APPENDIX D.

VANCOUVER SERVICE—CONTRACT.

ARTICLES OF AGREEMENT made this tenth day of October in the year of our Lord one thousand eight hundred and ninety-three between The Honorable John Kidd Postmaster-General for the Colony of New South Wales (hereinafter called the Postmaster-General in which expression his successors in office the Postmasters-General for the time-being are respectively intended to be included) on behalf of the Government of New South Wales of the first part and James Huddart of the city of London England shipowner (hereinafter called Contractor which expression shall be deemed to include the heirs executors administrators and permitted assigns of the said James Huddart when the context so requires or admits) of the other part Witnesseth that for and in consideration of the covenants and agreements hereinafter contained on the part of the Postmaster-General the said Contractor for himself his heirs executors and administrators doth covenant and agree with and to the Postmaster-General and his successors in manner and form and to the effect following that is to say—

1. To maintain monthly steamship service.

1. That he will provide establish and during the continuance of this Contract maintain continue and carry on in the manner hereinafter set forth a regular steamship service between the city of Sydney in the Colony of New South Wales and the city of Vancouver in the Province of British Columbia calling at Honolulu in the Sandwich Islands and at the outer wharf in the city of Victoria in the said province on both outward and homeward voyages from Sydney to Vancouver and from Vancouver to Sydney and such service shall as far as practicable make connection at Sydney with all local lines of steamships running between Sydney and other ports in Australia and New Zealand

2. Steamships to be provided.

2. The two steamships "Miowera" and "Warrimoo" shall be regularly and continuously employed in the said service each of which steamships is hereby warranted to be in length not less than three hundred and forty feet in breadth not less than forty-two feet in depth not less than twenty-five feet two inches of a gross tonnage not less than three thousand three hundred tons and capable of an average speed of not less than fifteen and one-half knots per hour. Each of the said steamships is further warranted to have the most approved triple expansion machinery refrigerators for ships' use duplicate electric light engines special ventilation for tropical voyages ample saloon and cabin accommodation for at least one hundred and thirty passengers and to be provided with every comfort and convenience that is to be found in the best Atlantic liners of its size. Each of the said steamships is further warranted to be of the highest class at Lloyd's and to have a present London Board of Trade Certificate and each of the said steamships shall during the continuance of this contract be at all times tight staunch and strong and well and sufficiently manned victualled and equipped and in every respect seaworthy and shall further at all times during the continuance of this contract retain the qualifications and class which it is hereinbefore warranted to possess

3. Duration of voyage.

3. The round trip for each of the said steamships shall begin and end at Sydney and the voyage of the said steamship "Miowera" which sailed from Sydney on the eighteenth day of May last and arrived at Vancouver on the eighth day of June last shall be deemed to be the first voyage in the performance of this Contract. The period of each voyage from Sydney to Vancouver and from Vancouver to Sydney shall not exceed twenty-one days including one day's detention at Honolulu on each voyage both outward and homeward but it is expressly agreed and understood that in the event of the said steamers calling at Brisbane or at Fiji as hereinafter provided for a further period of thirty-six hours is to be allowed for the time spent in calling at each port on both inward and outward voyages. The said service shall be monthly and the said steamers shall leave the said ports of Sydney and Vancouver on the days and at the times to be from time to time appointed for the purpose by the Postmaster-General after consultation with the Canadian Postmaster alternately arriving at Vancouver and at Sydney at intervals of not more than one month after the date of the arrival of the said steamship "Miowera" at Vancouver on its said first voyage in the performance of this Contract. Each voyage shall be deemed to commence so soon after the completion of the embarkation of the mails intended to be thereby conveyed as having regard to practical considerations the anchor of such vessel can be weighed or the vessel can be loosed from its moorings and each such voyage shall be deemed to be completed when the vessel has arrived and been anchored or moored at some position in the port of destination from which the mails can be conveniently disembarked and the times of the commencement and completion of every voyage shall be ascertained and recorded by officers of the Postmaster-General in pursuance of arrangements to be from time to time made by him for such purpose and the decision of the Postmaster-General as to all questions relating to any such times or periods shall be final and conclusive

4. Not to call at United States.

4. The said steamships shall not during the continuance of this Contract call at any port in the United States of America

5. Carriage of freight and passengers.

5. The said steamships shall each according to its capacity carry both outward and homeward all the freights and passengers which may be reasonably offered and obtained and at tariff rates both as to passengers and freights which shall be approved by the Governor of New South Wales with the advice of the Executive Council of the said Colony and after consultation with and approval of the Canadian Executive body

6. Preference to New South Wales.

6. No discrimination shall be made at regards tariff rates for either freights or passengers in any manner directly or indirectly against any New South Wales Port or against the New South Wales Government Railways or against any New South Wales Merchant or Shipper but New South Wales Merchants or Shippers shall at all times have preference for the carriage of their goods over other Merchants and Shippers as far as regards the Australian connexion. But in the event of a subsidy from Queensland or other Colony being received space shall be provided *pro rata* to the respective subsidies

7. Carriage of Mails.

7. During the continuance of this Contract the said steamships shall at the cost and the expense of the said Contractor receive and carry on each and every voyage all such Mails as shall or may be tendered for conveyance to the said steamships or to the masters or any officers on board of the same at the Port of Sydney aforesaid by or on behalf or under the direction of the Postmaster-General for the time-being his officers agents or servants and shall deliver such mails at their proper ports of destination upon the sailing route of the said steamships as hereinbefore indicated and in order to the due and proper performance of this Covenant the said steamships shall each be provided with sufficient and convenient accommodation and protection for all such mails to the satisfaction of the Postmaster-General for the time-being and the said Contractor shall further take all reasonable and necessary precautions for the protection of such mails while upon the said steamships from loss damage or injury in any way and he and they shall be responsible for any loss or damage thereto caused by negligence or want of proper care or accommodation on the part of the said Contractor or his or their agents or servants or on the part of the officers or employees or crew on board the said steamships

8. Accommodation on board.

8. The Contractor shall provide to the satisfaction of the Postmaster-General all necessary and suitable accommodation including lights for the purpose of sorting and making up the mails on board the several vessels employed under this Contract and on being required to do so by the Postmaster-General shall at his or their own cost erect or set apart in each of the said vessels on the spar deck a separate and convenient room for such purposes and all such furniture lamps fittings and other conveniences shall be from time to time cleansed and kept in repair and the oil for the lamps supplied by the servants and at the cost of the Contractor. The master or commander of each of the said vessels shall also if required provide assistance for conveying the mails between the mail room and the sorting room and also render such other assistance as may from time to time be needed without charge

9. Master to take charge if required, &c.

9. If the Postmaster-General shall think fit to entrust the charge and custody of the mails to the master or commander of any vessel to be employed under this Contract and in all cases where the officer or other person appointed to have charge of the mail shall be absent to the knowledge of the master or commander of such vessel such master or commander shall without any charge take due care of and the Contractor shall be responsible for the receipt safe custody and delivery of the said mail at the several appointed places on the shore in the respective ports as part of the services hereby contracted to be rendered. The master or commander shall also make the usual Post Office Declaration and furnish such journal returns and other information and perform such other services as the Postmaster-General or his officers shall from time to time reasonably require

10. To obey directions, &c.

10. The Contractor and all commanding and other officers in charge of the vessels employed under this Contract shall at all times punctually attend to the orders and directions of the Postmaster-General or his officers or agents as to the mode time and place of landing transhipping delivering and receiving the mails subject to the special provisions herein contained and so far as such orders and directions are reasonable and consistent with the safety of the vessel

11. Passenger accommodation for officers of Post Office.

11. The Contractor shall provide suitable first-class accommodation including a cabin or state-room for the exclusive use of a mail officer or agent of the Postmaster-General and for one assistant on board each of the vessels employed under this Contract who shall be at liberty to use such accommodation as may be required for the performance of their duties and such officers or agents and assistants shall be victualled by the Contractor as chief cabin passengers without charge either for their passage or victualling and whilst the vessel stays at any port excepting the Ports of Sydney and Vancouver to and from which the Mails are conveyed such officers agents and assistants shall be allowed to remain on board and shall be victualled as aforesaid

12. Mail officer to have full authority.

12. Every such mail officer or agent and assistant shall be recognised and treated by the Contractor his officers and agents as the agents of the Postmaster-General and as having full authority in all cases to require a due and strict performance of this Contract. Provided that no such agent officer or assistant shall have power to control or interfere with any master commander or officer in the performance of his duty and every such agent officer and assistant shall be subject to all general orders issued by the master or commander for the good order health and comfort of the passengers and crew and safety of the vessels

13. The expense of conveying mails to and from the said steamships or vessels from or to the Post Offices at the terminal ports of the several voyages or at the ports at which the said vessels call *en route* shall be borne by the Contractor of mails at ports 13. Conveyance required have the right to delay the sailing of any of the said steamships for the space of twenty-four hours 14. Power to Postmaster-General to delay sailing
15. The expression "mails" for the purpose of this Contract shall be deemed to mean and include all boxes bags or packets of letters post cards newspapers parcels books or printed paper and all other articles which under the Post Office Act or Acts and Postal Regulations for the time-being in force are transmissible by Post in New South Wales without regard to place either of origin or destination and also all empty bags empty boxes and other receptacles stores and articles used or to be used in carrying on the Post Office service or which shall ordinarily be sent by or to or from the Post Office 15. Definition of mails
16. The said Contractor shall not nor shall the master or officers of either of the said steamships receive or permit to be received on board of either of such steamships at any New South Wales port any letters for conveyance other than those contained in Her Majesty's mails or which are or may be privileged by the law nor the mails of any other country except such as may be specified by the Postmaster-General for the time-being and the said Contractor shall in all respects be subject to all the Postal Laws of New South Wales and all the Regulations lawfully made thereunder 16. Not to carry other letters
17. The Contractor shall not convey in any steamship employed by him under this Contract any nitro-glycerine or any other article which shall have been proclaimed as an explosive or explosive substance or shall have been legally declared specially dangerous or so declared by the Postmaster-General by notice in writing 17. Nitro-glycerine &c. not to be carried
18. This Contract shall not nor shall any right or interest therein be assigned underlet or otherwise disposed of without the consent in writing of the Postmaster-General to such assignment having been first obtained 18. Not to assign &c.
19. The said Contractor shall from time to time furnish to the Postmaster-General full and complete copies of the manifests of the cargoes and passenger lists carried by each of the said steamships on its outward and its homeward voyages certified by the proper Customs officials and also such other documents information and evidence as may be reasonably required by the Postmaster-General to show the volume extent and value of the trade carried on by the said steamships and such other Customs certificates documents and evidence as may be necessary or as may be reasonably required by the Postmaster-General to prove the performance of the service herein contracted for and to enable the Postmaster-General to judge as to whether this Contract is being properly and faithfully carried out and performed and the furnishing of such certificates documents information and evidence as hereinbefore specified shall be a condition precedent to the payment of the subsidy hereinafter provided for or any portion thereof 19. To furnish copies of manifests &c.
20. And the said Postmaster-General for himself and his successors covenants to and with the said Contractor that he and they well and faithfully performing all and every the covenants agreements and stipulations hereinbefore on his and their part set forth and contained he the Postmaster-General will well and truly pay or cause to be paid to him or them during the continuance of this Contract a subsidy of eight hundred and thirty-three pounds six shillings and eightpence sterling (£833 6s. 8d.) for each and every round trip performed by each of the said steamships in accordance with the intention of these presents payable in New South Wales the first subsidy for the first round trip to be payable within ten days after the arrival of the second of the said steamships at Sydney from Vancouver in the performance of this Contract and the remaining subsidies to be payable respectively within ten days after the succeeding arrivals of the said steamships at Sydney in the performance of this Contract the subsidy in respect of the last round voyage to be performed in pursuance of this Contract not to become payable however until such round voyage shall have been satisfactorily completed provided however that no amount or instalments of subsidy shall be payable at any time unless it appears to the satisfaction of the Postmaster-General that up to the time of such payment there has been no breach on the part of the said Contractor of any of the covenants provisions or stipulations of this Contract 20. Covenant for payment of subsidy
21. If at any time or times the mails required to be conveyed by the Contractor under this agreement between Sydney and Vancouver shall not be conveyed from Sydney to Vancouver or from Vancouver to Sydney within the respective periods of transit hereinbefore prescribed in that behalf then and so often as the same shall happen there shall be deducted from the subsidy which but for this provision would be payable to the Contractor a sum of Thirty Pounds for every complete period of twenty-four hours by which the time actually occupied in the conveyance of such mails from Sydney to Vancouver or Vancouver to Sydney as the case may be shall have exceeded the period of transit hereinbefore prescribed in that behalf Provided always that no deductions shall be made from the said subsidy by reason of any such default or failure as in this clause mentioned which may be proved to the satisfaction of the Postmaster-General to have arisen wholly or in part from any cause or causes altogether beyond the control of the Contractor 21. Deduction for delay
22. Each of the deductions hereinbefore mentioned and hereby agreed to be made shall be made and the subsidy be reduced accordingly although no damage or loss shall have been sustained by reason of or in connection with such default and (except in such case as in the last preceding clause hereof expressly provided) from whatever cause or causes any such failure or default shall have arisen and no such deduction shall in any case be deemed to be a penalty or in the nature of a penalty and the payment by the Postmaster-General of what shall from time to time remain due in respect of the said subsidy after making any such deductions as aforesaid shall in no case prejudice the right of the Postmaster-General to treat the failure of the Contractor to provide an appropriate vessel at any appointed place or time or to perform any service at or within the appointed period as a breach of this Contract 22. Deductions not to be penalty
23. This Contract shall remain in force until thirty-six round voyages shall have been performed according to the true intention of these presents provided that the Postmaster-General shall have the right at any time by notice in writing under his hand to determine this Contract and every matter and thing herein contained if it shall appear to him that there has been any material breach on the part of the said Contractor of any of the covenants stipulations agreements or provisions herein contained and entered into on the part of the said Contractor and it is declared and agreed that the Postmaster-General shall at all times be the sole and final judge as to whether there has been any such breach and his determination shall be final and conclusive 23. Duration of Contract
24. Provided however and it is the true intent and meaning of these presents that if the said steamships or either of them or any steamship replacing either of such steamships under this proviso shall be by the perils of the sea or other unavoidable casualty lost destroyed or temporarily disabled from performing their voyages according to the true intent and meaning of the agreements stipulations and provisions herein contained such loss or disability shall not be deemed to be a breach of these presents or any matter or thing herein contained but the said Contractor shall in such case as soon as reasonably may be having regard to the circumstances replace the said steamship so lost or destroyed by another of equal class speed equipment character and capacity to the satisfaction and approval of the Postmaster-General or to the like satisfaction and approval repair the damage done in case the said steamship has been only temporarily disabled and continue said service herein contracted for with such substituted or repaired steamship with as little loss of time as possible under all the circumstances Provided always that there shall be no payment of any subsidy in respect of any voyage not actually and fully performed And further provided that the Postmaster-General shall be the sole and only judge and have the final right of determination as to whether any suspension or temporary discontinuance of or delay in the said Regular Monthly Service has been actually caused by the perils of the sea or other unavoidable casualties within the meaning of this proviso and his finding and determination thereon shall be conclusive 24. Proviso for replacing steamers disabled
25. All notices or directions which the Postmaster-General his officers agents or others are hereby authorised to give to the Contractor his officers servants or agents other than any notice of termination of this Contract may at the option of the Postmaster-General his officers agents or others either be delivered or sent by Post to the master of any of the said vessels or any other officer or agent of the Contractor in the charge or management of any vessel employed in the performance of this Contract or left for the Contractor at or sent by Post to the Contractor's agents office or house of business in Sydney or any other place and any Notices or Directions so given left or sent by Post shall be binding on the Contractor Provided always that any notice of termination of this Contract shall be left for the Contractor at the office or last known office of his agents in Sydney or sent by Post to such office 25. JAMES HUDDART

APPENDIX E.

COMPARATIVE Return showing the Number and Amount of Money Order Transactions in New South Wales with various countries for the year 1893, compared with the year 1892.

APPENDIX F.

AGREEMENT for the exchange of Money Orders between the Imperial German Postal Administration and the Postal Administration of the British Colony of New South Wales.

ARTICLE I.

The remittance of sums of money may be made by means of Post Office Orders as well from Germany to the Colony of New South Wales as from the Colony of New South Wales to Germany.

The maximum amount for every money order to be transmitted from Germany shall be fixed at 210 marks, and for every money order to be transmitted from the Colony of New South Wales shall be fixed at £10 sterling.

The amounts of money orders shall be both paid in and paid out in gold or its nearest equivalent, due regard being had for the regulations in force in each administration.

No account shall be taken of fractions of one penny or of five pfennig.

ARTICLE II.

The sums of money converted into money orders are guaranteed to the remitters until they have been regularly paid to the payees or their representatives in accordance with the regulations in force in the country of payment.

The sums collected by both administrations for the issue of money orders of which the amount shall not have been claimed by the owners within the time prescribed by the laws of the respective countries shall definitely belong to the issuing administration.

ARTICLE III.

Each administration shall be at liberty to direct that the money orders issued by the corresponding administration shall be transferable by endorsement.

ARTICLE IV.

Each administration shall have power to fix the rate of commission to be charged for the transmission of money orders which may be issued by its offices.

Should it appear at any time that money orders are used by mercantile men, or other persons in Germany or in the Colony of New South Wales for the transmission of large sums of money, the postal administration in Germany or in the Colony of New South Wales, as the case may be, shall have power to increase the commission, or frame such special regulations as may seem requisite.

Official money orders relating to the postal service between the two administrations are free of all charge.

The commission shall belong to the issuing administration, but the Post Office of Germany shall pay to the Post Office of the Colony of New South Wales one half of 1 per cent ($\frac{1}{2}$ per cent.) on the amount of money orders issued in Germany, and the Post Office of the Colony of New South Wales shall make a like payment to the German Post Office for money orders issued in the Colony of New South Wales and paid in Germany, in each case after deducting the amounts of the official money orders which are free of charge.

ARTICLE V.

Each administration shall be at liberty to fix the rate at which money paid for the issue of money orders in its own currency is to be converted into the currency of the paying country. Each administration to communicate to the other from time to time the rate of exchange adopted.

ARTICLE VI.

The German administration shall furnish to the Post Office of the Colony of New South Wales a list of the offices which shall be authorised to exchange money orders. Similar information shall be furnished by the Post Office of the Colony of New South Wales to the German Post Office.

ARTICLE VII.

For the issue of every money order, the sender shall furnish, besides the surname, the Christian name or at least the initial of one of the Christian names of the payee, and shall also furnish his or her full and correct address, or when a money order is addressed to a firm or company the proper designation of such firm or company. Similar information is to be given as regards the remitter.

ARTICLE VIII.

The advice of sums paid in for money orders is to be effected between the two administrations by means of lists, similar to form A annexed, which the offices of exchange appointed for the purpose on each side are to prepare and forward to one another.

The transmission of the money orders between the post offices where they are issued or payable, and the exchanging office belonging to the same administration is to be regulated by the internal regulations of such administration.

The vouchers which have served for this transmission (money orders, advices, paid orders) shall remain at such offices of each administration as are concerned, and shall not be sent to the other administration.

The lists are to be despatched as often as an exchange of mails takes place between the reciprocal offices of exchange, and are to be officially registered.

The entries in the lists are to be made in accordance with the indications in the headings of the columns of form A.

The lists shall also be forwarded between the exchanging offices in duplicate, the duplicate copy being marked as such, and stamped and signed by the entering officer in the same way as the original copy.

A blank return, always in duplicate, shall be forwarded on the established days to the corresponding office of exchange when no money orders are to be advised.

ARTICLE IX.

Each list shall bear a serial number, which shall begin from No. 1 for the first list forwarded in the month of January in each year, and shall continue regularly to the last list forwarded in December.

The money orders shall also be designated on the lists under a progressive number called international, to begin with No. 1 and to recommence with No. 1 for the first money order described in the lists of each succeeding month.

The receipt of each list shall be acknowledged by both parties on the next list sent in the reverse direction.

Each office of exchange, when it has received the lists from the corresponding office, and has found the copies to be correct and agreeing with each other, shall return the one that is the duplicate by the next mail, retaining the original in its possession.

For the amounts of money orders, of which the entries on the lists are found to be correct, inland money orders shall at once be issued in favour of the persons entitled to receive the amounts (Article VIII 2).

ARTICLE X.

The lists are to be carefully examined by the office of exchange to which they are sent, and if they contain simple errors which can be at once set right they are to be corrected with red ink.

The corrections are to be communicated to the despaching office of exchange, when the receipt is acknowledged of the list in which the corrections have been made.

If the lists contain other irregularities, the receiving office of exchange shall apply to the transmitting office of exchange for the requisite explanations, which shall be given without delay. In the meantime, until a reply be received, all further action with reference to the orders in connection with which the errors have been discovered is to be suspended.

Whenever payment cannot be effected for the following reasons :—

Incorrect information as to the Christian name and surname of the payee;

Incorrect information as to the address of the payee; then the chief office of the country of destination shall enter into communication with that of the country of origin with the view of enabling the payees to obtain payment.

In

In like manner any complaint or inquiry which may be made by the parties interested with regard to orders issued in one or the other country, shall form, if necessary, the subject of correspondence between the two administrations.

Each administration shall be at liberty to entrust to a subordinate official, to be named, the duty of carrying on the necessary correspondence arising out of this Article.

ARTICLE XI.

The money orders to be exchanged between Germany and the Colony of New South Wales shall be valid during twelve calendar months after the month of issue.

ARTICLE XII.

Duplicate orders or some special authorisation for payment shall, at the request either of the payees or of the remitters, be issued by the paying administration during the course of the validity of the original orders (see Article XI) provided they be inscribed in the advice lists.

ARTICLE XIII.

If repayment of a money order is claimed by the remitter the administration of the country of origin must apply for authority to repay the amount to the chief administration of the other country, which shall not give such authorisation until it shall have duly ascertained that the money order has not been actually paid, and until it shall have taken the necessary steps to prevent payment of the order in future by its subordinate offices.

ARTICLE XIV.

The money orders not paid by either administration during the period mentioned in Article XI are to be advised monthly by the administration of the paying country to that of the country of issue on lists similar to the annexed Form B.

In the event of there being no orders to be advised, a blank list is to be sent. Such orders as are returned unpaid to the country of issue may be repaid to the remitters, or disposed of in some other manner, according to the regulations in force in the country of origin. (Article II.)

ARTICLE XV.

The German Postal Administration shall draw up for every quarter an account similar to form C annexed, and send it in duplicate to the Postal Administration of New South Wales.

These quarterly accounts are to be accompanied by two detailed statements, likewise in duplicate, similar to forms D and E annexed, giving the total amounts of the money orders issued by each administration, as shown by the advice lists relating to the quarter concerned, the amounts of money orders which have lapsed in the country of payment during the course of the quarter, and which are therefore under the provisions of Article XIV, to be refunded to the country of issue, and the amounts of all orders authorised to be repaid to the original remitters. (See Article XIII.)

ARTICLE XVI.

The Postal Administration of New South Wales, having found the accounts to be correct, shall retain one copy of the same, and return the other, duly verified and accepted, to the German Imperial Post Office, at the latest fourteen days after its arrival, addressing it to the "Imperial German Money Order Office at Berlin."

The conversion of the balances is to be effected at the fixed rate of 20 marks 40 pfennig to the £1 sterling.

ARTICLE XVII.

Payment of the balance resulting from the account in favour of one of the two administrations is to be effected by the debtor administration by means of bills of exchange at sight payable in gold and drawn on London.

If the quarterly account results in a balance in favour of the German Imperial Post Office, the Postal Administration of New South Wales, as soon as the account has been examined and verified, or at the latest when returning one copy duly certified, is to forward to the Imperial German General "Postkasse" at Berlin a bill of exchange for the amount of its debt.

If, on the other hand, the account results in favour of the Postal Administration of New South Wales, the German Imperial Post Office is to send to Sydney a bill of exchange for the amount of its debt, at the latest fourteen days after the receipt of the certified copy of the account.

The receipt of the bills of exchange is to be acknowledged by the one administration to the other.

ARTICLE XVIII.

If one of the two administrations, before the preparation or verification of an account, is convinced that it owes to the other administration a sum of at least £1,000 sterling, it shall remit to the other administration without delay a sum approximating to the amount of the balance.

The expenses incurred in forwarding the bills of exchange are always to be borne by the debtor administration.

If the bill of exchange for payment of the balance resulting from a quarterly account is not remitted within the period mentioned in Article 17, paragraphs 2 and 3, the amount of the balance is to carry interest from the day after the expiration of the period to the day on which the bill of exchange is forwarded, the interest being calculated at the rate of 5 per cent. per annum, and placed to the debit of the administration at fault in one of the next quarterly accounts.

ARTICLE XIX.

The present agreement shall come into operation on the 1st January, 1894, and shall remain in force from year to year until one administration shall have notified to the other, one year beforehand, its intention to terminate the same.

It is, however, agreed that either administration shall have the power under extraordinary circumstances, temporarily to suspend the service by giving notice to the other by telegraph.

The provisions of the agreement can, if deemed necessary, be modified by common consent of the two administrations.

Done in duplicate, and signed at—

Sydney, on the seventh day of December, 1893.

Berlin, on the ninth day of February, 1894.

JOHN KIDD,
Postmaster-General of
New South Wales.

A. J. DOAK, Controller.
Government Savings Bank, Sydney, 1st March, 1894.

F. B. SUTTOR,
Acting Postmaster-General.

I CERTIFY that the foregoing statement of all deposits received and paid from 1st January to 31st December, 1893, has been examined and found to correspond with the Books and Accounts of the Government Savings Bank.

28th March, 1894. E. A. RENNIE,
Auditor-General.

APPENDIX H.

AN AGREEMENT, dated the thirteenth day of December, 1892, and made between Her Most Gracious Majesty the Queen for account and on the authority of the respective Governments of New South Wales, Victoria, South Australia, Western Australia, and Tasmania (hereinafter referred to as the original contracting colonies) of the first part, Her Most Gracious Majesty the Queen on account and by the authority of the Government of New Zealand of the second part, and The Eastern Extension Australasia and China Telegraph Company, Limited (hereinafter called the Extension Company), of the third part.

WHEREAS these presents are supplemental to an Agreement, dated the 31st day of March, 1891, and made between Her Most Gracious Majesty the Queen for account and on behalf of the original contracting Colonies of the one part, and the Extension Company of the other part, and which is hereinafter referred to as the Principal Agreement. And whereas the Government of New Zealand have agreed to join in the guarantee contained in the Principal Agreement, and it has been arranged to reduce the rates for Messages to or from New Zealand, and to vary the rates specified in the second and third schedules to the Principal Agreement as hereinafter mentioned.

Now, it is hereby mutually agreed by and between the parties hereto, as follows:

- From and after the first day of January, 1893, the second and third schedules to the principal agreement shall be cancelled, and the schedules of rates hereunto annexed shall be respectively substituted therefor, and the principal agreement shall thereupon be read and construed accordingly.

2. The Government of New Zealand shall as and from the first day of January, 1893, in all respects be bound by and have the benefit of the provisions, terms, and conditions of the principal agreement as varied by this agreement, as if the name of the said Government had been included in the first recital of the principal agreement, and as varied by this agreement the principal agreement is in all respects ratified and adopted by all the parties hereto, and the amount which the Extension Company shall be entitled to receive under articles 3 and 4 of the principal agreement as varied by this agreement, shall be paid to the Extension Company out of the Consolidated Revenue Funds of the contracting colonies, including New Zealand.

In witness whereof Sir Saul Samuel, K.C.M.G., C.B., the Agent-General for New South Wales; Lieutenant-General Sir Andrew Clarke, G.C.M.G., C.B., C.I.E., representing Victoria; Sir John Cox Bray, K.C.M.G., Agent-General for South Australia; Sir Malcolm Fraser, K.C.M.G., Agent-General for Western Australia; Sir Edward Nicholas Coventry Braddon, K.C.M.G., Agent-General for Tasmania; and Westby Brook Perceval, Esquire, Agent-General for New Zealand, all duly authorised to execute these presents on behalf of Her Most Gracious Majesty the Queen, have hereunto set their respective hands and seals, and the common seal of the Eastern Extension Australasia and China Telegraph Company (Limited), hath been hereunto affixed the day and year first above written.

Signed, sealed, and delivered by the abovenamed Sir Saul Samuel, K.C.M.G., C.B., on } SAUL SAMUEL. [L.S.]
behalf of Her Most Gracious Majesty the Queen, in the presence of }

The Rates for Telegrams exchanged with the other places mentioned in Schedule 1 will be increased in the same ratio as Telegrams exchanged with Europe.

Sydney : Charles Potter, Government Printer—1894.

1894.
 (SECOND SESSION.)
 —
 LEGISLATIVE ASSEMBLY.
 NEW SOUTH WALES.

REPORT
 OF THE
 POSTAL AND TELEGRAPH CONFERENCE
 HELD IN
 NEW ZEALAND IN MARCH, 1894,
 INCLUDING
 REPORTS OF PROCEEDINGS, REPORTS OF PERMANENT HEADS OF
 POSTAL AND TELEGRAPH DEPARTMENTS, AND PAPERS LAID
 BEFORE THE CONFERENCE.

ORDERED BY THE LEGISLATIVE ASSEMBLY TO BE PRINTED,
6 September, 1894.

SYDNEY: REPRINTED BY CHARLES POTTER, GOVERNMENT PRINTER, PHILLIP-STREET.

○ POSTAL AND TELEGRAPH CONFERENCE, 1894.

REPORT OF DELEGATES ATTENDING THE INTERCOLONIAL POSTAL AND TELEGRAPH CONFERENCE HELD IN NEW ZEALAND IN MARCH, 1894.

All the colonies were represented.

The Conference sat on the 5th, 6th, 7th, and 8th March at Wellington, and on the 19th March at Auckland.

The principal resolutions agreed to were as follows:—

POSTAL SERVICE.

CANADIAN PACIFIC MAIL-SERVICE.

That this Conference is favourable to a four-weekly service (alternating with the San Francisco service) between Australia, New Zealand, and Vancouver, the mail-steamers calling at one main port in New Zealand and such ports in Australia as may be determined upon.

SAN FRANCISCO MAIL-SERVICE.

That, in the opinion of this Conference, it is desirable that a four-weekly service *via* San Francisco be continued, and that strong representations be again made to the United States Government, pointing out the inadequate support given to the service by them, and urging for an increased payment in support of the line; and that further representations be made to obtain a reduction in the heavy overland charges.

OCEAN MAIL-SERVICE.

That this Conference agrees to the extension of the present Federal mail-contracts with the Peninsular and Oriental and Orient Companies for a period of one year from the 31st January, 1895.

PENNY POSTAGE FROM GREAT BRITAIN TO AUSTRALASIA.

That, with regard to the proposals from time to time made for penny postage between Great Britain and the colonies, and more recently that such be adopted for letters from the United Kingdom, leaving the rate from the colonies as at present, this Conference, while recognising the desirableness of adopting the lowest possible rates, desires to express the opinion that the heavy cost of providing speedy and regular communication does not admit of any further reduction being made at the present time, the reduction to 2½d. in 1891 having resulted in an annual loss to the colonies of about £40,000; and that the partial reduction proposed—namely, in the rate from Great Britain—would be most undesirable, as such a measure would compel the colonies to reduce their inland and intercolonial rates from 2d. to 1d., involving a probable loss to them of a quarter of a million per annum, in addition to that already mentioned as the result of the reduction to 2½d.; and that a copy of the foregoing be transmitted to the Imperial Government.

POSTAL UNION CONGRESS.

That the question of the appointment of a delegate to attend the Postal Union Congress at its next meeting be postponed.

RACING LOTTERIES.

That the representatives at this Conference recommend their various Governments, as far as possible, to put a stop to the transmission and delivery of letters promoting racing lotteries.

TELEGRAPH SERVICE.**CANADIAN PACIFIC CABLE.**

That, considering the important interests involved, both of a national and commercial character, in the establishment of a Pacific cable, the representatives of the respective colonies assembled at this Conference recommend their Governments to consider the desirability of entering into a guarantee with the other countries interested, for a period not exceeding fourteen years, and to guarantee interest at 4 per cent. on a capital of not more than £1,800,000 to any company undertaking the laying of a Pacific cable; the tariff not to exceed 3s. per word for ordinary telegrams, 2s. per word for Government telegrams, and 1s. 6d. per word for Press telegrams, to and from Great Britain and the colonies; and that the United Kingdom be asked to join in the guarantee; the routes to be either of the following: Brisbane to Ahipara Bay (New Zealand), Ahipara Bay to Suva, Suva to Apia, Apia to Fanning Island, Fanning Island to Sandwich Islands, Sandwich Islands to Vancouver: or, from New Zealand to Suva, Suva to Apia, Apia to Fanning Island, Fanning Island to Sandwich Islands, Sandwich Islands to Vancouver.

MISCELLANEOUS.**INTERCOLONIAL TARIFF.**

That the delegates to this Conference, recognising the value of decisions arrived at in reference to joint postal and telegraph services, by periodical meetings of representatives from the various colonies, would suggest to their respective Governments that similar advantages in reference to trade relations between the respective colonies in the direction of reciprocity would ensue if similar conferences could be arranged to deal with questions in connection with intercolonial tariff.

HOUR-ZONE TIME SYSTEM.

That it is desirable in the public interests that the hour-zone system should be adopted as far as practicable in Australasia.

That the mean time be the 120th meridian in Western Australia, the 135th meridian in South Australia, the 150th meridian in Queensland, New South Wales, Victoria, and Tasmania, and the 175th meridian in New Zealand.

ELECTRICAL.

That a vote of thanks be accorded to the committee of experts, and that they be requested to complete their labours by reporting on electric tramways and drafting regulations in regard to electric-power leads generally.

REPORTS OF HEADS OF POSTAL AND TELEGRAPH DEPARTMENTS.

Reports upon subjects of detail connected with postal and telegraph matters, upon future Federal mail-contracts, and upon the Australasian Postal Convention were laid before the Conference, and agreed to with amendments.

Other minor matters were considered, for which see minutes of proceedings.

Attached to this report will be found—

Minutes of proceedings, and an Appendix, containing reports, papers, and statistics laid before the Conference.

Signed on behalf of—

New Zealand, J. G. WARD.

New South Wales, JOHN KIDD.

Victoria, AGAR WYNNE.

South Australia, JOHN ALEXANDER COCKBURN.
Queensland, W. HORATIO WILSON.

Tasmania, J. G. WARD.

Western Australia, STEPHEN H. PARKER.

REPORT OF THE PROCEEDINGS AND DEBATES
 OF THE
 POSTAL AND TELEGRAPH CONFERENCE
 HELD IN
 NEW ZEALAND, IN MARCH, 1894.

LEGISLATIVE COUNCIL CHAMBERS, WELLINGTON.

MONDAY, 5TH MARCH, 1894.

THE Postal and Telegraph Conference met at 10 a.m. on Monday, the 5th March, 1894, when the under-mentioned gentlemen, representing the colonies hereunder named, were present—viz.:—

- | | |
|----------------------------|--|
| <i>New South Wales</i> : | The Hon. JOHN KIDD, M.L.A., Postmaster-General.
S. H. LAMBTON, Esq., Deputy Postmaster-General.
P. B. WALKER, Esq., M.I.C.E., M.I.E.E., Secretary, Telegraph Service. |
| <i>Victoria</i> : | The Hon. AGAR WYNNE, M.L.C., Postmaster-General.
J. SMIBERT, Esq., Deputy Postmaster-General. |
| <i>South Australia</i> : | The Hon. JOHN ALEXANDER COCKBURN, M.D., Lond., Minister of Education and Agriculture.
Sir CHARLES TODD, K.C.M.G., M.A., F.R.S., &c., Postmaster-General and Superintendent of Telegraphs. |
| <i>Queensland</i> : | The Hon. WALTER HORATIO WILSON, M.L.C., Postmaster-General and Minister of Education.
J. McDONNELL, Esq., Under-Secretary, Post and Telegraph Department, and Superintendent of Telegraphs. |
| <i>Western Australia</i> : | The Hon. STEPHEN HENRY PARKER, Q.C., M.L.C., Colonial Secretary.
R. A. SHOLL, Esq., Postmaster-General and General Superintendent of Telegraphs. |
| <i>Tasmania</i> : | The Hon. JOSEPH GEORGE WARD, M.H.R., Colonial Treasurer, Postmaster-General, and Electric Telegraph Commissioner, Minister of Marine, Commissioner of Customs, and Minister of Industries and Commerce, New Zealand. |
| <i>New Zealand</i> : | The Hon. JOSEPH GEORGE WARD, M.H.R., Colonial Treasurer, Postmaster-General, and Electric Telegraph Commissioner, Minister of Marine, Commissioner of Customs, and Minister of Industries and Commerce.
W. GRAY, Esq., Secretary, Posts and Telegraphs.
J. K. LOGAN, Esq., Telegraph Engineer. |

APPOINTMENT OF PRESIDENT.

On motion of the Hon. Mr. KIDD (New South Wales), *Resolved, nemine contradicente*, That the Hon. Mr. Ward (New Zealand) be President of this Conference.

ADMISSION OF THE PRESS.

On motion of the Hon. Mr. WARD (New Zealand), seconded by the Hon. Dr. COCKBURN (South Australia), *Resolved*, That the Press be admitted to the meetings of this Conference.

PRESIDENT'S ADDRESS.

The Hon. the PRESIDENT then addressed the Conference, as follows:—

Gentlemen: I desire, in the name and on behalf of New Zealand, to welcome you to this colony. I assure you it affords me the greatest possible pleasure to have you amongst

us, and I feel greatly honoured at having been asked by you to preside upon this important occasion. It has been my pleasure to be present at two Conferences in the other colonies, and I am bound to express the opinion that, as the result of those Conferences, a great deal of good has been done, not only to the departments immediately concerned, but also to the colonies generally. As a result of Conferences of this kind a much closer union is brought about than previously existed between the respective countries; and I think every impartial observer will admit how desirable it is that these colonies should be brought closer and closer together, considering the circumstances in which they are placed. Amongst other things that Post and Telegraph Conferences have done has been that of causing people in public positions to think more of the necessities and requirements of the various colonies, and in that respect I am sure this Conference will add another link to the chain which many people are very desirous of seeing welded—namely, a closer union amongst all the colonies. I also trust that during your visit here you may, in addition to business and work, thoroughly enjoy yourselves. We will do our best to make your visit agreeable, but I feel confident nothing we can do can repay the hospitable treatment we have received from time to time in the other colonies. I also hope your visit may prove to be beneficial to you in your representative capacity. When visiting the other colonies I saw many things that were of considerable value to me, and, in turn, I hope you will, during your visit here, see things that will prove of value to you.

I should like to take this opportunity of congratulating a gentleman who sits at this table—a gentleman who has been to every Postal Conference that has taken place in the colonies—upon the marked distinction which has been conferred upon him by the Queen. I refer to our esteemed friend and visitor, Sir Charles Todd, Postmaster-General, South Australia. We all heard with the greatest possible pleasure of the conferment upon him of the distinguished honour so well earned. I desire to say that I hope he may live long to enjoy it. That he has worthily filled the important positions which he has held in the past goes without saying.

It now only remains for me to say I trust that, in the important matters which the Conference will deliberate upon on this occasion, we shall be able to arrive at decisions in the direction of enabling something practical to be done. The ordinary public has little conception of the vast amount of good which has been done in the postal-telegraphic service by these conferences. Speaking for myself, I recollect very well many defects and coggings that existed in the Post and Telegraph Department, owing to the fact that the colonies were separated, and there was no common platform for them to work upon; defects were difficult to remove, and much inconvenience was caused to the public. It is well known to all who are present that the whole machinery has been greatly improved. The facilities formerly existing have been so improved that the thousands of users of the Post and Telegraph Service now have their business carried on all over the world with such smoothness and accuracy that they scarcely know of the large transactions that are hourly taking place.

The cheapening of rates, which has been one of the characteristics of recent times, has been going on almost without notice; and it is to my mind one of the remarkable evidences of the age that the postal-telegraphic services have been the means of bringing foreign countries and the colonies themselves closer together than by any other means, not even excluding steam, that could possibly be adopted.

I can only say that I welcome you most heartily. I hope you may enjoy your visit, and that the result of the proceedings may be both satisfactory and profitable to the whole of the colonies.

APPOINTMENT OF SECRETARY TO THE CONFERENCE.

On motion of the Hon. Mr. WARD (New Zealand), seconded by the Hon. Mr. WILSON (Queensland), *Resolved*, That Mr. L. Stowe be appointed Secretary to this Conference.

REPRESENTATION OF TASMANIA.

The Hon. Mr. WARD (New Zealand) informed the Conference that he had been asked to represent Tasmania at the Conference, but that the official notification of his appointment had not arrived but was expected to be here this day.

COMMISSIONS PRESENTED.

The following honourable gentlemen laid their Commissions on the table, viz. :—

- The Hon. John Kidd, New South Wales.
- The Hon. Agar Wynne, M.L.C., Victoria.
- The Hon. John Alexander Cockburn, M.D., Lond., South Australia.
- The Hon. Walter Horatio Wilson, M.L.C., Queensland.
- The Hon. Stephen Henry Parker, Q.C., M.L.C., Western Australia.
- Mr. Richard Adolphus Sholl, Western Australia.

ORDER PAPER.

A list of subjects for consideration having been laid upon the table. (*Vide Appendix A, p. iii.*)

On motion of the Hon. Mr. WARD (New Zealand), *Resolved*, That the list of subjects for consideration, with the exception of Nos. 1, 2, 5, 9, 24, and 46, be referred to a Committee, consisting of the heads of departments, to report to this Conference.

ORDERS OF THE DAY.

On motion of the Hon. Mr. WYNNE (Victoria), seconded by the Hon. Mr. PARKER (Western Australia), *Ordered*, that the Nos. 1, 2, 3, 9, 24, and 46, on this day's Order Paper be made Orders of the Day for to-morrow.

PAPERS.

The Hon. Dr. COCKBURN (South Australia) laid upon the table,—

Papers relative to the Federal Mail-contracts.—Ordered to be printed. (*Vide Appendix D, p. xxii.*)

The Hon. Mr. WILSON (Queensland) laid upon the table,—

Letters from the Hon. the Premier, Queensland, to the Hon. the Postmaster-General, Washington, relative to the San Francisco Mail-service Subsidy.—Ordered to be printed. (*Vide Appendix E, p. xxvii.*) Also—

Report of the Postmaster-General of Queensland upon certain Resolutions of the Postal and Telegraph Conference held in March, 1893.—Ordered to be printed. (*Vide Appendix E, p. xxv.*) Also—

Return of the Queensland Telegraph Service, 1893.—Ordered to be printed. (*Vide Appendix J, p. xliv.*)

RETURN RELATIVE TO REDUCED RATES OF TELEGRAMS.

The Hon. Mr. KIDD (New South Wales) asked the Hon. the President, If he would lay upon the table a statement of the effect of the reduced rates of telegrams over the Australian Colonies? To which the Hon. Mr. WARD replied that he would lay the return asked for on the table to-morrow.

ADJOURNMENT.

On motion of the Hon. Mr. WARD, *Resolved*, That this Conference do now adjourn until 10 a.m. to-morrow.

Then the Conference adjourned.

TUESDAY, 6TH MARCH, 1894.

THE Conference met at 10 a.m.

PRESENT:

<i>New South Wales</i> :	The Hon. JOHN KIDD, M.L.A., Postmaster-General. S. H. LAMBTON, Esq., Deputy Postmaster-General. P. B. WALKER, Esq., M.I.C.E., M.I.E.E., Secretary, Telegraph Service.
<i>Victoria</i> :	The Hon. AGAR WYNNE, M.L.C., Postmaster-General. J. SMIBERT, Esq., Deputy Postmaster-General.
<i>South Australia</i> :	The Hon. JOHN ALEXANDER COCKBURN, M.D., Lond., Minister of Education and Agriculture. Sir CHARLES TODD, K.C.M.G., M.A., F.R.S., &c., Postmaster-General and Superintendent of Telegraphs.
<i>Queensland</i> :	The Hon. WALTER HORATIO WILSON, M.L.C., Postmaster-General and Minister of Education. J. McDONNELL, Esq., Under-Secretary, Post and Telegraph Department, and Superintendent of Telegraphs.
<i>Western Australia</i> :	The Hon. STEPHEN HENRY PARKER, Q.C., M.L.C., Colonial Secretary. R. A. SHOLL, Esq., Postmaster-General and General Superintendent of Telegraphs.
<i>Tasmania</i> :	The Hon. JOSEPH GEORGE WARD, M.H.R., Colonial Treasurer, Postmaster-General, and Electric Telegraph Commissioner, Minister of Marine, Commissioner of Customs, and Minister of Industries and Commerce, New Zealand.
<i>New Zealand</i> :	The Hon. JOSEPH GEORGE WARD, M.H.R., Colonial Treasurer, Postmaster-General, and Electric Telegraph Commissioner, Minister of Marine, Commissioner of Customs, and Minister of Industries and Commerce. W. GRAY, Esq., Secretary, Posts and Telegraphs. J. K. LOGAN, Esq., Telegraph Engineer.

REPRESENTATION OF TASMANIA.

The Hon. Mr. WARD (New Zealand) laid upon the table a telegram from the Premier of Tasmania, authorising him to represent Tasmania at this present Conference.

POSTAL CONFERENCE CORRESPONDENCE.

The Hon. Mr. WYNNE (Victoria) moved, and the question was proposed, That in future all correspondence relative to the Postal and Telegraph Conference be forwarded by the Government of South Australia.

The motion was, with the leave of the Conference, withdrawn.

PAPERS.

The Hon. Mr. WARD (New Zealand) laid upon the table,—

A Return relative to the Intercolonial Cable Guarantee.—Ordered to be printed. (*Vide Appendix J, p. 1.*) Also—

A Return of Telegraph Business in New Zealand, 1893.—Ordered to be printed. (*Vide Appendix J, p. I.*) Also—

Copy of a Letter sent to Fiji, inviting the Attendance of a Representative at the Postal Conference in Wellington.—Ordered to be printed. (*Vide Appendix H, p. xlvi.*)

The Hon. Mr. KIDD (New South Wales) laid upon the table,—

Further Correspondence relative to the Representation of Fiji at the Postal Conference.—Ordered to be printed. (*Vide Appendix H, p. xli.*)

The Hon. Mr. WARD (New Zealand) laid upon the table,—

Copy of a Telegram from the Hon. J. Henry, Treasurer, Hobart, to the Hon. Mr. Ward, relative to the Federal Mail-service. (*Vide Appendix D, p. xxiii.*)

NOTICES OF MOTION.

Notices of motion relative to the establishment of a Pacific cable, telegraph and mail subsidies, and colonial tariff were given in by the Hon. Mr. WARD (New Zealand); and by the Hon. Mr. WYNNE (Victoria), relative to conditions being prepared upon which fresh tenders for the Federal mail-service should be called for.

FEDERAL MAIL-SERVICE VIA SUEZ.

The Hon. Mr. KIDD (New South Wales) moved, and the question was proposed, That this Conference agrees to the extension of the present Federal mail-contracts with the Peninsular and Oriental and Orient Companies for a period of two years from 31st January, 1895.

Debate arose thereupon.

Hon. Mr. KIDD (New South Wales).—Mr. President : I consider that the best course to take with regard to the first question which appears on the Order Paper for to-day is just to move that the service be continued, or, rather, that the contract be continued, for a period of two years beyond the present year. We can clearly understand that it is impossible to enter into a new contract in time to take up the running at the expiration of the present contract; therefore it is necessary that we should make some arrangements to continue the present contract for a period, so as to enable the colonies and the Imperial authorities to thoroughly thresh out the conditions under which they are prepared to subsidise any line of steamers which may tender for a new contract. It is explained in the letter from the London Post Office, dated the 1st September, that it would be almost impossible in that short time to have proper arrangements made, or to find companies that would be likely to be in a position to tender at so short notice—namely, between this and the 31st January next. They give the reason in their letter of the 1st September. Their reason for it is that their India and China contracts would fall in within three years of the expiration of the present contract with the colonies. Beyond that it does not concern the colonies. But, in the letter dated the 26th January, they think that we might extend the period for a year after the expiration of the present contract; and they think there is no doubt that the contractors would be prepared to agree to the extension for another year. Now, I think another year would put New South Wales in as great a difficulty as we are in at the present time. We are not prepared at this Conference, I think, to agree as to the conditions we should lay down, or to ask the Imperial authorities to agree with us as to the conditions under which we should subsidise another contract. Therefore, as we require some time, I think it would be better for us to run on for two years instead of one year, as being midway between one year and three years. Three years is, I think, rather a long period, and if we could get the contractors to accept the extension for two years it would be much better than three years or one. I now, therefore, make that suggestion, without entering into the question of endeavouring to make any fresh conditions. That, of course, would be impossible. The contractors would not be likely to alter the present conditions for the sake of one or two years, and I do not think we should consider that phase of the matter. It would be a very proper thing, of course, before we enter into any new contracts to lay down other conditions such as were mentioned by the present President of the Conference, stipulating as to certain accommodation on board mail-boats for the carrying of frozen meat, butter, &c. That, however, is a question which, at the present time, we need not go into. I am beginning to think when I see a vessel like the "Gothic" lying in Wellington Harbour that when there is business to be done companies will find accommodation to carry on that business without mixing it up with postal subsidies or anything of that kind. I consider it would be a mistake to make any conditions: when trade is to be done the companies will see that provision is made for keeping pace with that trade. The fact of a steamer of the magnitude of the "Gothic" coming here without any conditions as to subsidies, or anything else, is ample evidence that the great companies of the world will see where trade is to be found, and that they will make good provision for it without any encouragement in the way of postal subsidies. However, that, I think, is a question we need hardly discuss at any length at the present time. I do not think we should hamper the continuation of the present contract for two years by proposing new conditions. As for any proposal to amend the conditions of the present contract, I feel quite sure that the great companies which are the parties to that contract for the carrying of mails would not entertain them for a moment. And the Imperial authorities I do not think would for a moment ask us to agree to any new conditions. Without saying anything further, I will move, for the reasons I have stated, That we join with the Imperial authorities and endeavour to make arrangements with the present companies to continue the services for two years longer, which will give us ample time, and not too much time, to make all the necessary arrangements, and will also give time to intending tenderers for the carrying of our mails in the future. I might just say that any proposal of this kind is always subject to the parliamentary approval of the several colonies. I rather like to hedge myself in in this way, as, though we may agree to a proposal, at the same time it prevents Parliament taking up the position that we did not submit matters to them before finally committing ourselves to them.

Hon. Mr. WYNNE (Victoria) : Sir, to some extent I agree with the views of the Hon. Mr. Kidd, but I think there are reasons why the time should be extended for one instead of two years. In the first letter written by the British Post Office it is suggested that the term should be extended for three years, so that they can call for tenders for the whole of the mail-services for the East—that is, India, China, and Australasia. If we make it for two years it is neither one thing nor the other. And in the second letter, of the 26th January, 1894, Mr. Forman there states that he does not think the Home Government would agree to a longer extension than one year; so it seems to me that, in the face of that letter, it would be useless to recommend an extension for a longer period. If we suggest two years it will lead to fresh correspondence, and may require the calling of another Conference to decide upon this question. I think, however, we should take some responsibility upon ourselves in connection with this, and I am prepared to go the length of agreeing to an extension for one

year, for this reason : that it is impossible now to call for tenders returnable by the 31st January next year, whereas between now and 1896 there ought to be ample time within which to formulate our views ; and I think this Conference should decide as far as possible as to the terms. Last year, at Brisbane, we suggested that tenders should be called for an extension, and we formulated our views. If we say two years the work has to be done again. We should make up our minds what we do want, and let the British Government know our views on the matter as regards each colony. All the Australian Colonies are largely indebted to the British people for borrowed money, and it is necessary that we must increase our exportable products. New Zealand has shown an example with reference to frozen mutton, and I think Australia is endeavouring to follow on these lines. At present upwards of one million pounds' worth of butter is being exported annually from the three colonies—New South Wales, Victoria, and South Australia. We have not accommodation for butter, and I would suggest that in this extension for one year we should endeavour to compel the companies to provide space for the carriage of these products. I do not know that for one year we can absolutely insist upon it, but if a strong communication comes from these colonies that the companies should provide space I think they will do it. Their inclination is in the direction of assisting the colonies in this freezing business a little further with a fixture of lower rates, and I think the British Post Office authorities will not put any obstacles in the way of the colonies. They look at it simply from a postal point of view. We have to go a little further, and we must assist the colonies in getting rid of their frozen produce. It would not pay the large steamers to come to the colonies to take away small quantities of butter. The mail-steamers have a certain amount of space available, and if we can arrange that they shall carry this produce at a reduced rate I think it will do great good to the colonies, and no harm to the Home authorities. The companies have the space available, and I think we should endeavour to make use of it by means of this Conference. At the end of the proposed extension, when tenders are called for, other companies perhaps will tender, probably at a reduced rate, and also including the carriage of our products. I do not know whether it is permissible under this motion to discuss the question of the clauses or the terms of the contract which is to be made, but I think it is practicable for us to have this service extended for one year, and to have provision made that frozen produce should be carried by these mail-steamers at reduced rates, rather than to extend the contract for two years, which is neither one thing nor another. The Home authorities want it for three years and not for two, but I think as their last letter suggested one I would suggest to the Hon. Mr. Kidd that he should make his term one year.

Hon. Dr. COCKBURN (South Australia) : Sir, it appears to me there are three alternatives before the Conference : either to call for new tenders at the expiration of the present contract, or to renew the service for three years, or for one year. It appears these are the alternatives at present. The first, I am afraid, is impracticable, much as I should like to see a new contract to incorporate the views that the Hon. Mr. Wynne has expressed, seeing that to the Colonies of South Australia, Victoria, and New South Wales the carriage of produce is second only in importance to the carriage of their mails. I am afraid it is quite impossible with the short time at our disposal to do all this. I think we should strike out one of the alternatives, and therefore reduce it to the question of extending the original time by one year, or by three years. I agree with the Hon. Mr. Wynne, if the time is to be extended we should as far as possible fall in with the views of the Imperial Government, and make the contract either for three years or for one year. I think, myself, it would probably be best, in concert with the Home authorities, to fall in with their last suggestion, and make an extension of one year only ; but if we do so I think we should at once formulate, at this Conference, all that will be necessary as regards detail—with regard to the manner in which the tenders should be called, and also the stipulations that are to be expressed. If we do not do so we shall be faced at another Conference with the same difficulty as we are in now. If the time is to be extended for the purpose of giving more time to consider the details, then we must take time by the forelock. We know that one year is much too short. I do not think that two years is any too long to put into effect any resolution as to details, fresh stipulations, or any other matters considered necessary by this Conference. I therefore join with the Postmaster-General of Victoria in asking the Hon. Mr. Kidd to alter his resolution so as to make the extension for one year. I think, as the Hon. Mr. Parker says, there are certain considerations which would make three years advisable to work in with the India and China mails. I suppose, however, there are certain improvements which we can hardly bring forward without calling for fresh tenders. The Hon. Mr. Wynne suggested we should make strong representations to the companies with regard to lower freights, more storage, and also to allocate the storage so that it might be equally available for all the colonies. I should like to add that we are now doing a large trade in butter, and at present London is our only market. Everything has to go to London ; and I am informed that for butter and other produce it is possible to do a trade in the provincial towns. We have been considering whether it would not be well to ask the contracting companies to give bills of lading to provincial towns at the same rates as they do to London. They could get concessions on the English lines of railway. I think we should add that to the matters to be pressed on the companies. I know they will do all they can to fall in with our wishes ; at the same time they can hardly be expected to do all we desire during the existing contract, but they will if we make it one of the conditions in calling for tenders. Therefore I am inclined on the whole to support and fall in with the wishes last expressed by the Imperial Government, to extend the contract for one year. At the same time we should see that the same difficulty will not present itself at any future time. We should make all provision, and mention all stipulations the colonies think should be inserted and included in the tenders to be next called for. For this two years will not be too long.

Hon. Mr. WILSON (Queensland) : Referring to the remark of the Hon. Mr. Wynne, that if we asked for an extension of two years it would lead to a great amount of correspondence, and that we should therefore fall in with the suggestion of the British Postmaster-General, I would point out that if

we ask for a three years' extension it would lead to a great deal more correspondence, and we should probably not get what we asked. It would therefore be very much better for us to have an extension for one year, which would really mean one year and nine months. We should then have plenty of time to go into all these matters, and come to a satisfactory conclusion.

Hon. Mr. WARD (New Zealand) : On behalf of Tasmania, I desire to say that I shall support the Hon. Mr. Wynne in the view he takes of this matter. The Tasmanian Government ask me to do this, and state in the cablegram they have sent me as well, "That it should be conditional with the new ocean mail-contract that the steamers should be required to afford conveniences for the carriage of frozen meat, butter, fruit, and other products of Australia at stipulated maximum rates for freights for the same, and to state what cold storage they will be prepared to supply, having due regard to the requirements of each colony." Of course, while I support on behalf of Tasmania the view the Hon. Mr. Wynne takes of it, at the same time I wish to express my own opinion on this matter. I think every effort should be made by the colonies to secure trade for the continuance of trade for the frozen meat, butter, fruit, and other produce that may be sent to England ; at the same time I feel it is only right to tell you what our experience in regard to the carriage of frozen meat has been in this colony. Our experience has been that by the subsidised regular mail-carriers this class of business was not very workable ; the whole of our frozen meat and products of this colony are carried by steamers that are not subsidised at all. It is a very remarkable thing that, while our mails are going by steamers which we subsidise, the whole of the lines which are carrying our frozen meat and other produce are unsubsidised. The result of that is a keen competition between the liners to secure the frozen-meat business, quite independent of any assistance by mail-subsidies. Whereas, if you give an enormous subsidy to one particular line, you at once prevent any other line of steamers from coming to compete on even terms, with the result that you have in all probability to pay a higher rate for sending produce Home than you would have to pay if, by not giving subsidies, you allow free competition for the trade upon even terms. Here, in this colony, we have got no less than four lines of steamers, not one of which has a subsidy ; and, as a result of their competition, I am sure we have a lower rate to pay than if we had subsidised one of those lines of steamers, and thus prevented other lines from coming in. I think it is highly important that to enable the rapid transit of mails the Federal line of steamers should be subsidised, though I still entertain the opinion that there should be no fixed subsidy, but that payment should be on the basis of the weight of mails carried. At the same time you, gentlemen, being all interested in the frozen-meat business from Australia, should carefully consider whether it is a desirable thing to make the mail-steamer such strong competitors by paying a subsidy which would prevent a large number of the slower class of steamers from coming in to carry our frozen meat. I think the broad aspect of this should be carefully considered, and under any circumstances I am of opinion that the service should not be extended for longer than one year ; in the meantime, the whole question should be gone into carefully and fully. Our freight arrangements are very good from New Zealand, but any assistance I can give you in dealing with the matter will be readily given.

Hon. Mr. KIDD (New South Wales) : In answer to what has been said in opposition to my proposal for a two-years extension, I would like to point out that the reason why the Imperial authorities ask us, in the letter of 26th September, to agree to three years is not because it is going to be any convenience for us to wait until the termination of their India and China contract. We have nothing at all to do with those contracts. The service under which our mails are carried now is a Direct service, so that there is no reason at all why we should fall in with the suggestion of the Imperial authorities to extend it for three years if we do not think it convenient for us to do so ; and my only reason for suggesting an extension of two years is that I thought one year too short to give other companies an opportunity of coming into the field and tendering for this mail-service, otherwise we might actually be in the hands of two large companies. However, I am quite agreeable to amend my resolution, and make it one year. But I am certainly very much opposed to what Mr. Wynne suggests, namely, that we should try and clog this extension with any new conditions. I am quite sure that they would not agree to any new conditions for one moment. I think it would be almost foolishness for us to embody any new conditions with regard to the operation of one year. If we thought fit to extend it for three years it would be a different matter. We might be able to secure greater advantages from them for three years, but they realise as well as we do that an alteration for one year would be simply making a convenience of them. Another reason would be that it might be better for them to cut us off without extending it at all, because they are the two most powerful companies that are likely to secure the contract if between this and 31st January next we invite tenders. However, as it appears to be the expressed wish of the Conference to reduce it to one year, we might, if we do not meet again before the usual time next year, make some arrangement to communicate in the course of a few months with the Home authorities to invite tenders, and in the meantime agree as to what conditions we would desire to be imposed on those tendering. We should not wait until the meeting of the Conference next year, because we will then be in just about the same position as we are now. I think, therefore, it is necessary for us to take some action before this Conference breaks up to decide as to what we require in the interests of the colonies, and come to a common agreement, and have it embodied in the new contracts. It will not do to wait until a year has elapsed, but we will have to take action at a very early date to get the Imperial authorities to invite fresh tenders. It is not the same as any ordinary service. This is a very important service to the colonies, and of course all are fully alive to that. If we are going to have any special conditions beyond those embodied, the sooner we set to work to draw up these conditions the better. I think within the next few months action should be taken to set the Imperial authorities in motion to call for fresh tenders to take up the running under a new contract on the expiration of this extension which has been proposed—that is, the extension for one year. I ask leave to amend my motion accordingly.

Hon. Mr. WYNNE (Victoria) : I move, That there be added to this resolution a condition that the steamship companies furnish sufficient cool-storage space for the products of the various colonies in

their steamers leaving the different ports, in proportion to the space required by the respective colonies.

Hon. Mr. PARKER (Western Australia) : In order that this resolution shall have as much weight as possible, it struck me that the Governments of the various colonies might instruct their Agents-General to see the contractors at Home and further the objects of this resolution. Therefore, if my friends, Dr. Cockburn and Mr. Wynne, have no objection, I would suggest that these words be added to the resolution: "And that the Governments of the Australian Colonies be requested to instruct their respective Agents-General to do all in their power to further the objects of this resolution."

Hon. Dr. COCKBURN (South Australia) : I understood the Hon. Mr. Wynne to say simply that representation should be made; but there is no doubt this contract is a question of business, and I think a joint representation from the colonies which the contracting companies serve could not fail to have some degree of weight with them. They are as anxious to secure our goodwill as we are to recognise their services. It has been already a subject of consideration between the various Australian Colonies whether some representation should not be made by the Governments of the colonies asking for reduced freights, more certain cool-storage accommodation, and allocation of space. I think, Sir, this representation coming from individual Governments would have a certain weight, and I think a general representation coming from a Conference of this nature, where representatives of all the colonies are assembled, cannot fail to have still more weight. I do not understand the Hon. Mr. Wynne to say that the renewal of the contract should be subject to this stipulation—

Hon. Mr. WARD (New Zealand) : I presume, Dr. Cockburn, you will move a separate resolution?

Hon. Dr. COCKBURN (South Australia) : No, sir. I am going to support the Hon. Mr. Wynne in this matter. Would Mr. Wynne put this stipulation in this resolution or move a separate resolution? In either case I should have much pleasure in supporting him.

Then, the question being put as amended by the Hon. Mr. Kidd, with the leave of the Conference,

It was resolved in the affirmative.

Resolved, That this Conference agrees to the extension of the present Federal mail-contracts with the Peninsular and Oriental and Orient Companies for a period of one year from the 31st January, 1895.

VANCOUVER SERVICE.

The Hon. Mr. WILSON (Queensland) informed the Conference that no replies to their correspondence relative to the Vancouver service had been received.

CANADIAN MAIL-SERVICE.

The Hon. Mr. WARD (New Zealand) laid upon the table a letter from Mr. James Huddart, of the Huddart-Parker Company, relative to their contract with the Dominion Government.

Ordered to be printed. (*Vide Appendix F, page xxix.*)

COLOURED LABOUR ON MAIL-STEAMERS.

The Hon. Mr. WARD (New Zealand) laid upon the table a letter from Mr. A. D. Michie, agent for the Peninsular and Oriental Steam Navigation Company, addressed to the President of the Conference, relative to the employment of coloured labour on mail-steamer.

Ordered to be printed. (*Vide Appendix K, page li.*)

CANADIAN-PACIFIC MAIL-SERVICE.

The Hon. Mr. WARD (New Zealand), seconded by the Hon. Mr. KIDD (New South Wales), moved, and the question was proposed, That this Conference is favourable to a four-weekly service (alternating with the San Francisco service) between Australia, New Zealand, and Vancouver, the mail-steamer calling at one main port in New Zealand, and such ports in Australia as may be determined upon.

Debate arose thereupon.

Hon. Mr. WARD (New Zealand) said,—In order to elicit a discussion upon this important matter, I will submit a proposal to the Conference. In moving this resolution I desire to point out to the Conference this very important fact: that the whole of the colonies at the present time are contributing on the basis of mail-matter carried a certain amount to the maintenance of the San Francisco service, and it is within the knowledge of the whole of the colonies that that service will in all probability be continued, and will extract an amount in the future from the colonies similar to that which has been paid in the past. The Vancouver service, which opens up quite a different field, is one which I think should be encouraged by the whole of the colonies; and, as far as the New Zealand Government is concerned, we are prepared to subsidise that service to the extent of £10,000 a year, but not if the service is going to be one such as is indicated in the letter from Mr. Huddart—if it is going to be one which requires a line of steamers to run between Canada and Sydney only, and connecting with New Zealand by a branch line. The service to be of any use to this colony is one which, I think, should be looked upon as a commercial service, a service enabling our people to send any products they require to Canada and to obtain anything Canada should wish to send to us. If the business of transhipment were to come in, the service, commercially, would be greatly reduced in value. No one could afford to pay the transhipping rates. It seems to me that, looking at the extraordinary treatment the United States Government has extended to the whole of the colonies since the initiation of the San Francisco service, it is well that the colonies should take advantage of the opportunity of having a second string to its bow. If by the establishment of the Vancouver service we should bring the United States to realise what

they ought to do in giving a fairer contribution than in the past to the maintenance of the San Francisco service, it would be a very good thing indeed. I am bound to express the opinion that under no circumstances will the San Francisco service cease. It has got to that position now that even under the existing contract it receives from the colonies a very small amount compared with the large payments formerly contributed. Whatever the United States Government may do I think the San Francisco service will continue. If it is to remain an inferior one to that *via* Vancouver will depend upon the United States. The Canadian service opens up another connection between the British colonies. In the prospect that presents itself from a commercial point of view, I think it is a legitimate one for the Post Office to step in and give a reasonable subsidy, and now, I believe, is the right time to do it. I hope, myself, that the Imperial authorities will see their way to subsidise this service to a reasonable extent. I think, if the resolution I have submitted to the Conference is carried, good will be done. It is committing the Conference to nothing beyond inviting tenders for an alternative San Francisco service—namely, between England and the colonies *via* Vancouver and San Francisco. If the amount is considered too high, in the ordinary course of things it would be necessary to communicate with the whole of the colonies, and a basis arranged of payment of a proportional amount by each. No harm can be done by inviting the various companies to tender for such a service as I have indicated. I have very much pleasure in moving the following resolution : "That this Conference is favourable to a four-weekly service, alternating with the San Francisco service, between Australia, New Zealand, and Vancouver, the mail-steamer calling at one main port in New Zealand and such ports in Australia as may be determined upon."

Hon. Mr. KIDD (New South Wales): I would like to point out, in regard to the resolution you have submitted, sir, the position the New South Wales Government and the Canadian Government have placed themselves in with the Huddart-Parker Company. We have gone too far to invite tenders for a service by Vancouver, or, in fact, with the San Francisco line, and I do not think it would be possible to get any other companies than those engaged in the service to do anything in the matter. We are already a party to subsidising this line to Vancouver at the rate of £10,000 a year for three years, and our agreement is on all-fours with the agreement made by Canada for three years to the extent of £25,000. We were in hopes that you yourself would move a resolution at the last Conference, suggesting that we should endeavour to secure the service by Vancouver. At that time you expressed yourself in the same way as you have done to-day. Referring to the manner in which the United States Government treated the San Francisco service, we are not prepared to abandon that service any more than you are. In fact, we submitted a resolution to the House authorising the Government to enter into a contract with the Huddart-Parker Company *via* Vancouver; so that it is not for the purpose of supplanting the San Francisco service that we entered into a guarantee for a Vancouver service. If the other colonies agreed to subsidise the Vancouver route, we might be able to encourage the two companies to run their steamers alternately every fortnight, which would give us a fortnightly service instead of having the two companies running in competition with one another as at present, each leaving at times within a few days of the other, as is inevitable when one is a four-weekly and the other a monthly service. At the present time, the agreement ties us down that they may call at Brisbane and Fiji; there is nothing at all about New Zealand. I feel quite sure that if New Zealand enters into an arrangement to subsidise this new company, New South Wales would not be opposed to have the agreement altered, so as to fall in with any arrangement that might be made.

Hon. Mr. WARD (New Zealand): We might do so to the extent of £10,000.

Hon. Mr. KIDD (New South Wales): That might be a strong inducement. Of course, if the Queensland Government desired to make an arrangement, that might make the service rather a lengthy one, as it would then have to call at Queensland and New Zealand, as well as Fiji. But I do not value this service so much for the postal convenience it affords as for the sake of the connection for trade purposes. The Government which I represent might be quite willing, if the Queensland Government decided upon subsidising the new service, and concurs that New Zealand comes in also. Beyond this we cannot make further conditions, as we are tied by the agreement we have entered into. I can say on behalf of New South Wales that anything reasonable we will do, recognising it is more a matter for trade than postal convenience. I am sure we would not object to any conditions that New Zealand may be able to make with the company. We shall be very glad also to see Queensland in. Of course, I think it would be very much in the interest of Victoria to have a share in this contract, even to the extent of a £10,000 subsidy. However, it only concerns the colonies on the eastern seaboard, and I do not expect our friends from South Australia to come in, because I do not see in what way it can serve them. I do not see how it can serve Tasmania. I think the three colonies on the eastern seaboard, together with New Zealand, may find it a very great convenience to encourage a trade of this kind, apart from postal convenience. I may simply state that, in dealing with this company, we are only anxious to assist them in every possible way, recognising it is a very big undertaking they have entered upon. We would like them to succeed in it; at the same time, we will not do less for the San Francisco service than we have been doing. That is the understanding on which Parliament agreed to subsidise the new company. I am making this explanation to show the position we are in. We have entered into this agreement, and Canada has entered into a similar agreement. Therefore, in order to effect a fortnightly service we should have to get these colonies to come in also. It would serve New Zealand to a very much greater extent than any of the other colonies. We are anxious to open up a trade with Canada if possible, and that is a proper reason to enter into a contract to subsidise this company to the extent we have done. If there is no objection I will lay this copy of the agreement on the table. I have already pointed out that the Vancouver service is a monthly one, and the other is every twenty-eight days. If the companies agreed we might run the service every fourteen days; that is, alternately *via* San Francisco and Vancouver.

Hon. Mr. WILSON (Queensland) : Sir, I am unable to fall in with the suggestion that tenders be invited for this service, because I am really in the same position as the Hon. Mr. Kidd, except that Queensland has not yet come into this contract. We wanted the steamers to call at Keppell Bay as well as Brisbane, and it was on that point the negotiations fell through. I believe that something will still be done. Queensland is anxious that a service should be established between Vancouver and Australia, and intends to support it as far as she possibly can. Representations have been made which possibly may lead to some agreement between the parties. Under these circumstances, I prefer matters to remain as they are. Sir Thomas McIlwraith is now in London, and, no doubt, is negotiating further in the matter; therefore, I do not wish to hamper any action he may take at the present time.

Hon. Mr. WYNNE (Victoria) : Mr. President, this is a matter which does not concern Victoria very much from a mail-service point of view; but, from a trade aspect, the Victorian Government were anxious to assist in the service if the company could have seen their way to make Melbourne a port of call; but the company are restricted as to the number of steamers, and were unable to do it. I have no doubt if the service is a success—which I trust it will be, in the interests of the colonies and Canada—the company will have to increase their fleet, and I have no doubt the Victorian Government will consider the matter in a favourable light, provided the company can arrange for their steamers to call at Melbourne, in the same way as the Government of New Zealand are anxious the company should call at New Zealand. We are at present well served by the existing service, and do not look at this service very closely from the point of view of a mail-service.

Hon. Mr. WARD (New Zealand) : In reply, I would like to say it seems to me that the purpose I had in view has been to some extent served by the discussion which has arisen on this motion. I desire to point out that this motion does not in any way invite the calling of tenders, neither does it make a commitment. It leaves the question, as far as Queensland and Victoria are concerned, entirely to be settled in the way of details as between the respective colonies and the contracting parties in the future. The motion is, "That this Conference is favourable to a four-weekly service, alternating with the San Francisco service between Australia, New Zealand, and Vancouver, the mail-steamers calling at one main port in New Zealand and such ports in Australia as may be determined upon." My own opinion is it would be as well if the Conference had given some marked action in this direction by passing this resolution. However, I propose, with the permission of the Conference, to ask to be allowed to modify the resolution, and to accept the debate which has taken place upon it as an indication of the desire of some of the colonies to support this service. As far as New Zealand is concerned, I may say that if the Vancouver steamers call at a port within the colony, either Auckland or Wellington, we will subsidise the service to the extent of £10,000 a year. We are very well served by mail-services as it is. We look upon the services entirely from a trade point of view, and not for the convenience of carrying mails at all, but as giving us fresh communication with an important country. On those grounds we will be prepared to subsidise this service to the extent of £10,000 a year, provided the steamers call at our colony.

Hon. Mr. KIDD (New South Wales) : I would suggest a slight amendment to the motion, if you will allow me, so as to make the motion read as follows: "That this Conference is favourable to a four-weekly service, alternating with the San Francisco service, between Australia, New Zealand, and Vancouver, the mail-steamers calling at one main port of New Zealand and at such ports of Australia as may be determined upon." This would not interfere with the present contract or with the future.

Hon. Mr. PARKER (Western Australia) : I regret to say I shall not be able to vote on this question.

Hon. Mr. WARD (New Zealand) : I accept the Hon. Mr. Kidd's suggested alteration.

Then, the question being put, it was resolved in the affirmative.

Resolved, That this Conference is favourable to a four-weekly service, alternating with the San Francisco service, between Australia, New Zealand, and Vancouver, the mail-steamers calling at one main port in New Zealand, and at such ports of Australia as may be determined upon.

CANADIAN-PACIFIC MAIL-SERVICE.

The Hon. Mr. KIDD (New South Wales) laid upon the table particulars of the agreement between the Hon. the Postmaster-General, Sydney, and Mr. James Huddart, relative to the Sydney and Vancouver mail-service.

Ordered to be printed. (*Vide Appendix F*, p. xxix.)

SAN FRANCISCO MAIL-SERVICE.

The Hon. Mr. WARD (New Zealand), seconded by the Hon. Mr. KIDD (New South Wales), moved, and the question was proposed, That, in the opinion of this Conference, it is desirable that a four-weekly service *via* San Francisco be continued, and that strong representations be again made to the United States Government pointing out the inadequate support given to the service by them, and urging for an increased payment in support of the line, and that further representations be made to obtain a reduction in the heavy overland charges.

Debate arose thereupon.

Hon. Mr. WARD (New Zealand) having moved the above resolution,

Hon. Mr. WILSON (Queensland) : I do not think anything can be gained by discussing this matter, as the reply from the United States Government was unfavourable.

Hon. Mr. KIDD (New South Wales) : Sir, I second the resolution. At the same time I should like to get some expression of opinion from yourself as to what you intend to do with regard to the renewal of the contract. I wish to reiterate what we have said before, that we are prepared to subsidise to the same extent. Of course, all subsidies are with the approval of Parliament. The present contract falls in November next.

Hon. Mr. WARD (New Zealand) : I am prepared to renew the contract for this service. Three years was the last term we renewed it for, and I am disposed to renew it for a similar period.

Hon. Mr. KIDD (New South Wales) : Before we renew the service we may have an opportunity of getting them to agree to the resolution which we have just passed. They might arrange their arrival and departure so as to make a fortnightly service. If you carry out your intention with regard to Vancouver with the Huddart-Parker Company, it would be a favourable opportunity for you to know that, so as to get them to fall in with an arrangement of that kind to give you a fortnightly service.

Hon. Mr. WARD (New Zealand) : I will undertake to see that provision is made for the service being a fortnightly one, assuming the Vancouver service is established, and we shall thus have a fortnightly service.

Then, the question being put, it was resolved in the affirmative.

Resolved, That, in the opinion of this Conference, it is desirable that a four-weekly service *via* San Francisco be continued, and that strong representations be again made to the United States Government, pointing out the inadequate support given to the service by them, and urging for an increased payment in support of the line, and that further representations be made to obtain a reduction in the heavy overland charges.

DELEGATE TO NEXT UNIVERSAL POSTAL UNION CONGRESS.

The Hon. Mr. KIDD (New South Wales), seconded by the Hon. Mr. Wilson (Queensland), moved, and the question was proposed, That the question of the appointment of a delegate to attend the Postal Union Congress at its next meeting be postponed.

Hon. Mr. KIDD (New South Wales) : Sir, we went into this matter at the Brisbane Conference, expecting that this Conference would have been held in 1896. It has now been postponed until 1897, and I think we can well allow this matter to stand over until the next Intercolonial Conference.

Hon. Dr. COCKBURN (South Australia) : I presume a Conference will be held. This is a question which can be considered apart from a Conference. It could be settled by communications between the different Governments. At the same time I hope the Intercolonial Conferences will be continued, as I recognise them to be of infinite benefit.

And the question being put, it was resolved in the affirmative.

REPRESENTATION OF FIJI.

The Hon. Mr. WARD (New Zealand), seconded by the Hon. Mr. Wilson (Queensland), moved, and the question was proposed, That no further action be taken with regard to the representation of Fiji at the Postal Union Congress and the Intercolonial Conferences until replies have been received from Fiji.

Hon. Dr. COCKBURN (South Australia) : I think that as Fiji has already been communicated with on the question, and as there is a general feeling that as far as possible the colonies which have a communitive interest are working together in this respect, I presume community of interest is the ground upon which any colony would be represented. It seems to me that if Fiji feels that interest she will interest herself to secure representation. Fiji, perhaps, is not on all-fours with the other colonies, being a Crown colony, and therefore partly representing Imperial interests; but still I think it might be as well that Fiji should not be further pressed in the matter.

Hon. Mr. WARD (New Zealand) : Then, if the Conference is agreeable, I will simply put a note against this item in the proceedings, "No further action." That will enable me to understand the position.

The question being put, it was resolved in the affirmative.

FEDERAL MAIL-SERVICE *VIA* SUEZ.

The Hon. Dr. COCKBURN (South Australia) moved, and the question was proposed, That the heads of departments revise the conditions of proposed new contracts in connection with the Federal mail-service *via* Suez.

Hon. Dr. COCKBURN (South Australia) : I observed that in Brisbane the permanent heads of departments reported as to the new contracts under the Federal mail-service, and, as there are several matters referred to the permanent heads in connection with this question, I wish to understand whether the permanent heads are, in their report, considering any revision which may be necessary to bring their suggestions up to date.

Hon. Mr. WARD (New Zealand) : It is not so at present. There is a notice of motion by Mr. Wynne for to-morrow, to the effect "That the conditions be now settled for which fresh tenders for Federal mail-service are to be called."

Hon. Dr. COCKBURN (South Australia) : There are one or two matters in connection with this, the details of which were settled at the last Conference at Brisbane, which might be revised on behalf of South Australia. There is one matter I should like to be looked into again, and that is with reference to the date of the departure of mails from Adelaide. It was originally proposed at the Conference to be Thursday, at 2 o'clock, but was afterwards altered to Saturday at 2 o'clock, and that is how it stands now. As far as I can gather it is questionable whether the alteration is prudent. I may say at once that Saturday is regarded as a difficult day for the departure of a mail from Adelaide. I believe the mails should leave on Friday. I mentioned the fact this morning, that we were endeavouring to carry our ramifications of trade and produce into the various provincial centres in England, and I think it is desirable that the Australian letters should arrive in England so as to be answered not only in London, but also in the provincial centres by the out-coming mail. The mails now reach London on Sunday or Monday, giving them plenty of time to get to the provinces and be replied to; but the mails leaving on Saturday would preclude that. A deputation waited on the

Government I represent, and I believe similar deputations waited upon other Governments, to urge that in any new contracts for the Federal mail-service the contracting companies should be asked to state what class of labour they intend to employ. Of course we know that the French and German boats are equipped in such a way that if at any time national disturbance breaks out they would be available for defence purposes. It has always been a feeling that has animated Postal Conferences that our mails should be carried by English boats, which in case of emergency could act in a similar manner. This would hardly be possible unless the ships were manned by such a crew as would be available for the purpose, and therefore it would be well, when going further into the matter, to make a stipulation in the Federal mail-service contract that the tenderers should be asked to state what class of labour they intend to employ. I mention this to prepare the ground for any views which may be expressed by the colonies. I am bound to raise the matter, because, in reply to a deputation, I stated I would see that the matter was brought before the Conference. I regard it as of considerable, if not paramount, importance. Therefore, that must be my excuse at the present time in bringing it forward.

The question being put, it was resolved in the affirmative.

Resolved, That the heads of departments revise the conditions of proposed new contracts in connection with the Federal mail-service *via* Suez.

ADJOURNMENT.

On motion of the Hon. the PRESIDENT, *Resolved*, That this Conference do now adjourn until 10 a.m. to-morrow.

Then the Conference adjourned.

WEDNESDAY, 7TH MARCH, 1894.

THE Conference met at 10 a.m.

PRESENT:

<i>New South Wales</i> :	The Hon. JOHN KIDD, M.L.A., Postmaster-General. S. H. LAMPTON, Esq., Deputy Postmaster-General. P. B. WALKER, Esq., M.I.C.E., M.I.E.E., Secretary, Telegraph Service.
<i>Victoria</i> :	The Hon. AGAR WINNE, M.L.C., Postmaster-General. J. SMIBERT, Esq., Deputy Postmaster-General.
<i>South Australia</i> :	The Hon. JOHN ALEXANDER COCKBURN, M.D., Lond., Minister of Education and Agriculture. Sir CHARLES TODD, K.C.M.G., M.A., F.R.S., &c., Postmaster-General and Superintendent of Telegraphs.
<i>Queensland</i> :	The Hon. WALTER HORATIO WILSON, M.L.C., Postmaster-General and Minister of Education. J. McDONNELL, Esq., Under-Secretary, Post and Telegraph Department, and Superintendent of Telegraphs.
<i>Western Australia</i> :	The Hon. STEPHEN HENRY PARKER, Q.C., M.L.C., Colonial Secretary. R. A. SHOLL, Esq., Postmaster-General and General Superintendent of Telegraphs.
<i>Tasmania</i> :	The Hon. JOSEPH GEORGE WARD, M.H.R., Colonial Treasurer, Postmaster-General, and Electric Telegraph Commissioner, Minister of Marine, Commissioner of Customs, and Minister of Industries and Commerce, New Zealand.
<i>New Zealand</i> :	The Hon. JOSEPH GEORGE WARD, M.H.R., Colonial Treasurer, Postmaster-General, and Electric Telegraph Commissioner, Minister of Marine, Commissioner of Customs, and Minister of Industries and Commerce. W. GRAY, Esq., Secretary, Posts and Telegraphs. J. K. LOGAN, Esq., Telegraph Engineer.

HOUR-ZONE TIME.

The Hon. Mr. WILSON, (Queensland,) laid upon the table a letter from the Hon. Sir Thomas McIlwraith to the Premiers of the Australian Colonies, relative to the Hour-zone Time.

Ordered to be printed. (*Vide Appendix I*, p. xlvi.)

CANADIAN-PACIFIC CABLE.

The Hon. Mr. WARD (New Zealand), seconded by the Hon. Mr. KIDD (New South Wales), moved, and the question was proposed, That, considering the important interests involved, both of a national and commercial character, in the establishment of a Pacific cable, the representatives of the respective colonies assembled at this Conference recommend their Governments to consider the desirability of entering into a guarantee with the other countries interested for a period not exceeding fourteen years, and to guarantee interest at 4 per cent. on a capital of not more than £1,800,000 to any company undertaking the laying of a Pacific cable; the tariff not to exceed 3s. per word for ordinary telegrams, 2s. per word for Government telegrams, and 1s. 6d. per word for Press telegrams, to and from Great Britain and the colonies; and that the United Kingdom be asked to join in the guarantee; the routes to be either of the following: Brisbane to Ahipara Bay (New Zealand), Ahipara Bay to Suva, Suva to Apia, Apia to Fanning Island, Fanning Island to Sandwich Islands, Sandwich Islands to Vancouver: or, from New Zealand to Suva, Suva to Apia, Apia to Fanning Island, Fanning Island to Sandwich Islands, Sandwich Islands to Vancouver.

Hon. Mr. WARD (New Zealand), in moving the resolution standing in his name, in a slightly amended form, said: The delegates who are present are all very conversant with the position in con-

nection with this cable. I need not elaborate any remarks I intend to make in moving the motion, as we have already discussed it very fully in Committee. I recognise it to be a very important matter. It is one which I think will have a considerable influence for good upon both the national and commercial affairs of the whole of the countries concerned. It will be an important link between the colonies and Canada, and a most useful cable for the Pacific Islands at which it is proposed to touch. The way in which the resolution now stands renders it quite unnecessary for me now either to point out whether the proposed cable will pay or not, or the amounts that will be required to be contributed by the respective colonies by way of guarantee, for the reason that the motion now is that a rate of interest of 4 per cent. is to be guaranteed by the whole of the countries concerned upon a fixed capital of £1,800,000 the profit or loss will only affect any company which undertakes it. That will amount to a guarantee of £72,000 a year for a period not exceeding fourteen years by the whole of the colonies interested, and that amount, divided upon the basis of population between the various colonies, works out, I may say, to very moderate sums indeed. So far as the colonies are concerned, Canada and England will have to bear the greater proportion of the cost of the guarantee. It is important, however, for us to recognise that we are not going to do anything by way of fixed subsidy; that the system we adopt is a system of guaranteeing only. I should also like to say it is not to be expected that either South Australia or Western Australia, from the position in which they are at present placed, and from the existing interests they are already concerned in, should come into this guarantee. It is recognised by the delegates who are here that neither of these colonies can be expected at present to do so. I have only to add that this cable, with the exception of Samoa and Honolulu, will pass entirely through British territory. Samoa is in a neutral position, and in that respect is to be distinguished from a colony, or place, which happens to be under the flag of a foreign nation. The routes indicated, it will be observed, render it possible for the Eastern Extension Cable Company (who are the proprietors of the existing cables) to tender, and to utilise existing cables between Australia and New Zealand. On the other hand, the proposal leaves it open to the world to compete for the laying of a cable between Australia and New Zealand, and from New Zealand onwards, as indicated. In moving the resolution I propose to ask the Conference to allow it to be printed and circulated, and to come up for final consideration to-morrow.

On motion of the Hon. Mr. KIDD (New South Wales), *Ordered*, That this debate be now adjourned.

Ordered that this debate be resumed to-morrow.

INTERCOLONIAL TARIFFS.

On motion of the Hon. Mr. WARD (New Zealand), seconded by the Hon. Mr. WYNNE (Victoria), *Resolved*, That the delegates to this Conference, recognising the value of the decisions arrived at in reference to joint postal and telegraph services, by periodical meetings of representatives from the various colonies, would suggest to their respective Governments that similar advantages, in reference to trade relations between the respective colonies in the direction of reciprocity, would ensue, if similar conferences could be arranged to deal with questions in connection with intercolonial tariffs.

FEDERAL MAIL-SERVICE CONTRACT.

The Hon. Mr. WYNNE (Victoria), seconded by the Hon. Dr. COCKBURN (South Australia), moved, and the question was proposed, That the conditions be settled at this Conference upon which fresh tenders for the Federal mail-service are to be called.

In moving the above resolution,

Hon. Mr. WYNNE (Victoria) said: Mr. President, I think this is a proper time for us now to consider the terms of the renewed mail-contract. It seems to me there are two ways of dealing with the mails, either to pay upon the weight or to subsidise the steamship companies for the quick carriage of our mails. A large part of the business now is done by telegraphic communication; but still I think it is advisable to continue the mail-service somewhat on the present lines; and I would suggest that we recommend the Home Government that tenders be called for a term of, say five years, for a service between the Mother-country and the colonies; and that the tenders should state the time they will take in carrying the mails, what freezing-space they can supply to the colonies, and the rates to be charged for the carriage of our products; or we could call for tenders in the alternative, simply for the carriage of the mails and for the carriage of frozen produce. Since my visit to New Zealand I am inclined to think that, as the Australian Colonies can produce the frozen meats and butter to be carried, steamers will be put on without any subsidy whatever to carry these goods to the Mother-country. I notice that large steamers like the "Gothic" go from port to port and collect the frozen carcasses, and take them to England without any subsidy whatever. I think if tenders are called for, as I suggest, we will know exactly what is the price to be paid for carrying the mails, and whether the companies want an extra price for carrying the meat. If we consider their charge is too high, it may pay the colonies to subsidise a slow-going line of steamers, with a large carrying-capacity, which will carry the produce at lower rates. I think it was suggested at Brisbane that the tender-forms should be submitted to the colonies before they are dealt with. I still think we should have a voice in settling the tender-forms, and that they should be submitted to us. There is a year and ten months to spare, and that would give ample time to consider the terms of the contract. Under the present contract the steamship companies contract to carry letters only. I think our parcel-post should be included, and one of the conditions should be that they should undertake also the carriage of parcels on the subsidy rate, instead of paying, as we do now, an extra charge for the carriage of parcels in addition to the large subsidy given to these steamship companies. As the report of the permanent heads has not been completed, I will not discuss the details of the proposed contract any further, but simply suggest that tenders be called for a renewal of the service for a period of,

say, five years more on the lines I have suggested. The details can be more fully discussed when the report of the permanent heads is before the Conference.

Then, the question being put, it was resolved in the affirmative.

Resolved, That the conditions be settled at this Conference upon which fresh tenders for the Federal mail-service are to be called.

NEWSPAPERS IN BULK PARCELS.

On motion of the Hon. Dr. COCKBURN (South Australia), seconded by the Hon. Mr. KIDD (New South Wales), *Ordered*, That the question of the number of newspapers required to be contained in bulk parcels be considered and reported upon by the committee of permanent heads of departments.

ADJOURNMENT.

Then, on motion of the Hon. the PRESIDENT, *Resolved*, That this Conference do now adjourn until 10 a.m. to-morrow.

Then the Conference adjourned.

THURSDAY, 8TH MARCH, 1894.

THE Conference met at 10 a.m.

PRESENT:

| <i>Tasmania</i> : | The Hon. JOSEPH GEORGE WARD, M.H.R., Colonial Treasurer, Postmaster-General, and Electric Telegraph Commissioner, Minister of Marine, Commissioner of Customs, and Minister of Industries and Commerce, New Zealand. |
| <i>New Zealand</i> : | The Hon. JOSEPH GEORGE WARD, M.H.R., Colonial Treasurer, Postmaster-General, and Electric Telegraph Commissioner, Minister of Marine, Commissioner of Customs, and Minister of Industries and Commerce.
W. GRAY, Esq., Secretary, Posts and Telegraphs.
J. K. LOGAN, Esq., Telegraph Engineer. |

PAPERS.

The Hon. Mr. WARD (Tasmania) laid upon the table,—

Return of the Tasmanian Telegraph Service, 1893.—Ordered to be printed. (*Vide Appendix J*, p. l.)

The Hon. Mr. KIDD (New South Wales) laid upon the table,—

Papers relative to Mr. Sandford Fleming's Pacific Cable Scheme, and Memorandum thereon by Mr. P. B. Walker, Secretary of Telegraphs, New South Wales.—Ordered to be printed. (*Vide Appendix G*, p. xxxi.) Also,—

A Letter from the Hon. Mr. Audley Coote to the Premier, New South Wales, relative to the New Caledonian Cable. (*Vide Appendix G*, p. xxxviii.)

CANADIAN-PACIFIC CABLE.

