733. I suppose it is not common to see a number of vessels leaving Newcastle without having a full load? They generally go away fully laden.
734. The only complaints the Department have had about there not being sufficient draught on the bar, I believe, have been from a few ship-owners in England? Yes.
735. The Chamber of Commerce at Newcastle have complained to the Government about the insufficient dredging of the harbour being a hindrance to the trade of the port. Do you think that that complaint is well grounded? They had some ground for the complaint when the harbour was shoaled up after the floods. In some places it shoaled up to 19 feet; but we went vigorously to work, working night and day with the dredges, and the evil was cured.

- A: B. Portus.** 736. Are not the accommodation and appliances for shipping coal at Newcastle, of such a character that vessels going there for cargoes do not experience much delay? The facilities for loading at Newcastle are very complete.
- 28 Mar., 1895. 737. How many berths are there under the hydraulic cranes, having sufficient water for vessels of 3,000 tons to load in? I could not say exactly—I think four or five.
738. Have not the appliances for the shipment of coal, during the last two years, been in excess of the number of vessels seeking freight there? The facilities have been in excess of requirements, because you can work the whole of the plant night and day. The difficulty is about the heavy-draught ships going over the bar. As regards the ordinary class of vessels—vessels up to 21 feet draught—there is no ground for complaint.
739. Is it not a fact that the heavy-draught vessels that go to Newcastle are few in number? Yes.
740. Is it not a fact that heavy-draught vessels can get southern coal in Sydney harbour at a cheaper rate than they can get coal at Newcastle? Instances are rare of a considerable export of southern coal. The quality of the Newcastle coal is much superior to that of the southern coal.
741. Are not the prevailing gales outside Newcastle the strongest and most protracted gales from the south-east? Yes, and occasionally from the east.
742. Would not those heavy gales, if that northern breakwater was extended, cause sand to drift against the northern breakwater? Do you mean that the sand would be brought from the sea and deposited there?
743. Will not the sand drift there? The sand comes from the north beach. I take it that the sand is always tending from north to south, and it is that which makes the obstruction at Newcastle bar. I do not think that much sand comes seaward at all. The accumulation is caused by the trend of the sand from the north beach.
744. Is it not a fact that there is a body of sand accumulated close to the north of the breakwater now, limiting the area of the channel? There is a small accumulation there. That may have been caused by the sand being kept in a boiling condition around the breakwater and the flood-tide bringing it in. There is nothing like the accumulation that there was in the old days,
745. Still, that contracts the width of the channel? To some extent; but the first flood generally sweeps it away. There was an accumulation before the flood of 1893, and it was carried away.
746. Do you not think that the extension of the breakwater will cause a greater accumulation? No; the further you get away from the beach the greater the improbability of it accumulating. Probably there will be no accumulation at all when the breakwater gets further out.
747. Nowadays, vessels of large draught find no difficulty in entering or leaving the port of Newcastle? Vessels up to about 22 feet of draught. But that sand which is accumulating now, and has been for the last two or three years, may increase in height, and a series of accumulations may block the port altogether for large vessels.
748. That is the bank which is accumulating outside? Yes; that has been going on for years.
749. Do you not think that if the northern breakwater is extended by the action of gales, and perhaps the flow of silt down the river, that accumulation will be increased? No; I take it that what will occur in future will be what has occurred in the past. The present obstruction will be carried 800 feet seaward, and that will take us into 40 or 50 feet of water. The object of the breakwater is to take it away into that deeper water to send it seaward.
750. And you think it will do so? I think it will, judging from what has been done before.

James Powell, Esq., Collector of Customs, Sydney, sworn, and examined:—

- J. Powell, Esq. 751. *Chairman.*] What are you? Collector of Customs.
752. Have you any information for the Committee with regard to the trade of the port of Newcastle? I have prepared some returns on the subject.
- 28 Mar., 1895. 753. Will you tell us what returns these are? I will explain them. I have a return showing the amount of the revenue collected from customs for the years 1885 to 1894 both inclusive, the excise duties, harbour and light dues, pilotage dues, removal dues, and tonnage rates. [Vide Appendix.]
754. *Mr. Davies.*] What is the total? The total for 1894 was £158,896.
755. *Chairman.*] Have you any other papers? Yes; I have returns showing the number of bales of wool shipped during 1894, and the vessels by which they were shipped. [Vide Appendix.]
756. *Mr. Davies.*] You have not the returns for previous years? No, I should have to get them specially. It is a growing trade at Newcastle.
757. Could you give us the returns for five years? No, I should have to get them from Newcastle.
758. *Chairman.*] Will you instruct your Sub-Collector at Newcastle to give us the return for five years? Yes. As a matter of fact, the value of the trade outside coal is greater than the trade in coal at Newcastle, as shown by the returns. I have another return showing the value of exports and imports at the port of Newcastle from 1885 to 1894, both years inclusive. [Vide Appendix.] I have a return of the tonnage of vessels entering inwards, and clearing outwards for the port of Newcastle from 1882 to 1894, inclusive. [Vide Appendix.] I might explain what seems to involve a contradiction—the tonnage out, being much greater than the tonnage in. The reason of that is that the tonnage of foreign vessels is taken at Sydney, and we do not take it again at Newcastle, but they are taken outwards at Newcastle. I have a return showing the amount of coal raised in the Newcastle District in 1892, 1893, and 1894; but as I thought you would very likely be better informed from other sources I did not extend it. [Vide Appendix.] I have a return showing the imports and exports for the year 1894, with each port of import or export showing each country or place at or from which imports or exports have been received or forwarded. [Vide Appendix.]
759. Does it mean that the imports went direct to those places? The ships cleared direct for the places named. I have a return giving the principal articles of import and export from and to Newcastle in 1894. [Vide Appendix.] I am advised by the Sub-Collector of Customs that the crane rates are not charged by him—they are included, I believe, by the Railway Commissioners in their haulage charges.
760. *Mr. Davies.*] Has any complaint been made to you by trades-people, shippers, and commercial men trading to the port of Newcastle, in reference to the want of approach to the harbour, and the depth of water? I am not likely to hear those complaints. My duties appertain to the collection of revenue.

FRIDAY, 29 MARCH, 1895.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.	The Hon. CHARLES JAMES ROBERTS, C.M.G.
The Hon. JAMES HOSKINS.	JAMES HAYES, Esq.
The Hon. JOHN DAVIES, C.M.G.	ROBERT HENRY LEVIEN, Esq.
CHARLES ALFRED LEE, Esq.	

The Committee further considered the proposed Harbour Improvements at Newcastle.

Robert R. P. Hickson, Esq., Commissioner and Engineer-in-Chief, Roads and Bridges Branch, Department of Public Works, sworn, and examined:—

761. *Chairman.*] What are you? Commissioner and Engineer-in-Chief, Roads and Bridges Branch, R. R. P. Department of Public Works. Hickson, Esq.
762. You are aware of the works in connection with which you are brought before this Committee—improvements of the harbour of Newcastle? Yes. 29 Mar., 1895.
763. Have you a full knowledge of the works? Yes.
764. You have been in charge of that district? Yes; I was eight years at Newcastle.
765. There are some alterations pending in your Department, are there not? Yes, in the Works Department.
766. Therefore it follows that if you have charge of the Harbours and Rivers Department you will be the officer to carry out this work? Yes.
767. *Mr. Lee.*] How long is it since you were resident at Newcastle? Six years. I went there in 1881, and I left in 1889.
768. During the time you were resident there were there many floods on the Hunter River? There were two or three floods, and there were a good many freshets.
769. Do you remember the date of the highest one during your residence there? I could not tell you from memory.
770. At all events, during that time, floods were high enough to go over the banks of the river Hunter? Yes.
771. And you had a full opportunity of knowing what the effect of the flood-waters was in Newcastle Harbour? Yes.
772. And you will be able to give information respecting the silting up of the harbour? Yes.
773. You clearly understand the nature of the proposed works? Yes.
774. Look at the northern breakwater on the map, and take a line from the centre of the northern breakwater up to the northern coast. During the period that you were resident there I presume that the flood-waters would have a free escape in that direction? When they passed Stony Point there would be a free run to the north of those two points.
775. Did the additions to that northern breakwater cause a sand-bank to form at the eastern end? Yes; it brought the foreshore out with it on the northern side of the northern breakwater.
776. But did it cause it to shoal in front of the breakwater? No; on the contrary, it cut off a good portion of the sand-bank on the inside of the northern breakwater.
777. Did you add to the southern breakwater? You can hardly call it adding. When I went up there I put a big end to it to enable it to withstand the sea.
778. You had not an opportunity of witnessing the effect of flood-waters from the commencement of the southern breakwater? No.
779. Would not the erection of that northern breakwater to the extreme point have the effect of contracting the channel? No.
780. For what reason? You must measure the discharging capacity of a channel at its narrowest point, and I think that the narrowest point at present is Stony Point. The discharge between the extension of the northern breakwater and the southern breakwater is greater than that.
781. During your residence there did you particularly observe the flood-levels in Newcastle Harbour during flood-times? No; but that has been kept by the Harbour Master for many years. You can get the height of the river at every stage of the tide.
782. Do you remember whether the tide had any influence upon the flood-water at that time;—when there was a spring-tide and a flood was coming down the river, did it make any perceptible difference in the Newcastle Harbour? As compared with what?
783. As compared with the ordinary high-tide levels? Of course the spring-tide is the highest tide.
784. Would the floods raise the waters in the harbour in proportion to the rise of the tide? I hardly understand the question.
785. If there happened to be a spring-tide when there was a flood would the height in the Newcastle Harbour be perceptibly increased? Of course, it would be higher than the ordinary tide, because it is a spring-tide.
786. The spring-tide without the flood-water would rise, say, 6 feet 2 inches; but if there was a flood under the same conditions would it make any difference? You will be able to get it to an inch from the Harbour Master. My impression is, that with a spring-tide and a strong south-east sea running, the water rises to a certain distance inside the heads slightly above its normal level. I think that if that level were followed out it would be found to die away when you got any distance up the harbour.
787. Would that not lead one to suppose that an easterly gale at that time would have an influence upon the entrance to the channel, by creating a wall or bank of water which would materially impede the progress of the flood-waters? Not to any great extent.
788. How do the floods and the tidal-waters flow—do they amalgamate, or does one go under the other? They go out a long way before they amalgamate. From Signal Hill I have seen the flood-water 2 or 3 miles out, the edges of it being clearly defined, almost as if it were in banks.

R. R. P. 789. In its passage through that narrower channel would the flood-water of necessity amalgamate with the salt water? I daresay that if you put a dipper in you would find the water salt to the taste, but you can see a clearly defined river going 2 or 3 miles out to sea before it appears to merge into the other water.
 29 Mar., 1895.

790. Before the eastern end of the northern breakwater was put on was there not that additional scope for the discharge of the flood-waters? No.

791. Before the addition was made to the northern breakwater, after the water had passed Stony Point, was not all that space available for it to spread? Yes, but that did not affect the discharge.

792. And notwithstanding that that free opening existed, the floods in the Hunter continued? Yes, they continued.

793. Would not the effect of narrowing the discharge at that point be to build up the water in the Newcastle Harbour? It is not being narrowed.

794. But it must be narrowed at that point. If you continue the breakwaters on both sides, you continue the channel for a longer distance in a contracted space? The length of the channel does not make any difference. You have to take the discharge of the channel at right angles with the flow. If the calculation shows that at the extension the area was less than the area at Stony Point, then it would have the effect of contracting the channel.

795. Supposing that during flood-time there was a strong easterly gale beating up against that contracted channel, as I call it, would that impede the discharge of the flood-waters? No; I do not think so. You would get a greater velocity to make up for it.

796. When the inflowing tide and the easterly gale are going in the same direction, would not that current be considerably stronger than the flood-current passing out? No, not necessarily; it depends upon the height of the flood; if it is a high flood there is no inward current at all. The flood is running out all the time; the vessels do not swing.

797. Would that prove that the flood-water was the stronger current of the two? Undoubtedly it is in flood-time.

798. In other words, it is superior to the tidal influence? Much stronger.

799. With reference to the deposits inside the harbour, do you remember whether they took place freely during your time? Yes; on the Stockton side very freely.

800. To what did you attribute that? To two reasons—the debris and mud and sand coming down in floods; also, the encroachment of the sandy point on the north-east of the harbour. That sand-spit is always going down into the harbour.

801. I am speaking of flood-silt? That, of course, comes down the river.

802. And is deposited where? Generally in front of Stockton. It comes down the river, strikes along Bullock Island wharf, a portion makes its way to the sea, the remainder settling down in the slack water at the Stockton side of the harbour.

803. Is there any other reason that you can assign for it accumulating at that particular place? No.

804. Would that depth take place during the height of the flood, or after it had subsided? It is going on as soon as the flood-waters come down the river carrying all this silt and mud.

805. Does it not appear strange that the whole of that silt is not carried out to sea? Some does go out; but the greatest quantity is deposited opposite Stockton.

806. Therefore, there could not have been a sufficient current to carry it away? That does not follow. The stronger the current in the river following along the dyke, the stronger would be the eddy, or perhaps, more correctly speaking, the slacker would be the current on the Stockton side, and there would be a tendency for a greater quantity of material to drop there.

807. [Chairman.] How do you account for the eddy on the Stockton side? By the floods striking on the south side of the harbour, at Bullock Island and Newcastle, which tends to make slack water along the Stockton side. The Stockton side was a place where we always had to put a dredge after heavy floods.

808. Mr. Lee.] Has that deposit on the Stockton side been more noticeable since the Bullock Island dyke was made? I cannot say.

809. Then, as a matter of fact, in that part of the harbour the current is pretty substantially trained? Yes.

810. And there must always be good scour? Yes.

811. But it is all on one side? Yes: on the Bullock Island side of the harbour.

812. Then the interior of the harbour has, to a certain extent, been trained to bring the current as strongly as possible towards the entrance? Yes.

813. And that notwithstanding that it will not keep the harbour free of silt? No.

814. That being the case, I presume you are of opinion that it will be necessary to maintain the dredges inside the harbour in future? Yes.

815. What benefit will the port derive by the construction of that northern breakwater? They will be able to get a larger class of vessels in. The vessels are larger now than they were some years ago.

816. And that only? Mainly that.

817. How much larger class of vessels will it be able to accommodate? The depth increases enormously in value. Stevenson, whose work is a Harbour Engineer's text-book, says: "The capacity for the tonnage of different vessels varies as the cube of their depths." If, for instance, you have a channel 20 feet deep the cube of that is 8,000; if you have 23 feet the cube of that is 12,167—that is 50 per cent. more.

818. The proposed works are supposed to give an additional depth of 3 feet? Yes.

819. Then, I suppose, you touch the rock? Yes.

820. Then, no matter what may be done in the direction of creating a scour, you cannot get more than 3 feet of water? Not unless you take away the rock.

821. When you were in charge were any complaints made by shipmasters about the depth of the water? Yes, frequently.

822. And the vessels were much smaller then in comparison with what they are now? Yes; the tendency now is to build vessels of large carrying capacity.

823. When the ships were smaller, I presume that the water was shallower? Yes; but I do not think there has been much increase in the depth since I left.

824. I suppose you had to give some attention to the question of flood-waters whilst you were at Newcastle? Yes.

825. What conclusions did you come to as to the effect of the flood-water upon the tide? I never could trace that it had the slightest effect either one way or the other. R. R. P.
Hickson, Esq.
826. Did you ever report upon any scheme to mitigate the effect of floods in the Hunter River? No. 29 Mar., 1895.
827. There is no other outlet for the flood-waters but Newcastle Harbour? No.
828. And unless their course is altogether diverted they must continue to go down that channel to sea? Yes.
829. Is it not a fact that the tendency of late years is for the floods to become higher in the Hunter River District? I do not think so. The flood of 1893 was a very high one, but I could not say from memory whether it was the highest.
830. Do you think the extension of the breakwater has had no effect in retarding the progress of the flood-waters? I cannot see that it would have the slightest effect.
831. On account of that southern breakwater going into deep water it would be a prominent object against the south-easterly gales, and would not the waves dashing against that cause a large eddy in the immediate vicinity? Of course any obstacle you put in the sea raises an eddy.
832. Would not that have the effect of causing a barrier to resist the speedy outflow of the water? I do not think so.
833. Then you are of opinion that the construction of this work will in no way affect the floods in the Hunter River? No; theoretically it ought to improve them, because it gives a better outlet; but I really do not think that it will make the slightest difference.
834. Beyond giving an additional 3 feet of water, and causing a somewhat better entrance to the harbour, no results are to be expected from this work? That is so.
835. *Mr. Roberts.*] When you were resident at Newcastle, what official position did you hold? I was assistant engineer for the Northern District; that is, from Newcastle to the Queensland border.
836. Did the question of the improvement of Newcastle Harbour come under your notice? Yes.
837. In what way? From complaints made chiefly by pilots as to the difficulty of getting ships out.
838. Did they speak of the dangerous nature of the entrance? Not so much of the danger as of the shallow water.
839. Have you made yourself thoroughly conversant with the scheme before the Committee? I have a fair knowledge of it.
840. Have you given the question that consideration that its importance deserves, having in view the large expenditure that is proposed? When Mr. Darley had this scheme under consideration some months ago, I was in his room and we went into the matter pretty fully. Since the scheme has been brought before the Committee I have examined the plans, and I am well acquainted with the circumstances connected with it.
841. Do you thoroughly approve of the proposals of Mr. Darley? I do.
842. You know of nothing that you could suggest to improve those proposals? I cannot say that I do. I think it is a very good scheme.
843. Referring to the southern breakwater, what sized stones were used at the end of it? Up to 16 or 18 tons. I do not think that we put in any that were under 5 tons in weight.
844. What size stones do you propose to use on the northern breakwater? Those will be small.
845. Were some of the stones used for the southern breakwater washed away? No; they were flattened down.
846. Having that fact in view, do you think it would be wiser to use small stones? It is a mistake to speak of them as having been washed away. In tipping stones they will not stand for any length of time at the "tipped angle," about one to one; the sea soon flattens them out. The sea has flattened those out and formed a good base. What we have to do now is to go on tipping until we get a breakwater with a slope flat enough to stand the sea.
847. Do you contemplate strengthening the breakwater? Yes. The piece at the end of the southern breakwater is all new work.
848. Do you think it would be a wise plan to extend that southern breakwater further eastward? No, I think it has gone quite far enough.
849. You do not think the effect would be a good one? I do not think it is necessary, and it would be very costly. We should be getting into very deep water.
850. The idea which I have given expression to, is, that it would more fully protect the harbour from south-east gales? I do not think so. The harbour itself is protected. I think that when that is finished it will have gone quite far enough to give smooth water at the entrance.
851. The first section of the breakwater is about 3,000 feet? Yes.
852. When that is erected the second section will be proceeded with? Yes; if found necessary.
853. Will the general effect of the scheme be known by the time the first section is completed? Certainly.
854. Do you think of waiting to see the effect of that before going on with the second section? When we get the first section well on towards completion we shall know what the effect will be; and I have no doubt in my own mind as to what that will be.
855. And when you are satisfied of the success of the first section, it is intended to at once go on with the second section? If it is found necessary; but we may get what we want by the construction of the first section; and, if so, we may leave the other until the vessels get bigger again.
856. Could you tell me whether a number of complaints have recently reached the Government in reference to Newcastle Harbour? No.
857. You are quite satisfied that the erection of that northern breakwater will prove satisfactory as far as regards the scouring of the bar? I cannot see how it can fail.
858. *Mr. Levien.*] Do you think the erection of both those breakwaters, and the repairs to the southern breakwater, will have any effect upon the flood-waters; that it will keep the water at a greater height at flood-tide in the Hunter? I have said already that I cannot see that it will have any effect whatever.
859. Supposing the northern breakwater were away, would the water have a widerscope to get out? No. In measuring the value of the discharge from the river you must take a sectional area at right angles to the stream at the narrowest place. I understand that the sectional area between the proposed northern breakwater and the present one is much in excess of that between Stony Point and the northern breakwater.
860. What depth can the channel be made without blasting? I think the rock is 26 feet or 27 feet below the surface.
861. Then you can get no more than 3 feet without blasting? No. 862.

- B. R. P. 862. While you were in Newcastle, I suppose there were as large ships going there then as there are now? No; the ships are increasing in size.
- 29 Mar., 1895. 863. Have you had any complaints as to the depth of the water in the channel? Complaints are frequent.
864. *Mr. Hoskins.*] Supposing a south-easterly gale had been blowing at the entrance of the river for several days, and there was also a flood in the Hunter, would not the high seas beating into the entrance retard the escape of water from the river? I think not to any appreciable extent. I believe that the heavy sea does raise the water to some extent as far as (say) the pilot station; but I think nautical men will tell you that it has no appreciable effect upon the water farther up the harbour. The flood coming down is so powerful that it sweeps the sea before it.
865. Do you know at what rate the water in the river flows down during flood time? I suppose the current in the harbour must run up to 6 or 7 knots. I have seen for days and days the vessels not swinging to the flood-tide, but always with their sterns towards the sea.
866. I suppose you are aware that the people up the Hunter River complain that some of the works which have been carried on at the Newcastle harbour have caused valuable land on the Upper Hunter to be greatly flooded? I never heard that.
867. Can you say whether, since the harbour works have been carried out at Newcastle, the outflow of the water from the Hunter has been contracted? The entrance has not been contracted—it has always been increased. The sectional area of the discharge has always been on the increase.
868. But Mr. Darley says that one of his reasons for wishing to have this extension of the breakwater is because it would tend to contract the width of the channel, and therefore create a greater scour? Yes; but that is beyond where it has any effect on the flood waters. He is contracting it opposite Nobby's, and for a very good reason. The ebb-tide coming out does its work admirably where it is confined; but when it gets opposite the northern breakwater it loses its effect, because it is spread out too much like a fan. What Mr. Darley proposes to do is to continue the scouring action which is doing good work opposite Stony Point, so as to scour out the bar.
869. But where you pointed out being the narrowest part of the harbour, where there is the greatest scour, would not that show that if you contract the width of the entrance further out to sea, there will still be a greater scour? Certainly there would be at that point.
870. But there would not be the same escape for the flood-waters? Yes; because the velocity of the water is increased.
871. Can you say of your own knowledge whether the works that have been erected at the end of the harbour have tended to cause a scour on the bar, and therefore to deepen the channel? Yes; the tendency has been to deepen the channel.
872. Are not gales from the south-east of the entrance of the harbour very much more prevalent than any other winds? I think the south-east is about the worst gale for the harbour.
873. If you extend that northern breakwater is there not this danger to be apprehended, that if the sea during a south-easterly gale is driven on to the extended northern breakwater it will be likely to take with it a large quantity of silt and shoal up the entrance? There is never any silt brought in with a south-east gale. If there was silt coming in with the south-east gales it would spread itself out inside the southern breakwater; but, as a matter of fact, that is clean rock. There is not a bit of sand between the end of the breakwater and Nobby's.
874. Did you not say in reply to Mr. Lee that the heavy sea at the entrance to the harbour has driven sand and silt along the face of the existing northern breakwater? No. What I said was that the pushing out of the northern breakwater has deposited sand at the north of the breakwater.
875. Has there not been some shoaling in front of that northern breakwater? I know that it diminished in my time after the northern breakwater was extended. The point opposite the southern end of the northern breakwater ran out so far into the channel that it was most difficult to navigate vessels, they had such a short distance to turn in. The effect of extending the northern breakwater was to cut that away.
876. Do you not think there is this danger;—if you extended the northern breakwater further out to sea that it would cause such a swell of water through the entrance as to disturb the ships at their moorings? Certainly not. Any swell that will be created at the bar—and there will be always more or less swell—will be lost to a great extent on the wave-traps, and any little disadvantage will be a great deal more than made up for by getting the 3 feet of extra depth.
877. Would you recommend the construction of a lengthened breakwater, as suggested, in preference to dredging up the sand on the bar? I do not think it will be necessary to dredge the sand on the bar.
878. Which would be the cheapest process? It would be practically impossible to dredge the bar. There is always more or less of a swell there, and if you did accomplish it there is nothing to keep the water deep, unless you put up the northern breakwater.
879. But this proposed northern breakwater is to be built on the oyster bank? Yes.
880. That forms a natural breakwater? To a very limited extent. There are 10 or 12 feet of water over it.
881. Do you think the oyster bank causes a great swell at the entrance? In the fairway?
882. Yes? No, I do not think so.
883. *Mr. Davies.*] During the time you were resident engineer in the Newcastle district, did you carry out a large portion of the northern breakwater? I carried out an extension of it.
884. What length? About 370 feet.
885. Was it the scheme of Mr. Moriarty the late Engineer-in-Chief? Yes.
886. Had you anything to do with the carrying out of the southern breakwater? Only the strengthening of it at the end.
887. And that has become necessary again? It was not finished then. We knew that in a few years more stone would have to be put there.
888. Practically, the scheme before the Committee is a scheme which Mr. Moriarity proposed years ago? To some extent it is.
889. Had the extension of the northern breakwater any influence upon the flood-waters coming from the Hunter as far as Singleton? I do not think it made any difference.
890. You are of opinion that it had no influence in backing up the flood-water? No influence.
891. What height is it proposed to have this breakwater on the northern side above sea-level? Sixteen feet above high water.
- 892.

892. What kind of stone is used in carrying out the extension of the northern breakwater? Rough blocks R. R. P.
of stone from the Waratah quarry. Hickson, Esq.
893. Is it faced, or is it simply cast in rough? The northern breakwater is in rough stone.
894. After carrying out the extension of the northern breakwater to some 370 feet, did you find any necessity for additional dredges in the harbour? No; I do not think it made any difference in the harbour. 29 Mar., 1895.
895. What number of dredges were at work when you had charge? Three in the harbour and one in the river.
896. Are you aware that there are now five dredges constantly at work there? There is one, I know, working three shifts—that is practically three dredges—and another working two shifts; that makes five.
897. That is a larger number than ever worked there before? I think so.
898. How do you account for the necessity for that additional dredging;—do you attribute it to the works which have been carried out? The necessity is caused in two ways—first, there is always an immense amount of deposit coming down the Hunter River, and in addition to that, a larger class of vessels visit the port, and they require more room.
899. If the northern breakwater is carried out as proposed by the Department are you of opinion that it will create a better and a more effective scour across the bar? Undoubtedly.
900. It will give greater velocity to the scour? Yes, and deepen the channel to the rocks.
901. On the northern side of the breakwater was there a silting up? There was a sand-bank formed out from the Stockton side opposite the pilot station, which very much narrowed the channel where it happens to be the turning-point for vessels coming down the north channel. The effect of carrying out the northern breakwater was to scour that out.
902. Then a further extension of the northern breakwater will, in your opinion, create a greater scour, and keep that channel quite clear? It cannot do anything else.
903. Are you of opinion that if the breakwater is carried out as proposed that it will be the means of securing greater safety to vessels entering and leaving the port? As I said before, the whole necessity for the carrying out of this extension is that the scour opposite the proposed first section does not do its work sufficiently.
904. Then if both the first and second sections are carried out what is your opinion about the improvement of the approach to the harbour? You will get 3 feet more water than there is now.
905. And a safer entrance? Quite as safe. In fact safer, because it will prevent the risk that there is now of vessels drifting on to the oyster bank.
906. Do you think that the carrying out of the northern breakwater will have an influence upon the silt in the harbour? I do not expect it will make much difference in the harbour except that more water will get in and there will be a greater scour.
907. There will be no saving as regards dredging? I do not look forward to that.
908. What you propose is to secure a greater depth of water, and greater safety for vessels approaching the port of Newcastle? Yes.
909. Had you anything to do with the reclamation works near Bullock Island? No, they were not commenced when I was there.
910. What is your opinion with reference to the carrying out of that work? I think that it is a most advisable thing to do. As I have pointed out, the northern end of the harbour has a tendency to slip down into the harbour. A great deal of dredging has had to be carried out between the harbour and the Hunter River proper to keep the channel clear.
911. Then by erecting a reclamation wall you will have a better scour? Yes.
912. And contract the water? Yes, to give greater velocity to the current.
913. Have you seen those works? No.
914. You believe the effect will be very good? Yes.
915. With reference to these wave traps which seem to be a novelty here, have you any knowledge of harbour works where similar provision has been made? Yes. I will mention a case to show that it is really not a new idea. The subject is referred to in a paper which was read before the Institute of Civil Engineers in 1849, by a Mr. William Brown, in connection with the harbour works at Sunderland. He incidentally mentions wave traps, and in the discussion which took place, Mr. Russell Scott, a very eminent engineer, begged Mr. Murray to describe the principle by which he had been guided in the formation of a wave trap, and also to state whether, after the waves came into it their progress was easily arrested, as it was generally found easier to get the waves into a trap than to keep them there innocuous. Then Mr. Murray explained:—

That the sea in Sunderland Harbour formerly ran with great violence along the north pier and broke upon the potato garth, so that vessels under press of sail could not recover themselves, but were frequently driven on it and wrecked. To obviate this a solid wall was built partially across it, parallel with the low-water line of the river, but it had the effect of causing the waves to roll up the harbour with such violence that no ship could safely remain in the lower part of it. When engineer of the Harbour Commissioners, he recommended a portion of the solid part of this pier to be opened by substituting timber framings by which means the swell was very much reduced, in consequence of the waves being permitted to be thrown on the potato garth. He had formerly seen a huge wave rolling along a portion of the north pier and making a clean sweep over that portion of it.

There are two breakwaters at the end of the Sunderland Harbour, and they found that the sea ran up in the channel and made a great deal of disturbance in the harbour. The engineer who was there before Mr. Murray, erected a stone wall at right angles to the current thinking thereby that he would prevent the action of the sea in running into the harbour, but it had exactly the opposite effect. Mr. Murray thought it a wrong principle. He said, "I will cut that away" and he did so and found that the effect was marvellous in reducing waves. He says:

It being an object of importance to render the harbour as quiet as possible it was his intention to form a small receiving bay or "clairevoie," as in some of the French harbours, into which the waves would run and expend their force, and he had received instructions to proceed with such work.* * * * * The result of the formation of this receptacle was that in stormy weather the heavy waves from the north and north-east which struck the south pier, hugged its face, and rolled along it until they tumbled into the trap, the higher portion of which took the form of a sloping bank of sand on which those waves were dispersed.

Mr. Rennie, another harbour engineer, said :

He believed the works designed by Mr. Murray were very judicious and had materially decreased the inconvenience formerly experienced, both in entering and leaving Sunderland Harbour. It had always been stated that the potato garth and the wave-trap were of great use in permitting the expansion of the waves, and in tranquillising them after they had entered the harbour.

Mr.

R. R. P. Mr. Scott Russell, said :

Hickson, Esq. There was no doubt the sooner the waves would be enabled to expand after entering the trap the sooner its force would be expended. * * * After getting a wave into a trap, it was necessary to destroy it there, and that seemed to be effectually done by Mr. Murray. He had seen on the outside of many harbours much mischief arise from reflected waves, boats had been swamped and lives lost close to vertical piers from that cause. The great point to be attended to was, the method of absorbing the force of the waves, and there was nothing so good for that purpose as providing on one side of the harbour a long sloping beach, towards which, if possible, the wave should be directed and there allowed to expend itself.

916. You thoroughly endorse what the Engineer-in-Chief proposes to do? Yes; entirely.

917. Do you regard an area of something like 10 acres, on the northern side, for a wave-trap, and about 8 acres on the southern side, as sufficient for the purpose? I think it will be.

918. And you quite endorse this provision? I do. I think it is a very important feature of the scheme.

919. Has the principle being applied to any other harbour works here? Sir John Coode has it in nearly all the harbour works that he has recommended. He made it one of the prominent features.

920. But there is no harbour work in our Colony constructed with a provision of that kind? Such works are being constructed.

921. *Mr. Lee.*] Is the sectional area between Stony Point and the northern breakwater the narrowest in the Newcastle channel? I imagine from looking at the plan that it is.

922. The area is 22,400 feet? That, I presume, is made the narrowest point in consequence of the construction of the northern breakwater? It is made the narrowest point by natural means at the southern side, and artificially by the breakwater on the other side.

923. But prior to the erection of the northern breakwater it was not the narrowest point? The narrowest point then was further up near the pilot station.

924. But it has for some years been the narrowest point of exit? Yes.

925. Would it be a safe investigation as to any effect that it may have upon the flood-waters in the Hunter, to date it from the time when it was made the narrowest point? I do not think so. There was a time when it was not the narrowest point—there was a point narrower still—the point between the old lightship and Stockton.

926. *Chairman.*] You have already told the Committee that you think the wave-trap provided for in the scheme before us is suitable for the purpose? I think so.

927. In your opinion will the water where shipping is carried on at present be as smooth after the completion of these works as it is at present? Quite as smooth. I believe that at the Newcastle wharf near the pilot station it will be smoother.

928. In consequence of the southern guide-wall? The southern wave-trap.

929. Mr. Lee has directed your attention to the piling up of the water at the entrance to the harbour in time of storms, and you expressed rather a qualified opinion in regard to it. Your reply is, that although there may be some little piling up outside it very soon disappears? Yes; if there is a little piling up outside at the entrance it will soon disappear in the harbour.

930. You say, if there is? Yes.

931. You know that waves breaking on a vertical cliff have been known to rise 40 and 60 feet? Yes; I knew a wave to take a 70-ton block of concrete and land it on the top of a cliff 70 feet high at Peter Head.

932. There is no doubt with regard to the force in the waves? You have no waves like that here.

933. You have no doubt with regard to the enormous force that would be expended if a wave struck on a vertical cliff near Newcastle Heads? The force would be very great.

934. When it reaches the outgoing current of the river that force is enormously moderated? The circumstances are totally different.

935. The force is still there, but it seems to be reduced when it meets with the outgoing current? The force is still there; but in this case it would be reduced because it gets into shallower water.

936. The force is in the wave, but it meets the liquid force coming out? They are so different that it is impossible to make a comparison between them.

937. The action is not momentary as it is when it strikes a vertical cliff? No.

938. It is continuous for some time? Yes.

939. And if it is continuous for some time, it seems difficult to understand how it soon disappears as you informed Mr. Lee? For two reasons; first, there is the wave of translation, and there is the wave of oscillation. A wave of oscillation does not travel; the wave of translation becomes one when it gets into shallow water.

940. And it is very much more powerful than a wave of oscillation? Yes; the immense body of water coming down very soon runs that oscillation movement down, and runs the sea out before it. Therefore, although there may be a slight rise—I am not quite sure that there is—owing to the south-easterly gale, I am satisfied that it will disappear very shortly in the harbour.

941. Your evidence with regard to that point is this:—With regard to the piling up of waves by the action of the wind and storms at the mouth of the harbour, such as Newcastle, it is not a vital thing for us to consider in connection with the rising of the water in the harbour? I do not think it is.

942. We made some inquiries previously with regard to the amount of water which a vessel requires under her keel in going into Newcastle, what is the rule with regard to that? You cannot lay down a rule for that—you are depending upon so many elements—first of all upon the weather, which is very important. You have also a very unknown quantity in the pilot. Some pilots will not go unless they have a very large margin for safety, others will go with a very small one. If it is perfectly still water all you want is steerage way, and a couple of feet would do for that.

943. Much depends on the build of the vessel? If it is perfectly still, you can go with safety with a couple of feet under the keel.

944. You have expressed an almost unqualified opinion with regard to the proposals now before us? Yes.

945. In your opinion, as an engineer, is it a wise thing to have the entrance to a harbour in a north-easterly direction? That is rather a difficult question to answer—so much depends upon circumstances. You could not have anything else at Newcastle.

946. Where do the storms come from? From the south-east.

947. An engineer would, as a rule, have the entrance to his port square off the sea? Nature generally shows him where he has to put it.

948. If he could put an entrance square on to the sea it leads the vessel in better? Yes.

949. In the port of Newcastle you have to be controlled by Nobby's? Yes; you could not shift the entrance half a point of the compass one way or the other.

TUESDAY, 9 APRIL, 1895.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.	JAMES HAYES, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	ROBERT HENRY LEVIEN, Esq.
The Hon. JAMES HOSKINS.	JOHN MOORE CHANTER, Esq.
The Hon. JOHN DAVIES, C.M.G.	CHARLES ALFRED LEE, Esq.
The Hon. CHARLES JAMES ROBERTS, C.M.G.	JAMES GORMLY, Esq.
	EDMUND WILLIAM MOLESWORTH, Esq.

The Committee further considered the proposed Harbour Improvements at Newcastle.

Captain John Jackson, Manager of the Government Wharfs, made an affirmation, and was examined:—

950. Chairman.] What are you? Manager of public wharfs. Capt. J. Jackson.
951. Mr. Hoskins.] Does that mean that you are manager of all the public wharfs in the Colony? I have nothing to do with Newcastle, because there is nothing to do down there. I am supervisor of all the wharfs that are proclaimed public wharfs under the Act. 9 April, 1895.
952. Are not the wharfs at Newcastle proclaimed? No; they were, but the proclamation was cancelled by Executive minute.
953. Do you know why? I cannot say.
954. You are manager of the public wharfs in Sydney? Yes.
955. Are you familiar with the wharfs and shipping appliances, and with the charges made by the Government for services rendered in the shipping of coal at Newcastle? I am familiar with all the charges except those for the shipping of coal—that is, the craneage. I do not know what the Railway Commissioners' charges for the shipment of coal are.
956. Is it not 4d. a ton? I do not think it is anything. The ship does not pay anything for it.
957. In the evidence which you gave in 1888 you said that the shipment of coal amounted to 1,750,000 tons, and that at 4d. a ton at the cranes the revenue would amount to £29,000? I do not know what is charged now. It is paid by the Railway Commissioners to the contractors.
958. Are the charges made at the wharfs in Newcastle the same as those made in Sydney? No, there is no wharfage rate at Newcastle.
959. What are the rates in Sydney? The schedule rate is 1s. 8d. per ton.
960. The Government charge 1s. 8d. per ton for all the ships at the Government wharfs in Sydney? Yes, that is the inwards charge; half of that is charged outwards.
961. Do no such charges exist in Newcastle? Not a penny is charged there.
962. The only charge made in Newcastle by the Government to persons shipping coal is for haulage, 6d. per ton, and 4d. for craneage? It is 10d. altogether. I do not know how they divide it.
963. You cannot say whether the charge made for the use of the cranes is sufficient to cover the interest on the money expended from loans for the construction of the wharfs and the erection of the cranes at Newcastle? I do not think any of it has gone to the credit of the wharfs. I think that the whole amount has gone to the credit of the Railways.
964. Including the charges for shipment by the cranes? I think so.
965. The statement was made here that the profits made on the shipment of coal at Newcastle are sufficient to pay the interest on the money which has been expended in the improvement of that port must be a mistake? Perhaps I am mistaken. I have never heard that the wharfs at Newcastle have been credited with anything except tonnage dues for which the ships pay a $\frac{1}{2}$ d. per ton per day. That amounts to about £7,000 a year.
966. Do the owners pay tonnage dues in the harbour of Sydney too? Yes.
967. In addition to the wharfage rate? The ships do not pay the wharfage rate. It is the consignees.
968. In Newcastle they are exempt from the wharfage rate and tonnage dues? The ships pay the tonnage dues at Newcastle, but no wharfage rate.
969. Have you never been asked whether it would not be judicious to have the wharfage rates charged at Newcastle? I have been consulted about it, and I have recommended that wharfage rates be charged at Newcastle. Last year I assisted to get a Bill ready for Parliament to make provision for it. There is a short Bill ready now for imposing a wharfage rate at Newcastle on everything except coal.
970. Would you charge wharfage rates for vessels carrying the principal product of the district? No. It is arranged that no wharfage rate should be charged on coal and coal products, because it is alleged by the Railway Commissioners that there is 4d. debited from the haulage for wharfage.
971. Does it not seem rather unusual that you, having the supervision over the wharfs of the Colony generally, should not have supervision over the wharfs at Newcastle? I could not have any supervision over them because they are not proclaimed under the Act. A special Act of Parliament will have to be passed before we can charge wharfage rates at Newcastle.
972. Can you say whether the amount received by the Government, whether through the Railway Commissioners or otherwise, leaves enough, after defraying all expenses, to pay the interest on the money which has been expended on the wharfs, steam cranes, and other appliances at Newcastle? I cannot say.
973. Do you frequently go to Newcastle? No.
974. Can you say whether the facilities at Newcastle for the shipment of coal are very good? I think they are second to none in the world.
975. Can you say whether vessels of the average amount of tonnage trading to Australian ports are prevented from taking full cargoes from Newcastle owing to the shallowness of the water on the bar? I believe that that has been the case. One or two cases have come under my observation.
976. Would cases of that kind be reported to you? No.
977. There have been only one or two cases? Only one or two cases came under my observation.
978. I suppose you know that in some of the principal ports in England the vessels cannot take full cargo? In many of the ports of England sometimes ships cannot get over the bar unless they wait until the tide rises.

- Capt. J. Jackson.** 979. What is the average size of the vessels now coming to the Colony? I should say the average size of the sailing ships is about 1,800 tons.
- 9 April, 1895. 980. What would be the draught of water of such vessels? About 20 feet.
981. If the depth of water on the bar is 22 feet 6 inches does not that show that the average sized vessels coming to Australia can get in and out of the port of Newcastle? That is the average draught of the sailing ships, but there are steamers running to Australia which draw 26 feet of water.
982. But vessels trading to Europe would not go to Newcastle? Yes; some of them go there during the wool season.
983. I suppose you know how much public money has been spent in improving the shipping appliances and the harbour at Newcastle? No. The Newcastle wharfs have not been under my supervision.
984. Under whose supervision are they? I do not know.
985. Is there anybody there who has to take special charge? It is partly under the Custom House, and partly under the Railway Commissioners, and partly under the Harbour Master. I do not think that anyone specially has got charge of the wharfs.
986. Is it not the custom in Sydney and in other parts of the world to have some responsible manager of the wharfs? It is. I must correct myself in one respect. I have to do with the Stockton wharf.
987. I believe there has been £500,000 spent out of revenue in improving Newcastle Harbour, and £600,000 out of loans, and it is now proposed to spend £140,000 more. And this expenditure is intended to deepen the water at the bar. Have you any knowledge of the character of the bar at Newcastle? No.
988. Did you know much of the state of the Newcastle Harbour before this large amount of money had been spent there? I have known Newcastle Harbour for thirty years.
989. What are the prevailing winds there blowing into the harbour? North-easterly.
990. Do the strongest winds come from the north-east? No; from the south-east.
991. Therefore, I suppose, the seas will come round the southern breakwater, and go on to where the Horse-shoe is? Yes.
992. Can you say whether the heavy seas tend to collect sand near the Oyster Bank? I cannot say.
993. Do you think that the erection of the southern breakwater or the northern breakwater has tended to increase the depth of the water at the entrance? I do not know.
994. Can you say whether the works constructed at the entrance to the harbour have or have not contracted the channel? I think they have. Years ago I saw large sand-banks near the northern breakwater.
995. Does not that show that the prevailing winds blow sand which tends to contract the channel? It would certainly seem like it.
996. Do you consider that the extension of the northern breakwater, which you say collects sand in front of it, would be best adapted for deepening the bar, or dredging the bar? I think it would be better to dredge the bar.
997. Can you say of your own knowledge whether the complaints of the Chamber of Commerce at Newcastle as to insufficient dredging in the harbour to enable vessels to be moved about are justified? I think that in many cases they are. The freshes bring a tremendous quantity of silt into the harbour.
998. You believe that the works have somewhat contracted the width of the entrance? Yes.
999. Supposing there was a large fresh bringing down a great quantity of silt, and a south-east gale blowing, would not the high sea at the entrance to the harbour tend to prevent the exit of the flood-water from the harbour? I should say that it would.
1000. Then if that flood-water has a quantity of silt in solution, and the water does not meet with a speedy exit, will it not cause a deposit of silt in the harbour, and perhaps on the bar? Yes.
1001. *Mr. Humphery.*] You referred to Stockton. Are the wharfs there under your control? Partly. It is not a public wharf under the Act. When the Stockton wharf was built I brought the matter under the notice of the Treasurer, some eight or nine years ago, as I thought that some revenue should be derived from it. It was only used by the Stockton Coal Company, and it was agreed by the company that they should pay one-penny-half-penny on the coal, and they have paid that for every ton of coal they have shipped over the wharf.
- 1001½. Do you know what the Stockton wharf cost? It cost £14,000.
1002. When was it built? About eight years ago.
1003. How long has the Stockton Company been paying 1½d. a ton on the coal? Ever since the cranes were put up.
1004. What amount has been received? Last year it was £550. It has been as much as £1,000 a year.
1005. That is the only wharf at Newcastle concerning which you have any knowledge? Yes. Of course I know what revenue the Government could have got from inwards and outwards wharfage if they had collected it on everything except coal.
1006. How have you obtained that information? I got the quantity of cargo imported and exported from the Collector of Customs about two years ago.
1007. Will you be good enough to say what the amount is? The Government could have collected there between £15,000 and £16,000 two years ago without touching the coal. My report on the subject is in the Treasury now.
1008. When did you furnish that report? About three years ago. Of course, that was when business was very brisk. There were 80,000 bales of wool alone shipped during the wool season for which nothing is charged, and here there is a charge of 4d. per bale.
1009. Briefly, your evidence is that if the wharfage were charged upon all imports and exports exclusive of coal the revenue derived would be about £15,000 a year? Yes, I am sure of that.
1010. *Mr. Trickett.*] You seem to favour the idea of dredging the bar at the entrance to the harbour; —have you considered whether that would be practicable? I think they have dredged there before.
1011. Do you mean to say that they have dredged at the bar? I do not think I am mistaken about it.
1012. Could you point out on the plan where the Newcastle bar is? I could not.
1013. Are you aware that it is right out in the ocean? Yes. I know that it was very shallow some time ago, and if I am not mistaken it was dredged then.
1014. When? A good many years ago. I do not see any difficulty in dredging it, because the water is very smooth there during the westerly winds in winter.
1015. *Mr. Davies.*] You stated that you believed the bar could be removed by dredging? I believe that the sand could be removed.

1016. If Mr. Darley and others had sworn that it would be impossible to dredge the bar you do not agree with them? I have only expressed a private opinion.
1017. Would you put your private opinion against that of Mr. Darley? I would not.
1018. Do you know what was the value of the imports and exports in 1891? I do not.
1019. Would you know what was the value of the imports and exports last year? No.
1020. Do you know whether last year was a better year than any previous year for eight or ten years? I should say it would be, unless the shipping had fallen off considerably.
1021. Would you be surprised to learn that the harbour light dues for 1894 were larger than any previous year for the last ten years? Yes; I should be rather surprised.
1022. The amount for last year was £7,838; for the previous year, £5,748. In 1892 it was £7,357; the amount for last year being larger than for any previous year? Perhaps that was on account of the larger size of the vessels.
1023. Would you be surprised to hear that the pilotage for last year was a larger amount than for any previous year for the last ten years? I should have thought it would have been far less.
1024. Then as to the removal dues for the port of Newcastle—would you be surprised to learn that they were larger last year than for any previous year? I do not know anything about the pilot service.
1025. Do you know the quantity of coal raised last year? I have no statistics as to the quantity of coal.
1026. *Mr. Lee.*] During the short period that wharfage rates were in force at Newcastle, did they apply to all goods shipped there? To all except coal.
1027. Is there not now an all-round charge of 10d. a ton for coal, including haulage, use of cranes, and shipment? I have heard that 10d. a ton covers the lot.
1028. It has been estimated that 6d. per ton pays all these charges and leaves a profit of 4d.? I have heard so.
1029. Would the wharfage rate apply to other wharfs besides Government wharfs? Yes; to all.
1030. If wharfage rates were charged by the holders of private wharfs, would not that be a private profit? Certainly.
1031. It would not become public revenue? No.
1032. Do you know why the wharfage rates were abolished? No.
1033. You gave evidence before a Sectional Committee in 1888, and in an appendix to your evidence you showed approximately that if the wharfage rate had been in existence in 1886 there would have been collected the sum of £7,333 9s.? Yes.
1034. You say now that the trade of the port has increased, and if the wharfage rates had been imposed the revenue would have been more? Yes.
1035. Can you offer any reasons to the Committee why it would not be equitable or wise to impose a wharfage rate at Newcastle? I do not think it is fair to the importers in Sydney to have to pay a rate, in some cases of 8s. 4d. a ton more than the importers at Newcastle pay. There are some articles imported here on which they really have to pay 8s. 4d. a ton.
1036. There are some private wharfs at Newcastle? I think there is one.
1037. Two, are there not? There is the A.A. Co.'s wharf, and, I think, Russell's.
1038. Supposing that a wharfage rate were imposed at Newcastle, would it not be evaded by vessels going to the private wharfs? Yes.
1039. Then the Government would get no revenue? All the vessels that go to Newcastle could not go to private wharfs. There would be competition, as there is here.
1040. They have abolished the Wollongong and Kiama rate? Yes.
1041. Have the rates been reimposed there? They have been at Wollongong. The Harbour Trust charges the wharfage rate now.
1042. Do the proceeds go to the general revenue or towards the expenses of the Harbour Trust? I think they go towards the expenses of the Harbour Trust.
1043. If a wharfage rate were imposed at Newcastle then and a Harbour Trust existed there, the Government would get no revenue? No.
1044. It could only be obtained by the Government imposing a rate and collecting it themselves? Yes.
1045. *Mr. Molesworth.*] How long have you held the position of manager of public wharfs? Nearly eleven years.
1046. You are charged with the administration of the Wharfage and Tonnage Act of 1880? Yes.
1047. When you first took your present position was there a wharfage rate charged at Newcastle? No.
1048. You told the Committee that the wharfs at Newcastle are exempt from control? Yes.
1049. And any other wharfs besides those of Newcastle and Wollongong? Yes, Kiama.
1050. At Wollongong the rates are not collected by you because they are provided for by special Act of Parliament? Yes.
1051. Why is not the wharfage rate at Kiama collected by you? I do not think it could be without a special Act of Parliament.
1052. I think the Wharfage and Tonnage Act distinctly states that at all ports the wharfage and tonnage rates are to be collected under that Act, unless specially provided for by other Acts, therefore you are responsible for their collection? Yes.
1053. Why do you not collect the wharfage rates at Kiama? The rates at Kiama, Morpeth, Maitland, and Moama were all cancelled.
1054. Do you know what Government was in power when that was done? I think Mr. Watson was Treasurer at the time.
1055. You carry out your instructions under the Act except where some other Act interferes? Yes.
1056. Are you of opinion that it is fair to impose a charge at Newcastle as well as at Sydney? I have urged it time after time.
1057. You think that the commercial interests at Newcastle have a decided advantage over Sydney in that respect? Yes. The commercial people of Newcastle were in favour of it when I was on a Board there. They were in favour of paying a wharfage rate on condition that certain improvements were made at the wharfs. The improvements were made but the revenue was never collected.
1058. Then the merchandise at Newcastle pays no charge? None whatever.
1059. Then the imports and exports of the northern district going through Newcastle are exempt? Yes.
1060. But everything is charged at Sydney? Yes.
1061. Including coal? Yes.

Capt.
J. Jackson,
9 April, 1895,

- Capt. J. Jackson.* 1062. Then the western and southern districts of the Colony which use Sydney and other ports have to pay wharfage rates inwards and outwards? Yes.
9 April, 1895. 1063. Do they not consider it a very great disadvantage as against their northern neighbours? Many speak about it.
1064. You said that the wharfage rate at Sydney is 1s. 8d. a ton? Yes.
1065. As a matter of fact you are compelled to make a wharfage rate according to the second schedule of the Act? Yes.
1066. But that rate does not apply to all goods? No.
1067. The rate in some instances runs up to as much as 8s. 4d. per ton? On some goods they pay 10s.
1068. Do you charge vessels in the harbour tonnage rates for berthing accommodation? Yes, everyone.
1069. Do you charge tonnage rates for berthing accommodation at Newcastle? Yes.
1070. Is it not a fact that steamers trading between Sydney and Newcastle are berthed free of charge? I do not know.
1071. They do not pay anything through you? No.
1072. But if they came to Sydney wharf they would have to be charged? Yes.
1073. Does the Stockton wharf belong to the Government? Yes.
1074. And the Stockton people have the use of it at a charge of 1½d. per ton for coal? Yes; and they pay tonnage dues as well.
1075. Did you ever visit the port of Newcastle about wharfage matters? Yes.
1076. What were your particular duties there? I was there as a member of the Board inquiring into this very matter.
1077. What conclusion did the Board come to? I think the Board recommended that a wharfage charge should be imposed.
1078. So as to place Newcastle on a footing similar to that of Sydney? Yes.

James Cole Ellis, Esq., M.P., sworn, and examined:—

- J. C. Ellis, Esq., M.P.* 1079. *Chairman.*] What are you? Merchant, and representative of Newcastle West in Parliament.
9 April, 1895. 1080. *Mr. Humphery.*] How long have you represented Newcastle in Parliament? I think it is about eleven years since I was first returned. I have not represented Newcastle continuously.
1081. How long is it since you became a resident of Newcastle? I landed in Newcastle in September, 1853.
1082. Have you been continuously in Newcastle? I have practically. I lived in Melbourne three or four years.
1083. You are familiar with the port of Newcastle? I think so.
1084. And you can express an opinion upon the proposal before the Committee? I will express my opinion for what it is worth.
1085. Have you examined the plan showing the improvements contemplated? I am in accord with what the Department propose to do inside the harbour, but I am not in accord with what they propose to do at the entrance.
1086. In what respect do you differ from the Department? I think that the southern breakwater should be run out, and that the northern breakwater ought not to be touched.
1087. To what extent would you deal with the southern breakwater? I would run it out to make the port a perfect port until it is parallel with what is known as the "Cawarra" buoy. When I say parallel, I mean in such a position that it would stop the seas that break there. In heavy south-east weather the seas break round the end of the southern breakwater and dash up on the Oyster Bank and expand themselves on the beach, doing no harm to anybody. In very heavy weather the sea breaks right across the mouth of the entrance. I have seen a good many rough places in my time, but I never saw a rougher one than the entrance to Newcastle harbour in bad weather.
1088. What knowledge have you of the present condition of the bar? Only as far as I know what ships can do and what they cannot do in going in and out. The swell is too great on the bar to allow big ships to load down to their full draught. There is always a range on the bar owing to the southern breakwater not going far enough to keep the water smooth.
1089. Have you formed an opinion as to what would be the effect of the extension of the southern breakwater? My impression is that as the bar has followed the southern breakwater out 800 feet, if the southern breakwater were again extended the bar would again follow it out. The present bar is only about 400 feet from deep water. If it went out further still it would get into deep water.
1090. What data have you for saying that the bar followed the construction of the southern breakwater? Actual experience.
1091. Then your evidence is that as the southern breakwater was constructed the bar crept outwards? The bar went out to sea with it.
1092. How long is it since the southern breakwater was finished? Ten or twelve years.
1093. Can you say that the bar began to form there twelve years ago? I am not come prepared to speak as to dates. I will stake my reputation on the assertion that the bar followed the southern breakwater out.
1094. We have been told that the bar has been getting very much worse lately? Yes; since the "Colonist" went ashore it is said that a shoal has been forming outside of her, and that goes to bear out what I told them, that if the northern breakwater was run out it would not shift the bar out but it would bung up the entrance altogether. If the "Colonist" being there has had the effect of shoaling, surely the northern breakwater would have a worse effect.
1095. Are you prepared to express any opinion as to what would be the effect of extending the northern breakwater the full length shown on the plan? It would have the same effect that the construction of the northern breakwater has had to its present extent. When that was constructed, and there was no southern breakwater, the sea came flying round Nobby's, dashed against the northern breakwater and flew up the harbour, and the ships in the harbour were dancing about to such an extent that the ordinary fenders were of no use, and at Queen's Wharf they had to use bales of hay. They were then compelled to run out the southern breakwater.
1096. You know that the object of the present improvements is to cause a scour which will have the effect of removing the bar? Yes.

1097. Do you think the removal of the bar will follow? I am very sceptical about scours as far as bars are concerned. I say that the bar will follow the southern breakwater. No doubt it will not follow it out to the same extent because it is getting into broader water. But even if it did not follow it to the full extent it would do all that we want. It would smooth the water on the bar, and ships would be able to load to the extra depth that they would want because there would be no range on the bar.

J. C. Ellis,
Esq., M.P.
9 April, 1895.

1098. Assuming that it is necessary to remove that bar after the construction of the southern breakwater as you suggest, in what way should it be dealt with? You will have a great difficulty in removing it. It would be of no use dredging it, because as fast as you got the sand away it would form again.

1099. Is it your opinion that it is not possible by any works of the character now proposed to produce a scour that will remove the bar? My own opinion is that the northern breakwater would not do it, because the sea would break against the northern breakwater, then, flying up the harbour, would meet the ebb-tide, and that must create a bubble and cause a settlement of silt where the two waters meet. I do not think the northern breakwater will have the effect that it is said it will have. If the southern breakwater is run out it must of necessity protect the harbor. It is admitted, according to the plan before us, that what I have stated is going to be the effect of the northern breakwater. It is evident that it is going to send the seas up the harbour, because there is a wave-trap provided there to meet them. The thing is,—Is there any guarantee that the wave-trap will stop those seas. I do not know that the northern breakwater is wanted.

1100. I understand this to be the effect of your evidence,—that if we extend the southern breakwater we shall have calm water where the bar is, and in that way we shall get two or three feet more available depth for the ships? You would get more available depth because you would have no range.

1101. You think that the only expenditure necessary is upon the southern breakwater? I think that the £45,000 which it is proposed to spend on the northern breakwater should be spent on the southern breakwater; it must of necessity do a great deal of good, because it will protect the port.

1102. Do you think that the traffic requires that there should be a channel 26 feet deep? I do indeed. I look upon Newcastle as the best asset that the Colony has, next to Sydney.

1103. If we are told that the only way to scour that depth of water is by carrying out the improvements on the plan before us, your opinion is that it will not have that effect? I do not think it will.

1104. We have had some evidence concerning wharfage rates. Wharfage is not paid at Newcastle, but it is paid at Stockton? Not at Stockton, that I know of.

1105. Do you know the reason for abolishing the wharfage dues at Newcastle? Yes; it was pointed out that the goods were being landed at private wharfs, and that wool was being shipped at Morpeth and sent down to Sydney, wool which would otherwise have been shipped at Newcastle. It was on these representations that Mr. Watson (the Colonial Treasurer) put a stop to the collection of wharfage dues at Newcastle.

1106. Do you recollect what the wharfage dues were at that time? They were similar to the Sydney charges.

1107. Do you know what amount of revenue was derived from them? I do not think they were in existence for a full year.

1108. Is there any difficulty in finding accommodation for shipping at Newcastle? I should not think there was.

1109. Do you know of any objection to the vessels lying in the fairway after loading? I have been told that there is a shallowness of the water. Sometimes we have heavy floods coming down the river, shoaling goes on, and there has to be a little extra dredging.

1110. You do not know of any serious trouble having arisen in consequence of the restricted accommodation? There was a flood a couple of years ago which did a good deal of shoaling up; but by degrees that has been removed. There cannot have been anything particularly serious. The trade of the port has been carried on ever since, and there has been a large increase, not only in the number of ships but in the size of the ships. Outside the fact that the bar is defective, there being not sufficient water to carry the ships out when they have loaded, it is a very fair port.

1111. You think that the only trouble at present is in connection with the bar? I think so. I think that the dredges at work in Newcastle harbour are doing good work towards giving the accommodation that is necessary.

1112. Are you an owner of ships? I have been.

1113. Can you, from your knowledge of the trade of the port, say whether the extension of the southern breakwater will do all that is necessary for the accommodation of the shipping? I do not know what they propose to do at Stockton. I have not studied particularly what the Works Department propose to do inside the harbour. I think from what little I have seen of it that they propose to do most of the work with the plant and men already in the employ of the Department. There is plenty of crane accommodation for the coal traffic, and wharfage accommodation for loading wool and frozen meat. If we can get 26 feet of water on the bar it will be as perfect a little port as there is in the world.

1114. Of course you know there is a basin in course of construction? That is pretty well constructed now. The money voted for that has been expended, I suppose. No doubt that basin will be a very great advantage in case of any increase of the trade, and I have no doubt the trade will increase.

1115. Is there anything further that you would like to say in connection with the plan now before us? I should like to give the reasons why I have formed the conclusions that I have in reference to the northern breakwater. I was at Newcastle when the northern breakwater was commenced. The point which was marked on the plans as the original shore line, although it does not exist where it was, is in existence at the northern end of the northern breakwater. I say that the bank is in existence now. A couple of years ago a vessel called the "Federal" nearly became a total wreck there. She went ashore and had to come to Sydney to be repaired. There is a beacon put there to show the danger, and that bank has formed there since the breakwater was built. Although the southern end of it does not show above the water, still it is very close under the water to-day, as shown by the Admiralty chart. That being the case, it seems to me that as they built the breakwater on the north side a bank was formed on the outside of it, and that being so I do not see what guarantee we have that the wave-trap will be maintained. I think the northern breakwater would be a very serious menace to the safety of the port. Ships coming round the breakwater would get into difficulties. The "Federal" lost her steering way, and her head was sent towards the beach. If that was to happen with the extension of the northern breakwater

J. G. Ellis,
Esq., M.P.
9 April, 1895.

breakwater it would prevent a ship from doing what she can do now, drop anchor to check herself and then drift to sea. In a heavy gale if a ship did go ashore on the northern breakwater she would knock herself to pieces and every man on board would go to perdition at once. I do not think that the underwriters, if they realised what is suggested, would consent to it, because Mr. Darley in his evidence says that the Oyster Bank is a danger to Newcastle. It always has been, and if you put a great obstruction like that on the top of it, it will become a greater danger than ever. I saw the "Eleanor Lancaster" wrecked at Newcastle, and I saw men clinging to the rigging for three days before they were rescued. Mr. Portus in his evidence says that the floods always come down after a gale. The shipwrecks as a rule take place when there is a gale. I have known the life-boat on five or six occasions to get outside and to be unable to get back owing to the heavy flood which was simultaneous with a severe gale. The water keeps up after a gale. It was so in the case of the "Eleanor Lancaster." There would be no hope for a ship if she came round Nobby's and got on to the northern breakwater. She would smash up in five minutes. The force of the water running up the harbour and meeting the heavy fresh, which brings a large quantity of silt, would cause a large deposit to take place. I say that the bar was in a worse state after the completion of the northern breakwater and before the commencement of the southern breakwater than it ever was in before. The extension of the southern breakwater undid the evil that had been done. Evidence has been given that the northern breakwater was further extended since the extension of the southern breakwater. Perhaps, technically, that is correct, but the extension of the northern breakwater after the extension of the southern breakwater was completed was infinitesimal. They did commence to lighter big stones across the harbour to run them to the end of the northern breakwater, and it came under my notice as member for the district. I interviewed Mr. Moriarty, and used then some of the arguments which I have used to-day, with the result that the work was stopped. I feel very strongly on the matter. I feel perfectly certain that the extension of the southern breakwater worked wonders for the port, and I am certain that if it is further extended it will work wonders again, and the only surprise is that when making it they did not take it further. If they had done that, the bar would have gone still further into deep water. A great deal has been said about the expenditure of money from revenue; but Newcastle has paid a great deal back in revenue. I do not mean to say that it has paid everything that it has borrowed, but it has paid a great deal. There has been a return made of the loan expenditure in the harbour of Newcastle. I will give a sample of it. Originally, there were four shoots erected at Newcastle at a cost of £27,000 or £28,000. Those shoots were worn out and have been renewed. Newcastle is not credited with the revenue that the shoots earned, but is charged with the expenditure from loans. Originally, coal was shipped at Newcastle by steam cranes. Those cranes paid for themselves a hundred times over and were worn out. They were replaced by hydraulic cranes, which are in existence now. But Newcastle stands debited with the two sets of cranes.

1116. Newcastle is not credited with the earnings of the first set? No.

1117. It is a double entry on one side? Yes. There is not credit given as far as the wharfs are concerned. The Railways get the benefit of all the revenue from the wharfs, but the capital account is charged to Newcastle instead of to the Railways. They get all the profit, and the expenditure is charged to Newcastle.

1118. Is there any difference between the Admiralty chart and that before the Committee? No; but the chart shows the banks. My object was to point out the matters that I have referred to; and the reason why I brought the Admiralty chart was to show that the fairway at Newcastle is so narrow from the bar inwards that you cannot afford to play with it. It will not do to experimentalise with it. You want to be certain of what you are doing. The Admiralty chart shows that the channel is very narrow.

1119. Do you think that the construction of the proposed northern breakwater will still further restrict the channel? That is my opinion. That opinion can be taken for what it is worth; but I have the Admiralty chart here to show that at any rate it is one of these things that require very grave consideration before you can experimentalise, and so risk the danger of throwing a bank into the channel.

1120. *Mr. Hoskins.*] What is the date of the Admiralty chart? It is checked for 1891. There has been no particular alteration in the character of the port since 1891.

1121. *Mr. Trickett.*] If the entrance to the port of Newcastle were narrowed to the extent shown by the Government plans—that is, to the extreme end of the northern breakwater—would there, in flood time, from the tremendous rush of water coming down the river, be a greater difficulty in getting ships into the harbour? I say that it would be a great danger to the port.

1122. At the present time, when a flood is coming down the river, is not a ship when trying to get in almost at a standstill? I have seen a steamer almost stand still. The velocity of the water would be very much increased by the channel, and I believe it would be almost impossible at times for a ship to enter the port; and if the ship once got on the northern breakwater it would be all over with the ship and everybody on board of her.

1123. *Mr. Davies.*] You have already expressed a strong opinion against the construction of the northern breakwater? Yes.

1124. Supposing the plan were modified,—the breakwater to be constructed a distance of 300 feet and the southern breakwater to be extended 500 or 600 feet,—would you be in favour of that? I would not touch the north side of the harbour at all.

1125. If the pilots and the harbour master, and those who had to do with the port for the last thirty or forty years, favour it? I still stick to my own opinion.

1126. If they strongly advocate the extension of the southern breakwater by 500 or 600 feet, and the extension of the northern breakwater to the end of the first section, would that do? I wish it was possible to build the northern breakwater, by way of experiment, to show who is right.

1127. Has not the construction of the northern breakwater so far been the means of creating a scour? I do not think so. My opinion is that it had no such effect. I say again, that my experience is that after the northern breakwater was constructed the bar was in a worse condition than it ever was in before until they commenced to run out the southern breakwater.

1128. If the evidence given before the Sectional Committee went to show that a scour was created by the northern breakwater, that would not be correct? I think that the gentlemen who gave that evidence have made a mistake. They will find that it was immediately prior to the commencement of the southern breakwater that the dangerous state of the bar was shown.

1129.

1129. The local evidence went to show that the extension of the northern breakwater to its present point has been the means of pushing out the bar 800 feet from its original position? Prior to the extension of the southern breakwater the bar was 800 feet further inside the port and abreast of Nobby's.

1130. The southern breakwater was completed before they commenced the extension of the northern breakwater? I say it was not.

J. C. Ellis,
Esq., M.P.
9 April, 1895.

1131. The Department say it was? I cannot help what they say; I still stick to my evidence. I repeat what I said a little while ago, that although technically the northern breakwater was further extended after the southern breakwater was completed, still that extension was of so slight a character that it could have no possible effect. I have a clear recollection of the matter, because when I discovered that they were extending the northern breakwater I at once put myself in communication with Mr. Moriarty; and the work was immediately stopped.

1132. The extension was between 300 and 400 feet? Well, I am inclined to doubt it.

1133. Your evidence is that the only cure for the bar harbour at Newcastle is the extension of the southern breakwater? That is my opinion.

1134. To what extent? I think it ought to go in a more northerly direction, but I believe that after the work is started we shall find the beneficial effects of it almost every week. I believe that a very short extension of it will show a great benefit. It ought to be extended by a length corresponding to what is already made.

1135. *Chairman.*] That would be about 1,400 feet? Well, 700 or 1,000 feet would have a beneficial effect.

1136. *Mr. Davies.*] The water would be 40 feet deep there, would it not? So much the better. If you have 40 feet of water there, you may get 30 feet on the bar.

1137. You advocate the extension of the southern breakwater by 1,000 feet, and it should take a more northerly direction? Yes.

1138. *Mr. Hayes.*] If the evidence which the Sectional Committee has taken states that the extension of the southern breakwater will quieten the range into the harbour, but will have no effect whatever in increasing the scour, is that correct? No. I believe the bar will shift into deeper water if the southern breakwater is extended. But supposing it remained where it is, the southern breakwater will make the water smooth which practically gives you two or three feet more water for your ships.

1139. Do you know that the bar is steadily shoaling, and that evidence has been given to show that that is caused by the want of scour? I am not aware that you have had such evidence.

WEDNESDAY, 10 APRIL, 1895.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.

JAMES HAYES, Esq.

The Hon. WILLIAM JOSEPH TRICKETT.

ROBERT HENRY LEVIEN, Esq.

The Hon. JAMES HOSKINS.

JOHN MOORE CHANTER, Esq.

The Hon. JOHN DAVIES, C.M.G.

CHARLES ALFRED LEE, Esq.

The Hon. CHARLES JAMES ROBERTS, C.M.G.

JAMES GORMLY, Esq.

EDMUND WILLIAM MOLESWORTH, Esq.

The Committee further considered the proposed Harbour Improvements at Newcastle.

James Cole Ellis, Esq., M.P., sworn, and further examined:—

1139 $\frac{1}{2}$. *Mr. Hayes.*] When the northern breakwater was completed did it not affect the scour in that portion of the harbour? No; I do not see how it could.

J. C. Ellis,
Esq., M.P.

1140. It had no effect in checking the scour between Stony Point and the north-eastern extension of the breakwater? Not in my opinion.

10 April, 1895.

1141. Then if the evidence of all connected with the port is that it had a very material effect, what do you say to that? I still stick to my opinion.

1142. Before the extension of the northern breakwater the bar was in a line with Nobby's? About there.

1143. Are you aware that that bar has gone 800 feet seaward since then? Yes; that was caused by the extension of the southern breakwater. As they built the southern breakwater the bar followed it out.

1144. *Chairman.*] When the tide passed out between the north-eastern point of the breakwater and Stony Point which way would it go? Straight out through the channel, and thence to the north and over the Oyster Bank.

1145. Does not some of that current run in a northerly direction from the north-eastern end of the northern breakwater? Yes.

1146. That being so, will not the extension of the northern breakwater as proposed confine that current and carry it out to sea? Of course it will.

1147. Therefore, of necessity, it must cause an increased scour in the harbour? I do not think so.

1148. If a greater body of water is going out in that direction will it not increase the scour? I am sceptical about scours as far as bars are concerned. I can understand a scour in a river, but not at the mouth of the harbour.

1149. You have already stated that one effect of the southern breakwater has been to wash the bar 800 feet to seaward? Yes; but I do not say that that was done by the scour. Of course it confined the ebb-flow of the water in a certain direction; but that had the effect of carrying the bar further out to sea. A bar is caused, in my opinion, by the meeting of two waters; the sea-water is as firm as a stone wall—the ebb-tide brings the debris from the river until it meets the wall of sea-water, then the debris is dropped.

1150. You do not think that the construction of the northern breakwater would increase the scour at the entrance to the harbour? No, I do not think it would do nearly so much good as the carrying out of the southern breakwater. We have had experience of the effect of that.

1151. Coming into the harbour at present, where do you meet the strong flow of the ebb-tide? I do not pretend to be able to tell that exactly, but from my observations I should say that the strongest part is just inside Nobby's. I have seen steamers in flood-time hang there, the force of the flood-water being so great that they were almost unable to get in the harbour.

1152.

J. C. Ellis, Esq., M.P. 1152. Does that extend further up the harbour? No. There is not the same strength of tide when they get past Stony Point.

10 April, 1895. 1153. If we have evidence from the harbour-master and various other officials connected with the port that the strongest flow of the ebb-tide is in a line with Stony Point and the eastern end of the northern breakwater until you pass from the Boat Harbour across to the western end, would that be correct? Practically correct; but I think there would be a still greater pinch off Stony Point than off the south-west end of the northern breakwater.

1154. Would the ebb-tide gradually lose its strength as it goes out? Yes.

1155. You do not think the northern breakwater has extended the force of the ebb-tide still further out to sea? I do not think so.

1156. The bar has gone from directly opposite Nobby's, 800 feet out;—if the current is confined by the northern breakwater, will that not throw it further out still? I am free to admit that if the second extension of 750 feet is carried out it may have the effect of shifting the bar into deeper water; but the same effect will be gained, and to a greater extent, by running out the southern breakwater, and you would get smooth water.

1157. If that were carried out, as you suggest, it would not confine the waters in the channel? It would, to a great extent, because already there is a natural breakwater, namely the Oyster Bank, although the sea breaks over it.

1158. The ebb-tide going past Stony Point goes to the north? Yes; that is proved by the fact that there is a channel between the beach and the Oyster Bank. The Oyster Bank, to a certain extent, confines the water. If the northern breakwater were extended it would confine the waters still more; but I object to the extension of the northern breakwater for reasons which I explained yesterday. There is a bank formed outside the northern breakwater, and I think that if the northern breakwater is still further extended a bank will form on the channel side.

1159. You said there is a channel formed at the north-eastern end of the northern breakwater out to the north? I say that there is deeper water showing. There is a channel between the end of the northern breakwater and the Oyster Bank.

1160. Is not the beach round to the north from there a sandy beach for some distance? It is all sand.

1161. Will not the flood-tides bring it round the north-eastern end of the northern breakwater? I do not think so. If it was brought round the channel would silt up, but it has always preserved its depth.

1162. Could you point out on the plan the shoal forming to the north-eastern end of the breakwater? There was originally a shoal at the south-western end; that was the original shore line. There is now a shoal at the north-east end and a beacon there, and a bank of sand is visible at low water; it was on that bank that a vessel called the "Federal" was nearly wrecked. I think that is a proof that if the breakwater is run out a bank of sand will accumulate at the end. I do not see why it should not, and if a sand-bank forms outside of that breakwater, in the same way as it has formed inside the present northern breakwater, it will be so close to the bar of the fairway—more especially as Mr. Darley intends to put it further north—that you will run a risk of doing very serious damage to the entrance of the port. You are trying an experiment which, if it fails, will be most disastrous to the port. If on the southern side of the proposed extension a sand-bank forms—as has already formed on the north-eastern end of the northern breakwater—you will have done a great injury to the port.

1163. Then you are of opinion that the original shore line was removed after the northern breakwater was extended? Yes; but it is still in existence. It has been slightly removed from its original position. The depths given are 7 feet, 8 feet, 10 feet, 4 feet, 3 feet, and so on.

1164. The Committee have the evidence of officers who have been many years at Newcastle, to the effect that the extension of the northern breakwater increased the scour in the channel and deepened the water, but you still hold the opinion that you have already expressed? Yes; I do. I say that the extension of the northern breakwater would be a great menace to the port. I know that it would be a great danger to ships entering the port. A vessel coming round the southern breakwater in very heavy weather is liable to be caught by a heavy sea and thrown off her course, more especially when there is a heavy flood or a strong ebb-tide running out, and if that happens now, they have a chance to drop anchor and check her head; but if the northern breakwater is extended the vessel will be sent on to the northern breakwater and smashed to pieces, and you could not do anything to save the lives of the crew.

1165. If the Committee have evidence from the parties I have mentioned that the shoaling on the north-eastern side of the northern breakwater is caused by the flood-tide bringing sand round the beach, what is your opinion? It does not matter what caused it; it is there.

1166. If we have evidence to say that the shoaling at the north-eastern end of the northern breakwater is not caused by the breakwater, but by the flood-tide coming round the channel to the north and depositing sand, would you say that that is incorrect? I have a different opinion, for this reason—that before the northern breakwater was extended that distance there was deep water there, at the spot where the end of the northern breakwater is.

1167. If we are told that the shoal had been caused by the flow of the ebb-tide to the north, that is not correct? I think that is wrong, because it could not happen without affecting the water in the channel itself. The bank could not be formed, in my opinion, by the flood-tide coming through the northern channel at the north-eastern end of the breakwater.

1168. *Mr. Levien.*] Do you know Captain Newton, the harbour-master, Pilot Hacking, and Captain Paton? Yes.

1169. They have all had great experience of Newcastle Harbour, have they not? Yes.

1170. And Captain Newton and Pilot Hacking daily travel in and out of the harbour? Yes.

1171. And they have given it as their opinion that the extension of the northern breakwater would considerably assist the scouring of the harbour? Did Pilot Hacking?

1172. Captain Newton did. You know Captain Hannell;—Has he not had considerable experience of the harbour? I suppose so.

1173. Those gentlemen have had considerable experience of the harbour, but you put your opinion against theirs? I stick to my opinion that the extension of the northern breakwater would be a danger to the port—that it is better not to touch it. I say further that the southern breakwater would be all that is required.

1174. And your opinion is that the further the southern breakwater is extended the further the bar will go seaward? It is my opinion that the bar will follow the breakwater out. It may not follow it in the same

same ratio that it has done in the past; but I am convinced that it will follow it out. If it does not follow it out the extension of the southern breakwater will do all that is wanted, because it will protect the bar. It will do away with the range which now exists, and make the water smooth, so that ships going out will have the advantage of two or three feet more water than they have now. The gentlemen you have referred to gave evidence in favour of the extension of the northern breakwater in a qualified sort of way. But they were all positive that the extension of the southern breakwater would be a great advantage to the port. I differ from them to this extent—that whilst I think that the extension of the southern breakwater is urgently needed, I do not think that the northern breakwater is wanted at all, and I believe that it will do more harm than good.

J. C. Ellis,
Esq., M.P.
10 April, 1895.

1175. *Mr. Hoskins.*] Has there been any later Admiralty chart of the entrance to Newcastle harbour than the one you have produced? Not that I know of.

1176. That chart was prepared by an officer of the Navy, who surveyed all round the coast of Australia? The charts are revised periodically.

1177. *Chairman.*] You produce an Admiralty chart of Newcastle harbour dated 1891? Yes; it is corrected to 1893.

1178. *Mr. Hoskins.*] Can you show on that chart where the shoaling up has taken place on the inner edge of the northern breakwater? Yes.

1179. Was that shoal formed in front of the breakwater after the breakwater was made, or did it exist before? It only existed at the south-west end. It did not exist where it is now.

1180. Then the shoal you speak of which is in front of the north breakwater has been considerably extended since that breakwater was built? Yes.

1181. Has it diminished the depth of the water? Yes; there is a bank of dry sand at the north-eastern extremity of the northern breakwater.

1182. Do you think that that shoal was formed by the heavy seas brought about by the south-easterly gales coming round the point of the southern breakwater and expending themselves on the northern breakwater? Yes; I believe it is caused by the sea coming one way and the tide the other.

1183. Those two currents carried the sand there which caused that shoal? Yes; caused the sand to settle there. Whenever a wave breaks on the beach there is always a large amount of sand in it.

1184. Do you believe that if the northern breakwater were extended, the sea coming round the end of the southern breakwater would bring still more sand against the northern breakwater? Yes; and I base my opinion on the fact that it has had that effect with regard to the present extension.

1185. Has not the formation of that shoal tended to contract the width of the channel? Certainly.

1186. Do you believe that the strongest winds blowing into the entrance to the harbour are south-easterly winds? I know it, from forty-two years' experience.

1187. Do you think that the tendency of those winds, if the northern breakwater is extended, will be to still further restrict the width of the channel? I am certain that a bank would form inside the northern breakwater.

1188. And as a necessary consequence will it narrow the channel? It must. If a sand-bank were to form in the same way as it has at the north-east end of the present northern breakwater it would be very close to the bar, more especially as it was intended to remove the fairway more to the northwards.

1189. Would not the formation of shoal inside the northern breakwater, further seaward, increase the difficulty of vessels getting in? In my opinion it would seriously increase the difficulty and would cause great additional danger.

1190. You have no doubt about that? I am quite certain of it.

1191. You were for years the owner of vessels that were trading to Newcastle? Yes.

1192. And you have frequently travelled in and out of Newcastle harbour? Yes.

1193. Did you closely observe the action of the sea upon the breakwaters as it affected the entrance to the port? I did not give that personal observation to it that an engineer would give, but I have seen the effect of the works.

1194. Did the masters of your vessels at any time give you any information as to the effect of the breakwater? I did not consult my captains about it.

1195. Have you received any information from people acquainted with the port on that subject? For the last twenty-five years I have been in almost daily communication with the authorities of the port, and I have had ships consigned to me much bigger than my own ships that were trading there, and I have had every information from the harbour authorities as to the draught with which a ship could leave the port. It is on all that experience, the experience that I have had during many years, that I have formed the opinions which I have expressed.

1196. What was the general opinion as to the late improvements? I never consulted anyone on the improvements to the harbour. I formed my own opinion from my own experience. I never heard anyone except the Department say anything against the extension of the southern breakwater. I have never heard anybody connected with the port who has not advocated its extension.

1197. Has the northern breakwater had the effect of disturbing the water in the harbour whilst not interfering with the entrance? It did interfere with the entrance; it caused the bar to shoal.

1198. You said yesterday that some years ago you pointed out to Mr. Moriarty the danger of extending the northern breakwater, and that owing to that the works were stopped? What I said was that after the extension of the southern breakwater to its present length I discovered that the Department were further extending the northern breakwater. I then waited upon Mr. Moriarty, and pointed out that if the Department persevered in running out the northern breakwater it must have the same effect on the harbour that it had before; that it would create so much disturbance in the harbour that ships would be unable to lie alongside the wharfs. I spoke very strongly at the time, and he told me that he would look into the matter. I said that if the works were proceeded with and I could do nothing else, in justice to my constituents I would bring the matter before Parliament.

1199. And the work was stopped? It was.

1200. And it has never been resumed since? It has never been touched since.

1201. You are of opinion that if the southern breakwater was extended 500 feet it would cause the water in the channel to be calmer, and would offer greater facilities for vessels to leave the port? Yes; but I do not think that 500 feet would be far enough.

1202. What you mean is that if the water was smoother vessels of greater draught could get out? Certainly. The draught of water on the bar is 21 feet at low water. There is a rise and fall of the tide

- J. C. Ellis, Esq., M.P. of from 5 to 6 feet, making 26 feet. That will not now take a ship out that draws more than 22 feet 6 inches, on account of the range which necessitates leaving 3 feet 6 inches under her bottom.
- 10 April, 1895. 1203. Do you consider it would be advisable first to extend the southern breakwater, and see what effect it will have on the bar, before commencing the northern breakwater? That is exactly what ought to be done.
1204. Have you read the evidence which was given before the Sectional Committee? I have glanced through it roughly.
1205. Did you notice the evidence given by Pilot Hacking? Yes; I noticed that he coincided with my views more than anybody else.
1206. Pilot Hacking said—"He would sooner see 24 feet of water on the bar with the extension of the southern breakwater than 26 feet with the carrying out of the northern one; he believed the extension of the southern breakwater would do all that was necessary for the improvement of the harbour"? Yes; I agree with that.
1207. And Mr Brooks said—"He would prefer spending £50,000 on the southern before spending two-pence on the northern breakwater"? Quite right. Some are in favour of both the breakwaters.
1208. *Chairman.*] Have you anything more to say? I should like to say something with regard to the wave-trap. I believe that the wave-traps recommended by Sir John Coode are for places where the breakwaters run at right angles to the shore. I believe that the wave-traps recommended by Sir John Coode would have a different effect with the breakwater running out at right angles to the shore from what they would have at Newcastle.
1209. Will you tell us why? I do not think that the water would run up in the same way in both instances. The breakwaters as recommended by Sir John Coode would catch the sea end on; those at Newcastle would catch it broadside on. In the one case the sea would hit the breakwater on the weather side and run up on the lee side; in the other case it would hit the breakwater on the weather side and run up on the weather side. It is evident that Mr. Darley does not believe that the northern wave-trap will intercept all the range, because he has also provided a southern wave-trap.
1210. Do you think that the bay lying to the south-east of the south guide wall will act as a wave-trap? There is no necessity for a wave-trap on the southern side as matters are at present.
1211. How do you account for the fact that the sea does not run up the southern side? Because it is protected.
1212. Have you had any experience of wave-traps? No; but I have heard Mr. Darley say that he was not sure that the southern wave-trap would not fill up, and that it would not matter if it did. If there is no proof that the southern wave-trap will not fill up I do not know where the proof is to come from that the northern wave-trap will keep open.
1213. Your statement in regard to wave-traps is not based on any theoretical objection to them? I have no objection to them under some circumstances; but knowing from experience how the seas break at Newcastle on the Oyster Bank, I do not see that that wave-trap, even if it did keep open, would be sufficient to break the force of the seas running up, and I believe it would silt up.
-
- Henry Richard Carleton, Esq., M.E., M.I.C.E., Principal Assistant Engineer for Harbours and Rivers, Department of Public Works, sworn, and examined:—
- H. R. Carleton, Esq., M.E., M.I.C.E. 1214. *Chairman.*] What are you? I am Principal Assistant Engineer, Harbours and Rivers Branch, Public Works Department.
1215. Have you been long in the Service? Since January, 1879.
1216. What experience have you had of works in connection with the improvement of bar harbours and river navigation? I have been principally employed on that kind of work under Mr. Darley and Mr. Moriarty. I have surveyed most of the entrances between here and the Queensland border. I have been engaged on the construction of our harbours, and I have got up schemes for improving some of our entrances.
1217. Had you any professional training before that? Yes. I have been employed on railway work in Canada and on railway and drainage work in Ireland.
1218. Then your whole life has been spent in engineering? Yes; I am a Master in Engineering of Trinity College, Dublin.
-
- Capt. Captain Richard James Skinner, master mariner, s.s. "Namoi," sworn, and examined:—
- R. J. Skinner. 1219. *Chairman.*] What are you? Master mariner in the employ of the N. and H.R.S. Company.
1220. Are you at present in command of a vessel? I have been twenty years in the employ of the N. and H.R.S. Company, and I have now my eleventh command. I am captain of the s.s. "Namoi."
- 10 April, 1895. 1221. Have you made frequent voyages to Newcastle? Yes; I leave every night. I have been running to and from Newcastle nearly every night for the last twenty years.
1222. You have a good knowledge of the port of Newcastle? Yes.
1223. *Mr. Lee.*] During your long experience on the northern coast you have encountered some very bad weather? I think, without egotism, I may say that I have crossed the Newcastle bar under the most perilous conditions under which it ever was crossed.
1224. Can you tell the Committee what state the improvements at Newcastle had reached twenty years ago? The southern breakwater was just commenced to the southward of Nobby's in 1875, when I first went there in steam.
1225. About what point in the channel was the bar at then? I should not like to give definite information on that point. I do not think I could remember.
1226. Could you give us any information as to what was the state of the bar as the southern breakwater progressed? It tended to protect the port.
- 1226½. By deepening the entrance or stopping the roll of the sea? By partially shutting out the roll of the sea and enabling us to get under shelter sooner.
1227. Do you think it gave you a greater depth of water? I should not like to say that. I have been running there in ships of shallow draught, and the deepest ship that I have commanded has not drawn more than 12 feet.
1228. Have you had an opportunity of seeing what the proposed works are? Yes. 1229.

1229. What do you think would be the best way to improve the port? By the extension of the southern breakwater. I maintain that you ought to extend the southern breakwater and protect the Oyster Bank thoroughly, so as to minimise that treacherous roll that comes round Big Ben and nearly sends us on the Oyster Bank. There is a treacherous swirl there. The end of the breakwater has been dislodged for I do not know how many feet and the stones scattered; consequently at the end of the breakwater we have an untrue sea. When the breakwater was established at first it was a complete structure, but the force of the waves spread it out, and the sea has now been made ten times worse than it was before.

Capt.
R. J. Skinner.
10 April, 1895.

1230. When the southern breakwater was completed to its terminal point, did it, to a certain extent, take the heavy roll off the Oyster Bank? It did; and as soon as it was washed down the rollers came on again:

1231. That proves that the roll from Big Ben during an easterly gale is the first thing to be looked to? I say protect your harbour by running the southern breakwater out a sufficient distance to the eastward. I am of opinion that if you do that you need not spend a farthing on the northern breakwater. It would protect the entrance on the ocean side during the heaviest gales, when we hold our lives in our hands in crossing the bar. Our strongest gales are from the east, south-east, and south. The most dangerous sea in which to enter the port of Newcastle is when the wind is east-north-east, which runs right into the port. I do not care what breakwater you establish, the east-north-east sea in a gale will go into that harbour with more or less force.

1232. Will you tell us how it is that it is so dangerous rounding from the southward to get into the harbour? The great secret of entering Newcastle harbour in a gale is to keep to the left. You must keep on the Nobby's side under any circumstances whatever. You must not allow your ship to go towards the Oyster Bank. In coming from the southward, and rounding the southern breakwater in heavy weather, it is our great aim to keep as close in as possible under the lee of the breakwater. It is a matter of impossibility for us to go within 200 feet of the present southern breakwater, simply because, before we can reach that point, we are under the influence of an undertow, a swirl, an eddy, and an untrue sea, which perhaps in some instances might cause the loss of the ship and all on board.

1233. Just at that critical point? Yes. In rounding that southern breakwater, before I can get within 200 feet of it, my rudder is hard starboard, to bring her up; but under the influence of this untrue and treacherous tide she will bolt towards the "Colonist" against the helm. It was only in January that I ran down to Newcastle in a heavy gale on a Sunday morning. The signal-man had the flags up, "bar dangerous." I held a consultation with my chief officer, the holder of a master's certificate, and we decided to take the port. We put our second officer, another ex-master, at the wheel, and we tried to go within 200 feet of the breakwater with the helm hard down and the ship drawing 11 feet.

1234. And yours is as powerful a ship as any in the trade? As powerful and handy a ship as any in the trade, her engines developing 2,000 horse-power. I pointed out to my officer that she was heading to starboard, and going ahead towards the "Colonist" full speed.

1235. Was that due to the dangerous roll? It was due to the influence of this swirl, which, if it is not altered, will lose our ships.

1236. Was there any flood in the river? No. When you are on the ocean you are dealing with a living sea, a true sea, and if the wind is in a certain direction the wave will go that way, and we know what we are doing. It is a true sea, and the ship is working in what we call living water. But once you get into conditions, such as you find at the end of the breakwater, and find a swirl that makes the sea outside untrue, you come under the influence of what a Chinaman would call "chow-chow" water, and your rudder becomes useless. It is not the same as working in the ocean; you are working with treacherous influences against you. On that Sunday morning I said to my officer "if she does not stop we shall be piled up on top of the "Colonist," and that will be the end of "Namoi." If I had attempted to do what was done by the "Cawarra" I should not have been here to-day. That was to have attempted to turn the ship and go out to sea. Had I put my helm hard aport, I should have lost my ship, but knowing the conditions of the harbour, and having been nearly in the same fix before with another ship I had the honor of commanding, I kept on my course as nearly as I could. We were going right end on to the Stockton beach, but, just as I surmised, immediately we got out of the influence of the Chinaman's "chow-chow" water, though we were nearer to the "Colonist," we were in a true sea, and immediately the rudder asserted itself, and up we came right into the port. I am giving the opinion of many when I say that I would sooner take the port of Newcastle, as it was in 1875, in a gale, than I would take that port in 1895, under the same conditions.

1237. Why? There was no breakwater at that time. The sea then broke close to Nobby's. If I came up with a south-east gale behind me I had a true sea. I used to run up with the "Kembla." The end of the southern breakwater has been washed away. I say that if you wish to protect Newcastle Harbour in a proper manner you should spend your money first on the southern breakwater.

1238. About how far do you think that ought to be extended? I would not carry it out on the same angle as it is now. I would bring it out towards the Big Ben rock. The question has cropped up about wave-traps. The heaviest prevailing gales are from the south-east and east-south-east, and the sea strikes on the southern breakwater; let the breakwater be so constructed that it will be a wave-trap. If you extend the southern breakwater out towards the south-east a wave coming from that direction will split on the end of the breakwater, half of it will go in with minimised force.

1239. Do you wish to see the trend of the breakwater in such a direction that it would catch the wave at an angle? Yes. The great fault of the present breakwater is running it out perfectly straight. You have run the breakwater out in such a way that the south-east seas have dislodged 200 feet of it. If you have it run out square to the point where it is now it cannot stand; no breakwater can stand like that.

1240. You think that the trend of the southern breakwater should be towards the east? To the south-east.

1241. Supposing it had been proposed by other witnesses that the breakwater should trend east by north? I am not in favour of that. I say take your breakwater out towards the Big Ben rock.

1242. I suppose Big Ben is responsible for a great deal of that roll? Yes. Let your breakwater be brought round towards the south-east, and let that be your wave-trap. Let the waves break on the southern side of the breakwater.

1243. It would amount to this, that the waves would strike the breakwater at an angle, and one half would run up the outside and the other half would cross the entrance? Yes.

1244. What influence do you think the northern breakwater has had upon the sands there? It has had a tendency to shift the bar further out.

1245-6. Has it created a scour? Yes, I should say so.

1247.

- Capt.* 1247. Has it made deeper water there? Yes.
- R. J. Skinner. 1248. If the northern breakwater were extended to the end of the first section, and the southern breakwater were also extended, what would be the condition of things at the entrance to the port then? I am not in favour of the new northern breakwater, only the old one.
- 10 April, 1895. 1249. Is that because the southern breakwater would be sufficient to protect the entrance? The evidence that you have already got tends to show that the small length of the existing northern breakwater has helped to scour the port. My opinion is that if you extend the southern breakwater 300 feet towards Big Ben, and extend the old northern breakwater 500 feet, that will have a beneficial effect. Let your wave-trap be the natural beach at Stockton where there is plenty of room for the waves to expend themselves.
- 1249½. If the northern breakwater has helped to scour the channel, then if it is a little further extended in its present position, why should it not help to scour the channel a little more, supposing that the southern breakwater is further extended too? I would go on with the old northern breakwater until you have extended the southern breakwater further and seen what the effect will be.
1250. In your opinion that should be the first work? Yes.
1251. And after that has been done the result can be watched, and, if necessary, the northern breakwater can be further extended? Let your practical men at the port of Newcastle give you the results of their experience.
1252. You think that the northern breakwater is one of those works as to the effect of which there may be some doubt; but there is no doubt in your mind as regards the southern breakwater? Not a bit.
1253. You say that notwithstanding any works that may be constructed at the port of Newcastle, when there is a north-east gale the water will roll into the harbour? Yes.
1254. Can you give any evidence in reference to the navigation of the port in flood time? The flood of 1893 was one of the worst I have ever seen.
1255. Had you any difficulty in entering the port? I entered the port one morning in the height of that flood. I suppose that our steaming power was about 12 knots on the ocean, but the speed of the ship was reduced to 4 knots at Stony Point. The tide was going out at the rate of about 7 or 8 knots, but we got in all right.
1256. I suppose it was just as much as you could do? On the same day I saw four steamers towing one ship in. It would be about a 7-knot current.
1257. Do you think the extension of the southern breakwater would increase that current? No; I do not think it would.
1258. Supposing the proposed northern breakwater were constructed and the channel were contracted, do you think it would increase the velocity of the flood waters? I should not think that it would but I am uncertain about that. If the northern breakwater already increases the scour, I think that the extension would increase the scour.
1259. It is a matter about which you are undecided? Yes.
1260. As to the wave-traps in the harbour you do not care to say much about them? As I said before let the Stockton beach be your wave-trap.
1261. But there is to be one on the southern side? I did not know that.
1262. When a sea is rolling in round the southern breakwater and is partially caught in a northern wave-trap will it not rebound towards the southern wave-trap? We have had no experience with the harbour in its present condition of anything serious happening. As far as the seas are concerned it is only the last dying kick of the wave that gets so far up the harbour.
1263. Has it not made the ships rock at Queen's wharf? Yes; we have had to double our moorings, but nothing more than that. I do not think the southern wave-trap would stop that range. The extension of the southern breakwater would minimise a lot of the trouble that we labour under at present.
1264. Do you think that the construction of the proposed works will interfere with the escape of the flood-waters? I do not think it would.
1265. *Mr. Molesworth.*] You spoke about the disturbed state of the water at the end of the southern breakwater owing to the spread of the stones there? Yes.
1266. You said that if you had followed the plan adopted by the captain of the "Cawarra" when you were entering with the "Namoi" you would have met with the same fate? Yes.
1267. Will you explain to the Committee how it was that the "Cawarra" got into that trouble seeing that the southern breakwater was not made at that time? I was not in the Colony when the "Cawarra" was lost, but I am told that the ship was lost through their attempting to get out of the port again. I suppose she was too far down towards the Oyster Bank, and under the influence of the ground swell. As I have said, the secret of getting into the Newcastle harbour is to keep to the left. The "Cawarra" got too far to the right.
1268. In describing to us the perils that you went through in January last, in entering the Newcastle harbour, you did not explain how you managed to get out of the difficulty? I told you that I kept the rudder hard a starboard. My experience led me to believe that immediately I got out of the influence of that swirl and under-tow, and got into living water the rudder would assert itself, and so it did.
1269. Will you tell the Committee whether the bar was in the same position then as it is marked on the plan? I should not think there is much difference.
1270. Will you tell the Committee how far the bar has shifted since you first knew the port? That is a difficult thing to answer. I can only say that I am of opinion that the Oyster Bank where the "Cawarra" was lost is working right out to the eastward. The "Colonist" lying there is promoting a sand-bank.
1271. Do you know that the bar has shifted a very considerable distance to seaward in the last ten or fifteen years? I have heard that opinion from men who know the port, Captain Newton, and others. I am working with a light draught ship which can go in at any time. The draught of the water, therefore, is of no concern to me.
1272. Were you trading to the port before the northern breakwater was constructed? Yes.
1273. Have you noticed any serious alteration in the formation of the shore line in conjunction with the northern breakwater? No.
1274. Are you of opinion that the construction of the northern breakwater has had the effect of deepening the channel? I am.
1275. Do you think that the extension of the northern breakwater will have the effect of deepening the channel still further? Yes, I do.

1276. What, in your opinion, would be the best way to deepen the water on the bar? The extension of the southern breakwater by three-fourths to every extension of the northern breakwater by one-fourth. Capt. R. J. Skinner.

1277. *Mr. Chanter.*] I understand you to say that under any circumstances the north-east roll would go up the harbour? Yes. 10 April, 1895.

1278. Could you make any suggestion as to how that could be minimised? I could not.

1279. Would not the two wave-traps minimise the roll from that point of the compass? They cannot possibly do it.

1280. Do you believe that the wave-traps will be effective? With the north-easterly seas rolling in I cannot see how they will be.

1281. The Departmental opinion is that the waves will enter the port in the shape of a V, and that the waves will be attracted towards the breakwaters, and will ultimately be caught by the wave traps;—could you offer any opinion on that? I would not. I do not care what breakwater you erect, there will be certain conditions under which the port will not be protected.

1282. If the southern breakwater is extended in the way you suggest, do you think it will be beneficial to have that southern wave-trap? I do not think so. I think that all the vice will be taken out of the wave long before it reaches there.

1283. *Mr. Hayes.*] You are speaking now as commander of a vessel drawing about 11 feet of water, and you want to have the entrance of the port made easier in bad weather? Yes.

1284. We have evidence that the bar is shoaling up, and it is proposed to create a scour to carry the sand further out; what is your opinion of the proposed work? I do not think that the proposed northern breakwater will help the scour.

1285. If the effect has been to send the bar further seaward, do you not think that if the breakwater is further extended the bar will go still further out? I do not.

1286. Where do you meet the strongest current of the ebb-tide in coming in? We meet it opposite Stockton.

1287. Is it pretty uniform up to the south-western end of the northern breakwater? Yes.

1288. Therefore, as the current increases the scour increases also? Yes.

1289. Is it not natural to suppose, therefore, that if the northern breakwater were extended, and the current confined, it would send the bar further out? Yes; the old breakwater would.

1290. Will not the new breakwater have the same effect? I do not think so.

1291. When the ebb-tide reaches the north-eastern end of the northern breakwater does it not break off to the north? Not a great deal. Some years ago, when we were leaving the wharf at Newcastle, through some neglect our bow line fouled the paddle wheel, and we had to stop the engines. To show how fairly the current runs out, we were carried by the ebb-tide right out to sea as straight as possible.

1292. Does the current diminish in velocity after leaving the point? Yes.

1293. Does it lose its force as you go out to sea? Yes.

1294. Therefore it loses its scour? Yes.

1295. If the northern breakwater is extended will not that tend to push the bar further out into deep water? Perhaps it would.*

1296. Therefore it would give a better entrance to vessels coming into the port? Yes.

1297. You are of opinion that it is essential that the southern breakwater should be extended? Yes.

1298. Do you think the extension of the southern breakwater would have the effect of increasing the scour? I do.

1299. Without the extension of the northern breakwater? No. Talking about waves, some few years ago when going into Newcastle harbour, before entering the port, we could see the smooth water with the break defining what I may term the actual channel; but we do not get any smooth now. It is all break right across from the Oyster Bank in one line.

1300. Is not that caused by the shoaling up at the entrance? Yes; I am quite sure that the Newcastle harbour is contracting at the entrance.

1301. *Mr. Gormly.*] You see the proposed extension of the northern breakwater, marked red on the plan? I do.

1302. Do you think that if that was constructed it would cause danger to vessels entering the port? Yes; I think it would cause danger.

1303. It would block up the channel between Stockton and the Oyster Bank? Yes.

1304. And that would not cause any danger? Yes, it would.

1305. And the waves that come round the southern breakwater, as it at present stands, would not be likely to be driven on the wall? They would.

1306. You do not think it desirable to construct the southern breakwater in a north-easterly direction? No.

1307. *Mr. Hoskins.*] Do you believe that if the southern breakwater were extended as you suggest, it would make the water on the bar smoother than it is now? I do.

1308. If the water on the bar were smoother, there would be practically a greater depth available for ships? Yes. Vessels of heavy draught are not usually taken out of Newcastle harbour when there is a lift on the bar. They generally wait until the water is fairly smooth. As regards the extension of the southern breakwater, I believe that it would have the effect of making the entrance smoother in a heavy gale. The sea would be truer, and the ships could get in with greater safety.

1309. Have you noticed whether the existing northern breakwater has caused a shoaling up against the breakwater in the channel? I think there is a shoaling up near where the green beacon-light is.

1310. If the northern breakwater were extended, would there not be a probability of a collection of sand forming up against it? I do not think so. I think if the northern breakwater were extended, as I have stated, proportionately with the southern breakwater, it would increase the scour and send the bar further out into the ocean.

1311. That is the extension of the present northern breakwater, not the new one? I am not in favour of the proposed new northern breakwater; neither am I in favour of anything called wave-traps. I say, let the Stockton beach be the wave-trap.

1312. Are you of opinion that if the proposed works tended to contract the width of the channel, it would make it more difficult for vessels to enter, especially in heavy weather? The channel might be narrower, but I do not think the safety of ships entering the port would be endangered.

1313. *Mr. Trickett.*] Your view of the position is mostly confined to the safety of vessels entering and leaving the port? Yes.

1314.

* NOTE (on revision) :—I understand this question to refer to the old northern breakwater.

Capt. R. J. Skinner. 1314. The soundings show that the water on the bar is getting shallower; you only propose to take the present northern breakwater out a very short distance;—will that increase the scour on the bar? Past experience tends to show that the present northern breakwater has shifted the bar out.

10 April, 1895. 1315. You prefer to carry it a very short distance? Yes, for this reason—that I am not in favour of extending the present northern breakwater by 100 feet until you see the practical results obtained from the extension of the southern breakwater.

1316. Have you considered the question as affecting the scour? I have. If you add 100 or 200 feet to the present northern breakwater, I think it will tend to shift the bar still further out. It cannot be denied that a sand-spit is forming around the "Colonist."

1317. Then I suppose you think that that vessel ought to be removed? Yes.

1318. Do you think that the bar could be dredged? That would be a very difficult undertaking. The dredge would have to be shifted every night. You may have a calm sea one hour, and a very rough sea the next.

1319. A gentleman told us the other day that the bar ought to be dredged;—do you think that is practicable? I do not. I think it would entail a great expense. The dredge would have to go out when the weather was favourable, and come in when it did not suit.

1320. Do you not think it is almost impossible to do it? It is possible, but it would involve a great deal of trouble and expense. It is next door to impracticable.

WEDNESDAY, 17 APRIL, 1895.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.
The Hon. WILLIAM JOSEPH TRICKETT.
The Hon. JAMES HOSKINS.
The Hon. JOHN DAVIES, C.M.G.
The Hon. CHARLES JAMES ROBERTS, C.M.G.

JAMES HAYES, Esq.
ROBERT HENRY LEVIEEN, Esq.
JOHN MOORE CHANTER, Esq.
CHARLES ALFRED LEE, Esq.
JAMES GORMLY, Esq.
EDMUND WILLIAM MOLESWORTH, Esq.

The Committee further considered the proposed Harbour Improvements at Newcastle.

Captain William Adams, master mariner, Sydney, sworn, and examined:—

Capt. W. Adams. 1321. *Chairman.*] What are you? Master mariner.

1322. Do you know the port of Newcastle? Yes.

17 April, 1895. 1323. What commands have you had to the port of Newcastle? A good many vessels; lately the "Coonanbarra" and the "Newcastle" steamships. I ran the "Coonanbarra" there twenty-three years ago.

1324. Are you at present in the service of the company? No; I have retired.

1325. How long since? About five years ago.

1326. *Mr. Trickett.*] You know the port of Newcastle well? Yes.

1327. After an experience of how many years? I have been running there ever since 1850.

1328. When did you retire from active service? In 1889.

1329. I suppose you have not been there lately? Yes; about a month ago.

1330. Having looked at the Government plan which is before the Committee, do you understand the nature of the proposed alterations? Yes.

1331. As an old trader to the port, will you give the Committee the benefit of your views as to what the effect of the proposed works will be? I understand that the Government propose to run the northern breakwater out with a view of directing the ebb-tide on to the bar to scour it out.

1332. That is what they think the effect will be? From the position of it, I have not the slightest doubt that it will have that effect; but my own opinion is, from a practical point of view, that if the southern breakwater were taken far enough out, it would obviate the necessity for that altogether. I think that then the bar would not lay up. The southern breakwater would prevent the sea from coming on the bar, and would naturally scour it out; or if the breakwater was carried far enough out the bar could be dredged.

1333. Will you explain what causes the bar to form there? In my opinion the bar is formed from the sea rolling in and breaking against the Oyster Bank.

1334. If that breakwater is built up to the Oyster Bank, do you think that will make the bar better or worse? I have no doubt that the northern breakwater will have the effect of sending the current more on to the bar; if that, it will scour it out. In my opinion, it is very doubtful whether the scour alone will do it. I believe it is very hard sand there, nearly as hard as rock, and that it will take a very strong current to scour it.

1335. Then you think that the better course would be to lengthen the southern breakwater, and so prevent the waves from driving up on to the Oyster Bank? That is my opinion. Of course it is a question of money.

1336. In what direction would you continue the southern breakwater? If it was extended in a south-easterly direction it would not have the effect of preventing the sea from rolling on to the bar, as it would if you made it in a north-easterly direction. I would continue it straight ahead.

1337. You would extend the present southern breakwater in a straight line? Yes; in a straight line to seaward, as it is going now. The sea would miss the breakwater altogether, and go straight on to the bar if the breakwater were extended in a south-easterly direction.

1338. You say that if the southern breakwater were extended it would prevent the waves from rushing down on to the present bar? Yes.

1339. Would it not have a better effect if the extension went in a northerly direction, and formed an angle, as shown in pencil on the plan? It would be more effectual, but it would contract the entrance.

1340. Would it make it more dangerous for vessels to get round? Yes.

1341. It has been stated by a former witness that it would be desirable, instead of taking the southern breakwater out in a straight line, to take it more in a south-easterly direction;—what do you think of a proposal

proposal of that kind? It would not do any good. The sea will roll past it, even as it is at present. It does not go any distance beyond the reef.

Capt.
W. Adams.

1342. Your answer is that by extending the southern breakwater in a southerly direction instead of going straight out it would make too large an opening, and would not prevent the waves from going on to the Oyster Bank? I do not think it would have the same effect as it would if extended in a north-easterly direction. If you bring it to the south-east, the sea has a clean sweep past it.

17 April, 1895.

1343. Would you tell us how far you think it ought to go? I can hardly give any definite idea. The further it was carried the more effectual it would be.

1344. Would you say a quarter of a mile or half a mile? A quarter of a mile at least.

1345. Do you think it ought to go as far outwards as the length of the existing breakwater? Yes. It is deep water, and the further you can carry the breakwater the more effectual it will be. I am of opinion that if the southern breakwater were carried out far enough, it would obviate the necessity for the northern breakwater altogether. The present northern breakwater has a tendency to throw the ebb tide down on to the bar. The ebb tide sets from Stony Point, on the other side of the port, across to the Oyster Bank. That is the strongest part that there is. If the object is to deepen the bar by scouring, I have not the slightest doubt that the northern breakwater will have that effect. It will prevent the current from going in a northerly direction, and send it across the bar. As for the wave-trap, I am not in a position to give a scientific opinion on the subject. It may prevent the swell from rolling into the harbour.

1346. You say that if the southern breakwater were extended in a north-easterly direction to about double its present length, you think that that, without extending the northern breakwater as proposed, would gradually remove the bar? I am of opinion that it would prevent the sea from rolling down, and laying it up, and I think that in fine weather you would be able to dredge the bar if the breakwater were carried out.

1347. In addition to its having that effect, you think it would make the harbour more easily accessible for vessels of all kinds? It would make it much safer.

1348. The bad weather is from the east-south-east? The heaviest weather is from the east-south-east to east-north-east, and that brings the sea more down on the bar. The south-east sea rolls down the reef, but if the southern breakwater is carried out the sea will pass the end of the breakwater, and there will be no roll on the bar. The sea will not break there as it does at present.

1349. Is not the space between the southern breakwater and the bar quite narrow enough now? It is quite narrow enough.

1350. Is it not the tendency of ships coming in to get over towards the breakwater? They are very bad pilots who will take a ship away to leeward. The way to make the harbour is to keep as close round the southern breakwater as you can.

1351. Coming from the north? Any one coming from the north would go far enough to the south before he attempted to get in.* He would not come in a northerly direction to the entrance, but would keep his head to the wind, and then run round the end of the southern breakwater.

1352. A previous witness has stated that when he has come in close round the southern breakwater, he has got into what he called "chow-chow" water, when his rudder would not act, and until he got clear of the point and into true water his vessel would not steer;—have you ever had that experience? No; I have never had that experience. There is no doubt that the sea curls in round the end of the breakwater, but you would have to be too close in to feel it.

1353. It has been explained that, by keeping in close to the breakwater, you get into this turmoil, which the witness called a "chow-chow," and he had to get well out into the stream before he could steer? When once a sea takes charge of your ship, that sea will take you wherever you are heading for.

1354. You stated that no man of any discretion would allow his ship to go near the breakwater? Yes.

1355. But according to the evidence we had the other day, the ship is between two dangers; if she goes too close to the southern breakwater she gets into a turmoil, and her rudder will not act; and if they go too far to the north they get on the bar? I never found any danger in connection with rounding the breakwater. We always know there is a little eddy coming round the end of the breakwater, but we pass clear of the eddy.

1356. Have you ever seen, in flood time, an inward bound vessel in a gale having any difficulty in getting into port by reason of the tremendous rush of flood-water? Yes; there is a tremendous rush of flood-water there when there is a great flood in the Hunter, and it makes the bar much more dangerous, especially during a gale.

1357. Is it not a fact that in a strong gale from the east steamers towing sometimes stick there by reason of the rush of the flood-waters? Yes.

1358. That being so, if the southern breakwater were extended further, and the northern breakwater were extended further, do you think the rush of water would be made greater, so as to affect vessels going into port? I do not think it would make any great difference.

1359. It would not increase the rush of water very much? In such a case as that, if a steamer is not powerful enough to tow the vessel in, once the vessel was well past the head of the breakwater she could anchor if necessary, but at present it is out of the question to attempt to anchor the vessel there. That would be the effect if the southern breakwater were carried out. They would not attempt to tow a vessel in a heavy gale with a strong flood running out.

1360. Then you do not think the extension of the breakwater would affect the rush of flood-water very much? I do not.

1361. A little while ago you said something about the wave-traps;—do you think that the wave-traps will be effectual? I have no doubt that the wave-traps will stop the swell from the northern breakwater running into the harbour. The water runs across the bar towards the Oyster Bank. It will run you nearly on to the Oyster Bank before the vessel will answer her helm to come up again. If the sea came straight across the bar it would not be so dangerous. If the sea rolls in there it will run into the trap. The trap on the southern side may have the effect of catching it. I do not know that the southern wave-trap will do a great deal of good, but the northern one may prevent the swell from coming into the harbour.

1362. I suppose you have experienced discomfort at the wharfs in heavy weather? Yes, ranging.

1363. A witness suggested that the bar should be dredged away;—do you think it possible to do it? They could not dredge it. They could not keep a dredge there in the smoothest water. There is always a rise and swell. What I said was that if the breakwater was carried out further it would keep the water smoother, and it might enable a dredge to lie there.

Captain

* NOTE (on revision) :—This means in a gale and heavy sea.

Captain William Anderson, master mariner, s.s. "Newcastle," sworn, and examined:—

- Capt. W. Anderson. 1364. *Chairman.*] What are you? Master mariner, captain of the steamship "Newcastle," of the N. & H.R.S. Co.
1365. Do you know the port of Newcastle? Yes; I have been running there ever since 1862.
- 17 April, 1895. 1366. *Mr. Davies.*] Have you charge of the vessels at present trading to Newcastle? Yes; the steamer "Newcastle."
1367. What is your opinion of the proposed improvements to Newcastle harbour? I think that by extending the northern breakwater, with all due respect to the wave-trap, you would throw the waves into the harbour.
1368. What is your idea as to the extension of the southern breakwater? In the first place, I should protect the southern breakwater, to keep it from washing away, because a large quantity of the debris from it has been thrown into the channel. In the direction of the "Colonist" wreck there is shallower water by a great deal than there used to be, and a very dangerous sea breaks on the northern side of the extreme end of the southern breakwater. On the northern side of the southern breakwater the debris has washed away into the channel, which causes a dangerous break. I have recently experienced it.
1369. Do you approve of the northern breakwater being carried out? I should not approve of it being carried out at present.
1370. For what reason do you disapprove of it? Because since those wrecks have been there there is a considerable upheaval and very much sea; and also to the south of the bar, owing to the debris washing down from the southern breakwater, and a bank being made up alongside the "Colonist," there is a shoal. It is banked alongside the "Colonist," and the "Colonist" obstructing the scour, the sand is thrown out towards the bar, consequently the channel is very much narrower than it was years ago. I should propose to protect the outer end of the southern breakwater first, because if it is extended in the same line in which it is now built it will all be washed away before the extension is completed.
1371. But supposing heavy material—stones 10 tons in weight—are used, what would be the result? If I were going to make the breakwater I should sink old hulks filled with concrete to form the breakwater.
1372. Where the southern breakwater should be extended? Yes; and also as a means of extending it into very deep water. Old hulks may be filled and sunk at the extreme end of the breakwater, starting 500 feet from Big Ben, and going out 1,000 feet in a northerly direction. Then you would have a smooth sea on the bar. You would protect the extreme end of the breakwater, and you could dredge the bar in calm weather.
1373. Supposing the suggestion you make of extending the southern breakwater were carried out, should anything be done to the northern breakwater? That would remain to be thought over. You would first have to see the result of the extension of the southern breakwater. I do not think the extension of the northern breakwater would be required.
1374. You feel satisfied that if the southern breakwater is lengthened and strengthened in the manner you have described, it will be sufficient, without any extension on the northern side? Yes.
1375. Would it create a scour to keep the channel clear? I do not think so. If the wreck were removed there would be a scour to a certain extent, but as long as that wreck is there there will always be a bank there, and it will have a tendency to spread, and no scour will ever remove it.
1376. Then if the first section of the northern breakwater is carried out, you are of opinion that it would not be of sufficient velocity to clear out the channel? I do not think it would.
1377. Then you believe that by the extension of the southern breakwater vessels would be able to enter the port at all times, and would have a smooth channel? You would lessen the swell on the bar, and enable the bar to be dredged, and by reducing the sea going in from the southward about a foot, you would get, perhaps, 6 inches more water there, it being more still.
1378. *Mr. Hoskins.*] Are you clear about that? No; it is supposition. I have an idea that if my ship pitches a foot with a certain rise of sea, for a much less sea she would only dip 6 inches. I have navigated that bar with a vessel drawing 21 feet 6 inches.
1379. *Mr. Davies.*] How long ago? In 1864. I got in on the northern side near the Oyster Bank, and I had to let go both anchors. If that bar had been as it is now, the "Star of the South" would have been there before the "Cawarra."
1380. *Chairman.*] Was the "Star of the South" your boat? Yes; in 1864, I had to let go both anchors.
1381. Have you found any great advantage accruing to you as a ship-master trading in and out of the port since the southern breakwater was constructed? Yes; but I do not say that the water has deepened much there. It has given a calmer channel.
1382. Is it as easy now to make the port in all weathers as it was before the breakwater was constructed? Just now, with the "Colonist" there, it is far worse.
1383. You say that the wreck of the "Colonist" has been the means of causing the channel to shoal, and that it creates a difficulty there? Yes; the water has shoaled, and the sea breaks much more heavily there away out to the head of the "Colonist."
1384. You strongly advocate the extension of the southern breakwater? Yes.
1385. Because it will give you a calmer channel, and enable the bar to be dredged? Yes.
1386. You do not recommend anything to be done on the northern side? Not at present.
1387. Have you any other suggestions to make? I would suggest that the wave-trap be outside the southern breakwater, so as to protect it whilst you are extending it.
1388. *Mr. Chanter.*] From what point do the average seas strike the bar? With the wind due east, the seas roll in nearly straight up to the bar. The south-east is about the heaviest sea.
1389. When a south-east sea is running, it is very difficult to get into the harbour at all? Yes.
1390. Do you recollect the southern breakwater before the extreme point of it was washed away? Yes.
1391. Was the entrance there any smoother before that breakwater was built? I could not tell you.
1392. How close to the southern breakwater do you go with your ship as a rule? From 300 to 500 feet off it. Of late we have given it a wide berth, because the sea is dangerous there. It spreads far more than it used to do. Therefore, I have drawn the conclusion that the water is much shallower owing to the stuff washed off the end of the breakwater.
1393. A previous witness has said there is a dangerous whirl, what he calls chow-chow water, at the end of the breakwater? It resembles the boiling of a pot. It is a very troublesome irregular sea.

1394. If you get into that troublesome sea, does the rudder cease to act? It is rather too close for us to get into it; we have to keep more towards the bar. Capt. W. Anderson.
1395. You are in favour of the extension of the breakwater in a south-easterly direction? In about the same direction as that indicated on the plan—north-east. 17 April, 1895.
1396. You propose to extend it in that direction at present? No; not until there is something there to protect it. It is of no use putting stone in there. What was put there has been washed away, and any more stone put there would only follow suit, unless you bind it together and use heavier material than you did before.
1397. You said that the most dangerous sea ran in from the south-east? Yes.
1398. If the extension of the breakwater was curved in a southerly direction, would it not have the effect of splitting the sea and detaining a portion of it? Yes; but it would have the worse effect, in my opinion, of narrowing the entrance.
1399. No; if you extended it to the south-east it would widen the entrance;—would it not meet the south-east seas and break their force? I do not think so.
1400. What effect would those very heavy south-eastern rollers have upon the breakwater if it was continued in the present lines;—would they not wash it away? Yes; decidedly.
1401. Would it not be wise to make the extension in a south-easterly direction? No; I do not think so. In my opinion you want something sunk outside to protect the breakwater before you begin to build. Unless you are prepared to put down 100-ton blocks of concrete that would stand heavy seas.
1402. It is proposed to sink blocks of 10 tons;—would they not be sufficiently heavy? I do not think so.
1403. You recommend blocks of 100 tons? Yes; you could get a hulk and put it in.
1404. I presume you admit that that is not possible? It is possible. You can fill a hulk with concrete, take her out there, and let her sink.
1405. Then, how would you provide for the superstructure? Build it on the top of it, and land the debris at the back of it.
1406. What weight of stone would you put on it? As heavy as you like. They put 80-ton blocks of concrete down for a breakwater in New Zealand, and nothing short of that would do. They had tried 10-ton blocks, but they had to be blown up again. I believe that the 80-ton blocks of concrete are standing now.
1407. If the breakwater were extended in the direction indicated by you, what would be their effect? It would throw one-half of the wave towards the beach in a northerly direction, and the other would come in between Big Ben and the present breakwater. That would be something like a wave-trap with the bend in a northerly direction.
1408. If the northern breakwater is constructed as shown on the plan, it will catch the full force of the southern rollers? Yes.
1409. What would be the effect, then? It would send the waves up the harbour.
1410. Would there be any rebound from that? Yes; enough to shoot out past the trap.
1411. Do you think the northern trap would be sufficient to expend the force of the waves? No; I do not think so.
1412. You do not offer any opinion in regard to wave-traps? No; I never heard of the name until a day or two ago.
1413. When there are floods in the Hunter River, what direction does the current take in going out to sea? The main portion of it runs pretty well direct out to sea, parallel with the southern breakwater. A portion finds its way to the north of the Oyster Bank, and seems to be piling up a sand-bank to the southward and eastward of the Oyster Bank. That is aggravated by the wreck being there.
1414. If the water were confined between the two breakwaters would it not increase the velocity of the current? Certainly it would.
1415. If a current is running out to sea and a south-easterly gale is blowing in, will it not have a tendency to create a bar immediately across from point to point of the breakwaters? If you put the northern breakwater so that the two points are even, certainly.
1416. If the northern breakwater is not constructed you are of opinion that the heavy rollers from the south-east will go still further north and expend themselves on the beach? Yes.
1417. Then what alterations would there be in the current in view of its scouring the bar? It would not have so much effect if the northern breakwater is not extended. If you confine the water between two breakwaters the ebb-tide will have more effect in scouring the bar, but by extending the southern breakwater you smoothen the water, and have far less sea to contend with on the bar.
1418. Is it possible at present, under any circumstances, to dredge the bar? In very fine weather it may be.
1419. I suppose there is always more or less swell there? There is; but sometimes even now a dredge could work there, but you must not have a lot of punts, you must have a dredge which could load itself, and go to sea and deposit its silt. The dredges which you have in the harbour would not do with a lot punts around them—they would block up the channel.
1420. Do you attribute the shore in front of Stockton receding, as shown on the plan, to the construction of the northern breakwater? Yes; I daresay it is owing to that. The sand-bank is not there now.
1421. Can you give any other reason for the construction of the breakwater or its removal? No. Yet I should not like to say that the breakwater did that much.
1422. And you would not like to hazard an opinion as to whether, if the breakwater were continued in the same direction as at present, it would continue that scour further out to sea? I should not. All I say is that the northern breakwater, if extended, will throw the sea into the harbour. If you extended the southern breakwater you might be able to see your way to extend the northern breakwater, and so keep the channel clear. But extending the northern breakwater at the present time would not clear out the sand-bank that is formed in the vicinity of that wreck. That is my opinion.
1423. Then you recommend the extension of the southern breakwater on the ground that it would make the entrance safer for shipping? Yes.
1424. Have you ever had any particular difficulty in entering the port of Newcastle? Yes.
1425. Will you give us some instances? About a month ago I came down there, and went slow until daylight, and the signals were up to stand off. I stood off, and afterwards tried a second time, and again noticed the signals. The heavy break along there ahead off the "Colonist" was a long way further off than I expected to find it in turning round to go out the second time.

Capt. 1426. How long had you to stand off? About two hours. When I entered I went in between the W. Anderson. squalls at the back of a very heavy one. When there is a heavy squall going in it leaves a sort of suction that draws the wave after the squall, and if you can catch that suction, you will get smooth water, but 17 April, 1895. if you wait until the waves rise up by the next squall it will be very much more difficult.

1427. Can you indicate the direction you would take to get into the harbour? I keep down the centre of the channel.

1428. Do you find any difficulty in regard to your vessel when she is alongside the wharf? Yes. There is a great run, and you have to be very careful or it will knock your ship to pieces. The run was considerably less before the northern breakwater was put there; hence, I say that if you extend the northern breakwater, you will run a heavy ground swell up the harbour.

1429. Have you ever had to protect your vessel by anything else than the ordinary fenders? No.

1430. Evidence has been given that the port is so rough at times that the fenders are not sufficient, and that bales of hay have to be used? I have only seen bales of hay used in Newcastle harbour on one occasion, and that was during a very severe south-east gale.

1431. Would it be an advantage to extend both the northern and southern breakwaters? I think it would be a disadvantage to extend the northern breakwater.

1432. What is the effect when a flood is coming down the Hunter, and you are entering with a gale behind you? The flood meeting the sea stirs up the water, and makes it much more difficult to get the vessel in. On several occasions I have put oil over each quarter of my ship to keep the sea from breaking over her.

1433. *Mr. Hoskins.*] You say that the extension of the southern breakwater would make the water on the bar smoother? Yes.

1434. And that would give, practically, an additional depth of water to the vessels going out? Yes; because if the water is smooth there is not the same lift of the vessel.

1435. What difference would it make, with the water now available, when it is smoother? I should say that, with a 1-foot sea, there would be 3 or 4 inches more depth of water.

1436. Then by causing the water on the bar to be smoother than it is at present, you would not increase the depth of water on the bar more than 3 or 4 inches? Three or 4 inches per foot on the bar.

1437. What is the average height of the waves on the bar? I could not tell you.

Captain William Adams, master mariner, Sydney, sworn, and further examined:—

Capt. 1438. *Mr. Davies.*] You have had an opportunity of listening to the evidence of Captain Anderson? Yes. W. Adams. 1439. Are you of opinion that the extension of the southern breakwater on the lines he has indicated, 17 April, 1895. would have the effect of producing a smooth sea within the channel? I understand his answer to be that, if you extend the southern breakwater in the direction in which it is now, it would have the effect of smoothing the water upon the bar, and I am quite of that opinion. I advocate the extension of the southern breakwater if it is possible to do it. I am not of the same opinion as Captain Anderson with reference to the northern breakwater. I think the northern breakwater would cause a scour, and I do not think it would bring such a sea in to the harbour as he anticipates.

1440. You would advocate the construction of the northern breakwater? In case of your being able to carry out the southern breakwater. The only object of the northern breakwater is to deepen the bar. I think it would have that effect.

1441. Do you believe with Captain Anderson that the southern breakwater would have a greater effect upon the channel than the northern breakwater? I think it would have the effect required. I agree with him that if the southern breakwater is extended the bar could be dredged. With regard to the stones from the breakwater going into the channel, I am not of opinion that those stones have gone there. If they have, the engineers ought to be able to ascertain that by sounding.

1442. *Mr. Molesworth.*] The Departmental evidence states that when the northern breakwater was constructed the scour removed the original shore line at Stockton, a distance back to the blue mark on the plan;—if that is so, would not the extension of the breakwater have the effect of further increasing the scour, and deepening the water on the bar? No doubt about it.

1443. In your opinion where has the sand gone to that was washed away? It has gone out over the Oyster Bank towards the north.

1444. You do not think it has gone in the direction of the bar? No.

1445. You are of opinion that the extension of the northern breakwater would have the effect of deepening the bar? Yes.

1446. What is your objection then to the construction of the northern breakwater? I do not object to it.

1447. Would it cause a serious difficulty for ships entering the port by contracting the entrance? No; I do not think it would.

1448. *Mr. Chanter.*] Have you had any experience of the "chow-chow" water? I do not know what that means.

1449. A gentleman of experience gave that name to a dangerous swirl in the water which extends for a considerable distance north of the southern breakwater;—have you experienced any difficulty in entering the port through the rudder not working? Not through a swirl off the southern breakwater.

1450. Have you got into an untrue sea there? Not caused by the breakwater. When you come into shallow water the sea is untrue, and that is why the rudder will not act. If you come down to the bar on the top of the sea the sea will run you along, and the rudder is no use whilst that lasts. But once you drop into the ordinary sea your helm acts directly.

1451. You would enter between the end of the southern breakwater and the bar? Yes.

1452. You would not go north of the bar? You could not go between the bar and the Oyster Bank.

1453. Would you recommend the extension of the southern breakwater in the same line as at present, or would you suggest a deviation to the south? No; I am of opinion that it should go in the direction it is now. If you turn it towards the south you lose the object of the breakwater. If you turn it to the south it splits the sea, and you will get as much on the northern side as you will on the southern side.

1454. Then you do not think it is desirable to split the sea? No; it is no good.

1455. You heard the evidence given by Captain Anderson; what would you suggest as a foundation for the breakwater? I am not prepared to give an opinion in reference to that. It is an engineering question.

There

There is no doubt it will take some very heavy blocks to make the southern breakwater, and they should be put in as quickly as possible. There should not be time lost by a vote of £10,000 being granted at one time and refused at another, because if the work were carried on intermittently the breakwater would be destroyed during the intervals when the work was not proceeding. Sinking old vessels is all very well, but I do not think you could get many engineers to agree to the sinking of old vessels to make a breakwater.

Capt.
W. Adams.
17 April, 1895.

1456. You heard the evidence of Captain Anderson, that if the northern breakwater were extended it would increase the range in the harbour? I do not think so. There has been a heavy range in Newcastle harbour ever since I have known it, irrespective of the breakwater being made there. It is only in very extreme weather that there is any range in the harbour.

1457. Looking at the position of the suggested wave-traps, do you think that if the velocity of the current was increased those wave-traps would not have the effect of checking the sea before it could enter the harbour? I think so.

1458. If the flood-water were confined within the two breakwaters, would the velocity of the current be sufficiently increased to scour the bar? I think it would. I do not mean the flood-waters only, but the ordinary flood and ebb tide.

1459. If the northern breakwater was not constructed as proposed, would not the waves have a freer course on the bar, taking it northward? Very likely; but there is as much turmoil there now as there would be then. If the breakwater were carried out there would be very little difference in the turmoil on the bar.

1460. You do not offer any opinion as to what the effect of the northern breakwater would be, but you prefer to see the southern breakwater extended? Yes.

1461. *Mr. Hayes.*] You are aware that the bar is steadily shoaling up? I do not know.

1462. If we have the evidence of the Harbour-Master to that effect, I suppose you would agree with that? It is only he and the engineers who ought to know.

1463. We have evidence that the bar is steadily shoaling from the "Cawarra" buoy down towards the southern breakwater;—are you aware that since the extension of the northern breakwater the bar has been taken seaward about 800 feet? I am not aware of it.

1464. By sending the bar into deeper water the break of the sea would be lessened, would it not? The deeper you make the bar the less break there will be.

1465. Then the bar would be very much easier of access? The depth of water is required for getting out rather than going into the harbour. It is in going out that they find the difficulty.

1466. The object of the northern breakwater was to deepen the channel? It cannot make the entrance to the harbour any safer, but it may have the effect of deepening the channel.

1467. From your experience, since the northern breakwater was extended to its present position, it has confined the flow of the ebb tide at Stony Point? Yes.

1468. From there the tendency of the water is to go to the north? Yes.

1469. And by the time it reaches the bar the strength of the current is lessened? Yes.

THURSDAY, 18 APRIL, 1895.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.
The Hon. WILLIAM JOSEPH TRICKETT.
The Hon. JAMES HOSKINS.
The Hon. JOHN DAVIES, C.M.G.
The Hon. CHARLES JAMES ROBERTS, C.M.G.

JAMES HAYES, Esq.
JOHN MOORE CHANTER, Esq.
CHARLES ALFRED LEE, Esq.
JAMES GORMLY, Esq.
EDMUND WILLIAM MOLESWORTH, Esq.

The Committee further considered the proposed Harbour Improvements at Newcastle.

Edward Fisher Pittman, Esq., Government Geologist, Department of Mines, sworn, and examined:—

1470. *Chairman.*] What are you? Government Geologist.

E. F. Pittman,
Esq.

1471. Have you a knowledge of the coal measures at Newcastle? Yes.

1472. *Mr. Lee.*] I should like to obtain some information as to the probability of the continuance of the output of coal at Newcastle and the surrounding districts;—have you any statement in detailed form? I can give you some information about the Maitland district; but, as regards the Newcastle district, I would suggest that the Committee should examine the Examiner of Coal-fields, because there is a pretty general belief that to a large extent the Newcastle seams have been worked out. I could not say how long they are likely to last. I have made some calculations in connection with the Maitland seams.

18 April, 1895.

1473. I shall be glad if you will confine yourself to the area with which you are acquainted? A good deal of the information which I have here has been derived from the observations of another officer, even as regards Maitland.

1474. But an officer who is in the Department? Not now. Professor David is the gentleman to whom I refer. I understand that he has given evidence before a previous Committee on the same question.

1475. Would the information be on the records of the Department? To a certain extent. I have gone into the matter with Professor David.

1476. Will you give us the information in your own way? I have made a calculation about the area of the coal lands south and north of the Hunter River. The Greta seam varies in thickness from 10 to 40 feet. For the purposes of this calculation I have taken it at an average of 15 feet. That is the mean thickness of the Greta seam in the Maitland District. Taking the specific gravity of the coal, I have calculated that there would be a gross yield of 23,306 tons per acre, or 14,915,840 tons per square mile; but allowing for waste in getting, and also allowing for faults and rolls in the seam—that is to say, deducting one-third—the net yield would be 15,538 tons per acre, or 9,948,898 tons per square mile.

1477. Would that be within the area that has been prospected to prove the coal? Yes; there has been a complete geological survey made of the whole of that district. I find that the area of the Greta seam,

E. F. Pittman, seam, south of the Hunter River, is 73,600 acres, and the gross yield of that area at the rate of 23,306 Esq. tons per acre would be 1,715,321,600 tons, or, making an allowance of one-third for waste, and for rolls and heaves, the yield would be 1,143,547,734 tons—that is, above a depth of 3,000 feet. Then there is 18 April, 1895. an area north of the river between Rix's Creek and Ravensworth. There were two bores put down at Ravensworth, and one of them gave a series of coal-seams having an aggregate thickness of 45 feet. The other one gave about 15 feet of workable coal. To be on the safe side, I have taken the mean thickness of those seams at 15 feet also, although in one bore of 45 feet was shown. The area which I have taken, which is certainly regarded as the minimum area, is 10 miles by 5, or 50 square miles, which at 14,915,840 tons gross per square mile would yield 745,792,000 tons of coal, or allowing one-third for waste and rolls and faults, the yield would be 497,194,667 tons of coal. These last yields I speak of would be above 2,000 feet in depth.

1478. Would they not be beyond a workable depth at a profit? The Coal Commission that sat in England for some years, composed of the leading experts of England, in making calculations as to the probable duration of the British coal-fields, took in everything at a depth of less than 4,000 feet. The following is the total weight of the coal, allowing for waste—that is two-thirds of the gross weight capable of extraction in the Maitland district, including the area south of the Hunter, and the area between Rix's Creek to Ravensworth, viz., 1,640,742,401 tons, which divided by the average output of the Newcastle and Maitland districts for the last ten years, which I have obtained from the Annual Report of the Department of Mines, namely, 2,362,031 tons, would give a duration of the Maitland coal-seams as 694 years, assuming, of course, that the output would always be the average of the last ten years.

1479. Do you know the direction in which the coal is taken—is it to the port of Newcastle or inland? It is mainly taken to the port of Newcastle.

1480. Therefore, the continuation of these seams of coal would mean the continuation of the port of Newcastle? Yes.

1481. There are other coal measures beyond the points already referred to? Yes.

1482. Possibly they would not come within the influence of the shipping? I think the freight would prevent that.

1483. Could you give the Committee any information with regard to the mineral productions of the north, and their ordinary port of shipment? There is a certain amount of antimony brought down the line to Newcastle; but I do not know what quantity.

1484. The north and north-west country is a large mineral-bearing district, is it not? Yes.

1485. Much of it would find its way to the seaboard? Yes. There is one thing which I think it only fair to mention, and that is that if this coal at Sydney is really opened up, I think it will affect the coal trade of Newcastle very much.

1486. The Cremorne Colliery? Yes.

1487. By the shipment of Cremorne coal to foreign parts? I think it would be largely used for steam purposes.

1488. Yes; but so far as shipment to foreign ports is concerned? I think it would be used for shipment to foreign ports.

1489. You are aware that the largest part of the shipment from Newcastle is to foreign ports? Yes.

1490. Do you think that Cremorne would affect that? I do not think it would affect the shipment of bituminous coal; but it is a better steam coal than the Newcastle coal.

1491. If there are half-a-dozen Cremorne mines at work, would not mining have to go on at Newcastle all the same? No doubt it would to some extent.

1492. I presume that the Cremorne coal is not superior to the Newcastle coal? It is steam coal—the Newcastle coal is bituminous coal, which is used for gas-making.

1493. Considering the name that the Newcastle coal has throughout the world, do you think there is a possibility of further developments interfering with a trade of that character? I do not think it would seriously interfere with it, but it would to some extent.

1494. *Mr. Hayes.*] Does the Greta seam extend on to Newcastle? It dips under Newcastle, and we believe it is continuous under Sydney, but at such an enormous depth that it would not be workable.

1495. Would that apply to Newcastle as well? Yes.

1496. I suppose the depth would be over 3,000 feet? Yes; it dips at an angle of 45 degrees between Maitland and Newcastle.

1497. Professor David points out that the Greta seam runs under Newcastle? Yes.

Hon. Alexander Brown, M.L.C., Managing Director, Dalgety & Co., Limited, Newcastle, sworn, and examined:—

Hon. A. Brown, M.L.C. 1498. *Chairman.*] What are you? Managing Director of Dalgety and Company, Limited, and Member of the Legislative Council.

1499. You are intimately connected with the trade of Newcastle? Yes.

18 April, 1895. 1500. You have come here to-day to give evidence with regard to the commercial aspect of the matter? I have.

1501. Are you prepared to make any statement at all in regard to the engineering aspect of it? I should not like to set up my opinion against the engineers in charge of the work.

1502. *Mr. Molesworth.*] You have been intimately associated with the trade of Newcastle for many years? For a life-time.

1503. You have seen all the improvements that have been made from time to time in the port of Newcastle? Yes.

1504. Are you well acquainted with the difficulties of entering and leaving the port with deep draught vessels? Yes.

1505. Will you state to the Committee what are the principal difficulties to be met with at the present time? With the advanced character of the ships we have now, compared with what existed a few years ago, the bar is a great drawback to the efficient navigation of the port, and it is greatly detrimental to the interests of the port. The best evidence I can give the Committee is the information which has reached me from the commander of a large steamer, one that would naturally visit that port for loading coal, which was detained four or five days. For four or five days she was unable to proceed to sea, and when

MINUTES OF EVIDENCE—HARBOUR IMPROVEMENTS AT NEWCASTLE.

when she did go, I am sorry to find that she touched as she went out. That, as you know, is a very serious matter. I have here a letter addressed to the firm with which I am connected. It is from the British-India Steamship Company—the largest steamship company in the world. The commander of this ship writes as follows:—

Hon.
A. Brown,
M.L.C.
18 April, 1895.

To Messrs. Dalgety & Co., Agents, B.I.S.N. Co.,—

Dear Sirs,

I regret to have to inform you that the above vessel has now been detained four days owing to the state of the bar or entrance to the port, and in the event of further delay there is every probability of being neaped, thereby involving serious loss to the company unless the vessel is lightered.

I would, therefore, respectfully suggest that some movement be made to remove or improve this obstruction, the vital importance of which must be palpable to the interests of trade.

Yours, &c.,

P. G. WADGE,
Commander.

That letter was written on the 15th April. The ship proceeded to sea on the 16th, and as the pilot was leaving the Captain gave him this letter addressed to the firm:—

Messrs. Dalgety & Co., Agents, B.I.S.N. Co. (Ltd.),—

Dear Sirs,

I regret to inform you that while proceeding to sea to-day, in crossing the shallowest part of the bar, three heavy rollers came in succession, and the vessel's heel touched the ground slightly. Apparently no damage has ensued.

Yours, &c.,

P. G. WADGE,
Commander.

I need not tell you that it is a serious drawback that a ship drawing 23 feet of water should be detained four days, and then when going out should strike on the bar, which will necessitate her being repaired, probably at a very great expense. Another thing which I may mention is that when ships are lying at the wool wharf a range comes in there which causes very great anxiety. They have to fender their ships which ride very uneasily and give the commanders a great deal of trouble and anxiety. It is a serious thing to the owners to have ships worth £80,000 or £100,000 each ranging backwards and forward at the wharfs at the imminent risk of being destroyed. It is not surprising that under such circumstances the owners should not care to allow their ships to enter the port. Only recently one of those large steamers—the "Damascus"—grounded in the port with the result that when she went home she had to be docked and repaired at a cost of £1,000. The owners wrote out asking that something should be done to provide deeper water in the harbour.

1506. I understand from your statement that there are two points which require attention, one is the depth of water on the bar, and the other is the range of the sea in port? Yes, and the depth of the water generally in the harbour. That requires attention, because every time there is a flood in the river, a great deposit of silt is the result.

1507. That is merely a question of dredging? Yes.

1508. Will you tell the Committee what your opinion is with regard to this proposal? It appears to me that the scheme proposed by the Government is a very good one. I am not prepared to express any opinion as to the probable effect of the extension of the northern and southern breakwaters.

1509. What has been the effect of the erection of the southern breakwater? It did a great deal of good in regard to the range in the harbour, and it enabled ships to enter the harbour much more safely. Before the southern breakwater was built ships could not enter this port during the night.

1510. The evidence, given by the Department, is that the bar, which you see there marked on the plan, has followed out the extension of the southern breakwater, that from being at one time level with Nobbys, it has shifted out a considerable distance? Yes.

1511. The object is to remove the bar still further seaward? I think the works are likely to have that effect.

1512. The evidence of shipmasters has been to the effect that the extension of the southern breakwater will be more effectual than the extension of the northern breakwater? I should think that the sooner a navigator gets into smooth water, out of a heavy sea, the better for him, and the extension of the southern breakwater would produce that result; but I cannot see that it would make the scour any better. I cannot see how you would improve the scour unless you extended the northern breakwater as well.

1513. You think that to make a scour the northern breakwater ought to be continued as well as the southern breakwater? It appears to me that they ought to be extended almost equally, with the exception that one should be longer than the other, just as they appear on the plan.

1514. What was the state of the weather when the large steamer to which you refer was detained? There was a strong south-east gale, and a heavy sea was running.

1515. Had there been smooth water there would she have been able to go out without difficulty? Yes.

1516. The vessel would not have so much water under her keel as she ought to have had in heavy weather? That was it.

1517. Can you give us any idea as to the extent of the rise and fall of the range at that time? Seven or 8 feet.

1518. If it had been smooth water what would have been the depth on the bar? I suppose about 27 feet at high-water.

1519. The real difficulty is in not being able to get it deep enough for rough weather? Yes.

1520. Have you any idea how much it should be deepened to make the entrance available for all weathers? I should think we should want at least 3 or 4 feet more water under the keel of a large ship. In smooth weather they cannot get more than 23 feet, and they cannot go to sea at all in rough weather. A ship arrived the other Sunday having a draught of 24 feet 6 inches, and the harbour authorities have intimated that she can only load to a depth of 23 feet, so that she will have to go away short of cargo by some hundreds of tons.

1521. *Chairman.*] What ship is that? The "William G. Davis," an American ship.

1522. *Mr. Molesworth.*] The Harbour-Master has given notice that she has only to load to a depth of 23 feet? Yes. It used to be 21 feet 6 inches, until circumstances compelled the authorities to take a little more responsibility than they used to do. I think that most pilots do not take enough responsibility. They get well on the safe side. They do not like to take in charge ships that are likely to touch the bottom. In the

Hon.
A. Brown,
M.L.C.

the case of this ship "Vadala," the pilot said, "I will do the best I can; but if you are going out you must take the risk that she may touch if she goes," and the master had to accept the responsibility, and went out.

1523. What do you consider is a sufficient depth of water at the entrance in smooth weather? I should think about 2 feet under the ship.

1524. You do not think that anything less than that would suffice? No; and they ought to go out at high tide.

1525. Your firm is agent for some large London steamers that visit Newcastle occasionally to take wool—the White Star Line? Yes.

1526. Are any of them in port at present? Yes, the "Australasian." She is in Sydney to-day.

1527. It would be advisable for us to examine the captain? Yes; he will be a very good man to get.

1528. Have you any knowledge of wave-traps? No. It seems to me that if they can catch the waves it will be better than letting them come into the harbour to tear the ships to pieces at the wharfs.

1529. *Mr. Chanter.*] You have had a very large experience of Newcastle? Yes.

1530. Can you say whether the port has been progressing or retrograding? It has been progressing. It could not have been more substantially progressive than it has been. From being a small place thirty years ago it has become an important place for the export of all sorts of commodities.

1531. I suppose coal is the principal article of export? No; the value of the wool exported is greater than that of the coal. Newcastle is the natural outlet for a tract of country, I suppose, 300 miles north and 100 miles west. There is no tract of country similar to it in Australia.

1532. Is it not a fact that a considerable portion of that wool which has to be loaded in these very deep ships is sent to Sydney and loaded here? A large proportion of wool finds its way into the hands of Sydney merchants, so that they can get their charge out of it; because the Sydney merchants control it, and the unfortunate producers are obliged to send it to Sydney. If the producers were independent they would ship their wool at Newcastle.

1533. Under the circumstances, would the vessels to which you have referred go to Newcastle, but for the wool? Of course they would.

1534. What would be the greatest depth of those ships? Twenty-two feet, 23 feet and 24 feet when loaded.

1535. Does the "Vadala" draw 24 feet? Yes; but she loaded coal, not wool.

1536. Will you tell us the different class of products that are exported from Newcastle? Coal, wool, tallow and hides of all kinds, antimony, tin, and frozen meat.

1537. Of all these which would bear the greatest proportion? Coal. I should think that half the export would be coal.

1538. According to the evidence given at Newcastle, the value of the imports and exports has diminished? I suppose that would be owing to the difference in the market price. The price of coal now is 6s. 6d. and 7s. a ton, as against 10s. and 11s. a ton, the price formerly.

1539. Has the tonnage decreased? I should not think so.

1540. Has there been any tendency on the part of your clients to open up a trade with the port with larger vessels? No; the ships they have now are suitable for the trade. The tendency of the mercantile marine is to enlarge the vessels. The building of the "Great Eastern" was considered a piece of madness at one time, but now they have immense ships running across the Atlantic. Ten years ago, 2,000 tons was considered a big cargo at Newcastle, now the ships take 4,000 and 5,000 tons.

1541. You spoke about frozen meat. Is there a tendency to largely increase the export of frozen meat from the port of Newcastle? There is. There is no place better suited for that kind of business than Newcastle.

1542. It would be part of the exports drawing its supplies from a large area of the Colony? Yes, from a large area in which one-third of the wool and the produce of the whole Colony is obtained.

1543. Could you give the names of the persons at present engaged in developing that industry? The Graziers' Meat Export Co., just started. They are looking for suitable land on which to erect warehouses in Newcastle. The Newcastle Australian Chilling Co., send large quantities of frozen meat from Newcastle. The freight from the Aberdeen works to Newcastle is 110 miles less than it is to Sydney.

1544. Then in your opinion that trade is likely to be very largely augmented? My opinion is that Newcastle with its resources at its back, if it were another 100 miles away from Sydney, would be a larger port than Sydney to-day.

1545. Do you think that the development of the coal industry at Cremorne would affect the trade of Newcastle? I do not.

1546. Even if the mine at Cremorne were opened up, you think it would not interfere with the Newcastle trade? It will not interfere with the foreign trade at Newcastle, but it will take some of the local steam coal trade, if it is developed.

1547. Although you say you do not care about expressing any definite opinion, as to the engineering aspects of the question, you must have had many conversations on the subject with those trading to the port? Yes.

1548. Can you tell the Committee what is the general opinion in regard to the suggested improvements? I think it is generally favourable to these proposals, as a whole.

1549. We have had evidence to the effect that the extension of the southern breakwater alone would be sufficient to give a free entrance to the harbour? I can understand that, it will make the navigation of sea-going vessels trading on the coast more satisfactory, but whether it would scour the bar, is quite another thing.

1550. One witness told us that the extension of the two breakwaters would have the effect of increasing the roll, and would make the sea come with greater force into the harbour? I should not think so.

1551. Do you recollect the port when the Stockton Point was in existence? Yes.

1552. That has been removed since the erection of the northern breakwater? Yes.

1553. Have you heard any opinion as to what effects a further extension of that breakwater would have? I prefer the Departmental scheme.

1554. It has been stated that a meeting of the flood waters and the waves would have the effect of increasing the bar by stopping the current? I do not believe it.

1555. You say that there is a considerable range when there is a south-easterly gale? Yes.

1556. Has it been of any very serious character? It was at one time, until they took out the southern breakwater, especially along the Queen's wharf. It is now comparatively smooth for ordinary ships, but for those large ships that lie aground there it causes much trouble.

1557. You think the further the breakwater is extended, the more it will decrease the range? Yes.

1558. Do you think the coal seams in the Newcastle district will last for any length of time? It will be a long time before the coal is worked out in the Newcastle district. Mr. Croudace may have said that the first-class coal will not last very long. We have simply been working the very best coal, but there are seams of coal that would be considered first-class that have never been touched. The visible area of first-class coal is not very extensive, but the question of the coal being worked out for years to come is entirely another thing.

1559. The commerce of the district is bound to be maintained? Unquestionably.

1560. And probably increased? Yes. So much so that I had something to do with a Harbour Trust Bill which was advocated some time ago, and we proposed in that Bill to pay the Government back all the money that they had ever spent at Newcastle on their handing over the port to us and allowing us to deal with it ourselves. I should be delighted if that were done to-morrow.

1561. Any scheme that would have the effect of securing the safety of ships entering and leaving the port, would increase the output of coal? There is no doubt about it.

1562. *Mr. Hayes.*] Have you received any intimations from shipping companies that unless the entrance to the harbour is deepened they are not likely to send their vessels? I have.

1563. Then, in your opinion, if the trade of Newcastle is to be carried on, it is absolutely essential to give deeper water at the entrance? Yes; to make the entrance safe.

1564. We have evidence that the bar is now 800 feet further out than it was when the northern breakwater was made? I do not doubt it.

1565. The result of the extension has been to send it out seaward? It must be so. It is not long since a vessel drawing 20 feet of water struck on the bar in going out. A ship called the "Eastern Light," drawing 19 or 20 feet struck on the bar, and had to go into the port of Sydney and discharge.

1566. It has increased the depth of the water there? Yes.

1567. Therefore, it is almost certain that if the northern breakwater is further extended it will carry the bar into deep water? I think so.

1568. If the southern breakwater is extended will it prevent the roll from Big Ben from coming into the harbour? I think so.

1569. And it will generally improve the entrance to the port? Yes.

1570. We have had a deal of evidence from masters of vessels that the extension of the southern breakwater will be sufficient? It is sufficient for purposes of navigation.

1571. And for the deepening of the bar? I do not think so. It will suit masters of light draught ships, because the sooner they are in smooth water the better.

1572. *Mr. Humphery.*] What is the greatest draught of any vessel up to this day that has entered the port of Newcastle? I have heard that vessels have gone out drawing 23 feet 6 inches; but as a rule they do not exceed 23 feet. Even then it is a concession on the part of the authorities. When a shipmaster arrives with a vessel drawing over 23 feet of water he consults the harbour authorities, and they tell him that he can load to a certain depth.

1573. We have been told that if the southern breakwater were extended a few hundred feet the water on the bar during heavy weather will be less disturbed than it is at present, the result being that the smooth water would give 3 feet more under the bottom of the vessel;—what is your opinion? It might do that; but I would rather see the bar deepened by the natural scour.

1574. Assuming the extension to take place and that effect to be the result, would it not enable vessels drawing more than 23 feet to leave the harbour in safety? I would not say anything to the contrary if the extension of the breakwater really lessened the waves. I had a chat with the master of a British India steamer who has been all over the world, and he thought the proposal to get a scour on the bar was the best thing possible, so as to let the water naturally do all the work for itself.

1575. *Mr. Trickett.*] Are you interested in any coal-mines? I am.

1576. Are they profitable? I cannot say that they are; but we hope they will be some day.

1577. Is not that the general experience at present? They are not working at a profit; but not many years ago the Wallsend mine and others used to divide £80,000 a year on a capital of £100,000.

1578. That sort of thing is past, is it not? It will all come back again within the next eighteen months or two years. As soon as the big men have eaten up all the little men, they will put the price of coal up again.

1579. From your long knowledge of Newcastle harbour, does any other means suggest itself to you of deepening the bar than what is now proposed for creating a scour? No.

1580. It has been suggested by one witness that the bar should be dredged; do you think it would be possible for a dredge to work on the bar? It is an absurd proposal whoever made it.

1581. Do you not think that if the southern breakwater were extended to about double its present distance in a north-easterly direction that would afford protection to the bar, and make it safe enough in calm weather for dredging to be carried on? I do not think so.

1582. It would not be safe? I do not think it would.

1583. *Mr. Davies.*] I gather from your answers that you approve of the Departmental scheme? I do.

1584. If the northern breakwater is extended a scour will be created sufficient to remove the bar? Yes.

1585. And give a greater depth of water? Yes.

1586. Suppose the works were carried out and ships of greater draught were able to come into the port, where would you be able to berth those ships? They would have to remain at their loading berths until they could go to sea. They cannot berth all over the harbour.

1587. There is no place in the harbour for mooring large vessels when they are loaded? They could make a place in the Horse Shoe.

1588. So that if the works are carried out they will be able to proceed with the dredging in order to have a proper place to moor vessels when loaded? I am sure of it. I wish we had the local management of the harbour ourselves; it would go ahead quickly enough.

1589. Do you favour the carrying out of the proposed reclamation works along the Stockton side? Certainly. Why they take the silt to sea I cannot understand.

Hon.
A. Brown,
M.L.C.
18 April, 1895.

Hon.
A. Brown,
M.L.C.

18 April, 1895.

1590. You are aware that for sixty days in the year they are not able to get out of the harbour with the silt? I do not doubt it.
1591. If they dredged that portion of the harbour, they would be able to work at all times of the year? Yes; and they could reclaim land worth thousands of pounds which would make a splendid asset.
1592. And it would be the means of contracting the channel and making a scour? Certainly.
1593. You advocate that in conjunction with the proposed works that work ought to be carried out? Yes. I have asked how they ascertain when the punts are full of stuff. They work away day and night, and the punt gets full of water, and if a man makes twenty trips, he says he has taken so much stuff away, but he may not have taken half that quantity. If the stuff is used for reclamation work, you can see what he is doing.
1594. And the expense of haulage would be reduced by 1½d. a ton? Unquestionably. I know that the dredge service is one of the most costly things that we have in the public service. The wages bill of one of the dredges is larger than that of one of the Orient Company's big steamers.
1595. You believe that a great saving might be effected if a wall were erected on the Stockton side, and all the silt raised in the harbour were deposited on the proposed reclamation ground? I think it would be a great saving.
1596. And of very great service to the harbour? No doubt.
1597. Do you favour the extension of the southern breakwater beyond what is proposed by the Department? I should not have the slightest objection to the extension of the southern breakwater, because of the valuable service it has rendered already.
1598. You would extend it some 300 or 400 feet further? Yes.
1599. Would you advocate the construction of the whole of the northern breakwater? I should like to see it carried out to the point marked on the plan as an experiment.
1600. You are strong in your conviction that it is necessary to create a scour? Yes.
1601. You are aware of the position in which the old bar was situated before the extension of the present northern breakwater? Yes.
1602. Do you think the Department is correct in saying that the northern breakwater has been the cause of the bar being removed some 800 feet out seaward? I think so.
1603. Then you think that if the northern breakwater is further extended it would remove the bar out to sea? I do. If the bar is so hard that it cannot be removed by the scour, it will have to be blasted the same as Hell's Gate at New York.
1604. You believe that the proposed works are works of necessity for the port of Newcastle? Yes; if we had a harbour trust, and I were a member of it, I should recommend that the proposed works be carried out.

Captain William Austin Knowles, master mariner, Sydney, sworn, and examined:—

Capt. W. A.
Knowles.

18 April, 1895.

1605. *Chairman.*] What are you? A retired master mariner.
1606. Have you had a long experience of the port of Newcastle? Yes; I have traded there for over fifty years.
1607. In various commands? In various capacities.
1608. Do you understand the scheme before the Committee? I do; thoroughly.
1609. *Mr. Chanter.*] What was your latest command? The "Namoi."
1610. How long were you in command of the "Namoi"? Nearly eleven years.
1611. When did you cease to command the "Namoi"? I was in command of steamers of the Hunter River Company for twenty years, until the 27th of last February twelve months.
1612. When did you retire? Twelve months the 1st of last March.
1613. You were in command of vessels running to that port before any improvements were effected in the Newcastle harbour? The first time I went in to the Newcastle harbour I went through the old channel, between Nobbys and the main land. That was on the 1st August, 1838.
1614. Will you explain what the effect of the first improvements there was? At that time no vessels could lie out opposite Stockton in rough weather. The range was so great that they had to go further up the river.
1615. When the breakwater was extended could they lie in the Horse Shoe? The vessels used to roll very much until the southern breakwater was extended from Nobbys seaward. As that extension went out the vessels became easier and easier in the port.
1616. From what point would the seas rolling in create a disturbance in the Horse Shoe? From the south-east.
1617. Then the southern breakwater extending north-east has had the effect of diminishing that roll in the harbour? Yes.
1618. A portion of the southern breakwater has been washed away. Can you tell the Committee whether the disturbance in the harbour has increased since that happened? Not to any extent. What has been washed away has merely consolidated the thing in my opinion.
1619. We have been told that since that portion of the breakwater has been washed away a very great swirl, making what is called "chow-chow" water has been caused;—have you had any experience of that? I have seen no material alteration in it since the end of the breakwater has been flattened out, and I have been running there continually since the first starting of the breakwater. I saw it grow inch by inch, and I found that the further the breakwater was extended the deeper water we got on the bar, and the more easily ships entered the port.
1620. What is your opinion as to the position of the present southern breakwater, and the proposal to extend it still further seaward? The further you extend it seaward, the better shelter you will have for ships in Newcastle harbour.
1621. Will it render the entrance more safe? Yes. In my young days the bar extending from Nobbys was supposed to be rock. We could not get an anchor to hold there. In 1854 we let go an anchor, but the anchor broke and we went away to sea, and we were three weeks before we got back to Newcastle.
1622. How do you account for the bar being removed? It is owing to the scour being increased by the extension of the southern breakwater, which stopped the sea from breaking, and carried the silt back into the channel.

