, greater vitality, and more rapid growth than the English salmon; also greater capability of development in waters of a comparatively high temperature, such as would be certainly fatal to the English species; each of these characteristics seems to point to this fish as eminently suitable to our waters, and coupled with the fact that both as a food-fish, and for purposes of sport, it is considered quite the equal of the salar, its acclimatization appears very desirable.

The Schoodic salmon, so named from its habitat, the Schoodic Lakes, is but a variation from the normal type of the salar, its peculiarity being that it has lost its migratory instinct, and propagates and thrives in waters remote and separate from the sea; its growth is more rapid than that of the salar, and the flesh is described as rich and of a more delicate flavour. This fish is much sought after in the United States, taking perhaps in public favour the lead of all fresh-water fishes species. According to the waters in which it is placed, it reaches a weight of from 5 lb. to 12 lb., ranging in exceptional cases as high as 18 lb. and 20 lb. It has a preference for deep streams, and is very highly prized for food.

The Rainbow Trout (*irideus*) is a hardy game fish and it too will thrive in streams having a higher temperature than is suitable for the common trout (*fario*). It also hatches out in larger percentage, it is not as handsome as the *fario*, having no canine specks, but it lives well in captivity, and grows rapidly.

It may be fairly assumed therefore that these fish will readily adapt themselves to our waters—and if the Commissioners, regarding my proposal in a favourable light, will invite the Colonial Secretary to procure a stock of ova from California or New Zealand (if, as I believe is the case, they are already acclimatized there), I have little doubt of being able to secure a successful hatching; I am progressing very favourably with the trout-hatching apparatus and see no reason to apprehend failure.

I wish however to put on record that I should not be satisfied to have the fry liberated as was done with the supply obtained from Victoria last October. I think that to insure success it is essential to establish ponds for the trout, and for the salmon also (if we are to have them), in some suitable locality, and I am inclined to propose the selection of a spot on the Upper Nepean River at as high an altitude as can be obtained, so that eventually the Hawkesbury River may be available as a means of passage to the sea. I claim this course as far preferable to exposing the fry to the risk of destruction by other fish and unknown enemies.

When they become of an age to protect themselves, I should be inclined to liberate some, retaining a portion in the ponds as stock fish for purposes of observation as well as comparison of habits and development. The cost of constructing ponds which, by the way, are already established in Victoria, New Zealand, and Tasmania, need not be great, and all the oversight and care necessary could be given, for the present at any rate, by one man.

I have of late been bestowing much attention to this matter of trout and salmon culture, and I seem to have such a confidence of success that I do not hesitate to submit it to the notice of the Commissioners, very respectfully urging the desirability of immediately securing the consent of the Colonial Secretary towards making the attempt on the lines I have suggested.

As the quinnat spawn in August very early application for the ova becomes imperative.

Department of Fisheries, 31st July, 1889.

LINDSAY G. THOMPSON,
Chief Inspector of Fisheries.

R. SEYMOUR.

[To Evidence of James J. Macfadyen.]

D.

THE following has been sent to the Honorable the Colonial Secretary, and is now printed for distribution amongst the Members of the Legislative Assembly and the representatives of the people, and we crave their careful consideration with the view of having removed the many disabilities under which this great native industry languishes :—

NEW SOUTH WALES FISHERMEN'S ASSOCIATION.

To the Right Honorable Sir Henry Parkes, K.C.M.G., M.L.A., Colonial Secretary for New South Wales, &c.

Sir, Town and Country Chambers, Elizabeth-street, Sydney, 24 March, 1888.

In accordance with a desire expressed by yourself to a deputation which waited upon you on Friday, the 17th February last, that you should be furnished with written particulars of certain grievances then mentioned to you, we now do ourselves the honor to place before you such records for your consideration, to enable you to judge as to the merit of our complaints.

First—As to the closing of Port Hacking.—We would point out to you, that though this place has been closed so long, it is one of the most important for net-fishing, in consequence of its close neighbourhood to Sydney.

Port Hacking—the fish in which are mostly of a migratory character—is not a breeding-place, as may be shown by the bare sandy nature of the bottom, and the strong run of tide, which would prevent any spawn from remaining even if placed there by the fish; but the adjacent rivers, as the natural spawning and breeding ground in this locality, should be closed.

In fine weather, the school fish coming in from the southward, go into the harbour and continue on into the river, and in both arms, or branches of the river, deposit their spawn. Having done so, and immediately on the return of stormy weather, the great majority, if not all of the fish, leave again for the ocean.

In stormy weather, the fish entering the harbour do not proceed to the river at all; but, making a circle within the harbour, head again for the ocean, close by the Oaks, and are lost as food, proceeding to the ocean on their journey northwards.

Such prohibition, therefore, is no protection to the fish; and, as can be adduced by abundant proof, when net-fishing was allowed in Port Hacking, the fish were more plentiful than they are at present, after being so long closed. Yet, while the fishermen are so debarred from using these waters, private persons have boats—their own or otherwise—for fishing purposes; and frequently, persons, though prohibited, have used dynamite, &c., which, when used, destroys more fish, spawn, &c., than would supply the markets of Sydney.

Second—

Second—As to the closing of George's River.—This river nearly takes second place to Port Hacking, inasmuch as it is the only refuge for the fishermen in boisterous weather, and is the only sheltered place in that locality.

George's River is teeming with fish, which if not caught, will, like their fellows in Port Hacking, disappear on the return of stormy weather, and be lost to the fishermen and, of course, to the public.

This river should be open from the mouth to the Saltpan Creek, because it is above this point on the river that the fish deposit their spawn and breed. From Saltpan Creek to the head of the waters of the river whereon the spawn is deposited, there is from 20 to 30 miles of deep water, exclusive of inlets, creeks, bays, &c., and with such an area of closed waters for spawning and breeding purposes, the opening of the river to the point named—viz., Saltpan Creek—can in no way whatever interfere with the breeding, the increase in number, or the natural spawning ground of the fish.

With regard to the *Wynora River*, the greater portion of it is a natural breeding ground, and, on account of the rough nature of the bottom, and great depth of water, cannot be disturbed by fishermen: However, below the crossing place it should be left open, as on account of the strong run of tide preventing the deposit of spawn, the working of this part of the river cannot interfere with the spawning ground or the breeding of the fish; but further, in the hotter months of the year, neither of the above rivers can be worked on account of the great quantity of blubber floating in the water, which effectually prevents the fishermen from working, as nets and gear, worked where this matter is, will be entirely destroyed.

Though these rivers have been closed to fishermen, private boats are in the habit of getting from fifteen to thirty dozen of whiting per boat in a single day, and there are dozens of boats daily on the river. Again, many of these people dig holes in the shoal places at the mouth of the river for the purpose of getting worms for bait. These heaps of sand, and the holes alongside, destroy the natural hauling grounds of the fishermen in that portion of the river, now open to them.

Third—As regards the closing of the Rivers and Tributaries of Port Jackson.—The experience of men working in these waters proves that closing the river—from Gladesville bridge upwards on the main river, about 50 miles of foreshore; the whole of Lane Cove from its opening, some 30 miles of foreshore; Iron Cove, above bridge, about 8 miles of foreshore; Johnson's Bay, from Glebe Island bridge upwards, an extent of some 6 miles of foreshore; Middle Harbour, from Spit upwards, an extent of about 50 miles of foreshore, making a total of 144 miles of foreshores reserved from fishing—is too great an area to reserve, more particularly as a great extent of the open waters or foreshores are taken up by reclamations, moorings, and other purposes, precluding the possibility of being used by net-fishing. These latter act in themselves as breeding grounds, and it would be desirable in the interests of the fishermen, as well as the public generally, that the above reservations should be considerably reduced in extent, when it can be proved that doing so would not in the slightest degree interfere with the breeding, spawning, or accumulation of the fish. Consequently, we would suggest that the limits for reservations should be as follows:—The main river from Ryde bridge upwards, and Lane Cove from the bridge upwards.

Middle Harbour.—These waters are very limited in hauling grounds above the Spit, and the foreshores being very steep, nets cannot be used. The only suitable and practicable place for hauling is up the main arm to a point known as "Fishermen's Point," about a mile from the orange groves. We would consider it advisable to close above this point, leaving the whole of the remainder open as we have suggested. The other portions unworkable would, in themselves, be natural reserves. These reservations, however, should be closed only in the winter months, from April to the 1st of October. By this means, the market of the metropolis could be supplied with the freshest of fish, when not procurable from long distances, which, when attempted, has caused a serious loss, and destruction of good edible food.

Experience has taught us that after the summer months the larger fish in their migratory character leave these waters, and during the winter the small fry left behind congregate in the creeks and shoals of the extremities of the rivers and their tributaries, and grow and become marketable in summer. The fish, mullet, which the men are precluded from catching during the summer months—the river being closed—leave the locality at a time when they are caught in such quantities as to become a drug in the market. They are almost unsaleable, and decidedly not profitable. With this knowledge and experience to guide us, the remedy suggests itself—viz., to allow the fish to be caught in the summer months when the market is scantily supplied, and the fish have not commenced to leave the rivers.

The rivers as now reserved, apart from the reasons already adduced, do not allow of the men being able to procure a living, not to speak of supplying themselves with the necessary appliances to carry out their avocation, and keeping same in repair, consequently they have to resort to prawn catching, which has been the only thing that has supported them. Failing this, many of them have had to relinquish their occupation, thus throwing out of employment from eighty to 100 men on these rivers alone, not to speak of the capital lying idle in the shape of fishing gear.

Fourth—As to the closing of Broken Bay and the Hawkesbury River.—The natural hauling grounds are from the Barranjoey into Pittwater, as far as Newport, to its fullest extent on its eastern shores, and thence along the western shores to West Head. From this point on the southern shore, the hauling grounds are very limited. The distance between West Head and Cowan-Cowan is about 5 miles, and on the whole of the shore there is only one place which can be made use of for hauling. Of the waters of Cowan-Cowan, in consequence of the bold nature of the foreshores, no use can be made with the present nets allowed or legalized, and only with certain kinds of nets, which are prohibited, these waters are seldom or ever used by fishermen with the nets, but almost solely for line fishing, and the creeks and tributaries to these waters are seldom or ever used by fishermen excepting in very bad weather. The river on either side of Cowan-Cowan, to the site of the Hawkesbury River bridge, offers little or no facilities for net work. For example, in Porter Bay, where great numbers of fish congregate, it has been experienced that in consequence of the uneven nature of the bottom, fish escape under the nets; consequently, this locality has been almost relinquished by the fishermen.

Danger Island was a very good place to haul nets on, but since the contractors there carrying out the bridge works by building their punts, &c., have staked the place to such an extent, it has become totally unfit for working. The same is applicable to Mullet Creek. In this latter place there remains but one haul, or place that can be used for that purpose. The residue of the river, as far as 1 mile above Mangrove Creek, can consistently be proclaimed open, as from the bridge to this point, there are a number of places which offer themselves as natural reserves for fish unassailable to nets.

Berowra Creek.—As regards Berowra Creek, it would be desirable to have same open to a point known as Craft's Creek. The residue of this creek could be closed, as likewise the upper or extreme portion of these tributaries.

Considering the facilities now offered by rail—between this most important river and the metropolis—every facility should be offered for the fishermen to ply their avocations. The many objections shown as existing in the other rivers, apply to this river also.

Fifth—In re Tuggerah Lakes.—The grievances the fisherman labour under in these waters are numerous. The reserves proclaimed are such as to thoroughly paralyse the industry, in consequence of the hauling grounds, which have, up to the last proclamation, always been left open, being now in almost every instance closed, and the unreserved portions, from their formation of bottom and foreshore—either excessively *weedy*, *shoaly*, *rocky*, and full of *drift-wood*, or *mags*—are in themselves natural reserves, and totally unworkable by nets, or other appliances. The area of the lakes, or rather its foreshores, must at least represent some 60 or more miles, not to speak of creeks, or other inlets. Of this there is fully a third closed to fishing, and it would appear to any observant person that the manner in which these reserves have been worked out, would lead to the belief that no regard or consideration had been taken as to the nature of the locality, its bed, foreshores, &c., but simply carried out haphazard. It is an established fact that the Commission have not had any survey of the lake, consequently are quite ignorant as to its character, and where the reserves should be justly proclaimed.

It can be shown beyond dispute that the greater portion of the open waters of these lakes, unreserved from fishing, are natural reserves unassailable by nets; hence the small fry can grow there undisturbed. The many creeks emptying themselves into the lakes are breeding grounds, and should be kept closed for that purpose, and the whole of the foreshores of the lakes should be kept open. As regards the entrance from the sea to the main or Tuggerah Lake, the current is so strong in its vicinity, that little or no fishing can be done; and further, it can be proved by observation, that a great amount of fish enter and leave the lake through the passage, plainly showing that the lake is not supplied by fish that are spawned or bred in it, but by a mass of fish that enter it from the sea.

In conclusion, we may mention that in consequence of the character of numerous reservations made on these lakes, the fishing industry has been paralysed, and the fishermen compelled to retire, not making sufficient to subsist on—not to speak of keeping their costly gear fit to carry out their calling.

Sixth—With reference to Lake Macquarie.—We would observe that many of the statements made in this communication, when speaking of the other fishing grounds, apply with equal force to Lake Macquarie.

We would, however, desire specially to draw your attention to the act of the Government in selling 9½ miles of the foreshores of this lake to a building society, much to the detriment of the fishermen, as the whole of the 9½ miles of foreshores sold is good hauling

hauling ground. We would, therefore, respectfully request the Government to resume this land, and in no case to alienate the foreshores of any of the harbours, rivers, lakes, &c., of New South Wales (when the ground is not taken up by wharves, or other works of a similar nature), as that would empower private owners to debar fishermen in the pursuit of their calling from using the foreshores.

Length of Nets.—With reference to nets, it is felt to be a great hardship that fishermen should be debarred in open waters from using the length of net they, as practical men, deem necessary to carry on their business.

On some fishing grounds the legal length of net is sufficient, and more than sufficient in many cases, but on other fishing grounds, by reason of the nature of the bottom, the position of the hauling gound, the depth of water, &c.,—to have to use the short legal length—simply means in such cases, that no matter how plentiful the fish may be, a day's work will not return a day's wage. This is incontrovertible, and it may be pointed out in this connection that practical fishermen will take all care that they do not add to their labours, by increasing, unnecessarily, the length of the nets they use. We are not now, in any way, referring to the size of the mesh. Our contention is, that with the necessary restrictions—such as prohibiting the casting of a net from shore to shore, across a river or a creek, &c.,—fishermen ought to be allowed to judge for themselves what length of net they should use under certain circumstances.

And now with reference to what has been said in the preceding remarks, we would say, generally, that the great want felt by the fishermen is that there is too little ground open to work upon, and this, not because it is naturally so, but because, as we believe—and our beliefs in this matter are based upon intelligent and extensive practical experience—that fishing grounds have been closed where closing would have no beneficial effect in the direction intended—viz., the preservation and multiplication of the fish—for the reasons given before, which reasons summarised are: Many of the grounds closed are not spawning or breeding grounds, and therefore the closing of such will not do good in the direction intended; and such places, as we have pointed out in a previous part of this paper, such as Port Hacking, and portions of the rivers, &c., mentioned, should certainly be thrown open as suggested. Again, natural hauling grounds have been closed, and natural reservations have been left open, as witness Tuggerah Lakes. Such actions as these mean to the fishermen simply, that to a lesser or greater extent, they are shut out from their legitimate employment. Sydney harbour, to a very great extent, has been decreased in area to the fishermen by the silting up of the harbour, the amount of ground taken up by moorings, and the foreshores by wharves, &c. Again, some of the places referred to have been closed at the wrong time, and in some cases, one at least, the utility of closing at all is very questionable. For instance, George's River, with its many natural spawning grounds or reservations, apart from the main river, and the tributaries of Sydney harbour, much the same. Why should these places be closed when fish are to be caught, which, if not caught, will, to a very great extent, be lost to those interested—viz., the public and the fishermen; for when the fish leave the rivers, as has already been referred to, they go towards the ocean in such numbers that big catches have to be made in two or three days during the season, and though many are caught, the fishermen receive only a small price for the fish sent into the market. A great portion go bad, as there are more fish than the market can use, and the great body of the fish from the rivers, which if caught at the proper time, and in small quantities, would have kept the market supplied, at a cheap rate, with good edible food, is lost to everyone concerned by proceeding to the ocean.

It is a well known fact that in the summer season great quantities of fish are lost in carrying the fish from long distances to the metropolis.

Again, we would respectfully draw your attention to the existing law, and to that part of it bearing upon the punishments to be inflicted for breaches of the same. We refer to the fact that under certain circumstances the Commissioners are empowered to demand the confiscation of the nets of a fisherman who has broken the law. Surely it is a harsh, not to say cruel law, which takes away from the offender his tools of trade; without which he is, so far as the law is concerned, placed in a position of total inability to earn his living; but what can we think of a law that empowers these same Commissioners who have seized a net because it is illegal, to turn round deliberately and with the sanction of the law sell to whomsoever will buy that which is illegal—viz., the net that they have just seized. We beg to assure you that we do not for a moment desire to excuse the law-breakers, but we do earnestly desire that the law may be altered, and that its administration may be such, that practical fishermen will not be tempted to break laws which their experience and intelligence tell them, to not tend in any way to achieve the ends aimed at, though they, the fishermen, cannot by working as hard as they please within the four corners of the Act, maintain those dependent on them with the necessaries of life, not to speak of its comforts. One of our aims as an association is in the words of the constitution (to which we beg to refer you, and a copy of which is enclosed)—“To have the laws of the Colony, relating to the fishing industry, and to the distribution of fish, put on a fair and equitable basis.” We, as practical men, conversant with the habits of the fish on this coast, the nature of the grounds over which they live and breed, the time and manner of their spawning, &c., are prepared to prove that many of the methods used by the Fisheries Commission for the preservation of the fish, have not been the best methods; rather, we regret to state, very much the reverse. We do not desire to say a word against the gentlemen forming that Commission. We believe that they are gentlemen whose desire it is to deal fairly between the public and the fishermen, but we point out, and we do so with the greatest respect, that however honest their intentions, without practical men on the Commission, they cannot possibly administer the Act intelligently, or indicate wherein the Act is opposed to the very objects for which it was passed. In reply, it may be stated that they have practical officers to guide them, but we beg to state that it is not so in all cases, and when the officers are intelligent practical men, we are safe in saying that they will agree with what we have suggested in this communication as the right way to deal with the different fishing grounds. We therefore beg that you will arrange to have the fishermen represented on the Commission by two of their own number, to be elected by themselves. If this is conceded, a way will be opened to reduce the friction that at present unhappily exists. As an association, our only desire is to have equitable and intelligent laws surrounding the fish industry, for it cannot be in the interests of any body of men more than ourselves to have good laws passed, and see them properly and intelligently administered. Our rules are so framed that we shall be able to act as detectives ourselves, and punish those who would selfishly pursue a course that would be detrimental to the interests of the whole body; and, we would point out, that to preserve from destruction the fish on the coast, comes home with a keener and greater interest to us as professional fishermen than it possibly can to any other body.

We will not here take up your time in giving reasons why we should be represented on the Commission, further than to remind you that “there should be no taxation without representation,” and that is as true to-day as on the day the phrase was first used, and when we tell you that many fishermen—the man from “Tipperary,” notwithstanding—have this year had to pay the tax out of the mouths of their children, you will see that it is a serious item to many of our members.

Official Recognition.—In connection with this association, we beg that you will grant us such official recognition, and give such instructions as will enable the executive of the association to receive from time to time a copy of all proclamations, gazettes, maps, plans, &c., connected with the fishing industry, or in which fishermen, as a body, may be interested, and which in the future may be issued from the Government Departments.

Library.—We have the honor to inform you that for the purpose of carrying out the objects of our association, we are forming a library to diffuse sound practical information among our members. We have many friends who are willing and who have promised to assist us in this matter—amongst whom are several Members of Parliament—and we would now respectfully ask that the Government would be pleased to present to the association such publications in the shape of books, blue books, maps, &c., as are at the command of the Government, and would be useful for the purposes named. They will be well and faithfully kept in our room, at the Town and Country Chambers, Elizabeth-street, and will be placed in the custody of the trustees of the association, which has been duly registered.

Trusting we shall soon hear favourably from you.

We have, &c.,

Commission.

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen, Defender of the Faith, and so forth,—

To our trusty and well-beloved—

ALFRED JOHN CAPE, Esquire, M.A., Solicitor, &c., President ; FREDERICK AUGUSTUS FRANKLIN, Esquire, C.E., J.P. ; THOMAS FRANCIS WALLER, Esquire, J.P.,—

Greeting:—

KNOW YE, that We, reposing great trust and confidence in your ability, zeal, industry, discretion, and integrity, do, by these presents, authorize and appoint you or any two of you, as hereinafter mentioned, to make a diligent and full inquiry into the working of the Casual Labour Board, consisting of The HONORABLE JOHN DAVIES, C.M.G., M.L.C., FREDERICK WELLS, Esquire, and DAVID HOUSOX, Esquire, from the time of its appointment until the twenty-third day of January, one thousand eight hundred and eighty-nine : Into the mode in, and the purposes for, which public moneys have been expended by the said Board, or any members or member thereof, or under their or his authority : Into the manner in which the said Board and the members thereof have performed their duties in that behalf ; and to include in such inquiry, but not by way of restriction of the terms or scope thereof, an examination into the truth of all charges and statements which have been made before Parliament, or before any Select Committee thereof, touching any alleged improper expenditure by the said Board, or any members or member thereof, or under their or his authority, of any public moneys in the improvement of, or the making or construction of roads or other works upon the property of any person, partnership, or Company : And We do, by these presents, grant to you, or any two of you, at any meeting or meetings to which all of you shall have been duly summoned, full power and authority to call before you all such persons as you may judge necessary, by whom you may be better informed of the truth in the premises, and to require the production of all such books, papers, writings, and all other documents as you may deem expedient, and to visit and inspect the same at the offices or places where the same or any of them may be deposited, and to inquire of the premises by all lawful ways and means : And we do give you power at your discretion to procure such clerical and other assistance as you may deem necessary for enabling you duly to execute this Our Commission : And our further will and pleasure is that you do within two months after the date of Our Commission certify to us, in the office of our Colonial Secretary, under your, or any two of your hands and seals, what you shall find touching the premises : And we hereby command all Government officers, and other persons whomsoever within our said Colony, that they be assistant to you, and each of you, in the execution of these presents : And we appoint you the said ALFRED JOHN CAPE, Esquire, to be President of this Our Commission, which said Commission We declare to be a Commission for all purposes of the Act 44 Victoria No. 1, intituled “ An Act to regulate the taking of evidence by Commissioners under the Great Seal.”

In testimony whereof, We have caused these Our Letters to be made patent, and the Great Seal of our said Colony of New South Wales to be hereunder affixed.

Witness, Our Right Trusty and Well-beloved Councillor, CHARLES ROBERT, BARON CARRINGTON, Knight Grand Cross of Our Most Distinguished Order of Saint Michael and Saint George, Our Governor and Commander-in-Chief of Our Colony of New South Wales and its Dependencies, at Government House, Sydney, in New South Wales aforesaid, this twentieth day of February, in the fifty-second year of Our Reign, and in the year of Our Lord one thousand eight hundred and eighty-nine.

CARRINGTON.

By His Excellency's Command,
GEORGE R. DIBBS.

Entered on record by me, in REGISTER OF PATENTS, No. 13, pages 311-12, this twenty-first day of February, one thousand eight hundred and eighty-nine.

For the Colonial Secretary and Registrar of Records,
CRITCHETT WALKER,
Principal Under Secretary.

Instrument of Extension.

CASUAL LABOUR BOARD INQUIRY COMMISSION.

WHEREAS it is necessary to extend the time by which the Commissioners are to make their Report in the above matter: Now, therefore, I do hereby, with the advice of the Executive Council, extend the time by which the said Commissioners are to make such report to and for the period of one month beyond the time in and by the said Commission appointed for such purpose—to take effect from the 20th instant.

Given under my hand, at Government House, Sydney, this 30th day of April, one thousand eight hundred and eighty-nine.

CARRINGTON.

By His Excellency's Command,
HENRY PARKES.

Gentlemen,

Dated 30th April
1889.

Colonial Secretary's Office, Sydney, 30 April, 1889.
In reply to your communication of the 11th instant, I am directed by the Colonial Secretary to transmit herewith an Instrument, under the hand of His Excellency the Governor, with the advice of the Executive Council, extending the time within which the Report of the Casual Labour Board Inquiry Commission is to be made for a period of one month beyond the time appointed for the purpose.

I have, &c.,

CRITCHETT WALKER,
Principal Under Secretary.

A. J. Cape, Esq., M.A.; F. A. Franklin, Esq., C.E., J.P.; and T. F. Waller, Esq., J.P.

Instrument of Further Extension.

CASUAL LABOUR BOARD INQUIRY COMMISSION.

WHEREAS the time appointed for the return of the Commission in the above matter was, by an Instrument dated the 13th *ultimo*, extended for a period of one month: And whereas it is necessary to extend the same still further: Now, therefore, I do hereby, with the advice of the Executive Council, extend the time *with* which the Commissioners are to make their return to and for a further period of fourteen days beyond the time in and by the aforesaid Instrument appointed for such purpose, to take effect from the 20th instant.

Sic.

Sic.

Given under my hand, at Government House, Sydney, this 20th day of May, one thousand eight hundred and eighty-nine.

CARRINGTON.

By His Excellency's Command,
HENRY PARKES.

Sir,

Dated 20th May,
1889.

Colonial Secretary's Office, Sydney, 20 May, 1889.
In reply to your letter of the 17th instant, I am directed by the Colonial Secretary to transmit herewith an Instrument, under the hand of His Excellency the Governor, with the advice of the Executive Council, extending the time within which the Report of the Casual Labour Board Inquiry Commission is to be made for a further period of fourteen days beyond the time appointed for the purpose.

I have, &c.,

CRITCHETT WALKER,
Principal Under Secretary.

A. J. Cape, Esq., President of the Casual Labour Board Inquiry Commission.

Letter Transmitting Commission.

Sir,

F. A. Franklin,
Esq., C.E., J.P.,
and T. F. Waller,
Esq., J.P.

Dated 20 February,
1889.

Colonial Secretary's Office, Sydney, 22 February, 1889.
I am directed by the Colonial Secretary to transmit herewith an Instrument under the Great Seal of the Colony appointing you, in conjunction with the other gentlemen named in the margin, to be a Royal Commission to inquire into the working of the Casual Labour Board, and setting forth the terms in which the inquiry is to be conducted.

2. I am desired to add that His Excellency the Governor, with the advice of the Executive Council, has been pleased to appoint Mr. Charles R. Burnside to be Secretary, and Mr. James Haddon Taylor to be Shorthand-writer to the Commission.

I have, &c.,

CRITCHETT WALKER,
Principal Under Secretary.

Alfred John Cape, Esq., M.A., President of the Casual Labour Board Inquiry Commission.

EXTRACTS FROM MINUTES OF THE PROCEEDINGS of the Royal Commission appointed on 20th February, 1889, to make inquiry into the working of the Casual Labour Board, from the time of its appointment until 23rd January, 1889, into the mode in and the purposes for which public moneys have been expended by the Board, or any members or member thereof, or under their or his authority, into the manner in which the Board and the members thereof have performed their duties, and to include in such inquiry an examination into the truth of all charges and statements which have been made before Parliament or before any Select Committee thereof touching any alleged improper expenditure by the Board, or any members or member thereof, or under their or his authority of any public moneys in the improvement of, or the making or constructions of roads or other works upon the property of any person, partnership, or Company."

MONDAY, 25 FEBRUARY, 1889.

PRESENT :—

A. J. Cape, Esq., M.A., President.

F. A. Franklin, Esq., C.E., J.P.

T. F. Waller, Esq., J.P.

The Commission met at 11 a.m., at Commercial Union Chambers, Pitt-street, Sydney.

The President reported the receipt of a letter from the Principal Under Secretary forwarding the Writ of Commission and notifying appointment of a Secretary and Shorthand writer.

The Commission was read by the President.

The President reported the receipt from the Principal Under Secretary of a letter from Mr. Burrowes, addressed to Mr. J. B. C. Miles, dated 9th February, 1889, which, it appeared from a note thereon, had been referred by the Honorable the Colonial Secretary to the Commission.

It was resolved that application be made to the Hon. the Colonial Secretary for delivery to the Commission of any departmental reports, and all books, accounts, vouchers, order books, letters, and papers bearing on the Inquiry, and any documents that might serve as affording particulars or evidence for their guidance.

Further resolved :—That, in view of the Inquiry which the Commission is directed to make extending to an examination into the truth of all charges and statements which have been made before Parliament or before any Select Committee thereof touching any alleged improper expenditure by the Board, or any members or member thereof, or under their or his authority, of any public moneys, in the improvement of, or the making or construction of roads or works upon the property of any person, partnership, or company, it is essential that the Commission should be furnished with particulars of any such charges and statements which have been made before Parliament or any Select Committee thereof; and that this resolution be communicated to the Hon. the Colonial Secretary, with a request that such particulars may be furnished to the Commission as early as conveniently may be.

The Secretary was instructed to make all necessary arrangements and attend to the official detail, to enable the Inquiry to be proceeded with.

The following letters were written to the Principal Under Secretary :—

1. Acknowledging receipt of the writ of Commission.
2. Asking for all documents, &c., in accordance with the first resolution.
3. Forwarding a copy of the second resolution.
4. Asking for instructions to be given to the Government Printer to carry out all printing.
5. Asking for a supply of O.S. postage stamps.

Further resolved :—That the consideration of Mr. Burrowes' letter to Mr. Miles be deferred, pending the receipt and examination of other relevant papers and evidence.

The Commission deliberated.

The meeting adjourned at 12.30 p.m. until Monday, 4th March, at 2 p.m.

MONDAY, 4 MARCH, 1889.

PRESENT :—

A. J. Cape, Esq., M.A., President.

F. A. Franklin, Esq., C.E., J.P.

T. F. Waller, Esq., J.P.

The Commission met in the Board Room, Colonial Secretary's Office, at 2 p.m.

Mr. J. H. Taylor, shorthand writer to the Commission, attended, and was informed he would be notified when his services would be required.

The President reported the receipt from the Principal Under Secretary of the Auditor-General's letter, dated 8th February, 1889, and addressed to the Casual Labour Board.

Letter read, and resolved that its further consideration be postponed.

The Secretary reported having received a parcel of printed papers from the Principal Under Secretary, in answer to letter, embodying the resolution passed at the first meeting.

Papers numbered 1 to 17 received, read, and considered.

The Commission deliberated as to further proceedings.

The meeting adjourned at 5.33 p.m. until such a day as the President should appoint.

THURSDAY,

THURSDAY, 7 MARCH, 1889.

PRESENT :—

A. J. Cape, Esq., M.A., President.

F. A. Franklin, Esq., C.E., J.P.

T. F. Waller, Esq., J.P.

The Commission met in the Board Room, Colonial Secretary's Office, at 2 p.m.

The President reported that he had called on the Honorable the Colonial Secretary with reference to obtaining the production of all the Casual Labour Board's books, papers, &c.; that he was informed that these books, &c., had been handed to Messrs. Miles and Mason with instructions to close the business of the Board and to report; that the Honorable Colonial Secretary had instructed the Principal Under Secretary to forward to the Commission all papers referring to the Inquiry; that the Principal Under Secretary had undertaken to do so, and also to send Mr. Ormiston, at present engaged visiting the various stations of the unemployed, to give information.

The President also reported having seen the Clerk of the Assembly with reference to the production of the manuscript evidence of the Select Committee on works of unemployed on roads at Hornsby and Holt-Sutherland Estate.

It was resolved to proceed with the examination of witnesses on Monday next, 11th March, and that the following witnesses be summoned :—

F. W. Webb, Esq., Clerk of the Assembly, to produce manuscript copy of evidence of the Select Committee;

Critchett Walker, Esq., J.P., Principal Under Secretary;

Frederick Wells, Esq.; and

David Houison, Esq., Members of the Casual Labour Board.

The Commission deliberated.

The meeting adjourned at 4.15 p.m. until Monday, 11th March, at 2 p.m.

MONDAY, 11 MARCH, 1889.

PRESENT :—

A. J. Cape, Esq., M.A., President.

F. A. Franklin, Esq., C.E., J.P.

T. F. Waller, Esq., J.P.

The Commission met in the Board Room, Colonial Secretary's Office, at 2 p.m.

The minutes of the three previous meetings were read and confirmed.

The Secretary reported having received from Messrs. Mason and Miles, certain books, papers, letters, &c., belonging to the late Casual Labour Board.

The following witnesses were called in, and examined :—F. W. Webb, Clerk of the Assembly, and David Houison, a member of the Casual Labour Board.

It was resolved that the witnesses already summoned, viz. :—Critchett Walker, Principal Under Secretary, and Frederick Wells, a member of the Casual Labour Board, should be examined at the next meeting; and also, that the Hon. John Davies, C.M.G., M.L.C., late Chairman of the Casual Labour Board, should be summoned for Wednesday, 13th March.

The meeting adjourned at 7 p.m. until 2 p.m. on Tuesday, 12th March.

TUESDAY, 12 MARCH, 1889.

PRESENT :—

A. J. Cape, Esq., M.A., President.

F. A. Franklin, Esq., C.E., J.P.

T. F. Waller, Esq., J.P.

The Commission met in the Board Room, Colonial Secretary's Office, at 2 p.m.

The minutes of the previous meeting were read and confirmed.

Critchett Walker, J.P., Principal Under Secretary, was called in, and examined.

Resolved, that Frederick Wells, a member of the Casual Labour Board, be requested to attend to-morrow, Wednesday, at 2 p.m., in accordance with summons already issued.

Resolved, that J. W. Deering and T. C. Hinchcliffe be summoned to attend at 2 p.m. on Wednesday, 13th March.

The Commission proceeded to examine the papers and letters of the Casual Labour Board, and it was resolved that Mr. Franklin be requested to examine all letters, plans, &c., and report to the Commission.

The meeting adjourned at 5.30 p.m. until 2 p.m. on Wednesday, 13th March.

WEDNESDAY, 13 MARCH, 1889.

PRESENT :—

A. J. Cape, Esq., M.A., President.

F. A. Franklin, Esq., C.E., J.P.

T. F. Waller, Esq., J.P.

The Commission met in the Board Room, Colonial Secretary's Office, at 2 p.m.

The Secretary reported that Mr. T. C. Hinchcliffe was waiting for examination in obedience to summons.

The Commission decided to defer other business, and to proceed with his examination at once, in view of the witness being material, and it appearing that he having ceased to hold office, his attendance might not be readily obtained another day.

T. C. Hinchcliffe was called in, and examined.

The Secretary reported the receipt of a letter from W. M. Robertson, offering evidence as to alleged irregularities at National Park, and on Heathcote section.

Further

Further reported that Mr. H. T. Saunderson had called as to certain alleged irregularities in connection with the Casual Labour Board, and that he would forward written statement on the subject to the Commission.

Minutes of previous meeting were read and confirmed.

Mr. Franklin reported progress in arranging plans and correspondence pursuant to previous resolution.

The Secretary reported having called on Mr. Deering, and obtained the only plan he had in connection with the works of the unemployed—being a plan of roads in the Hornsby district.

The President reported receipt of the following letter from the Principal Under Secretary—

Gentlemen,

Colonial Secretary's Office, Sydney, 13 March, 1889.

I am directed to state that the Colonial Secretary desires to be informed how far you have progressed in your inquiry into the proceedings of the Casual Labour Board, and whether any distinct charge or complaint against the members of that Board was submitted to you for investigation by the late Government, as Sir Henry Parkes cannot find any charge or complaint in the papers in this office.

I have the honor to be,

Gentlemen,

Your most obedient servant,

CRITCHETT WALKER,

Principal Under Secretary.

A. J. Cape, Esq., M.A.

F. A. Franklin, Esq., C.E., J.P.

T. F. Waller, Esq., J.P.

The Commission deliberated.

Resolved that the President draft a letter in reply to be submitted to a meeting to be held at 2 p.m. on Thursday, 14th March.

And that reply be signed by the President on behalf of the Commission.

The meeting adjourned at 6:30 p.m. until 2 p.m. on Thursday, 14th March.

THURSDAY, 14 MARCH, 1889.

PRESENT:—

A. J. Cape, Esq., M.A., President.

T. F. Waller, Esq., J.P.

The Commission met at Commercial Union Chambers, Pitt-street, at 2 p.m.

The Commission further deliberated on the Principal Under Secretary's letter of 13th instant.

The President, pursuant to the resolution passed at the previous meeting, submitted draft letter in reply, in the following terms:—

Casual Labour Board Inquiry Commission,

Board Room, Colonial Secretary's Office, Sydney, 14 March, 1889.

Sir, I have the honor to acknowledge the receipt of your letter of the 13th instant, addressed to Messrs F. A. Franklin, T. F. Waller, and myself, stating that the Colonial Secretary desired to be informed how far we had progressed in our inquiry into the proceedings of the Casual Labour Board, and whether any distinct charge or complaint against the members of the Board had been submitted to us for investigation by the late Government, as Sir Henry Parkes could not find any charge or complaint in the papers in your office.

Assuming that that letter was addressed to Messrs. Franklin, Waller, and myself in our capacities as the Commissioners appointed by Letters Patent under the Great Seal of the Colony, on the 20th day of February last, I brought it under the attention of the Commission at the sitting next following its receipt.

I have now to report for the information of the Honorable the Colonial Secretary that the inquiry, which by the terms of the Writ of Commission, embraces an investigation into "the working of the Casual Labour Board from appointment to 23rd of January, 1889, the mode in, and purposes for, which public moneys have been expended by the Board, or any member thereof, or under their or his authority; the manner in which the Board and the members have performed their duties in that behalf; the truth of all charges and statements which have been made before Parliament or any Select Committee thereof, touching any alleged improper expenditure by the Board or any member or members or under their or his authority of any public moneys in the improvement of the making or construction of roads or other works upon the property of any person, partnership, or company," has progressed to the extent of an examination by the Commission of several material witnesses, the consideration and study of numerous books, letters, plans, and records that have been obtained from the office of the Casual Labour Board and other sources, the perusal of the Parliamentary evidence and records relevant to the subjects of inquiry, and the necessary arrangements for obtaining evidence to test the truth or otherwise of several written and verbal statements and charges of a detraction character affecting the Casual Labour Board that have been brought under the attention of the Commission since its appointment.

I have further to report as to the second requisition in your letter now under reply that, on the 25th February last, I caused to be written to you a letter of which the following is a copy:—

Casual Labour Board Inquiry Commission,

Colonial Secretary's Office, Sydney, 25 February, 1889.

Sir, I have the honor, by direction of the President of the Royal Commission appointed to inquire into the working of the Casual Labour Board to inform you that at a meeting of the Commission, held this day, it was resolved, "That, in view of the inquiry which the Commission is directed to make extending to an examination into the truth of all charges and statements which have been made before Parliament or before any Select Committee thereof, touching any alleged improper expenditure by the Board or any members or member thereof, or under their or his authority, of any public moneys in the improvement of, or the making or construction of roads or other works upon the property of any person, partnership, or company, it is essential that the Commission should be furnished with particulars of any such charges and statements which have been made before Parliament or any Select Committee thereof"; and that this resolution be communicated to the Honorable the Colonial Secretary with a request that such particulars may be furnished to the Commission as early as conveniently may be.

I have, &c.,

C. R. BURNSIDE,

Secretary, Casual Labour Board Commission.

The Principal Under Secretary.

On the 27th of February last that letter was returned to me, noted on fold, as follows:—"All papers in the case are forwarded herewith.—C.W., B.C., 27/2/89. The President of the Commission." Accompanying it was a parcel of papers, seventeen in number, being partly papers noted as having "not been laid before Parliament," and other papers which appeared to have been laid before Parliament. These papers are now in the possession of, and have been under the deliberation of the Commission.

They were submitted to the Commission for investigation under the circumstances above stated, and, as is therefore assumed, by or at the instance of the late Government.

The Commission are now diligently engaged in investigating into the charges and complaints appearing on the papers which were so submitted.

I have, &c.,

ALFRED J. CAPE,

President of the Royal Commission appointed to inquire into the working and proceedings of the Casual Labour Board, &c.

The Principal Under Secretary.

which was agreed to, and the President was requested to sign the same.

The

The Secretary reported receipt of further letter from W. M. Robertson, pointing out the nature of the evidence he could give in reference to the alleged irregularities on the part of persons named by him in connection with the Casual Labour Board, and alleging that Mr. Davies was aware of such irregularities.

Letter read and action thereon deferred until further examination of witnesses.

Copy of a letter from Mr. John McElhone to Mr. J. F. Burns, with copy of a letter from J. H. Moore, late time-keeper at Narrabeen, in reference to alleged misappropriation of public moneys, and as to overcharges for rations on public works at Narrabeen, read and considered, and further inquiry thereon deferred until evidence taken.

The Secretary was instructed to examine all the papers and records obtained from the Casual Labour Board Office, and prepare a *précis* thereof to assist the Commission in future examination of witnesses.

The Secretary applied for instructions as to delivering up any papers in his charge.

Resolved, that the Secretary be instructed not to deliver up any papers or letters without the written order of the President.

Resolved, that Mr. F. Wells be requested to attend on Monday, 17th instant.

And that Sir John Robertson, Mr. G. F. Want, and the Honorable John Davies, C.M.G., M.L.C., be summoned as witnesses for Tuesday, 19th instant.

The meeting adjourned at 3 p.m. until 2 p.m. on Monday, 18th March.

MONDAY, 18 MARCH, 1889.

PRESENT :—

A. J. Cape, Esq., M.A., President.

F. A. Franklin, Esq., C.E., J.P. | T. F. Waller, Esq., J.P.

The Commission met in the Board Room, Colonial Secretary's Office at 2 p.m.

The minutes of the two previous meetings were read and confirmed.

The President reported the receipt of a letter from the Principal Under Secretary stating that Sir Henry Parkes desired to be informed how long, in the opinion of the President, the inquiry was likely to last, and pointing out the necessity of despatch.

Letter read and consideration thereof deferred until next meeting.

The President reported the receipt of a letter from Sir John Robertson.

Letter read and Secretary instructed to write to Sir John Robertson that he would be again notified when the Commission desired his attendance.

The Secretary reported the receipt of a letter from Thomas Buckley, stating that a petition purporting to be signed by the unemployed in Mr. Dyson's district, but really signed by permanent men on the roads, and by them in fictitious names for a supply of blue metal spalls, was sent in to the Minister for Works in September, 1888.

Letter read and consideration thereof deferred until evidence further proceeded with.

Mr. Frederick Wells, a member of the Casual Labour Board, was called and examined.

Mr. Wells' examination not being completed, he was asked to again attend on the following day at 2 p.m.

Resolved, that a meeting of the Commission be held on 21st March, at 2 p.m., instead of 20th March.

The meeting adjourned at 7 p.m. until 2 p.m. on Tuesday, March 19th.

TUESDAY, 19 MARCH, 1889.

PRESENT :

A. J. Cape, Esq., M.A., President.

F. A. Franklin, Esq., C.E., J.P. | T. F. Waller, Esq., J.P.

The Commission met in the Board Room, Colonial Secretary's Office, at 2 p.m.

The minutes of previous meeting were read and confirmed.

The President submitted to draft of a letter in reply to the Principal Under Secretary's letter of 16th instant, which, after discussion, was amended and adopted as follows :—

Casual Labour Board Inquiry Commission,

Board Room, Colonial Secretary's Office, Sydney, 19 March, 1889.

Sir, I have the honor to acknowledge the receipt of your letter of the 16th instant, intimating that Sir Henry Parkes would be glad to be informed of the probable time which, in the judgment of the Commission it will occupy.

That letter, which was handed to me on my return to town on Monday, 18th instant, I brought under the attention of the Commission of that day's sitting.

The Writ of Commission, dated 20th February last, under which we derive authority, directs that we certify our finding within two months after its date.

It is most difficult, at this stage of the inquiry, to estimate its probable duration, as one cannot guess the time that the evidence of any known, yet unexamined, witness may necessarily and properly take. My colleagues, however, concur with me in the opinion, from what has already come under our notice, that we will at least require all the time allowed by the Writ of Commission.

While entirely agreeing with the expression of the Honorable the Colonial Secretary's opinion that such an inquiry cannot be protracted to an indefinite period, and being fully sensible—to use the language of your letter—of the necessity for expedition, as well in the interests of justice to those affected as in the saving of public expenditure, we might point out that the Writ of Commission itself expressly defines the period of our action.

Will you convey to the Honorable the Colonial Secretary the assurance of myself and colleagues that we are most solicitous to bring our labours to an end with as much despatch as is compatible with the due fulfilment of the commands laid upon us by the Commission.

The work is not so congenial or attractive as even to suggest a protraction for an hour longer than may reasonably appear necessary with due regard to our responsible duties.

We feel confident that if the various Government Departments, to whom we have proper occasion to apply for information and assistance relevant to the inquiry, will respond to our own efforts to speed the investigation committed to us, the end will be more readily and satisfactorily attained.

I take this opportunity of reminding you that the Commission has not yet received from you, as promised on the 12th instant, "the reports as to certain works done by the unemployed," which you stated in your evidence were in your office, as also the progress report of Messrs. Mason and Miles. I may also add that the Commission has not, as yet, had any funds placed at its disposal to meet the necessary disbursements incurred in the conduct of the inquiry. Until

Until some determination is come to in furtherance of my personal interview with the late Colonial Secretary of the 5th instant, at which you were present, and my letter of 6th instant, the Commission is unable to arrange for necessary visits of inspection to the localities, or for the attendance of such witnesses who may be entitled to expenses.

In addition I gathered from the interview referred to that the Commission was expected to arrange for the payment of the salaries of the secretary and of the shorthand-writer, who were appointed by the Government in connection with the Commission.

I have, &c.,

ALFRED J. CAPE,

President of the Casual Labour Board Inquiry Commission.

Memorandum from Mr. H. F. Sanderson, alleging irregularities in connection with Cook Park Relief Works, read and left in abeyance until further evidence was taken.

Mr. F. Wells, member of the Casual Labour Board, further examined.

Mr. Wells applied for leave for the Chairman or some member of the Casual Labour Board to be present throughout the inquiry, at the examination of witnesses, for the purpose of watching the case on behalf of the members of the Casual Labour Board.

The President stated that the Commission was in the nature of an inquiry, but would endeavour to allow opportunity for explanation.

Mr. Wells pressing his application,—

The President stated that the Commission would take time to consider, and therefore reserved their decision.

Resolved, that Sir John Robertson, K.C.M.G., and Mr. G. F. Want be requested to attend at 2.15 p.m., in accordance with the summonses already issued, and that Messrs. Mason and Miles be summoned to attend at 3 p.m., and Mr. A. Larnach at 4 p.m.

The meeting adjourned at 7 p.m. until 2 p.m. on Thursday, 21st March.

THURSDAY, 21 MARCH, 1889.

PRESENT :—

A. J. Cape, Esq., M.A., President.

F. A. Franklin, Esq., C.E., J.P.

T. F. Waller, Esq., J.P.

The Commission met in the Board Room, Colonial Secretary's Office, at 2 p.m.

Minutes of previous meeting read, and confirmation thereof postponed until the next meeting.

The President reported receipt of a letter from the Principal Under Secretary, as to amount to be placed to the credit of the Commission for expenses.

Also the receipt of a letter from the Principal Under Secretary, forwarding report and returns of the Casual Labour Board and a Progress Report of Messrs. Mason and Miles.

The Secretary reported receiving foregoing letter reports, and returns, at 4.40 p.m., on Wednesday, 20th instant.

Letter read, and consideration of reports and returns deferred.

The Secretary reported the receipt of two parcels of plans and letters from the Hurstville office of the Casual Labour Board.

The Secretary was instructed to examine the same.

The Secretary reported the receipt of a letter from Mr. G. F. Want, stating that he was unable to attend this sitting of the Commission.

The President brought Mr. Wells' application for the attendance of a member of the Casual Labour Board at the sittings of the Commission to watch the interest of the Board under the consideration of the Commission.

The Commission having deliberated.

Resolved that it was inexpedient to grant Mr. Wells' application, and that Mr. Wells' be informed at a subsequent meeting.

The following witnesses were called in, sworn and examined :—Sir John Robertson, K.C.M.G., and Mr. J. B. C. Miles.

Resolved, that Mr. E. A. Rennie, Auditor-General, be summoned for Monday, 25th instant, at 2 p.m., to produce vouchers, pay-sheets, &c., of the Casual Labour Board.

Resolved, that, in pursuance of their former summonses, Messrs. F. W. Webb, G. F. Want, A. Larnach, and W. Mason be requested to attend on Monday, 25th instant.

Further resolved, that Mr. E. M. Burrowes, Mr. G. R. C. Neale, Mr. A. E. Hibble, and Mr. A. Houison be summoned for Tuesday, 26th instant.

The meeting adjourned at 7 p.m., until 2 p.m. on Monday, 25th March.

MONDAY, 25 MARCH, 1889.

PRESENT :—

A. J. Cape, Esq., M.A., President.

F. A. Franklin, Esq., C.E., J.P.

T. F. Waller, Esq., J.P.

The Commission met in the Board Room, Colonial Secretary's Office, at 2 p.m.

The minutes of the two previous meetings were read and confirmed.

The Secretary reported the receipt of a letter from J. H. Moore as to alleged irregularities in connection with the supply of rations on the Narrabeen Relief Works.

Letter read, and its consideration deferred until further evidence taken.

Secretary reported receipt of further letter from Mr. W. M. Robertson.

Letter read, and the Secretary instructed to write Mr. W. M. Robertson thereon.

Mr. F. Wells having been called in, the President delivered the decision of the Commission on his application—refusing to grant it.

Mr. C. Boydell attended on behalf of Mr. F. W. Webb, and produced two Petitions presented to the House by the Hon. J. F. Burns, dated 8th January and 6th March, 1889, respectively; also papers referring to the unemployed work on Hornsby and Holt-Sutherland Estates, laid on the Table of the House on 1st, 8th, 13th, and 14th November, 1888, and 13th December, 1888, and 8th and 11th January, 1889.

The following witnesses were called in and examined:—A. E. Rennie, Auditor-General; Wm. Mason, C.E.; and Mr. A. Larnach.

Mr. A. Larnach's examination not having been completed, he was requested to attend again on the following day at 2 p.m.

Mr. James H. Taylor, shorthand writer to the Commissioner, was granted leave to employ an assistant.

Resolved, that Mr. G. F. Want be requested to attend the following day, and

Mr. J. H. Wood, from M'Lean, Brothers and Rigg, and Mr. J. H. Springall be summoned to attend on Wednesday, 27th March.

The meeting adjourned at 7 p.m. until 2 p.m. on Tuesday, 26th March.

TUESDAY, 26 MARCH, 1889.

PRESENT:—

A. J. Cape, Esq., M.A., President.

F. A. Franklin, Esq., C.E., J.P. | T. F. Waller, Esq., J.P.

The Commission met in the Board Room, Colonial Secretary's Office, at 2 p.m.

Secretary reported receipt from Messrs. Mason and Miles of a number of letter-books and documents connected with the Casual Labour Board.

Mr. A. Larnach, being recalled, was further examined.

The following witnesses were called in and examined:—Mr. G. F. Want; Mr. A. Howlison; Mr. G. R. C. Neale; and Mr. E. M. Burrowes.

Mr. E. M. Burrowes' examination not having been completed he was requested to attend again tomorrow, Wednesday, 27th March.

Mr. A. E. Hibble was requested to attend Wednesday, 27th March, at 2 p.m.

Resolved, that the Commission hold a meeting on Thursday, 28th March, 1889, at 2 p.m.

Also resolved, that Mr. Thos. Wearne and Mr. C. Robertson be summoned for Thursday, 28th March.

The meeting adjourned at 6 p.m. until 2 p.m. on Wednesday, 27th March.

WEDNESDAY, 27 MARCH, 1889.

PRESENT:—

A. J. Cape, Esq., M.A., President.

F. A. Franklin, Esq., C.E., J.P. | T. F. Waller, Esq., J.P.

Dr. F. A. Pockley, M.B., attended, and stated that it was inadvisable that the Commission should visit Mr. Bennett to examine him.

The Commission deliberated.

Further examination deferred, pending reply to letter to the Hon. Colonial Secretary of 3rd instant, and to the President's letter to Sir Henry Parkes of the 13th instant, asking to be informed when it would be convenient for him to attend.

The meeting adjourned at 5.30 p.m.

TUESDAY, 21 MAY, 1889.

PRESENT :—

A. J. Cape, Esq., M.A., President.

T. F. Waller, Esq., J.P.

The Commission met in the Board Room, Colonial Secretary's Office, at 2 p.m.

Minutes of the three previous meetings were read and confirmed.

Secretary reported the receipt of a letter from Mr. C. J. Roberts, C.M.G., M.P., regretting his inability to attend owing to his absence from Sydney.

Secretary reported receipt of a letter from Mr. J. W. Deering as to contract for cutting firewood at National Park.

Secretary instructed to inform him that the Commission would receive and consider any written statement he might wish to make.

Secretary reported the receipt of a letter addressed to the Principal Under Secretary from Messrs. Mason and Miles, and referred to the Commission, *re* payments made to T. Boulden, a ferryman.

Secretary reported the receipt of a letter from Mr. H. T. Sanderson, having reference to his claim against the Government.

Secretary reported that in absence of any reply to the Commission's letter of 3rd instant a further letter was written by direction of the President to the Principal Under Secretary on the 16th instant, as follows :—

Sir,

Casual Labour Board Inquiry Commission, Sydney, 16 May, 1889.

Referring to the letter of the 3rd instant, addressed by this Commission to the Honorable the Colonial Secretary on the subject of extending the time for bringing up their Report on the matters entrusted to them for inquiry, and having regard to the fact that the time expires on Monday next, 20th instant, I am directed to inquire whether any decision has been come to on their application for a further extension.

The Commission think it necessary to examine certain witnesses on the matter mentioned in Messrs. Mason and Miles' letter of 11th instant, and which was on the 13th instant referred by the Honorable Colonial Secretary to this Commission.

In addition, Mr. J. F. Burns, M.L.A., has to-day intimated his desire to give further evidence.

Should the time not be extended, the Commission will be without power to take the further evidence next week.

It is therefore of importance that they should know how to proceed in regard to the issue of summonses for witnesses.

I have, &c.,

C. R. BURNSIDE,

Secretary.

The Principal Under Secretary.

Secretary reported receipt of a letter dated 15th inst. from Mr. J. F. Burns, M.P., addressed to the President, intimating his desire to be further examined, and that

Reply sent by direction of the President informing Mr. Burns that the Commission would meet on Tuesday, 21st instant.

The President reported the receipt from the Principal Under Secretary of the following letter :—

Sir,

Colonial Secretary's Office, Sydney, 17 May, 1889.

I am directed to request that you will be good enough to state for the information of the Colonial Secretary the amount of expenses incurred on account of the Casual Labour Board Inquiry Commission up to the present date, and also whether fourteen days from the 20th instant will be sufficient extension of time to enable the Commission to conclude their labours.

I have, &c.,

CRITCHETT WALKER,

Principal Under Secretary.

The President of the Casual Labour Board Inquiry Commission.

and that the following reply had been sent thereto :—

Sir,

Casual Labour Board Inquiry Commission, Sydney, 17 May, 1889.

I have the honor to acknowledge the receipt of your letter of this date inquiring as to the amount of expenses incurred on account of this Commission up to the present date, and as to whether fourteen (14) days from 20th inst. will be sufficient extension of time to enable the Commission to conclude their labours.

In

In reply, I beg to state that the payments we have made to date for shorthand-writer's fees, Secretary's salary, witnesses, and other incidental expenses of the Commission amount to £333 6s. 9d. Besides this there are outstanding shorthand-writer's fees for work done—account not yet rendered—Secretary's salary for current month, and some minor expenses.

If the Government Printer will be authorized to at once proceed with the printing he has now in hand, and speed the other printing work that will be shortly placed in his hands, I believe a fourteen (14) days extension will be all that is required.

I have, &c.,

ALFRED J. CAPE,
President.

The Principal Under Secretary.

Secretary reported the receipt of a letter dated 20th inst. from Sir Henry Parkes, addressed to the President, being in reply to letter of 13th inst., in which the President asked that Sir Henry Parkes would name a day and hour when it would be convenient for him to attend.

Secretary reported the receipt from the Principal Under Secretary of a letter addressed to the President, enclosing an instrument under the hand of His Excellency the Governor with the advice of the Executive Council extending the time within which to report for a further period of fourteen (14) days.

Letter read, and Secretary instructed to acknowledge to receipt of the same.

The Honorable Sir Henry Parkes, G.C.M.G., M.P., Premier and Colonial Secretary, attended and was examined.

Mr. J. F. Burns, M.P., attended.

Messrs. A. M'Leod, A. E. Hibble, and James Murphy attended for further examination.

T. Boulden was called in and examined.

The Commission deliberated.

It was resolved that no further evidence be taken, and that the Commission adjourn to consider evidence and prepare their Report.

The meeting adjourned at 6.30 p.m. until such day as the President should name.

WEDNESDAY, 22 MAY, 1889.

PRESENT :—

A. J. Cape, Esq., M.A., President.

F. A. Franklin, Esq., C.E., J.P. | T. F. Waller, Esq., J.P.

The Commission met at Commercial Union Chambers, Pitt-street, Sydney, at 2.30 p.m.

Draft Report on one branch of the Inquiry brought up and considered.

The meeting adjourned at 5 p.m. until 2 p.m. on Thursday, May 23rd.

THURSDAY, 23 MAY, 1889.

PRESENT :—

A. J. Cape, Esq., M.A., President.

F. A. Franklin, Esq., C.E., J.P. | T. F. Waller, Esq., J.P.

Commission met at Commercial Union Chambers, Pitt-street, Sydney, at 2 p.m.

Draft Report on Branch of Inquiry, as prepared by the President, brought up, read, and considered.

Several amendments discussed, and matter of approval deferred pending preparation of same, and revision of draft.

Terms of report on Roads Branch of Inquiry debated.

Part of draft as prepared by President, read and considered.

Further consideration postponed to allow of President proceeding with draft.

Meeting adjourned at 7 p.m., until such day as the President should name.

TUESDAY, 28 MAY, 1889.

PRESENT :—

A. J. Cape, Esq., M.A., President.

F. A. Franklin, Esq., C.E., J.P. | T. F. Waller, Esq., J.P.

Commission met at Commercial Union Chambers, Pitt-street, Sydney, at 2 p.m.

Mr. Franklin reported a special inspection he had made of Holt-Sutherland Estate, and roads and other works thereon.

His memoranda and particulars read.

The President brought up Draft Report, which he had prepared.

Read and considered.

Further consideration deferred until printing completed.

The meeting adjourned at 4.30 p.m. until such day as the President should name and the Report printed.

WEDNESDAY, 29 MAY, 1889.

PRESENT :—

A. J. Cape, Esq., M.A., President.

F. A. Franklin, Esq., C.E., J.P. | T. F. Waller, Esq., J.P.

Commission met at Commercial Union Chambers, Pitt-street, Sydney, at 2.30 p.m.

President reported complaint as to certain letters enclosing evidence for perusal, apparently properly directed and stamped, having gone into Dead Letter office.

Secretary instructed to write to Secretary of General Post Office, requesting an inquiry into the matter.

Mr. Franklin brought up memoranda prepared by him, as to work on Holt-Sutherland Estate and Hornsby property, to be schedules B and C to the Report.

Draft Report further considered, and amendments proposed.

Consideration to stand over, to admit of separate perusal of Draft by Members of the Commission.

The meeting adjourned at 4.30 p.m. until 2.30 p.m. on Thursday, 30th May.

THURSDAY, 30 MAY, 1889.

PRESENT :—

A. J. Cape, Esq., M.A., President.

F. A. Franklin, Esq., C.E., J.P.

T. F. Waller, Esq., J.P.

Commission met at Commercial Union Chambers, Pitt-street, Sydney, at 2:30 p.m.

Draft report further considered and amended.

The President reported receipt of a letter from Mr. J. W. Johnson, which was read and considered and the Secretary was instructed to reply thereto.

The meeting adjourned at 6 p.m. until 2:30 p.m., on Friday, 31st May.

FRIDAY, 31 MAY, 1889.

PRESENT :—

A. J. Cape, Esq., M.A., President.

F. A. Franklin, Esq., C.E., J.P.

T. F. Waller, Esq., J.P.

Commission met at Commercial Union Chambers, Pitt-street, Sydney, at 3:30 p.m.

The President reported the receipt of a further letter from Mr. J. W. Johnson as to his firm's connection with the Holt-Sutherland Memorials, which was read and considered.

Also, subsequently the receipt of a document, signed by Messrs. J. W. Johnson, S. A. Want, A.R. Minter, and E. P. Simpson.

Proof of Report as amended brought up and considered.

The meeting adjourned at 5:30 p.m. until 11 am. on Monday, 3rd June.

MONDAY, 3 JUNE, 1889.

PRESENT :—

A. J. Cape, Esq., M.A., President.

F. A. Franklin, Esq., C.E., J.P.

T. F. Waller, Esq., J.P.

The Commission met at Board Room, Colonial Secretary's Office, at 11 a.m.

Minutes of six previous meetings read and confirmed.

Report brought up, approved, and signed by all the Members of the Commission.

Secretary instructed to forward the same with Minutes of Evidence, &c., to the Hon. the Colonial Secretary for presentation to His Excellency the Governor.

Resolved, that a letter be written to the Hon. the Colonial Secretary, and signed by the Members of the Commission, commendatory of the service of the Secretary, Mr. Burnside, and Mr. J. H. Taylor, and Mr. W. R. Pratt, the shorthand-writers.

Resolved, that the President be authorized to arrange as to the disposal of papers and documents, and do all other things necessary for the closing of the affairs of the Commission.

The Commission adjourned at 1:30 p.m. *sine die*.

REPORT.

To His Excellency The Right Honorable CHARLES ROBERT, BARON CARRINGTON, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

MAY IT PLEASE YOUR EXCELLENCY,—

We, Her Majesty's Commissioners, appointed by Letters Patent under the Great Seal of the Colony, dated the 20th day of February, 1889, have the honor to submit to your Excellency the following Report:—

Our Commission authorized and appointed us or any two of us to make a diligent and full inquiry into—

The working of the Casual Labour Board, consisting of the Honorable John Davies, C.M.G., M.L.C., Frederick Wells, Esquire, and David Houison, Esquire, from the time of its appointment until the twenty-third day of January, one thousand eight hundred and eighty-nine.

The mode in, and purposes, for which, public moneys have been expended by the Board, or any Members or Member thereof, or under their or his authority.

The manner in which the said Board and the Members thereof have performed their duties in that behalf.

And to include in such inquiry, but not by way of restriction of the terms or scope thereof,—

An examination into the truth of all charges and statements which have been made before Parliament, or before any Select Committee thereof, touching any alleged improper expenditure by the Board, or any members or member thereof, or under their or his authority, of any public moneys in the improvement of or the making or construction of roads or other works upon the property of any person, partnership, or Company.

And, we were by such Commission enjoined, within a time therein named, to certify what we should find touching the premises.

The Commission was forwarded to us on 22nd February last. As it was not accompanied by any reports or particulars that would instruct us as to the nature or history of the case submitted for our investigation, we addressed the Principal Under Secretary, requesting him to obtain for our information any departmental reports, letters, books, and accounts bearing on the inquiry, or any documents he might have that would assist us in carrying out the investigation.

Various

Various returns and letters were subsequently forwarded to us. For the rest, we were referred to the records and papers then in the office, in Goulburn-street, which had been occupied by the Department known as the Casual Labour Board.

It became, therefore, necessary for us, as a preliminary, to examine into the mass of records, books, plans, and documents that had been collected during the existence of the Board, selecting such as then appeared to us to require special attention, and instructing ourselves as we proceeded with their perusal sufficiently to acquaint ourselves with the history of the Department, and to enable us, as well to decide as to what witnesses should be summoned, as to conduct their examinations without being at a disadvantage.

It will, we think, be conceded that this was no light task, especially in view of the importance of the interests involved, and the commands laid upon us to make "a full and diligent inquiry," and it will, we hope, coupled with the large number of witnesses whom we have found it necessary to examine, sufficiently account for the time which we have occupied in the matters and in concluding our labours under the Commission.

During the Session of the Commission 47 meetings have been held, at which the evidence of 80 witnesses has been obtained.

We have, in all respects, prosecuted the inquiries entrusted to us with all the diligence and care that we could bring to bear on the matter.

From the large range of inquiry indicated by the Commission, it might be claimed, that our investigations should have extended to a close examination of every item of the Board's working during its existence—such for example as the scrutinizing of and taking evidence on all the pay-sheets, vouchers and similar transactions. But, as the time and expense, which such an exhaustive investigation must have involved, would have been very considerable, and more, perhaps, than the results might have justified, we have, in the exercise of our judgment, confined our attention to such features as we believe will answer the ends of our Inquiry.

Our Report will, we think, be found to embrace the more important questions involved.

During the conduct of the Inquiry, several voluntary statements were made by different persons, in the form of letters addressed to us, alleging irregularities in pay-sheets, disposal of stores and rations and such like, and involving other matters of complaint similar in their features to those we have investigated in other districts, and which were said to have occurred at Rookwood, Eckersley Road, Narrabeen, and other places where the Relief Works had been carried on. We have not attempted to investigate every one of these, nor, indeed, could it have been properly done within the time that has been allotted to us.

In considering, at the outset of our labours, the best and most expeditious course of procedure, and after reading the evidence of the various witnesses that had been examined before the Select Committee of the Legislative Assembly, appointed on 15th November, 1888, we determined, wherever the same witnesses came before us and the circumstances appeared to us to justify the course, to incorporate their previous evidence on our proceedings.

This appeared to us a desirable course, as well on the score of economizing time and expense, as for the purpose of enabling us to contrast their testimony and report on the whole evidence.

In

In such an investigation as this, partaking of an inquiring nature, it was obviously impossible to confine witnesses to strictly legal evidence. Considerable latitude had to be allowed them in giving their evidence, and many documents were produced in the course of the evidence for their assistance and for facilitating reference.

We have not deemed it necessary to include in the Appendix to this Report, copies in full of all the Exhibits that were put in. Those only, that appear to us important for a proper apprehension of the evidence, are fully copied. Others have been shortly particularized.

In many cases as we proceeded, and evidence was given, making various disclosures, we deemed it our duty to call all necessary witnesses on the point, with a view, if possible, to clearing up the matter and to elicit the truth before we came to deliberate on our Report.

We now proceed to the subjects of Inquiry, dealing with them according to the order indicated in our Commission.

The Working of the Board.

The Department, which afterwards became known as the Casual Labour Board, appears to have come into existence in the month of May, 1887.

The members constituting the Department—Messrs. John Davies, Frederick Wells, and David Houison—rely on a document directed to them, and signed by Sir Henry Parkes, dated 2nd May, 1887, as evidencing their appointment and authority.

This document is in the following words :—

In respect to the Unemployed.

THE chief object I have in view, ultimately, is to draft the men off in parties of 400 to 600 to permanent works where their labour may be of value to the country, and from which they may be gradually absorbed (or, at least, a portion of them) by private employers.

In furtherance of this object, work will be provided in the Northern, Southern, and Western divisions of the Colony, in making tanks, works for irrigation purposes, deepening water-courses, and the like. Besides these works, commenced sooner than they might have been under other circumstances, but still of a legitimate character, there will be the construction of the North Shore Railway within a short time, and the conversion of the Lachlan Swamp into a public park, and some limited employment under municipal bodies.

By these various means it is hoped that employment may be found shortly for all industrious men, and that the difficulty will be practically removed.

In the meantime I wish a kind of Labour Bureau opened in Sydney, where a proper register shall be placed in charge of a careful and trustworthy person. I assume that a suitable office may be obtained in Hyde Park Barracks, and one of the clerks there hitherto employed may be detailed off for this duty. In this register the name of every applicant must be entered, with the following particulars :—

Name in full—
 Address—
 Trade or calling—
 Age—
 Nationality—
 Married or single. If married—number and ages of children—
 Date of arrival in the Colony—
 Where from—
 How long unemployed—
 Name of last employer—
 Substance of any certificate of character—

In connection with this principal office in Sydney communication will be established with local authorities in the principal country districts, with a view to obtaining employment for individuals.

All temporary assistance must be given after due inquiry, and in view of the ultimate objects arrived at.

2nd May, 1887.

HENRY PARKES.

John Davies, Esq., C.M.G. ; Col. F. Wells ; D. Houison, Esq.

We

We have been unable to discover any other appointment or authority, and we do not believe there is any such.

Mr. Davies' evidence on this head is :—"I received no instructions whatever, except what are contained in the formal appointment in the printed papers. That was the only instructions that we had of any character." He then identifies the document of 2nd May, 1887. Later on in his evidence he says, consequent on a letter he received from the Colonial Secretary, he called on that gentleman and was asked if he "was prepared to accept the position." The Colonial Secretary "explained the nature of the duties. He asked if I would relieve the Government "of the thousands of people who were clamoring for work for the construction of "railways, public roads, buildings and a variety of works that he named. I said I "was prepared to do so. Then, subsequently, I received the official communication, "which is to be found amongst the papers appointing the Board, coupled with the "duties that were previously suggested, and which we should have to carry out, &c."

Mr. Davies also gave the following evidence on this part of the case :—

- President.*] 10818. Did you make any bargain with the Colonial Secretary ; or did the Colonial Secretary make any offer to you ? Yes ; the Colonial Secretary intimated that we should be paid for our services at any rate.
 10819. Was there any special rate fixed ? No.
 10820. Then the first you knew of it was a short note from the Colonial Secretary asking you to call upon him ? Yes.
 10821. Do you know Sir Henry Parkes other than officially ? Yes.
 10822. Intimately ? Yes ; for thirty years.
 10823. Has he ever been to your house ? Yes ; he has been to my house.
 10824. And have you been to his ? Yes.
 10825. And you are on friendly terms ? Yes.
 10826. You say that there was a distinct understanding on this occasion that there was to be remuneration for your services ? Distinctly ; it was announced in the House several times.
 10827. Are you quite sure ? I have stated distinctly to you already.
 10828. There was to be some remuneration—it was not some gratuitous State service that you were entering on ? No.
 10829. Was anything said about your personal expenses ? Yes ; all my travelling expenses had to be paid.

NOTE made by witness after perusal of the printed evidence as to answer to Q. 10818.—After "intimated" insert "in answer to questions in Parliament," and omit "at any rate."

Mr. Wells' evidence on this head is that Mr. Critchett Walker, the Principal Under Secretary, sent for him and asked if he would act on a Commission to undertake the dispersion of the labour trouble. He adds, "At first I demurred and said that it would interfere with my own Departmental duties, but as he appeared to desire me on account of my previous experience in dealing with these men I acceded to the request." That shortly afterwards he received the original document of 2nd May, 1887, and that he had not previously seen the Colonial Secretary. On the question of remuneration for the duties he performed, extra those of his office in the Roads Department, his evidence is that he had not received anything, and that he had no understanding at all.

Mr. Houison's evidence as to his appointment is, that Mr. Darley was originally appointed, but was unable to undertake the duties—that he was asked if he would accept the appointment—that he did accept it, and subsequently received an unsigned copy of the document of May 2nd, 1887, and that he had no other instructions beyond what was stated in that document. As to remuneration, he stated that he had never received anything, that he had never had any conversation with reference to the matter, and had never asked for anything.

The

The evidence of Sir Henry Parkes and Mr. Critchett Walker may be usefully referred to in connection with this.

The creation of this Department, and the issue of the document of 2nd May, 1887, appears, from the evidence, to have been the act of the Premier and Colonial Secretary. The administration of the Unemployed Relief had previously come under the Colonial Secretary's Department.

Almost immediately following upon the receipt of this document, which was considered as their appointment, Messieurs Davies, Wells, and Houison, having taken upon themselves the duties of the Labour office, held a formal meeting, at which Mr. Davies was elected Chairman of the Board, and to him was delegated what was termed "the executive work" of the Department, but what, substantially, appears by the evidence to have amounted to, almost the entire administration of the office and the control and expenditure of the funds placed at the disposal of the Department.

The Department thenceforth became to be recognised under the name of "The Casual Labour Board" with Mr. Davies as "The Chairman of the Board."

It does not in any way appear that these gentlemen had any express authority to so delegate to one of their number such large powers and responsible functions. Mr. Wells states, that, on the day of the election of the Chairman, he reported what had been done to the Principal Under Secretary, but no formal confirmation of such action has been produced to us. It was, however, known and apparently acquiesced in, for thereafter Mr. Davies always appears in his capacity as Chairman of the Board, and is so recognized in all the official communications that passed between his office and the Department of the Colonial Secretary, which was the Ministerial Department under which the Board came.

From this time until the Board was dissolved on 25th January last, Mr. Davies assumed to exercise and did exercise most of the important duties of the Board, acting in very many instances, and in matters involving considerable expenditure, on his own sole authority.

Notwithstanding his evidence on this point to the contrary, it is quite clear to us from the evidence of Messrs. Wells and Houison, and from the evidence of the officers and clerks in the Casual Labour Department, that he was virtually the Board, and that Messieurs Wells and Houison did not actively engage themselves in the working of the Department. They had other important duties to perform, in connection with their respective offices in the Roads and Bridges Department, and the Harbours and Rivers Department. To the extent they could, they appear to have, whenever asked, given their professional advice, assistance and supervision, and to have bestowed some time and labour on certain of the works where their professional skill was required; but, in most other matters, they appeared to have mainly relied on Mr. Davies, and where their concurrence or signature was necessary or desirable, to have given it without much inquiry.

The mode in and purposes for which Public Moneys have been expended by the Board, or any Members or Member thereof, or under their or his authority.

The moneys required for the purposes of the Board were, it appears, supplied from the Colonial Treasury upon a requisition signed by the members of the Board, forwarded through and sanctioned by the Colonial Secretary's Department. The moneys so supplied were mostly advanced by the Treasury in sums of £6,000, and were paid into the Australian Joint Stock Bank to the credit of an account called "The Casual Labour Board."

As further moneys were from time to time required, they were supplied by the Treasury on what, the Examiner of Accounts in the Treasury informed us, was "a guarantee or obligation of the Board to account for the money to the Auditor-General."

In pursuance of this obligation, vouchers supporting expenditure of each £6,000 were at various times furnished by the Board Officers to the Audit Department.

But after a time, according to the evidence of Mr. Corkhill, the amount of the Relief Works Vote became exhausted, and the Treasury had to allow the Board an overdraft, necessitating, according to the Treasury requirements, that all the vouchers covering such overdraft should be sent to them.

We may mention in passing that these were the vouchers supporting payments of £12,203 10s., furnished by the officers of the Board just at the close of the Board's existence, which are referred to in the evidence of Mr. Corkhill, Mr. Eagar, and Mr. McMillan, and which only came under our consideration at a late period of this Inquiry.

The Board's current account with the Australian Joint Stock Bank was, in its early stages, kept in funds by the various £6,000 advances from the Treasury, but subsequently it became overdrawn to a considerable extent. In December, 1887, the Board's overdraft on this Bank account stood at over £18,000. The account was then replenished from the Treasury by an advance of £18,000. It again became overdrawn, the amount of overdraft increasing to £77,722 14s. 8d. in December, 1888. Early in January last a payment from the Treasury of £72,000 was made to the credit of the account. At the time the Board was dissolved the Bank account showed an overdraft of £12,203 10s.

In addition to these advances from the Treasury, moneys in the aggregate, amounting to £334 16s. 3d., had been at various times paid in to the credit of the Board's account in the Australian Joint-Stock Bank, representing seven amounts of £38 4s. 2d., £66 12s. 6d., £41 12s., £5 4s. 6d., £40 1s. 1d., £36 3s. 10d., and £40 12s. 3d., received for sales of firewood, and three amounts of £42 5s. 11d. received for sleepers, £4 received from one Hanley for wood, and £20 received from Carlingford residents for bridge.

A voucher for this amount, £334 16s. 3d., signed by Mr. Davies, was at the termination of the Board's existence left in the Board's office for purpose of making adjustment with the Colonial Treasury. This sum comprises the payments which were

were incidentally referred to in the Special Report presented by us on 29th April last, and which are touched upon in the evidence of Messieurs Hinchcliffe, Hibble, and Davies.

Since this Special Report we have examined William Hillier, the contractor for cutting the firewood. His evidence, though it may not materially affect the matter there reported on, confirms what we then supposed was the course of dealing as regards payments. But his evidence, taken with the evidence of other witnesses on the firewood subject, at once shows how futile it is to attempt to trace with any success the amount of wood cut, where it was delivered, and to whom and for what sold. He says all his books and accounts relating thereto were destroyed. Some wood appears to have been consigned to Mr. Neale, some went to Ashfield, some to Waterfall. The Board only appears to have their knowledge by Hillier coming for payment of his account, and their receiving Mr. Neale's cheques and account sales. But for aught we know or can find out, through the absence of any system of record, there may have been much more wood than the payments we have had evidence of represent.

It is pertinent to the matter of this Special Report to mention, that on finding by the evidence that various payments had been made to the Treasury on account of the Board whilst our Inquiry was proceeding, we, on 15th April last, wrote to the Treasury, requesting that any moneys that might thereafter be tendered for payment should be placed to a Suspense Account pending the Inquiry.

Before finally closing our evidence under this Commission, we, on 21st May last, further examined Mr. Newcombe, an officer of the Treasury, to ascertain what, if any, further payments had been made. He stated that on 7th May last a cheque for £26 17s. 7d., drawn by Mr. Davies on the City Bank in favour of the Treasury, had been paid in by Mr. Davies' son, that the amount had been placed to a Suspense Account as requested, and that no other payments had been made.

The other earlier payments by Mr. Davies into the Treasury of £8 10s. and 10s. (part of £52 13s. 2d.), on 15th February and 25th February last, he stated in his evidence, represented some surplus stores—sugar and crockery—he took over from his predecessors at the time the Board was formed; that the storekeeper, Springall, or Johnson valued them for him, and he bought at that value, according to his evidence, some six months previously. The evidence of Springall, Johnson, and other witnesses on this point does not confirm Mr. Davies' account of the purchase.

As regards the three particular amounts that Mr. Davies received,—When he was examined on 23rd April he stated, that after paying the amounts into the City Bank he cashed cheques for similar amounts at his bank, and held the amounts in cash during all the period. He claimed that this was done “because cheques, neither his nor anybody else's, would be taken at the Treasury”; and, further, “that he was justified in using the money for the purposes of the office”; that “he had to spend sometimes as much as £20 in a week.” Again, “that money was required to pay men who might come in and claim their wages.” Yet it is clear on the evidence that he received at various times, during the existence of the Board, quite independently of these firewood amounts, different sums on account of unclaimed wages, and which he said that he also kept in cash in his safe, available for payment to any claimant. These unclaimed wages sums, it appears, were paid into the Treasury by him on 25th February last, and amounted to £86 11s. 7d. It is also equally clear, that Mr. Hinchcliffe always had petty-cash in the office for supplying office and personal expenses, as will hereafter appear. His

His evidence that when the Board's services were dispensed with, no opportunity was afforded him to look into papers and arrange matters, and that he was not in the Board office after 25th January last, is in direct conflict with Mr. Miles' evidence on the subject which may be usefully referred to, not only on this matter but for his professional opinion as to the office affairs and accounts, so far as he had then gone into them. He states: "Mr. Mason and I had no desire to treat him "with incivility, and we thought that a man like him, as head of the establishment, "might require some little time to fix up his affairs. He remained until the end of "the month, when the pay-day came."

The moneys actually expended by the Board, up to the close of its existence on 25th January last, amounted to £252,424 8s. 10d. In addition to that, there were then outstanding liabilities amounting approximately to £7,256 4s. 9d.

The evidence throughout of those who were competent to speak on the subject, in our opinion, establishes that the expenditure of moneys and all operations on the Bank account were almost entirely controlled by Mr. Davies. Mr. Hinchcliffe, the senior clerk, it is true had to countersign all cheques; but this precaution must have been purely a formal one. Mr. Davies had at the outset been authorised by Messrs. Wells and Houson to draw and sign cheques, and we have no doubt that Mr. Hinchcliffe's confirming signature would follow on Mr. Davies' as a matter of course.

Mr. Wells on this point states, in answer to the question, "You told us that the cheques were signed by Mr. Davies and countersigned by Mr. Hinchcliffe; did you sanction the expenditure from time to time, or did you leave the matter with Mr. Davies?" "We trusted entirely to Mr. Davies. It was much better not to complicate matters. During the time I was on the Board I was away 146 days altogether, from Sydney."

The record of the payments made by cheque, as well as those made in cash, is contained in the Board's cash-book, which upon examination by us presented some curious features.

The evidence of Messrs. Hibble, Hinchcliffe, and Davies bears upon these; Mr. Hinchcliffe, according to the evidence of the members of the Board, was the responsible Accountant. Mr. Hibble, however, appears to have kept this cash-book, while Mr. Hinchcliffe kept the actual cash, which, for convenience of reference, although at times it was a considerable amount, we will call "the petty-cash." Mr. Davies states that he never looked into the books, or checked them or the cash, or in fact interested himself in the matter at all. He regarded Mr. Hinchcliffe as solely responsible. This book shows that between May, 1887, and January, 1889, a sum of £2,921 4s. 9d. was available for treatment as petty-cash. It was made up of cheques drawn against the Board's bank account and cashed—amounting to various sums at a time from £100 to £5—and also of sums which appear to have arisen from returns from pays where, from some cause not clear to us, cheques had been drawn to make pays in excess of the actual requirement, and the amount in excess had been brought back in cash by the clerk who made the pays.

Mr. Davies states, "In the earlier days large sums would be brought back. I have known the Paymaster bring £40 or £50 back, and he utilised it in paying small contingent vouchers."

This course of practice appeared to us extremely irregular, and we pressed our investigation on this head. These

These items are entered in the cash-book in the same column as the petty-cash cheques, appearing as "Refund from Beecroft cheque," "Refund from National Park cheque," "Refund, Rookwood cheque," and so forth. The moneys appear to have been handed to Mr. Hinchcliffe, and placed by him in his petty-cash box with the full knowledge of Mr. Davies.

It appeared in the course of the investigation that at various times, from 10th May, 1887, to 2nd February, 1888, in different pay-sheets sums of money, varying in amounts from £14 to a few pence, were returned, probably through the claimants at the pays not coming up to the pay-table for them, and were handed to Mr. Davies, who signed for the claimant, and held the money, as he says, in his hands in trust and, according to his evidence, with the knowledge of the Audit Department.

Of these moneys, portion was paid over to such of the claimants as called for payment. But the larger portion, amounting to £86 11s. 7d., was, as already stated, paid into the Treasury by Mr. Davies on 25th February last, under the Revenue head of Unclaimed Moneys. Mr. Davies states that he kept these moneys in cash in the drawers in his office-safe, to which nobody had access—that he held it "in order that when we wound up the affairs of the Casual Labour Board it might be adjusted in due form to the Treasury."

We had no way of testing whether this was the case or not, as Mr. Hinchcliffe did not appear to know much about it.

But the peculiarity was, so far as the cash dealings of the office were concerned, why considerable sums of money, returns from pay-sheets, should in some cases be taken over by Mr. Hinchcliffe for petty-cash, in other cases be handed to Mr. Davies, and, as it appeared from a statement furnished us by the Treasury, in other cases of some unclaimed sums paid direct into the Treasury.

Mr. Davies' explanation of the inconsistency in the practice was unintelligible, at least to us. He says in one place "some were held back to feed the petty-cash, and others were paid in simply to adjust vouchers." And in many other parts of his evidence, to which reference can be made, he endeavoured to supply an explanation which we have quite failed to grasp.

The practice of retaining such moneys either intact, or in aid of office cash operations, was, we think, altogether wrong, and we cannot believe obtains in any other Government Department. Mr. Ormiston's evidence on this head might usefully be referred to.

The payments out of petty-cash were entered in an inner column of the cash-book but not on every line. Throughout the book available spaces appear. The payments by cheque were entered in an outer column. So far as the petty-cash column shows, it would not seem that entries were made at the time the payments were, and we could not find any other petty-cash book.

Mr. Hinchcliffe, in one part of his evidence states, as follows:—

President.] 769. Were any other large cash payments made beyond those to the labourers? No; there would be small ones. We would perhaps draw a cheque for £50 or £100 for cash, because some of the men would be dissatisfied and throw it up, and ask to be paid when they came in under what is called *interim* vouchers. We used to draw a cheque, perhaps for £100, to pay these in cash. That is shown in the cash-book. There are two columns, and the whole of the amounts paid in cash appeared in the cash column.

770. Did you always keep a large sum of petty-cash in the office? Not a large sum—from £10 to £50 [*on revision by witness altered to £100*] perhaps; but never more than £50 [*on revision by witness altered to £100*]; of course we would use that before we drew any more.

We

We found, according to the cash-book, that Mr. Hinchcliffe's evidence, that they used up proceeds of one petty-cash cheque before they drew any more was not supported.

The following tabulated particulars will show the state of the cash-book in several instances on or just before the drawings of petty-cash cheques:—

Date of drawing of cash-cheque as per cash-book.	Amount of cheque.	Amount at credit.
	£ s. d.	£ s. d.
13 June, 1888	50 0 0	343 4 8
29 June, 1888	100 0 0	364 5 2
28 July, 1888	100 0 0	390 18 3
7 September, 1888	50 0 0	416 1 6
17 September, 1888	25 0 0	451 11 4
27 September, 1888	50 0 0	472 5 10
15 October, 1888	50 0 0	462 15 2
23 October, 1888	10 0 0	515 4 6
1 November, 1888	50 0 0	493 3 8
13 November, 1888	25 0 0	535 16 1
22 November, 1888	25 0 0	536 16 1
3 December, 1888	100 0 0	549 5 9

This apparent anomaly was pointed out to Mr. Hinchcliffe, and his evidence, in the main, was, the cash-book did not correctly show the state of affairs—he always had a lot of contingent vouchers in his box.

Mr. Hibble, who, it will be recollected, kept the cash-book, gave the following evidence:—

- President.*] 7000. Had Mr. Hinchcliffe anything to do with the accounts except the petty-cash? Yes; not with the cash-book.
7001. Did he examine it? I believe he did.
7002. Did Mr. Davies examine it? I do not think he could have done so if he had tried. I do not think he is well enough up in figures.
7003. When Mr. Hinchcliffe wanted money for petty-cash, do you know how he arrived at the amount he wanted? Only by his books.
7004. Did he ever compare his petty-cash with your book? Never to my knowledge.
- * * * * *
7010. Do you know what was the largest amount of petty-cash in the office at any one time? Whatever the largest cheque is drawn for. The largest one, £150; but you could not call it a petty-cash cheque. It was drawn at Centennial time to make payments, but it did not remain in the office more than two days.
7011. Was that the largest? Yes.
7012. What were the others? £100, £75, £25.
7013. Mr. Hinchcliffe says from £50 to £100? It never exceeded £100, excepting on that one occasion, as far as I know.
7014. I think he stated in his evidence that he never had in hand, as petty-cash, more than £100;—would that be about correct? No; he must be wrong, as the book shows different to that. He must be a lot out there.
7015. Look at page 80 of this cash-book [*Exhibit E 8*];—what is the balance to the credit of petty-cash there? £390 18s. 3d.
7016. On what date? On July 27.
7017. What is the entry on the debit side of the cash-book? The other side shows a cheque obtained for petty-cash £100.
7018. According to this book, then, on the date that petty-cash cheque for £100 was obtained there should be £390 18s. 3d. of petty-cash in hand? Yes.
7019. Can you understand that? Mr. Hinchcliffe should have had that money in his box.
7020. This showed then that there was £490 18s. 3d. in hand? Yes.
7021. Is not that an extraordinary thing? Yes, it is; but it was no business of mine.
7022. Did you know of it? I did.
7023. Did you not consider it part of your duty to mention it to him in the interests of your employers? I could never tell what vouchers he had in his possession. I did not know but that he had vouchers for all that money.
7024. It does not require a skilled accountant to see that it was a strange thing that £100 should be drawn for petty-cash when there was £390 18s. 3d. in hand? He might give me £200 of vouchers to enter up.

7025.

NOTE made by witness after perusal of the printed evidence:—Q. 7002.—For “I, &c.” to “tried” read “It was not in his province to do so.” Add “and certainly he was not the Accountant.” Q. 7014.—Add “taking his vouchers into consideration.”

7025. Is it not irregular on the face of it? Yes.
 7026. Has your attention been called to it? Yes.
 7027. By whom? By Larnach.
 7028. During the time this was going on? Yes.
 7029. How long ago is it since Larnach drew your attention to it? I cannot say; about six or seven months ago I should think.
 7030. I have just taken one instance, I have no doubt there are many others, where large cheques were drawn for petty-cash when the book showed already a large credit to petty-cash. Were you aware of that? No; because I could not tell how the vouchers stood. In one instance I spoke to Mr. Hinchcliffe on the matter.
 7031. What was the balance in hand then? I believe from £250 to £300. He told me himself.
 7031½. Of the office money? Yes; and he said he was that much out of pocket by being secretary in charge of the cash.
 7032. How? He said he had paid vouchers which had been sent up to the park, and never returned.
 7033. When did he tell you that? At the beginning of the year.
 7034. Of this year? Yes.
 7035. Did you ever hear of him being short in his cash before? He never told me he was short.
 7036. Was he to your knowledge? According to the books I knew he must be short.
 7037. You knew he was? I could not swear he was.
 7038. Were you not responsible for the books? Yes.

NOTE made by witness after perusal of the printed evidence :—Q. 7025.—Add “not entering up the vouchers at once.”
 Q. 7036.—Add “unless he had vouchers.”

Later on in his examination comes the following evidence :—

- President.*] 7292. Had you a petty-cash box? Mr. Hinchcliffe had the key.
 7293. Have you seen it? Certainly I have.
 7294. Have you seen the amount of cash in it? I could not tell what was in it. I never touched it.
 7295. You were aware that Mr. Hinchcliffe drew for petty-cash when you had over £300 to credit shown in the cash-book? Yes.
 7296. Did you know what the balance was? No, because I never knew how things were. Mr. Hinchcliffe did not put in the vouchers in a proper way. If things had been worked according to proper routine one would have known.
 7297. Did Mr. Hinchcliffe ever tell you he was short in his cash? Yes.
 7298. About the new year? Yes.
 7299. Before or after his Melbourne trip? After.
 7300. What amount? Between £250 and £300.
 7301. Did you not say he said that he had to make it good by drawing on his own private account? He told me he had to make it good, and I believe that he drew on his own bank, the London and Chartered Bank.
 7302. How did you get that belief? Because I have seen him draw cheques out.
 7303. Will you swear he told you that he made it good? Yes, I will.

NOTE made by witness after perusal of the printed evidence :—Q. 7302.—Add “on that bank.”

It should here be noted, that Hibble, when his evidence was, some time after it was given, submitted to him for perusal, made corrections which are noted at foot of his evidence in Minutes of Evidence attached to this Report. Further, that when recalled for further evidence on 21st May last, he stated that his previous evidence on this point was “wrong” “not untrue”—“a certain part of it true, a certain part not.” He was then asked if he had had any discussion with Hinchcliffe since giving his previous evidence—He said, “He had,”—“About a week ago”; that Hinchcliffe had said, “I think you put me away”; I said, “I don’t think I have.” He also said the expression “put me away” was Hinchcliffe’s.

The point about “the lost vouchers” mentioned in Hibble’s evidence is also touched upon in the evidence of Messrs. Davies, Burrowes, and Larnach, and in the evidence of Burrowes there is also reference to the shortness in cash; but Mr. Hinchcliffe denies it, and claims that he always had vouchers.

Be this as it may, in December last, shortly after Mr. Hinchcliffe’s return from Melbourne—Mr. Hibble having had charge of the petty-cash in his absence, and when the petty-cash as per book showed a balance of £549 5s. 9d., and without the drawing of any fresh cash cheque—cash vouchers began to be entered up pretty freely, some of them for different officers’ personal expenses, and others for items

that had always previously been paid by cheque. In the end, the book is balanced up, and there is a credit of £5 5s. 10d., which was duly paid into the Treasury on 14th February last.

Amongst the other items charged in the cash entries is an item on 27th December, 1888, entered, "Hon. J. Davies, Genl., £261 10s.," which is, according to Mr. Davies' evidence, the amount of his personal expenses as Chairman, and the payment of which was approved of by the Colonial Secretary on 14th January, 1889. Mr. Davies said he had not any memoranda or record of what these expenses were—that he thought "they were destroyed when the money was paid."

We discovered in one of the books an account headed "Chairman in account with Secretary," showing several items of payments in May, June, July, and August, 1887, and a note at foot, "Acc. made up to 29/10/88, £155 7s. 8d." Mr. Hinchcliffe confirmed this; Mr. Davies did not dispute it, at any rate so far as we can detach what his evidence is meant to convey. Mr. Hibble, when examined as to this payment, spoke of Mr. Davies having a "little bye-account" with Mr. Hinchcliffe. Yet not one single entry of the items we discovered—which must have been charges against cash—appears in the cash-book until the lump sum of £261 10s. on 27th December last.

With this before us, we cannot unreservedly accept the entries in this cash-book as faithfully recording the way in which moneys have been expended, nor, on the other hand, have we evidence which would entitle us to reject the vouchers that have been advanced in support of the cash payments. Many of them are for personal expenses and payments made to the clerks and to the officers in the field under the Board, which appear to have been allowed somewhat liberally. For example, in Mr. Hinchcliffe's case, as he had the sole charge of the cash it would appear he paid himself. Mr. Hibble's evidence on this point is instructive:—

President.] 7308. What had Mr. Hinchcliffe in the way of allowances? He would be allowed half-a-sovereign when he went away and his expenses.

7309. What are his expenses? His meals.

7310. You say half-a-sovereign and his other expenses? It is a Government allowance. It is £1 by right, but they only allow 10s. in this case.

7311. Where would he get the money from? He would pay himself.

7312. Did you see the vouchers for these drawings? Yes; they went through my books.

7313. Had you any means of checking what Mr. Hinchcliffe saw fit to allow himself for expenses? None whatever. Whatever he liked to allow himself he could.

7314. As far as you know these allowances might have been bogus? I had no means of checking them.

7315. He could have taken £5 instead of 10s. if he had chosen? Yes.

The total payments to Mr. Hinchcliffe for salary, allowances and personal expenses during the existence of the Board, amount, so far as we can gather from, and relying on the cash-book, to £837 2s. 10d. He stated, that if his monthly salary of £29 3s. 4d. were deducted from the total payments, the balance might fairly be taken as his allowances and personal expenses, which, however, it is fair to state sometimes included payments for the Board. Making all allowances though, his extra receipts must have been fully £200.

With such knowledge of the workings of the Board as we have been enabled to gain, we cannot understand where so large an expenditure for personal expenses could be justified. For it must be borne in mind that there are in addition, quite independent vouchers for buggy and cab hire, a cab also being permanently engaged by the establishment and paid for by separate voucher. It appears several of these cab-hire vouchers had, previously to our investigating them, attracted the attention of the Auditor-General as he wrote to the
Principal

Principal Under Secretary, on 25th February last, for information as to approval, and pointing out that "the vouchers enclosed exhibit apparently excessive daily charges for cab-hire, 176 days, at 18s. 3d. per day."

As a not unimportant amount of the expenditure of the Board has gone in the payment of salaries, allowances, and personal expenses to clerks and officers employed in connection with the Casual Labour Board, it appears to us convenient here to allude to them.

The clerks and officers employed in the head or town office of the Board were:—T. C. Hinchcliffe, F. J. Josephson, A. E. Hibble, and A. Larnach, with detective officer Tyndall and constable Cheney, who were detailed for duty in connection with the Board.

They have all been examined by us, and from their evidence, with that of the members of the Board, the working and departmental history of the head office can be gleaned. We have found it impossible, after many attempts, to make a summary of their evidence with any satisfactory result. The whole of it should be read, and we ask that it be taken as incorporated in this Report.

Mr. Hinchcliffe was the senior clerk. He was designated Secretary and Paymaster, and, notwithstanding some of his evidence, he was considered by all the members of the Board to be the responsible Accountant. Mr. Davies unquestionably so regarded him, and throughout Mr. Davies' evidence it will be seen he placed the responsibility on him, stating that he was appointed by the Government. Mr. Davies said, "The Board made no appointment of officers. The Colonial Secretary made two appointments, but we made none."

This is not altogether correct. From the records it would appear that in the latter part of May, 1887, the Chairman of the Board wrote some letter as to Mr. Hinchcliffe's appointment, upon which Sir Henry Parkes wrote the minute which appears in the Appendix hereto [*Exhibit B 9*]. That letter was withdrawn, and apparently Mr. Davies' letter of 31st May, 1887, in the Appendix hereto [*Exhibit B 8*] was substituted. This letter recommended the appointment of Mr. Hinchcliffe and Mr. F. J. Josephson, and his recommendation appears to have been confirmed on 3rd June, 1887.

Mr. F. J. Josephson was Registrar and Assistant Pay-master. Messieurs Hibble and Larnach were appointed by Mr. Davies, apparently without reference to the other members of the Board. The office duties of Messieurs Hinchcliffe, Hibble, and Larnach were conducted in the same room as Mr. Davies occupied. While Mr. Josephson's duties as Registrar engaged him in another room, and were of a nature somewhat distinct from the other clerks. This gentleman appears from the evidence to have satisfactorily performed the duties entrusted to him.