The Conference, according to order, resumed the adjourned debate upon the question, That, considering the important interests involved, both of a national and commercial character, in the establishment of a Pacific cable, the representatives of the respective colonies assembled at this Conference recommend their Governments to consider the desirability of entering into a guarantee with the other countries interested, for a period not exceeding fourteen years, and to guarantee interest at 4 per cent. on a capital of not more than £1,800,000 to any company undertaking the laying of a Pacific cable; the tariff not to exceed 3s. per word for ordinary telegrams, 2s. per word for Government telegrams, and 1s. 6d. per word for Press telegrams, to and from Great Britain and the colonies; and that the United Kingdom be asked to join in the guarantee; the routes to be either of the following: Brisbane to Ahipara Bay (New Zealand), Ahipara Bay to Suva, Suva to Apia, Apia to Fanning Island, Fanning Island to Sandwich Islands, Sandwich Islands to Vancouver; or, from New Zealand to Suva, Suva to Apia, Apia to Fanning Island, Fanning Island to Sandwich Islands, Sandwich Islands to Vancouver.

Hon. Mr. WARD (New Zealand): I think it would be as well to proceed with this order of the day, and for Mr. Kidd to proceed with the debate upon it. We could afterwards deal with order No. 2—viz., "Consideration of report of permanent heads of departments."

Hon. Mr. KIDD (New South Wales) : Mr. President, the motion which has been submitted by you in connection with this question is almost in accord with what I was prepared to suggest to this Conference myself. I arrived at this conclusion with the aid of Mr. Walker, of the Telegraph Department of New South Wales, after going very fully into the scheme submitted by Mr. Sandford Fleming, and his and other schemes seemed to be of such an impracticable character that the only scheme we thought at all practicable was that submitted by yourself yesterday. The only difference was that we thought, perhaps, the cable between Bundaberg and Gomen Bay might be utilised, and that then Fiji and the north of New Zealand might be connected. We thought that might meet all the requirements of the colonies in connection with the Pacific cable. But the alterations suggested by yourself and partly approved of by the Conference yesterday would start it at Brisbane, or the other route would be to take advantage of the cables laid from New Zealand, and start it at New Zealand just in the same way, and taking up the same line as we would by going from Brisbane to New Zealand and on. There was a communication sent some time ago by the London Post Office, copy of which I have here, and there was a letter addressed to the Secretary of State for the Colonies at Home, for the purpose of having it forwarded to the naval authorities, I suppose, in order that they might suggest a scheme; but what they submitted was very much on all-fours with Mr. Fleming's scheme. From Vancouver to Fanning Island, I think, is a distance of something like four thousand and odd miles, and they make a calculation that if the cable was taken that way it would cost twice as much as the ordinary cables would cost. Their estimate of it would be about £2,474,000, but they point out that it would necessitate a cable being manufactured of more than twice the substance of ocean cables generally. However, your proposal, sir, of course does away with the necessity for a cable beyond the ordinary size, therefore it will not be nearly so costly. And on inquiring into and discussing the matter we arrive at the same conclusion as you do yourself, with the only difference that we thought we might take advantage of the cable already laid between Bundaberg and New Caledonia, and branch them in a similar way as has been done in connection with other cables, which would reduce the distance to 6,751 miles. There, however, seems to be such a strong feeling against having to do with the French company, that your proposal, as worked out by your department, seems to be the best one. I have therefore much pleasure in heartily supporting the resolution submitted by you, Mr. President. I would like to lay on the table a report on the proposal of Mr. Sandford Fleming, which I think proves the position we have taken up in adopting the proposal submitted by yourself to be the proper one. I hope honourable members will approve of this report being printed, together with the other documents before this Conference. I also submit a map setting forth the line suggested, also the schemes formulated by Mr. Fleming. There is also a letter here from the Hon. Audley Coote, which is full of information, but of course I would treat Mr. Coote's proposals in much the same way as I would Mr. Fleming's, for the simple reason that they had evidently a personal object to serve in framing such proposals. However, I do not think we can have too much information of a character which would justify us in the conclusion we have arrived at, so with the consent of the Conference I would submit both Mr. Sandford Fleming's and the Hon. Audley Coote's letters, and move that they be printed.

Hon. Mr. WYNNE (Victoria) : Mr. President, I have to say that, as regards our own colony, we are fairly well served, or rather we are well served, by the present system, but this is capable of carrying a much larger number of messages than at present sent, but if all the colonies agree to this scheme through British territory, and the Imperial Government and Canada agree to pay their proportion, I am quite safe in saying our colony will join in and support the movement.

Hon. Mr. WILSON (Queensland) : I do not think I need say anything further than that I am in accord with the resolution suggested on Tuesday last, which was to the following effect :—

That, considering the important interests involved, both of a national and commercial character, in the establishment of a Pacific cable, the representatives of the respective colonies assembled at this Conference recommend their Governments to enter into a guarantee for a period of years to recoup the loss, if any, made by a company undertaking the laying of a Pacific cable, the cost of cable not to exceed £1,600,000, the interest chargeable on such amount to be 3 per cent.; office expenses, maintenance, &c., and amortisation fund to be computed at 4 per cent.; the maximum tariff to be at the rate of 8s. per word for ordinary telegrams and for Press telegrams 6d. per word to and from Great Britain and the colonies; and that the United Kingdom be asked to join in such guarantee.

I consider it would be better to leave the selection of the route to the Canadian Conference.

Hon. Dr. COCKBURN (South Australia) : Sir, in accordance with the custom adopted by previous representatives, the South Australian representative on this occasion will abstain from voting. Western Australia will, I also understand, do the same as her representative on previous occasions has done. Under these circumstances it is unnecessary for me to enter into any detailed criticism of the proposal submitted. I can only say that South Australia has every reason to be satisfied with the generous treatment accorded to her in the past by the other colonies in the matter of telegraphic communication with Europe, and I have every reason to trust that the same consideration that has previously animated the other colonies will in the future be extended to South Australia in recognition of her efforts in past days.

Hon. Mr. WARD (New Zealand) : It is unnecessary for me to avail myself of the right of reply, as it appears there is a general concensus of opinion on the matter. Of course, the representatives of South Australia and Western Australia have taken up the attitude that is to be expected from them. I am very glad to hear the Hon. Mr. Kidd express the opinion that it is not desirable for the colonies to have the communication between the Old Country by way of a French cable. I beg to move the motion standing in my name, and which has been seconded by the Hon. Mr. Kidd.

And the question being put, it was resolved in the affirmative, South Australia and Western Australia abstaining from voting.

Resolved, That, considering the important interests involved, both of a national and commercial character, in the establishment of a Pacific cable, the representatives of the respective colonies assembled at this Conference recommend their Governments to consider the desirability of entering

into a guarantee with the other countries interested, for a period not exceeding fourteen years, and to guarantee interest at 4 per cent. on a capital of not more than £1,800,000 to any company undertaking the laying of a Pacific cable; the tariff not to exceed 3s. per word for ordinary telegrams, 2s. per word for Government telegrams, and 1s. 6d. per word for Press telegrams to and from Great Britain and the colonies; and that the United Kingdom be asked to join in the guarantee; the routes to be either of the following: Brisbane to Ahipara Bay (New Zealand), Ahipara Bay to Suva, Suva to Apia, Apia to Fanning Island, Fanning Island to Sandwich Islands, Sandwich Islands to Vancouver; or, from New Zealand to Suva, Suva to Apia, Apia to Fanning Island, Fanning Island to Sandwich Islands, Sandwich Islands to Vancouver.

FUTURE FEDERAL MAIL-CONTRACTS.

The Hon. Mr. WARD (New Zealand) laid upon the table the report and recommendations by permanent heads of departments as to the terms and conditions of future Federal mail-contracts, which was as follows:—

REPORT AND RECOMMENDATIONS BY PERMANENT HEADS OF DEPARTMENTS AS TO TERMS AND CONDITIONS OF FUTURE FEDERAL MAIL-SERVICE CONTRACTS.

The present contracts held by the Peninsular and Oriental and Orient Companies will expire on the 31st January, 1895.

The total subsidy paid is £170,000 per annum, of which the sum of £95,000 per annum is paid by the Imperial Government, and £75,000 by the Colonies of New South Wales, Victoria, South Australia, Queensland, Tasmania, Western Australia, and Fiji, the colonies contributing on the basis of population.

The following were the amounts paid by the colonies for the year 1892:—

New South Wales	£26,724
Victoria	26,363
Queensland	9,519
South Australia	7,608
Tasmania	3,460
Western Australia	1,326

We recommend:—

1. That the London Post Office be invited to call for tenders in *Great Britain and Australasia for a weekly service*, on conditions approved by the colonies, from *bona fide British companies* (to be performed by one or more companies, running on alternate weeks as at present). Before accepting any such tender, that all tenders be submitted to the colonies.
2. The following to be the principal conditions:—
 - (a.) That alternative tenders be called for five or seven years.
 - (b.) That greater regularity in the time of the arrival of mails be insisted upon, as under the present arrangement of slow and fast vessels the equal weekly interval is destroyed.
 - (c.) That the time to be occupied between Brindisi or Naples and Adelaide be reduced to thirty days, or such lesser time as tenderers may offer.
 - (d.) That Brindisi and Naples, or either, be the European termini, and Adelaide the Australian terminus; but outward vessels to go on to Melbourne and Sydney, carrying mails to either of those ports if required. Homeward steamers to start from Sydney, calling at Melbourne and Adelaide, receiving, if required, the whole or a portion of the mails at Melbourne; to call at Freemantle or Albany both ways, the outward steamers to stay at that port not less than six hours.
 - (e.) That the Postmaster-General, South Australia, be empowered to delay the departure of a steamer for a period not exceeding twenty-four hours, if such delay is deemed necessary in the interests of the Australian Colonies or any of them.
 - (f.) That in any future contract the term "mails" shall be held to include parcels, but the parcels to be conveyed wholly by sea as at present.
 - (g.) That the steamers call at Colombo both ways.
 - (h.) That it should be a condition of the new ocean mail-contract that the steamers should be required to afford conveniences for the carriage of frozen meats, butter, fruits, and other products of Australasia, at stipulated maximum rates of freight for the same, and that tenderers shall state what cold-storage space they will be prepared to supply, having due regard to the requirements of each colony.
 - (i.) That the other general conditions of the present contracts be adopted.
3. With regard to the division of cost, we recommend that the sea-transit rates collected from other countries or colonies making use of the service be placed to the credit of the subsidy, together with any fines that may be inflicted, the balance of the subsidy to be apportioned between the United Kingdom on the one part and the contracting colonies collectively on the other part, on the basis of the amount of mail-matter they respectively despatch, the colonies, parties to the contract, to apportion their contribution on the basis of population as at present.
4. That clause 7 of the Peninsular and Oriental contract be amended in regard to the conveyance of the Indian-China mails connecting at Colombo. Should it be deemed necessary for the Australian steamers to carry mails in connection with the new contract between Colombo and Brindisi, we consider the Postal Union rates should be paid by the countries despatching those mails, such rates to be dealt with in manner provided for in the preceding paragraph.
5. That the day of departure from Adelaide be *Thursday, not later than 2 p.m.*, reaching Albany in 72 hours. (Queensland and Western Australia dissenting, favouring Saturday.)

6. In view of the fact that, whilst the mails from Australasia are carried by the accelerated train through Italy and France, those by Orient steamers are carried by ordinary mail-train, the time occupied being about the same in each case, we recommend that the accelerated train-service be abolished, as decided by the Adelaide Conference of 1890, especially as out of the postage of 2½d. per ½oz. letter, fifteen-sixteenths of 1d. has to be paid for the Continental transit by such trains, against three-eighths of 1d. by ordinary trains.

We deem it proper to mention that the words in italics comprise alterations made by Ministers in the draft conditions submitted by us to the Brisbane Conference, and we have therefore considered that it would be out of place on our part to disturb them, with the exception of the one relating to the day of departure from Adelaide, which, in the interests of all parties should, in our opinion, be Thursday, in lieu of Saturday.

W. GRAY, Chairman.	CHARLES TODD.
S. H. LAMBTON.	JOHN McDONNELL.
JAMES SMIBERT.	R. A. SHOLL.

The Conference then proceeded to consider the report, paragraph by paragraph.

Paragraph 1 read and agreed to.

Paragraph 2.

Subsection (a) read.

Hon. Mr. WYNNE (Victoria): I suggest the term should be "five" years in the new tenders, as larger and faster boats are being built every year; and for that reason it would be a mistake to allow too long a term. I move that the term be "five" years.

Hon. Mr. PARKER (Western Australia): I think, if tenderers were bound to "five" years, the subsidy asked would be considerably more than if the term were "seven" years.

Hon. Mr. WYNNE (Victoria) withdrew his motion.

Subsection (a) agreed to.

Subsection (b) read and agreed to.

Subsection (c) read.

Hon. Mr. WYNNE (Victoria): I suggest that, instead of fixing a time, tenderers should be required to state the time they would deliver the mails in. The colonies could get them delivered in less than thirty days, probably in twenty-eight or twenty-six days, and that would make a great deal of difference in the cost.

Hon. Mr. PARKER (Western Australia): I think the wording of the resolution is ample to cover what was intended.

Subsection (c) agreed to.

Subsection (d) read.

Amendment proposed. In line 6, to omit "that port," and insert in lieu thereof "the port of call." (Hon. Mr. Wynne, Victoria.)

Amendment agreed to.

Subsection (d), as amended, agreed to.

Subsections (e) and (f) read and agreed to.

Subsection (g) read.

Hon. Mr. PARKER (Western Australia): If Colombo were omitted from the contract, two or three days' time would be gained.

Hon. Dr. COCKBURN (South Australia): I support the clause, as there are certain advantages to be gained in the matter of trade between the Australian Colonies and India. At present there is a considerable trade in wines and copper, and we are endeavouring to extend the butter trade. There is also the advantage of the mail-service fitting in with the Eastern mail-service, and if the vessels did not call at Colombo that could not be done. The saving of time in not calling at Colombo is not sufficient to counterbalance the advantages I have named.

Subsection (g) agreed to.

Subsection (h) read.

The Hon. Mr. KIDD (New South Wales) moved, and the question was proposed, That subsection (h) be struck out.

Hon. Mr. KIDD (New South Wales): I am of opinion this clause should be omitted for the simple reason, as already stated by the Hon. Mr. Wynne, that in their own interests the steamship-owners would make all the provision they possibly could to carry out the desire of the colonies in the matter. If the company securing the mails had to make the provision required, the outside companies would simply do the same. If trade is to be obtained we would soon find shippers and others providing slow-going steamers that could more effectually overtake the trade than by putting in the conditions alluded to in the proposed tenders for the carriage of the mails. It would be a very great mistake to interfere in any way in this matter, or to make it a condition, because it is not right that the Postal Departments of the various colonies should have to bear the burden of anything in connection with a trade of the kind. The colonies would be charged a very much higher subsidy if they let a tender with a condition of the character mentioned than what they would under the present conditions of contract. I might state that my Government is very much opposed to any condition of the kind being inserted in any of the mail-contracts. It has been pointed out already at the Conference that if they could get vessels like the "Gothic" to come to New Zealand, where there was a large amount of trade, what is there to encourage such vessels if they gave a subsidy to one particular line. It has been explained to me that, although one voyage might not pay the owners for sending a large steamer like the "Gothic," the encouragement is sufficient without a subsidy, as it is considered the business will so enlarge that all these steamers would be continued. If a company would send a steamer like the "Gothic" without any subsidy, we shall have a good many "Gothics" sailing to the colonies to pick up the trade in the same way. This trade is growing in New South Wales; and vessels will have to pick up what they

can get in Sydney, Melbourne, and Adelaide, without encumbering the mail-service with any such conditions. I will be very glad if the Conference sees the matter in the same way as I have put it, and omits the clause altogether.

Hon. Mr. WYNNE (Victoria) : I cannot agree with the Hon. Mr. Kidd with reference to this matter. I think he must have misunderstood me yesterday. When I was referring to the steamer "Gothic," I was referring to the frozen meat, and I think as the frozen-meat trade increases in the Australian Colonies large steamers will be put on to take it away; but with reference to the butter, which has only a value if it arrives in England regularly and at certain seasons of the year, I think it is absolutely necessary that we should insist on steamers carrying that, and it does not seem that it can be done in any better way than by mail-steamers. They cannot probably provide the large space required for thousands of carcasses of frozen mutton, but they can provide storage space for five or six tons of butter, and that is the produce for which there is the greatest necessity to carry quickly. I do not think myself that it would cost anything extra, or very little extra, to insist upon this clause being in the contract. And the Hon. Mr. Kidd says, "Leave it to the companies themselves." I think it is a mistake when we, at any time we enter into a contract to do a certain thing, ask the other party to do something of their own free-will. It seems to me, if we want our produce carried, it is better to say we want it carried, and, if necessary, we are prepared to pay something extra for it, though I doubt if we will be called upon to pay anything extra. The whole of the companies have refrigerating space on their steamers, and it is to their interest to fill it up; and if it is part of the conditions of their contract that they are to carry so much produce, they will in addition probably put on other boats to carry it. I think, therefore, as it is absolutely necessary that space should be provided to take our produce Home, that it would be as well to insert this clause in the agreement. I do not think there would be any objection to it, because last year this very same clause was discussed and there was no objection.

Hon. Mr. KIDD (New South Wales) : I understood you to disagree to it yourself.

Hon. Mr. WYNNE (Victoria) : I say, with reference to the "Gothic," that I do not think it would pay any steamer like the "Gothic" to go to Adelaide, Melbourne, or Sydney to take a few hundred tons. Whereas we can start our industry if we have some means of shipping the produce, therefore we should ask them what space they would provide, and the price. What objection there is to that I cannot see. I strongly urge that that should be put in the contract, and I strongly urge the retention of this clause.

Hon. Dr. COCKBURN (South Australia) : I trust the Conference will retain this clause. I think the carrying of produce is second in importance only to the carrying of mails. There is no doubt that cool-storage is becoming every day a more essential condition for the carrying of our produce to the larger centres in every part of the world. Look at what the butter alone is doing for Australasia and will continue to do for Australasia. I consider, in view of that industry alone, it is most desirable to retain this clause. At present the butter is carried at—I do not like to say exorbitant rates—but there is every reason to believe that if a clause of this sort is inserted the present rates will be reduced; and even a very small reduction will be a great boon to our producers generally. The arguments used by the Hon. Mr. Kidd against the retention of this clause, to the effect that direct commercial enterprise would meet the requirements, might with the same effect be applied to the carriage of mails generally. As the Conference does not consider that policy applies to the one, I trust, also, the Conference will not apply it to the other. As the Postmaster-General of Victoria has stated, the clause was agreed to at the last Conference in Brisbane, and it is of no less importance now. The importance of the matter is growing day by day, and I trust the clause will be retained.

Hon. Mr. PARKER (Western Australia) : Unfortunately, if the steamers did provide the cool-storage required, the colony I represent would not be able to take advantage of it for years to come, therefore I have no particular interest in the question. I recognise that we are here not simply to represent our own particular colonies and our own more selfish views, but to advance the interests of Australasia generally. In that view, and bearing in mind the remarks made by my honourable friend Dr. Cockburn, as to the advantages of increasing the commercial conveniences for carrying our commercial products from Australia to the Mother-country and to Europe, even supposing Western Australia has to pay a small increased subsidy, still I consider it advisable to support the proposed clause in the interests of Australasia generally.

Hon. Mr. WILSON (Queensland) : I am in the same position as the representative from Western Australia, and I am anxious that the subsidy should not be increased by the addition of this clause. Queensland could not take any advantage of the clause, neither would she, under the circumstances, like to pay a higher subsidy than she is doing at present. I think that the clause might go through as it stands, because it is very important that mail-steamers should offer accommodation of the kind. The Queensland people employ their own steamers, and send their meat independently. They have a contract with the British India Company, and they will probably enter into a similar agreement shortly to the same effect as proposed in this clause with that company.

Hon. Mr. KIDD (New South Wales) : In reply, I may state that the proposal is rather an innovation in mail-contracts. The subsidy is fixed on the basis of population, and if Queensland is going to be so generous as to give in proportion perhaps twice the amount of the present subsidy to enable frozen produce to be carried, it shows her generosity to be beyond what the generosity of the other colonies generally is.

Hon. Mr. WILSON (Queensland) : We are not going to do so.

Hon. Mr. KIDD (New South Wales) : I wish to mention that hitherto Tasmania has had the lion's share of the monopoly with regard to the accommodation necessary for her fruit, but if the clause is going to be inserted I think we shall have to alter the basis of subsidy and place each colony on the same footing, and make all pay in proportion according to the amount of storage they each occupied in the mail-steamers. I cannot see for the life of me how we can take any other course; because if, in

calling for tenders, we are going to ask them to make provision for the carrying of butter, or frozen meat of any kind, then the Colony of Tasmania and the Colony of Victoria should pay more. Of course, I can understand my honourable friend Mr. Wynne so warmly supporting the clause, because Victoria is able to use about double the space New South Wales has been able to use; but I do not say that is going to last very long. The position I have taken up with regard to the question is that it is more far-reaching than what I at first thought. At Brisbane the subject was brought hurriedly forward by the President, the Hon. Mr. Ward, and, strange to say, of course he has no interest in the matter whatever, neither has he any interest in it now. He is the representative of Tasmania at this Conference, and no doubt will support this resolution. One can easily afford to be broad-minded when they have not to pay for it. No doubt the clause will be carried, and I can only enter my protest. Further than this, I consider that it will be necessary to revise the subsidy altogether. The Imperial authorities are not likely to agree to pay 50 per cent. more on the £95,000 they are paying now for the purpose of enriching the producers in two or three colonies at the expense of the other colonies and the Imperial authorities. The subject has a far wider range than what I at first thought of at Brisbane. I thought it was a very wise thing to get the companies to make as ample accommodation as possible for the carriage of the frozen produce of these colonies. The exportation of frozen produce has become such a large thing now that I think we should not hamper our mail-contracts with any conditions, stated or implied. I might point this out, that Tasmania and two of the other colonies are likely to use the accommodation beyond their fair share; and, in connection with the subsidy, their portion of the subsidy will have to be allowed to count to cover the expenses necessary. It is not likely that Queensland is going to give anything to benefit Tasmania. Queensland is undoubtedly the most hard-headed of any of the colonies. You can never get any advantage from them. They will agree to this, but they will take very great care not to be a party to paying anything beyond what is absolutely necessary to carry the mails. England will not and could not agree. As I pointed out before, the business is becoming so great, that I can see in the future we will require a good many "Gothics" to take the produce away from New South Wales alone. One company in the valley of the Hunter is now treating 600,000 sheep per annum, and we have to get rid of something like ten millions. We have to get rid of our surplus produce, and that will require a great many liners like the "Gothic" to carry the produce away from Sydney alone; therefore it would be too paltry a thing to put this clause into a mail-contract which would only carry a very small portion of the produce we shall have to send away. The shipping companies will find it to their own interest to carry as large a quantity of produce as they can find space for. I must enter a strong protest against this portion of the clause being adopted by this Conference.

Hon. Dr. COCKBURN (South Australia): I think the last speaker has over-estimated any increase which is likely to be required from the subsidy on account of this clause being inserted. If I thought that the colonies which would avail themselves of any benefits would be required to pay more than otherwise would be required from them, I would not support the clause. Can any one say that the vessels tendering for a mail-service would not be up to date? If not, they would not be fit to carry our mails; and, being up to date, they would have a large amount of cool-storage.

Hon. Mr. KING (New South Wales): If you are satisfied why make a condition?

Hon. Dr. COCKBURN (South Australia): Because we can make better terms acting here in Conference. We know what we are doing, and it places us in a more advantageous position making an agreement. I am sure there is no feeling amongst the representatives voting for this clause that it would considerably increase the subsidy. If there were I do not think they would support it. I think, as a matter of business, the contracting companies will know their friends and accept the position. It is far easier for the delegates assembled here, in dealing with the question, to ascertain exactly the terms upon which they can get their produce carried, and afterwards they can make their arrangements accordingly, and by inserting this clause we can probably arrange a little earlier than we could in the ordinary course of business. It is purely a business affair, and I am sure any steamers carrying our mails will provide ample storage-space for their own interests, because if they did not they would know what the necessary result would be. Then, it will enable us to have definite information before us. I am sure the Conference will agree that the honourable gentleman who has brought the matter forward would be the last, with myself, to hamper the colonies with any unnecessary expense.

And then the question being put, That subsection (b), proposed to be struck out, stand part of paragraph 2, the Conference divided, and the votes were taken down as follow:—

Ayes, 5.

Victoria
Queensland
Western Australia
South Australia
Tasmania.

Noes, 1.

New South Wales.

So it was resolved in the affirmative, New Zealand abstaining from voting.

Subsection (i) read and agreed to.

Paragraphs 3 and 4 read and agreed to.

Paragraph 5 read.

Amendment proposed. To omit "Thursday," in line 1, and insert in lieu thereof "Friday if possible or, if not, Thursday." (Dr. Cockburn, South Australia.)

Hon. Mr. PARKER (Western Australia): I regret to have to ask that this recommendation be not approved. It will be observed that, if the steamers leave Adelaide on Thursday, they will reach Albany on Sunday morning. Although the time is stated to be seventy-two hours, as a rule they run about sixty-eight or seventy-two hours, therefore these steamers will probably reach Albany on

Sunday morning at 11 o'clock, and Sunday at Albany will be thus turned into a week-day. The hotels would necessarily be open to enable passengers by steamers to obtain refreshments, &c. It is obvious also that we shall have to run trains to Albany on Sunday, as we cannot allow mails to lie a day or two at that port. Then the Customhouse officials will be employed during the day examining and taking charge of luggage and merchandise which arrives by steamers. The Post Office officials will also necessarily be employed; and passengers, unless the telegraph-office is opened—which it is not, at present, on Sunday—will not be able to communicate with their friends in the neighbouring colonies; steam-launches will have to be at work; and, in fact, Albany will be without a Sunday if steamers are allowed there, as it is proposed. I think the other colonies concerned will see that in the interests of Western Australia, and in the interests of the people residing at Albany, it is very undesirable to turn the Sabbath into a week-day, and take away entirely the only opportunity the officials have of taking a rest, making Albany absolutely a town without a Sabbath. At present, the mails leave Adelaide on Wednesday, so that they arrive at Albany on Saturday; but, as far as I can say, it will be a matter of indifference to our colony as to which day the mails arrive, so long as it is not a Sunday. We are perfectly willing to sacrifice the Saturday afternoon—the half-holiday usually given to officials—to look after passengers, mails, and merchandise, but we certainly must enter a strong protest against having these steamers arriving on Sunday. The steamers arrive at Brindisi on Sunday—and I have been there on several occasions when coming out from London—and Brindisi is practically without a Sunday at all. When the P. and O. steamers are there, the hotels are open, the market-places are open, all the officials are about, just the same as on a week-day; and it seems to me that, if the steamers are to call at Albany on Sunday, that day will be treated in the same way as it is at Brindisi. I hope, therefore, in the interests of Western Australia, that the members of this Conference will kindly consider this question, and name any other day than Thursday for the departure of mails from Adelaide.

Hon. Mr. WILSON (Queensland): I thought this matter had been arranged at the last Brisbane Conference. I find it says here "that the day of departure from Adelaide be Saturday, not later than 2 p.m." That day suits us very well, but we would even agree to Friday. If Thursday is inserted we shall have to make up our mails on the Sunday, which would be very inconvenient. Now if our mails leave Brisbane on Monday evening, at 6.25 p.m., they reach Sydney at 11 o'clock next night, and leave again on Wednesday, at 5.15 p.m., arriving at Melbourne on Thursday, at 11.45 a.m., and Adelaide on Friday. It would be too late for the Adelaide mail if Thursday were the day of departure, but it would be in time supposing Friday was agreed to. On behalf of Queensland, I must object to Thursday. I would not object to Friday, but I prefer Saturday.

Hon. Dr. COCKBURN (South Australia): Saturday was inserted at the last Conference at Brisbane, but Thursday was recommended in the first instance and agreed to. There are grave reasons against Saturday. The time of arrival of the mails in England at present allows of replies being sent from provincial centres. That is a matter of importance, not only to the English people but to the great mass of our own people and producers generally who are trying to open up a trade in other centres than London. The mail leaving Adelaide on Wednesday or Thursday enables replies to be sent; Saturday will not, even allowing for the accelerated pace of the service. Wednesday or Thursday will meet this requirement, possibly Friday. I think I recognise the force of the statement made by the Hon. the Colonial Secretary of Western Australia, and I do not know whether if we put it in optional for Friday how that would do. I am sure that we are anxious to meet one another as far as we can, and I understand that Friday will suit the colonies generally. The chief point is what I have already expressed, that it will not be in time to get the replies from provincial centres in England, which I think we should recognise. Of course there is this to be said: that an accelerated mail-service may meet this difficulty. That of course could only be ascertained when the tenders are in, and I would suggest, therefore, that when the tenders are in this point can be considered by the Imperial authorities. If we have not then the material to settle the question we might make it optional for Thursday or Friday, and then possibly Friday would be fixed. Saturday throws replies absolutely out in the provincial centres, and dislocates the English service. I would suggest Thursday or Friday, if possible Friday.

Hon. Mr. KIDD (New South Wales): I understand that Friday will suit us just as well as Thursday, only for the reasons stated by the Hon. Dr. Cockburn—viz., that there would be no time for the replies, and the Imperial authorities would not be likely to agree to it. We want them to agree to what would be reasonable; and I think if the day of departure were put off a day in Western Australia they might have their Sunday on Saturday occasionally, when the mails are being made up. I suppose every one likes to have their Sunday. It makes no difference to New South Wales, and the objection to Thursday would apply to Queensland only. I would not like to deprive my honourable friend Mr. Parker of his Sunday by any means, but it makes no difference whatever to us in particular, as Friday will suit just as well as Thursday. If the Imperial authorities can see their way to comply with it, we may as well have it Friday as Thursday.

Amendment agreed to.

Another amendment proposed. To omit, in the same line, the word "later," and insert in lieu thereof the word "earlier." (Hon. Dr. Cockburn, South Australia.)

Hon. Dr. COCKBURN (South Australia): I would like to make a suggestion. I see the words are "not later than 2 p.m." I think, if the Conference is willing, it would be very much better to insert the words "not earlier than 2 p.m." I have been asked to press for a later hour, but I feel there is a difficulty in getting a later hour, because I know the difficulty Western Australia is in in the matter. A later hour than 2 p.m. would enable the mails to reach Albany in time. I ask that the clause be recommitted, with a view to inserting the words "not earlier than," in lieu of "not later than."

Amendment agreed to.

Paragraph 5, as amended, agreed to.

Paragraph 6 read and agreed to.

The Hon. Dr. COCKBURN (South Australia), seconded by the Hon. Mr. WILSON (Queensland), moved, and the question was proposed, That the following new subsection be added to paragraph 2, to stand as subjection (j) :—

(j.) Tenderers to state what class of labour they intend to employ in their vessels, and that a recommendation be made to the Imperial authorities that mail-steamers should be manned by white crews.

Hon. Dr. COCKBURN (South Australia) : Sir, I have a matter which I think will come in at the end of clause 1. I mentioned it at an earlier stage, and I do not think it is necessary to allude further to it now. The clause I propose is : "That tenderers shall state what class of labour they intend to employ on their vessels, and that strong representation be made to the Imperial authorities that vessels be manned by white crews." I shall not say more at present, but I think there is a feeling in this Conference that this would be most desirable in the interests of the colonies and of the British Empire. Anticipating, therefore, that the matter will be agreed to without long debate, I shall move the motion.

Hon. Mr. KIDD (New South Wales) : I think, if Dr. Cockburn would confine his clause to the first portion of it, that ought to satisfactorily cover all that he requires. My honourable friend suggested to me yesterday that the first portion of the clause would be sufficient. Of course, you could do this when the tenders are being considered; then you could state whether or not the labour is of a character such as you desire. I do not think it would be very satisfactory to pass the clause in the way it is drafted.

Hon. Dr. COCKBURN (South Australia) : Perhaps I have worded it a little too strongly, but I think it is as well that we should acquaint the authorities in England with our views on the matter, otherwise they might be at a loss to know what we meant by inserting the clause in the tenders called for. It is simply a recommendation, and I can only understand the authorities taking one view of the matter. I think they would express themselves more strongly than Australasia, because the British Empire is very strongly interested. I think, therefore, it would on the whole be better to express our views to the Home authorities.

Hon. Mr. WARD (New Zealand) : I agree with the Hon. Dr. Cockburn. I think that in subsidising these steamers as we do, we are justified in pointing out to them that our vessels should be manned by white crews. In view of the fact that these steamers are now being built and adapted for the purpose of converting them into armed cruisers, it is the more desirable they should be manned by white crews. This is nothing further than a recommendation. I look upon it as most desirable that all the colonies should know what class of crews it is proposed to have.

Hon. Mr. WILSON (Queensland) : I may mention that, five years ago, in our contract with the British Indian Company, it was accepted by the company that the vessels should be manned by white crews. I think it is highly desirable that we should place this recommendation on record, in order that, if possible, a new arrangement should be come to.

Hon. Mr. WYNNE (Victoria) : A deputation of members of Parliament and others waited upon me in Victoria in reference to this subject, and I promised to bring the matter before the Conference. I think the only thing is to make a recommendation to the Home authorities, and, of course, they may make objections, if they think fit.

Hon. Mr. PARKER (Western Australia) : I think this is a simple recommendation to the Home Government that, if steamers will employ white labour, the colonies will be prepared to pay a small increase; and that, if the colonies find that this white labour cannot be employed upon the steamers without a large increase of subsidy, we should not be prepared to pay such large increase.

Then, the question being put, it was resolved in the affirmative.

The Hon. Mr. KIDD (New South Wales) moved, and the question was proposed, That the following words be added to subsection (h) of paragraph 2: "That alternative tenders be invited, requiring tenderers to name a subsidy with or without the stipulation proposed in clause (h)."

Hon. Mr. KIDD (New South Wales) : I might, before we leave this matter, move a new clause, bearing upon the clause we have just agreed to—namely, clause (h). I do that for the object of ascertaining what additional subsidy they think they would require to make the provision asked for in the clause we have agreed to. Then it would be a very easy matter, if we put it in that way, to find out if it would be accepted with the stipulation contained in that portion of the clause we have agreed to. It would be easy enough then to readjust the subsidy required by the several companies. That is my only object in moving this resolution.

Hon. Mr. WARD (New Zealand) : I will second the resolution, as I am bound to say I see no objection to giving tenderers the alternative suggested in the resolution.

Hon. Dr. COCKBURN (South Australia) : At first sight it did seem as if no objection could be offered to the Hon. Mr. Kidd's amendment, but on thinking the matter over I am not altogether sure about it. There is danger. As the time for answering the call for tenders approaches it might be evident to the companies that in any case they would secure the contract, and naturally they might prefer tendering for one thing instead of for two.

Hon. Mr. WARD (New Zealand) : They would tender both ways, I should think.

Hon. Dr. COCKBURN (South Australia) : Yes, they might; but if they were masters of the situation they would be masters on such terms as would be easiest for themselves. In that case they would send in a reasonable tender for the mails, and a prohibitive tender for mails and freight. I am afraid it would work out in that way, although at first sight the proposal seemed free from objection. If other tenderers were in the field they would send in the same tender, both for the mails pure and simple, and for the carriage of produce. If they were in the field alone, they would perhaps charge what they liked for cool-storage and not care to bind themselves to any scale of rates. They might say, "Let us get it on the terms most advantageous to ourselves and give us a

free hand"; and if there are no other tenderers in the field, they could secure it at once, and they could put on so many thousands extra for the stipulation for produce—altogether an undue proportion for the stipulation—which would place the colonies in the unfortunate position of having to accept the tenders for the mail-service only. I think this should just be an ordinary matter of business, and, therefore, I shall have to oppose the new clause.

Hon. Mr. WYNNE (Victoria): I rather liked the idea at first of alternative tenders, but, on consideration, I think if we keep it the way we have it now it will not cost us so much to carry our produce. I might explain that in our colony I think tenders were invited for parcels-post, and when the contractors had an opportunity of charging separately they put on an extra sum for parcels, but when the two were amalgamated they were actually carried for less than the letters were carried at before. I believe there are eighty or ninety steamers in the world with refrigerating space, and they will probably see it is their business to carry the mails cheaper on account of having the opportunity of filling up the space with frozen produce. I think if we give them the opportunity of making two offers they will add a considerable sum for carrying frozen produce; whereas if it goes with the mails they will not charge anything extra whatever. In putting these alternative tenders in they will say, "If there is no market for the produce the people will not pay us for it;" and they will then, probably, put on a large sum for carrying the produce under the mail-contract, whereas mails and produce going together will be carried at a less rate than we now pay. I agree with the Hon. Dr. Cockburn in this matter.

Hon. Mr. WILSON (Queensland): I shall support the resolution of the Hon. Mr. Kidd. So far as Queensland is concerned, she will not know what the increase in the subsidy is likely to be, but if there is any increase in the subsidy on account of cooled meat being carried by these steamers, of course she will take her fair proportion of it. We may have to come back to the carriage of mail-matter by weight. However, if there is any increase of subsidy in consequence of this proposal, we do not agree to pay it. Therefore, I think the resolution in favour of inviting alternative tenders should be agreed to by the Conference.

Hon. Mr. KIDD (New South Wales): Mr. President, In reply, I may say that I think the reasons that have been given for opposing this resolution are not based upon reasonable grounds, to my mind, because if the contracting companies that are likely to tender for the carriage of our mails agreed to give any provision for cool-storage—if they are likely to be in the position to impose upon us by tendering at a higher rate than that which they should be able to carry the commerce for, and to provide the conveniences—I think they are more likely to take advantage of the cost we put into the alternative. They have no necessity for making provision for cool-storage unless what suits their own purpose. What the Hon. Mr. Wynne referred to is due more to the depression in the colonies generally than to the desire of the contractors to get the work. They have been carrying the parcels-post for us just the same as before; but that is due more to the competition induced by the pressure of the times than to the carrying of the mails. Instead of having to pay more since the introduction of the parcels-post, we have had to pay less. That is not because the parcels-post is included, but because of the keener competition for the carriage of the mails. I would like to point out this anomaly: We are altering the conditions with regard to the Mother-country, in the subsidy that they are asked to pay. We say, "We are going to weigh the mails coming from England, and we are going to charge you a proportion of the subsidy"; but on the mails sent from the colony the difference should not be charged against the Imperial authorities for the difference in weight. Are they not likely to take very strong objection to us if you put on a restriction like that? Hitherto they have been paying £95,000, and by that report of the permanent heads it is not enough, therefore we are going to have the mails weighed. I want to show that the Imperial authorities would be more satisfied, I think, if my resolution were carried. They would say, "Very well, this is fair and just enough to tender for the same amount for the carriage of any produce in addition to the mails"; and, while I shall be very glad if we are going to hamper it by saying "If you want so much space we must charge you so much more," then it is not fair that we should charge the Imperial authorities with any portion of that which is for our own convenience and outside the question of mails altogether. I think you should agree to this resolution for the reason if there is going to be any large addition to the subsidy charged on account of the condition that they have to provide the colonies with that accommodation, it should be for certain of the colonies only. Why should we expect Queensland and Western Australia, that are not using that accommodation, to pay; and how can we arrive at what would be a reasonable price? We only want to pay for the services that are rendered to us in connection with this question. I hope the Conference will agree to this, as it is only fair and reasonable, and I think it will show the Home authorities that we are calling for tenders with the knowledge that ours is a growing trade, and I think it will be satisfactory to them.

And the question being put, the Conference divided, and the votes were taken down as follow:—

Ayes, 3.
New South Wales
Queensland
New Zealand.

Noes, 4.
Victoria
Western Australia
Tasmania
South Australia.

It passed in the negative.

Then, the question being put, That the report as amended be agreed to, it was resolved in the affirmative, New South Wales dissenting. (*Vide Appendix D, p. xxiv.*)

Hon. Mr. WARD (New Zealand) said he had received a cablegram from the London Post Office, requesting that immediately on the terms of the Federal mail-contract being settled they should be cabled to London.

Hon. Mr. KIDD (New South Wales) : I think we should cable the matter we have just been discussing, as it is just as important as other matters.

SPECIAL ADJOURNMENT.

On motion of the Hon. Mr. WARD (New Zealand), *Resolved*, That this Conference, at its rising this day, adjourn until 10 a.m. on Saturday, the 17th March, and that they meet then in Auckland.

On motion of the Hon. Mr. WARD (New Zealand), *Resolved*, That this Conference do now adjourn.

Then the Conference adjourned.

HARBOUR BOARD OFFICES, AUCKLAND, NEW ZEALAND.

MONDAY, 19TH MARCH, 1894.

The Conference met at 10 a.m.

Present :

<i>New South Wales</i> :	The Hon. JOHN KIDD, M.L.A., Postmaster-General. S. H. LAMBTON, Esq., Deputy Postmaster-General. P. B. WALKER, Esq., M.I.C.E., M.I.E.E., Secretary, Telegraph Service.
<i>Victoria</i> :	The Hon. AGAR WYNNE, M.L.C., Postmaster-General. J. SMIBERT, Esq., Deputy Postmaster-General.
<i>South Australia</i> :	The Hon. JOHN ALEXANDER COCKBURN, M.D., Lond., Minister of Education and Agriculture. Sir CHARLES TODD, K.C.M.G., M.A., F.R.S., &c., Postmaster-General and Superintendent of Telegraphs.
<i>Queensland</i> :	The Hon. WALTER HORATIO WILSON, M.L.C., Postmaster-General and Minister of Education. J. McDONNELL, Esq., Under-Secretary, Post and Telegraph Department, and Superintendent of Telegraphs.
<i>Western Australia</i> :	The Hon. STEPHEN HENRY PARKER, Q.C., M.L.C., Colonial Secretary. R. A. SHOLL, Esq., Postmaster-General.
<i>Tasmania</i> :	The Hon. JOSEPH GEORGE WARD, M.H.R., Colonial Treasurer, Postmaster-General, Electric Telegraph Commissioner, Minister of Marine, Commissioner of Customs, and Minister of Industries and Commerce, New Zealand.
<i>New Zealand</i> :	The Hon. JOSEPH GEORGE WARD, M.H.R., Colonial Treasurer, Postmaster-General, Electric Telegraph Commissioner, Minister of Marine, Commissioner of Customs, and Minister of Industries and Commerce. W. GRAY, Esq., Secretary, Posts and Telegraphs. J. K. LOGAN, Esq., Telegraph Engineer.

APPOINTMENT OF ACTING-SECRETARY.

On motion of the Hon. Mr. WARD (New Zealand), seconded by the Hon. Mr. WILSON (Queensland), *Resolved*, That Mr. F. Hyde be appointed acting-secretary to this sitting of the Conference.

LETTER OF THANKS.

The Hon. Mr. WARD (New Zealand) : I wish to say that I have received a letter from Mr. Stowe, which was handed to me in Wellington, in which he desired to thank the Conference for appointing him as Secretary to the first Postal Conference held in New Zealand, which he esteems a high honour.

REPORT BY PERMANENT HEADS OF DEPARTMENTS.

The Hon. WARD (New Zealand), having laid upon the table the report of the permanent heads of departments, the Conference then proceeded to consider seriatim the various subjects contained therein. (*Vide Appendix B, p. vi.*)

OCEAN MAIIS.

Subject 4 read.

Mail-train, Brisbane to Adelaide, Acceleration of : " We venture to suggest that the question of the acceleration of the mail-train between Brisbane and Adelaide receive further consideration, in connection with the following memorandum from the Sydney Post Office (see Appendix B, p. vi.), and we would also suggest that New South Wales should run a train from Albury to Sydney to connect with the Saturday night's express from Melbourne, so as to enable the Queensland portion of the mails to go forward to Brisbane without delay. If this is not feasible, it is suggested that the Victorian train should, on Saturdays, leave two hours earlier, the Sydney ordinary train to leave Albury on its arrival, in lieu of 2.45 p.m. as at present."

Hon. Mr. WILSON (Queensland) : I would suggest that New South Wales be asked to take the necessary action in this matter, and perhaps, on its being gone into carefully, a further acceleration might be seen to be advisable, especially between New South Wales and South Australia. I hope that this will be done, because at present the mail arrangements between Brisbane and Sydney are very unsatisfactory. I need not go further into the matter, as the permanent heads are quite familiar with the whole subject, and have gone into it carefully, and I am glad to see that some acceleration will be made.

Subject 4 agreed to.

POSTAGES.

Subject 5 : Paragraph (a) : Division of postages between the United Kingdom and the colonies, read and agreed to.

Paragraph (b) : Postages on newspapers to United Kingdom, read.

Hon. Mr. WARD (New Zealand) : In regard to subsection (b) of this paragraph, this has not been the policy of New Zealand ; but, as some of our newspapers are being surcharged by the London Post Office under the rates we have been charging, it appears to me that, in the interests of the posters, I am bound to the uniform system. I also desire to say I favour the London rate—that is, a minimum rate of $\frac{1}{2}$ d. for 2 ounces. As, however, I cannot get that, I have, under the circumstances, to agree to the proposal which is made here.

Paragraph (b) agreed to.

Subject 6 : Question of landing English mails in certain cases at Glenelg instead of Semaphore. Read and agreed to.

UNIVERSAL POSTAL UNION.

Subject 7 : Convention and detailed regulations, Unimportant amendments to, during recess, of International Congresses. Read and agreed to.

Subject 10 : Metric system of weights, As to avoirdupois equivalent for 350 grammes. Read and agreed to.

Subject 11 : Sea surtax, As to charging of, by Italy. Read and agreed to.

Subject 12 : Glassware, Transmission of samples of. Read and agreed to.

Subject 13 : Demonetization of stamps, Question of uniformity of practice. Read and agreed to.

Subject 14 : Registered letters, Acknowledgment of receipt of. Read and agreed to.

Subject 14 (a) : Question whether the colonies might not fairly object to deliver English packets prepaid $\frac{1}{2}$ d. whilst 1d. is levied in the colonies.

And the paragraph relating thereto having been read,

Hon. Mr. WARD (New Zealand) said : I desire to record my dissent from the recommendation contained in this clause. I do so because in this colony our rate is already a halfpenny rate, which conforms to that charged by England upon outward matter ; and, in addition to that, I dissent from the recommendation, as I think the principle of foreign countries having a cheap rate to the colonies, such as this, is one that should be encouraged.

Hon. Dr. COCKBURN (South Australia) : This seems rather a serious matter, and under the existing arrangements we are certainly placed at a great disadvantage. According to the report it appears that many people send their circulars not only to be posted in England at the halfpenny rate, but also to be printed there. We should remonstrate against this at the earliest possible opportunity. In addition to bringing the question before the next International Congress, we should make joint representations to the Post Office authorities in England on the subject, and I therefore beg to move, That this Conference, on behalf of the colonies represented, desires to make a joint representation requesting that the postage rate be raised from $\frac{1}{2}$ d. to 1d., so as to bring it into uniformity with the rate charged on such matter despatched from the Australian Colonies.

Hon. Mr. WARD (New Zealand) : That is the recommendation of the report.

Hon. Dr. COCKBURN (South Australia) : That recommendation will be acted upon in about two years hence, and in the meantime we shall have the present unfair arrangement continuing. I certainly approve of the report ; but still we should leave no stone unturned to obtain justice before the meeting of the next International Congress.

Hon. Mr. KIDD (New South Wales) : I would like to point out that the rate charged by England is the Union rate, and that, as with New Zealand, they are acting quite within their rights. This doubtless entails a heavy loss upon the Governments in the various colonies ; but I do not see how we are going to remedy it, unless we make representations urging that the penny rate be reverted to, and that this be the Union rate. At present a double injustice is being done to us, as is shown by the report. If the Hon. Dr. Cockburn would alter his resolution so as to read, that we submit this recommendation to the Berne Bureau that the rate be increased to 1d., and that we try at the same time to get the Imperial authorities to agree to this, pointing out how inconvenient this loss is, they might, I think, see their way to revert to the penny charge.

Hon. Mr. WARD (New Zealand) : I would suggest the following addition to 14 (a) : " and that a request be addressed from this Conference to the authorities of the London Post Office to assist the colonies in this respect."

Hon. Dr. COCKBURN (South Australia) : I move, That paragraph 14(a) be agreed to, with the addition suggested by the President.

Hon. Mr. WYNNE (Victoria) : I second that.

Hon. Mr. WARD (New Zealand) : It is understood, gentlemen, that I dissent from this recommendation.

Amendment proposed : To add to the paragraph, " and that a request be addressed from this Conference to the authorities of the London Post Office to assist the colonies in this respect."

Amendment agreed to.

Paragraph 14 (a) as amended agreed to.

Subject 14 (b) : Rate for commercial papers. Read and agreed to.

PARCEL-POST.

Subject 15 : United States—(a) Exchange of parcels with ; (b) Report by Queensland of action taken. Read and agreed to.

Subject 16 : Cape Colony, Exchange of Parcels with. Read and agreed to.

Subject 17 : Sea-transit rates intercolonially. Read and agreed to.

Subject 18 : Uniform conditions of transmission of transit parcels for foreign offices. Read and agreed to.

POSTAL NOTES.

Subject 19 : Poundage on ; suggestion by Hobart that payee receive face-value when having postal note cashed, instead of having to affix stamps to the amount of poundage.

Paragraph read and agreed to.

Subject 20 : Exchange of postal notes between other colonies and New Zealand.

The paragraph relating thereto having been read,

Hon Dr. COCKBURN (South Australia) said,—I understand that there is no exchange of postal notes between New Zealand and Western Australia and the other colonies.

Hon. Mr. WARD (New Zealand) : No ; not between New Zealand and the Australian Colonies.

Hon. Dr. COCKBURN (South Australia) : I want now to speak with regard to the practice of each colony in relation to postal notes. When postal notes were introduced in South Australia we gave them a currency of six months, and at the end of that time they were not cancelled ; but, in order to be cashed, they required the payment of an extra fee. I should like to have the opinion of the members of the Conference on this point.

Hcn. Mr. WARD (New Zealand) : That was formerly our practice also. Now ours are unlimited as to time of currency.

Hon. Dr. COCKBURN (South Australia) : Mr. President, that is the point. Although, at the time I thought this practice a good thing from a revenue point of view, still it appears to me that it greatly militates against the currency of these notes. As it is the object of most Post Offices that their notes should be used as far as possible in the place of cash, I should like to have the opinion of the other representatives as to what extent this practice of charging an extra fee of 3d. operates against the using of the postal notes in the place of cash by the people. The issuing of postal notes seems to be the beginning of a State bank of issue, which some of the Australian Governments are in favour of ; and, as I have already stated, I should like to have the opinion of yourself and the other delegates as to whether the extra charge made by most of the Australian Colonies in any way seriously operates against the notes being so used. I do not, however, intend to move in the matter, but I should like to know whether, in the interests of postal notes currency, the present practice should be continued. I myself am inclined to think the practice of New Zealand is the best.

Hon. Mr. WARD (New Zealand) : I should like to say I have given this matter of postal notes a very considerable amount of attention. The system which prevails in South Australia, to which reference has been made, was in existence here—that is, there was a limitation of currency while the note was renewed in the ordinary way. In this colony we have now changed the system. We now have an unlimited currency for our postal notes. The primary object is that they should be exchanged in the ordinary way, and they take the place of the ordinary bank-note for the time being. As long as it remains in circulation in that way people using it have the benefit of a State note. It is, I think, very desirable we should have this. We have fixed the maximum value of a postal note at £5, but we shall also issue £1 notes. I have no hesitation in saying they will be found to be of great convenience and considerable service to the public, and it will be very valuable to the Treasury. From any of the many points of view we like to look at it it is an advantage in the interests of the people generally, and a very proper thing for the Post Office to do. I should

- have been very pleased to have seen the whole of the colonies agreeing to the extension, and for an unlimited period. We are issuing 100,000 of these postal notes, and if necessary we shall increase that number from time to time as circumstances may arise.

Hon. Mr. WYNNE (Victoria) : It seems to me that the original idea of a postal note was to do away with money-orders which were issued from one place to another, and I think, if any country wishes to have an issue of paper-money, it would be better to do it directly—to have its State banks and issue their notes. But to my mind it is rather a mistake to convert postal notes into bank-notes. If you are going to have an issue of bank-notes it should not be done through the Post Office, but through the Treasurer, or some department which has charge of it. I think it is advisable to have a limit for postal notes, to make them returnable in a certain time, as is done in the Australian Colonies, and to keep the note-issue quite distinct from the Post Office. I shall support the recommendation as it stands now.

Hon. Mr. WARD (New Zealand) : You have the disadvantage in not having the use of the Post Offices throughout the colony.

Hon. Mr. WYNNE (Victoria) : You could easily arrange that.

Hon. Dr. COCKBURN (South Australia) : What do you charge for a five-pound note.

Hon. Mr. WARD (New Zealand) : We will probably charge 6d., and my idea is that finally they should be issued free of commission. There is no reason why, later on, we should not issue intermediate notes.

Hon. Mr. KIDD (New South Wales) : I quite agree with the Hon. Mr. Wynne that if we are going to have a State bank—a bank of issue—we ought to have it in connection with the Treasury,

and not the Postal Department. Postal notes are intended for convenience in transmitting small sums. We do not intend it to abolish the money-order system at all. Beyond that at the present time we do not desire to go. We do not want these notes to go knocking about for six months; we prefer to have the time limited. So far we have been very successful. We do, I think, an enormous amount of business, and we are very well satisfied with the system as it is. Beyond that, to issue postal notes up to £5, or to issue them for the purposes of circulation, I am not prepared to go. I shall support the recommendation as it is.

Hon. Dr. COCKBURN (South Australia) : I do not propose to make any alteration. My desire is to get a discussion on the subject, and I think the remarks that have been made are worthy of consideration. The practice of New Zealand is certainly worthy of consideration, if not of imitation. I shall not press the matter, but I quite agree with what has been said by the Postmasters-General of Victoria and New South Wales—that the Treasury is the proper department from which the bank issue should be started. We are anxious to take every step possible in that direction, but whether it is a possible step will have to be reserved for some other time. But, so far as South Australia is concerned, it will have the fullest consideration.

Paragraph agreed to.

Subject 21 : United Kingdom, Exchange of postal notes with. Read and agreed to.

AUSTRALASIAN POSTAL CONVENTION.

Subject 22 : Consideration of Convention generally. Read and agreed to.

TELEGRAPH AND TELEPHONE.

Subjects 23, 25, 26, 27, 28, 29, 30, 31, 32, and 33 severally read and agreed to.

ELECTRIC TRAMWAYS, LIGHT, AND POWER.

Subject 34 : Regulations for electric light and power wires, Consideration of committee of experts' report.

The paragraph relating thereto having been read,

Hon. Dr. COCKBURN (South Australia) said,—I think this Committee has done very valuable work in connection with electric power, which is coming more into importance day by day. I move a vote of thanks, and that the committee be requested to complete their labours by reporting on electric tramways, and drafting regulations in regard to electric-power leads generally.

Hon. Mr. Wilson (Queensland) seconded.

The question being put, it was resolved in the affirmative.

Paragraph, as amended, agreed to.

MISCELLANEOUS.

Subject 35 : Express messenger system and express companies. Read and agreed to.

Subject 36 : Payment to masters of vessels for carriage of mails. Read and agreed to.

Subject 37 : Reply-paid envelopes. Read and agreed to.

HOUR-ZONE TIME SYSTEM. (*Vide* also Appendix I, p xlvi.)

Subject 38 : The Conference proceeded to the consideration of the hour-zone time system.

Hon. Dr. COCKBURN (South Australia) moved, and the question was proposed, That the resolution relating to the hour-zone system arrived at by the Brisbane Conference in 1893 be reaffirmed.

Debate arose thereupon.

Hon. Dr. COCKBURN (South Australia) : This is a matter of very considerable importance, having so many varying times, and we should take what steps we can towards arriving at uniformity, or, at least, such a measure of uniformity as may be agreed to by the colonies. I would move that the resolution arrived at at the Brisbane Conference be reaffirmed. And perhaps I may be allowed to lay upon the table of Conference a minute addressed by Sir Charles Todd on this question. The honourable gentleman then moved the following proposition: That it is desirable, in the public interests, that the hour-zone system be adopted in a modified form, so that there shall be one time for Australia—viz., 135th meridian, or nine hours east of Greenwich.

Hon. Mr. WARD (New Zealand) : I will second the motion, so as to enable it to be discussed.

Hon. Dr. COCKBURN (South Australia) : We are all of one opinion. We want to assimilate as soon as we can. Possibly we can place the colonies in three groups. That will be a great step in advance, and perhaps is as far as the Conference will be disposed to go.

Hon. Mr. WYNNE (Victoria) : I think, if we adopt one, the difference will be too great as regards some of the colonies—Queensland, and probably Western Australia. It will be better, to my mind, to adopt three meridians, having 150, 135, and 120, making the difference in Victoria about twenty minutes earlier than the present time. That really was the line on which it was discussed at the Brisbane Conference, although the resolution does not read the same way. The feeling of all the colonies, I think, is to bring out as near as possible the nearest line. Each colony has a different time, and it would be a great convenience to travelling and commercial people if we could reduce the great difference that exists at present. If something on the lines I have suggested were carried out, Queensland, New South Wales, Victoria, and Tasmania would have one time.

Sir CHARLES TODD (South Australia) : South Australia, under the new arrangement, will only alter her standard time fifteen minutes, and Melbourne forty minutes.

Hon. Mr. WYNNE (Victoria) : If we adopted the three, the extreme, of course, would be about half an hour. But the 120th meridian would have to be extended to the Western Australian border so as to have only one time for Western Australia. If we adopt the three zones, it would be eight hours for Western Australia, nine hours for South Australia, and ten hours for Tasmania, Victoria, Queensland, and New South Wales.

Hon. Dr. COCKBURN (South Australia) : If Mr. Wynne will move that, I will withdraw my proposition.

The motion was, with the leave of the Conference, withdrawn.

Hon. Mr. WILSON (Queensland) : I have prepared a resolution which would be taken as an amendment if Dr. Cockburn had pressed his. It is, "That it is desirable, in the public interests, that the hour-zone system should be adopted as far as practicable in Australasia ; that the mean time be the 120th meridian in Western Australia, 135 in South Australia, 150 in Queensland, New South Wales, Victoria, and Tasmania, and 175 in New Zealand." The matter has been very carefully considered by the Government of Queensland, who had to send forward the resolution come to at the last Brisbane Conference, and Sir Thomas McIlwraith prepared an elaborate paper upon the subject, which I have already laid upon the table. That paper contains the arguments as far as Queensland is concerned. We came to the conclusion that we could not agree to the resolution as passed at the Brisbane Conference, the reasons for which have been stated. So far as Queensland, New South Wales, Victoria, and Tasmania are concerned, I think the 150th meridian would suit exactly. The time would be very little different from the mean time, and would do no violence to public opinion. I shall therefore move the resolution I have read. I may state also that I have prepared a Bill to lay upon the table next session in the terms of the resolution—that is, so far as Queensland is concerned. I shall be very happy to let any of the delegates who wish have a copy of that Bill, in order that similar legislation should pass in the other colonies simultaneously.

Hon. Mr. WARD (New Zealand) : I am very pleased to see there is a prospect of uniformity being arrived at in the colonies. It is very satisfactory indeed, and I compliment Sir Charles Todd on the result of his efforts. I second the motion.

Then, the resolution of the Hon. Mr. WILSON (Queensland) having been put, it was resolved in the affirmative.

Resolved, That it is desirable, in the public interests, that the hour-zone system should be adopted as far as practicable in Australasia ; that the mean time be the 120th meridian in Western Australia, 135 in South Australia, 150 in Queensland, New South Wales, Victoria, and Tasmania, and 175 in New Zealand.

PAPER.

Hon. Dr. COCKBURN (South Australia) laid upon the table the referendum of minutes by Sir Charles Todd on the hour-zone time system. (Appendix I, p. xliv.)

RACING LOTTERIES.

Subject No. 39 : Registered letters for promoters of racing lotteries : Should obstacles be placed in the way of registration ?

The paragraph relating thereto having been read,

Hon. Mr. KIDD (New South Wales) said,—I do not know how New Zealand stands with regard to this, but Victoria, New South Wales, and South Australia have not only passed legislation to prevent the carrying of letters for the promotion of sweeps, but we have put the law into force. In fact, I cannot understand any colony passing any legislation, knowing the other colonies had already done so, in order to put down gambling as much as possible, and then sheltering themselves behind a resolution of the House, as Queensland has done. We all know resolutions of the House cannot take the place of an Act of Parliament, and the sooner they follow up that resolution in the Queensland House of Parliament by repealing the Act the better. Of course, I do not want to imply that it is for the sake of the money for postage that they do this; they have to say what it is themselves; but it does seem a very improper thing, after having legislation, and after all the other colonies have fallen into line, that Queensland should do nothing. It was found that New South Wales was the great centre of all these sweep operations. They passed legislation, and abolished them. After that they went to Queensland to shelter themselves. I do not think it is for the credit of the colony. I am sure the Hon. Mr. Wilson will admit that it is a bit of sharp practice to pass such legislation as this, and, as soon as they had passed it and carried it into force, wink at it by saying, "We will get a resolution passed setting that aside." I think the Hon. Mr. Wilson ought to make a promise of one of two things—that is, not to shelter themselves behind a resolution of the House, or to say he does not agree with the Act, that he will encourage the operations of sweeps, and that he is going to ask his Parliament to repeal the Act. If he will do that I will forgive him. It is a proper position to take up to say we are going in for uniformity. No one can but regret the enormous evil that is wrought by the gambling spirit of the colonies, and we should endeavour to keep it down. I do not think it right for one colony to take advantage of another. My predecessor did not care to do anything, but he took a proper course—he believed in the use of the Post Office for circulating letters in connection with sweeps; he did not see any harm in it. That was a proper attitude. I believed differently myself, and as soon as I came into office I kept the promise made, on the representation of the Victorian Government, and introduced a Bill as speedily as possible, and successfully passed it without any difficulty at all. If I had not carried out the law I should, I think, have been very much to blame, especially after Victoria had had the courage to pass the Act to prevent the Post Office being used for the purpose. I hope the honourable gentleman will be able to give me a promise.

Hon. Dr. COCKBURN (South Australia) : I cordially indorse what has fallen from the previous speaker in regard to the general question. Of course, in regard to what has passed between the Governments of Queensland and New South Wales, I shall not dream of expressing an opinion. But I do think every Government should do all in its power to stop not only the registration of these letters, but even their transmission. If we could strengthen one another's hands, I think each of us, in our own colonies, would be able to act to better advantage in stopping this practice. I hope Mr. Kidd will move an amendment, and I suggest something to this effect : "That representations be sent from this Conference recommending our Governments, as far as possible, to put a stop to the transmission of letters for racing purposes." If you do so, I am sure there can be only one opinion. I cannot understand any objection to the general principle, but I think the

objection is in carrying out the detail. I shall be glad if my hands can be strengthened by some resolution showing that the delegates are alive to the evil, and that each will do all in his power to recommend his Government to introduce and enforce legislation.

Hon. Mr. WYNNE (Victoria) : I also indorse what has been said. The Victorian Legislature, I think, was the first to move in this matter of putting down sweeps, and the promoters were driven from that colony to New South Wales. The Hon. Mr. Kidd introduced his Bill on similar lines, and has done all he could to stop these racing lotteries. I understand Queensland has similar legislation, but they do not enforce it. The colonies should march in line in this matter where there is such a consensus of opinion. I must assume that the opinion of the majority of Queensland people is in favour of putting down these sweeps, otherwise they would not pass legislation ; and it seems to me to be a wrong thing that, where legislation is passed, it should be allowed to lie dormant in cases like this. Therefore I would urge the representatives of that colony to fall in line with the other colonies and put down this system, which the great majority of the people desire to see put down. It seems a rather sordid way to look at it, that, because there is a little revenue to be obtained by allowing these sweep-promoters to carry on their operations, they should be allowed to continue in one particular colony, when all the others are opposed to it.

Hon. Mr. WILSON (Queensland) : I am in this position with regard to Queensland : During the last session of Parliament an amendment was proposed in Committee of Supply on an item in the Post and Telegraph estimates in order to obtain an expression of opinion as to the Postmaster-General carrying out the 49th section of the Queensland Postal Act relating to the prevention of sweeps. This amendment was negatived by 37 to 12, showing that the Assembly was not in favour of any action being taken. Of course it is very desirable we should have uniformity in these matters, and it is rather awkward that, Victoria and New South Wales having decided to put the law into force, the gambling agents should have come to Queensland to exercise full operations there. But I am placed in this position : that until the next Parliament meets, and until that decision can be rescinded, my hands are tied. The fact was I had the subject under consideration, and before I had come to a conclusion about it this matter was ventilated in the House. The papers had been placed in the hands of the Attorney-General for legal advice. But this question having been decided in the Assembly as stated, the Government considered nothing could be done until the next session ; so that until next session I cannot promise that any alteration will be made. But it will be carefully considered, especially in view of the unanimous opinion that has been expressed at this Conference, and also in the direction of uniformity.

Hon. Mr. WARD (New Zealand) : I may say that legislation in the direction of preventing sweeps has been in existence in this colony for a very considerable time. New Zealand was the first of the whole of the colonies to take action in this matter, and I am thoroughly in accord with it. I think every country should do its best to put down this gambling spirit, and, at any rate, to prevent the Post Office from being made the medium. We cannot, so far as our legislation is concerned, prevent the transmission of letters to any other colony, but we can prevent it in our own colony. And I think every colony should prevent the circulation of these letters. If they did this, the machinery now being used for the circulation of these letters would to a very large extent be rendered useless. Of course, many people can still carry on gambling without the use of the Post Office, but that is a matter which does not come under our control. I have very much pleasure in cordially supporting the views expressed by Mr. Kidd, and I hope my friend Mr. Wilson may be able to give effect to similar views in his own colony.

Hon. Mr. KIDD (New South Wales) : I move, as an amendment, That the representatives at this Conference recommend their various Governments as far as possible to put a stop to the transmission and delivery of letters promoting racing lotteries. And I would just like to add that the explanation given by the Hon. Mr. Wilson does not at all improve his position. The House, by a large majority, advises the Government to take no heed of an Act of Parliament. Now, the Executive of a colony or any country is bound to carry out the laws of a country, no matter what resolutions may be passed by the Assembly. They cannot suspend the operation of any law. If the Executive has not the courage to carry out the law as it stands they should at once say so. I can understand a resolution being passed asking the Government to repeal an Act which is obnoxious to the people of Queensland. But it is about the first time such a thing has ever been done for a Government to shelter themselves behind a resolution, and say they must suspend the operation of a law. I know very often in our Assembly, in connection with the land-laws, people from country constituencies think the Minister for Lands can do just as he pleases. But, of course, he cannot. I do not know whether it was the Government that recognised the necessity of asking Parliament to pass that law, but now that the House of Parliament have passed a resolution asking that that law shall be suspended, I think it would be better to say, Let the people of Queensland decide.

Hon. Mr. WILSON (Queensland) : The representatives of the people have decided.

Hon. Mr. KIDD (New South Wales) : The representatives of the people have nothing to do with the laws in the statute-book. The Executive are sworn to carry the law out ; it does not matter how obnoxious it is. As far as the Executive is concerned, the only thing is to ask the Government, by resolution, to repeal the Acts which are so obnoxious. I hope my honourable friend will see the necessity of enforcing the law, and tell the Assembly of his colony if they desire the law repealed they must say so.

Then, the question being put, That the representatives at this Conference recommend their various Governments, as far as possible, to put a stop to the transmission and delivery of letters promoting racing lotteries,

It was resolved in the affirmative.

Subject 40 : Should any inquiry be made after non-registered articles ? If so, should a fee be paid? Read and agreed to.

Subject 41 : Postal Guide. Mutual arrangements to be made for insuring the latest information appearing in the respective quarterly Postal Guides of each colony. Read and agreed to.

Subject 42 : Postal rates, Consideration of Mr. Henniker Heaton's proposal to the Chancellor of the Imperial Exchequer that Great Britain adopt the penny postage to Australia, the postage from Australia to remain as at present.

The paragraph thereon having been read,

Hon. Mr. KIDD (New South Wales) said,—I propose the adoption of this recommendation ; and, to make it more clear, and to show the magnitude of the interests involved in connection with the reduction; I would like to put it in rather a different form. I will read it, Mr. President: "That, with regard to the proposals from time to time made for penny postage between Great Britain and the colonies, and, more recently, that such be adopted for letters from the United Kingdom, leaving the rate from the colonies as at present, this Conference, while recognising the desirableness of adopting the lowest possible rate, desires to express the opinion that the heavy cost of providing speedy and regular communication does not admit of any further reduction being made at the present time, the reduction to $2\frac{1}{2}$ d. in 1891 having resulted in an annual loss to the colonies of about £40,000 ; and that the partial reduction proposed—namely, in the rate from Great Britain—would be most undesirable, as such a measure would compel the colonies to reduce their inland and intercolonial rates from 2d. to 1d., involving a probable loss to them of a quarter of a million per annum, in addition to that already mentioned as the result of the reduction to $2\frac{1}{2}$ d. ; and that a copy of the foregoing be transmitted to the Imperial Government." My reason for submitting it in this way is that a reduction to 1d. would involve so much more than we are losing at present. New South Wales loses something like £13,000 to £14,000 in the reduction from 6d. to $2\frac{1}{2}$ d., and I assume Victoria loses about the same. I understand New Zealand loses about £8,000. Altogether it would be fully £40,000 we are losing now by the reduction from 6d. to $2\frac{1}{2}$ d. But there is a more serious question than the simple reduction—namely, that, having a letter transmitted from Great Britain, and from the colonies to Great Britain, at a penny rate, we could not possibly keep up the twopenny rate within our own colonies and intercolonially. Then, if we agreed to a rate of 1d. within our own colony, it would mean a loss of something like £70,000 or £80,000. In Sydney and the centres of population we have, within a radius of thirteen miles, a rate of 1d. But to make it universal throughout the colony would mean a loss of £70,000 or £80,000. I suppose it would mean fully that too in Victoria, while the loss, including intercolonial postage, would come to the enormous sum of £250,000. Those who are agitating for a reduction of postage between Great Britain and the colonies do not dream of the loss it is likely to involve. At the time they reduced the postage to 1d. in the Mother-country they had a great population to serve, and comparatively a small territory. Here we have a sparsely-populated continent—taking the whole of the colonies, it is a continent—where the population does not amount to more than four millions. It is a little over four millions, I think, including New Zealand. Why people should agitate for the reduction I cannot understand, unless it is they wish to make themselves notorious. I certainly think they are not able to judge of the enormous loss that it would entail upon the colonies, and the bad effect it would have, if it were carried out as they suggest, of 1d. only from the Mother-country to the colonies. We have had a little taste of it in connection with the halfpenny rate. The Mother-country has no right to inflict what would undoubtedly be a great amount of inconvenience and dissatisfaction by adopting the penny rate from herself to the colonies, unless the latter are able to reciprocate, and send out letters at the same rate. I do not think there is any necessity to enlarge upon the question, but I wanted to point out very shortly that aspect—that the loss would be very great to these colonies. If we have to adopt an internal penny rate, of course we could not possibly have more than an intercolonial penny rate. Then, the time is not opportune. Even if we were prepared to make big sacrifices the colonies are not in such a position to lose such an enormous amount of revenue. And I do not think those doing correspondence with the Mother-country have ever complained ; $2\frac{1}{2}$ d. is so low in comparison with the rate they have had to pay in the colonies. They are not complaining or agitating for it, and we do not want people to interfere with our business. This is not going to be of the advantage which some people suppose, though we might get a few more letters. But the family relations of the colonies to the Mother-country are not as they were some thirty or forty years ago. Then a larger proportion had emigrated to these colonies, and most persons who emigrated left their relations in the Old Country. Thus there was a larger amount of correspondence necessary in those days in proportion to the population. Now we are growing up the flow of emigration is not so great in proportion to the population, and therefore there would not be the correspondence except for commercial purposes. The rate is so low at present, and it would cause so much dissatisfaction if we only had the rate reduced from England to the colonies, that altogether I do not see what benefit can come of it. But my only object in submitting it in this form, Mr. President, is to show the large amount of loss we would be likely to sustain if it were adopted. We want to prevent this agitation, and to discourage the agitators. We want to show we are not in a position to adopt it, and will not be for many years. That is my principal reason. It is right enough as put in this recommendation, but it does not show the loss in regard to the internal, nor the loss that the colonies would suffer if we had a penny rate all over. I beg to move this addition to, or, rather, substitution for, the recommendation.

Hon. Mr. WYNNE (Victoria) : I will second that, for it is as well the colonies should show strongly their dissent from this reduction to 1d. It is all very well in theory this penny post from England to the colonies, and from the colonies to England, but the people who agitate for it do not have to pay for it. We all know that there is very little private correspondence amongst the poorer classes of people—the people who are always held up as being the ones hurt. It is the wealthy people—the large merchants and others who are well able to pay ; these are the only ones who would gain by this reduction. It is a case of larding the fatted pig again. Those who are

able to pay the larger amount ought to pay it, and we say those who do not correspond very much ought not to be called upon to pay more money for the benefit of the few who are well able to pay the present rate. In the Colony of Victoria, the late Government, in the very prosperous times, thought they ought to follow this cry of the reduction to 1d. internally, and it was reduced. That involved a loss of £89,000 a year, which meant additional taxation to the general community. The present Government felt compelled to recommend a twopenny post to reduce the loss, and we have a charge of 2d. in our own colony on the carriage of letters. I think it is as well the people in the Mother-country who are agitating should know we cannot afford to reduce the carriage to 1d.

Hon. Dr. COCKBURN (South Australia) : The sentiments expressed are those I personally hold, and I only rise to show my vote is not a silent one. I cordially indorse what has been said, and I would suggest the substance of the resolution be at once cabled.

Hon. Mr. WARD (New Zealand) : I will see that that is done. I should just like to say a word or two. I admit that in the financial circumstances of the neighbouring colonies such a resolution as that proposed—

Hon. Mr. KIDD (New South Wales) : Cannot you include your own ?

Hon. Mr. WARD (New Zealand)—is not a proper one. At the same time, I am bound to say that, speaking for myself, I am one of those who thoroughly believe in cheap communication either to or from foreign countries, within the colonies, and intercolonially ; and I look forward hopefully to the time when under the British flag there will be a universal penny postage between all countries over which that flag flies. The question, I may say, has been under the consideration of the New Zealand Government for a considerable time, as to whether we would not establish a penny postage between England and the colonies. The late Premier was strongly in favour of it; in fact, he communicated to me on the eve of my departure to Australia some twelve months ago the hope that our Government would be able to give effect to the penny postage between England and New Zealand. As the result of his communication, tables were prepared to show in what position this would place this colony. It was shown by the department that it would involve a loss of £3,367 per annum on the whole of our international correspondence upon the reduced rate. If we adopted an intercolonial rate it would be a loss of £2,093 per annum. We could therefore establish an international and intercolonial penny postage for £5,460 loss for the first year, and which would quickly be wiped out by the increase of business. Those were the estimated amounts. I do not believe in agitating for a reduction in this direction for the mere sake of agitating, or for the mere sake of having it said that they were the people who brought this about; but I am bound to say I do attach the greatest importance to it. I do not agree with my friend Mr. Wynne that a reduction such as this is sought only by those who are conducting commerce, and who expect to receive advantages. Domestic correspondence at the present time is estimated at about one-third of the whole ; consequently, if £250,000 would be lost, the domestic portion of the community would, it is estimated, pay something over £80,000 per annum by keeping up the present rates ; and it is idle to deny that every facility you give to commerce must, more or less, benefit every class in the community—domestic or otherwise. I am bound to say I am very strongly in favour of universal penny postage. The time at present may not be opportune ; it may be well to defer it for a time. But I do not think, myself, that the time is far distant, because the whole of the colonies are not going to be always in financial distress. They are bound to emerge from it ; and I should be very sorry if such a resolution should debar the English Government in giving effect to what they evidently contemplate—that is, the establishment of a penny postage outwards. There are thousands of people who never write, and the fact of being able to post a letter to the colonies for a penny would induce many persons to write who do not write at all. On the face of it, I admit, a considerable loss would be made, but that loss in the first instance, if the Imperial authorities reduced to 1d., would fall entirely upon their own community, and not on the Australasian community. On the other hand, we could not long remain in such an anomalous position as having a twopenny rate. I will, on behalf of New Zealand, simply dissent from the resolution, because I am not desirous of seeing deferred for a longer period than necessary the proposal to bring the whole of the British colonies and Great Britain into closer and more sympathetic touch, which, in my opinion, the establishment of a universal penny postage would do.

Hon. Mr. PARKER (Western Australia) : Perhaps you will permit me to say it is not financial troubles that make me assent. Western Australia is most prosperous, financially and otherwise.

Hon. Mr. KIDD (New South Wales) : I am very glad to hear there is one of the colonies that is all right, and no doubt you, sir, take credit that New Zealand is so. I am sorry, however, you have thought fit to dissent from the resolution, because I thought what had been advanced would have shown you differently. You want to make out it is not the cost, and yet you admit it is the cost. You say only one-third of the postage is of a domestic character, admitting, therefore, that two-thirds has to do altogether with commercial interests. As it would be a loss of £250,000, and as one-third of that is £80,000 odd, £170,000 would be made a present of at the expense of the taxpayers. I do not think it is a proper way to look at it at all. I view it in this way : The bulk of the taxpayers of a country are the working-classes, and, while they save in one-third, they will have to make good two-thirds of the loss. However, you do not see your way to vote for the resolution. I think the suggestion made by Dr. Cockburn is a very opportune one, and should be taken advantage of, for the benefit of the people in the Old Country, who have been agitating for some time past, and expecting the Home authorities to agree to their proposals, or at least to make it a penny postage from the Mother-country to the colonies. For the reasons I have stated, I think it would be disastrous to have anything of the sort unless and until we can make the postage uniform. I have nothing more to say. I would like to see the British-speaking communities more closely united, but that time has not arrived so far as the penny-postage rate is concerned, and I think it will be many years before we are able to take advantage of it.

Then, the motion having been put, it was resolved in the affirmative, New Zealand dissenting.

Resolved, That, with regard to the proposals from time to time made for penny postage between Great Britain and the colonies, and, more recently, that such be adopted for letters from

the United Kingdom, leaving the rate from the colonies as at present, this Conference, while recognising the desirableness of adopting the lowest possible rate, desires to express the opinion that the heavy cost of providing speedy and regular communication does not admit of any further reduction being made at the present time, the reduction to 2½d. in 1891 having resulted in an annual loss to the colonies of about £40,000; and that the partial reduction proposed—namely, in the rate from Great Britain—would be most undesirable, as such a measure would compel the colonies to reduce their inland and intercolonial rates from 2d. to 1d., involving a probable loss to them of a quarter of a million per annum, in addition to that already mentioned as the result of the reduction to 2½d.; and that a copy of the foregoing be transmitted to the Imperial Government.

Paragraph as amended agreed to.

Hon. Mr. WARD (New Zealand) : I will see that the resolution is cabled to-day.

Subject 43 : Circulars sent in bulk to Sydney for posting to New Zealand. Read and agreed to.

Subject 44 : Remitting through Treasury Department. Read and agreed to.

Subject 45 : Redirection, That the procedure of the British Post Office be adopted in regard to charge for. Read and agreed to.

Subject 46 : As to delay in international messages in consequence of interruptions in international lines.

The paragraph relating thereto having been read,—

Hon. Mr. WYNNE (Victoria) said,—I think if there had been no great delay in matters of this kind you would not have had the Chambers of Commerce complaining. It seems to me that the messages for the Press are of greater importance than private ones. The Press publishes the news for the whole of the colonies; persons resident in the colonies obtain the news from Europe through the Press. There are very few people who receive these private messages, and to my mind it is of greater importance that the Press should have precedence than private people. And, if it is thought absolutely necessary, I would suggest that 8 o'clock be altered to 6 o'clock. If the public want it during the day-time let them have it up to 6 o'clock, and after 6 let precedence be given to Press messages. That will allow of their being got through in time for the morning's publication. The matter is not in favour of the Press having precedence over private individuals, but so many more are benefited by the Press obtaining the news than the few. I think we ought to consider very carefully whether we make any recommendation.

Hon. Mr. PARKER (Western Australia) : I should have no objection to seconding the suggestion that the hour be 6 instead of 8.

Hon. Mr. WYNNE (Victoria) moved, and the Hon. Mr. PARKER (Western Australia) seconded, That the hour of 8 be struck out, and 6 substituted.

Hon. Mr. KIDD (New South Wales) : Mr. Lambton thinks we must not forget that the Press messages are taken at a reduced rate. Press messages are transmitted at 1s. 10d. and private ones at 4s. 9d. I should think it would be the other way about.

Hon. Mr. WYNNE (Victoria) : It means that twenty-four hours is lost. That is something to the Press, but it does not mean so much to private individuals.

Hon. Mr. KIDD (New South Wales) : What they object to is to be tied down. Let them judge whether they can get Press messages through in a reasonable time, and not give precedence to Press messages. Private messages can be sent through in a few minutes, while Press messages are lengthy.

Hon. Mr. WYNNE (Victoria) : Suppose we strike out the whole clause, and let it go as at present

Hon. Mr. KIDD (New South Wales) : It is better not to hamper the officers of the department. They use their own judgment, in the public interest. They are as anxious to get their messages through as the Chambers of Commerce.

Hon. Mr. WYNNE (Victoria) : If we adopt this recommendation, the telegraph company will pay attention to it. If it is desirable to adopt it, I think 6 o'clock is quite early enough. Otherwise strike the clause out altogether, and let them make their own arrangements.

Hon. Mr. WARD (New Zealand) : I may perhaps say, for the information of the Conference, that the rule we have is that such telegrams shall not interfere with the transmission of the ordinary telegraph traffic [rule read]. That is the system we carry out, and we find it is satisfactory.

Hon. Mr. KIDD (New South Wales) : That refers to offices in your own colony.

Hon. Mr. WARD (New Zealand) : No; it refers also to cables. I would rather agree to that, or something of that character. I think, if private parties come to the office and pay full rates, they are entitled to consideration. The officials are anxious to get Press messages through, and give every possible assistance, but I do not think private messages should be crushed entirely on one side.

Hon. Mr. WILSON (Queensland) : I think it would be better to withdraw it. By having a hard-and-fast rule of this kind you give an opportunity for parties to insist upon certain things being done. As far as Queensland is concerned, we have no difficulty whatever. We have no rule upon the subject, and we have no complaint. I would very much prefer to see the clause struck out.

Ordered that the paragraph be struck out.

AUSTRALASIAN POSTAL CONVENTION.

The Conference then considered the draft of Australasian Postal Convention submitted by the heads of departments. (Appendix C, p. xv.)

Article 1 read and agreed to.

On Article 2 being read,

Hon. Mr. WARD (New Zealand) said,—In connection with Article 2, New Zealand cannot agree to one or two suggestions here. Perhaps if I have the dissent recorded it will be satisfactory to the Conference.

Hon. Dr. COCKBURN (South Australia) : Is there any new matter here?

Mr. LAMBTON (New South Wales) : Letter-cards.

Hon. Dr. COCKBURN (South Australia) : But we have carried letter-cards already.

Hon. Mr. WARD (New Zealand) : Our rates are lower for books and higher for newspapers at the present time. I am sorry we cannot subscribe to the proposal here; we may do it later on.

Sir C. TODD (South Australia) : Cannot you adopt that intercolonially?

Hon. Mr. WARD (New Zealand) : We cannot do that.

Article 2 agreed to, New Zealand dissenting.

Articles 3, 4, 5, and 6 were read and agreed to.

On Article 7 being read,

Hon. Mr. WARD (New Zealand) said,—In this the word “colony” is substituted for “country.”

Article 7 agreed to.

Articles 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, and 24 severally read and agreed to.

Hon. Mr. WARD (New Zealand) moved, and Hon. Mr. PARKER (Western Australia) seconded, That the draft of the Australasian Postal Convention be agreed to. (*Vide Appendix C, p. xv.*)

The question being put, it was resolved in the affirmative.

FEDERAL MAIL-SERVICE CONTRACT.

Hon. Mr. PARKER (Western Australia) asked the Hon. the President, If he has had any official notification of the cablegram we saw in the papers this morning, to the effect that the Postmaster-General in London had arranged with the P. and O. and Orient lines of steamers, or offered them a renewal of their contract for the term of one year, with the option of a further term of two years. I have no doubt you saw that cablegram, and perhaps you will be able to tell us whether Mr. Morley acted upon any suggestion of this Conference or not, or whether he acted upon his own responsibility.

Hon. Mr. WARD (New Zealand) : I may state I have received no notification. All I know is what has appeared in the Press. No official notification has been sent to me. The resolution passed by the Conference was at once cabled to the Postmaster-General, Mr. Morley, so that he had the whole matter before him. I presume he has acted upon the resolution of this Conference.

BRISBANE MAIL-TRAIN SERVICE.

On motion of the Hon. Mr. WILSON (Queensland), seconded by the Hon. Mr. KIDD (New South Wales), *Resolved*, That the Hon. the President be requested to forward resolution in relation to the mail-train service from Brisbane to Adelaide to the colonies concerned.

AUCKLAND HARBOUR BOARD CORRESPONDENCE.

Hon. Mr. WARD (New Zealand) stated that he had received a letter, sent by direction of the Chairman of the Harbour Board, transmitting copies of the reports and statements of accounts of the Board, and also copies of the report of the Chamber of Commerce.

On motion of Hon. Mr. WARD (New Zealand), seconded by Hon. Mr. WYNNE (Victoria), *Resolved*, That the Chairman of the Harbour Board be thanked for his courtesy, and also for the use of the Harbour Board rooms for the Conference.

VOTE OF THANKS TO HON. THE PRESIDENT.

Hon. Mr. KIDD (New South Wales) : As there appears to be no new business to come on, I have very much pleasure in rising, on behalf of the Conference, to move that we accord a hearty vote of thanks to you, sir, for all your kindness since we landed in New Zealand. You have done everything that was possible to make our sojourn as pleasant and as agreeable as it was possible to make it. You not only did for us all you possibly could at Wellington, while the Conference sat, but you have been kind enough to take all those who have come over with the delegates, and the delegates themselves, throughout the whole of your colony, so that we might see the people, and judge of the resources of the colony, and view it in all its aspects, not only with regard to the question of settlement, but with regard to the large measures of reform which you have introduced into the legislation of the country. I, for one, heartily approve of the vast strides and progress that you have been able to accomplish during the last few years, more particularly in connection with social reforms. You are far ahead, I think, of the other colonies; and it is very much to the credit of the people of New Zealand that they are alive to the necessity for still greater social reforms than those you have been able to effect. I have taken great interest in connection with the reforms, so to speak, that you have been able to bring about by giving women the franchise. I was rather sceptical as to the advantages to be derived from it, but as far as it appertains to New Zealand, and the effect of it in connection with the return of the present Assembly, I think they have acted wisely and well; and, if they would be simply satisfied to remain as voters, I would not have any great objection to agreeing to woman's franchise myself; but I expect the next move will be, like the good lady who occupies a seat as one of the mayors of a borough near Auckland, that they will endeavour to secure their return as members of Parliament. Nothing would please my friend Mr. Parker better than to have an equal number of ladies with gentlemen. With regard to the Colony of New Zealand, I visited it a few years ago, but it was only a run around, and I had little idea of the immense tract of splendid country which you have lying pretty well as nature left it. It shows, with increase of years, as settlement becomes more general, that the Colony of New Zealand has a great future before it. You have made rapid strides during the last few years, and I congratulate the Government of the colony and the people on the healthy financial position in which you find yourselves. I hope that, by able government, large settlements will speedily take effect on the lands through which we passed. Of course you have some trouble, which I hope will be easily overcome, notwithstanding the Native difficulty. There is much, I think, which we may admire in the character of the Natives; yet I think you are taking a wise course to carry out your intentions—that if they will not use the lands themselves they shall arrange for other people to use them, or that the Government shall resume them. I think, there-

fore, it is a wise step you are taking. The population of New Zealand is nothing to what it is capable of carrying, and making it, I believe, one of the most important colonies in the British Empire before many years. It is now almost the most important; but I had no idea until I went through the colony that you had so much valuable land for settlement as you appear to have. It is no use my going into questions of that kind further. All I have risen to do is to convey to you our hearty thanks for the handsome way in which you have treated us since we arrived in the colony, and to thank you heartily for the hospitality which you have extended to us. It will be a red-letter day to most of us to look back to our trip to New Zealand. We have been able to combine some pleasure with the business we have had in hand. Just one word more. Some think there is no good accomplished by Postal Conferences; but I think those who have had to do with them recognise that a great amount of good is not only done in regard to postal and telegraphic facilities and matters connected with the business of our various departments, but it brings about a spirit of federation, which will be fostered more largely than has been the case in the past. I simply move, That the thanks of this Conference be accorded to the Hon. the President for the hospitality extended by him to the delegates since their arrival in New Zealand, and for the able manner in which he has presided over this Conference.

Hon. Mr. WYNNE (Victoria): Mr. President, I am sure that we all feel deeply grateful to you, and also to Mrs. Ward, for your hospitality to us. The month we have been enabled to spend here has been one for which we will ever feel thankful to you. I feel, too, that meetings such as this greatly assist the cause of federation; they bring the members of the different Governments into close contact, and give them opportunities for discussing matters, outside of postal ones, that are of advantage to the whole community; and I trust some day, as a result of these Conferences, to see one held from which will result a Customs Union of material benefit to the whole of the Australian Colonies, New Zealand, and Tasmania. I have great pleasure in seconding the resolution proposed by the Hon. Mr. Kidd, and again thank you very sincerely for the kindly way in which you have treated us during our visit.

Hon. Dr. COCKBURN (South Australia): Sir, I also wish to add my testimony and hearty support to this resolution. From the very moment of our landing in New Zealand we have been overwhelmed with courtesy, consideration, and hospitality. I recognise now that to visit New Zealand is not to visit any one centre. If a person wants to know New Zealand he must visit many parts. It is still very much as it was formerly—a federation of a number of centres of industrial and commercial activity; and, sir, I think this gives the highest possible promise of a successful future to any land, because it enables every portion of the colony to combine all the advantages of the city and the country. To enable us to see these many centres you have, as we all know, put yourself to a very great deal of inconvenience, for which we now wish to tender you our hearty thanks. We have learnt, sir, since we have been here of the many modes of activity in which you are personally engaged. With so many departments over which you preside, and with so many private relationships, all of which are mixed up with the advancement of the colony, we recognise that your absence from these duties during the time in which you have enabled the delegates to make the most of their visit to New Zealand must have been a very serious privation to you, and must have entailed a very great deal of hard work on yourself. I wish, sir, to add my testimony to that of those who have already spoken in regard to your efforts on our behalf. I wish also to remark on the excellent manner in which you have put forward the business of this Convention. We have discussed many matters of very great importance, and, while every opportunity has been given for discussion, no delay has taken place; and the manner in which we have been enabled to despatch our business here and in Wellington with so much facility has been owing chiefly to the thoroughly business-like way in which you have brought the matters before the Convention. During our trips through New Zealand we have become acquainted with you in many ways. We recognise your accomplishments, social and political, but above all we recognise that you are a man of business, and that business tact has been of the greatest possible advantage to this Convention. I wish to say that, for my part, this visit to New Zealand has been an education. One has been brought into familiarity with problems of the deepest possible importance, socially and politically. We have seen here what, perhaps, it is not possible for us to see in any other part of the world. We have seen many social and political problems brought to a successful issue, and we shall return, each of us, to our respective colonies with an inspiration for fresh activity in endeavouring to work out those problems which at the present moment are exercising not only New Zealand but Australia and every other country of the civilised world; and no Government, no people, can afford to neglect anything tending to their successful solution. As tending towards that successful solution, I believe one and all of us have learned a very great deal during our visit. I wish also to thank you for the courtesy with which you have supplied myself and the other delegates with all the information in your power bearing on the various institutions of New Zealand. Here we see established throughout the country what many of us have been working for years to effect in our own colonies. When a person visits any of the important centres in New Zealand one of the most prominent buildings that meets his eye is that of the Government Life Insurance Department. The establishment of such a department has been a problem that has engaged the attention of many of the Australian Governments. In New Zealand we find the problem solved, and the department in a healthy state. In this respect, also, I have to thank you for the information which you have without stint, and at any amount of trouble to yourself, placed at the disposal of the delegates. I beg to indorse what has been said by the mover and the seconder of this resolution, and, as one of the delegates, to tender my best thanks to yourself, and also to Mrs. Ward, for your kindness and courtesy to us. We shall leave New Zealand with regret, but, at the same time, I am sure that for years to come we shall look back with pleasure upon our visit, and also profit by it in the despatch of the work of our various departments, and in the discharge of our political duties. I regret to leave New Zealand,

but it affords me infinite pleasure to know that we have seen so much of it in so short a space of time, and with that pleasure there shall be mingled the thought that we have been enabled to see so much of it by your own efforts, which have been made at a sacrifice in order to minister to our requirements.