1623. Is that due to the extension of the southern breakwater, or is it partly attributable to the construction of the northern breakwater? There was no sign of the bar altering after the northern breakwater was constructed, until the southern breakwater was commenced. Then it was evident, as every few yards of the breakwater was made, that the original bar was going away.

Capt. W. A. Knowles.
18 April, 1895.

1624. You attribute that to the construction of the breakwaters north and south of the entrance? I was against the northern breakwater ever being constructed at all.

1625. What is your opinion now as to which has had the greater effect? The southern breakwater has had the greatest effect. If you contract the channel you will have a tidal wave rolling in. At present the seas run across the harbour, not into it. There is a difference in the range at the wharfs now—a material difference at the time of flood and ebb tide. I have had to let go from the steamers' wharf with the "Namoi," and run up the northern channel to save her from being torn to pieces.

1626. Was it an extraordinary gale on that occasion? It was so extraordinary that I would not go to sea.

1627. Will you indicate the direction of the current at present? It crosses from the north-eastern corner of the northern breakwater, and comes in a southerly direction, passing by the lightship towards the boat harbour. That carries the wave, or what we call the run of the wave, along the Queen's wharf, and that is what makes the ships ride so uncomfortably there.

1628. What is the direction of the current from the river, especially during heavy floods? It comes down along the dyke, crosses to the boat harbour, then goes along the walls to seaward.

1629. Does it trend towards the north or towards the south going to seaward? The greater portion of the current towards the end of the breakwater will be about mid-channel.

1630. Will it strike with greater velocity down at the northern point of the northern breakwater? After it rounds Stockton Point, it goes about mid-channel. The debris coming down the river generally lands on the western side of Stockton Point, in the vicinity of the wave-trap.

1631. The current then takes as nearly as possible the mid-channel course? Yes.

1632. You are aware that the position of the bar is now very materially altered from what it was before the construction of the breakwater? Yes.

1633. What is your opinion as to the proposals of the Department;—would it be best to extend the southern breakwater a considerable distance, and not to extend the northern breakwater so much as is proposed? I would extend the southern breakwater as far as I could out in a line with Big Ben. It would be almost useless to extend it beyond Big Ben, because there would be nothing to prevent the sea from carrying away the end of the breakwater in heavy gales. But the work to the south of Big Ben should trend towards the north, and the breakwater running north-east would make a kind of slide for the sea. But if you extend it beyond those rocks, it will get the full force of the ground-rolls.

1634. You will find that the position indicated on the plan is about parallel with the Big Ben Rock? Yes.

1635. Do you say that any further extension beyond that point would not be advantageous? Not beyond Big Ben.

1636. In what direction would you propose the extension of the southern breakwater? In a line with its present position.

1637. You would not give it a curve to meet the heavy rollers from the south-east? No.

1638. If the southern breakwater is extended, so as to be in a line with Big Ben, will that have the effect of breaking the seas, or of increasing the depth of water on the bar? I believe it would.

1639. By how much? That must be decided by the extent to which the southern breakwater has increased the depth at present.

1640. When these heavy south-eastern seas are rolling; is not the water very much disturbed upon the bar? Yes.

1641. If the southern breakwater is extended, would not that disturbance be materially decreased? It would make it smoother.

1642. In a gale of that character what would be the height of the wave-roll over the bar? It looks a great deal; but still it is not what it looks.

1643. If the roll were absent and the water smooth, how much deeper would be the water, and how much more would there be under the vessel? It would be a puzzle for any man to say.

1644. Will you relate shortly your experience of entering the harbour, and tell us the most dangerous position you have ever been in? I have gone in there in some critical positions.

1645. What is the danger in rounding the southern breakwater? I always made it a rule to round the southern breakwater as closely as possible—as closely as prudence would permit.

1646. How closely? Say, within about 150 or 200 feet. I have come round 200 feet off in a heavy gale. I had to haul short up, and the ship had her broadside on, and was driving across towards the Oyster Bank. Many have had very narrow escapes, and just cleared in time. I have been close to it.

1647. If the southern breakwater were extended, would it not have the effect of driving vessels to the northward, and more particularly towards the present bar? If the breakwater were carried further out it would give you more room to haul up.

1648. Would you not have to make a considerable tack to get round again between the present bar and the extended breakwater? No; she would come short round it.

1649. Do you think that if the northern breakwater were extended it would create a scour, and remove the bar further seaward? No doubt it would, but the question is would the bar shoal up. If the northern breakwater is extended it would divert the natural roll of the sea down the channel into the harbour.

1650. What effect would it have on the outgoing current? The sea would break further out, and go across in deeper water. If the northern breakwater was not there as the southern breakwater was extended, there would be deeper water, and you would come into smooth water more quickly.

1651. You see on the plan that provision is made for wave-traps? I have had no experience of wave-traps, and I should not like to express an opinion about them.

1652. Am I to understand that whilst you favour the extension of the southern breakwater, you think that the construction of the northern breakwater would have the effect of diverting the natural roll of the sea? Yes.

1653. Therefore, you recommend that the northern breakwater be not constructed? I would leave it as it is. The bar has shifted and the channel has deepened some 8 or 9 feet since the extension of the southern breakwater.

- Capt. W. A. Knowles. 1654. Do you think that that deepening process would be continued by the still further extension of the southern breakwater? I do.
- 18 April, 1895. 1655. By the natural force of the current? Yes.
1656. Without the assistance of the northern breakwater? Yes.
1657. *Mr. Hayes.*] The strength of the current now runs from the boat harbour, and down to a point north of Stony Point? Yes.
1658. When it passes that point does not a large portion of the current go away to the north around Stockton Beach? The strength of the current runs about mid-channel. It has a slight tendency after you get to the end of the breakwater to divert itself along the North Stockton Beach.
1659. Does not the current steadily decrease as it goes out seaward, after passing Stony Point? Yes; naturally.
1660. Therefore, it is more likely to deposit the silt at that point? As regards the currents I have been guided by the drift-wood coming down in heavy floods.
1661. Do you not think the scour would be materially increased if the northern breakwater were extended? I do not think so. I am guided by what has been done by the extension of the southern breakwater.

FRIDAY, 19 APRIL, 1895.

Present:—

THOMAS THOMSON EWING, Esq. (Chairman).

The Hon. WILLIAM JOSEPH TRICKETT.
The Hon. JAMES HOSKINS.
The Hon. JOHN DAVIES, C.M.G.
The Hon. CHARLES JAMES ROBERTS, C.M.G.
JAMES HAYES, Esq.

ROBERT HENRY LEVIEEN, Esq.
JOHN MOORE CHANTER, Esq.
CHARLES ALFRED LEE, Esq.
JAMES GORMLY, Esq.
EDMUND WILLIAM MOLESWORTH, Esq.

The Committee further considered the proposed Harbour Improvements at Newcastle.

Hugh McLachlan, Esq., Secretary to the Railway Commissioners, sworn, and examined:—

- H. McLachlan, Esq. 1662. *Chairman.*] What are you? Secretary to the Railway Commissioners.
1663. You are aware that the works under consideration are for the improvement of the Newcastle harbour? Yes.
- 19 April, 1895. 1664. Have you a knowledge of the traffic at the Newcastle harbour, and on the railway there? Yes; on the railway.
1665. *Mr. Hayes.*] Do you know the rate which the Commissioners get for the haulage of coal to the cranes at Newcastle? Yes.
1666. What is the amount? The minimum amount is 6d. a ton, for a distance under 1 mile; over 1 mile and not exceeding 4 miles, 9d.; over 4 miles and not exceeding 7 miles, 10d.; over 7 miles, and not exceeding 10 miles, 11d.; over 10 miles, and not exceeding 12 miles, 1s.; over 12 miles, and not exceeding 14 miles, 1s. 1d.; over 14 miles, and not exceeding 17 miles, 1s. 2d.; and so on. That would cover the principal shipments from the collieries.
1667. What does it cost you to ship coal at the cranes;—is that done by contract? The actual movement of the coal into the ships is done by contract.
1668. At what rate per ton? The present price for handling, I think, is, 1½d. per ton. That is merely for moving it to the shipping.
1669. Do the Commissioners keep the cranes in order, and do they supply the water required for the pumping station? Yes, we pay for water.
1670. Can you give any information as to cost of that per ton? Yes. I may say that the total shipments last year at Newcastle—the total quantity of coal carried from the collieries—was, 1,728,000 tons. That may be taken to be the quantity shipped; it was the quantity carried from the different collieries. What we call the terminal charges—that is, the cost of shunting, cost of signalmen, of overseers, the cost of wharfingers, and the cost of handling, the cost of repairs, and interest on the money spent there—was all worked out some time ago, and the terminal charges come to about 5½d. per ton on the whole quantity.
1671. The actual cost to the Commissioners was about 5½d. for the terminal charges, which includes the shipping of the coal? Yes.
1672. *Chairman.*] Is that based upon the interest of the work, and the services rendered? Yes.
1673. Taking into consideration the harbour works? Not the whole of the harbour works; simply the hydraulic cranes, the engine-house, and the sidings that were laid in.
1674. *Mr. Hayes.*] The actual cost came to 5½d. per ton? Yes.
1675. In reference to the haulage, what profit is derived from that? The average earnings of the coal in the Newcastle colliery district last year came to 10½d. per ton, and the actual distance hauled was practically 11 miles; so that if you subtract the terminal charges, amounting to 5½d., it leaves 5d. for an average distance of 11 miles, and as we have to run in and out, running one way empty, you practically get 5d. for 22 miles' running.
1676. Can you say what percentage of profit it gives, after allowing for working expenses and interest on the line? There certainly would be no surplus.
1677. It would not pay anything beyond that? No.
1678. At what rate of interest? We consider 4 per cent. on the cost of the sidings and hydraulic cranes.
1679. Then, practically, your reply would be that the cost of the services you render in taking the coal out for shipment, the terminal charges, gives nothing more than 4 per cent. on the working expenses, and 4 per cent. interest on the capital? I do not know whether it would do that if you consider all things.
1680. Would it not do more? No, it would do less. That 4 per cent. has simply been considered in connection with the terminal charges. That leaves us about 5d. for running expenses. Those running expenses are over the railways which have cost a certain sum, and have to be maintained. We did not fraction it out for the actual coal traffic over the main lines, the cost of station buildings, the cost of the permanent-way, the cost of engine-rooms, and so on. If you worked it out you would find it would not pay 4 per cent. There is no surplus profit on the working.

1681. In your opinion there is no surplus profit on the haulage and shipment of coal at Newcastle? No; H.
McLachlan,
Esq.
the figures will show that.
1682. If the Committee have been informed that there was a very large profit made by the Commissioners, a profit of 4d. or 5d. a ton, after defraying all charges, and the interest on the cost of construction of various works, would that be correct? I cannot see where we should get it. The average earnings per ton of the whole of the coal is only 10½d. for the 1,750,000 tons, and 5½d. goes in terminal expenses. That simply provides for running an average distance of 22 miles in and out.
1683. Your 5d. for running charges would average 11 miles loaded, and 11 miles more running empty? Yes; we run 22 miles for that.
1684. You say that it does not cover working expenses and interest on the cost of the line? It certainly does not leave any surplus profit.
1685. There is no profit beyond the mere interest on the cost of the works, and the expenses you have mentioned? No.
1686. Then the statement made that the Railway Commissioners make a very large profit is not correct? No.
1687. If the statement was made that the average amount received by the Commissioners for the haulage and shipment of coal was 10d. a ton, is that correct? That is fairly correct; it is a little over 10d.
1688. And that, allowing for the whole cost of handling the coal, interest on the cost of the works, and other appliances for shipping, will be fairly covered by 6d. a ton? That is not correct.
1689. If 10d. a ton is charged, how do you account for it? That 10½d. is the earnings. I say that out of that you have to take the terminal charges amounting to 5½d., which will leave about 5d. for an average haulage of 22 miles in and out—11 miles loaded and 11 miles empty.
1690. *Chairman.*] Therefore, you account for the whole of the 10d.? Yes; there would be no surplus profit.
1691. For railway services and railway works alone? Yes.
1692. *Mr. Roberts.*] If I have been under the impression, from the information that would reach me, that the Government make a clear profit of 4d. on every ton of coal shipped at Newcastle, is that correct? In my opinion it is not, on account of the facts which I have stated.
1693. Would it be right at first sight to assume that there was 4d. a ton profit? I do not think so.
1694. Where would a person be in error in assuming that 4d. a ton profit was made, supposing he was in a position to get the figures which were in your office? I do not understand a man imagining that. We have contracted for the shipping of coal at Newcastle, but that contract is a mere matter of labour. You may say that it does not include shunting charges, the cost of shunting engines, overseers, wharfingers, and the working of the hydraulic cranes. That is 1½d. per ton. If you take that off it will leave 4d. That is the difference between the two. A person might imagine that the 1½d. is the whole charge, and in that way he might suppose that we were making a profit of the 4d., but that is eaten up by the other charges.
1695. Then there is no profit at all? In my opinion there is not.
1696. You are reckoning interest at 4 per cent.? Yes.
1697. The charges you have quoted would be for putting the coal on board the vessel alongside the dyke? Yes, from the hydraulic cranes.
1698. Your charges do not include pilotage? No; we have nothing to do with shipping.
1699. *Mr. Levien.*] Whose engines are they with which they draw the coal to the mines? They belong to the Department. We have the whole of the working.
1700. Does it include trucks? No; the trucks belong to the colliery owners.
1701. All that you find are the engines, engine-drivers, guards, and firemen? Yes; and the railway.
1702. Do you have a guard to each train? Yes; we could not work without.
1703. Do you know of any place but Greta the running to and return from which makes up a distance of 20 miles? No; our average is 11 miles, which means 22 miles of running. You must run back empty to get loaded.
1704. All that goes back empty is the engine? The engine and the trucks.
1705. Did the Railway Commissioners ever expect that the colliery owners would pay for the conveyance of the trucks back? We do not charge them.
1706. No; but you are making a charge in your calculation? No; our charge, which is a general one, includes that.
1707. What is the cost of a train conveying 500 or 600 tons of coal travelling from New Lambton? We do not get such trains. The average is not half of that.
1708. You can give no account of what it would cost to carry 500 tons of coal from New Lambton to Newcastle to be put on the ships at the dyke? No; we have not worked the exact sectional detail charges out.
1709. There is no real authentic information that the Committee can get as to what it costs the Commissioners to take so many trucks to the dyke and back again? No; it never has been worked out.
1710. How do you come to the conclusion that you lose by it? In this way: We get for running 22 miles over part of our own lines 5d. a ton, and there can be no profit, as we know, from the cost of working. A rough calculation was made before the Commissioners took office in regard to the cost per ton per mile. I do not know if the calculations were strictly accurate, but I think they must have been approximately accurate. I am not aware the Railway Commissioners have attempted to work out the cost per ton per mile. Some years ago it was worked out at Newcastle, and the net earnings from coal was considered to be ½d. per ton per mile without interest. Even at that 10d. you would only have 2d. profit, and that would go to pay interest on the cost of construction.
1711. On that 22 miles what does it cost in the first instance, and what has been the amount of expenditure upon it from that day to this? That has not been worked out except some years ago.
1712. What did it cost from New Lambton to the dyke;—what was the cost of the construction of the line, and what have the Government lost upon it until now? It has never been worked out in detail.
1713. Then how can you come to the conclusion that they are losing by it;—is there anything for repairs? We have lots of other charges. The running of the trucks must cost something even when they do not belong to us.
1714. Can you furnish the Committee with any returns as to the cost between New Lambton and the dyke, New and Old Wallsend and the dyke, the A.A. Company's mines and the dyke, what have been the repairs? It would cost pretty well as much as is earned from the coal for the short run to keep the property in repair.

- H.
McLachlan,
Esq.
1715. Can you tell us the amount of repairs of any magnitude on those lines from their construction up to now the same as you could on the northern and the western lines? We do not keep the expenses on any section of a line separately.
- 19 April, 1895. 1716. Supposing you had to repair the northern line from Newcastle to Maitland, could you not inform the Committee what it would cost for the reconstruction of any portion of the line? No; we do not keep an account of any section separately.
1717. Supposing that between Maitland and Newcastle the line was injured by floods, and had been repaired, could you tell what amount the repairs would cost? Yes; I dare say we could work out an account of that.
1718. Supposing the floods injured the line to the amount of £20,000, you would know what the repairs in that case would cost? Yes; from the books.
1719. I want to know if these lines were injured, and any repairs had to be done from one point to another, whether any account would be kept as to what it would cost, as against each of the coal companies? The private coal lines are kept in order by the companies.
1720. That is what I want to know; what distance from the mouth of the pit, or from where they load the coal, to the dyke at Bullock Island, is the Government line repaired? I could not give the average.
1721. You cannot tell if it would cost £1, 1s., or a farthing for the repair of those lines? No.
1722. Supposing that from New Lambton to the dyke the coal passes over private property, except where it crosses the Government line for a distance of 15 or 16 feet, you cannot tell whether the maintenance of that portion of the line would cost the Government 1s. or £1? I have not the details.
1723. Do you include the distance from the mouth of the pit to the dyke;—do you treat it as a charge against the Department for repairs? No; not anything on a private line.
1724. Make this clear: there is no expense to the Department so far as the line is concerned? So far as the private line is concerned.
1725. The line from New Lambton crosses the Government line at the northern junction, going over it a few feet;—what cost would it be to the Government crossing that line? It would be a very small one.
1726. What is the actual expense of running the engine from New Lambton to the dyke and back again? Of course there are one or two other collieries very close to the dyke; 20 per cent. of the coal comes a very short distance, and for that we only get 6d. a ton, and we pay 5½d. a ton for terminal charges, which leaves ½d. for shunting. There is no great profit on that. Two or three collieries give us 20 per cent. of the coal that comes in for shipment.
1727. What is that 5½d.? It is made up by including the interest on the capital cost.
1728. You are charging on the capital cost for the construction of the line? On the cost of our own line.
1729. But it only crosses the line for a few feet? There is a sum of £83,000 which was spent on sidings at the dyke, which the coal has to go over, and of which it is fairly charged with the interest. The whole is debited against the 1,750,000 tons of coal which is shipped.
1730. That is your principal charge? Fivepence-halfpenny out of 10d. is for terminals.
1731. What do they comprise? The interest first of all on the cost of construction. As regards the cost of the dyke we have a number of shunting engines, two or three, which do nothing else practically but shunt about the dyke. We have wharfingers, overseers, men to work the hydraulic cranes, and other detail charges which all come into the terminals. The detail charges alone come to £23,000 at the dyke.
1732. Can you tell me how this 4d. a ton came to be thought by everybody to be a profit to the Department? The only way that I can imagine that it was is that they might have thought that the 1¼d. per ton for handling was really the whole charge at Bullock Island.
1733. Has any land been made up at Bullock Island which the Government sold to recoup them? I do not know anything of that.
1734. Was all this reclaimed land going to the credit of the Department? No.
1735. The Government get a profit on the sale of the land, do they not? As far as the railways are concerned we have had no profits from the sale of any land.
1736. Are the railways losing by this business? They are not making 4d. a ton. I do not think they are making more than bare interest. There is no surplus profit.
1737. One would think the more coal they got the greater would be the profit, but if they got 2,000,000 tons of coal, according to you, it would not pay? I do not say there is a loss, but I say there is no profit.
1738. Supposing they got 2,000,000 tons of coal, would they be losers at that? I think they would be in the same position.
1739. And if they got 3,000,000 tons of coal, would they be in the same position? No; we should be in a little better position, because our fixed charges would be spread over a bigger quantity. You might have an engine that would work 1,000 tons a day, and the same engine would work 10,000 tons. In 1892 we had 2,148,000 tons of coal at the dyke.
1740. With 2,000,000 tons you are reticent about whether it will pay? It will be a little better if the conditions are the same as to-day.
1741. So that this 4d. a ton, which the people of Newcastle suppose is a profit, is all moonshine? I think so.
1742. The Department never contradicted the statement? I never heard of it before.
1743. This has been given as the profit made by the Railway Department at Newcastle; it has been a matter of publicity, but you say there is no foundation for it whatever? Not in my opinion.
1744. Mr. Hoskins.] It is proposed to spend £140,000 in improving the harbour at Newcastle; in the course of this inquiry it has been ascertained that no wharfage rates are paid in Newcastle, although wharfage rates are paid in Sydney; it has been urged in addition to that that the Government make such a profit on the conveyance of coal and the shipment of it at Newcastle, that it covers the interest on the money expended in improving the harbour;—are you prepared to say whether the profits so made will cover the interest on the expenditure in improving the harbour? The greater part of the wharfs at Newcastle are not connected with the shipping of coal, and I suppose that most of the money has been spent on the township wharfs. At the Bullock Island wharfs which we have to deal with there is no surplus profit over the cost of the terminal accommodation and the cost of working.
1745. There is no surplus profit over the cost incurred in taking the coal from the mines to the dyke and shipping it? No; and paying for the cost of terminal accommodation.
1746. Is the cost of the cranes included in the figures? Yes; we are allowing 4 per cent. interest on the first cost.

1747. You believe that you make a profit of 4 per cent. on the cost of the cranes used in shipping coal, upon all the appliances necessary for working the coal traffic, and conveying the coal from the mines to the shipping? We might do that, but nothing more.

H.
McLachlan,
Esq.

1748. Can you do that? Nobody could say for certain, because the details of the cost of working the lines to the shipping port have not been worked out.

1749. You feel justified in saying that no sufficient profit is left from the haulage and shipment of the coal to provide anything towards paying interest on the large amount of money expended on the harbour improvement works at Newcastle? No.

1750. Therefore the people of Newcastle have the benefit of the outlay of Government money in the construction of wharfs, and the improvement of the harbour, without wharfage rates being imposed? I do not know much about wharfage rates. I do not think anything that is made, so far as the railways are concerned, would give any profit on the whole of moneys spent on the wharfage accommodation for traffic.

1751. *Mr. Davies.*] Am I to understand that the sum of £34,835 represents the profit on the haulage and craneage in connection with the coal at Bullock Island? I do not quite understand the figures.

1752. If it has been sworn by local witnesses at Newcastle that the Railway Commissioners, after having paid the cost of handling coal, and conveying it from different mines to the dyke, make a profit of £34,835 a year; you say that it is not so? It is not, in my opinion.

1753. *Mr. Hoskins.*] Can you say that as a matter of fact? I have given the facts. We earn on an average 10½d. a ton on the coal. Out of that we pay 5½d. for terminal charges, which leaves 5d. for running 22 miles. Anyone knows that there cannot be much profit on that. You cannot run 22 miles, and make a profit at 5d. a ton. The average train-load that we get is about 192 tons.

1754. *Mr. Davies.*] You say that there is practically no profit? There is practically no profit.

1755. And if it has been sworn in Newcastle that the profits, after paying the expenses of handling, hauling, and all incidental charges, left £34,000 profit, that is not correct? No; I think not.

1756. Can you tell what were the total earnings of the railway last year in dealing with coal coming from the several mines to Bullock Island? From the whole of the collieries in the Northern District last year the total earnings amounted to £78,000.

1757. Can you tell us what was the cost of working the trains and running the engines? I have given you the general facts, but I could not give you the exact amount.

1758. Approximately? I could not give it approximately, except that the terminal charges alone come to £37,000.

1759. *Chairman.*] Could it not be done this way: You have stated that there is 10½d. paid; but, in estimating profit and loss, you state that there is no profit? Yes.

1760. You must have something to aid you to come to that conclusion; can you not give us a statement? No; it would be a big sum to work out.

1761. You have come to a conclusion; can you not give us something to enable us to see that your conclusion is a sustainable one? The conclusion is that we have to haul 22 miles for 5d.

1762. *Mr. Davies.*] You say that the total earnings of the haulage and craneage of the coal was £78,000? Yes.

1763. If you have arrived at the conclusion that the earnings are £78,000 you ought to be able to tell the Committee how you arrived at the conclusion that there is no profit on the transaction? That I have told you.

1764. You charge so much a mile for the carriage of goods? Yes.

1765. Could you not apply the same rule to the 2 miles, 3 miles, 12 miles, or whatever it may be, that you have to carry the coal;—there is only one rate? It is according to the mileage. The collieries are all different distances from the port. The charge is from 6d. upwards.

1766. It is in proportion to the length of the mileage? No; it is not.

1767. Is there a higher rate for the short distances? Proportionately.

1768. The Railway Commissioners have a staff employed in connection with the Newcastle coal traffic? We have the dyke for which I have given you the terminal charges which you can allocate to this business. A cost of 5½d. out of 10½d., and there is a balance of 5d. which, according to some, we are to make a profit of 4d. out of.

1769. How do you arrive at the 5½d.? That is the cost of the men employed at the dyke, the cost of working, of shunting engines, the cost of coal overseers, the cost of wharfingers, the cost of working the hydraulic cranes, the cost of shipping the coal, and the interest on the money spent there.

1770. What money have the Railway Commissioners spent? I believe there has been an expenditure of about £300,000 at Newcastle.

1771. By the Railway Commissioners? No; the amount we have spent on railway accommodation is about £80,000.

1772. Can you tell the Committee where you have spent it? £80,000 has gone in laying down sidings and other works. There are miles and miles of sidings there.

1773. Outside and beyond the collieries? The shunting sidings running from Hamilton are used only for the coal traffic.

1774. Do you charge the earnings from the cranes against the outlay you speak of for sidings? We charge interest against that.

1775. On what basis? At the rate of 4 per cent.

1776. If you have the accounts in that form you will be able to give the Committee some idea as to how you arrived at the conclusion that the £78,000 is all swallowed up in expenses? I can say nothing more. I have stated that there was 5½d. for terminal charges.

1777. I should like you to tell the Committee how you arrived at that 5½d.? We have a certain number of shunting engines which cost us £4,000. We have a certain number of shunters, a number of overseers, people working on the dykes connected with the engine-house; we have to pay 1½d. for every ton we ship, which previously came to £14,000; we have to pay interest on a sum of money which comes to about £13,000.

1778. To whom do you pay the 1½d. per ton? To the contractor for the cranes.

1779. All your engine drivers dealing with the coal traffic, and your stokers and guards are men who are permanently employed in that particular industry? Not altogether. Sometimes they are taken away to the goods or stock traffic; they are taken away to other work.

- H. McLachlan, Esq. 1780. How frequently? During the greater part of their time they are working the coal traffic, but they do other work.
 1781. How would you be able to separate that? I do not include a single guard or driver, except shunting engine drivers, in the 5½d. Then there is 5d. to cover all the other charges, which it would be very difficult to attempt to allocate, and it never is attempted by railway companies.

- Capt. W. J. Featherstone, master mariner, s.s. "Oonah," sworn, and examined:—
 1782. *Chairman.*] What are you? Master mariner, at present in charge of the steamship "Oonah."
 1783. Do you know Newcastle well? Yes.
 1784. *Mr. Roberts.*] Have you seen the plan showing the contemplated improvements? I have
 19 April, 1895. inspected it since I came in.
 1785. How long have you held a master's certificate? About seventeen years.
 1786. And how long have you been trading to Newcastle as master of a ship? I have been trading there constantly for the last eight years.
 1787. Have you been in command of the "Oonah" all that time? No; I have been in command of the "Oonah" six years.
 1788. What draught of water has she? About 17 feet 6 inches; sometimes 18 feet.
 1789. I presume that you go to Newcastle for coal after coming from Hobart? Yes.
 1790. How much coal do you generally take on board? About 1,100 tons.
 1791. Have you ever experienced any difficulty in getting out of Newcastle harbour? No; except in a heavy sea.
 1792. That would be in a south-easterly gale? Yes.
 1793. Have you ever heard of ships generally experiencing a difficulty in leaving the Newcastle harbour? Yes; vessels of heavy draught.
 1794. What would you call a heavy draught? A draught of 22 or 23 feet.
 1795. Have you heard it said that something ought to be done to improve the entrance to the harbour? Yes.
 1796. Have you heard any opinions as to what ought to be done by the Government to improve it? No; it is only lately that I have heard this scheme spoken about.
 1797. It is proposed by the Department to build a northern breakwater, the first section of which will be 3,000 feet long, extending from the Oyster Bank out to the "Cawarra" buoy, and the object of that is to increase the scour, so as to carry the bar out into deep water; the Department state that the existing northern breakwater has caused a scour which carried the bar out 800 feet seaward; having that in view, would you favour the construction of the first section of the northern breakwater? Yes.
 1798. You think the scour would be effectual? Decidedly.
 1799. Do you think it would be necessary to go further than the "Cawarra" buoy? You might try the first section first.
 1800. You think it is desirable to construct the first section and see the effect of that? Yes; I think you would get good results from it.
 1801. Then coming to the southern breakwater, it is proposed to restore the eastern end of the southern breakwater—the portion which has been washed down by the sea;—do you think that if that is done it will be effectual in keeping out the roll of the sea from the east or the south-east? I should think it would be a great boon if that breakwater was extended seaward in the present line. There would be far less sea on the bar than there is at present.
 1802. You would not alter it? No; I would keep it on in a straight line.
 1803. About how far would you recommend its extension? I should think from 500 to 700 feet.
 1804. What leads you to the conclusion that the southern breakwater ought to be extended another 500 or 700 feet, in addition to the 200 feet which I have already mentioned? My reason is, that you would get far less sea on the bar in bad weather if that were done.
 1805. Your argument is, that the southern breakwater being extended another 500 feet seaward would give calm water on the bar? Yes.
 1806. You see the wave-trap near the northern breakwater? Yes.
 1807. Are you aware of its object? Yes; it is to prevent the seas from going into the harbour.
 1808. Have you had any experience of wave-traps? I have not; but I have heard of them.
 1809. Have you seen any in New Zealand? The harbours there have been constructed since I left.
 1810. You think they would be a good invention? Yes.
 1811. The only other work in connection with this plan is the erection of what is known as the southern guide-wall, which forms another wave-trap on the southern shore;—the object of that is to divert the current so as to assist the scour;—do you think that that would be a desirable work? That would be a decided improvement.
 1812. Do you recollect the old northern breakwater being erected? No; I was away from here then.
 1813. Are the Committee to understand that, having made yourself thoroughly familiar with the plans of the contemplated improvements in the Newcastle harbour, you view them with very great favour, and that they will be effectual, but that you would recommend the extension of the southern breakwater seaward another 500 feet in a direct line? Yes.
 1814. Is there any other information which you wish to give to the Committee? There is one thing which I have always thought that in Newcastle they could do something towards, and they are doing it now—they are building a stone wall on the Stockton side to reclaim the land.
 1815. You think that is very desirable? It will make a wonderful difference to the scour down the harbour.
 1816. Would you recommend dredging operations with a view of getting a greater depth of water on the bar? Yes; after you have extended your southern breakwater, not before that.
 1817. On what ground? I daresay that the silt settles down and becomes very hard, almost as hard as rock.
 1818. Then you would not recommend dredging operations? Not until you have extended your break-water.
 1819. Would not the water be too rough? No; very often you get a long run of calm weather there.
 1820. Have you ever given any consideration to the question of carrying the silt out to sea after it has been dredged out of the harbour? I do not approve of its being carried out to sea. If you have any land to reclaim it should be utilised for that.

1821. Do you think that it is possible that the shoaling up on the bar would be caused by silt being spilt whilst it is being carried out owing to the rough seas coming on board the punts? Oh, no. Capt. W. J. Featherstone.
1822. *Mr. Gormly.*] You favour the extension of the southern breakwater? Yes. 19 April, 1895.
1823. Would that be to prevent vessels entering the harbour from being washed on to the Oyster Bank? It would give smoother water. Suppose a vessel of 22 feet or 23 feet draught was going out, and you only had 26 feet of water on the bar, it does not require much of a lift to make the vessel strike.
1824. And if the southern breakwater were extended a vessel entering the port would soon get into smooth water? Yes.
1825. There have been vessels carried over to the Oyster Bank and wrecked? Yes; Newcastle harbour has a very narrow entrance in bad weather.
1826. If the southern breakwater were extended, would vessels be able to come in when they would otherwise be prevented? It would not make much difference in that respect, but it would give smoother water on the bar.
1827. You know by the roll of the sea and the breakers where the shallow water is in coming round the end of the southern breakwater? Yes.
1828. Have you seen the depths on the chart? Yes; I am acquainted with the depths.
1829. Is it much deeper as you go out? Yes; you will have as much sea as ever on the breakwater, but less on the bar, if it is extended.
1830. Therefore, by going into smooth water, you would have, practically, a greater depth? Yes.
1831. *Mr. Levien.*] You have no doubt, in your own mind, that the southern breakwater ought to be extended before the northern breakwater is commenced? Yes; then you would see what result you would get.
1832. You would go in a more easterly direction with the extension? In a straight line.
1833. How far would you carry the breakwater from its present termination, including the part that has been washed away? About 500 feet.
1834. Do you think that the wave-traps in the Newcastle harbour will be of much assistance? Yes; if it was not for the trap the water would rush straight into the harbour.
1835. Of course the "Oonah" can always get into Newcastle harbour? It would have to be very bad weather to prevent the "Oonah" from entering.
1836. *Mr. Hoskins.*] You prefer to have the southern breakwater constructed before the northern breakwater? Yes.
1837. Because you believe that after the construction of the southern breakwater the water on the bar will be smoother than it is now? Yes.
1838. Do you consider that if the water on the bar were made smoother by the construction of the southern breakwater, that would have a tendency, in the absence of rough water, to cause the water on the bar to deepen? No; you would still require your northern breakwater to give you a scour.
1839. *Mr. Lee.*] Have you been trading to any ports where experiments with breakwaters have been tried? No; I have not been out of the colonies for the last twenty-two years.
1840. *Mr. Molesworth.*] You said that you usually take about 1,100 tons of coal from Newcastle with a draught of 17 or 18 feet? Yes.
1841. But that is not the full carrying capacity of your ship? No; that is about 850 tons of cargo, and 250 tons of bunker coal.
1842. Supposing you loaded with coal only, what quantity would you take? About 1,400 tons.
1843. How deep would the ship be with the extra 300 tons of coal on board? She would then be drawing about 19 feet.
1844. The statement has been made that the bar has moved outwards a distance of nearly 800 feet, and that it went out as the breakwater was constructed;—do you think that the further extension of the southern breakwater would have the effect of causing that bar to go out still further? It is bound to make some difference.
1845. Then the bar lodges where it is at present as a result of the action of the scour on one hand and the operation of the sea on the other? The bar is not caused by the scour—it is a permanent bar.
1846. How can it be a permanent bar when it has shifted to sea 800 feet since the construction of the northern breakwater, according to the Departmental evidence? The same bar that is in the Newcastle harbour has been there ever since Newcastle was Newcastle, I understand.
1847. If that bar has been shifted further out owing to the extension of the breakwater, is there not a possibility of it shifting still further to seaward if the breakwater is further extended? I fail to see how a rocky bar can shift.
1848. They say that it is sand, not rock;—you do not appear to know that the bar has shifted? It is news to me.
1849. You are not prepared to dispute the fact? No; decidedly not.
1850. I understand that you advocate the extension of the southern breakwater so as to give smoother water on the bar? Yes.
1851. Which would give you a greater draught for vessels outward bound, and enable dredging operations to be performed with safety? Yes.
1852. *Mr. Hayes.*] If we have evidence before us that that bar is steadily shoaling-up, that it shoaled last year to the extent of 10 inches, and that it is necessary to get a scour to remove it, would you advocate the extension of the northern breakwater or the southern breakwater first? I think that by extending the southern breakwater first, you would have a better chance of blocking out the heavy seas.
1853. The evidence is clear that the extension of the northern breakwater created a scour; and seeing that the bar is shoaling again, would it not be advisable to further extend the northern breakwater, so as to send the bar still further out? I should certainly say, extend the southern breakwater.
1854. The southern breakwater has not had the effect of creating an additional scour, it has only made the water smoother on the bar? I never knew that the bar was where you state.
1855. *Chairman.*] Having seen the "Cawarra" buoy, do you think that the bar, as shown there, is in its correct place? The only place we look for is, the old original bar; when safe over that we are right.
1856. If the channel were dredged out, would not the south-east roll bring back the sand? I do not think so.

TUESDAY, 23 APRIL, 1895.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN.)

The Hon. FREDERICK THOMAS HUMPHREY.	JAMES HAYES, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	ROBERT HENRY LEVIEEN, Esq.
The Hon. JAMES HOSKINS.	JOHN MOORE CHANTER, Esq.
The Hon. JOHN DAVIES, C.M.G.	CHARLES ALFRED LEE, Esq.
The Hon. CHARLES JAMES ROBERTS, C.M.G.	JAMES GORMLY, Esq.
EDMUND WILLIAM MOLESWORTH, Esq.	

The Committee further considered the proposed Harbour Improvements at Newcastle.

Hugh McLachlan, Esq., Secretary to the Railway Commissioners, sworn, and further examined:—

H.
McLachlan,
Esq.

23 April, 1895.

1857. *Mr. Davies.*] Have you prepared a statement in reference to the earnings and disbursements in connection with the coal traffic at Newcastle? Since I was before the Committee last Friday I have gone into the details of the cost of the working of the coal traffic. It is very difficult to go fully into the details of the cost, because there are a large number of general charges which it is very difficult to allocate to any particular description of traffic. There are the salaries of the Commissioners and the salaries of all the principal administrative officers, which must be debited to something. The coal traffic is run over so many private sidings and over so much of the Government line, and it would be difficult to separate the actual cost of the working of that traffic. It would be very difficult to find out how much it costs per ton per mile. There are different loads carried over different distances. Mr. Levien said that we only ran from 1 to 2 miles on the Government railways, the greater part of the running of the traffic being over private lines. That is an exceptional instance. On the other hand we carry a quantity of coal from Greta, about 32 miles; and if you divide the two extremes you get an average of 16 miles, but that is a little high.

1858. How many collieries do you draw coal from the distance from which does not exceed $5\frac{1}{2}$ miles? I will give the number of collieries, and show the actual men working the traffic, and you will see what the figures make up. I will take, first of all, the traffic branch: Coal overseers and staff, debited to the branch, £530 a year; weigh-bridge staff, £360 a year; there are also guards, officers, and signal-men, forming an important item, making a sum of £5,876.

1859. *Mr. Hoskins.*] Do you deduct a portion of that for the main line? On the main line there are fifty signalmen, but if we had not the coal traffic you could knock off twenty-one signalmen. The stores come to £60, making a total of £6,826 per annum for that branch. That is leaving out some general expenses, which would come to something considerable, one of which is the cost of printing. The officers are issuing orders every day with regard to the working of trains, and we have to issue regulations involving a considerable amount of printing, which should be debited to something. I now come to another important branch in connection with the coal traffic—the locomotive branch. The maximum number of engines in use is eighteen for the coal traffic, although that would be too high to charge to the coal traffic solely, because sometimes some of those engines are working at other business, but I am assured by the Superintendent that an average of twelve engines would be a fair thing to allow for the coal traffic. The cost of these would be £34,800, and interest on that at 4 per cent. would be £1,592. Engines have to be repaired and to be renewed. I take about twenty years for the wear of an engine. I went into the matter with the Locomotive Accountant, and he thinks that for renewals and repairs a sum of £400 a year ought to be allowed, which would come to £4,800. To house these engines the Commissioners had to erect a very large shed at Honeysuckle Point. That cost £24,000, with barracks and offices. Allocating one-third of that to the coal traffic, the amount is £8,000, and the interest on that is £320. I allow £100 for renewals and repairs. Then there are running expenses, expense of drivers and firemen, stores, cleaners, and supervision, making a sum of £7,400. For last month the quantity of coal shipped was 176,000 tons, which would make about 2,000,000 tons a year. The cost, based on the actual traffic of last month, comes to £7,400 per year. There are seventeen brake-vans, the capital value of which is £375 each, making a total of £6,375, the interest on which, at 4 per cent., is £250 per annum. Renewals, repairs, and replacements, at £35 per van per annum, come to £600, and there is a sum of £400 a year for examiners. That makes a total of £15,462 a year. In these figures I am not including anything for the renewal of workshops. Those engines at certain times have to go to the workshops, but it would be difficult to say what charge we could put against them for that, so I am leaving that out. Now there is the rather difficult question—the percentage of the permanent-way which should be charged to the coal traffic. Of course you are aware that a very large proportion of the traffic in the Newcastle district is coal traffic. The renewal of the line is to a large extent determined by the traffic passing over it. In that district at least three-fourths of the tonnage is coal traffic. Taking last month again as a guide, I find that the number of miles run by the coal traffic over private lines was 2,375; the number of miles over the Government main lines, 9,479 miles. That is, roughly, in the proportion of 1 to 4. It would seem a fair proportion to charge one-fourth almost, or one-fifth, of the traffic to the permanent-way, but taking it at 6 miles of our permanent-way that the engines run over, then halving that again, making the coal traffic responsible for half, it would bring it down to a capital expenditure on the line of £100,000, giving £4,000 a year interest. This is the main line. We have 12 miles of sidings at Bullock Island. Half the cost of the maintenance on the main line and on the dyke comes to £2,331 a year. Then we have to work an electric light plant, with engine-house and engineers in attendance, and that comes to £3,600 a year, making a total under that head of £9,931. I am not allowing a penny for renewals. Of course, after a certain lapse of time, the lines require renewal, the sleepers require renewal, and the rails require renewal, and many of the Bullock Island dyke sleepers and rails have been down twenty years without renewal. Many are comparatively new sidings, but the originals have been there twenty years, and it would only be reasonable to allow something for renewals. Then we come to the terminal accommodation, and the interest on that is £13,600; the wages of coal overseers, £328; berthing-master and his office, £1,000 a year; twenty-seven shunters, shunting-engines, and engine-men's stores, £7,930. The cost of the shipment of coal I put down at £12,000 a year, making a total of £34,858. The amount of Russell's present contract is less than I have stated; but it has been more in the past, the present rate being a very low one. I may correct a slight misunderstanding. When giving evidence before I believe I implied that Russell had not to pay for repairs. His contract provides for ordinary wear

wear and tear; but these cranes require expensive overhaul, almost renewal at times, and we should not ask the contractor to pay for it. The total of all these items is £37,077, that is leaving out many little items of repairs, renewals, &c. Putting the total earnings at £78,000, that would leave £10,000 or £11,000 as a surplus; but you have to debit against that administrative expenses, the cost of renewals, and other items. I think I was fairly within the mark in saying that there was no surplus profit on the coal trade. The expenditure on this particular month works out about 8d. a ton, and the earnings come to about 9d., without those additional charges which I have mentioned. The cost, I think, last month was a little less than what has been the average for some time past, because the Commissioners made a reduction in the rate-book which came into force on the 1st March, allowing a reduction on the coal shipped from 4 to 7 miles to 9d. instead of 10d., and allowing small coal to be carried at a reduction of 20 per cent., which makes a fairly big reduction in a year.

H.
McLachlan,
Esq.

23 April, 1895.

1860. *Mr. Davies.*] There is a great difference between your statement to-day and the statement which you made last Friday? Not the slightest.

1861. Then you say that there is not any profit? I say that there is no surplus profit.

1862. You adhere to that? Yes.

1863. Have you not shown the actual cost, providing for interest on the cost of construction and renewals? I have not provided for renewals. There is a surplus; but nothing for all renewals.

1864. Providing for renewals, and making provision for the running of the coal, and all the different expenses attached to the handling and shipping of the coal, including craneage, you state that there would still be a difference of how many thousands? About £10,000.

1865. And that you do not regard as profit? No; I do not think there is much surplus profit in it. You have to consider the question of extensive renewals of the line, administrative expenses, and general expenses, the cost of printing, and the cost of lighting.

1866. And these are included? No, I have not included them.

1867. *Chairman.*] What are the exemptions? All administrative expenses, a portion of which ought to be charged, if it could be allocated. No business man would go into it. The printing is a fairly big item—each man has to have his general orders printed, and there are rule-books, &c. The renewals also make a big item.

1868. You have based your calculations on the 6 miles of permanent-way at £30,000? I have allowed less than half of that for the coal traffic.

1869. Are you not a long way in advance of actual cost? I do not think so. That is the actual cost that stands on the railway books to-day.

1870. That has been the cost right through to Maitland? Yes; it might have been made at a dear time.

1871. Will you look at the evidence given by Mr. Keightley, President of the Newcastle Chamber of Commerce, and Chairman of the Newcastle Coal-mining Company, and say how that harmonises with the estimate which you have given? I do not think there is any reason for it to harmonise. I speak from facts, he speaks on assumptions. I give costs that have actually occurred, details of working taken from what was paid last month.

1872. Mr. Keightley provides for interest on £400,000 at the rate of 4 per cent.? Probably his estimate is like the prospectus of an undertaking where they are going to make £50,000 in two or three months, but finally lose their money.

1873. You make out a difference of £10,000 in favour of the Department after all the expenses had been defrayed, except the small matters which you have mentioned? One or two of them are rather large ones: The renewal of the track, and the renewal of 12 miles of sidings at Bullock Island. Of course, that would be the heaviest item.

1874. You still arrive at the opinion that there would be very little profit left to the Department in connection with the coal trade? Yes.

1875. And if the President of the Chamber of Commerce stated that he deducted the expense of haulage to the dyke, and interest upon the capital cost of the locomotives, interest upon renewals, provision made for renewals of locomotives, drivers' wages, firemen's wages, cleaners' wages, repairs, oil, and other sundries, together with the expense of guards, and interest on the capital cost of £400,000 at 4 per cent., you still are of opinion that he is altogether in error in saying that it leaves a profit of 4d. a ton? Yes.

1876. The whole of the earnings are absorbed in the expenses? Yes; or very close to it. There is no surplus such as he mentioned.

1877. He must be in error? Yes.

1878. The estimate he made you think wholly unreliable as compared with your own figures? Yes.

1879. *Mr. Chanter.*] The 4 per cent. on the cost of construction is included in your estimate? Yes.

1880. And after that is paid, in your opinion, there is no surplus profit? No.

1881. That £10,000 mentioned by you just now would be practically absorbed? Yes; I think if you could allocate every charge in its fair proportion you would find very little, if any, surplus profit.

1882. The Railway Department are practically working the traffic now just for the interest on the cost of construction and working expenses? Yes; we are getting very little more than a fair interest on the cost.

Capt.
D. Swan.

23 April, 1895.

Captain David Swan, master mariner, s.s. "Gulf of Genoa," sworn, and examined:—

1883. *Chairman.*] What are you? Master mariner, at present in command of the steamship "Gulf of Genoa."

1884. You have been recently at Newcastle, and you know the port? Yes.

1885. *Mr. Levien.*] What is the draught of your vessel? Twenty-four feet six inches when fully loaded.

1886. How often have you travelled to this port? I have been travelling regularly between London and here ever since 1852.

1887. Have you ever had any difficulty in crossing the bar at Newcastle? Yes; I have been several times put back in the harbour when south-easters were blowing. We are only allowed for the utmost draught 23 feet; although the ship's draught is 24 feet 6 inches, we can only load down to 23 feet. I have to come to Sydney and take 500 or 600 tons more after having loaded at Newcastle.

1888. You leave Newcastle 500 or 600 tons short of what you could carry if the entrance to the harbour was deep enough? Yes.

1889. What was the first year that you entered that harbour? About 1882.

- Capt. D. Swan. 1890. Has the bar shifted, in your opinion? Yes; if anything, a little further out. The greatest change, I find, is inside the harbour.
- 23 April, 1895. 1891. Where? Sometimes you find the channel away to the eastward. Within the last two years it has not been quite so bad as it was previously, but the main channel remains the same. The bar is shifting outwards.
1892. You see on the plan the proposed new breakwater on the northern side of the harbour, and the proposed extension of the southern breakwater;—what is your opinion as to the necessity for extending either of those breakwaters? I would certainly extend the southern breakwater first. The sea breaks right across the end of the breakwater. I entered Newcastle the Sunday before last immediately after a very heavy breeze, and the sea was breaking on the Big Ben Rock, and it hove the sea right across the entrance to the harbour. It first struck on Big Ben, then rebounded sideways. It broke in a north-westerly direction, making it a beam-sea for a vessel going into the harbour, right on the broadside.
1893. *Chairman.*] What wind was there? There was very little wind then, but the sea had not gone down from the wind that blew before that. I think it was about south-south-west or south-south-east. I had come down from Brisbane.
1894. *Mr. Levien.*] Your opinion is, that the southern breakwater ought to be extended before the northern breakwater? Most certainly.
1895. What distance? Sufficiently to allow the waves from Big Ben not to cross the end of the breakwater.
1896. How far do you say it should be extended? It would have to go not less than 500 feet.
1897. I suppose you are aware that 200 feet of the breakwater has been washed away? I understand that that is so. The breakwater wants to be carried out in a straight line, otherwise the same sea that I saw that Sunday would heave the sand right against the northern breakwater.
1898. What do you think of the northern breakwater? It would be very well, but it would require to be overlapped by the southern breakwater.
1899. Do you think there is any necessity for building the northern breakwater at all? My visits to Newcastle are about twice a year, in and out—sometimes three times a year. I should most certainly say that if the southern breakwater were built first you could then judge for yourselves as to the necessity for the other.
1900. Surely you have an opinion about the northern breakwater? It will most certainly help to scour the harbour; but it will require to be very much overlapped by the southern breakwater.
1901. Have you had any experience in reference to wave-traps? I have not.
1902. So you will not express an opinion upon them? No.
1903. What effect would the northern breakwater have in sending the waves over the beach? With both breakwaters in an even line, it would make a very heavy sea there.
1904. You think it would make a heavy sea instead of reducing it? Yes, as represented on the plan.
1905. Your opinion is, that it would reduce the sea coming from the south to the north? I should imagine from the way in which I saw it that Sunday that it would make a very heavy sea between the two ends of the breakwaters. There would be a heavy sea, which would be very apt to heave a vessel on to the extreme end of the northern breakwater, if it is extended as proposed.
1906. Are you in favour of wave-traps? I could not express any opinion upon them.
1907. All your trouble is about the bar? Yes.
1908. The bar has moved out about 800 feet? The only way I see is, if you carry out the northern breakwater, to have it well overlapped by the southern breakwater. I do not think that you will be troubled very much with rough water out there then.
1909. If they adopted your opinion, and extended the southern breakwater, would you then be in favour of building the northern breakwater? To a certain extent I should.
1910. How far? Sufficiently to catch the indraught of sand from the north. With heavy seas there is always a certain amount of scour.
1911. The opinion is, that this northern breakwater would make a great scour, and assist to deepen the channel;—are you of that opinion? Yes; the northern breakwater would assist in making a greater scour, if the southern breakwater were first extended; but it would be useless otherwise.
1912. Have you ever had any severe storms when going in? I would not attempt to go in in a storm. I generally come from Sydney, and I do not leave Sydney for Newcastle unless the weather is favourable.
1913. You have experienced no severe storms in going into the harbour of Newcastle? No. Had I left Brisbane one day earlier than I did I should have been unable to get into Newcastle the last time, and my ship would have had to be hove-to outside.
1914. *Mr. Hoskins.*] Is not the water outside the entrance to Newcastle harbour lumpy? When there is a wind it is lumpy.
1915. If the southern breakwater were extended as far as you suggest, do you not think that such extension would tend to make the water on the bar more settled? I believe it would.
1916. Are you of opinion that if the water on the bar were smoother that would give practically a greater depth of water? Most certainly. My vessel is 350 feet long, and in a slight rise and fall of the sea it means a few feet difference in the draught of water, and if the stern post happens to be over a shallow part of the bar when she rises to a wave forward she may touch.
1917. What is the tonnage of your vessel? Her gross tonnage is 3,400 tons.
1918. Would you hazard an opinion as to how much you think the depth of water would be increased practically if the water on the bar were made smooth? On a smooth day it would make a difference of not less than from 2 to 3 feet.
1919. How much coal would your vessel carry supposing she were taking a cargo of nothing but coal? Bunkers and cargo, 4,800 tons.
1920. Have you ever left Newcastle with 4,800 tons on board? Never. I have had to come to Sydney and take in from 500 to 600 tons. The utmost draught allowed by the harbour-master at Newcastle is 23 feet, and with that on board one might occasionally slightly touch the bar.
1921. If you had smooth water on the bar, as you believe you would have if the southern breakwater were constructed, do you think you would be able safely to leave the harbour with your ship drawing 25 feet of water? Certainly. I should think that at high water I could draw my full draught. The draught of my ship when loaded is 24 feet 6 inches. That is only a moderate draught compared with some of the vessels that are being built.

Capt.
D. Swau.
23 April, 1895.

1922. You are of opinion that if the southern breakwater is extended the water on the bar will be so much smoother that you will have no hesitation in taking out your vessel drawing 24 feet 6 inches of water? I believe it will be smooth. It is the wash from that large rock outside that makes the trouble.
1923. The trouble to navigators in entering the harbour is principally caused through the southern breakwater not being extended far enough? I believe so.
1924. Have you been in the habit of frequenting harbours where they have breakwaters similar to the proposed breakwaters at Newcastle? Yes; I have been at New Orleans, where they have a scour.
1925. What is the greatest depth of water there? It is sixteen years since I have been there. The breakwaters were then being constructed.
1926. Where were they being constructed? On the south-west branch of the mouth of the river.
1927. Have those breakwaters had the effect of causing an increase in the depth of the water on the bar? They have. They did not dredge there; they scoured it with a steamer dragging a grapnel, and allowed the tide to carry the silt away.
1928. Were two breakwaters constructed there? Yes.
1929. The way they deepened the entrance to the river was by constructing two breakwaters, and also having a steamer drawing something which stirred the sand up? Yes; and I think they closed up one of the mouths of the river.
1930. Have you been to any other ports where breakwaters have been made? Not to any extent.
1931. It is not uncommon for you to have to enter ports where the draught of water is not more than it is at Newcastle? I cannot say that. It is the worst port in that way that I have ever been in. I have never had to go to two ports to complete a cargo.
1932. This is one of the most dangerous ports? In certain weather it is.
1933. *Chairman.*] You said that a ship drawing 24 feet 6 inches of water had not a very deep draught in comparison with some vessels which are now being built; to what were you referring? To steamers like the "George Thompson," the "Australasian," the "Thermopylae," and the "Damascus." When loaded they draw from 26 feet 6 inches to 27 feet. They are cargo-boats, like mine.
1934. *Mr. Davies.*] When your boat was being loaded at Newcastle, had you had any difficulty in finding a place in which to moor her? We have to stay alongside the dyke.
1935. Does that cause any inconvenience? None whatever.
1936. The harbour is too shallow? Yes; for swinging.
1937. Is there sufficient water in the North Harbour? I have never anchored there; I have gone alongside the dyke.
1938. As soon as you have got your cargo you go away to sea? Yes; I have had no occasion to stay except when we were weather-bound.
1939. You have had to stay alongside the dyke then? Yes. It is very inconvenient. I have lost as much as six days.
1940. If you have to be removed you must pay additional charges? Yes.
1941. Where was it that you found a difficulty in mooring your vessel? I say that when my vessel is loaded there is no place where I can swing at anchor in the harbour.
1942. No convenience? No, not for a vessel of the size of mine.
1943. Have you experienced any other difficulty in getting out of the harbour when loaded? Not in ordinary weather.
1944. To what extent can you load? Twenty-three feet draught.
1945. And how many tons short of your full cargo will you be then? 500 or 600 tons.
1946. Do you pay pilotage and other charges? I have been exempt for some years.
1947. You pay harbour and tonnage dues? When I call at Sydney, that makes me exempt; I only pay in one port.
1948. When you come back from Newcastle you have not to pay again? That is good for six months I understand. There are some few local dues that we pay, but they are very small.
1949. Where do you take your cargo to? When I load coal at Newcastle I go to Singapore and Manila.
1950. It has been pointed out that during the time that you have been trading to the port of Newcastle the bar has shifted to seaward 800 or 900 feet? Yes.
1951. Do you know why the bar has been pushed out so far as it is at present? I can form no opinion, unless there has been a heavy flow of water coming out of the river.
1952. Do you think that the construction of the northern breakwater to its present point, and the construction of the southern breakwater, has been the means of forcing the bar to its present position? I should not like to give an opinion upon that. Newcastle harbour is a very peculiar harbour.
1953. Do you think that a scour would be created if the first section of the northern breakwater, 3,000 feet, were constructed? As long as the southern breakwater overlapped it, it would.
1954. The contraction of the outlet would create a scour? Most certainly. The southern breakwater would have to be carried out.
1955. You advocate the construction of both breakwaters as long as the southern breakwater well overlaps the other further on? Yes.
1956. To create a scour and to carry out the bar into deep water? Yes.
1957. Would that be a means of enabling you to take your full cargo? I believe it would; it would bring the bar right out.
1958. What would be the effect? There would be a saving of time. It would mean for a vessel of the size of mine about three days, irrespective of other minor advantages.
1959. What would be the expense of those three days? Not less than £100.
1960. It would make a difference of £100 to your ship if you could take her out fully loaded? Yes. My own vessel is not likely to go into the Singapore trade again, but we have other vessels very similar, with the same draught of water—four of them.
1961. *Mr. Molesworth.*] Had you been into the harbour at Newcastle before there was an extension of the southern breakwater to the eastward of Nobby's? The first time I went there was in 1882. They were constructing it then.
1962. You had no opportunity of judging as to the improvement that the southern breakwater has been to the harbour? It has very much improved it.
1963. You think that the construction of the southern breakwater has been a real improvement? Most certainly it has.

Capt.
D. Swan.
23 April, 1895.

1964. Therefore you advocate the further extension of it? Yes; to avoid the rough water from Big Ben.
1965. I understand that you have an objection to the running out of the northern breakwater until the end is even with the extreme point of the southern breakwater? Certainly.
1966. Your principal objection is that it would create rough water? It would cause very rough water at the ends of the two breakwaters.
1967. And materially contract the entrance? It would. In entering there a heavy current would be apt to heave us on to the northern breakwater.
1968. You believe that if the southern breakwater overlapped the northern breakwater there would be smoother water on the bar? Yes.
1969. *Mr. Chantre.*] In your reply to Mr. Levien, I understood you to say that in your opinion the bar was caused by the sea sand coming round from the north? Yes.
1970. Evidence has already been given to the Committee that on the sand being tested it was found to be sand from the Hunter River;—do you know which way the current sets on leaving the river? In my opinion it sets towards Port Stephens, in an easterly and northerly direction, a very short distance outside the harbour. I have never found much influence from it.
1971. Do you ever find any set current along the southern breakwater? We are never long enough there to go minutely into that matter.
1972. I want you to express your opinion upon this; you are strongly impressed with the necessity for extending the southern breakwater for the purpose of intercepting the heavy rollers from Big Ben? Yes.
1973. Practically ranging from south to north? Yes.
1974. If that is so, would not the extension of the northern breakwater have the effect of intercepting that roll, and prevent it from expending itself upon the beach? Yes; but that would cause a very heavy sea where you once had smooth water.
1975. If the northern breakwater was extended as proposed, it would have the effect of causing a heavy sea at the entrance? Yes; immediately outside the two breakwaters.
1976. If the northern breakwater was not extended that would not be there? You would require to extend it to make a scour to where the bar is or is likely to come to,
1977. Would not the water be more quietened, if the northern breakwater were extended, than it would be by the southern breakwater? The extension of the southern breakwater would make smooth water, but it would not create a scour.
1978. As the current sets to the north, and the northern breakwater is constructed, the current will naturally tend to run along the training-wall? It seems to run in a line with the breakwater, as far as the breakwater goes.
1979. If the current is setting in from the river out to the sea, when you have this cross-roll, will there not then be a disturbance at the end of the breakwater—the heavy seas striking the current from the river? Yes; but you are in deeper water there, and have a better channel. Immediately you round the breakwater now you are on the bar. With the breakwater extended the smooth water would be on the bar. At present it is a short distance inside of the bar.
1980. It has been stated in evidence that a spit of sand extended out near the commencement of the northern breakwater, but the construction of the breakwater has removed it. If the breakwater was extended as shown upon the plan, would it have the effect of shifting the bar from its present position? I should not like to express an opinion upon that.
1981. In one case you have to deal with shallow water, and in the other with deep water? I am inclined to think that the bar, as it remains there, is caused by the wash of sand which comes round the end of the breakwater in gales. It is a sea deposit, or the river deposit, washed back by the action of the waves.
1982. You are of opinion that the wisest thing would be to extend the southern breakwater only? I would certainly extend it, whatever else is done. The southern breakwater is the more important of the two.
1983. If the northern breakwater were extended at all it should not be in anything like the same proportion as the southern breakwater? Certainly not.
1984. Then would it not be wise to see the effect of extending the southern breakwater before extending the other? Yes.
1985. *Chairman.*] You made a remark with regard to a sort of harrow being drawn behind a steamer in the harbour at New Orleans to stir up the silt? Yes; I have seen it done. It was a powerful steamer, and when the water was running out she dragged a grapnel after her.
1986. Was it very heavy? The steamer would be a vessel with engines of 200-horse power, and she dragged the grapnel after her.
1987. Can you give us any idea of the weight of the grapnel? I should say that it was not less than 2 tons.
1988. Was it very effectual? It was.
1989. Would any good result follow operations of that kind at Newcastle? I am afraid that it would fill up again. As the breakwater is now there is not enough scour.
1990. *Mr. Hoskins.*] Is not the bar silt, instead of sand? It is a very heavy mixture of alluvial sand.

Captain John Jones, master mariner, ship "Caradoc," sworn, and examined:—

- Capt. J. Jones.
23 April, 1895.
1991. *Chairman.*] What are you? Master mariner, and captain of the ship "Caradoc."
1992. Is that ship trading to Newcastle? No; I never was there until this trip. I came from Rio to Newcastle, and loaded at Newcastle for Manila. I got into that hurricane on the 31st January, and my ship sprung a leak, and I had to put back to Sydney.
1993. When were you in Newcastle? I arrived in December, and sailed in January.
1994. What is the draught of your ship? 21 feet 6 inches.
1995. What is her tonnage? 2,409 tons. She will carry 3,860 tons of coal.
1996. Is she a sailing ship? Yes.
1997. *Mr. Hoskins.*] When you were at Newcastle, did you notice any peculiarities in the entrance, or experience exceptional difficulty in entering the port? I was kept there for a week before I could get out, owing to the easterly gales and the heavy sea on the bar.
1998. Did you experience any difficulty in getting over the bar? There was a heavy sea for three days after the wind had died away, and I could not get out.
- 1999,

1999. You could not get out on account of the heavy sea on the bar? No.
 2000. Have you noticed the southern breakwater at Newcastle? Yes.
 2001. Have you been accustomed to enter a port where there are breakwaters for guiding the sea so as to give a better entrance? Yes, in 1880. I went to Shields where they have breakwaters, and once you get inside you are in smooth water.
 2002. What depth of water is there available for a ship loaded with coal to leave the port? My ship was drawing 22 feet.
 2003. The depth of the water at Shields, which is a large port, is not greater than the depth of the water at Newcastle? I do not know how deep a vessel could leave there; but there are some very large steamers. Ships of very large draught cannot leave Newcastle fully loaded.
 2004. Did you say that the depth of the water at the bar at Shields was 22 feet? No; I said that my ship was drawing 22 feet.
 2005. What is the depth of the water on the bar? I do not know.
 2006. The construction of the breakwater there has made the bar smooth? Yes.
 2007. Have you been to any other ports where breakwaters have been erected? I have been to Portland, Holyhead, and Plymouth.
 2008. I suppose you know it is intended to make certain improvements at the entrance of the Newcastle harbour;—would you have the southern breakwater extended further, or would you have the northern breakwater constructed? I would extend the southern breakwater.
 2009. Did you, when you were at Newcastle, particularly notice the entrance to the harbour and the difficulty of getting in? When I got round the end of the breakwater my ship rolled and knocked us all about the deck.
 2010. Why would you extend the southern breakwater? To prevent the sea from breaking on the bar.
 2011. Have you experienced any other special difficulty in the port of Newcastle besides the entrance to the harbour? At low tide there was not much water at the dyke.
 2012. *Mr. Davies.*] Did you take a full cargo from Newcastle? Yes. My ship only draws 21 feet 6 inches when loaded.
 2013. Then you had plenty of water to take your ship out? No; I was delayed there a week before I could get out. It was blowing a gale from the eastward.
 2014. It was because of the heavy sea, not the want of water? It was the heavy sea.
 2015. That was your first trip to Newcastle? Yes.
 2016. You state that your vessel had sprung a leak? Yes, in a hurricane.
 2017. How long ago? On the 30th January.
 2018. You do not know much about the port? Very little.
 2019. Do you regard it as a safe port? Yes; but it is unsafe when there is a gale from the eastward.
 2020. You find no difficulty as far as the port is concerned from the draught of water? Yes; there is hardly water enough to load alongside the dyke.
 2021. *Mr. Molesworth.*] You said that when you entered the Newcastle harbour the water was very rough? Yes.
 2022. What was the cause of that rough water? There was a south-east wind two days before that, and I suppose that that had got up the heavy sea.
 2023. You came in with the assistance of a tug? I reached the end of the breakwater before I got a tug.
 2024. Then a tug took you in? Yes.
 2025. You were only in ballast? In ballast drawing 12 feet.
 2026. And you loaded down to 21 feet 6 inches? Yes.
 2027. How long had you to wait? I finished loading on the Thursday, and got out on the following Friday week.
 2028. Had the water been smooth you would have got out sooner? I should have been out three days before that had the water been smooth. The sea on the bar kept me there four days.
 2029. You were not waiting for the spring-tide? I was waiting for calm water.
 2030. *Mr. Chanter.*] You say you were detained inside the harbour? Yes; it was exceptionally bad weather. We could not expect anything else than a nasty sea.
 2031. Your vessel was moored alongside the dyke; was she very much disturbed? Not much. On the night when we finished loading we could not get her in close to the crane.
 2032. Did the sea range in the harbour during the heavy weather? It ranged on the north side pretty badly, but not so badly at the dyke. At the A.A. Company's wharf a ship was tearing everything to pieces.
 2033. You are a man of large experience. Have you entered any harbours where there were wave-traps? No, I never heard of them before.
 2034. Then you would not like to express an opinion as to the effect they would have? No, I know nothing about them.
 2035. Then your opinion, shortly, is that if the southern breakwater were extended it would quieten the sea on the bar, and give it a greater available depth? Yes.
 2036. Under those circumstances you would not be delayed as you were on this occasion? Not so much. Of course, you cannot get out of the port of Newcastle during an easterly gale.
 2037. Would you express any opinion as to the effect of the extension of the northern and southern breakwaters in scouring the channel? I cannot say much about that. I have not had much experience of these breakwaters.
 2038. *Mr. Hayes.*] In proposing the extension of the southern breakwater only, is not that to give you more certainty of getting into still water? Yes. I think that if the southern breakwater were further extended into deep water, the water on the bar would be smoother.
 2039. And would make it easier for ships to get in? Yes.
 2040. You do not express any opinion as to the effect of the breakwater in creating a scour? No.
 2041. You simply give your opinion as a sea-faring man, that if the southern breakwater is extended it will make the water smoother and make it easier to get into the harbour? Yes.

Capt.
J. Jones.
23 April, 1895.

WEDNESDAY, 24 APRIL, 1895.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.	JAMES HAYES, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	ROBERT HENRY LEVISON, Esq.
The Hon. JAMES HOSKINS.	JOHN MOORE CHANTER, Esq.
The Hon. JOHN DAVIES, C.M.G.	CHARLES ALFRED LEE, Esq.
The Hon. CHARLES JAMES ROBERTS, C.M.G.	JAMES GORMLY, Esq.

EDMUND WILLIAM MOLESWORTH, Esq.

The Committee further considered the proposed Harbour Improvements at Newcastle.

Henry Richard Carleton, Esq., M.E., M.I.C.E., Principal Assistant Engineer for Harbours and Rivers, Department of Public Works, sworn, and further examined:—

- H. R. Carleton, Esq., M.E., M.I.C.E.
- 24 April, 1895.
2042. *Chairman.*] Have you followed this inquiry? Up till within the last week or so. I am afraid I have not been able to keep in touch with it since then.
2043. Do you know the salient points before the Committee? Yes.
2044. The Department has had an opportunity of making itself conversant with them? Yes.
2045. In evidence previously given before the Committee, in order that we might have an idea of the discharge from the river, and the injury possible from floods, we were given some low water sectional areas? Yes.
2046. Would you like to make a statement with regard to them? Yes.
2047. I presume you grant that a low water sectional area does not fittingly convey what the discharge of the river would be in flood-time? Yes.
2048. Therefore the information ought to be given to us in some different way? Yes.
2049. Perhaps you will give us that information? First of all, I think Mr. Darley supplied those cross-sections of the Hunter more with the object of showing the tidal capacity of the river—that is, the volume of water which would lie between the high and the low water planes, and to point out that if floods were to be kept within bounds, you should deal with the upper portion first where it is more contracted. He showed by those sections that we were able to discharge the whole of the flood-water through the entrance, as it is at present, without flooding the adjoining lands; but if you go further up the river the flood-water spreads out over the ground—the channel is not sufficiently large to carry it. However, I have gone a little further myself into the matter since then, because I thought the Committee considered the question wholly with reference to the discharge of flood-waters, and I have taken a case of an 8-feet flood at Hexham—that is one of the highest. I have assumed a fall of 6 inches in the mile in connection with this flood. The velocities I may give you may not be the actual ones, but they are comparative velocities. I am taking the velocity on two different sections; one at the entrance, and the other at Hexham.
2050. For comparison they will do as well as any other? Yes; they are due to a fall of 6 inches in the mile.
2051. *Mr. Davies.*] What would be the total length of mileage? From Hexham to the entrance, about 12 miles. The width of the channel opposite the outer end of the southern guide-wall is 1,170 feet. The sectional area at low water is 30,980 feet. The sectional area between high water and low water is 6,000 feet, giving a total of 36,980 feet. That corresponds to the flood at that point, because floods raise and maintain the harbour at about high-water mark, when they are running full. As the water of the harbour entrance remains practically at high-water level during a flood, the above total would represent the full discharging area at the entrance, without further scour. The width of the channel at Hexham at low water is 520 feet. The sectional area at low water is 12,512 square feet. I have got some of our own levels and the map of the district, and I find that to get the same sectional area at Hexham, with an 8-feet flood as at the entrance, would require that the water should spread out to a width of 5,500 feet, and have an average depth over the land of 4 feet, in which case the mean velocity would be less than one-half of that at the entrance. The actual width, however, as far as can be ascertained from our plans, is about 1,000 feet less. The average depth would also be less, perhaps one-half, and the velocity slightly more than one-half that at the entrance.
2052. *Chairman.*] Being shallow water the friction is greater? Yes. The discharge in the case I take at Newcastle will be 11,382,444 cubic feet per minute, and at Hexham 5,340,600 cubic feet per minute, or only about one-half of what the Newcastle section is capable of discharging.
2053. You say that the greater depth, and the better formation of the channel at the heads as a discharging channel, renders the discharge therefrom, although the sectional area might be about the same, a very much greater discharge than at the shallow channel which would be formed by a flooded area at Hexham? Yes.
2054. And in addition to that, it has a larger discharging area at the mouth of the heads? Yes; a larger discharging area and a greater velocity.
2055. Are you prepared to grant that you are speaking in general terms, and do not know absolutely the fall of your sectional area? I do. Mr. Darley gave it in his evidence as 6 inches to the mile. We have it on record.
2056. But you do not know the shape of your sectional area at Hexham? I know it as well as anyone. I took the levels all over it seventeen years ago. We have our own plans as well in connection with the survey for the Newcastle water supply.
2057. You say the velocity at the heads will be twice as great as at Hexham? In that particular calculation.
2058. Where do you find the definite difference in the velocity? All I want for the purposes of this calculation is the mean velocity of all the particles passing through the section. Of course it is variable at the entrance. I have heard it said that you get surface velocities there, at points, of 8 miles an hour. Those, however, are only based on steamers known to be able to travel at 8 miles an hour, and they were unable

unable to make headway; but that is no proof of the velocity being 8 miles an hour, because the slip of the screw was enormous in water running like that.

H. R.
Carleton,
Esq., M.E.,
M.I.C.E.

2059. In general terms, your evidence means this: that although the low water sectional areas do not correctly explain the discharging power of the river Hunter at the time of flood, still the real flood discharge is not affected by any works at the heads? No.

24 April, 1895.

2060. The Committee is told that, because low-water sectional areas in the Hunter show a certain sectional area, and the heads show also a sectional area, therefore the question of floods cannot be affected by the work at the heads;—but our contention is this: that inasmuch as we are not dealing with low-water sectional areas at all, they are not pertinent to the question? Exactly.

2061. You grant that? Yes.

2062. You furnish us with a sectional area at Hexham, making it clear that the discharge at the heads will not affect it, inasmuch as it is larger than the flood-water discharged at Hexham? Yes.

2063. There is one more point before we come to the work before us, and that is in reference to the scheme of reclamation which you have shown in red on the maps? Yes; we are not considering that scheme now. The Department has not yet thrashed it out.

2064. It deals vitally with the question of the amount of water which will be over the bar? Yes.

2065. You grant that any interference with the present tide-submerged area inside the Hunter River and estuary will affect the amount of water coming over the bar;—it will affect the volume of tidal water entering, and, therefore, will affect the scour on the bar? Yes.

2066. Therefore, it is a matter to be taken into consideration very seriously in connection with works of this kind? Yes.

2067. You show upon the plans that you are covering up areas which previously have been submerged? A portion of it, but it is very shallow.

2068. What provision are you making to compensate for that? By opening the entrance to Fullerton Cove and letting in a greater volume of tidal water.

2069. You intend to use that as a sluicing dock? Yes; and we shall also increase the volume in the channel itself by deepening it.

2070. Using Fullerton Cove as a sluicing dock will compensate for the embankments you intend to carry out? Yes.

2071. Your Department realises the importance of the question? Yes; it was taken into consideration when Mr. Darley sketched out that scheme.

2072. What is the approximate area of Fullerton Cove? About 2,560 acres.

2073. What is the area of your embankments? About 920 acres.

2074. Therefore, it will give you a sluicing dock twice the area of your reclaimed land? Yes; nearly three times the area.

2075. Might the using of Fullerton Cove as a sluicing dock solve the difficulty of the settlement of silt in the North Harbour? No; I do not think so. We want an area for shipping. If we contracted our channel, and kept it uniform at 1,800 feet width, we would be able then to scour it out, but we have to widen it out to obtain some place for the ships to lie in.

2076. You do not think it will be of much value for scouring purposes, excepting right down at the bar? It will assist us there.

2077. The Committee asked you on a recent occasion where the water, following along the dyke, and on reaching the southern guide-wall, would be projected;—what direction will the current then take? I have not been able to fix that exactly yet. It is too complicated a problem.

2078. But you must have had that in your mind when you made the scheme? Yes.

2079. If the guide-wall is built the northern breakwater must be built; otherwise the current will find its way out between Stockton beach and the Oyster Bank? Yes.

2080. Therefore, your reply, I presume, is this—that that guide-wall will project the current somewhere towards the north-eastern end of the northern breakwater? About the outer end of the northern breakwater.

2081. The construction of the southern wave-trap makes it imperative that the northern breakwater should be built? Yes.

2082. It would give you a worse bar than ever if it were not? Yes; it would direct the current sideways instead of directly out on the bar.

2083. Coming to the question of the northern breakwater, the evidence we have at present is this—that the construction of the southern breakwater and the northern guide-wall have had the effect of moving the worst part of the bar some 800 feet to the north-east;—is that evidence correct? Yes, about that; but this bar is not a point. It extends over a distance of practically 800 feet.

2084. The worst part of the bar is generally regarded as the bar? Yes; but even that is not a line. It has some width in itself.

2085. But the effect has been that the worst part of the bar is 800 feet seaward from where it was? Yes.

2086. That result has been brought about by the scour created by the northern guide-wall, with the aid of the southern breakwater? Yes. Whilst on that point I should like to draw attention to this—that these three sections are taken, one on the line of the old fairway, one 100 feet to the right, and another 100 feet to the left. The point marked "A" on the first longitudinal section corresponds to the end of the northern breakwater—that is, a line taken at right angles with this section would just cut the end of the northern breakwater. Before the northern breakwater was constructed the red line was the bar. As soon as it gets beyond the end of the northern breakwater the scour loses its influence.

2087-8. That little hillock is at the end of a tongue of sand formed from the northern breakwater, running out in an easterly direction? It shows that the northern breakwater's influence has been lost after the current passes beyond its end.

2089. A little further along the plan you will see a sienna mark;—what brought that sand there? It was always there. That is the sand line on the rock.

2090. Has there been no alteration there at all? Yes; it is slightly deeper.

2091. What made it deeper there? The scour.

2092. You tell us that the scour lost its power just outside the northern breakwater? Not the whole of its power. It is not nearly so effective as when confined between the two breakwaters.

2093. But your plan shows that sand has been brought along the northern breakwater and deposited in the fairway? Yes.

2094.

- H. R.
Carleton,
Esq., M.E.,
M.I.C.E.
2094. That has been brought there by the scour? Yes.
2095. From where? All the way up the harbour.
2096. Therefore, the scour has some influence there? Yes.
2097. The influence of that scour is felt 2,400 feet from where the contracting influences cease? Yes.
2098. To have taken it to that position there must have been a scour in existence? Yes.
2099. That is 2,400 feet outside the contracting influences? Yes.
2100. Take the first section of the northern breakwater, and tell us what depth of water there will be 2,000 feet eastward from it? Not less than 50 feet.
2101. If we transfer the termination of the contracting influence from the end of the present northern guide-wall to the end of the proposed first section of that northern breakwater, and it exercises the same influence as the northern guide-wall, the bar will be precipitated north-easterly into the 50 feet of water? It follows from your argument exactly the same law.
2102. Is the argument correct? It is hard to predict exactly what distance anything will be conveyed by a current. Assuming that it pushes it 2,400 feet further that will not be sufficient. We must go out to catch the littoral current.
2103. Do you grant that, in all probability, the scour will transfer the bar 2,000 feet seaward? I will not say what distance. It will put it out further. The end is in 46 feet of water at present.
2104. Therefore the bar in places would be in at least 50 feet of water? Yes.
2105. It is said that the deepest boats likely to come to Newcastle are 26 feet? Yes.
2106. Then you will want 30 feet of water at Newcastle? Yes.
2107. If you have 50 feet of water on the bar you will have 20 feet to come and go upon? Yes.
2108. Before the danger reveals itself again? Exactly. It would only be a temporary relief.
2109. But if the first section of the northern breakwater places your bar in 50 feet of water at least, and the utmost water you require is only 30 feet, your bar has to fill up 20 feet of sediment or sand before you experience any trouble again? Yes; and it will not be long in doing it either.
2110. How long? If you do not carry it out to catch the coastal current—some current which will disperse the sand—it will fill up again.
2111. In time? Yes.
2112. It will take a considerable time to form 20 feet of bank out there in the ocean;—is it reasonable to suppose that the bar will make a foot a year? One flood would do it. It is not reckoned by years. One really good flood would bring down enough to do it.
2113. Are you prepared to state that that does not get out as far as the current? I am.
2114. You believe the current is further out than that? Yes; otherwise we would not have that stuff there now.
2115. How far out is the current? I could not tell you.
2116. You cannot locate it? No.
2117. But you say that the extension of the second section will precipitate it into the current, but stopping at the end of the first section will not? I think it is safer. The further you take it out the more likely you are to catch the current.
2118. Will you grant that the construction of the first section of the northern breakwater will, in all probability, transfer the bar so that it will be situated in 50 feet of water? Yes.
2119. With regard to the removal of the rock in the channel itself, have you any statement to make with regard to that;—the different sections do not seem to be quite clear to us? I think the estimate of cost which was given to you before was in excess of what will actually be required for the work. I think the estimate was an error on my part in supplying the total of the accumulated quantities to Mr. Darley.
2120. Mr. Darley stated in his evidence that the increased scour would give another 2 or 3 feet, and that by small operations in the removal of rock we could get an additional 2 or 3 feet? Yes.
2121. Now you make a statement with regard to the cost of those feet? To remove the bar we hope to scour down to 25 feet at low water. Then we come to the rock, and to remove the rock lying between that and the 26-feet contour will cost £3,242. To remove the 26-feet contour and the 27-feet would cost £15,186; and to remove the 26, 27, and 28-feet—that is, to remove all the rock above the 28-feet level, would cost £34,690.
2122. That is the removal of rock? Yes.
2123. And you wish that statement to stand as a correct estimate for that work? Yes; if it has not already been corrected.
2124. *Mr. Levien.*] Where is this rock? Just where the bar is now.
2125. *Chairman.*] The Committee understand that, in order to get 28 feet of water, you require to remove a certain quantity of rock? Yes.
2126. To give you what fairway? 300 feet.
2127. And you have made a calculation based on a width of 300 feet? Yes.
2128. And the result is, £34,690? Yes; for 17,345 cubic yards. That is the quantity of rock.
2129. *Mr. Davies.*] What is the object of the continuance of the northern breakwater? To scour out the bar. What I said previously, or what I meant to say, was that the influence of the current dies out at a distance of 2,400 feet from the end of the northern breakwater.
2130. What distance will the construction of the first section of the northern breakwater carry the bar seaward? I do not know.
2131. *Chairman.*] What is the length of the existing breakwater? 1,960 feet.
2132. To the end of the first section, north breakwater, is virtually your contracting influence right along? Yes.
2133. What is the length of that? 2,020 feet.
2134. You virtually double what you may regard as your contracting influence? Yes.
2135. Therefore it must have a great benefit upon the bar? Yes.
2136. Will your wave-trap have any effect at all as a contracting influence? Yes; I think there will be less friction. There will be still water outside the line of the breakwater.
2137. If the Committee determine to adopt the first section of the northern breakwater, you have a northern guide-wall continuous in its effect for 4,000 feet? Yes.
2138. With regard to the southern breakwater, the Departmental proposal is to build it up some 200 feet to bring it to its old position? Yes.

2139. Why was that southern breakwater built? With the object of improving the entrance to Newcastle. H. R.
 2140. In what way? To shelter it from the reef and the sea to the south-east. Carleton,
 2141. Are you sure that the southern breakwater goes sufficiently far to give a reasonable shelter from Esq., M.E.,
 the south and the south-east? I think it will when we have made up the end, but if you spent what is M.I.C.E.
 proposed to be spent on these works in extending the southern breakwater, you would have no appreciable
 effect in further sheltering the port. 24 April, 1895.
2142. The southern breakwater was built to protect the port of Newcastle from southerly and south-easterly seas? I think it was built with the object of protecting it from every sea.
 2143. But the main seas are from the south and south-east? The more frequent gales are; but some of the very worst are what are called "black north-easters."
 2144. But nine-tenths of the gales are south of the easterly point? Yes.
 2145. How did you come to the conclusion that the exact point at which the Department ceased to construct the breakwater originally was the right point at which to cease? It was governed by the reef. We were just getting off the rock there. We went a little beyond the reef with our breakwater in the first instance, considering that was sufficient to protect the entrance from the seas which, of course, break on the reef, and are carried across the entrance.
 2146-7. The Department came to the conclusion that the breakwater, as originally completed, was sufficient to protect Newcastle from the southerly and south-easterly seas, and that point of termination happened to fairly coincide with the rock? No; it is not a coincidence.
 2148. The Departmental evidence is this—that the southern breakwater as it at present stands gives quite sufficient protection to the port? We think so.
 2149. We want to know why you think so? Because we have extended it beyond the rock and reef from which the broken water came.
 2150. What sort of end had you upon that breakwater when it was originally completed? It was a good solid end, but it had not been flattened out. The sides were rather steep.
 2151. The seas flattened it out for you? Yes.
 2152. It is a reasonable inference, therefore, that a heavy sea runs round it? Yes; but we look for something of that kind in the construction of all breakwaters to give us a wide base. We are not able to widen the base ourselves. The stones catch when we push them over, and we look forward to a gale to flatten them out.
 2153. Have you seen the end of the southern breakwater? Yes.
 2154. Have you noticed how the heavy stones are dragged round in a north-easterly direction into the channel? No; it would be hard to say whether the stones were tipped there or carried round.
 2155. The very fact that some very heavy works carried out at the end of the southern breakwater were washed away shows that a very heavy sea rages there? Yes.
 2156. That being so, are you quite clear that you have extended that breakwater far enough to intercept the southerly and south-easterly seas? I believe if you extended it another quarter of a mile you would have the same sea on the end of it.
 2157. A south-easterly sea, as the breakwater is at present, would find its way upon Stockton beach? Yes.
 2158. Supposing you had never started the southern breakwater at all, it would have found its way to the north breakwater? Yes.
 2159. Therefore, the further you extend that breakwater out, the more it will throw those easterly seas beyond the port of Newcastle on to the Stockton beach? Yes; I should like to add that the effect on the seas of any extension of the southern breakwater, which we could possibly afford to carry out, would be inappreciable, as far as the entrance is concerned.
 2160. Let us take a problematical distance of 300 feet. First of all, what would that cost? I think I ran it out roughly at about £30,000. I have estimates prepared for a quarter of a mile, and I find it a little in excess of the cost of our whole scheme—about £147,000. An extension of the southern breakwater for 710 feet would cost £74,000.
 2161. Can you tell us definitely why the Department believe the breakwater as originally constructed was sufficiently long to intercept the southerly and south-easterly seas? I think it was because we had got past the edge of the reef.
 2162. Can you give us the Departmental reason for stopping at the present end of the southern breakwater? Because we have reached the end of the reef.
 2163. Supposing the reef had gone on another 300 feet;—would the Department have gone on with the southern breakwater 300 feet? I dare say, if we had had the money—if the reef had been further out—because the vessels would have had to go round it in entering.
 2164. You state that that breakwater saves you from the easterly and south-easterly seas? Yes.
 2165. Supposing the whole of the shipping evidence before us says it does not, how do you stand then? I still hold to my own opinion.
 2166. If these people are unanimous that it does not protect the entrance to the port, and it is absolutely proved, how then does your Department stand with regard to affording protection? If it is absolutely proved of course I will withdraw my opinion; but I am not aware that it is absolutely proved.
 2167. If captains—whose experience of entering the port extends over a number of years,—give their unanimous opinion that the extension of the southern breakwater is necessary, will you venture your opinion against theirs? Yes, I will, for this reason:—the primary object of our scheme is not so much to obtain smoother water, as to increase the depth on the bar; and we say that our scheme will effect that, and the extension of the southern breakwater will not do so.
 2168. It is absolutely proven as a fact by those who are accustomed to go there at all times, that the breakwater will not be extended far enough by your proposal to protect them from the southern and south-easterly weather;—what then do you do? I should ask to see the proof.
 2169. Supposing it be proved—taking a problematical case—what then is your remedy;—is it an extension of the southern breakwater? Yes, for the case you put before me.
 2170. Is not that the only way you can get the protection required by the continuation of your work, such as you have had in the past? I say we do not require the protection; you cannot mention an instance of a vessel being lost there.

H. R.
Carleton,
Esq., M.E.,
M.I.C.E.

2171. If it is a fact that the entrance to Newcastle is not sufficiently protected from the southerly and south-easterly seas, how would you remove it? By extending the southern breakwater.
 2172. Then the matter rests upon this: Is it a fact that Newcastle is properly protected from the south and south-east? Those are supposititious questions.

24 April, 1895. 2173. How would you prove Newcastle was not properly protected from the south and south-east—what evidence would you rely upon with regard to the protection of the port? One is, that no vessels have been lost and no damage has occurred since the construction of the southern breakwater. That, I think, is very conclusive proof. I am not aware that passenger boats even are delayed.

2174. Would you consider the evidence of the pilots and harbour-master as valuable in a case of that kind? Yes.

2175. Would you consider the evidence of the traders to the port in all classes of boats has any value? Yes; but I should like to know the class of boat you are referring to. Our object is to make provision for vessels drawing 22 feet and over. The harbour is sufficiently deep for the other vessels, and naturally men with light draft vessels would try to make it as smooth as they possibly could.

2176. *Mr. Levien.*] But you would expect every class of vessel, no matter whether of heavy or light draught, to enter with safety? The rough weather perhaps is only for one or two days in a year.

2177. *Chairman.*] Your contention is that the extension of the southern breakwater would be beneficial to the smaller boats which want smoother water? Yes, if you had the money to take it far enough.

2178. But would it not be beneficial to the large boats which only want additional depth? No.

2179. If it be a fact that the southerly and south-easterly seas do still roll round the end of the breakwater, when made up, as the Department proposes the only cure for that, is an extension? I should like to add that in my opinion it would be better for the Committee to throw out the whole scheme than to go in for a large extension of the southern breakwater.

2180. Why? For the reason I have stated, that our object is to obtain an increased depth on the bar and the most economical means of doing that is by the construction of that scheme which Mr. Darley has already prepared. I think too much has been made of the rough water at Newcastle. There has been very little delay caused to shipping at Newcastle on that account.

2181. How do you prove it to be a fact that the southern breakwater does intercept the seas we have mentioned in the face of the whole of the evidence that it does not intercept them, and that it is not long enough? I do not prove it. I say our breakwater has been extended to the edge of the reef from which the broken water comes, and that if you extend the breakwater, say, a quarter of a mile, you will have the same sea at the end.

2182. Notwithstanding the fact that the whole of the witnesses accustomed to go in and out there, some of them every day of their lives, say that the seas break there in the most furious way, still you contend there will be no benefit at all from extending the breakwater? You must fix upon a length, and I say that an extension of a quarter of a mile would not give you what you anticipate, and that the cost of that would be greater than the total cost of the scheme before the Committee.

2183. Is the end of the breakwater affected by the roll from Big Ben at all? Yes, it strikes it in passing.

2184. If we extended the breakwater 300 feet, would it intercept it? It might intercept a portion; but I say it will not be appreciable.

2185. *Mr. Hoskins.*] What do you say is the width of the entrance to the channel? 1,400 feet.

2186. What width will a vessel drawing 21 feet of water have available at the entrance? 300 or 400 feet. I hear that the point was raised that the silt, after being deposited outside, was carried back and deposited on the bar. We have had some soundings taken at the point where we deposit the sand, and we find there are 15 or 16 feet less water there than there used to be, showing that the sand has gone to the bottom there. We deposit the material about $1\frac{1}{2}$ miles to the south-east, and to show that it could not be carried back and deposited on the bar, I may say that the bar always forms from the northern side.

2187. *Chairman.*] Have you a statement to that effect? No; but I wanted to show how quickly silt and sand precipitate themselves in salt water compared with fresh. Anyone who has spent any length of time in the bush knows that if you come to a clear waterhole, the water will probably be brackish; but in the fresh-water holes it is usually muddy. I will read an extract from the Minutes of Proceedings of the Institution of Civil Engineers on Mr. Vernon Harcourt's paper on the "Training of Rivers":—

The accumulation of sediment (at the bottom of the sea) is helped by the property possessed by sea water, of retaining fine matter for a much shorter time than fresh water does. Thus, according to Mr. Sidell (quoted in Dana's *Manual of Geology*), sea-water clears itself in fifteen times less time than river-water does. By experiments Mr. Sidell proves that precipitation which requires ten to fourteen days to be completed, in fresh water took place in fourteen to eighteen hours in saline solutions. This principle accounts, to a great extent, for the very beneficial effects of training-jetties at the mouths of rivers, because by keeping the river-water separate from the sea-water for a greater length of time and space, they prevented the matter in suspension from being precipitated close to the mouth of the river.

2188. Does that prove that the stuff you deposited $1\frac{1}{2}$ miles to the south-east goes to the bottom at once? Yes.

THURSDAY, 25 APRIL, 1895.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.
 The Hon. WILLIAM JOSEPH TEICKETT.
 The Hon. JAMES HOSKINS.
 The Hon. JOHN DAVIES, C.M.G.
 The Hon. CHARLES JAMES ROBERTS, C.M.G.

EDMUND WILLIAM MOLESWORTH, Esq.

JAMES HAYES, Esq.
 ROBERT HENRY LEVIEU, Esq.
 JOHN MOORE CHANTER, Esq.
 CHARLES ALFRED LEE, Esq.
 JAMES GORMLY, Esq.

The Committee further considered the proposed Harbour Improvements at Newcastle.

Henry Richard Carleton, Esq., M.E., M.I.C.E., Principal Assistant Engineer for Harbours and Rivers, Department of Public Works, sworn, and further examined:—

2189. *Chairman.*] The Departmental view is that no good results will follow the extension of the southern breakwater? Not with any reasonable expenditure of money.

H. R.
Carleton,
Esq., M.E.,
M.I.C.E.

2190. The 200 feet of making up will be useful? We have always looked upon that as re-forming work and strengthening.

2191. Will you show the Committee, from the plan, the direction a south-easterly sea would strike the end of the southern breakwater, and where it would proceed after going beyond it? Just outside the end of the outer extension of the northern breakwater. It would just clear it. The southern breakwater would protect the northern breakwater from the south-easterly sea.

25 April, 1895.

2192. You have your breakwater up to a certain point;—if you extend that point does it not give you 500 feet more of still water? I do not know that it would. It would curve inward, but the sea upon the bar is independent of that; it is a breaker on the bar itself.

2193. You tell us that your southern breakwater protects the port, and a south-easterly sea, passing outside it, goes in a certain direction;—if you extend that southern breakwater 500 feet, will it not give you 500 feet more smooth water than is given at present? I suppose it would.

2194. Therefore, it would extend that smooth water into what depth of water? Into 29, 31, and 26 feet. An extension of 800 feet would give a depth of about 60 feet.

2195. Your north-east line from the end of the 500-feet extension passes between a sounding showing 30 feet, and a sounding showing 60 feet? It actually passes through 31 feet.

2196. And immediately outside that you show a sounding of 60 feet? There is a considerable distance between the two—about 450 feet.

2197. The north-easterly sea at present passes over a bar showing as low as 20 ft. 6 in. of water? Yes.

2198. If you go 500 feet further out by extending the south breakwater, your rollers, going in the same direction, forced by the same sea, pass over a depth of 31 feet? Not 31 feet. The sounding on this map is 22 feet. If the waves go in the same direction after the present breakwater has been extended 500 feet, they will pass over an additional depth of 10 feet, and 400 feet further than that we have a depth of 60 feet of water.

2199. If you extend the southern breakwater, and the same results follow, fresh water coming out of the river will meet the heavy rollers in 10 feet greater depth? You would have to arrange to have heavy rollers at the same time as the flood to make them meet anywhere.

2200. But a heavy sea and a flood frequently occurs? I have seen it very calm during floods.

2201. A current coming out of the river is very much the same as a "roost"? I think the term "roost" applies to the very rapid tidal currents which occur upon the coast of Norway and the upper parts of Scotland.

2202. How fast do these "roosts" or races run on the coast? From 6 to 11 miles an hour.

2203. At what rate in flood-time would the water run out of Newcastle Harbour? You are not comparing like quantities. The other is a tidal-water; this is a flood. To make a comparison you must have like quantities. The rate of an ordinary tide at Newcastle would be about $3\frac{1}{2}$ knots.

2204. At what rate does it run out of Newcastle when there is a heavy flood in the Hunter? I have taken most of the flood velocities of the harbours along the coast, and I know that the greatest flood velocity at the Richmond, when the flood was 71 feet at Irvington wharf, in 1887, was $4\frac{1}{2}$ knots an hour at the entrance. That would be a fair index of what it would be at Newcastle. At Belmore Bridge, on the Hunter, on a base line of about a mile, I took the greatest velocity I have ever seen on any of the coastal rivers here in flood-time, and it came to about 6 miles an hour.

2205. Will you make a definite reply with regard to the flood-water going over the Newcastle bar at flood-time;—at what rate do you think it runs? I should say between 5 and 6 miles an hour at one particular part. That is the maximum velocity, but the mean velocity of the whole section would not be anything like that. In the centre of the current you might get between 5 and 6 miles.

2206. We will take it at about 6 miles an hour, although we have evidence that it is more than that? I do not know where you can get that evidence. I have taken more current velocities on this coast than any man in the country.

2207. Did you ever take them here? No; I have not. I have taken them on the Hunter and on nearly all the rivers on the coast between here and Queensland.

2208. If you grant that it runs 6 miles an hour it is enough for my purpose; it then becomes a "roost" or race of 6 miles an hour going out to meet the open sea? Yes.

2209. Compare its meeting the open sea in shallow water and also in deep water; what would be the difference? In very shallow water you would have it all broken up and boiling.

2210. What would be the result upon the sea if the "roost" from the Hunter River met it in 30 feet of water instead of in 20 feet? I do not think there would be any appreciable difference.

2211. Is there no difference between the "roosts" which run on the coast of England in shallow and deep water? Yes; but you are not comparing like quantities. You have the fresh water here running out in a flood which beats the sea down. There it is all salt water. The "roost" is caused by the running tide there. Here the fresh water runs out on the top of the salt water and keeps the sea down.

2212.

- H. R. Carleton,
Esq., M.E.,
M.I.C.E.,
2212. Stevenson, one of the authorities you brought before the Committee, likens the discharge of a tidal river exactly to one of those "roosts" which you find on the English coast? Yes. Most of his works refer to places where they have very much greater tides than we have. Ours is a comparatively small tide. The highest we get is 6 feet, and our neap-tides at Newcastle are only 2 feet 6 inches.
- 25 April, 1895. 2213. He speaks of them forming "roosts" and races when they are running under 3 miles an hour, and he points out that if they meet the sea in shallow water where the translation process is going on, it is different to meeting it in deep water? There is no "roost" at Newcastle. Stevenson does not say there are "roosts" in every river, and I have certainly never seen one at Newcastle.
2214. How would you describe the discharge of the Hunter into the sea at flood time? As flood-waters.
2215. What form does it take; it is an intrusion of fresh water, is it not;—have you any technical term by which to describe it—the English engineers describe it as a sort of miniature "roost"? Not that I am aware of. A "roost," as I understand it, is the breaking up of the water consequent on the meeting of two currents—perhaps not meeting directly. I may add that the sea has nothing whatever to do with the forming of a "roost," as I understand it. You have a "roost" on a perfectly calm day on the coast of Norway.
2216. Supposing the river is running out into a smooth sea, will it preserve its shape and go further into the smooth sea than it would into a heavy sea? No doubt. If there were a heavy sea running directly in, parallel with the breakwaters, I should say it would hold the flood-water up to a certain extent, and spread it out; but its effect would not reach far. I have been at Newcastle at flood-time, and on all the other rivers. The fresh water, of course, is very marked. It works its way out on the ebb-tide, and is again pushed backwards towards the entrance on the flood. The clear water comes up towards the mouth of the bar during flood-tide.
2217. If the river runs into the rough sea, the stream or current will be broken up more readily than if it runs into the smooth water? Yes.
2218. If you extend the southern breakwater 500 feet, and get 500 feet more of smooth water, you prevent your current for a further distance of 500 feet from being broken up? Yes.
2219. Therefore, you aid in extending the power of your scour another 500 feet? No; because you have not got it. You want a breakwater on the other side to hold it up. It leaks out.
2220. I take it that there is some value in having a quiet bar? Yes; but in reply to that I say that, for no reasonable amount of money, will you be able to produce an effect on the smoothness of the bar.
2221. If you get smooth water for 500 feet beyond what you have at present, would not that smoothness be a benefit in aiding your scour? Not unless you construct a northern breakwater to hold up the current. If you extend the southern breakwater (say) half a mile, you will create no further scour on the bar.
2222. If the breaking process does not take place until you get 500 feet more seawards, it aids the effectiveness of the scour? To a very slight extent it may do so. I do not think we would be able to detect it by any soundings we could take.
2223. You have granted that an extension of 500 feet gives you 500 feet more of calm water? Yes; on calm days. Newcastle is a comparatively safe port.
2224. *Mr. Hoskins.*] We have evidence quite to the contrary? I can give you particulars of every wreck which has occurred there, and I can also obtain the days during the year on which our little tug steamers and punts have been delayed.
2225. *Chairman.*] You grant that you get 500 feet more smooth water by extending the south breakwater? Yes.
2226. You grant, also, that it will take you into 30 feet of water? Yes.
2227. Therefore, you have transferred the breaking point of your scour 500 feet seaward? Yes.
2228. If you grant that how can you contend it is not valuable? Simply because it will not last for any time. It is merely a temporary measure. It will silt up there in the 30-feet depth, just the same.
2229. Your contention is that it will again fill up? Yes.
2230. The construction of the northern breakwater without the wave-trap would accentuate the range into the Newcastle harbour? Yes; but I think too much has been made of that range.
2231. But still, the smoother a harbour is the better? Yes.
2232. Therefore, you put a northern wave-trap in to intercept the roll? Yes.
2233. Supposing that you transfer, by extending the southern breakwater—what you might call the range point—where the waves run across the mouth of the harbour, 500 feet eastward;—it will have 500 feet more to go before it reduces the range in the harbour? Yes.
2234. Therefore, the extension of the south breakwater is likely to lessen the range in the harbour? I think the wave-traps will be most effective in that direction.
2235. Was the southern breakwater built in the first instance to give you smoother water over the bar and on the approach to the river? Yes.
2236. If there were no southern breakwater would there be a heavy range at Newcastle harbour? I do not know that there would be in the present harbour.
2237. If you extended your southern breakwater 500 feet you would have the waves 500 feet further away from the port itself, and they would have a further distance of 500 feet to run before you felt their influence? Yes.
2238. Do you believe the extension of the southern breakwater would be useful to any class of boats? Yes, slightly, to the smaller light draught ones.
2239. But a smooth bar is of no value to the bigger boats? The difference in smoothness which you would be able to create by the extension would be of no value to them. Of course if you can make it always perfectly calm, no doubt it would be of value to everything passing in and out, but you cannot do that.
2240. A smooth bar will be valuable to light draught boats? Slightly better.
2241. Is not a ground swell a dangerous thing for a port? I do not think so. I think it is the breaking waves which are dangerous. As long as it is a roll it does not matter.
2242. Supposing one port has an entrance of 30 feet deep and another has an entrance of 20 feet deep, which is the better? The one with 30 feet.
2243. Virtually the worst part of the entrance to Newcastle, if the southern breakwater were extended, would be under the lee of the south breakwater? No.
2244. What depth of water are you in when you get under the lee of the south breakwater? About 27 feet.
- 2245.

H. R.
Carleton,
Esq., M.E.,
M.I.C.E.

25 April, 1895.

2245. At 22 feet you find the benefit of the south breakwater? No; I do not think so, because it sweeps round up there. There is not a hard and fast line between the rough and the smooth waters.

2246. Supposing you could get under the lee of the breakwater in 30 feet, would it be a better port to approach for a deep-sea boat? Yes.

2246½. With the southern breakwater as it is at present, you do not get under the lee until you are in 22 feet of water;—how is it that that will not be of benefit to the deep-sea boats? My contention is that it will fill up there.

2247. Yesterday we came to this conclusion—that if the first section of the breakwater were built, and the result which has followed from the construction of the northern guide-wall occurred in that instance, the bar would be projected seaward into from 40 to 50 feet of water? Yes; into that water, but that would be filled up.

2248. Supposing the first section of the northern breakwater is constructed, and the southern breakwater is extended 500 feet, will that force the bar into 40 or 50 feet of water? Yes; I think it will.

2249. Therefore, if we extend the southern breakwater 500 feet, it will give you 500 feet more smooth water? Yes; perhaps so, but not in the place you want it to.

2250. With the construction of the first section of the northern breakwater the bar will be likely to commence to form again in some 40 feet of water? I think it is probable.

2251. And the extension of the south breakwater will give you 500 feet more smooth water in that direction? Yes; but at the same time you will carry it further by putting 500 feet on the northern breakwater.

2252. The extension of the northern breakwater means that you will carry the bar into more than 40 feet of water? Yes.

2253. An extension of the southern breakwater 300 feet beyond the point at which the Department intend to build it up, and the construction of the first section of the northern breakwater, would have this effect—it would propel the bar to 40 feet of water, give you 500 feet more smooth water than you have at present in the direction of the bar, and the entrance to the port would be in deeper water? Yes; but the same result can be arrived at at less cost by the extension of the northern breakwater.

2254. *Mr. Trickett.*] Can you tell us at what depth of water a scour will be effective? In the entrance to Newcastle harbour I see it has been scoured out in one part 41 feet at low-water, and I do not know that it is done yet. If we could get our bar down I believe it would scour deeper still.

2255. If that is the case, why should it silt up again at the end of the northern breakwater if it is extended out? That is due to the action of breakwaters. That 41 feet is opposite the middle portion of the northern breakwater. The current having passed a certain point has lost its effect in consequence of there being no northern breakwater beyond that point.

2256. I understand the tenor of your evidence is more in the direction of deepening the entrance than in regard to safety for the port? Our primary object was to produce deep water by the most economical means. If in doing that we made it any smoother we should be only too delighted, but I do not think any reasonable expenditure there will alter the sea much. If you do not have it exactly where it is now you will have it a little further out.

2257. The primary object is to get rid of the sand-bank or bar? Yes.

2258. We had evidence a few days ago, from a captain who had travelled a great deal, to the effect that in certain ports heavy weights or dredges had been dragged over places of this kind, and that the outgoing tide had had the effect of removing very large quantities of sand? We have done that ourselves, and I think it was tried at Newcastle also.

2259. With what result? It is only a temporary measure. It is just the same as dredging. We also tried to harrow the bar on the Richmond River.

2260. But was it not too light for this work;—did it not almost float after the steamer? No.

2261. Did it not lift up? No. We had iron-work at Lake Macquarie. I did not see the Richmond one. I do not think it would be effective in such water as we have at Newcastle at 22 feet. It is merely on small or shallow bars where it is tried.

2262. You do not think it would be effective in this case? I think not. It might toss the sand about a little.

2263. Have you thoroughly thought out the effect of narrowing the neck of the entrance to this port, as proposed by the first section of the northern breakwater and its subsequent extension? Yes. This scheme does not narrow it. The new scheme does not make it any narrower than it is at present, and the old scheme has made it 600 feet wider than it was in its natural state.

2264. It prolongs the neck at the entrance? Yes.

2265. The entrance for deep vessels is confined to about 300 feet wide at Nobby's? Yes; but there are very few heavy vessels coming inwards.

2266. Your new breakwater, carried out to its ultimate extent, must make the neck of the entrance to Newcastle harbour longer than it is at present?

2267. And as you are going to prolong that breakwater you must create a neck there which does not exist at the present time? Yes, that is our object.

2267½. Is not the effect of a work of that character, as on other rivers, to cause the sea-waves to roll for miles upon miles right into the effect? I will read this case from Stevenson on the design and construction of harbours:—

Propagation of ground-swell in narrow channels at Dunoon in the Firth of Clyde the ground-swell, after coming through the narrow passage at the Cumbraes is still from 7 to 9 feet high. It therefore passes through a neck of only 1 mile broad, and is propagated through a channel 1 mile broad for a distance of 14 miles.

2268. Is not there a possibility of this happening at Newcastle? Not the slightest.

2269. Why not? Because a portion of it would be caught in the wave-trap, and what did not would lose itself in the wider area beyond. If any passed the wave-trap, which I doubt, it would not be noticeable.

2269½. This wave-trap business is not very much practised at the present time? Every design on this coast has been designed with a wave-trap by Sir John Coode. At the Selina mouth of the Danube one was constructed.

2270. In this wave-trap are you going to retain a part of the original ocean beach for the wave to spend itself upon? Yes. We expect that the northern wave-trap may fill itself up to a certain extent. We look for something of the kind. The longer and the flatter the slope the better for us.

2271.

H. R.
Carleton,
Esq., M.E.,
M.I.C.E.

25 April, 1895.

2271. Do you propose to retain in that wave-trap the present beach formation for the waves to spend themselves upon? Yes; we say that when our works are carried out sand will probably be deposited on the portion marked pink on the plan, and it will be all the better for us if it does so.

2272. What data do you go upon with regard to the extent of the places required for the waves to spend themselves upon? Mr. Darley spent many days considering it.

2273. Have you gone into it yourself? Yes; I went into it with Mr. Darley.

2274. What space of opening to your northern wave-trap have you? Five hundred and fifty feet.

2275. Do you stake your professional reputation that such a wave-trap as that will have the effect of preventing the waves running up the Newcastle harbour? Yes, I do.

2276. You say that by degrees it will silt up;—how will you deal with it then? We want it to silt up.

2277. If it silts up no water can come in? The sea will run up. It will be a long, flat, sloping beach. At present the beach slopes at about 1 in 5. The flatter we can get it the better.

2278. Will the wave-trap on the southern side also be an assistance? Yes. That is a very useful and effective beach at the present time—of course, not so effective as it will be with a wave-trap in addition to it, but it has always been retained as a wave-trap, and has proved useful to the port. Several applications have been made for the construction of wharfs along there, and Mr. Moriarty and Mr. Darley have always strongly opposed them on that ground.

2279. Several witnesses have stated that carrying out this northern breakwater as intended by the Department, will so narrow the neck of the entrance to the port, that when there is a strong flood on in the Hunter River it will be absolutely a menace to the port, and that vessels will not be able to sail in or even be towed in against such a fearful rush of water as will occur there? Our object is to increase it, but I do not think we shall reach a velocity which will—I am sorry to say—prevent vessels of ordinary power from coming in. I should like to see it reach such a velocity for a short time so as to deepen the bar. These are occurrences which take place so rarely that you must neglect them. Such a velocity as that described may not occur more than once perhaps in four or five years.

2280. There have been cases in which ships under full sail have not been able with two or three tugs ahead of them to get in against the outward rush of water—I have seen that myself; will not that be very much intensified? We undoubtedly hope that the scour will be increased. I do not think we shall get too much increase in it. We should get a longer period of scouring, but whether it will be much stronger I am not prepared to say. It is a temporary thing. It only could have occurred when the highest part of the flood was coming down, and the tide was ebbing.

2281. The Chairman has asked you questions as to extending the southern breakwater 500 feet? Yes.

2282-3. The Sectional Committee recommend that the southern breakwater be made up to the 200 feet which has been washed away, and be extended for a further distance of 300 feet;—do you think that would be an effectual means of scouring this part without the construction of the northern breakwater? No.

2284. Many people have contended that by doing that the action of the sea on the present bar there would be done away with, and that this stuff would go away to sea;—do you think that would be the case? I do not think so; I am pretty sure it would not.

2285. You were asked several questions yesterday as to filling up certain portions of the harbour at Newcastle, and part of the river;—that work has not yet been determined upon? It is not part of the present scheme.

2286. I asked that question because the authorities are so strong as to the risk of interfering with the surface space of water inside the bar harbours, that it seems to be very necessary that that work should be very cautiously considered before it is gone on with to any extent? As far as the harbour is concerned we are increasing the shipping area from day to day.

2287. What I mean is that there is no great embankment at present in consideration which might interfere with the big space of water, and so reduce the output of the water at the fall of the tide? No; I think it would be the reverse. We shall enable a greater volume of tidal water to enter the port than enters at present.

2288. You recognise the principle not to reduce the outrush of water which is so necessary for creating a scour? Certainly; it is never lost sight of in designing harbours.

2289. *Mr. Davies.*] You are familiar with the Departmental scheme? Yes.

2290. And have had to do with the drafting and settling of the different points under Mr. Darley? Yes.

2291. What is the object of the construction of the northern breakwater to the termination of the first section, and the building up of the old southern breakwater? To obtain 3 feet extra depth upon the bar. That is the primary object.

2292. By means of the scour? Yes.

2293. It has not been a question with the Department as to the safety of the entrance to the harbour for shipping? That has not been lost sight of.

2294. But that is not a question which has entered largely into the project before the Committee? Yes; I think it has.

2295. Do you regard the port of Newcastle at present as an unsafe port? No; but if in carrying out our scheme we can make it better still we should endeavour to do so.

2296. But the primary object of the Department is to secure a greater depth of water in the channel? Yes; and a slighter increase, if it requires it, of safety.

2297. By the extension of your southern breakwater up to the point of your old formation you propose to secure also greater calmness of water, and additional depth, giving greater facilities for navigation? Yes.

2298. You do not advocate the extension of the southern breakwater beyond the point of its old formation? No; I think any money expended upon that could be more usefully employed elsewhere.

2299. What are the reasons which actuate your Department in spending £7,000 to make good the southern breakwater? Because it has been knocked down, and will be knocked down more still. It is a thing which you must constantly repair. That sum was first put down under the heading of repairs. The ends get battered about, and there is an annual expenditure upon them. The sea levels them out, and you have to reform them from time to time.

2300. But if you are correct in your opinion that it will serve no good purpose to extend the southern breakwater, why spend £7,000 in making it good? Because it will keep on washing away, and it will be shortened. If we do not put a head upon it, the sea will wash it away further still.

2301. The southern breakwater will gradually crumble away and shorten itself? Yes.
 2302. And you recommend that it should be made up to its old bearings? Yes.
 2303. If it is necessary to prevent the crumbling away and shortening of the southern breakwater, would it not be a greater advantage to continue it out, say 500 feet further than the old line? I think it would be cheaper to make it up from time to time, and I will give my reasons. It is now practically at the end of the reef. We drop over then into deep water of 32, 35, 36, 38, 40, 42, and 43 feet.
 2303½. What water is it in now? Twenty-nine or 30 feet.
 2304. What are the soundings, 300 or 400 feet beyond the southern breakwater? That brings us into 35 feet of water on sand. We do not know what depth it is to the rock.
 2305. If £7,000 will make good the 200 feet of the old breakwater, what will it cost to make an additional extension of 300 feet? Very considerably more; but you cannot draw any comparison from the building up of the breakwater, because the base of it is formed. That is why our estimate is so small. I have not made a calculation for an extension of the southern breakwater 300 feet, but I have made a calculation for the extension of 710 feet under Mr. Hall's scheme, and I find that that will cost about £74,000. The inner portion, of course, will not cost so much as the outer, so that your suggested extension would be under £30,000.
 2306. Three thousand feet is the length of the first section of the northern breakwater. The second section is 750 feet. That is estimated to cost £32,000. In answer to my question you state that in addition to the proposal of the Department, the carrying out of the southern breakwater 300 feet could be done for something under £30,000? I think so.
 2307. If the southern breakwater is extended practically 500 feet beyond its present limits, it would give 500 feet greater extension than at present exists, and you would have your northern breakwater completed up to the end of the first section for the same estimate which you are now submitting for the carrying out of the whole work? That is correct. You would have that much work done, but you would not have the desired effect.
 2308. But the Department itself have a doubt as to whether it is necessary to carry out the second section of the northern breakwater? Not that I am aware of.
 2309. Has not Mr. Darley fixed the first section of the northern breakwater at 3,000 feet as being absolutely necessary? But he thought it would be necessary to construct the two.
 2310. Is not there a possibility, if you get out 3,000 feet, that the second section may not be necessary? No doubt.
 2311. You have been connected with the Department for seventeen years? Yes.
 2312. Do you know the action of the northern breakwater when it was constructed upon the channel? Yes.
 2313. When the northern breakwater was constructed, prior to the southern breakwater being completed, did it not create a deal of trouble in the harbour? I do not think so. I think it has been magnified with age.
 2314. But what if Mr. Darley himself states that? He said there was a slight range at the end of the Queen's wharf, but all the shipping is practically moved away from there now. The greater portion of the shipping is now a mile or more up the harbour.
 2315. Is it not a fact that there was trouble in the harbour until the southern breakwater was completed? I believe there was some range.
 2316. Was there not a great deal? No.
 2317. Were there not many complaints? I never saw a ship taken from the wharf in consequence of it. I have heard it said that lines were broken, but I never saw a ship taken from the Queen's wharf in consequence of the range.
 2318. Were there not many complaints about vessels and steamers breaking away from their moorings, and as a consequence double moorings had to be used? Not many complaints. There have been complaints, and lines have been broken too.
 2319. Would the complaints come to you or go to the shipping authorities of the port? They would go the harbour-master I suppose. Whatever he saw of that kind we generally saw.
 2320. But you would not be so well informed as the harbour-master? Not officially.
 2321. But you are aware from your own observation that there has been trouble in that respect? Yes; I have noticed a range there myself, but as I say, it has been magnified with age.
 2322. What is the object of constructing the southern breakwater from Nobbys to its present point? Because there is a big flat reef over which the seas used to pass.
 2323. But what has been the object of the building of that? To protect the port from the southern and south-eastern seas. It is a part of the scheme to obtain a scour.
 2324. Has not the construction of the southern breakwater from its old point been a means of quietening the sea in the channel? Yes.
 2325. And giving a great deal of ease to navigation compared with what it was before the construction of the southern breakwater? The only difference is that ships had no shelter until they came to the point of the old bar.
 2326. You have a full knowledge of the construction of the northern breakwater? Yes; a portion of it.
 2327. Have you any knowledge as to the influence the construction of that breakwater has had upon the scour in the channel? Yes; it has taken away the original spit; it has deepened a portion of the harbour between the inner and the outer end of the fairway to as much as 41 to 42 feet in places opposite the breakwater; and it has, in conjunction with the inner portion of the southern breakwater, pushed the bar some 800 feet seaward.
 2328. Then, you are of opinion that the construction of the northern with the extension of the southern breakwater has created and maintained a scour up to a certain point? Yes.
 2329. Where does this scour lose its velocity? I could not tell you exactly; it gradually dies out.
 2330. Where do you think it terminates? I cannot say, but I know where it begins to weaken.
 2331. Where? After it has passed the outer end of the northern breakwater. It diminishes from there until it falls away to nothing. It does not stop directly, but gradually decreases.
 2332. You account for the bar being 20 ft. 6 in. in depth at the present time, from the fact of the scour being lost by reason of the want of the extension of the northern breakwater? Yes; in consequence of the water leaking out of the harbour sideways.

H. R.
Carleton,
Esq., M.E.,
M.I.C.E.

25 April, 1895.

- H. R. Carleton, Esq., M.E., M.I.C.E.
2333. Do the tidal waters come across from the southern breakwater broadside upon the harbour? They come in from all sides, and when confined between the two breakwaters, they run parallel with the foreshores.
2334. You maintain, on behalf of the Department, that unless you continue the northern breakwater, you will lose a large portion of the scour, which will be created by the construction of the southern breakwater to its present termination? Yes.
- 25 April, 1895. 2335. How do you arrive at that conclusion? I thought I had given one conclusive proof. I showed that, as long as the water was confined between the northern breakwater and the inner portion of the southern breakwater, we had a much more effective scour. Everyone knows that if water is confined to a channel its scouring power is greater than if it is allowed to spread itself out laterally.
2336. So that if the northern breakwater is constructed, you not only narrow the channel, but you maintain the scour you have already generated by the construction of your present northern breakwater? Yes.
2337. Why has your Department not proposed to continue your northern breakwater parallel, instead of taking it in a semi-circular direction? In order to form a wave-trap, and it is a more convenient means of bringing stone for the construction of the breakwater. I think the cost of forming the curve will be cheaper than the prolongation of the northern breakwater upon its present line.
2338. Would not the continuation of the northern breakwater in a straight line be shorter? Yes; but it will be in deeper water, and there is a scour alongside.
2339. *Mr. Lee.*] Supposing the northern breakwater were extended in a straight line, would it not knock your wave-trap theory into a cocked hat? Of course it would. Our wave-trap would be gone.
2340. *Mr. Davies.*] There are several reasons which operate with the Department in proposing the construction of a northern breakwater? Yes.
2341. You state there will be an easier and more economical way of getting material from the quarries for the purpose of constructing the breakwater? Yes; but the primary object was the construction of the wave-trap.
2342. If the southern breakwater is extended 500 feet beyond its present termination, would the wave-trap be as necessary as it will be without the extension of the southern breakwater? I think so.
2343. You believe the wave-trap will have a good influence upon the seas which come into the channel? Yes; I think it will intercept all the northern part of the wave if I may so call it.
2344. You have a space of 10 acres for the waves to spend themselves upon? Yes.
2345. And you have an opening of between 500 and 600 feet? Yes.
2346. What do you propose to do with the termination of your existing northern breakwater? We should, if necessary, put stone upon it from time to time.
2347. Would not the very fact of your wave-trap being there indicate that that would be a weak point in your northern breakwater? No doubt. If a big wave enters a portion of it it may strike the end, but I do not think that by the time it has reached there it will be powerful enough to do any damage to the northern breakwater. All breakwaters require a certain amount of maintenance. You cannot complete a breakwater and leave it.
2348. On the southern side you also propose a wave-trap? Yes.
2349. What seas is that proposed to catch? The southern part of any wave entering the harbour.
2350. At present you have a small wave-trap? Yes; we have a beach there which is another name for a wave-trap, excepting that we have no artificial means of enclosing it.
2351. You propose to construct a wall which will secure the wave-trap on the southern side? Yes.
2352. Is that an expensive job? £11,000; but it has a double object. Not only does it form the wave-trap, but it directs the ebb current over to the northern side of the entrance where the rock is at a deeper level where we propose to form our new channel. It helps to assist us in scouring the bar.
2353. You propose also to shift the fairway more to the northern side? Slightly.
2354. Which will give you 25 or 30 feet of water? We hope to get 25 feet at low water.
2355. And that will be without the removal of rock? Yes.
2356. How far would you be, taking the extreme end of your northern breakwater, from the line of your proposed fairway? 400 feet.
2357. Then you will be within 400 feet of the northern breakwater? Yes.
2358. What do you estimate the depth close to the breakwater? At that point there are 17 feet of water, but it is 35 to the rock, and it will scour down there to at least 30 feet I think.

FRIDAY, 26 APRIL, 1895.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY.	JAMES HAYES, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	ROBERT HENRY LEVIEN, Esq.
The Hon. JAMES HOSKINS.	JOHN MOORE CHANTER, Esq.
The Hon. JOHN DAVIES, C.M.G.	CHARLES ALFRED LEE, Esq.
The Hon. CHARLES JAMES ROBERTS, C.M.G.	JAMES GORMLY, Esq.
EDMUND WILLIAM MOLESWORTH, Esq.	

The Committee further considered the proposed Harbour Improvements at Newcastle.

Henry Richard Carleton, Esq., M.E., M.I.C.E., Principal Assistant Engineer for Harbours and Rivers, Department of Public Works, sworn, and further examined:—

- H. R. Carleton, Esq., M.E., M.I.C.E.
2359. *Mr. Davies.*] Have you prepared information as to cost of the extension of the southern breakwater? Yes; extending the southern breakwater 300 feet beyond the 200 feet of repairs, as proposed by the Department, 105,330 tons, at 5s., £26,332 9s. 1d.
2360. The cost of the final extension of the northern breakwater beyond the 3,000 feet, a distance of 750 feet, is estimated by the Department at £32,000? Yes.
- 26 April, 1895. 2361. Do you think practical results would be obtained by carrying out the southern breakwater a distance of 500 feet, or 300 feet in addition to what is proposed, and stopping the northern breakwater at 3,000 feet?

feet? No; if we cut the northern breakwater short we should not get the same scour, and we should have a repetition, on perhaps a somewhat smaller scale, of what we have had before, namely, a lobsided harbour. The further we extend the breakwaters, of course, the further the scour will assist us.

2362. Your contention is, that the breakwaters must be brought out so as to stand opposite to each other? Yes; I think that the end of one should be at right angles with the other.

2363. How is it that the Department have not carried out the northern breakwater to a greater length than it is at present? Mr. Moriarty recommended it on several occasions, but he had not the money for it, and he was not allowed to do it.

2364. Can you quote from any paper of his to show that he strongly recommended it? Yes; I can read from a letter of his, published in the *Newcastle Chronicle*, in 1872, in which he stated, "Those changes are due to the operation of the northern breakwater," referring to the deepening of the bar and the scouring out.

2365. Mr. Moriarty was evidently in favour of the extension of the northern breakwater out to the Oyster Bank? He has not fixed a limit to it. There is nothing to show whether he would stop beyond it or on the inner side of it.

2366. He did not advocate any provision being made for a southern breakwater to overlap the northern one? No.

2367. In the event of the northern breakwater being extended 300 feet and the southern breakwater 500 feet, would it be possible, later on, to further extend the northern breakwater 750 feet, and would the results be such as to justify the expenditure of £40,000 upon those works? I think you will get a better result by putting the money into the extension of the northern breakwater.

2368. Why does the Department propose only to extend the southern breakwater by building it up to the old workings? It is not an extension—it is only a repair.

2369. But if it renders no service to the harbour why spend £7,000 upon it in building it up? Because if we do not build it up it will cut back further still, and eventually we shall have no top to it at all.

2370. If it is of no service why should you trouble about it? It is of service, and will be of much more service. Half of its effectiveness is lying idle in consequence of the northern breakwater not being extended. Now it is a shelter to some extent, and to show that no further shelter is required I may state that Mr. Thomas, the Manager of the Newcastle and Hunter River Company, says that during a year, two or at most three days only have the company's steamers been prevented by rough seas from crossing the Newcastle bar.

2371. Supposing the southern breakwater had been carried out 300 feet, would it not have assisted the Company's steamers in getting in on those days? No; not on those days. A quarter of a mile would not make any difference, and that would cost more than the whole of the scheme before the Committee.

2372. Supposing the southern and northern breakwaters were carried further out, would it not facilitate steamers getting in on the days on which they are prevented entering? Yes; the northern breakwater will assist them.

2373. How? Because it would scour out the bar, and they would have a greater width of channel. At present they have to keep on the line of the fairway; but if the northern breakwater and the outer extension of it are carried out, we should obtain a greater scour. The part between the line of the fairway and the northern breakwater will be scoured out. At present, if they leave the line of fairway very much, they are carried on to the Oyster Bank. When our works are carried out, and the results we expect are arrived at, they will be able to go closer to the breakwater, because we should have deeper water.

2374. You will get from 25 to 26 feet of water, without having to take out the rock? We hope so. We should probably have 25 feet of water, in places where there is only 17 feet.

2375. That will be produced by the construction of the northern breakwater so as to create a scour? Yes; by concentrating the outflow of the tide.

2376. Do you admit that if the southern breakwater were extended for 300 feet it would be of service in securing calm water for the purpose of navigation? It would be inappreciable.

2377. Your Department have in hand the reclamation of some works at Stockton, and are now erecting a training-wall for the purpose of depositing silt? Yes; but it is not included in this scheme.

2378. Have you heard shipping captains state that when their vessels draw 24 and 26 feet of water there is no place to moor? No.

2379. Is there sufficient water for loading modern vessels in the harbour? That depends on the draught of the vessels.

2380. If you have all these improvements made, and they attain the expectation of the Department, you have not any really safe place in which to moor vessels in the harbour? Yes; there will be plenty of them before that time.

2381. Where? In the northern harbour.

2382. After you have dredged out the northern harbour? Yes.

2383. How many years will it take to do that? It is impossible to say. It all depends on the frequency of floods.

2384. Where is most of your silt deposited? A mile and a half to the south-east of the breakwater.

2385. If you carry out these works at Stockton, you will be able to work the whole of the year round with these dredges, and deposit the whole of your silt on reclamation work? Yes.

2386. Would it not save many thousands of pounds per year if that course were adopted, instead of punting the silt outside the heads? I do not think it would.

2387. Would it not save you 1d. or 2d. a ton? No; the saving would be really in time.

2388. What does dredging cost per ton? Twopence.

2389. What does it cost to punt the silt out to sea, a distance of 1 mile? Three farthings a ton.

2390. You would be able to save three farthings a ton if you could dump it down at a spot where you propose to reclaim a portion of land? But it would cost us more than three farthings a ton.

2391. Then you would have the benefit of your reclamation, and the land which would be resumed, as an asset against the loss you are incurring by pumping out to sea the dredging of the North Harbour? Yes.

2392. In view of the state of the harbour, and the requirements of the port for space to moor large vessels, it is necessary that that work should be proceeded with? Yes.

2393. [Mr. Lee.] In the early part of your evidence you stated it would be better for the Committee to reject the whole scheme rather than recommend a large addition to the southern breakwater? Yes.

2394. Do you, after reflection, wish to qualify that statement? No.

H. R.
Carleton,
Esq., M.E.,
M.I.C.E.
April, 1895.

- H. R. Carleton,
Esq., M.E.,
M.I.C.E.
2395. Supposing the northern breakwater were extended to the end of the first section only, and you found then that you would obtain all the scour you required to move the bar, and give you the necessary depth of water? Then there would be no necessity for going any further if we had a depth of 25 feet.
2396. If you attained that end before you got to the terminal point you would leave off? I think it is highly improbable that we should attain that end.
2397. What would happen in the event of your attaining it? No doubt we should stop the works and watch the changes. If we have 25 feet on the bar, and it will remain permanently at that depth, there will be no necessity to go further.
2398. If that were the case, and an extension of 300 feet were made to the southern breakwater, that extension would not lessen the scouring power at the end of the first section, or at the end of the northern breakwater? No.
2399. Would it not diminish the scouring-power at the end of the first section of the northern breakwater if we extended the southern one? No.
2400. If the southern breakwater were extended, and there was an influence at all, it must be for good? It would not exercise any influence.
2401. Do you mean to say it would be so many tons in the sea? Yes.
2402. But surely it would cause the water to be smoother inside? Any such extension as proposed, or any extension which might be carried out for a reasonable sum would not affect the water appreciably.
2403. We have the fact before us that the extension from Nobby's to the present point has caused the water to be much calmer? Yes; but we have got off the reef now. That is where the bad water came from.
2404. Is it not a fact that if the southern breakwater were extended it would cause the water to be calmer inside its influence? Nothing to speak of; not worth noticing.
2405. If the necessary scour were obtained at the end of the first section of the northern breakwater, and if the extension of the southern breakwater 300 feet gave calm water for a distance of 300 feet, could you in the face of that say that the whole scheme would be better rejected, than that that 300 feet should be added? Yes; because I say that that will not be attained. You are putting a supposition question.
2406. You say the primary object of the scheme is not so much to obtain smooth water as to obtain deeper water? Yes; if in obtaining deep water we obtain smooth water also we should be much more pleased.
2407. Supposing you found your primary object met by the construction of the first section of the northern breakwater, it might leave a balance of money which might be expended in extending the southern breakwater; if you maintain deep and calm water at the same time would not that be better than rejecting the whole scheme? But you would have to wait until you built the first section of the northern breakwater, in order to know whether you got deep water before you commenced to spend money in extending the southern breakwater.
2408. *Mr. Molesworth.*] I understand that this design is Mr. Darley's? Yes.
2409. And you have assisted him in drawing up the details? Yes.
2410. And you fully concur in all the suggestions which the design conveys? Yes.
2411. Have you had any practical experience as to construction of wave-traps? No; we have not completed one yet; but I have seen the result of it on this beach, and on some of the northern rivers also.
2412. To a certain extent these wave-traps will be experimental? No; I think Mr. Hickson read a statement to the Committee in which he showed that one was constructed about 1842.
2413. Do you know of any wave-traps in existence in Australia? No; but in every one of our designs we have provided for them.
2414. Then, as far as New South Wales is concerned, wave-traps are a new thing? Yes.
2415. You have said that a certain quantity of sand will necessarily be brought into the wave-traps, and that they will shoal to a considerable extent? We hope they will.
2416. If they do that what is to prevent them being blocked? They cannot do that.
2417. Do not the waves of the sea build up banks of sand? Yes; long, flat, sloping banks.
2418. Is it not a fact that sandy shores are continually being built up rather than being washed away? They change. They are built up with some winds and storms and are taken away with others.
2419. Then, although the shoaling which you desire will take place, it will not affect the utility of the wave-trap? No; it will improve them. It will give a flatter slope for the water to run up.
2420. You say you can scour down to 25 feet at low water on the inside of the bar before you reach the rock? Yes.
2421. What is the rise and the fall of the tide there? At high-water spring, 6 feet. The worst neap tides are about 2 feet.
2422. To remove the rock to a depth of 27 feet would cost about £15,186? Yes; but that is not included in the scheme. That is a question which has cropped up since.
2423. You do not propose then to touch the rock at all? No.
2424. Then 25 feet is the least you will have at low water? Yes.
2425. If there is rough water on the bar when you have only 25 feet, would not the removal of the rock give vessels a very much better way out? Yes; but a vessel would not go out at low water. The mean of the tide would be 4 feet, which would give them a total of 29 feet.
2426. But the neap tides will only give them 27 feet? Yes; our scheme will provide for 3 feet more than they have at present. An increase of 3 feet in depth at Newcastle will increase the commercial efficiency of the harbour by fully 50 per cent.
2427. Is it not of great importance that, in order to secure the best possible depth of water on the bar, the water should be kept as smooth as possible? Yes.
2428. Is it not admitted that the extension of the southern breakwater for 300 feet will be likely to bring that about? I think not.
2429. *Mr. Chanter.*] As the heaviest gales comes from the south-east, about what point of the northern breakwater would they strike? A north-west line from the end of the southern breakwater would just strike the end of the outer extension of our proposed northern breakwater.
2430. Would no portion of the northern extension intercept the roll going on to the beach? No.
2431. Then in your opinion the extension of the northern breakwater would not divert that roll down the channel into the port? No; that is the reason for cutting it short at that point.
2432. The roll would be across the end and not in the entrance? Yes.
- 2433.

2433. Supposing the roll did come within the channel? Then we have made provision for that by putting wave-traps in the design. If any south-easterly sea caught the northern breakwater it would run along it, be drawn into the wave-trap, and dispersed.

H. R.
Carlton,
Esq., M.E.,
M.I.C.E.

26 April, 1895.

2434. Would there not be a possible overflow from the northern wave-trap which would be diverted across the channel towards the southern wave-trap? I think the wave would cling to the side of the northern breakwater. A great portion would be dispersed in the northern wave-trap. Another large portion would be caught in the southern wave-trap, and the quantity, if any, which passed along, would do no harm.

2435. Would not the opposing currents from the Hunter River, when in flood, have an effect upon the currents crossing, so as to prevent the rolling into the wave-traps? The fresh water would beat the salt water down and make it calmer and smoother.

2436. Would the wave-traps be effective under those circumstances? Yes; you cannot have water running in opposite directions;—one will overcome the other.

2437. But you will have two currents meeting? Yes; and one will neutralise the other if they are both equally powerful.

2438. Would some of the current turn round Nobbys? Yes.

2439. Then the southern breakwater intercepts that and gives it a more northerly trend? Yes.

2440. If the southern breakwater were extended another 300 feet would it not still have the effect of diverting the current to the north? Of course, it would have to go on the end before it could come round it.

2441. Would it go to the end, or be diverted to the north? It would spread out like a fan.

2442. In your opinion the extension of the southern breakwater will have no appreciable effect in increasing the velocity of the current along the northern breakwater? We shall get no more scour.

2443. You say that the southern breakwater is based upon the rock? Yes; it goes just over the rock.

2444. And your soundings are up to 35 feet to the sand? Yes; 35 feet to the sand at 300 feet. We have a sounding of 75 feet on the line of the southern breakwater.

2445. Within that distance? No; at a distance of 1,000 feet from our proposed end.

2446. If the southern breakwater were extended 300 feet, would it be absolutely necessary for you to find a base on the rock there? It depends on what depth the rock was. If the rock were not found at 3, 4, or 5 feet, a considerable quantity of sand would be scoured away.

2447. About what number of feet would you allow for that scour? The breakwater would be cut by the seas breaking on the end of it, and the sand would be stirred up. The seas would constantly agitate the stone until it sunk 5 or 6 feet into the sand. I daresay we should get a firm base at that depth.

2448. You anticipate that the construction of the northern breakwater will give you such a scour as to remove the bar? Yes.

2449. How far seaward will it remove it? We do not know the exact position of the littoral or coastal current; but we are in hopes of reaching it, and that it will not be deposited at all, but that it will be dispersed.

2450. Is there no danger, when the sand is being taken out with the scour, of the south-easterly roll intercepting it and forming a bar immediately at the end of your breakwater? I think not.

2451. That is the question you have taken into consideration? Yes, we have. We expect we shall have such a current as will carry the silt and sand in suspension until we reach the coastal current, and of course if we bring it to that point it will be carried along and dispersed.

2452. You hope that the constant action of the waves going into the wave-traps will cause silting up? Yes; We have shown in our design a silting up of nearly 10 acres.

2453. If the basin keeps silting up, will not the silt get so high that there will be no flow over it? No; I do not think it will silt up beyond what is shown on our plan.

2454. *Mr. Hayes.*] You say it would be impossible, with the scour created by the formation of the breakwater, for a wave-trap to silt up? Even if a bank of sand were formed there, the next ebb tide would cut it away.

2455. Are not wave-traps used under the name of stilling-basins in harbours in other parts of the world? Yes.

2456. What height do you propose to take the northern breakwater? Fifteen feet above high water, or 20 feet above low water.

2457. That is to prevent the current flowing away and confining it within the channel? Yes.

2458. Would not that have the same effect if the breakwater were only carried up to high water? We could not build it. I do not say it is an absolute impossibility; but it would not be a wise thing to attempt to do it. I may mention that at Trial Bay we carried the breakwater out at 20 feet above high water. We have found since that it has been necessary to raise it 4 feet.

2459. You tell us that your object is to increase the scour to remove the bar and deepen the channel? Yes.

2460. You do not consider the question of providing easier means of access and egress in connection with the port? We did consider it fully.

2461. But that has not been your primary consideration? No; the primary consideration was to obtain 3 feet more water on the bar.

2462. And that, you are satisfied, will be carried out by constructing the works proposed by you? Yes; our scheme is the most economical means of obtaining that result.

2463. *Mr. Roberts.*] Will you explain why the end of the breakwater should be at right angles with the current? The best form of an ideal harbour is two parallel breakwaters of the same length, with their outer ends at right angles to one another, with a wave-trap on either side, to catch the sea. In this case Mr. Darley stopped the northern breakwater at the point shown on the plan, so that it would not intercept any portion of the south-eastern sea passing the end of the southern breakwater.

2464. Are you acquainted with Captain Henry Newton, Harbour-Master, Newcastle? Yes.

2465. I will read you a portion of a report he prepared:—

During this time the original bar has gradually scoured to the bare rock, giving a depth of 23 feet 6 inches. The shoaling that has taken place is the cause of a most treacherous sea running across the channel from Big Ben Rock on to the tail of the Oyster Bank, and is a source of danger to navigation, also causing a great range in the harbour.

—? Shoaling is not due to the south-eastern sea, and the proof of that is that the bar always grows from the northern side. That could not be caused by a force which was running directly against it, namely, the south-east sea.

2466.

H. R. Carleton,
Esq., M.E.
M.I.C.E.
26 April, 1895.

2466. Mr. Newton continues:—
thus compelling the vessels along the Queen's wharf and at the buoys to strain heavily at their moorings, parting their cables, and in several instances breaking the mooring-posts on the wharf. The bar at present in the fairway carries 20 feet 6 inches, having decreased from 22 feet during the flood of January last. I have on several occasions reported the state of the entrance to the local Marine Board, strongly urging the necessity of further extending the southern breakwater, not that it would cause much greater scour, as the tidal influence is greater on the north side, but with a view to preventing the seas from Big Ben breaking in the channel, thus affording a greater amount of safety to vessels entering and leaving the port. This was fully endorsed by the local Marine Board and forwarded on to the Government.

? A south-east sea from the most northern portion of Big Ben would strike nearer to Nobby's than the middle of the southern breakwater.

2467. Then if the harbour-master at Newcastle states that the southern breakwater will keep seas from coming into the harbour, you reply that he is in error? I say that the southern breakwater is sufficiently extended at present to intercept the south-east sea from Big Ben.

2468. In other words, you disagree with the harbour-master? I do.

2469. *Mr. Gormly.*] The last 750 feet of the northern breakwater, as proposed, will be partly on the top of the Oyster Bank? Yes.

2470. The sea now breaks over that Oyster Bank? In bad weather.

2471. The wind comes from the east at times? Yes.

2472. And if the wind came from the north-east, and the northern breakwater were complete, it would strike it? Yes; the only way to protect it against a north-easterly sea would be to put a breakwater across the entrance.

2473. *Mr. Levien.*] How long have you been in the Service in this country? About seventeen years.

2474. Where did you serve before you came here? I first obtained my B.A. and Bachelor of Engineering degrees in Trinity College, Dublin.

2475. Had you any experience before taking those degrees, or was it obtained by education itself? Yes; I was employed two years on the Canadian-Pacific Railway, in Canada. I was also employed under Mr. James Dillon, member of the institution of Civil Engineers in Ireland and England, on railway and drainage works in Ireland. I was also employed in France and Spain.

2476. All on railways? No; on engineering works generally.

2477. Can you tell me of any experience you have had with reference to harbour works for the building of breakwaters? Yes; I was in charge of the whole of the works at Lake Macquarie, and I have had to deal with the Clarence from time to time. I made the surveys and watched the progress of nearly all the works.

2478. Your experience, so far as harbours and rivers is concerned, is entirely what you have obtained in this Colony? No; I have kept in touch with harbour works elsewhere.

2479. But have you ever been under any engineer for the construction of harbours or rivers in any other part of the world? No.

2480. I suppose such men as Captains Adams, Skinner, Anderson, Featherstone, Knowles, Swan, Hacking, and Newton, are men of large experience? Not in the construction of harbour works; none whatever.

2481. They are men of experience so far as the navigation of vessels is concerned, and entering and coming out of harbours? Yes.

2482. Have you any experience of entering and going out of harbours during heavy storms? I have had experience of going in and out of harbours during heavy storms.

2483. Have you been captain of a vessel? No; but I have been on vessels.

2484. What knowledge have you of passing in and out of harbours? I have been in numerous harbours.

2485. The evidence of those who have had years of experience of entering the harbour ought to have some weight? Yes.

2486. You have had no knowledge as to building-up breakwaters and as to the entrance of harbours? I have had knowledge as to entrance into harbours.

2487. And as to building-up breakwaters? Yes.

2488. But not until you came to this Colony? I was able to watch the progress of many breakwaters just in the same way as the gentlemen you speak of.

2489. But you had no knowledge as to building them? Yes, I have. I watched the progress of the Kingstown breakwater, Dublin Harbour, harbours in France, and other ports. I know how they were built; I can tell you where they got the stone from. I watched the progress of its being brought down and placed in the breakwaters.

2490. If all these captains say it is necessary to extend the southern breakwater, not alone for the protection of the harbour, but to allow of a safer means of ingress and egress,—will you stake your professional reputation against theirs that they are wrong? I say that the gentlemen you have mentioned are all men capable of saying what is required for the port of Newcastle; but they are not able to say how that result is to be obtained as well as Mr. Darley and other engineers.

2491. Then no matter what experience or knowledge these gentlemen may have of entering a harbour or of the southern breakwater, you would entirely disregard their evidence? I would not; I would weigh it most carefully.

2492. But would you regard it as being of any worth at all? Yes; I should consider it, because I look upon them as gentlemen who have had large experience at that bar. They have been over it in all weathers, and they know what is required on it. They know they want smoother and deeper water; but I say they do not know as well as Mr. Darley and the other engineers how that result is to be obtained.

2493. What do you say as to their opinion of the extension of the southern breakwater? I would like to ask what length they propose to extend it.

2494. Three hundred or 400 feet, after building-up the 200 feet? And do they know the cost.

2495. That is nothing to do with the question;—do you say their opinion is wrong? I will not say they are wrong. I say that the result obtained by the extension of the southern breakwater, 300 feet beyond the point proposed by the Department, will have an inappreciable effect on the port.

2496. If the southern breakwater is of no use at all, what is the use of expending one farthing more upon it, and in building it up? It is to repair it.

2497. What is the good of repairing it if it is to be of no more benefit than it is now? If we do not repair it it will wash back further still, and eventually we should have no breakwater at all.

2498. Then you admit that the southern breakwater is of great importance? Yes; but it will be of still further importance when the northern breakwater is extended. We are only deriving half of its usefulness

at

at the present time. I look upon more than one-half of the money spent on the southern breakwater as lying idle.

H. R.
Carleton,
Esq., M.E.,
M.I.C.E.

2499. Has the shifting of the bar all been occasioned by building the northern breakwater? Yes; in conjunction with the southern breakwater.

2500. You say the southern breakwater will have no effect in carrying the bar further out? Not with- 26 April, 1895; out the northern breakwater.

2501. What is the depth at the point where you think the bar will be taken by the construction of the northern breakwater? Thirty-four feet.

2502. What is the bottom there? We have made no borings.

2503. Will it not fill up with sand? Some might be deposited there, but it would not fill above a line 25 feet below low water.

2504. Of course Mr. Darley has been a good many years in this Colony? About thirty.

2505. He has had no practical experience of wave-traps? I could not say. Of course he has had practice in other parts of the world.

2506. You have had no actual knowledge of these wave-traps beyond what you have read? No.

2507. *Mr. Hoskins.*] Are you aware that the commander of the "Gulf of Genoa" steamship, which will carry 4,400 tons of coal, has stated that if the southern breakwater were extended 500 feet, it would still be lumpy water at the entrance to the harbour, and tend to deepen the water; are you also aware that Mr. Ellis, M.L.A., who has been largely engaged in shipping, expressed a similar opinion? I am not aware of any of that evidence.

2508. Do you think if the southern breakwater were extended, and the extension of it caused the water on the bar to be smoother than it is now, it would tend to deepen the available water 2 feet? I do not believe it would.

2509. Do you think it would increase it a depth of 1 foot? I do not.

2510. Are you aware that witnesses of great experience have said that if the roll of the sea from Big Ben were reduced, and the water on the bar were made smooth, there would be no difficulty in dredging the bar at the mouth of the river? Whoever said that cannot have understood the case. I say you could not dredge on that bar after any reasonable extension of the southern breakwater.

2511. You will admit that Mr. Newton, the harbour-master at Newcastle, is an officer of experience? Yes.

2512. Mr. Newton said in his evidence that the recent shoaling of the bar was the cause of a treacherous sea running across the channel from Big Ben Rock to the tail of the Oyster Bank; do you agree with that? I do not see, in the first instance, how a sea could run from Big Ben Rock to the tail of the Oyster Bank without passing over the southern breakwater. I say that whatever silting takes place on the bar comes from the northern beach, and we have ample evidence to show that it always grows from that side. If it came from the south-east, as is stated—and I do not know where the sand is to be obtained to do it with—it would grow from the other side.

2513. Has not Mr. Newton been a pilot and harbour-master for close on thirty years? Yes.

2514. Is he not on the harbour every day, and does he not frequently take soundings? Yes.

2515. Is it not fair to presume that he has seen the sand which has been brought to the bar? I do not know that Captain Newton's soundings, although they may have been taken more frequently than ours, extend over any great area. His soundings would be along the fairway only, and he could not tell by a single line of soundings where the sand was coming from. He could not predict where the sand which had accumulated there had come from by such an observation as that.

2516. Are not the strongest gales which blow into the entrance to the harbour from the south and south-east? The southerly gales are not so bad, but those from south-east round to east are the worst.

2517. Do you not think that heavy seas breaking on to the entrance to the harbour would tend to bring sand with them, and tend to shoal up the entrance with them? No.

2518. Would they not carry sand across to where you propose to extend the northern breakwater? I do not think so, because a wave has no effect on the bottom when the water reaches a certain effect—that is, in moving the sand.

2519. If an experienced officer says that the entrance to the harbour has been shoaled up by sand carried by east and south-east gales on to the Oyster Bank, do you think it is correct? There is some correctness in that; because, when it gets into the shallow water to the north of the bar it stirs up the sand shortly before reaching the Oyster Bank, and some of it might be carried round in the wave which the bar always forms from the northern beach, but it is not brought there directly by any wave from the south-east.

2520. You admit that sand may be carried by an east-south-east gale across the mouth of the harbour to the Oyster Bank? I have not admitted that—the reverse.

2521. Do you think if you had the northern breakwater extended, and did not have the southern breakwater extended further than you propose, the effect would be that the gales I have described would cause a drift of sand against the new breakwater, and thereby diminish the fairway of the harbour? I do not think it would.

2522. On what grounds? First of all, I say there is no sand in suspension carried by a south-east sea to place there, and secondly, if there was our scheme provides for a south-east sea passing the end of the northern breakwater.

2523. That is at the end of both extensions? Yes.

2524. Mr. Newton was asked:—

If the northern breakwater is extended, do you think there will be greater difficulty in breaking into the harbour during the south-east gales than there is at present? Yes; unless the southern breakwater overlaps the northern breakwater. That is essential.

The proposed extension does not overlap? No.

I say it does. I say that our proposed extension overlaps the extension of the proposed new northern breakwater.

2525. *Mr. Humphery.*] Do you remember the recent flood in the Hunter? Yes.

2526. Is it a fact that as the result of that flood the bar increased in height about 1 foot 6 inches? I know that the bar at present is the depth you state, but I say that whatever silting took place was not due to the flood, but to the bar forming in its ordinary way, as bars do on every one of our coastal rivers.

2527. Is it correct that the sudden shoaling took place during or after the recent flood, or that it simply formed in a natural way? I think it formed in the ordinary way from the northern beach. As a proof of that Mr. Walsh tells me that the material on the bar is sea-sand, and not silt which is brought down by flood.

2528.

- H. R.
Carleton,
Esq., M.E.,
M.I.C.E.
2528. Is it your opinion that any evidence we may have had to that effect is incorrect? It is hardly fair to say that. Perhaps a portion is caused by flood, but it is a very small portion.
 2529. Do you say the increase of sand on the bar has no relation to the flood which occurred in the Hunter, and the prevalence of south-easterly weather? I could not answer that question unless I were given the dates the soundings were taken before and after the flood.
 2530. We want to know what the effect of the southerly weather during floods has upon the bar;—you say the shoal grows from the north beach? I say the floods do not diminish the depth on the bar, generally speaking. The decrease in depth on the bar is caused by sand carried from the Stockton beach.
 2531. [Chairman.] Is there a tendency for a current to follow a wall? Not a straight one. You must make it slightly concave. In this instance there would be a tendency to leave it.
 2532. If you took away one side of the port, you contend it would be a lobsided port? Yes.
 2533. Would not the water lose its scour more rapidly if you took out both sides? Yes; the tendency would be to spread both ways, but not at Newcastle as there is a reef on one side.

TUESDAY, 30 APRIL, 1895.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERTY.	JAMES HAYES, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	ROBERT HENRY LEVIE, Esq.
The Hon. JAMES HOSKINS.	JOHN MOORE CHANTER, Esq.
The Hon. JOHN DAVIES, C.M.G.	CHARLES ALFRED LEE, Esq.
The Hon. CHARLES JAMES ROBERTS, C.M.G.	JAMES GORMLY, Esq.
	EDMUND WILLIAM MOLESWORTH, Esq.

The Committee further considered the proposed Harbour Improvements at Newcastle.

Captain Richard Magrath, master mariner, s.s. "Phœbe," sworn, and examined:—

- Capt. R. Magrath. 2534. [Chairman.] What are you? Master mariner, in charge of the steamer "Phœbe."
 2535. Have you any knowledge of the improvements proposed to be carried out by the Government at the port of Newcastle? The first intimation I had of them was after reading the *Sydney Mail* on Sunday.
 2536. [Mr. Davies.] How long have you been trading to Newcastle? Since 1877. My exemption dates from 1878.
 2537. What steamers or vessels have you had under your command? Nearly all J. and A. Browns' steamers. I was also in the employ of Mr. Ellis, in a sailing-ship. I have also been on nearly all the tug-boats.
 2538. Are you at present engaged in towing vessels in and out? Yes.
 2539. What is the largest vessel you ever had under your charge trading to the port after you took to the towing of tugs? 1,283 tons register.
 2540. What would be the draught? Twenty-one feet 6 inches.
 2541. Have you ever experienced any difficulty in getting in or out of the harbour? Sometimes we could not get out; also, I have had to stand off, and could not get in. I came from New Caledonia on one occasion with a vessel drawing 14 feet, and it had to stand off for four days.
 2542. Were you in ballast? Partly.
 2543. When did this occur? In March or April, 1883 or 1884.
 2544. Who were you employed by then? Mr. Ellis.
 2545. In what state was the southern breakwater at that time? It was not so far out as it is now. There were 40 feet of water at the end of the breakwater at that time.
 2546. Notwithstanding the breakwater being constructed to the point you speak of, you found it very difficult to approach the harbour? We could not get in.
 2547. Have you experienced any difficulty in approaching the harbour since then? I have seen a nasty sea on, but we got in, although it was pretty dangerous.
 2548. Were the vessels of greater draught than the one you have spoken of? Yes.
 2549. What was the draught? The ship "Altcar" drew 17 feet; going out she drew 21 feet.
 2549½. Have you noticed much improvement to the approach to the harbour? Whilst the southern breakwater was going on the harbour seemed to be improving the whole of the time. It has not, however, been made wide enough to break the force of the sea.
 2550. You are familiar with the work which has been carried out in connection with the northern breakwater? Yes.
 2551. Has that improved the channel? A piece was put on, and since then there has not been as much water, uniformly, on the bar as formerly. In my opinion there is more sand on the bar, however, than there used to be, and there is less water on the bar than there was before the northern breakwater was extended 300 or 400 feet.
 2552. Are you aware that the Departmental evidence is to the effect that before that extension took place the bar was in a certain position? Yes.
 2553. And you say that that extension has left less water on the bar? In my opinion there is less water as a whole. You will get 21 feet. The water is shallower now on the old site of the bar than it was before that extension took place, and there is more sand in the harbour—more range.
 2554. Are the Committee to understand that you are of opinion that with the extension of the northern breakwater the harbour has been caused to shoal up, and that it has been the means of creating less water on the site of the old bar? I am of that opinion. It is the same bar still, only it has spread out into deeper water.
 2555. If it is the same bar, how is it that it has been removed 800 or 900 feet further to sea? It has only spread out. I do not believe the bar has shifted a bit, because the bottom remains the same.
 2556. Are you speaking about the rock? Yes; the rock is there, 4 or 5 feet under the sand.
 2557. Will you admit that the bar has been forced out 900 feet? It has been spread out; it has been made bigger than it was before. It used to be a narrow ridge and now it is a wide one.
 2558. But there is a greater depth of water where the bar used to be? There used to be 19 feet 6 inches; now there are 21 feet.
 2559. Do you think there should be an extension of the northern breakwater? Those who live the longest will see that if it is extended it will block the bar up altogether.

2560.

2560. Why have you come to that conclusion? The ebb-tide comes down the harbour towards the pilot-station and sets away to the end of the northern breakwater on to the northern beach. When it gets there it must have the beach to expend itself upon, because as far as the Oyster Bank the tide is done and there is no current of importance felt; but the ebb-tide, running longer than the flood, must carry silt further out than the action of the flood would carry silt in. Capt.
R. McGrath,
30 April, 1895,

2561. You do not approve of the contraction of the channel to create a scour? No, because when a south-east to east gale is blowing the sea must have some place upon which to expend itself, and if you put a wall there it will block the beach up.

2562. It is necessary for the tide to have a means of exhausting itself, and you state that it exhausts itself at present on the beach? Yes.

2563. Supposing the Department has made provision for what are known as wave-traps, what then? In a few days they will be blocked up. If the northern breakwater is carried out as suggested, the wave-trap will fill up in a year or so, I think. I would point out that no range comes into Newcastle harbour, excepting when a southerly round to south-easterly wind is blowing. If it comes in at the present time it has the beach to expend itself upon. At present you have to put double moorings at Queen's wharf, and for the first time in my life, last Easter, owing to range, I put double moorings out at the dyke, which I have never had to do before the northern breakwater was extended. It was the first time I ever felt the range at the dyke. If the northern breakwater is carried out, there will be no chance whatever of the sea expending itself. It must all come in, and the wave-trap might as well be a mouse-trap. It will be no use in stopping the sea in my opinion.

2564. You strongly advocate the building up and strengthening of the southern breakwater? Yes; carry it out as far as you can towards the reef and back it up. Boulders are required at the back in order to break the sea before it strikes the breakwater.

2565. How far do you think it ought to be extended? As near to the reef as you can get it.

2566. How far out? About 100 yards further than it was originally.

2567. At the back of the southern breakwater alongside Big Ben, in a shoal of rocks, is there not practically a wave-trap where the sea expends itself? It is not shoal enough; there are too many gaps, and the whole of the ocean is in full force there.

2568. Is there anything else you would like to suggest? I have had a ship touch off No. 5 crane; there is a piece of rock there which should be cleared away; it is of the greatest danger to shipping inside the harbour. There is another bad place at the Market wharf, off the end of the dyke.

2569. What effect would the extension of the southern breakwater have upon the water on the bar? It will tend to scour it until it gets down to the bed-rock.

2570. If all the professional men of the Department state that the construction of the northern breakwater, coupled with the southern breakwater, has been the means of creating a scour which has cleared away the sand, and also the bar, some 800 or 900 feet, you think they are under a misapprehension? I do. It has scourred one part, but it has left it in another.

2571. But it is 800 or 900 feet from where it was originally? The bar is there still, only it has spread out, and has gone into deeper water. The bar has never been shifted; it is where it always was, and will be till the end of time.

2572. Where does the scour come in? From the inside.

2573. Do you admit that there has been a scour which has taken away the sand from Scott's Point? Yes; it has deposited it further on, so that it has not improved the bar at all, and there is a range in the harbour now which, it is my opinion, was not there before the last extension on the north side.

2574. Your opinion is, that the last extension of the northern breakwater has been the means of preventing the scour which originally existed? Yes; from clearing the harbour.