Mr. Hibble seems to have given satisfaction to the Chairman, but his and other evidence submitted to us show that, though he was aware of many irregularities and defective departmental administration, he made no report of it, as he said, not considering it his duty to do so.

Mr. Larnach is spoken of in strong depreciatory terms by Mr. Davies and also by the clerks. In many respects his evidence did not favorably impress us; nor indeed can we say that our conclusions from the evidence of Messrs. Hinchcliffe and Hibble are altogether favorable to them.

The

The field or district officers and clerks were F. N. Oxley, E. M. Burrowes, A. M'Pherson, H. T. Sanderson, F. O'Donnell, H. Little, J. H. Springall, and a number of overseers and assistant storekeepers, whose evidence is appended hereto, and which we cannot satisfactorily summarize, though a perusal of it is necessary to properly understand this Report.

There can be no doubt that the Board, if not the Chairman, had the power at any time either to dismiss or recommend for dismissal any of the clerks or officers.

Mr. Burrowes, on the field staff, appears to have given great dissatisfaction to Messieurs Wells and Houison at an early stage in the discharge of his professional duties. At a later date Mr. Davies generally condemns him. It appears, from the evidence of Mr. Deering, that when the supervision of the unemployed was passed over from him to the Casual Labour Board he left records, and he thinks reports, affecting adversely Burrowes and Springall. From Mr. Davies' and other evidence it would seem that Mr. Davies was aware of these records or reports, as he was, later on, aware of Burrowes' imperfections and shortcomings. Yet no proper action was taken either in his case, or in that of Springall, or of Larnach. In fact, it would appear from the evidence that the whole staff was working satisfactorily and in harmony until the latter part of last year, when discord and accusations arose.

It is beyond doubt, on the evidence, that Burrowes, the Superintendent of the Southern District, had and exercised extraordinary powers of ordering tools and plant, regulating the disposition and terms of payment for the work of large numbers of men throughout his district, and reporting on and recommending to the Chairman construction of roads and other work, and which were carried out, involving very large expenditure. Also that Larnach was entrusted with fairly important duties, and in some cases acted as Paymaster; although Mr. Davies' evidence is "He simply acted as messenger, and had to index the records."

It is therefore unaccountable to us, that with the opinions that the members of the Board had, and especially with the opportunities that the Chairman had, these officers were retained in the service, and we cannot believe that Mr. Davies was not aware of their irregularities until the latter part of last year.

The only other district officer we need here specially allude to is J. H. Springall. He was Principal Storekeeper in the Southern District, and as such was permitted, without any substantial check or proper precaution, to order rations, deal with the stores, make out pay-sheets, and generally manage the whole store, and pay department of an extensive district, which he did apparently with a free hand, and to an extent which led to a vast and, we think, as will hereafter appear, an improper expenditure of the moneys which the Board were entrusted to administer.

According to Mr. Deering's evidence, he left with his successors the Casual Labour Board papers about Springall, which ought to have prevented his being retained in so responsible a post, at any rate without regular and competent supervision. It can be no justification that the Board simply continued him on from their predecessors because they found him there.

A large amount of the expenditure went in the supplies of rations. Mr. Kidman, the contractor, gives the total amount of payments to him on account of rations supplied £53,020. His contract specified that he was to deliver, "at his own expense, whenever, wherever, and however demanded by the Board or officers acting for them."

His

His evidence is, that he complied strictly with this, and probably he believed that the expense of delivery to the proper places was always borne by him. Yet, we found vouchers for payment for cartage of rations, and such payments appear in the pay-sheets, continued up to the discovery of the charge by Messieurs Miles and Mason, as pointed out in the evidence of Mr. Miles. There can be no doubt that but slight inquiry and supervision would have detected this, and thus this expenditure would have been saved.

In dealing particularly with the rations question and irregularities that the evidence discloses, we have been obliged by reason of the large range of our Inquiry to limit our attention more particularly to the Southern District. Beyond some voluntary written statements that were forwarded to us, which we did not think we could usefully expend our time and energy on, we have not become aware of any ration irregularities in the Northern Districts.

But, in the Southern District we discovered some serious irregularities. Springall, as clerk and storekeeper at the National Park, gave the orders for stores on his own responsibility, took delivery, and had the sole charge, and disposal of them, keeping such books and records as he thought fit and apparently without any other than, at most, a very superficial inspection.

According to Mr. Kidman's evidence, throughout the existence of the Board, although the members of the Board disclaim any knowledge of it, Springall was supplied on private account by Mr. Kidman with goods and stores; and although the dealings were not large, they were quite sufficient, in view of other irregularities, to justify a suspicion that there was not fair play.

The evidence of Springall, G. W. M. Johnson, and H. J. Goodman, should be read on this branch of the subject. But as the matter brings us to the consideration of some of the pay-sheets, in which the rations are taken into account, we propose to consider their evidence with that of Bell, Burrowes, M'Leod, M'Pherson, Crossthwaite, W. M. Robertson, Flemming, and Dick.

The evidence goes to establish that for a considerable time, apparently as far as we could discover from June, 1888, probably earlier, and up to December, 1888, a man named Flemming appeared on the pay-sheets, and was paid sums varying from £14 to £20 every fortnight as though a ganger with a gang of eight, seven, or five men at different times—his name appearing as a ganger, or representing work of a gang, sometimes on the Sutherland-Loftus Road pay-sheet, principally on the Heathcote Agricultural pay-sheet, and sometimes on the Woronora River Road pay-sheet.

The draft or abstracts from which the fair copy pay-sheets were compiled, and which were handed in to Springall by the Superintendent, Assistant Superintendent, and different overseers, did *not* contain the name of Flemming. The original pay-sheets in Springall's handwriting did, and frequently the name appeared last on the pay-sheet.

Springall did not satisfactorily explain this; he admitted the pay-sheets in question were false. He stated that he got the information to put in the pay-sheet from Mr. Bell or Mr. Burrowes. Later on in his evidence he named Burrowes, and said he got written instructions first and followed it up the same way afterwards.

It appears from Springall's own admissions that Flemming paid him back at least some portion of the money, between £20 and £22, but if, as we are inclined
from

from the evidence to think it is, the whole thing was a fraud, it is probable that the repayments were not so limited. At the time, Flemming is stated to have been "a rouse-about" "grooming Burrowes' horse," and such like, but not a ganger, and so employed at a considerable distance from the places where the pays were made and he appeared to receive them. In December last Springall resigned his office and took Flemming into his service.

Flemming was examined, and claimed that he was a ganger, and that his name and amount on the pay-sheets were correct. Dick, whom he claimed to be one of his gang, on examination disclaimed the position. The police officers, Tyndall and Cheney, whose duties sometimes brought them to the pays, were examined, but were not able to throw any light on the matter.

Flemming's name appears in the National Park pay-sheets from July, 1887, until February, 1888, sometimes with three and sometimes with one man, and he probably was on these pay-sheets correctly—a few odd men about the camp being placed with him for convenience of pay. From December, 1887, to February, 1888, he appears in an individual capacity on the pay-sheets. But thereafter he appears as a ganger with a gang of five, six, or seven, or he is down on the pay-sheets simply as "metal-breakers" or as "Flemming and gang," in each case showing amounts and rations, &c., which would be properly due to a gang of that number.

The form of pay-sheet has the following heads:—Name—amount of work done—rate—amount earned—deducted for rations—cash paid—received payment—date—witness.

Frederick Crossthwaite, whose evidence appears in the Minutes of Evidence attached to this Report, deposed as to other irregularities he discovered in March, 1888, in regard to pays and rations, in which, according to him, Springall was implicated, and that he brought the matter officially under the attention of Mr. Davies. He speaks of Flemming "as one of Springall's factotums."

W. M. Robertson, from whom the Commission received several letters at the outset of their labours, was examined with a view of testing the value of the statements he made. It appeared, though, he was only on the works for about three months at the start. He gave evidence of irregularities involving Springall, which he claimed to have reported frequently to Members of the Board. Mr. Davies, in his evidence, stated that Robertson was dismissed for drunkenness, and he apparently had no recollection of any reports having been made to him as indicated by the other witnesses.

After we had closed the taking of evidence on this head a report of apparent irregularities on George's River pay-sheets was, on 13th May last, referred to us by the Colonial Secretary. It disclosed that one Thomas Boulden, puntman at George's River Ferry, and in receipt of salary on the staff of the Roads Department, had been paid on the George's River pay-sheets as a labourer on the Relief works. We examined overseer M'Leod and Boulden. We found that Boulden's name did appear on the pay-sheets as a labourer at 5s. a day, with a deduction for rations. The evidence disclosed that he never was a labourer on the Relief works, never received rations, and the overseer (M'Leod) said the pay-sheet was false. This pay-sheet was signed at foot by Superintendent Burrowes. The payment appears to have been made by T. C. Hinchcliffe, and witnessed by J. H. Springall. In addition to this, Boulden had sent in contingent vouchers for claim for ferry dues, which were certified to by Burrowes.

Mr.

Mr. Davies says that "he went to the pays in order to adjust any grievance between the men and the overseers and superintendents, that he examined the stores and supplies, and dealt with complaints"; and again, that "he checked Springall's books and returns." If any such examination and checking were made—as to which we have no satisfactory evidence—it must have been of the most superficial character.

Mr. Davies states he was present at most of the large pays, but there was a large number of other pays made by Hinchcliffe, Hibble, Josephson, and Larnach in different districts, at which considerable sums of money were paid away.

The system adopted in making the pays was, it seems, satisfactory, if it was strictly carried out in all cases, which we have much reason for doubting.

Mr. Ormiston, who since the dissolution of the Board has been attending to the pay branch, gave evidence which can be usefully referred to on this point—that he was following the same system, but in every instance he referred the men to the superintendent and overseer who were present, and each ganger had a docket.

We have no doubt there was careless supervision in many of the pays and want of precaution in the selection of the officers who had the compiling, verification, and carrying out of the pay-sheets, resulting—we have much reason for believing—in the misapplication of moneys.

It will be seen from the foregoing, and in a greater degree from a perusal of the whole evidence, how unreliable—as records—are the pay-sheets, store and ration books, and other accounts in the Southern District. We could not, therefore, trust them as affording a faithful ground-work for our Inquiry on this branch, or for enabling us to accurately arrive at what was the legitimate expenditure.

But we submit, for your Excellency's consideration, as to whether the evidence of the witnesses to whom we have specially referred, should not be laid before the Law Advisers to the Crown to determine whether any further action should be taken in the premises.

The expenditure for tools and plant forms a considerable item.

From a return furnished us by Messieurs M'Lean Brothers and Rigg (Limited)—one of the firms who supplied the Board—the payments to them between July, 1887, and January, 1888, were £4,670 6s. 1d. In addition, they claim a balance still due to them for goods supplied of £1,610 6s. 4d., making, in all, an expenditure of £6,280 12s. 5d.

M'Lean Brothers and Rigg did not supply the Board under the Government contract schedule prices. Mr. Davies said he did not find that out till about six months after commencement of the Board, and that he then adopted a practice of deducting $2\frac{1}{2}$ per cent., acting on some information of Mr. Hinchcliffe. Mr. Wood, manager of the firm, stated they had a schedule of prices for the general Government contracts, but not for the Casual Labour Board. He did not know of any arrangement for $2\frac{1}{2}$ per cent. deduction. His firm looked upon the Board as a wholesale buyer.

It is noticeable that Mr. Davies took prompt steps to obtain fair terms by calling for tenders in the case of rations, but no steps were taken as regards supplies of tools and plant. The reason he gave for not so doing was because he "did not anticipate

anticipate that the Board would last more than a few months." The other Members of the Board do not, from the evidence, seem to have known of the terms under which M'Lean Brothers and Rigg were supplying. A considerable amount of money might have been otherwise saved, and on this point the evidence of Mr. A. Freeman might be usefully read.

The ordering of tools and plant, at any rate in the Southern Districts, it appears from the evidence rested in a large measure on Superintendent Burrowes and Storekeeper Springall. Requisitions were freely made, and often, it would seem, responded to by the persons supplying, in larger quantities than were requisitioned for. Deliveries of the tools, plant, and similar supplies were made in most cases to the railway station. But after that the arrangements for receiving, checking, storing, and distribution appear to have been of the very loosest kind. The evidence of Burrowes, Springall, G. W. M. Johnson, and of the clerks in the head office, sufficiently establishes this.

The practice that the Casual Labour Board claimed to prevail was—when plant, tools, powder, or such like were requisitioned for or considered by Mr. Davies to be necessary, a printed form of order for the articles or stores required was filled up in the head office and signed by Mr. Davies, the articles or stores ordered being also written in the butt of the order-book.

The order would then be forwarded to the firm or tradesman with whom the Board did business. Apparently nothing further would be heard—except casually in some cases—that the order had been complied with and goods received, until the firm or tradesman sent to the head office the usual printed form of Government pay-voucher for contingent expenses, with the particular articles ordered written in, the date, the number of the order, and the cost—the contingent voucher being signed by the claimant, and, as was stated, with the original issue order attached. The head office, after *to a certain extent* checking it, then sent the voucher to the Superintendent of the District, to which it would appear the goods had been forwarded. The Superintendent then signed as "*the officer incurring the expense,*" and returned it to the head office, after which it would be paid, then signed by Mr. Davies as head of the department.

The evidence discloses that these contingent pay-vouchers were not properly checked. They were not compared with the butts of the order-book. Neither Mr. Hinchcliffe nor Mr. Hibble took this precaution. Mr. Hinchcliffe disclaimed any responsibility beyond seeing that the different names and signatures were on the document. Mr. Davies' evidence is that it was done, but we are satisfied on the evidence it was not done. Hibble states he simply checked the computations and castings.

In the case of the Southern District, and as regards the contingent vouchers of M'Lean Brothers and Rigg, the Superintendent signing above the title on the voucher, "*Officer incurring the expense,*" was "E. M. Burrowes." He appears to have signed as a matter of course, regarding it, apparently, as quite a form, and without making much, if, indeed, any, inquiry whether the goods had been properly ordered, whether they were required, and whether they had been received.

Mr. Davies said that the practice was always to send written orders—if verbal orders were given they were generally confirmed by written orders. Many of the cases that we have examined do not bear this out.

Mr.

Mr. Miles tells us in his evidence that he and Mr. Mason were appointed to take over charge on 25th January last—that Mr. Davies remained at the office until 31st January—that on the day afterwards Mr. Hinchcliffe saw him and handed him a number of M'Lean Brothers and Rigg's accounts or contingent vouchers, and asked him to sign a cheque for them so that they could be paid. Mr. Miles said "they could not be paid." Mr. Hinchcliffe's and Mr. Davies' evidence to a considerable extent is confirmatory as to the handing over to Mr. Miles of these vouchers.

These vouchers, it is admitted on the evidence, bore on their face all the signatures that were required to secure their payment, and most probably they would have been paid in due course without further inquiry had it not been for Mr. Miles' intervention.

We examined the vouchers and took evidence on them, as we found in many cases the particulars therein did not tally with the butts of the order-book. In some cases there was not any record at all in the order-book. In other cases the particulars in the voucher were in excess of, and differed from, the particulars in the butt of the order-book; while in one somewhat peculiar instance the contingent voucher of Messieurs M'Lean Brothers and Rigg, with a number corresponding to that in the butt of the order-book, and which voucher had all the signatures and authority on it to warrant its immediate payment, contained absolutely different articles.

In this instance the order 552, both as per butt of order-book and as per the order itself, which we obtained and found to have been duly signed "John Davies, Chairman," was for "*one hamper-basket*," while the contingent voucher, similarly numbered in its margin (552), and duly signed by "J. H. Wood" as claimant, "E. M. Burrowes," as "*officer incurring the expense*," and "John Davies, Head of the Department," was for "6 coils Manilla rope, £3 10s."

The matter became more mixed when in inquiring as to another contingent voucher of M'Lean Brothers and Rigg—which comprised the following: "24 long-handled shovels, £4 16s.; 4 hammers, £1 14s.; total, £6 10s."—we could not find any order or other record of any requisition for the articles.

Mr. Wood, M'Lean Brothers and Riggs's manager, could not explain either of the vouchers. We examined Mr. Lawn, the firm's clerk, whom Mr. Wood referred to, as the clerk who had special charge of the Government Orders Department. Lawn admitted that the particulars written in the body of the contingent voucher, "6 coils Manilla rope, £3 10s.," were in his handwriting, but he could not produce any entry in any of the books to justify it, but only an entry on that day with the same number, as follows, "One hamper-basket, £3 10s."

As to the items in the other voucher for "24 long-handled shovels, £4 16s., and 4 hammers £1 14s., total, £6 10s.," of which we found no record amongst the Board's papers, Lawn also identified the particulars in that as being in his handwriting. He searched his books, but could not find any entry for the item, or produce any receipt evidencing delivery of the goods. But he gave evidence that there had been two hamper-baskets supplied; the cost of the first was £6 10s., the cost of the second was £3 10s., the amounts in each case corresponding with the amounts in the shovels and hammers' voucher, and the Manilla rope voucher. He stated that both of these baskets had been returned, and that there were pencilled credits in their books for the amounts that had escaped observation.

The explanation as to these vouchers is on all sides unsatisfactory. The evidence of Larnach and Burrowes is that the two vouchers were deliberately, with the connivance of Hibble and Davies, substituted for the hamper baskets. Hibble's and Davies' evidence in no way confirms this version. Hibble states, "I know nothing of them, excepting what is upon them." He denies that Davies asked for the vouchers in Burrowes' presence, or that he handed them for signature, or that he gave any explanation to Burrowes or anyone as to their meaning, and adds, "Vouchers were always posted out to the works." But he admits having obtained one picnic-basket, and believes there was another. Davies' evidence is that the articles in the £6 10s. voucher were actually ordered and delivered, while the £3 10s. voucher is, so far as he is concerned, virtually without any explanation, and he claims that the vouchers were signed by Burrowes at the works, not at the office.

The following is an extract from Mr. Davies' evidence on this matter:—

President.] 10707. Here is another of M'Lean Brothers and Rigg's contingent vouchers for £6 10s.—twenty-four long-handled shovels and four hammers. Will you tell me where the order is for that—this is one you recognized as having been left by you with Mr. Hinchcliffe? I could not say anything at all about it. The order ought to be in the book.

10708. We have searched, and can find no order in the book? I think that as regards these things, instead of being sent to Hurstville they were delivered at the office, for the purpose of going to the men employed in clearing the dam at the Little Bay Hospital. One of the inmates of the hospital was found drowned, and the water was found polluted, and under the direction of the Colonial Architect we put on some thirty men, and these shovels were ordered for them.

10709. Who ordered them? They should have been ordered by Mr. Hibble. Some of the shovels were left in the office when I left at the end of January.

10710. Then you say that these twenty-four long-handle shovels and four hammers were delivered at the office? Yes; I think they were.

10711. Can you account for our not finding any written order for them? No; my impression was that you would have found it. I thought you would have found an order for everything that was ordered.

10712. Will you look at this document, [*Exhibit E 2*]—a contingent voucher for £3 10s. M'Lean Bros. and Rigg—six coils of Manilla rope;—its number is 552, and if you compare that with the butt in the order-book you will see that the corresponding entry in the order-book is a hamper-basket;—will you explain that? The hamper-basket that I used for going these journeys for twelve months—it was my own private property—got the handle broken through going out to these different works on pay-days, and I sent Mr. Hibble to M'Lean Bros. and Rigg to see if they could provide me with a basket. They sent me a basket, but it was too expensive; and I immediately told them that I would have to return it, and that I wanted a less expensive basket, and that the price would be between £3 and £4. I returned the basket myself, taking it in a cab and returning it. I told the man in charge there to credit the office with the basket as being returned. They sent me another one, but it was too small, still expensive, and no use; I returned that; I told the ledger-keeper and told Mr. Lawn that we must be credited with these. There has been no voucher passed by me for them. I should have thought it no crime if I had got a basket for 25s. or 30s. to go out to these different works, to have charged the Government with it. I should have thought it no crime seeing that I was getting nothing for my services. That is my explanation.

10713. Do you recollect what the price of the first basket that you returned was? I think it was about £3.

10714. Do you recollect what the price of the second was? £2.

10715. Did they credit you with these baskets? I went myself to the shop and told them they must credit us with the basket. I went to the ledger-keeper. You will find no voucher passed by me for a hamper-basket.

10716. Will you explain what is the meaning of No. 552 in the order-book being one hamper-basket, and the corresponding number on M'Lean Bros. & Rigg's voucher, signed by you, is for six coils of Manilla rope? No. I must say I have explained to you the whole of the hamper-basket business. You could send for the firm. I do not suppose a respectable firm like that would care to tell a lie. They would not sully their trade reputation.

10717. I want your evidence; you are the man that we have to deal with now. Do you on your solemn oath tell me that you know nothing further about this hamper-basket and these six coils of Manilla rope than you have told us? Certainly.

10718. Who signed the voucher for these six coils of rope? Mr. Burrowes.

10719. Where were the vouchers signed by him? At the works.

10720. Nowhere else? No; he never signed them in the office. If it were my last words, I would say, on my oath, that he never signed them in my office.

10721. I never asked you that; that is a piece of voluntary information on your part. Who asked anything about his signing them in the office? You asked me if he signed them in my presence.

10722. I did not ask you whether he signed them in the office. I simply asked where Mr. Burrowes signed, and you answer me that he never signed them in the office. I hope
the

the shorthand-writer has got it down as you said it. Now let us get a little more about this. Do you notice that these vouchers have not got the stamp of the Southern District upon them? They often do not have the stamp of the Southern District.

10723. The others have got that stamp? Not all of them.

10724. Do I understand you to say that both these baskets were returned? Yes; both were returned.

10725. If one of the witnesses has given evidence to the contrary, what do you say to that? It is not true.

10726. Do you recollect the date that you left your office in Goulburn-street? It was on the 25th of January, the day before Anniversary Day.

10727. Not the 31st? No. I was in the lower part of the office two or three times for a day or two after that, but not where the business was being done.

10728. Were you ever told that the price of one of these hamper-baskets was £6 10s.? No.

10729. Will you swear that one of those baskets did not cost £6 10s.? I will swear it did not.

10730. Will you swear that one of them did not come to £3 10s.? I will swear it did not.

10731. After all these different vouchers I have shown you, and the many inaccuracies in them, what check had you against cooked, or bogus, or improper accounts? We had to do the same as other people; we had to trust to people outside.

NOTE made by witness after perusal of the printed evidence :—Q. 10715—*For* “the basket” *read* “the return of the baskets”.
Q. 10731—*For* “people outside” *read* “our officers.”

Against this, is the fact that neither of these vouchers has on them the Southern District office stamp, which appears on most of the others; that M'Lean, Brothers, and Rigg cannot justify the vouchers or the delivery of the goods, and, as will be seen from Mr. Miles' evidence, do not now claim payment for the amounts of them. Further, that other witnesses, including Mr. Hinchcliffe, have stated that in some instances Burrowes had signed vouchers in the head office.

We examined several officers in M'Lean Brothers and Rigg's establishment—Messieurs Wood, Lawn, Jarrett, and Ashton—and inspected such of their books as related to their dealings with the Casual Labour Board, and as the Government contractors. It was noticeable that in their Government day-book while these officers were under examination, and we were inspecting the books in their hands, there were numerous erasures and alterations throughout in the Casual Labour Board Orders—but with one exception—and that in a private order of Mr. Springall there were not any alterations in the orders of other customers, or in other contracts. Many of these alterations and erasures occurred in cases where the order butts did not correspond with the contingent vouchers sent in. The explanation was, that orders of the Casual Labour Board were not unfrequently altered by subsequent verbal orders.

The evidence of the different officers and clerks of the Board with the evidence of the officers from M'Lean Brothers and Rigg, establishes that the practice of ordering and the system of checking deliveries and charges was of a most loose description.

As it would seem that Messieurs M'Lean Brothers and Rigg still have claims outstanding against the Board, and as in many cases, both in past vouchers and in those still unpaid, there are discrepancies between the vouchers and the order-book, and in some cases no record of an order at all, we submit, and we believe a perusal of the evidence of the officers of the firm fully justifies our conclusion, that no further claims on their part be entertained without a rigid examination of their accounts and proof of the ordering and delivery of the goods for which payment is demanded.

In supplying vouchers to the Audit Office to support advances made under the usual obligation to account, it was so arranged,—according to Mr. Hinchcliffe, on the strength of some rule of the Service,—that in each case a batch of vouchers was sent in to the Auditor-General making up the exact advance of £6,000. This appears

appears to have been done on forty different occasions, whenever an advance of £6,000 was vouched for. Vouchers were always forthcoming to make up the exact amount neither more nor less. Unless this was done by supplementing cash vouchers that Mr. Hinchcliffe held in reserve to make up any odd difference, we confess, that we are entirely unable to understand the process, though several of the witnesses who had so adjusted the vouchers claimed that it was very simple. It seemed to us an odd chance that on forty different occasions vouchers should exist to so nicely balance the advance.

Whether it is a rule of the Service or not it occurs to us that if it were necessary to vouch exactly for £6,000, the straightest mode would have been to divide a voucher and carry over the balance to supporting the next advance.

The results of the expenditure of the moneys placed at the Board's disposal are to be found in the construction of the different roads and other works, shown by the evidence to have been undertaken by the labour the Board had the control of.

It would be impossible for us, within the limits of this Inquiry, and of the time allotted to us to investigate each of these various works with a view of ascertaining if the expenditure was in any respects irregularly or improperly administered.

In the general inquiry we have made, it has appeared to us, that many of the works entered upon were not of the nature of Relief works either necessary or useful in the public interest—that many persons, and in particular carters with their plant and ordinary labourers were employed at full rates who were not in pressing need or from the ranks of the so termed “unemployed”—that to a considerable extent there is nothing left of benefit to the community to support the large outlay of public moneys; and that the expenditure throughout has not been guarded with that care and consideration which the public was entitled to expect from those who accepted the responsibility of its administration.

The manner in which the Board and the Members thereof have performed their duties.

In discussing this head of the inquiry, it should be borne in mind that two of the members of the Board, Messrs. Wells and Houison, held, at the time of their appointment, and throughout the existence of the Board, important and responsible positions in the Public Service, and that their duties in connection with their respective departments naturally demanded their first attention.

They were, therefore, unable to give that time and assistance to the working of the Board that was properly necessary for its administration. Their evidence shows that at times they were frequently absent from Sydney in the discharge of the duties of the Departments to which they were attached. In the case of Mr. Houison, he states he was absent on one occasion for over five months. In Mr. Wells' case he says he was absent from Sydney 146 days, sometimes as long as thirty-six days at a time.

Whilst in Sydney, each of them appears to have rendered professional advice and assistance to the extent of their ability, and the time at their disposal, in regard to such works as came under their notice. They state they occasionally visited the
offices

offices of the Board, and inspected the works that were going on. It is obvious, though, that such casual and intermittent attention and inspections were, from the nature and extent of the works and the expenditure, insufficient, even though zealously performed.

They both recognised that they were unable, from the exigencies of their own departments, to give regular or proper attention to their Board duties and obligations, and were desirous and spoke of resigning their post as members thereof. They appear to have remained on the Board in deference to the wish of their Seniors in the Service whom they consulted on the subject, and under a belief, which they were, perhaps, justified in holding, that the Relief Works would be closed and the Board dissolved at an early date.

But while debarred from taking an active part in the administration of the Board, and in controlling and supervising its large expenditure, we think, they erred in delegating their powers to so large an extent to Mr. Davies.

The evidence shows that they were cognizant of irregularities, and were aware that in many respects the Board's affairs were being loosely conducted. Under such circumstances, the proper course was to resign their trust, without respect to personal consequences.

As regards Mr. Davies, the evidence, in our opinion, establishes that he discharged his duties in a perfunctory manner, without due regard to the important trust which he had accepted and the responsibility attaching to the expenditure of the vast amount of public moneys that was placed at the Board's disposal.

Although, in his evidence, he states that he diligently carried out his work, and that the time he has expended and labour he has bestowed, in connection with his duties as Chairman of the Board were very considerable, we cannot find, upon a consideration of the whole evidence, that such a conclusion is supported. His administration of the Department was defective and culpable.

There was throughout no proper organization and supervision. Though in the field and district camps there may have been some system prevailing and precaution taken, which, if regularly and properly administered, might have successfully prevented imposition and misapplication of moneys, yet, in the head office, where the main expenditure was controlled, the system, organization and checks were imperfect and unsatisfactory, the business of the office being conducted in a loose and irregular manner.

In the result, in almost every branch of the Department, according to our finding, a wide door has been opened affording opportunities for peculations and for practising frauds and impositions, which we are inclined to think have been availed of in some cases.

It seems clear, on the evidence, that Mr. Davies was not only lax in the performance of the particular functions that the other members of the Board had confided to him and which he had accepted, but that he was a party to many irregularities of which the clerical staff and officers under the Board must have become aware, inducing in them, or such of them as were so disposed, an equal laxity and carelessness in the performance of their duties.

The truth of all charges and statements which have been made before Parliament or before any Select Committee thereof touching any alleged improper expenditure by the Board or any members or member thereof, or under their or his authority, of any public moneys in the improvement of, or the making or construction of, roads or other works upon the property of any person, partnership, or company.

Having regard to the large range of subject that this covered, the Commission, at their first sitting, on 25th February last, resolved,—

“That it was essential that they should be furnished with particulars of any such charges and statements which have been made before Parliament or before any Select Committee thereof, and that such Resolution should be communicated to the Honorable the Colonial Secretary, with a request that such particulars might be furnished to the Commission as early as conveniently might be.”

This Resolution was submitted in a letter from the Secretary to this Commission, addressed to the Principal Under Secretary, on 25th February last, and on 27th February last such letter was returned to us noted on fold as follows :—“All papers in the case are forwarded herewith.—C.W., B.C., 27/2/89. The President of the Commission.”

Accompanying it was a parcel of printed papers which we have enumerated in the Schedule A hereto.

Conceiving that the official reply to our letter of 25th February last, asking for particulars of the charges and statements confined us to an examination of those papers, for the ascertainment of the charges and statements, which we were directed to investigate the truth of, we came to the conclusion, after perusal of all the papers and careful deliberation, that in the main the charges and statements in question were resolved into two branches, and could be conveniently arranged for purposes of consideration and report under two heads.

- (1.) Alleged improper expenditure of public moneys in the improvement of making and construction of roads and other works upon the property of the Holt-Sutherland Estate Land Company (Limited).
- (2.) Alleged similar expenditure upon the property of Messieurs J. F. Burns, G. Withers, and R. B. Smith, at or near Hornsby.

Treating of this branch of the Inquiry, therefore, in the order above indicated, we come first to the consideration of

Expenditure upon the property of the Holt - Sutherland Estate Land Company (Limited).

We cannot attempt here to make a summary of the evidence which has been given on this head. We refer more particularly to the evidence of Messrs. J. Murphy, M. McRae, E. M. Burrowes, A. MacPherson, Sir John Robertson, G. F. Want, V. Parkes, F. Farnell, H. T. Sanderson, J. H. Carruthers, S. A. Want, E. P. Simpson, H. Prince, H. B. Jamieson, and the members of the Board. We ask that the whole of it may be here read and taken as incorporated in this Report.

Further,

Further, we have inspected the property of the Holt-Sutherland Estate Land Company (hereinafter spoken of as "the Company") and the improvements, roads and other works thereon which have been effected or constructed by an expenditure of public moneys.

We may add that, in our opinion, the perusal of the full evidence that has been obtained in this matter can give but an inadequate idea of the nature and extent of the improvements, roads, and works on this Estate. To properly appreciate the evidence a visit to the Estate is necessary.

The authority for the bulk, if not all the work here, is to be found on five Memorials or Petitions that were presented to the Chairman of the Casual Labour Board, and which are printed *in extenso* in the Appendix to this Report. (Exhibits S 1, I 26, R 2, R 3, and R 4.)

The history of these Petitions is somewhat unique.

Mr. James Murphy is the registered manager of and the largest shareholder in the Company.

His evidence is that he initiated the making of the roads and got up the memorials.

Alluding to the first memorial, he says that Mr. Davies suggested that he (Murphy) should get an authority. He states Mr. Davies said, "If you can get me a letter, or anything I can get sanctioned, I will recommend it; I have no doubt they will do it."

All the five memorials appear to be in the same handwriting, prepared in Mr. Murphy's office. Mr. H. Prince, a shareholder of the Company, and a member of the firm of Prince, Ogg, & Co., stated, in accounting for some of the signatures in the memorials, that Mr. Murphy was an intimate friend of his and had free access to his firm's office at all times. An examination into the signatures to these memorials established that they were mainly composed of shareholders of the Company, clerks in Messrs. Prince, Ogg, & Co.'s, and in Messrs. Want, Johnson, & Co.'s and other offices, and that they had all been obtained by Mr. Murphy. In the case of one of these memorials, Mr. H. B. Jamieson, a son of Mr. J. S. Jamieson (member of the firm of Prince, Ogg, & Co., and also a large shareholder of the Company), identified forty-three out of the whole forty-nine signatures that appeared on one memorial as being either members of the firm of Prince, Ogg, & Co., or clerks in the firm's office at the time.

In the other memorials, it will be seen from the evidence of Mr. Murphy, and of Mr. Want and Mr. Simpson, that the names of a number of Want, Johnson, & Co.'s clerks were amongst the signatures, the ten clerks signing in two cases, the other signatures being chiefly shareholders in the Company. The signatures of two, in some cases three, Members of Parliament were also obtained to these memorials, and from the appearance of the original documents in some cases such signatures appear to have been obtained after the other signatures, a space for the purpose being left at the head of the other signatures. Mr. Varney Parkes, then Member for Central Cumberland, who had signed the memorial of 19th August, 1887, stated he believed he signed at Mr. Murphy's request, and that places were kept at the head of the signatures for the Members of Parliament. Mr. Farnell,
also

also Member for Central Cumberland, who had signed three of the memorials, stated, "It was the custom of Mr. Murphy to bring these petitions, and get them signed "by the Members for the county according to seniority. Mr. McCulloch was senior "Member, Mr. Varney Parkes next, and I was junior Member."

It will be seen on reference to the evidence that several persons, and amongst them shareholders of the Company, when applied to by Mr. Murphy, refused to sign the memorials, or some of them, for the reasons that, proposed works were not proper in the public interests. We may mention Mr. Simpson (of the firm of Want, Johnson, & Co.), Mr. Carruthers, Sir John Robertson, and, in one case, Mr. Myles McRae, having been applied to and refused to sign.

Mr. J. S. Jamieson, who, according to the share list supplied to us, held 48 shares in the Company, appears to have been active in regard to obtaining early consideration for these memorials, two of which were also signed by him. We were unable to obtain his evidence, as he had left the Colony for Europe on 20th February last.

Mr. Myles McRae, who was a large shareholder of the Company, and owned land in the district, but was not then a Member of the Legislative Assembly, signed three of the memorials.

The evidence of Mr. McRae should be read in connection with this part of the report.

Mr. McRae and Mr. Jamieson appear to have presented some of the memorials to the Casual Labour Board and afterwards gone to the Colonial Secretary's Office on the matter.

From Mr. Murphy's evidence it appears he went to the Casual Labour Board Office with each of the memorials.

It will be seen that in each case the Chairman of the Casual Labour Board, within a short time of, in three cases apparently on the same date as—the date of the memorials—recommended the carrying out of the works requested by the memorials for approval of the Colonial Secretary, and they received such approval.

Whether they were previously reported on or not by any competent officer does not clearly appear.

If reference be here made to the evidence of Mr. F. Wells, it will be seen he states, he took objection to the roads on the Holt-Sutherland Estate being undertaken by the Board, and saw the Principal Under Secretary about them. He adds: "They were ultimately undertaken. The Colonial Secretary gave the authority for the work being done, and I was relieved from responsibility in the matter." Later in his evidence he states "Mr. Davies and I were in consultation over some of the "roads, I was quite in accord with some of them being undertaken. I saw no "objection to the Main Illawarra Road, the Port Hacking Road, and, in fact, I "would not have objected to the Corunulla Road, leading to the Noxious Trades site. "These three I approved of." He adds, as to the other roads, "As they were on "private property, I did not think we ought to undertake them. At any rate, I "deprecated making the roads on the Holt-Sutherland Estate. As soon as they were "confirmed by superior authority I ceased to object to them."

From the evidence of Sir John Robertson and Mr. G. F. Want, both shareholders in the Company, and of Mr. Critchett Walker, the Principal Under Secretary, which can usefully be read in connection with this matter, it appears that special attention

attention was called to this road-work that was going on in the Holt-Sutherland district, and that it appeared public moneys were being spent on the Company's property. It further appears that the work was at one time stopped; that Mr. Jamieson and Mr. Murphy saw Mr. Walker, and remonstrated against the works being stopped, and that they were afterwards resumed.

The first memorial of 7th July, 1887, requested the Board to have the Main Illawarra Road aligned, cleared, and stumped, for its full width 2 chains, and properly formed for half a chain.

The second memorial, 19th August, 1887, was to clear, stump, and form Malvern Road and Sylvania Road.

The third memorial, 22nd September, 1887, was to have six roads, there particularly named, and also there described as being public roads, "cleared and stumped to their full width, and properly formed with water-tables, &c., fit for vehicular traffic for 33 feet wide on each road."

The fourth memorial, also dated 22nd September, 1887, commences with a reference to the Illawarra Road, but it goes on to define with much particularity a number of proposed works which we do not enumerate here, but ask that the document itself [Exhibit R 3 in the Appendix] be read, as it is important for a proper appreciation of the matter.

The fifth memorial, 10th May, 1888, was to clear, form, stump, gravel, and culvert twenty-three roads there particularly named, and to break stone in a quarry on Government Reserve, Sutherland.

We think it proper to point out that in this and the previous memorial, as it appears printed in the "Return respecting Roads through Holt-Sutherland Estate," ordered by the Legislative Assembly to be printed on 13th December, 1888, being one of the Returns mentioned in Schedule A to this Report, we found important omissions when comparing with the original memorials.

The evidence of Messrs. V. Parkes and F. Farnell establishes that these gentlemen only signed the memorials that bear their signatures in their capacity as Members for the Electorate in which the property was situate, and that they had no other interest.

The evidence of Mr. J. H. Carruthers, then Member for Canterbury, who signed two of the memorials—namely, the first relating to Illawarra Road, and the second relating to Malvern Road and Sylvania Road—establishes that he so signed because he knew the roads, on which, by the memorials, work was requested to be put were public roads, and that it was for the public benefit. He explains that the Sylvania Road, he some time afterwards saw on the Holt-Sutherland District map produced before the Select Committee was not the road he took to be the Sylvania Road, and that what he understood to be the Sylvania Road when he signed the memorial was the road leading from Port Hacking to Sylvania. Mr. Carruthers states that two of the other memorials were presented to him for signature and he refused to sign them because, as he states, he "would not mix himself up with what appeared to be private roads."

As it appeared from the Select Committee proceedings and also from the evidence of some witnesses examined under this Commission, that there was some statement that Mr. Carruthers' property was particularly benefited by some of the works,

we think it proper to express our opinion that there is no foundation whatever for such statement, and that the action and interest taken by this gentleman in regard to having works done on certain roads were disinterestedly taken and entirely in the general interests of the District.

It appeared from the records of the proceedings of the Select Committee, that reference had been made to the interest that Sir Henry Parkes had in the Company upon whose Estate the roadwork had been sanctioned.

The facts as to this interest appear from the evidence of Messieurs J. W. Johnson, S. A. Want, E. P. Simpson, and J. Murphy, and are briefly as follows :—

According to the Share Register of the Company Sir Henry Parkes is, on 10th September, 1885, shown as a holder of ten shares; on 3rd July, 1886, as a holder of two further shares on a new issue; on 6th July, 1887, as a holder of two further shares on a second issue; and on 13th July, 1888, there is a record of a transfer of four shares to J. S. Jamieson and ten shares to Messieurs Johnson, Want, Simpson, and Minter.

According to documents produced by Mr. S. A. Want, it appeared that Sir Henry Parkes had, on 26th September, 1885, charged the shares he then held in the Company in connection with an advance from the Colonial Mutual Assurance Company, and that Messieurs Want, Johnson, & Co. held the shares to indemnify them against any loss they might be called on to make good to their clients, the Colonial Mutual Assurance Company, in respect of some mortgage that had been given by Sir Henry Parkes. On 1st October, 1885, Sir Henry Parkes wrote to Messrs. Want, Johnson, & Co., sending endorsed transfer in blank of the ten shares signed.

It would therefore appear that after 26th September, 1885, and until 12th October, 1887, when Sir Henry Parkes assigned his estate, his interest in the ten shares, and perhaps of the four new issue shares, was charged with and subject to the arrangement under which Messieurs Want, Johnson, & Co. held the shares, but that after 12th October, 1887, he ceased to have any interest at all in the shares, which thenceforth—subject to Want, Johnson, & Co.'s charge—became vested in the Trustees of the Deed of Assignment of 12th October, 1887.

If reference be made to the dates on which the recommendations in the five memorials were approved, namely, 8th July, 1887, 22nd August, 1887, 30th September, 1887 (two approved together), and 21st May, 1888, it will be seen that the interest above described existed at the dates of the first four of the memorials, but had ceased when the last memorial was considered.

Sir Henry Parkes, in his evidence, to which we ask that reference may be made, absolutely and emphatically disclaimed the idea that, in approving of the works memorialized for in the five memorials before alluded to, he acted otherwise than in his capacity as Premier and Colonial Secretary, or was prompted by any other than the purest motives, and such as should be dictated by a high sense of duty in conserving the public interests. We unreservedly accept such disclaimer and believe a contrary conclusion would be unreasonable.

We deemed it within our duty and pertinent to make the inquiry, as testing the origin and propriety of the authorized expenditure, and to clear away an imputation on a distinguished public servant that might be drawn from questions placed on the records of the Select Committee proceedings. We humbly submit ourselves to your Excellency's forbearance if we have erred in the premises.

Mr.

Mr. Murphy appears to have interested himself not only in working up and getting effect given to these memorials, but also to a considerable degree in connection with the performance of the Road Works and improvements on the Estate.

Mr. Burrowes, the superintendent in charge of the district, produced, in his evidence, a series of letters he had received at various times from Mr. Murphy, some marked "private." These letters having, in our opinion, an important bearing on the matter under our consideration, are printed in the Appendix to this Report (Exhibits I 4 to I 25, and S 2 to S 6). They disclose that Mr. Murphy, the Manager of the Company, was interesting himself to a considerable extent, both suggesting and directing. According to some of the evidence before us, Mr. Burrowes had complained to Mr. Davies of Mr. Murphy's interference. This is borne out by Mr. Murphy's "private" letter of 8th September, 1888 (Exhibit I 19).

Mr. Murphy's evidence as regards these letters is not altogether satisfactory; and there is some evidence that the communications and Mr. Murphy's working in the matter with Mr. Burrowes were not altogether unknown to Mr. Davies.

In the result, however, extensive and in many respects costly road-work—both clearing, formation, ballasting, and culverting—was carried out on the Estate of the Company.

We have found a difficulty in locating many of these roads by the names given to them in the memorials, and especially the series of twenty-three roads named in the memorial of 10th May, 1888. It will be seen by reference to the evidence that the witnesses conversant with the District, and some, too, who signed the memorials, did not recognize many of the roads by their names.

Two of the roads, however, named in the memorial of 10th May, 1888—Burraneer and Wotonga—appear to have connection, if they are not identical, with what has been termed "Gannon's Road," which appears to have received a separate Ministerial sanction, following upon a letter of 23rd January, 1888, written by Mr. W. Lovel Davis, then a Member of the Legislative Assembly, to the Principal Under Secretary. We found, what we were informed is, Wotonga Road, leading off the Port Hacking Road in an easterly direction, bounded on one side by property now, we understand, belonging to Mr. McRae; and, after some distance, we found a road turning off in a southerly direction, which we were informed is Burraneer Road—both roads being formed and gravelled from the Port Hacking Road to a gateway leading into property stated to belong to Mr. Gannon, and where the gravelling and formation end. According to a statement supplied to us by Mr. Surveyor McPherson, the extent and nature of work there, is as follows:—"Length formed and gravelled, 79½ chains; cleared, 111½ chains; gravelling, 14 feet to 15 feet wide; formation, 33 feet wide; clearing, 66 feet wide, with a bridge, 3 pipe culverts and a timber culvert. This appeared to us to be rather an exceptional piece of road-work, but we failed to obtain any evidence which would justify the work in the public interests.

In many other respects, and to an extent involving large expenditure, road-work and other improvements appear on this Estate which the evidence established had been constructed by the Relief men, and which, in our opinion, cannot be justified as having been done in the public interest.

In addition to the visit of inspection paid by us to this Estate, Mr. Franklin, associated with us in this Commission, recently made a second inspection and examination of the work done, in order that he might place before us his professional report on the matter. We submit, in Schedule B to this Report, the memorandum prepared by him.

Expenditure

Expenditure upon the Property of Messrs. J. F. Burns, G. Withers, and R. B. Smith, at or near Hornsby.

The evidence bearing upon this matter was obtained from Messrs. J. W. Deering, W. M. Gordon, F. O'Donnell, H. Little, L. C. Palmer, C. B. Dawson, C. N. J. Oliver, J. F. Burns, G. Withers, R. B. Smith, and A. W. S. Gregg, which, as in the other cases, being unable satisfactorily to summarize we ask may be here read and taken as incorporated in this Report.

A reference to the plan which we used in the taking of evidence, and which we were informed was prepared from actual survey (noted in the Appendix to this Report as *Exhibit D 4*), may also be made to properly appreciate the position.

We have inspected this property, and the roads and other works thereon which have been constructed, as it appears from the evidence, by an expenditure of public moneys.

In this case, so far as can be gathered from the evidence and our examination of various records, there was not any Ministerial sanction to or approval of the initiation and construction of the roadworks now under review. The Members of the Board claim that they carried out work here that had already been initiated when they came into office.

The evidence, in our opinion, establishes that at the time the Board took over the duties from Mr. Deering the only place on the Estate upon which work had been done was the road over the railway, marked road A on plan [*Exhibit D 4*], through the property of Messrs. Burns, Withers, and Smith leading to Crown lands. That road appears from the records to have been surrendered by Messrs. Burns, Withers, and Smith in November, 1886, in lieu of a road previously agreed upon, and in respect of which the Government were to relinquish all claim. The formal dedication of this road was gazetted in August, 1887. The only other condition attached to the surrender was that the road should be "surveyed and cleared for traffic in a reasonable time." Mr. Deering states that when he gave up supervision, road A had been surveyed and cleared for traffic, and the condition complied with.

Mr. Surveyor Gordon an officer under Mr. Deering had been connected with the works in the District previously to the appointment of the Casual Labour Board, and Mr. Deering was asked by the members of the Board to assist them with Mr. Gordon's services in the taking over other works then in hand, and explaining as to the position of affairs. This was done but Mr. Deering does not otherwise appear in the matter after the Board came into existence.

It will be seen by reference to the plan [*Exhibit D 4*] the extent and number of the various roads under consideration.

How or under whose authority the work came to be initiated on this property and the roads constructed is not by any means clear. It appears to us from the evidence that this system of roads was independent of road A, and that it cannot properly be urged that the other roads followed as of course on the authorization for road A.

So

So far as we can gather from the evidence, the first road commenced was the Junction Road (G on plan *Exhibit D 4*). This road is in the same direction as what is named on the plan Boundary Road, the line of Boundary Road being in parts impracticable. The Boundary Road is on Crown land and skirts the north boundary of Messrs. Burns, Withers, and Smith's property, and there can be no question that going east from the railway the line of road becomes impracticable at or near its junction with road marked D on the plan.

There is some evidence that there was a document that in some way accounted for the opening of the Junction Road and some of the tributary roads going thence north to Crown lands. Both Messieurs Wells and Houison speak of such a document. We have not been able to discover any such, or any copy or record of it, nor could any evidence of its alleged contents be given by any of the witnesses who spoke of it. So far as we can judge from the evidence, there is not any document authorizing the commencement of the work, or to evidence the giving up by the owners of the land for Junction Road.

There is a conflict of evidence between Mr. Deering and Mr. Surveyor Gordon as to the origin of the work. Mr. Gordon speaks of it being initiated by Mr. Deering, and refers to a particular interview Mr. Deering had with him as to the roads, and that immediately, notice was sent to his field assistant, Mr. Palmer, to start the work. Mr. Palmer was examined by us, but his evidence did not confirm Mr. Gordon to that extent. In fact Mr. Palmer's evidence was confined to road A, and instructions to continue it south-easterly "as the country might permit," to strike the Vanceville or Great Eastern Road. He said the tracing sent to him showed a continuation of road A in "a direction easterly from Bellamy's," but he was quite clear it did not show Junction Road (G) or any of the tributary roads (B, C, D, E, F), so that, while not supporting Mr. Gordon's recollection, he to some extent confirms Mr. Deering's account.

That there was some intention of extending road A can be seen from a letter of 11th August, 1887, from Mr. Burns to the Minister for Lands, when forwarding the approval of himself and co-partners to the plan of road A. He says:—"I think right to remind you that it is obligatory on the part of the Government to extend the road to the Great Eastern or Vanceville Road, and to put it in fair passable condition for traffic." Noted by an officer of the Survey Department on that letter, for the information of Mr. Bennett, the Commissioner and Engineer for Roads, is a memorandum that there was no such obligation. And Mr. Symonds, to whom this was forwarded, reported inspection, and that he found "that the work of clearing, culverting, &c., had been undertaken by the Casual Labour Board, who have a number of men employed upon it."

We think, however, the position can be gathered from the evidence of Mr. Burns and of Mr. C. B. Dawson, his surveyor. Mr. Burns says application was made to him for some roads. He handed the matter over to his surveyor, Mr. Dawson, and gave him discretionary power. Mr. Dawson states:—"Mr. O'Donnell, overseer in the charge of the unemployed at Hornsby, called at my office one morning and told me the men were doing nothing, and that they wanted a road through the Estate in lieu of Boundary Road. He said Mr. Burns had allowed him to lay it out. I went up next morning and laid it out in position. They had laid out the Boundary Road, but found they could not get across the gullies, as it was very precipitous in places."

Mr.

Mr. O'Donnell's evidence is:—"I believe we started Junction Road on our own authority. Having the men there we had to do something, and we started; I had some authority; I believe I got it from Mr. Davies." Further, he says, as to forming Junction Road, "I had authority from Mr. Davies to do it. I think after clearing it we had word from Mr. Gordon—I am not certain. I think it mentioned about ballasting, forming, and putting culverts in where necessary." Mr. O'Donnell, who is not a surveyor, appears to have had rather a wide discretion, for the work once started on this Estate seems to have proceeded in various directions, and to rather an elaborate extent.

Mr. Surveyor Gordon appears to have received instructions at various times from the Casual Labour Board, of which Mr. Deering, his superior officer in the Survey Department, states he knew nothing. On 17th October, 1887, Mr. Gordon, writing to the Chairman of the Board, encloses a tracing showing roads cleared and in course of completion, and other roads which he proposes to clear. This tracing shows roads, which correspond to those marked B or C (which, is not quite clear), D, E, F, G, H, I, and J on plan [*Exhibit D 4*].

The Casual Labour Board, through Mr. Hinchcliffe, thereupon wrote to Mr. Burns, enclosing tracing and intimating that if he and his co-partners have no objection to the opening of three roads—which correspond to D, E, and F on plan [*Exhibit D 4*—they will be commenced. Mr. Burns replies on 19th October, 1887, on behalf of Burns, Withers, and Smith, that he has no objection to the roads shown on tracing there enclosed being opened for public use. This, so far as the evidence before us goes, appears to be the only letter from Mr. Burns in the matter of this road work—excepting one as to the extension of the Great Eastern or Vanceville Road.

The work is proceeded with and carried to completion, other roads in addition, as will appear by reference to the plan [*Exhibit D 4*], being also gone on with and constructed without any particular sanction or authority that we could find.

In January, 1888, some inquiry appears to have been made consequent on some question as to the propriety of the work. Mr. Burns, who was then Colonial Treasurer, states:—"I brought the whole question of these roads before the Cabinet." * * * * * "In consequence of my letters and representations, and my desire that the Cabinet should consider whether these roads were all in the public interest, Mr. Bennett," the Commissioner and Engineer for Roads, "was desired to report upon their necessity from a public point of view." Mr. Bennett having, it appears, examined the locality and the road works done, wrote a minute thereon on 8th February, 1888, of which the following is a copy:—

Minute by the Engineer-in-Chief.

I have examined the locality of Hornsby and the road works done by the Department and the unemployed. The roads from the main or Junction Road to the Peat's Ferry Road have been cleared at private cost by the owner of land on either side.

The Boundary Road, which has been cleared to show more definitely the Crown lands, is impracticable, unless at a large outlay, and has no direct access to the station, as private property intervenes. This Boundary Road, crossing the gullies low down, has undulations which can only be made passable at great cost, and even then with very steep grades and extensive bridges over the gullies which intersect it.

To obviate this, on the representations of the Officer of the Survey Department, Junction-street was made the main road to those back lands from the station; the owners of the lands, Messieurs Burns, Withers, and Smith, having given five roads of access, which have all been cleared so as to give access to eligible points for the continuation of roads at summits of ranges through the expanse of Crown lands to Cowan Creek. By this arrangement the public estate is decidedly benefited, as easy roads with practicable grades are obtained to this Crown land, and direct access given to the station without necessity for passing through other private property. The

The Vanceville road, joining this Junction Road, was made by the Department two years ago as far as Billyard Road or Street, and was recently extended by the unemployed to afford direct access by one of the short branch roads to the Crown lands from the Lane Cove Road and the Gordon Railway-station. One of the other two cross roads recently cleared was to give direct access from the church and junction of the Lane Cove Road and Peat's Ferry Road, Pearce's Corner, to the Crown lands. The other intermediate road gives access from Lane Cove Road, half-way between Gordon and Hornsby, to the land in question. All will be ultimately required, and will enhance the value of the Crown land beyond by rendering it easy of access, and have been located in the best positions and defined by clearing, instead of their selection in the future being hampered by sale of allotments through which it might be necessary to force the roads at considerable cost for compensation and fencing.

If it had been possible to exercise this provision and precaution in other cases miles of bad road, large outlay for works and compensation, would have been saved, and larger revenue from land sales would have been secured.

Had this land been reserved Crown land not to be sold, all the roads would have been desirable in the interests of the Crown lands beyond, and I fail to see why the possession of the property in question by private individuals should be a bar to necessary improvements because they incidentally enhance its value.

As Mr. Burns relied particularly on this minute, we gave it our special attention.

Unfortunately, we were unable to obtain Mr. Bennett's evidence, owing to his state of health, and Dr. Pockley, his medical adviser, assured us that it would be very inadvisable to examine him.

It appears from Mr. Gordon's evidence, and a letter of his to the Chairman of the Casual Labour Board, dated 28th January, 1888, that Mr. Davies requested him to meet Mr. Wells and Mr. Bennett at Hornsby; that he did meet them, and that Mr. Wells and he (Gordon) pointed out the different roads. Mr. Wells, besides being a member of the Casual Labour Board who had had to do with these roads, was Assistant Engineer, and second in command in the Roads Department. Mr. Surveyor Gordon, as already appears in the Report, had previously recommended several of the roads. After his visit of inspection with Mr. Bennett and Mr. Wells, he reported fully by letter of 28th January, 1888, to the Chairman of the Casual Labour Board, as to the work that had then been done.

It appeared from our inspection of the locality, and it also appears from the evidence of Mr. Gordon, and Mr. Burns, that Mr. Bennett is under some misapprehension, when, in the first paragraph of his minute of 8th February, 1888, he refers to the roads from the Junction Road to the Peat's Ferry Road. The Junction Road is on one side of the railway line, running through the property of Messrs. Burns, Withers, and Smith, now under consideration; the Peat's Ferry Road is on the other side of the railway line.

As to the second paragraph: The Boundary Road has been cleared, and it has been made, and is available for traffic in a direction from the road A over railway up to its junction with road D on the plan [*Exhibit D 4*], thus, as it appeared to us, minimising the necessity of a continuation of Junction Road (which is parallel to it) westward to the railway.

As to the third paragraph, we have been unable to discover that Junction Road originated with the Survey Department, but rather, as already stated, by arrangement with Mr. O'Donnell and Mr. Dawson. Unless Mr. Burns' letter of 19th October, 1887, before referred to, can be taken to cover all the roads, it would seem by reference to Mr. Hinchcliffe's letter of previous day that three roads and not five had been given.

As to the fourth paragraph, according to some of the evidence, Vanceville Road to its junction with Billyard Road was made by the proprietors of land in its vicinity. Mr. Burns' evidence is that "it was"—"roughly made." Its continuation from Billyard Road to Junction Road was petitioned for in November, 1887, and the

the petition was referred to the Casual Labour Board, but the evidence before us did not show that that work had been formally authorized. The continuation of Vanceville Road beyond the Junction Road which has been done is not referred to in the minute. The "two cross-roads" and "the other intermediate road" which Mr. Bennett refers to in this paragraph we could not, in the absence of his evidence, satisfactorily locate.

The roads of which Mr. Bennett makes no mention, and which appear to have had work done on them by the "Unemployed" are:—

1. Burns' Road and its continuation across the Vanceville Road proceeding in an easterly direction bounding Messrs. Burns, Withers, and Smith's property, then southerly skirting the same property, and then easterly.
2. The continuation of road E joining Burns' Road with Junction Road.
3. A road parallel to the railway, George-street, on the plan [*Exhibit D 4*].
4. Several roads near the railway, shown on plan [*Exhibit D 4*].

It does not appear on the evidence whether or not the work on these had been done at the time of Mr. Bennett's inspection. If it had been done they may have escaped his attention. At any rate, we submit from the foregoing, that Mr. Bennett's conclusions were not based on sufficient premises.

Other than we have already pointed out in connection with Mr. Dawson's and Mr. O'Donnell's evidence, there is not any evidence before us to show that Mr. Burns interested himself to have this road system, as it now appears on the Estate and as shown on plan [*Exhibit D 4*], carried out.

Mr. Oliver gives some evidence of an official visit he made to Hornsby while Under Secretary for Lands, at which Mr. Davies, Mr. Burns, and Mr. Deering were present, and that there was some discussion as to the propriety of forming a road parallel to the railway (George-street on plan) between him and Mr. Davies, but that Mr. Burns did not take part in it.

Mr. Burns was the manager of the Estate, and principally looked after its affairs and expenditure. He occasionally visited the property, and was aware that the roads were being made, and as to the nature of the work done.

The petition before referred to, as to the continuation of Vanceville Road to Junction-street, is the only petition we have had produced affecting this District. It was signed by Mr. G. Withers, and according to Mr. Burns' evidence it was presented to him for signature, but he refused to sign it.

Mr. Burns was Colonial Treasurer during the years 1887 and 1888. He states, that when the petition was presented to him he was acting for Mr. Sutherland, Minister for Works, and he did not sign it because he was a Member of the Government, and because he was interested in the matter of the petition. He further states that applications for advances to the Casual Labour Board went to the Colonial Secretary, who authorized the Treasury to pay, and that, as Colonial Treasurer, he had neither the control of the expenditure allowed to the Board nor did he interfere in it.

Mr.

Mr. Burns, after he had given his evidence before this Commission on 7th May last, expressed a wish to give further evidence, and produce papers. He accordingly attended before us on 21st May last, and made a statement which appears in the Minutes of Evidence attached to this Report, and to which we direct attention.

Mr. Withers was a Member of the Legislative Assembly during the time these road works were going on. He states he only knew in a general way what was being done, and thought the roads were being constructed in the ordinary way; his first definite knowledge was when he went up after giving his first evidence before the Select Committee. With the exception of the evidence respecting road A, and its subsequent dedication, Mr. Burns does not appear, from his evidence, to have had occasion to discuss the Estate matters with Mr. Withers, and he says that from the commencement of the public discussion about the Hornsby Roads the relations between them have become strained.

Mr. R. B. Smith, who was also a Member of the Legislative Assembly at the time, states "he was opposed to the roads being opened or given without compensation;" that "neither directly nor indirectly had he anything to do with the initiation or direction of the work," and that he left everything to the management of Mr. Burns. It is probable, therefore, that neither Mr. Withers nor Mr. Smith had any particular knowledge of the roadwork that was going on on their property until it or the bulk of it was completed.

As to the nature of the work done, it is in many respects substantial and costly, especially on the Junction Road and Burns Road; and we cannot, upon the evidence and after inspection, conclude that it was all necessary and justifiable in the public interests.

The estimates of expenditure given by different witnesses vary, owing, perhaps, to their measurements being taken from sketch plans, as no survey-plan appears to have been prepared until that which was produced before this Commission. [*Exhibit D 4.*]

We append, in Schedule C to this Report, a memorandum prepared by Mr. Franklin.

The conclusion we have come to on the Road Expenditure branch of the Inquiry is that in both instances—that of the Holt-Sutherland Estate, and that of the Estate of Messieurs Burns, Withers, and Smith—there has been an improper expenditure by the Casual Labour Board of public moneys, in the improvement of and the making and construction of roads and other works upon the respective properties; and that in the former case—the Holt-Sutherland Estate—it is more serious both in principle and amount than in the latter.

It seems clear on the evidence that there were many other avenues open for the employment of the Relief Labour on Crown lands in places equally convenient, from which the public would have derived benefit, and that there was not any necessity or justification for employing the labour on these properties to the extent that has been done.

We ask that the Special Report, which was presented by us on 29th April last, be taken as read and incorporated in this Report. In

In submitting for Your Excellency's consideration, in compliance with the terms of our Commission, what we have found touching the premises, we ask Your Excellency's forbearance, if, in the extensive range of subject that we have had to inquire into and deliberate upon, we have omitted to deal with any matter contemplated by the Commission, or have in any way misconceived or gone beyond the scope and purposes of the Inquiry. We have, and often in the face of many difficulties, striven conscientiously to discharge the responsible duties entrusted to us, and to conduct the investigation, reporting our findings, without favour, fear, or partiality. We have endeavoured to execute the commands laid upon us with all the industry and ability that we were capable of exerting, and we venture to express the hope that in the results it will be found we have not quite failed.

Certified under our hands and seals, this third day of June, 1889.

ALFRED J. CAPE, (L.S.)
President.

F. A. FRANKLIN. (L.S.)

T. F. WALLER. (L.S.)

SCHEDULE A.

1. RETURN as to ROADS and other works carried out by the Casual Labour Board in the parish of Manly Cove, county of Cumberland.
2. PAPERS in connection with various roads and other works carried out by the Casual Labour Board at Ryde, Eastwood, Carlingford, Beecroft, Hornsby, Dural, Coolah, Thornleigh, and Berowra.
3. CORRESPONDENCE, &c., respecting roads through Crown Lands at Hornsby. Ordered by Legislative Assembly to be printed, 14th November, 1888.
4. PETITIONS and Surveyors' Reports respecting Roads at Hornsby.
5. RETURN as to ROADS and other works carried out by the Casual Labour Board at Holdsworth, Heathcote, Sutherland, Peakhurst, Unwin's Bridge Road, Cook Park (Sandringham), Bankstown Park, Bankstown Common, Drutt Town, and Campbelltown.
6. CORRESPONDENCE, PLANS, &c., respecting Roads passing through Holt-Sutherland Estate. Ordered by Legislative Assembly to be printed, 13th December, 1888.
7. PETITION from Hon. J. F. Burns praying to be heard, either in person, or by Counsel or Attorney, before Select Committee sitting on Work of Unemployed on Roads at Hornsby and Holt-Sutherland Estate.
8. PETITION from the Unemployed to be heard at Bar of the House.
9. RETURN showing Roads constructed by the Unemployed. Ordered by Legislative Assembly to be printed, 1st November, 1888.
10. PARTICULARS respecting the Unemployed. Ordered by the Legislative Assembly to be printed, 23rd November, 1887.
11. RETURN as to AMOUNT expended for Relief Works and relief to the Unemployed. Ordered by Legislative Assembly to be printed, 28th June, 1887.
12. RETURN as to PAYMENTS on account of Relief Works for the Unemployed. Ordered by Legislative Assembly to be printed, 28th June, 1887.
13. RETURN showing Applicants for work to the Casual Labour Board, where they came from, and how dealt with, from 2nd May, 1887, to 31st December, 1888.
14. RETURN showing Applicants for work to the Casual Labour Board, where they came from, and how dealt with, from 2nd May, 1887, to 30th June, 1888.
15. CORRESPONDENCE respecting the Discontinuance of Services of the Unemployed. Ordered by the Legislative Assembly to be printed, 11th January, 1889.
16. PROGRESS REPORT from the Select Committee of the Legislative Assembly on Work of Unemployed on Roads at Hornsby, Holt-Sutherland Estate, together with proceedings of the Committee, Minutes of Evidence, and Appendix. Ordered by Legislative Assembly to be printed, 21st December, 1888.
17. SECOND PROGRESS REPORT from the Select Committee of the Legislative Assembly on Work of Unemployed at Hornsby and Holt-Sutherland Estate, together with Proceedings of the Committee and Minutes of Evidence. Ordered by Legislative Assembly to be printed, 16th January, 1889.

SCHEDULE B.

Memorandum as to Roads, &c.

Holt-Sutherland Estate.

SINCE the official inspection made by the Commission, on the 29th day of April, I have personally, with assistants, visited the locality and examined the work done in road clearing and formation, under direction of the Casual Labour Board, on the Holt-Sutherland Estate.

From the measurements taken on the ground, and by adopting the lengths of roads given in Mr. Burrowes' statement G, appended to his evidence before the Select Committee of the Legislative Assembly, and based on the schedule rates obtained in evidence before the Royal Commission, the accompanying statement of extent and nature of works has been prepared.

The total estimated expenditure thus obtained is £13,423 Os. 6d.; but, if the Main Illawarra, Port Hacking, Coronulla, and, as stated by some, the Malvern Roads, are to be considered public roads, and expenditure on them justifiable (within the ordinary limit allowed for such roads), the total would be subject to deduction, as shown in summary.

EXPENDITURE.

	£	s.	d.
Expenditure as stated	10,284	6	2
Special work on Woronora Road "(e)"	1,188	3	6
Other additional work "(a), (b), (d), (e), (f), (g)"	1,194	19	0
Supervision, 6 per cent.	759	0	0
	<u>£13,426</u>	<u>8</u>	<u>8</u>

SUMMARY.

Amount expended	£13,426	8	8
<i>Deduct</i> Illawarra Road, part expended, excess	£	s.	d.
width deducted	1,131	14	3
Port Hacking	1,429	0	0
Coronulla	823	11	7
Malvern Road (stated as necessary for approach to beach from Railway)	655	4	6
If admitted public roads, deduct...	<u>4,039</u>	<u>10</u>	<u>4</u>
Total expended on other roads	<u>£9,386</u>	<u>18</u>	<u>4</u>

N.B.—The cost of tools, powder, and contingent carting, in connection with above works, could not be ascertained.

Total expenditure on Estate (less amount claimed to be for public roads) £9,386 18 4

SCHEDULE C.

Memorandum as to Roadwork, &c., on Burns, Withers, and Smith's Estate.

THE work done on this Estate under direction of the Casual Labour Board is given in the statements attached, and is computed from a plan of actual survey by Mr. W. M. Gordon, Government Surveyor, under instructions of Mr. District-Surveyor Deering, which comprises strictly all the roads traversing or forming boundaries of the said Company's land.

The statements also show the works chargeable to other private owners whose lands are adjoining and benefited, in addition; the three roads marked H, I, K, extending north from Lane Cove and Pennant Hills roads to south boundary of Messrs. Burns, Withers, and Smith's property, complete the system shown on plan.

The following estimate is made by measurements from plan on schedule rates given in evidence.

TOTAL EXPENDITURE.

	£	s.	d.
Chargeable to roads on Messrs. Burns, Withers, and Smith's Estate	2,519	4	9
Chargeable to roads on other estates	508	12	5
Do roads H, I, K	160	15	9
<hr/>			
Total expenditure on east side of railway and south of Crown lands	£3,188	12	11
<hr/> <hr/>			

SUMMARY.

Amount chargeable to roads on Messrs. Burns, Withers, and Smith's Estate	2,519	4	9
Less cost of Vanceville Road and Junction Road to Boundary Road, if a public road	336	0	10
	<hr/>		
	2,183	3	11
Amount chargeable to roads on other private estates	508	12	5
Do roads H, I, K	160	15	9
	<hr/>		
Total	£2,852	12	1
<hr/> <hr/>			

N.B.—The cost of tools, powder, and contingent carting, in connection with above works, could not be ascertained.

1889.

NEW SOUTH WALES.

CASUAL LABOUR BOARD INQUIRY COMMISSION.
(SPECIAL REPORT BY.)

Presented to Parliament by Command.

A SPECIAL REPORT presented to His Excellency the Governor, by the Casual Labour Board Inquiry Commission, upon a particular matter arising during the progress of the Inquiries directed by the Commission.

To His Excellency The Right Honorable CHARLES ROBERT, BARON CARRINGTON, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

MAY IT PLEASE YOUR EXCELLENCY,—

We, Her Majesty's Commissioners, were appointed by Letters Patent under the Great Seal of the Colony, dated the twentieth day of February, one thousand eight hundred and eighty-nine, to make a diligent and full inquiry into the working of the Casual Labour Board, consisting of the Honorable John Davies, C.M.G., M.L.C., Frederick Wells, Esquire, and David Houison, Esquire, from the time of its appointment until the twenty-third day of January, one thousand eight hundred and eighty-nine, into the mode in and the purposes for which public moneys have been expended by the said Board, or any members or member thereof, or under their or his authority; into the manner in which the said Board and the members thereof have performed their duties in that behalf; and into the truth of all charges and statements which have been made before Parliament, or before any Select Committee thereof, touching any alleged improper expenditure by the said Board, or any members or member thereof, or under their or his authority, of any public moneys in the improvement of, or the making, or construction of roads or other works upon the property of any person, partnership, or company.

We received our Commission on the 22nd day of February last.

We

We have since that date diligently prosecuted the inquiry intrusted to us and we are still actively engaged in the examination of witnesses, whose evidence is, in our opinion, material and necessary for the purposes of the investigation.

We have held twenty-seven meetings and have examined fifty-two witnesses.

Excepting so far as the subjects referred to us for inquiry, and above indicated, trench upon and are unavoidably imported into that branch of the inquiry which relate to the charges and statements which have been made before Parliament or before any Select Committee thereof, as mentioned in the Commission, we have, we believe, unless other material witnesses are presented, concluded the actual taking of evidence, on what may be termed, for purposes of division of subject matter, the Departmental working.

We defer bringing up our Report on this head until we are in a position to present our Final Report upon the whole subject matter submitted for investigation, as, in some important respects, we are unable to come to a proper conclusion until evidence on the latter branch of the inquiry is completed.

In the course of the inquiry, a matter, in our judgment, of serious import has arisen, involving the Chairman of the late Casual Labour Board, the Honorable John Davies, C.M.G., M.L.C.

We have, so far as we are able, investigated this matter, with the result that, in our opinion, the evidence taken and the examination of such books and documents as are available to us, disclose grounds for the belief that, at least, a grave irregularity, implicating Mr. Davies, has been committed.

We, therefore, after the fullest and most anxious deliberation, and in view of the responsible nature of our duties and the public interests, deem that the circumstances demand that we should submit a Special Report on the particular matter hereinafter indicated.

We, for reasons that will appear obvious, refrain here from pronouncing our definite finding on the matter.

We submit this Special Report, with the documents that are annexed to, and are to be taken as incorporated herein, in order that, if your Excellency sees fit the same may be referred for the opinion and advice of the Crown Law Officers, as to whether any further action shall be taken.

We have, as will be found later on in this Special Report, taken upon ourselves the responsibility of impounding certain books and documents which have been produced in evidence by various witnesses.

These books and documents are the property of certain persons and companies.

We doubt whether we have power, either inherent to our office as Commissioners, or by virtue of the statute 44 Victoriæ No. 1, to warrant the impounding of such books and documents.

But, in the general interests, and to save what possibly might lead to a miscarriage of justice, we have assumed the authority to detain the books and documents, believing that our action in this respect will be supported.

The consideration of this has, in a large measure, induced us to the conclusion that the circumstances justify our submitting a Special Report, and on this point we seek to be directed as to what course we are to take, if the return of these books and documents is demanded and insisted upon by their owners. We

We propose in this Special Report to refer to or quote only such evidence as, in our judgment, bears upon and is material for the purpose of conveying a clear comprehension of the particular matter to which this Report relates.

The Casual Labour Board, the members of which were Mr. John Davies, Mr. Frederick Wells, and Mr. David Houison, appears to have been appointed by Sir Henry Parkes, then Colonial Secretary, in or about the month of May, 1887.

The members of the Board rely upon a memorandum or minute under date 2nd May, 1887, signed by Sir Henry Parkes, and directed to them as conveying instructions for their guidance.

Messieurs F. Wells and D. Houison, at the time of the creation of the Board, and throughout its existence, held important, and, we believe, responsible offices in the Public Service, the former as an Assistant Engineer in the Roads and Bridges Department, the other as District Engineer in the Harbour and Rivers Department.

Shortly after the creation of the Board, the members thereof appointed Mr. John Davies to be the Chairman, and subsequently, what has been termed by different witnesses "the executive work," or general administration of the Department, was entrusted to him.

Messieurs F. Wells and D. Houison thenceforth, though in many respects bestirring themselves in regard to the professional working, did not actively and continuously engage themselves in the duties of the Casual Labour Board Department.

Mr. John Davies, on the other hand, assumed the active management of the office, and administered its affairs, virtually appearing and acting throughout as the responsible head of the Department.

He and some of the subordinate officers on the staff of the Department appear to have had almost the entire control of the funds which were placed at the disposal of the Casual Labour Board by the Government, and the application of the various moneys belonging and coming to the Department.

Amongst other things, Mr. John Davies was empowered to sign cheques, which were countersigned by Mr. Thomas Cooper Hinchcliffe, the senior clerk in the establishment, and in other respects Mr. Davies appears to have had and exercised a very wide discretion.

From our examination of the books of the Department, and from evidence we have taken on the subject, the practice appears to have obtained for the Colonial Treasurer to pass to the credit of the Casual Labour Board at the Australian Joint Stock Bank various sums from time to time, each amounting to £6,000.

For some months the bank account of the Board was thus kept in funds by periodical payments from the Treasury of £6,000, but at a later period the account with the Australian Joint Stock Bank became and remained for a considerable time overdrawn to the extent of several thousands.

For example: In December, 1887, the Board's current account with the Australian Joint Stock Bank was overdrawn upwards of £18,000. In July, 1888, the same account was overdrawn upwards of £29,000; and this overdraft went on increasing to the end of the year 1888, when it reached £77,722 14s. 8d., as shown by the Bank pass-book.

The

The account was then partially put in funds by a payment from the Colonial Treasurer of £72,000. But at the close of the Board's existence in January last there was again an overdraft, amounting to £12,203 10s.

The total payments made by the Casual Labour Board during the time of its existence, as taken from the cash-book kept by one of the officers of the Department, were £252,424 8s. 10d.

These facts and figures are mentioned to illustrate in a measure the extent of the control and responsibility of Mr. John Davies as the Chairman of the Board who administered the Department.

They are not further relevant to the special matter herein reported on, beyond noting that the Colonial Treasurer was, with certain exceptions to which we refer below, the source from which this Bank account was fed, and that the Casual Labour Board's Bank was the Australian Joint Stock Bank.

In examining the Bank pass-books, three in number, at an early stage of the inquiry we discovered in addition to the Colonial Treasurer's payments at various times of twenty-five sums of £6,000 each to the credit of the account and of the payments £18,000 and £72,000 from the same source, there were in the months of June, July, August, and September, 1887, and of June and September, 1888, six credit items appearing simply with the name "John Davies" before each item.

On referring to the cash-book of the Casual Labour Board, we found these entries in name, date, and amount, agreeing with the entries in the Bank pass-books, but we could not find amongst any of the other books or records of the Casual Labour Board Department anything to throw light on the items.

Mr. T. C. Hincheliffe, the senior and responsible clerk employed in the Casual Labour Board office, and immediately under Mr. John Davies, was examined by us.

In his evidence, he claimed the position simply of Secretary and Paymaster to the Department, and distinctly disclaimed the position of Accountant, or full responsibility for the accounts, though he admitted that it was his duty to see the books were properly kept, and he said he sometimes checked them.

Several other witnesses, including members of the Board, described him as the responsible Accountant to the Department.

In the course of his examination he was asked whether moneys were received for or on account of the Casual Labour Board from any other source than the Treasury, and he replied: "Small sums sometimes."

In eliciting his knowledge on this point further by close questioning, we obtained the clue to the transactions to which some of the entries related.

In answer to a question, "What became of the moneys?" he replied, "They were paid into the Bank to the account of the Casual Labour Board. That, I may tell you, was irregular. I told the Chairman so with regard to several other sums, I think about £300 altogether, that the course he adopted was against the rules of the Department. He said he would take the responsibility, but when I left the office I got him to sign a voucher, transferring it from the Bank to the Treasury. It was simply an irregularity on his part. He said he would take the responsibility, and I let him do so. There is the voucher in the office, simply transferring the amount from the Bank to the Treasury."

Mr.

Mr. Hinchcliffe further said—Such moneys were paid to the Chairman, sometimes by cash and sometimes in cheques. He was asked—Whether such moneys would go through the books of the Department, and, in reply, he said, “No; that is where the irregularity came in. We were not allowed to receive any moneys, except from the Government, that is, the books did not show any money that we received. We were supposed to pay it into the Treasury, into the Miscellaneous Account, or wherever it had to go.”

He repeatedly affirmed that these amounts appeared only on the Bank deposit receipts and Bank pass-books, but on no book that was kept by the Casual Labour Board Department.

As a matter of fact, these items did appear as and in the way mentioned above, in the cash-book of the Department. This was pointed out to Mr. Hinchcliffe at the close of his evidence, and he explained that he did not know the items appeared there.

On further interrogation, Mr. Hinchcliffe said “That firewood was sold by auction. That the auctioneer sent accounts of the sales, which he saw when they came in but not afterwards. That the Chairman had possession of these accounts, and would keep them in his own drawers. That the Chairman would receive the moneys for the sales, and pay them into the Bank” (meaning the Australian Joint Stock Bank) “to the credit of the Casual Labour Board, and they would become absorbed in the balance of the £6,000 advances.”

This witness also stated, “The Chairman, when he received the *first* cheque, paid it into the Bank. I told him that that was not the usual way, but that it should be paid into the Treasury”; and further, “That the Chairman paid similar moneys in all the time, in spite of his (Mr. Hinchcliffe’s) remonstrances.”

Following this information up, we ascertained that men had been employed at or near the National Park from time to time in cutting timber, apparently the property of the Government, for firewood, which was sent on for sale to Sydney; that Mr. George Robert C. Neale, of Engine-street, was the auctioneer employed, who alleged that he had made several payments to the Casual Labour Board, and had always with such payments sent in account sales to the Chairman of the Board.

Mr. J. B. C. Miles, one of the gentlemen appointed in January last to take over and wind up the affairs of the Casual Labour Board, was examined before us, and stated that he had been unable to find any account sales in the office, and had applied to Mr. Neale for copies of same, but that he (Mr. Neale) had refused to furnish copies without payment therefor.

We accordingly summoned Mr. G. R. C. Neale to attend before us with his books, &c. He was examined by us on 26th March last. As he had not then with him certain cheques, on which the evidence he then gave bore, we required him to attend again and produce them.

On the following day, 27th March last, Mr. Charles William Beggs, the partner of Mr. G. R. C. Neale, attended before us and was examined. He produced nine cheques, which it was claimed had been paid over to the Casual Labour Board, and represented proceeds of sales of firewood.

Subsequently, occasion arising, Mr. G. R. C. Neale was again called and examined on 23rd April instant, and on 24th April instant with reference to a further payment that had turned up in the course of the taking of evidence.

As

“timber to the Casual Labour Board. Hillier got it because before they (the Casual Labour Board) gave him (Hillier) his cheque they (the Board) had to have Neale’s.” It is supposed, the Board wanted Neale’s cheque and account sales to check Hillier’s work.

We should here remark that we have not yet found where Hillier is for the purpose of obtaining his evidence, though we don’t think it can in any way materially affect the matter presently under report.

The Casual Labour Board cash book discloses a payment to Hillier, on 17th May, 1887, of £29 1s. 6d. This may relate to the same timber as the payment by Neale, but we have not yet been able to connect it with the particular transaction.

We do not think it affects the consideration of the evidence.

The evidence of Mr. Duchesne, of the City Bank, supported by the original deposit slip he produced, establishes that on the 16th May, 1887, apparently two days after its receipt by Mr. John Davies, as Chairman of the Casual Labour Board, this particular cheque of £26 17s. 7d., which Neale had paid to the Casual Labour Board Department, as proceeds of sale of firewood, was appropriated by Mr. John Davies to his own use, and paid into his private bank account in the City Bank, with special directions as to how it with other moneys then paid in should be applied, that is to say, according to the deposit or credit slip in Mr. Davies’ handwriting, “£50 in special reduction of Osborne’s bill, and £5 7s. 7d. account C. R., £5 7s. 7d. on 18th instant,” being evidently purposes connected with his (Mr. Davies’) private business, and in no way pertinent to or arising out of his position as Chairman of the Casual Labour Board.

We next come to the consideration of the sixth item in the foregoing statement of amounts, the item of £33 3s. 2d. It will be noted that Mr. G. R. C. Neale, when examined before us on 26th March last did not disclose this item. On the contrary he stated he had not anything further on his books than what he had just then previously stated to us in evidence, and that he did not know of any further sales.

Having, subsequently to Mr. Neale’s examination, of 26th March last, learnt that certain sums had been paid into the Colonial Treasury on account of the Casual Labor Board, we summoned the Under Secretary for Finance and Trade, and subsequently, Mr. Newcombe, an officer in the Treasury Department.

From them, we received a statement of the moneys so paid in, and the receipt vouchers, which had been handed in, when certain payments-in had been made, describing for what the particular payments-in purported to have been made.

The last item on this Treasury statement was £33 3s. 2d. ; the date on which it had been paid in and credited at the Treasury was 29th March, 1889. The Department receipt voucher No. 4,635 was signed “John Davies,” and showed under the head of “Particulars of sums received” the words “Sale of firewood at National Park.”

This was the first clue we obtained to any further firewood transactions than what Mr. G. R. C. Neale had stated to us on 26th March last.

We followed it up, with the result that we discovered and the evidence established that in July, 1887, a sale of firewood was effected by Mr. G. R. C. Neale, on account of the Casual Labour Board; that the proceeds, amounting to £33 3s. 2d., were duly paid over by Mr. G. R. C. Neale by his cheque on the Bank of New

South Wales, Haymarket Branch, dated 19th July, 1887; that that cheque was received by Mr. John Davies, and by him appropriated to his own use, such cheque having been paid by him personally into his private Bank, the City Bank, with a special direction written on the credit or deposit slip: "To provide for cheque to be drawn on Thursday."

We next come to the consideration of the payment of £52 3s. 2d., on or about 22nd September, 1887, being the tenth or last item in the foregoing statement of amounts. Though apparently trivial, it is worthy of notice that Mr. Neale, giving evidence on 26th March last, with his auction sales book in front of him, stated the amount, *as it does in fact appear there*, to be £52 3s. 2d., but when Mr. Beggs next day produced the original cheque given in payment it was found to be for £52 3s. 1d.

This circumstance is relied on as assisting to explain a matter later on in this Special Report.

Mr. Neale says—In all cases he sent the account sales and always paid by cheque

That the sales for which he accounted were all on account of the Casual Labour Board, and that the Casual Labour Board generally got his account sales and cheques before they settled with Hillier.

A reference to the cash-book of the Casual Labour Board shows a payment to Hillier on 22nd September, 1887, of £38 1s. 6d., thus supporting Neale's evidence as to the practice. For this would appear to be in respect of the transaction he had accounted for to the Board that day.

When asked if he had seen Mr. Davies recently, Mr. Neale said, "About a month ago as near as possible." He was asked what Mr. Davies saw him about. His reply was, "He asked me whether I could give him a memo. of what cheques I paid to the 'Board.' I said, 'I can give you a rough one.' I did so far as I could. He said, "'That is about the same as I have, but I have a little more.' I looked it up and "found I had omitted something whilst copying from one book to the other."

Taking a month back from the time the witness spoke would bring the interview to nigh the end of February.

The evidence is that Messrs. Miles and Mason were appointed to take over control of the unemployed on 25th January last, and that Mr. Davies remained at the office for some days after that time.

He would probably become aware later on of the fact that some examination would be made into past transactions.

Messrs. Miles and Mason took some time to master the details of the office, and probably it was well on in February before mention of any firewood sales would come up.

Mr. Davies was not, we believe, in the office after January, but we are disposed from the evidence to think he had friends, or at least one there who would mention to him what was going on.

Apart from that, we readily believe, from what has happened in the course of this inquiry, that Mr. Davies would not lose an opportunity of inquiring what was being said or done by his successors.

This will probably account for his visit to Neale, and his anxiety to obtain from him a memo. of the payments.

Now

Now Mr. Neale says he was then asked for a memo.; that he gave a rough one; that Mr. Davies said he had more; Mr. Neale then said he looked it up and found he had omitted something.

Mr. Davies, in the course of giving his evidence before us, which is hereinafter referred to, produced the memorandum he said he had got from Mr. Neale, and also a memorandum he had obtained from the office of the Casual Labour Board.

This latter was in the handwriting of one of the clerks in the Board's service, for which probably Mr. Davies had asked after giving up charge.

It comprised a list of all the payments that had been made by him to the Australian Joint Stock Bank other than the moneys which had been paid into that Bank by the Treasury.

But the memorandum he got from Mr. Neale, and which he (Mr. Davies) produced did *not* contain either the items of £26 17s. 7d. and £33 3s. 2d.

This probably is what Mr. Neale meant by his evidence "he found he had omitted something in copying from one book to the other."

We have Mr. Neale's books, and we have observed that the item of £26 17s. 7d. is not carried into some new ledger account he opened, and that the item of £33 3s. 2d. appears on a different page to that on which all the other payments are noted, only a figure reference at foot of page being noted to direct attention to the separate entry.

We can readily understand how these entries might be overlooked in the hurry of supplying information on Mr. Davies' call. We are quite satisfied as to Mr. Neale's books.

Mr. Neale had in his book—as he gave it in evidence—£52 3s. 2d.; but when Mr. Beggs produced the cheque it was £52 3s. 1d.

Mr. Neale evidently had not noticed in his book the small discrepancy between the return of proceeds as per his book and the cheque he drew. It is clear though, now, from this small discrepancy, that when Mr. Davies paid the £52 3s. 2d. into the Treasury on 15th February last he got his information then recently from Mr. Neale, and not from the cheque which he had received in September, 1887.

As to this £52 3s. 1d. the evidence of Mr. Duchesne, and the original deposit slip in Mr. Davies' own handwriting, establishes that this sum of £52 3s. 1d. was on 26th September, 1887 (four days after the date of Mr. Neale's cheque for that amount), appropriated by Mr. John Davies to his own use, and paid into his No. 2 account in his own bank (the City Bank).

According to the statement we received from the Treasury Mr. John Davies, on 15th February last, paid into the Treasury a sum of £52 13s. 2d., of which £52 3s. 2d. is described in the departmental receipt voucher, signed by "John Davies" as "September 26th, amount received for sale of firewood from National Park."

As to Mr. Neale's omission of items in the memorandum he gave Mr. Davies in February last, it may be the first item of £26 17s. 7d., or it may be the item of £33 3s. 2d. It seems to afford some explanation for the items of £52 3s. 2d. and £33 3s. 2d. coming in separately when they appear in the statement we obtained from the Treasury—the one on the 15th February, 1889; the other on 29th March, 1889.

1889. But this can in no way explain the appropriation of these moneys in the months of July and September, 1887; while as to the £26 17s. 7d., there does not appear to have been ever any payment thereof made to the Treasury. So far as the evidence goes that money has never been disgorged.

It is beyond doubt that the payment-in to the Treasury of £52 3s. 2d. was made by Mr. Davies after he saw Mr. Neale in February last, and that the amount differing from the actual amount he received and paid into his own bank in September, 1887, was obtained from Mr. Neale's book.

Mr. Davies was examined by us on 23rd April instant specially in regard to any moneys he received or property he held for or on account of the Casual Labour Board or the Government in respect of the premises.

His evidence on this point is hereto appended.

It may appear unaccountable that Mr. John Davies should select only certain of Mr. Neale's cheques for proceeds of firewood sales to pay to his own bank for his private credit, while the bulk he paid to the Board's account in the Australian Joint Stock Bank.

There is this distinguishing feature:—All the seven of Mr. Neale's cheques—except one small one for £5 4s. 6d.—that were paid into the Australian Joint Stock Bank, credit of account Casual Labour Board, were made in favour of—(1) Government Wood; (2) The Casual Labour Board; (3) Government Relief Works; (4) Casual Labour Board; (5) Chairman of Labour Bureau; (6) Government Labour Bureau.

Such cheques, if paid to a private account in a bank, might naturally excite question or remark at the time, or some talk amongst the officials.

The three of Mr. Neale's cheques that were at different times passed by Mr. John Davies to the credit of his private account in the City Bank were made in favour of “(1) Mr. T. S. Hinchcliffe, (2) Mr. E. M. Burrows, (3) Mr. Burrowes.”

We may add that, in a measure, to test the value of the evidence as regards cashing cheques and “holding particular moneys in hand,” we inquired whether, between 1st May, 1887, and 31st March, 1889, any cheques had been drawn by Mr. Davies on any of his accounts in the City Bank for £26 17s. 7d., £33 3s. 2d., £52 3s. 2d., or £52 13s. 2d., and in reply we were informed that not any cheque for any of such sums had been drawn during the periods named.

The evidence given by Mr. Davies just at the close of his second day's examination came after we had had the bank's officer in attendance and under examination.

Mr. Davies' evidence on the whole matter herein referred to, is, in our opinion, extremely unsatisfactory, and does not alter the facts established by the evidence of Messrs. G. R. C. Neale, W. C. Beggs, and W. Duchesne,—

As to the misappropriation, on 16th May, 1887, and the absolute retention of £26 17s. 7s.

As to the misappropriation, on 26th September, 1887, of £52 3s. 1d., and its retention from that date until 15th February, 1889.

As to the misappropriation, on 19th July, 1887, of £33 3s. 2d., and its retention from that date to 29th March, 1889.

It

It has already been mentioned that, during a considerable portion of the period of the Casual Labour Board's existence, the account in the Australian Joint Stock Bank was overdrawn, and probably paying interest, while Mr. John Davies had the use of the above moneys for his private banking purposes.

It will be seen from Mr. Davies' evidence that he distinctly and frequently denies that he has now any money or property in his possession or under his control, or in the control of any person or company on his behalf, belonging to the Government or the Casual Labour Board.

It is proper for us to add that there is not any evidence whatever to connect the other members of the Board, Mr. Wells or Mr. Houison, with the matter herein specially reported on, and we believe they have not any knowledge of the same.

It will be gathered from the foregoing, the reasons that have induced us to impound the several books, cheques, and credit-slips, pending any further action that may appear to Your Excellency proper in the premises, or pending Your Excellency's commands or directions to us, which we humbly ask may be issued to us in this respect.

We certify this to be a Special Report made upon a particular matter arising during the progress of the inquiries entrusted to us by the Commission before referred to.

Certified under our hands and seals, at Sydney, this 29th day of April, 1889,—

ALFRED J. CAPE,
President.

F. A. FRANKLIN.

T. F. WALLER.

1889.

MINUTES OF EVIDENCE

TAKEN BEFORE

The Royal Commission appointed to inquire into the working of the Casual Labour Board, the mode in and purposes for which public moneys have been expended by the Board, the manner in which the Board have performed their duties, and to examine into the truth of charges and statements made before Parliament or any Select Committee as to alleged improper expenditure of public moneys by the Board or any Member thereof.

MONDAY, 11 MARCH, 1889.

Present:—

A. J. CAPE, Esq., M.A., PRESIDENT.

F. A. FRANKLIN, Esq., C.E., J.P.,

T. F. WALLER, Esq., J.P.

Frederick William Webb called in, sworn, and examined:—

1. *President.*] You are Clerk of the Legislative Assembly? I am.
2. And as such you have custody of all papers and records produced before the Assembly? Yes.
3. Do you produce minutes of all the evidence taken by the Select Committee of the Legislative Assembly, appointed on the 15th November last, as to work of unemployed on roads at Hornsby and Holt-Sutherland Estate? By leave of the House, I produce progress reports and evidence as laid upon the table of the House on the two occasions upon which progress reports were brought up.
4. Does that include the whole of the papers produced—the whole of the evidence given before the Select Committee regarding the work done upon the roads at Hornsby and on the Holt-Sutherland Estate? Yes, to the best of my belief.
5. Does it include the whole of the papers—the returns laid upon the table of the House and ordered to be printed on the 8th, 13th, and 14th November, and on the 19th December, 1888? Yes, if they appear as appendices to the report.
6. Do you produce the whole of the returns and Parliamentary papers submitted to the Committee? I have not got the whole of the returns here, but I would be able to produce them if necessary. I was merely requested to produce the minutes of the evidence of the work performed at Hornsby and on the Holt-Sutherland Estate.
7. Have you any petitions presented by Mr. Burns, and can you produce them? Yes—do you mean the one presented during the present Session?
8. I mean one last Session and one during the present Session? Yes; I can produce them.
9. The papers you have got here are mainly the papers connected with the Select Committee, and nothing else? Precisely; the papers produced before the Committee and the evidence given before the Committee, the two progress reports of the Committee, with the evidence taken.
10. Do you know of any other papers besides what you have mentioned—those I have been asking about relating to the inquiry on the Hornsby and Holt-Sutherland Estate roads? I am not aware of any others; I have no recollection of any others.
11. You can leave these papers with us, I presume? Yes, on receiving your undertaking that they will be kept in safe custody and returned to me after the Commission has done.
12. Yes, we will give you that undertaking.
13. *Mr. Waller.*] I presume you will have a schedule of all the documents? There is connected with each report a schedule or table of contents.
14. *President.*] I would like to get the returns which were laid upon the table of the House? I can produce them at any time they may be required.
15. *Mr. Franklin.*] Do you remember if any plans were given in by the Casual Labour Board to the Committee? Yes, and they appear with the papers. Some plans I believe were returned to the Department on a motion made in the Committee itself.
16. Are you aware whether there were any working tracings or plans? No, I am not aware. Some plans were returned to the Department; and, if so, there will be a note to that effect on the proceedings of the Committee.
17. Which Department do you refer to? Whichever Department produced them; I could not say which. It may have been the Casual Labour Board or one of the Government Departments. Mr. Wells, I think, produced them from his own Department or the Casual Labour Board.
18. Do you think Mr. Wells is their custodian still? I think so; at all events it would appear in the evidence.

Mr.
F. W. Webb.
11 Mar., 1889.

David Houison called in, sworn, and examined :—

- Mr. D. Houison.
11 Mar., 1889.
19. *President.*] I believe you were a member of the Casual Labour Board? Yes; but my appointment was not signed by Sir Henry Parkes.
20. When were you appointed? On May 2nd, 1887.
21. Who appointed you? Sir Henry Parkes. I produce a letter, dated 2nd May, 1887, purporting to be a copy of a document signed Henry Parkes. The other two letters of appointment were signed, but that one was unsigned.
22. You have seen the original of this? I have seen Mr. Davies's letter of appointment. I might make an explanation. I believe the reason that was, not signed was that Mr. Darley was to be a member of the Board. He could not be on the Board because he could not give the time required for the duties, and they wrote and asked me if I could take his place on the Board.
23. Mr. Wells's appointment was signed by Sir Henry Parkes? I have seen the other two copies, and they are signed by Sir Henry Parkes.
24. What position do you occupy in the public service? That of District Engineer in the Harbours and Rivers Department.
25. Did you hold that position at the time that you were appointed to the Casual Labour Board? Yes.
26. Were any particular instructions furnished you for your guidance? These are in the paper I have handed in to you. [*Copy of letter of 2nd May, 1887, handed in and marked A.*]
27. You had no other instructions beyond what are stated in this document? Nothing beyond what are in the document.
28. You were examined before the Select Committee on the work of the unemployed on roads at Hornsby and Holt-Sutherland Estate on the 21st November last and on the 12th December last? Yes.
29. Is this your original evidence? Yes.

Evidence before Select Committee.