Hon. Mr. WILSON (Queensland) : On behalf of Queensland, I would like to add to the remarks that have fallen from the previous speakers. I thank you for your hospitality. When I left for New Zealand I had no idea that I would see so many wonders here. Having formerly passed through New Zealand on my way to England I had some knowledge of it, but I had no idea of the great extent of the country until I gained it through your hospitality. I can only say that I highly appreciate my visit to, and the information gained during my stay in, New Zealand. These will, I have no doubt, afford me great pleasure in the future, and be of profit to me. I have also to thank Mrs. Ward for her very great kindness and for the way in which she has attended to the ladies. Altogether, our visit has been most enjoyable, and we shall be very sorry indeed to leave New Zealand.

Hon. Mr. PARKER (Western Australia) : I desire to say that I concur in the remarks made by the members of this Conference who have already spoken on this subject. I desire to thank you and Mrs. Ward particularly for your kindness to the delegates of my colony. I may truly say that before I arrived in this country I had very little knowledge of its resources. I have been very greatly impressed with this charming colony, not only with its magnificent scenery, but also with its agricultural and pastoral lands. I leave New Zealand almost regretting that I was not born a New-Zealander instead of an Australian.

Then, the question being put by the Hon. Mr. KIDD (New South Wales), it was unanimously resolved in the affirmative.

Resolved, That the thanks of this Conference be accorded the Hon. the President for the hospitality extended by him to the delegates since their arrival in New Zealand, and for the able manner in which he has presided.

Hon. Mr. WARD (New Zealand) : I have to thank you very much for the resolution which has been passed. I also thank you very heartily for the kind expressions to which you have severally given utterance. I feel you have said many things which I accept as a compliment, but which I scarcely deserve. In connection with the tour we have made through the colony, I should be wanting in acknowledgment to Mr. Gray, the head of the department, were I to omit to say that to him largely is due the excellence of the arrangements which have been carried out. Upon him has devolved a very large share of the hard work in connection with the tour, so that any success which may have attended our visit through the colony is due to Mr. Gray. I have much pleasure in acknowledging it. I am too gratified to hear you say so many kind things of New Zealand, and I hope during the trip the representatives of the various colonies have acquired information which may be of use to them in the future. We have been exceedingly proud to have you amongst us and to have entertained you, and if we have succeeded in doing that it was all we hoped for. I cannot forget, myself, the universal kindness and courtesy extended to me and those with me upon each of our visits to the Australian Colonies, and if in New Zealand we have extended hospitality and courtesy we have only followed the good example set us when we were upon your shores. When you leave New Zealand we shall feel we have lost a number of friends. And if my friend regrets he has not been born in New Zealand I can only express my regret that I have not been born in each of the other colonies. However, I can only hope for good results from this Conference; that it will be productive of a considerable amount of good in the future. And I trust that at no distant date another Conference may be held in the direction to which this Conference has given utterance—a tariff Conference. I feel, myself, it is of the greatest importance to the whole of the colonies that such a Conference should be held. If our statesmen could only see their way to have a Customs Union it would be, in my opinion, of very considerably more importance than what is known as federation—in the meantime at any rate. I trust, as the result of the colonies' enterprise in sending their representatives here, that we may before long see some practical steps taken to adopt a Customs tariff which will enable the colonies to carry and improve regulations which day by day become necessary. I have only to thank you, Mr. Kidd, and the gentlemen here, for the resolution you have passed, and the kind expressions to which you have given utterance, and I shall have very great pleasure in informing Mrs. Ward of the kind way in which you have spoken of her.

VOTES OF THANKS.

Votes of thanks having been proposed by the various delegates to Mr. W. Gray, Chairman of the Heads of Departments, to the Departmental Heads, to the Press, to the Eastern Extension Telegraph Company, and to the Secretaries to the Conference,

And the question being severally put thereon, they were unanimously resolved in the affirmative.

BUSINESS OF CONFERENCE TO BE CONDUCTED THROUGH THE HON. THE PRESIDENT.

On motion of Hon. Dr. COCKBURN (South Australia), seconded by Hon. Mr. PARKER (Western Australia), *Resolved*, That all communications arising out of the business of this Conference should be despatched through the President of the Conference, and that there should be a distinct understanding on this point.

NEXT MEETING OF THE POSTAL AND TELEGRAPH CONFERENCE.

On motion of Hon. Mr. WYNNE (Victoria), seconded by Hon. Mr. WARD (New Zealand), *Resolved*, That the next meeting of the Postal and Telegraph Conference should be held in Melbourne.

ADJOURNMENT.

On motion of the Hon. Mr. WARD (New Zealand), *Resolved*, That this Conference do now adjourn.

The Conference accordingly adjourned *sine die*.

APPENDICES.

APPENDICES.

Letter from the Superintendent of Foreign Mails in Reply to the above, Appendix E, No. 4; and also relative to Parcel-Post Service between the United States and Australia, Appendix E, No. 5	xxvii.	
Correspondence with London Post Office re Postage on Newspapers from Colonies to United Kingdom, Appendix E, No. 6	xxvii., xxviii.	
QUEENSLAND TELEGRAPH STATISTICS, Appendix J	xlvi.	
REPORT OF HEADS OF DEPARTMENTS, Appendix B	vi.-xiv.	
SOUTH AUSTRALIA TELEGRAPH STATISTICS, Appendix J	xlvi.	
SUBJECTS FOR CONSIDERATION OF THE CONFERENCE, Appendix A	iii.-v.	
TASMANIA TELEGRAPH STATISTICS, Appendix J	l.	
TELEGRAPH STATISTICS: South Australia, Queensland, Tasmania, New Zealand, Appendix J	xlvi.-l.	

APPENDIX A.

LIST OF SUBJECTS FOR CONSIDERATION.

The subjects hereunder, with the exception of Nos. 1, 2, 3, 9, 24, and 46, were referred to the Heads of Departments to report upon, the excepted subjects being dealt with ministerially by the Conference.

OCEAN MAILS.

1. Federal Mail-service, *via* Suez : Report on, also consideration of London Post Office letter of 1st September, 1893.
2. Vancouver Service—
 - (a.) Report by Queensland.
 - (b.) To be considered.
3. San Francisco Service—
 - (a.) Report by Queensland.
 - (b.) To be considered.
4. Mail-train, Brisbane to Adelaide, Acceleration of.
5. Postages—
 - (a.) Division of, between the United Kingdom and the Colonies.
 - (b.) On newspapers to United Kingdom.
6. Question of landing English mails in certain cases at Glenelg, instead of Semaphore.

UNIVERSAL POSTAL UNION.

7. Convention and detailed regulations : Unimportant amendments to, during recess of International Congresses.
8. Vienna Postal Union Convention, Revision of.
9. Australasian delegate to next Postal Union Congress.
10. Metric system of weights : As to avoirdupois equivalent for 350 grammes.
11. Sea surtax : As to charging of, by Italy.
12. Glassware : Transmission of samples of.
13. Demonetization of stamps (question of uniformity of practice).
14. Acknowledgment of receipt of registered letters.

PARCEL-POST.

15. United States—
 - (a.) Exchange of parcels with.
 - (b.) Report by Queensland of action taken.
16. Cape Colony : Exchange of parcels with.
17. Sea-transit rates—intercolonially.
18. Uniform conditions of transmission of transit parcels for foreign offices.

POSTAL-NOTES.

19. Poundage on : Suggestion by Hobart that payee receive face-value when having postal-note cashed, instead of having to affix stamps to the amount of the poundage.
20. Exchange of postal-notes between other colonies and New Zealand.
21. United Kingdom : Exchange of postal-notes with.

AUSTRALASIAN POSTAL CONVENTION.

22. Consideration of Convention, generally, including following subjects :—
- (a.) Verification certificates.
 - (b.) Question whether the Colonies might not fairly object to deliver English packets prepaid $\frac{1}{2}$ d., whilst 1d. is levied in England.
 - (c.) Commercial papers—
 - (1.) Rate for.
 - (2.) What printed matter, if any, should appear in rate notices ?
 - (3.) "Expiry" notices of fire policies, &c.
 - (d.) Should letters or commercial papers enclosed in envelopes bearing advertisements be allowed to pass at ordinary rates ?
 - (e.) Invoices—
 - (1.) As to nature of remarks, or instructions to customers, which may appear in addition to the name of the firm and a description of its business.
 - (2.) Printed with code-letters having a secret meaning.
 - (3.) Should printed detached papers accompanying invoices be allowed or forbidden ?
 - (f.) Type-writing : Facsimiles of.
 - (g.) Printed papers—
 - (1.) Special rate for publications such as "Australasian Iron-monger," and for magazines, Christmas numbers, &c.
 - (2.) Minimum amount on printed papers to be $\frac{1}{2}$ d.
 - (h.) Travellers' cards—
 - (1.) Conformity with Postal Union Regulations, as regards insertion of name and date of visiting in writing.
 - (2.) Postage on.
 - (i.) Charge made on packets closed against inspection. As to practice of colonies.
 - (j.) Unclaimed letters.
 - (k.) Uniformity of statistics.
 - (l.) Letter-cards : Intercolonially.

TELEGRAPH AND TELEPHONE.

23. Duplicate cable : Subsidy.
24. Pacific Cable—
- (1.) Report by Queensland on action taken.
 - (2.) To be further considered.
25. Telephone systems : Regulations.
26. Press messages : Regulations.
27. Intercolonial repeats—
- (1.) Despatch *re* joining Telegraph Union.
 - (2.) For corrections.
28. Telegraph money-orders—
- (1.) Report by Queensland on action taken.
 - (2.) To be considered.
29. Standard dictionary : Whether it is possible to fix upon a standard dictionary.
30. Rectifying telegrams.
31. Telegrams addressed to initials or fictitious names : Whether telegrams so addressed should be accepted for transmission, or any distinction made between telegrams deliverable by letter-carrier or *poste restante*, and telegrams deliverable in the ordinary way by messenger.
32. Complaints of errors in telegrams transmitted to and from London *via* the Roebuck Bay cable and Western Australia.
33. Collect telegrams.

ELECTRIC TRAMWAYS, LIGHT, AND POWER.

34. Regulations for electric-light and power-wires : Consideration of committee of experts' report.

MISCELLANEOUS.

35. Express messenger system, and express companies.
 36. Payment to masters of vessels for carriage of mails.
 37. Reply-paid envelopes.
 38. Hour-zone system.
 39. Registered letters for promoters of racing lotteries: Should obstacles be placed in the way of their registration?
 40. Should any inquiry be made after non-registered articles? If so, should a fee be paid?
 41. Postal Guide: Mutual arrangement to be made for insuring the latest information appearing in respective Quarterly Postal Guides of each colony.
 42. Postal rates: Consideration of Mr. Henniker Heaton's proposal to the Chancellor of the Imperial Exchequer, that Great Britain adopt the penny postage to Australia, the postage from Australia to remain as at present.
 43. Circulars sent in bulk to Sydney for posting to New Zealand.
 44. Remitting through Treasury Department.
 45. Redirection: That procedure of British Post Office be adopted in regard to charge for.
 46. Representation of Fiji at the Postal Union Congresses and Intercolonial Conferences.
-

APPENDIX B.

REPORT AND RECOMMENDATIONS BY PERMANENT HEADS OF DEPARTMENTS.

*Presented at the Meeting of the Postal Conference held in Auckland on Monday,
the 19th March, 1894.*

In pursuance of the instructions of the Honourable the Ministers assembled in Conference, we have carefully considered the questions remitted to us, and have to report as follows:—

OCEAN MAILS.

4. MAIL-TRAIN, BRISBANE TO ADELAIDE, ACCELERATION OF.

We venture to suggest that the question of the acceleration of the mail-train between Brisbane and Adelaide receive further consideration in connection with the following memorandum from the Sydney Post Office, and we would also suggest that New South Wales should run a train from Albury to Sydney to connect with the Saturday night's express from Melbourne, so as to enable the Queensland portion of the mails to go forward to Brisbane without delay.

If this is not feasible, it is suggested that the Victorian train should, on Saturdays, leave two hours earlier, the Sydney ordinary train to leave Albury on its arrival, in lieu of 2.45 p.m. as at present.

“Acceleration of Journey of Mail Trains, Brisbane to Adelaide.

“There are two questions in connection with the Brisbane mail-service: 1st. Alteration of hours of departure of the train from Sydney and Brisbane respectively. 2nd. Acceleration of the time of journey from Brisbane to Adelaide.

“The first matter has been very fully considered, and the New South Wales Post Office Department is willing that the train leave Sydney at 5.45 instead of 6.15 p.m., which would involve the mails for the north closing at 4.15 instead of 4.45 p.m., letters for Brisbane itself closing at 4.45 p.m.—a gain of half an hour. A further saving of another hour and a quarter could, perhaps, be managed by the Railway Department in the journey north from Newcastle or Hamilton, which would enable the train to reach Brisbane at 8.35 p.m.

“Another suggestion of New South Wales is that the train leave Brisbane at 8.30 a.m., and, by a similar acceleration to that herein proposed for the Sydney-Brisbane mail, it could arrive in Sydney next day at 11.30 a.m., thus insuring the delivery of Sydney letters at 2.30; and to forward mails for Great Britain and the other colonies, as well as the southern and western districts of New South Wales, the same evening.

“On the 6th January, 1894, these suggestions were put before the Railway Commissioners of New South Wales, for their consideration, prior to submitting them to the Queensland Postal Department.

“The Queensland Department was, on the 20th January, 1894, informed that the Postmaster-General had further considered the matter, as promised, and conferred with the Railway Commissioners of New South Wales; and that he did not see his way to concur in any alteration of existing arrangements unless such an entire revision were practicable as would provide for the mails arriving in Sydney in the forenoon and leaving in the evening.

“It was pointed out that Mr. Mathieson, Chief Railway Commissioner for Queensland, urged the departure of the mail-train at 4.45 p.m., and that, from inquiry made, the public of New South Wales desired a *later* instead of an *earlier* despatch.

“Attention was also drawn to the fact that many years ago the hour was much later, but it had, as a compromise, though adversely to postal interests, been made gradually earlier, and to make it earlier still would cause considerable public dissatisfaction; and, moreover, the despatch of the mail-train at 4.45 p.m. would entail additional cost to the Railway Department of this colony.”

5. POSTAGES.

(a.) Division of, between the United Kingdom and the Colonies.

As it is proposed that the net cost of the Federal mail-service under any new contract shall be apportioned between the United Kingdom and the Colonies on the basis of the weight of mail-matter they respectively despatch, we are unable to recommend any alteration in the existing system under which each country retains its own postage.

(b.) *On Newspapers to United Kingdom.*

That the rates of postage, as agreed to at the Brisbane Conference, and approved by special agreement with the London Post Office—viz., 1d. for the first 4 ounces, and $\frac{1}{2}$ d. for every additional 2 ounces—should be adopted throughout the colonies.

Telegram from POSTMASTER-GENERAL, South Australia, to the HESSE EASTERN EXTENSION TELEGRAPH COMPANY, London.

March, 1893.

COPY of messages *re* newspaper rates between Australia and Great Britain :—

“Todd to Hesse, London.—Ask Blackwood to reply immediately *re* newspapers as Conference sitting. It is proposed to charge four ounces or under one penny, and halfpenny every additional two ounces. Will he agree?”

To which Blackwood sent following reply :—

“Hesse to Todd.—Following from Blackwood: ‘Newspaper rates to England, penny first four ounces, and halfpenny each additional two ounces, agreed.’” (*Vide also Appendix E, p. xxvii.*)

6. QUESTION OF LANDING ENGLISH MAIIS IN CERTAIN CASES AT GLENELG INSTEAD OF SEMAPHORE.

As the Postmaster-General, South Australia, reported: (1) That a Board, consisting of the Postmaster-General, the General Traffic Manager, and the President of the Marine Board of South Australia, reported in 1886 in favour of there being only one mail station—viz., at Largs Bay (Semaphore), for the reasons that all other vessels anchor there, that the water is smoother, that there is a difference in the distance between Cape Borda and the two places in question of only four miles, and that landing at Largs Bay (Semaphore) only involved a delay of half an hour; and (2) that a special train is always employed to meet the steamers at the end of the jetty, and that during the year 1893 there was not a single instance where the mails would have reached Melbourne earlier had they been landed at Glenelg; and, as to make the change proposed would involve considerable additional expense, we recommend that the existing arrangements be not disturbed.

UNIVERSAL POSTAL UNION.

7. CONVENTION AND DETAILED REGULATIONS: UNIMPORTANT AMENDMENTS TO, DURING RECESS OF INTERNATIONAL CONGRESSES.

We agree with the views of the Russian Post Office that it is unnecessary to discuss, through the medium of circulars from Berne, questions of procedure in postal practice except in cases of *urgency*; and think that the numerous points raised can be much better discussed *viva voce*, and settled more quickly at the meetings of the Congress.

10. METRIC SYSTEM OF WEIGHTS: AS TO AVOIRDUPOIS EQUIVALENT FOR 350 GRAMMES.

We recommend that for patterns and samples 12 ounces be the equivalent of 350 grammes.

11. SEA SURTAX: AS TO CHARGING OF, BY ITALY.

Complaints having been made of a surcharge of 1½d. upon letters from Italy addressed to Queensland, which bore postage at the rate of 2½d., making the rate equivalent to that fixed for countries not within the Union, we recommend that the Berne International Bureau be asked to explain why such letters are subject to this excessive charge, contrary to the principles of uniformity which should prevail amongst countries within the Union, the charge between which is 2½d., not 4d., as appears to be charged by Italy on letters to Australasia.

12. GLASSWARE: TRANSMISSION OF SAMPLES OF.

The Post Office at Berne, by letter dated the 23rd November, 1893, inquired of the Postmaster-General of South Australia whether the postal laws or regulations of the colonies absolutely prohibited the despatch or receipt by letter-post of glassware sent as samples. The Postmaster-General, Adelaide, wrote to the other colonies on the 9th January, 1894, recommending that the matter be considered at the Wellington Conference. The regulations of Great Britain, the Crown colonies, and Roumania absolutely prohibit the despatch of such samples through the post; while, on the other hand, those of the United States of America, Austria-Hungary, France, Italy, &c., admitted them. We recommend that the Berne Post Office be informed, in reply, that samples of glassware will be admitted, provided they are so securely packed that they cannot damage the contents of the mails.

13. DEMONETIZATION OF STAMPS: QUESTION OF UNIFORMITY OF PRACTICE.

The accompanying memorandum and synopsis having been submitted by the New South Wales Post Office, but, after very careful consideration, we are of opinion that no change should be made, as the present practice obtaining in the Australasian Colonies is also observed by Great Britain and other important countries.

“Demonetization of Postage Stamps.”

“Herewith is a synopsis of the replies received from countries in the Postal Union to the question of this department asked through the medium of the Berne Bureau.

“The synopsis is arranged according to the various systems adopted by the countries mentioned in connection therewith, and I have arranged the systems in accordance with the number and importance of the countries adopting them.

" It will thus be seen that the system (1) of notifying the withdrawal of a superseded series on some fixed date, the destruction of the stamps so withdrawn, and the consequent invalidation of all not exchanged within the given period, has the preponderance of support.

" The system (2) of 'once a stamp, always a stamp' is second on the list, and is that adopted by Great Britain, and, consequently, by the majority of the British Crown colonies.

" These two are the principal systems, Nos. 3 and 4 being, indeed, merely variants of them, showing minor details or a limited application of the principle.

" No. 5, although advantageous from a financial point of view, is not to be recommended, as it owes its existence solely to the demand for new issues by stamp-collectors, to whom the company look for sufficient support to repay them handsomely for their outlay in providing the plates and stamps gratis to the different Governments.

" The recommendation of the Brisbane Conference on the subject of demonetization of stamps appears to be open to several objections:

" 1st. That in the natural course of events the stock of any superseded issue in the hands of the public becomes gradually smaller; but as the stamps are to remain available, however few in number, it necessarily follows that each letter-sorter and stamper is expected to recognise every kind of obsolete stamp, no matter of what age; and as they become older, and consequently less familiar, the difficulty of detecting forgery of these obsolete stamps becomes greater every year.

" 2nd. If no stock of a superseded series is retained for purposes of exchange in response to the numerous demands from other Administrations, it sometimes becomes necessary to reprint specimens at a cost which might have been avoided.

" 3rd. Unless the superseded series are deprived of their monetary value after a specified period there is great risk of loss to the revenue from the use of obsolete stamps, either forged or obtained by fraud.

" I may be permitted to suggest that the system of withdrawal after a specified period, and the subsequent invalidation of a superseded series, is the best, but with the detail adopted by Turkey and Peru—viz., that the stamps so withdrawn and demonetized be reserved for such purposes as may be determined upon."

" Synopsis of Replies received from Union Administrations through the Medium of the Berne International Bureau."

" 1. On the issue of a new series: Notice of withdrawal of superseded series at a stated time; during the interval the old series may be exchanged for the new, but will also be allowed to frank correspondence; a further period being allowed during which the old series can be exchanged, but will not be allowed to frank correspondence. After the above two periods have elapsed the old series becomes absolutely demonetized, and will neither be exchanged nor allowed to frank."

" Countries adopting this System.—Italy, Netherlands, Switzerland, Germany, Roumania, Egypt, Hungary (exceptionally long period allowed, and extended in favour of licensed vendors); Uruguay, Denmark, Siam, Argentine, Japan, Surinam, Curaçoa, Russia, Liberia, Austria, Turkey, Peru, and Trinidad.

" 1. The remaining stock of stamps thus withdrawn were: (a) Destroyed by Germany, Siam, Russia, Trinidad, Austria (in this case a limited stock being reserved for exchanges); (b) reserved for exchange, by Roumania; (c) reserved, for some purpose not defined, by Turkey and Peru.

" The remaining countries do not state the manner in which the withdrawn stock is disposed of.

" 2. No withdrawal: Validity of stock until all is exhausted, whether in the hands of the Administration or the public.

" Countries adopting this System.—Great Britain, Sweden, Norway, France, Fiji, Queensland, Luxemburg, Antigua, and twenty-six other British Crown colonies; Bulgaria (small stock reserved for exchange).

" 3. Notice of withdrawal of certain specified issues, and continued validity of others.

" Countries adopting this System.—Belgium (issues prior to 1865 invalid); United States (issues of 1847 and 1851 declared invalid in consequence of the rebellion); Ceylon, Mauritius, Newfoundland (these three, having changed their currency from pence to cents, declared the pence values to be invalid); Falkland Islands, Natal.

" 4. On issue of a new series, the remaining stock is withdrawn without public notice and destroyed, those in the hands of the public being still available for postage.

" Countries adopting this System.—Canada, New Zealand, Portugal (this was the former practice; the superseded types are now surcharged 'Provisional,' and re-issued); British Guiana (stock withdrawn sometimes re-issued with fresh value surcharged).

" 5. Contract with the Hamilton Bank-note Company for supply of new series every year (gratis). At end of year three months' notice of withdrawal given, and remaining stock then handed to the company, with the plates.

" Countries adopting this System.—Salvador, Nicaragua, Honduras.

" Bosnia and South Australia state that the question of demonetization has never been raised, there being no occasion for it."

14. ACKNOWLEDGMENT OF RECEIPT OF REGISTERED LETTERS.

We recommend: (1.) That the Bulgarian proposal to revert to the old system, as resolved upon at the Brisbane Conference, viz., that the office of origin prepare the "A.R." label, be agreed to; but, if this proposal cannot be carried out, that (2), the German-Austro-Hungarian proposition be accepted—viz., that the office of origin should attach a label to the letter, showing the name of the office, and the number of the letter. We might however, suggest to the Berne International Bureau that a stamp is preferable to a label.

14A. QUESTION, WHETHER THE COLONIES MIGHT NOT FAIRLY OBJECT TO DELIVER ENGLISH PACKETS PREPAID $\frac{1}{2}$ D., WHILST 1D. IS LEVIED IN THE COLONIES.

Attention has been drawn to the fact that, under the existing arrangement, the Colonies have to deliver, without remuneration, large quantities of British trade circulars on which only $\frac{1}{2}$ d. postage is paid, notwithstanding that the rate levied by the Colonies (with the exception of New Zealand, which charges $\frac{1}{2}$ d.) on the same articles is 1d.

Only a comparatively small quantity of such mail-matter is sent hence to England, and the system of unequal rates works unfairly, as owing to the lower rate obtaining in the United Kingdom many people send their circulars, &c., to be printed as well as posted in England, the colonies thereby losing so much trade as well as postage.

We therefore strongly recommend that, at the next International Congress, the Australasian delegate be instructed to press for the initial rate to Australasia being made 1d., and to point out that the Colonies are contributing at considerable loss to a costly mail-service, and cannot afford to make any reduction at their end in the minimum rate of 1d.

Amended by the Conference.

The above paragraph was agreed to with the addition of the following words: "And that a request be addressed from this Conference to the authorities of the London Post Office to assist the Colonies in this respect."

14B. RATE FOR COMMERCIAL PAPERS.

The Berne Office wrote on the 19th July, 1892, to the effect that, in order to comply with the Postal Union Regulations, certain alterations would have to be made by the Australasian Colonies in connection with commercial-paper rates, and submitted the accompanying table of necessary alterations. At the Brisbane Conference it was decided to reply to Berne that the limit of weight for commercial papers would be raised to 5lb. On the 5th May last, Berne again called attention to the fact that the commercial-paper rates levied in Australia did not yet conform to the Union scale; and the Postmaster-General, South Australia, suggested that the rates be altered accordingly, but that final consideration of the matter should stand over until the Wellington Conference.

We recommend that the table of rates submitted by the Berne Office should be adopted.

Rates now levied.				Rates which Berne Bureau states should be levied.			
Weight.	Union Initial Rate.	Surtax.	Total Postage.	Weight.	Union Initial Rate.	Surtax.	Total Postage.
Not exceeding 4oz. ...	2 $\frac{1}{2}$...	2 $\frac{1}{2}$	Not exceeding 2oz. ...	2 $\frac{1}{2}$	0 $\frac{1}{2}$	3
Between 4oz. and 6oz. ...	2 $\frac{1}{2}$	0 $\frac{1}{2}$	3	Between 2oz. and 4oz....	2 $\frac{1}{2}$	1	3 $\frac{1}{2}$
" 6oz. and 8oz. ...	2 $\frac{1}{2}$	1 $\frac{1}{2}$	4	" 4oz. and 6oz....	2 $\frac{1}{2}$	1 $\frac{1}{2}$	4
" 8oz. and 10oz. ...	2 $\frac{1}{2}$	2 $\frac{1}{2}$	5	" 6oz. and 8oz....	2 $\frac{1}{2}$	2	4 $\frac{1}{2}$
" 10oz. and 12oz. ...	3	3	6	" 8oz. and 10oz....	2 $\frac{1}{2}$	2 $\frac{1}{2}$	5
Each additional 2oz. to 5lb.	0 $\frac{1}{2}$	0 $\frac{1}{2}$	1	" 10oz. and 12oz....	3	3	6
				Each additional 2oz. to 5lb.	0 $\frac{1}{2}$	0 $\frac{1}{2}$	1

NOTE.—New Zealand has adopted the minimum halfpenny-rate. Unable to agree to recommendation as applied to inland papers.

PARCEL-POST.

15. UNITED STATES.

(a.) *Exchange of Parcels with. (b.) Report by Queensland of Action taken.*

We recommend that, in view of the reply received from the Washington Post Office (copy of which has been laid on the table by the Hon. Mr. Wilson), in response to the invitation of the Brisbane Conference for the establishment of a parcel-post between Australasia and the United States, the matter be allowed to rest for the present.

16. CAPE COLONY: EXCHANGE OF PARCELS WITH.

The Capetown Post Office, having proposed the introduction of a direct parcel-post between the Cape and the Australasian Colonies,—

We recommend that the Capetown Office be informed that we are prepared to exchange parcels on the following terms and conditions:—

- That the rate between the Colonies and Cape Colony be 1s. per lb., and between the South African Colonies and States and the Australasian Colonies, 1s. 3d. per lb.
- That the division of postage be as follows:—

	Cape Colony.	Other South African States.
	Per lb.	Per lb.
For sea-transit ...	2d.	2d.
Country of origin ...	5d.	5d.
Country of destination ...	5d.	5d.
Cape land-transit	3d.
Totals ...	1s.	1s. 3d.

3. That the size and weight be the same as that of the United Kingdom; that there be no limit to the value; and that the special provisions as regards the Post Office or Customs, and the general conditions, be the same as those existing between the United Kingdom and the respective colonies.

17. SEA-TRANSIT RATES—INTERCOLONIALLY.

We beg to report that the several attempts made to obtain better terms for the carriage of parcels by steamers have not been successful, and that, in the absence of fresh legislation on the part of some of the colonies, it is found that nothing further can be done in this direction at present.

18. UNIFORM CONDITIONS OF TRANSMISSION OF TRANSIT PARCELS FOR FOREIGN OFFICES.

We recommend: (1.) That when parcels for any country beyond Australasia exceed five in number for any mail, a direct parcel mail be made up for such country; (2) that the country which includes "forward" parcels in its closed mails shall treat such parcels in every respect as its own, and, in return, be credited by the office of despatch with parcel rates to the country of destination.

POSTAL-NOTES.

19. POUNDAGE ON: SUGGESTION BY HOBART THAT PAYEE RECEIVE FACE-VALUE WHEN HAVING POSTAL-NOTE CASHED, INSTEAD OF HAVING TO AFFIX STAMPS TO THE AMOUNT OF THE POUNDAGE.

Having considered the objections of Tasmania, we are of opinion that the present practice be adhered to, as a change would involve loss of revenue. But we advise that, when making fresh issues of postal-notes, the denominations and rates of poundage be made uniform throughout the colonies of exchange, and be as follows:—

s. d.	d.	s. d.	d.	s. d.	d.					
1 0	...	0½		3 6	...	1		10 0	...	3
1 6	...	0½		4 0	...	1		10 6	...	3
2 0	...	1		4 6	...	1		15 0	...	3
2 6	...	1		5 0	...	2		20 0	...	3
3 0	...	1		7 6	...	2				

20. EXCHANGE OF POSTAL-NOTES BETWEEN OTHER COLONIES AND NEW ZEALAND.

When, on the passing of "The Postage Acts Amendment Act, 1893," it became possible to introduce the postal-note system in New South Wales, the other colonies were on the 16th August last invited by that colony to reciprocate in an extension of the system intercolonially. Queensland, Victoria, South Australia, and Tasmania have agreed to do so; but the Postmaster-General of New Zealand replied on the 16th September regretting his inability to fall in with the proposal, as he did not consider there was the same need for an exchange of postal-notes with New Zealand as there was between the Australian Colonies themselves; also, if extended to places beyond New Zealand, there would be great danger of fraud, &c.

A desire was expressed, however, to have the question discussed at the forthcoming Conference.

Having heard the objections of New Zealand that its postal-notes are now issued without limit as to time of repayment, we have no recommendation to make beyond suggesting the reconsideration of the question by the New Zealand Post Office, in the interests of uniformity of practice.

A similar difficulty exists with regard to postal notes issued in Western Australia.

21. UNITED KINGDOM: EXCHANGE OF POSTAL-NOTES WITH.

As no new circumstances have arisen since the Brisbane Conference, we do not think that this matter should be reconsidered at present.

AUSTRALASIAN POSTAL CONVENTION.

[For Draft Convention see on, Appendix C, page xv.]

22. CONSIDERATION OF CONVENTION, GENERALLY INCLUDING FOLLOWING SUBJECTS:—

A draft of the proposed Convention, as amended, is submitted in a separate report. With regard to the particulars (a) to (l) referred to us, they have been dealt with as follow:—

(a.) Verification certificates.

Form recommended for adoption:—

Post Office of

Correspondence with the

Post Office.

VERIFICATION CERTIFICATE.

For the correction and verification of errors and irregularities of every kind observed in the Mail from the Office for the Office.

Despatch of the , 189

ERRORS OR IRREGULARITIES.

(Failure of the Mail, failure of Registered Articles or of the Letter-Bill, Mail broken open, Mail torn, in a bad state, &c.)

ERRORS OF ACCOUNT DURING STATISTICS.

Numbers of the Tables of the Letter-Bill.	Description of the Correspondence.	Declaration of of the Despatching Office.	Verification of the Receiving Office.	Cause of the Correction.

Seen and accepted.

189

189

Receiving Officers.

The Chief of the Despatching Office.

- (b.) Question, Whether the Colonies might not fairly object to deliver English packets prepaid $\frac{1}{2}$ d., whilst 1d. is levied in England?
Dealt with under 14 (a).
- (c.) Commercial papers—
(1.) Rate for.
See 14 (b).
(2.) What printed matter, if any, should appear in rate notices? and
(3.) "Expiry" notices of fire policies, &c.
See Convention.
- (d.) Should letters or commercial papers enclosed in envelopes bearing advertisements be allowed to pass at ordinary rates?
No objection; provided in draft Convention.
- (e.) Invoices—
(1.) As to nature of remarks, or instructions to customers, which may appear in addition to the name of the firm and a description of its business?
(2.) Printed with code-letters having a secret meaning? and
(3.) Should printed detached papers accompanying invoices be allowed or forbidden?
Dealt with in Convention.
- (f.) Type-writing: Facsimiles of.
Dealt with in Convention.
- (g.) Printed papers—
(1.) Special rate for publications such as "Australasian Ironmonger," and for magazines, Christmas numbers, &c.
Dealt with in Convention.
(2.) Minimum amount on printed papers to be $\frac{1}{2}$ d.
Not recommended.
- (h.) Travellers' cards—
(1.) Conformity with Postal Union Regulations, as regards insertion of name and date of visiting in writing.
(2.) Postage on.
Dealt with in Convention.
- (i.) Charge made on packets closed against inspection. As to practice of colonies.
Dealt with in Convention.
- (j.) Unclaimed letters.
Dealt with in Convention.
- (k.) Uniformity of statistics.
Having ascertained the different views on the forms first submitted, we recommend that New South Wales be requested to submit amended forms, with a view to uniformity.
- (l.) Letter-cards: Intercolonially.
Dealt with in Convention. We recommend their introduction generally, and that the charge be 1½d. each.

TELEGRAPH AND TELEPHONE.

23. DUPLICATE CABLE: SUBSIDY.

This matter has now been adjusted through the Agents-General, and no report is required.

25. TELEPHONE REGULATIONS.

We recommend that the Telephone Regulations in force in the various colonies be amended so as to admit of licenses being granted to private persons to erect Telephone Lines under regulations similar to those in force in Victoria. See page 205, "Victorian Postal Guide," January, 1894.

Queensland dissenting.

26. PRESS MESSAGE REGULATIONS.

We are unable to recommend any departure from the regulations now in force with regard to the mode of charging Press messages.

27. INTERCOLONIAL REPEATS.

(1.) Despatch *re* joining Telegraph Union.

We recommend that the Colony of Queensland be asked to join the Telegraph Union the same as the other colonies.

(2.) For Corrections.

And that the recommendation of the Brisbane Conference be adhered to, but that the usual practice of division of receipts should be adopted intercolonially.

28. TELEGRAPH MONEY-ORDERS.

(1.) Action taken.

(2.) To be considered.

We find it impossible to agree on a uniform code of regulations to govern the transmission of telegraphic money-orders, and we advise that the Post Office of each colony adopts within its own territory such a system as it may deem expedient for its own and the public protection, and that the result of the working of each system be reported to the next Conference. The intercolonial regulations to remain as at present.

29. STANDARD DICTIONARY: WHETHER IT IS POSSIBLE TO FIX UPON A STANDARD DICTIONARY.

The Paris revision of the Berne Convention Regulation 20, paragraph 5, admits of any dictionary being used for the purpose of deciding the number of characters which may be passed in each word.

We do not consider it practicable to fix upon any particular dictionary as a standard.

30. RECTIFYING OF TELEGRAMS.

Dealt with under No. 27.

31. TELEGRAMS ADDRESSED TO INITIALS OR FICTITIOUS NAMES: WHETHER TELEGRAMS SO ADDRESSED SHOULD BE ACCEPTED FOR TRANSMISSION, OR ANY DISTINCTION MADE BETWEEN TELEGRAMS DELIVERABLE BY LETTER-CARRIER OR POSTE RESTANTE, AND TELEGRAMS DELIVERABLE IN THE ORDINARY WAY BY MESSENGER.

We recommend that telegrams addressed to initials be accepted for transmission, provided the initials be followed by a definite address such as :

A.O., Post-office, Sydney.

B.C., 27, George-street, Brisbane.

M.N., Care of John Brown, 301, Elizabeth-street, Melbourne.

D.O., Telegraph Office, Wellington.

No distinction should be made, whether delivered by letter-carrier, *poste restante*, or by messenger.

32. COMPLAINTS OF ERRORS IN TELEGRAMS TRANSMITTED TO AND FROM LONDON *via* THE ROEBUCK BAY CABLE AND WESTERN AUSTRALIA.

We suggest that this matter be referred to the Postmasters-General of South Australia and Western Australia for inquiry.

33. COLLECT TELEGRAMS.

We are unable to make any recommendation with regard to Collect Telegrams, owing to the difficulty of assimilating the regulations of the several colonies.

ELECTRIC TRAMWAYS, LIGHT, AND POWER.

34. REGULATIONS FOR ELECTRIC-LIGHT AND POWER-WIRES: CONSIDERATION OF COMMITTEE OF EXPERTS' REPORT.

In view of the extension of electric-lighting to towns, we consider it very desirable, and recommend that the report of the Committee of Experts, which was laid before the Brisbane Conference, and which is published at pages 41 to 52 of the Proceedings of the Brisbane Conference, 1893, be adopted.

Amended by the Conference.

The above paragraph was agreed to with the addition of the words: "That a vote of thanks be recorded to the Committee; and that they be requested to complete their labours by reporting on electric tramways, and drafting regulations in regard to electric-power leads generally."

MISCELLANEOUS.

35. EXPRESS MESSENGER SYSTEM, AND EXPRESS COMPANIES.

An express messenger company having been formed in Adelaide, a test case was tried, with the result that the defendants were fined a nominal sum of 10s., and costs £6 4s. 6d., for carrying letters sent otherwise than through the post. The Postmaster-General of South Australia wrote to the other colonies, and also to the London Post Office, on the subject, and a copy of the letter to the latter and the substance of the reply are attached hereto. It is clear that the practice is illegal under the laws of the different colonies, which are similar to those of South Australia; and we strongly recommend that no steps should be taken to legalise or sanction the operation of any such companies.

"SIR,—

"General Post Office, Adelaide, 5th December, 1893.

"Some months since an Express Messenger Company was started in this city, which, amongst other things, undertook the delivery of invoices and circulars at considerably less cost to the senders than the ordinary rates of postage.

"The actual *modus operandi* was, I believe, to let the messengers in their employ out on hire at terms mutually agreed to.

"As this was considered an infringement of the Post Office Act (section 108, Part VI., 1891), an information was laid against the company as a test case, with the result that the defendants were fined a nominal sum of 10s., and costs, £6 4s. 6d.

"The principal of the company has since called my attention to statements (of which I enclose copies) extracted from the Melbourne *Argus* and *Age*, of 29th May, 1891, to the effect that a company carrying on similar operations in London has been licensed by the Postmaster-General.

"I enclose a copy of the newspaper report of the test case tried here, which may be of interest to you, and shall be glad to know whether it is true that the London company has been licensed, and, if so, upon what terms such license has been granted, and to what description of correspondence or postal matter it relates.

"Personally, it appears to me to be highly undesirable, at least in these colonies, where the postal service is necessarily carried out at a great cost relatively to the population, that a private company should be allowed to assume the functions of the Post Office, selecting, of course, the larger centres of population where the work can be performed at a profit.

"I have, &c.,

"CHARLES TODD,

"Postmaster-General and Superintendent of Telegraphs.

"The Secretary, General Post Office, London."

In reply to the foregoing, London writes strongly supporting the action taken by South Australia, fully endorses contention that hiring out messengers to deliver letters is in contravention of Act, and states that district messenger company licensed in London was connected with telegraph-call system, and permit for one depended upon maintenance of the other; and that even this concession was granted only as matter of expediency.

36. PAYMENT TO MASTERS OF VESSELS FOR CARRIAGE OF MAILED.

The New South Wales Post Office has made the following arrangement, which we consider fair and reasonable, and would therefore recommend that, if possible, a similar arrangement be made in the other colonies:—

For conveyance in harbours and on rivers, 8d. per lb. of letters and post-cards; 1s. 6d. per cwt. of other articles, comprising packets, books, parcels, and newspapers.

For conveyance between places on the New South Wales coast, 1s. 4d. per lb. of letters and post-cards; 3s. per cwt. of other articles (as above).

For conveyance beyond New South Wales, 2s. per lb. of letters and post-cards; 4s. 6d. per cwt. of other articles (as above).

The payments to be made only on the weight of contents of mails.

37. REPLY-PAID ENVELOPES.

Cav. R. G. Ravesi, of Catania, Italy, submits specimens of the "Columbus" Reply-paid Envelopes, which he has patented, and also submitted to all the other Postal Administrations of the Universal Postal Union. Mr. Ravesi says his envelope has many advantages, being safe, simple, and capable of being made of any shape or material, and by arrangement it could be universally used by Union countries; its adoption would vastly increase correspondence; it would be very profitable, and it would enable persons to insure replies from foreign countries, now attended with so much difficulty.

The Department points out that, before adopting such an envelope for international use, it would be necessary to re-open the question of an international postage-stamp.

We have no recommendation to make on this matter.

38. HOUR-ZONE SYSTEM.

This subject we leave to be dealt with by the Conference.

39. REGISTERED LETTERS FOR PROMOTERS OF RACING LOTTERIES.

Registered Letters for Promoters of Racing Lotteries: Should Obstacles be placed in the way of their Registration?

We have no recommendation to make, but consider that the matter should be left to each colony to deal with.

40. SHOULD ANY INQUIRY BE MADE AFTER NON-REGISTERED ARTICLES? IF SO, SHOULD A FEE BE PAID?

We recommend that the present practice be continued.

41. POSTAL GUIDE: MUTUAL ARRANGEMENT TO BE MADE FOR INSURING THE LATEST INFORMATION APPEARING IN THE RESPECTIVE QUARTERLY POSTAL GUIDES OF EACH COLONY.

We recommend that each colony furnish the other colonies, not later than the first week in the third, sixth, ninth, and twelfth month in the year, with all alterations *re* opening and closing of offices, changes of mail times, and other changes in which the other colonies are concerned; and we further advise that the Postal Guides of the various colonies be prepared as far as possible in uniform style.

42. POSTAL RATES: CONSIDERATION OF MR. HENNIKER HEATON'S PROPOSAL TO THE CHANCELLOR OF THE IMPERIAL EXCHEQUER, THAT GREAT BRITAIN ADOPT THE PENNY POSTAGE TO AUSTRALIA, THE POSTAGE FROM AUSTRALIA TO REMAIN AS AT PRESENT.

We consider it most undesirable for the United Kingdom to adopt the penny postage to Australia, as this would render the maintenance of the present existing rates from Australia very difficult; and we consider that the Colonies are not in a position to reduce their rate whilst having to pay large subsidies to insure speed and regularity in the delivery of the mails.

Amended by the Conference.

The above paragraph was agreed to with the addition of the following resolution: "That, with regard to the proposals from time to time made for penny postage between Great Britain and the colonies, and more recently that such be adopted for letters from the United Kingdom, leaving the rate from the colonies as at present, this Conference, while recognising the desirableness of adopting the lowest possible rates, desires to express the opinion that the heavy cost of providing speedy and regular communication does not admit of any further reduction being made at the present time, the reduction to 2½d. in 1891 having resulted in an annual loss to the colonies of about £40,000; and that the partial reduction proposed—namely, in the rate from Great Britain—would be most undesirable, as such a measure would compel the colonies to reduce their inland and intercolonial rates from 2d. to 1d., involving a probable loss to them of a quarter of a million per annum in addition to that already mentioned as the result of the reduction to 2½d.; and that a copy of the foregoing be transmitted to the Imperial Government."

43. CIRCULARS SENT IN BULK TO SYDNEY FOR POSTING TO NEW ZEALAND.

We see no reason for interfering with the present practice.

44. REMITTING THROUGH TREASURY DEPARTMENT.

That the present arrangement, although causing inconvenience in some of the colonies, be allowed a further trial; and the result of its working be reported to the next Conference.

45. REDIRECTION: THAT PROCEDURE OF BRITISH POST OFFICE BE ADOPTED IN REGARD TO CHARGE FOR.

Dealt with in Convention.

The following additional subject has been dealt with, and our recommendation is submitted:—

46. AS TO DELAY IN INTERNATIONAL MESSAGES IN CONSEQUENCE OF INTERRUPTIONS IN INTERNATIONAL LINES.

Complaints having been made by the Chamber of Commerce at Adelaide, and by Reuter's Agent for Australasia, that the receivers of private telegrams are put to great disadvantage on account of precedence being given to Press messages when there is an accumulation of international telegrams, caused by interruption of the lines, we recommend, with a view of obviating this, that during the day messages take their ordinary turn, but that, after 8 o'clock in the evening, precedence be given to Press messages in the interests of the general public.

[This paragraph was struck out by the Conference.]

APPENDIX C.

DRAFT OF AUSTRALASIAN POSTAL CONVENTION SUBMITTED TO THE CONFERENCE BY HEADS OF DEPARTMENTS.

[See also Appendix B, pages x. and xi.]

*Presented at the Meeting of the Postal Conference held in Auckland, on Monday, the
19th March, 1894.*

AGREEMENT REGULATING THE EXCHANGE OF CORRESPONDENCE BETWEEN THE AUSTRALASIAN COLONIES.

Article 1.

THERE shall, as far as practicable, be an exchange of correspondence between the Australasian Colonies, one with the other, comprising letters, letter-cards, post-cards, newspapers, printed matter of every kind, packets (as per definition appended to Article 12), parcels, and such other postal articles as may be mutually agreed upon, originating in any one colony and addressed to and deliverable in another.

Article 2.

The rates of postage to be collected in each colony on intercolonial correspondence shall be as follows, viz.:—

Letters	2d. per $\frac{1}{2}$ oz.
Letter-cards	1 $\frac{1}{2}$ d. each.
Post-cards	1d. each.
Reply-cards	2d. each.
Books, not exceeding 4oz.	1d.
And for every additional 4oz. or portion of 4oz. (up to 5lb.)	1d.
Magazines, not exceeding 8oz.	1d.
Every additional 4oz.	1d.
Commercial and printed papers, not exceeding 2oz.	1d.
Every additional 2oz. up to 4lb.	1d.
Packets, not exceeding 2oz.	1d.
And for every additional 2oz. or fraction of 2oz. (up to 1lb.)	1d.
Newspapers, as hereinafter defined, not exceeding 10oz. in weight, $\frac{1}{2}$ d. each, and, if over 10oz., $\frac{1}{2}$ d. for every additional 10oz. or fraction thereof.	1d.
Newspapers—Bulk parcels of newspapers of the same issue, posted by the publisher or newsvendor, and which have been registered or accepted by the Postmaster-General, 1d. per lb. No parcel containing less than four newspapers to pass at bulk rates.	1d.
Registration-fee, 3d., in addition to ordinary postage. Acknowledgment of receipt, 2 $\frac{1}{2}$ d.	1d.
Parcel Post—For each parcel not exceeding 1lb.	8d.
Each additional 1lb., or fraction thereof	6d.

Article 3.

Wholly unpaid and insufficiently prepaid letters, and insufficiently prepaid packets and newspapers, may be forwarded from one colony to another; but wholly unpaid packets and newspapers shall not be sent.

Article 4.

Correspondence forwarded as fully prepaid from one colony to another shall be delivered free of all charge whatsoever; but wholly unpaid, where allowed, and insufficiently prepaid correspondence so forwarded shall be charged on delivery with double the deficient postage due thereon.

Article 5.

No accounts shall be kept between the Postal Departments of the several colonies enumerated on the intercolonial letters and post-cards exchanged between them, but each shall retain to its own use the whole of the postage and fees which it may collect, except as regards articles sent by parcel-post, which are to be dealt with as provided for under Article 21.

Article 6.

On correspondence despatched to places beyond Australasia the despatching colony shall pay to each colony through which such correspondence shall be conveyed by rail the sum of 4d. per pound of letters, and 4s. per hundredweight of other articles.

Article 7.

Prepayment of postage on every description of correspondence shall be effected only by means of postage stamps valid in the colony of origin, or (in cases where the despatching Postmaster is out of stamps) by money, except where the laws or regulations of any colony permit the payment in money of the postage on large numbers of circulars or newspapers forwarded by one person.

Article 8.

Letters which from any cause cannot be delivered shall be mutually returned, tied in a separate bundle labelled "Dead letters," to the respective colonies of origin without charge, monthly, or as frequently as the regulations of the respective colonies will permit. But newspapers, and all other articles of purely printed matter, which from any cause cannot be delivered, shall be retained at the disposition of the receiving colony.

Article 9.

Wholly unpaid and insufficiently prepaid correspondence shall be stamped in black ink on the address side with the letter T, and the amount of postage chargeable under Article 4 shall also be expressed in plain figures in black ink on the face thereof, and such sum shall be collected on delivery.

Article 10.—Verification of the Mails.

1. The office of exchange which receives a mail ascertains whether the entries in the letter-bill and in the registered-letter list, if there be one, are correct.

The mails must be delivered in good condition. Nevertheless, the receipt of a mail cannot be refused on account of its bad condition. In the case of a mail for an office other than that which has received it, it must be packed up afresh, but the original packing should be preserved as far as possible. The repacking is preceded by a verification of the contents, if there is reason to suppose that they are not intact.

2. When the office of exchange detects errors or omissions, it immediately makes the necessary corrections on the letter-bills or lists, taking care to strike out the erroneous entries with a pen in such a manner as to leave the original entries legible.

3. These corrections are made by two officers. Except in the case of an obvious error, they are accepted in preference to the original statement.

4. A verification-certificate (in accordance with the form printed on page x.) is prepared by the receiving office, and sent without delay, officially registered, to the despatching office. At the same time a duplicate of the verification-certificate is sent by the receiving office to the administration to which the despatching office is subordinate.

In the case contemplated in paragraph 1 of the present article, a copy of the verification-certificate is inserted in the repacked mail.

5. The despatching office, after examination, returns the verification-certificate with any observations to which it may give rise.

6. In case of the failure of a mail, of a registered article, of the letter-bill, or of the special list, the fact is immediately reported, in such form as may be desired, by two officers of the receiving office, and notified to the despatching office by means of a verification-certificate. If needful, the latter office may also be advised thereof by telegram, at the expense of the office which sends the telegram.

7. In case of the loss of a closed mail, intermediate offices become responsible for the registered articles contained in the mail, within the limits of Article 8 of the Vienna Convention, provided that the non-receipt of such mail shall have been notified to them as soon as possible.

8. In case the receiving office shall not have forwarded by the first mail to the despatching office a verification-certificate reporting errors or irregularities of any kind, the absence of that document is to be regarded as evidence of the due receipt of the mail and its contents, until the contrary be proved.

Article 11.

The following shall be considered as a newspaper, and be allowed to pass as such, viz. :—

(a.) A publication consisting wholly or in great part of political or other news, or other articles relating thereto, or to other current topics, with or without advertisements.

(b.) It must be printed and published in numbers at intervals not exceeding one month.

(c.) The full title and date of publication must be printed at the top of the first page, and the whole or part of the title and the date at the top of every subsequent page. This regulation applies also to "Tables of Contents" and "Indices."

(d.) A supplement must consist wholly or in great part of matter like that of a newspaper, or of advertisements, printed on paper; or wholly or in part of engravings, prints, or lithographs illustrative of articles in the paper. It must in every case be published with the paper, bear the printer's name, and have its title and date printed at the top of every page: or, if it consists of engravings, prints, or lithographs, at the top of every sheet or side. Insets, handbills, or advertisement sheets are not supplements; but sheet almanacs may pass as such if marked "Supplement," and bearing the title and date of the newspaper, and the name of the printer of the newspaper.

(e.) Collected numbers of any publication registered as a newspaper shall not be transmitted through the post as a single newspaper, but postage will be charged on each number of issue comprised therein.

(f.) Every newspaper may be sent with or without a cover, and must be open at both ends; and there shall not be in or upon any such newspaper or the cover thereof any communication, character, figure, letter, or number (other than the words "Newspaper only"; or a mark to indicate any report, article, or paragraph therein; the printed title of such newspaper; the printed names, occupations, and places of business of the printer, publisher, and vendor thereof; the name, occupation, and address of the person to whom it is sent; and the name of the person who sends the same); nor shall anything be enclosed in or with or accompany such newspaper or cover, otherwise such newspaper shall not be transmitted or delivered.

Any publication fulfilling the above conditions can, upon payment of a fee of 5s., be registered at the General Post Office of the colony of publication for circulation as a newspaper, and also for transmission to places abroad, and unless so registered it cannot be transmitted as a newspaper: Any newspaper complying with the foregoing definition, registered in Great Britain or in any of the colonies, may be posted in any other country or colony (except Queensland) at newspaper rates of postage.

When, owing to a great influx of newspapers the transmission or delivery of letters would be delayed if the whole mail were dealt with without distinction, newspapers may be kept back till the next despatch or delivery.

Article II.

All correspondence, not otherwise provided for or defined herein, shall be classified under the heading: (1) Books; (2) Magazines; (3) Commercial and printed papers; and (4) Packets: and the list and definition of each shall be as follows:—

1. The following shall be considered as books, and be allowed to pass as such, viz.:—

Printed books, pamphlets, printed music (bound or loose), photographs, and, generally, anything printed and bound and published in book form.

Catalogues and reports of societies or companies are not accepted as books intercolonially, even if published in book form.

2. The following shall be considered as magazines, and be allowed to pass as such, viz.:—

Magazines, reviews, serials, and other publications published at intervals of not exceeding three months, that do not come within the definition of newspapers.

3. The following shall be considered as commercial and printed papers, and be allowed to pass as such, viz.:—

Acceptances.

Accounts, received or unreceived. The remark "With thanks" will be allowed; but either printed or written communications in the nature of a letter, or of the character of actual or personal correspondence, by code or otherwise, are chargeable as letters. Invoices may be received, and may advise when or how the goods are forwarded, but may contain no other printed or written matter, nor anything in the nature of actual or personal correspondence, by code or otherwise. They may, however, bear ordinary trade notices, whether printed or impressed with a rubber or other stamp, such as, "All empties returned must be advised;" "When remitting, please return the statement to be received;" "Terms, cash in advance;" "Terms, 2½ per cent. discount for cash."

A packet containing a mixture of commercial and printed papers will be treated as if the whole contents were commercial.

Affidavits.

Balance-sheets and reports (printed) of public societies and companies.

Bankers' parcels (*i.e.*, packets sent from one bank to another), containing bank-notes, cheques, cheque-books, drafts, or orders, provided they are enclosed in covers with the ends sufficiently open to admit of postal officials seeing that the packets contain nothing of the nature of a letter. Packets containing bank-notes must be registered if sent from one colony to another, and cannot be forwarded at packet rates to the United Kingdom or to New Zealand or Western Australia.

Bank pass-books may be sent from or to any bank at packet rates, provided they are enclosed in covers with the ends sufficiently open to admit of postal officials seeing that pass-books only are being transmitted. The packet must be indorsed "Pass-book only."

Bills of exchange.

Bills of lading and ships' manifests.

Briefs.

Cards (other than birthday, Christmas, Easter, or New Year cards), either plain or bearing printed matter or pictures, or both (the name only of the addressee may be written on the face of such cards).

Cards: Birthday, Christmas, Easter, or New Year cards may have written on them complimentary or such like remarks, together with the names and addresses of the senders and of the person for whom the cards are intended, also the date of sending. (For example: "To John Smith, with best wishes, from Mary Smith. Christmas, 1891.") But cards having messages or other communications written on them, such as "Hoping to see you shortly," "Be sure to write soon," will be liable to letter rate of postage.

Cards: Travellers' cards or circulars may be sent at packet rates, and, if necessary, may include a catalogue or list of prices. They may also bear the date and name of the traveller.

Catalogues, printed (prices, in figures, may be written).

Circulars, *i.e.*, letters wholly printed, engraved, lithographed, chromographed, or produced by other mechanical process, bearing internal evidence that they are intended for transmission in identical terms to several persons (the name of the addressee may, however, be added in writing); but in the case of circulars not wholly printed in ordinary type or engraved or lithographed, that is, circulars produced by other mechanical process, such as chromography, copying-press, type-writer, or imitations thereof, at least twenty copies of such circular must be submitted to the post office and be posted at the same time in order to constitute it a circular, otherwise every copy will be charged letter rates.

Deeds, or copies thereof. Depositions. Drafts. Drawings.

Engravings. Examination papers (corrections allowed, but nothing in the nature of a letter).

Fashion-plates, or similar publications.

Insurance documents, not being in the nature of a letter.

Invoices (see Accounts *supra*).
 Legal documents, not being in the nature of a letter.
 Manuscript for printing.
 Maps.
 Music (written).
 Notices of meetings, of subscriptions, calls, or premiums due, printed, engraved, lithographed, or produced by other mechanical process (names, dates, and amounts only to be inserted in writing).
 Pass-books or cards connected with any society.
 Pay-sheets.
 Placards.
 Plans.
 Policies of insurance.
 Powers of attorney.
 Prices current, printed (prices of articles included therein may be filled in in writing).
 Printed matter.
 Printers' proofs.
 Prints.
 Prospectuses (printed).
 Rate notices, not being of the nature of a letter.
 Receipts (see Accounts).
 Recognizances.
 Reports (printed) of societies or public companies.
 Returns or periodical statements, if so indorsed on the cover.
 Scrip.
 Specifications.
 Stock-sheets.
 Valentines (printed).
 Way-bills.

4. The following shall be considered as packets, and allowed to pass as such, viz.:—

Bottles containing fluid, &c., very securely corked so that their contents cannot escape, and packed in boxes sufficiently strong so as to prevent breakage of the bottles and damage to the mails.
 Glass, if securely packed so as not to damage contents of mail.
 Merchandise.
 Mineral specimens.
 Paintings.
 Paper.
 Parchments or vellum.
 Patterns (manufacturers' or trade-mark, and prices may accompany them).
 Photographs (not on glass, except in cases of leather, or other strong material).
 Pictures.
 Queen bees, &c. (see Regulation No. 16).
 Samples (manufacturers' or trade-mark, and prices may accompany them).
 Seeds.
 Wedding-cake (securely packed).
 Other articles similar to above can also be forwarded as packets.

Book and Packet Regulations.

1. All packets containing bank-notes, jewellery, or articles of high value must be registered, or they will be officially registered and charged double registration fee on delivery. Coin and bullion will be passed at letter-rates only, and must be registered.
2. None of the articles mentioned in the above list will be forwarded as packets beyond the limits of the colony, if the law or postal regulations of the colony or country to which they may be addressed prohibit their reception into such colony or country as packets.
3. If any articles, which can only be sent if paid as letters, are posted bearing the packet rate of postage, they will be treated as insufficiently-paid letters; and no packet must contain anything of an epistolary character, except as herein provided for.
4. Officers of the Post Office may examine the contents of any package for the purpose of ascertaining whether they are in accordance with these regulations, but such officers must securely refasten any packet so opened; but this authority does not apply to bankers' parcels containing notes.
5. Books and packets may be sent through the post without a cover (but not fastened with anything adhesive such as gum, sealing-wax, &c.), or in a cover entirely open at one end or side, or with the flap left unsealed, or fastened with a binder; if the cover be slit the opening must be to the full extent of the end or side, and the contents must be easy of withdrawal. For the greater security of contents the packets may be tied with string, but in such cases postal officials are authorised to cut or untie the string, but if they do so they must securely tie up the packets. Officers will, however, if possible, satisfy themselves as to contents without withdrawing them.
6. Samples of seeds, drugs, &c., which cannot be sent as open packets, may be enclosed in bags or boxes (fastened so as to be easily undone and refastened) except where disallowed by the regulations of the foreign countries.
7. If the above conditions be not complied with, the packets will be regarded as insufficiently-

xix

paid letters and charged accordingly; but if, on the opening in the Dead Letter Office of a letter which has been surcharged and refused by addressee in consequence, it is found to contain enclosures entitled to pass at packet rates, and if it was fully prepaid at such rates, it shall be at once forwarded to its address without charge. If, on a letter surcharged as above the addressee shall open it in the presence of a postal official, and it be found to contain matter entitled to pass at packet rates, the surcharge may be refunded on application to the Head Office.

8. Postal officials may refuse to receive any packets under Class 4 exceeding 16oz. in weight.

9. No article to exceed 2ft. in length, 1ft. in depth or breadth, or, if in a roll, 2ft. 6in. in length, or to be of inconvenient form.

10. Books may have on the title-page complimentary or such like remarks, as per regulation in the case of Christmas, Easter, and New Year cards, and passages in a book to which it is desired to call attention may be marked with a single stroke.

11. When, owing to a great influx of books, commercial and printed papers, and packets, the transmission or delivery of letters would be delayed if the whole mail were dealt with without distinction, such articles may be kept back until the next despatch or delivery.

12. Prints, maps, &c., may be either printed, written, engraved, lithographed, or plain, or a mixture of them,

13. All legitimate binding, mounting, or covering of a book, &c., or of a portion thereof, is allowed, whether such binding, &c., be loose or attached, as also rollers in case of prints or maps, markers, whether of paper or otherwise, in the case of books, or whatever is necessary for the safe transmission of such articles or usually appertains thereto.

14. Articles liable to injury by stamping, or being pressed in mail-bags, should not be sent through the post unless securely packed.

15. The following articles are not allowed to be sent as packets: Gold or silver money, jewels, or precious articles, or anything liable to Customs duty, addressed to any country in the Postal Union except the United Kingdom, unless specially permitted by the regulations of such country, in which cases they may be forwarded if paid letter-rate and registered.

Glass, except as provided under Class 4, and perishable substances such as game, fish, flesh, fruit, vegetables, or any other matter or thing likely to be injurious to or endanger the officers of the post-office or the contents of the mail-bags.

Photographs on glass, when not in strong cases.

Anything sealed or fastened against inspection.

Packets bearing on the outside or containing any profane, obscene, or libellous address, signature, picture, or thing.

Packets posted in fraud or violation of the Postal or Customs laws.

16. Queen-bees, and live but harmless entomological specimens, will be transmitted by post to any country or colony where allowed by local regulations.

All live specimens must be secured in strong, safe, and properly ventilated boxes or cages of wood or metal. Specimens enclosed in cardbox or other fragile material will not be forwarded.

Size of box or cage not to exceed 12in. x 6in. x 4in. Each box or cage to bear a label, securely attached, giving name and address of sender and particulars of contents.

Boxes, &c., posted in violation of these conditions, or addressed beyond the colony, except where allowed by local regulations, or containing poisonous or dangerous live specimens, or improperly or insecurely packed, will not be transmitted.

Article 13.

The despatching colony shall pay to the forwarding colony whatever sums may be payable to masters of vessels under the regulations of the forwarding colony on any correspondence to be sent on to another colony or country by sea, it being understood that these rates shall not apply to correspondence conveyed by mail vessels under contract with any Australasian colony or colonies.

Article 14.

Each mail despatched from one colony to another shall be accompanied by a letter-bill, on which shall be stated the contents of the mail, and, if registered correspondence be enclosed, the same shall be plainly stated. If correspondence to be forwarded on to destination by sea be sent in closed transit-mails, the total number of letters and packets for each office of destination shall be stated in black ink on the labels of the bags.

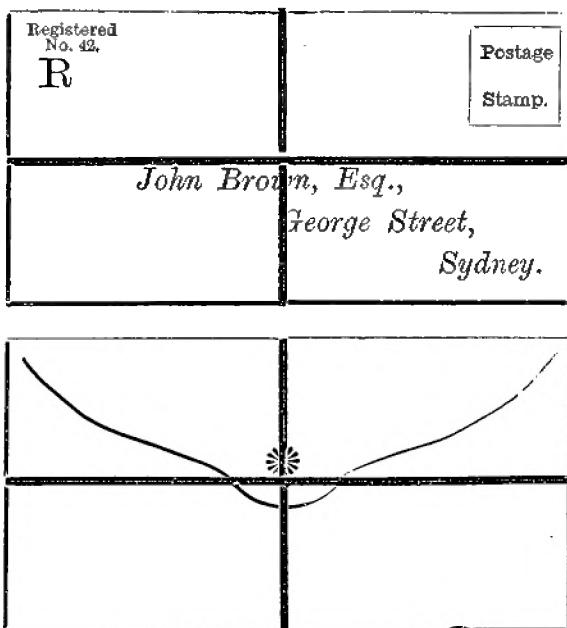

Article 15.

The receipt of a mail at the office of exchange in one colony from that of another shall be acknowledged by return mail on the prescribed form, in which shall be pointed out any discrepancies which may occur.

Article 16.

Registered articles must bear the impression of a stamp reproducing conspicuously the capital letter R in Roman type under the word "Registered," such impression to be placed on the address side of the letter or packet. By each mail containing registered correspondence shall be forwarded a registered letter-list, on which shall be entered the following particulars respecting every such article, viz.: The name of the office of origin, the name of the addressee, and number given to the article by office of origin.

In order that registered letters, packets, &c., may be readily distinguished from those unregistered, each registered letter or packet shall be marked with red or blue pencil (in imitation of tape) in the following manner:—

*Article 17.*

Registered articles shall be made up in a separate packet from ordinary correspondence, and shall be suitably enclosed and sealed so as to preserve the contents. The post offices of the respective colonies undertake no liability with respect to any correspondence, registered or otherwise, which may be lost in transmission.

Article 18.

Where articles supposed to contain money, &c., are observed passing through the post unregistered, the same shall be officially registered, and the addressee shall be subjected to a charge equal to double the ordinary registration-fee upon delivery of such article; but letters, &c., containing money-orders, postal-notes, crossed cheques, and non-negotiable enclosures need not be registered.

Article 19.

When an acknowledgment of receipt of a registered article is required from the addressee such article must be stamped with the letters "A.R.", and the post-office of destination will obtain the necessary acknowledgment duly filled up and transmit it to the sender. An inquiry respecting the delivery of any registered article must be accompanied by a fee of 2½d.

Article 20.

Except where contrary to the laws and regulations of any colony, no charge will be made for the re-direction of letters (including registered letters), whether re-directed by an officer of the post-office or by an agent of the addressee, after delivery, provided in the latter case that the letters are reposted not later than the day (Sundays and public holidays not being counted) after delivery, and that they do not appear to have been opened.

Re-directed letters which are reposted later than the day after delivery will be liable to charge at the prepaid rate. Any which appear to have been opened will be chargeable as freshly posted unpaid letters.

Article 21.—Intercolonial Parcel-Post.

The following are the regulations under which parcels will be accepted from the public:—

1. Limit of weight: 11lb., except where otherwise stated in the Postal Guides of the several colonies.
2. Limit of size: 3ft. 6in. in length, or 6ft. in length and girth combined, unless otherwise specified in Postal Guide.
3. The postage must be fully prepaid by stamps affixed to the parcels.
4. Parcels to be received at and delivered from parcel-post offices only.
5. The sender of any parcel to be required to sign a declaration, on a form provided for the purpose (to be obtained free of charge at any parcel-post office), furnishing an accurate statement of its contents and the value thereof, address of the addressee, as well as the sender's signature and place of abode.
6. Parcels with regard to which a false declaration shall have been made may be confiscated.
7. A certificate of posting may be obtained, if desired, and applied for at the time by the person posting a parcel, on payment of a fee of 3d.
8. No parcels will be received or delivered which contain articles of an explosive, combustible, dangerous, or offensive character, live animals, or articles likely to injure other parcels, or articles the admission of which is not authorised by the Customs or other laws and regulations of the countries to which such articles may be addressed. All prohibited articles may be forthwith confiscated.

9. No parcel may contain any letter, or communication of the nature of a letter; and should any letter or communication be enclosed, such letter or communication will be treated as an unpaid letter, and charged for accordingly.

10. No parcel may consist of or contain two or more parcels addressed to different persons at different addresses. If such parcel be discovered, each of its contents will be treated as a separate parcel and be charged for accordingly.

11. In the case of parcels from the United Kingdom, or any other country or colony, their contents will be examined by the Customs officers employed in the post-office; and where duties are payable, the same must be paid or remitted before the parcels are delivered.

12. The necessary Customs entries will be passed free of cost to the addressees of parcels received.

13. Parcels will be delivered in accordance with the Inland Parcel-Post Regulations of the several colonies.

14. In the event of any parcel being addressed to a place beyond the limits for the transmission of parcels, the addressee, on being advised of the arrival of the parcel at the General Post Office, must state to what parcel-post office he wishes the parcel to be forwarded.

15. Parcels will be retained at the post-office to which they are sent for delivery for a period of three months, when, if unclaimed, they may be returned to the sender, through the colony from which they were received. Should any parcel be refused by the addressee, it may be forthwith returned to the sender, subject, however, to fresh postage and any other charges to which it may become liable.

16. If a parcel cannot be delivered from any cause, the sender will, if possible, be consulted as to its disposal.

17. Parcels returned to another country at the request of the sender will be surcharged with the ordinary parcel postage. Such surcharge, together with any other charges to which the parcel has become liable, will be collected on delivery, unless remitted by the sender or the addressee of the parcel.

18. At the written request of either the sender or addressee, or the authorised agent of either, a parcel can be redirected to another country with which arrangements have been made for the exchange of postal parcels, but will be subject to fresh postage and any other charges to which it may have become liable, which must be either prepaid or collected on delivery.

19. Parcels which cannot be delivered, or redirected, or returned to the sender, will be sent back to the colony from whence they came.

20. The contents of parcels returned to the colony, being unclaimed or undeliverable, which cannot be returned to the sender, will be sold or destroyed by the order of the Postmaster-General.

21. The contents of parcels should be securely packed and closed in such a manner as to preserve them from injury.

22. Parcels will only be received and forwarded at the risk of the owners. In no case will the Postmaster-General be responsible for the delay, non-delivery, injury, or loss of any parcel.

23. No current coin or bullion shall be allowed to be sent by parcel-post.

Article 22.

The commission chargeable on money-orders exchanged intercolonially to be as follows:—

	£	s.	d.
Not exceeding	2	...	0 6
" "	5	...	1 0
" "	7	...	1 6
" "	10	...	2 0
" "	12	...	2 6
" "	15	...	3 0
" "	17	...	3 6
" "	20	...	4 0

Article 23.

Where one person has occasion to send more than one telegraphic money-order to the same person he shall only be charged for one message of advice.

Article 24.

This Convention shall come into operation on the 1st July, 1894, so far as the laws and regulations of the several colonies will permit.

W. GRAY, Chairman.

APPENDIX D.

PAPERS RELATING TO THE FEDERAL MAIL SERVICE.

Laid upon the Table by the Hon. Dr. Cockburn, Minister of Education and Agriculture, South Australia, and ordered to be printed.

No. 1.

CORRESPONDENCE RELATIVE TO THE FEDERAL MAIL CONTRACTS.

The Hon. the POSTMASTER-GENERAL and SUPERINTENDENT of TELEGRAPHS, Adelaide, to Sir S. A. BLACKWOOD, K.C.M.G., London.

Post Office and Telegraph Department,

SIR,— General Post Office, Adelaide, 5th June, 1893.

I have the honour to forward herewith three copies of the Report of the Conference held in Brisbane in March, 1893, and shall be obliged if you will favour me at an early date with your opinion respecting the suggestion in regard to the Federal mail-contracts.

I have, &c.,

CHARLES TODD,

Postmaster-General and Superintendent of Telegraphs.

Sir S. A. Blackwood, K.C.M.G., General Post Office, London.

No. 2.

Mr. H. B. FORMAN, General Post Office, London, to the POSTMASTER-GENERAL, South Australia.

SIR,— General Post Office, London, 1st September, 1893.

The Postmaster-General has had before him your letter of the 5th June, No. 6336, forwarding copies of the Report of the Brisbane Postal and Telegraph Conference of 1893, and asking the opinion of this department respecting the suggestion in regard to the Federal mail-contracts.

I apprehend that this inquiry is made by you on behalf, not only of South Australia, but also of the other Australian Colonies, and, taking it to relate to the series of resolutions passed at the Conference, as recorded at pages 5 to 12 of the report, I have, of course, pointed out to Mr. Morley how considerable are the questions which the resolutions in the aggregate raise.

Subjects of so much importance naturally demand, and will certainly receive, the most careful consideration on this side; but it is scarcely to be doubted that some of them will need prolonged discussion before they can be finally settled.

With reference to the suggestion that fresh tenders for the packet service between this country and Australia should now be invited, Mr. Morley directs me to call the attention of the colonial Governments, through you, to the shortness of the time which remains for an exhaustive discussion of anything in the shape of a revised contract to come into force on the 1st February, 1895, especially if, as appears to be desired, the tenders are to be submitted to the Colonial Governments.

Although there has not yet been time to examine the bearings of all the resolutions maturely, it is evident that they point to an improved service, and therefore, in all probability, to a more expensive service than at present; and I am to state that, although six years ago the Imperial Government consented, at a considerable financial sacrifice, to enter into the present joint arrangement for the packet service for seven years, the present moment is especially inopportune for any increase of Imperial expenditure. Hence, if the suggestion of an improved service under more arduous conditions for the Mother-country were pressed, it might even become a question whether some such system as that in vogue before 1888 might not have to be reverted to, the Imperial Post Office providing a mail conveyance as far as Ceylon, and the Australian Colonies providing a line of packets to that island, as formerly.

Such an arrangement would obviously compare unfavourably with the present, except as regards economy; and Mr. Morley desires to assure the Colonial Post Offices that he would be sorry to have to resort to that plan. He is disposed to think that, if the present arrangements could be maintained intact until the 31st of January, 1898, when the India and China contract is terminable, there would be a better chance of coming to satisfactory conclusions in connection with the difficulties arising from the Brisbane suggestions, while the Canadian Pacific scheme would doubtless be considerably advanced, and the financial situation both here and in the colonies might have become more favourable.

xxiii

I am to state that, even if other suggestions could be adopted unhesitatingly, the term of seven years proposed for any new contract or contracts would be open to very grave objections, because, in the present state of steam communication with the various parts of the empire in the east, it is greatly to be desired that no one section of the packet service of the future should be prejudiced when the time comes for revision, by the fact that other sections have still a term to run.

Although, therefore, the Postmaster-General cannot pledge himself even to the continuance of the present arrangements after the 31st January, 1895, the clear advantages of co-terminous contracts for all the eastern packet services cannot be ignored, and he would be glad to learn whether, in the event of the Imperial Post Office and the contractors being willing to continue the service on the present terms till the 31st January, 1898, such a scheme would be agreeable to the colonies.

The Postmaster-General, South Australia.

I am, &c.,
H. BUXTON FORMAN.

No. 3.

Mr. H. B. FORMAN, General Post Office, London, to the POSTMASTER-GENERAL, South Australia.

SIR,— On the 23rd of this month I had the honour to telegraph to you in the following terms: "How soon answer letter 1st September, Federal Service?" and I received yesterday your reply, from which it appears that the question dealt with in my letter of the 1st of September last (No. 336 T), will be considered at an intercolonial Conference to be held at Wellington in March.

The Postmaster-General, of course, sees how desirable it is that the Colonial Governments should have time to examine thoroughly the highly-important question of the mail-service between the Mother-country and the Colonies, and he is also anxious that no final decision should be come to by Her Majesty's Government until every aspect of the question has been carefully gone into.

It will be obvious to you that by the time the Conference, which is to commence its deliberations in March next, has discussed the present phase of the question and communicated the results arrived at to Her Majesty's Postmaster-General, so long a period will have elapsed since the subject was first brought forward that the interval remaining before the expiration of the present contracts will not suffice for the arrangement of a service under fresh conditions to commence on the 1st of February, 1895.

In these circumstances the Postmaster-General feels that, unless some immediate step is taken, inconvenience may be caused to the public both here and in the Colonies, and in order to obviate this he would be willing to arrange for the continuance of the service in its present conditions till the 31st of January, 1896—that is to say, for one year beyond the contract time, so that no interests may be unduly prejudiced by the prolonged discussion which seems likely to take place on the larger issues. Mr. Morley has reason to believe that the contractors would consent to such an arrangement.

Perhaps you will be so good as to suggest to your colleagues at the coming Conference that this question of a year's continuance of the service on existing terms and conditions should be at once considered, and that if, as the Postmaster-General anticipates, the Colonial Governments accept his suggestion, a reply in that sense should be telegraphed on the earliest possible date.

It is still desirable that the original question put in my letter of the 1st September, namely, whether the Colonies would be willing to agree to a three years' continuance of the service in present conditions, should be answered as soon as convenient, although the Postmaster-General cannot even now pledge himself to the continuance of the present service for more than one year.

As it is probable that you may have left Adelaide for Wellington before the arrival of this letter, I am addressing it to you in duplicate—sending one copy to Adelaide and one to Wellington.

The Postmaster-General of South Australia.

I am, &c.,
H. BUXTON FORMAN.

No. 4.

FEDERAL MAIL-SERVICE CONTRACT.

Laid upon the Table by the Hon. Mr. Ward, and ordered to be printed.

The Hon. Mr. HENRY to the Hon. Mr. WARD.

(Telegram.)

Hobart, 14th February, 1894.

HAVE received letter from Government of Victoria re communication from London Post Office; subject, Ocean mail-contract. I concur with Victoria that resolution passed at Brisbane Conference, March, 1893, should be adhered to: That it should be a condition of the new Ocean mail-contract that the steamers should be required to afford conveniences for the carriage of frozen meat, butter, fruit, and other products of Australia, at stipulated maximum rates of freights for the same; the tenderers shall state what cold-storage space they will be prepared to supply, having due regard to the requirements of each colony. Kindly support same as representative acting for Tasmania.

JOHN HENRY, Treasurer.

The Hon. J. G. Ward, Postmaster-General, Wellington, New Zealand.

No. 5.

FUTURE FEDERAL MAIL-SERVICE CONTRACTS.

RECOMMENDATIONS BY PERMANENT HEADS OF DEPARTMENTS AS TO TERMS AND CONDITIONS
OF FUTURE FEDERAL MAIL-SERVICE CONTRACTS, AS AGREED TO BY THE CONFERENCE.

1. That the London Post Office be invited to call for tenders in Great Britain and Australasia for a weekly service, on conditions approved by the Colonies, from *bonâ fide* British companies (to be performed by one or more companies, running on alternate weeks as at present). Before accepting any such tender, that all tenders be submitted to the Colonies.
2. The following to be the principal conditions:—
 - (a.) That alternative tenders be called for five or seven years.
 - (b.) That greater regularity in the time of the arrival of mails be insisted upon, as under the present arrangement of slow and fast vessels the equal weekly interval is destroyed.
 - (c.) That the time to be occupied between Brindisi or Naples and Adelaide be reduced to thirty days, or such lesser time as tenderers may offer.
 - (d.) That Brindisi and Naples, or either, be the European termini, and Adelaide the Australian terminus; but outward vessels to go on to Melbourne and Sydney, carrying mails to either of those ports if required. Homeward steamers to start from Sydney, calling at Melbourne and Adelaide, receiving, if required, the whole or a portion of the mails at Melbourne; to call at Fremantle or Albany both ways, the outward steamers to stay at the port of call not less than six hours.
 - (e.) That the Postmaster-General, South Australia, be empowered to delay the departure of a steamer for a period not exceeding twenty-four hours, if such delay is deemed necessary in the interests of the Australian Colonies or any of them.
 - (f.) That in any future contract the term "mails" shall be held to include parcels, but the parcels to be conveyed wholly by sea as at present.
 - (g.) That the steamers call at Colombo both ways.
 - (h.) That it should be a condition of the new ocean mail-contract that the steamers should be required to afford conveniences for the carriage of frozen meats, butter, fruits, and other products of Australasia, at stipulated maximum rates of freight for the same, and that tenderers shall state what cold-storage space they will be prepared to supply, having due regard to the requirements of each colony.
 - (i.) That the other general conditions of the present contracts be continued.
 - (j.) Tenderers to state what class of labour they intend to employ in their vessels, and that a recommendation be made to the Imperial authorities that mail-steamers should be manned by white crews.
3. With regard to the division of cost, we recommend that the sea-transit rates collected from other countries or colonies making use of the service be placed to the credit of the subsidy, together with any fines that may be inflicted, the balance of the subsidy to be apportioned between the United Kingdom on the one part and the contracting colonies collectively on the other part, on the basis of the amount of inail-matter they respectively despatch, the colonies, parties to the contract, to apportion their contribution on the basis of population as at present.
4. That clause 7 of the Peninsula and Oriental contract be amended in regard to the conveyance of the Indian-China mails connecting at Colombo. Should it be deemed necessary for the Australian steamers to carry mails in connection with the new contract between Colombo and Brindisi, we consider the Postal Union rates should be paid by the countries despatching those mails, such rates to be dealt with in manner provided for in the preceding paragraph.
5. That the day of departure from Adelaide be Friday if possible, or, if not, Thursday, not earlier than 2 p.m., reaching Albany in 72 hours. (Queensland and Western Australia dissenting, favouring Saturday.)
6. In view of the fact that whilst the mails from Australasia are carried by the accelerated train through Italy and France, those by Orient steamers are carried by ordinary mail-train, the time occupied being about the same in each case, we recommend that the accelerated train service be abolished, as decided at the Adelaide Conference of 1890, especially as out of the postage of 2½d. per $\frac{1}{2}$ oz. letter, fifteen-sixteenths of 1d. has to be paid for the Continental transit by such trains, against three-eighths of 1d. by ordinary trains.

APPENDIX E.

PAPERS RELATIVE TO ACTION TAKEN WITH REGARD TO CERTAIN RESOLUTIONS OF THE POSTAL CONFERENCE HELD IN 1893.

Laid upon the Table by the Hon. Mr. Wilson, Postmaster-General of Queensland, and ordered to be printed.

No. 1.

REPORT OF THE POSTMASTER-GENERAL OF QUEENSLAND UPON CERTAIN RESOLUTIONS OF THE CONFERENCE OF MARCH, 1893 (WITH PAPERS).

As the Postmaster-General of the colony in which the last Postal Conference met, I have the honour to report the action taken to give effect to the resolutions which, on the motion of the Hon. J. G. Ward, the President was requested to transmit to the Governments concerned.

POSTAL SERVICE.

1. Representative Postal Union Congress.

1. "That, in the opinion of this Conference, one representative should be sent from Australasia on behalf of all the colonies to represent them at the Postal Union Congress."

Upon this resolution no action was necessary or taken.

2 and 3. Ocean Mail-service.

2. "That, in view of the necessity for speedy and regular communication between the United Kingdom and Australasia, this Conference is of opinion that the system of subsidies should be continued and the mail-service maintained by the United Kingdom and the colonies as at present."

3. "That the London Post Office be invited to call for tenders in Great Britain and Australasia for a weekly service, on conditions approved by the colonies, from *bonâ fide* British companies (to be performed by one or more companies, running on alternate weeks, as at present). Before any tenders are accepted, it be a request that they be submitted to the colonies for approval. The principal conditions are set forth in the proceedings of this Conference."

On the 29th June, 1893, the Chief Secretary, at the instance of the Postmaster-General (President), wrote to His Excellency the Governor requesting him to communicate these resolutions to the Secretary of State for the Colonies, with such recommendations as he might think fit in support of them.

But in the meanwhile the Postmaster-General at Adelaide wrote to the London Post Office on the subject, and has forwarded a copy of the reply, in which the Imperial Post Office raises objections to the terms of Resolution 3, and asks whether, in the event of the contractors and the Imperial Post Office being agreeable to continue the existing arrangement until the 31st December, 1898, when the China contract is terminable, such a scheme would meet the approval of the colonies. The Hon. Dr. Cockburn has already laid a copy of the letter on the table.

No direct reply has been received by our Government from the Secretary of State for the Colonies.

4. Fumigation of Mails.

4. "This Conference is of opinion that any fumigation of mails for Australasia should be at Adelaide (not at Albany), and at Thursday Island for northern mails."

No action was taken upon this resolution.

5. Canadian Pacific Mail-service.

5. "That this Conference considers it desirable to negotiate for a Canadian Pacific postal-service."

The Chief Secretary, at the instance of the Postmaster-General (President), wrote on the 29th June, 1893, conveying this resolution to the Premier of Canada, and to His Excellency the Governor, for transmission to the Secretary of State for the Colonies.

6. San Francisco Mail-service.

6. "That this Conference directs that a communication be sent to the Postmaster-General, Washington, regretting the continued non-participation of the United States in the matter of the subsidy to the present San Francisco mail-service, and also directs his attention to the excessive overland transit rates between San Francisco and New York, and respectfully requests him to urge the Pacific Railway Company to give more favourable terms."

The Chief Secretary, at the instance of the Postmaster-General (President), wrote to the Postmaster-General, Washington, on the 3rd July, 1893, in terms of this resolution, and a letter has been received by the Post Office here from the Superintendent of Foreign Mails to the effect that the amount now paid by the United States of America for the conveyance from San Francisco to Australia—about 55,000 dollars—is the maximum amount allowed by statute; and that the rate charged for closed mails is less than the cost. Both matters had already received careful consideration, but any change at present was impracticable.

7. *Parcel-post with the United States of America.*

“That negotiations be opened with the United States of America with the view to the introduction of the parcel-post between the United States and the Australian Colonies.”

The Chief Secretary, at the instance of the Postmaster-General (President), communicated this resolution to the Postmaster-General at Washington in a letter dated the 12th July, 1893, and a reply has been received stating it is not deemed advisable by the United States Government to establish the service in question at present.

TELEGRAPH SERVICE.

1. *Continuation of Cable Guarantee.*

1. “That this Conference does not consider it desirable, after the recent arrangement as to rates, to give notice to the Eastern Extension Cable Company to terminate the existing guarantee. Queensland objecting.”

No action was taken on this resolution.

2. *Pacific Cable Route.*

2. “That, in the opinion of this Conference, the time has arrived when a second cable route should be established *via* the Pacific to Vancouver, touching at such places *en route* as may be hereafter agreed upon. South Australia not voting. Western Australia not voting.”

This resolution was communicated to the authorities of Fiji, Hawaii, Canada, and Samoa by the Chief Secretary, at the instance of the Postmaster-General (President), on the 3rd July, 1893, and to the Canadian Government and Imperial Government (through His Excellency the Governor), on the 29th June, 1893. Acknowledgments in favourable terms have been received from Hawaii and Samoa, though the latter states it is unable at present to subscribe money for the furtherance of the enterprise. The Governor of Fiji stated he had no official knowledge of the Conference.

MISCELLANEOUS.

1. *Hour-Zone Time.*

3. “That it is desirable, in the interests of the public, that the hour-zone system should be adopted in a modified form, so that there should be one time throughout Australia—viz., that on the 135th meridian, or nine hours east of Greenwich.”

The Chief Secretary wrote to the other colonies on this subject on the 19th August, 1893.

No. 2.

The Hon. Sir T. McILWRAITH to His Excellency Sir H. W. NORMAN, G.C.B.

SIR,—

Chief Secretary's Office, Brisbane, 29th June, 1893.

Referring to the report of the Postal and Telegraph Conference held in Brisbane in March last, of which I had the honour to enclose a copy of my letter to your Excellency of the 16th ultimo, I have now the honour to request that your Excellency will be good enough to communicate to the Secretary of State for the Colonies the following resolutions, which were adopted by the Conference, with such recommendations as your Excellency may think fit to make in support of these resolutions:—

“That, in view of the necessity of speedy and regular communication between the United Kingdom and Australasia, this Conference is of opinion that the system of subsidies should be continued, and the mail-service maintained by the United Kingdom and the colonies as at present.”

“That the London Post Office be invited to call for tenders in Great Britain and Australasia for a weekly service, on conditions approved by the colonies, from *bona fide* British companies (to be performed by one or more companies running on alternate weeks, as at present). Before any tenders are accepted, it be a request that they be submitted to the colonies for approval. The principal conditions are set forth in the proceedings of this Conference.”

“That this Conference considers it desirable to negotiate for a Canadian-Pacific postal-service.

“That, in the opinion of this Conference, the time has arrived when a second cable route shall be established *via* the Pacific to Vancouver, touching at such places *en route* as may be hereafter agreed upon. South Australia not voting. Western Australia not voting.”

I enclose a copy of the report of the Conference for transmission to the Secretary of State, and I take leave to request that, in forwarding the resolution, your Excellency will be good enough to direct attention to the “Recommendations by Permanent Heads of Departments,” on page 63 of the report, as to the conditions of the contract for the ocean mail-service.

I have, &c.,

THOMAS McILWRAITH.

His Excellency Sir Henry W. Norman, G.C.B., &c., Governor.

No. 3.

The Hon. Sir T. McILWRAITH, Brisbane, to the Hon. the POSTMASTER-GENERAL, Washington,
SIR,— Chief Secretary's Office, Brisbane, 3rd July, 1893.

I have the honour to inform you that a Postal and Telegraph Conference of representatives of all the Australasian Colonies was held in this town in March last, and I have been requested to communicate to you the following resolution which was adopted by the Conference relating to the mail-service between Australia and San Francisco: "That this Conference directs that a communication be sent to the Postmaster-General, Washington, regretting the continued non-participation of the United States in the matter of the subsidy to the present San Francisco Mail-service, and also directs his attention to the excessive overland transit-rates between San Francisco and New York, and respectfully requests him to urge the Pacific Railway Company to give more favourable terms."

With regard to this resolution, I take the liberty of calling attention to the fact that the overland transit-rates between San Francisco and New York amount to over 70 per cent. of the total postage of letters carried by the line in question.

The Hon. the Postmaster-General, Washington.

I have, &c.,
THOMAS McILWRAITH.

No. 4.

The SUPERINTENDENT OF FOREIGN MAIIS, Washington, to the Hon. the POSTMASTER-GENERAL, Brisbane.

Post Office Department, Office of Foreign Mails,
SIR,— Washington, D.C., 10th August, 1893.

I have the honour, by direction of the Postmaster-General, to acknowledge the receipt of your letter, No. 6134, of the 3rd ultimo, communicating, by direction of the Postal and Telegraph Conference held in Brisbane in March last, a resolution adopted by the Conference regretting the non-participation of this department in the matter of the subsidy to the present San Francisco mail-service, and calling attention to the excessive overland transit-rates between San Francisco and New York. In reply, I have to inform you that the amount now paid by this department for the sea-conveyance of mails from San Francisco to the Australasian Colonies, about fifty-five thousand dollars annually, is the maximum sum allowable under the statutes now in force in this country, and that the rate charged for the transportation of closed mails between San Francisco and New York is less than the actual cost of the transit in question.

The questions covered by the resolution adopted by the Conference have already received the very careful consideration of this department, and it has been found to be impracticable at this time to change existing conditions so far as this department is concerned.