2575. Is there anything else you have to state? Yes; there are rocks at Stony Point which want removing.

2576. Has not the rock already been removed from where it is proposed to put the lightship? Only a little.

2577. You would not approve of a wave-trap being constructed from the guide-wall, as shown on the plan, by the southern side? No; there is a sort of natural wave-trap now, a small beach, where the tide expends itself. If you put a guide-wall there you will never hold a ship at the wharf. Judging from what I have seen during the last seventeen years, I say that the southern breakwater wants extending and strengthening, and I believe that will cure all the defects in connection with the bar.

2578. Do you know anything of the pumping out to sea of the silt raised in the harbour? Yes; I have met the punts thousands of times going in and out.

2579. Do those punts contribute in any way to the silting up of the bar? I think so. When there is a breeze they cannot go out, and they lie there. When they go out they meet the sea; there must be a lot of the stuff washed off the punt and lost. If you watch a punt near the entrance you will see it leave a muddy mark the whole of the way to where it deposits the silt.

2580. Do you think that has contributed towards the silting up of the bar? Yes. I do not think it should go out at all, if they want to reclaim the land inside.

2581. You advocate that it should be used in reclaiming Stockton Point? Yes, and on the dyke as well.

2582. Would you regard it as a great saving to deposit the silt on the proposed reclamations rather than take it out to sea? Yes; I think it would lessen the danger of the bar being blocked up. The sand-drift behind Shepherd's Hill has all come out of Newcastle. It washes back again. The bed of the ocean outside is all rock. I have sounded it.

2583. *Mr. Hayes.*] You mentioned that you were on one occasion four days off the entrance to the harbour with a vessel drawing 14 feet? Yes.

2584. Was a heavy gale blowing? Yes. The signals were at "stand off"; I was on a brig called the "Restless."

2585. You say that since the northern breakwater has been extended the bar has become shallower? I believe it has.

2586. The northern breakwater has created a scour on the original bar; if it is extended still further will not that scour be carried out to a greater extent? I do not think so.

2587. You say that after a gale, when the silt-punts go out to sea, the water is discoloured? Yes; it washes from the top of them, or from the underneath.

- Capt. R. McGrath.* 2588. Does not the muddy water lie on the top of the punts when they go out? The heavy sediment certainly goes to the bottom.
30 April, 1895. 2589. When a sea breaks upon the punt it washes the light material from the top and discolours the water? Yes.
2590. *Mr. Levien.*] You have never seen those in charge of the punts let the silt out from the bottom? No.
2591. You do not impute that it has been let out? I am not going to say whether I do or not.
2592. Do you think it has been let out wilfully? I would not say. I believe a good deal of stuff dredged from the harbour is left on the bar.
2593. *Chairman.*] Does the tide run hard along the southern breakwater? No, not very.
2594. Is there any current along the southern breakwater? Yes; there is more ebb than there is flood.
2595. In flood-time is there a good run along the southern breakwater? Not very hard.
2596. At what rate would you say it ran? From half a knot up to 3 knots. It runs 3 knots at Stony Point, and tapers off to half a knot.
2597. When there is flood in the river, does it run out very fast near the black buoy? Near the end of the southern breakwater you do not feel much ebb there. It sets away to the north beach.

Captain Charles Adams, master mariner and tug-master, Harbours and Rivers Branch, Department of Public Works, Newcastle, sworn, and examined:—

- Capt. C. Adams.* 2598. *Chairman.*] What are you? Master mariner and tug-master at Newcastle.
30 April, 1895. 2599. *Mr. Lee.*] How long have you been stationed at Newcastle? Eight years.
2600. What are your daily duties? Towing punts to sea, and shifting dredges occasionally. My chief business is tugging the barges full of silt, and emptying them.
2601. You have seen the bar, under all conditions? Yes.
2602. What do you think would be the effect on the water at the entrance to the port, and the water in the port, and the state of the bar, if the proposed Government works were carried out? My experience of the rivers of New South Wales, and of the breakwaters and sea-walls which I have seen built, tells me that if the northern breakwater is carried out it will confine the waters, and we cannot scour sand or silt unless we do that. At present there is no tide over by Stockton; it is on the dyke side. There is a slight current on the Newcastle side, of no force to shift anything. On the Stockton side there is dead water; in fact, it is eddying water. In a time of flood the eddy there shallows the water up several feet. Three or four years ago the North Harbour was shallowed up 3 or 4 feet. After a tide has struck the dyke, and after it comes to No. 6 crane, there is no tide whatever to cause a scour. It comes down very strongly about the middle of the harbour, and strikes on the lightship rock. A great deal runs across over by the northern breakwater and the Oyster Bank.
2603. Between the existing breakwater and the Oyster Bank? Yes; and over the Oyster Bank. I have seen the buoy at the Oyster Bank kept under water owing to the force of the tide.
2604. Are you speaking of the tide under ordinary conditions or with flood-water at the back of it? With flood-water at the back of it.
2605. And that would be the worst condition we could have? The buoy will run under at strong spring tides.
2606. Describe the outward course of the current from the light-ship point? It runs very strongly and follows the line of fairway. There is not much tide on the south side. It strikes Stony Point and it turns it off in a northerly direction.
2607. You know the existing state of the tides? Yes.
2608. What would be the result if you have that wall built on the northern side? It will confine the current and cut the sand right away.
2609. What about the current then? The breakwater will confine the current so that it cannot get over the Oyster Bank. It must go out and cut the bar clean to the rock, I should imagine. There would be nothing allowed to remain on the rock when the water was confined.
2610. Do you think it will set up sufficient scour to clear the bar? Clean to the rock; that is my experience.
2611. Do you think it will set up a current so strong that you would have difficulty in navigating inwards? Yes, except with a powerful steamer. Of course the sailing ship does not attempt to go in without a strong fair wind.
2612. If the proposals of the Government were carried out, what would be the position of a deep ship being towed into port? She would require a powerful tug. I have seen them stuck up with the present tides, and they have had to get a second, or even a third tug, to take them in; but the usual way would be, if there was any bad weather, to wait for a flood-tide.
2613. Would not a deeply-laden ship, with a gale of wind from the south-east to south, have to be extremely careful in taking the entrance to avoid getting on to the breakwater? No more so than at present. The dangers are still there. If you get on to the Oyster Bank you will be in trouble.
2614. But if the Government proposal be carried out, the breakwater will go over it? Yes; and you will have a better chance of there being more deep water than there is now.
2615. If the works are carried out as proposed, do you think that the Oyster Bank, under any circumstances, a danger to the port? I do not. I do not think myself that I would extend the northern breakwater beyond the first section, and I would build the southern breakwater up to the 200 feet which have been washed away.
2616. Supposing the southern breakwater were extended another 300 feet? It would be still better.
2617. What would be the peculiar advantage derived from having that extended? It would drive the sea further out, and it would be so many hundred feet further from the Oyster Bank. The further you carry it out, the further you will drive the broken water to the north. If you extended the northern breakwater right out to the second section, and did not extend the southern section, the sea would run upon it, and probably bring a ship with it. The sea breaks more across there now towards the "Cawarra" buoy than it used to do.
2618. Therefore you think the proper thing to do is to build up the southern breakwater to its original height and length, and then extend it some 300 feet? Yes; to protect the bar from the sea.

2619. By doing that you will get calmer water inside the entrance, and you will take the diagonal roll off the immediate entrance to the port? There will always be a roll, but the further you run the southern breakwater out the more it will protect the bar or the inner harbour from it.

Capt.
C. Adams.
30 April, 1895.

2620. Should it be extended to the north-east, or should it trend more to the southward? I think it should be carried a little more to the east than it is at present. I would not carry it any more to the northward, because a ship would have more difficulty in rounding up going in during a heavy sea.

2621. If the northern breakwater were carried out to its full limit, and the southern breakwater were left in its present position, it would be no protection to the port at all? I believe it would be worse than it is at present.

2622. Then, whatever may be done with the northern breakwater, will it be absolutely necessary to extend the southern breakwater beyond it, so as to protect it from the seas? Yes. If I had to spend my own money upon it, that is what I should do; but to deepen the bar, I should carry out the northern breakwater.

2623. Supposing the northern breakwater is carried to the first section, and the southern breakwater is extended 300 feet, the latter will overlap it? Yes; and the more the better, because of the sea. The greater the distance the greater the protection.

2624. Do you think, if the first section of the northern breakwater were constructed, and the southern breakwater were also extended, it would create sufficient scour to drive the existing bar? If the northern breakwater were constructed, and the southern breakwater were built up and extended 300 feet, it would deepen the bar.

2625. *Mr. Chanter.*] Have you experienced any difficulty inside the harbour from the range of the sea coming in? Yes; I have had to shift away from the Queen's wharf up towards the dyke to get out of the range.

2626. If the northern breakwater is extended as proposed, and it intercepts any of the south-easterly roll, must not that range go right into the harbour? I think it will be a difficult matter to prevent the range entirely. I do not think it will cause a great deal of range, particularly as the southern wave-trap will intercept the waves continually.

2627. In reply to Mr. Lee you indicated clearly the trend of the waves from the south-easterly roll;—they will expend themselves on the Stockton beach? Yes.

2628. If the northern breakwater is constructed, must not it intercept that roll? The first section of the northern breakwater does not go out beyond the edge of the break. It undoubtedly will check the waves.

2629. Do you think if it does that, the northern wave-trap will have the effect of preventing the roll into the harbour? It will assist it.

2630. Do you think it will prevent it? I do not; but by extending the southern breakwater you will still drive the sea which breaks across to the "Cawarra" buoy further out.

2631. Then, really, for the safety of the harbour, you lay great stress upon the extension of the southern breakwater? Yes.

2632. And the only object you would have in extending the northern breakwater would be to create a scour and remove the bar further out to sea? Yes.

2633. And you are of opinion it might possibly increase the range of the harbour? Yes.

2634. If the southern breakwater is extended, and results in smoothness on the bar, would not that give existing currents a better opportunity of removing the bar? No; I think you will have to confine the waters.

2635. If the southern breakwater is extended, and the proposed northern breakwater is not constructed, what effect will that have upon the current? I do not believe it will deepen the bar.

2636. If the southern breakwater is extended as you suggest, will it not put the roll further out to sea? Yes.

2637. And consequently smooth the water on the bar? Yes.

2638. Then, if the water on the bar is made smooth, how much greater depth will it give you there—that is, in comparison with the bar under rough water? There are different rough waters.

2639. Take the ordinary range? Some seas might be 4 or 5 feet, and you would take the sounding from the hollow of the sea.

2640. What would be the average increase in depth, then, comparing the smooth water with the rough? If I were going out in rough weather I should want 6 feet of water, and nothing less.

2641. How many feet difference would you require in ordinary weather? Three feet.

2642. If, by any means of construction, the water on the bar can be made continuously smooth, it will increase the depth, so far as ships going in and out are concerned, by 3 feet? Yes, if you can always keep it smooth; but it is not possible to do that.

2643. *Mr. Hayes.*] If you extend the southern breakwater 500 feet, will the result be a smoother sea on the bar in heavy gales? It will lessen the roughness, but there will always be a sea in very bad weather unless you run the breakwater out beyond the limits altogether. Thirty-one years ago, when I went to Newcastle, you could not attempt to go in under circumstances under which you can now go in safely.

2644. In heavy weather you have a treacherous sea across the harbour? Yes.

2645. And it has been increasing during the last three or four years? Since the floods of 1892—since the "Federal" went ashore. I think that has had something to do with it. She lay there some days, and caused a spit to form.

2646. If the northern breakwater were extended, and it swept the bar into deeper water, would it not ease the sea very much? Yes; wherever deep water is you are safer than in broken water.

2647. You also believe that by extending the southern breakwater 300 feet the port will be made more easy of access? The more the southern breakwater is carried out the better. It will be much easier and safer for vessels entering. I should like to state that at present a tremendous quantity of sand comes in from the north in a flood tide. In a spring tide the water is quite yellow with sand. If the northern breakwater is extended it will stop it.

2648. *Mr. Roberts.*] Where did the steamer "Federal" go ashore? 400 or 500 feet south of the "Cawarra" buoy.

2649. *Mr. Gormly.*] Were you trading to Newcastle when the southern breakwater was washed down? Yes.

- Capt. 2650. What was the effect of it being washed down? Very considerable. I cannot say exactly whether C. Adams. it is on account of the breakwater being washed down, although it no doubt has a great deal to do with it, but certain parts of the fairway have been shallow since the "Federal" went ashore.
- 30 April, 1895. 2651. The sea washing in goes from the end of the southern breakwater on to the Oyster Bank? Yes.
2652. Do you think that has any effect in keeping the bar in its present position? No; I think it is the continual scour out, and when it comes near the bar its strength is gone, and it spreads out.
2653. Do you think it is important that the southern breakwater should be built up again? Yes.
2654. It will be a protection to vessels coming in? Yes; but I do not think it will have any effect in deepening the water.
2655. *Mr. Humphery.*] Are you in charge of the tug of the port? Yes.
2656. Where are the dredges? The one I am working for is operating opposite No. 15 crane.
2657. Where do you deposit the silt? About $1\frac{1}{4}$ mile from the end of the breakwater, in a south-south-easterly direction.
2658. How many punts do you tow at a time? I have taken seven punts out in the eight hours. It all depends on the distance.
2659. What is the average number per day? Six.
2660. Do you work night and day? Yes, a treble shift.
2661. How many tons a day do you deposit? From 7,000 to 8,000.
2662. Is that the average? That will be a high average, because in bad weather we cannot go out at all. I think last year we took out about 1,800,000 tons. We had a fine year last year.
2663. How many men do you employ? Fifteen—five on each shift. There are two men on each punt, and we tow one punt only at a time.
2664. What would be the difference in the quantity of silt deposited if, instead of going outside beyond the southern breakwater, you deposited it at Stockton? They are pumping it ashore there now; but that of course will not take all the stuff at Newcastle. That will be filled up in a year or two.
2665. Can you suggest any better way of getting rid of the silt than that which is now adopted? Yes; by depositing it on the waste lands.
2666. How far from where the dredges are now working? One and a half mile. The great advantage of that would be that you could work in all weathers, and there would be no broken time.
2667. Then, instead of towing 7,000 tons a day, how many tons do you think you would be able to deposit? You would be able to maintain your average of 7,000 tons.
2668. Can you say that the bar was worse after the last flood than before it? I cannot; but I have noticed that the big steamers and ships hug the southern breakwater. The reason is because of the bar being where it is now.
2669. *Mr. Hayes.*] When you go out to sea with mud-punts in heavy weather, is the water apt to wash the silt out of the punts as you cross the bar? That is the cry of people who know nothing about the matter. There is a wash certainly. When the ebb-tide is going out, and a north-easter is coming in, the water is in a state of commotion, and naturally gets into the punts, levels the stuff down, and washes dirty water out. You can always trail our punts from the time they leave the dredge until they deposit the stuff. It is a moral impossibility to have the doors of a punt so tight that water will not get through them.
2670. Have you ever seen the men in punts easing the doors when crossing the bar in heavy weather? It is an impossibility. If a man eases the break the silt must run right away down. During my time I have seen the doors slip once. If a man did that with me I would do my level best to displace him. It would be criminal to lift the stuff and deposit it on the bar. I am not afraid of it shallowing the bar out.

James Cole Ellis, Esq., M.P., sworn, and further examined:—

- J. C. Ellis, Esq., M.P. 2671. *Chairman.*] You have expressed a desire to give further evidence on this subject? There seemed to be a certain amount of uncertainty as to what the Newcastle harbour was in early years, what it was a few years ago, and what it is to-day. I have thought I could clear the matter up. Mr. Darley says he 30 April, 1895. went to Newcastle in 1867. Without speaking positively, I believe the so-called northern breakwater was then commenced—that is to say, it was at that time a ballast jetty. There was one in the harbour at the southern extremity of the northern breakwater. I am under the impression that it existed when Mr. Darley went there. They went on placing ships' ballast along the northern breakwater. The seas broke up against that wall of stone and sand on the south side of it, and ran up the harbour until the ships on the Newcastle side danced about alongside the wharf to such an extent that their fenders were of no use at all, and at last they had recourse to bales of hay to keep them off the wharf. We have heard a great deal of talk about seas running across the harbour, as if they ran like billiard balls. The seas which ran along the northern breakwater came round Nobbys, and the seas ran from north-east into the harbour. Witnesses of twenty years' experience have been called. I have had forty years' experience. In giving evidence the other day I forgot a most important matter which fixed this bar business on my mind more than any other circumstance, and it was this: that the ship which struck on the bar and which created the agitation, ending in the southern breakwater being carried out, was consigned to myself. The northern breakwater was finished to the end of the first extension in 1873. A ship called the "Eastern Light" was consigned to me in Newcastle, in October, 1873. She was a good-sized ship, but owing to the bar being in a bad state the captain did not load her to her full draught, being recommended not to do so by the harbour authorities. Notwithstanding that fact, in towing out, she struck on the bar.
2672. *Mr. Hayes.*] What draught of water was she drawing? I could not tell you, but if loaded, she would draw 23 feet at least.
2673. *Mr. Lee.*] Was the bar off Stony Point then? Off Nobbys. That led to an agitation, in which the then harbour-master, Captain Allan, took great interest, and the result was that the southern breakwater was approved of in 1874, and in that year the breakwater was commenced. Every foot which that breakwater went out stopped the range from coming into the harbour, until the range alongside the wharfs stopped altogether. As the southern breakwater went out the bar followed it out.
2674. The Harbour Department says that it is of no use extending the southern breakwater, that it cannot create a scour, and that it cannot have any effect upon the bar, but how comes it that it had an effect on the bar before—because the northern breakwater was up to the end of the first extension then? It proves conclusively that the southern breakwater did have the effect of carrying the bar further out into deeper water, because

because that occurred during its construction, and whilst the northern breakwater was standing still. I say without fear of contradiction that the second extension of the northern breakwater did not move the bar 1 inch. That can be easily proved by the records of the Department. The facts as to when this work was carried out, and the record of the bar, and its position, are in the possession of the Department. I am very anxious, as a representative of the district, not to have a shilling wasted on the northern breakwater if I can help it, but to have all the money spent in carrying out the southern breakwater as far as possible. It is impossible to carry it out too far, because if you carry it out you must get smoother water at the entrance, and if you get that you must also get a greater draught. If you run the northern breakwater out, you must make the sea so much rougher for ships coming in. An officer of the Department the other day gave evidence as to the enormous expense of extending the southern breakwater. The last witness, however, did not say it would be a waste of money, but that the further it was carried out the smoother the water on the bar. It is proposed to construct a so-called northern breakwater 3,000 feet, with an additional 750 feet, and it is proposed to bring all the stone from Waratah. It would have to come to Newcastle, to be taken out of the railway trucks and placed in the lighters, to be taken across to Stockton in the lighters, and then taken out again, and a tramway would have to be constructed before it could be brought into use. If the southern extension is carried out it will come along in the railway. There is an old railway along the breakwater, and it only requires repairing. You would run your stone right out until you pitched it into the sea. Of course, there would be a good deal greater depth at the end of the southern breakwater; but we are asked on the score of expense to say that the southern breakwater is impracticable, and that it will cost so much more than the northern one, although there are 3,750 feet of it, as against 500 feet on the southern side. I am perfectly certain that if tenders were obtained for extending the southern breakwater 500 feet it would be found that it would only cost half the expenditure of extending the northern breakwater 3,750 feet. If the southern breakwater is continued, I am sure it will have the effect of still carrying out the bar, because the Oyster Bank is still a natural breakwater. You have heard evidence as to the strong current which goes over the top of it. That shows there is a scour all the time. I am convinced that if the southern breakwater is extended the bar will extend with it to deeper water. It only has to go 400 feet to get into considerably deeper water, and, if it did not go another foot it would have the effect of giving smooth water, and would create the additional draught for ships which is required. An officer of the Department a day or two ago said there could not be any sand-bank formed at the end of the northern breakwater—the water is too deep; but he is perfectly certain the wave-trap will fill up, as they wish it to do. If there is no sand to make a sand-bank there, where is the sand to come from to fill up the wave-trap? The map before the Committee is not correct, because it does not show the bank which was formed at the north-eastern extremity of the northern breakwater. There is a bank at the commencement of the northern breakwater so dangerous that the authorities have considered it necessary to put a beacon there with a light. It must be patent that if a stone wall is built where proposed, a bank must form outside.

J. C. Ellis,
Esq., M.P.
30 April, 1895

2675. *Mr. Hoskins.]* What, in your opinion, caused the bank to form inside the northern breakwater? The heavy sea coming up the harbour and meeting the ebb-tide.

WEDNESDAY, 1 MAY, 1895.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.
The Hon. WILLIAM JOSEPH TRICKETT.
The Hon. JAMES HOSKINS.
The Hon. JOHN DAVIES, C.M.G.
The Hon. CHARLES JAMES ROBERTS, C.M.G.

JAMES HAYES, Esq.
ROBERT HENRY LEVISON, Esq.
JOHN MOORE CHANTER, Esq.
CHARLES ALFRED LEE, Esq.
JAMES GORMLY, Esq.
EDMUND WILLIAM MOLESWORTH, Esq.

The Committee further considered the proposed Harbour Improvements at Newcastle.

Robert R. P. Hickson, Esq., Engineer-in-Chief for Public Works, sworn, and further examined:—

2676. *Chairman.]* There are one or two points upon which the Committee desire information from you as the head of the Department;—you have already informed the Committee that the northern guide-wall, in conjunction with the southern breakwater, has moved the bar a distance of 800 feet seaward? Yes. R. R. P.
Hickson, Esq.

2677. Do you apprehend a similar result from the construction of the third section of the northern breakwater? I do not think it will move it so far. It will move it out a good way beyond the end of the first section, but I do not think it will move it as far as 800 feet, because you get into deeper water there.

2678. Are we justified in supposing it will move it 600 feet? It is very hard to state the exact length, but my opinion is that the first section will probably do all that is required—for many years to come, at all events.

2679. You say, then, that the construction of the first section will do as much as is required at present, and may do enough for many years to come? I think so.

2680. What was the reason the southern breakwater was built in the first instance? Mainly to protect the entrance from the side seas which vessels would be exposed to if it were not there.

2681. Supposing the breakwater as it at present exists, or as made up as you propose to make it up, did not protect the port from the side seas, would you then have any objection to its extension, the end in view being the protection of the port? No; not if that is a fact.

2682. You say the object of the southern breakwater is to protect the port from the south-easterly seas? Mainly to do that.

2683. Would the extension be far enough if the southern breakwater were made up to its old position? I think so.

2684. Supposing another 300 feet were put on to that extension, would it not have the result of giving you 300 feet more calm water seaward? It would certainly give you a greater length of calm water seaward; but whether it would be exactly in proportion to the length of the breakwater I am not prepared to say. I do not think it would.

2685. That would take you out into deeper water on the bar? Yes.

1 May, 1895.

2686.

R. R. P. 2686. Therefore you would have your break, if it were outside that 300 feet, in deeper water than you Hickson, Esq. would have it if it were not extended 300 feet? Yes.

1 May, 1895. 2687. Is it an advantage to the port to have the break in deep water rather than shallow water? I do not think so, because you cannot navigate the port when there is a break there.

2688. I am not speaking of extreme weather? You mean a roll—I think so.

2689. You think it is better for your bar to be where your waves are virtually waves of oscillation, instead of waves of translation? A roll.

2690. And if your breakwater is far enough extended to give you shelter, or rather, if you pass in under shelter, before you get into shallow water, it is of benefit to the port? It is of benefit to light-class vessels.

2691. Therefore you say it is an advantage to pass out of the smooth water before you get to shallow water? Undoubtedly.

2692. The extension of the southern breakwater would aid in bringing about a result of that kind? It would go towards it.

2693. Would a scour be broken up more rapidly in a rough sea than it would in smooth water? The scour which deepens the bar is not the surface scour, and it does not get broken up at all. It goes underneath the waves. The surface scour is the one which is broken up by the waves, and, of course, that has no power in deepening the bar at all.

2694. You created a scour by contracting works at the entrance to the river? Yes.

2695. If it meets a storm outside it has a tendency to break up sooner than it would in smooth water? Yes; that is the surface scour; but the scour which is deepening the bar is some 20 feet below the surface, and it is not broken up or affected by the sea.

2696. The tendency of a south-easterly sea running into Newcastle would be in the absence of a wave-trap, after striking the northern breakwater, to disturb the waters of the harbour? Yes.

2697. Therefore it follows that if you extend the southern breakwater 300 feet, so that it fairly protects from south-easterly weather, the end of the first extension, you are not likely to have the water inside disturbed? No.

2698. In other words, you may altogether move some of the seas, by forcing them beyond contact with the northern breakwater, and you remove them at least 300 to 500 feet away? You would move them some little distance out.

2699. Therefore you grant that the extension of the southern breakwater is likely to have an influence in keeping the water in the port calm? No; I do not think so; because the sea you speak of is caught in the wave-trap on the northern side.

2700. But supposing there is no wave-trap? You would be right if there were no wave-trap.

2701. The extension of the southern breakwater would keep the port smoother? No doubt it would.

2702. We should have a benefit also in that you would extend the area of smooth water seaward, and a boat entering the port would pass out of the roll into smooth water? Yes.

2703. Do you think there is no benefit in bringing about those results? I do not think they are wanted.

2704. Would the extension of the southern breakwater, bringing about those results, be more convenient for any class of boats going into Newcastle? It would be more convenient, but like every other convenience, you can purchase it too dearly. I do not suppose there is one boat in a hundred prevented going in and out at all times. They use it at night, and there has never been one lost whilst I have been there, so that it cannot be a very dangerous port. I do not think the money you would have to spend in extending the southern breakwater 300 or 500 feet would be worth the advantage you would gain, because you would not get an extra inch of deeper water on the bar by it. Again, you would be protecting the port for, we will say, one vessel in one hundred at a very great cost.

2705. The bar being situated, by the extension of the southern breakwater, in smooth instead of rough water virtually gives additional depth? Very slight. It would give some additional depth, but it would be really of no use, because the deep draught vessels would not attempt to go out at all, if there was anything of a heavy sea outside.

2706. Although you will not define the amount of extra depth given by a smooth bar, will you grant that there is some extra depth? Yes; there is something gained, no doubt.

2707. Will you grant that the extension of the southern breakwater will give you a further area of smooth water seaward? Yes. I do not think, however, it will have any effect in this case, because we are meeting that difficulty by putting in a wave-trap.

2708. Do you grant that it will be more convenient for boats to enter in smooth water? I think it will be a little more convenient.

2709. What would be the cost of extending the southern breakwater 300 feet? I have not gone into the matter myself, but I understand the cost has been given as £26,000.

2710. Mr. Molesworth.] You have recently taken charge of the Harbours and Rivers Department? Yes.

2711. And these plans were prepared prior to your taking that position? Yes.

2712. Had you any opportunity of criticising them before your acceptance of that position? Yes; when Mr. Darley was getting them out in the first instance he asked my opinion about them.

2713. Then the matter does not come upon you as an entirely new one? No.

2714. You have gone into all the details? Yes; except as regards the estimate.

2715. And, generally speaking, you approve of the proposed scheme? I do. I think it is a good scheme, and it will meet what is required.

2716. Have you had the opportunity of reading any of the evidence given by the practical nautical men who have been visiting the port for many years? Only in the morning papers.

2717. Are you aware that they are unanimous in their opinion that the extension of the southern breakwater is the first work which should be proceeded with? It would appear so from the newspapers.

2718. That being so is the matter not one which necessarily calls for very grave consideration on the part of those who are in charge of the proposed scheme? Unquestionably.

2719. You are of opinion that the extension of the southern breakwater would tend to increase the area of smooth water inside? Certainly.

2720. Would not that area of increased smooth water give a greater available depth upon the bar? Nothing worth speaking of for a deeply laden vessel.

2721. Would not that depth be in proportion to the rise and fall of the wave;—supposing it was absolutely smooth water would you then get an actual depth? Yes; if it were absolutely smooth.

2722. But if it were rough water the available depth would be reduced in proportion to the height of the sea? Yes; somewhat so,

2723. Therefore, in obtaining absolutely smooth water you would obtain additional depth? You might; but R. B. P. that would be really no advantage to a deeply laden vessel, because it will not go out at all if there is a heavy sea outside. Supposing there is a medium sea with a medium swell on the bar, the vessel is of such length that the swell will have no practical effect upon her. She will rise and fall very little. Therefore, I think, the extension of the southern breakwater will have very little practical effect as regards giving greater depth for deep laden vessels. Hickson, Esq. 1 May, 1895.

2724. Then you are not aware that the evidence of ship-masters is contrary to what you are stating? I am not.

2725. We have had the evidence of ship-masters that they have been detained in the harbour not on account of the rough weather simply, but on account of the rough weather giving them less available depth on the bar? I do not know of that.

2726. I presume you have not had much experience of nautical matters? I have been twenty-eight years on harbour works.

2727. But you have had no practical experience in regard to nautical matters? I had seven years experience as harbour-master, and I had the whole of the pilots and management of the port under my jurisdiction.

2728. What class of port was it with regard to depth of entrance? Fifteen feet when I went there, and when I left it was 28 feet.

2729. By what means was the additional depth secured? By dredging entirely.

2730. There is no possibility of dredging to that extent here? No.

2731. The evidence we have before us is that the removal of the bar seaward has been almost simultaneous with the extension of the southern breakwater. Give us your opinion with regard to that evidence? I could not, because, as a matter of fact, I was not there when that southern breakwater was extended.

2732. You are not prepared to dispute it? Certainly not.

2733. Referring back to the additional draught of water on the bar, when the water is smooth, are you aware that the pilots of the port state that the difference between smooth and rough water means 3 feet? No.

2734. You can conceive that that is an important matter? Very—if it is a fact.

2734½. We have the evidence, not only of ship-masters and of the pilots, but of the harbour-master, who, in his official capacity, has had something like nineteen years' experience at Newcastle. He strongly advocates the extension of the southern breakwater? I did not know that he did.

2735. You are not prepared, I suppose, to controvert the evidence of men of that description? I should be very sorry to contradict Captain Newton, who is a very capable officer.

2736. Do you think their opinions are correct? I do not think they are. I cannot possibly see how it will make a difference of 3 feet.

2737. You think, however, it would make an important difference? It would make some difference.

2738. We have evidence to show that the extension of the northern breakwater would have the effect of causing the range of sea to travel right up the harbour? I say it cannot do it, because it is caught in the wave trap.

2739. We have evidence to the effect that it would conduct the sea right into the harbour and that it would be almost impossible to find a mooring strong enough in an easterly gale to hold the vessels at the dyke or Queen's wharf? I entirely differ from that evidence.

2740. Another opinion is that the construction of the northern breakwater will contract the entrance, and make it difficult of access except in very fine weather? As a matter of fact, it does not contract the entrance. The narrowest part is still in existence between the end of the present breakwater and Stony Point:

2741. But that is sheltered, whilst the entrance will be open to the sea? There can be no difficulty whatever for any vessel to get in between the two breakwaters, and they would get the extra depth of water.

2742. How are we going to get that extra depth of water? When the current is running out to sea from the harbour it is confined as far as the end of the present northern breakwater, and it acts as a scour. When it gets past that point it spreads out in the shape of a fan, and goes over the "Cawarra" bank out to sea. If you continue that breakwater you continue the scouring effect which is going on, and you deepen the water.

2743. But according to the plan the bar has been removed far away from the operation of the present northern breakwater? To some extent.

2744. More than the length of the breakwater itself? Yes.

2745. Therefore, the operation of the scour must have been guided by something besides the northern breakwater? I do not mean that the action of the current immediately ceases when it leaves the end of the present northern breakwater. It still has its effect for a certain distance, but it loses it in time. That is why I say I believe you will find that if the first section of the northern breakwater is carried out it will scour not only as far as the breakwater itself goes, but a considerable distance beyond it into deep water.

2746. But we have the evidence of the Departmental witnesses that when the tide passes beyond the north-east corner of the northern breakwater it has a tendency to go direct northward? It goes in the shape of a fan.

2747. Therefore, the strength of it must be expended before it reaches the present site of the bar? Of course it is, and that is what forms the bar.

2748. Is it not generally understood that bars are formed by the meeting of the two waters? That is generally where they are formed.

2749. Where the rough water meets the tide? It is where the current from the harbour or river, as the case may be, is neutralised by the sea current.

2750. But is not the fact of the bar being nearly opposite the present southern breakwater an indication that that breakwater has had some effect upon its position? None whatsoever.

2751. Will you explain why? Because you cannot have a channel with only one side. You want two sides to scour. You must contract the water between two walls.

2752. Do you say that the bar is caused by the meeting of the ebb-tide with the sea? No; the bar is formed there because that is the point where the outward current loses its effect.

R. R. P. 2753. Does the outer current lose its effect when it meets the sea? Not always. It happens in this case to be where the sea is. That, I presume, is the point where the two currents practically meet, and neutralise each other.
Hickson, Esq. 1 May, 1895.

2754. That is the ebb-tide and the sea current? Yes.

2755. Has not the southern breakwater had the effect of creating that as the point by the sheltering influence it has had against the sea current? I do not think so. As I said before, the current coming down the harbour is confined for a certain distance between two walls. When it gets beyond that point it loses all that confining influence, and gradually dies away, until it gets to a point where it is neutralised.

2756. How does that fit in with the evidence we have had that the bar began and continued shifting outwards with the construction of the southern breakwater? I can hardly credit that. I was not in Newcastle when the southern breakwater was built, so I cannot say.

2757. However, you are still of opinion that the southern breakwater has not had the influence upon the bar which others have stated it has had? I do not see how it possibly can.

2758. We had the sworn testimony that if the northern breakwater is constructed as designed, without any alteration of the southern breakwater beyond the making up of the 200 feet, and that if a vessel attempts to approach in a south-east gale she will be rendered almost unmanageable at the entrance, and that if anything goes wrong there is a certainty that she will be driven on the northern breakwater, not having room in which to work;—can you give any information in regard to that point? I cannot understand such a statement being made. My opinion of that is that the extension of the northern breakwater will make it much better. If a vessel comes in now from the south, with a southerly gale, there is nothing to prevent her being driven upon the bank upon which we propose to put the northern breakwater. If that breakwater is built there will be a current formed between the two walls, the tendency of which will be to get a vessel into that current, and bring her up into deep water in the harbour.

2759. Another statement has been made that the effect of the construction of the northern breakwater will be that the sea will come with great force against it, and will be carried right up into the harbour;—what is your answer to that? My answer is that we trap it by means of the wave-trap.

2760. It has been stated that the northern wave-trap will in a short time be silted up with sand? You have only to go to an ordinary beach and see what takes place there. The beach forms a certain angle, and the waves expend themselves upon it. The same thing will happen here. The sand in the wave-trap will form a certain angle, and the waves will run up the beach and expend themselves upon it. It will never silt up beyond that point, whatever it may be.

2761. You are strongly of opinion that the statements made with regard to the northern breakwater are not called for? I am satisfied they were incorrect.

2762. Are you prepared to admit that the southern breakwater might be constructed with advantage another 300 feet? It would be a slight advantage to some vessels, but I do not think those vessels want that advantage. Vessels have been going in and out even in the dark for many years, and I think I am right in saying that none of them have been lost.

2763. But you are referring to light coasting vessels? Those are the vessels for which the extension of the southern breakwater would be of any use.

2764. You admit it would give you smoother water inside? To a slight extent.

2765. And that would have the effect of giving more available depth on the bar? Slightly; and beyond that I do not think it would be of much use to the deep laden vessels, because they will not go out in a heavy sea, no matter what the bar is.

2766. Is it not a fact that since you have left Newcastle the tonnage of the vessels has largely increased? Yes; and that is the reason we want deeper water.

2767. *Mr. Chanter.*] The northern breakwater was constructed in two sections? Yes.

2768. It has been stated by a gentleman who has been in Newcastle a long time that it was only in consequence of the construction of the first section of the present northern breakwater, which is practically a guide-wall, that the scour took place which removed the original shore line, and it has absolutely ceased since? I was not there when the first portion of the breakwater was built, but I was there when 300 feet of it were put on, and I know it had the effect of increasing the scour.

2769. Do not the soundings indicate that the bar itself is shallow—that there is a lesser depth now than there was a year ago? It is pushed further out, but I am not aware there is less depth than there was.

2770. We have had the evidence of one navigator, who states that the effect of the scour has simply been to remove the ridge of sand, and flatten it out;—when the ridge is gone, and the scour has a flat surface to run over, what effect can it have? There never was a ridge in that sense, and there will not be a flat surface in that sense. There is deeper water inside, opposite the pilot station, and there is a gradual rise from that to the shallow water on the bar, and as we contract the channel by putting a breakwater on the northern side we make the scour extend further down, and it throws that which may be called a ridge further out to sea, until, when we get to the end of the first section, it may throw it into deep water altogether.

2771. It has been stated that the Department hope that the sea will have the effect of filling up the wave-trap? It will fill it up to a certain extent.

2772. Then it must get the sand from the sea to do that? Not necessarily. The sand going along with the outgoing current may be caught by the incoming current, and driven back into the wave-trap.

2773. Is not the object of the northern wave-trap to receive a certain volume of water? Yes.

2774. If that cavity is filled up to any extent, it will receive less water, will it not? I do not think so. A shelving beach will be formed from low-water up to 5 or 6 feet above high-water.

2775. We have it in evidence that it will fill up absolutely? It is proved beyond all doubt by the experience of other wave-traps that that is not correct.

2776. Is not there a sand-bank now at the north-east end of the northern breakwater? Yes.

2777. What is the cause of the formation there now? There is no formation there now; it is going away. That was the main reason why I recommended Mr. Moriarty to extend the then breakwater. When I put up the beacon there it was dry. When I left there was 7 feet of water upon it.

2778. If it is asserted that the sand-bank and the beacon are still there can you, from your Departmental knowledge, disprove the assertion? The sand-bank undoubtedly is there; but I say that there are 6 or 7 feet

feet of sand which have gone away from it. That is due entirely to the extension of the northern breakwater. R. R. P. Hickson, Esq.

2779. If the northern breakwater is extended still further it will not increase the power of the current at that particular point? No; we do not want it to do so either. 1 May, 1895.

2780. There is evidently something requiring explanation, with regard to this matter, because we have evidence that when the first portion of the northern breakwater was constructed, it removed the shore line? Yes.

2781. But since then the sand-bank of which I have spoken has been formed;—it was not there before the existence of the breakwater? I cannot tell when it got there. All I can tell you is, as to what was there when I went there. The sand-bank was formed to a considerable distance close to the end of the northern breakwater, as it then existed, and upon that we put a beacon. I then recommended Mr. Moriarty to extend the northern breakwater, and the effect of that extension was to take 6 or 7 feet of sand away from the bank. The bank was situated at the end of the first portion of the old breakwater.

2782. The greatest danger to be feared is from the heavy seas from the south-east? Yes.

2783. Running across at an angle from the terminal point of the southern breakwater on to the Stockton beach? Yes; across the "Cawarra" bank.

2784. If the southern breakwater is not extended, and the northern breakwater is extended even to the end of the first section, will not those seas strike a considerable portion at the end of that breakwater, which if it were not there, would expend themselves on the beach? Yes.

2785. And their course must then be diverted up the channel? Yes.

2786. If the northern wave-trap does not have the effect you anticipate, what would be the result? It is hardly a case of anticipation, because wave-traps are not experiments. They have been proved all over the world. If there were no wave-trap there a heavier sea would run to the harbour.

2787. You have said that a south-easterly roll would strike a certain portion of the northern breakwater;—would it not be wise to extend the southern breakwater sufficiently far to prevent the south-easterly sea striking it at all? I do not think you could possibly do that.

2788. Supposing it is lengthened 500 feet? It will still strike it. No matter how it is extended a certain portion of the sea is bound to come within the channel, and the wave-traps will be sufficiently effective to prevent the roll going into the port.

2789. *Mr. Hayes.*] Assuming, in heavy gales, the sand is brought in and fills up the wave-trap, will not the effect of the current be to take it out afterwards, and form a natural beach there? There can never be anything else but a natural beach there. It could never fill up in the sense of being a wall of sand.

2790. *Mr. Roberts.*] No matter how far you carry the southern breakwater out, in your opinion, it is absolutely necessary to construct, at any rate, the first section of the northern breakwater? Undoubtedly.

2791. And the object of that is to concentrate the ebb-tide, so as to get the desired scour? Yes.

2792. You state that if the southern breakwater is carried out a considerable distance, it will have no effect whatever in giving deeper water at the entrance, unless the northern breakwater is also extended? That is so.

2793. *Mr. Trickett.*] When did you take possession of the works at the northern breakwater? I was in charge from 1881.

2794. Will you show me on the plan how far the northern breakwater was then extended? The shore line had not quite made up to the end of the breakwater then; but it made up very shortly afterwards. When I went to Newcastle to take possession of the works, the northern breakwater was extended as far as the point between the black letters "K" and "W" of the word breakwater.

2795. That being so, where was the bar then located? I cannot say from memory.

2796. *Mr. Davies.*] What is the primary object of the Department in carrying out the construction of the northern breakwater, and of the making good of the southern breakwater? To create a scour in order to gain a greater depth of water into the harbour.

2797. It is not because of any danger attached to approaching, or leaving the port, that you propose to carry out the works? No.

2798. Are you of opinion that your scheme will be successful? I think so. I hope to attain the object sought with the first section of the northern breakwater only.

2799. *Chairman.*] The tendency of the breakwater is to hold up the current? Yes; to confine it.

2800. The moment you pass the north end of the northern breakwater, the current commences to spread out towards the north? It goes out in the shape of a fan.

2801. With the northern breakwater in existence, there will be a current along the southern breakwater? Very little; that is all shallow water.

2802. The further you extend the northern or southern breakwater, the more certainty there is of holding up your scour? Yes.

2803. Therefore the extension of the southern breakwater 500 feet, will have a tendency to hold up the scour on the southern side? Not unless you take the northern breakwater with it.

2804. If you construct the first section? No; you would have to go further than the first section.

2805. The end attained by the erection of a guide-wall or breakwater is the creation of a scour? Yes.

2806. Therefore the extension of a breakwater means the holding up of the scour? You cannot apply it to every case, but as a general principle it does.

2807. You contend that the shallowness of the water on the southern breakwater will render an extension of that breakwater inefficient for that purpose? Yes; the southern breakwater has had very little to do with the scour which has taken place, and which has deepened the bar, and that is borne out by old charts. The deep water is not in any case near the southern breakwater. It spreads to the north, and I believe when the northern breakwater is made the deep-water channel will leave the southern breakwater still further away, and will go closer to the northern breakwater.

2808. Will the construction of the northern breakwater as far as the first section, and the extension of the southern breakwater 300 feet beyond its original limits, be detrimental to the port? No.

2809. Would it be a vast improvement? It would be a vast improvement to extend the northern breakwater to the first section. It will be of no use whatever, as far as the deep-water vessels are concerned, to extend the southern breakwater, although it will, perhaps, make the harbour a little better for light craft.

R. R. P. 2810. *Mr. Humphery.*] You are not in accord with Mr. Darley as to the necessity of the extension of the second section of the northern breakwater? I did not read his evidence. I gathered from what I heard that he thought the first section would probably do what is required, but that if it did not you could go on with the second section.

1 May, 1895. 2811. Are you of opinion that the second section will be necessary? I have doubts about it. I think myself that the first section will really do all that is required, at all events for very many years.

James Cole Ellis, Esq., M.P., sworn, and further examined:—

J. C. Ellis, 2812. *Chairman.*] Do you wish to make any further statement to the Committee? I wish to point out Esq., M.P. that the large plan which is the main exhibit in the inquiry, shows a very small portion of sand bulging out from the northern breakwater. It would convey to one's mind that that is how matters now stand. 1 May, 1895. In my evidence I have stated most distinctly that there is a bank there, as it was originally, with this exception, that there is a little water upon it at low-water. The top of it has gone away, and has moved towards the north-eastern end of the present breakwater, and to such an extent that it has been necessary to put up a beacon to show the danger. I have put in an exhibit of an Admiralty chart showing the position of the beacon, which must be correct, because it is a document prepared by the Admiralty, in conjunction with the Harbours and Rivers Department. As this northern breakwater, and this great scour which we are told it has created, has had the effect of creating the large bank upon which it has been necessary to put a beacon to show the danger, I think the further extension of the breakwater must continue to create a sand-bank all the way along it. I do not see what is to stop it. I flatly contradict Mr. Hickson, and I say that at the time the northern breakwater was extended to the point between the letters "K" and "W," the bar was where it is to-day. I maintain that the 380 feet which he added to the breakwater, have not affected the bar 1 inch.

THURSDAY, 2 MAY, 1895.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY.	JAMES HAYES, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	ROBERT HENRY LEVIEEN, Esq.
The Hon. JAMES HOSKINS.	JOHN MOORE CHANTER, Esq.
The Hon. JOHN DAVIES, C.M.G.	CHARLES ALFRED LEE, Esq.
The Hon. CHARLES JAMES ROBERTS, C.M.G.	JAMES GORMLY, Esq.
EDMUND WILLIAM MOLESWORTH, Esq.	

The Committee further considered the proposed Harbour Improvements at Newcastle.

Henry Richard Carleton, Esq., M.E., M.I.C.E., Principal Assistant Engineer for Harbours and Rivers, Department of Public Works, sworn, and further examined:—

H. R. Carleton, Esq., M.E., M.I.C.E. 2813. *Chairman.*] The other day you estimated that the cost of extending the southern breakwater a distance of 300 feet beyond the point to which it is to be made up at £26,332 9s. Id.? Yes.

2814. We have to day received an estimate from Mr. Hickson, and he states—

2 May, 1895. The estimates are made on the assumption that the existing bottom is hard and able to sustain the weight of the structure, and that the slopes will stand $1\frac{1}{2}$ to 1; but, from my experience of breakwaters generally and Newcastle in particular, I am of opinion that the slope will flatten to a greater depth than 1 to 1, and the bottom being sand the stones will sink to a considerable extent, and consequently increase the cubic contents of the breakwater. To meet this contingency the amount should be increased by about 25 per cent.

In making out your estimate did you allow the 25 per cent. to which Mr. Hickson has referred? No; I went carefully over that calculation. Mine was not a very careful estimate, as I had to make it hastily. If you add 25 per cent. to my estimate the £26,332 will be increased to £31,000.

2815. The Committee were of opinion that you had mentioned that the breakwater would sink, and that you might have taken into consideration all the surroundings in connection with your calculation; you say you have not? No; my figures were given as if the ground were solid rock. We know it is not; but we do not know how far it is to the rock. Mr. Hickson allows 25 per cent. for sinkage, which would allow for about from 5 to 7 feet of scour. If you want to compare my estimate with that of Mr. Hickson you must deduct 25 per cent. from his figures, and that will put them on the same plane.

2816. You have not allowed for the contingency of the sea flattening the breakwater? He has not allowed for that either in his calculation. He only says it may occur.

2817. Mr. Hickson assumes that the slopes will stand $1\frac{1}{2}$ to 1? So did I.

2818. And he continues—

And the bottom being sand, the stones will sink to a considerable extent, and consequently increase the cubic contents of the breakwater. To meet this contingency the amount should be increased by about 25 per cent.

—? Exactly.

2819. Do you regard Mr. Hickson's estimate as a safer estimate than your own? I do.

2820. You regard all these estimates as to some extent approximate? It is very hard to give any exact estimate in connection with work of this kind. There is really no discrepancy between our estimates. Mr. Hickson has merely extended the matter.

2821. *Mr. Davies.*] I asked you, when under examination, what would be the cost of extending the southern breakwater 300 feet beyond the point to which the Department intended to make it good, and you stated that the cost would be within £30,000? I did.

2822. I also asked you to prepare an estimate of the actual cost? Yes.

2823. I understood that in preparing that estimate you would give us the approximate cost as near as possible, and not take the rock as a basis for your foundation; you now wish to state that your calculation was based as if you were going to build a breakwater on a rock? Yes; as if we had a solid foundation.

2824. You did not tell us that, however? I may point out we have no borings on that line.

2825. But you stated that you had taken the depth of water? Yes. The estimate I gave was based on the information we have in the office. To have gone any further it would have been necessary for me to have had some borings taken on the line of the southern breakwater.

2826.

2826. Would it not have been better for you to have told the Committee that your calculations were based on the assumption that you would have a bed-rock upon which to extend the breakwater an additional 300 feet? No doubt it would have put the matter more plainly; but that was as far as we could estimate with the information at our command. I think I mentioned that we had no borings on the line of the southern breakwater. To arrive at an exact estimate, it would be necessary to take borings and ascertain the depth of the rock, which of course would be a costly matter.

H. R.
Carleton,
Esq., M.E.,
M.I.C.E.

2 May, 1895.

2827. You gave the depth of the sand from the soundings? Yes.

2828. But you did not tell the Committee it would possibly require a great deal more money to find the additional material to extend the breakwater? No; I gave that estimate as the least possible cost of extending it. Perhaps I should have added to my statement that £26,332 9s. 1d. was the least possible cost of extending it.

2829. *Mr. Chanter.*] How long would it take you to take the borings, and what would be the cost? You would have to wait for westerly winds before you could take them. Our boring gear, I may say, is a very top-heavy kind of plant, and you would require very calm water. When I was on the Richmond we could only bore in winter, and when we had westerly winds.

2830. If you had the borings taken, you would be able to calculate exactly? Yes.

2831. Have you any idea what it would cost to take the borings? From £100 to £150.

2832. Is that allowing for the time lost in waiting for westerly winds? We should have to wait, and keep the men in readiness to put out. You might get all the borings in one day if there was a calm.

2833. In what period of time do you think the work could be carried out? When I was at the work myself we got our plant into order about May for it. The westerly winds only blow strongly in the winter time.

2834. Could it be done in a fortnight or a month? The borings required could be done in two days if they were fine days, but we might have to wait three months for those days.

2835. *Chairman.*] Do you know how deep the rock is? I think the rock is a considerable depth in some places, because 1,000 feet out from the end of the breakwater there is a depth of 75 feet of water.

2836. But the breakwater would not necessarily reach the rock? No; but if there were a depth of from 4 to 10 feet of sand on the rock, it would probably scour that out and make a seat for itself on the rock.

2837. If you found 15 feet between the rock and the surface, the breakwater would not get down to it? No; we should allow about 5 feet of settling. The increased estimates of Mr. Hickson's corresponds to a scouring away of the sand, or an increase of the depth all along the breakwater of from 5 feet to 7½ feet.

2838. *Mr. Gormly.*] What will be the depth of the first 100 feet of extension beyond the point at which you propose to build up the southern breakwater? The mean depth of the first 100 feet would be about 33 feet at low water.

2839. Does the plan show that? Yes; that is the mean depth. There are 32 feet at one end, and 35 at the other.

2840. What would be the depth of the second section of 100 feet? I may state it is sloping ground. The depth of the second 100 feet will be about 35 feet.

2841. What will be the depth of the third 100 feet? Thirty-five feet again.

2842. What will be the depth of the 400 and 500 feet sections? Thirty-six feet and 39 feet.

2843. What will be the difference in the cost of the different extensions of 100 feet each? Mr. Hickson's statement shows it.

2844. But I want your estimate? I prepared that estimate for Mr. Hickson.

2845. The first 100 feet are estimated to cost £10,750, and the first and second 100 feet combined are estimated to cost £21,500; therefore the two sections will cost practically the same? Practically the same.

2846. I should have imagined there would have been a greater amount of material in the second 100 feet than in the first? There is a little more.

2847. If the breakwater were extended further out you would have the top the same width all along? Yes.

2848. Then the additional 2 feet would be the base? Yes.

2849. And the additional 2 feet would be the full width of the base? Yes.

2850. The additional depth of the sea would cause you to have an additional 2 feet of base? Yes.

2851. And an additional height of 2 feet? Yes.

2852. That, therefore, would take up a considerable amount more material than the first section of 100 feet? Yes.

2853. Can you explain the reason why the difference in cost between the cost of the first and second 100 feet is so slight? We have allowed for widening out in each case. The Chairman asked for the cost of extending the breakwater 100 feet. We had to put a widening out on that as the permanent end of the breakwater. Then I extend it 200 feet, put a widening on that again, and so on.

2854. And would that only take the additional amount of material which you estimate as the difference in the cost of the different 100 feet? Yes, I think so. These estimates are of course all approximate.

2855. But in making an estimate of a solid wall you would take the exact dimensions when completed? Yes; we allow one-fifth for voids. It is not a solid wall.

2856. *Mr. Hayes.*] Did you, in taking the cubic contents, allow for 2 feet in depth? I have given you the depth on the plan. Whether those were the exact depths we employed in the calculation, I cannot say. Of course, it would look as if there was a slight error there, one section being 2 feet deeper than the other.

2857. *Mr. Humphery.*] Is there not a difference of 6 feet between the 500 feet section and the 100 feet section? Yes, on the other end.

2858. *Mr. Hayes.*] Then it is merely an approximate estimate? It was as close as we could go into it in the time at command.

2859. But you can calculate exactly by taking the cubic contents of each 100 feet? You cannot even then calculate exactly. There are voids or vacant spaces in the breakwater.

2860. You have allowed for that? Yes. We have allowed one-fifth of it as being vacant space—that is, four-fifths of the area would be solid.

- H. R. Carleton, Esq., M.E., M.I.C.E. 2861. What I mean is this: You have to put the breakwater in a certain depth of water? If you have water 2 feet deeper in one section than the other it will make the cubic contents considerably more.
 2862. Did you calculate on that basis? Yes, we calculated each section separately, but we would have to put on half of a truncated cone at the end of each section, so that it runs out into the next section.
 2 May, 1895. You have to take a sloping end and that brings them more nearly equal. A breakwater is not really cut with a vertical end. It must have a long slope out in front, and the figure then on the end is really half a cone with the top off it, which we have to add on to each of them. That equalises the quantities for each section. Of course, a breakwater will not stand vertically on the end with $1\frac{1}{2}$ and 1 slopes on the side; so that in making the calculation for each length of 100 feet, we have to add the portion on the end of each 100 feet. That brings them more nearly equal.

TUESDAY, 7 MAY, 1895.

Present: —

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.	JAMES HAYES, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	ROBERT HENRY LEVISON, Esq.
The Hon. JAMES HOSKINS.	JOHN MOORE CHANTER, Esq.
The Hon. JOHN DAVIES, C.M.G.	CHARLES ALFRED LEE, Esq.
The Hon. CHARLES JAMES ROBERTS, C.M.G.	JAMES GORMLY, Esq.
EDMUND WILLIAM MOLESWORTH, Esq.	

The Committee further considered the proposed Harbour Improvements at Newcastle.

- Charles Good, Esq., M.I.C.E., Engineer to the Wollongong Harbour Trust, sworn, and examined:—
 C. Good, Esq., M.I.C.E. 2863. *Chairman.*] What are you? Engineer to the Wollongong Harbour Trust. I hand in a letter containing the following statement:—

- 7 May, 1895. I was articled to Sir John Coode for three years commencing 1869, and remained in his office for a year and a half after my articles expired.

In 1874 Sir John Coode sent me to Colombo, as Assistant Engineer of Harbour Works under Mr. John Kyle, Resident Engineer, in which capacity I remained until 1883, when I was appointed Executive Engineer on Sir John Hawkshaw's harbour works at Mormugão, Goa, under Mr. E. E. Sawyer, Engineer-in-Chief of the West of India Portuguese Railway. From there I was sent by Sir John Coode to Warrnambool, Victoria, as Resident Engineer of Harbour Works, and on the completion of those works I was appointed Engineer to the Wollongong Harbour Trust, which appointment I still hold.

I joined the Institution of Civil Engineers as Associate Member in 1879, and was transferred to the class of members in 1889.

2864. You hand in also a letter of instructions and a report in connection with the proposed harbour improvements at Newcastle? Yes, as follows:—

Sir,

I have been requested by the Parliamentary Committee on Public Works to instruct you to inquire into and report upon the proposed improvements at the port of Newcastle.

Herewith you will find such plans as bear upon it, and the Departmental statement, which will enable you to understand the scheme in detail.

In addition to a general report there are several questions to which it is desirable to give special consideration.

1. The effect of the construction of the proposed northern breakwater (first section and second section),—
 - a. With regard to scour.
 - b. With regard to effect upon the range in the port.
2. The extension of the southern breakwater from its present visible position for (say) 500 feet. With regard to—
 - a. Scour.
 - b. Smoothness of bar.
 - c. Range in the port.
 - d. Stability of the northern (proposed) breakwater.
3. The effect of northern wave-trap with regard to—
 - a. Efficacy.
 - b. The probability of silting up.
4. The effect of southern guide-wall with regard to—
 - a. Direction of the scour.
 - b. Efficacy.

You will also take into consideration the possibility of the extension of the works at some future date, so that any proposal or alteration will form part of a final scheme.

You will return this letter of instructions with your report.

We shall be pleased to receive your report as soon as practicable.

Believe me, yours faithfully,
 THOS. EWING,
 Chairman.

Charles Good, Esq., M.I.C.E.

NEWCASTLE HARBOUR IMPROVEMENTS.

Sir,

As instructed by your letter of the 3rd instant, returned herewith, I proceeded to Newcastle on the 4th instant, and inspected the sites of the proposed works for the improvement of the entrance to the harbour, and now beg to report as follows:—

From inquiries made on the spot, and from the statements of the officers of the Harbours and Rivers Department, it appears that during the last two or three years the bar has shoaled, and is shoaling, to such an extent that it has become absolutely necessary that something should be done in the near future to improve it if the harbour is to be kept open for any but small vessels.

The works, as shown on the plan submitted to me, will, in my opinion, have the desired effect of scouring the bar out into deep water, and of improving the entrance generally.

I would, however, recommend, in view of any further extension of the works that may possibly be required in the future, that instead of restoring the end of the southern breakwater, as originally constructed, viz., with a curve to the south, an extension of 500 feet from the present visible end be carried out on a line running in a N.N.E. direction. This would allow of a further extension of 500 feet in the same direction if it should ever be found necessary, without unduly contracting the entrance.

This

This extension would give better shelter to the entrance, and also have the effect of removing it beyond the influence C. Good, Esq., M.I.C.E., of the roll from the Big Ben Rock.

With regard to the special points to which you draw my attention, I beg to give the following opinions:—

7 May, 1895.

1. *Northern Breakwater.*

- a. This work will have the full effect anticipated by the Department, viz., of scouring the channel, so as to give at least 3 feet more water than at present.

The length will have to be determined as the work proceeds. I am, however, of opinion that the first section will be found sufficient to maintain a deep entrance for many years to come, though doubtless the work will eventually have to be carried out to the full length shown.

- b. The northern breakwater, if carried out even as far only as the first section, will, unless covered by an extension of the southern breakwater as I propose, be exposed to seas coming in from the east, and draw them up the harbour, and though the waves will be partially expended in the wave-traps, there will still at times be a considerable range in the harbour.

2. *Extension of Southern Breakwater.*

- a. This will have little or no effect in increasing the scour.
- b. It will, however, improve the entrance by throwing the rough water further out, and making smoother water on the bar itself, which will be equivalent to an extra depth, the sound of vessels passing the bar being thereby reduced.
- c. The range in the harbour will be diminished, if not stopped altogether, as the northern breakwater being well under the lee, waves which would otherwise strike it and roll up the harbour will to a great extent pass clear of the end of the work.

As a general principle, I should say, from my knowledge of the seas on this coast, that the end of the northern breakwater should not be carried further than a point about due west from the end of the southern breakwater.

- d. The northern breakwater, which without the extension of the southern one would have to be at its outer part nearly of the same strength as the latter, can, if protected as proposed, be of lighter construction.

3. *Northern Wave-trap.*

- a. This will doubtless be efficacious in reducing the waves running along the breakwater, though it is difficult to say exactly to what extent.
- b. I think there need be no fear of the trap filling up to such an extent as to impair its utility.

4. *Southern Wave-trap.*

- a. The existing beach at this point having proved efficacious, there can be no doubt that the proposed work will have the same effect, but in a more marked degree.
- b. The guide-bank is designed of such a form as to throw the current to the north side of the channel, and will certainly have this effect, which I consider is very desirable, in view of the greater depth of the rock on that side enabling a deeper channel to be maintained without blasting.

On the whole, I consider, from the opportunity I have had of studying the matter, that the works as proposed, with the addition of an extension of the southern breakwater, are the best that could be designed, and if carried out will, by providing a deeper and safer entrance, vastly improve the port.

I am, &c.,

CHARLES GOOD, M.I.C.E.

The Chairman, Parliamentary Standing Committee on Public Works.

2865. You inspected the works at Newcastle in company with an officer of the Harbours and Rivers Department and the Harbour-Master? Yes.

2866. The first statement you make in your report with regard to the works is that the breakwaters, as proposed by the Department, will have the effect of removing the bar further eastward? I have no doubt they will.

2867. You have no doubt with regard to the matter? None at all.

2868. Then you go on to say that instead of restoring the end of the southern breakwater, as originally constructed, namely, with a curve to the south, an extension of 500 feet from the present visible end, carried out in a line running in a north-north-east direction, would allow of a further extension of 500 feet in the same direction if it should ever be found necessary without duly contracting the entrance;—will you show the Committee, on the plan, the direction you propose your extension to take? Along this (marked) line of soundings, about north-north-east.

2869. You have shown an extension of 500 feet in the direction you desire it to go, along the line of soundings marked X;—you have suggested that eventually it may be necessary to extend that still further;—having made that extension, how wide would the mouth of the port be, provided the northern breakwater were extended, as proposed? Something like 1,350 feet.

2870. Is that a sufficient width for the entrance to a port? I think it is quite sufficient.

2871. What is your experience with regard to ports;—how wide is the entrance to Colombo? Colombo has a wide entrance now, because there is only one breakwater, but they are making the northern breakwater there, which I believe will leave only about 800 feet. Sir John Coode designed it at 600 feet, but ship-captains complained that it was not wide enough.

2872. How does Newcastle compare with other ports you know of? I think it has a very wide entrance. It has a far wider entrance than some ports on the English coast.

2873. What distance is it from Stony Point to the end of the northern breakwater? 1,200 feet.

2874. What is the distance from the southern guide-wall to the northern breakwater? 1,100 feet to the water-line.

2875. If the southern breakwater were taken, as you suggest, along the line of soundings marked X, 1,000 feet out, it would be pretty well 100 feet wider than at Stony Point or the end of the northern guide-wall? Yes; it would be 100 feet wider than the narrowest part.

2876. Therefore, for the discharge from the river, it should be sufficiently wide? It should be, because it is deeper water; at the same time, the sectional area will be larger.

2877. As far as the entrance to the port is concerned, it is abundantly wide? I think it is plenty wide enough.

2878. Why do you think the southern breakwater should be extended? I think it should be extended to prevent the seas striking the inside of the northern breakwater extension.

2879. You made a statement to the effect that the end of the northern breakwater should not be carried further than a point about due west from the end of the southern breakwater? That is approximately west.

2880. Why do you make that suggestion? So as to keep it well under the lee of the southern breakwater—to put the end of the northern breakwater in smoother water.

2881. What benefit would that be to the northern breakwater? It would make smoother water in the harbour by preventing the seas striking and running along the northern breakwater, and it would lighten the construction of the northern breakwater to a certain extent. It could be made with smaller stones.

2882.

C.Good, Esq., 2882. You used the word "west," approximately, I suppose? Yes; I do not think it would matter 100 feet one way or the other, so far as the length of the breakwater is concerned.

7 May, 1895. 2883. The extension of the southern breakwater which you propose will be about due east of the end of the first portion of the northern breakwater? Approximately so.

2884. In extending the southern breakwater why would you make a turn in it? Because a shorter length of breakwater in that direction would have the same effect as a longer length upon the original line. We get the same result by a shorter length. If the idea is to keep a line east and west, for the sake of shelter, you will have to run further out.

2885. Then you get the same result, and it does not bring about an undue contraction of the port? I consider it does not. It will leave the entrance quite wide enough even if it is extended another 500 feet.

2886. The seas, according to your evidence, come from the east and south-east. If you turn the extension of the southern breakwater in the direction you suggest, will it not be assailed by the heavier seas—will it not be a very expensive breakwater to build? It will be more square on to the seas. It will get a bigger wave-stroke.

2887. Do you think there are any special engineering difficulties in that? I do not think so. I think stone of the size used in the present breakwater will be large enough, except at the end, where some heavier stone may be required.

2888. What will be required at the end? If it is not possible to get large enough stone I should put in concrete blocks at the end.

2889. Do you know where Big Ben Rock is? Yes; I thought it was further out than is marked on the plan. It is nearly square on to the present end of the breakwater.

2890. You say that the easterly seas coming in will catch the northern breakwater, instead of going on to Stockton beach, as at present, and will roll right up the harbour? I think they will.

2891. You do not believe the wave-traps will do everything? I do not think they will entirely stop the waves, although they will take the worst out of them.

2892. If there is no wave-trap on the northern side, would waves rolling on to the northern breakwater make a heavy sea in the harbour? I should say it would send a greater sea up the harbour than if there were no wave-trap there.

2893. You say the extension of the southern breakwater will not have much effect in increasing the scour? No. I do not propose it with that object, but simply for shelter.

2894. You say—

It will, however, improve the entrance by throwing the rough water further out and making smoother water on the bar itself, which will be equivalent to an extra depth, the scend of vessels passing the bar being thereby reduced.

That means that in a lumpy sea they require more water to prevent them striking the bottom than in a smooth sea? Exactly.

2895. Can you give us any information with regard to that matter? I believe a vessel scends something like two-thirds of the rise of the sea.

2896. But there is nothing definite with regard to it? It depends on the length of the ship. A long ship will naturally scend less in proportion than a small one.

2897. You also state—

The range in the harbour will be diminished, if not stopped altogether.

You have explained that the waves will be drawn outside the northern breakwater instead of catching it and running into the harbour? That is my explanation.

2898. You have also explained that, if possible, the end of the southern breakwater should be kept no more south than due east from the end of the northern breakwater? Yes.

2899. You have also explained that the northern breakwater, being under the lee of the southern breakwater, will not require to be quite so stable, as it will not get the full force of the sea? I do not think there is much in that, but it certainly will be capable of extension with somewhat smaller stone.

2900. You express the opinion that the northern wave-trap will be efficacious to a certain extent? I am sure it will.

2901. And you do not think it will fill up? I do not see why it should fill up.

2902. You saw the sea running in at the end of the northern breakwater? I did.

2903. How was it running? It was running in with the flood-tide, and bringing the sand from the beach, where the wave-trap is to be formed, up the harbour.

2904. You see that the southern guide bank is designed to throw the channel to the north-side? That is evidently the design of it.

2905. You do not object to the direction of it? No.

2906. Mr. Hayes.] In extending the southern breakwater as you propose, instead of on the original lines, your object is merely to shelter the northern breakwater? Yes, and the entrance itself.

2907. From what gales? From anything from south-east to east.

2908. In what way will it effect a shelter? There is bound to be a certain amount of rough water around the end, and it will keep it further out and in deeper water to the north-east, where it will do less harm to a vessel coming in.

2909. That is the only reason you have for extending it in the direction you propose? My reason for extending it in that direction, instead of on the original line, is to save length. I think you will get the same effect sooner.

2910. With a north-easterly gale, which is not an uncommon thing on the coast, would not the extension you propose tend to draw the seas more into the harbour than the line of the southern breakwater? I do not think it would. Besides, as far as I have seen, the north-east seas are nothing very much. It is very rarely you get a heavy sea from the north-east.

2911. Being more broadside on to the varying gales of wind, east and south-east, would it not be more likely to cost more in repairs than it would do if it were extended in a straight line? It might require a little heavier section to start with more stone being required.

2912. Do you think an ordinary rubble-head will be effective there? I think so, if it is constructed of the largest stone which can be got, up to 25 tons.

2913. You have seen the existing southern breakwater? Yes. It simply wants making up again with heavier stone on the top. The sea has only drawn the stone down.

2914. Will it stand if made up with stone similar to that of which it is now constructed? It might go C. Good, Esq., M.I.C.E.
down to a certain extent, but not far, because there is a base there already.
2915. Have you had experience of rubble breakwaters of the kind proposed to be constructed here? Yes; I have been on Portland breakwater, in England. *7 May, 1895.*
2916. Does not that cost a large amount annually for repairs, especially on the end? The ends are masonry heads. It has two ends to it.
2917. Built on rubble? Yes.
2918. Does not the rubble give way constantly? It was many years before it consolidated sufficiently to enable the heads to be put on.
2919. Have you considered the question as to what breakwater it would be advisable to construct in the first instance;—what do you propose in reference to that? I should think it would be advisable to start the northern breakwater as soon as possible, so as to commence getting the scour.
2920. And watch the effect of that before extending the southern breakwater? Yes; the southern breakwater will not require to be started until the northern breakwater was some distance out. It is only when it comes out to the end that I think there will be any danger of the sea striking it, and going up to the harbour. I think it could be carried abreast of Nobby's before the southern breakwater was started.
2921. Do you advise that the northern breakwater should be extended up to that point, and the results watched, with a view to future extensions? The results would be watched daily as the work went on. Soundings would be taken frequently to ascertain the effect. There need be no stoppage of the work to watch the effect.
2922. You say positively that the extension of the southern breakwater will not assist in creating a scour at all? I say it will have little or no effect. I do not think it will have any.
2923. This design is for the purpose of creating a scour? That is the main idea.
2924. With the object of deepening the entrance to the harbour? That, I believe, is the main object.
2925. Would not the extension of the northern breakwater give an opportunity of seeing what effect the wave-trap will have in stilling the waters of the harbour? It would, but the waves would hardly strike it. I do not think the wave-trap would come into play until you got to a point abreast of Nobby's.
2926. *Chairman.*] Imagine the northern breakwater to stop abreast of Nobby's;—where would the tide go out? It would go out where it does now—north.
2927. *Mr. Hayes.*] Is not the water more shallow at the point abreast of Nobby's than it is further in? I believe it is shallower on the Oyster Bank now than it is inside.
2928. And would not the Oyster Bank to some extent form a guide-wall in confining the current? It would have little effect. There are 10 or 12 feet of water upon it at low-water.
2929. *Mr. Humphery.*] Have you estimated the cost of the extension of the southern breakwater, as proposed by you? No; I have only made a rough estimate. I have estimated that at 5s. a ton it would cost £30,000 to extend it 500 feet.
2930. *Chairman.*] That is an approximate estimate? Yes; I have no detailed sections.
2931. *Mr. Davies.*] You are strongly of opinion that the southern breakwater should overlap the northern breakwater by a considerable distance? Yes.
2932. Not so much to create a scour as to secure calm water for navigation? To secure calm water, because I think it will have very little effect one way or the other on the scour.
2933. The whole of the scour is to be obtained by the extension of the northern breakwater? Yes.
2934. But in order to prevent a range in the harbour and disturbed waters you suggest that the southern breakwater should be extended? Yes.
2935. You believe that that will have great influence? I am sure it will.
2936. Coupled with the wave-traps? Yes.
2937. Do I gather that you generally approve of the scheme before the Committee? I quite approve of it with the addition I have mentioned.
2938. You approve of the Departmental scheme with the addition of some 500 feet to the southern breakwater? I do.
2939. And you believe it will create a scour, and give greater depth of water? I believe it will have that effect.
2940. And that it will not only give a greater depth of water, but calmer water for navigation? Yes.
2941. *Mr. Molesworth.*] I understood you to say that the extension of the southern breakwater would create smoother water in the harbour, and that that would give a greater available depth on the bar;—will you tell the Committee what you think that increased depth would be? I have not had sufficient experience of Newcastle—in fact, I have never seen it in a rough sea—to enable me to say what the increased depth will be, but it seems to me that if you keep the rough water further out in deep water, thereby making smoother water on the bar, it must be equivalent to an extra depth on the bar.
2942. An important depth? A foot or two. It does not take very much of a swell to make a ship rise and fall a foot.
2943. You think it would make an important difference in the available depth on the bar? I think it would make a decided difference.

Henry Richard Carleton, Esq., M.E., M.I.C.E., Principal Assistant Engineer for Harbours and Rivers,
Department of Public Works, sworn, and further examined:—

2944. *Chairman.*] You desire to make an explanation in regard to certain matters? Yes. Some doubt was expressed as to the accuracy of the quantities supplied by Mr. Hickson the other day when I was examined, and I had not the details with me. It was thought that, because the cost of each hundred feet of extension of the southern breakwater was practically the same, there was some error in the calculations. I have the details now, and I think I shall be able to show the Committee that the calculations are absolutely correct, and, if so, I should like very much that the statement that there was a gross discrepancy in my evidence should be withdrawn. We were asked to make calculations for 100 feet, then for 200 feet, then for 300 feet, then for 400 feet, and then for 500 feet. If we run out 100 feet it will be necessary to have a wide end. The calculation was made for a length of 100 feet, with a semi-circular end upon it 40 feet wide, the cost of which will be £8,586, or in round figures £8,600. Mr. Hickson directed

*H. R.
Carleton,
Esq., M.E.,
M.I.C.E.*
7 May, 1895

H. R. Carleton, Esq., M.E., M.I.C.E. directed me to ask 25 per cent. for scour or subsidence in each case, which makes the estimate £10,750. If we run out 200 feet instead of 100 feet, it will not be necessary to have the first 100 feet 40 feet wide. I have made diagrams showing the shape. If it is necessary to run out 100 feet, we should commence with a width of 40 feet. In the case of an extension of 300 feet, we should run along at our present width, 100 feet. We should widen out the second 100 feet, and put a big end on the third 100 feet, so that the cost of the first 100 feet will vary with the length of the breakwater—that is, the cost of the first 100 feet, if you propose to put 200 feet on, will only be £5,631, and if you propose to put on 300 feet, it will only be £5,045. I have the costs worked out, and I will read them to the Committee. For 100 feet it will cost £8,600; that, with 25 per cent. added, is £10,750. If you desire to put 200 feet on the breakwater, the first 100 feet, which will be 20 feet at its inner end, and which will widen out to 40 feet, will cost £5,631, and the outer end will cost £11,499. The total in round numbers is £17,200, or with 25 per cent. added, £21,500. If you desire to extend the breakwater 300 feet, the cost of the first 100 feet which will be only 20 feet wide will be £5,045. The cost of the second 100 feet, which will be 20 feet wide at its inner end and 40 feet wide at its outer end, will be £8,250; and the cost of the third 100 feet—that is the outer end of it—will be £11,640. The total of that is £25,000, or with 25 per cent added, £31,250.

2945. *Mr. Davies.*] Are we to understand that your estimate for extending the southern breakwater 300 feet includes, or is exclusive of the 200 feet to be made good by the Department? It is exclusive of it.

2946. *Mr. Hayes.*] If you extend the breakwater 300 feet beyond its present length it will not cost £7,000 to make up the gap which exists now? The big end is really there now. The £7,000 is really for putting a new top on the outer end.

2947. Will it cost that? You might cut it down slightly. These estimates are independent altogether of the Departmental scheme.

2948. You stated it would cost £7,000 to make up the present southern breakwater? Yes.

2949. Will that be reduced if you extend the southern breakwater 300 feet? I think not—perhaps a few pounds; but it would be impossible to estimate it. If you desire to extend it 400 feet, the cost of the first 100 feet would be £5,045; the second 100 feet, £7,517; the third 100 feet, £8,512; and the fourth 100 feet, £11,919; or in round numbers, £33,000, which, with 25 per cent. added, makes £41,250.

2950. *Mr. Humphrey.*] It runs to about £1,500 a foot? Yes. I only bring this forward to show that though the differences are about £10,000, the increase is really on the end. If you extend your breakwater further the cost of the inner portion will be cheaper. It all depends upon how far the Committee desire to extend the breakwater. If you wish to extend it 300 feet we should have to make a separate estimate for it to what we would for 400 feet or 200 feet.

2951. *Mr. Davies.*] Are those calculations based upon a rock foundation or upon a sand foundation? They are based upon the present bottom.

2952. That is of sand? As far as we know, but of course there may be rock 6 inches underneath it. We have taken the present soundings, and Mr. Hickson directed me to add 25 per cent. for scour.

2953. Is the Committee to understand that your calculations are based on the present soundings as to sand? Yes.

2954. So that this is only an approximate estimate after all? It is better than an approximate estimate.

2955. You have taken no borings? No.

2956. Therefore, you do not know how many thousand tons of stone more may be required to get the height you speak of? No. What I am explaining now is a mere matter of comparison. To extend the breakwater 500 feet, the first 100 feet would cost £5,045; the second 100 feet would cost £7,517; the third 100 feet would cost £7,765; the fourth 100 feet would cost £8,778, and the fifth 100 feet would cost £12,202. You will see in comparing the fourth 100 feet with the fifth 100 feet, that the outer end of a 400-feet extension costs £11,919, but if you extend it 100 feet further, that 100 feet only costs £8,778. The total for the 500 feet, with the 25 per cent. added, is £51,875.

2957. With reference to the 300 feet extension beyond the 200 feet to be made good, what would that 300 feet cost? Mr. Hickson estimates it at £31,250.

2958. That is including the 25 per cent.? Yes.

2959. So that the actual building up of the breakwater 500 feet, in addition to the 200 feet to be made up, would cost £38,250? Yes.

2960. *Mr. Hayes.*] With reference to the allowance of 25 per cent., what is the depth at the end of the southern breakwater? Thirty-two feet.

2961. In that case you allow that the breakwater will go down to the sand, a depth of 8 feet? No; you have the slopes to take into consideration. It comes to about $7\frac{1}{2}$ feet.

2962. *Mr. Lee.*] In the scour you always allow for spread as well? Yes. As we scour we draw out our slopes also. We calculate the material as it would run out on its natural slope of $1\frac{1}{2}$ to 1.

2963. *Mr. Hayes.*] If the depth of sand is not sudden to 8 feet the cost of the breakwater will be less? Certainly.

[To Evidence of R. R. P. Hickson, Esq.]

ESTIMATES OF EXTENDING THE SOUTHERN BREAKWATER.

Department of Public Works, Sydney, 2 May, 1895.

I HEREWITH submit, for the information of the Committee, estimates for extending the southern breakwater, Newcastle, in lengths of 100 feet up to a total length of 500 feet.

The estimates are made out on the assumption that the existing bottom is hard and able to sustain the weight of the structure, and that the slopes will stand at $1\frac{1}{2}$ to 1. But from my experience of breakwaters generally, and the Newcastle one in particular, I am of opinion the slopes will flatten to a greater degree than $1\frac{1}{2}$ to 1, and the bottom being sand, the stones will sink to a considerable extent, and consequently increase the cubic contents of the breakwater. To meet this certain contingency the amounts should be increased by about 25 per cent.

The estimates would then stand as follows:—

100 feet	£10,750
200 ,,"	£21,500
300 ,,"	£31,250
400 ,,"	£41,250
500 ,,"	£51,875

ROBT. HICKSON.

The Chairman, Public Works Committee.

C.

[To Evidence of H. R. Carleton, Esq., M.E., M.I.C.E.]

ESTIMATED COST OF EXTENDING THE SOUTHERN BREAKWATER.

Length of Extension.	Cost of 1st 100 feet.	Cost of 2nd 100 feet.	Cost of 3rd 100 feet.	Cost of 4th 100 feet.	Cost of 5th 100 feet.	Total cost.	Total cost, say,	Cost with 25 per cent. added for subsidence, &c.
100 feet	£ s. d. 8,586 0 0	£ s. d. 8,586 0 0	£ s. d. 8,600 0 0	£ s. d. 10,750 0 0

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

SECTIONAL COMMITTEE.

HARBOUR IMPROVEMENTS AT NEWCASTLE.

REPORT.

THE Sectional Committee instructed to make local inquiries into the proposed improvements to Newcastle Harbour left Sydney on Monday morning, the 1st April. The Committee consisted of the Hon. F. T. Humphery, the Hon. James Hoskins, the Hon. John Davies, C.M.G., the Hon. C. J. Roberts, C.M.G., Messrs. C. A. Lee, J. Hayes, R. H. Levien, and T. T. Ewing, Chairman.

The Hon. F. T. Humphery and Mr. R. H. Levien joined the Committee at Newcastle. The Hon. James Hoskins was prevented from attending.

The Sectional Committee arrived at Newcastle on Monday afternoon and, accompanied by Mr. Walsh, Engineer-in-Charge of the works, and Capt. Newton, the harbour-master, inspected the works at present in existence at the entrance to the port, viz., the northern breakwater or guide wall, and the southern breakwater, and carefully examined the site of the proposed works. They then proceeded to inspect the dredges at work in the harbour, viz., the bucket dredges "Samson" at No. 12 hydraulic crane, the "Newcastle" at No. 5 buoy, the "Vulcan" and the sandpump "Dorus" off Stockton, the "Juno" in the new basin, and the Lobnitz rock drill "Poseidon" off Queen's Wharf.

Subsequently further minute examinations were made of the breakwater and the whole of the works carried out in the port, also of the Quarry site and the proposed route, and the method of the transmission of the material to its destination.

During the inquiry it was frequently brought under the notice of the Committee that grave apprehension existed in the minds of the residents in the upper parts of the river as to the effect of the improvements under consideration upon the escape of the flood waters. The Committee felt that so serious a complication could not pass unnoticed. They therefore left Newcastle on Saturday morning by steam-launch at 8 a.m., and proceeding up the river, inspected the proposed reclamation scheme adjoining and above the North Harbour. They also made an inspection of the sectional area of the river at Hexham, the sectional area below Alnwick, and also at Raymond Terrace. Then after proceeding to Morpeth, they visited Maitland in accordance with arrangements previously made.

The Mayors of Raymond Terrace, Morpeth, and West Maitland informed the Sectional Committee that they did not—unequal as they were to express any opinion upon an intricate engineering question—desire to oppose the scheme on the ground that it would augment the floods which periodically devastate the valley of the Hunter. The explanation offered by the Resident Engineer for Harbours and Rivers, at the request of the Committee, to the Mayors of Raymond Terrace and West Maitland, to the effect that the proposed works would furnish a larger discharging sectional area than at present exists at Newcastle, removed any apprehensions which previously obtained with reference to augmentation of floods.

The Quarry consists of what is locally known as Waratah sandstone. The stone is apparently suitable for the purpose intended, and a face of 40ft. has been obtained with very little stripping.

The route will be one and a half miles to the junction of the Raspberry Gully and the Tunnel Railway lines; a further half mile of line reaches the Government railway system at a point one mile and a half from the river. The route offers on neither side of the river any engineering obstacle.

The principal points upon which in the opinion of the Committee it was desirable to elicit information were—

1. The importance of the port.
2. The permanence of the trade.
3. The effect of similar works in the past.
4. Whether the proposed works would bring about the anticipated result.

And incidentally, the effect (if any) of the proposed works upon the flooded areas in the Hunter River Valley.

1. The Importance of the Port.

The evidence of Mr. Logan (Sub-Collector of Customs), and that of Mr. Keightley (President of the Chamber of Commerce), supported by Mr. Sharp (Mayor of Newcastle) and various other residents of long experience, amply proves the volume of trade. The returns do not show that elasticity which might be desired, but it must be remembered that they are not an absolutely fair index to the imports and exports, for—as emphasised by the Mayor—the increase in the size of modern vessels, and, consequently, the largeness of the freight, involves the transhipment of goods for Newcastle at Sydney, and has thus transferred part of the direct trade of Newcastle to the metropolis. Therefore, although the trade to Newcastle may be absolutely larger than formerly, it reaches Newcastle by coasting steamers, and for that reason is not included in the statistics of the Custom House.

Further, the value of both imports and exports having fallen so largely prevents too close a comparison being made between the present and past value and volume of trade; the tonnage visiting the port has been fully maintained.

A few items from the evidence of the Sub-Collector of Customs will be sufficient to remove any doubts there may be as to the importance of the port of Newcastle. Taking the figures for the year 1894—the last available returns—it will be seen that :—

The value of the imports was	£427,581.
The value of the exports	£1,485,475.

The number of vessels, exclusive of the coastal trade, was 1,255 with a tonnage of 1,415,159 tons. The total tonnage of the port—

Inwards	1,422,310 tons.
Outwards	1,415,159 tons.

The former being the largest for ten years, and in the latter case there being but two exceptions.

The amount of coal raised in the Newcastle district during the year 1894 was 2,605,142 tons with a value of £883,174.

The value of the coal exported was £710,341.

2. The Permanence of the Trade.

Situated as Newcastle is, 102 miles by rail from the metropolis, and being the first port where the great railway system extending to the north and north-west reaches deep water, it seems probable that with a first-class port it must become the dépôt for a very considerable trade. For instance, the wool shipped direct for the last wool year amounted to 58,000 bales, and for the year 1894 to 48,000 bales. In addition to the great area of country from which the produce naturally finds its way to Newcastle, the vast coal-fields for which it is geographically the outlet place it beyond all doubt that it is the shipping place for a great quantity of trade and is likely to remain so.

3. The effect in the past of works similar to those under consideration.

The Port of Newcastle, prior to the commencement of improvement operations, as shown by the plan of the "Coal River" before the Committee, was an almost open roadstead, protected by various reefs, of which "Nobby's" was the most prominent, the waters of the Hunter finding their way to the sea over a bar with a depth of some 18 feet of water and also by a channel of a depth of 10 feet between Nobby's and the southern mainland. The original scheme of improvement embraced a southern breakwater of 1,400 feet to Nobby's and an extension in a north-easterly direction of a further 1,400 feet, this work being partly to protect the entrance from southerly and easterly seas and to furnish a southern training wall to aid in contracting the water so as to obtain the necessary scour to deepen the entrance. Then to secure the scour the northern breakwater (more correctly described as a guide wall) was completed in 1886. The result of these works has amply justified the engineering opinion which originated them, in that the depth, which was but 15 feet when these works were commenced, rapidly increased to some 22 feet, and the bar was pushed some 800 feet seawards. This result was fairly well maintained till last year, when—as will be seen by the Harbour-master's evidence—dangerous shoaling took place, the bar having evidently been removed so far seawards as to have lost much of the effect of the scour.

The inner works, primarily to obtain further accommodation in the harbour, although not directly before the Committee, were inspected, and an opinion was formed as to the great improvements which have been carried out. Many millions of tons of sand and silt have been dredged and removed, reclamations have been carried out, wharfs have been erected on the Stockton side, and wharfage to the extent of 8,000 feet has been constructed on Bullock Island, and fitted with twelve hydraulic cranes (9 to 25 tons), three steam cranes (15 tons), and provided with fifty-six arc lamps of 2,000-candle power. A basin, with an area of 90 acres, is in course of construction; a length of 3,000 feet by a width of 200 feet and a depth of 26 feet has been dredged. The reef extending from Market wharf to the southern end of the dyke has been removed for a length of 650 feet to a depth of 25 feet, the original depth being 12 feet. Rocks have been removed at the lightship. Queen's and Market wharfs have been erected on the Newcastle side, and boat harbours have been constructed at Newcastle, Stockton, and Carrington, and various other improvements, which it is needless to further particularise.

The evidence discloses that these works are not unproductive, but it is difficult, mixed as the returns are with railway profits and revenue for services rendered, to exactly define what the net percentage of profit is. It will be sufficient to say that the works give a fair direct return to the State, and that nationally they amply repay the expenditure. Further, the reclaimed land, although it may be not of so high a value as that set upon it by some Departmental evidence (£1,500 to £2,000 an acre), still will no doubt form a very considerable asset.

4. Will the proposed works have the anticipated result?

There can be little doubt that the proposed works will bring about the results expected from them in that—

- (1.) The scour thus extended will deepen the channel and remove the bar seaward, where it is apprehended that, reaching deeper water, it will practically disappear.
- (2.) It appears probable that the new southern guide-wall will form a wave trap and intercept waves approaching the harbour. There appears some likelihood of some silting in the northern wave trap, but, in view of strong engineering evidence to the contrary, the Committee feel justified in believing that it will probably be effective.

Local evidence taken from men of long practical experience was unanimous upon two points—

- (1.) That it was essential to extend the southern breakwater; and
- (2.) That further accommodation was required in the harbour, in that inconvenience is felt from the want of deep water and danger from anchoring vessels in the fairway.

The evidence with regard to the extension of the southern breakwater was so definite and unanimous that the Committee again inspected the site and made the fullest investigation—the contention being that the southern breakwater should be extended sufficiently far to intercept the roll from “Big Ben” and south-easterly seas. The Resident Engineer, Mr. Walsh, informed the Committee that if restoring the southern breakwater to its original dimensions did not intercept the heavy easterly roll he could offer no objection to its extension. In the opinion of the Committee such restoration alone will not have this desired effect.

With reference to No. 2.—Further Harbour Accommodation.—Although not directly before the Committee, comes in strongly incidentally, inasmuch as it would be of little use to furnish a deeper entrance if large vessels could not even then use the port, and this was dealt with by the local officer of the Harbours and Rivers Department, Mr. Walsh, who explained, under further examination, that within a limited period the “Cliona” would have removed the rock at the entrance to the new basin, and then arrangements could be made so that a number of large vessels could be moored there without difficulty. Although he did not regard this as a completely satisfactory arrangement, still it would meet any temporary difficulty.

It is however apparent, that with a less sectional area for entrance and discharge than is embraced in the large area lying between Stockton and the Dyke, and embracing the locality known as the North Harbour, there must be a slackness of water in a great portion of it, and therefore a tendency for silt to deposit which will entail continuous and expensive dredging, unless some means can be devised which will create a more uniform scour. The Departmental officers urge that the completion of the proposed reclamation will have this effect.

The return furnished by Captain Newton, Harbour-master, shows that the scour seems to have lost its power on the bar in its present position, and that dangerous shoaling makes itself again manifest, soundings taken in April, 1893, showing a depth of 22 feet 6 inches, while on April 3rd, 1895, there were only 20 feet 6 inches. This emphasises the fact that some immediate action must be taken.

The evidence discloses that these works will take some five years to construct, therefore the yearly expenditure should not exceed £30,000.

Finding of the Committee.

- (1.) That the southern breakwater be made up to the 200 feet which has been washed away and be extended for a further 300 feet.
- (2.) That the first section only of the northern breakwater be constructed at present.
- (3.) That the southern guide-wall be constructed as proposed.

THOS. EWING,

Chairman.

9th April, 1895.

APPENDIX.

THE Committee have during their inquiry observed several matters to which reference in their report may not be out of place:—

1. It will be well, when plant is available, to remove the Stony Point rock.
2. It will be well to discontinue as soon as possible the custom of dumping the sand and silt in the open sea. Not only is the practice expensive and attended with some risk, but the material is of value for reclamation works.
3. The sectional areas referred to by the Engineer-in-Chief do not appear to the Committee to give a fair index as to the amount of water passing down the Lower Hunter valley at flood time, in that the sectional areas are calculated at low water level. When it is realised that at Raymond Terrace in 1893 the water rose 19 feet, and the flood waters are many feet over the banks at some of the places where these measurements were taken, it will require no argument to prove that low-water sectional areas do not furnish a correct idea of the discharging power of the Hunter River valley.

THOS. EWING,
Chairman.

9th April, 1895.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

HARBOUR IMPROVEMENTS AT NEWCASTLE.

(TAKEN BEFORE THE SECTIONAL COMMITTEE.)

TUESDAY, 2 APRIL, 1895.

[The Sectional Committee met at the Office of the Marine Board, Newcastle, at 10 a.m.]

Present:—

THOMAS THOMSON EWING, Esq., (CHAIRMAN.)

The Hon. FREDERICK THOMAS HUMPHREY.

JAMES HAYES, Esq.

The Hon. JOHN DAVIES, C.M.G.

ROBERT HENRY LEVIEEN, Esq.

The Hon. CHARLES JAMES ROBERTS, C.M.G.

CHARLES ALFRED LEE, Esq.

The Sectional Committee proceeded to consider the proposed Harbour Improvements at Newcastle.

Henry Deane Walsh, Esq., Principal Assistant Engineer, Newcastle District, Department of Public Works, sworn, and examined:—

1. *Chairman.*] What are you? I am Principal Assistant Engineer in the Works Department.
2. You are in charge of the works here? Yes.
3. The works will be carried out under your supervision? Yes.
4. And you have an intimate knowledge of the scheme before the Committee? Yes.
5. *Mr. Davies.*] How long have you been in charge of the works at Newcastle Harbour as resident engineer? I have been in Newcastle seventeen years.
6. Have you had charge of the harbour works during that long period? I have had full charge for six years, and I had temporary charge for a year before that.
7. Have you also charge of the water and sewerage works of the Hunter as engineer? I am a member of the Board.
8. Not as an engineer? No. I carried out the waterworks here.
9. Have any of the existing harbour works been carried out under your supervision? Yes, everything that has been done here for the last seven years.
10. Can you point out on the plan the portion carried out under your supervision? It has been chiefly reclamation works and the erection of cranes and wharfs. None of the breakwaters have been carried out since I have had full charge.
11. You have not carried out any portion of the breakwaters? No.
12. You have had to do more with training-walls and reclamation works? Yes; we have also erected four hydraulic cranes and new machinery in the engine-house for the electric light.
13. You have had to do with works in the harbour but not at the entrance? There has been nothing done to the entrance since I took charge.
14. Who carried out the last section of the northern breakwater? Mr. Hickson.
15. How was it done? By day-labour.
16. What has been the effect of the construction or the extension of the northern breakwater upon the channel? It has deepened the channel and pushed the bar further out to sea.
17. To what extent has it deepened the channel as compared with the state of the channel prior to the extension of the northern breakwater? From the records which I find in the office it was formerly only 14 to 15 feet deep.
18. What is it now? Up to the last flood we had about 21 ft. 6 in., but we have only 20 ft. 6 in. to-day.
19. Were the soundings of the channel made under your supervision? Yes; last September.
20. Have you found the bar moved from its original position in consequence of the extension of the northern breakwater? Yes; the shoal part has gone out some 800 feet since that extension.
21. Do you attribute that shifting of the bar to the extension of the northern breakwater? Yes, on account of its creating an extra scour.
22. Have you observed that the extension of the northern breakwater has created a very great scour? Most certainly.
23. Has there been any complaint made to you as resident engineer of the want of sufficient water in the channel for large ships? There have been constant complaints.
24. Can you name any shippers or owners who have made complaints? I am constantly mixing with shipping agents, and I daily hear them talking about the want of water on the bar.
25. Have there been any written complaints made to you? I have seen letters which have been forwarded to the Minister from various people. Those letters have been sent to me for my report on the matter.
26. You have not had any direct communication with those who made the complaints? No.

H. D. Walsh,
Esq.

2 April, 1895.

H. D. Walsh, 27. Personal representations have frequently been made to you about the want of water on the bar for ships of large carrying capacity. Has there been any great change in the character of the shipping coming into Newcastle within the last five years? Yes, a very great change. I have here a list which gives a very good idea of the increase in the size of the vessels coming here during the last ten years. It is a statement which I made out to send to the Engineer-in-Chief.

2 April, 1895. 28. Has it been sent? Yes; but it was simply an item in the monthly report of the works done in this district.

29. Can you tell the Committee what the difference has been? It is a return in connection with the discharge of ballast at the port. We have ballast jetties at the upper end of the dyke, and vessels coming in ballast are discharged under my supervision. The ballast is used to reclaim the land there.

30. That is the free ballast? It simply costs us the plant. We let the jetties by tender, and the contractor makes a certain charge for taking the ballast out. I find that in 1883 we discharged 47,076 tons of ballast from 216 vessels; that gave an average of 223 tons per vessel. In 1886, 34,420 tons from 164 vessels; that was 233 tons per ship. In 1886, 47,941 tons from 195 vessels; that was an average of 246 tons per vessel. In 1888, 68,154 tons from 184 vessels; that was an average of 370 tons per vessel. In 1889, 81,003 tons from 227 vessels, giving an average of 356 $\frac{1}{2}$ tons. In 1890, 42,408 tons from 116 vessels, giving an average of 365 tons. In 1891, 70,009 tons from 185 vessels, that is an average rate of 378 $\frac{1}{2}$ tons. In 1892, 82,141 tons from 159 vessels; that gave an average of 516 $\frac{1}{2}$ tons. In 1893, 52,981 tons from 95 vessels, or an average of 551 $\frac{1}{2}$ tons. And last year we discharged 101,402 tons from 163 vessels; that gave an average of 622 tons per vessel. From this it will be seen that the average quantity of ballast carried by vessels visiting Newcastle in 1885 was 223 tons, and that it has increased year by year until in 1894 it has reached the very high average of 622 tons. I think that gives a very good idea of the increase of the capacity of the vessels coming to this port during the last ten years. The tonnage of the vessels has largely increased.

31. Can you tell the Committee the gross amount of the tonnage now as compared with the period five or ten years back? I could not give you that; it would come under other departments.

32. Although you have ships of large capacity coming in to the port you do not seem to have the same number of vessels coming here that you had in former years? I do not discharge all the ships that come to the port. I discharge no steamers. A number of vessels discharged their ballast into lighters. The figures that I have just given relate merely to vessels that went to the ballast jetties. They do not represent the number of vessels that came into port.

33. The number in one year was 90? Yes, I think that was one of the years of a strike.

34. That shows a great falling off as compared with previous years? Yes; but in 1894 we had 163, and in 1893 only 95.

35. How do you account for the small number of vessels which you discharged in 1893? I think one reason was that there was a considerable run on stone in the port; the various municipalities buying stone. They are not allowed to discharge at our jetties. Anything that goes there becomes the property of the Government as soon as it is landed, and many vessels were carrying granite and bluestone which was sold to the municipalities for road metal, and those vessels would not come to the ballast jetties.

36. Then you do not attribute the falling off in the shipping trade during 1893 to coal strikes or any disturbance of the labour market? I attribute the falling off altogether to the coal strikes.

37. Would the vessels which you have referred to as discharging at the ballast-jetty be vessels coming to load coal? Yes, almost exclusively.

38. Then if we took 1893, when you had only ninety-five vessels to discharge the coal, trade must be at a very low ebb? A large quantity of the trade was done by steamers.

39. What portion of the channel at the present time is the shallowest? The shallowest portion at present would be in a line between the end of the first extension and the end of the southern breakwater. The last flood has shoaled it up by a foot.

40. That is an accumulation of sand? Yes.

41. If the proposed breakwater is continued, as shown on the plans, what in your opinion will be the effect? It will push the bar further out to sea; I think it will wash it away altogether. Once the sand gets into deep water it will be carried away by the current. There are 50 feet of water when you get into the current going north and south.

42. How far is the current from the present bar? It alters at different times of the year. Sometimes it is a mile out, sometimes less. There is a slight current from the south.

43. You are thoroughly convinced that if the breakwater is extended to the beginning of the second section, that is about 3,000 feet, the scour will be so great that it will take the bar right away to sea? Yes, I think so.

44. Have you noticed the provision made for wave-traps? Yes.

45. Have you any experience with reference to wave-traps in connection with bar harbours? I have watched this one very carefully for years.

46. Where is it? At Pilot Boat Harbour.

47. That is the only experience you have had in reference to wave-traps? Yes.

48. But you have authorities strongly recommending the adoption of wave-traps in connection with bar harbours? Yes.

49. As regards the circular shape of the breakwater, the object of the circular form is to provide for the wave-trap? Yes.

50. Can you describe to the Committee what the influence of the wave-trap will be? It will prevent the waves from entering the harbour. They will strike on the northern breakwater and hug the breakwater until they have expended themselves in the wave-trap.

51. What influence will the wave-trap have on the southern side? Any seas that have hitherto come into the harbour, and tended towards the southern side have always been killed by the wave-trap. It has reduced the force of the waves at the Queen's wharf very much through having that trap there.

52. In the event of the erection of the retaining wall on the northern side, what will be the narrowest point in the channel? The narrowest place will be at Stony Point.

53. Would it be any advantage to the approach to the harbour to remove Stony Point? I do not think it would be much good for navigation.

54. It would not assist the scour or improve navigation? No, I do not think so. It would enlarge the discharging area of the channel.

MINUTES OF EVIDENCE—HARBOUR IMPROVEMENTS AT NEWCASTLE.

55. Would that be any advantage? There might be some small advantage in it.
 56. There would be no difficulty in removing it? No.
 57. Is it solid rock? Large boulders.
 58. Could they be easily removed? Yes.
 59. What would be the width across from the starting-point on the northern breakwater to where you propose to have your wave-trap on the southern side? It is about 1,400 feet.
 60. What would be the depth of water in the centre? In the present fairway at that point there are 45 feet.
 61. So that the only place of difficulty with regard to the depth of the water is on the bar? Yes, when you get out past the end of the present northern breakwater.
 62. The shallowest point is where the sand-bar now exists? Where the effect of the scour is lost by the breakwater not being far enough out.
 63. And are you strongly of opinion that if that breakwater is carried out in the form in which it is now submitted to the Committee it will create a scour sufficiently powerful to carry away the sand? Certainly.
 64. If the channel is contracted by these works will not that impede the outflow of the flood-water in the Hunter River? We do not propose to contract it.
 65. But there will be a longer shoot? Yes; but we do not alter the neck of the bottle. We do not alter the small sectional area.
 66. Do you make the outlet much longer? Any water that can get out at Stony Point can get out between the breakwaters when they are completed, because the area will be much larger than the sectional area at Stony Point.
 67. Before you constructed your breakwater on the northern side had not the water an opportunity of getting away and expanding itself? No more facility for getting away there than for going straight out to sea.
 68. But by carrying out the proposed breakwater you will put a longer neck in the bottle? Yes, but it is a larger one. The scour should improve because it should increase the sectional area of Stony Point.
 69. Then you will not admit that carrying out of that breakwater on the northern side will have the effect of backing up the flood-waters from the Hunter? Not at all.
 70. You believe that the get-away will be as easy as it is at present? Yes. Supposing you have a water pipe. If you take the side out at one end it will only discharge the same amount of water as before.
 71. You have an opinion that the discharge will be quite as free as it was prior to the formation of the breakwater? Yes.
 72. You propose to construct your breakwater on the same lines as the existing breakwater? Yes, with rough stone tipped into the water.
 73. I presume the stone will be as heavy as you can possibly get it? Yes, the best and heaviest blocks procurable in the districts.
 74. What will be the cost of the stone per ton delivered on the site of the breakwater? I think it is down in the estimate at 6s. per ton.
 75. Will it be the same kind of stone that was used for the breakwaters already in existence? Yes; there is very good stone showing at the quarry now.
 76. Is that the best stone which you can get in the district for the purpose? Yes.
 77. For resisting the action of the sea? It is a very good stone under water.
 78. It does not fret much? No.
 79. It is harder than the ordinary sandstone? Yes.
 80. What would be the height of the northern breakwater;—will it be the same height as the existing work? The plan shows a rise of 5 feet from the base to the end. It is 10 feet at the starting-point, and rises to about 15 feet.
 81. About the same height as the southern breakwater? No; the southern breakwater is 17 feet.
 82. You are aware that it is not proposed to extend the southern breakwater, but only to make good the portion that has been battered down by the sea? Yes.
 83. You do not think it necessary to extend that breakwater? I think it will be found that when we make it up to its original length that will be sufficient. When the southern breakwater was completed it was done in very calm weather, and the rock was standing nearly straight up and down. Since then we have had a great deal of heavy weather, and the upper portion spread out at the toe, and practically up to low-water mark; it has extended itself, I suppose, as much as 50 feet by the top rolling out and spreading. I think that when it is made up to its original height it will be far enough out.
 84. You are aware that there is a diversity of opinion in reference to the extension of the southern breakwater, some advocating the extension of the southern in preference to the northern breakwater;—what is your opinion? I consider that extending the southern breakwater will not increase the scour in the channel, but it may take some of the southerly and south-easterly roll out of the mouth of the harbour.
 85. That is the only influence it will have? That is the only influence it will have.
 86. In the event of your carrying out the northern breakwater to the point shown in the second section, would it be a wise thing to extend the southern breakwater some distance beyond its present point? To my mind it rests with this fact—whether the toe of the southern breakwater in settling down since it was finished has gone out far enough to take the roll from Big Ben and prevent it going into the harbour. That is the only possible use of extending the southern breakwater to prevent the roll from that big rock from getting round the end of it.
 87. Do you of your own knowledge know whether it has been extended sufficiently to prevent that roll? When it was finished there was a slight roll at certain heavy seas, but, after the settling down, whether it is far enough now remains to be seen.
 88. At present you would not advocate its extension? At present I would only make it up to its original length on the top.
 89. The practical result to be obtained by carrying out the northern breakwater is to create a scour? To create a scour. It is a dangerous place when vessels are getting round and the tide is ebbing and going out into the bight. The vessels are very liable to be brought on to the oyster-bank. That would be done away with by getting a direct scour out to sea instead of half of it going out over that bank.
 90. Then I gather from your statement that it will not only create a scour but also afford greater safety to vessels entering the port? Certainly.

H. D. Walsh,
Esq.
2 April, 1895.

- H. D. Walsh, 91. This is a strong reason why the northern breakwater should be extended? I think so.
 Esq. 92. You believe it would give greater security for all vessels entering the port? Yes; especially entering
 2 April, 1895. 93. I think you admit there are numbers of persons, and some whose opinions are entitled to respect, who are entirely opposed to the extension of the northern breakwater in the way proposed by your Department? The only opposition that there has ever been to the extension of the northern breakwater was based on the ground that it would throw the waves into the harbour; but the wave-trap will obviate that.
 94. You will not only have a scour but a deeper channel altogether if the plan is carried out? Yes.
 95. And I suppose that ships of a larger tonnage would be able to come into the harbour without difficulty? Yes, if the results are realised which we think will be. I think there will be sufficient water on the bar to take everything except the large mail boats. All the regular coal traders will be able to get in and out freely.
 96. Have you any doubt whatever that if the work is carried out it will not be a failure? None whatever. Our experience has been that as the northern breakwater went out the sand kept washing out to sea the whole time. It has gone about 800 feet beyond the northern breakwater—that is, until it lost the effect of the scour.
 97. Then the extension of the northern breakwater from the point at the junction of your proposed wave-trap has had the effect of scouring all the sand away at the point where the bar existed in 1894? Yes.
 98. Then there is a uniform depth of water from the starting-point of the northern breakwater up to the end of the first section of your proposed breakwater? Abreast of the pilot-boat harbour there are 38 feet. Then it goes on 29 feet, 24½ feet, 33 feet, 24 feet. There there is a piece of rock, and it drops immediately outside of that to 37 feet, 40 feet, 41 feet. Opposite the northern breakwater, on the present fairway, there are 40 feet; then about 800 feet beyond the end of the northern breakwater we find 30 feet. That is where the full scour caused by the northern breakwater begins to lose its effect. Then it gradually shoals up, leaving 27 feet, 25 feet, 24 feet, and opposite the "Cawarra" wreck it comes down to 25 feet; then out on the bar 21 ft. 6 in., according to the plan; but it is now 20 ft. 6 in.
 99. And those figures will go to prove that the scour takes away the sand, but the scour being exhausted it leaves it on the bar? Yes.
 100. What is the greatest depth between the bar and the southern breakwater? Twenty-six feet; that would be about 600 feet off the northern breakwater. Many of the vessels go that way now. Since the sand-spit on the bar has set up so badly they keep slightly to the south of the fairway, but it is injudicious to get too near the southern breakwater in coming round.
 101. Coming back to the northern breakwater—at the starting-point of the boat-shed the shoal has been taken away? Yes; our papers show that that sand-bank went out over 500 feet beyond where it is. The sand began to wash away as soon as the effect of the northern breakwater was felt.
 102. The sand has all disappeared? Yes.
 103. What is the depth of water alongside where the shoal was? There are now 22 feet of water.
 104. All going to show that the breakwater created a scour? Yes, and increased the carrying capacity of the channel there. The Hunter flood report shows that across from the boat-harbour to the end of Stockton there has been an increase of nearly 10,000 feet in area.
 105. That sand-spit having disappeared by reason of the construction of the breakwater, the Department believe that if the breakwater is continued further out it will create a scour that will deepen the water in the fairway? Yes.
 106. How far have you carried your reclamation works at Stockton? We have run the training-wall from Callan's slip about half a-mile towards Hereford-street wharf.
 107. What area of land will be reclaimed when the whole scheme is carried out? We have reclaimed up to the present slightly over 10 acres.
 108. What will the total area be? That is not quite fixed yet. We are having a survey made, and we have not quite fixed the walls. It will probably be about 500 acres.
 109. What is your opinion as regards the training-wall being continued up to the point you propose and the land being reclaimed;—what effect will it have on the harbour? It will make a more even scour down the centre of the harbour. At present the tide, after it comes from Fullarton Cove, strikes right across the harbour. About No. 11 or No. 12 hydraulic crane there is a tremendous sluice at ebb tide; but it does not come down the north channel much. That is our greatest trouble.
 110. By contracting that portion of the harbour you expect to get a scour on the opposite side? We hope, by placing training-walls along Stockton, and removing the big sand-spit at present going out from Stockton more than half-way across the harbour, to carry a fair portion of the tide along the Stockton foreshore, and the other portion will still go over to Bullock Island. By doing this we hope to increase the scour in the north channel and to keep down the floods. It will increase the discharging capacity of the river immensely. At present the water runs over shallow flats.
 111. Then the contraction of that portion of the harbour will be the means of creating a scour on the Stockton side? Yes.
 112. Instead of striking the Bullock Island side the stream will come along the channel? A fair proportion will go along the Stockton foreshore, and thence to the north channel.
 113. Had you anything to do with the Bullock Island reclamations? Yes.
 114. How many acres are reclaimed there? I think we reclaimed something like 100 acres during the twenty-five years we have been discharging ballast there. The "Juno" reclaimed about 40 acres around the dyke and 7 acres beyond the engine-house.
 115. Is all the coal raised in the district delivered at Bullock Island? All the coal except that from the A. A. Company's mine, part of that from J. and A. Brown's mines, and the Stockton mines is delivered at Bullock Island.
 116. Can you tell what income is derived from the delivery of coal at Bullock Island? I could not tell the exact figures.
 117. You could not tell what revenue is derived from Bullock Island? No; I know there is considerable profit on the delivery of coal.
 118. You say that about 100 acres have been reclaimed? Yes.
 119. Could you get a return showing what the amount is, and where the profit comes in? The profit comes in by the Railway Department charging for the haulage and shipping of the coal, and when they have paid

paid their contractors for cranage, and charges in connection with their own rolling stock and everything, H. D. Walsh,
there is a balance left of something like 4d. per ton.

120. What about the interest on the cost of construction? That I have not gone into.

121. Are you in a position to get that information? I think the President of the Chamber of Commerce ^{2 April, 1895.}
has it ready for you.

122. What, in your opinion, would be the value of the reclaimed land, taking it at 100 acres? I consider
that it ought to be worth £2,000 per acre. I know that quite close to where we have been reclaiming
lately a man refused £2,000 an acre for similar land.

123. Had you anything to do with the building of the wharf? Yes; with a large portion of it.

124. Is it proposed by your Department to continue the reclamation on the inner side of Bullock Island?
In the new basin we are doing it now.

125. Will you erect wharfs there? Eventually.

126. Will you dredge it to get a sufficient depth of water? Yes; we are reclaiming land with the "Juno."

127. One of the most valuable assets in connection with this expenditure in the district of Newcastle is
Bullock Island? Yes; it is a very valuable asset.

128. And the value will be much increased by the continuation of your present operations? Yes; the
value of the land that we have actually reclaimed would, I should think, a good deal more than pay for
the whole of the works at Newcastle, which have been charged to Loan Votes.

129. What was the total amount spent? About £620,000 out of Loan Votes.

130. Do you know that there has been something like £500,000 paid for dredging? Yes; for revenue.

131. Then the total cost is nearly £1,200,000? We do not pay interest on the Votes from revenue.

132. The country has to pay it? The interest is debited only on the Loan Votes.

133. If you take the amount of money expended on the harbour during the last twenty years it will
amount to nearly £1,250,000? Yes, it is £1,124,000; but I do not think it is a fair thing to charge the
dredging of Newcastle Harbour to Newcastle. I think it should be rather a charge on the whole district.

134. How would you limit the district? From the time that we took away the horse-shoe about five or
six years ago we have done very little new dredging except with sand-pumps.

135. What do you mean by the whole district? The country generally. I think it is a fair charge on
the country.

136. I want to know what boundary you fix to the district? I would rather not say the district; I would
rather say the country.

137. The whole country does not drain into Newcastle, does it? No; but it receives a certain amount of
benefit from the prosperity of Newcastle.

138. If £1,200,000 has been spent on the harbour, the interest being 4 per cent. per annum, that with the
dredging makes a cost of £80,000 a year up to the present date. I want to know whether that is a fair
and reasonable thing to charge to the harbour of Newcastle? I think it would be a fair thing to charge
the interest on the loans, but not on the expenditure from revenue, because the same thing is going on in
Sydney and on all the rivers in the Colony. Therefore I do not think it would be fair to pick out this
one port and say, "Interest shall be charged on the expenditure here" when it is not charged in connec-
tion with any other port in the Colony.

139. I will put it in another way;—you are spending a large sum of money every year in dredging the
harbour? Yes.

140. I think you stated that you raise about 3,000,000 tons of silt annually? We are dredging at the
rate of about 3,000,000 tons a year now.

141. That costs about 3d. per ton? Yes.

142. Is it a fair thing to charge the whole cost of lifting that silt and sand in your harbour to Newcastle?
We should not have to dredge a quarter of that for the maintenance of the harbour if it were not for the
silt that comes down to us from above.

143. But I want to know whether it is fairly chargeable to your harbour, or whether you consider that
Singleton, Maitland, and Raymond Terrace are contributing largely to cause that expenditure? Yes; the
river above causes a great deal of the expenditure in the harbour.

144. Is a very large quantity of silt and sand brought down in flood times from the Hunter River and
deposited in the harbour? I took 1,500,000 tons out of the north channel after the flood of 1893.

145. And are you still engaged in dredging by reason of floods? Yes; we are deepening it now at No. 5
buoy with the large dredge "Newcastle," taking mud out there.

146. What part of the Hunter does that principally come from? It is hard to say what part. We
generally get mud from the Upper Hunter.

147. Would that be brought down by the flood waters? Yes.

148. So that whatever may be done to deepen the water in the harbour and on the bar you will still have
to continue dredging silt and sand out of the harbour? There will always be a certain amount of dredging
necessary; but we hope by improving the harbour to cause a scour, so that a great amount of dredging
may become unnecessary.

149. Will your works have much effect in preventing the silting up of the harbour? I think that the
reclamation work at the north part of the harbour will diminish the amount of dredging necessary.

150. You look upon the works at Stockton and the north portion of the harbour as of very great importance?
Yes.

151. And such as will be economical hereafter? I think that in time to come it will pay for itself—by
the lands which will be reclaimed, by the scour that will be created to carry the silt out. It will also
lessen the cost of dredging materially, because during rough weather we cannot send the punts to sea;
but when we get that work in full swing we propose to put a sand pump there, dump the silt from the
dredge punts and pump it ashore, so that we shall be able to work at it in all weathers.

152. You are convinced that the principal portion of the silt and sand come down with the flood-waters?
Yes.

153. Are you of opinion that if the work is carried out as now proposed it will have any influence upon
your dredging operations;—will any saving be effected? I think that if the channel is thrown 200 feet
or 300 feet further north at the end of the guide wall, it will scour out a portion of the sands which still
exist off Stockton, and that may have the effect of creating a scour along the Stockton wharf.

154. That is about the only effect you expect to be produced? I do not expect much deepening of the
harbour on account of the extra scour on the bar.

- H. D. Walsh, 155. Then you do not expect any saving in the annual expenditure on the harbour, even if the works are carried out? No.
- 2 April, 1895. Esq., 156. But you do expect a saving if the Stockton reclamation works are carried out? Certainly.
157. How long will it take to carry out the works proposed? I suppose we shall spend between £2,000 and £3,000 per month.
158. About £30,000 a year? Yes.
159. Would a large number of people be employed on the works? Yes; I fancy we should have room for about fifty hands.
160. It would not absorb a very large amount of labour? No; between fifty and sixty hands. It is hard to say exactly. A great deal depends on the amount of face you have at the quarry.
161. Mr. Lee.] The object of this proposed southern wave-trap will be to break the force of the rollers as they come in? Yes; to do the same work that the present wave-trap is doing.
162. And that being the case you provide for the entire portion being filled up? We reckon some sand will work in about there. It is very hard to say. It is only the probable future line that we have put down.
163. It will, of course, follow that the sand will pile up further along the beach towards Stony Point? No; I do not think it will come to that extent. The sand on the present beach has never increased very much, but has always remained practically as it is now. There is no reason to believe that the sand will either increase or decrease. It will form its beach in the same way at present, and remain at that.
164. And it will always remain shallow water? Yes.
165. Therefore, there is nothing to be gained by cutting away Stony Point? Very little. The only thing that could be gained would be that you would get a slightly increased area of channel there. It might be advantageous at some future time to cut away Stony Point so as to make the section at Stony Point equal to the section which there will be between the northern breakwater and the end of our new guide wall.
166. In reference to the reclamation on the northern side, I should like to know what you mean by the country gaining by the reclamation;—is it proposed that the land should be sold in the future? Yes. At Carrington we reclaimed swamps, and the Lands Department cut them up and sold them.
167. You do not look upon the areas of sand as of any value? The area of sand reclaimed in the wave-trap at the foot of the northern breakwater I do not look upon as of any commercial value. On the contrary, it must always remain open, otherwise it will not be a wave-trap.
168. The object of providing the northern and southern wave-traps is, I presume, based upon the present condition of things? The main object of the southern wave-trap is to place that guide-wall so as to throw the fairway further north, and to increase the efficiency of the present wave-traps.
169. But is there not at present a very heavy roll into the harbour with certain winds? Yes, considerable range at times.
170. To such an extent that it is with difficulty that ships lie at the Queen's wharf? It is inconvenient.
171. Is it not dangerous? Yes; I have seen them ranging heavily at the wharf, but I consider that the new wave-trap will diminish that greatly.
172. You think that with the extension of the training-walls there must necessarily always be a roll into that point? I think the wave-trap will minimise that as much as it can be minimised.
173. There must always be a roll? You cannot avoid that in a harbour so near to the sea.
174. When you get a wave you must do something with it? Yes; you must kill the wave.
175. Will not the area be more contracted when the works are carried out near Stony Point? No; it will be wider and deeper. The sectional area between the end of the guide-wall and the northern breakwater is greater than between the end of the northern breakwater and Stony Point.
176. Now, as to the fairway,—I notice on the plan there are two lines, one showing the existing line of the fairway and a red line showing the probable line of the future fairway? Yes.
177. How far will the eastern end of the northern breakwater be from the line of the fairway? The fairway will be about 400 feet from the northern breakwater.
178. Will not that be dangerously close for bringing ships in? I do not think so. No ship travels exactly on the fairway; they always keep a little to the southward of it. It would rest with the shipmaster, if he thought the sea too heavy, not to approach too close.
179. You anticipate that the scour will keep that open as a main channel? Yes; it will also keep the present one open, so that the present channel will not be any worse than it is.
180. Taking the full space between your two proposed walls, will the whole of that be deep enough for ordinary navigation? Yes; the present fairway will be improved. It will not diminish the depth it is possible to make on the present fairway.
181. What effect will the works have on ships under tow coming in, in heavy weather? I do not think it will have any. Ships coming in, in heavy weather, are nearly always in ballast; therefore they draw much less water than they will require when going out.
182. But you expect that a day will come when they will arrive with cargo? I have always looked upon this as an export port. The majority of the ships arriving here for many years will come in ballast, and will be lighter when they come in than when they are going out. They will therefore be able to keep away from the northern breakwater.
183. The northern breakwater covers the Oyster Bank? Yes.
184. That has always been a dangerous spot? Yes.
185. Have the wrecks on that bank occurred to vessels under tow or coming in under sail or steam? The "Cawarra" and the "Colonist" were both under steam.
186. If danger exists do you not think that you will be increasing the danger when you put up a permanent structure? No, I do not think so; because when the northern breakwater is complete it will remove a great portion of the danger. The tide runs out to the north, when it gets clear of the northern breakwater. The current always tends to throw ships over towards the Oyster Bank. We shall do away with that, making a straight scour out to sea.
187. Do you think that the tide or the gales retard the exit of the flood-waters? I do not think so.
188. Have you given them close attention? I have.
189. The Department have shown that the flood-water deposits about a million tons of silt in the harbour. There must be some reason for that? We have created a large artificial basin for the accommodation of ships,

ships, and that basin has a very much larger area than the river above or the channel below. Therefore, in H. D. Walsh,
Esq.,
that basin there must be a slackening of the current as it comes down, and the moment the current slackens the silt deposits. It is because of having that large artificial basin which forms the harbour that 2 April, 1895.

190. That might partly account for it? The only thing that makes a greater deposit is the slackening of the current.

191. The moment you steady the flood water the deposit takes place? Yes.

192. Has that taken place in consequence of the channel being blocked by heavy gales? No; chiefly because of the construction of a large artificial area there. There was no deposit left in the harbour before we removed the Horse-Shoe Bank. Whenever we dredged before the Horse-Shoe Bank was removed we got clean sand. That was when the discharging capacity between Stockton and the end of the dyke was about equal to the discharging capacity between the breakwaters.

193. You have told us that notwithstanding the improvements on the Bullock Island side this enormous deposit still takes place? Yes; the scour is not sufficient to prevent it. In parts of the harbour the scour does not have any effect. At present we have scour enough along the dyke, between No. 13 and No. 6 crane; but we have not sufficient in the north channel to shift the slightest loam.

194. As a rule, is flood silt to be found between the western end of the northern breakwater and the channel outwards? I have never known of any flood silt being between the Boat Harbour and Stockton Point or beyond that out to sea. Anything that we see there is clean sand.

195. How long did you say you had been here? I have been here seventeen years.

196. You have seen a good many floods? Yes.

197. The flood of 1893 was the largest? It was the worst we have ever had.

198. What influence had it on the shipping? They lay with their bow to the stream for three or four days. They never showed any sign of flood-tide. The water was running out strongly all the time.

199. What became of the tide? When the water was running out the tide did not come in.

200. Was the flood-water sufficiently strong to prevent it? Certainly. You can only get a certain amount of water into the harbour, and if the flood-waters coming down occupy that space, the tide cannot come in. Wheeler, a writer on harbour works, says: "The quantity passing down the bar will be practically the same, whether freshes prevail or not." That is, if freshes occupy the space, it simply means that the water does not come in—the flood keeps going out.

201-2. At what rate was the flood-water running out? It was running out stronger at ebb than at flood-tide—about 8 knots.

203. What is the usual strength of the tide? Off the light-ship the ordinary strength is about 4 knots.

204. Personally you are of opinion that the influence of the wind and the sea at the entrance to the harbour has no effect whatever in reducing the outflow of the flood-water? No; no appreciable effect—no effect that would do any harm up the river—no effect that would be felt beyond the harbour.

205. You are relying largely, I daresay, upon the sectional areas that have been given? Partly on them and partly on observation. We know that if the river rose 15 feet at Morpeth—which is about what it does—and Morpeth is 30 miles from the entrance, the surface fall between Morpeth and Newcastle would be about half a foot per mile. We know from diagrams shown by the Royal Commission that the actual fall was 0·44 per mile. Even supposing the wind and tide raised the water in the harbour a foot, it could only affect the flood grade for a couple of miles up. If you raise the water in the harbour a foot, it will only do away with the grade of the flood for 2 miles from the mouth.

206. *Mr. Hayes.*] And it would not affect the river at Morpeth? It could not. The river at Morpeth is 14 feet above the harbour, and there is an even grade of half a foot per mile all the way down.

207. *Mr. Lee.*] Would it not create a barrier 2 miles from Newcastle? No more barrier than it creates when the flood grade dies out at any other place.

208. Suppose that the Paterson and the Williams rivers also rose, only one-third of the water came down the Hunter, the other two-thirds going over the surface of the land? If you have a high flood in the Paterson, and a high flood in the Williams, you will get a still greater grade down to Newcastle, and the flood grade would meet this extra foot in the harbour at a point nearer the heads than it would be if the grade was less.

209. Wherever it met there must be a point of resistance? I do not think there is any resistance where the water runs from the grade into the level.

210. During the time you have been in charge of the works, have you had any representations made to you by people up the river in reference to the effect of harbour works upon flood-waters? There was a slight agitation a few weeks ago, but I know of no opposition at present.

211. Do you remember the date of that movement, and the particular point that they took up? I can give you the speech of Mr. Gillies in the West Maitland Council, when the thing was mooted about a fortnight ago.

212. It has not come before you officially? No.

213. Not from Raymond Terrace? No; except when I met people at various times.

214. As a matter of fact, there is rather a wide-spread opinion amongst people up the river, that the contraction of the Newcastle Heads has affected the flood-water? There was a notion of that kind.

215. Does it still exist? I know it does not exist among many who held that opinion a fortnight ago.

216. Has their engineering education improved in so short a time? They have been asked to think over it, and they found that they were wrong.

217. Suppose that your calculations prove to be altogether astray, and that the fairway, instead of showing on the red mark on the plan, should be thrown nearer the northern breakwater, within a chain or two of it—what would be the effect on the entrance then? It may deepen along the northern breakwater; but if we get a straight scour out between the two breakwaters, it is almost certain the fairway will be in about the position we have shown it. Of course we cannot gauge the centre of the fairway to a few feet.

218. At best it is an estimate founded upon previous experience in other parts of the world? Yes; and I know of no reason why it should not be realised.

219. Suppose these works are carried out in their entirety what will be the actual gain in depth? What we reckon on as a certainty will be 3 feet.

- H. D. Walsh, 220. And that is as deep as you can go owing to the rock? That is the depth on the line of fairway
 Esq. Deeper water could be obtained to the rock nearer the northern breakwater.
- 2 April, 1895. 221. And that admits of larger vessels entering and leaving the port? Yes.
 222. In other words, it will allow many vessels to leave with a full cargo which cannot do that at present? In many cases they do not. I wish to mention that when I said the tide was running 8 or 9 knots at flood-time, that that was immediately off Stony Point during ebb-tide.
 223. *Chairman.*] The ordinary run-out of the water is what? Between 2 and 3 knots; but there are sluices. Before I removed the Lightship Rock I noticed considerably more than that; but that is the ordinary. The way I came at the 8 miles was, from vessels that could not get in at ebb-tide during a flood. They had to be towed in, and it was at its worst at Stony Point.
 224. Mr. Lee is not justified in believing that the run-out is more than 3 miles an hour? The ordinary run-out is shown as from 2½ to 3½ miles during the ordinary tide.
 225. *Mr. Hayes.*] Since about 1871, when the northern breakwater was finished, has there not been a steady improvement in the depth of the water over the bar? There was a steady permanent improvement until it arrived at a point when the scour could not affect it any more. That was about 800 feet out past the end of the breakwater.
 226. When did that cease? It ceased when we had finished the northern breakwater in 1886.
 227. Is it not a fact that the bar is now steadily shoaling? Yes.
 228. When did that shoaling commence? It has shoaled a foot since I took the soundings in September.
 229. When did you notice the shoaling commence? Up to last year the bar was practically the same. Ever since 1878 it has varied from 22 to 23 feet.
 230. Has there been a steady increase in the shoals? Out where the bar is now it has shoaled up considerably. It shoaled up 7 feet in one year.
 231. But speaking about the depth of the water on the bar? Yes; it has shoaled up 7 feet in one year.
 232. That shoaling still continues? Yes.
 233. And since September, has it increased at a more rapid rate? Yes; since September it has shoaled up 1 foot.
 234. What is the present depth? It is 20 ft. 6 in. in the fairway.
 235. To what extent has it shoaled up since last year? From 21 ft. 6 in. to 20 ft. 6 in.
 236. That is 1 foot? Yes.
 237. Do you think that the shoaling is going to continue? It will continue unless we do something to stop it. It has been a very serious matter the way the sand has been piling up about that place every year. We see it as much as 5 feet and 6 feet on the soundings out beyond the influence of the present northern breakwater.
 238. In your opinion, it has become absolutely necessary that some action should be taken to remove that shoaling? Yes; it is a serious injury to the port at present.
 239. You are quite satisfied that it is likely to continue? Yes.
 240. And, therefore, to still further reduce the depth of the water at the entrance of the harbour? Yes. At present we have better water to the south of the fairway than we have on the fairway. Probably by next year that spit going across the fairway will be further down towards the southern breakwater.
 241. And shoal the entrance right across? It is tending to shoal the entrance right across. If we do not cut it off it will seriously affect the port in a few years.
 242. Is there any possibility of dredging there? I think it would be impracticable.
 243. The only means that you can recommend is that of extending the northern breakwater? Yes; we must deepen the channel by natural instead of by artificial means.
 244. You have no hesitation in saying that the effect of the extension of the breakwater will be to cause a scour which will remove the sandspit now forming? Yes.
 245. When the northern breakwater was extended it caused a considerable roll to come into the harbour, did it not? Yes; I have known of that coming in.
 246. And the effect of the extension of the southern breakwater to its present position materially improved that? Yes.
 247. Is it not likely that the same result would follow if the northern breakwater were extended as proposed? No. The reason is that the range which came in was the break off the Big Ben Rock, and the object was to run the southern breakwater far enough out to cut off that break from Big Ben, and I think that when it is made up to its original length it will be found that it is far enough to do that.
 248. If the southern breakwater, apart altogether from the roll coming into the harbour, were extended southward, would it not materially assist vessels coming into port? I do not think there would be much difference once you have got it far enough to arrest the roll from Big Ben.
 249. The bar is not caused by silt coming down the river? No; it is entirely composed of clean sand.
 250. *Mr. Roberts.*] Is it proposed to erect the south guide wall at the foot of Signal Hill? Yes; it is better known as the Pilot Boat Harbour.
 251. What is the length of the south guide wall? 1,000 feet.
 252. What would be the cost of it? £11,000.
 253. I think I understood you to say that the trouble at that point is in consequence of a reef running out there? It is in consequence of the ebb-tide coming suddenly on to the reef and creating a rip.
 254. The object of the south guide wall is to bring the current clear of that point and give a better sweep outwards? Yes.
 255. What stone do you contemplate using on the south guide wall? Waratah stone.
 256. Can you tell the Committee whether any Melbourne stone was used in the early days for the southern breakwater? I have been informed that the first breakwater between Signal Hill and Nobby's was formed of ballast from the ships.
 257. Would that be from Melbourne principally? I fancy so.
 258. My reason for asking was to ascertain whether you have compared the Waratah stone with the Melbourne bluestone? The Melbourne bluestone would be very much better as it is heavier, and it is better stone for resisting the action of the sea, but we could not get it. The stone came in the shape of ballast, but stone of the size of ballast would be useless for our present work.
 259. It would be impracticable to fetch the stone from Victoria? Yes.
 260. What is the size of the stones used? Up to 20 tons. I suppose the average would be about 8 or 10 tons.

261. Do you bring this stone from Waratah to Bullock Island, and then across the river in punts? Yes, H. D. Walsh, We propose to arrange with the Waratah Company to run the stone down with their engines as far as one of our wharfs, then to bring it across in our own punts, and run it along the tram line to the beach. Esq.
262. Do you place great value on the services of the wave-trap on the southern shore? Yes. 2 April, 1895.
263. Is it a fact that the value you place on it has been so great that applications which have been made to the Government for it to be used for baths or extensions of wharfs have always been opposed by the Department? Yes; I have myself reported three times against its being alienated. It was applied for as a site for baths at Newcastle, and I reported very strongly against it.
264. It tends to preserve calm water in the harbour? It breaks the waves coming along the breakwater.
265. How often are soundings taken on the bar? Once a year—that is, soundings to plot for reference; but the Harbour-Master does not take a deep-draught vessel to sea without sounding before he goes out. No pilot would take a deep-draught ship out to sea without going beforehand to see how the bar was.
266. Were you in Newcastle when the northern breakwater was constructed? No, I came in 1878.
267. You have heard it stated that since the breakwater was finished the scour has much improved? Yes, very much.
268. And it has shifted the bar seawards? Yes.
269. That, of course, enables the flood-waters to escape much more rapidly? Yes; it increased the carrying capacity of the narrowest part of the harbour.
270. You have noticed that the size of vessels coming to this port has much increased during the last two years? Yes, the size is increasing very rapidly.
271. Is it a fact that numbers of vessels have to leave the harbour only half loaded? Many have had to leave not fully loaded.
272. What depth of water will it be necessary for those vessels to have when fully loaded? It would depend on the state of the bar and what we call the rise on the bar.
273. Would the contemplated increase of 3 feet be ample depth? I think it would be ample as a rule for vessels going out to sea. There is a certain send in a ship over and above her draught. She keeps going up and down in the water, and the rule at many ports in England is to allow half the rise on the bar for the send of the ship. Supposing there is a 6-feet rise between the trough and the crest of the wave. For a long ship you would allow half that for the send of the ship. That would be 3 feet. If the ship was drawing 23 feet of water, you would require at least 26 feet for her to go out with safety. In the case of a short ship they allow generally two-thirds of the rise. A short ship, drawing 23 feet of water, would require, under ordinary circumstances, more water to enable her to cross out than a long ship drawing 23 feet. The whole thing depends upon what rise there is on the bar when the ship is going out.
274. Do you think that if the contemplated improvements were carried out they would fully answer the requirements of the port for many years to come? I think so.
275. *Mr. Humphery.*] In answer to a question asked by Mr. Davies, you said there was a depth of 26 feet between the bar and the southern breakwater? Between the present fairway and the southern breakwater.
276. Where there has been shoaling? Yes.
277. What width have you in the channel? Just at that point, about 150 feet.
278. Is there a uniform width of 150 or 160 feet, or a greater width, from that point inwards? No; we could not put a channel there. There are rocks a short distance from that point into port.
279. What is the greatest depth between the point of which you have been speaking and the fairway? Immediately abreast of the end of the first section of the northern breakwater there is 23 feet 3 inches 150 feet south of the present fairway.
280. To reach the fairway from where you have 26 feet between the present shoaling and the southern breakwater, what depth is there? You can get into the present fairway carrying that depth the whole way. You can carry practically 25 feet into the fairway to that point.
281. What width? About 200 feet there.
282. What were the soundings taken last year between the spot shown on the plan where the bar is now shoaling and the present southern breakwater? The soundings vary from 26 feet, the deepest, to 21 feet 6 inches.
283. What variation was there in the soundings of last year and previous years between the points I have mentioned? We have no cross-section there.
284. When were these soundings obtained that you have on the plan? In September last year.
285. And there were no previous soundings? Between the "Cawarra" buoy and the southern breakwater there were no soundings except on the line of fairway taken since 1874.
286. Then you are unable to say whether there has been any shoaling or not during the past twenty years? There has been none on the southern side. There is a great deal of bare rock there.
287. Can you ascertain that without taking soundings? We know that it is bare rock.
288. You say that there has been no shoaling from the green spot on the plan to the southern breakwater? There has been practically none to the southern breakwater.
289. I say close to the green spot? As far as I know. I have not taken any soundings. There is at present only three-quarters of a foot of sand on the rock, so that the shoaling has not been very much.
290. Then why do you say the bar is now extending towards the southern breakwater? Because since I took the soundings in September it has shoaled a foot, and it shows that there is a long tongue coming down towards the southern breakwater which did not exist when we made the survey in 1874.
291. How far does that tongue extend towards the southern breakwater from where the green spot is on the plan? It extends nearly 300 feet to 24 feet of water. It shelves down from 21 feet 6 inches on the fairway to 24 feet about 300 feet south of the fairway.
292. Have you any record of the depth of the water between the shoaling portion there and the southern breakwater before that breakwater was completed? I do not think so.
293. You are unable, therefore, to say what effect the breakwater has upon the channel between those points? I am.
294. Is this your evidence then: that for the past twenty years the depth of the water has been uniform between that green spot on the plan, where the bar is now shoaling, and the southern breakwater? So far as I know; but the one thing we do know is that during the last year the tongue has been coming down from the north to the south and shoaling across.

- H. D. Walsh, Esq. 295. That shoaling has taken place on the northern side? Yes; it is working to the southward.
- 2 April, 1895. 296. Has it been spreading towards the southern breakwater or not? We find that it is.
297. To what extent has it been spreading? That tongue did not exist when the survey was made in 1874.
298. You are unable to say by what degrees it attained its present dimensions? During the last twelve months it has increased on the bar to the extent of 1 foot.
299. Four years ago you made a report which led to the suggestion that the northern breakwater should be extended 500 feet? I did.
300. At that time, did you recommend the formation of a wave-trap? No; I did not think four years ago that the port would warrant such a large expenditure as that of going in for the extensive scheme that we find necessary now.
301. What would have been the cost of extending the northern breakwater 500 feet? £17,000 is what I asked for.
302. That was your recommendation then? Yes.
303. What result did you expect to obtain? To increase the scour sufficiently to do away with that tongue that was coming down from the north.
304. Which would practically have deepened the bar where it is only 20 ft. 6 in. to 23 or 24 feet? Yes, I calculate on that.
305. How came you to abandon that recommendation and suggest the present scheme? I simply reported to the Engineer-in-Chief, and he thought it better, having let the matter rest for four years, and the importance of the port having increased enormously, to propose this scheme to make a first-class harbour.
306. What will be the difference in the result? I did not hope to get 25 feet with my extension, but merely to keep the 23 feet that we had at that time. Under the present scheme we shall get 25 feet without breaking the rock.
307. There is a very considerable difference in the cost of the two proposals—that of 1891, and the present proposal? There is a very great difference in the value of a port with 20 feet, and the value of a port with a depth of 25 feet.
308. What is the difference that would compensate for the increased cost to obtain a greater depth? The authorities give the cube of the depth of the water as indicating its increased commercial value.
309. And do you reckon it in the same way? I can only take the statement of the authorities. I have calculated out what the difference would be, and I find that it would increase the commercial value of the port 50 or 60 per cent.
310. Mr. Lee asked some questions about the effect of gales and tides on flood waters;—what is the height of Morpeth above sea level? The bottom of the river is practically the same at Morpeth as at Newcastle. There is no fall in the bed of the river.
311. Then what is the height at Newcastle during the highest tide that you have known? During 1893, the highest tide that we had was 6 ft. 2 in.
312. What was the highest at Morpeth when you had that tide at Newcastle? I am not certain. I fancy it was 15 or 16 feet.
313. You explain that the only effect that could be produced by the action of the tide would be to throw the water back to the height of that tide, a distance of 2 miles? Along the grade.
314. Therefore you say from that that there will be 6 feet of water above the Newcastle height, and that the water will travel practically above that level? Yes; it would be coming down all the time.
315. Having a tide of 6 feet at Newcastle, it could not affect the condition of the flood waters at Morpeth? Not at all; it only shortens the grade. It runs into a lesser grade, higher up the river.
316. You spoke about the cost of dredging being greater at present than it would be in the event of your proceeding with the Stockton reclamation works? Yes.
317. There is some difference in the towage is there not? I think we should have a difference in the amount of dredging necessary. I do not expect that the channel would always fill up as rapidly as it does now if we can get a scour down the north channel.
318. Would not the tidal waters meeting the river water cause a deposit of silt the same as at present? Not so much.
319. Would a great quantity of silt be carried out? It would be. We get the scour of the ebb-tide.
320. The quantity of silt dredged is not less now than it was before the breakwaters were constructed? It is much greater because we have made an artificial basin, thus increasing the area so much that we cannot hope to get the same scour that we had before.
321. Therefore, it increases instead of lessening the deposit of silt? Yes.
322. What will be the difference per ton in the cost of depositing silt on the proposed reclamation at Stockton, and the cost of towing it out to sea? I should think it ought to be about 1d.
323. How many tons a year are you lifting? We are raising it at the rate of 3,000,000 tons per year.
324. *Chairman.*] Your statement is merely a surmise as to the cost? Yes, I have not gone into that.
325. *Mr. Humphery.*] Would the cost of towing be saved by the carrying out of this scheme? Not the whole, but a great deal of it.
326. How much would be saved? I should have to work it out. I should have to see what steamers would be required for the short tow as against what were required for towing the silt out to sea. We have four tugs working in the harbour now. I should fancy that two would be sufficient for the other work.
327. Would there not be additional cost in fixing sand-pumps? Yes.
328. Would that have to come out of the saving? Yes.
329. So that instead of 1d. the saving might be less? I do not suppose there would be very much saving further than that we should have fifty-five or sixty extra working days in the year, which would be a great advantage to the port where a great deal of work is necessary, and we should be reclaiming valuable land.
330. So that the saving you thought at first might be effected shrinks a great deal? I do not think that the actual money saving would be very much.
331. Do you happen to remember what vessels were unable to fully load which led to your report in 1891? I do not remember the names. The Chamber of Commerce have a list of some fifteen vessels which could not fully load.
332. *Chairman.*] The plan before us shows at the end of the south breakwater a red-tinted space marked "repairs"? Yes.
333. That will be the position of the old southern breakwater? Yes

334. Did you ever see the breakwater in that position? Yes.
335. And the sea has been severe enough to flatten it out? That was on account of the stone being tipped in in very fine weather. Once you have tipped the stone you have to wait for the waves to form the base.
336. The seas there have been sufficient to flatten it out? Yes.
337. Did any seas run round the end of that breakwater when it was intact? Yes; I have seen seas sluicing round it.
338. The extension of the breakwater was to prevent the seas from Big Ben from coming into the fairway? Yes.
339. If it does not do that it fails in its object? I think the fact of the end of the wave getting round now would hardly be sufficient to justify the statement that the breakwater failed.
340. It did not do its work completely? I do not think it would be possible to stop all the waves. It may have been a portion of the waves outside Big Ben which broke in.
341. The southern breakwater must be extended sufficiently to prevent the waves from that rock coming into the harbour? Yes.
342. If the repairs shown on the plan will not do that the breakwater must be extended further? I think it will be judicious to run the breakwater out until it does that. It is so near that point at present that a very slight alteration in the works would make it do that.
343. The end in view is to extend the southern breakwater until it prevents the break from coming in? I think it will be a good thing to make it far enough out to take the break from Big Ben.
344. Would the southern breakwater cost more or less than the 750 feet section of the northern breakwater? Considerably more than that, although the stone of the northern breakwater would cost more per ton, but in making the southern breakwater we should be tipping into 35 feet of water. On the northern breakwater the depth is only 16 or 17 feet.
345. Are you aware that when they commenced to build that northern breakwater it would deepen the water all along, and in some instances they would be tipping into 30 feet where your plan shows 17 feet? I do not think the stone would go down 30 feet. We will have the stone going down into sand on the end of the southern breakwater as well.
346. The depth that you show will not be any index as to what the depth will be as the breakwater goes out to sea? It will always be slightly deeper at the end of the breakwater. That effect would be experienced more at the start of our work than when we got further out. At the start we should have the flood tide running round the end of our works, but when we got further out there would not be such a scour.
347. How far has the erection of the northern breakwater removed the bar to the eastward? About 800 feet.
348. How much further to the eastward would you require to have that bar to take it into water so deep that it would practically cease to exist? About 800 or 900 feet beyond the end of the proposed breakwater.
349. The result of the present works has been the removal of the bar to its present position? Yes.
350. That is 800 feet outside of the present northern breakwater? Yes; that is the effect that we have got up to the present.
351. Would it be reasonable to suppose that when the first section of the northern breakwater was formed the bar would be removed a further 800 feet seaward? I think it will remove it more than that.
352. That being so, will it be in deep water? It would not be far enough for the sand to get into the current.
353. What depth of water would there be further out than the present bar? About 33 feet, but that would not be sufficient.
354. The reclamation works are shown by a tint on the plan of an oval shape? Practically that. The lines are not quite fixed yet.
355. You pointed out that the current ran along the dyke strong enough to shift gravel, whereas at the Stockton side it would not shift loam? Yes.
356. Could you not put a guide-wall there? I do not think it would be judicious to do that. I look forward to the time when we shall be able to have a good basin at the north side of the channel to place our loaded ships in, and a good scour down the middle of the harbour.
357. *Mr. Humphery.*] A letter signed "Delta" appeared in this morning's *Newcastle Herald*. The writer says: "I will explain why I am of the opinion that the proposed new northern breakwater will not answer its purpose in connection with the scouring of the fairway. The reason is that, although it will act as a wave-trap for a few years, it will all the while become a sand-trap instead, until, eventually, the whole of the space between the new and old northern breakwaters will become a dry, sandy waste, with the top of the new northern breakwater visible only here and there as a poor monument of sunken money without a return of permanent usefulness. This tendency to sand up in that direction can be seen now—the oyster-bank to wit. Besides that, the waves coming round past the southern breakwater will not merely rush up in an oblique direction into the wave-trap, but they will still impart their motion to the water in the entrance of the harbour, and meeting there the river current cause a choppy sea, thereby checking the river current and produce shifting sandbanks at the very entrance to the harbour, although some of the sand will be continually driven into the wave-trap, transforming it, in a few years, into a waste of sand for the top portion of which, only to be blown back again into the harbour by northerly and north-easterly winds. It would, therefore, be better to extend the present northern breakwater for at least 2,000 feet from its present end, but in a prominent curve, with a radius of 1,300 feet, and with its convex side towards the sea, and its chord forming with the straight portion of the present northern breakwater an obtuse angle of 135 degrees. This curved portion of the new northern breakwater will break up the advancing waves like a blunt wedge, thereby counterbalancing the destructive effect of their heavy impact, and in the same time give the motion of the broken-up waves a new direction—not towards the proposed wave-trap inshore and partly into the river, but causing them to glide along its convex side out into the ocean, and thus assist the river current to follow, or, in other words, to assist its scouring action";—What do you think of that suggestion? The effect of putting the northern breakwater in a curve facing out would lessen the scour in the very place where we want it most. It would increase the width where we want to keep it even, to carry the scour right out to sea. One of the great objections to the present state of the harbour is that as soon as the water passes the end of the present northern breakwater it takes a northern direction, and goes out across the oyster-bank. If you put the breakwater as proposed in that letter you put it in the wrong position. When the water is running out at present it fails to go over the part of the bar where we want it.

H. D. Walsh,
Esq.
2 April, 1895.

H. D. Walsh, 358. There is a second suggestion that the southern breakwater should be extended 500 feet in its present direction;—what do you think of that? I do not think there is any ground for believing it is necessary to do it at present. Probably, if when we have made up the breakwater to its original length we find any of the roll from Big Ben gets round it, we may extend it a small distance further.

2 April, 1895. 359. Would it have any effect upon the scour? Not the slightest effect.

360. Mr. Hayes.] If the breakwater was put out as proposed it would increase the width between the piers? Yes.

361. Would not that seriously increase the roll into the harbour? I think it would. I think that a wave that struck on the northern breakwater without a wave-trap would simply roll up until it got into the harbour.

362. From practical experience it is found that the narrower the entrance the less the roll, is it not? The main body of the wave divides and hugs the walls as it goes along.

363. The narrower the space between the piers the less the roll that would come in? There is less room for it to come in.

Stewart Keightley, Esq., Chairman of the Newcastle Chamber of Commerce, sworn, and examined:—

S. Keightley, Esq. 364. Chairman.] What are you? I am Chairman of the Newcastle Chamber of Commerce and General Manager of the Newcastle Coal-mixing Company.

2 April, 1895. 365. You are aware of the scheme for the improvement of the harbour at present under the consideration of the Committee? I am aware that there is a scheme, but I am not acquainted with the particulars of it.

366. What evidence do you desire principally to give to-day? The evidence which I desire to give to the Committee is as to the disabilities under which the harbour labours in the way of shipping coal on account of the unsafe draught of water. I propose also to show that the investment of Government funds in the improvement of Newcastle Harbour so far has proved a very lucrative one.

367. And do you desire to offer any suggestion at all as to how the desired result is to be brought about? None whatever.

368. You desire to limit your evidence to those two points? Yes.

369. Mr. Lee.] Have you prepared an explanation in tabulated form? I have certain memoranda here giving a number of vessels which have met with accidents in the channel going in and coming out of the harbour, and vessels that have gone away short of their full cargoes; a large number of vessels which have arrived here and have not been loaded up to their full carrying capacity on account of the insufficiency of water. I wish to lay before the Committee the following facts and correspondence:—

5th March, 1890, s.s. *Navarino*, with 2,580 tons coal, drawing 22 ft. 5 in., grounded in channel when leaving the port. S.S. *Gulf of Carpentaria*, in 1886, drawing 23 feet, grounded in channel on leaving the port.

S.S. *Cheybassa* was considerably delayed owing to insufficiency of water. S.S. *Nerubuda*, in 1890, had to go to Sydney to finish loading, being unable to load down to her marks at Newcastle. Barque *Antrim* grounded in channel, whilst entering port, 12th April, 1890, 100 yards to the north of the lightship, drawing 19 ft. 6 in. She required tugs to get her off.

The Tyser line of steamers, also the Southern Cross line, will not come here now on account of insufficient depth of water. S.S. *Balmoral Castle* grounded at the Dyke in 1887.

The Ducal line of steamers would come here if there were sufficient depth of water. New Zealand Shipping Company's steamers, who come for frozen meat, have to "bunker" at other ports owing to their being unable to load down to their full depth.

S.S. *Worcester* grounded at the Dyke in 1888, and s.s. *Southern Cross* in 1894, and lay with a heavy list for three or four hours.

British India Steam Navigation Co., Brisbane.—"Re *Lawada*, 3,269 tons. We have decided to load this vessel with coal in Sydney. We find her loaded draught will be 24 ft. 4 in., so that she could not take a full cargo from your port. We would urge upon you the necessity of getting a greater depth of water at Newcastle, as we could have given you orders for cargoes several times had a greater depth of water been available."—"Re *Nevasa*. Referring to previous correspondence regarding this vessel, we have now to advise that it has been arranged that she will load coal in Sydney for Singapore, her draught, 23 ft. 9 in., being too great to allow us to send her to your port."

The British India Steam Navigation Co. stated to their Newcastle agents that owing to the heavy draught of a number of their steamers they are unable to send them to Newcastle.

S.S. *Illaroo* grounded in the harbour, off the Market wharf, on 28th March, 1895, and remained fast for six hours.

Letters from Shipping Agents.

From A. E. Kinnear & Co., London, 13th September, 1889:—"We cannot help expressing the greatest surprise in finding that the ship *Lancing* was only allowed to take about half a cargo, and we are informing our friends so that they shall not be caught napping with a Newcastle freight. The charges (particularly pilotage, which is only over a course of a few miles of open navigation, and for which £100 is charged) are simply outrageous. We should have saved considerably had we loaded coal at Melbourne at a much smaller freight."

R. W. Leyland & Co., Liverpool, write:—"We much regret to see that our vessels are not allowed to load to their full draught, and thereby are shut out from a large amount of carrying. We fear we shall have to give up chartering from Newcastle unless you can arrange to load the ships fully."

J. and W. Goffrey, Liverpool, write:—"We do not understand the action of the Harbour-Master, with respect to the *Eurasia* and the *Malaysia*, preventing them from taking their full cargoes. Were the passage across a dangerous one we would not, perhaps, care so much about a vessel being light, but in the cases in question it is annoying to lose so much freight."

The Chamber of Commerce, Newcastle, has received a memorial from the Liverpool Shipowners' Association to the following effect:—

"(1) That this Association represents a net tonnage of about 750,000 tons, and comprises almost all the sailing ship-owners of Liverpool.

"(2) That many of the vessels belonging to members of this Association are engaged at times to load coal at your port. The trade is a growing one, and the vessels engaged in it are of increasing size and draught of water.

"(3) That at present vessels which load at your port have a draught of 23 to 23½ feet, and the depth of water in the harbour is insufficient to permit of their loading to this draught. Such vessels are thus obliged to leave the port without being fully loaded, causing a serious loss of freight to their owners.

"(4) That your memorialists are informed that although dredging operations are being proceeded with for the purpose of deepening the harbour, additional dredging power is needed in order to effectually overcome the grievance, and increase the depth of water in the harbour to the extent required.

"Your memorialists therefore respectfully urge that your Chamber will put in operation such additional dredging power as will enable the required depth of water to be obtained.—28/6/91."

The facts I have laid before you show that a number of vessels have been unable to get out of the harbour with safety with full cargoes.

370. The last one was in the year 1890;—have you anything later than that? Not with respect to vessels grounded in the channel. I have other particulars with reference to vessels having to go away short of their regular load. The Tyser line and the Southern Cross line of steamers will not come here. The

Tyser

Tyser line was established to run from England to Melbourne and Sydney, calling at Newcastle to get S. Keightley,
their bunker coal, and going on to New Zealand; but owing to the unsafe draught of water in Newcastle
Harbour those steamers are obliged to miss Newcastle, and that is a decided loss not only to Newcastle,
but to various interests, and to the Government as well. The railways lose by it.

2 April, 1895.

371. And the pilotage and tonnage dues? Yes, everything suffers. The Ducal line of steamers would come here if there was a sufficient draught of water. That is a line of very large steamers which cannot come here and take full cargoes.

372. Have you any idea of their draught? The draught of those steamers will be up to 28 feet deep. I have a list of a number of steamers and thirty-two sailing vessels which have not been loaded to their full capacity during the last fifteen months. [Vide Appendix.]

373. The vessels in that list left short of their cargo? Yes.

374. Could you give any idea of their full capacity? Yes. The "Rialto" when loaded would draw 24 feet, and her cargo would be 2,500 tons; she left with a draught of 22 ft. 5 in. She was short of her draught by 1 ft. 7 in. The "Warrior," with a draught of 23 ft. 6 in. and a carrying capacity of 2,500 tons, left drawing 22 ft. 6 in. aft and 22 ft. 1 in. forward, and she took 213 tons short of her cargo. Then there was the "Lord Spencer"; her draught is 24 feet, her carrying capacity is 3,000 tons; she left drawing 23 feet, and had on board 2,696 tons. The "Macedon," a ship of 2,400 tons and a draught of 23 ft. 9 in., left with a cargo of 2,335 tons, her draught on leaving being 22 ft. 8 in. The "Honolulu," a ship of 2,600 tons burthen and a draught of 23 ft. 6 in., left with a cargo of 2,434 tons, drawing 22 ft. 5 in., being short by 166 tons.

375. What would be the loss to a ship on going out short of its cargo by 240 tons? That would depend upon the amount of the freight.

376. What would that represent to the shipowner? It depends upon the rate of freight prevailing, and the port the ship is going to. The freight to San Francisco is 14s. a ton.

377. What pilotage and tonnage dues would a vessel have to pay, and what would she loose through not having a full cargo? She would have to pay pilotage and harbour dues upon the full registered tonnage, and going away so much short would involve a loss.

378. Could you give us definite information on the point? I will show you a definition later on. I will now refer to a return upon a subject of interest. I have taken the trouble to work the matter out, taking one colliery as an example. A colliery shipping 224,000 tons of coal per annum, situated 5½ miles from Bullock Island. The particulars are as follow:—

ESTIMATED cost per ton to the Railway Department of shipping 224,000 tons of coal from a colliery situated 5½ miles from Bullock Island.

1. Haulage to Dyke—

Estimated cost of locomotive, £3,000.

Estimated life of locomotive, 20 years.

Interest on £3,000 at 4 per cent.	£120	0	0
-----------------------------------	-----	-----	-----	-----	-----	-----	------	---	---

Renewal of locomotive in 20 years	150	0	0
-----------------------------------	-----	-----	-----	-----	-----	-----	-----	---	---

Driver's wages at £13 10s. per month	175	10	0
--------------------------------------	-----	-----	-----	-----	-----	-----	-----	----	---

Fireman's " £9 "	117	0	0
------------------	-----	-----	-----	-----	-----	-----	-----	---	---

Cleaner's " £6 "	78	0	0
------------------	-----	-----	-----	-----	-----	-----	----	---	---

Repairs, oil, &c., at £7 6s. 8d. per month	95	6	8
--	-----	-----	-----	-----	-----	-----	----	---	---

Guard at £9 12s. per month	124	16	0
----------------------------	-----	-----	-----	-----	-----	-----	-----	----	---

Coal " "	120	0	0
----------	-----	-----	-----	-----	-----	-----	-----	---	---

Annual cost of working locomotive 12 days a fortnight ... £980 12 8

Hauling 224,000 tons of coal at a cost of £980 12s. 8d.; cost per ton, 1·05d.

2. Shunting at Dyke—

Provision is made here for three engines being engaged in shunting constantly during the twenty-four hours of twelve days per fortnight in 8-hour shifts, also two foremen each shift, with six shunters.

Cost of nine locomotives at £980 12s. each per annum	£8,825	14	0
--	-----	-----	-----	--------	----	---

One overseer at 12/- per day	187	4	0
------------------------------	-----	-----	-----	-----	---	---

Six foremen at 10/- per day	936	0	0
-----------------------------	-----	-----	-----	-----	---	---

Fifteen shunters at £2 10s. per week (other three included in locomotive cost) ...	1,950	0	0
--	-------	---	---

Annual cost of shunting on dyke ... £11,898 18 0

At estimated shipment of 2,000,000 tons = 1·4d.

3. To cover interest and depreciation of hydraulic engines, cranes, and other minor services not included in the above, three-eights of a penny is added to contractor's price, viz., 1½d., making the total 1½d. (1895).

4. Interest on £400,000 at 4 per cent. = £16,000; on a shipment of 2,000,000 tons annually = 1·92d. per ton.

Summary.

	d.
1. Haulage to dyke, say	1·05
2. Shunting at dyke	1·40
3. Contractor—shipping, 1½d., including allowance for hydraulic engines, cranes, &c....	1·58
4. Interest on £400,000 at 4 per cent. = £16,000	1·92

Total cost ... 5·95

The cost to the Government of shipping the coal is 5·95d. They charge the Company 10d. a ton for that work. As a matter of fact the Government make 4d. a ton clear profit on all the coal they ship. In addition to that I have got the particulars for the past year showing that the Government shipped 2,071,239 tons of coal at 4d. per ton giving a clear profit of £34,520. They get £17,000 for pilotage, £8,300 for tonnage dues, £3,400 for removal dues, showing a gross profit of £63,200 for the year 1894.