281. *Chairman.*] Are you a member of the Board called the Labour Bureau? Yes; I am a member of the Casual Labour Board.
- 281½. Have you been a member of the Board since its origin? Yes.
282. How long ago is it since the Board was formed? Since May, 1887.
- 282½. Can you tell us how you became connected with the Board? I know nothing further than that I was appointed with Mr. Davies and Colonel Wells.
283. Were you consulted before the appointment was made as to whether you would accept it or not? I was asked to take Mr. Darley's place. He was originally appointed, but was unable to undertake the duties, and he asked me if I would accept the appointment.
284. Before you were asked to take the appointment? Yes.
285. Are you a civil servant? Yes; I am connected with the Harbours and Rivers Department.
286. Do you know whether you were appointed to this position because of your connection with the Harbours and Rivers Department? I have no knowledge.
287. How soon after its appointment did the Board meet? At once.
288. At the office of the Board? Yes.
289. Have you held regular meetings since? No. We did at first; but our duties would not permit of our constantly meeting.
290. At the first inception you held regular formal meetings? Well, you can hardly call them formal; there were no regular minutes taken. I was in constant attendance at the office for an hour every morning when I was in Sydney, before going to my regular duties.
291. Were you there by yourself at these times? No; Mr. Davies was always there, and Colonel Wells sometimes.
292. Then you have no record whatsoever of any of your meetings? The chief clerk has a record of every thing that has been done.
293. But I mean of any consultation? No; there was no regular record kept.
294. What was the nature of the instructions given to you as a member of the Board? I received such short notice—I only got a telegram last night—that I had not time to bring any papers with me, and there was no one at the office to-day.
295. What were your instructions, as far as your memory can serve you? I could not give the precise wording, and I would prefer not to say without giving the precise wording.
296. Of course, you do not always carry your instructions about with you; but you know what you can do, and what you are expected to do. When you took office, what was your understanding as to your powers and limits of those powers? To find employment for the unemployed.
297. There was a general power given to you? I could not describe it now.
298. You state that your instructions were to find work for the unemployed? Yes. We took over the unemployed from those who had charge of them at the time.
299. What I mean now is, when you took over the unemployed, had you any instructions given you as to the way in which these unemployed should be utilized? There were general instructions given.
300. Can you remember any limitations to those instructions? No; I cannot at present.
301. So far as your memory serves you, had you any power to dispose of those men according to your own discretion? Yes, we had.
302. As far as you can recollect, what work were the unemployed engaged upon when you took them over? Clearing, as a rule, and also upon roads.
303. They were working upon roads? Yes, and clearing.
304. *Mr. Copeland.*] Clearing Crown lands? Crown lands.
305. *Chairman.*] They were not in any particular district? They were scattered about.
306. In large numbers? Yes; there were a great number of them when we took charge.
307. What was the first effect of your taking them over—to concentrate them? To concentrate them at National Park as a depôt—to distribute them from there as the men were selected.
308. Did you call in any of those who were at work on any of the roads of the Colony? No; I do not think there were any called in.
309. Then, in concentrating them, where did you get your largest supply from? From Sydney streets.

310. Was your first task then to take them to National Park, and to distribute them from there, or did you send them direct from Sydney? Some went from there, and some went direct from Sydney afterwards.

Mr.
D. Houston.

11 Mar., 1889.

311. In considering where the men that you had at your disposal should go, did you receive any instructions of any kind from any of the Government officers? In what way?

312. Well, you had so many men at your disposal; you were intending to send them where they were most needed;—did you get any representations as to where they might be required from any Government officers? We had notice from the Roads Department if men were required in a particular district.

313. How did you ascertain that men were required in these districts? They forwarded us returns from the road superintendents. Copies of the reports referring to the works were sent to us with regard to the special requests.

314. That is from places where men were already at work? No; where men were required. We always had a statement as to the state of the labour market in these districts furnished to us by the Roads Department. It came from the head of the Department.

315. Did you issue instructions for the Roads Department to furnish you with these? No; we had no power to do so.

316. Then you acted upon the reports sent to you by the roads superintendent? Yes. If the contractors required any men they wrote for them.

317. How did you make it known? It was advertised in the daily papers.

318. And in the subsequent disposal of these men have you had any communication from any Government source? Not that I know of.

319. In sending your men to any locality, did you submit your proposals to the Colonial Secretary? His approval was invariably sought before any men were sent anywhere.

320. When you say invariably, are there any exceptions? There may be. I could not say positively, because I was not constantly in the office. Mr. Davies was our executive.

321. You say that Mr. Davies was your executive? Yes; he attends to all requirements of the office, sees to all the papers, and everything.

322. Has Mr. Davies the power to dispose of men without consulting you or your colleague, Colonel Wells? He does, as a rule, consult us.

323. Have there been instances where he has not consulted you? Yes.

324. And when he consults you does he convene you for the purpose? No; I am generally in. I call at the office every time I am in Sydney.

325. When you speak of "consults," you mean that he has some conversation with you when you call in casually at the office? Yes.

326. Does he ever talk with you outside the office, in the streets, on these matters? No.

327. Have you any knowledge of the work of the unemployed upon an estate owned by Messrs. Burns, Withers, and Smith at Hornsby? I could not localize the ground, but I know the roads at Hornsby; I have been over them all.

328. Have you been over the district shown on the map before you? Yes.

329. From whom issued the orders for the unemployed to clear and form these roads? I could not say positively about that.

330. Did they issue from you? From the Board altogether, I think.

331. Who has charge of the unemployed out there? Mr. O'Donnell.

332. What are the instructions from the Board to Mr. O'Donnell in the matter? He gets instructions as to what to go on with, what roads to clear; and after he has cleared these roads, as an expert and an engineer, I, or Colonel Wells, go on to the ground and point out any portion that may require slight ballasting to improve the roads or the grades.

333. What was the object of the Board in forming these roads? To get access to the Crown lands at the back.

334. Did you authorize any roads that are not simply to give access? No.

335. Does that map show all the roads constructed? That shows all the roads.

336. Is it possible that orders may have come from your Board that you are not aware of, and that roads may have been cleared of which you are not aware? I do not think so.

337. Look at the map before you. There is a road between the road marked A and the Junction Road, marked G, running parallel with the railway line, and bordering the railway line? I do not know of any road there.

338. You are not aware that that road exists? No; I have not been there for some months.

339. *Mr. Copeland.*] How long is it since you were there? Four or five months. It must be four months, at the least, since I was there.

340. *Chairman.*] If such a road has been formed, it has not been done by your instruction? I do not know anything about it.

341. If it has been done by the instructions of the Board, it is still unknown to you? I do not know anything of it.

342. Take the Boundary Road. Are you aware whether any instructions have been given to continue that road as far as the railway line? No; I do not know of any.

343. Have any instructions been given to construct a road to the north of that line, towards the railway? No.

344. Or to the south of it? No.

345. Or to construct a road running off Junction Road, between the first letter G and the railway line, to the south? No; I have not been out there for so many months that I cannot tell you.

346. If these roads were formed, you would consider them roads of access? Well, unless I personally inspected them, I could not say.

347. In making any of these roads what object had the Board? To get to the Crown lands I suppose.

348. Would you consider the road H H D a road of access? Yes; that is one of the roads. There is a claim for compensation in respect to that road, I believe.

349. From whom? From Mr. Harnett, if I remember rightly.

350.

Mr.
D. Houston.
11 Mar., 1889.

350. Is that necessary as a road of access when you have the road I C? Yes; certainly.
351. And the road J F? That goes to the Boundary Road; it is the principal road almost—the Vanceville Road.
352. Is the object of that road—the Vanceville Road—to give access alone? For purposes of access.
353. What was the object in laying out the Boundary Road? That road was almost inaccessible. When I went on to it at first I would not, as an engineer, go through with its construction because of the expense it would incur.
354. Are you aware that it is being formed as a road now? I think I put in a crossing on it at the first creek, but I would not go on any further with it.
355. Are you aware whether there are any unemployed working on it now? No; I could not say.
356. If there were any unemployed engaged on it, considering the existence of Junction Road, would you consider the work justifiable? I do not think they can make this road. I do not think it is possible to grade it so as to make it an accessible road for ordinary traffic. I have been over it. The other road beyond it again to the north is still worse; it is utterly impossible to make a road there. That is what they call the population boundary road, a short distance further north.
357. Are there any roads formed on the Crown lands? The Boundary Road is the only one I have been on yet.
358. What is the nature of the Crown land—is it good land; what is the character of it? It is not first-class land; there are portions of it pretty good, the rest of it is rather poor.
359. What do you think the comparative expense would be of making the roads B, C, D, E, and F, and the opening up of the Boundary Road—which work do you think would be the most costly? The Boundary Road would cost ten times more than the other. You cannot make a road there that would ever be used by traffic—the grades are too steep. It is right enough at the end near the Hornsby junction; but when you get more to the eastward it is almost impassable.
360. *Mr. M. Millan.*] What about the country further north? It gets worse and worse as you go north.
361. Then you could not make a road at all through the Crown lands? No. I stopped the Boundary Road.
362. *Chairman.*] Does it go as far as D? No; not as far as D—to the first creek, I think. There is a stone crossing there, which is the limit to which I went.
363. If the road goes as far as that, would you consider the road C a necessary road, considering that B opens into the Boundary Road? I think they are all necessary. They are all easy roads to make.
364. If the Crown lands are so poor, and it is impossible to make roads upon them? There is very good land at the back.
365. But it is impossible to reach the back portion? You can reach the whole of it through these roads. These are the roads to give access to it, between the creeks. You cannot cross the creeks from east to west; but you can go in between each creek, and that is the object of these roads. These roads would have to be taken up eventually to get access to the Crown land.
366. None of these roads are continued on Government lands; I could not say; but I have not been there for five months.
367. Would it not have been more to the improvement of the Crown lands to make roads on the Crown lands, instead of these other roads? You could not get the Crown lands without these other roads.
368. *Mr. O'Sullivan.*] You say that you held some meetings of the Casual Labour Board? At the first.
369. Do you remember how many? No; I could not say.
370. How long ago is it since you had a meeting there? The last meeting was about a week ago.
371. How many meetings have you held altogether? I have been there every morning for the first twelve or fifteen months.
372. But how often have you held regular meetings? I could not say.
373. As a matter of fact, until last week, you had had no regular meetings? No; I have not been able to attend at the office.
374. No minutes of the business have been kept? Well, of course we have our minutes in the office; but they are not like the ordinary minutes of meetings, they would be simply records of the office.
375. During the absence of yourself and Mr. Wells, Mr. Davies would act as a kind of dictator? He does nothing without consulting us or letting us know. When we come into the office we see all the back papers and everything.
376. You act more in the form of advisers than as members of the Board? We act as experts,—to give advice. There is no engineering work carried on without our advice, and we visit the work before it is paid for.*
377. The Board is almost a fiction, practically? I do not think so.
378. From your experience of Crown lands and of the laying out of roads, do you not think it possible that the private owners of this estate would have laid out these roads without the Government doing the work? The work would have had to be done eventually, and if not by the labour under our command it would cost six times as much.
379. But they would have subdivided the land and made roads? I could not say. 380.

* NOTE (on revision):—To explain this more fully, sections and cross-sections of roads that were very difficult to make were prepared by myself, and handed to the chairman for the guidance of the superintendents, and to enable them to let the work in small contracts and have correct measurements of the work. I may name specially Narrabeen, Dobroyd, and Unwin's Bridge Road.

380. As a matter of fact, you know they began one road called Burns' Road,—they had begun the construction of Burns' Road? Well, it was cleared, I think.

381. And the probability is that in the ordinary way of subdividing estates, as all private owners do, roads would have been constructed across it, in order to make the land more saleable? I do not know, I am sure. They might have been opened up in the same positions.

382. What has been your experience of the subdividing of private estates? I do not know anything about it at all.

383. You have been present at land sales? No.

384. You do not know the method they adopt in cutting up streets? Yes; I know that.

385. Probably the same plan would have been carried out by Burns, Withers, and Smith? They might have done so.

386. Do you know who authorized the roads I and H? I cannot say exactly; I have not had access to any of the papers.

387. You never authorized them? I cannot remember it.

388. You cannot remember authorizing these roads? I cannot remember having authorized them.

389. Then if you cannot remember having authorized them, and Mr. Wells did not authorize them, who was the party who would have authorized them? Mr. Davies, I suppose, if they were authorized without our knowledge.

390. Did Mr. Davies consult you about the roads I and H? I cannot say without seeing the papers.

391. Have you any recollection? No, I have not. We have our own work besides to attend to.

392. How long ago is it;—about twelve months ago? I cannot say positively.

393. You say you knew most of the roads on the Hornsby Estate? Yes.

394. There may be some roads there of which you have no knowledge? Yes.

395. You say you have no knowledge of this road running parallel with the railway? No.

396. Are you aware that there are half-a-dozen other roads besides these shown on the plan? No; I am not aware of any. The roads on the plan are the roads I have seen when I have been out there.

397. If the roads running down to B, C, and H have been constructed by the unemployed, and have the unemployed working upon them, who has authorized these roads? I could not say. I do not say that the unemployed have made them.

398. Supposing that they are there, and that they admit that they are unemployed, working under Mr. O'Donnell, who has authorized the roads? Probably Mr. Davies.

399. You say that all plans were submitted to the Colonial Secretary—plans of roads? No. All requisitions and representations by the residents were forwarded as a rule to the Colonial Secretary for his approval.

400. Do you know if this request for the road on the Hornsby Estate was submitted to him? I could not tell you.

401. In the ordinary way of business these requests would have been submitted? We generally do submit anything of the kind.

402. Then, probably, he would be the Minister who authorized the making of these roads? The Colonial Secretary is the only Minister they would come to.

403. *Chairman.*] In an answer given yesterday by Colonel Wells, he says that he was frequently away for two or three weeks at a time, and that you were away for a like period? There are times when I could not possibly attend to the duty.

404. Is the sole management of the Board, and the initiation and continuation of work, in that case left in the hands of Mr. Davies? During the time we are absent.

405. Whatever work is carried on you know nothing of? We are informed of it the moment we attend, and receive the whole of the papers.

406. *Mr. M'Millan.*] Everything in the way of roads, I suppose, has gone through your hands? Not the work of clearing or anything of that kind. I never interfere with that. Mr. Davies and the superintendent would look after that, and Colonel Wells or myself would probably look over the work after it was done.

407. Has the clearing of these roads on this estate not been brought under your notice as one of the experts on the Board? Yes; I think it was. At that time we were constantly meeting.

408. Speaking of the last six months, have these roads been brought under your notice as a Board during that period? Not for the last five or six months, I think.

409. I take it that a lot of work has been done there during the past six months? During the past five or six months I have had very little time to attend to the work of the Board.

410. But a great deal of expenditure for metalling and so forth has been incurred during that period, I suppose? No metalling has been done, only ballasting.

411. But a great deal of that kind of work has been done during the past six months? I do not think much has been done during the past six months. I think I saw pretty well the whole of it. I think I should be better able to give you the information you require after visiting the land with Colonel Wells, as I intended to do.

412. You disclaim any connection either with the initiation or the supervision of the laying out of these roads during the last six months? Well, at any time when I have called at the office I have spent an hour or two in looking over the back papers.

413. As far as the real management is concerned, except that it was in your power to see the papers, you have for all practical purposes had no direct connection with the work? Not during the last five months. I have been unable to attend to the work.

414. *Chairman.*] I suppose Mr. O'Donnell can show us what roads have been cleared, formed, and ballasted by the unemployed in addition to those shown on the plan? Yes; I think he would be able to give you all the information you require on that branch of the subject.

Mr.
D. Houston.
11 Mar., 1889.

Mr.
D. Houston.
11 Mar., 1889.

415. *Mr. Copeland.*] Do you keep no record whatever in the office of the Casual Labour Board? The secretary has a record of the correspondence and so forth. Everything is kept in just the same way as in other departments. As far as I have been able to see, this record is quite as accurate as that of any other department in which I have been.
416. In order to obtain information connected with this record it would be necessary to call Mr. Hinchcliff? Yes; I should think so.
417. Do I understand you to say that the Boundary Road is quite impassable? Well, it is not exactly impassable, but it would cost a mint of money to make it; and when it was made the grades would be so steep that it would not be possible to work traffic over it.
418. Do you make that statement with due regard to the nature of the ordinary up-country roads? Yes. I myself examined this particular road in company with Mr. O'Donnell.
419. *Mr. M. Millan.*] As I understand you, the roads here must go north and south; it is not practicable to take them east and west? Exactly.
420. *Mr. Copeland.*] You said that this Boundary Road is impassable, and that the road further north, the Population Boundary Road, is utterly impracticable. Is this on account of the extreme roughness of the land? No; the depressions there are very deep, some of them fully 300 feet in depth. Running parallel to these gullies you get access to the whole of the country on the table-land.
421. If this land is so very rough, and irregular, and uneven, do you think it was worth while expending so much upon the outside land? The land at the top is good table-land, through between the creeks; but the gullies are precipitous and inaccessible.
422. You think there will be no approaches made across these particular creeks? Not from an engineering point of view. No one would ever sanction it.
423. Looking at the map, do you see a road marked A, which crosses the railway. Would not that road give you access to Crown lands? Not across the creeks. You cross the creeks directly you get on to the Crown lands.
424. So far as the land recently sold is concerned, would not the road A give access to it, and to the railway. Would not the road, in fact, give access to the land on both sides of the railway? Well it would give access to a portion of the land.
425. And to the railway-station? Yes; but it does not give any frontages.
426. Has it not been the practice in the Department to make their own frontages by subdividing the Crown lands, and making the roads on those Crown lands? I do not know. I have never belonged to the Survey Department.
427. Do you know of any instance, except what has occurred during the last few months, where the Government expended money in making the roads through private property instead of through their own Crown lands? I do not know of any case. I have been employed principally upon the main roads of the Colony when in the Roads Department; this is the first time that I have had any connection with work of this kind.
428. Supposing the Government had made roads through their Crown lands, do you think that the proprietors of this subdivision would not have made roads to connect with them? I do not know. They could not have made them so cheaply as we have made them.
429. You see this road marked A. Are you aware that between road A and the Junction Road it is all private property, belonging to Messrs. Burns, Withers, and Smith? I could not say.
430. Admitting it to be the case that that road was formed by the Government to give access from the Crown lands on one side of the railway to those on the other, making a bridge across the line, was it necessary, in your opinion, in the interests of the Crown, that other roads should be carried from the railway between A and G, making five roads in the space of (say) three-quarters of a mile? I have not seen any of those roads.
431. If these roads are made—and, as a matter of fact, they are—would you consider it necessary, in the interest of the Crown, that the public money should be expended in giving access to this piece of Crown land? I do not think that the unemployed have done it.
432. If they had done it? I think not.
433. If the whole control of this work was in your hands, and you were responsible for it would you be inclined to pay men wages for constructing these roads through private property? I think not.
434. When you were given in charge of these unemployed, were there no roads to be constructed on which you could employ this surplus of labour, on subdivisions belonging to the Crown that occupied the same position that this private subdivision did? We had numbers of men engaged at other places; at Narrabeen, for instance, we had an immense crowd.
435. We have a number of subdivisions here, perhaps you could give me some information about them; take Beecroft and the Field of Mars; there is a large amount of Crown land on these divisions still unsold;—have you ballasted or formed any of those roads? That is all clearing.
436. Some are still uncleared? Yes.
437. Have you ballasted or formed any road there? They are all formed.
438. *Chairman.*] And ballasted? They are ballasted where the roads are soft. Ballast is not used as a rule where there is a good foundation.
439. *Mr. Copeland.*] Have you ballasted any of these roads at Beecroft and the Field of Mars by the Casual Labour Board? I could not say about Beecroft and the Field of Mars.
440. There is a subdivision of Crown lands at Harbord, near Manly, where a large amount of land is still unsold there? Yes.
441. Have the Casual Labour Board made roads there or at Heathcote, on the Illawarra line? Yes. We are making roads at Heathcote now.
442. I understood you to say just now that this is not metalling, that it is only ballasting; is not this metalling, or ballasting, or whatever you call it, what is generally used on the country roads? No. The ballasting is put on the roads prior to the metalling. It is a sort of foundation for the metal. It is the kind of ballasting we generally put on in places where the road is soft or sandy.

443. Were you in the Roads Department? I was for eleven years a first-class road superintendent. Mr.
D. Houston.
444. Do you not know of hundreds of miles of country roads which have nothing but this ballasting, with blinding thrown on to it? No; I never met with any in my eleven years' experience as a superintendent. 11 Mar., 1889.
445. Were you ever on the road going to Copeland? No.
446. Have you been on the road between Grafton and the table-land? I made the Newton-Boyd Road, and I know that there is no ballast on that; it is all blue-metal. There is no sandstone in the district.
447. You said that for the last five months you had taken no active part in these works? I have been unable to do so.
448. Are you sure that the period is only five months, or would it be more than that? No; it was about five months.
449. Prior to five months ago you took an active part in the works? Yes; I did all the engineering as a rule.
450. I suppose that during the last five months your professional duties have interfered with your work on the Casual Labour Board? Yes.
451. So that this work has been left to Mr. Davies, who is not a professional man? He has professional men under him.
452. Who are they? He has as assistant superintendent Mr. M'Pherson, an engineer. I look upon him as a very clever fellow.
453. *Mr. Henry Clarke.*] What would be the cost of this ballasting per chain? It varies very much.
454. *Mr. Carruthers.*] What would be the average cost? About 3s. a yard.
455. Where do you get the ballast? We bring it from the road-side.
456. From whose land? From whatever land we are passing through; we generally ask permission to take it.
457. I suppose that the ballasting in this case then would come off the land of Messrs. Burns, Withers, and Smith? Yes. As a rule we pay 1s. 6d. for getting and 1s. 6d. for breaking. I daresay it would cost from £2 to £3 per chain.
458. *Chairman.*] Do you think that would be a fair average? Yes. The ballasting is not continuous; it is only put in soft places; the road where it is good is left.
459. Is the material sandstone? Yes; different qualities of it. We generally use the hardest sandstone we can get.
460. *Mr. Street.*] When you first commenced work at Hornsby, were you informed to any extent as to what was the object of the forming of these roads? I understood that they were to give access to the Crown lands.
461. Was the Crown land there about to be brought into the market for sale? Yes. Mr. Gordon, the surveyor, recommended these roads. The land, I think, was all being prepared for sale.
462. Do you consider that the formation of these roads increased the value of the Crown lands? Most decidedly.
463. You think that the price of the Crown lands, to which these roads gave access, was increased? Yes; you could not get access without these roads. We should have had to take them eventually in order to give access to the land.
464. The nature of the Government land is too rugged to permit of your making a road from east to west? Yes.
465. Do the gullies increase in depth as you go northward from the Boundary Road? Yes, until they become quite inaccessible. What is known as the Population Boundary Road is quite inaccessible from east to west. I doubt whether you could walk over it.
466. You have been asked some questions about roads in connection with land at Harbord, Beecroft, and the Field of Mars;—had you anything to do with the preparation of those properties for sale by the unemployed? I had nothing to do with it.
467. You are aware that they were prepared for sale by the unemployed? Yes.
468. Prior to their preparation for sale, was there not ample access to them by public roads? Yes. I think there was access to the whole of those lands.
469. Therefore it was not necessary to go through the adjoining lands of private owners to make roads of access? I am not aware of any being made in that way.
470. Therefore these lands cannot be compared in any way with the Crown lands at Hornsby? No.
471. *Mr. M'Millan.*] I suppose it was in view of the railway line principally that these roads were made—that is to say, the construction of the Pearce's Corner line brought about the idea of these approaches to the Crown lands? Yes.
472. That would be the direct line of communication with this part of the country? Yes.
473. *Mr. Brunker.*] I understood you to say just now that requisitions were made by the Colonial Secretary before any roads were made? As a rule.
474. What is the form of requisition? The papers are sent on for approval. The requisition would be from the inhabitants of the various districts.
475. Not from the Casual Labour Board to the Colonial Secretary? No. The papers which are sent to us are generally forwarded.
476. Is there no general form of requisition? Well, the communications which are received by the Chairman of the Board are forwarded to the Colonial Secretary for approval.
477. Was any such communication sent by Messrs. Burns, Withers, and Smith? Not to my knowledge.
478. The Colonial Secretary would not have any knowledge of the details of the work? No.
479. The fact of the matter is that the whole of the responsibility in connection with the construction of these roads rests with the Casual Labour Board? Yes. Our recommendations were

Mr.
D. Houston.
11 Mar., 1889.

were generally adopted. Mr. Gordon, who had been with Mr. Deering, acted for us when we first took charge. He had been with the unemployed for some time previously, and he had a greater knowledge than any of us could possibly have.

480. I understood you to say that there had been a claim for compensation by Mr. Harnett in respect of a road at Hornsby? Yes.

481. *Chairman.*] When was that claim for compensation sent in? I could not say. I merely heard of it.

482. *Mr. Copeland.*] I suppose it is a mere rumour? I do not know the facts.

483. *Mr. Bruncker.*] Do you know whether the whole of the land between the II and I road belongs to Mr. Harnett? I only know the owners from passing round the land with O'Donnell. He knew the whole of the owners, but I had no personal knowledge on the subject.

484. *Chairman.*] Had you ever a personal interview with any of the owners in that district? No; I never saw any of the owners there.

485. *Mr. Bruncker.*] Have you at any time, as a member of the Board, been consulted by Messrs. Burns, Withers, or Smith, with reference to the construction or formation of any of these roads? I do not know Mr. Burns further than this, that I was once introduced to him by Mr. Davies. I do not know Mr. Smith at all. I knew Mr. Withers some years ago, but I have not spoken to him for years. I have not seen either of these gentlemen about the roads.

486. Have the men employed under the Casual Labour Board done any work except under the instructions of the Board? None; except the work under the municipalities. I think that some work has been done by them in nearly every municipality in the Colony.

487. *Mr. M. Millan.*] As far as you are concerned you know of no direct application from Messrs. Burns, Withers, and Smith to have roads made by the unemployed through their land? No.

488. *Mr. Bruncker.*] Have any of the Crown lands in that neighbourhood been cleared? I know that some of the Crown lands have been cleared, but I do not know about the laying out of the roads.

489. What would be the cost of grubbing and clearing this land? About £7 per acre. That would be 10 chains. These roads are 1 chain wide. That would be £56 a mile.

490. What would be the cost of forming? About 12s. a chain.

491. Would that include the water tables? Yes.

492. What is the cost of the ballasting per mile? I do not think there is a mile of it on the land.

493. Is it ballasted from point to point or only in soft places? Only here and there.

494. In the worst places on the roads? Yes.

495. You could not say what would be the cost per mile for ballasting, because it is so unequal? Yes; just so. The ground is of a very rocky character, and in many places it would be cheaper to ballast over the rocks than to cut through.

496. What did you mean when you said that the approval of the Colonial Secretary was needed before the men were sent to any work? The papers are sent on, that is to say, if any requisition is received for a road it is sent on to the Colonial Secretary for his approval.

497. How is Mr. Davies the executive then? What I meant when I applied that term to him was that he did the whole of the office work for us. He is permanently there.

498. You are sure that the Boundary Road is impracticable? I do not think I used the word impracticable. I think it would never be utilized for a road even if it were made; because the grades are too steep.

499. You think in the interests of the public that the Junction Road should have been made, instead of the Boundary Road? Certainly, from an engineering point of view, because the Junction Road is always a good road.

500. *Mr. M. Millan.*] You think that the Junction Road should have been made in the interests of the future sale of the Crown lands? Yes.

501. *Mr. Henry Clarke.*] How much of the Crown lands here do you consider good? Well, it is pretty good on the table-lands between the creeks.

502. If that is so, do you not think that a continuation of road A would have been sufficient to give access to the Crown lands? That would be quite impracticable for the reasons I have already pointed out.

503. *Chairman.*] Looking at the plan, do you consider that the roads coloured red are amply sufficient to give access to the Crown lands? I think so. The idea with regard to roads B, C, D, E, and F, is that a road should be taken up between each creek on to the better portions of the Crown lands.

504. If any other roads have been constructed, they are not, in your opinion, necessary to give access to the Crown lands? Any more than to give more frontages in opening up the land.

505. Take the bend in H road running from the Lane Cove Road—if a road were continued further to the northward, and if about 4 or 5 chains further on a road ran east and west intersecting, it would be a necessary road of access? I do not think so. These roads depend upon the surveyor laying out the roads. The roads shown give general access to the land.

506. And are amply sufficient? For opening up the land.

507. Have you any knowledge of the amount of clearing and road forming which has been done by the Casual Labour Board upon this estate? I think there is about 2½ miles, if I remember right.

508. If it has been stated that there have been only 24 chains of road forming, and 53 chains of road formed and ballasted, would that be a correct answer? The clearing, of course, is outside that. I think the answer you have read is about right. Mr. O'Donnell knows—he is the one who ought to know.

509. You would rely on Mr. O'Donnell's statement? It can be easily verified in the office.
510. *Mr. Brunker.*] If Colonel Wells furnished and initialled the answer given by me in the House, and read just now by the Chairman, would it be likely to be correct? Yes.
511. *Mr. O'Sullivan.*] You say that there are only $2\frac{3}{4}$ miles of road formation and ballasting on this property? I am speaking from memory.
512. Do you know the length of road I? I do not.
513. Do you know the total length of the Junction Road? No.
514. When you say $2\frac{3}{4}$ miles, you refer to the whole of the property here—to the property belonging to Mr. Harnett and others, as well as to the property belonging to Mr. Burns? I daresay there would be a greater length than I have given on the whole of the property.
515. As a matter of fact, is there not nearly 7 miles? No.
516. What should you make the distance approximately? $2\frac{3}{4}$ miles.
517. *Mr. Copeland.*] Do I understand you to say that no petitions have been presented in connection with these roads? I could not say that from memory.
518. You will find a petition among the printed papers—can you tell us whether the signature of George Withers to that petition is the signature of George Withers, one of proprietors of the Hornsby Estate? I could not say.
519. You will find that this document is sent from one official to another, and that it eventually finds its way to Mr. Burns from the Casual Labour Board with the following intimation:—"Enclosed herewith you will please find tracing of roads recommended to the Board by their local officer at Hornsby, to give better access to the adjacent Crown lands. Should yourself and partners have no objection to the opening of these roads marked A, B, and C, instructions will be given to have them commenced forthwith;" which are the roads referred to as A, B, and C? I think you will find that they are shown upon the plan on Appendix B.
520. Can you tell the Committee how any of the other roads have originated? I could not say.
521. You cannot tell us who authorized them and who applied for them? I could not say from memory.
522. You remember about roads A, B, and C? Yes, I remember Mr. Gordon's letter.
523. How wide are these roads ballasted? Generally 18 feet, but sometimes only 15.
524. The roads are cleared a chain wide? Yes; when I first took charge they were forming them 40 feet wide; I reduced it to 30 feet and sometimes to 27 feet; in some cases we have ballasted only 15 feet wide, allowing just room for a dray to pass.
525. What is the cost of clearing? £7 an acre.
526. And of forming? It varies. Sometimes it is as low as 8s. a chain. Generally it would be about 12s.
527. What did you pay for the metal? About 1s. 6d. for getting, and 1s. 6d. for breaking.
528. You mean by the cubic yard? Yes; it runs about a cubic yard to the yard lineal.
529. The yard lineal would be about 5 or 6 yards in width? Yes.
530. And the ballasting would be about 6 inches thick? Yes; we put it on as thin as we can. It is in reality only a skin.
531. How do you calculate the cost of the culverts? They are tendered for, and the lowest tenders accepted. In some cases we have put in causeways.
532. You say that you do not know Mr. Burns? I was introduced to him once, and seeing him the next day I did not know him.
533. Did he ever meet you on the ground? I never saw him or any member of the firm on the ground. Mr. O'Donnell, our own officer, is the only person I ever met on the ground.
534. You are not in the habit of going there frequently? I go only when there is heavy work to do.
535. *Chairman.*] Where were you when you were introduced to Mr. Burns? It was in the street somewhere. I was with Mr. Davies at the time.
536. And Mr. Burns came up? Yes; I was simply introduced. I do not think I spoke to him.
537. *Mr. O'Sullivan.*] Let me call your attention to road H. Can you tell us why it is made in this peculiar dog-legged fashion? Mr. Gordon is responsible for that.
538. You cannot tell us any reason for that? No. We relied upon him greatly at the start as the officer who had been in charge. He knew the unemployed, and he knew the whole of the roads in the district. We were to a great extent dependent on him for information in regard to the laying out of the roads.
539. You implied in answer to Mr. McMillan that roads H and I might have been made to touch the railway? As a matter of fact they cross the railway.
540. Are there any stations or platforms at the end of these roads? Not that I am aware of.
541. *Mr. Brunker.*] Are the platforms and stations defined yet? That, I could not say.

David Houison recalled and further examined—12 December, 1888:—

2692. *Chairman.*] You have been out again to inspect these roads at Hornsby? Yes; I have been out since I was here.
2693. Did you find the roads that were not marked on the tracing? There are roads there that I was not aware of when I was here before.
2694. You surveyed none of those roads? No; I have had nothing to do with surveying. Mr. Gordon pointed them out to us as a rule.
2695. The roads that were constructed or finished? I saw roads not cleared when I was up before.
2696. *Mr. McMillan.*] How long is it since you were up there before? Five months.
2697. *Chairman.*] Did you consider the roads you saw when you were up on this recent visit roads of access? They were all necessary as roads of access, every one of them.

Mr.
D. Houston.
11 Mar., 1889.

2698. Do you consider the roads near the station as roads of access? Unless they run straight against the fence, and cross direct into the railway premises. It gives greater access to follow the fence.

2699. Do you consider that No. 1 T shaped road necessary? Those roads I knew nothing of, or of the road running parallel with the railway line.

2700. Do you consider those roads necessary? These roads, from what I can learn, were all recommended by the Crown Lands Ranger. I do not know anything about them.

2701. Do you consider them roads of access? I cannot express an opinion about that. They were done on the recommendation of the Crown Lands Ranger. They were half finished before.

2702. Do you consider the lower road a road of access? No; I would not consider it so.

2703. Do you know that it was recommended by the Crown Lands Ranger? Yes; both roads were recommended by him, and by the auctioneer.

End of Evidence before Select Committee.

30. *President resuming.*] This evidence which has just been read over to you was afterwards submitted to you for revision? Yes.

31. And I think you signed it? Yes.

32. After having heard it read to you now, do you wish to correct any portion of it, or to give any explanation regarding it? There are some minor corrections which might be made, but they are hardly worth while mentioning. They would take up the time of the Commission unnecessarily. There is one place where it mentions that I was in constant attendance at the office of the Casual Labour Board for an hour every morning when I was in Sydney before going to my regular duties—that is in the answer to question 290. That was in a general way. I have since that time found that I paid 255 visits out of 312 days.

33. You have an actual record of that? I have found since I last gave evidence that I had actually been upon the work of the Board 255 days.

34. Then except as to some minor matters of detail your evidence as read is correct? It is. I see here, I say in reference to ballasting that it was only done in patches. That was before I was on the ground at all—after that the roads were ballasted all through.

35. You said you had taken no active part in the works for the last five months before you gave evidence to the Select Committee; how do you fix that time? I have a record. I was not there after June 15. It was exactly five months according to my record.

36. In answer to question 408 you said these roads had not been brought under your notice for the last five or six months? I was speaking then from memory. I find from the record that the 15th June, was the last date—five months and about a week.

37. Anything else you wish to tell us as to your evidence before Select Committee? In reference to one of the plans that was submitted to me by the Select Committee there were roads shown upon it, but they were not on the ground.

38. Can you refer us specifically to that plan? No; I have not got the plan; but there were more roads shown upon it than were actually upon the ground. One road did not exist that I saw on the plan.

39. Did you concern yourself about the routine of the office of the Casual Labour Board? Not after the first month of my appointment. It rested with Mr. Davies; he was constantly there. For instance, I had to go there in the morning as I had to attend to duties elsewhere—professional duties in connection with the Harbours and Rivers Department.

40. Then you cannot give us any information as to the system adopted in the office? Oh, I saw everything day after day. It was exactly similar to any other Government Department—it was more like a Department than a Board, with Mr. Davies at the head of it for the time being.

41. Can you give us any information or particulars as to the mode adopted in obtaining and paying money? In obtaining money Mr. Davies, Mr. Wells, and myself signed a requisition asking for the money required. £6,000 was the amount asked for. This was done when we had not got sufficient money in the bank to carry us over the payments.

42. Were all such requisitions signed by the Board? There was only one requisition. I think that was not so signed.

43. Was the amount generally asked for £6,000? £6,000 at a time always.

44. With regard to payments made by the Board, how were they arranged? The payments were made by the Paymaster, and if possible one of the Board always accompanied him. Mr. Davies went very often, but sometimes the whole Board went.

45. Who drew the cheques? Mr. Davies, countersigned by the Secretary.

46. Was any resolution or arrangement come to at an early period after your appointment apportioning your duties? Mr. Wells proposed that Mr. Davies should be Chairman, and I seconded it. Then afterwards we found that it was impossible for us to be constantly in the office. They were grumbling in our own offices about our absence from duty, and when we found we could not do it, we appointed Mr. Davies executive head in the office, and we gave him the assistance that he required when we called. Everything was then put before him.

47. Then you consider that Mr. Davies had the whole work in this office under him? The whole work, but he took our advice about anything that wanted it.

48. Are records kept in the office of correspondence? That was left entirely with him. Our advice was asked for in all matters, and if things had to be dealt with when we were not there, everything was shown to us afterwards.

49. Who were the officers under the Board? Mr. O'Donnell had charge at Hornsby; Mr. Burrowes, the head superintendent, was in charge at the National Park, where there were 4,000 men. He had Mr. M'Pherson under him as assistant engineer. At Narrabeen we had Mr. Oxley. These were the superior men who received instructions from the Board.

50. What other staff had you? We had the secretary, Mr. Hinchcliffe; the registrar, Mr. Josephson; and latterly when the work got heavier we had Mr. Hibble, corresponding clerk; Mr. Larnach, who was in the office for checking vouchers and things of that kind, and besides that, we had two detectives there during the whole time that the Board was in existence. Their duty was to see that no men who were discharged were allowed on the works again, and to keep a close watch on things generally.

51. Who appointed these officers? They were appointed, most of them, before we took charge.

52. Do you know by whom? No; I could not say who they were appointed by. Mr. Burrowes was in charge at the National Park when we took charge, Mr. O'Donnell was at Hornsby, and Mr. Oxley at Rookwood. They were all appointed by our predecessors.

53. Can you name any of the officers who were appointed by the Board or by Mr. Davies? Well, they were all junior officers that had been in the employ before at 6s. per day. Mr. M'Pherson was the only man that we raised—we raised him to 10s. per day. He was the best man we had.

54. Mr. O'Donnell for instance, did you make any alteration with regard to him? His pay was reduced by the Board.

55. Who appointed him? I cannot say; it was before our time.

56. Were there any other reductions? Our general object was to reduce all through.

57. There was Mr. Hinchcliffe; what were his duties? He was secretary.

58. Was he appointed before you took charge? No; he was appointed from the Immigration Office—he was connected with the unemployed previously—he and Mr. Josephson. Both came from the same office.

59. What was his salary? I think £350 a year. It was decided to give him a good salary in consequence of his having large responsibilities—such large sums had to be taken out to pay the men—sometimes he had between £2,000 and £3,000, so we decided to give him a good salary.

60. You considered him a responsible officer? He was a most responsible officer.

61. What were the amounts you said he sometimes had charge of? A couple of thousand pounds, and sometimes more. I could not say exactly how much.

62. Would that be in cash? Yes; Mr. Davies was always with him when he took these amounts out.

63. What was the duty of Mr. Burrowes? He was superintendent of the whole of the men in the National Park district. He had others under him who had charge of the work.

64. I think you said he was there before you took charge? He was in charge of the National Park.

65. He was appointed by Mr. Dibbs, I believe? I have always understood so.

66. Do you know anything of Mr. Burrowes? I do not—any further than our connection with him.

67. At any rate you considered he had been so appointed as far as the Board was concerned? I did.

68. Did he give satisfaction? Not always, from an engineering point of view, especially.

69. Can you define what his duties were? His duties were to take out the measurements—to see after the men on the ground—he had some 4,000 of them there. He had to locate the men into different positions on the ground, to specify their work, to say what they were to do, and the rate of pay that they were to get, principally for clearing; to attend to the rations, to see that everything was delivered properly. He had to look after the men and report to the Board generally on the work. He had also to certify to all the measurements of the officers who were under him; to verify and to find out whether there was any diversity in them.

70. Was that as regards all the works? Oh, no; only as regards that particular locality. He had nothing to do for instance, with Mr. O'Donnell or Mr. Oxley.

71. What were Mr. O'Donnell's duties? His duties were similar to those of Mr. Burrowes, but they were confined to Beecroft and the Field of Mars, where he had charge of the works.

72. And Mr. Oxley? Mr. Oxley had charge of Narrabeen, with the same powers in that district as Mr. Burrowes had in the southern district.

73. How about Mr. M'Pherson? Mr. M'Pherson was responsible to Mr. Burrowes until very lately. He was called assistant superintendent. Before that he was with Mr. Burrowes.

74. When you spoke in your evidence before the Select Committee of the chief clerk having a record of everything that was done, whom did you mean? I meant Mr. Hinchcliffe, the secretary.

75. You stated in your evidence before the Select Committee that at the commencement you held regular and formal meetings? Yes.

76. Can you say how long that lasted? Only about a month. We had full meetings repeatedly and regularly, but they were not called. It was found that the Board could not possibly go through the whole of the correspondence.

77. All this time you had your official duties to attend to in your own department? I had my own official duties, and in addition to that I had to work in the field, and do the best work that I possibly could—surveying, levelling, and getting out plans at night independent of the day work that I did.

78. Did you find it impossible to attend to the whole? I could not do it. I intended resigning in May, when I was appointed to the present work I have charge of. Foolishly, however, I did not do it. I spoke to Mr. Davies and Mr. Wells because after that I could not pay attention to it. Mr. Davies, I think it was, pressed me to continue until the Board was broken up. He expected it would have been so, long before the time it actually took place. That was in May, 1888.

79. Can you tell us the course that was adopted in considering applications for initiating any particular work? If a petition came in for any road to the Colonial Secretary it was forwarded to us for report. It was then sent on to our officer, whoever he might be, in the district, whatever the district might be, to report whether it was necessary or not. If his report was favourable it was returned to the Colonial Secretary and recommended.

80. Do you mean it was forwarded to each member of the Board? No; it was forwarded to the chairman, and by him sent to the Colonial Secretary.

81. That was in the case of petitions coming in to you? No; to the Colonial Secretary. Petitions coming from him were sent to our officers for report and their report would come back to the Board, and the Board's recommendation would go to the Colonial Secretary, who would say whether the work was to be carried out or not, as the case might be. It was the same as in all departmental routine. I looked upon it more as a Department than as a Board—that we were in fact a Department for the time.

82. The Colonial Secretary's Department was the Ministerial Department you were under? The Colonial Secretary was the Ministerial head.

83. When these recommendations went forward did they represent the recommendations of the Board? Yes.

84. Were they the result of meeting and consideration, or of separate consideration by the members? Of separate consideration.

85. Did you see the whole of them? I saw nearly every paper that went through up to the time I spoke of.

86. Did you see these papers each day as they were dealt with? I could see every paper each morning I was in. I went there formerly, regularly every morning, as I was on my way from my work to the office.

87.

Mr.
D. Houston.
11 Mar., 1889.

Mr.
D. Houston.
11th Mar., 1889.

87. Did you manage to get through all this in your ordinary day's work? As I was saying, I was only in the office an hour or two in the morning. Some days I was at the Casual Labour Board the whole day; some days only a few hours. My work lay at Cook's River, and I went to the office in the morning about 10 or 11 o'clock.
88. In the case of applications made direct to the Board for initiating work what course was adopted? They were forwarded to our superintendent for report, and then forwarded to the Colonial Secretary for approval if we thought the work necessary.
89. Do I understand you that all work that was initiated was approved of by the Colonial Secretary? No. I think some portions of the Hornsby Estate were without his approval. I do not remember distinctly but I fancy in every other case the work was executed with his approval. The Hornsby roads were, many of them, in progress before we went there.
90. You say some portions of the Hornsby work was in progress when you took over the duties? Yes.
91. Can you specify what parts of the Hornsby work was not approved of by the Colonial Secretary? No; I cannot say from memory.
92. Could you refer the Commission to any records or department where that information could be obtained? All the information was prepared in Mr. Davies' report or Mr. Hinchcliffe's evidence before the Committee of Inquiry.
93. Were any applications made for the initiation of work to individual members of the Board? No; not that I am aware of. None were made to me most certainly.
94. Mr. Davies may have had personal applications? I could not say.
95. As to correspondence passing between the Chairman of the Board and the Colonial Secretary, would it be opened by any member of the Board? Most of the letters addressed to the Chairman were opened by any member of the Board.
96. Do you remember the number of unemployed you took over when you commenced your duties? I think there were about 4,000, if I remember right.
97. Where were they? Principally at the National Park and Rookwood.
98. What were they doing? Clearing principally, and scrubbing.
99. Were they doing any other work? It was impossible to find them work; we had to put them to almost anything to keep them from being idle.
100. Do you regard clearing and scrubbing as profitable work? I do not. I regard that as very unprofitable. In our instructions we were informed that works in the northern, southern, and western districts—more reproductive works—would be brought into existence. We never had any irrigation or any works of that character to do—nor any tanks, nor anything of that kind. In the foolish hope that these and others of a like character would be undertaken, we kept the men at the National Park Depot, hoping to provide them with these other works, but we never had an opportunity of doing so. The Lachlan Swamp was to have gone through our hands, but we had nothing to do with it. We had simply to find the men work wherever we could.
101. Is it not generally admitted that clearing and scrubbing on Crown lands is unprofitable if not followed up by sale or other work? It is not profitable work—they were working at it when we went there.
102. In fact it often does more harm than good? Well, my experience in the matter is, that it is more like sowing the seed for bringing up fresh young trees, which grow more vigorously than before, but the ground there was thoroughly cleared, and there was a great deal of work in laying down grasses, &c.
103. Were there no other places to put them to? We could do nothing else unless we just fed and kept them there.
104. Speaking generally, what class of men were they? Some of the men were as good workmen as I have ever had, but there were classes there who were physically unfit, who were cripples, and could not do this work. It was utterly impossible to get a day's work out of them. The rule that we adopted with these men was to pay them a day's wages, give them 3s. 6d., and get what we could out of them. We reduced wages when we took charge; they were getting high wages, and we reduced them to 4s. and 3s. 6d.
105. As a body, what could you say of them? As I told you, we had 10 or 15 per cent. of them as good workmen as you could wish, others were fair workmen, but their work was not continual, and others of that character I have just mentioned.
106. Of what classes were they? They were of all classes—tradesmen, saddlers, harness-makers, cooks, in fact everything you could name, as the records will show.
107. Were many of the men unfit for work? They were never used to out-door work; nevertheless we had to find them work; when it had to be done, we gave them piece work. We laid down a scale of wages ourselves. The scale of rates that we paid for clearing was such that the limit of earnings would be 4s. or 3s. 6d. We gave the superintendents instructions, what rates to allow for the different classes of work upon inspection. That was the object of our personal visits to the works.
108. Looking at your answer to question 312 before the Select Committee, what were the notices you received from the Roads Department? We have written notices—written copies of the road superintendents' reports. Each road superintendent reported monthly as to the condition of the labour market, and a copy of that report was forwarded to us by the Commissioner for Roads to enable us to judge the state of the labour market.
109. They were not applications from contractors? Oh, no. They referred entirely to superintendents' reports as to the labour market and as to the condition of the work.
110. Because I see that immediately afterwards in your evidence you referred to contractors? No. If a contractor sent us an application, we dealt with it and sent a number of men to the contractor at a certain rate of wages.
111. Did you keep a record of these men? Of every man that was sent away from the field a record was kept.
112. Did any men you sent away come back to you? They have come back, but unless they could give a satisfactory account of themselves and good reasons for coming back, they were not allowed on the field again. The number was very small of those who were put on again. If we found that a contractor treated them harshly we put them on again.

113. Did you take any steps to ascertain whether the men went to the contractors who required their services? Sometimes they never went at all. We did take steps to see that they went to their work; in several instances they did not go.
114. Was that frequently the case? The full number scarcely ever turned up. They had their tickets, but did not get on the railway train. When the man went there he would not get the full number of tickets, and then he would report from the Railway Department if they had gone.
115. Were there records showing the number of tickets used? There was the number given to this man. A requisition was made out giving the number of tickets required and the number we actually got.
116. Did you take such men back into the ranks again? No. That is what the detectives were there for, to prevent these men being taken on again. They would come disguised, with their faces shaven and their clothing changed. We adopted every safeguard to find them out.
117. Were these detectives in the employ of the Board the whole time? We applied to the department for them the very first day we were in office. We applied for them because we had no other protection.
118. What were their duties? To detect any one who tried to pass in a second time, or any notorious character that might be upon the works; and upon occasions to go with the paymasters, and accompany them when they went to their places to pay the men.
119. You say you took every precaution to prevent people coming back; do you think it worked satisfactorily? We had every protection possible.
120. Since giving your evidence before the Select Committee, have you discovered any instance of labour being sent to any district without the authority of the Colonial Secretary,—I mean other than the few cases at Hornsby you mentioned? No; I don't know of any. My principal work lay on this side; Mr. Wells attended more to the other side.
121. Do you know of any cases where the Chairman authorized work without reference to you? I could not tell you of any; I don't think any would be authorized. He would tell me of anything he had done within a day or two, and expose every paper in connection with it. I knew wherever men were on the ground every time I went to the office.
122. Did you visit the works? I visited them, and did engineering work there. That was what stopped me giving so much attention to the Board as I had done. I was doing actual field work that no one else could do; I mean when there were any heavy grades requiring special attention, where larger engineering skill was required. I might mention the Unwin Bridge Road, French's Forest Road, and Dobroyd. I had all the engineering, the cutting, preparation of plans, and everything to do.
123. During your office time? I would take it now and then, when I could get away from my own work. We had to do it. No one else could do it.
124. Were works let out on contract, or was it all day work? On contract, at a scale of charges, which would give 4s. a day to the men. Of course, there were men who did make more, because they worked on moonlight nights. Plenty of men on the works were anxious to work hard to make a little money to get away from the work.
125. Did you estimate the cost before these works were commenced? We could not well estimate it. Very often a piece here and a piece there was started at different times to get the work off. It was easy to estimate them roughly, because we fixed the cubic yards that were to be paid for.
126. Are you prepared to say that the work was done economically? I say positively that it was done more economically than work of a similar character was ever done in the Colony before.
127. Was it done properly? It was done properly where I had any connection with it. There was some work in hand before we took it up, with which we were rather puzzled. At Waterfall, for instance, at the head of the Waterfall Road.
128. Do you think it was too substantially done? It was a waste of money; it was so badly graded that it was impossible to pass over it. When we inspected the road I wanted to make a detour, and Mr. Wells thought it would be better to leave the road for the present and draw attention to it.
129. Did you continue it afterwards? From the point that was done; at that time we made out the grades.
130. That was from a place where something was going on when you commenced your duties? Yes; it was nearly completed.
131. Where was that? It was at Waterfall—it was virtually done before our time. That was the most objectionable work I saw in which any expenditure was made.
132. Who was the engineer? Mr. Burrowes was, I believe, the engineer.
133. During the five or six months you were unable to attend to the duties of the Board, were you away from Sydney? Yes; I was away from Sydney—at Rookwood. I never left the work.
134. Was it possible to communicate with you and get an answer in a short time? Yes; and every time I came into Sydney I called at the office.
135. Whenever you got an opportunity, I understand, your evidence is that you attended at the office and examined all the papers and records going back to the previous meeting? Yes.
136. Did you satisfy yourself that all records and books were being properly kept? So far as I remember they were exactly kept, and I was in the office constantly.
137. Would they be such records as you would keep in a department over which you had control? Exactly the same as in the department I am now working under.
138. With reference to the five roads within the space of three-quarters of a mile, spoken of in question 430 before the Select Committee, have you ascertained since giving that evidence whether that is so or not? I have. I was not asked about any of these questions at the next meeting of the committee which I attended. You will understand that there was a lapse of time, and I was not asked the question after I visited the whole of the works.
139. You say, in answer to question 432 before Select Committee, "I think not"—did you mean that you would not think it necessary in the interests of the Crown that the public money should be expended in giving such access to this piece of Crown land? I was not aware at the time that these roads were being ballasted. It is rather a mixed way the evidence is given there; but it is all in reference to ballasting.
140. Has your answer to that question reference to whether the roads were necessary or not? I have answered in another place that I consider that they were necessary in the public interest. I recommended them,

Mr.
D. Houston.
11 Mar., 1889.

Mr.
D. Houison
11 Mar., 1889

140 $\frac{1}{2}$. Are you of opinion that the public money has been properly expended there? I think so. There was not a single road too many.

140 $\frac{3}{4}$. Was it economically expended? As economically as it could possibly be. I have so held all along. I was not asked the question before the Select Committee, and as I confined myself there to the questions asked, I said nothing about it; but I have always held as an engineer, that on ground such as we had up there it would be only a waste of money to form the roads without ballasting. The roads would be cut up in no time and would become practically of no use. I tried to impress upon Mr. Davics the necessity of ballasting all the roads. I hold that it is a great mistake to form roads wholesale over the country and not ballast them.

141. Do you think that the work done was too elaborate for the district? I do not. It was very plain work, considering the nature of it. If this ballasting had not been put on, the heavy rains would have damaged them and the traffic would have cut them up.

142. During the five months that you were unable to attend regularly to this Board work, are you aware if Mr. Wells was in Sydney? He was absent for a time. Three weeks.

143. At the same time as yourself? He was. At the same time as myself. He was away once, I know.

144. Would it have been possible for the Chairman to have obtained yours or Mr. Wells' sanction to anything that may have been necessary during the interval? He could have found me at any minute. An hour's notice would have been sufficient.

145. In making these roads, had you to cart the material any distance? Yes; at some places.

146. Who did the carting or carrying? The ballasting was let at so much, and the contractors would have to do that themselves; the unemployed would carry some of the material. There were some carts; but I would not be sure whether they were not on-day work. They were not on for any length of time, I know.

147. Could you say whether the carriage work was done by the unemployed or not? A considerable deal of it was contract unemployed work. There were drays on at one time; but they were absolutely necessary to keep the unemployed going.

148. Had you any carrying plant? No; absolutely none.

149. Whatever carriage was done was done by outside work? Yes; it was outside work.

150. Would that be charged against the unemployed? Yes.

151. Was there any quarrying done for the material? I cannot call to mind whether there was or not. There was stone obtained at Hornsby for the work—rubble stone.

152. Who would do any quarrying? The men who supplied the stone were the unemployed.

153. Were there any fixed rates for that work? The general rule was 1s. 6d. for cutting the stone, 1s. 6d. for bringing it, and so much for spreading it.

153 $\frac{1}{2}$. What I want to get at is whether there was any work done outside the unemployed that has been paid for out of the money charged to the unemployed? None but what was absolutely necessary to keep the unemployed going. The ballasting was let to the unemployed only.

154. For example, if a contract was let to the unemployed and they sub-let work to carters who were not unemployed, is it not clear that some moneys would go to other sources than they were intended for? Yes; but still it was absolutely necessary if they could not get the material on the ground.

155. Who is Mr. Gordon, whose name appears on the evidence before the Select Committee? Mr. Gordon is a surveyor under Mr. Deering. He had charge of a number of the unemployed before we took them over. The work that was being carried out at Kurnell was under his direction.

156. Was he employed solely by the Board? No, he was not. He was under Mr. Deering, but I understood that he was to give us all the assistance that he could, as he knew the district. We did not know the district and had no time to look round, and in order to set to work at once we had to depend upon him for information.

157. Did he remain carrying out these works all the time? No; he just carried them out for a short time after we took charge.

158. He was not under you? Oh, no; but he was more like our officer than anything else.

159. Was he detached from the Survey Department? No.

160. What is his profession? A surveyor.

161. Do you know anything of his qualifications? I know he is a good surveyor.

162. Was he a capable man for the work you employed him to do? Yes; I have the very highest opinion of Mr. Gordon. For instance, there was French's Forest Road; he had marked that road all through. He was a most valuable assistant to us.

163. The whole time you were performing your duties? Just when his services were called into question. For instance, at Narrabeen he altered roads on my advice. I pointed out that there were better roads, from an engineering point of view, to be got by adopting a certain course. He took my advice. He altered those roads; had them described afresh, so as to give better access from the Crown lands to Narrabeen.

164. Your evidence is that he did his work well? He did. I will speak very highly of Mr. Gordon in everything in which I have had any connection with him. I certainly think a great deal of him.

165. But so far as the Casual Labour Board was concerned he was not their servant? He was not paid by them.

166. Was he paid any expenses or overtime? He was paid by the Board on two or three occasions, but it was merely a nominal sum. He was most straightforward in every action.

167. Can you tell the Commission where they can obtain a plan which will show all the works that the unemployed have done? I do not think it would be possible to get one. To have one made out would involve a large expense. In many cases I have tried to get a complete plan, but it was so mixed up with what had been previously done, or so interlaced in other places where land had been marked for sale, or with what they call underscrubbing previous to sale, that the same ground had to be gone over.

168. Did you not keep any plans in the Casual Labour Board office? We had surveys of the Crown lands—plans showing the blocks that were for sale.

169. But are there no plans which would show all the roads at Narrabeen, Illawarra, National Park, and other districts where the unemployed worked? Yes.

170. As distinct from private roads? Yes.

171. Where could we get these? I think from the Casual Labour Board. My attention was chiefly devoted to the works at Narrabeen and on this side.

Mr.
D. Houston.
11 Mar., 1889.

172. You said in your evidence before the Select Committee that Mr. Davies introduced you to Mr. Burns. Will you say when that was? I could not. I think it was about the beginning of the work. I saw Mr. Burns in a cab, and Mr. Davies introduced me to him. Only a few words passed between us.
173. Can you say whether Mr. Burns was a Minister of the Crown then? He was in the Government at the time. It was a casual introduction in the street—simply an act of courtesy on Mr. Davies' part.
174. Was any reference made to these road matters? Not the slightest. I passed Mr. Burns in a cab next day, and I did not know I had passed him until I was told of it afterwards.
175. Was the work at Hornsby pretty well advanced then? Most of the ballasting was done at that date. In my evidence I stated that I did not know all these roads that were ballasted. I saw them afterwards when I went up there. June 15th was the date I spoke of.
176. Can you tell us the various districts where any large unemployed works were entered upon? From Narrabeen to French's Forest Road—9 miles through there were ballasted—Kurnell, Rookwood, where there was a lot of clearing, Gordon, where there was a lot of work done in clearing, Field of Mars, Beecroft, Berovra, Carlingford, Dobroyd, where a good deal of work was done, Unwin's Bridge Road, Tempe, and Cook Park. These, I think, were all, the only two I have not mentioned being the National Park and Waterfall. I attended more to those on this side—down the Narrabeen way.
177. Was there much work done in the Liverpool district? I do not know anything about that. I never was on it.
178. After May did you know anything about the initiation of it? I saw a petition in connection with the initiation, but I could not say from memory who it was from.
179. Do you know anything about the district? I never was in it at all.
180. I mean independent of the Casual Labour Board? No; very little.
181. Do you know where Mr. Davies lives? Yes.
182. Can you say whether the work done particularly benefits his neighbourhood? No; I do not think so, from my knowledge of it. A road was opened past Mr. Davies's before.
183. Had you much to do with the roads on the Holt-Sutherland Estate? No; I never attended to that district. Mr. Wells would know more of that district than I do.
184. Do you know that part of the country? I know the National Park, but I do not know any particular portion of the work. I was on the Illawarra Road—the main road upon the estate, because there was some heavy engineering work to be done, and I gave advice.
185. Does your knowledge enable you to state whether the roads on the Holt-Sutherland Estate gave access to any Crown lands? I could not say.
186. Who was it that settled the rates that were to be the contract prices? Mr. Wells and I, some times together. In fact the superintendents sought our advice as to the pay they should give, we having a much better knowledge than they had of the value of the work.
187. Can you tell us when the services of the Board were discontinued? I can hardly tell you. I know that I was so disgusted that I took no notice of it.
188. Did you get any official notice? I did not, I merely knew that the Chairman had got one.
189. Have you taken any action since then? I called once, there was no one there but Mr. Davies. I asked him if it was necessary that I should appear there. He said, "no."
190. Did you personally take any steps as to the disposal of the books, &c.? Not the slightest. Messrs. Miles and Mason had been there in charge for some considerable time.
191. Have you received any remuneration for your services? I have not received a copper—either for expenses or anything else. I have incurred expenses to the amount of some £60 or £70, but I have not sent any claim in, and I have not received a penny.
192. Were you given to understand that you would be remunerated? The only knowledge I have, is what Sir Henry Parkes stated in the House. I have never had any conversation with regard to the matter, and I never asked for anything. In fact, I am out of pocket £60.
193. Was that for work done within your official time? No; apart from my official time.
194. How long did the duties in connection with the Casual Labour Board occupy you? I prepared plans, made out reports, and worked overtime. Those reports were always written at night. I was put to heavy expenses too sometimes.
195. Have you seen this return before? Yes; it was made out at the office.
196. This is a return showing the applications for work, from May, 1887, to December, 1888? Yes.
197. That covered most of the time you were in office? Yes.
198. So far as you know that is a correct return? Yes. [*The return put in and marked A 1.*]
199. What was the reason for the Board employing all the labour so close to Sydney? We had no option. The Board were always expecting work outside Sydney. We had no option but to find this work. We had great difficulty in keeping the men from idling about. The main object was to keep them employed at works.
200. Were you expecting that work of more importance would be required to be carried out? We expected, according to the tenor of our instructions that work of a different kind was to be carried out; that irrigation works, the construction of tanks, and other works in the interior were to be provided for these men almost immediately; that such works were to be pushed on almost before they were necessary on account of the urgency.
201. Do you know whether the accounts of the Board were audited at any time? For every £6,000 that we paid, vouchers were sent to the Treasury and audited by the Auditor-General. They were sent to the Audit Office and audited there. Each £6,000 that was made up went through the same process that all departmental vouchers go through.
202. You said that sometimes as large a sum as £2,000 in cash has been entrusted to Mr. Hinchcliffe? It was always locked in the safe over night, and Mr. Davies went with Mr. Hinchcliffe in the morning when the men were to be paid.
203. Was it possible that any of that money could be retained without proper vouchers being given, and without your knowing it? No; it had to be accounted for to the Treasury. It could be seen at any time whether any amount had been kept back.
204. Do you know whether any money ever was kept back? Mr. Davies has held money in his hands when the men have not appeared to sign for it. The vouchers were sent to Mr. Davies, who took the money from the Secretary, and held it for the men. Mr. Davies would sign the vouchers, and acknowledge the amount to the Treasury.

- Mr. D. Houston.
11 Mar., 1889.
205. Is that the usual custom in the Government service? According to all previous departmental experience that I have had, such money should be paid into the unclaimed wages account at the Treasury. I have had moneys of the same kind myself, and I have followed that course with regard to them.
206. Were they large sums? Small amounts of 4s., 3s., and 2s.
207. Were you aware that at various times vouchers were handed in by Mr. Davies, and the money received by him in this way? I am aware of it myself.
208. Do you know whether any money has been retained in this way now? Mr. Davies has got moneys in his hands retained for that purpose.
209. The Auditor-General writes that he cannot complete the examination of the accounts owing to different sums for wages not having been receipted for? Mr. Davies's signature will be found to all these, whatever they are.
210. Where would that money be now? In Mr. Davies's hands, I suppose.
211. In cash? In cash.
212. Who was the assistant superintendent? Mr. M'Pherson. That was at the National Park.
213. Who is Mr. Springall? He was storekeeper; he looked after the rations at the National Park.
214. Who appointed him? Mr. Burrowes. I saw him at the National Park when I went there.
215. Do you know anything about him? Yes; I know we had a bother with him. He kept a store there, and we told him to do away with it. He was keeping a store there and selling things to the men. We would not allow this to go on. He was looking after the rations at the same time that he was keeping a store. He gave up the store—cleared it right out.
216. Did you continue him afterwards? Yes; we had nothing against him, and he remained with us up to the last. We found him very careful with his accounts.
217. Have you any reason to doubt that he was a good officer? I never had the slightest reason to doubt him; but Mr. Davies paid more attention to that department than I did.
218. Do you know anything of a person named Flemming? No; I do not know anything of him.
219. Mr. Hinchcliffe, you say, was the secretary? Yes.
220. Did he always give satisfaction? Always. He was a very intelligent accountant.
221. Can you tell us whether he was appointed by the Board? He was handed over to us by the Immigration Office; he was with Mr. Wise.
222. Was Mr. Hinchcliffe responsible for the keeping of the accounts? Yes.
223. Did you ever hear anything about his being short in his cash? No, never, further than that he over-paid someone at Rookwood.
224. To any extent? No; only a pound or two, and he made it good out of his own pocket.
225. Who was Mr. Hibble? He was a sort of corresponding clerk, and assistant to Mr. Hinchcliffe in making out the papers.
226. What salary did he receive? He was only getting 6s. a day.
227. Did he ever pay the men? Sometimes, in the minor places; he would, perhaps, be sent to some of these.
228. Do you know of any complaint or charge against him? Nothing; I think he is as straightforward a man as we had in our employ. I would trust him to-morrow, from my own personal knowledge.
229. Are you aware of any difference that existed between the Chairman and any of the officers? No. I know Mr. Burrowes was continually getting into scrapes with Mr. Wells and myself. Mr. Wells refused to allow him to do any engineering at all. That arrangement was supposed to be made with the approval of the Board; still, he got kept on.
230. Why did you continue him? Because he was such a good superintendent otherwise. His control of the men, for instance, was excellent; but he was no engineer, or anything of that kind. He just had the peculiar position he was fit for, and nothing else.
231. What was the particular scrape you referred to? Mr. Wells insisted upon his discharge once, and Mr. Davies begged him off. Mr. Davies, however, threatened him. I have seen letters from Mr. Davies threatening him on his own account. Every time we met there was something wrong—simply from an engineering point of view. It was not the class of work that we would have liked to have seen done, especially on the Holt-Sutherland Estate.
232. Are you aware of any other difference, difficulty, or ill-feeling on the part of any of the other officers of the Board? No.
233. So far as you know, the whole Department worked harmoniously? So far as I know. I never knew of any quarrelling or anything of that kind. I know that there was ill-feeling between Burrowes and M'Pherson in a professional way. Burrowes saw that things were being taken out of his hands, but we were compelled to do so, for M'Pherson understood engineering work better.
234. Do you know Mr. Larnach—was he in the employ of the Board the whole time? Not all the time; he came on some considerable time after we took charge.
235. Do you know whether he had any ill-feeling against Mr. Davies? I do not think he knows much about him.
236. Did you know him in the office? I knew him in the office; he was employed checking vouchers and things of that kind.
237. *Mr. Franklin.*] You say that some time after you took charge of the work it was done almost the same as a department? Yes.
238. The works that would be initiated—especially with the assistance of yourself and Mr. Wells—would be works of construction? Yes.
239. And therefore required very considerable attention? They required professional skill.
240. And from the nature of your ordinary professional duties you could not give all the attention you would think necessary? Well, I gave so much that I began to consider whether I would not have to give up either one or the other. We devoted so much time to the Board that they were complaining in our Department in both cases—both in Mr. Wells's case and my own.
241. Did it occur to you then that you were incurring responsibility over which you had not got full control? We had control; they were under our direction. We were always seeing these works—paying casual visits.
242. But as the works were spread over these large areas it would have been better if you had had more time to devote as field officer? I proposed that we should have a regular officer, but it was thought that
- we

we were not justified in taking people from the Department and paying them high salaries, which I would have done unhesitatingly. I think it would have been far better to have obtained men from the Department than to have had the unemployed doing the work.

243. Do you know that in the expenditure of large sums of money in works it has always been considered necessary to get a field officer—to put them into professional hands? Yes; and they have always had our advice on every subject. No work has been done without it. The clearing was in their power, but when they went beyond that the work came under us.

244. But you could not give much time. You were quite satisfied that the officers carrying out the work were fully competent? Precisely; and for that reason, when I found a competent officer I gave him a plan that he could not get away from, with cross-sections and everything complete.

245. You have told the President that you were not satisfied with the principal officer's engineering work? No; but Mr. McPherson I have been thoroughly satisfied with.

246. As your visits were not very frequent, was it not possible that Mr. Burrowes might have made an engineering mistake sometimes? No, hardly. There were no works of an engineering or heavy character that were not looked after either by Mr. Wells or myself.

247. Who would you hold responsible for such work as ballasting the roads at Hornsby and on the Holt-Sutherland Estate, as to the necessity for it? Mr. Davies. That work was done in May. He had my advice that wherever roads were formed it was especially necessary to ballast and protect them. The ballasting was put on as a protection, to save expense afterwards.

248. You know that the formation there is very good? The formation is sandstone—long sandy hills, with cuttings.

249. A portion of the Vanceville Road has been a long time in existence? That is all clay on that side. The country changes entirely when you get into Hornsby; one side is clay and the other sandstone.

250. You have seen the ballasting used on these roads;—do you think that an improvement? I do.

251. Do you think that the road is sufficiently ballasted? Not sufficiently, but it is sufficient for travelling over. It is not what I call a fully-formed road. I think, looking to the future, that the ballasting was necessary. The ballast was of course the foundation of the road, and over that the metal was put.

252. Considering the light nature of the traffic, do you think the ballasting was required? I do. It would be sufficient to make a small cutting, and then the rain-water would go through at once and wash away the foundation. The lighter it was the easier it would be cut through.

253. At any rate, in a portion of the estate, would it not have been better to have left the simple formation? I think not, from an engineering point of view. On my recommendation most of the roads were ballasted there; but there were some done the first time I was up. Until then I had no idea what was done.

254. Do you think any ballasting material for your work was laid down during the time of the construction of the Northern Railway—were the works carried on simultaneously? Most of it was done during the time I did not give so much attention to the Board. I suppose they must have been going on about the same time.

255. At the time the railway was going on the highest rates were paid for cartage in that district? I could not say. That might possibly be so; but at French's quarries the men had hand-barrows; in other cases they carried the material, and they broke the boulders on the road. But the vouchers will tell every penny that has been expended. I know I grumbled about a portion that was done at Narrabeen. It would appear on the one voucher, and the next voucher would show only for the stone broken. I grumbled about it myself; it was inevitable.

256. In all cases where it was impossible to get material near the road there was cartage? As a rule; but, as I have said, they used hand-barrows. In many cases I have seen them carrying material with ordinary sacks with two poles attached.

257. However, at that time there was no want of labour to induce them to work at unemployed prices? No.

258. *Mr. Waller.*] Do you think that it was right, within the meaning of the instructions that were given to the Casual Labour Board, to expend the public money in cartage? We had no other means of employing them; without doing this it would have been impossible to go on.

259. Do you think it was right? I cannot say.

260. Were these men employed with their carts at this work? Some certainly were.

261. Did they come to you for work as unemployed? Some of them did.

262. Did they go about with their horses and carts? They may have been there with carts or without them.

263. There are no carters entered in the schedule statement of the men actually on the register books in the office as unemployed? They may have been there as carters without going through the books as carters.

264. Then they would not really go through the books? I do not think that any of the carters went through the books.

265. Did you give them the wages of the unemployed, or did they have the ruling wages? I think they had the ruling wages, unless where it was otherwise contracted for amongst the unemployed. I would not be positive as to details.

266. Can you tell us where we could obtain information as to the absolute staff of the unemployed—you told the President the heads of the Department? The names of everyone can be obtained from the voucher sheets—of everybody employed in the office.

267. Have you those of the branch offices as well as the main office? Well, you could not call them branch offices, except the National Park. We had the camps, the superintendents, and clerks.

268. Would the vouchers and papers pass in from the branch offices? Yes.

269. And would they contain all particulars? Yes.

270. From your own knowledge of the whole of the transactions, you can say that the books and papers would give full information? Yes.

271. I want to know if it is your opinion that the Board, constituted with two professional men, yourself and Mr. Wells—who, of necessity, had other occupations in the Government service demanding frequently your absence from the Board work—and the third member being a non-professional man, was able to do justice to the expenditure of such a large amount of public money? No; I always held that one professional member should have been permanently appointed to the Board. That was always my opinion.

Mr.
D. Houston.
11 Mar., 1889.

272. In your opinion, a Board constituted as that was had not the proper supervision of public moneys? Well, as I told you, except in the minor details, everything of importance was attended to by us; but in minor details, such as clearing, a professional head was not required.
273. You say, however, that you were absent five months? No; I was present twenty times during the five months.
274. You mentioned at one time that the Colonial Secretary approved of all the work that was deemed necessary with the exception of the work at Hornsby? Yes; I would not be positive about that.
275. Why was it that he should not have had the approval of the work at Hornsby? I could not say positively.
276. Taking it for granted that it was necessary to have his approval for all the other works, was it equally necessary to have his approval for this? Yes; but you must remember that the men were there on these roads. These works had been initiated before we took charge.
277. Who recommended them? Mr. Gordon, the surveyor, I believe, recommended these roads, and I have been over some of them with him.
278. Do you know who recommended these Hornsby roads, for instance? I would not like to say positively, because there is a paper in the office missing, and it cannot be found. I think, however, it was Mr. Deering. I hunted it up some time ago, and I remember seeing it. It strikes me that Mr. Deering had something to do with the recommendation. I do not give this as positive, but my recollection is to that effect.
279. Did you approve of these roads as handed over to you? I did; except as regards Boundary Road, which was cleared right through. I refused to allow it to go on, although Mr. Deering had laid it out, because it was impracticable from an engineering point of view. As I have already said, it was right enough at the end near the junction.
280. Who recommended these roads on the estate? I understood it was Mr. Gordon. I understood that it was at his recommendation that every road was done.
281. In opening up or making roads, did you ascertain whose authority they were made by? Yes, and saw all the papers.
282. Then we may take it for granted that with the exception of the Hornsby Road, you were conversant with all the others? I was during the time I was in office. The petitions were always handed to me to read through.
283. Was the Colonial Secretary's approval always in writing? It was always "Approved, H.P."
284. How many men did you find on the Hornsby Road when you took charge? I could not say from memory.
285. Have you any means of ascertaining? Yes; the office books will tell.
286. Did you increase the number when you took charge? No; men were always leaving, and we always kept them up to the limit. We got a standard number at each place, on account of having the camp and the fittings there.
287. Am I to understand then that whatever number of men was at Hornsby at the time you began, you kept up that number? Yes; while the work was going on.
288. Talking about scrub-clearing, what was the pay for that? It ranged from £6 to £10 an acre.
289. Did that include the clearing, gathering, and burning? It included clearing, gathering, and burning.
290. What is the usual price for this under-scrubbing? We have paid £30 sometimes, leaving the majority of the trees in.
291. Have you had any experience of clearing generally in the country? Of road-clearing; of course I have.
292. That is much the same I suppose? Yes, it is the same; I have done hundreds of miles of it.
293. What is the difference, in your opinion, between the cost you paid the unemployed, and the cost as you have had the work done before? We paid considerably under.
294. How much under? Well, 50 per cent. under. In fact I do not know how some of them made wages.
295. Taking into consideration the class of men that you had at work, and the class of men who receive the usual current rate of wages, what do you think the difference in the cost between the two classes of work would be? As four to seven—that is about the ratio.
296. Were any contracts let by the unemployed for clearing? Not to my knowledge. Such a thing never came under my notice.
297. Did some of the unemployed gangs take clearing contracts? Yes; contracts were let out in the National Park direction.
298. Is there any evidence to show what the rates at those works were? The papers would show.
299. Are there papers showing the rates you paid for these works? They are on the vouchers, and the books with the accounts—all of them are at the Audit Office.
300. You said that sometimes Mr. Davies kept money in hand under certain circumstances. Have you any idea how much these moneys might amount to at any time? No; I could not individualise any of them. I may say that I have seen a paper in the office of the Auditor-General asking for a proper acquittance for these amounts.
301. Had he no stated sums? The sum was on the vouchers, 3s. and 4s., small amounts; I saw these amounts in the office myself.
302. Would the total amount be considerable? No.
303. You say he has some of the money now in his possession; would that be considerable? No; I would not like to take it for a month's "screw."
304. I think you said Mr. Springall was the storekeeper at the National Park. How did he come to represent Mr. Kidman? I do not know; we were not there you know when he commenced. There was the canteen there at the time the military forces were at the Park; and in fact he was in the dual position of storekeeper and a sort of agent for Mr. Kidman. It was only a temporary matter however.
305. I understood you to say that you at once saw the impropriety of his holding the dual position? I saw it instantly, and said to the Chairman, "We will put an end to this at once."
306. Who do you mean by "we"? The whole Board—all the members were on the ground. I think it was on the 23rd of May the conversation took place.
307. Referring again to the constitution of the Board, I ask you, did you feel that the position you occupied gave you the full control, power, and authority that you would like to have in undertaking any work that you are responsible for? Yes; I consider that I had my full share of responsibility and control.

Mr.
D. Houston.
11 Mar., 1889.

308. That is, in other words, that you are perfectly prepared now to accept the responsibility for all acts which have been done, either with your knowledge and consent, or during your absence by your colleagues? I accept every responsibility for the work.
309. During your presence or otherwise? Yes.
310. Had Mr. Davies power to deal with things during your absence? Yes; clearing and things of that kind in a locality where the authority of the Colonial Secretary was obtained for; they were all referred to us, and in fact they were undertaken knowing that the authority would be given in a day or two.
311. I want to refer you to the absences of yourself and Mr. Wells; how could you, during those absences, have been in a position to object to works which you might think were unnecessary? I was always at hand; I was at Rookwood.
312. It amounts, therefore, to this, that you say that no works were undertaken or carried out without your knowledge within a day or two? Yes, if Mr. Davies did not consider it necessary to call me. I paid about twenty visits to Sydney during the last five months.
313. From your evidence before the Select Committee it appears that you stated that the reason for certain roads not being formed through Crown lands, and other roads being made through other property, was the enormous cost that they would have been to the Colony? Yes.
314. Have you made any estimate of that cost? It is impossible for us to make an estimate; the reason these roads were made was to give access to the Crown lands; you could not cross the creeks from east to west; it was impracticable—like going down a roof and straight up the other side; a very large extent of the lands there are table-lands, and getting in between the gullies and creeks and their tributaries you intersect Crown lands, running in long parallelograms, while you could not go through the whole length of Government land upon any road that could be made.
315. These parallel lines—do they extend far? They go right through to the Hawkesbury; the deer they go the more impracticable they become—the more precipitous and inaccessible.
316. Is the soil good? On the table-lands the soil is good; their area I could not give; I saw some splendid orchard lands on the top, in places running back about an eighth of a mile.
317. Is it land that would be easily sold? The orchard land would.
318. Is it all orchard land? All orchard land, and some very pretty sites for residences.
319. In making these roads I presume you had an eye to the value of the lands on either side, and the return that would be realized when the lands were sold? The Government surveyor told us that the value of the Crown lands when these roads were made would be very great.
320. Who was the surveyor? Mr. Gordon, and he told us this in the course of conversation.
321. Do you remember what value he mentioned? No amounts were named.
322. May we take it that these roads were made to enhance the unknown value of Government lands? Yes; land that was utterly valueless without roads.
323. Why was it valueless? Because it could not be sold.
324. Was there no attempt made by an experienced person to see what the value might be? Mr. Deering valued the land, I suppose, but I had no object in valuing it.
325. What I have been endeavouring to obtain is whether money was judiciously laid out, and whether it would be returned in some shape or form by giving access to property, the value of which would be materially increased by the roads? I say that so far as my knowledge goes the land was practically valueless without these roads.
326. Have you any idea of the value of the roads that were made? I do not know. I have no knowledge.
327. Do you know if anybody connected with the Government or the Board went into that question—is there nothing to show their value? Mr. Davies estimated all that. I think the value is on record.
328. Then there was a calculation made? Mr. Davies has one of all the lands.
329. I do not know that I clearly understand who was actually responsible for the laying out of the roads in the absence of yourself and Mr. Wells? We never laid out any roads at all. All that we did was to see the roads after they were laid out. We had nothing to do with the surveying. I did not know whose land we were passing through. I never knew either Mr. Burns or his land.
330. Then, as a matter of fact, you were responsible only for the carrying out of the roads? Yes.
331. Did you refuse to carry out the roads as laid out by these Government surveyors? Only in the case of the Boundary Road. The Boundary Road was actually cleared; but I would not go on with it from an engineering point of view.
332. Then you are not responsible for the roads as laid out? I, myself, am not, personally, further than the engineering is concerned—in saying what class the road should be and how it should be made.
333. That is, a first or second class road? Yes.
334. Regarding these roads, I presume that you did as you always do in the Government service—you made the necessary reports as to the cost? We knew in these roads, where the men were having fixed rates. We found so much a yard for ballasting, so much for forming, and we gave an estimate of the whole according to the nature of the ground. Where we had a certain depth of cutting in rock the rate was different to that allowed where there was a shallow cutting; and so on through the work we valued everything—this section 3s. 6d., that 4s.—so that we got the estimate of what would give to the men 4s. a day.
335. Is there any documentary evidence that would show the amount allowed for these different sections? The engineer and superintendent would have records, I suppose.
336. Did you not give them to the superintendent in writing? No; we let them know it as they went along.
337. Then how could you locate any particular section of land. The superintendent would know that for a certain section a certain price was fixed, and how could he locate that particular section? By his own plan; his own sketch plan would be sufficient.
338. Could a man who had no practical knowledge understand the prices to be paid for these sections? If we marked them on the plan at the time.
339. Some of these men, not being surveyors, could not make a correct plan? A sketch plan would be sufficient.
340. How many were formed into parties for a section? Each party was formed into a gang of eight, and the requisite number of tools was handed to each of those eight.
341. Who was responsible for the tools? The head of the gang; one whom the men would recognize as a ganger.

- Mr. D. Houston. 342. What was the system adopted with regard to the tools? The superintendent was responsible for them in each district.
- 11 Mar., 1889. 343. What was the nature of his responsibility? Seeing that the tools were repaired, and that a proper record was kept of them.
344. Is there anything to show what tools there were? The vouchers will show every tool in the service.
345. And all the tools used by each gang were returnable to the head office or the superintendent? The superintendent was supposed to be responsible for the return of them. I know, however, that lots were lost in clearing and burning.
346. Do you know of your own knowledge that a proper system of supervision was kept to check the men who went for all these tools? I know that there was in one particular instance, for I insisted upon a record being kept of the Waterfall tools when they came in with a request for more.
347. Then we may infer from that that a proper record was not kept? I do not think that there was a proper record or supervision kept. Men were constantly leaving, and we could not send the police after them. Any man might leave, taking his tools with him, and he did not come back with the tools.
348. How did you pay the gangs—every week? Every pay was fortnightly, and the men were paid according to the measurements sent in by the superintendent.
349. Was it necessary that each of the Board should sign cheques for the money to pay the gangs? No; it was arranged from the first with the Treasury that the signatures of the Chairman and the secretary were to be the signatures of the Board,—that is Mr. Davies and Mr. Hinchcliffe.
350. Would the signature of another member of the Board, with the secretary countersigning it, be sufficient? No; it was distinctly understood by the Treasury that Mr. Davies and the secretary were to be responsible for the signature of the Board.
351. I think you said in one place in your evidence before the Select Committee that, as a matter of fact, you and Mr. Wells had to go and look at these works as they were going on, to see that they were practicable and necessary? Mr. Davies used to send me a note when my services were necessary in a particular place, and I so arranged my own work as to be able to go.
352. Can you state as a fact that you gave the same attention to looking after these works that you would think necessary for works under your own control? No; because I think the works under my control require more attention fifty times than the works the unemployed were engaged upon. The works that the unemployed were doing could constantly be seen; but the work I am doing is covered up and never seen again. I have given full attention to matters connected with the Board that came under my supervision.
353. Do you think you gave as much attention as you ought to have done to this work? I do.
354. In the roads you were laying out at Hornsby, was there any work done upon any road which did not lead to Government land? No; there were some partly between the private lands of Burns, Withers, and Smith and the Government lands.
355. Is it possible or was it possible to get any frontages to the Government land without having made these roads? No; I do not see how you could.
356. There is a difference between the ballasting of these roads and ordinary roads? Yes; the one costs 12s. and the other 3s.
357. What traffic would there be on these roads? I could not say.
358. I am not asking you to tell me exactly? It would be a small traffic. When the railway is opened it will be heavy, but at present it is light.
359. Would spring-carts be the principal traffic that would go over it? Yes.
360. Is it your experience in road-making that ballasting is necessary where there is a sandstone formation and the traffic is light? It is not the traffic that damages the roads, it is the rain that does it. If the road is ballasted the water does not affect it.
361. Are there any drains? There are water-tables right through. There is a drain above, but you cannot, as a rule, drain off the water. The water-tables do all the duty.
362. What is Mr. M'Pherson's christian name? I cannot tell you in full; it is A. M'Pherson.
363. Is he a surveyor in the Lands Department? He is not now, but he was. They speak of him there as a very clever fellow and attentive to his duties.
364. You mentioned to the President some time ago about requisitions? That should be petitions—petitions from parties to the Colonial Secretary's Department.
365. In answer to question 496, before the Select Committee, did you mean the word requisition or petition? Petition is the word that ought to have been used. Requisition has the same meaning in one way; it was an application for roads to be made.
366. Can you tell the Commission what became of those petitions after they received the sanction of the Colonial Secretary? I mentioned that these petitions were forwarded to the Board for report, and by the Board sent to our officers for report. If the report was favourable the work was recommended to the Colonial Secretary, and the Colonial Secretary approved of it. The petitions then came back to us and the works were initiated by the full Board. The petitions were then left in the custody of the Casual Labour Board. Some of them, I think, were returned, but a great many were left with the Board.
367. Do you mean that the petitions were either returned or kept by the Board? Yes.
368. Had you the same system as they have got in all Government offices of minuting the letters sent away? Yes, certainly.
369. So that if the Commission wish to inspect the books they would see all the petitions that were returned, what were not returned, and what became of them? Yes; the information will be all there. I found one or two of the petitions were not there. I could not specify which, but they were on record. I know there are some of the papers about the Hornsby roads which I have looked up, but they cannot be traced.
370. Does it not strike you as being strange that there seems to be no authorization so far as appears now for these roads at Hornsby, whereas in all other parts it seemed to be considered necessary to obtain the sanction in writing of the Minister? In all other cases the works were actually initiated under our control. In the Hornsby case they were initiated by our predecessors, and merely continued by us.
371. Are we to understand that you carried out previously authorized roads? No; as mentioned by Mr. Gordon, he recommended those works.

372. Pardon me, that evidence was not given by Mr. Gordon ;—was Mr. Gordon on the ground all that time? He had charge.
373. I will put it in another way to you ;—did you suppose that Mr. Gordon had authority for these roads? No; we never supposed there was an authority. We took his recommendation.
374. Without considering whether he had a higher authority? He was responsible to Mr. Deering for his action.
375. Do you suppose that Mr. Deering had any authority? I suppose that Mr. Deering, being the district surveyor, was perfectly conversant with these roads.
376. I want to know whether you suppose he had authority? I never questioned whether he had authority.
377. That being the case, why did you take more pains to have authority for all other works? Because in one case we were only carrying out works that were already commenced; in the other, works that we initiated.
378. Do you hold that Mr. Gordon and Mr. Deering are actually responsible for the roads being made? No; I don't say that positively. I say they were Mr. Gordon's recommendations to us. We asked him about these roads.
379. Somebody must take the responsibility for making these roads ;—you, as a Casual Labour Board, so far as I understand, give as your reason that they were in course of construction when you came into existence? Men were working on them.
380. And, therefore, in your opinion your predecessors are the people who were responsible for them? No; these roads were recommended by Mr. Gordon after we took office. I saw the roads—went on the grounds with Mr. Gordon. We saw them necessary, and went on with them.
381. Then there was no absolute authority for these roads? No absolute authority. They were necessary to give access to the Government land. That was the light that we looked at them in.
382. What I want to get at is—was there any authority for making of these roads? There was that paper that is missing ;—I fancy there was Mr. Deering's name on that paper.
383. But it cannot be produced? No.
384. *President.*] Have you any recollection of the contents of this missing document? No; but I think the records will show that it referred to these roads.
385. Did it refer to all these roads? I do not say all these roads, but it referred to these roads.
386. Your recollection is, that there is a document signed by Mr. Deering? There is a document, I think, signed by Mr. Deering. It cannot be found, but that paper was in our office.
387. I omitted to ask you for particulars of your record of the visits you paid to the Board ;—will you kindly give them? There are other visits besides these, but these are the actual records made :—National Park, 7 visits; Waterfall, 3; Gordon, 5; Field of Mars, 1; Rookwood, 7; Beecroft, 1; Prince Alfred Hospital, 1; Hornsby, 6; Illawarra Road, 1; Narrabeen, 39; Carlingford, 1; Dobroyd, 1; French's Forest, 17; Tempe, 18; Johnson's Creek, 5; Pennant Hills Quarry, 1; Cook Park, 16; Cook's River, 32 visits. To the offices I made 161 direct visits. For instance, every time I went to Tempe I went to the office. These come to about 250 visits altogether. That is only speaking up to the 12th May.
388. Can you tell us the total amount of money that the Board had placed at their disposal? I think it was £220,000; I could not tell exactly.
389. Can you tell us the amount annually voted to the Roads Department? No, I cannot; but it is over half a million.
390. Have you any papers or records in your possession belonging to the Board? I never touched a single paper. I have not taken a single paper out of the Casual Labour Board Office.
391. Did you ascertain the name of the engineer that made the road called the "shoot"? Mr. Burrowes.
392. Do you produce a tracing showing the roads cleared, formed, and ballasted at Hornsby? Yes. I produce a plan showing the Government land sold near the Hornsby station, the whole of the roads made by the unemployed, and the price of the land sold, with the names. That is not an official plan; it belongs to me. [*Plan put in and marked A 2.*]

TUESDAY, 12 MARCH, 1889.

Present:—

A. J. CAPE, Esq., M.A., PRESIDENT.

F. A. FRANKLIN, Esq., C.E., J.P., | T. F. WALLER, Esq., J.P.

Critchett Walker called in, sworn, and examined:—

393. *President.*] What position do you occupy in the Public Service? Principal Under Secretary.
394. How long have you held that position? Ten years.
395. Do you know when the Casual Labour Board was appointed? It was some time in May; I think on the 2nd May, 1887.
396. By whom was it appointed? By the Colonial Secretary.
397. Who was the Colonial Secretary? Sir Henry Parkes.
398. Will you tell us who the Board consisted of? The Hon. John Davies, Mr. Wells, and Mr. Houison.
399. Have you any record of the appointment in your office that you can produce? No; because the minute was sent in the original to Mr. Davies; but I have a copy of it.
400. Will you allow me to see the copy? This is the copy.
401. Do you know whether an original was supplied to each of the members of the Board? This was sent to the Chairman.
402. But you don't know whether a duplicate or copy was sent to each of the members? No; I don't suppose there was.
403. Can you tell us anything of the circumstances that led up to the appointment of the Board? No; I cannot.
404. I mean generally the circumstances that necessitated the appointment of the Board to manage this department? No; I cannot give you any information upon it, beyond the fact that Sir Henry Parkes, the

Mr.
D. Houison.

Mr.
C. Walker.
12 Mar., 1889.

Mr.
C. Walker.
12 Mar., 1889.

the Colonial Secretary, appointed the Board. I presume it was thought advisable by him that something should be done in order that there might be some place where the unemployed could be dealt with—a kind of bureau.

405. Had your department been dealing with the unemployed before that time? Yes; for years.

406. Did they occasion you much work? A great deal—a great deal of work and a great deal of trouble.

407. I suppose you had frequent personal applications? Not only that, but deputation after deputation—a dirty rabble, who were first relieved by soup tickets and the establishment of a kitchen at Hyde Park barracks, and who gave us a deal of trouble.

408. Was it because the work and annoyance were so great in connection with them that it was thought desirable that a separate department should be created? I could not tell you.

409. Under what Ministerial head was the Casual Labour Board? Under the Colonial Secretary's Department.

410. Can you tell the Commission anything of the work that the unemployed were engaged in before the appointment of this Board? Well, they were in various parts; I cannot enumerate all of them.

411. Can you speak of the class of work in any particular district? Oh, clearing and stumping. That was the principal work.

412. Had they been engaged on any productive work? Well, I cannot say that. The work would be productive hereafter, in the shape of the land they cleared; but I cannot say that it would be immediately productive.

413. Were there any particular instructions or regulations issued for the guidance of the Board that you are aware of? Nothing more than the document which appointed them.

414. Are you aware whether any instructions were issued that work should not be initiated without reference to your department? I do not know of any such instructions.

415. As a matter of practice, was it required that proposed works should not be initiated without reference to your department? Not that I know of.

416. Can you give us any information as to the system adopted as regards the initiation of work? No; the whole thing was in the hands of the Board.

417. Do you think the Board had full power to act without reference to your department? I think so. I think they had full power to act. They would come to me from time to time, and I might tell them where to put the men; when they put the men to National Park, for instance, where there was a kind of depôt formed, where they began clearing.

418. Do you know who had charge of the unemployed before the Board was appointed? Well, they were under the charge of different people. They were in batches. Nobody had exclusive charge of them, but they were under our department. Nominally we had charge of them. There was a kind of mixed authority.

419. When recommendations were sent in by the Board, did you take action solely on their recommendations, or did you make independent inquiry? As a rule we used to act on the recommendations of the Board.

420. Did these recommendations come in the shape of written papers and reports, or in what form? Well, I cannot say; sometimes they would come verbally, and sometimes in the shape of a letter.

421. Would the Board send reports in? Yes. They would send what would be termed a report in the shape of a letter with certain things that they wanted to be done, and it would be approved. Sometimes it would simply be a verbal statement: "I think so-and-so wants clearing, and you had better shift the men over there"; and the authority was given. I am speaking now of the Crown lands.

422. You say these requests came frequently in the shape of a verbal application? Yes, as regards different parts of the National Park.

423. Your evidence on this point relates simply to Crown lands? Purely to Crown lands. I know nothing of private property.

424. Do you know of any work that was done on land that did not belong to the Crown by the unemployed? No; not officially.

425. What became of the papers that were from time to time submitted by the Board to the department? They got all of them back again.

426. You gave them back to the Board? Yes.

427. Then we ought to find amongst the records of the Board all the papers that have been submitted to you? Everything that has been submitted to me has gone back again.

428. You have nothing in your department? No; nothing at all.

429. We are told that expensive works have been initiated, and in some respects completed on the Holt-Sutherland Estate and at Hornsby;—can you say whether these works came before your department in any way for authority or otherwise? The Hornsby roads I know nothing whatever about; they never came before our department. The Holt-Sutherland roads were brought to us on the representation of a number of Members of Parliament, brought in by the chairman of the Board, Mr. Davies, and approved by the Colonial Secretary. As regards one of the roads, it was pointed out to me, I think by Sir John Robertson and Mr. Want, that it was a private road, and I immediately stopped the work. On the full assurance being given that it was a public road it was afterwards gone on with.

429½. Was that the Malvern Road? The Malvern Road was the one.

430. Did Sir John Robertson call upon you on that occasion? I cannot say that. He sent word to me and came in afterwards. I cannot say that he came in at the time.

431. Do you recollect what the purport of his statement was? No, I cannot tell you. I remember he said they were working on a private road as he thought.

432. Did his remonstrance relate to that particular road? Yes; that was all. He might have meant others; but I took it that he meant that one road, and I stopped it. I know I instructed all the works to be stopped until Sir Henry Parkes, who was away in Adelaide, returned. Sir Henry Parkes was in Adelaide attending the Exhibition. Mr. Jamieson and Mr. Murphy called and were very angry with me because I stopped the works. They said they were sure Sir Henry Parkes would not have done so had he been here. I said, "That shows how little you know about it," and I showed them a telegram I had received from Sir Henry Parkes approving of my action in stopping the works until he returned.

433. You were examined before the Select Committee on the 15th January? Yes.

434. Is this your evidence? Yes.

Evidence before Select Committee.

Mr.
C. Walker.
12 Mar., 1889.

363. *Chairman.*] You are the Principal Under Secretary? Yes.
364. Have any recommendations come through your office in regard to the work done upon roads by the unemployed under the Casual Labour Board? Yes; but not in respect of every road.
365. But in regard to such roads as are of importance, I suppose you would say? No, I cannot say that. The roads upon the Holt-Sutherland Estate have come through the Department—in fact, roads in various parts of the Colony.
366. Does that apply to any of the Hornsby roads? No.
367. None of them? Not that I am aware of.
368. In the case of the Holt-Sutherland Estate, what was the routine through which the roads had to pass in your department? The Board would recommend the roads, and they would come to me. I would submit them to the Colonial Secretary, believing them to be public roads.
369. Were any representations of any kind made to you as to the nature of the roads, at any personal interview, or in any other manner, by the chairman of the Casual Labour Board? No; nothing beyond the circumstance of the roads being public roads, and the work being necessary for the public convenience.
370. It was stated to you by the chairman of the Board, either by letter or by personal interview, that the roads were for the public convenience? As a rule; but in one or two instances, I think it is stated in the papers laid before Parliament, that the roads were works of public necessity.
371. Did you ever at any time have any suspicion as to the public necessity for any of the roads so submitted? No; certainly not. I took it as a matter of course that they were to be public roads, especially when a number of Members of Parliament signed the requisition and urged the matter.
372. Did you ever object to approve of any of them? Yes. On one occasion I heard—I cannot tell you from memory when—that the road was a private road. I immediately stopped the work and telegraphed to the Colonial Secretary, who approved of my action until he returned. On his return, upon proper representations being made, it was discovered that the road in question was not a private road—that it was a public road. It was, to the best of my recollection, the Malvern Road, on the Holt-Sutherland Estate.
373. That is the only road about the approval for which you hesitated? Yes.
374. You objected to it upon your own authority? Upon my own authority I stopped it, and two members of the Holt-Sutherland Company came to me. I cannot remember now who they were, but I think Mr. Murphy was one and that Mr. Jamieson was another. They were angry that I had stopped the road. I have not yet obtained a copy of the telegram, but I telegraphed immediately to Sir Henry Parkes, and I had received a reply when they came. Unfortunately I have since destroyed the telegram but I have tried to get a copy of it, and I daresay I shall succeed in the course of a day or two. I remember the words as clearly as possible: "Approve of your action *re* Holt-Sutherland Roads."
375. Is that the only instance in which you disapproved? That was the only instance in which I had cause to disapprove, as far as my knowledge would permit.
376. In no instance had you any knowledge? None whatever.
377. That is beyond the representations of the Board? Just so.
378. In each instance it was represented to you that the roads sent for approval were actually public roads or were roads of such a nature as to be of public convenience? Yes. The papers will show that, I think.
379. Had the Colonial Secretary, from your knowledge, any means of ascertaining the character of any of these roads? I do not think so; that is no more than I had.
380. Did he do more than act upon the representation which you conveyed to him from the Casual Labour Board? No more than that.
381. You acted upon the *bonâ fides* of the representations made to you? Yes; by the Board and other persons concerned in the roads. What I mean by that is, Members of Parliament and those who came upon deputations urging the making of these roads.
382. You refer, I suppose, to Members of Parliament signing petitions for roads. Can you recollect any instance in which a Member of Parliament signed for what might be termed a private road? I do not think I can. The papers will show you the names.
383. Have you seen the Progress Report of this Committee? Yes.
384. The signatures of the Members of Parliament, I suppose, would be in reference to roads of which the Committee approve? Yes; I imagine so.
385. And not in reference to other roads? No.
386. Perhaps you have in your mind the clearing of the railway track to the noxious trades sites? Yes. That was approved of, I think, upon the representation of some seventy-eight Members.
387. *Mr. Carruthers.*] I suppose that in your private capacity you know that locality pretty well? I know it now but I did not know it when the roads were being made.
388. You have frequently been in the Park? Since the roads were made, but not before.
389. I suppose you have seen the plan which has been placed before the Committee? Yes.
390. You know the extent of the settlement at Como? Yes.
391. Are there many people living there? I should not say very many.
392. Are there more than fifty people there? That would be as many as there are, I should think. I doubt if there are fifty, but there may be.
393. Is there any settlement at Sutherland? Yes.
394. How many people are living there? I should say there are over 100 there.
395. There are a couple of hotels there? I believe so. I should say there were between 100 and 150 people there.
396. You know Sylvania, where the punt crosses? Yes.