I am, &c.,
A. M. BROOKS,
The Postmaster-General, Brisbane.
Superintendent of Foreign Mails.

No. 5.

The SUPERINTENDENT OF FOREIGN MAIIS, Washington, to the Hon. the POSTMASTER-GENERAL, Queensland.

Post Office Department, Office of Foreign Mails,
SIR,— Washington, D.C., 18th August, 1893.

I have the honour, by direction of the Postmaster-General, to acknowledge the receipt of your letter of the 12th ultimo, No. 93/7687, transmitting a copy of a communication addressed to you by the Postmaster-General of Queensland, embodying a resolution, relative to the establishment of the parcels-post service between Australia and the United States, which was adopted at the Post and Telegraph Conference of representatives from all the Australasian Colonies held at Brisbane in March last, and asking that the views of this department on the subject be communicated to the Postmasters-General of the colonies concerned.

In reply, I am directed to request that you will be so good as to inform the Postal Administrations of the colonies referred to, that it is not deemed advisable by this department to establish the service in question at this time. The matter will not be lost sight of, however, and, as soon as the inauguration of the service appears to be practicable, the Administrations interested will be promptly advised.

I am, &c.,
A. M. BROOKS,
The Postmaster-General, Queensland.
Superintendent of Foreign Mails.

No. 6.

CORRESPONDENCE with the LONDON POST OFFICE re POSTAGE on NEWSPAPERS from COLONIES to UNITED KINGDOM.

SIR,— General Post Office, London, 26th August, 1892.
It is observed that at the Hobart Postal Conference a resolution was adopted to the effect that the practice at present followed in most of the Australasian Colonies of sending newspapers to the United Kingdom at 1d. each paper up to 10oz., or in some instances irrespective of weight, must be discontinued, being repugnant to the provisions of the Postal Union,

As you are aware, the Imperial Post Office has no wish to enforce the Union Regulations by charging newspapers from the Australasian Colonies at Union rates, when received here as fully prepaid in accordance with a rate recognised by the colonial Post Offices. At the same time, as already intimated, this department would greatly prefer the adoption of the ordinary Postal Union tariff by the colonies, and has already pointed out that the exceptional rate for newspapers leaves the colonies open to Postal Union criticism.

In view of the fact that, in adopting this exceptional rate, the colonies are not regarding strictly the provisions of the Postal Union Convention, it is hoped that the resolution on the subject come to at the Hobart Conference will before long be generally carried into effect.

Perhaps you will be good enough to inform me how the matter now stands so far as your office is concerned.

I am, &c.,

H. BUXTON FORMAN,

For the Secretary.

The Postmaster-General, Adelaide.

SIR,— General Post Office, Adelaide, 28th October, 1892.

Referring to your letter of 26th August, No. 231 S, relative to the exceptional rates of postage on newspapers from the colonies to the United Kingdom, I have now the honour to inform you that the matter will be very carefully considered at the next intercolonial Conference.

As I have before pointed out, our difficulty is that the principal newspapers published in the colonies considerably exceed 4oz. in weight, and you will readily understand the powerful opposition which would be met with on the part of the Press to any increase in the rates of postage which have so long obtained.

The rate of 1d. per newspaper up to 10oz. is generally regarded as a graceful concession by the Mother Country, and I hope you will see your way clear to allow it to be continued.

It appears to me that under the rules of the convention full provision is made for special arrangements as far as postage is concerned between the United Kingdom and her colonies, and therefore foreign countries would have no grounds of complaint against arrangements which might be made within the limits of the Empire.

I have, &c.,

CHARLES TODD,

Postmaster-General and Secretary for Telegraphs.

The Secretary, General Post Office, London.

(Telegram.)

20th March, 1893.

20. EXPRESS.—Conference Brisbane propose newspaper rates to England penny first four ounces, and halfpenny each additional two ounces. Will you accept?

Blackwood, Post Office, London.

TODD, Brisbane.

(Telegram.)

22nd March, 1893.

22. FOLLOWING from Blackwood: Newspaper rates to England penny first four ounces and half-penny each additional two ounces agreed.

Hesse, London, to Todd, Brisbane.

19.

APPENDIX F.

CANADIAN-PACIFIC MAIL SERVICE.

No. 1.

CANADIAN MAIL-SERVICE.

Mr. HUDDART to the Hon. the PREMIER, New Zealand.

Laid upon the Table by the Hon. Mr. Ward, and ordered to be printed.

SIR,—

Ottawa, 2nd September, 1893.

I have the honour to inform you that I have completed a contract with the Dominion Government for a mail steamship service for a period of ten years. At present the time-table includes as ports of call Sydney, Moreton Bay, Honolulu, Victoria (B.C.), and Vancouver (B.C.). I have offered to continue to call at Moreton Bay, and also to touch at Keppel Bay, in Queensland, in consideration of a subsidy of £10,000 sterling per annum for ten years from the Queensland Government. I proceed to England to-day to complete arrangements for the building of a third swift powerful mail steamship. On the arrival of that steamship it is intended to develop our service into a three-weekly, and within five years we anticipate that we shall be running a fortnightly service. If your Government will offer sufficient inducement, I am prepared, on behalf of the Canadian-Australian Steamship Company, to provide a branch steamship service to connect with each steamship at Sydney from Lyttelton. These steamships will probably be the "Warrimoo" and "Miowera," and they would maintain between Wellington and Sydney all the year round an average speed of fourteen knots. I should be glad to know what subsidy your Government can offer for such a service. In the event of Queensland at once declining to subsidise my company, it has been decided to cease calling at any Queensland port. In that event, we shall be prepared, subject to the approval of the Dominion and Australian Governments, to negotiate with your Government as to the possibility of calling at a New Zealand port *en route* to and from Canada. As you are probably aware, the Dominion Government is sending by the R.M.S. "Warrimoo" a Ministerial Commission to Australia with a view to negotiate for free or freer trade relations between Canada and Australia. I am authorised by Mr. Bowell, the Hon. Minister of Trade and Commerce, to say that he is most desirous that your Government should send a representative to discuss with him the feasibility of including New Zealand in these negotiations. I respectfully urge that you should at once send a Minister to meet the Hon. Mr. Bowell. He would be glad to visit New Zealand, but public business at the opening of the Dominion Parliament next session imperatively demands his return within a period that precludes the possibility of his visiting New Zealand.

I have, &c.,

JAMES HUDDART,
22, Billiter Street, London, E.C.

The Hon. the Premier, Wellington, New Zealand.

No. 2.

CANADIAN MAIL-SERVICE.

Laid upon the Table by the Hon. Mr. Kidd, and ordered to be printed.

An experimental service between Sydney and Vancouver is now being carried out under contract by Messrs. Huddart, Parker, and Co., the Government of New South Wales contributing a subsidy of £10,000 a year thereto. Future developments are being awaited.

Particulars of the contract with papers.

SYDNEY AND VANCOUVER SERVICE.

Particulars of Agreement between the Postmaster-General and James Huddart, dated the 10th October, 1893.

1. Maintain a monthly service between Sydney and Vancouver, calling at Honolulu.
2. Two steamers to be employed—viz.: The "Miowera" and "Warrimoo"—steamers to be not less than 3,300 tons, and to be capable of an average speed of not less than 15½ knots per hour.
3. Duration of voyage: The round trip to begin and end in Sydney; and the "Miowera," which sailed from Sydney on the 18th May last, and arrived at Vancouver on the 8th June, shall be deemed the first voyage under the contract. The period of each voyage from Sydney to Vancouver, and from Vancouver to Sydney, shall not exceed twenty-one days including one day's detention at Honolulu. In the event of the steamers calling at Brisbane or Fiji, a further period of thirty-six hours to be allowed for the time spent in calling at each port. The service to be monthly.

4. The steamers during the contract shall not call at any port in the United States.
 5. Carriage of Freight and Passengers.—To be carried at tariff rates, to be approved of by New South Wales Government with approval of Canadian Executive body.
 6. New South Wales merchants and shippers shall at all times have preference for the carriage of their goods over other merchants and shippers as far as regards the Australian connection; but, in the event of a subsidy from Queensland or other colony being received, space shall be provided *pro rata* to the respective subsidies.
 7. Carriage of Mails.—The steamers shall, at the cost and the expense of the contractor, receive and carry on every voyage all mails that may be tendered by or on behalf of the Postmaster-General, and shall provide sufficient and convenient accommodation and protection for such mails.
 8. Accommodation on board.—The contractor shall provide all suitable accommodation, including lights, for the purpose of sorting or making up the mails.
 9. Master to take charge of mails if required.—If the Postmaster-General shall think fit to intrust the charge and custody of the mails to the master, he shall, without charge, take due care of, and the contractor shall be responsible for safe custody and delivery.
 10. The contractor shall at all times attend to the orders of the Postmaster-General or his officers as to the mode, time, and place of landing, transhipping, &c., of mails.
 11. First-class accommodation to be provided for Mail Officer and one assistant, without charge.
 12. Mail Officer to have full authority to require a due and strict performance of the contract.
 13. Conveyance of Mails at Ports.—The expense of conveying mails to and from the steamships to the post-offices and the terminal ports of the several voyages, or at the ports at which the vessels call *en route*, shall be borne by the contractor.
 14. Power of Postmaster-General to delay sailing: In case of need, for purpose of forwarding mails, shall have the right to delay sailing for twenty-four hours.
 15. Definition of "Mails"—Shall be deemed to mean all boxes, bags, &c., transmissible by post.
 16. Not to carry other letters than those contained in Her Majesty's mails, nor the mails of any other country except such as shall be specified by the Postmaster-General.
 17. Nitro-glycerine nor explosive substance to be carried.
 18. Contract shall not, nor shall any right or interest therein, be assigned, underlet, or otherwise disposed of without the consent in writing of the Postmaster-General.
 19. To furnish copies of manifest.—The contractor shall furnish complete copies of manifest of cargoes and passenger-lists.
 20. Covenant for Payment of Subsidy.—A subsidy of £833 6s. 8d. for every round trip.
 21. Deduction for Delay.—A sum of £30 for every complete period of twenty-four hours by which the time actually occupied shall have exceeded the period of transit contracted for.
 22. Deduction not to be deemed a penalty.
 23. Duration of Contract.—The contract shall remain in force until thirty-six round voyages shall have been performed.
 24. Proviso for replacing steamers disabled.
 25. Notices or directions of the Postmaster-General to be delivered or sent by post to the master or agents.
-
-

APPENDIX G.

PAPERS RELATIVE TO THE PROPOSED CABLE-COMMUNICATION BETWEEN AUSTRALASIA AND CANADA.

Laid upon the Table by the Hon. Mr. Kidd, New South Wales, and ordered to be printed.

No. 1.

SUGGESTED INTERCOLONIAL CONFERENCE.—ALTERNATIVE SCHEMES.— BOWEN TO VANCOUVER, 6,244 MILES.

[Extract from *Brisbane Courier*, 20th October, 1893.]

THE following letter has been addressed by Mr. J. L. Payne, private secretary to the Hon. Mackenzie Bowell, to the Premier of each of the Australian Colonies interested in the proposed establishment of telegraphic communication between this continent and Canada:—

“Sir,—I am directed by the Hon. Mackenzie Bowell, Minister of Trade and Commerce, Canada, now on a visit to Australia for the purpose of exchanging views upon the matters of trade and telegraphic communication between these colonies and the Dominion of Canada, to enclose to you herewith a copy of a communication received by him from Sandford Fleming, Esq., C.M.G., on the subject of the Pacific cable. As Mr. Bowell's stay in these colonies is limited, owing to the meeting of the Canadian Parliament in January, it may not be possible within so short a period to discuss fully these matters with each Government separately. I am directed to ask if your Government would be disposed to send a representative to some central point in the colonies, to be agreed upon by the Governments, to consider the whole subject. Should this suggestion commend itself to your judgment Mr. Bowell will be glad to attend any conference which may be arranged. Mr. Bowell desires it to be understood that the Canadian Government is not committed to any particular scheme for the establishment of cable-communication between the colonies and Canada, that being a subject for mutual consideration and decision.”

MEMORANDUM ON THE PACIFIC CABLES BY SANDFORD FLEMING, ESQ., C.M.G.

Sydney, New South Wales, 11th October, 1893.

The printed proceedings of the Postal and Telegraph Conference held in Brisbane in March last reached Canada a few weeks back. The resolution passed by the Conference, expressing the opinion that the time has arrived when a cable should be established to Vancouver, was welcomed with peculiar satisfaction by those who have for years looked forward to the prospect of having the two countries connected telegraphically. The debate, however, by members of the Conference, together with letters attached to the proceedings, gave rise to misgivings, which were in no way lessened when a copy of the agreement between the French Government and the New Caledonia Cable Company was subsequently received from Europe.

As one who has long taken an active interest in the proposal to connect Australia and New Zealand with Canada by a Pacific cable, I have been impelled by a sense of duty to visit these colonies at this juncture to inquire into all the circumstances, and, if the facts appeared to require it, to submit a respectful representation on the subject, and to appeal with all the earnestness I can command against a contemplated step which, if carried out, would, in my humble judgment, greatly lessen the commercial utility of the Pacific cable, and render it comparatively valueless as a national undertaking.

The French Cable.

Before leaving Canada I gathered from the proceedings of the Postal Conference, and the papers appended thereto, and I learn from other public documents since my arrival in Sydney, in substance as follows:—

1. It is designed that the cable from Queensland to New Caledonia shall form the first link of the trans-Pacific cable, and that it is the intention of the company to proceed section by section as further subsidies are obtained.

2. An opinion is expressed in some quarters that it is impossible to lay a cable through the Pacific Ocean from any part of Australia or New Zealand to Canada without landing at some places, such as New Caledonia, Samoa, and Hawaii, where British influence is not supreme.

3. From the fact that the lines of the Eastern and Eastern Extension cable system touch foreign soil at several points, it has been urged that the Pacific cable, landing at New Caledonia, would be in no worse position than the present line of telegraph between Australia and England.

In considering these points, I would first direct attention to the character of the agreement between the French Government and the Société Française des Télégraphes Sous-Marins, dated 3rd February, 1893, subsequently ratified by the Parliament of France.

I beg leave to submit a translation of the following five articles of this agreement:—

Article III.—As far as the establishment and maintenance of the proposed cable, as well as the organization of the service, the fixing and collecting of rates, the control, the relations with the public, and the connecting of the new line at either end with submarine or land-line systems is concerned, the Société Française des Télégraphes Sous-Marins shall observe the table of rules and obligations approved by the Under-Secretary of State for the Marine Department and the colonies, all the clauses and conditions of which it accepts as having the same force as the terms of this agreement.

Article V.—The society agrees to have its head offices in France, to engage French administrators only, to have the cable manufactured by French employés in works situated on French territory, and to guarantee the laying of the cable by a French ship and crew.

Article VI.—The society shall not, without the expressed written consent of the French Government, cede any of the rights resulting from the present agreement, nor lease its lines, nor amalgamate its interests with those of any other company.

Article X.—The transit rate over the cable between Australia and New Caledonia shall be mutually agreed upon by the French Government and the society. The maximum rate shall be 90 centimes a word.

Article XII.—Any dispute as to the interpretation or the non-performance of these presents arising between the Government, of the one part, and the Société des Télégraphes Sous-Marins or persons claiming under them, of the other part, shall be decided by the Council of State.

These provisions of the agreement make it plain that the telegraph from Queensland to New Caledonia will be under the absolute control of the French Government, and hence no parallel can be instituted between the new line across the Pacific, as contemplated by its promoters, and the Eastern and Eastern Extension system. The lines of that system certainly pass over portions of foreign soil, but it cannot be held that any foreign Power controls the administration and management of the company's affairs. Moreover, if, owing to unavoidable geographical reasons, the wires of the Eastern and Eastern Extension Telegraph Company necessarily touch territory which is not British, the more is it to be desired that Australia should be connected with the Mother-country by a line of communication which nowhere would pass over the soil of another nation, or in any sense be subject to the dictates of a foreign Power.

A British Route required.

The Pacific cable, as originally projected and advocated for many years, has been designed to connect the two greatest divisions of the British Colonial Empire—Australia and Canada—by a route substantially British throughout. Unless such a route be physically impossible, it would, in my judgment, be unwise in the last degree to place the first section of this undertaking absolutely under the control of a foreign Power.

I venture to think it can be indisputably established that there is more than one route from Australia and New Zealand to Canada eligible for a British cable; that there is no necessity whatever for landing at New Caledonia, Samoa, or Hawaii, or indeed at any island occupied by natives who are not already wholly under British protection. I beg leave to describe several of such routes or combination of routes:—

Four Suggested Routes.

Route No. 1.—Commencing at Vancouver Island, the cable would extend to Fanning Island, thence to the nearest island of the Fiji Group. From Fiji it may run direct to New Zealand, and thence to the Australian Continent; or it may run first to Norfolk Island, and from that point bifurcate to the northern part of New Zealand, and to a convenient point near the boundary between New South Wales and Queensland.

Route No. 2.—From Vancouver Island the cable would be laid to a small unoccupied island indicated on the charts as Necker Island, favourably situated about 240 miles westward from the Hawaiian Group. From Necker Island the cable would extend to Fiji, and thence, as in route No. 1, to New Zealand and Australia.

Route No. 3.—As in route No. 2, the cable would extend from Vancouver Island to Necker Island, thence to Onoatoa or some one of the eastern islands of the Gilbert Group. From this station in the Gilbert Group two branches would extend, one to Queensland and the other to New Zealand. The Queensland branch would touch at San Christoval Island in the Solomon Group, and terminate at Bowen, connecting at that point with the land lines, easterly to Brisbane and Sydney, westerly to the Gulf of Carpentaria, where a connection may be formed with the Port Darwin—Adelaide transcontinental telegraph leading to Victoria, Tasmania, South and West Australia. The New Zealand branch of this route would find a mid-station on Viti Levu, the southern island of the Fiji Group.

Route No. 4.—As in routes Nos. 2 and 3, the cable would be laid from the northern terminal point to Necker Island. From Necker Island it would extend in a direct course to Bowen, touching at Apamana—a central island of the Gilbert Group—and at San Christoval, of the Solomon Group. At Bowen this route may, as in the case of route No. 3, connect with Melbourne, Adelaide, Tasmania, by the South Australian overland line. Route No. 4 is probably the shortest possible line that can be drawn on the surface of the globe between any part of Canada and any part of continental Australia. It has the disadvantage of excluding from its telegraph service the Fiji

xxxiii

Islands and New Zealand. To connect the latter colony a special cable from Queensland or New South Wales would be required. The Fiji Islands, however, would remain without a telegraph by this route.

	Knots.
Route No. 1, including both branches from Norfolk Island to New Zealand and Australia ...	7,145
Route No. 2, including branches to New Zealand and Australia ...	7,175
Route No. 3, including both branches to Queensland and New Zealand from the Gilbert Group ...	8,264
Route No. 4, Vancouver to Bowen ...	6,244
Route No. 4A, Vancouver to Bowen, with a special cable from the mainland to New Zealand	7,310

Cost.

In estimating the cost of a cable there are various circumstances that require to be considered. One of the most important is the allowance for slack. It is customary to add an allowance to the ascertained superficial distance of 20 per cent., in order that the cable may be safely laid at all depths and under all conditions likely to arise. This practice has been followed in estimating the cost of establishing a cable by each route. In the case of route No. 1 a special allowance is made on account of the unusually long section between Vancouver and Fanning Island. In each case the estimate is intended to cover the cost of cables of the best type manufactured:—

	£
Route No. 1, estimated cost, completed ...	1,678,000
" No. 2, "	1,585,000
" No. 3, "	1,825,000
" No. 4, "	1,380,000
" No. 4A, "	1,610,000

Having pointed out that there is a choice of routes for an essentially British cable across the Pacific, and presented estimates of cost, which I believe to be fairly reliable, I ask permission to add a few remarks bearing on the means which may be taken to carry out the undertaking.

Means to be adopted.

There are two ways by which the object may be accomplished: first, through the agency of a company liberally subsidised; second, as a public work under Government control. I have given this question much consideration, and year by year I have become more and more firmly convinced that if economy, low rates for telegraphy, and the highest efficiency be desired, the latter means of establishing the cable is the best. Promoters of companies generally desire to make large sums of money. The policy of companies is to obtain from the public as large profits as possible, while that of Governments is to accommodate and benefit the public in every possible manner by reducing the rates to the lowest practicable point, and by giving the most efficient service. The principle of ownership of telegraphs by Government is not new. It has long been adopted in the United Kingdom, India, in these colonies, and elsewhere, and in every case I am aware of where the principle has been tried the public has derived the greatest advantage.

Various efforts have been made during the past ten years to have the Pacific cable established by a subsidised company; but no company has offered to carry out the undertaking for a less subsidy than £75,000 a year continued for a period of twenty-five years. It can be indisputably shown that under the plan of Government ownership a much less annual payment for a very much shorter period will suffice. Moreover, when established, the cable will be public property, controlled by Government for the public benefit.

Joint Ownership by the Colonies.

The proposal, then, is that Australia, New Zealand, Fiji, and Canada should be joint owners of the Pacific cable, and that it should be established and worked as a public undertaking for the common good. There is one difficulty to be met at the outset. Certain of the Australian Governments are under obligations to pay an annual subsidy of £32,400 to the Eastern Extension Company until May, 1899, and, in consequence, they may not consider themselves in a position to co-operate on equal terms with the other Governments concerned in establishing the new line. This difficulty is not, however, insuperable, and in my judgment it can most readily be overcome by providing out of capital an annuity to meet the subsidy as it annually becomes due. By this arrangement the liability of New South Wales, Victoria, South Australia, and Western Australia to the Eastern Extension Telegraph Company would be practically removed, and these colonies would be free to enter with Queensland, New Zealand, Fiji, and Canada into a joint agreement to accomplish the establishment of the trans-Pacific telegraph. As will hereafter be seen, the annuity so provided to extinguish the subsidy of £32,400 a year would be met by profits accruing from the new cable. Meanwhile, all liability incurred in the raising of the capital would be borne in equitable proportions by all the co-operating Governments.

To illustrate the proposal set forth, let us assume that the cable itself, say on route No. 2, requires an expenditure of	£1,600,000
To this capital add the sum needed to purchase an annuity to meet the annual subsidy of £32,400, from May, 1894, to May, 1899—five years	145,000
Total	£1,745,000

This total capital, raised on the joint guarantee of the Australian Colonies, New Zealand, and Canada, could be placed at the low rate of 3 per cent., making a total charge of £52,350 per annum.

This interest-charge is less than the lowest subsidy asked by a company, and I shall establish by the strongest possible evidence, that, unlike a subsidy for a fixed period of twenty-five years, long before the expiry of that period the whole interest will be met by surplus revenue.

Cost of Working.

I have obtained estimates from the best authorities of the cost of working the Pacific cable under Government. These estimates range from £45,000 to £60,000 per annum, and include the salaries of superintendents, electricians, and operators, two steamers for current repairs, and all necessary expense at terminal and mid-ocean stations. As it is desirable to have adequate allowance for every service, it is expedient to base our calculations on the highest estimate (£60,000) as the total cost of working the cable. £60,000 will accordingly be a first charge on the revenue, and it will remain a constant charge whatever the volume of business, whether five million words per annum or half a million only.

Renewal Fund.

Next to working-expenses there should be an annual charge on revenue for renewals. It is proposed, therefore, to place to a cumulative reserve the sum of £32,000 a year, equal to 2 per cent. on the entire cost of the cable. This provision is considered ample until the earning qualities of the cable come to be thoroughly established.

Revenue.

In many cases it is difficult, owing to the lack of information, to form estimates of the probable revenue of a projected undertaking. In this instance, however, the best data is available for our guidance. We have the published statistics of telegraph business by the existing line between Australia and Europe for a number of years, and it is fair to assume that on the establishment of the Pacific cable, rates and all other things being equal, the business will be equally divided between the two lines.

I am unable to ascertain the business for the past year, but I gather from the published returns that the number of words transmitted in the year ending 1st May, 1892, was 1,275,191. If we divide this into equal parts, we have 637,595 words as a basis for estimating the revenue of the Pacific cable.

In examining the returns for previous years some striking peculiarities are apparent. During the eight years from 1882 to 1890 the telegraph business between the Australian Colonies and Great Britain increased, on an average, 54,441 words each year, equal to 14 per cent. per annum. This may be viewed as the normal increase under a high tariff, inasmuch as throughout these eight years the charges on ordinary messages were never less than 9s. 4d. per word. On 1st May, 1891, the rate was reduced from 9s. 4d. to 4s. per word, and within the twelve following months the business increased by 448,913 words—an increase of 54 per cent. on the business of the previous year, and 831 per cent. over the normal annual increase during the preceding eight years. The further expansion of business will, no doubt, for the present be disturbed and retarded by an increase in the charges on messages on the 1st January last; but there remains the experience of the year 1891–92 to establish the remarkable effect of a low tariff in stimulating telegraphy. In that single year the increase in the number of words transmitted under a 4s. rate was greater than the growth of the business during the whole of the preceding eight years under a 9s. 4d. rate.

One of the direct benefits to the public from the Government ownership of the Pacific cable will be the reduction in charges for transmitting messages. I have already mentioned that, with a full and efficient staff such as the estimate for working-expenses provides for, it will cost no more to do a large business than a small. There will therefore be no reason for preventing the freest expansion of telegraphy by the new line by lowering the charges. In my humble opinion, the rates across the Pacific should be lowered to 2s. per word immediately on the cable being laid, in order that the public may have the advantage of cheaper communication at the earliest moment.

The proposed rate of 2s. per word for transmitting messages across the Pacific would reduce charges between Australia and England to 3s. 3d. in place of 4s. 9d. as at present. Moreover, messages from Australia received at Vancouver would be forwarded to all parts of Canada and the United States for an average charge not exceeding 2s. 3d. per word in place of 6s.—the present charge.

I wish to avoid extravagant statements or too sanguine estimates. I would, in submitting my ideas, particularly desire to keep strictly within reasonable probabilities. If we base estimates on the existing volume of business merely, we must anticipate that there will be no great advance over the business of 1891–92 for a few years if the charges on messages are again raised, as they already have been to some extent. In the calculations which follow I shall therefore assume the business to be at a standstill for three years; that is to say, I shall assume that the business in 1894 will not be greater in volume than it was in 1891–92, and that thenceforth the normal increase of not more than 14 per cent. per annum shall apply. The number of words transmitted in 1891–92 was 1,275,191. It is assumed that the Pacific cable would, if in operation in 1894, obtain one-half of this business.

Year.	Words per Annum.	Earnings at 2s. per Word.	Year.	Words per Annum.	Earnings at 2s. per Word.
1894	637,595	63,759	1900	1,173,176	117,318
1895	726,858	72,686	1901	1,262,439	126,244
1896	816,122	81,612	1902	1,351,703	135,170
1897	905,386	90,539	1903	1,440,967	144,097
1898	994,649	99,465	1904	1,530,230	153,023
1899	1,083,913	108,391			

XXXV

It is scarcely likely that the Pacific cable will be established before the year 1896. The above estimate shows that in the year following (1897) the revenue from the cable would be £90,539, a sum equal to the whole working-expenses, together with £30,539 for the renewal fund.

In the five following years the revenue, in addition to paying working-expenses and providing for gradually reducing the interest charges, would finally, in 1903, within about seven years after the completion of the undertaking, be sufficient to meet every current charge, and the contributing Governments would practically be relieved from further liability. Not only would all fixed charges be then met, but in succeeding years the productive capacity of the undertaking would yield an annually-increasing surplus, to be dealt with as the co-operating Governments may determine.

If instead of a 2s. rate we reckon the same business for each year at an additional 6d. per word, or 2s. 6d. in all, a charge on messages across the Pacific which would still be considered comparatively low, we have as follows :—

Year.	Earnings at 2s. 6d. per Word.	The Fixed Charges, including Working-expenses, Renewal Fund, and Interest, being in all £144,350 per Annum.	
		Deficiency.	Surplus.
1897 ...	113,173	31,177	...
1898 ...	124,331	20,019	...
1899 ...	135,489	8,861	...
1900 ...	146,647	...	2,297
1901 ...	157,805	...	13,455
1902 ...	168,963	...	24,613
1903 ...	180,121	...	35,771
1904 ...	191,279	...	46,929
1905 ...	202,437	...	58,087
1906 ...	213,595	...	69,245

This last estimate gives the result for the first ten years of operation of the cable based on a 2s. 6d. rate and a low normal increase. It shows that the revenue for the first year would be insufficient to pay the whole interest on capital in addition to working-expenses and provision for renewal fund, and that the co-operating Governments would together require to pay £31,177 to make up interest. In the following year the deficiency to be made good would be £20,019; in the third year, £8,861. A small surplus would result in the fourth year, and at the end of ten years there would be an accumulated surplus of over £250,000 after meeting interest on cost and every other charge.

Comparison with Present Subsidy.

If we compare these estimated results with the sums now paid for the temporary use of the existing telegraph at lower rates than formerly, we shall find everything in favour of an independent cable owned and controlled by Government.

There is first a fixed annual subsidy of £32,400 paid to the Eastern Extension Cable Company by five of the colonies. In addition to this annual payment, I find in the Postmaster-General's (N.S.W.) report for 1892, page 25, that further sums have been paid to the same company for the past two years, to obtain a reduction in charges from 9s. 4d. to 4s. and 4s. 9d. Under the heading "Cable Guarantee," I find that £27,520 was paid for the year 1891-92, and £21,778 for the year 1892-93. If we add this guaranteed payment to the subsidy, we find the payments in each case to have been :—

	Subsidy and Guarantee paid.	
	For Year 1891-92.	For Year 1892-93.
By Victoria ...	£25,730	£23,048
By New South Wales ...	23,787	21,126
By South Australia ...	7,966	7,213
By Tasmania ...	1,447	1,102
By Western Australia ...	990	874
Total sums paid ...	£59,920	£53,363*

* This does not include £815 paid by New Zealand.

Thus it appears that five colonies have paid, in each of the past two years, to the Eastern Extension Cable Company sums in excess of the interest (£52,350) on the whole capital required to establish the Pacific cable. I do not know that it is at all necessary to carry the comparison any further. I will only remark that in the case of the Pacific cable the liability for interest would not be confined to the present five contributing colonies; the intention is that it shall be borne in equitable proportion by all, including New Zealand, Queensland, Fiji, and Canada, and in consequence would fall lightly on each. Moreover, it is perfectly clear from the estimates of revenue that, while at no time would the interest-charge, distributed over nine Governments, exceed £52,350, so soon as the cable goes into operation the payments on interest account would gradually be reduced, and in a very few years would be wholly covered by surplus revenue. It is quite true that in the case of the Eastern Extension cable the guarantee may cease any year by giving notice, and the obligation resting on five colonies to pay the annual subsidy of £32,400 will in any event

terminate in 1899; but, without an alternative line under Government control, is there any certainty that the Eastern Extension Company may not raise charges to the old high rates unless an extension of the subsidy be granted them?

Conclusion.

In connection with the estimates of revenue, I have pointed out from statistical returns two elements of increase of business—(1) a normal increase under an exceedingly high tariff; (2) a very much greater increase under a lower tariff. There will be a third increase, which will be due to the development of traffic with Canada and in bringing the Australian Colonies into direct telegraphic touch with the whole telegraphic system of North America. At present telegraphic intercourse is insignificant; but, with a 2s. or 2s. 6d. rate across the Pacific in place of a 6s. rate by a circuitous route, the circumstances will be favourable to the growth of telegraph business between the two continents, and, in consequence, the revenue to the Pacific cable from this source will rapidly develop to large proportions.

In the foregoing estimates of revenue I have reckoned only the normal increase under a high tariff, and taken no account of the greater increase which certainly will result from the charges being lowered as proposed. I have likewise added nothing for the Australasia-North American business, the whole of which would flow to the Pacific cable. I am quite warranted, therefore, in expressing the opinion that the estimates of revenue I have presented are not exaggerated or unreasonable, and that the Pacific cable established by Government in the manner proposed would effect very important results. It would practically extinguish all subsidies now paid, and render guarantees unnecessary. It would permanently establish low rates for ocean telegraphy. It would yield a revenue which, after paying working-expenses, providing for maintenance and renewals, would make good all interest-charges on the whole cost of the undertaking from the beginning, and in a very few years would furnish large surplus earnings. I venture to think, then, that if the resolution passed by the Postal and Telegraph Conference in March last be generally assented to in these colonies, the Governments need not hesitate in incurring the comparatively small—almost nominal—liability necessary to secure a telegraph connection across the Pacific, which every British subject will recognise to be of the greatest national and commercial value.

No. 2.

MEMORANDUM by P. B. WALKER, Esq., Secretary of Telegraphs, New South Wales, on Mr. Sandford Fleming's Pacific Cable Scheme.

Laid on the Table by the Hon. Mr. Kidd, New South Wales, and ordered to be printed.

I HAVE read and carefully considered the Pacific cable scheme of Mr. Sandford Fleming, submitted by the Hon. McKenzie Bowell, Minister of Trade and Commerce, Canada, and published in the *Brisbane Courier* of the 20th October last.

In this scheme it is stated that "an opinion is expressed in some quarters that it is impossible to lay a cable through the Pacific Ocean from any part of Australia or New Zealand to Canada without landing at some places, such as New Caledonia, Samoa, and Hawaii, where British influence is not supreme." This statement certainly never emanated from any one having any accurate knowledge of the facts of the working or laying of cables, because it is clear, from a glance at the chart, that this can be done from Australia or New Zealand without much difficulty. At the same time it must be taken into consideration whether it would be desirable to adopt such a scheme, as the importance of the islands in the Pacific lying between Australia, New Zealand, and Canada, and the trade in which Australia and New Zealand is so largely interested with these islands in the Pacific, is of such vast importance that to shut them out of a Pacific cable, *en route* to Vancouver, would be a grave mistake.

So far as the provisions of the agreement made by the Société Français des Télégraphes Sous-Marins with the French Government, regarding the cable from Queensland to New Caledonia, is concerned, I would point out that the agreement in question has never been approved by the Governments of New South Wales and Queensland, and is not in accord with the agreement which these two Governments entered into under their guarantee agreement with the French company before referred to; therefore it is improbable that such an agreement would meet with favourable consideration in the event of the Queensland *cum* New Caledonia cable being adopted as the Pacific route to Vancouver or elsewhere.

There are many routes that could be adopted to Vancouver for a British cable, but the four suggested by Mr. Fleming are open to objections, and it would be against the interests of the colonies to adopt either of them. I will deal with these in the order in which Mr. Fleming has placed them.

Route No. 1.

He says, "Route No. 1, commencing at Vancouver Island, the cable would extend to Fanning Island" (a distance of about 3,200 nautical miles). This would be a mistake, as such a length of cable, without an intermediate relay, would not work satisfactorily, and I gather from this proposal that no consideration has been given to the capabilities of working the cable in a direct circuit over such a distance. It is well known that when a cable over 3,000 miles is worked in a direct circuit that there is great difficulty experienced through the slow progress in working; and I am quite sure that no cable company would attempt to work a cable in direct circuit over a length of 3,000 miles. I find that the longest length of cable worked *en route* to England is under the Eastern Company's system, and extends from Bombay to Suez, a distance of 3,253 knots; but

xxxvii

it must be remembered that this touches at Aden, where an intermediate relay is inserted to assist the circuit; and, as a matter of fact, the longest lengths worked direct are the Atlantic cables, the greatest length being 2,709 knots.

The Eastern Company also has another cable from Alexandria to Gibraltar, of 2,037 knots, with an intermediate relay inserted at Malta; and the Eastern Extension Company have a cable from Port Darwin to Singapore of 2,055 knots, with a relay at Banjoewangie; also one of 1,770 from Singapore to Madras, with a relay at Penang; so that it will be seen by the practical experience of these companies that such a proposal to connect Vancouver and Fanning Island direct is not likely to be workable, and no assistance should be given to carry out such a proposal as that contained in No. 1 route. In addition to this, the latter part of the proposal is to run direct to New Zealand, and thence to the Australian Continent, which would probably cost £1,800,000 instead of £1,678,000, as estimated; and I would point out that £1,800,000 was Mr. Fleming's estimate for a similar route proposed by him in his paper of 18th July, 1890.

Route No. 2.

From "Vancouver to Necker Island"—a distance of 3,230 knots—"from Necker Island to Fiji, thence to New Zealand and Australia." Necker Island is situated about 630 miles north-west of Hawaii, and about 420 miles north-west of Honolulu; and these two important places in the Sandwich Islands would be out of the route, to say nothing of the extra length of cable that would be required to carry out this project. Then, again, from Necker Island to Fiji, a distance of about 3,200 knots, cutting out all the Samoan Group; and from Fiji to New Zealand (no port being named) the nearest point would be about Auckland, 1,239 miles, thus involving the transmission of business over the New Zealand land-lines, and thence by the Eastern Extension Company's cables from Cable Bay to Botany. In the first case, it is improbable that Queensland would join in this scheme; and, in the second, I hardly think that they would undertake the construction of a second cable from New Zealand antagonistic to any route which might be probable from their own coast. The cost, as far as can be estimated, for this route, taking Mr. Fleming's distances, would be about £1,793,000, in place of £1,585,000.

Route No. 3.

From "Vancouver to Necker Island, thence to Onoatoa or some one of the eastern islands of the Gilbert Group, thence to Queensland or New Zealand. From Onoatoa to the nearest point in Queensland (Bowen), touching at Solomon Islands (San Christoval), and from Onoatoa to New Zealand" (a distance of about 1,980 miles). By this route Mr. Fleming makes the distance 8,264 knots, and he proposes to terminate the Queensland section at Bowen (the New Zealand port not being stated), making a connection with the Adelaide-Port Darwin transcontinental telegraph line. But there appear to be the same objections to this as there would be to No. 2 route; and to land a cable 200 miles north of Bundaberg would be precarious, on account of the rocky bottom it would have to pass over in approaching the Queensland coast at this point. I do not, therefore, think it would be advisable to consider this as a favourable route; and the connecting Bowen with the Darwin-Port Adelaide transcontinental telegraph-line would involve a heavy expenditure for the construction of about 1,000 miles of land-line through difficult country. The estimate given for this route is £1,825,000, but I estimate it at about £2,050,000.

Route No. 4.

A direct course from "Necker Island to Bowen" is proposed, giving a stretch of cable of about 4,680 miles, touching at "Apamana." By this route the Fiji Islands and New Zealand would be entirely cut out, and, in addition to this, the same objections apply as pointed out in route No. 3. The distance is stated as 6,224 miles, and the estimated cost £1,380,600, but I make it about £1,556,000.

Route No. 4a.

No. 4a route, Vancouver to Bowen, with a special cable from the mainland to New Zealand, is open to the same objections as routes 3 and 4. The distance is given as 7,310 miles, and the estimated cost £1,610,000. I estimate it at about £1,827,000.

The estimated amounts for the various routes are as follows:—

- No. 1: Estimated cost completed, £1,678,000; 7,145 knots.
- No. 2: Estimated cost completed, £1,585,000; 7,175 knots.
- No. 3: Estimated cost completed, £1,825,000; 8,264 knots.
- No. 4: Estimated cost completed, £1,380,000; 6,244 knots.
- No. 4a: Estimated cost completed, £1,610,000; 7,310 knots.

In the estimates of the different routes I cannot reconcile Mr. Fleming's figures, as in route No. 1 he gives for 7,145 knots an estimated amount of £1,678,000, whereas in route No. 2 for 7,175 knots (a greater distance) only £1,585,000 is given, the estimated cost being £93,000 less, with 30 knots more of cable than No. 1 route. Then, again, in No. 4a route, for 7,310 knots the cost is estimated at £1,610,000, against £1,678,000 for 7,145 knots, No. 1 route, being 165 knots less at a cost of £68,000 less. From this it appears that there must have been some oversight in the calculations regarding the estimated costs. The proposal that the cable should be carried out as a public work under Government control is objectionable, as cables are a precarious property, and to work them under Government control would be an expensive undertaking, and cable companies can exercise a more rigid system of management in the working of cables than Governments are capable of doing, on account of their having experienced business-men who are not hampered by the surroundings attending Government control. The question of low rates is held out as the principal reason for this; but that does not carry any force, as it is advisable to have competition by the two

xxxviii

distinct routes, and this will eventually secure rates much lower than it would be possible for any combined Governments to maintain cables without working at enormous loss. I do not think that any subsidy, or question of subsidy, for a Pacific cable, and certainly no proposal to make the cable a Government one, should be entertained.

The question of joint ownership by the colonies could not be considered satisfactorily till after the Eastern Extension Company's guarantee of £32,400 per annum, expiring in 1899, falls in, as in dealing with this a complication is involved. The Queensland Government, never having entered into this guarantee, would, of course, in coming into the proposal set forth by Mr. Fleming, have to contribute their share of this £32,400 for fifteen years before an equitable adjustment between the Governments could be arrived at; and New South Wales, Victoria, and South Australia could not consistently write off this deficiency without some compensating concessions from the former colony that it is not likely they would concede. In addition to this, the proposal to purchase an annuity to extinguish the £32,400 is a scheme which might suit an insurance or a mercantile company, but it does not appear a suitable one for Governments to adopt. The figures show that this might be met by a surplus revenue, but it is only in prospective; and it must not be forgotten that there will be keen competition with the other cable *via* Port Darwin, which in such a case would probably reduce the revenue of the proposed cable to Canada far below any estimate that could possibly be anticipated; therefore it is impossible to form an estimate at the present time of a revenue to be derived from any Pacific cable, and I cannot accept the positive statements as to the probable revenue to be derived from this scheme as at all satisfactory.

The suggestion that there is a probability of the Eastern Extension Company putting up the rates on the expiration of the subsidy in 1899 is one that need not be considered, because we have found in the past that, when the New South Wales and New Zealand Governments refused to continue the ten-years subsidy for the New Zealand cable expiring in 1886, the Eastern Extension Company not only continued to carry on the cable at the then-existing rates, but, three years and a half ago, laid a second cable at their own cost, without any subsidy whatever from the New South Wales and New Zealand Governments. And the cable company, being alive to its own interest and the interests of its shareholders, with a largely-increasing business, is not likely to interfere with the rates, as by 1899 we shall probably have all the guarantees and subsidies wiped out through overflowing increase in the business on the cables between this and Europe. Moreover, there is a saving-clause in the agreement, by which the Governments are enabled to purchase the cables from the company upon giving twelve calendar months' notice of their intention to do so. Under this arrangement the company cannot gain any greater advantages than they at present possess by putting up the rates. I consider that a Pacific cable is most desirable, as it is the best and shortest route for traffic, being only about 12,500 miles, as against 14,638 by the Port Darwin route. Therefore, if it is possible for an arrangement to be arrived at by which a moderate guarantee—not subsidy, or joint ownership—could be given by the Australasian Governments to some companies in order to attain this object, great benefit would be derived by the colonies. The best route, in my opinion, for the cable to go is from Bundaberg direct to Fiji, thence to Samoa, Fanning Island, Honolulu, and Vancouver; and New Zealand could be connected, either from New South Wales or Queensland, by an additional cable, if thought desirable. This would avoid New Caledonia, leaving only 1,500 knots of cable to connect Queensland and Fiji, a good workable distance, and the other sections would be of easy distances for all practical purposes; or, an alternative route could be adopted, direct from Brisbane, touching at the northern extremity of New Zealand, thence to Fiji, and onwards; but this would necessitate a longer length of cable. I may remark that one of the present cables touches at Banjoewangie (Java), another at Suez, and another at Lisbon; and if any junction were made with the New Caledonia cable, it would simply be at Gomen, in the same manner as is done at Lisbon; and, seeing that the present cables touch upon three foreign territories, the objections advanced against the New Caledonia cable do not appear to be of as grave a character as depicted, on account of the probabilities of satisfactory arrangements being made with the different Governments interested to work the cable with British officers. It would be a mistake to leave out Samoa and Honolulu, as we may expect a large revenue from these islands, and the European Powers interested in them will, more or less, exercise a protectorate over their interests in the cable-communication in these parts, in the same manner as they do in the Egyptian and other waters.

I attach a tracing of the chart, showing the different routes proposed by Mr. Sandford Fleming.
21st November, 1893.

P. B. WALKER.

No. 3.

NEW CALEDONIAN CABLE.

The Hon. AUDLEY COOTE to the PREMIER, New South Wales.

Laid on the Table by the Hon. Mr. Kidd, New South Wales, and ordered to be printed.

DEAR SIR,—

Grand Hotel, Melbourne, 27th October, 1893.

I have read with much surprise the confidential letter of Lord Ripon to the Chief Secretary of Victoria (Mr. Patterson), and I think that when Lord Ripon wrote that letter, marked as a confidential communication, he never intended that it should be published in the manner that it has been through the Victorian Press by the Premier of that colony. No doubt Mr. Patterson, being desirous of attacking the New Caledonian cable and the Governments of New South Wales and Queensland for not consulting Victoria, made use of a confidential communication in order to suit his ends. I may, however, inform all on this side of the water that it will be utterly futile, because the companies which I am representing are quite prepared to carry the extension of the

xxxix

Pacific cable to a satisfactory termination, notwithstanding the exertions of the Eastern Extension Telegraph Company in the colonies, and assisted by the Governments of Victoria and South Australia. A great deal is being said by the Hon. Mackenzie Bowell, Minister of Trade and Commerce of Canada (now on a visit to Australia, assisted by Sandford Fleming, Esq., C.M.G.), about a British cable through British territory to Vancouver, and in his letter to each of the Premiers of the Australian Colonies his private secretary says: "As Mr. Bowell's stay in these colonies is limited, owing to the meeting of the Canadian Parliament in January, it may not be possible within so short a period to discuss fully these matters with each Government separately. I am directed to ask if your Government would be disposed to send a representative to some central point in the colonies, to be agreed upon by the Governments, to consider the whole subject."

But, surely, in putting forth such a suggestion for the consideration of the various Governments of the Australasian Colonies Mr. Bowell must have lost sight of the fact that the interests of Queensland are entirely antagonistic to all the existing cable telegraphic arrangements made by the other colonies, and has always stood aloof from all subsidies, guarantees, &c., and for reduction of rates made by the sister colonies, except in the case of the New Caledonian cable, in which New South Wales has joined with Queensland. It is therefore evident that to propose a conference which would bring Queensland into the question of the Pacific cable most prominently would promote an element of discord at once into the whole question, because Victoria and South Australia, being allied to the Eastern Extension Telegraph Company, would not conform to anything by which it would benefit without that colony first agreed to enter into and recoup Victoria and South Australia for what they are already out of pocket from their past obligations incurred in dealing with the Eastern Extension Telegraph Company. I am sure from the expressions made by Sir Thomas McIlwraith in reference to the Eastern Extension Telegraph Company monopoly that this would be absolutely impossible. Mr. Bowell forwards a memorandum on the Pacific cable from Mr. Sandford Fleming, in which that gentleman says that he "has long taken an active interest in the proposal to connect Australia and New Zealand with Canada by a Pacific cable, and he has been impelled by a sense of duty to visit these colonies at this juncture to inquire into all the circumstances, and, if the facts appeared to require it, to submit a respectful representation on the subject, and to appeal with all the earnestness he can command against a contemplated step which, if carried out, would, in his humble judgment, greatly lessen the commercial utility of the Pacific cable, and render it comparatively valueless as a national undertaking."

I will deal with Mr. Fleming's remarks under four different headings. He says (1) that he "has long taken an active interest to connect New Zealand with Canada by a Pacific cable."

It will be seen at once that this would be impracticable, because the Eastern Extension Telegraph Company, having already a cable laid between New Zealand and Sydney, could not be prevailed upon to allow the business of any adverse company to traverse their lines without they were permitted to have a monopoly of the traffic; and, seeing that Queensland has so persistently held aloof from all the arrangements with the Eastern Extension Telegraph Company, it would be necessary to run an additional cable from New Zealand to some other portion of Australia, which would be a useless expenditure, seeing that we now have a cable laid on the direct line of the Pacific cable to New Caledonia.

(2.) He "has been impelled by a sense of duty to visit these colonies at this juncture to inquire into all the circumstances."

If Mr. Fleming's sense of duty has impelled him to visit these colonies at this juncture, it is a pity that he did not do so before arrangements had been entered into and concluded by the New South Wales and Queensland Governments for the construction of the New Caledonian cable, and the cable laid, because he would then have had an opportunity of ventilating many of the exploded ideas which were promulgated at the Conference in 1887, and proved to be so impracticable that no financial company in England or France could be prevailed upon for one moment to entertain them. Moreover, the statements contained in the memorandum which was published in the *Brisbane Courier* of the 20th October show clearly that Mr. Fleming has not the interests of the colonies at heart, but merely acts as the mouthpiece of some financial operators, who know very little about the wants of the colonies in regard to the Pacific cable.

(3.) "If the facts appeared to require it, to submit a respectful representation on the subject."

From this it would appear that Mr. Fleming merely assumes that something is required; but, notwithstanding this fact, he submits a scheme which he considers is required, because he thinks that Australia, New Zealand, Fiji, and Canada should be joint owners of the Pacific cable, and that it should be established and worked as a public undertaking for the common good. (I need hardly say that this will never be accomplished, because the Australian Governments are not likely to consent, I feel satisfied, to become joint owners and joint workers of a cable-undertaking of such magnitude as would involve them in a large annual expenditure, with probable loss, which, in all other countries, is generally carried out by private enterprise.)

(4.) "To appeal with all the earnestness he could command against a contemplated step which, if carried out, would, in his humble judgment, greatly lessen the commercial utility of the Pacific cable, and render it valueless as a national undertaking."

There is very little similarity between Mr. Fleming's idea of "national undertakings" and his objections raised in regard to the New Caledonian cable, because the provisions of the agreement do not make it clear, as Mr. Fleming asserts, that "the whole Pacific route from Queensland will be under the absolute control of the French Government," when, as a matter of fact, I may inform Mr. Fleming that such is not to be the case, because the companies that I represent are making arrangements for the whole of the extensions to be worked entirely by English officers; but the cables will be manufactured in France, on account of the facilities afforded for manufacturing the cable, being nearly "half a million pounds sterling less" than it can be manufactured in England, and of equal quality.

It is inferred by Mr. Bowell that if the cable is carried on to Vancouver along the Pacific route from New Caledonia, that Canada will not give any subsidy towards it; but I look upon this as merely an attempt to coerce the Australian Colonies into swallowing Mr. Sandford Fleming's scheme, which I venture to predict the Premiers of the various colonies will be clear-headed enough to see through.

And now, please, let me say that I am now on my way to Paris and London by the mail-steamer leaving to-day, to conclude matters finally.

A great deal has been said in the Press about the Colonies of New South Wales and Queensland entering into an agreement in reference to the New Caledonian cable without first consulting the other colonies; but I presume that in all cases where Governments are responsible to the people for their political actions they do not require to solicit the sanction of a sister colony before entering upon it.

Therefore this objection is only an attempt to bolster up the ideas of a single Minister, because he does not like it to be thought that an important work of this character should be carried out without his Government being consulted.

It may be remembered in the history of colonial cable-communication, when first it was contemplated to connect with Europe by cable, Captain Noel Osborne, of the Eastern Extension Telegraph Company, and myself were on our way to these colonies under an arrangement to consult the whole of the Colonies of Australasia, "more especially Queensland," upon the question of cable-communication with England, but on Captain Noel Osborne's arrival at Adelaide he was intercepted there by the Adelaide Government, and they, without consulting any of the other colonies, entered into a binding arrangement with him for carrying out the Port Darwin route. After this the whole of the Australasian Colonies were drawn into the arrangement, much against their will, because at this time and for some years after all cable messages had to pass through the Dutch territory, causing considerable difficulty, and it was only when the cable that was laid between Port Darwin and Banjoewangi (Java) became interrupted for several months, in 1885, that it was thought desirable to get direct communication between Port Darwin and Singapore, under the designation of a "duplicate cable," for which the Australasian Colonies (except Queensland) were saddled with the subsidy of £32,400 a year for twenty years, or equal to the sum of £648,000 at the completion of the agreement on the 1st July, 1899; so that I do not see how Mr. Fleming's parallel in regard to the French cable is in any way different on national grounds to the arrangement made by the South Australian Government with Captain Noel Osborne to take the colonial telegraph information through "foreign territory," the only difference being that in twenty years the Governments will have paid the modest sum of £648,000 as a subsidy, whereas, in the case of the Pacific cable which my companies intend to carry out, the Government will probably not be required to contribute one-fourth of that sum in the same time, and, with the enormous traffic which will arise through the conveniences and connections of other countries, it will possibly reduce the amount of guarantee to a minimum.

I am unable to understand how it is possible for any communities having the slightest pretensions to commercial prosperity to disregard such important facts as these upon a mere bogey-cry of nationality, when the welfare and the general interests of the people demand that they should have every facility afforded for placing them in the position of obtaining cheaper, speedier, and more accurate means of procuring intelligence of the commerce of the world.

I have, &c.,

The Hon. the Premier, New South Wales.

AUDLEY COOTE.

APPENDIX H.

PAPERS RELATIVE TO THE REPRESENTATION OF FIJI AT THE POSTAL UNION CONGRESS AND INTERCOLONIAL CONFERENCE.

No. 1.

MEMORANDUM BY THE DEPUTY POSTMASTER-GENERAL, NEW SOUTH WALES.

Laid upon the Table by the Hon. Mr. Kidd, N.S.W., and ordered to be printed.

THE London Post Office wrote on the 14th December last (letter hereunder), stating that hitherto all communications between the Berne Bureau and Fiji have been made through the London Office, but now Fiji proposes that that colony should be represented at the Union Congress by the representative of the Australasian Colonies (which point has already been settled by correspondence between Fiji and New South Wales), and that "in respect of all matters discussed at Intercolonial Conferences, and otherwise in the interval between the Union Congresses, Fiji shall be represented by the representative of New South Wales.

"His Excellency is assumed to have satisfied himself that your Office will have no objection to the latter part of the proposal; and, as the Secretary of State for the Colonies and Her Majesty's Postmaster-General entirely concur in it, I lose no time in communicating with you on the subject.

"The adoption of the course indicated will involve the transmission of all communications, documents, and specimens of postage-stamps, &c., from the International Bureau of the Postal Union for the Post Office of Fiji through the medium of the Post Office of New South Wales, instead of through this department; and the Director of the International Bureau has been requested to give instructions accordingly.

"The Postmaster-General of South Australia has also been informed of the arrangement."

This letter was received on the 16th January. Before receipt of it, however—namely, on 12th December, the Honourable Mr. Ward telegraphed suggesting that we invite representative of Fiji to future conferences, and asking Mr. Kidd to give his opinion after conferring with other Postmasters-General. This was done, and all the Postmasters-General concurring, Mr. Ward was so informed on the 5th January, Mr. Ward replying on 12th, as follows: "On behalf of colonies Premier has wired Fiji to send representative to Conference."

No. 2.

COPY OF LETTER FROM THE SECRETARY, GENERAL POST OFFICE, LONDON, TO THE HON. THE POSTMASTER-GENERAL, SYDNEY.

Laid upon the table by the Hon. Mr. Kidd, N.S.W., and ordered to be printed.

SIR,—

General Post Office, London, 14th December, 1893.

Since the entry of the Australasian Colonies into the Postal Union on the 1st of October, 1891, communications between the International Bureau of the Union and the Post Office of Fiji have been sent through the medium of this department.

In connection with the question of the representation of Australasia in the Postal Union, the Governor of Fiji has proposed that, in regard to all matters discussed and settled at Postal Union Congresses, the Colony of Fiji shall be represented by the delegate for the group of the British Colonies of Australasia; and that in respect of all matters discussed at Intercolonial Postal Conferences, and otherwise in the intervals between the Union Congresses, Fiji shall be represented by the representative of New South Wales.

His Excellency is assumed to have satisfied himself that your office will have no objection to the latter part of the proposal; and, as the Secretary of State for the Colonies and Her Majesty's Postmaster-General entirely concur in it, I lose no time in communicating with you on the subject.

The adoption of the course indicated will involve the transmission of all communications, documents, and specimens of postage-stamps, &c., from the International Bureau of the Postal Union for the Post Office of Fiji through the medium of the Post Office of New South Wales, instead of through this department; and the Director of the International Bureau has been requested to give instructions accordingly.

The Postmaster-General of South Australia has also been informed of the arrangement.

The Postmaster-General, Sydney.

I am, &c.,
H. BUXTON FORMAN.

No. 3.

COPY OF LETTER SENT TO FIJI INVITING THE ATTENDANCE OF A REPRESENTATIVE AT THE WELLINGTON CONFERENCE.

Laid upon the Table by the Hon. Mr. Ward, and ordered to be printed.

The Hon. J. G. WARD, New Zealand, to the Hon. the COLONIAL SECRETARY, Fiji.

SIR,— Premier's Office, Wellington, 11th January, 1894.

I have the honour to inform you that, believing the time has arrived when a representative from Fiji should take part in the deliberations of the annual Conferences which meet to discuss Post Office and Telegraph matters of more or less interest to Fiji as well as to Australasia, the several Governments have unanimously decided that an invitation should be extended to your colony to send a representative to the Conference which is to meet in New Zealand in a few weeks' time. On behalf of the Governments of the Australasian Colonies, I have therefore very great pleasure in inviting you to send a representative to the Conference which is to meet in Wellington on the 5th March next, and to express the hope that you may find it convenient to accept the invitation. In addition to an interchange of views of matters to be brought up at the Conference, much is to be gained by personal intercourse and informal discussion on other matters.

I need scarcely state that a cordial welcome will be given any representative from your colony. The Postmaster-General, to whom the arrangements in connection with the Conference have been intrusted, has requested me to say that he is arranging to take the representatives to some of the wonderful sights to be seen in this colony, and, with this in view, the whole of the Australian representatives are to leave Melbourne on the 17th proximo for the Bluff. If your Government should decide to send a representative, he should, if he wishes to make the complete tour, arrive at the former port not later than the 17th, and at Bluff not later than the 21st proximo.

I enclose a proof of the list of subjects for consideration at the Conference, so far as received from the several colonies; and, should your colony send a representative, I shall be obliged if you will forward by an early opportunity a list of the subjects you would wish considered.

I have, &c.,

J. G. WARD,

For the Premier.

The Colonial Secretary, Suva, Fiji.

APPENDIX I.

PAPERS RELATIVE TO THE HOUR-ZONE TIME SYSTEM.

No. 1.

HOUR-ZONE TIME.

The Hon. Sir THOMAS McILWRAITH to the PREMIERS of the Australian Colonies.

Laid on the Table by the Hon. Mr. Wilson, and ordered to be printed.

SIR,—

Chief Secretary's Office, Brisbane, 19th August, 1893.

At a meeting of the Post and Telegraph Conference held in Brisbane in March last the following resolution was proposed by Mr. Todd, of South Australia: "That it is desirable in the interests of the colonies to adopt the hour-zone system, or some modification of it."

In speaking on this motion, all Mr. Todd's arguments applied to the hour-zone system in its entirety, which may be expressed in the following resolution passed by a meeting of surveyors held in Melbourne in November last: "That the true mean time on the 150th meridian east of Greenwich should be adopted as the standard time for all railway, telegraphic, and other purposes, and that it should be made the legal standard of time within the Colonies of New South Wales, Tasmania, Victoria, and Queensland. Also, that South Australia should adopt the same time, or the mean time of the 135th meridian, which is exactly one hour later; and that Western Australia should adopt the mean time of the 130th meridian, which is two hours later."

Mr. Todd's resolution was ultimately altered to read as follows: "That it is desirable in the public interests that the hour-zone system should be adopted, or that there should be one time throughout Australia—namely, the 135th meridian, nine hours east of Greenwich."

I direct your attention to the debate on this resolution, and to the fact that very little reason was given why the 135th meridian, or one time, should be adopted for the whole of Australia.

As Premier of the colony in which the Conference took place, I have, according to custom, undertaken to bring the resolution before you, but I have to add that it has since been under the consideration of this Government, who differ from the resolution that was carried.

It is to be regretted that full discussion on the subject did not take place. I consider that the hour-zone system has great advantages over the system of one time, and that it should be adopted. I admit that the one-time system, if adopted, would be met most conveniently by adopting the 135th meridian; this, however, makes a difference in time by longitude, between the 135th meridian time and Brisbane time, of one hour and twelve minutes—that is, when it is twelve o'clock there it will be twelve minutes past one by mean time in Brisbane. In addition to this, at one time of the year apparent time is about sixteen minutes in advance of mean time, so that then the difference between apparent time and time according to the 135th meridian would be as much as one hour and twenty-eight minutes. This, of course, involves considerable inconvenience, and the same inconvenience will, to a certain extent, be felt all down the eastern coast. At Perth, in Western Australia, if the 135th meridian for all Australia is adopted, there will be difference in longitude of one hour and seventeen minutes, so that noon will be only 10° 43' by the sun; and at one time in the year the difference between apparent time and the 135th meridian time will be over one hour and thirty-one minutes.

If, on the other hand, the zone system is adopted, the 150th meridian would suit well for Queensland, New South Wales, Victoria, and Tasmania. The 135th would suit admirably for South Australia. The 120th would suit in the same way for Western Australia. I, of course, assume that the zone stretching east from the 135th meridian would not cover the whole seven and a half degrees making the half-hour, but would stop at the boundaries of the Colonies of Queensland and New South Wales, making thereby the same time in the Colonies of Queensland, New South Wales, Victoria, and Tasmania. No doubt the zone system will stretch further east, when New Caledonia may be expected to, and no doubt will, adopt the 165th meridian. We will thus have time in Australia, according to the different colonies, differing by exactly full hours from English time, and from the time in countries that have already adopted the zone system. Were the 150th meridian adopted for New South Wales, Victoria, Tasmania, and Queensland, the greatest difference would be felt in the western part of Queensland; but there the time would only differ from apparent time by forty-eight minutes. It is, in sparsely-populated countries such as are the western parts of Queensland and New South Wales, a matter of very little importance. By this system we secure the advantage that the time remains unaltered when the borders of New South Wales or Queensland are crossed into South Australia or the Northern Territory. The same principle may be adopted in making the boundary of the West Australian zone in seven and a half degrees east of the 120th meridian, the 129th being the boundary between West Australia and South Australia.

From the foregoing you will understand that the Queensland Government desires to adopt the hour-zone system in its entirety, limited only by the wish to make, as far as practicable, the boundaries of the zones coincide with the boundaries of the colonies, and I urge the matter for your serious consideration, thoroughly believing that the adoption of this system will add to the convenience of business arrangements in all the colonies, both among themselves and with other countries.

If you are of the same opinion, and the other colonies agree, I will be happy to prepare a Bill with a view to carrying out the object, and submit it to you.

Premiers, Australian Colonies.

I have, &c.,
THOMAS McILWRAITH.

No. 2.

REFERENDUM by Sir CHARLES TODD, Postmaster-General, South Australia, relative to the Hour-zone System.

Laid on the Table by the Hon. Dr. Cockburn, and ordered to be printed.

I PLACED this matter very clearly before the Conference at Brisbane, and pointed out that we had the choice of two alternatives. Either would be a great improvement on the present system, under which each colony observes, as a rule, throughout its limits the local mean time of its capital.

1. We might adopt three hour-zones—viz., (a) the 120th meridian, or eight hours east of Greenwich, for West Australia; (b) the 135th meridian, or nine hours east of Greenwich, for South Australia; (c) the 150th meridian, or 10 hours east of Greenwich, for Tasmania, Victoria, New South Wales, and Queensland—as agreed to at the conference of surveyors held at Melbourne in November, 1892. Or—

2. Adopt one standard time for the whole of the colonies—viz., the 135th meridian, nine hours east of Greenwich, which so nearly bisects Australia. For telegraph and railway purposes the latter course has much to recommend it, and personally I strongly urged its claims for favourable consideration.

My views were generally concurred in by the other members of the Postal and Telegraph Conference—as will be seen from the report of the discussion—and the following resolution was unanimously agreed to: “That it is desirable in the public interests that the hour-zone system should be adopted in a modified form, so that there should be one time throughout Australia—viz., that of the 135th meridian, or nine hours east of Greenwich.”

I believe the Railway Commissioners of the several colonies are in favour of the adoption of one standard time, and it is viewed with equal favour elsewhere, as the following extracts will show:—

Extract from a letter to me from the Astronomer Royal, Mr. H. M. Christie, M.A., F.R.S.:—

“I am very glad to see by the report of the Postal and Telegraph Conference in Australia just received that you have been so successful in promoting the unification of time in Australia. It is a great point to have one time for the whole continent, and I trust the resolution of the Conference will soon be carried out. You have done good service in urging the adoption of one time rather than three hour-zones, which, as it seems to me, would be only a provisional arrangement. I fancy that in Canada and the United States they are coming to one time as replacing the hourly zone system, which, though a great reform, can only be looked upon as a step towards uniformity in time-reckoning.”

Mr. Sandford Fleming writes me as follows:—

“You were good enough to send me a copy of the proceedings of the Postal and Telegraph Conference held at Brisbane in March last, in which I was glad to notice the resolution passed, mainly through your influence, in the matter of the hour-zone time. As I am chairman of a special committee on standard time of the American Society of Civil Engineers, and they will expect to hear from me at the next annual meeting, I shall be glad to learn if anything further has been done, or likely to be done, in Australia. My own opinion is that the resolution of the Postal Conference is the very best decision that could be reached in Australia.”

The following is taken from the *Observatory*, an astronomical magazine published in England:—

“At the Postal and Telegraph Conference held in Brisbane in 1893 the subject of hour-zone time was considered. Mr. (now Sir Charles) Todd (South Australia) made a statement on the question, pointing out that if the system adopted in the United States were followed in Australia three times would be adopted for the continent, differing from Greenwich time by eight, nine, and ten hours respectively, and at a recent conference of surveyors a resolution was passed in favour of this plan. But he was disposed to think that there would be greater advantages in only having one time throughout the whole continent—viz., nine hours east of Greenwich. True, those in the extreme east and extreme west would be some one and quarter hours away from local time; but this was a small inconvenience compared with that of changing the time twice when on railway journeys, as experience had shown. Many of them had already been living for years with official or standard time differing by nearly an hour from local time, and no serious inconvenience had been felt. Mr. Todd was supported by the Hon. J. G. Ward (New Zealand), the Hon. J. Kidd (New South Wales), the Hon. A. Wynne (Victoria), and finally the following resolution was passed: ‘That it is desirable in the public interests that the hour-zone system should be adopted in a modified form, so that there should be one time throughout Australia—viz., that of the 135th meridian, or nine hours east of Greenwich.’

"We tender our hearty congratulations to Sir Charles Todd on the success of the movement of which he has taken charge. If the resolution is, as we hope, soon put into practical operation it will be a distinct advance upon the hour-zone system to have one time throughout such a large portion of the inhabited globe as Australia and New Zealand, and it will promise well for the ultimate adoption of a single universal time all over the world."

From a telegraphic point of view one time would be a great convenience to the mercantile world. A merchant in London will know that every telegram he receives from Australia is timed nine hours in advance of Greenwich.

The inconvenience referred to by Sir Thomas McIlwraith of adopting a standard time differing at the extreme limits somewhat over an hour from local time is more imaginary than real. Persons would become accustomed to the change of hour, and perform their ordinary functions at the same *time of day* as hitherto. Thus, a man accustomed to go to his office at nine in the morning will at Brisbane go when the clock strikes eight, and at Perth when it strikes ten.

The adoption of one standard time would obviate the inconvenience now experienced under the hour-zone system, where two towns, only a few miles apart, are situated near to (one on each side of) the meridian bounding two contiguous zones, and consequently differ one hour in time. This would happen at Cockburn and Broken Hill, as New South Wales time will be one hour in advance of South Australia.

These considerations weighed with the delegates at the Brisbane Conference, and also with the Railway Commissioners whom I consulted; and I would very strongly urge, before setting aside the decision arrived at after full discussion at Brisbane, that the question may be again submitted to the various Governments, and especially to the Railway and Telegraph Departments.

C. TODD,

10th November, 1893.

Postmaster-General and Superintendent of Telegraphs.

APPENDIX J.

TELEGRAPH STATISTICS LAID BEFORE THE CONFERENCE.

SOUTH AUSTRALIA.

Laid upon the Table by the Hon. John Alexander Cockburn, M.D., Lond., and ordered to be printed.

INTERNATIONAL TELEGRAPH TRAFFIC.—From 1st May, 1891, to 31st January, 1894,
compared with the Years 1889 and 1890.

Notes.

An agreement made at the Sydney Conference of 1891 between the cable company and the following colonies: South Australia, Victoria, Tasmania, New South Wales, and Western Australia to reduce the tariff from the 1st May, 1891, the cable company to be guaranteed their 1889 receipts, viz., £237,736, the company bearing one-half of any loss, and the contributing colonies the other half. Similar agreement made between the contributing colonies, agreeing to guarantee South Australia £37,552 per annum.

From the 1st May, 1891, cable rates (contributing colonies), Adelaide to London, &c., were reduced from 9s. 4d. to 4s. per word, and rates to other parts of the world reduced in proportion, Government messages 3s. 6d. per word, and Press messages 1s. 9d. per word.

From the 1st January, 1893, an all round increase of 9d. per word was made on ordinary or public messages, Government and Press messages not being affected. Through insufficient notice the extra charge of 9d. per word was not collected by India, Burmah, and Ceylon until the 16th January, 1893.

From the 1st January, 1893, New Zealand joined the contributing colonies as a party to the cable and South Australian guarantees.

NOTE.—The contributions of the colonies are calculated on the basis of population.

COMPARATIVE STATEMENT SHOWING THE INCREASE TO BUSINESS SINCE THE ALTERED RATES CAME INTO OPERATION FROM THE 1ST MAY, 1891.

Western Australia	49,782	103 5 2
Totals	3,409,549	£7,072 0 0

APPENDIX K.

EMPLOYMENT OF COLOURED LABOUR ON MAIL STEAMERS.

EMPLOYMENT OF COLOURED LABOUR ON MAIL STEAMERS.

The AGENT for the PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY to the Hon. the PRESIDENT of the POSTAL and TELEGRAPH CONFERENCE.

Laid upon the Table by the Hon. Mr. Ward, and ordered to be printed.

SIR,—

21st February, 1894.

Apropos of the inclosed paragraph, which appeared in the Sydney *Daily Telegraph* of the 16th instant, I have the honour to bring under your notice two statements which are reported to have been made by deputationists who waited on the Postmaster-General of New South Wales. These, if allowed to remain uncontradicted, cannot but create a wrong impression in regard to the events to which they refer.

It is stated that at the wreck of the "Tasmania" "the native crew took possession of the life-boats, some of which were swamped while being launched, while the passengers were left to shift for themselves." To this utterly incomprehensible statement I feel I must give a most unqualified denial; and in support thereof I would remind the members of your distinguished body of the fact that, although the commander, several of the European, and about thirty of the native crew perished, not one single passenger was lost.

At the inquiry held in London, shortly after the disaster, it was conclusively shown that the native crew, so far from rushing the boats, behaved admirably, and, as a matter of fact, died at their posts.

The other point to which I would refer is the somewhat ill-thought-out reference to the wreck of the British India Steam Navigation Company's s.s. "Quetta," in respect of which I will crave your indulgence, simply for the purpose of mentioning that the time which elapsed between the striking of this vessel on an unknown rock and her actual sinking was inside three minutes.

I have, &c.,

A. D. MICHIE,

The Hon. the President of the Australian Postal Conference, Wellington.

Agent.

[Extract from the Sydney *Daily Telegraph*, dated the 16th February, 1894.]

COLOURED LABOUR ON MAIL STEAMERS.—DEPUTATION TO THE POSTMASTER-GENERAL.—THE RESOLUTION OF THE LABOUR CONFERENCE.

A DEPUTATION, consisting of Messrs. Davis, Houghton, Gardiner, Cann, Langwell, J. D. Fitzgerald, Bavister, and Edden, waited on the Postmaster-General yesterday, and asked that no subsidies should be paid to mail or other steamers belonging to lines on which coloured labour was employed.

Mr. Davis said the deputation understood that the Postmaster-General was about to leave for the Postal Conference in New Zealand, and they desired to say that the Intercolonial Labour Conference, recently held in Sydney, had passed a resolution to the effect that every effort should be made to induce the various Governments contributing to the subsidies of steamers carrying mails or other articles to insert a clause in the contract providing that none but European or Australian labour should be employed. Action similar to that now being taken had already been urged on the Premier of South Australia, and he believed with good effect, as Mr. Kingston had fallen in with the adoption of the idea, and quite agreed that only Europeans or Australians should form the crews of these vessels. A similar deputation had also waited on the Premier of Victoria, and he believed the matter was under consideration by the Government. The South Australian delegate to the Postal Conference had, he was told, received instructions to vote in favour of granting no subsidy to any mail steamer carrying a black crew. In Queensland, about eighteen months ago, the Government had fallen in with the same idea, and in the new contract with the British-India Steam Navigation Company a clause had been inserted specifying that only European labour should be employed on the boats. The deputation thought it would be only right that the New South Wales Government should fall in with the views adopted by the Governments of the two colonies named. The P. and O. Company, which received half the subsidy given to the English mail lines, employed crews of lascars and other Asiatics, while the Orient Company employed only Europeans. There was no doubt that the P. and O. boats were very fine ones, but in case of disaster their crews could not be relied on to do their duty. When the R.M.S. "Tasmania" went ashore in the Mediterranean a few years ago, the coolie crew took possession of the lifeboats, some of which were swamped while being launched, while the passengers were left to shift for themselves. A large

number of lives would have been lost had assistance not been sent from the shore. When the Orient liner "Garonne" went ashore in the Red Sea some years ago the European crew did their duty like men, and both ship and passengers were saved by jettisoning some of the cargo. There were innumerable cases to show that Asiatics were not sufficient to man vessels, and in addition, they were not desirable additions to the population of these colonies. As a new mail contract would have to be entered into before long, the deputation thought the present was the most opportune time to bring the matter under the notice of the Postmaster-General.

Mr. J. D. Fitzgerald instanced the "Quetta" disaster in Torres Straits, to show the utter unreliability of Asiatic crews in times of disaster.

Mr. Kidd, in reply, said the present contract did not fall in until the end of next year, but the Imperial authorities had made a suggestion that the present contract might be continued on the same basis as at present for two years longer, in order that the whole of the Eastern contracts might fall in at the one time. This matter would have to be discussed by the forthcoming Postal Conference. The amount of subsidy paid by the colonies was £75,000 to the P. and O. and Orient lines, and the Imperial Government contributed £95,000. With regard to the representations made to him by the deputation, all he could say was that in all probability a Cabinet meeting would be held on the following day, when he would lay before his colleagues all that the deputation had urged, and that was all he could promise at the present time.

Mr. Davis suggested that the colonies might decline to extend the terms of the contract on the present basis.

Mr. Kidd said that would be for the Conference to decide.

POSTAL AND TELEGRAPHIC CONFERENCE, 1895.

REPORT OF THE DELEGATES TO THE INTERCOLONIAL POSTAL AND TELEGRAPHIC CONFERENCE HELD IN HOBART DURING FEBRUARY, 1895.

PRESIDENT: THE HON. JOHN GAVAN DUFFY, M.L.A., OF VICTORIA.

I. THE Seven Colonies of Australasia were all represented at the Conference.

II. The Conference sat on the 1st, 2nd, 6th, 7th, and 8th February.

The following were the principal Resolutions adopted, viz. :—

RELATING TO POSTAL SERVICE.

1. That this Conference re-affirms the desirableness of establishing a four-weekly service (alternating with the San Francisco Service) between Australia, New Zealand, and Vancouver, the Mail Steamers calling at one main port in New Zealand and such ports in Australia as may be determined upon.
2. It is desirable that in the next Contract for the conveyance of Mails from the United Kingdom to Australia, provision be made—
 - (1.) That until safe and commodious harbour accommodation be provided at Fremantle, it be optional with the Companies to call at Fremantle; but that so soon as such accommodation is provided, it be compulsory for the Companies to call at Fremantle to deliver and take on board mails and passengers.
 - (2.) That any Mail Steamer arriving at Albany or at Fremantle shall remain in port for six hours at least.
 - (3.) That the sailing day for Mail Steamers from Adelaide be Saturday.

3. That it be a condition in any future contracts that Mail Boats be manned by white labour only.

4. That this Conference desires to express its disappointment at the reply of the London Post Office to the conditions laid down by the Colonies for an extension of the Federal Mail Contract, and while, under the circumstances, reluctantly agreeing to such extension, desires to emphasize the terms and conditions of the Wellington Conference. This Conference further desires to inform the London Office that no future contract will be acceptable to the Colonies which does not include them, together with the Resolution passed by this Conference relating to the employment of coloured labour.

5. That, while sympathising with the desire expressed by Mr. Henniker Heaton for a cheaper postage rate to and from England and the Colonies, this Conference regards the present time inopportune for carrying out the proposal, and hereby decides accordingly.

TELEGRAPHIC SERVICE.—PACIFIC CABLE.

6. This Conference re-affirms the desirableness of the construction of a Pacific Cable to connect the Australasian Colonies and Canada, and in view of the ascertained practicability of the scheme, respectfully urges upon the various Colonial Governments that steps be taken for the furtherance of the project at the earliest opportunity.

CABLE GUARANTEES.

7. That the several Colonies agree to guarantee International Revenue to the Eastern Extension Telegraph Company of £227,000 per year, and to make up any loss below that amount, provided the total payment in any one year shall not exceed £10,000, and to guarantee a revenue of £20,000 on the New Zealand cable, and to make up any loss below that sum, provided the payment in any one year shall not exceed £9000; provided always that rates not higher than those now ruling be charged by the Eastern Extension Telegraph Company during currency of such guarantee: such arrangement to be from year to year, and terminable at two months' notice.

TELEGRAPH SERVICE.

8. On the subject of precedence of Press Cable Messages, this Conference resolved:—"That the Governments concerned be urged to take steps to obviate, as far as possible, the inconvenience caused to the mercantile community by delay in forwarding private messages in case of telegraphic interruption."

ELECTRICAL.

9. That the Second Report of the Committee appointed at the Postal and Telegraphic Conference held at Hobart, 1892, for the purpose of drafting a code of Rules and Regulations for the erection and laying of Electric Light and Power Wires, be adopted by this Conference.

GENERAL.

10. The Report of the Heads of Departments on subjects of detail connected with Postal and Telegraphic matters was received and adopted. The Report contains full information as to the estimated contributions of the several Colonies under the guarantees on account of cable services.

11. Other matters were considered and withdrawn, and for such see Minutes of Proceedings.

12. Appended to this Report will be found—

- I. Minutes of Proceedings.
- II. Second Report of Committee on Electric Light and Power Wires.
- III. Papers laid before the Conference.
- IV. Report of Heads of Departments.
- V. Report of principal Proceedings.

**POSTAL AND TELEGRAPH CONFERENCE,
HOBART, 1895.**

MINUTES OF THE PROCEEDINGS.

LEGISLATIVE COUNCIL CHAMBER, HOBART.

FRIDAY, FEBRUARY 1, 1895.

THE Conference met at 11 A.M., when the under-mentioned gentlemen, representing the Colonies herein named, were present:—

<i>New South Wales:</i>	The Hon. JOSEPH COOK, M.P., Postmaster-General. S. H. LAMBTON, Esq., Deputy Postmaster-General.
<i>Victoria:</i>	The Hon. JOHN GAVAN DUFFY, M.L.A., Postmaster-General. JAMES SMIBERT, Esq., Deputy Postmaster-General.
<i>South Australia:</i>	The Hon. J. A. COCKBURN, M.P., Minister of Education, &c. &c. Sir CHARLES TODD, K.C.M.G., Postmaster-General.
<i>Queensland:</i>	The Hon. A. J. THYNNE, M.L.C., Postmaster-General. JNO. M'DONNELL, Esq., Under Secretary to the Post and Telegraph Department, and Superintendent of Electric Telegraphs.
<i>Western Australia:</i>	Sir JOHN FORREST, Premier.
<i>Tasmania:</i>	The Hon. P. O. FYSH, M.H.A., Treasurer and Postmaster-General. H. V. BAYLY, Esq., Secretary to the Post Office.
<i>New Zealand:</i>	The Hon. J. G. WARD, M.H.R., Treasurer, Postmaster-General, and Electric Telegraph Commissioner. W.M. GRAY, Esq., Secretary to the Post and Telegraph Department.

The Hon. JOHN GAVAN DUFFY proposed, and the Hon. JOSEPH COOK seconded—That the Hon. P. O. Fysh, Postmaster-General of Tasmania, be appointed President of the Conference.

The Hon. P. O. Fysh thanked the Conference for the intended honour, but explained that his engagements, especially in connection with the business of the Federal Council of Australasia then sitting, precluded him from accepting the position. He moved that the Hon. John Gavan Duffy be elected President of the Conference.

The Hon. A. J. THYNNE seconded the Motion, which was unanimously carried.

The Hon. JOHN GAVAN DUFFY acknowledged the honour, and took the Chair.

The Hon. P. O. FYSH moved, and the Hon. J. A. COCKBURN seconded—That Mr. THOMAS COOK JUST be appointed Secretary to the Conference. Carried.

The Conference considered the question of admitting the Press. The Hon. JOSEPH COOK moved that the representatives of the Press be admitted to the sittings of the Conference. The Hon. A. J. THYNNE seconded, and the Motion was carried.

The Hon. JOHN JOSEPH COOK, the Hon. JOHN GAVAN DUFFY, and the Hon. ANDREW JOSEPH THYNNE presented their Commissions.

Papers.

The following Papers were tabled and ordered to be printed:—

The Hon. JOHN GAVAN DUFFY.—Victorian Telegraph Statistics, 1894.

The Hon. A. J. THYNNE.—Telegraph Statistics of the Colony of Queensland, 1894.

The Hon. J. A. COCKBURN.—Papers relating to International Telegraph Traffic and Guarantees.

The Hon. A. J. THYNNE laid on the Table a "Report by the Right Honourable the EARL OF JERSEY, G.C.M.G., on the Colonial Conference at Ottawa, with the Proceedings of the Conference and certain correspondence." Received.

ORDER OF BUSINESS.

The following Paper was tabled :—

List of Subjects for consideration.

1. Federal Mail Contract—
 - (a) Proposed extension of.
 - (b) Time of departure from Adelaide.
 - (c) Cold Storage.
 - (d) Coloured Labour.
 - (e) Delay of Train at Adelaide for English Mails.
2. Pacific Mail Service.
3. Italy charging Sea Surtax—Report by Postmaster-General, Adelaide.
4. Stoppage of Letters addressed to senders of obscene matter.
5. Mr. Henniker Heaton's proposal to reduce rate of Postage to England to 2d.
6. Delivery of indefinitely addressed Letters to business people.
7. Colonies remitting through the Treasury.
8. Uniform Statistics.
9. Notification of promotion of Higher Grade Postal Officials.
10. Postal Guides: uniformity of.
11. Post Cards of private manufacture: Regulations.
12. Letter Cards—
 - (a) Uniform exchange of.
 - (b) Consideration of Berne Circular re Rates chargeable thereon.
 - (c) Whether Victorian Letter Cards should not bear Stamps equivalent to their face value.
13. Proposed discontinuance of Letter Bills intercolonially.
14. Australasian Postal Convention—proposed revision or expunging of Article 7, and revision of Convention generally.
15. Rates on Circulars and Packets from United Kingdom (*vide London Letter*).
16. Transmission by post of Samples in Envelopes bearing printed notices relating thereto.
17. Rate of Postage on Seedsmen's Catalogues or such matter got up in book form.
18. Travellers' Orders: whether, when filled up in manuscript, they should pass at Packet Rate.
19. Printed matter and Trade Notices on Accounts and Invoices
20. Rate on printed circular from Matters & Co.
21. Christmas and New Year Cards.
22. Obscene Photographs and Catalogues.
23. Precious Stones and Jewellery passing at Sample Rates.
24. Queensland surcharging New Zealand $\frac{1}{2}d$. matter.
25. Austro-German proposal for Uniform Rate of Postage on Parcels up to 11 lbs.
26. Liability of Steamship Owners for damages to parcels, to be increased.
27. Insurance of Parcels.
28. Charge for intermediary service in regard to Intercolonial and Foreign parcels.
29. Parcel Post, United States.
30. Parcel Post Rates with United Kingdom: Reduction of.
31. Parcel Post Convention with Italy: London's offer.
32. Parcel Post Convention with Malta.
33. Parcel Post Convention with Canada.
34. Parcel Post Convention with France.
35. Re-direction of Parcel Post Packets: Calcutta's proposal.
36. Reduction of Commission on Money Orders to United Kingdom.
37. Telegraph Money Order Regulations.
38. Issue of Duplicate Money Orders.
39. Universal Postage Stamp—Federal Postage Stamp.
40. Marking Stamps "Specimen."
41. Patent Envelopes.
42. Postal Note System, England.
43. Arbitrary marks in Newspapers to convey information of a personal nature.
44. Enclosure of printed Papers in Newspapers.
45. Payment for conveyance of Letters in English Mails in transit Victoria to Tasmania.
46. Delegate to next Universal Postal Union Congress.
47. Postal Union (Sea Transit Rates).

Telegraph.

48. Pacific Cable.
49. Cable Guarantees, and proposed withdrawal of Victoria.
50. Improved Telegraph facilities between South Australia and Western Australia.

11

51. Consideration of proposed Official Code Vocabulary.
52. Registration of Code or abbreviated Addresses (Uniformity of Regulations).
53. Telegraph Code—Alteration of.
54. Rate on Telegraph Messages to and from New Caledonia.
55. Fire Alarms—Regulations, &c.
56. Rectifying Telegrams or Repeats for corrections.
57. Name of Terminal Country to be given in Foreign Telegrams.
58. Reply Paid Telegrams—Mode of accounting for.
59. Cablegrams "on Service."
60. Repeated Telegrams—Uniform mode of dealing with.
61. Question of precedence of Press Cable Messages.

Miscellaneous.

62. Consideration of Second Report of Electric Light and Power Leads Committee.
63. Standard Time.
64. Telephone List : Patent arrangement of Alphabetical Index.

The Hon. JOSEPH COOK moved, and the Hon. A. J. THYNNE seconded—That all the subjects excepting Nos. 1, 2, 5, 46, 48, 49, 61, and 63 be referred to the Heads of Departments as a Sub-Committee to report as soon as possible. Other subjects to be dealt with by the Conference in order as printed. Carried.

The Conference adjourned at 11·55 A.M. until 2·30 P.M.

AFTERNOON SITTING.

On the Conference resuming at 2·30 P.M., Hon. J. A. COCKBURN moved, Hon. A. J. THYNNE seconded—That this Conference adjourn until to-morrow at 10 o'clock.

Motion carried, and the Conference adjourned accordingly.

JOHN GAVAN DUFFY, President.

THOS. C. JUST, Secretary.

LEGISLATIVE COUNCIL CHAMBER, HOBART.

SATURDAY, FEBRUARY 2, 1895.

THE Conference met at 10 A.M., when the under-mentioned gentlemen, representing the Colonies herein named, were present:—

New South Wales: The Hon. JOSEPH COOK, M.P., Postmaster-General.
S. H. LAMBTON, Esq., Deputy Postmaster-General.

Victoria: The Hon. JOHN GAVAN DUFFY, M.L.A., Postmaster-General.
JAMES SMIBERT, Esq., Deputy Postmaster-General.

South Australia: The Hon. J. A. COCKBURN, M.P., Minister of Education, &c. &c.
Sir CHARLES TODD, K.C.M.G., Postmaster-General.

Queensland: The Hon. A. J. THYNNE, M.L.C., Postmaster-General.
JNO. M'DONNELL, Esq., Under Secretary to the Post and Telegraph Department and Superintendent of Electric Telegraphs.

Tasmania: Hon. P. O. FYSH, M.H.A., Treasurer and Postmaster-General.
H. V. BAYLY, Esq., Secretary to the Post Office.

New Zealand: The Hon. J. G. WARD, M.H.R., Colonial Treasurer, Postmaster-General, and Electric Telegraph Commissioner.
WILLIAM GRAY, Esq., Secretary to the Post and Telegraph Department.

The PRESIDENT suggested that, to meet the convenience of the Hon. Mr. Ward, they might alter the order of business.

The Hon. P. O. FYSH (by leave) moved—That such business as the Hon. Postmaster-General of New Zealand may desire to submit to the Conference take precedence.

The Hon. JOSEPH COOK seconded. Carried.

12

The Hon. P. O. FYSH laid on the Table a letter from Mr. J. G. Barrett, Secretary of the Trades Hall Council, Melbourne, on the subject of the employment of Coloured Labour on Mail Steamers, and moved that it be read.

The Hon. A. J. THYNNE seconded. Carried.

The letter was read by the Secretary.

COMMISSIONS.

The Hon. J. G. WARD and the Hon. J. A. COCKBURN presented their Commissions as Representatives of New Zealand and South Australia to the Conference.

PAPERS.

The following Papers were laid on the Table, and ordered to be printed:—

The Hon. J. A. COCKBURN.—The Second Report of the Committee appointed at the Postal and Telegraphic Conference held at Hobart, 1892, for the purpose of drafting a Code of Rules and Regulations for the erection and laying of Electric Light and Power Wires.

The Hon. J. G. WARD.—Statement of Traffic *re* New Zealand-Sydney Cable Guarantee from 1st May to 31st December, 1894; also a statement of Estimated Traffic for the year ending 30th April, 1895; also Return of Telegraphic Business, New Zealand, 1894.

Return of New Zealand Telegraph Service, 31st December, 1894.

Correspondence on :—

Postage on Circulars from the United Kingdom.

Re Brisbane-Adelaide Mail Train.

Italian Surcharges.

Newspaper Postage to the United Kingdom.

Electric Tramways—Light and Power.

Pacific Cable.

San Francisco Mail Service.

Ocean Penny Postage.

The Hon. JOSEPH COOK tabled a letter from Mr. D. Michie, Agent of the Peninsular and Oriental Steam Navigation Company, Sydney, on the subject of the employment of Native Crews on the Boats of the Company; and also Report of a Deputation to the Postmaster-General of New South Wales from the Seamen's Union against the employment of Coloured Labour on Ocean Mail Steamers; also *re* a Minimum Wage. Received.

The Hon. JOHN GAVAN DUFFY (President) tabled a letter from Mr. J. Henniker-Heaton, addressed to Mr. Warren, Melbourne. At a later period he would move that it be read. Received.

The Hon. J. G. WARD expressed his thanks to the Members of the Conference for the courtesy shown him in altering the order of business to meet his convenience. He moved the following as the

ORDER OF BUSINESS.

1. Pacific Mail Service.
2. Pacific Cable.
3. Cable Guarantees, and proposed withdrawal of Victoria.
4. Consideration of proposed Official Code Vocabulary.
5. Federal Mail Contract—
 - (a) Proposed extension of.
 - (b) Time of departure from Adelaide.
 - (c) Cold Storage.
 - (d) Coloured Labour.
 - (e) Delay of Train at Adelaide for English Mails.

The Hon. J. A. COCKBURN seconded. Carried.

Pacific Mail Service.

The Hon. J. G. WARD moved—That this Conference re-affirms the desirableness of establishing a four-weekly service (alternating with the San Francisco Service) between Australia, New Zealand, and Vancouver, the Mail Steamers calling at one main port in New Zealand and such ports in Australia as may be determined upon.

The Hon. A. J. THYNNE seconded.

After discussion, the Motion was agreed to.

Pacific Cable.

The Hon. A. J. THYNNE moved—

That in the opinion of this Conference it is desirable that—

- (a) The construction, working, and maintenance of a submarine Cable through British territory or under British control from Vancouver Island to Australasia be under-

13

taken by the Governments of Great Britain, the Dominion of Canada, and the Australasian Colonies as a joint national and public work.

- (b) The cost of its construction, working, and maintenance to be borne in the following proportions, viz.:—Great Britain one third, the Dominion of Canada one third, and the Australasian Colonies one third.

The Hon. J. G. WARD seconded the Motion *pro forma*.