379. I suppose that in the cost of works and material you have not included the cost of the trucks? They belong to the coal company.

380. In every instance? You may say in every instance. Perhaps once in six months the Government may lend their trucks. Our company during the past eighteen years have borrowed Government trucks on three occasions only; so practically the companies supply their own trucks. If we get Government trucks we have to pay 5d. a ton extra for the use of them.

- S. Keightley, 381. From these amounts for pilotage and tonnage would not the wages of the officials have to be deducted? They would.
- 2 April, 1895. 382. As far as the coal is concerned that £34,520 is absolute profit? Absolute profit, making allowance for everything.
382. The Committee would like to know whether the trade of the port is being maintained, or whether it is falling off? Last year the export of coal exceeded the export for 1893 by 400,000 tons.
384. Could you give the figures? For 1894 the quantity of coal exported from Newcastle was 2,605,143 tons; for 1893 the quantity was 2,200,000 tons.
385. Would these figures be correct—for 1893, 2,203,480 tons; for 1894, 2,605,000 tons? Yes, these would be about correct.
386. I suppose coal is the chief article of export from here? It is the chief article.
387. As a rule vessels coming for coal arrive in ballast? A number of them do.
388. And as far as entering the port is concerned there is very little difficulty? No difficulty whatever.
389. A vessel drawing 26 feet of water when unloaded could come in as the bar is now? Yes.
390. The difficulty is about getting her out? Yes.
391. A loss is sustained by shipowners through vessels not being able to take away full cargo? Yes, and the Government suffer a loss too.
392. If opportunity were offered for larger vessels to trade with this port, the Government would necessarily obtain a much increased amount of pilotage, tonnage, and other harbour charges? Certainly. If a vessel has to leave Newcastle with 500 tons short of her full cargo, that would weigh seriously with regard to competing charges, and the effect would be to send the vessel to some other port instead of Newcastle.
393. Then there is really a loss to the Colony generally—that is to say, if vessels do not come here to load they do not load at other coal ports in the Colony? No, they do not.
394. Is it the practice of colliery-owners here to send coal on to Sydney to fill up their ships? Yes, occasionally they have to do that.
395. Is it a general practice? It is a pretty general practice.
396. I presume that there is some substantial reason for it? The reason is that the vessels cannot load to their full capacity.
397. And they are under contract to supply so many tons? Yes.
398. Does that add much to the cost? There is from 3s. to 3s. 6d. a ton added for carrying the coal to Sydney.
399. As well as necessitating a delay? Yes.
400. I should like to hear from you what, in your opinion, would be the best way to improve the port;—what is the general idea of the Chamber of Commerce on the subject? The only means, as far as they are aware, is to deepen the channel at the bar and to give greater facilities within the harbour for vessels passing in and out. Their idea with respect to the Horseshoe, where vessels go to the buoys after being loaded, is that that might be done away with and excavations made in the North Harbour so that vessels might lie there. Of course these are matters upon which every man has an idea of his own. The Chamber of Commerce do not profess to be engineers, and they speak on a matter of that kind with a great deal of reserve. They feel that it is not in their province to say what ought to be done. Their great object is to have a greater draught of water for vessels entering and leaving the port, so that vessels may be loaded to their deepest draught.
401. Have you any general idea of the nature of the proposed work? I cannot say that I have. The northern breakwater is to be extended, and there is to be a wave-trap there.
402. It is proposed to take the northern breakwater out to a point beyond the oyster-bank, almost in a line with the eastern end of the southern breakwater? Yes.
403. The depth of water proposed to be given if these works are carried out will be about 25 feet at low water? Yes.
404. That would be an addition of 3 feet to the present depth;—how would that suit steamers such as the steamers of the Ducal line? An additional 3 feet would be a very great advantage, but whether it would be a sufficient draught for vessels of that size I could not say.
405. That additional 3 feet in depth would admit of very much larger vessels? It would be sufficient for all the sailing vessels that are likely to come here for years, but I do not know how the large steamers would be affected.
406. If that additional advantage is given will the depth of water inside the harbour be sufficient for these larger vessels to lie in the harbour? Not unless the harbour is further excavated.
407. So that in addition to improving the entrance to the harbour the harbour itself must be deepened? Yes. It will be ample for all sailing vessels, but I do not know how it would be with regard to the large steamships.
408. Such vessels as those of the Orient Company, the P. & O. Company, and the Ducal line would not be able to come here? No; those drawing over 22 ft. 6 in.
409. Would they be able to come here for their bunker coal? I think they would. I find that the maximum draught of the steamers of the Ducal line is 24 feet, not 28 feet as I stated.
410. In that case at high water they could pass in and out of the harbour loaded? Yes.
411. Is it the tendency of vessels entering the port of late years to increase in size and to increase in draught? The tendency is to increase in draught, in beam, and in length. The length is a very important factor. Some vessels now, in consequence of their length, are not permitted to swing at the buoys; the draught of water is not sufficient for them to swing.
412. I presume that when those vessels have been loaded at the cranes they are not sent away at once? As a rule they are not; but in some cases they are obliged to go. A vessel called the "John Kerr," drawing 23 ft. 3 in., had to be towed away from the cranes straight out to sea. The Harbour-Master could not allow her to swing.
413. When they are loaded they have to be taken away to make room for other ships? Yes.
414. There is not a sufficient depth of water to accommodate them in the stream? No, not if they are vessels of very great length.
415. Then, in addition to the improvement of the entrance to the harbour, it is necessary to deepen the harbour itself? Yes.

416. Do you care to give any opinion as to the effect of the works which have been carried out here? I S. Keightley, Esq.
prefer to leave that alone.
417. What effect has the roll of the seas on the shipping at Queen's wharf? No specially serious effect ^{2 April, 1895.}
at present, although it causes a severe strain on the warps, and has been known to break them.
418. Have any claims arisen through damage being sustained by vessels there? Not during recent years.
At one time it used to be very bad, but of recent years I have not heard of any claims.
419. With reference to exports other than coal, is there much wool exported from the port? About
60,000 bales per annum.
420. Any frozen meat? Yes, a great deal.
421. And metals? Not a very great quantity of metals.
422. Is there any export of butter from this port? Yes; butter has become a very important trade.
423. Is the frozen meat trade likely to grow into anything very large? I have no doubt that it will, but
recently it has not shown any expansion; but it is a trade which I have no doubt will grow.
424. But those articles require cool storage and large steamers? Yes.
425. And they require quick despatch? Yes.
426. As regards the coal trade;—can we hope that the trade is likely to increase, or, from causes which I
need not mention, is the trade likely to stop? It is just possible that the trade to a very large extent
may be stopped temporarily, but I have no doubt at all that we shall have a still larger trade in the future.
It is a trade which, to my mind, is certain to grow. We have first-class coal, we can sell it at a cheap rate,
and we have very great advantages in the coal being so close to the harbour.
427. And facilities for shipping? Facilities for shipping and everything. The only drawback that we
have to complain of is the insufficient depth of water.
428. There has been an absence of export to some foreign ports for many years? At the foreign ports, as
a rule, the demand has grown, and it was greater in 1894 as compared with 1893.
429. Is there any special reason for that? There has been a fall in the price of coal.
430. Your opinion is, after mature consideration, that as there is an unlimited supply of coal here, if every
possible facility for shipping is provided, the trade must of necessity increase? It must of necessity increase,
and will increase to a much greater extent if an increased draught of water is provided by the Government.
431. I notice that some of your correspondents complain of the heavy charges for pilotage and tonnage;—
would the improvement of the harbour lessen those charges? I do not see that it would. We have had
very serious complaints about the pilotage charges, and I understood that Parliament was inclined to
reduce them by one-half. That would be a great assistance. Twopence a ton taken off the charges
would increase the freight to that extent.
432. Any concession of that character would act as an inducement to vessels to come here? Yes.
433. Are there vessels enough coming to the port to take coal away? There are sufficient vessels coming
here to do that; but not sufficient to keep the cranes fully employed or anything like it. If all the pits
were going at full speed they would be able to put out 33 per cent. more coal than is taken from the port
of Newcastle at present.
434. So the output is determined by the number of vessels that there are to carry the coal? Yes.
435. Is there any particular feature of the matter which you would like to bring prominently before the
Committee? The only thing I should wish to point out is, that we are of opinion that after the ships
have been loaded they should lie in the north harbour instead of lying in the fairway, which renders liable
to accident vessels entering and passing out of the harbour.
436. Where is the north harbour? It is almost in a line with Robertson-street on the Newcastle side,
and near Hereford-street and William-street.
437. Your reason for suggesting that is to keep the harbour free from stationary vessels, and to allow the
inwards and outwards traffic to go on? Yes.
438. Is that a difficult point in regard to the navigation of the harbour in bad weather? Yes, the channel
is pretty narrow and vessels swinging there have not very much room. I have known the master to have
to leave them alongside the cranes in consequence of the want of room.
439. Particularly when there is a flood? That is one element, but the want of space is the great thing.
440. If the output of coal could be increased by 33 per cent., and the shipping proportionately, the harbour
would of necessity have to be improved to enable the trade to go on? Yes.
441. Mr. Hayes.] You see on the plan a basin in the course of construction? Yes.
442. When that is finished will it not give you sufficient accommodation for the future? It will greatly
increase the accommodation.
443. It is a very large area? Yes.
444. From the letters you have read you are clear that unless the entrance to the harbour is deepened
the trade of the port will suffer? I am perfectly certain that the trade has suffered considerably already.
445. The result will be that many lines of sailing vessels will not come to the port in future? Decidedly.
The existing state of things has kept a great number of vessels from coming to the port of Newcastle at
all. It becomes known among shipowners that vessels of a certain draught cannot get out of Newcastle
Harbour fully loaded. Therefore, people will not charter their vessels here who otherwise would be only
too glad to send them to Newcastle.
446. You look upon it as absolutely essential that some action should be taken? Yes.
447. I noticed in the list you read that ships leaving the port vary from 12 inches to 1 ft. 6 in. short of their
full draught when leaving the port? Yes.
448. So that if the port is deepened to the extent of 3 feet that will be ample for the present? Yes.
449. And except in very exceptional cases you will have sufficient water? Yes; ample for all vessels
except the big ocean mail steamers.
450. Do you think it at all probable that if there is a sufficient depth of water the mail steamers would
come here? They would. The "Monowai" which used to run to San Francisco formerly, came up here
regularly for her bunker coal, but she was not a vessel of any great draught, not being nearly fully loaded,
having only bunker coal on board.
451. Would such boats as those of the Orient and P. and O. Co. be likely to come to Newcastle if there
was a sufficient depth of water? The whole question is a matter of calculation. If they can save money
by coming to Newcastle they will come. We have an exceptionally good coal to sell—first class for
steam purposes, and it is very probable, considering the cheapness of the coal, that some of those vessels
may be induced to come here.

- S. Keightley, Esq. 452. You have no hesitation in saying that with the proposed depth of water the harbour will answer future requirements? Yes, as far as we can see at present.
- 2 April, 1895. 452½. Is there not a tendency now in building vessels to increase their beam and diminish their draught? I do not know about diminishing their draught.
453. Increasing the beam naturally does so? As a rule, when they increase the beam they maintain the old draught and make them carry more cargo.
454. Are there not many other harbours which these coal tramps have to go to where they have no greater depth of water than there is at Newcastle? Yes; but in that case they will have better freights than we can offer. If they are not able to take full cargoes from Newcastle they will not be able to take full cargoes from other similar harbours, or they must have a higher freight to compensate for it.
455. And the Harbour-Master will not allow vessels to load to greater depths than you have mentioned? No. Considering all the circumstances of the case the Chamber of Commerce are satisfied that the Harbour-Master permits vessels to go to sea with as deep a draught as is consistent with safety.
456. In reference to what you said about the revenue of the port, you pointed out that the net profit of shipping coal is 4d. per ton? Yes.
457. Is not that partly a railway charge which has nothing to do with the Government, the money going to the credit of the Commissioners? It goes to the credit of the Railway Commissioners, but it is a profit earned by the Government. It affects the Government in this way: If the Railway Commissioners did not make this profit of £34,000 they would have to hand over to the Government every year a sum less than £34,000. It is a direct profit to the Railway Commissioners and an indirect profit to the Government.
458. Altogether you make a total revenue of £63,000? Yes.
459. And taking from that the £34,000 for the railways it leaves a net result of £29,000? Yes.
460. That is paying all charges? Yes; tonnage, pilotage, and removal dues.
461. And from that you have to deduct the cost of the necessary officials? Yes.
462. So the net amount will be considerably under £63,000? It will amount to (say) £55,000. That would be the net profit.
463. Have you had complaints about the pilotage rates? Yes.
464. Complaints are that they are excessive? Yes.
465. Do you hope to get them reduced? We do.
466. That will still further reduce the revenue of the port? Yes.
467. Speaking as President of the Chamber of Commerce, do not you think the charges in this port are very moderate for shipping? If you take into account the services rendered by pilots to the vessels at Newcastle, they are very much overpaid. The services rendered are of such a meagre description that we might almost as well be without them. I am not saying anything about the pilots individually. They do all that is necessary. They board a ship a couple of miles outside Nobby's and bring it into the harbour, and I think that a charge of £100 is grossly excessive for a few hours' work.
468. Are you aware that there are no wharfage charges? There is a tonnage due, which is really a wharfage charge, for vessels lying alongside the wharf.
469. Will improving the harbour as proposed benefit the northern district? Yes; that district will get the benefit of it the same as Newcastle.
470. If the depth of the water is increased and the entrance is improved, will not the effect be to give cheaper freights? Yes.
471. And in that way will not the northern districts be benefited? Yes.
472. *Mr. Roberts.*] Referring to the accidents in the channel that you spoke of—do you feel quite sure that they took place entirely owing to the insufficiency of water, or might they not have been caused by errors of judgment? I do not think it is likely that they were caused by errors of judgment. I think it is for want of a sufficient depth of water.
473. In one case you mentioned the ship was drawing 19 feet? Yes.
474. It is rather difficult to understand why she could not get out when we are told that there is 21 feet of water on the bar at low tide? She got a little out of the channel; it was but a mere gutter.
475. Then there was the case of the "Colonist"? That was a sheer accident. She was right out of her course.
476. If those vessels had waited until high tide would they not have been able to get out? They usually do wait for high tide when they load so close to the maximum depth, but if there is a little swell on the bar that will affect them.
477. Does not the pilot always sound the bar before taking a large vessel out? Yes.
478. That leads me to suppose that, perhaps, in many of these cases the accidents were not altogether due to insufficiency of water, but to errors of judgment? Yes; to getting out of the channel.
479. Whatever accidents occur, they have a bad effect upon the port as far as shipowners in other parts of the world are concerned? Yes.
480. How many steamers and sailing vessels have had to leave this port not fully loaded during the last twelve months? During the last fifteen months, twenty steamers and thirty-two sailing vessels.
481. Have you the total tonnage of those steamers? The total tonnage of the steamers was 65,190 tons, the actual quantity carried 50,432 tons, showing a deficiency of 4,758 tons. The total carrying capacity of the sailing vessels was 92,840 tons and the quantity actually carried 87,646 tons, showing a deficiency of 5,194 tons; making a total deficiency of 9,952 tons.
482. Mr. Lee asked you how many bales of wool were exported from Newcastle in 1894, and you said 60,000? Yes; roughly, about that.
483. The sub-collector of customs at Newcastle states that the number was 48,874 bales for 1894? Yes; I believe the number is somewhat less than that of the previous year.
484. Can you recollect whether the export of wool from Newcastle is increasing, comparing the last four or five years? I am afraid it is not increasing.
485. Could you give any reason for the falling off? It is due chiefly to the competing freights at Morpeth. There the steamers compete with the Railway Department, and take the wool down to Sydney.
486. Have the large Sydney houses branches at Morpeth? That I could not say. There are two branch houses at Newcastle, Dalgety's and Gibbs, Bright, & Co.'s.
487. Does the wool go from Morpeth because it can be shipped there at a lower rate than from Newcastle? It is greatly due to that, and I think that Sydney is regarded as a better market for the wool.
488. Is there a large quantity of frozen mutton shipped at Newcastle? Yes.

489. Is that trade increasing? I am afraid it is not. The demand for frozen mutton is not so good as it S. Keightley, Esq., has been.
490. You have stated that the export of coal has increased? Yes.
491. Can you mention any other article which has? I have not looked into any other items. No doubt ^{2 April, 1895;} coal is the principal thing.
492. You think this extra 3 feet of water will be sufficient for Newcastle for years to come? For a great many years to come.
493. *Mr. Humphery.*] When you say that there has been an increase of 400,000 tons in the quantity of coal exported, you do not mean that there is any absolute increase in the trade, but that it has recovered from the sudden fall that took place in 1893? It is a recovery, and something in addition.
494. Do you remember what the export of coal was in 1893? Not exactly; but it was somewhere about 2,200,000 tons.
495. There was a sudden fall in the export in 1893? Yes.
496. So that the increase in 1894 would mean a recovery? Yes.
497. What is the pilotage charge here? Fourpence per ton.
498. Would that be 4d. inwards and 4d. outwards? Yes.
499. In making your estimate of the profits on the coal trade, which you said was £34,000, did you charge the cost of dredging operations for the year? No; I did not. I charged what I presumed was fair.
500. Do you think it would be a fair charge against that sum of £34,000 to debit the cost of dredging operations in order to keep the channel navigable? Only to a certain extent, for the reason that the silt is brought down the river by floods. It is an incubus cast upon us from up the river.
501. If we are told that the accumulation of silt is attributable to the improvements made at the mouth of the harbour, would your view be altered? To a certain extent.
502. In 1894 the export of tallow amounted to about £22,000? Yes.
503. Can you say whether the export is likely to increase or to diminish? I understand that it is very likely to increase.
504. Is there likely to be any increase in the export of preserved meat? Yes.
505. Why do you think so? The price at the present time is low, and the strong probability is that preserved meat will increase in price in the markets of Europe; that there will be an extension of the markets of Europe because of an increased demand.
506. Is the export of bone-dust likely to increase? I do not know.
507. The value of the gold and copper ore shipped in 1894 reached £20,000;—is that likely to be an increasing export? I believe that copper ore will be an increasing export. There are mines up north which are being developed, and the people concerned in them have very great hope of being able to send away a great quantity of ore.
508. The vessels of the Ducal line, I believe, at the present time go to Sydney? Yes.
509. What is your reason for thinking that if the channel were deepened they would probably come to Newcastle? At present they cannot take away full cargoes, and that means loss in freight. They have frequently come here for cargoes of coal.
510. In your opinion, there has been considerable loss of trade by reason of the shoaling of the bar? Yes; we cannot form an adequate idea of the loss of trade resulting from the insufficiency of the depth of water on the bar.
511. I see that for 1894 the total value of the exports of this port was £1,500,000;—do you know whether in previous years it exceeded that amount? I do not think it did.
512. Has that been the highest sum reached? About the highest.
513. *Mr. Levien.*] Do you know Geddes & Co., Goldsborough, Mort, & Co., who have their head offices in Sydney? Yes.
514. They have no agents here? None at all.
515. They send their canvassers out to the north-west, and their wool is carried to Sydney? Yes.
516. If those firms were established here, do you not think Newcastle would be able to get that trade? I have no doubt a great deal of that wool would be shipped at Newcastle.
517. They take wool from Morpeth to save 22 miles of railway freight to Newcastle? Yes.
518. If the railway freight were much reduced for the carriage of wool, would it come to Newcastle to be shipped? Yes.
519. Mr. Humphery asked you a question with reference to the reduction of the pilotage rate, and you said no doubt if it was reduced that it would be a loss to the Government? Yes.
520. But if an increased number of ships came to the harbour, would not the Government be recouped? Decidedly.
521. *Mr. Davies.*] You stated in reply to a question that the total expenditure in connection with the dyke and rolling-stock and necessary plant for loading coal would be how much? £400,000.
522. That includes everything? Yes.
523. You endeavoured to show that there was a profit of £34,000, but you neglected to take into account the cost of dredging and of building the breakwaters and other charges amounting to £1,200,000? I have not taken that into account.
524. If it is fair to charge £400,000 for rolling-stock and plant, is it not fair to charge this £1,200,000? It is in one way, but a large portion of that money has been debited to revenue on which there is no interest to pay.
525. It is a matter of little concern whether the money was borrowed or taken from revenue, the country has to pay? Assuming that it is a fair thing to charge this £1,200,000 with interest, I maintain that the profits derivable from the coal alone and those other rates would more than provide interest at the rate of 4 per cent. on that sum of money.
526. With £30,000 a year the annual charge? The interest on £1,200,000 a year would come to £40,000. I show a profit on coal alone of nearly £40,000, so that if it was a fair thing to charge all these works to the coal trade of Newcastle, they are amply provided for in the surplus profits made by the Railway Department. The interest on £1,124,000, at 4 per cent., is £45,000, and we show £55,000 profit from the coal trade, and the pilotage, tonnage, and removal dues. Those dues, together with the £34,000, make £63,000. Take off £8,000 as the cost of producing this revenue, and that leaves £55,000.
527. There are five dredges working in the harbour, raising about three million tons of silt annually at a charge of about 3d. a ton, which will come to about another £40,000, and that with the £62,000 makes £102,000;—is that another aspect that you have not looked at? Why do you add £40,000 to the £62,000?

- S. Keightley, 528. You say that £62,000 is the income from the cranes, but there is £40,000 to be debited against Esq. that? Is it a fair thing to charge all the dredging work to the Newcastle Harbour?
- 2 April, 1895. 529. I want you to explain how it becomes necessary to have five dredges working in the harbour? That is owing to the large quantity of silt which comes down the Hunter River.
530. Is that discharge of silt attributable to floods? It is. After each flood there is an immense deposit, which it takes the dredges a long time to remove.
531. Then you have to bear in mind that the proposed improvements will cost another £140,000, the interest on which has to be provided for? Yes.
532. Can you show that there will be any direct or indirect advantage accruing to the port or to the Colony generally by this additional expenditure? Yes; I have no hesitation in saying that when you have expended this £140,000, enabling vessels of large tonnage to come into the harbour, it will cause such an increase in the revenue in railway income, pilotage dues, harbour dues, light dues, and so on, that we shall be far more than reimbursed for the outlay.
533. You believe that by carrying out these improvements the port will be made far safer than it is at present? Yes.
534. And the revenue will much more than compensate for the interest on the expenditure? Yes.
535. You said that if the water was deepened in the harbour the vessels of the Orient Company might come to Newcastle? Yes.
536. Would it pay them to come here for coal and pay the pilotage dues? The best answer I can give you is that the owners of the "Monowai" found that it paid to send her to Newcastle to get her bunker coal.
537. Would you expect vessels like the Orient vessels to come to Newcastle for coaling? There is something more than the coaling. There is the frozen meat, and there are other exports from Newcastle which would be an inducement for them to come here.
538. But there has been no great development in any trade other than coal? One of the great reasons of that is that vessels of suitable capacity cannot get into Newcastle Harbour. That prevents the advancement of Newcastle, not only in the coal trade, but also in other trades.
539. Supposing you had one of the best ports in the world—do you think that the coal trade would increase in view of the disturbed state of the labour market? Certainly. Wherever there is a coal trade there are miners, and wherever there are miners there are strikes all the world over. It does not follow because strikes occur at Newcastle the trade will come to an end. They have strikes in other parts of the world.
540. Has the coal trade of Newcastle suffered owing to strikes? It has in the past.
541. Have you secured a return of the trade that was lost? Yes.
542. To any large extent? Yes.
543. By the reduction in the price of coal? Yes, that is the chief thing.
544. If it had not been for the war in China would you have got that trade back? The war in China has not affected the coal trade of Newcastle to the smallest extent.
545. Would you be able to compete with the cheap labour of Japan in supplying coal? We labour under a disadvantage in having to pay higher wages to the miners; but we have an article superior to the Japanese coal, and I have no hesitation in saying that we shall be able to compete with the Japanese in the foreign markets if wages here are not too high.
546. Will not the present market price of coal leave a very small profit? Very small.
547. If the price has to be lowered will it be worth while working the coal mines? It is not likely that the coal will go lower than its present price unless wages are reduced.
548. As President of the Chamber of Commerce, do you anticipate that the industry will revive, and that there will be a larger export of coal to foreign ports, notwithstanding that you have to compete with the cheap labour of the world? I think the best reply I could give you is, that during last year we recovered our lost trade to the extent of 400,000 tons.
549. Can you tell me where that principally went to? Well, it was general.
550. More to the colonies? No; not more to the colonies.
551. Was not Victoria a larger consumer last year than during the previous year? No, smaller.

WEDNESDAY, 3 APRIL, 1895.

[*The Sectional Committee met at the Office of the Marine Board, Newcastle, at 10 a.m.*]

Present:

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.

JAMES HAYES, Esq.

The Hon. JOHN DAVIES, C.M.G.

ROBERT HENRY LEVISON, Esq.

The Hon. CHARLES JAMES ROBERTS, C.M.G.

CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed Harbour Improvements at Newcastle.

Stewart Keightley, Esq., Chairman of the Newcastle Chamber of Commerce, sworn, and further examined:—

- S. Keightley, 552. *Chairman.*] Is there anything further that you would like to say in reference to the proposed Esq. harbour improvements? I have particulars of the dues paid by the steamer "Southern Cross" when in Newcastle, 18th February 1894. I have a written statement, which is as follows:—

3 April, 1895. PARTICULARS of dues paid by steamer "Southern Cross" when at Newcastle, N.S.W., during February, 1894.

	£ s. d.
To harbour and light rates paid at Sydney on arrival there—3,311 tons, @ 4d.	55 3 8
4 February...,, inward pilotage at Newcastle—3,311 tons, @ 4d.....	55 3 8
10 " " " outward pilotage at Newcastle—3,311 tons, @ 4d.....	55 3 8
" " " tonnage dues loading five days, @ $\frac{1}{2}$ d. per ton per day on gross tonnage of steamer, viz., 5,050 tons, @ $\frac{1}{2}$ d. per ton per day =2 $\frac{1}{2}$ d. per ton.....	52 12 1
	<u>162 19 5</u>
Total.....	£218 3 1

N.B. —1. If the steamer had not called at Sydney the light dues would have been paid here.

2. Had the vessel been moved whilst in the harbour a charge of £8 for the pilot's services for each removal would have to be paid.

3. Steamers always pay tonnage dues on the gross tonnage.

That

That is with respect to steamers. I have had a statement prepared showing the dues that are paid by S. Keightley, Esq., sailing vessels. It is as follows:—

PARTICULARS of dues payable by a sailing vessel visiting Newcastle of 1,550 tons register, being the estimated average tonnage of the sailing vessels now arriving at this port.

	£ s. d.
Harbour and light rates—1,550 tons, @ 4d.....	25 16 8
Inward pilotage—1,550 tons, @ 4d.....	25 16 8
Outward pilotage—1,550 tons, @ 4d.....	25 16 8
Removals in harbour, say, four, @ £3 each.....	12 0 0
Tonnage dues—1,550 tons, four days @ ½d.=2d.....	12 18 4
	<hr/> £102 8 4

N.B.—Sailing vessels pay tonnage dues on net tonnage. Harbour and light rates similar conditions as steamers.

There are one or two things which I was not quite seized of during my examination, which I would now like to explain. The amount of the tonnage dues is 4d. in and 4d. out—that is to say, they pay 8d. on the registered tonnage. They pay for pilotage at exactly the same rate as for towage. They have to maintain powerful steamers and to keep a number in reserve, so that the item of 8d. per ton for pilotage is exactly the same as that for towing vessels in and out. Another thing which I have ascertained is that the new vessels are not built with so great a draught as they formerly were. The increase in the tonnage is due to the width of the beam and the extra length of the vessel. Then as regards wool, the Committee will recollect that I said that 60,000 bales are exported annually from Newcastle. What was running in my mind was the wool year. The wool year is from the 1st July, 1893, to the 30th June, 1894. The export of wool from Newcastle to London during that year was 58,424 bales. The statistics which we have here are from the 1st January to the 31st December, showing 48,000 bales. Another thing which I omitted, and which places Newcastle in a better financial position than I showed yesterday, is the payment of royalties by the colliery companies which are working coal owned by the Government. The amount paid in royalties to the Government during 1894, was £12,000. I have also ascertained that the use of the Stockton wharfs, &c., is paid for to the amount of £3,000 a year, so that these amounts added to the amount given yesterday of £62,500 would show a credit to the port of Newcastle of £77,520. It adds £15,000 to the amount which I gave yesterday. There is another aspect of the case which did not occur to me when I was giving evidence yesterday. I find that there has been 150 acres of land reclaimed, worth, I am assured by a competent valuer, £1,500 an acre. That is a set-off against the cost of dredging. That gives a sum of £225,000 which should be, in all fairness, credited to the port of Newcastle. I may say that in addition to the £12,000 paid during last year for royalties there are other companies that have land leased from the Government, which in a very short time they will be compelled to work, and those lands will also produce royalties at the rate of 6d. per ton. The companies that have the land are the A. A. Company, the Newcastle Company, the Burwood, the Stockton, the Durham, and several other similar companies. This £12,000 paid last year in royalties is an insignificant sum compared with what will be received from the large companies when they are working under the ocean.

553. *Mr. Davies.*] You make out a credit in favour of Newcastle Harbour of £77,500? Yes.

554. On the other side you have to take the interest on the capital expended on improvements and dredging, which amounts to about £80,000 a year? When you say £80,000, do you mean £80,000 as an average or for one special year?

555. The present outlay up to date is £1,200,000; the cost of dredging is about £40,000 a year; there is £40,000 interest on the money expended, together with the cost of rolling-stock, which you value with the cranes and other accommodation at £400,000, the interest on which will probably bring the total annual expenditure up to £100,000 a year;—is it not fair, as you take credit for income from all sources, to look at the other side? Yes. I am not possessed of the data as to the cost of dredging the harbour, but I have some information. I understand that last year was rather an extraordinary year with regard to that expenditure. If that is the case it is hardly fair to take last year as a criterion. Instead of doing so you should take a certain number of years. Would it not be a fair thing to take the last ten or fifteen years and strike an average? It would also be well not to forget that all this silt that is in the harbour is not there through any fault of the harbour. It really is deepening or widening the river away up as far as Maitland, Singleton, and those places. It is hardly a fair thing that the Newcastle Harbour should be debited with the cost of removing all the silt that is brought from beyond the harbour.

556. *Mr. Lee.*] Newcastle has to pay the penalty for having a river behind it? That is really what it is.

557. *Mr. Davies.*] Supposing you take ten years and we find that the cost of dredging is about £500,000—that is £50,000 a year. We find in the statement that £477,081 11s. 8d. has been spent in dredging. That was when there was not so large a quantity of silt raised as there is at present, though the charge was higher, up to 8½d. per ton for lifting and taking it out to sea;—is it not fair that both sides should be looked at? Yes.

558. In connection with that do you take into account the capital account of the rolling-stock and the necessity for a sinking fund to provide for the renewal and repair of rolling-stock? Yes.

559. It is only fair that we should have that before us? Of course. The estimate which I have made has been from such information as I have been able to glean. In the figures which I gave you I make provision for the renewal of the locomotives after twenty years' service, and on the top of that I allowed a certain sum per annum for reasonable repairs. So that the figures which I have worked out I think are fairly reasonable. If anything the advantage is in favour of the Railway Commissioners as against the port of Newcastle.

560. Was your information supplied by the Railway Commissioners? No.

561. Simply supplied by some person outside the Department? I am an old railway man. I was in the employment of the Hobson's Bay Railway Company in Melbourne, and I have had special opportunities of knowing the cost of locomotive engines and the various items of cost in connection with railway work.

562-3. You have arrived at your conclusions from your own personal knowledge? Yes. After getting out these figures, I submitted them to a railway man—a friend of mine—and asked him whether he considered them a fair and reasonable estimate. And he said, "Well, if there is any fault in the figures at all they are in favour of the Railway Commissioners."

S. Keightley, 564. Supposing that these works were carried out and the channel were deepened, would it be a means of attracting a larger trade to the port? Yes; I am certain of it.

3 April, 1895. 565. In view of the disturbed relations of labour and capital? I do not think it is a fair thing to bring in the present disturbed relations between labour and capital. The present is an exceptional time, but there is always a difference of opinion between employers and their workmen as to what is a fair and reasonable rate of wages. If a strike takes place in the mining districts it can only be of a temporary character, and no doubt afterwards the relations which usually exist between employers and employed will be renewed. It will no doubt have a bad effect as regards the interests of people who own vessels chartered to come on to Newcastle.

566. Have we not had almost continuous strikes here for the last six years? Yes; there was a three months strike in 1888, and there was another in 1890.

567. And have not strikes in the past had a very sad influence on the trade of the port? Yes, a very sad influence.

568. Have vessels come here during the last three or four years in ballast, and had to leave after waiting for cargo and been unable to get it? There were two or three instances after the late strike in which vessels had to leave without getting their cargoes.

569. Not more than two or three? I do not think so.

570. Have any of those vessels come here again? That I could not say.

571. Has any portion of the trade that was so disturbed and lost to this port been regained? Yes. I was asked yesterday if I could give the ports to which there had been increases in our exports. I find that there was an increase in 1894 as compared with 1893 in our exports to Chili of 125,000 tons.

572. Were there not other reasons why the coal trade was not very large between this port and Chili two or three years before that? I will give the exports to Chili.

573. Did not the war in Chili affect the trade? Yes.

574. Is not that one of the reasons why there was very little trade between this port and Chili? The trade is a very important one. Last year we shipped 266,000 tons to Chili.

575. Is it increasing? The returns for this year are not made up. Last year we sent an increased quantity of 63,000 tons of coal to the United States. To the Phillipine Islands in 1893 we exported 33,000 tons; in 1894, 86,000 tons, showing an increase of 53,000 tons. To South Australia in 1893 we exported 127,000 tons; in 1894, 167,000 tons, showing an increase of 40,000 tons. To the Sandwich Islands in 1893 we exported 32,000 tons; in 1894, 46,000 tons, giving an increase of 14,000 tons. To Panama there was no coal exported in 1890, 1891, and 1892, but in 1893 we exported to Panama 2,034 tons; the quantity exported to Panama in 1894 shows an increase of 14,000 tons. To Western Australia in 1893 we exported 19,000 tons; in 1894, 31,000 tons, showing an increase of 12,000 tons. To Mexico in 1893, 3,600 tons; in 1894, 11,000 tons, showing an increase of 8,000. To the Mauritius in 1893, 5,841 tons; in 1894, 12,334 tons, showing an increase, roughly speaking, of 7,000 tons. To Hong Kong in 1893, 20,000 tons; in 1894, 25,000 tons, showing an increase of 5,000 tons. To New Zealand in 1893, 154,000 tons; in 1894, 160,000 tons, showing an increase of 6,000 tons. These are the chief increases.

576. Those are the figures of the export to the ports to which you traded prior to the strike? Yes.

577. That trade is gradually being secured to the port of Newcastle? Yes.

578. Have you ever seen the harbour so free from shipping as it is at present? I have.

579. When? Frequently. Shipping comes in spasmodically. One thing which I should like to draw attention to is this, that the greater part of the coal shipped from Newcastle is taken away by steamers. A steamer will come in at night and be away again by morning; but when the trade was carried on by sailing vessels the harbour used to look full, when, as a matter of fact, there was not two-thirds of the coal leaving the harbour that there is now.

580. Steamers are supplanting the sailing vessels? Yes.

581. Have you not seen as many as 200 vessels in the harbour in the old times? I do not think so. On one occasion when there was a strike on, and when the coal was taken away by small sailing vessels, information had to be sent to other Australian ports that they were not to send their vessels here, that there was not room for them in the harbour, but I do not know that anything of that kind has occurred in recent years.

582. But you cannot expect small vessels to be here in such large numbers when larger vessels are carrying the coal? No.

583. Would the proposed improvements, to a large extent meet the requirements of the port, and satisfy the Chamber of Commerce? I think they would.

584. You have had to write to the Minister for Works on more than one occasion complaining of the want of water in the channel? We have interviewed the Minister for Works on many occasions, besides writing to the Works Department. Deputations were formed specially to bring under the notice of the Minister the disabilities under which the port has laboured. It has been a standing complaint with the Chamber of Commerce ever since its inception here in 1886.

585. Then what is the general opinion of the Chamber of Commerce as to the proposed alterations? I may say that we have not had full information supplied us of the nature of the improvements. It is known that the northern breakwater is to be extended, and that the southern breakwater is to be extended, and that a wave-trap is to be formed. We also understand that it is part of the scheme that the north harbour shall be deepened so as to allow vessels to be moored there. We have not had an opportunity of seeing the plans. I have heard one or two persons speak in favour of the proposed works, and I have heard one or two speak rather in opposition to the scheme.

586. Were they members of the Chamber of Commerce? The members of the Chamber of Commerce are not competent to express an opinion on the matter. Every man has an idea that his own particular scheme is the best. If the question was put to a vote as to whether the Chamber of Commerce would suggest any alteration in the scheme, I think the vote would be in favour of not interfering with the proposals of the engineers. I may tell you that a number of them think that the proper thing to do is to extend the southern breakwater, and they think the wave-trap is a mistake. But those persons have no professional knowledge.

587. Did Mr. Darley, the Engineer-in-Chief, meet your committee? He did.

588. And explained the character of the proposed improvements? No. Mr. Darley's visit was made before these improvements were suggested. We complained very bitterly to the Government as to the way

way in which, according to our idea, Newcastle had been neglected, proper provision not having been made for the shipping. The result was that Mr. Darley was sent up to Newcastle, and the Chamber of Commerce had a general consultation with him. This scheme is, I believe, the outcome of what took place then.

3 April, 1895.

589. Then you favour the scheme, thinking it will be of immense advantage to the trade of the port? Yes.

590. What are the freights to the United States and other ports as compared with what they were three years ago? They are very much reduced. The freights to San Francisco are 13s. or 14s. a ton. Three years ago they were 16s. or 17s. a ton. But the reduction in the freights to San Francisco are not nearly so pronounced as the reductions in freights in other directions. The freights to New Zealand have gone down very much. Some years ago I paid £1 a ton for a vessel to take cargo to Lyttleton. Now the charge is 8s. and 9s. a ton for steamers.

591. I gather from what you have stated that the reduction of the freights for coal from Newcastle to foreign ports will be very largely in favour of the coal industry at Newcastle? I may mention that, so far as San Francisco is concerned, wheat had a great deal to do with the freights from that port.

592. *Mr. Hayes.]* The freight question has nothing to do with it, because if there is a reduction of the freights to this port there are reductions to other ports as well? Certain vessels are obliged to come out here carrying general cargo. Some have to go to San Francisco for wheat, but instead of going in ballast they come to Newcastle to take coal. If there is a great demand for vessels for San Francisco it pays to take coal at a nominal rate. If the freights from San Francisco are not good they must have something from the coal to compensate them or they will not go.

Captain Henry Newton, Harbour-Master, Newcastle, sworn, and examined:—

593. *Chairman.]* What are you? Harbour-Master at the port of Newcastle.

*Capt.
H. Newton.*

594. How long have you been here? I have been here twenty-two years.

595. You have a thorough knowledge of the port? Yes.

596. You desire to make a statement in reference to the proposed improvements? Yes. My knowledge of the harbour of Newcastle extends over a period of thirty-two years. During 1873 I became more intimately connected with it, having been appointed to the position of pilot. In 1881 I was promoted to Assistant Harbour-Master and in December, 1884, succeeded Captain D. T. Allan as Harbour-Master, which position I have held up to date. At the time of my entering the pilot service the depth of water on the bar was 18 ft. 6 in. low-water springs. The class of vessels then trading to the port did not exceed 1,200 tons register, and the maximum draught was 20 ft. 6 in., and I have known loaded ships to be detained in the harbour for eight or ten days, waiting an opportunity to cross the bar. The northern breakwater was at this time in course of construction and during heavy weather there was considerable disturbance in the harbour, especially at the frontage of the Queen's wharf, causing coir springs to be used to ease the ships at their moorings. During 1875 the southern breakwater was commenced and eventually completed in 1883, but the last portion of the northern one was not finished until 1886. Whilst these breakwaters were being constructed, the scour commenced on the bar, carrying the silt outwards. In 1883 the depth on the bar had increased to 22 ft. 6 in. but at 900 feet outwards an accumulation of silt eventually formed another bar, caused no doubt by the lack of scour. Since 1880 I have watched very closely the changes that have taken place at the entrance of the harbour, by carefully sounding and recording the same, with the result that 900 feet outwards in the fairway from a point, that is, from the original bar or the signal masts on Nobby's in line; the depth of water decreased 7 feet, at 1,080 feet 12 feet during the past twelve years, at 1,284 feet 17 feet in the last four years, and at 1,500 feet 6 feet during the last twelve months. During this time the original bar has gradually scoured to the bare rock, giving a depth of 23 ft. 6 in. The shoaling that has taken place is the cause of a most treacherous sea running across the channel from Big Ben rock on to the tail of the Oyster Bank, and is a source of danger to navigation, also causing a great range in the harbour, thus compelling the vessels along the Queen's wharf and at the buoys to strain heavily at their moorings, parting their cables, and in several instances breaking the mooring posts on the wharf. The bar at present in the fairway carries 20 ft. 6 in., having decreased from 22 feet during the flood of January last. I have on several occasions reported the state of the entrance to the Marine Board here, strongly urging the necessity of further extending the southern breakwater, not that it would cause much greater scour, as the tidal influence is greater on the north side, but with a view to preventing the seas from Big Ben breaking in the channel, thus affording a greater amount of safety to vessels entering and leaving the port. This was fully endorsed by the local Marine Board and forwarded on to the Government. Of late years the class of vessel visiting this port has increased considerably in tonnage, and a number of the largest ships afloat arrive here from time to time to load coal; several of these have loaded during spring-tide to a draught of 23 feet, and steamers to 23 ft. 9 in., carrying 5,000 tons. There are many instances of vessels leaving short of cargo which cause complaints from shipowners and is an injury to the port, and should the shoaling at the bar still continue it will be necessary to curtail the draught. As the trade not only in coal but frozen meat, wool, and tallow is on the increase, and there being every prospect of still greater tonnage in ship-building, it is absolutely necessary that greater facilities be afforded without delay, not only to the entrance but in the harbour. Should the present state of things exist it will be absolutely necessary to make provision for the safety of ships loading in the upper part of the north harbour.

597. *Mr. Hayes.]* After the extension of that northern breakwater was the scour in the channel very materially increased? Yes; whilst the two breakwaters were being carried out the scour increased and the water was deepened on the bar.

598. And there was a steady increase until late years? Yes.

599. When did you first notice the alteration in the bar? I think in 1886 I noticed it first.

600. The shoaling has been increasing ever since? Yes; gradually increasing at the rate of about $6\frac{1}{2}$ inches a year.

601. What direction is it forming from? From the end of the old northern breakwater to outside the "Cawarra" buoy in a south-easterly direction.

602. And working into the fairway? Yes.

- Capt. H. Newton. 603. That shoaling is not caused by floods bringing down silt? I think it is silt brought down from the Hunter, carried out until the tidal influence is lost and then deposited.
- 3 April, 1895. 604. What is the material of that shoal forming there? Sand.
605. Is it sea or river sand? I have examined the sand and I find that it corresponds with the sand on the north shore.
606. The current at present is going down the channel from the eastern end of the northern breakwater begins to spread out fan-shaped towards the north? The current has always set to the north during my experience.
607. That being so would not the extension of the northern breakwater, as shown on the plan, increase the scour in the position where that shoal is now forming? It would carry the current out straighter and increase the scour.
608. And do you think from your own practical knowledge that the effect will be to remove that shoal into deep water? I believe that it will cause a great scour and remove the shoal.
609. Do you believe it would have a permanent effect? It will have an effect that will last for many years.
610. You say that the bank is forming from the eastern end of the northern breakwater, and working away past the Oyster Bank? Yes.
611. If the northern breakwater is extended, will it increase the scour and carry that out to sea? I believe it would carry it straight out into deep water.
612. You said just now that if the southern breakwater was extended it would have the effect of preventing the waves from breaking from Big Ben across the harbour? Yes.
613. Do you think the extension of the southern breakwater further seaward would increase the scour? I do not think it would cause much scour as there is not a great deal of tide on that side. The strongest tide is on the northern side of the channel.
614. And that is the deepest portion, is it not? Yes, down to the rock. I believe that the rock dips to the north.
615. The only effect of extending the southern breakwater would be to prevent so much sea from getting into the harbour? Yes; and it would give greater safety to the shipping entering and going out.
616. You do not think it would increase the depth of water in the channel? I do not think it would cause much more scour. At present nearly up to the end of the breakwater there is very little silt; it is nearly all rock.
617. You stated that when the two breakwaters were extended there was a strong range into the harbour causing vessels to strain a great deal. If the breakwater were extended as proposed, what effect do you think it would have on the seas coming into the harbour? I cannot speak from any experience of wave-traps, but if that wave-trap is a success it should prevent the range in the harbour. If it keeps open there is no doubt it will be a success. I cannot say whether it will keep open or not. If it does keep open the sea will run along the training-wall and expend itself on the beach.
618. What would be the effect of a heavy sea running along the breakwater—will it occur? It should scour the trap out. And then the scour should take the sand away.
619. Then the ebb-tide should take it out to sea? Yes.
620. You do not think there is much danger of the harbour silting up owing to the wave-trap? No; I am of opinion that it will be a benefit to the harbour, and to a large extent prevent the seas from breaking into the harbour.
621. You think that the proposal submitted by Mr. Darley will have the effect that he anticipates? I do.
622. Not alone in deepening the bar and keeping it permanently open, but also in quieting the water in the harbour? Yes.
623. What is the present depth of water on the bar? 20 ft. 6 in.
624. What is the maximum draught of vessels going out? I limit the draught according to the tide.
625. Under the most favourable circumstances? 23 ft. 9 in. has been the heaviest draught which has left this port.
626. Could a ship get out with that draught to-day? Yes, I think at high water it could.
627. Under the most favourable conditions a vessel drawing 23 ft. 9 in. could leave the harbour? Yes.
628. Looking at the present and the future of the port do you think that the deepening of the bar as proposed by Mr. Darley to a depth of 23 ft. would meet all requirements? No, not 23 ft.
629. What is the maximum draught of vessels that could go out with a depth of 25 ft. at low water? That would be according to the sea. If there is 25 feet at low water there would be another 4 ft. at high water. That would be 29 ft. In comparatively smooth water we could take out a ship drawing 26 ft. 6 in. That would be under the most favourable circumstances.
630. Is it not the tendency now to increase the beams of vessels so as to reduce their draught? Yes; the modern ship has now greater beam and less draught of water. We have some old fashioned ships coming here of 1,200 tons register, and drawing more water than modern ships of 3,000 tons register.
631. Do you think to increase the depth as proposed to 25 ft. at low water will be ample for the present and future requirements of the port? I think so.
632. What tonnage would a vessel be that had a draught of 25 ft.? We have had sailing vessels here carrying over 4,900 tons. We had the "La France" here, a vessel of 4,000 tons register, the largest sailing ship in the world. Her draught is 23 ft. 6 in. when fully loaded. She went away from the port about 10 inches light.
633. It will be impossible to increase the depth of the channel without blasting when the sand has been removed? I have not tested the bottom there. That has been done by the Harbours and Rivers Department. I think Mr. Darley says that some rock will have to be removed.
634. He says that by removing some rock the depth will be increased by two or three feet? Yes.
635. It was stated yesterday by Mr. Keightley that several vessels of light draught had been grounded in the channel? Yes, not in the fairway; it was in the harbour. During flood time there is a great deal of silting up, and the north channel used for navigating ships to and from the dyke silted up by over 8 feet.
636. That is caused by local floods? Yes.
637. And that of course there is no means of remedying? Not that I am aware of. There have been several schemes suggested.
638. By increasing the accommodation in the harbour you diminish the velocity of the current, do you not? Yes.
639. And the result is a deposit of silt? Yes.

640. The more you extend your area and increase your accommodation for shipping the larger is the deposit from the floods? Yes. Capt.
H. Newton.
641. And the only way is to keep dredging? Yes, to dredge continuously.
642. Do you think that the proposed increased scour down the main channel will increase it in any way? No.
643. It will not affect the harbour? I do not think it will.
644. If the northern breakwater is extended, do you think there will be greater difficulty in entering the harbour during the south-east gales than there is at present? Yes, unless the southern breakwater overlaps the northern breakwater; that is essential.
645. The proposed extension does not overlap? No.
646. If the northern breakwater is carried out according to the design, do you think the southern breakwater would have to be carried out to a corresponding length? I think so; 500 feet would do it.
647. What depth of water is there? Thirty-five feet just outside the lower part of the extreme end of the southern breakwater. It would go out to a depth of about 45 feet.
648. You could extend it 500 feet at a depth of about 45 feet? Yes.
649. You observe that it is proposed to remove the present fairway to the north? Yes.
650. Will there be any risk in any of the gales of vessels being carried on to the breakwater? Not if the southern breakwater is run out sufficiently to give them shelter. The danger is from the seas from Big Ben breaking there and rolling across the channel. If they can be prevented it will materially lessen the danger.
651. If that is done would the port then be a fairly safe one in all weathers? I am sure it would be.
652. The seas from Big Ben break right across the harbour? They break right across the channel.
653. In what gales will that be? South-south-east to east.
654. *Mr. Roberts.*] For how long a period have you noticed the increase in the size of the vessels entering this port? They have gradually increased from my first knowledge of Newcastle Harbour which extends back to 1863. There has been a steady increase, but more especially during the last five years. They have made a big jump.
655. A jump from what? From about 1,800 tons up to 2,800 tons register.
656. What depth of water was available about five years ago? About 22 ft. 6 in. on the bar; now there is only 20 ft. 6 in.
657. And you think that it will gradually get less? I think it will. In my report for 1891 I brought under the notice of the Marine Board the fact that if something was not done soon to improve the entrance to the port we should have a bar forming at the eastern end of the northern breakwater from the position of the "Cawarra" wreck towards the light tower on the southern breakwater.
658. That a bar would be formed across? A bar of sand is formed from the position of the "Cawarra" wreck.
659. *Chairman.*] Which way does it go? Starting from the beach north of the northern breakwater it goes in a south-easterly direction towards the fairway.
660. That is how it is forming now? Yes.
661. *Mr. Roberts.*] Supposing the water on the bar silted up another foot, reducing the depth to 19 feet, what would be the size of the largest vessel that could go over it with safety? There would be great inconvenience caused. We have not accommodation for ships to lie here bar-bound; they would not do so, they would go away short of cargo.
662. Is it a fact that vessels are obliged to leave the port not fully loaded? It is.
663. Could you give us any idea of the number of those vessels and their gross tonnage? About thirty sailing ships and twenty steamers have had to leave short of their full cargo. They went away altogether, I think, about 12,000 tons short.
664. Have you heard it said that they would be prevented from coming to Newcastle again? I have heard shipmasters say that their owners would not send their ships here if they had to go away only partly loaded. I think I am hardly correct as to the 12,000 tons.
665. *Mr. Levien.*] Mr. Keightley said that the total deficiency was 9,000 tons? I think that is right.
666. *Mr. Roberts.*] I understand you to say that you favour the idea of extending the southern breakwater? I have always been under the impression that the southern breakwater has been the salvation of the entrance to this port.
667. I presume that you have noticed a great improvement in the harbour since that breakwater was constructed eastward of Nobbys? Yes; a great improvement.
668. How long is it since it was constructed? It was finished in 1883.
669. And nothing more has been done towards improving the entrance since 1883? Nothing more. About 200 feet of that breakwater has been washed down by the sea.
670. That is at the extreme end? Yes.
671. If I understand you correctly, it is the fact of the Big Ben Rock being just where it is to the southward of the end of the southern breakwater that causes the sea to break into the harbour? Yes; it is for that reason that I suggest the extension of the southern breakwater.
672. Which wind is it that causes this Big Ben Rock to give so much trouble? It is the wind from the south-east to east—anything easterly.
673. The southern breakwater extends much further eastward than the northern breakwater? Yes.
674. Notwithstanding that there is very deep water at the end of the southern breakwater, you think it ought to be still further extended? I do. I do not think that after the plant is all got into working order it will cost a great deal. There is deep water there, still it will be a protection even to the northern training wall as well as to the shipping.
675. Have you ever noticed the usefulness of that wave-trap? I have.
676. Has it prevented the seas from approaching the wall? Yes.
677. If the wave-trap has been a success it is fair to assume that the proposed new wave-trap will be a success? Yes.
678. Generally speaking, you favour the plan as proposed, but you would prefer to see the southern breakwater extended to a distance of 500 feet? Yes.
- 678½. *Mr. Humphery.*] What would be the effect of the south guide-wall shown on the plan? To prevent the sea from running up along the Queen's wharf.

Capt. H. Newton. 679. If the first section of the northern breakwater, 3,000 feet, is constructed, the southern breakwater will then extend about 350 feet beyond it—will that be a sufficient lap for safety? No. I think that under any circumstances the southern breakwater should be run further out.
 3 April, 1895.

680. Upon that point you are firm? I am.

681. Then in the event of the northern breakwater being extended 3,750 feet, would it not be necessary to extend the southern breakwater more than 500 feet? I think that the southern breakwater should overlap the northern breakwater.

682. To what extent? A couple of hundred feet would do.

683. Assuming the first section of the northern breakwater to be constructed as proposed, do you think the increased scour would be sufficient to remove the bar? Probably it might. I think that the contour line will go out 800 feet past the end of the breakwater.

684. Is this your evidence: That in your opinion the construction of the first section of the northern breakwater will produce sufficient scour to shift the bar about 400 or 500 feet? It would shift it more than 400 or 500 feet.

685. You say 800 or 900 feet beyond the present breakwater? Yes.

686. Assuming the bar to be shifted 400 or 500 feet from where it is now, would it be much deeper water? Not much deeper.

687. What depth of water would it give in the fairway? In the fairway, I think 24 or 25 feet.

688. Then assuming that the bar had shifted 400 or 500 feet, would you have sufficient water for all purposes? Yes; if it came out as I anticipate.

689. Then it is only a question of the construction of the first section of the northern breakwater as far as the point shown on the plan and extending the southern breakwater 500 feet? Yes.

690. [Chairman.] It is a question of going far enough out to intercept the seas from Big Ben? Yes.

691. [Mr. Humphery.] At present the breakwater is not long enough? No, not by 500 feet.

692. [Mr. Davies.] In the event of getting sufficiently deep water in the channel for large vessels, what state would the harbour be in to provide the necessary waterways? The harbour, until very lately, has caused a great deal of trouble. The dredges are working night and day, so we anticipate a better state of affairs than we have had for some time past.

693. Have you a difficulty at present in providing suitable anchorage for large ships? We have had very great difficulty to provide for loaded ships.

694. The only cure for that is to continue the system of dredging? Yes.

695. In the event of your having a number of loaded ships in the harbour, and two or three million tons of silt were brought down by a flood, what position would you be in? We should be in a very awkward position.

696. What was the state of things in 1893, when you had a great flood? We had vessels lying here loaded and they could not get out until the flood was over.

697. Could not be moved for the silt? No; the greatest silting up was on the upper part of the North Harbour, and in the north channel.

698. Up near the wharf where the ships are loaded? No, out in the anchorage. The spit came down 1,100 feet.

699. That is opposite Bullock Island, is it? Yes.

700. How long had the vessels to wait before they could get away? On that occasion we had not many vessels loaded. We had two or three accidents through moorings being carried away.

701. If the Departmental scheme is carried out will it take the silt out of the harbour? I do not think it will take the silt out of the upper part of the harbour.

702. If you have ships of larger draught coming in where will you find a safe anchorage for them when they are loaded? I have had to resort to doubling the ships off alongside the wharf, which causes great inconvenience. If I had a ship drawing 23 feet of water, and I had to double her off alongside another vessel, that would be a source of extreme danger, because with a strong flood it is as much as you could do to hold the ships alongside the wharf without doubling them.

703. You have great trouble in handling the large ships that come here at present? Yes.

704. Would that trouble be intensified if there was sufficient depth in the channel to enable larger vessels to come here? Yes.

705. Will it increase your trouble in reference to anchorage? Yes; it will.

706. I mean within the harbour? I am looking forward to great improvements in the harbour which are much required.

707. There are five dredges at work in the harbour at present? Yes.

708. Have you any idea what length of time it would take to give you the depth necessary for larger vessels to come to the port? We should have to make a greater depth in the Horseshoe. I am afraid we would have to resort to blasting. I look forward to the time when vessels will be moored at the upper portion of the North Harbour.

709. What depth of water have you there now? It is a mud-bank.

710. If these works were carried out, and large ships came into the harbour, where would you put them after loading? I have not accommodation for anything larger than the ships coming into the port at present unless provision is made in the upper part of the North Harbour for them.

711. And it will be many years before that can be done? Yes.

712. It will take a number of years to get accommodation for shipping at North Harbour? It would depend on the plant that was put on.

713. If they put on all the plant that the Government possessed it would take many years? Yes, all the plant that is in Newcastle.

714. Is there not a basin in course of construction? Yes.

715. What depth of water have they there now? I think they have got down as deep as 25 feet, but there is no accommodation there for shipping.

716. Is the reclamation work being proceeded with with great expedition? Yes.

717. When finished it will afford great accommodation for vessels, will it not? Yes; there is 90 acres there.

718. If the work were carried out would it not give you much better accommodation than you have at present? It would. It is absolutely necessary to take the loaded ships out of the fairway; they are really an obstruction and a danger.

719. Would not the basin be a safe harbour? Yes; if there was a sufficient depth of water.

720.

720. Have they not some 25 feet in most parts of it? Not in that basin. There may be 23 or 25 feet, but it is only a narrow gutter, one cutting of the sand pump. Capt. H. Newton.
721. The alterations and improvements to the basin could be more readily achieved than attempting to do the north harbour? I think it could be dredged out much more readily than the North Harbour. 3 April, 1895.
722. It will not be subject to the same amount of silting up as the North Harbour? No; it would be clear of flood waters.
723. In the event of the North Harbour being dredged it would still be subject to floods? Yes.
724. If these works are carried out they will cause a scour in the channel? Yes.
725. And keep the channel a fairly good depth? Yes.
726. Do you favour the extension of the second section of the northern breakwater, or are you of opinion that the first section would be sufficient? I think we should have to be guided by experience in that matter.
727. If the first portion is completed and is found to work well, you do not think it would be necessary to complete the second portion? Probably not, if you get sufficient water.
728. Near the boat-shed is there not a wave-trap? There is a natural one there.
729. Has that been of very great service? It has.
730. The action of the waves being provided for by the proposed northern and southern wave-traps will that have a great influence in reducing the range of the harbour? It will.
731. Did you read a letter in the newspaper signed "Delta"? Yes.
732. You see the boomerang-shaped line on the plan trending northwards? Yes.
733. That is the line of "Delta's" proposal—in your judgment would what he proposes be of any service in creating a scour so as to secure a greater depth of water on the bar? No. If that gentleman had watched with as much interest as I have the action of the sea on the north side of the harbour he would know that the sea was more likely to come into the fairway after it had struck the boomerang-shaped breakwater, and would be as likely to go south as to go north.
734. You entirely disapprove of the suggestion contained in that letter? Most decidedly I do.
735. You have been a pilot here? Yes, I was a pilot here for eight years, and I have been Harbour-Master for about ten years.
736. Then you are very familiar with the port? Yes.
737. Has there been any increase in the trade of the port during the last three or four years? There was an increase last year over 1893.
738. Can you tell why there was so large a falling off in the trade of 1893? There was a general depression at that time all over the world.
739. If this scheme is carried out will it make the port more attractive? I believe it will increase the commercial value of the port to a large extent.
740. *Mr. Lee.*] Part of your duty is to keep a tide record? Yes.
741. Could you give me any information in reference to the influence of the flood waters upon the tidal waters? I never noticed any particular influence until 1893.
742. Will you refer to Saturday, 11 March, 1893, and tell me the height at high water, and the height at low-water? The height at high-water on Saturday morning at 3 o'clock was 6 ft. 2 in. above low-water mark, and the height at low-water at 10 o'clock in the forenoon was 5 ft. 4 in. above low-water mark spring tides.
743. That shows a difference of only 10 inches? Yes.
744. That was the day on which the flood waters were highest in the harbour? Yes.
745. To what do you attribute this very small rise and fall of the tide on that day? The water did not appear to get away out of the harbour. I attribute the tide not receding to the fact that it could not get out of the entrance.
746. Could you draw any distinction between the rise of the flood water in the harbour, and the rise of the water under tidal influence? There was no material difference in the rise of the tide. The tide did not fall to what it should have done that day by about 3 feet.
747. Three feet ten inches should have been the rise and fall of the tide that day? No; the tide should have fallen lower than that on that day. It should have fallen to about 1 foot 6 inches above low water. Under ordinary circumstances it should have fallen 3 feet.
748. Instead of which it only fell 10 inches? Yes.
749. That is because the water could not get out of the entrance? Yes.
750. Could the tide have got in the entrance? There was a swelling of the tide. For the next tide the rise was 4 inches. The tide might swell and the waters still be running out.
751. Am I to understand that if there is a strong flood running out of the harbour that will prevent the tide from rising to its usual height? The flood current runs stronger than the tidal water; but the water below the flood current will come in and swell the tide.
752. The salt water will be the heaviest and the action of the tide will go on while the flood is running out? The vessels were lying with their heads to the ebb tide for days. They did not swing at all.
753. Was there much wind? Not on that day. The current was running out at a velocity of 10 knots.
754. What is the ordinary rate of the tide? The ordinary ebb tide would be about 5 knots.
755. Do you think that a heavy gale blowing against the bar would retard the flow of the flood waters? It would to a certain extent.
756. Have you noticed that after the cessation of a heavy easterly gale there has been any piling up of sand on the bar? Yes.
757. Immediately after the wind ceased? Yes. After a heavy breeze, before I allow a ship to go out we sound the bar, and generally find some alteration.
758. And generally speaking floods happen when there is a strong south-east gale? That is a fact.
759. It would be a fair thing to assume that under the conditions which I have already indicated there would be a certain amount of piling up at the entrance which would retard the outflow? Yes.
760. What do you think would be the state of things if the proposed improvements were carried out? If we get the depth of water that is anticipated we shall have a far greater sectional area than we have now at that particular part of the entrance to the port.
761. Therefore you think that the floods will not be aggravated in any way? I do not think it will have any effect upon flood waters at all.

- Capt. H. Newton. 762. You lay stress upon the fact that it will create a scour, and that the water will pass out more rapidly? Yes.
- 3 April, 1895. 763. You set up a current by concentrating the water? Yes.
764. You have seen a very severe current going out the other side? I have.
765. Had it not some effect upon one of your beacons? Yes, it snapped everything away.
766. Where was that beacon? It was about 200 feet from the northern breakwater.
767. And about how many feet from the eastern end of it? I suppose about 500 feet.
768. Of what was it built? Of piles driven into the ground.
769. Were they washed away? They were washed away by the flood of 1893.
770. Did that cause any alteration in the channel? It caused a great deal of alteration along the northern breakwater.
771. The new fairway is to be much closer to the northern breakwater than the fairway is at present;—how will that affect the entrance of vessels when there is a heavy sea? If they are protected by the southern breakwater there will not be a great deal of difference.
772. Will you have sea-room enough? I think so.
773. Suppose there was that roll coming round the eastern end of the southern breakwater and a ship in tow were to get a sea on the quarter, would she not be almost on top of the breakwater? Yes; ships at present get down close on the "Cawarra" buoy, but of course the tide would be different. It would have a tendency to run straight out; at present it runs across the Oyster Bank.
774. Do you think that the proposed fairway is close enough? Yes.
775. Of course, it is only the probable line of fairway;—it is possible that it may be much closer to the breakwater? I do not think it would be advisable to go any closer.
776. You have no reason to suppose that the construction of the breakwater will divert that channel and make it closer? I do not think so. There would be a tendency to keep it more in the centre.
777. Chairman.] That red line on the plan is the line of the future fairway, and that line is distant 400 feet from the "Cawarra" wreck? Yes.
778. Is that dangerously close? No.
779. Can you show us the place where, twenty or thirty years ago, at certain times, you entered the harbour? I never came through there; but Captain Campbell frequently told me that in running down with a fleet of vessels he used to come in through the rocks and run into the harbour and cut the others out.
780. Mr. Davies.] What was the size of his vessel? I suppose about 100 or 150 tons.
781. Mr. Hayes.] When the southern breakwater was finished, how far out did it extend? About 1,700 feet from the base of Nobbys there is, however, about 200 feet of it gone.
782. When that 200 feet stood, did it have any effect in keeping off the roll during a big gale? Yes; but not sufficient. I was under the impression that it should have gone a little further out.
783. Chairman.] Do you wish to say anything further? I do not desire to express an engineering opinion, but I do think that if the southern breakwater is run out further the end of it should go more to the north-east to shut out the south-easterly seas.

William Robert Logan, Esq., Sub-collector of Customs at Newcastle, sworn, and examined:—

- W. R. Logan, Esq. 784. Chairman.] What are you? I am Sub-collector of Customs and Principal Officer of Customs at Newcastle.
- 3 April, 1895. 785. How long have you been here? Twenty-five years.
786. You have a full knowledge of the port and its trade? Yes.
787. Mr. Roberts.] Are you aware that the Collector of Customs handed in a statement in reference to the trade of Newcastle in connection with his evidence on the subject? I am.
788. Have you looked through the figures? I prepared the return for the Collector of Customs.
789. Have you any other figures which you think would interest the Committee with regard to the trade at Newcastle? I have a return showing the value of the imports and exports, together with the total revenue collected at Newcastle during the years 1885 to 1894.
790. The revenue for 1894 amounted to £158,896? Yes. I may mention that if the imports and exports were added together for this ten years it means a trade of £25,000,000 for the ten years, or an average of £2,500,000 per year, the value of our imports and exports.
791. When did the 10 per cent. and the 15 per cent. *ad valorem* duties come into operation? The first *ad valorem* duties came into force in 1865. They ceased subsequently, but were commenced again in 1891.
792. In what month? On the 2nd of December, 1891.
793. That would account for the small amount received during that year? Yes.
794. Then, during the years 1892, 1893, and 1894, the revenue would be considerably augmented in comparison with that of previous years? Yes; in 1892 the amount was £17,257; in 1893, £11,827; in 1894, £8,832. There is a great falling off, and that may be accounted for a good deal, I think, from the depression, and from people preferring to get their goods from Sydney. They have been buying up cheap stocks in depressed times instead of importing them directly from home.
795. I notice that the imports for last year show a great decrease, the amount for 1885 being £930,200, the amount for 1893 being £451,253, and for 1894, £427,581;—could you tell the Committee why there should be such a falling off in the value of the imports? I have mentioned one reason, and that is that people buy their goods at Sydney instead of importing them to Newcastle, and pay duty at Sydney on them.
796. Could you give the Committee any other information to account for the falling off? I do not know what to attribute it to.
797. Would it be attributable to the general depression? I attribute it to the fact that people are not so well off as they were formerly.
798. Do many ships come to Newcastle direct from Great Britain with cargoes of general merchandise? Two or three yearly.
799. Would they be from Great Britain? They would be either from Great Britain direct or *via* Sydney or Melbourne. They came up here and discharged the balance of their cargo.
800. They came up here with goods consigned direct to Newcastle? Yes; then there were other vessels from Victoria, South Australia, and New Zealand.

801. What sized vessels? All sizes. They bring the stuff out for nothing almost.
802. Do you know whether the shallowness of the harbour has prevented any great ships from coming from Great Britain? No; because most of the vessels which come direct with full cargoes are not so large as those which arrive here to discharge ballast. Those coming direct from London are ships from 1,600 to 1,800 tons burthen.
803. Has the number of large ships coming to Newcastle decreased of late years? We have not had more than two or three each year bringing general cargo from London.
804. What is the quantity of coal raised within the Newcastle district? That is outside my Department.
805. I find from a return for 1892 that in that year 2,611,731 tons were raised; in 1893, 2,203,480 tons were raised; and in 1894, 2,605,142 tons;—can you give us any information as to the output prior to those three years? I have got it as far back as 1885.
806. *Chairman.*] Do you hand in a return showing the quantity and value of the coal raised in the Newcastle district since 1885? Yes. [Vide Appendix.]
807. *Mr. Roberts.*] How do the figures for 1894 compare with those for each of the previous ten years? In 1885 the quantity of coal raised was 2,113,372 tons; in 1886, 2,178,116 tons; in 1887, 2,243,792 tons; in 1888, 2,067,042 tons; in 1889, 2,624,347 tons; in 1890, 2,120,046; in 1891, 2,853,251; in 1892, 2,611,731; in 1893, 2,203,480; in 1894, 2,605,142 tons.
808. In what year was the largest quantity of coal raised? In 1891, the quantity for that year being 2,853,251 tons.
809. Then it may fairly be said that the output of coal is certainly not decreasing? It is not decreasing. In the following year, 1892, the quantity was 2,611,731 tons. In the intermediate year there was a falling off, but in the following year it came up again to 2,605,142 tons. So it is keeping up very well, notwithstanding all the troubles in the trade. I have another return in reference to the draught of the vessels. I have a return showing the number and tonnage of the sailing vessels and steamships of over 2,000 tons net register entered at Newcastle in 1885 and 1894. That shows the increase in the number of vessels of large tonnage. When I first came here, the largest vessels that entered the port were vessels of about 800 tons burthen. Of late years they have been increasing in size. Although the number of the vessels may now appear to be small, the tonnage in the aggregate is considerably larger than formerly.
810. What was the largest year? I will take the sailing vessels first. The largest year was 1892. The number of sailing vessels was the largest in 1894. In that year we had forty-five sailing vessels of a tonnage of 106,006 tons, giving an average tonnage of 2,356 tons. The next year to that, as regards the number of the vessels, was 1892. In that year we had twenty-eight ships of a gross tonnage of 64,746 tons, giving an average of 2,312 tons. Those are the two highest years. As regards steamers, we commenced in 1885 with thirteen steamers of a gross tonnage of 28,150 tons, being an average of 2,165 tons; in 1892 we had thirty-eight steamers, the gross tonnage of which was 92,201 tons, giving an average of 2,426; in 1894 we had thirty-five steamers with a gross tonnage of 82,959 tons, an average of 2,370; so that the total tonnage of the sailing vessels that entered the port during the ten years (numbering 179 vessels) was 408,797, giving an average of 2,284 tons. The number of steam vessels during the ten years was 191 with a gross tonnage of 441,451 tons, giving an average of 2,311 tons. [Vide Appendix.]
811. What is the largest amount of tonnage carried by any one vessel? That I have not got, but the largest sailing vessel which came here was "La France," and the largest steamer was the "Southern Cross."
812. Where does the "Southern Cross" trade? When she came here she was going all round, getting cargo wherever she could. She was what they call a tramp.
813. Can you give us any information as to the export of wool from Newcastle? I have here a return which gives a comparative statement of the principal items of export from the year 1889 to the year 1894 inclusive. That shows that in 1889 there were 2,091,557 tons of coal exported of the value of £1,102,722; the quantity of wool shipped in 1889 was 41,638 bales, the value of which was £736,980. 1893 was a good year, the number of bales of wool exported for that year being 70,394. The quantity in 1890 was 45,820 bales; in 1891, 64,859 bales; in 1892, 61,795 bales; in 1893, 70,394 bales; in 1894, 56,263 bales. The total quantity of wool exported from 1889 to 1894 inclusive was 340,769 bales.
814. Does not a great deal of wool go via Morpeth? Yes; a good deal goes by steamer to Sydney and by rail too.
815. What steamers take it from Morpeth? The Newcastle and H. R. Company's regular cargo steamers. There are included in these statistics returns of the coal, bonedust, tallow, and preserved and frozen meat exported.
816. Is the shipment of frozen meat increasing? That seems to have commenced in 1892. In 1892 we shipped 9,620,194 lb. of frozen meat of the value of £81,626; in 1893 we shipped 6,372,271 lb. of frozen meat of the value of £40,358; in 1894 we shipped 10,154,427 lb. of frozen meat of the value of £75,952. The total quantity shipped during the three years was 26,146,892 lb. of the value of £197,936. [Vide Appendix.] This return does not include the coal exported for reintroduction, nor wool shipped coastwise to Sydney. We send out coal which is returned into the Colony to such places as Broken Hill. I have here a return, showing the imports and exports of the port of Newcastle, together with the revenue collected at Newcastle, during the years 1864 to 1893 inclusive. It gives also the pilotage, harbour dues, tonnage rates, harbour lights, and *ad valorem* duties. [Vide Appendix.] It is shown by another return that the other goods exported exceed in value the coal exported. The total value of the exports exclusive of coal, for the six years is £5,607,609, and the value of the coal shipped during the same period was £5,430,897. The total value of the exports for that period was £11,038,506. [Vide Appendix.] I have a decennial return showing the quantity and value of the coal exported from 1885 to 1894 inclusive, and the ports of destination. This return shows that the export of coal has increased to certain places, and that it has decreased to other places. There has been a great falling-off in the quantity of coal exported from Newcastle to Hong Kong of late years, owing to Hong Kong being supplied from Japan. To Victoria in 1885, we exported 544,005 tons; and in 1894 we exported to Victoria 606,686 tons.
817. Will you hand in that return? Yes. [Vide Appendix.]
818. Have you any other returns? Yes, I have a return showing the total number of vessels which have been entered and cleared at Newcastle, during the years from 1885 to 1894. I have two different returns with regard to this. One is made out in accordance with what the law requires of us—that is, to make it appear

W. R. Logan,
Esq.
3 April, 1895.

W. R. Logan, Esq., appear that a vessel is only entered and cleared at one port in New South Wales. A ship will arrive at Sydney, discharge her cargo, come on here, and is cleared for another port *via* Newcastle. She has already been entered in at Newcastle or at the main port in the Colony; the consequence is that her arrival is recorded in the Sydney office and it goes into the general statistics of the Colony. Therefore, if we were to record her arrival at Newcastle we should be recording it a second time, and it would be misleading in the statistics. In the case of an inquiry as to the number of vessels which arrive here *via* Sydney from foreign or intercolonial ports we keep a separate book to supply that information. The first return contains a larger number of vessels as having entered inwards than the second one. This return shows the total number of vessels, exclusive of those employed in the coastal trade, from 1885 to 1894 inclusive. [Vide Appendix.]

819. How does the year 1894 compare with previous years? In 1894, 1,255 arrived, with a gross tonnage of 1,422,310 tons.

820. Is that an increase or a decrease? It is not a very great decrease. The highest number which arrived in any one year during the previous ten years was in 1889, the number for that year being 1,443 vessels. It went down to 1,159 in 1890; then the number was 1,392 in 1891; 1,325 in 1892; 1,390 in 1893.

821. So the year 1894 compares very favourably with previous years? Yes; it is a good average year. The tonnage, I may remark, for that year is larger than for the previous year, the vessels having increased in size. The tonnage in 1885 was 779,901 tons. The vessels that come here *via* Sydney appear in the returns as vessels entered inwards, and it seems for the year 1894 as if we had only 605 vessels entered inwards, whilst 954 went out. Our statistics only apply to intercolonial vessels and vessels from foreign ports. The coasters we do not take into account; they need not come to the Customs House unless they have any dutiable goods, which is very seldom.

822. Is there anything else you wish to state? I may mention that there are five bonded warehouses here, which is some indication of what the trade is.

823. What are their principal contents? Spirits, groceries, oils, stores, salt, and things of that kind. They are principally wholesale groceries.

824. Have you the total value of the goods at present in bond? I will supply it. [Vide Appendix.]

825. What amount of bonded warehouse duty did you receive in 1894? It is under the heading "Bonded Warehouse Duty"—that means bond rent.

826. I see that shows a steady increase? That is according to the number and capacity of the bonds, of course.

827. And according to the quantity of goods going into general consumption? It is not on the goods; it is a bond rent. In 1885 the amount was £181, in 1894, it was £905; there has been a considerable increase. Under the Act, it is called a license fee. In our cash-books it is put in the duty column.

828. From your observation do you say that the export trade of Newcastle is increasing? I do. It certainly has not decreased; there is every prospect of it increasing. I believe that every year we shall have a larger amount of shipping coming in.

829. The export of coal is keeping up satisfactorily? Yes.

830. And the general exports? The general exports have an upward tendency. Their value is greater than that of the coal exported. A great many people are not aware of that.

831. Is there any other matter which you would like to mention? I do not think there is anything except that we might be provided with a little better accommodation on the wharfs for the handling of goods. There are continual complaints about it.

832. Have any complaints reached you as to the insufficiency of the depth of water at the entrance to the harbour? No. Complaints of that kind would go to the harbour authorities.

833. Have you heard of ships having to leave the harbour not fully loaded? Occasionally I have; but I have been sometimes of opinion that it was not so much the depth of the water as the mismanagement of the people in charge that was to blame in some cases.

834. Are you prepared to offer any opinion on the scheme put before us by the engineers for the improvement of the harbour? I would not attempt it.

835. Mr. Davies.] How long have you been sub-collector of customs? Twenty-five years.

836. Have any complaints been made to you in reference to the depth of water in the fairway? No; they would not come to me.

837. How do you account for the very great difference in the imports to Newcastle for last year as compared with previous years? I think I have already said that I believe it is owing to the bad times.

838. The value of the imports in 1891 was £877,063? Yes.

839. But in the year 1894 the value of the imports was only £427,581? Yes, there was a great falling off.

840. In 1885 the value of the imports was £930,200, but in 1894 the imports only amounted to about half that value? It is very extraordinary how the trade of this place fluctuates. During the last thirty years the figures have gone up and down like the marks on a weather chart.

841. In 1891 the value of the exports from Newcastle was £2,337,382; in 1894, £1,485,475; so there is a great falling off there? Yes.

842. In view of these figures are you of opinion that the trade of the port of Newcastle is improving? I do not think it has gone back.

843. What do these figures show? They certainly show a great falling off in the trade. That, I expect, is in the coal trade.

844. Mr. Levien.] I suppose the railways take to Sydney a great deal of the traffic that used to come down here? Yes.

845. Mr. Davies.] The railway was opened before 1891. I am anxious that you should give some explanation of the falling off of the trade? I will endeavour to do so.

846. Mr. Lee.] I should like to know whether, under the heading "Imports and Exports," there are any goods coming from any port within the Colony or going to any portion of the Colony are included? No. The returns refer simply to foreign and colonial ports outside New South Wales.

847. Might not the falling off in the value of the imports be explained by the fact that goods are landed at Sydney and sent to Newcastle by rail or by coastal steamer? We receive large quantities of goods under bond from Sydney.

848. In the appendix to your evidence you show that the *ad valorem* and all other duties including bonded warehouse license fees make a total for the year 1894 of £122,250? Yes.

849. That I suppose is no criterion as to the importation at the port, inasmuch as some of the goods may have come up from Sydney under bond? There are certain imports on which no duty is paid at all. W. R. Logan, Esq.

850. The mere fact of so much duty having been paid does not prove that all the goods came to the port direct? No. 3 April, 1895.

851. I refer to the year 1894. The harbour light dues, pilotage dues, removal dues, and tonnage rates amount to a total of £36,638? Yes.

851½. That is money actually earned at the port? Yes.

852. There is an item of £8,331 for tonnage rates for 1894—is not that the largest return to the port for any year since 1885, except 1891 and 1892? It is.

853. Will the collection of tonnage rates at the port of Newcastle be a reliable guide as to the tonnage of ships coming here? To a certain extent it is. That is the only guide I think, because pilotage is paid only in a case where the captain is not exempt.

854. If the tonnage dues increase every year, ought that not to be *prima facie* evidence that the trade of the port has increased? I think so.

855. *Mr. Hayes.*] Mr. Davies has pointed out that from the year 1891 to 1894 there has been a steady falling off in the value of the exports. Since 1891 has not the value of the wool and of all our exports fallen very considerably? Yes.

856. Does not that alone account for the difference? No doubt that will account for it.

Thomas Croudace, Esq., General Manager of the Scottish Australian Mining Company, Newcastle, sworn, and examined:—

857. *Chairman.*] What are you? General Manager for the Scottish Australian Mining Company.

T. Croudace,
Esq.

858. How long have you been here? About thirty-three years.

859. Have you a knowledge of the port and its surroundings? Yes.

860. Have you any knowledge of the proposed works to improve the harbour? I have.

3 April, 1895.

861. Do you regard it as an important work? Yes.

862. How much greater depth is the scheme intended to give? I think three or four feet.

863. You believe that to be an important thing? I do.

864. You are an engineer, are you not? I am. I am a member of the Institute of Mining Engineers. I am also a mechanical and civil engineer.

865. Did you know Newcastle in the old days? Yes; about thirty-three years ago.

866. Is the map on the wall a fair delineation of the Hunter River in the days when you first saw it? I think it is.

867. Have the works carried out by the Government been beneficial? Yes; very much so indeed. From 13 feet to 15 feet was the depth on the bar in the early days.

868. And the result we have to-day has been owing to the Government works? Yes.

869. Do you know the result brought about by the construction of the southern and northern breakwaters? I do. That result has been beneficial. I have advocated the extension of the northern breakwater for some years.

870. The result of the construction of the breakwaters has been not only the clearing of the entrance at the Heads, but the removal of the bar 800 feet further out? Yes.

871. You see the northern breakwater shown on the plan? I do.

872. The Department contend that the extension of the northern breakwater will scour the channel, and give an additional depth of 3 or 4 feet;—do you think it will bring about that result? I do; for the simple reason that if the effect of the first extension of the northern and southern breakwaters was to deepen the channel and to send the bar further out any further extension must produce a similar result.

873. It will push the bar further out? Yes.

874. In all probability into deep water? Yes.

875. You believe that the Departmental scheme will bring about the results anticipated? Yes; I do, beyond doubt.

876. Do you approve of the extension of the southern breakwater? I do not think I would do more than make up what has been flattened out by the sea, until you see the effect of the extension of the northern breakwater.

877. Do the seas break on Big Ben and roll into the harbour? Yes, to a certain extent.

878. Would it remedy that if the breakwater was reduced to its original dimensions? I do not think it would entirely do so, unless carried out a great distance.

879. Is it a desirable thing to further extend the southern breakwater? I would not go to the expense of extending the southern breakwater until the northern breakwater has been finished. I think it will be more prudent to extend the northern breakwater first.

880. Notwithstanding the fact that you believe that the sea breaking on Big Ben will still roll round into the harbour? Notwithstanding that, I think the best course would be to extend the northern breakwater. Ships when entering the harbour in rough weather are in danger of being driven on to the Oyster Bank; but when the northern breakwater is extended that will practically be done away with, because vessels will get into the main fairway. There is practically no fairway from the termination of the northern breakwater now. The "Cawarra" and the "Colonist" were wrecked there, and I have known several coasters to be driven on the Oyster Bank.

881. Although it is a desirable thing to keep the roll out of the harbour, you do not think it is imperative? No; I do not think there will be so much wave in the harbour as some anticipate, more particularly if they make proper wave-traps. I wish you to understand that I should quite approve of the extension of the southern breakwater into deep water; but I do not think that that should be the first work. I think that more immediate benefit would be derived from the extension of the northern breakwater, and the making up of a portion of the southern breakwater which has been flattened out.

882. Of course that will intercept part of the roll? Yes.

883. Do you think it is imperative to carry out the second section of the northern breakwater in order to get a sufficient scour to remove the bar? At first I thought it scarcely would be necessary to go beyond the first section; but Mr. Walsh has shown me the extension of the bank formed by the action of the current, and now I think it will be decidedly necessary, so as to get that as far as possible out of the influence of any tidal operation.

884.

T. Croudace, Esq. 884. Will not the need for it show itself as they proceed? It will, and it will probably be the best guide

3 April, 1895. that the engineers will have. In theory you design to do a certain thing, but there are forces in nature which come in to interfere with your theoretical designs. I think there may be such results that you may perhaps only require half of the second extension. Still if the whole were carried out I am bound to admit that it would be better.

885. It is a question of money? It is.

886. Are we justified in believing that the southern breakwater is a question of money too, and that if the money is available it would be a good thing to extend it? Yes.

887. You believe the result a desirable one, and that the works proposed by the Department will bring about that result? Yes, I do.

888. The ships having come inside, is there plenty of room there for them? The ships at present have to lie all about the old Horse Shoe Bend. No doubt if they could get further up the harbour they would be more out of the influence of the tidal and storm waters as this harbour abuts right on to the sea.

889. Do you think there is any need of an extension of the area of the harbour in which vessels can lie? Yes. I believe that there ought to be a considerable amount of dredging carried on. The expanse of water across from the A. A. Company's shoots to Stockton is very great, and any current there is much less than at Stony Point, and the velocity, not being so great, silting will still continue although not so much as formerly.

890. You believe that this work will have a tendency to sweep it away? Yes.

891. Do you consider that the Newcastle trade has suffered any disability from the silting up of the harbour? Yes. In February, 1894, I had to load the "Southern Cross," and she could have carried a little over 6,000 tons of coal, but we could only put on board 5,400, so that she had to go away 600 tons short of her full cargo. I have heard of other similar cases, and we have complaints from London and Liverpool of the shallowness of the harbour.

892. The trade of the port depends upon wool and coal? Principally upon coal.

893. Is the export of wool increasing? I think it is.

894. You think that the export of wool from Newcastle will increase? I am inclined to think so.

895. You believe that the port being 3 or 4 feet deeper will enable you to hold your own in the foreign trade? Yes, I do, certainly.

896. With regard to the immediate future of coal half a dozen years hence, will there be a greater export of coal than there is now? That is a most difficult question to answer. The trade ought to increase under ordinary trading conditions, but we have been so much subjected to these unfortunate labour troubles that Newcastle is suffering severely. We had a strike in 1888 and another in 1890. Therefore, it would be difficult for me to say whether the trade will increase.

897. You think that the industrial disturbances have a great deal to do with the number of vessels that will come to the port? I do. And they have a great deal to do with the development of the trade at places which are competing with us, such as Japan and China. The Victorian coalfields got their great impetus from our 1888 and 1890 strikes. Even now, I know as a matter of fact that the proprietors of the Victorian coalfields urge the Government to consider, with regard to contracts, the probability of strikes at Newcastle.

898. Is the supply of coal at Newcastle likely to be permanent? There is no doubt that our present seam known in connection with the Bore-hole and the Wallsend mines is getting worked out. In my time the greater portion of it has been worked out. Two or three collieries have worked out their coal; but it is not improbable that by deeper boring we may prove lower seams.

899. Is it good for fifty years' ordinary working? I could not say that.

900. Is it good for twenty years? I do not think that we could get so much from the present collieries after that time as we can now, or that we could even in fifteen years, but we are getting new collieries to take the place of those which are worked out.

901. Are we justified in believing that the coal trade at Newcastle will last twenty years? Yes, I think so.

902. Do you wish to add anything further to your evidence? Only to say with regard to the twenty years that that point is very much affected by outside influences.

903. You are aware that a basin is being dredged out, and is to have a depth of 26 feet;—will that meet all the requirements of the port? I certainly think so, and it will be augmented. I have seen a plan according to which the Government propose to reclaim some land by dredging between the Waratah channel and the Hunter River channel. The Government also propose to take away a considerable portion of silt from near Stockton which will give further accommodation.

904. Will not one great advantage of the basin be that there will be no possibility of silt from the Hunter River going into it? Undoubtedly.

905. That is in the North Harbour? Yes.

906. When the basin is finished there will be no deposit of silt there? No.

907. It will practically be a dock? Yes. The basin which we now see was proposed by Mr. Moriarty thirty-two years ago. Looking at the plan generally, and speaking with engineering knowledge, I think it is an exceedingly good one. There are two or three advantages. The wave-trap on the southern side will tend to throw the current more over to the north, and consequently deepen the entrance by the rapid movement of the sand, and I know, from the sinking of the Stockton coal-mine, that the rock all dips to the north. There may be one or two trap dykes crossing it here and there.

THURSDAY, 4 APRIL, 1895.

[The Sectional Committee met at the Office of the Marine Board, Newcastle, at 10 a.m.]

Present:—

THOMAS THOMSON EWING, Esq. (Chairman).

The Hon. JOHN DAVIES, C.M.G.

JAMES HAYES, Esq.

The Hon. CHARLES JAMES ROBERTS, C.M.G.

ROBERT HENRY LEVIEN, Esq.

CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed Harbour Improvements at Newcastle.

William Bethel Sharp, Esq., Mayor of Newcastle, sworn, and examined:—

908. *Chairman.*] What are you? General Agent, and I was manager for Dalgety & Co., Ltd. W. B. Sharp,
Esq.
909. Have you any official position? I am Mayor of Newcastle, and I am representative of the Chamber
of Commerce, appointed by committee.
910. Have you been long here? I have been here thirteen years.
911. Have you a knowledge of the port? I have.
912. Are you acquainted with the scheme by which it is proposed to improve the harbour? I have not
seen the plans yet.
913. *Mr. Davies.*] You state that you are connected with the trade and commerce of the port and are the
appointed representative of the Chamber of Commerce to give evidence before this Committee? Yes.
914. Does your business bring you in contact with the trading community? I am intimately connected
with it.
915. Has there been a fairly reasonable increase in the value of the imports and exports at this port
during the last three or four years? The returns from the Custom House show a slight decrease in value,
but that is very easily accounted for.
916. Can you account for it? The imports have fallen off very considerably. That, however, does not
fully represent the imports, because a great body of them came from Sydney by coastal steamers, and are
not represented in the returns.
917. Do not the imports pay duty whether by land or water? Yes; but the entries may be passed in
Sydney and the goods brought in the coastal steamers. Those imports are not shown in the figures given
here, or I dare say the amounts would be double.
918. I would ask you to look at the figures for 1891;—the value of the imports was £877,063 and the
value of the exports was £2,337,382, and compare that with the value of the imports and exports for last
year, which were, imports £427,581, exports £1,485,475;—I want you to explain how it is that in the
year 1891 there is a difference of £800,000? I will deal with the imports first. In 1891, and for
several years previously, ships came direct with imports from London to Newcastle. Then a class of
ships were built that are too large to load for one port. They load for Sydney and Newcastle and
for Melbourne and Newcastle. The consequence is that at the present time we seldom get more than
one or two ships a year direct from London to Newcastle. The cargo comes in ships *via* Sydney and
Melbourne. A very large quantity of the cargo that goes to Sydney is landed there, and is entered in
the Customs there, and is then sent to Newcastle by coastal steamer. The consequence of this is that
Newcastle is not credited with that portion of the imports, though the trade of the port is as great, if not
greater, than ever.
919. Would the goods come in bond, or how? The entries are passed there, but they also come in bond.
920. The Customs Department would have some knowledge of them if they were in bond? I am
confident that they are not included in the returns. Of course, the part of the cargo that comes to
Newcastle is credited to Newcastle, but not the goods that are landed in Sydney.
921. If goods are imported in bond, would that not be shown in the returns? Goods coming from
Sydney would not be sent as imports.
922. Goods coming in bond would come under the supervision of the Customs authorities? They might
not be credited as imports.
923. In what way would they be? They would be credited as goods in bond.
924. To some extent there has been a difference in the character of the shipping trading to the port? Yes.
925. I want you to go back to 1888 when the imports were £758,586, and the value of the exports was
£2,067,400;—the large ships were not coming to the ports in those days? No; up to 1891 ships came
here direct from London. If we take the imports from 1885 to 1891 there is a pretty fair level of figures.
The falling off takes place in 1891 when the large ships loaded in London for two ports instead of coming
here direct. With reference to the exports, I should like to answer your question in regard to 1891 and
1894. First, with regard to the exports, the value certainly shows a very considerable shrinkage. The
actual quantities, I think, on comparison will not show very much (if any) shrinkage at all. In 1891 the
price of coal was 11s. a ton, and at present it is 7s. 6d. and as low as 5s. 9d. a ton. Then, in addition
to that, in these returns there are any quantity of exports from Newcastle which are not credited to New-
castle. I would refer to the butter industry. You find from the Newcastle returns the export of butter
is almost *nil*; but last year we exported about £10,000 worth of butter which went *via* Sydney. It is the
same with regard to wool. In the off season any amount of wool comes here for shipment, but if there is
no vessel it is taken coastwise to Sydney, and Sydney gets the credit for it. We are only credited
with what is actually cleared at the Customs for foreign countries.
926. How long has the wool export business been carried on in the same proportion as at the present
time? I was the first man who shipped wool here. It was about twelve years ago. I think that the
export for the first year was about 32,000 bales. At present it is about 60,000 bales a year. A great
deal more comes to Newcastle, but goes on to Sydney for shipment there.
927. There has been an increase in the export value of the wool? Not in the value but in the quantity.
928. Take five years back—what would be the gross increase in the number of bales that were shipped in
1890 and the following years? There has not been a very great increase during the last five years.
929. Has the output of wool from this port doubled itself in the last five years? No.

W. B. Sharp, 930. There has only been an increase in five years of 5,000 bales? Yes. The reason for that is the growing tendency in the minds of wool-growers to try two markets. They try the Sydney market first, and if they cannot get satisfactory prices there they ship their wool to London.

4 April, 1895. Then they try the local market as well as the foreign market? Yes.

932. Would not the increase in the export of wool make up for the reduction in the value of the coal exported? No. Wool has gone down nearly 30 per cent. in value during the last five years.

933. Then an increased export would not make up for the difference in the value of the exports since 1890? No, not at all.

934. Can you tell us how you explain the difference in the value of the exports in 1891 as compared with 1894? Coal was selling in 1891 at about 11s. per ton; it is about 7s. 6d. now.

935. Is there any coal being shipped at 7s. 6d. per ton? Yes; the best Wallsend is selling at 7s. 6d. That is the best coal in the district. In 1891 that coal realised 11s. a ton, being a difference of nearly 33 per cent. in the value. The price of wool since 1891 has fallen 25 per cent.

936. Those are the two leading articles of export? Yes; that is why the value of the exports appears so much less in 1894 than it was in 1891.

937. Would this reduction in value make good the difference between the value of the exports in 1891 and the value of the exports in 1894? As a matter of fact between the quantity of coal exported in 1891 and the quantity exported in 1894, there is only a difference of 180,000 tons.

938. What was the export of coal in 1891? The export in 1891 was 2,244,000 tons, and in 1894 1,891,000 tons.

939. There is a slight reduction as compared with 1891? Yes; but it was made up by the increased quantity of coal used in the Colony. The output of coal in 1891 was 2,779,000 tons. The total output in 1894 was 2,605,000 tons. The local consumption has increased, but the exports have slightly decreased.

940. To what other causes do you attribute the reduction in the value of the exports; have the disturbed relations of capital and labour had anything to do with it? I think that the strikes have interfered considerably with some of our markets.

941. Have they had a bad influence on many of the foreign markets? Yes; in some of them, and the production of coal in other countries has had an adverse influence on our export trade.

942. Has the greater production of coal in other colonies been brought about by the strikes in this Colony? I would not say that.

943. Was not the production of Japanese coal brought about primarily by the great strikes we had here? No; it was a natural development on the part of the Japanese.

944. Has not a large proportion of the trade which formerly came to Newcastle been lost by reason of the development of the Japanese mines? Yes.

945. Do you think it possible, having to compete with the cheap labour of Japan, that we shall be able to regain the trade that we have lost by reason of the strikes? I do not believe that we shall ever regain that trade; but we can develop the trade that is left us. I do not think that if our coal was selling at 5s. a ton we could get it into Hongkong against the Japanese coal. Labour there is so cheap; the same argument applies to other Chinese ports. It applies to Singapore and to Java. The Borneo coal is going there. That is another competitor, and the Indian market which used to be very large in those days is almost lost entirely.

946. Where do they get their supplies? From their own provinces. They have developed large coal-fields, and the only coal that we now ship to India is for gas purposes.

947. Then we are not likely to get back that large trade which we had? Not the trade with the countries which I have named, but we can increase our trade with other countries. As population increases our intercolonial requirements will increase.

948. But in view of the development of the coal industry, would the Newcastle district have any prospect of increasing to a large extent its output of coal by simply depending on local consumption? If we have Federation the output of coal at Newcastle will be doubled and trebled in my opinion.

949. Are you not at present supplying all the Australian Colonies with coal from Newcastle? No. We are not supplying New Zealand with nearly as much coal as they use. They work their own coal. We are not supplying Victoria with anything like the quantity that we used to supply, because they are developing their own mines.

950. Has not that been in consequence of the strikes? No, I think it was owing to a determination to foster the industry in their own country.

951. But was it not principally in consequence of the great strike, when they had to use wood on the engines? That would have some influence, but the main object was the development of their own resources.

952. You look forward to the day when Federation will be a means of causing a larger output of coal from your district? Yes, for intercolonial consumption.

953. What about the San Francisco trade? I do not think we shall ever lose that trade.

954. Can it develop into larger proportions? Yes; as long as California requires ships to carry her wheat those ships will coal at Newcastle on the way so as to get sufficient freight to pay expenses.

955. And you say that coal is realising 7s. 6d. per ton? Yes.

956. Is that the best coal in the district? Yes, Wallsend coal.

957. From your commercial knowledge, what is your opinion about the price—will 7s. 6d. a ton leave a large profit? The company, I understand, has paid a very handsome dividend.

958. From reserves or from profits? I think it was from profits.

959. Do you know any mines in Newcastle at present yielding profits to the owners at the ruling prices? Some of them are dividend-paying, but not many of them.

960. In view of the disturbed state of your district with regard to labour are you likely to attract shipping to take cargoes of coal to foreign countries? Yes, I think ships will always come here.

961. Whether the coal can be had or not? No, if it could not be had they would not come.

962. If there is a general strike? Of course they would not come then; but the moment it was ended they would come.

963. There has been a general strike during the time that you have been here, and ships have come and had to leave in ballast have they not? Yes, a few.

964. Would they come again? Yes. It is the same as a flood in the river; it is soon forgotten.

965. A flood in the river is a very costly thing to the country? It is a very costly thing to me personally. W. B. Sharp,
966. The coal trade forms the life of your district? Of course.
967. If the trade of your port is not going to increase it is of no use spending money in improving the harbour? I want you to understand that if a general strike took place it would naturally interfere with the trade, but only for a time.
968. Does it not very materially affect the trade? Yes; but I do not want you to anticipate that we are going to have a strike. I do not think that we are going to have one.
969. How do you explain the difference between the exports of 1891, and those of 1894;—is it the reduced values of the exports that makes the difference? Yes; not a reduced volume of trade.
970. The volume of trade has been the same, but the articles have been reduced in value? Yes.
971. You are hopeful that the good trade that has been lost to you will yet be recovered? Yes.
972. Are you familiar with the proposed improvements? Yes, from what I have read.
973. Do you know the two breakwaters? Yes.
974. From your knowledge do you believe that if these improvements are carried out they will have the effect of deepening the channel? Yes, I believe it would improve the channel.
975. It is anticipated by the Department that if the works are carried out the breakwaters will create such a scour as to remove the sand, and leave in the channel 25 feet of water at low tide. Would that give greater facilities for larger ships to come here? Of course it would.
976. Do you approve of the scheme for giving a better entrance to the harbour? Yes.
977. If you get ships in this harbour drawing 23, 26, or 27 feet of water where will you put them? I do not think any ship could come here drawing 27 feet of water.
978. Where would you moor ships drawing 24 feet of water? They could be taken alongside the dyke.
979. And when they were loaded where would you remove them to? They would have to go to sea from the dyke.
980. Therefore it is not only the entrance to the harbour that would have to be improved, but the whole harbour would have to be dredged to give a sufficient depth for these large sea-going vessels? It would not have to be dredged; a scour could be formed.
981. Where would you get it? From the river. There will be a scour when the works are completed.
982. It is only anticipated that the scour will be in the channel? The works at the entrance will only cause a scour at the entrance. If you want a scour in the harbour you will have to make it.
983. Can you tell us how to make a scour? The natural trend of the river is on to the dyke. After it strikes there it goes over towards Stockton Point; there the current slackens and the silt drops. If you extend the breakwater you will make a scour in that part of the harbour. If you want to scour in the north harbour, to do away with the great amount of dredging which otherwise would have to be carried on, there is a plan which has been prepared by the Harbours and Rivers Department, showing the walling-in of all those islands, so as to contract the channel; and instead of taking silt out to sea, it is to be used to reclaim the whole of the land on the islands. That contracted channel would make a great scour in the harbour itself, the consequence being that it would deepen the harbour and minimise the dredging. If we are going to have these large steamers here, I do not think that a loaded ship ought to lie in the Horseshoe—in the fairway. They ought to be removed to the upper end of the harbour.
984. If you look at the depth of the water at present in the north harbour, you will find that it is only 6 or 8 feet in some places? Yes.
985. No ships can go there? No; but if a scour is created probably there will be 20 or 30 feet of water there in a short time.
986. Would it not take years of dredging to get the silt out? Yes; but I maintain that the scour itself would do it. It is an endless job dredging.
987. Supposing it were dredged out to-morrow, would it not again silt up? Yes.
988. So that dredging is a continuous operation? Yes; as it is done at present.
989. You believe that a scour of sufficient force could be obtained? Yes. We want a main channel and we want depth. All our dredging has been concentrated on the sand-bank, where people could walk over many years ago. If the proposed reclamation of the northern side of Stockton and on the island were carried out, I believe it would create a very great scour in the harbour and do away with a great deal of the expense of dredging.
990. That is your opinion? Yes; I think if the stream were divided, opposite Hereford-street, by an artificial breakwater, it would cause a current on both sides and make two deep channels, so that ships could lie on the inside of the artificial breakwater.
991. You know the basin in course of construction at Bullock Island? Yes.
992. Do you think that would afford any great accommodation when it is completed? Yes; but I do not suppose we shall ever see it completed.
993. Would it not be more economical to do that than to carry out the work you have suggested just now? I do not think so.
994. Would the basin be free from silt, not being inundated by the floods? The flood waters would get in there just the same as into the harbour, and silt would be deposited there.
995. You do not think that that work would be of much service if carried out? No.
996. Not if they got 25 feet of water? They would have to remove the bar across there. It would be an expensive job.
997. They have a depth of 20 feet in some parts, and are still dredging? There is a bar across the entrance from the end of the dyke to the A. A. Co.'s frontage—a bar of rock which they have been at for five or six years.
998. Is that your principal objection to that basin becoming a receptacle for vessels? That is one of my objections. I think it will take a tremendous time to get that basin made.
999. How long have they been working at it? I think about five years.
1000. That you regard as a fatal objection to that basin? I think it is an objection. I do not think that any of us will see it completed.
1001. To return to the exports—you say that butter and other commodities are exported from Newcastle, and are not credited? Yes; we get no credit for them.
1002. How do they go from here? By coastal steamer to Sydney, in the same way as the wool and tallow.

- W. B. Sharp, 1003. The Customs returns do not show the absolute volume of trade done here? No; it never will until Newcastle is credited by the Custom House with her proper share of trade, and it could easily be done by cross entry.
- 4 April, 1895.
1004. *Mr. Lee.*] You have already stated to Mr. Davies that the desire of the shipowners and exporters is to obtain a greater and more reliable depth of water at the entrance? Yes, that is the first object.
1005. Have you found that the present depth of water in the harbour prevented ships of a large draught from trading to the port? It has prevented ships from coming here, and it has prevented ships from loading to their full draught. It is very aggravating to the shipowners when they cannot get the full load.
1006. Are you representative of the British India Company? I was when I was manager for Dalgety & Co., Ltd.
1007. Do the vessels of that company come here? Yes.
1008. What is their ordinary draught? About 24 feet. Several of their steamers were prevented from coming to Newcastle because they could not get into the port, and they loaded southern coal at Sydney.
- 1008½. It suited their arrangements better to get a full cargo at Sydney than to come to Newcastle for a portion of their cargo? Yes.
1009. Do you remember the visit of Mr. Darley to this port in 1891? Yes.
1010. Do you remember giving him some particulars in reference to ships? I do.
1011. The "Lawada" for instance? Yes.
1012. Is this an extract from a letter which you received from the owners of that ship: "re "Lawada," 3,269 tons: "We have decided to load this vessel with coal in Sydney. We find that her loaded draught will be 24 ft. 4 in., so that she could not take a full cargo from your port. We would urge upon you the necessity of getting a greater depth of water at Newcastle as we could have given you orders for cargo several times had a greater depth of water been available"? Yes, that is a letter from the representative of the B.I.S.N. Co. at Brisbane.
1013. Is this a further letter that you received: "re "Navasa": "Referring to previous correspondence regarding this vessel we have now to advise that it has been arranged that she will load coal in Sydney for Singapore, her draught, 23 ft. 9 in., being too great to allow us to send her to your port"? That is a letter from the same company, I gave those letters to Mr. Darley to show the necessity for increasing the depth of the water.
1014. It is proposed to give a depth of 25 feet at low water;—I presume that if that were obtained ships of that class would be able to trade to the port? Yes.
1015. Would that increased depth be ample? Yes; and, of course, there would be the channel up to the dyke at the same depth.
1016. You also state that twenty ships went out of this port last year which could not load to their full capacity? Yes, I believe more than that.
1017. What amount would the cargoes be short? I suppose from 150 to 700 or 800 tons each.
1018. I presume that the opinions you held then you hold now as to the necessity of improving the port? Certainly.
1019. I will read what you then said, as it summarises the thing very well:—"The object of the Chamber was to ask if some system of deepening the harbour could not be devised. A ship drawing 22 ft. 6 in. of water could not fully load, and the Chamber were only desirous to give Mr. Darley their opinion. Their main object was to get more water in the harbour, so that ships might take full cargoes, and that trade should not be driven from the port. At the present time the Harbour-master at Newcastle would not allow vessels to leave with more than a certain draught, and the Chamber thought that if they could get another foot or 18 inches of water it would meet the difficulty. His idea was that if the bar were deepened it would do away with a great deal of dredging";—that is your evidence in a nutshell? Yes.
1020. When Mr. Darley was here had you any idea of the nature of the contemplated improvements? None whatever.
1021. Had Mr. Darley at that time submitted the plan to you which is now before you with a statement of the estimated results, would you have been satisfied to have adopted it? I think the plan would carry out what is needed.
1022. I think you have held somewhat different ideas yourself? Yes.
1023. Would you mind stating what your idea is? My idea is that the southern and northern breakwaters ought to be run out simultaneously for the reason that if the northern breakwater is run out without the southern breakwater the seas from the south-east will strike the northern breakwater and rebound to the Queen's Wharf and make it very unpleasant for ships lying there.
1024. Do you think that the southern breakwater should be carried out a further distance? Yes; I should think about 500 feet. We have lost a good deal of it. At present it turns towards the south-east and by turning it you loose a lot of valuable breakwater. It allows the waves to come in more freely than it would if it were turned to the north-east. It ought to be turned a little to the north-east.
1025. It ought to be carried out a further distance of 500 feet with a turn towards the north-east? Yes.
1026. The northern breakwater ought to be carried out also? If the southern breakwater is carried out 500 feet further, the northern breakwater could safely be carried out a 1,000 feet. I think that if the northern breakwater were carried out a 1,000 feet, it would give a good scour.
1027. Then you do not think it would be necessary to proceed some distance beyond the Oyster Bank? I do not think that that would be advisable, because I believe that the waves would come into the harbour if that were done. If you are going to carry out the northern breakwater a distance of 3,000 feet you must carry out the southern breakwater 1,000 feet and I should carry it in a north-easterly direction.
1028. If the northern breakwater were extended 1,000 feet then it would be sufficient to extend the southern breakwater 500 feet? Yes.
1029. Have you observed that if that were done you would be deprived of the present wave-trap? Yes.
1030. And would not the effect of a wave coming in be to strike on the extended northern breakwater, then roll into the harbour? No; because the southern breakwater if extended another 500 feet would prevent that.
1031. There would still be some rollers coming into that entrance? No more than at present.
1032. Your idea is to prevent the entrance of the rollers from the Big Ben rock? Yes, from the south-east.
1033. Taking the scheme as it stands, do not you think it will have the effect of preventing the waves from rolling in? Yes, I believe it would up to a certain degree. Of course I am not an expert, but my own opinion is that the wave-trap would fill up with sand.
- 1034.

1034. I think you had a further idea of utilising a portion of the southern breakwater? I did give an opinion on that subject, because at that time we had not got the soundings from Mr. Darley of the depth at the bar. The bar originally was from Nobby's to Stockton Point, but the bar, according to recent soundings, has shifted out a considerable distance, and it is composed of sand and silt. The scour has taken it out and dropped it there.

W. B. Sharp
Esq.
4 April, 1895.

1035. I think your idea was to have wharf accommodation under the lee of the extended southern breakwater? My idea was, if the state of the harbour was absolutely incurable, that a ship should partially load at the dyke and come down to the southern breakwater to complete loading.

1036. But now that it is found that the bar has extended so much further out to sea, have you modified your opinion? Yes. If that is not a rocky bar, and the scour would deepen it, the scour is all that is necessary. If it is 25 feet to the rock, that will give us ample water for the port of Newcastle.

1037. As far as I am able to gather, the only point of difference between you and the engineers is that you think the northern breakwater should be extended? I think that the northern breakwater should be extended for 1,000 feet at a cost of £18,000 or £20,000.

1038. You do not attach much importance to the suggested wave-trap? I think it would silt up.

1039. Have you seen the influence of it yourself? Yes; but it was sand travelling southwards that filled that up. All along the coast the trend of the current is between two and three knots an hour southerly.

1040. Have you any suggestion as to how these improvements are to be paid for? I think the Government get a fair revenue from the money expended at Newcastle.

1041. Do you think it would be an equitable thing for the port to contribute some portion of the interest on the cost of these works? I think the revenue derived from the port is a very fair interest to the Government for the outlay. The value of the land reclaimed at the back of the dyke—some 40 or 50 acres—the Government will be entitled to if they give us a depth of 25 feet at low water, and they will be able to lease every inch of that land.

1042. Do you not think that this revenue may be very fairly supplemented by the imposition of wharfage dues here? I do not see how you can impose wharfage dues when you have a private company owning a large wharf in the centre of all your wharfs. It will be a repetition of what happened before. The steamers will discharge their cargo at the A. A. Company's wharf, and evade the wharfage. You could not impose a wharfage rate at Newcastle unless you took over the frontage of the A. A. Company.

1043. They would not always have the use of a private wharf without charge? They would make a small charge and you would not get any revenue.

1044. Wharfage dues were imposed for a short time? Yes.

1045. How long were they in existence? It was before I came to Newcastle.

1046. Why were they removed?—was it owing to political influence, or because they could not be equitably charged? Of course there was political influence brought to bear.

1047. Would wharfage dues contribute a large sum towards the interest on the cost of the proposed works? No, but we have tonnage rates here.

1048. They have tonnage rates in Sydney? Not at private wharfs.

1049. Here there is a tonnage rate upon all ships? Yes, except ships discharging—those are free.

1050. And I suppose coasting vessels too? Yes.

1051. The estimated revenue that might have been obtained in 1888 from wharfage dues, inwards and outwards, was some £7,733, was it not? It would all depend on what the rate was.

1052. You, as a commercial man, are very much opposed to wharfage rates? No, I am not opposed to them if you can make them general. It is a fair charge.

1053. *Mr. Hayes.*] I notice that Captain Jackson, manager of the public wharfs in Sydney, when giving evidence in 1888 said: "The approximate amount of wharfage in 1886 at Newcastle, if collected, would be £5,758 15s. 8d. inwards, and outwards £1,274 15s. 4d.";—that is based on the same rates which they have in Sydney;—this would not include coasting steamers? No.

1054. You think it would be impossible to collect these rates here, for the reasons you have given? I take it that if a wharfage rate were struck it would be on the intercolonial boats as well.

1055. Then, would it much more than cover the proposed interest on outlay in harbour improvements? I do not know what they propose to expend.

1056. £140,000? That would be about it.

1057. Have you anything more to say on the subject? I may say, with regard to the calculations for 1888, that a lot of new business has sprung up since then—the export of frozen meat for instance. If we could get 25 feet of water at the entrance it would be easy to get a depth of 25 feet up to the dyke, and that would be ample for the present.

1058. When this inquiry was held in 1888, it had special reference to the providing of more harbour accommodation for vessels. The Committee spoke very strongly about it, and this is what they said—

The proposed basin, and the construction or completion in its vicinity of the necessary wharf accommodation, will provide the authorities with additional mooring space for vessels, and enable them to load coal from the western side of a portion of the present dyke as well as from the eastern. In the basin there will be, according to the Harbour Master, room for a dozen vessels waiting their turn to load, and, as a mooring ground, it will better than any other part of the harbour, as it will be out of the tideway.

Do you agree with that? Oh, yes; I agree with that if the basin is made.

1059. *Mr. Roberts.*] You are aware that the estimated cost of the proposed improvements is £141,000? Yes.

1060. Have you made any calculation as to whether the increased trade of the port would bring in sufficient to pay interest on that amount at 4 per cent.? I never worked it out, but no doubt there will be an increase in the trade, and the Government will receive considerable revenue from the ships that come here.

1061. What revenue does the Government receive from the ships coming inwards, and going outwards? Pilotage 4d. inwards and 4d. outwards; light dues, 4d.; then while lying at the wharf ½d. per ton per day.

1062. According to my calculations, it would take 171,000 tons at 8d. a ton to yield the sum of £5,640;—is it a fair thing to assume that the trade of the port would be increased to that extent? You have only calculated it at 8d. a ton, but if you calculated it at 1s. a ton and ½d. a ton per day, it would increase the amount considerably.

1063. Can you tell the amount of tonnage for twelve months of ships that have not been able to fully load? I think there were thirty sailing vessels and twenty steamers.

1064.

- W. B. Sharp, 1064. What would be about the average tonnage of each vessel that went away short? I believe they Esq. went away short from about 150 to 600 or 700 tons each.
- 4 April, 1895. 1065. It would not be a very large increase if they went away full? If we had 25 feet at low water there would be a greater inducement for vessels to come. I look forward to the day when Newcastle will be the final port for all the mail steamers.
1066. You mean you think they would come to Newcastle for their coal, instead of loading it at Sydney? Yes.
1067. What is the difference in cost between steamers loading in Sydney from a collier and coming to Newcastle for coal? She would not get the coal in Sydney under 10s. 6d. or 11s. a ton, but she could get similar coal put on board here at 6s. 6d. per ton.
1068. Did I understand you to say that no record is kept at the Custom House of the goods imported from Sydney and exported to Sydney? I do not think there is.
1069. It is from your knowledge of that fact that leads you to believe that is the cause of the falling-off in the exports? Partially. With regard to the steamers coming here, there is not the slightest doubt that if we had a depth of 25 feet in the port the mail boats would make Newcastle their final port. Every voyage they bring large quantities of cargo for Newcastle, which has to be transhipped at Sydney; and at Newcastle they would get cargoes of wool and meat. All this would tend to increase the revenue at the port of Newcastle.
1070. Have you heard it or do you state it as a matter of fact? I state it as a matter of fact. Those companies would be only too glad to send their ships to Newcastle.
1071. Have you carefully considered the proposed improvements? I have.
1072. Have you heard it suggested that the southern breakwater to the eastward of Nobby's ought to be extended further beyond the part that is to be repaired? Yes; I think it ought to be extended 500 feet in a north-easterly direction.
1073. What causes you to form that opinion? I think it would prevent south-easterly gales and breakers from affecting the northern breakwater and it would be an additional help to the scour.
1074. In a heavy gale does not the roll from Big Ben sweep round that corner? Not from Big Ben; it comes from the open ocean.
1075. You are decidedly in favour of the extension of the southern breakwater for a distance of 500 feet? Yes.
1076. There are about 200 feet washed away? About that.
1077. You would have 500 feet in addition to the 200 feet that it is proposed to restore? Yes.
1078. *Chairman.*] There is one point that I am not quite clear about. You said that in 1891 the direct trade to the port ceased, and that it finds its way to Newcastle either by railway or coastal boat. What I want to know is the reason for the cessation of this direct trade? As a rule, when the leading brokers are loading in London for one port they have to get a small vessel for Newcastle, otherwise they would have to wait a long time to get a cargo, but if they can get a vessel to call at Sydney, and go on to Newcastle they load it for both ports. Nearly all the steamers from England and Germany bring part cargoes for Newcastle.
1079. It seems strange that they should have started a direct trade, and then partially abandoned it? Nearly all the vessels which used to come here, were small vessels, but those are dying out now.
1080. The small boats are disappearing, and big vessels are taking their places, and it is necessary to fill them up? Yes, and instead of coming to Newcastle the larger vessels would tranship their cargo into an intercolonial boat.

Mr. Alexander Hacking, Government Pilot, Newcastle, sworn, and examined:—

- Mr. A. Hacking. 1081. *Chairman.*] What are you? Pilot, employed here by the Government.
- 4 April, 1895. 1082. How long have you been here? I have been in the pilot service fourteen years.
1083. *Mr. Lee.*] You know the question that we are engaged upon? I have heard of it.
1084. Have you seen the plans of the proposed improvements to the port? I just glanced at them yesterday. I understand them.
1085. Your business is to bring vessels in and to take them out of the port? Yes.
1086. Tell the Committee what you think of the proposed improvements;—do you think the scheme is a good or a bad one? As far as the scour is concerned, I think it is a very good one; but I think it will have a bad effect as regards running the sea into the harbour.
1087. Why do you think that? The heavy seas from the east and south-east will strike the northern breakwater, and it will cause a heavy swell to roll into the harbour, and we shall not be able to hold our ships. During the last flood here everything was breaking adrift. The north harbour buoy broke a shackle $3\frac{1}{2}$ inches in diameter, in consequence of the ground swell, and the shipping in the harbour was all breaking adrift.
1088. Supposing these waves were to come in, and were caught in the wave-trap on the northern side, and again in a wave-trap on the southern side, do you think that that would minimise the trouble? The northern wave-trap would take a large portion of the sea. During the last gale we had a sea breaking from the end of the breakwater right to the "Colonist," one sea going all the distance. A great deal of that water must rush into the harbour, in spite of the wave-trap.
1089. How do you propose to get over that? By lengthening the southern breakwater. I think it should be run out 500 or 600 feet. That would reach a depth of 40 or 50 feet of water, and it would give us smooth water upon the shallow part of the bar. At present, when taking ships out, we get a lift from the sea further in than we should if the breakwater was extended with a slight curve to the northward.
1090. Would you recommend the proposal to carry out the northern breakwater as well as extending the southern breakwater? I would not. I do not like the northern breakwater scheme. When I first came here there was no northern breakwater. We first started it by using ballast, and there was no southern breakwater, but they had to discontinue making the northern breakwater in consequence of the swell that was driven into the harbour.
1091. How far did the southern breakwater extend when you first came here? There was no southern breakwater at all.
1092. You have seen the growth of that year by year? Yes.
1093. What has been the effect of the gradual extension of that breakwater? It has minimised the range in the harbour very much.

1094. And that has led you to the opinion that if it were carried out further still it would still further reduce the range? Yes. Mr.
A. Hacking.
1095. And if that is done the northern breakwater is not needed at all? No. If the northern breakwater is continued you must continue the southern breakwater to cover it. We often get a very heavy swell here without any wind. 4 April, 1895.
1096. Do you anticipate any difficulty in entering the channel if the works are carried out as proposed? I think it will be a very dangerous harbour to approach in heavy weather with that northern breakwater. During the flood of 1893 we had not a boat on the coast that would have been able to enter between the two heads. There would not have been steam-power enough. Our fastest steamboats could barely crawl past Stony Point.
1097. I want to know the influence of the current on a sailing vessel? A sailing vessel could not look at it. I brought in a sailing ship in tow of the "Stormcock," the most powerful tug in New South Wales, and the "Awhina," and it took one and a half hour to go from Stony Point to the lightship, and there I stuck. The "Awhina" could not withstand the tide. I had to let her go. The "Young Bungaree" came and got a rope on to the "Stormcock," and she, being able to get over into smoother water, pulled us along.
1098. What is the rate of the current during a big flood? It was 11 miles an hour at the Narrows during the highest part of the flood. There were only 3 inches difference between high and low water.
1099. If these difficulties occur under present conditions, do you think they would be still greater if that extra wall were carried out, so as to make the channel longer and narrower? I do.
1100. You have taken a very serious position now? I am only giving my opinion.
1101. Do you think that the idea of the northern breakwater should be abandoned altogether? I would rather see the money spent on the southern breakwater.
1102. You see on the map two lines, a black one and a red one—the black line shows the present fairway, and the red line the probable fairway;—do you think that if the works were carried out, the probable fairway, which would be 400 feet from the northern breakwater, would be a safe fairway for ships entering the port? For steamboats it would be a fair channel.
1103. Outside the fairway you have very deep water? Yes.
1104. Consequently, you would not be confined to that fairway on entering the port? You would not be confined to that line.
1105. Therefore, it does not follow that that will be the line of entering? No more than it follows that the old line is the line of entering. At present we do not use it; we go to the southward.
1106. Do you know anything about wave-traps? I have had very little experience of them.
1107. Have you seen them in other parts of the world? Not of the same magnitude as that.
1108. Do you know what is the effect of them? No.
1109. *Mr. Hayes.*] You were not here when the northern breakwater was commenced? I was.
1110. Has not the effect of the breakwater been to increase the scour very materially in the channel? It has assisted it.
1111. Has it not increased the depth of the water very materially since it was constructed? I do not think it has increased it a very great deal.
1112. If we have evidence that it has increased the depth of the channel by several feet, is that incorrect? It may have increased the depth by 18 inches, but the bar formerly used to increase and decrease.
1113. Has one of the effects of the scour gained by the extension of the northern breakwater been to remove the bar out seaward? It has.
1114. Therefore, the scour must have been increased considerably? It created a scour.
1115. Is there not a shoal forming to the north of the present bar? There is a shoal forming out from the wreck, to the northward of it, from the "Cawarra" buoy.
1116. Is that shoal extending? It has come out a little. Only the other day the harbour-master put a notice in the newspapers warning mariners to keep to the southward of it.
1117. Has that shoaling considerably decreased the depth of the water within the last year? Yes.
1118. Judging by the results of the extension of the northern breakwater, if that breakwater is carried out to the "Cawarra" buoy, is it not reasonable to suppose that the scour will be very much increased? No doubt it will.
1119. It will take the shoal away and send the bar into deeper water? We shall have deeper water, and there will be a scour.
1120. Your only objection to the scheme is, that if the northern breakwater is extended, unless the southern breakwater is also extended for a certain distance, the range in the harbour will be increased? Yes.
1121. And you are not prepared to give any opinion as to whether the proposed wave-traps will minimise the evil? It must minimise it; but I do not think it will absorb the heavy seas that will run in against the northern breakwater.
1122. *Mr. Davies.*] Would you prefer the extension of the southern breakwater, with a depth of 24 feet on the bar, or the extension of both with a depth of 26 feet on the bar? I would sooner have 24 feet on the bar, and the southern breakwater extended. My reason for that is, that if we could get the southern breakwater extended to the northward or north-north-east, the seas would get away to the north. At the present time the easterly seas run in there, and give us a big lift on the bar. If we have a swell there that takes away 3 feet of water. We might as well have 3 feet less in depth and smooth water. If we touch with a vessel in going out in smooth water it does not hurt it, but if there is a big lift there is a serious danger.
1123. How long do you say you have been a pilot here? I got my exemption in 1867 as pilot.
1124. You were a pilot before the breakwater was started on the northern side? Yes.
1125. Do you remember, before the erection of the breakwater, a sand-bank coming rather a long distance from the shore from the starting-point of the northern breakwater? Yes; it came right out.
1126. What has removed that sand-bank? The last flood took away a large quantity of it.
1127. Did the breakwater contribute to the scour that carried that sand away? It must have done.
1128. If there had not been a breakwater, would that sand, which had been accumulating there for many years, have been taken away? That has formed since I have been here. There has been a spit formed since the northern breakwater was made.
1129. Is there any spit there now? No; it is cleared away.
1130. What is the depth of the water? Twelve feet very close in.

- Mr. Hacking.** 1131. What is the depth at the end of the breakwater? It is almost dry at low water.
A. Hacking. 1132. What is the depth opposite the starting-point of the northern breakwater? There are 23 feet of water there now.
4 April, 1895. 1133. Does that vary much? Only just at the point; it has varied a little.
 1134. Has the breakwater been the means of taking away that sand-spit? There is not the slightest doubt about it.
 1135. And it has left 23 or 24 feet of water? Yes.
 1136. Do you find a uniform depth of water running up to the end of the present breakwater? It varies there very much.
 1137. How much? Five or 6 feet.
 1138. What is the uniform depth opposite the northern breakwater, midway between the line of the fairway and the northern breakwater? It varies very much.
 1139. To what extent would the depth vary? The last flood cut away 6 or 7 feet from there.
 1140. What is the depth opposite the end of the northern breakwater? It varies from 11 feet to 14½ feet.
 1141. A greater depth has been obtained since the erection of the breakwater along that side? Yes.
 1142. You see on the plan a boomerang-shaped line, illustrating the idea put forth by a writer named Delta in the papers;—would you favour the extension of the breakwater in that direction? I cannot see what good it would be. There is really no water where that is.
 1143. From your practical knowledge of the port, you would recommend the extension of the southern breakwater? Yes.
 1144. You believe that that would secure safety and a good depth of water? The southern breakwater has done that as far as it has gone.
 1145. *Mr. Levien.*] What effect have the silt barges in going out over the bar? They drop a lot of sand there. In the north-east weather it is continually washing out of the barges.
 1146. That tends to silt up the bar? I believe that a lot of sand has been brought in. Before the Newcastle dredge began to dredge the silt up we had not a grain of sand between Allan's Hill and Nobby's, now it is right up to Nobby's.

Mr. George Melville, Deputy Harbour-master, Newcastle, sworn, and examined:—

- Mr. G. Melville.** 1147. *Chairman.*] What are you? I am Deputy Harbour-master.
 1148. Have you been long in Newcastle? About thirty-five years.
4 April, 1895. 1149. *Mr. Hayes.*] Do you know the object of this inquiry? Yes.
 1150. Will you inform the Committee what you think of the proposed harbour works? I have not seen the plans yet.
 1151. Will you tell the Committee your opinion upon the subject? I think that to deepen the bar at present we must have some wall to keep the water in the channel. The water at present runs over the Oyster-Bank and does not give a scour. That you would have by building a breakwater on the north side of the harbour, but that northern breakwater is going too far out for the southern breakwater. It will make a dangerous entrance unless the southern breakwater is extended along with it. Tremendously heavy seas come in when there is a south-east gale, and unless there is sufficient protection from the south-east gales no vessel can approach that part when the tide is confined between two walls. I have seen a current going out at the rate of 10 knots an hour. In 1893 it was passing out by the lightship at 10 knots an hour, and big steamers could not get past Stony Point. And if that is confined to the bar, and there is no protection on the south-east, ships can never enter in a heavy sea with that current running out.
 1152. That was the flood of 1893? Yes.
 1153. Did what you have mentioned occur at the height of the flood? Yes.
 1154. How long did that flood last? From two to three days.
 1155. What is the velocity of the current of the ebb-tide at ordinary times? From 3½ to 4 knots; spring-tide, about 4 knots.
 1156. It varies from 3 to 4 knots? Yes. It does not run so rapidly when there is a neap-tide as it does when there is a spring-tide.
 1157. Are you aware that there is a shoal now forming opposite the "Cawarra" buoy extending across the fairway? Yes.
 1158. Has the water been steadily shoaling at that point? Yes. The north side of the channel has shoaled a great deal. Yesterday I was sounding there, and found 20 feet where we have had 22 and 23 feet.
 1159. Were you here when the northern breakwater was extended? I was here before there was any breakwater at all.
 1160. Since the extension of that breakwater has not the effect been to create a considerable scour towards the entrance? Yes; it took away a bank which existed near the end of the northern breakwater. It came a long way out into the harbour. The first fresh that came down afterwards cleared the bank away. I suppose it left 7 feet of water where before it had been almost dry.
 1161. Do you think that seas coming from the south-east, and striking the northern breakwater, would expend themselves on the wave-trap? I believe they would.
 1162. Would that create a greater range in the harbour than there is at present? A sea coming in has a tendency to follow any wall. It would go along close to the northern breakwater, and expend itself on the beach instead of coming into the harbour.
 1163. You are of opinion that if the breakwater is extended as far as the "Cawarra" buoy it will be necessary to extend the southern breakwater 500 feet? Yes, to make a safe entrance.
 1164. You also suggest that that breakwater should curve to the northward? Yes.
 1165. In a south-easterly gale which way would the seas tend? They will strike the northern breakwater, and run along into the harbour if not protected by the southern breakwater.
 1166. *Mr. Levien.*] When the dredges take out sand, has it any effect upon the bar? It must have a little effect upon the bar when they are towing out in a north-east wind; the barges are full, and the sea makes a clean breach over them. I have seen them towing out those lighters, and I can safely say that they have lost a fourth or a fifth of what was in them before they got clear of the end of the breakwater in the very place where we want deep water.

1167. It is washed over on the bar and makes it shoal? They lose the silt from the barges on the bar.
 1168. How much? A good percentage. I should not like to say how much. I believe that if the silt was deposited on land, instead of being taken outside, we should have deeper water on the bar than we have.
 1169. Have you noticed, since they commenced depositing silt outside, any more sand at Nobby's than there was before? Until they commenced this heavy dredging at Newcastle I never saw any sand about Nobby's at all; it is bare stone; but since this heavy dredging, every south-east gale brings thousands of tons into the harbour, making it shallower.

Mr.
G. Melville
4 April, 1895.

1170. *Mr. Lee.*] You would lead us to believe that depositing the silt outside is having an injurious effect upon the bar? Yes.

1171. A portion of it is washed up and deposited on the bar? I am certain that a lot of it is lost on the bar as they are going out with it.

1172. Is not that silt which they take out of the harbour nearly all mud, deposited by the floods? It is mud and sand.

1173. Did you ever find this silt on the bar? I cannot say that I did.

1174. Is it not always clean sand? As a rule it is sand and gravel.

1175. Would that lead you to believe that any portion of the silt had been washed up in that place? No doubt the tide took the mud away but not the sand.

1176. They have been dumping the silt outside off Big Ben for a long time at the rate of a couple of million tons a year? Yes.

1177. Has it caused any shoaling at that point? It has made the water perceptibly shoal. The Harbour-master is continually looking after them to see that they deposit the silt in the right place.

1178. What was the depth of the water before they commenced dumping there? I could not tell you.

1179. How much do you think it has shoaled? I do not know.

1180. *Mr. Hayes.*] The loss of silt is only in heavy weather? In the north-easter when there is a sea on.

Thomas Brooks, Esq., marine surveyor, Newcastle, sworn, and examined:—

1181. *Chairman.*] What are you? I am a marine surveyor—Lloyd's surveyor for the port of Newcastle. T. Brooks, Esq.

1182. Are you a member of the Marine Board? I am.

1183. You know the proposed harbour works? I do.

4 April, 1895.

1184. *Mr. Levien.*] How long have you resided in Newcastle? Thirty-five years.

1185. How long have you been on the Marine Board? About a couple of years.

1186. Have you seen the plans of the proposed harbour works? I have not studied them very carefully.

1187. Will you give us your opinion of those improvements? I think they will be of very great advantage to the port.

1188. Why? They will increase the scour, and deepen the bar.

1189. What is your opinion as to the proposed northern breakwater? My opinion is that the northern breakwater is absolutely necessary to create a scour. You cannot dredge the bar, so you must create a scour by artificial means.

1190. Do you think the southern breakwater ought to be lengthened? I do, decidedly. Unless the southern breakwater is extended, I should let the northern breakwater stay as it is.

1191. What distance would you extend the southern breakwater? I could not give you the exact distance, but it should be extended sufficiently to break the seas from the Big Ben rock.

1192. Roughly speaking, how far would you say? About 500 feet; 200 feet of it has been washed off the end. When that was standing the water was comparatively safe and smooth, but since that end has been washed off the bar has been absolutely dangerous. The seas have been heavier and more dangerous during the last five or six years than they ever were before.

1193. Do you think the southern breakwater ought to be continued before they proceed with the northern breakwater? I think it would be judicious to have them carried out simultaneously.

1194. Have you had any complaints made here to the Marine Board about ships of large draught being unable to take their full cargoes? I have heard several complaints, but nothing has come before me specially.

1195. Will you give us your opinion generally as to what ought to be done for the improvement of the harbour? I am not a harbour engineer, but from my long observation, and having an interest in steam-ships that leave here morning and night every day in the year, I have some knowledge of the matter. I think that something must be done to obviate the heavy seas which break on the bar. Years ago it was a very short bar, and there were a couple of seas and you were over it. Now it has extended seaward; the shoal water has been gradually shifted out, and instead of having one or two seas when you cross the bar, you have half-a-dozen very dangerous seas in consequence of the shoal waters.

1196. Do you think there is any necessity to increase the accommodation for the shipping in the north harbour? Decidedly. The want of facilities for mooring ships after being loaded has been a very serious drawback to the port. Eight or ten vessels of large tonnage have been detained from five to ten days. Sometimes they have been compelled to lie alongside the cranes, there not being a berth in the north harbour where they could be moored, and that, of course, has prevented the loading of other vessels with coal, causing serious loss to the port and to the railways.

1197. When these detentions take place is it more expensive to the shipowners? Unquestionably. £25 a day would be the loss to the shipowners for the detention.

1198. Is there anything else you wish to say why these improvements should be gone on with? I came here in 1858 with a small vessel only drawing 12 feet of water. At that time we could only take 250 tons of coal, and we had to lighter the balance to the Horse-shoe. I have seen the port grow. The improvements which have been carried out hitherto have been of very great advantage to the port, and to the Colony at large.

1199. What is your opinion about the basin? If the trade grows the basin will be necessary, and it will be a safe place for vessels. That is a very old scheme—I saw it twenty years ago. By the reclamation, they are utilising ground which was valueless, but which, in time to come, will be of incalculable value to the country.

1200. *Mr. Davies.*] Have you had the carrying out of improvements in connection with the harbour under your own supervision? I constructed a great portion of the wharf along the Bullock Island dyke.

1201.

T. Brooks,
Esq.
4 April, 1895.

1201. You suggest that immediately opposite Bullock Island, in the northern harbour, there would be a good mooring place for ships? Yes, if it is deepened sufficiently to allow ships of ordinary draft to swing.

1202. You are aware that it is very shallow at present? Yes, and there is a very dangerous rock with only 13 feet of water upon it, in the north harbour opposite No. 4 crane.

1203. Are you surprised that that should have been allowed by the Harbour Department to remain? I am. I have reason to believe that serious damage has been sustained by vessels in consequence of that rock.

1204. Do you know whether attention has been called to the existence of that rock? Yes.

1205. And no action has been taken? No action has been taken as far as I know.

1206. Is it shallow water all along opposite Stockton, a considerable distance up north harbour? Yes, there is a mud flat there. To get into the channel you have to cross straight over from Bullock Island to Stockton.

1207. Is that the portion of north harbour which you say would, if dredged out, make a good place for mooring vessels? That is part of it. The whole space should be dredged out in the north harbour.

1208. That would be a very expensive undertaking, would it not? I do not think so.

1209. Would there not have to be millions of tons of silt removed? Yes; but they say that they remove 3,000,000 tons a year.

1210. How many years would it take to remove it to the depth of 4 feet? You would have to take into consideration the silt continually coming down the river.

1211. Supposing that the silt is taken out to sea, would not the first great flood in the Hunter replace it? At present our dredging appliances are only sufficient to cope with the silt washed down the river by the floods.

1212. Do you regard the Hunter and its floods as great contributors of silt to the harbour? Unquestionably. If we had not the silt that comes down the Hunter during flood-time to contend with we could have dispensed with our dredging appliances long ago. For the last two or three years they have done nothing but take out silt which had been washed down by the floods.

1213. What influence, in your opinion, has the northern breakwater had upon the channel? It has created a very great scour indeed. From the line of the northern breakwater there was a spit running out about 500 feet. I have fished there for whiting years ago, but the effect of the breakwater has been to wash away that spit, and to deepen the channel.

1214. You admit then that the construction of the northern breakwater has created a scour, deepened the channel, and shifted the bar further out? Unquestionably it has. It has removed the bar further out to sea, and it may have made it more dangerous.

1215. Then you are in favour of the Departmental scheme which provides for the continuation of the northern breakwater? I am, decidedly.

1216. Would that continue the scour and carry the bar out into deep water? As far as I can judge it would. From the end of the breakwater about 1,000 feet out, the influence of the scour is felt. I conclude that if the breakwater is carried out, as proposed, 1,000 feet from the end, it would take it into 40 feet of water.

1217. You are also strongly of opinion that it would be absolutely necessary to extend the southern breakwater? I am. We have what we term a lift on the bar—a rise and fall of the waves. If you prevent the wash from the Big Ben rock from breaking across the harbour, and can reduce that lift, say 2 feet, that will give you a foot more water on the bar. Every foot that you reduce that lift is equal to 6 inches more depth of water on the bar.

1218. Are you more strongly in favour of the extension of the southern breakwater than of the construction of the northern breakwater? Supposing there was only sufficient money available for that, I should say spend £50,000 on the southern side before you spent twopence on the northern side.

1219. Would you prefer to spend money on the southern breakwater instead of on the northern breakwater? Yes; I believe it will give us greater safety on the bar. It will save the dangerous sea that now exists. I am connected with the Hunter River Company. Our ships run every day, and it is sometimes appalling to me to see the great seas that break across that bar. It is much more dangerous than it has been during any other time for the last ten years. I attribute that to the washing away of the end of the southern breakwater.

1220. Are you in favour of the carrying out of both the breakwaters? I am very much indeed. It will give us a great scour, and gradually deepen the bar.

1221. Will it make the harbour safer, and more attractive to shipping? Unquestionably it will.

1222. Are you in favour of the wave-traps? That is a matter that is new to me—I have not studied harbour engineering. We have a natural wave-trap which has a splendid effect. But for it, we should not be able to use the Queen's Wharf at all. The proposed improvements will make it still more effective.

1223. Did you see the letter in the newspaper, signed "Delta"? I did.

1224. What is your opinion in regard to the suggestions contained in that letter, and illustrated on the plan? I believe that if the proposal made by "Delta" were carried out, it would ruin the harbour. I read that letter very carefully, thinking, at first, that there was something in it, but after studying the thing out, I found that it was all bunkum. When the steamer "Federal" was ashore, I had to float her, and then I had a special opportunity of testing the strength of the current during flood-time, and at other times, and my observation was that there was an immense scour during an ebb-tide along the northern breakwater going to sea, and during flood-tide the current sets southward, from the beach. It made the water where the "Federal" was, like a boiling cauldron, like pea-soup. A great quantity of sand came in, and formed that spit. The flood-tide came in a certain distance and then set in a southerly direction. That is what formed the spit in front of the northern breakwater. As for the wave-trap silting up, the scour on the north side would, I think, be sufficient to prevent that.

1225. *Mr. Hayes.*] You do not favour the suggestion of "Delta" with regard to the construction of a breakwater? I think it would ruin the harbour.

1226. You say that during the last ten years a heavy sea was breaking across the present entrance? Yes.

1227. Is that not caused by the shoaling of the bar? The original bar was abreast of Nobby's, but it was gradually washed out between 800 and 1,000 feet, and the water being less shallow than it was when the bar was opposite Nobby's it is more subject to the influence of heavy seas. It creates a continual sea, and makes it absolutely dangerous for ships, in the heavy weather, to come in.

1228. *Chairman.*] Of what material is the Oyster-Bank composed? Sand.

Clarence Hewson Hannell, Esq., Shipping-master, Newcastle, sworn, and examined:—

1229. *Chairman.*] What are you? Shipping-master at the port of Newcastle.

C. H.
Hannell, Esq.

1230. *Mr. Roberts.*] How long have you resided in Newcastle? Fifty-eight and a half years. I was born at Newcastle.

4 April, 1895.

1231. How long have you occupied your present official position? Thirty-two years.

1232. I suppose you have taken an interest in the improvement of the harbour? I have.

1233. Have you been a shipowner during that time? I was a shipowner for some years.

1234. Therefore you are financially interested in it? I was, and I may say that I am now. All my property is here.

1235. Your position as shipping master does not officially make you acquainted with the navigation of the port? No; it does not. But I have been brought up here. Boating has been my pastime; I have been a yachtsman, and I have knocked about the harbour for many years, so I can speak pretty well on matters concerning it. I have been over it thousands of times.

1236. Have you made yourself acquainted with the present proposals for improving the entrance? I have not seen the plans, but I have read about them in the newspapers.

1237. You will see that it is proposed to build the northern breakwater on the Oyster Bank, the first section being 3,000 feet, then afterwards to add another 750 feet, and it is proposed to replace some 200 feet of the southern breakwater which has been washed away. It is expected that the breakwaters will create a scour that will ultimately remove the bar into deep water. What is your opinion of the proposal? I believe it will have a good effect in giving us deeper water on the northern side of the harbour.

1238. Were you in Newcastle when the present northern breakwater was constructed? I was.

1239. Will you admit that after the work was finished there was a greater scour in the channel, causing the bar to be removed further seaward? I think it has given more scour. All along the northern side the water runs very slack, and always did. From the point where the northern breakwater is constructed to the point where they are building the retaining-wall, with the tide at spring ebb, by keeping close in on the Stockton side, you would have the current the reverse way, and *vice versa* with the flood-tide.

1240. Would you favour the construction of the northern breakwater as shown on the plan? I think it would have a good effect.

1241. Then the remaining work is the construction of the south guide-wall for 1,000 feet on the southern side near the boat-house? There can be no doubt as to the efficacy of that.

1242. Have you noticed that wave-trap? I have not taken particular notice of it. But I have heard pilots and others speak of its usefulness.

1243. You certainly view with satisfaction the contemplated improvements? I do. They will be very good indeed. I think that the southern breakwater should be run from 250 to 300 feet further.

1244. Two hundred feet of it has been washed away, and it is proposed to reconstruct it? I think one of the best things would be to run it out 300 yards further outwards and outside the line of Big Ben. A fearful sea comes in that direction. If the southern breakwater was run out in a curve towards Big Ben, about 300 yards, so as to let the sea come and break outside of Big Ben on the breakwater, instead of across the harbour, it would have a good effect.

1245. Do you think that an additional 500 feet would be of great service? I should take it out 500 feet. You cannot run it too far, and you will find that the water is not so deep towards Big Ben.

1246. Your object is to prevent the seas from getting into the harbour? Yes. The southern breakwater is a great boon to the port, but it is not of sufficient length.

1247. Would you prefer the southern breakwater being extended to any improvement whatever being effected on the northern side? I think it necessary to have a little extension of the northern breakwater to increase the scour. I think the plan of removing the sand from the bar would have a good effect.

1248. The only improvement you suggest would be the further extension of the present southern breakwater? Yes, to keep the seas out.

1249. If the entrance be made pretty well perfect do you think we should have visits from a large number of ships of heavy tonnage? Of course we should. Vessels of large tonnage are prevented from coming to Newcastle because of the scarcity of water.

1250. Would there be a difficulty in mooring them after they were loaded? I do not know. Dredging would, of course, have to be resorted to to provide accommodation for them.

1251. Is it not considered that the mooring of vessels in the fairway now is fraught with very great danger? It would be as well if there were more room. I do not think we can get more room by scouring—it will have to be done by dredging.

1252. I suppose that in the north harbour would be a good place to moor ships? Yes, there is a lot of room there. The Government are doing good work on the northern side of the harbour by that retaining wall that they are making from Stockton, and by reclaiming the land.

1253. You quite approve of that? I do. They throw a lot of dead water that covered a considerable area of shallows into the harbour. You will now not get more than 2 feet on it at high water. By building a wall you throw the water into the channel. The water comes down from the flats just above Stockton, and the silt and sand are deposited on that corner. But by building the wall and filling in, I think we shall get an effectual scour.

1254. Have you heard complaints as to the difficulty of mooring ships in the harbour after they have loaded at the dyke? Yes, there have been complaints about vessels having to go straight to sea from the cranes.

1255. Are you acquainted with the basin in course of construction at Bullock Island? I have seen it.

1256. Do you not think that that would be preferable to dredging out the north harbour. If we dredged out north harbour would not the first flood that came fill it up? It would do a great deal towards it.

1257. Do you not think the basin there would be less liable to be filled with silt? I do.

1258. What effect would it have upon the harbour as regards the mooring of ships? It would be a capital thing if it were dredged out inside the dyke. It would be a very good work indeed.

1259. The principal work at present is to get over the difficulty at the entrance? Yes.

1260. Do you think that the proposed works are satisfactory? I think they are very good indeed, especially if they run a breakwater out towards Big Ben to stop the seas from coming from there.

1261. The extension of the southern breakwater for the distance you speak of would be very expensive, would it not, on account of the great depth of water? It would be an expensive work, but it would be worth all the money.

- C. H. 1262. You know it is proposed to make two sections of the northern breakwater, one of 3,000 feet, the Hamnell, Esq. other of 750 feet? Yes.
- 4 April, 1895. 1263. Do you think it would be more desirable to make the first section only up to the "Cawarra" buoy, and then spend the balance of the money in extending the southern breakwater, instead of on the second section of the northern breakwater? If you only extend the northern breakwater to the "Cawarra" buoy you will scarcely give the bar enough scour. It would not be far enough out.
1264. You think that it ought to go out the full 750 feet? Yes, it would be better to give sufficient scour, but the action of the heavy seas would probably wash it away.

Thomas Brooks, Esq., marine surveyor, Newcastle, sworn, and further examined:—

- T. Brooks, Esq. 1265. *Chairman.*] You wish to make a statement? Yes. I should like to state, in addition to my evidence, that, from the reports received from the harbour master from time to time, I am of opinion that the place in which the silt is now deposited by the dredges is injurious to the harbour, or if not at present April, 1895. it ultimately will be, as it is placed to windward, that is, to the south-east. Our prevailing winds are from the south and south-east. It will shoal the entrance to the harbour, and the shallower the water the worse the sea is.
1266. Do you know the depth of water in which they have deposited the silt? They say it is 15 fathoms.
1267. Do you suggest that the position shall be altered? I would suggest that the silt be deposited away to the north, where it can do no harm—to leeward. Then it will be impossible for it to enter the harbour.
1268. Have you any evidence of its having done any damage? I have not, except from my own personal observations. When it is blowing hard, if you walk out on the southern breakwater, the sand is blown about, and it nearly cuts your eyes out. Where does it come from. We have a bare bed of rock extending a mile out to sea. The sand cannot come from the rock. It must come from the sand deposited outside that rock being stirred up by the continual action of the ocean. If you have walked over the breakwater you would notice a deposit of sand between the rocks, like snow deposited by a snow-storm. To obviate the possibility of any injury to the port the silt ought to be deposited to the northward instead of to the south-east.

Captain John Paton, Berthing-master, Newcastle, sworn, and examined:—

- Capt. J. Paton. 1269. *Chairman.*] What are you? I am Berthing-master at present.
- 4 April, 1895. 1270. Have you been here long? I have been here ever since 1856.
1271. You have a full knowledge of the port? Yes; I have not been above eight or nine months away during all that time.
1272. Are you at times inconvenienced in regard to the berthing of ships by the roughness of the harbour? Yes. There is a range in the harbour which causes great trouble in securing a vessel.
1273. Is the range greater or less than it used to be? It has increased since that northern breakwater was put there.
1274. You believe that the northern breakwater is the cause of it? I have seen the sea running along it, instead of expending itself on the beach.
1275. You think that the northern breakwater has increased the range? Yes. Years ago, when there was no range, we used to lay two or three vessels off. There was no range then close up to the A. A. Company's ground, and the A. A. Company's shoots.
1276. What effect has the building of the southern breakwater had? It has been a great protection to the harbour. It made the harbour more secure.
1277. You say that the range is getting worse? There was no such thing as a range at the A. A. Company's wharf until that northern breakwater was built.
1278. Has it got worse during the last five years? Not during the last five years.
1279. Do you know the scheme by which Mr. Darley proposes to get deeper water? I have had a look at it.
1280. Tell us briefly what you think ought to be done with the harbour? The scheme looks very well on paper. I think that the southern breakwater wants extending. If the southern breakwater were extended 400 or 500 feet it would prevent that roll that breaks on the northern breakwater, and runs up the harbour. It would go into that wave-trap.
1281. You would extend the southern breakwater another 500 feet? Yes, and then it would be as safe a harbour as there is anywhere.
1282. That is what you want to tell us? Yes.
1283. Is there anything that you want to say? I would stop the silt punts from going outside.
1284. You believe that they spill the stuff when going out? Yes. They are level with the water when they are going out. You can stand on the breakwater past Nobby's, and see the wake of discoloured water behind the barges as they go out to sea. There is plenty of room to the northward for depositing the silt.
1285. You approve of the silt being used for reclamation purposes, and the second idea would be not to fill the punts quite so full? There is plenty of room up to the north for the punts. I would not let them go out at all.
1286. You think they would spill the silt whether they went north or south? Yes.
1287. So you do not want the silt to go outside at all? No; the sea washes over them, and it is dangerous for the men to be on them.

David Williams, Esq., agent for the Union Steamship Company, Newcastle, sworn, and examined:—

- D. Williams, Esq. 1288. *Chairman.*] What are you? I am agent for the Union Steamship Company, and resident at Newcastle.
- 4 April, 1895. 1289. *Mr. Davies.*] How long have you resided in Newcastle? About twenty-three years.
1290. Have you been all that time connected with the shipping trade? Yes. Previous to that I was running a vessel out of this port.
1291. Have you seen the plans of the proposed improvements? Yes.
1292. Have you made yourself thoroughly acquainted with all the features of the scheme? I think so.

1293. What is your opinion, as a practical man, in reference to the proposed work? If the northern breakwater is carried out it must do good in several respects. I believe that a deal of sand comes round the northern breakwater and settles in the harbour, and on the bar, and the extension of the northern breakwater would stop that. When taking heavy ships down we have a strong current of from 5 to 6 miles an hour running direct across to Stony Point, which is a very dangerous part. If the northern breakwater was run out it would also stop that, but it would run the seas into the harbour. We shall never be able to hold the ships in the harbour unless the southern breakwater is run out at the same time.

D. Williams,
Esq.
4 April, 1895.

1294. Unless we extend the southern breakwater it will be impossible to moor ships alongside the wharf? Not only that—a ship coming round from the southward gets the sea on the port quarter, and broaches to and runs inside the southern breakwater. If you have not sufficient room for your ship to pick herself up from about where the bar of 1894 is, before reaching the southern breakwater, she would run ashore. The southern breakwater ought to be carried out more to the north-east.

1295. And extended how far? I could not tell. It should certainly go outside Big Ben. If it was carried out to the north-east it would turn the water to the southward, instead of taking it across as it does now. When running in with the barque "Australind" I was signalled to go to sea, but I could not go to sea—it was impossible. Our ship would not beat out of the bight against the wind and sea, and as soon as you get under Nobbys you lose the wind. If the southern breakwater is extended, and the end is turned towards the north-east so as to carry the sea to the south and westward, instead of as at present to the north-west, we should have very little sea on the bar.

1296. So as to conduct the waves out of the harbour, instead of into the harbour? Yes. Then, as soon as the ship got inside the breakwater, we should have calm water. It is stated that it is 1,300 feet across at Stony Point, but I do not think there is more than 120 feet of deep water there. I had one of our ships drawing 22 ft. 11 in. outside that rock; she was only 60 feet southward of the line of fairway, and she was aground. It is the narrowest part of the harbour, and it is most dangerous for vessels meeting at this point.

1297. Was it high tide, or what? It was high water. There was a barque coming in on the northern side passing us on the port side.

1298. Had she plenty of water? Yes; there is plenty of water both north and south of this Stony Point rock.

1299. How was it that you had not plenty in the fairway? On account of the rock. That rock holds the sand, and the sand had silted up outside. If that rock were removed it would make a better current there.

1300. Is that the only occasion on which you had trouble with the shipping? No. When the "Wakatipu" was going out the other morning we did not know whether we had not got aground—and she draws only 18 feet—on account of another steamer crossing in on the leading mark and we had to come very close to the rock or strike the incoming steamer.

1301. So that in your opinion, one of the most awkward parts of the harbour is the fairway at Stony Point? Yes; the rock at Stony Point should certainly be removed. In going down the fairway you cannot tell whether you are on that rock or not. It is a cable length from the shore, but the thing is to judge a cable length.

1302. Has the channel improved since the extension of the northern breakwater? Yes. When I first came here we could only get 17 ft. 6 in. over the bar.

1303. The harbour has been very much improved by the construction of the present existing breakwater? Yes.

1304. Do you believe in the carrying out of the breakwater on lines shown on the plan? Yes; but it will throw the sea into the harbour. At the same time it will stop the sand which is lodging on the bar of 1894. It is very hard to say where that sand comes from—some people say it is from the silt that is now taken out to sea. If you go down the line of the proposed breakwater the water is thick with sand coming round into the harbour. It must either come into the harbour or settle in the channel.

1305. Supposing the northern breakwater is carried out as shown on the plan, you are strongly of opinion that the southern breakwater must be extended a considerable distance out to sea? Yes; I do not think the northern breakwater will stand without the extension of the southern breakwater.

1306. Supposing the northern breakwater were constructed to the point shown on the plan by the Department, and the southern breakwater were extended a considerable distance to sea, and instead of turning towards Big Ben it turned towards the north; would that give greater safety at the entrance for ships entering the channel? Yes; I am quite sure of that.

1307. Do you think it would quieten the water at the wharfs? I am sure it would. When they started to extend the northern breakwater, and we were lying at Queen's wharf, we had to buy bales of hay, saw them in two, and hang them over the sides of the ships for their protection. We have had to let go all our moorings except the bow chain. That was before the southern breakwater was extended.

1308. The southern breakwater has been of great advantage to the port? Yes; it has stopped the sea from coming in.

1309. Is there anything else that you want to tell the Committee? I can make no more suggestions. The southern breakwater will have to be extended—and that is compulsory—after the northern breakwater is finished, to make it a safe harbour. The American mail-boats could not come up here, because their ships at flood-tide could not make the turn at North Shore point.

1310. What about the rock opposite Stony Point—will it be necessary to remove that rock? Yes.

1311. Have representations been made to the Department about it? Yes.

1312. But nothing has been done? No.

1313. The red line on the plan is the line of the probable fairway, and if the breakwater was carried out towards the bar it would leave about 400 feet in that line;—is that a sufficient space for vessels to travel up and down? Yes; ample.

1314. Would it not get rid of a good deal of the objections to coming down to Stony Point if that is the fairway when the works are carried out? No; you come down end on with a loaded vessel on a spring-tide, and if you alter the course in the least you will send your vessel on to Stony Point. There is no room to pass there.

1315. Have you anything further to suggest? Along that line there will be a shorter curve round Stockton Point. To make Newcastle a safe harbour the mooring buoys should be up the north harbour.

1316. Have you a sufficient depth at north harbour? No.

1317. It would take a long time to get the depth, would it not? I do not think so. I think that if Spectacle Island were stoned round it would not.

1318.

D. Williams, 1318. You think they could soon get the depth? There is a gutter kept clear there. A good deal of the north harbour is deep water.
Esq.

4 April, 1895. 1319. Have you anything further to say? The flood-waters are greatly against the interests of the port, and when the harbour is in flood we cannot shift our ships, because there is such a strong current. If that rock at Stony Point were shifted, it would enable the water to get out better. It is said that there is sufficient space at that point to take the water from the river. The tug "Goolwar" in assisting the "Wairarapa" to get away from the wharf down off Stony Point was seven hours in getting back. To prove that there is not sufficient space opposite Stony Point to get the flood-waters out, I may state that when coming up the harbour the water was like a hill. We steamed about half-way abreast of Stony Point, then were driven back by the flood-waters.

1320. The force of the water coming down would force you back again? Yes; the water being fully 8 or 9 feet lower outside the harbour than it was inside.

1321. *Mr. Lee.*] The water was 8 or 9 feet lower outside at Stony Point than it was on the harbour side? Yes; you could see the water like a bank.

1322. That is a very big statement—I presume it was all flood-water? Yes, and the tide-gauge would prove this as the water was very high at the wharf, and for two days did not fall more than 9 inches, but at the end of the breakwater would go down to its usual low-water mark, clearly showing the water much higher inside than out.

1323. Where would you mark the line showing where the bank of water was? About 100 yards inside of Stony Point.

1324. Did it ever occur to you what made the water higher? There was not sufficient space for it to get out to sea.

1325. Therefore, the water in the harbour was much stiller than it would be at Stony Point? Yes.

1326. During the time that the flood-water was in a state of suspension, would it be likely to deposit its sediment? It does, most decidedly.

1327. So that there is a large quantity of silt deposited after every flood? Yes.

1328. Do you think it is sound reasoning to assume that a current being unable to get out steadies itself and deposits silt? It does. If I had my way I would have a channel through to the other side of Stockton to take the flood-water away, which would save about three miles and give the water a straight run to sea.

Mr. James Rorison, master mariner, Newcastle, sworn, and examined:—

Mr. J. Rorison. 1329. *Chairman.*] What are you? A marine engineer. I have been in the Harbours and Rivers Department for twenty-four years in charge of the dredges. I am a marine engineer and master.

4 April, 1895. 1330. Are you in charge of dredges at the port of Newcastle? I have been in charge of the dredge "Newcastle" for sixteen years. I am now retired.

1331. During that period was it your practice to convey the silt out to sea? Yes; that has been the practice for many years.

1332. Where did you dump the silt? About 3 miles outside of Nobby's. We have a mark in the city that we go by.

1333. Have you always confined yourselves to the same spot? Yes; as nearly as possible.

1334. What is the depth of the water there? We were not allowed to dump the silt in less than 14 fathoms of water.

1335. After many years of dumping did you notice that it caused the place to shoal? It does shoal when you go further out.