397.

Mr.
C: Walker.
12 Mar., 1889.

397. Are there many people living there? About as many people as at Como, I should think.
398. You think there are fifty people there? I should say there would be about fifty there and at Ewey Bay, because I suppose you would take in Mr. Frederick Want's place.
399. I suppose you know the locality from Richardson's place up to Davis' and Burraneer Bay;—are there fifty people in that locality? I do not think there are. I do not know the locality very well. I have not been down at Mr. Gannon's place. I have been in a boat in the Bay, but that is all.
400. You say that you have seen the Progress Report submitted by the Committee? Yes.
401. Did you observe the statement in the Report that there were only fifty families living in the vicinity of these roads? There are a great many more than that.
402. Are you aware that the main Illawarra Road is a road which has been maintained by the Government for some time? Yes.
403. For how many years can you remember that road being maintained by the Government? I think I remember it for something like fifteen or sixteen years, if not more. I cannot tell you the exact time but I have always known it as a public road.
404. Maintained by the Government? Yes.
405. You know what is called the Port Hacking Road? I have never been over it, but I know where it turns off from the other road. It may have been a road for years, but it is only newly made. It may have been on the map for a number of years, laid out as a permanent road, but I do not think it has been made or used for more than (say) three or four years—perhaps a little more.
406. *Mr. McMillan.*] When this Board was appointed, consisting of two public officers and Mr. Davies, your department looked upon it, not merely as an Executive carrying out this work, but also as affording some proof of the *bonâ-fides* of all the work done? Certainly.
407. So that when their reports came before the Colonial Secretary's Department, with the initials of these gentlemen appended, it was taken for granted in the main that full inquiry had been made, and that everything was perfectly correct? Certainly.
408. I take it that it would be absolutely impossible for a department like yours, with such multifarious duties, to in any way go into detail? Quite so.
409. Especially in a case where a special Board has been provided to take the responsibility, more or less;—it was understood that you would have to carry out their recommendations? Yes.
410. *Mr. O'Sullivan.*] Referring to the statement in the Progress Report, that there are only about fifty families resident in the vicinity of these roads, are you aware that that statement was made by Mr. Murphy, the Manager of the Holt-Sutherland Estate? No; I was not aware of that. I have not read the whole of the evidence.
411. Who would be more likely to have the best knowledge of this fact—you yourself, or Mr. Murphy, the manager of the estate? I think that I know just as much about it as Mr. Murphy, although he is the manager of the estate.
412. Considering that Mr. Murphy is the gentleman who got all the petitions signed for these roads, do you not think that he will be in a better position than you are to give an opinion as to the number of residents? I do not think I can answer that question.
413. *Chairman.*] We do not want to get at the population surrounding the roads which are approved of. It is admitted that some of the main roads—the Sylvania Road, for instance—would serve a large population, but there are other roads—subsidiary roads, running north and south;—what about the population in their vicinity? I saw them for the first time on the plan. I certainly was not aware that they were the roads alluded to in the recommendations.
414. Would you say that there were over fifty families served by these subsidiary roads? I should say there certainly were, as far as my memory serves me.
415. You say that there are over fifty families? I am certain there are.
416. Are you aware if any audit has been made of the accounts of the Casual Labour Board? I understand from the Auditor-General that a number of accounts have been audited,—in fact they are going through them now.
417. Since this inquiry started? No; I think they have always been audited from the commencement.
418. But you say that they are going through them now? Not more than formerly, as I understand.
419. There has been no general audit? There has been no special audit on account of the sitting of this Committee.
420. *Mr. O'Sullivan.*] What I want to arrive at is this: I do not want to know about the audit of detail payments;—has there been a general audit of the accounts of the Casual Labour Board? I do not quite understand you.
421. The Board has been in existence for twenty-two months;—has there been an audit of the accounts of the Board—that is, the whole of the accounts, for any specific time,—that is to say, a year or six months? I cannot say; the matter would not come through me.
422. *Mr. Burns.*] All payments in connection with the unemployed have been made upon the order of the Department of the Colonial Secretary? Yes; that is to say, the Board would apply to us for a certain advance, ours being the office under which it is supervised. We approve, as a matter of form, and send the warrant back to the Treasury for payment.
423. Are you aware that these accounts of the Casual Labour Board have been regularly checked at the Treasury from time to time, and that a second advance would hardly be made unless the first account had been checked? That I believe is correct.
424. Are you aware also that the accounts, in the regular course, find their way into the hands of the Auditor-General? Yes.
425. There has been no special audit? No.
426. *Chairman.*] What is the form gone through in asking you for an advance? It is merely a formal request for a further advance of such and such an amount, as occasion may require. The last advance applied for I think was for about £6,000. 427.

427. *Mr. Burns.*] Are you aware that there is an officer at the Treasury to examine all the accounts of this kind? Yes.

428. The accounts must pass through his hands? Yes.

429. *Mr. Carruthers.*] Do you remember when the unemployed were first banded together under the administration of Mr. G. F. Wise? I think, if my memory serves me right, that would be over three years ago.

430. Do you remember at that period what course was adopted for their relief? I think they were relieved principally by soup tickets.

431. And free feeding? Yes; they had orders upon Barnett's and some other eating-house. There was afterwards a special kitchen got up for them at the Hyde Park Barracks, where they used to be fed in grand style. They used afterwards to lie down in the park and enjoy their smoke.

432. Do you remember Mr. Wise complaining to the Government that some of these men were earning at the work upon which they were engaged as much as from 9s. to 15s. per day? Yes; I heard it, but I do not think it was correct.

433. At all events you remember Mr. Wise writing a letter to the Department? I could not say whether it was a letter or a memorandum, but I know there was some communication of the kind. I do not think the statement was correct—that is, it was not a fair way of putting it. Some of the men, it is true, used to work eighteen hours a day, and make sometimes 15s.; but you could not say that that was what they were making a day. Some of them would go to work grubbing trees by moonlight. They would work from a very early hour in the morning until late at night. These were a few honest hard working men who had got in among the unemployed.

434. Some of them at all events were doing very well? I should say that the greatest average from an ordinary day's work would be from 7s. to 8s.—anything beyond that would be overtime.

435. Are you not aware that a lot of the men were working overtime, and that it became a matter of current report that many of them were making these excessive wages? I know that that report got about; but the question is, whether it was true. I do not think it was.

436. Do you think it had any effect in attracting men to the body of the unemployed? Certainly it did. One object of spreading the report was to make more men throw up their billets. A lot of them I know did so.

437. How many of these feeding tickets as a rule were issued every day? A large number. It would not be safe for me to say how many.

438. Do you think the number went up to 1,000? I really could not say. If I said a 1,000, I might be making a mistake. I know that the number was very large.

439. Was any contract entered into with any person to supply these meals at a certain rate? Yes, with Mr. Kidman.

440. What was the rate? I do not know.

441. Was it 6d.? There were several people. I know that Mr. Barnett in Pitt-street did it for 6d., and there was another man higher up who also did it for 6d. The men used to come round twice and get several tickets; then they would dispose of them without going near the place at all. They would sell them to other men for 3d., and buy beer with the proceeds.

442. For how many months or weeks was this sort of thing going on? It would be hard for me to say; but I should think that it would be at least two or three months.

443. Was any work done in return for these tickets? No.

444. They were an absolute drag upon the State? Yes; the money was thrown away, so to speak.

445. I believe it was principally upon your recommendation that the men were sent to a depôt at the National Park? Yes.

446. From that time to this there has been no recurrence of the free feeding? No.

447. Has the work been rendered less attractive by lower wages? Yes.

448. And the anomalies to which I have referred have been removed? Yes; to a large extent.

449. Has any report been made, showing that the unemployed have diminished in numbers? When they went out to the National Park, I think there was something like 2,500 or 3,000. They gradually increased until they reached about 5,500.

450. How long ago is it since the highest point was reached? About twelve months. When they found that it was not easy work they began to clear off. Now I believe there are not 1,000 left.

451. *Mr. O'Sullivan.*] When the men were enjoying free feeds, and living in this sumptuous easy style, was it not while they were waiting for Crown land work to be prepared for them? That certainly might be said of them; but I do not know that there was any work for them to do.

452. *Chairman.*] Had you not great difficulty at first in the Colonial Secretary's Office in determining how you should dispose of the men? Yes.

453. It was a new difficulty springing up then? It was very great indeed.

454. It was not until you had time to mature your plans that anything could be done;—meanwhile you could not do otherwise than feed them in this way? Certainly not. I wanted for a long while to have them shunted out to a depôt away from the stump orations, which attracted a large number of men. They would listen to the speeches, and then they would telegraph over to Adelaide, "There is a good champion here," and so on.

End of evidence before Select Committee.

435. *President resuming.*] Had you any opportunity of revising it? I had afterwards; after it was laid on the Table of the House.

436. Having now heard it read over; is it correct in every particular? In substance it is correct.

437. You say in your answer to question 398 before the Select Committee, as now read to you, the words, "there and at Ewey Bay" have been left out? Yes; but, as printed, it is correct. 438,

Mr.
C. Walker.
12 Mar., 1889.

438. With reference to your answer to question 412 before the Select Committee, you made some remark just now that since giving the evidence about the number of residents on the Holt-Sutherland Estate you had made inquiry? Since giving that evidence I made inquiry through the police, and I find that there were more than twenty-nine families—about 150 people—on what is called the Holt-Sutherland Estate.
439. You said something when your evidence was being read over just now with reference to your answers before the Select Committee to questions 416 to 419, respecting the auditing of the accounts? I do not think that the Chairman of the Select Committee knew what I meant when I said that I understood from the Auditor-General that a number of accounts had been audited, and that they were going on now. From the question, "But you say you are going through them now," to which I answered "Not more than formerly." I do not think that the chairman understood the fact that there were a number of these accounts, and that the audit was still going on. The evidence was not submitted me for revision, in accordance with the usual practice. I got it afterwards and revised it, but it appeared in the *Herald* and *Daily Telegraph* as read in the original.
440. With these minor exceptions, is your evidence correct? It is true in every particular.
441. Did the chairman, or any member of the Casual Labour Board, ever wait upon you personally to urge the consideration of any matters before the department—to urge any of the Board's recommendations as to work? I cannot say that he did not in a sense urge them on. Sometimes he would bring a recommendation and ask if it could be carried out.
442. Was that generally the Chairman? Generally the Chairman.
443. Do you recollect whether Mr. Wells or Mr. Houson asked you about any? They sometimes called. Mr. Wells may have done so, Mr. Houson never did.
444. Can you recall any case where they were particularly urgent to get any recommendation confirmed? No; I do not know that any one of them was urgent about any matter. It would be in the ordinary run of events. It would be something like this. Supposing they were clearing out one patch in the National Park, then there was another bit up there that ought to be done.
445. You are speaking now of the time they were at National Park? I am speaking now of the whole time they were a Casual Labour Board, not merely of the National Park.
446. Do you remember at any time a member of the Board coming to urge any private work? No. I was never interviewed upon any occasion, except as regards a public road or public land.
447. Everything related to a public road or to public land? Everything that was represented to me was a public matter. The Hornsby roads never came through me at all.
448. Are you quite clear on that? Quite clear.
449. Did any other persons—Members of Parliament or anybody else—see you officially on any of these works? No; I do not remember.
450. Do you recollect whether any deputation waited upon you? No; never that I know of.
451. Are you aware of any personal application being made to the Colonial Secretary? No.
452. In the ordinary course, would you hear of them? I think I should hear of them if they came in about these roads.
453. Did this Casual Labour Board from time to time make any reports as to the working of the department generally, and the progress they were making? I do not think that there were any that you would term regular progress reports, or reports of any kind made—nothing in the shape of reporting upon the works. We used to get communications occasionally relating to different matters, but I would hardly call them reports.
454. Had you any reports as to the general working of the Board—as to the carrying out of their duties? Not while they were in progress with the work.
455. Did the roads on the Holt-Sutherland Estate come before your department—the making of these roads? Yes; they came under our department, and they received the sanction of the Colonial Secretary—that is, the public roads did.
456. I am speaking of the roads on the Holt-Sutherland Estate? Yes; they were approved by Sir Henry Parkes.
457. In every case was it represented to you that they were public roads? Yes; in every case, except in the case I have mentioned.
458. You say the recommendations were given effect to by the Colonial Secretary? They were only just approved—approved and initialled H.P.
459. Wherever we see any papers without that approval or those initials, are we safe in assuming that they have not been submitted to the Colonial Secretary? Well, I do not know that; there might have been a verbal authority.
460. Did he give verbal authority? Yes.
461. To you? No; I cannot say to me.
462. To the Chairman of the Board? Yes; he used to come out to me and say such and such a thing was being done.
463. That amounted to a sufficient approval when the Chairman got a verbal authority like that? Yes.
464. Was it probable that the Colonial Secretary would give a verbal authority without reporting to you in any way? I do not think so. For instance he would say take this Mr. Walker. I approve of it. Then I would act.
465. That was the usual official mode? Not always; the usual official mode was to approve of it, and initial it.
466. Was that the usual mode your department adopted in sanctioning work? No; the usual mode was a written approval, but he might adopt the other course when he was busy.
467. Were these verbal authorities exceptional? Quite exceptional. They would simply be carried out to me by Mr. Davies, or Mr. Wells in the absence of Mr. Davies.
468. Had you any petitions and letters sent to you direct asking the unemployed labour to be put on any properties? No, not on any properties, certainly not. But from the municipalities we had requisitions.
469. Did these petitions from the Holt-Sutherland and Liverpool districts and various other districts mentioned in the printed papers sent to us from your department go direct to you or to the Casual Labour Board? They would go to the Board.
470. What was the practice as to any requisitions that came direct to you. Did you send them down to the Board? Yes; immediately.
471. Had the Board full control? Yes.

Mr.
C. Walker.
12 Mar., 1889.

472. On the occasion when you took upon yourself to stop some work, I think you said that was owing to some representations made by Sir John Robertson? Yes.
473. Do you recollect whether anyone was with him when he called in? He sent a message and came in afterwards. Mr. Fred. Want was with him when he came in. The first time he sent in; the second time he came in himself with Mr. Fred. Want.
474. In your evidence before the Select Committee you say the remonstrance was confined to some particular road? Yes; not to the whole of the roads.
475. Do you recollect his saying anything about the roads being of an unusual width? No.
476. Can you tell us approximately what amount of money was expended on the Holt-Sutherland Estate? No; I do not think it was very large. I could only give you a surmise that it was £6,000 or £7,000.
477. Where could we get that information. Do you think we could get it at the Treasury? I do; or you could get it out of the papers from the Board. The Treasury, however, would be the quickest way.
478. How was it that Mr. Murphy and Mr. Jamieson were so angry at your stopping the work? I cannot say.
479. Who is Mr. Murphy? I cannot say, beyond that he is the manager of the Holt-Sutherland Estate.
480. Did you ever see him before? Yes; I had met him before.
481. Do you know if he is a shareholder in the company? I do not.
482. Do you know whether Mr. Jamieson has any interest in the company? I know he belongs to Prince, Hogg, and Company, but I do not know whether he has got any shares in the Holt-Sutherland Estate.
483. How did they show their anger? Only in the way that I told you; they said that they were quite sure Sir Henry Parkes would not have approved of the stoppage of the works. They said they were quite sure the road was a public one. I showed them the telegram, which was in effect, "Approve of your action *re* Holt-Sutherland Estate." I have since obtained a copy of the telegram from the Electric Telegraph Department, and it confirms my evidence before the Select Committee.
484. How did you stop the work, by letter or by telegram? Verbally; I sent word to Mr. Davies, and he took the men off at once.
485. Do you know whether Mr. Jamieson had any particular reason for taking such an interest in the matter? No; I do not know what his object was.
486. Had you seen him in reference to the Holt-Sutherland roads before? No.
487. Do you know whether Sir Henry Parkes had? No.
488. With reference to the payments to the Board, were all the accounts and warrants for payment sent through your department? No. They would apply to the Treasury, and then it would come over for the formal approval of the Colonial Secretary.
489. Do you think any moneys could be obtained by the Board without reference to you? They could not get money except from the Treasury. They would apply to the Treasury, and they must apply to us either officially or non-officially. In the majority of cases it used to come to us, and we used to forward it to the Board.
490. Can you tell us when the services of the Casual Labour Board were dispensed with, and how it was done? Well, it was done in a rather peremptory way when this other Board was appointed. Sir Henry Parkes virtually terminated the Board on the 31st of this month; but in the interim Mr. Dibbs stopped it at once. It was terminated in this letter of mine, dated 29th December, 1888. Since then Mr. Dibbs appointed another Board, telling the Casual Labour Board to hand over to them all papers and books.
491. Where is the original of that letter of the 29th December? It is, I think, in our own office.
492. Can you, looking at this copy letter, say whether it is correct? Yes; I know it is correct. [*Document put in and marked B.*]
493. Document marked B is a copy of the letter of the 29th December, 1888, the other copy purporting to be a letter from Mr. Davies, of the 31st December, is also in your department? Yes.
494. That is a copy too? Yes.
495. Following on that Mr. Dibbs terminated the services of the Board by the appointment of other gentlemen? Yes.
496. Who did he appoint? He appointed Mr. Miles, public accountant, and Mr. Mason, formerly an engineer of the Railway Department.
497. Is there any document evidencing the appointment that you can produce? I can produce the written appointment of the Board.
498. Do you produce a minute by Mr. G. R. Dibbs, dated 23rd January, recommending that the services of the Casual Labour Board be terminated forthwith? Yes.
499. And that Messrs. Miles and Mason be appointed to wind up the business? Yes. [*Document put in and marked B1.*]
500. Do you produce letters of 24th and 25th January last from Mr. John Davies to the Principal Under Secretary, and the reply thereto; a letter from Messrs. Miles and Mason, dated 31st January, 1889, to the Principal Under Secretary? Yes. [*Documents put in and marked B3, B4, and B6.*]
501. Do you produce a copy of a letter of the 25th January, 1889, to the Hon. John Davies, informing him that the Government had decided to forthwith terminate the services of the Board? I do. [*Document put in and marked B5.*]
502. Do you also produce a copy of a letter of the 24th January, to the Principal Under Secretary, and another letter from Mr. Davies to the Principal Under Secretary, enclosing a newspaper paragraph headed "Casual Labour Board"? Yes. [*Document put in and marked B7.*]
503. Do you produce a minute of Mr. Lackey's? Yes. [*Document put in and marked B2.*]
504. You produce a letter of Mr. John Davies of the 31st May, 1887, to Mr. Hinchcliffe? [*Document put in and marked B8.*]
505. Is this a minute by Sir Henry Parkes as to Mr. Hinchcliffe's salary, undated? Yes. [*Document put in and marked B9.*]
506. And a minute of Mr. G. R. Dibbs' of 6th February, 1889? Yes. [*Document put in and marked B10.*]
507. Have you any other papers? No; I have no others bearing on the case.
508. I suppose you cannot give us any evidence respecting this correspondence which has been put in beyond what the documents say themselves? No.
509. Have you received any report from the Casual Labour Board since its appointment up to the present time, any general report? There are some reports as to the works done by the unemployed in our office.
510. Have you got these now? I have not got them with me; but I could get them. 511.

Mr.
C. Walker.
12 Mar., 1889.

511. Will you let the Secretary to the Commission have them? Yes. I will get my record clerk to look them up.
512. Have you any report from Messrs. Miles and Mason? Yes; there is a report which came in this morning—a progress report.
513. Can you let the Secretary to the Commission have that? Yes; I can let him have that, or a copy of it.
514. *Mr. Franklin.*] I would like to know what immediately led up to the change in the system of the Casual Labour Board? I cannot tell you.
515. Do you know whether it was that the works in the future were to be those of construction instead of simple clearing? There was no definite idea given as to what they intended to do in the future in that respect, so far as I know.
516. Did any contemplated change in the character of the work lead to the necessity for two engineers being appointed on the Board? Not that I know of.
517. When Messrs. Wells and Houson were appointed it was well known that their services were fully employed in their several departments? I think so.
518. Therefore, of the three members, Mr. Davies would be the one most likely to have the greatest leisure and the least experience? I cannot say that. He may be a practical man, although not an engineer. I do not know what his qualifications are.
519. But at the time of the establishment of the Board there were already in the field professional men? That I do not know.
520. There was a professional staff engaged working in the field on the different works at the time the Casual Labour Board was appointed? Mr. Deering was there.
521. Mr. Deering was withdrawn, I think? Mr. Deering was withdrawn from certain operations when this Board was appointed.
522. At the time the Board was appointed, were there professional men in the field to be administered to by the Board—supervised in other words—surveyors and engineers? I cannot say that at all. But I know Mr. Deering was there. He is a professional man. He was superseded immediately the Board took office.
523. Did not Mr. Deering initiate some of the works further than the clearing of the Crown lands—such as at the noxious trades site? No; there is nothing but clearing at Kurnell—and very bad clearing, too.
524. Was it not contemplated to extend the operations of the unemployed to profitable works, such as road construction? I do not think so.
525. As a matter of fact such works did commence immediately the Board was established? Not immediately after. Some of the roads were made some time after the Board was appointed.
526. The Holt-Sutherland roads? Yes.
527. Does that road-work in the aggregate represent a large item in the general expenditure? I do not think so. I think it is a very small item—a very small item in the expenditure, indeed.
528. Well, I suppose returns will be available to show the exact amount that has been spent? I think they can be got from the Treasury. The item must be small, because I think it is only about £15,000, and there has been £250,000 spent.
529. But whatever proportion of the expenditure may have gone towards work and construction, it was necessary that it should be professionally expended under an engineer? I cannot say that.
530. Do you know of any cause—any reason why those gentleman had been appointed on the Board? I cannot tell the reason they were appointed.
531. I suppose there were no complaints that their services were not at all times available to their Chairman? No; I never heard of any complaints of that kind from any one.
532. I suppose you are aware that Mr. Wells and Mr. Houson were for long periods away? I was not aware of that until lately; but I heard that they had not done so much as Mr. Davies did.
533. Were Messrs. Wells and Houson the gentlemen originally nominated to the Board? I think so.
534. You are not aware of any other? No.
535. Had they felt that these duties would have been more than they could have undertaken, would it have been competent for them to have refused? I think that it would certainly have been competent for them to have said that they could not undertake them.
536. Without prejudice to their positions? Yes.
537. Do you think, when they accepted the appointments, they knew anything of the responsibility they would incur, or the time which would be required of them? I do not know.
538. Do you think that at that time they estimated that an expenditure amounting to over £200,000 would come under their supervision? I do not think that they saw the enormity of the work that they accepted.
539. You are not aware of a desire on their part to be relieved of the responsibility? No; I never had representations of that kind made to me.
540. Nor did they express themselves dissatisfied with the construction of the Board? No; I never heard that there was any evidence of a want of accord in working.
541. *Mr. Waller.*] In answer to Question 372, in your evidence before the Select Committee, you stated that you stopped certain work because it was represented to you that it was not a public road? Yes.
542. Have you ascertained since whether that representation was correct or not? I think that is answered a little further on. I took it for granted that the representation was correct, but since then it was discovered that it was a public road, and work was proceeded with.
543. Then did the Colonial Secretary, Sir Henry Parkes, subsequently, as it were, cancel the telegram, and permit this work to be resumed? I do not think so, because I have stated here that, on proper representations being made, the work was proceeded with. I stopped it because there might be danger ahead.
544. But it was resumed after Sir Henry Parkes returned? Yes; I have stated that in my printed evidence.
545. You stated to the President just now that all petitions and requisitions had gone from your office back to the Casual Labour Board. We have it in evidence that the greater proportion of these papers would go from them and remain with you? What kind of papers?
546. Petitions and requisitions, and the like? I do not think so.

Mr.
C. Walker.
12 Mar., 1889.

547. The evidence was that they sent them to you for authority, and they returned them? No; it does not run on all-fours; where would be their authority for undertaking the work?

548. If they are in your office they can be found? If they are in our office I will find them out. The usual course is for them to send the papers in to get the thing done, and we return them again.

549. Would they have gone back to the Board? I think they are with the Board; I do not think that they came back to us.

550. Can you state from your own knowledge where the authority is for doing the work on the Hornsby roads? No; I know nothing about it at all.

551. Was not the work of such a character that it was necessary to obtain authority from some person in your position, or that of the Colonial Secretary? I should think so.

552. You do not think such work could be taken up and carried through without the approbation of some person in authority? No; I do not think the Board would take upon themselves to do that.

553. If there was such authority, could you find it out? I do not think so. If the Board had done the work they certainly would have had some authority, but it did not come from us; I do not remember it coming from us.

554. Would there be any record in your office of sending such an authority to the Board? I do not see how there could; the authority did not come from us at all.

555. If it did not come from you, where could it have come from? I do not know.

556. Could the Treasury give such authority? It would be a very wrong thing for them to do.

557. Could the Department of Lands give such authority? I cannot say, but that also would have been wrong.

558. If there was such authority, you are the proper person it should have emanated from? I think so.

559. And would that authority have been in writing? I think so.

560. Can you state whether any estimate was made by a responsible officer under instructions from your office as to the original value of the Crown lands adjoining the Hornsby Estate, the cost of making these roads, the estimated increase of the value of the lands after the making of the roads, and the estimated expenditure of public money upon them? I do not know that anybody in our office was told to make such a calculation.

561. Do you think it would be a reasonable thing to undertake such an expenditure without such an estimate being made? I think an estimate of the amount might be made, specifying the expenditure of a large sum of money upon roads of that kind.

562. To see whether it was justifiable or not? I think that might be done.

563. If you will kindly turn to Appendix A to the evidence taken before the Select Committee you will notice there that the Premier, Sir Henry Parkes, gives his reasons for the constitution of the Casual Labour Board, and amongst the reasons he gives are the advantages which will be derived from doing certain works, which he there describes, in different parts of the country, which we might call reproductive works, and at the same time find employment for a large number of persons who were stated to be actually starving? Yes.

564. Can you tell us, of your own knowledge, whether any portion of the works indicated by that expression of opinion of his has been carried out. So far as the evidence has gone that has been brought before us, the chief portion of the work and money has been expended on private lands and on unproductive works? I am not aware that it has been spent on private lands.

565. Are you aware that it has been spent on unproductive works? No; I am not aware of that.

566. Are you aware whether the works indicated by the Premier have been carried out? I am not aware, but a large portion of that has been carried out in the conversion of the Lachlan Swamp.

567. Pardon me; that work has not been carried out by the unemployed? The unemployed were put upon it.

568. But the money which was expended by the Casual Labour Board has not been expended on the Lachlan Swamp, or any of these works? That is right enough.

569. Have you any knowledge whether this large sum of money has been expended as foreshadowed by the Premier? No; I have got no knowledge. To a small extent some of it has been done in the making of the tanks at the National Park.

570. But in a general sense, works for irrigation purposes, the making of tanks, the deepening of water-courses, and the like have not been done? Not so far as I know.

571. Can you tell me the amount of money expended by the Casual Labour Board? I think it is something over £200,000. I cannot give the exact amount in evidence.

572. I will draw your attention again to Appendix A to the evidence taken before the Select Committee. Can you tell me if any of the money which has been expended by the Casual Labour Board has been expended in the making of tanks? Only in the way I say in connection with the National Park, and that is in a very small way.

573. In irrigation works? Not that I am aware of.

574. In deepening watercourses? That is a very wide expression. I don't know what you would call deepening watercourses.

575. I suppose they would be creeks and small rivers leading into larger ones? I do not think, in accordance with this statement here, any money has been expended on that. They have expended money in the construction of the North Shore railway.

576. Under the Casual Labour Board? No; I do not think so.

577. Can you tell me if any application was made by any member of the Casual Labour Board for the sanction of such work as is mentioned in said Appendix A? I cannot tell you from memory, but I do not think so.

578. Did you ever see any proposal to provide any of the work that was mentioned there? Not beyond this. This is really an offer from our department, telling them what work was to be done.

578½. Did you give them the means in themselves or instructions to carry out this work? They had the money, but I do not think they applied for authority.

579. Could they have done it on their own authority? I do not think so. I do not think they would have attempted to do so.

579½. Were the Board so constituted that they could do what they liked on their own authority? I do not think so.

580. Then they would of necessity have come to you for instructions? Yes.

581. Was it their duty as a Board to have made application to your office for authority for such works as would involve the expenditure of public money in the interests of the public? I should say so.

Mr.
C. Walker.
12 Mar., 1889.

582. It was clearly their duty to undertake such works as would be for the benefit of the Colony at large? I think they have always done so.
583. Apparently they did not, if they never applied for authority to carry out their instructions? This is the natural authority. They would not go headlong on without reference to us.
584. Was it their duty to have applied to you for authority for any particular portion of this work? They have done so. They have applied to us.
585. Do you think that the work which has been done under the authority and supervision of the Casual Labour Board, with the money they have expended is as valuable as if they had carried out the whole or some portion of the works here recommended or foreshadowed by Sir Henry Parkes? Quite.
586. As regards remunerativeness? If the land had been sold that has been cleared it would have been far more valuable.
587. Do you consider that the money spent at Hornsby and on the Holt-Sutherland Estate has been more valuably expended than on these works? I do not say that. I say that the work that the unemployed did will be equally remunerative.
588. Do you consider that the work done by the Casual Labour Board on the Holt-Sutherland Estate and at Hornsby is as valuable to the Colony at large as if the works in part or in whole had been carried out as foreshadowed by Sir Henry Parkes? I do not think so.
589. Have you any knowledge of the enhanced value of the Crown lands by reason of the roads made on these estates? I have no knowledge at all.
590. I notice here, in answer to question 434 in your evidence before the Select Committee, as regards wages, that you say that the greatest average for an ordinary day's work would be from 7s. to 8s., anything beyond that would be overtime;—now, if 7s. or 8s. was fair pay for labourers in the position that those were, who were working under the Casual Labour Board, what would have been the current rate of wages at that time for outside labour per day? Well, that is a very hard thing to say. I presume it would be about the same price; but I do not gauge my evidence on the current price of labour at the time.
591. Do you know the usual rate of wages for that kind of work? You mean the ordinary labourer?
592. Yes? I think it ranged from 6s. to 7s. and 8s. per day.
593. Then I ask you was it the intention that this Casual Labour Board should find employment for men at the ordinary rate of wages, or simply to try to prevent a lot of men actually starving for want of some employment? It was simply done to keep them from starving, and this is not the rate of wages paid at so much per day; it is piece-work. They had got amongst these men a lot of good hard-working fellows, who wanted to complete their block of land, and they would simply go at it. It would take two or three crawlers a week to do what they would do in twenty-four hours.
594. Do you think it was contemplated by Sir Henry Parkes, or whoever created this Casual Labour Board, that these men should be given work which would bring them in an absolutely greater amount per day than those who were engaged at ordinary work of the same character could possibly make? No; I do not think so.
595. Do you think it was desirable or correct for the Casual Labour Board to so manage the business of the Board as to absolutely make it a better thing for workmen to obtain work from them than to obtain legitimate work elsewhere? But they did not do so.
596. They did by working overtime? I explained that. There were only a very few instances of that. Some of the men did not make 3s. a day; hundreds did not make even half-a-crown.
597. We have it in evidence that they did make more wages? Oh, that was a few only.
598. But do you think it was right for even a few to make more money? I cannot answer that. I do not think it was done for any purpose of that kind at all. It was done by those men who wanted to get away as soon as possible. I do not think it was done by improper work.
599. But do you think it was right for them to make money at forced work of the State than they could do outside? I do not think it was the correct thing altogether.
600. That is what I wanted to find out; because those men outside would not be allowed to work one minute before or one minute after certain hours. Their time would be regulated by the Unions? Yes.
601. Have you any communications, which might have been made from time to time, by any one member or all the members of the Casual Labour Board as regards requisitions for authority for work, or certain work to be authorized, and the amount fixed when they are undertaking it? Do you mean communications from people outside?
602. No; I am asking about the Casual Labour Board? I have had no communications beyond what I have already stated—none that I know of.
603. And have you had any from outside people? No; not beyond those I have stated. The Holt-Sutherland representatives.
604. I think you said it was the 2nd of May, or some time in May that this Board was created? Yes.
605. Have you any knowledge as to who were the shareholders at that time in the Holt-Sutherland Estate? Not the slightest. I do not know any individual from another.
606. Who would the Casual Labour Board be responsible to? I think they would be responsible to us, or to the Colonial Secretary in person.
607. You mentioned some time ago to the President that occasionally verbal authorities might be given by the Colonial Secretary? Only to me. Somebody might be in the room, and he would say, "Mr. Walker, get this carried out, and then I would get the authority afterwards." I do not think, however, that any verbal authority ever emanated from our office for the carrying out of the work of the unemployed.
608. But would it be possible that some of the written authorities which you sent out would not have Sir Henry Parkes' approval on them? I do not think so.
609. Will you look at this paper marked No. 2 from the Casual Labour Board. In the paragraph marked A, "Frank Farnell, Esq., to the Colonial Secretary," you will notice that there is no approval by the Colonial Secretary? Quite so. I think this approval must be there somewhere; the papers are incomplete. [*Paper put in and marked B 11.*]
610. I call your attention to B in the same paper, which also appears to be wanting the signature of the Colonial Secretary? This appears to have the approval of the Minister for Lands upon it; it bears the initials "T.G."

611. That is further on? Yes; but it may be connected with the other part for all that. That at the Field of Mars might have been done by Mr. Garrett or Mr. Deering, and that may have been the reason why there is no approval there, but there must have been some other approval elsewhere.

612. Will you look through the whole of these papers and find out where the Colonial Secretary has approved of any roads? I think "K" you will find he has approved of.

613. Are there any others except "K"? No; I do not think so.

614. Can you tell me whether it is more necessary that his approval should have been obtained for "K" than for any other? I think the approval to "K" covers the whole lot of them. I think it is the bad way they have arranged them that makes them appear like this.

615. Here is an application from a number of residents at Campbelltown; I will ask you to read it. [*Application put in and marked B 12.*]

616. Will you tell me whether his approval is endorsed upon it? I do not know that; I never saw that paper.

617. Has it got Sir Henry Parkes' approval on it? No.

618. Do you know the district? Very slightly.

619. Does the Chairman of the Casual Labour Board live there? I understand he lives up there.

620. From that paper it would appear that he has approved of that work himself? Unless it is covered by some other paper.

621. Is it covered by some other paper? Not that I know of. It looks very bad as it appears here.

622. It looks as if Mr. Davies had given instructions to Mr. Burrowes? I do not know what instructions he may have to cover this in any way at all.

623. Presuming that there are no other instructions to cover that work or work of that nature, do you think that the Board had authority to undertake such work without the approval of the Colonial Secretary's Department? I do not think they had.

624. If there is any authority to cover that it would be before us? There may be authority to cover that somewhere.

625. I think you told me before that you had no knowledge who authorized the work on the Hornsby Estate? Yes.

626. Have you any knowledge of any applications having been made since the creation of the Casual Labour Board for the continuation of such works? Not that I remember. I do not recollect anything of the kind.

627. Have you any knowledge of applications being made for other works? Not from any private sources

628. Oh, no; I mean from the Board. I may tell you that they admit that they have had many applications, but what I want to know is whether it strikes you as peculiar that applications should have been made as they have been for the approval of the Colonial Secretary for certain works to be performed, but there is an entire absence of any authority or approval for the work done on the Hornsby Estate. Does not that strike you as extraordinary? It does, but I cannot explain it. The only explanation I can give is that some of the works had been going on there before the Board was appointed, and that they continued them, assuming that their instructions authorized them to go on with them. I think the whole thing has been a lot of blundering.

629. There must have been a commencement—there must have been some authority? Well, it does not follow; there may have been some authority. Their instructions may have been misunderstood, but they did not get them from us.

630. In your opinion, was it contemplated, in the creation of the Casual Labour Board, that the works which were to be undertaken by the unemployed were to be of a character requiring great engineering knowledge? I do not think so.

631. Or were they to be only works of a simple character, to give temporary relief at the time? I understood that the work was to be of the ordinary kind.

632. What Sir Henry Parkes stated in his minute here was altogether otherwise—on a very much larger scale. What you have stated being the case, can you tell me why it was considered necessary to appoint two of the highest officers of the Roads and Bridges, and the Harbours and Rivers Departments, for the supervision of works which did not require large engineering skill? No; I cannot tell you.

633. Does it not seem peculiar that it should require men of such high standing? No. In the one case Mr. Wells had been always mixed up with the unemployed, and I think the engineers in the Harbours and Rivers Department had always had to do with the work at Cook's River.

634. Are you aware that Mr. Houison's was not an original appointment to the Casual Labour Board at all? I was not.

635. That he was subsequently appointed, but not at first? No.

636. The appointments made were Mr. Wells and Mr. Darley. Mr. Darley stated to Mr. Houison that he would be glad if he would take his seat on the Casual Labour Board, as he (Mr. Darley) had not the time to give to it? All this is new to me; I know nothing of that. The appointments, as I know it, is Messrs. Davies, Wells, and Houison.

637. Therefore does it not seem strange that a man like Mr. Darley, then next to the Engineer-in-Chief of Harbours and Rivers, and now actually the Engineer-in-Chief, should have been appointed to such work? I do not see anything strange in it. I think the reason he would be appointed would be because he was a man of great integrity and great ability as well, but not having the time to attend to the work he asked that this other man should take his place. The same rule would apply to Mr. Bennett.

638. My reason for drawing attention to this fact is that you said these works were not to be heavy engineering works; and these gentlemen, being the highest in the Civil Service, their time would naturally be thoroughly occupied with works of a more important character in their own offices? Certainly. The works I understood you asked me about were works about Sydney, not the works in the Colonial Secretary's minute. As regards the works about Sydney, there was no great engineering skill wanted for them; but in making tanks and wells there would have been engineering skill required, and the Colonial Secretary may have had that in view when he appointed these engineers.

639. I ask you how is it that the Board, knowing that the work which was contemplated as mentioned in Appendix A to the report of the Select Committee, has in effect not been undertaken at all, and that the money, instead of being expended on public works which would have been of great advantage to the colony,

has

Mr.
C. Walker.
12 Mar., 1889.

Mr.
C. Walker.
12 Mar., 1889.

has been expended on works of a very minor character, and which would to a very large extent benefit other people's property? I cannot answer that. As I have said before, the amount spent on private property is very small compared with the works on the public estate, and, compared with what would be realised by the public estate. I believe that two and a half millions sterling could be realised from the land that is cleared now.

640. Considering that Mr. Wells and Mr. Houison were actively engaged in their own professional business for the Government, and had of necessity to leave for a very considerable time at different periods—sometimes weeks at a time—do you think that they were in a position to properly supervise the work that was to be carried on? I hardly think that they could have given that attention to the work which they should have given, judging from the character of their duties.

641. The evidence before the Select Committee, which perhaps you have seen, shows that Mr. Houison for a matter of five months was unable to attend? Yes, I have seen it.

642. *President.*] Do you know whether, during the time the Board was in existence, any important public works were undertaken outside the Board? Not to my recollection.

643. Do you know anything of the Yanko cutting? No; I do not—not officially.

644. Can you say whether that work was undertaken by the Government during the existence of the Board? I could not tell you that from memory.

645. Do you consider that the work that you speak of here has enhanced the value of the land very much? I do.

646. Do you consider that the work of clearing is productive work? If the land is immediately sold, certainly it is.

647. But if it were cleared now and sold twelve months hence you would scarcely call that clearing productive? I would if it were done properly.

648. The trees and scrub cut down spring up again quickly? That is not so with the clearing at the National Park.

649. But clearing is not generally recognised as productive works? It is not what would be regarded as productive works generally. But in this instance, if it only cost £5 an acre, and £20 an acre could be got for it, I think it would be very productive.

650. Do you know whether Mr. Davies has had any remuneration for his services? No.

651. Nor Mr. Wells nor Mr. Houison? No. Mr. Davies has had his expenses paid—his travelling expenses.

652. Are you aware whether Mr. Houison has had his travelling expenses? I do not think he has. I suppose if he makes a claim he will get them. They have had no remuneration for their services.

653. I see in some of the papers reference to a payment, or recommendation for payment, at the rate of 10s. a day? Yes; that is to Mr. Davies for travelling expenses. I do not think it was much to give a man for his services.

654. That has been paid, then, I suppose? A portion of it was paid, not all of it, because I have got another claim from him now.

655. You don't know whether Mr. Wells has got any travelling expenses? I do not know that either he or Mr. Houison made any application for them, or they would have got them.

656. *Mr. Waller.*] Do you think it was contemplated that the Casual Labour Board should have engaged horses and carts and paid for them at the usual current rate of wages for the work that they were doing, or was not the Casual Labour Board appointed merely to find employment for the unemployed? I think that was part of their duty; for instance, they could not get the unemployed to take the stones up.

657. I mean the bringing up of stones for ballasting? I think that would form part of their work.

658. Do you think it was contemplated to go outside for work of that kind for works that were intended to give labour to the unemployed? I do not understand what you mean.

659. I wish to know if the Casual Labour Board had any right to go outside and engage carts and horses and give contracts for quarrying which was not employment to the unemployed or employment to the general run of working men? What I take you to mean is whether it is part of their duties to hire horses and carts to quarry and form roads that the Roads Department could do. Well, it would all depend upon where the roadmaking was. I do not think they went out of their province in this, because there would have been confusion and friction if they had asked the Department to do it.

660. Do you think it was contemplated in the course of the formation of the Board that it was to do otherwise than simply to find labour for these people at a less rate of wages than the ruling wages? No.

661. *President.*] Do you know Mr. Burrowes? Yes.

662. Do you know anything of his qualifications? I have got from his own statement that he went to Queensland or Victoria and passed as a surveyor, and then he was in Queensland until he came down in a reduced and starving state and I gave him work as a kind of unemployed. This was before the Board was appointed, and then I got him put under the Board after that. It was more as an act of charity than anything else.

663. Do you know anything of his character? I did not know anything of him then. I have heard a great deal of him since, and I have not a very exalted opinion of him now.

664. If Mr. Burrowes made a statement involving other people would you be inclined to give it much credence? I certainly would not place much value upon it.

665. Do you know whether Mr. Hibble made any statement to the late Colonial Secretary? I do not know.

666. In this office? I never heard of him coming here.

667. Was there any departmental examination here at the office that you have heard of? I cannot call it an examination, but one day Mr. Burrowes and Mr. Larnach were brought up.

668. You don't know whether Mr. Hibble made any statement to Mr. Dibbs? No; I don't.

WEDNESDAY,

WEDNESDAY, 13 MARCH, 1889.

Present:—

A. J. CAPE, Esq., M.A., PRESIDENT.

F. A. FRANKLIN, Esq., C.E., J.P., | T. F. WALLER, Esq., J.P.

Thomas Cooper Hinchcliffe called in, sworn, and examined:—

667. *President.*] What position did you hold under the Casual Labour Board? I held the position of Secretary and Paymaster.

Mr. T. C.
Hinchcliffe.

668. Who appointed you? I was appointed by the Colonial Secretary.

669. When? On the 2nd May, 1887.

13 Mar., 1889.

670. Was that appointment conveyed to you by letter from the Colonial Secretary? By Mr. Wise. I was then in the Immigration Office, and Mr. Wise, who had charge of the office, said that myself and Mr. Josephson were to be detached together to the Casual Labour Board.

671. Have you that letter? No; I saw Mr. Wise this morning and asked him for a copy, but he had not got one. Mr. Walker, the Principal Under Secretary, has a copy.

672. Where is the original? Mr. G. F. Wise has it. It was addressed to him as head of the department. All that we knew was that we were to be detached to the Casual Labour Board.

673. He was the head of the Unemployed Department before the establishment of the Casual Labour Board? No; Mr. Deering was the head; but I did the principal business previous to that.

674. How long previously to that were you employed by Mr. Wise, or any other officer, in connection with the unemployed? I could not say how long; I think about ten months. The initiation of the unemployed was entrusted to Mr. Treatt, and then to Mr. G. F. Wise; and then Mr. Deering was appointed, and he applied for my services. Mr. Wise told him I could not go to the position without resigning my position in the Immigration Office. He then asked for my services to go and pay the men, and I paid the men on several occasions.

675. Was your salary fixed by the Colonial Secretary or the Casual Labour Board? The Board fixed the salary, which was approved by the Colonial Secretary. Under Mr. Wise I received fees and allowances which brought my salary up to £420 a year. The Casual Labour Board suggested that I should have £350 per annum and 10s. for each pay. I was allowed £1 for each pay by Mr. Wise.

676. Were all the members of the Board present when this offer was made? Yes.

677. Will you detail to the Commissioners as concisely as you can the duties of your office as Secretary and Paymaster to the Board? I had charge of the office; was the official retained to look after the correspondence and see that it was inserted in the books; to take minutes of any meetings that the Board might hold; to pay the men and get the vouchers; to look after the accounts and send them to the Auditor-General; to see that money was placed periodically to the credit of the Board before they ran out; and all the usual incidentals in connection with a Government office.

678. To see that money was placed to the credit of the Board;—what money? The money with which they paid accounts and wages.

679. Where did that come from? We used to apply to the Under Secretary for Finance and Trade for the money.

680. Were these applications made irregularly or periodically? When we found that we were running to the end of the amount at our credit, we used to apply for £6,000 at a time—that is to say, when we found that we had spent about £5,000 we applied for £6,000 to be placed to our credit a few days hence. I made out the form to go to the Under Secretary for Finance and Trade, and it was signed by the members of the Board.

681. Do you know what routine these applications went through afterwards? I could not say.

682. Do you know the Ministerial Department under which you were controlled? The Colonial Secretary's Department.

683. Are you aware whether the applications for advances went to the Colonial Secretary's Department? I believe they sometimes did for approval, but I am not sure whether on all occasions they went or not.

684. Was it part of your duties to keep the books of the Board? Yes; to see that they were properly kept.

685. What books of accounts had you? Cash-book and ledger, that is all. You see as we got a second advance we always squared up the first advance, and of course we got a receipt from the Auditor-General for that.

686. You had nothing but a cash-book and ledger;—were these the only books kept in the office? Yes; in connection with the accounts.

687. What books outside accounts were kept? We had a letter-book, a record diary, in which we kept a note of all pays that became due. We had to go through the usual process to get the money out of the bank to send to the different places to pay the men.

688. Where was the money kept that you drew out of the bank to make these payments? In the office of the Casual Labour Board, 82, Goulburn-street.

689. When did you cease to be Secretary to the Board? On the 12th of last month.

690. Did you leave the office then? Yes.

691. Did you hand over the books that had previously been in your custody to Messrs. Miles and Mason, personally? Yes; that is their receipt for the vouchers I left.

692. Was there any schedule of the books and records handed over? No; there was still one of the clerks remaining in the office who had been there all the time. He understood everything. He filled my position temporarily.

693. What was that clerk's name? Mr. Hibble.

694. You obtained a receipt from Messrs. Mason and Miles, and do you produce it? Yes. [*Document put in, and marked C.*]

695. Do you produce a letter dated 12 February, 1889, from the Principal Under Secretary, informing you that your services would not be required after that date? Yes. [*Letter put in, and marked C 1.*] I replied to that, and made application for three months' leave of absence on full pay, and also for compensation under the 49th section of the Civil Service Act, which has been approved by the Minister. That letter is down at the Casual Labour Board Office; I saw it there to-day. The application was approved of by Mr. Dibbs before he went out of office.

- Mr. T. C. Hinchcliffe.
13 Mar., 1889.
696. Whatever you had under your control you handed over to Messrs. Miles and Mason? Yes.
697. Have you any papers, records, books, or writings, in connection with your late duties now in your possession belonging to the Casual Labour Board? Only these two I have produced.
698. You were examined on the 30th November and 7th December last, before a Select Committee of the Legislative Assembly, I believe? Yes.
699. Is this your evidence; I will have it read over to you? Yes.

Evidence before Select Committee.

1237. *Chairman.*] Are you the Secretary of the Casual Labour Board? Yes.
1237½. How long have you occupied that position? Since the commencement of the Board. I think they started on the 2nd May, 1887.
1238. Are you in constant attendance? Yes.
1239. What are your duties in connection with the office? I have to look after all the correspondence, the records, pay all the accounts and wages, send the vouchers to the Audit Office, and all the incidental work connected with the office.
1240. What kind of records have been kept? The ordinary official records, the same as are kept in any other Government Department.
1241. Are there any minutes of any meetings that have been held by the Board? There are a few at the commencement. At the commencement of the Board we had only a small room, about 6 feet x 8 feet, at the Immigration Office, and the very scanty information here was put down by myself at the time or next day. The office was besieged by hundreds of men every day, and we had to answer all sorts of questions. After the end of May the Board said they did not want any minutes kept. They appointed Mr. Davies to do all the executive work, and the other two members of the Board being professional gentlemen were appointed to inspect and lay out the works and give professional advice.
1242. *Mr. Brunker.*] Who were the other two gentlemen? Colonel Wells and Mr. D. Houston.
1243. *Chairman.*] After that you did not keep minutes? We recorded all the papers that came in and the work that was done.
1244. But as to the proceedings of the Board? No. Of course the papers would show what was done.
1245. You say Mr. Davies was appointed executive head;—was that at a general meeting of the Board? Yes; they were all present.
1246. Was it done by resolution? No; I do not think so. They seemed to talk matters over and agree among themselves.
1247. Did petitions or requests to have work done come to you as Secretary? They were generally addressed to the Chairman. The Chairman opened all the correspondence, but in his absence I would open it. Then it would be entered in the record-book, and I would write any official communication that was required, and he would sign it, and it would be sent, perhaps, to the local surveyor for report, or to the nearest superintendent. When his report was received the Chairman would make a recommendation, favourable or otherwise, and send it on to the Colonial Secretary for his approval.
1248. Do you recollect how many full meetings of the Board there have been? I could not say.
1249. Have they been numerous or few? As I told you, after the first month Mr. Davies used to do the executive work. The other members would drop in occasionally, and ask me what was being done, and I would show them the papers. If the papers had gone out, I would show them the records. If they had any objection, I suppose they would communicate with Mr. Davies about it. They seemed to work very well together.
1250. Had you any petitions or requests for the making of roads on the lands near Hornsby? I could not tell that, because I did not take any more notice of that than of any of the others. I could only go by the report that is here. There are one or two petitions here.
1251. Are those one or two all that there are? All that I know of.
1252. Would you be likely to remember if there were more? I could not say. I would not try to recollect any particular paper; there were so many papers coming in; I suppose two or three thousand in the year.
1253. Have you any recollection when the formation of the roads commenced near Hornsby? No. Of course I had nothing to do with the executive management—only to do what I was told, principally office work. I was paymaster as well as secretary, and that would take up all my time, being responsible for the money—as much as £5,000 on one pay-sheet.
1254. Had you anything to do with engaging the men? No.
1255. Do you know anything at all about the construction of roads at Hornsby? Nothing at all.
1256. You were never present at any meeting when these roads were discussed, to keep the records? No, not to keep any records. I might have been present when they were being talked or, but I do not recollect any particular meeting.
1257. Your attention was never called to them officially in any way? Only as it might appear here (in the papers). I see there is a letter in my name addressed to the Hon. J. F. Burns. That is the only one I see in connection with it.
1258. *Mr. O'Sullivan.*] You say you have kept no minutes or records of what was done since May last? We keep the records, but these minutes were in addition to the records, because the Board met at first as an ordinary Board would meet; but after the first month the other two members arranged with Mr. Davies that he was to do the executive work, and they, when he let them know, or they received information from me, would superintend the outside or professional work, such as the making of bridges, roads, or culverts, or anything of that sort.
1259. What record could we get to find out who proposed and seconded or authorized any particular work? You would only find it from the papers, the same as in any other Government office; they would be initialled by the Chairman on behalf of the Board.

1260. Would it be correct to say that you have held thirty meetings of the Board? There have been a great number of meetings; there was no particular record kept.

1261. Would it be correct to say that there have been thirty regular meetings of the Board? About twenty-four I see here; for the first month they were held pretty well daily, except on Sundays.

1262. There were no regular meetings after May? No; the business they did would be shown on the papers. The Chairman would act for the three, and put his initials on as the head of the department.

1263. Would it be correct to say that there had been one hundred meetings of the Board? Not formal meetings.

1264. What do you mean by the meetings after May;—when one of the others dropped in to consult with Mr. Davies? Yes; they would drop in perhaps daily, perhaps once in two days; or one of them might be away for four or five days at his departmental work; then when he came back, he would come in to see what had been done.

1265. How long would they remain consulting with Mr. Davies? Sometimes a couple of hours.

1266. Do you keep all the applications that have been made to the Casual Labour Board for the construction of works? Yes; all the official papers are registered and stamped with a number, the same as in the other departments.

1267. Is there any means by which we can arrive at the cost of the different works? Yes; we have the total cost of each work.

1268. Have you vouchers for all the expenditure? Yes; at the Auditor-General's.

1269. Have you ever had any complaints from the men of unfair treatment? Numerous; but when we have investigated them, as a rule nine out of ten were without foundation.

1270. Have you had any complaints about their being unfairly treated by the contractors who supplied the provisions? Very seldom. I think the provision contract was about one of the best the Board ever had—most liberal considering the large number of men that would have to be supplied at short notice.

1271. Have you had any complaints from the men about money being kept back from them? Sometimes; but there would be a reason for it. Perhaps they had not finished their work. When the superintendent went round, perhaps, he would say, "That stump must be taken out before you are paid;" and then when I went out to pay he would tell me to hold the money till it was properly finished, and then he would give me a memo. to pay the money.

1272. Do you remember a man named O'Brien, a sort of a ganger down near Waterfall? Yes.

1273. Why was he dismissed? I forget. I could not tell you exactly, because I did not post myself up in anything with regard to the office. I thought this was only an inquiry about certain roads, and I do not know anything about the roads.

1274. *Mr. O'Sullivan.*] The inquiry deals with the operations of the Casual Labour Board as well as the roads. Do you remember any complaints about sly-grog selling on the Holt-Sutherland Estate? There was one complaint, I believe. Someone was convicted of sly-grog selling; but I fancy that was before the Casual Labour Board was appointed.

1275. You get all the petitions and letters? Yes; they are all kept and registered.

1276. Then if I were to ask you to produce the request for road H and road I on this plan, could you do it? All the petitions in reference to these roads they say are printed in these papers. I have been away; but these were handed to me as the papers in connection with it. Of course, without going personally through all the papers in the office, I would not know if there were any more.

1277. You say Mr. Davies was in the habit of opening all letters? Yes.

1278. And acting on the contents? He generally instructed me to write what we call a B.C. communication, and he initialled it.

1279. Mr. Davies appeared to be a kind of dictator of the establishment? No; what we would call the head of the department.

1280. He appeared to do things without regard to being kept in check by anybody else? I do not know; there was nobody there to keep him in check that I was aware of.

1281. He seemed to have the sole power? The other members appointed him to do that, they seemed to have thorough confidence in him. When they came and I told them what had been done, they said, "All right, Hinchcliffe." They always seemed quite content with what had been done.

1282. Was the effect of this understanding among them that Mr. Davies had sole charge of the Casual Labour Board, and called them in merely as advisers or experts? They would walk in any time they wished to. Of course they were professional men, and they attended to any work that required professional supervision outside. In the office they were not required, except occasionally they had to sign some documents to get money from the Treasury, or anything of that sort.

1283. These gentlemen were very often away for a week or a fortnight at a time? Colonel Wells had to go away visiting roads in the various districts.

1284. And Mr. Houison, too? Occasionally.

1285. During the absence of both of those gentlemen, would new works be gone on with by Mr. Davies without consulting them? No; I do not think they were both away at the same time.

1286. *Chairman.*] Has it ever happened? It might have happened; I could not say; I do not think so.

1287. *Mr. O'Sullivan.*] Did Mr. Davies give any reason for not wanting the minutes kept after May? No; they were no formal meetings. They met every day in May, and then the works got started, and Mr. Houison and Colonel Wells found they could not attend at any stated time daily.

1288. Did you keep a record of the consultations or meetings after May? Not after May.

1289. There is absolutely no guide whatever as to the number of times they met or consulted after you ceased to keep the record? Only by the papers.

1290.

Mr. T. C.
Hinchcliffe.
13 Mar., 1889.

Mr. T. C.
Hinchcliffe.
13 Mar., 1889.

1290. Which papers? The papers have to go through a certain routine that generally takes a few days, and they would be sure to come in before anything was actually done on the papers, and they would see what was being done.
1291. That would be no guide as to the number of meetings held? No.
1292. So that there is no guide whatever as to the number of meetings or consultations they held after May? No.
1293. I suppose vouchers for all the expenditure were forwarded to the Auditor-General's office? Yes.
1294. And everything is kept in the proper manner? Yes.
1295. How would you settle these complaints about non-payment of wages and other liabilities? They would always be settled, either by the superintendent or by the Board, if there was anything very particular. There was always a good reason for stopping any money, and it would only be stopped for a time.
1296. *Mr. Brunker.*] Who are the members of the Casual Labour Board? The Hon. John Davies, Mr. David Houison, and Colonel Wells.
1297. What is Mr. David Houison's business? I think he is an engineer in the Roads and Bridges Department.
1298. And Colonel Wells? I think he is an engineer in the Roads Department.
1299. They are both Civil Servants? Yes.
1300. You say no records of the proceedings were made after a month? Only the papers which would show what was done. There were no formal meetings.
1301. The minutes were not kept in the ordinary way? No; the papers were all registered, and the action of the Board would appear on them.
1302. I suppose Messrs. Wells and Houison were treated as professional guides in carrying out the works? Yes.
1303. Did Mr. Davies, as Chairman of the Board, to your knowledge, exercise any powers beyond those which seemed to be in accord with his position? No.
1304. Were you present at all the meetings of the Board that were held at the Casual Labour Office? Yes; unless I was away paying wages.
1305. Generally? Yes; generally I would be there.
1306. What action would be taken prior to works being undertaken by the Board;—what would induce them to have the work carried out;—how would they gain the information that it was necessary? By letters being sent to the Board or to the Colonial Secretary by various Members of Parliament or by the local residents. The papers would be sent to the Board; they would recommend that the works be undertaken or otherwise; and the Colonial Secretary would approve of it or otherwise, and send the papers back.
1307. These letters all passed through your hands? Yes; through the office.
1308. Can you say whether any of these letters came from Messrs. Burns, Withers, and Smith, asking that these roads should be constructed on their land at Hornsby? Not that I am aware of.
1309. Can you say;—you ought to be aware? The only letter with their name attached that I know anything about is the one giving the land to make the road. To the best of my memory and belief there was never any communication received from Messrs. Burns, Withers, and Smith as to making any road. A communication was made to them asking if they would give the land, and their answer is the only communication I am aware of.
1310. *Mr. O'Sullivan.*] Have you a list of the works carried out by the Casual Labour Board? I think it is in the office.
1311. Will you send it down? Yes.
1312. Have you a list of the applications made by Members of Parliament? I could get it from the records.
1313. Will you supply that, with special reference to the county of Cumberland? Yes; I think nearly all the works are in the county of Cumberland.
1314. *Mr. Brunker.*] The whole of the applications will be with the correspondence? Yes.
1315. You can produce them at any time? Yes; with a little time to search for them. Some of them might be in some of the other departments.
1316. Then you will have the record of them? Yes.
1317. The papers are all numbered and stamped? Yes, in the usual way.
1318. *Chairman.*] Did ever Mr. Withers or Mr. Smith call at your office? Not that I am aware of.
1319. Were all the applications that reached your office forwarded on to the Colonial Secretary? Unless it was some very trivial matter.
1320. How would you define a trivial matter? Perhaps an application to increase a number of men from fifteen to twenty, or something small like that; when the Chairman would take the responsibility on himself.
1321. Would the clearing of a road be considered trivial? No.
1322. For every road that was cleared there was a consultation prior to its being cleared, either by letter or in some other way, with the Colonial Secretary? I think so.
1323. Are you sure? I am not exactly sure. Of course the Board has been in operation a year and eight months. I should think so myself.
1324. Were there any applications sent in for the clearing or formation of any roads that were not complied with? I believe so; I could not say for certain. I know there has been an application made to clear a common at Liverpool that has not been complied with. I believe several roads were applied for, but the applications were not complied with on account of being too expensive, or something of that sort.
1325. The common at Liverpool would be Crown property? Yes; public property.
1326. That has not been cleared? No. That is one of the cases I can recollect when an application has not been complied with. It has not been refused.
1327. Have you any record or accounts to show exactly how much has been expended
on

on the property of Messrs. Burns, Withers, and Smith at Hornsby? No; the wages-sheet for Hornsby would come in in a lump sum—£250 or £300 for the fortnight. It would only show that such and such a gang was entitled to so much money. It would only be headed Hornsby.

Mr. T. C.
Hinchcliffe.
13 Mar., 1889

1328. Then there is nothing to show exactly how much has been spent on property belonging to private owners? The local superintendent might have the details; they are not put on the wages sheet.

1329. Do the papers show by whom any work was originated? No; not in all cases.

1330. You said the papers would show what was done;—would they show how such and such a road came to be initiated or originated, by whom it was authorized, and why it was authorized? I should think so. There is just one little item referring to these roads at Hornsby which perhaps would not be on the papers. It is in this minute book:—"28th May, 1887.—Board met 426, Pitt-street. Present: Mr. John Davies, F, Wells, D. Houston. Mr. John Davies visited Hornsby in company with Mr. Deering, and approved of certain roads being laid out and formed." That, of course, would show there had been a consultation over roads in the district, and the Metropolitan District Surveyor had been consulted and approved of them; but there are no particular roads mentioned.

1331. Do you recollect now what Members of Parliament have applied for work to be done in any particular district? There are about sixty on one application—clearing the railway track to Kurnell.

1332. I mean in the matter of roads? I could not say from memory.

Thomas Cooper Hinchcliffe recalled and further examined, 7 December, 1888:—

2092. *Chairman.*] Have you been able to obtain any further information for the committee? In reference to the pay-sheets you wanted, I went to the Audit Office, to which I told you the papers had been sent. The Inspector of Accounts told me that it would take some little time to get out all the pay-sheets, and that he could not give them to me; but that if the committee were to spend a subpoena to the office they would send up a clerk with them, if you gave them two days' notice. I produce the last three pay-sheets in the office, and they would be similar to all the others. One is being paid up at Hornsby to-day. They do not show any particular roads; they simply show that the work has been done at Hornsby. If you were to send for the clerk and storekeeper or for the superintendent, they would be able to give you details. I know that the work extended for miles beyond the Hornsby Station.

2093. What we want to know is the number of men who have been working upon the estate of Messrs. Burns, Withers, and Smith, or in its vicinity? Mr. O'Donnell or Mr. Little would be the only gentleman who would be able to give you that information.

2094. It would be impossible for you to state how many men had been at work upon these roads? Totally impossible.

2095. Or how much money has been paid? I can only give you the gross total of the money paid for the whole of the work.

2096. When you say the gross total, that would include all the work in the Hornsby District? Yes.

2097. Does that include all the roads upon the tracing which you saw the other day? It would take in a great many other roads not shown upon the tracing. It would include also the clearing of the Crown lands.

2098. *Mr. Copeland.*] With roads on the western side of the railway line? Yes.

2099. Can you give us any idea of the number of men employed upon the land of Messrs. Burns, Withers, and Smith at the time of the appointment of this Select Committee? No; I see from the pay-sheets that from the 12th to the 26th October, eighty-four men, including officers, were employed altogether.

2100. That is upon the roads shown upon the tracing? No; that is upon the whole of the works at Hornsby. From the 26th October to the 9th November, eighty-three men were employed, and from the 9th November to the 23rd November, 102 men.

2101. But you cannot say how many of these men were employed upon these particular roads? No; the superintendent or Mr. Little could tell you that.

End of Evidence before Select Committee.

700. *President resuming.*] Was that evidence as now read sent to you for revision after you gave it? Yes; the only thing that was not revised was a statement made by Mr. O'Sullivan.

701. Having now heard that evidence read over, do you wish to make any correction or explanation? No, sir. I would merely point out that in asking question 1274, Mr. O'Sullivan said, "The inquiry deals with the operations of the Casual Labour Board as well as the roads." I said that according to the resolution as passed by the Assembly this was not correct, and I did not go prepared with any other evidence. The Chairman said the witness is correct. I altered it in the revision, but I see they left the evidence there as it was. Mr. Walker turned round to the gentleman who was taking notes, for the copy, but before there was time to get it Mr. O'Sullivan went on, and no further notice was taken of it.

702. With this exception your evidence before the Select Committee is true and correct in every particular? Yes.

703. With reference to your answer to question 1274 you say that on your revision you made an alteration? Yes; but the words that the Chairman said, "I think the witness is right," which I put in on revision, have been struck out.

704. Who struck them out? I cannot say.

705. What you mean then is that you did not wish to keep back information, but you did not go there prepared with anything beyond evidence as to roads? I had not brought evidence that was altogether irrelevant.

706. With that exception you adopt your evidence before the Select Committee as your evidence before this Commission? Yes.

Mr. T. C.
Hinchcliffe.
13 Mar., 1889.

707. What experience had you had in any Government or large department before you undertook your duties in connection with the Casual Labour Board? I had been in the Stock Branch for nearly nine years. I was appointed in July, 1875. It was then under the Lands, and was afterwards transferred to the Mines.
708. Then you have been in the service thirteen years? Nearly fourteen.
709. What was the practice adopted by the Casual Labour Board as regards the drawing of cheques? I drew all the cheques. They were signed by the Chairman and countersigned across the face by me as Secretary.
710. Was that in pursuance of any regulation made by the Board? Yes.
711. Were you present when the regulation was made? Yes.
712. And all the members of the Board? Yes.
713. Were many cheques drawn of this kind? Yes.
714. What was the largest sum that you recollect that a cheque was drawn for? £5,000 odd, for the pay-sheet at the National Park. By the instructions of the Colonial Secretary or Principal Under Secretary the Board were told to make that the depôt. There was a large number of meetings held about the statue at the top of King-street, and they used to go in deputations to the Colonial Secretary. We were instructed to get all the men out of the city, to give them work of some sort; and we were told to make the National Park the depôt and to draft them from there to other works afterwards.
715. Were large numbers of the men congregated there? I think nearly 4,000 at a time, so there was a pay-sheet for £5,000.
716. Was the cheque for that an open cheque? Yes.
717. Who got the cash? I did.
718. How long did you have that in your possession? While I went down from the bank to the office in a cab; then I would go out in a train in the morning accompanied by the Chairman, or perhaps another member of the Board.
719. And between the drawing of the cheques and the following day where was the cash? In a big safe in the office. We also used to write a note to the nearest inspector of police telling him that the money was there, and asking him to watch the place. Of course there was a man and his wife looking after the place there.
720. Were any other large cheques drawn besides this £5,000 cheque? No; only the wages cheques. They would be open because we had to get the money for them. The business cheques, such as the contractor's, would be paid into his account. I would always cross them and mark them "bank."
721. How did you carry this money out? In a large bag—the office bag.
722. Who was with you? Always the Chairman, and sometimes a detective or plain-clothes constable.
723. Did you make the payments yourself to the men? Yes.
724. To all the men? Yes.
725. How many times did you pay visits to the works with large sums of money in your hands? Well, there would be every fortnight to the National Park, and to Narrabeen and other places. I should think about twice a week. Small pays I gave to the assistant paymaster.
726. Was it necessary to draw so large a cheque as £5,000 to pay any particular branch? Yes; on one particular occasion. That would be the exact amount of the National Park wages-sheet. In all the cheques that I drew I always put who it was for and what it was for.
727. Who had the keys of the safe? I had them myself.
728. Had any other person access to the safe? No.
729. Was there a duplicate key? The duplicate key I lodged at the Joint Stock Bank.
730. What other amount of money had you personal control over during the time the Board was in existence? The total amount that went through my hands?
731. Yes? I think about £240,000. All the money went through my hands; but I would only have £6,000 at any one time.
732. *Mr. Franklin interposes.*] How many months were your duties in existence? Twenty months.
733. *President.*] Were you responsible for all this cash during that time? Yes. I may mention that in addition to the other precautions which we took when there were large sums of money in the safe, the Chairman used to sleep on the premises when there were large amounts there. Instead of going to his residence at Campbelltown he would stay in town and sleep on the premises. This, perhaps, was not so much on account of the money as because he would not otherwise be able to get into town in time to go out to pay the men. He slept in the private house which formed part of the office premises.
734. Had you in any previous departments control of such large sums of money? No; I was not in charge before. Mr. Wise was in charge of the Immigration Department, and he used to sign the cheques.
735. Do you know any department in the Government where an individual officer has control of so large a sum of money? I do not know; I cannot say one way or another. It would be only of course from the latest time we could get money until we paid it to the men that the money would be in my possession or in the safe.
736. Can you tell me whether it is the practice in the Government Departments to have fidelity bonds or guarantee bonds for the clerks who are employed? Yes.
737. Was there any fidelity bond in your case? Yes, £1,000, I had to give a bond for.
738. Was it in force while you were in the Casual Labour Board Office? Yes.
739. What is the nature of the fidelity bond; is it under any guarantee company in Sydney? Yes; the one approved of by the Government. It is one of the usual guarantee companies; I believe there are two.
740. Does that cover any duties you were employed at? Yes; I believe so.
741. Or does it refer to some particular employment? I cannot say.
742. How long has it been in existence? While I was with Mr. Wise it was a £500 guarantee; since then I have had to find one of a £1,000.
743. The greater the responsibility the greater the risk to the company? I do not know.
744. An officer who had no responsibility as regards receiving and paying money would be a less risk to the guarantee company? I could not say.
745. With regard to the amount received from the Government from time to time, was no less a sum than £6,000 ever obtained? No; we had it always in sums of £6,000.

746. And the practice was to make application to the Treasury for it? We had to send a receipt by all three members of the Board for it.
747. What became of it then? The money was placed to the credit of the Casual Labour Board in the bank. Mr. T. C. Hinchcliffe.
13 Mar., 1889.
748. Were vouchers taken for all payments made? Yes.
749. What became of these vouchers? They were sent to the Auditor-General.
750. As the payments were made? No; in sums of £6,000, with the balance of the previous £6,000. The vouchers were brought to me; we added them up, and then there was an abstract made out and signed by the Chairman. It is in copying ink; they are all in the ledger; a few days afterwards these would be checked by the Audit Department, when the vouchers covering the cash advances made on such and such a day had been received.
751. Were these vouchers sent in only when you had exhausted the advance? Yes.
752. In batches? Yes; in sums of £6,000, similar to the advances.
753. Who checked the vouchers in the office? They were checked by myself.
754. Nobody else? Perhaps by Mr. Hibble.
755. Are you satisfied that in every case where the vouchers came before you they were correct? I could not say that; the ordinary voucher came in signed as being correct by the superintendent of any particular work. On his certifying to the voucher being correct I would draw the cheque.
756. Then your drawing of the cheque was dependent upon the certificate of some other officer? Yes.
757. Did you ever hear of any voucher of M'Lean Brothers and Rigg having its correctness questioned? No.
758. With reference to certain items—shovels and hammers on the voucher? No; I believe the gentlemen appointed to wind up the affairs of the Board had some experience of the kind. I heard some talk of the affair, but it did not come before me. I do not know anything about it. Any voucher I would certify for I would see that it was certified by the proper officer, before drawing the cheque.
759. Whose duty would it be to certify to the correctness of the vouchers of Messrs. M'Lean Bros. and Rigg? The superintendent of the work that might be carried out. It might be any of the four or five different superintendents.
760. You say in your evidence before the Select Committee that no minutes were kept after a certain time, and further that the Board did not want any minutes kept? Yes.
761. Who instructed you not to keep any minutes? As I explained in my evidence, the two professional members of the Board gave their attention to it during the first month; but then they found that their own departmental work was getting in arrears, and they told the Chairman that they could not attend any particular meeting at any particular time. So it was left for the Chairman to take the executive work in hand, and consult them when it suited their convenience. They had to attend to their own work, and the heads of their departments were I believe dissatisfied with their being away so much.
762. When you, in your evidence before the Select Committee, say that they appointed Mr. Davies to do the executive work, what do you cover by the expression executive work? The whole of the work appertaining to the Board, that is, to act on his own responsibility for the three.
763. Was it understood that Mr. Davies had sole power to act in everything as the Board? It was understood, I believe, between them. I never saw for certain, but I imagine that in any case that required their consultation he would consult them, but any small matter—any trivial thing would go through in the ordinary way—that is anything for which there would be a precedent in the office.
764. Going back to these payments; there is a question or two I want to ask you regarding them. Were any payments ever made by you at the works without Mr. Davies being present? Yes, I think so; but I am not sure.
765. Large payments? No; not very large. If Mr. Davies was not there someone from the office would be with me.
766. Where were they made? Generally on the works, they would be small amounts, paid in the presence of the superintendent, overseers, and some members of the police very often.
767. Were any other large cash payments made, beyond those to the labourers? None. The largest item would be the Government contractor for rations.
768. Was that cash? No, crossed cheque.
769. Were any other large cash payments made beyond those to the labourers? No; there would be small ones. We would perhaps draw a cheque for £50 or £100 for cash, because some of the men would be dissatisfied and throw it up, and asked to be paid when they came in under what is called *interim* vouchers. We used to draw a cheque, perhaps for £100, to pay these in cash. That is shown in the cash book. There are two columns, and the whole of the amounts paid in cash appear in the cash column.
770. Did you always keep a large sum of petty cash in the office? Not a large sum—from £10 to £50 perhaps; but never more than £50. Of course we would use that before we drew any more.
771. Do the books show how that was distributed? Yes.
772. And the petty cash? Yes.
773. By whom have these books been audited? By Mr. Miles, the professional accountant, appointed by the Government.
774. Did they go to the Auditor-General? No; only the vouchers would go to the Auditor-General.
775. Were the records and the papers that you kept in the Casual Labour Board Office in any particular order? Yes; the same as in any other Government Department.
776. Can you tell us the order in which you kept them, to facilitate our reference? They would be kept in numbers from 1 up to 100 with a stamp upon them. In the record book would be a *précis* of each of the papers, and entries would be on the margin.
777. The record book, I understand you to say, contains a *précis* of all the correspondence; what was done with that correspondence, and what action was taken by the Board? Well, the book would not show the action taken by the Board; that action would appear on the original papers.
778. Can you tell us whether the applications to initiate works originated in your department, or in what other department? They would come from the outside.
779. Would they come to you direct, or through any other department? Very frequently they would come from the Colonial Secretary, but the bulk of them would come direct.
780. Did Mr. Davies generally take action in these matters himself? He would take the initiatory steps. That

Mr. T. C.
Hinchcliffe.
13 Mar., 1889.

That is, after an application was made (say in the Hornsby district) for a particular road, he would send out to the superintendent at Hornsby to report upon it in the first place. Then, after the report from him came in, very likely he would consult the other members of the Board, and then he would submit the recommendation upon it for the approval of the Colonial Secretary.

781. Was the approval of the other members of the Board obtained before or after the work was begun? Before the work was begun.

782. In all cases? Perhaps not in all, but shortly afterwards. Mr. Wells might be away for a couple of weeks, but he could know from the books exactly what was being done.

783. In your answer to question 1259 before the Select Committee you say that a record of who proposed and seconded or authorized any particular work could be found from the papers initialled by the Chairman on behalf of the Board;—where are these papers? That is hardly correct. The record, I presume, referred to the initiation of the work; there was no proposer or seconder. I believe you have the minute-book here; it shows the thing very slightly. There was no such thing as a proposer or seconder, even when they held formal meetings; they simply debated over the matter, and recommended certain things that were done.

784. Where can we find a record of the authorization of any particular work? The papers ought to be in the office; you can trace it from the record-book; it ought to be indexed, and you will get it from the index.

785. If we find no paper authorizing a particular work, or no record in the office of any such authority, can we conclude that there was no application? No; it might have been this way: it might have been a work handed over to the Board which was already in existence when they took office; they would not appear; they would simply appear as having been carried on by Mr. Deering or Mr. Wise.

786. But in reference to any new work? Any new work ought to appear in the book.

787. If there is a new work, and no authority for it amongst the records of the Casual Labour Board, and no record at all of it, can we conclude that there was no authority? I should think so.

788. Who had access to the papers in the department? The Board would have access—Mr. Davies, Mr. Houson, Mr. Wells, and two clerks in the office, Mr. Larnach and Mr. Hibble.

789. Anyone else? That would be all who would have access to the papers.

790. Any gentlemen from the Roads Department or the Survey Department? They would have no right to touch our papers.

791. Could they get at your papers without your knowledge or the knowledge of one of your staff? No.

792. You have been asked whether there is any means of arriving at the cost of the different works, and you replied that you had the total cost of each work;—can you refer us to a book or record in the department that will give us that? Yes, the ledger.

793. Will that give the total cost of each work? Yes.

794. Will you tell us if you know the course adopted with regard to dismissing men;—would that come within your province in any way? No; I don't exactly understand you; do you mean in large numbers?

795. No; regarding any of them? I don't suppose any men would be dismissed until the work was ended. Of course in December we received a letter from the Colonial Secretary, telling us to dismiss the whole of them—one third at the end of January, one third at the end of February, and the remainder at the end of March.

796. You were asked before the Select Committee about a man named O'Brien—do you know anything of that case? Yes; I know there was a man of that name dismissed.

797. Do you know anything of the works on the Holt-Sutherland Estate? Not much.

798. Do you recollect their being stopped? No; I think they are going on at the present time, to the best of my knowledge.

799. Were many personal applications made at the Board Office, to your knowledge, that the unemployed labour be put on any particular work? There were.

800. Can you mention any persons who made personal applications? Yes; Mr. Hawthorne, Mr. Chapman, and various Members of Parliament; but they would be referred to the Colonial Secretary, and asked to put their request in writing unless it was an ordinary matter.

801. Do you know Mr. Burns? Yes.

802. Do you recollect whether he called at the office on any occasion? No; I never saw him in the office.

803. Mr. Jamieson? I have seen him in the office.

804. Often? Two or three times.

805. Mr. Withers? I have not seen him.

806. Mr. R. B. Smith? No; I have not seen him.

807. Mr. Murphy? Yes, with Mr. Jamieson.

808. Could you say frequently? Not frequently.

809. How many times? A few times.

810. Mr. Cook? I do not know Mr. Cook.

811. Have you any list made of the works carried out by the Board? No; it could be made up.

812. Have you a list of the applications made by Members of Parliament? That could be made up from the record-book.

813. Will you look at your answer to question 1330, before the Select Committee? Yes.

814. The abstract quoted there is from your minute-book, is it not? Yes.

815. Made shortly after the appointment of the Board? Yes, on the 28th May; the Board was appointed on the 2nd.

816. Do you know whether the work referred to there had been initiated before that? Yes; I believe it was. The men were up there working before that.

817. Do you know how long before? I could not say for certain, but they had been a long time in the district. I had been there to pay them for Mr. Wise, and at Carlingford and Beecroft.

818. Were you present when the minute was made? Yes.

819. Was any particular authority given to Mr. Davies on that occasion? Not that I am aware of. Mr. Davies may have mentioned that he was going up with Mr. Deering to see about the making of roads at Hornsby.

820. Did you go to Hornsby with Mr. Davies? No.

Mr. T. C.
Hinchcliffe.
13 Mar., 1889.

821. Your report is that "Mr. John Davies visited Hornsby in company with Mr. Deering, and approved of certain roads being laid out and formed";—how did you get that information? From Mr. Davies.
- 821½. Is there any record of his approval being confirmed by Mr. Wells or Mr. Houison? No. There would be no record beyond the fact of its being in the minute-book.
822. Do you know whether that work was approved of? I could not say what work it was; it only referred to some roads there; I imagine it would have been proceeded with.
- 822½. Did the Inspector of Public Accounts ever visit your office? No. We applied to the Government twice to send one, but the Under Secretary for Finance and Trade said he had seen all the vouchers, which had been doubly checked, and it was unnecessary to send one out. Then the Chairman demanded from Mr. Dibbs that he should send somebody before he handed over the papers, but that was not complied with. That was quite lately. Before Mr. Dibbs came into power we applied to Mr. Burns to send some one, but he said it was not necessary.
823. You applied to Mr. Burns—who was Mr. Burns? Colonial Treasurer. All that they required was that the vouchers should go in for the advances. It is only where large sums have been received that they bother about sending an Inspector.
824. Did you receive moneys from any other source than the Treasury? Small sums sometimes.
825. For what? I could not tell you from memory; I could tell you in a moment if the books were here.
826. How much do you suppose these sums would amount to? I could not say. Down in the office I have got all the Treasury receipts.
827. Was it a hundred pounds, do you think? I could not say.
828. Do you know whether any money was received for the sale of any sleepers? Yes.
829. Do you remember from whom it was received? From the Works Department.
830. Do you know how much? About forty odd pounds. It was not received by me, but by the Chairman.
831. What became of the moneys—were they paid into the bank to the account of the Casual Labour Board? Yes. That I may tell you was irregular. I told the Chairman so with regard to several other sums—I think about £300 altogether—that the course he adopted was against the rules of the department. He said he would take the responsibility; but when I left the office I got him to sign a voucher transferring it from the bank to the Treasury. It was simply an irregularity on his part. He said he would take the responsibility, and I let him do so. There is the voucher in the office simply transferring the amount from the bank to the Treasury.
832. Would these amounts be forwarded by letter, or would some person call and pay them? Yes, generally somebody would call and pay them. We received small sums—one of £20 for a bridge from some local residents, who said they would give £20 for the construction of a bridge if the Casual Labour Board would take the matter in hand.
833. Would that money be paid over in cash? Very likely in cash. The cash or the cheque, whatever it was, was paid into the bank by the Chairman.
834. Then when he received the money would it not go through your books? No; that is where the irregularity came in. We were not allowed to receive any money except from the Government—that is, the books did not show any money that we received. We were supposed to pay it into the Treasury—into the miscellaneous account, or wherever it had to go.
835. Then all these amounts appeared on the receipts of the bank? Only on the deposit receipts and bank-book.
836. On no book that was kept at the Board office? No.
837. Then if any payments came to you or any member of the Board at your office they were not entered in your books at all? They would not be entered in the books in the ordinary way, but should be paid into the Treasury.
838. Can you say whether these receipts were principally cash or cheques? I think they were principally cheques.
839. Were any sums ever paid to you? Yes.
840. To any one else? Not that I am aware of. Sums paid to me would be for rations. For instance, one day a man put £2 on the table. I kept it for some time, not knowing the man, and thinking he would come back for it; but he did not return, and I paid it into the Treasury.
841. Did you receive any sums of money for sleepers for the Centennial Park? Yes; the Chairman did. That would be paid by the Chairman into the bank. The Public Works Department paid that.
842. Outside of these, would any other people pay moneys? Only those I have mentioned.
843. Was there some firewood sold? Mr. Deering initiated that, and all the cheques for that were paid direct into the bank by the Chairman.
844. Can you say whether the Board were in the habit of visiting the works? Yes, frequently.
845. Did you accompany them? Sometimes.
846. I don't mean when you went to pay, but on other occasions? I very seldom accompanied them unless it was to pay the men; but I know they did go on a great many occasions.
847. Do you know whether there was any work paid for by the Board which was outside the unemployed labour? In what way? I do not understand.
848. For example, cartage of stone, hire of drays, and so forth—material for roads? I am not aware of any.
849. Had the Board any carrying plant? No.
850. Can you tell us who carried the material? I do not know. The names would appear on the pay-sheet.
851. What has become of the plant and tools the men had? I suppose while the works were in existence they would be on the works; when they were closed they would be sent to Hurstville.
852. Who would be responsible for them? The superintendents.
853. Do you know whether any list was kept? They kept a stock account.
854. Were you responsible for them in any way? No.
855. Was any report ever submitted to the Board as to the amount of the plant? Yes; they were called upon occasionally for an account of the stock in hand.
856. Are you aware of any check being kept to prevent losses or thefts? No; only that the superintendents would be in charge and responsible. The papers in the office would show what they had in hand at any particular time.

Mr. T. C.
Hinchcliffe.
13 Mar., 1889.

857. Do you know of any case in which a contract made by the Board at any time was sublet? I knew of a case under Mr. Treatt's management, but I had nothing to do with it.
858. Do you know of any case in the Liverpool district where a contract was sublet and profit made out of it? No; I am not aware of any.
859. Have you been examined by any officer of the Colonial Secretary's Department recently, or by the Colonial Secretary, as to the working of the Board? No.
860. Did you see Mr. Dibbs? No.
861. Do you recollect, in the latter part of January, being at the office with Mr. Davies when reference was made to taking electoral rolls to the railway-station? There were electoral rolls taken to the various works, but I do not recollect anything about one particular occasion. It was usual to send the electoral rolls out to the works and let the men come in to vote.
862. Do you remember Mr. Davies asking you to take the rolls and drive up to the railway-station? No; I do not think he did.
863. Did you drive up? No.
864. Did you ever go to the railway-station in a cab with Mr. Burrowes? Mr. Burrowes has often been in the office. I cannot say for certain. I might have done so.
865. In the latter part of January, with some electoral rolls? No, I did not.
866. Did you ever speak to Mr. Burrowes with reference to the appointment of Mr. Mason as a member of the Inquiry Board? Yes.
867. Do you recollect when that was? It would be shortly after Messrs. Mason and Miles were appointed.
868. Do you recollect making any remarks to Mr. Burrowes to the effect that Mr. Mason was thoroughly investigating the working and the business of the Board? No. I told him I thought the new Board was going to be very economical. That was the remark I made.
869. Did you ever speak to Mr. Burrowes about your being short in some cash? No.
870. Did you ever suggest to him to claim that certain vouchers had been lost? No.
871. Any such statement is untrue? It is untrue. There were no vouchers lost that I am aware of. If there were a cash voucher lost the value would simply come out of my pocket, as I was answerable for the money. If it were a cheque voucher it would not be so.
872. Did you ever use such an expression to Mr. Burrowes as "Mr. Mason has got his knife into you"? I never used such an expression.
873. Will you kindly tell us the names of the different members of the staffs that were employed by the Board? Yes; myself, Mr. F. J. Josephson, Mr. Hibble, and Mr. Larnach in the office.
874. The outside staff? The superintendent at Narrabeen, Mr. Oxley, and the clerk—Mr. Neads. The superintendent at Hurstville, who controlled the whole of the works along the Illawarra line, Mr. Burrowes; the assistant-superintendent, Mr. M'Pherson; the storekeeper and clerk at Hurstville, Mr. Springall, succeeded by Mr. Larnach. At Hornsby, Mr. O'Donnell, superintendent, and Mr. Little, clerk and storekeeper. At Liverpool and Campbelltown the works were under Mr. Burrowes, with an overseer in charge. There were no clerks up there, so far as I know.
875. Have you ever had any quarrel with Mr. Burrowes? No. I always kept him, as I thought, at a safe distance, because I was given to understand that he was a very dangerous man to have much to do with.
876. Did the Board ever complain of his neglecting his duties? Yes.
877. When? I could not tell only from the letter-book. It would be entered in the letter-book.
878. Was any remonstrance sent to him? Yes.
879. That is on record? Yes, it is on record.
880. But he was not dismissed? No.
881. What are you doing now, Mr. Hinchcliffe? I am doing nothing; my three months' leave of absence is not up yet.
882. What is your present address? Nos. 103-105, Oxford-street.
883. I suppose if the Commission wants you further a summons sent to that address will find you? Yes.
884. *Mr. Franklin.*] Your position, Mr. Hinchcliffe, was somewhat analogous to that of Chief Clerk and Accountant? No; I don't claim the title of Accountant. Secretary and Paymaster, that was my title.
885. You found that the operations of the office grew into something like the dimensions of an ordinary department? Yes.
886. Therefore it was necessary to adopt the ordinary system in regard to correspondence, and you had the sole control of that? Yes; all the papers that came into the Department passed through my hands.
887. And were dealt with by Mr. Davies, as the head of the department? Yes.
888. The works of the department or Board grew into the proportions of works of construction—roads, bridges, and culverts? Yes.
889. Requisitions for such works were pretty continuous? Yes.
890. And the attendances of the professional members of the Board were frequently interrupted by absences necessitated by the work of their own departments? Yes. Mr. Wells, I might say, was frequently absent; Mr. Houison not so frequently.
891. And during their absence cases of immediate necessity were attended to by Mr. Davies? Yes.
892. And the works were divided over several sections in the county of Cumberland, north and south? Yes.
893. Administered to in the field by skilled officers? Yes.
894. And these officers were administered to by the head officers of the Board? Yes.
895. And you say that during about twenty months you spent about £220,000? I think it was about £240,000, but the books will show that.
896. And during the time of that expenditure the professional members of the Board were of necessity frequently absent? Yes; they were Civil Servants, and they had their own departments to look after.
897. Are you aware that one of the two was absent for a period of five months out of those twenty months? No; I have no knowledge of that.
898. You have no record of it? No. The members of the Board would often meet outside the office. For instance, the Chairman lived at Campbelltown and Mr. Houison at Parramatta, and they would meet often in the trains.

899. You have had considerable experience of Government Departments? Yes; but not as head of a department. Mr. T. C.
Hinchcliffe.
900. You know their internal working? Yes.
901. Would you consider £12,000 a month detailed expenditure a large sum? As ordinary expenditure? 13 Mar., 1889.
902. Yes? I do not know.
903. I mean an ordinary department. I don't mean railways for example. The ordinary expenditure of a department is what I mean? I am sure I do not know.
904. You say your expenditure was recouped by the Treasury at intervals in sums of £6,000? Yes.
905. That would make it necessary to have a fresh credit every fortnight during the whole time? About that. Of course it gradually got less towards the close.
906. While you were holding the responsible position, had you full opportunity of checking the demands made for money in the shape of vouchers and ascertaining the *bonâ fides* of each claim? I would simply be guided by the officers who signed the vouchers. But I would not sign a voucher or draw a cheque unless it was properly certified to by the proper officer.
907. From that I conclude that you had every confidence in the officers who were working with you? Yes.
908. You had no reason to doubt them at all? No.
909. Which officer on the field staff drew most largely upon you? Mr. Burrowes.
910. But you say he would not handle the money at all? He would simply send in the vouchers, and I would go out and pay it in the presence of witnesses.
911. You had no reason to doubt that the items certified were perfectly correct? None whatever; I could not tell anything about that.
912. In the matter of small payments—interim payments, such as wages for the days in the intervals between the ordinary pay-days—these sums would be paid at once by cash? Yes.
913. Would the individual signatures of the men be taken on the face of the vouchers? Yes; the men signed the vouchers.
914. In furnishing these vouchers to the Treasury, it was necessary to give a full acquittance before you got a fresh credit? Not always; we would get a second £6,000 before there was an acquittance for the first. We might have a thousand pounds lying to our credit. We would have to find out that next day.
915. In the case of absentees from any causes, how did you deal with small amounts left on the pay-sheet? In the first instance the chairman signed for absentees. Then I put them in the book and I took his receipt for the amount, mentioning the name and the date. If the man came in in the meantime the Chairman would pay him, and sign on the margin of the book. In a certain time the Auditor-General asked for these receipts, and he objected to this system. He said that where money was not received by the men it was to be paid direct into the Treasury. That has been done ever since.
916. Have these sums been all paid into the Treasury? I saw, at the Auditor-General's to-day, that they had been paid in and an acquittance given.
917. In the expenditure of £12,000 per month there would be approximately £2,500 or £3,000 per week? Yes.
918. There would be tools and rations and so forth? The number of men varied from 6,000 down to 1,000.
919. In allowing for the proportion of the £12,000 per month what would the amount be for tools, stores, and camp equipment, and what system of storekeeping had you? I cannot say. The superintendents had charge of that. They used to send in a list from the stock-book, and we had a printed order-book, and on requisitions coming in we sent orders for what was required.
920. Then orders were issued to the Government contractor? Yes.
921. Who supplied the tools at the ordinary contract rates? Yes. There was no particular rate for ours.
922. Am I to understand that the tools were not got under the ordinary yearly tender schedule? Yes, frequently; but sometimes where an item was pressing we had to go somewhere else.
923. Who ordered them? I ordered them through the head office. They were all ordered through the head office.
924. Are you aware when Mr. Davies took the whole responsibility that the other members found it inconvenient to attend? They said they could not make it convenient to attend daily, as they had done during the first month. There was a large number of matters to be dealt with daily, and they stated that their own work was getting into arrears, and they could not be there at any particular time, but they would give every attention they could, and when anything was pressing they could be sent for.
925. You were of opinion that this work pressed rather heavily upon them in addition to their ordinary duties? Yes, if they had attended to it as they did during the first month.
926. Do you think that when they relaxed their energy the service suffered in consequence? Well, I cannot say that.
927. If you won't say that, do you believe Mr. Davies was fully competent to attend to all the duties of the Board, professional or otherwise? I think so.
928. You don't know whether these officers would have liked to be relieved from their duties? I do not know.
929. You could not gather that? No.
930. Do you think it would have been better if a professional head had been appointed when the thing grew to such dimensions? Well, I think it would.
931. It would have been better? Yes; I think so.
932. Did you know, when you undertook the responsibility, that the work of the unemployed might be extended to water-conservation, irrigation works in the interior, water-storage, and tank-sinking? Well, I think it was mentioned in the appointments of the Board; but I did not pay much attention to that.
933. You don't know, as a matter of fact, that the money was voted for the purpose? No; it was voted for the purpose of giving employment to these men;—clearing Crown lands was mentioned.
934. You think the intention of the resolution was met by the one item—clearing of Crown lands? Yes, and the making of roads.
935. You think it would have been too large a matter to go into the conservation of water, because it could only have been done by professional men, who could make surveys and things of that kind? I do.
936. Do you know the ordinary expenditure of the Roads and Bridges Department? I do not.
937. You don't know the expenditure of the staff? I do not.

Mr. T. C.
Hinchcliffe.
13 Mar., 1889.