The Hon. JOSEPH COOK moved an Amendment that all the words after "That" be left out with a view to insert "this Conference re-affirms the desirableness of the construction of a Pacific Cable to connect the Australasian Colonies and Canada in view of the ascertained practicability of the scheme, and respectfully urges upon the various Colonial Governments that steps be taken for the furtherance of the project at the earliest opportunity."

The Hon. P. O. FYSH seconded.

After discussion, Hon. A. J. THYNNE, by leave, withdrew his Motion.

The Amendment was then put and carried.

Cable Guarantees, and proposed withdrawal of Victoria.

The Hon. J. G. WARD enquired as to the attitude of the Government of Victoria.

The Hon. JOHN GAVAN DUFFY stated that Victoria desired to withdraw from the cable guarantee, and had given the necessary notice for that purpose.

The Hon. J. G. WARD then moved—That this Conference respectfully requests Victoria to reconsider its decision, and not to withdraw from the guarantee.

The Hon. J. A. COCKBURN seconded.

Discussion followed; and

The Hon. JOHN GAVAN DUFFY explained as to the position of Victoria, and suggested that Mr. Ward should withdraw his Motion, and the matter might be considered in Committee and an arrangement arrived at.

The Hon. J. G. WARD accepted the suggestion, and the Motion was, by leave, withdrawn.

The Hon. J. G. WARD then moved—That the Conference go into Committee to consider the question.

The Hon. J. A. COCKBURN seconded the Motion, which was carried.

The PRESIDENT left the Chair, and the Conference resolved itself into Committee accordingly.

After some time spent therein;

On the Conference resuming;

The Hon. J. G. WARD reported that the question of the Guarantee to the Eastern Extension Telegraph Company had been fully considered, and he moved the following Resolution—"That the several Colonies agree to guarantee International Revenue to the Eastern Extension Telegraph Company of £227,000 per year, and to make up any loss below that amount, provided the total payment in any one year shall not exceed £10,000, and to guarantee a revenue of £20,000 on the New Zealand cable, and to make up any loss below that sum, provided the payment in any one year shall not exceed £9000; provided always that rates not higher than those now ruling be charged by the Eastern Extension Telegraph Company during currency of such guarantee: such arrangement to be from year to year, and terminable at two months' notice."

The Hon. JOSEPH COOK seconded the Motion, which was carried.

The President left the Chair at 6·28. P.M.

EVENING SITTING.

The Conference resumed at 8 P.M.

Official Code Vocabulary.

The Hon. J. G. WARD moved—

That the question of the Official Code Vocabulary be referred to the Official Heads of Departments, to report as early as possible.

The Hon. J. A. COCKBURN seconded the Motion, which was carried.

Federal Mail Contract.

The Hon. JOSEPH COOK moved that the Conference resolve into Committee to consider this question.

The Hon. J. A. COCKBURN seconded the Motion, which was carried.

The President left the Chair, and the Conference resolved into Committee.

After some time spent therein, the Conference resumed, and

The Hon. P. O. FYSH reported progress made, and moved that the Conference, at its rising, adjourn until Wednesday morning at 11 o'clock. He expressed the best wishes of the Conference towards the Hon. Mr. WARD, and wished him a pleasant journey home.

The Hon. J. G. WARD seconded, and acknowledged the compliment, and requested the Hon. Mr. Fysh to represent New Zealand in his absence, which Mr. Fysh agreed to do.

The Motion was carried.

Coloured Labour on Mail Boats.

The Hon. JOSEPH COOK moved—

That it be made a condition in any future contract that mail boats be manned by white labour only.

The Hon. J. G. WARD seconded the Motion, which was carried.

The Conference adjourned at 10:30 P.M. until 11 o'clock on Wednesday.

JOHN GAVAN DUFFY, President.

THOS. C. JUST, Secretary.

LEGISLATIVE COUNCIL CHAMBER, HOBART.

WEDNESDAY, FEBRUARY 6, 1895.

THE Conference met at 11 A.M., when the under-mentioned gentlemen, representing the Colonies herein named, were present:—

New South Wales : The Hon. JOSEPH COOK, M.P., Postmaster-General.
S. H. LAMBTON, Esq., Deputy Postmaster-General.

Victoria : The Hon. JOHN GAVAN DUFFY, M.L.A., Postmaster-General.
JAMES SMIBERT, Esq., Deputy Postmaster-General.

South Australia : The Hon. J. A. COCKBURN, M.P., Minister of Education, &c. &c.
Sir CHARLES TOOD, K.C.M.G., Postmaster-General.

Queensland : The Hon. A. J. THYNNE, M.L.C., Postmaster-General.
JNO. M'DONNELL, Esq., Under Secretary to the Post and Telegraph Department and Superintendent of Electric Telegraphs.

Tasmania : Hon. P. O. FYSH, M.H.A., Treasurer and Postmaster-General.
H. V. BAYLY, Esq., Secretary to the Post Office.

Western Australia : Sir JOHN FORREST, Premier.

New Zealand : Hon. P. O. FYSH, M.H.A., Treasurer and Postmaster-General, Tasmania.
WILLIAM GRAY, Esq., Secretary to the Post and Telegraph Department.

MAIL STEAMERS.—PORTS OF CALL.

Sir JOHN FORREST moved—That in the opinion of this Conference it is desirable that in the next Contract for the conveyance of Mails from the United Kingdom to Australia provision be made—

(1.) That until safe and commodious Harbour accommodation be provided at Fremantle, it be optional with the Companies to call at Fremantle; but that so soon as such accommodation is provided, it be compulsory for the Companies to call at Fremantle to deliver and take on board mails and passengers.

(2.) That any Mail Steamer arriving at Albany or at Fremantle shall remain in port for six hours at least.

(3.) That the sailing day for Mail Steamers from Adelaide be Saturday.

Hon. JOSEPH COOK seconded the Motion.

The Hon. J. A. COCKBURN moved as an Amendment—That in the new Mail Contracts the time of the Mail Steamers leaving Adelaide for England be fixed so as to allow replies to be received from Queensland, and so that Sunday work at the various ports of call be avoided.

The Hon. A. J. THYNNE seconded the Amendment *pro forma*.

After discussion the Hon. J. A. COCKBURN withdrew the Amendment, and the Motion was put and carried.

CABLE GUARANTEE.

The Hon. JOSEPH COOK moved that the Conference resolve into Committee to further consider the question of the International guarantee to the Eastern Extension Telegraph Company. The Hon. J. A. COCKBURN seconded. Carried.

The Conference resolved into Committee accordingly.

After some time spent therein the Conference resumed; and

On the Motion of the Hon. A. J. THYNNE, the Conference adjourned till 10 o'clock to-morrow.

JOHN GAVAN DUFFY, President.

THOS. C. JUST, Secretary.

LEGISLATIVE COUNCIL CHAMBER, HOBART.

THURSDAY, FEBRUARY 7, 1895.

THE Conference met at 10 a.m., when the under-mentioned gentlemen, representing the Colonies herein named, were present:—

New South Wales: The Hon. JOSEPH COOK, M.P., Postmaster-General.
S. H. LAMBTON, Esq., Deputy Postmaster-General.

Victoria: The Hon. JOHN GAVAN DUFFY, M.L.A., Postmaster-General.
JAMES SMIBERT, Esq., Deputy Postmaster-General.

South Australia: The Hon. J. A. COCKBURN, M.P., Minister of Education, &c. &c.
SIR CHARLES TODD, K.C.M.G., Postmaster-General.

Queensland: The Hon. A. J. THYNNE, M.L.C., Postmaster-General.
JNO. M'DONNELL, Esq., Under Secretary to the Post and Telegraph Department and Superintendent of Electric Telegraphs.

Tasmania: Hon. P. O. FYSH, M.H.A., Treasurer and Postmaster-General.
H. V. BAYLY, Esq., Secretary to the Post Office.

Western Australia: SIR JOHN FORREST, Premier.

New Zealand: Hon. P. O. FYSH, M.H.A., Treasurer and Postmaster-General, Tasmania.
WILLIAM GRAY, Esq., Secretary to the Post and Telegraph Department.

CABLE GUARANTEE.

Committee on International Guarantee to the Eastern Extension Telegraph Company.

The Committee resumed, without Motion made.

After some time spent therein the Conference resumed; and

The Hon. President reported that the Committee had considered the subject, and adopted a Report, which would be submitted to the Conference to-morrow.

Hon. JOSEPH COOK tabled Statistics of Electric Telegraphs New South Wales, and moved that it be printed. Hon. J. A. COCKBURN seconded. Carried.

Hon. JOSEPH COOK moved—That the letter of Mr. J. G. Barrett, Secretary of the Trades and Labour Council, Melbourne, tabled by Hon. Mr. FYSH, also the letter of Mr. D. Michie, Agent of the P. & O. Steam Navigation Company, and the Report of a deputation to the Postmaster-General of New South Wales from the Seamen's Union against the employment of coloured labour, also re a minimum rate of wage, tabled by himself on Saturday last, be printed. Hon. J. A. COCKBURN seconded the Motion, which was carried.

Hon. J. A. COCKBURN moved—That the Second Report of the Committee appointed at the Postal and Telegraphic Conference held at Hobart, 1892, for the purpose of drafting a code of Rules and Regulations for the erection and laying of Electric Light and Power Wires, be adopted by this Conference. Hon. JOSEPH COOK seconded the Motion, which was carried.

FEDERAL MAIL CONTRACT.

Hon. JOSEPH COOK moved—That this Conference desires to express its disappointment at the reply of the London Post Office to the conditions laid down by the Colonies for an extension of the Federal Mail Contract, and while, under the circumstances, reluctantly agreeing to such extension, desires to emphasize the terms and conditions of the Wellington Conference. This Conference further desires to inform the London Office that no future contract will be acceptable to the Colonies which does not include them, together with the Resolution passed by this Conference relating to the employment of coloured labour.

Telegram referred to.

FEDERAL MAIL SERVICE.

London Sub., 6 —, 5.20 P.M.

President Postal Conference, Hobart.

AGENTS-General conferred with Committee of Post Office urging views of Wellington Conference. Post Office then conferred Companies, who agreed from first February, 1896, to include parcel post in contract, and guaranteed invariable call at Colombo. Post Office will extend contract two years, and write Colonies shortly on paragraphs 3, 4, 5, 6 of recommendation Conference with every desire to meet wishes of Colonies.

Hon. J. A. COCKBURN seconded.

Discussion followed, and the Motion was carried.

REDUCTION OF POSTAGE TO ENGLAND.

The PRESIDENT requested the Secretary to read a telegraphic letter received from Mr. Henniker Heaton, M.P., on the suggestion to reduce the rate of postage to England.

The letter was read.

Hon. JOSEPH COOK moved—That, while sympathising with the desire expressed by Mr. Henniker Heaton for a cheaper postage rate to and from England and the Colonies, this Conference regards the present time inopportune for carrying out the proposal, and hereby decides accordingly. Hon. J. A. COCKBURN seconded. After discussion, Motion put and carried.

Hon. P. O. FYSH moved—That the Conference adjourn until 10 A.M. to-morrow. Hon. JOSEPH COOK seconded. Carried.

JOHN GAVAN DUFFY, President.

THOS. C. JUST, Secretary.

LEGISLATIVE COUNCIL CHAMBER, HOBART.

FRIDAY, FEBRUARY 8, 1895.

THE Conference met at 11 A.M., when the under-mentioned gentlemen, representing the Colonies herein named, were present:—

New South Wales: The Hon. JOSEPH COOK, M.P., Postmaster-General.
S. H. LAMPTON, Esq., Deputy Postmaster-General.

Victoria: The Hon. JOHN GAVAN DUFFY, M.L.A., Postmaster-General.
JAMES SMIBERT, Esq., Deputy Postmaster-General.

South Australia: The Hon. J. A. COCKBURN, M.P., Minister of Education, &c. &c.
Sir CHARLES TODD, K.C.M.G., Postmaster-General.

Queensland: The Hon. A. J. THYNNE, M.L.C., Postmaster-General.
JNO. M'DONNELL, Esq., Under Secretary to the Post and Telegraph Department and Superintendent of Electric Telegraphs.

Tasmania: Hon. P. O. FYSH, M.H.A., Treasurer and Postmaster-General.
H. V. BAYLY, Esq., Secretary to the Post Office.

Western Australia: Sir JOHN FORREST, Premier.

New Zealand: The Hon. P. O. FYSH, M.H.A., Treasurer and Postmaster-General,
Tasmania.
WILLIAM GRAY, Esq., Secretary to the Post and Telegraph Department.

CABLE GUARANTEE.

The Report of the Committee of the Whole Conference on the subject of the Guarantee of Revenue to the Eastern Extension Telegraph Company was read, as follows:—

REPORT.

THE Committee has to report that the following Resolution of the Conference was cabled through the Manager in Australasia to the Chairman of the Company in London:—

“That the several Colonies agree to guarantee International Revenue to the Eastern Extension Telegraph Company of £227,000 per year, and to make up any loss below that amount, provided the total payment in any one year shall not exceed £10,000, and to guarantee a revenue of £20,000 on the New Zealand cable, and to make up any loss below that sum, providing the payment in any one year shall not exceed £9000; provided always that rates not higher than those now ruling be charged by the Eastern Extension Telegraph Company during currency of such guarantee: such arrangement to be from year to year, and terminable at two months' notice.”

And in reply, the following message has been received from the Chairman of the Company:—

“Desiring to meet Colonies’ wishes as far as possible, and believing commercial outlook improving, and consequently traffic likely increase, I believe I could induce Board and associated administrations to accept Conference proposal, provided arrangements be made for fixed period of at least five years, so as to run concurrently with subsidy agreement.”

The Committee advises that the proviso be agreed to.

The Committee further reports that the Representatives of the several Colonies contributing to the Guarantee have agreed to share with Victoria, as regards the Tasmanian Cable, the guarantee of that Colony in the usual proportion (population basis), to pay the first £1000 of the loss in any one year, and half of any additional loss beyond the £1000: this Guarantee being in addition to the subsidy of £4200 a year at present contributed by the Colonies of Victoria, New South Wales, Tasmania, South Australia, and West Australia.

A careful estimate of the financial effect of the new arrangement has been prepared by Sir Charles Todd, and is appended.

The following are the estimated payments by Colonies under present and proposed agreements, taking the traffic during year ending April 30, 1895:—

Payments under present Agreements.

	VICT.	N.S.W.	N.Z.	S.A.	TAS.	W.A.	TOTAL.
Cable Company	2508	2491	1364	705	323	109	7500
South Australia	669	664	364	188	86	29	2000

			{ 2892					
	5574	5535	5104	1923	1568	717	245	20,666

Hon. the PRESIDENT expressed the hope that Queensland might be induced to join in the guarantee.

Hon. JOSEPH COOK and Hon. J. A. COCKBURN also urged Queensland to join.

Hon. A. J. THYNNE promised to recommend his colleagues to join in the guarantee.

The Report of the Committee was adopted.

DELEGATE TO NEXT UNIVERSAL POSTAL UNION CONGRESS.

Hon. J. A. COCKBURN moved—That the question of electing a Delegate to the next Postal Union Congress be deferred until next Conference.

Hon. A. J. THYNNE seconded the Motion, which was carried.

IMPROVED TELEGRAPH FACILITIES BETWEEN SOUTH AND WESTERN AUSTRALIA.

Hon. J. A. COCKBURN moved—That the question as to improved Telegraph facilities between South Australia and Western Australia be left to be arranged between those Colonies.

Hon. Sir JOHN FORREST seconded the Motion, which was carried.

PRECEDENCE OF PRESS CABLE MESSAGES.

Hon. JOSEPH COOK moved—That the question of Precedence of Press Cable Messages be referred to the Departmental Heads, to report when convenient.

Hon. J. A. COCKBURN seconded the Motion, which was carried.

PLACE OF MEETING.

Hon. P. O FYSH moved—That the next Postal and Telegraphic Conference be held in the City of Melbourne.

Hon. J. A. COCKBURN seconded. Carried.

REPORT OF SUB-COMMITTEE.

The Conference proceeded to consider the Report of the Sub-Committee of Heads of Departments on questions of detail.

The following paragraphs were submitted by the Hon. the PRESIDENT, and adopted :—

No. 1.—(e). *Delay of Train at Adelaide for English Mails.*

The Sydney and Melbourne Chambers of Commerce invite attention to the serious delay and consequent inconvenience and annoyance caused by the departure of the mail train from Adelaide when mail steamers are actually signalled, and express a hope that strenuous efforts may be made to obviate this in future.

The Postmaster-General, Adelaide, has arranged to provide a special train to leave Adelaide when the mails arrive not more than half an hour late, to overtake the express train at Murray Bridge. When, through the occurrence of holidays, such as Easter, Christmas, &c., or from other causes, a delay of more than one day would otherwise result, there is a further arrangement which provides that when the steamers arrive too late for the 4.30 p.m. express train, or for the overtaking train, a special train is despatched up to 9 p.m. on either Wednesday, Thursday, or Friday, at a joint cost to New South Wales and Victoria of £71 15s., South Australia running such train from Adelaide to Serviceton free of charge.

The object of the Chambers of Commerce is that arrangements be made to delay the departure of the 4.30 p.m. express train from Adelaide, or run a special train regularly; but if anything further is desired, it can only be arranged at considerable cost for special trains, which the several Administrations have, after due consideration, already declined to incur.

No. 3.—Italy charging Sea Surtax: Report by Postmaster-General, Adelaide.

The Postmaster-General, Adelaide, reports that Italy, from 1st January, 1895, abolished Sea Surtax of $1\frac{1}{2}d.$ as recommended at Wellington Conference, which amounts to reduction of postage from 4d. to $2\frac{1}{2}d.$

No. 4.—Stoppage of Letters addressed to senders of Obscene Matter.

Nos. 4 and 22.—We are of opinion that when letters are addressed to persons who have sent photographs and catalogues of a decidedly obscene character, they should be stopped in the manner provided for in the case of sweeps, &c., and in any amendment of the Postal Laws we advise that provision be made accordingly.

With reference to obscene circulars sent by post by a firm in Holland, we find that steps were taken by the various Administrations to prevent the delivery of these circulars, and we recommend that a joint protest be sent to the Berne Bureau, and as there appears nothing in the Universal Postal Union Convention directly dealing with the transmission of obscene matter, we think that the question should be brought up at the next Quinquennial Congress.

No. 6.—Delivery of indefinitely addressed Letters to business people.

The Berne Bureau wrote at the instance of the Hungary Office, inquiring whether the Post Office would undertake to distribute packets of fully prepaid letters which do not bear a precise address, but only a vague one, such as Mr. _____, tailor, grocer, &c.

The Berne Office has recently forwarded summary of replies received from other Postal Administrations, most of which are adverse to the proposal of Hungary. We, however, see no objection to deliver in Australia any single article bearing such address, provided that it bears full rates.

No. 7.—The Colonies remitting through the Treasury.

We suggest that the Australian Postal Administrations be permitted, as formerly, to adjust accounts direct one with the other, and remit their balances direct instead of through the Treasury. The question was considered at the Wellington Conference, when it was reported "that the present arrangement caused delay, but it was proposed to give it a further trial, and the result reported at the next Conference." Further experience has shown that continued delay arises in the settlement of accounts, the amounts due to the Postal Departments frequently remaining unpaid for considerable periods.

No. 8.—Uniform Statistics.

We recommend the acceptance of the Forms as prepared by the Sydney Office, with the following exceptions:—

Form 3. Columns Nos. 8 to 11 to be retained.

" 5. Column 3. The word "Offices" to be substituted for "Statistics."

" 5. The words "Despatched" to be substituted for "Transmitted."

" 10. Omit Revenue No. 3, and insert under Expenditure No. 3, "Conveyance of Mails less Contributions from other Administrations."

" 10. No. 1 to be amended to read as follows:—"Estimated proceeds of sale of Postage Stamps used for payment of correspondence."

No. 9.—Notification of promotion of higher grade Postal Officials.

The Berne Bureau forwarded a proposal from the Egyptian Office that the offices of the Union should be kept informed of the personnel of the higher class of the various Administrations, and that the "Postal Union Journal" might give this information, which could be supplied to the Editor by the Head Offices. We see no objection to the information being given, restricted, however, to the Ministers, Permanent Heads, and Heads of Principal Branches.

No. 10.—Postal Guides: uniformity of.

We recommend that the Postmaster-General of South Australia be asked to revise a Guide on uniform lines, and submit the same to next Conference.

No. 11.—Post Cards of private manufacture: Regulations.

We beg to recommend that private cards, bearing adhesive stamps of proper value, measuring not less than $4'' \times 3''$, and not more than $5\frac{1}{2}'' \times 3\frac{1}{2}''$, not of thicker material than that used for official Post Cards, be adopted in the various Colonies, and accepted reciprocally under the same conditions as official Post Cards. In reference to this matter the London Office wrote asking the following four questions:—

- (1) Whether a plain card with an adhesive stamp might reasonably be allowed to circulate in the Union as a postcard under the usual regulations?
- (2) If not, whether a plain card with the word "post card" written upon it, and with an adhesive stamp, might reasonably be admitted?
- (3) Whether any relaxation of rules that might be deemed reasonable for single cards should apply to reply cards?

(4) Whether, between the present time and the meeting of the Congress of Washington in 1897, any step can usefully be taken for giving effect to such relaxation as the prevailing sense of the Union might indicate?

We recommend that these questions be answered as follows:—

No. 1. Yes, provided they bear the ordinary Post Card rate.

No. 2. Answered by No. 1.

Nos. 3 and 4. We do not consider that the proposed concession should apply to Reply Cards at present.

No. 12.—*Letter Cards.*

(a) Uniform Exchange of.

(b) Consideration of Berne Circular *re* rates chargeable thereon.

We see no objection to the uniform exchange of Letter Cards internationally; but we respectfully point out that it will lead to a considerable loss of revenue unless the postage is the same as letter rate, and we recommend accordingly.

There is no valid reason why a cheaper rate of postage should be charged on letter cards than on ordinary letters, and it appears from a summary prepared by the Berne Bureau, which applied for information on the subject from the various Union Administrations, that in every part of the world where letter cards are in use, excepting Australasia, the rate of postage is the same as that of ordinary letters. Letter cards are closed against inspection, and are practically letters—the only difference being, that the Department supplies the material for letter cards at considerable cost, whilst that of ordinary letters is of course supplied by the sender; as, however, a lower rate has been in force, inland and inter-colonially, we see some difficulty in now raising it.

(c) Whether Victorian Letter Cards should not bear stamps equivalent to their face value—

Victoria is charging $1\frac{1}{2}d.$ each, as agreed to at the Wellington Conference, but under the present law is compelled to mark them with a face value of 1d. We are, however, of opinion that it is undesirable and confusing to the public to mark the cards at a less value than they are sold for.

No. 13.—*Proposed discontinuance of Letter Bills intercolonially.*

We do not think it necessary that the number of Letters, Packets, and Newspapers should be entered on Letter Bills, but recommend that a more simple form of Letter Bill or Advice be prepared, on which should be entered Registered Letters, Forward Mails, and Money Order Packets. New South Wales to prepare the form. Of course the usual records will be kept for statistical purposes.

No. 14.—*Revision of Australasian Convention.*

We beg to report that time has not permitted the careful revision of the Australasian Convention, but we propose to deal with it later on.

No. 15.—*Rates on Circulars and Packets from United Kingdom* (vide *London Letter*).

In view of the letter received from London, and tabled by the Postmaster-General of New Zealand, we do not see that anything further can be done. Although the d. rate is in force in New Zealand, we do not feel justified, for financial reasons, in advising any reduction in existing rates levied in Australian Colonies. Should the $\frac{1}{2}d.$ rate at any future time be adopted, it should in our opinion be wholly confined to printed matter.

No. 16.—*Transmission by Post of Samples in Envelopes bearing printed Notices relating thereto.*

We recommend that the following questions asked by Berne Bureau be answered as follows:—

Do you pass, or are you prepared to pass, Samples in Envelopes bearing printed Notices on the address side or other side?—Answer: Yes; provided the envelope complies with the provisions of Clause 2, Detailed Regulation xix., no objection would be raised to such envelope bearing upon it a printed list or notice within the limits of Clause 3 of the same Regulation. The Vienna Convention does not prohibit printed notices on the address side.

2. Do you allow, or are you prepared to allow, the attention of the addressee to be directed to these communications by coloured pencil marks? Answer—Yes.

3. In your opinion, can such articles circulate within the Union at the reduced rate for samples? Answer—Yes, if they comply with the above conditions.

No. 17.—*Rate of Postage on Seedsmen's Catalogues or such matter got up in Book form.*

We advise that Catalogues, Reports of Societies, and other such matter, if printed and published in book form and containing no writing whatever, be passed at Book rate of postage.

No. 18.—*Travellers' Orders whether, when filled up in Manuscript, they should pass at Packet Rate.*

We recommend that Travellers' Orders should be treated as commercial papers, and passed at Packet rate of postage inland and intercolonially, provided they contain no writing or remarks of the nature of a personal correspondence.

No. 19.—*Printed Matter and Trade Notices on Accounts and Invoices.*

We are of opinion that any difficulty in this respect would be met by amending Article 12 of the Australasian Convention by omitting the words "nor anything" in paragraph 3, and in the revised draft of the Convention we have proposed such omission.

As an illustration, we append a portion of an invoice submitted to the Melbourne Post Office, and claimed to pass at Packet Rate. We are of opinion that the first portion should be passed, and that the latter is in the nature of a personal correspondence, and therefore inadmissible:—

JOHN SMITH & CO.,
WHOLESALE & FAMILY DRAPERS.

Melbourne, ———, 189

TERMS NET CASH.

We beg to notify that our Terms are strictly Cash, as we sell at original Wholesale Prices.

No. 20.—Rate on printed Circular from Business Firms.

The following specimens of postal matter numbered consecutively 1 to 12 having been submitted to us to decide whether they may pass at packet rate of postage, we recommend that Nos. 1, 11, and 12 pass at packet rate, and the rest at letter-rate of postage:—

RECEIVED from Pence Sterling.	the Sum of £	No. 1. Pounds	Adelaide, Shillings and 189
		No. 2.	Adelaide, 189
We are instructed as Agents for the Vendors of _____ to inform you that £ _____ is now due, and unless this amount or a considerable portion thereof is paid within 3 days from date we must place the matter with our Solicitors for collection.			
To Mr.	No. 3.		189
KINDLY favor us with remittance of £ _____ overdue Rent, which must be paid without fail not later than noon of Monday next.			
No. 4.		Adelaide,	189
PLEASE take notice that interest amounting to £ _____ s. d. became due on _____ and we must request payment of same within seven days from date hereof.			
No. 5.		Adelaide,	189

No. 10.

When remitting please forward this Memorandum to be receipted.

Adelaide,

July, 189

Mr.**Sir,**

We have received notice from the Insurance Company that the Premium on Policy on your property will be due on the 1st of August next. The amount is £ which we shall be obliged by your forwarding to us, so that the risk may be immediately covered.

* If any Stove, Steam Engine, Furnace, or other implement for producing heat (common Fireplaces excepted), has been erected on your premises; or if the nature of the risk has been in any other respect changed; or if other buildings have been erected within 70 feet; it is necessary for your security that the circumstances be made known to the office.

No. 11.

Insurance Company,

Adelaide,

189

Sir,

I beg to remind you that your Insurance by Policy No. will expire at 4 P.M. on , and that unless the Premium be paid for its renewal on or before that date you will not be entitled to recover in case of loss.

Sum insured, £ Premium, £

* If any Stove, Steam Engine, Furnace, or Oven has been erected on your premises, or if the nature of the risk be in any other respect changed, it is necessary (for your security) that the circumstances should at the time be made known to the office.

No. 12.

The ————— Insurance Company, Limited,

Adelaide,

1894.

Sir,

I beg to inform you, for your security, that your Policy No. , expires at three p.m. on the and unless the premium be paid on or before that date you cannot recover any loss that may be sustained.

Amount	£	:	:
Premium	£	:	:

* If any Stove, Steam Engine, Furnace or other implement for producing heat (common Fireplaces excepted), has been erected on your premises; or if the nature of the risk has been in any other respect changed; or if other buildings have been erected within 70 feet; it is necessary for your security that the circumstances be made known to the office.

Office Hours :—9 a.m. to 5 p.m.; Saturdays, 9 a.m. to 1 p.m.

No. 21.—*Christmas and New Year Cards.*

Correspondence having taken place between the Berne Bureau and other Administrations of the Postal Union with respect to the practice of permitting complimentary remarks on Christmas, Birthday, New Year, and Easter Cards, we agree with the United Kingdom, and recommend that the practice which now obtains in the Colonies of allowing such remarks to be placed on the Cards be continued, as regards the United Kingdom and such other Foreign Administrations which may agree to exchange on such terms.

No. 23.—*Precious Stones and Jewellery passing at Sample Rates.*

We recommend that the words " Precious Stones " be inserted at page 4 of the Australasian Postal Convention, at Packet Regulation No. 1. This will provide for Precious Stones and valuable Jewellery being charged at letter rate of postage, and registered.

23

No. 24.—Queensland surcharging New Zealand ½d. Matter.

It is desirable that absolutely uniform rates of postage should exist between the Colonies, but as a ½d. rate has been in operation in New Zealand for several years, we advise that the other Colonies should agree to accept such matter as fully prepaid.

No. 25.—Austro-German proposal for Uniform Rate of Postage on Parcels up to 11 lbs.

The matter has been further considered by this Committee, and although the Austro-German proposal of a uniform rate of postage on parcels up to 11 lbs., irrespective of weight, has been accepted as a temporary measure, we think it very undesirable to have one rate irrespective of weight, as this practice discourages the transmission of light parcels and encourages that of heavy ones. We therefore recommend a graduated scale at per single pound, and that the Berne Bureau and London Office be so informed, and urged that at an early date a graduated scale be adopted between the Colonies and other countries.

No. 26.—Liability of Steamship Owners for damages to Parcels to be increased.

We recommend that in the new Contract for the Federal Mail Service provision be made for payment of compensation by Contractors for the loss or damage occurring to any parcel, but not in any one case to exceed £5 per parcel, instead of £1 as at present.

No. 27.—Insurance of Parcels.

This matter has already been under consideration at previous Conferences, but at Hobart and Brisbane it was decided not to adopt the system. The subject has recently been reopened by the London Post Office in a letter dated February, 1894. In this letter, in urging the reconsideration of proposal for Insurance, the London Office states that during a recent year upwards of 21,000 insured parcels were sent to and from the United Kingdom, and in respect of loss or damage the claims met by the Department amounted only to £11 16s. 9d. It was added that considerable public convenience was being afforded in the several parts of the Empire, while the business is more than self-supporting.

As, however, the International Parcel Post has, as yet, only attained very moderate dimensions, and consequently yields small revenue, we still consider it undesirable to incur the responsibility involved in insuring parcels.

No. 28.—Charge for Intermediary Service in regard to Intercolonial and Foreign Parcels.

We recommend that no alteration be made at present.

No. 29.—Parcel Post, United States.

Nothing can be done in this matter, as the United States has twice refused to enter into a Parcel Post Convention with the Colonies.

No. 30.—Parcel Post Rates with United Kingdom—Reduction of.

We recommend that as soon as arrangements are concluded with the P. & O. and Orient Companies to discontinue to make any special charge for the Parcel Post portion of the Mails, the rates be reduced as suggested by London from 1s. 6d. for the first 2 lbs. or fraction, and 9d. for each succeeding lb. or fraction, to 1s. for the first lb., and 6d. for each additional lb.

No. 31.—Parcel Post Convention with Italy—London's offer.

The London office wrote on October 9, 1894, intimating that it would probably negotiate with the Italian Post Office for a Convention with a view to the establishment of a direct Parcel Post between Italy and Australia similar to the Draft Convention prepared by the French Post Office. We see no objection to such a Convention, subject to the alterations suggested in the Draft Convention submitted by the French Post Office. [See No. 34.]

No. 32.—Parcel Post Convention with Malta.

We recommend the Parcel Post System be established with Malta, but cannot agree to each country retaining its own receipts, as experience shows that we receive a much larger number of parcels from abroad than are despatched, and therefore the usual principle of dividing the postage should be adhered to. The rates and division of postage to be the same as with Gibraltar, as follows:—

For the first 2 lbs.	1s. 6d.
For every additional lb.	9d.

Division:—

Credit of Colony.....	9d. first two lbs., 4½d. each additional lb.
-----------------------	--

Sea	4d. " 2d. "
-----------	-------------

Gibraltar	5d. " 2½d. "
-----------------	--------------

<hr/> 1s. 6d.	<hr/> 9d.
---------------	-----------

No. 33.—Parcel Post Convention with Canada.

It is recommended that a direct exchange between the Colonies and Canada be established, the rates of postage to be uniform in all the Colonies, either 1s. 2d. or 1s. 3d. per lb. as Canada may advise, the New South Wales share to be 5d. per lb. on first lb. and 4d. on each additional lb. on parcels sent loose in Mails from other Colonies, but if sent in closed Mails, the New South Wales share to be 1d. per lb. for territorial transit and 2d. per lb. for sea rate.

34. Parcel Post Convention with France.

In July last the London Post Office informed the Colonies that the French Post Office desired a direct exchange of parcels between France and Australia by the French Mail Steamers (Messageries Maritimes), and, the proposal having been approved of by the Home Authorities, forwarded a draft Convention and Regulations for consideration of the Colonies.

We have considered the Draft submitted, and recommend that its provisions be agreed to, but that the following suggestions be made:—

Article 6. That no fee for portage and for the execution of Customs formalities be collected in the Colonies from the addressees of parcels from France.

Article 14. That the introduction of the system of acknowledgments of delivery of parcels remain in abeyance until the system be adopted generally.

Regulation 2. That the postage progress pound by pound, instead of in steps of 2 lbs., 7 lbs., and 11 lbs., as more consistent with the Colonial and English practice.

Regulation 6-3. That the Customs declaration forms be drawn up in the English language, and bear a sublineary translation in French, as is done with Postal Union forms.

Regulation 8-3. That the provision that mails "be landed as far as possible at the Customs House" be omitted as unnecessary, as Customs work is done at the Post Offices.

That it be provided that the cost of receptacles be shared equally between the countries of exchange.

Regulation 12. That in lieu of this a simple regulation providing for the preparation of a quarterly account, and for the payment of the balance due as early as possible after the same has been ascertained, be substituted.

No. 35.—Redirection of Parcel Post Packets.

With reference to a letter from the Calcutta Post Office of 7th August, 1894, on the subject of Redirection of Parcels, we recommend that the Colonies agree to the substitution of Article 14 of the Union Convention which provides for payment being made in all cases of redirection of parcels to other Postal Administrations, or of their return (owing to non-delivery) to the office of origin, in lieu of Article 2 of the existing arrangement between the two countries.

No. 36.—Reduction of Commission on Money Orders to United Kingdom.

The London Office wrote suggesting a reduction of Australian Rates on Money Orders to the United Kingdom. The rates in Great Britain and the Colonies are as follows:—

*Rates charged in United Kingdom.**INLAND MONEY ORDERS.*

For sums not over	£1.	£2.	£4.	£7.	£10.
the charge is.....	2d.	3d.	4d.	5d.	6d.

FOREIGN MONEY ORDERS.

For sums not over	£2.	£5.	£7.	£10.
the charge is.....	6d.	1s.	1s. 6d.	2s.

The Rates of Commission charged in the various Colonies on Money Orders issued on the United Kingdom are as follows:—

COLONY.	To £2.	To £5.	To £7.	To £10.	
South Australia and West Australia	1s.	2s.	3s.	4s.	
Victoria, New South Wales, and Tasmania.....	1s.	2s. 6d.	3s. 6d.	5s.	
	To £2.	To £4.	To £6.	To £8.	To £10.
Queensland and New Zealand.....	1s.	2s.	3s.	4s.	5s.

We are of opinion that although our rates are somewhat high, the present is not an opportune time for making any reduction.

No. 37.—*Telegraph Money Order Regulations.*

It appears that since the Conference at Wellington, at which it was decided that each Colony should adopt within its own territory such rules as it might deem fit for its own and the public protection, and that the result of the working be reported to the next Conference, we find that no fresh rules have been prepared by any of the Administrations, although some have been drafted and suggestions made by New South Wales and Victoria, the result of the working of which will be reported in due course.

No. 38.—*Issue of Duplicate Money Orders.*

A case having been brought under notice in which Orders were fraudulently negotiated after the issue of duplicates, it was decided the matter receive consideration when fresh regulations for the guidance of Postmasters are framed.

No. 39.—*Universal Postage Stamp: Federal Postage Stamp.*

The question of a universal or international postage stamp having been brought before the Vienna Congress by the Administration of Luxemburg, the Berne Bureau has asked the opinion of the other Administrations of the Union on the matter, and has been informed in reply that it would be considered at the Conference at Hobart, unanimity being desirable among the Colonies.

The Berne Bureau has furnished a great many opinions gleaned from other countries, most of which are adverse to the proposal at present, and the Director of the Bureau himself sums the matter up as follows:—

"I consider that under present conditions, and especially with regard to the diversity of currencies, the difficulties in the way of the creation of a universal postage stamp are too considerable to admit of the introduction of this innovation."

We entirely concur in the above opinion.

With regard to a "Federal" Stamp, we are of opinion that it is undesirable at present to adopt a Federal Stamp for Australasia.

No. 40.—*Marking Stamps, "Specimen."*

Under the Vienna Convention each Administration belonging to the Postal Union has to forward to the Berne Bureau, for distribution among the other Administrations, five specimens of its postage stamps (including, of course, stamped envelopes, newspaper wrappers, postcards, &c.), the number required being 730 of every kind, i.e., a quintuple set for each of 146 Administrations. In return, the Departments receive through the Bureau a supply of specimens from all the other Administrations. It is a vexed question whether the stamps sent from Australasia should be unmarked, or bear the word "specimen."

The Berne Bureau in 1892 intimated that a number of Administrations much preferred that the stamps sent to them should be unmarked, as it is considered that the overprint "injures the clearness of the design," and that the number sent for this official purpose is "so small as to preclude all danger of abuse." The New South Wales office thought the stamps should be marked in some way, but asked the opinion of Melbourne and Adelaide offices. In reply, Melbourne stated that it sent stamps unmarked, but not of any denomination higher than 5s. Adelaide replied that it had sent unmarked stamps, but nevertheless considered that they should have "specimen" printed on them.

On further representations from the Bureau, a statement was prepared showing what was done in other parts of the world, from which it appeared that Forty-eight Administrations placed the word "specimen" or some other imprint upon the stamps. This included Great Britain, which country, however, last year abandoned the custom of marking, at the same time expressing an opinion that the matter was not of sufficient importance to justify interference with the local regulations of other countries, and suggesting that every latitude be allowed to each in this respect: and of the forty-eight above mentioned, several have since left off marking their stamps. On the other hand, eighty-four administrations then (more now) sent unmarked stamps, and it was noted that the face value of the unmarked stamps sent by the United States amounted to over £31,000.

Of the colonies, Tasmania, South Australia, Western Australia, and New South Wales cancel by the word "specimen" or otherwise; whilst Victoria, Queensland, and New Zealand supply unmarked stamps.

Further representations continued to be made by the Berne Bureau, including a very strong request from Austria that "the custom of disfiguring stamps intended for distribution in the Postal Union be abandoned."

The question was considered at the Brisbane Conference, 1893, when it was agreed that "all stamps sent to the Berne Bureau be cancelled or marked "specimen." This decision was communicated to the Bureau, and a proposal has since been made to date-stamp the stamps instead of overprinting "specimen."

The majority of us are of opinion that these stamps should either be marked "specimen" or defaced with the date-stamp.

Importation of Electrotype fac-similes.

It was reported that the New South Wales Post Office had stopped a number of packets addressed to a firm in Sydney containing electrotypes of some of the postage stamps of the various

Colonies, on the grounds that *fac-similes* of the stamps in use might be printed from the electrotypes. The addressees appealed to the Department to deliver the electrotypes, at any rate of the other Colonies. This however was refused, unless they chose to obtain the consent of the various Administrations. They have accordingly applied to the other Colonies offering to place a bar across the electrotypes, so as to deface the stamps, and to give a guarantee bond that the electros will only be used to illustrate catalogues and price lists.

We endorse the action of New South Wales, and think it most undesirable that these exact reproductions of our stamps should be allowed to be brought into the Colonies, or used in any form. Under the Postal Acts of all the Colonies it is illegal to imitate any postage stamp.

41.—*Patent Envelopes.*

Applications have been made to the Postal Administrations of the Colonies to allow patent envelopes bearing a postage stamp of the proper value embossed by the Post Office, a portion of which stamp is impressed on the leaflets (containing advertisements) enclosed in the envelopes. These envelopes the applicants propose to sell to the public at half the face value of the stamp, trusting to be recouped by charges for the advertisements on the enclosed leaflets. We see grave objections to acceding to the request, and recommend that the Post Office should refuse to comply with their wishes.

No. 42.—*Postal Note System, England.*

The London Office was communicated with, but declined to exchange Postal Notes on account of the great risk.

No. 43.—*Arbitrary Marks in Newspapers to convey information of a personal nature.*

We do not advise that the present system of allowing certain marks calling attention to paragraphs be extended.

No. 44.—*Enclosure of printed Papers in Newspapers.*

We recommend that the Australasian Convention Rules be adhered to with respect to printed Papers in Newspapers which exclude Placards, Insets, Advertisement Sheets, &c.

No. 45.—*Payment for Conveyance of Letters in English Mails in transit—Victoria to Tasmania.*

Victoria reports that a Bill has been drafted providing for reduction in Sea Transit Rates of Mails to Tasmania.

No. 47.—*Postal Union (Sea Transit Rates).*

In September last the great inequality of the rates of payment for the sea transit of mails for Postal Union countries was brought under notice by the Sydney Post Office, special attention being drawn to the case of mails for New Caledonia, as follows :—

Under Article 4 of the Vienna Convention, the French Post Office claims from this office for the conveyance of mails by French mail vessels from Sydney to New Caledonia, a distance of 1060 miles, the rates of 15 francs per kilogramme of letters or postcards, and 1 franc per kilogramme of other articles, the same rates as would be charged from Adelaide to Marseilles, a distance of 9240 miles ; whilst on mails from France to New Caledonia, conveyed from Italy to Adelaide by P. & O. and Orient vessels, and from Sydney to New Caledonia by non-contract packets, at a cost to this office of 2s. per lb. of letters or postcards, and 4s. 6d. per cwt. of other articles, this office is allowed for the latter service 1 franc 57 centimes per kilogramme (7d. per lb.) of letters or postcards, and 10 centimes per kilogramme (½d. per lb., or 4s. 3d. per cwt.) of other articles. In other words, France claims for the conveyance of New South Wales mail matter from Sydney to New Caledonia about ten times the rates allowed to New South Wales for the conveyance of French mails between the same places.

In the case of other mails, also, great inequalities exist. The stipulations in the Postal Convention were made before the Australasian Colonies joined the Postal Union, and their operation in this way may not have been foreseen, but it appeared to be imperative that these Colonies should press for a more equitable arrangement.

The Adelaide Office was therefore asked by New South Wales (26 September, 1894) to communicate with the other Colonies and obtain their assent to submitting the following proposals to the Berne Bureau (in terms of Article 26 of the Convention) for the consideration of Postal Union countries ; viz.—

That in lieu of Subsection 2° 3§ of Article 4 of the Vienna Principal Convention, the following be substituted ; viz.—

" For sea transits :—	Letters or Postcards.	Other articles.
Not exceeding 2500 miles.....	3 francs	20 centimes
Between 2500 and 5000 miles	6 "	40 "
" 5000 and 7500 "	9 "	60 "
" 7500 and 10,000 "	12 "	80 "
Over 10,000 miles	15 "	1 franc } per kilogramme.

That subsections 2° and 4° of §4 of Article 4 be suppressed.

That the necessary amendments be made in Article 5 §2 subsection 1, Article 17 §4 subsection (a) and §5 ; and §4 of detailed regulations 24 and 25, respectively, in order to bring same into conformity with the changes proposed."

The matter was referred accordingly to the other Colonies, and the following is an extract from the New Zealand reply :—

" This Office quite recognises that the case under review presents probably one of the greatest anomalies possible in the application of the long distance sea rates re-enacted by the Vienna Convention, and fully concurs with you that it should be brought under the special notice of the Union Administrations. In my opinion, however, the object sought would be more readily obtained if no definite rates were proposed. Those suggested by New South Wales would traverse the huge Atlantic and European interests created in and before 1878, compared to which the few hundred pounds involved by the Sydney-New Caledonia question sink into insignificance, and while standing but a remote chance of being accepted, they might aid in compromising Great Britain in connection with the growing agitation for the total abolition of sea rates.

" It is considered not unlikely, however, that the part of the proposal made by Austria-Hungary at the Vienna Conference, but postponed for discussion at Washington, which would fix the sea rates from 300 to 4000 miles at 5 frs. and 50 cts. for letters and other articles respectively, may commend itself to a majority of the Union Administrations, and, if so, Sydney's difficulty would be effectually met, as its payments to France would be reduced to one-third the present rates."

We recommend that the matter should be brought before the Berne Bureau and London Office, and that the Australasian Delegate at the next Quinquennial Congress be asked to press for an alteration in Sea Transit Rates.

No. 51.—*Consideration of proposed Official Code Vocabulary.*

There seems to be a misapprehension on this subject. The proposed code was not prepared by the Eastern Extension or any Company, but by the Berne Bureau, by direction of the Paris Convention of 1890. It is not intended to come into operation as regards extra-European countries (of which Australasia is one) until it has been confirmed at the next Telegraph Conference in 1896. We are of opinion that it is very desirable to have a carefully prepared code vocabulary, as many of the present private codes contain inconvenient words, and words so nearly alike as to lead to frequent repetitions through an error possibly of a single letter. Not having seen the vocabulary to which objection is taken, we are unable to form an opinion as to its suitability.

No. 52.—*Registration of Code or abbreviated Addresses (Uniformity of Regulations).*

The Wellington Office telegraphed to the Postmaster-General, South Australia, that "in England a separate charge is made for each registration at office of delivery. South Australia and Victoria appear to accept registration for the whole of Colony, charging only one fee. The question is—What rule is observed in other Colonies, as uniformity is desirable?"

Postmaster-General, Adelaide, wrote in reply : "South Australian practice as follows :—

Persons, firms, &c. in Adelaide or any provincial town can have code address entered in Adelaide ; thus—

Phillipson & Co.,

Mount Gambier,

can be entered on Adelaide register, say—

Bonus,

Adelaide.

And we transmit messages on receipt to

Phillipson & Co.,

Mount Gambier,

without any additional charge.

If, however, Phillipson & Co. have offices in several towns, they must register a code to each address. Thus—

Phillipson & Co., Mount Gambier,

Bonus, Adelaide,

Phillipson & Co., Gawler,

Beatrice, Adelaide,

Phillipson & Co., Adelaide,

Burnham, Adelaide,

paying usual fee for each code ; or they may register code at each place, in which case the messages would bear proper names of places.

Thus—

Bonus, Mount Gambier.

Beatrice, Gawler.

Burnham, Adelaide.

The reason why in most cases persons register in Adelaide is because Mount Gambier, Gawler, &c. may not for messages put in at London, or in France, &c., be sufficiently explicit, unless the words 'South Australia' are added, which increases the cost.

The London Office adopts similar practice. Thus—

Newton & Co.,
Birmingham,

can be registered in London, say—

Portia,
London.

While on the subject of code addresses, it may be mentioned that we do not regard the proper or surname of any individual as a sufficient address, and require it to be registered, as there may be other persons of the same name. Thus—

Thomson, Adelaide,

must be registered.

People complain of this until the reason is explained, when our rule is generally admitted to be a proper one for the protection of the public."

The South Australian rule is the one practically followed in the other Colonies, although we favour the Melbourne modification, which provides that visitors passing through Victoria may register for a month on payment of a fee of 5s.

No. 53.—Telegraph Code, Alteration of.

It is recommended the following alterations in the Telegraph Code be made, viz.:—

L, for ———	substitute ——..
X, for .—..	substitute —..—
Y, for	substitute —.——
9, for —.—	substitute ——.—
Sig—

No. 54.—Rate on Telegraph Messages to and from New Caledonia.

We recommend that messages to and from New Caledonia and New Zealand be treated as International Messages, and charged accordingly.

No. 55.—Fire Alarms—Regulations, &c.

We recommend that the Laws and Regulations of the various Colonies with regard to Fire Alarms should be uniform, and advise that a code of Regulations be drafted by the Melbourne, Sydney, and Adelaide offices and considered at next Conference, and that the Regulations should embrace the whole question of the erection of wires of private persons erected by the Department.

No. 56.—Rectifying Telegrams or Repeats for Corrections.

We recommend that the Regulations and Charges agreed to at Brisbane Conference be adopted, and the following arrangement made, viz.:—"Ask by service memo. for repeat, and if repeat is the same as the original copy to be delivered at a charge of half rate. If there has been an error no charge to be made. If no error, Service Memo. to be paid for as well as the half rate for the repeat. Each office to keep its own receipts.

No. 57.—Name of Terminal Country to be given in Foreign Telegrams.

We recommend that in cases of Foreign Telegrams the name of the Terminal Country should be inserted by the sender.

No. 58.—Reply Paid Telegrams—Mode of accounting for.

We recommend that this be dealt with departmentally by correspondence.

No. 59.—Cablegrams "On Service."

This is now under consideration by the Cable Company.

No. 60.—Repeated Telegrams—Uniform mode of dealing with.

We recommend that where a sender of a message pays half rate additional for his message to be repeated, the addressee shall send the repeated copy which is to be delivered to the original sender.

No. 61.—Precedence of Press Cablegrams.

The PRESIDENT read the following Report from the Permanent Heads on the subject of Precedence of Press Cable Messages :—

"We recommend that on communication being restored after [an interruption, each day's business should be cleared in order of date of despatch, precedence being given to all press messages of same date. This is practically what the Sydney Chamber of Commerce contends for, and we think such an arrangement will be a fair one for all parties interested."

Discussion followed, and the Hon. SIR JOHN FORREST moved that the consideration of the matter be postponed.

The Hon. JOSEPH COOK moved that the Governments concerned be urged to take steps to obviate, as far as possible, the inconvenience caused to the mercantile community by delay in forwarding private messages in case of telegraphic interruption.

The Hon. J. A. COCKBURN seconded the Motion, which was carried.

No. 63.—Standard Time.

We beg to report that Standard Time has been adopted by Queensland, New South Wales, Victoria, and South Australia, and that the Colonies of New Zealand, Tasmania, and Western Australia be invited to also adopt Standard Time as agreed to at Wellington Conference.

No. 64.—Telephone List—Patent arrangement of Alphabetical Index.

We do not see any necessity to adopt the patent arrangement submitted to the Adelaide Office.

Bulk Newspapers.

Sir Charles Todd read a letter from the Editor of the South Australian *Advertiser* pointing out that two newspapers pass at bulk rate of postage in Victoria, and complaining that a different course is followed in South Australia. We regret that Victoria has departed from the provision of the Convention which requires that no parcel containing less than four newspapers should pass at bulk rates, and are of opinion that the present number of papers for bulk rates should be maintained.

THANKS.

The Hon. JOSEPH COOK moved a vote of thanks to the Hon. J. Gavan Duffy for the able manner in which he had presided over the proceedings of the Conference, and for the generous hospitality and kindness which he had extended to the Delegates.

Hon. J. A. COCKBURN seconded the Motion, which was carried by acclamation.

The Hon. PRESIDENT returned thanks for the compliment paid him, and specially mentioned the able services of the Heads of Departments from the various Colonies attending the Conference.

The Hon. Sir JOHN FORREST moved a vote of thanks to the Secretary, Mr. T. C. Just, for the able manner in which he had performed his duties.

The Hon. JOSEPH COOK seconded the Motion, which was carried.

Mr. JUST acknowledged the compliment.

The Hon. Sir JOHN FORREST moved a vote of thanks to the Government of Tasmania, and especially to the Hon. P. O. Fysh, for their kindness and hospitality during the meeting of the Conference.

The Hon. A. J. THYNNE seconded the Motion, which was carried.

The Hon. P. O. FYSH acknowledged the vote, making special reference to the federal spirit which had animated the proceedings of the Conference.

The Hon. J. A. COCKBURN moved a vote of thanks to the Press of Tasmania and the other Colonies for the attention given to the proceedings of the Conference.

The Hon. P. O. FYSH seconded the Motion, which was carried.

The Conference at 1.30 p.m. adjourned *sine die*.

JOHN GAVAN DUFFY, President.

Thos. C. JUST, Secretary..

SECOND REPORT OF COMMITTEE

APPOINTED AT THE

POSTAL AND TELEGRAPHIC CONFERENCE

HELD AT HOBART, 1892,

FOR THE PURPOSE OF DRAFTING A CODE OF RULES AND REGULATIONS FOR THE ERECTION AND LAYING OF ELECTRIC LIGHT AND POWER WIRES.

The Committee has the honour to report that, in compliance with the following resolution passed at the Postal and Telegraphic Conference held this year in New Zealand, viz. :—

“That the Committee be requested to complete their labours by reporting on electric tramways and drafting regulations in regard to electric power leads generally,”

it met at Melbourne on the 30th of October, its sittings extending over the 31st of October, the 1st, 2nd, 3rd, 6th, 7th, and 8th of November—the following members being present :—

Sir CHARLES TODD, K.C.M.G., M.A., F.R.S., M.I.E.E., Postmaster-General and Superintendent of Telegraphs, South Australia.

Major P. B. WALKER, M.I.C.E., M.I.E.E., Secretary of the Telegraph Service, New South Wales; also representing New Zealand.

GEORGE SMIBERT, Esq., A.I.E.E., Telegraph Engineer and Chief Electrician of the Post Office and Telegraph Department, Victoria.

ROBERT HENRY, Esq., Superintendent of Telegraphs, Tasmania.

O. HAES, Esq., M.I.E.E., Engineer of the Brush Electrical Engineering Company, Sydney, Melbourne, and Adelaide.

A. J. ARNOT, Esq. A.M.I.C.E., M.I.E.E., Melbourne City Electrical Engineer.

JAS. O. CALLENDER, Esq., A.I.E.E., Callender's Bitumen Telegraph Waterproof Company Limited, London and Sydney.

The members at their first meeting were received and welcomed by the Hon. J. Gavan Duffy, M.P., Postmaster-General, who alluded to the important business which would occupy the attention and consideration of the Committee, and referred to the necessity for the proper regulation of electric lighting and power wires in order to insure public safety. Among other things he mentioned that a Bill intituled the Electric Light and Power Bill was about to be introduced into the Victorian Parliament, a copy of which Bill would be supplied to each member of the Committee, and he would be glad to receive from the Committee any suggestion they might desire to make on the Bill.

Major Walker proposed, and Mr. G. Smibert seconded, that Sir Charles Todd be appointed Chairman, which was unanimously agreed to.

On taking the chair, Sir C. Todd thanked the members of the Committee for the honour they had conferred upon him in again electing him their Chairman. He reported, for the information of the Committee, that the report and draft regulations to be observed in the erection or laying of electric light and power wires, drawn up at their first meeting in Sydney in March, 1893, were laid by him before the Postal and Telegraph Conference held at Brisbane the same month, and favorably received.

At the Postal and Telegraph Conference held at Wellington in March last the Hon. J. A. Cockburn, M.D. Lond., Minister of Education and Agriculture, South Australia, moved a vote of thanks to the Committee, and that they be requested to complete their labours by reporting on electric tramways and drafting regulations in regard to electric power leads generally. In compliance with that resolution the present meeting was convened.

The Chairman expressed his regret that the Queensland Government was not represented at the present Conference, more especially as Queensland was the only colony that had passed an Act permitting public electric tramways to be constructed by joint local authorities, and therefore that Government was especially interested in any regulations which the Committee might frame, and which might be in conflict with the existing legislation of that colony.

In Tasmania an Act has, he said, been passed authorizing the Hobart Tramway Company Limited to construct, maintain, and work tramways in Hobart, which tramways, on the overhead trolley system, were opened during the last year.

In the same colony legislation has been obtained to enable the Municipal Council of Launceston to take water from the South Esk for use as a motive power for electric lighting and other purposes.

The principal object, the Chairman said, in appointing this Committee was to bring all the colonies into line in regard to the regulations for electric light, electric tramways, and the application of electrical energy generally, with a view to the adoption as far as possible of uniform legislation and one common code of regulations.

Mr. W. B. Crosbie, LL.B., was appointed Secretary, on the motion of Mr. G. Smibert, seconded by Major Walker.

Major Walker informed the Committee that he also represented the Government of New Zealand.

The following papers were laid on the table:—

By the Chairman—

- Report from the Joint Committee of the House of Lords and the House of Commons on electric powers, 13th July, 1893.
- A translation of an extract from *Archiv für Post und Telegraphie*—
“Protection of telegraph lines from injury by high-tension currents.”
- A paper on electric tramways in the United States and Canada, by Mr. H. C. Wilkinson, read before the Institution of Electrical Engineers, London.

By Major Walker—

- Specifications for underground telephone cables.
- The report of the board appointed to inquire into the interference of the proposed electric tramways in Dunedin with telephone lines.
- Statistics of the European electric tramways.

By Mr. Callender—

- The electrical equipment of the Liverpool overhead railway, by T. Parker, M.I.C.E.

By Mr. Henry—

- Notes on disturbances caused on telephone lines at Hobart by the running of the electric tramways.
- Notes on the construction and working of the Hobart electric tramway, by A. C. Parker.
- Observations taken on 30th September and 7th October, 1894, to determine potential on Hobart telephone lines arising from disturbance caused by the Hobart electric tramway, by R. Henry.
- Map of Hobart and suburbs, showing tramway routes and position of telephone lines.

By Mr. Haes—

- Special regulation issued by the Board of Trade for alternating current transformers, 1894.

By Mr. Arnot—

- A paper by Edward Hopkinson, M.A., D.Sc., M.I.C.E., on electrical railways—“The City and South London Railway.”

The Committee had also before it the regulations of the Board of Trade for securing the safety of the public and for insuring a proper and efficient supply of electrical energy.

These papers were carefully examined by the Committee, which then proceeded to consider and draft regulations for the control of electric light and power supplies and the erection of electric-light power and traction wires.

REGULATIONS.

It was considered desirable to carefully revise and amend the regulations drawn up at the first Conference of the Committee in Sydney. These, as amended, are now embodied in the complete Code of Regulations appended to this report (Appendix A), which the Committee recommends for adoption throughout the Australasian Colonies. They are arranged in the following order:—

1. *Electric Light and Power.*

- Definitions.
- Regulations as to safety.
- Conduits for underground wires.
- Aerial conductors.
- Converting stations.
- Consumers' premises.
- Alternating current transformers.
- Regulations as to supply.

2. *Electric Traction.*

- Definitions.
- Regulations.

ELECTRIC TRAMWAY SYSTEM.

The various methods of constructing electric tramways received very careful consideration, with a view to ascertaining the possible dangers and interferences likely to arise from their use.

Briefly stated, there are three systems—it being unnecessary to refer to a fourth where storage batteries are carried in the car, and no external conducting wires are necessary:—

1. That known as the single trolley, consisting of one overhead bare wire, insulated from earth, with an uninsulated return lead, of which the rails form the whole or part, to generator. This system has already been introduced in Sydney, Hobart, and Box Hill (near Melbourne).
2. That known as the double trolley, having both wires (forming the lead and return) carried overhead and insulated from earth.
3. The underground conduit system, in which one or both conductors (lead and return) are insulated.

The objections raised to the overhead trolley system are—

1. That it is unsightly, especially in the principal streets of a city.
2. That it is a source of danger and an impediment in the event of fire.
3. That the rails forming the whole or greater part of the return lead to generator are uninsulated from earth, and, where the overhead conductor runs parallel with the telephone, telegraph, and railway signal wires, the induction and leakage are a cause of serious disturbance, especially on telephone wires, as will be seen in the memorandum appended to this Report, laid before the Committee by Mr. Robert Henry, Superintendent of Telegraphs in Tasmania (*vide* Appendix B). The same objection applies to some extent to the underground system, where the return wire is connected with the earth.

Speaking on the question of the overhead trolley system, Sir F. J. Bramwell, in his evidence before the Joint Committee of the House of Lords and House of Commons before referred to on page 2, says, referring to the Leeds tramway, "that it

is intolerable to telephone working" (*vide* page 74, question 1067). There is other evidence to the same effect. We have also instances of the railway signals, which are worked on earth circuit, being interfered with by leakage from the tramway uninsulated return through the earth, the signal "line clear" being dropped by this means when a train is on the track; and some railway companies in England have been compelled to employ metallic circuits to obviate this.

With regard to the third objection, Mr. Preece, in his notes on a trip to the United States, read before the Institution of Electrical Engineers, Vol. XXIII., No. 109, says—"The disturbances in telephone circuits created by the extension of electric railways have been severely felt in many parts of the United States. We have experienced the same in London, Liverpool, Leeds, and Blackpool. But, owing to the prompt action taken by the telephone and railway companies (especially in Boston), the area of disturbance has been much reduced, and the influence of electric railways on telephones has ceased to be a trouble. Of course, this result is very much favoured by the rapid introduction of metallic circuits into cities; but it has also been favoured by the prompt action of the railway companies themselves. They did all that they were asked to do, and that at once."

Experience has also shown that serious trouble and possible danger may be caused by the rapid destruction by electrolysis of water and gas pipes laid in the immediate vicinity of these electric tramways. This, however, can be obviated by connecting the negative pole of the dynamo to the pipe, and by properly screening such pipe from the action of the current, as provided for in the regulations appended to this report.

If the regulations now submitted are rigidly enforced, the Committee is of opinion that the objections raised and the disturbances complained of can be reduced to a minimum. Of course, the most effective means of overcoming these disturbances, due to induction and leakage, would be to place all the telephones in metallic circuit, using twisted wires. This, however, would involve a very serious expense, as it means doubling the whole of the telephone wires, and would soon render it necessary to place them in suitably-constructed subways or conduits.

The system occasionally used in the United States, known as the "Double-Trolley Overhead Conductors," forming a metallic circuit wholly insulated from earth, has some advantages.

Electrically it is satisfactory, both in the freedom it gives from disturbance to telephone and other wires and also on account of the satisfactory running of the cars, due to the completely insulated return. The great objection to it is the multiplication of overhead wires, and in this respect all the dangers of an ordinary single-wire trolley system are increased. This is specially noticeable at points where two or more lines cross each other, or where a junction occurs.

The chief obstacle to the adoption of the underground conductors with line and return wholly insulated from the earth is the great cost as compared with the overhead trolley system having uninsulated returns; and, while fully recognising the advantages of the former, the Committee is forced to agree with the decision arrived at by the Joint Committee of the House of Lords and the House of Commons:—

"That it is not, in the present state of electrical science, to the interest of the public to insist upon electrical tramways using an insulated return conductor, and that such insistence would retard the development of electric traction."

While there are many electric tramways and railways in operation worked on the overhead trolley system having uninsulated returns, there are very few with underground conductors wholly insulated from earth. A line of this description has, however, been in operation at Buda-Pesth for several years; and Mr. H. D. Wilkinson, in an interesting paper recently read before the Institution of Electrical Engineers, London, and published in No. 113, Vol. XXIII., of the Institution's Transactions, describes two lines constructed on this principle during the last twelve months in America with underground conduits on Love's system, in which the conductors are in metallic circuit and wholly insulated from earth.

Such a system would wholly prevent any inductive action on telegraph and telephone wires, and electrolytic action upon water and gas mains; but at present there are several obstacles in the way, and it has as yet hardly emerged from the experimental stage.

There are also several systems in which the conductor is completely enclosed in a tube or conduit, and devices of a mechanical or electrical nature are used, by means of which short sections of the rails or a surface conductor are automatically connected and disconnected by the car as it advances. These systems, although promising well at first, have not been successful in actual practice, and the multiplication of contacts and movable parts must necessarily form a source of weakness in any such system.

WIRES TO BE PLACED UNDER GROUND.

The Committee considers that in the busy or principal parts of a city, where there may be a large number of telephone and electric light, tramway, or power wires, it is desirable—having regard to the safety of the public—that these wires should be placed under ground; but, as before observed, this will require the construction of subways or suitable conduits.

PROTECTION OF GOVERNMENT TELEGRAPHS.

The Committee recommends that the instruments connected to the telegraph and telephone wires crossed by electric light power or tramway overhead wires should be protected with fusible cut-outs, placed on such telegraph and telephone wires at the nearest leading-in offices and subscribers' premises on each side of the crossing.

VICTORIAN ELECTRIC LIGHT AND POWER BILL.

The Committee, having, at the request of the Hon. the Postmaster-General (Mr. J. Gavan Duffy), carefully considered the provisions of the Victorian Electric Light and Power Bill, is of opinion that the Bill has been ably drafted, and, with some few amendments, might with advantage be adopted by the other colonies in order to secure uniform legislation.

CONCLUSION.

In view of the rapid extension of electric lighting and the introduction of electric tramways, it is, in the opinion of this Committee, desirable that uniform legislation should be introduced at an early date ; and it strongly recommends that effect should be given as soon as possible to the three resolutions passed by the Committee at its first Conference in Sydney, viz. :—

1. That it is desirable that the laws and regulations relating to the erection of electric light and power wires for the supply of electrical energy should, as far as possible, be uniform throughout the Australian Colonies.
2. That no local or municipal authority, company, or person shall be allowed to lay in or erect on or along any street or public thoroughfare any electric light or power wires without statutory authority.
3. That a board of control—consisting of, say, three members—be appointed in each colony, under whose supervision all works relating to electric lighting and the transmission of power shall be carried out in accordance with the rules and regulations approved by the Governor in Executive Council; and that a central or intercolonial board of control—consisting of representatives from the local boards—should also be appointed to make such amended rules and regulations as may from time to time be necessary, and to deal with matters cognate thereto.

In any case the Committee recommends that each Government should at an early date appoint a properly qualified inspector, whose duty it should be to make periodical inspections of all electric light and power leads, and see that all works connected therewith are carried out in accordance with the regulations.

CHARLES TODD, Chairman.

GEORGE SMIBERT.

Melbourne 8th. November 1894

APPENDIX A.

REGULATIONS FOR THE CONTROL OF ELECTRIC LIGHT AND POWER SUPPLY AND THE ERECTION OF ELECTRIC LIGHT, POWER, AND TRACTION WIRES.

I.—ELECTRIC LIGHT AND POWER.

DEFINITIONS.

In the following Regulations the expression "Order" means any Order of the Governor in Council granted or made pursuant to the Act.

The expression "the undertakers" means the undertakers for the purpose of the Order.

The expression "the consumer" means any body or person supplied or entitled to be supplied with energy by the undertakers.

The expression "consumer's terminals" means the ends of the electric wires situate upon any consumer's premises, and belonging to him, at which the supply of energy is delivered from the service conductors.

The expression "consumer's wires" means any electric wires on a consumer's premises which are connected with the service conductors of the undertakers at the consumer's terminals.

The expression "constituted authorities" means the Board of Control or the authorities appointed by the several Australasian Governments.

The expression "local authority" means the municipal or other authority having control of the area within which the Order applies.

The expression "inspector" means any person appointed by the constituted authorities for the purposes of these regulations.

The expression "aerial conductor" means any wire or cable for the transmission of electrical energy for light or power purposes placed above ground in the open air.

The expression "service conductor" means any conductor used to connect any aerial or underground main conductor with a consumer's premises.

The expression "efficient earth" means that when any casing, support for conductors, conducting wire, or other metallic body is required to be efficiently connected to earth, such casing, support, conducting wire, or metallic body shall be deemed to be so connected when it is connected to metallic mains for water supply, outside of buildings, or, where these are not available, to a mass of metal having a total surface of at least 4 square feet, buried to a depth of at least 3 feet in moist earth, by means of a conductor possessing a mechanical strength, and offering a passage to electrical discharges, equal to that of a strand of seven No. 16 S.W.G. galvanized-iron wires.

The expression "pressure" means the difference of electrical potential between any two conductors through which a supply of energy is given, or between any part of either conductor and the earth; pressure on any alternating current system being taken to be the equivalent of pressure on a continuous current system when it produces an equal heating effect if applied to the ends of a thin stretched wire or carbon filament; and—

- (a) Where the conditions of the supply are such that the pressure cannot at any time exceed 300 volts if continuous, or the equivalent of 150 volts if alternating, the supply shall be deemed a low-pressure supply—
- (b) Where the conditions of the supply are such that the pressure may exceed the limits of a low-pressure supply, but cannot exceed 3,000 volts or the equivalent of 3,000 volts, whether continuous or alternating, the supply shall be deemed a high-pressure supply;
- (c) Where the conditions of the supply are such that the pressure may on either system exceed 3,000 volts, or the equivalent of 3,000 volts, the supply shall be deemed an extra high-pressure supply.

Mains, service, and other conductors and apparatus are referred to as low-pressure, high-pressure, and extra high-pressure mains, &c., according to the conditions of the supply delivered through the same or particular portions thereof.

The expression "earth return" means that the earth is used as a passage for the return current solely or in conjunction with a metallic conductor.

The expression "electrical energy" means the capacity for doing work by electricity.

REGULATIONS AS TO SAFETY.

General.

1. *Low-pressure supply to consumers.*—Save as hereinafter provided, the supply of energy delivered to the consumer's terminals shall be a low-pressure supply.

2. *Limitations of high-pressure supply.*—A high-pressure supply shall not be delivered to any consumer's terminals except for special purposes, and with the approval of the constituted authorities, on the joint application of the consumer and the undertakers, and subject to such further regulations as the constituted authorities may from time to time prescribe. But a high-pressure supply may be given to distributing or converting stations or points or to distributing mains, in accordance with the following Regulations.

3. *Limitations of extra high-pressure supply.*—An extra high-pressure supply shall not be given except to distributing stations or other premises in the sole occupation of the undertakers, and with the written consent of the constituted authorities, and subject to such regulations and conditions as the constituted authorities may prescribe.

Underground Mains and Conductors.

4. *Maximum working current.*—The maximum working current shall not be sufficient to raise the temperature of the conductor in any part to such an extent as to materially alter the physical condition or specific resistance of the insulating covering, if any, or in any case to raise such temperature to a greater extent than 30° Fahrenheit; and efficient automatic means shall be provided which will render it impossible for this maximum working current to be by any accident exceeded to the extent of 50 per centum, even for short intervals of time; and special care shall be taken that the cross sectional area and conductivity at joints is sufficient to avoid local heating, and that the joints are properly made and protected against corrosion.

5. *Lightning arresters.*—Where any portion of any conductor is exposed in such a position as to be liable to be affected by lightning, a lightning arrester, of such pattern and construction as may be from time to time approved by the constituted authorities, shall be placed in the circuit for the efficient protection of all instruments connected therewith.

6. *High-pressure conductors laid above ground.*—Where any high-pressure conductor, other than an aerial conductor, is placed above the surface of the ground, it shall be completely enclosed in brickwork, masonry, or cement concrete, or in strong metal cases efficiently connected to earth, for a height of at least 10 feet above the ground.

7. *High-pressure conductors laid in subways, &c.*—Where any high-pressure conductor is laid in a subway, or in the same conduit with any low-pressure conductor, it shall be completely enclosed in strong metal casing efficiently connected to earth.

8. *High and low pressure conductors laid in proximity.*—Where any high-pressure conductor is laid within a less distance than 18 inches from any low-pressure conductor, or from the surface of the ground, or where any low-pressure conductor is laid within the above-mentioned distance from any previously laid high-pressure conductor, efficient means shall be taken to render it impossible that the low-pressure conductor or the surface of the ground shall become electrically charged by any leakage from or defect in the high-pressure conductor.

9. *Continuous insulation.*—Every high-pressure conductor shall be continuously insulated with a durable and efficient material, which shall be protected on the outside against injury or removal by abrasion, and every such conductor shall be tested for insulation after having been laid in position, and before any joints for service lines are made. The insulation resistance under these conditions shall not be less, in any section of the conductor, than at the rate of 100,000 ohms. per mile for every volt of pressure of the supply under a testing pressure of at least 100 volts, and the undertakers shall duly record the results of the tests of each conductor or section of a conductor, and at all times permit the electric inspector to examine and take copies of such record.

10. *Minimum insulation resistance allowable—Indicator of leakage.*—The insulation resistance of any complete circuit used for high-pressure supply, including all devices for producing, consuming, or measuring energy, connected to such circuit, shall be such that, should any part of the circuit be put to earth through a resistance of 2,000 ohms., the leakage current shall not exceed 0·04 ampere in the case of continuous currents, or 0·02 ampere in the case of alternating currents. Every such circuit shall be fitted with an instrument, of such pattern and construction as may from time to time be approved by the constituted authorities, which shall immediately indicate any defect which may at any time occur in the insulation resistance of either conductor.

Every such circuit shall be tested for insulation at least once in every week, and the undertakers shall duly record the results of such testings, and at all times permit the electric inspector to examine and take copies of such record.

11. *Precautions against sparking with high-pressure alternating current mains.*—In the case of a high-pressure supply on any alternating current system, where separately insulated conductors are laid in the same conduit or pass through the same boxes, precautions shall be taken against the discharge of electric sparks between the insulating covering of oppositely charged conductors, by providing a sufficient connexion of a conducting nature from one covering to the other.

Conduits.

12. *Conduits to be durable and strong.*—All conduits used as receptacles for conductors shall be constructed of durable material, and of ample strength to resist any pressure due to heavy traffic or other forces to which they may be expected to be subjected.

13. *To be kept free from water.*—Where the conductors in any conduit are not continuously insulated, adequate precautions shall be taken to insure that no accumulation of water shall take place in any part sufficient to raise the level of the water into contact with the conductors.

14. *To be kept free from gas.*—All conduits for conductors constructed in streets in which gas mains are also laid shall be efficiently protected against an accumulation of gas.

15. *Precautions with respect to street boxes.*—Where any street box contains high-pressure conductors efficient means shall be taken to render it impossible that the covers or other exposed parts of these boxes, or any adjacent material forming the surface of the street, shall become electrically charged, whether by reason of leakage, defect, or otherwise; and all street boxes shall be efficiently protected against any accumulation of gas or water, and their covers so secured that they cannot be opened except by means of a special appliance.

Aerial Conductors.

16. *Height from ground, and distance from buildings, &c.*—An aerial conductor in any street or thoroughfare shall not, in any part thereof, be at a less height from the ground than 20 feet; or, where it crosses a street, 30 feet, or within 6 feet of any building or erection other than a support for the conductor, except where brought into a building for the purpose of supply.

17. Aerial conductors over rooftops.—Where necessary to run aerial conductors over the top of any buildings, they shall be kept at least 7 feet clear above the buildings; and all poles placed on buildings shall be fixed in shoes or plates, so that the downward pressure may be distributed over a large surface; such poles must be properly stayed with stranded galvanized-iron or steel wires, and if of metal be efficiently connected to earth, and if of wood the poles shall be provided with lightning conductors as required by Regulation No. 21.

18. Maximum intervals between supports.—Every aerial conductor shall be attached to supports at intervals not exceeding 200 feet where the direction of the conductor is straight, or 150 feet where this direction is curved, or where the conductor makes a horizontal angle at the point of support. If suspending wires are used, as required in Regulation 31, the span for straight lines may be increased to 250 feet.

19. Angle of crossing thoroughfares.—Wherever possible a conductor should cross a street at right angles, and in no case shall the angle between such conductor and the direction of the street at the place of such crossing be less than 60 degrees, and the span shall be as short as possible.

20. Supports, construction and erection of.—Every support of aerial conductors shall be of a durable material, and properly stayed against forces due to wind pressure, change of direction of the conductors, or unequal lengths of span, and the conductors must be securely attached to insulators fixed to the supports by a non-metallic ligament. The factor of safety for the suspended wires shall be at least 6, and for all other parts of the structure at least 12, taking the maximum possible wind pressure at 35 lbs. per square foot.

21. Connexion of support to earth.—Every support, if of metal, shall be efficiently connected to earth, and every other support which shall be exposed in such a position as to be liable to be affected by lightning shall be protected by a lightning conductor fastened to the support along its entire length, and projecting above the support to a height of at least 6 inches, such lightning conductor to be efficiently connected to earth, and possess a mechanical strength, and offer a passage to electrical discharges equal to that of a strand of seven No. 16 galvanized-iron wires.

22. Lightning arresters.—Lightning arresters of pattern approved by the constituted authorities shall be placed in the circuit of all aerial conductors at the point where they leave the generating station.

23. Crossing other wires.—Where any aerial conductor is erected so as to cross one or more telegraph, telephone, or other wires, it may pass over, under, or, where specially permitted by the constituted authorities, between such wires, provided precautions are taken to keep such conductor at least 1 foot clear of the other wires in all directions; and both the aerial conductor and the telegraph and telephone wires shall be respectively affixed to separate supports, placed within 6 feet of the point of intersection where practicable, but in no case to exceed 10 feet, and further protected from coming in contact, under any circumstances, by guard irons or wires; all such guard irons or wires to be efficiently connected to earth.

24. Service conductors.—All service conductors shall be laid from the main cable, being joined thereto at a point as near as possible to a pole or support, direct to insulators attached to the building or premises to be served, and lead upward therefrom to tubes or channels of insulating and non-inflammable material, through which they shall pass into the building. Where they run along the outside of any building they shall be kept at least 12 inches apart, and be affixed to insulators. The tubes or channels to be sloped downwards from the inside to the outside of the building.

25. Maximum working current.—The maximum working current in any aerial conductor shall not be sufficient to raise the temperature of the conductor in any part to such an extent as to materially alter the physical condition or specific resistance of the insulating covering, if any, or in any case to raise such temperature to a greater extent than 30° Fahrenheit, and efficient automatic means shall be provided which will render it impossible for this maximum working current to be by any accident exceeded to the extent of 25 per centum, even for short intervals of time; and special care shall be taken that the cross sectional area and conductivity at joints is sufficient to avoid local heating, and that the joints are properly made and protected against corrosion.

26. High-pressure conductors to be insulated.—Every high-pressure aerial conductor shall be continuously insulated with a durable and efficient material, to be approved by the constituted authorities, to a thickness of not less than one-tenth of an inch, and, in cases where the extreme difference of potential in the circuit exceeds 2,000 volts, the thickness of the insulation shall be increased by one-thirtieth of an inch for every 1,000 volts or part thereof. This insulation shall be further efficiently protected on the outside against injury or removal by abrasion. If this protection be wholly or partly metallic, it shall be efficiently connected to earth, so, however, as not to cause undue disturbance to other electric lines or works by electrostatic induction or otherwise.

27. Low-pressure conductors to be insulated.—Every low-pressure aerial conductor shall be continuously insulated with a durable and efficient material, to be approved by the constituted authorities, and shall be further efficiently protected on the outside against injury by removal or abrasion. If this protection be wholly or partly metallic, it shall be efficiently connected to earth.

28. Specification of insulation.—The material used for insulating any aerial conductor must be such as will not be liable to injurious change of physical structure or condition when exposed to any temperature between the limits of 10° Fahrenheit and 150° Fahrenheit, or to contact with the ordinary atmosphere of towns or manufacturing districts.

29. Minimum insulation resistance allowable—Indicator of leakage.—The insulation resistance of any circuit using high-pressure or extra high-pressure aerial conductors, including all devices for producing, consuming, or measuring energy, connected to such circuit, shall be such that, should any part of the circuit be put to earth, the leakage current shall not exceed 0·04 of an ampere in the case of continuous currents, or 0·02 of an ampere in the case of alternating currents. Every such circuit containing high-pressure or extra high-pressure conductors shall be fitted with an indicating device, which shall continuously indicate if the insulation resistance of either conductor fall below the conditions required by this Regulation.

30. Earth return.—No earth return shall be allowed on any electric light or power circuit.

31. Suspension of conductors.—Every aerial conductor having a sectional area greater than 7, No. 16, S.W.G., shall be suspended, by means of non-metallic ligaments, to a suspending wire, securely affixed to the support, and efficiently connected to earth at every point of support. Every such suspending

wire shall be in lengths not exceeding 300 feet, and shackled with insulating shackles. Where the conducting wires are crossed, as provided in Regulation 34, the suspending wires shall also be crossed in the same manner. All suspending-wires, if of iron or steel, shall be galvanized.

32. *Conductors to be fastened to inner side of insulators.*—In all cases where aerial conductors are supported by insulators, such conductors must be fastened to the inner side of the insulators, except where guard irons are used, so that, in the event of the conductor fastening giving way, the conductor will not fall to the ground.

33. *Minimum sectional area of conductors.*—No single wire less than No. 14 S.W.G., shall be used, and no smaller wire than No. 20 S.W.G., shall be used in any stranded cable. No stranded cable shall have a sectional area less than the equivalent of No. 14 S.W.G.

34. *Protection of telegraph and telephone wires from interference.*—Except where otherwise permitted by the constituted authorities, in the case of aerial conductors carrying alternating currents, the two conductors constituting the lead and return for any circuit shall be run parallel with each other, and at a distance apart not exceeding 18 inches; and the position of such lead and return shall be interchanged by crossing every half mile, or at least once in any shorter length of parallel telegraph or telephone wire, which would be liable to induction.

35. *Conductors not to be placed on telegraph or telephone poles.*—In no case, without special permission from the Postmaster-General, shall any aerial conductor be attached to any pole or support carrying a telegraph or telephone wire.

36. *Owner of conductor responsible for supports.*—The owner of every aerial conductor and support shall be responsible for the efficiency of the same, and every support shall bear a distinctive mark, approved by the constituted authorities, to indicate the ownership.

37. *Maintenance.*—Every aerial conductor, including its supports and all the structural parts and electrical appliances and devices belonging to or connected with such conductor, shall be duly and efficiently supervised and maintained by or on behalf of the owners as regards both electrical and mechanical conditions.

38. *Transformers.*—Where transformers are attached to street poles they shall be securely fixed thereto, at a height of at least 18 feet above ground, and shall be provided with switches and fusible cut-outs placed in the lead and return of the high-pressure or extra high-pressure conductors, in such a manner that the transformer can be completely disconnected from the supply mains, and the whole apparatus shall be enclosed in a watertight covering, which, if of metal, shall be efficiently connected to earth, and necessary precautions shall be taken to render it impossible for the low-pressure or secondary conductors to receive current from the high-pressure or primary conductors. (See Regulation 52.)

39. *Unused conductors to be removed.*—No wire or support or attachment thereto shall remain erected for more than one month after it has ceased to be in use, unless the owner or owners intend, within a period not exceeding three months, to take it again into use, and shall give notice of such intention to the constituted authorities.

40. *Protection of telegraph and telephone lines from induction.*—Every aerial conductor shall be placed and used with due regard to electric lines and works from time to time used, or intended to be used, for the purpose of telegraphic or telephonic communication, or the currents in such electric lines and works, and every reasonable means shall be employed in the placing and use of aerial conductors, to prevent telegraph and telephone wires being injuriously affected, whether by induction or otherwise, to the entire satisfaction of the Postmaster-General.

41. *Bare conductors for long distances.*—For the purpose of transmission of electrical energy over long distances, the constituted authorities may, after due inquiry, and on satisfying themselves that the public safety will not be endangered thereby, grant permission, under special conditions, for the erection of bare conductors overhead in sparsely populated districts, and beyond the area of cities and towns.

Converting Stations.

42. *Converting stations.*—Converting stations or points in a system of distribution to which a high-pressure supply is given from generating stations, and from which a low-pressure supply is given to one or more consumers, and which are not on the consumer's premises, shall be established in suitable places, which are in the sole occupation and charge of the undertakers.

43. *Precautions against contact.*—In every case where the supply is transformed at a converting station, as described in the preceding Regulation, some means or apparatus approved by the constituted authorities shall be provided which shall render it impossible that the low-pressure distributing mains shall be at any time charged to a dangerous difference of potential from the earth, owing to any accidental contact with, or leakage from, the high-pressure system either within or without the converting station. (See Regulation 52.)

Consumers' Premises.

44. *Transformers and high-pressure apparatus to be enclosed in metal.*—Where the general supply of energy is a high-pressure supply, and transforming apparatus is installed on the consumer's premises, connected to the distributing mains by high-pressure service lines, and to the consumer's terminals by low-pressure service lines, the whole of the high-pressure service lines, conductors, and apparatus, including the transforming apparatus itself, so far as they shall be on the consumer's premises, shall be completely enclosed in solid walls, or in strong metal casing efficiently connected to earth, and securely fastened throughout.

45. *Precautions against contact.*—In every case where any transforming apparatus is installed on the consumer's premises, as described in the preceding Regulation, some means or apparatus approved by the constituted authorities shall be provided, which shall render it impossible that the low-pressure service lines and consumer's wires shall be at any time charged to a dangerous difference of potential from the earth, owing to any accidental contact with, or leakage from, the high-pressure system either within or without the transformer. (See Regulation 52.)

46. *Low-pressure apparatus to be insulated.*—All terminals, low-pressure service lines, or other apparatus, between the transforming apparatus or other source of supply and the consumer's terminals, so far as they shall be on the consumer's premises, shall be completely enclosed in insulated cases or coated

with insulating material in such a manner that no part of them can be touched by any person without the removal of such case or coating, and, wherever exposed, shall be efficiently protected against injury to the insulation.

47. *Responsibility of undertakers for their lines, &c., on consumer's premises.*—The undertakers shall be responsible for all electric lines, fittings, and apparatus belonging to them, or under their control, which may be upon the consumer's premises, being maintained in a safe condition and in all respects fit for supplying energy.

48. *Fire risks.*—In delivering the energy to the consumer's terminals the undertakers shall exercise all due precautions, so as to avoid risk of causing fire on the premises.

49. *Testing consumer's wires for leakage by undertakers.*—If the undertakers are reasonably satisfied, after making all proper examination by testing, or otherwise, that a connexion with the earth exists at some part of a circuit of such resistance as to be a source of danger, and that such connexion does not exist at any part of the circuit belonging to the undertakers, then, and in such case any officer of the undertakers, and duly authorized by them in writing, may, for the purpose of discovering whether such connexion with the earth exists at any part of a circuit within or upon any consumer's premises, at all reasonable times, after giving one hour's notice of his intention to do so, enter any such premises and disconnect the consumer's wires from the service lines, and may require the consumer to permit him to inspect and test the wires and fittings belonging to the consumer and forming part of the circuit.

50. *Supply to be discontinued.*—If, on such testing, the officer discovers that a connexion exists between the consumer's wires and the earth, and that such connexion has an electrical resistance not exceeding 5,000 ohms, or if the consumer does not give all due facilities for such inspection and testing, the undertakers shall forthwith discontinue the supply of energy to the premises in question, giving immediate notice of such discontinuance to the consumer, and shall not recommence such supply until they are reasonably satisfied that such connexion with the earth has been removed.

Provided that in cases where the maximum power by any consumer exceeds 25,000 watts, the consumer's wires may be divided, for the purposes of this testing, into separate circuits of as nearly as possible 25,000 watts each, the insulation resistance of each of which shall not fall below 5,000 ohms.

51. *Appeal to electric inspector.*—If any consumer is dissatisfied with the action of the undertakers, either in discontinuing or in not recommencing the supply of energy to his premises, the wires and fittings of such consumer may, on his application, and on payment of the prescribed fee, be tested for the existence of connexion with the earth by the electric inspector, or, if no electric inspector has been appointed, by a person appointed or approved by the constituted authorities.

This Regulation shall be indorsed on every notice given under the provisions of the last preceding Regulation.

Alternating current transformers.

52. In every case where a high-pressure supply of energy is converted to a low-pressure supply by means of alternating current transforming apparatus, whether fixed in converting stations, on street poles, or in or on consumer's premises, the following arrangement may be used as a means of preventing contact between the high and low pressure conductors within such transforming apparatus. An arrangement, such that, by the construction and winding of the apparatus, any wire or other conductor forming part of the low-pressure supply circuit within the transforming apparatus, is separated from any wire or other conductor forming part of the high-pressure supply circuit within the transforming apparatus in every part by a wire or other conductor possessing sufficient sectional area, which is efficiently connected to earth, but is not in metallic connexion with either the high or low pressure supply circuits.

Arc Lamps.

53. *Height from ground.*—Where arc lamps are used in public thoroughfares they shall be so placed that no part of the lamp shall be less than 8 feet from the surface of the ground, or, if suspended over a roadway, less than 20 feet.

Descriptions, Plans, &c.

54. (a) *Plan to be supplied to Postmaster-General.*—Upon the proclamation of these Regulations in the *Government Gazette*, every owner of an aerial conductor for the supply of electrical energy shall forthwith furnish the Postmaster-General and the constituted authorities with a description and plan showing the mode and position in which such conductor is erected.

(b) *Postmaster-General may require alteration.*—The Postmaster-General and the constituted authorities, upon consideration of such description and plan, may require such alteration in the position or mode of erection or mode of use of such conductor, or compliance with such other conditions as he or they may think fit, having regard to the protection of the electric lines or works of the Postmaster-General; and any failure on the part of the body or person owning or using, or entitled to use, the said conductor to comply with such requirements shall be deemed to be a non-compliance with these Regulations.

(c) *Notice to be served.*—Any notice required to be served upon the Postmaster-General and the constituted authorities under these Regulations may be served by being addressed to them and left at, or transmitted through the post, to their authorized addresses; and any notice required to be served on the body or person owning or using, or entitled to use any aerial conductor may be served by being addressed to such body or person, and left at, or transmitted through the post to, their or his office or last known place of address.

55. *No departure from regulations.*—In no case shall any of the foregoing Regulations be departed from, unless with special permission of the constituted authorities.

56. *Existing electric conductors.*—All existing electric light or power conductors shall be so altered as to comply with these Regulations, and all future work connected with the erection of electric light and power conductors must be carried out under these Regulations, to the entire satisfaction of the constituted authorities.

NOTE.—Where the supply is for the purposes of electric traction, the foregoing Definitions and Regulations shall not apply except where specially provided in the Regulations for traction.

REGULATIONS AS TO SUPPLY.

1. *Notices.*—One week at least before the undertakers are ready to commence to supply energy through any feeding, charging, or distributing mains, they shall serve a notice upon the Postmaster-General and the municipal or local authorities of their intention to commence such supply.

2. *Supply to be continuous.*—From and after the time when the undertakers commence to supply energy through any distributing mains, they shall maintain a supply of sufficient power for the use of all the consumers for the time being entitled to be supplied from such main, and such supply shall be constantly maintained at such pressure as may be fixed under the provisions of these Regulations, except when the constituted authorities, with the consent of the local authority, permit any variation of pressure or discontinuance of supply during such period as may be approved by such constituted authorities.

3. *Mains to be in section.*—The system of distributing mains shall be so arranged in sections that, in case it becomes necessary to stop the supply through any portion of a main for more than one hour for the purposes of repairs, or for any other reason, the stoppage of supply will in no case exceed in amount a maximum power of 100,000 watts, or extend to the premises of more than 50 consumers; and, in the case of every stoppage for more than one hour, reasonable notice shall be previously given by the undertakers to every consumer affected thereby except in cases of emergency.

4. *Standard pressure to be maintained.*—During the whole of the period when a supply of energy is required to be maintained by the undertakers in the distributing mains under the Order and these Regulations, it shall be maintained at a constant pressure (in these Regulations termed "the standard pressure") to be fixed as hereinafter specified; but such standard pressure may be different for different portions of the distributing mains. Provided that the undertakers shall be deemed to have complied with the requirements of this Regulation so long as the pressure does not at any point vary more than 3 per cent. from the corresponding standard pressure in the case of a general supply at low pressure, or 2 per cent. in case of a general supply at high pressure, unless changes in pressure recur so frequently as to cause unsteadiness in the supply.