1336. Are you prohibited by a regulation from dumping silt in less than 18 fathoms of water? Yes.

1337. And are those regulations adhered to? They are.

1338. Was it your practice to load the barges gunwale deep? They must be loaded gunwale deep to get the proper quantity.

1339. Did any of the silt wash overboard when it was going outside the heads? Very little. The silt settles before it gets to the heads. It is pure water that goes over the sides there.

1340. Supposing there were occasional waves, would they wash out the silt? Very little; it would not be perceptible.

1341. Of course, the number of hoppers sent out in a year would be very large? Yes.

1342. Has it ever been complained to you that you were doing damage to the harbour by sending the silt out there? No one has complained to me; but there have been complaints about the punts not going far enough out to sea.

1343. In heavy weather has any portion of that silt found its way to the bar? I do not think so. It has made no perceptible difference on the bar.

1344. Then, whatever may have been the cause of the shoaling on the bar, you do not think that it arose from silt being washed off the barges, or from the silt being deposited by them outside? No.

1345. What theory do you hold as to the formation of that bar? I cannot form any theory. That is an original obstruction—it is getting deeper now than it used to be.

1346. If you take the position of the bar at the present time, you will see that it is very much more eastward than it was formerly? Yes. If there is any silting at all, I think it is from the silt coming down the river.

1347. I am informed that it is not silt but sand? It may come in from the sea; it is not from the silt carried out by the barges. A lot of sand comes down the river.

1348. Those connected with the shipping say that you have not taken enough care in taking out the silt? We are very strictly watched. If the steamer is not taken out the right distance the matter is reported to the harbour-master.

1349. You must have deposited many thousands of tons? Yes.

1350. And would not that form a bank and be affected by heavy weather? I think it would go away to the south. It is well out to sea.

1351. When you first took charge of the dredges was any portion of the breakwater from Nobby's constructed? They were making it.

1352. What has been the effect of the southern breakwater upon the entrance to the harbour? That would give a partial scour.

1353. Has it caused a larger sea to flow in there? No; the range is not so great now as it used to be.

1354.

1354. Have you lost as many days in the year since that breakwater was made as you did before it was made? No; it is only when there is bad weather outside that we cannot take the punts outside. It is not on account of the range.

Mr.
J. Rorison.

4 April, 1895.

1355. Do you desire to offer any opinion as to the proposed works? From what I have read, I should say that the northern breakwater ought to be extended as far as the southern breakwater.

1356. It is proposed to start the new breakwater near Clyde-street, and carry it out to the Oyster-Bank, a distance of 3,750 feet, leaving a space for a wave-trap; do you approve of that scheme? I think it is a very good scheme.

1357. If the proposed northern breakwater were constructed, and the southern breakwater were restored to its original length, do you think that would be an advantage to the port? I think it would be a great advantage to the port. It is necessary for vessels coming in and going out. That breakwater being carried straight out will cause a great scour through the channel.

1358. Is there any necessity to construct any of these works? Yes.

1359. Is not the harbour sufficiently good at present to enable the traffic to go on? It is not. We are getting such long deep ships now.

1360. When you talk about long ships, you are referring to the inside of the harbour? Going in and out, and inside as well.

1361. It does not matter how long the ships are if they do not draw more than a certain depth of water? Long ships are more difficult to manage than short ones. They are more difficult to steer, and at the entrance we have no true current. It requires great judgment to steer a ship into this harbour.

1362. Do you think that by confining the water we can create a scour? Yes.

1363. And it would offer no serious obstacle to navigation at that point? No, it would improve the navigation.

1364. *Mr. Davies.*] Did you see the scheme proposed by "Delta" in a letter to the newspapers? Yes.

1365. Do you know anything about it? I do not.

1366. You see a semi-circular line on the plan representing "Delta's" proposal;—would you favour that? Certainly not.

1367. You do not think it would improve the harbour? No. It would protect Stockton beach, but nothing more. I have got a scheme myself for the improvement of the inside of the harbour. I will hand in a description of it.

FRIDAY, 5 APRIL, 1895.

[*The Sectional Committee met at the Office of the Marine Board, at 10 a.m.*]

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. JOHN DAVIES, C.M.G. | JAMES HAYES, Esq.

The Hon. CHARLES JAMES ROBERTS, C.M.G. | ROBERT HENRY LEVIEN, Esq.

CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed Harbour Improvements at Newcastle.

Herbert Cross, Esq., President of the Marine Board, Newcastle, sworn, and examined:—

1368. *Chairman.*] What are you? I am a master mariner, and President of the Marine Board of H. Cross, Esq. Newcastle.

5 April, 1895.

1369. Have you a full knowledge of Newcastle and its surroundings? I think so.

1370. *Mr. Hayes.*] Have you seen the plan of the proposed improvements to Newcastle Harbour? I have only seen it for a few minutes; but I perfectly understand it.

1371. Have you been long connected with the port of Newcastle? Thirty years.

1372. What is your opinion as regards the proposed improvements;—will they have the effect anticipated? As to scouring, yes. But I have always thought that an extension of the southern breakwater should go on contemporaneously with the extension of the northern breakwater. There is no doubt in my mind that that should be done, for the purpose of protecting the end of the northern breakwater, and also to smooth the water inside. It would be a barrier to keep back the heavy seas that come from the south-east.

1373. You were here when the present northern breakwater was erected? Yes.

1374. What was the effect? The effect of that, before the southern breakwater was commenced, was to disturb the ships lying at Queen's wharf, where they formerly lay quite still. It was the only wharf at that time. The sea impinging on that northern breakwater created a range, and the ships lay very unsafely there.

1375. When the southern breakwater was extended to its present position, did that improve the state of the harbour? It improved it to a great extent.

1376. Is the range in the harbour now more than it was before the erection of the northern breakwater? Not since the southern breakwater was completed.

1377. Then you are of opinion that if the northern breakwater were extended it would be absolutely necessary to extend the southern breakwater? I think so.

1378. To what extent? I should say 500 or 600 feet, even more, but at least 500 feet.

1379. Are you of opinion that if the breakwater is extended 500 feet further there will be no probability of the seas coming into the harbour? There will be a great lessening of the probability of that.

1380. What, in your opinion, will be the result if the breakwater is not extended? A greater swell and range in the harbour, and the possibility of bringing more sand, and the blocking up of the entrance.

1381. Would the effect of extending the northern breakwater be to create a still stronger scour on the bar as it now stands, and to carry that bar seaward? Without extending the southern breakwater?

1382. Yes? I do not think so. I think it would deposit itself sooner on the bottom. The flood waters and the ebb tide would bring down what silt would be there, and it would fall to the bottom before it ought to do.

1383-4. Is not the shoal which is now forming on the site of the present bar caused by sand coming round from seaward, and not from silt brought down by the river? I should fancy it is formed by the silt mostly.

1385.

- II. Cross, Esq. 1385. Silt from where? From the river, because it has developed itself more since the flood of 1893.
- 5 April, 1895. 1386. But at present is the current which is confined to a line between Stony Point and the eastern end of the northern breakwater very strong, and is there not a scour there? Yes.
1387. When it leaves that place the current breaks off towards the north? Yes.
1388. How is the current at the bar now? The ebb tide goes away to the northward.
1389. Where does the effect of the current cease? That is according to the strength of the ebb tide.
1390. On the average? Not more than 2 or 3 miles.
1391. Is the velocity of the current, taking it from Stony Point across to the eastern end of the northern breakwater, very much diminished by the time it reaches the end of the southern breakwater? No; not until it gets outside altogether.
1392. You have stated that it breaks off to the northward at the end of the breakwater? No; not close to the end—further out.
1393. In your opinion, does it become diminished at all up to that point? Yes; as the area enlarges it diminishes naturally.
1394. Does the velocity of the current diminish by the time it gets to the end of the southern breakwater? No.
1395. Then what is the use of bringing up the other breakwater to increase the scour? The purpose for which I should advocate the extension of the southern breakwater is the protection of the northern breakwater.
1396. The object of the northern breakwater is to create a scour by which the present bar will be carried out into deep water. If it will not increase the velocity of the current there, it cannot increase the scour? I say that it would—it has done all along.
1397. You say it would be absolutely essential to carry the southern breakwater 400 or 500 feet further to give easier access to the port, and to protect the northern breakwater? Yes.
1398. Would it be more difficult in ordinary weather to come into the port if the southern breakwater is not extended? No; it might not be more difficult than it is now, but if the breakwater were extended, it would make it safer for the ships.
1399. Is there not a break right across to the end of the southern breakwater? The break would be further out. The extension of that southern breakwater has already sent that break further seaward, and if it is further extended it will make the break go further out.
1400. By creating a current? No, by protecting it from the south and east winds.
1401. Is it essential, looking at the future development of the port, that the depth of the water should be increased in the channel? Yes; I think it is necessary to meet the requirements of the future trade, and to preserve the trade which we have already, it is necessary to have more water in the harbour and on the bar. It is no good having deep water in the harbour unless there is a sufficient depth of water on the bar to enable deep-draught vessels to get out.
1402. If the water at the bar is increased by 3 feet in depth as proposed, will that necessitate a similar depth in the harbour? Yes; it is not only that the depth of the vessels is increasing, but they are increasing in length, and it is necessary to have space for them after they are loaded, so that they can stay a day or two. They cannot do so now, because very long vessels cannot swing in the harbour without running a great risk of coming to grief. The consequence of that has been that those vessels must go to sea straight from the dyke, which is inconvenient, because a ship cannot always sail directly after the last lot of cargo has been put on board. The ships have had to remain at the cranes where they have been loaded, thus preventing other vessels from loading.
1403. Then you say that the harbour accommodation is not sufficient for even present requirements? It is not sufficient.
1404. And it will have to be increased? Yes.
1405. You see that basin marked on the plan—it contains an area of about 90 acres. When that is finished and has a depth of 26 feet, will it not be ample for the requirements of the port? It will be very awkward to take loaded vessels in and out there, and expensive too. There would be room for large vessels when loaded, but it would be a very inconvenient and expensive thing to take loaded vessels round there prior to their going to sea. They ought to be in the north harbour.
1406. It is proposed to have that place for loading vessels on the western side of the dyke;—would not that give a much larger accommodation to the port? Yes; you cannot let loaded vessels remain at the wharf, underneath the loading cranes. They must be taken to an anchorage, or a buoy in the harbour, for a day at least. Very often, when they are loaded, the bar is in such a state that vessels cannot go to sea.
1407. You consider it absolutely necessary to have increased accommodation for vessels which have been loaded, and are waiting to go to sea? Yes.
1408. The present accommodation is not sufficient? No; we should have to wait a long time before we got 26 feet of water there. I may say that I believe that the trade of the port will increase. I have already a list of over seventy vessels which are bound for this port at the present time. The company that I represent has about eighteen or twenty large vessels coming of 2,000 or 3,000 tons register each.
1409. Do you advocate the extension of north harbour for that purpose? Yes.
1410. I suppose you are aware that in flood time a heavy deposit of silt comes down the north harbour? Yes.
1411. After a heavy flood that part of the harbour would not be available for shipping purposes until the silt was removed? The increased scour should keep it comparatively at the depth at which the dredges would leave it, except on occasions of very heavy flood, such as that of 1893.
1412. Do you think that the extension of this breakwater would give an increased scour in the north harbour at the dyke, and on the Stockton side? Yes; the freer that entrance is—allowing more space to go out—and the more water there is on the bar, the more will the scour increase all the way down in my opinion.
1413. You see the reclamation works marked on the map;—when those are finished do you think that it will materially increase the scour in the north harbour? Yes; it will keep up the velocity with which the water comes down the river.
1414. And prevent the deposit of silt? It will not altogether prevent it, but it will lessen it considerably.
1415. Mr. Roberts.] Did you say that you had a list of seventy vessels that are expected in Newcastle? Yes; it is in this morning's paper.

1416. Will you hand in the list? I hand in a list of seventy-five vessels which are expected to arrive at H. Cross, Esq. this port up to the present date.
1417. Are they of such a tonnage that there would be a difficulty in getting them away from the port ^{5 April, 1895.} loaded? I do not know the tonnage of them all, but some of them will be large vessels.
1418. What do you call large vessels? Vessels drawing 23 feet of water.
1419. In the present state of the bar, would not such a vessel be able to leave with a load? In smooth water. If she drew more than 23 feet there would be a difficulty, and vessels drawing not more than 22 feet of water must wait for the tide and have smooth water.
1420. Have you had any experience of wave-traps? No; that is a part of the scheme which I think experimental.
1421. You may have noticed on the southern shore a wave-trap which has been in existence for some years, and has proved very useful? Yes.
1422. Considering the successful way in which that wave-trap has worked, do you not think it fair to assume that the wave-trap on the north side will be successful? The sea will bring a certain amount of sand with it. The idea is a little experimental, and not having had any experience of that kind of engineering, I should not like to give an opinion upon it.
1423. Do you think the trap would silt up there? I think it would a little.
1424. I suppose you have heard that wave-traps have been used in many other parts of the world? Yes; but perhaps not under the same conditions as those of this harbour.
1425. You entirely approve of the proposal to extend that northern breakwater shown on the plan? Yes.
1426. Do you think that the first section of the northern breakwater, that is, the 3,000 feet extending to the "Cawarra" buoy, would be sufficient to produce the necessary scour? When that is finished, I would stop at that, and look at the effect of it.
1427. Then the rest can be gone on with if it is found necessary? Yes.
1428. You think it would be more desirable to extend this southern breakwater 500 feet, and let the second section of the northern breakwater wait until you see the result? That is just my idea. With regard to the figures about the trade and other matters submitted by Mr. Keightley and others, I confirm them, knowing them to be very exact indeed.
1429. *Mr. Davies.*] Have you read the suggestions made by "Delta" in a local newspaper? Yes.
1430. You do not know who is the author? I do not.
1431. Do you favour that suggestion? No.
1432. If carried out would it be of any service to the port? I do not think it would.
1433. You say that, from your general knowledge of the port, you favour the scheme proposed by Mr. Darley? I certainly do to the extent I have named, viz., first section of northern breakwater and the extension of the southern at the same time.
1434. You strongly advocate the extension of the southern breakwater to a greater length? Yes.
1435. If this scheme is carried out, you will have a depth of 25 feet of water on the bar; then vessels of larger tonnage and greater draught than any you have had yet may come in? Yes.
1436. When those vessels are loaded where will you put them? In a place that will have to be made sufficiently deep for them, that is to say, the north harbour.
1437. Then, you would advocate that the north harbour should be deepened to make it a mooring ground? Yes.
1438. Would not that be a work of many years? It depends on the amount of dredging power that you have.
1439. You have a fair share of dredging power now? Yes.
1440. How many years, do you think, it would take with that power to get a fair depth of water for vessels drawing 25 feet when loaded? I cannot say.
1441. What advantage would it be to the port for larger vessels to come here if you have not a place in which to put those vessels when loaded? They would have to lie alongside the wharf. They could not be put anywhere else with the present depth of water.
1442. You have got a greater depth of channel, and you are able to admit vessels of greater carrying capacity, but you have no place to put them in when they are loaded, unless these works are carried out? They could go under certain inconvenient circumstances straight away to sea after occupying the wharf for half a day.
1443. That would only apply to a very small number? Yes; sometimes they stop outside and heave to, until the captain has finished his business with the agents.
1444. Do you think it is likely that shipowners and traders will send their large steamers to load with coal, unless you have safe moorings for them? Those who have large steamers do not require moorings. They go straight to sea.
1445. Would not the owners of sailing vessels require to know that the harbour is perfectly convenient and safe before they sent their ships? There would be very few sailing vessels drawing 25 ft. 6 in. It is only the large steamers, and they do not require mooring-stations. They go direct from the cranes to sea.
1446. If you were a shipowner, trading in the coal trade, would you send large vessels to Newcastle, if there was a sufficient depth of water in the channel, but not a sufficient depth in the harbour for mooring the ships and loading? I should not hesitate about it if I knew that my ship could be taken to sea directly she was loaded.
1447. That is a question of convenience, is it not—waiting for your turn, then a question of getting away from the crane when loaded? When loaded the ship has to get away from the crane, and if it is a sailing vessel she does not go straight to sea.
1448. Where would you put the sailing vessels when loaded? I could not put them anywhere if they drew more than 22 feet of water, and were long ships. If you moor a long vessel now in the north harbour, drawing 22 feet, there is a risk when she swings with the tide that her heel will catch.
1449. The only mooring ground that you have in deep water is in the fairway? Yes, the outer buoys.
1450. Though you have a deeper channel, and greater facilities for getting larger vessels into port, it will be absolutely necessary to dredge out the north harbour to get a sufficient depth for mooring vessels? Yes.
1451. At present the water in the north harbour is shallow, simply a mud-bank? No; it is better than that.

H. Cross, Esq. 1452. How much better is it? I forget the depth of the water, but it is as much as 18 feet in some portions.
 1453. It would require a great deal of money to make a sufficiently safe harbour for ships when they are loaded with coal? Yes.
 5 April, 1895.

1454. Is there a great deal of danger attaching to the mooring of sailing vessels in the fair way? I do not think so.

1455. Ought not your fairway to be clear? It is better of course that it should be. It requires a great amount of skill to bring vessels in when ships are lying at the buoys.

1456. There is a basin at the back of Bullock Island—what do you think of that place as an anchorage for vessels with their cargo;—it is proposed to have a line of loading berths on one side, then the large ships after loading there could haul off into deeper water? That would be a great advantage if the bigger vessels were taken in there, because they could haul off into the centre of the basin; but I do not like the idea of the inconvenience of vessels loading outside that dyke and having to haul in there. I think that the owners would rather take their ships to sea from the cranes.

1457. You are aware that the necessary appliances will be provided, and there would be no objection to loading vessels there? None whatever, and they could take much larger vessels into that basin.

1458. That would be a very safe anchorage for vessels when loading? Yes.

1459. And it would not be liable to be shoaled up so readily as the north harbour in flood time? Certainly not.

1460. Do you know whether there is a bar of rock at the entrance to that basin? I do not know that it is rock.

1461. You do not know anything about the rock existing there? I know there is a shallowness there, but do not know the nature of it.

1462. Does your board know anything about it? We know the depth there; and that it is at present being deepened.

1463. You admit that that would be a very good auxiliary to your means of mooring your ships when loaded if there were the necessary appliances, and the water was of a sufficient depth? Yes.

1464. And your larger ships would go there with safety? Yes, and could be moored with safety.

1465. You are of opinion that the southern breakwater must be extended 500 or 600 feet? Yes.

1466. Mr. Roberts.] In your opinion the volume of trade to the port of Newcastle is increasing? Yes.

1467. And as a proof of that you have handed in a list of some eighty vessels to arrive? Yes.

1468. Mr. Lee.] It would appear from the list of vessels that the trade for 1895 promises to be rather a good one? Yes; if the amount for the first quarter is kept up afterwards, it will exceed the trade of the previous year.

1469. Without knowing the tonnage of those vessels, the fact that they are consigned to this port shows that the owners are aware that the ships will be able to enter this port to get their cargo? Yes.

1470. What reason can you offer to the Committee for the necessity of any improvements to the entrance to the port? As I stated, the improvements are necessary in the first place to create a more effective scour.

1471. From the entrance? Right down along the fairway.

1472. Supposing it has been shown on reliable evidence that the construction of this work would not create a scour in the harbour? I cannot conceive such a thing.

1473. Apart from your own opinion, supposing it were shown that it will not create a scour, and that whatever depth is wanted in the north harbour will have to be dredged, I want to know what advantage there would be to the port of Newcastle if these improvements were carried out? It would make it safer for ships; it would be more easily sailed into, and more easily left; it will stop the damage of the flood-waters, and preserve the entrance of the harbour, and prevent what is already taking place—the silting up of the bar.

1474. How long have you been President of the Marine Board? About seven years.

1475. During that time have you had to adjudicate upon many cases of accident which have been brought about by the imperfect entrance to the harbour? No; it is the imperfect management of the ships that has caused accidents. Ships in going out have touched the bar to the great risk of the vessels.

1476. Have you any evidence of that character? It is known to the Pilot Department. I have known several cases of vessels having touched. Sometimes it has occurred owing to the captain of a ship taking his vessel out a little too soon on the tide. Several ships have bumped on the bar when going out.

1477. Some have bumped through carelessness? No; if the bar had not been there they would not have bumped.

1478. If they had waited for better water they would not have bumped? Perhaps not.

1479. There is always a large discount to be allowed for foolhardiness? Yes.

1480. Do you consider the entrance to the port is getting more dangerous? It has not improved since the washing away of that southern breakwater.

1481. You should know officially whether that bar is an obstruction to the ships? The local Marine Board have, from time to time, represented through the Marine Board in Sydney, the necessity of something being done. They have called attention to the filling up at the bar, and the necessity for extending the breakwater.

1482. Without giving any opinion, from an engineering point of view, as to the proposed works, you hold that it is necessary to do something to improve the entrance to the port? Yes.

1483. Among others, I believe the question of charges to the port is included in the matters that you have to deal with? Certainly not; the imposition of charges has nothing to do with the Marine Board. The regulation of the pilot service, and of the port, is part of their duty.

1484. Does your Board recommend, in any case, the imposition of any charges? No.

1485. Would you care to give an opinion as to the advisability of imposing further charges, such as wharfage dues? I think that if accommodation is provided charges should be made. I would not make them very high, but I would charge something in the shape of a wharfage rate. Tonnage rates are already paid at the rate of $\frac{1}{2}$ d. per ton per day, during the time ships are loading.

1486. Any improvement that is made to the port must be for the benefit of all concerned? Yes.

1487. And if they receive these direct benefits, would it not be a fair thing to impose a charge which is the usual charge at all these ports, such as wharfage? I think it is only a fair thing. They charge it in Sydney. The revenues are already pretty high, and will go a long way towards paying for the improvements.

1488. You have been a long while resident here? Yes

1489.

1489. Were you trading on the coast before you came here? Years ago I was trading on the coast for H. Cross, Esq. four or five years.

1490. You have seen the progress of this port? I have watched the progress of the port. It has progressed and improved very satisfactorily. I think that the money spent in improving it has been spent judiciously from the commencement. 5 April, 1895.

1491. If the improvements in the past had not been made, would the large trade now going on in the port ever have been obtained? Never.

1492. The large shipping trade going on here now is due almost entirely to the improvements of the port? Undoubtedly.

1493. What is the prospective trade of the port? I think we have every reason to believe that the trade will gradually increase. The coal trade has increased in spite of the loss of the Eastern and China trades, which has been compensated for by new markets in other directions. The wool trade is increasing, and the frozen meat trade—a new industry—bids fair to increase rapidly. There is every reason to look forward to the increase of the trade; I do not see that anything can reduce it at all.

1494. Are you of opinion that so long as the coal measures last there will always be a large traffic from here? Yes; I think so.

1495. And that must always be regarded as the principal traffic? The shipping of coal is the chief traffic of the port.

1496. Any developments that may be made as to the shipment of frozen meat or live stock, or the development of minerals other than coal and all kinds of station produce will add to the existing trade? Yes.

1497. Which may fairly be expected to increase? Yes.

1498. The northern and north-western districts lying behind the port of Newcastle are very large districts? Yes.

1499. And capable of supplying enormous quantities of stock and station produce for exportation? Yes.

1500. Which Newcastle has a right to expect its proportion of? Yes.

1501. And if the port is made available it will get it? Yes.

Henry Deane Walsh, Esq., Principal Assistant Engineer, Newcastle District, Department of Public Works, sworn, and further examined:—

1502. *Chairman.*] During the inquiry here, several matters have arisen in reference to which we think it H. D. Walsh, well to ask for a further explanation. Mr. Williams, in giving evidence, pointed out the danger of navigating in the fairway, opposite Stony Point? Yes; it is owing to what we call the 13-ft. rock. Esq.

1503. Will you give us your views with regard to the removal of it? The rock is just off Stony Point, about 190 feet. About two months ago I was asked to report upon the removal of it; but in view of the works we proposed to carry out in connection with the improvements to the entrance to the harbour, and seeing that the guide-wall would probably throw the future line of the fairway some 200 feet further north than the present ones, I did not recommend the removal of the rocks. 5 April, 1895.

1504. 190 feet across? Yes; the new line of fairway will be 200 feet further north than the present line.

1505. And how far is the present line of fairway from the rock? 190 feet. That will give 390 feet clear, and until we see what the effect of this guide-wall will be, I did not think the matter was urgent enough to spend the money on it at present.

1506. Would it be very expensive to take the rock away? I do not think it would be very expensive.

1507. Can you give an approximate idea? I do not know exactly the size of it. It shows 130 feet by 50 feet. No doubt as soon as we have finished the works already authorised—and which to my mind are more urgently required—there will be nothing to prevent us removing portion of this rock.

1508. You expect that in a short time it will be 390 feet out of the fairway? Yes; therefore a good deal of the danger that now exists will be got rid of.

1509. A statement was made that the punts, in going over the bar, lose a considerable quantity of silt;—will you give us your view with regard to that? My view is that the statement is erroneous.

1510. There are two views that may be taken of the matter—one is that the silt is intentionally spilt, and the other is that there is a natural loss of silt when the punts are going out to sea;—take the first view—the intentional loosening of the doors to let some of the silt out? It has been inferred that the men, in order to make it safer for themselves when going out to sea, ease the doors down to lighten the punt. We have not to knock off towing on account of the safety of the punts so much as for the safety of the tugs. We can send the punts to sea when we cannot send the tugs out. The reason for this is that when there is a following sea, the tug is anchored by the punt, she is held down at the stern. We have had instances of the rollers going right over on to the deck of the tug, because she is practically anchored by the punt. That is the danger. There is also the danger of snapping the tow-line. There is not that danger to the punt; she has nothing to hold her back, and therefore rises with the waves.

1511. Now, will you explain whether it is possible for the men to loosen the doors to let some of the silt out? We send two men out in each punt. Take the case of one of the "Newcastle's" 400-ton punts. There are twelve doors in the bottom of the punt, and each winch lifts two doors, so there is one-sixth of 400 tons on each; that is, over 60 tons. It is nearly as much as two men can do to lift up the doors when the punts are empty; but when the punt is loaded there are 60 tons of silt on the two doors, and the winches are worked with a friction brake. The brake is screwed tight up. To let go the door the brake is eased off. It would be a matter of impossibility to ease the brake enough to allow an opening of 1 inch without letting it go altogether. With a weight of 60 tons on the two doors, it would be an utter impossibility to let it go an inch or so without letting it go entirely.

1512. It is in two compartments? Yes.

1513. They could not let one go? That would empty one-half, and the end would go up in the air.

1514. *Mr. Hayes.*] You are of opinion that if they attempt to use the friction-brakes the doors must go altogether? Yes.

1515. *Mr. Leiven.*] One witness said that the silt was washed over by the sea? Yes; that is another view. Anybody who knows anything about these punts going out will be aware that when we are dredging we must pump up a large proportion of water into the punt with the sand, the silt, and the mud. The heavier portion settles to the bottom; the lightest remains at the top. Owing to the joggling as the punt goes along, a little of the lightest portion of the silt is thrown off. If you throw a bucket of dirty water

into

H. D. Walsh, into the sea it will spread out just as the muddy water which escapes from the punt does, and makes the water Esq. dirty for some distance. I do not think that the dirty wake behind the punt indicates that much of the stuff has got out of the punt. I think that the quantity of dirty water that there is in the top of the punt 5 April, 1895. would be quite sufficient to cause that. With regard to the silt being deposited on the bar, I would ask you to refer to the harbour-master's evidence. He is the head of the Department in which Pilot Hacking and Pilot Melville are employed; he should therefore be well qualified to judge of these things. His evidence most distinctly is that any samples of stuff which have been taken from the bar have been coarse, sharp sand, similar to that found on the north beach and on no occasion has he ever found mud on the bar.

1516. *Chairman.*] The current over the bar would be running 2 or 3 miles an hour, and before the silt could get to the bottom it would have travelled some distance? Yes; but I have not mentioned that point, because our punts go out upon flood-tide as well as on the ebb. If it were true that our silt was going overboard, we should find it all along the fairway beyond the influence of the northern breakwater.

1517. With regard to your dumping ground to the south-east, it has been stated that that is disturbed, and that the silt comes back on the beach right over the breakwater;—what is your view of that? I think my view is very well explained in the letter written by the local Marine Board on the 8th March, 1895, on the report of the harbour-master to them in connection with this matter. I may mention that for some years we have used this same ground that the harbour-master mentioned in the letter. It has been our dumping ground for several years. At the time we started there was about 16 fathoms of water. That letter says:—

I have the honor, by direction of the local Marine Board, to inform you that the harbour-master has reported to them that the silt from the dredges has been for some years past, and is still deposited in less than 14 fathoms of water, and that being within the prescribed limit, the Board would advise that the punt should be towed further to the south-east, say $\frac{1}{2}$ a mile.

Then it goes on to give the bearings of that $\frac{1}{2}$ mile. That means that during those few years that we have been dumping our silt from the dredges in that place, a hill has formed. That hill has been raised on the bottom of the sea, $1\frac{1}{2}$ mile south of Nobby's, and $1\frac{1}{2}$ mile east of the coast, 18 feet high on the bottom of the ocean. If the silt was being carried, as stated, over the southern breakwater, and on to our bar it seems an extraordinary thing that it should leave a hill at the bottom of the sea 18 feet high. I do not see how it would be possible.

1518. How deep is the water? About 13 fathoms.

1519. How far down is it absolutely silent? About 10 feet below the bottom of the wave. Hassall says, "A wave 10 feet in height and 100 feet in length would only disturb the water 10 to 18 feet below the surface." It would simply down there be a wave of oscillation—it would have no disturbing motion at all.

1520. You have got 84 feet to come and go on at present? Yes.

1521. At a depth of 50 feet would the water be quite still? I should think it would be perfectly still.

1522. Engineering authorities are unanimous that at a depth of 70 or 80 feet there is no movement in the water at all? No movement whatever.

1523. *Mr. Hayes.*] What is the set of the current where you are depositing the silt? The set of the current would be from north to south. Just inside the bight there is a slight current from south to north. One-and-a-half mile out there would be very little current either way.

1524. *Chairman.*] How much ballast has been placed on shore? The ballast discharged by me from ships since 1882 to December last year was 800,974 tons.

1525. That has been used in reclaiming works? Yes; in reclaiming Bullock Island from the hydraulic engine-house up.

1526. And has cost you nothing? Practically nothing, further than the cost of men to attend to the work.

1527. You are aware that in 1888 there was an inquiry into the improvements in the inner harbour at Newcastle? Yes.

1528. Can you show what has been done since then? It is shown on the plan. The portion of the rock at the entrance, estimated to be removed for £12,000, has been removed as far as we think it judicious to remove it.

1529. And the wharfs? We have put up about 720 feet of wharfs at the south end of the dyke, and we have reclaimed the whole of the land behind the dyke to the future wharf frontage.

1530. At what cost? The cost of the removal of that rock was £12,950 0s. 1d. That includes £7,040 10s. 4d., the cost of the "Poseidon," and machinery, and work, to December, 1894. We have finished the work, and we have the "Poseidon" to go on with other work, and she is in as good order as when she started. The extension to the south end of Bullock Island Wharf, including the facings, cost £5,378 15s. 5d. The reclamation work done at Bullock Island, including part cost of altering the "Juno," and the cost of stone, labour, &c., up to date has been £9,985 11s. 4d. The other item we have carried out which was mentioned in the report of 1888, was the erection of further engine-plant in the hydraulic engine-house. We put up No. 3 engine of 250-horse power at a cost of £2,639 12s. 7d.

1531. What is the total? About £30,000.

1532. Out of a vote of £112,000? Yes; other things have been done for the improvement of the harbour, which I have always held should have been charged to that item. There were the Auxiliary engines, the condensers, new boiler house, new set of Babcock and Wilcox's boilers and so on.

1533. Which have been charged to some other vote? Yes; they have been charged to the 1888 and the 1891 harbour votes. The amount for the new boiler house and the Auxiliary engine house is £6,700; the condensers and Auxiliary engines, £3,173; the Babcock and Wilcox's boilers, £2,986.

1534. What is the total? About £12,700.

1535. What work has the "Cliona" done between the dyke and the Newcastle side? When she started to work at the end of the dyke, the average depth was from 11 feet 6 inches to 12 feet, along the wharf, deepening slightly towards the A. A. Company's Wharf. We have excavated for 100 feet along the wharf, and at the end of the wharf down to 18 feet 6 inches, and at 100 feet out we have excavated a channel from the new basin outwards, 100 feet wide, and 650 feet long to a depth of 25 feet.

1536. How much longer will that require to be to make it 25 feet right across? We cannot get 25 feet right across out there; but we can excavate to 21 or 22 feet, which in that smooth water would be quite sufficient for some time to come for any loaded ships.

1537. Is there very much more cutting to be done? No; I think that probably by the end of this year, H. D. Walsh, Esq.

5 April, 1895.

I shall have a sufficient channel 100 feet wide; so that in smooth water a vessel drawing 23 feet of water could get into the basin.

1538. There is one more point with regard to this aspect of the case: if we get a little more water on the bar, and you have nowhere to put the loaded ships, you might get them in? There is no reason why we should not dredge a broad channel along the future line of the wharf on the inside of the dyke—that is, to the westward of the present dyke—and place dolphins along that to moor ships at. The class of dolphins we now construct are simply 20 feet sections of wharf, so it is so much wharf finished.

1539. If they loaded at one side of the dyke, and were brought round into the basin, would that be inconvenient? It is an extra removal; but under present circumstances there is an extra removal to the buoy. It would not be quite so convenient as to drop down to No. 5 buoy and lie there; but I think it would be safer for the ship.

1540. Have you made suggestions as to mitigating the difficulty of want of area? I mentioned that as a ready remedy in case the present accommodation for loaded ships should prove insufficient by-and-by.

1541. And you could have this ready in twelve months? I could have it ready in a very short time, and for about £300 I could put dolphins for one ship.

1542. Could you have the channel you refer to dredged in twelve months after this? If necessary, I could deepen it sufficiently to get a ship in in twelve months. The rush would not come on so suddenly that we should require accommodation for a large number at once. We could make accommodation for a couple of ships in case of immediate need.

1543. A good deal has been said in favour of extending the southern breakwater to intercept the roll of the south-east sea? Yes.

1544. Your idea is, that if it is made up to the original position that will intercept the roll? That is the Departmental idea.

1545. If the roll still came round the breakwater, would you suggest to the Department an extension of the breakwater? If it is found that the roll is not sufficiently intercepted when the breakwater is made up to its original length, I do not think the Department will object, if money can be provided, to run the breakwater a short distance further until it does intercept the roll.

1546. Can you express an opinion as to whether the present breakwater intercepts the roll? It allows some of the roll to go round in certain seas. In an easterly gale a certain portion does get round.

1547. Therefore, it resolves itself into a matter of opinion as to whether the other 200 feet will intercept the seas, or whether it will require another 500 feet? It is a tentative process.

1548. Mr. Davies.] Can you tell the Committee what proportion of the amount voted in 1888 has been spent at Bullock Island harbour works? Of that £112,000 we have spent about £30,000.

1549. So there is some £70,000 or £80,000 still available? Yes; the money that is still available is for the construction of 3,000 feet of wharf on the east side of the new basin of which these dolphins would form a part, the erection of seven more hydraulic cranes along that wharf, and the completion of the reclamation that we have now in hand. These are the things included in the £112,000 that we have not carried out.

1550. So that the balance of the money still available out of that £112,000 is still in the hands of the Department for the completion of the work? Yes; I expect we shall get it when we want it.

1551. Is any portion of that sum available for dredging? Yes; a certain portion of the dredging inside of the basin was charged to that reclamation work.

1552. Then, as far as the work has proceeded, how has it harmonised with the estimate made by the Department in 1888? Very well, indeed. The wharf has been very much cheaper. We have put up about 800 feet of wharf. It has run about £2 a foot cheaper than the original estimate.

1553. Does that principle apply to all the works? The removal of that rock was estimated to cost £12,000. It has cost £12,900; but we have all the plant to the good.

1554. What has been the basis of the calculations to arrive at the estimate of £141,000 for these improvements? We kept a record of the actual cost of each month's work on the northern breakwater, and the price given here is quite above the average.

1555. You have based your calculations upon the prices ruling when you were finishing the last section of the northern breakwater? Yes.

1556. If that was the case I presume that you expected to be able to carry out the proposed work even at a less rate than that? Yes.

1557. Are you of opinion that the estimated expenditure of £141,000 will be ample for this work? I did not make the estimate—it was made at the head office; but I think there would be ample money to carry out what we propose.

1558. Is there any difficulty in estimating the cost of works of this character? They are more difficult than when you know what your foundation is. There is always a certain amount of guess-work, and it is only by experience one finds out how much extra to allow when tipping stone into sand.

1559. Do you reckon it by the cubic yard? We generally reckon these things by the ton.

1560. You based your calculations upon the actual cost of the last extension of the northern breakwater? Yes.

1561. And at that time prices were ruling at a higher rate for labour than at present? Yes.

1562. The Committee have had evidence from persons trading to the port that to secure a scour in the channel the southern breakwater should be extended beyond its original length;—what is your opinion? It is simply a matter of having the breakwater far enough out to lessen the roll which comes in with the easterly and south-easterly seas. I do not see any objection, if money can be provided for it, to continue the breakwater a little further if we find that the work proposed there has not the desired effect.

1563. Supposing the northern breakwater were extended to a distance of 3,000 feet, and the money required for the second section was spent on the southern breakwater? I prefer to see the northern breakwater brought out to the end of the 750 feet. If the breakwater ends too near the coast line, the flood tide entering the harbour will draw the beach sand towards the entrance. At present the current is not taken far enough away from the beach to prevent it from drawing the sand to the back of the breakwater, and filling it up behind. If we carry the breakwater out into deep water, the current which draws along the beach will be so far out that it will not affect the beach sand; therefore, it would not fill up behind the northern breakwater.

- H. D. Walsh, 1564. But would not the velocity, if the first section is constructed, be sufficient to carry the sand at least 1,000 feet further? Yes; it would carry it 1,000 feet further than the end of the northern breakwater.
 Esq. 5 April, 1895. 1565. You think it would give a scour 1,000 feet? Yes.
 1566. Would the southern breakwater, if extended so as to clear the Big Ben Rock, have any influence in quietening the waves within the channel? Yes; if the waves come in when our present proposal is carried out, it will be possible to carry the breakwater still further until it stops them.
 1567. So it would be of service? Yes; if the present proposal is not sufficient it will be better to extend it further out.
 1568. And you would advocate an extension, provided it was necessary to secure that result? Yes.
 1569. As to the deposit of silt outside the heads; if your training walls are to be carried out near Stockton Point, where you propose to dump a large quantity of silt, would it not be far more economical to have your training wall provided for, and make it a dumping ground for the silt, instead of taking the silt outside of the harbour? I have been trying to bring that about for some time.
 1570. Might it not do away with the silt on the bar which is said to come out of the punts? We do not take any notice of such a stupid idea; but on grounds of economy it ought to be done.
 1571. You have ample room for the deposit of the whole of your silt? Yes, to deposit the whole of our dredgings from the harbour for the next twenty years if we had the training walls completed up above, and had sand-pumps large enough to take the dredgings. We have no sand-pump at present that would take them.
 1572. If you had a training wall, you would be able to do the dredging for nearly one-third less than it costs at the present time? For considerably less—I would not say one-third. It would be the difference in cost of towing half-a-mile instead of 3 miles.
 1573. It would be a 1d. per ton? Say two tugs less in the year, that would be probably £3,000 or £4,000 a year.
 1574. Not more? That is for tugs alone. We get the benefit of first-class land.
 1575. What does all the dredging cost per year? It costs about 1½d. per ton.
 1576. You would not have to send any of that out? No; but you would have to have tugs to take it to the dumping ground.
 1577. Then you would have to save 1d. a ton. Yes. I daresay that the expense of putting the silt ashore would have to be charged.
 1578. One penny a ton would be a large sum in a year? Yes.
 1579. You strongly favour the idea of erecting a reclamation wall, and proceeding with the reclamation work? Yes. I reported on that two years ago, and tried to get the money on the estimates.
 1580. On the ground of utility you advocate that the Department should proceed with the erection of a training wall, and dump the silt on the proposed reclamation? Yes; the greatest outlay would be the large dredge.
 1581. It would help to deepen the channel and prevent the silting up of the harbour, and instead of it costing 1½d. per ton, you would be able to put it on the ground for less in that way? Yes.
 1582. What would the extension of the southern breakwater cost? I have not got the sections to enable me to calculate accurately, but I have run it out roughly. I think we can have an extension of about 300 feet to cost about £26,000. We have an item of 7,000 for making up the present portion. That extension would have to be a very heavy portion of wall. We should be dumping into 37 feet of water.
 1583. What is the total length of the Bullock Island wharf? About 8,000 feet.

Captain Henry Newton, Harbour-master, Newcastle, sworn, and further examined:—

- Capt. H. Newton. 1584. *Chairman.*] Do you hand in a return showing the gradual shoaling of the harbour? Yes. (*Vide Appendix.*) Mr. Hayes asked a question as to when I first investigated the bar and reported on it. The first report I sent in in regard to it, and giving my ideas as to the cause, was on the 2nd July, 1886. I sent in another report in reference to the same thing on the 1st June, 1891; another on the 11th September, 1893; another on the 1st February, 1895. I have always recommended the extension of the southern breakwater.
 5 April, 1895. 1585. And there has been a steady silting up all that time? Yes; a steady silting up all the time.

SATURDAY, 6 APRIL, 1895.

[The Sectional Committee met at the Council Chambers, West Maitland, at 2 p.m.]

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

THE HON. JOHN DAVIES, C.M.G.

JAMES HAYES, Esq.

THE HON. CHARLES JAMES ROBERTS, C.M.G.

ROBERT HENRY LEVIEEN, Esq.

CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed Harbour Improvements at Newcastle.

Henry Crothers, Esq., Mayor of West Maitland, sworn, and examined:—

- H. Crothers, Esq. 1586. *Chairman.*] What are you? A grazier; and I am Mayor of West Maitland.
 1587. Have you any knowledge of the scheme for the improvement of the entrance to the river at Newcastle? None whatever.
 5 April, 1895. 1588. Do you desire to express any opinion with regard to the effect of the proposed harbour improvement works on the floods in the Hunter? I could not express any opinion, from my want of knowledge of the subject. Mr. Walsh says that the proposed works will improve the outlet.

1589. You say that it depends upon whether the proposed works will improve the carrying capacity of the river at the port? That is my opinion. H. Crothers,
Esq.

1590. You think the improvements may do some good? They may.

1591. The whole question is whether the works, if carried out at Newcastle, will have any effect here, and on that point you do not desire to express an opinion? I would not attempt it.

6 April, 1895.

1592. It is an engineering question? Yes; and I know very little about the harbour at Newcastle.

1593. You prefer to leave matters of that kind to the engineering authorities? Decidedly.

1594. *Mr. Davies.*] After having had the matter explained to you by the resident engineer, are you of opinion that the scheme is one which should be carried out in the public interest? That is rather a large question for a non-professional person like me to give an answer to. Mr. Walsh's opinion has always considerable weight with me, and from my long knowledge of him, I should be inclined to believe the statement he has made that the works will be beneficial.

1595. You are inclined to agree with the resident engineer, who has already pointed out to you the nature and character of the proposed improvements? Yes.

1596. He has assured you that the improvements at the entrance to the Newcastle Heads will be of such a character as not to impede the passing out of the flood-waters? Yes; he has assured me of that, and I place every reliance on his assurance.

1597. The only apprehension in your district is that the contraction of the channel would back up the flood-waters? Yes; that is the opinion of a great many.

1598. Then, from the explanation of the resident engineer, you are satisfied that no possible injury can accrue from the improvements? Yes; I have every confidence in Mr. Walsh's statement.

1599. Were you one of a deputation to the Minister the other day in reference to the flood-waters in the Hunter? I was.

1600. The carrying out of the harbour improvements at Newcastle will not interfere with the proposal submitted to the Minister? We do not believe that it will.

1601. You had a scheme which you put before the Minister? Various schemes.

1602. You do not think that the harbour improvements will interfere with the flood-waters of the Hunter River? I do not think it would. The great difficulty arises between here and Newcastle.

1603. You are so far removed from the Newcastle Harbour that you do not think the improvements will interfere with it? The difficulty arises between Maitland and Newcastle.

1604. Do you believe that the Hunter River carries a large amount of silt into Newcastle Harbour? It is indisputable.

1605. Then the annual charge for draining Newcastle Harbour is mainly brought about by reason of the large quantity of silt and sand which is carried down into the harbour in flood time from the watershed of the Hunter? No doubt about it.

1606. Have you any scheme that could be brought into practical use for the interception of this silt that goes down into the Newcastle Harbour? Certainly not.

1607. Was there much harm done in the Hunter district by the flood of 1893? Yes, immense; we rowed boats into this hall.

1608. Did the producers suffer? Every one suffered.

1609. Engineering skill could not prevent that? It could mitigate it.

1610. In what way? By the proposed canal, across Bulwarra.

1611. You think that would be the means of relieving this part? Yes; the West Maitland district.

1612. And would it relieve Newcastle Harbour? I am not prepared to say that.

1613. All the knowledge that you have of the proposed harbour improvements is what you have obtained from seeing the plans, and from the resident engineer? Yes; and the evidence I have read that was given before the Committee.

1614. From that, you conclude that the scheme will not affect the Hunter River Valley? That is my opinion.

1615. Do you know of any gentlemen connected with the Council or resident in the district who holds a contrary opinion, and who would like to give evidence? I cannot say that I do. I asked Mr. Scobie to attend.

1616. *Mr. Hayes.*] You are only interested with reference to the flood-waters in the Hunter, and if you are satisfied that the proposed works in the Newcastle Harbour will not injuriously affect the flood-waters, you have no objection to the scheme whatever? Not the slightest.

1617. *Chairman.*] The intention of the Sectional Committee to visit West Maitland to take evidence was notified in the press last Saturday? It escaped my notice.

1618. The Mayor was written to from Newcastle some days ago? The people do not seem to take any interest whatever in the matter.

1619. The Committee having taken steps to give their visit publicity, the people cannot be interested or they would have been here; they must have known? Of course they knew. I inserted an advertisement in the *Mercury* to-day, requesting people to come here and give evidence.

1620. They have had ample notice, but they have not thought fit to come? Exactly so.

John Gillies, Esq., M.P., sworn, and examined:—

1621. *Chairman.*] You are a resident of West Maitland? Yes.

J. Gillies,
Esq., M.P.

1622. And represent the Electorate in Parliament? Yes.

1623. Have you any knowledge of the improvements under consideration? I saw the plans of them some time ago.

6 April, 1895.

1624. Are you prepared to express a definite opinion with regard to them? I could not say anything very definite about them. At first I was opposed to the work, because I believed it would be prejudicial to the interests of my constituents, as I thought that it would throw the water back upon West Maitland, and adjacent districts generally; but I have since inspected the plans with Mr. Darley and Mr. Walsh, and Mr. Walsh has altered my opinion.

1625. You realise that the question of backing up the water is dominated by that of a further contraction of the entrance, but it has been made clear to you by the officers of the Department that there would be no further contraction of the entrance? Yes.

1626.

- J. Gillies,
Esq., M.P.
6 April, 1895.
1626. That removes your objection? My opinion is, from what I have been informed by the engineers, that it may bring about the advantage of making a greater scour. I have spoken to several residents about giving evidence, but they do not feel inclined to do so. I suppose they think the matter is in sufficiently good hands.
1627. *Mr. Lee.*] How long have you resided here? I have been here nearly all my life. I was 4 years old when I came here.
1628. Have you seen the ravages of every flood since 1867? Yes; I have been an active member of the water brigade for many years.
1629. Have the floods increased or decreased in their severity? It appears to me that they have increased.
1630. Therefore, the volume of water that comes down the valley of the Hunter now is perhaps greater than it was years ago? I think there is no doubt about it.
1631. To which are to be added the streams of the Paterson and the Williams Rivers? Yes.
1632. Therefore, as all that water has to pass through the port of Newcastle, the question of the improvement of the harbour is a matter of great importance to the residents of West Maitland? Certainly.
1633. Would it be fair to assume that if they were under the impression that the flood waters would be retarded at the entrance, they would not be satisfied with the proposed scheme, although it might improve the port of Newcastle? We should oppose it most strongly.
1634. As far as you know, the scheme proposed has been accepted? Personally I am satisfied with it.
1635. On the assurance that it will not retard the outflow of flood waters? Yes.
1636. That is the basis on which you accept the proposal? It is.
1637. Any scheme, no matter how good it might be, for the improvement of the port of Newcastle, if it were detrimental to West Maitland, or would retard the progress of the flood-waters, would not be accepted by the people here? Not unless we were provided with another outlet for the flood waters.
1638. I think there is an interest being taken in the question of another outlet? There is an agitation on the subject. There has been an agitation about it for thirty-five or forty years to my knowledge.
1639. Are you, or is any other resident, prepared to offer any suggestion with reference to the proposed works? Seeing that they will do no injury to our town, I say by all means improve the harbour of Newcastle as much as possible in the interest of the whole district.
1640. The more the passage of the water is accelerated through that entrance the better it will be for the people about here? Undoubtedly.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

Harbour Improvements at Newcastle.

SECTIONAL COMMITTEE.

APPENDIX.

A.

[To Evidence of S. Keightley, Esq.]

VESSELS LEAVING NEWCASTLE WITH SHORT CARGOES.

RETURN of Steamers and Sailing Vessels that have loaded at the Port of Newcastle since 1st January, 1894, showing draught and capacity when fully laden, draught of water on leaving, and actual quantity of coal taken.

19 November	22·0		

Further out the shoaling is greater.

Newcastle, 5 April, 1895.

HENRY NEWTON,
Harbour Master, Newcastle.

B 1.

ADVANTAGES FROM EXTENDING THE SOUTHERN BREAKWATER.

I SAW the south breakwater erected. As it proceeded, a marked change occurred; the range in the harbour was greatly reduced. Still there is a heavy, dangerous range, even with the waves having the whole of Stockton Beach to expend upon. If the north breakwater be erected as proposed without an extension of the southern, any sea to the east of south-east will run on to the wall and be conducted up the harbour, and make a range such as has not been experienced in Newcastle in the past. The wave-trap is well enough in its way; but, in my opinion, without an extension of the south breakwater the seas will be so heavy that a great body of them must rush past up the harbour. It is of great importance that vessels should get under the lee of the breakwater while the water is deep. The sea then is true. When the sea begins translation, from shallowness of water the rudder is comparatively ineffective, and the ship unmanageable. I consider a 3,000-ton ship, drawing 23 feet of water, scends about two-thirds of the lift of the sea. Say, for instance, the lift is 6 feet, the scend would be 4 feet; and therefore in a sea of this kind, and a boat as described, there would be 1 ft. 6 in. more at least available if the bar were smoother. As Newcastle Harbour is now, the range is felt as far up the harbour as opposite Cowper-street. I have seen a vessel jerk a wharf-post off, to which her cable was affixed a little below this point. It is a common occurrence for mooring-bits to go up at the A.A. Company's wharf.

HENRY NEWTON,
Harbour Master, Newcastle.

C.

[To Evidence of W. R. Logan, Esq.]

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

NEWCASTLE HARBOUR IMPROVEMENTS BILL.

(MESSAGE No. 65.)

Ordered by the Legislative Assembly to be printed, 6 June, 1895.

FREDK. M. DARLEY,
Lieutenant-Governor.

Message No. 65.

In accordance with the provisions contained in the 54th section of the Constitution Act, the Lieutenant-Governor recommends for the consideration of the Legislative Assembly the expediency of making provision to meet the requisite expenses in connection with a Bill to sanction the carrying out of certain works of Harbour Improvements at Newcastle, and for other purposes.

Government House,
Sydney, 5th June, 1895.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

NEWCASTLE HARBOUR BAR.

(RETURN SHOWING NAVIGABLE DRAUGHT OF WATER ON.)

Ordered by the Legislative Assembly to be printed, 28 May, 1895.

[Laid upon the Table of this House in answer to Question No. 7, of the 28th May, 1895.]

Question.

NEWCASTLE HARBOUR BAR:—MR. ELLIS asked THE COLONIAL TREASURER,—

- (1.) What was the navigable draught of water on the bar at the entrance of Newcastle Harbour during the year 1849?
- (2.) What was the greatest draught of water of any vessel which proceeded to sea from that port in that year?
- (3.) The same information for every year from that time up to the present date?

Answer.

- (1.) No record of navigable draught on the bar for 1849. The first record shows 19 ft. in 1851.
- (2.) No record of the draught of vessels leaving Newcastle for 1849.
- (3.) The first record kept was in 1859, when the greatest draught was 17 ft. 6 in., and the succeeding years are as follow, namely:—In 1860, 19 ft.; in 1861, 20 ft.; in 1862, 20 ft. 6 in.; in 1863, 20 ft.; in 1864, 18 ft. 6 in.; in 1865, 19 ft. 4 in.; in 1866, 20 ft. 6 in.; in 1867, 19 ft.; in 1868, 19 ft. 6 in.; in 1869, 20 ft. 3 in.; in 1870, 20 ft. 3 in.; in 1871, 21 ft.; in 1872, 21 ft. 7 in.; in 1873, 21 ft. 8 in.; in 1874, no record; in 1875, 21 ft. 1 in.; in 1876, 21 ft. 1 in.; in 1877, 21 ft. 9 in.; in 1878, 21 ft. 5 in.; in 1879, 21 ft. 10 in.; in 1880, 21 ft. 10 in.; in 1881, 22 ft. 2 in.; in 1882, 22 ft. 2 in.; in 1883, 23 ft.; in 1884, 22 ft. 11 in.; in 1885, 23 ft. 2 in.; in 1886, 23 ft.; in 1887, 23 ft. 3 in.; in 1888, 22 ft. 9 in.; in 1889, 23 ft.; in 1890, 23 ft. 3 in.; in 1891, 23 ft. 1 in.; in 1892, 23 ft. 5 in.; in 1893, 23 ft.; in 1894, 23 ft. 9 in.; in 1895, 23 ft. 8 in.

RICHMOND RIVER HARBOUR WORKS.

(PETITION FROM RESIDENTS OF THE RICHMOND RIVER DISTRICT, PRAYING FOR AN INQUIRY IN CONNECTION WITH THE CARRYING OUT OF.)

Received by the Legislative Assembly, 27 November, 1894.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled,

The humble Petition of the undersigned residents of the Richmond River District,—

HUMBLY SHOWETH:—

1. That in the opinion of your Petitioners many irregularities and improprieties have taken place in connection with the expenditure of public money and the employment and discharge of men employed on the Richmond River Harbour works.
2. That abundant evidence was given in a recent civil action that a Government employee on these works set men employed by the Government, in working hours, to do his private work, and was afterwards paid for that work by the Government.
3. That the men who gave this evidence in a properly constituted Court of Law were immediately discharged after giving their evidence.
4. That the said Government employee was immediately reinstalled in his position of trust, and still occupies the said position, while two of the men who gave the evidence are still unemployed, with large families depending on them.
5. That such a proceeding is not in keeping with the principles of justice, and does not tend to promote the well-being of the Public Service; but, on the contrary, reflects much discredit on the administration of the Works Department.

Your Petitioners consider that in the interests of justice, as well as for the well-being and purity of the Public Service, a full and searching inquiry should be made.

Your Petitioners, therefore, pray that you will be pleased to have a full and thorough investigation made by an impartial committee of inquiry, who will take evidence on oath, and see that the witnesses are not injured for what evidence they truthfully give.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 93 signatures.]

**EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.**

VOTES No. 41. TUESDAY, 27 NOVEMBER, 1894.

6. **SHOALING AT THE MOUTH OF NORTH CREEK, NEAR BALLINA:**—Mr. Perry moved, pursuant to Notice,—
 (1.) That a Select Committee be appointed to inquire into and report upon the claim of certain farmers on the North Creek, near Ballina, to compensation for losses sustained by them in consequence of the shoaling of the mouth of that creek, brought about by the construction of the harbour works.
 (2.) That such Committee consist of Mr. Young, Mr. O'Sullivan, Mr. Ewing, Mr. Waddell, Mr. Kidd, Mr. Frank Farnell, Mr. Edden, and the Mover.
 Debate ensued.
 Question put and passed.
-

VOTES No. 51. THURSDAY, 20 DECEMBER, 1894.

3. **SHOALING AT THE MOUTH OF NORTH CREEK, NEAR BALLINA:**—Mr. Perry moved (*by consent*), without Notice, That the Select Committee on “Shoaling at the Mouth of North Creek, near Ballina,” have leave to sit during any adjournment of this House.
 Question put and passed.
-

VOTES No. 59. TUESDAY, 12 MARCH, 1895.

5. **SHOALING AT THE MOUTH OF NORTH CREEK, NEAR BALLINA:**—Mr. Perry, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before the Select Committee for whose consideration and report this subject was referred on 27th November, 1894, together with Appendices.
 Ordered to be printed.

SHOALING AT THE MOUTH OF NORTH CREEK, NEAR BALLINA.**REPORT.**

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 27th November, 1894, "To inquire into and report upon the claim of certain farmers on the North Creek, near Ballina, to compensation for losses sustained by them in consequence of the shoaling of the mouth of that creek, brought about by the construction of the harbour works, and to whom was granted, on 20th December, 1894, leave to sit during any adjournment of this House,"—have agreed to the following Report:—

1. That the works in progress at the Richmond River Heads have interfered with the navigation of North Creek in such a way that the farmers on that creek were deprived of the use of a water-way; which had been their only route to market.
2. As a result of the difficulty thus created at the mouth of North Creek, the farmers were compelled to unship their cane, convey it overland through Ballina, and reship there for conveyance to the mill, thereby entailing considerable additional cost upon them.
3. That your Committee recommend the claims of the North Creek farmers to the favourable consideration of the Government.

*No. 3 Committee Room, Legislative Assembly,
Sydney, 12 March, 1895.*

JOHN PERRY,
Chairman.

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 6 DECEMBER, 1894.

MEMBERS PRESENT:—

Mr. Edden,		Mr. Kidd,
		Mr. Perry.

Mr. Perry called to the Chair.

Entry from Votes and Proceedings, appointing the Committee, *read* by the Clerk.
Committee deliberated.[Adjourned till Tuesday next, at *Two o'clock*.]*TUESDAY, 11 DECEMBER, 1894*

MEMBERS PRESENT:—

Mr. Perry in the Chair.

Mr. Edden,		Mr. Ewing,
Mr. Kidd,		Mr. Waddell.

Albert James Hodgkinson called in, sworn, and examined.

Witness handed in plan of Richmond River entrance [*Appendix A 1*] ; statement of details of the cane crop of season 1893, from North Creek district, showing cost of transport in consequence of the block to navigation at entrance of creek [*Appendix A 2*] ; statement of loss sustained by A. J. Hodgkinson during 1893–4 [*Appendix A 3*].

Witness withdrew.

John Bryant called in, sworn, and examined.

Witness handed in statements of estimated losses by farmers in consequence of the stoppage of North Creek [*Appendix B*].

Witness withdrew.

[Adjourned till To-morrow, at *Eleven o'clock*.]*WEDNESDAY, 12 DECEMBER, 1894.*

MEMBERS PRESENT:—

Mr. Perry in the Chair.

Mr. Edden,		Mr. Ewing,
		Mr. Kidd.

John Bryant recalled, and further examined.

Witness withdrew.

James Ross called in, sworn, and examined.

Witness withdrew.

Albert James Hodgkinson recalled, and further examined.

Witness withdrew.

[Adjourned till To-morrow, at *Eleven o'clock*.]*THURSDAY, 13 DECEMBER, 1894.*

The House continuing to sit till the hour named for the meeting of the Committee, no meeting could be held.

*WEDNESDAY, 19 DECEMBER, 1894.*The House having met at *Ten o'clock* a.m., no meeting of the Committee could be held.*THURSDAY, 20 DECEMBER, 1894.*

The House continuing to sit till the hour named for the meeting of the Committee, no meeting could be held.

THURSDAY, 28 FEBRUARY, 1895.

MEMBERS PRESENT:—

Mr. Perry in the Chair.

Mr. Edden,		Mr. Ewing,
		Mr. O'Sullivan.

Entry from Votes and Proceedings granting leave to the Committee to sit during any adjournment of the House, *read* by the Clerk.

William

William Percy Dixon called in, sworn, and examined.

Witness handed in a return of particulars of cane crops of seasons 1893 and 1894, with cost of transport and transhipment of same across Ballina by means of carts and tramway, in consequence of block to navigation at entrance of creek. [Appendix C 1.] Also cane cut by Colonial Sugar Refining Company, for A. J. Hodgkinson, North Creek, Richmond River. [Appendix C 2.]

Witness withdrew.

Henry Richard Carleton (*Supervising Engineer, Harbours and Rivers Department*), called in, sworn, and examined.

Witness produced a plan of the entrance to the Richmond River.

Witness withdrew.

[Adjourned till Friday next, at *Eleven o'clock*.]

FRIDAY, 1 MARCH, 1895.

MEMBERS PRESENT:—

Mr. Perry in the Chair.

Mr. Ewing, | Mr. O'Sullivan.
The Chairman handed in a letter from Mr. W. P. Dixon, in reference to cane crops for seasons 1893-4. [Appendix C 3.]

Henry Richard Carleton recalled and further examined.

Witness withdrew.

[Adjourned till Thursday next, at a *quarter past Eleven o'clock*.]

THURSDAY, 7 MARCH, 1895.

MEMBERS PRESENT:—

Mr. Perry in the Chair.

Mr. Kidd, | Mr. O'Sullivan.
The Chairman submitted Draft Report.

Paragraph 1, read, amended, and agreed to.

Paragraph 2, read, amended, and agreed to.

Paragraph 3, read and agreed to.

Motion made (*Mr. O'Sullivan*), That the Report, as amended, be the Report of the Committee.

Question put and passed.

Chairman to report to the House.

1894-5.
(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

SHOALING AT THE MOUTH OF NORTH CREEK,
NEAR BALLINA.

TUESDAY, 11 DECEMBER, 1894.

Present:—

MR. PERRY,
MR. EWING,

MR. EDDEN,
MR. KIDD.

J. PERRY, Esq., IN THE CHAIR.

Mr. Albert James Hodgkinson sworn and examined:—

1. *Chairman.*] You are a farmer residing at North Creek, Richmond River? Yes.
2. Do you know the North Creek pretty well? Yes.
3. For how long have you known it? About twenty-eight years.
4. I believe the farmers of North Creek have some complaint against the Government? Yes.
5. Will you make a statement concerning it? The grievance they complain of is this: The harbour works are being carried on, and the effect of those works has been to cause the channel to become tortuous and empty itself near the sea, instead of going out into the calm waters of Richmond River as it formerly did. That was the trouble complained of last season, and that is the trouble of this year. Instead of the water of North Creek running through the opening of the bridge left for the purpose of navigation, it runs through the piles of the bridge and the opening is silted up so that punts cannot pass through. There has been a stoppage of the navigation of the creek.
6. Has there been any attempt made to get through with punts? Yes, one or two.
7. What was the result? The first result was that one of the punts was swamped, everything was lost, and two or three men were nearly drowned. The punt, some time afterwards, was got up in a very damaged condition.
8. Did the Sugar Company after that refuse to send their launches in there again? Yes; they did not attempt to send them in after that.
9. Was there any difficulty in navigating this creek. Did you ever have any stoppages before? Nothing of any importance. There was some delay inside the creek, but not at the extreme entrance, and that was owing to the shoals. There was nothing to cause any great delay or interruption to the navigation.
10. Are you quite satisfied that the works now being carried on at the Heads have occasioned this trouble? I consider there is no question about it.
11. Did the Sugar Company foresee this in any way? The Sugar Company foresaw it. They apprehended that the difficulty would arise as the works were carried on.
12. And they refused, I believe, to renew contracts until some other way of getting out was made? Yes.
13. Can you give the Committee any idea of the amount the farmers have lost by reason of their having to handle their cane in a different way from what they handled it before? Do you mean from all causes or from the one cause in regard to transport?
14. Say, for hauling the cane across to Ballina? It cost them last year £690. It has cost them this season about a similar amount—£653 18s. 8d.

Mr. A. J.
Hodgkinson.

11 Dec., 1894.

- Mr. A. J. 15. You produce a statement in regard to the year 1893, showing the cost of transport across to Ballina
 Hodgkinson, to amount to £653 18s. 8d.? Yes.
- 11 Dec., 1894. 16. What about 1894? It is about £600, I believe.
17. What about next year. Do you anticipate the same amount next year? Yes, somewhere about the same amount.
18. Do you know whether the Government have recognised the fact that they have interfered with your navigation in any way? It appears that they have, inasmuch as Mr. Lyne made a statement to the effect that we had a grievance; and he seemed to admit by his remarks that we had suffered loss.
19. *Mr. Edden.*] When did Mr. Lyne say that? About six months ago.
20. Whilst he was in office? Yes.
21. *Chairman.*] Are the Government now doing something to give you another way out for your cane? I believe they commenced to cut a canal a few days ago.
22. Virtually recognising that they had destroyed the original entrance? So I should say.
23. Is there any other loss to the farmers besides the actual cost of cartage, say, in values? There has been a loss and waste in connection with the transport across to Ballina. There has been a loss by transhipment at both ends, and a loss by evaporation. The farmers consider that the loss will be about 10 per cent. There is also a loss by the farmers being unable to cut certain patches of cane. The mode of transport was not rapid enough, and the consequence was that certain portions had to be left. They were not able to get the cane off as soon as it was ripe. In consequence of the block it had to stand over till the end of the season, until a large quantity perished on the land.
24. *Mr. Kidd.*] Is the estimate of 10 per cent. in addition to the amounts you have given? There was a considerable quantity of cane left on the ground uncut which perished.
25. You estimate a loss of about 10 per cent. in addition to the £600 loss this year and the £600 loss last year? Yes.
26. *Chairman.*] I suppose the cane, after it is cut, loses weight very quickly? Yes; there is the loss by removing it from the punts and on to the truck. A large quantity falls into the water at both ends. Then there is evaporation, and we consider there is a loss of about 10 tons in every 100 tons.
27. What price are they paying for the cane? 12s., and they are allowing 1s. for cartage. That means 13s. a ton for the cane delivered at Ballina.
28. Is there any other loss? There is the loss by certain portions of cane being left and perishing before the succeeding season.
29. Did the farmers ever make a claim? They made an application some time ago—about last February—to have a Commission appointed to inquire into the matter.
30. The reason they did not put in individual claims was that they did not know exactly what they would be out of pocket; therefore the matter was not reduced to £ s. d.? The farmers are in a position to put it in £ s. d.
31. But they anticipate a loss also for next year? Yes; but at the same time they are not making any question at present about it; it is for losses already sustained.
32. Was not a claim made to Mr. Lyne when he was in Ballina some little time ago? I think some application was made to Mr. Lyne in reference to the canal. I have the newspaper report, which I think will give some information on the point.
33. Was there some talk about the farmers commencing an action at law against the Government? There was.
34. It was not proceeded with? No.
35. Why? I heard of one individual case in which the matter was placed in the hands of a solicitor, but whether that is correct or not I cannot say.
36. You see the plan [*produced*]. Can you point out the position of the bridge? The point marked A.
37. Which is the proposed canal? The point marked B.
38. Which is the entrance of the river? The point marked C.
39. The heavy seas come in through the entrance and prevent the navigation of the North Creek? Yes.
40. *Mr. Edden.*] How did you get the cane away before the Government made the channel? Through the entrance marked A, and out into the main river.
41. You used to get it away by boats? Yes, with very little interruption. Occasionally, during neap tides, there was a shoal inside the creek, but there was never any obstruction at the point marked A.
42. Did the inhabitants of the place prevail upon the Government to make these improvements—the harbour works in the main river? Not in particular. They may have assisted in the project.
43. Did you ask for it to be made? It is quite likely. I had a feeling that it should be done, and if any assistance could have been given in the matter I might have given it.
44. Was there any public meeting held? There were meetings at Ballina. I do not know that I or any of the North Creek people attended it.
45. Were any petitions signed? I believe there have been.
46. Did you sign one? I recollect signing one about fifteen years ago.
47. For this work to be done? Yes.
48. And through this work not turning out as well as was expected, it has put you to a deal of expense which you were never put to before? When these works were about to be commenced we concluded that they would very likely alter the entrance. We expected that, and the Colonial Sugar Refining Company expected it. We concluded that the work could hardly be carried on without some damage being done to the creek. In fact, I believe Sir John Coode made a remark to that effect.
49. That it could not be done without something going wrong? I think so; but he said it would all be right when the works were completed.
50. And are the works completed? No; they are not.
51. Are they working on them now? Yes.
52. You stated in answer to the Chairman that the loss to the farmers in transport was about £600? Yes.
53. Do you mean personally—to each farmer—or collectively? That was the whole amount. I may say that the company came to our relief and liberally gave one half. That was the gross amount.
54. The Sugar Company came to your relief? Yes. The farmers had to pay one half, and the company took upon themselves to pay the other half.
55. Seeing that the company paid one half, that leaves you with a loss of £300? Yes.
56. And how many come under it? Roughly speaking, about twenty.

57. These twenty have to share a loss of £300 in one year? It is a greater loss than that. The loss, as Mr. A. J. Hodgkinson, I have already explained, is caused through the cane standing on the ground owing to the slow mode of transport. Some of them lost a certain quantity. Above and beyond that there was a quantity which had to remain late in the season, which otherwise might have been got off. Hundreds of tons perished. 11 Dec., 1894.

58. They could not get it away? No.

59. They could not get it down the channel which they had been in the habit of getting it down? No. The channel was blocked and the company would not send boats into it.

60. And you hold that the Government are responsible for it? Yes; for anything at all which may cause loss to any portion of the community. If the Government have an old bridge across a creek, and knock that bridge away, and build a new one, they have to put a punt there to carry the traffic in the meantime.

61. Has there been any complaint to the Government about the inconvenience which has been caused? Many complaints have been made.

62. And did they do nothing to assist you? They have done a certain amount of dredging the creek.

63. Do you think they have done all they could do under the circumstances? I do not say anything about that. They have had dredges at work there.

64. Do you, as a resident of the place, think the Government did all it was possible for them to do under the circumstances? No they did not.

65. What else could they have done? They could have cut a canal, instead of spending hundreds of pounds doing useless work in dredging the entrance. They have done a large amount of work in connection with training walls, which could have been spent on the canal. We applied for the canal a long time ago. It was considered by Mr. Keele and others out there that it was the best and easiest way out of the difficulty.

66. Who is Mr. Keele? The engineer in charge of the harbour works under the Government. It has been his opinion all through that the canal was the easiest way out of the difficulty.

67. *Mr. Kidd.*] I think you say there are about twenty settlers interested in this question? Eighteen or twenty.

68. What is the gross acreage they hold? I think about 500 acres.

69. About what quantity of land will the settlers on the creek, who are inconvenienced by the work, have available beyond the 500 acres? It would be difficult to form an exact idea. Roughly speaking, there must be 3,000 or 4,000 acres.

70. Do you think a much larger quantity than the 500 acres is likely to be put under cultivation as soon as they have proper facilities for getting the produce away? Yes; there is a good deal of land still lying idle.

71. Do you think it could be broken up and planted if they had means of getting the crop away? Yes; they would grow a much larger area.

72. Before the harbour works were commenced you had no difficulty in getting your produce down the Creek? No; sometimes the punts were stopped during neap tides.

73. That was the only means you had then of conveying your cane? Yes.

74. You had not much trouble then? No.

75. You did not suffer from loss by having to wait? No; the loss was very small. The punts might be on one tide, but they would be off the next.

76. You have been agitating for the proposed canal? Yes.

77. The Government have undertaken to construct it? Yes.

78. Have you any idea of the cost of the canal? About £6,000.

79. You state that if they had recognised the necessity for the canal earlier they might have saved hundreds of pounds, which they have spent in endeavouring to give you a way out at another place? Yes; I think so. They have run a training wall from the bridge a long distance on both sides, which must have cost a considerable amount of money.

80. After this work is constructed you will suffer no inconvenience in getting your produce down to the river? No; I believe it will be a success so far as the navigation is concerned.

81. Up to the present time, the twenty persons who are settled there have lost in the aggregate, by cartage alone, £600 for 1893, and a similar amount this year? The returns are not all in, but it is about the same this year.

82. Besides the 10 per cent. you have referred to? Yes.

83. This work might be constructed within twelve months—by next season? It all depends on the progress they make.

84. But you think it would be easy enough for them to have the canal complete by next season? I do not say that it would.

85. Your loss will go on till the work is completed? Yes.

86. You are quite satisfied that it is impossible to get the water made sufficiently deep to get the punts out the way you got them out previous to the works being started? Yes.

87. And, in fact, the Sugar Company have refused to send their punts up? Yes, they have.

88. *Mr. Ewing.*] You have informed the Chairman that you have been a resident in the district for 28 years? Yes.

89. Have you had a knowledge of North Creek all those years? Yes.

90. And you are quite sure that the alteration at the mouth of North Creek was occasioned by the Government works at the bar? Yes.

91. You never knew it to be in its present condition before? No.

92. Is the internal navigation of North Creek better than it was before? Yes.

93. In consequence of the work carried out by the Government? Yes.

94. In other words they have dredged the sandbanks, but the bar at the mouth of the creek renders traffic impossible? Yes.

95. You are of opinion that when the canal is finished you will be in as satisfactory a condition as you ever were? I do.

96. Therefore the loss you sustained is limited to the time when the mouth of the creek became bad, consequent on the bar works and the completion of the canal. Divide that loss into two—first of all the direct payments out of pocket, and the loss you suffered incidental to delay. Take the loss incidental upon the delay to your crops. What do you estimate that at? In my individual case? 97.

MINUTES OF EVIDENCE TAKEN BEFORE THE SELECT COMMITTEE

- Mr. A. J. 97. Yes? I will hand to the Chairman a statement showing my loss during the season of 1893.
 Hodgkinson. 98. What is the total? £1,216.
- 11 Dec., 1894. 99. In one season? In two seasons. [Statement handed in.]
 100. *Chairman.* There is an item in this statement, "Cane standing too long, 150 tons at 12s. a ton." How do you arrive at that? That was cane I could not cut until the very end of the season. I was unable to cut during the earlier part of the season, and the consequence was that a lot of it perished on the ground.
 101. *Mr. Edden.* How was it you were unable to cut it? There was too much delay in getting across. There was no facility to get it across the river. It took a double quantity of punts on account of the transhipment, and the consequence was that the company were not able to supply us.
 102. *Mr. Kidd.* You were altogether dependent on the company for your supply of punts? For the main part; but at the same time, in an emergency, we could have got other mills on the river to send punts into the creek, if they could have got in.
 103. You could not facilitate the transport of the cane on account of the limited number of punts they were able to supply? Yes, and on account of the limited number of wharfs. There were not wharfs available.
 104. *Mr. Edden.* I believe that in that part of the country, when anyone takes up land for the growing of sugar-cane, they enter into a contract with the Sugar Company? Yes, some of them do.
 105. What is the nature of the contract? The persons entering into the contract sign in regard to a certain area of cane for a certain number of years at a certain price. They bind themselves to plant the cane, keep it in good condition, and deliver it in good condition at the bank at deep water where the company's punts may take it. The condition of affairs became such that the company's punts could not take it, and we had to find ways and means by which they could take it, tranship it out of the company's punts across Ballina, and up to the main river.
 106. Then the Committee are to understand that this is the extra expense you complain of in getting the cane into deep water? Yes, that is one item of loss.
 107. *Chairman.* Did the farmers use every means possible to get their cane to the mill? They did.
 108. *Mr. Kidd.* Are you under an agreement with the Sugar Company? My agreement expired 18 months or two years ago.
 109. You stated a short time ago that you might have made arrangements with other mills? I was at liberty to do so, but I do not think any of the others could have done so, because I was the only one not under contract to them.
 110. You are not able to relieve yourselves by any other arrangements you could have made during this period with the proprietors of other mills? No, there was only a limited number of wharfs and they were in use.
 111. *Chairman.* You produce a statement showing your individual loss for 1893 and 1894? Yes.
 112. *Mr. Kidd.* What area have you under crop? Eighty-eight acres.
 113. *Mr. Ewing.* Your statement shows your individual loss? Yes, the loss which I estimate; £325 has been the total yearly.
 114. The direct payment out of pocket for the carriage of cane? Yes.
 115. *Mr. Kidd.* What is your average crop on the 88 acres? I have had from 50 tons down to 20 acres—an average of 35 tons.
 116. You say the Sugar Company was good enough to pay half the cost of transit by drays? Yes.
 117. Did they bear half your losses? Yes; they did last season, but not this. I had to pay it out of my own pocket this season.
 118. *Chairman.* That is half the cost of carriage? Yes.
 119. *Mr. Edden.* What do you get a ton for the cane delivered to the Company? Thirteen shillings.
 120. *Chairman.* You know the North Creek guide-bank or training-wall? Yes.
 121. Do you know what it was constructed for? I believe it was constructed to send the water to the opening in the bridge.
 122. In order to assist the scour across the bar? Yes.
 123. It was not constructed in any way to assist the North Creek farmers? I think it was quite likely that it was an effort in that direction.
 124. Was not that part of Sir John Coode's scheme? I cannot say whether it was or not.
 125. *Mr. Edden.* You have no idea what has been the average amount of crop for the last two years? About 35 tons.
 126. Can you give us a correct statement? I can give you the statement for the last two years. In 1894 it was 761 tons off about 40 acres. That came to a little under 20 tons to the acre. That was owing to the cane perishing by standing over.

Mr. John Bryant sworn and examined:—

- Mr. J. Bryant. 127. *Chairman.* You reside at North Creek? Yes.
 128. And you are a farmer? Yes.
 129. Are you farming your own land? No, leased land.
 11 Dec., 1894. 130. You and Mr. Hodgkinson, I believe, were sent here to represent the other farmers at this inquiry? Yes.
 131. Will you make a statement as to what you know of the case—the cause of the block at North Creek, and the loss sustained by the farmers? I have been a resident of North Creek for eight years, and during that time I have known of nothing to prevent cane being taken out of the creek until such time as the harbour works were started. Since then we have not been able to get any cane out at North Creek, except overland, bringing it across Ballina as it were. Consequently there has been a lot of cane left in the creek which the company has not been able to get away. In some cases farmers have not been able to get any of it away, particularly frosted cane—cane that was touched by frost. The company as a rule send their gangs in to cut that cane early. In consequence of this block and the wrecking of the punt they had to discontinue it for a time. I think about nine weeks elapsed before any cane was got out. Consequently the frosted cane was useless; it could not be got out at all; in fact it was not worth taking

taking away. It was no use taking it. The loss sustained by farmers is the extra expense they have been put to in crossing Ballina, as well as the loss in waste and evaporation, etc., which has been considerable. Mr.
J. Bryant.

132. You say that nine weeks elapsed, during which time of course the frosted cane went completely bad? 11 Dec., 1894.

Yes.

133. What were you doing during those nine weeks? Simply waiting for the completion of the tram-line.

134. *Mr. Kidd.*] That was made in 1893? Yes.

135. Have you any statement to put in? Yes; I produce my own statement, with others.

136. According to this statement your loss for 1893 is £86 5s. —

137. You hand in statements of losses by other farmers whom you represent? Yes.

138. Have you any statement in regard to 1894? Yes; but not of my own. There are statements from the other growers; but I claim nothing in regard to 1894.

139. Are the statements in regard to 1894 included in what you have handed in? Yes.

140. But you only give your own loss for 1893? Yes.

141. *Chairman.*] Are these losses in your opinion solely attributable to the action of the harbour works? Yes.

142. *Mr. Edden.*] You are sure of that? Yes.

143. *Chairman.*] Was there ever any trouble in getting the cane out before? Never to my knowledge—not during my time of residence in North Creek.

144. And the Sugar Company absolutely refused to go in that old way any more? Yes; they reported to us that they would risk no more of their property.

145. Did they refuse to renew contracts until a better means of getting out was made? Yes; in consequence I threw up my holding and I have discontinued cane-growing, and I have not another place yet. I have not renewed my holding at North Creek in any way. I still reside there, but I am doing nothing so far as cane-growing is concerned.

146. *Mr. Kidd.*] With regard to the cartage accounts between the settlers and the Sugar Company for 1893 and 1894. They have agreed to allow you one half of the cartage account? The farmers acknowledge that they have paid it.

147. *Chairman.*] The Sugar Company have actually paid half the cost of carriage across Ballina? Yes.¹

WEDNESDAY, 12 DECEMBER, 1894.

Present:—

MR. EDDEN,		MR. EWING, MR. KIDD.
------------	--	-------------------------

J. PERRY, ESQ., IN THE CHAIR.

Mr. John Bryant recalled and further examined:—

148. *Mr. Ewing.*] The injury to property is limited to the period starting from the time the mouth of the creek became bad, consequent, as you say, upon the bar works, until it will be terminated, as you believe, by the cutting of the canal? Yes. Mr.
J. Bryant.

149. And your losses are limited to that period? Yes; I did not refer to my own loss right through with regard to that period. 12 Dec., 1894.

150. But it must be inside that period? Yes.

151. And you have handed to the Chairman a statement of your losses? Yes. In my statement referring to frosted cane I did not mention that only a portion of the patches were frosted. I did not allude to the whole paddock.

152. Have you stated in the statement you handed to the Chairman the absolute amount of money you paid out of pocket? No; losses sustained through not being able to get the cane away.

153. The other loss is the money out of pocket which you have paid to get your cane across Ballina? I have had none of my own carted, not being able to get any away.

154. Did the company pay the money themselves, and then deduct it from the accounts of the farmers? Yes.

155. In handing the farmer a cheque for his produce they took from it one-half the amount of cartage? Yes.

156. *Mr. Kidd.*] Do I understand you to say that you did not get any cane away in 1893 at all? None.

157. And your loss you say was £86 5s.? Yes.

158. That is what you would have made out of your cane if you had got it away? Yes.

159. What acreage had you? About 10 acres.

160. What do you estimate the quantity per acre? Fifteen tons per acre.

161. Was it a dead loss? Yes; I made no use of it at all.

162. Could you not have got it away in the same way as others did, by drays and other means? No; the company had not time to get all the cane away in consequence of the delay with the tram-line. They took some gangs out of the creek. Afterwards they put them back into the creek, but in consequence of the block they took them out again.

163. You have given up sugar-cane growing now? Yes; I had to do so in consequence of not being able to carry on.

164. You had no agreement with the company at all? I was under contract with the company.

165. At how much per ton? The usual price—12s. for two-year old cane, and 11s. 6d. for one-year old cane, and 1s. added for cartage.

166. You are supposed to deliver it on the punts, are you not? Yes.

167. What would be the cost from the field to the punts? About 2s. from my paddock.

168. Have you given credit in the estimate of your loss for the charge of 2s. per ton, or have you charged it as delivered on the punts? I have given credit for the 1s. a ton allowed by the company for cartage.

169. Did you produce the whole of the claims from the other farmers yesterday? No; I have some, which Mr. Hodgkinson had with him, which he handed me this morning. I think there is another one to come in—Mr. Ross's.

170.

- Mr.
J. Bryant. 170. *Mr. Ewing.*] I see in the exhibit marked B, which you have handed in, that you have 10 acres yielding 150 tons of cane. That is only 15 tons to the acre? Yes.
 12 Dec., 1894. 171. That is rather a low estimate? Yes.
 172. What became of that cane? It was left on the field and portion of it died out after being frosted, in consequence of not being taken away in time. I had to give up my claim in consequence of not being able to continue. I was not able to continue the rent.
 173. You do not doubt that the company would have taken all the cane? That was their full intention. It was the business of the company to get all the cane likely to be damaged by frost away first.
 174. Supposing the company contract to take, and eventually do not take. Are they protected in any way if any unforeseen difficulty arises. You could put it into the punts? Yes, if it were in a fit state to take to the mill. They did not reject it on the ground that it was not fit to take to the mill, but simply because there were no means of getting it away in time.
 175. Have the company power to do that under their agreement? Yes; they have power to take the cane at any time, provided it is in a fit state to manufacture.
 176. Time passed on until eventually the cane became in an unfit state? When it becomes in an unfit state you cannot compel them to take it.
 177. And you say that this delay eventually made the cane unfit to take? Yes.
 178. It was delayed so long that it became unfit to take, and then the company exercised their right and did not take it? That is so.
 179. *Mr. Kidd.*] How long have you been under agreement with the company? Seven years.
 180. For the first five or six years you had the cane loaded in the barges and the punts on the creek? Yes.
 181. You never required to cart it at any time? No; there was never any difficulty in getting the cane away before.
 182. *Chairman.*] Then you lost the whole of one season's crop? Yes.
 183. And in consequence of the delay in making an opening the company refused, I believe, to extend their contracts with you? Yes.
 184. That was the reason you were compelled to give up the farm? Yes; in consequence of that and not getting the crop away, and not getting the means to pay rent.
 185. You have noticed the condition of the water at the entrance of the creek for some years? Yes.
 186. Since the works have progressed as far as they have, has there been a greater break at North Creek than ever there was before? It has caused the entrance to the creek to get lower down to eastward, and in consequence the break is greater.
 187. The effect of the harbour improvements now going on has, I believe, undoubtedly been to deepen the water over the bar? Yes.
 188. And in consequence of the deep water there, seas come in without breaking until they reach the North Creek outlet? Yes.
 189. Do you think it will ever be possible to navigate the creek with punts? No.

-
- Mr. J. Ross. Mr. James Ross called in, sworn, and examined:—
 12 Dec., 1894. 190. *Chairman.*] You reside at North Creek? Yes.
 191. You are a farmer? Yes.
 192. Do you own land there? Yes, 50 acres.
 193. How long have you been resident there? About twenty-eight years.
 194. You have been in the habit of using the creek all the time? Yes.
 195. Before the works in course of construction at the Heads were commenced, did you ever have any trouble or difficulty in getting your cane out of the creek? Yes; half way up the creek there used to be three shallow places.
 196. But was there any trouble at the entrance? No, never; it has always been open.
 197. Up to that time did you take your cane direct from the bank at North Creek to the mill at Broadwater without transhipping? Yes, for the last two years.
 198. What is the reason you have to tranship now? The mouth of the creek is blocked.
 199. How do you account for the block? Before there was any training wall put down the water used to rush up the new creek. Now it has been put up the water runs up to the main river.
 200. How much cane do you grow? About 28 acres.
 201. In consequence of this blocking you have suffered from loss? Yes.
 202. How much? I lost 40 tons last year.
 203. How did you lose it? The company only cut one half of the crop and left the rest. If there had been any water carriage when the gang first came to me they would have cut it all. If I had been able to cut cane at a suitable time I should have got 12s. a ton for it and 1s. a ton for cartage, but by leaving it so long, it deteriorated, and then was not fit for manufacture.
 204. What became of the other 140 tons? It was destroyed, and that cost me 3s. a ton to get cut and carted off.
 205. So that in place of having 18s. a ton you had to pay out 3s. a ton? Yes.
 206. Have you any doubt at all about the works now in course of construction being the cause of this block? Not at all.
 207. Are you aware that the Government propose cutting a canal from North Creek to Fishery Creek in order to obviate the necessity of going out through North Creek? Yes.
 208. If that is constructed, will it not place North Creek in a better position than ever it was before? Yes.
 209. So that if it is constructed there will be no deterioration in the value of property at North Creek? No; you won't get 10s. an acre for the ground there now.
 210. So that we can dismiss from our minds anything in the shape of a loss in the value of land if the Government cut the canal? Yes.
 211. If they do not cut the canal what would you estimate the loss on your land? The difference between it being available and not being available.
 212. What do you consider your farm will be worth if you get the canal? At least about £10 an acre.
 213. At least as much as before the block took place? Yes; rather more, if anything. 214.

214. *Mr. Ewing.*] You say rather more because you will have a shorter and better approach to Broad-^{water?} Yes; the canal will be about 10 miles. *Mr. J. Ross.*
 215. How long will it take a punt to go 10 miles? About an hour. The approach through the Fishery and the canal will be a better approach to my farm than the old route round through the mouth at North Creek. *12 Dec., 1894.*
216. *Chairman.*] That will be a gain to the company. Will it be any gain to the farmers? Both to the farmers and to the company.
217. *Mr. Kidd.*] I suppose for that gain the Government are going to charge you something for putting the canal in? We have agreed to pay so much.
218. *Chairman.*] You have agreed to pay half the cost of the canal, with interest at the rate of $4\frac{1}{2}$ per cent.? Yes.
219. I think there was a proviso in the agreement that on the completion of the works, if it were proved that the navigation of North Creek were still bad, you would not be called upon to pay anything? I believe so.
220. *Mr. Kidd.*] Are you under a contract now with the Sugar Company? The contract is up next season—in January.
221. How long have you been under contract with them to supply them with cane? Ever since the mill started.
222. That is seven or eight years ago? More than nearly twenty years ago.
223. Your agreement at the present time is that you get 13s. a ton for the cane you put on board? Yes.
224. What was your average crop last year? $298\frac{1}{2}$ tons.
225. Was that what you sold to the company? Yes.
226. And you had 140 tons destroyed? Yes.
227. The company, for this $298\frac{1}{2}$ tons, have allowed you half the carriage through Ballina, the same as the others? Yes.
228. What about this year's crop? This year there were 446 tons.
229. Have you delivered that amount? Yes.
230. Have you any loss this year? No.
231. And on that they have also paid half the cartage? Yes.
232. What is the cartage per ton? Three shillings.
233. And they pay half of the 3s.? Yes, 1s. 6d.
234. Do they allow you 13s., and 1s. 6d. besides? Yes.
235. What becomes of the 1s. for the cartage from the field to the punt; do they allow you 12s. at the mill, by paying half the cartage? They allow me 13s. when I deliver the cane on the wharf, and then they allow 1s. 6d. for the expense across Ballina.
236. Then they have been paying you 14s. 6d.? Yes.
237. It costs the company an extra 1s. 6d. to take it to the punt at Ballina? Yes.
238. What becomes of the other 1s., because the company are too knowing to allow you the 1s. cartage from the field to the punt, because the contract is really 12s., unless you deliver it at the punt? Yes.
239. *Chairman.*] The company make an all round agreement with the farmers, I believe, without reference to their distance from the river bank or the creek bank? Yes.
240. And towards the cost of carting from the field to the river bank in the first instance they allow each farmer 1s.? Yes.
241. That makes 13s., including the 12s. for the cane? Yes.
242. Then, when this block occurred the farmers met the company to see by what means they could get the cane across Ballina? Yes.
243. And they met the farmers half way by agreeing to pay half the extra cartage across Ballina? Yes.
244. So that now, at North Creek, the company actually give 2s. 6d. a ton towards carting, that is, to the main river bank, the farmers have to pay the difference, which is 1s. 6d. a ton? Yes.
245. *Mr. Edden.*] Do you live on the Richmond? Yes.
246. How long have you lived there? About forty years. I have been on the creek about twenty-eight years.
247. Have you been put to much inconvenience over this matter? Only during the last two seasons.
248. What amount of cane do you get for your land on an average? Thirty tons to the acre.
249. I suppose when the canal is completed it will be a benefit to the place? It will.
250. You will be glad when it is done? Yes.
251. I suppose it will enhance the value of the property there? Yes.
252. Land which is worth, say, £1 an acre, after the canal is completed will be worth 30s.? Yes. I suppose it will be worth more than that.
253. Then when the canal is completed it will certainly compensate to a great extent the loss you have been put to already? Yes.
254. *Chairman.*] Before this block occurred your farms were always saleable or letable? Yes.
255. Since then they are not? No.
256. When this canal is complete, then, it will put your farms back in the same letable condition as they were before? Yes, a little more I think.
257. But would it compensate you for the losses you have been to? I could not tell that exactly.
258. *Mr. Edden.*] But it will compensate you to a great extent? Yes.
259. *Mr. Kidd.*] How much of the 28 acres did you cut last year? About half, and half this year.
260. You only cut the cane which is matured? Yes; I cut the twelve months' old crop this year too.
261. *Chairman.*] If the canal had been cut some two years ago, I suppose there would have been no claim whatever for compensation? No.

Mr. A. J. Hodgkinson recalled and further examined:—

262. *Mr. Edden.*] Yesterday you stated to the Committee that your loss was £1,216? I estimated it at *Mr. A. J. Hodgkinson.* that, barring the amount being reduced.
263. How did you get at the estimate? I submitted the various items to the Committee in writing.
264. You remember also that you stated that you had 88 acres of cane, and that the average was 35 tons to the acre, worth 13s. a ton? Approximately, I have had about from 50 tons to about 30 tons. *12 Dec., 1894.*
- 265.

- Mr. A. J. Hodgkinson. 265. And then you struck the average at about 35 tons? Yes; at about that.
 266. What would the average be? From 30 tons to 35 tons.
 267. If you put it at 35 tons at 13s. a ton, the income from the cane would be about £2,000? Yes.
 12 Dec., 1894. 268. And you stated yesterday that you were at a loss out of that of £1,216;—do you not think you have made a mistake? I do not calculate that estimate by the average, but by what I actually cut and lost. It is all stated in the estimate which shows the precise crop. I say nothing in the estimate of the average. The estimate may be 35 tons or not; it is merely a rough guess.
 269. I am not looking at the statement, I am going by what you have said? That is merely approximate. It may be a fair estimate or a little off.
 270. *Mr. Kidd.*] How much of the 88 acres do you cut each year? Somewhere about one half.
 271. *Mr. Ewing.*] I see in looking through the statements you have handed in that you have two claims from Thomas Duff, one for £38, and one for £80. Which is the correct one? The one for £80; that is the last one.
 272. Is John Bryant a leaseholder? He was.
 273. Is Owen McGuff a freeholder or a leaseholder? A leaseholder.
 274. What area has he? I think 80 acres; that is, of his own land.
 275. Is Glynn a freeholder? No; a leaseholder.
 276. Do you know the limit of his lease? I think it is 50 acres.
 277. What is Duff? A leaseholder with 40 acres.
 278. What is the length of these leases? I think about eight-year leases.
 279. Do you know how long they have to run? No.
 280. Is Dougall Brown a leaseholder? Yes, with an area of 40 acres. I think he has some five years to run.
 281. What about Wells? He is a leaseholder with two years to run.
 282. What about John Stone? He is a leaseholder with about 80 acres, and five years to run.
 283. How about Henry Williams? He is on his property, 40 acres.
 284. Thomas Ryan? He is a leaseholder with about 40 acres.
 285. Little Brothers? They own the property, about 40 acres.
 286. John Kearey? He is on his own land, 40 acres.
 287. Thomas Cowan? He has 40 acres, his own land.
 288. Joseph Stone? His own land, 40 acres.
 289. Charles Williams? His own land, about 160 acres.
 290. George Young? About 100 acres.
 291. Arthur O'Connor? About 40 acres. He is a freeholder.
 292. A. J. Hodgkinson? His own land, 118 acres.
 293. *Chairman.*] The block at North Creek, you say, depreciated the value of the land? Yes.
 294. If the proposed canal is cut, will it replace the value? Yes, fully.
 295. *Mr. Ewing.*] Are you aware what the total claims amount to? Yes; about £3,550.
 296. As set forth in exhibit X? Yes.

THURSDAY, 28 FEBRUARY, 1895.

Present:—

MR. EDDEN, MR. EWING,	MR. O'SULLIVAN.
--------------------------	-----------------

J. PERRY, ESQ., IN THE CHAIR.

William Percy Dixon, Esq., sworn and examined:—

- W. P. Dixon, Esq. 297. *Chairman.*] You are in the employ of the Colonial Sugar Refining Company? Yes.
 298. What are your duties with reference to the Richmond River Works? I have very few duties in connection with the Richmond River; my duties are more in connection with Fiji and Queensland; I have occasional correspondence in connection with the Richmond. In connection with this matter, I have been through the correspondence which has been received since March, 1893.
 28 Feb., 1895. 299. Are you aware, from the records of your Company, whether there was any stoppage in the conveyance of cane from North Creek in consequence of a block at North Creek? There was a stoppage in conveyance; but, as far as I know, it did not occasion a stoppage of the mill, although it may have conduced to it.
 300. *Mr. Edden.*] It did not cause a stoppage of the mill? Not alone. Of course, there were a good many stoppages of the mill, to which North Creek partly contributed.
 301. *Chairman.*] Did the stoppage at North Creek occasion any loss to the mill? I should say that the Company were losers to a considerable extent, besides the direct loss in the additional cost of transport, by reason of the deterioration in the quality of the cane, through the long delay between cutting and crushing. Cane quickly deteriorates after cutting, through fermentation setting in, and the percentage of sugar falls rapidly after it has been cut for three or four days. The Company also suffered loss through being obliged to purchase tram-line and trucks that would not otherwise have been required.
 302. How did they get the cane out from North Creek? They sent punts up in the early part of the season 1893, and they found the navigation of the entrance of the creek very difficult on account of the low water and the high sea which runs in there. Consequently, they engaged Captain Fenwick to tow the punts round, and after that had been done for a short time a couple of punts were stranded. One was sunk at the entrance, after which the Company declined to send any more punts round for the conveyance of cane out of the creek, although they afterwards decided to send some punts into the creek with a launch, which launch was, I think, stationed there for the remainder of the season. It was decided that the cane be taken from the bank of the creek, inside the creek, across to the main river, through Ballina; but this was found to be almost impracticable on account of the heavy cartage it would necessitate, and the cutting up of the streets; and at the request of the farmers, and, I believe, of some of the residents of Ballina, the Company approached Mr. Toohey with reference to the purchase of his tram-line and trucks. We did not want his line, but we wanted his trucks. He would not sell the trucks without the

the tram-line; consequently, we were obliged to purchase both, as it would have occasioned too great a W. P. Dixon,
delay to get the trucks from any of the other mills. The Government, or the contractor for the break-
water—I am not sure which—lent the rails which were necessary, and we used the trucks which we bought from Tooheys. We hired two punts from Kerle and Kerle, contractors. The cane was loaded on those punts. The punts were towed down the creek, and the cane was transferred to the trucks, taken across to the main river, and loaded there again into punts.

303. That necessitated additional handling? A great deal of additional handling. The only handling necessary, under ordinary circumstances, is the first loading of the punts. This necessitated the leading into punts in the first instance, the transport of the punts to Ballina, the loading from the punts into the trucks, the taking the trucks across, and the loading from them into the punts on the other side.

304. At what did your Company estimate the extra cost of handling? The additional cost for 1893 was £653 18s. 8d., of which the proportion borne by the farmers was £318 1s. 10d. In 1894, the additional cost was £703 18s. 2d., of which the farmers bore £386 14s. 5d.

305. *Mr. Edden.*] How many farmers were there to share that amount? Twenty in 1894, and seventeen in 1893. Of course, they contributed according to the quantity of cane from their farms; and in some instances the farmers had to bear the whole of the cost, because they were not contractors. We were not obliged to take their cane. They were obliged to bear the whole of the cost of transport.

306. Your Company made every effort, I suppose, to navigate the creek—they gave it a fair trial? They gave it a fair trial, inasmuch as they took their punts in, as long as they considered it safe, with their own launch, and then they engaged Captain Fenwick, who had a more powerful and a safer boat in heavy water, and after the stranding of the two—one being sunk and the other stranded there—the Company decided to cease operations unless they could make some arrangement for taking the cane across to Ballina.

307. Does anything appear in your returns to show whether any of the farmers lost the whole of their crops? I believe none of them did.

308. *Mr. O'Sullivan.*] Do I understand you to say that none of the farmers lost by the closing of the creek? No. I said that none of them, so far as I knew, lost the whole of their crops.

309. Do you know a farmer named John Bryant? I do not know any of them myself; but I think there is a man of that name.

310. Do you know that his loss is estimated at £86 5s.? I cannot give any information on the point.

311. Do you know if Bryant has given up sugar-growing, owing to the fact of the mouth of the river being closed? I do not know that.

312. *Mr. Ewing.*] Previous to the commencement of the harbour works at Ballina, could the creek be navigated easily? The navigation at the entrance to the creek, I believe, has always been difficult; but I am not aware of any absolute stoppage having occurred before.

313. Are we justified in believing that, previous to the harbour works starting, you were always able to get your crops out? So far as I know; but I cannot speak with certainty on the subject. I have been connected with the Company for eight or ten years, and I never heard of any absolute stoppage.

314. I notice that you refer to contractors and non-contractors? Yes.

315. You have no statement at all in regard to non-contractors? Yes; we had a statement in regard to non-contractors whose cane we took, but not in regard to those whose cane we did not take.

316. Does your statement make any reference to non-contractors? Yes.

317. Is it possible that there may be cases in which people who usually sent to you have lost their cane owing to its carriage being prevented by the bad state of the creek? I think not, for this reason, the navigation in the creek is very good. The creek is not stopped at all so far as I know; in fact, Mr. Holden mentions in one of his letters that there was plenty of water in the creek, but it was the entrance which was bad.

318. Has the fact that you had to cart the cane across Ballina been the reason for you refusing any cane? Yes; we have not taken cane which we otherwise would have taken—that is, one-year old cane. We are not obliged to cut it, and we have not taken it either from contractors or non-contractors.

319. Will that result in eventual loss to them? It results in loss to them; but it is difficult to estimate what the loss is.

320. Will the cane be cut at two years old? It has been cut as 2-year old cane; and in consequence of it remaining on the ground another twelve months, they are considered to have lost considerably.

321. Has any cane at all been eventually refused—not cut as 1-year or 2-year cane—because of the fact that you had to cart it across Ballina? I am not aware of any case.

322. *Mr. Edden.*] How long have you been in the district at the sugar-mills? I have been there twice, but only for a week or ten days at a time.

323. Do you know anything about this creek? No; excepting what I have learnt from the letters.

324. You understand how the cane was got to the Company's works? Yes.

325. Have you any idea as to what was the cause of the Government making the harbour works? I suppose to improve the entrance to the river.

326. Did anybody ask them to do it? I could not say.

327. You are not aware whether any public meetings were held in the district? No; I believe these harbour works were begun when Sir John Coode was here—at least he examined the entrance, and made certain recommendations, which, as far as I know, were afterwards adopted.

328. Is there a gentleman owning land up there, and growing sugar, which he sends to your mill, named Hodgkinson? Yes.

329. I suppose you know what amount of sugar-cane he sends? Yes.

330. Can you furnish us with information as to what he has sent each year, for the last five years? Yes.

331. I suppose you take the whole of Hodgkinson's cane? Yes; if it suits us.

332. If you do not take it who will? There used to be a man named Sharp up there, crushing cane, but I do not know whether he took any of Hodgkinson's or not. I do not know whether his mill is working now.

333. Can you tell us whether the entrance the Government have made to the Richmond has facilitated the getting of the cane to the mill in any way? So far as I know it has not.

334. Has it impeded it in any way? It is the opinion of our officers up there that it has done so—impeded the getting of the cane from North Creek.

W. P. Dixon, 335. Can you tell us why? In March, 1893—that was when they first began to anticipate trouble—Mr. Esq. Wyness, the manager there, reported on it. He says:—

28 Feb., 1895. Navigation of entrance to North Creek is the most difficult and dangerous of any we have to do with. I do not apprehend danger of the channel being blocked by the breakwater operations.

Mr. Keele, the district engineer, says that the channel will not in any way be altered this year, 1893. Later on, Mr. Holden says:—

The trouble expected some months previous in navigating North Creek has appeared. No water for the launch or punts, and waves from ocean break right in at high tide. Not sufficient water for the "E," one of our smallest launches, drawing only 3 ft. 4 in. The only channel showed 2 ft. 6 in. at high tide between the waves. Changes take place in the channel very suddenly through shifting sand-spits, but owing to the contraction of the spread of water, caused by the gradual closing in of the two breakwaters, I am afraid we must expect frequent delays in the removal of the crops from North Creek, particularly as the mouth of the creek will be facing the completed channel over the Richmond bar. Inside the creek the channel was never better than now. I might add here an extract from Mr. Wyness' letter of 8th March, 1894, in which he says, "I think the works being carried out at the bar largely, if not wholly, responsible for the silting up of the entrance and for the exposed position of the channel."

336. Chairman.] Mr. Hodgkinson states in his claim that there were 150 tons left standing;—have you anything to show the difference between the estimated crop and the actual crop of Mr. Hodgkinson for 1893? Yes.

337. Is there any difference? There is a difference of three-quarters of a ton of cane. I might add here that Hodgkinson's crop in 1894 fell very much further short of Mr. Holden's estimate, as is shown by the following figures:—

	2-year old plant.	2-year old ratoons.
Estimate	$7\frac{1}{2}$ acres 325 tons	32 acres 750 tons.
Actual yield	$7\frac{1}{2}$ " 313·8 ,	32 " 440 ,

In this connection Mr. Holden writes, "Hodgkinson was one of the heaviest losers this year through the over-ripeness of his 2-year old ratoons, but his contracts with us had all expired, and as he would not avail himself of the opportunity of renewing in the early part of 1893, he had to wait until the cane which was still under contract to us was cut."

338. He gives 832 tons as the crop cut for 1893? Yes; 832½ tons, I have it.

339. Mr. Ewing.] How much cane had Hodgkinson which you estimated you had cut? In 1893, the estimate of his crop was 833 tons.

340. For how many acres? In 1893 the estimated area to cut was 50 acres, and he actually cut 50 acres.

341. He says he had 100 tons left standing? I do not know how much he had left standing.

342. Would your cane inspector make a mistake of 100 tons in 50 acres? It is quite possible to make as big a mistake as that; but the only cane which could have been left standing over would have been 1-year old cane, which, in any case, we are not obliged to take.

343. Mr. Edden.] How many tons to the acre did it average in 1893? About 16½.

344. Mr. Ewing.] But are you sure that the whole area of 50 acres was cut? According to our returns 50 acres were cropped.

345. Therefore, if Hodgkinson says he got 35 tons to the acre, it is a discrepancy? It appears to be. It is quite possible that 35 tons to the acre might have been cropped from some portions of it.

346. In estimating the weight of cane, would your inspector make allowance for that cane which was spoiled by standing over for a season;—for instance, supposing cane was frosted in the early part of the season, and was not taken away, and was spoiled, your inspector, in making an estimate for 1894, would, of course, throw that out? He would probably not expect to get as big a yield. They estimate each farm separately.

347. Can you give us an idea of the minimum and maximum weights per acre obtained? That is very difficult. Some of the farms on the Clarence have not given more than 2 tons per acre. I have known a virgin crop yielding 103 tons to the acre, but that is the highest I ever heard of. The average crop for 2-year old cane on the Richmond is from 27 to 33 tons; the 2-year-old ratoons and the 1-year old crops are much lighter.

348. Mr. Ewing.] The total cost of transport for 1894 is £703 13s. 2d.? Yes. For 1893 it was £653 18s. 8d.

349. £1,356 is the total cost for the two seasons? Yes; that includes the carriage of the cane in the creek.

350. That covers everything extra? Yes; but there is also included in that the cost of towing down the creek, which we would have had in any case, even if the creek had been opened.

351. What does that amount to? I could not say; it is very little indeed, because when we have a launch, a couple of miles extra does not make much difference.

352. Your reply is, that it is not a material matter? Yes.

353. Are those amounts the actual cost to the Company? No; it is the total cost, and the farmers bore part of it. In the case of the contractors the farmers bore one-half of it, and in the case of the non-contractors the farmers bore the whole of it.

Mr. Henry Richard Carleton sworn and examined:—

Mr. H. R. Carleton. **354. Chairman.]** What are you? I am the principal assistant engineer in the Harbours and Rivers Branch of the Public Works Department.

28 Feb., 1895. You were stationed on the Richmond River for some time? Yes; I made a survey at the entrance to the Richmond for Sir John Coode, and reported upon it.

356. You see on the small plan produced the words, "Guide Bank, North Creek"? Yes.

357. Can you tell me what that was constructed for? For the training of North Creek—strengthening its course.

358. Was it constructed to direct the creek waters on to the bar, in order to increase the scour? Yes; formerly the waters of the river and the waters of North Creek met almost directly face to face, and our endeavour at present is to make them meet at a somewhat smaller angle, and to deflect the current on to the bar.

359. In fact, to make use of the North Creek water as a scouring agent? Yes.

360.

360. Was any consideration given at that time to the question as to whether that would have any effect on the channel at North Creek for navigation purposes? Yes; it was considered it would improve it. Mr. H. R. Carleton.
361. Has it improved it? Yes; but the improvement is not complete yet, as the works are still in progress. 28 Feb., 1895.
362. Would you consider the stranding of punts and steam launches there, in attempting to navigate, an improvement? No; I would not.
363. Are you aware that such has been the case? I am aware of it. I am also aware that during the time I made the survey there the punts were constantly stranded in the creek.
364. *Mr. Edden.*] Whereabouts? Between the mouth of the North Creek and the North Creek wharf.
365. *Chairman.*] Was there any loss of cane through that stranding? I am not aware of that. Of course, it was no part of my business at that time to inquire into that. I should like to add that our own boring punt, which is a larger one than those I saw used by the Colonial Sugar Company whilst up there, was swamped one night, and I had to go down in the whaleboat to relieve the watchman in charge.
366. Did you ever see any cane punts swamped? No.
367. They were simply grounded on the sand? Yes.
368. And got off the next tide? The cane inspectors who were waiting for the tide, came to my house (Mr. Taylor and Mr. Riley were two of the cane inspectors for the Company), and on some occasions they spent the evening with me while steamers and punts were stranded in the creek; they were waiting for the tide.
369. Did you ever see them driven ashore by the seas? No, not those; but I have seen our own anchor chains carried away, and the punt nearly swept over the bar, but we got down in time to save her. As regards the Sugar Company's punts, of course I did not take any interest in them. I looked after our own plant, and we had some difficulty with it.
370. You see where the bridge is on the plan? Yes.
371. Is it right opposite the entrance to the river? Yes, it may be said to be directly opposite—not exactly opposite the centre; it is a little to one side.
372. Do you think there will always be a break there? I think there will be broken water there. Mr. Darley, however, proposes to run out a training bank, which will remedy it.
373. If you had charge of the Government punts or plants similar to those which are conveying cane, and there was a break at that bridge, would you be justified in sending them out? Of course, there are occasions when it would be too rough; but, generally speaking, I should take one of our punts round there without the slightest hesitation.
374. Provided there was no break there? No; even if there was a break, or the break which I have seen.
375. When were you there last? About two years ago.
376. Have you been there since the trouble complained of arose? No; of course, I have been in touch with the work as principal assistant engineer.
377. What was the work at the heads designed for? The improvement of the entrance to the Richmond River, in accordance with plans received from Sir John Coode, and the whole was submitted to the Public Works Committee, and revised by them.
378. Was it to obtain an extra depth of water over the bar? Yes.
379. And having that depth, is not there a probability that there will be a greater difficulty in navigating North Creek by reason of a heavier swell coming in? Not on that account; but I am inclined to think that there will be somewhat of a greater roll at the entrance of the North Creek, in consequence of our moving the entrance. The completed entrance has been moved, or will be moved, as the plan shows, 400 or 500 feet.
380. You say the department are considering a scheme to prevent the break at the entrance to North Creek? Yes.
381. If the creek were navigable, do you think they would consider that scheme for a moment? I think so, because the creek never was very good.
382. Have you any knowledge at all of the Colonial Sugar Refining Co.? I have been over the works on one or two occasions with the manager, Mr. Holden.
383. Do you think the Company would be likely to cancel a contract if there was not a real danger to their plant;—do you think they would refuse to navigate the creek if there was not a real danger to the plant? That is hardly an engineering question.
384. I am not asking you as an engineer, but as a matter of personal observation? I do not know what the Sugar Company would do at all.
385. *Mr. O'Sullivan.*] Presuming that there is a danger to the navigation, at the entrance to the creek, what would you recommend as the best way of getting over that danger? The work we are carrying out.
386. Your contention is that when the work is completed there will be no block at all? None.
387. There will, therefore, be no necessity to construct a channel from North Creek into the Richmond at a point below West Ballina? I will not say that. I say there will still be rough water, and the punts of the Company are of a small class—not suitable for going out into rolling water. They must be light-draught punts in order to go into the places into which they take them—up the creeks, for loading—but they are not suitable for going into disturbed and lumpy water.
388. Do you think, then, the navigation having been impeded, and there being a likelihood of danger to the shallow punts, it would be desirable, on the part of the Government, to construct a canal from some point below West Ballina into North Creek? I think so.
389. What would be the cost of that canal? About £6,000.
390. Ought not that work to be included as portion of the work in connection with the entrance to the Richmond River? I would hardly go so far as to consider it a part of the harbour scheme. It was not included originally.
391. But as it appears that an inconvenience has arisen already—and even you admit that the water will always be rough there for shallow punts—ought not that to be taken in as an "incidental" or "extra" to the Richmond River works? No doubt, from the way you put it, it seems that it might, perhaps, be made a charge on the harbour work.
392. A claim for compensation has been put in by the sugar planters, and if it is good for one year, it must be good for all time if they suffer this loss. Would it not be cheaper, on the part of the Government, to construct a canal to give a safe channel from North Creek into the Richmond River, rather than be

Mr. H. R.
Carleton.

28 Feb., 1895.

be compelled to pay these claims for compensation every year? You are aware that we are at present constructing this canal. It is actually in course of construction.

393. *Chairman.*] As a matter of fact you are constructing a canal, recognising that you must give these people a way out? Yes.

394. *Mr. Ewing.*] Is the entrance to North Creek blocked now;—could a punt get up now? No.

395. Therefore, at this period of the construction of the Richmond River works, the North Creek is blocked? Yes.

396. Does it appear to you that a person having cane to come out of the mouth of North Creek, will have to take it by land transport to the main river at Ballina? Yes.

397. Therefore, entailing an extra cost? Yes; but we bore a great portion of the cost. We supplied the rails for the road.

398. The contention is that the deepening of the water on the bar, and the directing of the river out by a straight channel, has brought the sea-beach virtually under the mouth of North Creek—that is the public contention? Yes; and there is a great deal in that too; but it will not be so bad when our harbour works are completed. It is simply because our southern breakwater is not sufficiently extended.

399. During 1893 and 1894, has the water been rougher at the mouth of North Creek than previously? That is an opinion you would have to get from Mr. Keele. I have not been there for one and a half years. I worked on the bar for some time, but that was in 1887–8.

400. Are you aware that previously the Company used to get the cane punted round out of the mouth of North Creek? Yes; they always had difficulty.

401. But still they found it necessary in 1893 or 1894 to put down a tramway? It was in this way: The tramway was laid down before the creek was blocked, so as to anticipate any trouble of the kind. We supplied the rails, and the tramway was completed in September, 1893. The channel was not blocked until June, 1894, so that there were really the two routes up to June, 1894.

402. The Company have found it necessary to use land transport across Ballina at considerable cost? We did not know the Company in the matter.

403. However, they have found it necessary to use land transport across Ballina during 1893 and 1894? It was considered desirable. I would not go so far as to say it was absolutely necessary.

404. You have seen the punts stranded in North Creek in 1887 and 1888? Yes.

405. What is the rise and fall of water in North Creek? At high water spring-tides you would get from 4 ft. to 4 ft. 6 in. at the wharf.

406. So that it stands to reason that at very low tide they would be stranded? They do not go in at low tide. They watch their opportunity, and go in on the top of high water.

407. Can you explain why the department found the rails to meet the difficulty in the first instance; I suppose they apprehended the difficulty? Yes; here is a letter from Mr. Keele in which he says:—“The tramway is now nearly completed.—22/9/93.”

408. Why did you build the tramway? We did not build it, as a matter of fact.

409. How did it come to be built? It was a suggestion of Mr. Keele's.

410. Why was the suggestion made? Because the farmers had complained of the difficulty of getting out with their cane.

411. If the mouth of the creek was good enough to come out of, why did they consider that at all? It has always been, as I said before, a cause of complaint.

412. Do you believe the mouth of the creek is worse now than it was previously? Yes; I say that you cannot take a punt there at all now; but that is not on account of broken water, but on account of its mouth having been blocked by the works.

413. It is on account of the operations at the Richmond River? Yes, that is perfectly plain.

FRIDAY, 1 MARCH, 1895.

Present:—

MR. EWING.

MR. O'SULLIVAN.

J. PERRY, ESQ., IN THE CHAIR.

Mr. Henry Richard Carleton further examined:—

Mr. H. R.
Carleton.

1 Mar., 1895.

414. *Chairman.*] Will you refer to the papers in possession of the department to see when complaints as to the block at North Creek were sent in? I think this paper refers to anticipated damages.

415. The claims are for 1893, and you have stated in your evidence that there was only a block in 1894; there was a complaint made in 1893 by the farmers? We have not any record of that.

416. Did the department have any representations made to them in August, 1893, with reference to this block? Yes; they received a letter from Mr. John Perry, the representative of the district, in August, 1893, as follows:—

The Under Secretary, Department of Works,—

Dear Sir,

Re Navigation of North Creek.

Would you kindly and at once bring this matter before the Minister. The farmers and Sugar Company have first arranged for towage of punts. The result you know (loss of cane and punts used in attempt). Second, they have tried carting from wharf at North Creek to wharf at Ballina. This has to be given up. It destroys the streets over which traffic passes, and consequently carts cannot convey the cane, so that you will see that those concerned have made honest attempts to help themselves. I have now to propose that your department provide and lay a tramway from landing place at North Creek to loading place, distant about a mile. I think you have rails, &c., on the spot. The rolling stock, if addition is required to ordinary trucks, the farmers will make the necessary alterations. The road is perfectly level, and all that would be required would be to lay rails. No embankments required. The farmers will find the motive power in the shape of horses, and it will cost them about 1s. 6d. a ton extra to load and unload punts, &c. This matter is urgent, and if necessary to communicate with Mr. Keele, the wires should be used. I have seen several of the aldermen of Ballina, and they say the council will offer no obstruction. In fact they were of opinion that the council, if necessary, would unanimously pass a resolution empowering the Government to lay the tram along the street. Trusting you will see the Minister on receipt of this, as it is of the utmost importance that the growers should be enabled to get their produce to market, the usual mode of conveyance having been interfered with in such a way as to render it impracticable.

Yours truly,

J. PERRY.

Please wire me to Alstonville.

The letter is marked off to Mr. Darley as urgent, and he has evidently furnished a report.

ON SHOALING AT THE MOUTH OF NORTH CREEK, BALLINA.

417. Are you aware, from any of the departmental papers, that the farmers held a meeting and made representations to the Government in July, 1893? I am not aware of it. Mr. H. E. Carleton.
418. Will you look at the paper I have handed to you, and see whether there is anything bearing on the subject? This paper is not signed. It is a *précis*—a brief statement of the case. 1 Mar., 1895.
419. A departmental *précis*? Yes.
420. Would you mind reading it? I do not think it is authoritative, because there is no signature, and it is not registered.
421. Never mind the signature—it is evidently a departmental paper? Yes, I should say so.
422. Will you read the first paragraph? Yes.

Department of Public Works, Harbours and Rivers Branch, Sydney, December, 1894.
MINUTE PAPER.—Subject:—Fishery Creek Canal, Richmond River.

Brief Statement of Case.

31/7/93. At a meeting of settlers in July, 1893, a resolution was passed to the effect that a canal through Fishery Creek would be a comparatively inexpensive undertaking, and would be a complete and permanent benefit to the country at large.

Mr. Darley decided to have a survey made, and instructions were given to Mr. Keele (28/8/93) to report.

Mr. Keele reported that he considered the application to open a canal through Fishery Creek a reasonable one, and recommended that a canal be made by dredging, at a cost of £6,000. In addition to benefiting the town of Ballina by removing stagnant water and sewage matter from swamp which borders the creek, Mr. Keele thought it would make saleable some 500 acres of Crown land at present utterly useless.

Mr. Street, knowing Mr. Keele's report had been sent in, thought that if the Minister would give his approval, the three dredges which were then at the Richmond would be put on at once, and the expenditure would come out of Harbours and Rivers Vote, say £3,000; the balance could be charged against Harbours work vote when finished. The area of improved land and the imposition of light canal dues would form a counterbalancing asset and revenue sufficient to justify required expenditure.

423. It is evident that you made a mistake when you said there was no block until July, 1894? I still say there was no block until then.

424. *Mr. O'Sullivan.*] But although you say that, it is evident from the letter you read, that there were complaints in 1893 by Mr. Perry? Yes; that is correct.

425. Do you consider there was any block there at that time? Only the usual block which I described to you was there in 1887, and in the following years.

426. You admit that in 1894 there was an actual block caused by the channel of the creek being closed up? Yes, undoubtedly.

427. *Chairman.*] Then it was simply a freak on the part of the farmers to cart across and go to this additional expense in 1893? No; I think that was done anticipating the block—to make provision for it, so that they would not suffer.

428. Do you think it is likely that farmers would go to additional expense in carting and transhipping cane in anticipation of trouble which might never come? It was pretty well foreseen that it must come.

429. You think it did not come in 1893? No.

430. And they went to this additional expense because they foresaw that trouble must come? Yes.

431. Your departmental experience leads you to that conclusion? Yes; not exactly departmental, but ordinary experience.

432. *Mr. Ewing.*] So far as you are concerned, it is simply a question of locating the time of the block;—you admit there was a block? I admit it is blocked at the present moment.

433. Can you tell us exactly when the block commenced to show? We closed 7/7/94.

434. And the block happened in a day? It was done very rapidly. We rushed the stuff in in the last few days. The object of doing it so rapidly was to try to divert the current into the new channel where we have an opening span, and so scour it out.

435. *Chairman.*] By the block you mean the casting in of stone by the department? Yes.

436. Not the forming of the sandbank outside which actually caused the trouble—you do not look on that as a block? There was no forming. There were only the natural sandbanks which grow there, and are scoured away from time to time, affected by the flood-waters or north-easterly weather.

437. *Mr Ewing.*] Who was doing the towing out of North Creek? In my time the Company used to send their own little launches.

438. Do they generally manage their business pretty well? I should say they do.

439. Do you think they would take cane out of North Creek, and cart it across Ballina, unless there was some reason for it? No; I do not suppose they would.

440. And they had never taken that action before 1893? They would have had to do it at some time, as there has always been trouble in that creek.

441. But these extreme steps were never required, in the opinion of the Company, before 1893? I do not know what their opinion was.

442. The tramway was not put up until 1893? No; but still the difficulties were there.

443. *Chairman.*] You said in answer to a question yesterday,—“Yes; I say that you cannot take a punt there at all now; but that is not on account of broken water, but on account of its being shallow”;—that is generally a cause of broken water, where there is a swell? Yes; you see our works have moved the entrance to the creek into a shallow place, and we have not dredged that out yet. We have the deep ordinary water which was in the creek up to June and July, 1894. We blocked that in the hope of scouring out the entrance to the creek at another place, where we put in an opening span; and that work is not yet completed. I thought, perhaps, I had not made myself quite clear on that point, so I made a note on the subject which, perhaps, I might be allowed to read.

444. Have you, among your papers, a report from Mr. Keele, dated 2 March, 1894? Yes; it states:—

The application to have Fishery Creek made navigable for cane punts and steam launches by dredging a canal through it is, I think, a very reasonable one, seeing that the farmers resident on North Creek are suffering much inconvenience and loss through the entrance to that creek being practically blocked, and there is no certainty that the works now in progress for its improvement will prevent the formation of shoals below the bridge. Indeed I think it highly probable that there will always be a tendency for a bar to form there.

445. Was Mr. Keele competent to give an opinion of that sort? No one better, I should say, he being on the ground, but he only went there on the commencement of the harbour works, and could not have known of the obstructions which existed previously. I mentioned yesterday that the North Creek is worse now than it was. I forgot to add that this has only taken place since we closed the mouth (7/7/94), and that any damage can only be prospective. As I understand, there has been only one cane season since that date. To meet a contingency which might arise next cane season we are constructing a canal.

SHOALING AT THE MOUTH OF NORTH CREEK, NEAR BALLINA.

APPENDIX.

[Handed in on 11th December, 1894.]

Broadwater, 8th December, 1894.

R. F. HOLDEN.

Dear Sir,

Colonial Sugar Refining Company (Limited), Broadwater Mill, 8 December, 1894.

In compliance with a joint request by most of the farmers of North Creek I now forward to you a statement giving full details of the cane crop of last year from the North Creek district, and showing the cost of transport of such crop by individual farms.

It is impossible at present to compile like information for the crop of the present year—not until the full work of the season has finished there. Generally speaking, however, the cost of transport may be taken to be about the same rate as last year.

Mr. A. J. Hodgkinson, of North Creek, passenger per s.s. Macleay.

Yours, &c.,

R. F. HOLDEN.

A3.

Loss sustained by A. J. Hodgkinson, Season 1893.

By cane standing too long, 150 tons at 12s. per ton	£ s. d. 90 0 0
Sixpence per ton reduction by Colonial Sugar Refining Company for damaged condition of cane on 600 tons	15 0 0
Eighteen tons of cane not cut, at 12s. per ton	10. 16 0
Cost of transport across Ballina on 832 tons at 3s.	124 16 0

C3.

Colonial Sugar Refining Company (Ltd.), Offices, O'Connell-street,

Sydney, 28 February, 1895.

Sir,
I regret I omitted to state that the figure I gave as representing the average crop referred to the 2-year old plant cane only, and I should have added that the 1-year old crops and 2-year old ratoons are not nearly so high. The following are the figures for North Creek for seasons 1893 and 1894:—

	1-year old plant.	1-year old ratoons.	2-year old plant.	2-year old ratoons.
Season 1893	11·7 tons per acre.	9	27	16·3
Season 1894	25½ "	17·8	27·4	18

For the whole river the averages were as follows:—

Season 1893	11 tons per acre.	12	31·3	19·9
Season 1894	12 "	15	24½	19·4

I had intended to go on to say that the yields from the 1-year crops and 2-year ratoons were much lighter, but was interrupted by some other question.

Kindly have this correction made.
The Chairman, Parliamentary Committee on the Shoaling of North Creek.

WM. P. DIXON.

1894-5.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

DREDGING OPERATIONS.

(REPORT OF ENGINEER-IN-CHIEF FOR HARBOURS AND RIVERS.)

Ordered by the Legislative Assembly to be printed, 19 March, 1895.

The Engineer-in-Chief for Harbours and Rivers to The Under Secretary for Public Works.

DREDGING OPERATIONS.

I HAVE the honor to forward herewith the Annual Report on our dredging operations.

The Superintendent's report deals so exhaustively with the subject that it is unnecessary for me to go into any detail.

The plant at present under the control of this Department consists of:—

4 double ladder dredges.

10 single do.

1 Von Schmidt type of revolving cutter sand-pump dredge on a pontoon.

3 Dutch type of suction dredges with self-contained hoppers and screw propellers.

4 Dutch type suction dredges on pontoons for stationary work.

19 grab dredges.

27 tug boats of all kinds.

Five of the dredges and three of the tugs have been laid up during the year.

Since the introduction of the sand-pump dredges, the total yearly output has largely increased, with a very marked corresponding decrease in the average cost per ton. We now have five years' experience of the use of this class of dredge, and during that period the total amount of silt raised by all our dredges amounts to over 28,750,000 tons, or more than was raised on the thirteen previous years.

During the last five years the average cost per ton has been 4·035d., whereas the previous average cost amounted to 8·219d. per ton, which alone shows the advantage gained by the introduction of this class of plant.

The Minister having authorised me to convert two of the larger grab dredges into sand-pumps, arrangements are now being made for carrying this into effect. The two dredges in question, known as the "Sigma" and the "Rho," have large roomy iron punts which we built at the Fitzroy Dock; I propose placing small pumps on them of the Von Schmidt type, with 15" suction and discharge pipes; the grab crane will be retained on one end of the punt for dredging stiff material and lifting snags and logs from rivers. These small dredges will be used chiefly for up river work, working in places where the silt can be discharged direct from the pipes.

The comparison which the Superintendent has drawn up between the cost of dredging in this Colony and in various English ports, in favour of the former, is interesting and instructive, seeing that here we pay higher wages and that repairs generally should be more costly. There are but two ways of accounting for this remarkable result: first, some of our cheapest work is done by dredges working two or more shifts, as pointed out by the Superintendent; secondly, that we employ experienced practical engineers to take charge of our dredges, instead of putting them in charge of sailors, as is very frequently the case. I have not the least doubt that in adopting this system we save a very large expenditure in annual repairs—on the principle that a "stitch in time saves nine" an experienced engineer can see at once when any portion of the plant requires attention, and carries out the repairs, often with his own staff, without stopping the plant if possible, or for as short a time as is necessary; whereas, when a sailor is in charge, he runs the plant as long as possible, until there is a general breakdown and the plant has to go to dock for an extensive overhaul and repairs. This is the only way to account for the fact that only from 15 to 30 per cent. of our expenditure is for repairs, while at the Tyne and Aberdeen repairs amount to 59 and 54 per cent. respectively. On the hopper type of self-propelling suction dredges we have a sailing-master in charge, this being necessary, as these vessels are often employed in a seaway loading the hopper and conveying the silt out to sea to discharge; but in this case there is a first-class certificated engineer in charge of the machinery, including both the engines and dredging machinery, the master simply having charge of the deck and navigating his vessel.

The most important work we have in hand is that at Newcastle, where the harbour was seriously injured by a vast accumulation of silt left during the heavy floods of 1893. By keeping four large dredges constantly at work in the harbour—one of them working three shifts, and one two shifts, making them practically equal to seven dredges—I am glad to say the lost ground has been gained and deep water again prevails in the most important channels within the harbour.

The working of the service has been satisfactory and harmonious, and we have had no serious collision or loss to our plant during the year.

C. W. DARLEY, M.Inst.C.E.,
Engineer-in-Chief, Harbours and Rivers.

REPORT OF THE SUPERINTENDING ENGINEER OF DREDGES.

The Engineer-in-Chief for Harbours and Rivers,—

Department of Public Works,

Sir,

Harbours and Rivers Branch, Sydney, 7 February, 1895.

Herewith I beg to submit a detailed statement of work performed by the dredging-plant of the Department during the past year:—

Before particularising the operations at the different ports and rivers, I have thought it desirable, in justice alike to yourself and the dredge service, to compare, briefly, the cost of work in New South Wales with dredging work performed, under like conditions, in Europe and America—countries where cheap labour obtains, and where the eight-hours system does not, as in this Colony, curtail a day's work.

Hitherto statistics of dredging have been of such a meagre description that data upon which to have based a comparison was not obtainable; but this want exists no longer, Mr. Wheeler, M. Inst. C.E., in his work on "Tidal Rivers," published in 1893, having compiled records of the least costly dredging hitherto carried out in England, Scotland, the United States, France, and Germany. Of all the instances quoted by Mr. Wheeler, from the different countries just named, the lowest record of work at ladder and bucket dredging is that of the "Tees," where an average for lifting and transporting is given of 2·773d. per ton; but how this is arrived at is not very clear, the cost for 1890 being given as 3·386d., of 1891 as 3·11d., and of 1892 as 7d.

The next lowest quotation comes from "Newcastle-upon-Tyne," where a year's dredging costs 3·32d. per ton, divided thus—Dredging, 1·85d.; conveying, 1·45d.

Turning now to kindred work performed in New South Wales, we find the dredge "Newcastle" lifting in one year 1,193,045 tons of silt, at a cost of 2·378d. per ton, divided thus—Dredging, 1·609d.; conveying, 0·769d.; being 15 per cent. less than the best cited work on the "Tees" and 33 per cent. less than the cheapest dredging on the "Tyne." I have specially separated the dredging from the towing cost, lest it might be urged that the distance towed was greater in one case than the other, and it will be seen that for lifting alone colonial work is still the lowest.

And with reference to suction dredging, the merit of cheapest work belongs also to New South Wales. Mr. Wheeler cites "Dunkirk" pumping as the lowest, the figures being 1·5d. per ton; the "Danube" work next, at 1·825d.; the New South Wales suction dredge "Juno's" work for a year (1892) is 1·484d. per ton, and for 1891, 1·406d.

In explanation of the economical results arrived at, notwithstanding the eight-hours system and comparatively high wages, it may be noted that in the largest ladder dredges double and treble shifts are employed, one dredge thus doing the work of two or three under one controlling officer, who is an engineer experienced in preventing accidents and capable of having repairs quickly carried out, thus minimising stoppages, which are always chief factors in expensive work. The Dredge Regulations of 1880, which are rigidly adhered to, have cheapened work by preventing the service being burdened with unsuitable employees.

Ladder Dredges at Newcastle.

Dredge "Newcastle," working two shifts, and for part of the year three, lifted 1,193,045 tons silt, at cost of 1·609d. per ton.

In the month of April a fire broke out at night on the dredge "Hunter," laid up for repairs, and the port for some time lost the services of a dredge, but this was almost compensated for by the excellent year's work performed by the "Newcastle" and by the exceptionally deep dredging of the "Samson," sent to replace the "Hunter" on completion of the latter dredge's repairs.

Newcastle Harbour at the end of 1894 was in a comparatively satisfactory state, due, however, as much to the respite from floods as to the work of the dredges.

At the present time the outlook for 1895, owing to the prospect of more floods, is not cheering for shipmasters. However, it is satisfactory to know that the dredging appliances now at work in the harbour represent dredging at the rate of three million tons per year. Repairs after the fire increased the cost of the "Hunter's" work.

Dredge "Vulcan," working in Newcastle, lifted 107,250 tons, and on the Hunter River, 123,900 tons, at a cost of 3·202d. per ton.

The ladder dredge "Vulcan" worked during the early part of the year at the upper end of Newcastle Harbour, and afterwards was sent up the Hunter River to deepen the lower flats, the sand-pump "Dorus" simultaneously being withdrawn from the river to carry on reclamation work at Scott's Point, Stockton.

Ladder Dredges at Sydney.

The "Sydney," working in various parts of Sydney Harbour, dredged 318,080 tons of silt, at a cost of 3·579d. per ton.

The Estimates for 1894, showing a decrease of £31,068 upon those of the preceding year, were based upon the presumption that the ladder-dredges "Samson," "Charon," "Archimedes," and other vessels would not work; but early in 1894 it was determined that the dredges named should be commissioned.

The "Samson" worked from February to June, lifting 182,630 tons, at a cost of 2·355d. per ton.

The "Samson" was accordingly put to work in Woolloomooloo Bay in February, and continued dredging in Sydney until when, owing to the great length of her ladders, it was decided to send her to Newcastle to take the place of the "Hunter." The cost of the dredge "Sydney's" work is high compared with the rate of 1893, owing to the plant having undergone the first extensive overhaul since the dredge was built six years ago. The "Sydney" was employed deepening Darling Harbour to enable the large mail steamers to load at the new jetties, improving Woolloomooloo Bay, and deepening White Bay preparatory to the new wharf being built there. The "Samson" was employed at Woolloomooloo Bay and at the approach to the Long Cove Canal, and the "Hunter" at deepening Neutral Bay and Careening Cove, the silt being used for reclamation purposes by pumping at Rozelle Bay.

Ladder

Ladder Dredges at other Ports.

At the Manning River the "Ulysses" has been throughout the year improving the up river channels chiefly between Taree and Wingham. The record, both as regards cost and quantity, compares favourably with the work of the preceding year.

Early in 1894 the "Minos" was sent to the Clarence River to work at the main channel near Grafton (instead of the grab-dredge "Alpha"); the dredging at this place occupied the remainder of the year. The expense of removing the dredge from Lake Macquarie to the Clarence increased the cost of the work.

Throughout the year dredging has been vigorously proceeded with at the Macleay River, with the view of opening up the ocean steamer trade again with Kempsey. The ladder dredge "Fitzroy" was engaged all the year at and below Kempsey, while the sand-pump "Alesus" dealt with the long flats at Fisherman's Channel, Shark Island, and Long Reach. Communication with Kempsey will be restored next month.

The dredge "Alcides" worked at the Richmond River at Pimlico and Wardell Flats, and at the south training wall until December, when the new canal at Fishery Creek was started with.

The small ladder-dredge "Charon" was put in commission in February, and was sent to Port Hacking to deepen the channel between the Deer Park and Audley, but was withdrawn temporarily from the district, and was sent to complete the unfinished channel, started during the preceding year, at Brooklyn, and left incomplete at the time of general retrenchment in July, 1893.

In February the small dredge "Archimedes" was commissioned and sent to Moruya to attempt to effect some improvement near the bar. Some good was done, as a small coasting steamer (finally lost on the bar) was enabled to make weekly trips. The cost of the work was very high, owing to the delays due to rough water, and the fact that towing cannot be carried on except when the tide is up.

Sand-pumps.

The sand-pump "Neptune" at the beginning of the year was working on the Clyde Bar, the experiment proving most unsatisfactory, owing to the material operated upon not being sand, and the vessel not being able to cut her way through the shallow bank, this was aggravated by the surge of the sea breaking the pipe. The "Neptune" was brought to Sydney, and she suction pipe was altered so as to project beyond the bow of the vessel. On resuming work no difficulty was experienced, the bar being deepened and navigation much improved. Deepening inside the bar has still to be carried on, but this will probably be done by a ladder-dredge. Ulladulla Harbour was deepened by the "Neptune" on the return journey to Sydney, and in August reclamation work was started at Glebe Point, where most satisfactory progress is being made in filling up the insanitary bay between the Glebe and Annandale, the material pumped is towed to the "Neptune" from ladder and grab dredges, and dumped alongside the pump instead of as before being taken out to sea.

The Von Schmidt dredge "Groper" has been working at deepening and reclamation work at Callan Park and Long Cove. The dredge cut its way through about half a mile of the canal, pumping the material on to the north side, giving most satisfactory evidence of being able to deal with stiff clay and soft rock, as well as with silt.

The sand-pump "Juno," from January to October, was employed filling her own hopper in the outer harbour, Newcastle, and depositing the silt, so lifted, at sea. Subsequently reclamation work behind the dyke was resumed, the sand being discharged on to Bullock Island.

The sand-pump "Dorus" during the first half of the year was employed making a channel at Eales' Flats on the Hunter River, the material being deposited on a shallow bank north of the cutting. Later on work was started at Scott's Point, Stockton, where reclamation is now being proceeded with.

In a previous paragraph recording the deepening operations on the Macleay River, the work of the sand-pump "Alesus" was referred to, that dredge having deepened three of the long flats at the lower part of the river and at Long Reach. The "Alesus" is now at Seven Oaks Flat, and it has been approved that, on the completion of it, work be resumed on the Nambucca River. During the time the "Alesus" has been on the Macleay double shifts have been employed.

The "Dictys" has been employed at the Richmond River Heads, chiefly in connection with the Harbour Improvement Works. Occasionally, as it became necessary, sixteen hours work per day was performed. An attempt was made to work in rough water, but this type of sand-pump not being well adapted for such dredging, the experiment was not a success.

Grab-Dredges.

This dredge was removed early last year from the Clarence to Tweed River, where the deepening of Dunbille Creek has been carried out.

Worked at South Forster, Cockatoo Island, Darawank, and the main channel, Cape Hawke.

Was principally employed at Bain's Falls, Wauchope, Red Bank, Eunis Flat, and Andrews Falls, Hastings River. During the year the whole plant received a thorough overhaul.

Worked at the Hunter River, Raymond Terrace, Newcastle, and Lake Macquarie. The expense of removal to and from Lake Macquarie has increased the cost of the year's work.

Removed obstructions in Teven Creek, Richmond River; the material met with was unsavourable to cheap work.

Deepened

"Eta" lifted 41,170 tons, at 4'87d. per ton.
 "Theta" lifted 47,855 tons, at 3'40d. per ton.
 "Iota" lifted 85,936 tons, at 4'77d. per ton.
 "Kappa" lifted 52,855 tons, at 4'112d. per ton.
 "Nu" lifted 5,335 tons, at 35'04d. per ton.
 "Sigma" lifted 68,255 tons, at 2'74d. per ton.
 "Tau" lifted 36,857 tons, at 4'89d. per ton.
 "Omicron" lifted 37,396 tons, at 4'66d. per ton.
 "Rho" lifted 13,035 tons, at 16'28d. per ton.
 "Pi" lifted 21,580 tons, at 9'67d. per ton.
 "Chi" lifted 83,060 tons, at 3'48d. per ton.
 "Omega" lifted 835 tons, at 110'24d. per ton.

Deepened at Tea Tables; Main Channel, John's River; entrance Queen's Lake, Camden Haven.
 Dredged principally at North Arm, Martin's Point, and Eatonsville Falls, Clarence River.
 Dredged on Main River and Taylor's Arm, Nambucca River.
 Deepened at Long Cove, Callan Park, and various sewers, Balmain and Sydney.
 Lifted blasted material at Pyrmont Jetties and Steel Point.
 Dredged at Brasswater, Shark's Hole, and Lower Myall, near Tea Gardens.
 Worked at South Arm, Wardell, and Bingall Creek, Richmond River.
 At Sheas Creek, Cook's River.
 Lifting blasted rock, at Newcastle principally.
 At Moruya and Wagonga Rivers; at latter place navigation has been opened to the new wharf.
 At South Arm, Back Creek, and between Fernmount and Boat Harbour. Two shifts have been employed for six months.

Was hired at Wollongong, and on return to Sydney, late in the year, was overhauled and towed to the Clarence, where the dredge is now engaged lifting blasted rock.

After the collision with the "Time" the steam hopper "Castor" was towed to Sydney, but owing to want of funds no repairs were effected for some time. During 1894 the hull was lengthened 17 feet, with the view of ultimately adding a sand-pump. Very considerable improvements were effected in the vessel's general arrangements, among others telescoping the funnel and arranging to lift it by steam and lower it when passing under bridges to reclamation sites.

Additional towing power being required, a new iron tug has been laid down at the Fitzroy Dock Works. The dimensions are 90 feet by 18 feet beam, with fine lines. Engines of 240 indicated horse-power will be fitted, and as the boiler will be worked under forced draft good results may be looked for.

I look forward with much satisfaction to the proposed conversion of grab-dredges into sand-pumps, reserving the power to use either grab or pump as occasion requires on the same hull. The dual arrangement will be of the greatest possible advantage at such places as the Myall, Cape Hawke, the Hastings, the Nambucca, the Bellinger, and Moruya.

I have, &c.,
 A. B. PORTUS.

AVERAGE Cost of Dredging and Conveying, 1894.

Class of Dredge.	Tons dredged.	Hours dredging.	Dredging only.			Dredging and Towing.	
			Expenditure.	Average cost per ton.	Average cost per hour.	Expenditure.	Average cost per ton.
Ladder Dredges	3,501,890	17,622	£ 40,210 13 2	2'755	2 4 10	£ 55,164 19 9	3'780
Sand Pump Dredges	2,273,975	10,631	21,648 15 8	1'942	2 0 6	21,048 15 8	1'942
Grab Dredges	589,186	22,406	14,085 2 6	5'737	0 12 7	16,701 11 2	6'800
	6,364,951	51,019	75,944 11 4	2'863	1 9 9	93,515 16 7	3'526

COMPARATIVE cost of Dredging in Europe and New South Wales.

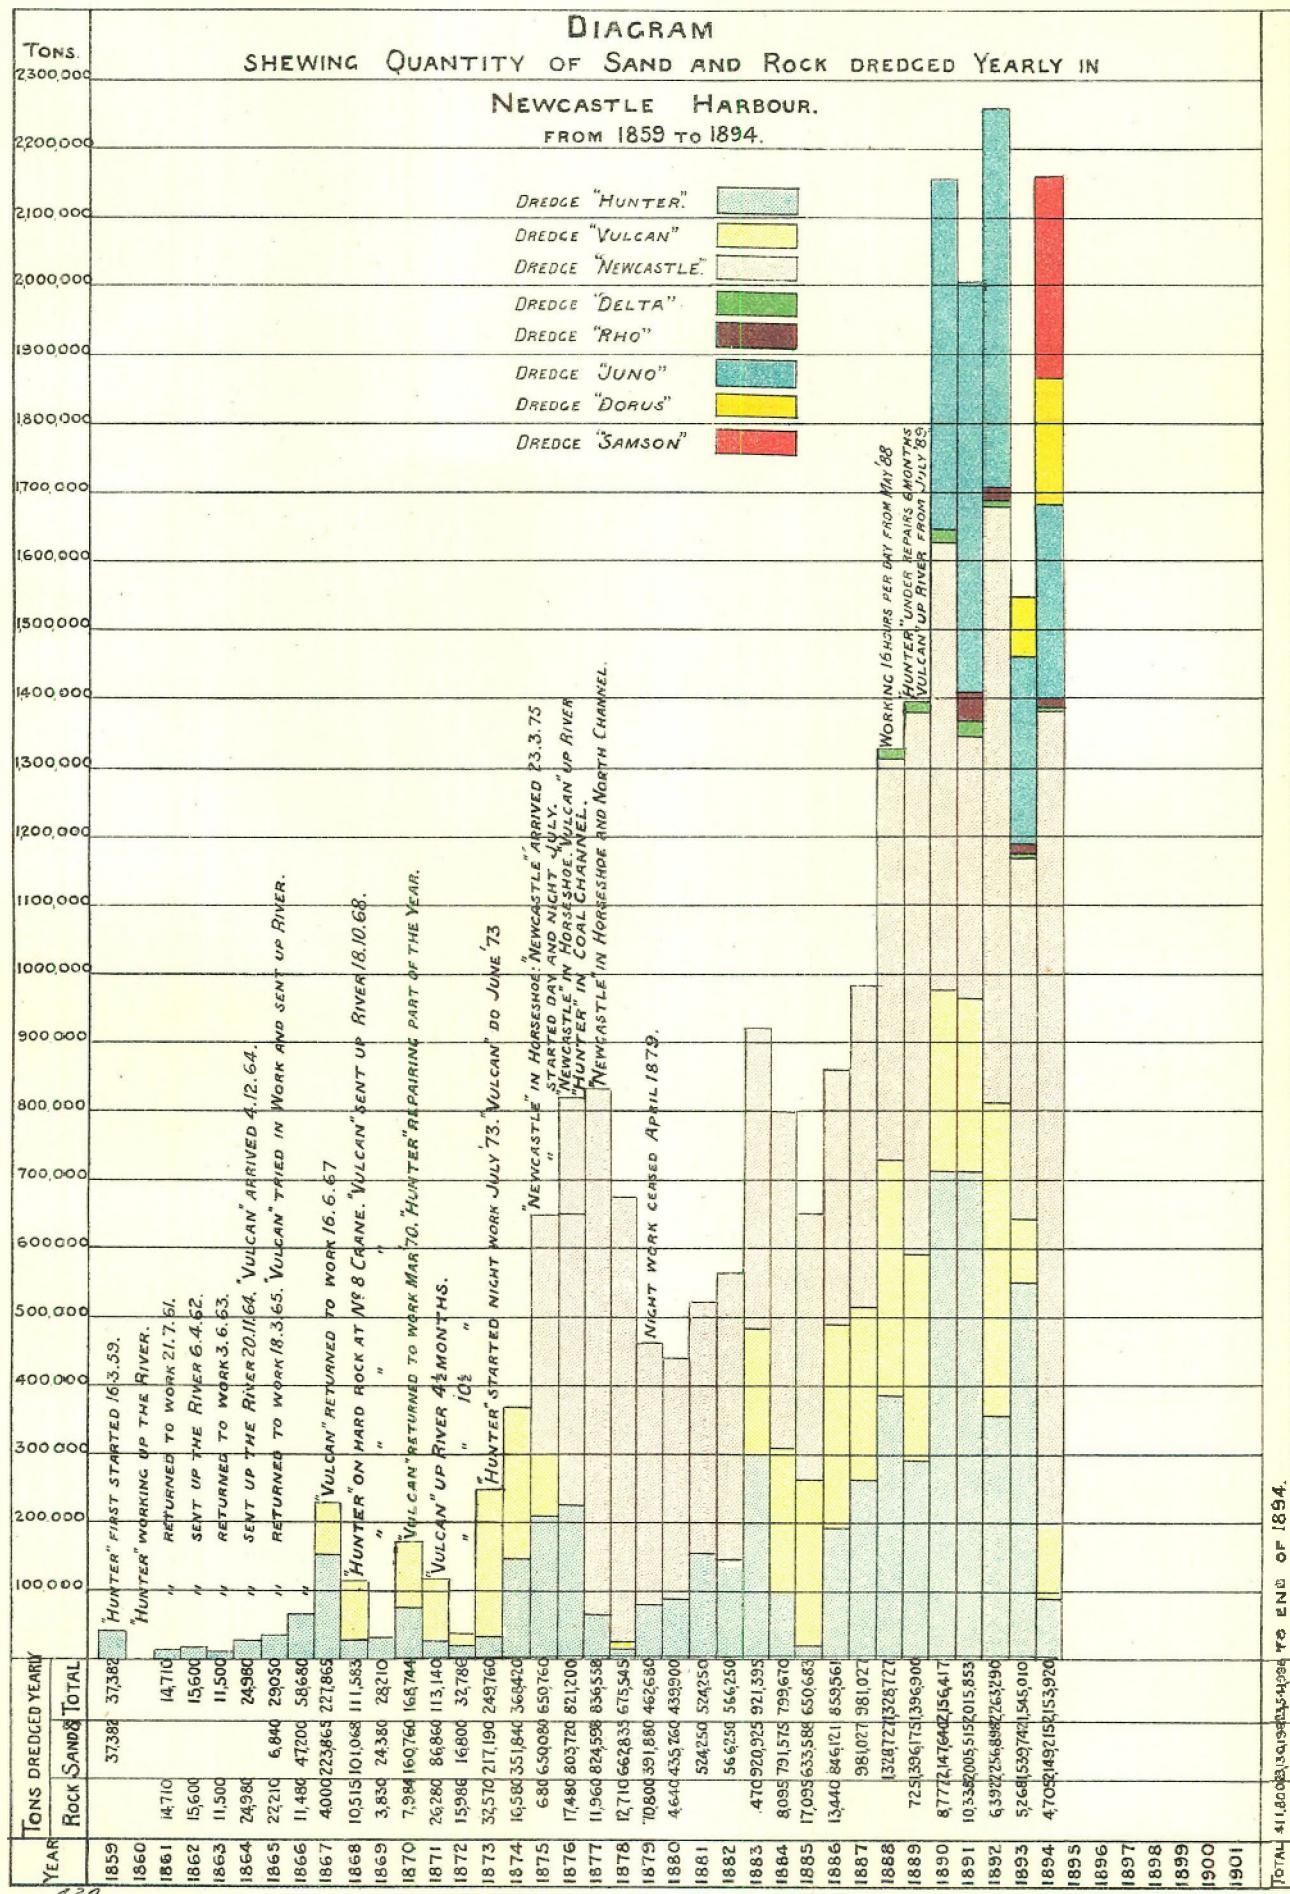

Europe.	New South Wales.
Clyde—Work by ladder dredge (capable of lifting 500 tons per hour)	Pence.
Dredging soft material at per ton	2'06
Conveying to Loch Long (7 miles) at per ton	2'00
Total.....	4'06
About 2,000,000 tons are dredged annually; the actual quantity in 1892 was 2,158,628 tons.	
For the year 1890 the cost per ton was	4'00
Suction dredges—	
Writing in 1893 of the rate at which suction dredging had been carried out at Dunkirk, Mr. Wheeler, M. Inst. C.E., says:—The cost of pumping up sand and conveying it through long floating pipes on to the land is per ton	1'50
Newcastle—Work by stationary ladder dredge (capable of lifting 500 tons per hour)—	Pence.
Dredging soft material, at per ton	1'609
Conveying to sea (3 miles) at per ton	0'769
Total.....	2'378
Sydney—Work by ladder dredge (capable of lifting 500 tons per hour)—	
Dredging sand, mud, and clay, at per ton	2'000
Conveying to sea (10 miles) at per ton	1'853
Total.....	3'922
The cost includes detention caused by rough sea. In 1894 the quantity dredged in Newcastle was 2,158,926 tons (of which 13,035 tons was specially hard material), the cost of dredging and depositing being on the average at per ton	2,959
Suction dredges—	
The "Juno," at Newcastle, in one year (1892) lifted and put ashore 554,600 tons, at per ton	1'484
And in 1891, 904,608 "	1'406
The "Actor," at Tweed River, in one year lifted and put ashore 484,800 tons, at per ton	1'685

* In 1893 and 1894 the "Juno" was only partially employed pumping on shore.

No. 1.

Notice calling for Tenders.

The Treasury, New South Wales, 9 July, 1888.

TENDERS FOR LEASING PUBLIC WHARF AT NEUTRAL BAY.

TENDERS will be received at this office until noon of Thursday, the 26th instant, from persons desirous of leasing the Public Wharf at Neutral Bay.

The lease will be granted for a term of three years.

The rates and dues leviable by the lessee will be found in the Act 44 Victoria No. 8, and Schedules thereto.

The accepted tenderer will be required to enter into a lease with the usual covenants.

The highest or any tender not necessarily accepted.

Any further information may be obtained from the Manager, Public Wharves, Circular Quay, at whose office, also, a copy of the conditions may be obtained.

Tenders to be addressed to the Under Secretary for Finance and Trade, and endorsed "Tender for leasing Public Wharf, Neutral Bay."

J. F. BURNS.

No. 2.

Conditions for Leasing the Public Wharf at Neutral Bay.

1. THE wharf to be leased for three years from 1st August, 1888.
2. Rent to be paid quarterly, in advance, to the Manager, Public Wharves, Circular Quay.
3. If rent remains unpaid for seven days after demand, the Colonial Treasurer, or any one authorised by him, may enter upon the wharf, and the lessee shall vacate without prejudice.
4. The lessee shall not relet the whole or any portion of the wharf without permission from the Colonial Treasurer.
5. Any damage done to the wharf (reasonable wear and tear excepted) to be made good by the lessee.
6. All Government goods to be landed free of wharfage, and any Government vessel to have use of the wharf free of tonnage dues.
7. The lessee to keep and maintain the light on the wharf in proper order.
8. The lessee to have two approved sureties, each in the sum of £100, for the due fulfilment of this contract.
9. All rights in connection with advertising are reserved to the Government.

J. F. BURNS.

The Treasury, New South Wales, 9th July, 1888.

No. 3.

No. 3.

Schedule of Tenders received.

CONTRACT FOR THE PUBLIC SERVICE, 1888.

TENDERS for Leasing Public Wharf at Neutral Bay, opened at the Treasury, 26th July, 1888. In all two tenders received, namely:—

- No. 1. Tenderer—W. Weatherill; £55 per annum.
 No. 2. Tenderer—G. E. Cass; £26 per annum.

The Board recommends acceptance of the tender of Mr. Weatherill.

HAROLD MACLEAN.
 W. O. HOPKINS.
 G. H. BARNEY.

There being only two tenders, I think that in the public interest fresh tenders should be invited.—
 J.F.B., 27/7/88. Fresh tenders invited, to come in on the 9th proximo.—M.R., 31/7/88.

Dear Sir,

371, P.O. Box, Sydney, 26 July, 1888.

I beg to tender the sum of £55 per annum for the lease of the public wharf at Neutral Bay, in accordance with your conditions.

Yours, &c.,

WILLIAM WEATHERILL.

The Under Secretary for Finance and Trade, Treasury, N.S.W.

Sir,

4, Barristers' Court, Elizabeth-street, Sydney, 26 July, 1888.

I have the honor to tender for a lease of the public wharf at Neutral Bay, as per *Gazette* notice, and hereby agree to pay a rental of £26 per year, in accordance with your conditions.

I have, &c.,

The U.S. Finance and Trade, Sydney.

GEORGE E. CASS.

No. 4.

Notice calling for Fresh Tenders.

The Treasury, New South Wales, 31 July, 1888.

FRESH TENDERS FOR LEASING PUBLIC WHARF AT NEUTRAL BAY.

FRESH tenders will be received at this office until noon of Thursday, the 9th proximo, from persons desirous of leasing the Public Wharf at Neutral Bay.

The lease will be granted for a term of three years.

The rates and dues leviable by the lessee will be found in the Act 44 Victoria No. 8, and Schedules thereto.

The accepted tenderer will be required to enter into a lease with the usual covenants.

The highest or any tender not necessarily accepted.

Any further information may be obtained from the Manager, Public Wharves, Circular Quay, at whose office, also, a copy of the conditions may be obtained.

Tenders to be addressed to the Under Secretary for Finance and Trade, and endorsed "Tender for Leasing Public Wharf, Neutral Bay."

J. F. BURNS.

[The conditions referred to in the above notice are identical with those shown herein as paper No. 2, of 9th July, 1888.]

No. 5.

Schedule of Tenders received.

CONTRACT FOR THE PUBLIC SERVICE, 1888.

FRESH tenders for leasing Public Wharf at Neutral Bay, opened at the Treasury, 9th August, 1888. In all three tenders received, namely:—

- No. 1 Tenderer—North Shore Steam Co., £5.
 No. 2 Tenderer—W. Weatherill, £55.
 No. 3 Tenderer—P. W. Glacken, Mayor of East St. Leonards, £120.

The tender of the Borough of East St. Leonards being the highest, the Board recommends its acceptance.

W. O. HOPKINS.
 JOHN JACKSON.

Approved.—J.F.B., 9/8/88. Crown Solicitor,—Will you please prepare a lease in terms of the within papers.—G.E., 27/8/88.

Sir,

Sir,

On behalf of the Directors of the North Shore Steam Ferry Company (Limited), I hereby tender an application for leasing the public wharf at Neutral Bay, for the sum of £5 per annum.

I have, &c.,

THO. SUMMERBELL,
Manager.

To Under Secretary for Finance and Trade.

Sir,

I beg to tender the sum of £55 a year for the lease of the public wharf at Neutral Bay, in accordance with your conditions.

Yours, &c.

To the Under Secretary for Finance and Trade,
Treasury, N.S.W.

WILLIAM WEATHERILL.

Town Hall, East St. Leonards, 9 August, 1888.
On behalf of the Borough of East St. Leonards, representing the ratepayers and residents of this district, I have the honor to formally tender for leasing the above.