938. Would not the duties in your offices have been very much assisted if you had been in strict accord with the officers in the field? We were in accord with them.
939. You mentioned that there was a sort of strained relationship between yourself and Mr. Burrowes; you said you did not care about mixing up with him more than you could help? No; but you could be on good terms with a man without doing that.
940. What I mean is that a comparatively small staff, in strict accord, would have been attended with better results? I do not think so. I treated Mr. Burrowes the same as any other superintendent; he was always civil and polite to me, and I treated him the same.
941. *Mr. Waller.*] You told the President the names of certain officers;—have you told the names of all the employes of the office? I think so.
942. The clerks? The whole of them.
943. Do you know every branch office? Only at the camps. A branch office would only be in connection with the principal camp. The superintendent would appoint clerks to assist him in making up the pay-sheet, or anything else.
944. What would be the other duties of these clerks at these branches? I could not say. I presume it would be to look after the stores and issue the rations, but I could not say. I was never on the works for any length of time. I simply went to pay the men and came back again. I had nothing to do with the inspection of the works, nor with the arrangements there in any way.
945. How many branches were there? They varied from time to time.
946. What was the greatest number and the least? I should think about twenty to twenty-five. They would be spread over the works, occupying particular places. Of course seven or eight of these would be under one superintendent.
947. Would it be a ganger or the superintendent who would appoint these clerks at these different places? The superintendent.
948. And there were how many superintendents? Four. These superintendents had the power to appoint clerks at these different places.
949. Well in the ordinary way the appointments would come from the Board? I really do not know how it was with some of them. They were not clerks really. I do not think they devoted the whole of their time to that work.
950. I asked you whether the superintendents had power to appoint these clerks? They would do so, and perhaps refer to the Board for approval.
951. In all cases? Well, I could not say; I would not be sure.
952. Would there be documentary evidence of the nominees of the superintendents? Yes; I think so.
953. I mean would there be written applications to the Board afterwards to confirm the appointments? Yes; in the ordinary way.
954. Shall we find that in the correspondence? Yes; I think so.
955. What steps were taken to ascertain the character of these assistants appointed by the superintendents? I could not say.
956. Would it come under the province of these superintendents or their assistants to make out the vouchers of the payments to be made to the different gangs? Yes.
957. And also the names of the men who were working on the different gangs? Yes.
958. And also the piecework which these different men did? Yes.
959. And also the time when they went on to work and the time they left? Yes.
960. How would the overseers be appointed? In the ordinary way, subject to the approval of the Board.
961. Would the Board be asked to approve of the appointment of overseers? In the ordinary way they would.
962. What do you mean by the ordinary way? I mean that it was customary for the Board to approve of the appointments of the superintendents.
963. As a rule, do you think the superintendents appointed them on their own responsibility, or on the authority of the Board? It was both ways. I know on several occasions the superintendents made appointments themselves.
964. May the Commission take it for granted that where they fail to obtain written evidence of these appointments such appointments were made by the authority of the superintendents themselves? Yes.
965. When the pay-sheets came in to you for payment, your duty, I apprehend, was simply to see that they were in order? Yes.
966. Did you initial them? I signed them in full.
967. Before or after they were paid? After they were paid. They were filled up from the pay-sheets, with the name of the man and the amount received. Under the column I used to put "T. C. Hinchcliffe."
968. Previous to that, what steps were taken to ascertain that the amount stated in the pay-sheets was correct? The pay-sheets would have to be made out, in the first place, from the time-books of the overseers, made out by the overseer or clerk, checked by the superintendent, and certified by him, and then sent on to me to be re-checked in the office and paid.
969. Who checked them in the office? The clerks or myself.
970. Did the clerk who re-checked the voucher initial it after he re-checked it? As a rule, yes; but it was not an absolute rule. It was generally ticked, and we understood the ticks.
971. Do you think it was an advisable thing to pass a pay-sheet or an account as correct without having absolute proof? I cannot see how we could get absolute proof.
972. Do you think it was a wise thing to do in the absence of proof;—to pay it without having an officer to check it? But we did not do that.
973. Do you think it business-like or advisable to pass accounts before you were satisfied as to their correctness? I would not think it was business-like to do so.
974. Then in the case of your receiving certain pay-sheets not having the initials of the checking clerk, what proof have you got as to their being correct? Of course we would not have any absolute proof of the correctness of the accounts that came in. The only proof would be that we had the signature of the superintendent.
975. And your own clerk? Yes, our own clerk in the office.
976. What other check had you? We had to get the money—however much we wanted to pay the men—so many sovereigns, half-sovereigns, half-crowns, shillings, and coppers. That would be a check.

977. That would be a check as to the correctness of the sum total, but it would not be a check as to the correctness of the amount. What check had you as to the correctness of the account that the superintendent made out? Only the fact of its being rechecked in the office.

Mr. T. C.
Hinchcliffe.

13 Mar., 1889.

978. And by his assistant, who might or might not have been his own appointment? Yes.

979. Under these circumstances would it be possible for any fraud to creep in in the way of the men being paid for over-time that they had no right to be paid, or in the way of men being paid who absolutely were not on the works at all? I do not think so, unless there was collusion amongst the whole of the officials—the overseers, clerks, and superintendents—and even then it would be detected when the men came up to be paid. The men were paid for block so and so. They were numbered previously. It was known who were working there, so there would be a considerable amount of risk of their being found out even by the other men.

980. What I mean is, that on this pay-sheet there are 300 men or 1,000 men, as the case may be; do you mean to tell me that each man as he comes up is cognizant of what would be correct against each man's name—would it be possible, under such circumstances, that Smith could be paid £4 6s. 8d., when Smith was only entitled to be paid £1? If there were collusion between all these officers.

981. Where is the necessity for that? There would be the overseer, he stands there calling the names of his own gangers. He would know what the amounts were, and so would the superintendent. I think as good precautions as could possibly be taken were taken in the payment of the men.

982. Do you know anything of the authorities given to make roads on the different works? Only by the papers.

983. What became of the papers? They would all be in the office.

984. They did not go back from your office to the Colonial Secretary's Office? No.

985. Have you got in your office the papers relating to the authority to make roads on the Hornsby Estate? I think so; they were all printed in these books.

986. By whom was the authority signed? I cannot say without reference. The Chairman signed on behalf of the Board, and I think the papers were signed by the Colonial Secretary.

987. I notice in your answer to question 1250, in the evidence before the Select Committee, that reference was made to certain petitions. I want to ask you whether these petitions can be found? I think so, if they are in the office.

988. But if they were sent out of the office would there be records where they were sent and when they were sent? Yes.

989. And of all petitions and correspondence? Yes.

990. I notice that in answer to question 1257 of the same evidence, that you say there was a letter addressed by you to the Honorable J. F. Burns—was that letter produced? Yes; it is in the printed matter.

991. You told the President that you had a considerable amount of experience in the Government offices; and you told him that everything was carried on under the Casual Labour Board, which was a sort of Government department, in exactly the same manner as in any other Government department? Yes.

992. Can you tell me the reason why, in a very short time, all records in the shape of Minutes and Proceedings of the Board were stopped? They were stopped by order of the Board.

993. What was the reason? Because the whole Board could not meet regularly—the two professional members could not meet at stated times.

994. Don't you think that the minutes might have been kept by the executive head? The Board did not see the necessity for it, and I do not myself, for the reason that everything appears on the papers as to what was done.

995. But as to what was not done, how about that? Of course then there would be nothing to record.

996. Do you think that is the usual way in which a department is conducted? Well, I never had charge of a department before.

997. Do you think it is the usual way business is conducted, without any record as to the Minutes of Proceedings? I think so.

998. You told the President, I think, that there were some estimates of cost made on all road-work? I do not recollect saying that.

999. Were there any estimates? Oh, yes; the superintendents would fix the price when the work was laid out.

1000. And the probable total cost, that would be estimated before the approval was given? I think so.

1001. Can we find evidence of that? I should think so.

1002. You do not know from your own knowledge? Oh, yes; it was stated in a rough way. There was some attempt made to ascertain the cost of different kinds of work. In sending the papers to the superintendent he would be asked to state what would be the probable cost.

1003. Who made these estimates? The superintendents.

1004. Who checked them? I cannot say, perhaps his assistant. The only estimate he would send in would be the statement that he had gone over this road, that it was 2 miles in length, as the case might be, and it would cost so and so.

1005. Would no one else check that? Very likely some of the members of the Board would check the actual cost.

1006. Have you any knowledge of its being checked? I have knowledge of its being checked in a great many cases.

1007. In all cases? I could not say in all.

1008. Owing to the frequent and enforced absence of the professional members of the Board, was it possible that these estimates made by the superintendents might pass unchecked? It is possible.

1009. Do you think the superintendents were men to whom that kind of work might be safely entrusted? One or two of the superintendents are very good practical men; and their reports have been found strictly correct. In this case their reports would probably be checked—the professional members of the Board would be consulted, and if a work which was estimated to cost £600 finally cost £650, it would be paid without demur. If that estimate were an improper estimate it would be inquired into, and they would be able to arrange matters. There was a check kept upon undue payments in this way. Every fortnight a check was kept on the average earnings of each man. If a man earned more than 4s. or 4s. 3d. a day,
it

Mr. T. C.
Hinchcliffe.
13 Mar., 1889.

it would be marked and sent to the superintendent, who would be asked why these men earned so much. He might explain that by saying that these men stopped up late, and were up early in the morning.

1010. That is the only check the Board would have—they would ask for an explanation why a man's average earnings were so much. Now, as a matter of fact, were not the superintendents the men who laid out the work, who estimated the cost of the work, and at the finish sent in the absolute cost, and generally were judge and jury in the matter, or had the Board a responsible officer, of known integrity and position, who went out and surveyed it and gave proper returns as to the cost? The two professional members of the Board, it was their duty to look after that.

1011. Did they do it? They did it to the best of their ability. Of course, the superintendents, I may tell you, with the exception of Mr. O'Donnell, were all surveyors.

1012. They were surveying their own work though;—was the work measured by a responsible head, I do not mean by the superintendents, by other responsible heads? I cannot say.

1013. Were certificates sent in by professional heads;—I do not care whether it was Mr. Wells or some other gentleman appointed to certify that certain sections of land had been measured, and the measurement was so much and the charges correct? No; it was the superintendent that did that as a rule. The members of the Board would simply go and inspect the work done.

1014. But they could not tell the measurement? The number of cubic yards would be taken out and the amount would be checked. In the first instance the distance would be given, and the total payments would be made according to the distance.

1015. But that was given by the superintendent? Yes.

1016. In answer to question 1310, in your evidence before the Select Committee, you told Mr. O'Sullivan that a list had been made out and the works carried out by the Casual Labour Board;—did you forward that list? No; it was not required.

1017. Have you any knowledge what lands or roads were surveyed or works undertaken on the Burns, Withers, and Smith's Estate? No; I never saw them.

1018. Nor the Holt-Sutherland Estate? I have seen the Holt-Sutherland roads—some of them.

1019. Have you any knowledge who made the application for the roads? I have no particular knowledge. I believe that one of the works was handed over from Mr. Deering, and that there were some petitions from local residents; but they will appear on the papers.

1020. I suppose your appointment did not cease in the Service, so far as the Immigration Office was concerned, when you were appointed to the Casual Labour Board? Yes; I presume so. I was told that I could go back to the Immigration Branch.

1021. Could you have returned then? Yes; I could have elected to go back there, but I preferred to take leave of absence.

1022. You said you had to pay wages;—had you to pay any other moneys? Yes; all moneys.

1023. Were there any moneys that you would pay without there being, of necessity, anybody else present? No; there was always somebody else present.

1024. How was it that you kept only a ledger and cash-book? Because they were the only books required. There were the vouchers; the whole of these were kept and sent to the Auditor-General. I received no instructions from the Casual Labour Board that anything else was required. If there was a £6,000 advance on the 18th there would be an acquittance sent in on the 30th.

1025. Do you think, with your experience of book-keeping, that these were all the books required? I have not had experience of book-keeping.

1026. None at all? I am not an accountant.

1027. You had from time to time a considerable amount of petty cash in your possession? From £50 to £100.

1028. Were all the payments made on account of petty-cash payments made in the presence of somebody else? I should think so.

1029. Would the vouchers be witnessed by anyone besides the one who passed them? Every voucher bore the signature of the party who received it; but besides the party who receipted it, there must be someone else to witness the signature of the person receiving the money.

1030. Is there any account of postage and cab-hire? As regards postage, we used the Government stamps. Cab-hire was receipted for by vouchers.

1031. And all other payments? There was one exception to that. The Chairman from time to time asked me to give him a cheque or cash to be receipted for by him. He would want it for expenses from time to time. Of course it was stated at one time that the Board were to be paid for their services.

1032. How much would he receive, under those circumstances, from time to time at different times? £25 at a time, perhaps; but he would tell me on account of what expenses the sum was drawn. It was to be refunded or a voucher given when the fees were received.

1033. Has he ever given a detailed account of the sums? No. He was allowed 10s. per day to cover his expenses, and when he got the 10s. per day from the Colonial Secretary, I added up the advances that had been made to him, and handed him the balance. His voucher came to £260 for one year and eight months at the rate of 10s. per day.

1034. I want you to give your attention to what you stated to the President regarding the timber and sleepers. Was there any other sort of timber, such as posts and rails for fencing, which may have been sold? There were some posts and rails for fencing near the Unwin's Bridge Road; but they were used by the Government.

1035. Was it not possible that some of these may have been sold? I do not think so; but, of course, I cannot say.

1036. Have you any reason to suppose it was done—have you any suspicion it was done? No.

1037. Did it ever strike you that such a matter might be going on, as the sale of timber, without authority? It did not.

1038. Who would have the opportunity of selling this timber? The local superintendent.

1039. Nobody else? No.

1040. Could the Chairman of the Board give the authority as executive head without reference to you or anybody else? No; I do not think so. There would be a memo. sent by the superintendent, and an account of the sales.

1041. Was the timber all sold by public auction? I think so.

1042. Could sales not have been effected privately? That might be so.

1043.

Mr. T. C.
Hinchcliffe.
13 Mar., 1889.

1043. Were there any private sales? I cannot say.
1044. Was any money received by the Board for timber other than for which you got auction-sale returns? Possibly there may have been some payments for sales by private contract and not by public auction.
1045. That is possible? It is possible.
1046. And the sale would be made by the superintendent, and not the Chairman? I do not say that.
1047. What became of the moneys? The Chairman would receive the moneys for certain sales and pay them into the bank to the credit of the Casual Labour Board, and they would become absorbed in the balances of the £6,000.
1048. And entered in the book's balances as so and so? No; not entered in the books at all except in the bank-book. They should not appear in the books. The Chairman when he received the first cheque paid it into the bank. I told him that that was not the usual way, but that it should be paid into the Treasury.
1049. In spite of your remonstrance he continued to adopt the same system of paying into the bank? Yes; all the time he paid it in.
1050. Have you any knowledge of the amounts that came into his possession in this way? I would know the auctioneer would pay the money because I would get a duplicate slip.
1051. Would you always see the auctioneer's account of the sales? Yes.
1052. Who had possession of them? The Chairman.
1053. What became of them afterwards? I did not see them afterwards. The Chairman would keep them in his own drawers.
1054. Could anything else be disposed of besides timber? Of course they could dispose of anything belonging to the Government if they had the opportunity and wished to do it.
1055. I mean so far as the clerical operations of the Board were concerned, was it possible for property belonging to the Government to be disposed of without your knowledge? It was quite possible, but I do not think that anything of that sort was done.
1056. Were these applications for the refreshment of the account by £6,000 signed by all the members of the Board? Yes.
1057. In every case? In every case but one, when Mr. Wells was away; and I do not know that he did not on that occasion sign it afterwards. He was away and we wanted money. There would be two members of the Board to sign it, and my name was attached to it.
1058. There would be no case in which your signature and that of the Chairman would be sufficient? No.
1059. Can you tell me whether Mr. Wells carefully examined the books and vouchers? I do not think Mr. Wells examined the books.
1060. Did Mr. Houison? No.
1061. Did Mr. Wells check the proposed expenditure in the shape of purchasing plant by the different superintendents and their gangs? There would only be the tools, and there was a schedule price for all the tools.
1062. By whom was the schedule made out? It is printed.
1063. Would there be any supervision as to the propriety of a requisition for a certain number of different tools for a gang—whether it was too large or too small? The tools would not be ordered for any particular gang.
1064. How many men would be in a gang? There would be about eight in a gang.
1065. I will put it in another way, whether the requisitions sent in for tools, or for anything else—tools, tents, water-tanks—anything that was required—were checked, and if checked, who checked them to see that there was not more asked for than was needed? Generally the Chairman.
1066. But when he did not do it, who did it? The superintendents. We had to rely upon their word for it: so many men would require so many tools.
1067. When the Chairman examined these, did he initial them and take the responsibility? No; he would send out to the clerk to sign the order.
- 1067½. Would he initial it? No, he would not initial it.
1068. If he said he never examined these requisitions, would there be any proof that he did examine them? Not that he examined any particular requisition.
1069. So that the requisitions might pass unchecked by any person? They might.
1070. Have you any conception of the cost of the tools required on one of these requisitions—that is, in any particular case at one time? I could not say. Latterly the requisitions have been very small as regards the number of tools.
1071. We will take it at the first when you had a large number of tools, would it be £100? Oh, yes; more than that.
1072. £1,000? No; it would not be that—perhaps it would be £200; that would be, perhaps, for 500 men.
1073. Have you any knowledge of how many of these tools would be lost? We could not possibly go into these details. We had to depend upon the superintendents.
1074. If the superintendent sent a second request within a very short period of the first one? No; we trusted to Mr. Burrowes not ordering anything that he did not require. He was responsible.
1075. Yet you say that Mr. Burrowes was a dangerous man? I did not say that to be used as evidence. I had no idea it was to be put down.
1076. *President.*] You may depend upon it that everything you say will be put down? Then I should like to withdraw that. I have no reason whatever to doubt the honesty of Mr. Burrowes. I was advised that he was a man to steer clear of; but I have always found him very nice and gentlemanly. The only words I have had with him were in the interview I have told you of.
1077. *Mr. Waller.*] Is it your opinion of Mr. Burrowes that he is thoroughly trustworthy—that if he makes certain statements to the Commission they might be looked upon as perfectly true? No; I would not say so.
1078. You would not say that he is a man in whom implicit reliance could be put? I would not place a great deal of reliance upon him.
1079. And yet this is one of the men who would sign requisitions for large amounts, and you would accept them as being correct without inquiry? These requisitions would be in his letter-books, and they would be seen by the assistant superintendent, overseer, and storekeeper, and if there was any looseness it would soon be detected.
1080. Where were the tools principally obtained? From M'Lean Bros. and Rigg. 1081.

Mr. T. C.
Hinchcliffe.
13 Mar., 1889.

1081. Under contract? Not exactly under contract. They are the Government contractors, and the prices were agreed upon. They objected in the first instance when the vouchers were sent in to supply the articles at the terms provided in the Government contract, so they sent us schedule prices, but not under the regular contract. They said the quantities were so small that they could not do it.
1082. What is the difference between the contract and the schedule prices? I could not tell you; they vary at different times. Kegs of powder, for instance, cost more at one time than at another.
1083. You had to pay them the prices that they chose to charge? Yes.
1084. As to those orders that went to M'Lean Bros. and Rigg;—did orders of the same description go to any other firm? Well, we always dealt with them. They supplied the bulk of the requisitions.
1085. What means were taken to ascertain that they would supply the tools at a cheaper rate than any other house in town? I do not think that any means were taken.
1086. Who authorized dealing with M'Lean Bros. and Rigg? They were the Government contractors.
1087. Who authorized giving a monopoly of the tools to M'Lean Bros. and Rigg, they having refused to accept the position as Government contractors? The Chairman would authorize that.
1088. Did the Chairman sign the orders to initiate dealing with M'Lean Bros. and Rigg? That was initiated before the Board came into existence.
1089. Did they deal with them previously under schedule prices or at the market rates? At the market rates.
1090. Do you know whether any attempt was made by calling for tenders to ascertain whether some of the other large houses were prepared to enter into a contract to supply the articles at schedule prices? No; the only contract we had was for rations.
1091. About what money did M'Lean Bros. and Rigg receive from the Casual Labour Board;—would it amount to £5,000? I could not say.
1092. Is there any account with M'Lean Bros. and Rigg? The accounts are all kept together for each district, and you could see the amounts there. Their account for Hurstville would appear under the Hurstville account, and their account for Campbelltown under the heading Campbelltown.
1093. Is it not strange that you did not open an account with the one firm from whom so much was purchased? ———
1094. You say they were paid by voucher? Yes.
1095. Do you think that the Commission would be justified in supposing that M'Lean Bros. and Rigg from the different works would have got £2,000 or £5,000? No.
1096. If we require your assistance to find these items out, can we rely upon having it? Oh, certainly.
1097. Don't you think it would have been well to have kept these different items in one book? I don't know; I was not an accountant.
1098. You occupied the position of accountant? No; I did not.
1099. What was your official standing? Secretary and Paymaster.
1100. You had no accountant? No.
1101. Do you say that you had no knowledge of keeping accounts? Not beyond cash-books and ledger.
1102. What experience had you in the Mines Department in keeping books? I had no books to keep.
1103. What experience had you in the Immigration Office in keeping books? I simply kept a cash-book there after Mr. Wise had charge of the unemployed.
1104. What is the different class of work that you have had to do for the Government? It has been various. Under Mr. Wise I had charge of the correspondence; I had the correspondence and records, and when I took charge of the unemployed I had those books.
1105. What reason was there for your receiving a situation which was eminently a situation belonging to an accountant, where everything that had to be done relied upon figures? Well, I kept all these accounts for Mr. Wise. There was no elaborate system of book-keeping required.
1106. Fancy yourself a merchant in the city, and would you say if you were doing a business worth £250,000 in 20 months, would you say that it would not require careful book-keeping? These were all the books that were kept.
1107. Here is simply a question of how much a certain firm received for goods sold and delivered, and the only answer you can give is that it can be picked out of the books. You cannot ask a man to believe that there can be a proper system of supervision when you say the amount received by a firm can be picked out of the books? I told you I did my best in the position; I was not instructed to do anything more than I did.
1108. Who appointed you? The Colonial Secretary.
- 1108½. Who recommended you? I do not believe I was recommended at all.
1109. How did you get the appointment then? It was simply a letter saying that myself and Mr. Josephson were to be detached to go with the Casual Labour Board.
1110. Did you know the members of the Board? I knew Mr. Davies by sight as a public man; I did not know the other gentlemen.
1111. Do you think Mr. Wise had anything to do with it? I do not think so; the letter came from the Colonial Secretary.
1112. I do not say this disrespectfully, but do you think if you had a business of your own the transactions of which amounted to £240,000 in twenty months, that you would like to appoint a man with so little financial knowledge as you have to the important position of looking after and checking these accounts? I could not answer that.
1113. If we want a statement of the goods and plant supplied by the different firms to the Casual Labour Board, how are we to ascertain that fact? It can be got out of the cash-book.
1114. As regards individual firms? Yes. You see we would have required a large staff to have kept a complete system of books showing all these things; we understood that this was to be only a temporary thing.
1115. The Commission understand from you that there is nothing to show that either the executive head or Mr. Wells, or Mr. Houison, systematically and regularly checked these accounts? There is nothing at all.
1116. You said that pay-sheets were sent in checking the amounts paid to every man on the works? Yes.
1117. Did Mr. Wells or Mr. Houison attend the office irregularly? Yes.
1118. How often did they attend? Sometimes once, sometimes twice in a week.
1119. How long did they continue to attend twice in a week? I could not say.
1120. Did they attend twice in a week even when the Board was in full swing? Yes.
- 1121.

1121. Mr. Wells was away two or three weeks at a time, and Mr. Houson tells us that he was away for five months at a time? I suppose that would be so, but if they were not at the office, these gentlemen would meet occasionally in the train.

Mr. T. C.
Hinchcliffe.

1122. But could they have an opportunity of checking the accounts in the train? I do not think that Mr. Houson or Mr. Wells ever attempted to check accounts.

13 Mar., 1889.

1123. Do you think they attended so frequently to the official duties as to have a thorough knowledge of the internal arrangements of your office? I could not say. They are better able to answer that question themselves.

1124. I will ask you if, in your opinion, you think that the books of the Casual Labour Board were so kept and so examined that the Board could at all times check orders for goods and the disposal of those goods after delivery? Yes; they could tell at any time.

1125. Would it be possible under the system that existed for men who were dishonest to order more goods than were required to take delivery of those goods and dispose of them for their own benefit? If they chose to be dishonest they could do so.

1126. In fact some of the goods charged for need not be on the ground at all? They would have to be on the ground, because otherwise the order-books would show that goods were ordered that were never there.

1127. Did you notice in to-day's paper, in the examination of the man Webster at the Court-martial, that a system was in vogue some time ago as to the supplying of tunics,—that the Government paid for three tunics, and out of that the man who supplied the tunics kept one and gave the soldier two. I want to know whether it would be possible under this arrangement for a system of a like character to exist? No; I think not.

1128. Why not? Because the goods would have to be addressed to places where they would have to go. The storekeeper was always on the ground, and he would see the order that had been sent by the superintendent.

1129. Could the superintendents order the goods on their own authority? No; they could not order them on their own authority. They had to send their requisitions to us.

1130. You also said that one of the superintendents was a man you could place no reliance on? I said I would not believe all the statements he would make.

1131. I want to know whether, under such circumstances as you have described, a man who was not honest might make use of these goods to his own advantage? Yes; if he chose to be dishonest I believe he could.

1132. In certain payments which were made by cheques for vouchers received, did it ever happen that you handed the Chairman the cheques, and he would bring in the vouchers afterwards? No.

1133. Did you ever pay the Chairman for anything before you got his voucher? I would draw the cheque in the ordinary way when the voucher was produced before me and certified by the proper officer.

1134. Did the Chairman ever produce vouchers to you for other payments than the wages of the men? He might produce vouchers and ask me for certain cheques.

1135. What vouchers? Any vouchers.

1136. Would he take the cheques when they were drawn? In one or two instances he did—for instance, he would take Mr. Kidman's cheques.

1137. Did he ever take anybody else's cheques? I think he has taken cheques to M'Lean Brothers and Rigg.

1138. Would there be others? I cannot think of any at the present time. They would be drawn out in favour of Mr. Kidman or M'Lean Brothers and Rigg, as the case might be.

1139. I simply want to know if in certain cases he would produce the vouchers of these people and take their cheques? Yes.

1140. Would there be any other cases;—in matters of refreshment at this Holt-Sutherland Estate, who would take the cheque for expenses? I do not know of any case. To my knowledge there was no case.

1141. What sort of an establishment was kept at the office of the Casual Labour Board? It was a private house, part of which was converted into the Board's offices.

1142. You say that the Chairman was so anxious to be at his work constantly at early hours that he stopped there? I do not know that he was "anxious." He stopped there on some occasions rather than go all the way to Campbelltown.

1143. What sort of accommodation was there? He had a single bed there. He had a housekeeper, the wife of a man who went out working. The woman gets about 6s. a week, and is allowed to live there rent free.

1144. What is the name of the man? The name of the man who kept the house was Baker.

1145. What did he work at? I could not say.

1146. Was he working for the Board? Not that I know of. I never saw his name on the books.

1147. Who owned the house? Burrows & Gleeson.

1148. Had this man who lived in the house access to the papers and documents? Yes; he had access to those that were left out.

1149. You say you are not aware whether he was in the Government employment or on the books, and yet he had access to the books? Anything of importance would be locked up in one of the two safes. We had one upstairs and one down.

1150. That man might be actually in receipt of payment from the Board? Not to my knowledge. I believe these people are well known to the Chairman. That is all I know.

1151. I should think it was your duty, taking the place of accountant, to see whether his name was on the pay-sheet? He was not working in the office; that is all I can tell you.

1152. You told the President that you had a guarantee of £500 a year in the Immigration Office, where you had no monetary responsibility? Oh, yes, I had monetary responsibility. Mr. Wise had £2,000 or £3,000 passing through his hands when the unemployed were under him.

1153. Mr. Wise was responsible for that? But I had responsibility too.

1154. And when you came to handle £5,000 or £6,000 you required a guarantee only of £1,000? That rests entirely with the Treasury; they regulate that.

1155. What means did you adopt to ascertain the correctness of any voucher? The only means of ascertaining the correctness of any voucher is by the name attached to that voucher.

Mr. T. C.
Hinchcliffe.
13 Mar., 1889.

1156. The officer's name, I presume, you mean? Yes. Of course the voucher would give all the details, and any one looking at the voucher, if it were very far out, would be able to tell if there were an over-charge or anything of that kind.
1157. But there was no check upon the articles supplied? The voucher would be certified by the proper officer and checked in the office. We could not go out to the bush and look up the details. That would be too much to do.
1158. Had you requisition-books? Yes—order-books. They had butts in them.
1159. Who signed for the delivery of the goods? The various storekeepers wherever the goods would go on to.
1160. And who appointed them? They would be appointed by the superintendents, subject to the approval of the Board.
1161. You say they were all in office when the Board took charge? No, not all. If a superintendent appointed a storekeeper he would send word that he had appointed so and so subject to approval. Things of that kind had to be done in a very quick manner.
1162. Can you tell me how many men were storekeepers at the time you took over the business, and who continued to be storekeepers right through? There are only two of those who were there when we began still there.
1163. How many more were appointed under the Board's rule than were in existence when the Board took possession? I could not say. The superintendent will be able to give you better information about the storekeepers than I can do.
1164. What pay would they get? They would only get about 5s. or 6s. per day.
1165. Do you know where they were picked from—out of the unemployed, as a rule? Yes.
1166. Do you know that these men were not appointed as storekeepers without the approval of the Board? I could not say.
1167. Had these men a considerable amount of stores under their control? Not a considerable amount. You see the works were spread about a great deal.
1168. About how much would a storekeeper have? I really could not say. The stores now along the Illawarra line are sent to Hurstville.
1169. What would stores include? Simply tools, shovels, and other implements, and powder, &c.
1170. And also food? Yes. We know that when we send fifty men to a different place we know that rations have to be provided for them.
1171. Were there any other sources from which money could be obtained by the Casual Labour Board than by the sale of timber? No; except that item I mentioned where local residents gave £20 towards a bridge. That is the only case I can think of.
1172. Did you get any money from municipalities, for instance? No; the system adopted with regard to municipal councils was set forth in the following letter:—"I have to inform you that the Board approve of twenty married men being employed for one month, provided they do not interfere with the men employed on the ordinary municipal work, the Government undertaking to pay one-half. The daily wage not to exceed 6s. per day."
1173. Do you know whether there was any plant or goods of any sort on the ground when the Casual Labour Board took possession or took up the general business of the unemployed at the National Park? There would be a lot of goods there.
1174. Was stock taken of those goods? I should think so; but the superintendents would be able to answer the question better. I imagine they did. They had a lot of stock in hand.
1175. How often was stock taken by the superintendents? I could not say. It would be generally when they were told. They would be asked for a return occasionally.
1176. Who checked the stocktaking? I could not say.
1177. Do you know whether stocktaking was checked or not? I could not say.
1178. *President.*] Is this cash-book all in your handwriting? No; that is Mr. Hibble's writing.
1179. Is there any writing of yours in it? No.
1180. Did you have anything to do with the keeping of the accounts there? Only to see that they were kept. I checked them, and saw that they were kept correctly.
1181. Can you, looking at this book, tell us the total amount of money you received from the commencement to the end of your labours? Yes; £240,334 16s. 3d.
1182. I think you told us that these amounts were received always in sums of £6,000? Yes.
1183. Look at this, one of the bank pass-books of the Casual Labour Board. Do you see an entry of £18,000 on the 30th December;—will you explain that? That £18,000 was received in three separate amounts by letter of credit. That is simply a matter of book-keeping at the Treasury, when they have been squaring up at the end of the year.
1184. And they have not lodged all that cash in the bank at one time? No; we never got any other sum than £6,000.
1185. Will you look at this, another bank pass-book of the Casual Labour Board—the entry on the 3rd January, 1889, how much is that? £72,000
1186. Was that in one payment? No; in several payments—each of £6,000.
1187. But as a matter of fact these sums were all placed to the Board's credit in one sum? No; the money was all spent before that. That is simply a matter of book-keeping between the Treasury and the bank.
1188. The receipts of money from other sources—such as from sales of timber—you said in your evidence above do not appear in the books of the Casual Labour Board? No; only in bank books.
- 1188½. I do not want to lead you into any misstatements, but look at this cash-book—look at page 5 of the cash-book. You see an item £38 4s. 2d.? Yes.
1189. Was that a sum paid into the bank by Mr. Davies—you see it does appear in your books? Yes; it is not in my writing, and I did not know it was there.
1190. Look at page 13. There is an item, John Davies £113 9s.;—what is that? That is one of the items which amount in all to about £319, paid by Mr. Davies into the bank. I did not know that Mr. Hibble had entered them.
1191. That represents a sum that Mr. Davies received for the sale of timber and other things? Yes.
- 1191½. Look at page 19, an entry John Davies £76 4s. 11d.;—is that the same? Yes, the same style of moneys.

1192. Also at page 24, an entry John Davies £40 12s. 3d.? Yes, still the same. These are amounts received by Mr. Davies and paid into the bank by him.
1193. Also an entry, page 73, John Davies £46 5s. 11d., is that of the same nature? Yes.
1194. Also page 91, an entry John Davies £20, is that the same? Yes.
1195. Do you know what the total of these moneys is? £334 16s. 3d.
1196. Is that what you believe to be the amount received by Mr. Davies from these outside sources, and paid into bank? Yes.
1197. With these exceptions all the other moneys you received came from the Treasury? Yes.
1198. Was there any other bank besides the Joint Stock Bank that you dealt with? No.
1199. Then your former evidence so far as these moneys not appearing in the books is concerned is not quite correct? It is correct so far as the rough cash-book is concerned. Mr. Hibble has made these entries; I did not know they were here.
1200. Did you go into the position of Secretary and Paymaster immediately the Board was appointed? Yes.
1201. Were you present at any Board meeting when your position or salary was discussed? Well, they discussed the salary, and the Chairman came to me and told me that they were going to offer me £300 a year. I told them that I did not care about taking it, as my salary, with the fees I was allowed, amounted to £420 a year when I was with Mr. Wise, for I was then allowed a pound for each pay, and the Board only proposed to allow 10s. They said they could not give me more than £350, and as they said that this would be a permanent billet, I took it.
1202. Do you know whether Mr. Davies referred to the Colonial Secretary with reference to that? I know it would go to the Colonial Secretary to be approved of.
1203. Were you informed of the result of the application to the Colonial Secretary? I saw the result in the papers when they came back.
1204. Do you see this document. [*Exhibit B8*]? Yes.
1205. Do you see the minute attached to it in Sir Henry Parkes' handwriting? Yes. I may mention as regards my appointment that I never applied for the appointment; I told them that unless I retained my continuity on the permanent staff I would not take it. Mr. Davies said that would be all right.
1206. Can you say whether the orders that came in from Mr. Burrowes for supplies or plant were more frequent than those of the other superintendents? Yes. He had the largest number of men under his control; he has had 4,000 men there.
1207. Was any remark ever made as to his numerous applications for plant and so forth? It was mentioned, sometimes jocularly, over the amount of stationery he wrote for.
1208. Had you any reason to doubt the *bonâ fides* of the different applications? No. I would not give the orders on my own authority, so of course I had no reason to doubt them.
1209. Did you accept the vouchers he sent in as correct? Yes.
1210. Had you any means of ascertaining that these vouchers were correct beyond the fact that Mr. Burrowes had certified to them? Nothing beyond the fact that they had gone through the ordinary routine of the overseers, the clerk, and the superintendent, Mr. Burrowes.

Mr. T. C.
Hinchcliffe.
13 Mar., 1889.

MONDAY, 18 MARCH, 1889.

Present:—

A. J. CAPE, Esq., M.A., PRESIDENT.

F. A. FRANKLIN, Esq., C.E., J.P.,

T. F. WALLER, Esq., J.P.

Frederick Wells called in, sworn, and examined:—

1211. *President.*] What position do you hold in the Public Service? I am an assistant engineer, second in command in the Roads and Bridges Department. Mr. F. Wells.
1212. How long have you held that position? The exact position, it is hard to say. I have been thirty years in the Public Service; I should say I have been assistant engineer twelve or fourteen years; but I have been practically second in command for the last twenty years. 18 Mar., 1889.
1213. I believe you were appointed a member of the Casual Labour Board? Yes.
1214. And you held the same position in the Public Service then that you do now? Yes.
1215. Who appointed you as a member of the Board? I received a notification from the Colonial Secretary, a copy of which I hand you. I have the original, if you wish it. I produce the original, letter of appointment, signed by Sir Henry Parkes, dated 2nd May, 1887, addressed to John Davies, Esq., Colonel F. Wells, and David Houston, Esq.
1216. Do you know if there was any duplicate of this? I think each member of the Board had one.
1217. And you think that the original was issued to Mr. Davies? Yes.
1218. Was that the first intimation of your appointment? Well, not exactly.
1219. Who had you seen before? Mr. Critchett Walker, the Principal Under Secretary.
1220. Did Mr. Walker send for you? Mr. Walker sent for me, to the best of my recollection. I saw him in his own room, or in the corridor adjacent to his room.
1221. What was the substance of the discussion? He asked me if I would act on a Commission to undertake the dispersion of the trouble we had here in connection with labour.
1222. What are these pencil marks in your original letter of appointment? They were my own notes upon the advisability of what was suggested in the appointment—mere pencil notes that I marked at the time.
1223. Did you intimate to Mr. Walker that you would accept the position? Yes. At first I demurred, and said that it would interfere with my own departmental duties, but as he appeared to desire me, on account of my previous experience in dealing with these men, I acceded to the request.
1224. And shortly after that you got this letter of your appointment? Yes.
1225. Within two or three days? I think it was only a day or two before the Board was begun.
1226. Did you see the Colonial Secretary on the matter at all? Not prior to that.
1227. Previously, had your duties any connection with the management or work of the unemployed? Yes.

1228.

- Mr. F. Wells. 1228. How had you been brought into contact with them before? I was brought into contact with the unemployed for the first time, I think, about seventeen or eighteen years ago. We had the Military Road on the North Shore done by them. That was one of the first outbreaks, and off and on since then we have had the trouble going on. I had even then the unemployed, as they were called, working under me.
1229. Did your Casual Labour Board duties come additional to those of your ordinary official duties? Yes.
1230. You were expected to do both? Yes; I was not relieved of any of my ordinary work.
1231. You did not devote yourself exclusively to the Casual Labour Board? No.
1232. Were you examined before a Select Committee of the Legislative Assembly on the 20th November and 12th December last? Yes.
1233. Is this your evidence? Yes.

Evidence before Select Committee.

1. *Chairman.*] You are next to Mr. Bennett in the Department of Roads, and are, I believe, connected with the Labour Bureau? Yes; I am a member of the Board.
2. How long has the Board been in existence? Since the 2nd of May last year.
3. What are the functions of the Board in relation to the unemployed, so far as finding them work is concerned? Our first duty was to disseminate the unemployed. There were a large mass of them in Sydney, and our first duty was to get them out of town, the free feeding which they had hitherto been receiving being abolished. The first depôt to which we took them out of town was at the National Park. We were able to employ them there on work which was not immediately reproductive, but it was the only place where we could establish a depôt, and do something on the public estate until we could disperse them.
4. Had none of the unemployed been working at the National Park prior to that? Yes; but only in a desultory way, I believe.
5. Some of them were at the National Park before you joined the Board? Yes; but there was no large camp there such as there afterwards was.
6. Your first step was to concentrate them at the National Park? We wished to get them where we could place them at work under supervision, and where, if they did not work sufficiently to earn their rations, they would not receive them.
7. In carrying out this work, did you receive any instructions at all from the Government? Yes; we were instructed from the Colonial Secretary's Office.
8. What was the nature of these instructions? Well, there were our appointments, combined with the desirableness of making a depôt somewhere out of town, and the National Park was suggested.
9. Do I understand that the Government suggested the National Park as a depôt? Yes.
10. Did they issue any definite instructions as to the ultimate disposal of these men at the time you took office? No; it was understood that we were to dispose of them in the best way possible, in view of the public interest.
11. Then, from the time you took office, the whole management of the unemployed was in your hands? Yes; with the exception of receiving instructions and approval, and they came, in every case, from the Colonial Secretary.
12. In every instance then where you disposed of the unemployed in any special manner, had you to submit the matter to the Colonial Secretary? Yes; or the matter emanated from him—one or the other.
13. That is to say, you had no power to do anything without the Colonial Secretary knowing of it? Of course, in regard to the details of roads in connection with the subdivision of Crown lands, as at Gordon, Narrabeen, and Hornsby, for instance, we used our own discretion as to which roads we cleared, having the advice of the Government surveyor.
14. Do I understand, then, that in the case of the clearing of a road it was always necessary for you to submit the matter to the Colonial Secretary? Yes, if the road were a separate road, and away from the Crown lands subdivision upon which we were engaged.
15. But suppose the unemployed were working at a given point, clearing a road, you would then and there, without any further consultation with or notice from the Colonial Secretary, authorize another road to be made in the neighbourhood? Yes. We put them on to such roads as we considered best or necessary in the subdivision.
16. Will you give us an instance? Well, take Gordon, for instance. I have brought with me a map showing the design for the subdivision, and the works which have been carried out. I cannot speak of all the works, because I have not visited them all myself. Mr. Houson has dealt more particularly with that work. The design of which I speak is for a subdivision extending from the Hornsby railway station right through to the sea at Narrabeen. The alienated lands have the owner's name attached; all the other lands are Crown lands.
17. But will you speak more particularly with reference to the Hornsby District—will you give us particulars as to the work done there by the unemployed? Some of the unemployed were there I think when the Board came into existence.
18. Before you took office? Yes. I know that they were in the neighbourhood of Hornsby. I have prepared a statement which will be shortly added to the printed papers on the subject, which will explain the matter to some extent. It is a paper describing the way in which the Hornsby roads were cleared, that is, the roads which I understand from the subject of inquiry.
19. Before you proceed to describe the paper further, I should like to have one point cleared up. When you took over the work of the management of the unemployed you found that there were a large number of them at Hornsby? Yes; in that neighbourhood.
20. Do you know if the lands upon which the unemployed were working at that time were private property or Crown lands? They were at work on the Crown lands.
21. Having them there at work on the Crown lands, had you authority, by virtue of your office, to authorize the making of roads by them on any private property? Yes. I consider we were authorized to make any roads of access to the Crown lands which we thought advisable and advantageous.
22. You were limited to road of access? Certainly.

23. You had no power to authorize the clearing of a road which was not distinctly a road of ^{Mr. F. Wells:} access? No; it would be contrary to all our instructions.
24. Then you were actually prohibited from making any roads beyond those which would ^{18 Mar., 1883.} give access to Crown lands? We prohibited it in our own office, and I am pretty certain that none were made.
25. Had you any instructions upon this point from the Colonial Secretary? We had no definite instructions of the kind; but we considered it our duty to expend the money only for the benefit of Crown lands.
26. Then, so far as I can understand, the matter was left entirely to your own discretion? I think in most cases—in fact, in nearly every case, all the roads cleared and the work done had been submitted for the approval of the Colonial Secretary.
27. I suppose you could, if you chose, have authorized the making of those roads without consultation with the Colonial Secretary? Well, if we were in a subdivision of Crown lands—take the reticulation of roads at the back of Narrabeen, for instance—we should not ask for authority in the case of every road. We should clear all the roads which we thought necessary in the subdivision. Of course the same would apply to the subdivisions at Gordon and Hornsby.
28. *Mr. Copeland.*] In speaking of Hornsby, will you be good enough to let us understand whether you allude to the Government subdivisions or to the property of Messrs. Burns, Withers, and Smith? Of course when I referred to Hornsby I referred to the Crown lands.
29. *Mr. O'Sullivan.*] When the Casual Labour Board took over this work at Hornsby, how many roads had been made by the Government under the supervision of Mr. Deering? I cannot say how many. Mr. Houison will be better acquainted with that branch of the subject than I am. I know a good deal of the clearing had been done in the region of the main camp, which was on the Stony Creek road, when we first took charge.
30. That clearing was on the Crown lands? Yes; I am under the impression that a good deal of scrubbing and road-clearing had been done.
31. *Chairman.*] Had there been any clearing or forming of roads on property there belonging to private owners when you took charge? There was a short piece of road leading from the Stony Creek road. That we immediately stopped.
32. I notice that all these plans and tracings have been submitted to the Honorable John Davies? Yes; they were addressed to him because he was actually the working and business head of the Board.
33. Had he the power to alter those plans and to say where roads should or should not go? I think not. He interfered scarcely at all with the direction of the roads. That rested with Mr. Houison and myself.
34. But had he the power to do so had he chosen? I never heard of his doing so.
35. *Mr. O'Sullivan.*] You say that all these plans were addressed to the Honorable John Davies? He never interfered with the roads at all—not as to subdivisions.
36. I understood you to say just now that you constructed only roads of access to the Crown lands? That is all.
37. Let me draw your attention to the road marked HHH in the plan shown on Appendix E of the papers;—do you consider that that road is absolutely required as a road of access? It was considered by Mr. Gordon to be a desirable road of access, and at his instigation it was cleared.
38. He is responsible for the road, then? Yes, and also for the boundary road marked I. I do not know much about those roads, but I am perfectly conversant with the others from Junction Road northerly.
39. Does this plan on Appendix E show the whole of the roads authorized on the Burns-Withers property? Yes; I believe so. It shows all the work which I know to have been done by the unemployed.
40. Then if any roads have been carried out by the unemployed other than those shown upon the plan they have not been carried out with the authority of the Board? Certainly not, as far as I know.
41. Would you be astonished to hear that there are some such roads? I have not seen them.
42. *Chairman.*] A portion of the road leading up from the Lane Cove Road to the Vanceville Road is not coloured red—what does that mean? The road was constructed along that portion by the Roads Department for a certain distance, extending it in a northerly direction to meet the work done at Junction Road and the Crown lands.
43. Turn your attention to the east side of the Hornsby Station—to the land running up from the Junction Road to the road marked A? No road has been cleared by the Board there, or if it has been done it has been done without any authority.
44. Would you be astonished to hear that the unemployed are working on that road? They have no right whatever to be working there. This plan is supposed to show all the work we have had in hand.
45. Have you entire control of the unemployed? Yes; the Board have.
46. Would it be possible for the unemployed to be working anywhere without the cognisance of the Board? Certainly they should not be, because the superintending officers report regularly to the Board what the men are engaged upon.
47. *Mr. Copeland.*] Is Mr. Gordon, the surveyor, under your control? To a certain extent he is; he reports to the Chairman of the Board.
48. Of whom is the Board constituted? It is composed of the Honorable John Davies, Chairman, of Mr. Houison, and myself.
49. You and Mr. Houison are the two professional men? Yes.
50. Mr. Gordon is a surveyor in the Lands Department also? Yes.
51. At the present time he is subordinate to yourself? Yes; he is carrying out the work under our direction.

Mr. F. Wells.
18 Mar., 1889.

52. Then for any work which he has carried out, you, as his superior officer, of course would hold yourself responsible? Yes; we have taken his advice in regard to anything which he has suggested as to where the men could be profitably employed.
53. I think you said just now that Mr. Gordon considered that the road marked HHH was necessary to give access to the Crown lands? I think you will see that he mentions it in the papers.
54. What is your opinion as to the necessity for constructing this road? Well, I think it is a very desirable road of access.
55. Notwithstanding the fact that it passes right through private property? Yes. I do not see that the fact of its passing through private property renders it any less valuable as a road of access to certain Crown lands. In order to reach the Crown lands it is necessary to go through private property somewhere.
56. Would it not have been a better policy to run the roads through the Crown lands themselves, instead of taking them through private property? Roads in many directions through the Crown lands were quite impracticable.
57. For what reason? There are very deep gullies running into the Cowan Creek. The road marked "Boundary Road" on the plan is purely impracticable on that account.
58. Would you be surprised to hear that the Committee were driven over the Boundary Road yesterday in a buggy, and that we did not find it at all impracticable? I do not think the Committee can have been on the portion of the road to which I refer. It would entail very heavy work.
59. Since you consider that road impracticable, how does it come about that it is already constructed, and that a portion of it is metalled? I am not aware of its being constructed. There may be a road for some distance; but I do not think it extends any length.
60. *Chairman.*] Is it possible that a number of roads can be constructed without your knowing anything of it? Roads might have been constructed out there without my knowing anything of the matter; but it should not have been done without an order emanating from the Board.
61. Can any one of the members of the Board authorize the construction of a road? The Chairman might authorize the construction of a road if he had the authority of the Colonial Secretary.
62. But could the Chairman of his own motion, without consulting you as a colleague, authorize a new work? Yes; he would probably inform me afterwards that it was being done.
63. Then, as I understand matters, he could, without consulting you in the first instance, authorize works which he might think necessary? Yes.
64. Then, in short, you would have no voice in the matter, excepting the approval of it when it was done? I might be spoken to about the work after it had been started; but in such a case the Chairman would probably have received instructions from the Colonial Secretary. Of course he would not wait either for myself or for Mr. Houison to be there. I am frequently away for weeks at a time.
65. And is Mr. Houison, to your knowledge, away for a similar period? He is frequently away. He cannot now attend the Board very regularly. He attends only now and then as a practical expert.
66. *Mr. O'Sullivan.*] Do I understand that you sit merely as advisers? Well, we assist to control the expenditure. We fix the price of work done, we set out work, and we see that our officers are doing what is correct from an engineering point of view.
67. *Chairman.*] Is it possible for you to authorize a work upon your own authority? No; I should never do so on my own authority.
68. But have you the power? No; I do not think I have the power. I should probably say to the Chairman of the Board, "Such and such a work is desirable, and had better be done."
69. But you would do that as a matter of courtesy, apart from your knowledge as to your own powers in the matter? I think I have no power to originate a work in the first instance.
70. You do not appear to be quite sure as to the limits of your power? No. Of course, if men were at work upon a subdivision of Crown lands, I should naturally direct any roads to be made which I might think it desirable to clear and open, but I should not think of authorizing work outside of the limit of the Crown subdivision.
71. As a matter of fact you have not authorized any work on your own responsibility? No, except as stated.
72. Of your own knowledge, has Mr. Houison done so? I do not think so. If it were the case of a Government subdivision, and I thought it necessary to alter a line from an engineering point of view, I might order it to be done.
73. Then you think you have power to alter a line of road without consultation with your colleagues? Within the Government subdivision, yes, after consulting the surveyor.
74. When the Board was appointed, how was the Chairman elected? He was elected by ourselves; neither Mr. Houison nor myself could give our time to it. It would be utterly impossible for either of us to undertake the duty.
75. You elected Mr. Davies Chairman of the Board? Yes.
76. You say that the Chairman has power to authorize the construction of roads without consulting you? Yes. He has done so with the approval of the Colonial Secretary. I think that in every case in which he has acted he has had the approval of the Colonial Secretary.
77. How were your powers defined to you? I understood that I was to find employment for the unemployed, and to use them in the best manner possible. I will hand in a copy of my appointment, and you will then see for yourself. [*Appendix A.*]
78. How did you arrive at the conclusion that you yourself had no power to authorize a new piece of work, while you felt sure the Chairman had that power? Because the Chairman is in constant communication with the Colonial Secretary; he receives his instructions from him.
79. The letters come to the Chairman? Yes.

80. But are not the letters and the instructions addressed equally to the Board? They are addressed generally to the "Chairman of the Casual Labour Board." Mr. E. Wells.
18 Mar., 1889.
81. But Mr. Davies receives his instructions simply as chairman of the Board? Yes.
82. Would not that of itself imply that he had no power to act of himself? No. It might be necessary at times to take action without waiting for the members.
83. Have you ever, at any time, by resolution or speech, given the chairman to understand that in your opinion he has this power? No. The chairman would inform us that he had received instructions for a certain piece of work to be done. I think in one or two instances I raised objections, and I subsequently found out that there were reasonable grounds for his action. I found out, moreover, that he was acting under direct instructions and in compliance with a petition which had been approved of by the Colonial Secretary. In every case I think he had this approval or instruction.
84. I want to make this matter perfectly clear. I understand from your answers that the chairman has from the first had the power to initiate works without consulting you? If we were available he would probably consult us; but if we were not he would carry out the work and inform us after that a certain thing had been done.
85. If you were about you mean that he would have consulted you? Yes.
86. But if you were not present he would act without you? Yes; he would act, and inform us that the work had been started.
87. In what instance was it that you objected to a work which he had initiated? I forget now; it was in some trifling item. I suggested that it was perhaps not in his province to do it; but Mr. Davies was able to show me the Colonial Secretary's instructions, and I made no further objection. It was pointed out, I think, that the road was made under instructions to give access to Crown lands or for public convenience.
88. Had the Board any power to refuse to act upon the instructions of the Colonial Secretary? I do not think so.
89. You did whatever he ordered? If he instructed us to do a thing I considered that we were bound to carry it out. Our duty was to see that the labour was profitably employed and that the money was not wasted.
90. I will put you a question, which you can answer or not, as you like? Supposing the Board thought that the instructions issued from the Colonial Secretary's office were detrimental to the public interest, or involved a misapplication of the public funds, would they have carried out those instructions? I do not think we would have done so without remonstrance; I feel pretty sure not.
91. You feel that they would have refused to carry them out? They would have remonstrated, and have pointed out they did not consider the work advisable.
92. Would you, as a member of the Board, consider that you had no power beyond that remonstrance? I think I should have no further power.
93. Are you aware of any cases where, without a communication from the Colonial Secretary, work has been undertaken, and roads have been made? Only within Government subdivisions, where we have general instructions.
94. With reference to the roads at Hornsby which are not upon a Government subdivision, did the order issue in every case from the Colonial Secretary's Office? I believe the approval did, if not the order.
95. I am speaking now of the roads on the estate of Messrs. Burns, Withers, and Smith? The roads H and I, to which I have already referred, were carried out upon Mr. Gordon's representation, but I think I gave recommendations with reference to the Junction Road and the Vanceville Road as long ago as 1885 or 1886.
96. You recommended both of those roads some years ago? When I say I recommended them, I ought to add, perhaps, that they never came before officially. I was in conversation with Mr. Burns with reference to the Northern Railway, and, speaking with regard to the access to the Hornsby station, Mr. Burns said that if the Government would clear and form a road he would give them the land right through his property. That was long before the time of the unemployed. I think I was travelling somewhere up in the Hunter District when this conversation occurred, and we were talking of the Northern Railway at the time. The Roads Department had already made the Vanceville Road a certain distance, and whether the road was to be taken across to the station diagonally or the other way was not, I think, mentioned at the time.
97. What I want to understand is this: Were the roads marked H, I, B, C, D, E, and F authorized from the Colonial Secretary's Office, or were they made at the instance of the Labour Board? I think they came from the Labour Board. H and I at Mr. Gordon's recommendation. The others were the result of Mr. Houison's examination more particularly than mine. I knew the locality sufficiently to know that the Boundary Road was a very expensive road to make—in fact, that it was almost impracticable; but Mr. Houison specially examined the locality in order to see the best way of giving access to the Crown lands.
98. Do you recollect having any of these roads brought before you for consideration—I refer more particularly to the roads that are marked? Yes; two or three times when we first went to the camp. No one brought them before us that I know of; but they were brought up by myself and Mr. Houison.
99. What roads are you referring to? The Junction Road and the roads B, C, D, E, and F.
100. Has there ever been a proposal that you are aware of, emanating from yourself or from Mr. Houison, to clear a road parallel with the railway line between the roads A and G? I am not aware of any.
101. Do you know whether such a work has ever been considered by the Board? No. I believe there was a proposal for a diagonal road made some years ago by Mr. Symonds, but it would not have gone to the station. I think it would have gone to the overbridge.
102. The road to which I refer is alongside the railway fence, parallel with the railway, between

Mr. F. Wells.

18 Mar., 1889.

- between the Junction Road and road A? It may possibly have been made. I see it is not shown on the plan.
103. Has that been done without your knowledge? I am not aware of its having been done; it has not come before me.
104. It has not been considered by the Board, sitting as a Board? No. Our meetings are generally very short. We make a call at the office for an hour or two to talk over the work immediately before us, and then we separate.
105. Do you keep any minutes of your meetings? No.
106. In the absence of Mr. Davies, the chairman, did you ever hold any meeting for consultation? Not in office; I have met outside on various subjects with Mr. Houison. We have gone together to different localities when we have had to take notes of the work being done.
107. Have you had meetings convened for the purpose of consultation in connection with any particular proposal? No. I think at first we had one or two appointed meetings, but afterwards the members of the Board would call in at the office and see Mr. Davies and see what business was proceeding.
108. Was no record of those meetings ever kept? There has been no record of those meetings that I know of.
109. There were no movers or seconders to anything done? No.
110. Look at the Boundary Road upon this plan. Has a proposal ever come before you to continue the Boundary Road to the railway line? I do not remember any.
111. Take a point about the centre of road B. Has any proposal ever come before you to make the road between the railway station and that road? Not that I am aware of.
112. Have you ever had a proposal brought before you for a street between the end of the road marked street B and street A? No; I never heard of any there. I do not believe any have been done by us there at all—in fact, I am nearly sure we have done none. If we have done any work there I should have been sure to hear of it.
113. Take the Junction Road between the railway station and G. There is a road running to the south. Have you ever had any consultation about a road there? I know of none there.
114. The road to which I refer runs north and south? I know nothing of it. The roads marked red on this plan are the only roads I know to have been constructed by the Board.
115. Look at the road marked H, running out from the Lane Cove Road towards the north, and taking a turn into Burns Road. Has any proposal come before you to continue the road to the Lane Cove further to the north and into Burns Road? No; none that I know of.
116. Look at the road, marked H D, running right into the Boundary Road. Has any proposal ever come to you to make a road parallel with Burns Road some chains to the north? No; I know nothing of it.
117. Would it be possible for any member of the Board to have authorized roads of this kind to be made without your knowledge? It is possible, but not very likely.
118. Do you know Mr. O'Donnell? Yes.
119. Has he charge of the unemployed in that district? Yes.
120. If there are men working on any roads there they are under his charge? Yes.
121. Is he responsible to your Board? Yes; he takes his instructions from us. A certain amount of license is allowed him in Government subdivisions as to where he shall distribute the men for scrubbing and clearing; but that would only apply to Government subdivisions.
122. He himself can originate no roads? No.
123. He can employ his men only upon work which has been already decided upon? Exactly, on work authorized by the Board.
124. If there are men at work on portions of these roads, of which you appear to know nothing, under Mr. O'Donnell's supervision, from whom would he have received his instructions? I do not know. He has not received them from me. If Mr. O'Donnell has received them from any member of the Board, I think I should have been acquainted with them.
125. Does Mr. O'Donnell receive orders from any other source? No.
126. If he has received orders to employ men for clearing and forming these roads they must have come from the Board? Yes.
127. If such orders have come from the Board you know nothing about them? Nothing.
128. It must be the act of some member of the Board without consultation with you? The orders could have emanated only from the chairman; but I cannot credit that they have been given.
129. Could they not have originated from Mr. Houison? No; he would not be likely to do that.
130. You are positively certain that the Board knows nothing about the roads I have mentioned? Quite, as far as I am concerned.
131. Would it not be possible for Mr. Davies to do these things while you were away? Well, he might have done so.
132. His taking the action would be equivalent to the Board taking the action, would it not? Yes, of course.
133. Then you are willing to admit that these works may have been authorized by the Board, in the person of its chairman without your knowledge? It is possible, but I think we should have been informed of them—in fact, I feel certain of it.
134. *Mr. O'Sullivan.*] If there are any men working on these roads now they are not working there by the authority of the Board? Well, I suppose that if the men are there they must be there under instructions from Mr. O'Donnell, who may have received instructions of which I am not aware.
135. Do you know of a road running from the Noumea Estate at Campbelltown towards Hurstville? I do not know that particular road, but I know that work has been done at Campbelltown by the unemployed.

136. Can you tell us the character of the great portion of the Crown lands to which access is given by these roads at Hornsby? It is poor barren land. Mr. F. Wells.
18 Mar., 1889.
137. When do you think that the land is likely to be sold? Some of it has been sold recently.
138. But I mean some distance at the back of the Boundary Road, where we saw yesterday so much rock and scrub;—do you think this land will be sold within thirty years? I think a great deal of it will be sold.
139. Do I understand that you have no responsibility whatever for road J? Oh, yes, responsible for road J.
140. But not for H and I? They were done without my knowing it. They were considered desirable by Mr. Gordon. I did not know that they were done until I went over the Junction Road and saw them. It was pointed out to me that they were desirable as roads of access from the Lane Cove Road, and I fell in with that view.
141. If these gullies and other obstacles in the Boundary Road were known to exist, why was that road laid out? That is a question which only the surveyors can answer. They lay out roads in all directions, and some of them are very impracticable. In this case there are gullies which it would take an enormous sum of money to bridge.
142. *Chairman.*] In a memorandum of yours, dated 13th September, you mention a conversation with Mr. Burns in reference to granting access to the railway, in view of the line being opened to Hornsby, and you say that Mr. Burns stated his willingness to give the land? Yes.
143. What was your intention at the time, as far as you can recollect, in carrying the road to the railway-station? There was an absolute necessity to give access to the station. There was no access except by going along the Boundary Road or through Mr. Burns's land to get to the road the Department had already made.
144. Having formed the conclusion that it was necessary to have an access to the station, did you think that the road since constructed would be the nearest cut? Of course there might have been a diagonal road, but I doubt if they would have given us the land. I think we should have had to pay for it.
145. But if the road had been necessary, it would have been the nearest and best? The existing line accommodates a number of people, but the other would probably have been shorter.
146. When the conversation to which you have referred took place, did you meet for the purpose? No. I believe I was travelling with Mr. Burns in a railway carriage in the Hunter District somewhere. There was an accidental conversation, which, I think, was introduced by the subject of the Northern Line. The matter never came before me afterwards.
147. *Mr. Copeland.*] What salary do you receive in your position in the Roads Department? £700 a year.
148. I presume that you do not receive anything extra for your duties in connection with the Labour Board? I have received nothing yet.
149. Do you think that you are entitled to anything? That depends upon whether the Colonial Secretary considers that I have done my duty satisfactorily. I have no understanding at all. All that I know in connection with the matter is, that the Colonial Secretary stated in the House that, if the members of the Board did their duties satisfactorily, and managed to disperse the unemployed, and get rid of the trouble, he considered that they would be entitled to some reward for their services.
150. *Chairman.*] Have you any land in the vicinity? I do not own a foot of land in the Colony.
151. *Mr. Copeland.*] Can you state whether, had this land, known as Burns, Withers, and Smith's land, belonged to yourself, you would, in your position as a public officer, paid by the public to see that public money was properly expended, have dared to employ the unemployed in making roads through the property? If I had been a member of the Casual Labour Board, I certainly should have felt some delicacy in doing anything of the kind; but if the matter came before me in the Roads Department, I should have been only too glad to accept the land required for road as a gift instead of having to pay for it.
152. Was the question of constructing these roads through this private property ever submitted to the Colonial Secretary? I think it must have been. I am pretty sure of it.
153. Do you not know that it was? I do not know for certain that it was. I only know that access was needful. The first time we went up to the camp Mr. Koebke was supervising the clearing being done for Mr. Deering. I suggested that the first thing to do was to connect the clearings with the railway-station. It was then mentioned that the Boundary Road was impracticable. I had some knowledge of it before. I knew that the country was very rough. Mr. Houison went out, I believe, and closely examined it.
154. From your knowledge of the country, you believe that the Boundary Road is too rough for a continuous road right through? Yes; and the road would be too expensive.
155. Are you aware that it is already metalled, and that they are making the bridges upon it at the present time? I was not aware of that.
156. Do you know that the Committee drove over the road in a buggy yesterday? I could not have thought it; but perhaps you did not go far down.
157. Are you aware of a culvert existing in the Boundary Road? I am not aware of it.
158. Are you aware that they are making a second culvert there? There may be a small culvert near road C, and one near road B, but I do not think you will find any more.
159. Have you yourself been along the Boundary Road? No. I have been along part of it. Mr. Houison went specially to examine it. I think he has been along the whole of the line. He made a close personal examination.
160. If these Crown lands, a portion of which is shown on the plan, are so broken up, how is it that you have sold a portion of them? I do not know which is sold and which is not.

Mr. F. Wells.
 18 Mar., 1889.

161. Would it not have been as easy for you to construct a road on the Crown land as lower down? I have been given to understand that roads leading north from the Boundary Road are already extended into the Crown lands.
162. I mean the road running parallel with the Junction Road. Would it not have been possible to use the unemployed in making a road on the Crown land, instead of on the other side through private property? If the other road had been equally practicable that might have been done, but it was not an equally good road.
163. Do you say that of your own knowledge? I know that some parts of it were very much worse than the country lower down.
164. As an officer of the Department, would you consider the Boundary Road a bad road? Yes, certainly.
165. Is there any portion of it over which, without its being made, a buggy and pair of horses might not be driven? Yes; I am sure there is.
166. If the Boundary Road was so bad, would not that be a strong reason for the employment of these men in improving it? Heavy work of that description is very much out of their line. You can get them to do clearing and light forming with some advantage, but it is no use to put them on heavy roadwork.
167. Your impression is that some of the roads on the Crown lands have been cleared? Yes.
168. Does it not appear reasonable that if the men had been able to make roads through the Crown lands they should also have been able to make this road at the junction of the Crown lands and private property? I do not see what advantage would attach to making this expensive road along the boundary, especially when we had the other road, that is, the Junction Road, given to us.
169. In making that Junction Road, would you not be very much enhancing the value of the land abutting on to it? I have no doubt we have done so.
170. If it had passed through this strip of Crown land, would it not have immensely enhanced its value? If we had adopted the Boundary Road we should still have enhanced the value of one of the frontages of the Burns-Withers estate and others.
171. But you would also have increased the value of one of the frontages of the Crown lands? Yes; but the cost of making the road would not have been worth it.
172. I understand you to say that the Crown land is so broken up that it is impossible to make roads? I do not say that it is impossible to make roads, but it is sufficiently rough to preclude us from making roads with the labour of the unemployed.
173. What is the use of making roads through this private property to bring people to country which is so impassable? The roads do not lead to wholly impassable country. There are tributary roads leading up from the Boundary Road on to the plateaux between the gullies.
174. Do you tell the Committee that you could not have given access to the railway by continuing the A road through the Crown lands? It would have been worse there; the gullies there are perfect precipices when you get more to the northward.
175. Would there have been no chance of continuing the street to the northward of Hornsby Junction? It would have been impossible.
176. Why? Because the gullies deepen so rapidly.
177. The Committee were unable to discover yesterday that this land was so exceedingly rough; but supposing that it is, what chance is there of the Government being able to sell it? That I do not know. As I have just pointed out, you can get access on to the plateaux between the gullies.
178. But there are no means of access through the Crown land? It would be very expensive to do it. In taking the Junction Road we came up to the head of the gullies as far as we could.
179. Are you not surprised to hear that the Committee had no trouble in driving along the Boundary Road? I do not think you can have driven along the road very far. You may go a short distance along from the railway-station end, but that is all.
180. Having regard to the road marked C and I, and connecting the Boundary Road with the Lane Cove Road, what necessity was there to construct road H? That I cannot tell. As I said before, I did not know that these two roads were cleared until I saw them. I found that they had been done upon the recommendation of Mr. Gordon.
181. Do you think there was any necessity to have four roads in this short distance between the Junction Road and road A, making five roads in all to the railway in a distance of less than three-quarters of a mile? I do not believe these roads had been constructed or cleared or even touched by the Board at all. I think that is a matter of private subdivision. I believe it has been done entirely by private people. I shall be very much surprised to learn that it has been done by the Board.
182. Are you aware that this road marked Burns Road, although not coloured on the map, has been metalled? Not by the Board.
183. Are you sure that it has not? No; but I do not believe that it has.
184. No authority was given by the Board, so far as you are aware? No.
185. Were you ever along that road? No; I have merely seen it from the end of the other road; then it was not ballasted.
186. Mr. Gordon is subordinate to the Board, not to the Roads Department; he is an officer of the Lands Department? Yes. Since the constitution of the Casual Labour Board he has been acting under the orders of the Board as far as our work is concerned.
187. Therefore he is subject to you? Yes. We took him over when Mr. Deering gave up charge. Mr. Gordon was managing for Mr. Deering.
188. Do you consider that Mr. Gordon's position warranted him in determining to construct any of the roads without the question being submitted to you as the professional officer of the Department? He would recommend roads to the Board as a matter of access. He would not undertake the works on his own responsibility.

189. *Chairman.*] Would he recommend it to the Board without recommending it to you, or without consulting you in the matter? I do not think he would have come to me. It was simply a matter of access—a matter of clearing. There was no engineering work in it. If there had been any work in it apart from the clearing it would have been left until Mr. Houison or myself had reported upon the matter. Mr. F. Wells.
18 Mar., 1889.
190. *Mr. Copeland.*] You and Mr. Houison are professional gentlemen? Yes.
191. Whereas the chairman of the Board is a non-professional man? Yes.
192. Do you not think it rather singular that the non-professional member of the Board should have decided upon these works without submitting them to the professional members of the Board? Whenever professional work has been required I think we have been consulted.
193. Would you not consider these roads work of a professional character? Hardly. The simple clearing could be done by the superintendent on the field—that is, if the work were determined a right thing to do.
194. But would it not be a practical question for you to determine if the road were a right thing to construct or not? I think the surveyor would be as good a judge of that as myself. No professional work would be required. It was only a clearing. It was simply a question of the advisableness of making the road.
195. *Chairman.*] Who decides upon the advisableness? I presume the chairman, on Mr. Gordon's recommendation.
196. *Mr. Copeland.*] I understood you to say that the first proposal in connection with these roads emanated from you in 1885 or 1886? I hardly know whether it was from Mr. Burns or myself. He told me that he was the proprietor of the land. I did not then know that Mr. Withers or Mr. Smith had any connection with it.
197. Which do you suppose was the first batch of these roads to be cleared? I should imagine the Junction Road, being the most essential, and the continuation of the Vanceville Road.
198. You know nothing about road A? No.
199. Is there any official correspondence as to the road emanating from your conversation with Mr. Burns in 1885 or 1886? No; we simply had a conversation. I had no official correspondence. If I had I should have recommended the matter at the time in the Roads Department. The first thing I remember is Mr. Ives' petition to get a road continued from the Vanceville Road to the Hornsby Station.
200. What is the date of that? I cannot say. It is since the establishment of the Board.
201. Is not the petition in the papers marked B the petition to which you refer? Yes.
202. What is the date? 11th November, 1887.
203. That is the first official communication you are aware of? Yes.
204. That is with reference to these roads through the property of Messrs. Burns, Withers, and Smith? Yes, that is the first I know of. I thought at one time there was a petition before, but I have looked into the records and I cannot find it.
205. Do you know whether the signature of George Withers asking for this road through the property of Burns, Withers, and Smith is the signature of one of the owners of the property. That I cannot say. I should think that it very likely was.
206. *Chairman.*] Do you know whether those signatories are living in the neighbourhood? I cannot tell you. I looked very little at the petition to begin with. I know that such a petition came in. It was sent on to us by the Commissioner to be dealt with, and we dealt with it.
207. *Mr. Copeland.*] You say that the Crown lands to which these roads are to give access are very barren? Yes; it is barren rocky land.
208. Is it more barren than the private land adjoining? No; I should think it was very much the same kind of land. I think it is very poor, the whole of it.
209. Of course it gets rougher as you go to the northward. Do I understand that you are the chief officer in the Roads Department next to Mr. Bennett? Yes.
210. Can you tell the Committee what the probable cost per chain for grubbing and clearing these roads would be? In some parts perhaps it would cost from £4 to £5 an acre. I do not think it would go as high as £10 an acre in any case. In some places it might cost £8, but it certainly would not go £8 all through. I can supply you with all the information you require as to cost at a subsequent date.
211. The estimate you have given would be for merely grubbing and clearing the roads? Yes.
212. What would be the cost of forming the roads? About 15s. a chain.
213. Would that include the cutting of the drain and the whole forming of the road? Yes; I do not think it would cost more than that.
214. *Chairman.*] You are not speaking as, I understand, from accurate knowledge? No; because we pay these men less rates than we should pay under ordinary circumstances. We do not want the work to be too attractive; we want it to be somewhat punitive.
215. *Mr. Copeland.*] With reference to metalling? None of the roads have been metalled. Some of them have been ballasted with sandstone.
216. You do not term that metalling? No; it is only rough ballasting.
217. What would be the cost per chain for ballasting? It would probably run into about from £1 to £1 2s. a chain.
218. What thickness of ballast would that provide for? There would be about 6 inches of ballast—perhaps scarcely as much. I know that the roads are only very lightly ballasted. I can tell you the exact cost later on from our own books.
219. Does your estimate of £1 or 22s. include the procuring and breaking of the metal? If you were to include that I suppose the cost would be about £2 a chain. If ironstone were used it would be more costly, but I do not think there is any used there. I am pretty certain that there is only sandstone ballasting.

Mr. F. Wells.
 18 Mar., 1889.

220. If one officer of your department has estimated the work at £9 a chain, and another £15 a chain, both of them are very wide of the mark? Yes; it would cost about £2, besides forming and blinding, say £3.
221. At the next meeting of the Committee, will you supply information as to what has been the actual cost of the grubbing, clearing, forming, and ballasting of the roads? Yes; I think I can give you the whole of that information.
222. *Mr. O'Sullivan.*] Granting that the Boundary Road would be costly to construct, would it cost more than the Junction Road and all the tributary roads together? A long way more.
223. Can you explain why the H road takes such a peculiar shape? I cannot explain that road and the I road. As I have already said, they were adopted on Mr. Gordon's representation. I was not aware of their being cleared until I saw that all the work had been done.
224. *Chairman.*] Are you aware whether the Boundary Road, the Vanceville Road, Burns Road, and the road marked HD would cut that portion of the Burns and Withers' Estate into a square block? Well, yes, a rectangular block.
225. Do these roads bound the estate? I do not know where Burns and Withers' boundaries are. I should imagine, however, that Burns Road was the boundary to Burns' property.
226. Are you aware whether any bridges had been made by the unemployed on any of the roads? There are culverts, I believe, on the Junction Road and on the Boundary Road. I cannot think of any bridge, and I do not know whether the culverts were done by the unemployed.
227. Do you know if there are any bridges on the Burns Road? I do not think we have done any work on that road.
228. If it came to your knowledge now that the unemployed were constructing and making passable the Boundary Road, would your opinion be that a mistake had been made in constructing the Junction Road at all? If they could make a good road there, decidedly but I am certain they cannot.
229. *Mr. Brunker.*] You said, I think, that from the time of the establishment of the Board instructions have emanated from the Colonial Secretary? Yes.
230. Is the Committee to infer that the whole of the work has been carried out under the instructions of the Colonial Secretary? I cannot say whether that is so.
231. I mean generally? Not in matters of detail. These we generally deal with ourselves upon our own responsibility.
232. Not under instructions from the Colonial Secretary? No.
233. I suppose it would be impossible for the Colonial Secretary to give instructions unless certain propositions were made to him? That I cannot say. I believe that we have obtained Ministerial authority for all the roads which we have made through private property. Mr. Davies, however, will be able to give you better information on this point. I saw a number of approvals yesterday in our own office. I was under the impression that all the works undertaken outside of Crown lands had received Ministerial approval.
234. But it would be impossible for the Colonial Secretary to say that certain work was necessary, in the absence of a suggestion from the Casual Labour Board? Of course he would not be aware of what was necessary.
235. You say that the unemployed were at work at Hornsby before you commenced there? Yes, under Mr. Deering.
236. If the land between road A and the Junction Road has been cleared, and if roads have been formed there, that has been done apart from instructions from the Casual Labour Board and from the Colonial Secretary? Yes; all that has been done there must have been done, I think, by private owners. I am not aware of any authority for roads there. There is no authority for any work in that block at all. I thought that the road along the railway might have been cleared by Mr. Deering. It was not done by the Board.
237. I suppose that the first consideration of the Board in making these roads was to give better access to the Crown lands? That was the only thing we considered. Of course we took into consideration to some extent the desirability of access from the Lane Cove Road to the railway station.
238. Do the members of the Board consider that the expenditure which has been incurred upon these roads has increased the value of the Crown lands adjoining? Most decidedly. They would be almost worthless without access.
239. Are you, as a member of the Casual Labour Board, able to say whether the Board have had any communication with Messrs. Burns, Withers, and Smith; and, if so, whether any of these roads have been constructed as the result of that communication? I am almost positive that there has been no such communication. I know, so far as I am concerned, that since I spoke to Mr. Burns on the subject in 1885 or 1886, I have had no communication with him whatever on the matter. I feel pretty certain that Mr. Houson, upon whose recommendation the Junction Road was made, has not had any. I am nearly certain that no member of the Board has had any such communication.
240. As a matter of fact, so far as you can tell as a member of the Board, these roads have been constructed upon the sole responsibility of the Board? I think so, decidedly.
241. And under their advice and control? Yes.
242. As to this Boundary Road, you say that the inequalities of the surface are so great that it would be almost impossible to construct a road in that direction? Well, it would be too costly.
243. But not too costly if you had skilled labour? I think so—even with skilled labour. Mr. Houson will be better able to answer that question, because he made a close examination of the road.
244. Is it not a fact that with these men under your control you are not able to carry out such works as you could carry out under other circumstances? It is. 245.

245. *Mr. Copeland.*] As a professional man, and as second in command of the Roads Department of this Colony, you say that it would be impossible to make a road fit for traffic in the direction of the Boundary Road? I believe it would be impracticable; or, at all events, if it were not impracticable, it would be much too costly. We should have to make a deviation at each of the gullies. We could not cross the gullies on the line of the road. We should have to make side-cuts down the gullies. It is not so bad at the station end. I am referring more particularly to the gullies further along.
246. Do I understand that as soon as you get away from the Burns property on the Crown lands they become impassable? Yes; the further north you go the more precipitous the gullies become.
247. *Mr. Brunker.*] Can you tell the Committee what action was taken after the receipt of the petition of Mr. Ives? It was referred to the Casual Labour Board by the Commissioner for Roads. It was sent on, I presume, and approved.
248. Mr. Burns was communicated with by the Casual Labour Board? Yes; he was asked to give his consent to the making of the road, and he agreed to it.
249. *Mr. Copeland.*] The minute of the Casual Labour Board on the subject is dated 18th October, 1887? Yes.
250. And was approved of by Mr. Burns on the 19th October? Yes.
251. *Mr. Brunker.*] Were the propositions of Mr. Davies, with reference to the construction of roads, objected to any time by any other member of the Board? I am in doubt as to whether there was not some little matter in which we had a difference of opinion.
252. What road was it about? I do not know now, but it was not one of the Hornsby roads. Mr. Davies showed me that he had the Colonial Secretary's authority for the work being done. I am nearly sure that it was one of the roads on the Holt-Sutherland Estate.
253. Do you know whether a large area of the Crown lands at Hornsby have been subdivided? Yes; and a portion of the land has been sold.
254. It has been subdivided and is ready for sale at any moment? A large portion of it is.
255. The bulk of the Crown lands in that locality, I suppose? Yes.
256. Do you know anything of the extent and character of the population about Hornsby? There are a great many fruit-growers about the Vanceville Road, and there are some settlers at the back.
257. Are the roads which have been made by the Casual Labour Board likely to serve the public? Yes.
258. They will more especially convenience the people in the surrounding locality? Yes; I think the roads H and I would be of service to the people on the Lane Cove Road going to Hornsby.
259. If the Crown lands are as rough as you describe, the means of access would considerably improve their value, as they would also improve the value of the private lands? Yes. I ought to mention that roads H and I are merely cleared.
260. I understand that some roads on the Crown lands are cleared? Yes.
261. You were speaking about the unemployed doing some work at Campbelltown;—is it not a fact that they were sent to various localities on condition of the municipal councils offering subsidiary aid? Yes. I know that some were sent to Wallsend, Campbelltown, Parramatta, Leichhardt, &c. The municipalities paid one half of the wages, and the Government paid the other half, to employ local labour.
262. *Mr. Copeland.*] You were saying that roads H and I were merely cleared? Yes; when I saw them.
263. Are you not aware that road H is ballasted along its entire length? No; I was not aware of that. When I last saw it it was only cleared. The only ballasted road I remember seeing was the Junction Road.
264. If a great deal of this road had been ballasted, and if a number of culverts have been formed in it by the unemployed, it has been done without the instructions of the Board? Yes; so far as I am aware, no instructions have been given. Some culverts may have been put in, because Mr. O'Donnell had *carte blanche* to put in whatever he thought necessary for the crossing of the creeks.
265. Although you are a member of the Casual Labour Board, you are not aware that culverts have been constructed along the whole of this road? No; I was not.
266. *Mr. O'Sullivan.*] If Mr. O'Donnell has been authorized to construct culverts along this road, and if he has done so with the labour at his disposal, how is it that he is unable to carry out the work to which you have referred on the Boundary Road? Crossing the gullies on the Boundary Road is a very different thing from crossing the water-channels on a comparatively good road.
267. Have you seen some of these culverts? I have seen them on the Junction Road. They are not very big there.
268. Have you seen the culvert in the gully across Boundary Road near C road? I have not seen that.
269. *Mr. Brunker.*] To whom was Mr. Gordon responsible for the work he carried out? He was answerable to us directly for the work. He would recommend and carry out certain work. He would advise as the surveyor engaged on the design for the subdivision of the land.
270. Was the Junction Road recommended by Mr. Gordon? Yes.
271. And approved by the Board? Yes.
272. Do you consider that a road constructed there is as beneficial to the Crown lands adjoining as a road constructed higher up would be? More so, on account of the nature of the ground. You get access by the tributary roads.
273. So far as giving increased value to the Crown land is concerned, you think that the construction of Junction Road is just as advantageous as the construction of Boundary Road would have been? Yes; I consider that the Boundary Road is an almost impracticable road.

Mr. F. Wells.
18 Mar., 1889.

Mr. F. Wells.

18 Mar., 1889.

274. Although the road gave increased value to the private land, the Board considered that they were acting in the public interest in carrying out the work as it appears on the plan? Yes, decidedly. If we could have got a diagonal road across the land it might have been shorter, but we should have had to pay for the land. If there had been no Crown lands to clear I should have recommended the Junction and J Roads.

275. *Mr. Copeland.*] Is it not rather a coincidence that the only points of access from the private lands to the Crown lands should be just on the division lines of this property? These lines of road were selected by Mr. Gordon to give access.

276. *Chairman.*] You can see no coincidence in it? No.

277. *Mr. Brunker.*] Is it not true that these boundary lines are also the boundary lines of property belonging to Messrs. Brown, Harnett, Ebsworth, and others? Yes.

278. *Mr. Copeland.*] Was not that property included in the estate originally? Not that I am aware of.

279. Then how is it that the boundary, as shown on the plan, is all coloured yellow? I do not know. That is what puzzled me at first. Vanceville I know is an old subdivision. I do not know the boundaries of the Burns property. The plan also shows property belonging to Mr. Forster, Harnet (Edwards), and Want, I believe.

280. Would that be Mr. Justice Foster? Not that I know of.

[Frederick Wells recalled and further examined—12th December, 1888 :—

2742. *Chairman.*] Have you been out to the Hornsby District since you were examined previously? Yes.

2743. Have you discovered any roads not on the tracing at that time? Yes. I wish to hand in an Appendix of the roads I know now to be done, in contradistinction to the roads shown on the plan upon which I gave my evidence. The Appendix also shows the estimated cost, at the rate we pay. (*Vide Appendix H.*)

2744. Is the shape of the road cleared by mistake shown on the plan correct? I cannot say. As far as I know from Mr. O'Donnell, he started from road H across to the other road.

2745. Mr. O'Donnell's evidence is that that road does not take this shape? That may be.

2746. Mr. O'Donnell shows that he joined with the road running to the north? Yes.

2747. This tracing does not show that? I did not go down the road; I just drew it into the map to show its situation.

2748. What is this marking in pencil? That is a road that has nothing to do with us, if such a road exists. I do not believe it does exist. I did not see it on the ground, and it was not done by us.

2749. You do not know that it is not there? No; but I do not believe it is there. I did not see it when going along Junction-street. It was not one of our works.

2750. You do not know that it does not exist? I am pretty certain that it could not. I said before that there was a lot of work that I was pretty sure could not have been done, because I was not informed of it, but I found that it had been done.

2751. Will you explain generally the roads that were not on the plan before? I was only cognizant at the time of my last being here of the Junction Road having been cleared, and of the Vanceville Road, and the roads H and I. Of course the roads B, C, D, and F were all cleared. I expected those to be cleared. When I was out on the 1st February I saw that the roads H and I had been cleared; but I was not aware of any other roads than those at that time.

2752. Will you kindly describe the roads you saw on your last visit? The roads I saw work done upon my last visit are the Western Road, that is, the western boundary of the Crown lands, the continuation of road B—that had been done since my visit in February—a portion of Boundary Road, which has been formed as far as road D, the continuation of road A, which has been formed, and the junction to road C on the Boundary Road. The Boundary Road has also been formed from the station.

2753. *Mr. M'Millan.*] That is a road coming from Boundary Road from the station? Coming from the station as far along Boundary Road as practicable. From road D to the Junction Road had been cleared when I was there last; but it has been formed since I was there. The ballasting of these roads had been nearly altogether done since I was there. The ballasting is shown in colours on this map which I now hand in. The whole of the ballasting along Burns Road has been done since I was there; the clearing had been done previously by the owners. The clearing, forming, and ballasting of this road that I have marked here as K—that is, from the Junction Road down to the hotel, the short cut to Pennant Hills—that was all cleared and ballasted since I was there in February. This continuation of road E across to Burns Road I was perfectly ignorant of. I did not go over it; but I saw it from the end of the road, and I was told that it was cleared and formed right through.

2754. *Mr. O'Sullivan.*] Do you consider that the whole of those roads you recently discovered were in the interests of the public? There is one road that I do not, and cannot account for. I think the others are useful roads in the interest of the public. The road I refer to is the continuation of road E. I do not think that that road is essential in the interest of the public.

2755. Do you think that peculiarly shaped road at the end of Burns Road is required? That is absolutely necessary, only it is badly shown on map. It is not ballasted along there.

2756. *Mr. Copeland.*] Have you not been out to see for yourself? No. I saw it was ballasted from the start; but it is not ballasted all along. I have put it down as ballasted. It is to connect with the Bobbin Rock Road.

2757. *Mr. O'Sullivan.*] Why did they require a double connection? There are not two roads there. It is shown like that because the road goes round one way or the other; I do not know which.

2758. Why do you want to get a connection with the Bobbing Rock Road when you can meet the Peat's Ferry Road? That was a work recommended by one of our superintendents; it was a voluntary recommendation that it should be cleared. Mr. F. Wells.
18 Mar., 1889.
2759. Have you made a reinspection of Boundary Road? As far as road D. I went down the road some little distance, and of course I saw sufficient to know that we should not have made it any further.
2760. Do you think it could have been made passable for a fair amount? No; it would cost a deal of money. I do not think £2,000 would make that road.
2761. If a surveyor who has laid out these roads has stated it could be made passable for about £1,200? It would be a very peculiar "passable." It could not be made a road at all or anything like for the money. If it had been the motive of the Board to do anything to benefit Burns, Withers, and Smith's property, it certainly would have been more advantageous to expend a large sum of money on this road along their property than merely to have made a road which Burns, Withers, and Smith could have cleared for £100; because it need not have been more than cleared by them. It would have been more to their advantage if we had made this impracticable road at a cost of £2,000 or £3,000.
2762. *Mr. Copeland.*] Are you not overlooking the fact that in one case they get only one frontage, and in the other they get a double frontage? I am not overlooking that.
2763. In Junction Road do they not get a double frontage? Yes; for over a mile—for 82 chains.
2764. Would they get a double frontage to Boundary Road? They have one frontage to Boundary Road, which is impracticable.
2765. Who provided the land for that road? I believe it was from the Government Estate. It was laid out by the Surveyor-General's Office.
2766. They not only get a road presented to them by the Government, but they get the road cleared by the Government, and they get a frontage without contributing anything? I believe it is an old Government road along the boundary of the Crown lands.
2767. The evidence shows the reverse? What I am guided by is the plan of distribution of Government lands in saying that it was left along there. It is essentially a Government road, and was left as one.
2768. You have supplied information here with reference to the expenditure? This table shows that there has been £2,365 10s. expended on these various Government roads? I think that is the total.
2769. And then you deduct from that a sum of £56 10s. for the labour of clearing done by the owners, leaving a net amount of £2,309;—have you arrived at that estimate as the actual expenditure, or merely as the estimated expenditure? I have arrived at that as the estimated expenditure.
2770. Being a member of the Board, why are you not in a position to give the Committee the actual expenditure? That it is impossible for me to do. The resident officers pay for all work at piece-work rates.
2771. On what scale have you paid them? You will see by the note in the margin.
2772. That is, clearing 15s. a chain? Yes; £7 an acre.
2773. That includes the grubbing of stumps, the burning off, and everything? Yes.
2774. For 15s. a chain? Yes, and those are very liberal estimates in comparison with what we have been paying.
- 2774½. Ballasting, three-quarters of a cubic yard at 1s. 4d. = 1s. a lineal yard;—by that you mean a lineal yard the full width of the road? Yes; the ballasted portion.
2775. What is the average width of these streets? I do not think they will run above 15 or 16 feet—the ballasted portion. I stepped two or three of them, and they ran about 15 or 16 feet.
2776. What would be 48 square feet to the lineal yard? I have not run it out. I judged it by stepping it at three-quarters of a yard to the yard.
2777. How many inches would that require? For an 18-foot road it would require a solid 6 inches.
2778. What is the roadway? The road is formed wider, but it is ballasted 15 or 16 feet.
2779. You say that three-quarters of a cubic yard would cover a lineal yard, and allowing the road to be 15 or 16 feet wide, that would give 48 square feet? I am not in the habit of measuring that way. I can work it out for you.
2780. What thickness do you reckon this metalling is done? I do not think it would average 4 inches. I do not think it would average more all over.
2781. That is those parts ballasted? It is not very heavily and but roughly ballasted.
2782. Do you give this evidence from your own observation? From my own observation.
2783. And you state here you do not think it would average—? I do not think it would average more than three-quarters of a yard to a yard.
2784. Which would give a covering of what? A sure test would be to take up some yards and stack it and measure it. If you wish you can have it taken up.
2785. How many inches would that give? About 4 inches; I did not calculate particularly; but it is a single stone thick in some places. The stone is very crude, and the roads roughly ballasted. It is not such stone as we would accept anywhere else.
2786. Does that apply to every road? To Burns Road and the Vanceville Road as far as I travelled it.
2787. Did you not see in any parts such a thing as stone 8 or 9 inches thick? No; I do not think so. It is very crudely done: in some places it is a little thicker than in others; but I do not believe, and I am a pretty good judge, that if you take it up it will go more than three-quarters of a yard to a yard.
2788. You estimate it at from 3 to 4 inches? Not three. They are mostly big stones, and have not been properly broken up.
2789. They cannot be very big stones if they average 4 inches? They are not very thick. You could not measure stone like that on the road. 2790.

Mr. F. Wells.
18 Mar., 1889.

2790. If the average is 4 inches, in some places it would be 6 inches thick and in others 2 inches? Very possibly it is; but the only possible way to check the measurement is, as I have said, to take up some yards of the road, stack the stone, and measure it.
2791. Carting, spreading, and blinding, at 1s. a lineal yard;—in this estimate have you included the draining? The draining is included in the forming.
2792. Have you included the culverts and bridges? I have not included the culverts and the bridges.
2793. Do you not know their cost? No; I should have had to take out every one of them.
2794. Do you not think that in preparing a statement like this you should have shown so many culverts and bridges? I could not spare the time to prepare a very full statement.
2795. You hand this paper in as an estimate of the total cost of the work done? Of the roads and ballasting.
2796. Is that a fair way of doing the thing? If you want further particulars I can procure them for you.
2797. But we wanted it now? Well someone will have to get it and take it out for you.
2798. But you as an officer of the Government, went out to ascertain the total cost of the making of these roads? I did nothing of the kind. I went out as a member of the Labour Board, to see what had been done since I last saw it.
2799. Is not that under the Government? No.
2800. Who pays you your salary? I get no salary for it at all.
2801. *Chairman.*] Do you not expect it? If I do get some I shall be very thankful.
2802. *Mr. Copeland.*] At the time you went out there you were receiving a salary from the Government for your services? Yes; but to get that information I should have had to spend more time than I could afford to lose from the department.
2803. Even if you had not time, could you not have stated that there were so many culverts and bridges that you had not estimated? There are one or two I have marked here on the map that I know to exist, but without considerable trouble I could not have arrived at their cost. They would not have made a very large item at any rate.
2804. I understand from this column that you estimate the total cost of the work done on the roads to which Burns, Withers, and Smith have one frontage only is £374 5s.? No, £563 17s. The other figures are after the deduction made by the Roads Department.
2805. The cost of the roads through Burns, Withers, and Smith's property where they have both frontages is £535 10s.? Yes.
2806. In this calculation you seem to have omitted several roads;—have not Burns, Withers, and Smith a double frontage to A road? Yes; but that is a Government road, and the only crossing of the railway.
2807. But have they not a frontage to both sides of this road? Yes; but I do not think we have a right to charge it to them.
2808. You have given in this estimate the cost of all the roads done in that neighbourhood, as I understand it; it assumes to be so;—why did you not include road A? I do not know; it was not done by us. The cost is put down in another column; but I do not think it would be right to charge it to them. You can put it down if you like.
2809. No; I am not going to do your work. This paper presumes to show the cost of the roads entirely through Burns, Withers, and Smith's property;—has not that road A been made by the Government? It was made by Mr. Deering before we took charge at all. Road A was done not by the unemployed under the control of the Board; I believe it was done by Mr. Deering when he had charge.
2810. You know it was done by the unemployed? I do not know by whom it was done; but it was not done by the Labour Board.
2811. *Mr. McMillan.*] I understand that this schedule is made out as to the work done since you were a body? Since we were a body.
2812. *Chairman.*] In your schedule you have omitted to mention road A as being upon the property of Messrs. Burns, Withers, and Smith—as a matter of fact the road does pass through their property? It does, and is shown on schedule, but not charged to Burns, Withers, and Smith.
2813. Then why have you omitted to include it in the roads in this schedule? It is included in the roads in the schedule, but it is not put against their estate because it is a Government road. I do not think it is in the same position as the other roads which I have charged against their estate.
2814. But the road passes through their property? Yes.
2815. Is there any other road passing through their land which you have not put against their property in this schedule? I will look through the schedule and see. I do not think there is any other—that is, any other in the same category. * * * * Well, I find that a portion of the Boundary Road, to which Messrs. Burns, Withers, and Smith have one frontage, is not charged against them. The clearing has not been charged against the estate of Messrs. Burns, Withers, and Smith, although it is along their frontage. You see it is a Government road.
2816. Although you have a column there showing charges on account of one frontage you have not included this road in that column? No; it is a Government road, cleared entirely at the instance of the Government.
2817. Have you included the cost of the culverts and bridges in your schedule? No.
2818. Or the drain-pipes? No. I do not see any other roads but these two which are in that position.
2819. *Mr. O'Sullivan.*] You have included in these columns only the roads which have been constructed since the unemployed have been in the charge of the Casual Labour Board? Yes.
2820. Have you any objection to add to the schedule the words, "While under the charge of the Casual Labour Board?" No, I will add those words. I remember that road A was cleared and formed before our Board was formed; but we have ballasted it since.

2821. *Chairman.*] Have not men under your Board done work upon the Boundary Road? Yes; but I am doubtful whether they did any of the clearing. I think that was done by Mr. Deering before we took charge. Mr. F. Wells.
18 Mar., 1889.

2822. They have not been upon the work under you? No; not in clearing, but they have done some forming between the railway station and the road marked D.

2823. Is that portion of Burns, Withers, and Smith's frontage under its proper heading in this schedule? One half of the clearing is charged there.

2824. *Mr. Copeland.*] Notwithstanding the fact that the work was done by the unemployed? The work has been done there under Mr. Deering.

2825. But Mr. Deering had charge of the unemployed? Yes.

2826. You are aware that this inquiry is as to the work done by the unemployed? Then I think the better way, if you are going to refer to the whole of the work done there, would be for Mr. Deering to prepare a schedule of his own. It is not at all likely that for the sake of a few pounds I would neglect to make these charges against the estate if I thought that the roads were properly chargeable against it. The charge for the road over the Railway Bridge would be £131, and the other item omitted would amount to £30 15s. The £161 15s. would not make very much difference in my estimate. It is scarcely worth considering. It certainly would not be worth my while to keep these amounts back for the purpose of misleading the Committee.

2827. *Mr. O'Sullivan.*] But you have admitted in your evidence that you have not included the culverts and bridges? I am not, as I have said, in a position to give you that information.

2828. Will you add a note to the schedule stating that that is the case? I will do so with pleasure.

2829. We have had it in evidence from the surveyor who laid out these roads, and who kept the books, that the total cost of the roads was nearly £4,000; you say now that the cost was only £2,309? May I ask who was the surveyor who said so?

2830. *Mr. Little.* He would probably be in a better position to give you definite information than I am, being on the ground; I can only give you the amount from my knowledge of the rates we pay, and having regard to the work which I saw had been done.

2831. Do you think the amount Mr. Little has given would be right? I can scarcely credit it.

2832. *Mr. Copeland.*] Are you aware that Mr. Little has given evidence that the total cost of this work on the private property has been nearly £4,000? I am not aware that he has given such evidence.

2833. If he has given such evidence would it be correct? I can scarcely credit that the roads have cost so much, unless the officers have been paying considerably more than the rates which they were authorized to pay.

2834. Which do you think is more likely to be more correct—Mr. Little's evidence from his books or your estimate? Of course I cannot answer for his books, but his answer should be the more correct. If he has been able to distinguish the roads the items of his estimate should be correct.

2835. You are a member of the Casual Labour Board? Yes.

2836. Is it not one of your duties to see that the public money is properly and judiciously expended? Yes, as far as it is possible for us to exercise any check.

2837. Would you not consider it part of your duty as a member of the Board to see that proper accounts of the expenditure were kept? Yes; we see that the sheets are kept, but it would be utterly impossible for us to exercise supervision over every detail.

2838. But this is not a question of detail? It is with us.

2839. Is not this a batch of work upon which you have a certain number of men employed? No; we have a lot of work all round that camp. The work paid from that camp extends to Berowra, and half way across to Narrabeen.

2840. If the superintendent keeps an account of the money paid to these men who are working on these roads is he not able to supply the Committee with accurate information? He should if he could distinguish the roads, but I very much doubt whether he would be able to do that, unless he has been to the Audit Office and obtained the sheets.

2841. You think the superintendent's information is not likely to be more reliable than your estimate? I should not give it more credence myself.

2842. On what do you base your rates? On what our officers are authorized to pay.

2843. That is so much per cubic yard for ballast, and so much for other work? Yes.

2844. When the men have natural difficulties to contend with are they paid at the same rate? Such an article as ballast would come to much the same price. You appear to think that I should exercise supervision over these things, but I have no chance of doing so. It would require a far larger number of men to exercise this supervision. We can only estimate what the cost of work is from the rates we authorize our officers to pay.