5. *Standard pressure to be fixed—Notice of alteration.*—The standard pressure shall be fixed by the undertakers for every pair of distributing mains, and notice of the amount of such standard pressure shall be given to the local authority before the undertakers commence to supply energy to consumers through such mains, and such standard pressure shall not be altered except by permission of the local authority, and upon such terms and conditions as the local authority may impose, and after public notice has been given during a period of one month, in such manner as the local authority may require, of the intention of the undertakers to apply for permission to alter the same. The undertakers may appeal against any decision of the local authority under this Regulation to the constituted authorities, whose decision shall be final.

6. *Pressure at consumers' terminals.*—Before commencing to give a supply of energy to any consumer, the undertakers shall declare to such consumer the constant pressure at which they propose to supply energy at his terminals. The pressure so declared at any pair of consumer's terminals shall not, except by agreement, be greater than 115 volts or less than 45 volts, if continuous, or the equivalents thereof respectively, if alternating; and shall not at any time be altered or departed from, except in consequence of any authorized alteration of the corresponding standard pressure. In distribution on the three-wire system, the central terminal shall, for the purposes of this Regulation, be considered to form a pair with either of the outer terminals, and similarly for multiple-wire systems.

7. *Variation of pressure at consumer's terminals.*—The variation of pressure at any consumer's terminals shall not, under any conditions of the supply which the consumer is entitled to receive, nor at any time, exceed 4 per centum from the declared constant pressure, whether such variation be due to the resistance of the service lines or apparatus belonging to the undertakers, or to any action or effect produced by such apparatus, for which the consumer cannot be shown to be responsible, or partly to any variation of pressure in the distributing mains from which the supply is taken.

8. *Penalty for default.*—If the undertakers make default in complying with any of these Regulations as to supply, they shall, subject to the provisions of the Order, be liable to a penalty not exceeding (suggested £5) for every such default, and to a daily penalty not exceeding (suggested £5).

NOTE.—Nothing in these Regulations shall be construed to authorize the undertakers to lay any electric line, or work their undertaking otherwise than in accordance with the Order and the Act, or to supply energy otherwise than by a system for the time being approved of by the constituted authorities.

II.—ELECTRIC TRACTION REGULATIONS.

DEFINITIONS.

The expression "electrical energy" hereinafter called "energy" means the capacity for doing work by electricity.

The expression "generator" means the dynamo or dynamos or other electrical apparatus used for the generation of energy.

The expression "motor" means any electric motor carried on a car and used for the conversion of energy.

The expression "pipe" means any gas, water, or other metallic pipe, structure, or substance.

The expression "wire" means any conductor used for telegraphic, telephonic, electrical signalling, or other similar purposes.

The expression "current" means any electric current exceeding one-thousandth part of one ampere.

The expression "the company" means the company, person or persons, corporations, and others undertaking the works.

REGULATIONS FOR ELECTRIC TRACTION.

1. *Generator.*—Any dynamo used as a generator shall be of such pattern and construction as to be capable of producing a continuous current without appreciable pulsation.

2. *Return may be insulated or uninsulated.*—One of the conductors used for transmitting energy from the generator to the motors shall be in every case insulated from earth, and is hereinafter referred to as the "line"; the other, hereinafter referred to as the "return," may be insulated throughout, or uninsulated wholly or in part, as is provided for in the following Regulations.

3. Uninsulated return to be of low resistance.—Where the rails on which the cars run or any other conductor within 3 feet of such rails, and metallically connected therewith, form the whole or any part of the "return," such rails and conductor may be uninsulated, and all other "returns" or parts of the "return" shall be insulated from the earth, or, if uninsulated, must be of such sectional area that the difference of potential between the points of the uninsulated "return" furthest from and nearest to the generator shall not exceed seven volts, and a continuous record shall be kept of such difference of potential during the working of the tramway.

4. Height of wire.—Where any part of the "line" or "return" is erected overhead, and is used for conveying the current to the motor by means of a sliding or rolling contact attached to the car, such conductor and connexions thereto shall not, in any part thereof, be at a less height than 18 feet from the ground. All other overhead conductors, including feeders, shall be erected in accordance with the Regulations for aerial conductors.

5. Guard Wires.—Where telephone or telegraph wires cross any part of the "line" or "return" (erected overhead) used for conveying the current to the motor by means of a sliding or rolling contact attached to the car, a galvanized-steel guard wire must be erected at a distance of not less than 18 inches above and parallel to the "line" or "return," such guard wire in all cases to be insulated from the "line" and "return" (when insulated), and connected with earth.

6. Uninsulated return connected with rails.—When any uninsulated conductor laid between or within 3 feet of the rails forms any part of a "return" it shall be electrically connected to each length of rail by means of copper wires or strips having a sectional area of at least one-sixteenth of a square inch or by other metallic connexions of equal conductivity.

7. Negative terminal connected to return and earth.—When any part of a "return" is uninsulated it shall be connected with the negative terminal of the generator, and in such case the negative terminal of the generator shall also be directly connected, through the current indicator hereinafter mentioned, to two separate earth connexions, which shall be placed not less than 20 yards apart.

Water-pipe may be used.—Provided that in place of such two earth connexions the company may make one connexion to a main for water supply of not less than 3 inches internal diameter, with the consent of the owner thereof and of the person supplying the water, and provided that where, from the nature of the soil or for other reasons, the company can show, to the satisfaction of an inspecting officer of the constituted authorities, that the earth connexions herein specified cannot be constructed and maintained without undue expense, the provisions of this Regulation shall not apply.

Efficient earth—Monthly test.—The earth connexions referred to in this Regulation shall be constructed, laid, and maintained so as to secure electrical contact with the general mass of earth, and so that an electro-motive force not exceeding four volts shall suffice to produce a current of at least two amperes from one earth connexion to the other through the earth, and a test shall be made at least once in every month to ascertain whether this requirement is complied with.

Distance from pipes.—No portion of either earth connexion shall be placed within 6 feet of any pipe, except a water main, of not less than 3 inches internal diameter, metallically connected to the earth connexions with the consents hereinbefore specified.

Storage batteries, &c.—When storage batteries, motor generators, or other transforming devices are electrically connected to the line, or any part thereof, they shall be connected to the line, return, and earth in the same manner as the generator, and the same precautions taken to prevent leakage to earth.

8. Uninsulated return—Conditions.—When the return is partly or entirely uninsulated, the following conditions must be observed to prevent injurious leakage from such return to earth:—

- (a) Lay such return,
- (b) Avoid connexion of such return with any pipe or pipes,
- (c) Connect the several lengths of rails by suitable metallic bonding,
- (d) Adopt such means for reducing the difference of potential produced by the current (when the cars are running) between any one point and any other point of the uninsulated return,
- (e) Maintain the efficiency of the earth connexions specified in the preceding Regulations,

So that—

(1) **Leakage to earth.**—The current passing from the earth connexions through the indicator to the generator shall not at any time exceed either two amperes per mile of single tramway line or 5 per cent. of the total current output of the station.

(2) **Leakage to pipes.**—If at any time and at any place a test be made by connecting a galvanometer or other current indicator to the uninsulated return and to any pipe in the vicinity, it shall always be possible to reverse the direction of any current indicated by interposing a battery of three Leclanche cells connected in series if the direction of the current is from the return to the pipe, or by interposing one Leclanche cell if the direction of the current is from the pipe to the return.

In order to provide a continuous indication that the condition (1) is complied with, the company shall place in a conspicuous position a suitable, properly-connected, and correctly-marked current indicator, and shall keep it connected during the whole time that the line is charged.

The owner of any pipes in the vicinity of the uninsulated return may require the company to permit him, at reasonable times and intervals, to ascertain by test that the conditions specified in (2) are complied with as regards his pipe.

9. Connexion with pipe, examination of.—Every electrical connexion with any pipe shall be so arranged as to admit of easy examination, and shall be tested at least once in every three months.

10. Line in half-mile sections.—Every "line" and every insulated "return" or part of a "return," except feeders, shall be constructed in sections not exceeding one-half of a mile in length, and means shall be provided for isolating each such section for purposes of testing.

11. Circuit, insulation of.—The insulation of the "line" and of the "return" when insulated, and of all feeders and other conductors, shall be so maintained that the leakage current shall not exceed one-hundredth of an ampere per mile of tramway. The leakage current shall be ascertained daily before or after the hours of running, when the "line" is fully charged. If at that test the leakage be found to exceed one-hundredth of an ampere steps shall be taken to localize and remove the leak. Should the leakage current exceed one-half of an ampere per mile of tramway, the running of the cars shall be stopped unless the leak is localized and removed within 24 hours. Provided that, where both "line" and "return" are placed within a conduit, this Regulation shall not apply.

12. *Underground cables, insulation of.*—The insulation resistance of all continuously-insulated cables used for lines, for insulated returns, for feeders, or for other purposes, and laid below the surface of the ground, shall not be permitted to fall below the equivalent of 10 megohms for a length of one mile. A test of the insulation resistance of all such cables shall be made at least once in each month.

13. *Telegraph wires, protection from induction.*—Where in any case in any part of the tramway the "line" is erected overhead and the "return" is laid on or under the ground parallel with or nearly in the same direction as any telegraph, telephone, or signalling wires, the property of the Government, the company shall, if required so to do by the Postmaster-General or the constituted authorities, provide, insert, and maintain in the company's line one or more induction coils or other apparatus mutually approved of by the Postmaster-General, the constituted authorities, and the company, for the purpose of preventing, as far as possible, disturbance of the said telegraph, telephone, or signalling wires by electric induction.

14. *Distance between line and insulated return.*—Any insulated "return" shall be placed parallel to and at a distance not exceeding 3 feet from the "line" when the "line" and "return" are both erected overhead, or 18 inches when they are both laid underground.

15. *Feeders.*—In the disposition, connexions, and working of feeders the company shall take all reasonable precautions to avoid injurious interference with any existing wires.

16. *Sparking, prevention of.*—The company shall so construct and maintain their system as to secure good contact between the motors and the "line" and "return" respectively, and shall adopt the best means available to prevent the occurrence of undue sparking at the rubbing or rolling contacts, and in the construction and use of their generator and motors.

17. *Controlling rheostat.*—In working the cars the current shall be varied as required by means of a rheostat containing at least 20 sections, or by some other equally efficient method of gradually varying resistance.

18. *Conduits.*—Where the "line" or "return" or both are laid in a conduit the following conditions shall be complied with in the construction and maintenance of such conduit:—

- (a) The conduit shall be so constructed as to admit of easy examination of and access to the conductors contained therein, and their insulators and supports.
- (b) It shall be so constructed as to be readily cleared of dust or other débris, which on no account shall be allowed to accumulate.
- (c) It shall be laid to such falls and so connected to sumps or other means of drainage as to prevent the possibility of water rising to the level of the conductors.
- (d) If the conduit is formed of metal, all separate lengths shall be so jointed as to secure metallic continuity for the passage of electric currents. Where the rails are used to form any part of a return, each length of rail shall be electrically connected by means of copper wires or strips having a sectional area of at least one-sixteenth of a square inch or by other metallic connexion of equal conductivity. Where the return is wholly insulated and contained within the conduit, the latter shall be connected to earth at the generating station through a high-resistance galvanometer suitable for the indication of any contact or partial contact of either the line or the return with the conduit.
- (e) If the conduit is formed of any non-metallic material not being of high insulating quality, and impervious to moisture throughout, and is placed within 6 feet of any pipe, a non-conducting screen shall be interposed between the conduit and the pipe of such material and dimensions as shall provide that no current can pass between them without traversing at least 6 feet of earth, or the conduit itself shall in such case be lined with bitumen or other non-conducting damp-resisting material in all cases where it is placed within 6 feet of any pipe.
- (f) The leakage current shall be ascertained daily, before or after the hours of running, when the line is fully charged, and if at any time it shall be found to exceed half an ampere per mile of tramway the running of the cars shall be stopped, unless the leak is localized and removed within 24 hours.

19. *Pressure, limit of.*—Where any part of the "line" or "return" is not continuously insulated the pressure on such "line" or "return" shall not exceed 550 volts.

20. *Lightning arresters.*—Lightning arresters of approved pattern shall be placed in the circuit of all conductors, either partly or wholly overhead, at the point where they leave the generating station.

21. *Cut-outs.*—Cut-outs of approved pattern shall be inserted in the circuit at the points where conductors for traction or other power purposes leave the generating station, and so arranged that in the event of a short circuit occurring between the "line" and "return" the current will be automatically cut off.

22. *Records to be kept.*—In order to insure the efficient working of the tramway or railway the following records shall be kept, and all such records shall be available for the information of the constituted authorities at any time:—

Daily Records.

- Number of cars running.
- Maximum working current.
- Maximum working pressure.
- Maximum current from the earth connexions (*vide* Regulation 8, section 1 of paragraph "e.")
- Leakage current (*vide* Regulations 11 and 18).
- Fall of potential in return (*vide* Regulation 3).

Monthly Records.

- Condition of earth connexion (*vide* Regulation 7).
- Insulation resistance of insulated cables (*vide* Regulation 12).

Quarterly Records.

- Conductance of joints to pipes (*vide* Regulation 9).

Occasional Records.

- Any tests made under provisions of Regulation 8.
- Localization and removal of leakage, stating time occupied.
- Particulars of any abnormal occurrence affecting the electric working of the tramway.

APPENDIX B.

**NOTES ON DISTURBANCES CAUSED ON TELEPHONE LINES AT HOBART BY THE
RUNNING OF THE ELECTRIC TRAMWAYS. BY R. HENRY, SUPERINTENDENT
OF TELEGRAPHS IN TASMANIA.**

1. There is a steady humming sound always more or less present, and varying slightly in intensity, more apparent on some lines than on others ; but, although its absence would be desirable, in no case can it be said to destroy conversation, and when persons become accustomed to its presence little notice is taken of it. It is distinctly traceable to induction pure and simple, as it can be easily associated with the running of the generators.

2. An intermittent musical sound, difficult to describe, but reminding one of a steam siren at a great distance. It commences always at a comparatively low pitch, and gradually ascends until it finally disappears, as if the vibrations were too rapid to be rendered audible. It has the peculiar effect also of almost eliminating No. 1, that sound seeming to disappear as the siren increases in pitch. It does not, however, interfere much with speech. Its duration extends over a few seconds only.

3. Another disturbance is a rasping sound, very much like broken contacts with a battery through a telephone receiver, and is the most troublesome of all as regards conversation. This would appear to be caused by direct currents with irregular contacts through dirty rails, &c. It is intermittent.

4. The most annoying trouble is the dropping of the shutters of the Telephone Exchange Board, and some lines suffer considerably more than others, especially the longer ones. It is intermittent and erratic, and is, in my opinion, not so much the result of induction as of direct currents taken up by the earths of the various lines. The greater the number of cars in use, and, consequently, the larger the output of current, the greater the number of shutters affected ; and on occasions when the tram current has been suddenly increased, and as suddenly interrupted—such as the short circuiting of a motor and the burning of a fuse—the effect is more severely felt, as many as 250 out of 400 shutters having come down at one time. This is, of course, an unusual number ; but there are some few shutters on which the effect may be said to be chronic, while the remainder are seldom or never disturbed, except on special occasions such as previously referred to, when the effect is generally confined to between 20 and 60, depending upon the locality in which the occurrence takes place.

The resistance of the earth return seems to be much greater than it should be.

On the 5th and 8th September, 1893, the resistances of the various circuits of the electric tramway were taken as follows :—

	Line.	Earth.	Total.
5th Newtown	... 1·1 ohm	... 4 ohm	... 1·5 ohm
8th Cascades	... 955 „	... 355 „	... 1·31 „
8th Sandy Bay	... 1·23 „	... 23 „	... 1·46 „

The calculated resistance of the rails on each section, allowing 6,000 lbs. per ohm mile, is about—

Newtown	·082 ohm
Cascades	·067 „
Sandy Bay	·072 „

I have not had an opportunity of testing these resistances since, but should not be surprised to find, judging from the increased disturbing effect on the shutters, that they have increased.

The set of observations as to potential were taken on two separate dates—one fine and dry, the other heavy rain ; but there did not seem to be any appreciable difference, except in the case of the telephone line to the tramway station, which gave a “right” deflection on the wet day and “left” on the dry.

A disturbed condition of the atmosphere seems to increase the effects caused by the tram currents, more especially on the approach of thunderstorms. On one occasion, although no trams were running for a portion of the time, there was a continual crackling, like an intermittent battery contact, on the whole of the lines, and lasting for about four hours.

APPENDIX C.

EXTRACT FROM PAPER ON THE HOBART ELECTRIC TRAMWAYS, FURNISHED BY MR. A. C. PARKER, AND LAID ON THE TABLE BY MR. R. HENRY.

Routes.

1. From the corner of Park and Liverpool streets to Cascades Brewery, Macquarie-street.
Length, 210 chains; average grade, 1 in 40.
One grade, 1 in 27 for 25 chains, another 1 in 20 for 10 chains.
One curve, 73 feet radius.
2. From corner of Macquarie and Murray streets to Sandy Bay.
228 chains, steepest grade, 1 in 24 for 6 chains.
Three curves, 67, 70, and 80 feet radius.
3. From corner of Macquarie and Elizabeth streets to South Glenorchy.
270 chains.
Grades, 1 in 16 for 6 chains, 1 in 17 for 23 chains, 1 in 20 for 4 chains, and 1 in 22 for 10 chains.
One curve of 73 feet radius.

Permanent Way.

40-lb. Vignole rails laid in pairs, joined with ordinary fish-plates, and spiked down to hardwood sleepers. A groove of $1\frac{1}{8}$ inch is allowed between the guard and running rail. Single track, with sidings, arranged for a quarter of an hour service. The whole length of one running rail is bonded throughout by copper slips riveted to the ends of each rail.

Overhead Line.

The trolley wire is of 7 m/m. steel wire, carried along the centre of the track at a height of 18 feet 6 inches by span wires of No. 8 B.W.G. steel wire, stretched from Siemens No. 8 iron poles, placed at the edge of the kerbstone on each side of the roadway at intervals of about 40 yards. The trolley wire is electrically connected by means of the span wires to feeders running on one side of the roadway, as follows:—

1. From the generating station to corner of Park and Liverpool streets, 1 wire of 7 strands 2·3 m/m. diameter bare copper wire.
2. From the generating station to Murray-street, 4 wires of 19 strands, 3 m/m.; from Murray-street along Macquarie-street for 2,090 yards, 2 feeders, 19 and 7 strands respectively; thence for 800 yards, 1 of 19 strands; and thence to terminus, 1 of 7 strands; all of 2·3 m/m. bare copper wire; resistance of circuit, 1·31 ohm.
3. From Murray-street for 1,470 yards, 2 wires of 19 strands; thence for 800 yards, 2 wires of 19 and 7 strands respectively; thence for 1,000 yards, 1 wire of 19 strands; and thence to terminus at Sandy Bay, 1 wire of 7 strands; all 2·3 m/m. bare copper wire; resistance, 1·46 ohm.

4. From corner of Macquarie and Elizabeth streets, 2 wires of 19 strands for 1,444 yards; thence 2 wires of 19 and 7 strands for a similar distance; thence and again for 1,444 yards, 1 wire of 19 strands; and thence to terminus at South Glenorchy; 1 of 7 wires all of 2·3 m/m. bare copper wire; resistance 1·5 ohm. All feeders running parallel are electrically connected together to form one conductor.

The generating station is supplied with three of Siemens Bros. H.B. 21/36 dynamos, capable of giving an output of 250 amperes each at 500 volts, with a speed of 350 revolutions per minute, coupled direct with Willan and Robinson's engines, each of 200 horse-power. Only two generators and engines are used for the regular traffic, the third being kept in reserve.

The cars are four wheeled, double deckers, with seating for 48 persons, each car being fitted with two of Siemens Bros'. $12\frac{1}{2}$ horse-power motors coupled in series.

The tramway was opened for traffic on 21st September, 1893, the ordinary service being one car starting from each terminus every quarter of an hour, or twelve in all. On special occasions when the traffic required it two or even three cars were run close together without difficulty.

The number of car miles run during the first twelve months were 351,741 miles, carrying 1,432,899 persons. General and inclusive expenses during the last six months of the year, 6·64 pence per car mile.

RETURNS RELATIVE TO THE TELEGRAPH SERVICE.

VICTORIA, 1894.

C. TODD, Postmaster-General and Superintendent of Telegraphs.

DUPLICATE CABLE SUBSIDY.

APPORTIONMENT on basis of Census Populations of 5th April, 1891.
(Current on this basis until the 31st December, 1896).

Colony.	Amount.
	$\text{£} \text{ s. } \text{d.}$
Victoria.....	13,245 13 11
New South Wales	13,150 15 10
South Australia	3721 15 6
Tasmania	1703 10 6
West Australia.....	578 4 3
	<hr/> $\text{£}32,400 \text{ } \text{0 } \text{0}$ <hr/>

The 20 years' agreement expires on January 25th, 1900.

C. TODD,
Postmaster-General and Superintendent of Telegraphs.

NEW ZEALAND-SYDNEY CABLE GUARANTEE.

Papers tabled by the Hon. J. G. WARD, M.H.R.

STATEMENT of Traffic for period from 1st May to 31st December, 1894.

Amount guaranteed to Cable Company.....	£ s. d.
	<hr/>
Two-thirds thereof equals.....	£17,505 6 8
The actual receipts by the Cable Company during the above period were	7550 10 1
Showing a loss to the Cable Company of.....	9954 16 7
	<hr/>
Say.....	$\text{£}9955 \text{ } \text{0 } \text{0}$ <hr/>

The apportionment of this loss is as follows :—

Cable Company bears $\frac{1}{3}$	2489 0 0
New Zealand bears $\frac{2}{3}$	7466 0 0
	<hr/> $\text{£}9955 \text{ } \text{0 } \text{0}$ <hr/>

New Zealand's $\frac{2}{3}$ share is divided thus :—

N.Z. solus pays $\frac{1}{2}$ ($=\frac{1}{3}$ of total loss) or	2489 0 0
The contributing Colonies (including N.Z.) pay $\frac{2}{3}$ ($=\frac{2}{3}$ of total loss)	4977 0 0
	<hr/> $\text{£}7466 \text{ } \text{0 } \text{0}$ <hr/>

The contributing Colonies' proportion divided on the basis of Population is—

Colony.	Population (Census April, 1891.)	Amount.
		$\text{£} \text{ s. } \text{d.}$

J. G. WARD.

WELLINGTON CONFERENCE, MARCH, 1894.

Papers tabled by the Hon. J. G. WARD, M.H.R.

OCEAN PENNY POSTAGE.

(Service Telegram).

Wellington, 24th March, 1894.

Postmaster General, London.

POSTAL Conference at final sitting passed Resolution against Penny Letter Postage United Kingdom and Colonies, and requested me cable decision. This has been done through Reuter, who will forward you copy Resolution.

J. G. WARD, President.

SIR,

17th April, 1894.

I HAVE the honor to confirm my cablegram to you on the 24th ultimo, advising that a copy of the Resolution in reference to the question of Penny Postage from the United Kingdom to the Australasian Colonies, passed at the final sitting of the Intercolonial Postal and Telegraph Conference held in New Zealand last month, had been cabled to you through Reuter's Telegraph Company, and append herewith copy of the Resolution:—

"That, with regard to the proposals from time to time made for Penny Postage between Great Britain and the Colonies, and, more recently, that such be adopted for letters from the United Kingdom, leaving the rate from the Colonies as at present, this Conference, while recognising the desirableness of adopting the lowest possible rate, desires to express the opinion that the heavy cost of providing speedy and regular communication does not admit of any further reduction being made at the present time, the reduction to $2\frac{1}{2}d.$ in 1891 having resulted in an annual loss to the Colonies of about £40,000; and that the partial reduction proposed, namely, in the rate from Great Britain, would be most undesirable, as such a measure would compel the Colonies to reduce their inland and intercolonial rates from 2d. to 1d., involving a probable loss to them of a quarter of a million per annum, in addition to that already mentioned as the result of the reduction to $2\frac{1}{2}d.$; and that a copy of the foregoing be transmitted to the Imperial Government."

The Resolution was proposed by the Postmaster-General of New South Wales, and seconded by the Postmaster-General of Victoria, and approved by all the Representatives except myself, I dissenting on behalf of New Zealand.

So soon as the Report of the Conference proceedings has been revised six copies will be sent you.

I have, &c.

J. G. WARD, President.

Hon. the Postmaster-General, London.

General Post Office, London,
1st June, 1894.

SIR,

I AM directed by the Postmaster-General to acknowledge the receipt of your letter of the 17th April last, No. P.G. 94/1557A., and to thank you for communicating to him the Resolution recently passed by the Intercolonial Postal and Telegraph Conference against the adoption of Penny Postage from the United Kingdom to the Australasian Colonies.

I am, &c.

H. BUXTON FORMAN.

The President, Postal and Telegraph Conference,
Wellington.

OCEAN MAIL SERVICES.—SAN FRANCISCO MAIL SERVICE.

The Hon. the President of the Postal and Telegraph Conference, New Zealand,
to the Hon. the Postmaster-General, Washington.

Postal and Telegraph Conference, Wellington, New Zealand, 1894.
General Post Office, Wellington, 17th April, 1894.

SIR,

I HAVE the honor to send you herewith (enclosure No. 1.) copy of a Resolution in relation to the San Francisco Mail Service, passed by the Australasian Postal and Telegraph Conference, which sat in this city last month. You will observe that the terms of the Resolution refer both to the

desire of these colonies for the continuance of a service performed through United States territory, and also to the inadequate support accorded the San Francisco service hitherto by your Government, and the prohibitive charges for the United States transit with which, in maintaining it through the now long period of years during which it has been regularly carried on, this colony in particular has had to contend.

Negotiations for the proposed renewal of the service should be set on foot almost immediately, and I shall be glad to learn from you, at as early a date as possible, whether your Government can see its way to increase its payment in aid of the service. I shall also be glad to hear at the same time that your Administration will make an endeavour to have the excessively heavy charges for the United States railroad transit materially reduced. How heavy and entirely disproportionate these charges are you will best gather from the accompanying table (enclosure No. 2.), comparing the Postal Union territorial rates with those levied in the United States. I may say that the Resolution as here communicated to you is the same in effect as was passed at the similar Conference held in Brisbane last year.

I have, &c.

J. G. WARD, President.

The Hon. the Postmaster-General, Washington, D.C.

Enclosure 1.

EXTRACT from the Report of the Proceedings and Debates of the Postal and Telegraph Conference, held in Wellington, New Zealand, in March, 1894. (Tuesday, 6th March, 1894.)

Resolved,—That, in the opinion of this Conference, it is desirable that a four-weekly service *via* San Francisco be continued, and that strong representations be again made to the United States Government, pointing out the inadequate support given to the service by them, and urging for an increased payment in support of the line, and that further representations be made to obtain a reduction in the heavy overland charges.

Enclosure 2.

STATEMENT showing the Postal Union Territorial Rates compared with the American Territorial Rates, and the difference between them.

Class of Correspondence.	Union Territorial Transit Rates.*	American Territorial Transit Rates.†	Difference.
Letters	8·64d. per pound	27·5d. per pound	18·86d. per pound.
Other articles	1·08d. ,,	8·5d. ,,	7·42d. ,,

* Article IV., § 3, Section I., Universal Postal Union.

† Postmaster-General's Report, 1892, XII.

The Superintendent of Foreign Mails, Washington to the Hon. the Postmaster-General, Wellington.

Post Office Department, (Office of Foreign Mails), Washington, D.C., 8th June, 1894.

SIR,

I HAVE the honor, by direction of the Postmaster-General, to acknowledge the receipt of your letter of the 17th April, enclosing copy of a Resolution in relation to the San Francisco Mail Service passed by the Australasian Postal and Telegraph Conference which convened in the City of Wellington in the month of March last, and of which you were the President, which Resolution calls attention to "the inadequate support" given by the Government of the United States to the steamship service between San Francisco and Auckland, and urges an increased payment to the steamship line and a reduction in the overland transit charges.

In reply I am directed to inform you that the payments now being made to the steamship company are the maximum allowable under existing laws, that said payments cannot be increased, and that the rates charged for the transit between New York and San Francisco cannot be reduced without further legislative authority, which authority cannot be hoped for at present in view of other important measures pressing upon the attention of Congress, and the short time that probably remains before its adjournment.

The Postmaster-General appreciates the value of the regular mail communication with the Colonies by means of steamers sailing from San Francisco to Auckland, and is disposed to exercise to the fullest extent the powers vested in him by law in order to encourage and promote the

service; but, until additional legislation shall enlarge those powers, he will be without authority to increase the payments to the steamship company, or to reduce the charges for the transit between New York and San Francisco.

I am, &c.

N. M. BROOKS, Superintendent of Foreign Mails.

The Hon. J. G. WARD,
Postmaster-General, Wellington, N.Z.

POSTAGE ON CIRCULARS FROM THE UNITED KINGDOM.

18th April, 1894.

SIR,

I HAVE the honour to inform you that at the Australasian Postal and Telegraph Conference, which commenced its sittings at Wellington last month, the question was brought forward "whether the Colonies might not fairly object to deliver English packets prepaid $\frac{1}{2}d.$ while 1d. is levied in the Colonies," and it was directed that "a request be addressed from this Conference to the authorities of the London Post Office to assist the Colonies in this respect." In bringing the matter under your notice I have to point out that the Australian Colonies have to deliver large quantities of British trade circulars on which only $\frac{1}{2}d.$ postage is paid, while the minimum rate levied by the Colonies on similar matter is 1d. Owing to the comparatively small quantity of such matter for England from Australia the system of unequal rates works unfairly, and it is found that the Colonies lose both in trade and postage through large numbers of circulars from Australian firms being printed as well as posted in England. I shall therefore be glad to learn whether your office will consider the desirableness of raising the postage rate for circulars for the Colonies from $\frac{1}{2}d.$ to 1d. for every two ounces, so as to make it uniform with the rate charged on such matter from the Australian Colonies.

I should add that the recommendation of the Conference was not endorsed by me on behalf of this Colony, the minimum rate for circulars from New Zealand being the same as that charged in the United Kingdom.

I have, &c.

J. G. WARD, President.

The Hon. the Postmaster-General, London.

General Post Office, London, 1st June, 1894.

SIR,

I AM directed by the Postmaster-General to acknowledge the receipt of your letter of the 18th April last, in which, on behalf of the Australasian Postal and Telegraph Conference, you enquire whether this Department will consider the question of raising the postage chargeable upon circulars from the Colonies from $\frac{1}{2}d.$ to 1d. for every 2 ounces, so as to make it uniform with the rate charged in Australia.

Mr. Arnold Morley learns with regret that inconvenience is caused to the Australian Post Offices by the difference existing between the British and Colonial rates of postage for printed matter, but he desires me to point out that the rate chargeable here is but the simple Postal Union rate—that it has been uniformly adopted for all classes of printed matter, including newspapers—and that it applies not only to the Australasian Colonies but to all other parts of the Empire, and indeed to all destinations outside the United Kingdom.

For these reasons, while far from ignoring or underrating the temporary inconvenience sustained by the Colonial Post Offices so long as they are not in a position to follow this Department in adopting the Union rate in its simplicity, the Postmaster General finds himself unable to take a step the result of which would be to deprive the public here of the great benefit of uniform postage to which they have now become accustomed.

I have, &c.

H. BUXTON FORMAN.

New Zealand,
General Post Office, Wellington, 5th September, 1894.

SIR,

I HAVE the honour to acknowledge the receipt of your letter of the 1st June, No. 182 U., addressed to myself as the President of the late Postal and Telegraph Conference, in reply to the letter of the 18th April last.

I note that your Department does not see its way to raise the rate of postage chargeable on circulars for the Colonies from $\frac{1}{2}d.$ to 1d. for every 2 ounces, and I have forwarded a copy of your reply to the Australian Post Offices.

I have, &c.

J. G. WARD, Postmaster-General.

The Secretary, General Post Office, London.

PACIFIC CABLE.

The Hon. the President, Postal and Telegraph Conference, Wellington,
to the Hon. the Premier, Ottawa.

SIR,

Post and Telegraph Conference, Wellington,
New Zealand, 18th April, 1894.

I HAVE the honor to forward herewith copy of a Resolution in relation to the proposed Canadian-Pacific cable, passed at the Australasian Postal and Telegraph Conference, which commenced its sittings at Wellington on the 5th ultimo.

You will observe that the terms of the Resolution suggest that the countries interested in securing cable communication between Canada and the Australasian Colonies should join in guaranteeing for fourteen years a sum of £72,000 per annum—the amount of interest on the proposed capital—to any company undertaking the laying of a Pacific cable by either of the routes mentioned; and the Representatives to the Conference, with the exception of those from South and West Australia, will recommend their Governments to this effect. I have accordingly to ask whether your country will be prepared to join the Colonies in the proposed guarantee, and, if so, I venture to express the hope that the interests of your country will admit of your Government being able to affirm its determination to bear a substantial proportion of the cost. I shall also be glad to hear at the same time that you will co-operate with the Colonies in securing the assistance of the Imperial Government in the guarantee.

I have, &c.

J. G. WARD, President.

The Hon. the Premier, Ottawa, Canada.

Resolution—Canadian Pacific Cable.

Resolved—"That, considering the important interests involved, both of a national and commercial character, in the establishment of a Pacific cable, the Representatives of the respective Colonies assembled at this Conference recommend their Governments to consider the desirability of entering into a guarantee with the other countries interested, for a period not exceeding fourteen years, and to guarantee interest at 4 per cent. on a capital of not more than £1,800,000 to any company undertaking the laying of a Pacific Cable; the tariff not to exceed 3s. per word for ordinary telegrams, 2s. per word for Government telegrams, and 1s. 6d. per word for Press telegrams, to and from Great Britain and the Colonies; and that the United Kingdom be asked to join in the guarantee; the routes to be either of the following:—Brisbane to Ahipara Bay (New Zealand,) Ahipara Bay to Suva, Suva to Apia, Apia to Fanning Island, Fanning Island to Sandwich Island, Sandwich Island to Vancouver; or from New Zealand to Suva, Suva to Apia, Apia to Fanua Island, Fanning Island to Sandwich Islands, Sandwich Islands to Vancouver."

The Hon. the Premier, Ottawa, to the Hon. the President of the
Postal and Telegraph Conference, Wellington.

DEAR SIR,

Office of the Minister of Justice,
Ottawa, 16th May, 1894.

In reply to your letter of the 18th April, which I have just received, I beg to say that the Government of Canada has not formulated any policy guaranteeing aid to the proposed trans-Pacific cable. The matter will no doubt be fully discussed at the coming Conference to be held here next month, but in the meantime no assurance can be given that the Canadian Government will be in a position to make any appropriation in aid of the project.

Yours, &c.

JNO. S. D. THOMPSON.

The Hon. J. G. WARD, President, Postal Telegraph Conference,
Wellington, New Zealand.

The Hon. the President of the Postal and Telegraph Conference, New Zealand,
to the Railway Companies in the United States.

Postal and Telegraph Conference, New Zealand, 1894.
Wellington, 18th April, 1894.

SIR,

I HAVE the honor to forward herewith copy (see enclosure in letter to Postmaster-General, Washington), of a Resolution passed by the Australasian Postal and Telegraph Conference which sat in this city last month.

The Resolution refers, you will perceive, to the very heavy charges which have to be paid for the United States territorial transit on closed mails from the Colonies. It is with reference to those that I am desired to submit for your consideration the accompanying table showing the difference between the Postal Union territorial transit rates and those levied by the railroad companies of the United States, and to

express the hope that the way may be seen towards materially reducing the latter, and thus affording substantial relief to this Colony, the one principally concerned in the maintenance of the San Francisco service. Action in this direction would undoubtedly directly conduce towards the continuance of a service which has at present the support, notwithstanding the disadvantages of excessive charges and a rival route, of a large section of the mercantile community of this country, whose wishes the Postmaster-General is in every way himself disposed to second.

The Resolution I now submit, bespeaking for it your most earnest consideration, is effectually the same as that passed by the same body at its meeting in Brisbane, Queensland, last year. I beg the favour of a reply at your earliest convenience.

I have, &c.

J. G. WARD, President.

JOHN M. TOUCY, Esq.,
General Manager, New York
Central Railroad, New York
City.
A. N. TOWNE, Esq.,
General Manager, Southern

Chicago and North-Western
Railroad, Chicago, Ill.
JOSEPH WOOD, Esq.,
General Manager, Pennsyl-
vania Line, Pittsburgh,
Penn.

The Resident Agent for New Zealand, San Francisco, to the Secretary,
General Post Office, Wellington.

San Francisco, California,
31st May, 1894.

SIR,

I have the honor to acknowledge the receipt of your communication of the 17th April, enclosing communications for the managers of the various railroads engaged in the transportation of the New Zealand mails from San Francisco to New York.

* * * * *

I have also thought it advisable to accompany these letters with a communication (a copy of which is enclosed), in an endeavour to make rather a more prominent stress on the matter of competition with the Canadian Pacific, because I consider that will be our greatest leverage to accomplish the object sought.

In response to these communications I have only received one reply : the others doubtless have been forwarded direct to New Zealand. The communication received (now enclosed) is from the General Manager of the Southern Pacific Company, whose headquarters are in this city. From this communication you will observe that that Company is of the opinion that nothing can be done in the direction of reduction of transit charges except through the United States Government. The question of identity of mail-matter is, of course, one which is not of any importance, as all Australian mails have an entirely distinct exterior to those originating in the United States.

* * * * *

I have, &c.

H. STEPHENSON SMITH, Resident Agent.

W. GRAY, Esq., Secretary,
General Post Office, Wellington, N.Z.

Enclosure 1.

The Resident Agent for New Zealand, San Francisco, to the General Manager
of United States Railway Companies.

San Francisco, California, 12th May, 1894.

SIR,

By direction of my Government, I have the honor to enclose for your information a communication from the President of the Intercolonial Postal Convention, held at Wellington, New Zealand, in April last, with enclosures, having reference to the question of the reduction in transit charges for the conveyance of the British mail from Australia to the United Kingdom and return.

The difference in transit charges, as shown by the enclosed papers, is most marked, and it is sincerely to be hoped that you may see your way to make a concession, in order to strengthen the hands of the New

Zealand Government, who, notwithstanding the very strong pressure brought to bear to relinquish the American service in favour of the Canadian line, is still favourably disposed towards maintaining a service which is of more or less benefit to the American transcontinental railroads.

Soliciting your earnest consideration of the enclosed communication,

I am, &c.

H. STEPHENSON SMITH, Resident Agent.

JOHN M. TOUCEY, Esq., General Manager New York
Central Railroad, New York [and other General Managers].

Enclosure 2.

The General Manager, Southern Pacific Railway Company, San Francisco,
to the Resident Agent for New Zealand.

San Francisco, California, 15th May, 1894.

DEAR SIR,

MANY thanks for your favour of the 12th instant, with enclosure from the President of the New Zealand Postal and Telegraph Conference, relating to cost of transportation of mails across the United States.

Section 802 of Postal Laws and Regulations reads: "The Postmaster-General may make any arrangements he may deem just and expedient for allowing the mails of Canada or any other country adjacent to the United States to be transported over the territory of the United States," etc.

We have no way for indentifying the New Zealand mails, as they are carried under the general arrangement which we have with the United States Government, and their weight goes in with the weight of other mails, on which we receive compensation. Any arrangement, therefore, for transporting any particular mails at other than regular rates of compensation will have to be made between the New Zealand officials and the United States Post Office Department, as there is no ground on which a transportation company can treat with a foreign country on such a matter.

Regretting that we are not in a position to do something to help you out in the direction indicated,

I am, &c.

A. N. TOWNE.

H. STEPHENSON SMITH, Esq., Resident Agent,
New Zealand Postal Service, San Francisco.

NEWSPAPER POSTAGE TO THE UNITED KINGDOM.

SIR,

New Zealand,
General Post Office, Wellington, 19th April, 1894.

I HAVE the honor to refer to my letter of the 7th February last, F 94/219, and previous correspondence, on the subject of the newspaper postage from this Colony to the United Kingdom, and to inform you that at the Australian Postal and Telegraph Conference which sat here last month, it was agreed that the whole of the Colonies should adopt the rates of postage on newspapers to the United Kingdom approved at the Brisbane Conference last year, namely, one penny for the first four ounces, and a halfpenny for every additional two ounces. The change will probably take effect from the 1st July next, and I trust that newspapers from this Colony prepaid at the postage rates now in force will not be surcharged by your Department in the meantime.

I enclose copy of the recommendation as agreed to by the Conference.

I have, &c.

W. GRAY, for the Postmaster-General.

The Secretary, General Post Office, London.

SIR,

General Post Office, London, 12th June, 1894.

FROM your letter of the 19th April last, No. PG 94/122, the Postmaster-General has learnt with satisfaction that the Wellington Postal Conference confirmed the resolution of the Brisbane Conference as to the adoption of uniform postage for newspapers sent from the several Australasian Colonies to the United Kingdom, and that, in New Zealand, the rate agreed upon, namely, one penny for the first four ounces and a halfpenny for every additional two ounces, will probably take effect from the 1st July next.

You will doubtless send further information shortly as to the actual date on which the new rate is to be brought into operation in New Zealand; and for the present newspapers from the Colony prepaid at the existing rate of 1d. per paper will still be passed here without charge.

I am, &c.

H. BUXTON FORMAN.

The Postmaster-General, Wellington.

BRISBANE-ADELAIDE MAIL TRAIN.

SIR,

11th May, 1894.

You may remember that the question of the acceleration of the mail train between Brisbane and Adelaide was brought up at the recent Conference, and that the Hon. Mr. Wilson, the delegate from Queensland, suggested that your Government might be requested to take action in the matter. Mr. Wilson, in course of his remarks, stated that the present arrangements, especially between Brisbane and Sydney, were very unsatisfactory, and that it was possible that a further acceleration between Victoria and South Australia might, on enquiry, be found advisable. I therefore refer the matter to you for consideration and action.

I have, &c.

J. G. WARD, President.

The Hon. the Postmaster-General, Sydney.

ITALIAN SURCHARGES.

SIR,

11th May, 1894.

I HAVE the honour to inform you that the question of the sea surtax charged by Italy on letters for Australasia was considered at the Australasian Postal and Telegraph Conference, which sat at Wellington in March last, and the following recommendation was agreed to:—

"Complaints having been made of a surcharge of $1\frac{1}{2}d.$ upon letters from Italy addressed to Queensland, which bore postage at the rate of $2\frac{1}{2}d.$, making the rate equivalent to that fixed for countries not within the Union, we recommend that the International Bureau of the Universal Postal Union at Berne be asked to explain why such letters are subject to this excessive charge, contrary to the principles of uniformity which should prevail amongst countries within the Union, the charge between which is $2\frac{1}{2}d.$, not $4d.$, as appears to be charged by Italy on letters to Australasia."

I shall be glad to learn that you will give this matter your full consideration with a view to making representations to the Italian Administration for the abolition of the surtax on letters to Australasia, seeing that the Colonies, which have to maintain expensive systems of maritime transit, charge only the ordinary Postal Union rate of $2\frac{1}{2}d.$ per half-ounce on letters for Italy.

I have, &c.

J. G. WARD, President.

The Director, International Bureau of the Universal Postal Union,
Berne.*Translation.*International Bureau of the Universal Postal Union,
Berne, 23rd June, 1894.

SIR,

By letter of the 11th May last, No. J 94-619, you were good enough to ask me to take steps to request the Italian Post Office to abolish the surcharge of 15 centimes ($1\frac{1}{2}d.$) levied on each single rate of letters, which, like those for Queensland, are subject to the maritime transit charges of 15 francs per kilo.

As I have already intimated to the Post Office and Telegraph Department of South Australia, at Adelaide, which had written me on the subject, I have the honour to inform you that paragraph 2 of Article 5 of the Principal Convention reserves to all the Administrations of the Union the right to levy on letters subjected to the above maritime transit charges a surcharge which may not exceed 25 centimes ($2\frac{1}{2}d.$) per 15 grammes. The Italian Administration makes, in conformity with that provision, a surcharge of 15 centimes per single rate on letters. This is perfectly regular, as it does not exceed the maximum above mentioned.

In terms of the same paragraph the surcharges adopted by the Administrations of the Union must be levied in uniform manner in all the relations to which the transit costs are applicable. The Italian Administration could not, therefore, make an exception in favour of letters from Italy to the British colonies of Australasia without being obliged at the same time to abolish the surcharge levied on other letters under similar conditions.

I doubt, however, whether the Italian Administration would be disposed to abolish in a general manner the surcharge of 15 centimes in question, and I have the honour to beg of you to kindly re-examine the question, and to inform me whether, under the conditions stated, it does not appear to you inopportune to approach that Administration in the direction indicated in the aforesaid letter.

I have, &c.

ED. HOHN, Director.

The President, Postal and Telegraph Conference, Wellington.

Translation.

No. 6556-323.
SIR,

The International Bureau of the Universal Postal Union,
Berne, 6th December, 1894.

REFERRING to my circular of the 18th July, 1893, No. 4905-266, the Postal Administration of Italy requests me to inform you that from the 1st January next it will cease to levy the maritime surcharge which is applicable to letters in its country.

Therefore, correspondence of every class addressed to other countries of the Union will be liable in Italy to the normal Union charges only as from the aforesaid date.

This system will be equally applicable to correspondence forwarded by the offices to the Italian colony of Eritrea.

I have the honor to beg that you will take note of this information.

I have, &c.

ED. HOHN, Director.

ELECTRIC TRAMWAYS, LIGHT, AND POWER.

SIR,

11th May, 1894.

I HAVE the honor to refer to Subject 34, Electric Tramways, Light, and Power, printed at page 25 of the Report of the Proceedings of the Wellington Postal and Telegraph Conference, and to convey to the Committee the thanks of the Conference for its very valuable and interesting Report.

The suggestion that the Committee might report on the Electric Tramways, and draft regulations applicable to Electric Power Leads generally, will no doubt receive early attention at the hands of the Committee.

I have, &c.

J. G. WARD, President.

Sir CHARLES TODD, K.C.M.G.,

Chairman Committee of Electric Light and Tramways,
Adelaide.

SIR,

General Post Office, Adelaide, 4th August, 1894.

I have the honor to acknowledge the receipt of your letter of the 17th May last, conveying the thanks of the recent Wellington Conference to Committee of Experts for their Report on Electric Light Leads, which I will convey to the several members thereof; and in reply would inform you that I propose to convene a meeting of the Committee to meet in Melbourne in September or October to draft regulations applicable to Electric Power Leads generally.

I must apologise for not replying earlier, owing to great pressure of work since my return from Wellington.

I have, &c.

CHARLES TODD,
Postmaster-General and Superintendent of Telegraphs.

The Hon. J. G. WARD, M.H.R., Postmaster-General,
Wellington.

COLOURED LABOUR ON MAIL STEAMERS.

Trades Hall Council, Melbourne, 29th January, 1895.

To Chairman and Members of Postal Conference.

GENTLEMEN,

I HAVE been instructed by the Trades Hall Council to write and protest against any extension of the Mail Contract to the P. & O. Steamship Company as long as they continue to employ coloured labour on their boats.

For some years we have, as well as the Councils of the various colonies, endeavoured to have this injustice rectified, and have received promises from the various Governments that when the question of a renewal of the service arrived the matter would be considered.

From the expressions of the various Postmasters-General they are unanimous upon this question, and we are of opinion, from the attitude of the last Conference which sat in New Zealand, that a strong protest should be forwarded to the Imperial Government ; in fact, the Conference, in our judgment, should not consent to any renewal unless white labour is employed.

As the taxpayers of the colonies are called upon to pay a heavy subsidy, they certainly object to being brought into competition with alien races. Further, the various Australasian Governments from time to time have thought it wise to pass Acts in the various Legislatures restricting aliens ; this being so, the employment of these on the boats carrying Her Majesty's mails cannot be justified. Cheap labour, in our judgment, is dear labour, and though under ordinary circumstances coloured labour is endurable while everything is going right, they have neither the strength nor stamina nor the brain power to rise to the occasion if the necessity arose, and the consequences to a vessel so manned in a moment of calamity would be too terrible to contemplate.

If the Orient Company, whose fleet is equal if not superior to the P. & O., can employ white labour, surely it is no injustice to compel a subsidised company to comply to these conditions.

Trusting that the Conference will carry out this much-desired and necessary reform,

Yours faithfully,

J. G. BARRETT, Secretary Trades Hall Council.

Sydney.

Peninsular and Oriental Steam Navigation Company,

28th January, 1895.

SIR,

AT the deputation which waited on you on the 23rd instant, in reference to the employment of native crews on board mail steamers, I find according to the newspaper reports that several utterly wrong statements were made by some of the gentlemen present, and apparently allowed to go unchallenged.

In the first place I would like to mention that "Coolies," who are a low type of labourer employed in India for unskilled labour, are not to be found in any capacity on board this Company's vessels. Lascars are British subjects, and are skilled sailors from the West Coast of India. They have for years and years past been employed to the entire satisfaction of the Directors and all the Commanders and Officers of this Company. To say that they cannot be relied on in cases of emergency is simply doing a great and wicked injustice to a hardworking, brave, and deserving class of Her Majesty's subjects. In the case of the "Tasmania," I am sorry that one of the gentlemen who waited on you should have thought fit to again repeat a statement which his interest in the subject should have enabled him to satisfy himself was incorrect. This he could have done by applying to me or any one knowing something about the Board of Trade enquiry which took place in London, and which conclusively proved that the natives behaved under appallingly trying conditions in a most admirable manner, and that those who lost their lives did so at their posts while doing their duty. As you are no doubt aware, not a single passenger was lost.

The reason of this Company employing Native crews in preference to Europeans is, that after many years experience of both, the former have proved themselves to be in every way more satisfactory. The immediate reason for doing away with European crews in the lower grades was that they caused an infinity of trouble through drunkenness and disobedience, &c. As a matter of fact the employment of Lascars costs the Company more than if they employed Europeans, for the reason that the former are kept and paid all the year round, whereas the latter are as a rule signed off the articles on their arrival in London.

The only steamers of the British India Company on which Lascar crews are not carried are those of the Queensland Royal Mail Company, who are compelled very much against their will to carry European crews. To my certain knowledge the Queensland Royal Mail Company have not benefited by the change, and if they had their choice they would doubtless revert to the employ-

ment of Lascars. It is quite safe to say the British India Company proper would not dream of employing anything but coloured labour.

I feel considerable diffidence in troubling you just on the eve of your departure for Tasmania, but the importance of the subject emboldens me to do so.

I have made several efforts to see you, but have been unsuccessful.

I have the honor to be, Sir,
Your obedient Servant,

G. D. MICHIE, Agent.

The Hon. J. Cook, M.L.A., Postmaster-General, Sydney.

Deputation against employment of Coloured Labour on Ocean Mail Steamers; also re a Minimum wage.—23-1-95.

Mr. T. M. DAVIS, M.P., introduced to the Postmaster-General a deputation from the Seamen's Union against the employment of coloured labour on the Ocean Mail Steamers.

Mr. Davis said he had been asked to introduce the deputation, consisting of Mr. Jewell, president, Mr. Smith, secretary, Mr. McLean, treasurer, and Mr. Noonan, one of the executive officers of the Seamen's Union, (Mr. Watson, M.P., also present), to lay before the Minister the necessity for refusing to subsidise any steamers carrying Asiatic labour: he supposed that term took in all that was objectionable. Some time ago he had introduced a deputation of the labour party to the previous Postmaster-General, Mr. Kidd, asking him, prior to the extension of the contract with the P. and O. Company, to make it a condition that white labour should be employed on board those steamers, and Mr. Kidd said he would place the matter before the Cabinet and give it the fullest consideration. Mr. Davis had then pointed out that the South Australian Government was entirely in accord in this matter, and the Victorian Government was being deputationised at the time with a view to similar results. However, it transpired that the Conference which Mr. Kidd attended decided to allow the Service to go on for 12 months (having been asked, he believed, by the Imperial Government to extend the contracts for 3 years), and that that 12 months being now nearly up, he now asked Mr. Cook, as Postmaster-General, to use his best influence with the other Postal Departments to have Asiatic labour stopped on the P. and O. boats.

There were many reasons why it should not be employed, and one of the principal was that as a race the coloured men were entirely unsuited to the manning of our steamships, especially in times of danger: that had been proved over and over again. Whenever a P. and O. steamer had got into danger through collision or wreck, they had invariably proved that they were not up to the standard in endeavouring to save life or mails. In the case of the "Tasmania," wrecked in the Straits of Sardinia on the voyage home, the records show that the crew behaved in a most selfish manner—practically mutinied, and took the life-boats, &c.

Another reason was that whenever from time to time the small-pox, or any other of those diseases that are looked upon as indigenous to Eastern countries, had appeared on our shores it was generally through the agency of Asiatics from those vessels. The P. and O. and the Torres Straits Mail Companies had had cases of this sort. He thought that as the Colonies contributed such a large sum towards the subsidy of the P. and O. Co., they ought to be on the same conditions as the Orient Co. The latter carried out their contract quite as well, and he believed gave more satisfaction and were more popular than the P. and O. Co., at any rate so far as safety was concerned in the passenger traffic. They employed white men, and kept their vessels in a most efficient state. It had been amply demonstrated by that Company that white crews are far and away the most efficient, and he thought it was nigh time something was done to give employment to our own race of people.

Her Majesty's Navy never sought crews of Asiatics. However long the ships stayed in the Eastern waters—and even though they thought fit to employ Hindoos as soldiers in India—yet they had always been wise enough not to attempt to employ Asiatics on board men-of-war, because although some of the race have shown themselves fair soldiers, they had demonstrated themselves as utterly incompetent and useless at sea, and the British Admiralty knows that. That of itself ought to be a fair reason: that a race not good enough for the Naval Service was not suitable for our Mail boats.

Another subject he wished to bring under notice was that in contracts entered into with Steamship Cos. where subsidies are granted, there ought to be something like a minimum wage named in the contract. It was done in the case of contracts on shore in several Colonies, and when such a plan found favour with Ministers and Ministries on shore, he could not see why the same principle could not be extended to contracts at sea. He thought the system could be very well worked, and the State would lose nothing by it. If it was fairly put before the Postal Conference about to be held they ought to see their way to agree upon some conditions being imposed.

Mr. S. SMITH was understood to say that the seamen had lately been in correspondence with other provinces and the United Kingdom with a view to bettering their position, and Mr. J. H. Wilson, President of the British Seamen's Union, had been moving in his capacity as representative on their behalf in this matter, but nothing had yet been done, though action was hoped for from the last Postal Conference. Apparently they were not strong enough to enforce a stipulation that the Contract should not be extended unless European crews were employed. An endeavour was, he

understood, now being made to extend the Contract till 1898, and from a letter of Mr. Prendergast, M.P., Victoria, he learned that their delegates were prepared to strongly oppose any further extension unless white labour was introduced to the P. & O. Co.'s boats. The same determination was held by South Australian delegates. The seamen and the workers of New South Wales who contribute the money that subsidises the boats thought they should be manned by Europeans, and New South Wales—and this city especially—thought that something should be done to create an Australian mercantile marine. Newspapers lately had given considerable prominence to what they called "The disappearance of the Australian seaman," but they who had been on the coast for years were inclined to think he had not yet been developed. But in this way he could be encouraged by giving employment to men of our own race. As regards manning the Navy, the mercantile marine should form a nursery for the creation of seamen who could be called upon when required in times of danger and emergency.

In Queensland the stipulation was made that white labour should be employed, and the same thing applied in New Zealand, and in regard to other lines trading out of this port such as the Oceanic (American) line, and the Vancouver line. A Conference now sitting in Sydney had desired these representations to be made, and had expressed also a strong wish that some regulation should be inserted in the contracts that a minimum wage should be paid. Recently, in a contract given by our own Government, the people who had got the contract expressed themselves willing to pay certain wages, and the seamen trusted them, but the gentlemen who got the contract had taken advantage of their position to alter the wage rate. The seamen were aggrieved at this. The opinion in South Australia and Victoria was strong on this matter, and they as well as the seamen here desire to have this question finally adjusted by a decision that only European crews shall be employed. It was against the policy of the country to say that people of our own race shall be shoved out of employment and men of another race used for the object of enriching a few people. There was an almost unanimous feeling amongst seamen that no contract should be given to any steamship line inclined to employ Asiatic crews, and he asked Mr. Cook to use his best endeavors to have the matter settled.

Mr. JEWELL supported what had been said by the previous speakers, and said that he asked the Minister to take up a stand not alone on behalf of the seamen, but of the taxpayers in general.

Mr. M'LEAN said if these coloured men were trading to and from their own ports, say from India to Britain, it would be different, but he thought they should be stopped trading to an Australian port, and the boats manned by Australian seamen. Newspapers talked about the disappearance of the Australian seaman, and asked why Australians did not go to sea? They did not go because they had very little opportunity, and when they did wages earned were very small, and they had to go among coloured men. The Orient Co. paid white crews about £4 10s. per month, whilst Asiatics get about 30s. They are no good to this country, and do not spend anything in it. The Government ought to assist them to become seamen on board our own mail boats by abolishing coloured labour from them. He had been on the coast 16 years.

Mr. NOONAN, who had been on the coast 13 years, said there was a lot of dissatisfaction about coloured labour, and it was not right to employ it between England and Australia—two white countries—and he did not see how it could be stopped unless the Government put it in the contract. He alluded to the loss of the "Quetta" as an instance of the bad results of coloured labour.

Mr. J. C. WATSON, M.P., sympathised entirely with the objects of the deputation.

The POSTMASTER-GENERAL said: I may say at once that I am in hearty sympathy with your desire to replace black or coolie labour on the P. and O. boats with white. From inquiries I have made on this subject, it appears to me that the P. and O. Co. is really the only Company now which runs boats to our ports manned with coolie labour: I understand the British India Co. have dispensed with this kind of labour, and now employ only European crews. There can be no doubt that the strongest point made is that the sister Company now employs white labour. That, to my mind, is the answer to all the objections made. It has been averred that the white labour is not so amenable to discipline: that I do not believe, and never did. The fact that white labour is preferred on the sister line is sufficient answer to such objections. Why the P. and O. Co. prefers to use black labour in preference to white I have never been able to understand, except on the score of cheapness. Well, on that matter, it has always seemed to me that as we are partners in this agreement to such an extent, paying as we do £75,000 a year to the two Companies, we ought to say at once that the subsidy we pay shall be for the purpose of assisting ships to employ our own labour in preference to this coolie labour. I take it that the test of this labour, or rather this race, question, is the indisposition on the part of the people to mix. I understand that these boats do not attempt to mix the coloured labour with the European: there must be, therefore, an impassable barrier of some kind, and the Company evidently makes a choice between two kinds of labour. Certainly that choice should be made in favour of white men. Another point seems a strong one,—that most of these vessels are made available to the Admiralty in case of war, and it is a fact that if a war broke out we would not think of manning these ships for war purposes with this kind of labour. I think it is a point that ought to weigh very much with the Admiralty at home. When they make arrangements for these ships to be available, they should also make some provision to ensure white crews who would pull together. You speak of co-operation with the other Colonies, and I am glad in a matter of this kind that you recognise that.

We are parties to this agreement to the extent of £75,000 a year—*we* pay one moiety of that, the Imperial Government subsidises to the extent of £90,000, so it is clearly a matter for arrangement if possible with the other parties to the agreement. All I can say is, I shall go to the Conference with my own mind clearly made up as to the kind of labour it is desirable to get on these boats, and shall use my best endeavours throughout the Conference to get white labour to carry our mails. I do not know that I can say any more.

Mr. DAVIS expressed satisfaction on behalf of the deputation at the answer given.

After the Minister's reply, and the business of the deputation had practically closed, **Mr. Davis**, M.P., alluded to a remark of **Mr. Cook's** to the effect that he could not understand why the Company employed black labour in preference to white, except on the score of cheapness.

Mr. DAVIS remarked : It is not so much even on the score of cheapness that the P. and O. Company carry black labour crews. They do not give the black seamen anything like the wages the European gets, but they carry such an enormous number of hands that it makes their bill come very close up to that of the Orient liners. I have been in the Orient and P. and O. boats, both, and in the P. and O. they have to carry so many quartermasters to do the steering and to take up positions of trust because they cannot afford to run the risk of their ships being lost by placing an Asiatic at the wheel or on the look-out. Whenever they come within a certain distance of land, a European quartermaster has to go on the look-out, and it is him they have to depend on. Then they carry white men to do the steering ; I was one of them ; I was in the *Oceanic* and the *Cotopaxi*, and we summed up the number carried on those vessels approximately. They were each about 4100 tons, and the number of hands carried on the *Oceanic* was so far in excess of the number on the *Cotopaxi* that actually the wages sheets did not show much difference : for while the *Cotopaxi* was fully manned with her 20 A.B's., her quartermasters, 2 boatswains' mates, and boatswain, the *Oceanic* had something like 45 hands at lower wages. The black labour is useless in times of danger : I have myself seen a sail blown away in a light squall while the yard was covered with coolies who could not get it in, 30 or 40 of them, when about a dozen white men went up and secured it without trouble.

I would also point out that the British Admiralty have decided, in certain vessels, the *Himalaya*, *Australia*, *Victoria*, and *Britannia*, on the new lines that the Admiralty is going to run, to have them manned by Naval Reserve crews. It shows that the Admiralty is fully alive to the fact that it will not suit to have them manned by coolies, and if it does not suit the Admiralty it should not suit our colonial Governments.

POSTAL AND TELEGRAPHIC CONFERENCE, 1895.

REPORT OF THE DEBATES.

SATURDAY, 2ND FEBRUARY, 1895.

The PRESIDENT (Hon. J. Gavan Duffy), took the Chair at 10 o'clock.

Thanks.

Mr. WARD returned thanks to the Members of the Conference for the arrangements that had been made for his personal convenience.

Black Labour on Mail Boats.

Mr. FYSH produced a letter from the Secretary of the Trades and Labour Council, Melbourne, protesting against any extension of mail contracts with the P. & O. Company as long as they employed coloured labour on their boats.

The letter was read and ordered to lie on the Table.

Pacific Mail Service.

Mr. WARD : I anticipated that probably some other member of the Conference would have taken up this question of the Pacific Mail Service this year. I desire, however, to state briefly what my views upon this matter are. As you are aware, at the Conference last year a resolution was carried in favour of a four-weekly mail service *via* Vancouver, and since then the matter has assumed a very much more live state. I myself think, in order to bring about a practical solution of the question, this Conference ought to affirm generally the necessity of subsidising this service to ensure its being established on proper lines. At the present time there are 300,000 tourists visiting England annually, and each of these spending £100 means an expenditure of £30,000,000. I think, therefore, that every one representing the Colonies of Australia will see the great importance it will be to us to have a Vancouver service to induce a portion of this large number of people to come to the Colonies. That, I take it, every representative will agree with me in. The whole of the Colonies, and indeed the civilized world, we all know, are suffering from depressed prices, and it is surely our business, as far as we can, to take advantage of any source of traffic which would contribute in any way to the increase of our customs revenue and the general wealth of our people. That being so, I would earnestly press on the delegates present the importance of establishing a link which would have the effect of diverting a portion of the large tourist traffic I have referred to to our shores. The service we proposed last year was a 21-day one between New Zealand and Vancouver, computed on a speed of 15½ knots per hour. There is no desire to have a faster service than that, neither could there be any wish on the part of steamship owners to have a greater speed. Speaking for New Zealand, I think you will see that it would not suit us to have a forked service or transhipping service ; in fact, it would not be worth our while to come in and give a direct subsidy if we are to be served by a branch service. We are prepared to considerably increase the amount indicated by myself at the Wellington Conference in order to give effect to our earnest desire to have this line established. I think New South Wales should be more desirous than any other colony to see the line established, as Sydney would obtain the advantages from being the terminal port and an expenditure of about £80,000 a year. We in New Zealand expect to gain nothing beyond the fact of these steamers giving us a direct connection with Vancouver and an outlet to Canada, however small it may be, for some of our surplus products. If New Zealand is prepared to increase its subsidy, which it is, I would suggest to Mr. Cook that New South Wales, with the vast interests she has at stake, might also increase its payment to ensure this line becoming an accomplished fact. I can only re-affirm the resolution that was passed at the last Conference, but, looking at the matter broadly, I cannot see that there is anything of greater importance to Australasia than seeking to obtain fresh fields for trade, thereby assisting in the development of the country and removing from us the present financial depression. If we could, by establishing a line of first-class steamers to Canada, only get a small proportion of the tourist traffic, I think it would add materially to the success of these Colonies. I will conclude by moving—

"That this Conference re-affirms the desirableness of establishing a four-weekly service (alternating with the San Francisco service) between Australia, New Zealand, and Vancouver, the mail steamers calling at one main port in New Zealand and such ports in Australia as may be determined upon, and that the respective Governments be urged to take this up."

Mr. THYNNE : I will second the Resolution put before us, and I will add to what Mr. Ward has said that this question is becoming one which undoubtedly we will have to consider. I look of course to what Canada is doing in the matter for the purpose of establishing communication with Great Britain. After the Conference at Ottawa, the Dominion Parliament authorised the Government of Canada to enter into a contract for a subsidy of £150,000 per annum to any company to establish a line of steamers from Canadian ports to Great Britain. It will be seen from the report of the Ottawa Conference that the suggestion made there for that part of the work is : "That as the Imperial Post Office contributes towards the cost of the mail service between England and Australia via Brindisi and Naples the sum of £95,000 per annum, while the sea postage amounts only to £3000, and to the mail service between Vancouver and Japan and China £45,000, less £7300 charged against the Admiralty, this Conference deems it but reasonable to respectfully ask that assistance be given by the Imperial Government to the proposed fast Atlantic and Pacific service; more particularly as the British Post Office, while paying the large subsidy of £104,231 a year to the line from Liverpool to New York, has so far rendered no assistance to the maintenance of a direct postal line between Great Britain and Canada." Now, at the Ottawa Conference the following resolution was adopted, and at the time all the representatives of these Colonies were present, with the exception of the representative of Western Australia :— "That the Conference expresses its cordial approval of the successful efforts put forth by Canada and New South Wales for the establishment of a regular monthly steamship service between Vancouver and Sydney, and affirms the desirability of a reasonable co-operation of all the Colonies in securing the improvement and permanence of the same." I take it that the resolution which Mr. Ward has moved, being a repetition of the resolution of last year's Postal Conference, is practically to the same effect as the resolution of the Ottawa Conference, and the representatives of the Colonies having adopted the principle there, we may safely follow their example. Apart from the monetary considerations which Mr. Ward has so clearly put before us, there are even the wider grounds that these Colonies should find it to their interest as well as to their credit to take their share in developing all portions of the British Empire which fall under their control, and the first step to be taken is to try and facilitate rapid communication. I beg to second the Resolution.

Mr. COOK : I am very glad Mr. Ward has moved his Resolution in such terms, because if he had done anything further I might not have been able to subscribe to it. It is well known that New South Wales has already entered into an agreement with Huddart, Parker, & Co. to subsidise two boats running between Vancouver and New South Wales, paying £10,000 a year for three years. Mr. Thynne made a reference to the mail aspect of this question, but that is a matter better left out of consideration. Our receipts from the mails carried on this line did not amount to very much at all. It seems to me that this matter of mail communication would not be very greatly facilitated by coming by way of Canada for many years to come, consequently we had better confine our view of the matter to the trade aspect. The other Colonies may take a more sympathetic interest in the matter than they now appear to do, but Victoria has made no move in regard to it, though at the last Conference they were very anxious, from a trade point of view, to get communication direct with Canada. All I can say is that if these Colonies are anxious to promote trade on these routes, they had better represent to their Governments the desirableness of paying something towards its maintenance. Now we contribute about £4000 a year to the maintenance of the San Francisco mail. That is contributed directly through New Zealand. In addition we subsidise these boats to Canada to the extent of £10,000 a year. These two lines of steamers run right alongside each other almost the whole distance, and, I think therefore the other colonies ought to fall in with the idea, and induce their Governments to agree to some substantial contribution towards the maintenance of these boats.

Mr. FYSH : My recollection of what has taken place at so many Conferences on postal and other subjects brings it to my mind that rebellion against want of unity must sooner or later tend to union. Whenever I have read of the various conferences which have been held, I find there has been unfortunately in connection with the motions proposed a want of unity; the separate interests of individual states have cropped up, and members have found it necessary upon certain resolutions to absent themselves from voting and possibly from speaking. I have felt whenever I have read the result of these conferences that anything like union upon such subjects could not be brought about while we had separate interests existing. The time will come, however, and I hope speedily, when there will be no necessity for Postal and Telegraphic Conferences to consider separate interests, and that some power will be in existence to which reference can be made upon all subjects, which will do away with all insular reasonings and cause us to act in unity. But until such a power is called into existence we must retain that individual action which leads us to fly off from various resolutions as not specially belonging to the countries we may represent. And to-day I am in the unfortunate position, while listening with very much pleasure to what has been urged, of feeling that I have no special interest to represent. It is to be regretted that a service of this kind does not affect Tasmania directly, either as a matter of postal business or a matter of commerce, but I can see that it is of vital importance in the development of the trade and commerce of Australasia as a whole. I can see where we may increase the lines by which our trade and passenger traffic may continue, and by which we may draw to our shores a class of business we have not received before. I hold that with mails and mail routes it is as with railways and roads, the supply creates the demand—(hear, hear),—and the traffic between us and Vancouver wil. spring up by means of the supply. However, if I join in affirming the desirableness of establishing this service, and in expressing the

purpose to bring this matter before my Government, I shall commit myself to a portion of the subsidy which is necessary, and commit myself to asking Parliament for that subsidy. I think I should mislead hon. members if I were to vote, because I am satisfied that to ask Parliament for a subsidy is out of the question until developments take place which will more closely identify Tasmania with this service. While I may express the interest I feel in the developments which must take place by bringing Australia into closer communication with other parts of the world, I cannot commit the people of Tasmania at the present moment to the resolution. May I call to the minds of hon. members that within the past few months I think it was the representative of New Zealand urged very strongly, at the Conference of Delegates meeting from all parts of Australia, that the time for subsidies was passing by. I may be met by the remark that that statement cannot apply to the new service, but it is well for us to consider whether the time for subsidies is not passing by. Not many years ago Tasmania was desirous of having a port of arrival, if not of departure, of large ocean-going steamers. It was considered it would be advantageous to offer subsidies. We avoided or evaded or postponed the offering of such subsidies, but there has been no change in the services. The competition was such that development of trade took place without subsidies. When we think of the small sum of money with which the present mail steamers to Europe are subsidised as compared with the trade which they do, it appears infinitesimal. I have arrived at the conclusion that the time for subsidies is passing away, but whether we have arrived at that stage in 1895 I am not prepared to state. I make these remarks regretfully in one sense, for I would like, in conferences of this kind, that we should be unanimous in our reception or rejection of a proposal of this kind, and that we should feel that there is no matter of business or commerce connected with Australasia in which we are not all interested.

Dr. COCKBURN : It is impossible for anyone to bind himself to a proposal of this nature before he knows what the conditions are. As far as South Australia is concerned, we want to see every possible kind of trade or mail communication with the old world and Canada, and with America. Report says, however, that the Colonies further removed from the Eastern shores could not be expected to give a subsidy for this route ; and I am afraid that is the position of South Australia. I think, with the previous speaker, that it is a pity we should refrain from expressing our active sympathy with this extra link of communication, because we do not wish to bind our respective Governments ; but, at the same time, if to vote for this motion means to bind our Government to seek a subsidy from Parliament, I shall not be able to support it.

The PRESIDENT : I agree with Mr. Fysh in hoping for the time when the different parts of Australia will not be hampered by their geographical position, but will be under one head as far as postal and telegraphic matters are concerned, and will work as one body for the benefit of Australia as a whole. There are several matters in which we are so hampered by our geographical position that we cannot act with that unity with which we should like to do. Mr. Ward has put a conundrum to us which may be answered in two ways. If it is our sympathy he wants, he can have it : if it is our cash he wants, I am afraid, as far as Victoria is concerned, that it won't be forthcoming at the present time. The Southern and Western Colonies and New South Wales have established an expensive mail service, which, as a mail service, is ample and complete for those particular Colonies. We all sympathise with New Zealand and Queensland, and all Australia ought to sympathise with them, in the effort they are making to push their trade in the Pacific: for, although we get no direct benefits, we get them indirectly, and for this we pay a certain amount indirectly. As far as Victoria is concerned, however, the matter must remain in that stage for the present.

Mr. FYSH : I beg to suggest to Mr. Ward that he makes it clear to us what we are to understand by "subsidising?"

Mr. WARD : I will make the matter quite clear, and I therefore ask that the latter portion of the resolution, from the word "upon," be deleted, thus re-affirming the resolution of the former Conference. That, I think, will remove any objections hon. members may have to urge. I would like to say one or two words in reply, in order to remove some misconceptions which exist in the minds of hon. members. Looking at it broadly, hon. members must agree that it is to the general interest of Australia to have this line of communication, and that indirectly we must all reap a certain amount of benefit. That being so, I do not think a matter such as this should be approached other than in a broad way ; and, in the interests of the whole of Australasia, a service such as this should have the goodwill of the whole of the Colonies. In reply to Mr. Cook, I may say that this service would spend yearly in Sydney at least £80,000 ; and if any other port in Australia were to obtain such an expenditure, I feel sure their representatives would feel called on to support my proposal. The steamers would take 3000 tons of coal a month, and would spend £5000 in the same time for the ordinary supplies of the ships. This line would therefore be more to the benefit of New South Wales than any other Colony. So far as New Zealand is concerned, I can affirm that, directly, we would obtain no advantage. I am exceedingly obliged to the President for his sympathy. We have his sympathy : that is something ; though, as a substitute for cash, I am bound to say it is not worth much. In the absence of the cash, however, I am glad to have the sympathy of a great colony like Victoria. My object, however, has been attained ; and I desire to move the resolution, with the alteration I have suggested.

Motion, as amended, put and passed.

The Pacific Cable.

Mr. THYNNE: In moving the Resolution of which I have given notice, I propose to give a short summary of the history of this cable question, because, although many of us are familiar with it, it is yet not thoroughly known throughout the Colonies; and the opportunity is a fitting one to make some allusions to its present position, with a view to facilitating subsequent action on the part of the various Governments. The question of this cable was first proposed in 1887, at an Intercolonial Conference in London, when Mr. Fleming, whose name is so well known in connection with this matter, pointed out the necessity of cable communication between Canada and the Australasian Colonies for the purpose of improving and promoting commercial and social arrangements, and practically for strengthening the system by which the British Empire is independent of any foreign power in respect to its telegraphic communications. A long discussion took place in regard to the matter, during which it was shown how extremely vulnerable the present system was in case of European disturbances. Objections made to the proposal by Sir John Pender and other distinguished men were also considered by the Conference, but the result of the Conference was practically a confirmation of the principle that such communication was necessary. A request was made to the Imperial Government at the end of that Conference for the institution of a survey across the Pacific, but unfortunately no definite step was taken for the completion of that survey. Last year the Canadian Government, anxious to have its high aims and aspirations promoted a little more rapidly than had been done since the 1887 Conference, met representatives of all the various Colonies in Canada. These delegates practically found the question in the same condition as it had been left by the Conference of 1887, except that some additional information had been obtained as to the conditions of the sea-bed between Honolulu and the American Coast. Then we come to the fact that in 1888, a Postal Conference held in Sydney passed a resolution in favour of a survey being made by the Admiralty, the cost to be defrayed by the Imperial Government, the Government of Canada, and the Colonies. The Imperial Government declined to undertake the task, unless they had reason to believe that the submarine cable would be shortly laid. The matter came up also in 1894, at the New Zealand Conference, and again at the Ottawa Conference, when I had the honour of attending on behalf of my Colony. At the latter Conference, as shown by the report which I laid on the table yesterday, resolutions were arrived at, from which I will quote as follows:—

1. "That, in the opinion of this Conference, immediate steps should be taken to provide telegraphic communication by cable, free from foreign control, between the Dominion of Canada and Australasia."
2. "That the Imperial Government be respectfully requested to undertake, at the earliest possible moment, and to prosecute with all possible speed, a thorough survey of the proposed cable route between Canada and Australia, the expense to be borne in equal proportions by Great Britain, Canada, and the Australasian Colonies."

That first resolution practically bears out the conclusions arrived at by former Conferences. Then a resolution was arrived at to the following effect:—

"That the Canadian Government be requested, after the rising of the Conference, to make all necessary enquiries, and generally to take such steps as may be expedient in order to ascertain the cost of the proposed Pacific Cable, and promote the establishment of the undertaking in accordance with the views expressed in this Conference."

Such was the position of the question at the close of the Conference at Ottawa. A few hours later some new light was thrown on the subject by the unexpected and very welcome arrival at Ottawa of the distinguished electric engineer Mr. Siemens, and Lord Jersey in his report refers to the information supplied by Mr. Siemens when he says, "At the Colonial Conference of 1887, and in subsequent correspondence it was assumed that this was the case," that is to say, that further consideration should be given to the question of survey before active operations were commenced. The Report continues—"Some doubt was expressed at the Ottawa Conference as to whether the partial surveys already made in the Pacific Ocean were not sufficient to render possible a fairly approximate estimate of the difficulty and cost of the work." This was the view taken by Mr. Lee Smith, who stated as an illustration that when the cable on the West Coast of Africa was laid, no survey was taken, but an allowance made for risks. It appears that since 1887 the scientific resources connected with the laying of submarine cables have been so improved that, given a general knowledge of the depth, a previous survey is not now always required. On this point I will quote from a printed memorandum by Mr. A. Siemens, which was communicated to me after the close of the Conference:—"With regard to the technical difficulties raised in 1887, it may not be out of place to consider that the necessity for a close survey of a cable route arises principally from the requirements of the engineer laying the cable, who has to know at every moment the exact depth of water into which the cable passes. The break power with which the cable is held back, and by which the percentage of slack is regulated, has to be adjusted according to the depth of water in order to ensure an even distribution of slack along the whole route of the cable. Such a distribution prevents accidents, economises cable, and facilitates repairs: hence the usual practice is to lay cables only on routes where very frequent soundings have been taken, and in 1887 the experts consulted by the Imperial Government were not satisfied that the Pacific Ocean was sufficiently well explored for this purpose. During the last seven years the work of survey has steadily progressed, and at present it may be asserted that the route proposed at the Wellington Conference passes nowhere through water more than 3500 fathoms deep.

If the adjustment of the break power depended entirely on the knowledge acquired by soundings taken previously on the selected route of the cable, grave doubts might still exist whether the laying of the Pacific Cable could be proceeded with without further information being obtained by carefully taking soundings over the exact route. Fortunately, means have been devised to indicate to the breaksmen continuously the percentage of slack with which the cable is paid out, and thus it is possible to lay a cable over a route of which only the general features are known. This contrivance has been used with perfect success in the laying of six Atlantic cables, so that there is no doubt as to its performance realising its theoretical advantages. The depth of water met with in the Atlantic reaches 3000 fathoms in several places where the cables have been laid, so there is no doubt about the possibility of laying the cable in 3500 fathoms, or even more. To be sure it will be necessary to select a type of cable which combines great strength with light weight; but there is no difficulty in this either, as it has been possible to construct cables for the Atlantic which will carry 7000 fathoms of their own length before they break. It may, therefore, be taken for granted that any technical obstacles which were apprehended in 1887 have now been overcome, and the cable can be laid as soon as the financial question has been settled." Then we come to the fact that the Canadian Government, in compliance with the resolution passed by the Conference, requesting them to make enquiries and ascertain the cost of laying the cable, called at once for tenders for the laying of the cable over eight alternative routes. As a consequence they have received four series of tenders, the lowest in all cases being from the India Rubber, Gutta Percha, and Telegraph Works Company. Mr. Siemens was also one of the tenderers. The lowest tender of the series is No. 4, "Vancouver to Bowen direct, with stations at Bowen, Apamana, and San Christoval, £1,068,000." The prices which have been received from these firms of course give now a practical basis on which to judge what the cost of laying this cable will be, and I may add within these prices is included an obligation on the part of the Company to bear the charge of keeping the cable in order for three years. The first impression produced by the disclosure of these figures is that hitherto the estimated cost of laying cables has been very much exaggerated, or else modern improvements in the manufacture and laying of cables have been so rapid as to alter altogether the estimated cost of the cable as compared with those of the past. In no case has a tender of this firm reached the estimate that Mr. Fleming named as the cost of laying the cable. In his estimate of the cost he has been very much above what is asked by the lowest tenderer. We have now the question brought forward to this point,—that we can, at a cost of between one and one and a half millions of money have cable communication made between Australia and Canada, and we can thereby secure an alternative line of communication with Great Britain, passing through British territory the whole way. I think I am correct in saying that the Trans-Pacific Cable question is now within measurable distance of solution, and, as Mr. Siemens points out, only requires now the settlement of the financial question. Now there are several matters in connection with a cable question of this kind to be considered. Mr. Siemens is so impressed with its feasibility that he is himself prepared to undertake the work. All that remains is to secure combined action. I quite agree with what Mr. Fysh said on a previous occasion, that he regretted there was no combined body capable of taking up and dealing with questions like this, as the Dominion Parliament of Canada is able to do. There is a fear always that we will be compelled to regard our own diverse and petty local interests, and to overlook the higher, and, to us individually, the more important questions. There is this difference between this proposal and that moved by Mr. Ward, and that is; that every colony will share equally in the benefits to be derived from the Pacific Cable. At the present time I look upon it that the chief difficulty, and the difficulty we ought to address ourselves to, is the question of getting combined action in Australasia. The attitude of Canada has always been so sincere and outspoken on this subject that I do not for one moment venture to doubt her *bona fides*; and I think if the Canadian Government and the Australian Government combined, and offered to take their share of the laying of this cable, the Imperial Government will not be very backward in giving its proportion of assistance towards this undertaking. However, it will depend on the course we take. If we can all combine to regard this question in the light it would be regarded in if the colonies were federated, and take each our share, not only in the risk but in the credit, I think we will be setting a very good example. Now, the question of cost has been practically settled by the result of the tenders received, and the estimates which have been made from time to time are very interesting. I may say that on this question of apportioning the cost of construction, working, and maintenance, I have adopted the same basis as that adopted by the Conference at Sydney in 1888,—as was used afterwards in 1894 in New Zealand,—and as was generally accepted at the Ottawa Conference. Objections may be raised by Canada or Great Britain to the suggested apportionment on the ground that as Australasia would be the chief recipient of benefits from the construction of the cable, her proportion of the outlay should be larger; but any objection of that kind may be answered by saying that whatever may be the direct interest of the people of Australasia, the indirect interest of the people of Great Britain and the interest of Canada would be fairly represented in the manner I have suggested. I will not detain this Conference long with figures, but we may assume that the capital required need not exceed £1,300,000, while by adopting the direct route by Bowen, No. 4 Route, £1,100,000 would be enough. Assuming the capital required at £1,300,000, it would involve an annual charge for interest at $2\frac{1}{2}$ per cent. of £32,500. The working expenses were estimated very carefully by Mr. Siemens and Mr. Fleming, and there was very little difference between their calculations. They come to £30,000. This would give a fixed charge to be met by

revenue of £62,500 for the first three years. After that, allowing liberally £50,000 for maintenance, the total annual charge against revenue would be £112,500. It is estimated that the revenue, at the end of three years, will reach something like £160,000.

Dr. COCKBURN : That is allowing for an increase of 15 per cent. every year.

Mr. THYNNE : It is estimated on a gradual increase of that kind. Now, Sir John Pender has made several reports and estimates ridiculing the proposals which have been made by Mr. Fleming ; but one after the other the objections have been raised and fallen down, and we have come now to the question of the cost of the cable, after all the bogies which have been raised to deter the different Governments from carrying out this scheme have melted away and disappeared. I stated a short time ago that the charges against revenue were estimated at £119,000 or £120,000, that is, of course, calculating the interest on the capital at 2½ per cent., and if proper arrangements are made I have no doubt we can get the money at that rate. There is another question to be dealt with in connection with the matter, and that is the question of route. We are met first with the query whether we can get from Vancouver to Fanning Island, or one of the Hawaiian Islands. If one of the Hawaiian Islands could be obtained for the purpose there is a manifest advantage in favour of taking the cable in that direction, because there is first of all a saving of distance in the first long stretch of the cable, and in addition to that there is a very large trade to be anticipated from Honolulu. Shipping in Honolulu amounts to a very considerable quantity every year, for it is a dépôt or port of call for every vessel in the Pacific Ocean, as well as a station for the Naval Service of Great Britain and the United States, and other powers, as China and Japan, and Russia also. We can at once see that a port with that trade and that business would be a very useful one to have connected with the cable at the present time. The Imperial Government, in dealing with the Hawaiian Government, is restricted by the treaty rights of the United States, and it is necessary to get the sanction of the United States to the cession of any of the islands of the Hawaiian Group. But if we can rely on the information received by the press, the matter seems to have gone to this extent, that the President of the United States has recommended to the Senate, which is the treaty power of that country, a modification of the treaty with Hawaii to allow of the cession of one of the islands to the British Government, and that message has been referred in the usual manner to a committee. This committee, however, did not report favourably upon it, but, notwithstanding that report, I am informed that the Senate has adopted the message which the President has sent them, and the power now exists to make the cession which is required by Great Britain. It would be very grateful information to us to know that the treaty has been entered into, inasmuch as it would promote more friendly relations with our United States cousins, and also remove some difficulty and expense. But if we are unable to make satisfactory arrangements for obtaining a site in Hawaii, we are able, fortunately, to fall back on the Fanning Islands, securing thereby the great point that our messages will pass through no other than British territory. In the first paragraph of the resolution I advocate the work being undertaken by the Colonies as a joint national and public work. It seems to me that there can be no question as to the necessity of this work being undertaken in that way rather than by subsidy or guarantee, because if we subsidise any company or guarantee a certain amount of work on it, the Governments who enter into that guarantee leave themselves practically at the mercy of the company they subsidise or make the guarantee to, and expose themselves to any combination that may be entered into between competing companies, thereby throwing on the guaranteeing Governments a heavy loss. Companies of this nature, having similar objects, are apt at times to amalgamate, which would bring about in this instance a combination of that monopoly in cable traffic from which Australia has suffered so much. I have no hesitation in saying that the Colonies have had to pay a great deal more for their cable messages than they ought to have done ; but I will not detain the Conference by entering into the details of that question. I believe there is a general sentiment amongst the members of the Conference in the direction I have just spoken of, that the time has come when Australia must be relieved from the very heavy tax imposed on the mercantile community for the transmission of cable messages. The charge some time ago was 9s. 4d. a word, and that is the charge to-day from Queensland to Great Britain. I have no hesitation in saying, according to the estimates of those who have devoted so much of their time and attention to this proposed cable, that the rate suggested at the Conference in New Zealand last year of 3s. per word could be carried out by the new cable profitably and remuneratively. We are paying three times as much for cable messages as we ought to be called on to pay. I thank the Conference for the patient hearing it has given me, but I felt it my duty, as being familiar with this question, to take the earliest opportunity of bringing the matter before the Postal Conference in as practical a way as possible. I will conclude by moving paragraphs (a) and (b) of the motion of which I gave notice, as follows :—

"That in the opinion of this Conference it is desirable that (a) the construction, working, and maintenance of a submarine cable through British territory or under British control from Vancouver Island to Australasia be undertaken by the Governments of Great Britain, the Dominion of Canada, and the Australasian Colonies as a joint national and public work ; (b) the cost of its construction, working, and maintenance be borne in the following proportions, viz :—Great Britain one-third, the Dominion of Canada one-third, and the Australasian Colonies one-third."

Mr. WARD : *Pro forma* I rise to second the motion, but I may say at once that I regret I am unable to support it, because I differ from the mover in several very important matters. I do not propose to take up the time of the Conference with details. I compliment Mr. Thynne upon having so intelligently placed the matter before the Conference; I would, however, remind the Conference of the resolution passed at the Conference in New Zealand last year. I may say that I for one do not think that Canada has done what she ought to have done in connection with this matter. If we are desirous of arriving at finality in this matter we ought to have some practical evidence of what Canada and England are prepared to do—something more than placing before us formally the tenders received. I take it that if the Governments are prepared to guarantee that should be a sufficient security to those who desire to invest in this stock. It has been apparent to me that Canada and England want the Australasian Colonies to do more than they are fairly called on to do. Now I am quite prepared to say, on behalf of New Zealand, that if such an unprecedented change arises as our being left in the cold so far as cable guarantees are concerned, we are prepared to do a great deal more than heretofore; but we are not in that position, and I hope that we will never be. We are prepared to stand in with the other Colonies in this matter, but at the same time we want to see the Canadians approach it in a broader spirit and not throw the whole of the responsibility on these Colonies. Every effort should be made by this Conference to see that fair representations are made, and that the Canadian Government should be made to realise the advances we have already made in the matter. The resolutions are too far-reaching, and on that account I cannot see my way to support them. I should be glad to support a resolution of a more general character to keep the matter alive. I have only seconded the motion *pro forma* to allow the question to be fully and fairly discussed. In my own opinion there are few matters of greater importance than having low cable rates between here and the old world, as it is to the far-away parts of the world that our producers will have to look in the future; and in this regard low cable rates are of vital importance. Speaking for New Zealand, though we cannot support the resolutions as they stand, we are desirous of co-operating with the other Colonies to obtain cheap cable rates.

Mr. COOK : I am in the same position as Mr. Ward in regard to the resolution submitted. The Colony I represent is as anxious as I believe most of the Colonies are to have an alternative system of communication to the various countries of the world, but at the same time we are not prepared to go to the extent of the drastic resolutions submitted by the Hon. Member from Queensland. It will be in the recollection of the Conference that at the last Postal Conference a resolution was submitted, affirming the desirableness of this cable being carried out by a private Company and subsidised by the various Governments. The result of the tendering in Canada shows very clearly that not one of the companies will take the risk and responsibility on their own shoulders; they make offers indeed to maintain the cable for three years, but that is a very short space indeed in the life of a cable. I desire to emphasise what Mr. Ward has said in regard to the want of practical sympathy on the part of Great Britain, as I do not think we have been treated as well as we had a right to expect; the same may be said of Canada—she sends us out these bald tenders for our information, and hopes we will continue from our side of the water to agitate to bring matters to a practical conclusion. It appears to me that it is for them to submit an alternative proposal. If the matter is such a good one one might readily expect these Companies who have tendered to undertake it with some degree of alacrity, but none of them will take the risk beyond the three years. As to the route, it appears to me that unless we can get some of the Islands, at any rate, it will be a very precarious thing as a business venture; we have it stated in the newspapers that America won't concede any point in respect of the Hawaiian Group. The last information we got was on the 26th of last month, which states that the Committee of the United States Senate had reported adversely as to granting England a cable station in the vicinity of Hawaii. I don't know, really, that it is in the power of this Conference to discuss the matter on the lines suggested by the Hon. Member from Queensland: it is a matter of policy for the various Governments to consider rather than a business arrangement for this Conference. I do think before we take any further steps in the matter beyond a very general resolution, the various Governments should enter into negotiations and determine the lines upon which it should be proceeded with. I am inclined to think that at the last Conference we went a little further than we should have done. It seems to me that the practicability of the route is not altogether determined upon, and that the estimate of the returns expected from it has been very much exaggerated. I beg to move an amendment, as follows :

"That this Conference re-affirms the desirableness of the construction of the Pacific cable to connect the Australian Colonies and Canada; and in view of the ascertained practicability of the scheme, respectfully urges upon the various Colonial Governments that steps be taken for the furtherance of the project at the earliest opportunity."

I think that is as far as it is desirable we should go in the matter at the present time.