I offer the sum of £120 sterling per year for a term of three years, and undertake to comply with all regulations and conditions as set forth in the printed forms.

P. W. GLACKEN,

Mayor of East St. Leonards.

To the Under Secretary for Finance and Trade.

No. 6.

The Under Secretary for Finance and Trade to The Mayor, East St. Leonards.

Sir,

The Treasury, New South Wales, Sydney, 10 August, 1888.

I am directed by the Colonial Treasurer to intimate to you the acceptance of your tender of 9th instant, made on behalf of the Borough of East St. Leonards, for leasing the public wharf at Neutral Bay, for a term of three years, at an annual rental of £120, in terms of Treasury notice of 31st July, 1888, and in accordance with the conditions of contract.

I have, &c.,

G. EAGAR.

No. 7.

The Council Clerk, East St. Leonards, to The Under Secretary for Finance and Trade.

Sir,

Town Hall, East St. Leonards, 24 August, 1888.

I have the honor, by direction of the Council, to acknowledge the receipt of your letter of the 10th instant, stating that the tender made on behalf of this Borough for the Neutral Bay Wharf has been accepted.

I am directed to inform you that the Council is willing to pay rent when we get the lease.

I have, &c.,

P. A. TEMPLE.

No. 8.

The Crown Solicitor to The Under Secretary for Finance and Trade.

Sir,

Crown Solicitor's Office, Sydney, 31 August, 1888.

I have the honor to return herewith the papers forwarded to me on the 27th instant, as instructions to prepare a lease to the Borough of East St. Leonards of the public jetty at Neutral Bay, and to state that I have prepared, and forward herewith, a draft lease for the approval of the Colonial Treasurer and the lessees.

I notice it is provided by the eighth condition that the lessee is to have two approved sureties, each in the sum of £100, for the due fulfilment of the contract. It does not appear from the papers who the sureties are, or whether this condition has been dispensed with by the Minister.

I have, &c.,

JOHN WILLIAMS.

I think that, as we are dealing with a corporate body, and that as the consideration moving in the matter is only £120 a year, the Treasurer might dispense with the bond in this matter. It seems to me that a lease will be quite sufficient.—M.R., 8/9/88.

Approved.—G.E. Draft sent to Mayor for perusal.—M.R., 8/9/88.

No. 9.

The Under Secretary for Finance and Trade to The Mayor, East St. Leonards.

Sir,

The Treasury, New South Wales, Sydney, 8 September, 1888.

I have the honor, by direction of the Colonial Treasurer, to enclose, for your perusal and approval, a draft lease prepared by the Crown Solicitor in connection with the leasing to your Borough of the public wharf at Neutral Bay.

I have, &c.,

G. EAGAR.

No. 10.

The Under Secretary for Finance and Trade to The Mayor, East St. Leonards.

Sir,

The Treasury, New South Wales, Sydney, 17 October, 1888.

I have the honor to inform you that the Colonial Treasurer wishes to be favoured with the early return of the draft lease of the Neutral Bay public wharf, forwarded for your perusal with Treasury letter of 8th ultimo.

I have, &c.,

F. KIRKPATRICK

(For the Under Secretary).

No. 11.

The Secretary, North Shore Steam Ferry Company (Limited), to The Under Secretary for Public Works.

Sir,

This Company contemplates putting on a larger steamer for the Neutral Bay trip, but we find it will be impossible to safely take such a steamer to the Military Wharf at low tide owing to the existence of a rock close to the wharf. I am instructed to ask you to be good enough to have it blasted, and the water-way sufficiently deepened.

Being anxious to put the larger boat on at an early date, to meet the requirements of the traffic, my Directors would be glad if you could have the work put in hand as early as possible.

I have, &c.,

J. J. WESTON.

No. 12.

Memo. from Mr. R. Cameron to Mr. A. Williams.

North Shore Steam Ferry Company, re deepening in front of the Neutral Bay Military Wharf.

ACCORDING to instructions received from you, I went over to Neutral Bay Military Wharf along with Captain Summerbell, Manager for the North Shore Ferry Company. He pointed out what was required. It is a solid reef or flat rock extending about 30 ft. east from the east end of the wharf with only about 5 ft. of water on it at low spring tides, and, as he says that they require about 10 ft. when they put on their new steamers, it will be rather an extensive piece of work. The sweep the steamers have to take coming from the High-street Wharf is so short that one end of the steamers have to run inside of the wharf in getting alongside, and, as the new steamers have a propeller at both ends, they will require deeper water than the steamers now running.

Yours, &c.,

R. CAMERON.

13/3/91.

Respecting the application of the Steam Ferry Company, I find from the inspecting diver's report that there is only 5 ft. of water on a large area of flat rock in front of the wharf in question. The Company are about placing passenger boats on this ferry that will draw 10 ft. of water. The work of deepening the front of the wharf will be rather costly. I think a small survey should be made, so that the matter can be properly placed before the Engineer-in-Chief.—ALFRED WILLIAMS.

Mr. Halligan for survey.—G. A. TILLET, 16/5/91. Mr. Williams tells me that a plan of this place was made by Mr. Grimshaw about a month ago, on verbal instructions, and handed to the Engineer-in-Chief.—G.M.H., 2/6/91. Let me see the survey referred to.—C.D., 16/6/91.

No. 13.

The Council Clerk, North Sydney, to The Under Secretary for Public Works.

Sir,

Town Hall, North Sydney, 25 March, 1891.

I am directed to inform you that a deputation has been appointed by this Council to wait on the Minister for Works, with a view of representing the necessity for removing the rock near the Government wharf at the foot of Hayes-street, and also dredging the channel at Spain's Wharf to a sufficient depth to allow the passage of boats of a deeper draught than those now plying. Be good enough to inform me when it will be convenient for the Minister to receive this deputation.

I have, &c.,

W. BARNETT SMITH.

The wharf quoted as at Hayes-street has always been known to me as Ben Boyd Road. The wharf is leased to the North Shore Ferry Company.—J.J., Circular Quay, 28/9/91.

No. 14.

The Manager, North Shore Steam Ferry Co. (Limited), to A. Williams, Esq.

Sir,

No. 4 Jetty, Circular Quay, 2 April, 1891.

In reference to your inquiry what depth of water this Company require for their steamers at Military Wharf, in reply, 8 feet at low tide will answer our purpose.

I have, &c.,

THO. SUMMERBELL.

No. 15.

Report by Mr. Engineer Grimshaw to Mr. Engineer Williams.

North Shore Steam Ferry Company.—Re Deepening in front of Hayes-street and Spain's Wharfs, Neutral Bay.

Hayes-street Wharf.—The shallow water referred to here is over a reef of solid rock on the east side of the wharf, on which the present steamers often touch at low water. It only projects a short distance in front of the face of the wharf, but the steamers do not come up parallel but at an angle, with the bow projecting behind the face of the wharf and over the reef.

To obtain the required 8 feet of water at low tide, an average of 2 feet of rock will have to be removed from over an area of 45 feet x 30 feet, equal to 100 cubic yards at £2 10s. = £250.

Spain's Wharf.—The steamers appear to have washed up a shoal just off this wharf, leaving only a narrow channel for themselves close to the face of the wharf.

The quantity required to be dredged there to give the required depth of 8 feet is 150 feet x 30 feet x 2 feet = 333 cubic yards at 2s. = £33 6s.

Total cost for the two wharves, £300.

J. W. GRIMSHAW,
16/4/91.

When could a dredge be spared for this service?—C.D., 20/4/91.

There is no grab dredge available, nor is there likely to be one for two or three months. Mr. Williams has one of them at rock work, new wharfs. One has engagements for deepening ferry approaches, one only is at Long Cove, and one is going to Port Hacking. The only dredges available are the "Samson" or "Sydney," and they are at urgent work.—A.B.P., 30/4/91.

No. 16.

Report by Mr. Engineer Williams to The Engineer-in-Chief.

Subject :—Respecting Deputation to the Minister from the North Sydney Borough Council, to request that water frontages to two wharfs should be deepened.

Department of Public Works, Harbours and Rivers Branch, Sydney, 17 April, 1891.

I BEG to report that the present depth of water at Hayes-street and Spain's-street, North Shore, is scarcely sufficient for the safety of the boats now running in this ferry service.

The manager informs me that larger ferry boats are now being built, and these new boats will draw 2 feet more water than the present ones.

This makes it most necessary to deepen the water at these wharf frontages.

The cost will be £300.

I have had the accompanying surveys* made, so that the necessity for the work can be seen and estimated.

ALFRED WILLIAMS.

Hayes-street and Spain-street wharfs are private property. If there is not sufficient depth of water alongside, it has nothing to do with the Government, but should be deepened by the ferry company using them, or by the owners of the wharfs.—J.J., Circular Quay, 29/4/91.

No. 17.

The Manager, Public Wharfs, to The Under Secretary for Finance and Trade.

Sir,

I beg to inform you that the lease of Neutral Bay Wharf—leased to the Borough of East St. Leonards—will expire 9th August next, and to recommend that fresh tenders be called for leasing it.

I have, &c.,
JOHN JACKSON.

Approved.—W.M., 5/5/91.

Tenders called for 18/6/91.—M.R.

No. 18.

Notice calling for Tenders.

The Treasury, New South Wales, 14 May, 1891.

Tenders for Leasing Public Wharf at Neutral Bay.

TENDERS will be received at this Office until noon of Thursday, the 18th proximo, from persons desirous of leasing the public wharf at Neutral Bay.

The lease will be granted for a term of three years, from 10th August, 1891.

The rates and dues leviable by the lessee will be found in the Act 44 Victoria No. 8, and schedules thereto.

The accepted tenderer will be required to enter into a lease with the usual covenants.

The highest or any tender not necessarily accepted.

Any further information may be obtained from the Manager, Public Wharfs, Circular Quay, at whose office also a copy of the conditions may be obtained.

Tenders to be addressed to the Acting Under Secretary for Finance and Trade, and endorsed "Tender for Leasing Public Wharf, Neutral Bay."

W. McMILLAN.

[The conditions referred to in this notice are identical with those shown in paper No. 2.]

No. 19.

* The maps have not been printed.

No. 19.

Schedule of Tenders.

TENDERS for leasing Public Wharf, Neutral Bay.

No tenders received. The Board recommended reference to Captain Jackson for advice.

M.R., 22/6/91.

The Manager, Circular Quay, for favour of report.—F.K. As no one tendered for the wharf at Neutral Bay, the company using it should be charged the usual tonnage due, viz., 10s. per day for each steamer; and I would suggest that the North Shore Ferry Company be notified to that effect.—J.J., 25/6/91. Approved.—W.M., 29/6/91.

No. 20.

The Acting Under Secretary for Finance and Trade to The Secretary, North Shore Steam Ferry Company (Limited).

Sir,

I have the honor, by direction of the Colonial Treasurer, to inform you that tenders were recently invited by the Treasury from persons desirous of leasing the public wharf at Neutral Bay for three years from 10th August, 1891.

No response, however, was made to such invitation, and I am now to notify to you, as a matter of courtesy to your directors, but as a matter of courtesy only, that, in the event of the steamers of your company requiring to use such wharf, after expiration of the existing lease, the usual tonnage dues will be charged.

I have, &c.,

F. KIRKPATRICK.

No. 21.

The Secretary, North Shore Steam Ferry Co. (Limited), to The Under Secretary for Finance and Trade.

Sir, North Shore Steam Ferry Co. (Limited), 29, O'Connell-street, Sydney, 8 July, 1891.

I am instructed to thank you for your letter of 30th June (S. 1,520) drawing our attention to the fact that the lease of the Military Wharf, Neutral Bay, expires early next month. I am instructed to say that this Company will be willing to take a lease for three or five years at an annual rent of, say, £25.

I have, &c.,

JNO. J. WESTON.

Captain Jackson for report.—F.K., 8/7/91. This wharf cost over £600 to construct. I beg to recommend that it be leased to this Company if they will pay £50 per annum for it.—J.J., 9/7/91. Approved.—W.M., 10/7/91.

No. 22.

The Acting Under Secretary for Finance and Trade to The Secretary, North Shore Steam Ferry Co. (Limited).

Sir,

The Treasury, New South Wales, Sydney, 11 July, 1891.

I am directed to acknowledge the receipt of your letter of 8th instant, and to state, in reply, that the Colonial Treasurer is prepared to lease to your Company the Military Wharf, Neutral Bay, provided a rental of £50 per annum be agreed upon.

I have, &c.,

F. KIRKPATRICK.

No. 23.

The Secretary, North Shore Steam Ferry Co. (Limited), to The Under Secretary for Finance and Trade.

Sir, North Shore Steam Ferry Co. (Limited), 29, O'Connell-street, Sydney, 14 July, 1891.

In reply to your letter of the 11th inst. (S. 1,564-6,178) I am instructed to say that my Board consider that £25 is an ample rent for the Military Wharf, and that we cannot agree to pay £50 per annum.

I have, &c.,

JNO. J. WESTON.

No. 24.

The Secretary, North Shore Steam Ferry Company (Limited), to The Under Secretary for Finance and Trade.

North Shore Steam Ferry Company (Ltd.),

Sir,

29, O'Connell-street, Sydney, 30 July, 1891.

Referring to your letter of the 11th instant (S. 1,564-6,178) I have the honor to say that my Board consider the rent of £50 per annum for the Military Wharf is excessive, and not warranted by the traffic; in fact, the Company cannot afford to pay so high a rent for the service of that particular spot. It is out of all proportion to the rents which we are paying elsewhere, and the sum of £25, which we have offered, is full value for the jetty.

I would point out that the wharf was built for military and not ferry purposes, and having regard for the conveniences necessary for a mere place of call for ferry steamers, the amount expended thereon was wholly unnecessary. Moreover, the depth of water is insufficient for some of the Company's steamers, and considerable inconvenience is experienced by our having to run a special class of boat to render the wharf accessible.

It is quite true, as mentioned in the conversation which took place to-day with two of the members of my Board, that the Company have been paying £50 a year to the Corporation; but, as explained to you, the circumstances were exceptional. When tenders were first called, this Company offered £5 a year upon the suggestion of Captain Jackson, while the Corporation, in an excess of zeal on the part of some of the aldermen who wished to control the traffic, tendered the extraordinary sum of £120 per annum. They endeavoured to impose this rental upon the Company, but without success, as the Company's steamers were promptly taken off. Subsequently, as a matter of compromise, and out of consideration for men who had incurred a liability, for which they had rendered themselves responsible, my Board consented to pay £50 a year for the time being, but with a distinct intimation that after the expiry of the lease the Company would decline to continue the payment of so high a rent.

I trust that under the circumstances this Company's reasonable offer of £25 per annum will be accepted.

I have, &c.,

JNO. J. WESTON.

As this wharf was worth £50 per annum to the Company when leasing it from the Corporation, it is worth the same amount leasing it from the Government; but as the Company decline to pay what is a fair rental for it, I would recommend that their offer of £25 per annum be refused, and that the usual tonnage dues be charged after the expiration of the present lease.—J.J., Circular Quay, 3/8/91. The Under Secretary for Finance and Trade.

Submitted.—F.K., 4/8/91. Approved.—H.P., 4/8/91.

No. 25.

The Under Secretary for Finance and Trade to The Secretary, North Shore Steam Ferry Company (Limited).

Sir, The Treasury, New South Wales, Sydney, 6 August, 1891.

I am directed to acknowledge receipt of your letter of the 30th ultimo, in further reference to the Neutral Bay Wharf, and to state the Government is not prepared to accept a lower rental than £50 per annum for the same.

I have, &c.,

F. KIRKPATRICK.

No. 26.

The Secretary, North Shore Steam Ferry Company (Limited) to The Under Secretary for Finance and Trade.

North Shore Steam Ferry Company (Limited),

Sir, 29, O'Connell-street, Sydney, 13 August, 1891.

I am in receipt of your letter of 6th inst. (No. 6,788 Misc.), with reference to the Military Wharf, Neutral Bay. My Board will be prepared to take a lease of the Military Wharf at £50 per annum, provided the depth of water—to which your attention was drawn on the 30th ultimo—is increased, so as to enable the ordinary boats of the Company to have access to the wharf. At present they are prevented from doing so by a piece of rock, which requires removal. Until this is done the Company is unable to meet the exigencies of the traffic.

I have, &c.,

JNO. J. WESTON.

I beg to recommend that the wharf be leased for three years to the North Shore Ferry Company, at £50 per annum, to date from the expiration of the former lease of the wharf, and that the waters be deepened to the required depth.—J.J., 15/8/91.

Submitted.—F.K., 19/8/91. Approved.—B.S., 20/8/91. The Under Secretary for Public Works.—F.K., 24/8/91. Please report as to dredging at once.—Jno. P., Supt. (for Engineer-in-Chief), 25/8/91.

This matter has been dealt with by Mr. Williams, who was asked by the Engineer-in-Chief to submit alternative prices for removing the rock and extending the wharf 10 or 12 feet. It will be seen that the probable cost of each scheme is about £147 on survey. Would it not be best to ask the Company if the increased wharfage would not suit them better than deepening?—A.B.P., 28/8/91.

Mr. Williams to take this matter in hand. I presume the Treasury will find the money.—C.D., 1/9/91.

Shall I have the wharf extended at a cost of £150? I think it will cost less money, and be quicker work than blasting the rock to obtain the required depth. Plan and specification can be prepared for approval.—A.W., 2/9/91.

The rent for this wharf will not be paid by the Company until this work is done.—J.J., 8/9/91. Resubmit when the Lobintz plant is ready.—C.D., 9/9/91.

No. 27.

The Council Clerk, North Sydney, to The Under Secretary for Public Works.

Sir, * * * * * Town Hall, North Sydney, 14 August, 1891.

I am also directed to request that the wharf at the foot of the continuation of Ben Boyd Road, known as Hayes-street, may also be handed over to the Council at the same time, as part of the road in question.

I have, &c.,

W. BARNETT SMITH.

No. 28.

The Under Secretary for Finance and Trade to The Secretary, North Shore Steam Ferry Company (Limited).

Sir,

The Treasury, New South Wales, Sydney, 22 August, 1891.
I have the honor, by direction of the Colonial Treasurer, to acknowledge receipt of your letter of the 13th instant, and to inform you, in reply, that the Government will be prepared to grant you a lease of the public wharf, at Neutral Bay, for a period of three years, from the date of expiration of the former lease, at a rental of £50 per annum, and will increase the depth of water so as to enable the ordinary boats of your Company to have access to the wharf.

I shall be glad to receive a notification of your acceptance of the offer, so that the lease may go forward for preparation.

I have, &c.,

F. KIRKPATRICK.

No. 29.

The Secretary, North Shore Steam Ferry Company (Limited), to The Under Secretary for Finance and Trade.

Sir,

North Shore Steam Ferry Company (Limited), 29, O'Connell-street, Sydney, 26 August, 1891.
In reply to your letter of the 22nd instant, S. 1,743-7,177 Misc., I am instructed to accept the offer made for a lease of the public wharf, at Neutral Bay, and I am further to say that this Company will be prepared to execute a lease when the water-way shall have been deepened as arranged. My Board assume that this work will be put in hand at once.

I have, &c.,

JNO. J. WESTON.

No. 30.

The Council Clerk, North Sydney, to The Under Secretary for Public Works.

Sir,

Town Hall, North Sydney, 17 September, 1891.

In reply to your letter, dated 5th instant, intimating that the wharf at the foot of Hayes-street was a private one, and, consequently, not under the control of your Department, I am directed to point out that such an intimation must be the result of some misapprehension, as the wharf referred to is a public one, and has been let by tender annually, the Council being the lessee during the past year. Now, however, that the Council is assuming the charge of the Ben Boyd Road, to which this wharf has been the approach, it is considered only fair that the wharf should also be handed over to the Council, as it is the principal landing-place for the public at Neutral Bay. I am, therefore, directed to again request that the wharf referred to may be handed over to this Council.

I am, &c.,

W. BARNETT SMITH.

No. 31.

Minute by Mr. Engineer Tillett to The Engineer-in-Chief.

Subject:—Wharf at Hayes-street, Neutral Bay.

I FIND that the wharf at Hayes-street was built by the Government. The contract was let on the 6th October, 1883, to R. M. Scott; amount of contract, £436.

G. W. TILLETT.

Captain Jackson was apparently misinformed about this wharf being a private one. The application of the Council of North Sydney to have the wharf handed over, should again be referred to the Treasury.—C. W. DARLEY, 16/10/91.

Best to inform Council that the wharf cannot be handed over, as it is leased by the Treasury.—J.B., 23/10/91. Approved by Minister.—D.McL., 24/10/91.

No. 32.

The Under Secretary for Finance and Trade to The Crown Solicitor.*

Sir,

The Treasury, New South Wales, Sydney, 11 November, 1891.

I am directed to request you to be good enough to cause a draft lease to be prepared in connection with the papers enclosed (public wharf at Neutral Bay to North Shore Steam Ferry Co., Ltd.)

I have, &c.,

F. KIRKPATRICK.

The Minister for Public Works requests that all action be stayed for the present.—F.K., 11/11/91.
Let the lease be prepared.—J.S., 2/12/91.

[* This letter was not sent to the Crown Solicitor until the 2nd December, 1891.]

No. 33.

Minute by The Secretary for Public Works.

Department of Public Works, Sydney, 11 November, 1891.

ARE there any papers in the Treasury in reference to the Government wharf at Hayes-street, Neutral Bay? Principally in reference to the leasing of the wharf.

W.J.L.

These are the only papers in the Treasury in connection with the wharf at Neutral Bay. There is one paper in the Works, 91/7,177.—F.K., 11/11/91.

The papers in this Department do not contain the letter to which Mr. Weston's is evidently a reply, nor is there any tender from the North Sydney Council to lease the wharf, and, therefore, perhaps the Crown Solicitor or Mr. Jackson may have another set of papers. I should like them to be found, and in the meantime that no further action be taken, as I wish to consult my hon. colleague the Treasurer in this matter.—W.J.L., 11/11/91.

Let the whole matter stand over till we hear further.—J. B., 12/11/91.

No. 34.

The Council Clerk, North Sydney, to The Under Secretary for Finance and Trade.

Town Hall, North Sydney, 13 November, 1891.

In the course of an interview between the Hon. the Minister for Works and Mr. E. M. Clark, M.L.A., on the subject of wharf at the foot of Hayes-street, Neutral Bay, tenders for which were invited in June last, the Minister informed Mr. Clark that no tender had been received from this Council. I beg to enclose you herewith a copy of the tender, which was forwarded from this Council on the 12th June, and which is now said to have gone astray. If necessary, I am prepared to make a declaration that the tender was duly forwarded.

I have, &c.,

W. BARNETT SMITH.

[*Enclosure.*]

Town Hall, 12 June, 1891.

Sir, In accordance with your advertisement inviting tenders for leasing public wharf at Neutral Bay, I beg to offer, on behalf of the Borough Council of North Sydney, the sum of twenty pounds per annum.

I have, &c.,

FRANCIS PUNCH,

Mayor.

The Acting Under Secretary for Finance and Trade, Sydney.

No. 35.

The Council Clerk, North Sydney, to The Secretary for Public Works.

Sir,

Town Hall, North Sydney, 13 November, 1891.

In reference to the matter of the wharf at the foot of Hayes-street, and an interview between yourself and Mr. E. M. Clark, M.L.A., on the subject, when you informed Mr. Clark that no tender had been received from this Council, I beg to inform you that a tender was forwarded to the Under Secretary for Finance and Trade on the 12 June last, a copy of which I enclose. If necessary, I am prepared to make a declaration to this effect.

I have, &c.,

W. BARNETT SMITH.

No. 36.

Minute by The Secretary for Public Works.

Subject:—Government Wharf at foot of High-street, Neutral Bay.

VERY strong representations have been made to me by the North Sydney Council as to the advisability of giving them the control of the above wharf. The road leading to it is of course in their charge, and they find that unless they have command of the wharf they are put to very considerable disadvantage. I find the Treasury have promised the North Shore Ferry Company a lease of the wharf when a certain amount of rock, which now obstructs access to it, has been removed, the price agreed upon being £50 per annum, but the lease has not yet been prepared. I think it would be very desirable if my honorable colleague would transfer this lease to the North Sydney Council, who are prepared to re-lease the wharf to the North Shore Ferry Company on the same terms, and I understand also from the secretary of the company that they are perfectly willing to agree to this arrangement. I shall be glad if my honorable colleague will kindly assent to the proposal, as it seems to me very desirable that the control of the wharf should be in the hands of the Municipality rather than the ferry company.

It also appears, from statements and a declaration made, that the Council forwarded a tender, of which a copy has since been sent to the Department, evidently, therefore, some mistake has arisen, and this, the more, makes it desirous to let the Council have control of the wharf.

W. J. L., 25/11/91.

The Council's offer was only £20 per year, and the wharf has already been leased to the North Shore Co. at £50 per year.—J.S., 1/12/91.

No. 37.

E. M. Clark, Esq., M.P., to The Colonial Treasurer.

Sir,

The Borough Council of North Sydney has written to your Department *in re* a tender forwarded by them in July last for the lease of Government wharf at Neutral Bay. It appears that, notwithstanding the fact that the Council was the only tenderer, at £20 per annum, the N.S.S. Ferry Company has been allowed to lease the wharf at £50, without any opportunity being offered to the Council to compete with them. I explained the circumstances to Mr. Lyne, who sent to the Treasury for the papers, with the result that there was missing from among them the tender of the Council. The Council Clerk produces his letter-book, showing copy of tender forwarded, and is prepared to make an affidavit that he sent it some five or six days before the advertised time for closing tenders. I therefore desire to bring the matter under your immediate notice, feeling assured you will give it your attention.

I remain, &c.,

EDWARD M. CLARK.

Kindly let me have all the papers in connection with this matter.—J.S., 24/11/91.

No. 38.

E. M. Clark, Esq., M.P., to The Colonial Treasurer.

Sir,

Parliament House, Sydney, 10 December, 1891.

Some time ago I addressed a letter to you on the subject of the Government Wharf at Neutral Bay and the tender of the Borough of North Sydney. I have as yet received no reply, but on the 1st December I received the following from the Under Secretary for Public Works:

"I am directed by the Secretary for Public Works to inform you that he has caused a communication to be addressed to the Colonial Treasurer, setting forth the desirability of leasing the wharf in question."

As the Borough Council meets on Tuesday night, and the members are anxious for a settlement of this matter, I shall be glad to know at once how it stands.

Yours, &c.,

EDWARD M. CLARK.

The writer might be informed that a lease has been granted to the North Shore Ferry Company.—F.K., 11/12/91. Approved.—J.S., 11/12/91.

No. 39.

The Under Secretary for Finance and Trade to E. M. Clark, Esq., M.P.

Sir,

The Treasury, New South Wales, Sydney, 14 December, 1891.

Referring to your letter of the 10th instant, I have the honor to inform you that a lease has been granted to the North Shore Steam Ferry Company (Limited) of the Government wharf at Neutral Bay, therein mentioned.

I have, &c.,

F. KIRKPATRICK.

No. 40.

The Crown Solicitor to The Under Secretary for Finance and Trade.

Sir,

Crown Solicitor's Office, Sydney, 11 December, 1891.

As instructed, I have prepared and now forward herewith for your perusal and that of the lessees, draft lease of the public wharf at Neutral Bay to the North Shore Steam Ferry Company (Limited), and must ask your further instructions as to the following points.

How is the rent of £50 to be paid—quarterly, or half-yearly? Was the first payment made on 10th August last?

The covenant to insure, usual in the Circular Quay leases, has been inserted in the draft. Is the company to insure in this case; and if so, in what amount?

Are there any buildings on the jetty to be painted?

Is the jetty sufficiently described as "the" public wharf, Neutral Bay?

Is there to be a right reserved to the Government of advertising on the jetty?

Are the Company to maintain and exhibit a light thereon?

Is the general public to have free access, &c., to the wharf?

It would greatly facilitate the preparation of these leases and save a deal of unnecessary correspondence if I were furnished in the first instance with clear and definite instructions as to the terms on which they are to be granted, and an accurate description of the property to be leased.

I have, &c.,

ERNEST A. SMITH,

Crown Solicitor

(Per C.E.P.)

No. 41.

The Crown Solicitor to The Under Secretary for Finance and Trade.

Sir,

Crown Solicitor's Office, Sydney, 6 January, 1892.

Acting under your instructions of 2nd ultimo P.O. 2,962, M. 72, I have prepared, and now forward herewith lease in duplicate form from the Treasurer to the North Shore Steam Ferry Company of the public wharf at Neutral Bay.

The

The documents should be executed by the Minister, and the Company under their Common Seal as indicated in pencil—one part may then be handed to the Company, and the other retained by you.

Each part will require a 2s. 6d. stamp, each party stamping his own document.

I have, &c.,

ERNEST A. SMITH,

(*Per C.E.P.*)

As Mr. Clark, M.P., has been moving in this matter, with the object of securing the lease for the North Shore Municipality, I should like the Colonial Treasurer to see Mr. Clark before the lease is signed.—F.K., 9/1/92.

Ask Mr. Clark, M.P., whether he has completed arrangements as suggested by me—otherwise the lease to the North Shore Company will be completed.—J.S., 11/1/92.

No. 42.

The Council Clerk, North Sydney, to The Under Secretary for Finance and Trade.

Sir,

Town Hall, North Sydney, 9 January, 1892.

I am directed to request that the Colonial Treasurer, will be good enough to name a time when it will be convenient for him to receive a deputation from this Council in reference to leasing the Government Wharf at Neutral Bay.

I have, &c.,

W. BARNETT SMITH.

Mr. Clark, M.P., has been fully informed of how this matter stands, and I am prepared to carry out my offer to him, viz., that with the concurrence of the North Shore Ferry Company, I am prepared to grant a lease to the Municipality at the same rental the said Company have agreed to pay.—JOHN SEE, 12/1/92.

No. 43.

The Under Secretary for Finance and Trade to E. M. Clark, Esq., M.P.

Sir,

The Treasury, New South Wales, Sydney, 12 January, 1892.

I am directed by the Colonial Treasurer to ask whether you have completed arrangements, as suggested by Mr. See to you, in connection with the public wharf, Neutral Bay, as the matter cannot be kept open much longer.

I have, &c.,

F. KIRKPATRICK.

No. 44.

E. M. Clark, Esq., M.P., to The Under Secretary for Finance and Trade.

Sir

Parliament House, Sydney, 13 January, 1892.

I beg to acknowledge the receipt of yours of yesterday's date, re public Wharf, Neutral Bay, and in reply beg to state that negotiations are now pending between the Municipal Council and North Shore Steam Ferry Company on the subject. I shall again bring the matter under the immediate attention of the Mayor, and will communicate the result without further delay to you.

Thanking the Colonial Treasurer for the opportunity offered by him to the Council.

I remain, &c.,

Seen.—J.S., 15/1/92.

EDWARD M. CLARK.

No. 45.

The Under Secretary for Finance and Trade to The Council Clerk, North Sydney.

Sir,

The Treasury, New South Wales, Sydney, 14 January, 1892.

I am directed by the Colonial Treasurer to acknowledge receipt of your letter of the 9th instant, and to state, in reply, that Mr. E. M. Clark, M.P., has been fully informed how the matter therein referred to stands, and to intimate that Mr. See is prepared to carry out his offer to Mr. Clark, viz.:—That, with the concurrence of the North Shore Steam Ferry Company (Limited), he will grant a lease of the public wharf at Neutral Bay, to your Municipality, at the same rental the said Company have agreed to pay.

I have, &c.,

F. KIRKPATRICK.

No. 46.

The Council Clerk, North Sydney, to The Colonial Treasurer.

Sir,

Town Hall, North Sydney, 25 January, 1892.

In reply to your letter dated 14th inst., in reference to the tender from this Council for the lease of the Government wharf at Neutral Bay, I am directed to inform that Mr. E. M. Clark, M.P., has intimated that the North Shore Ferry Company will not agree to the terms of your offer.

I am therefore directed to again request that you will be good enough to receive a deputation from this Council in reference to the matter on some early date suited to your convenience.

The Council desires to discuss the matter fully with you in the hope that some arrangement satisfactory to the people of this district may be arrived at.

I have, &c.,

W. BARNETT SMITH.

I think that before I receive a deputation, some agreement should be arrived at between the Council and the Ferry Company. It is a local matter in dispute, with which I do not at present feel called upon to interfere.—J.S., 29/1/92.

No. 47.

The Under Secretary for Finance and Trade to The Council Clerk, North Sydney.

Sir,

The Treasury, New South Wales, Sydney, 2 February, 1892.

Referring to your letter of 25th ultimo, I am directed to state that the Colonial Treasurer feels that the negotiations which it is understood are now pending between your Council and the North Shore Ferry Company should be settled before he could arrange to receive a deputation *re* the leasing of the Neutral Bay wharf, as the matter at issue appears to be of a local character, in connection with which Mr. See does not consider that he is at present in a position to interfere.

I have, &c.,

F. KIRKPATRICK.

No. 48.

The Council Clerk, North Sydney, to The Under Secretary for Finance and Trade.

Sir,

Town Hall, North Sydney, 13 February, 1892.

I am directed to acknowledge the receipt of your letter of the 2nd instant on the subject of Government wharf at foot of Hayes-street, Neutral Bay, and to inform you that a further communication will shortly be made to you, this being merely an intimation that your letter has been received.

I have, &c.,

W. BARNETT SMITH.

No. 49.

The Crown Solicitor to The Under Secretary for Finance and Trade.

Sir,

Crown Solicitor's Office, Sydney, 13 May, 1892.

Referring to my letter of 6th January last, enclosing lease and counterpart of the public wharf at Neutral Bay to the North Shore Steam Ferry Company (Limited), I have now the honor to return all the Departmental papers forwarded to me.

I have, &c.,

ERNEST A. SMITH.

No. 50.

Précis of Case.

Minute Paper.

Subject:—Lease of Neutral Bay Wharf.

Department of Public Works, Sydney, 28 July, 1892.

UNDER date of 4th May, 1891, Captain Jackson advised the Treasury that the lease of Neutral Bay Wharf was about to expire. The Treasury thereupon invited tenders for leasing the wharf. One tender was sent in, viz., that of the North Sydney Council (£20 per annum); but by some unfortunate mis-carriage it was overlooked, and the Treasury, in the assumption that no tender had been received, sent a notice to the North Shore Ferry Company, who had long occupied the wharf, that if they did not send in a tender they would have to pay heavy wharfage dues. The Company sent in a tender of £25 per annum. The Treasury thought it too little, and demanded £30, which the Company, after some demur, agreed to pay, provided the depth of water were increased to enable them to run larger boats.

In the meantime the North Sydney Council had been in communication with the Minister for Works about their taking over Ben Boyd Road, and they asked that, as a part of the arrangement, the control of the wharf, which is practically at the foot of the above road, might be made over to them. This request would probably have been granted, but in consequence of a misunderstanding on the part of Captain Jackson, the wharf was supposed to be a private one, and before the mistake was rectified the Treasury had closed with the North Shore Ferry Company.

Under date of 17th October, 1891, Mr. Secretary Lyne wrote a minute representing the desirability of giving the control of the wharf to the North Sydney Council, and asking the Treasurer to give the lease to them, but the Treasurer minuted that the Council offered only £20 per annum, and that the wharf had been leased to the Company at £30.

C.A.B.,

28/7/92.

Seen by Minister.—D.McL. Return to Treasury, 21/9/92. Nothing can be done in this matter until the term created by the lease has expired.—M.R., 23/9/92.

No. 51.

The Town Clerk, North Sydney, to The Under Secretary for Public Works.

Sir,

Town Hall, North Sydney, 1 February, 1894.

I have the honor, by direction of the Municipal Council of this Borough, to request that the wharf situated at the foot of Hayes-street, Neutral Bay, may, at the termination of the existing lease to the North Shore Ferry Co., be vested in this Council. At the time the Council took over the Ben Boyd Road from the Government, it was thought that this wharf would go with the road. This Council has since spent a considerable sum of money in forming the approaches to it, and it is considered a reasonable proposal that the Municipality should enjoy the benefits to be derived from it. I have therefore to request that the Secretary for Public Works will be good enough to name a time when it will be convenient for him to receive a deputation to urge the matter upon his attention.

I have, &c.,

W. BARNETT SMITH.

The wharf asked for by the Borough Council of North Sydney cost the Government to erect £604 13s. 8d. It is now leased to the North Shore Ferry Company for ferry purposes at a yearly rental of £50. The lease will expire on the 9th of August next. I think the present lessees should be asked if they desire to renew the lease on the same terms as at present. I do not see any reason for handing this valuable property over to the Council, towards which they have not contributed anything. I may also state that the above Council had a lease of this wharf, and declined to renew same on its expiration.—J.J., 15/2/94.

Approved.—J.S., 16/2/94.

No. 52.

The Under Secretary for Finance and Trade to The Manager, North Shore Steam Ferry Company (Limited).

Sir,

I am directed to ask you to be good enough to favour me with a communication, at your early convenience, advising, for the information of the Colonial Treasurer, whether your Company is desirous of renewing, on the present terms and conditions, the lease it now holds of the wharf situate at the foot of Hayes-street, Neutral Bay.

I have, &c.,

F. KIRKPATRICK.

No. 53.

The Under Secretary for Finance and Trade to The Town Clerk, North Sydney.

Sir,

Referring to your letter of 1st instant, addressed to the Under Secretary for Public Works, on the subject of the vesting in your Council of the wharf at the foot of Hayes-street, Neutral Bay, I am directed to state that the Colonial Treasurer is unable to accede to your request in such matter.

I have, &c.,

F. KIRKPATRICK.

No. 54.

The Town Clerk, North Sydney, to The Under Secretary for Finance and Trade.

Sir,

I have the honor, by direction of His Worship the Mayor, to request you to be good enough to inform him when the lease of the wharf at the foot of Hayes-street, Neutral Bay, now held by the North Shore Ferry Company, expires.

I have, &c.,

W. BARNETT SMITH.

The lease held by the North Shore Ferry Company of the wharf at the foot of Hayes-street, Neutral Bay, expires on the 9th August, 1894.—J.J., 19/2/94.

The Mayor might be informed that the lease expires on 9th August next, but that the North Shore Ferry Company have intimated their intention of accepting a further lease for three years on same terms.—F.K., 20/2/94.

Approved.—J.S., 20/2/94.

No. 55.

The Under Secretary for Finance and Trade to The Town Clerk, North Sydney.

Sir,

The Treasury, New South Wales, Sydney, 21 February, 1894.

Referring to your letter of 17th instant, I am directed to state that the North Shore Ferry Company's lease of the wharf at the foot of Hayes-street, Neutral Bay, will expire on 9th August next.

I am to add, however, that the Company has intimated its intention of accepting a further lease, for three years, on the present terms.

I have, &c.,

F. KIRKPATRICK.

No. 56.

The Secretary, North Shore Steam Ferry Co. (Limited), to The Under Secretary for Finance and Trade.

North Shore Steam Ferry Co. (Limited),

.Sir,

16, O'Connell-street, Sydney, 20 February, 1894.

In reply to your letter of the 19th instant (S. 266), I have the honor to state that this Company is prepared to renew the present lease of the Military Wharf at the foot of Hayes-street, for three or five years, upon the present terms.

I have, &c.,

JNO. J. WESTON.

Approved.—J.S., 20/2/94. The Secretary might be informed that it has been decided to invite tenders for leasing the wharf.—F.K., 28/2/94. Approved.—J.S., 28/2/94.

No. 57.

The Under Secretary for Finance and Trade to The Secretary, North Shore Steam Ferry Company (Limited).

Sir,

With reference to your letter of 20th ultimo, in reply to Treasury letter to you of 19th idem, I am directed to inform you that the Colonial Treasurer has decided to lease the Military Wharf at foot of Hayes-street, Neutral Bay, by public tender, upon the expiration of the existing lease to your Company

I have, &c.,

F. KIRKPATRICK.

No. 58.

The Town Clerk, North Sydney, to The Under Secretary for Finance and Trade.

Sir,

Town Hall, North Sydney, 23 February, 1894.

With reference to your letters dated 19th and 21st instant, intimating that the Colonial Treasurer was unable to accede to the request contained in my letter of the 1st instant, and that the North Shore Ferry Company's lease of the wharf at foot of Hayes-street, Neutral Bay, will expire on the 9th of August next, and, also, that the Company intend to accept a further lease for three years on the same terms, I have the honor, by direction of His Worship the Mayor, to respectfully protest against the granting, if such is intended, of any further lease to the Company without the Council being afforded an opportunity of tendering for it.

I am directed to point out to you that this wharf is situated at the foot of a public street, with the care, construction, and management of which the Council is charged, and upon which a very considerable sum has been expended by the municipality, almost solely for the benefit of the people travelling by the ferry to and from Sydney. The Mayor is therefore of opinion that if any special consideration is to be shown, it is the Council, and not the Company, which is entitled to it. He also desires me to remind you that while the Government refuses to grant leases for wharfage purposes to private persons unless they also own or control the foreshores, in this case the Council, which controls and maintains, at great expense, the street leading to the wharf, is differently treated.

I am also directed to state that in the absence of a municipal wharf at Neutral Bay, the Council has to pay wharfage to private wharfowners for landing the materials required to form and maintain the roads in this portion of the borough, and was put to some expense in this way for landing the metal used on Hayes-street itself. The Mayor therefore considers that the Council is fairly entitled, in the public interest, to control this wharf, and directs me to request that the Honorable the Colonial Treasurer will not renew the existing lease until the Council has had an opportunity, if it so desires, of tendering for it, or making further representations on the subject.

With reference to the request contained in my letter of the 1st instant, the Mayor further directs me to inquire whether he is correct in interpreting your letter of 19th instant as a refusal to receive the proposed deputation from the Council.

I have, &c.,

W. BARNETT SMITH.

As this Council is probably desirous of leasing this wharf, I think it will be advisable, at the expiration of the present lease, to call for public tenders for leasing it.—J.J., 27/2/94.

Submitted. I think tenders should be invited. In reference to the last clause, the application respecting the deputation was made to the Secretary for Public Works, not the Treasurer. There will, however, now be no necessity for a deputation.—F.K., 28/2/94.

Approved.—J.S., 28/2/94.

No. 59.

The Under Secretary for Finance and Trade to The Town Clerk, North Sydney.

Sir,

The Treasury, New South Wales, Sydney, 1 March, 1894.

I am directed by the Colonial Treasurer to acknowledge the receipt of your letter of 23rd ultimo, and to inform you, in reply, that it has been decided to invite tenders for the leasing of the Military Wharf, foot of Hayes-street, Neutral Bay, on the expiration of the existing lease to the North Shore Steam Ferry Company (Limited).

Respecting the last paragraph of your letter under reply, I am to remind you that the request that a deputation might be received was addressed to the Secretary for Public Works. There will, it is presumed, now be no necessity for a deputation.

I have, &c.,

F. KIRKPATRICK.

No. 60.

The Town Clerk, North Sydney, to The Under Secretary for Finance and Trade.

Sir,

Town Hall, North Sydney, 2 March, 1894.

With reference to your letter, dated 1st instant, intimating that the Colonial Treasurer had decided to invite tenders for the leasing of the wharf at foot of Hayes-street, and also calling attention to the fact that the request that a deputation might be received was addressed to the Secretary for Public Works, and that it was presumed there was now no necessity for a deputation, I have the honor, by direction of the Mayor, to inform you that it is still desired that a deputation should be received by the Colonial Treasurer with reference to the question of the control of the wharf under discussion being placed in charge of the Council. The Mayor therefore directs me to request that the Colonial Treasurer will be good enough to appoint a time when it will be convenient for him to receive the deputation.

I have, &c.,

W. BARNETT SMITH.

Next Monday afternoon at 3 p.m.—J.S., 5/3/94.

No. 61.

The Under Secretary for Finance and Trade to The Town Clerk, North Sydney.

Sir,

The Treasury, New South Wales, Sydney, 6 March, 1894.
I am desired by the Colonial Treasurer to acknowledge the receipt of your letter of 2nd instant, and to inform you, in reply, that he will accord an interview to a deputation from your Council, on the matter under notice, on Monday afternoon next, at 3 o'clock p.m.

I have, &c.,
F. KIRKPATRICK.

No. 62.

The Secretary, North Shore Steam Ferry Co. (Limited), to The Under Secretary for Finance and Trade.

Sir,

Offices of the North Shore Steam Ferry Co. (Limited),

16, O'Connell-street, Sydney, 6 March, 1894.

With reference to your letter of the 1st instant, I am instructed to say that in giving an affirmative answer to yours of the 19th ultimo, my Board understood that a renewal of the present lease would be made to this Company.

The rent of £50 per annum is admittedly ample. I may remind you that when on a previous occasion tenders were called for the wharf in question, the then Borough of Neutral Bay being the successful tenderers, it was evident from the excessively high rate offered that they were influenced simply by a desire to saddle this Company with an exorbitant rental. The Borough did not wish to use the wharf themselves, because they offered it to us at once. My Directors, after fully considering the matter, were unable to comply with the demands, and refused to run to the wharf. Whereupon, a much less rental than was paid by the Borough to you was accepted by the Council from this Company, and the ratepayers were consequently the losers of the difference in the rental.

This Company has always acted in a *bona fide* manner, paying the Government a large amount yearly for rents of wharves, and it respectfully claims fair treatment at your hands.

I would further respectfully point out that this Company now pays to the Crown £500 a year rent for the wharf at Circular Quay for the purpose of running the ferry to Neutral and Mossman's Bays, and to place us in such a position that we might lose the wharf on the other side would materially lessen the value of our holding on this side, and be unfair to us as tenants of the Crown.

In stating, in reply to your letter, that this Company was prepared to take a renewal of the lease offered, my Directors naturally thought that upon accepting your terms the matter was closed.

Upon reconsideration, I respectfully request that you will adhere to the original intention and grant a renewal of the lease to this Company.

I have, &c.,
J. J. WESTON.

North Shore Steam Ferry Company (Limited), 29, O'Connell-street, Sydney,
The Council Clerk, Municipality of East St. Leonards, North Shore,— 12 October, 1888.

Dear Sir,

I have received your letter of the 11th instant.

No one can regret more than my directors the inconvenience to which the residents of Neutral Bay have been subjected by reason of the sudden withdrawal of this Company's steamers from calling at the Military Wharf. But inasmuch as your Council not only showed no desire to meet the Company on the matter of a reasonable rental, but peremptorily raised the rent to £365 per annum, which is what 10s. per day per steamer means, the Company had no alternative but to cease calling at the wharf, as it could neither afford to pay such an amount nor submit tamely to such an arbitrary proceeding. The Board will be only too ready to resume the calling at the wharf in question if the Council will meet them amicably in the matter. Meanwhile the responsibility for the present state of things rests with the Council.

With regard to the wharf at High-street, it should be borne in mind that it was built by this Company at a very considerable outlay.

Yours, &c.,
J. J. WESTON,
Secretary.

No. 63.

The Secretary, North Shore Steam Ferry Company (Limited), to The Under Secretary for Finance and Trade.

Sir,

Offices of the North Shore Steam Ferry Company (Limited),

16, O'Connell-street, Sydney, 13 March, 1894.

With reference to the deputation which waited upon the Colonial Treasurer yesterday, in regard to the Military Wharf at the foot of Hayes-street, Mr. E. M. Clark, M.P., is reported in the Press to have said that there were no facilities given for landing cargo at this wharf. With regard to this, I am instructed to point out that no application to land cargo has ever been refused, so long as it did not interfere with the landing of passengers from the ferry-boat, and for such convenience no charge has ever been made or sought to be made; in fact, all cargo has been landed free of wharfage.

If it will be more satisfactory in the interest of the public to have a clause inserted providing for cargo being landed by vessels free of charge, so long as the passenger traffic is not interfered with, my Board will be quite prepared to agree to the inclusion of such a clause in the lease.

I have, &c.,
J. J. WESTON.

No. 64.

Minute by The Colonial Treasurer.

Treasury Minute.

Subject :—Military Wharf at foot of Hayes-street, North Sydney.

The Treasury, New South Wales, Sydney, 20 March, 1894.

HAVING in view the Treasury letter of 19th ultimo, to the Secretary of the North Shore Steam Ferry Company (Limited), asking if that Company were prepared to renew the lease, and the Company's reply on the following day to the effect that they were so prepared, it seems to me that the Treasury is morally bound to renew the lease—if not for the whole term, at any rate for one year.

I therefore direct that a lease of the wharf for one year to the North Shore Steam Ferry Company (Limited) be prepared, with a provision therein respecting the landing of cargo free, provided the same does not interfere with the landing of passengers from the ferry-boats, as suggested in the Company's letter of 13th instant.

JOHN SEE.

Crown Solicitor for preparation of lease.—F.K.

No. 65.

The Under Secretary for Finance and Trade to The Town Clerk, North Sydney.

Sir,

The Treasury, New South Wales, Sydney, 20 March, 1894.

With reference to your Council's deputation of 12th instant, and to previous correspondence on the subject of the Military Wharf at foot of Hayes-street, North Sydney, I am directed by the Colonial Treasurer to inform you that he has decided, after very full consideration of the whole matter, that, in view of the correspondence between the North Shore Steam Ferry Company (Limited) and this Department, he is morally bound to renew, at any rate for one year, that Company's lease of the wharf in question; and that he has, therefore, directed that a one-year's lease of the said wharf to the North Shore Steam Ferry Company (Limited) be prepared, such lease, however, to contain a provision securing the right to land cargo thereon free at all such times as shall not interfere with the landing of passengers from the ferry-boats.

I may state that the foregoing provision is the suggestion of the Ferry Company.

I have, &c.,

F. KIRKPATRICK.

Sir,

16 O'Connell-street, Sydney, 28 March, 1894.

I am in receipt of yours of the 20th inst., S. 840-2,011 Miscl., and in reply I am instructed to say that this Company is prepared to execute a lease upon the conditions contained therein.

J. J. WESTON.

Shall the lease be prepared?—F.K., 30/3/94.

Prepare the lease before August.—J.S., 2/4/94.

No. 69.

No. 69.

The Under Secretary for Finance and Trade to The Under Secretary for Public Works.

Sir,

Mr. E. M. Clark, M.P., is to ask the Colonial Treasurer in the Legislative Assembly a series of questions in regard to the Neutral Bay wharf. No. 1 is: "Under what authority, (2) for what purpose, and (3) when was the Government wharf at Hayes-street, Neutral Bay, constructed?"

I am directed to request you to be good enough to move the Secretary for Public Works, with a view to the information necessary to the answering of the above being furnished to the Treasury as early as practicable.

I have, &c.,

F. KIRKPATRICK.

There are no papers in this office to show, 1st, the authority for placing a sum of £750 on the Estimates for 1883 for the erection of the wharf referred to; nor are there any records to disclose for what purpose (other than for steamers to call at) the wharf was constructed. The structure was completed in February, 1884.—C.W.D., 4/4/94.

Captain Jackson,—Can you throw any further light on this matter?—F.K., 6/4/94. This wharf was erected before I came into the public service. I am unable to throw any further light on this matter.—J.J., 6/4/94.

No. 70.

The Mayor, North Sydney, to The Under Secretary for Finance and Trade.

Sir,

I beg to acknowledge receipt of yours of the 20th ultimo, and to inform you that I am more than astonished at its contents. I cannot but express regret that the Treasurer should have thought fit to have leased, over the heads of the people of North Sydney, the Neutral Bay wharf, in the face of the promises made by him to the deputation which waited upon him at the Treasury on the 12th instant.

Entirely apart from my position as Mayor, but as a resident of Neutral Bay, I deem it my duty to enter a strong protest against the course adopted by the Treasury Department in granting a lease to a private Company, and entirely ignoring the public.

In your letter of the 1st March you state that it has been decided to invite tenders for the leasing of the Military wharf, at the foot of Hayes-street, Neutral Bay, on the expiration of the existing lease to the North Shore Steam Ferry Company, and, I, therefore, presume that the course, since adopted, was not then contemplated.

In view of the statements made by Mr. See to the deputation referred to, which were as follows:—"In replying to the deputation, I recognise that in a large Municipality like North Sydney, there should be a means of access for the public. My own disposition is to place the control of such wharfs under the care of the Municipality, who ought to have power to regulate the steam traffic coming to them." And also in view of the fact that on a previous occasion the North Sydney Council had sent in a tender for the lease of the wharf which was alleged to have been mislaid in your Department, and the lease on that occasion granted to the North Shore Steam Ferry Company, I cannot refrain from coming to the conclusion that the treatment the people of North Sydney have received at the hands of your Department is not fair and equitable.

With respect to the last paragraph in your letter of the 20th instant, and which you state is a suggestion of the Ferry Company, "That the Council will have the privilege of landing material on this wharf," all I can say is that I cannot understand how such a suggestion could have emanated from the Company, unless it be, that the negotiations between the Company and the Treasurer took place after the deputation waited upon him, if this be the case the moral obligations referred to in your letter could not then have arisen.

I cannot understand the reason for what appears to me such undue haste in granting a lease to the North Shore Ferry Company, which has a monopoly of the ferry traffic between North Sydney and Sydney proper, and whose present lease of the wharf does not expire until August next, while the wishes of the people of the district are entirely ignored.

I have written warmly on this matter, but not as warmly as the facts warrant, and I feel that the Treasurer must have been misled in granting this lease.

I have, &c.,
G. J. BARRY.

Seen.—J.S., 5/4/94.

No. 71.

The Under Secretary for Finance and Trade to The Mayor, North Sydney.

Sir,

The Treasury, Sydney, New South Wales, 6 April, 1894.

I am directed by the Colonial Treasurer to acknowledge receipt of your letter of the 3rd instant, upon the subject of the lease to the North Shore Steam Ferry Company (Limited) of the Neutral Bay wharf.

I have, &c.,
F. KIRKPATRICK.

1006

1894.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

WHARFAGE ACCOMMODATION AT CIRCULAR QUAY.

(REPORT ON.)

Ordered by the Legislative Assembly to be printed, 25 September, 1894.

The Manager, Public Wharfs, to The Under Secretary for Finance and Trade.

Re Improvements on the Western side of Circular Quay.

Sir,

Public Wharfs' Office, 21 September, 1894.

In compliance with your verbal instructions, I have now the honor to report that the whole of the structure, from the iron gates at the old A.S.N. Co.'s wharf to the foot of Pitt-street, was condemned about twelve years ago. The structure in question is between forty and fifty years old, and has for years, owing to its rotten condition, been unsafe for trade purposes and general traffic. During the last four years no heavy weights, such as locomotives, &c., have been allowed to pass over it, fearing its total collapse. I have at various times reported on the state of this portion of the Circular Quay, and some years ago, in drawing the then Treasurer's attention to it (Mr. McMillan) and its very unsafe condition, declined to be held responsible for any accident that might occur to life or property through this cause. Owing also to this fact the Agent for the "Norddeutscher Lloyd" line of steamers, who leases a berth on this western side, wrote to the late Treasurer (Mr. See) drawing his attention to the facts previously stated, and, in consequence of the Government declining to take any responsibility as to the wharf giving way or not, the rent was reduced from £1,800 to £1,200 per annum. The above company have agreed, when their berth is completed, to pay a yearly rental of £2,000; that, with the wharfage dues from their trade (about another £2,000) would return a revenue of £4,000 for one berth alone. And again, owing to this fact the northern portion of the wharf has been very little used for several years, and as a result little or no revenue has been latterly received from this site. Some little while back enquiry was made for a large berth for the Vancouver Mail service. This line, if accommodation could be provided, would return a revenue I should estimate at about another £4,000 per annum for rent and wharfage, and these facts alone conclusively point out that the renewal of the wharf is absolutely necessary.

I would also point out, that no syndicate can possibly have any interest in the carrying out of this work of improving the Quay, seeing that, with the exception of about 60 feet frontage at the corner of Argyle-street, the Government owns all the land from Dawes Point to the foot of Pitt-street, together with large frontages to George-street.

It appears to me that it would be more beneficial to the interests of a syndicate (if such were in existence) to prevent this progressive work being carried out than otherwise. If these improvements are completed, at the estimated cost of £40,000, I anticipate a revenue from same of at least £10,000 per annum, and any commercial man would, I should certainly say, be prepared to lease this portion of the Quay and pay the Government at the rate of 10 per cent. per annum on the outlay guaranteeing at the same time to keep the wharf in proper repair during his tenancy.

I have, &c.,

JOHN JACKSON,
Manager, Public Wharfs.

1008

1894.
(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CLAIMS FOR RESUMPTION OF LAND, WOOLLOOMOOLOO BAY.
(RETURN RESPECTING.)

Ordered by the Legislative Assembly to be printed, 21 November, 1894.

[Laid upon the Table of the House in answer to Question No. 8, of 3rd October, 1894.]

Question:

- (8). CLAIM FOR RESUMPTION OF LAND AT WOOLLOOMOOLOO BAY.—MR. BAVISTER asked THE COLONIAL TREASURER,—Has he any objection to lay upon the Table of this House all correspondence, minutes, and papers passing between the Crown Solicitor, Attorney-General, Secretary for Works, and the Colonial Treasurer, in reference to settlement of Mr. George Hill's claim for resumption of land at Woolloomooloo Bay; if not, will he cause that to be done at an early date?

Answer.

Mr. REID answered,—I have no objection.

Mr. P. Hourigan to The Secretary for Public Works.

Re resumption under Lands for Public Purposes Acquisition Act—Potts' Point, Woolloomooloo Bay.

Sir, 91, Elizabeth-street, Sydney, 25 April, 1890.

Herewith, I beg to forward you notice of claim by Mr. George Hill, also notice of claim by Messrs. Hill, Belisario, Batty, and Sheehy, also notice of claim by Messrs. Batty and Sheehy.

The several abstracts of title, with duplicate notices of said several claims, have been forwarded to the Crown Solicitor.

I have, &c.,
P. HOURIGAN.

LANDS FOR PUBLIC PURPOSES ACQUISITION ACT, 44 VIC. NO. 16.

Notice of Claim and Abstract.

To the Minister for Works,—

In pursuance of the "Lands for Public Purposes Acquisition Act," and of the enactments therewith incorporated, I hereby give you notice that I claim compensation in respect of the land hereunder described, which has been resumed under the said Act. The amount of such claim, and other the particulars required by the said Act, are stated in the subjoined abstract:

Names and descriptions of parties claiming, and nature of their interests, whether tenants for life, in tail, or otherwise.—George Hill of Cowper Wharf, Woolloomooloo Bay, Sydney, gentleman.

Situation and description of property.—All that piece of land particularly described in the paper writing hereto annexed, marked A.

Quit rents payable if leasehold, name of landhold, term of lease, and rent reserved.—None.

Names of occupiers, distinguishing whether tenants at will or under lease, rent reserved, terms, &c.—The said lands in the occupation of Messrs. Donnelly and Basten, as weekly tenants, at £3 per week.

Particulars of claim, specifying separately the amount claimed for value of property and for compensation.—The value of my said land is £22,800, and I also claim the sum of £2,280 for compensation, making in all £25,080.

Dates and other short particulars of documents of title.—Abstract of title sent herewith.

Names of persons having the custody of documents, and place or places where the same may be inspected, and name of claimants' solicitor or agent.—Mr. P. J. Hourigan, of No. 91, Elizabeth-street, Sydney, is my solicitor, and he has the custody of documents, and the same may be inspected at his office.

GEORGE HILL,

Care of P. J. HOURIGAN, Solicitor,

91, Elizabeth-street, Sydney.

25 April, 1890.

(A.)

(A.) All that piece or parcel of land situated in the parish of Alexandria, county of Cumberland, and Colony of New South Wales, being part of 11 acres granted to John Wylde on the 1st day of November, 1822, situated near Potts' Point: Commencing on the western side of Victoria-street, at its north-west termination, being a point 187 feet northerly from intersection of western side of Victoria-street with northern side of lane 12 feet wide, and bounded at the east by lane 20 feet wide northerly 22 feet 8 $\frac{1}{4}$ inches, said boundary being a line in continuation of western side of Victoria-street; then again northerly 119 feet 11 $\frac{1}{2}$ inches to a post in the southern boundary fence of M'Quade's property; thence on the north side by said fence south-westerly to high-water mark; on the west by Woolloomooloo Bay southerly 114 feet, more or less; on the south by a line easterly, to point of commencement (reserving to Richard Rouse Terry right of drainage, &c.)

The Crown Solicitor to The Under Secretary for Public Works.

Land at Woolloomooloo Bay.—Claim of George Hill.

Sir,

Crown Solicitor's Office, Sydney, May, 1890.

I have the honor to forward herewith notice of claim and abstract of Mr. George Hill, in respect of land at Woolloomooloo Bay resumed for wharfage accommodation purposes.*

The claim is made in respect of part of 11 acres, granted to John Wylde on the 1st November, 1822, situated near Potts' Point, and more particularly described in the description attached to the notice of claim forwarded herewith. I have examined the title, and find that by indenture dated the 1st October, 1853, registered number 658, book 29, made between Donald Larnach, first part; Francis Oakes and George Allen, second part; William Walker, the younger, third part; and George Ormsby Weston, the fourth part; the piece of land therein described forming part of the Granthanville Estate, having frontages to Wylde and Granthan Streets, and a street 24 feet wide, with depths to high water-mark of Woolloomooloo Bay was conveyed and assured to George Ormsby Weston in fee.

Part of this piece of land as described in indenture of 15th September, 1860, registered number 712, book 74, was subsequently conveyed to John Frederick Hilly by William M'Quade, who reserved a lane running through same to his land.

Hilly mortgaged the land to Richard Rouse Terry, who by indenture of date, 24th October, 1888, registered number 699, book 400, conveyed the piece of land in respect of which the claim is made to George Hill, the claimant reserving the free and uninterrupted passage of running water, soil, and refuse through pipes, sewer drains, and watercourses, and in the direction which were then upon, in, under, or laid down on the land, &c.

No title has been produced to me in respect of any reclaimed land lying between the original high water-mark and the line fixed for limit of reclamation.

I am unable to say whether the land resumed comprises the land in respect of which the claim is made, or whether the descriptions contained in the deeds above mentioned include that land, those being matters for a surveyor to determine; but, assuming such to be the case, I think that Mr. George Hill may be dealt with as to the amount of compensation to be paid for the land in respect of which he claims, if such land does not comprise any of the reclaimed land.

I have, &c.,

JOHN WILLIAMS,
Crown Solicitor.

Mr. Rae for certificate.—A.B., 3/6/90. Certificate herewith.—F. G. RAE, 4/7/90.

The Crown Solicitor to The Under Secretary for Public Works.

Land at Woolloomooloo.

Claim of Messrs. Mason and O'Donnell, Trustees and Executors of the Will of Charles Doyle, deceased
Sir,

Crown Solicitor's Office, Sydney, 8 December, 1890.

I have the honor to forward herewith notice of claim and abstract of Messrs. John Mason and George O'Donnell, trustees of the will of Charles Doyle, deceased, in respect of land at Woolloomooloo Bay resumed for wharfage accommodation purposes. The claim is made in respect of land having a frontage to the water of Woolloomooloo Bay, and bounded on the east by Victoria-street. I have examined the title and find that—

As to lot 9, Granthamville Estate.—By indenture, dated the 7th June, 1858, registered No. 518, Book 55, William M'Quade conveyed to James Yates allotment 9 of the Granthamville Estate, having a frontage to the western side of a reserved street of 30 feet, by a depth on the north of 130 feet and on the south of 160 feet to high-water mark of Woolloomooloo Bay.

As to lots 10 and 11, same estate.—By indenture, dated the 24th June, 1864, registered No. 722, Book 88, John Frederick Hilly and others conveyed to James Yates lots 10 and 11 of the Granthamville Estate, having a frontage of 55 feet to Victoria-street. Commencing 119 feet southerly from the south side of a lane) by depths on the north side of 92 feet, and on the south side of 130 feet to high-water mark of Woolloomooloo Bay.

As to lot 12, same estate.—By indenture, dated the 9th December, 1859, registered number 667, Book 64, William M'Quade conveyed to Edward Arthur and Frederick Arthur allotment 12 of the Granthamville Estate, having a frontage to Victoria-street of 119 feet, by a depth on the northern side of 83 feet, and on the southern side of 92 feet to high water-mark of Woolloomooloo Bay.

As to lot 13, same estate.—By indenture, dated the 10th June, 1857, registered No. 614, Book 49, John F. Helly conveyed to Charles Parish lot 13 of the Granthamville Estate, having a frontage to the western side of Victoria-street of 50 feet, by a depth on the north of 100 feet, and on the south of 83 feet along the northern side of a lane 16 feet 6 inches wide to the high water-mark of Woolloomooloo Bay.

By

* Being similar to the foregoing this document is omitted.

By various acts, deeds, and assurances the allotments mentioned subsequently became vested in Charles Doyle, and were, by indenture of date the 20th July, 1888, registered No. 491, Book 394, mortgaged by Doyle's executors to Sarah Amelia Bayley.

As to reclamation on the frontages of lots 9, 10, 11 :—

* * * * *

By grant dated the 25th March, 1875, registered volume 229, folio 90, 1 rood 9 perches, situate on the frontages of lots 9, 10, and 11, was granted to Daniel Sheehy, who transferred the same to Charles Doyle.

As to reclamation on the frontage of lot 12.—By grant dated 3rd September, 1853, registered volume 665, folio 62, 1 rood 1½ perches, on the frontage of lot 12 was granted to Charles Doyle.

As to reclamation of frontage of lot 13.—By certificate of title, dated 5th July, 1867, registered volume 47, folio 83, Joseph Gould, junior, was registered as the proprietor of 9½ perches, part of 10 perches granted to Joseph Gould, junior, on the 17th November, 1866.

These reclamations were subsequently vested in Messrs. John Mason and George O'Donnell, the executors and trustees under the will of Charles Doyle, and were by them mortgaged to Sarah Amelia Bayley and Alfred Bayley. The mortgagees referred to have, I am informed, been paid off and discharged, but evidence of this has not been produced to me.

As to all the abovementioned lands, Charles Doyle, by his will, dated the 19th September, 1885, appointed John Mason and George O'Donnell and George H. Robinson trustees and executors, and gave and devised all his estate, both real and personal, unto his said trustees and the survivors and survivor of them upon trust to lease or mortgage his property in Brougham-street, Woolloomooloo, for seven years, but not to sell same before the year 1890. At the expiration of the year 1889, or as soon after as they might deem expedient to sell the Brougham-street property, together with any other portion which might be acquired by them from the Challis Estate, or otherwise; and also any other property which might be then unsold. The testator, by a codicil to his said will, revoked the appointment of G. H. Robinson as trustee, and, by a further codicil, the testator revoked a devise of one-sixth share in the residuary estate to K. L. Counsel, and devised the same to his nephews, Ernest Robert Peisley and John Doyle, in equal shares.

The testator died on the 1st March, 1887, and probate of his will and codicils was granted on the 2nd June, 1887.

The said John Mason and George O'Donnell, by a statutory declaration, dated 20th July, 1888, declared (*inter alia*) the properties above referred to were identical with the testator's property referred to in his said will as his "property in Broughton-street, Woolloomooloo Bay."

The shares in the residue of the testator's estate, which were devised and bequeathed to certain persons therein named, were so devised subject to the following legacies and annuities, namely :—

- (1.) £100 to Ann Elizabeth Morris, and £1 weekly to her until division of estate. Mrs. Morris subsequently assigned her interest in the weekly payment of £1 to Messrs. Batty and Sheehy.
- (2.) £100 to George O'Donnell, subsequently assigned to Messrs. Batty and Sheehy.
- (3.) £100 to Charlotte Wilson, and £1 weekly to her for life, subsequently assigned to Messrs. Batty and Sheehy.
- (4.) £100 to Mrs. Peisley.
- (5.) £500 to John Mason.

Neither of the two last-mentioned legacies have been assigned.

I may mention that Messrs. George Hill, Thomas Batty, Daniel Sheehy, and Edward Henry Belisario have also made a claim in respect of the same lands to which the above claim refers, and I have reported upon their title by letter of even date herewith. I think, therefore, that as there appears to be some annuities and legacies still outstanding, the trustees of the will of Charles Doyle, deceased, are entitled to be dealt with in conjunction with Messrs. Hill and others as to fee simple value of the lands resumed, and in respect of which the claims are made, and that both the trustees and Messrs. Hill and others should be required to agree between themselves as to the amounts to be paid to them for their respective interests in the land taken, but the amounts should be paid into Court.

I am unable to say whether the lands above described form part of the land resumed, that being a matter for a surveyor to determine.

I have, &c.,

JOHN WILLIAMS,
Crown Solicitor.

LANDS FOR PUBLIC PURPOSES ACQUISITION ACT, 44 VIC. NO. 16.

Notice of Claim and Abstract.

To the Minister for Works,—

In pursuance of the "Lands for Public Purposes Acquisition Act," and of the enactments therewith incorporated, we hereby give you notice that we claim compensation in respect of the land hereunder described, which has been resumed under the said Act. The amount of such claim, and other the particulars required by the said Act, are stated in the subjoined abstract.

Names and descriptions of parties claiming and nature of their interests, whether tenants for life, in tail, or otherwise.—John Mason, of Petersham, near Sydney, in the Colony of New South Wales, bank clerk, and George O'Donnell, of Sydney aforesaid, Esquire, formerly clerk in the Civil Service of New South Wales, as trustees and executors of the will of Charles Doyle, late of Emu Plains, and formerly of Elizabeth-street, Strawberry Hills, near Sydney aforesaid deceased.

Situation and description of property.—Land having frontage to the water of Woolloomooloo Bay; bounded on the east by Victoria-street, on the north by land owned by Mrs. Leaf, and on the south by land owned by the University of Sydney.

Quit rents payable if leasehold, name of landlord, term of lease, and rent reserved.—None.

Names of occupiers, distinguishing whether tenants-at-will or under lease, rent reserved, terms, &c.—

Messrs. Batty and Sheehy, of Woolloomooloo aforesaid, their tenancy to be terminated by three months' notice from either side.

Particulars

Particulars of claim, specifying separately the amount claimed for value of property and for compensation.—Claim for actual value of land, which has a frontage of about 303 feet, at the rate of £500 per foot.

Dates and other short particulars of documents of title.—As to part of the land certificate of title, dated 5th July, 1867, Vol XLVII, folio 83; Crown Grant, dated 25th March, 1875, Vol. CCXXIX, folio 90. Crown Grant, 3rd September, 1883, Vol. 665, folio 62. As to the residue of the land, deeds showing title in Charles Doyle, late of Emu Plains, deceased, 1st July, 1886. Will of the said Charles Doyle, probate whereof was granted to John Mason and George O'Donnell, on 2nd June, 1887. 20th July, 1888—Mortgage, John Mason and George O'Donnell, of the whole of the land to Sarah Amelia Bayly and Alfred Bayly.

Names of persons having the custody of documents, and place or places where the same may be inspected, and name of claimants' solicitor or agent.—Jones and Jones, solicitors, Lincoln Inn Chambers, 38, Elizabeth-street, Sydney..

5th May, 1890.

Witness to the signatures,—

H. H. HUNTERFORD,

Clerk to Jones and Jones, solicitors, Sydney.

JOHN MASON,

(of John Mason, Petersbam.)

GEORGE O'DONNELL,

(of George O'Donnell, 100, Pitt-street, Redfern).

[A similar notice of claim and abstract were forwarded to the Crown Solicitor.]

Extract from a letter of P. J. Hourigan, solicitor, dated 25th April, 1890.

Re resumption under "Lands for Public Purposes Acquisition Act," Potts' Point and Woolloomooloo Bay.

HEREWITH I beg to forward you notice of claim by Messrs. Hill, Belisario, Thomas Batty, and Daniel Sheehy (the elder).

LANDS FOR PUBLIC PURPOSES ACQUISITION ACT, 44 VIC. NO. 16.

Notice of Claim and Abstract.

To the Minister for Works,—

In pursuance of the "Lands for Public Purposes Acquisition Act," and of the enactments therewith incorporated, we hereby give you notice that we claim compensation in respect of the land hereunder described, which has been resumed under the said Act. The amount of such claim, and other the particulars required by the said Act, are stated in the subjoined abstract.

Names and descriptions of parties claiming, and nature of their interests, whether tenants for life, in tail, or otherwise.—George Hill, Edward Belisario, Thomas Batty, and Daniel Sheehy (the elder), all of Cowper Wharf, Woolloomooloo Bay, Sydney, gentlemen, who are the owners of the fee simple, the entirety being held by them as tenants in common.

Situation and description of property.—All those several pieces or parcels of land particularly described in the paper writing hereto annexed, marked "A."

Quit rents payable if leasehold, name of landlord, term of lease, and rent reserved.—None.

Names of occupiers, distinguishing whether tenants at will or under lease, rent reserved, terms, &c.—Miss Mary Selina Vaughan is the lessee of same under lease which will expire on 28th April, 1891, at the weekly rent of £4.

Particulars of claim, specifying separately the amount claimed for value of property and for compensation.—The value of our said land is £30,500, and we also claim the sum of £3,150 for compensation, making in all £33,650.

Dates and other short particulars of documents of title.—Certificates of title under the "Real Property Act," registered volume 906, folios 37, 38, 39, and 40, with respect to portion of the land, the other portions being under the old system of conveyancing. Abstracts of title with respect to all the said several lands being sent herewith.

Names of persons having the custody of documents, and place or places where the same may be inspected, and name of the claimants' solicitor or agent.—Mr. P. J. Hourigan, of No. 91, Elizabeth-street, Sydney, is our solicitor, and he has the custody of documents, and the same may be inspected at his office.

GEORGE HILL,

E. H. BELISARIO,

THOS. BATTY,

25th April, 1890.

The Crown Solicitor to The Under Secretary for Public Works.

Land at Woolloomooloo Bay—Claim of George Hill, Edward Belisario, Daniel Sheehy, and Thomas Batty.

Sir,

Crown Solicitor's Office, Sydney, 21 May, 1890.

I have the honor to forward herewith, notice of claim and abstract of Messrs. George Hill, Edward Belisario, Daniel Sheehy, and Thomas Batty in respect of land at Woolloomooloo Bay resumed for wharfage accommodation purposes.*

The claim is made in respect of seven pieces of land at Woolloomooloo Bay particularly described in annexure "A" to the notice of claim.

I

* Being similar to the foregoing this document is omitted.

I have examined the title and find that:—

As to one piece of land.—By indenture, dated the 28th June, 1867, registered number 39, book 104, Joseph Gould the elder, conveyed to Edward Gould 4 perches of land part of the Granthamville Estate, having a frontage to the western side of Victoria-street of 20 feet by a depth on the northern side of 30 feet, and on the southern side of 80 ft. 6 in. to the original high-water mark of Woolloomooloo Bay, and laying between Hilly allotment on the north, and Gould's land on the south.

As to another piece of land.—By indenture, dated the 12th October, 1870, registered number 656, book 121, John Gould and Albert Sharp, the piece of land therein described reserving the use of the drains and sewers running through same. Both these two pieces of land subsequently became vested in Edward French.

As to another piece of land.—By indenture, dated 1st November, 1879, registered number 129, book 187, John Hilly by direction of Richard Rouse Terry, conveyed to Edward French the land therein described having a frontage of 20 feet to the western side of a lane 20 feet wide by a depth of 87 feet to the sea-wall with the further right of 29 feet continued on the low-water mark of Woolloomooloo Bay, what right the vendor had to this 29 feet is not stated.

As to another piece of land.—By indenture, dated the 17th December, 1878, registered number 130, book 187, Hilly, by direction of Terry, conveyed to French the land therein described having a frontage to a right of way of 20 feet by depths on the north of 73 feet, and on the south of 76 feet to the old sea-wall, Woolloomooloo Bay.

As to another piece of land.—By indenture, dated the 4th December, 1879, registered number 227, book 197, Hilly, by direction of Terry, conveyed to French the land therein described, being lot 3 of the Grantham Estate.

As to all the before-mentioned lands.—By indenture, dated the 19th November, 1888, registered number 662, book 402, Edward French in consideration of £5,000, conveyed the whole of the five pieces of land before referred to to Thomas Batty, Daniel Sheehy, George Hill, and Edward Belisario in fee as tenants in common.

As to lands under the Real Property Act.—By Certificate of Title, dated the 26th November, 1878, registered volume 382, folio 206, Edward French is declared to be registered as the proprietor of 7½ perches at Woolloomooloo Bay, being lot 4 on deposited plan 27, and part of 15 perches granted to George Gould, senior, by grant dated 17th November, 1866. A transfer of this land from French to Batty, Sheehy, Hill, and Belisario has been prepared, but has not been registered. And by Certificates of Title, dated respectively the 20th December, 1888, registered volume 906, folios 37, 38, 39, and 40, Messrs. Batty and Sheehy, Hill and Belisario are each respectively declared to be registered as the proprietor, as tenant in common of an undivided fourth part in 2½ perches at Woolloomooloo Bay, part of lot 3 on deposited plan 27, and part of 15 perches granted to Joseph Gould, senior, by grant, dated 17th November, 1866.

I am unable to say whether the land resumed comprises to whole, or part of the land above referred to, that being a matter for a surveyor to determine, but assuming such to be the case, I think that the claimants may be dealt with as to the amount of compensation to be paid therefor.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

Mr. Rae for certificate.—A.B. (pro Land Valuer), 22/5/90. Herewith.—FRED. G. RAE, 30/5/90.

THAT piece of land, situated at Woolloomooloo Bay, in the city of Sydney, parish of Alexandria, and county of Cumberland, containing 2½ perches or thereabouts: Commencing on the south-eastern side of Woolloomooloo Bay; at the south-western corner of lot 4, and bounded thence on the north-east and on the north-west by part of that lot, being lines bearing south-easterly 32 ft. 6 in., and north-easterly 9 ft. 6 in. to the original high-water mark of Woolloomooloo Bay; again on the north-east and on the south-east by that high-water mark bearing south-easterly and south-westerly on the south-west by a line bearing north-westerly 34 ft. 9 in. to Woolloomooloo Bay aforesaid, and again on the north-west by the waters of that bay, being a line bearing north-easterly 15 feet to the point of commencement, being part of lot 3 on a plan deposited in the Land Titles Office, Sydney, numbered 27, and also part of 15 perches delineated in the public map of the said parish, deposited in the office of the Surveyor-General, originally granted to Joseph Gould, senior, by Crown grant dated the 17th November, 1866, registered in the Land Titles Office, Sydney, volume 35, book 184.

Also, all that piece or parcel of land situated at Woolloomooloo Bay, in the city of Sydney, parish of Alexandria, county of Cumberland, and Colony of New South Wales, being a part of the Granthamville Estate, containing by admeasurement 4 perches more or less: Bounded on the north by Hilly's allotment, commencing at a point distant 30 feet in a south-westerly direction from the intersection of the north side and Joseph Gould's wall with Victoria-street, and bearing thence east 23° degrees 30 minutes north along the north side of the said wall 30 feet dividing it from Hilly's allotment to Victoria-street; on its eastern side by the west side of that street bearing south-easterly 30 feet to John Gould's north-east corner; thence on the southern side by a line bearing west 24° degrees 30 minutes south, 80 ft. 6 in., dividing it from the said John Gould's allotment to the original high-water mark of Woolloomooloo Bay, and lastly thence by said original high-water mark to the point of commencement, be the said dimensions a little more or less.

Also, all that piece or parcel of land situate in Victoria-street, parish of Alexandria, city of Sydney, the northern subdivision of Mr. John Gould's allotment, being a portion of Mr. Joseph Gould's, senior, purchase in Woolloomooloo Bay: Commencing at a point in Woolloomooloo Bay on the front of the wharf wall, distant 15 feet north-easterly from the north-west corner of Mr. Joseph Gould's, senior, allotment, and bounded on the south-west by a line bearing south-easterly 34 ft. 9 in.; thence by a line bearing north-easterly 91 ft. 9 in., running partly through the 9-inch wall on the southern side of Mr. John Gould's house and the outbuildings to Victoria-street; on the east by the said street by a stone wall bearing north-westerly 17 feet; on the north-west by a line bearing south-westerly 90 feet, dividing it from

from Mr. Edward Gould's allotment, and running partly through the party wall of the privies and through the 9-inch wall between Edward Gould's and John Gould's houses; and thence by a line bearing north-westerly 32 feet to Woolloomooloo Bay, dividing it from Edward Gould's allotment; and on the north-west by the said bay by a line bearing south-westerly 15 feet to the point of commencement, be the said dimensions a little more or less. Reserving to the said John Gould, his heirs, appointees, and assigns the use and enjoyment of the drains and sewers now running through the land hereby conveyed for the purpose of draining the premises of the said John Gould adjoining thereto.

Also, all that piece or parcel of land situated in the parish of Alexandria, at Potts' Point, in the county of Cumberland and Colony of New South Wales: Commencing at the north-east corner of Mr. Walker's premises, known as Grantham Villa, and bounded by the western boundary wall of Grantham Villa, bearing westerly 87 feet to the present sea-wall, with a right to take 29 feet to the low water at Woolloomooloo Bay, and frontage to the bay of 20 feet; on the north by a line bearing easterly 29 feet to the sea-wall; again on the north by a line bearing easterly 87 feet to the right of way, 20 feet wide; and on the east by that right of way bearing south 20 feet, to the point of commencement.

Also all that piece or parcel of land, situate at Potts' Point, in the parish of Alexandria, city of Sydney, county of Cumberland, Colony of New South Wales: Commencing at the north-east corner of lot No. 1, purchased by Mr. French, and the western side of a right of way, 20 feet wide, in continuance of Victoria-street, bearing north 1 degree 37 minutes west 20 feet; on the north by a line bearing west 24 degrees 25 minutes south 73 feet on to the old sea-wall of Woolloomooloo Bay; on the west by said sea-wall, bearing south 10 degrees 24 minutes west 20 feet to lot 1; on the south by a line dividing it from lot No. 1, bearing north-easterly 76 feet, to the point of commencement.

And also all that piece or parcel of land situate at Potts' Point, in the parish of Alexandria, city of Sydney, county of Cumberland, Colony of New South Wales, being lot No. 3 of the subdivision of the Grantham Estate: Commencing at the north-east corner of lot No. 2, and bounded on the north by a line bearing west 6 degrees north 57 ft. 5 in. on the sea-wall of Woolloomooloo Bay; on the west by said sea-wall, bearing south 10 degrees 24 minutes west 41 feet, to lot No. 2; on the south by a line dividing it from lot No. 2, bearing north-easterly 73 feet, to the point of commencement.

And also all that piece or parcel of land situate at Woolloomooloo Bay, in the parish of Alexandria, and county of Cumberland: Containing 7½ perches or thereabouts, being lot 4 on a plan deposited in the Land Titles Office, Sydney, No. 27, and part of 15 perches, delineated in the public map of the said parish deposited in the office of the Surveyor-General, originally granted to George Gould, senior, by Crown grant dated 17th November, 1866, registered in the Lands Titles Office, Sydney, volume XXXV, folio 184 (being the whole of the land comprised in certificate of title registered, volume 382, folio 206).

LANDS FOR PUBLIC PURPOSES ACQUISITION ACT, 44 VIC. NO. 16.

Notice of Claim and Abstract.

To The Minister for Works,—

In pursuance of the "Lands for Public Purposes Acquisition Act," and of the enactments therewith incorporated, we hereby give you notice that we claim compensation in respect of the land hereunder described, which has been resumed under the said Act. The amount of such claim, and other the particulars required by the said Act, are stated in the subjoined abstract.

Names and descriptions of parties claiming, and nature of their interests, whether tenants for life, in tail, or otherwise.—George Hill, Thomas Batty, Daniel Sheehy, and Edward Henry Belisario, all of Sydney, gentlemen, owners in fee simple.

Situation, and description of property.—Land on the eastern side of Woolloomooloo Bay, being portion of that described in *Gazette* notice of the 4th February, 1890, having a frontage to the bay of 304 feet, with a depth on one side of 141 ft. 6 in., and on the other of 274 feet.

Quit rents payable if leasehold, name of landlord, term of lease, and rent reserved.—None.

Names of occupiers, distinguishing whether tenants at will or under lease, rent reserved, terms, &c.—

H. C. Press, weekly tenant of a portion of the said land to the north of the lane at a rental of £2 per week, and Robert Head, weekly tenant of a cottage on another portion of the said land at a rental of 10s. per week.

Particulars of claim, specifying separately the amount claimed for value of property and for compensation.—£300 per foot frontage to Woolloomooloo Bay, i.e., the sum of £91,200, the value of the land resumed.

Dates, and other short particulars of documents of title.—Too numerous to be here specified, but comprised in the abstracts sent to the Crown Solicitor.

Name of persons having the custody of documents, and place or places where the same may be inspected, and name of claimants' solicitor or agent.—Those comprised in the abstract of the title of the trustees of Doyle's estate and their mortgagees in the custody of Messrs. Jones and Jones, solicitors, Elisabeth-street, Sydney, and those comprised in the abstract of title of Messrs. George Hill and others, in the custody of Messrs. Stephen, Jacques, and Stephen, solicitors, O'Connell-street, Sydney.

GEORGE HILL,
THOS. BATTY,
DANIEL SHEEHY,
E. H. BELISARIO,

Care of STEPHEN, JACQUES, AND STEPHEN, Solicitors,
O'Connell-street, Sydney.

1 May, 1890.

[A similar notice was served also on the Crown Solicitor.]

The Crown Solicitor to The Under Secretary for Public Works.

Land at Woolloomooloo Bay—Claim of Messrs. G. Hill and others.

Sir,

Crown Solicitor's Office, Sydney, 8 December, 1890.

I have the honor to forward herewith notice of claim and abstract of Messrs. George Hill, Thomas Batty, Daniel Sheehy, and Edward Henry Belisario, in respect of land at Woolloomooloo Bay, resumed for wharfage accommodation purposes.

The claim is made for compensation for land on the eastern side of Woolloomooloo Bay, being portion of that described in *Gazette* of 4th February, 1890, having a frontage to the bay of 304 feet, with a depth on one side of 141 ft. 6 in., and on the other of 274 feet.

I have fully reported on the title to the land, down to the date of ownership thereof by the late Charles Doyle in my letter to you of even date herewith, in connection with the claim of Messrs. Mason and O'Donnell, trustees and executors of the will of Charles Doyle, who have claimed compensation in respect of the same land.

I find that by his will, Charles Doyle gave, devised, and bequeathed all his estate, both real and personal, unto his trustees, and directed the payment of his just debts, funeral, and testamentary expenses, and after devising trust estates, subject to the equities affecting the same, and making certain specific devises of lands not affected by the resumption, he empowered his trustees to lease and mortgage his property in Brougham-street, Woolloomooloo Bay, but not to sell the same before the year 1890, and after making certain directions as to other properties not affected by this resumption, he directed his trustees, at the expiration of the year 1889, or as soon after as they might deem expedient, to sell and dispose of his Brougham-street property, &c.

The testator directed his trustees, as soon as conveniently might be after his decease, to pay to Mrs. Charlotte Wilson, £100; to Ann Elizabeth Morris, £100; to Thomas Bennett, £100; and to George O'Donnell and G. H. Robinson £100 each; and he declared that all costs, charges, and expenses which his said trustees might incur, or be put to in carrying out the said trusts, should be paid out of his estate.

The testator also directed his trustees to pay to Mrs. Charlotte Wilson the sum of £1 weekly during her life, also to Mrs. Annie Elizabeth Morris £1 weekly until the time of the division of his estate; and subject to such legacies and payment, and upon the realization of his property to divide the residue into six shares, and invest two of such shares for Mrs. Elizabeth Peisley during her life, and after her decease, to pay such interest to his nieces, Martha Peisley, Florence Peisley, and Louise Johnson (formerly Peisley), wife of Leslie Johnson, in equal shares; to pay one share to John Mason; to invest one share for the benefit of Charlotte Hilliard until sale of Brougham-street property, and division of residuary estate, and then to pay same to her; to pay one share to Kate Louise Counsel, and the remaining share to Ann Elizabeth Morris, and declared that devises, &c., to females should be for their separate use, &c.

The testator made two codicils to his will, the first of which he revoked the appointment of one of the trustees of his will, and the bequests of £100 each to G. H. Robinson and Thomas Bennett, and bequeathed a legacy of £100 to Mrs. Elizabeth Peisley, and by the second he revoked the bequest of the sixth share to Kate Louise Counsel, and instead thereof directed his trustees and executors to forego £500 lent to her husband, and he devised one-sixteenth share to his nephew, Ernest Robert Peisley, and John Doyle, in equal shares, and he bequeathed the sum of £500 to John Mason, in addition to the one-sixth share of his residuary estate, and the testator expressed a wish that Charlotte Hilliard should not receive a less share of his residuary estate than the other legatees mentioned in his will.

The testator died on the 1st day of March, 1887, and probate of his will was, on the 2nd June, 1887, granted to Messrs. Mason and O'Donnell. I find that the legacies of £100 bequeathed to Charlotte Wilson, of £100 and £1 per week to Ann E. Morris, and of £100 to George O'Donnell have been assigned to the claimants, or some of them; but it does not appear from the documents produced to me that the legacies of £100 to Elizabeth Peisley and £500 to John Mason, and £1 per week to Charlotte Wilson for life have been got in by the claimants.

With regard to the shares in the residuary estate I find as follows:—

As to John Doyle's half of one-sixth share.—By indenture, dated 4th May, 1887 (registered No. 291, Book 365), John Doyle, in consideration of £500, assigned and assured all his estate and interest in the lands, &c., and proceeds, &c., to Thomas Batty and Daniel Sheehy.

As to Ernest Robert Peisley's half of one-sixth share.—By indenture, dated the 7th September, 1887 (registered No. 618, Book 372), E. R. Peisley, in consideration of £200 lent to him by Messrs. Batty and Sheehy, assigned and assured by way of mortgage all his estate and interest in the lands, &c., and proceeds, &c.; and by indenture, dated 3rd January, 1888 (registered No. 788, Book 377), E. R. Peisley, in consideration of £200, assigned and assured his one-twelfth share under the will and codicils of said C. Doyle in the residuary personal estate and effects to Messrs. Batty and Sheehy.

As to Ann E. Morris' one-sixth share, &c.—By indenture, dated 12th June, 1888 (registered No. 788, Book 391), A. E. Morris, in consideration of £1,200, granted, released, and conveyed to Messrs. Batty and Sheehy the said annuity of £1 per week and her estate and interest in the residuary estate, except certain property in Elizabeth-street, Sydney.

As to C. J. Hilliard's one-sixth share.—By indenture, dated 18th June, 1888 (registered No. 787, Book 391), Charlotte Jane Hilliard, in consideration of £1,350, assigned to Messrs. Batty and Sheehy her interest in the said residuary estate.

As to Mrs. and the Misses Peisley's two-sixths share.—By indenture, dated 29th August, 1889 (registered No. 757, Book 421), Mrs. Elizabeth Peisley, Florence Elizabeth Peisley, Martha Australia Peisley, and Mrs. Margaret Louise Johnson (formerly Miss Peisley), and her husband, in consideration of £2,000 paid to Mrs. Peisley and £1,000 to each of the other three parties, granted, released, and confirmed unto George Hill their shares and interests under the will of Charles Doyle, except the interest of M. A. Peisley in the Elizabeth-street property.

As to John Mason's one-sixth share.—By indenture, dated 12th September, 1889 (registered No. 489, Book 424), John Mason, in consideration of £5,000, assigned his one-sixth share in the said residuary estate to George Hill.

By deed poll, dated 19th November, 1889, the said George Hill, Thomas Batty, and Daniel Sheehy declared that they held the several shares, interests, and annuities, &c., upon trust for themselves and E. H. Belisario in equal shares as tenants in common..

For

For the reasons stated in my letter of even date herewith, reporting on the claim of Messrs. Mason and O'Donnell, I think it is desirable that they, and the present claimants, should be dealt with as to the fee simple value of the land resumed, and when the amount has been agreed upon it should be paid into Court.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

Land Valuer.—D.C.McL. (*pro* U.S.), B.C., 10/12/90. Draftsman for certificate.—A.B. (*pro* Land Valuer). Herewith.—F. G. RAE, 23/12/90.

Works Department, Valuation Branch, Sydney, 12 May, 1890.
I CERTIFY that that the land at Woolloomooloo Bay, now occupied by Thomas Batty and Daniel Sheehy, is comprised within certificate of title, registered volume 910, folio 79, and is part of the land resumed for wharfage purposes by notification in the *Government Gazette* of 3rd April, 1890.

FRED. G. RAE.

Extract from a letter of P. J. Hourigan, Solicitor, dated 25th April, 1890.

Resumption, under Lands for Public Purposes Acquisition Act, Woolloomooloo Bay.
HEREWITH I beg to forward you notice of claim by Thomas Batty and Daniel Sheehy.

LANDS FOR PUBLIC PURPOSES ACQUISITION ACT, 44 Vic. No. 16.

Notice of Claim and Abstract.

To the Minister for Works,—

In pursuance of the "Lands for Public Purposes Acquisition Act," and of the enactments therewith incorporated, we hereby give you notice that we claim compensation in respect of the land hereunder described, which has been resumed under the said Act. The amount of such claim, and other the particulars required by the said Act, are stated in the subjoined abstract:—

Names and descriptions of parties claiming and nature of their interests, whether tenants for life, in tail, or otherwise.—Thomas Batty and Daniel Sheehy, of Cowper's Wharf, Woolloomooloo Bay, Sydney, ship-builder, &c., who were formerly lessees for five years, and erected buildings on said land, and were at the time of the resumption tenants from year to year.

Situation and description of property.—All that piece of land, having about 90 feet frontage to Woolloomooloo Bay, by a depth of about 200 feet.

Quit rents payable if leasehold, name of landlord, term of lease, and rent reserved.—The trustees of the Challis Estate were the landlords of said property.

Names of occupiers, distinguishing whether tenants-at-will or under lease, rent reserved, terms, &c.—We are still in occupation, and our rent was £75 per year.

Particulars of claim, specifying separately the amount claimed for value of property and for compensation.—The value of our interest, including the buildings we erected on said land, is £400, and we also claim the sum of £40 for compensation, making in all £440.

Dates and other short particulars of documents of title.—Tenants from year to year at time of resumption.

Names of persons having the custody of documents, and place or places where the same may be inspected, and name of claimants' solicitor or agent.—Mr. P. J. Hourigan, of No. 91, Elizabeth-street, Sydney, is our solicitor, and he has the custody of documents, and the same may be inspected at his office.

THOS. BATTY,
DANIEL SHEEHY,
Care of P. J. HOURIGAN, Solicitor,
91, Elizabeth-street, Sydney.

JNO. MASON.
GEORGE O'DONNELL.

The Crown Solicitor to The Under Secretary for Public Works.

Land at Woolloomooloo Bay—Claim of Thomas Batty and Daniel Sheehy.

Sir,

Crown Solicitor's Office, Sydney, 2 May, 1890.

I have the honor to forward herewith notice of claim and abstract of Messrs. Batty and Sheehy, in respect of land at Woolloomooloo Bay resumed for wharfage purposes.

The claim is made in respect of land having a frontage of about 90 feet to Woolloomooloo Bay by a depth of about 200 feet.

The claimants state that they are tenants from year to year of the land, and as such they may be dealt with, affirming that the land in respect of which they claim, forms part of the land resumed, that being a matter for a surveyor to determine.

It will be noticed that the sum claimed as compensation includes the value of the buildings erected on the land. I am unable to say whether the claimants are entitled to such buildings, and I think satisfactory proof that they are so entitled should be given before they are dealt with in respect thereof.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

Draftsman for Certificates.—A.B. (pro. Land Valuer), 3/5/90. Herewith.—FRED. G. RAE,
12/5/90.

LANDS FOR PUBLIC PURPOSES ACQUISITION ACT, 44 VIC. NO. 16.

Notice of Claim and Abstract.

To the Crown Solicitor,—

In pursuance of the "Lands for Public Purposes Acquisition Act," and of the enactments therewith incorporated, we hereby give you notice that we claim compensation in respect of the land hereunder described, which has been resumed under the said Act. The amount of such claim, and other the particulars required by the said Act, are stated in the subjoined abstract:—

Names and descriptions of parties claiming, and nature of their interests, whether tenants for life, in tail, or otherwise.—Thomas Batty and Daniel Sheehy, of Cowper's Wharf, Woolloomooloo Bay, Sydney, shipbuilders, &c., who were formerly lessees for five years, and erected buildings on said land, and were at the time of the resumption tenants from year to year.

Situation and description of property.—All that piece of land having about 90 feet frontage to Woolloomooloo Bay by a depth of about 200 feet.

Quit rents payable if leasehold, name of landlord, term of lease, and rent reserved.—The trustees of the Challis Estate were the landlords of the said property.

Names of occupiers, distinguishing whether tenants-at-will or under lease, rent reserved, terms, &c.—We are still in occupation, and our rent was £75 a year.

Particulars of claim, specifying separately the amount claimed for value of property and for compensation.—The value of our interest, including the buildings we erected on said land, is £400, and we also claim the sum of £40 for compensation, making in all £440.

Dates and other short particulars of documents of title.—Tenants from year to year at time of resumption.

Names of persons having the custody of documents, and place or places where the same may be inspected, and name of claimants' solicitor or agent.—Mr. P. J. Hourigan, of No. 91 Elizabeth-street, Sydney, is our solicitor, and he has the custody of documents, and the same may be inspected at his office.

THOS. BATTY,
DANIEL SHEEHY,
Care of P. J. HOURIGAN, Solicitor,
91, Elizabeth-street, Sydney.

25th April, 1890.

Mr.

Mr. J. B. Thompson to The Under Secretary for Public Works.

Woolloomooloo Bay Resumption.

Department of Public Works, Valuation Branch, Sydney, 12 September, 1890.

* Appendix A. WITH reference to a certain claim for land resumed on Woolloomooloo Bay, as shown on the accompanying tracing,* I have the honor to request, on behalf of Messrs. Richardson and Wrench, Mills and Pile, and myself, that the Crown Solicitor might be asked to advise whether the owner of the fee simple of the land coloured red on the tracing has any right to apply for and obtain permission to reclaim the land lying between his present frontage boundary and the limit line of reclamation, as laid down by the Government, similar permission having been given to adjacent owners; and, if so, whether that right not having been employed, should be regarded by the above-named valuators in assessing the compensation payable to the owner of the fee simple, as having actual value in itself, or as enhancing the value of the freehold in virtue of which it might be exercised.

J. B. THOMPSON,
Land Valuer.

Will the Crown Solicitor kindly advise.—J.B., 12/9/90.

The Crown Solicitor to The Under Secretary for Public Works.

Sir,

Crown Solicitor's Office, Sydney, 14 November, 1890.

I have the honor to return herewith your minute paper of 12th September, 1890, on the subject of the Woolloomooloo Bay resumptions, and in reply thereto, to state that the owner in fee simple of the land coloured red on the tracing has no vested interest entitling him as a matter of right to obtain permission to reclaim the land lying between his present frontage boundary and the limit line of reclamation. All the land lying beyond that coloured red is Crown lands, over which the owner of the land coloured red has no more right of property or title than he would have if it formed part of a street. The fact that similar permission has been granted by the Government to other adjacent owners, gives this owner no right whatever, and it could not in any way be taken into consideration by the valuators in assessing the compensation payable to the owner of the fee simple, either as having actual value in itself, or as in any way enhancing the value of the freehold in virtue of which the right of reclamation if granted might be exercised.

It is desirable to explain that, though the Governor has a discretionary power under the 64th section of the Crown Lands Act of 1884, to authorise a proprietor in fee simple, having a frontage to the water, to reclaim land adjoining thereto, yet no such reclamation is ever authorised which in any way interferes with public rights, and the right of granting the application is entirely in the discretion of the Crown.

In addition to this, the owner of the freehold can be prosecuted for illegally using Crown lands if he attempt to use the space in front of his own property, even as a mooring place for vessels, and if he attempt to put up any wharf, jetty, bathing house, or other erection within such Crown lands, he is liable to be prosecuted for so doing. Should he wish to occupy the Crown land, it is necessary for him, under section 89 of the Act of 1884, to obtain a lease, and pay rent in respect of such occupation, the granting of which lease, and the rent in respect thereof, and the term for which it is to be granted, being also entirely within the discretion of the Crown.

In like manner, it is not lawful for the owner of a freehold having a water frontage without permission of the Crown, to dredge such water frontage, or deepen the channel, or, on the other hand, to fill up or reclaim such channel, the land being to all intents and purposes Crown lands, over which the owner has only the same right of access as any other person, except that he has the additional right of coming in and out of his own property, whilst any other person has only the right of passing across the Crown lands in question.

I have, &c.,
R.S.,
For JOHN WILLIAMS,
Crown Solicitor.

Mr. Thompson.—J.B., 15/11/90. I should like a special note made of this opinion.—J.B.

Mr. J. B. Thompson to The Under Secretary for Public Works.

Wharf Frontages, Woolloomooloo Bay.

Department of Public Works, Valuation Branch, Sydney, 2 September, 1890.

As requested by Mr. Tillett, I have indicated on the accompanying print the way in which it is proposed to divide the resumed portions of Woolloomooloo Bay for wharfage purposes. The divisions are indicated on the print (annexed) by letters which are also used for reference to the various divisions in the following list of owners, &c.:

- A to B.—Trustees of the Challis Estate.
- B to C. } John Mason and George O'Donnell.
- D to E. } Patrick Lahiff.
- E to F.—J. A. Brown.
- F to G.—George Hill.
- G to H.—Hill, Belasario, Batty, and Sheehy.
- J to K.—George Hill (no water frontage).
- K to L.—Trustees of M'Quade.

J. B. THOMPSON,
Land Valuer.

Mr. Darley.—D.C.McL. (*pro* Under Secretary), B.C., 2/9/90. Mr. Tillett.—J.S., 3/9/90.

Some of the subdivisions of the water frontages are so small as to be quite unsuitable for wharfs, but might be used for jetties. Perhaps the Land Valuer might be asked to indicate how, in his valuation, he proposes to deal with each case—*i.e.*, if he proposes a jetty, how far is it to extend, and in what cases

he

he proposes wharfs and in what cases jetties, or he might say, that if he be furnished with the cost of dredging 80 feet in width to rock along the limit line of reclamation, whether that will meet his views or not.—C.D., B.C., 19/9/90. Under Secretary, Public Works.

Land Valuer.—D.C.McL. (*pro* Under Secretary), B.C., 20/9/90.

The Crown Solicitor to The Under Secretary for Public Works.

Sir,

Crown Solicitor's Office, Sydney, 9 January, 1891.

I have the honor to return herewith the papers referring to the claim of Messrs. George Hill and others in respect of land resumed for wharf accommodation, Woolloomooloo Bay, and in reply to the memo. of the Land Valuer, of date the 24th ultimo*, to state that the land coloured pink on the tracing referred to appears to be land reclaimed by the claimants and the predecessors in title, without, as far as the documents of title produced to me show, any authority on the part of the Crown.

Under these circumstances the land, although probably included in the title-deeds referred to in the tracing, must be considered as Crown lands.

The claimants have only shown a title down to high-water mark, and can only be dealt with in respect thereof.

I have, &c.,

JOHN WILLIAMS,

Crown Solicitor.

Land Valuer.—D.C.McL. (for U.S.), B.C., 12/1/91.

Report, &c., on claim of Messrs. G. Hill and others.

Department of Public Works, Valuation Branch, Sydney, 30 January, 1891.

REPORT and Valuation on the claim of Messrs. George Hill and others in respect of land at Woolloomooloo Bay, resumed for wharfage purposes.

PARTICULARS OF CLAIM.

Claimants—George Hill, Thomas Batty, Daniel Sheehy, and Edward Belisario. Area taken—About 1 acre and 26 perches. Amount of claim—£91,200.

REPORT.

This claim is made in respect of land having a frontage of 303 ft. 7½ in. to the water of Woolloomooloo Bay, resumed for wharfage purposes by notification in the *Government Gazette* of 3rd April, 1890.

The average depth from the western boundary, Woolloomooloo Bay, to Victoria-street, which is the eastern boundary, is about 190 feet, and the area taken is about 1 acre and 26 perches.

This property is at present of great value. It is in two portions divided by a lane about 17 feet wide, the first of which, adjoining the Challis Estate, has 253 feet 7½ inches frontage to Woolloomooloo Bay, and the other, divided from the former by the lane mentioned, has 50 feet frontage to that bay.

A claim is made by Messrs. J. Mason and George O'Donnell, trustees and executors of the will of Charles Doyle, deceased, amounting to £151,500, for the same land, but, as advised by the Crown Solicitor, we have dealt with the fee-simple value of the land resumed, which, when the amount has been agreed upon, should be paid into Court.

VALUATION.

303 ft. 7½ in. frontage to bay, at £175 per foot, £53,134 7s. 6d.; forced sale, at 10 per cent., £5,313 8s. 9d.; total, £58,447 16s. 3d.

Claim, £91,200; valuation, £58,447 16s. 3d.

Submitted for approval.

J. B. THOMPSON.

RICHARDSON & WRENCH (LIMITED).

MILLS, PILE, & WILSON.

N.B.—This is not a further and separate award to that in claim of John Mason and George O'Donnell, trustees and executors of Chas. Doyle, deceased, but is identical, and must be read in connection therewith.

The Under Secretary, Public Works, Sydney.

I understand that this is dependent upon another—that it is surely a proportional distribution of the amount awarded.—W.M., 16/2/91. Claim, £91,200; valuation, £58,447 16s. 3d. Mr. Thompson,—J.B., 23/2/91.

Reports and Valuations of Land at Woolloomooloo Bay.

Department of Public Works, Valuation Branch, Sydney, 3 February, 1891.

HEREWITH enclosed are reports and valuations of land at Woolloomooloo Bay resumed for wharfage purposes, under the provisions of the Lands for Public Purposes Acquisition Act:—M.P. No. 91-46H, claimant, Thos. Batty and D. Sheehy; M.P. No. 91-47H, claimant, James A. Brown; M.P. No. 91-48H, claimant, John Lahiff, trustees of; M.P. No. 91-49H, claimants, G. Hill, T. Batty, D. Sheehy, and E. Belisario; M.P. No. 91-50H, claimant, Chas. Doyle, executors of.

J. B. THOMPSON,

Land Valuer.

The Under Secretary, Public Works, Sydney.

Submitted.—J.B., 3/2/91. Forward for the consideration of the Colonial Treasurer.—B.S., B.C., 4/2/91. Under Secretary Finance and Trade. Claims submitted to the Treasurer and now returned. See his minute, Nos. 46, 47, 48, and 50, 11/2/91. The Under Secretary for Public Works, B.C. It will be seen that the Treasurer has not dealt with minute 49. Will the Under Secretary for Finance and Trade kindly resubmit it to Mr. McMillan?—J.B., 13/2/91. Completed and returned, 17/2/91. The Under Secretary for Public Works, B.C. Land Valuer.—D.C.McL. (for U.S.), B.C., 18/2/91. These papers should, I think, be referred to the Crown Solicitor to advise as to how and upon whom the notices of valuation should be served.—J.B.T., 7/3/91. U.S. Works, B.C. Crown Solicitor.—J.B., 7/3/91.

Report

* No copy of this memorandum is on the file.

Report by Mr. J. B. Thompson on claim of Mason and others.

Woolloomooloo Bay Resumptions—Claim of Mason and O'Donnell and George Hill and others.
Special and confidential report.

Plan of resumptions; list of purchases by Hill and others; valuation by Richardson and Wrench, and sworn valuation by Mason and O'Donnell; estimated cost of resumption by Land Valuer; annexed hereto. [These documents are not on the file.]

WITH reference to the above resumption and the joint valuations of Richardson and Wrench, Mills, Pile, and Wilson, and myself therein, I have the honor to submit the following separate report for the consideration of the Minister.

1. The land in question consists of two pieces of land divided by a lane, having frontages of 253 ft. 7 $\frac{1}{2}$ in. and 50 feet respectively to Woolloomooloo Bay; the average depth is about 190 feet to an inaccessible lane called Victoria-street. The total area is about 1 acre and 26 perches.

2. Mason and O'Donnell, as trustees under the will of C. Doyle, preferred a claim for the fee-simple of the land in question amounting to £151,500, and Geo. Hill and others who acquired an interest in the fee-simple by purchasing the interest of the beneficiaries under Doyle's will, also claimed £91,200 as their value of the fee-simple.

3. The valuators appointed to assess the value of this and other resumptions in the same locality—Richardson and Wrench, Mills, Pile, and Wilson, and myself—agreed to a report on each of the claims mentioned in the preceding paragraph that the value of the fee-simple of the portion of land in question was £58,447 16s. 3d. I concurred in this valuation, though so greatly in excess of my own ideas, out of deference to the opinions of the other joint valuators.

4. The two coincident reports and valuations mentioned were referred to the Crown Solicitor* to advise as to how the compensation should be paid, and on perusing the papers Mr. Smith came to the conclusion that the land was not only very much over-valued, but that such over-valuation would greatly prejudice the Crown in the valuation of other resumptions, notably those at Darling Harbour and Milson's Point. After consultation with Mr. Smith, careful examination of the proofs adduced by that gentleman, and consideration of his reasons for arriving at the conclusion mentioned, I must admit my agreement therewith, and that I am satisfied that under the circumstances there was no other opinion possible.

5. It is not without great hesitation and misgivings, notwithstanding the apparently indisputable facts in Mr. Smith's possession, that I have made the foregoing admission seeing that it involves doubt as to the ability, competence, and integrity of the firms I have named above, and to whose long and wide experience in valuing property of this description and high standing and great reputation in their business I felt myself bound respectfully to defer my own individual opinion.

6. The proofs I have mentioned as having been adduced by Mr. Smith in support of his opinion that the land has been over-valued included a valuation of this land made in December, 1886, by Richardson and Wrench, amounting to £8,000 only, and then a sworn valuation by the claimants Mason and O'Donnell of the same land in 1887 and for the same amount, viz.:—£8,000, and the price paid by Hill and others for the beneficial interests in the property as furnished by the annexed list. These facts, conclusively showing that Richardson and Wrench in December, 1886, valued this very land for the owner at £8,000, and in 1890 valued the same land for the Government at £58,447 16s. 3d., give rise to two considerations which are to me utterly inexplicable and almost incredible, first, that that or any other firm of similar standing would make two such discordant and irreconcilable valuations of the same land, and second, that their valuation of this land in 1886 should be estimated so far below what I believe to have been its value.

7. In view of the enormous discrepancy between the several valuations of this portion of land which are as follows:—Joint valuation submitted, £58,447 16s. 3d.; independent valuation by myself, £24,240†; and estimate made by the Crown Solicitor, £18,000 or less—I beg to submit the following proposal suggested by Mr. Smith: That it would be desirable to have the value re-assessed by a Board consisting of myself and the following gentlemen:—James Powell, Esq., Collector of Customs, Captain Jackson, C. W. Darley, Esq., Harbours and Rivers, W. Houston, Esq., Under Secretary Lands, and the Acting Crown Solicitor.

J. B. THOMPSON,

Land Valuer.

Submitted.—J.B., 1/4/91. Approved.—BRUCE SMITH, 1/4/91. Write to the Treasury and Lands Department, with the view of Mr. Powell, Captain Jackson, and Mr. Houston acting in the capacity named.—J.B., 1/4/91. Done, 1/4/91. All the gentlemen referred to have consented to act on this Board, and the Minister wishes the Acting Crown Solicitor to be the Chairman and convener thereof.—J.B., B.C., 18/4/91. Mr. R. Smith.

Land Valuer's Report on claim M.P. No. 90-185H.

Report and valuation on land resumed at Woolloomooloo Bay for wharfage accommodation.

PARTICULARS OF CLAIM.

Claimant and owner, George Hill; amount of claim, £25,080.

REPORT.

Claim, £25,080; valuation, £2,395.

This claim is made in respect of land at Woolloomooloo Bay resumed for wharfage accommodation purposes.

The land taken has a frontage of 130 feet to a lane 30 feet wide, which is a prolongation of Victoria-street by an average depth of about 25 feet to high-water mark, beyond which Mr. Hill has no claim or title whatever.

The buildings are worth £250, in addition to the value of the land.

130 feet frontage to lane, at £15 per foot, £1,950; buildings, £250; forced sale at 10 per cent., £195; total, £2,395. Claim, £25,080; valuation, £2,395.

RICHARDSON & WRENCH (LTD.)
MILLS, PILE, & WILSON.
J. B. THOMPSON.

The Constructing Authority, Sydney.

Please see the Crown Solicitor about this.—J.B., 14/9/91. Crown Solicitor.—J.B.T., 14/9/91.

Mr.

* Mr. Robt. S. Smith.

† Not now on file.

Mr. J. Hourigan to The Secretary for Public Works.

Sir,

Referring to the resumption *inter alia* of certain land situate at Potts' Point and Woolloomooloo Bay belonging previous to such resumption under the "Lands for Public Purposes Acquisition Act, 44 Vic. No. 16" to Messrs. Hill, Belisario, Batty, and Sheehy respectively; also to the fact that my clients forwarded notices of their several claims with abstract of title as far back as the 25th April, 1890, and also to the fact that my clients have not as yet been informed of the valuation you have caused to be made of the said lands, I am now instructed to write to you calling your attention to the above several facts, and to complain of the extraordinary delay that has taken place over my client's cases, and at the same time to invite your notice to section 13 of the Act, which appears to have been either overlooked or ignored; and also to inform you that unless the several proved requirements of the Act are carried out without any further delay my clients will be reluctantly compelled to apply to the Court for a mandamus.

91, Elizabeth-street, Sydney, 26 May, 1891.

I have, &c.,

J. HOURIGAN.

Mr. Thompson.—J.B., B.C., 27/5/91. I think this should be referred to the Crown Solicitor, who has the previous papers.—J.B.T., 28/5/91. Under Secretary for Works. Will the Crown Solicitor kindly say how this matter stands?—Another claimant (M'Quade) has also been pressing for settlement.—J.B., 4/6/91.

Report by Mr. J. B. Thompson.

Valuation of Woolloomooloo Resumptions.

Department of Public Works, Valuation Branch, Sydney, 25 October, 1892.

In accordance with the verbal instructions of the Under Secretary, I have the honor to submit a valuation of the following resumptions at the rate of £100 per foot on the frontage to Woolloomooloo Bay.

They are numbered 2 and 5 respectively on the annexed plan:—

No. 2. Hill, Belisario, Batty and Sheehy—	£	s.	d.
301 feet at £100 per foot	30,100	0	0
Forced sale as 10 per cent. (not to be offered)	3,010	0	0
	33,110	0	0
No. 5. Hill, Belisario, Batty and Sheehy—	£	s.	d.
45 feet at £100 per foot	4,500	0	0
40 feet frontage to lane at £30 per foot	1,200	0	0
Forced sale at 10 per cent.	570	0	0
	6,270	0	0

J. B. THOMPSON,

Land Valuer.

The frontage of the resumption numbered 2 in this is shown by the deed to have an extent of 303 ft. $7\frac{1}{2}$ in., and not 301 feet as shown on the plan. The Crown Solicitor recommends the former to be adopted, therefore the compensation to be offered will be as follows:—No. 2. 303 ft. $7\frac{1}{2}$ in. at £160 per foot, £30,362 10s.—J.B.T., 4/11/92.

Approved.—W.J.L., 7/11/92.

No. on plan.	Name.	Feet frontage	Claim.	Valuation.		Remarks.
				Total.	Per foot	
1	Trustees of Challis Estate	feet. 261	£ 49,500	£ 45,000	0 0	172 Settled at £172. Pink on plan.

LANDS FOR PUBLIC PURPOSES ACQUISITION ACT, 44 VIC. NO. 16.

Notice of Valuation.

To George Hill, Thomas Batty, Daniel Sheehy, Edward Henry Belisario, claimants in respect of the land hereunder described, resumed under the Lands for Public Purposes Acquisition Act. TAKE notice that the land hereunder described being that in respect of the resumption whereof, under the authority of the aforesaid Act, your claim for compensation has been lodged, has been valued at the sum of £30,362 10s. (thirty thousand three hundred and sixty-two pounds ten shillings.)

Dated this fourteenth day of November, 1892.

WILLIAM JOHN LYNE,

Minister for Public Works.

Description of land or damage in respect of which claim has been made.

All that piece or parcel of land situate in the parish of Alexandria, county of Cumberland, colony of New South Wales: And commencing at a point on the western side of Victoria-street at its intersection with the northern side of a lane 16 $\frac{1}{2}$ feet wide leading to Woolloomooloo Bay; and bounded on the east by first-named street bearing northerly 50 feet; on the north by a line bearing south 67 degrees west 100 feet

feet more or less to Woolloomooloo Bay ; on the west by that bay bearing southerly to the abovenamed lane ; and on the south by that lane bearing north 67 degrees east 83 feet more or less, to the point of commencement—and being lot 13 of the Granthamville Estate, and also the reclamation frontage to this land, comprised within certificate of title, registered volume 47, folio 83.

Also, all that piece or parcel of land situate at Woolloomooloo, in the parish, county, and Colony aforesaid, being allotment No. 9 as shown on the map or plan of the Granthamville Estate : Commencing at a marked rock at high-water mark in the south-west corner of allotment No. 10 ; and bounded on the north by that allotment, being a line bearing easterly 130 feet to a reserved road 30 feet wide ; on the east by that reserved road, and having a frontage thereto of 30 feet ; on the south by a portion of the present line of fence forming the southern boundary of the Granthamville Estate, being a line bearing westerly 160 feet, to a marked rock at high-water mark in Woolloomooloo Bay ; and on the west by the waters of Woolloomooloo Bay.

Also, all that piece or parcel of land situate, being, and lying in the parish, county, and Colony aforesaid : And commencing at a point on the western side of Victoria-street 119 feet southerly from a lane leading to Woolloomooloo Bay ; and bounded on the north by a line bearing south 67 degrees west 92 feet more or less to Woolloomooloo Bay ; on the west by that bay southerly to the northern boundary of Yates' land ; on the south by that land, being a line bearing north 67 degrees east 130 feet more or less to Victoria-street ; and on the east by last-named street bearing north 2 degrees 30 minutes west 55 feet to the commencing point, and being lots 10 and 11 of the Granthamville allotments.

Also, all that piece or parcel of land situate and being in the parish, county, and Colony aforesaid : And commencing at a point being the intersection of the southern side of a lane 12 feet wide with the western side of Victoria-street ; bounded on the east by Victoria-street, bearing south $2\frac{1}{2}$ degrees east 119 feet ; on the south by a line bearing south 67 degrees west 92 feet to high-water mark in Woolloomooloo Bay ; on the west by the said high-water mark bearing northerly to the southern side of first-mentioned land ; and on the north by said lane bearing north 67 degrees east 83 feet to the point of commencement—and being allotment No. 12 of the Grantham allotments, and also the reclamation frontage to the three parcels of land lastly described comprised within Crown grants, registered volume 665, folio 62, and volume 229, folio 90, respectively.

F.G.R.

Original served on Mr. Consett Stephen, of Messrs. Stephen, Jaques, & Stephen, solicitor, O'Connell-street, 14/11/92.—E.R.Y.

Petition of G. Hill and others.

Claim against the Government.

To His Excellency the Right Honorable Victor Albert George, Earl of Jersey, a member of Her Majesty's Most Honorable Privy Council, Knight Grand Cross of the Most Distinguished Order of St. Michael and St. George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

The humble Petition of George Hill, Thomas Batty, Daniel Sheehy, and Edward Henry Belisario, all of Sydney, in the Colony of New South Wales, gentlemen.

SHOWETH,—

That your Petitioners are the owners of certain freehold lands, situate on the eastern shore of Woolloomooloo Bay, in the city of Sydney, a description whereof is as follows :—All that piece or parcel of land situate in the parish of Alexandria, county of Cumberland, Colony of New South Wales, and commencing at a point on the western side of Victoria-street, at its intersection with the northern side of a lane, 16 $\frac{1}{2}$ feet wide, leading to Woolloomooloo Bay, and bounded on the east by the first-named street, bearing northerly 50 feet ; on the north by a line bearing south 67 degrees west, 100 feet more or less to Woolloomooloo Bay ; on the west by that bay bearing southerly to the above-named lane, and on the south by that lane bearing north 67 degrees east, 83 feet more or less, to the point of commencement, and being lot 13 of the Granthamville Estate, and also the reclamation frontage to this land comprised within certificate of title, registered volume 47, folio 83. Also, all that piece or parcel of land situate at Woolloomooloo, in the parish, county, and Colony aforesaid, being allotment No. 9, as shown on the map or plan of the Granthamville Estate, commencing at a marked rock at high-water mark in the south-west corner of allotment No. 10, and bounded on the north by that allotment, being a line bearing easterly 130 feet to a reserved road 30 feet wide ; on the east by that reserved road, and having a frontage thereto of 30 feet ; on the south by a portion of the present line of fence forming the southern boundary of the Granthamville Estate, being a line bearing westerly 160 feet to a marked rock at high-water mark in Woolloomooloo Bay ; and on the west by the waters of Woolloomooloo Bay. Also, all that piece or parcel of land, situate, lying, and being in the parish, county, and Colony aforesaid, and commencing at a point on the western side of Victoria-street, 119 feet southerly from a lane leading to Woolloomooloo Bay, and bounded on the north by a line bearing south 67 degrees west, 92 feet more or less to Woolloomooloo Bay ; on the west by that bay southerly to the northern boundary of Yates' land ; on the south by that land being a line bearing north 67 degrees east, 130 feet more or less to Victoria-street ; and on the east by last-named street bearing north 2 degrees 30 minutes west, 55 feet to the commencing point, and being lots 10 and 11 of the Granthamville allotments. Also, all that piece or parcel of land situate and being in the parish, county, and Colony aforesaid, and commencing at a point being the intersection of the southern side of a lane 12 feet wide with the western side of Victoria-street ; bounded on the east by Victoria-street, bearing south $2\frac{1}{2}$ degrees east, 119 feet ; on the south by a line bearing south 67 degrees west, 92 feet to high-water mark in Woolloomooloo Bay ; on the west by the said high-water mark bearing northerly to the southern side of the first-mentioned lane ; and on the north by said lane bearing north 67 degrees east, 83 feet to the point of commencement, and being allotment No. 12 of the Grantham allotments and also the reclamation frontage to the three parcels of land lastly described, comprised within Crown grants, registered volume 665, folio 62, and volume 229, folio 90, respectively.

That

That in pursuance of the Act 44 Victoria, No. 16, the land above described was, on or about the 1st day of February, in the year of our Lord 1890, amongst other lands resumed for public purposes, and a notification of such resumption was duly published in the New South Wales *Government Gazette*, of the 4th day of February, 1890, and in the *Daily Telegraph*, of the 6th day of February, 1890, in the words and figures following, that is to say:—

NOTIFICATION OF RESUMPTION OF LAND UNDER 44 VICTORIA, No. 16.

NEW SOUTH WALES,	} By His Excellency the Right Honorable Charles Robert, Baron Carrington, a member of to wit. } Her Majesty's Most Honorable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of (L.S.) } the Colony of New South Wales and its Dependencies.
By deputation from His Excellency,	
ALFRED STEPHEN, <i>Lieutenant-Governor.</i>	

WHEREAS I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, have duly sanctioned the carrying out of certain works for and in connection with providing additional wharf accommodation at Woolloomooloo Bay for and towards the completion of which said works public funds are available under the provisions of the "Loan Act, 53 Vic, No. 23," and whereas the land hereinafter described is required for the construction of the said works: Now, I, the Governor of the said Colony, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf, given to, or vested in me by the Lands for Public Purposes Acquisition Act, do, by this notification, published in the *Gazette*, and in a newspaper, that is to say, in the *Daily Telegraph*, circulated in the police district wherein the said land is situated, declare that the land hereinafter described, has been resumed for the public purposes hereinafter mentioned, that is to say, for providing additional wharf accommodation at Woolloomooloo Bay to the intent that upon the publication of this notification in the *Gazette*, the legal estate in the said land shall forthwith be vested in the Minister for Public Works and his successors, on behalf of Her Majesty, for the purpose of the said last-mentioned Act, for an estate of inheritance in fee-simple in possession, freed and discharged from all trusts, obligations, estate, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the intent, further, that the legal estate therein together with all powers incident thereto or conferred by the said Act, shall be vested in the said Minister as a trustee, with the powers stated in the said last-mentioned Act. And I declare that the following is the description of the land hereinbefore referred to, that is to say:—

All that piece or parcel of land situate in the city of Sydney, in the parish of Alexandria, county of Cumberland, and Colony of New South Wales, be the hereinafter-mentioned several dimensions, a little more or less, on the eastern side of Woolloomooloo Bay: Commencing at a broad-arrow mark on the limit line of reclamation of Woolloomooloo Bay, at the north-eastern extremity of Cowper Wharf; and bounded thence towards the south-west and south by the north-eastern and northern sides of Cowper Wharf bearing successively south 25 degrees 52 minutes east (true) 34·2 links, and south 86 degrees 8 minutes east (true) 28 links to a point on a fenced line dividing it from Cowper Wharf; thence again towards the west and south by fenced lines dividing it from Cowper Wharf bearing successively south 24 degrees 1 minute west (true) 48·5 links and south 78 degrees 12 minutes east (true) 104·2 links to a point on the western side of Duke-street, thence again towards the south by a line crossing that street bearing south 79 degrees 12 minutes east (true) 30·3 links to the north-western corner of Buchanan, Gilchrist, and Knox's 20 perches grant; thence towards the west by part of the eastern side of Duke-street, bearing south 10 degrees 18 minutes west (true) 26·7 links; thence towards the south-east by a line bearing north 58 degrees 26 minutes east (true) 41·3 links; thence again towards the south by a fenced line bearing south 81 degrees 17 minutes east (true) 136·4 links to a point on the western side of Brougham-street; thence towards the east by part of the western side of that street bearing north 9 degrees 55 minutes east (true) 78·9 links to its intersection with the southern side of Challis-street; thence again on the south by a line crossing Brougham-street bearing south 79 degrees 38 minutes east (true) 60·6 links to a point on the eastern side of that street, being a south-western corner of 1 acre 2 rods 37½ perches owned by the University of Sydney, and again towards the south by a southern boundary of that land bearing south 79 degrees 44 minutes east (true) 263·9 links to a point on the western side of Victoria-street; thence again towards the east by a western side of that street 66 feet wide, bearing north 8 degrees 33 minutes east (true) 491·5 links; thence again towards the south by fenced lines forming the northern extremity of Victoria-street, 66 feet wide, bearing successively north 76 degrees 51 minutes east (true) 18·7 links north 76 degrees 20 minutes east (true) 63·5 links and north 78 degrees 2 minutes east (true) 25·5 links to the eastern side thereof, at the south-western corner of E. Mandelson's land; thence again towards the east by a line forming the western boundary of Mandelson's and other properties bearing north 8 degrees 34 minutes east (true) 263·7 links to the south-western corner of H. C. Dangar's land; thence again towards the south by the southern boundary of that land, being a fenced line bearing north 79 degrees 18 minutes east (true) 132·5 links to a point on the western side of Grantham-lane; thence again towards the east by part of the western side of that line bearing north 1 degree 19 minutes east (true) 78·7 links to the north-eastern corner of Gallenhoef's property at Grantham-street; thence again towards the east by a line crossing that street and bearing north 26 degrees 53 minutes west (true) 35·2 links to a north-western angle of Grantham-street; thence again towards the east and south by western and northern sides of that street, being lines bearing successively north 1 degree 28 minutes east (true) 50 links, north 22 degrees 25 minutes east (true) 12·7 links; north 50 degrees 19 minutes east (true) 17·6 links, and north 72 degrees east (true) 13·7 links to a point on the northern side of Grantham-street, at the southern extremity of a fence dividing the properties known as Omega and Tarpeian; thence towards the remainder of the east by straight lines generally following the direction of the high cliffs on the eastern side of Woolloomooloo Bay bearing successively north 5 degrees 55 minutes west (true) 120 links, north 20 degrees 15 minutes east (true) 134 links, north 30 degrees 55 minutes east (true) 108·5 links, north 21 degrees 5 minutes east (true) 288 links, and north 26 degrees 10 minutes west (true) about 470 links, to a point on the limit line of reclamation of Woolloomooloo Bay, near Pott's Point; and thence towards the west and south-west by that limit line of reclamation, being curved lines, bearing generally south-westerly, to the point of commencement, and said to be in the possession of Charles Elouis, the University of Sydney, Daniel Sheehy, Charles Doyle, the Bank of New South Wales, Joseph Gould, H. C. Dangar, — Brown, S. Gattenhof, Batty and Sheehy, George Hill, Mrs. J. F. Hilly, Mrs. Leaf, and the representatives of Frederick M'Quade.

In witness whereof I have hereunto set my hand and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this 1st day of February, in the year of Our Lord 1890, and in the fifty-third year of Her Majesty's Reign.

By His Excellency's Command,
BRUCE SMITH.

GOD SAVE THE QUEEN;

That shortly after the publication of such notice of resumption the Government entered into possession of the said land and has since retained possession of the same, and has been in receipt of the rents and profits thereof.

That your petitioner, on the 1st day of May, 1890, duly gave to the Minister for Works notice of their claim, wherein they claimed the sum of £91,200 as compensation for the value of the land resumed by the Government, in the words and figures following, that is to say:—

Lands for Public Purposes Acquisition Act, 144 Vic. No. 16.

Notice of Claim and Abstract.

To the Minister for Works,—

In pursuance of the "Lands for Public Purposes Acquisition Act" and of the enactments therewith incorporated, we hereby give you notice that we claim compensation in respect of the land hereunder described, which has been resumed under the said Act. The amount of such claim and other the particulars required by the said Act, are stated in the subjoined abstract:—

Names and descriptions of parties claiming, and nature of their interests, whether tenants for life, in tail, or otherwise.—
George Hill, Thomas Batty, Daniel Sheehy, and Edward Henry Belisario, all of Sydney, gentlemen.

Situation

Situation and description of property.—Land on the eastern side of Woolloomooloo Bay, being portion of that described in Gazette notice of the 4th February, 1890, having a frontage to the bay of 304 feet, with a depth on one side of 141 ft. 6 in., and on the other of 274 feet.

Names of occupiers, distinguishing whether tenants at will or under lease, rent, reserved, terms, &c.—H. C. Press, weekly tenant of a portion of the said land to the north of Grantham-street, at a rental of £2 per week; and Robert Head, weekly tenant of a cottage on another portion of the said land, at a rental of 10s. per week.

Particular of claim specifying separately the amount claimed for value of property and for compensation.—£300 per foot frontage to Woolloomooloo Bay, i.e., the sum of £91,200, the value of the land resumed.

Dates and other short particulars of documents of title.—Too numerous to be here specified, but comprised in the abstract sent to the Crown Solicitor.

Names of persons having the custody of documents and place or places where the same may be inspected and name of claimants' solicitor or agent.—Those comprised in the abstract of the title of the trustees of Doyle's Estate and their mortgagees in the custody of Messrs. Jones and Jones, solicitors, Elizabeth-street, Sydney, and those comprised in the abstract of the title of Messrs. George Hill and others in the custody of Messrs. Stephen, Jaques, and Stephen, solicitors, O'Connell-street, Sydney.

GEORGE HILL,
THOS. BATTY,
DANIEL SHEEHY,
E. H. BELISARIO,

Care of STEPHEN, JACQUES, AND STEPHEN, Solicitors,
O'Connell-street, Sydney.

1st May, 1890.

That on the 14th day of November, 1892, your petitioners received a notice of the valuation from the Minister for Public Works, wherein the sum of £30,362 10s. was offered to your petitioners as compensation for the resumption of their said land in the words and figures following, that is to say—

Lands for Public Purposes Acquisition Act 44 Vic. No. 16.

Notice of Valuation.

To George Hill, Thomas Batty, Daniel Sheehy, and Edward Henry Belisario, Claimant in respect of the land hereunder described, resumed under the "Lands for Public Purposes Acquisition Act."

Take notice that the land hereunder described being that in respect of the resumption whereof, under the authority of the aforesaid Act, your claim for compensation has been lodged, has been valued at the sum of £30,362 10s.

WILLIAM JOHN LYNE,
Minister for Public Works.

Dated this 14th day of November, 1892.

Here follows the above description of the land owned by your Petitioners.

That the sum of £30,362 10s. is not sufficient to compensate your Petitioners for the loss they have sustained on account of such resumption, and your Petitioners decline to accept such sum, and claim that they are entitled to recover from the said Government the sum of £91,200, together with interest thereon at the rate of £6 per centum per annum from the date of the publication of such notification of resumption.

That owing to the non-payment of the said compensation by the Government, your Petitioners have been compelled to pay large sums of money for interest upon an overdraft upon the security of the deeds of the said land, and at a higher rate than that payable to them by the Government, and have otherwise suffered loss and damage on account of the resumption of the said land, and the non-payment of the said moneys.

Your Petitioners feel aggrieved by reason of the premises and of the default on the part of the Government to pay your Petitioners the amount of compensation for the loss sustained by them in respect of such resumption, and desire to sue the Government as being liable in that behalf.

Your Petitioners therefore humbly pray that your Excellency will, in accordance with the provisions of the "Claims against the Colonial Government Act," be pleased to appoint a nominal defendant to be sued for, and on behalf of the said Government in respect of the matters aforesaid. And your Petitioners will ever pray.

Sydney, 24th November, 1892.

GEORGE HILL,
DANIEL SHEEHY,
THOS. BATTY.
E. H. BELISARIO.

The Under Secretary for Public Works to Messrs. Stephen, Jaques, and Stephen.

George Hill and Others—Woolloomooloo Bay Resumptions.

Sir,

Department of Public Works, 29 November, 1892.

I am directed by the Secretary for Public Works to acknowledge the receipt of your letter of the 25th instant, enclosing a petition for the appointment of a nominal defendant in the above matter, and to inform you that the petition has been referred to the Colonial Secretary.

I have, &c.,
J. BARLING,
Under Secretary.

The Under Secretary for Public Works to R. Smith, Esq.

Dear Mr. Smith.

Department of Public Works, Sydney, 2 March, 1892.

We have not yet received the Attorney-General's written opinion on the point as to whether the cost of land is to be included in the estimated cost of any proposed public work for the purposes of the Public Works Act, I gathered from what you said that the opinion of Mr. Barton rather inclined to the inclusion of this expense in the estimate, but I now write to ask whether a definite decision has been come to on the point, as a case is now before me which shows how extremely inconvenient, not to say injurious, to the public interest, it will be if there is no way out of this decision. We are about to bring before Parliament, with a view to its being referred to the Public Works Committee, a scheme for the extension

extension of the railway to Darling Harbour, which necessitates the resumption of a quantity of land on which are carried on a number of large businesses, and if the Attorney-General's final opinion be as you have indicated to me, we shall have to estimate the value of the land required, and also compensation for the destruction of businesses which will ensue on our taking the land. In order to arrive at this, it will be necessary to inspect the books of the various companies and firms interested, and to make very delicate calculations, and it will be at once seen that it will be most injurious to the public interest to have to expose our hand at this early stage of the matter. It would, in fact, be most inopportune, and tend to make our final dealings with the parties concerned very embarrassing. I remember some time ago, when I appeared as a witness before the Public Works Committee, in connection with the offices for the Water and Sewerage Board, that one of the Members of the Committee commenced to ask me questions about the land we intended to resume, but he was at once stopped by the Chairman, Mr. Abbott, with the ruling that no question of land was before the Committee, and he would not therefore permit any question to be put to me on the subject. Perhaps you will kindly obtain the final opinion of Mr. Barton on the matter, previously putting this view of the case before him as it is becoming very urgent. I need hardly say I write with the consent of Mr. Lyne, who, as you are aware, is rather inclined to the belief that the cost of the land should be included in the estimate, but, at the same time, he is fully alive to the inconveniences which I have pointed out.

Yours faithfully,

J. BARLING.

My Dear Mr. Smith,

7 July, 1891.

I have received Mr. Thompson's valuations in connection with the land resumption, Mr. Hill, in connection with Woolloomooloo Bay. As I have not yet heard from you in relation to your report on the subject, which I left with you some few weeks ago, I hardly know how to submit the matter to the Minister. Perhaps you will kindly return me the papers with your further advice on the matter.

Yours faithfully,

Robert Smith, Esq.

J. BARLING.

The Crown Solicitor to J. B. Thompson, Esq.

Dear Sir,

Crown Solicitor's Office, Sydney, 4 August, 1892.

Re Woolloomooloo Bay resumptions, I shall be glad if you will see me as soon as possible, as arranged, and furnish me with the information required, so that some steps may be taken towards getting these valuations made.

Yours, &c.,

ERNEST A. SMITH,
Crown Solicitor.

Put by —J.B.T., 11/8/93.

The Crown Solicitor to The Under Secretary for Public Works.

Re Woolloomooloo Bay Resumptions.

Sir,

Crown Solicitor's Office, Sydney, 13 October, 1892.

In accordance with instructions, I have caused inquiries to be made with a view of arriving at a determination as to the amount that should be offered to the various claimants in respect of this resumption.

I send herewith a plan of the land resumed, showing in different colours the various ownerships.

Also enclosed are:—

1. A list showing names of owners and amounts claimed, &c.
2. Particulars of estimates obtained.

It will be noted that the land resumed, which has water frontage, is split up into seven different ownerships. Of these, in the cases of Nos. 1 and 3, edged red and brown on the plan, the amount of compensation has been settled, namely, No. 1 Challis Estate, have been paid at the rate of £172 per foot. No. 3, the trustees of Peter Lahiffe, have been offered £150 per foot, and that offer has been accepted.

The question now is, at what rate per foot should the compensation in respect of the other allotments, Nos. 2, 4, 5, 6, and 7 be assessed.

The first point to which I wish to direct special attention is this. It will be noticed that the Challis Estate block No. 1 stands by itself in this particular, that it is open to ready access to all the streets running down to Woolloomooloo Bay and the Cowper Wharf itself, and this block completely shuts off all the other blocks lying to the north of it from any such access. The only means of access to these remaining blocks, Nos. 2 to 7, is from Victoria-street along the extension of that street. This approach is on the top of a very high cliff.

Another point to which attention should be directed in comparing this property with other wharf properties in the city is the depth of water. The plan accompanying shows the surroundings that have been taken, and it is evident that a considerable amount of dredging will have to be done before ships of any considerable size can be brought alongside.

From reports which I have obtained from the persons named in the list accompanying, and from the interviews that I have with some of them, it appears to me there will be ample evidence to show that the very utmost that the Government should offer for each foot of frontage is £75. Some of the witnesses, whose opinion would carry weight in a matter of this kind, think that for the reasons mentioned, namely, the want of access and the want of depth, this property has no commercial value. Others value the frontage at from about £40 to £75, the highest valuation being £75.

In supporting this valuation of £75 per foot the Government would be met with the fact that they offered and paid to one of the claimants, P. Lahiffe, a sum calculated at the rate of £150 per foot. In my opinion this valuation was far too high, but now it is too late to withdraw, and it will have to be admitted, if any of these cases are tried on the £75 basis, that the Government in this case of Lahiffe's made a mistake.

Another

Another difficulty is the fact that on the first valuation that was made on behalf of the Government by Messrs. Richardson and Wrench, Mills, Pile, and Wilson, and Mr. Thompson jointly, the amount in Hill, Belisario, and others, case No. 2, was assessed at £58,447, that is at the rate of £175 a foot.

With regard to Mr. Thompson, it has already been explained by him that in joining in this valuation he did so against his better judgment, and, on further consideration, he thinks that £24,240 would be ample.

With regard to Messrs. Richardson and Wrench, it is very difficult to reconcile their present figures with the valuation made by them in December, 1886. At that time, when the property belonged to the late C. Doyle, now deceased, a valuation for the purpose of sale was made by Messrs. Richardson and Wrench, and the value of the whole 300 feet frontage was placed at £8,000.*

Mr. Doyle died shortly after this, and his executors for the purpose of probate, adopted this valuation, and in their affidavit, for the purposes of stamp duty, the property was put down at this figure, £8,000. The same executors have now sent in a claim against the Government for the same land, in which they value the property at £151,500.

It is advisable to draw attention to this fact as showing to what lengths claimants will go in cases of this kind. Indeed it would appear that in assessing the property for the purpose of probate duty, no valuation could be too low, while in sending in a claim against the Government, no amount, however extravagant, is considered to be too high.

With regard to Messrs. Richardson and Wrench's valuation, I have seen Mr. Greig of that firm, and asked him to explain, if he can, how he can reconcile these two valuations, viz., that of £8,000 in December, 1886, and £58,447 on the 1st February, 1890. On this point I would refer to the letter received from Mr. Greig, which I enclose.† The explanation now attempted to be given in my opinion is wholly insufficient to account for the enormous difference between the figures.

Messrs. Richardson and Wrench state that in December, 1886, "this portion of the city was almost neglected by capitalists, practically almost dormant." An activity arose in the way of demand for land there in the belief that the early future would discover for it an important and valuable use," and so on.

As a matter of fact there was an increase—a great increase in value of properties of this and other kinds, but that increase began in 1886 and rose to its height in the year 1888, and from that date the fall was as remarkable as the previous rise.

I think there will be ample evidence on this point, so that comparing January, 1887, with January, 1890, the market was rather more favourable in the earlier date than in the latter date. I enclose a copy of a joint valuation made at my request by Messrs. Hardie and Gorman, in which they assess the value at £100 a foot. This appears to be an outside value from an auctioneer's point of view, and in estimating property of this kind, I should feel more inclined to disregard evidence of that kind, and to trust more to the evidence of merchants, wharf-owners, &c.

Comparing this property with other wharf properties, especially in view of the two features referred to above, there would be ample evidence to show that £100 per foot is very excessive. For instance, Alger's wharf, which has a deep water frontage, was sold at the very height of the market in 1888, at £80 per foot, and there is no comparison between that wharf and the Woolloomooloo sites. The one has deep water frontage, so that a larger ship can come alongside, while, as already mentioned, at Woolloomooloo not only will there have to be a great deal of dredging work done in front of the wharf itself, but for a considerable distance into the bay to enable a larger ship to come alongside.

Reference should be made to this report of Mr. M'Credie, in which it will be seen that he values this frontage at £208 a foot and £175 a foot. To support these figures Mr. M'Credie has given in detail a scheme by which it is attempted to show that a fair return for the outlay could be expected.

Dealing with the 250 feet portion of Block No. 2 on plan, Hill, Belisario, and others, the first block north of Challis Estate, it will be seen that Mr. M'Credie contemplates a total expenditure on this small block of £91,500. This is to include the cost of dredging, £1,000 little enough, and the erection of two jetties, six stores and lifts. The scheme is that the goods are to be taken by lifts to the top of the cliff, and thence I suppose carted to the city along Victoria-street and down the William-street hill. I do not propose to discuss seriously the feasibility of such a scheme. It is very difficult to understand how anyone who had been to visit the place, and who has a most ordinary knowledge of things of this kind could put forward such a proposition.

The late Acting Crown Solicitor, Mr. Robert Smith, left with the papers a memorandum dealing with this report of Mr. M'Credie's, and pointing out the many absurdities involved. As already mentioned, I do not think it necessary to deal with this in detail, but this memorandum will be very useful for the purposes of cross-examination, in case of any attempt being made by any one of the claimants to substantiate his claim to compensation on any such grounds as those put forward in this report.

On the whole, therefore, and in view of the evidence that can be obtained, I would recommend that the Government should base their valuation on not more than £75 a foot.

It should be mentioned that in the case of J. A. Brown, an offer was made of £125 per foot for his small portion, 15 feet. This offer was not accepted, and I think it should be at once withdrawn, and an amended offer sent in to him at £75 a foot, with such addition as may be necessary to cover his improvements.

With regard to George Hill, No. 6, it should be borne in mind that he has still to make out his title to the 130 feet frontage, and no offer should be made until this is done.

If the offers are made on a valuation calculated on this basis, namely, £75 per foot, I think, from the evidence at present before me, the Government will be able to make out a very strong case in resisting any claim for an amount above that sum. I return all the papers herewith.

I have, &c.,

ERNEST A. SMITH,
Crown Solicitor.

Submitted.—J.B., 18/10/92.

This matter is submitted by the Secretary for Public Works to the Cabinet, and after considerable discussion, it was decided to offer £100 per foot for the land belonging to Hill & Co., valued at £58,447—total; or £175 per foot.—G.R.D., 24/10/92.

Make the above offer—and withdraw offer to Brown.—W.J.L., 24/10/92. See letter to Crown Solicitor.—J.B., 24/10/92.

LAND

* See page 9.

† This document is not on the file.

LAND FOR PUBLIC PURPOSES ACQUISITION ACT, 44 VICTORIA, NO. 16.

To James Aitchison Brown, Esq., claimant in respect of land hereunder described resumed under the Lands for Public Purposes Acquisition Act.

You are hereby informed that the Notice of Valuation addressed to you, and dated the fifth day of March, one thousand eight hundred and ninety-one, wherein you were notified that the land therein, and herein described, being that in respect of the resumption whereof, under the authority of the said Act, your claim for compensation had been lodged, had been valued at the sum of one thousand eight hundred and seventy-five pounds is hereby withdrawn, no agreement having been come to between you and the Minister for Works in respect thereof.

Dated this seventh day of November, 1892.

WILLIAM JOHN LYNE,
Minister for Works.

Description of land referred to.

All that piece or parcel of land situate in the parish of Alexandria, county of Cumberland, and Colony of New South Wales, being the whole of the lands comprised in indenture dated July 24th, 1872, registered No. 334, book 131, and in certificate of title, registered volume 146, folio 134.

Original served on Mrs. J. A. Brown, of 79 Victoria-street, North Darlinghurst.—E.R.Y., 8/11/92.

The Under Secretary for Public Works to George Hill and Others.

Gentlemen, Department of Public Works, Valuation Branch, Sydney, 12 November, 1892.

With reference to the notice of valuation, dated 7th November, 1892, for the sum of £30,362 10s., being in respect of the resumption whereof, under the Lands for Public Purposes Acquisition Act, 44 Victoria, No. 16, your claim for compensation has been lodged, I have the honor to inform you that owing to a clerical error the description attached to that notice of valuation did not embrace the whole of the land resumed from you, for which your claim was lodged, and for which the above sum was offered as compensation.

I now forward a similar notice of valuation with corrected description thereon, in lieu of that previously served.

Please, therefore, consider the former notice withdrawn, and the notice now served with this letter, substituted in place of the notice so withdrawn.

I have, &c.,
J. BARLING,

Under Secretary.

LANDS FOR PUBLIC PURPOSES ACQUISITION ACT, 44 VIC., NO. 16.

Notice of Valuation.

To George Hill, Thomas Batty, Daniel Sheehy, Edward Henry Belisario, claimants in respect of the land hereunder described, resumed under the Lands for Public Purposes Acquisition Act.

TAKE notice that the land hereunder described, being that in respect of the resumption whereof under the authority of the aforesaid Act your claim for compensation has been lodged, has been valued at the sum of £30,362 10s. (thirty thousand three hundred and sixty-two pounds ten shillings).

Dated this fourteenth day of November, 1892.

WILLIAM JOHN LYNE,
Minister for Public Works.

Description of land or damage in respect of which claim has been made.

All that piece or parcel of land situate in the parish of Alexandria, county of Cumberland, Colony of New South Wales: And commencing at a point on the western side of Victoria-street at its intersection with the northern side of a lane 16½ feet wide leading to Woolloomooloo Bay; and bounded on the east by first-named street, bearing northerly 50 feet; on the north by a line bearing south 67 degrees west 100 feet more or less to Woolloomooloo Bay; on the west by that bay bearing southerly to the abovenamed lane; and on the south by that lane bearing north 67 degrees east 83 feet more or less to the point of commencement,—and being lot 13 of the Granthamville Estate, and also the reclamation frontage to this land comprised within certificate of title, registered volume 47, folio 83.

Also, all that piece or parcel of land situate at Woolloomooloo, in the parish, county, and Colony aforesaid, being allotment number 9, as shown on the map or plan of the Granthamville Estate: Commencing at a marked rock at high water-mark in the south-west corner of allotment number 10; and bounded on the north by that allotment, being a line bearing easterly 130 feet to a reserved road 30 feet wide; on the east by that reserved road, and having a frontage thereto of 30 feet; on the south by a portion of the present line of fence forming the southern boundary of the Granthamville Estate,—being a line bearing westerly 160 feet to a marked rock at high water-mark in Woolloomooloo Bay; and on the west by the waters of Woolloomooloo Bay.

Also, all that piece or parcel of land situate, being, and lying in the parish, county, and Colony aforesaid: And commencing at a point on the western side of Victoria-street 119 feet southerly from a lane leading to Woolloomooloo Bay, and bounded on the north by a line bearing south 67 degrees west 92 feet more or less to Woolloomooloo Bay; on the west by that Bay southerly to the northern boundary of Yates' land; on the south by that land, being a line bearing north 67 degrees east 130 feet more or less to Victoria-street; and on the east by last-named street bearing north 2 degrees 30 minutes west, 55 feet to the commencing point,—and being lots 10 and 11 of the Granthamville allotments.

Also, all that piece or parcel of land situate and being in the parish, county, and Colony aforesaid: And commencing at a point being the intersection of the southern side of a lane 12 feet wide with the western side of Victoria-street; bounded on the east by Victoria-street bearing south 2½ degrees east 119 feet; on the south by a line bearing south 67 degrees west 92 feet to high water-mark in Woolloomooloo Bay; on the west by the said high water-mark bearing northerly to the southern side of first-mentioned land; and on the north by said lane bearing north 67 degrees east 83 feet to the point of commencement,—and being allotment number 12 of the Grantham allotments, and also the reclamation frontage to the three parcels of land lastly described, comprised within Crown Grants, registered volume 665, folio 62, and volume 229, folio 90, respectively.

F.G.R.

Original served on Mr. Consett Stephen, of Messrs. Stephen, Jaques, and Stephen, solicitor, O'Connell-street, 14/11/92.—E.R.Y.

The Crown Solicitor to The Under Secretary for Public Works.

Sir,

Crown Solicitor's Office, Sydney, 29 October, 1892.

I have the honor to return herewith the papers relating to the claims of George Hill alone and to two claims of Messrs. George Hill, Thos. Batty, Daniel Sheehy, and E. H. Belisario in respect of land at Woolloomooloo Bay, resumed for wharfage purposes, which were only handed to me yesterday to prepare notices of valuation to be served on the claimants.

It will be seen that the Land Valuer in his minute of 25th instant, has dealt with the two claims of Hill and others, Nos. 2 and 5 on the plan. But it does not appear that the valuation of £100 per foot includes any buildings or improvements which were on the land at the date of resumption. If it is intended that that sum is to cover not only the value of the land, but also of any improvements thereon, it should be so stated.

If it is not intended to include the value of the improvements in that figure particulars of the improvements should be given and their value stated.

I am not instructed as to the offer to be made to Mr. George Hill in respect of the land owned by him alone, and coloured yellow, and No. 6 on the plan with the papers.

If you will cause the necessary information to be furnished to me I will have the notices of valuation prepared without delay.

I have, &c.,

ERNEST A. SMITH,

Crown Solicitor.

No instructions were given to make an offer in either of the cases, viz., Hill, Belisario, Batty, and Sheehy—claim, £33,650—or George Hill claim, £25,080—nor was Mr. Thompson instructed to make any valuation in these cases.—W.J.L., 31/10/92.

I find a mistake has arisen from the fact of my not having in my letter of the 24th instant given the full text of the Minister's minute, which was as follows:—"This matter is submitted by the Secretary for Public Works for the Cabinet, and after considerable discussion it was decided to offer £100 per foot for the land belonging to Hill & Co., valued at £58,447—total; or £175 per foot." Mr. Thompson has now run out the total sum according to the amount per foot approved by the Cabinet in the particular case referred to, and the amount is £30,100. The sum of £100 per foot is to be taken to include buildings on the land, allowance for forced sale, &c.—J.B., B.C., 31/10/92. Crown Solicitor.

The Crown Solicitor to The Under Secretary for Public Works.

Sir,

Crown Solicitor's Office, Sydney, 1 November, 1892.

I have the honor to return herewith the papers referring to the claims of Mr. George Hill, and Messrs. Hill, Belisario, Batty, and Sheehy (2), and as now instructed I have prepared a form of Notice of Valuation for service on Messrs. Hill & Co., in respect of their claim for portion marked "2" on the plan.

The notice, of course, should be prepared in duplicate, signed by the Minister, and one copy served on the claimants and the other copy retained, with notice of service endorsed.

Proper descriptions of the two portions of land to which the notice refers should be inserted therein.

The total frontage, according to the plan, is 301 feet; but it will be observed that the claimants in their notice of claim state that the land has a frontage of 304 feet. Probably this is an error.

I have, &c.,

ERNEST A. SMITH,

Crown Solicitor.

Prepare at once; very urgent.—J.B., 2/11/92. Mr. Rae for description.—A.B., 3/11/92. Notice of valuation herewith.—A.B. (per Land Valuer), 4/11/92. U.S., Works.

Stephen, Jaques, and Stephen to The Secretary for Public Works.

George Hill and Others to the Queen—Woolloomooloo Bay Resumption.

Sir,

12 and 14 O'Connell-street, Sydney, 11 November, 1892.

Referring to our interview with you this morning, in connection with this matter, in which it was pointed out and admitted that the notice of valuation did not comprise the whole of the land resumed, lot 12 having been inadvertently omitted, we have the honor to request that an official notification of the fact, and an amended notice of valuation, may be sent us.

We have, &c.,
STEPHEN, JAQUES, AND STEPHEN.

Stephen, Jaques, and Stephen to The Secretary for Public Works.

George Hill and Others—Woolloomooloo Bay Resumption.

Sir,

Sydney, 12 and 14 O'Connell-street, 25 November, 1892.

We have the honor to acknowledge the receipt of your letter of the 12th instant, forwarding the notice of valuation in this matter.

The claimants are unwilling to accept the amount of compensation offered, and are desirous of having a nominal defendant appointed, with the object of bringing an action against the Government for the recovery of damages.

We beg to enclose a petition for that purpose, signed by the claimants, and to request that the matter be brought before the Executive Council at the earliest convenient opportunity.

We have, &c.,
STEPHEN, JAQUES, AND STEPHEN.

B.C., Principal Under Secretary.—J.B., 29/11/92. For necessary minute.—C.W., 29/11/92. Minute herewith.—U.S., Public Works, 29/11/92. Stephen, Jaques, and Stephen, 29/11/92. The Crown Solicitor to see.—J.B., 2/12/92.

The Principal Under Secretary to The Under Secretary for Public Works.

Sir,

Colonial Secretary's Office, Sydney, 29 November, 1892.

I am directed by the Colonial Secretary to state that it is proposed to appoint the Honorable William John Lyne, Esquire, M.P., Secretary for Public Works, to be the nominal defendant in the matter of a claim preferred by Messrs. George Hill, Thomas Batty, Daniel Sheehy, and Edward Henry Belisario, against the Government, and that a notice to this effect will be duly published in the *Government Gazette*, when a further communication will be made to you.

I have, &c.,

CRITCHETT WALKER,
Principal Under Secretary.

The Principal Under Secretary to The Under Secretary for Public Works.

Sir,

Colonial Secretary's Office, Sydney, 16 December, 1892.

I am directed by the Colonial Secretary to inform you that His Excellency the Governor, with the advice of the Executive Council, has been pleased to appoint, by notification in this day's *Government Gazette*, in conformity with the provisions of the second section of the "Claims against the Colonial Government Act," the Honorable William John Lyne, Esquire, M.P., Secretary for Public Works, to be the nominal defendant in the matter of the Petition presented by Messrs. Stephen, Jaques, and Stephen, on the part of Messrs. George Hill, Thomas Batty, Daniel Sheehy, and Edward Henry Belisario, as to a certain claim or demand which they deem themselves to have against the Government.

I have, &c.,

CRITCHETT WALKER,
Principal Under Secretary.

Papers forwarded herewith. The Crown Solicitor for information.—J.B., 19/12/92.

The Crown Solicitor to The Under Secretary for Public Works.

Hill v. Lyne.

Sir,

Crown Solicitor's Office, Sydney, 23 May, 1893.

As this case is down for trial, and may be reached about the 12th June, I have the honor to request that you will return to this office the plan of the Woolloomooloo resumptions, and all papers, reports, and valuations in the Land Valuer's office relating to this matter. At the same time, please send me a few lithographs, with the area and distance shown, as was done in Brown's case. If you do this I will see Messrs. German, Pile, and W. Thompson again, and get detailed valuations from them.

I would again impress upon you the advisability of erecting a fence along the southern boundary of the Challis block, so as to emphasise the fact that the allotments nearer Potts' Point have no outlet to town but by Victoria-street. It need not be a paling fence, to cause foot passengers to complain. It will be enough if it blocks horses and carts.

I have, &c.,

ERNEST A. SMITH,
Crown Solicitor.

The Land Valuer.—D.C.McL. (for U.S.), B.C., 25/5/93. Urgent. Done. Put by.—J.B.T., 11/8/93.

The Crown Solicitor to The Under Secretary for Public Works.

Land at Woolloomooloo Bay—Claim of George Hill (alone).

Sir,

Crown Solicitor's Office, Sydney, 30 May, 1893.

I have the honor to return herewith the papers in connection with this matter, and to state that since my report of May, 1890, on the notice of claim sent in, I have received a communication from Mr. Hourigan (acting on Mr. Hill's behalf, in which he states that with regard to the land between the high water-mark and the limit line of reclamation—as to which I reported no title had been shown—that an application to reclaim the land in question was made many years ago by the late Mr. Hilly, and that he (Mr. Hourigan) was informed that on some of the old maps it is incorrectly noted that such application had lapsed; that although the land was conveyed to his client by certain metes and bounds which did not, in absolute description, cover the land so reclaimed, nevertheless buildings were erected upon such land by the vendors a considerable time before the said purchase, and his client was put in possession of them; that moreover, under the general words in the conveyance, it must be taken that all the fruits, incidents, and accessories relating to the land in question (both at law and in equity) passed to his client; that on investigating this matter it was ascertained that in June, 1878, the right to reclaim was formally admitted, and the late Mr. Hilly was informed that the purchase money in respect of that land should be paid into the Treasury within a month from that date; that the money was accordingly paid into the Treasury on the 24th July, 1878, but it would appear that no further steps were taken in regard to the issue of the grant; that in 1891 application was made to the Minister calling on him to issue the said grant, and on the 3rd October last the Under Secretary wrote a letter stating that on proof of title to adjoining freehold action would be taken with a view to the issue of the grant.