2845. Do you authorize your officers to pay the same rate over the whole of the work irrespective of the ease or difficulty of the work? The rates in some places would of course differ from the rates in others. For instance the clearing would differ. In my estimate I have taken that at an average of £7 per acre, and I think that would be a fair average for the clearing which has been done upon this ground. I have taken 14s. a chain, and I have added 1s. per chain, so that I may be within the margin.

2846. *Chairman.*] Have you ever had any audit of your accounts? No; never. The sheets are audited by the Auditor-General. They are passed directly on to him; I may say that I have asked the Treasury for an audit of our accounts.

2847. But you have never had a certified audit? Never. I have applied once or twice to the Treasury officers, but they have told me that the matter has not been one of revenue, and that as it was merely a matter of expenditure if the Auditor-General was satisfied with the vouchers which were sent in, it would be considered sufficient audit.

2848. *Mr. Carruthers.*] Is the estimate which you have handed in based upon any previous experience which you have had? Yes; of course.

Mr. F. Wells.
 18 Mar., 1889.

2849. You have made roads before similar in character to these? Never similar in character, because they are roads of a character which I should never allow to be made under my own supervision.
2850. Are these prices higher or lower than those which you generally pay in your management of the Roads Department? Very much lower. We want the work to be somewhat punitive. For that reason we only sanctioned a rate which would give the men something like 6d. per hour. We want to get rid of the men. That is our primary object.
2851. Is it usual when you are making roads in the department to pay for the ballast which you take off private property? We have to do so in many cases. In other cases we take the ballast.
2852. When you let the roads out by contract do the contractors have to pay for the ballast? That is their own look-out. That depends upon the terms which the contractor can make with the adjoining landowner. We have a section in the Act empowering us to obtain the authority of the Surveyor-General to enter upon land and to take what we require, but we rarely ever force it. We allow the contractor to do the best he can for himself.
2853. Is this statement made regarding what you know from your connection with the Casual Labour Board only? Yes; it is made in accordance with the rates which we pay.
2854. You offer no opinion as to what has been done before by Mr. Deering, or any other person having charge of the unemployed? No.
2855. Although road A is included in your statement of work done under the Casual Labour Board—has any part of that work been done by the unemployed? Only the ballasting by the Board—the forming and clearing was done under Mr. Deering.
2856. *Mr. Copeland.*] By the unemployed? Yes.
2857. *Mr. Carruthers.*] Does this £131 5s. represent the cost of what was done under the Casual Labour Board? I put that down as being the total cost.
2858. That represents all that has been done on the road? Yes.
2859. By you or by any one before you? Yes.
2860. *Chairman.*] Excepting the culverting and the bridges? Yes.
2861. *Mr. Carruthers.*] Do these prices fairly represent the value of the work done? They do not represent its fair value, because it has been done by somewhat punitive labour; our men earn on the average only 3s. a day. Do not misunderstand me; the value does not represent the value of ordinary roads. If ordinary labour had been paid to do the work, it would have cost much more. The work, of course, would have been much better done; but it would have cost double as much.
2862. *Mr. Copeland.*] Do you think 3s. a day is a fair wage to allow the unemployed to earn? I think 6d. an hour is as much as we ought to give them. Of course, some of them earn 4s. or 5s. a day, but 3s. is the average. The bulk of them are very poor hands.
2863. *Mr. Carruthers.*] You have a note here that the Junction Road and the Vanceville Road are not charged here, as they would most probably have been made by the Roads Department? Yes. Vanceville Road had been made up to a certain point by the department; it was necessary to get through the property of Messrs. Burns, Withers, and Smith somewhere in order to get to the station. I might have tried for a diagonal road, in the first instance, but I do not think the proprietors would have given it to us on account of the injury it would have done to their property.
2864. As an experienced officer of the Roads Department dealing with applications for making new roads, would you have approved of an application for making these roads under all the circumstances? Yes; that is the Vanceville and the Junction Roads.
2865. And the cost of making them is as you have stated? Yes.
2866. Is that putting aside the unemployed? The work could not have been done at the price named here except with the assistance of the unemployed.
2867. *Chairman.*] In cases where the roads made only give one frontage you have put down only half the cost of making the road? Yes.

End of Evidence before Select Committee.

1234. *President resumes.*] Was that evidence submitted to you for revision after you gave it? Yes.
1235. Do you wish now, having heard it read over, to make any alteration or give any explanation in regard to it? There are one or two little matters that appear to have been omitted in my answers to the questions, and the questions themselves have gone a little away from the form in which they were originally put; but upon the whole it is correct. The answer to question 42 before the Select Committee reads, "The road was constructed along that portion by the Roads Department for a certain distance extending it in a northerly direction to meet the work done at the Junction Road and the Crown lands." That is scarcely a correct answer, because it would imply that the Junction Road had been made first, whereas the Vanceville Road was done before anything was done with the Junction Road. With regard to question 204, in the answer I stated that I thought at one time that there was a petition, but I had looked into the records and could not find it. I now wish to add that my reference was to the Roads records.
1236. I want you to detail for our information, as concisely as possible, the routine or system you adopted for conducting your business on the Casual Labour Board? Yes. In the first instance, after appointment, we met tolerably regularly; in fact, we had regular meetings of the Board. Some minutes at that time were also taken, and resolutions were passed, that is at the commencement. After a time it was found that action was more necessary, and the members of the Board contented themselves with only occasionally coming together. It was found necessary that one member of the Board should be constantly in the office, as we had hundreds of men in the streets to deal with, and it was therefore necessary that there should be one member in constant attendance. So it was necessary that the Chairman should undertake the executive work and be constantly in the office. The first duty that we found incumbent on us was taking over the plant that was left at the barracks from the Soup Kitchen business, and the other paraphernalia for the free feeding of the men, and it was arranged for the distribution of them where they would be away from their old meeting place at the Statue. So as soon as we met some drafts of these men were taken away, and we took offices down at the Haymarket, where they could assemble for work openly

openly; in fact, these offices were afterwards known as "The Casual Labour Bureau." A register was kept and also forms, upon which was entered the particular circumstances of the men who sought employment. The men were then drafted into the Park, and arrangements were made to ration them and supply them with such utensils as could be got together and given to them. They were sent out through Mr. Burrowes, who was superintendent at the National Park dépôt. Work being given them there as soon as they arrived, they had to earn the rations before they got them. Of course at first it was impossible to measure out every particle of the work, as they were sent in drafts of 200 a day. The work that we found for them was paid at the rate of 5s.; but this lasted two or three days only, until such times as there was opportunity given to measure out the work for them. As soon as piece-work could be arranged, they were put on to it. At first they were put on at rates that would give 4s. and 5s. a day, but we found that the pay at that rate was too attractive, and we did not appear to be getting rid of them. So we had to issue instructions to our officers to lower the rates and emoluments, and we have since kept up the practice of giving the men about 6d. per hour. Of course in starting this work we had to take over the ration contract as it existed at the time we took charge. Mr. Kidman was at that time, I think, the ration contractor, and he was receiving 1s. 3d. for a ration smaller than we thought was a fair thing for a working man. We thought we would get better terms by calling for tenders. We called for tenders, and the lowest tenderer for National Park rations was Mr. Kidman, who offered to supply them at 1s. 1d. per day per man, a considerable saving thereby being effected. The ration contract at Rookwood was let to a local man; but all the other contracts fell to Mr. Kidman. At Rookwood the local man was lowest. Our storekeeper gave instructions for rations according to the number of men he had employed, and they were issued under direction of the superintendent. The men had to pay for their rations whether they received them or not; that is to say, they were compelled to take the ration that was supplied by the Government. If they did not take the rations they were, nevertheless, deducted from their wages; but it is needless to say that all these men were in necessitous circumstances, and that they took the rations provided for them. It was compulsory that they should take these rations, including the superintendents and their officers. The payments were made for the men's work by cash on the ground. The money was supplied by drafts made on the Treasury for amounts of £6,000, which were placed to the credit of the Board in the bank. This account was operated upon by the Chairman, solely with the counter signature of the Accountant and Paymaster, Mr. Hinchcliffe, who gave security for £1,000. The pay-sheets of the men came from the superintendents into the office, and they were there signed or checked, and a calculation was made of the quantities, and the exact amount was drawn and taken in specie to the grounds. At first, on large pay-days, we would make it our business for the whole Board to go out to the National Park, partly for the reason that we would be present in the event of any disturbance, and partly that we might have an opportunity of going over some parts of the work and seeing what the men were doing. These payments were made once a fortnight. The pay was then given out by the Paymaster and Accountant, in the presence of Mr. Davies, the Chairman of the Board, who was nearly always there. I think I may say that Mr. Davies was constantly present. Each man received a slip—there are probably printed slips amongst the papers here—he received a slip upon which the value of his work was made out. These slips showed the quantity of work done, the amount due for the work, the amount due in respect of rations, and the balance that had to be handed to the men. The ganger took the money which he received to the men, and it would be seen how the money had been expended. They would settle all disputes there. The gangs varied in number from four and five to eight and ten, as they would agree amongst themselves. The receipts, of course came back on the pay-sheets and were handed in to the Treasury, but they were first examined by Mr. Houison, who generally checked the sheets, more particularly with the object of seeing what the average pay was. These sheets were then transmitted to the Auditor-General. They were witnessed by three or four persons, and they were dealt with just the same as those of any other Government Department, by the Auditor-General. The arithmetic was checked, and the quantities taken out. Although they had been checked before that, still, I presume, they were checked there, and the signature taken the same as if they had been from any other department. With regard to the audit, I was under a misapprehension, when I gave my evidence before the Select Committee, that they had been audited at the Treasury. I asked some of the Treasury officers if they would come and take possession of our books. They told me that there was no occasion for it, but it would be sufficient if they went to the Auditor-General. Of course if the accounts had been examined at the Treasury they would be passed to the Audit Office, so that they would go through the ordeal of the Treasury as well as a subsequent one at the Audit Office. There could not be any simpler or better form adopted by a Government Department than was adopted by us. The forms in which the pay was made out and the amount that every ganger got would be found amongst the papers that were left in the office. Correspondence, of course, was kept in a letter-book, in the same manner as obtained in any other Government Department.

1237. What officers did the Board appoint as distinct from the officers you took over when you were appointed? I do not know; possibly two junior clerks, Mr. Hibble and Mr. Larnach, who may have been appointed by the Board. These are the only two.

1238. Who appointed Mr. Hinchcliffe? Mr. Hinchcliffe was appointed by the Colonial Secretary at the time of the appointment of the Board.

1239. Did you have any say in the appointments that the Chairman made? Yes. When Mr. Hinchcliffe was appointed to the Board, he was appointed with Mr. Josephson to assist us, but their relative positions were not stated, and after we met at the Immigration Barracks it was considered by Mr. Houison, myself, and the Chairman, that Mr. Hinchcliffe was by far the most suitable man to appoint as Accountant and Paymaster. For the office of registrar and assistant Mr. Josephson was appointed.

1240. They were appointed by the Colonial Secretary, but who apportioned their duties? The Board apportioned their duties.

1241. What were Mr. Hinchcliffe's duties? Accountant and Paymaster.

1242. Did you make inquiry as to his ability as an accountant? I had some knowledge of him before. He was in the Immigration Department, and he was engaged in similar work when there. That is how I knew him.

1243. Were you satisfied that he was qualified for the position? Yes. I felt certain that he was a thoroughly qualified man for it.

1244. Then you spoke of Mr. Larnach and Mr. Hibble;—were they appointed by the Chairman? Yes.

1245.

Mr. F. Wells.
18 Mar., 1889.

Mr. F. Wells. 1215. Without your knowledge? Yes, without my knowledge. They were merely copying clerks. The two responsible men who had charge were, of course, Mr. Hinchcliffe, the accountant, and Mr. Josephson, the registrar.

18 Mar., 1889.

1246. Did the Chairman mention their appointments to you? Not officially,

1247. Did he have the fixing of their salary and all their routine duties? Yes.

1248. You mentioned Mr. Larnach, who appointed him? That was, I think, one of the appointments made by the Chairman, unless he was sent from the Colonial Secretary's office.

1249. Did you have any say in regard to the keeping of the books at the office? No; very little. I used to look at the bank-book occasionally, and occasionally at the letter-book and the pay-sheets, but more with the view of seeing the average rates that the men were earning than anything else.

1250. Who determined as to the moneys to be applied for from time to time? As soon as we had run out of one amount we made application for a similar advance.

1251. Was that done at a meeting of the Board? Yes; it was done there.

1251½. Are you quite sure that no application was made without the sanction of all the members of the Board? Yes.

1252. How was the amount arrived at for which you applied? The method was a very simple one. We owed £6,000 until we had expended it.

1252½. Had you an overdraft at the Bank? Yes; the bank allowed us an overdraft, and every time that we had an advance we returned the remainder of the previous £6,000 that we had not spent to the Treasury.

1253. Latterly the overdraft was larger than that? Yes; it was some £60,000 or £70,000. That was at the Joint Stock Bank. I think that was a matter of arrangement with the Treasury people; but this amount was made available for us to carry on our payments.

1253½. You told us that the cheques were signed by Mr. Davies and countersigned by Mr. Hinchcliffe;—did you sanction the expenditure from time to times, or did you leave the matter with Mr. Davies? We trusted it entirely to Mr. Davies. It was much better not to complicate matters. During the time I was on the Board I was away 366 days altogether.

1254. Then the Chairman and Mr. Hinchcliffe had the power to draw any cheques they liked? They had the power to draw on the bank account.

1255. Without any reference to you at all? Yes; except that occasionally we saw the bank-book and the money that was drawn.

1256. Have you any private record, or official record, to show how many regular meetings of the Board were held? No.

1257. Have you any record of the number of times you attended? No. From what I can make out from my own diary I attended about 200 times. Some of the visits were longer than others. Some of the visits were only for a short time. In some cases I have been for half an hour at the office; in others an hour, or even two hours.

1258. With regard to this arrangement for expenditure, it was quite possible for expenditure to be made without your knowledge at all? It was quite possible. We had to trust to the *bonâ fides* of the Chairman and the Accountant.

1259. Did you expend any money yourself? No.

1260. Did you ever make inquiry during the existence of the Board as to the way the books were being kept, and as to the arrangements that were being made for paying? Yes; I looked over the books, and I saw all the arrangements for the paying from the start, because I had had considerable experience before in dealing with the unemployed. I proposed that we should adopt as nearly as possible the same system that had been carried out previously.

1261. You have had considerable experience of the working of a large department? Yes.

1262. Do you consider the departmental system and organisation in connection with the Casual Labour Board was as efficient as that in any other Government Department? Yes; it was exactly on the same lines, with the exception that the Chairman was the head of the department.

1263. Both system and organization were efficient? I think so.

1264. And were proper checks kept upon the ordinary expenditure of moneys? I think so.

1265. Are you saying that from your own observation or from what you learned from the Chairman? No. I am saying it from my own observation, and more particularly so from what I observed at the commencement of the Board, when I attended the meetings of the Board regularly.

1266. When reports and statements were made to you by the Chairman with a view to initiating some expenditure, did you take any independent action in the matter for testing the reports, or did you accept them? Sometimes we had a difference of opinion, once or twice, as to proper expenditure.

1267. Can you recollect any case in which there was expenditure on the part of the Chairman in which you took a different view? Yes. I cannot tell the exact road; but, as regards the roads on the Holt-Sutherland Estate, I took objection to them—in point of fact, I saw Mr. Walker about them.

1268. Are you alluding to the roads that were ultimately undertaken? Yes, they were ultimately undertaken. The Colonial Secretary gave authority for the work being done, and I was relieved from responsibility in the matter.

1269. Then you did exercise your independent judgment? Yes, when it was necessary, and I recollect this as a particular instance. We had a difference of opinion in regard to one of the officers at one time. I wanted to discharge him, and I think Mr. Houston was of the same opinion as myself; but Mr. Davies was anxious to be lenient to the officer in question, so I did not press it. I wrote some very sharp memos. and rather sharp letters expressing my annoyance. I should have retired on one or two occasions—in fact I had determined to retire—but the Chairman stated that it was undesirable in the public interest for me to retire.

1270. Why were you anxious to retire? Because I could not give attention to the work. It was taking me too much away from my own duties.

1271. Was that all? That was all.

1272. Not because of want of harmony in the Board? Oh, no.

1273. What was the name of the officer you objected to? It was Mr. Burrowes, who disobeyed some instructions I had given him imperatively. I wrote to Mr. Davies and complained about him.

1274. Was any attention paid to your representation? He got a rebuke, but the matter was allowed to rest there.

1275. Who was Mr. Burrowes appointed by? He was handed over to us. We found him there on the ground when we took charge. Mr. F. Wells.

1276. One of the legacies you got from the Government? Yes.

1277. Do you know anything of him? No; I do not. I have been informed he was the son of Major Burrowes, who was Deputy Surveyor-General here many years ago.

1278. Is he a professional man? That is why I fell out. I objected to him on account of his want of professional knowledge. He was a very fair manager. He could keep the men well in hand; but when he went to interfere with any of the engineering work he made a mull of it.

1279. Was your objection to him solely with regard to his professional work? Yes; that was what I objected to. I objected to his interference with professional work; and my second complaint against him was his disobedience of orders. I told him to leave professional work alone, and he did not do so.

1280. What were his duties? To supervise generally what was going on. He had 3,000 or 4,000 men at various places on the National Park to look after. He had to see that the men were engaged at the particular work they were put to, to measure out their averages, and see that every man was doing his duty.

1281. Did he supervise the distribution of rations? The rations were issued under the supervision of the storekeeper of the camp generally. At one time he, Mr. Burrowes, began some roads that I objected to. Ordinary roads he could do pretty well, but whenever he came to anything where professional knowledge was required he was not up to the mark.

1282. With the exception of this imperfection in professional knowledge, were his other duties satisfactorily performed? Yes. I considered him a very good man and a very efficient officer. He was good at clearing ordinary gravel roads.

1283. Were not his duties of a highly responsible character—I mean as regards the money he controlled? Yes, they were responsible, because we had to pay on his voucher. As a matter of fact, we had to pay on his voucher always, so far as the National Park was concerned.

1284. Had you to accept his certificate as final? Yes. He signed for the measurements made up by his officers and surveyors.

1285. Was it possible for him, had he been so minded, to rob the department of considerable sums? I do not think that is likely; it would have leaked out.

1286. Would it have been possible? It would have been possible in that or in any other department of the Service.

1287. Then he had highly responsible duties? Yes; his duties were highly responsible.

1288. Had you any check upon him beyond his own honesty? No; with this exception, that men are always ready to cry out when anything is wrong. If there had been anything wrong there would have been checks enough, and some very sharp ones.

1289. Are you able to say from your knowledge of him whether he is a man whose word can be taken? I have no reason to doubt it.

1290. Supposing he made certain reports of a somewhat sensational character, would you feel inclined to give credence to them or not? I should feel rather inclined to doubt them until I first investigated them. He is a man who never tried to deceive me; but he is a very bumptious and particularly talkative individual.

1291. Is the occasion you speak of the only occasion on which you had cause to complain of him? Well, the first occasion I had to find fault with him was on account of the work. I objected to him carrying out work when I told him to leave road work alone altogether. I had to find fault with him always on this account. Two or three times I had to find fault with him.

1292. What is your opinion of Mr. Hinchcliffe as an officer? From what I saw of him he appeared to be a steady reliable officer. He did his work to my satisfaction. So far as I can judge, I think he is a good officer.

1293. Are you aware he had very large sums of money under his control? I was not aware. I do not think he could have very large sums.

1294. Are you aware that he had £5,000 in cash on one occasion? Yes. I have known him to have all that, and he was bound to have it in order that he might pay the men next day.

1295. Would he go alone to pay the men? No; the Chairman would go with him.

1296. What protection had you at the office for such a large sum of money? It was placed in a safe, and we had two constables there at night.

1297. Can you tell us how often you visited the Casual Labour Board offices in a week? I cannot tell you; perhaps about twice a week I might be going down; I counted about 200 attendances on duty, as near as I can judge.

1298. Whenever you went, was the Chairman there? Not always, but nearly always; I generally timed my visit so as to try and catch him; he used to go there about 9 o'clock in the morning, and stay until 11, when he would probably go to see the Colonial Secretary; a little after that he would go down to the office, and be there until nearly lunch-time. On Thursdays he would have a Board meeting in the afternoon, which he used to attend, but he would be there on other afternoons.

1299. When accounts and claims were submitted to the Board for payment, did you satisfy yourself as to their being genuine? They were checked in the office by Mr. Hinchcliffe. I presume you speak of ration accounts.

1300. Not only of ration accounts, but of all accounts? Mr. Hinchcliffe would check these by the receipts given by the officers in the field. Of course you could also check them by the orders given. The orders would be given by Mr. Hinchcliffe for what was required.

1301. Did you adopt any means, personally, to satisfy yourself whether these accounts were or were not genuine? I took no further trouble than this—to see the system was carried through.

1302. Did you satisfy yourself that there was a sufficient check? Yes; otherwise I might have been in the office altogether.

1303. Have you brought with you to-day any documents or records that would be useful to the Commission? Well, I do not know of anything that would be of particular value. I produce a tracing of a comparative section of the Junction and Boundary Roads at Hornsby.

1304. When did you prepare this? It was taken by Mr. Gordon about the time of the examination before the Select Committee of the Legislative Assembly. [*Section put in and marked D.*] I produce a sketch showing the designs of subdivisions of Crown lands in Manly Cove and Gordon. 1305.

Mr. F. Wells.

18 Mar., 1889.

- Mr. F. Wells. 1305. Do you know the history of the construction of these roads at Hornsby? At the time of the appointment of the Casual Labour Board I went to visit the camp and the works near Stony Creek road, from information I received from Mr. Koebke, who had charge of the work, as to the impracticable nature of the Boundary Road, connecting with the railway station, and I requested Mr. Houison to visit the Junction Road. I had an interview with Mr. Burns some years ago with reference to the Northern Railway, and Mr. Burns said that if the Government would clear and form the road he would give them the land right through his property. I remembered this offer, and I informed the Board of what Mr. Burns had told me a year or two ago. Upon receiving Mr. Houison's report it was determined by the Board to ask Mr. Burns to allow them to take advantage of the Junction Road.
1306. At that time had anything been done on the Junction Road? Nothing at all.
1307. Was it cleared? No, nothing had been done. The Junction Road had not been touched. Vanceville Road, and Burns Road leading up to it, had been formed.
1308. Had anything been done on the Boundary Road at the time you speak of? At that time the Boundary Road had been cleared the whole length as far as the Crown land went.
1309. Then the result of your visit on that occasion was to try and get the road which is now Junction Road, in place of doing anything to the Boundary Road? Yes.
1310. And why? Because of the impracticable nature of the Boundary Road, as reported to me by Mr. Koebke. As I have said, I got Mr. Houison to thoroughly explore it, and he came back and reported to us that we should take advantage of the Junction Road, and run roads of access between the gullies.
1311. Then was the Junction Road gone on with after this? Yes; Mr. O'Donnell had moved his camp up to Hornsby, as the base of the operations—removed from another part of the district.
1312. Previously to that, had anything been done at Hornsby? Nothing.
1313. Nothing on Messrs. Burns, Withers, and Smith's estate? No; the first work done there in the way of road-making was the Junction Road.
1314. Who was Mr. O'Donnell? He was our surveyor.
1315. Appointed by the Casual Labour Board, or by whom? No; I think appointed by the department as a kind of officer. We had him at Eastwood, and then he was transferred to Mr. Deering, and then he was transferred back when the Board took charge.
1316. What course did the Board take as to initiating any particular work which they thought necessary in any particular district? In this case I took the advice of Mr. Gordon as to what roads were necessary. The Junction Road was made on the suggestion of Mr. Houison.
1317. Was any systematic course adopted? No; Mr. Houison would go out there and inspect the district and see where he could recommend work.
1318. Would that be sufficient to warrant the initiation of work? No; he would recommend to the Chairman—speak to the Chairman about it.
1319. Had any member of the Board power to initiate work on his own responsibility? No; not outside the piecework we had already been engaged upon. For instance, in clearing subdivisions, any one of us who went out there might make an alteration, and, if necessary, we would get the Surveyor-General's Department to make the alteration.
1320. Do you know whether the construction of the Junction Road, for instance, was done under any particular authority? No; it was done with the authority of the whole Board.
1321. Before that work was gone on with, was anything further done in the way of getting authority beyond the Board? No; we had Mr. Burns' authority and his offer of the land. I think there was only one letter from Mr. Burns giving us permission to make that road.
1322. Did you undertake it immediately you got Mr. Burns' consent to give the piece of land? Some officer up there commenced to make this road. I think Mr. Dawson was the surveyor who laid it out.
1323. Can you say positively that the officer would be instructed by the Board? Yes.
1324. Would it be in writing? Very possibly not. He would simply be told to clear the road which Mr. Dawson had surveyed.
1325. Do you think the Board would act on their own responsibility in the matter of giving authority? I think so.
1326. Without reference to any other department? I do not think they would confer with any other department.
1327. Do you not think they would ask for Ministerial sanction? I do not think they would ask for Ministerial sanction in such a case as this.
1328. With reference to all the other roads up there that were made by the unemployed during the existence of the Casual Labour Board, were they initiated in the same way as this Junction Road? Which other roads do you mean?
1329. The roads on Messrs. Burns, Withers, and Smith's estate? Oh, they were all initiated by the Board in the same way. We were only allowed permission as regards one road; I do not think we got actual permission for the other. We simply put some of the roads there.
1330. Will you particularise, as concisely as possible, the works that were in existence when the Board took charge of the unemployed? There were clearances being done at the National Park, at Rookwood, at Gordon, and near Hornsby, some works near Heathcote, some work on the line near Carlingford, and at the Field of Mars and Beecroft.
1331. Did you continue these works? Yes. We carried on the works that were begun, just the same as Mr. Deering carried on the works when he took them over from the Roads Department.
1332. Who amongst the officers was responsible for the supervision of the men, and for seeing that the work was actually done? Mr. O'Donnell would be responsible for Hornsby camp; Mr. Koebke, as long as he had work to do at Stony Creek; Mr. Oxley was responsible at Narrabeen; Mr. Burrowes was responsible for the National Park and at Hurstville, and also for the Liverpool Roads; and Mr. M'Pherson was responsible for the road works in the National Park above Waterfall.
1333. Who did the road from Campbelltown to Heathcote? That was Mr. Burrowes, and a man called Boylan. That is known as the Eckersley Road.
1334. Were these officers responsible for carrying out the orders of the Board, and seeing that the men did their work properly? Yes. Of course, the officers were very poorly-paid men.
1335. Had you any occasion to complain of these officers other than the occasions you have given already? No.

1336. Is it your opinion that they efficiently performed their duties? Yes; they were a very efficient body of men. They were not of a sufficiently good class if the work had been going to continue for any length of time, but taking them altogether they carried out their duties very well indeed. They managed to squeeze work out of these men, just about what you would expect from them. Mr. F. Wells.
18 Mar., 1889.

1337. Were their duties of a responsible nature? They were responsible for looking after the money and the measurements.

1338. When the men were paid by Mr. Hinchcliffe, was he attended in all cases by the Chairman or another member of the Board? Mr. Hinchcliffe had always one or other members of the Board when there was a big pay. When there was a small pay we have sent Mr. Larnach out and a constable with him; but whenever there was a big pay either the Chairman or one member of the Board—sometimes Mr. Houison, sometimes myself—were present. Sometimes at first when we had a really large pay we all three of us would go.

1339. Did you get signatures on the pay-sheets for all the money disbursed? The signature of every man was given on the pay-sheets. The pays were made in the presence of the storekeeper and Mr. Davies. Mr. Hinchcliffe used to call over the names, and very likely one or two of the officers would be there at the same time.

1340. Would each man get his pay? No; the ganger of each gang would get the pay due to that gang. We would get the amount from each ganger, how much the work would be, how much was due, how much for rations, how much for breakages of tools, and how much had to be given to each man.

1341. Who would know the number of men in each gang? The officers would know that, and Mr. Burrowes would know the number of men under the ganger.

1342. Was it not possible under that system for a ganger and a sub-officer to collude? It is possible that might occur once, but it could not occur again.

1343. How would you discover it? It would be discovered in a minute; if any man was getting any more money than he was entitled to, and there would be a "holloboloo" about it.

1344. I believe several petitions and applications were sent in to you to initiate work? Yes.

1345. What course did you adopt as regards these? I have not seen all of these yet. Some of them I objected to. Some of them came in through the Colonial Secretary's Office. Some were petitions from municipalities seeking to get a grant. I was frightened not so much at the largeness of these grants, but I was frightened that other municipalities would follow the same lines and make application for men. In one case application was made in connection with some sewers which I was not satisfied with, and I raised an objection, and sent in an objection to the Colonial Secretary; but the Colonial Secretary approved of the work.

1346. You objected, but gave way when you saw that it had been approved by the Premier? Yes.

1347. Have you any knowledge of the steps that were generally taken to procure the Colonial Secretary's approval? No. In one instance, I think, the matter was taken to the Colonial Secretary by the Chairman, and that the Chairman recommended it. I think that was the one I objected to. I had a little difficulty with him on the matter. I spoke to Mr. Walker about it, and I think Mr. Walker telegraphed to Sir Henry Parkes on the subject, he being away at the time.

1348. Was there any other petition or application brought before you which you objected to? No; there was a proposal for doing some road-work at Campbelltown. I objected to it, and it was not done at the time; but I think it was done afterwards. I think the petition came from the Mayor of Campbelltown on that occasion. I said to Mr. Davis, "If I were you, I would refuse it, as the road is so near your place."

1349. What was the work? A road for Campbelltown. I think the work was asked for by the Mayor of Campbelltown, if I remember rightly. The road was afterwards carried out.

1350. Then in all these cases, can I take it, you exercised your independent judgment, and did not take the *ipse dixit* of others? I know I exercised my own judgment in every case.

1351. And with regard to the cases you objected to, you only yielded when you saw there was superior authority? Yes; when there was superior authority.

1352. Do you know how it came about that the Holt-Sutherland roads were authorized? I have seen more of it in the newspapers than anything else. I know Mr. Davies and I were in consultation over some of the roads. I was quite in accord with some of them being undertaken. I saw no objection to the main Illawarra Road, the Port Hacking Road, and in fact I would not have objected to the Coronella Road leading to the noxious trades site. These three I approved of.

1353. With reference to these petitions and applications, did any of them come in after the work was authorized? When we were about to start them. As they were on private property, I did not think we ought to undertake them.

1354. Did you call at any time at the Colonial Secretary's Office and represent your opinion about this? No. I called in to see Mr. Walker about the road.

1355. About a road or several roads? I am not certain whether it was one or several roads. At any rate I deprecated making the roads on the Holt-Sutherland Estate.

1356. Was that before you expressed your opinion to the Chairman? I think it was afterwards.

1357. You felt it your duty to press your opinion still further? I mentioned it to Mr. Walker. I had some conversation with him on the subject.

1358. Was any application ever made to you by any person or company to start or influence any particular work? No; not at any time.

1359. Were you in the habit of visiting the works that were going on? Some of the works I visited, but not very often.

1360. Did you go by yourself, or were you accompanied by any of your colleagues? I went sometimes with Mr. Houison. Sometimes I went down and spent the night at the National Park.

1361. Did you ever go with the Chairman? Oh, yes. I have gone to the National Park. At first when there were a good many men I went tolerably frequently over the works, but afterwards I could not spare the time, and I should have been glad to have been relieved of the work altogether. In fact I went so far as to ask the Commissioner of Roads on one occasion whether he did not think it would be advisable for me to see the Secretary for Works, our Minister, and ask him whether it would not be well for me to retire; but he appeared anxious that I should continue a member of the Board, so I did not like to press the matter further.

- Mr. F. Wells. 1362. You did not wish to retire because of any want of harmony between you and the Chairman? Oh, dear no; Simply because I could not do justice to the business as I would like. Of course, I satisfied myself by visits that things were going on all right, otherwise I should peremptorily have retired. We expected weekly that some action would be taken to close the works. I expected the thing would have been closed long before I had notice. As soon as we got down to 1,000 men I thought they would be closed.
1363. Had you got the number down to that limit? Yes; we had got it down for some time.
1364. Did you think that the works ought then to have been closed? I did. I am certain I mentioned to the Chairman that it would be quite as well to give them notice to close the thing, and he appeared to be of the same way of thinking. There was a time when it might have been conveniently done; just as conveniently as at the time it was done afterwards.
1365. I suppose you are aware that large sums were spent from time to time—do you think that the public were getting a good return for their money? They were getting the best return we could give; but not such a return as I would have liked to have seen.
1366. Do you think that the men might have been employed at more profitable work? I do. If we had had canal work, or something of that kind, we could have managed to have obtained good work out of these men; but if we had put them on railway work I would have been inclined to tell the bulk of them to sit down and smoke and keep outside the fence.
1367. In carrying out different works, was any other labour employed than that of "the unemployed"? They were all "unemployed" from the superintendent downwards.
1368. I mean in the construction of the roads, was there any quarrying or carting of stone or such like done by outside labour? We did employ carters; you could scarcely call them unemployed.
1369. On any large scale? No; not on a large scale. We had no works of magnitude to require them on a large scale. In regard to the carrying of stone for roads, and ballasting and so forth, our fellows barrowed and humped the material, and then we found it advisable to put horses and carts on and make a proportionate reduction from the men.
1370. Did you hire or get contracts for the supply of the carrying work? No; we hired.
1371. Did you employ outside labour and make the unemployed account for it? There would be a reduction in the wages. There would be only so much for the clearing and dragging of the stone.
1372. Was a separate account kept of these items? Oh, no; it would all be met in the value paid to the men.
1373. Was there any deduction made in the contract price or wages of the men? No; I do not think so. The reduction would be in the value of the work. If they got so much for the work, if we got horses and carts, we would pay them so much less. Mr. Houison and Mr. Oxley settled this particular matter.
1374. When you took over the unemployed, do you know what steps were taken to ascertain the amount of plant that you had on hand? Yes; I think there was an inventory handed by Mr. Burrowes to the officers at the time.
1375. Where? At the National Park principal depôt. There were some few things at the Immigration Barracks when the unemployed were there, but everything was sent to the National Park.
1376. What course was adopted to check the plant; were plant-books kept? Mr. Burrowes would keep a man in the head depôt who would keep account of the plant received and schedule it.
1377. Was there any other check? The only check was the supply.
1378. Would Mr. Burrowes have control of any other district but the southern? No; only his own.
1379. The officers of the other districts—Mr. Oxley, for instance—would be each responsible for the plant in his district? Yes.
1380. And for the repairs and renewals? Yes.
1381. Was there any considerable amount of plant purchased from time to time? Yes.
1382. What became of it? Some of it is there at present, or at the main depôt, which is now at Hurstville, but I do not suppose it is worth very much.
1383. Supposing a requisition came in for 100 picks, how did you satisfy yourself that it was a necessary application? I would look up the last supplies and see from them if it was necessary; at first we checked them.
1384. Who checked them? Mr. Burrowes, I think.
1385. Did you do it? No. I have done it once or twice. When there were exorbitant orders, we have gone out to see, and made the men work with some old tools.
1386. Who is Mr. Gordon? Mr. Gordon is a surveyor in the Survey Department. He is the officer who managed for Mr. Deering when he had charge of the casual labour, so his services were allowed to us for sometime longer, as he knew all about the district and the work. For sometime he acted under our directions, but he was not with us actually.
1387. Was he detached from the Survey Department? No; I do not think he was detached.
1388. Who was his superior officer? Mr. Deering.
1389. Even at the time he was working for you? Yes.
1390. Had you any control over him? No.
1391. Had he power to start the construction of, or to clear or ballast, a road? Not under the Board; he had prior to the Board's appointment.
1392. Without reference to anyone else? No; he would recommend.
1393. Had he power without reference to Mr. Deering? I do not know that Mr. Deering had charge; what his powers might be I cannot say; nor can I state what relations he stood in to Mr. Deering.
1394. Have you experienced any difficulty in working with him by reason of his acting in a twofold capacity? No; he gave us advice, and we were glad to receive it.
1395. In the answer to question 18, in your evidence before the Select Committee, you said you had prepared a statement which would be shortly added to the printed papers, as to the work done in the Hornsby district by the unemployed. Have you got that? I cannot lay my hand on it just now, but I will look it up.
1396. Since you gave your evidence before the Select Committee, have you ascertained whether any roads or other works were carried out or constructed without the Board's authority? Not since my last evidence.
1397. You do not wish to explain your evidence in that respect in any way? No.
1398. There was a question asked you with reference to the Boundary Road. You were asked whether it was now constructed? I suppose, as a matter of fact, it has not been, only to a certain length, which I can show you on the plan.

1399. Is it still your opinion that the course of that road was an impracticable one? Oh, yes. Impracticable to make it. It has a gradient of 1 in $4\frac{1}{2}$ going up the hill, and it would cost a mint of money, besides destroying all the frontage. Mr. F. Wells.
1400. Do you know Mr. Burns personally? Yes.
1401. Intimately? No. I know him as an acquaintance; I have met and shaken hands with him at the Club.
1402. Are you members of the same Club? No.
1403. Have you had any discussion with him in reference to these roads since that railway conversation you alluded to? No; only that one discussion.
1404. Did he, or anyone on his behalf, urge you to have these roads constructed on this property? Certainly not. I was ignorant of the country until I gave my second evidence. I knew with certainty the Hornsby Railway Station.
1405. Can you tell us where we are to look for the authority that led to the construction of these roads? I have given you the inspiration of them.
1406. You have given us your version, but where are we to look for the authority, or the records initiating them? There are no authorities or records. Mr. Houston only gave in a verbal report when he examined the roads, and the only authority is the letter written by the Board to Mr. Burns asking for permission to construct the road and his consent. But in regard to these other roads we took possession of them, and I do not think we had any authority for making them.
1407. Did you ever see any authority of the Colonial Secretary? No.
1408. Do you know whether that authority was obtained? No; I do not think that the Colonial Secretary ever gave any authority.
1409. Are you aware that in a great many other cases where work has been initiated his authority is forthcoming? Oh, yes; but not in these cases.
1410. Can you account for this? Simply because it was not deemed necessary to ask where we had got Crown lands to connect with a railway station, and when it was necessary to have practical access to them.
1411. That is only as regards one road, but there are four? And I would have pressed very hard for some of them. There are one or two of the roads that I should not have recommended, but I do not think there is £150 worth of work that I would have objected to.
1412. Does it not appear to you a singular coincidence that there is an absence of Ministerial authority here, and that Ministerial authority has been given as regards almost all other roads that have been constructed? I cannot say that. You will find a number of other roads that have no Ministerial authority at all.
1413. You say then that you took possession of this land and improved the land on your own authority? I think so; it was after Mr. Gordon had surveyed the road. I am not aware whether Mr. Dawson, who was Mr. Burns' surveyor, surveyed this road, or whether it was Mr. Gordon.
1414. Then you are not aware whether Mr. Dawson was the surveyor or Mr. Gordon? I am not. Mr. Gordon was there in the Government interest, and I think it very likely that he did it.
1415. Had Mr. Gordon power to initiate such a work? He would not initiate construction.
1416. You point out two roads on the Hornsby Estate which you object to? I did not object to them, but I should not have agreed to them. I object to them now.
1417. With these exceptions, do you believe all the roads there were necessary and useful works in the interest of the Government? Yes. With regard to the main roads, we shall have to spend in our department at least £2,000, to make good work of it. It is only roughly ballasted now.
1418. Then the work done on these roads was not of a substantial character? No; very poor.
1419. Were they not metalled? No; they were what we called ballasted.
1420. Then it is not productive, it is not likely to be of much service? No; if it came to have heavy traffic on it it would not be much good, and the rain would go through it.
1421. Speaking still of this Hornsby property, and the Crown lands on the other side of Burns, Withers, and Smith's property, could that have been approached in any other practicable way than by making these roads? No.
1422. Are you quite certain of that? Yes; the approaches there are precipitous and inaccessible.
1423. Did the roads constructed on the Holt-Sutherland Estate give access to Crown lands? They gave access to the National Park and the waters of Port Hacking.
1424. But they were not required for the ordinary purposes of the public? No; there were no Crown lands there for sale. But there is the Coronulla Road, which should be continued, and the Port Hacking Road is one which has from time to time received endowments from the Government.
1425. Will any of these roads on the Holt-Sutherland Estate be useful roads to the public? The Coronulla Road, the Port Hacking Road, and the Main Illawarra Road will be useful roads.
1426. But in the main they are pleasure roads? Yes.
1427. For picnic parties and so forth? Yes.
1428. Have you seen the subdivision plan of that estate? No.
1429. Do you know that it is a private estate? Yes, I do; that is the reason I objected to the roads.
1430. Were the roads constructed there without any reference to you? I do not think they were commenced. I think we were about to consider them. They had been working previously on the Illawarra Road.
1431. Can you pick out any of the roads you don't object to? Yes; the Port Hacking, the Illawarra, and Coronulla roads, and I think there is another road which would have been constructed with my approval.
1432. How many roads did you object to? I objected to all I saw done, excepting these four.
1433. Do you know how many? There are not a large number of them.
1434. Why did you object to them? Well, I objected to them because they were on private subdivision, and I do not think they were yielding the public an income.
1435. Do you accept any responsibility in regard to these roads? No, except in regard to those I have mentioned.
1436. Your evidence is—you took the course of objecting to them, but they were confirmed by superior authority? Yes. As soon as they were confirmed by superior authority I ceased to object to them.
1437. Are not some of these roads of an unusual width? Yes; some of them are very much wider than was intended.

- Mr. F. Wells. 1438. Much wider than necessary? Not wider than necessary. I understand that some of the roads that were to be only a chain wide were made 100 feet—a chain and a half.
- 18 Mar., 1889. 1439. Did the Holt-Sutherland Company bear any portion of the expense? Not that I know of.
1440. Are you aware what number of settlers there are there? There are a few settlers about Port Hacking, where the pleasure-seekers resort.
1441. Do you think there is sufficient to justify these roads? Not sufficient to justify these subdivisional roads.
1442. Are the roads you made there all of a substantial kind? Yes; they are good, serviceable, gravel-made roads.
1443. Can you tell us the amount expended there? No.
1444. Do you recollect the work being stopped there? No—unless it was stopped at the time I spoke to Mr. Walker about it.
1445. Did you ever hear that Sir John Robertson had remonstrated against the work being carried out? No.
- 1445½. Then you do not know whether the work was stopped or not? No. The work might have been stopped without my knowing anything about it.
1446. How long were you away from town or unable to attend to Board duties during the existence of the Board? I have been 146 days out of Sydney, sometimes as long as thirty-six days on one visit.
1447. Have you been long distances away? All over the Colony, from the far north to the far south and far west.
1448. At places where it would have been inconvenient to communicate with you? It would have been impossible; if they had wired for me in some places they could hardly have found me.
1449. Have you any share in any land syndicates or companies or any interest in any land in these districts? I have no share or interest in any land at all.
1450. Is Mr. O'Donnell an efficient officer? No; he is rather a slow officer.
1451. Is he a man you can trust? Oh, yes, he is trustworthy

TUESDAY, 19 MARCH, 1889.

Present:—

A. J. CAPE, Esq., M.A., PRESIDENT.

F. A. FRANKLIN, Esq., C.E., J.P., | T. F. WALLER, Esq., J.P.

Frederick Wells called in and examination continued:—

- Mr. F. Wells. 1452. *President.*] Do you wish to make any alteration or explanation in your evidence given yesterday? I do. Circumstances have come to my knowledge since I was here yesterday with regard to Mr. Burrowes which certainly render my opinion of his character for truthfulness different from what I expressed it, and I have also some doubts, which I never had until this morning, as to his absolute integrity. I said yesterday, in respect to Mr. Burrowes, that the only fault I had against him was his want of professional knowledge and disobedience of orders. I find, on looking back to the records, that I had occasion to find fault with him in July, 1887 for laxity in returning pay for one of our officers, who was incapacitated at the time from duty through drink.
- 19 Mar., 1889. 1453. Have you any objection to tell us the circumstances which have led you to change your mind as regards Mr. Burrowes since giving your evidence here yesterday afternoon? None whatever. I asked Mr. Davies this morning for papers in relation to faults I had to find with Mr. Burrowes, and amongst other things this question of the laxity cropped up. I have press copies, made at the time, of two complaints I had to make referring to professional incompetency and disobedience. The first is as follows:—“30th August, 1887. Dear Mr. Davies,—I think so seriously of our ground of complaint against Mr. Burrowes that I cannot refrain from writing to impress on you further that my minute on his report would convey the absolute necessity of recalling all the men from Waterfall that can possibly be drawn, leaving only such quarry hands as are competent to undertake piecework; further, to insist on all road-work in the way of cutting or formation at the National Park or its neighbourhood being stopped until proper supervision can be arranged. I am of opinion the best thing that could be done would be to transfer Mr. Burrowes to Narrabeen, and put Mr. Oxley on at the park instead. We should have, however, in such case to give the latter a fair start to finish the existing map on piecework. Mr. Houson might be able to spare a day or two to do this.—Yours sincerely, F. WELLS.” The following is the second letter:—“25th October, 1887. Dear Mr. Davies,—The more I think over Mr. Burrowes' wilful insubordination in attempting to interfere with road works, after the plain instructions that were given him not to do so, the more angry I feel. I told him in your presence of his utter incompetency on such work, and reminded him of the wasteful expenditure he had already committed the Board to. I subsequently, in the course of our ride, repeated instructions that Mr. M'Pherson was to undertake all road works without interference or control by Mr. Burrowes, but that Mr. M'Pherson would make requisition to him for men. I now hear of Mr. Burrowes having entered on the supervision of Unwin's Road, and having placed a perfectly incapable man in charge there, the result, as might have been anticipated, being a disgraceful mess. I recommend Mr. Burrowes' immediate suspension until further facts are elicited, and a full meeting of the Board determines whether his services should be retained.—Yours truly, F. WELLS.”
1454. Have you seen Mr. Davies since yesterday? I saw him this morning.
1455. Did he give you any papers? No; none. These papers I had in my own drawer. I asked him for any other papers he might have in connection with Mr. Burrowes in order that I might correct anything that was wrong.
1456. These letters were written in October and August, 1887; did you take any subsequent action in the way of getting rid of Mr. Burrowes through his having lost your confidence? Well, he was let off on Mr. Davies's intercession. Mr. Davies urged on behalf of his wife and family that he should be kept on.
1457. With reference to your answer to question 18 before the Select Committee, do you produce the statement referred to regarding the work done in the Hornsby District? I do. This statement is dated 13th November, 1888, signed by me as a member of the Casual Labour Board, and headed “Memorandum by

- by Mr. Wells. Roads cleared by Casual Labour Board near Hornsby." [Copy put in and marked D 1.] Mr. F. Wells.
 1458. In your answer to question 140, before the Select Committee, as to two roads mentioned there, you stated that they were considered desirable by Mr. Gordon, but you did not know they were done until you went over the Junction Road and saw them? No. 19 Mar., 1888.
1459. Before they were finished you knew nothing of them? Before they were cleared I knew nothing of them. It was when I went over the Junction Road in February, 1888, that I saw them. The Commissioner for Roads, Mr. Gordon, and I were in company.
1460. Then they were done without your knowing it? The clearing was done without my being acquainted with it. I did not go down them. I saw from the Junction Road that they had been cleared all the way from the Lane Cove Road; but as I have said, I did not go over them. The roads to the northward I know nothing about.
1461. In your answer to question 151, before the Select Committee, you distinguished between what you would have done as a member of the Casual Labour Board and what you would have done had the matter come before you as an official in the Roads Department? Yes. I said that if the matter had come before me in the Roads Department I should have been only too glad to accept the land required for a road as a gift instead of having to pay for it.
1462. Do you consider that in the gift of the road the Government got substantial value? I do. May I quote a case in my neighbourhood to illustrate this?
1463. Certainly? I quote a case in which there was a great agitation, and pressure was made on the department for a road at Ryde. A gentleman who owned some intervening lands was pressed for 10 chains, and although his property would have been improved by the road in the same way as that of Mr. Burns has been, he pressed for £500 per acre. The Roads Department has no power to enforce what was required except through the Crown Lands Acquisition Act, and the Survey Department has no power either. So that I answer the question that we have got full value for the roads given.
- 1463½. Are there any claims of that kind with respect to these roads? There are claims with respect to road H which will yet have to be settled up.
1464. With reference to question 18 before the Select Committee, you say you did not know these roads were cleared;—are they constructed now? C and A are formed only.
1465. What is formed? Merely shaped, with water-tables thrown up and drainage in the centre.
1466. With reference to your answer to question 196 before the Select Committee, did Mr. Burns commence the conversation with you as regards these roads? It was a general conversation as to the northern line of railway. I believe we were sitting in a railway carriage at the time. He informed me then that he was the proprietor of land surrounding Hornsby station; that it would be absolutely necessary to secure an approach to the station that we should get a road through his land, and that he would give us the land there if we made the road through it. As an officer of the department I remember that conversation.
1467. Was he in office then? No—at least I am pretty sure not. It was in 1885 or 1886. I am nearly sure Mr. Burns was not in office then.
1468. How did you recall that offer? When I went to Mr. Koebke's camp at Stony Creek, and was informed that the Boundary road was impracticable, I suggested to Mr. Davies and Mr. Houison that as Mr. Burns had spoken to me about this, and had offered the road through his land, Mr. Houison should go and inspect the land, and consider whether it would be advisable to accept the offer.
1469. Do you recollect how long a period elapsed between the two events? I think it was on the 10th May, 1887, I went to Stony Creek.
1470. Between the time of the conversation with Mr. Burns you refer to and the occasion of your visit to Stony Creek, had you any other conversation with Mr. Burns on the subject? No. I never had any other conversation with Mr. Burns at all; that was the only conversation I had with him.
1471. Mr. Franklin.] Your duties as principal assistant engineer would necessitate your frequent absence from head-quarters? Yes.
1472. And when at head-quarters your duties were of an absorbing nature and fully occupied your time? Yes.
1473. It was difficult to spare time from your ordinary duties to undertake the work in connection with the Board? Yes; I had to make up for a good deal of it in my own time.
1474. You were under the immediate direction of the Commissioner for Roads? Yes.
1475. Is that gentleman solely instructed by the Minister for Works in regard to operations of a special character? So far as I understand, he is solely responsible to the Minister for Works.
1476. Did you receive instructions from the Commissioner for Roads to act on the Casual Labour Board? No.
1477. Did you get his permission? I mentioned it to him. I was requested to do so, and he assented to my becoming a member of the Board.
1478. Upon your acceptance of the position, were you relieved of any portion of your regular duties in the Roads Department? No.
1479. Did your letter of appointment specify the nature of the work for which your services were required, or the expenditure which was to be made? It specified certain works it was intended to employ labour upon, which intention was never afterwards carried out.
1480. Were you well acquainted with the mode proposed for the expenditure of the funds of the Casual Labour Board? I could reasonably conceive what was intended. Of course I was not made well acquainted with it. I could reasonably conceive what was contemplated by the letter of appointment.
1481. But the general proposal of expenditure would have extended over a great area of the Colony, would it not? Yes.
1482. Assuming that the expenditure would have been in water conservation and works of a like character, would not the responsibility of supervision have been more than you could have afforded time for in addition to your ordinary duties? Certainly.
1483. If anything of that kind had been undertaken it would have been absolutely necessary to reorganize the whole Board or department, and to employ a very different class of assistants? Yes.
1484. At the commencement of your duties, were you satisfied with the field officers or staff handed over to you? Not from an engineering point of view. Mr. Burrows appeared a capable man in dealing with the men—in classifying them, distributing them, and in arranging for their encampment or quarters.

- Mr. F. Wells. 1485. Was the storekeeper a faithful man? He appeared to me to be a faithful and trustworthy man. The other officers and assistants were really of very little account at the National Park. At Rookwood we had Mr. Oxley, an officer with whom we had every reason to be satisfied up to the present time. We have never had any trouble with him at all. But none of these assistants were officers of such status or standing, or in receipt of such pay as to render them thorough reliable assistants. I may state that our Board is an exigency produced in a period of great popular excitement. These men were going down besieging the Public Offices 600 or 700 strong. They even broke into Parliament House, held disorderly meetings round the statue, from 2,000 to 3,000 of them being present. It was not a time at which the Board could readily hesitate in doing the best they could to get them out of the city, with the object of averting danger. That was our first trouble, and then when we got them settled out it became manifest to Mr. Houison and myself that there was a weak point in the system. In the first instance the Board did the duty that they were called upon to perform; we cleared the town of these people in three days. In four days there was not another meeting.
1486. When this settlement was effected, did you take any steps to reorganize or devise additions to the staff? No; we were in hopes from the first that it was only a temporary measure.
1487. Did you make any objection to any individual or to the presence of any one on the staff? No, not until my first rebuke, which took place a month or two afterwards. Then I found fault with Mr. Burrowes for laxity in returning pay. Some two overseers I had to find fault with for quarrels originating amongst themselves. Sometimes minor cases of insubordination had to be dealt with, but nothing more than you might expect amongst a large crowd of men.
1488. Was Mr. Burrowes your principal field officer? Yes. I very soon found he was inefficient in engineering work.
1489. What were his duties? The general management of the camp, the supervision and management of the rations, the supervision of the overseers and surveyors, the marking off of tasks, and we had to take his report as the final officer who measured the work, and to get from him as much of a check as he could give, by riding over at the time and seeing that as much work was done as the overseers certified for. Of course, he was the court of appeal that the men had against the judgment of the overseers.
1490. He was the district officer, in fact? He was the district officer in full charge.
1491. You have stated that the works of construction were first suggested by the Government surveyor; what works of construction were they? These roads.
1492. You say Mr. Gordon proposed the construction of the roads? He recommended the lines of roads to be adopted—that is at Hornsby. Those near the National Park were the first roads we constructed. They were recommended by Mr. Freeman, the Secretary to the National Park Trust. They were recommended in the old times when Mr. Deering had charge of the unemployed.
1493. When did you find the first evidence of Mr. Burrowes' failure in road matters? When I went out there I found that the work that he had carried out there at great expense on the Waterfall Road was a very great mistake from an engineering point of view. It cost a lot of money, and I stopped it; the character of it was so very bad.
1494. Was that road laid out by the surveyor? It was laid out by Mr. Burrowes before the Board came into existence.
1495. In your long experience as an engineer, have you throughout the Colony followed the lines laid down by the Government surveyors? In very many cases we have to differ from them, in matters of gradient especially. Of course, when surveyors used to lay out roads in the first instance they would lay them over a range and right up the tongue of a spur, at an impracticable angle, or necessitating deep cuttings. Subsequently, when money had to be expended, a deviation was necessary.
1496. Would it not have been better, under all the circumstances, to have appointed a road engineer, under your immediate supervision, to have taken control of these works? Decidedly; that was what was wanted—a good officer at a good salary.
1497. Did you advise the adoption of such a course? I spoke of it to Mr. Davies, but he looked upon the Board as a temporary thing that would close very soon after it started, and never be wanted further. It would have been difficult to have got one, inasmuch as we had got our hands full in our department.
1498. You say that your appointment to the Casual Labour Board was made by the Colonial Secretary? Yes, that was so.
1499. Would you have felt competent to decline your appointment without prejudice to your position? I could have absolutely refused it, but at the same time I should have been withholding necessary services at a crisis when I should not withhold them.
1500. You really did not enter any protest to the Colonial Secretary? I demurred some little time to the Principal Under Secretary, and said I could not give the necessary attention to the work; but as I was told that it was the wish of the Government I should take it, I took it.
1501. Having entered upon the duties, did you find work press heavily upon you? No; not at first. There was a good deal of work thrown upon me; but there was a good deal of consideration shown to me by my Chief Commissioner during the busiest part of the time in the first month or so.
1502. On the other hand, if Mr. Bennett had demanded your full average time, it would have pressed you heavily? Oh, yes. I could not possibly have carried it out. It was only possible by the forbearance of the Commissioner that I could have carried it out during the first month. After that I began to resume my old duty.
1503. At what period did you appoint the Hon. John Davies as executive head of the Board? Almost immediately after our appointment—almost on the first day that we took possession of the office. Mr. Houison and I agreed that we should appoint Mr. Davies as head of the Board and as Chairman. On my return I reported what I had done to Mr. Walker, and I told Mr. Walker that we could not give the whole of the time that Mr. Davies was able to give to the appointment.
1504. You do not know whether any such action was indicated to you as the proper thing to do? No.
1505. Was it not somewhat for the purpose of relieving the professional members of the Board of a portion of their responsibilities? Yes; we could not have attended to the executive work. I was thirty-six days absent from Sydney at one time on my official duties, and two or three times I have been eighteen or nineteen days away.
1506. After this first month were arrangements made for the Chairman to act independently in your absence

absence with the full authority of the Board? Yes, but he would endeavour to see the other members. Mr. F. Wells.
Mr. Houison was able to attend more than I could do. If I knew Mr. Houison was away, I gave whatever assistance I could, and attended to anything that might require attention. 19 Mar., 1889.

1507. Was it understood that each of the members were equally responsible? Yes; about equally.

1508. Could the chairman act upon his own responsibility, reporting things periodically to you and you approved? Yes; it would not have done to have kept everything waiting until we returned or until a quorum of the Board could be formed.

1509. You had every confidence in the Chairman? I had every confidence in him—I never had any reason to doubt him.

1510. Had he the ability to initiate and carry on the work to your satisfaction? Yes. Of course in any large work he would wait until he saw Mr. Houison or myself.

1511. And you were always willing to accept the responsibility of any action taken by the Chairman during your absence? Yes; except where, in the cases I have mentioned, I raised objection.

1512. There were cases in which you raised objections, and then your objections ceased? Yes.

1513. It has been shown in the evidence that the expenditure reached a sum of £240,000 during the twenty months' time that the Board existed? Yes.

1514. This amount was expended within a radius of 30 miles of the metropolis? Yes.

1515. Taking the coast-line as a base, would not this represent a semicircle containing an area of 1,410 square miles? Yes.

1516. That would take in the extreme limits? Yes.

1517. What is the approximate area of New South Wales? The approximate area of New South Wales is, I think, 250,000 square miles.

1518. That would represent 177th part of the whole area of the colony. Then the expenditure of the Casual Labour Board would be proportionate to the expenditure of about £25,000,000 per year on public works in the Colony? Yes.

1519. What is the amount of the expenditure of the Roads Department on the whole of the works throughout the Colony now? Half a million pounds.

1520. What amount of this would be expended on the area supervised by the Casual Labour Board? There was not a very large expenditure on that particular area, or, rather, the areas upon which the moneys of the Board were expended, because their labour was not utilised upon any of the heavily-endowed roads. Nothing had been done to them.

1521. I suppose a fair proportion of the annual vote would be expended within the metropolitan semicircle? Yes; I may state that these works, being the nearest to Sydney, and many of them being roads that would have been done by the department, if they had found time, they would have been the easiest taken up by the Casual Labour Board. To send these men distances into the interior would have been useless.

1522. You would not send them into the interior with the field staff you had to manage then? No; at the same time, when our works were going on in the Roads Department we employed a large number of the unemployed.

1523. On your own account? Yes; I had a number of unemployed, quite detached from the others, working on the Military Road from Watson's Bay to Bondi, and Mr. Coleman had a large number at work at the Spit Road. We also sent a goodly number of men to contractors, and to different places where works were going on; but on these works we had a better class of men. The men out at the National Park were scrubbing and clearing and learning to work.

1524. Did these men work under the supervision of the officers of the Roads Department? Not those at National Park. The other works I have spoken of were done under the department and the supervision of the officers of the department.

1525. What amount of supervision is given over the area in the semicircle by the Roads Department at the head-quarters and in the field. What number of officers would be employed by the Roads Department in that area? Only three—Mr. Dayson, Mr. Gunter, and Mr. Miller would cover all the area.

1526. Would those three be equal to the men who had charge of the Casual Labour Board work? They were superior, better men, more experienced in the class of work.

1527. Considering the limited area upon which expenditure was made, don't you think the sum of £12,000 per month was rather extraordinary? The expenditure was not regulated by the work, but by the men we had to find employment for.

1528. Was not the work very much greater than in the largest district in the service? Yes; very much greater.

1529. In your experience, does not the construction of a railway greatly enhance the value of agricultural lands? Yes; very much.

1530. And in a greater ratio near a railway station? Yes.

1531. Under such circumstances, is it not a common thing for speculators to purchase unimproved forest lands for subdivision and sale? Yes.

1532. And is it not usual to cut up land to produce frontages to the extent sometimes of one-fifth of the area? I cannot answer as to the amount; it is the custom to cut them up. A good deal would depend upon the nature of the ground.

1532½. And in many cases this simple superficial clearing is all that is done to such roads? Of late years it has been the custom to clear them in this superficial manner, but in some cases they have been thoroughly cleared.

1533. In any case, by this simple expedient is not the value of the land greatly enhanced? The land is seen, and it certainly causes it to attain a higher price at a sale than it otherwise would do, but I do not think it increases the intrinsic value of the land.

1534. It shows what the land is like. In fact, for simple bush land they would give a small price, and with scrubbing and clearing and laying out roads they would get a good deal? Yes; I imagine so.

1535. Have not the operations of the Casual Labour Board placed the Holt-Sutherland Estate and the Hornsby Estate in a similar position to that to which I have referred—I mean the clearing of these roads and the division into sections? There is no doubt it materially enhances the sale price of the land.

1536. As a matter of fact they never attempt to sell until the lands have been cleared? Well, it is not very many years since the practice first obtained of clearing. It was a novelty when they began clearing the roads on this Holt-Sutherland Estate.

- Mr. F. Wells. 1537. That was a very great improvement when they began to clear these roads? You must remember that these roads were cleared before.
- 19 Mar., 1889. 1538. But any further clearing would enhance the value of them? Yes.
1539. And that was done by the Government? It was done by the Casual Labour Board. The Holt-Sutherland was one of the first estates I saw laid out in that way.
1540. It is a common practice now. They never attempt to sell until so much work has been done? No.
1541. Is it not a fact that in these districts additional work has been done, such as ballasting and the construction of bridges and culverts—that, in fact, more improvements have been carried out than those of the ordinary character, such as speculators would effect? Yes; forming and that kind of thing is beyond the practice of the speculator.
1542. You stated in your evidence before the Select Committee that the cost of clearing was 14s. per chain—£7 an acre? Yes. It would, however, be from £4 to £5 per acre in places.
1543. It would be safe to state £7 as an average for the long line roads? Yes.
1544. Forming would be 15s.? Yes.
1545. Ballast— $\frac{3}{4}$ cubic yard to the yard—at 1s. 4d. per yard, £1 2s.; carting, spreading, and blinding, 1s. per lineal yard, would bring the amount in all to £3 15s.? Yes. Those are generally the rates we paid. I know I have given the full value, having regard to the inferior character of the work, because, as I have stated before, the work is such that in the department we would not tolerate it. It was inferior work; but of the roads that we put down, £3 15s. a chain was a fair estimate of their value.
1546. That is nearly £37 an acre? Yes, at the reduced rates that we were paying the men.
1547. If this land was given, as it has been said, without charge, in the case of the Hornsby roads, by Messrs. Burns, Withers, and Smith, it seems that the Government has given over to these men per acre the full value of it? That would be very much less than the value of the land.
1548. Oh, yes, but is it not very much more than the usual speculators would do? That has nothing to do with the agreement that Mr. Burns made with us. If it had been made with us—I am alluding to the Roads Department—it would have been a matter of £2,000, because we should have made it after our own fashion, and we shall have to do it yet: Either the Roads Department will have to make them, or if there is a Local Government Act passed, the local governing body will have to make these roads at very considerable cost.
1549. At any rate, they have got the advantage of the clearing of these roads with the parallelograms and frontages, more than any speculator would have done for a sale? Certainly no speculator would have done more than the clearing; £120 would have done all that they required in merely clearing the roads. That would have left the land open.
1550. Assuming that the Boundary Road was necessary for the traffic from the railway station to the back lands, this land would have remained in its original state of forest land without a road crossing it? It would have remained so unless Mr. Burns chose to make a road for himself.
1551. The land lying near a railway station, bounded by two lines of railway, it would have been to their interest to have cleared as soon as possible? I cannot say what their interest was. I was glad indeed to get the consideration I did—the right to form a road through the property. They decidedly have an advantage, but the general public have a very much greater advantage. I do not know that the owners are satisfied.
1552. They cannot have any complaint against the Government surely? Well, their consent as regards the Junction Road was a clearly defined thing between Mr. Burns and myself when he made his offer to me that he would give us the road to the Roads Department if we properly cleared and made it. Then in regard to the tributary roads, Mr. Houson and Mr. Gordon suggested those, and I do not know what terms we are getting them on. I think we took possession of them without Mr. Burns' consent.
1553. Did it not occur to you that it was a large expenditure on a small estate? No; I do not think that the few hundred pounds spent on the estate is a very large sum. The amounts actually expended on the Burns, Withers, and Smith's Estate are £347 5s., £228. I produce a document the same as Appendix H in my evidence before the Select Committee, showing the expenditure in detail. I would also add that in the document I made a special note that I had not included the cost of the bridges because I had not been able to ascertain it. I have ascertained since that the cost is £408 10s., signed by Mr. O'Donnell. These are the bridges upon the whole of the roads, and there is included crossings, culverts, pipes, and causeways. I give the following summary of the costs:—1 set of drain-pipes, £63; 11 crossings, £33; 1 causeway, £70; 6 bridges, £176 10s.; 5 culverts, £58; 2 culverts redecked, £8; total, £408 10s. £450 would represent the total expenditure on culverts, bridges, &c., on the Burns, Withers, and Smith's Estate and private properties adjoining at Hornsby.
1554. Can you tell how many chains of road have been formed on the Holt-Sutherland Estate? Not from memory, but it is in the evidence. There is the list, from which it appears that there are 3,461 chains on the Holt-Sutherland Estate.
1555. And how many chains are formed on Messrs. Burns, Withers, and Smith's land? On Burns, Withers, and Smith's and the adjoining private lands there is a total of 463 chains, including some Government roads that are ballasted.
1556. Do you consider the Boundary Road from the overbridge near the Railway Station to be impracticable? The road to the overbridge is a passable road down to point D.
1557. It is practicable for traffic? Yes.
1558. The extension of Vanceville Road to that part of Boundary Road you consider was justifiable? Yes. That is the natural road to the railway.
1559. The extension from the Vanceville Road, nearly westward to point D, was perfectly justified? Yes; that is part of the continuation of the road across the railway line to the overbridge—the continuation going to the railway station.
1560. What is the length of the extension of the Vanceville Road to the Junction and Boundary Roads? I cannot tell you.
1561. Could you undertake to put in the figures? No; because it would have to be specially taken.
1562. Was any portion of the Vanceville Road ballasted? It was all ballasted along the Junction Road, but not ballasted above that. The northern roads have not been ballasted.
1563. As you feel that this road was justified, why was the Junction Road extended towards the station parallel to the Boundary Road? Because one was the means of access to the back of the station.

1564. You do not consider that the road leading to the practical part of the Boundary Road was a sufficient approach to the station? No; not without making a sufficient extension of the Junction Road.
1565. At what date was it determined to deviate from the Boundary Road? It would be in May, 1887. I think on the 10th May when we went to the camp at Koebke's. After that Mr. Houison explored the road and reported to me in the office.
1566. On what date did Mr. Gordon take the angle of the incline showing the obstruction on the Boundary Road? I cannot tell you that.
1567. Will you look at Appendix marked D, showing the section of the obstruction—you will see that it is shown to have a grade of 1 in $4\frac{1}{2}$;—does that grade represent the actual formation? It represents the ruling grades through the cliffs. There are stiff cliffs and rock barriers there. The total rise is 100 feet.
1568. It was not contemplated to raise the level by a bridge or to reduce the top of the hill by cutting? You could not have cut to any great depth. It would have been possible to have raised the level of the road by a bridge 20 feet, and to have reduced the top by 5 feet, but it would still have been a very steep grade.
1569. The works at Hornsby and on the Holt-Sutherland Estate would be carried on simultaneously with the construction of the railways? No; works on the Holt-Sutherland Estate were going on where the railway passed through.
1570. Not at the hands of the Directors? Oh, yes.
1571. That would not be the case at Hornsby? At Hornsby the North Shore line of railway runs parallel with these works.
1572. Was not the North Shore railway under construction during the progress of this work on Messrs. Burns, Withers, and Smith's Estate? Yes.
1573. So that the cartage of material would be brought into competition with the cartage on the railway works? No, there was no carting at the railway works. The ballasting was brought in by train. I do not think that in the carting there could be any competition.
1574. You say you approve of three of the roads on the Holt-Sutherland Estate? I approve of the three I have mentioned, and I think of a fourth.
1575. But there are a number of roads which I suppose you do not know any particulars of at all? There were a number of roads cleared which were not done with my knowledge or sanction at all.
1576. And you, so far as possible, opposed those works? I protested against them to the Chairman, and upon his showing Sir Henry Parkes' authority for their construction I said nothing further. We had to find work for the men; we were obliged to keep them at work.
1577. Beyond those works I have asked you about at Hornsby, there are extensions that you were not acquainted with until more recently? Oh, yes.
1578. Did you approve of these? I approve of all that was done at Hornsby with the exception of one or two roads, and they were insignificant—only small matters of clearing. I might as well say that I do not think I would have sanctioned the ballasting of Burns' Road.
1579. Do you say that the ballasting is very rough as it is laid on? Yes.
1580. But having cost a certain amount of money, will it not be valuable? Oh, yes; it will tend to make a foundation for a proper road, which will have to be put down.
1581. It is of value on the ground? Yes.
1582. You said, in answer to a question put by the President, that you thought the operations of the unemployed should have ceased a year ago? Hardly so much as that, but they should have terminated some months ago when we got down to a thousand men. They might have terminated then without any more trouble than we have now.
1583. And you have expressed a wish from time to time to be relieved from a responsibility over which you had not regular control? I have expressed it on two or three occasions. I told Mr. Walker I thought it advisable that I should retire as I could not give the time necessary to do justice to the work. I also told the Commissioner for Roads once or twice that I would rather be relieved of the work. Of course it was only a matter of expense to me—a matter of trouble and annoyance, on account of my having to work overtime in my own department—and do extra work, besides the worry and annoyance of dealing with these men.
1584. Are you aware that Mr. Deering, the Metropolitan District Surveyor, has stated that the only road that he has any knowledge of having been cleared was that over the bridge leading through Bellamy's grant—a short road? Yes.
1585. That is marked A on the lithographed plan? Yes. The road crosses the railway on the overhead bridge, about a quarter of a mile north of the station.
1586. Are you aware that Mr. Surveyor Deering throws the responsibility of all the other roads upon the Casual Labour Board? I think he does, and I think he may justly do so, with the single exception of the Boundary Road, which was cleared by Koebke before we took charge.
1587. *Mr. Waller.*] Referring to the Holt-Sutherland Estate, what was the nature of the work done there when you accepted a seat on the Casual Labour Board? I do not know of any work done by the unemployed there.
1588. None? No.
1589. On the Holt-Sutherland Estate, then, was all work on private lands, as well as Crown lands, initiated under the régime of the Board? All the Holt-Sutherland roads passed through private lands, but two or three of them are public roads. The Holt-Sutherland Estate is intersected by the main Illawarra Road and the Port Hacking Road.
1590. Was all the work done on the Holt-Sutherland Estate on private lands done by the Casual Labour Board? Yes, it was.
1591. Did the Board receive authority for such work? Yes; they received authority from the Colonial Secretary.
1592. Before commencing? I presume before commencing.
1593. How was that authority obtained? I cannot tell you, except that I saw the authority on the papers marked, "Approved.—H.P." I believe it was obtained by the Chairman of the Board.
1594. Not by the Board as a body? No; by the Chairman of the Board, because I objected, first to the Chairman, Mr. Davies, and afterwards, in the Colonial Secretary's Office, I objected verbally to Mr. Critchett Walker.
1595. What was the ground of your objection? That they were private roads, which the Board ought not to undertake.

Mr. F. Wells.
19 Mar., 1889.

- Mr. F. Wells. 1596. May I ask if the Commission would be correct in supposing that you objected to the expenditure of public money for the benefit of private individuals? Yes.
- 19 Mar., 1889. 1597. You thought they would benefit the subdivision only? Well, yes, until I saw from the papers that several Members of Parliament had declared that the roads were for the public benefit, and approval was given to them.
1598. You mention, in answer to question 6 of your evidence before the Select Committee, that you desired the unemployed should work sufficiently to earn their rations;—did you give them other pay besides rations? Of course, they got whatever they earned beyond. For the first day or two no work was measured out to them, and they received 5s., until piecework could be measured.
1599. Was that exclusive or inclusive of rations? These rations were deducted from it every day. If they did not do any work they did not get any rations.
1600. What was the value of the rations per day? The charge at that time was 1s. 3d. We called for tenders afterwards and got larger rations for 1s. 1d. per day. We were paying the rate that the Government had been paying before. We had nothing to do but to order the rations to supply the men with food.
1601. So that you desired that the unemployed should have sufficient work to relieve the Government and the country of the cost of paying 1s. 3d. or 1s. 1d. per day for food? Yes; to relieve the Government of the cost of feeding 2,000 or 3,000 men who were being fed for nothing in Sydney.
1602. Did you apprehend at that time or desire that the unemployed should not only work sufficiently to cover the expenditure of public money, but also to be able to make a fair wage? We had no objection at first that the men should make 5s. a day, but it appeared afterwards that the camaraderie of the camp made that class of work attractive to men, and we began to reduce the allowance in order that they should not earn more than 6d. per hour. A great many of the men had not been earning more than from 9d. to 1s. per day after their rations were deducted. By working long hours some of them could make fair wages.
1603. But so long as they cleared their rations the Board was satisfied? Yes; we were satisfied.
1604. Are you aware that a system of overtime had obtained for a certain period, if not altogether? There was no overtime paid for by us.
1605. At no time? I do not think so. There was never any day-work, except at the first.
1606. Whether there was a busy time or a slack time the evidence shows that there was overtime, and overtime paid for, and it shows a state of things that had no business to exist? In the whole camp I do not suppose you will find a hundred men who were receiving day wages. Amongst the overseers you will find men paid by the day, and the superintendents.
1607. If overtime was paid for, was it without your knowledge and consent? I am opinion that it did not occur. It could not occur except in the case of some of the "supers." They might have some overtime with the consent of the Chairman.
1608. Then it resolves itself into this: that if overtime has been paid for it was without your knowledge or consent; however, your opinion is that it has not been paid? Yes.
1609. If payments have been made for overtime they are without your knowledge and consent, or else there has been a false charge made on the pay-sheets? Yes; but it is more likely to be without my knowledge or approval.
1610. Do you know of your own knowledge about the average that these men made? Yes. From the sheets that I have compared they made from 3s. to 3s. 6d. per day on an average. Some of the men made 5s. and 6s. When the rations were taken off the average would be from 3s. to 3s. 6d.
1611. Do you find rations to regular gangs of road men? No; not those working under the department.
1612. Does your knowledge of things in general as regards prices lead you to suppose that the men who worked for the Roads Department, could purchase their rations at a greater or less rate than you supplied them to the unemployed? Well, I do not think they could purchase them so cheaply, as they could be supplied by a contractor who supplied a large quantity at the ration-scale that has prevailed since we called for tenders.
1613. What is the rate of wages you pay for road-making? It varies from 6s. 8d. to 7s. In some instances it might even be a little more where there are a better class of men. 6s. 8d. is our lowest rate. A road contractor won't get a good man to work for him under 7s. We get our men who have constant employment entered at 6s. 8d.
1614. Do you produce a form of contract for supplies for the relief works, dated 6 June, 1887, with the form of tender attached, dated 13 June, 1887? Yes.
1615. Was this the rate charged from that date up to the present time? Yes. [*Document put in and marked D 2.*]
1616. Taking into consideration the fact that the unemployed received rations at the rate of 1s. 1d. per day, and could, if they chose to work, make 3s. and 3s. 6d. per day after cost of rations had been deducted, what do you consider was the difference between what was paid to the unemployed simply for the purpose of finding them work and keeping them from starvation, and what was paid to the regular workers employed by the Roads Department? The one man would do double the work of the other.
1617. But what is the difference in the money? Whatever the difference in the money would be by deducting the rations from it.
1618. What would those other men have to pay for living? For road-men, living in the country costs them 7s. or 8s. per week. I know that for 7s. per week I have lived for a long time in camp. Men living in the bush are accustomed to pay about 7s. or 8s.
1619. Can you say of your own knowledge whether the Chairman of the Board, in deference to your verbal remonstrance regarding the work to be done or proposed to be done on the Holt-Sutherland Estate, carried your remonstrance to a higher authority? I do not think he did. I am not aware of his having done so.
1620. That being the case, I presume we are justified in supposing that he did not concur in your views? I presume you may consider that to be the case, seeing that he recommended the Colonial Secretary to give his approval.
1621. Did the other member of the Board, Mr. Houison, agree with him? I don't exactly know; but I think Mr. Houison's opinion was the same as my own.
1622. I will ask you a question about the Burns, Withers, and Smith's estate. I am anxious to find out, if

if possible, the authority for the work done there? I am not aware of any authority. We wrote and asked them to allow us to make this road. It was my suggestion to the Board that Mr. Burns should be asked to give this road. Mr. F. Wells.
19 Mar., 1889.

1623. Whom did you write to? The Board wrote to Mr. Burns.

1624. Was there a written reply to that communication? Yes.

1625. Giving sanction to it? Yes, on the condition that the road should be properly formed. The same condition applied to the overhead road that they gave Mr. Deering.

1626. What I want to know is whether that work was carried out upon the written approval or consent of Mr. Burns, or on a verbal condition agreed upon between you? No; it was carried out by Mr. Burns' written consent.

1627. And the conditions were therein named? I do not think that there are any conditions beyond what I have said.

1628. Will you produce the letter in which Mr. Burns gives his sanction to the Board to make a road or roads through the Burns, Withers, and Smith estate on certain conditions? Yes.

1629. Did that permission apply to other roads than the Junction Road? I think only to the Junction Road.

1630. By what authority did you proceed to work on the other roads? We took possession of them.

1631. I don't understand what you mean; will you explain? I do not think that there was any formal action taken.

1632. You simply went to work upon them as trespassers? As trespassers.

1633. And that is how the thing stands now? I think there has been sanction given verbally for these roads since.

1634. Supposing that there is no letter agreeing to any particular terms as to the work to be done in return for the giving of the road, upon what agreement would this improvement have been made? On a verbal agreement.

1635. Supposing that the letter which you have promised to procure does not contain any formal minute or entry of the work to be done upon the Junction Road, upon whose authority would the work have been done? It would have been, I presume, by the authority of the Chairman of the Board.

1636. Do you recollect the powers that were given to the Casual Labour Board? Yes.

1637. And did you consider that they had the authority vested in themselves to expend money upon private property without any more authority than that which was in themselves? I think so, where it was for the advantage of the public.

1638. They were to be the judges? Yes; where there are Crown lands and access had to be given to them.

1639. Therefore you could go to any part of the Colony and commence such works? We had not the authority to go to any part of the Colony. We had the authority to go there, because it was the first place we started upon. It was from the Minister for Lands that authority was first given to Mr. Deering.

1640. Was any authority given by the Colonial Secretary for any work in that part of the district? No; none whatever. They were undertaken before we took charge.

1641. Was it not a peculiar feature of the business that there should be no signed authority of the Colonial Secretary for all the work done except the part on the Holt-Sutherland Estate? I do not think it is a peculiar feature. The unemployed had been making roads and approaches to the railway at Beecroft and Carlingford, and other roads had been done by Mr. Deering before we commenced.

1642. I am referring to that portion of the Crown lands adjacent to Hornsby and Narrabeen, and you say you got no special authority for those? No; we got no special authority. The Minister for Lands instructed Mr. Deering, I think.

1643. What was the date of your meeting with Mr. Burns, when you got into conversation with him about this road? It was, I think, in the year 1885.

1644. Was he then in Parliament? Yes.

1645. But he was not a Minister? No.

1646. Have you got a paper "Casual Labour Board, roads and other works carried out in the parish of Manly Cove, county Cumberland," amongst your papers there? No.

1647. Will you look at that letter marked B, dated 19th July, 1887, and addressed by Under Secretary for Lands to the Principal Under Secretary—are these roads made in the subdivision of Narrabeen that have not got approval? That has got the approval of Sir Henry Parkes.

1648. Is not that one of the roads on that portion? That is the whole of the Narrabeen subdivision. It gives authority for any road, and we should have cleared any road upon that authority.

1649. Is not that in the same category as the Hornsby roads? It is in the same category.

1650. Is it not in the same county? Yes; but not in the same parish.

1651. Why was it necessary to get that authority for this work? Because I suppose that was the first action taken there.

1652. Are you sure whether this was subsequent or prior to your Board being instituted? It was in July, 1887. July, 1887, would be subsequent to the appointment of the Board.

1653. And should we not therefore find similar authority for the commencement from the beginning of the work on the Hornsby Estate? Yes; but you must go back before the days of the Board. You must go to Mr. Deering for that. Very possibly Mr. Deering will be able to tell you that.

1654. Am I correct in understanding that you stated that no work had been commenced on the private lands on the Hornsby Estate before the Casual Labour Board was brought into existence? Yes; except road A, which I don't call a private road.

1655. That is the Government road started for by Mr. Deering? Yes.

1656. Will you look at your answer to question number 31 before the Select Committee? Yes.

1657. Why did you stop the piece of road leading from Stony Creek? That was on our driving back from the Gordon Camp. We saw the road being cleared through two farms, and we asked whether that was private property, and we were informed that it was, and that it was going nowhere—between two farms. I thought it better not to continue the work, but to go on with work that would give access to Crown lands.

1658. Who was the man who owned the farms? I don't know.

1659. Did you ascertain by whose authority that road was commenced? We did not know, but it was probably carried out by Mr. Koebke. It was commenced in Mr. Deering's time. 1660.

- Mr. F. Wells. 1660. You made no further inquiry? We knew it was Mr. Koebke. We knew very well who had done it, and we sent him a message back.
- 19 Mar., 1889. 1661. Did you express the disapproval of the Board? We sent a message back to him, and told him not to put men on any road without ascertaining the opinion of the Board and obtaining their approval.
1662. Were any other works commenced without your sanction in the same manner? None that I know of.
1663. In the same evidence, in answer to question 34, you were asked if the Chairman had power to alter plans and to say where roads should or should not go; and your answer was, "I never heard of his doing so." I ask you now had he the power? No; he had not the power. If we wanted any road altered we did it ourselves—either Mr. Houison or myself.
1664. You did not give him that power as the executive authority? No.
1665. And if he altered any roads he exceeded his power? Yes; he would be acting *ultra vires*.
1666. Have you, since giving your evidence, known of his altering any roads? No; I have no reason to believe that he ever did. The only man who altered any was Mr. Houison.
1667. In the same evidence, questions 39 to 41, you were asked a question as to the existence of certain roads not shown on the plan, and of the existence of which roads you expressed a doubt. Is it a fact that other roads did exist, and that you did not know of them? They had been cleared, and I did not know of them.
1668. By whose authority? I presume by that of the Chairman and Mr. Houison.
1669. Did you consider that they were entitled to do that without your knowledge? Oh, I do. I do not think there was any occasion to advise me of that, so long as Mr. Davies and Mr. Houison agreed upon the matter.
1670. Who commenced the Vanceville Road? It was commenced by the Roads Department, and finished about half-way up to the Junction Road.
1671. Prior to the commencement of the Board? Oh, yes. A long time prior to that. I think it must have been before the time Mr. Burns spoke to me, because he spoke of the junction that could be effected with it.
1672. Did the Chairman of the Board ever construct or order the construction of any roads without reference to the Board before commencing the work? I am not certain about that. I am not sure whether he conferred with Mr. Houison about the construction of the Campbelltown Road, from Liverpool by the Woolwash and Eckersley. He did not confer with me until it was under way.
1673. If he had constructed the road in the first instance without consulting Mr. Houison he would have exceeded his authority? Yes. I do not think he would have commenced the road without consulting one of us.
1674. You named roads as being constructed without you personally having been asked about them—particularly the Campbelltown Road, and you presume the Chairman consulted Mr. Houison before it was started? Yes, the Eckersley Road.
1675. Did you approve of it afterwards? Yes; with one single exception. There was one thing I did not approve of, and that was the hasty manner in which they were about to construct a dam across the river. And Mr. Burrowes was checked until Mr. Houison was able to go up and make a proper survey, and see whether it was necessary.
1676. Where was that road situated? Between Liverpool and Campbelltown, on the east bank of George's River.
1677. That was your only objection to it? Yes; my objection was to its having been so hastily commenced.
1678. Was there any other road that was begun that you disapproved of? No.
1679. What was the cost of the Eckersley Road? It is incomplete still.
1680. Do you know what was the extent of it? No.
1681. I presume you knew the system in vogue for checking the requisitions or orders for plant? Yes.
1682. Would you explain it? The system was perfectly plain. So much plant was sent to the superintendent, who signed for it and took the men's receipts.
1683. Who applied for it in the first instance? It was applied for by Mr. Burrowes from the camp.
1684. Had Mr. Burrowes the distribution of the plant amongst the men? Yes.
1685. Was Mr. Burrowes the only man who applied for plant? It might be that Mr. M'Pherson would do so; but Mr. Burrowes was responsible for the custody and distribution of the plant.
1686. What further check was there? There was no further check except the storekeeper.
1687. How was the storekeeper nominated or appointed? He was appointed before we took charge. He was a very decent class of man; he was an ex-sea-captain.
1688. How many storekeepers had you? I cannot call to mind. I am speaking now of the storekeeper at the camp at the National Park, Mr. Springall.
1689. What was your opinion of Springall? I rather distrusted him myself at first. He was inclined to trade. He was a sort of representative of Kidman. We checked him from selling. I am not sure that it was not at Mr. Kidman's instance.
1690. What did he sell? Small luxuries to the men.
1691. Kidman had a man there keeping a store? Yes; that was prior to the creation of the Board. This man was keeping the store, and at the same time he was selling on his own account to the men goods that he had purchased from Mr. Kidman.
1692. Do you think it was the correct thing for him to set himself up in that way? No. It was not the correct thing. It was not long before we stopped him; but that militated against him in my opinion.
1693. Would it be possible, do you think, from the knowledge that you now have of Mr. Burrowes and the knowledge that you have of Mr. Springall, for there to have been collusion between those two persons, whereby the Board would be robbed of plant and other things? It is quite possible that there might be a robbery effected in the way of rations, but it would be with some difficulty and at very considerable risk. These people were under the survey of a number of eyes, and a number of people were ready to spy upon them.
1694. Was Mr. M'Pherson not over Mr. Burrowes? He was second in command; he was under Mr. Burrowes. I give him the credit, so far as road-making is concerned, of being far more competent than Mr. Burrowes; but if he wanted men for the works, he had to obtain them from Mr. Burrowes.

1695. Were his professional attainments superior to those of Mr. Burrowes? Yes; he was superior to Mr. Burrowes from a professional point of view. He was a good surveyor, and I got him to do engineering work. I looked upon him, too, as steadier and more reliable than Mr. Burrowes. Mr. F. Wells.
19 Mar., 1889.

1696. Was he a man of whom you could have obtained a character from any department of the Service? Yes.

1697. He is a man that you could trust? Yes; I think you could trust him. He is a hard-headed, deaf, dry Scotchman, who sticks to facts.

1698. Will you turn to question 46 in your evidence before the Select Committee? Yes.

1699. Will you answer that question now to me—"Would it be possible for the unemployed to be working anywhere without the cognizance of the Board"? Certainly, it was possible; but it was not likely that they would be.

1700. Was it possible that the returns in the pay-sheets showing the number of men working at a time might not be absolutely true and correct? It was possible.

1701. I mean would the Board have no opportunity of ascertaining that the returns were true? Yes; there would be the officers.

1702. You would have to trust to this superintendent? Yes; we would have to trust to one officer against another. There was no very cordial feeling between three or four of the principal officers, and if there had been anything wrong we should have been sure to have heard of it.

1703. You do not think that anything of that kind could have existed? Not even for a week.

1704. Do you know how often the other members of the Board used to make this inspection that you have already spoken of. Well; they generally made an inspection on pay-days. Of course, they could not go over the whole of the ground. They would make an inspection generally. Mr. Burrowes would have to inspect the whole of the work—he was officer in charge; and he was occasionally visited by the Board, but not very often.

1705. Mr. Burrowes would inspect the outlying places? Yes.

1706. Consequently, if Mr. Burrowes was not a trustworthy man, the result would follow that his inspection would not be of very much importance as regards malpractices? Certainly not. He would receive the returns on the ground from Mr. Sanderson, whose books they were put in, showing how much had been done, how much had been cleared, and how much each gang was entitled to.

1707. Had Mr. Burrowes the most responsible position of all your sub-officers? Certainly.

1708. Was it not absolutely necessary that a man occupying that position should be above suspicion and reproach? Yes, undoubtedly he should; and we should have had very superior officers to those we had if we had contemplated that the Board would have been likely to last so long as it did. I should have been more resolute in seeing that my recommendation was carried out.

1709. Was it not essential for the proper carrying out of the work, as regards the time of the work, the number of kinds of work, the distribution of the rations, and the due care of the tools, that you should have had a man of the most absolute probity—a man upon whom the utmost reliance could be placed occupying that position? Most certainly we should have had.

1710. Can you say that Mr. Burrowes was a man of that description? I have not had the same confidence in him of late; but I have no fault to find with him.

1711. Would you advise this Board to accept a statement made by Mr. Burrowes as being true? I have grave doubts about that.

1712. Would you have recommended him for a position of that sort now? No; if I had stopped on the Board he would not have been there; I recommended his removal twice.

1713. I notice here, in answer to question No. 60, in your evidence before the Select Committee, that you say roads might have been constructed out there without your knowing anything about the matter; but it would not have been done without an order emanating from the Board. What do you mean by the Board? I mean from the Chairman or some member of the Board. It would not have been right for the Chairman to do it verbally; it should have been in writing.

1714. In question No. 73, before the Select Committee, the question was asked whether you think you have power to alter a line of road without consultation with your colleagues, and your answer was—"Within the Government subdivision, yes, after consulting the surveyor." Is that any particular surveyor? That is the surveyor who had charge of any particular subdivision. For instance, Mr. Gordon, who had charge at Narrabeen, struck a road straight up a hill; I would alter it to make a detour round it.

1715. Will you tell me how you elected Mr. Davies Chairman—have you any records of it? No; I am sure of that. When we first commenced we took over a little crib, 6 feet by 8 feet, in the Hyde Park Barracks, before we shifted out. The notes kept there, I think, just mentions the fact that Mr. Davies was appointed Chairman.

1716. Did you approve of your responsible work being undertaken with an absolute absence of minutes and records? I do not see how it was possible to keep minutes.

1717. Did you approve of the system? No; I did not approve of the Board system at all. I consider that the Board as constituted was a mistake; I think it ought to have been made a department.

1718. Did you think that the Board as it was constituted could properly supervise the expenditure of such a large sum of money? They could not supervise it very closely.

1719. You could not supervise it so closely as if it had been a department? The affairs were managed in the same way as a department, with the exception that the officers would have been more reliable men and of higher status.

1720. Is that because the officers that you would have employed would have given the supervision that you regarded as necessary? Yes.

1721. Which was lacking in this case? Yes.

1721½. Do you know of any petitions that came in for private roads? Only those in the papers of the Select Committee.

1722. Not of any others? They were shown to me from time to time when I visited the office.

1723. I draw your attention to your answer to question 87 before the Select Committee, when you said you objected to a work which Mr. Davies had initiated. Do you now recollect the road which you stated there you had made an objection to Mr. Davies about? No; I do not remember the exact road. It was one of the Holt-Sutherland roads, and I objected to most of those roads.

- Mr. F. Wells. 1724. Have you any knowledge of how money was drawn for the payment of wages, &c.? Yes. It was drawn by cheque, which was cashed on the afternoon before pay-day, and the money was put in the safe until the next morning, when it was carried out by train.
- 19 Mar., 1889. 1725. Was it not a custom that payments were made to A on account of B and C when B and C were not present? No; it was made a *sine quâ non* that a ganger should be there to receive his money,
1726. Supposing accounts came in from other quarters, besides the payments due to the labourers, do you know if money was ever received by any person on account of these people? Very probably. Each amount would be received by the clerk or paid into the bank, but not to anyone except a duly authorized receiver.
- 1726½. Do you know whether Kidman would send down a clerk to receive his account? I do not; nor am I aware whether the ironmonger who supplied the tools would send a clerk.
1727. Do you know of any member of the Casual Labour Board taking them and paying them? No; I do not know of anyone doing so.
1728. In speaking of the ironmonger, had you a schedule price for what you might pay for tools? Yes; but I do not remember rightly about it. The tenders were invited before the Board was formed.
1729. Who was the ironmonger? It was the firm of M'Lean Bros. and Rigg.
1730. Did they supply the goods at the regular Government schedule price? I do not know that. They supplied it from a schedule price.
1731. Would you be surprised to learn that they refused to supply them at the schedule price that they supplied the Government with other things at? I have not heard of it.
1732. It is Mr. Hinchcliffe's statement that they refused? Mr. Hinchcliffe would know, at any rate.
1733. Do you think that the firm having refused to supply the articles at the Government contract rates, it would have been the proper thing to have called for tenders? I should have called for further tenders if that had been the case.
1734. Of your own knowledge you were not aware that they were not supplying goods according to schedule? I was under the impression that they were supplying them under regular schedule prices.
1735. You mean the regular schedule prices at which they supplied the other Government Departments? Yes.
1736. And if such was not the case, it is new to you? Yes, quite new to me.
1737. After your remonstrance with the superintendent, did the superintendent, or any other superintendent, in spite of your remonstrance, continue to lay out any roads without your authority? You mean Mr. Burrowes?
1738. Did Mr. Burrowes or any other superintendent? He was the only one who was ever struck off the works. I struck him off from superintending the road works after. I was very much annoyed that he had undertaken the position on his own responsibility. I had him brought into the office and insisted upon his dismissal. Mr. Davies interceded for him for the sake of his wife and family. I was very wroth about the matter.
1739. I did not quite gather whether he laid out the work on his own authority? He undertook work that I had prohibited him from undertaking.
1740. Supposing he said "we want a road here," would he begin it? No.
1741. I mean he never commenced work on his own authority? No; he did not lay out the lines or anything like that, except in the case of the Waterfall Road.
1742. Will you turn to question 141 in your evidence before the Select Committee. Did you ever make a calculation of the enormous sums of money which you said it would take to bridge over the gullies in the Boundary Road? It was unnecessary to calculate that. The road was not worth even taking into consideration. The road was beyond all reason.
1743. Are you satisfied in your own mind that the roads, as made on the Hornsby Estate, for tapping these Crown lands between these deep gullies, are the best that could be made, whether public or private? Undoubtedly.
1744. In answer to question 171, before the Select Committee, you state that if you had adopted the Boundary Road you would have increased the value of one of the frontages of the Crown lands. I will ask you then whether you made any calculation at any time of the increased or enhanced value of the Crown lands by reason of the roads made on the private lands? The Crown lands would have been worth little or nothing if it had not been for the roads made on the private lands.
1745. What are they worth now? They have been sold as high as £70 an acre.
1746. What is the cost per acre of making these roads? About £37 or £38.
1747. And the Crown lands, what would they have been worth before. I merely want a general estimate? I do not think they would be worth £5 an acre.
1748. According to that, including the price of the work, you have doubled the value to the Crown? Yes.
1749. What do you consider the increased value of the private lands on the Hornsby Estate would be? It is utterly impossible for me to say. I should, roughly speaking, think that the land itself was worth £100 an acre—taking it in the block, but I should think it would fetch more now considerably. There is no doubt the clearing of the roads has increased the value of the Burns, Withers, and Smith Estate; but I do not think it has increased it more than if they had spent £150 themselves in clearing. If they had spent £150 upon their lands, they would have made their property as valuable as it is now.
1750. If there is £500 spent by the Board, you can only debit them £150? No; I debit Burns, Withers, and Smith with the total cost of the opening up of the Crown lands. It will come to very little more than the value of the ground they gave.
1751. In question 177 before the Select Committee, it was stated that the Committee were unable to discover that the land was so exceedingly rough, and in another part it was said they had no trouble in driving along the Boundary Road. You said you did not think they could have driven along the roadway far? They could only go down to point D as far as it was open. They could not drive any further.
1752. In answer to question 185 in your evidence before the Select Committee, you said that it was not ballasted as far as you could see. Have you subsequently found out that the road was ballasted? Yes; it is ballasted. It was ballasted without my having seen it. That is one of the things I should have objected to. I should have ballasted the Junction Road, but I do not think I should have ballasted the Burns Road.
1753. It was not done with your consent? No; but it is done now. 1754.