Mr. FYSH : I think the amendment is worthy of consideration, but I am thankful to Mr. Thynne for the elaborate and painstaking way in which he placed the whole business before us. While he was speaking my memory was being refreshed with the history of the commencement of these proceedings. We find that the statesmen and Government of England are standing aloof from this proposal, and it is contemplated to place the Governments of Australia and Canada in the undesirable position of taking up a commercial speculation. What Governments do in matters of this kind they do boldly. The times are completely out of joint in regard to subsidising cable

companies. We do not know where we stand or are likely to stand in the next few months in regard to our existing lines. In the disjointed position we are in at the present moment I am not in a position to give the proposal of Mr. Thynne that practical sympathy that I would like to do, but I hope that the deliberations of this Conference will lead to a larger amount of sympathy and interest in this proposal. I gathered from the speech of Mr. Ward that his mind is turning to the possibility of the fear of competition causing the existing lines to maintain the rates we are now paying, and I think the existing companies should take warning that unless they are prepared to maintain low rates competition will step in. Although they have laid three lines of cable between here and Java, we know difficulties are constantly arising, and there is nothing to prevent another company constructing another line of cable home, and entering seriously into competition with them. We shall be thrown back directly on the old position; there will be no agreement between the Colonies, but we will each have to make our own arrangements.

Dr. COCKBURN: There is nothing more conspicuous in the past history of South Australia than that we have always done our utmost in the interests of Australasian telegraphy; but on all former occasions when South Australian representatives have taken part in discussions on this subject, they have always refrained from voting, and I shall follow the same course to-day. I do not know that I need say anything at all, except that I am anxious that no false impressions should get about in regard to the recent developments which have taken place in connection with the proposal to lay this cable. Mr. Thynne quoted some figures in regard to the estimated traffic on this line, prepared by an eminent engineer and an enthusiastic advocate of the scheme, Mr. Sandford Fleming. At present the cable sends 1,400,000 words a year. If we estimate that the Pacific cable takes half of this, I think it is a very liberal estimate indeed, when we consider that only 4½ per cent. of the messages come from America. This gives us 700,000 words a year as their business. Of course the reduction in the rates may lead to an increase of business, but our experience in cable traffic has not been that a reduction has always led to any great increase of business as anticipated. The reduction which was effected on the existing line was not followed by such a large increase as some anticipated. We must not, therefore, be too sanguine that any decrease in the rates will lead to an increase of business. Mr. Thynne spoke of the low tenders, but I would ask do these tenders fulfil the conditions we anticipated it would be necessary to fulfil in connection with this cable; and if the Government are to undertake this work, it is necessary that the repairs should not be a very great item. A cable may very well stand a strain of three years, but it will be after this that the danger will come in. It will necessitate extreme carefulness if the subsequent maintenance of the cable is to be undertaken by the Government. There is one other matter to which I would like to call attention. We ought not to shut our eyes to the fact that all authorities on this subject have laid stress on the fact that it is absolutely necessary for a commercial undertaking of this nature to have a duplicate line, and that a single line has never yet been known to pay commercially. Then again, with regard to Mr. Fleming's estimate, he leaves out of his calculations in regard to working expenses any calculation in regard to repairing-ships; no allowance is made either for a sinking fund. I think we should abstain from dealing with the matter until we are in possession of some full information in regard to it.

Mr. WARD: I have no desire to detain the Conference, but I would like to make reference to one remark which fell from Dr. Cockburn in regard to the effect of the reduction of the rates upon our cable business. In 1892 the number of international messages sent by New Zealand was 2930, valued at £11,279 10s. 9d. In 1893, the year following the reduction, there were 6114 messages of the value of £20,934 0s. 10d., an increase of 3184 messages, and £9654 10s. 1d. in value. The outward intercolonial business in 1892 was 15,758 messages, valued at £11,576 18s. 9d., and in 1893, 28,293 messages of the value of £7753 11s. 2d., an increase of 12,535 in the number of messages, but a decrease in value of £3823 7s. 7d. The number of intercolonial messages increased by no less than 79·55 per cent., but the value decreased 33·03 per cent., the decrease being due to the rates over the intercolonial cable having been reduced by over three-fourths—from 8s. 6d. to 2s. for the first ten words, and from 1s. to 3d. for each additional word. My experience is, therefore, that where the rates are materially lowered there is generally a large increase of traffic. As the amendment proposed by Mr. Cook meets my views, and also those of the Conference, I hope Mr. Thynne will see his way to withdraw his motion in its favour.

Mr. THYNNE: I would like to say a few words in reply to the gentlemen who have addressed themselves to this question. In the first place some of the speakers have expressed some dissatisfaction with the action of Canada in not submitting some more extensive and complete proposal than they have, but if we remember the fact that the Ottawa Conference only concluded its sittings in July last, and that the result of the tenders has practically only recently arrived in Australia, we will see that it is premature to complain of nothing having been done upon those tenders. It seems to me that the Canadian Government have done everything in the matter that they could be expected to do. They have lost no time in ascertaining the cost of the cable, and communicated that information to us. Our Conference has been fixed at an earlier period than usual, and consequently we are not in receipt of the full information from the Canadian Government that we would have liked. We have not received any detailed explanation of what they propose to do; they have not had time to consider it. It is for us now to take those tenders into consideration and see how far we are prepared to go in regard to them. We must somehow be brought together on a business foundation, so that we can meet each other on some definite lines, and have some

definite proposal before us, before we can come to any conclusion at all. It seems to me that the proper course will be for the Australian Colonies to give this matter their full consideration, and then to make a representation to the British Government, as well as to our friends in Canada, as to what course they are prepared to take. I think they are entitled to demand from us some expression of what united action we are prepared to take before we can complain of their not putting any proposal before us. These are the reasons that impelled me to bring forward some definite proposal for discussion. If any better scheme can be devised no one will be better pleased than I shall be. At this early stage of the proceedings it is evident to me that the Australian Administrations have not had sufficient time to give full consideration to the conclusions of the Ottawa Conference, or the effect they had on the mind of the Imperial Government, and for that reason I will be prepared to adopt the suggestion made, and content myself with a somewhat less rapid advance in the direction of this cable than my resolution would have provided. Before I conclude, I would like to say a few words as to some of the circumstances that seem to have had a very considerable effect on the mind of Mr. Cook in connection with these tenders. He has been much struck by the fact that no definite offer was made by any of these companies for the construction of this cable. Now I am not much impressed with that fact, because, if we look at the history of companies constituted for the purpose of undertaking work of this character, we find, first of all, something in the shape of a concession obtained by some private individuals, who thereupon set to work to find the capital necessary. It would be asking rather much of any one of these tenderers, or any one of the people who would be inclined to enter upon an enterprise of this character, to find funds at a few weeks' notice. An institution capable of carrying out a work of this kind is one of slow and moderate growth. Mr. Cook is also impressed by the fact that the tenderers limited their guarantee to three years. I may inform him that that is in accordance with the published conditions, which asked for a three years' guarantee. It is the opinion of many people that when you have laid the cable on a sound bed, as the bulk of the bed of the Pacific seems to be, the prospect of interruption is less than in the beginning. In submitting this resolution, I would like to say that I do not look on this Conference as anything more than a recommendatory body; the Ottawa Conference was the same; and there is no power or body in existence that has any greater power than that of recommending and advising. With regard to Mr. Fleming's estimates, I am inclined to believe that they are fairly reliable.

The PRESIDENT: I admit there is a certain amount of fascination about the idea of a Pacific Cable; but, when we come here as business men, dealing with a practical question, we must look at it from a business point of view. Mr. Thynne said it did not much matter what we did, as we were only a recommendatory body; but he must not forget that we are here as Ministers of the various Colonies of the Australian Group, and, as such, anything we may do here must to a very great extent commit the Ministries of which we are Members. Any resolution to which we may agree may be quoted against us or our Ministries, as if that Ministry or Colony had assented to some definite proposal. That therefore makes us, or should make us, rather more careful in what we say or what resolutions we agree to, than if we were merely delegates, not connected with the Ministries of the day. Looking at it from a practical point of view, the first question is—is it practicable to make this cable at all? I find that considerable doubts have been expressed on that point. It must not be forgotten that there is a greater span to be got over than has ever been spanned by a cable before, and that the cable must be sunk to a greater depth than any previous cable has been. Even if it is practicable to lay the cable, we may well have some doubts whether the cost of the cable in the first place, and the subsequent expense of repairing it, will not be considerably larger than the figures before us seem to warrant. Personally I think when the cable comes to be laid, even if actual survey shows a better route at a less depth, it will be found to cost more than we think, and considerably more to repair and maintain it. Assuming that it is practicable to lay the cable, the next question is would it be a good commercial transaction. Here I have reluctantly come to the conclusion that it would not be; I cannot see where the commercial success of the undertaking would come in. Of course we have the usual facts and figures always brought forward on an occasion like this; but my experience has always been, when such undertakings have been proceeded with, the expenses are always found to be more and the receipts less. I cannot think that the present occasion would be an exception to that general rule. The various tendering companies have all treated the matter in a very chary manner, and I was greatly struck by the action of Mr. Siemens in the matter. He came forward and gave some very straightforward and no doubt valuable evidence as to the practicability of laying this cable; but when it came to a question of cold business tendering, that gentleman puts in a higher tender than any other, which shows that he knew that the theory was one thing, and taking the business risk was another thing. From the conduct of these tendering companies, and the evidence produced, I am inclined to think that as a commercial transaction this Pacific Cable would not pay. If it does not pay as a commercial transaction, the question arises, are there any other considerations in its favour? I think there are. I think that for strategical and Imperial reasons, and for encouraging the growth of the Imperial sentiment it would be a wise thing to lay this cable, if not now, at any rate in the not very remote future. It would be a great spectacle to see the three great branches of the Empire united together, and in times of war it would be of immense value to the Imperial Government and the Colonies. If it is undertaken, it should be by England and her Colonies co-operating together. Of course we must remember that Canada is not so vitally interested in this question as we are. This will be to us not only a connection with Canada, but a direct

connection with the heart of the Empire—London; and I do believe when the matter has been fully considered by the Canadian authorities, they will do even more than they have done in the past. As regards the Imperial Government, it is more their concern than Canada's; and I trust on this occasion they will be found acting not only justly, but generously to this outlying part of the Empire. I may say that in the past I have been grieved and disappointed at the position the Imperial authorities at the Post Office have taken up in regard to telegraphic enterprise. We do not require this cable, because we have the existing one, which I was going to say was cheap and satisfactory—but I will say it is, perhaps, not unsatisfactory, and, perhaps, not too dear. I think that is as far as I can go. The present Company have succeeded in getting as much as they could, and a great deal more than they ought, out of us, but in future if they try to suck the orange too dry circumstances may so alter that this Pacific Cable may become a great commercial success. I do not know that there will be any immediate prospect of the cable being laid, but I trust we will all give what encouragement we can, and that the Imperial Government will come forward and take its share of the undertaking. I trust Canada will also give us in a concrete and tangible form the good wishes that I know she holds towards the enterprise. If that is so, I suppose Australasia would be willing to join in the enterprise, and if Australia is willing, I trust and believe that Victoria will not be wanting in helping her sister colonies in the matter.

Mr. THYNNE: I forgot to inform you that just before this Conference met I received a cablegram from Sir Mackenzie Bowell, informing me that important papers upon this cable question are due in Sydney on the 9th February. I sent him a message asking him to be good enough to give me some idea of the contents of the papers, and he replied, "Papers sustain Fleming's memorandum of 1st December, urging state ownership and appointment joint Commission to arrange details subject to approval of Governments." This letter, I take it, explained and put in a practical shape the attitude of Canada on this question, and removes still more the grounds of complaint made of want of action on the part of Canada.

The motion was then withdrawn, and the amendment having become the motion, it was carried.

Cable Guarantees.

The PRESIDENT, in reply to Mr. Ward, said:—Our attitude in regard to the cable guarantee is that we wish to withdraw from the undertaking we entered into of guaranteeing a certain amount, and we have given proper notice of our intention to do so.

Mr. WARD: Is it intended to maintain that position?

The PRESIDENT: I have seen no reason why we should not maintain it.

Mr. WARD: Then I beg to move, "That this Conference respectfully requests the Government of Victoria to reconsider its proposed withdrawal from the cable guarantees." The total amount of international guarantee payable by the colonies last year was £6191, and of that sum New Zealand contributed £1125 16s. 9d., about one-fifth of the total sum. Apart from that New Zealand has increased the amount of contribution to the cable service by no less a sum than £9654, as the result of the reduction of the rates from 9s. 4d. to 4s. 9d. per word. If any of the other Colonies were to abandon the international cable guarantee, the alternative must be a reversion to the original high rates. We are prepared to pay a larger sum of money to maintain present rates rather than see trade disorganised.

Dr. COCKBURN: I will second the resolution. I very much fear that if Victoria withdraws from these guarantees they will be at an end at once, and there is no doubt that the Australian public will suffer very considerably. The reduction made in consequence of the guarantees in the cable rates alone has led to a saving of £200,000 to the community; and I would like this matter to be taken into consideration, for is it not possible, if even a small consequent increase took place in the rates, that it would press more hardly on the people of Victoria than the amount of the contribution the Government are now making would do?

Mr. COOK: I find this cable company is still paying immense dividends and keeping up a big reserve fund, so that they might in these times of depression easily afford to be a little bit generous. We still maintain the basis of 1889 as a basis on which our business is conducted, and it is a question in my mind whether it is not possible to make some re-arrangement in regard to these subsidies. I am inclined to support the resolution which has been moved, as we must be careful to throw no impediment in the way of our foreign trade. I think it is better Victoria should not take the extreme step she proposes to do, but wait and see if the figures of the last 3 or 4 months are maintained, because if they are maintained the guarantee might be wiped out next year.

Mr. FYSH: It would be an exceedingly harmful proceeding if we have to revert to the position we occupied prior to the last agreement of 1892. If one Colony withdraws from that arrangement we will each of us have to review our position, and is it possible that we are going to open the question of reviewing the tariff against each other in 1895,—that year which we hoped was to be marked by the accentuation of the federal principle and practice of which we have all heard so much? I do trust Victoria will see the advisability of re-considering her position, and taking a larger view of the subject. If one Colony withdraws it will necessitate the withdrawal of the

whole of them. I support the proposal of Mr. Ward, with a view of inducing the Government of Victoria to review their position, if they only maintain their present guarantee for 1895. It is worth while making a great effort rather than reverting to the rates we paid heretofore. For this reason I hope we will not be left here in Tasmania to maintain the cable at our own charges for the benefit of the whole of the neighbouring Colonies. We must have a practical sympathy shown by a monetary contribution from the various Governments. I hope, therefore, the wishes of this Conference will be conveyed to his colleagues in Melbourne by Mr. Duffy, and that before this agreement ceases to exist there will have been such a revival in the business of the cables and telegraphs that he will feel warranted in recommending his Government to reconsider their present determination.

THE PRESIDENT: There was one remark which fell from Mr. Fysh which I prefer to misunderstand, and that was one which seemed to convey to my mind a fear of Victoria instituting a preferential rate as against Tasmania. I move in this matter with the greatest reluctance and regret. I was instrumental in carrying this matter into being. It was first mooted in 1890, Queensland or New Zealand not coming in. When the Conference met in 1891 in Sydney I was strongly urged that it would be unwise of Victoria and the other Colonies to undertake the responsibility themselves, but I regarded it as being of benefit to our commerce in these seas and the whole of the British Empire that the reduction should be made. I therefore proposed the present arrangement at the Conference, and succeeded in carrying it through our Parliament. Therefore it is with regret that I find myself called on four years afterwards to undo the work; but, on looking into the figures, I found that the brunt in this matter had to be borne by New South Wales and Victoria, and with the latter Colony it had proved anything but a nominal guarantee up to the present: it has proved a greater financial loss than we expected. In our prosperous days we did not mind this, but now we are compelled to economise in every possible way. I felt that in this matter we must have some finality and get rid of these guarantees as soon as we could get out of them. The figures placed before me to a great extent actuated me, especially as things might be worse and the decrease greater next year. I felt it was a duty that I owed to the Colony to get rid of this expense as soon as I could. I would suggest to Mr. Ward that he withdraw his motion for the present, and that a Committee meeting be arranged between myself and the other members of the Conference and the representative of the Cable Company, whom, I understand, is at present in Hobart. If any *modus vivendi* can be arrived at, I will rescind the notice of withdrawal without troubling my colleagues.

MR. WARD: I will comply with the suggestion you have made, Mr. President, and ask permission to withdraw my motion. The course you have suggested is agreeable to the other Members of the Conference, and I hope a solution of the difficulty may be arrived at in Committee. Now I wish to state that the actual amount New Zealand paid last year was £6234 1s. 8d. for cable guarantees only. I don't want it to be thought that we are asking Victoria and New South Wales to bear a greater proportion of the contribution than we are paying; we want to do what is right in the matter. Our payment, taking our population into consideration, amounts to a very considerable sum larger than Victoria has to pay towards these cable guarantees. We are paying, not only what we agreed to pay, but a greater amount than was agreed to at the time the rates were fixed. We should, I think, pass a resolution calling on the Imperial Government to consider the position of the international cable business of these colonies, pointing out that they pay nothing whatever, although they have merchants receiving the advantages of the cheap rates, and that in the interests of trade and commerce it is only fair that they should assist to enable the whole of the Colonies to secure the benefits—commercial, national, political, and social—which low cable charges bring about, without being unduly taxed.

The Conference then went into Committee.

On resumption of Conference—

MR. WARD said that the matter had been considered in Committee, and he would now move the following resolution:—

“That the several Colonies agree to guarantee international revenue to the Eastern Extension Telegraph Company of £227,000 per year, and to make up any loss below that amount, provided that the total payment in any one year shall not exceed £10,000; and to guarantee a revenue of £20,000 on the New Zealand Cable, and to make up any loss below that sum, provided the payment in any one year shall not exceed £9000; provided always, that rates not higher than those now ruling be charged by the Eastern Extension Telegraph Company during currency of such guarantee: such arrangement to be from year to year, and terminable at two months' notice.”

MR. COOK seconded the motion, which was agreed to.

Compulsory Telegraphic Code.

MR. WARD: Probably it is within the recollection of Members of this Conference that at the Telegraphic Conference held in Paris in 1890 it was proposed to establish an official vocabulary of code words for cabling. I do not know if Hon. Members have seen the proposed vocabulary it is intended to use, but I have seen some of the words, and in my opinion they are not such as ought to be forced upon private people, or those who wish to use cable codes. I presume

the object of those who suggested that the vocabulary should be used was to prevent the abuses of the private code system. I do not, however, think that the whole of the Colonies should be made to suffer for that, and it would be very arbitrary to compel business people to abandon their private codes. I hope the Conference will see its way to enter a protest against the suggested change. In the Colony I represent the mercantile community are strongly opposed to it. I move that the matter be referred to the permanent heads of the departments to report upon.

Mr. COOK seconded the motion, which was carried.

Congratulations.

Mr. FYSH expressed the sentiments with which the Conference welcomed Mr. Ward, and wished him a pleasant voyage.

Mr. WARD, in reply, said : I wish to express my sincere thanks for the consideration which has been shown me, and take this opportunity of expressing my sense of the great courtesy and kindness which has been extended to me by the Members of this Conference, who have put themselves out in order to suit my personal convenience. I thank Mr. Fysh for his good wishes, and hope that by the time we meet again no political changes will have caused any of us to be enjoying a quieter life. (Cheers.) I ask Mr. Fysh to be so good as to represent New Zealand in my absence.

Mr. FYSH : I accept the duty with pleasure.

Black Labour on Mail Boats.

Mr. COOK : Before we separate, I wish to raise the question of the employment of black labour on mail steamers. There is only one Company employing coloured labour on its boats, and that is the P. & O. Company. They allege, as a reason for the employment of this coloured labour, that white crews cause an infinity of trouble through drunkenness and disobedience. They state they do not employ coloured labour because it is cheaper, but because they can preserve better discipline. Such an assertion is not worthy of a large company like that, and I am inclined to speak very strongly in regard to it. In my opinion, it is no argument at all to say that such reasons are sufficient to induce them to discard white labour. We should employ no labour that will not commingle with our own ; and I think it is one of the strongest arguments against the employment of coloured labour that it is not possible, for it to live side by side in harmonious relationship with our own. There must be always an impassable barrier between the coloured and white races by reason of the difference in language ; and, since it is impossible for them to commingle, we ought to give white men the preference over the others. We should insist strongly that our mails should be carried by those who are of the same flesh and blood as ourselves, and live the same kind of life ; and I therefore move—"That it be a condition in any future contracts that mail steamers shall be manned by white labour only."

Mr. WARD : I second the resolution, and I may say that I fully agree with the remarks that have fallen from Mr. Cook. It does appear to me that so long as we largely subsidise these steamers, and one line is manned by white and the other by coloured labour, preference should be given to the lines carrying white labour, unless the other lines are prepared to displace their coloured crews. In the colony I represent there is a very strong feeling against paying public money to steamers manned by coolies. I wish to put that feeling on record.

Dr. COCKBURN : I desire to support the resolution. The question was raised also at the Conference at Wellington, and I felt there was a strong opinion then forming in the minds of the public, and which has since gained ground daily, that black labour should not be employed on mail boats.

The motion was put and carried.

At 10.25 p.m. the Conference adjourned until the following Wednesday.

WEDNESDAY, 6TH FEBRUARY, 1895.

Western Australian Mails.

Sir JOHN FORREST : Sir, I regret I should have to bring before this Conference so prominently a matter which may be said to be a local matter, as affecting the Colony I represent ; but the motion I am about to propose is one of very great importance to us, and I am glad to think it will not very injuriously affect any other Colony. I think, therefore, that the members of this Conference will not have any objection to having these proposals embodied in the next mail contract. I understand that the present contract is likely to be extended to the 31st January, 1898, and my proposals are not intended to affect the extension of the present contract up to that date. My desire is that these conditions shall be inserted in any new contract that is agreed to. In the present contract there is a provision that the P. & O. and Orient mail steamers may call at Fremantle if they desire to. I have never pressed upon them.

to do that, because I was aware that the accommodation is not good enough to allow them to do so, but we are now providing at an enormous expense what we hope will be a safe and commodious harbour at Fremantle, and when the new contract is entered into in about two years' time or more, we have a natural desire to have these steamers call at our chief port. The desire of the people of Western Australia is that these steamers should call at Fremantle and take on board mails and passengers. The only objection any one can have to that is that it may delay the mail, but I can hardly think that that would be the result; it is very little out of the direct course, and in any case there are detours far greater than the one I suggest on the part of the mail steamers between the old country and this one. I would like to point out clearly that it is not intended to affect in any way the present contract, but only any future one, and only then when safe and commodious harbour accommodation is provided. It will cost my Colony a million of money to provide that accommodation, and I think when we have spent that amount we should have every consideration it is possible to give us. In regard to portion No. 2 of my motion, although it will be of the greatest importance to Western Australia, it will not in any way affect any of the other Colonies. Mail steamers arriving now near midnight will seldom leave before morning—until daylight I am informed—but the uncertainty so caused occasions great annoyance and inconvenience: it is difficult for anyone who wishes to leave by one of the mail steamers to do so. We all know the time these steamers stop at such ports as Aden and Colombo, and I see no reason why they should not stay a short time at King George's Sound for the convenience of the people of Western Australia. The proposal is that under the new contract the sailing day shall be Saturday; Saturday would suit us better than any other day, but, next to Saturday, Wednesday is the best day for us. Saturday would suit every Colony in Australia. Queensland is under a great disadvantage at the present time, though I am sure we will do our best to remove it if she would be satisfied to dispatch her mails to leave Adelaide on Saturday. Now they have to remain over Sunday somewhere about Sydney; any day between the Wednesday and Saturday will be disastrous to us, and I will oppose it as strongly as it is possible for me to do. It will either result in the steamers leaving Albany on Sunday, or in our being obliged to dispatch our mails from Perth on Sunday; of course that is an arrangement no one would desire to impose on any Colony if it could be avoided. I am quite sure Members of this Conference would not for a moment desire to place Western Australia at a disadvantage to which they themselves would not for a moment submit. I have much pleasure in moving:—

"That in the opinion of this Conference it is desirable that in the next contract for the conveyance of mails from the United Kingdom to Australia, provision be made—
 (1.) That, until safe and commodious harbour accommodation be provided at Fremantle, it be optional with the Companies to call at Fremantle; but that so soon as such accommodation is provided, it be compulsory for the Companies to call at Fremantle to deliver and take on board mails and passengers. (2.) That any mail steamer arriving at Albany or at Fremantle after 11 P.M. shall not leave such port till 8 A.M., and that mail steamers arriving between 8 A.M. and 11 P.M. shall remain in port for six hours at least. (3.) That the sailing time for mail steamers from Adelaide be Saturday at noon."

Mr. COOK: I beg to second the motion. I sympathise with Western Australia in their desire to improve their mail arrangements, but I will suggest to the mover, would it not be well if he made paragraph No. 2 of his motion correspond with the conditions set forth by the permanent heads of departments? If he looks there he will see it is provided that the outward steamers shall stay at the port of call for not less than six hours.

Sir JOHN FORREST: If required by the Post Office. The difficulty is when they arrive in the middle of the night. We want them to stop until they give people an opportunity of getting on board.

Mr. COOK: That means practically nine hours. In respect to the other points, I am in complete accord with Sir John Forrest, both as to the day of sailing from Adelaide, and as to the desire on his part to get increased accommodation at Fremantle, but I would strongly urge on him to make some little concession in regard to the detention of nine hours in the night. If he can make it six or seven hours, there will be no difficulty.

Dr. COCKBURN: With regard to the second portion of the motion, I quite agree with Mr. Cook that it is to a great extent provided for; and to the extent that it is provided for it should not be re-duplicated by the Conference. Fixing the time for one port of call will mean fixing it for every port, and that will hamper the position very much. It will be as well for Sir John Forrest not to press this matter, and I think it would be as well for us not to go further than we have already gone. With regard to the first portion of the resolution, it will be fulfilled very shortly, and steamers may find it necessary to call at Fremantle. With regard to the third portion, that has been decided at a recent Conference. I sympathise with the mover in his desire to avoid Sunday work at any port of call; but, on the other hand, the time must be fixed for mails to leave Adelaide so that they might arrive in time for replies to be sent by the mails leaving England on Friday, especially in regard to the provincial markets. I believe Friday is likely to remain the day for the mails leaving England, as it is preferred by the London merchants. I think it was this consideration that induced the permanent heads of departments at Brisbane to recommend Thursday as the day for mails to leave Adelaide, as fulfilling these important conditions, but afterwards the day

was altered to Saturday. The matter was again referred to the permanent heads of departments, and the time was again altered to Thursday, or if possible, Friday, to meet the wishes as far as possible of Western Australia. I think it is a pity we should have all this oscillation from one day to another, and so I will ask Sir John Forrest to accept this—

“That in the new mail contracts the day for leaving Adelaide for England shall be fixed so as to allow replies to be received from Queensland, and so that Sunday work at the various ports of call be avoided.”

I beg to move that as an amendment.

Mr. THYNNE: I will second the amendment *pro formâ*, in order that the matter may be fully discussed. It seems to me that the proposal of Sir John Forrest is one that will best suit the whole of the Colonies. At present we are in Queensland in the very awkward position of having to close our mail on Friday, two days before the incoming mail is delivered, and the mails even then do not leave Sydney until Monday night. As far as I can see, Saturday as a day of departure is likely to suit all the Colonies best. We could thus close our mails on Tuesday evening, and have the whole day to reply to the incoming letters, and avoid Sunday work. It is not so important to the Colonies to get replies from England as to send replies there.

Mr. COOK: I think Sir John Forrest's proposal is quite reasonable, as it is only intended to come into operation when the new contracts are entered into.

The PRESIDENT: I think if Dr. Cockburn were to withdraw his amendment it would be better under the circumstances. Though the logic is on his side, Sir John Forrest's proposal only affects future contracts, and by passing it we would not be doing any executive act. The second portion of the motion goes in my opinion rather further than is necessary or desirable, so I will ask him to consider the convenience of the mail steamers too, and not press the matter.

After further discussion, Sir John Forrest altered his motion in the second paragraph to provide for steamers remaining in port for 6 hours, and striking out the words “at noon” in the third paragraph. The motion, as amended, was agreed to.

Australian Cable Guarantees.

The Conference then went into Committee to consider the Australian Cable Guarantees.

Adjournment.

At 12·30 P.M. the Conference adjourned until 10 A.M. next day.

THURSDAY, 7TH FEBRUARY, 1895.

The Federal Mail Contracts.

The PRESIDENT took the Chair at 11·40 A.M.

Mr. COOK: Mr. President, I regret in connection with the matter of the Federal Mail Contracts—an all-important one to the Australasian Colonies—the authorities at Home did not see their way clear to make some greater concessions than they have done with respect to the extension of the mail contract. This extension is desired by the London Post Office so that the termination of our contract may be concurrent with the termination of that for the Eastern mails. That, I presume, is not only satisfactory to the London Post Office but also to the companies interested. If, therefore, such arrangements as that be agreed to by this Conference, it does appear to me, having in view the very different conditions now obtaining to those which obtained at the time this mail service was entered into, they might have been a little more liberal in the concessions which they proposed to give us. Out of the total of ten conditions laid down at the Wellington Conference, the Home authorities propose to concede two only. Perhaps on this point, Mr. President, it would be well if I read the intimation received from the London Post Office in answer to a cablegram sent Home asking how many of these concessions would be made. The reply, Mr. President, is as follows:—

“Agents-General conferred with Committee of Post Office urging views of Wellington Conference. Post Office then conferred companies, who agreed from first February, 1896, to include parcel post in contract, and guaranteed invariable call at Colombo. Post Office will extend contract two years, and write Colonies shortly on paragraphs 3, 4, 5, 6 of recommendation Conference, with every desire to meet wishes of Colonies.”

It would seem to me, Sir, there is not much desire on the part of the Home Office to assist us. They propose to give us only two out of the ten concessions asked for—and of those two concessions which they propose to make to us they are not by any means the most important; but it appears to me that we are somewhat in a difficulty with respect to these contracts. To call for fresh tenders now would, I presume, only be placing ourselves and the Colonies we represent at the mercy of these companies, unless in the meantime some steamship company come in to make the running and

compete. That appears, so far as we know, quite improbable at the present time, therefore we are compelled—especially in view of the strong wish of the London Post Office to this effect—to agree to the proposal laid down by the London office. I should think, Sir, considering that we have now two years more to run with the mail companies connected with the Federal Mail Contract, that the London Post Office will, before the termination of the existing contract, use their influence in getting from the mail companies some of the conditions agreed upon at the Wellington Conference. I can only therefore move, Mr. President,—

“That this Conference desires to express its disappointment at the reply of the London Post Office to the conditions laid down by the Colonies for an extension of the Federal Mail Contract, and while, under the circumstances, reluctantly agreeing to such extension, desires to emphasise the terms and conditions of the Wellington Conference. This Conference further desires to inform the London Office that no future Contract will be acceptable to the Colonies which does not include them, together with the resolution passed by this Conference relating to the employment of coloured labour.”

I can, Sir, only move this resolution, and reiterate the hope I have already expressed, that the London Post Office will exert itself to the utmost to try to secure some of the important conditions laid down by the Wellington Conference. For instance, there is the condition relating to frozen meat, butter, fruit, &c. The stipulation of cool storage on our mail boats has not been mentioned by the London Office, and this I take it, Sir, has an important bearing on the subject, in view of the fact that the Australian Colonies are trying to recover themselves to a certain extent by the exportation of perishable products. The London Office says nothing of that either in their telegrams or in their promise to write hereafter. They leave it out altogether. They also leave out the last condition agreed to by the Wellington Conference as to the employment of coloured labour on mail steamers. Some of these things, such as the exportation of frozen meat, butter, and fruit, &c., it would seem are proposed to be left out of sight altogether. They neither give us the concessions, nor write to us about them. Altogether the reply from the London Office is not of a very satisfactory character. I accordingly beg to move the resolution which I have just read to the Conference.

Dr. COCKBURN : I beg to second the resolution, which I do somewhat reluctantly. I should certainly have liked to have seen the stipulations met in a more liberal spirit. I cannot but bear in mind the fact that the Post Office authorities have definitely refused on more than one occasion to call for any tenders which would extend the term of the contract for the Australian mails beyond the termination of the present contracts which have been made by the London Post Office authorities for the India and China mails. Of course that throws us into the alternative of either doing as proposed by this resolution, or to insist upon fresh tenders being called for a short term. To adopt the latter alternative might involve us in difficulties. It cannot be expected that other steam companies will come in and tender for only two years, as they would have to provide a large fleet of steamers to carry out the service. I think, Sir, the chances are if we called for tenders for the ensuing two years, we would in the end be glad to get back to the present system. The question of cool storage is an important one to the Colonies, as the quantity of perishable products now exported is a large item of revenue; but it must be borne in mind that the Colonies interested in the mail contracts and having agreements with the mail companies can at two months' notice get from the companies the cool storage accommodation they require, and they have entered into arrangements to supply extra vessels to carry on this trade. With regard to the resolution which has already been confirmed by this Conference in reference to the employment of coloured labour, the most sanguine cannot expect anything to be done in this direction for some little time. It will take, no doubt, some time for the necessary arrangements to be made. We have no other course but to fall in somewhat reluctantly with the desire of our senior partner in this respect—the United Kingdom—which not only acts for us, but also calls for tenders and bears the larger portion of the subsidy. I therefore beg to second the resolution.

The Hon. P. O. FYSH : I must, Mr. President, support the resolution in its entirety, except upon one point. I do not wish to have any reservation in my own mind as to which I am not disposed to give utterance publicly. I will say, firstly, I think the time is coming when the cost of the subsidies to the mail steamers will cease, but if not ceasing, yet the cost shall be more equitably divided in the future between our senior partner and ourselves. No one appears desirous at this Conference of re-opening the question of the subsidised amounts of Tasmania in contradistinction to other Australasian Colonies and our senior partner, the United Kingdom. If we consider the enormous amount of business transacted by these Colonies for the mother country, it must be apparent that the division of the cost, £170,000, which is the present subsidy paid, has not been equitably made when the Imperial Post Office takes only £95,000 out of the £170,000, giving £75,000 as the share of the Colonies. I have no later statistics than 1889 as to the mail matter carried. If I had an opportunity of gathering information later my statement would be considerably emphasised in that every year the quantity of mail matter carried from England for these Colonies far exceeds the growth of mail matter carried from the Colonies to England. That would be apparent from the fact that while in one year there were 35 tons of letters carried, there were 500 tons of mail matter in addition to letters. The great tonnage of matter which leaves Australian waters for England would be newspaper matter, and therefore the quantity of tonnage they have to deliver for us is very small in the item of book and parcel post; but

for the Imperial Government we have to distribute over 500 tons in one year. The proportion of work done by these Colonies for the Mother Country—she receiving the whole of the revenues from postal matter delivered here—the amount of work done here is far in excess of the work done for us. Therefore on some future occasion it will be desirable to consider, if the subsidies are to continue, to give a more equitable distribution of that charge. There is only one other point to which I will refer. Some of the concessions asked for have been granted by the Committee of the Post Office in London; others will be referred to by subsequent letter. In some minor points we have found ourselves running upon parallel lines with them, and it is well that we have no reserved opinions which we do not express with regard to these matters. With reference to the question of coloured labour, I fully sympathise with the views expressed in letters and correspondence, and in the words uttered by the representatives of these Colonies. I would like to point out there is another side to this very important question. Upon a late occasion, when it was discussed I gave my voice with the majority, because I am satisfied if the Orient Steam Company's service can be conducted with English labour, the P. & O. service should be also conducted; and we are not handicapping the P. & O. Company in their competition with the Orient Line by demanding that they shall employ white labour as the Orient Company do. It is apparent that if one Company can do it, as they are doing it, without incurring extra cost, the other Company can also do it. There is one point we should bear in mind when we are meeting our confreres in connection with the Imperial service—I use the term Imperial as embracing Australia, for we are an integral part of the Empire—we must not forget the Empire embraces 250 millions of our fellow subjects in India. It appears to me to be a very strange thing that we should be forgetful, or, if we are not forgetful, that those who are seeking to monopolise the labour of Australia should be altogether forgetful, of these fellow subjects and their interests. We should not, Sir, be forgetful of the position we occupy as inheriting what our forefathers did only 150 years ago, when it gave the East India Company a charter to take possession of and build up a commercial Company. English treasure and English blood were spilt; and ultimately that vast Indian Empire was taken over as part and parcel of the British Empire. Irrespective of other incongruities, when I see two representatives of Colonies before me which have developed their resources largely by the employment of coloured labour,—when I remember that Queensland has had to retrace her steps with reference to this matter, and that Western Australia will most probably have to be developed with the aid of coloured labour,—it does seem incongruous with these facts before us, if they be facts, that we should be so deliberately setting our faces against the employment of a few hundred Lascars. I make a point of these things in order that our people may be reminded that we cannot always devote ourselves solely to the advancement of what seems to be our personal interests at the moment. Our personal interests are associated with the development of the whole of Australia. Although I belong to Tasmania, I have interests in Queensland and other Colonies,—that interest which you all have,—an interest which will be very much greater in the great future Commonwealth which will be developed. Under this great Commonwealth we must not forget these things: those for whom we work must not forget these facts. In attempting to secure for the people the benefits they desire, we must forget our insularity and those things which are purely selfish, and remember that we are parts of a great Empire. We must look abroad and remember we are not Australian people only, but that we are part of the British Empire, with 300 millions of our fellow subjects living in India.

Sir JOHN FORREST: Mr. President:—I do not feel able, with the information I have before me, to subscribe to the motion of the Hon. Mr. Cook. It seems to me altogether unnecessary at the present time. The telegram which has been read to us, I take it, merely refers to the present extension of the contract, namely, to the 31st of January, 1898, and not to the new contract, which was adumbrated by the Conference at Wellington. I think it must be obvious to all of us that it would not be very easy or convenient for these companies to alter their arrangements. The telegram sent us in no way conveys the intimation that, under the new contract which will be called for two years hence, a great many, if not all, of the conditions asked for at the Wellington Conference may not be complied with. I cannot, therefore, see any reason for taking up the position that Mr. Cook proposes to take; and, with regard to the question of coloured labour, I notice it is practically the same recommendation.

Hon. P. O. FYSH: We understand it applies to future contracts, and not to this.

Sir JOHN FORREST: This should apply to the next two years?

Hon. P. O. FYSH: No.

Sir JOHN FORREST: Does the telegram we have received a reply to refer to future contracts or to the next two years? I read it as referring to the next two years upon two of the points, and as regards the other concessions asked for they will write us. That does not imply that when a new contract is desired they will not be able to comply with the conditions set forth in the Conference at Wellington.

Mr. COOK: The conditions of the Wellington Conference were intended to apply to the next two years.

Sir JOHN FORREST: From what we have done here we have practically agreed with these conditions, at any rate that we are prepared to accept the contract without the conditions of the Conference at Wellington being granted, and therefore it seems to me that as the companies

are prepared to comply with some of the recommendations it cannot be considered as other than satisfactory. I notice that letter J, Class 2, says that "tenders shall not state what class of labour is to be employed," and recommends to the Imperial authorities that mail steamers be manned by white crews; that is practically the same as the motion passed by this Conference. I did not know it went so far as to absolutely state we would not have anything to do with any contract in which coloured crews formed part of the manning of the steamers. I take it, therefore, Sir, that the recommendations of letter J just about equal the resolution passed by us the other day. I must say I quite agree with the remarks of Mr. Fysh in regard to this matter. It seems to me we must not get too narrow and selfish in our views on this question of coloured labour. I cannot think that the fact that a few hundred Lascars, subjects of the same Sovereign, being employed upon the mail steamers should be a matter that the Australian people should take so strongly to heart as to say "we will not even allow them to be employed." It seems to me we are getting into a position of great insulation, and also in a position in which we may be charged with very great selfishness. I do not know what the people of Australia think in regard to the question of immigration from the mother country,—I believe the consensus of opinion is even opposed to that on any large scale; I have no sympathy with that feeling either.

Hon. P. O. FYSH: They are opposed to assisted immigration.

Sir JOHN FORREST: They are opposed to immigration in large numbers of any people because it will interfere probably with the price of labour. This is not immigration, but merely the question of a few hundred sailors, natives of India, a country I think which we are proud to have dominion over, subjects of the same Sovereign, having a right to be employed upon the mail steamers coming into our ports. Considering this is not a bargain we are making altogether on our own account—if that were so we would be perfectly right in insisting upon any conditions we might think fit—but is a bargain we are entering into jointly with the mother country (hear, hear,) how can we expect the British Government to do anything which would encourage the idea in India that the natives were to be excluded from becoming sailors upon British vessels? It seems to me such a thing might have a very damaging effect upon the Empire at large. Whilst I am as strong as any one in this room in the desire to exclude from this Continent of Australia the coloured races, and do not desire to build up the country with coloured races—I wish it in every way to be a British country and community to the utmost extent—still I must say we are placing ourselves in a very selfish position by advocating that even the steamers that come across the ocean to us, and in which we are interested and have to pay a subsidy to, should not employ coloured labour. While we have to pay that subsidy even I do not know whether we should say we will not allow the mail steamers to be manned by coloured races, especially those races being our own fellow subjects. I must say I see no reason whatever for this resolution, especially when we have already expressed the same opinion in the Conference at Wellington: it seems to me like overdoing it. I hope, therefore, that the members of this Conference will not support the motion which has been made.

Hon. A. J. THYNNE:—Mr. President: It seems to me the resolution proposed by Mr. Cook goes further than is needed. The discussion has turned a good deal upon the question of the employment of coloured labour. Upon that subject I sympathise with Mr. Cook to this extent, that the Governments of these Colonies should not give facilities for the employment of coloured labour in positions which can be filled with equal economy or satisfaction by our own race; that, I presume, no one will for a moment question to be a wise policy. The Queensland Government, in their contracts with British-Indian steamers, made it a condition that the ships should be manned by purely white crews. I believe that Government would, if entering into any separate contracts, make the same stipulations. I hope I speak upon this question in agreement with the views of the Colony of Queensland. I believe all the Colonies would join in that view with regard to this question. (Hear, hear.) There is, however, a very considerable difference in the relation of Australian Governments to their constituents. It is not diplomatic, and it is not wise, to express now too strong an opinion, too strong a resolution, which we might be forced by circumstances or prevented from adhering to upon future occasions. I have no reason for not giving my support to the resolution. The Hon. Mr. Cook will see, as regards the question of coloured labour, there is practically very little difference between us. There are some other questions, for instance, the question of supplying cold storage and refrigerating space. With regard to these I have to inform hon. Members of this Conference Queensland is negotiating a separate service with the old country. It will be for her to consider these questions when these new contracts are verified, or when fresh tenders are called for the conveyance of mails. It will be for her to make representation, perhaps, to some future Conference that her position in relation to the different Colonies and their contracts is slightly altered. For that reason I am not able, having in view the special interests of Queensland, to commit myself to anything. So far as the extension of these contracts is concerned, when the proposal to extend it was submitted to the various Australasian Colonies, it was my duty to take it into consideration, and with very little hesitation I came to the conclusion that the wisest course was to assent to the increase proposed by the Imperial Post Office, with the modifications which have been suggested, and which I am very pleased to see have been conceded, that is, to include the parcels post. Queensland having obtained concessions which I suggested could be made, has obtained all that she has asked for; I therefore do not feel myself at liberty to go further. I regret that I am unable to vote with my hon. friend Mr. Cook upon this motion.

Hon. J. COOK : Mr. President : It appears to me there is some misapprehension in the minds of hon. members regarding the purport of my resolution. It goes no further than the resolution embodying the conditions of the Wellington Conference, with the exception that the resolution carried at this Conference makes the position a little more definite with regard to the employment of coloured labour, and that is the point taken by those who object to the form in which the resolution appears. Let me say, first of all, that the figures supplied by the Hon. Mr. Fysh as to the advantages derived from the present contracts by the Home Authorities are very surprising indeed, and indicate to my mind all the more clearly the duty of the Home Government to as far as possible meet the wishes of the Conference, in view of the very generous terms to which we consent for the next two years. If we pay £75,000 a year, and the Home Office £95,000, they get four or five times the matter carried we do for the money. This seems to me a very strong reason why they should meet us as far as possible with respect to the conditions we desire. In regard to the question of coloured labour, Sir, it is not because it is coloured labour, not because their skins are black or white, that we object to them. No such narrow views as those influence us. We object because with these companies it is made an exclusive matter; they will not employ white labour. I respectfully submit, if all the employers of the Colonies took the same stand, Mr. Fysh and Sir John Forrest would protest as loudly as anyone else. It is not because they are blacks that we object, but because of their habits, and because of their particular relations with this company. For instance, there is no freedom in the attitude assumed by these men. They keep them the whole year round. They pay them a very small wage, and they are never out of the employment of the company. There is, consequently, no freedom with respect to the relations of these blacks to the company. The company employ no white labour at all, so that it is a matter of the total exclusion of white labour on these particular boats.

Sir JOHN FORREST : The stewards are white.

Mr. COOK : All the particular labour they employ whites for, and fill the other with blacks. The reason blacks are employed, as alleged in a letter from Mr. Michie himself, is that after many years of experience of both they have proved themselves in every way more satisfactory. The main reason for doing away with the European crews in the lower grades was that they caused infinite trouble from drunkenness and disobedience. The Lascars cost the company more for the reason that they are kept and paid all the year round, whereas the white crews are paid off upon arrival in London. This company practically keeps, as they would have kept a lot of slaves in the olden times, these Lascars upon the mail boats. These are the reasons we have for objecting to their being employed. It has been said they are British subjects. I admit the strength of that argument; but I submit that when the black portion of the British subject comes into conflict with the interests of the white subject anywhere in the way it does upon these boats, we ought to make our preference in favour of those most like ourselves; that is to say, if these various kinds of labour, black and white, were mingled, paid the same rate of wages, worked in the same way, had the same ideas and aspirations, and entered into all the things which make up our civilisation in the same way that the whites do, I for one would have no objection on account of their skin, I would look upon them just the same as white men. Because these subjects do not commingle, because one will have nothing to do with the other, we are compelled to take our preference of the two. This company has taken its preference, because they are more manageable, and because they can keep them in close subjection practically as slaves. Reference was made to Queensland employing black labour—that was an unfortunate reference. Queensland tells us, and let me not be understood as agreeing with the statement, that they employ black labour only because white is not suitable for the work.

The Hon. P. O. FYSH : Not in the stoke-hole.

Mr. COOK : No, the Queensland people employ black labour because they say they cannot employ white. With respect to the P. & O. Company, there is plenty of white labour willing, and, in fact, begging to do the work, but this company absolutely refuses to employ them. There is absolutely no parallel between the two cases. Sir John Forrest says the company may be speaking with respect to the two years' extension.

Sir JOHN FORREST : Not the two years' extension,—afterwards.

Mr. COOK : We simply express disappointment at not being able to do anything before the period. The resolution is emphasised by the surprising figures quoted by Mr. Fysh. With respect to the attitude of New Zealand I have nothing to say. I only repeat that we are driven to take up the attitude we have taken up by the company. They say they will only employ one kind of labour, and that not of the most desirable kind. That is the position I take up. It is not because they are blacks, but because of the exclusiveness with which they are employed, and because of the general conditions of their life which makes it impossible that the two races can commingle. We are compelled by the company to take our choice—my choice is for white men in preference to the black.

The CHAIRMAN : I think it is to be generally regretted that the discussion on this motion should have turned altogether on the point of the employment of coloured labour, which is not, after all, immediately before us. I may say that it is with the greatest and deepest regret that I have to put this motion that the Hon. Mr. Cook has laid before this Conference. I was in hopes that this Conference would not have agreed to an extension of the present contract without having

received more concessions than it has done. I was in great hopes that this Conference, speaking unitedly and with one voice, would have been able to bring sufficient pressure upon the Imperial Post Office and the companies contracting to enable us, if we did extend the contract to a period of three years, to gain almost if not all the concessions we asked for; whereas we are driven to renew the contract without receiving any concessions, or receiving only the most paltry conditions. I deeply regret this; at the same time I feel, as Dr. Cockburn put it, we are coerced by our "senior partner" into adopting this course, by the Imperial Post Office taking up the position which it has taken up and maintained throughout this controversy. There was a great deal to be said for these Colonies, who felt themselves bound, owing to circumstances, to follow the lead thus given. The only consolation to my mind is that this resolution of Mr. Cook's (which I trust will be carried) gives fair notice and fair warning to all concerned that if these Colonies, at the expiration of the extended period, are again to enter into a Federal Mail Contract for carrying our postal matter; it is to be only upon the adoption of the terms and conditions we have laid down. Some years ago I had hoped that when the period of the termination of the present contract arrived we should be able to do as the Hon. Mr. Fysh had suggested, without any future subsidies whatever. I had hoped this, and now, if this contract is to be renewed for three years, I do still hope at the end of that time we shall be in a position not to give any subsidies to the steamers that carry our letters. Let them take them at moderate poundage rates in the same way that the Imperial Post Office sends its mail matter to America. I do trust that if we continue to subsidise we shall be able to get some *quid pro quo*. I trust we will be in a position to say that we require all the concessions asked for at the Wellington Conference, and that matters will be in such a condition that there will be a certainty of obtaining all, or substantially all, the requests we have made. At present I feel we are in a difficulty; we are bound and shackled hand and foot. It is most difficult for us to move in the matter in any satisfactory manner. If we desire simply to renew the contract for two years, it is self-evident there will be no likely chance of any shipping company tendering; we will be therefore completely in the hands of the contracting companies. If we endeavoured, instead of calling for tenders for two years, to bring about fresh contracts for a further period of seven or ten years, the Imperial Post Office might at once say, "We will not fall in with this arrangement; if you are determined to have a mail service of your own you must pay for such mail service." This is the difficulty we are in, and I may say that, as far as I am concerned, on the part of Victoria, if it stood alone, I would be willing to take the risk. But Victoria is only one of the Australian Colonies, and all the Australian Colonies, except New Zealand, are interested in this federal mail service, and the whole of Australia is only a junior partner in the whole concern. I am not prepared to do anything but what I must do, and do unwillingly and painfully, that is, fall in with the general expression as conveyed in this resolution of Mr. Cook's—"that he desires to express his disappointment"—for it is a bitter disappointment we all must feel at the action of the Imperial Post Office in this matter. I regret we have not some easier means of communicating with them than by letter or telegram. I should like to meet them here face to face, and thus bring forcibly under their notice our requirements and needs in this matter. (Hear, hear.) They talk about our being insulated; they take up a position of inaccessibility; there is no moving them—no stirring them. My hon. friend the Premier of Western Australia is a mere reed compared with them, although I believe he has a little will of his own. (Laughter.) When once the Imperial Post Office take up an idea they never seem to lose it again. They always look at things from one point of view, the view of the Imperial Post Office, when regarding the wants and wishes of the Australian Colonies, which after all are more concerned than the Imperial Post Office can be. I have said the concessions are paltry which they are giving us. One of the concessions we have practically already obtained, the other only refers to parcels post which, although an important matter in some of the Colonies, is of a paltry description as compared with the concessions for which we asked. The idea seems to have obtained that as the Imperial Post Office was desirous of extending the contract to 1898, it was with a view of taking advantage of that being the period of the termination of the India and China contract to hook us on in the old-fashioned way in which we used to be hooked on, and not to assist us in getting a through mail service. I am happy to say they have acknowledged they have no such intention. I have received a telegram from the Government of Victoria which embodies the letter sent by Mr. Buxton Forman, in which he assures the Agent-General of Victoria that when the new tenders are called for in 1898 there will be no attempt to hook on Australia with the China and India service. It is satisfactory to know that this idea has no foundation in fact, and that we shall get a through mail service of our own. Besides that telegram I have received another, presumably from the Agent-General of South Australia, which is I think the telegram which Mr. Cook has read. If this telegram means that the Imperial authorities really do desire to meet the wishes of the Colonies, of course that would be satisfactory as far as it goes. I only regret that having said so much they are going to give way upon two points only. They say they are going to write to us shortly as regards sections 3, 4, and 5, and take no notice whatever of the remaining recommendations of the Wellington Conference. If they had intended to give way I think this telegram would have been worded differently. I am afraid under the circumstances we are driven into a corner. We can only hope for the best, that is, when the letter comes it will be more satisfactory than the former correspondence has been. I do hope that this matter of new contracts will be fully discussed and satisfactorily settled two years hence, which will allow one year to get new tenders out, and that when a future Conference comes to discuss this matter all the Colonies will be able to speak with a united voice, and bring forcibly before the Imperial authorities and the contracting

companies the wants and desires of the Colonies as regards the new tenders. If we do not do that—if one Colony gives way upon one point and another Colony upon another, we will never get any concessions. Whereas if we say, "These are our terms, take them or leave them," I trust satisfactory arrangements may be brought about.

The motion was put and passed.

Mr. Henniker-Heaton's Postal Reduction Proposals.

The Secretary, Mr. T. C. Just, read the following letter on the proposals of Mr. Henniker-Heaton to reduce the Postal charges between Great Britain and the Australasian Colonies:—

"26, London, 25th January.

The Postmaster-General, Melbourne.

SIR,

THE Australian Postal Conference, which sat last year at Wellington, New Zealand, discussed the proposal for which I am responsible, that penny postage should be allowed from the United Kingdom to the Colonies represented, the return postage from the Colonies remaining unaffected. Although I had not the privilege of addressing the Assembly, I have studied the views expressed by the Delegates, and in the event of the subject coming up again at Hobart, I have to ask that you will request the Conference to do me the honour of listening to this brief statement of my case.

1. In the first place, I would call attention to the undisputed fact that the people of the three Kingdoms unanimously and earnestly desire this favour of the Colonies, namely, that a British letter bearing a penny stamp shall be accepted by the Colonial Post Office delivery. The associated Chambers of Commerce have repeatedly pressed for the adoption of the scheme, the most eminent leaders of opinion and the most distinguished statesmen have recommended it, Parliament has ratified it, and the Ministry now in office only awaits the assent of the Colonies to give effect to it. Canada is willing, but Australia hangs back.

2. It must be obvious that the rejection of such a proposal will, in the absence of sufficient grounds for rejection, wear a singularly ungracious air. Articles have appeared in the London press complaining of the new tyranny of the Colonies in this matter, and expressing not only genuine surprise, but something like indignation at the curt refusal of the "Mother country's unselfish offer." They will borrow more of our money, it is said, and try and sell us more of their goods, but they don't want any more of our letters than they are now troubled with. Without endorsing these complaints, I would beg permission to comment on the objections raised to the plan at Wellington.

3. It was feared that the measure would compel the Colonies to reduce their inland and inter-colonial rates from 2d. to 1d., involving a probable loss to them of a quarter of a million per annum, &c. Admitting the compulsion, it is evident that while the whole community would have to make up the loss, the whole community would share the benefit of a reduction of inland and intercolonial postage. The effect would be similar to the transference of a purse from one pocket to another; but compulsion could only be applied by the votes of Australians. Is it likely that they will inflict a loss of a quarter of a million a year on themselves? The argument under examination reflects severely on the intelligence of perhaps the acutest population in the world.

4. Granting, however, the alleged denseness of the Australian intelligence, it may be pointed out that by adopting the 2d. inland postage as the rate for letters to England, all danger of loss would disappear. This step would be strictly according to precedent. Canada and the United States have thus exchanged their correspondence for a generation, the inland rate of each country being one penny in the case of the States and three halfpence in the case of the Dominion franking a letter to any part of the other. These restricted unions, at less than the Union tariff, are expressly authorised by the Postal Union Convention, and several are in operation. I respectfully urge that a new one should be formed between the United Kingdom and the Colonies.

5. I observe that a delegate said the mother country had no right to inflict what he thought would undoubtedly be a great amount of inconvenience and dissatisfaction by adopting the penny rate from herself to the Colonies, unless the latter were able to reciprocate. This bold claim (which has already been answered in par. 3 of this letter) is in singular contrast with other statements made: thus, it was observed that we are now doing a large trade in butter, and at present London is our only market, and then followed a scheme for reaching the provincial towns also; indeed, the dominant note in the discussion is the necessity of encouraging the export of Australian products to England. "All the Australian Colonies," said a delegate, "are largely indebted to the British people for borrowed money, and it is necessary that we must increase our exportable products." Accordingly the mail-steamship owners are to be required to provide not only strong rooms for the mails, but "cold storage" for mutton, butter, and apples. The mails are dismissed in a sentence or two, and each speaker who does mention them hastens to return to the mutton.

6. I am thus led to remark that the prime cause of differences of opinion on this subject is the confusion as to the cost of conveying mails by sea. The real cost is the same as that of carrying merchandise, which does not exceed forty shillings a ton for any distance. True, immense subsidies are paid to the shipping owners, and rightly paid, but they are wrongly charged against the post offices, and wrongly described as the cost of carrying the mails. Every well-informed man knows that subsidies are paid to encourage trade and shipbuilding, and in the case of England to maintain a reserve fleet of swift convertible cruisers. These are not postal objects. Let me, with much

deference, suggest that the Australian Postmaster-Generals should request their Ministries to charge the due proportion of such subsidies to general revenue, leaving the post offices to meet only the just rate of freightage. As Mr. Ward said, "payments should be on the basis of the weight of mails carried." Lord Carrington's Commission expressly condemned the absurd practice of charging to the post office the whole cost of steamship subsidies. Up to 1860 these subsidies were charged to the Admiralty, and every Postmaster-General condemns the practice of tacking the items to the Post Office expenditure. The amount paid by the British Government for the conveyance of the mails to India exceeds £268,000 per annum; the total postage receipts do not amount to £85,000.

As I have already pointed out, the enormous subsidies are paid for four distinct purposes—1, to encourage ship-building; 2, to uphold the commercial supremacy of England on the seas; 3, to maintain an auxiliary naval power; and 4, to carry the mails. In the case of Australia, if you merely want a rapid delivery of letters, and wish to subsidise steamers for no other purpose, no further comments are necessary; but I have often pointed out that if you want speed you could, by subsidising the cable companies, telegraph the contents of the letters without paying more than at present for steamers. I find that there are six or eight steam services now subsidised, whereas only two carry the bulk of the letters. No one will pretend that the Torres Straits and the San Francisco and Vancouver Services are necessary for the conveyance of letters to and from England, yet the Australian post offices are saddled with the whole cost, together with the whole cost of the P. & O. and the Orient mail services. I trust that steps will be taken at the forthcoming Conference to charge the Consolidated Revenues of the various Colonies with three-fourths at least of the present subsidies. Your wish to cheapen postal rates will thus be facilitated, for you will no longer have to calculate the loss sustained by carrying mails to England in a manner that shows a heavy balance against the Post Office; further you would be able instantly to extend the present Australian 2d. postage rate to Great Britain and Ireland. From whatever point of view the proposal here advanced is regarded, I trust it will appear to you both equitable and expedient; its acceptance would unquestionably gratify the people of the mother country, and I venture with all the earnestness of which I am capable to commend it to the favourable attention of the Conference.

I have &c.

J. HENNIKER-HEATON.

Postscript.—By the generous courtesy of Sir John Pender I am permitted to cable the foregoing for the consideration of the Conference.—H. H. 1381."

Mr. COOK: Mr. President: Many of us have been interested in hearing the letter from Mr. Henniker-Heaton which has just been read. With regard to his proposals to reduce the Imperial Postage rates to two pence instead of two pence half-penny as now, there can only be one opinion. As to the desirability of having a cheap postal-rate between the Colonies and England we are all agreed. I do not anticipate any Member will object in any way to the proposals for cheaper postage rates, other things being equal. The point I take, Sir, is that the present is a most inopportune moment to make any proposals which would involve the Treasurers of the respective Colonies in any increased contribution for this purpose. According to the figures which have been made out in our office we estimate the loss to be £2000 per annum if the reductions were carried out. At the present time, when all the Colonies are looking round for the best means to balance their accounts, the Treasury could not be burdened further with such an amount as that. While sympathising to the full with the very laudable desire Mr. Heaton has in view, I beg to move the following resolution:—

"That, whilst sympathising with the desire expressed by Mr. Henniker-Heaton for a cheaper postage rate to and from England and the Colonies, this Conference regards the present time as inopportune for carrying out the proposals, and hereby decides accordingly."

Dr. COCKBURN: I do not think, Sir, the conditions have altered materially since this matter was threshed out, discussed, and resolved upon at the Conference at Wellington. A resolution was then carried that we considered it undesirable to adopt the proposals of Mr. Henniker-Heaton, which is practically the same proposal as that made to-day. That motion involves, first of all, a reduction of the postage from England to Australia; but it would not stop there. I am quite sure, Sir, the Colonies would never submit to such a state of things by which they could get a letter sent to the other side of the world for a penny, and have to pay two pence to send it into the adjoining street; therefore we should find ourselves compelled to take the remaining steps and submit to a loss, which we are not prepared to incur at the present time. (Hear, hear.) With regard to the reduction of the postage from two pence halfpenny to two pence, I should be very glad to see that accomplished if we were able to do it. The loss would not be very great, I think. It would not only minister to a very legitimate sentiment, but would be of very considerable utility that postage should be reduced to the United Kingdom to this extent. To be able to write to England for the same postage as to New Zealand would lead no doubt to a considerable increase of business. I know very often the fact that a 2½d. stamp is required means a letter is not written which would be written if a 2d. stamp could be affixed. This concession would mean something under a thousand pounds to our Colony, but this year we certainly cannot afford that amount. I look forward to the time when we shall be able to

go as far as this—as soon as the Colonies can afford it we hope to do it. South Australia does not now feel able to fall in with the suggestion, but hopes at some future time to do so, therefore I think we might well adopt this motion of Mr. Cook's. I wish to reserve the right to urge the Colonies, when they can afford it, to reduce the 2½d. rate to 2d. I do not think it is worth while making any amendment. While I am with Mr. Cook in opposing the reduction to a penny, I am thoroughly in accord with the suggestion Mr. Henniker-Heaton has made, that it would be desirable a 2d. stamp should carry us throughout the British Federation, and I hope it will not be very long before this will be done.

Hon. A. J. THYNNE: Upon this question of a 2d. postage to England, the Government of Queensland are prepared to adopt Mr. Henniker-Heaton's proposals, and if the Imperial Government will take the steps necessary to carry out this, we are prepared to incur the necessary expense of seven or eight hundred pounds. We have considered the matter, and think the extra cost to us would be repaid by the convenience to the people of Queensland. As regards penny postage, it is not within practical politics. It is no use our offering serious consideration to any proposition that is not likely to be adopted within the next few years. The Australasian Colonies are not in a position, nor are they likely to be in a position, to consider this question during the next few years from a practical point of view. I should be very glad if we could agree to the 2d. postage. We should then have the pleasure of knowing that whether our letters went into the next village, or into the village where we were born—those of us who can claim nativity with the Antipodes—our Antipodes, we should be able to send them with the same postage stamps. It would thus make no difference whether they were carried a distance of a few hundred miles or a few thousand miles.

The CHAIRMAN: I am in accord with the gentlemen who have spoken. The penny postage is not within the range of practical politics. I regret the time for the adoption of the 2d. postage proposal is inopportune. We should all lose considerably under it. Victoria would lose something like £1600 or more. Some of the Colonies can ill afford to lose money just now. We must all regret the time is inopportune, but the times will not always be inopportune. Perhaps before more than another year has passed the great zeal and energy Mr. Henniker-Heaton has thrown into this matter will be rewarded.

The motion was put and passed.

The Conference adjourned at 1.15 p.m. till 10.30 a.m. on Friday, February 8.

FRIDAY, 8TH FEBRUARY, 1895.

The Cable Guarantees—(vide Minutes, p. 16.)

The PRESIDENT: Our first business will be the consideration of the report of the Committee in regard to the question of Cable Guarantees. Honourable Members will remember that when we were in Committee we put it to the representative of Queensland that this would be a favourable opportunity to come into the Guarantee. It is highly desirable that Queensland should be at one with the rest of the Colonies in this matter. I do trust that she will see her way to come in, as she will be in a much stronger position when other cable matters come to be discussed.

Mr. COOK: I earnestly hope Queensland will see her way to come in with us, not merely from pecuniary considerations, but as a proof of her earnestness in these larger Federal matters which bear so much upon the particular cable in which Queensland is so prominently interested. There is a very strong feeling in my own Colony that nothing should be done in regard to that particular cable which will retard it. I presume a similarly strong sentiment exists in the other Colonies, and that being so it appears that the position of Queensland would be very much strengthened by coming in with us in our present undertaking.

Dr. COCKBURN also spoke to a similar effect.

Mr. THYNNE: I may say at once that I intend to advise my colleagues to comply with the wish that has been expressed by the Colonies represented here—(hear, hear)—in regard to the cable guarantee. With regard to the cable subsidies, I may say at once that that is a different question, because it is against our policy, and it is a proposal for which I shall not be able to obtain any consideration. I may be permitted to say, for my own part, I am very strongly indeed impressed with the necessity for even a greater amount of give-and-take amongst the Colonies than we have been able to obtain, and I would be extremely sorry to see a Colony standing apart, even in a matter in which she might not be so deeply interested as the others. As long as I have a voice in matters of this kind it will always be used in favour of co-operation on the part of the Colonies. (Hear, hear.)

The Report of the Committee was adopted.

Telegraphic Communication between Western Australia and South Australia.

Mr. COCKBURN asked that this question might be left in the hands of the two Colonies to deal with, as they were quite prepared to do all that could be done in the matter.

59

Sir JOHN FORREST seconded the proposal. His Colony was already constructing 350 miles of new line, and he was sure there would be no reason to complain of her efforts in other directions.

Mr. THYNNE pointed out the advisability of connecting one of the stations on the overland line with Camooweal, and thus creating an alternative route in case of interruptions in the southern portions of the Colonies.

Sir JOHN FORREST complained of the excessive cost of telegrams from Western Australia to the other Colonies. The present rates were almost prohibitive.

Dr. COCKBURN thought that the various Colonies should be prepared to see what could be done in the matter.

Votes of thanks to the Chairman, the Government of Tasmania, the Secretary, and the Press concluded the proceedings.

REPORT and Recommendations by Permanent Heads of Departments, presented at the Meeting of the Postal Conference held in Hobart, February, 1895.

(As adopted by the Conference.)

No. 1.—(e). *Delay of Train at Adelaide for English Mails.*

The Sydney and Melbourne Chambers of Commerce invite attention to the serious delay and consequent inconvenience and annoyance caused by the departure of the mail train from Adelaide when mail steamers are actually signalled, and express a hope that strenuous efforts may be made to obviate this in future.

The Postmaster-General, Adelaide, has arranged to provide a special train to leave Adelaide when the mails arrive not more than half an hour late, to overtake the express train at Murray Bridge. When, through the occurrence of holidays, such as Easter, Christmas, &c., or from other causes, a delay of more than one day would otherwise result, there is a further arrangement which provides that when the steamers arrive too late for the 4.30 p.m. express train, or for the overtaking train, a special train is despatched up to 9 p.m. on either Wednesday, Thursday, or Friday, at a joint cost to New South Wales and Victoria of £71 15s., South Australia running such train from Adelaide to Serviceton free of charge.

The object of the Chambers of Commerce is that arrangements be made to delay the departure of the 4.30 p.m. express train from Adelaide, or run a special train regularly; but if anything further is desired, it can only be arranged at considerable cost for special trains, which the several Administrations have, after due consideration, already declined to incur.

No. 3.—*Italy charging Sea Surtax: Report by Postmaster-General, Adelaide.*

The Postmaster-General, Adelaide, reports that Italy, from 1st January, 1895, abolished Sea Surtax of $1\frac{1}{2}d.$ as recommended at Wellington Conference, which amounts to reduction of postage from 4d. to $2\frac{1}{2}d.$

No. 4.—*Stoppage of Letters addressed to senders of Obscene Matter.*

Nos. 4 and 22.—We are of opinion that when letters are addressed to persons who have sent photographs and catalogues of a decidedly obscene character, they should be stopped in the manner provided for in the case of sweeps, &c., and in any amendment of the Postal Laws we advise that provision be made accordingly.

With reference to obscene circulars sent by post by a firm in Holland, we find that steps were taken by the various Administrations to prevent the delivery of these circulars, and we recommend that a joint protest be sent to the Berne Bureau, and as there appears nothing in the Universal Postal Union Convention directly dealing with the transmission of obscene matter, we think that the question should be brought up at the next Quinquennial Congress.

No. 6.—*Delivery of indefinitely addressed Letters to business people.*

The Berne Bureau wrote at the instance of the Hungary Office, inquiring whether the Post Office would undertake to distribute packets of fully prepaid letters which do not bear a precise address, but only a vague one, such as Mr. ——, tailor, grocer, &c.

The Berne Office has recently forwarded summary of replies received from other Postal Administrations, most of which are adverse to the proposal of Hungary. We, however, see no objection to deliver in Australia any single article bearing such address, provided that it bears full rates.

No. 7.—*The Colonies remitting through the Treasury.*

We suggest that the Australian Postal Administrations be permitted, as formerly, to adjust accounts direct one with the other, and remit their balances direct instead of through the Treasury. The question was considered at the Wellington Conference, when it was reported "that the present arrangement caused delay, but it was proposed to give it a further trial, and the result reported at the next Conference." Further experience has shown that continued delay arises in the settlement of accounts, the amounts due to the Postal Departments frequently remaining unpaid for considerable periods.

No. 8.—*Uniform Statistics.*

We recommend the acceptance of the Forms as prepared by the Sydney Office, with the following exceptions:—

- Form 3. Columns Nos. 8 to 11 to be retained.
- “ 5. Column 3. The word "Offices" to be substituted for "Statistics."
- “ 5. The words "Despatched" to be substituted for "Transmitted."
- “ 10. Omit Revenue No. 3, and insert under Expenditure No. 3, "Conveyance of Mails less Contributions from other Administrations."
- “ 10. No. 1 to be amended to read as follows:—"Estimated proceeds of sale of Postage Stamps used for payment of correspondence."

61

No. 9.—Notification of promotion of higher grade Postal Officials.

The Berne Bureau forwarded a proposal from the Egyptian Office that the offices of the Union should be kept informed of the *personnel* of the higher class of the various Administrations; and that the "Postal Union Journal" might give this information, which could be supplied to the Editor by the Head Offices. We see no objection to the information being given, restricted, however, to the Ministers, Permanent Heads, and Heads of Principal Branches.

No. 10.—Postal Guides: uniformity of.

We recommend that the Postmaster-General of South Australia be asked to revise a Guide on uniform lines, and submit the same to next Conference.

No. 11.—Post Cards of private manufacture: Regulations.

We beg to recommend that private cards, bearing adhesive stamps of proper value, measuring not less than $4'' \times 3''$, and not more than $5\frac{1}{2}'' \times 3\frac{1}{2}''$, not of thicker material than that used for official Post Cards, be adopted in the various Colonies, and accepted reciprocally under the same conditions as official Post Cards. In reference to this matter the London Office wrote asking the following four questions:—

- (1) Whether a plain card with an adhesive stamp might reasonably be allowed to circulate in the Union as a postcard under the usual regulations?
- (2) If not, whether a plain card with the word "post card" written upon it, and with an adhesive stamp, might reasonably be admitted?
- (3) Whether any relaxation of rules that might be deemed reasonable for single cards should apply to reply cards?
- (4) Whether, between the present time and the meeting of the Congress of Washington in 1897, any step can usefully be taken for giving effect to such relaxation as the prevailing sense of the Union might indicate?

We recommend that these questions be answered as follows:—

No. 1. Yes, provided they bear the ordinary Post Card rate.

No. 2. Answered by No. 1.

Nos. 3 and 4. We do not consider that the proposed concession should apply to Reply Cards at present.

No. 12.—Letter Cards.

(a) Uniform Exchange of.

(b) Consideration of Berne Circular *re* rates chargeable thereon.

We see no objection to the uniform exchange of Letter Cards internationally; but we respectfully point out that it will lead to a considerable loss of revenue unless the postage is the same as letter rate, and we recommend accordingly.

There is no valid reason why a cheaper rate of postage should be charged on letter cards than on ordinary letters, and it appears from a summary prepared by the Berne Bureau, which applied for information on the subject from the various Union Administrations, that in every part of the world where letter cards are in use, excepting Australasia, the rate of postage is the same as that of ordinary letters. Letter cards are closed against inspection, and are practically letters—the only difference being, that the Department supplies the material for letter cards at considerable cost, whilst that of ordinary letters is of course supplied by the sender; as, however, a lower rate has been in force, inland and intercolonially, we see some difficulty in now raising it.

(c) Whether Victorian Letter Cards should not bear stamps equivalent to their face value—

Victoria is charging $1\frac{1}{2}d.$ each, as agreed to at the Wellington Conference, but under the present law is compelled to mark them with a face value of 1d. We are, however, of opinion that it is undesirable and confusing to the public to mark the cards at a less value than they are sold for.

No. 13.—Proposed discontinuance of Letter Bills intercolonially.

We do not think it necessary that the number of Letters, Packets, and Newspapers should be entered on Letter Bills; but recommend that a more simple form of Letter Bill or Advice be prepared, on which should be entered Registered Letters, Forward Mails, and Money Order Packets. New South Wales to prepare the form. Of course the usual records will be kept for statistical purposes.

No. 14.—Revision of Australasian Convention.

We beg to report that time has not permitted the careful revision of the Australasian Convention, but we propose to deal with it later on.

No. 15.—*Rates on Circulars and Packets from United Kingdom* (vide London Letter).

In view of the letter received from London, and tabled by the Postmaster-General of New Zealand, we do not see that anything further can be done. Although the $d.$ rate is in force in New Zealand, we do not feel justified, for financial reasons, in advising any reduction in existing rates levied in Australian Colonies. Should the $\frac{1}{2}d.$ rate at any future time be adopted, it should in our opinion be wholly confined to printed matter.

No. 16.—Transmission by Post of Samples in Envelopes bearing printed Notices relating thereto.

We recommend that the following questions asked by Berne Bureau be answered as follows:—

Do you pass, or are you prepared to pass, Samples in Envelopes bearing printed Notices on the address side or other side?—Answer: Yes; provided the envelope complies with the provisions of Clause 2, Detailed Regulation xix., no objection would be raised to such envelope bearing upon it a printed list or notice within the limits of Clause 3 of the same Regulation. The Vienna Convention does not prohibit printed notices on the address side.

2. Do you allow, or are you prepared to allow, the attention of the addressee to be directed to these communications by coloured pencil marks? Answer—Yes.

3. In your opinion, can such articles circulate within the Union at the reduced rate for samples? Answer—Yes, if they comply with the above conditions.

No. 17.—*Rate of Postage on Seedsmen's Catalogues or such matter got up in Book form.*

We advise that Catalogues, Reports of Societies, and other such matter, if printed and published in book form and containing no writing whatever, be passed at Book rate of postage.

No. 18.—*Travellers' Orders whether, when filled up in Manuscript, they should pass at Packet Rate.*

We recommend that Travellers' Orders should be treated as commercial papers, and passed at Packet rate of postage inland and intercolonially, provided they contain no writing or remarks of the nature of a personal correspondence.

No. 19.—*Printed Matter and Trade Notices on Accounts and Invoices.*

We are of opinion that any difficulty in this respect would be met by amending Article 12 of the Australasian Convention by omitting the words "nor anything" in paragraph 3, and in the revised draft of the Convention we have proposed such omission.

As an illustration, we append a portion of an invoice submitted to the Melbourne Post Office, and claimed to pass at Packet Rate. We are of opinion that the first portion should be passed, and that the latter is in the nature of a personal correspondence, and therefore inadmissible:—

JOHN SMITH & CO.,
WHOLESALE & FAMILY DRAPER.

Melbourne, —————, 189

TERMS NET CASH.

We beg to notify that our Terms are strictly Cash, as we sell at original Wholesale Prices.

No. 20.—*Rate on printed Circular from Business Firms.*

The following specimens of postal matter numbered consecutively 1 to 12 having been submitted to us to decide whether they may pass at packet rate of postage, we recommend that Nos. 1, 11, and 12 pass at packet rate, and the rest at letter-rate of postage:—

No. 10.

When remitting please forward this Memorandum to be receipted.

Adelaide,

July, 189

Mr.

SIR,
We have received notice from the Insurance Company that the Premium on Policy on your property will be due on the 1st of August next. The amount is £ which we shall be obliged by your forwarding to us, so that the risk may be immediately covered.

* * If any Stove, Steam Engine, Furnace, or other implement for producing heat (common Fireplaces excepted), has been erected on your premises; or if the nature of the risk has been in any other respect changed; or if other buildings have been erected within 70 feet; it is necessary for your security that the circumstances be made known to the office.

No. 11.

Insurance Company,

Adelaide,

189

Sir,

I BEG to remind you that your Insurance by Policy No. will expire at 4 P.M. on , and that unless the Premium be paid for its renewal on or before that date you will not be entitled to recover in case of loss.

Sum insured, £ Premium, £

* * If any Stove, Steam Engine, Furnace, or Oven has been erected on your premises, or if the nature of the risk be in any other respect changed, it is necessary (for your security) that the circumstances should at the time be made known to the office.

No. 12.

The ——— Insurance Company, Limited,

Adelaide,

1894.

SIR,

I beg to inform you, for your security, that your Policy No. , expires at three p.m. on the and unless the premium be paid on or before that date you cannot recover any loss that may be sustained.

Amount £ : :
Premium £ : :

If any Stove, Steam Engine, Furnace or other implement for producing heat (common Fireplaces excepted), has been erected on your premises; or if the nature of the risk has been in any other respect changed; or if other buildings have been erected within 70 feet; it is necessary for your security that the circumstances be made known to the office.

Office Hours:—9 a.m. to 5 p.m.; Saturdays, 9 a.m. to 1 p.m.

No. 21.—*Christmas and New Year Cards.*

Correspondence having taken place between the Berne Bureau and other Administrations of the Postal Union with respect to the practice of permitting complimentary remarks on Christmas, Birthday, New Year, and Easter Cards, we agree with the United Kingdom, and recommend that the practice which now obtains in the Colonies of allowing such remarks to be placed on the Cards be continued, as regards the United Kingdom and such other Foreign Administrations which may agree to exchange on such terms.

No. 23.—*Precious Stones and Jewellery passing at Sample Rates.*

We recommend that the words "Precious Stones" be inserted at page 4 of the Australasian Postal Convention, at Packet Regulation No. 1. This will provide for Precious Stones and valuable Jewellery being charged at letter rate of postage, and registered.

No. 24.—*Queensland surcharging New Zealand ½d. Matter.*

It is desirable that absolutely uniform rates of postage should exist between the Colonies, but as a ½d. rate has been in operation in New Zealand for several years, we advise that the other Colonies should agree to accept such matter as fully prepaid.

No. 25.—*Austro-German proposal for Uniform Rate of Postage on Parcels up to 11 lbs.*

The matter has been further considered by this Committee, and although the Austro-German proposal of a uniform rate of postage on parcels up to 11 lbs., irrespective of weight, has been accepted as a temporary measure, we think it very undesirable to have one rate irrespective of weight, as this practice discourages the transmission of light parcels and encourages that of heavy ones. We therefore recommend a graduated scale at per single pound, and that the Berne Bureau and London Office be so informed, and urged that at an early date a graduated scale be adopted between the Colonies and other countries.

No. 26.—*Liability of Steamship Owners for damages to Parcels to be increased.*

We recommend that in the new Contract for the Federal Mail Service provision be made for payment of compensation by Contractors for the loss or damage occurring to any parcel, but not in any one case to exceed £5 per parcel, instead of £1 as at present.

No. 27.—*Insurance of Parcels.*

This matter has already been under consideration at previous Conferences, but at Hobart and Brisbane it was decided not to adopt the system. The subject has recently been reopened by the London Post Office in a letter dated February, 1894. In this letter, in urging the reconsideration of proposal for Insurance, the London Office states that during a recent year upwards of 21,000 insured parcels were sent to and from the United Kingdom, and in respect of loss or damage the claims met by the Department amounted only to £11 16s. 9d. It was added that considerable public convenience was being afforded in the several parts of the Empire, while the business is more than self-supporting.

As, however, the International Parcel Post has, as yet, only attained very moderate dimensions, and consequently yields small revenue, we still consider it undesirable to incur the responsibility involved in insuring parcels.

No. 28.—*Charge for Intermediary Service in regard to Intercolonial and Foreign Parcels.*

We recommend that no alteration be made at present.

No. 29.—*Parcel Post, United States.*

Nothing can be done in this matter, as the United States has twice refused to enter into a Parcel Post Convention with the Colonies.

No. 30.—*Parcel Post Rates with United Kingdom—Reduction of.*

We recommend that as soon as arrangements are concluded with the P. & O. and Orient Companies to discontinue to make any special charge for the Parcel Post portion of the Mails, the rates be reduced as suggested by London from 1s. 6d. for the first 2 lbs. or fraction, and 9d. for each succeeding lb. or fraction, to 1s. for the first lb., and 6d. for each additional lb.

No. 31.—*Parcel Post Convention with Italy—London's offer.*

The London office wrote on October 9, 1894, intimating that it would probably negotiate with the Italian Post Office for a Convention with a view to the establishment of a direct Parcel Post between Italy and Australia similar to the Draft Convention prepared by the French Post Office. We see no objection to such a Convention, subject to the alterations suggested in the Draft Convention submitted by the French Post Office. [See No. 34.]

No. 32.—*Parcel Post Convention with Malta.*

We recommend the Parcel Post System be established with Malta, but cannot agree to each country retaining its own receipts, as experience shows that we receive a much larger number of parcels from abroad than are despatched, and therefore the usual principle of dividing the postage should be adhered to. The rates and division of postage to be the same as with Gibraltar, as follows:—

For the first 2 lbs.	1s. 6d.
For every additional lb.	9d.

Division:—

Credit of Colony.....	9d.	first two lbs.,	$4\frac{1}{2}d.$	each additional lb.
Sea	4d.	"	2d.	"
Gibraltar	5d.	"	$2\frac{1}{2}d.$	"
<hr/>				1s. 6d. 9d.

No. 33.—*Parcel Post Convention with Canada.*

It is recommended that a direct exchange between the Colonies and Canada be established, the rates of postage to be uniform in all the Colonies, either 1s. 2d. or 1s. 3d. per lb. as Canada may advise, the New South Wales share to be 5d. per lb. on first lb. and 4d. on each additional lb. on parcels sent loose in Mails from other Colonies, but if sent in closed Mails, the New South Wales share to be 1d. per lb. for territorial transit and 2d. per lb. for sea rate.

34. *Parcel Post Convention with France.*

In July last the London Post Office informed the Colonies that the French Post Office desired a direct exchange of parcels between France and Australia by the French Mail Steamers (Messageries Maritimes), and, the proposal having been approved of by the Home Authorities, forwarded a draft Convention and Regulations for consideration of the Colonies.

We have considered the Draft submitted, and recommend that its provisions be agreed to, but that the following suggestions be made:—

Article 6. That no fee for portage and for the execution of Customs formalities be collected in the Colonies from the addressees of parcels from France.

Article 14. That the introduction of the system of acknowledgments of delivery of parcels remain in abeyance until the system be adopted generally.

Regulation 2. That the postage progress pound by pound, instead of in steps of 2 lbs., 7 lbs., and 11 lbs., as more consistent with the Colonial and English practice.

Regulation 6-3. That the Customs declaration forms be drawn up in the English language, and bear a sublineary translation in French, as is done with Postal Union forms.

Regulation 8-3. That the provision that mails "be landed as far as possible at the Custom House" be omitted as unnecessary, as Customs work is done at the Post Offices.

That it be provided that the cost of receptacles be shared equally between the countries of exchange.

Regulation 12. That in lieu of this a simple regulation providing for the preparation of a quarterly account, and for the payment of the balance due as early as possible after the same has been ascertained, be substituted.

No. 35.—*Redirection of Parcel Post Packets.*

With reference to a letter from the Calcutta Post Office of 7th August, 1894, on the subject of Redirection of Parcels, we recommend that the Colonies agree to the substitution of Article 14 of the Union Convention which provides for payment being made in all cases of redirection of parcels to other Postal Administrations, or of their return (owing to non-delivery) to the office of origin, in lieu of Article 2 of the existing arrangement between the two countries.

No. 36.—Reduction of Commission on Money Orders to United Kingdom.

The London Office wrote suggesting a reduction of Australian Rates on Money Orders to the United Kingdom. The rates in Great Britain and the Colonies are as follows :—

Rates charged in United Kingdom.

INLAND MONEY ORDERS.					
For sums not over the charge is.....	£1. 2d.	£2. 3d.	£4. 4d.	£7. 5d.	£10. 6d.
FOREIGN MONEY ORDERS.					
For sums not over the charge is.....	£2. 6d.	£5. 1s.	£7. 1s. 6d.	£10. 2s.	

The Rates of Commission charged in the various Colonies on Money Orders issued on the United Kingdom are as follows :—

COLONY.	To £2.	To £5.	To £7.	To £10.	
South Australia and West Australia	1s.	2s.	3s.	4s.	
Victoria, New South Wales, and Tasmania.....	1s.	2s. 6d.	3s. 6d.	5s.	
	To £2.	To £4.	To £6.	To £8.	To £10.
Queensland and New Zealand.....	1s.	2s.	3s.	4s.	5s.

We are of opinion that although our rates are somewhat high, the present is not an opportune time for making any reduction.

No. 37.—Telegraph Money Order Regulations.

It appears that since the Conference at Wellington, at which it was decided that each Colony should adopt within its own territory such rules as it might deem fit for its own and the public protection, and that the result of the working be reported to the next Conference, we find that no fresh rules have been prepared by any of the Administrations, although some have been drafted and suggestions made by New South Wales and Victoria, the result of the working of which will be reported in due course.

No. 38.—Issue of Duplicate Money Orders.

A case having been brought under notice in which Orders were fraudulently negotiated after the issue of duplicates, it was decided the matter receive consideration when fresh regulations for the guidance of Postmasters are framed.

No. 39.—Universal Postage Stamp: Federal Postage Stamp.

The question of a universal or international postage stamp having been brought before the Vienna Congress by the Administration of Luxemburg, the Berne Bureau has asked the opinion of the other Administrations of the Union on the matter, and has been informed in reply that it would be considered at the Conference at Hobart, unanimity being desirable among the Colonies.

The Berne Bureau has furnished a great many opinions gleaned from other countries, most of which are adverse to the proposal at present, and the Director of the Bureau himself sums the matter up as follows :—

"I consider that under present conditions, and especially with regard to the diversity of currencies, the difficulties in the way of the creation of a universal postage stamp are too considerable to admit of the introduction of this innovation."

We entirely concur in the above opinion.

With regard to a "Federal" Stamp, we are of opinion that it is undesirable at present to adopt a Federal Stamp for Australasia.

No. 40.—Marking Stamps, "Specimen."

Under the Vienna Convention each Administration belonging to the Postal Union has to forward to the Berne Bureau, for distribution among the other Administrations, five specimens of its postage stamps (including, of course, stamped envelopes, newspaper wrappers, postcards, &c.), the number required being 730 of every kind, i.e., a quintuple set for each of 146 Administrations. In return, the Departments receive through the Bureau a supply of specimens from all the other Administrations. It is a vexed question whether the stamps sent from Australasia should be unmarked, or bear the word "specimen."

The Berne Bureau in 1892 intimated that a number of Administrations much preferred that the stamps sent to them should be unmarked, as it is considered that the overprint "injures the clearness of the design," and that the number sent for this official purpose is "so small as to preclude all danger of abuse." The New South Wales office thought the stamps should be marked in some way, but asked the opinion of Melbourne and Adelaide offices. In reply, Melbourne stated that it sent stamps unmarked, but not of any denomination higher than 5s. Adelaide replied that it had sent unmarked stamps, but nevertheless considered that they should have "specimen" printed on them.

On further representations from the Bureau, a statement was prepared showing what was done in other parts of the world, from which it appeared that Forty-eight Administrations placed the word "specimen" or some other imprint upon the stamps. This included Great Britain, which country, however, last year abandoned the custom of marking, at the same time expressing an opinion that the matter was not of sufficient importance to justify interference with the local regulations of other countries, and suggesting that every latitude be allowed to each in this respect: and of the forty-eight above mentioned, several have since left off marking their stamps. On the other hand, eighty-four administrations then (more now) sent unmarked stamps, and it was noted that the face value of the unmarked stamps sent by the United States amounted to over £31,000.

Of the colonies, Tasmania, South Australia, Western Australia, and New South Wales cancel by the word "specimen" or otherwise; whilst Victoria, Queensland, and New Zealand supply unmarked stamps.

Further representations continued to be made by the Berne Bureau, including a very strong request from Austria that "the custom of disfiguring stamps intended for distribution in the Postal Union be abandoned."

The question was considered at the Brisbane Conference, 1893, when it was agreed that "all stamps sent to the Berne Bureau be cancelled or marked "specimen." This decision was communicated to the Bureau, and a proposal has since been made to date-stamp the stamps instead of overprinting "specimen."

The majority of us are of opinion that these stamps should either be marked "specimen" or defaced with the date-stamp.

Importation of Electrotypes fac-similes.

It was reported that the New South Wales Post Office had stopped a number of packets addressed to a firm in Sydney containing electrotypes of some of the postage stamps of the various Colonies, on the grounds that *fac-similes* of the stamps in use might be printed from the electrotypes. The addressees appealed to the Department to deliver the electrotypes, at any rate of the other Colonies. This however was refused, unless they chose to obtain the consent of the various Administrations. They have accordingly applied to the other Colonies offering to place a bar across the electrotypes, so as to deface the stamps, and to give a guarantee bond that the electros will only be used to illustrate catalogues and price lists.

We endorse the action of New South Wales, and think it most undesirable that these exact reproductions of our stamps should be allowed to be brought into the Colonies, or used in any form. Under the Postal Acts of all the Colonies it is illegal to imitate any postage stamp.

41.—Patent Envelopes.

Applications have been made to the Postal Administrations of the Colonies to allow patent envelopes bearing a postage stamp of the proper value embossed by the Post Office, a portion of which stamp is impressed on the leaflets (containing advertisements) enclosed in the envelopes. These envelopes the applicants propose to sell to the public at half the face value of the stamp, trusting to be recouped by charges for the advertisements on the enclosed leaflets. We see grave objections to acceding to the request, and recommend that the Post Office should refuse to comply with their wishes.

No. 42.—Postal Note System, England.

The London Office was communicated with, but declined to exchange Postal Notes on account of the great risk.

No. 43.—Arbitrary Marks in Newspapers to convey information of a personal nature.

We do not advise that the present system of allowing certain marks calling attention to paragraphs be extended.

No. 44.—Enclosure of printed Papers in Newspapers.

We recommend that the Australasian Convention Rules be adhered to with respect to printed Papers in Newspapers which exclude Placards, Insets, Advertisement Sheets, &c.

No. 45.—Payment for Conveyance of Letters in English Mails in transit—Victoria to Tasmania.

Victoria reports that a Bill has been drafted providing for reduction in Sea Transit Rates of Mails to Tasmania.

No. 47.—*Postal Union (Sea Transit Rates).*

In September last the great inequality of the rates of payment for the sea transit of mails for Postal Union countries was brought under notice by the Sydney Post Office, special attention being drawn to the case of mails for New Caledonia, as follows:—

Under Article 4 of the Vienna Convention, the French Post Office claims from this office for the conveyance of mails by French mail vessels from Sydney to New Caledonia, a distance of 1060 miles, the rates of 15 francs per kilogramme of letters or postcards, and 1 franc per kilogramme of other articles, the same rates as would be charged from Adelaide to Marseilles, a distance of 9240 miles; whilst on mails from France to New Caledonia, conveyed from Italy to Adelaide by P. & O. and Orient vessels, and from Sydney to New Caledonia by non-contract packets, at a cost to this office of 2s. per lb. of letters or postcards, and 4s. 6d. per cwt. of other articles, this office is allowed for the latter service 1 franc 57 centimes per kilogramme (7d. per lb.) of letters or postcards, and 10 centimes per kilogramme ($\frac{5}{4}$ d. per lb., or 4s. 3d. per cwt.) of other articles. In other words, France claims for the conveyance of New South Wales mail matter from Sydney to New Caledonia about ten times the rates allowed to New South Wales for the conveyance of French mails between the same places.

In the case of other mails, also, great inequalities exist. The stipulations in the Postal Convention were made before the Australasian Colonies joined the Postal Union, and their operation in this way may not have been foreseen, but it appeared to be imperative that these Colonies should press for a more equitable arrangement.