I think that if the statements contained in Mr. Hourigan's communication are correct, as to which inquiries should be made both at the Lands Department and at the Treasury, there can be no doubt that the late Mr. Hilly was entitled to a deed of grant in respect of the reclaimed land, and such right would, I think, have passed to the purchasers from him, and would apparently have been vested in Mr. Hill at the date of resumption.

Should it appear that Mr. Hill was entitled to the grant, I think a revaluation should be made on the assumption that he was so entitled—that is, that he was entitled to the land lying between the lane in continuation of Victoria-street and the limit line of reclamation fronting Woolloomooloo Bay.

I have, &c.,

ERNEST A. SMITH,
Crown Solicitor.

The

The Land Valuer.—J.B., B.C., 6/6/93. Immediate. Will the Under Secretary for Lands kindly make a special matter of this, which he will see is one of great urgency.—J.B., 7/6/93. Special. Mr. Boyle.—8/6/93. Urgent. Ask Crown Solicitor to return the papers.—8/6/93. Crown Solicitor asked for return of papers 91-9,165, as requested.—8/6/93. End of week. Papers now herewith.—A.S.D., 12/6/93. Mr. Bronson. Mr. Boyle, 12/6/93. A reminder should, perhaps, be sent.—10/7/93. Mr. Bronson. Done.—10/7/93.

The purchase-money was paid in Hilly's case (please see particulars on 91-9,165 enclosed), and it was approved that a deed of grant would issue provided both was shown to the Crown Solicitor and the reclamation is satisfactorily completed. Perhaps these papers should now be referred to the Works Department.—10/7/93.

Submitted for approval of the course suggested above.—A.B., 10/7/93. C.H.C., 25/7/93. The Under Secretary for Public Works.—A.B. (*pro U.S.*), B.C. Lands, 25/7/93. The Land Valuer, as to the other information needed.—J.B., B.C., 26/7/93. I have ascertained that the purchase-money for 1 rood 9 perches was paid into the Treasury 24/7/78.—J.B.T., 2/8/93. U.S. Works. Shall the land be revalued?—J.B., 2/8/93. Yes; let Mr. Kirkpatrick value.—W.J.L., 2/8/93. B.C., Mr. Kirkpatrick.—J.B., 4/8/93.

Mr. J. H. Kirkpatrick to The Under Secretary for Public Works.

Woolloomooloo Bay Resumptions—Claim of Mr. George Hill and Others.

Sir, Department of Public Works, Valuation Branch, Sydney, 20 September, 1893.

* Appendix B

In accordance with instructions received from your Department, I have inspected certain land resumed at Woolloomooloo Bay shown on accompanying tracing* to have a frontage of 123 ft. 6 in. to the waters of the bay, with an average depth of about 180 feet to Victoria-street, and a lane forming a continuation of that street, to which the land has a frontage of about 87 feet.

The buildings on the land consist of a 10-roomed house with the necessary out-offices. The house is in good tenable condition, and occupied. There are also some large wooden-sheds used for boat building purposes.

I estimate the value of the buildings as they stand at a total sum of £1,150.

The value of the property consists in its having a water frontage to Woolloomooloo Bay which I estimate at £110 per foot exclusive of buildings, the total value of which I make up as follows:—

	£	s.	d.
To 123-ft. 6-in. water frontage at £110 per foot	13,585 0 0
Buildings	1,150 0 0
Forced sale at 10 per cent.	1,473 10 0
Total	£16,208 10 0

In making up the valuation I have been careful to ascertain the prices paid for land in the locality where this property is situated, at or about the date of resumption, and have assessed the value here set down in accordance therewith.

I have, &c.,

J. H. KIRKPATRICK.

Mr. J. H. Kirkpatrick to The Under Secretary for Public Works.

Woolloomooloo Bay Resumption—Claim of Mr. George Hill and Others.

Sir, Department of Public Works, Valuation Branch, Sydney, 20 September, 1893.

Having, under instructions from your Department, made up and sent in valuations of two portions of land with frontages of 112 feet and 123 ft. 6 in. respectively to the waters of Woolloomooloo Bay, resumed from the above mentioned owners, and having sent in my valuation of the above portions of land as separate blocks and belonging to different owners, I am now requested to make up the value of the property as one consolidated block.

In compliance therewith, I find the property has a frontage of 235 ft. 6 in. to the waters of Woolloomooloo Bay by an average depth of 109 feet to Victoria-street, and a lane which forms a continuation of that street. The land has a frontage to the street and lane mentioned of about 122 feet.

In making up the valuation I have taken into consideration, and been guided by, the prices paid for land having similar facilities of water frontage as possessed by this land. I also attach greater value at per foot in proportion to the length of the water frontage, and, therefore, allow a higher rate for a long length of water frontage of 235 feet than for length of 112 or 123 feet.

I estimate the value of the land in one block having a frontage of 235 ft. 6 in. to the waters of Woolloomooloo Bay at £131 per foot frontage, exclusive of the buildings, the total value of which I make up as follows:—

	£	s.	d.
To 235 ft. 6 in. water frontage at £131 per foot	30,850 10 0
Buildings and sheds	1,200 0 0
Forced sale at 10 per cent.	3,205 2 0
Total	£35,255 12 0

In making up the value of this property I consider I have allowed a liberal price for the land as a water frontage, and also for the buildings thereon.

I have, &c.,

J. H. KIRKPATRICK.

The Crown Solicitor to The Under Secretary for Public Works.

Hill and Others v. Lyne.

Crown Solicitor's Office, 30 May, 1893.

I have the honor to request that you will furnish me with the name of the officer who took the soundings off the eastern shore of Woolloomooloo Bay in July, 1890. It may be necessary to give evidence on this head at the trial.

I have, &c.,

ERNEST A. SMITH,

Crown Solicitor.

Mr.

Mr. Darley.—D.C.McL. (for U.S.), B.C., 31/5/93. Urgent. Mr. Tilleit, please say.—J.H.N. P., 31/5/93. The soundings were taken by Mr. Gerald Halligan.—G. A. TILLETT, 31/5/93. Forwarded for Crown Solicitor's information.—C.W.D., 31/5/93. The Under Secretary, Public Works. The Crown Solicitor.—J.B., B.C., 2/6/93.

I enclose subpoena for Mr. Halligan. Please say where he is at present, and whether he can attend the trial on Monday or Tuesday next. I should like him to be prepared to give a rough estimate of the probable cost of dredging, so as to get a sufficient depth of water before Hill & Co.'s property to accommodate large vessels.—ERNEST A. SMITH, Crown Solicitor, B.C., 7/6/93. Under Secretary, Works.

Mr. Darley.—D.C.McL. (for U.S.), B.C., 7/6/93. Very urgent. Let Mr. Halligan attend to these instructions.—C.D., 8/6/93. Mr. Tilleit. Mr. Halligan.—G. A. TILLETT, 8/6/93. Subpoena received.—H.H., 8/6/93.

The Crown Solicitor to The Under Secretary for Public Works.

Woolloomooloo Resumptions—Hill v. Lyne.

Sir,

Crown Solicitor's Office, Sydney, 1 June, 1893.

I have the honor to inform you that in connection with this case reference is continually being made to the value and rentals of well known wharfs in other parts of the harbour, and at the trial (about the end of next week) this subject and the comparison of wharf properties will be repeatedly entered upon. I think, therefore, it would be of great service to the Crown case if Captain Jackson were to make inquiries and compile a statement showing as fully as possible all the dealings with Dibbs', Moore's, Alger's, Dalton's, and other large wharfs during recent years, as also the annual returns obtained therefrom. If he would add a note as to what persons can give evidence of the sales, &c., they may be subpoenaed, if need be, later on.

I have, &c.,

ERNEST A. SMITH,
Crown Solicitor.

Submitted for approval.—J.B., 2/6/93. Approved.—W.J.L., 3/6/93. Will the Under Secretary for Finance and Trade kindly give the necessary instructions to Captain Jackson.—J.B., 5/6/93. Urgent. Captain Jackson.—F.K., 6/6/93.

The Under Secretary for Finance and Trade,—The only way to obtain reliable information re the dealings with the within wharf properties, together with the annual rental from same, would be from the owners, lessees, or managers of same; but it is not likely that they would furnish me with this information. I would most respectfully suggest that the parties concerned be subpoenaed and examined upon oath. Herewith list of owners, lessees, or managers:—Dibbs' Wharf—Gibbs, Bright, & Co., owners; manager, W. R. Benson. Moore's Wharf—Baldwin, Johnston, & Co., owners; lessees, Sydney Stevedoring and Wool-dumping Co.; manager, W. R. Benson. Alger's Wharf—Saywell & Co., owners; lessees, Hoffnung & Co.; manager, W. R. Benson. Dalton's Wharf—Dalton Bros., owners.—J.J., 8/6/93.

The papers are now to be returned to the Department of Public Works.—F.K., 9/6/93. Approved.—J.S., 12/6/93.

The Crown Solicitor to The Under Secretary for Public Works.

Hill v. Lyne.

Sir,

Crown Solicitor's Office, Sydney, 12 June, 1893.

I have the honor to request that you will let me have a reply to my letter of 1st instant, with the information respecting certain wharfs asked for therein. The case is now proceeding. I should like to know to-day also the result of your officer's inspection, with a view to deciding whether jetties would be likely to be permitted.

Mr. Halligan was to give an estimate of cost of dredging, and sent to me for a copy of Mr. Charlton's report thereon, but there is no such document with the papers. I see that the Superintendent of Dredges, in giving evidence before the Public Works Committee, stated that the cost of dredging and removing the silt to 3 miles out to sea to be 9*½*d. per ton.

Please give these matters immediate attention.

I have, &c.,

ERNEST A. SMITH,
Crown Solicitor.

Mr. Darley.—D.C.McL. (for U.S.), B.C., 12/6/93. This was supplied to the Crown Solicitor; see papers 93-5,129, sent this morning for Engineer-in-Chief.—G. A. TILLETT, 2/6/93. As instructed, Mr. Halligan has seen the Crown Solicitor, and arranged to give evidence on the cost of dredging, &c., as required for Engineer-in-Chief.—G. A. TILLETT, 12/6/93. The Under Secretary, Public Works. The Crown Solicitor.—J.B., B.C., 12/6/93.

Report of action—Hill and Others v. Minister for Public Works.

SUPREME COURT—TUESDAY, 20TH JUNE, 1893—No. 2 JURY COURT.

(BEFORE THE CHIEF JUSTICE AND A JURY OF FOU).

Hill and Others v. Minister for Works.

His Honor said: This is a suit brought by the plaintiff to recover from the Government compensation for certain land which has been resumed by an Act of Parliament which is in force in this Colony. It appears that the plaintiffs sent in a claim amounting to something like £90,000, and it also appears that the Government made an offer of £100 per foot, or, in other words, £30,000 some odd hundred pounds—it is not necessary to give the exact amount—so that there is that difference between them; but you are not bound by the £30,000 in any way. You have the whole matter at large, and it is for you to determine, and for you to say, what the value of this land was in 1890. If you think it is under £30,000 you are

are bound to find under that amount. If you think that the land is worth only £20 or £30 per foot it is for you to say so. You say that, and you are not bound by the offer of the Government. The Government may have been very much mistaken in their estimate of £30,000, and you may think so. If so, you are bound to say that that is so. You may, on the other hand, think that the offer was too much. If so, you may say so, but you cannot give more than the plaintiffs have claimed. The whole matter is at large, and upon you rests the entire responsibility of saying what this land is worth. We have heard something in the course of this case about liberal offers, and we have also heard something about 10 per cent. being added to the price of land resumed by the Government under the Act in accordance with the provisions of which this land was taken. The Act does not use the word "liberal," but simply the word "value." The Minister, under the Act, is bound to have a valuation of the land made, and after that he is bound to offer that valuation to the parties, and it is for the jury to say whether that amount was too much or too little. We can well understand that where a man's home is taken away from him—the house he possesses—it may be of sentimental interest to him or it may be of real value to him, and in such a case a jury would be properly instructed by a Judge that they are at liberty to take what is a liberal value of the property, and give the owner compensation from a liberal point of view. But often all that is only telling the jury to take the value of the land, because the value of the land includes these different matters. Where the Government took away a man's homestead, where, perhaps, he has himself been born, where his children have been born, and where he hopes to die and leave his children in possession after him, you can well understand that, included in the mere average value of the land, is another value, which the jury are entitled to take into consideration. But the question is—does that hold good in respect to this land? Here is a case where Sheehy rented some land, and, on the evidence, he also rented some land which belonged to the Challis Estate. He paid Challis or the trustees 30s. per week, and he occupied the land both for boat-building purposes and he also put up some machinery. What the value of that machinery was we do not know. It may have been worthless, but that we do not know. However, we heard that some machinery was put up, and that boats were built there, and that a small steamer had been hauled up there and repaired. Of late years there appears to have been a partnership, and these waterside properties were used in connection with contracts for the making of wharfs. The plaintiffs had large contracts in relation to Garden Island, and were also engaged in erecting some important wharfs in the city. I think they erected Cowper Wharf and another wharf, and were engaged in other contracts. In conducting this business, they necessarily had a large quantity of land, and no doubt a large quantity of material, and it would appear that they used this land as a store-place for the plant which they used in their contracts, and the necessary material to carry out those contracts. That went on for a time, that is so far as Sheehy and Battey are concerned. How the other plaintiffs (Belisario and Hill) came into the business we do not know. They were not wharf contractors or boat-builders, and they apparently had not an interest in the land in the same way as Sheehy and Battey, but simply came in as land speculators. Well, seeing the nature of this land, and the purpose to which it was put, can any sentimental value be put upon it, as in the case of garden land or a homestead? You have to say whether it in any way approaches that sort of thing, and whether you have not merely to say what is its commercial value for the purposes for which it could be used, whether for dumping wool or storing timber upon it. Sheehy and Battey have nothing to claim but the commercial value of the land, and as for the others, they are not justified in claiming any sentimental value. That appears to me to be a fair way of looking at it. Do not give them one penny too much or too little, but once you ascertain its fair commercial value, give them that, and nothing more. Having said so much upon the principle which is to guide you in determining a matter of this sort, there now comes another matter, which, however, you are not called upon to decide, and it is not necessary that you should, seeing that it is a matter of law. It was argued on the part of the Crown—and I do not think improperly argued, because it is their duty to see that the matter is placed before you so that you can value the land fairly, and that the Judge will instruct you properly upon matters of law—the Crown, I say, have argued that you must value the land as having no practicable water frontage, because there is only 2 or 3 feet at low water. That point was properly taken, but, at the same time, I do not hold with it. I think it is not sustainable, and I ruled against the Crown, and therefore you will be good enough, when you come to consider the value of the whole land, not to value it as the Crown say you are to value it, merely as having only 2 or 3 feet at low water. Although that might be so, still it remained a wharf, and therefore you ought not, in determining the value of this land, to value it as if this difficulty could not be removed. You should value it as if you knew it could be removed, for we know it can be removed, and deepened to the same depth as Cowper Wharf, namely, some 20 feet; and in dealing with the matter you must take into consideration that it can be made into a good wharf property by the expenditure of a certain sum of money. Of course, you must take that expenditure into consideration, and you must not take it as if there was a depth of 20 feet at the present moment, but the sum it would cost to make it 20 feet deep, and you must put that as against the present value of the land; but, in favour of the owners of the land, you must assume that that can be done. You must assume that as soon as this is deepened it would be worth (say) £100 per foot, and that it would cost £6,000 to deepen. I do not say that that is the sum. I think it was said to be £3,000, and, therefore, if you valued the land at £100 per foot, you will have to take off £3,000, which is said to be the cost of the deepening. Before you can use the wharf in a practical way it must be deepened, and therefore you must ascertain the cost of doing that, and take that amount off your valuation; but you are to value the property as if, in the hands of the plaintiffs, it could be made a valuable wharf. I need not to you, gentlemen, go into the reasons which induced me to come to that conclusion which I did yesterday. It is unnecessary that I should do so, and as it involves legal considerations, it would be useless for me to do so, but I tell you you must value the property as if the plaintiffs to-morrow, if the property had remained in their hands, might send dredges there for the purpose of deepening the water frontage. The expenditure for that you must take off your valuation. Having now shown you the principle upon which this land should be valued, namely, that you must give nothing more than the commercial value, whatever that may be; and secondly, that you ought to value the land in favour of the plaintiffs as if it was capable in their hands of being made into deep water frontage, let us now consider the evidence brought before the Court as to the value of the property. Well, two of the plaintiffs—Sheehy and Battey—have been called, and from Sheehy's evidence it appears that he commenced purchasing this land in May, 1887. Looking at the first purchase the names of Messrs. Hill and Belisario do not appear at all. In the first deed it is Sheehy and Battey only, and it would appear that they paid a sum of

of £500 on the 4th May, 1887. It would appear that previous to this the owner of the property—Doyle—died, and the property was divided among a number of persons; I suppose his children and other relatives. He seems to have left a will, and there were two executors. More than a year after that, namely, on the 3rd July, 1888, another purchase was made for £600, that is, £1,100 for that one-sixth, and then on the 12th June, 1888, another one-sixth was bought for £1,200, and in the same month another one-sixth was bought for £3,500. Then a year elapses, and they then own the three undivided sixths. On 29th August, 1889, Hill and Belisario come in, and two-sixths are bought, and for these two sixths, or at least the consideration named in the deed, was £5,000, and, curiously enough, about a fortnight afterwards, namely, on the 12th of September, 1889, the same figures—£5,000—were contained in a deed which conveyed only one-sixth of the land. It is very hard to understand how these gentlemen gave £2,500 for one-sixth a fortnight before and exactly double a fortnight afterwards. However, that was what appeared in these deeds. After paying some small charges, cheques and so forth on the property, and taking these deeds to be correct, which you are at present bound to do, the total amount, covering costs and everything given by the plaintiffs, was £22,649. Having got this property for that amount they now send in a claim to the Government for £90,000. They are perfectly entitled to do that, and they are entitled to ask as much as they think they can obtain for the property. It was the vendor's interest to get as much as they could, and at the same time it was the business of the Minister, acting on behalf of the public, to get it as cheaply as he could. There is no dishonesty in that. It was thought at one time that some imputation was cast upon Mr. Knox for asking the Government a large sum of money for the Challis Estate, of which he was trustee on behalf of the University. It was his bounden duty to get as much as he possibly could for the property, whether from the Government or an individual. It was his duty to get as much for it on behalf of the University, for which body he was trustee. It was also the duty of the Government, standing in the position of trustee for the public, not to pay the sum unless they found, acting upon the advice of those competent to judge, that the property was of the value asked. However, £30,000 odd being the sum which the Government placed upon the property as its value the plaintiffs sent in a claim for £90,000. Then the plaintiffs come into the box to support their claim, and they say that this property is worth £300 per foot. Sheehy and Belisario place that value before you, but no other witnesses on behalf of the plaintiffs have approached those figures. The highest price next to that of Sheehy and Belisario was Mr. Henderson, who gave the value as £200 per foot. Bayle and Wilson, who were called by the plaintiffs, said it was worth £200 all round, and other witnesses speak of it as being worth less. Mr. Gregg gives the value at £175; Mr. Mills, £165 all round. Mr. M'Credie, who made this plan, and who went into a very elaborate calculation of what you may think a very impossible claim, and upon whose evidence not much reliance can be placed, on the ground, not that he is not speaking the truth, but that what he puts forward is incredible. Mr. M'Credie values the large piece at £280 and the smaller piece at £175 per foot, and he bases this value on the assumption that large buildings, costing large sums of money, will be erected; that an approach to the wharf property would be made, and that two jetties would be run out into the harbour. If that were done—and it might not be allowed by the authorities—he bases upon the expenditure which he speaks of a rental of £8,400 a year. That rental, I think you will say, all the evidence in the case tends to contradict. Mr. M'Credie says that if all this money was expended upon it—some £80,000—including the purchase of land, then a tenant would be obtained who would give a rental of £8,400 a year, and that on that basis the land would be worth £208 per foot for the larger piece and £175 for the smaller piece. Now, first of all you have to imagine that a person would spend all this money upon the land, as for 1890, and then you must find a tenant to come forward and give that enormous rental for it. A good deal has been said as to Russell's Wharf and the amount which has been given for it, but we know that the rental which was paid by Mr. Findlay for Russell's Wharf was £1,750. Russell's Wharf and Town's Wharf had been compared together to some extent. Russell's Wharf was not so convenient in some respects, because you have to go through this bridge at this side angle, but if you compare the rent paid for that with the rent suggested by Mr. M'Credie for the property now in question you may say that the latter was entirely incredible. However, you have before you these different figures, ranging from £35 to £300, and it is very important to consider who these persons are, their means of knowledge, and what reliance can be placed upon their valuations. Before I deal with them again, let us look at the values given by the defendants' witnesses, their means of knowledge, and who they are. Take Mr. Gorman, an old and experienced land valuer, and he says that the land is worth £100 per foot. Then we have Mr. Willis and Mr. Findlay, who value the land at from £35 to £40. Mr. Knox values the land at £50 per foot. Lenehan about £50, Mr. File £70 and £50, the first price being for the large piece and the second for the small. Mr. Sievers, auctioneer and land valuer, values the land at £85 per foot, Mr. Kethel £80, and Mr. Jackson £65 and £50, the first amount for the larger piece and the second for the smaller; so that you see the amounts range from £35 or £40 by Messrs. Willis and Findlay up to £100 by Mr. Gorman, who is the highest on the part of the Government. Having valued the property in that way, and seeing that there is a great difference in the values, let us consider the class of classifiers. Let us consider who they are, and their means of knowledge. It had been said by the learned counsel for plaintiffs that many of these persons were only wharfowners or connected with wharfs, and that their evidence for that reason ought not to bear entirely the same weight as that of valuers and auctioneers who are conversant in dealing in land. Well now, gentlemen, I put it to you that men who are carrying on a particular trade, no matter what that trade may be, are they not more likely to know the value of property or premises suitable to their own particular trade than auctioneers, and land agents, and professional valuers, who, as far as we can see in this case, and for that matter in other cases too, are simply guided by sales which have taken place in the locality at or after the particular time when they were called upon to make a valuation? Who would be more likely, for instance, to know the value of a place for a haberdashery business than a haberdasher? Who would know better what they could offer for a property suitable for that particular trade? He would be more likely to know what would be the turnover in each year and the interest on the money expended, if he was going to buy the land, and the amount he would be justified in offering for it. Take any business, no matter what it is, is not that a fair way of taking it? Is it not more likely that a tradesman, a man carrying on business whatever it may be, would know the value to him of particular premises from the locality in which they were situated, the side of the street they were on, and the kind of street—say George-street, for instance—better than some auctioneer or land valuer who may have been obtaining some

some fancy prices under the influence of a land boom, and who comes here and gives the result to the jury as the market price? Is not a person who is carrying on a trade more likely to be correct than a land valuer or auctioneer, both being desirous of giving the best.

A JURYMAN: In regard to Mr. Gorman's valuation—

THE CHIEF JUSTICE: His valuation is £100.

A JURYMAN: That is on the assumption that there was no deep water.

MR. WANT: Yes; and £150 if we could get deep water, and £100 if we could not get deep water.

HIS HONOR: Then, of course, I take it as having a deep-water frontage Mr. Gorman says, "I value it just as it was at £100, and if dredged out to 20 feet, £150."

MR. C. B. STEPHEN: I understand that in examination he said he did not think it would be worth doing, and he explained that in re-examination.

THE CHIEF JUSTICE: No doubt he did say so. I think he said that even if you did have 20 feet, no one would be so foolish as to establish a wharf there.

MR. WANT: He said it could be deepened to 20 feet, and would then be worth £150.

THE CHIEF JUSTICE: No doubt; and no doubt also this gentleman has very large experience in his own business as a land valuer, and so has Mr. Gregg. Now, taking the defendants' witnesses first, the auctioneers and valuers for the defendants were Messrs. Pile, Sievers, and Gorman, and Messrs. Gregg and Mills were the auctioneers and land valuers called on behalf of the plaintiffs. Now, Mr. Gregg and Mr. Mills were very much influenced by the results of sales in the vicinity, and more particularly the value which was placed on Mr. Morris' land. I think Mr. Gregg was the auctioneer in that instance, and no doubt he was very much influenced by the value placed upon that land which is not a waterside property, but had a frontage to Cowper's Wharf and a large frontage to Dowling-street. Evidence was given that at one period the value was £3,000, and shortly afterwards it jumped up to £20,900. That was an enormous rise.

MR. WANT: Mr. Sievers was the auctioneer for that.

HIS HONOR: Such an increase could only have been brought about by some land boom, but the plaintiffs' auctioneers based their valuations upon those figures. That is what they go by. They are not wharf-owners or wharfingers, and they have no more practical knowledge of the working of a wharf than they have of the practical working of a tailor's shop. They know nothing about it. They are auctioneers on both sides and not wharf-owners. Now let us see who are called on behalf of the defendants as wharf experts, who do know the practical working of a wharf, who know what expenditure was required, who ought to know the requirements of the port, and who ought to know whether, if a wharf was started in one locality, it would draw custom from another wharf. Mr. Knox is the Chairman of the Wharf-owners Association, whose wharfs reached from Dawes Point right round to Darling Harbour, not taking into consideration owners of private wharfs. He is also managing director for a mercantile firm known as "Dalgetty & Co.," who are large shippers; and it is for you to say whether that gentleman, from the nature of his business, and having to work out these things day by day to see whether the work will result in a profit or not, who know how these wharfs can be made available, how they could be made to produce more money and so forth, is not he more likely to give more trustworthy information than any auctioneer or land agent. Mr. Knox is as intelligent a gentleman as any other, and I ask you whether he is not more likely to form a good and fair judgment on a question of this sort as to the value of wharf property than any auctioneer, no matter what his experience may be of the experience of any land valuer in the city. It is said that he got £172 or £175 for Challis property. Well, persons may shrug their shoulders, and say that the Government was foolish to give it. Mr. Knox had a perfect right to ask it, and if the Government liked to give that price, it was the duty of Mr. Knox, as trustee, to get as much as possible. The next witness was Lenehan, who was also a wharfinger and an expert in these matters. He says about the same as Mr. Knox. Then, again, Mr. Lenehan is chairman of a company having large stores, and we know that it is their clients and their own interests to get wharfs as cheaply as they can. They are considering the value of wharfs day by day I daresay. It is part of their business, and it is for you to say whether a man like Mr. Lenehan, who has this matter constantly before him and constantly under his cognizance is not better able to give you a good and fair opinion of the value of a wharf than any auctioneer that could be called. Mr. Willis, of the Tasmanian Steamship Company for many years, had also been connected with wharfs for years, and Mr. Findlay was manager for the Darling Harbour Association, and was himself lessee of Russell's Wharf at a rental of £750 per year. You may come to the conclusion that he would be able to give you very valuable information as to what could be made out of a wharf, and the capital value of a wharf. Having been engaged as a wharfinger himself, he is possibly a witness above all others who should be thought reliable. Possibly there is no witness who was called on behalf of the plaintiffs or defendant, who would be able to give you more accurate information on the subject than himself. He has been wharfinger, and knows what can be made out of it. After being a wharfinger, he was taken on as manager of the Darling Harbour Wharf Association, who purchased a large property. Then there was Mr. Benson, who estimates the value of the property at £75 per foot. It is a question after all whether these gentlemen know their own trade. Are these the results of the practical experience of working and carrying on wharfs, or are they not? If you can rely upon the figures they have given you, and that is their honest opinion that evidence ought to go a very long way indeed. I have already dealt with the five auctioneers, whom I put on the same footing, although we know that their valuations differ. Now we come to the so-called experts on the plaintiffs' side. There is Mr. Henderson, who is a land bank manager, who never bought a wharf in his life. He judges this property just like any other expert, by the sales made in the district about the time, and by his dealing in properties generally, and feeling the pulse of the market. He says that in 1890 this property was worth £200 per foot. The only large sales he knew of in this district were the sales of the land belonging to Dr. Morris and the Standard Paint Company, who valued their land at £160 per foot. Then there was Mr. Martin, who is a wholesale iron-monger, and who is connected with Lassetter. He says he has had a good deal of experience as a land buyer, but I do not know that he has had anything to do with wharfs. Then there is Mr. Taylor, who values the property at from £170 to £200. He is the owner of Russell's Wharf, and he ought to know his business. What I have said about other wharf-owners applies to him, and the only question is whether, looking at the large number of witnesses on the other side, you can place reliance upon Taylor's evidence as opposed to the evidence given by the witnesses for the defendant. Of course he is a reliable witness, and you ought to take his evidence into careful consideration, and deal with it as with the others. Then there is Clarke, who is a produce merchant.

MR.

MR. WANT: He is a wharfinger; I understood him to say that he was a lessee of wharfs, certainly of one.

The CHIEF JUSTICE: That may be so. Yes, I see he says, "I have been lessee of Victoria Wharf, and been connected with wharfs for forty years." You may, therefore, put him in the same position as Taylor. He also would be a reliable witness, and you must contrast his evidence with the other evidence given on the side of the defendants. Then there is Mr. Bayle, a land speculator, and that is all you can say about him. As a land speculator he is interested in making out these properties on the waterside as valuable as possible, but he is not engaged in the business of a wharfinger. Then there is Mr. Wilson, of Town's Wharf. On the plaintiffs' side there are Taylor, Clarke, and Wilson, and you must remember that Wilson is interested in keeping up the price in the locality. He is a director of the Standard Paint Company, and he has valued this property at £160 per foot. These are the witnesses called on behalf of the plaintiff. I decline to say anything about M'Credie, who simply says what can be done with this property. The only question with regard to him is, "can a person be found willing to pay the sum of money he speaks of as necessary to improve the land, and can a tenant be found to pay the rental he speaks of when it is improved?" There is another matter which you must not lose sight of, and that is the price which the Government have given for land in the vicinity. Lee's and Brown's property they seem to have given £150 per foot for, and Mr. M'Quade's property, Mr. Gorman said he valued at £80 per foot altogether. That seemed to have a very bad access, and at any rate it seemed to be Mr. Gorman's opinion that it would be rather an expensive place to do anything with, and I daresay the Government gave an extreme value when they gave £50 and £80. As to Mr. Challis, you have this to bear in mind, that there is an access from Cowper's Wharf to Challis' land, and although it is now Government land, you cannot take into consideration the fact that the Government put a road across it immediately. You have to take the value of the plaintiff's land without reference to the access to it. No doubt they regard Challis' land as more valuable than the other owing to its having that access to it; but after all, none of these is a safe guide. What the Government may have given in 1889 and 1890 is really no proper guide for you. They may have given a great deal too much or a great deal too little. You have got to say, looking at the evidence given before you—and I call your attention more particularly to the wharf experts—and you are to say, looking more particularly at these gentlemen's evidence, what is the fair commercial value of the land, taking everything into consideration, in 1890. With respect to experts such as men like Messrs. Gregg, Mills, Pile, Sievers, Gorman, these were called in on behalf of the defendant, and two on behalf of the plaintiffs. This expert evidence, given by such men as these, no matter how honest or honorable it was intended to be, is always dangerous evidence. You may be guided by it, but you are not bound to be guided by it. I look upon the people who are carrying on this trade as the experts—persons coming here knowing this trade and what is necessary to it, who know the circumstances of the port, the quantity of shipping that comes into port, the quantity of property lying idle in the course of the year, according to the report which has been put on. You have got the evidence of these men of knowledge and experience in wharf property such as this, and they say it is worth so much. You have the evidence given by skilled men (Clarke, Taylor, and Wilson) on behalf of the plaintiffs, and of skilled men on behalf of the defendant, and it is for you to say which is correct. The matter now is in your hands, gentlemen, and I hope you will be able to give a fair and reasonable valuation. Looking at the properties from a commercial point of view, and as commercial men, I ask you to say what was the fair commercial value of this land in 1890.

[The Jury retired at 11:30.]

Mr Stephen: Mr. Pilcher jotted down certain points which he desired to have mentioned to your Honor before the Jury gave their verdict.

His Honor: Mr. Pilcher says that there is no evidence before the Jury of what the public would, have given for the land at the time of resumption. I have told them that.

Mr. Want: The Jury could not tell what the public would have given for the land. They could say what, in their opinion, was the value of it.

Mr. Stephen: I may explain that my friend drew that up in respect of what might be said as to Mr. Want's point.

His Honor: Then I will take that point off.

Mr. Pilcher: In other words, your Honor does not touch my learned friend's argument?

The Chief Justice: No. Then it is the 1st, 2nd, 3rd, and 5th I take.

Mr. Pilcher: Yes, your Honor.

Shortly after 4 o'clock the Jury returned into Court with an intimation that they could return a verdict by majority, but that they were not likely to agree. The parties consented to take the verdict which was for the plaintiffs, with damages £60,725, or at the rate of £200 per foot.

The Crown Solicitor to The Under Secretary for Public Works.

Hill v. Lyne.

Sir,

Crown Solicitor's Office, Sydney, 21 June, 1893.

I have the honor to report, for the information of the Minister, that this case was tried on the 12th, 13th, 14th, 15th, 19th, and 20th instant, before the Chief Justice and Jury, and was concluded yesterday, when a verdict was returned assessing the amount of compensation at £200 per foot, or £60,725.

The reports contained in the daily papers are very meagre, but I have had a verbatim note taken of the Judges summing-up which there has not been time yet to transcribe. I will send a full statement, with regard to this action, as soon as I have been furnished with the shorthand report.

There are several legal points reserved for the consideration of the Full Court, and a new trial will be applied for on the grounds mainly that certain evidence as to compensation paid to other owners (M'Quade trustees) was wrongly rejected, and that the Jury were only entitled to value the land as it then stood without any right to deepen the water, &c. I will deal fully with this and other matters in my next letter.

I have, &c.,

ERNEST A. SMITH,
Crown Solicitor.

The Crown Solicitor to The Under Secretary for Public Works.

Hill v. Lyne—Woolloomooloo resumption.

Sir,

Crown Solicitor's Office, Sydney, 23 June, 1893.

I have the honor to report that the hearing of this case, after lasting for six days, was concluded on Tuesday evening, when the jury, by a majority, returned a verdict assessing the amount of compensation at £200 per foot, or at the gross sum of £60,750.

I have also the honor to enclose a short-hand report of the Chief Justice's summing-up in this action, with list of the witnesses called on each side, giving the values sworn to.

It will be seen that the opinion already formed by the advisers of the Government that the claim was exorbitant, is fully confirmed by the Chief Justice, and that the verdict now returned is at all events very much against the weight of evidence. The summing-up of the Judge supports the opinion expressed in my report of 18th October, 1892, on the two main points, viz.:—1. That in estimating what the Judge terms the commercial value of the property the opinion of such men as wharf-owners and others engaged in this particular trade are to be relied upon, rather than the opinions of auctioneers; especially in view of the fact that the opinions of these experts are so totally irreconcileable, and (2) that a claim based upon such a scheme as that put forward by Mr. McCredie is a very impossible claim, and evidence of this kind is not to be relied upon, not because the witness is not speaking the truth, but because what he puts forward is "incredible."

Certain legal points arising on the directions of the Judge in his summing up have been specially reserved, and there are other points relating to the rejection of certain evidence which will require to be considered and brought before the Full Court. There will be a further ground that the verdict should be set aside, as being excessive and against the weight of evidence. I am instructing counsel to prepare the necessary memorandum, with the view of moving the Full Court in the beginning of next term, and in the meantime, by order of the Judge, all further proceedings herein have been stayed.

The papers have been handed to the Land Valuer at your request.

I have, &c.,

ERNEST A. SMITH,
Crown Solicitor.

Submitted.—J.B., 26/6/93. Seen by Minister.—J.B., 3/7/93.

List of Witnesses referred to.

Plaintiff—Sheehy and Belisario, £300; Henderson, manager, Building Society, £200; Martin, ironmonger, £200 and £175; Mills, auctioneer, £175; Gregg, auctioneer, £175; Taylor, wharf-owner, £190 to £200; Clarke, produce merchant, £190 to £200; Bayle, wharf-owner, £200; Wilson, manager, Paint Co., Woolloomooloo, £200; McCredie, architect, £208 and £175; Selfe, no valuation, stores could be built. £25,000.

Defendant—Kethel, wharf-owner, £80; Knox, wharf-owner, £60; Jackson, wharf-owner, £65 and £50; Benson, wharf-owner, £75; Findlay, wharf-owner, £35 to £40; Lenehan, wharf-owner, £50; Willis, wharf-owner, £35 to £40; Pile, auctioneer, £70 and £50; Sievers, auctioneer, £85; Gorman, auctioneer, £100.

List of Valuations for Plaintiff.

Sheehy, £300 per foot; Belisario, £300 per foot; Henderson, financier, five years' experience, one time Manager, Real Estate Bank, £200 per foot; Martin, ironmonger, £170 and £200, 300 feet at £195 per foot; Clarke, produce merchant, £200 per foot; Taylor, wharf-owner (Russell's wharf), £190 to £200 per foot; Bayle, small owner of two water frontages, £200 per foot; Wilson of, & Co., director of Standard Paint Company, £200 per foot; Gregg, auctioneer, £175, and £26, in 1887, per foot; Mills, auctioneer, £175 per foot; McCredie, civil engineer, £200 per foot; Selfe, civil engineer, no valuation. Average (excluding plaintiff's own valuations), £194 per foot. Average (including plaintiff's own valuations), £213 per foot.

N.B.—No 10 per cent. for forced sale. During the trial it was distinctly laid down that this was not a case for such an allowance.

Defendant's Valuations.

Thomas Foster Knox, managing director, Dalgety & Co., £50 per foot; Andrew Lenehan, Talbot & Co., £50 per foot; Wm. C. Willis, Tasmanian Steamship Company, £40 per foot; John Findlay, manager, John Frazer & Co., £70 per foot; Wm. R. Benson, manager, Wharf Association, £75 per foot—belonging to Wharf Association. Alexr. Kethel, wharfinger (Market wharf), £80 per foot; Fredk. W. Jackson, manager, Union S.S. Company, £75 per foot; George Pile, auctioneer, £66 per foot; E. J. Sievers, auctioneer, £85 per foot; H. F. Gorman, auctioneer, £100 and *quaere* £150 per foot—outside Wharf Association. Average (nearly), £70 per foot. Government offer, £100 per foot—303 ft. 7½ in.—£30,362 10s.

The Crown Solicitor to The Under Secretary for Public Works.

Hill v. Lyne.

Sir,

Crown Solicitor's Office, Sydney, 30 June, 1893.

Referring to my letter of the 23rd instant, I have the honor to report that a consultation was held last Saturday, at which Counsel finally settled the grounds upon which the new trial motion will be made, and the memorandum was filed accordingly on the 28th instant.

I may mention that Sir Julian Salomons, Q.C., and Mr. Pilcher, Q.C., advise that, as a matter of law, the appeal ought to be successful.

I have, &c.,

ERNEST A. SMITH,
Crown Solicitor.

Submitted.—J.B., 3/7/93. Seen.—W.J.L., 3/7/93.

Memorandum

Memorandum by The Crown Solicitor to The Under Secretary for Finance and Trade.

Crown Solicitor's, Sydney, 7 July, 1893.

In connection with the recent case of Hill and others *v.* The Minister for Works, tried at the last sittings of the Supreme Court, before His Honor the Chief Justice, in which the issue tried was the amount of compensation to be paid to plaintiffs for land resumed by the Government for wharf purposes, at Woolloomooloo Bay, I think it right that I should bring under your notice the following circumstance.

In the course of this trial I desired to show the amount spent by the Government in constructing Cowper Wharf, and I sent a message to Captain Jackson, asking him to come to Court, or to send some one from his office, one who could give the requisite particulars, obtained from his books. Captain Jackson being busy at the time, sent Mr. Thynne, who, I understand, is a clerk in the office of the Manager of Public Wharfs. Mr. Thynne had to wait some time outside the Court before being called as a witness, and while so waiting he was approached by one of the plaintiffs, and held a conversation with him. The evidence before me of this is very clear, and need not be particularised now.

I would recommend that Mr. Thynne be called upon to state in writing the exact nature of the conversation he held with the plaintiff referred to, while waiting to give evidence, and that this statement should be sent to me to compare with the evidence already obtained, and for further report by me.

ERNEST A. SMITH.

Submitted.—F.K. Approved.—J.S., 8/7/93. Mr. Ross.—F.K. For perusal by Captain Jackson, who is requested to be good enough to instruct Mr. Thynne, in accordance with the terms of this communication.—F.K. Treasury, B.C., 11/7/93. Will Mr. Thynne please report as required by the Works, within communication?—J.J., 12/7/93. Herewith Mr. Thynne's report as requested.—J.J., 13/7/93. The Under Secretary for Finance and Trade.

[*Enclosure.*]

Sir,

Public Wharfs Department, Circular Quay, 13 July, 1893.

Referring to the enclosed memo. calling upon me to state in writing the exact nature of the conversation I held with one of the plaintiffs whilst waiting outside the Court on the occasion of your sending me with certain extracts from the Cowper Wharf books asked for by the Crown Solicitor, in the case of Hill and others *v.* the Minister for Works, I do myself the honor to inform you that when I arrived at the Supreme Court, and after handing in the extracts above referred, I was informed by Mr. Curtis that I would be required to give evidence, and wait outside till I was called upon. Whilst standing in the porch, outside the Court, I joined in conversation with several gentlemen that I knew, and amongst them was Mr. Hill, Mr. Benson, Mr. Mailler, Mr. Belisario, and others. The subject of that conversation was the value of water frontages and wharf properties generally.

I also conversed individually with both Mr. Sheehy and Mr. Belisario, our conversation, amongst other things, referring to the high price of land a little while ago, when it was rumoured that Cowper Wharf was going to be the big commercial centre of the city, and land valuations in that locality were at extreme prices.

I have, &c.,

JAMES THYNNE.

The Crown Solicitor.—F.K., 14/7/93.

The Crown Solicitor to The Under Secretary for Public Works.

Woolloomooloo Bay Resumptions.

Sir,

Crown Solicitor's Office, Sydney, 4 August, 1893.

I have the honor to report that a *rule nisi* on a new trial was granted by the Full Court to-day in the case of G. Hill and others.

I would draw your attention to the other cases in this resumption in which no offer has yet been made, I believe, to the several claimants. These are George Hill (alone), Batty and Sheehy (yearly tenancy), and Charles Elouis.

If the rule for a new trial is made absolute in the case of Hill and others *v.* Lyne, it will be a great advantage and convenience if it can be arranged that the other cases are brought on at the same sittings. In any case, it is important that these cases should be disposed of as soon as possible while the question of the value of wharf properties is still in the minds of witnesses, and the facts are all before this Department and Counsel for the Crown.

As regards the amount to be offered, notwithstanding the large verdict recently returned against the Government in the case of Hill and others (which I may mention the Chief Justice to-day characterised as "outrageous and wicked") I adhere to the opinion as expressed in my report of the 18th October, 1892, that £75 per foot is a fair amount of compensation, and all that should be offered.

As already pointed out, the evidence placed before the Court, and the summing up of His Honor the Chief Justice, confirms the view expressed in that report. The evidence and valuations already obtained are ample, and I do not recommend any further valuations to be made.

This applies more particularly to the case of George Hill (alone), as that case is on all-fours with that of Hill and others.

I would recommend that offers be made to the three claimants named without further delay.

I have, &c.,

ERNEST A. SMITH,

Crown Solicitor.

Submitted to Minister.—J.B., 8/8/93.

G. Hill & Co. to The Secretary for Public Works.

[Without Prejudice.]

Sir,

Office, Criterion Theatre, 27 September, 1893.

In the matter of the resumption of our Woolloomooloo frontages, following our conversation of yesterday *re* the settlement of both lawsuit and claim for our other land, we, after consultation, are prepared to settle on the following basis:—We will accept £185 per foot all round, *i.e.*, 303 feet 3 inches and 238 feet—in all, 541 feet 3 inches; interest, of course, as per Act, from the day of resumption. We may say we are advised by our Counsel not to accept a shilling less than the verdict recorded by the jury, but pressure from the bank and the desire to avoid further litigation on our other land is a strong element in wishing for a settlement.

Trusting an early reply,

We are, &c.,

GEO. HILL & CO.

Norton,

Norton, Smith, & Co. to The Secretary for Public Works.

Woolloomooloo Resumption.

Sir.

Marlborough Chambers, O'Connell-street, Sydney, 8 December, 1893.

We have the honor to enclose copy of an irrevocable authority given by Mr. George Hill in favour of our clients, Messrs. John Gilechrist and William Chisholm, and directed to you in respect of the sum of £2,000 charged upon his share of the resumption moneys in respect of the property at Woolloomooloo Bay in which Mr. Hill is interested in conjunction with Messrs. Belisario, Sheahy, and Batty. We hold the original and will produce it when necessary.

Please own receipt of this letter.

We have, &c.,

NORTON, SMITH, & CO.

Let this be noted at once. Crown Solicitor should be asked as to what reply to send.—J.B., 9/12/93. The Crown Solicitor says that we should simply acknowledge the receipt of this letter.—H.F.N., 12/12/93. The Under Secretary. For approval.—J.B., 12/12/93. Approved.—W.J.L., 13/12/93. Write.—D. McL. (for U.S.), 14/12/93.

[Enclosure.]

To the Honorable The Minister for Public Works,—
I HEREBY irrevocably authorise and request you to pay to John Gilechrist, of Sydney, stock and share broker, and William Chisholm, of Macquarie-street, Sydney, aforesaid, doctor of medicine, out of the resumption moneys payable to me in conjunction with Edward Belisario, Daniel Sheehy, and Batty in respect of land resumed by the Government at Woolloomooloo Bay, Sydney, the sum of £2,000. And I declare that the receipt to be given by the said John Gilechrist and William Chisholm shall in all respects be a good and effectual receipt and discharge for the said sum of £2,000.

As witness my hand and seal this 8th day of December, 1893.

Signed, sealed, and delivered by George Hill, {
in the presence of, —

GEORGE HILL.

FRANK OSBORNE, Solicitor, Sydney.

The Crown Solicitor to The Under Secretary for Public Works.

Hill v. Lyne.

Sir,

Crown Solicitor's Office, Sydney, 20 December, 1893.

Confirming my telephone message to you this morning, I have the honor to report that the reserved judgment herein was delivered to-day, and the rule was made absolute for a new trial, with costs.

I have, &c.,

ERNEST A. SMITH,
Crown Solicitor.

Submitted.—J.B., 27/12/93. Put with papers, 30/12/93.

Messrs. Hemsley and Perkins to The Secretary for Public Works.

Sir,

Bank Chambers, 122, Pitt-street, Sydney, 30 December, 1893.

As solicitors for and on behalf of the Bank of New South Wales, we have to give you notice that the deeds relating to the land and property belonging to Messrs. George Hill, E. H. Belisario, Daniel Sheehy, and Thomas Batty, situate at Woolloomooloo Bay, Sydney, and which was some time ago resumed by the Crown, have been deposited with the Bank, and are held by the Bank as security for moneys advanced to the above-named four gentlemen, and also for moneys advanced to Mr. George Hill, and also for moneys advanced to Mr. E. H. Belisario, by the Bank, and that the securities held by the Bank from the above-named four gentlemen give it a charge over all resumption and other moneys payable or to become payable in respect of such land and property, or any part thereof; and we have to give you further notice that the Bank requires the moneys owing to it upon the above-mentioned securities to be paid to it before any moneys are paid to the above-mentioned gentlemen or any of them, or to any other person or persons.

We have to request an acknowledgment of this notice.

We have, &c.,

HEMSLEY AND PERKINS.

Will the Crown Solicitor please advise what reply should be sent to this letter.—J.B., 3/1/94.

It will be sufficient to acknowledge the receipt of this letter. It should, of course, be recorded, so that it is not overlooked when the time comes for payment of the money.—E.A.S., 8/1/94. The Under Secretary for Works.

For the Minister to see.—J.B., 9/1/94. Be sure this is not overlooked when the account is passed.—J.B., 28/3/94. Land Valuer.—D. McL. (for U.S.), B.C., 28/3/94. Accountant. Noted.—H.C., 28/3/94.

G. Hill & Co. to The Secretary for Public Works.

Re Woolloomooloo Bay Land Resumption.

Sir,

Criterion Theatre, Sydney, 15 February, 1894.

Referring to my previous letter on the above subject, written to you some time since, wherein we offered to take the sum of £185 per foot for the whole of the land resumed by you. This offer was made after obtaining a verdict of £200 per foot for portion of the land, which had been valued by Messrs. Richardson and Wrench, Mills and Pile, and the Government Valuator (Mr. J. B. Thompson) at £174 per foot, in addition to the usual percentage for forced sale.

The other portion of our land—say, about 236 feet—has been valued by the Government officer at £131 per foot, with the usual percentage.

We feel it very hard to be compelled to take less than others with land of about the same value, but, in consequence of great financial pressure being brought to bear upon us, we are compelled to reconsider our former offer, and, after repeated interviews with you, now make a final one, viz., to take £150 per foot, with the usual percentage for forced sale.

By this offer it will be seen that we are losing very heavily on the 304 feet as described above, but rather than have further delays and annoyance, we are constrained to accept the above-named sum.

I have, &c.,

GEORGE HILL & CO.

Memo.

Memo. from The Crown Solicitor.

Woolloomooloo Bay Resumptions.—Hill v. Lyne.

Crown Solicitor's Office, Sydney, 19 February, 1894.

The enclosed papers are returned for the consideration of the Honorable the Attorney-General.

In October last, Mr. Attorney-General Barton was asked to consider and advise on the claims made for land resumptions which were still unsettled—particularly as to the claim of G. Hill and others which formed the subject of the action then recently tried, and as to the claim of G. Hill, and also of others for adjoining blocks in respect of which no offer had been made by the Government.* A consultation was held with the late Attorney-General, Mr. Pilcher, and Mr. C. B. Stephen (the counsel in the case of Hill v. Lyne) at which the questions were fully discussed. A short memorandum (dated 2nd November herewith) showing the result of this consultation was drawn up by me under verbal instructions from the Attorney-General, who decided that nothing further should be done until the proceedings on the rule *nisi* had been disposed of. At that time a rule *nisi* had been obtained by the defendant in Hill v. Lyne for a new trial, on the ground (amongst others) that the plaintiffs' property should not be valued on the assumption that they had a legal right to deepen the water frontage. The rule *nisi* was subsequently argued and made absolute by the Full Court on the ground stated, and the questions above mentioned were not finally dealt with by the late Attorney-General before he retired from office. The judgment of the Court on making the rule absolute in taking away the supposed right of deepening the water frontages places these claims on an entirely different footing, and I would recommend that no further steps be taken towards making any offer in regard to the other blocks until the second trial of Hill v. Lyne has taken place, for which I am now having a special day fixed during the ensuing sittings in March.

ERNEST A. SMITH,
Crown Solicitor.

The Attorney-General.—W.W.S., 21/2/94.

Let a copy of this letter be sent to the proper Department, with a suggestion that the Crown Solicitor should be seen before further steps are taken, and that if any settlement should be proposed he should be communicated with,—C.G.H., 23/2/94.

U.S. Public Works informed and copy of memo. forwarded, 26/2/94. The papers are now returned to the Crown Solicitor.—W.W.S., B.C., 26/2/94.

The Crown Solicitor to The Under Secretary for Public Works.

Hill and others v. Lyne.

Sir,

Crown Solicitor's Office, Sydney, 23 February, 1894.

I have the honor to report, for the information of the Minister, that in consequence of the postponement of "Attorney-General v. M'Leod and another," the above case will now come on for trial on Monday, the 12th day of March next.

If there should be any additional evidence you wish put forward, I shall be glad of further instructions at your earliest convenience.

I have, &c.,

ERNEST A. SMITH,
Crown Solicitor.

Submitted.—J.B., 26/2/94.

Mr. H. Morris to The Under Secretary for Public Works.

Sir,

Attorney-General's Department, Sydney, 26 February, 1894.

I have the honor, by direction of the Attorney-General, to forward herewith a copy of a memorandum received from the Crown Solicitor in the matter of the Woolloomooloo case, Hill v. Lyne, and to inform you that the Attorney-General suggests that the Crown Solicitor should be seen before further steps are taken, and that if any settlement should be proposed the Crown Solicitor should be communicated with thereon.

I have, &c.,

HERBERT MORRIS

(For the Secretary).

Submitted.—J.B., 26/2/94.

Memo. from The Crown Solicitor to The Secretary to the Attorney-General.

Hill v. Lyne.

Crown Solicitor's Office, Sydney.

I HAVE received from the Under Secretary for Works the enclosed papers in reference to this case, and I shall be glad of the Attorney-General's instructions with regard to having the case now struck out of the list.

16 March, 1894.

ERNEST A. SMITH,
Crown Solicitor.

Submitted.—W.W.S., 17/3/94. The case had now better be struck out.—C.G.H., 17/3/94.
The Crown Solicitor.—W.W.S., 19/3/94.

Minute

Minute by The Under Secretary for Public Works.

Hill and Others v. Lyne.

Department of Public Works, Sydney, 15 March, 1894.

I AM directed by Mr. Secretary Lyne to forward herewith the Cabinet minute, approving of the settlement in the case of Hill and Others v. Lyne. The other papers will be sent as soon as they can be collected. It will be seen that the letter of Stephen, Jaques, and Stephen, of the 5th instant, did not disclose the terms agreed upon, and before sending a letter to Mr. Hill, which he had specially asked for with the view of satisfying his bankers, Mr. Lyne instructed that the terms must be accepted, and this was done in my office, the parties to the matter having been sent for. A copy of the letter sent to Mr. George Hill is enclosed.

I should mention that a copy of the Cabinet minute, certified to by the Minister, was forwarded to the Crown Solicitor on the 7th instant, the Cabinet minute being dated the 6th.

The Crown Solicitor. J.B.

[Enclosures.]

Dear Sir,

Department of Public Works, Sydney, 7 March, 1894.

In reply to your personal inquiry respecting the matter of your claim for land resumed at Woolloomooloo Bay, I am to inform you that this matter has been settled by the Cabinet, and agreed to by your solicitors, on the terms disclosed in the papers, of which you are aware.

Yours, &c.,

J. BARLING.

Sir,

Hill v. Lyne.

Crown Solicitor's Office, Sydney, 5 March, 1894.

I have the honor to inform you that I received your message by telephone this morning, to the effect that this action had been settled, and I have accordingly withheld the briefs which I was about to deliver to Counsel, for the trial on Monday.

I assume that you will send on the papers to me with written instructions in due course.

I have, &c.,

ERNEST A. SMITH,

Crown Solicitor.

The Under Secretary for Works.

The Cabinet has come to the following conclusion in this matter—to quote the minute of Sir G. R. Dibbs—"Cabinet approves of settling the claim of the Messrs. Hill for £145 per foot—the actual measurement to be adjusted—with interest at the rate of 6 per cent. from date of resumption, each party paying their own costs."

On the same paper the solicitors for Hill & Co. have notified their acceptance of the terms in the following words:—
"Having read the above minute of Sir George Dibbs, we accept the above terms on our client's behalf."

STEPHEN, JAQUES, & STEPHEN,

7th March, 1894.

Forwarded for information.—J.B., 7/3/94. Correct. This refers to the whole of the claims for resumption at Woolloomooloo Bay.—W.J.L., 7/3/94. B.C., Crown Solicitor.

Memo. from The Crown Solicitor.

Crown Solicitor's Office, Sydney, 19 February, 1894.

Woolloomooloo Bay resumptions—Hill v. Lyne.

THE enclosed papers are returned for consideration of the Honorable the Attorney-General.

In October last Mr. Attorney-General Barton was asked to consider and advise on the claims made for land resumed, which were still unsettled—particularly as to the claim of G. Hill and others, which formed the subject of the action then recently tried, and as to the claim of G. Hill, and also of others, for adjoining blocks, in respect of which no offer had been made by the Government. A consultation was held with the late Attorney-General, Mr. Pilcher, and Mr. C. B. Stephen (the counsel in the case of Hill v. Lyne), at which the questions were fully discussed. A short memorandum (dated 2nd November herewith), showing the result of this consultation, was drawn up by me under verbal instructions from the Attorney-General, who decided that nothing further should be done until the proceedings on the *rule nisi* had been disposed of. At that time a *rule nisi* had been obtained by the defendant in Hill v. Lyne for a new trial on the ground (amongst others) that the plaintiff's property should not be valued on the assumption that they had a legal right to deepen the water frontage. The *rule nisi* was subsequently argued and made absolute by the Full Court on the ground stated, and the questions above mentioned were not finally dealt with by the late Attorney-General before he retired from office. The judgment of the Court on making the rule absolute, in taking away the supposed right of deepening the water frontage places these claims on an entirely different footing, and I would recommend that no further steps be taken towards making any offer in regard to the other blocks until the second trial of Hill v. Lyne has taken place, for which I am now having a special day fixed during the ensuing sittings in March.

ERNEST A. SMITH,
Crown Solicitor.

[Enclosure.]

[Copy.] Re Woolloomooloo Bay resumptions—Claim of Hill and others, and G. Hill.

THESE claims are:—

1. G. Hill and others—in respect of block of land having 300 feet frontage to the bay. No. 2 on plan.
2. G. Hill and others—in respect of block of land having 123 feet 6 inches frontage. No. 5 on plan.
3. G. Hill—in respect of block of land having 112 feet frontage. No. 6 on plan.

In the first case the claim has been tried in an action in the Supreme Court, which has resulted in a verdict for a sum amounting to £200 per foot frontage.

A *rule nisi* has been obtained to set aside this verdict on grounds which may be summarised as follows:—

1. That the damages are excessive, and the verdict against evidence.
2. That the learned Judge was wrong in directing the Jury that they could assess the value of the block as if the claimant had the right to deepen the waters of the bay in front of his land.

The *rule nisi* will be argued during the present term (4th term, 1893).

In the second and third cases no formal offer has yet been made to the claimants, who are now pressing for such offer to be made.

A consultation was held on Friday, the 27th October, by direction of the Attorney-General, in the Attorney-General's room, at which the counsel engaged in the case, Mr. Pilcher, Q.C., and Mr. C. B. Stephen and the Crown Solicitor were present.

The

The questions for consideration were :—

1. What sum should be formally offered to the claimant in the second and third cases.
2. If the claimants are disposed to settle all the three cases, what sum should, without prejudice, be offered by the Government.

The evidence given on the trial was carefully considered. Counsel were of opinion that the application to make the rule absolute would be successful.

On the second point above mentioned (that of the direction as to valuing on a basis of deep-water frontage) both counsel advised that on this ground the rule should be made absolute, and in this the Attorney-General concurred.

On the main point as to the verdict being against evidence and the damages excessive, Mr. C. B. Stephen was inclined to the opinion that a question of value being one entirely for the jury, and there being some evidence to support the figures on which the verdict is based, there would be some difficulty in disturbing the verdict, however absurd.

Mr. Pilcher, on the other hand, was of opinion that the verdict could not stand, because—

- (a) On the evidence the amount was grossly excessive, and rightly characterised by the Chief Justice as "outrageous."
- (b) That although two or three of plaintiff's witnesses swore that, in their opinion, £200 per foot was the value, this opinion was mere matter of surmise as to what the property would be worth as a wharf property, it was not founded on facts such as sales of similar properties in the same neighbourhood, and the evidence of the defendant was overwhelming to show that this surmise had no foundation at all.

The Attorney-General concurred in Mr. Pilcher's view.

It was stated by the Crown Solicitor that the amount offered in this case was £100 per foot. He had advised, on reviewing the evidence which would be available, an offer of £75. (Report of 13th October, 1892, herewith); but £100 was offered probably on the ground that Gorman's valuation amounted to that sum. (He was the highest of the Crown witnesses). That Challis' estate had been paid at the rate of £172 per foot—(See No. 1 on plan)—but this block admittedly stood on a different footing (access being complete, and this block being in fact the key to the whole of the remaining blocks). That in Brown's case (No. 4 on plan) the verdict amounted to £100 per foot. That recently M'Quade's claim (No. 7 on plan) had been settled for £85 per foot.

It was also pointed out that a reference to the plan shows that the block owned by George Hill alone has not anything like the depth that the block owned by Hill and others has.

On the above facts the opinion was that although £85 was excessive (on the evidence adduced by the Crown in the recent case) still as that sum has been paid to M'Quade, that sum might be offered to G. Hill—and that £100 for the reason above mentioned (smaller depth) would be too much.

To settle the cases the opinion was that £130 per foot would be too much to offer—£100 per foot, the sum already offered in No. 1 case, and £85 per foot, the amount suggested in the other case, being ample.

Papers herewith :—

1. Plan showing all the properties with list referring thereto.
2. Report of Crown Solicitor, of 13th October, 1892.
3. Judge's notes.
4. Judge's summing up.
5. List of witnesses, with amounts, sworn to.

E.A.S., 2/11/93.

Stephen, Jaques, and Stephen to The Under Secretary for Public Works.

Hill and Others v. Lyne.

Sir,

12 and 14 O'Connell-street, Sydney, 3 March, 1894.

We have the honor to inform you that we have been advised by our clients that this action has been settled with your Department, and that the rehearing, which is set down for Monday, the 12th instant, will not take place.

On inquiring at the Crown Solicitor's Office, this morning, we find that they have received no intimation of the settlement of the action, and we would, therefore, feel obliged if you will inform us at once whether our clients are correct in considering that the action is settled.

If you require from us a formal intimation that our clients are prepared to accept the amount which we are instructed the Government are prepared to pay, we shall be glad to give it.

We have, &c.,

STEPHEN, JAQUES, AND STEPHEN.

P.S.—An early reply will be esteemed a favour, as the action is set down for hearing on such an early date.—S., J., and S.

Stephen, Jaques, and Stephen to The Under Secretary for Public Works.

Hill and others v. Lyne.

Sir,

O'Connell-street, Sydney, 6 March, 1894.

We have the honor, following up our letter to you of the 3rd instant, to now notify to you, About 533 feet on behalf of our clients, that they are prepared to accept the sum of £145 per foot for the whole of the land, having about 554 feet frontage to Woolloomooloo Bay, together with interest from date of resumption.

We have, &c.,

STEPHEN, JAQUES, AND STEPHEN.

Submitted.—J.B., 6/3/94.

Cabinet approves of settling the claim of the Messrs. Hill at £145 sterling a foot, the actual measurement to be adjusted, with interest at the rate of 6 per cent from date of resumption, each party paying their own costs.—G.R.D., 6/3/94.

Having read the above minute of Sir George Dibbs, we hereby accept the above terms on our client's behalf.—STEPHEN, JAQUES, AND STEPHEN, 7/3/94. Carry out. This refers to the whole of the claims at Woolloomooloo Bay.—W.J.L., 7/3/94. Mr. Waller.—J.B., 7/3/94.

Barling, Esq.—

Sir,

Would you kindly send papers to Crown Solicitor re Woolloomooloo Bay. The Minister faithfully promised to send them this morning.

GEORGE HILL.

Mr. Waller,—Please get these papers complete.—J.B., 2/4/94. All the papers, with the exception of those already with the Crown Solicitor, sent on to-day.—T.F.W., 2/4/94.

The

[†] At the consultation it was assumed that there was only one other block besides that the subject of the recent action. I now find there are two one owned by G. Hill alone, and the other by Hill and others, and now marked on plan Nos. 6 and 5.—E.A.S.

The Crown Solicitor to The Secretary to The Attorney-General, with Minutes from
The Attorney-General and Secretary for Public Works.

Hill v. Lyne.

Sir,

Crown Solicitor's Office, Sydney, 12 March, 1894.

I have the honor to report that, in accordance with the instructions of the Honorable the Attorney-General, I attended Court this morning with counsel for the Crown, and by consent this case was postponed until Monday next, the 19th instant, the object of this course being to afford time for the consideration of the present position.

It is alleged that a settlement of the case has been effected without reference to this Department. The papers in the case have not yet been submitted with final instructions on the point, as is the usual course, but it appears from a memorandum written on the back of a letter of mine asking for instructions that the matter stands in this way:—

The Cabinet approved of settling the claims of the Messrs. Hill for £145 sterling per foot, the actual measurement to be adjusted, with interest at the rate of 6 per cent. from the date of resumption, each party paying their own costs.

A minute to this effect was signed by the Premier, and on this minute the solicitors for the plaintiff endorsed their acceptance in the following terms:—"Having read the above minute of Sir G. R. Dibbs, we accept the above terms on our clients' behalf—STEPHEN, JAQUES, AND STEPHEN, 7/3/94."

And across this is written the following:—"Correct. This refers to the whole of the claims for resumptions at Woolloomooloo Bay.—W.J.L., 7/3/93."

It would thus appear that a distinct offer to settle on certain specified terms has been made by Minister of the Crown to the plaintiffs' solicitors and they have accepted these terms unconditionally in writing.

In view of these facts, I am afraid it is too late to withdraw, but that it would be held that the settlement so effected is legal and binding on the Crown. Although it is too late to reopen the matter, I feel it my duty to place upon record the fact that in my opinion this settlement so made is most ill-advised, and that the terms are most exorbitant. It is a matter for great regret that before coming to a final conclusion the opinion of this Department, which was charged with the conduct of the defence of the action, was not asked. Had such an opinion been asked and duly considered, I feel sure that the cogent reasons which could have been advanced would have been sufficient to prevent such a settlement as this being made.

It will be remembered that this question of settlement of this and the other claims of George Hill and other matters was referred to the late Attorney-General, Mr. Barton. A consultation was held at which both the counsel for the Crown and myself were present. The matter was very fully and exhaustively discussed, and the conclusion arrived at then was that £100 per foot for the land in dispute in the action was the outside limit that should be offered, and £85 for the other land in respect of which no offer has yet been made.

At that time the motion for a new trial was pending, and the opinion of the late Attorney-General was that no offer should be made until that was disposed of, as the judgment of the Court in that case might materially affect the consideration of the matter.

Since then, as we know, the rule *nisi* for a new trial has been made absolute and the late verdict set aside, on grounds which completely cut away the arguments of the plaintiff and the weight of his evidence in support of his claim.

At the same time, undoubtedly, the right to deepen being now removed, the witnesses for the Crown would have been able to prove conclusively that the sum offered in this case was really excessive, and if the case had gone to trial there was reasonable ground for hoping that a verdict would have been returned for a sum less than the offer of the Government, viz., £100 per foot.

Apart from this case, this settlement will have a prejudicial effect on the Crown, in view of the fact that other cases of resumption where water frontage is involved are pending, and no doubt capital will be made out of the facts that the Government have voluntarily offered this high rate per foot for this water frontage, which is not deep enough for large ships and legally cannot be deepened.

Another matter in connection with this settlement to which I desire to draw very special attention is the manner in which it has been effected.

It does not appear by whose authority this decision of the Cabinet was communicated to the solicitors for the plaintiff, but by whomsoever the same may have been directed I venture to say that this mode of procedure is most irregular and calculated to be most detrimental to the public interest. When this Department has charge of a case, either for or against the Crown, I contend that no action should be taken by Ministers having the effect of altering the rights of the litigants in any particular without first consulting this Department. To pursue the opposite course, as has been done in this case, will lead to confusion and disaster.

I feel that I cannot too strongly urge this point upon the consideration of the Honorable the Attorney-General, as it is not the first time that action of this kind has been taken by the Works Department.

In a recent case in which one of the most extravagant claims that was ever brought against a Government was the subject of an action, the case was settled behind the back of this Department, and although I was never officially informed of the exact nature of this settlement I believe that a large sum of money was paid away in satisfaction of a claim which was most monstrous in its terms, and which, according to the advice of counsel, could not have been legally sustained in any Court of law. The case I refer to is that of Rochester, in which the same plaintiff, Geo. Hill, was the principal person interested.

Unless some new and clear rules are laid down to guide the action of Departments in this matter, it seems to me to be almost useless for this Department to attempt to make any strenuous or valid resistance to any claims, however absurd, that may be brought against the Government.

I enclose the previous papers, from which it will be seen that the Under Secretary for Works was advised by you, under instructions from the Attorney-General, that if any settlement in this case of Hill's should be proposed I should be communicated with. It would seem that the action of the Works Department has been in utter disregard of this advising.

I have, &c.,

ERNEST A. SMITH,
Crown Solicitor.

Submitted for the consideration of the Attorney-General.—W.W.S., 13/4/94.

Minute

Crown Solicitor
wrote asking if
we had further
evidence, which
we had not.

£85 being the
sum for which
M'Quade's claim
was settled.

Minute by The Attorney-General.

LET this letter be forwarded to the Works Department. As to the value of the land I can say nothing, as I have little personal knowledge of land values, and have not followed the evidence in this case (which was tried before I became Attorney-General), and have read nothing about it, except the judgment of the Full Court on the appeal. At the same time, it is evident that whatever fault may be found with the jury's verdict of £200 per foot, £55 per foot is a very substantial reduction, and the difficulties in the Crown's way, referred to in the Crown Solicitor's memo, are serious.

As to the second point, viz., the manner of carrying out this settlement, I entirely concur with the Crown Solicitor. In matters of this sort, where large sums of public money are concerned, I think that every step should be taken in the most careful and regular way. I fail to see the advantage of having highly skilled experts like the Crown Solicitor in the public service if an opportunity is not afforded to them to make such representations as they may think advisable in the public interest. I regret very much that my minute on the Crown Solicitor's letter of the 19th February was not attended to. My own view, upon which I shall continue to act, is that this Department should refuse to recognise any settlements until they are brought before it in strictly regular form; but this will be of little use if the settlements are made binding and complete without consulting this Department, or making any reference to the special knowledge which it necessarily requires in cases such as this.

C.G.H., 13/3/94.

The Under Secretary for Public Works.—W.W.S., 13/3/94. B.C. to be returned.

Minute by The Secretary for Public Works.

Case of Hill and Others v. Lyne.

I HAVE read with considerable surprise the letter addressed by the Crown Solicitor to the Attorney-General, and forwarded to me by my colleague. On the face of it, it is a fact worthy of note, that a servant of the Government, on the eve of his retirement from the public service, when he might consider the usual official restraints were relaxed, should think fit to forward what is practically an attack upon the Cabinet, for the particular matter referred to, viz., the settlement of the case of Hill and others v. Lyne, is one that was determined by the Cabinet after the fullest consideration, and this the papers disclose. Mr. Smith was fully aware of the Cabinet decision, as a copy of the Cabinet minute, endorsed by me, was forwarded to him on the 7th instant, the date of his letter being the 12th, or five days later.

A very brief statement will give the main facts of this case, and will, I think, satisfy any impartial person that the best possible settlement has been come to on the part of the Government. It should be premised that the whole of the Woolloomooloo Bay resumptions, including this land, were effected by the previous administration, this claim and some others being left to the present Government to finally settle. The land comprises a frontage of about 538 feet, divided into three blocks of 303-7½ inches 45 feet, and 190 feet frontage respectively, separated by two small strips, one of 30 feet, and the other of 15 feet.

When I came into office I found that Mr. Thompson, the Government Land Valuator, in conjunction with Messrs. Richardson and Wrench, and Messrs. Mills, Pile, and Wilson, had valued the first block at £175 per foot, with 10 per cent. for forced sale, bringing the price up to £192 10s. per foot. In view of conflicting opinions on the subject, I decided not to approve of any valuation, but to submit the matter to Cabinet, and as a result, made an offer at the rate of £100 per foot. This offer was refused, and the parties appealed to the Law Courts, their claim being made at the rate of £300 a foot. The case was tried, and the jury awarded £200 a foot. A new trial was then moved for on the part of the Government, and all further action stayed. Subsequently a new trial was granted, on the ground that the Chief Justice who tried the case, had misdirected the jury on a certain point, viz., as to right of the owners to deepen the water-frontage.

At this point it was thought there might be a possibility of settling the whole of the resumption from these particular parties above referred to without further recourse to law, and it was ultimately decided to fix as a compromise for the three blocks a sum at the rate of £145 per foot, nothing being allowed for forced sale, and each side paying its own legal expenses.

It should be pointed out in the first place that the claimants had the award of a jury at the rate of £200 per foot; that the first valuers had valued the land at £192 10s. per foot; that the late Government paid for a piece of land adjoining, having a frontage of 267 feet, at the rate of £168 18s. 3d. per foot; for a smaller piece, with only 30 feet frontage to the bay, at the rate of £150 per foot; and that for a still smaller piece, having only 15 feet frontage, which could not be utilised for shipping purposes at all owing to its narrowness, the late Government offered £130 per foot, which offer not having been accepted, I withdrew and made another at £75 per foot. This the owner refused, and took the case before the Law Courts, obtaining a verdict which with cost, brought the amount the Government had to pay, up to £158 per foot. It should also be remembered that this land was resumed under the Lands for Public Purposes Acquisition Act, where resort to arbitration is not provided for, consequently in the event of a jury awarding one shilling more than the offer of the Government, the whole of the costs of both actions, which would be extremely heavy, would fall upon the country. Taking these facts into consideration, and the uncertainty which attaches to all law proceedings, it will, I think, be admitted that the Government decided wisely in the settlement. Reference has been made by the Crown Solicitor to the settlement arrived at in the case of M'Quade's Estate, which was at the rate of £85 per foot. A special valuation was made of this property, and the report disclosed the fact that this land, owing to the want of access at the back, was not fitted for mercantile purposes, nor so valuable as other portions. The settlement was arranged by me, and could not have been so advantageously done, but for the anxiety of the late Mr. M'Quade to determine the matter before leaving for England, where he intended to go in consequence of failing health.

Mr. E. A. Smith then passes from this case and makes reference to another, and in such a way as to convey a very serious innuendo against myself. The case is that of Rochester v. Lyne, in connection with contract 25, Sydney Sewerage. I am quite prepared to accept the responsibility of the course I took in this case, the result being a settlement for the sum of £5,051 7s., with simple interest at 5 per cent.; as against the amount of the claim which was £34,052.

I now briefly allude to that part of the Crown Solicitor's letter in which he complains of this Department settling claims behind his back. With regard to Hill's case, I may mention that Mr. Smith was at once (before any letter could be written) apprised by telephone of the decision of the Cabinet, and that the day after the Cabinet decision was arrived at, a certified copy of the Cabinet minute endorsed by myself, was sent to him. The Cabinet minute did not go out of the possession of my Under Secretary, which the letter of the Crown Solicitor would seem to imply. As Mr. Hill pressed the Under Secretary for an answer in writing of the fact that a settlement had been come to, with a view of satisfying his bankers, I instructed him not to write to this effect until the parties, in writing, agreed to the Cabinet decision. For this purpose their solicitors were sent for and endorsed their acceptance on the official papers in the Under Secretary's room. I did this, so that there should be no cavil hereafter as to the arrangements that the legal costs were to be borne by each party. If this had not been done, I feared there would have been some difficulty hereafter by which the Government would perhaps have been involved in the payment of the whole of the costs, and this impression has been confirmed by an application since made to me to pay costs. The steps I took effectually prevented any such misunderstanding.

With regard to Rochester's case, when the decision was come to, a trusted officer of this Department was sent to the Crown Solicitor, with a request that he would settle the form of the final voucher.

As the responsible Administrator of this Department, I shall certainly decline to be dictated to by the Crown Solicitor, under what conditions I am to deal with matters arising in and affecting my Department. I am strengthened in this opinion in contesting land cases in Courts of law, which is not sufficiently encouraging to warrant my refusing to make a reasonable settlement where such is possible. I have before me a list of land cases since 1891 which have been taken into the Law Courts, and it has been reported to me that in no case have we been successful.

The insinuation contained in the paragraph referring to Rochester's case is as unworthy as it is uncalled for. With just as good reason might I impugn the good faith of Mr. Smith himself in the case of Cliff *v.* the Crown, where he advised me most specifically that I should on no account pay more than £37,500, and then, just two days afterwards, after he had seen Mr. Macnamara, he as strongly advised me to pay the sum of £40,000.

I must express my opinion that if trusted officers of the Government were to assume the role of critics of the actions of the Government, as Mr. Smith has done, the feeling of perfect trust which should exist between the Government and its high officials would be completely shattered.

I cannot conclude this minute without referring to the last portion of the Attorney-General's memorandum, where he says:—"I fail to see the advantage of having highly skilled experts like the Crown Solicitor in the public service, if an opportunity is not afforded to them to make such representations as they may think advisable in the public interest. I regret very much that my minute on the Crown Solicitor's letter of the 19th February was not attended to. My own view, upon which I shall continue to act is, that this Department should refuse to recognise any settlements until they are brought before it in strictly regular form; but this will be of little use if the settlements are made binding and complete without consulting this Department or making any reference to the special knowledge which it necessarily acquires in cases such as this." Perhaps the Attorney-General is not aware that it is customary for the Crown Solicitor, if required, to attend upon any Minister for consultation. I presume this would be considered "not strictly regular." It has also evidently escaped his memory that the Cabinet decided Hill's case on the 15th February, and the Crown Solicitor's letter was written on the 19th, and forwarded by the Attorney-General on the 26th. Unless sufficient and urgent reason is shown all matters are brought before the Attorney-General's Department in a regular way, but I cannot submit, nor I think will the Cabinet submit in all cases such as Hill's, to being bound to consult the Crown Solicitor, where he has altogether broken down on the question of land values. The Crown Solicitor is but a civil servant, and cannot be allowed to assume the functions of a Cabinet Minister.

To the Hon. the Attorney-General.

W.J.L.

The Secretary to the Attorney-General.—J.B., B.C., 28/3/94. The Attorney-General.—W.W.S., 30/6/94. See minute herewith.—C.G.H., 6/4/94.

Minute by The Attorney-General.

The settling of the case of Hill and Others *v.* Lyne.

Attorney-General's Department, Sydney, 6 April, 1894.

As the minute of the Minister for Works makes some comments on the letter of the late Crown Solicitor, it would be as well that that gentleman should have an opportunity of seeing it.

As to so much of the minute as refers to my own minute written upon the Crown Solicitor's letter, I have read and considered it with the careful attention which it demands. With great respect to my honorable colleague, I think that he has quite misapprehended my meaning.

I took no exception to the practice of occasionally taking the opinion of the Crown Solicitor at a personal interview (a practice which in some cases must be convenient and even necessary). It was rather the giving him no opportunity to offer any opinion at all which I thought regrettable.

Neither had I forgotten that the decision of the Cabinet was earlier in date than the letter of the Crown Solicitor—of the 19th February—or my minute thereon. The material point is that that letter and minute were earlier in date than the settlement. I find no fault with the fact of the Cabinet coming to a decision. A decision is not final until it is acted upon and carried out. Before this case was actually settled the Cabinet might have changed its mind. That this is not a mere possibility is shown by the fact that at a meeting of Ministers, held after an Executive (at which, however, the Minister for Works was not present, but which was before the date of the settlement, though after the date of the decision to settle) the opinion was generally expressed that it would be much better not to settle, but to fight the case out. If, therefore, instructions to settle had been sent in due course to the Crown Solicitor, and he had thought it his duty to lay some further evidence, some recent legal decision, some new facts, some fresh aspect of the law; or even his opinion and that of the Crown counsel upon the case generally, before me, and I had laid it before the Cabinet, the Cabinet might have been much influenced thereby. The opportunity for this was prevented by the irregular settlement that was made, and an occasion might thus be given to an enemy to say that the case was settled behind the back of this Department in order

to

to anticipate any objections which might be raised. I might add that the establishment of the practice here adopted would give to a corrupt Minister (should we ever unhappily have one) opportunities for sudden and independent action where large sums of money were at stake, which could not but be disastrous to the interests of the country. It would be as impertinent as unnecessary for me to say that such an insinuation would be grossly unjust, or to write one word in defence of the motives which led to the settlement. Still, I hold the opinion strongly that things should be done not only with right intentions, but in the right and regular way, and then the administration of the business of the country is not only honest, but (what is hardly less important) cannot, with any reason, be even suspected of being anything else. To insist upon this is not to give to a Civil Servant the functions of a Cabinet Minister, or to impair the freedom of the Cabinet, which must always remain responsible for its decisions, and must, therefore, always have the right to decide as it thinks best. It merely ensures to the Cabinet (who are trustees for the public) the best assistance they can obtain in the discharge of their responsible duties.

CHAS. G. HEYDON.

A copy of the Attorney-General's minute and that of the Minister for Public Works was forwarded to Mr. E. A. Smith, for his perusal, on the 17th instant, 18/4/94. Now forwarded for the Crown Solicitor's information.—W.W.S., 18/4/94.

E. A. Smith, Esq., to The Secretary to The Attorney-General.

Sir,

George and Jamieson Streets, Sydney, 30 April, 1894.

I have the honor to acknowledge the receipt of your letter of the 17th instant, transmitting for my perusal a copy of a minute written by the Minister for Public Works in reference to a report made by me when Crown Solicitor respecting the recent settlement of the case Hill v. Lyne, together with a copy of the minute of the Attorney-General thereon dated the 6th instant.

I have the honor to state that I have perused both the minutes referred to, and have also read and reconsidered my report, which bears date the 12th March last.

In my report the two main points to which I thought it my duty to draw particular attention were—

1. That it was a matter for regret that a final and irrevocable decision to settle had been arrived at without consulting the Crown Law Department, who had charge of the matter.
2. The grossly irregular way in which that settlement had been carried out by the Works Department.

In his minute of the 6th April the Attorney-General has dealt with these two main points, and it is unnecessary for me to say anything further on this part of the subject.

In my report of the 12th March I ventured to express the opinion that had the advice of the Crown Law Department been asked and given, the settlement of this action would not have been sanctioned by Ministers. A perusal of the minute of the Minister for Works confirms that opinion. In that minute are stated the considerations which appear to have formed the ground of the decision arrived at. Had my Department been allowed the opportunity of being heard, cogent reasons could have been advanced to show that these considerations ought not to have had the weight they appear to have had. It is, however, too late to go into this part of the subject in any detail. But I should, perhaps, draw attention to this, namely, that at first sight it would appear that by the settlement arrived at a substantial reduction has been made in the amount of the verdict obtained in the action. In reality this is not so. The settlement comprises not only the 300 feet, the subject of the action, but also two other portions, making up a block having a frontage of 225 feet. This latter block is evidently of less value than the 300 feet, by reason of its small depth, and for the same reason it is not so valuable as McQuade's. For McQuade's, £85 per foot was paid, which, on the evidence, was really a liberal figure. Taking, therefore, the block of 225 feet at £85 per foot, it will be found on going into figures that by this settlement the Government are paying for the 300 feet, the subject of the action, at the rate of £190 per foot. The verdict of the jury was at the rate of £200 per foot, a verdict which the Chief Justice, who had heard all the evidence, characterised as "outrageous."

With regard to the case of Rochester v. Lyne. That case was referred to by me because it seemed to afford evidence that the irregular course of action which was pursued in Hill's case was not in any way exceptional, but is growing into a practice at the Works Department, as at present administered. As mentioned by the Minister, it was not until "a decision was come to"—namely, when the settlement was finally agreed on—as in Hill's case, that any attempt was made to communicate with me. Then verbal instructions were sent to me by a trusted officer, informing me that the case had been settled, and requesting me to settle the form of final voucher. This I positively declined to do, and sent a message back that before I could move at all in the matter the papers must be sent up to me in the usual way, with definite instructions in writing, stating on what terms the case had been settled. There was no other course open to me consistent with my duty. I could take no responsibility whatever for the settlement of this claim. If the papers had been sent up in compliance with my request, I should then have placed on record my opinion of the nature of the settlement and the irregular way in which it had been carried out. The papers were not sent up to me, and no official reply was made to my request. It now appears from the minute of the Minister that the sum paid by the Government was rather more than double the amount of the award of the arbitrator which had been set aside.

If the statement of the arbitrator which was reduced by him to writing is to be believed, the conduct of the real claimant in that case was of such a nature that ordinary prudence required that in dealing with any claims in which this party was interested the utmost caution and vigilance should be exercised. But, unfortunately, the opposite course was taken. In both these cases the advice of the Crown Law Department was disregarded, and its assistance dispensed with.

Another matter to which I should allude is the paragraph in the minute in which the Minister states as follows:—"I have before me a list of land cases since 1891, which have been taken into the Law Courts, and it is reported to me that in no case have we been successful."

The inaccuracy of this list and this report is patent. The result of these cases has not been so disheartening as the Minister is led to believe. I need only refer to the case of Blue's claim—a case in which a very excessive claim was, in the first instance, supported by an award, which, on the evidence, was absurd. On my urgent advice the case was taken before a jury, with the result that a verdict was given for a sum considerably less than the amount of the award, and if I remember rightly, very slightly in excess

excess of the Government offer, and the claimants had to pay all the costs of the arbitration and the trial before the jury. There are, perhaps, no more difficult questions than the legal advisers of the Crown have to determine than the question as to whether a case should be settled or fought out.

While agreeing with the Minister for Works that the result of legal proceedings is too often not sufficiently encouraging to induce those responsible for the conduct of the case to persist in litigating a matter to the end, if a chance of a settlement offers, still it seemed to me, while I had the honor to advise the Crown, that in considering what advice should be given, regard must be had to the nature of the case to be dealt with.

In certain cases where the claim, though perhaps excessive, is a *bona fide* one, and the claimant is inclined to reduce his claim to an amount approaching very nearly to what the Government are prepared to offer, it seemed to me to be the best wisdom to advise a settlement.

The case of Cliff, referred to by the Minister, is an illustration of this. In that case the claim, though originally very excessive, was in its nature a *bona fide* one. The Government had taken a private residence and garden and grounds, on which, according to the responsible officers of the Government, including the Government Architect, enormous sums had been spent by the owners. It may be that the actual market value of the place as it stood was far below the amount of the sum expended. It could not be disputed, however, that the money had been spent. After lengthy arbitration proceedings an award was made for £40,000. This, with the interest, would have amounted at the date of payment to over £47,000, and the Government would have had to pay in addition the costs of the arbitration, which were heavy. The Government then offered to settle for £37,500, and the claimant refused to take less than £40,000—such sums to include all interest and costs. At short notice I was asked by the Minister to advise, and my first advice was to stand to the offer of £37,500. I then, at the request of the Minister, saw Mr. Macnamara, who acted for the claimant, and discussed the details and the figures with him, and I ascertained that the £40,000 was the lowest the claimant would take. I then went fully into the case with Mr. Parkinson, my chief clerk, who had had the conduct of the arbitration proceedings, and the result of these deliberations was that I advised a settlement for £40,000. A memorandum containing my reasons for so doing will be found with the papers.

On the other hand, cases of a totally different nature at times arise which require different treatment—cases in which, while acting as responsible legal adviser of the Crown, I could not advise that one single penny of the public money should be paid in satisfaction, except on the verdict of a jury and the judgment of the Court. Costs may be incurred as the consequence of such advice, but in general it is for the public interest that such claims should be strenuously resisted, and the cases decided in open Court. To attempt to settle such cases in any other way is only to invite unscrupulous attacks on the Consolidated Revenue.

In the minute of the Minister there is much that is of a personal nature. While this is to be regretted, I do not think that on this part of the minute it is either necessary or becoming for me to make any comment. I understand that it is the opinion of the Honorable the Attorney-General that in reporting, as I did, to him as the Ministerial Head of my Department, I was simply doing my duty. With that I am content to leave the matter. And then with regard to the high office which I had the honor to occupy. It is, no doubt, true that the Crown Solicitor is "only a Civil Servant," but he is a servant of the State, to whom is committed a very important trust. "The greatest trust between man and man" says Lord Bacon, "is the trust of giving counsel." If this is true as between individuals it is all the more necessary to bear this principle in mind when the person to whom the trust is committed happens to hold Her Majesty's Commission, by virtue of which he is called upon to give advice on matters affecting the public interest.

It is impossible to exaggerate the importance of insisting that in all cases such advice should be given freely and without regard to the fact that the advice so given may or may not be pleasing to Cabinet Ministers.

In conclusion, I may be, perhaps, allowed to make a suggestion which I should have made had the minute referred to been received in time to be dealt with before I retired from office. The suggestion is this:—That "The Claims against the Colonial Government Act," 39 Vic. No. 38, and certain Special Acts like our Resumption Acts should be amended by an enactment to the effect that in all actions or suits against the Crown the nominal defendant shall be Her Majesty's Attorney-General. If such an enactment was passed Her Majesty's Attorney-General would be in any such action or suit the *Dominus litis*, and the action or suit could not be settled, or the proceedings therein in any way interfered with except under the express direction of Her Majesty's Attorney-General.

I have, &c.,
ERNEST A. SMITH.

Previous papers herewith, 94-889. Submitted.—W.W.S., 2/5/94. Forward to the Works Department for perusal.—C.G.H., 4/5/94.

I notice by this letter that my minute of the 6th April was sent to Mr. Smith. This was altogether a mistake; it was meant, as its contents showed, for the Works Department and not for Mr. Smith at all. Let it be forwarded at once to the Works Department.—C.G.H., 5/5/94.

Have forwarded to the Under Secretary for Public Works.—W.W.S., B.C., 8/5/94.

The Attorney-General's minute of 6th ultimo, herein referred to, has, in the meantime, been returned from Works Department, and the minute of the Minister thereon has been submitted to Mr. Heydon.—W.W.S.

Minute by The Secretary for Public Works.

7 May, 1894.

THERE is but little to reply to in this minute. (See Attorney-General's minute on page 87, dated 6th April, 1894.) I shall continue to administer this Department in the future as I have done in the past, viz., when I consider it necessary to apply to the Attorney-General or Crown Solicitor for advice I shall do so, but I do not desire, nor will I allow, undue interference with my administration. In the case referred to by the Attorney-General, I submitted the case for decision of Cabinet, and Cabinet decided; I saw no reason for altering the decision, and that surely was sufficient. What conversation some Ministers had afterwards, at the instance of the Attorney-General, I was not aware of, and if Ministers did not communicate a general altered desire of the Cabinet it was not for me to receive such information from

from the Crown Solicitor. As to remarks made by my colleague in reference to what a corrupt Minister may or may not do, that is beside the question. I hope such a Minister may not hold such a position, but considering a multitude of cases come before a Minister for decision that never go before the Attorney-General's Department, the Crown Solicitor cannot be placed in the position the Attorney-General seems to wish him placed. If a Minister is not trusted by his colleagues the sooner he is out of that position the better. I act as I consider best, and am quite prepared to take the responsibility of my actions. In the Hill case, the best settlement, in the interests of the country, except one (McQuade's) has been made regarding the vexed Woolloomooloo land resumptions, and this without continuing to pay high legal fees in addition to the cost of the land.

W.J.L.

Minute by The Attorney-General.

Subject:—The settling of the case of Hill and others v. Lyne.

Attorney-General's Department, Sydney, 15 May, 1894.

I REGRET that my honorable colleague continues to misunderstand me. I have not the slightest desire, nor is there anything in my minute to indicate it, to encroach upon his duties or responsibilities. I need not say that he is perfectly competent to discharge them with credit to himself and benefit to the country. I have quite enough to do with my own proper duties without interfering with others, for which I am not qualified. What I do object to is that matters properly in this Department should not be dealt with in the regular, orderly, and safe way. The method adopted in this case was, for the reasons I before gave, irregular and full of danger to the public interest. It is a precedent to be avoided, not followed.

This is in no way attempting to dictate to the Works Department. It is only requiring that the proper position and legitimate functions of my own Department be, in the public interest, recognised and preserved. I notice that my honorable colleague does not controvert the arguments of my minute, but asserts his independence. Assuming that he admits the force of my representations, and that he will accept my disclaimer of any wish to interfere in his Department or dictate to himself, it seems to me that we are practically very much of a mind in the matter.

There is one other mistake to set right. My honorable colleague assumes that the subsequent conversation of Ministers to which I referred came about "at the instance of the Attorney-General." This is absolutely wrong. I did or said nothing whatever, either prior to or at that meeting, to bring up the subject. There had been a Cabinet meeting shortly before, at which I was not present. I learnt at the meeting at which I was present that, at the previous Cabinet, the question of the right of the plaintiffs to 10 per cent. on the amount to be paid to them had been broached. A letter had afterwards been written by my honorable colleague to the Premier, and it was this letter—of which I knew nothing before the meeting—which led to a revival of the subject, and to the mention of the discussion as to the 10 per cent. I had nothing whatever to do, either directly or indirectly, with reopening the question, and did not say much about it when it was reopened, though I concurred in the opinion then generally expressed that it would be better not to settle. I was careful in my minute to mention that my honorable colleague was not present at this meeting, and I only referred to it in order to illustrate, in the most forcible way, my point that a decision of a Cabinet is never final or irrevocable until it has been carried into effect.

CHAS. G. HEYDON.

The Under Secretary for Public Works.—W.W.S., B.C., 22/5/94.

Minute by The Secretary for Public Works.

Case of Hill v. Lyne.

31 July, 1894.

It is more than singular that the Attorney-General's minute of the 6th April should have been sent to the late Crown Solicitor, and not to me, but as the Attorney-General minutes it was not so intended, I need not say more about the official action in so forwarding it.

In the late Crown Solicitor's letter of the 30th of April, 1894, he states: "I ventured to express the opinion that had the advice of the Crown Law Department been asked and given, the settlement of this action would not have been sanctioned by Ministers. A perusal of the minute of the Minister for Works confirms that opinion. In that minute are stated the considerations which appear to have formed the ground of the decision arrived at. Had my Department been allowed the opportunity of being heard, cogent reasons could have been advanced to show that these considerations ought not to have had the weight they appear to have had. It is, however, too late to go into this part of the subject in any detail, but I should, perhaps, draw attention to this, namely, that at first sight it would appear that by the settlement arrived at, a substantial reduction has been made in the amount of the verdict contained in the action. In reality this is not so. The settlement comprises not only the 300 feet the subject of the action, but also two other portions, making up a block having a frontage of 225 feet."

This is but the late Crown Solicitor's probable opinion. As to the remarks affecting to believe no substantial reduction was made on the verdict, it is beyond comprehension that any sane man could make the statement. At first there was a doubt as to certain rights held by Hill and others in regard to the 225 feet; but that those rights existed was subsequently acknowledged, and that being so, there is but little difference in value between the 300-foot block and the portions totalling 225 feet. What has Mr. Smith to say to the verdict and costs in Brown's case, where a small (15 feet frontage) and comparatively invaluable intermediate block costs us (with costs) £158 10s. 9d. per foot? What has he to say to Mrs. Lahiffe's case of 31 feet, where an amount of £150 per foot was paid? As regards M'Quade's land—I settled this claim, irrespective of the Crown Law Department, with Mr. M'Quade, mainly in consequence of his desire to have the matter completed before leaving the Colony through ill health (he is since dead). The property has no back access, lane, or street, and is a long frontage compared to the length of the back line. Hill's property all through is more valuable per foot than M'Quade's. Referring to Rochester's case, the statements contain strange inaccuracies. Technically, "the sum paid was rather more than double the amount of the award of the arbitrator," but was recommended. The award was £2,500, and attached to that by the arbitrator was the following: "While unable to award any further sum, I would suggest that the Minister for Public Works should, as a concession, allow the contractor the sum of £1,600 and £45 in respect of the first item of claim, as no doubt the extra excavation of 1,316 cubic yards was taken out. I make this suggestion because the contractor has completed his contract

tract in the face of difficulties to the satisfaction of the Department, and was promised that he should be liberally dealt with. As to the last item claimed for interest, I consider I have no power to allow interest on my award, but I would recommend the Minister to allow simple interest in the amount of the award of £2,500 from the date Mr. Rochester's claim was made to the date of my award."

This award was set aside at the instance of the defendants (Hill and others). It subsequently came to the knowledge of the arbitrator that evidence on the values allowed for excavations, &c., was inaccurate, and he forwarded a fuller report, in which he says: "The first point that I would alter is with regard to the price allowed. In going through the evidence given by Mr. Smaill, the Government Engineer, I find the price set down for enlarging, tunnel excavation or scabbling, to be from 25s. to 30s. per cubic yard, in addition to the schedule prices set down in the contract, which was 52s. 6d. per cubic yard; the price given in Mr. Rudolph's evidence as being the highest paid by the Government for that kind of work when pick and gad only were used, was from £6 to £7 per cubic yard. Taking, therefore, the average price of this work, and assuming that 438 cubic yards of excavation were taken out of the tunnels as extra work by the contractor, and allowing the average price of such work at £5 15s. per cubic yard, would give the sum of £2,518 10s. The second point that I would alter is, I would add the said sum of £2,518 10s. to the award instead of merely recommending it as a concession, if approved of by the Minister. By adding the above-mentioned sum to the original award of £2,500 the total amount would come to £5,018 10s., which sum, I consider, would be ample compensation to the contractor for any extra work he may have performed in completing No. 25 Sewerage Contract."

And on this the settlement was made. This quite alters the complexion sought to be conveyed by the late Crown Solicitor.

Mr. Smith's action and language, when a trusted officer was sent to him, who could and would have given all information to settle the former voucher, were such as could not be tolerated in a civil servant. I considered the reply impertinent.

Regarding Blue's case (the only case which shows an appearance of being now) it speaks for itself. The particulars are as under:—

Area	John Blue.						1 acre 3 roods $\frac{1}{2}$ perches. £ s. d.
	
Amount claimed	14,323 8 7
" offered	4,070 0 0
" awarded	9,639 18 0
Verdict of Jury	7,600 0 0
Cost of Award	1,310 14 0*

* Which are exclusive of the Crown Solicitor's costs in conducting the case.

This shows but little gain, with great risk of serious loss by going to Court.

From the last paragraph of Mr. Smith's minute leaks out the whole trouble, viz., his determination to set at defiance any Minister of the Department in which the cases arose.

"The claim against the Colonial Government Act (39 Vic. No. 38), and certain special Acts like our Resumption Acts should be amended by an enactment to the effect, that in all actions or suits against the Crown the nominal defendant shall be Her Majesty's Attorney-General, would be in such actions or suits the *Dominus litis*, and the action or suit could not be settled, or the proceedings therein in any way interfered with except under the express direction of Her Majesty's Attorney-General."

It will thus be seen that the desire is to act entirely independent of the Department of Works, and practically place all power in the hands of the Crown Solicitor, when costs could be piled up at will. My object has been to check undue litigation. I may remark in conclusion, that with no other Crown Solicitor has any similar difficulty arisen, as it is always the custom to wait upon the Minister and confer with him, in cases where they consider it desirable.

W.J.L.

B.C.—The Secretary to the Attorney-General.—J.B., 31/7/94. Seen; place with the other papers.—C.G.H., 31/7/94.

The Secretary to The Attorney-General to E. A. Smith, Esq.

Sir,

Attorney-General's Department, Sydney, 17 April, 1894.

I have the honor to transmit for your perusal a copy of a minute written by the Minister for Public Works, which has been forwarded to this Department in reference to your memorandum respecting the recent settlement of the case of Hill and others *v.* Lyne.

The minute referred to, I may mention, is forwarded to you in accordance with the view expressed by the Attorney-General in the first paragraph of a minute written by him in connection therewith, a copy of which is also enclosed for your information.

I have, &c.,

W. W. STEPHEN.

E. A. Smith, Esq., to Mr. C. E. Parkinson.

London Chartered Chambers, corner of George and Jamieson Streets,

Dear Mr. Parkinson, G.P.O. Box 489, Telephone 373, Sydney, 19 April, 1894.

On reading the papers sent down to me by the Attorney-General in Hill's case, I find that I want to refer to my report to the Attorney-General, which you produced to me yesterday. I thought I could do without it, but find I cannot. Will you let me have a copy on loan?

Better get Attorney-General's approval to your doing so.

Yours, &c.,

E. A. SMITH.

Press copy of report sent to Mr. Smith, 20/4/94.

Memorandum.

Memorandum.

Dear Stephen,

19 April, 1894.

Mr. E. A. Smith wishes me to let him have a copy of his report to the Attorney-General re Hill and Lyne, in order that he may refer to it in (I presume) answering the Minister's memorandum.

Mr. Smith suggests that I should obtain the Attorney-General's consent to a copy of the report in question being sent to him. Will you please let me know if the Attorney-General approves of a copy of such report being sent to Mr. Smith?

Yours, &c.,

C. E. PARKINSON.

Dear Parkinson,—If it is the report, a letter on which Mr. Lyne wrote that censorious minute, a copy was sent to him yesterday. Is there any other report?—W.W.S. Yes; Mr. Smith's own report to the Attorney-General.—C.E.P. As the other letter has been sent to him, also Mr. Lyne's report (or rather copies), there can be no objection to sending him the report you refer to. In haste, yours—W.W.S. I can ask Attorney-General if you wish, but in that case should show it to him.—W.W.S.

Telegram from The Crown Solicitor to C. E. Parkinson, Esq.

Wentworth Falls.

DOCUMENTS received as minute of last instructions not sent. Impossible for me to say whether alleged settlement final and binding. Tell Curtis to do nothing towards postponing or withdrawing case without express instructions of Attorney-General. I take no responsibility. See Attorney-General, and say I protest against action taken, as settlement on terms mentioned is monstrous, and in manner grossly irregular. If possible, settlement should not be recognised, but trial proceed. I shall return to-morrow. Could see you at my house Saturday evening or Sunday if necessary. Perhaps, if settlement not conclusive, case might be adjourned till 2 o'clock, Monday.

ERNEST A. SMITH,
Crown Solicitor.

Seen. Put with papers.—C.G.H., 10/3/94.

Mr. C. E. Parkinson to The Secretary to The Attorney-General.

Hill and others v. Lyne.

Crown Solicitor's Office, Sydney, 10 March, 1894.

In view of the absence of the Crown Solicitor, I shall be glad of the Attorney-General's authority to communicate with Messrs. Stephen, Jaques, and Stephen, plaintiffs' attorneys, with the object of arranging a postponement of the trial in this case.

The case stands first in the list in No. 1 Court for Monday morning, so please consider this matter very urgent.

C. E. PARKINSON,
Chief Clerk.

I authorise an application to be made to secure a postponement until Tuesday morning, or even later; but, at any rate, if no more can be obtained, until 2 o'clock on Monday.—C.G.H., 10/3/94, 12:25 p.m. Mr. Curtis has arranged with Mr. Cowper, of Stephen, Jaques, and Stephen, to let this case stand over till Tuesday morning, 13th instant.—C.E.P., 10/3/94.

Memo. on Crown Solicitor's Letter of 5th March.

Hill and others v. Lyne—Woolloomooloo Bay Resumptions.

Crown Solicitor's Office.

THE Cabinet has come to the following conclusion in this matter, to quote the minute of Sir G. R. Dibbs:—The Cabinet approves of settling the claim of the Messrs. Hill for £145 sterling per foot, the actual measurement to be adjusted, with interest at the rate of 6 per cent. from date of resumption, each party paying their own costs.

On the same paper the solicitors for Hill & Co. have notified their acceptance of the terms in the following words:—"Having read the above minute of Sir G. R. Dibbs, we accept the above terms on our clients' behalf.—STEPHEN, JAQUES, AND STEPHEN, 7th March, 1894."

Written across above minute is the following:—"Correct. This refers to the whole of the claims for resumptions at Woolloomooloo Bay.—W.J.L., 7/3/93."

Stephen, Jaques, and Stephen to The Crown Solicitor.

Resumption, Woolloomooloo Bay—Hill and others.

Dear Sir,

O'Connell-street, Sydney, 26 April, 1894.

We shall be much obliged if you will send us for perusal the release of the land resumed, in order to carry out the settlement of the action arrived at.

So far as we know there is nothing to prevent the matter being completed at once. We would ask your kind co-operation in securing that object.

Yours, &c.,
STEPHEN, JAQUES, AND STEPHEN.

Memorandum by The Secretary to The Attorney-General.

Hill v. Lyne.

THE accompanying papers are returned to the Crown Solicitor, as they will be, I conclude, required in connection with the final settlement of the above case.

The letters and memoranda now before the Attorney-General, and retained by him for the present, are simply those which have passed between the late Crown Solicitor, the Attorney-General, and the Minister for Works, arising out of some comments made by the first-named gentleman (previously to his resignation of office) as to the course which had been adopted in determining on the amount to be paid to Messrs. Hill, Belisario, and others, and do not, therefore, in any way affect the decision arrived at, or necessitate any delay in the carrying out of the same.

The Crown Solicitor.

W.W.S., 3 May, 1894.

Memo. by The Secretary to The Attorney-General to The Under Secretary for Public Works.

Hill and others v. Lyne.

THIS matter having been now disposed of, and the amount of compensation to be paid to the claimants having been determined by the Cabinet, the papers are herewith forwarded to the Public Works Department, with a view to the necessary steps being taken for the final settlement of the case.

W.W.S., 9th April, 1894.

Approved.—C.G.H., 9/4/94. Land Valuer.—D.McL. (for U.S.), 10/4/94. Mr. Rae for description.—A.B., 10/4/94. Herewith.—F. G. RAE, 13/4/94. The Crown Solicitor for completion of matter.—F.G.R. (*pro* Land Valuer), 13/4/94.

The Crown Solicitor to The Under Secretary for Public Works.

Land at Woolloomooloo Bay—Resumed for Additional Wharf Accommodation—The claims of (1) Messrs. Hill, Belisario, Batty, and Sheehy for £33,650, dated 25th April, 1890; (2) same parties for £91,209, dated 1st May, 1890; (3) George Hill (alone) for £25,080, dated 25th April, 1890.

Sir, Crown Solicitor's Office, Sydney, 23 May, 1894, 4:45 p.m.

I have the honor to inform you that I shall be prepared to settle this matter very shortly. Will you, therefore, be good enough to take the necessary steps to have the compensation money, with interest calculated to Monday next, and made available for payment at the Treasury, and in the meantime forward me two vouchers in duplicate for the amount in the above cases for signature by the respective claimants—that is to say, one voucher in duplicate for Nos. 1 and 2, and one voucher for No. 3. Also, please let me know the amount of interest accruing per diem in each claim.

Departmental papers are sent herewith, which please return immediately after particulars have been taken.

I have, &c.,
GEO. COLQUHOUN,
Crown Solicitor.

Land Valuer.—D.C.McL. (*pro* U.S.), B.C., 23/5/94. Vouchers for £20,439 5s. 3d. (George Hill) and £77,858 12s. 5d., (Hill and Belisario, Batty and Sheehy), herewith.—A.B. (*pro* Land Valuer), 26/5/94. Chief Accountant. Rec., 28/5. Examined, 28/5. ? Vote. For approval.—J.B., 28/5/94. £10,261 3s. 2d. required from Treasurer's Advance Vote.

The Under Secretary, Finance and Trade states, that the voucher for £77,858 12s. 5d. can be paid to-morrow morning, but the voucher for £20,439 5s. 3d. cannot be paid unless the Colonial Treasurer approves of £10,261 3s. 2d. being paid from Advance Account, the vote of £90,000, 57 Vic. 17, being short by this amount.—H.C., 28/5/94. Under Secretary.

Should be referred to the Treasury, and the amount required to be paid from the Advance Account.—J.B., 28/5/94. Approved.—W.J.L., 23/5/94. Under Secretary, Finance and Trade.—J.B., 28/5/94. Ascertain why full provision was not made or asked for upon the last Loan Estimates.—J.S., 28/5/94. The Under Secretary for Public Works.—F.K., 28/5/94.

The Crown Solicitor to The Under Secretary for Public Works.

Land at Woolloomooloo Bay—Claim of George Hill alone.

Sir, Crown Solicitor's Office, Sydney, 25 May, 1894.

Referring to my letter of the 30th May last (93-803A), and to the suggestion contained at the latter part thereof, relative to certain inquiries being made at the Lands Department and the Treasury in reference to the land reclaimed by the late Mr. Hill (which it is stated enures to the claimant), I have the honor to request that you will be good enough to inform me if the inquiries have been made at the Treasury and Lands Department; and, if so, with what result.

I should like to have your reply as early as possible, as the matter is shortly to be completed, and unless it is put beyond all doubt that the right to reclaim the land on the frontage of the property has been granted, and the purchase money has been paid, it will cause delay in settlement.

I have, &c.,
GEO. COLQUHOUN,
Crown Solicitor (*per* C.C.P.).

Mr. Rae.—A.B., 26/5/94.

The information required by the Crown Solicitor is given by a minute from the Lands Department and by one from the Land Valuer, Mr. Thompson, on the accompanying letter from the Crown Solicitor, dated 30th May, 1893, registered No. 93-803A.—F. G. RAE, 28/5/94.

Minute by The Under Secretary for Public Works to The Under Secretary,
Finance and Trade.

Woolloomooloo Bay Resumption.

Department of Public Works, Sydney, 28 May, 1894.

WITH reference to the inquiry of the Honorable the Treasurer on 94-193H, as to why full provision was not made or asked for on the Loan Estimates in respect of this matter, Mr. Lyne desires me to say that the amount was put on the Estimates by the direction of the Treasurer, after a conversation with him. It was impossible then to give the full amount which would be required for these and other outstanding claims, nor is it possible now.

Submitted. £10,261 3s. 2d. required from Advance Vote.—F.K., 29/5/94. Approved.—J.S., 29/5/94. The Under Secretary for Public Works.—F.K., 29/5/94. I now forward the voucher to the Crown Solicitor, and will sign it on his informing me that it is in proper order.—J.B., 29/5/94.

J.B.

[Enclosure.]

NEW SOUTH WALES.

Resumption of Land for construction of Wharfs—further sum—£90,000; 57 Vic. No. 17.
Contingent Expenses—Department of Public Works.

Date of Service.		Rate.	Amount.
		£ s. d.	
25 May, 1894	Claimants—Messrs. Hill, Belisario, Batty, and Sheehy, and Daniel Sheehy, the elder, and Solomon Herbert Hyam, Executors and Trustees of the will of Thomas Batty, deceased. To amount of compensation for land resumed at Woolloomooloo Bay, for additional wharf accommodation purposes. To amount of interest from the date of resumption, the 4th day of February, 1890, to the 28th day of May, 1894, at the rate of 6 per cent. per annum.	426'638 feet, at £145 per foot.	{ 61,862 10 2 15,996 2 3
	Total	£77,858 12 5

I certify that the amount charged in this voucher as to computations, castings, and rates is correct; that the service has been faithfully performed, and that the expenditure is duly authorised in terms of the Audit Act.

T. F. WALLER.

Received, on the day of 189 , the sum of £77,858 12s. 5d. sterling.

The Crown Solicitor to The Under Secretary for Public Works.

Re George Hill and others' claims (2) and George Hill alone.

Sir, Crown Solicitor's Office, Sydney, 30 May, 1894.

I am in receipt of your B.C., with voucher in duplicate, for compensation moneys and interest in the above claims, which I now return.

With regard to your memo. as to whether the vouchers are in proper order, I can only certify This is what I as far as the names of the persons are concerned. Whether the amounts and other particulars are required.—J.B. correct or not I am unable to say, as this information is obtainable only in your Department.

The voucher in favour of Hill and others will require amendment, in consequence of the death of Mr. Batty, and I have indicated the amendment in pencil. I have, &c.,

GEO. COLQUHOUN,
Crown Solicitor.

Claimant—George Hill (3).

Claimants—George Hill, Edward Henry Belisario.

Claimants, 1 and 2—Daniel Sheehy, senior, and Solomon Herbert Hyam and Daniel Sheehy, senior, executors and trustees of the will of Thomas Batty, deceased.

Fresh vouchers to be prepared and sent to the Crown Solicitor.—W.H.P., 31/5/94. Original 1 and 2 cancelled, and fresh ones in duplicate herewith.—H.C., 31/5/94. Vouchers now signed and forwarded to the Crown Solicitor as requested.—J.B., 31/5/94. Memorandum, 5/6/1894, from Herbert Morris to the Secretary. Should not these papers be sent on to the Crown Solicitor to place with the others in his custody?—H.M. They may be forwarded, although they have no material bearing upon the action remaining to be taken in the matter.—W.W.S., 6/6/94. The Crown Solicitor.—H.M. (for the Secty.), 6/6/94. These papers are not complete. There is Mr. Smith's reply to the Minister's memo., which is not herewith; also Attorney-General's minute of 6/4/94.—C.E.P., 6/6/94.

The Crown Solicitor to The Under Secretary for Public Works.

Land at Woolloomooloo Bay resumed for additional wharf accommodation purposes—Two claims by Geo. Hill and others and one claim by Geo. Hill alone.

Sir, Crown Solicitor's Office, Sydney, 28 June, 1894.

I have the honor to request that you will be good enough to take the necessary steps to have the balance of interest due on the above claims calculated to the date of payment at the Treasury, and forward me a supplementary voucher in duplicate for the amount for signature by the claimants.

I have, &c.,
GEO. COLQUHOUN,
Crown Solicitor.

The Land Valuer.—D.C.M.L. (pro U.S.), B.C., 29/6/94. Vouchers for £183 0s. 9d. and £48 1s. herewith.—A.B. (pro Land Valuer), 6/7/94.

The Crown Solicitor to The Under Secretary for Public Works.

Re Hill and others' Claim.

Sir,

I have the honor to inform you that a question has arisen between the solicitors of the various claimants and myself, in regard to the construction of the minute endorsed upon my letter to you of the 5th March last, No. C.L. 94-220, as regards the payments of costs.

The minute, as you will see, reads "each party paying their own costs," if this is to be read literally it would apply to all costs—that is, to both the cost of the action and the several conveyancing costs on resumption paid to the claimants' solicitors. The solicitors of the parties contend that at the time of writing the minute the costs only of the action were in contemplation. This may, or may not be the case, and it is your decision in that respect I desire. I forward herewith the letter and minute above referred to, and shall be glad to have the question settled as early as possible.

I have, &c.,

GEO. COLQUHOUN,
Crown Solicitor.

Submitted for decision.—J.B., 2/7/94. The minute referred to *all* costs.—W.J.L., 7/7/94.
Inform.—J.B., 7/7/94. Crown Solicitor, 7/7/94. Place with the other papers.—D.C.McL., 9/7/94.
Noted.—T.F.W., 9/7/94.

Additional interest voucher in favour of George Hill only for £48 1s., also additional interest voucher in favour of George Hill and others for £183 0s. 9d., forwarded to Acct. Const. Branch.—E.R.Y., 25/7/94.

Certified.—H.C., 27/7/94. Sec. L.V., 94-318II.

The Under Secretary for Public Works to The Crown Solicitor.

Re Hill and others.

Sir,

Department of Public Works, Valuation Branch, Sydney, 7 July, 1894.

In reply to your letter of the 28th ultimo, in which you ask to be informed as to the correct interpretation of the minute endorsed on your letter of the 5th of March last, respecting the payment of costs in the above matter, I am directed by the Secretary for Public Works to say that the minute in question refers to all costs.

I have, &c.,

J. BARLING,
Under Secretary.

1894-5.

RESUMPTION OF LAND, WOOLLOOMOOGLOO BAY.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 29th November, 1894, "to inquire into and report upon the resumption and payment for land at Woolloomooloo Bay, including the Challis Estate, Hill & Co.'s, Lahiff's, Brown's, and McQuade's properties, and to whom was referred on 4th December, 1894, the return respecting claims for resumption of land at Woolloomooloo Bay, and the original papers respecting resumption of lands at Woolloomooloo Bay for wharfage purposes and to whom was granted on 20th December, 1894, leave to sit during any adjournment of this House,"—have agreed to the following Report:—

Your Committee having examined the witnesses named in the list,* beg *See List, p. 12. to report as follows:—

1. That from the evidence given by Mr. Joseph Barling, Under Secretary for Public Works, it is found that the land was resumed by the Government of Sir Henry Parkes, on the 4th of February, 1890.
2. That the land belonging to the Challis Estate, Mrs. Lahiff, and Gattenhoff, was paid for, or payment authorized, by the Colonial Treasurer of the day, Mr. McMillan, upon valuations made by Messrs. Richardson and Wrench, Mills and Pile, and J. B. Thompson, Government Valuator. In the case of Mr. J. A. Brown, payment was authorized by Mr. McMillan after a verdict of jury.
3. That the land belonging to Hill and Company, and McQuade, were paid for by Mr. John See, Treasurer in the Government of Sir George Dibbs.
4. That the price paid for the land belonging to Hill and Company, viz.:— £145 per foot, as compared with amounts given per foot for other land adjoining and in the immediate vicinity shows as follows, the Challis Estate for which £168 10s. 10d. per foot was paid, or a total of £45,000, the claim being £49,500. Lahiff's land, 30 feet frontage to the bay, with a mean depth of 137 feet 6 inches, at the rate of £150 per foot, or a total of £4,500; J. A. Brown's land having a frontage of 15 feet to the bay, with a mean depth of 129 feet 6 inches, at the rate of £146 13s. 4d. per foot, exclusive of improvements, or a total of £2,200; Gattenhoff's land, having a frontage—but not a water frontage—of 17 feet 4½ inches to the street, at the rate of £71 18s. 10d. per foot, or a total of £1,250; McQuade's land, having a frontage of 505 feet to the bay, with a mean depth of 150 feet, at the rate of £85 3s. 4d. per foot, or a total of £42,925. This last property has no access by right-of-way or road such as the other properties mentioned have, and the settlement was made at the urgent request of Mr. McQuade, who was desirous of going to England for the benefit of his health, and who, as a matter of fact, died shortly after the settlement was arrived at.
5. That the evidence of Mr. J. Barling, Mr. George Hill, Mr. John McElhone, Mr. Belisario, Mr. Sheehey, and others, does not show any evidence of corruption or collusion in the adjustment of these claims.

6. That the evidence given by Mr. E. A. Smith with regard to an alleged statement made to him by Mr. George Hill, rests upon his unsupported testimony alone, and was generally denied by Mr. Hill. Mr. Sheehey in his evidence stated positively he never went to the Works Department, and did not even know Mr. Lyne till he saw him in the Committee Room. Mr. Batty had been bedridden for over twelve months, and is since dead. Your Committee also desire to say that if such a statement was made (as Mr. Smith alleges) by Mr. George Hill, it was his duty, as a civil servant, to have at once communicated it to the head of his Department.

7. That the evidence goes to show that at the time of the resumption of the Woolloomooloo Bay land, although what is known as the "boom" had ceased, prices for land were ruling very high, and that land which was worth a comparatively small sum in 1886 had increased five or six fold in 1890, *vide* the evidence of Mr. A. W. L. Gregg, pp. 35, 36, 37, and 38, and also evidence of Mr. J. B. Thompson, Government Valuator, pp. 47, 48, 49, and 50.

8. That with regard to the objections raised by the Crown Solicitor regarding the settlement of claims by individual Ministers or Cabinet while they are in the hands of the Crown Law Officers, your Committee do not think it is desirable that such claims should be settled without a consultation with that Department, yet they are of opinion that the functions of that office are confined to tendering legal advice in regard to such claims. In support of the view which the Committee take, they desire to quote the evidence of Mr. Barling, who uses these words, and with which the Committee concur:—"I unhesitatingly say that, as a rule, I do not think it is a good practice, but I can quite see this,—that there are certain cases in which it would never do to bind a Minister with red tape when in the public interest he might consider another course is advisable in order to preclude mistake";—but find that in the case of Hill and Company the claim was settled by the Cabinet, at which the Attorney-General was present, and not by the Secretary for Public Works, Mr. Lyne, and at that meeting he was requested to make no definite offer until satisfied the claimants would accept.

9. Finally, your Committee are of opinion that the evidence entirely exonerates the Honorable Member for the Hume, and late Secretary for Public Works, from any charge or semblance of corruption or collusion in regard to the settlement of the claims of Messrs. Hill and Company and Mr. McQuade. It will be seen by the evidence that Mr. McMillan, Treasurer in the Government of Sir Henry Parkes, was of opinion that the first valuation made of Hill and Company's land, viz., £175 per foot, "seems to be reasonable," and that it was settled by the Government of Sir G. R. Dibbs (in Cabinet) for £145 per foot, notwithstanding that the claimants had obtained a verdict in the Supreme Court of £200 per foot against which the Government had moved and obtained leave for a new trial.

JAMES MORGAN,
Chairman.

No. 3 Committee Room, Legislative Assembly,
Sydney, 27th February, 1895.

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 4 DECEMBER, 1894.

Witness withdrew.

Chairman to prepare Draft Report.

Reassembling of the Committee to be arranged by the Chairman.

[Adjourned.]

TUESDAY, 26 FEBRUARY, 1895.

MEMBERS PRESENT:—

Mr. James Morgan in the Chair.

Mr. Bavister,	Mr. O'Sullivan,
Mr. Cann,	Mr. Piddington,
Mr. Lee,	Mr. Wall.

The Chairman submitted Draft Report, which was read a first time as follows:—

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 29th November, 1894, “to inquire into and report upon the resumption and payment for land at Woolloomooloo Bay, including the Challis Estate, Hill & Co.'s, Lahiff's, Brown's, and McQuade's properties, and to whom was referred on 4th December, 1894, the return respecting claims for resumption of land at Woolloomooloo Bay, and the original papers respecting resumption of lands at Woolloomooloo Bay for wharfage purposes, and to whom was granted on 20th December, 1894, leave to sit during any adjournment of this House,”—have agreed to the following Report:—

Your Committee having examined the witnesses named in the list, beg to report as follows:—

1. That from the evidence given by Mr. Joseph Barling, Under Secretary for Public Works, it is found that the land was resumed by the Government of Sir Henry Parkes, on the 4th of February, 1890.

2. That the land belonging to the Challis Estate, Mrs. Lahiff, and Gattenhoff, was paid for, or payment authorised, by the Colonial Treasurer of the day, Mr. McMillan, upon valuations made by Messrs. Richardson and Wrench, Mills and Pile, and J. B. Thompson, Government Valuator. In the case of Mr. J. A. Brown, payment was authorised by Mr. McMillan after a verdict of jury.

3. That the land belonging to Hill and Company, and McQuade, were paid for by Mr. John See, Treasurer in the Government of Sir George Dibbs.

4. That the price paid for the land belonging to Hill and Company, viz., £145 per foot, “was small” as compared with amounts given per foot for other land adjoining and in the immediate vicinity, as instance the Challis Estate for which £168 10s. 10d. per foot was paid, or a total of £45,000, the claim being £49,500. Lahiff's land, 30 feet frontage to the bay, with a mean depth of 137 feet 6 inches, at the rate of £150 per foot, or a total of £4,500; J. A. Brown's land, having a frontage of 15 feet to the bay, with a mean depth of 129 feet 6 inches, at the rate of £146 13s. 4d. per foot, or a total of £2,200; Gattenhoff's land, having a frontage—but not a water frontage—of 17 feet 4½ inches to the street, at the rate of £71 18s. 10d. per foot, or a total of £1,250; McQuade's land, having a frontage of 505 feet to the bay, with a mean depth of 150 feet, at the rate of £85 3s. 4d. per foot, or a total of £42,925. This last property has no access by right-of-way or road such as the other properties mentioned have, and the settlement was made at the urgent request of Mr. McQuade, who was desirous of going to England for the benefit of his health, and who, as a matter of fact, died shortly after the settlement was arrived at.

5. That the evidence of Mr. J. Barling, Mr. George Hill, Mr. John McElhone, Mr. Bellisario, Mr. Sheehy, and others, completely exonerates every member of the Dibbs Government from the suspicion of corruption or collusion in the adjustment of Hill's claim.

6. That the evidence given by Mr. E. A. Smith with regard to an alleged statement made to him by Mr. George Hill, rests upon his unsupported statement alone, and was generally denied by Mr. Hill, and according to the weight of evidence, if such statement was made by Hill, it proved to be untrue. Mr. Sheehy in his evidence stated positively he never went to the Works Department, and did not even know Mr. Lyne till he saw him in the Committee Room. Mr. Batty had been bed-ridden for over twelve months, and is since dead. Your Committee also desire to say that if such a statement was made (as Mr. Smith alleges) by Mr. George Hill, it was his duty, as a civil servant, to have at once communicated it to the head of his Department, viz., the Minister of Justice, and not to have kept it such a profound secret until the meeting of this Committee.

7. That at the time of the resumption of the Woolloomooloo Bay land, although what is known as the "boom" had ceased, prices for land were ruling very high, and that land which was worth a comparatively small sum in 1886 had increased five or six fold in 1890, *vide* the evidence of Mr. A. W. L. Gregg, pp. 35, 36, 37, and 38, and also evidence of Mr. J. B. Thompson, Government Valuator, pp. 47, 48, 49, and 50.

8. That with regard to the objections raised by the Crown Solicitor regarding the settlement of claims by individual Ministers or Cabinet while they are in the hands of the Crown Law Officers, your Committee do not think it is desirable that such claims should be settled without a consultation with that Department, yet they are of opinion that the functions of that office are confined to tendering legal advice in regard to such claims. In support of the view which the Committee take, they desire to quote the evidence of Mr. Barling, who uses these words, and with which the Committee concur:—"I unhesitatingly say that, as a rule, I do not think it is a good practice, but I can quite see this,—that there are certain cases in which it would never do to bind a Minister with red tape when in the public interest he might consider another course is advisable in order to preclude mistake";—but find that in the case of Hill and Company the claim was settled by the Cabinet, at which the Attorney-General was present, and not by the Secretary for Public Works, Mr. Lyne; and at that meeting he was requested to make no definite offer until satisfied the claimants would accept. Under these circumstances he could scarcely take any other course than he did.

9. Finally, your Committee entirely exonerate Mr. W. J. Lyne, the Honorable Member for the Hume, and late Secretary for Public Works, from any charge or semblance of corruption or collusion in regard to the settlement of the claims of Messrs. Hill and Company and Mr. McQuade, and find that the amounts paid for these two properties were lower than that given for any of the other water frontage lands at Woolloomooloo Bay resumed at this time; and so careful was the Minister of the public funds that he refused to pay the cost of transfer, which, according to evidence, was most unusual, as the "Government invariably paid the cost of conveyancing"; and it will be seen by the evidence that Mr. McMillan, Treasurer in the Government of Sir Henry Parkes, was of opinion that the first valuation made of Hill and Company's land, viz., £175 per foot, "seems to be reasonable," and that it was settled by the Government of Sir G. R. Dibbs (in Cabinet) for £145 per foot.

Paragraphs 1, 2, and 3, read and *agreed* to.

Paragraph 4 read.

Mr. Piddington moved that the paragraph be amended by leaving out in line 1 the words "was small."

Question put,—"That the words proposed to be left out stand part of the paragraph."

Committee divided.

Ayes, 1.

Mr. Lee.

Noes, 4.

Mr. Bavister,
Mr. Cann,
Mr. O'Sullivan,
Mr. Piddington.

And so it passed in the negative.

And the paragraph, having been further amended, paragraph as amended *agreed* to.

Paragraph 5 read.

Mr. Piddington moved that the paragraph be amended by leaving out in lines 2 and 3 the words, "Completely exonerates every member of the Dibbs Government from the suspicion of corruption or collusion in the adjustment of Hill's claim," and inserting, "Does not show any evidence of corruption or collusion in the adjustment of these claims."

Question put,—"That the words proposed to be left out stand part of the paragraph."
Committee divided.

Ayes, 3.

Mr. Cann,
Mr. Lee,
Mr. Wall.

Noes, 3.

Mr. Bavister,
Mr. O'Sullivan,
Mr. Piddington.

The numbers being equal, the Chairman gave his casting vote with the noes, and declared the question to have passed in the negative.

Question,—"That the words proposed to be inserted be so inserted, put and passed."

Paragraph, as amended, *agreed* to.

Paragraph 6 read, amended, and *agreed* to.

Paragraph 7 read, amended, and *agreed* to.

Paragraph 8 read, amended, and *agreed* to.

Paragraph 9 read. Mr. O'Sullivan moved that the paragraph be amended by leaving out the words in lines 3, 4, 5, 6, and 7, "and find that the amounts paid for these two properties were lower than that given for any of the other water frontage lands at Woolloomooloo Bay resumed at this time, and so careful was the Minister of the public funds that he refused to pay the cost of transfer, which, according to evidence was most unusual, as the 'Government invariably paid the cost of conveyancing'; and"

Question put,—"That the words proposed to be left out stand part of the paragraph."
Committee divided.

Ayes, 3.

Mr. Cann,
Mr. Lee,
Mr. Wall.

Noes, 3.

Mr. Bavister,
Mr. O'Sullivan,
Mr. Piddington

The numbers being equal the Chairman gave his casting vote with the noes, and declared the question to have passed in the negative.

Mr.

Mr. Lee moved,—Add at end of paragraph the words, “notwithstanding that the claimants had obtained a verdict in the Supreme Court of £200 per foot, against which the Government moved and obtained leave for a new trial.”

Question put,—“That the words proposed to be added be so added.”
Committee divided.

Ayes, 4.

Mr. Cann,
Mr. Lee,
Mr. O'Sullivan,
Mr. Wall.

Noes, 2.

Mr. Bavister,
Mr. Piddington.

The Chairman declared the question to have passed in the affirmative.

Paragraph as amended *agreed* to.

Mr. Bavister moved,—That the final consideration of the Report be postponed till Wednesday next.

Question put.

Committee divided.

Ayes, 1.

Mr. Bavister.

Noes, 5.

Mr. Cann,
Mr. Lee,
Mr. O'Sullivan,
Mr. Piddington,
Mr. Wall.

And so it passed in the negative.

Motion made (*Mr. O'Sullivan*),—That the Report as amended be the Report of the Committee.

Question put and passed.

Chairman to Report to the House.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

RESUMPTION OF LAND, WOOLLOOMOOLOO BAY.

WEDNESDAY, 5 DECEMBER, 1894.

Present:—

MR. BAVISTER,	MR. O'SULLIVAN,
MR. WALL,	MR. PIDDINGTON,
MR. LEE,	MR. FRANCIS CLARKE,
MR. MOLESWORTH,	MR. LEES,
MR. JAMES MORGAN.	

J. MORGAN, Esq., IN THE CHAIR.

Joseph Barling called in, sworn, and examined :—

1. *Chairman.*] You are Under Secretary for Public Works? Yes.
2. You have some knowledge of the resumption of land at Woolloomooloo Bay? Yes.
3. Will you kindly inform the Committee, as nearly as you possibly can, the circumstances which arose to cause these resumptions? The circumstances which brought about the resumptions of this land will be found detailed in a letter, dated 30th December, 1889, written to me by the ^{5 Dec., 1894.} Under Secretary for Finance and Trade, the late Mr. Eagar. The letter was in these terms:—

Sir,
I have the honor, by direction of the Colonial Treasurer, to hand you original of a minute which passed the Cabinet on the 23rd instant, in reference to the resumption of land at Woolloomooloo Bay for providing additional wharf accommodation at that place. I beg also to hand you a plan of the property to be resumed, description of which is attached to the minute.

I have, &c.,
G. EAGAR.

The Cabinet minute was endorsed by Sir Henry Parkes and initialled by Mr. McMillan, and it is in these terms: "In view of the increasing necessity for both present and future wharf accommodation and of the fact that wharf extension is now most readily obtainable in connection with Cowper Wharf—extending from the eastern side of Woolloomooloo Bay towards Victoria-street—and having regard to the desirability of acquiring the properties named in the attached valuation before any considerable rise on present values may be expected, I beg to recommend to the favourable consideration of the Cabinet, that the properties concerned may be resumed for wharf purposes, under the provisions of the 'Lands for Public Purposes Acquisition Act.' And as provision is made by the Loan Act, 53 Vic. No. 23, to the extent of £200,000, 'for resumption of land for construction of wharfs,' of which sum £150,000 is estimated to be available, I further recommend that the Honorable the Secretary for Public Works be authorised to obtain from His Excellency the Governor and the Executive Council the needful authority to permit of the issue of the required proclamation forthwith. Attached is the valuation by Mr. J. B. Thompson, land valuer for the Department of Public Works, who states the properties proposed to be resumed to be worth £112,515. The description of the surveyors, Messrs. Atchison and Schleicher, and a map of the properties also accompany this minute." I may mention that Mr. McMillan in this minute draws attention to the fact that a sum of money was available for the resumption of land for

J. Barling,
Esq.
5 Dec., 1894.

for this purpose, and I will hand to the Committee the Loan Act in which the amount is contained. It was assented to on the 10th October, 1889. On the 3rd of that month, in explaining the matter to Parliament, Mr. McMillan said—I quote from the *Hansard* report: "Hon. members are aware that in the Lands for Public Purposes Acquisition Act power is given to resume land under certain conditions, but it is necessary to have command of a vote for the purpose in order to be able to resume. It simply amounts to this: Is it the intention of that Act that the Governor, in his discretion under certain circumstances of public importance and necessity, shall have power to resume land under cover of a vote without coming directly to the House; that is to say, taking the responsibility as a matter of urgent public necessity and dealing with the transaction, which of necessity, if it is to be done in the public interest, must also be done expeditiously, and to a certain extent secretly? It seems to me that if a vote of this kind is not passed to be at the demand of the Government, the Land for Public Purposes Acquisition Act may be blotted out altogether. If whenever a resumption takes place, no matter whether it may be necessary to make such resumption in the recess or when the House is engaged in business of great importance, such, for instance, as a Land Bill, which cannot be interrupted—if it was necessary that before the Executive takes upon itself the responsibility of resuming land under that Act, it must take a vote in Parliament, and so spread its intention broadcast through the community and allow land grabbers and land speculators to run riot in connection with the properties concerned—then it seems to me that practically the Act may be as well wiped out for all ordinary purposes. We ask the House to allow £200,000 to be placed on the Loan Estimates for the resumption under conditions for which the Government of the day will be responsible of public wharfs from time to time as circumstances may demand. Of course, no Government would attempt to carry out the intentions of the Act, unless it was willing to take the responsibility for its actions. I would also like to point out that in this matter of resumption the position is not the same as in the case of the Government purchasing land from private individuals. The land is resumed. It is only paid for according to its real value by a process of arbitration, if necessary, and it is surrounded by every possible safeguard; and no suspicion can attach to the transaction. At the very outside, if the Government should be led to retrace its steps, the land resumed is always worth the money given under the safeguards of the Lands for Public Purposes Acquisition Act. It seems to me that, unless the Government is not to be trusted at all, a vote like this is a fair and reasonable one, in view of the Act now in existence." Accordingly, the land was resumed under the Lands for Public Purposes Acquisition Act, although the resumption did not take place until the 4th February, 1890. The usual *Gazette* notice was inserted. Subsequently further votes were taken—one of these was for £90,000 and another for £24,650; the latter vote was taken a few weeks ago in a Temporary Supply Bill in anticipation of loan.

4. These amounts all bore upon the Woolloomooloo Bay resumptions? The money was voted for land resumption for wharfage purposes. I may mention that the money was used for other purposes besides the Woolloomooloo Bay resumption. For instance, there was the Erskine-street resumption.

5. Mr. McMillan mentioned in his speech that the vote applied to the Erskine-street and Woolloomooloo Bay resumptions? I only read the first part of his speech; but, no doubt, that was the intention.

6. Mr. Wall.] Can you specify the different areas of land covered by the valuation? Yes. I have Mr. Thompson's report with me, but that may be looked upon as a preliminary valuation—it was the first valuation made.

7. Chairman.] Some time after that one of these properties was paid for? I can give you the date of payment for the various properties as far as they have gone. Of course, I cannot give you the actual date of payment, because it was made by the Treasury, but I can give you the dates upon which the vouchers were forwarded to the Treasury. In the case of the Challis Estate the voucher was sent to the Treasury on the 24th February, 1891. In that of R. R. Terry's land, on the 10th December, 1892. In the case of the Hill Estate, one voucher was sent on the 1st June, 1894; and another on the 13th June, 1894. In Lahiff's case the voucher was sent on the 24th October, 1892; in Catley's case, on the 2nd September, 1893; in the case of J. A. Brown, on the 3rd May, 1893; in Gattenhoff's case on the 2nd March, 1893; in M'Quade's case on the 9th August, 1894. There are two cases still unsettled.

8. Mr. Lee.] You have handed in the preliminary valuations of Mr. Thompson. Upon what valuations were these amounts paid? The Challis Estate was paid on the valuation of Messrs. Mills, Gregg, and Thompson. The rate per foot—that is exclusive of interest, which follows as a matter of course, and costs—was £168 10s. 10d. The total amount paid for the land was £45,000, the claim being £49,500. It had a frontage to the bay of 267 feet. That land is marked No. 1 on the plan, which I now hand in for the information of the Committee. The next portion of land, marked No. 2 on my plan, is R. R. Terry's. It has a frontage of 285 feet to the street. The amount paid for the land was £8,800, or £30 17s. 6d. per foot. This includes some buildings. No separate amount was given by the valuator for them. The valuation in that case was by Messrs. Mills, Gregg, and Thompson. The next portion, shown as No. 3 on my plan, is the property of Hill and others. The frontage is 426'638 feet. The claim was £124,850, and the amount paid was £61,862 10s. 2d.; it ran out to £145 a foot. That amount was arrived at by Cabinet decision.

9. Was there no valuation to go upon? The valuation was for a frontage of 303 feet 7½ inches to Woolloomooloo Bay at £175 per foot, making a total of £53,134 7s. 6d.; forced sale at 10 per cent., £5,313 8s. 9d.—total, £58,447 16s. 3d. That valuation was signed by J. B. Thompson, Richardson and Wrench, and Mills, Pile, and Wilson. That was sent with all the other valuations to the Colonial Treasurer (Mr. McMillan), and he has written on the margin these words: "This seems to be a reasonable valuation." I may mention that I only discovered yesterday on looking through the papers that this minute by Mr. McMillan was not printed with them. I cannot account for it, but the clerk in copying the papers evidently omitted it.

10. Then in that case Mr. McMillan approved of the payment to Hill and others of £175 per foot? He cannot be said to have actually approved of it, because the land was resumed under the Lands for Public Purposes Acquisition Act, which is administered by the Secretary for Public Works. Inasmuch, however, as the Works Department was set in motion by the Treasury, it was considered right that the Treasurer should have a say in the matter, consequently the paper was sent to the Treasury and was returned with the minute I have just read upon it.

11. That is only in respect to one portion of the Hill property? The property belonging to Hill and others.

12. The land adjoining the Challis Estate? Yes. The next case is the property of George Hill with 112 feet frontage to the bay. The claim was £25,080. In the first place we only acknowledge the claim

ON RESUMPTION OF LAND, WOOLLOOMOOLOO BAY.

claim of Mr. Hill to the small piece of land bounded by the lane, and coloured yellow on the large plan I have exhibited. This was originally valued at £15 per foot, as having 130 ft. frontage to the lane only. J. Barling,
Esq.
13. *Chairman.*] You afterwards found that the owner of this property had a right to a greater area of land than was valued? Yes. The original valuation was that of Messrs. Richardson and Wrench, Messrs. Mills, Pile, and Wilson, and Mr. J. B. Thompson. The land was valued at £2,395. The amount is made up as follows:—130 ft. frontage to the lane, at £15 per foot, £1,950; buildings, £250; forced sale at 10 per cent., £195; total, £2,395.

14. How did you come to include the larger area of land? If you look at page 21 of the printed papers which have been laid upon the Table, you will find a letter addressed by the Crown Solicitor, Mr. E. A. Smith, to the Under Secretary for Public Works. It is dated 30th May, 1893, and is as follows:—

Sir,

I have the honor to return herewith the papers in connection with this matter, and to state that since my report of May, 1890, on the notice of claim sent in, I have received a communication from Mr. Hourigan (acting on Mr. Hill's behalf), in which he states that with regard to the land between the high water-mark and the limit line of reclamation—as to which I reported no title had been shown—that an application to reclaim the land in question was made many years ago by the late Mr. Hilly, and that he (Mr. Hourigan) was informed that on some of the old maps it is incorrectly noted that such application had lapsed; that although the land was conveyed to his client by certain metes and bounds which did not, in absolute description, cover the land so reclaimed, nevertheless buildings were erected upon such land by the vendors a considerable time before the said purchase, and his client was put in possession of them; that, moreover, under the general words in the conveyance, it must be taken that all the fruits, incidents, and accessories relating to the land in question (both at law and in equity) passed to his client; that on investigating this matter it was ascertained that in June, 1878, the right to reclaim was formally admitted, and the late Mr. Hilly was informed that the purchase money in respect of that land should be paid into the Treasury within a month from that date; that the money was accordingly paid into the Treasury on the 24th July, 1878, but it would appear that no further steps were taken in regard to the issue of the grant; that in 1891 application was made to the Minister calling on him to issue the said grant, and on the 3rd October last the Under Secretary wrote a letter stating that on proof of title to adjoining freehold action would be taken with a view to the issue of the grant.

I think that if the statements contained in Mr. Hourigan's communication are correct, as to which inquiries should be made both at the Lands Department and at the Treasury, there can be no doubt that the late Mr. Hilly was entitled to a deed of grant in respect of the reclaimed land, and such right would, I think, have passed to the purchasers from him, and would apparently have been vested in Mr. Hill at the date of resumption.

Should it appear that Mr. Hill was entitled to the grant, I think a revaluation should be made on the assumption that he was so entitled—that is, that he was entitled to the land lying between the lane in continuation of Victoria-street and the limit line of reclamation fronting Woolloomooloo Bay.

I have, &c.,

ERNEST A. SMITH,

Crown Solicitor.

I wrote upon that, "Immediate. Will the Under Secretary for Lands kindly make a special matter of this, which he will see is one of great urgency?" Then the Lands Department said, "The purchase money was paid in Hilly's case, and it was approved that a deed of grant would issue provided title was shown to the Crown Solicitor, and the reclamation is satisfactorily completed. Perhaps these papers should now be referred to the Works Department." The papers were sent to the Land Valuer for other information needed, and he said, "I have ascertained that the purchase money for 1 rood 9 perches was paid into the Treasury, 24/7/78." Finally, Mr. Lyne wrote, "Let Mr. Kirkpatrick value," and the matter was accordingly sent to Mr. Kirkpatrick.

15. *Mr. Molesworth.*] Can you tell us why the matter was sent to Mr. Kirkpatrick for valuation, seeing that Mr. Thompson had made a valuation previously. It would appear that Mr. Thompson had the valuation in hand? Yes; but Mr. Lyne had great confidence in Mr. Kirkpatrick, and thought it desirable, I presume, in a matter of such great importance, to have as much advice as he could on the subject.

16. *Chairman.*] What did Mr. Kirkpatrick value the land at? Mr. Kirkpatrick, I see from the papers, valued the block of 112 feet separately; but I have not the papers before me, so that for the present I cannot answer that part of the question. However, he valued both the 112-ft. block and the 123-ft. block together, making a total of 235 feet 6 inches. The blocks are numbered 5 and 6 on the lithograph plan in the Parliamentary papers. He valued that land at £131 per foot, or £30,850 10s.; buildings and sheds, £1,200; forced sale at 10 per cent., £3,205 2s.; total, £35,255 12s.

17. The original claim for that land was how much? The original claim for the 112 feet was £25,080.

18. *Mr. Lee.*] What was the claim for the 123 feet? The claim for that was £33,650.

19. How much would that be per foot? £273 per foot.

20. What did the claim for the two blocks of 112 feet and 123 feet amount to? £58,730.

21. And Mr. Kirkpatrick's valuation in respect of those two areas was £35,255 12s.? Yes. The next case is that of Lahiff, No. 5 on my plan. The property had a frontage of 30 feet to the bay. The claim was £8,250; the amount paid for the land was £4,500, the rate per foot being £150. This property was valued by Messrs. Richardson and Wrench, Messrs. Mills, Pile, and Wilson, and Mr. J. B. Thompson.

22. Who authorised the payment of the amount? Mr. McMillan. The next is Catley's leasehold property. The amount paid was £175. The next property is J. A. Brown's, No. 6 upon my plan, having a frontage of 15 feet to the bay; the claim was £3,850, and the amount paid for the land was £2,200, which works out at £146 13s. 4d. per foot.

23. *Mr. O'Sullivan.*] Who authorised the payment in that case? Mr. McMillan.

24. *Chairman.*] Mr. Brown refused to take the sum offered, and went into Court? Yes; and he obtained a verdict which came out at £146 13s. 4d. per foot, inclusive of improvements. The next property is Gattenhoff's, No. 7 upon my plan. It had a frontage of 17 feet 4½ inches to the street. The amount paid for the land was £1,250, or £71 18s. 10d. per foot. I believe there are some buildings on the land, but no separate amount was given for them by the valuers.

25. *Mr. Lee.*] Who authorised the payment of that amount? It was authorised by Mr. McMillan, and subsequently by Mr. Bruce Smith. The next property is M'Quade's, with a frontage of 504 feet to the bay. The amount paid was £42,925, or £85 3s. 4d. per foot.

26. Who authorised the payment in M'Quade's case? Mr. Lyne. I may mention that there are two unsettled claims, that of Mr. Elouis and that of Mr. H. C. Dangar.

27. *Chairman.*] Was Gattenhoff's a water-frontage property? No; it is merely to the street. I was about to say that the reason Elouis' claim was unsettled is this: He will not accept the offer, because he says we do not admit any title to the water-frontage. He says also—I speak subject to correction—that he can prove his right to the water-frontage.

28. How is it that the claim in the case of M'Quade's property was settled at a much lower rate than the claim for the other water-frontages? It is not so valuable. Excepting a small lane, which is almost inaccessible, I believe, there is no access to the property, so far as the Government are concerned. M'Quade, of course, has access.

- 4 J. Barling, Esq.] 29. *Mr. Lees.*] M'Quade's property one would think would have deeper water? I have not a plan showing that.
- 5 Dec., 1894. 30. *Chairman.*] Is there no other reason for the lower rate apart from the want of access. Is not the land very narrow at one end? Yes; it runs out to a point.
31. *Mr. O'Sullivan.*] M'Quade's property goes towards the end of Potts' Point? Yes.
32. *Chairman.*] M'Quade received the smallest price of any of the claimants having land fronting the water? Yes.
33. The next smallest price to that was paid to whom? The next smallest price, so far as water-frontage is concerned, was paid for the Hill property.
34. *Mr. Lee.*] You say that Mr. Lyne authorised the payment in M'Quade's case? Yes.
35. On what date? The voucher was sent to the Treasury on the 9th August, 1894.
36. Is it not the case that there is access to M'Quade's property by a lane? There is access by a lane, as I have pointed out; but I believe the lane is almost inaccessible.
37. *Mr. O'Sullivan.*] As far as one can gather from the plan and the list given on page 13 of the Parliamentary papers, showing the valuation and the price per foot, the nearer the land was to the middle of Woolloomooloo Bay and to the population the higher the price it brought? Yes.
38. Would not that therefore explain the lower price given for M'Quade's property, which runs out towards the point? I should think it would to some extent, but the chief reason was, I think, that the property had not the access which the other properties had.
39. *Chairman.*] All the other properties had access? Yes; but I may mention that in the case of the 112-foot block of Hill's property the access was not so good as in the other cases.
40. *Mr. Bavister.*] Is it not a fact that the depth of M'Quade's property is as great as any of the others, and that provision could have been made for a lane if so desired? Yes.
41. *Mr. Lee.*] But M'Quade accepted the amount offered? Yes.
42. Was there any reason why he should accept it? I had nothing to do with negotiations. The only reason I can see is that given by Mr. Lyne. Speaking of M'Quade's land, he says:—"I settled this claim, irrespective of the Crown Law Department, with Mr. M'Quade, mainly in consequence of his desire to have the matter completed before leaving the Colony through ill-health. (He is since dead)." I know for a fact that Mr. M'Quade desired to have the matter settled. He told me so himself. I saw him several times, and I remember his saying, "I want to go Home, and I want to get this matter settled up before I leave," or words to that effect.
43. With the exception of the claim of Hill and others, of J. A. Brown, and of George Hill, the claims in respect of these properties were settled privately? Yes.
44. Mr. Brown went to law and obtained a verdict of £100 per foot? Yes; but the improvements were included in the amount paid, which brings the amount up to £146 13s. 4d. per foot.
45. The claims of Hill and others, and of George Hill, in respect of two distinct properties, were the subject of actions in the Supreme Court some time ago? Yes.
46. In which they obtained a verdict for the sum of £200 a foot? Yes.
47. Will you go on to tell the Committee what action was taken after that verdict? The information I have as to that is, of course, not complete, because the matter was dealt with by the Minister himself in conjunction with the Cabinet. Necessarily, therefore, I do not know what transpired in connection with the actual settlement. The papers disclose that a new trial was moved for, and granted, on the ground of misdirection of the Judge as to the right to deepen the frontage. The Judge took it for granted that Mr. Hill would have the right to deepen.
48. *Chairman.*] Has the right to deepen water-frontage property ever been refused? As far as I am aware, it has always been granted. Sometimes they have not been able to accomplish it themselves, and have come to us for dredges at a time when we have not been able to give them dredges.
49. You hire them dredges for the purpose? Yes. There is one exception: if we find that the water-frontage has been decreased by reason of the deposition of silt, then to that extent we deepen free; but so far as deepening the natural bottom is concerned, we provide the dredges, and the owners pay us so much a day.
50. *Mr. O'Sullivan.*] If that is so, then the trustees of the Challis estate, Hill and others, Lahiff, George Hill, M'Quade, and the others—had a right to deepen by custom? I would not say that they had a right to deepen; I do not think that that could be admitted.
51. But putting it as a matter of custom, it has been the custom to grant the right to deepen? Yes.
52. And in some cases good work has actually been done by deepening, the department allowing the dredges free up to a certain point? Free only as regards the removal of silt deposited by the sewers.
53. Does this not all go to show that a right has been established by custom, and that it was a somewhat unique proposal to refuse it to Hill & Co. after granting it to others? I object to the word "right" being used. I would prefer to use the word practice. I do not see any reason why permission should not be granted in Hill's case.
54. If that was the ground upon which a new trial was applied for, was it not insecure ground for the Government to go upon? I should not like to pronounce any opinion on that point.
55. *Mr. Lees.*] I see nothing about the depth to these properties. Take Gattenhoff's case for instance? We have taken the whole of his land. In the case of Elouis we only admit his title to the bit coloured green, but he contends that his right goes down to the water-frontage.
56. Then you do not know how much of Elouis' land you propose to resume; you mention the frontage, but not the depth? On the southern side there is a depth of 114 links; on the northern side of 60 links. In Brougham-street there is a frontage of 78 9 links, and a water-frontage of 100 links.
57. *Mr. Lee.*] Will you tell the Committee the exact frontage of the land which was the subject of action by Hill & Co.? 303 feet 7½ inches.
58. You have no doubt about that? No.
59. There was no settlement or agreement for settlement with Hill in respect to any portion of the land prior to the action? No.
60. He obtained a verdict of £200 per foot for the land? Yes.
61. What was your valuation for the land per foot? The original valuation was at the rate of £175 per foot, with 10 per cent. for forced sale.
62. There was also another area resumed from him of 235 feet, which was not the subject of an action. What was that valued at? At the rate of £131 per foot. Ten per cent. has to be added for forced sale, and £1,200 for buildings and sheds.

ON RESUMPTION OF LAND, WOOLLOOMOOLOO BAY.

J. Barling,
Esq.
5 Dec., 1894.

63. Could you tell the Committee when the final payment to Hill & Co. was authorised? Yes. I will put in the original Cabinet minute, which reads thus:—"Cabinet approves of settling the claim of the Messrs. Hill for £145 sterling per foot—the actual measurement to be adjusted—with interest at the rate of 6 per cent. from date of resumption, each party paying their own costs.—G.R.D., 6/3/94." On the 7th this paper was given to me by the Minister, Mr. Lyne. I will state what took place as far as I can remember it. Mr. Lyne gave me the paper, and I said to him, "I presume that this will now go to the Crown Solicitor for settlement?" Mr. Lyne, who, as far as I can recollect, was in somewhat of a hurry at the time, said "No." I then said to him, "It seems to me that if you do not wish it to be done in that way, the safest plan is for the parties concerned to accept on the original paper." I saw at once that if a letter was written by me possibly some mistake might occur in the exact wording of the Cabinet decision. If the parties accepted in the way I indicated, I thought there could be no possible mistake. Mr. Lyne approved of that being done, and the solicitors for Messrs. Hill & Co.—that is, Messrs. Stephen, Jaques, and Stephen—in the person of Mr. Cecil Cowper, in my office, and in the presence of my chief clerk, wrote this acceptance: "Having read the above minute of Sir George Dibbs, we hereby accept the above terms on our clients' behalf." One voucher, as I have explained, was sent to the Treasury on the 1st June, 1894, and the second was sent on the 18th June, 1894.

63. With reference to the practice of settling claims under reference to the Crown Solicitor, does the practice adopted in this instance prevail in the Works Department? No, I do not think it does prevail. I unhesitatingly say that, as a rule, I do not think it is a good practice. But I can quite see this, that there are certain cases in which it would never do to bind a Minister with red tape when in the public interest he might consider another course is advisable in order to preclude mistake. I was not at first quite sure of Mr. Lyne's reason for doing the thing in this way, but I saw it immediately afterwards. He wished to settle the question of costs, so as to prevent any question arising as to the terms of the settlement in this respect.

64. *Chairman.*] Did not something take place with regard to a letter? Mr. Hill came to me; I am not quite sure whether Mr. Belisario was with him or not, but my chief clerk was present. He asked me to give him a letter containing the decision of the Cabinet. I did not refuse to give it to him, but I said I certainly could not give him a letter of any kind unless I first got the sanction of the Minister to do it. I remember he went out of the room in a great tiff, using expressions which were not very complimentary to Mr. Lyne. I forget exactly what he said, but I am sure Mr. Lyne would not consider the expressions very complimentary. I afterwards informed Mr. Lyne, and he said I could inform Mr. Hill in certain terms, upon which I wrote this draft letter, under date of 7th March, 1894: "Dear Sir.—In reply to your personal inquiry respecting the matter of your claim for land resumed at Woolloomooloo Bay, I have to inform you that the matter has been settled by the Cabinet on the terms disclosed in the papers of which you are aware." I took good care not to quote the terms, for the reason I before stated.

65. *Mr. Lee.*] The terms were assented to by his solicitors? Yes. I was so careful about the matter that I did not even give him that letter without showing it to Mr. Lyne and getting his sanction to the letter being sent. Mr. Lyne, on reading the letter, inserted these words, which you will see in pencil after the word "Cabinet": "and agreed to by your solicitors."

66. *Mr. Molesworth.*] The letter of Mr. Hill's solicitors, in which they notify that they are prepared to accept £145 per foot, is the letter upon which the Cabinet minute was written. I should like to know whether that letter from the solicitors came from them freely, or whether it was the result of some communication, verbal or otherwise, which took place between the Department and Mr. Hill? That I could not say. Mr. Lyne will be able to explain all that.

67. When you received this Cabinet minute, did you suggest its immediate reference to the Crown Solicitor? As far as I can remember, I said, "I suppose this ought to be sent to the Crown Solicitor for settlement."

68. That is the usual practice in such cases? Yes.

69. Why was it not carried out in this instance? Mr. Lyne—although I did not know it at the moment, I saw it almost directly afterwards—was afraid that, unless the matter was settled at once, the question of costs would be revived. Of course, in doing the thing in this way, we completely stopped any further claim or dispute. Mr. Lyne subsequently explained in the House that the Cabinet instructed him to have the matter settled up somewhat in that way.

70. The settlement took place outside the Crown Solicitor? Yes; the papers were signed in my office.

71. Without reference to the Crown Solicitor? Yes. The Crown Solicitor was told by telephone, I think, a day or two before that a settlement was come to.

72. And this was done without the Crown Solicitor's knowledge? In the papers you will find a letter from the Crown Solicitor to me, under date of 5th March, 1894, in which he says: "Sir—I have the honor to inform you that I received your message by telephone this morning, to the effect that this action had been settled," &c. You will see, therefore, that the Crown Solicitor knew all about it.

73. You say that the Crown Solicitor received intimation of the settlement on the 5th March, but I see that the Cabinet minute is dated 6th March? Mr. Lyne, as far as I can remember, told me that the Cabinet decision was not in writing. Seeing the omission, he went to Sir George Dibbs and got it written. I think that is the explanation of the discrepancy in the dates.

74. But the official document bears date the 6th March? I necessarily have no knowledge of what was done in Cabinet, but, as far as I can remember, the explanation I have given you is the correct one. Mr. Lyne told me that the Cabinet had decided to settle upon the terms I have indicated, and I then telephoned to the Crown Solicitor, on the 5th March. Mr. Lyne, for greater safety, thought it better to have the terms in writing, and he therefore went to Sir George Dibbs and got the minute written.

75. *Chairman.*] Did Mr. Lyne give any instructions as to this document—that it was not to go out of the office until it had been signed by the solicitors? I forgot exactly what he said, but no one would dream of allowing such a document to go out of the office.

76. *Mr. Molesworth.*] Is it usual for a Prime Minister to sign a Cabinet minute on any other date beside that on which the decision is arrived at? Can we ascertain the date upon which this minute was passed by the Cabinet? I imagine that it must have been on the 5th March. I cannot say what took place in the Cabinet. No one but a Cabinet Minister would know. I can give no other information on the point beyond that which I have already given. The discrepancy which you suggest in the dates does not present itself to my mind as anything very remarkable, because, without being able to quote particular cases, I am sure I could discover cases where the Cabinet has decided matters without any writing whatever, and where

J. Burling,
Esq.
5 Dec., 1894.

where subsequently the Minister of the Department has gone to the Prime Minister and has requested him to put the decision in writing. I have no special case of that kind in my mind at the present moment, but still I think there have been such cases.

77. *Mr. O'Sullivan.*] Are you aware that no minutes or records are kept of Cabinet proceedings? I do not think that I can do better than refer you to Lord Macaulay, who, in his "History of England," puts it conclusively that a Cabinet is a body not recognised in any way by the law, which keeps no record of its proceedings, and which is a thing entirely outside the Constitution.