1754. Who gave the authority for ballasting that road? I cannot tell. Very probably the Chairman. Mr. F. Wells.
1755. Do you know if Mr. Houison concurred in the ballasting of the road? I do not think he was asked. 19 Mar., 1889.
1756. Is it your opinion that it was done on the sole authority of the Chairman? I think it was.
1757. Without reference? Without reference. I knew that they were ballasting roads there.
1758. In question 221 before the Select Committee, you were asked to supply the Committee with certain information as to the cost of grubbing, clearing, forming, and ballasting of roads—did you supply it? I supplied it to the best of my ability—it is in the schedule.
1759. Has the population largely increased about Hornsby since this work has been done there? Yes; but not altogether from that cause.
1760. It has increased though? Yes.
1761. Is there much traffic? There is a good deal of traffic on the various roads that go through there; but I should hardly expect very much traffic yet.
1762. Taking into consideration the class of work that you have had done by the unemployed, and general expenses entailed by their management, do you think that you got anything like an equivalent in comparison with the work that you would have had done by the regular roadmen? Yes; but it was of a rougher character. The clearing is pretty fairly done.
1763. Do you think they were overpaid in comparison with the pay of the regular roadman? Oh, no; these men worked at lower wages. They were cheaper than other men would have been.
1764. They did not do as much work for their money, and they were not so skilful at it? No.
1765. Will you turn to question 2742 before the Select Committee? Yes.
1766. There seems to have been some doubt in your mind regarding certain roads, and you were asked by the Chairman if you had been out to the Hornsby district since you were previously examined—if you had discovered any roads not on the tracing at the time? Yes.
1767. And you said you had discovered some roads? Yes.
1768. I simply want to ask you whether your want of knowledge of these particular roads was not owing to your inability, through your other duties, to be as frequently over the ground as you would otherwise have been? Yes; it was simply because I could not attend.
1769. In answer to question 2750 before the Select Committee, you said that the road inquired about could not exist? It does not exist; I have ascertained that.
1770. Is there any written evidence or records as to the visits of inspection paid by the Board? No. There was a visit every fortnight at pay-time by one member of the Board, or perhaps two. Mr. Davies would most probably be there once in each fortnight.
1771. In your evidence before the Select Committee, and also in answer to a question by Mr. Franklin, you stated that the average cost of clearing was about £7 an acre;—that is the usual rate for clearing forest land? A good deal would depend upon the kind of clearing.
1772. That is taking up stumps by the roots, to the depth of about 12 inches below the surface, and cutting and burning;—it would be pretty heavy timber where you would have to pay £10 an acre? Yes.
1773. What was the thickness of the timber there? There are some very large trees that £10 an acre would not nearly pay for.
1774. Is not £10 an acre a high average? No, not a high average; grubbing and clearing would cost a great deal more than that.
1775. In answer to question 2788 before the Select Committee, you say that, in ballasting, mostly big stones have been used, which had not been properly broken;—what is the usual gauge for stones? These stones have no business to be broken small, but they ought to be broken regularly; it is sandstone.
1776. What is the usual gauge? We generally use a 4-inch gauge. In places we are not very particular to gauge the breaking of it down on a road where it is intended to cover it with metal. The covering over metal has to be broken to a small gauge. These stones had been pitched on the roads in a way that would not be tolerated by the department.
1777. If we were told that there were contracts taken or contracts let by the Board or their officers for the quarrying and carting of stones, would that be correct, do you think? It is possible. I think the carting is most likely to have been done for the men by day labour.
1778. And would this quarrying be done at the usual market rates? No, at less. I have a list we made out for Mr. M'Pherson; you will see the prices given there.
1779. Would that be extra to the amount allowed for piece-work on particular roads, or would it be calculated in what they would get for making these particular roads? They might let the forming and ballasting together. In this statement here you have a memo. of the piece-work rates and schedule of the prices we gave for the work.
1780. Who fixed these? These are the prices I fixed with Mr. M'Pherson down at our larger works. I settled these prices with him.
1781. And would it be different in different parts? It would not make much difference. There is little distinction there; it is all sandstone. [*Memorandum of piece-work rates put in and marked D3.*]
1782. In question 2832, before the Select Committee, it is stated that Mr. Little has given evidence that the total cost of this work on private property would be nearly £4,000;—is that correct? I took the trouble to ask Mr. Little what he meant, knowing that half the way to Narrabeen the work did not come to that. He explained to me that he meant the other works. In any case his statement is incorrect. You will see that the total expenditure, as I have put it down there to you, is £2,300 on all the private roads.
1783. When you accepted your seat on the Casual Labour Board, did Mr. Walker give you any idea of what the duties and responsibilities would be? No; none whatever.
1784. Were you told by Mr. Walker or anybody else before you accepted the position? The first intimation I got was the letter of appointment. I did not fear any great trouble in the matter, for I depended upon proper supervision being given and qualified assistants.
1785. Were you told of the amount of supervision you would be expected to give? No.
1786. Regarding these pay-sheets—can you say that either you or Mr. Houison always checked them? No, not always. We never thought of checking them as regards the amounts. We checked them for the purpose of ascertaining the average.
1787. Can you prove before the Commission which sheets you checked and which you did not? I did not check any for purposes of account. The only check I would give would be to see the rates paid.
1788. Do you know who did check them? They were checked by the clerks, Mr. Hibble, Mr. Hinchcliffe, and Mr. Larnach. It was their duty to check the pay-sheets. 1789.

- Mr. F. Wells. 1789. How do you know that they were checked? They were ticked with their initials upon them.
1790. Do you know that they initialed the pay-sheets? I conclude that they did; they carried on the work as if it had been a department.
1791. Was Mr. Hinchcliffe the accountant? He was the accountant.
1792. Do you know how he was appointed? No.
1793. Do you know of any special reason why he was appointed? Only that he had been with the unemployed before; he had been under Mr. Wise and under Mr. Treatt.
1794. Did you consider that he was a qualified accountant? Yes.
1795. Would you be surprised to hear that Mr. Hinchcliffe states in evidence himself that he was not an accountant; and never was, and does not accept the responsibility of being an accountant? Perhaps not in the light you regard an accountant, but he is fully qualified to keep a set of books; and knows how to keep them properly.
1796. As regards his experience and knowledge of book-keeping he led us to form an opinion that his experience was limited. Do you think that for such a position it was necessary that he should have a good knowledge of book-keeping—a good knowledge of disbursements? Yes.
1797. There was a large sum of money going through his hands? Yes; but it is as easily manipulated as a smaller amount; if the arithmetic was correct I do not see how he could get far wrong in his sheets; they were simple books he had to keep.
1798. Do you know that the money that was operated upon by the Casual Labour Board was in the form of a bank overdraft, and that there was no check upon it? The bank had always a check. We paid on overdrafts to the Treasury for £6,000. The Treasury arranged for the overdraft at the A.J.S. Bank. At first the amounts were paid in the ordinary way; but latterly it was found more convenient to let the Board draw against the overdraft.
1799. What I say is that, as a matter of fact, with the presentation at the bank there was not the same check or guard as there was on presentation at the Treasury. They must have received intimation from the Treasury, because at one time you were £70,000 overdrawn. There must have been a guarantee that the bank would be recouped. So that, as a matter of fact, there was a credit at the bank, and it was not likely the bank would question any cheques as they were presented; so that the Board really had no check whatever upon their expenditure. Their cheques would always be paid? As soon as we drew one £6,000 we made another overdraft at the bank, and sent our vouchers for what had been expended.
1800. But still there was no check, because the Treasury did not pay the amount until it amounted to £70,000 at one time.
1801. Regarding the number of men that would be employed on a particular piece of work, you being necessarily absent very much on account of your other duties, and the other professional member of the Board being also frequently away engaged in professional duties, what check was there upon Mr. Burrowes making the payments to the proper number of men for particular works? The only check was that the men were on the ground doing certain work, for which the overseers made up the pay. He had a knowledge of the number of men on the ground. We from time to time were keeping a check of the men who were at different places and saw what they were put to do.
1802. Granting that system to prevail, wherever you checked these things have you found Mr. Burrowes quite correct? I found him nearly correct. Of course to ride over the National Park alone to visit all the men would have taken a man two or three days of one week. I found his figures generally correct.
1803. Did you find that he was inclined to have too many men for a piece of work, or was he inclined to economise? He had no occasion to economise. The difficulty was to find employment for the men.
1804. Did he apply for more plant in particular places than you thought requisite? No. I am not sure whether, on one occasion, he did not make a request for plant and we thought the requisition was unduly large.
1805. If Mr. Houson made recommendations for certain work to be done in your absence, when he and Mr. Davies formed the Board, would they be in writing or verbal? Oh, they would be verbal communications, and the next time there would be a meeting I would be informed of what had been done.
- 1805½. Who appointed the overseers, heads of gangs, and those men you call storekeepers? They were appointed by the Board, very probably through the officer or superintendent in charge of the camp.
1806. Virtually their nomination or suggestion would be approved by the Board? Yes; they would be supposed to have some knowledge of them, having seen them there. They would have to have trustworthy men for their own sakes.
1807. Is there any record of any proposals for these men to be appointed? No. Very possibly they would be appointed on personal application. Some of them would be written to, but generally they were men that were left on us.
1808. How would the approval of the Board be obtained? Simply verbally.
1809. What wages would they receive? 6s. or 7s. per day, perhaps. The rates would vary.
1810. Would the Board arrange the rates of these men? Yes; and if they were too high we would reduce them.
1811. Do you think that if the money that has been expended by the Casual Labour Board had been expended in the way sketched out by the Colonial Secretary in his letter of the 2nd May, 1887, the country would have received larger benefit from that expenditure than it is likely to receive now? Decidedly.
1812. Do you think that that was work of a character that would have come more within the province of finding employment for the unemployed, and getting rid of them from the city, than the means adopted? If they had been works of water conservation, yes. If they had been the making of railways, they would have been a failure.
1813. In your opinion, such work as that would have drawn the good men, and got rid of the bad? All our work did that.
1814. The poorer men were left on your hands;—the system you adopted kept the useless men to be fed, and do as little work as they liked to do? Well, they were better there than talking at the statue. You have just got the alternative.
1815. I think I understood you to say to the President that a reduction was made from the unemployed in respect of cartage? No. The cartage would be included in the work, and if they did not do it they would not be paid for it. It would be deducted from their earnings in wages.

1816. Would you show us how that was? Supposing they had a certain road to clear and form, according to how they worked they would make so much an hour—as a matter of fact, about 6d. Supposing that road was ballasted, the ballasting of that road being an extra price and separate contract would not affect the clearing and forming. The men who did the ballasting would have to find the cartage, and if they did not the Board would not pay them for it as if the cartage had been done. They would only pay them for spreading, cutting down, and getting.

Mr. F. Wells.
19 Mar., 1889.

1817. How would you pay for carting? It would be paid for at the ordinary rates—most probably 12s. per day.

1818. Carters would not be paid at the unemployed rates? No; they would be paid at the current rates per day.

1819. I suppose the same system of supervision which was in vogue at the Burns, Withers, and Smith camp would be in existence at all the different camps? Yes; just the same.

1820. With regard to the knowledge which you have now of Mr. Burrowes as a superintendent occupying a position of trust and responsibility, is it possible that you, with your other duties occupying you so much, might possibly be mistaken in the characters of some of the other persons who occupy positions similar to Mr. Burrowes, or even more subordinate ones? A man might be mistaken in anyone's character. If I had had any amount of supervision—all my time to devote to it—I could not have had any more opportunity for official detection than we had.

1821. But you would have had better knowledge if you had been brought more frequently into contact with the officers? I do not know that I should.

1822. What I mean to say is that there are storekeepers, and clerks, and superintendents, and if you had with your knowledge and experience full charge of these works for some time you would have had better opportunities of knowing the men than you had? Decidedly.

1823. I refer you to the press copy of the letter you have handed in, addressed to Mr. Davies on the 30th August, 1887;—you use the words, "I think so seriously of our ground of complaint against Mr. Burrowes";—who is "our"? That is the Board generally.

1824. You say further that all road work in the way of cutting or formation at the National Park should be stopped until proper supervision can be arranged;—I want to know what you mean by proper supervision? Until we got a better man for the work.

1825. Therefore you don't consider that Mr. Burrowes gave proper supervision? He could not give proper supervision to road works.

1826. And he still, after that, was continued in the place that you objected to him occupying? Yes.

1827. I will ask you now to turn to the press copy of the letter dated 25th October, in which you again express your disapprobation of Mr. Burrowes being in the position he held;—was any notice taken of that? Yes; he was brought into the office, and I gave him a great wiggling, and Mr. Davies recommended his being kept on.

1828. Did you acquiesce in his being kept on? Oh, yes.

1829. *President.*] Will you look at this plan;—what does it purport to be? A plan of the roads on the properties of Burns, Withers, Smith, and others. [*Plan put in and marked D 4.*]

1829½. Will you look at a petition presented by Mr. Ives, on the 11th November, 1887? Yes. [*Petition put in and marked D 5.*]

1830. That petition purports to be signed by a number of persons, amongst others by G. Withers;—can you tell us from your own knowledge what course that petition went through? I imagine it went to the Honorable John Sutherland, Minister for Works, then up to the Commissioner for Roads, back to the Public Works, probably with a minute on it, on the 15th November, to the Colonial Secretary on the 21st November.

1831. Is there anything on it to indicate what was done with it in the Colonial Secretary's Department? Nothing.

1832. Is there anything to show how it got to the next department? It came to the Casual Labour Board from the Under Secretary. I imagine that that would be the Under Secretary for Works, because if it had been from Mr. Critchett Walker, it would have had Principal Under Secretary upon it.

1833. Is there anything to show how it got out of the Colonial Secretary's Department? No; except that it is referred to us.

1834. Who referred it to the Casual Labour Board? I presume the Colonial Secretary.

1835. Is there anything on the paper to show that it was the Colonial Secretary? No.

1836. But it went to the Casual Labour Board? Yes.

1837. Have you any independent recollection of what was done when it came to you? I have not.

1838. Will you look at this letter of the 18th October, 1887? Yes. [*Letter put in and marked D 6.*]

1839. Do you recognize the letter of the 18th October, 1887, written by Mr. Hinchcliffe—does that recall anything to you? No.

1840. Will you look at a letter of the 19th October, 1887, apparently unsigned? Yes.

1841. Whose is that letter do you think? I presume it is Mr. Burns's. [*Copy put in and marked D 7.*]

1842. Does that recall anything to you? No.

1843. Is that the letter to which you referred in the early part of your evidence as the authorization of the Junction Road? No; I do not think so.

1844. You still think there is another letter? I am certain there is another letter.

1845. Looking at the plan, does G G G G represent the Junction Road? Yes.

1846. Is your evidence that roads H and I on that plan were objected to by you? No; they were done without my knowledge, but I approved of them. The road on this plan of Mr. Deering's—the continuation of road E—I objected to, but it was done before I objected.

1847. You told me at the commencement of your evidence to-day that, in consequence of something you had heard, you had changed your opinion of Mr. Burrowes since yesterday, and you afterwards said it was through having seen Mr. Davies? Yes.

1848. Where did you see Mr. Davies? I saw him at my office this morning, and I went over with him to the Casual Labour Board office.

1849. Did he come to see you accidentally? He called upon me.

1850. Did you discuss with him the evidence that you had given here yesterday? A little, not much.

1851. What happened? I went with him to the Casual Labour Board to hunt up this paper.

- Mr. F. Wells. 1852. How did it come to pass that you discussed Burrowes with him? I forget. Just in the course of conversation Mr. Davies expressed himself dissatisfied with Mr. Burrowes, and I asked him how that was. He reminded me of these things, and said he believed him to be untruthful, and told me of untruthful matters in which he had found him out.
- 19 Mar., 1889. 1853. Was this conversation led up to by remarks of yours or inquiries of his? I think by remarks of mine.
1854. Are the papers that you have before you relevant to our inquiry or likely to assist us? No; I do not think there is anything. If I can send any to you I will do so.
1855. In connection with the petition presented by Mr. Ives, there is a letter by Mr. F. O'Donnell, dated 1st December, 1887, reporting on the petition? Yes.

THURSDAY, 21 MARCH, 1889.

Present:—

A. J. CAPE, Esq., M.A., PRESIDENT.

F. A. FRANKLIN, Esq., C.E., J.P., | T. F. WALLER, Esq., J.P.

Sir John Robertson, K.C.M.G., called in, sworn, and examined:—

- Sir John Robertson, K.C.M.G. 1856. *President.*] You are one of the trustees of the National Park, I believe? Yes.
- 21 Mar., 1889. 1857. I believe you are not now in Parliament? No.
1858. Do you hold any office under the Government or under the Crown? No.
1859. Are you aware that in 1887 a department was created known as the Casual Labour Board? I know there was a department created to deal with the unemployed. I do not know exactly what it was called.
1860. Do you know who were the members? John Davies, C.M.G., was Chairman. I do not know who the other members are. I always thought John Davies was the Board.
1861. Have you been in the habit of visiting the National Park frequently during the last two years? Not often during the past two years. Unfortunately a little over two years ago when I with Messrs. G. F. Want and Walter Bradley was making a road from the river to the top of bluff near Loftus, a rock broke from under me, and in springing from it, as it went down, I so severely injured the sinews of my legs that I was obliged to retire from public life. I have not been very often at the Park since.
1862. During the years 1887 and 1888, I suppose you were there? Oh, yes; up to quite lately.
1863. More than once? Yes; several times.
1864. Do you know the Holt-Sutherland Estate? Yes; I am a proprietor or shareholder in the Holt-Sutherland Estate.
1865. Is that estate the property of a private company? Yes; it was formed by Thos. Holt.
1866. We have been appointed by the Crown to inquire into the working of the Casual Labour Board, consisting of John Davies, C.M.G., Frederick Wells, and David Houison, from the time of its appointment until the 23rd January last, into the mode in and purposes for which public moneys have been expended by the Board, or any members or member thereof, or by any one under their or his authority; into the manner in which the Board and the members thereof have performed their duties; and including in such inquiry an examination into the truth of all charges and statements which have been made before Parliament or any Select Committee thereof, touching any alleged improper expenditure by the Board or any members or member thereof, or under their or his authority, in the improving, or making, or construction of roads or other works upon the property of any person, partnership, or company. Are you aware of any instance where any roads or other works have been made, improved, or constructed by the unemployed on the estate, or for the benefit of the estate of any person, partnership, or company? I cannot say whether roads were constructed for the benefit of the Holt-Sutherland Estate, but I am quite sure they were constructed, and they do benefit the estate; I do not know whether they were made for that purpose, but I am quite sure they are a benefit.
1867. The question is, on any estate or for the benefit of any estate? On the estate—yes.
1868. What was the nature of the work on the Holt-Sutherland Estate? You see it is a very large property—16,000 or 14,000 acres. The lands were subdivided by Mr. Holt, and the roads were laid out and marked. These roads, to the extent of some 43, 44, or 45 miles, have been made or cleared by the unemployed.
1869. Is that during the last two years? It is since the unemployed were sent there.
1870. During 1887 and 1888? Yes; I know that absolutely it was done by them under the Casual Labour Board.
1871. Since the Casual Labour Board was appointed? Yes.
1872. Can you tell us when you first observed this? It is, I feel sure, from nine to twelve months ago. I observed very expensive works on the roads through the place—a road from a place we call Tom Ugly's Point to the National Park boundary. This was a very wide road, and it was made in a most expensive manner, with culverts and ballast, and the middle of the road is a chain wide—good enough for Sydney; and on either side of this chain width half a chain wide was cleared to be planted with trees, or some arrangement of that kind. When I saw that I was very angry indeed, because I thought that our money—the company's—was being wasted. I never dreamt that any other money than ours was being expended on it. I was very wroth, and I met Mr. Want, another proprietor, and I said, "These people will ruin us." "In what way?" he asked. "In spending our money in this way," I replied. He said, "That is not our money; that is the Government money." I said, "That cannot be"; he said it was so. I then said, "That is worse, to my mind." He took pretty much the same view of it as I did, or at least he said he did. When I came back to Sydney I went to see Mr. Walker, the Principal Under Secretary. I asked where Sir Henry Parkes was, and Mr. Walker informed me that he was away. I went first to Mr. Walker and I told him that a terrible scandal had arisen, that public money had been spent on our property, and that he had better discontinue it, as I felt sure there must be some mistake. He said he thought it must have been done in mistake. I said, if I were you I would telegraph to Sir Henry Parkes informing him of what was going on, and he said he would do so. I believe he did so, and the work was stopped, but subsequently it was again proceeded with. I believe there are some 43 or 44 miles of roads made there.
1873. Do you know that of your own knowledge? I have no doubt about it. All our people tell me so.
- 1874.

Sir John
Robertson,
K.C.M.G.

21 Mar., 1889.

1874. Did you confine yourself to any particular road in your conversation with Mr. Walker? I had only been on one road, the road leading from Tom Ugly's Point to the National Park. I have not been otherwise on the estate, but I know that that road and others have been made.
1875. How do you know it? We all know it—everyone knows it.
1876. Do you know why it was done? I think the reason for the Casual Labour Board doing it, although I have never seen it put forward on their behalf, was that we allowed the unemployed to camp on the National Park, and this was the nearest work to the National Park. The work was merely done I thought for the purpose of giving employment to these men.
1877. Did your remonstrance with Mr. Walker cover only a particular road or all the roads? The roads on the Holt-Sutherland Estate. I thought it was not right that public money should be spent there. I considered that it was scandalous.
1878. Mr. Walker, in his evidence, states that the remonstrance made to him only had reference to a particular road called the Malvern Road? I am not aware of any remonstrance. I did not remonstrate. I did not object to the work being done. I only said it would be a great scandal, and that the work ought not to be continued. I do not know which is the Malvern Road. I know the road between Tom Ugly's Point and the National Park. I do not know whether that is the Malvern Road, but it is the road I had been on.
1879. I think you said you are a shareholder in this Holt-Sutherland Estate Company? Yes; I am a shareholder. I cannot say what the shares are worth. I will give my twenty shares for £150 a share, not a penny less.
1880. Do you consider that the value of your interest in the company has been increased by the work of the unemployed? I think it has very largely increased—about a third.
1881. Taking the estate as a whole, what do you consider that the enhancement of value has been through the construction of these works? I do not know, as I have been practically a cripple for a long time. I have not been about so much as I used to be, and, therefore, I could not give you a correct estimate.
1882. Is there any public land on the other side of the Holt-Sutherland Estate? No; there is a reserve which I understand is intended for a Noxious Trades Site, which goes down near the water, but there has been nothing done there lately I am told.
1883. Are you aware whether the company had subdivided their land? No; we had not. Before we formed the company Mr. Holt did that.
1884. Are you aware whether the roads which have now been constructed are the same roads as are shown on the subdivision? I cannot tell that. I know that we were bound by our subdivisions, because I hold a large quantity of land from the Holt-Sutherland Estate. I hold a 10-acre block here and a 10-acre block there, amounting altogether to about 250 acres.
1885. Can you tell us who the directors of the company are? Mr. Sydney Want is one; I think Mr. Simpson is one; Mr. Samuel Cook down at the *Herald* office is one; Dr. Atherton is one; Mr. Newton is one; and Mr. Jackson is one.
1886. Have you been a director? No; I never attended a meeting when the directors were appointed. I always let them elect who they liked.
1887. You are not now a director, then? I never was; but I have been a shareholder for many years.
1888. Have you seen the plan of the subdivisions? Yes.
1889. Do you know what width the roads on the plan are? I think nearly everyone of them was a chain wide.
1890. Do you know the Act known as Reid's Act? Yes.
1891. Are they the width required by Reid's Act? I think that width was fixed before we heard of Reid's Act. I think some of the roads have been actually made two chains; the one between Tom Ugly's Point and the National Park is two chains.
1892. You do not know the name of that road? I simply call it Tom Ugly's Road.
1893. When you noticed these men working, were you driving through the place? I was riding.
1894. Did you go over more than one road? I do not think I did. I was mainly there visiting the National Park, and I observed this work. On seeing the men, I followed the work up for nearly a mile.
1895. How do you know that these roads were done by the unemployed? I know they were. Everybody knows it.
1896. For aught you personally know to the contrary, these roads were not done by the unemployed? I never saw the unemployed working on them; but you may as well say I don't know there is an island called New Zealand or Norfolk Island. I do know.
1897. Who was with you when you saw this work on the road from Tom Ugly's Point? No one. When I subsequently saw Mr. Want, I said to him, "This looks like a swindle, keep your hands clean;" and I believe he did.
1898. Was your conversation with Mr. Walker after or before you saw Mr. Want? After.
1899. Do you know a road called the Illawarra Road? I know the old Illawarra Road, if that is what you mean.
1900. There are three roads spoken of to us—the Illawarra Road, the Port Hacking Road, and the Coronulla Road—Do you know these roads? Not by name.
1901. Did you notice any bridges or culverts on this road you went over? Yes; that was why I was so annoyed, when I thought our money was being wasted. I don't say that the improvements were not good and valuable; but no one likes to see money wasted where it is not necessary.
1902. Were the road improvements in your opinion too extravagant and elaborate? Well, they were very good. They were fit for the city.
1903. Can you give us any idea of the settlement in that district? Oh, it was little or nothing.
1904. By whom would these roads be principally used? By visitors.
1905. Are you aware that the work was stopped when you remonstrated against it? Mr. Walker told me so, and again he told me that it was resumed.
1906. Do you know anything of the circumstances that led to the resumption? No.
1907. Do you know Mr. Jamieson? Of Prince, Hogg, & Co.; yes, I know him.
1908. Do you know whether he is a shareholder in this company? Yes; he is a large shareholder.
1909. Did you ever see him in reference to this work? No. There is another man a large shareholder. The Holt-Sutherland Company's manager has grown up in a short time to be a large shareholder.

- Sir John Robertson, K.C.M.G.
 21 Mar., 1889.
1910. What is his name? Mr. Murphy.
1911. Can you say whether or not Mr. Jamieson took any action in the matter of these roads? I cannot say that. I do not know anything about that.
1912. Or Mr. Murphy? I do not know anything about that.
1913. On the occasion of your visits to the National Park, did you observe gangs of unemployed at work? Yes; at the park.
1914. At any other place? No.
1915. Did you observe them sufficiently to form an opinion as to whether the superintendence or supervision was satisfactory? I think it was as good as it well could be. They were necessarily very inferior workmen. They were culled from all parts. They were not men who were used to that class of work, nor were they men whom anyone would care to employ. Although the cost was great, the work would not have been like that if done by competent men. The superintendents were competent enough, I believe, but the men were not so good. They were not the kind of men you would employ. In fact, all manners of men were there.
1916. Do you know anything of the superintendents? I have seen one of them. I think he was a very good man.
1917. Do you know his name? I have forgotten his name.
1918. Was it Mr. Burrowes? Yes. He seemed to be a very intelligent man.
1919. Did you ever see him in the performance of his duties? Yes; but I could not judge of that.
1920. Did you ever meet the Chairman of the Board or any member of the Board out there? Oh, yes; I have met the Chairman.
1921. Did you meet any other member of the Board? I do not know any other member.
1922. Mr. Houison? No.
1923. Mr. Wells? I have met Mr. Wells out there—a very excellent man.
1924. Have there been any particular occasions when you have met the Chairman there? I have met him often.
1925. Was there any time when, as Chairman of the trustees of the National Park, you met the Casual Labour Board officially? No; I never did meet them as Chairman of the National Park.
1926. Were you ever asked to meet them? I might have been asked, but I think not. I would have been there and have met them had I been asked. Since I have been injured in my leg Mr. G. F. Want has done the main work.
1927. Can you recollect any occasion on which the Casual Labour Board, or any member of it consulted you or any of your co-trustees as to what they would do with the unemployed? Oh, yes; they used to ask us and we used to point out as trustees what we thought it was desirable to have done. We did not allow them to go and do as they liked.
1928. That work was confined to the National Park? Yes.
1929. And to the improvement of the park? Yes.
1930. Nothing else? No.
1931. Had you anything to do with the devising, initiation, or construction of any works outside the National Park? No.
1932. Do you know anything of any work they have undertaken outside the park? Only the work on the Holt-Sutherland Estate; that is all.
1933. Did you ever remonstrate with the Chairman or Mr. Wells as to the work on the Holt-Sutherland Estate? No. I went to the chief of the Colonial Secretary's Department. I was not going to talk to them about it. I told Mr. Wells so. I said I am afraid there will be a great scandal created out of this.
1934. Were you examined before the Select Committee of the Assembly? No.
1935. Were you asked to attend? No.
1936. Do you think the Casual Labour Board was justified in the interests of the public in making a road from Tom Ugley's Point to the park? No. Of course, they would have been justified in making the road passable, but that was a very different thing from making such a road as this.
1937. *Mr. Franklin.*] If the trustees had requested that the road be formed and made by the department, and if it had been a classified road, do you think it would have been justified? The trustees of the National Park have nothing to do with the Holt-Sutherland Estate. We did not want this road; it is not a direct road. We have got the railway.
1938. You know a good road? I think I do.
1939. Do you consider this an extra good road? No. I think it is much wider in the centre portion of the road than there is any necessity for. The centre portion of the road is a chain wide laid with ballast.
1940. You know the laying out of roads in making subdivisions of land, that such work greatly increases the value of land? It does.
1941. Do you know that it is the practice in the city for people to purchase unimproved land for the purpose of subdivision with a view to selling it again? Yes. I bought a lot of the Holt-Sutherland land. I have got 250 acres there, but it was subdivided before I purchased it.
1942. When you are getting such good work done upon your property as this, you know you must lose a proportion of the land to make thoroughfares through it? Of course, if the land were not subdivided.
1943. If the Government were to give you these improvements on a much superior scale to what you thought necessary for the sale of the property you would get equal value in the return for the land you would have to give for the making of the roads? Unquestionably; but if I wanted my land subdivided I would have to pay for it. I am sure the Government would not. If I have a road on the south side of my property and if I choose to get another road there I can do so, but surely it is not for the Government to make it.
1944. I only want to know whether the land is very much improved in value by these roads having been made through various parts, and the land subdivided? Unquestionably.
1945. Therefore the condition of the Holt-Sutherland Estate has been improved by the action of the Casual Labour Board? Yes.
1946. The roads were laid out by Mr. Holt, and the Casual Labour Board made them, and thus there is an increased value thrown upon the land? Of course there is.
1947. *Mr. Waller.*] Would there have been any mistake made by Mr. Walker if he said that your objection was not against the expenditure of public money upon these roads generally, but upon one particular

particular road? Of course there would. Why should I object to that road more than to any other. I objected to public money being spent upon our property. But then always fair play; that was not being done for the sake of the roads or for the sake of the proprietors of the land adjoining the road, but for the purpose of finding employment for the unemployed. They had been giving these men dinners and breakfasts and teas in the city, but they gave them no work. The incoming Government of Sir Henry Parkes sent them away to the National Park. There they were made to do work for their food, and it seems to me the least objectionable way of employing these men. They were employed on the National Park, and they were removed from there to the Holt-Sutherland Estate.

Sir John
Robertson,
K.C.M.G.
21 Mar., 1889.

1948. Did you ever mention to the Colonial Secretary, Sir Henry Parkes, your objection to these roads? No. I had spoken to the Principal Under Secretary, and it was not for me to go further in the matter.

1949. Do you know that Sir Henry Parkes insisted upon the resumption of the work after it was stopped? I know that Mr. Walker telegraphed to him about it, but I do not know that he insisted upon the resumption of it. It may have been his colleagues. I do not know what action Sir Henry Parkes took nor how far he may have been concerned in the matter, if at all.

1950. Do you know the names of the shareholders in the Holt-Sutherland Estate? There is a list of them published in the Appendix to the proceedings of the Select Committee of the Legislative Assembly appointed to inquire into the work of the unemployed. It was handed in by the manager.

1951. Do you know if there was a lunch or anything of the description of a lunch at the National Park at any time during the time of the Casual Labour Board? I do not know. We have had many a lunch there.

1952. I mean a lunch given by the Casual Labour Board? I never heard of the Casual Labour Board having anything of the kind. I have had many a lunch there, but I would not inquire who paid for it. I have paid for many a lunch there myself.

1953. Do you know by whose desire or authority the work was commenced on the Holt-Sutherland Estate? I have no idea. If I had known how it arose I should not have gone to see Mr. Walker. I thought it was done inadvertently. I went to see Mr. Walker as the permanent head in the Colonial Secretary's office. I thought I had better let him know, as it seemed to me they had been acting inadvertently in spending public money there. Otherwise I would not have taken the liberty of interfering with the action of the Government.

1954. What I wish to know is whether this Commission would be justified in understanding that the proposal to do this work did not emanate from the proprietors of the Holt-Sutherland Estate? I don't know; I would ask them if I were you.

1955. Did you see any of the petitions that were signed and forwarded to the Casual Labour Board asking them to do this work on the Holt-Sutherland Estate? I have seen them since they were printed in the book containing the evidence taken before the Select Committee. I read almost everything that appears in connection with public matters.

1956. Did you ever sign any of them, Sir John? No.

1957. Were any of them ever submitted to you for approval? No; they knew me too well. They would have more sense than come to me.

1958. Were the names attached to the petitions of such a trustworthy character that a Government would be likely to consider them? I think they were, when one of them was signed by about thirty members of Parliament. That ought to be good enough.

1959. Were they all familiar with the property? I believe ten of them have been there.

1960. Are there any petitions which have been signed by *bonâ fide* residents of the estate? They are *bonâ fide* members of Parliament.

1961. I mean *bonâ fide* residents? I am not going to run down a member of Parliament.

1962. They were not *bonâ fide* residents about the estate? No.

1963. They were generally living in Sydney? A great many of them were. They pay taxes though, and as the money was expended from the Consolidated Revenue of New South Wales it was a matter upon which any man might petition.

1964. Do you know about the value of each share in the Holt-Sutherland Estate? I will sell mine at £150 each, and not a penny less.

1965. Do you consider that each share has been enhanced in value as much as your own? They were all alike.

1966. You don't consider yours any better than anybody else's? No; they were all enhanced in value about a third.

1967. Can you tell me of your own knowledge whether Sir Henry Parkes was or is now a shareholder in the Holt-Sutherland Estate? I know he was a shareholder, but I understand he has sold out. I think his shares are now in the hands of Sydney Want. He could tell you.

1968. Do you know whether there were any dead-head shares in the company—I mean free shares? No; I know that there were none.

1969. I suppose, Sir John, you do not know anything of the general working of the Casual Labour Board? No.

1970. From what you know of him, do you think that Mr. Davies was a suitable man for the position of Chairman of the Casual Labour Board? I do not know a more suitable man.

1971. *President.*] Will you kindly tell us the names of your co-trustees at the National Park? Mr. G. F. Want, Mr. Cameron, Mr. A. H. McCulloch, junr., Mr. Walter Bradley, Mr. Charles Bradley, Mr. John Graham, Mr. Charles Moore. There are thirteen altogether. I cannot recollect all the names now. Only a few of them attend.

John Balfour Clement Miles called in, sworn, and examined:—

1972. *President.*] What is your profession, Mr. Miles? Public accountant.

1973. What is your experience as a public accountant? I think I have been practising myself about thirteen years in Sydney.

1974. Are you in any way connected with the department recently existing as the Casual Labour Board? Yes; I am one of the present Board who took over the control from the late Casual Labour Board.

1975. When were you appointed? On the 25th January last.

Mr.
J. B. C. Miles.
21 Mar., 1889.

1976.

- Mr. J. B. C. Miles.
21 Mar., 1889.
1976. What was the nature of your appointment? I think it must have been an Executive appointment. It came under the signature of the Principal Under Secretary.
1977. Have you got the document? No; but I think Mr. Mason has his, and mine was exactly similar.
1978. Would you kindly tell us what the nature of your instructions were? We were to adjust the accounts of the late Casual Labour Board, and to close the relief works.
1979. When does your appointment terminate? Well, our duties ought to terminate shortly—on the 31st March. That is the last date upon which the men are to be at work.
1980. What action have you taken since your appointment? Well, we took over the control of the office and the accounts from the late Casual Labour Board, and followed our instructions by dismissing a number of the men on the 31st January, and again on the 28th February, and we will take steps to dispense with all the men on the 31st of this month.
1981. Did you discharge any of the officers of the staff? No.
1982. Can you say whether the present staff of the Department consist of the same officers that it did before your appointment? Almost without exception. There are the same three superintendents at the different places, and I know that they have nearly all the same men that were under their control before.
1983. What are the names of the superintendents? Mr. Burrowes was the superintendent in the Illawarra district. He is not acting as superintendent now. He calls himself superintending surveyor. Mr. M'Pherson is in his place. Mr. Oxley is at Narrabeen, and Mr. O'Donnell in the Hornsby district.
1984. Who have you got in the office? Mr. Hibble is the only clerk that we have there now.
1985. Who are the storekeepers? Mr. Larnach is the storekeeper on the Illawarra line.
1986. Have you gone into the books and accounts of the late Casual Labour Board? We have inquired into the books as we found them there, and into such of the accounts as were open to our investigation.
1987. Did you find all the necessary information and particulars there to enable you to make a full investigation? Well, I think we must say that there were sufficient books of account kept.
1988. Would you state to the Commission as concisely as possible the result of your investigation of the accounts up to the present time? The investigation was not very minute with regard to the principal part of the expenditure because the vouchers had been taken from the office and were lying partly at the Auditor-General's office and partly at the Treasury, so they were not accessible to us; but we did all that we could do. We checked their expenditure with the bank-book; saw that they had handed over to the Auditor-General vouchers for the money that had been placed at their disposal, and it would rest with him to say whether the vouchers were sufficient or not. Then, still further, with regard to the accounts, we made it our business to inquire into the accuracy of such accounts as had been incurred by the late Casual Labour Board, but left unpaid by them. We had some little difficulty about some of these.
1989. Have you had any experience as an accountant in the working of a large department? Yes.
1990. In this Colony? Yes; I have seen the working of large mercantile and other establishments.
1991. Are you enabled from your investigation to form any judgment—to express any opinion as to the system adopted as regards the books and accounts of the office, and the way in which they were kept? Yes. I think they can be said to have kept books that were sufficient if they applied them to their proper purpose, and if they had a proper method of checking the amounts when the accounts were received.
1992. So far as your opinion goes, can we take it that quite sufficient records have been kept of all moneys disbursed by the late Casual Labour Board? Oh, yes; that is to say, that for every cheque they paid away they had a voucher properly attested.
1993. So that when they say they disbursed a certain amount they can show a voucher for it? Yes.
1994. But the amount is dependent upon the voucher? Yes.
1995. And if the vouchers were tampered with or incorrect, the accounts would be made to correspond? Oh, necessarily.
1996. Can you state the amount of money that went through the department from 2nd May, 1887, the date of the appointment of the Casual Labour Board, until the 23rd January last? I find from my own inquiries that the late Casual Labour Board had placed at their credit by the Government, from first to last, a sum of £252,000. There has been a small expenditure beyond that, which has been allowed by the Bank without the Government authority.
1997. Was the whole of that expenditure incurred by the late Casual Labour Board during their existence? I believe so.
1998. Have you expended any moneys out of the £252,000? No. Our Board have had placed at their disposal £18,000, of which about £14,000 have been spent.
1999. Is this money additional to the £252,000? Yes.
2000. Are you aware, speaking generally, of the objects or purposes for which the moneys at the disposal of the late Casual Labour Board were applied? Yes; I know for what they were professedly applied.
2001. Could you state what? They were chiefly for the formation of roads through various properties, some of which we know from the inquiry by the Select Committee of the Legislative Assembly, were conducted through private lands, the making of bridges in different parts, and the damming of streams.
2002. My question relates rather to the labour employed on these works, whether it was the unemployed or not? It was supposed to be all done by the unemployed.
2003. Have any accounts come before you showing the payment of moneys outside the unemployed, such, for example, as accounts for carting, carrying, and so forth? Yes.
2004. Which was not the work of the unemployed? Well, I suppose, as regards the matter of cartage, it was not directly unemployed labour, but the outside people were necessarily employed, having horses and vehicles.
2005. Is there anything in the books which will enable us to separate the cost of that class of work and the cost of the unemployed work? Oh, yes; the pay-sheets will enable that to be done.
2006. Can you say whether it was a considerable amount? It must have been heavy, because there were a number of men engaged in cutting and excavating for roads, and a good many carters were employed in removing the earth and stone taken out of the cuttings.
2007. Can you say whether or not, from your investigation up to the present time, proper checks were kept, and the usual precautions taken to prevent irregular, improper, or extravagant expenditure of money by the late Casual Labour Board? No; proper precautions were not taken.

Mr.
J. B. C. Miles.
21 Mar., 1889.

2008. Where was the defect? The defect was, I think, in most of the control over all the work being left to Mr. Davies by the other members of the late Casual Labour Board, and the absence of co-operation with him. They have appeared to have held themselves almost aloof from him the greater part of the time, and to have let him conduct the affairs of the late Casual Labour Board almost as he chose.

2009. With reference to the payment of moneys, does it seem to you that proper checks were taken to prevent any irregular expenditure? No. So far as I can see they were particularly careful to have it vouched, that a certain sum of money set down to a certain man on a certain day was actually paid to that man. That is to say, if a man received £10 on a certain day, a voucher would show that it had been paid on that day.

2010. Where do you think there was a defect in the check as regards payment? Well, information has reached us of a man being put down as a ganger and receiving money as a ganger, when he was no ganger at all, and was entitled to receive money for his own labour only.

2011. Could such a thing as that be discovered by an examination of the pay-sheets and books? No, because you would have to take it for granted that the man being returned as a ganger he would necessarily be so—without information from people outside you would have no means of proving that he was not.

2012. Do you think, when such a thing as that occurred, the Chairman or any member of the late Casual Labour Board was responsible for it? No; I do not think that he or any member of the late Casual Labour Board would know of it. The superintendent, who returned the man as a ganger when he was not a ganger, would be responsible.

2013. I suppose in a department like this the heads of the department would of necessity have to trust to the honesty of some of their officers? Yes.

2014. If therefore such a thing as that occurred it might be purely and simply from the dishonesty of the superintending officer for which the head of the department was not responsible, and could not have protected himself? Well, it all depends upon what a man is supposed to do when he signs a paper authorizing the expenditure of a considerable sum of money. Is he merely to affix his name and be relieved of the responsibility, when the mere glancing over the paper and comparing it with the rough draft that he might have, would be sufficient. I do not think that the superintendent is absolved from blame if there are errors in the pay-sheet prepared by his subordinate from his draft.

2015. Has any actual case been brought under your notice where a pay-sheet has been signed by a ganger, representing a number of men, instead of being signed by the man as an individual worker? Yes. There is one pay-sheet where a man named Flemming has been returned as a ganger. Mr. Burrowes, the superintendent, who signed the pay-sheet, informed me that this man was working as a labourer, a knockabout, and that he was entitled to receive pay only for his own services.

2016. Do you know what amount that involved? He was paid from £20 to £22 for a fortnight for a gang, instead of receiving 4s. or 5s. a day for himself.

2017. That arose from his being represented as a ganger and claiming payment for several men? Yes. The explanation made by Mr. Burrowes was that the wrong was done by his storekeeper, who prepared the fair copy of the pay-sheet, and who knew that the man was not a ganger.

2018. Who was the storekeeper? His name was Springall.

2019. Mr. Burrowes, when questioned about this, threw the responsibility upon Mr. Springall? Yes. Burrowes handed him the rough sheets of the pay, which he said he had not had time to look at afterwards and compare with the copy prepared by Springall, and so the amount was paid.

2020. How did you discover this case? Well, the discovery was not made by us. Mr. Larnach, the storekeeper, supplied the information to us.

2021. For aught you know to the contrary, or for aught the vouchers or pay-sheets show, this might have occurred on many other occasions? Yes.

2022. In other districts? Yes; it is quite possible.

2023. Could not that have been checked in any way? Well, it could have been checked if they had had anybody for the special purpose, by making a comparison between the number of men that received wages and the number of rations distributed. But they might have been wise enough to have managed it in this way,—to have ordered rations for the number of men that were apparently to be supplied, that is to say, for the extra number that was represented to be in the gang.

2024. Then it was possible for a system of swindling to have gone on, and worked so skilfully as to have almost prevented detection? Oh, yes; it would have been easy to have prevented detection.

2025. With these exceptions, does it appear that the usual checks were adopted? No. Among other duties to which we succeeded was the examination of a number of accounts of a firm of Government contractors, who supplied large quantities of material to the work. The material was supplied to orders which were issued from the office of the Board, and in due course the accounts came in from the firm and were settled. The accounts appeared to have been signed by the head of the department. I suppose they were nearly all signed by Mr. Davies, and signed by the officer who incurred the expense. They were also signed by the clerk, Mr. Hibble, and it was Mr. Burrowes' duty to receive the articles, and he was responsible, and ought to have known whether the things were received or not. On comparing the accounts with the orders we find in several instances that they do not tally. I put these in my books as accounts upon which we are engaged inquiring into. There is an order sent for the delivery of twenty-three kegs of powder, and the account was rendered for twenty-eight kegs. It may be capable of explanation afterwards; for instance, they may be able to show a receipt for the delivery of twenty-eight kegs. There is another case, where six kegs were ordered and eight charged for. There is another, four kegs of powder and sixteen coils of fuse, and they charge for double the quantity. There are a good many accounts like these, about which I am in communication with McLean Brothers and Rigg, who supplied the articles. They make various explanations with regard to these. They get out of the difficulty by saying that the orders were sent for so much, but Mr. Davies verbally ordered an additional quantity. But before the accounts are paid they must produce receipts to show that they delivered the full quantity they have charged for. If four kegs were ordered and they delivered eight kegs, we wish to have the orders, and we wish to see the delivery notes. But, even in that case, we shall not pay the amount without the sanction of the Colonial Secretary. Here is another account for three bars of iron, and the account is for six bars. The explanation in that case is that three bars were ordered, but the firm sent six half bars. But a man would not call them bars when they were only half bars. There are a number of accounts

Mr.
J. B. C. Miles.
21 Mar., 1889.

accounts like that. Two of the most remarkable things, however, are order No. 552, entered in voucher as being six coils of Manilla rope, the order-book showing the same No. 552 is one hamper-basket, the date of that order being the 10th September, 1888. You will see that the voucher is signed by the superintendent as having received it, and signed by Mr. Davies. Before passing away from that, there is another matter which seems very singular. In this case we find no order at all, but we find a voucher for twenty-four long-handled shovels and four hammers, 31st August, £6 10s. We found that there were a number of accounts unpaid, and there was the bare possibility of others having been rendered. I wrote to them asking them to furnish us with a statement of the various amounts due to them. Their statement came in, and from that statement was omitted these two accounts. They omitted these in their statement, and said there was no record of them in their books. The tale we had from Larnach, the storekeeper, was that the hamper-basket was for Mr. Davies' own private use, and that the account came in the first instance for hamper-basket, £6 10s., and that he made some mention of it in the office, and they sent in a Government account for £6 10s., the one with the long-handled shovels and hammers; but I think Larnach must have made some mistake, as the one for £3 10s. is the one that was numbered with the order. The explanation of the £3 10s. amount was that the basket was returned and credited, being too small, and a larger basket sent, and against that they charged the long-handled shovels and the hammers.

2026. Is there anything else? With regard to some moneys that came into the hands of Mr. Davies, a number of men were employed at the National Park from time to time in cutting firewood, which was sent down for sale to Sydney. It was sold by Mr. Neale, whose office is in Engine-street. We found that certain amounts had been paid into the credit of the late Casual Labour Board in the Joint Stock Bank. We found with regard to the firewood that instead of the proceeds being paid into the Treasury Mr. Davies called personally on Mr. Neale and paid them to the credit of the late Casual Labour Board at the Joint Stock Bank. Well, I wanted to see if the proper amounts had been paid into the bank, and I asked the clerks for the account sales, and they said they never had seen any, and as we could not find them we thought it was right to get Mr. Neale to furnish us with copies. I wrote to him asking him to do this, but he refused unless we paid him for doing so. He said he had furnished the Chairman of the late Casual Labour Board with copies. We did not carry the matter further, as your Commission was appointed, and you could obtain them much more readily from this man than we could.

2027. What is his name? G. R. C. Neale, Engine-street. It is just possible that these are the correct proceeds, but there is nothing to enable us to judge.

2028. What is the amount? Over £270.

2029. For firewood? Yes. The first five items of the account passed through the hands of Mr. Neale.

2030. And you have been unable on application to obtain an account of the sales? Yes. He said he had furnished the Chairman with copies, and if we wanted more we would have to pay for them.

2031. Anything else? This is a memorandum which was handed to me one day by Burrowes and Larnach and I had an interview with these men respecting it. The memorandum was prepared by a man named Charles Robertson, and states that on a certain date he packed up a case of ale, wine, porter, and spirits. Mr. Larnach's accusation, supported by Burrowes, is that there was a picnic given by Mr. Davies to which certain people were invited, that the Government paid the sum of £30 through the late Casual Labour Board for refreshments, and that this quantity, which was unconsumed, Mr. Davies had packed into a case and sent to his own residence at Campbelltown. Mr. Burrowes, to make quite sure, wrote across the face of it the date upon which it was despatched. I made an effort to ascertain whether an amount of £30 had been paid to Mr. Kidman by the Casual Labour Board for this, but whether it was so or not we have no means of ascertaining.

2032. Could you find no vouchers for that at all? No; the vouchers had been sent to the Auditor-General long before our appointment, so we never had an opportunity of seeing it. These same men also made a statement that when the Board of which Mr. Davies was Chairman took over the relief works from Mr. Deering, the Metropolitan District Surveyor, there were large quantities of stores at the National Park, such as sugar, flour, cheese, and a quantity of crockery that had been received from Sydney when they gave up feeding the men at the Immigration Barracks. These men say that Mr. Davies ordered twenty bags of sugar, some cheese and flour, and a large quantity of crockery, to be sent to his private house. Whether that was done or not I cannot say, but they profess to be able to vouch for the accuracy of their statements by the records of the Railway Department?

2033. Anything further? I will mention, so far as our investigation has gone, that the only carelessness I find in the office is that the vouchers have been paid without comparing the accounts with the butts of the orders. In other respects, from what we have seen, the books have been properly kept. This material thing the Board seems to have neglected.

2034. If these vouchers had been compared with the butts of the order-books, mistakes might have been discovered that could not have been discovered from memory? Oh, yes. Just as we have discovered this account for £3 10s. and one for £6 10s. with regard to the shovels and hammers and the Manilla rope. Then there are numerous others in dispute between us, where there is a charge for a larger quantity of things than was ordered.

2035. There are numerous others which you are still inquiring into? Yes. There is one case where there were ten casks of powder ordered, and they charged forty-six, and the explanation is that Mr. Davies ordered the extra quantity. In one case there were five coils of rope charged for and half a hundredweight was ordered. They say that five coils were required, and they sent that quantity. It appears to me to be a very singular thing that five coils should be required and only half a hundredweight ordered.

2036. Will you mention any other item that is now being inquired into? There is one there—three dozen picks, and four dozen are charged for. They said in regard to that that picks came out in two-dozen boxes, and Mr. Davies agreed to take the additional dozen. There is another case where twenty-three kegs of powder were ordered and twenty-four were charged for. They say they sent the kegs out two in a bag, and they sent twelve bags with two kegs each. These cases are still under investigation. Hitherto, whenever there has been a discrepancy between the amount ordered and the amount charged for, they say that it was consequent upon some verbal orders given by Mr. Davies.

2037. Can you tell us who was the member of the firm or officer of the firm who had charge of these accounts? Yes; his signature is upon all these vouchers—Mr. J. H. Wood, for McLean Bros. and Rigg.

2038. Have you discovered any other irregularity or defect up to the present day, other than those you have stated? There were irregularities in the retaining and handling of a large amount of petty cash over and above what would be reasonably required for the working of the office. It has been subsequently accounted for, but it appears that at one time they had between £500 and £600 of petty cash in hand. 2039.

Mr.
J. B. C. Miles,
21 Mar., 1889.

2039. Do you know who had charge of the petty-cash books? Yes; the petty cash was formerly in the hands of the late Paymaster and Secretary, Mr. Hinchcliffe.

2039½. Did you find anything to indicate that at any time he had been short in his cash, and that he had to make it up? We are not sure that he was short in his cash, because we never had the opportunity of counting it. But according to his own book he showed that he must have had at one time £450 in his box for petty cash, and at that time he got a cheque for another £100 for petty cash. That being the case he could not want any more I should think.

2039½. Did the books show how this petty cash was disbursed, or was there anything to suggest a reason for holding such a large amount as that? Nothing at all; it was quite an incomprehensible thing to me how it should have been allowed by the Chairman.

2040. Do you know if there are vouchers for the payments shown in the petty cash? Yes; for everything. He explains a portion of that amount in this way: He says that he subsequently put in an entry for the payment to Mr. John Davies of £260, which Mr. Davies calls personal expenses, and in respect of which he was allowed 10s. per day. One voucher was put in for the total amount drawn by Mr. Davies. Hinchcliffe says that portions of that amount were paid from time to time to Mr. Davies during the currency of the Board—that he did not give Mr. Davies the £260 at one time, but £25 at one time and £25 at another. But even supposing that were so, he had still £250 petty cash which was not required. Another remarkable thing in connection with these accounts is that they sent in accounts to the Auditor-General with everything vouched and witnessed for the exact amount of the advances they obtained. The remarkable point is this, that the late Casual Labour Board, the same as ourselves, obtained from the Government, votes of £6,000, for which they accounted to the Treasury—that is to say, they accounted for one £6,000 before getting another. The late Casual Labour Board were always able to send vouchers for £6,000 exactly. It would strike me as a remarkable thing if we were able to send vouchers to the Treasury once for the precise amount of the advances made. When we got to the extent of our money in hand and had not sufficient to meet the next pay-sheet we would get another advance, but we would refund some small amount to the Treasury. With the late Casual Labour Board, however, the previous amount always totalled up exactly to £6,000.

2041. That struck you as being very extraordinary? Exceedingly so. I am quite certain I could not have done it. If the directors of any company I manage gave me a round sum to expend, I am quite certain that I could not spend it exactly.

2042. Has any explanation been asked for with reference to that? I asked the late Secretary and the clerk, Mr. Hibble. They protested that it was the easiest thing in the world to do this. When they got nearly to the end of the £6,000 they would take small vouchers and put them in until the exact amount was made up; but I cannot believe it. I do not believe it is possible. Once or twice it might have been possible for them to have done it, but that it should have been done in all cases is something beyond my comprehension.

2043. Have you seen those adjustment forms and vouchers for the £6,000 sums? No.

2044. Where are they? They are all in the Government offices. I do not think they have been sent over from the Treasury to the Auditor-General yet; but I think the Treasury has operated with nearly all of them now.

2045. But they had, as far as we have learned, an overdraft at the bank? That is how we are being treated too. We get a credit for £6,000, and then we ask for a second sum and get an authority for another £6,000, when, as a matter of fact, the Treasury has not covered the account yet.

2046. In no instance would they have control over more than £6,000? No; but the Treasury would not cover them until several payments had been made.

2047. That accounts therefore for the credits in two cases of £18,000 and £72,000? Yes.

2048. What is the nature of this document which shows the vouchers for the £6,000 exactly—what is it called, or by what name is it known in the department? An abstract for the adjustment of advances and recapitulation of vouchers.

2049. You say that in every case they showed vouchers for the exact amount of £6,000? Yes.

2050. Is there any other matter you wish to state? No; I think I have exhausted everything.

2051. Do you wish to say anything about a matter appearing in your progress report as to a double payment for some seed? I think that was purely an accidental circumstance. The man who rendered the account for the seed is I think an honest man. The man's name is Howlison, who is a partner with Mr. Joseph Graham in the market. The amount when first paid was passed to the credit of their cash-sales account; by a new clerk who was employed, and he afterwards found a certain invoice unpaid by the Casual Labour Board. The account was sent out, and by carelessness the amount was twice paid. The vouchers were sent on to the Auditor-General's Department, and there they looked into the matter and saw that both accounts bore the same date. The matter was discovered by a clerk in the Auditor-General's Office.

2052. You believe from your investigation that this has been entirely explained? Yes.

2053. If you were in the position of auditor, you would be satisfied with the explanation you have already received? Oh, quite; there is this peculiarity, that Mr. Graham of the markets should be one of the trustees of the National Park.

2054. Have you had any official experience of the qualifications of the Board's officers—Mr. Hinchcliffe, for instance? Yes.

2055. Do you think he is a capable man? He struck me as being a very good officer—quite exact in all that I saw.

2056. Mr. Hibble? He also is a very good clerk, so much so that when a Cabinet minute came out, dismissing Mr. Hibble at once, I sent in a remonstrance saying that he was of great service to me, and that, whatever he may have done in former times, he could do no harm now, and that we were anxious to retain his services. The sanction came down at once, and we have kept on Mr. Hibble till now. He is powerless to do any wrong now.

2057. Did Mr. Hinchcliffe remain with you? No; he was dismissed in accordance with instructions received from the Colonial Secretary's Department early in February.

2058. Have you had opportunities of observing his work? Yes.

2059. And your opinion is that he is a competent man? Oh, yes; he is quite a capable man.

2060. What can you say of Mr. Larnach? My opinion of him is not a favourable one. He is a man of very

Mr.
J. B. C. Miles,
21 Mar., 1889.

very flighty temperament, and given to great outbursts of anger. He is called the storekeeper, but nearly all the work is done by a clerk, named Goodman. Mr. Larnach does practically nothing at all.

2061. Have you been brought into contact with Mr. Burrowes? Yes; I have had many interviews with him.

2062. What are his duties? Mr. Burrowes was the superintendent under whom all the men in his district worked at one time—in fact, until we were appointed. On our first interview with Mr. Davies, which was on the same date as we took charge, Mr. Davies told us that Mr. Burrowes was incompetent and generally untrustworthy. I had not seen Mr. Burrowes at that time, and I asked Mr. Davies how long Mr. Burrowes had been so. He said he was always incompetent, always untrustworthy. I asked him why he had kept him on if he was incompetent and untrustworthy, and Mr. Davies did not give any satisfactory explanation. Mr. Mason, when you examine him, I think will tell you that Mr. Burrowes is not at all competent, and does not attend to his instructions. At one time Mr. Burrowes (until we took charge) was in the habit of drawing very freely for personal expenses. He used to make up £4 or £5 a fortnight, sometimes £6 or £7 a fortnight, for personal expenses.

2063. He is still under you, is he not? Yes, he is; we were desirous to discharge him, but we were requested to keep him on until the 31st of March. Mr. Mason to utilise his services thought he would keep him on survey work. Burrowes is now employed in plotting work.

2064. Have you any reason to doubt his trustworthiness? Only from this report that he had been in the habit of borrowing money from the men, which in itself is a very bad thing, and he does not carry out the instructions that we give him.

2065. I believe he had almost the entire control of the district, had he not? Yes, and large sums of money were paid on his certificate.

2066. Do I understand that Mr. Davies made a complaint of him directly you went there? Yes; within half an hour of our presenting our appointments to him he spoke of both Burrowes and Larnach being unreliable.

2067. Do you know how long Larnach had been there? Larnach had been there much less time than Burrowes, but I cannot say when he came on.

2068. Then there was Mr. Josephson;—do you know anything of him? He was there acting in the capacity of registrar, but there were no duties for him to perform except when there was a pay. We recommended that he should be returned to the department from which he was withdrawn to go to the Casual Labour Board, and he was taken away from us.

2069. Have you any books at the office of the Casual Labour Board which will help us in our inquiry? Nothing that I know of.

2070. There is some record-book that we would like to get? That you will be able to get.

2071. I suppose at the conclusion of your labours you will furnish a final report to the Colonial Secretary? Yes.

2072. *Mr. Franklin.*] Did you find on the books that the amounts of money expended had been divided into districts—north and south? Yes.

2073. Can you ascertain what had been expended by Mr. Burrowes? Yes; there is a kind of ledger showing that. It would take some time to work it out, but I think it could be ascertained without difficulty.

2074. You have never seen the acquittances which have been received by the Auditor-General? No; I have seen a few of them which have been sent back to the office for completion on account of some little irregularity—either the want of a proper signature, or something of that kind.

2075. In those that you sent out, did you remark that many of the signatures were marksmen? No; I saw that there was a small proportion of marksmen. At one time they had about 9,000 men paid through the Casual Labour Board.

2076. You know, in connection with the pay-sheets, that the signatures were taken on each pay-sheet showing the correct expenditure? Yes.

2077. Do you think it possible that in the confusion of paying so many men a substituted signature might appear? I hardly think so, especially from the reports I have received from Mr. Ormiston, who now pays the men. He says that if the pays had been made in a manner similar to his pays he did not think there could be any doubt but that all the men received the moneys entered against their names.

2078. You don't think that a claimant being absent, would authorize anybody to sign for him and take his money? No; sometimes the money was brought back, and the absent man either got it through the superintendent of the works, or the money was paid into the Treasury to the unpaid-wages account there.

2079. But it might happen that a moderately industrious man might be absent during the period of two pays? Yes. Then I take it that a return should be made to the Treasury.

2080. Don't you think, if these men continued to be absent, that there must have been some means adopted by which a voucher would be supplied for the incomplete signatures? No; the Auditor-General would not accept an incomplete voucher.

2081. Have you found that any moneys have been paid into the unpaid-wages account? Oh, yes; some sums have been so paid.

2082. Would it be practicable, within the terms of your inquiry, to ascertain the amounts that have been paid into the Treasury and compare them with the amounts on the papers sent to the Auditor-General? I think so. Of course it would take some time, and it would all depend upon whether the Auditor-General would give me access to the accounts that would be there.

2083. Do you know that the expenditure during the existence of the Casual Labour Board extended to £12,000 per month? Yes.

2084. From your experience as a financier, don't you think that is a very large amount? Yes; it is a very large sum.

2085. That is, to be paid away in services rendered? Yes; and material.

2086. What proportion of the expenditure would be represented by material? I have no means of judging, because we really were not asked to do anything of that kind in our appointment.

2087. You could not give it, I suppose, approximately? I should estimate that there would be about two-thirds for services rendered probably, but I cannot say.

2088. With your knowledge of the present staff, and also the knowledge that you found it in nearly its full force, do you think proper supervision could be given to this large expenditure? Certainly not, so far as I can judge from the people they employed.

Mr.
J. B. C. Miles.
21 Mar., 1889.

2089. Do you think that, in view of these enormous amounts spent in the Southern District, the large expenditure in the hands of one man, Mr. Burrowes, with a very small staff, that there was sufficient supervision over every man in regard to his vouchers? No; I do not think there was.

2090. Have you come to the conclusion that there was little or no professional supervision during the time of this expenditure? That is what I have gathered from what Mr. Mason has told me. When the Board was appointed there was a preponderance of professional skill, but I know that Mr. Houson and Mr. Wells gave scarcely any professional assistance at any time.

2091. Did you ascertain that their legitimate duties in the Government Service prevented their giving that attendance to the work of the Board which its importance demanded? Yes; Mr. Wells was represented to me as having, on account of his other official duties, to be frequently absent from the work of the Board.

2092. Of course, in the responsible position of making your inquiry, that would be one of the important things that you would give your attention to, and you are satisfied that they were unable from some cause or other to give the amount of supervision required? That is really what I have ascertained, that Mr. Wells was kept busily employed in his own department.

2093. Then with that small amount of check such a very large aggregate amount of money as £250,000 would be expended, and the vouchers coming to the office of the Board would come in the form of a bill, over which no check could be had beyond the statement that somebody at a distance had received the goods? Yes.

2094. It would have been possible for a responsible officer to have gone there and kept a check upon these things? It certainly was.

2095. A proper check could not have been kept by Mr. Burrowes; for instance, if Mr. Burrowes ordered a certain quantity of powder for the works, it has never been known that that quantity of powder was received? You could only trust to Mr. Burrowes.

2096. Are you of opinion that an individual having the authority to order the expenditure of nearly one-third of this large sum of money would be in a position to be at least tempted to little irregularities? Well, the opportunity would be there; but there is an opportunity for all of us.

2097. Still it is an unusual position for a man to be in? I do not know that it is altogether unusual, unless a man has a very large establishment by which a system of complete record can be kept. The expenditure was very large for the small amount of establishment that appears to have been kept here.

2098. At any rate, orders may have been given for things not absolutely required? Oh, yes.

2099. In furnishing particulars of the National Park the item of sleepers was mentioned? Oh, yes; the amount received from the Roads Department for sleepers from the National Park is £42 5s. 11d.

2100. Have you ascertained how these sleepers were ordered, and to what account they were paid;—have you found any request for the sleepers, or any correspondence that led up to their supply? I think the reply that we got was that these sleepers were supplied to the Centennial Park on the order of the Government, and that the Board received £42 5s. 11d. for them. I am told that it cost about three or four times as much to cut them.

2101. I suppose you are not aware whether it was the system of the Casual Labour Board that the butts of orders should be checked with the vouchers after presentation? No; I do not know. I have not heard that that was the custom, but I think it ought to have been. The accounts that came in for the months of January or February were not accompanied by the orders.

2102. Don't you think that would have been a very simple check indeed? Yes; but the butts are the things that I should be referring to, for the reason that when the municipal frauds were discovered the perpetrators were discovered through the butts being referred to.

2103. Were you not surprised that there was no sort of initialling of the butts then in the office? Yes; I inquired why it was not done, and Mr. Hibble, the clerk, says he did not do it because he never had time.

2104. Does it not appear to you that it would be the simple duty of any man in the smallest way of business to adopt this precaution? Certainly. There is this to be said for Hibble, that it may not have been his duty, because he really was very much overworked.

2105. Assuming that he had authority over a very large sum of money, it would be one of the most important things in the office? Yes; it would have been one of the first things I should have done in the office. It is only what I am having done with the accounts that have come in under our administration.

2106. I suppose you have not been in the field to see what has been done? No; Mr. Mason will be able to give you some information about that.

2107. *Mr. Waller.*] From what I can gather from the questions that have been asked and answered, although there were sufficient books for the actual keeping of accounts, so as to give you upon entering your examination an insight into the operations of the Board, was there not a great want of records by which you could positively give assurance that the accounts were correct? Yes; the accounts themselves have been sent out to the Treasury.

2108. As regards these vouchers, was there anything on them to prove to you satisfactorily that the proper officers of the Board had really examined into these vouchers for the order of goods? Yes; every voucher that I saw gave me the impression that the proper officer had examined the account.

2109. The consequence would be then that you, in the capacity which you are in at present, would hold them responsible that all these vouchers were for goods honestly required, and they were properly checked? Yes.

2110. And if it should appear that these vouchers are not correct, it would not be the result of an accident in your opinion? No; it ought not to be the result of accident.

2111. It would be deliberately doing what is wrong? Yes, wrong—either conniving at an unjust account or a dereliction of duty.

2112. Have you made a demand at the Treasury or Audit Office to permit you to view these vouchers by which their methods of working out this expenditure of £6,000 could be exactly obtained? I went to the Auditor-General's Office and saw two or three packets of vouchers. They appeared to be all genuine, as far as I could gather.

Mr.
J. B. C. Miles.
21 Mar., 1889.

2113. Have you checked these accounts against the documents in the office to enable you to say that they are not cooked vouchers that will not agree with the butts of the corresponding dates? No; because they have never been available for us. Nor, indeed, were we asked to do that in our appointments.
2114. As accountants and investigators, don't you think it is highly necessary in order to prove whether this is so or not? Yes; I suggested that to Mr. Dibbs, and he concurred in my opinion that as the accounts had passed to the Auditor-General he would have an investigation by his own officers.
2115. Such an investigation will go a great way to prove or disprove the honesty or dishonesty of the transactions of the Board? Yes.
2116. Do you consider that any business house would have been satisfied with their business manager who had no better checks upon his subordinates who were directly in some cases and indirectly in others the means of the expenditure of such a large sum of money? No; I think there was very defective management and very defective supervision.
2117. Would the misappropriation of funds, either in the shape of ordering goods which were not required, or the non-delivery of goods charged for, be a simple matter under the system carried out by the Board? Yes.
2118. And if men were not dishonest it was not from a want of means, but from a want of desire to be dishonest? I think so.
2119. The means were available without very much difficulty? Yes; without any trouble at all.
2120. And without very great probability of detection? Yes. One thing just occurs to me as a rather singular thing. Kidman had a contract for supplying the works with rations. One of the clauses of the contract was that he was to deliver the rations at the various camps. Of course he calculated the expense of so doing, and fixed his price accordingly. He has always been paid that price. The first pay-sheet that came into us, which was prepared by M'Pherson, who was Burrowes' successor, contained an item for carting rations, and Mr. Mason on seeing this struck it out; and then we set to work to inquire of Mr. Burrowes if he had paid for this in the past. Yes; we found the carting had always been paid at the expense of the Government, and then we asked him how he returned this in the pay-sheets, and we found that it was described not as so much for carting rations, but so much for carting alone—inferring that the charges were for ordinary carting. Mr. Burrowes could not say whether the men were described in the pay-sheets merely as carters, but the probability is that they were so put down.
2121. Will the Commission be justified in taking this statement as an indication of the ease with which malpractices could be carried on? They may.
2122. Referring to these contracts, do you know the nature of the contract with M'Lean Bros. and Rigg? No; not yet.
2123. Have you had any reason to wonder at that contract? No; I made inquiry of Mr. Dibbs with regard to them, and in my interview with him I mentioned that these people had been sending in accounts with a suspicious appearance. He said they were the Government contractors, and they appeared to be reputable people.
2124. Perhaps you are not aware that we had some evidence before us that they are not supplying the Casual Labour Board under the Government contract? No; I did not know that.
2125. And that they were supplying the Board at the market prices? I was not aware of that.
2126. That being the case, do you think that the reason given to the Board was the right one, that the supply of goods was so small that it would not be worth M'Lean Bros. and Rigg's while to supply them at the contract prices? I would not believe that at all.
2127. I will put it to you in another way: Do you think that if tenders had been called for the contract to supply the Casual Labour Board with goods, other merchants would have been willing to tender? Everyone in the same line as M'Lean Bros. and Rigg would have tendered—all the wholesale ironmongers.
2128. So you don't think it was necessary to give M'Lean Brothers and Rigg any premium? No.
2129. Have you interviewed M'Lean Brothers and Rigg over any of these accounts personally? Yes.
2130. What sort of a reception did you get? The man I saw was very civil about it.
2131. Did they seem to court inquiry or otherwise? No; they did not appear to be anxious. I took these accounts into the office and gave them notice that there were a number of discrepancies, and that if they would send a clerk to my office one of my clerks would go through them with him. The clerk came and passed some time with one of my clerks last Saturday. The last information furnished with reference to the matter is that where there was a difference the extra quantities of goods were authorized by Mr. Davies. The explanation was unsatisfactory.
2132. Don't you think it likely that the head of a house in a large line of business would say in such a case that the best thing you could do would be to go through the entries in the books yourself? Well, the entries in the books would not be more satisfactory than the accounts themselves, because if there was anything wrong the entries in the books would correspond with the accounts.
2133. What course, then, do you think they should have taken? What we would have asked them to do would have been to produce the order, and in the event of it showing a less quantity than the invoice, then we might fall back and ask them to produce the railway receipt.
2134. In offering to show the books, they should have produced the order at the same time;—Do you think that would have been a businesslike thing to do? Yes. A person would naturally wish to have a thing like that cleared up at once. I would have brought the order and the receipt at once.
2135. It would not have been an unreasonable thing to have expected a firm to do? No.
2136. Would not an investigation of that kind disclose the facts about this peculiar hamper? If the order was for the hamper it would have been produced.
2137. What would be the weight of these coils of rope? I could not say. Some of the coils would be so small that you could carry them in your hands. I should think the five coils charged for must be at least four times the value of the half-hundredweight ordered.
2138. What would be the weight? They do not give the weight. I know from my clerk that half a hundredweight would be worth about a quarter of what is charged.
2139. Do you come across the storekeepers at all? Only Mr. Larnach—he is the chief storekeeper; but there are storekeepers at the different camps.
2140. Have you come into contact with them? I have not. Mr. Mason has come into contact with one or two of them.

2141. Have you any records in the office about the appointments? Mr. Burrowes was appointed by the Colonial Secretary.

2142. In writing? I believe so; because I believe we had to get notice of his suspension from him.

2143. Did he give any guarantee, do you know? I think not.

2144. Did all the officers of the Casual Labour Board give guarantees? I never heard of such a thing being in existence.

2145. Had Mr. Hinchcliffe one? No; I do not think he had. I think I should have heard if he had one.

2146. Is Mr. Hinchcliffe a man that you could say was a competent accountant and book-keeper? I would not engage him as a competent accountant; but he is a clever clerk, and can do a large amount of general work well, quickly, and accurately; but he could keep books with a very little practice, and keep them well too.

2147. Is he a man that might fairly be held responsible for the duties of the position he had? I think so.

2148. He would have no right to claim indulgence on account of his want of knowledge? No. He used to call on Mr. Hibble to initial all the vouchers and pay-sheets that came in to him.

2149. What does that initialling mean? It merely indicates that the computations are correct.

2150. His superior officer was Mr. Hinchcliffe? Yes; Mr. Hibble was not responsible for anything more than the computations. It would appear to me, that knowing that, Mr. Davies allowed accounts to pass through without being properly checked. Mr. Hibble and Mr. Hinchcliffe may be held responsible; I should say the blame must rest with Mr. Davies.

2151. Why? Because it appeared to be no part of Mr. Hinchcliffe's duties to in any way assist in checking the accounts.

2152. Mr. Hibble in checking the accounts had no knowledge whether they were fraudulent or not. He simply went into the computation? That is what he says.

2153. There is the account for the Manilla rope instead of the hamper-basket, would it not strike you, from the amount of evidence before you, that he is corroborated by M'Lean Bros. and Rigg, when they say that the changes and discrepancies in the accounts arose through the verbal orders received from the Chairman. That being the case, how could he be responsible for the correctness of accounts which would differ from the order-book in the office, as regards the transaction of the order? Yes, it certainly gives colour to the statement.

2154. Consequently, if the Chairman changed these orders, and did not take the trouble to acquaint his officers with the alteration, and to initial each alteration to make the order correspond, does he not take upon his shoulders the whole responsibility of anything that may occur, either in the way of malpractices or anything else? I think the blame must be cast upon him if he commits these acts.

2155. The character of Mr. Burrowes, I think you said, was not so favourable in your eyes? No.

2156. Is he a man whom you would engage in a similar position of authority and responsibility? Decidedly not.

2157. Is he a man whose statements can be relied on? I always doubt him very much.

2158. You would not like to take for absolute truth statements he might make of other men? No; I would not.

2159. I notice you said there were £252,000 expended by the Casual Labour Board. Does that include the debts left unpaid on account of Mr. Deering? I cannot say.

2160. If the accounts were properly kept surely that would be shown? No; we have all the accounts of the expenditure, but we have nothing to show how that expenditure was incurred.

2161. But could they not have separated these accounts? I do not see how very well they could have done that.

2162. They could have told the contractors with whom Mr. Deering was acting to close up all books to a certain date and open fresh accounts with the Casual Labour Board? I should think this expenditure of £250,000 is the Casual Labour Board's own expenditure. That is the system we have adopted. There are accounts of M'Lean Bros. and Rigg's left unpaid which we shall have to discharge.

2163. But you are in the position of liquidators? Well, we have entirely separate accounts opened for ourselves.

2164. Have you any records in the office by which you can verify the statement of large quantities of goods such as you describe being left by Mr. Deering? No.

2165. Did you apply to Mr. Deering? No. It was just after your Commission was appointed, and knowing that you had the power to compel attendance and take evidence on oath, we thought we would leave it to you.

2166. But your books would show if the Casual Labour Board immediately gave large orders for goods such as those left by Mr. Deering? No; because just after that a contract was entered into with Mr. Kidman to supply rations at so much per day. We did not know what was in the store, this contract being entered into at once, and there being no more orders for groceries.

2167. If there had been a large quantity of goods it would have been unnecessary for Mr. Kidman to have begun to supply the rations under the contract at once? These men do not profess to say that there was a large quantity. In the matter of sugar they say there were only twenty bags. It is merely a matter of honesty or dishonesty.

2168. Can you supply the Commission with an abstract statement of the money paid for cartage? We cannot, as the vouchers are not in our possession.

2169. If you had them, could you do it? Yes.

2170. The same answer could be given as regards quarrying? Yes.

2171. And as I am on this subject, I would ask you whether a statement could be prepared with reference to the total amount paid for different descriptions of plant; take, for example, barrows, rope, powder, general tools in the shape of picks and shovels, &c.? Oh, yes. The vouchers are at the Treasury, and from any official in the service, who might be asked to go through them, that information could be got.

2172. The value of that you can at once see, as it might assist the Commission to form their own judgment as to whether there has been any undue quantity of tools used during the time the Board was in existence? The Commission would be required to allow liberally for breakages and so forth. I can say that Mr. Mason has an idea that the requisitioning for powder was in excess of what it need have been. We had a requisition for powder after we took charge, and we sent a smaller quantity than was requisitioned for, and they did not stop the works which are going on as if there had been a larger quantity required than we sent.

Mr.
J. B. C. Miles.
21 Mar., 1889.

2173. Did it strike you since you have made this investigation that there has been a very large amount of money expended on tools—that the requisitions for that sort of thing were large? Yes; considering the number of men and the kind of work done; but my opinion is not of much value.
2174. I suppose that generally the opinion of road contractors would be about as valuable as any that we could get as to the necessity existing for the tools ordered? Yes.
2175. Regarding the distribution of money, we have it on evidence that as much as £5,000 would be in the safe at one time (say) on Tuesday night, for distribution on Wednesday. In your opinion, was it necessary to have such large sums at one time? I never knew that they had such large sums in the safe. I knew that when they first took over the relief works they must have had a large sum. They have had to start by early train in the morning, just as we have had to do; so that it was necessary to have the money in the safe on the night before. So far as we are concerned we have had over £1,000 in the safe at night.
2176. Was there no avoiding it? No.
2177. Were there other payments made besides the payments of wages proper—payments like those to M'Lean Bros. and Rigg. Have you had any evidence brought before you that such payments should have been made, not to M'Lean Bros. and Rigg personally, or their clerks, but to some other person who took the amount to them? No.
2178. Have you got evidence to show that absolutely on every occasion the amount was paid to the person to whom the money was due by the officials of the Casual Labour Board? I have not evidence, but I have never heard otherwise.
2179. Have you any proof that it was paid to the people for whom it was drawn? Nothing beyond the receipts of the people to whom the money was due.
2180. Were the payments made in the office? Ordinarily in the office; but some of the amounts were paid out of the office by the Chairman of the Board, Mr. Davies.
2181. Then you have got proof that Mr. Davies did himself take cheques around to pay the persons in whose favour these cheques had been drawn? Oh, yes.
2182. Then he must have given himself a large amount of additional trouble in so doing? Yes.
2183. As a matter of fact, have your researches shown you that people generally came to the office and signed in the office for these cheques, or, on the other hand, that Mr. Davies was generally kind enough to take them to them? No; I think people generally came to the office.
2184. I do not want what you think, but what you know? Then I do not know, because I was not there at the time.
2185. But there are the signatures. Would you have any knowledge as an accountant whether these persons came to the office and were paid the moneys, got the moneys in the office, and signed receipts for them? No; I cannot say that.
2186. Do you know that in some cases they have not done that? In some cases they have not done so—I have been so informed. For instance, I do not know personally whether Mr. Davies took the money round to Kidman's; I was not there.
2187. Supposing these vouchers disclosed signatures purporting to be those of collectors, have you any means, from other writing in the office, of verifying those signatures? No; I should think not.
2188. And, therefore, before you could satisfy yourself that the signatures were actually those of the persons they purported to be, you would have to get further proof? Yes.
2189. And that as a Board you have not had to prove? No. I might mention this as a circumstance which ought to come before you. We were appointed on the 25th January. Mr. Davies was informed of our appointment on the same day. He did not leave the office immediately after our appointment, but remained there until the 31st of January. Mr. Mason and I had no desire to treat him with incivility, and we thought that a man like him, as head of the establishment, might require some little time to fix up his affairs. He remained until the end of the month, when the pay-day came. I then wrote a letter to the Colonial Secretary, inquiring whether the pay was to be made by us or Mr. Davies—stating that Mr. Davies was still in the office, but that we were quite prepared to act at once. Mr. Dibbs upon that, wrote a letter to Mr. Davies, which led to his withdrawal on the day afterwards. On the day afterwards, Mr. Hinchcliffe came down with us with the money for the unemployed, and then he pulled out of the bottom of his bag all these old accounts of M'Lean Bros. and Rigg. He asked me to sign a cheque for them so that they could be paid, but I told him they could not be paid. Had I signed for those, we should have paid for the hamper-baskets, and the other things to which I have drawn attention. Mr. Davies, it seems, had these in his possession, and I was told that it was no unusual thing for him to have them, and to accept payment for other people's accounts. Hinchcliffe asked me to sign a cheque to enable him to pay these.
2190. Had the moneys been due to those people for a long time? Oh, yes. The accounts had been in the possession of Mr. Davies for some time.
2191. Did Mr. Hinchcliffe ask you for this on account of anything that Mr. Davies had said to him? He did say that Mr. Davies had told him that some of these had been owing for a long time, and that they ought to be paid. I said that although they had been lying over so long they must remain a little longer.
2192. You mention an amount which was obtained by a man for wages as a ganger when he was only a labourer? So Mr. Burrowes says.
2193. Have you any proof that he was ever on the labour sheet? Oh, he was on the labour sheet, because he was returned as a ganger.
2194. What was the wages he was receiving as a ganger? Well, he drew some £22 on one sheet for only a fortnight's pay.
2195. Do you recollect how many men were in the gang? There would be eight—seven and the ganger.
2196. Can you give us any evidence as to how long this kind of thing had been going on? I cannot.
2197. Is it impossible to obtain this? No; all this can be obtained from the pay vouchers at the Auditor-General's Office.
2198. Could you get them from there? Well, we could if we had time and assistance, but our hands are pretty full; but you only want a clerk. I should say any clerk in anything like a good position would be able to pick these out for you. There is one man in this case who could very well get this information, and that is Mr. Ormiston.
2199. Could the same information be obtained in the same way as to whether the rations were delivered,

or

or if not delivered were charged for in respect of these men who were supposed to be under this ganger? Well, it might be a little more difficult for Mr. Ormiston to get that for you; but Mr. Larnach could get that. He has been inquiring into matters connected with the rations. When you get Mr. Larnach before you he will very probably make a statement to you about the rations being improperly drawn.

Mr.
J. B. C. Miles.
21 Mar., 1889.

2200. What wages were these gangers paid? They ranged from 4s. to 5s. per day.
2201. Each man? Yes.
2202. They were a portion of the unemployed? They were.
2203. Do you know Mr. Springall? I know him by name.
2204. Have you seen anything of him which would lead you to form an opinion regarding him? No. The report that Mr. Burrowes and Mr. Larnach gives is, that he used to draw large quantities of stores for his own private use. He was a man who was able to build a public-house for himself. You could obtain better information as regards Springhall from Larnach and Burrowes.
2205. Do you think that Burrowes is a man who can be relied upon? Well, he ought to be able to substantiate any statement he may make from the storekeeper's books.
2206. Was it possible for goods to be ordered, paid for, and not delivered under the system that prevailed? I think it was.
2207. Was it possible for goods to be ordered, delivered, and sold somewhere else? Yes; that could have been done if the storekeeper and superintendent were dishonest men.
2208. In fact, a general system of swindling could have prevailed with undoubted ease? Yes.
2209. Do you, from your examination of the books, think that such a system was pursued? No; I cannot say that such a system was pursued.
2210. Not to any very large amount? No.
2211. Have you found all the order-books with the butts? Yes; I have them in my private safe. They are all in order from first to last, and I have got them safe.
2212. You have still charge of them? Yes.
2213. Was there no book in the form of what we might call a delivery-book—a book that the receiving clerk might sign for the delivery of goods? No.
2214. He never kept a book showing what he had received? I do not think so; but I really do not know.
2215. Have you inquired for it? No. It has not been required.
2216. Will you inquire for it? I will inquire to-morrow.
2217. In your opinion, was this a most necessary book? Certainly.
2218. It was a check upon frauds? Yes.
2219. Have you seen at M'Lean Bros. & Rigg's establishment, or any other store, their carter's delivery-book for the delivery of goods? No. They have not been produced.
2220. They would be of great aid to you and to us? Yes, as being corroborative of the accounts.
2221. And would show who received the goods? Well, as a matter of fact, nearly all the receipts would be railway receipts.
2222. Have you found any receipts for goods, such as wines, that ought not to have been delivered? No; but there may have been accounts for that kind of thing paid, and if they had been bought from Kidman all that we would see would be certain vouchers for goods supplied to the relief works.
2223. Have you met with any plain discrepancy between Mr. Davies's orders and the quantities actually charged, as regards Kidman's accounts? No. I have not had an opportunity of dealing with them.
2224. Have you spoken to Larnach about that? No.
2225. You have not spoken to any of the unemployed about it? No.
2226. You have given us particulars of the sales of firewood;—do you think it would have been easy for other sales of a like character to have been made? Oh, yes; it was quite possible that such may have taken place.
2227. Without the knowledge of the Casual Labour Board, provided the Chairman was aware of it? Yes.
2228. Could the Chairman have sold the wood and not have accounted for the proceeds? He could have sold the wood and not have accounted for the proceeds.
2229. By auction as well as privately? Yes; he might have sold some by auction and put the cheque in his pocket. It was so easy to suspect that these amounts were wrong that I asked Mr. Neale, the auctioneer, to furnish me with correct accounts of each sale.
2230. Would it not be equally possible for the superintendent to have done that? Yes; the superintendent might have done so without the Chairman or the Casual Labour Board knowing anything about it. As a matter of fact, there is a sum of £4 received from a man to whom Mr. Burrowes sent firewood. It was intended by Burrowes that he need not pay for it, and he told the man so. The man, however, became a little bit alarmed, and he went to the office of the Casual Labour Board and paid £4 for the firewood.
2231. Do you know the man's name? Hibble, I think, will be able to tell you his name. Hibble, I think, learned that Mr. Burrowes sent some firewood to somebody at Ashfield named Underwood.
2232. To whom did this man pay the £4? I am not sure whether he paid it to Mr. Davies or Mr. Hibble.
2233. Had this £4 been paid into the bank? It was received in the bank in June, 1888.
2234. That was previous to your appointment? Oh, yes; our appointment was not made until the 25th of January, 1889.
2235. Do you know what the date of this little picnic to the National Park was? Well, it must have been about the date mentioned in the slip I gave to the President—that is, the 21st September, 1887.
2236. Have Kidman's accounts passed through your hands? Yes. We have paid one lot, and we are settling another lot.
2237. Have you noticed anything unsatisfactory with regard to them? There is nothing beyond that trouble about the carriage. The only objection that we have had to them was the charging for cartage, when they undertook to deliver the rations at the camps.
2238. How have you checked Kidman's accounts? Well, Kidman's accounts have been checked by the local storekeeper, who compared the number of rations supplied with the number of men employed at the works during the month, and they came out as closely as the ration accounts could come out. For instance, there would be a certain number employed to-day, and the storekeeper would order an equal number for to-morrow. For the last month, and for that period we have had to pay, the accounts are quite correct.

- Mr. J. B. C. Miles.
21 Mar., 1889.
2239. I am speaking now of Mr. Davies's time? We have not had an opportunity of checking them, for they have been out of the office.
2240. Have you checked the accounts at all during the time Mr. Davies was there? No; even if we had the desire and the time we had not the opportunity.
2241. Therefore you cannot say whether Mr. Kidman has been overpaid or underpaid, or whether it has been the custom to not only pay him for the rations at the rate agreed upon, but also for the delivery of those rations, which, under the agreement, he ought to have delivered free of additional charge? No; but I think Kidman will always be able to show that the accounts he rendered agreed with the requisitions that were sent to him every day.
2242. What you have stated as regards this gang of Flemming's would show that there has been no checking of accounts? Yes; that the accounts were not properly checked.
2243. And it will also show that the man who put Flemming's name down as a ganger was in collusion with the man who ordered the goods? Yes.
2244. Do you think the Casual Labour Board, as a Board, allowing for two to form a quorum, could have met very constantly during the year and ten months it was in existence? Yes; it could have met.
2245. Do you think it did meet frequently? No.
2246. It does not require any great amount of ingenuity to think that its affairs would be left largely in the hands of Mr. Davies? No.
2247. There is no evidence to show that the business of the Casual Labour Board was conducted by these professional gentlemen? No; Mr. Wells himself has assured me that it was not.
2248. Have you any evidence to give us as to the date the crockery and sugar and cheese, &c., went to Mr. Davies? No; but Mr. Larnach and Mr. Burrowes say that they can state the date, and show by the railway books that these things were actually sent.
2249. Goodman's name you mentioned;—who is he? He is the man that prepares all the work that Larnach was expected to do.
2250. What is your opinion of him? He is a trustworthy man; and, in fact, all the work that was to have been done up there by Larnach has been done by Goodman.
2251. You are therefore of opinion that this Commission would be justified in accepting the evidence of Mr. Goodman as to the character of others? I think so.
2252. Was he in the position of being able to swindle if he chose? Well, he could not do anything except with the connivance of one of his superior officers.
2253. But it was possible? He could do something that was dishonest with the connivance of Burrowes.
2254. Do you think he would be likely to know if swindling was going on? Yes.
2255. And he would be likely to give us evidence upon that? I think so.
2256. How many men would Burrowes have under him? At one time I should think Burrowes must have had over 1,000 men under him.
2257. Do you know Mr. M'Pherson? Yes.
2258. Is he there at work now? Yes; he holds the position that Mr. Burrowes formerly occupied.
2259. Do you think he is a man that could give good evidence to the Commission? Yes.
2260. And you think that he is a man whose evidence would be thoroughly reliable? I think so.
2261. You mentioned that Mr. Davies had got certain advances at one time from Mr. Hinchcliffe—do you know what these advances were for? I made inquiry, and the information given to me was that they were for personal expenses at the rate of 10s. per day. I began to wonder what the personal expenses could mean. It could not be for cab-hire, because they kept a cabman almost constantly employed, and his account was paid by voucher. It was not railway or tramway fares, because Mr. Davies always travelled free, and whenever he went on an inspection of the works he was met at the station by a buggy which was paid for by the Government. When he went with the Paymaster and Secretary at the times that the pays were being made Hinchcliffe paid for refreshments out of the cash. So it appeared to me that Mr. Davies was making 10s. a day. This payment of 10s. a day was absolutely for travelling expenses; but there must have been many days when Mr. Davies never left his office, except to drive in a cab down to the Colonial Secretary's Office.
2262. You said that Mr. Burrowes had a failing that way for personal expenses? Yes; he had that weakness.
2263. Can you tell us what they were for? They must have been for the times that he was asked to come to Sydney to see the members of the Board. We have paid him small amounts since we have taken charge of the office, but they are very much less than they formerly were. He has been much offended with us because we have asked him occasionally for vouchers to support his claims.
2264. Can you give the Commission an account of Mr. Burrowes' personal expenses? No; I cannot understand what they were for.
2265. Can you give the total amount of them? I cannot now, but that can be obtained from the vouchers.
2266. Did Mr. Burrowes ride about much during his work? Oh, yes; he must have had to travel about a good deal.
2267. Was he found in horses by the Government? Yes.
2268. And allowed for the keep of his horses? I should think so, but perhaps you will be able to ascertain that from Mr. Larnach or Mr. Hibble. They will tell you; but I am almost certain he was allowed for the keep of the horses.
2269. You mentioned that the petty cash amounted to £500 at one time, yet absolutely there was no petty-cash book kept? No; it was all kept in the big-cash book.
2270. Can you tell what amount was drawn? Oh, the book shows all the different cheques that were drawn. The book is a record of all.
2271. So that when this man asked for another £100 petty cash the book shows that he already had between £400 and £500? Yes.
2272. That being the case, is there anything in the books to show any expenditure during the time that this £400 was lying in the cash-box—is there anything to show that any expenditure was made in petty cash? There could not have been, or he would have had it entered in the petty-cash account.
2273. Did you take notice of the length of time between the drawing of the first cheque for that amount of £400 and the first payment from it on account of petty cash? No.
2274. Is this the cash-book which you found in the office? Yes.

2275. Does it show the petty-cash account just as an ordinary petty-cash book kept for the purpose would? Yes; there was another book for the ordinary petty cash, kept by Hinchcliffe, but he found that it entailed too much work, and Hibble thought it would be better to have the book all in one handwriting, and he wrote this entirely. I believe that what is here appeared in the other book, so that there is no alteration. Mr.
J. B. C. Miles.
21 Mar., 1889.
2276. But this is the only cash book kept; the other book was cancelled? Yes; Mr. Hinchcliffe cancelled it himself.
2277. Supposing some small item of petty cash was expended at any time, how would it be shown in the book? It would be put in when they made up their vouchers for the Auditor-General.
2278. Who would sign that voucher? Mr. Davies would probably sign it as head of the department, and Hibble or Hinchcliffe as incurring the expenditure.
2279. The stamps were supplied by the Government, I suppose? I really do not know.
2280. How do you find your stamps? We require so few that it is impossible for me to say.
2281. Do you know if the stamps you have been using have the Government brand on them? I cannot say; I know we use very few.
2282. In this cash book which you produce you show an entry of 28th July, by which it is shown that Mr. Hinchcliffe had up to that date £2,405 8s. 2d. in petty cash? Yes.
2283. And up to that date he had expended £2,014 9s. 11d., leaving a balance to the debit of petty cash £390 18s. 3d.? Yes.
2284. Yet, in the face of that, he, on that same day, obtained another cheque upon the petty-cash account for £100? Yes.
2285. Can you understand the reason for Mr. Hinchcliffe so acting? No; I have not heard any satisfactory explanation of it.
2286. The Chairman of the Board, I presume, must have either signed these cheques without any knowledge as to the condition of the accounts, or he must have been cognizant of the state of the accounts? Yes.
2287. There was no concealment? No; you can see from the book the state of the accounts.
2288. The cash book was closely written up? Yes.
2289. If such was the state of affairs as regards the petty cash, there was nothing to prevent the same liberal drawing of cheques in other cases? No, indeed.
2290. Do you know anything of the establishment where the Casual Labour Board met? Yes.
2291. They are the present offices? Yes.
2292. Who is in charge of the place—I mean as regards the housekeeper or attendant? There is some woman, whose name I am not sure of, looks after it, and she gets 6s. per week.
- 2292½. Has she got a husband? I believe she has, although I have never seen him.
2293. Do you know whether his name is on the pay-sheet of the Casual Labour Board? No; I am quite sure it has not been on the pay-sheets since the 25th January.
2294. If Mr. Hinchcliffe stated that he never had a large sum in petty cash at a time, and that he only drew cheques for sums not exceeding £100 from time to time as they became exhausted, he would not be quite correct in that statement? No; he would be stating what his own book shows to be incorrect.
2295. Did Mr. Davies offer you unsought his information as regards Mr. Burrowes? Entirely so.
2296. Did you accept that as a warning that you were not to trust the man? Oh, I looked upon it in that light. I looked upon it as Mr. Davies's opinion that the man was incompetent and untrustworthy.
2297. Did you think the statement was peculiar? I thought it was an unskilful statement for him to make, that it was strange he should have discovered this while the works were going on, and yet have retained this man in a position of responsibility.
2298. Did he give you any reason for keeping him on? No; he gave me no reason, at least, none that I can remember. He might have said he did not like to sack him or something of that kind.
2299. Did he tell you that any other member of the Casual Labour Board objected to this man? No.
2300. Could you separate the expenditure of money on the Holt-Sutherland Estate from the expenditure of public money on the Crown lands adjacent thereto? I hardly think we could do that because it might be difficult to take the labour from the pay-sheets, to ascertain what amount of labour had been expended on the Holt-Sutherland Estate. The pay-sheets might have been so rendered as to enable that to be done, but I am doubtful whether it could be ascertained.
2301. So that the only way would be to value the amount done? Yes; it would take time, and you would have some difficulty in getting a proper estimate, because the work has been badly, or at any rate unsubstantially done.
2302. As regards the statement as to the amount expended in the different directions for plant and things of that kind, do I understand that you would give us these? We could do it, but we have not got the vouchers for one thing, nor have we the clerical assistance. The Auditor-General's staff would be the proper people to do that. As the vouchers are now in the Auditor-General's Office, a clerk in that office would do all that you required for you.
2303. Of course, from your own knowledge of the books, you would be better able than a stranger to identify the vouchers as against particular payments in the Casual Labour Board's books? Oh, yes; I think so.
2304. You could easily identify them as against a particular order? Yes.
2305. In fact you are the only person that could do it now? Yes.
2306. Do you know of your own knowledge, from the books or otherwise, that Mr. Davies sometimes, at least, retained in his own possession unpaid wages—amounts that were not claimed as wages upon the pay-days? Yes; I know it from the record-book in the hands of the Auditor-General.
2307. What would they amount to in the aggregate? Well, I never saw the book until it was in the hands of the Auditor-General. But having looked through it at the time, I should imagine that Mr. Davies could not have had more than £30 in his possession.
2308. All small sums? Yes.
2309. When was that? That was about ten days after our appointment—some time early in February.
2310. There was nothing to show that he had at any time a considerable amount of unpaid wages? No. That would not be likely to arise.
2311. Why did he retain them? I do not know. He was in the habit of sending similar sums to the Treasury, and he might just as well have sent these.

Mr.
J. B. C. Miles.
21 Mar., 1889.