The Adelaide Office was therefore asked by New South Wales (26 September, 1894) to communicate with the other Colonies and obtain their assent to submitting the following proposals to the Berne Bureau (in terms of Article 26 of the Convention) for the consideration of Postal Union countries; viz.—

That in lieu of Subsection 2° 3§ of Article 4 of the Vienna Principal Convention, the following be substituted; viz.—

"For sea transits :—	Letters or Postcards.	Other articles.
Not exceeding 2500 miles.....	3 francs	20 centimes
Between 2500 and 5000 miles.....	6 "	40 "
" 5000 and 7500 "	9 "	60 "
" 7500 and 10,000 "	12 "	80 "
Over 10,000 miles.....	15 "	1 franc

That subsections 2° and 4° of §4 of Article 4 be suppressed.

That the necessary amendments be made in Article 5 §2 subsection 1, Article 17 §4 subsection (a) and §5; and §4 of detailed regulations 24 and 25, respectively, in order to bring same into conformity with the changes proposed."

The matter was referred accordingly to the other Colonies, and the following is an extract from the New Zealand reply:—

"This Office quite recognises that the case under review presents probably one of the greatest anomalies possible in the application of the long distance sea rates re-enacted by the Vienna Convention, and fully concurs with you that it should be brought under the special notice of the Union Administrations. In my opinion, however, the object sought would be more readily obtained if no definite rates were proposed. Those suggested by New South Wales would traverse the huge Atlantic and European interests created in and before 1878, compared to which the few hundred pounds involved by the Sydney-New Caledonia question sink into insignificance, and while standing but a remote chance of being accepted, they might aid in compromising Great Britain in connection with the growing agitation for the total abolition of sea rates.

"It is considered not unlikely, however, that the part of the proposal made by Austria-Hungary at the Vienna Conference, but postponed for discussion at Washington, which would fix the sea rates from 300 to 4000 miles at 5 frs. and 50 cts. for letters and other articles respectively, may commend itself to a majority of the Union Administrations, and, if so, Sydney's difficulty would be effectually met, as its payments to France would be reduced to one-third the present rates."

We recommend that the matter should be brought before the Berne Bureau and London Office, and that the Australasian Delegate at the next Quinquennial Congress be asked to press for an alteration in Sea Transit Rates.

No. 51.—*Consideration of proposed Official Code Vocabulary.*

There seems to be a misapprehension on this subject. The proposed code was not prepared by the Eastern Extension or any Company, but by the Berne Bureau, by direction of the Paris Convention of 1890. It is not intended to come into operation as regards extra-European countries (of which Australasia is one) until it has been confirmed at the next Telegraph Conference in 1896. We are of opinion that it is very desirable to have a carefully prepared code vocabulary, as many of the present private codes contain inconvenient words, and words so nearly alike as to lead to frequent repetitions through an error possibly of a single letter. Not having seen the vocabulary to which objection is taken, we are unable to form an opinion as to its suitability.

No. 52.—*Registration of Code or abbreviated Addresses (Uniformity of Regulations).*

The Wellington Office telegraphed to the Postmaster-General, South Australia, that "in England a separate charge is made for each registration at office of delivery. South Australia and Victoria appear to accept registration for the whole of Colony, charging only one fee. The question is—What rule is observed in other Colonies, as uniformity is desirable?"

Postmaster-General, Adelaide, wrote in reply : "South Australian practice as follows :— Persons, firms, &c. in Adelaide or any provincial town can have code address entered in Adelaide ; thus—

Phillipson & Co.,
Mount Gambier,
can be entered on Adelaide register, say—
Bonus,
Adelaide.

And we transmit messages on receipt to

Phillipson & Co.,
Mount Gambier,

without any additional charge.

If, however, Phillipson & Co. have offices in several towns, they must register a code to each address. Thus—

Phillipson & Co., Mount Gambier,
Bonus, Adelaide,
Phillipson & Co., Gawler,
Beatrice, Adelaide,
Phillipson & Co., Adelaide,
Burnham, Adelaide,
paying usual fee for each code ; or they may register code at each place, in which case the messages would bear proper names of places.

Thus—

Bonus, Mount Gambier.
Beatrice, Gawler.
Burnham, Adelaide.

The reason why in most cases persons register in Adelaide is because Mount Gambier, Gawler, &c. may not for messages put in at London, or in France, &c., be sufficiently explicit, unless the words 'South Australia' are added, which increases the cost.

The London Office adopts similar practice. Thus—

Newton & Co.,
Birmingham,

can be registered in London, say—

Portia,
London.

While on the subject of code addresses, it may be mentioned that we do not regard the proper or surname of any individual as a sufficient address, and require it to be registered, as there may be other persons of the same name. Thus—

Thomson, Adelaide,

must be registered.

People complain of this until the reason is explained, when our rule is generally admitted to be a proper one for the protection of the public."

The South Australian rule is the one practically followed in the other Colonies, although we favour the Melbourne modification, which provides that visitors passing through Victoria may register for a month on payment of a fee of 5s.

No. 53.—*Telegraph Code, Alteration of.*

It is recommended the following alterations in the Telegraph Code be made, viz.:—

L, for	—	substitute	—	—
X, for	—	substitute	—	—
Y, for	..	substitute	—	—
9, for	—	substitute	—	—
Sig			—	—

No. 54.—*Rate on Telegraph Messages to and from New Caledonia.*

We recommend that messages to and from New Caledonia and New Zealand be treated as International Messages, and charged accordingly.

No. 55.—*Fire Alarms—Regulations, &c.*

We recommend that the Laws and Regulations of the various Colonies with regard to Fire Alarms should be uniform, and advise that a code of Regulations be drafted by the Melbourne, Sydney, and Adelaide offices and considered at next Conference, and that the Regulations should embrace the whole question of the erection of wires of private persons erected by the Department.

No. 56.—Rectifying Telegrams or Repeats for Corrections.

We recommend that the Regulations and Charges agreed to at Brisbane Conference be adopted, and the following arrangement made, viz.:—"Ask by service memo. for repeat, and if repeat is the same as the original copy to be delivered at a charge of half rate. If there has been an error no charge to be made. If no error, Service Memo. to be paid for as well as the half rate for the repeat. Each office to keep its own receipts."

No. 57.—Name of Terminal Country to be given in Foreign Telegrams.

We recommend that in cases of Foreign Telegrams the name of the Terminal Country should be inserted by the sender.

No. 58.—Reply Paid Telegrams—Mode of accounting for.

We recommend that this be dealt with departmentally by correspondence.

No. 59.—Cablegrams "On Service."

This is now under consideration by the Cable Company.

No. 60.—Repeated Telegrams—Uniform mode of dealing with.

We recommend that where a sender of a message pays half rate additional for his message to be repeated, the addressee shall send the repeated copy which is to be delivered to the original sender.

No. 61.—Precedence of Press Cablegrams.

We recommend that on communication being restored after an interruption, each day's business should be cleared in order of date of despatch, precedence being given to all press messages of same date. This is practically what the Sydney Chamber of Commerce contends for, and we think such an arrangement will be a fair one for all parties interested. [See par. 8, Report of Conference.]

No. 63.—Standard Time.

We beg to report that Standard Time has been adopted by Queensland, New South Wales, Victoria, and South Australia, and that the Colonies of New Zealand, Tasmania, and Western Australia be invited to also adopt Standard Time as agreed to at Wellington Conference.

No. 64.—Telephone List—Patent arrangement of Alphabetical Index.

We do not see any necessity to adopt the patent arrangement submitted to the Adelaide Office.

Bulk Newspapers.

Sir Charles Todd read a letter from the Editor of the South Australian *Advertiser* pointing out that two newspapers pass at bulk rate of postage in Victoria, and complaining that a different course is followed in South Australia. We regret that Victoria has departed from the provision of the Convention which requires that no parcel containing less than four newspapers should pass at bulk rates, and are of opinion that the present number of papers for bulk rates should be maintained.

H. V. BAYLY, Chairman.

S. H. LAMBTON.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

POSTAL.

(PARTICULARS RESPECTING EXTENSION OF MAIL CONTRACTS, *VIA SUEZ*.)*Ordered by the Legislative Assembly to be printed, 11 December, 1894.*

SCHEDULE.

NO.		PAGE.
1.	<i>Précis, Federal Ocean Mail Service, via Suez.....</i>	1
2.	Minute of Postmaster-General. 14 September, 1894.....	3
3.	Cablegram from Premier. 28 November, 1894	3

No. 1.

Précis, Federal Ocean Mail Service, via Suez.

Question of Extension of Contracts.

THE amount paid by each contributing Colony, on the basis of population, toward the cost of the Federal Ocean Mail Service for the year 1893, was as follows, viz:— £ s. d.

New South Wales	26,727	11	8
Victoria	26,382	6	8
Queensland	9,511	3	4
South Australia	7,597	11	8
Tasmania	3,463	16	8
Western Australia	1,317	10	0
							£75,000	0	0
The contribution from the United Kingdom is	95,000	0	0

Total subsidy £170,000 0 0 per annum.

This contract will expire on 31st January, 1895.

In accordance with a resolution passed at the Postal and Telegraphic Conference, held at Brisbane in 1893, the London Post Office was invited to call for tenders for an improved service for a period of seven years.

In a letter dated the 1st September, 1893, that office pointed out that the time was very short for an exhaustive discussion of the subject, and stated that the Postmaster-General, London, was disposed to think that the present arrangements might be maintained intact until the 31st January, 1898, when the India and China contract, which it is not thought advisable for the Australian Service to overlap, is terminable.

In a subsequent letter, however, dated the 26th January, 1894, it stated that, to obviate any inconvenience to the public at home and in the colonies, the Postmaster-General would be willing to arrange for the continuance of the Service in its present conditions till the 31st January, 1896; and, in accordance with this suggestion, it was resolved at the Postal and Telegraphic Conference held in New Zealand, in March, 1894, to agree to the extension of the present Federal Mail Contracts with the P. and O. and Orient Companies, for a period of one year from the 31st January, 1895.

This decision was communicated to the Postmaster-General, London, who has arranged with the contractors for the extension of the existing arrangements up to the 31st January, 1896. On

On the 25th May, 1894, the Postmaster-General, London, wrote as follows to the Postmaster-General, Adelaide :—

" Since the settlement of the matter with the contractors, the Postmaster-General has seen a telegram addressed to the Agent-General for Victoria, by his Government, urging the importance to the colonies of the cold storage question, which was the subject of a resolution passed at the Conference. This question will, in due course, be carefully examined by a committee which has been appointed to consider the whole subject of mail communication with the East, and at which the Secretary of State for the Colonies is represented.

" At the present moment the Postmaster-General is still awaiting the arrival from Wellington of the full text of the resolutions concerning the Federal Mail Service ; and, in the meantime, the resolutions, as telegraphed, do not indicate whether the colonies are prepared for a further extension of the Federal service till the 31st January, 1898, when the India and China mail contract expires.

" It is observed that one of the Wellington resolutions favours a new Federal contract of five or seven years duration. If either of the terms in question were to be counted from the 1st February, 1898, it is possible, though no promise to that effect can be given, that Her Majesty's Government might consent to renew the Federal Service under fresh conditions, to be carefully debated and settled in the *interim* ; but I may at once say that the Committee referred to above is unanimously opposed to any fresh contract for the Australian Service overlapping the term of the present India and China Service.

" Mr. Morley, in common with the Committee, attaches great importance to the consideration that, if we are to obtain in the future the most advantageous services to and from the whole East, including Australasia, we must not, at the time of their settlement, be bound to a particular way of serving any one section, or hand over to any competitor so strong a weapon as an assured subsidy over a considerable portion of the system.

" With reference to the last paragraph but one of my letter of the 26th January last, I am glad to be able to state that the Postmaster-General is now in a position definitely to conclude arrangements for prolonging the Federal Service in all its present conditions till the 31st January, 1898, and that he is willing to do so if the Colonial Governments agree.

" He feels that if this were done there would be ample time for fully considering all the important points arising out of the wishes of the colonies in regard to the future ; and supposing the Colonial Governments to concur in this view, he would be much obliged if you would telegraph their consent to him as soon as possible after the arrival of this letter."

A copy of this letter was, in the first instance, sent departmentally by the Postmaster-General, Adelaide, to the Postmaster-General of this Colony, and the late Postmaster-General replied that he had no objection to the proposed extension to 1898.

On the 6th August, a copy of the same letter was forwarded in a despatch from the Premier of South Australia to the Premier of New South Wales.

The Premier of South Australia, in transmitting this letter, suggests that the Agents-General be instructed to confer with above Committee, and place before it the requirements in this respect of the colonies parties to the Federal Mail Contracts.

The questions therefore for decision are whether the late Postmaster-General's approval of the extension to January, 1898, should be confirmed, and whether the suggestion of South Australia to instruct the Agents-General to confer with the English Committee is approved.

The estimated net cost to the Colony in 1892 was	£13,274 8 5	

No. 2.

Minute by The Postmaster-General.

I AM of opinion that the resolution of the New Zealand Conference of March last to extend the present mail contracts with the P. and O. and Orient Companies for one year only from the 31st January, 1895, should be adhered to.

Should the Committee, which the Postmaster-General of Great Britain states has been appointed to report upon the various questions involved in the future contracts, be unable to complete its labours in sufficient time, or should other circumstances arise to render a further extension necessary, I see no objection to our considering, later on, the question of a further extension for one year more, i.e., for one year from 31st January, 1896.

There is no objection, I think, to the Agents-General being instructed to confer with the English Committee and advise that this be done.

Perhaps the Hon. the Premier will be good enough to communicate with the Premier of South Australia, and instruct the Agent-General, as proposed.

J. COOK,

No. 1.

The Secretary to General Post Office, Wellington, New Zealand, to The Deputy Postmaster-General, Sydney.

Sir,

General Post Office, Wellington, 29 October, 1894.

I have the honor by direction to forward herewith copy of resolutions passed in the House of Representatives of this Colony on the 12th instant, in reference to the renewal of the San Francisco mail service for a period not exceeding three years.

Government has decided that the renewal shall be from year to year, and the contractors have accordingly been asked to renew for another twelve months.

The Postmaster-General understands that your Government will continue its contribution of £4,000 a year.

I have, &c.,

THOMAS ROSE

(For Secretary).

Submitted. It was understood at the New Zealand Conference that this Colony would, subject to the approval of Parliament, continue its contribution of £4,000 for another year at any rate.—S.H.L, 13/11/94.

Approved.—J.C., 13/11/94, subject to approval of Cabinet to-morrow.

[*Enclosure.*]

EXTRACT from the Journals of the House of Representatives, Friday, the 12th day of October, 1894.

Resolved,—

1. That this House empowers the Government to arrange for a renewal of the San Francisco mail service for a period not exceeding three years.
2. That the basis of the payment for conveyance of mails from New Zealand shall be a rate of 11s. per pound on the net weight of the letters conveyed.
3. That all payments or contributions from Great Britain or other countries shall be receivable by the contractors, the Colony's direct liability to be for payment of its outward letters only.
4. That at least one New Zealand steamer in three shall be employed.

5.

5. That the time between San Francisco and New Zealand shall not exceed twenty days. The port of call in the Colony to be Auckland or Wellington, at the option of the contractors. No bonus to be paid for early arrival, and penalties, at the rate of £4 an hour, to be enforced only when late delivery exceeds 48 hours.

6. That all the provisions of the existing agreement, where not at variance with the foregoing provisions, shall be applicable to any new contract made under this authority.

On motion of Hon. Mr. Ward.

A true extract,
GEORGE FRIEND,
Clerk of the House of Representatives.

No. 2.

Précis re the San Francisco Mail Service.

PAPERS show that the mail service between Sydney and San Francisco, *via* New Zealand, has been carried on for about twenty-five years. Formerly, New South Wales was a party to the contract, but latterly the contract has been between New Zealand and the Union Steamship Company only, this Colony, instead of paying a subsidy, paying for carriage of its mails according to their weight. In November, 1892, the contract expired, and it was represented that owing to loss by reduction of postage to 2½d., cessation of contribution by the Imperial Government, &c., the mail service could not be continued unless this Colony contributed more largely. It was not thought advisable to allow it to drop, and the contract was renewed on New South Wales agreeing to pay £4,000 for conveyance of its mails for one year, till November, 1893. On expiry then, the contract was again renewed for another year on the same terms.

The question of what should be done when it expired this month came up at the Postal Conference at Wellington, N.Z., last March, when a resolution in favour of continuance on the same terms was passed. (See extract from proceedings attached.)

A letter from New Zealand now states that their Government has decided to renew the contract from year to year, and asks this Government to continue its contribution of £4,000.

No. 3.

Minute of the Cabinet.

THE Cabinet approve of an extension for one year of this contract subject to the approval of Parliament.

G.H.R., 20/11/94.

No. 4.

Extract from Proceedings at the Postal and Telegraph Conference, Wellington, New Zealand, 6th March, 1894.

SAN FRANCISCO MAIL SERVICE.

The Hon. Mr. WARD (New Zealand), seconded by the Hon. Mr. KIDD (New South Wales), moved, and the question was proposed,—That, in the opinion of this Conference, it is desirable that a four-weekly service *via* San Francisco be continued, and that strong representations be again made to the United States Government pointing out the inadequate support given to the service by them, and urging for an increased payment in support of the line, and that further representations be made to obtain a reduction in the heavy overland charges.

Debate arose thereupon.

Hon. Mr. WARD (New Zealand) having moved the above resolution,

Hon. Mr. WILSON (Queensland): I do not think anything can be gained by discussing this matter, as the reply from the United States Government was unfavourable.

Hon. Mr. KIDD (New South Wales): Sir, I second the resolution. At the same time I should like to get some expression of opinion from yourself as to what you intend to do with regard to the renewal of the contract. I wish to reiterate what we have said before, that we are prepared to subsidise to the same extent. Of course, all subsidies are with the approval of Parliament. The present contract falls in in November next.

Hon. Mr. WARD (New Zealand): I am prepared to renew the contract for this service. Three years was the last term we renewed it for, and I am disposed to renew it for a similar period.

Hon. Mr. KIDD (New South Wales): Before we renew the service we may have an opportunity of getting them to agree to the resolution which we have just passed. They might arrange their arrival and departure so as to make a fortnightly service. If you carry out your intention with regard to Vancouver with the Huddart-Parker Company, it would be a favourable opportunity for you to know that, so as to get them to fall in with an arrangement of that kind to give you a fortnightly service.

Hon. Mr. WARD (New Zealand): I will undertake to see that provision is made for the service being a fortnightly one, assuming the Vancouver service is established, and we shall thus have a fortnightly service.

Then, the question being put, it was resolved in the affirmative.

Resolved, That, in the opinion of this Conference, it is desirable that a four-weekly service *via* San Francisco be continued, and that strong representations be again made to the United States Government, pointing out the inadequate support given to the service by them, and urging for an increased payment in support of the line, and that further representations be made to obtain a reduction in the heavy overland charges.

No. 1.

The Right Honorable the Secretary of State for the Colonies to His Excellency the Governor of New South Wales.

Sir,

Downing-street, 9 May, 1891.

I have the honor to transmit to you two documents (1) a printed copy, as presented to Parliament, of a convention between Her Majesty the Queen and the President of the French Republic, respecting Postal communications, signed at London, on the 30th of August, 1890, the ratifications of which were exchanged at London, on the 23rd of March last; (2) a copy of a Bill which has been introduced into and passed by the House of Commons, "to enable Her Majesty in Council to carry into effect conventions with foreign States respecting ships engaged in Postal service."

I have to draw your attention to Article XV of the convention, and to request that I may be informed, as early as possible, whether your Ministers desire (as Her Majesty's Government trust will be the case) that the stipulations of the convention shall be made applicable to the Colony under your Government. You will observe that in that case it will be necessary that notice should be given by Her Britannic Majesty's representative at Paris to the Government of the French Republic within one year from the 30th of August, 1890, the date of the signature of the convention, and I should be therefore glad to be informed by telegraph whether your Government decide to adhere to the convention or not, and, in the former case, whether they would introduce in the Colonial Legislature the legislative measure necessary for giving effect to it, or would prefer that the Imperial Act when passed should be made applicable to the Colony by order of the Queen in Council.

I have, &c.,

KNUTSFORD.

[Enclosure No. 1.]

CONVENTION between Her Majesty and the President of the French Republic respecting Postal Communications, signed at London, 30th August, 1890, presented to both Houses of Parliament by Command of Her Majesty, April, 1891.

Signed at London, 30th August 1890.

[Ratifications exchanged at London, 23rd March, 1891.]

HER Majesty the Queen of the United Kingdom of Great Britain and Ireland, and the President of the French Republic, alike animated with the desire to fix the special treatment to be accorded to British packets in the ports of France and of the French Colonies and Possessions and to French packets in the ports of the United Kingdom and of the British Colonies and Possessions,

SA Majesté la Reine du Royaume-Uni de la Grande-Bretagne et d'Irlande, et le Président de la République Française également animés du désir de déterminer le régime spécial accordé aux paquebots-poste Anglais dans les ports de la France et des Colonies et possessions Françaises, ainsi qu'aux paquebots-poste Français dans les ports du Royaume-Uni et des Colonies et possessions Britanniques, et usant de la

and availing themselves of the right reserved to the Contracting Parties by the Convention of the Universal Postal Union, have resolved to conclude a Convention to that end, and have named for their Plenipotentiaries :

Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, the Right Honorable Robert Arthur Talbot Gascoyne Cecil, Marquis of Salisbury, Earl of Salisbury, Viscount Cranborne, Baron Cecil, Peer of the United Kingdom, Knight of the Most Noble Order of the Garter, Member of Her Majesty's Most Honorable Privy Council, Her Majesty's Principal Secretary of State for Foreign Affairs, &c. ;

And the President of the French Republic, M. William Henri Waddington, Senator, Member of the Institute, &c., Ambassador of the French Republic to Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, Empress of India ;

Who have agreed upon the following Articles :—

ARTICLE I.

Between the Postal Administration of France and the Postal Administration of Great Britain there shall be a regular exchange of correspondence of all kinds, which shall be effected by means of two steam-packet services which shall continue to be maintained or subsidised, the one by the French Government, and the other by the British Government, on the line between Calais and Dover.

The French Postal Administration and the British Postal Administration shall regulate, by common consent and in accordance with the mutual interests of both countries, the days and hours of departure and arrival of the subsidised packets.

ARTICLE II.

Independently of the correspondence which shall be exchanged between the Postal Administrations of the two countries by the means indicated in the preceding Article, those Administrations may reciprocally forward from one to the other correspondence of all kinds by the several means hereinafter mentioned, namely: (1) by such packets as the French Government and the British Government may respectively think it right to maintain, to freight, or to subsidise, for the conveyance of correspondence; (2) by merchant-ships plying between French ports and British ports.

ARTICLE III.

The commanders of British and French merchant-ships sailing from the ports of France or Algeria for the United Kingdom of Great Britain and Ireland, on the one part, and the commanders of British and French merchant-ships sailing from the ports of the United Kingdom of Great Britain and Ireland for France or Algeria, on the other part, shall be bound to take charge of the mails which the post-offices at the ports of departure may have to deliver to them.

ARTICLE IV.

The charges for the sea conveyance of correspondence exchanged between the French Postal Administration and the British Postal Administration by means of non-contract merchant-ships shall be paid to the commanders or owners of those vessels by the Postal Administration of the country of origin, namely :—

1. At the rate of 5 fr. per kilog. of letters and post-cards;
2. At the rate of 50 centimes per kilog. of other articles.

faculté réservée aux Parties Contractantes par la Convention de l'Union Postale Universelle, ont résolu de conclure, à cet effet, une Convention, et ont nommé pour leurs Plénipotentiaires :

Sa Majesté la Reine du Royaume-Uni de la Grande-Bretagne et d'Irlande, le Très Honorable Robert Arthur Talbot Gascoyne Cecil, Marquis de Salisbury, Comte de Salisbury, Vicomte Cranborne, Baron Cecil, Pair du Royaume-Uni, Chevalier du Très Noble Ordre de la Jarretière, Membre du Très Honorable Conseil Privé de Sa Majesté, Principal Secrétaire d'Etat de sa Majesté, au Département des Affaires Etrangères, &c. ;

Et le Président de la République Française, M. William Henri Waddington, Sénateur, Membre de l'Institut, &c., Ambassadeur de la République Française près Sa Majesté la Reine du Royaume-Uni de la Grande-Bretagne et d'Irlande, Impératrice des Indes ;

Lesquels sont convenus des Articles suivants :—

ARTICLE I.

Il y aura entre l'Administration des Postes de France et l'Administration des Postes Britanniques un échange régulier de correspondances de toute nature, au moyen de deux services de paquebots à vapeur, qui continueront à être entretenus ou subventionnés, l'un par le Gouvernement Français et l'autre par le Gouvernement Britannique, sur la ligne de Calais à Douvres.

L'Administration des Postes de France et l'Administration des Postes Britanniques régleront, de concert et dans l'intérêt bien entendu des deux pays, les jours et heures de départ et d'arrivée des paquebots subventionnés.

ARTICLE II.

Indépendamment des correspondances qui seront échangées entre les Administrations des Postes des deux pays par la voie indiquée dans l'Article précédent, ces Administrations pourront s'expédier réciproquement des correspondances de toute nature par les différentes voies ci-après désignées, savoir : (1^e) par les paquebots que le Gouvernement Français et le Gouvernement Britannique pourront respectivement juger à propos d'entretenir, de fréter, ou de subventionner pour opérer le transport des correspondances; (2^e) par les bâtiments du commerce naviguant entre les ports Français et les ports Britanniques.

ARTICLE III.

Les capitaines des navires Français et des navires Britanniques du commerce devant appareiller des ports de la France ou de l'Algérie pour le Royaume-Uni de la Grande-Bretagne et d'Irlande, d'une part, et les capitaines des navires Français et de snavires Britanniques du commerce devant appareiller des ports du Royaume-Uni de la Grande-Bretagne et d'Irlande pour la France ou l'Algérie, d'autre part, seront tenus de se charger des dépêches que les bureaux de poste des ports de départ pourraient avoir à leur remettre.

ARTICLE IV.

Les frais résultant du transport par mer des correspondances échangées entre l'Administration des Postes de France et l'Administration des Postes Britanniques par la voie des bâtiments libres de commerce, seront payés aux capitaines ou armateurs de ces bâtiments par l'Administration des Postes du pays d'origine savoir :—

1. A raison de 5 fr. par kilog. de lettres et cartes postales;
2. A raison de 50 centimes par kilog. d'autres objets.

ARTICLE

ARTICLE V.

When the packets employed by the French Postal Administration and by the British Postal Administration are national vessels owned by the State, or vessels belonging to Companies subsidised for the execution of postal service, such packets cannot be diverted from their destination nor be liable to seizure, embargo, or "Arrêt de Prince."

Passengers on such packets, who may not desire to go on shore during the vessel's stay in a port of either State, cannot be, on any account, taken from on board.

Nevertheless, the local authorities may claim the expulsion from on board of persons wanted in pursuance of a regular warrant for any crimes or offences who may have taken refuge or embarked in mail-boats, and, in case of necessity, searches may be carried out on board such vessels by the competent authorities. The individuals in question shall then be handed over to them.

It is, however, agreed that the authorities cannot proceed on board unless they have previously given notice, at least one hour before the search, to the Consulate or Vice-Consulate, in order that the Consul or Vice-Consul, or his delegate, may be present at the searches in question. The letter giving notice shall be addressed to the Consul or Vice-Consul, and shall state the exact hour, and if the Agents neglect either to appear in person or to be represented, the proceedings shall go on in their absence.

The execution of such measures shall not delay the departure of the vessel for more than an hour after the time of departure fixed in the time-tables of the Company, which must be duly communicated by the respective Companies to the authorities of each port of call.

The present Article shall not apply to packets entrusted with a mail service and belonging to Companies subsidised by either State, until a bond has been entered into, once for all, by the said Companies to satisfy, after due hearing and definitive decision, the legal consequences of any liability incurred either by the captains of their packets or by the Companies themselves.

The aforesaid bond must be guaranteed by a security within the jurisdiction of the Tribunals of the country in which the bond may have been entered into.

ARTICLE VI.

The packets of the two Administrations shall be at liberty to take on board, or land at the ports of the two countries at which they touch, whether regularly or accidentally, specie and gold and silver bullion, as well as passengers, of whatever nation they may be, with their wearing apparel or baggage, on condition that the captains of those packets shall submit to the Sanitary, Police, and Customs Regulations of those ports concerning the arrival and departure of travellers and merchandise.

ARTICLE VII.

The packets of the two Administrations may enter and leave the ports of the two States at any hour of the day or night. They may also, if they think proper, without anchoring, embark or disembark the mails and passengers, in the roads or at the entrance of the harbours, so long as they observe the Regulations referred to in the preceding Article.

ARTICLE VIII.

Whenever a packet carrying mails shall be compelled to put into any port of either of the two States other than that at which such packet ought to touch, the Administration on whose territory the said mails shall be landed shall use the most certain and expeditious means of forwarding them to their destination.

ARTICLE V.

Lorsque les paquebots employés par l'Administration des Postes de France et par l'Administration des Postes Britanniques seront des bâtiments nationaux propriété de l'Etat, ou des bâtiments appartenant à des Compagnies subventionnées pour l'exécution du service postal, ces paquebots ne pourront être détournés de leur destination ni être sujet à saisie-arrêt, embargo, ou Arrêt de Prince.

Les passagers admis sur ces paquebots, qui ne jugeraient pas à propos de descendre à terre pendant la relâche dans un port de l'un et l'autre Etat ne pourront sous aucun prétexte être enlevés du bord.

Néanmoins les autorités locales pourront réclamer l'expulsion du bord des individus recherchés en vertu d'un mandat régulier, pour cause de crimes ou délits, et qui se seraient réfugiés ou embarqués sur des paquebots-poste, et, en cas de nécessité, des recherches pourront être faites à bord de ces paquebots par les autorités compétentes. Les individus dont il s'agit seront alors remis entre leurs mains.

Il est, d'ailleurs, convenu que ces autorités ne devront se rendre à bord qu'après avoir donné préalablement, c'est-à-dire, au moins une heure avant l'opération, avis au Consulat ou Vice-Consulat, afin que le Consul ou Vice-Consul, ou son délégué assiste aux recherches en question. La lettre d'avis qui sera adressée au Consul ou Vice-Consul indiquera une heure précise, et si les Agents négligeaient de s'y rendre en personne ou de se faire représenter par un délégué, il sera procédé en leur absence.

L'exécution de ces mesures ne pourra retarder le départ du navire plus d'une heure après l'heure du départ fixée par les horaires de la Compagnie, horaires qui devront être dûment communiqués par ces Compagnies aux autorités de chaque port de relâche.

Le présent Article n'aura d'application à l'égard des paquebots chargés d'un service postal, et appartenant à des Compagnies subventionnées par l'un ou l'autre Etat, qu'après engagement pris, une fois pour toutes, par les dites Compagnies, de satisfaire, après avoir été dûment entendues, et après décisions définitives, aux conséquences légales des responsabilités qui auraient été encourues tant par les capitaines de leurs paquebots que par elles-mêmes.

Le susdit engagement devra être granti par une caution justiciable des Tribunaux du pays dans lequel cet engagement aura été souscrit.

ARTICLE VI.

Les paquebots des deux Administrations pourront embarquer où débarquer dans les ports des deux Etats où ils aborderont, soit régulièrement, soit accidentellement, des espèces et des matières d'or ou d'argent, ainsi que des passagers de quelque nation qu'ils puissent être, avec leurs hardes ou effets personnels, sous la condition que les capitaines de ces paquebots se soumettront aux Règlements Sanitaires de Police et de Douane de ces ports, concernant l'entrée et la sortie des voyageurs et des marchandises.

ARTICLE VII.

Les paquebots des deux Administrations pourront entrer dans les ports des deux Etats ou en sortir à toute heure du jour ou de la nuit. Ils pourront aussi, sans mouiller, s'ils le jugent convenable, envoyer ou faire prendre en radé ou à portée des ports, la correspondance et les passagers, sauf observation des Règlements mentionnés dans l'Article précédent.

ARTICLE VIII.

En cas de relâche forcée d'un paquebot porteur de dépêches, dans un port de l'un des deux Etats, autre que celui où ce paquebot devait aborder, l'Administration sur le territoire de laquelle ces dépêches auront été débarquées devra employer les moyens les plus sûrs et les plus prompts pour les faire parvenir à destination.

ARTICLE

ARTICLE IX.

In case of war between the two nations, the packets of the two Administrations shall continue their navigation, without impediment or molestation, until a notification is made on the part of either of the two Governments of the discontinuance of postal communications; in which case they shall be permitted to return freely, and under special protection, to their respective ports.

ARTICLE X.

The captains of the packets engaged in the conveyance of the respective mails of the two Administrations are forbidden to take charge of any letter not included in those mails, with the exception, however, of despatches of their Governments. They must take care that no letters are conveyed illegally by the crews or passengers, and they must give information in the proper quarter of any infringement which may be committed in this respect.

ARTICLE XI.

There shall be reserved in the vans, carriages, or trucks conveying between Modane and Calais the mails from the East Indies for Great Britain, or from Great Britain for the East Indies, a place free of charge for a British courier, who shall keep the said mails under his special care, and who shall have the right to be present at the disinfection of the correspondence contained in those mails whenever it shall take place, and at all other operations to which the said correspondence may be subjected.

The same advantages shall be granted in the territory of Great Britain to the couriers of the French Postal Administration, should that Administration think proper to send a French courier in charge of mails containing correspondence from or for France passing through Great Britain and paid for at special transit rates.

ARTICLE XII.

The British Postal Administration and the Postal Administration of France shall nominate, by mutual consent, the offices through which the exchange of correspondence shall respectively take place. They shall also determine the direction of the correspondence reciprocally transmitted, and shall settle the arrangements relating to the preparation and liquidation of the accounts arising out of the reciprocal transmission of correspondence, as well as every other matter of detail or arrangement necessary to insure the execution of the stipulations contained in the present Convention.

It is understood that the measures above alluded to may be modified by the two Administrations whenever those Administrations recognise, by mutual consent, the necessity for modification.

ARTICLE XIII.

The Postal Administrations of the two countries are authorised to determine, by mutual consent, the conditions of the conveyance, by French services, of the mails to or from British Colonies not comprised in the Postal Union, as well as the conditions of the conveyance, by British services, of the mails of French origin destined for those Colonies, or passing in transit through their territories.

The same administrations may also fix, by mutual consent, the rates of postage applicable to correspondence exchanged between France and French Colonies on one side, and British Colonies not comprised in the Postal Union on the other side.

ARTICLE IX.

En cas de guerre entre les deux nations, les paquebots des deux Administrations continueront leur navigation sans obstacle ni molestation, jusqu'à notification de la rupture des communications postales faite par l'un des deux Gouvernements, auquel cas il leur sera permis de retourner librement, et sous protection spéciale dans leurs ports respectifs.

ARTICLE X.

Il est défendu aux commandants des paquebots employés au transport des dépêches respectives des deux Administrations, de se charger d'aucune lettre en dehors de ces dépêches, excepté, toutefois, celles de leur Gouvernement. Ils veilleront à ce qu'il ne soit pas transporté de lettres en fraude par leurs équipages ou par les passagers, et ils dénonceront à qui de droit les infractions qui pourront être commises.

ARTICLE XI.

Il sera réservé dans le fourgons, voitures, ou wagons qui transporteront entre Modane et Calais les dépêches des Indes Orientales pour la Grande-Bretagne, ou de la Grande-Bretagne pour les Indes Orientales, une place gratuite pour un courrier Britannique, qui conservera les dites dépêches sous sa garde particulière, et qui pourra assister à la purification des correspondances contenues dans ces dépêches toutes les fois qu'elle devra avoir lieu, et à toutes les autres opérations auxquelles ces correspondances pourraient être soumises.

Les mêmes avantages seront accordés sur le territoire de la Grande-Bretagne aux courriers de l'Administration des Postes de France, dans le cas où cette Administration jugerait à propos de faire accompagner par un courrier Français les dépêches contenant les correspondances de ou pour la France transitant par la Grande-Bretagne et donnant lieu à des frais de transit spéciaux.

ARTICLE XII.

L'Administration des Postes Britanniques et l'Administration des Postes de France désigneront, d'un commun accord, les bureaux par lesquelles devra avoir lieu l'échange des correspondances respectives. Elles régleront également la direction des correspondances transmises réciproquement, et arrêteront les dispositions relatives à la formation et à la liquidation des comptes résultant de la transmission réciproque des correspondances, ainsi que toute autre mesure de détail ou d'ordre nécessaire pour assurer l'exécution des stipulations de la présente Convention.

Il est entendu que les mesures désignées ci-dessus pourront être modifiées par les deux Administrations toutes les fois que, d'un commun accord, ces deux Administrations en reconnaîtront la nécessité.

ARTICLE XIII.

Les Administrations Postales des deux pays sont autorisées à déterminer, d'un commun accord, les conditions de transport, par les services Français, des malles à destination ou provenant des Colonies Britanniques non comprises dans l'Union Postale, aussi bien que les conditions de transport, par les services Anglais, des malles d'origine Française destinées à ces Colonies, ou passant en transit par leurs territoires.

Les mêmes Administrations peuvent aussi fixer d'un mutuel accord, les tarifs postaux applicables aux correspondances échangées entre la France et les Colonies Françaises d'une part, et les Colonies Anglaises non comprises dans l'Union Postale d'autre part.

ARTICLE

ARTICLE XIV.

The present Convention shall be carried into effect as soon as possible, and it shall continue in force until one of the two Contracting Parties shall have announced to the other, one year in advance, its intention to terminate it.

ARTICLE XV.

The stipulations of the present Convention shall be applicable to all the Colonies and possessions of Her Britannic Majesty, excepting to those hereinafter named, that is to say, except to :—

India.
The Dominion of Canada.
Newfoundland.
The Cape.
Natal.
New South Wales.
Victoria.
Queensland.
Tasmania.
South Australia.
Western Australia.
New Zealand.

Provided always that the stipulations of the present Convention shall be made applicable to any of the abovenamed Colonies or possessions on whose behalf notice to that effect shall have been given by Her Britannic Majesty's Representative at Paris to the Government of the French Republic within one year from the date of the signature of the present Convention.

The Government of Her Britannic Majesty engages to invite the Governors of these Colonies to recommend the adoption of the present Convention to the proper authorities.

The stipulations of the present Convention shall be applicable to all the Colonies and possessions of France.

ARTICLE XVI.

The present Convention shall be ratified, and the ratifications shall be exchanged as soon as possible.

In witness whereof, the Undersigned have signed the present Convention, and have affixed thereto the seal of their arms.

Done at London, the 30th day of August, 1890.

[For Enclosure No. 2, see Enclosure to No. 2—Despatch of the Right Honorable the Secretary of State for the Colonies to His Excellency the Governor, dated 12th August, 1891.]

Colonial Secretary.—JERSEY, 10/7/91. The Postmaster-General.—H.P., 13/7/91. The Secretary to the Post Office.—C.W. (P.U.S.), B.C., 14/7/91.

No. 2.

The Right Honorable the Secretary of State for the Colonies to His Excellency the Governor of New South Wales.

Sir,

With reference to my circular despatch of the 9th of May last, I have the honor to transmit to you, for publication in the Colony under your Government, a copy of the Imperial Act 54 and 55 Vic., cap. 31 "to enable Her Majesty in Council to carry into effect Conventions which may be made with Foreign Countries respecting ships engaged in postal service."

Downing-street, 12 August, 1891.

I have, &c.,
KNUTSFORD.

Mail Ships Act, 1891, 54 and 55 Vic. Ch. 31.

CHAPTER 31.

An Act to enable Her Majesty in Council to carry into effect Conventions which may be made with A.D. 1891. Foreign Countries respecting Ships engaged in Postal Service. 21st July, 1891.

Be it enacted by the Queen's Most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows:—

1.—(1.) Where Her Majesty the Queen has made a Convention with a Foreign State respecting Application of the postal service between such Foreign State and the United Kingdom, or respecting the privileges of in Council mail ships—that is to say, ships engaged in any postal service of such foreign State or of any part of Her Majesty's dominions—it shall be lawful for Her Majesty in Council to order that this Act shall, and this Act

ARTICLE XIV.

La présente Convention sera mise à exécution le plus tôt possible, et elle demeurera obligatoire jusqu'à ce que l'une des deux Parties Contractantes ait annoncé à l'autre, un an à l'avance, son intention d'en faire cesser les effets.

ARTICLE XV.

Les stipulations de la présente Convention seront applicables à toutes les Colonies et possessions de Sa Majesté Britannique, à l'exception de celles ci-après dénommées, savoir :—

L'Inde.
Le Canada.
Terre-Neuve.
Le Cap.
Natal.
La Nouvelle-Galles du Sud.
Victoria.
Queensland.
La Tasmanie.
L'Australie du Sud.
L'Australie Occidentale.
La Nouvelle-Zélande.

Toutefois, les stipulations de la présente Convention deviendront applicables à l'une des Colonies ou possessions ci-dessus indiquées si, en leur nom, une notification à cet effet a été adressée par le Représentant de Sa Majesté Britannique à Paris au Gouvernement de la République Française un an après la date de la signature de la présente Convention.

Le Gouvernement de Sa Majesté Britannique s'engage à inviter les Gouverneurs de ces Colonies à recommander l'adoption de la présente Convention aux Administrations compétentes.

Les stipulations de la présent Convention seront applicables à toutes les Colonies et possessions de la France.

ARTICLE XVI.

La présente Convention sera ratifiée, et les ratifications en seront échangées aussitôt que faire se pourra.

En foi de quoi les Soussignés ont signé la présente Convention, et y ont apposé le sceau de leurs armes.

Fait à Londres, le 30 Août 1890.

SALISBURY.
WADDINGTON.

A.D. 1891. Act shall accordingly, subject to any conditions, exceptions, and qualifications contained in the Order, apply, during the continuance of the Order, as regards such Convention and Foreign State, and the postal service and mail ships described in the Convention; and where by virtue of any such Order this Act or any section thereof applies as regards any Convention, Foreign State, postal service, or mail ship, the same is in this Act referred to as a Convention, Foreign State, postal service, or mail ship to which this Act or section applies.

(2.) The Order shall recite or embody the terms of the Convention, and may be varied or revoked by Order in Council, but shall not continue in force for any longer period than the Convention.

(3.) Every Order in Council under this Act shall be laid before both Houses of Parliament forthwith after it is made, or, if Parliament be not then sitting, after the then next meeting of Parliament, and shall also be notified in the London Gazette, and published under the authority of Her Majesty's Stationery Office.

Conveyance of letters by crew or passengers of mail ships forbidden.

2.—(1.) Where this section applies to a Convention with a Foreign State, the master of a British mail ship to which this section applies when carrying mails to or from any port of the Foreign State, and the master of a mail ship of the Foreign State to which this section applies when carrying mails to or from any port of the United Kingdom, shall not, nor shall any person on board the ship, whether a passenger or belonging to the ship, or any other person, convey in the ship for delivery to another person in the Foreign State or United Kingdom, as the case may be, any letter other than the letters contained in mail bags entrusted to the master by a postal officer of the United Kingdom or of any Foreign State, or than the despatches sent by the Government either of the United Kingdom or of any Foreign State.

(2.) If a person on board such ship acts in contravention of this section, or refuses or fails on demand to give up to a postal officer, or, if such person is not the master, to the master, any letter so conveyed by him, he shall be liable, on summary conviction, to a fine not exceeding five pounds.

(3.) It shall be the duty of the master of the ship to secure the observance of this section by all persons on board the ship, and to inform the proper authorities at the port at which the ship arrives of any breach of this section by any of those persons, and if he wilfully fails to perform that duty he shall be liable to a fine not exceeding five pounds.

(4.) Provided that a person shall not be liable under this section to a fine for any offence for which he has been punished by the law of the Foreign State.

(5.) Nothing in this section shall apply to any letters which, if sent from the United Kingdom, would be exempted from the exclusive privilege of the Postmaster-General under the Act of the session of the seventh year of King William the Fourth and the first of Her present Majesty, chapter thirty-three, intituled "An Act for the management of the Post Office."

7 Will. IV and 1 Vict., c. 23.
Regulation as to giving of security for ships engaged in postal service.

3.—(1.) Where the owner of any ships, British or foreign, applies to the High Court in England, and

(a) produces a certificate of a Secretary of State that such owner is subsidised for the execution of any postal service within the meaning of a Convention with a Foreign State to which this Act applies, by reason of receiving from the Foreign State, or from the Government of the United Kingdom or of a British possession, a bona-fide subsidy for the postal service mentioned in the certificate, and

(b) produces sufficient evidence of the nature of the said service, and the number of, and the prescribed particulars respecting the ships engaged therein, and

(c) gives notice of the application to the Board of Trade,
the High Court, after hearing the owner, and the Board of Trade if they wish to be heard, shall fix the nature and amount of the security which the owner ought to place under the control of the Court for the purpose of this Act as respects the ships engaged in that postal service, and fix the maximum number and tonnage of the ships to which the security is to apply.

(2.) The security shall be the bond of the owner guaranteed either—

(a) by the personal security of a surety, accompanied by an adequate real security given by the surety; or,

(b) by the payment or transfer into Court of cash, or of securities of the Government of the United Kingdom.

(3.) If the owner gives such security to the satisfaction of the High Court, then so long as the security is maintained and is sufficient to the satisfaction of the Court, and the number and tonnage of the ships for the time being actually engaged in carrying mails for the postal service in respect of which the security is given does not exceed the number and tonnage of the ships to which the security applies, the ships actually engaged in carrying mails for the said service shall be deemed to be exempted mail ships, and be entitled to the exemptions and privileges given by this Act to exempted mail ships; and the Board of Trade shall give the prescribed notices for informing the arresting authorities that the ships actually engaged in carrying the mails for the said postal service are exempted mail ships.

(4.) Notice of every application respecting any security given in pursuance of this section shall be given to the Board of Trade.

(5.) If at any time it appears to the Board of Trade that a security given as respects ships engaged in any postal service is from any cause (whether pending claims, variations of the conditions of the service, or otherwise) insufficient, the Board of Trade shall apply to the High Court, and that Court, if satisfied of such insufficiency, shall require the security to be made sufficient to the satisfaction of the Court within a reasonable time, and direct that in default the ships engaged in the postal service shall cease to be exempted mail ships, and that the Board of Trade shall give the prescribed notices for informing the arresting authorities of such cesser.

(6.) The amount and nature of the security may be varied and the whole security may be withdrawn, and the income of the security may be disposed of, by order of the High Court from time to time on such application either of the shipowners, or of the Board of Trade, or of any person appearing to be interested, and in such manner, and after such notice, and upon such terms and conditions as may be prescribed by rules of Court, or, so far as the rules do not extend, as the Court may think just.

(7.) Provided that before the security is actually withdrawn, the High Court shall be satisfied—

(a) that the prescribed notice of the order for withdrawal has been given to the arresting authorities; and

(b) that there is no pending claim for the purposes of which the security may be required; and upon the prescribed notice of the order for withdrawal being given to an arresting authority, the ships shall, as respects that authority, cease, after the date specified in the notice, to be exempted ships.

(8.)

(8.) Rules of Court may be made for carrying this section into effect, and in particular for regulating the nature, amount, and value of the security to be given, and the mode of giving security, and of giving notices to the arresting authorities, and for providing for the evidence of the exemption of ships under this section, and for the information to be given from time to time to the High Court respecting the ships to which the security applies, and for the jurisdiction of the High Court under this Act being exercised in chambers.

A.D. 1891.

4.—(1.) Where this section applies to a convention with a Foreign State, and an exempted mail ship to which this section applies is in a port in the United Kingdom no person shall be arrested without warrant on board such ship, and before any process civil or criminal authorising the arrest of any person who is on board such ship is executed against that person the following provisions of this section shall be observed; that is to say,—

Arrest and execution of process on board exempted mail ships.

- (a) written notice of the intention to arrest a person who is, or is suspected to be, on board the ship, stating the hour at which, if necessary, the ship will be searched, shall, if it is a ship of Foreign State and there is at the port a consulate of that State, be left at the consulate, addressed to the consular officer;
- (b) it shall be the duty of the master upon demand, if the said person is on board his ship, to enable the proper officer to arrest him.
- (c) if the officer is unable to arrest the said person he may, but if it is a foreign ship, only after the expiration of such time after notice was left at the consulate, as is specified in the convention, search the ship for such person, and if he is found may arrest him.

(2.) The ship may be delayed for the purposes of this section for the time specified in the Convention, but not for any longer time.

(3.) If the master of a ship refuses to permit a search of the ship in accordance with this section, any officer of customs may detain the ship, and such master shall be liable to a fine of five hundred pounds.

(4.) This section shall apply to the arrest of the master in like manner as in the case of any other person.

5.—(1.) An exempted mail ship to which this section applies, shall not, subject as in this Act mentioned, be liable to be arrested or detained by any arresting authority, either for the purpose of founding jurisdiction in any Court of Admiralty, or of enforcing the payment of any damages, fine, debt, or other claim or sum, or enforcing any forfeiture, whether arising from the misconduct of the master or any of the crew or otherwise, but every Court of the United Kingdom by the process of which the ship could have been under the circumstances arrested or detained, shall have the same jurisdiction as if the ship had been so arrested or detained, and any legal proceeding in relation to any such matter as aforesaid may be commenced by such service in the United Kingdom of any writ or process as may be prescribed by rules of Court, and the High Court, on application, shall, in accordance with rules of Court, cause the security to be applied in discharge of any such damages, fine, debt, claim, sum, or forfeiture.

Exemption from seizure of exempted mail ship.

(2.) Provided that nothing in this section shall render invalid the arrest or detention of a ship before the prescribed notice has been given to the arresting authority, but such authority, on proof that the ship is an exempted mail ship, shall release the ship. Where the Commissioners of Customs, in pursuance of any Act, or as a condition of waiving any forfeiture, require a deposit to be made by any exempted mail ship to which this section applies, the amount of such deposit shall, on notice from the Commissioners of Customs, and without any further proceeding, be set apart out of the security as money belonging to the said Commissioners, and shall be paid and applied as they direct, and any rules of Court relating to such notice, payment, or application shall be made with the consent of the Treasury.

6.—(1.) Where the convention with a Foreign State provides that any provisions of the Convention similar to those contained in this Act shall in any cases apply to a public ship of a Foreign State when employed as a mail ship, it shall be lawful for Her Majesty the Queen to agree that the like provisions shall apply to a public ship of Her Majesty in the like cases when employed as a mail ship, and to give effect to such agreement.

Application of Act to public ships.

(2.) An Order in Council applying this Act as regards a convention with a Foreign State may, if it seems to Her Majesty in Council to be consistent with the Convention so to do, apply this Act as regards a public ship of that Foreign State when employed as a mail ship in the cases authorised by the Convention, and this Act shall apply accordingly, as if such ship were an exempted mail ship belonging to a private owner, and any person may be arrested on board such ship accordingly.

7.—(1.) Every fine under this Act, if exceeding fifty pounds, may be recovered by action in the High Court in England or Ireland or in the Court of Session in Scotland, and the Court in which it is recovered may reduce the amount of such fine, and a fine under this Act not exceeding fifty pounds may be recovered on summary conviction, provided that every offence for which a fine exceeding fifty pounds can be imposed under this Act may be prosecuted on summary conviction, but the fine imposed on such conviction shall not exceed fifty pounds.

Legal proceedings.

(2.) In the case of a summary conviction, any person who thinks himself aggrieved by such conviction may appeal to Quarter Sessions. In Scotland such person may appeal in manner provided by the Summary Prosecutions Appeals (Scotland) Act, 1875.

38 and 39 Vic., c. 62.

(3.) Service of any summons or other matter in any legal proceeding under this Act shall be good service if made by leaving the summons for the person to be served on board the ship to which he belongs with the person being or appearing to be master of the ship.

(4.) If a fine under this Act imposed on the master of a ship is not paid, and cannot be recovered out of any security given in pursuance of this Act, the Court may, in addition to any other power for enforcing payment of the fine, direct the amount to be levied by distress or poinding and sale of the ship, her tackle, furniture, or apparel. An officer of customs in detaining a ship or releasing a ship after detention in pursuance of this Act shall act upon such requisition or authority, and under such regulations as the Commissioners of Customs may make with the consent of the Treasury.

8.—(1.) An Order in Council may, for the purpose of a Convention with a foreign State, apply this Act, subject to any exceptions or modifications not inconsistent with the provisions of this Act, to any British Possession, and this Act when so applied shall, subject to those exceptions and modifications, and subject as hereinafter mentioned, have effect as if it were re-enacted with the substitution of such British Possession for the United Kingdom:

Application of Act to British Possessions.

Provided that before it is applied to any British Possession named in the schedule to this Act the Government of such possession shall have adhered to the Convention. (2.)

A.D. 1891.

(2.) Where this Act applies to a British possession it shall not be necessary for the owner of any mail ship to give security in any Court in that possession, and the provisions of this Act with respect to the jurisdiction of any Court of the United Kingdom, other than any jurisdiction relating to the application of the security, shall apply as if a Court in the British possession were substituted for a Court of the United Kingdom.

(3.) It shall be lawful for Her Majesty in Council to make rules for carrying into effect, as respects British possessions, the provisions of this Act with respect to the security given by mail ships, and in particular with respect to the commencement of a legal proceeding by service of a writ or process in the possession, and to the notices to be given to arresting authorities in the possession, and the evidence to be receivable by such authorities of the security having been given or withdrawn, and the application of the security in discharge of any damages, fine, debt, claim, sum, or forfeiture, where the same are or is recovered or payable either in the British possession, or under proceedings pending concurrently in that British possession and in any other British possession or the United Kingdom.

(4.) If by any law made either before or after the passing of this Act by the Legislature of any British possession provision is made for carrying into effect within such possession any convention to which this Act applies, Her Majesty in Council may suspend the operation within such possession of this Act or of any part thereof so far as it relates to such convention, and so long as such law continues in force there, or direct that such law or any part thereof shall have effect in such British Possession with or without modifications and alterations as if it were part of this Act.

Definitions.**9. In this Act--**

The expression "mail bag" means a mail of letters, or a box, or parcel, or any other envelope in which post letters within the meaning of the Acts relating to the Post Office, are conveyed;

The expression "subsidy" includes a payment for the performance of a contract;

The expression "master of a ship" includes any person in charge of a ship, whether commander, mate, or any other person;

The expression "ship of a Foreign State" means a ship entitled to sail under the flag of a Foreign State;

The expression "arresting authority" means any Court, authority, or officer having power to arrest or detain a ship, or to arrest a person on board a ship, or to order such arrest or detention, or to order the execution of any process, civil or criminal, for the arrest of a person on board any ship;

The expression "postal officer" means any person employed in the business of the Post Office of the United Kingdom or a British Possession or Foreign State, as the case may be, whether employed by the Postmaster-General, or the chief of the Post Office of the British Possession, or the Chief of the Post Office of the Foreign State, or by any person under him, or on behalf of any such Post Office.

Short title.

MEMO.—It is not deemed necessary to publish the correspondence, relating to the references made to the Postal, Police, Customs, and Attorney-General's Departments prior to the decision arrived at by the Premier of New South Wales on the 21st July, 1894.

No. 3.

The Right Honorable the Secretary of State for the Colonies to The Governor of New South Wales.

Sir,

Downing-street, 30 March, 1894.

With reference to my despatch general of the 15th May, 1893, respecting the question of the adhesion of New South Wales to the Postal Convention between Great Britain and France of 30th August, 1890, I have the honor to inform you that I have received a communication from the Secretary of State for Foreign Affairs requesting to be furnished with a definite statement of the wishes of your Government in the matter. I have to request that you will be good enough to furnish me with a reply at your earliest convenience.

I have, &c.,

No. 4.

Minute of Principal Under Secretary.
Subject:—Anglo-French Postal Convention.

Sydney, July, 1894.

His Excellency has received a communication from the Secretary of State for the Colonies, dated 30th March, 1894, intimating that the Secretary of State for Foreign Affairs desires to be furnished with a definite statement of the wishes of this Government in regard to the Convention. The matter has again been

been referred to the Postmaster-General, who suggested that it should be submitted for the opinion of the Attorney-General, and he having now advised that he sees nothing to make it inexpedient for this Colony to become a party to the Convention, perhaps the necessary intimation might be made to the Secretary of State, through his Excellency, that the Government have decided to adhere to the Convention, and desire that the "Imperial Mail Ships Act, 1891" (passed in order to carry such Conventions into effect), be applied to this Colony by order of Her Majesty in Council.

Approved. His Excellency.—G.R.D., 21/7/94. Secretary of State informed.—23/7/94. The Principal Under Secretary.—A.G. (P.S.). B.C., 23/7/94. These papers may now be sent to the Post Office.—C.W. (P.U.S.). B.C., 23/7/94. The Deputy Postmaster-General.—Read.—S.H.L., 25/7/94.

No. 5.

The Right Honorable Secretary of State for the Colonies to His Excellency the Governor of New South Wales.

Sir,

Downing-street, 26 October, 1894.

With reference to your despatch, No. 56, of the 23rd July, I have the honor to inform you that the adhesion of New South Wales to the Anglo-French Postal Convention of the 30th August, 1890, was notified to the French Government by Her Majesty's Minister at Paris, on the 12th September, and was accepted by that Government on the 20th September.

I enclose Order of Her Majesty in Council applying "The Mail Ships Act, 1891," to New South Wales in respect of this Convention.

I have, &c.,

RIPON.

[Enclosure.]

At the Court at Balmoral, the 15th day of October, 1894.

Present:—The Queen's Most Excellent Majesty, Lord President, Lord Chamberlain, Mr. Bryce. WHEREAS on the thirtieth day of August, one thousand eight hundred and ninety, a Convention was made at London between Her Majesty and the President of the French Republic respecting the postal service between France and French Possessions and the United Kingdom and British Possessions, the terms of which Convention are set forth in the schedule to "The Mail Ships (France) Order in Council, 1892."

And whereas the ratifications of the said Convention were exchanged on the twenty-third day of March, one thousand eight hundred and ninety-one.

And whereas by Section eight of "The Mail Ships Act, 1891," it is provided that an Order in Council may for the purpose of a Convention with a Foreign State apply the said Act, subject to any exceptions or modifications not inconsistent with the provisions of the said Act, to any British Possession, and that the said Act when so applied should, subject to those exceptions and modifications and subject as thereafter mentioned have effect as if it were re-enacted, with the substitution of such British Possession for the United Kingdom, provided that, before it should be applied to any British Possession named in the Schedule to the said Act the Government of such Possession should have adhered to the Convention.

And whereas the Government of New South Wales, one of the British Possessions named in the Schedule of the said Act, has adhered to the said Convention.

And whereas it is expedient that the said Act should, for the purpose of the said Convention, apply to New South Wales, subject to the exceptions and modifications in this Order contained.

Now, therefore, Her Majesty, by virtue and in exercise of the powers in this behalf by "The Mail Ships Act, 1891," or otherwise in Her Majesty vested, is pleased, by and with the advice of Her Privy Council, to order, and it is hereby ordered, as follows:—

1. "The Mail Ships Act, 1891," shall, for the purpose of the said Convention, apply to New South Wales, subject, however, to the provisions of section eight of the said Act, and also to the exceptions and modifications following, that is to say:—

- (i) The expression "Officer of Customs" shall mean an officer of the Customs Department of New South Wales.
 - (ii) In lieu of sub-sections (one) and (two) of section seven of the said Act the following provisions shall be substituted, that is to say: Every offence may be prosecuted and every fine may be recovered by action or other legal proceedings in any Court of New South Wales competent to impose fines, but any fine imposed by a Court of inferior or limited jurisdiction shall not exceed either the amount authorised by the said Act or the amount of fine which the Court may impose in the exercise of its ordinary jurisdiction, whichever of the said amounts shall be the less; and there shall be the same right of appeal (if any) against any such fine as in other cases of fines imposed by the same Court in the exercise of its ordinary jurisdiction, and every Court, whether of original or appellate jurisdiction, may reduce the amount of any fine.
 - (iii) The regulations required to be made under sub-section (four) of section seven of the said Act, by the Commissioners of Customs with the consent of the Treasury, shall in New South Wales be made by the Governor in Council.
 - (iv) Section five of the said Act, so far as relates to the Commissioners of Customs, shall not apply to New South Wales.
2. The said Act shall apply as regards any public ship of the French Republic, when employed as a mail ship in the cases authorised by Article V of the said Convention.
3. This Order may be cited as "The Mail Ships (France) Order in Council (New South Wales), 1894."
- C. L. PEEL.

To the Chief Secretary.—R. W. DUFF, 5/12/94. The Postmaster-General.—J.N.B., 12/12/94.
The Deputy Postmaster-General.—C.W. (P.U.S.), B.C., 12/12/94.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PUBLIC WORKS ACT OF 1888.

(RESUMPTION OF LAND FOR A POST AND TELEGRAPH OFFICE AT PARRAMATTA NORTH.)

*Ordered by the Legislative Assembly to be printed, 29 August, 1894.*NOTIFICATION OF RESUMPTION OF LAND UNDER
THE "PUBLIC WORKS ACT OF 1888," 51 VICTORIA
No. 37.

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Right Honourable Sir ROBERT WILLIAM
DUFF, a Member of Her Majesty's Most
Honourable Privy Council, a Knight
(L.S.) Grand Cross of the Most Distinguished
R. W. DUFF, Order of Saint Michael and Saint George,
Governor. Governor and Commander-in-Chief of
the Colony of New South Wales and its
Dependencies.

WHEREAS I, Sir ROBERT WILLIAM DUFF, the Governor aforesaid, with the advice of the Executive Council, have directed that a certain public work, that is to say, the erection of a Post and Telegraph Office at Parramatta North, in the said Colony, the estimated cost of which does not exceed twenty thousand pounds, shall be carried out under the provisions of the "Public Works Act of 1888," as an authorised work by the Minister for Public Works as Constructing Authority; and that the land described in the Schedule hereto, which is in my opinion required for carrying out the said work, shall be acquired by taking the same under the "Lands for Public Purposes Acquisition Act," as adopted by the "Public Works Act of 1888"; Now, therefore, I, the said Governor, with the advice aforesaid, in pursuance of the "Public Works Act of 1888," do declare by this notification, to be published in the Government Gazette and in one or more newspapers published or circulated in the Police District wherein the said land is situated, that the Crown Land comprised within the description set forth in the Schedule hereto has been appropriated, and the private property within such description has been resumed, for the public purpose aforesaid, to the intent that upon the publication of

this notification in the Gazette, the said land described in the said Schedule hereto shall forthwith be vested in the said Constructing Authority as a corporation sole on behalf of Her Majesty, for the purposes of the "Public Works Act of 1888," for an estate in fee simple in possession, freed and discharged from all trusts, obligations, estates, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the further intent that the legal estate therein, together with all powers incident thereto or conferred by the said last-mentioned Act, shall be vested in the said Constructing Authority as a Trustee: And I declare that the following is the Schedule of land hereinbefore referred to:—

SCHEDULE.

All that piece or parcel of land situate in the town of Parramatta, parish of Field of Mars, county of Cumberland, and Colony of New South Wales: Commencing at the junction of the southern boundary of Albert-street with the north-eastern boundary of Church-street; and bounded thence by the aforesaid southern boundary of Albert-street bearing north 89 degrees 27 minutes east 2 chains 1 link; thence by lines bearing south 38 minutes east 47 $\frac{3}{5}$ links, and south 89 degrees 27 minutes west 1 chain 89 $\frac{1}{2}$ links to the aforesaid north-eastern boundary of Church-street; thence by that boundary bearing north 13 degrees 35 minutes west 49 $\frac{3}{5}$ links, to the point of commencement,—be the said several dimensions all a little more or less, containing 15 perches or thereabouts, and said to be in the possession of Frederick Oatley and the Crown.

In witness whereof I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this twenty-sixth day of June, in the year of our Lord one thousand eight hundred and ninety-four, and in the fifty-eighth year of Her Majesty's Reign.

By His Excellency's Command,
WILLIAM JOHN LYNE.
GOD SAVE THE QUEEN!

1894.
(SECOND SESSION.)

NEW SOUTH WALES.

ELECTRIC TELEGRAPHS.

(AMENDED REGULATIONS RELATIVE TO THE TRANSMISSION AND DELIVERY OF TELEGRAMS
WITHIN THE COLONY.)

Presented to Parliament, pursuant to Act 20 Vic. No. 41, sec. 6.

Postal and Electric Telegraph Department,
General Post Office,

Sydney, 8th September, 1894.

HIS Excellency the Governor, with the advice of the Executive Council, has, in accordance with the provisions of the 6th section of the Electric Telegraph Act, 20 Victoria No. 41, been pleased to approve of the substitution of the following code of Regulations relative to the transmission and delivery of telegrams within this Colony for those now in force.

JOSEPH COOK.

NEW SOUTH WALES POSTAL AND ELECTRIC
TELEGRAPH DEPARTMENT.

REGULATIONS FOR THE TRANSMISSION AND DELIVERY
OF TELEGRAMS.

Manner of writing telegrams.

1. All telegrams should be written with ink in a clear and legible manner on the forms provided for that purpose; but when the prescribed or regular form cannot be obtained, any other form or paper will be accepted. The proper date and address in full must be stated, also the signature and address of the sender authenticating the message, and subscribing to the conditions contained in these Regulations.

All numerals must be expressed in words, except in the case of cipher messages.

Abbreviations are not allowed.

(NOTE.—Books of "unstamped" telegraph forms may be obtained at any Telegraph Office at the price of one shilling (1s.) per book.

Telegram forms, impressed with sixpenny or one shilling stamps, may be purchased at their face value, either singly or in packets of twenty, at the General Post Office, or at any Telegraph Office in the Colony. Forms impressed with a shilling stamp are printed in black, and those impressed with a sixpenny stamp in pink, on white paper.)

Telegrams to be prepaid by postage stamps.

2. The charges on telegrams (except New Zealand, New Caledonia, and International Cable business, for which cash will be excepted) are to be prepaid by postage stamps; and the public will be required to affix them to the message forms, just as they are required to affix stamps to letters.

Stamps obtainable at any Telegraph Office.

3. Stamps may be obtained at any Telegraph Office in the Colony, and the officers to whom the messages are handed for transmission will cancel the stamps thereon in the presence of the senders.

Collect telegrams.

4. All telegrams must be prepaid, unless they are from Members of Parliament, or replies to telegrams on which the words "Reply paid," have been written, or unless special arrangements have been made for payment by the receiver. In cases of emergency or distress, however, persons may (at the discretion of the Officer-in-charge) send messages to be paid for by the receiver.

Reply-paid telegrams.

5. When the sender of a telegram wishes to pay for a reply thereto he must affix in stamps a minimum rate for the reply in addition to the charge for the original telegram. Should the reply contain more words than have been prepaid, the excess must be paid for by the sender of the reply. The words "Reply prepaid," must be added as the last words of the text, and these words will be charged for as part of the telegram.

Date, address, and signature transmitted free of charge.

No charge will be made for the date, address, or signature of any telegram lodged for transmission within the Colony.

One address or signature only, sent free.

7. Only one address or signature to a telegram is sent free. Extra addresses or signatures are counted and charged as a part of the telegram.
For example:—

In the address "Mr. or Mrs. Smith, Goulburn," the words "or Mrs." are charged.
In the signature "John and Sarah Watson," the words "and Sarah" are charged.

The above does not apply to the ordinary signatures of firms.

Charges for telegrams transmitted on Sundays.

8. Telegrams transmitted on Sundays will be charged double the ordinary rates, excepting Cable and Press messages, which will pass at the usual rates.

Cypher telegrams.

9. Every telegram consisting wholly or in part of words in secret language, or of words in any admitted language (English, French, German, Italian, Dutch, Portuguese, Spanish, and Latin) having no connective meaning, groups of letters or figures, shall be regarded as a cypher message; and every cypher word in such telegram shall be counted as two words, and the extra charge added to the minimum rate for a telegram, provided that such extra charge shall not in any case exceed 50 per centum on the ordinary rate which would be payable on account of the said telegram. Groups of five letters or five figures shall count as one cypher word.

Repeating telegrams as precaution against mistakes, delays, &c.

10. In order to provide against mistakes in the transmission and delivery of telegrams, every telegram of importance ought to be repeated by being signalled back from office to office. No copy is in such case given to the sender. The charge for repetition is one-half the ordinary tariff.

Government not responsible for mistakes, &c., in unrepeated telegrams.

11. The Government will not be responsible for mistakes or delays or non-delivery of any unrepeated message arising from any mistake in the transmission of the telegram or the address.

No responsibility beyond the sum of ten pounds for delays, &c., of telegrams.

12. The Government will not be responsible to any extent above ten pounds for mistakes, delays, non-delivery, or non-transmission of any message, repeated or unrepeated, from whatever cause the same may arise.

Charges for copies of same telegram addressed to several persons, &c.

13. Copies of a telegram, other than press, addressed to several persons in the same place, or to one person at several addresses in the same town, will be charged at the rate of six pence per copy.

Local messages.

14. In addition to ordinary telegrams lodged for transmission by wire, messages will be received at any Telegraph Office in the Colony at which messengers are employed, addressed to any place within the city, town, &c., in which such office is situated, and will be delivered subject to the Regulations relating to the transmission and delivery of telegrams. These messages must be prepaid, and will not be accepted for addresses exceeding one mile from any country office, nor for delivery outside the boundaries fixed for the head, branch, and suburban offices.

Receipts for telegrams.

15. Receipts for telegrams lodged at any Telegraph Office for transmission, showing the amount paid for such telegram, will be given to senders on payment of a charge of one penny (1d.) for each receipt. Forms of receipt must be filled in by the sender and handed in with the telegrams for the initials of the receiving clerk, and impression of the office date stamp thereon.

Immediate replies to telegrams.—Mode of obtaining same.

16. Where an immediate reply to a telegram is required, the sender of such telegram should append the words "Reply by telegraph," which will be sent free. The messenger charged with the delivery of the message will then be directed to wait five minutes for the reply.

Order of transmission of telegrams.

17. Telegrams will be transmitted in the order in which they are received, and no precedence will be allowed except for telegrams relating to the arrest of criminals, the discovery or prevention of crime, or any other matter connected with the administration of justice, or Government despatches when so required.

Cancellation of telegram prior to transmission.

18. If from any circumstance a telegram is not sent within a reasonable time, and the delay is sufficient to destroy the value of the despatch, the sender will, if practicable, be informed of the cause of such delay. It will then be optional with the sender to cancel such telegram in accordance with Regulation 25.

Receiver may have telegram repeated.

19. The receiver of a telegram may have the whole, or a part of it repeated on payment of the cost of the telegram demanding the repetition, and of the reply to the same.

Sender may have telegram repeated.

20. The sender can also have the whole or any portion of his message repeated on payment of the cost of the telegram he forwards, and of the reply if one be required.

Form of telegram demanding repetition.

21. The demand for the repetition must be made within seventy-two hours after receipt or despatch of the telegram, and should be written in the following manner:—

Sydney to Bathurst (these words are not charged for) "R.P.4" (representing reply paid four words). "Twenty-sixth, 10 a.m." (date of message to be repeated and time lodged), "Brown" (receiver's name). "Repeat first, fourth, ninth" (meaning words of the text of the telegram to be repeated); or "Twenty-sixth 10 a.m." "Brown" repeat word (or words) after."

The reply will be worded as follows:—

"Bathurst to Sydney" (these words are not charged for) "Brown" (words repeated).

Refund of charges for repetition of telegrams, &c.

22. The charges will be refunded if the repetition proves that the original telegram has been seriously mutilated in transmission. No refund will be made when the mutilation has been caused by illegible handwriting on the part of the sender. No reimbursement of the charge for the original telegram will be allowed.

Fee payable for rectifying incorrect address, &c., of telegram.

23. When a telegram cannot be delivered, the sending office is advised of the cause of non-delivery, which advice, if practicable, is communicated to the sender. Should the sender furnish a corrected address, or require the telegram to be presented a second time, he must pay the cost of the rectifying telegram. Should the failure in delivery in the first instance be caused through any fault of the Department, the extra charge will be refunded.

Inquiries respecting delivery of telegrams, &c., must be paid for.

24. Inquiries by telegram for information respecting the whereabouts of people, the time when messages were delivered, &c., must be prepaid.

Cancellation of telegrams.

25. The sender may, on proving his identity, have his telegram cancelled, and if it be cancelled before the commencement of transmission, the amount paid for such telegram will be refunded on application by letter to the Deputy Postmaster General if made within three months; but if transmission has commenced, the sum will not be refunded. If transmission has been completed an official telegram, prepaid by the sender, will be sent to the terminal office. If the official telegram should arrive too late, the sender will, if practicable, be informed that the attempt to cancel his telegram has failed, but the sum paid will not be refunded.

Indecent, obscene, or libellous telegrams.

26. Telegrams indecently, or obscenely worded, or appearing to contain libellous, or grossly offensive matter, or which may seem to be contrary to the laws of the State, will not be transmitted.

Mode of delivery of telegrams.

27. Telegrams are, as a rule, delivered personally; but when attention cannot be gained, they are dropped into the letter-box if there is one. If there is no letter-box, a notice is left at the address, and the telegram is brought back to the office.

Free delivery within one mile of Telegraph Office.

28. All telegrams will be delivered free within one mile, by road of the office where messengers are employed, over that distance, porterage or cab-hire will be charged, and boat-hire on telegrams to be delivered on ship board. At Railway Telegraph and Telephone Offices where no messengers are employed, telegrams remain at the office until called for. A deposit of 5s. for boat-hire is required on every telegram addressed to a ship, unless the vessel is alongside a wharf, jetty, or pier.

Charges for delivery beyond one mile of Telegraph Office.

29. Telegrams requiring to be delivered beyond the limit of one mile will only be forwarded at the sender's risk, and subject to the Department being able to procure a special messenger, and the actual charge (the minimum being at the rate of 1s. per mile) made by such special messenger must be defrayed by the sender. Porterage charges must be paid in advance, but in cases where the exact distance is not known a deposit will be accepted. Should the sender under-calculate the charge the deficiency will, if possible, be collected on delivery, and if the sender pays too much the excess will be refunded.

Postage of telegrams to destination.

30. Telegrams for addresses beyond the limit of free delivery within the Colony will, upon instructions from the sender, be posted to their address by the terminal office free of charge, but postage will be charged on telegrams posted to addresses beyond the Colony.

Code addresses.

31. A record is kept at the Chief Telegraph Office, Sydney, for the registration of the full addresses at which foreign telegrams reaching Sydney and bearing abbreviated or arbitrary addresses are to be delivered. A fee of 10s. per annum is charged for registration, payable in advance on the 1st April in each year. In all cases where it is desired to register a code address a proper name or a dictionary word must be chosen. Cypher words representing addresses must be submitted before registration, to prevent the same or similar words being used by different firms. Real words or names must be registered as address indicators. Combination or made-up words, such as "Coffpal," "Scotunion," "Retsbol," will not be accepted. Code addresses will only be registered or accepted in the case of International, New Caledonia, and New Zealand telegrams.

Unclaimed telegrams.

32. A list of all unclaimed telegrams will be posted in a conspicuous place outside each Post and Telegraph Office weekly.

Telegrams to be called for.

33. In the case of telegrams addressed to a Telegraph Office "To be called for," such telegrams will be held for one week, and if not then delivered the usual advice of non-delivery will be sent.

Re-directed telegrams.

34. Telegrams may, on the written request of the addressee, be re-directed to any other town within the Colony on payment of full local rates, exclusive of the original fee paid.

Delivery of telegrams after office hours at second address, &c.

35. Notices of removal and instructions respecting the delivery of telegrams at hours when the addressee's place of business is closed are registered free on application by letter. In cases where no such instructions have been registered, and any additional service is performed in delivering the telegrams at a second address in the same town, an extra charge of 6d. will be made.

Telegrams for transmission through line-repairing and railway telegraph stations.

36. Telegrams for Line Repairing Stations and Railway Telegraph Offices can only be accepted subject to possible delay consequent upon the absence of officers on other duties or other causes.

Telegrams for transmission by wire may be forwarded free by post to nearest Telegraph Office.

37. Telegrams posted at any Post Office in the Colony (which is not also a Telegraph Office) will be forwarded by first mail to the nearest Telegraph Office, and transmitted thence by wire to destination, provided unobliterated postage stamps are affixed to

the form on which the telegram is written, sufficient in value to defray the cost of the telegram, and that the telegram is enclosed in an envelope endorsed "Telegraphic message only" and which need not be stamped, directed to the Officer in charge, Telegraph Office at (give the name of the nearest Telegraph Office, which can be obtained from the Postmaster on enquiry).

Press telegrams.

38. No person shall be entitled to send telegrams at press rates to any proprietor, publisher, or agent of a newspaper, in any one day between the hours of 9 a.m. and 6 p.m. containing more than five hundred words in the aggregate. If, however, during these hours the line is clear, and unoccupied, press telegrams of any length may be sent provided that they may be stopped from time to time to allow of the transmission of any private or business telegrams requiring to be sent. Between 6 p.m. and 9 a.m. press telegrams will be sent to the extent of 500 words at a time in rotation, and no such telegram shall be allowed to occupy the line beyond this limit, if there are any other telegrams awaiting transmission.

Telegrams available for inspection.

39. Telegrams will be available for inspection, or copies thereof may be obtained upon application by the sender or receiver, or their duly authorised agents, during a period of one year from the date of transmission, on payment of a search fee of 2s. 6d. for each telegram. Half rate, in addition to the search fee, will be charged for copies of telegrams having to be transmitted to another office. Original telegrams will be kept for one year, after which they will be destroyed.

Hours of keeping offices open for transaction of business.

40. Except where otherwise indicated in the list of Stations contained in the Postal Guide, Offices will be open to the public for the transaction of business daily, Sundays, Good Friday, and Christmas Day excepted, from 9 a.m. till 8 p.m., and on Public Holidays from 9 a.m. till 10 a.m. and from 6 p.m. till 8 p.m.

On Sundays, Good Friday, and Christmas Day, Offices will be closed all day.

Transaction of business after usual office hours.

41. Arrangements will be made to open any office for the transmission of telegrams, after the ordinary business hours, upon notice being given to the Officer in charge, at least one hour before the time of closing, and upon payment of a deposit of four shillings (4s.) for the first hour or portion thereof, and two shillings (2s.) for every subsequent hour, or portion thereof, during which it is desired the office may be kept open. All telegrams transmitted to be charged at the ordinary rates.

Telegrams held confidential.

42. All telegrams will be held strictly confidential.

1894.

(SECOND SESSION.)

NEW SOUTH WALES.

ELECTRIC TELEGRAPHS.

(AMENDED TELEPHONE REGULATIONS.)

Presented to Parliament, pursuant to Act 20 Vic. No. 41, sec. 6.

Postal and Electric Telegraph Department,
General Post Office,
Sydney, 17th August, 1894.

His Excellency the Governor, with the advice of the Executive Council, has been pleased, in terms of a resolution passed at the recent New Zealand Postal and Telegraph Conference, to approve of the existing Telephone Regulations being amended, so as to provide for communication between private houses, offices, warehouses, mines, factories, or other places not connected with a Public Telephone Exchange.

The Regulations in connection with the Telephone System will therefore be in future as follows.

JOSEPH COOK.

REGULATIONS.—TELEPHONE SYSTEM.

1. Applications for connection with the Telephone System through the Central Exchange, at the General Post Office, or otherwise, should be forwarded to the Deputy Postmaster General, General Post Office, Sydney.

2. The erection of the lines will be carried out by the Government, and future subscribers will be charged for the use of the same as follows:—

FOR CONNECTION WITH THE CENTRAL TELEPHONE EXCHANGE AT THE GENERAL POST OFFICE, SYDNEY, FOR A DAY AND NIGHT SERVICE (including the advantage of communicating with the Telephone Exchanges in the Suburbs of Sydney until it may be found needful to withdraw or revise this condition, in view of the increased cost of working these Exchanges):—

Per Annum.
£ s. d.

Providing line of 1 mile or under, 1 telephone set complete, and service at Exchange	12 0 0
Each additional quarter mile of line or under	1 0 0
Magneto extension bells, each	0 10 0
Indicators without bell or batteries, each	0 10 0
Indicators with bell and batteries, each	1 0 0

Special appliances, as per agreement.

Persons occupying offices in the same building can jointly subscribe to the Telephone Exchange under the same Exchange number, on paying, in addition to one ordinary subscription, £3 10s. a year for each additional set of instruments fixed in the several offices of the said joint subscribers, who will have to provide an attendant for their own local switch-board, or should additional instruments not be required, on paying £2 a year for each additional name to be inserted on the list of subscribers. Partners in firms can have their names published separately in the telephone lists upon payment of a fee of £1 per annum for every additional name.

Per Annum.
£ s. d.
Switch-board for above, per number

Where extension lines are erected to connect with Exchange lines, and the total distance does not exceed one mile, no additional rental will be charged for the line, but instead thereof £5 per annum for one set of telephones complete, and £1 per annum for one extension bell and switch, or other apparatus used; and where the total distance exceeds one mile, an extra charge of £1 per annum for each additional quarter mile or fraction thereof will be made.

- (a) The above rates include attendance, adjustments, repairs, and renewals of lines, instruments, and batteries.
- (b) Mileage to be calculated radially from the Central Exchange, General Post Office, Sydney.
- (c) New lines to be taken for at least two years, after which one calendar month's notice must be given of intention to discontinue the use of the line.
- (d) Rent to be charged from the date of connection. The first year's rent to be paid in advance, and thereafter half-yearly in advance. Should any subscriber be in arrear with his rent, and fail to pay the same, on being requested to do so, the Postmaster General shall have power to disconnect his telephone and (if the rent be not paid within a reasonable time, say one month) cancel the agreement, remove the name of the subscriber from the list, and enter upon the premises for the purpose of removing all instruments, wires, &c., without prejudice to the right of the Postmaster General to claim the rent due.
- (e) All telephone instruments, batteries, &c., are the exclusive property of the Government, and may be removed upon the determination of the contract, for which purpose the Postmaster-General or his officers are to have free access to the premises of the subscriber.
- (f) The Postmaster General or any officer appointed by him is also to have free access for inspection purposes whenever required.

SUBURBAN TELEPHONE EXCHANGES.

Before a Suburban Exchange can be established fifteen subscribers are required for a day service (*i.e.*, between the hours of 9 a.m. and 8 p.m.), and twenty-five subscribers for a day and night service.

The rates for local connections with Suburban Exchanges are as under, subject to the same conditions as the subscribers to the Central Exchange.

Providing line of 1 mile or under, 1 telephone set complete:—

	Per Annum. £ s. d.
For a business establishment	10 0 0
For a private house	6 0 0
Each additional quarter of a mile or under	1 0 0
For use of trunk wire and service at Central Exchange:—	 £ s. d.
For every mile or fraction thereof	0 10 0
Minimum charge	2 0 0

COUNTRY TELEPHONE EXCHANGES.

Before a Country Exchange can be established, fifteen subscribers are required for a day service only (*i.e.*, between the hours of 9 a.m. and 8 p.m.). The rates for connection with the Country Exchanges are as under, subject to the same conditions as subscribers to the Central Exchange.

Providing line of 1 mile or under, one telephone set complete:—

	Per Annum. £ s. d.
For a business establishment	10 0 0
For a private house	6 0 0
Each additional quarter of a mile, or under	1 0 0

3. Telephones in connection with the Exchanges are for the use of subscribers or proprietors only.

4. Any infringement of the above rules will render the subscribers or proprietors liable to have their telephone disconnected, without prejudice to the right of the Postmaster General to claim the maintenance fee or rent for the remainder of the term.

5. Subscribers requiring their wires or instruments removed from one building or room to another will be charged the net cost of labour and material expended on such removal.

6. If any removal involves an extension of line beyond the mileage paid for, the rental will be increased accordingly.

7. The subscriber or proprietor will be required to pay for all damage to instruments beyond the ordinary wear and tear.

8. With a view to facilitate business, and for the better conduct of the system, telephone messages containing unbecoming expressions must be refrained from, and language of an obscene nature or of a character calculated to provoke a breach of the peace is strictly forbidden. Any violation of this regulation will render the offender liable to have his telephone disconnected from the Telephone Exchange and the line dismantled.

9. Those lines erected under what was termed the PURCHASE SYSTEM will be still considered the property of the proprietors, and be subject to the maintenance fees existing at the time the respective agreements were made, so long as the proprietors remain in their present premises.

TELEPHONE BUREAUX.

The following are the charges to be paid by the public for the use of Government Telephones wherever established in the Colony at a Bureau Station:—

Where the line in use is not more than three miles long, an uniform charge of six pence for the use of the same for any period not exceeding three minutes, and a further charge of six pence for every additional three minutes or portion of three minutes. Where the line in use is over three and under ten miles long the charges are one shilling for the use of the same for any time not exceeding three minutes, and a further charge of one shilling for every additional three minutes or portion of three minutes. Where the line is over ten miles long, special rates to be fixed.

No person is allowed the use of the line for more than six minutes consecutively, if other applicants are waiting to use it. and in cases where the line may be engaged, applications will be registered, and connections will be made in the order of priority of application.

PRIVATE TELEPHONES AND PRIVATE LINES.

The Department will undertake the adjustment, regulation, and maintenance of Telephones and batteries the property of persons and firms, for the sum of £1 per single set per annum, provided the said instruments, &c., are approved of, or in case they should be considered obsolete or worn out, the Department will supply others of the best make. If the latter course is adopted the charge for rent of instruments and maintaining the service in good order will be £2 per single set per annum.

Private telephone lines (special wire and instruments) will be provided and maintained between private houses, offices, warehouses, mines, factories, or other places on payment of the following rates annually for a term of no less than three (3) years.

If within a radial distance of twenty (20) miles of Sydney:—

	Per Annum. £ s. d.
For any distance not exceeding $\frac{1}{4}$ mile	1 5 0
Do do $\frac{1}{2}$ do	2 10 0
Do do $\frac{2}{3}$ do	3 15 0
Do do 1 do	5 0 0
Every additional $\frac{1}{4}$ mile	1 0 0
For each set of Telephones (Galvano)	2 0 0
Do do (Magneto)	2 10 0

Outside the twenty (20) miles radius at such rates as may be fixed by the Postmaster General.

The Lessee of any private line will not be allowed to permit the use of such line for any other than his own business. Any breach of this rule will involve the removal of the line and instruments without prejudice to the right of the Postmaster General to claim the rent for the remainder of the term.

Should a lessee of a private line change his residence or office he will be required to pay such proportion of the cost of altering the line, &c., as may be determined by the Postmaster General.

The annual rental fee for this service will be adjusted to altered length of lines.

The lessee will be required to pay for all damage to instruments &c., beyond ordinary wear and tear. All telephones, batteries, &c., which are the exclusive property of the Postmaster General may be removed by him upon the determination of the contract, for which purpose he, or his officers are to have access to the premises of the lessee. The Postmaster General, or any other officer appointed by him is also to have free access for inspection purposes whenever required.

The first year's rent must be paid in advance, and thereafter half-yearly in advance.

REGULATIONS FOR THE ERECTION OF PRIVATE TELEPHONE LINES.

In country districts a private person may be allowed to erect poles and wires for a telephone line mainly upon his own land, provided such line be used exclusively for his own private purposes, and be not run from a point in the vicinity of a telegraph office to another point in a like vicinity, upon payment in advance of a licence-fee to the Postmaster General of £1 per mile per annum for the first four miles; after that, 10s. per mile or fraction thereof per annum; provided, nevertheless, that the licence-fee shall in no case exceed £7 per annum.

Where the line may cross or run along public roads or tracks, the height of the wire above the highest portion of the road or track shall not be less than 18 feet, and the poles carrying the wire at such places shall be of a substantial character and be struttured or stayed, if necessary, to stand the strain of the wire.

All fittings upon such poles, such as brackets, pins, insulators, &c., shall be of approved material and make.

The person wishing to erect the line must submit a plan and specification showing the route to be followed, especially marking where roads are to be crossed or entered upon, and describing the nature and dimensions of the materials to be used in the construction of the line, and any other particulars which may be required, upon receipt of which the Postmaster General may direct an officer of the Post and Electric Telegraph Department to examine such plan and specification and, if necessary, make an inspection of the route, the cost of such examination and inspection to be borne by the person wishing to erect the line; and should the report of such officer disclose that the line will not, in any way, interfere with or endanger any other line of telegraph, whether belonging to the Postmaster General, the Railway Commissioners, or any private person, and that the material and method of erection described in the specification are satisfactory, the Postmaster General may, upon payment of the necessary fees, grant permission to erect: Provided, however, that such permission shall in no case be granted in the event of the route of such proposed line being along any public road, railway, or track, or over or across any private land other than land belonging to the person desirous of erecting such private line, unless and until the necessary authority of the local municipal council or the owners of such private land (as the case may be) shall have been obtained, and satisfactory evidence to that effect shall have been forwarded to the Postmaster General.

The person to whom such permission has been granted shall, upon the completion of the line, report the fact to the Postmaster General, when an officer of the Post and Electric Telegraph Department may be sent to inspect the line and report whether the work has been satisfactorily carried out; the cost of such inspection to be borne by the person who erected the line. If the work be not to the satisfaction of the inspecting officer, he shall issue instructions as to what is required, and on the defects being made good a license to use the line may be issued.

Should the person to whom permission has been granted to erect the line fail to make good the defects pointed out, the Postmaster General may take such steps as he may deem necessary to remove the portions objected to, and the person seeking the license to use the line shall be prohibited from so doing until the requirements of the Postmaster General have been satisfactorily complied with.

The Postmaster General may direct an official inspection of such lines to be made periodically; and the officer making such inspection may direct the licensee to make such alterations or repairs as may to him appear necessary, and the licensee shall immediately carry out the same; and in the event of his failing to do so within a reasonable time, the officer shall report to that effect, and the license to use such line shall be cancelled.

The licensee shall be wholly responsible for the repairs and maintenance of the line, and he shall undertake to maintain the same in a thoroughly efficient manner at his own cost; and

any alterations, repairs, or other works which the Postmaster General may, in the interests of public safety or convenience, order to be done shall be charged to the licensee, and may be recovered by the ordinary process of law.

The licensee shall undertake that the line shall be used for his own private purposes only, and in no case shall he charge or accept a fee for the use of the line or for the transmission of any communication over the same; and in the event of it being proved that he has done so at any time, the license may be cancelled.

In the event of the licensee's line being found to interfere in any way with the future erection of any lines by the Postmaster General or the Railway Commissioners, the Postmaster General may direct the licensee's line to be altered, removed, re-erected in another position, or otherwise dealt with as may be deemed necessary.

The licensee shall be solely responsible for any damage which may arise to life, limb, or property which may be caused by the poles, wire, or other portions of the line erected by the licensee.

Where the line is required to be erected partly on poles the property of the Postmaster General and partly on poles the property of the licensee, the latter shall pay at the rate of £1 per annum per mile for the first three miles, and £2 per annum per mile over that distance for the portion erected on the Government poles; but the wire erected on such poles shall be erected and maintained by the Postmaster General.

Sydney : Charles Potter, Government Printer.—1894.

1894.

(SECOND SESSION.)

NEW SOUTH WALES.

ELECTRIC TELEGRAPHS.

(REDUCED TELEGRAPH RATES BETWEEN CUDGEN AND CHINDERAH IN NEW SOUTH WALES AND ALL STATIONS IN QUEENSLAND.)

Presented to Parliament, pursuant to Act 20 Vict. No. 41, sec. 6.

Postal and Electric Telegraph Department, General Post Office,
Sydney, 9 June, 1894.

WITH reference to the arrangement made with the Queensland Government, under which the inland rate of 1s. for ten words and 1d. for each additional word is charged on telegrams transmitted to and from Border Stations in this Colony and all stations in Queensland, it is hereby notified, for public information, that Cudgen and Chinderah will in future be treated as "Border" Stations under this arrangement.

JOHN KIDD.