2312. *President.*] This original pay-voucher for £58 15s. is a voucher in respect to which you are still making inquiry? Yes. [*Voucher put in and marked E.*]
2313. And this original pay voucher for £6 10s.? Yes. [*Voucher put in and marked E 2.*]
2314. And this original voucher for £3 10s.—six coils of Mauilla rope—is the voucher referred to in your previous evidence, about which you are still making inquiry? Yes. [*Voucher put in and marked E 3.*]
2315. And this original voucher for £5 11s. for six bars of steel? Yes. [*Voucher put in and marked E 4.*]
2316. And this original voucher for £18 3s.? Yes. [*Voucher put in and marked E 5.*]
2317. And this original voucher for £20 19s. 6d.? Yes. [*Voucher put in and marked E 6.*]
2318. And this document described as “miscellaneous,” showing a total amount of £334 16s. 3d., is the document you referred to as showing the proceeds of sales of firewood, &c., and about which you are still making inquiry? Yes. [*Document put in and marked E 1.*]
2319. Is this list of “liquor in case” the document referred to in your previous evidence as having been handed to you by Mr. Burrowes? Yes. [*List put in and marked E 7.*]
2320. Whose is the writing which appears across this document, “21/9/87, J. Davies, Esq., C.M.G., Lleumeah, Southern Line”? It is the writing of Mr. Burrowes.
2321. In whose writing is the list of the liquor? That is the writing of the man named Robertson, who packed the case.
2322. Whose pencilling is this at the foot? The pencilling £30 odd, paid for refreshments, of which the above is the balance, is a note made by me upon something Mr. Burrowes told me.
2323. The book in your hand is the cash-book of the Casual Labour Board? Yes. [*Cash-book put in and marked E 8.*]
2324. That is the book referred to in your previous evidence as containing the petty cash and all the other accounts? Yes.
2325. And is this the book to which Mr. Waller referred you at page 80? Yes.
2326. What other books were kept at the office of the Casual Labour Board? There was a ledger into which was posted all the moneys that had been expended at the respective relief works, so that if you want to know what has been expended at Hurstville you can turn up Hurstville.
2327. Are there no other books showing receipts and payments of money beyond the cash-book and ledger? No; these are the only two books.
2328. Were these, in your opinion, sufficient for the purposes of the Casual Labour Board? I think so.
2329. Was there any need for more elaborate accounts? They could not have been kept with the staff they had there.
2330. Have you had the cheques that were drawn on the bank account produced to you for examination No.
2331. You do not know how they are signed then? No; but I believe they were signed by Mr. Davies, and countersigned by Mr. Hinchcliffe.
2332. Do you know what course Mr. Ormiston takes now with regard to the payment of the men? Just the same as was pursued by Mr. Hinchcliffe; he takes with him a witness, and the money is paid as the amount appears on the pay-sheet. There are the signatures of the men who receive the money, and the two witnesses who see the money paid to the men. There is just the same precautions taken now as there was in the old time. When it was suggested by Mr. Dibbs that Mr. Ormiston should go out and pay the men, Mr. Ormiston found upon going out that no improvement could be made upon the system previously adopted by Mr. Hinchcliffe, and he continued it.
2333. Who is Mr. Ormiston? One of the officials in the Government Service—in the Colonial Secretary’s Department.
2334. Is he high up in the service? Yes.
2335. A very responsible officer? Oh, yes. So much so, that I wonder they sent Mr. Ormiston to make the payments—he is so good an official.
2336. Is there anything in the Casual Labour Board office to show you what amount of wood or sleepers was disposed of by the Board to the Roads or any other department, or to any person? Not so far as I can ascertain; those I have mentioned are the only moneys, so far as I can see, that have come into the hands of the Casual Labour Board from sales.
2337. What is the usual practice in a department as regards moneys paid for realisations, should there not be some separate record or credit book kept? The credit record would be the cash-book, but the moneys ought not to have been passed into the bank to enable the late Casual Labour Board to draw cheques against them, but into the Treasury. They were not authorized by the Government to draw against these amounts.
2338. Do you know of any practice in any of the large establishments in Sydney of giving commission on sales to their staff? I know such a custom does exist.
2339. Are you aware whether such a custom exists in M’Lean Bros. and Rigg’s? I am not, but it is quite likely it does. I know it prevails in other houses in the same line of business.
2340. Have you ever heard of such a commission being divided between the clerk who obtains and the person who brings the order? No; I cannot say I have heard of the division. I have known of a person who took an order not dividing the commission with the clerk, but receiving it from the principal direct.
2341. I think you said you were not aware, of your own knowledge, if Mr. Davies paid the accounts himself? No.
2342. You have not made any inquiry from the people the Casual Labour Board was dealing with? No; I have asked Mr. Howlison, the man who was twice paid for the seed, and he told me that Mr. Davies had taken cheques to him.
2343. I have a letter here, written on the 15th December, 1887, from the Chairman of the Casual Labour Board to the Roads Department, stating that the total number of sleepers forwarded from the National Park to the Centennial Park was 3,905. In the ordinary course of events, I suppose the Casual Labour Board should be paid for these? Yes.
2344. Is there any book in the office where that would be recorded? Yes, because the Department of Roads would only pay upon account being rendered. The account would be rendered from the office, and there ought to be a record of it there.
2345. Could there not have been several sums of money received by the Casual Labour Board without any entry being made in the book? Yes; a man could receive money and make no entry.

2346. Are you aware of a practice of allowing discount on payment of accounts? Yes.
2347. Have you known of cases where discount has been returned in cash—where the full account was paid by cheque? Yes, I have known of cases where that has been done.
2348. Do you produce the four order-books of the Casual Labour Board? Yes.
2349. Do these, so far as you know, represent all the order-books that the Casual Labour Board has had during its existence? Yes.
2350. These are the books referred to in the previous part of your evidence as not having been employed to check the vouchers? Yes; there is no mark upon them except such marks as we ourselves have put.
2351. And the danger of not keeping that check is that goods might be twice paid for? Yes, and that the proper quantities might not be sent. [Four order-books put in and marked E 9, E 10, E 11, E 12.]
2352. Mr. Waller.] How many men would the payments made to the ganger Flemming represent? The gang was supposed to consist of eight, including the ganger himself.
2353. What would be a fair average wage per man per day? I think something between 4s. and 5s. for a working man; Mr. Davies used to calculate it at less, because the Government paid for the rations of the men. He boasted that the men's average wage was so much per day, but he appeared to forget to add the 1s. 1d. that was deducted from the wages for rations.
2354. So it is your opinion, after an examination of the books, that any evidence which we have received that the average earnings of the men was from 3s. to 3s. 6d. is a mistake? I think Mr. Davies makes his average upon a mistaken principle. I consider that a fair average would be from 4s. 6d. to 5s.
2355. We may take it then that Flemming's gang would represent a payment of about £24 for the fortnight? The amount runs sometimes from £20 upwards. Sometimes a man would be away a day or something of that kind, and thus the amount would vary.

Mr.
J. B. C. Miles.
21 Mar., 1889.

MONDAY, 25 MARCH, 1889.

Present:—

A. J. CAPE, Esq., M.A., PRESIDENT.

F. A. FRANKLIN, Esq., C.E., J.P.,

T. F. WALLER, Esq., J.P.

Edward Alexander Rennie called in, sworn, and examined:—

2356. President.] You are the Auditor-General, I believe, Mr. Rennie? Yes, sir.
2357. Do you produce the vouchers, pay-sheets, and accounts of the Casual Labour Board? I have not got them all here. I have just brought a sample with me, but I have them all locked up in my office.
2358. Do you say that is only a sample? Yes, but I can produce the whole of them.
2359. We will require to have produced here and left with us all the vouchers and pay-sheets if you have no present occasion for them? No; I have a list here and statement that I will hand in, and any vouchers and pay-sheets that you may wish I can supply at once.
2360. What statement do you produce? It is a statement fixing the dates of the advances, the dates of the adjustment, the number of queries upon them, the surcharges raised, the surcharges recovered, so far as the accounts for the adjustment and advances have come from the Treasury.
2361. Is that statement prepared by you for our use or for any use of your own? No; I had it made out for your use. [Document put in and marked F.]
2362. Have you amongst those papers any forms of recapitulation of vouchers and adjustment of advances? There is one.
2363. Will you allow me to see it? Yes.
2364. This represents £6,000 and the vouchers mentioned there I have here? They were furnished to us in amounts representing £6,000 each, except when I had twelve of these at once, representing £72,000. That came from the Treasury, not from the Casual Labour Board.
2365. Have you got with you to-day the whole of the recapitulation of vouchers, or only one of them? No; this only refers to this particular parcel of vouchers.
2366. Have you any objection to forward the others to this Commission? None whatever.
2367. You have no present occasion for them in the office? None whatever; they have all been examined, and with the exception of some few queries have all been dealt with.
2368. Can you give us the name of the particular officer of your department who has had these under his consideration? Yes,—Ambrose Freeman.
2369. Personally, I suppose, you know little about them? I look at the queries, and the rest of them, I conclude, have been examined by my examiner and found correct.
2370. Personally you can give us little information beyond what the head of a department can give, but you say they have been all examined? Oh, yes; they have all been examined, and bear the initials of the examiner.
2371. Can you tell us what the nature of that examination is? First of all, we see that we have all the acquittances of the parties to whom the moneys have been paid; then after that the vouchers that are paid are examined as to their objects, as to their castings, as to the rates, and I think that is all.
2372. And added up to see that the totals agree with the recapitulations? Yes.
2373. Do you go outside the vouchers at all? I scarcely understand.
2374. Do you go outside the vouchers or accounts to inquire as to their correctness or otherwise? No; not unless I find something on them to indicate the necessity for further examination.
2375. For example, a receipted account is produced to you vouching a payment to a tradesman, do you inquire into the items of the account in any way? Yes; to see that they are according to the contracts they are under. Of course there are certificates given with every voucher that the services have been performed and duly authorized.
2376. Where, for example, an account represents goods supplied, would you inquire whether these goods were supplied? No, we do not do that; we could not very well do that. For example, there is a voucher for rations; the certificate first of all is vouched for by the contractor who supplies, and then certified by the

Mr.
E. A. Rennie.
25 Mar., 1889.

Mr.
E. A. Rennie.
25 Mar., 1889.

the Chairman of the Casual Labour Board and another officer, by the clerk, I think, or superintendent of works where the men are. That certificate goes to the effect that the service has been faithfully performed and the expenditure duly authorized. The services faithfully performed mean, of course, that the supplies have been furnished. We do not go behind that, unless there is something which would lead to further inquiry, but the voucher would not show that. Sometimes we get to know that by side-winds, and then we take whatever action may be necessary.

2377. Supposing these goods had been supplied on written orders from a particular department, would you consider it any part of your duty to examine the butts of the order-book? No. As regards goods supplied for the stores, which are paid for by the Treasury, those are made upon requisitions, which are approved by the Treasurer or some other particular officer. These requisitions are produced to us with a statement from the department that the stores were received, but that is only a special case.

2378. Can you say from your examination of these Casual Labour Board papers whether the recapitulations of vouchers, and the vouchers in support, covered in every case £6,000? Yes.

2379. In every case? Yes.

2380. Exactly? Yes; all the vouchers in each case represented the sums mentioned there.

2381. Is there anything extraordinary in that? Well, no. Doubtless there must be one voucher, or two or three, that may be divided so as to carry the balance to the next account. That is often done, and their object has been to adjust each £6,000 for the purpose of getting another advance from the Treasury.

2382. Would not that necessitate some dividing of the voucher? Well, I would not know that, because there might be two vouchers together, and I would not know from them if they divided the amount so as to balance the £6,000. There is nothing in the vouchers produced to show that there has been any dividing, but it is just possible that there may have been other supplies in September, which would not be included in this account.

2383. Do you know how many sets of £6,000 advances were made? Some of them would represent twelve; we had £72,000 in one lump.

2384. Will you kindly look through these and tell me how many sets of £6,000 advances there were? There were forty altogether.

2385. Can you say whether, in every case, the vouchers produced exactly made up £6,000? Well, I conclude so, because they are all shown here. They appear to have been all adjusted, and on each occasion there would be a complete set of vouchers to make up the £6,000.

2386. Does that occur in any other department? Well, there is no other department that has advances in that way.

2387. Has it occurred in any previous case, in your experience, where advances were made in such sums that, on each occasion of an advance, the vouchers produced exactly made up the sum? I do not know of any case where the advances were carried on over such a long period.

2388. Does it not strike you as strange that here there are forty advances of £6,000 each, and the vouchers produced in each case represent an exact amount of £6,000? Well, I think there is this to be said on that point, that these vouchers are not so much for the adjustment of each particular advance, but vouchers representing the sum required to carry on the business of the Casual Labour Board. At the time they sent these vouchers for £6,000 very likely they had advances for a considerable sum more. It is not so much an adjustment of each particular advance as an evidence to the Treasurer that they have spent the £6,000 and want more. That is the way I look at it. I think, in other cases, the same kind of thing is done where fixed advances are made of large sums. The Treasury does not usually advance any money until they know that the particular sum advanced before has been expended. All that they want to know is that the £5,000 or £6,000 or £7,000 has been received and expended.

2389. Would it be necessary, according to the practice of your department, that an exact supply of vouchers should be given to support an advance? No; it would not be necessary. It might be a little more or a little less.

2390. Suppose for an advance of £6,000 there were vouchers produced for £6,559, would not that be a sufficient justification for the advance? Oh, yes.

2391. Supposing that a sum of £6,000 had to be adjusted, and there was a balance of payment over or under. If there was a surplus they might return it to the Treasury, or a voucher might be sent to the Treasury later? I do not think there is any particular need for that at all. It simply shows that they spent £6,000 and want more.

2392. You have had very considerable experience, I suppose, in the accountant's branch—I am speaking generally of your professional experience? Oh, yes; I have had to deal with that ever since I have been in the office.

2393. And you have had large experience as accountant in connection with the various Government departments? Yes.

2394. Does there not appear to be, in your opinion, some difficulty in selecting vouchers on each occasion to exactly make up a £6,000? I do not suppose it could be done regularly, except, as I have explained before, by the detention of the voucher. I do not know that that has occurred in any of these cases, but most likely that is the way. They have divided the voucher and carried the balance over to the new account.

2395. Can you show that this has been done? I do not think that I could find out, without a great deal of trouble, that this was the case.

2396. In one of the £6,000 advances I see that there are two amounts, one for £4,000 and one for £2,000,—can you explain how that has come to be divided? I do not know for a fact, but I can explain it in this way. They have found, on going to the Advance Account of the Treasury, that they could not give the £6,000. There might be £2,000 available from the revenue, and the other £4,000 might be taken from the Trust Fund. It was simply that the Treasury had not the money to pay the whole sum, and this £6,000 was divided in that way.

2397. Has the audit been completed for these accounts, so far as the requirements of your office are concerned? There are two or three queries here which have not been answered, but they are of no great matter—acquittances and the like.

2398. I refer you to the bank pass-books, which have been sent to your department. I want to know, regarding these sums of £6,000, whether the amounts appear on the bank pass-books? I do not think they would
They

- They might, certainly, but the Treasury might draw only one cheque for the £6,000, and they would pass it into their books in two sums—one from the revenue and one from the Advance Account.
2399. Have you with you, to-day, any vouchers from M'Lean Brothers and Rigg, for January, 1889? No, I have not. These are further back than that—from the 31st August, 1888 to the 25th September, 1888.
2400. What is the last date? 25th September, 1888. It is numbered 552.
2401. I suppose you have the others in the office? I am afraid not. We queried them to the Casual Labour Board, because the price charged was higher than the contract price. We wrote asking them for an explanation, and they said that these services were not included in their contract with the Government, and consequently we referred the matter to the Treasury.
2402. It is very material for the purposes of this inquiry that we should have these vouchers produced—are these you have the original vouchers from M'Lean Brothers and Rigg? These are not paid yet.
2403. Where are their accounts—you would not have those? No, I have not got them. We always send the vouchers with the query to the sender of the goods, to answer the query, or the whole of the facts upon which the query is based.
2404. Have you got the original vouchers for all the other payments? They are all there—a pile of great bulk, about the height of this table. I will have them all looked out, and they are at your service whenever you desire to see the Examiner.
2405. *Mr. Franklin.*] I would like to know if the acquittances are in the shape of detailed pay-sheets, giving all the particulars? No; they are all summaries. There is a summary in the front, showing the total amount for the week. These acquittances are carefully examined by us, to see that they are really genuine.
2406. I suppose there are no means by which you can satisfy yourself that the signatures are genuine? These are witnessed by Sanderson and paid by Hibble.
2407. Do you think the check was sufficient over the payments to absentees? In almost every case there are absentees, and if these acquittances have to be signed by the parties, on the fortnightly pay-days, it is quite possible that some of the men may be absent.
2408. Do you know what the practice in a case of that kind is—who signs for absentees? I am not very sure whether it was not the Chairman himself who signed for them, as unclaimed money at the date of payment.
2409. Has he paid these into the Treasury? Yes; he has paid all these into the Treasury.
2410. How much would they amount to? It was £40, £50, or £60. I am not certain as to the exact sum.
2411. You are not aware that at any time these vouchers were incomplete owing to the want of signatures? Oh, well, we have had to ask for these, you know.
2412. There is one acquittance here signed "C. Burgon, 9s."—an acquittance for the full amount required; you would be satisfied with the explanation that this man was absent and the money would be paid? We should get the receipt for the money, and that would be satisfactory.
2413. After approved signatures like these the signature of the recipient would be a full acquittance? Oh, yes; we could not get beyond that.
2414. As regards the present custom of the adjustment of advances, is it not usual in making advances of lump sums to trustees to close their accounts after the actual expenditure of the amount, and carry forward the balance? Oh, yes; it would be considered proper to exhaust the vote by the payment of several other sums.
2415. And from the custom followed by a great many of the road trustees in this respect I presume that it would not be irregular to close the amount of the advances by payments on account, so long as the account is not closed? Oh, no; that is very often done.
2416. *Mr. Waller.*] Do you produce any vouchers here to-day other than vouchers for the payment of wages? Yes.
2417. Have you got any vouchers here for goods sold and delivered to the Casual Labour Board by any of the merchants in the city? The only other vouchers I have here are for rations.
2418. *Mr. Kidman's?* Yes.
2419. As to the vouchers you have produced for rations supplied by Mr. Kidman, have you any further information than is contained in the voucher itself? None whatever.
2420. Are we to understand that if a voucher is presented to you in your capacity of Auditor-General for the supply of rations from Mr. Kidman no description is given of what was supplied;—did the Casual Labour Board not require that the voucher should have attached to it the account for which that voucher is made out? No, it is not required in this case, where the rations are supplied at a particular rate. If rations are supplied at different prices, as in the case of some public institutions, then we have a statement showing the number of items in a detailed form, but where there is only a single price, as in this case, we do not require that; we simply get a certificate that this number of rations has been supplied.
2421. What proof have you as Auditor-General that the amount of rations as stated in the voucher and charged for in the voucher is correct, you not having any detailed account to show any particular quantity of rations delivered at any particular time or times to the different camps? We have no means of proving that.
2422. In your opinion, does not the fact of the rations having been delivered in different quantities to different numbers of men, who may be at work in different camps, bring the case pretty well on all-fours with having, as you stated just now, different rates for different kinds of goods? No, not exactly; the price is the same for all.
2423. I observe that these vouchers are vouchers for different places—one is for Waterfall, one for Narra been, and one for some other place—these represent the number of rations supplied to the number of men who were employed at Waterfall and at Narrabeen during the month of September; what I want to draw attention to is the absence of any proof of the receiving of these rations which are stated in the vouchers? That is the delivery of them?
2424. Yes? Well, we have no other documents in support of the vouchers; all that we take is the certificates of the officers—in this case of Mr. Burrowes and Mr. Davies—in the other case, of Mr. Oxley and Mr. Davies.
2425. I will tell you a case that presents itself to us as showing the necessity for something in support of these vouchers. Supposing it is possible that the receiving officer in this case did not take the trouble or had not the means at his disposal, and no other arrangements having been made to take delivery of the goods,
- he

Mr.
E. A. Rennie.
25 Mar., 1889.

Mr.
E. A. Rennie.
25 Mar., 1889.

he simply took it for granted that the exact quantity ordered had been sent on a certain date, and the Chairman of the Board attached his signature to it, would not that be a very peculiar sort of document to pay away large sums upon? Well, so far as I am concerned, if I had to go into these details and particulars, I would never do my work.

2426. Quite so; but as a matter of business, do you not think that the vouchers should be attached to a document for reference in a case of this sort? Well, I conclude that the officers who were engaged in the distribution of these rations must have some books and documents in which all these things were recorded. We think that in a matter of this kind these men would not have signed this document unless the goods were supplied.

2427. Quite so; but you think that there ought to be precautions taken? Oh, yes.

2428. With regard to the goods supplied by M'Lean Bros. and Rigg and others, have you any documents in support of these vouchers? No; I think not. As a rule we do not get any documents in support of what we call supply vouchers.

2429. Just now you told us that it was not necessary in the matter of Kidman's vouchers, where the rations were supplied at fixed prices, but that would not apply to M'Lean Bros. and Rigg, for the simple reason that their charges, so far as I can ascertain, were not in accordance with the contract prices for goods supplied by the Government, but that some other arrangement was made? I was not aware of that.

2430. We have it in evidence that their prices were not in accordance with those fixed in the usual Government contract; that being the case, do you not think that these vouchers ought to have been supported with accounts from M'Lean Bros. and Rigg for the different classes of goods supplied? All that we require are the vouchers that have been supplied to me.

2431. You have not got at any time the originals from which the vouchers were made out? No.

2432. You do not know whether there are any? We conclude that they are taken from their books, or something of that kind.

2433. With regard to the advances to the Casual Labour Board through the bank, were these requisitions for fresh advances sent in at particular stated periods or at any time? I could not tell that, because it would be a matter for the Treasury to deal with.

2434. What I mean is—would these requisitions come at any time during the month? Yes; whenever the money ran short they would ask for more.

2435. Supposing the Board made a requisition for £6,000, and sent in vouchers which showed that they still had to their credit at the Joint Stock Bank, £456 19s. 6d., would the Treasury, with a knowledge of the large amount of money they were spending daily or weekly, have raised any objection to refreshing that account, knowing that there was £456 19s. 6d. to their credit? I am not very sure whether that might be the case. So far as I know, the bank would have had authority to allow the Board a further advance under those circumstances.

2436. I am supposing that they have not exhausted all the £6,000—that they have still left £456 19s. 6d., would any objection have been raised by the Treasury to grant a fresh application for another £6,000, before the first sum was exhausted? I do not think that for a small sum like that they would raise any objection, because the amount would not be sufficient to enable the Casual Labour Board to meet its next wages payment. We know very well that parties getting advances, when they find that their expenditure has outrun what they anticipated (say before they complete their account), want £200 or £300 more.

2437. That being the case, I would like to know why the Casual Labour Board deemed it necessary to so manipulate the vouchers as to make the sum total £6,000 exactly—neither more nor less? I do not know that. I simply found the vouchers for the £6,000 duly assorted.

2438. In your capacity of Auditor-General, does it generally come to pass that the amounts are made up to a penny in that way? Well, I am inclined to think that if the amount of the vouchers and of the advances agreed in every case it is certainly unusual. It is surprising that they should continue to do that for month after month for a period of twenty months; but such a thing as that would not justify me in returning the accounts.

2439. Can you suggest a possible mode under which the peculiar result would obtain of having vouchers to the exact amount of £6,000? Yes; in the smaller vouchers that is very often done in the adjustment of the petty cash, when they get near the amount they have to make up. Then they do not present accounts for these until they get another advance—amounts perhaps of £10, £20, or £30.

2440. Supposing that was the system they adopted, would it be correct that the next voucher should show on the face of it a balance of account due to M'Lean Bros. and Rigg as per voucher so and so? Yes.

2441. Was this done? I could not say that.

2442. If it did not appear on the face of the next voucher, would you consider it a correct way of manipulating the accounts? No; but I do not see any harm in dividing the accounts, if you show where the division occurs, and show the division.

2443. If it was not done in that way, and the system adopted was to shuffle the accounts backwards and forwards until by a series of shuffling you brought the amount to £6,000, does it not strike you that it would be a matter almost of impossibility to shuffle accounts every time that you get an advance to bring them to represent £6,000 exactly? It would be almost impossible.

2444. Without manipulation? Yes.

2445. If it were done once, it certainly could not be done twenty times? No.

2446. You might get your figures by shuffling a lot of accounts to come out exactly once or twice, but not oftener. Therefore, if it was always done in the way I have mentioned, it must simply be by manipulation? I think it must be so.

2447. Was there any necessity for making up the vouchers to represent the amount of the £6,000 advance exactly? No.

2448. Have you got any officer in your establishment who could go through these vouchers and check them against the particular accounts which they represent? Yes; the Examiner of Accounts will come down any day you like and go through them.

2449. He could go through the whole of the documents voucher by voucher? Yes; that is, if the Commission get at the original accounts for which the vouchers represent grants of money, he could identify the vouchers in each case.

2450. Supposing we get the vouchers, and we get M'Lean Brothers and Rigg's account for them, would he be able to identify them? Providing the items corresponded with the lines in the other accounts he could do so. Mr.
E. A. Rennic.
25 Mar., 1889.
2451. But if the supply of the number of articles were divided, he could not do that? If they were divided and no division shown on the face of them, you might club the dates and figures together to see if they agreed with the original. It often happens with dates—and it is one thing we are very particular about to have the dates of service always furnished to us—that in many instances we have double claims, and it very often happens that for the same dates the same supplies are brought with the accounts. I have a system of registration by which any double payments would be detected in a moment.
2452. Do you not think it would be an advantage with Government vouchers to have printed memos. or printed remarks upon them as per folio so-and-so, so as to appear against so-and-so, which would have to be filled up by the person presenting the voucher, so that at any time you could check that particular voucher against the original account, and thus prevent the possibility of double payment in any case? Oh, that would not prevent it, because the book-keeper in the shop would copy his account from the ledger, and that would involve sending a clerk down to compare with the ledger.
2453. Not necessarily; but you would have the information before you at any time you might require it. Have you had any cases in connection with the Casual Labour Board where there are double payments? No; I do not think so.
2454. Could you get one of your officers to dissect these vouchers, to place all the entries from M'Lean Bros. and Rigg in their order from the earliest date, the same with those from Kidman, or any other merchants, and the same with other money expended? Yes.
2455. Will you have that done? Yes.
2456. My reason for asking this is, that if we have to go through these accounts we will lose such an enormous quantity of time, whereas, if we had the accounts separated into batches we would be able to see each bundle as we required it? That would be easily done. I will set them to work at once. There is a large pile to go through, and I dare say it will take a couple of days before we get them all done.
2457. Could you let us have them by Wednesday or so? I will try.
2458. Regarding M'Lean Bros. and Rigg supplying goods, do we understand that they at any time supplied goods under the usual Government contract? I cannot say that, but my impression is that they supplied none under contract.
2459. Were there any other firms besides M'Lean Bros. and Rigg supplying goods to the Casual Labour Board? I cannot say that.
2460. And you cannot say whether they were supplying under contract or not? No.

Charles Boydell called in and examined :—

2461. *President.*] What are you? Acting Clerk of Records in the Legislative Assembly.
2462. Do you produce the returns laid upon the Table of the House on the 8th, 13th, and 14th November, 1888? Yes. There are one or two more returns here than those specially asked for. I produce returns ordered to be printed on the 8th, 13th, and 14th November, and also the returns ordered to be printed on the 13th December, 1888; in addition, a return ordered to be printed on the 1st November, 1888, and a return ordered to be printed on the 8th January, 1889, another on the 11th January, 1889, and two petitions presented on the 8th January, 1889, and 6th March, 1889, on behalf of J. F. Burns, M.P., presented respectively by Messrs. C. J. Roberts and A. J. Gould, and received on the dates mentioned. Mr.
C. Boydell.
25 Mar., 1889.

William Mason called in, sworn, and examined :—

2463. *President.*] What is your profession? Civil engineer.
2464. What is your experience? I have had a long experience in the profession—from the time I was 17 years old. Mr.
W. Mason.
25 Mar., 1889.
2465. Are you in any way connected with the department recently existing under the name of the Casual Labour Board? Yes.
2466. I believe you were appointed at the same time as Mr. Miles? I was.
2467. Have you inspected the work done in the construction of roads and such like by that department? I have inspected portions of them—some of the heaviest portions of them that were in progress at the time we took charge.
2468. Are you enabled to speak as to the works done during the twenty months that the Casual Labour Board has been in existence, in the nature of constructing roads, and such like? No, I cannot speak as to that. I can only speak of the operations I have seen since we took charge—only the works actually in progress. The heaviest parts of the works I examined. The roads in progress at some parts were almost complete.
2469. What is the result of your observation as regards the works that were in progress—as to the character of the works and the manner that they have been carried out? Well, they have not been carried out in a very satisfactory manner, nor in the way that I should have carried them out.
2470. Do you speak with regard to the construction or the originating of them? With regard to the construction only and the laying out of them.
2471. Can you say whether or not the labour that has been spent upon them has been properly directed? Well, I do not think it has. I do not think it has been skilfully directed.
2472. I mean in order to secure a satisfactory and productive return? I do not think so.
2473. Do you know anything of the system of supervision that prevailed under the Casual Labour Board? Yes.
2474. What do you think of that? Do you mean the general supervision of the men on the works?
2475. Yes? Well, in some instances it has been very fair. For instance, in the way that the men have been dealt with, but the works have not been carried out as they ought to have been, because they have had to take men as inspectors or superintendents, as they are called, who were not skilled workmen, and these were supposed to be under the direction of the two professional engineers who were members of the Board. They have had to make overseers—to take these out of the ranks of the unemployed generally. I believe in

Mr.
W. Mason.
25 Mar., 1889.

in some cases they were skilled, and in other cases unskilled men. Under the circumstances, perhaps, they could not have done very well otherwise unless they had got some that were not returned as unemployed. My view of the case is this,—that if they had properly-skilled inspectors and men used to the work, the works probably would have been carried out in a different manner. You could hardly expect men who knew nothing about road-making to make the roads in the same way as engineers or skilled labourers would do.

2476. Can you say anything about the system adopted for supervising or superintending the labour? That seemed very good.

2477. Do you think the organization of the department in regard to the working was satisfactory? Well, so far as the organization of the department goes, there were two engineers and one Chairman, and that ought to have been sufficient to carry out the works properly.

2478. With regard to the subordinate staff,—was that satisfactory? No; I do not think it was. They probably got the best men they could out of the unemployed, but they were inexperienced men, and they have had great difficulties to contend with in training those men to any kind of work.

2479. Did it appear to you that much opportunity was afforded for imposing upon the officers by making up bogus claims or preparing false pay-sheets? I cannot say.

2480. Was any unusual opportunity offered of imposing upon the officers by making up bogus claims or preparing false pay-sheets? Well, not if provision had been made for looking after them properly by those in charge.

2481. Is it your opinion that every precaution was taken to prevent this? That I cannot say. I could not give an opinion upon that, or say what precaution has been taken, because I am not acquainted with their acts from the commencement. So far as I can see I have reasons to suppose that precautions were taken.

2482. Have you discovered or been made aware of any irregularity or improper expenditure of moneys in the construction of works? Oh, no; I know nothing of any improper expenditure. I only know this,—that money has been expended in a way it need not have been, and it might have been better applied under better supervision.

2483. *Mr. Franklin.*] Do you think that the staff of engineers of the late Casual Labour Board was sufficient. I understand that the engineers had dual duties to perform,—should that be taken into consideration? It was not like an engineer having nothing else to do but to attend to the work. They might probably have given more attention had that been so.

2484. But are you aware that these engineers gave little time to the affairs of the Board? I am not aware of that, but in some cases the inspectors appeared to have been left entirely to themselves.

2485. Do you think that that was the proper thing? If the engineers had been unable to give attention, and if I had been in the Chairman's place, I should have made application for some one that could have given the attention that they could not give.

2486. Then, under the circumstances, in the absence of these officers there would be every opportunity for laxity in the field? Yes.

2487. And, of course, much more so from the fact that the officers in the field were not experienced men? Oh, yes.

2488. As a matter of fact, do you really know anything at all about the professional supervision that was given? Nothing.

2489. Nothing previous to your taking charge of the Board? Nothing at all.

2490. You are simply supposing that with a professional staff of two that the supervision ought to have been sufficient, but you do not know whether it was so or not? Yes; I know this much,—that they have not had the assistance that they required from the engineers—they have been left to themselves. I will give you an instance. At Foxground Road they were left entirely to themselves. They were told to find a road between such and such a place, and they did so to the best of their ability. In another instance, the road from Hornsby to Dural, the case was similar. They were going in a direction that I considered very absurd, and I recommended that the work should be stopped, and it was stopped accordingly.

2491. Just now you told the President that you disapproved of the laying out of the work and the money expended upon certain roads—that being the case, do you think that if proper supervision had been there, these causes for complaint would have arisen? Well, no; if proper supervision had been there, I do not suppose anything of the kind would have occurred.

2492. Do you know the Boundary Road at Hornsby? Yes.

2493. Do you know that it has been stated in evidence on several occasions and by a number of persons that to make that road was impracticable? I have heard it said that it was impracticable.

2494. Have you any knowledge of the country beyond where the road has been made? No; I have not. I have been along the road so far as it has been made, and I went a little further to see the description of the country that it was intended to go over. That is all I know about it.

2495. Taking into consideration that portion of the road that is made, would the balance of the road that is to be made be, in your opinion as an engineer, very much worse than what was made? Oh, yes; considerably. It would require very steep gradients, and be very expensive. It intersects very deep gullies, and to cross those gullies, and to make a tolerable road, would be a very costly affair.

2496. If you knew that the inclination was 1 in $4\frac{1}{2}$, would you consider it practicable? No.

Albert Larnach called in, sworn, and examined:—

Mr.
A. Larnach.
25 Mar., 1889.

2497. *President.*] What position did you hold in the Casual Labour Board? I was record clerk in charge of the correspondence, and I adjusted the paid vouchers for the Auditor-General.

2498. When were you appointed? On the 16th May, 1887. I commenced work under the Casual Labour Board shortly after its commencement.

2499. By whom were you appointed? John Davies.

2500. Have you any letter or minute evidencing that appointment? None; I might mention that before that I had been sent up by the Colonial Secretary in charge of the unemployed to the National Park, under Mr. Wise. Mr. Wise knowing that I had been brought up in a bank, and that I knew nothing of clearing bush, recommended that I should have charge of the store, but that I refused. 2501.

Mr.
A. Larnach.
25 Mar., 1889.

2501. Then I understand you had something to do with the unemployed before your appointment by the Casual Labour Board? Yes.
2502. Where? At the National Park and at Gordon.
2503. What were your particular duties before your appointment by the Casual Labour Board? In connection with the unemployed.
2504. Yes? Well, I used to go out and measure their work with Mr. Dallas; I was supposed to be Mr. Dallas' assistant superintendent. I used to go out and measure up the work and see the returns made out.
2505. What salary were you getting then? Ten shillings per day.
2506. What salary did you get under your new appointment? Six shillings. I was told by Mr. Hinchcliffe, the secretary, that I was sure to be made registrar of the Board at a salary of £250 a year, and that was why I went on working.
2507. You said something about being in a bank, what bank was that? Oh, about twenty-three years ago I was manager of the Australian Joint Stock Bank at Deniliquin.
2508. When did you cease banking? About twelve years ago.
2509. Why? Simply because I went to take charge of my father's place.
2510. What bank were you in when you gave up? The Bank of New South Wales.
2511. What position did you hold when you left? I was manager at Roma.
2512. What salary were you getting? £350
2513. Did you resign voluntarily? Yes, I did.
2514. What other bank were you in? The Australian Joint Stock Bank.
2515. Did you resign your office there? I did.
2516. Voluntarily? I did.
2517. How long had you been under Mr. Wise? Only a few months—I suppose about six months.
2518. What were you doing before then? I had been a contractor. I did the extension of Macquarie-street.
2519. What other class of work have you been doing since you have been in the bank? I have been doing anything I possibly could.
2520. You have not been successful in life? Far from it.
2521. How was it you came to give up your position in the bank? Only that I expected to have my father's place, and I might have had it only for some mistake in the will.
2522. What are you doing now? I have charge of the stores at the Casual Labour Board.
2523. What check is kept over these stores? How do you mean?
2524. I mean as regards the checking of what is coming in and going out? The receipts of the stores and the rations I send down at the end of the month with the total amounts—the rations that have been sent from Kidman's to these particular stores.
2525. Where are your stores? At Hurstville.
2526. Have they always been situated there? No; only from the beginning of this year.
2527. Where were you before that? I was the record clerk in charge of the correspondence at 82, Goulburn-street, and before that in Lower Pitt-street.
2528. When did you leave the head office of the Casual Labour Board? The last day I was in the head office was on the 27th December last. On the 28th I went to Campbelltown. I acted as paymaster in several places. They allowed me 6s. extra for expenses on that occasion. As I arrived at the railway station from Campbelltown on the 28th I met Constable Cheney, and he said, "You are wanted at the office to take over some cash. You are wanted to go out again to-morrow." I thought it was an unusual thing for me to have to go away two days running. There was some money at the office to pay the Bankstown men. I locked it up in a safe. I paid the men, and on coming back I found a letter written by Mr. Hinchcliffe, appointing me in charge of the stores in the southern district, and informing me that I was to go out there and present myself first thing on Monday morning. I left the office there and then.
2529. You were originally appointed on the 16th May, 1887? Yes.
2530. Then between the 16th May, 1887, and 27th December, 1888, you were in the head office of the Casual Labour Board? Yes.
2531. What were your particular duties there? I kept the records, had charge of the correspondence, checked any voucher sent in for payment, and very often I used to go out and pay the men; I also had to check vouchers, such as McLean Bros. and Rigg's, or Kidman's—what were called contingent vouchers. They had to come to me, and I checked these also.
2532. Then do I understand that you had nothing to do with the stores until the beginning of this year? That is so, sir.
2533. Had you anything to do with the stores when the unemployed works existed previous to the Casual Labour Board? Nothing. I have had the looking over of the accounts of the stores since I went out there.
2534. Can you give us any evidence as to what became of the plant, stores, and such like that were in existence at the time the Casual Labour Board took office? No, only from hearsay.
2535. I do not want hearsay? Well, I know nothing about that myself. I can say that they were sent out to the National Park, and the superintendent would be the only person who could tell you what became of them.
2536. Who is the superintendent? Mr. Burrowes.
2537. Then you don't know what stores were there? I know that there was a lot of sugar and a lot of crockery there.
2538. How do you know? I know, because it was sent down there.
2539. Do you know the quantity of sugar? I don't know beyond what other people have told me. I know very little about the sugar.
2540. What were your office hours? I was always in the office at a quarter to 9 o'clock, and left at 5 o'clock, and sometimes later.
2541. Did you find yourself constantly occupied with the work that you have detailed to us? I did as much as I could do of it.
2542. Who were your superior officers? John Davies, the Chairman, and Mr. Hinchcliffe, the Secretary of the Board.

Mr.
A. Larnach.
25 Mar., 1889

2543. Anyone else? No, that is all. I used to apply for the £6,000 advances from the Treasury, and I used to adjust the vouchers for that amount.
2544. Did you always adjust the vouchers? Yes. I used to make them up exactly for £6,000, not a penny more and not a penny short; and I made the recapitulation of vouchers out.
2545. You made them all out? Yes, every one of them.
2546. You were responsible for them? I was.
2547. You accept the responsibility? I do.
2548. The last lot that were made up were sent in on the 31st December? I was not there then, but up to that time I had made them out. I was responsible.
2549. There are some forty sets of recapitulation of vouchers, and every one of them is for the exact amount of £6,000? Exactly. I made them out.
2550. Every one of these is for the exact sum of £6,000, and is vouched for the exact amount without anything being left over? Yes.
2551. How did you manage that? Simply this way: I had been asked several times by people in the office how to make up these amounts. I put these vouchers down to the amount, say of £6,700, and when I had the vouchers adjusted up to nearly the £6,000 I looked over for small amounts, £16 or £17, and other like amounts. Of course that could not be done by everyone, but anyone who knows anything at all about banking could pick out the ones required to make exactly the £6,000. I have done that every time, and have come out always clear. I never had any trouble in doing it. I consider it as simple as the ABC.
2552. Had you done similar work before? I never did it until I went there.
2553. Had you any instructions to do it? I was told that the vouchers should come to £6,000. The first time I saw it was the first time the £6,000 was made up. I was then in the office until 10 o'clock at night, picking these out. I always had more than £6,000 in hand—generally £6,700 or £7,000; but after the first time it was as easy as anything. The only thing was to pick this one out and put another one in.
2554. Will you undertake to pick out for me, if I put these vouchers before you—these forty lots of recapitulations of vouchers—a set of paid accounts in each case, making up exactly £6,000? I would.
2555. That is your evidence? That is so.
2556. I will probably ask you to do it before we close our Commission. I will have the vouchers here? Very good, I am prepared. I will do it with the greatest of pleasure. Any schoolboy, I should think, will be able to do it.
2557. Can you give us any information as to the form in which the requisitions were made to the office for the supply of plant—through whom did they come? Well, sometimes they would be addressed to the Chairman; at other times they would be addressed to the Secretary. I have known O'Donnell, Burrowes, and other superintendents come in and leave on my table requisitions. They would say, "Will you kindly see that these are sent out to us?" And then they were handed over to the Chairman for his approval, and he signed the order to M'Lean Bros. and Rigg, and others. If it was for the barrowman who made the barrows, the same course was adopted, and if it was Mr. Horsey, who used to sell grain and fodder for horses, it would be sent to him. Then there were the coal merchants. We sometimes got coal and wood. The orders were always sent for these things.
2558. Did they, in all cases, go before the Chairman? All that ever I have seen. I never sent one on my own account.
2559. Are you aware of any orders being sent out without the Chairman's authority, or the authority of some member of the Board? No; never.
2560. Then tell me what the process was by which these orders were carried out. Take for example the ordinary case of an order for goods (say) from M'Lean Bros. and Rigg? Shortly after the goods were sent out we used to get an account for a particular order. It was on a contingent voucher form that the account was conveyed. We used to take 2½ per cent. off M'Lean Bros. and Rigg's accounts. The Chairman used to put them in a pigeon-hole until they were paid. The accounts for Hurstville, Liverpool, Campbelltown, Narrabeen, and Hornsby were all pinned together, and generally added up on the first voucher. Seven, eight, or nine vouchers were added up, and the total put on the first voucher; and that was the amount put on the cheque.
2561. What knowledge had you that the goods were supplied? They were all sent out to the overseers with the vouchers. Those that were sent to Narrabeen, Mr. Oxley signed for as correct. Those that went to Hurstville, Mr. Burrowes signed for as correct, and so on with the different superintendents.
2562. Were these contingent vouchers sent out to the superintendents before they were passed in the office? Oh, yes. I have seen one or two cases where they were not sent to the superintendents, and they were handed to the superintendent in the office. He demurred to signing them, and he was told that they were initialled by Mr. Hibble. The Chairman said they were correct, and the superintendent signed them without them going out to his camp. That was done one time, I remember.
2563. Give me the particulars of that? Well, there were six contingent vouchers that came, I think, in November last to the Casual Labour Board office in Goulburn-street, from M'Lean Bros. and Rigg. They were all on Hurstville. Mr. Burrowes, the superintendent, came in. John Davies said, "Hibble, you had better get those vouchers for Burrowes to sign"; and they were brought out by Hibble, and Burrowes said, "They had better be sent out to the storekeeper." But Mr. Davies said, "They are initialled by Hibble, and are all right." Afterwards we discovered that they were not all right.
2564. Who was the storekeeper? Springall.
2565. Who discovered that they were not right;—now keep to your own knowledge? Just before the Melbourne Exhibition in August, a contingent voucher came in from M'Lean Bros. and Rigg to the office for a hamper-basket. I would not be certain whether it was for £6 10s. or £3 10s. I showed it to the Secretary, and said, "What is the meaning of this? We have had no hamper-basket." He said, "I suppose the Chairman had it, and took it to Melbourne to the Exhibition." I threw it on one side. When I saw the six vouchers that were presented to Mr. Burrowes to sign, I observed one was for £6 10s., and another for £3 10s. I said to Hibble, "What is the meaning of these vouchers?" He said, "I have got the hamper-basket changed for twenty-four long-handle shovels and eight napping-hammers, which came to £6 10s." There was another contingent voucher, which came in with so many coils of rope, £3 10s. There were three or four other vouchers. There were one or two of these had been changed from

Mr.
A. Larnach.
25 Mar., 1889.

from a hamper-basket to these things that were required at Hurstville. The things had never been to Hurstville—Burrowes was annoyed at having signed them. "Well," he said, "The Chairman told me they were all right, and I cannot be blamed for doing it."

2566. Who was it you said had got these vouchers changed? Hibble.

2567. Who was he? He was a clerk in the office. Latterly he has been doing the work that I had been doing. He used to go to M'Lean Bros. and Rigg. I do not know why Mr. Davies always sent him to do it. I used to do it originally.

2568. Was he subordinate to you? No; he was just the same, only he happened to be down with the registrar down-stairs. I was up-stairs in the Board-room.

2569. What became of the voucher for the hamper? I cannot tell you; Hibble would know.

2570. Did you see it? I saw it.

2571. In the usual Government printed form? I did.

2572. Was it a form like that? Yes; that is the same, exactly the same.

2573. That is what you are calling a contingent voucher? Yes.

2574. In the regular form? Yes.

2575. And it was dated 31st August? Yes.

2576. Was it signed by anybody else? No; it would not be signed by anybody else, because it was for the office. It was made away with, and this one was put in its place.

2577. How do you know it was not for a private hamper of Mr. Davies'? Because it was addressed, Casual Labour Board.

2578. Do you recollect the amount? I believe it was £6 10s.; but some one said it was £3 10s., and that was the price of six dozen long-handle shovels and eight napping hammers.

2579. You told us that you used to receive these accounts, and take off 2½ per cent.? Yes.

2580. Who told you to do it? I understood that it was some arrangement with the Government. I was instructed to do it in the office. Of course I know the Government got the benefit of that, because I know the cheques used to go for the amount, less 2½ per cent.

2581. Do you recollect who it was that told you that was the arrangement? Yes; Hinchcliffe, the secretary.

2582. Was there a similar arrangement with any of the other trades people? Not that I am aware of.

2583. Who calculated the discount? I used to do it. I was told to do it. I had a sort of little table, and could tell exactly what were the amounts to deduct.

2584. Who are the officers that were responsible for these goods—the supplies and so forth that were ordered from time to time. Who were responsible for them after they were supplied; you say they were sent out to the different works? Those that were sent to Hurstville, Mr. Springall would be responsible for.

2585. Where is Mr. Springall now? He has built a hotel down at Coronulla Beach. He was the chief storekeeper at Hurstville. Everything that was sent to the Southern District he should see delivered properly to the different places.

2586. And who in the other districts? Some one of the name of Neads, at Narrabeen, and Little, at Hornsby.

2587. Did those gentlemen initial the vouchers that came in? They initialled the vouchers before the superintendent signed them, except the particular ones that were signed in our office.

2588. Did you ever pay any accounts for the Board other than for wages? No; they never gave me any. Mr. Davies used to pay the accounts of Mr. Kidman, Mr. Graham, the seedsman, and M'Lean Bros. and Rigg.

2589. Were you entrusted with any moneys? Yes. I have had to pay £800 at Berowra, Hornsby, and Ryde.

2590. Has anyone been with you? Yes; and I have been by myself at one time to make the Payments, for which I received the amount of 6s.

2591. What vouchers did you bring back for them? The pay-sheets at Hornsby, the pay-sheets at Ryde, and the pay-sheets at Berowra. These were handed to the Paymaster, Mr. Hinchcliffe, and they were duly witnessed by some one up there, and written across them "paid" by A. Larnach. Three signatures were attached to every one of them.

2592. How did you do in the case of absentees? Of course, if there was no payment made there was no signature. On one occasion I had to go to Hornsby, and I had to take gold to pay the men with. There were two sovereigns found on the table, which I brought back and handed to Mr. Hinchcliffe. I could not tell how they got there, and I told Mr. Hinchcliffe to put them in the Paymaster's surplus cash. That was on the 22nd December. I do not know whether he did or did not do so.

2593. Did you see after the payment of these moneys yourself? I paid them myself to each man.

2594. Did you know the men? The superintendent stood by and identified every man.

2595. Were you ever under Mr. Burrowes? Never.

2596. Have you had much to do with him? No; except that I have seen all his pay-sheets after they came in.

2597. Have you had many conversations together? Very few.

2598. When did you see him last? This morning.

2599. Before that when did you see him? Last Friday.

2600. And before that? Well, I think he was at the office.

2601. Where is the office? My office is at Hurstville.

2602. Have you seen him pretty frequently lately? Oh, yes.

2603. Have you discussed with him at all the inquiry now being made? No.

2604. Have you talked over with him in any way the evidence that you or he might give? No; never.

2605. Are you quite clear on this? Quite certain.

2606. With reference to this voucher for the hamper, where did the conversation you speak of take place? In our office in Goulburn-street. I told Burrowes that he was a fool to sign vouchers without seeing that they were correct.

2607. Did you see it being done? I saw it done.

2608. Were you in the office at the time? I was.

2609. Did you remonstrate? I happened to be sitting with my back to them at the time. I knew he was signing the vouchers. Davies told him that they were all right. Afterwards I said to him, "You are just

Mr.
A. Larnach.
25 Mar., 1889.

as bad as the others." He said, "I do not care; Davies told me that they were quite correct; he is my superior officer; I did not know that there was anything wrong in them." Hibble laughed, and said, "That's the hamper-basket."

2610. Was it your duty to check the vouchers of M'Lean Bros. and Rigg? It was at first, but Mr. Davies, for some reason or other, used to put them into Hibble's hands.

2611. Up to what time did you examine them? Oh, about the first twelve months I was in the office. After that they were all handed over to Mr. Hibble. I never could tell why or for what reason.

2612. Was it a regular practice of Mr. Davies to pay these accounts himself? Ever since he has been there he has always paid them. The Secretary mentioned to me one day that it was too bad of John to go and pay these accounts always himself and never give us any show of the good things for ourselves.

2613. What other accounts did he pay? Those of Mr. Kidman.

2614. Which Mr. Kidman was that? Mr. James Kidman.

2615. Was it only in the case of M'Lean Brothers and Rigg that the 2½ per cent. was taken off? That is all.

2616. Were these vouchers always signed or initialled by the Chairman? Yes; he signed them all as the principal man—John Davies.

2617. Did you see anything of them after they were paid? Oh, yes. After they were paid they were handed to me; and then I made up this wonderful adjustment for £6,000.

2618. Who told you that it was necessary to make this wonderful adjustment? I think Hinchcliffe told me, because he thought I could not do it. Of course I could not have done it unless I had always vouchers for £700 or £800 more than the £6,000, and sometimes we had £700 or £800, or even £1,500 worth of vouchers on hand, and we would pull them out and fit them in. Someone said to me it was a difficult thing, but I told him it was easy enough.

2619. According to the practice of the office, was it usual for requisitions for goods, plant, and supplies to pass through your hands in the same way? Not through my hands. Whoever had the order-book used to order them.

2620. Who had the order-book? Mr. Hibble had the order-book of late. I have not sent an order to M'Lean Bros and Rigg for some eighteen months. I had plenty to do in checking the returns.

2621. Do you know whether all the orders that were sent out were in writing—were there any verbal orders? They had no right to be verbal orders. I have seen papers come in for goods with no butt in the order-book for them.

2622. Was that the practice in the office? No; it was not. Why it was done I cannot understand. I have seen contingent vouchers there for powder when there was any amount of powder on hand. I do not know what they wanted such a quantity of powder for.

2623. Are you aware whether the other members of the Board attended at the office at all? Sometimes they did, but I always considered that the Chairman took everything upon himself. Sometimes he asked their advice.

2624. Frequently or otherwise? If they were there he asked them out of courtesy; if they were not there he did everything on his own account.

2625. How many rooms had you in the office in Goulburn-street? The room up stairs—the Board-room I called it—and two rooms down-stairs.

2626. Did you sit in the same room as Mr. Davies? Yes.

2627. Had you an opportunity of seeing the other members of the Board whenever they came? I did; and, unless there was something of special importance, I remained in the room. When there was anything special I went down-stairs of my own account.

2628. Do you know anything about supplies of rations and so forth—did they come within your province? I have looked at the rations several times; that is, the amount which we have had to pay at the beginning of each month. I have brought it before the Chairman's notice several times, seeing that he had answered questions in the House to the effect that they had only 710 men on the works, and that there were over £2,000 worth of rations. There were only 710 men that were supplied with these, and these 710 rations could not be possibly more than £1,100 or £1,200. I pointed that out again and again.

2629. What I want to know is, did the ordering and receiving of rations come within the scope of your duties? I used to get a return every month, and I saw that they agreed, and that the issues and receipts were within a few rations of each other, and we could only have a few on hand. I also noticed that those that were received were a great many more than were used by the men who were said to have been on the work.

2630. I will ask you to look at this paper, purporting to be signed by Mr. Springall—an abstract of rations for the month of July, National Park Relief Works? Yes.

2631. You see that on the first day it states the rations ordered were 6,200, the rations received were 3,100, and the rations issued were 3,000. What is the meaning of that? If that is a return that has been sent in to our office the explanation would be that the 1st July would be on a Friday, when 6,200 rations would arrive. The rations would arrive on the Saturday, and that would be 3,100 for the Saturday's issue and 3,100 for the Sunday's issue. On Fridays double rations were always ordered.

2632. Take the next item;—it states rations received, 6,200; rations issued, 5,470? Well, of course they have not issued quite the amount of the rations that they received; perhaps some of the men may have fallen off, but that seems pretty fair.

2633. Have you any books or papers in connection with the store at Hurstville? No. Mr. Springall and John Davies took possession of all the books and papers, and brought them to town. I got some valuable information from some of the books, and it was through their being examined that I became suspicious.

2634. How do you know that Mr. John Davies took them? Because when he was out there Springall took them away with him by his directions.

2635. When was this? When I went out in the beginning of the year. Springall said it would be just as well that I should not have the books in the office to overhaul.

2636. What books are these? There is one of them, the letter-book, with all the returns for pay-sheets copied into it. It is a book that will be of great service. You will be able to see some discrepancies in it when you see it. It shows the vouchers and the amounts that have been paid.

2637. Any other books? Yes; there is a book called the ration-book, showing the different rations issued at the different camps. I got hold of it, and took some extracts from it.

2638. Anything else? These are the only books that I know of that I wanted.

2638½. You say that Mr. John Davies went and got them himself? Oh, no; I said he gave instructions to Springall to bring them. Springall told me.

2639.

Mr.
A. Larnach.
25 Mar., 1889.

2639. What length of experience had you in the banks that you were telling me of? About twelve years.
2640. Do you know anything of the working of a large department? I do.
2641. Now, Mr. Larnach, are you aware of any irregularity having at any time occurred in the office, or any improper expenditure having been certified to, or any laxity in checking the accounts, other than the particular cases that you have referred to? I know this,—that the books of the Casual Labour Board were never kept properly.
2642. Is that your answer to the question? Yes. I say that they have never been balanced properly.
2643. Have you any knowledge of any practice or action during the time of your employment with the Board that would lead you to suppose that there had been any misappropriation of money? I always knew that there was £1,000, or nearly that amount, being used in some way or other.
2644. What gave rise to that belief? I said before that I adjusted all the paid vouchers under the Casual Labour Board. I made them up again and again, and had all the vouchers from the Secretary, and there was £1,000, or nearly that amount, short. And when I left at the end of the year to go up to Campbelltown, and came back on the 28th, and was sent to another place, I asked Hibble if they had balanced the books for the end of the year, and he said they had got a voucher for £250, but there was some £800 or £900 more. He had got some contingent vouchers from the Secretary, but nearly £800 was still short. I might mention that in October last the Secretary got a month's leave of absence and went to Melbourne, and he drew two months' salary at the end of that month. It was at the time that he was away for a month that I discovered that he was nearly £1,000 short. He returned at the beginning of December, and the cheque-book was kept out of my hands for some reason or other. I looked at the cheque-book the first chance I got, and I found that there was a cheque for £100 drawn on the 31st. I imagine that was to meet bills of his.
2645. Do you say that you are aware, of your own knowledge, that they were frequently short in their cash? Yes; I have been short in that way—nearly £1,000 of vouchers short; and they could not have any cash in hand. Another thing, they had no right to have £1,000 cash in hand.
2646. Who was the Secretary? Thomas Hinchcliffe.
2647. If it has been stated by him that he never was short in his cash, is that correct? I would say that it is not correct. Nothing could be greater proof than this: Mr. Josephson, who was paid every time by cheque, was paid in gold on one occasion, and Hinchcliffe borrowed money to my certain knowledge to make up his deficiency.
2648. How do you know that—speak from your own knowledge, and recollect that while in giving your evidence you have the same protection you are subject to the same liabilities as if you were giving evidence before a Judge. Recollect also that you have already said some things very damaging to the reputation and credit of certain people, and consider well before you make any statements, because they may lead you into trouble if incorrect. I ask you now are you aware of your own knowledge that Mr. Hinchcliffe was at any time short in his cash? Yes. I have heard him say that he had not money in the cash-box to pay certain things, and at that time he should have had, by my showing in my books, £700 or £800.
2649. Are you aware of any misappropriation of plant or stores? No; only from hearsay.
2650. Had you ever any difference with any of the officers of the Board? No.
2651. Have you never quarrelled with anyone? No.
2652. Was any complaint ever made on account of the way in which you performed your duties? No; never any single thing—in fact, I was offered this change as a sort of promotion. He thought he was doing me a great favour.
2653. You were in the employ of the Board at the head office at the time? Yes. He offered me this as promotion. I thought it was to get rid of me.
2654. What reason had he for that—were you so particular in your duties? Well, Mr. Houson made a remark one day. He said, "I am afraid you know too much, Larnach. You have got everything at the tip of your fingers."
2655. Have you any feeling against Mr. Davies? None whatever.
2656. He has never done you any wrong? No; not a bit of wrong—in fact, he was so well disposed towards me that he made me a present of a new hat, and I discovered afterwards that it was charged to the Government as gratuities to officials.
2657. How did you discover that? Mr. Hibble told me. He told me how these contingent vouchers were made up.
2658. Where is Mr. Hibble now? He is in the office there with Mr. Mason.
2659. Can you tell me how those vouchers were made up? I can tell you every item in them—cab-hire, and that kind of thing.
2660. Do you know of those vouchers for cab-hire? I know Hinchcliffe had six contingent vouchers made up for balancing the cash at the end of the half-year.
2661. Do you mean to say that there were six bogus vouchers made up? I mean that there was a good deal owing, and that he was drawing £29 per month from the Government. He got £17 out one pay in November, and this was made up with vouchers. There was cab-hire, 35s., although we had a cab of our own. This consisted of sums of 2s. 6d., 6s., 3s., 3s. 6d., amounting to 35s. There were amounts of 18s. 6d., 12s. 6d., 18s. There were all expenses, breakfasts, dinners, at each of six places that he went to pay the men, and for paying at each of these places he got an allowance of 10s. That was only one voucher.
2662. You saw this? I saw it. There were six vouchers to my certain knowledge made out, and they amounted to £100, and that assisted him in making up his cash. I think there was 18s. for tram-tickets, and they all went in at the end of the month.
2663. When did these difficulties occur? At the end of the month. It was only when the Committee was sitting at the Legislative Assembly that they began to get frightened. John Davies came down one day, and said, "The idea of them saying that the books have not been audited. Some one came down from the Treasury." Hibble looked at me, and I looked at him, and Hibble laughed. We knew well enough that the books had never been written up until the last few days of the year. Hibble took them home to his own house night after night.
2664. Who was Hibble? Well, Hibble was supposed to have charge of the books—in fact, that was how he was brought up-stairs. Mr. Davies said to me, "Larnach, you do not mind my bringing Hibble up? I do not want to get rid of him, and there is not enough for him to do down-stairs."

- Mr. A. Larnach.
25 Mar., 1889.
2665. Had Mr. Hinchcliffe nothing to do with the books? He never touched them. He left them all to Hibble to do. He never did anything. He used to make out the adjustment of vouchers, and then I did that.
2666. Then according to your opinion Mr. Hinchcliffe's was a useless office? I do think so. I do not think he was worth his salt. He used to come there at all hours of the day. The way I was paid, and the way others were paid who did work, compared with the amount he received, was shameful.
2667. Can you give us any evidence as to the sources from which money could be obtained other than the Treasury—for example, from the sale of firewood, and so forth? Yes, I can. I myself gave John Davies on the 15th December, 1887, £6 10s. for firewood that had been sold at Carlingford. After I had done so I thought I had made a mistake, as he never offered to give me a receipt. I felt rather queer about it, as Mr. Hinchcliffe had told me once or twice to pay the moneys to Mr. Davies. I was determined to get an acknowledgment from him that he had received the money, so I asked Hinchcliffe if he would ask me when Mr. Davies came in if I had received certain moneys from Carlingford? Hinchcliffe did so. Davies said, "He handed them to me. I have them."
2668. I suppose he would pay the amount into the bank? I do not know what he did with it. I also know he received moneys for firewood and charcoal that came from the National Park. These are items that Mr. Burrowes would know more about than I would.
2669. Do you know of any other payments that were made to Mr. Davies? No.
2670. Was it not possible that the money that you gave to him was paid into the bank with some other money? It might have been; I could not say what was done with it. I have got an entry here of the transaction.
2671. What is that you are looking at? It is a law almanac upon which I made an entry at the time—on the very day I paid it. It is dated 15th December.
2672. Are you aware of any other payments having been made to Mr. Davies by any other clerks? No; I cannot tell you anything about any other.
2673. The cash-book shows payments, or rather receipts, amounting to £334 16s. 3d., purporting to have been the proceeds of sales and so forth, which Mr. Davies paid into the bank;—could you give us any evidence as to how that was made out? No. I think it was for firewood. But by a rough memo. that I have got there should be about £500 for firewood paid in. Mr. Burrowes will explain that.
2674. What rough memo. is that? Some of these weigh-bills I took down.
2675. When did you do it? Oh, a long time ago. I have it in lead pencil. When I went up to Hurstville there were some weigh-bills there. I stuck them down and valued them. That is exactly what was sent down, and I entered it at a low value. I know it is only half of what was sent down during the whole period.
2676. Was it chiefly firewood? Yes, and charcoal.
2677. Have you any idea what became of these different consignments? They were sent down to Neale & Company, and Wearne—Wearne, the Government contractor. I think the charcoal was sent to him, and the firewood to the other.
2678. Am I to understand that you cannot tell us how this £334 16s. 3d. is made up? No. I suppose it was for firewood. There was some that Mr. Davies was paid for at Hornsby and at Carlingford.
2679. Who will give us evidence about that? O'Donnell.
2680. Do you know of any other firewood? Only those supplied to Wearne and Neale.
2681. Where ought we to find an account of the sales? John Davies ought to find that. He took delivery at the railway-station, and he used to have the cheque sent to John Davies. Neale would sell the stuff.
2682. Who ought to have an account of the sales? Neale would have that. Mr. Burrowes was the superintendent; he sent all the wood down. I know that Mr. Davies received more than is represented by the amount you have stated.
2683. I have a letter of the 16th August, 1887, from the station-master at Darling Harbour to the Chairman of the Casual Labour Board, stating that there are consigned to him thirty-five bags of charcoal;—would that be the charcoal you speak of? That would be the charcoal. He wrote to Mr. Wearne to take possession of and send the money to the Board.
2684. Did he send the money? If the money came I never saw it.
2685. Then we should find in the letter-book of the department a letter written by Mr. Davies to take possession? Yes.
2686. *Mr. Franklin.*] Were you responsible for keeping records in the office of all sorts of accounts? Yes, and the letters that came, and I entered them in the register—those that became records.
2687. In a comparatively small establishment you would know pretty nearly everything that was done? Yes; I knew nearly everything.
2688. Did you keep a record of the requisitions that came in for stores? At first I did, and then they were handed to Mr. Hibble. At the time I kept the record I entered the requisition in the order-book.
2689. And on these requisitions there were instructions for action to be taken—given by whom? By John Davies.
2690. He signed these requisitions? Yes.
2691. And the substance of these requisitions was entered in the Government order-book? Yes.
2692. These orders would be for tools, powder, and stores on the general works? Yes.
2693. They made out the orders upon these requisitions upon the different storekeepers? Yes.
2694. Did you make yourself acquainted afterwards with the fact that these orders had been supplied? Yes.
2695. Accounts were sent by M'Lean Bros. and Rigg for the supplies, and then they were forwarded to these particular camps to be initialled as having been received correctly, and then these receipts were sent back to the office? Yes.
2696. And then, of course, you might see from the butts of the order-book that the orders had been supplied? We did not trouble about the butts.
2697. Oh, you never bothered about the butts at all? No.
2698. If a voucher came back, and you saw that it agreed with the butt, and it was initialled by the party receiving the supplies, you did not put the same mark upon the butt? No.

2699. Don't you think it was a necessary check? It might have been a good idea if we had had a proper person at the head of the department—if we had had a man who understood his position the thing could have been properly arranged.
2700. You have had experience in a banking institution—have had a banking education—and you knew how important it was to check the smallest expenditure in a bank, and how careful the records ought to be kept, and you do not think it was necessary to initial the butts to satisfy yourself that they checked with the voucher? No; I initialled the voucher, and the voucher having my initials to it showed that it agreed exactly with the butt. That was sufficient.
2701. After what you saw when Mr. Burrowes happened to be in the Board-room signing the vouchers, do you think that that check was sufficient? No doubt if I were head of the department and had everything going on over again I would alter a good many things.
2702. Would you not, for your own credit's sake—having regard to your long experience and the responsibility of the position—would you not have suggested many other systems of check? Oh, there never was an error in any order that ever I sent out.
2703. Don't you think that an error was likely to occur? I have checked them all—initialled vouchers—and know that they are right.
2704. And you don't think it possible that during the time that you had charge that there could be any difference between the original order and the amount passed by the Superintendent? No, not during all the time I had charge.
2705. During all that time was Mr. Springall the storekeeper? Yes.
2706. Although you are satisfied that the orders given for the stores were correct, you had no check? I had no check.
2707. At the time that you were responsible for the payment of the men at the several camps that you mentioned, have you ever found that there were absentees—that the men could not be found to take up their money? Never.
2708. What would be the number of men you would pay? About 300.
2709. What would be the average payment? I suppose about £3 per week per man. O'Donnell gave the order; he supplied it to John Davies for so much contained in voucher so-and-so, and then he would have the signature at the back, and sign his name. That would be sufficient identification—seeing the signature on the back of the pay-slip.
2710. Would that be satisfactory to the Auditor-General? Well, we would witness it then. I could witness it with the greatest safety.
2711. You state that Mr. Springall is no longer storekeeper? No.
2712. Where is he now? He has an hotel at Coronulla Beach.
2713. What was the rate of his wages or salary? £3 per week.
2714. Do you know how he was employed before he entered upon these duties? He had been on board the "Tomki"—chief officer, or something of that kind.
2715. Do you think he was very much reduced before he would be induced to take a position at £3 per week? He was. He was in very poor circumstances indeed when he joined the unemployed.
2716. He must have been a very industrious, steady man to have saved in twenty months a sufficient amount to enable him to build an hotel and go into business? He must have been a very steady, saving man.
2717. This business that he has entered into is the result of his savings? Yes.
2718. You have never found any difficulty with regard to the stores? No; I do not know of any difficulty.
2719. You do not know that more rations were used than were actually required? I got hold of an order at one time showing that he got the rations of a hundred men down there.
2720. But you would know the number of men absolutely on the works—on the different works? No; not at all times.
2721. Would it not have been easy for you to have a record showing that the rations ordered agreed with the number of men on the works? I told Mr. Davies, on several occasions, that there were more rations consumed than there were men on the works.
2722. Then you got a periodical return from Springall showing that there was an accumulation of rations? No; they used to balance them somehow.
2723. Will this Commission be able to see exactly the daily return of men on the different works and the daily rations? Yes; exactly.
2724. And will they find that the number of rations will balance with the number of men daily at work? I think that sometimes the men were fewer than the rations.
2725. Do I understand that we shall be able to find a record that will balance with the number of men at each camp with the issue of rations by Mr. Kidman? Yes; that ought to be shown on Mr. Springall's books and papers.
2726. You say that it did not give you very much trouble to bring your vouchers to £6,000? I say it is as easy as doing a common addition sum.
2727. Do you think that there was an absolute necessity for doing that? I was told that Mr. Geoffrey Eagar wanted £6,000 to be paid into the Auditor-General.
2728. But why did you not, with your knowledge as a banker, tell them that there was no necessity for that? They would have told me that although I knew something about a bank I knew nothing about Government work. I believed it was thoroughly correct to make up the vouchers to amount to £6,000.
2729. You did not know that it was your duty, as it was a current account, to render as nearly as you could the acquittances? No, I did not.
2730. Do you think, from your knowledge of banking, that the system of expenditure and the general accounts were perfect? No, I do not.
2731. Or that the records in connection with the stores were properly kept? I think they might have been improved.
2732. You say that in joining under the Board, after your former services in connection with the unemployed, you were put on at a reduced rate? Yes.
2733. You were rather aggrieved at that? No. I was very hard up. I had been struck off by Mr. Deering, and I thought I was done for and would get nothing at all, and I had my wife and family depending upon me.
2734. You were reinstated by Mr. Davies? Yes.

Mr.
A. Larnach.
25 Mar., 1889.

Mr.
A. Larnach.
25 Mar., 1889.

2735. Did Mr. Davies take any opportunity he could of improving your position? No; but Mr. Davies and I never had any words. I never felt in any way aggrieved, but I always thought I was entitled to a better position than I was in.

2736. *Mr. Waller.*] As regards this abstract of rations, I do not quite understand it now. I see on Thursday, 28th July, the rations ordered were 2,250; rations received, 2,340; rations issued, 2,627? The rations received would be the rations ordered on the day before that, on the Wednesday. Those issued would be merely those issued that day.

2737. My difficulty is that you issue more rations than you got? Those received would be issued the next day.

2738. I will take another case. On Monday the 4th there were 2,250 rations ordered, 3,100 rations received, and 2,716 issued. How did you receive more than you ordered? Because the 3,100 were ordered on the Saturday. If you can understand, the rations that would be ordered on the Saturday would be received on the Monday.

2739. That does not explain; if they were ordered on Saturday, you need not receive more than you ordered. How did you get your appointment in the Casual Labour Board at all? I saw Mr. Walker, and was appointed by him under the late Board.

2740. Was that your first experience? No; first of all I got an appointment in connection with the unemployed under Mr. Wise. From that, when Mr. Dibbs was Colonial Secretary, I was appointed superintendent at the National Park.

2741. And then you passed from Mr. Wise to Mr. Deering, and from Mr. Deering to the Casual Labour Board? Yes.

2742. Was your first appointment in writing, or was it verbal? There was a memo. sent up to Mr. Wise, signed by the Principal Under Secretary and initialled by the Colonial Secretary.

2743. I understand that your evidence to-day was, and I would like you to give it again, that you had something to do with the accounts—the checking of paid accounts? No; I did not say checking paid accounts; I said adjusting paid accounts for the Auditor-General.

2744. What do you mean by adjusting them? Placing them in batches of £6,000.

2745. How many accounts would you require to have in your possession—I am not speaking of their value, but of their number—in order to do the shuffling to bring them out £6,000? Well, as nearly as I can guess, there would be sixty-nine or seventy. I had generally a piece of foolscap, and made the calculations in two columns. There would be about seventy.

2746. Having become such an adept at manipulating accounts as to bring out the £6,000 exactly, you must have got to the stage of knowing that with a certain table of facts certain results would follow? No; I used to take a batch of vouchers out of a pigeon-hole, and I would see that I had very nearly £6,000. I would put a lot more down and a lot more, until I had about £6,700. Then I would see what had got to be left out; that would leave exactly £6,000.

2747. Did your banking experience ever teach you such things as these? No.

2748. Would it be considered a proper principle to work an account upon? No.

2749. If you were asked by a bank to make a return, would the bank be satisfied if you were keeping up certain tables of returns by putting in certain other returns—would the bank be satisfied if you shuffled the accounts about—bringing some in and leaving some out? If a bank had £6,000 to pay away, I could shuffle so that we could pay so many thousands in one lot and so many in another. There would be no objection to making up the £6,000 in that way.

2750. Did it ever strike you that if it was an absolute necessity that there should be £6,000, neither more nor less, a more straightforward and simple manner of business would have been to deduct from the last voucher the amount which was necessary to make it £6,000, and to put the balance of the voucher in your next account, endorsed as part of voucher so-and-so? It might have been so, but I was acting under the instructions of Mr. Hinchcliffe. David Houison told me the same thing. He asked me if I had much trouble in making up the exact amount of the advances, and I replied that it was easy enough now.

2751. How many vouchers would you have over after sending in payments for £6,000? I have seen in some cases only seven. I have even gone so far as to ask the Secretary if he had got any of the vouchers paid with petty cash that did not require checking. If you got any of those small ones when the amount was nearly balanced you could always make up the money.

2752. These vouchers that were left out, were they paid in the next account? Well, I stuck these first into the next account, but I have seen them crushed out again.

2753. Those petty accounts that you adjusted, had you any previous knowledge of their correctness before you used them for adjustment? None, except that they were signed by the Secretary and signed by John Davies as Chairman.

2754. Did you use many of them? No; I did not use many of them, but I have seen a good many of them. I was nothing there except a supernumerary clerk, and I was there to do as I was told.

2755. You told us that you were in the Board-room, and of necessity saw everything that was going on;—would you of necessity also have known all about the accounts passing in? No; for instance, I used to be away sometimes at Campbelltown, and therefore vouchers would come in that I would not know about.

2756. Can we take it for granted that when you were in the office you had every opportunity of seeing documents? Yes.

2757. Were you much in the office? I was always in the office except when I was away at Campbelltown or some other place paying. I have been away twice a week—twice in one week.

2758. How did persons other than labourers receive the money which was due to them? Those who were at Campbelltown, such as the blacksmith who had been mending the tools, would have their accounts sent down and signed by the superintendent as being correct. After that, when I went to pay, I would take the man's money up to him.

2759. You, personally? Yes, I, personally.

2760. And it would be paid before whom? The overseer, who would be a witness.

2761. How would accounts due to such people as M'Lean Bros. and Rigg be paid? They would be paid by cheque.

2762. Were there other firms paid that way? Yes; Graham, the seedsman, and Kidman, the grocer.

2763. Any others? No; I do not remember any others.

2764.

Mr.
A. Larnach.
25 Mar., 1889.

2764. Did M'Lean Bros. and Rigg deliver the goods under a regular contract? Yes; with 2½ per cent. taken off; we always looked for that.

2765. Was that done all through? All that ever I saw. I had a list there.

2766. I want to know something about these accounts; did M'Lean Bros. and Rigg, and Kidman, and Graham, the seedsman, send in their invoices to the office for goods ordered? M'Lean Bros. and Rigg, except on a few occasions, sent in contingent vouchers with the orders attached, and the contingent voucher agreed with the items mentioned in the order.

2767. That is the order which emanated from the Board in the first instance? Yes, except on a few occasions. On looking over there vouchers I discovered that there were no orders attached to them at all.

2768. Can you name these occasions? Well, I picked the vouchers out and gave them to Mr. Miles.

2769. So, then, what you call contingent vouchers were the first documents that came from M'Lean Bros. and Rigg, backed up by the original order? Yes.

2770. Where did they go to? They were generally rolled up in a big envelope, and addressed to the Chairman.

2771. Direct to the Chairman? Yes.

2772. Did they come immediately after the order was sent? No; they did not; they came at the end of the month.

2773. Might that be a considerable time after the order? It might be a month after the order.

2774. Or it might have been the last order—only a day previously? Yes; it might have been the last day in the month.

2775. Where did these goods from M'Lean Bros. and Rigg go to? They might have been sent to Redfern or to Manly by boat, as the case might be, according to the places they were intended for.

2776. What was their contract of delivery for? There was no contract of delivery. They were merely to send to the railway-station.

2777. What about Kidman's rations? At first they were delivered at the different railway-stations, and we carted them to the camps, but now I make out slips, showing where they are to deliver them.

2778. Where is the contract to deliver them to—is the contractor to deliver them at the different camps? When Mr. Kidman undertook the contract there was only one large store, and he was to deliver the supplies there.

2779. Do you think, if your idea was correct, that Kidman would refuse now to deviate from his original plan of going to the trouble and expense of delivering at the different camps? Oh, no. I fancy Mr. Davies and he may have made some arrangement, but it had nothing to do with any of us.

2780. I am asking whether Kidman, if his contract were not to deliver the goods at the different camps, would be likely to agree with the present Board to deliver the things at the camp? He does not dispute it. He says he delivered them where he was ordered to.

2781. Then, as a matter of fact, the Casual Labour Board were paying railway freights where there was no necessity for their being paid? No; Kidman delivered by rail; it was only cartage that we paid for; we never paid any railway rates.

2782. That might easily be; one Government department would not charge another one with rates, but the carriage would be entered all the same. If Kidman had delivered the goods, in accordance with the contract, at the different camps, would not the Government have been saved a loss that they now sustain by having these goods carried on the railway? Of course if they have been paying railway fare, but I have seen nothing of that. I do not know what the custom is as regards the carriage of goods for delivery in connection with a Government Department.

2783. Has there been any account from the Railway on account of rations delivered by Kidman? Yes; but there have been accounts sent on to the Board for goods delivered by M'Lean Bros. and Rigg.

2784. As regards Kidman's accounts for rations, were they sent to the Board? Yes; and they were then sent to the National Park and to Narrabeen, where they were signed by the superintendents in both places and returned to the Board.

2785. Did Mr. Kidman attach to his vouchers the orders for the rations that he received? No; he did not.

2786. Never? No never.

2787. How then did you check the vouchers? I have a sheet of foolscap with Monday, Tuesday, Wednesday, Thursday—every day in the week entered in it and headed Illawarra Road, Waterfall, Bulgo Camp, Bell's Camp, &c., as the case may be, on each particular day, and the total agrees with the total of Kidman's vouchers; then I have had them all made out and the total shown.

2788. Kidman's vouchers would be for how many days' rations? For all the days in the month except the last day.

2789. Each account would contain rations for the month? Yes.

2790. Who orders the rations? I do; each camp sends a card to me. The order would be seventy-one rations required for Thursday, and they would be sent.

2791. Do the overseers send detailed statements of the rations required? Yes; they generally send down a slip of paper for the rations to be ordered for the next day.

2792. How do they show that the rations which they stated would be correct? Because we knew exactly the number of men that were in the camp. It might be one ration, or it might be two rations. In many of these camps we have a day's rations or two days' rations in hand.

2793. I did not ask that—How did the superintendent prove to you that the order was a correct one? By the order and the list of men made out by the superintendent at Hurstville.

2794. When were those lists made out? Every fortnight.

2795. So that your list would be thirteen days old, and the rations for the 14th would be the same as on the first? Yes.

2796. What proof had you that the number was the same? They would send me down a return of the rations used on the twelve working days, and make the total for the fortnight, and that agrees within one or two rations of the rations that have been ordered by me and charged to the men on the works.

2797. How do you know from the second day that the number of men for whom the rations were demanded were in existence at all? Simply because I knew that they were still on the works.

2798. How do you know that? Because for every man that leaves, down comes an advice saying so-and-so has left or has been dismissed.

2799.

Mr.
A. Larnach.
25 Mar., 1889.

2799. That being the case, how is it that you said to the President that you knew, of your own knowledge, that there were rations far in excess of the number of men at work? Oh, I was speaking then of the time before I took charge.

2800. Then you were speaking of a thing that you did not know anything about? I am speaking of what I saw in the books.

2801. You know that such a thing did occur? Yes. I issued a return that I gave to Mr. Mason, where 439 rations had been going to Springall.

2802. So before you took charge there were opportunities for swindling there in connection with the rations, and those opportunities were made use of in some cases? I fancy there was something wrong from the books.

2803. I do not want your fancy, I want you to say whether the books prove that? Yes.

2804. Have the books disclosed to you that there was absolute swindling, and that absolute swindling took place by accounting for rations delivered far exceeding the number of men at work? Yes; they have.

2805. What are these papers? These are some papers that were handed to me by Johnson, the assistant storekeeper, showing where 439 rations had been obtained by the late storekeeper, Mr. Springall, from Johnson's store at Illawarra Road. I know nothing more about it. He obtained these papers.

2806. Where did you get them from him? Johnson handed them over to the superintendent, and the superintendent, Mr. Burrowes, as I was in charge, handed them to me. That was on the 27th January, 1889.

2807. What did you do with them? I handed them over to Mr. Miles.

2808. Do they give us any information as regards irregularities in the supply of rations? They show that 439 rations have been taken away from Johnson's store by Mr. Springall.

2809. He was the storekeeper at the end of the year? Yes.

2810. Can you show by the books to this Commission that these irregularities, that you say existed before you took charge, actually took place? Yes. Here is the ration-book.

2811. Are you quoting now from the ration-book? Yes. I find on the 24th September and the 6th of October that a man named Flemming is entered as a ganger, who was a labourer at the main camp, drawing 85 rations for a fortnight. He was supposed to be under one Napier, overseer. Of course that is bunkum, but it appears in the book. On the 10th September and the 22nd September, he draws 98 rations again, and he appears in the book as a stone-breaker—Napier, overseer. On the 13th August and 25th August, he appears working as Flemming and others, under Michael Bell, overseer, and they together draw 98 rations for the fortnight. I have seen Michael Bell, and he says it is a fraud. He is a gardener, belonging to Mr. Moore, and placed in charge there. On the 30th July and 11th August, he draws 80 rations. On the 16th July and 28th July, he draws 80 more. I will repeat. He drew from the 21st May to 2nd June, 56 rations, the National Park; from the 3rd June to 16th June, 98, National Park; from the 17th June to 30th June, 80, Meadows, Sutherland, and Loftus Roads; from the 1st July to 14th July, 80, Meadows, Sutherland, and Loftus Roads; from the 15th July to 28th July, 80, Illawarra Road; from 29th July to 11th August, 80—he was a carter at that time; from 12th of August to the 25th August, 98, Michael Bell, Flemming, and others; from 26th August to 8th September, 98, stone-breaker—Napier, overseer; 9th September to 22nd September, 98—Walsh, overseer; 23rd September to 6th October, 85—Napier, overseer. The total number, 1,253, at 1s. 1d., equals £67 17s. 5d. This man obtained wages for the fictitious gangs as well as rations. I see his name down (Flemming) for the last six months. In a word he has been drawing from £18 to £20 every fortnight that he was not entitled to. He has generally been put down amongst Bell's men. Bell was the overseer.

2812. Where did you see this? There is the book that the Casual Labour Board have a press-copy of—where all the pay-sheets have been copied into by the parties who made them out at the Hurstville camp. I immediately mentioned the thing to Mr. Burrowes, and we turned up the original draft of the pays made out by Burrowes, and discovered that no such gang or man was on the pay-sheet. It was Burrowes' practice when he made out this draft-sheet to hand it to Springall, who took charge of the pay-sheets. He always got out Bell's pay-sheet, and he must have put Flemming's name down as ganger; and he has been drawing £18 to £20 on each pay.

2813. Burrowes would see this? Oh, no; he would not see it. The other signature being attached to it he would take it for granted that it was all right.

2814. This man Bell, what did he do? He was an overseer. The man Flemming was not a ganger at all.

2815. Who brought the money out to pay these gangs? Hibble.

2816. When Hibble went to pay the men of which Bell was overseer, where was Bell? He was outside. The men were paid in a sort of shed on the railway line.

2817. And where would Bell be? He would be walking about outside.

2818. Who was there to check the correctness of the pay-sheet? Springall. He was there every time.

2819. Did the men come up individually for the money? No; the ganger came up and drew for the gang. For instance, Johnson, when he was a ganger, would draw money for himself and his men.

2820. Would these men come always in the same rotation for their money? They would come as their names appeared upon the sheet. The names always appeared to have been made out with Flemming at the foot.

2821. Be careful over this. From your examination of the pay-sheets, do you now swear that Flemming's name always appeared at the bottom of the papers? I swear that it did nearly always.

2822. In connection with the draft pay-sheet, would there not be some suspicion excited from the fact that this man Flemming so often appeared at the pay, and he not being a ganger, and it only being customary for a ganger to appear? I put the same question to Bell, and he said he had mentioned to Springall that he did not like this man coming there, Bell knowing at the time that he was a labourer and not a ganger. He believed that there was a ganger who had not come in.

2823. You say the books will disclose this system for quite six months? Yes. I believe if anyone went further into it it may be found to have gone further still.

2824. That being the case, do you think there would be the same notorious system existing in the other camps? No.

2825. Would there have been any difficulty from your knowledge of the system adopted in the way of its having been carried on elsewhere? No; I believe it could have been.

2826. How was it that you discovered all this? I may tell you that I was suspicious when I joined the

Casual

Casual Labour Board, when Hinchcliffe went out and brought £60 or £70 or £80 in money back. I said there was something rotten in the way things were done at the National Park. I believe there is money there put down to men who are bogus men, and somebody was there working it. I believed that there was something wrong, and the first thing I did when I went to Hurstville was to go over the particulars in the books.

2826½. Did not a detective always attend these pays? Not regularly; it is not true that they were always present.

2827. Could this swindling have gone on without the knowledge of the Board? Well, I do not really think they knew.

2828. Do you hold that you are quite clear of any responsibility in this matter? Certainly I am. I was not an official like Mr. Hinchcliffe or Mr. Davies.

2829. Do you think if Mr. Hibble had taken due precautions he could have discovered this? I will not say that at all. When more evidence comes out perhaps he will be found to be to blame as well as others. I will not say who is to blame.

2830. Do you think that if you had occupied Mr. Hibble's position that the swindle could have gone on with the same impunity? I occupied that same place twice when Mr. Hinchcliffe was away and I did not discover it; I did not even know the men.

2831. You were imposed upon? Yes. I paid there twice myself without discovering anything.

Mr.
A. Larnach.
25 Mar., 1889.

TUESDAY, 26 MARCH, 1889.

Present:—

A. J. CAPE, Esq., M.A., PRESIDENT.

F. A. FRANKLIN, Esq., C.E., J.P., | T. F. WALLER, Esq., J.P.

Albert Larnach called in and examination continued:—

2832. *Mr. Waller.*] I think you gave evidence as to swindling that had taken place, and one case where a man named Flemming received pay as if he were a ganger? Yes.

2833. Is it a fact, then, that it only required collusion between the superintendent and another man for such swindling, owing to the want of a proper system of checks, to take place, and that neither the Board nor the paying clerk could detect it? Such a thing could and did happen.

2834. Now, in your evidence you stated, yesterday, that M'Lean Bros. and Rigg, and, I think, Kidman, used to send in their requisitions and original orders for goods at the end of every month? They sent their vouchers in on the first day of the month, and M'Lean Brothers and Rigg always had the order attached to each voucher.

2835. If that be the case, what documents went out to the camp to the receiving clerk with the goods that were delivered? I do not know what M'Lean Bros. and Rigg sent out. I never saw them.

2836. Were orders to M'Lean Bros. and Rigg invariably given in writing in the order-book? I always did so.

2837. A duplicate of that order remained in the butt of the book? It did.

2838. Of your own knowledge, were those orders ever extended or lessened verbally by the Chairman or other person belonging to the Board? I never knew of a case.

2839. You understand my question. Were they ever altered after going from the office? Not to my knowledge.

2840. Can you tell me how the superintendent knew of the orders given to M'Lean Bros. and Rigg, so as to be able to check the delivery, as corresponding with the order? No, I cannot tell you what was sent out. I suppose they sent out invoices with them.

2841. That is not the question. It is how did the superintendents know what was ordered from M'Lean Bros. and Rigg? I cannot tell you.

2842. At the end of the month, when the documents came in, did the superintendents come in to the Board, to see that the contingent voucher was correct, so far as the delivery of the goods was concerned? Not that I am aware of.

2843. Did you therefore pay the contingent voucher, provided it agreed with the order on the butt of the order-book? No; it had to be signed by the superintendent.

2844. First? The Chairman first signed it as being correct.

2845. How could he sign to its being correct if he had no checks or cart-notes in his possession to show that the goods were delivered on certain dates? From what I have seen I should think he put down what he received in a memo. book at each camp.

2846. That is imagination on your part? That is all.

2847. Did you see that? No.

2848. You have no knowledge whatever that the superintendent adopted any means of checking the delivery of goods? No; I cannot say so.

2849. Do you, of your own knowledge, know of goods being sent down to Mr. Davies' private house? Only from hearsay.

2850. You know nothing of your own knowledge? No.

2851. Did you ever tell anyone you did know it? I may have mentioned that I heard it.

2852. That you did know it? I felt certain that the parties told me the truth, and I feel certain it is true.

2853. Did you mention that you could prove it? No; only that those parties told me.

2854. Who told you? The superintendent of the National Park.

2855. What is his name? Burrowes.

2856. Did he tell you? Yes; he saw them taken away, and the crockery too. Springall told me that was what became of one of his bedsteads.

2857. Springall told you that? Yes.

2858. Sent to whom? He had orders from John Davies to send it to him. If I may mention it, I may say I had a 40-candle burner lamp in the office. He took a great fancy to it and asked me to get one on his

Mr.
A. Larnach.
26 Mar., 1889.

Mr.
A. Larnach.
26 Mar., 1889.

account. He told me his was not as good as the one I bought for the Board. As soon as we removed into the other office the lamp disappeared, and the kerosene-oil lamp with it. I have my own idea where it has gone to, but I know nothing more.

2859. Did the storekeeper initial the vouchers acknowledging the receipt of the goods from M'Lean Bros. and Rigg? They were signed by the superintendent, and that was sufficient.

2860. The goods went into the possession of the storekeeper? Yes.

2861. No check was taken from the storekeeper? No.

2862. What check was adopted for taking stock of the plant of all sorts and descriptions on the ground? None at all. We have never taken any stock since I have been there.

2863. You do not know what quantity was on the ground? No.

2864. Were those long-handled shovels in lieu of the hamper account? They were in lieu of the hamper account.

2865. They took the place of the original account for the hamper? Yes.

2866. Why did you think it hard you should not be allowed to pay the accounts? It was something to get out of the office. I had a good deal of sitting there, and I should have liked a run up to Kidman's, or some other place. We have often talked the matter over, and said, "There was no fear, John would not let us pay the accounts."

2867. Were you intimate with Mr. Davies? We used to laugh together, and I told him anecdotes, and he told me some.

2868. Called each other John and Jack? No; I called him Mr. Davies. I looked upon him as my superior officer.

2869. What did Mr. Davies' personal expenses consist of? I cannot say.

2870. Do you know whether he obtained money for incidental expenses? I do not remember telling you anything of the kind. I may say that cheques of £50 were drawn occasionally to pay sundry accounts. That may be to pay my small salary and Mr. Hibble's.

2871. I understood you to say to the President that you did not know what the charges were for, as there was a camp kept? I was not alluding to Mr. Davies. You asked me something about the Secretary's cash. I said I was sure it was not correct for certain reasons. There were six vouchers made out to my certain knowledge by Mr. Hibble, and they amounted to nearly £100. These vouchers consisted—one of them I know of £3; then £1 1s., 8s. 6d., and 10s. 6d.—expenses for breakfast, lunch, and dinners; 35s. for cab-hire—3s. 4s., and 5s. at a time.

2872. Your reply was not about Mr. Davies? No; I was speaking about the Secretary.

2873. Do you know whether Mr. Davies had any allowance for expenses? No; excepting that when out with the Secretary he got some of those lunches.

2874. Do you know of any? No; I do not know.

2875. Do you know whether Mr. Burrowes was allowed anything? Yes; I have seen contingent vouchers from Mr. Burrowes, but they were small ones as compared with the others.

2876. Was Mr. Burrowes allowed a horse for going about? He was allowed forage.

2877. Who found him the horse? Mr. Houson.

2878. Were you allowed anything? I never got anything except a few tramway tickets and a free railway pass when I went to pay the men.

2879. You said something regarding timber that was sold and charcoal;—was there any other class of timber sold besides firewood? Not to my knowledge.

2880. No sleepers? Yes; there were some supplied to the Engineer-in-Chief for Roads, Mr. Bennett, who was making the tramway in the Centennial Park. We got the sleepers and supplied them. I really forget the amount of money now. It was paid to Mr. Davies, and I think paid into the bank.

2881. You remember about that charcoal lying at Darling Harbour? I got a receipt for it from J. T. Wearne, who received it.

2882. How many bags? All the charcoal that came down, he was to get it.

2883. Mr. Wearne got it all? Yes.

2884. Did you ever instruct an auctioneer of the name of Neale to sell charcoal? No, never. I believe he had something to do with selling the wood, but I think that was through Mr. Burrowes.

2885. You are certain that the charcoal you referred to yesterday, and said was given to Wearne, could not be given to Mr. Neale? No; I wrote to Wearne about it.

2886. Where did it come from originally? From Burrowes' place at the National Park. It was said to be excellent charcoal by Wearne himself, so he took the lot.

2887. Do you know the average wages of the unemployed a day? 3s. 6d. or 4s.

2888. Was Mr. Springall a sober steady man? I should say he was a most steady sober fellow. A hard-working man, I should say too.

2889. The sort of man the Board could put reliance in? Yes; unless they knew otherwise. They found him there. I believe they found certain things when they took the affair over, and gave him a severe reprimand.

2890. As regards the books of the Board, do you think the system adopted was such as would have made it easy for a competent man, with a thorough knowledge of books, to cook the accounts? I consider they were not opened in the way I should have opened them if I had had to do it.

2891. But they might be opened well enough to prevent any cooking going on or hiding of true transactions; do you think the system was sufficiently good to prevent a man who understood books cooking the accounts or cloaking the transactions? No; I do not.

2892. It was not good enough? No.

2893. You said that Mr. Davies made returns to Parliament that the expenditure was only something about £1,200 a week, when, to your certain knowledge, it was £2,000? I said he sent a return in to Parliament, in answer to a question, in which 910 men were mentioned, and when the return came in for the rations I called attention to the fact that £2,000 was due to Kidman. If there were only 910 men there the amount should be only £1,200.

2894. You spoke to Mr. Davies yourself about it? I did, before Mr. Hibble. I have spoken to him when the returns came in, pointing out that, although the men were being reduced, the rations account was never reduced.

2895.

2895. Do you state positively, from your own knowledge, that the rations account remained in the same state when there was a considerable reduction of the men employed as when the full quantity were employed? I do not say it was exactly the same, but it was not sufficiently reduced according to the reduction of the men.

Mr.
A. Larnach.
26 Mar., 1889.

2896. Give us an idea at what ratio the reduction took place? I think about November there were 910 men on the works, and three months before that there were 1,500; and the reduction between that and the amount paid Kidman was not, as I suppose, small enough in comparison with the reduction of the men.

2897. Is this what you mean to say: When 1,500 men were at work and when 900 were at work, the reduction of the rations as between 1,500 and 900 was very small indeed? Yes. There was hardly any reduction at all. The reduction was very small indeed.

2898. Did you find it often occur? I pointed it out three times to him. I tried to work it out once in the office. He said it was no matter, although there might be more of it. If there were less men to-day, there were more men to-morrow; that they fluctuated.

2899. You no not think there was a proper reduction? No; I never did. I have shown you here where rations were drawn that never should have been drawn at all,

2900. *President.*] Can you tell me whose handwriting this is? The handwriting in the copying-book in the pay-sheets for the Southern District under Mr. Burrowes is Mr. Goodman's. Some of it is in Mr. Springall's handwriting. All the pay-sheets that have Flemming's name on them are in Springall's writing.

2901. Can you give any information about this pay-sheet beyond what it shows itself. Were you out there? I was not.

2902. Are you a married man? Yes.

2903. With a family? Yes.

2904. Have you any testimonials you can produce to us, or any references? Yes; I have two. There is one in the Australian Joint Stock Bank belonging to me.

2905. Presented you on leaving the bank? Yes.

2906. Can you refer us to a gentleman who has known you? Yes; Mr. William Laidley.

Alexander Howlison, called in, sworn and examined:—

2907. *President.*] What are you? Nurseryman and seedsman.

2908. Are you in business on your own account? In partnership with J. Grahame & Co., of George-street A. Howlison.
markets.

2909. Did you ever have any dealing with the Casual Labour Board? Yes; I supplied a great quantity of grass and clover. 26 Mar., 1889.

2910. Can you tell us the amount of the account in the aggregate? Well, no; I might have looked it over in our own books. All papers were given to the Casual Labour Board before I got paid.

2911. Do you recollect a sum of £125 17s. 8d.? Yes; that was my mistake.

2912. Was there any peculiarity about that account? Purely a mistake on my clerk's part.

2913. What happened? He put it down as a cash-sale, instead of amongst the cheques from the National Park account. It appeared in the cash-sales, but when we went over the accounts we found two lots of grass that had not been charged for. The occurrence would not have happened if we had had the old clerk, but we had just engaged a new clerk. It was a mistake.

2914. It was purely accidental? It was entirely accidental.

2915. How was it discovered? Mr. Miles came down, and I showed him how it had happened. He said: "Did you get a cheque on a certain day?" As soon as we turned over the accounts I saw how it was done. We knew it was not amongst the cash-sales, as that was not our day for doing such business.

2916. Your evidence is that it was entirely accidental? Purely a clerical mistake on my clerk's part. It had nothing to do with the Board.

2917. Who used to send you orders—were they in writing or verbally? In writing.

2918. Who used to bring them? One of the men, I am not sure of his name, in the Casual Labour Board.

2919. Who used to pay for them? I have been paid by one of the clerks, and on one occasion by John Davies.

2920. Himself personally? Himself.

2921. Do you allow any return commission? No commission. It was done by contract, and it was put as low as it possibly could be put in.

2922. *Mr. Waller.*] How many payments did you get at the time you were serving the Casual Labour Board? I can tell you within half an hour. I can get you the whole of the items from the clerk.

2923. Were there a good many? Yes.

2924. Who paid them? The clerk paid most of them.

2925. Paid them in the Board's room? No; he has brought them down.

2926. As a rule the clerk paid you? The clerk.