78. That being so, there could not possibly be any record of Cabinet proceedings, and that will explain the dating of this document on a subsequent day? I think that is the case. I do not think the date of the minute purports to be the date on which the Cabinet decision was arrived at. I have known instances where the decision of the Cabinet has not been signed by the Premier at all, but where the Minister has simply said, "The Cabinet has decided so and so." That is the only authority I want. I have no reason to inquire outside of my Minister. In other cases my Minister has written on papers, "The Cabinet has decided so and so." Sometimes the Prime Minister signs a minute at the time of the Cabinet meeting, and sometimes he signs it afterwards.

79. So far as you can gather from this document, it is an intimation from Sir George Dibbs that the Cabinet did arrive at that decision on a previous date? It must have been so, because my telephone message to the Crown Solicitor was on the 5th March, and the minute was on the 6th March—it must therefore refer to a previous date.

80. *Mr. Lees.*] Mr. E. A. Smith, the Crown Solicitor, said in his letter to the Attorney-General that this is not the first case in your Department in which settlements have been arrived at in this way? Yes. I think he refers to the case of Rochester.

81. Do you know that case? I am well aware of it.

82. Was it so settled? It was not exactly settled in that way, because in that case an officer of the Department was sent up to the Crown Solicitor, telling him that the Minister had settled the case. It was not a Cabinet case at all. The case was quite different in this respect: it was the settlement of an ordinary contract claim. There was no difficulty whatever in our settling the claim without reference to the Crown Solicitor, although it had been to him. Cases in which land is concerned must go to the Crown Solicitor, because it requires legal action to complete the discharge of conveyance to the Crown.

83. Have you any documents showing the various depths of these properties at Woolloomooloo Bay, and the nature of the improvements upon the land? The various depths are shown upon the plan I have put in, and, if you wish it to be done, I will have all the improvements described.

84. You will admit, I suppose, that in the resumption of land the value is regulated very much by the depth? Depth and, of course, position.

85. I think you will admit that if you resume one-half of any man's property, and you put a good Government wharf or road in front of the half left, there is some improvement in the value of that half? Yes.

86. Of course, the owner is deprived of his water-frontage; but he has a good, solid, commercial property in front of him? Yes.

87. Some of these properties seem to have had valuable tenements on them. That does not seem to have been set forth? Quite so.

88. Take the case of M'Quade's property—I know the whole of the land. The frontage is nothing but the natural shore, and there was a slight improvement in the shape of a rustic road? Yes.

89. But as you get nearer to the main cove, and come nearer to the buildings—the wharfs, sheds, and houses—there is a great difference, and if all this is set out before us we shall probably be able to see where the discrepancy in value comes in? Yes. I will have the improvements put in.

90. *Chairman.*] Mr. Hill and his solicitor waited upon you upon many occasions? Yes.

91. Was this done by the will of the Minister; did he appear willing at all times to see Mr. Hill? I do not think that I was ever present at an interview between Mr. Hill and Mr. Lyne as to any settlement in this matter. But I have been present in the room when Mr. Hill has been announced, and I know that Mr. Lyne expressed himself in such a way as to lead me to think that he felt harassed and bothered by Mr. Hill continually coming to him. He may have been seeing him oftener than I know of; but I know he was there very often. At certain times he would pretty well haunt the office.

92. What time elapsed between the resumption of Hill's land and the several payments? The *Gazette* notice was dated 4th February, 1890, and the vouchers were sent to the Treasury on the 1st June, 1894, and on the 13th June, 1894.

93. *Mr. Molesworth.*] Under whose instructions did you send the telephone message to the Crown Solicitor on the 5th March? Perhaps I had better explain that the case was set down for trial, and it had to be withdrawn from the list because the trials were coming on almost immediately. It was necessary that the Crown Solicitor should know of the settlement at once, so that he might withdraw the case.

94. I should like to know how it was that you sent the telephone message to the Crown Solicitor intimating that the case was settled on the 5th March, whereas, according to the Cabinet minute, it was not settled before the 6th March? I do not think there is much difficulty in explaining that. I am perfectly certain of this—that the message was sent subsequent to the Cabinet decision. The matter may have been settled in Cabinet without any papers at all. As throwing some side light upon the matter, I may mention that I remember, although I cannot fix the date, that Sir George Dibbs sent to me in reference to the matter. The reason that he sent for me was that Mr. Lyne was out at the time. I remember his saying, "Tell Mr. Lyne that Mr. Hill must come to a decision at once. No further amount will be allowed him." I gathered from that that Mr. Hill was doing his utmost to induce the Cabinet to give a larger sum. When Mr. Lyne came in, I gave him Sir George Dibbs' message. I mention that to show that from incident which came before me it must have been a matter for Cabinet discussion some time before.

95. *Chairman.*] As a matter of fact, the Cabinet meeting was held on the 5th March? I cannot say for certain.

96. *Mr. O'Sullivan.*] Is there not on page 36 of the Parliamentary papers a letter from Mr. Lyne in which he says that the Cabinet decided Hill's case on the 15th February? I am not able to say one way or the other whether that is so.

97. You will see that later on the Attorney-General says, "Neither have I forgotten that a decision of the Cabinet was earlier in date than the letter of the Crown Solicitor—of the 19th February—or my minute thereon." It would seem, therefore, that the decision must have been arrived at on the 15th, or, at all events, before the 19th? Yes. Judging from what Sir George Dibbs said to me, I gathered that

the

ON RESUMPTION OF LAND, WOOLLOOMOOLOO BAY.

J. Barling,
Esq.
5 Dec., 1894.

the case was settled, and that Mr. Hill knew of the settlement, and that he was doing his best to get a larger amount. I think it is a very fair supposition on my part that the Premier and other members of the Cabinet had been approached with a view to obtaining better terms than were embodied in their decision.

98. *Chairman.*] During the whole course of the proceedings in connection with these cases, have you observed, or do you know of any act of the Minister, Mr. Lyne, which could be looked upon as being of a doubtful nature. What I mean is, are you aware of any inducement being held out to him to bring this case to a close? So far as I am aware, I know of nothing of the kind. As I have already explained, had the case been an ordinary one I should have preferred it being settled by the Crown Solicitor; but I well conceive that there are exceptional cases which require different treatment, which must be within the discretion of the Minister, and founded upon reasons which he himself would have to vindicate.

99. *Mr. Wall.*] Do you think, considering the surroundings of this case, and having a knowledge of it from its initiation, that it was one of those exceptional cases which might advantageously have been settled in the manner in which it was settled? Taking Mr. Lyne's explanation, I should think it was desirable to settle it in that way. You will observe on reading the correspondence with the Crown Solicitor that he does not for one moment insinuate that the settlement was legally defective. It is admitted on all hands that the settlement was legally binding.

THURSDAY, 6 DECEMBER, 1894.

Present:—

MR. BAVISTER,

MR. CANN,

MR. FRANCIS CLARKE,

MR. LEE,

MR. WALL.

MR. LEES,

MR. PIDDINGTON,

MR. MOLESWORTH,

MR. O'SULLIVAN,

J. MORGAN, Esq., IN THE CHAIR.

George Hill called in, sworn, and examined:—

100. *Chairman.*] You are one of the parties interested in the claims in respect to the resumption of land at Woolloomooloo Bay? I am.

G. Hill,
Esq.

101. When was your land resumed? I do not know the exact date.

102. At all events, you sent in, through your solicitors, a notice of claim on the 25th April, 1890? Yes.

6 Dec., 1894.

103. What was the amount of your claim? I cannot say from memory.

104. You cannot say what value you put upon the land per foot? I cannot, speaking from memory; but you have before you documentary evidence, and it would be much better to refer to that.

105. You refused to accept the valuation put upon your land by the Government? We did.

106. And you instituted proceedings to recover the amount of your claim? That is quite right.

107. What was the verdict of the jury? £200 per foot.

108. I think, as a matter of fact, you claimed £300 per foot? We did.

109. Was the amount of the verdict awarded by the jury paid to you? No. The Government applied for a new trial, and got it.

110. On what ground? On the ground of misdirection of the jury. It was stated that we had not the power to deepen the water in front of our property. It was a very frivolous objection, I consider; and I do not think it was a fair one. The right has never been refused to anyone.

111. The Government refused on that ground to settle the claim, and later on I think you offered to settle it on some other terms? Yes.

112. I believed you offered to take the sum of £185 per foot? We did.

113. What reply was given to that? The Government would not give the amount.

114. Afterwards, did you make another offer? Yes.

115. What was it? That I cannot say from memory. This matter has been running on for four and a half years. But you will find documentary evidence upon all these points in the papers.

116. The second offer you made was not accepted? No; it was refused.

117. Finally, did you make an offer to take the sum of £145 per foot;—did you, or your solicitors, or anyone on your behalf, make an offer to accept £145 per foot? Yes; that offer was accepted by the Government.

118. Did you make the offer? I did not. I think Mr. Belisario and the manager of the Bank of New South Wales did it. It was almost out of my control at the finish.

119. What had the manager of the Bank to do with it? It was the manager of the Bank of New South Wales. The Bank held a mortgage over the property, and he was very anxious to get the matter closed; in fact, he insisted upon a settlement, and would not give us the power to go to law again. I think the manager of the Bank, as far as I can recollect now, wrote a letter in very strong terms demanding an immediate settlement. It was at the time the Banks wanted money. Practically, we were obliged to do as they told us.

120. If the matter had been left to you, and if you had not been involved with the Bank, you would not have made an offer of £145 per foot? If the matter had been left to me alone, I would not have taken a fraction less than £200 per foot; but Mr. Belisario had a share, I had a share, and a man who is now dead had a share, and his executors would not agree to go to law again.

121. Are you aware whether a valuation was made by Richardson and Wrench, Mills and Pile, and Mr. J. B. Thompson, the Government Valuator, at the early stages of these resumptions? Yes.

122. Do you remember the amount of their valuation? It was £175 per foot, I believe, and I believe 10 per cent.

123. Your object in refusing to take the money offered by the Government was to obtain more;—you believed that the property was worth a great deal more? Certainly it was worth more—I can prove that it was.

124. Judging from the sale of properties at Woolloomooloo Bay, have you any reason to believe that the land was worth more than the sum offered? I have very good reason to believe that it was.

G. Hill, Esq. 125. Do you know of any properties sold, or put under offer for sale, at Woolloomooloo Bay at a greater sum than you asked? I had a piece of property in Woolloomooloo Bay which was made land, without water-frontage. On many occasions we refused £160 per foot for it. There is a piece of land next door, belonging to the Standard Paint Company, for which they have refused £180 per foot. Mossman and Munro's property, without water-frontage, brought £21,000. You must recollect that the land which the Government resumed from us was all virgin land, which had never been disturbed. The land to which I have just been referring had been filled in, and it would have been impossible to put down foundations in it without a lot of trouble and expense. The tide runs underneath it.

126. None of the properties you mentioned have a water-frontage? No; they are only half the depth of the other two properties.

127. And you say that offers were made for those properties higher than the amount you received for your property with a water-frontage to the bay? Yes, considerably higher.

128. Finally, the offer of £145 per foot was accepted on your behalf by someone? By Mr. Belisario and the manager of the Bank. I do not know what the manager of the Bank said; but that is how it was settled.

129. The amount was paid to the Bank? Yes.

130. In the course of these transactions you had to see the Secretary for Public Works of the day, Mr. Lyne? Repeatedly; in fact, I was a nuisance in the office.

131. Your object in seeing him was what? To try to get a settlement in respect of the property in Woolloomooloo Bay.

132. Had Mr. Lyne any interest in the settlement of the claim upon that property, apart from his being Secretary for Public Works at the time? Not the slightest.

133. Was he to receive from you any consideration whatever because of the claim having been settled? Not the slightest in the world.

134. Do you consider that he acted in a friendly way to you throughout? I consider that he acted in a very harsh manner, indeed. He screwed me down to the last fraction.

135. In no way was Mr. Lyne interested, so far as you know, in the settlement of this matter, except in his capacity of Minister of the Department which resumed the land? As far as I know, he had not the slightest interest in the matter; in fact, I think he was antagonistic to me. And, after the Bank had been to the Department, and he knew my position, I think he was even harder with me.

136. Did you ever make an offer to Mr. Lyne that if he settled this claim he should receive any consideration whatever? Never.

137. And, so far as you know, Mr. Lyne received no consideration from you or from anyone else connected with these resumptions? None whatever. How was it possible?

138. *Mr. Lee.*] There were 541 ft. 3 in. of your land taken altogether? Somewhere about that.

139. And the area which you went to law about was 303 ft. 3 in.? Yes.

140. For that 303 ft. 3 in. you got a verdict of £200 per foot? We did.

141. The area of 235 feet was not referred to the Supreme Court? It was not.

142. According to the correspondence and your own letter, the 235 feet was valued by the Government Valuator at £131 per foot? Yes.

143. And you say that your final settlement with the Government was at the rate of £145 per foot? Yes.

144. You received £145 per foot, and the 235 feet was valued at £131 per foot? Yes.

145. In the course of a letter dated 15th February, 1894, and addressed by G. Hill & Co. to the Secretary for Public Works, you say, "The other portion of our land—say about 236 feet—has been valued by the Government officer at £131 per foot"? That is correct, and it is not correct, because it was £131 per foot with 10 per cent. added.

146. Therefore, in your final settlement you lost on the verdict £55 per foot on the 303 ft. 3 in., and you gained £14 per foot on the other area? No; we did not gain anything on the other area, because 10 per cent. had to be added for forced sale.

147. *Mr. Wall.*] Did the price stated in the letter contain the amount for forced sale? No; 10 per cent. had to be added. I think you will find that instead of gaining £14 per foot we gained nothing.

148. *Mr. Lee.*] In your final settlement of the claim you got £145 per foot with interest at the rate of 6 per cent. from the date of resumption, and without 10 per cent. added for forced sale? Yes; and nothing was allowed for the buildings. All the others parting with their land were allowed for the buildings upon it. There were valuable buildings on our land, for which we were allowed nothing.

149. There appears to have been a lot of correspondence and a great many interviews between yourself and the Secretary for Public Works about the settlement of this claim? There were a great many interviews.

150. Had you any interviews with Sir George Dibbs? I had.

151. Do you know about what dates they took place? I cannot give you the dates, because, as I have said, this matter had been going on for four years and six months.

152. And it was settled in March of this year? Yes; but I cannot give you the dates.

153. Did you see Sir George Dibbs about March of this year? I could not say whether I did or not. I do not think I did. I remember once wanting to see Sir George Dibbs, and his refusing to see me.

154. You made two offers after you obtained your verdict. In the one case you offered to take £185 per foot, and in the other you offered to take £150 per foot. Eventually the papers show that it was settled for £145 per foot. How did the final settlement come about? The final settlement was arrived at behind my back. It was settled by the manager of the Bank of New South Wales and Mr. Belisario.

155. Was the settlement of the matter brought about through any personal influence of yours with any Minister of the Crown? No; I think they robbed me when they settled it at £145 per foot.

156. Had you the assistance of any Members of Parliament? No.

157. Not at any time? No.

158. You wish the Committee to understand that, so far as you are concerned, if you had not been under financial pressure, you would not have assented to a settlement at £145 per foot? I certainly would not, and I will explain to you why I would not. We were offered £160 per foot for land in Woolloomooloo Bay without any water-frontage, and the Standard Paint Co., next door, refused £180 a foot for their land. Lahiff's land had a frontage of only 30 feet, and was only half our depth. It was useless as a water-frontage. Brown's land was 17 feet by 15 feet, it was useless for a wharf; but both those properties brought more than our land did, and the Government paid a sum of money into Court. I consider

consider also that our land was more valuable than the land the Government bought off the University. G. Hill, Esq. They bought it not at a forced sale, but in a regular deal, and they gave £192 per foot. I believe our land, which was in its natural state, was worth considerably more than the land in the Challis block. 6 Dec., 1894.

159. You were aware at the time the settlement was arrived at that the Government had obtained a new trial against you? They had, and on a very paltry excuse.

160. Did that circumstance influence you in accepting a lower amount? The Bank made us do it. That is what really influenced us. In reality I had no voice in the matter.

161. You were not a party, then, to opposing the application for a new trial? It was done in the usual way. The Government applied to the Full Court for a new trial and obtained it.

162. When the Government had decided, in Cabinet, to pay £145 a foot, did your solicitors consult you before writing the acceptance? I cannot tell you. If they did, you will find it all in writing.

163. The papers show that they did. Before signing the Cabinet minute, did they consult you? They must have done so.

164. Did you agree to the acceptance? I did not agree to it.

165. Would you not have to give your consent to the settlement? The settlement was made behind my back by the manager of the Bank of New South Wales and Mr. Belisario.

166. The Bank of New South Wales were mortgagees? Yes.

167. With power of sale? You may depend upon it they had us bound down as tightly as they could get us. They wrote to the Government asking them not to pay us the money, and we did not receive it.

168. I ask you once more, did you have to enlist any outside influence—Parliamentary, Ministerial, or otherwise—to obtain this settlement? None whatever. The settlement was obtained adversely to my interest.

169. *Chairman.*] Is it true that when you heard of the settlement having taken place behind your back by your solicitor, by Mr. Belisario and the manager of the Bank of New South Wales, you went down to Mr. Barling and kicked up a row with him? I did. I did not believe there was a settlement.

170. You used very strong language about it? It is very likely that I did.

171. *Mr. O'Sullivan.*] You say this matter was settled behind your back and adversely to your interests? Yes.

172. I presume that the Bank had you so tightly fixed in the financial crisis that you were compelled to do as you did—you had to accede to their terms? Of course, I had.

173. Had Mr. Belisario the power to go and make this arrangement with the Bank manager? Yes. He stood in the same position as I did.

174. He was a partner with you? Yes.

175. I suppose he went to the Bank manager, and between them they decided without regard to your wishes to accept the £145 per foot? They did. Of course I do not know what conversation took place.

176. We must accept that as the reason why you eventually took £145 for a property which you originally valued at £300 per foot? Yes. I had no voice in the matter at all. This thing had been carried on so long, for a period of four years and six months, as I think I have already said, that the Bank was getting sick of it, Mr. Belisario was sick of it, and I also was sick of it.

177. You said just now that in your opinion Mr. Lyne had treated you harshly? I think he treated me very harshly—he screwed me down to the last shilling.

178. What you mean is that he treated you harshly in beating you down in the price of the land? Yes, and I think that when he saw the Bank manager down there it made him a little harsher. He knew that we were compelled to sell, and he took advantage of that knowledge.

179. It is clear, at all events, that the Bank manager and Mr. Belisario settled this matter—you did not settle it? I did not settle it. It was settled, as you say, by Mr. Belisario and the Bank manager. I cannot say what conversation took place. For ought I know, Mr. Belisario may have been the more instrumental of the two in settling the matter. At all events, the Banks would not carry the matter on any further. They refused to give us further money.

180. Mr. Belisario was a partner with you in all this land? Yes.

181. You were simply a victim of circumstances, caught on a lee shore at a time of financial depression, and you were compelled to take a price which you would not otherwise have taken? Yes.

182. Suppose you had resisted, and said that you would not let the land go at the price it did, what would have happened? Mr. Belisario would have sold it to the Government. I had no voice in the matter.

183. *Chairman.*] Whom did the Bank manager and Mr. Belisario see in this matter;—are you aware? I think they saw Mr. Barling.

184. *Mr. Molesworth.*] You said just now that this matter was settled behind your back, and without your knowledge and consent? Yes.

185. Was the offer made to the Government by Messrs. Stephen, Jaques, and Stephen for a settlement also made without your knowledge and consent? I do not say that it was; but the final settlement was behind my back.

186. Let me refer you to two letters written by Messrs. Stephen, Jaques, and Stephen, to the Under Secretary for Public Works, under date the 3rd March and the 6th March. They are as follows:—

Sir,

We have the honor to inform you that we have been advised by our clients that this action has been settled with your Department, and that the rehearing, which is set down for Monday, the 12th instant, will not take place.

On inquiring at the Crown Solicitor's Office, this morning, we find that they have received no intimation of the settlement of the action, and we would therefore feel obliged if you will inform us at once whether our clients are correct in considering that the action is settled.

If you require from us a formal intimation that our clients are prepared to accept the amount which we are instructed the Government are prepared to pay, we shall be glad to give it.

We have, &c.,

STEPHEN, JAQUES, AND STEPHEN.

P.S.—An early reply will be esteemed a favour, as the action is set down for hearing on such an early date.—S., J., and S.

Sir,

We have the honor, following up our letter to you of the 3rd instant, to now notify to you, on behalf of our clients, that they are prepared to accept the sum of £145 per foot for the whole of the land, having about 554 feet frontage to Woolloomooloo Bay, together with interest from date of resumption.

We have, &c.,

STEPHEN, JAQUES, AND STEPHEN.

G. Hill, Esq. I should like to know if those letters were sent with your knowledge and consent? I could not say now whether they were or not. There were so many interferences by Mr. Belisario on one day and by the
6 Dec., 1894. Bank on another that I cannot remember precisely what took place.

187. But Stephen, Jaques, and Stephen were your recognised solicitors? Yes.

188. Then they would scarcely have sent these letters, and specially the letter under date of March 6, without your knowledge and consent? They may have done so. Whatever they did I was bound by it. I was bound by what Mr. Belisario did.

189. Messrs. Stephen, Jaques, and Stephen were acting as solicitors for yourself and your co-partners? Yes.

190. They acted for the firm? Yes.

191. Then I suppose they would act under instructions they received from the firm? They might receive instructions from me or from Mr. Belisario.

192. *Mr. Wall.*] Mr. Belisario would have power to give instructions to them? Yes, just the same as any one of the rest of us.

193. *Mr. Molesworth.*] You think that any one of your co-partners would act in a matter of this kind without consulting his fellow-partners? It is possible that he might.

194. Would he go so far as to make a definite offer for settlement? Yes. There had been so much haggling about it that we were all sick of it.

195. Is it not most unusual for a partner to act without consulting his co-partners to the extent of making an offer for the settlement of a claim upon so large an estate? It is very likely we were all consulted. But there were hundreds of applications and offers in connection with the matter which, as I have said, ran through four years and six months. It is hard now for me to tell exactly what occurred.

196. I am now referring to the final offer upon which the settlement was based, and what I want to know is whether it was made with your knowledge and consent? I tell you distinctly that it was settled behind my back. I do not know the day it was settled.

197. *Mr. Wall.*] Immediately you received the information of the settlement you interviewed the Under-Secretary for Public Works? Yes, I told him I did not think the matter was settled.

198. *Chairman.*] When you made an offer of £185 per foot to settle this matter, did Mr. Lyne tell you that it was of no use to make an offer of that kind, and that he would not submit it to the Cabinet? Yes. He ridiculed the idea of £185 per foot, and said he would not submit such an offer to the Cabinet.

199. He refused to consider it? Yes.

200. Did you ask Mr. Lyne what he thought the Government would pay, and did he say that they were not likely to go over £130 or £140 per foot;—do you remember his saying that? Yes, I do; he did say that.

201. This took place when you put in your first letter offering to take £185? Yes. I may mention that we refused £5,000 a year for Sheehy's land.

202. Was not this land resumed at a time when land generally was very high in price? Yes, it was very high.

203. Did you at any time offer to keep the Ministry in power by the votes of members of the Assembly if a settlement were made? No. How could I do such a thing as that?

204. You at no time endeavoured to influence the votes of any Members of the House with the object of getting Mr. Lyne, or any member of the Government, to settle this matter? No. If anything, I wished Mr. Lyne would go out of office.

205. Why? Because I could not get a settlement with him.

206. Were you under the impression that some other Government would have dealt more favourably with you? No one dealt more hardly with me than Mr. Lyne tried to do.

207. You were under the impression that another Government might look more favourably upon your claim? Yes, seeing that Mr. M'Millan had offered £175 per foot, and had written a letter saying he was willing to pay that price for the land.

208. Therefore you thought that another Government might not be so harsh with you? It was impossible that they could behave worse to us than Mr. Lyne did.

209. You are sure that at no time did you offer to procure votes for the Government? How could I secure votes for them. It is nonsense to talk about such a thing.

210. Did Mr. Lyne ask you personally to secure votes? Never.

211. If it has been stated that there have been improper proposals either from Mr. Lyne to you, or from you to Mr. Lyne, is that statement true? There never was any improper proposals made either by Mr. Lyne or myself.

212. Either by you to him, or by him to you? None whatever. I can most positively swear that.

213. *Mr. Lees.*] Is there a lane dividing the two blocks of land in dispute belonging to you and your partners? Yes.

214. What lane is that? It is a lane running down to the water from the top of Victoria-street. I do not know the name of it.

215. What is the width of it? It is about 6 or 7 feet wide—it might be more or it might be less.

216. The properties in dispute have a water frontage, and back up to Victoria-street? Yes.

217. Can you tell us how much land the Government resumed from you. Did they propose to take the whole of it from the water up to Victoria-street? Yes. You will see that one piece of land adjoins the University land. The next piece of land was Lahiff's. The Government paid so much into court—it was only half the depth of ours, and had only a 30-foot frontage.

218. What is your full depth? I could not say from memory.

219. This block of yours with the 253-foot frontage to the bay has a smaller frontage to Victoria-street? Yes.

220. Is the frontage to Victoria-street a good building site? It is the very best site for a wool store that you could possibly have, and I will tell you why. It has a precipice behind, and by building a store you would not have to raise and lower your wool. Hill, Clark & Co.'s store, for instance, is the worst on the quay, while Flood & Co.'s is the very best, because of the saving of labour in raising and lowering.

221. *Chairman.*] You consider the land a good building site because of this cliff behind it? Yes, it is the very best possible site you could have for a wool store.

222. *Mr. Lees.*] What tenements are there on the land? Very good tenements.

223. What are they? Sheehy's store and house, a first-class patent slip, and another very good house on the property bought off Mrs. French.

224. With reference to Block No. 2, the piece to the north of the lane with the 50-foot frontage. Does G. Hill, Esq., the description of the water frontage apply to the narrow frontage of the tenements? Look at Brown's piece, it is only 17 feet by 15 feet, and Lahiff's, which is only 30 feet, with half the depth. They are absolutely useless for vessels. You could not lay a vessel there. You must have a good strip of land for a vessel to go alongside it.

6 Dec., 1894.

225. Are the two disputed pieces of greater depth than any of the pieces about which a settlement has been made? No. 2 block, in my opinion, is the best, and is fit to hold a vessel. It is of a greater depth than the pieces upon which a settlement has been made.

226. Do you think that because it excels to that extent that it is, therefore, so much more valuable than the other pieces? It will hold a vessel, and you want about 250 feet to do that.

227. So will McQuade's property? Yes; but there is no back way to that. How can you get on to McQuade's land?

228. Macleay-street, Potts' Point, makes on to McQuade's property, does it not? I do not think so.

229. Is there not a gate at the extreme end of Macleay-street? I do not think you can get on to the land that way.

230. But by resuming you could reach it? Yes; but not in any other way.

231. I gather from the printed papers before us that your desire was to effect a settlement with the Government as rapidly as possible, because of the monetary transactions which you wanted to complete? That is so.

232. *Chairman.*] You know something of McQuade's property. The frontage is much wider than the back portion? Much wider.

233. I am referring to the portion No. 8 on the plan? Yes; I consider that McQuade got a better price for his land than we did, although he only got £85 per foot. At one end of it, owing to the shape of the land, you would see that it goes to a point; he was getting £80 for an inch and so on.

234. Is the lane between the two blocks which you have referred to wide enough for vehicular traffic? I do not think it is.

235. *Mr. Bavister.*] Is it not a fact that the depth of McQuade's land is as great as the combined depths of your No. 2 block and Gattenhoff's block? I do not think so.

236. *Mr. Lee.*] Mr. McQuade was paid on the water frontage? Yes.

237. And from the shape of the land the first foot of the frontage would not be a foot deep? It would only be an inch deep. Mr. McQuade said he would not have accepted the price offered except that he was very ill indeed, and wanted to go to England.

238. *Chairman.*] The valuation by Messrs. Mills and Pile, Richardson and Wrench, and the Government Valuator in respect to your land was £175 per foot? Yes, with 10 per cent. for forced sale.

239. Was that for the whole of your land? No; the No. 2 block only.

240. *Mr. Bavister.*] You spoke just now of a part of McQuade's frontage being only an inch in depth. Having regard to the whole frontage and depth of McQuade's block, is it not a fact that there is a considerably greater area in proportion to the frontage than in the case of either of your two blocks? I could not swear that—the plans will show you.

241. *Mr. Lees.*] Does not the resumption of the Challis Estate block very largely improve the value of your property? No.

242. Not by bringing a Government road and wharf up to your boundary? It would if they were to give me a road through.

243. *Mr. Cann.*] What do you consider would be the annual rental value of the whole property with the various tenements? I can give you some idea. We have three vessels there discharging stone. The Government charge is 6d. a ton. It means 2,000 tons a week. That would be for Sheehy's piece. Another great advantage in having a wharf of your own is that you can get vessels away so much more quickly. If a vessel loses a trip it means a matter of £60 or £70. I have already said that we were offered £5,000 a year for Sheehy's piece.

244. *Mr. Lees.*] Was that a private offer? Yes.

245. *Mr. Cann.*] In addition to what you have mentioned, there are the tenements occupied for warehouse and residential purposes to be considered? Yes.

246. Could you give us an idea of the total annual value of the property? I could not. Of course, if the land is left idle, you may say that it would be worth very little; but immediately you make a wharf there it will bring in a first-class income.

247. It is rendered valuable by other money being spent upon it? Yes.

248. *Mr. O'Sullivan.*] I presume you have noticed the evidence which has been given by Mr. Kethel and other wharf-owners in regard to the value of your property, which they state to be about £80 per foot. How do you account for a wharf-owner such as Mr. Kethel giving that evidence? Their evidence is obviously wrong, and I can prove it to be so. A great many wharfs were sold about the time you are referring to in Darling Harbour. Henry Clark's wharf was sold for one; then the Cox and other properties were sold at exorbitant prices. We were asked £180,000 for the Moore wharf. For a wharf at Pyrmont, next to the Sugar Company's wharf, they wanted £25,000.

249. Mr. Kethel's evidence tends to depreciate the value of your property? I think it would be advisable for the Committee to examine all the wharfs at Woolloomooloo Bay, and to see for themselves the land in the vicinity which was sold at that time. I have already referred to a piece of land there for which we were offered £160 a foot. The Standard Paint Company refused £180 a foot; there was no water frontage, and it was made land; besides, it was only one-half the depth of the other property. If that price was offered for their land, surely water frontage is worth considerably more.

250. You have had considerable experience in wharf property, and I want you to tell us how it is, if you can, that Mr. Kethel came to put such a low value upon your property? I could not say.

251. Do you think he could have taken into account the true value of the position at Woolloomooloo Bay? I think it is the best position bar the Circular Quay.

252. Are the Woolloomooloo Bay wharfs increasing in importance and value from a shipping point of view? Very much indeed.

253. There has been a large access of shipping to that part of the harbour during the last six or seven years? Yes. From inquiries I made last year in the middle of the wool season, I found that they had shipped over 80,000 bales, to say nothing of a good many tons of tallow and so forth.

254. Is it not a fact that the California mail boats have come to Woolloomooloo Bay in recent years? Yes.

255. Do any other steamers come there? Yes; there were four steamers there last week.

256. To what ports do they trade? They were large wool ships.

- G. Hill, Esq. 257. How long is it since this trade sprung up at Woolloomooloo Bay? It is only within the last six or seven years.
- 6 Dec., 1894. 258. There was a time, not many years ago I believe, when Woolloomooloo Bay was almost deserted by shipping? Almost deserted.
259. About eight or nine years ago, with the exception of a few coasters, Woolloomooloo Bay was little used by shipping? Very little.
260. Since the completion of the new wharf and other accommodation, a larger number of ocean-going steamers have come to the Bay? A very large number indeed.
261. Some of these ocean-going steamers, the Californian mail boat, and others, take away wool? Wool, tallow, and hides.
262. Vessels also come there from Puget Sound and other parts of America? Yes.
263. All this increase of trade has occurred within the last six or seven years? Yes.
264. And it has tended to give value to the property in the neighbourhood? A very large value.
265. How far is your property from the place where the California mail steamer comes in? It is rather difficult to say; but by water, I think it would be about 100 yards.
266. How far do you think it would be round the wharf? About 150 yards.
267. So that this land, which Mr. Kethel values at only £80 per foot, is really within 100 yards of a wharf where some of the largest steamers which come to our port berth? Yes.
268. Under those circumstances, does £80 per foot seem a fair valuation to put upon the land? I think it is a very unfair valuation. I think I should receive £200 a foot for the land, although the Government bought it for £145. Mr. Knox, one of the trustees, sold the Challis Estate land to the Government for £192 per foot.
269. That land adjoins yours? Yes.
270. The gentleman to whom you refer, who is one of the trustees for the University, in giving evidence valued your property at £50 per foot? Yes.
271. How do you account for that? I think he knows nothing about the value of land.
272. *Mr. Lees.*] The fact of the Challis Estate block being resumed would make your land valuable? I have already said that it would do so if we are given a road.
273. Your land comes up to the quarry? Yes.
274. Do you think that the fact of that quarry being on the Victoria-street side operated upon the mind of Mr. Kethel and other gentlemen, and induced them to undervalue your property? I could not answer that question.
275. Do you think that the circumstances would weigh with them that there would be no approach to the property from Victoria-street except for the purposes of a wool store? I could not say that.
276. Is it not a likely thing to operate upon the minds of these gentlemen, who might not consider the erection of a wool store? I think the cliff there makes the land more valuable, but another man might think that it would make it less valuable.
277. *Chairman.*] Mr. McCredie, an architect, values your land at £208 per foot? Yes.
278. One of the reasons he valued it at £208 was that he thought it suitable for store purposes? I believe he gave the Government a valuation and plans showing what could be done with the land, and what interest it would produce.
279. By whom was he employed? By the Government, I suppose. If you ask me my candid opinion, I believe he was employed by the Crown Solicitor.
280. *Mr. Piddington.*] What did you originally give for this property when you purchased it? We bought it in eight or nine different lots. Some of it was bought of boys and girls who had just come of age. I think we gave old Mrs. Peasley £2,500 for her life interest. There is documentary evidence of all these facts, and it would be much better for you to obtain them from the documents than to refer to me in the matter.
281. *Mr. Bavister.*] If you turn to the Parliamentary papers you will see on page 28 a list of valuations for the plaintiff. Among the names given is that of McCredie, civil engineer. Were these persons employed by you or in your interest to give these valuations? I think Mr. McCredie was employed by the Government when he gave the valuation of £208 per foot. When he was afterwards examined in the Court he appears to have valued the land at £200 per foot.
282. *Mr. O'Sullivan.*] Who called him as a witness? We did, I think.
283. *Mr. Bavister.*] With regard to the natural formation of the land, you have said that there is a very steep cliff between Victoria-street and the water frontage? Yes.
284. Can you give us an idea as to how far back the face of the cliff is from the Victoria-street frontage? I think it abuts close upon Victoria-street. I think the land is formed exactly as a man would want it for the purpose of a store. If you consider the position of some of the stores at Circular Quay, you will get a first-class illustration of the advantage of the cliff in this case.
285. *Mr. F. Clarke.*] The closer up to the street the cliff is the better? Yes.
286. *Mr. Lees.*] What would be a fair value for the tenements on your property—the two disputed pieces? On No. 2 block I should think £2,000 or £2,500 for the tenements and slip.
287. What would be the annual value? About £250 a year.
288. What is the value of the tenements on the other block? Say, £5 a week.
289. Were there any improvements upon the Challis block? No; but there might be a coal-shed—I am not quite sure.
290. Or upon McQuade's property? I think there was a boat-shed.
291. *Mr. O'Sullivan.*] Do you know an old boatbuilder named Joe Donnelly? Yes.
292. Has he not a shed there? Yes.
293. From whom does he rent it? From us.
294. How much does he give you? 30s. a week.
295. What is the size of the shed? It might be 30 feet wide, but it is rather hard to say.
296. Would that be a fair rental for the accommodation there? I should say so. Of course, you must remember that the land is now unimproved. Directly you put stores and wharfs there you at once get a large return.
297. *Mr. Cann.*] You said just now that the tenements on one of your blocks would bring in about £5 a week, and that on the other block the buildings would be worth £250 a year? Yes.
298. What do you estimate the wharfage at? I have already said that we refused for Sheehy's piece £5,000 a year.
299. As a business man, what do you think would be a fair rental to pay for the whole frontage? Say, £10,000 a year—it might be more. It depends on the accommodation and the nature of it.

ON RESUMPTION OF LAND, WOOLLOOMOOLOO BAY.

William John Lyne, Esq., M.P., sworn and examined:—

300. *Chairman.*] You are the Member for The Hume in the Legislative Assembly of New South Wales, and you filled the office of Secretary for Public Works in the late Administration? Yes.

W. J. Lyne,
Esq., M.P.

6 Dec., 1894.

301. The desire of the Committee is to get as much information as possible from you concerning the resumption of land at Woolloomooloo Bay;—perhaps it would be convenient for you to make a statement to the Committee? I know nothing about the original resumption of this land. It was resumed by the preceding Administration. I think Mr. McMillan brought in a Bill and passed it through Parliament for the purpose of resuming this land. He then brought in an amount of £200,000 on a Loan Bill. I think that was in October, 1889. That was for the purpose of paying partly for this land, and also for some land which he proposed to resume in Erskine-street, Darling Harbour. When I took the position of Secretary for Public Works the matter came before me in the ordinary course, and I found that offers of payment had been made and had been accepted in the case of the Challis Estate on a valuation made by Richardson and Wrench, Mills, Pile, and Wilson, and J. B. Thompson, the Government Valuator. The valuation was about £175 a foot, and 10 per cent. forced sale. That, of course, had gone beyond my control. An offer had also been made and accepted in respect to the 30 feet belonging to P. Lahiff of £150 per foot for the 30 feet. That is shown as in the centre of the property which was resumed from Hill, Bellisario, and others. I am speaking now of the whole of the Hill property. £125 per foot had also been offered upon a valuation by the same men, I think, for 15 feet belonging to a Mr. J. Brown. That had not been accepted. I withdrew that offer after submitting it to the Cabinet, and offered £75 a foot. I considered that that was sufficient for a small portion of 15 feet which was practically useless for shipping purposes.

302. *Chairman.*] Do you remember the depth of that piece of land? It was 132 feet on the south side, 127 feet on the north side, by 15 feet water frontage. The depth of Lahiff's property was 143 feet on the south side, 132 feet on the north side, by 30 feet frontage. I looked upon both these properties as almost useless for any commercial purposes as far as wharfage was concerned, but especially the 15 feet. I therefore withdrew the offer, and I withdrew it against the advice of the Crown Solicitor, Mr. E. A. Smith. In the first place he advised a withdrawal, but he afterwards wrote, advising me not to withdraw. A letter was written by him; it is among the unprinted papers—I am referring now to the Brown property—and I believe it is dated 7th November, 1892, in which he says he does not think it worth while withdrawing this offer. This would be a criterion as to price for other land, as the difference would be small, even if the lesser amount were paid. However, I withdrew the offer, and made an offer of £75, which Mr. Brown refused to take. He took us into Court, and the verdict and costs brought the amount up to £156 some odd shillings a foot. The Crown Solicitor wrote when the case was over, and said that the verdict would appear to be £160 a foot, deducting the buildings. I begged to differ from him, because I did not think the buildings represented anything like the difference. What I want to show to the Committee is that through fighting the case in the Court we had to pay a great deal more than we should have had to pay if we had settled at the offer of £125 per foot.

303. *Mr. Lees.*] What was the actual verdict, apart from the costs? I cannot say at this moment. Now, with reference to Mr. Hill's case, I may mention that Mr. Hill saw me a great many times—I am afraid to say how many. He was always worrying me, and I was very much put out over the case, because every few days I was worried to get the case settled. I recognised that it was not fair to the parties to keep this case without an offer, because if the Government resume land the parties cannot sue until the Crown makes an offer. This land had been taken on the 4th February, 1890, and in 1892, two years afterwards, no offer had been made. I was pressed to make an offer, with a view, I suppose, if it were not accepted, of the matter going to law. I took the matter to the Cabinet, and, after discussion, the Cabinet authorised me to offer £100 a foot. The Committee will see that that is so if they look at page 18 of the Parliamentary papers.

304. *Chairman.*] Was that offer made before Hill and party went into Court? Yes; they could not go into Court until they got the offer. If the Committee refer to the same page of the Parliamentary papers they will find a letter from the Crown Solicitor, in which he suggests that a property containing, practically, 533 feet is of the same value per foot as a property of 15 feet. That I looked upon at the time as an absurdity. I said then, and I say now, that a property of 533 feet is worth a good deal more per foot, with a water-frontage, than a property of 15 feet frontage is worth. At all events we offered £100 a foot, which was refused. I considered, and I think the Cabinet considered, that if we offered £75 per foot for 15 feet, £100 per foot was a proportionate offer for 533 feet. The offer was refused, and the case was taken into Court. A trial took place, and a verdict of £200 per foot was obtained. With reference to that verdict, I should like to direct the attention of the Committee to page 25 of the Parliamentary papers, which contains the summing up of the Chief Justice. The Committee, if they read the papers, will see that the Chief Justice was against the other Judges upon the question of the right of deepening the water-frontage. He held that the right existed, but when the appeal was made for a new trial the other Judges over-ruled him. The Chief Justice said: "Mr. Gregg gives the value at £175, Mr. Mills £165 all round, Mr. M'Credie, who made this plan, and who went into a very elaborate calculation of what you may think a very impossible claim, and upon whose evidence not much reliance can be placed, on the ground, not that he is not speaking the truth, but that what he puts forth is incredible, values the large piece at £280 and the smaller piece at £175 per foot, and he bases this value on the assumption that large buildings costing large sums of money will be erected, that an approach to the wharf property would be made, and that two jetties would be run out into the harbour." Later on he says: "Then there was Mr. Martin, who is a wholesale ironmonger, and who is connected with Lasseter. He says he has had a good deal of experience as a land-buyer, but I do not know that he has had anything to do with wharfs. Then there is Mr. Taylor, who values the property at from £170 to £200. He is the owner of Russell's wharf, and he ought to know his business. What I have said about other wharf-owners applies to him; and the only question is, whether, looking at the large number of witnesses on the other side, you can place reliance on Taylor's evidence, as opposed to the evidence given by the witnesses for the defendant. Of course he is a reliable witness, and you ought to take his evidence into careful consideration, and deal with it as with the others. Then there is Clarke, who is a produce merchant." That is Mr. Henry Clarke, who was a Member of the late Parliament. I quote this because it seems to me that many witnesses, men who ought to know, express very strong opinions as to the value of this property—Mr. Clarke, Mr. Martin, Mr. Taylor, Mr. Gregg, and others. I looked into the

W. J. Lyne, Esq., M.P. the case, and I got a copy of the list of witnesses, which the Committee will find on page 28 of the Parliamentary papers for the plaintiff. I obtained that to see whether in my opinion there was any good evidence as far as the plaintiff was concerned. I must say that I found a good deal of the evidence much stronger than I expected. When the new trial was applied for, I had a conversation with Sir George Dibbs about this matter. He said he thought it would be better to leave it until the new trial was obtained, and that we should then have a stronger position for a settlement if it were obtained. Therefore, I let the matter rest until the trial had been obtained. Mr. Hill saw me once or twice, and I told him that the Government would be prepared to settle at a reasonable value, but not upon the high value he seemed to place upon the land. I also told him that I thought the Government would be prepared on a fair basis to settle for the whole of the land, and not to have a fight over one piece and to leave the other to be settled afterwards, and perhaps to have the same fight over that. Mr. Hill then put in a letter offering to take £185 a foot all round. When he put that in I told him I did not think it was of any use submitting that price to the Cabinet, and that I thought it was a good deal too high—a higher price than I could advise the Cabinet to pay. I said that unless he was prepared to come down to something reasonable I did not think his letter was worth bothering about. I am not quite certain, but I do not think that I ever submitted that letter to the Cabinet. The matter drew on until we got notice from the Bank of New South Wales, in a letter which you will find on page 30 of the Parliamentary papers, dated 30th December, 1893, instructing us to pay any money claimed in respect of this land to the Bank. Then the matter, so far as the owners were concerned, seemed to become very acute, because they pressed very hard indeed to get a settlement. But even then they would not come to what seemed to me to be fair terms. I refused to take any action until I received a letter, under date 15th February, offering to settle at £150 per foot all round, with the usual percentage. I took that letter to the Cabinet. The Attorney-General was present. It was upon that letter that the discussion took place as to what we should pay for this land. The Cabinet decided they would not give £150 a foot, but finally it was agreed—of course, it was only known to ourselves—that if the other side made an offer of £145 per foot we should accept it, but that we would not make the offer in the first instance. Sir George Dibbs refused absolutely to put any memorandum from the Cabinet on the papers. Some delay arose—I do not know the cause. I ascertained that they would offer to take £145 a foot. The trial was to come on at the beginning of March—I do not know the exact date—and the claimants for this money ultimately, about the 1st or 2nd March, as far as I can judge, but I have nothing to guide me as to the day, agreed to take £145; but they then wanted 10 per cent. for forced sale, and that had not been discussed by the Cabinet. I was not in a position to say whether 10 per cent. would be given with the £145 or not, and I refused to do anything until I had taken the matter to the Cabinet again to ascertain whether it was intended that the 10 per cent. should be paid. When I took the matter back again—I think it was the 1st or 2nd March—it was again discussed, and it was decided that we should not pay 10 per cent. for forced sale or plaintiff's costs. One of the parties, I think it was Mr. Hill, thereupon refused to make any offer at all at that time or to settle the matter; but I think the manager of the Bank of New South Wales or some other person came to the Under Secretary for Public Works, having heard that we were prepared, if they offered it, to take £145 a foot without the percentage for forced sale, for the purpose of making the offer. Mr. Barling came in to me to know what he was to do. I told him that the Cabinet had desired me not to let the matter go out of my hands until it was absolutely clinched, so that there could be no withdrawing, and that is how the document came to be signed by Stephen, Jaques, and Stephen in Mr. Barling's office. I took the papers to Sir George Dibbs, shortly after the Cabinet meeting, for my own security, and I got him to endorse upon them what the Cabinet had agreed to. That is how it is that the endorsement of Sir George Dibbs is dated the 6th March. There was no Cabinet meeting on that date. I took the papers to him after the decision of the Cabinet, and the day I acted definitely upon them. It was necessary for the Minister to secure himself—to have some record to show what the Cabinet had decided. Sir George Dibbs wrote the Cabinet minute which appears among the Parliamentary papers, and Mr. Barling got the solicitor to sign the document in his office. Before that, however, on the 5th March, he sent a telephone message to the Crown Solicitor. As far as I can remember, it was on the day when I became thoroughly aware that the parties would accept £145 a foot, and made that offer. The Crown Solicitor was told what had been done, and he was also told that he had better withdraw the case from the Court, or something to that effect. I knew nothing more about the matter until I got the first letter from the Crown Solicitor with the minute of the Attorney-General, which appears on page 34 of the Parliamentary papers. If the Committee will read that letter and minute they will find that the Attorney-General says, according to the Crown Solicitor's letter, that a meeting of the Cabinet had been held after the matter was decided, at which I was not present, and that there seemed to be an expression of opinion in favour of not settling the case. I replied to the Attorney-General that it was a matter of which I never had any knowledge, and that that was the first I had heard about it. The Committee will see that in one of the letters the Attorney-General says he was aware that I was not present, but that that was the effect of the conversation which had taken place. The Committee will understand that, not knowing anything of the conversation referred to, I did what was decided should be done. If any Ministers wanted me to do otherwise they should have let me know, when the matter would have been remitted to the Cabinet again.

305. Chairman.] Was there a Cabinet meeting to deal with Hill's case after it had been decided to pay £145 a foot? There was one after the 15th February.

306. Dealing with Hill's case? Yes.

307. When was it held, and why? It was held in consequence of my not being certain whether the Cabinet intended to pay 10 per cent. for forced sale with £145.

308. No Cabinet meeting was called after that to consider the matter? There never was a Cabinet meeting to deal with the matter. Two or three members of the Cabinet met together, but there was no regular Cabinet meeting. The Attorney-General dropped down to see Sir George Dibbs, and perhaps Dr. MacLaurin may have been present, but there was no Cabinet meeting. I had heard nothing about it. As far as I can judge, the conversation was in consequence of a telegram which the Crown Solicitor had addressed from Wentworth Falls to Mr. Parkinson, in these terms:—

Documents received as minute of last instructions not sent. Impossible for me to say whether alleged settlement final and binding. Tell Curtis to do nothing towards postponing or withdrawing case without express instructions of Attorney-General. I take no responsibility. See Attorney-General, and say I protest against action taken, as settlement

on

on terms mentioned is monstrous, and in manner grossly irregular. If possible, settlement should not be recognised, but W. J. Lyne, trial proceed. I shall return to-morrow. Could see you at my house Saturday evening or Sunday if necessary. Perhaps, Esq., M.P. if settlement not conclusive, case might be adjourned till 2 o'clock, Monday.

ERNEST A. SMITH,
Crown Solicitor.

6 Dec., 1894.

I think in the first place that that is an impudent and insulting telegram. He speaks of an "alleged" settlement, whereas he had received intimation from me, through the Under Secretary of my Department, that the case had been settled. The Attorney-General, I understand, sent the telegram to Sir George Dibbs—I think on the Saturday night. I had no knowledge of the telegram until the whole thing had been settled and the document had been signed in my Under Secretary's office; and I wish to say this in my evidence—that the action of the Crown Solicitor had been for some considerable time such that he practically took control of my Department on matters of fact in connection with land matters. I resented it. I do not think he had a right to do anything of the kind. As often as he was required I asked him to come and see me about various matters, but I would never consent to hand over dozens of big matters in connection with land resumptions, contracts, and other things in my Department to a Crown law officer so that he might decide upon matters of fact. He may decide matters of law, but I am as good a judge as he is as to whether a settlement would be an equitable one or not. My wish all through, while administering the Department, was to settle any reasonable claim that I could without going to law, because, as the Committee will see from these papers, the experience I had of sending any land case to the Crown Solicitor's Department was not encouraging, for we never won practically one case. We had to pay very heavy sums in costs. The Crown Solicitor takes exception to that statement I know. It is made in one of my minutes, and he instances the case of Blue's, which was won in the Courts. I had said that there was no case in all the cases which I had had before me which had been won, although we had gone to great expense. I looked at Blue's case, the particulars of which are given on page 40. The amount claimed was £14,323; the amount offered was £4,070; the amount awarded was £9,639. He could compel us to go to arbitration, and he did compel us. I thought the arbitrators' award an exorbitant one, and would not accept it, and let the case go into Court. I think there was an offer of £7,500 to settle the matter before it went into Court, and the verdict of the jury was £7,600. The cost of the award was £1,310; the cost of the Crown Solicitor's Department I never could find out; but they were very heavy. If you add these together, you will find that we might just as well have paid the £9,639. We should have been no worse off. I do not know whether the Committee wish to hear anything further from me upon that phase of the question.

309. *Mr. Lees.*] I think you might now express an opinion, after what has been said, as to whether it is worth while referring anything to the Crown Solicitor in the matter of land resumptions except for legal information? If the Minister decides that he cannot come to a settlement, then the matter in its legal aspect must go to the Crown Solicitor, but in any other aspect I certainly do not think the Crown Solicitor's Department is a department that can very well judge the value of land in respect to which claims are made. I do not wish to mention any particular case, but there were innumerable cases, dozens of cases, in my Department of immense importance that never went to the Crown Law Office at all until they had to prepare the documents for final settlement. This communication of the Crown Solicitor I felt to be something like an imputation upon me, and I felt sore about it. That was why my minute was so strong in reply to him. If a Minister cannot be trusted to deal with matters of this kind, how can he be trusted in dealing with 101 cases where he has to use his judgment in connection with the expenditure of hundreds of thousands of pounds in the settlement of contracts and other matters which never go to the Crown Solicitor's Department.

310. *Mr. F. Clarke.*] And after all this matter was settled by the Cabinet? I considered it such an important matter that I would not settle it.

311. *Mr. Lee.*] You concurred in the amount offered? Yes.

312. *Mr. Lees.*] Where does the importance of the case come in? In the vast sum concerned—it came to about £100,000. I thought my colleagues would have just ground for complaint if I had settled the case without consulting them upon it.

313. *Chairman.*] You said, a little while back, that while the Crown Solicitor refused to give more than £75 for the Hill property, in the case of Brown's property he advised that the offer of £125 a foot should not be withdrawn? Yes. The letter to which I referred is dated 29th October, 1892, and it contains these words, "As it has now been determined to offer to other adjoining owners £100 per foot for the bare water-frontage, and I suppose that Mr. Brown's property would be valued on the same basis, the difference between the amount already offered and the amount of the new valuation made on this basis, with the sums added for forced sale and improvements, would be so inconsiderable that I am inclined to think that the present valuation should not be withdrawn, especially in view of the fact that it has been allowed to stand so long." That letter was sent to me by the Crown Solicitor, but I decided to withdraw the offer. I did not think the land was worth as much as £125 per foot. In a letter of a previous date the Crown Solicitor had advised a withdrawal of the offer. I would like now to refer to another matter. Mr. Barling yesterday produced a document which showed that Mr. McMillan had approved of the payment of £175 as a valuation of the land which was taken into Court in Hill & Co's. case. I cannot understand how it is that that paper had got away from the other papers altogether, excepting that there was a claim put in for £151,000 by some other persons for the same land upon which Hill & Co. claimed £91,000. There were two valuations of £175 per foot in each case, and they both applied to the same land. The £91,000 valuation seems to have become the paper which was considered and put with the other documents, but the paper which Mr. Barling produced yesterday with Mr. McMillan's approval I never saw until Mr. Barling produced it. I think the reason he looked for it was this: in looking through the papers on page 11, it struck me that before I came into office all these land matters had been sent by Mr. Bruce Smith to Mr. McMillan because he had started the matter. They were sent over to the Treasury on the 4th February, 1891, and they were returned on the 11th of the same month. Then the Under Secretary for Public Works says: "It will be seen that the Treasurer has not dealt with minute 49." Minute 49 was this case of Hill & Co. Immediately after that are these words: "Will the Under Secretary for Finance and Trade kindly resubmit it to Mr. McMillan." Then comes this minute: "Completed and returned 17/2/91." Above that letter in the valuations will be seen the completion, "I understand that this is dependent upon another—that it is surely a proportional distribution of the amount awarded." That is where the two cases came in. That was sent to Mr. Thompson.

W. J. Lyne, Esq., M.P. I asked Mr. Barling if he could tell me anything more about the matter having been sent over to Mr. McMillan. That is how he came to have the papers hunted up in the office, and came across Mr. McMillan's approval, which he produced yesterday. The Committee will remember that Mr. McMillan said that he considered the valuation a reasonable one. I never remember seeing that paper until yesterday. If the Committee will look at the bottom of page 11 of the Parliamentary papers they will find Mr. Thompson says, "These papers should, I think, be referred to the Crown Solicitor"—not to deal with the question of value—Mr. McMillan had settled the whole thing and had approved of it. He had not asked the Crown Solicitor to approve of it; he had settled the whole matter—"to advise as to how and upon whom the notices of valuation should be served." That is the purpose for which he thought the papers should go to the Crown Solicitor in this case. On page 12 the Committee will find a report by Mr. Thompson, which I never saw for many months after I had been in the Works Department. To my mind, seeing that it is a special and confidential report, it never should have been produced. Although I afterwards became aware of its existence, I refrained from putting it with the papers, and it never had been. I think it is a document which is calculated to injure Mr. Thompson, and that it should not have been published. I am not quite sure that the firms referred to would not have an action against him. As I have said, that document was not shown to me for some time after I went into the Works Department. I made a query one day of Mr. Barling, and that led to his producing this document, which he had kept as confidential, and which was always afterwards kept as confidential. It will be seen that Mr. Thompson repudiates two valuations that he had sent in in conjunction with Messrs. Mills and Pile and Messrs. Richardson and Wrench, and he gives reasons for his repudiation. What took place was this: Mr. Robert Smith was Acting Crown Solicitor at the time, and when the documents went to him he went down to the Works Department, where, in Mr. Barling's room, Mr. Thompson practically wrote this paper at Mr. Smith's dictation. That is what took place in reference to that. All that I want to explain to the Committee is that it is a confidential document. It was never acted upon because it was confidential. It was lying dormant until these papers were produced, when it was put among them for the first time. With regard to values, the Crown Solicitor, in one of his letters, says that the value of the water-frontages in Woolloomooloo Bay in 1888 was higher than at the time of the resumption in 1889. I know that was not so; 1889 was practically the commencement of the fall of boom values. Properties were very much higher at that time, and we had to consider the value of the resumption at the time the land was taken, and not now. The money which Mr. McMillan had had voted was for other purposes, as he described—at Erskine-street for instance—that is apart from the Woolloomooloo resumptions. That matter having been referred to in Mr. Barling's evidence yesterday, I think I might say a few words about it. Cox's property at Erskine-street was resumed, containing an area of 1 rood 16 perches; the claim was £88,000. The sum of £60,000 was paid without question, or £171,400 per acre, or £346 16s. 5d. per foot. That is what was paid for this land at Erskine-street, for which the money was voted. That shows the values at the time at that particular place. I have taken the trouble to find out the capital value on the rents of some of the properties at Circular Quay. Take the Manly wharf. I find there is a frontage of 50 feet, for which £1,000 a year is paid. If you put it at 3½ per cent. it will give you £600 a foot capital value.

314. Mr. Cann.] Did you do the same thing in reference to the land under dispute? I did not. I do not think the land there is used profitably, nor can it be used until money is spent for making wharfs. It is in its native state. With regard to M'Quade's property, you will see that there is a long frontage to it with lines converging together to a short back, so that if you take off about a third of it to make it a square block, you will find that you have paid about £120 a foot. With reference to the settlement in that case, Mr. M'Quade came to me on many occasions in very bad health. Mrs. M'Quade came, and she also saw me herself, and pressed me to settle the matter. She said she did not think her husband would live long; that they wanted to go to England. She said she wanted to have the matter settled before anything happened to her husband. The property is not so valuable at the back, in consequence of the want of access. Although it is of greater depth, there is no practicable access at the back; and chiefly for the reason I have given I got the matter settled, and I got it settled without reference to the Crown Solicitor, or anyone else, at £85 a foot. I could not have done so except that Mr. M'Quade was so ill. He shortly afterwards died. That will account for the discrepancy between the amount paid for that property and the amount paid for the other frontages. Something was said yesterday about the depth of these properties. The mean depth of Lahiff's and Brown's properties is 133 feet, for which £150 was paid for 30 feet, and £150, including costs and buildings, for 15 feet. The mean depth of Hill's property, for which we paid £145, without 10 per cent. for forced sale and without any costs, is 141 feet for the whole 533 feet.

TUESDAY, 11 DECEMBER, 1894.

Present:—

MR. BAVISTER,
MR. FRANCIS CLARKE,
MR. LEE,
MR. LEES,

MR. CANN.

MR. MOLESWORTH,
MR. O'SULLIVAN,
MR. PIDDINGTON,
MR. WALL,

J. MORGAN, ESQ., IN THE CHAIR.

William John Lyne, Esq., M.P., recalled and further examined:—

W. J. Lyne, Esq., M.P. At the conclusion of your examination by the Committee last week you were speaking of the depth of the various properties at Woolloomooloo Bay;—do you wish to say anything further upon that point? Not as to the depths; but I wish to refer again to the summing up of the Chief Justice. **11 Dec., 1894.** If the Committee refer to page 24, they will find that he says:—

The Crown, I say, have argued that you must value the land as having no practicable water-frontage, because there is only 2 or 3 feet at low-water. That point was properly taken, but, at the same time, I do not hold with it. I think it is not sustainable, and I ruled against the Crown, and therefore you will be good enough, when you come to consider the value of the whole land, not to value it as the Crown say you are to value it, merely as having only 2 or 3 feet at low-water. Although that might be so, still it remained a wharf, and therefore you ought not, in determining the value of this land, to value

ON RESUMPTION OF LAND, WOOLLOOMOOLOO BAY.

value it as if this difficulty could not be removed. You should value it as if you knew it could be removed, for we know it can be removed, and deepened to the same depth as Cowper Wharf, namely, some 20 feet; and in dealing with the matter you must take into consideration that it can be made into a good wharf property by the expenditure of a certain sum of money. W. J. Lyne,
Esq., M.P.

11 Dec., 1894.

Referring to the witnesses, he said:—

Now, taking the defendants' witnesses first, the auctioneers and valuers for the defendants were Messrs. Pile, Sievers, and Gorman, and Messrs. Gregg and Mills were the auctioneers and land valuers called on behalf of the plaintiffs. Now, Mr. Gregg and Mr. Mills were very much influenced by the results of sales in the vicinity, and more particularly the value which was placed on Mr. Morris's land. I think Mr. Gregg was the auctioneer in that instance, and no doubt he was very much influenced by the value placed upon that land, which is not a waterside property, but had a frontage to Cowper's Wharf and a large frontage to Dowling-street. Evidence was given that at one period the value was £3,000, and shortly afterwards it jumped up to £20,900. That was an enormous rise.

I wish now to direct the attention of the Committee to a letter from the Crown Solicitor to the Under Secretary for Public Works, upon page 29 of the Parliamentary papers, under date 4th August, 1893. The Committee will see that he says:—

As already pointed out, the evidence placed before the Court, and the summing up of His Honor the Chief Justice, confirms the view expressed in that report. The evidence and valuations already obtained are ample, and I do not recommend any further valuations to be made.

This applies more particularly to the case of George Hill (alone), as that case is on all-fours with that of Hill and others.

The Committee will see that in his letter to the Secretary for the Attorney-General, under date the 30th April, 1894, he makes a statement which bears upon the paragraph which I have just quoted from the letter on page 29 with regard to the value of Hill's second property—not the one concerning which the action took place. In the quotation I have just read he says that no further valuation was necessary, as the properties were on all-fours, that is, the property concerning which the action took place and the other property, and especially that of George Hill alone. On the 30th April, 1894, he says:—

But I should, perhaps, draw attention to this, namely, that at first sight it would appear that by the settlement arrived at a substantial reduction has been made in the amount of the verdict obtained in the action. In reality this is not so. The settlement comprises not only the 300 feet, the subject of the action, but also two other portions, making up a block having a frontage of 225 feet. This latter block is evidently of less value than the 300 feet, by reason of its small depth, and for the same reason it is not so valuable as McQuade's.

I draw attention to these two paragraphs to show that in one case the Crown Solicitor says the properties are upon all-fours, and that afterwards, when it suited his purpose, he said that one was of much less value than the other. I put in a letter from the Bank's solicitors to the Secretary for Public Works, which appears upon page 30 of the papers, and which I should like to see printed in an Appendix to my evidence. [Vide Appendix.] I invite the attention of the Committee to the following minute by the Under Secretary for Public Works to the Crown Solicitor, under date the 15th March, 1894:—

I am directed by Mr. Secretary Lyne to forward herewith the Cabinet minute approving of the settlement in the case of Hill and others v. Lyne. The other papers will be sent as soon as they can be collected. It will be seen that the letter of Stephen, Jaques, and Stephen, of the 5th instant, did not disclose the terms agreed upon, and before sending a letter to Mr. Hill, which he had specially asked for with the view of satisfying his bankers, Mr. Lyne instructed that the terms must be accepted, and this was done in my office, the parties to the matter having been sent for. A copy of the letter sent to Mr. George Hill is enclosed.

I mention that in order to show the caution which was exercised in the final settlement, and to emphasise the circumstance that no one was allowed to know what we would give. Even Messrs. Stephen, Jaques, and Stephen when they wrote did not disclose the terms, because, I presume, they did not know them. On page 33 the Committee will find a paper relating to a consultation between the Attorney-General, Mr. Pilcher, and Mr. C. B. Stephen, which was held on 27th October, by direction of the Attorney-General:—

On the main point as to the verdict being against evidence and the damages excessive, Mr. C. B. Stephen was inclined to the opinion that a question of value being one entirely for the jury, and there being some evidence to support the figures on which the verdict is based, there would be some difficulty in disturbing the verdict, however absurd.

Mr. Pilcher, on the other hand, was of opinion that the verdict could not stand, because—

- (a) On the evidence the amount was grossly excessive, and rightly characterised by the Chief Justice as "outrageous."
- (b) That although two or three of plaintiff's witnesses swore that, in their opinion, £200 per foot was the value, this opinion was mere matter of surmise as to what the property would be worth as a wharf property; it was not founded on facts, such as sales of similar properties in the same neighbourhood, and the evidence of the defendant was overwhelming to show that this surmise had no foundation at all.

I mention that to show that Mr. Pilcher was absolutely wrong, and on page 26 the Committee will see that in the course of his summing up the Chief Justice points out that Mr. Gregg and Mr. Mills were influenced by sales in the vicinity, and more particularly the value which was placed on Morris's land. I will, later on, produce a letter from Mr. Gregg in which he gives his reasons, which, it will be found, are based on absolute sales.

316. *Mr. Wall.* Why is that letter not with the papers? That I cannot say—it should be with them. I have had to get a copy of the letter from Mr. Gregg this morning. It is a certified copy of a letter addressed by him to the Crown Solicitor, on the 13th October, 1892, and I will read it for the information of the Committee. "Sir,—Referring to the personal interview with you this morning, re Woolloomooloo Bay Resumptions, I beg to state that until a few years ago that portion of the city was almost neglected by capitalists—practically the whole place was dormant. An activity arose in the way of demand for lands there, under the belief that the early future would discover for it an important and valuable use; the comparative smallness of the available area, its proximity to the city, and the suggested railway connection, together with a measure of patronage of large ocean-going vessels and others of smaller style, all tended to awaken an interest and enhance value. As showing the developments of prices for lands immediately hereabouts, I have knowledge of these sales:—127½ feet Cowper Wharf, 299 feet depth along Duke-street, 215 feet depth along Dowling-street, 97 feet depth to Harnett-lane, for £3,500, to Dr. Morris. He sold it in 1888, I think, for £21,000; and I know vendor in 1890 asked £27,000." He told me that, if necessary, he could produce the offer and his plans from his safe; and I may mention that although the property is called Cowper Wharf, it had no water-frontage at all—"87½ feet to Cowper Wharf, 120½ feet depth to Dowling-street, 81 feet to Bland-street, other depth line less—for £2,000. The buyer died only a few years ago, and I understand his widow to say his value was £200 per foot frontage. My clear impression is that she was offered £160 per foot frontage." That property also had no water-frontage. "Fifty-eight feet to Cowper Wharf, part of it having a width of 54 feet to 89 feet, other side line 112 feet, width at rear only 25 feet, for £7,000, in 1888; 27½ feet Cowper Wharf,

W. J. Lyne, Wharf, depth 86 feet to 92 feet, 27 feet to rear street, for £30 per foot—adjoining, I think, the piece previously quoted for £2,000, and which 27½ feet frontage was sought for in 1888. In September, 1888, we offered Moore's Wharf, Miller's Point, with a reserve of £96,000, and had offers at auction of £85,000 or £86,000, when it was not sold. Inquiries then set in for Cowper Wharf frontages, as the idea was that quarter would come into active employment for wharfs and storage warehouses, the rate being less than the prices required for frontages on Darling Harbour." The following postscript was in answer to a question by the Crown Solicitor as to why he valued 115 feet of Brown's property at £125 per foot and 30 feet of Lahiff's property at £150 per foot. He says, "As explained to you, the difference in the assessed prices per foot arose from the fact of the varied breadth of frontages; the narrower not having been deemed as valuable as the larger block, which latter allowed of better scope for use. May I mention that after the Crown resumed Challis' Estate block it was remarked that it was a cheap purchase, and I heard had it gone to auction some would have competed for it and bought it at more money." I have had a statement compiled with the object of showing, as far as possible up to the present time, some of the larger claims which have been settled by myself and other Ministers in connection principally with railway contracts. I quote the amounts to show that in the Works Department claims of great magnitude come before the Minister constantly. As far as I was concerned, I always settled these claims if I could do so without letting them go to the Crown Solicitor's Department, for the moment they get there great expense ensues, and, in my experience, very little good results. In connection with the Culcairn-Corowa line, for which Horne and Shand were the contractors, they claimed £146,000. The claim was settled for £118,794 without going to the Crown Solicitor. In the case of the Nyngan and Cobar line, for which Messrs. Smith and Finlayson were the contractors, the claim was £221,821, and it was settled for £201,655 without going to the Crown Solicitor. In the case of the Cootamundra to Temora line, for which Messrs. Baxter and Sadler were the contractors, the claim was £116,877, and it was settled for £108,951. In the case of the Sydney and Waterfall line, for which Messrs. C. and E. Miller were the contractors, the claim was £239,712, and it was settled for £233,682. I have not the exact figures with regard to other large claims which have been settled in connection with other contracts, but I have no doubt I could furnish them if necessary before the inquiry closes. For instance, large claims were settled by the Minister in connection with the Kiama and Nowra line, the Michelago and Cooma line, the Hawkesbury Bridge, the Tamworth to Uralla line, the Uralla to Glen Innes line, the Sydney to Wollongong and Kiama line No. 3, the Homebush and Hawkesbury line, and the Gosford and Waratah line. These were all large claims made upon the department, and settled without going to the Crown Solicitor's Office. In connection with M'Sharry's claim, I may mention that I placed it in the Crown Solicitor's Department, under an arbitration, and the result of it was that the Government had to pay an immense sum of money—I think a great deal more than I could have settled the case for without letting it go there at all.

317. *Mr. Lee.*] Some of the cases to which you have referred were settled by Ministers who preceded you? Yes.

318. Showing that it had been the practice of the department? Yes. An officer of the Works Department has sent me a message to say that he could only get the figures I have quoted up to the present time, but that later on he will be able to furnish me with the other figures.

319. *Mr. Bavister.*] In any of the cases to which you have just referred, have proceedings been taken in the Law Courts? No, they were settled without going to the Courts.

320. In this case, is not the contention that the case was settled by the Minister after having been taken into Court? Yes. In connection with M'Sharry's case, which I mentioned just now, and which was sent to the Crown Solicitor's Department in connection with arbitration—I believe it was settled finally in the Law Courts when Mr. Sutherland was Minister—the Government had to pay an immense sum for costs. I think the costs alone came to £20,000.

321. *Mr. Wall.*] In Hill's case a verdict had been obtained, and new proceedings had been initiated in connection with a new trial? Yes; not by the owners of the land, but by the Government.

322. The case was set down for hearing, but proceedings had not been further initiated? No; I think the case was set down for hearing on the 12th of the same month in which a settlement took place. A settlement took place at the beginning of the month. As I explained in a previous part of my evidence, I saw Sir George Dibbs about the matter between the time at which the verdict was given and the time at which the new trial was obtained. When I spoke to him about the matter, he said that we had better let it stand until a new trial was obtained, as we should then be in a stronger position, and would be able to make better terms. That is why the matter stood over till afterwards.

323. Was the verdict given for a larger amount, you think, than the case could have been settled for before going into Court? I cannot say that, but I should think it was.

324. The verdict was for a larger amount than the case was settled for afterwards? Yes; the verdict was about a quarter larger. As far as I can judge, the chief trouble between the Crown Solicitor and myself is contained in the last paragraph of his letter, which appears on page 38 of the papers. He says:—

In conclusion, I may be, perhaps, allowed to make a suggestion which I should have made had the minute referred to been received in time to be dealt with before I retired from office. The suggestion is this:—That "The Claims against the Colonial Government Act," 39 Vic. No. 38, and certain Special Acts like our Resumption Acts should be amended by an enactment to the effect that in all actions or suits against the Crown the nominal defendant shall be Her Majesty's Attorney-General. If such an enactment was passed Her Majesty's Attorney-General would be in any such action or suit the *Dominus litis*, and the action or suit could not be settled, or the proceedings therein in any way interfered with, except under the express direction of Her Majesty's Attorney-General.

That to my mind is pretty well the whole trouble with the Crown Solicitor. He took it upon himself, not only in this, but in other cases, to direct me as to what I should offer. I resented it, because the Minister of any department in connection with which a case goes into Court is the nominal defendant, and I held—as I hold now—that the Minister who has had the history of the case before him from the beginning is a better judge of matters of fact than the Crown Law Officers could possibly be. All questions of law I have always referred to the Crown Law Officers, but in all questions of fact, especially in connection with land valuation, bridge contracts, or railway contracts, where the whole case is filtered through the officers of the department to the Minister, I maintain that the Minister is in a better position to judge of matters of fact than the Crown Solicitor can possibly be. Now, I desire to say, with reference

11 Dec., 1894.

reference to any insinuations which may have been made, and which I take to reflect upon my probity in the administration of the department, that in no case, at any time, did any of the persons interested in this matter approach me in the slightest degree in a way in which they should not have done. When reflections, therefore, were made upon me, I felt that they were most unjust. I could not take the statements made in any other way than as reflecting upon myself. I have given a general denial of them, and I shall be quite prepared to answer any questions the Committee may think fit to ask me with reference to them; but nothing of any kind ever happened between Mr. Hill and myself, or any of the other persons connected with the matter. I do not know that I ever saw any of the others by themselves—which could be construed into an offer of, or an attempt at, bribery of any kind as far as I am concerned.

W. J. Lyne,
Esq., M.P.,
11 Dec., 1891.

325. *Chairman.*] When any of the parties saw you, what was it for generally? To urge settlement. The complaint Mr. Hill made—and he appeared to me to get almost beside himself just before the termination of the case—was that four years had elapsed since the land was taken, and that he had to threaten Supreme Court proceedings before he could get an offer from the department. He complained that the matter had been allowed to drag along through this length of time, with the Bank pressing him, and that during nearly the whole of the time the Government would do nothing, but practically hang the matter up.

326. You mean to say that, notwithstanding that the Government had had this land valued by their valuers, they refused to give a valuation to the parties interested? Yes, until I offered £100 per foot. The papers will show that the owners of the land threatened to go into court to compel us—as they could compel us—to make a valuation of some sort, because they could not take proceedings against us until they obtained that valuation. I then offered, at the instance of the Cabinet, £100 a foot. That was between two and three years ago, after the land had been first taken.

327. That offer was made, notwithstanding that the Government valuator had valued the land at £175 per foot without 10 per cent. for forced sale? The £100 was offered only for the two first blocks which afterwards became the subject of the action, and they had been valued by the Government valuers, Messrs. Mills and Pile and Messrs. Richardson and Wrench and Thompson at £175 per foot, which carried with it 10 per cent. for forced sale, according to the law. I should like to direct the attention of the Committee to the fact that a valuation was put in the other day, endorsed by Mr. McMillan. The document was dated in January or February, 1891, and what I desire to impress upon the Committee is that when Mr. McMillan made the minute to which I refer, he was in a much better position than I, or anyone coming after him, at this late stage could be, to recognise what the values were at the particular date of resumption. In addition to that I have made inquiries, and I find that the activity of the boom in these properties ended about the close of 1889. The actual values, however, did not recede very much until nearly the end of 1890. Though the activity, to a large extent, had ceased, still the properties were not sold below boom values for nearly twelve months afterwards, that is, at the end of 1890.

328. *Mr. Lee.*] Was there any friction between the Crown Solicitor and yourself, as Secretary for Public Works, at this time? No friction at all.

329. Had the Crown Solicitor any object of a personal character in prolonging litigation in this case? I should not like to swear that—I could not say.

330. He was in receipt of a salary from the Government at the time was he not? He was.

331. Would he be entitled to any fees? I do not know; I should not think so.

332. You do not know of any reason why the Crown Solicitor should have taken up the attitude he did? No reason at all. I was as friendly with the Crown Solicitor as I am with any Member now sitting in this room. We lived close together, and the first intimation I had of any attack upon me was when I received the minute of the Attorney-General.

333. Had there been any previous correspondence between the Crown Solicitor's Department and your department with reference to the settlement of previous cases on this basis? Not exactly on that basis. There has been no corresponding case to this; but there have been communications from the Crown Solicitor's Department in which he, to my mind, has taken up a position which practically took the administration of my department out of my hands.

334. I want to know, in the first place, whether it was owing to any previous settlement that the Crown Solicitor was so emphatic in his remonstrance with you? Not that I knew of at the time; but in one of his minutes he referred to Rochester's case.

335. Did that occur during your administration? Yes.

336. What are the particulars of that case? It is not at all on all-fours with this case.

337. What particular opportunity had the late Crown Solicitor for valuing property? I do not think he had any opportunity.

338. Do you know of any reason why he should set himself up as an expert in the valuation of properties? I know of none. That is what astonished me so much.

339. In his letter under date of 12th March, 1894, the Crown Solicitor says:—

It will be remembered that this question of settlement of this and the other claims of George Hill and other matters was referred to the late Attorney-General, Mr. Barton. A consultation was held, at which both the counsel for the Crown and myself were present. The matter was very fully and exhaustively discussed, and the conclusion arrived at then was that £100 per foot for the land in dispute in the action was the outside limit that should be offered, and £85 for the other land in respect of which no offer has yet been made.

It was that paragraph of the letter which you took exception to? No, it was the whole letter; I did not think he was a competent land valuer; I do not know any reason why he should be competent in the matter of land valuation. He is a competent lawyer, I have no doubt.

340. The other portion of his letter refers to the settlement of claims by the Works Department behind the back of the Crown Solicitor? Yes.

341. I wish to refer you to the following minute by the Attorney-General:—

Let this letter be forwarded to the Works Department. As to the value of the land I can say nothing, as I have little personal knowledge of land values, and have not followed the evidence in this case (which was tried before I became Attorney-General), and have read nothing about it, except the judgment of the Full Court on the appeal. At the same time, it is evident that whatever fault may be found with the jury's verdict of £200 per foot, £5 per foot is a very substantial reduction, and the difficulties in the Crown's way, referred to in the Crown Solicitor's memo, are serious.

As to the second point, viz., the manner of carrying out this settlement, I entirely concur with the Crown Solicitor. In matters of this sort, where large sums of public money are concerned, I think that every step should be taken in the most careful and regular way. I fail to see the advantage of having highly skilled experts like the Crown Solicitor in the public service if an opportunity is not afforded to them to make such representations as they may think advisable in the public interest

W. J. Lyne, interest. I regret very much that my minute on the Crown Solicitor's letter of the 19th February was not attended to. My own view, upon which I shall continue to act, is that this Department should refuse to recognise any settlements until they are brought before it in strictly regular form; but this will be of little use if the settlements are made binding and complete without consulting this Department, or making any reference to the special knowledge which it necessarily requires in cases such as this.

11 Dec., 1894. Was not this case settled by the Cabinet? Yes.

342. At which the Attorney-General could have been present? He was present.

343. For what reason then does he take exception to a matter which has been considered and decided by the Cabinet? That I never could understand.

344. In your opinion is the Crown Solicitor free to canvas the action of the Cabinet? Certainly not, unless he knows of some specific improper conduct.

345. When the matter has been determined by the Cabinet, would it not be the province of the Crown Solicitor to see that it was carried out if so ordered? If so ordered, his portion of carrying out the decision would be to see that all the documents were regular, and that the matter was carried in legal form. He did see to that afterwards.

346. The Attorney-General also would be bound by the decision of the Cabinet? Of course he would.

347. Can you offer any reason as to why the Attorney-General should reflect upon the action of the Cabinet in deciding this matter? I cannot. The Crown Solicitor refers in this letter to his not having had an opportunity to deal with it. Now, the Attorney-General was present at the Cabinet meeting of the 15th February, and he knew all that took place. The matter was not settled finally until the 4th March or thereabouts, so that there was a fortnight or three weeks during which the Attorney-General knew perfectly well what was being done. In addition to that this was a very special case, because, as I explained in my previous evidence, Sir George Dibbs, speaking for the Cabinet, would not agree to my making an offer at all. It was only when the other side were prepared to make an offer of £145 per foot to clear everything that I was to accept it. Nor would Sir George Dibbs write anything on the Cabinet paper until it was absolutely concluded. I was instructed not to allow anything to be done until the matter was so clinched that there could be no withdrawing from it.

348. You tell the Committee then that the Attorney-General was present at the Cabinet meeting at which it was decided to give £145 per foot for this land? Yes; but he was not present at the Cabinet meeting held a few days before the final settlement, at which it was decided not to pay the 10 per cent. for forced sale.

349. Therefore the Attorney-General's minute is not upheld by the facts of the case? No.

350. Do you think his minute is intended to be a covert attack upon any practice he might not have approved of? The Attorney-General has told me that it was not intended to be an attack at all. I spoke to him about it the other day.

351. *Mr. Molesworth.*] Can you now give us the explanation which has been promised in regard to the letter from the Crown Solicitor under date 5th March, 1894. How is it that he received a letter from the Under Secretary for Public Works in reference to the settlement when the settlement itself bore date of March 6th. There does not appear to be any document relating to the settlement under an earlier date than March 6? I think I have already explained that. The explanation is this. I was prevented from making an offer to the parties. The offer was to come from them. They had intimated to me that they were open to take £145 clear of everything. But nothing had been written on the Cabinet papers as Sir George Dibbs had refused to write anything which might be used against us if we had to go on further with the case, until I was absolutely certain the offer would be made. The telephone message to the Crown Solicitor was to prevent further expense in the delivery of briefs. As soon as I was sure the offer would be made I took the paper to Sir George Dibbs for my own security, not at a Cabinet meeting, but after a Cabinet meeting, in order that he might write a minute as to what the Cabinet had decided. That is how it is that the minute was dated the 6th. The minute was the result of a Cabinet meeting, but that meeting was held several days before.

352. Are you aware that the offer from the solicitors of the claimants is dated 6th March? That would be the written offer.

353. Then how did you know on the 5th March that a written offer was coming to you dated 6th March? I cannot tell you from whom I heard, but I think it was through Mr. Barling that I had the information that the parties had absolutely agreed to the terms.

354. Who was the individual who, on behalf of the parties, had agreed to them? That I cannot tell you. I am under the impression that Mr. Barling saw some one, and I think it was the manager of the bank and Mr. Belisario.

355. Notwithstanding that you did not get this absolute offer of settlement from the parties until the 6th you treated the matter as having been settled on the 5th? Yes, I was told that they had agreed to the terms.

356. This seems to me to be a very important matter. Can you not remember who told you about it? I think it came from Mr. Barling; and I believe that the settlement was made with Mr. Belisario and the manager of the bank.

357. But had not the previous interviews with regard to this settlement taken place between yourself and Mr. Hill? Yes; I remember now that Mr. Barling wanted to find Mr. Hill, that he wanted to see him in regard to the matter. That is how he came to see Mr. Belisario and the manager of the bank. Mr. Hill could not be found.

358. They had full authority to make a settlement without Mr. Hill? It was concluded that the solicitor for Messrs. Hill and Belisario had authority.

359. With reference to the communication of the Crown Solicitor of the day to yourself, and the minute of the Attorney-General upon it, was not that communication directed more against the operations of the Works Department than against the Cabinet? The whole communication speaks for itself.

360. Let me refer you to the last paragraph of the Crown Solicitor's letter under date of 12th March, 1894:—

I enclose the previous papers, from which it will be seen that the Under Secretary for Works was advised by you under instructions from the Attorney-General, that if any settlement in this case of Hill's should be proposed I should be communicated with. It would seem that the action of the Works Department has been in utter disregard of this advising.

Would it not appear from that that he made a complaint against the Works Department rather than against yourself? That had reference to a letter dated 19th February, which letter did not reach me until the matter was absolutely decided by the Cabinet, and I had negotiated as to whether the parties would

would take £145. The letter appears upon page 31 of the papers. It was sent on by the Under Secretary to the Crown Solicitor's Department on the 26th February, 1894. I take particular notice of the dates on that letter. It went along rather slowly. It was a memorandum from the Crown Solicitor desiring to be consulted before the settlement. It was submitted to the Attorney-General on the 21st February; it remained with him until the 23rd February; it was ordered to be sent to the Works Department on the 26th February, but it was never shown to me until the matter was settled by the Cabinet, and it was settled a few days before the 26th.

W. J. Lyné,
Esq., M.P.
11 Dec., 1894.

361. What I want to know is this—do you not conclude from the paragraph of the Crown Solicitor's letter to which I referred that his objection is not so much to the decision of the Cabinet as to the subsequent action of the Works Department? I think to both.

362. Is it not a fact that the final settlement took place without reference to the Crown Solicitor? Certainly, on the decision of the Cabinet.

363. Has it not been the custom in all matters of this kind to refer them to the Crown Solicitor for final settlement? Not unless questions of law have to be decided.

364. But in all resumption matters, immediately they are determined by the Cabinet, are the papers not sent to the Crown Solicitor in order that he may carry out the necessary steps? In order that he may carry out the instructions given—that he may do what is necessary to give effect to the instructions.

365. But in this case that course was not adopted? It was, except as to the signing of the document in Mr. Barling's office. The document was sent to the Crown Solicitor to complete. The signing of the document in Mr. Barling's office was only the commencement of the completion. I do not know how long it would take to settle such a case, but I dare say the examination of the documents and the making out of the vouchers would occupy some time.

366. Was it not rather an exceptional course, the signing in Mr. Barling's office of the agreement of the Cabinet? No, I do not think so; I should do the same thing if a similar case occurred to-morrow. I am satisfied that so complete a settlement could not have been made if the matter had gone to the Crown Solicitor's office. That is proved by the fact that many months afterwards a letter was sent on—you will find it on the last page of the papers—from the Crown Solicitor to the Under Secretary for Public Works, in which he says that the question of costs had arisen. The settlement in the way I made it prevented the possibility of anything of that kind cropping up.

367. What I want is a direct answer to my question, whether it is not the fact that in all ordinary cases the moment the Cabinet comes to a decision, to place the whole matter of settlement in the hands of the Crown Solicitor? Certainly not, excepting cases which are absolutely in the hands of the Crown Solicitor at the time.

368. Was not this arrangement of the Under Secretary of Public Works rather an unusual course? I do not think it was an unusual course. I think it was a course which showed a great deal of prudence.

369. Is it not a course to which the Crown Solicitor himself took exception? Yes.

370. And is it not a case in which the Attorney-General himself endorsed the opinion of the Crown Solicitor? Yes.

371. The Attorney-General was a member of the Cabinet which determined the matter? Yes; he knew all about it from the 15th February until the date at which the settlement was arrived at. Let me refer the Committee to the consultation between Mr. Pilcher, Mr. C. B. Stephen, and the Attorney-General with reference to going on with the case. In no large case has Mr. Pilcher ever been known to recommend the settlement until after the briefs have been issued. Mr. Stephen did not recommend the case being proceeded with at all.

372. *Mr. Cann.*] What is the effect of that—is it to secure fees? Yes, I suppose so. The Bar does not get any fees unless a new brief is marked.

373. If no recommendation for settlement is made, that ensures that the briefs would be marked before it is arrived at? Of course, if there is a recommendation for settlement, no briefs are issued.

374. If no recommendation for settlement is made the briefs are completed? Yes.

375. And that ensures the fees? Yes.

376. *Mr. O'Sullivan.*] Fees to whom? To the barristers retained in the case.

377. *Mr. Cann.*] Is it usual to refer questions of value to the law officers of the Crown? Not so far as I know—I never did.

378. *Mr. Wall.*] You say you know of no large case in which Mr. Pilcher recommended a settlement? I am not aware of any large case in which he recommended a settlement before the briefs were issued. If hon. members will refer to page 33 they will find that Mr. Stephen did not want to go on with the case. It was proceeded with on the strong statement of Mr. Pilcher, which is not borne out by the facts.

379. Can you offer any explanations as to why Mr. Gregg's letter and Mr. McMillan's minute upon the valuation have not been published among the papers? I cannot. I do not think the Works Department purposely omitted them. I wish it to be clearly understood that these papers get mixed up between the Crown Solicitor's Department and the Works Department, and that letter of Mr. Gregg's is, I think, somewhere in the Crown Solicitor's Office now, if it could be found.

380. *Mr. Lees.*] How do you account for your not seeing this important letter of Mr. Thompson's—the confidential document—until it appeared in the Parliamentary papers? I had no knowledge of it for some time; it was not in the papers, but I heard from another source that there was some such document in existence. I made inquiry, and that is how I came to see it. It is a most confidential document, and I am surprised to see it in the Parliamentary papers.

381. You said just now in answer to Mr. Molesworth that you do not send cases to the Crown Solicitor for the mere purpose of getting valuations? No.

382. In this particular case, has not the whole matter of values been gone into in the course of the trial in the Supreme Court? Yes.

383. Would not the Crown Solicitor by means of that trial therefore be as well posted in these values as a man could be expected to be? As far as the evidence went.

384. Do you not think, seeing that a new trial was granted on the ground that the verdict was against evidence, that the Crown Solicitor had a good case to go to a jury? I do not think he had a case at all.

385. Not in the face of the evidence? No; a new trial was obtained against the Chief Justice's summing up. The Chief Justice said the right to deepen the water-frontage had never been refused. I do not think a single case can be produced in which the right has been refused. The point was a technical one in law, but no jury could possibly have been influenced by it.

W. J. Lyne, 386. If a private individual put a case into the hands of a lawyer, and that lawyer had gone through the Esq., M.P. pros and cons of it by means of a civil action, and felt afterwards that in the interests of his client another step should be taken, do you not think that the client should trust him to the end? He would not do anything without consulting his client. If I were the principal, and I thought I was going to lose money by going on, I should stop the case and settle it myself.

387. Against the advice of your solicitor? I have done it many times.

388. Even if the solicitor were a highly paid Crown servant? Certainly.

389. You said the other day that in your opinion the telegram of the Crown Solicitor from Wentworth Falls was insulting? Well, it cast a reflection upon the settlement. The words used were "Impossible for me to say whether alleged settlement final and binding." You see that he says "alleged settlement."

390. You do not think that is a reasonable comment on the part of the Crown Solicitor, seeing that the whole of the legal business in the case had been in his hands, and that a second trial had been asked for? I do not think so, taking the surrounding circumstances into consideration.

391. You also said that you were pressed to make an offer with the view, if it were not accepted, of the case going to the court. Who exerted that pressure upon you? The parties concerned.

392. Who are they? Messrs. Hill and Belisario. They are the only two I know of.

393. No one else? No. I have already explained that no action can be taken in the court by the parties concerned until an offer is made. The holding back of an offer may prevent persons from obtaining their just rights. The offer in this particular case should have been made months, and indeed years, before. It was under the threat of our being compelled by the courts to make an offer that I made one.

394. The only parties who pressed you to make it were the claimants? They are the only parties I know of who were interested in pressing me to make it.

395. Mr. O'Sullivan.] Had the Crown Solicitor any other point than that about deepening the water frontage? None that I heard of.

396. Judging from what you read of the summing up of the Chief Justice, that objection could not in his mind be sustained? He directed the jury not to consider it. He said the Crown had taken a point which he did not think was tenable.

397. Mr. Wall.] In the concluding paragraph of his letter to the Secretary to the Attorney-General, under date of 30th April, 1894, the Crown Solicitor makes a suggestion in these terms:—

In conclusion, I may be, perhaps, allowed to make a suggestion which I should have made had the minute referred to been received in time to be dealt with before I retired from office. The suggestion is this:—That "The Claims against the Colonial Government Act," 39 Vic. No. 38, and certain Special Acts like our Resumption Acts should be amended by an enactment to the effect that in all actions or suits against the Crown the nominal defendant shall be Her Majesty's Attorney-General. If such an enactment was passed Her Majesty's Attorney-General would be in any such action or suit the *Dominus litis*, and the action or suit could not be settled, or the proceedings therein in any way interfered with except under the express direction of Her Majesty's Attorney-General.

398. Is it within your knowledge that the Attorney-General has ever applied to be named as nominal defendant in any claim of this kind? No, I am not aware that he has.

399. This contention was only set up after this case had been decided? Yes.

400. Did the Crown Solicitor ever make the suggestion that the Acts to which he refers should be amended prior to the settlement of this case? Not that I am aware of.

401. That is, amended in this direction—that the Attorney-General should be the nominal defendant? Not that I am aware of.

402. Mr. Piddington.] Did you know from a perusal of the papers when they first came before you how much money Hill & Co. gave for the land for which they claimed £90,000? No.

403. I suppose you are aware that at the time of settling this case, Sir Julian Salomons and Mr. Pilcher thought that the appeal ought to be successful? I paid more attention to the enclosure which appears on page 32 and 33 of the papers. You will see that a consultation took place between the Attorney-General, Mr. Pilcher, and Mr. C. B. Stephen.

404. I was referring to the letter under date of the 30th June, 1893, from the Crown Solicitor to the Under Secretary for Public Works? I cannot say that I am aware of that. I have not read the whole of the papers very carefully.

405. Mr. Bavister.] In your evidence last week, in referring to Mr. Hill having pressed for a settlement of the case, you said that someone came to see you everyday to get the case settled? I cannot say every day. Sometimes there might be an interval of a month or six weeks, and then there would be two or three days when someone would see me every day.

406. The impression I gathered from your evidence was that a considerable number of persons had at different times pressed for a settlement of the case? I do not think I saw anyone except Mr. Hill and Mr. Belisario. Mr. Hill was like a shadow at my door.

407. In giving your evidence, you referred specially to Mr. Hill. You say that he was always worrying you, and then you go on to state that every day someone would come to try to get the case settled? I do not think anyone beside Mr. Hill and Mr. Belisario saw me positively about the case. Of course I heard it mentioned by several other persons.

408. If those persons came to interview you at your office, pressing for a settlement of the claim, cannot you remember who they were? No. I remember hearing the case talked about by Members of Parliament. I have heard it talked about at the House on many occasions.

409. Did any Member of Parliament interview you specially in reference to this business? Not specially in reference to this business.

410. Did any Member of Parliament interview you at your office, pressing this claim upon your attention with a view to settlement, when seeing you in reference to other matters? No Member of Parliament that I saw ever referred to the matter except in a casual way.

411. Such a thing could not take place without your recollecting it. You say that the case occupied a great deal of your time and that it caused you very much annoyance. That being so, no Member of Parliament could have interviewed you and have pressed for a settlement without your remembering it? I do not think they did so in a pointed way.

412. But you do not feel sufficiently confident to assert that no Member of Parliament adopted that course? Certainly no Member came specially to see me about it. If they saw me at all they must have spoken to me about some other matter at the same time.

413. If any Member of Parliament had pressed upon your attention the advisableness of settling the case, do you not think you would remember it? If anyone had done so specially I should remember <sup>W. J. Lyne,
Esq., M.P.</sup> ~~any member of this Committee might speak to me about it.~~ ^{11 Dec., 1894.} The case was referred to in the House—it has been talked about for a good time.

414. *Mr. F. Clarke.*] In the course of your experience as Secretary for Public Works did you ever know an application made for the deepening of water in front of wharfs to be refused? Never. In addition to that, I may say that owners of property often ask the Government to deepen the water in front of their wharfs because the Government have dredges and facilities for doing the work. On some occasions when these matters have come before me the officers of the department have said that we ought not to do the work, and that the owners should do it themselves. I have never known a case in which an application for the right to deepen was refused. We have always thought it a good thing to have it done..

415. Mr. Molesworth asked you just now some questions about a point which does not seem to me to have been properly cleared up. He referred in the first instance to the letter of the Crown Solicitor, dated the 12th March, 1894, which appears on page 34. At the close of that letter the Crown Solicitor says:—

I enclose the previous papers, from which it will be seen that the Under Secretary for Works was advised by you, under instructions from the Attorney-General, that if any settlement in this case of Hill's should be proposed I should be communicated with. It would seem that the action of the Works Department has been in utter disregard of this advising.

When Mr. Molesworth asked you about that particular paragraph you referred him to a letter on page 31, the bearing of which, I think, escaped the notice of the Committee. That letter, I think you said, was not received by you until after the case was actually settled? The case was settled some days before the 6th, and I had let the parties know that their offer would be accepted. I did not see the letter referred to until the settlement had been verbally agreed upon—until I knew that the parties would agree to it.

416. *Mr. Cann.*] How long were the negotiations going on in this case, from the start until it was finally settled? The case was settled in February, 1894; it commenced in November or December, 1891, as far as I am concerned.

417. Can you say from the Parliamentary papers how long before that negotiations were proceeding? From the 4th February, 1890—the date of the resumptions.

418. During that time had any offer been made, as far as the department was concerned? There was no offer made as far as Hill's land was concerned until I made the offer of £100 per foot for the two portions which were the subject of the action.

419. I see from your evidence that in the case of Labiff's property an offer was made and accepted before you went to the department? Yes.

420. Still no offer was made to the others? No; that is what Mr. Hill complained so bitterly about, that he was treated so differently from any of the other parties at that time. If Mr. Hill had an offer from the department the case would have been settled more quickly.

421. Although the valuation of the Government Valuator, of Messrs. Richardson and Wrench, and of Messrs. Mills and Pile, had been approved by Mr. McMillan in February, 1891, no offer was made to the parties? No; that was in consequence of Mr. Robert Smith, who was Acting Crown Solicitor at the time, stepping in and intercepting it.

422. It would appear that in consequence of that delay, and in consequence of the case being settled when it was, the parties lost a big sum of money? There is no doubt in my mind that they lost £40 a foot for a part of the land.

423. In a case where a number of parties are concerned is it usual to make an offer of settlement to one party, and to leave the others without an offer? That is the matter upon which the papers went to the Crown Solicitor. He was to ascertain who were the parties entitled to have the offer made to them. The papers were not sent to him upon the question of value. The Crown Solicitor was to decide as to who were the proper parties to whom to make an offer.

424. Then the reason that the Government did not make an offer to the other parties was that they did not know to whom to make it? You will see that the papers went to the Crown Solicitor's Office with an instruction to discover to whom the offer should be made. If you refer to page 11 you will see that after Mr. McMillan had approved of the valuation, Mr. Thompson said, "These papers should, I think, be referred to the Crown Solicitor to advise as to how and upon whom the notices of valuation should be served." The date of that is 7th March, 1891.

425. When the notice as to valuation is served upon the parties, is it taken as an offer? Yes; they can accept at once, if they like, and we are bound to pay them.

426. *Mr. Bavister.*] Is it a fact that the valuation was accepted by Mr. McMillan? Yes. I have already referred you to the minute of Mr. McMillan, in which he says that the valuation appears to be a fair and reasonable one. Then, on a subsequent date, on the 16th February, 1891, on a corresponding valuation for the same land, he says, "I understand that this is dependent upon another—that it is surely a proportionate distribution of the amount awarded." He evidently wrote that, having in view what he had previously written.

427. What struck me was that it would appear in a more definite form, if he had actually approved of the valuation. What might appear to be a fair valuation to a person might not commend itself to him for absolute approval without further inquiry? You will find that on the 7th March, 1891, after both these papers with Mr. McMillan's minutes had gone back to Mr. Thompson, he wrote the minute I have just quoted, sending the papers to the Crown Solicitor, and asking to whom the offer should be made. The minutes of Mr. McMillan were his authority for doing that.

428. I suppose you understood my questions just now as referring to Members of the last Parliament. I suppose no Member of the last Parliament pressed upon your attention the advisableness of settling this claim? Not in a definite way.

429. But some may have done so indefinitely? Yes.

430. *Mr. F. Clarke.*] I suppose that in speaking to you they referred to the matter just as they would refer to any other case which was the subject of a certain amount of curiosity? Yes; I heard many Members speaking of it. I heard many Members say they thought Mr. Hill had been badly treated.

431. *Mr. Wall.*] After the minute of Mr. McMillan, the papers were, in the ordinary course of departmental routine, sent on to the Crown Solicitor to advise as to the owners of the land, and not as to the amount that should be paid? Yes; in order that an offer might be made.

W. J. Lyne, 432. In the ordinary course of departmental routine would that offer have been made in accordance with Esq., M.P. the valuation as accepted by Mr. McMillan? Yes.

11 Dec., 1894. 433. I understand you to say that had it not been for Mr. Robert Smith this matter would have been completed in accordance with that valuation? Yes.

434. What action did Mr. Smith take? If you look at page 12 you will find the letter to which I have previously referred, which was written by Mr. Thompson, practically at Mr. Smith's dictation.

435. In consequence of that letter the matter was held in abeyance? Yes.

436. *Mr. Lees.*] Does that support your position in this matter? I do not think it does one way or the other, but it casts a reflection upon the other valuers.

437. Could you give us a sample of the evidence upon which you base your opinion as against that of the Crown Solicitor, as to the reason why there should not have been a new trial? In the first place, those parties who had to deal with the matter at the time—that is, at the boom time—were in a better position to estimate values than we can possibly be now. Then the valuation was obtained from Messrs. Richardson and Wrench and Messrs. Mills and Pile, two of the recognised valuers in the city, who have a better knowledge than anyone else as to what properties were worth. Then, again, £172 per foot was paid for the Challis property, which is only separated from Hill's by a palisade fence. Then, Mrs. Lahiff was paid £150 per foot for a 30-foot frontage in the centre of Hill's property. Brown took us to Court, and obtained a verdict, including costs, equivalent to £156 a foot for 15 feet in the centre of Hill's property. A long frontage such as Hill's, of 530 odd feet, is worth a good deal more per foot than these short frontages I refer to. Then the point upon which the new trial was obtained, though it may have been technically right as a point of law, would have no influence with the jury, because the right to deepen has never been refused in the large number of cases in which it has been applied for. M'Quade's case was settled under exceptional circumstances by myself for £85 a foot. His frontage did not represent a corresponding per foot frontage with the other properties, because it drew so much together at the back. I could not see, nor can I see now, how it would have been possible to prevent a heavy verdict against the Government.

438. *Mr. Cann.*] I understood you to say just now that the reason no offer was made was because of Mr. Thompson's letter on page 12, written at the dictation of Mr. Robert Smith, yet you were not aware of the existence of that letter? The matter was left in abeyance, and was not brought before me until it was agitated by the parties interested. I made inquiries with reference to the case, and I heard something which caused me to believe that there was a letter to this effect.

439. The letter was written before you took office? Yes.

440. And you never had occasion to inquire about it till some time afterwards? No. We took office in October, and this matter came before me several months after that.

441. Is it not a funny thing that the department did not put this letter before you in the first instance, seeing that it was the reason why they had not made an offer? I had not been pressed by the parties; but as soon as I was pressed by them to make an offer I became aware of the existence of the letter to which you refer.

Ernest Augustus Smith, Esq., called in, sworn, and examined:—

E. A. Smith, 442. *Chairman.*] During the time negotiations in connection with the Woollooomooloo Bay resumptions were taking place you were Crown Solicitor—that is, during a great part of the time? Yes. I was appointed in October, 1891. The matter had been partially dealt with by Mr. Robert Smith before I took

11 Dec., 1894. the office.

443. You are acquainted with the various properties embraced in the resumptions? I did know them, but I do not know whether I can remember them now.

444. Were you generally opposed to the payment of the money which the Government decided to pay in the case of Hill and in other of these cases? In Labiff's case, if I remember rightly, I advised that the amount was excessive, but that it was too late to withdraw. I think that appears in my first report. In Brown's case I think there was a verdict of a jury. We went to trial in that case; it was one of the small cases. In Hill's case I was opposed to the payment of the amount which was actually paid.

445. You were opposed to it, I presume, because you thought that the sum offered was more than the value of the property? That was the main ground. But I might, perhaps, point out the way in which the question presented itself to my mind. It did not seem to me to be a question so much as to one's opinion of the value of the land. I do not profess to be a land valuator in any sense. The question we had to address ourselves to was what was the effect of the evidence which we could obtain, and what sort of case could be made before a jury. It was on that ground that we thought, taking all the evidence and weighing it, that the amount was excessive. I might mention that those were the lines upon which the subject was discussed at the consultation between the Attorney-General, Mr. Pilcher, and Mr. C. B. Stephen, which was held between the date of the granting of the rule *nisi* and the rule absolute. The whole thing was fully discussed then.

446. You based your opposition to the payment on the evidence of witnesses at the trial which took place in the case of Hill *versus* Lyne? Yes.

447. I suppose your department would take into consideration also the payments made for other properties situated in the locality? Yes.

448. Properties such as the Challis Estate, Brown's property, Lahiff's property, and other properties which were sold? Quite so.

449. In the case of the Challis Estate I believe the sum paid amounted to £172 per foot? Yes.

450. That was exclusive of 10 per cent. for forced sale? I do not know whether the 10 per cent. was allowed in that case or not; it was settled before my time.

451. You would consider that amount in estimating the Hill property? Quite so.

452. You are aware of certain prices having been paid for the properties I have mentioned? Yes.

453. I believe Labiff's case was settled during your tenure of the office of Crown Solicitor? Yes. If I remember rightly an offer had been made and accepted, and we could not withdraw from it.

454. The price paid for that property was what? I forget. I know it was mentioned in my first report, when I first dealt with the matter, and after going into all the evidence we could collect.

455. In Brown's case what happened? We reduced the offer which had been made, I think under my advice. We then went to a jury and got a verdict for a certain amount.

456. An amount beyond that offered by the department? Yes, beyond the amount offered.

457. Do you remember now exactly what the department offered? I am afraid I cannot. E. A. Smith,
 Esq.
 458. Was it £100 a foot? I think what I advised was that a uniform rate of £75 per foot should be offered; that was in my first report. The offer of the Government was £100.
 459. A letter has been put before the Committee showing that you advised that an offer of £125 made by the Government should not be withdrawn? Yes. 11 Dec., 1894.
 460. In this same case the Government determined to offer £100 a foot? The difference between £100 and £125 is inconsiderable, because there were improvements on the land. The £100 was for the bare land.
 461. I presume that a previous valuation had been submitted to Brown. At any rate you advised that the offer of £125 per foot should not be withdrawn? Yes, because that sum included the forced sale and the value of the improvements, and it appeared to me that the difference was inconsiderable—that is to say, if we gave him £100 a foot, and also the value of the improvements, it would come to nearly £125 a foot.
 462. He refused to take the offer made by the Government, and went to Court? Yes.
 463. And got a verdict? Yes, for an amount which I now forget.
 464. In your letter referring to the matter, you say "I have the honor to report that the trial of the above case was concluded this morning, when the jury returned a verdict assessing the compensation at £2,200, which amount would seem to be £100 per foot for the land, £1,500, with £700 added for the value of the buildings";—on what ground did you base your statement that the verdict allowed £100 per foot for the land? I based it on the evidence given by the plaintiff's witnesses as to the value of the improvements. The officer in charge of the matter in my department was Mr. Curtis, and in going into figures with him, that was the way we brought it out. I was not in Court when the figures were given, but I heard what had been the evidence of the witnesses as to the value of the improvements.
 465. The Challis Estate was dealt with before you occupied the position of Crown Solicitor? Yes.
 466. In that case a valuation of £175 per foot was made;—are you aware of that? Yes; I think that was so.
 467. It was valued by Mr. Thompson, Messrs. Richardson and Wrench, and Messrs. Mills, Pile, and Wilson? I think that is so.
 468. The claim was paid at that rate? I think it was at the rate of £172 per foot, but I am not sure.
 469. At the same time these valuers valued the adjoining property of 303 feet at £175 per foot? Yes; that was the subject of the action, I think.
 470. Was 10 per cent. allowed for forced sale? I think it was.
 471. Are you aware that Mr. McMillan had agreed that that was a fair and reasonable valuation? I never heard of it.
 472. A paper has been put in tending to prove that Mr. McMillan thought it a fair and reasonable valuation? I do not think it was brought before me. If it had been, I think I should have seen Mr. McMillan about it.

WEDNESDAY, 12 DECEMBER, 1894.

Present:—

MR. F. CLARKE, MR. LEE, MR. LEES,	MR. MOLESWORTH, MR. O'SULLIVAN, MR. WALL.
---	---

J. MORGAN, Esq., IN THE CHAIR.

Ernest Augustus Smith, Esq., recalled and further examined:—

473. Chairman.] When the Committee adjourned yesterday you were about to state how the case stood E. A. Smith, when you took the position of Crown Solicitor? What I was going to mention was this. When I went Esq. into office I found, that on the recommendation of the late Acting Crown Solicitor, Mr. Robert Smith, a Board had been nominated. I think it consisted of various heads of departments, and it had been suggested, I believe, that they should meet and advise the Government as to what price should be offered in the case of these land resumptions. That was the position. 12 Dec., 1894.

474. Who recommended the Board? I think Mr. Robert Smith recommended it, and I believe it had been approved by the Minister before I came into office.

475. As a matter of fact the Board never sat? No. When I went into the matter it seemed to me that this Board would not be of any assistance to us in case we had to go to court. It seemed to me to be likely that we should have to go to court in connection with this particular matter, and we should not have been able to call the members of the Board as witnesses with any advantage. They were all officials of the Government, and it seemed to me that it would take up a lot of their valuable time. I think, at my suggestion, I was instructed to get together the evidence that we should put before the court, if we did go to trial. I was to report on the result of my investigations, and the idea of the Board was abandoned. I then went to work, and collected all the evidence I could, and it was put before the department in the form of a report.

476. That was some considerable time before the case went into court? Yes.

477. You say in a letter, on page 17 of the papers written by yourself to the Under Secretary for Public Works, and dated 13th October, 1892, that "in accordance with instructions I have caused inquiries to be made, with a view of arriving at a determination as to the amount which should be offered to the various claimants in respect of this resumption";—who gave the instructions? That is the report I have just referred to. It was under instructions from the Works Department. I do not know whether I made the recommendation in writing as to the course which should be adopted; but I know that the suggestion came from me that we should not have the Board. It seemed to me to be a little bit unworkable from a practical point of view, and I think the Minister confirmed me in that opinion.

478. That was the reason the Board never sat? That was the reason it never sat.

479. You point out in the same letter of the 13th October, that in the case of the Challis Estate £172 per foot had been paid? Yes, that was one of our difficulties.

480. Beside that amount was any allowance made for forced sale? I am afraid I cannot remember that point. It is not stated in the paper that it was so, but I think it was. However I would not be sure.

481.

- E. A. Smith, 481. You will see that lower down in the same paragraph you state that the trustees of Peter Lahiff had been offered £150 per foot, and that the offer had been accepted? Yes.
- 12 Dec., 1894. Esq. 482. You go on then to state that the question was at what rate per foot the compensation in respect of the other allotments should be assessed? Yes.
483. And you finally recommend the sum of £75 should be paid all round? Yes.
484. For the whole of the land held by Hill, and by Hill & Co.? Yes.
485. Did you believe at that time that the amount of money paid for Lahiff's property was too great? It seemed to me to be so on the evidence.
486. Did you hold a similar opinion as to the amount paid for the Challis Estate—that it was too large? Yes, I think it was.
487. This was so from your own point of view, not only in your own opinion, but also in the opinion of experts who had valued the property? Quite so. Of course, I went down to the land myself. I went over it with two officers of the Government. I forget at the moment who they were, but I think that Mr. Thompson was one and that Captain Jackson was the other. We also had a surveyor with us.
488. Although you use the words "in my opinion," your opinion was really based upon the evidence given to you by other persons who were supposed to be experts in the matter? Yes.
489. You believed at this time in recommending the payment of £75 per foot all round that there was a large area of land belonging to Hill and party for which they had no water right? At that time he had not made out his right to the reclaimed land. I think that applied to the other portion of the property which was not the subject of the action.
490. Still you recommended the sum of £75 per foot for the whole of his land? Yes; assuming that he could make out his title to the water frontage, it was subject to that. I think I refer to it somewhere in my report. You will see that on page 18 I say "With regard to George Hill No. 6, it should be borne in mind that he has still to make out his title to the 130 feet frontage, and no offer should be made until this is done." I think we had been assured by the solicitors of George Hill that they could satisfy us that they could make out a title, but they had not done so at that time.
491. If they had not made out that title you would not have named such a high rate as even £75 per foot? Just so. I do not know what the land would have been worth at all without that right. Of course now I am referring to No. 6; I am taking that block by itself. If he had not made out his title to reclaim in front of No. 6, I do not know what the value of that particular block would have been. I do not mean to say that it would have affected the amount of compensation to be paid for the two other blocks.
492. Previous to that a valuation was made by Messrs. Richardson and Wrench, Messrs. Mills and Pile, and the Government valuator? Yes.
493. Did they value this particular portion, No. 6, at that time? I think their value went only to the block which was the subject of the action,—the 300 feet. I see that in my report I refer to that valuation. I say: "Another difficulty is the fact that on the first valuation that was made on behalf of the Government by Messrs. Richardson and Wrench, Mills, Pile, and Wilson, and Mr. Thompson, jointly, the amount in Hill and Belisario case No. 2 was assessed at £58,447." I think that was the only valuation we had.
494. No. 2 was the only valuation you had at that time? It would seem that that was the only valuation.
495. You are not aware whether the 130 feet was valued by anyone prior to that date;—was the piece in regard to which you were doubtful about their having the water frontage valued? I cannot remember whether there was any valuation on that or not.
496. Do you remember whether there was any subsequent valuation made in respect of that block? I cannot remember it. Do you mean by these same gentlemen?
497. By anyone on behalf of the Government? No; I cannot remember that there was a separate valuation made. Of course, my object was to treat this thing as a whole, so that we might act consistently with the various claimants. I was always averse to making these piecemeal offers. I wanted the whole question considered. That was the object of my report. It seemed to me that it would be wise to adopt a uniform rate throughout on the evidence, although in some respects one allotment might, perhaps, have a greater value than an adjoining allotment. It seemed to me desirable, as we had to fight the thing out, to adopt a uniform rate as far as we could. As I have pointed out, one of the great difficulties we had to contend with lay in the fact that there had been piecemeal dealings with the thing before. We had to get over that.
498. As there was no valuation made of this particular piece prior to your expressing your opinion, on what did you base that opinion? Generally on the evidence I had collected. I think I enclosed in my report the evidence with regard to the value.
499. There appears to be nothing here to show on what you based your opinion, unless it was based upon some private report which you may have received? It was a statement which I got in writing, and which I enclosed in my report. You will see the enclosures I refer to in the third paragraph, and that the second of them is, "Particulars of estimates obtained."
500. Is that shown in these papers? Apparently it is not printed. The 6th paragraph of my report shows the basis of my opinion. I said:
- From reports which I have obtained from the persons named in the list accompanying, and from the interviews that I have with some of them, it appears to me there will be ample evidence to show that the very utmost that the Government should offer for each foot of frontage is £75. Some of the witnesses, whose opinion would carry weight in a matter of this kind, think that for the reasons mentioned, namely, the want of access and the want of depth, this property has no commercial value. Others value the frontage at from about £40 to £75, the highest valuation being £75.
501. You refer to want of access and want of depth. Was there no access to the property? No. Perhaps I ought to point out this with regard to the Challis block, that it stood upon an absolutely different footing from any of the other blocks, on the ground that it had access on the flat. All the streets that run down to Woolloomooloo Bay there have access to the Challis block; it was really the key to the whole position. If it were in adverse hands the whole of the owners to the north of the block would have no access except over the cliff at the back leading from Victoria-street. You will see, therefore, that the Challis block stood upon an absolutely different footing from the others.
502. The Government having purchased the Challis block, if you had made a road through it the other parties could have had access? If we made a public road through it. Yes.
503. Still, you did not take that into consideration;—there was no public road there at the time? No.
504. When you say want of depth do you mean the depth of the land? No; the want of depth refers to

to the depth of the water. You will see that I refer to the point just above the paragraph I last read. E. A. Smith, I say : "Another point to which attention should be directed in comparing this property with other wharf properties in the city is the depth of water." I notice that there is a misprint in the following sentence. The word "surroundings" should be "soundings."

12 Dec., 1894.

505. Prior to your making that statement a valuation was made by the Government valuers, Messrs. Richardson and Wrench and Messrs. Mills, Pile, and Wilson? Yes.

506. By whom were they employed? That was before my time. I suppose they were employed by the Works Department, but I am not sure.

507. You will notice that in the report of the valuers on page 11 they say:—"This property is at present of great value"? Yes.

508. I suppose there are other persons besides these valuers who influenced your opinion;—you could not have based it upon their evidence, because your opinion is directly opposed to theirs;—you say that the property was of no commercial value, and they say that it was of great value? Quite so.

509. So that your opinion could not be based upon the report of the Government valuers and the men who were employed by the Government to value the property? No.

510. On whose evidence, then, did you generally base your opinion? I think it is stated in my report. I say:—"I enclose a copy of a joint valuation made at my request by Messrs. Hardie and Gorman, in which they assess the value at £100 per foot. This appears to be an outside value, from an auctioneer's point of view; and, in estimating property of this kind, I should feel more inclined to disregard evidence of that kind, and to trust more to the evidence of merchants, wharf-owners, &c." That was really the way in which it seemed to me that we ought to put the case to the jury. Here was a property which it was admitted had its value for one purpose only, namely, as a wharf property, and, in finding out what is the value of a particular wharf property, I thought more weight ought to be attached to men who knew their business than to men who were auctioneers only. That was the way in which it was put to the court eventually. The Chief Justice in summing up put the case in that way, and confirmed my report to that extent. He lays great stress upon the value of the evidence we had collected from men of that class—wharf owners and others.

511. Did Messrs. Hardie and Gorman value the property as a whole in giving the valuation of £100 per foot, or did they make two valuations, one of which was for a higher sum than £100 per foot? I was under the impression that they made two valuations. I forget what the valuation was now. The copy should be with the papers; I see it is enclosed.

512. I believe Mr. M'Credie afterwards valued this same property? I think he valued it before. It was he who had put forward the scheme that I referred to.

513. By whom was he engaged? I forget whether he was engaged by the Crown or by the other side. He put the scheme forward in the time of Mr. Robert Smith, who dealt with his report.

514. There was a property, I think, on No. 2; that is, on the piece of land adjoining the Challis Estate. There was a house or something of that kind there;—are you aware of it? I forget that.

515. I believe No. 2 is the block in respect to which the action took place? I think there was a small tenement on it, but I really forget.

516. You cannot remember? No.

517. You do not remember whether there was a patent slip on it? Oh, yes; there was something of that kind.

518. Was it of any value? I do not think it was considered to be of any substantial value, in regard to the figures we were dealing with, of course.

519. Mr. Kirkpatrick made a valuation of the 112 feet and 123 feet 6 inches. Do you remember at whose instigation that value was made—you will find a reference to it at page 22 of the papers? I do not think I ever saw this document.

520. He was employed by the Government as assistant valuer, or something of that kind? I do not know him in connection with this case.

521. You will see from the document on page 22 that Mr. Kirkpatrick valued these two lots of 112 feet and 123 feet 6 inches at £131 per foot, that is in the second report. You will see that he allows for building and shed £1,200, and for forced sale at 10 per cent. £3,205? Yes.

522. These are the two portions adjoining McQuade's property at the extreme north of the Hill property? Those are the two pieces.

523. This valuation was made sometime after you had expressed a doubt as to whether Hill and Co. had a right to the water frontage? I see the report is dated the 20th September, 1893.

524. And your letter on page 21, under date 30th May, 1893, refers to the question of the water frontage right? Yes, that is so.

525. So that the valuation was apparently made some time after that? Yes.

526. When I suppose it was conceded that Hill and Co. had a right to the water frontage? It was practically admitted. No doubt on that date, the 30th May, 1893, we had passed the title.

527. That was before Mr. Kirkpatrick was employed by the Government to value these properties? I do not think he had been employed on these valuations at all before then. I do not remember seeing these reports to which you have drawn my attention. Now I come to think of it, I have some recollection of Mr. Kirkpatrick's coming up to my office and telling me that he was going down to value the property. I think that was after the trial. I know that he wanted some information.

528. When did the trial take place? I think it was at the June sittings of 1893. I believe that it was some time after that that I saw Mr. Kirkpatrick.

529. If you turn to page 22 you will see that the Under Secretary for Public Works asked whether the land should be revalued. Further down there are the words, "Yes, let Mr. Kirkpatrick value," following which are the initials of Mr. Lyne? Yes.

530. It is therefore apparent that he was employed by the Government to value the land? I think that it is very likely that he then came up to see me, I have some recollection of it.

531. Looking at the valuation of Mr. Kirkpatrick you could not have based your opinion upon that? Which opinion do you refer to.

532. Your opinion generally, that the land was only worth £75 per foot? No; I had not Mr. Kirkpatrick's valuation before me when I came to that conclusion.

533. The trial took place, and the jury gave a verdict for £200 a foot? Yes.

534. You moved for a new trial in the matter? Yes; we moved at the next term.

535.

- E. A. Smith, 535. And prior to that new trial there was a meeting of counsel engaged by the Crown? Yes.
 Esq. 536. To consider the probability of the success of the new trial, I presume? Yes; we had a consultation before we moved for a *rule nisi*. That was the first step; it was to settle the grounds. We settled our grounds at the first consultation, and the *rule nisi* was obtained on some of those grounds.
- 12 Dec., 1894. 537. On what ground was the *rule nisi* obtained? The two main grounds were—first, as to his Honor's direction to the jury with regard to the right to deepen; and the other ground—the main ground—was that the amount was excessive and against the weight of evidence. Those were the two chief grounds. We may have had some technical points, but I do not think they were very substantial.
538. Was it the unanimous opinion of the counsel present at the consultation that applications should be made for a *rule nisi*? They were unanimous that we should apply for our rule, and it was after we had obtained it that another consultation took place with the Attorney-General. It was a special consultation held under his direction. He sent for me and told me that the matter had been referred to him, and that he wanted to see counsel.
539. You were successful in getting your new trial; but the proceedings were stayed by some one—you did not go into court? No; the trial was first on the list for the March sittings.
540. And it was stayed by the action of some one? It was stayed eventually by the thing being settled. It was called on and it was adjourned for a week. I was instructed by the Attorney-General to get an adjournment for a week in order that we might consider the whole position. Eventually, of course, the case was struck out.
541. By whom was it settled? It was settled by a minute signed by Mr. Lyne.
542. Are you aware that it is stated that it was settled by a Cabinet meeting? Yes; I understand that. It was in pursuance of a Cabinet meeting that the thing was settled.
543. The Cabinet minute was signed by Sir George Dibbs stating that the case had been settled? Yes.
544. So that really it was not settled by Mr. Lyne but by the Cabinet? Let me make myself quite clear. When you ask me by whom the matter was settled, I say by Mr. Lyne. He was the person to settle it eventually in such a way as to bind the Government. One of the questions we had to consider was, whether there was a binding and legal settlement. Counsel advised me that the memorandum having been signed by the officer who was the party on the record it was binding. It was signed "W.J.L.", and that I presume was Mr. Lyne's signature. He was the defendant on the record, and the case having been settled by him we could not dispute it. Of course, I am well aware that it was settled by him in pursuance of a Cabinet decision. But some other person might have put his name to the thing, and it would not have been legal and binding. That was the view we took of it.
545. I want to be clear upon this point. I want to discover whether the case was settled by the Minister behind the back of the department, or whether it was settled by Cabinet meeting? It was in pursuance of the Cabinet meeting, I understand, that the offer was made.
546. You are aware that the case was brought before the Cabinet? Yes.
547. I suppose you are also aware that the matter was settled by a majority of the Cabinet? I do not know what was done in Cabinet. I only know that I saw the minute.
548. Is the minute referred to that which appears on page 33 of the papers, and signed by Sir G. Dibbs? Yes.
549. In your letter to the Secretary of the Attorney-General, on 12th March last, you say, "That a distinct offer to settle on specified terms has been made by a Minister of the Crown to the plaintiff's solicitor, and they have accepted these terms unconditionally in writing." Is that strictly correct? I think it is.
550. It has been stated that the offer of Hill and Co. to settle came from the Manager of the Bank of New South Wales, and Mr. Belisario, two of the parties interested? Yes. Of course, I do not know what offers may or may not have been made at that time by the persons interested. All I knew was what I had before me. It appeared that there had been a decision of the Cabinet, and that it had been so dealt with by some one in authority as to bind the other side, who had clinched the matter by signing a document.
551. As a matter of fact are you aware of any offer having been made by a Minister of the Crown to Hill and Co., or anyone else. Did any Minister offer to settle the case on any specified terms? I do not know about his offering, but I know he had been approached by the other side. They made certain proposals I believe.
552. What do you mean by being approached? I mean that an offer had been made by Hill and others.
553. To settle the case? Yes.
554. Then it is scarcely correct to say that a distinct offer to settle upon specified terms had been made by a Minister of the Crown? I do not want to say or do anything which may mislead the Committee or any one else. I do not wish it to be inferred from that paragraph that the Secretary for Public Works, or any other Minister of the Crown had on his own motion made a distinct offer. I think that if the whole report were taken together it would not bear that construction. What I do wish to convey is this, that the Cabinet had decided on a certain settlement, that it had been communicated by a Minister of the Crown to the plaintiff's solicitors, and that they had accepted it. That is what I meant, and I think what I wrote bears that construction.
555. *Mr. Wall.*] That was your opinion in view of the minute? Quite so.
556. *Chairman.*] You were strongly opposed to this settlement? Yes.
557. Why were you opposed to it; on what grounds;—was it because of the excessive price which in your opinion was being paid for the land? Yes; I was opposed, not only to the settlement itself, but to the way in which it was carried out. That was my strongest ground of objection. I should certainly have been opposed to any settlement on these terms for the reason that it seemed to me that we had a very good case to put before a jury on a second trial, and that I thought we ought to have gone before a jury. That was my opinion.
558. Had you any fresh evidence to put before the jury? No; I was very well pleased with the way in which the case worked out before the court; so were counsel. No doubt there were difficulties in our way. But I thought from our experience of the trial that we had as good a show, and we might do better at the second, especially in view of the opinion of the full court with regard to the right to deepen. We were in a strong position then I consider.
559. Are you aware that in most cases where the right to deepen a water-frontage has been applied for it has been granted? I am not aware personally, but I think it is almost admitted that it is generally granted. Of course there is a great difference between reclaiming and deepening.
- 560.

560. In view of the fact that £172 per foot had been paid for the Challis Estate, that £150 per foot had E. A. Smith, been paid for Lahiff's property, and in view also of the price which had been paid for Brown's, do you still think you had a fair chance of success on the new trial? I think so.

561. Is it a fact that some of the money paid for these properties—the Challis Estate, Lahiff's, and Brown's—was proportionately greater than the amount paid for Hill's property? Undoubtedly more was paid for the Challis Estate, but as I pointed out in my first report I could distinguish that case, because it stood absolutely alone on the ground of the question of access. Any one who goes to the place and sees the property will see that that is obvious. All the streets there come right down on to it.

12 Dec., 1894.

562. Lahiff's property was far removed from that; it was on the other side of the Hill property, was it not? Yes, it was between the two Hill properties.

563. And for that the sum of £150 per foot was given? Yes. As I pointed out in my first report I think that was an excessive amount. It shows the danger of dealing with these things piecemeal.

564. I suppose Lahiff's and Brown's property would also stand alone, independently of any other property? Yes; you see, they were such small pieces—15 feet and 30 feet.

565. Are you aware what the verdict would amount to per foot in the case of Brown's property? I think I stated that yesterday. I believe the verdict was for £2,200. We took off that the amount which Brown swore was the value of his house, in which he was supported by some other evidence—that is, the sum of £700. That reduced the amount to £1,500, or £100 per foot for the bare land.

566. You still think, notwithstanding the prices paid for Brown's and Lahiff's property, and for the Challis Estate that the sum of £145 per foot, which was paid for the settlement of the Hill case, was too great? I think £145 for the three lots settled at that rate was certainly excessive.

567. You are aware that it included the buildings on the land? Yes.

568. And a patent slip? Yes.

569. And also that 10 per cent. was not allowed for forced sale as in the case of the Challis property? Yes; of course I was strongly opposed to the settlement of the action. I pointed out, I think, with regard to the land which was the subject of the action, that it was a fallacy to say that the settlement was for £145 per foot. No. 2 property, which was the subject of the action, had Nos. 5 and 6 thrown in with it in the settlement. And comparing Nos. 5 and 6 with No. 7, that is, McQuade's property which was settled for £85 per foot, you have only to look at the plan to see that if No. 7 is worth only £85 per foot, then Nos. 5 and 6 would not be worth more. We had a clear issue to fight in the case of Nos. 5 and 6, and they would not have got nearly £145 per foot. As I think I have before pointed out, if you take the figures and put Nos. 5 and 6 at the same rate as No. 7, namely, £85 per foot, you will find that the Government paid at the rate of about £190 per foot for No. 2 block, which was the subject of the action. That is what I mean.

570. Have you worked out the figures to prove that the Government would be paying £190 per foot? Yes, I did work it out at the time when the Attorney-General referred the minute of the late Secretary for Public Works to me.

571. Do you think block No. 2 of the Hill property is actually worth less than the Challis Estate property? Yes.

572. Has it a greater depth? Not a greater depth.

573. Is there a similar depth? I forget the exact figures, but I fancy that the Challis property was deeper.

574. You were generally disgusted with the settlement at £145 per foot all round? Yes.

575. And you wrote a strong report to that effect? I wrote a report under date 12th March, which appears on page 34.

576. You were of opinion that once the matter had been placed in your department that neither the Secretary for Public Works, nor indeed any other Minister, had the right to take it out again without the authority of your department? I do not say without the authority of my department, because I do not mean to say for one moment that my department was to dictate to the Minister in any way. But what I do say is this, that when a case has been referred to the Crown Law Department for legal action in defence of the Crown's interests, which really mean the interests of the public, it is wrong for any action to be taken by the department who sent the case there without first referring to the Crown Law Officers, and hearing what they have to say on the matter.

577. In the two cases settled by the Minister, McQuade's and Hill's, were the prices paid lower or higher than the settlement in the other cases—I mean the Challis Estate and Brown's and Lahiff's property? McQuade's price was lower, that was £85 per foot, the price of the Challis Estate was £172 per foot. You already have it in evidence what price was paid for Brown's and Lahiff's properties. Hill and party received all round £145.

578. In your reference to the Secretary for Public Works in your minute, do you intend to impute any dishonest motives to him? I do not know whether I am bound to answer the question as to what my intention was, but I would be the last person in the world to impute anything to any one. If I wanted to do anything of that kind, if I had anything to say of a person I should say it straight out. I confess, since you have asked me the question, that I could not make it out at all. I could not understand why the thing should be done in this way. That is the utmost, I think, I can say.

579. I might put it in this way. Had you any reason to guide you in thinking that the Minister had been influenced by any personal considerations to settle this claim? No, I cannot say that I had. As I just now said, if I had anything of the kind to say, I should have said it straight out. But I did not understand at all why the thing was done in this way.

580. Do you think ordinary prudence was exercised in the settlement of this claim by the Cabinet? No, I do not. I think that if the board of directors of any company were to act in the same way—well, I know what a Court would say to it in the interests of the shareholders.

581. Mr. Wall.] The rule *nisi*, you state, was granted on the ground, among others, that the plaintiff had not the right to deepen the frontage? Yes.

582. That would, of course, necessarily alter the question of valuation; it would carry with it the question of valuation? It put us in a stronger position. I do not want it to go abroad that there has been any great alteration of the law as the effect of the Full Court's decision, but, if I may say so, with all respect, I think his Honor the Chief Justice went a little bit too far in his direction to the jury. He laid it down that they might assume that the plaintiffs had an absolute legal right. That is what it amounted to roughly.

583.

E. A. Smith, 583. I see Mr. C. B. Stephen, in the consultation that took place, was inclined to the opinion that the question of value was one entirely for the jury? Yes; I remember that.

12 Dec., 1894. 584. Were not the Challis Estate and the Lahiff property in exactly the same position in regard to the right to deepen the frontage? Exactly.

585. Then if an error occurred in the valuation with regard to this property, conceding rights which the owners were not supposed to possess, the same error occurred in the previous valuation of the other estates? Yes, if the valuations were upon those lines—that the owners had an absolute legal right.

586. The payments in the case of the Challis Estate and Lahiff's property were not made during your term of office? Challis's case was settled before I took office, and in Lahiff's case an agreement was concluded. I do not think the money had been absolutely paid, but an offer had been accepted, so that there was a complete agreement between the Crown and the claimant. In Brown's case we went to a jury.

587. Was any recommendation made to the department in connection with these estates, pointing out that the owners had not a right to deepen the frontage, and that the value might be increased by contesting that right? No; I do not think it was. The whole question was treated, not on the basis of each individual having an absolute legal right to deepen, but on the basis that it would be a fair thing to put to the jury that it was a well-known thing here that the Government would allow the deepening to be made almost as a matter of course. That is what I meant just now; but in saying that I do not wish to be taken as expressing the opinion that the ruling of the Supreme Court will alter the practical law of the question. But the view of His Honor the Chief Justice as to an absolute legal right to deepen was held to be an erroneous view.

588. In submitting a case of that character to a jury, would not the fact of the right to deepen having been always conceded in the other cases where a valuation was made, have practically the same effect in arriving at the valuation as if a legal right existed? It is impossible to say. Of course, in each case, you would be able to rebut the ordinary presumption that a right to deepen would be given by showing that in a particular case it might not be obtained.

589. I should like to get the legal aspect of this case. In contending against the Minister in regard to it you take advantage of this technical objection which might be raised? No. I think the basis, as I mentioned just now, on which the whole thing was dealt with was the assumption that the individual would be allowed to deepen as a matter of course.

590. I am taking now the address to the jury of His Honor the Chief Justice, that this right should be conceded to the plaintiffs? His Honor laid it down that the jury must assume that the plaintiffs had the right.

591. The jury being advised on that particular point, arrived at the conclusion upon the whole of the evidence which the department had to produce? Quite so.

592. Was there any additional evidence which was brought forward at the new trial apart from that forthcoming at the first trial? No, I do not think we had in our minds any additional evidence at the time of the consultation.

593. Then, practically, what the new trial was based upon was the direction to the jury by His Honor in regard to the rights claimed by Hill, which were not strictly legal rights? The new trial was granted on that ground alone; but in the new trial itself we should have put it to the jury that the first verdict was grossly excessive. That was the second ground upon which we applied for the rule, but it was not argued before the Full Court.

594. In the previous trial the evidence you produced was to show that the values were excessive? Yes.

595. Had this question of the right to deepen the water-frontage not arisen, would the department have obtained a new trial? Yes; we should have argued the second ground. We were prepared to argue the second ground, that the verdict was excessive. If the Court had not been with us on the first ground, we should have argued the second.

596. In one of your reports you offer a suggestion that the Attorney-General should be the nominal defendant in all cases of this kind? Yes.

597. That appears to be the strong point of contention between your department and the Works Department in regard to the settlement of these cases? That was one of the things which I felt it to be my duty to draw marked attention to in connection with these cases, but, as I have pointed out before, it is no new matter between our department and the Works Department.

598. Do you regard it as one of the functions of your department to deal with the values of properties which have been resumed? I do not think it is as valuations simply, but I have often drawn attention to this, that it would be of very great value to the public if the Valuator's Department were more in touch with the Crown Solicitor's Department. I think that in any doubtful cases it would be very wise if the valuers would refer to the Crown Solicitor if they expected a fight over the matter, and if they consulted with him before a report was sent in. The Crown Solicitor is charged, and it is a very grave responsibility, with putting a case in a proper manner before the Court, and he is often handicapped by finding that the valuers, simply from the absence of legal assistance and advice, have made admissions and so on, injuring the case, and making it difficult to put a fighting case before the Court. I have often drawn attention to that. While I think the two functions are quite distinct, that of valuing the land, and that of affording legal advice as to the valuation, I think the two departments ought to work together.

599. In dealing with evidence submitted to you as to these valuations by the Works Department, and your position of Crown Solicitor, I presume you would recommend in accordance with the chances of success in contesting any legal point? The first thing I would do would be to go to the evidence and see what sort of case we could put before the Court.

600. Then the question of values would not enter into your consideration any further than as regards the evidence on which those values were based? Quite so.

601. And the possibility of your succeeding in any action that might arise in connection with it? Yes; I should feel it my duty, of course, to test the values as far as I could by seeing the witnesses and cross-examining them in my own office as far as I was able.

602. And if it were possible for you to have access to the valuations made by the other side, and if the preponderance of the evidence were in favour of the Government valuations, you would advise that the matter be contested? Yes.

603. In regard to these cases which have been referred to—the Challis Estate and Lahiff's property, viewing

viewing those cases in the same light in which you appear to regard Hill's claim—that is, the owners not E. A. Smith, having the legal right to deepen the water frontage—had those cases come before you would you advise that the matter be contested? It was assumed in Challis' case that they could get the right as a matter of course.

12 Dec., 1894.

604. That was so in both of the cases? Yes.

605. You state that this friction has existed for some time between these two departments, and it was that which induced you to make the recommendation that the Attorney-General should be made the nominal defendant in such cases? Yes; it was in consequence of the action taken by the Works Department that I made the recommendation. It was no new matter to my mind, the thing had occurred to me before.

606. If the Attorney-General had been the nominal defendant in this case, and it had become a Cabinet matter, and it had been decided to settle the claim, the fact of the Attorney-General being the nominal defendant would not have prevented a settlement? No; but the Attorney-General would have to sign it.

607. Take a hypothetical case. We will assume that the Attorney-General was the nominal defendant in this case and that the matter had been settled in precisely the same way as this case had been settled, in virtue of a Cabinet minute by the Minister, who was the nominal defendant;—would you have taken the same exception to the settlement of the case by the Attorney-General as you have taken in this case? Yes, I should have taken objection. Of course, in this case, you must bear in mind that the Attorney-General, who is my Ministerial Chief, had called upon me for a report upon the matter, and I had to report, but if he had taken the same action without sending down for me to know how the thing stood, and if I had thought that by reason of my not having put before him something of advantage the public interest had suffered, I should certainly have drawn attention to it. I should have suggested that in all future cases, before dealing with matters of which I had charge as Crown Solicitor, he should send down for me and obtain my report.

608. You would have taken up the same position as you have taken up in this case? Yes; because it goes without saying that it would be impossible to carry on business with any hope of doing any good at all if independent action were taken by the nominal defendant without referring to me.

609. Are you aware that the Attorney-General was present in Cabinet when this case was decided? I do not know what took place in Cabinet, or who was there. I know, however, that the matter was referred to the late Attorney-General, Mr. Barton, to deal with, and that we spent a lot of time and trouble in dealing with it, as can be seen from the printed papers. We took up a certain position, and that position was absolutely given away.

610. At the time of the consultation which took place between Mr. C. B. Stephen, Mr. Pilcher, and the Attorney-General in regard to this case, did you know what was the amount of the verdict, per foot, and the amount of the costs? No; the verdict per foot was £200.

611. And they had no knowledge at the time that the plaintiffs would be willing to accept £145 per foot? No; all that the Attorney-General said at that consultation was that he had understood that there was some—I do not know whether it was exactly an offer—but some idea of settling at £130 a foot. The conclusion arrived at was that that was far too much, and was not to be looked at.

612. You made some comparison just now with regard to M'Quade's property, portion 7, and you said that portions 5 and 6 were portions of a similar character, and would be of the same value? Yes.

613. The amount paid in M'Quade's case was £85 per foot? Yes.

614. You are aware that in the case of that block, although it has 510 feet frontage, the superficial area is not equal to a 510-foot frontage block? No.

615. It is only 190 feet at the back? Quite so; it is not square.

616. Squaring that block would have given it only 350 feet frontage? With that depth—yes.

617. So that actually the compensation paid for that block was something very much more than £85 per foot? I should not argue in that way myself.

618. That is the view the valuers have taken—that an equal frontage with an equal depth at the back would be of exactly the same value? If the block were extended in that direction it would be a more valuable block, but I was simply comparing it as it stood with Nos. 5 and 6.

619. And if it had been a square block, taking the valuation at £85 a foot as compared to a square block, it would have amounted to something like £120 per foot? Possibly.

620. *Mr. Lee.* Do you remember the date of the settlement of this case by the Cabinet? The news of the decision of the Cabinet was conveyed to me by telegram which I received at Wentworth Falls.

621. On what date? I am afraid I cannot say. I know they sent me up some papers. I remember applying for leave, and going away just after I sent in my resignation. My telegram in reply appears to have been sent on the 9th, and was received by the Crown Solicitor's Department on the 10th.

622. That was the first intimation you had of the settlement of the case? No. I do not think it would have been the first intimation. My telegram reads, "Documents received. As minute of last instructions not sent, impossible for me to say whether alleged settlement final and binding." If I remember rightly, what was done was this: They reported to me that the settlement had been made, and I telegraphed back to have the papers sent up that I might see what it was. They came up, and I then said that, as the minute of the last instructions had not been sent, it was impossible for me to say whether the alleged settlement was final and binding.

623. You will find a letter on page 32, under date of 5th March, from the Crown Solicitor's Office? Yes. That was written in my absence. It was evidently on the 5th that they first informed me of the settlement.

624. The letter acknowledges the telephone message to the effect that the case was settled? Yes. I presume that it was then that they wired up to me and that I wired down for the documents.

625. Had you received any prior information to that of the 5th March? No. The signature of the letter to which you refer is not mine—I was not then in Sydney.

626. Your office had evidently been informed of the settlement? Yes; but I do not want to speak of anything that is not within my own knowledge.

627. As far as you remember you had no prior intimation of a settlement? No. I went away from Sydney on the Friday I think, with the full anticipation of the case coming on on the Monday week. The case was set down, and we were all ready for trial.

628. You were not aware that it had been settled by the Cabinet on the 15th February? No; I certainly was not aware of that.

629.

E. A. Smith, Esq. 629. Have you known since that the case was settled on that date? Now that you mention it I ought to have known that it was so settled, but I confess that I did not. The date of the Cabinet minute would speak for itself.

12 Dec., 1894. 630. Let me refer you to the latter part of Mr. Lyne's minute on page 36? Yes, I see that.

631. You see from that minute that Mr. Lyne states that the case had been decided by the Cabinet on the 15th February? Yes.

632. Yet as Crown Solicitor you had no intimation of it prior to the 5th March? No.

633. Further on you will see that the Attorney-General in his minute acknowledges the receipt of the minute of the Secretary for Public Works, and refers to the date at which the matter was settled in Cabinet? Yes.

634. Now turn to page 32 to a memorandum of your own. That memorandum has reference to the case then pending and to be set down for trial after the new trial had been granted? Yes.

635. So really it would appear that, although the case was decided by the Cabinet on the 15th February, yet on the 19th of the month you were ignorant of it, and were making arrangements for the re-hearing of the case? That appears to be so. I confess I had not noticed that the Cabinet had dealt with the case on the 15th until this moment.

636. Whatever the Cabinet had done in the case you were in ignorance of it? Yes. I was taking the necessary steps to get the case on for trial.

637. If the Cabinet had informed you of its decision immediately after the 15th February, would you have gone on with the case, or would you have accepted the Cabinet's decision as final? Of course, if I had heard of anything of the kind, I should have asked for instructions at once. I should have asked for definite instructions in writing.

638. The reason why you appear to be proceeding with the case on the 19th February is that you were unaware that it had been settled on the 15th? Yes.

639. You referred just now to the amount paid to Brown for the 15 feet resumed from him? Yes.

640. The valuation of that 15 feet was £125 per foot, was it not? Yes.

641. You notice the position of that piece of land on the plan—there is only a 15 feet frontage? Yes.

642. As a matter of fact it would be a useless piece of land for wharfage purposes? Absolutely useless I should think. Of course I am not speaking as an expert.

643. It would appear that Brown was dissatisfied with the offer made to him and went to law? Yes.

644. When he obtained a verdict equivalent to £100 per foot? Yes, deducting the amount of the improvements.

645. And your contention appears to have been that the Cabinet were wrong in settling Hill's case at £145 per foot with a Supreme Court verdict against them of £200 per foot. What reason had you to suppose that that verdict would have been reduced had you gone on with the second trial? The only reason I can give, to put it shortly, is the reason which weighed in the consultation to which I referred just now, that the whole of the evidence on both sides having been carefully scrutinised, the conclusion arrived at was that the weight of evidence on the part of the Crown was such that we ought to succeed even if we started at £75 per foot.

646. You think that the Crown had reason to suppose that it would have obtained a reduced verdict equivalent to £125 per foot? I think we should have reduced the figures considerably.

647. Reduced them to what? Our highest point was £100, that was Hardie and Gorman's valuation. But we put our case most strongly on the evidence of men who knew what they were talking about and not men who were simply guessing at values, because after all one's experience of the valuation given by auctioneers is that they often amount simply to guesses, and the strength of our case lay in the overwhelming evidence on the part of the Crown which was adduced from men in a good position here, and who knew what they were talking about—wharf-owners and others. That was the real point of the case. It was admitted that the property had a value solely as wharf property.

648. Had you arrived, in your own mind, at what amount you thought the verdict would be reduced to, bearing in mind the £200 a foot verdict standing against you? Something under £100. I do not think we hoped to go much below £60 or £70 upon our evidence—it would be something between that and £100.

649. When you fixed that amount in your mind did you think at the time that the only other person who had gone to law was Brown, who had obtained a verdict equivalent to £100 per foot for a useless piece of land with 15 feet frontage? It was not useless, he had a house there and he lived there.

650. I am basing my figures upon the actual verdict—£100 per foot for 15 feet—had you that in view? Yes.

651. Then the comparison was this—that Hill's property, with 303 feet water frontage, would be worth only between £70 and £100 per foot, while a useless piece of land carried a verdict of £100 a foot? Yes. But I think the amount paid in Brown's case was too much.

652. You thought the amount too high? Yes; I recommended £75.

653. Did you advise an appeal against the verdict? No; I would not advise an appeal in a case like that, because it was getting very near our own figures.

654. Then, although this comparatively useless piece of land had obtained a verdict of £100 per foot, and although the 303 feet of Hill's property had received a verdict of £200 per foot, yet you were going to contest that verdict upon the supposition that it would be reduced to between £75 and £100 per foot? That was the reduction I was prepared for, having given the best attention to the thing that I could. I was prepared to advise that the Crown had a good chance of getting a verdict of something between £70 and £100.

655. Considering that the plaintiffs had received a verdict of £200 per foot, and that they subsequently accepted £145 per foot, do you not think that was a reasonable reduction considering the expense attendant upon a new trial? No, I do not. I think we were in a very strong position, and that we ought to have fought the case. As I pointed out just now, the settlement included a thing which was quite new ground, lots 5 and 6. In regard to those blocks, we should have had an open issue, and we should not have been handicapped by discarded valuations.

656. It would appear that Hill & Co. gave up £55 a foot on 303 feet, and received £14 a foot more than the Government valuation for 235 feet? Yes.

657. You have said that Mr. Kirkpatrick valued the land at £131 per foot? The papers I have just seen E. A. Smith, show that he did, but I did not know it before.

Esq.

658. So that the final settlement will be what I have just stated? Yes.

659. And you think that that was an improper settlement of the claim? Yes; I do not agree with that valuation at all—I mean the £131. I thought we had obtained all the evidence which it was possible to get upon the question without getting further reports.

12 Dec., 1894.

660. You say that when you were informed that the case had been settled behind the back of the Crown Solicitor you did not understand it? Yes.

661. You have also said that this is not the first time that matters of this kind have taken place in the Works Department? Yes.

662. Have you any special reason for saying that you do not understand why this particular case should have been settled in that way? I could not understand it. I do not to this day understand why such a proceeding should be adopted.

663. But apart from what appears to you an extraordinary proceeding on the part of the Works Department in settling a case under reference to the Court, have you any direct evidence to give to this Committee to show that the settlement was improperly arrived at? I cannot say that I have any direct evidence to give.

664. Have you any indirect evidence? Well, I do not quite know how to answer that question. As I say, I did not know what to think at the time, and at that time I had no ground for any charge of impropriety of any sort.

665. I do not want to ask you any question concerning any matter of which you have no knowledge yourself, but do you think the interests of the country have been sacrificed in arriving at the settlement which has been made in this case? I think so. What I felt about it was this. We had been working pretty hard upon the case in the Crown Law Department. I do not want to take any credit to myself, but the officers under me had been working pretty hard, [and, with the assistance of counsel for the Crown we had got the thing into a solid position. To my mind that position was absolutely given away without a word being asked from us.

666. And you do not retire from that position now? I do not.

667. What the circumstances were which led up to the final settlement in that way you have already said you are not prepared to state? No.

668. As a matter of fact, do you know? I do not know.

669. But would the fact of a final settlement being arrived at in that way expose the Government of the day to suspicion? That is a matter which it is entirely for each individual to judge for himself, I should think.

670. But it was not the first case that had been settled in that way in the Works Department? No. I referred to the other case—that of Rochester.

671. *Mr. O'Sullivan.*] You say that in your opinion your case was in a very solid position, and that it was given away by the Minister? Yes.

672. What was that solid position? That we had a rule absolute for a new trial, and that we had all this evidence to which I have referred.

673. All what evidence;—do you mean the evidence given in the previous case? Yes.

674. And you contend that with the evidence given at the previous trial, in which a verdict of £200 was given for Hill, that you were in a strong position? Yes.

675. How could that be? The verdict was grossly excessive on the evidence.

676. But do you think it would have been discovered to be excessive to the extent that you contend? It is only my opinion. That is the opinion I formed of it.

677. Are you going on your own opinion, or upon the facts of the case as brought out in the evidence? The facts of the case as brought out in the evidence, and as threshed out by the two counsel for the Crown and the Attorney-General.

678. Were you aware, when you got your case into what you call a strong position, that the trustees of the Challis Estate had received £172 per foot? Yes.

679. That estate adjoins the Hill property? Yes.

680. That being so, how could you hope to reduce the amount from £172 per foot to £70 per foot? As I have already pointed out, the Challis block stands by itself.

681. But it adjoins the other property? Yes.

682. Were you aware at the time you took this stand in reference to the strong position of your case that Mr. McMillan had practically recommended the payment of £175 per foot for Hill's land? No; I did not know that. I was asked that yesterday, I think, but I could not bring it to my mind at all.

683. I presume, however, that you were aware that it had been the practice of the department to give authority to deepen water frontages to all persons who applied for it? Yes.

684. And that no exception was likely to be made in the case of Hill? I do not know of any reason why it should have been made.

685. Was not that one of the grounds upon which you were going for a new trial? It was the ground upon which the new trial was granted by the Court.

686. That being the reason for the new trial, is it likely that any jury knowing that the right had been given to all other persons who had applied for it would have assumed that it would have been refused to Hill? I do not know that we could have got any evidence to show that it would have been withheld in his case.

687. At the same time it was the main point upon which you asked for a new trial? Yes.

688. Still, you seem to admit by your answers that it would hardly have been a tenable ground before a jury? I am not clear in my mind as to how far the Full Court's decision would go in blocking the plaintiffs in a case of this kind from showing that as a matter of practice, although not of right, they would have been allowed to deepen.

689. As a matter of equity, would any Court have withheld that right from Hill, knowing at the same time that it had been invariably granted to other persons? It is not a question of what a Court would or would not do; it is a question of the proper way to put a case to the jury as a matter of law. My own opinion is that the proper way to put it to the jury would be that the whole issue before them was to determine what was the marketable value of the land at that particular date. In settling that I think the

E. A. Smith, the jury would be entitled to take into consideration the chance of getting the right to deepen from the Crown. I think that it would be fair to put it to them in that way. It would be fair to say, "Well, Esq. gentlemen, you know that, as a matter of course, the owners of water frontages have always obtained that right." That is the view I should take if I were acting for the claimant, and I should press it strongly.

12 Dec., 1894. 690. Speaking of the chances, would they not be on the side of Hill getting the right, and when that matter was put to the jury, who would be more swayed by considerations of equity than of law, would it not have weight? I think you could put that contention with very great force, and I think you would get the jury with you, but you have to bear in mind what is the right way to direct a jury. If you direct them wrong it may mean a new trial.

691. The Chief Justice is acknowledged to be a sound lawyer? Oh, yes.

692. He did not seem to hold the same opinion about the right to deepen that you hold? He did not. As the Full Court have held, he went a bit too far the other way.

693. In speaking of the question of valuations, you seem to think that auctioneers, such as Mills and Pile and Richardson and Wrench, would guess at the valuation of a property like this when their opinion was asked, and when they were paid to give it? It amounts to guessing, and it would be so in Mr. Gregg's case, I think; although I have a very high opinion of him, and should not wish for one moment to say a word against him. It is, however, absolutely incomprehensible to my mind how he made the valuation in this case, in view of his former valuation of £8,000. As you know, for I think it appears in the papers, I sent down to Mr. Gregg, and he was good enough to come up and see me, and I had it out with him. I did my best to understand it, but I confess that to this day I am absolutely incapable of understanding how any one could give two such divergent valuations in so short a space of time.

694. I presume that you will allow that Mr. Gregg is a competent man? Certainly.

695. And, in the matter of valuations, he ought to be a better judge than yourself? As I have said, I do not pretend to be a land valuer.

696. Ought not great regard to be paid to the evidence of Mr. Gregg, as the representative of a firm which has such a prestige in this city as valuers, that it is almost impossible to sell a city property without their endorsement of value? Due weight ought to be given to his opinion.

697. In your telegram from Wentworth Falls you used a word which seemed to raise the hair of the late Secretary for Public Works. You talk of the "alleged" settlement? The alleged settlement was this: I had no papers before me to show that a settlement had been made, and I was not going to admit that there was any settlement.

698. Notwithstanding that it may have been made, and, in point of fact, was made without your knowledge? Yes.

699. Subsequent events showed you that it was a genuine settlement? That it had actually been made, no doubt.

700. So that, in point of fact, it was not an alleged settlement but an actual settlement? No doubt it was.

701. I presume you did not mean anything offensive by the use of this word, but simply that at that particular time, you could only regard it as an "alleged" settlement? That is the only way in which the word "alleged" is used. I think that is apparent from the nature of the telegram. I sent down for the papers, and I said that it was impossible for me to say whether the settlement was final and binding. It had been "alleged" that one was made, and I said I could not say whether the "alleged" settlement was final. That is the only sense in which I used the word there.

702. If you had known of the decision of the Cabinet, and also of Mr. McMillan's opinion in respect to the valuation of £175 for Hill's land, and all the other circumstances, would you have prepared for a second trial? I think so. But I should have taken the precaution of seeing Mr. McMillan to see if he could throw any further light upon the matter. I should have been prepared to go on, subject to any new light which might have been thrown on the matter. But we had threshed this thing out in the Crown Law Department to such an extent that, as far as evidence goes, I do not think we could get anything further.

703. I desire, Mr. Smith, to ask you a straight question, and it is this: Had you any reason to believe in your own mind from what you saw or heard, or what came under your notice in any shape or form, that there was anything like a corrupt or improper settlement made in this matter? I do not know whether I am justified in repeating a conversation I had with Mr. Hill. That is the only thing that I know of which would lead me to doubt it at all.

704. I think in this matter we are entitled to get the fullest information concerning anything in your mind bearing upon it. I think we ought to hear the conversation to which you refer, and more particularly as Mr. Hill is present? I do not want to give it, unless I am pressed to mention it.

705. *Chairman.*] I think it should be given? The conversation was this. I remember it very well, as it was the last day before I left office. It was on the Friday after it had been arranged for Mr. Colquhoun to come in on the next day, Saturday. Mr. Hill was announced, and he came in to see me. He said at first that he had come up to ask me to press on the completion of the carrying out of the settlement in this matter. I told him that I was going the next day, but that I had no doubt that Mr. Parkinson, the Chief Clerk, would push the thing on for him, and get it completed. He then went on to tell me that he had been very badly treated in this matter. I told him, after he had been talking a little of the bad treatment he had suffered at the hands of the Government, that it was no use for him to talk to me in that way. I said, "You know it is no good talking to me like that. You know perfectly well what my opinion about the value of this land is," and he said, "But you do not know that Mr. Lyne has treated me very badly. He promised to give me more—a good deal more." Then he went on to tell me that this was just before the division on the previous motion of censure or want of confidence, when the Government had a majority of one. He said that Mr. Lyne had sent for him then, and had said, "I want you to do certain things for me, Hill," and after discussing these he said, "I am going to settle that Woolloomooloo matter for you." Mr. Hill said that after the division he called upon Mr. Lyne, and that Mr. Lyne then said, "Do not come near me now, I am too busy. Call again in ten days." This is as far as I can remember, but I am glad Mr. Hill is present, because he can correct me if I am wrong. He said he had had other interviews with Mr. Lyne, and he complained that he had been cut down very much, if I remember rightly not only as regards the amount first promised, but also in the knocking off of the 10 per cent. addition for forced sale. He told me all this. I did not want to hear it, but he seemed to be a little bit excited—in fact he was excited. I think I told him that he ought not to come talking to me like that—that I did not want to hear these things. That is substantially what took place.

ON RESUMPTION OF LAND, WOOLLOOMOOLOO BAY.

706. *Mr. O'Sullivan.*] What did you gather from that? Well, I did not know what to think about it. E. A. Smith,
 707. You say that Mr. Hill told you that he complained of Mr. Lyne for having cut him down? He told me Esq.
 that there was a distinct agreement before the division.
708. *Mr. Lee.*] What was the certain thing he referred to? He did not tell me, and I did not ask him 12 Dec., 1894.
 to. The expression he used was, "To do certain things for me."
709. *Mr. Lees.*] Did he leave you after the conversation you have narrated? Yes.
710. *Mr. O'Sullivan.*] Can you tell us anything more as to what this previous understanding or agreement was? He did not give me the figures. He told me that the figures that he should get had been arranged, and I think he told me that after his first interview, when he went again, he was told to call in ten days. He told me that. I think he said that Mr. Lyne went back on his agreement, and that when he went the second time he took with him two of the others—Batty and Sheehy, I think he said; but I remember his saying "two of the others," although I forgot now who it was. He said that they all went and interviewed the Minister.
711. Did he give you to understand that there had been a private agreement or an agreement with Mr. Lyne, as Secretary for Public Works, with Mr. Hill? He did not tell me what it was at all. He told me substantially what I have told you.
712. Is that all the information you can give us on the point? The whole.
713. Why should that leave on your mind the impression that there had been some corrupt affair? It left an uncomfortable impression on my mind at the time. I remember turning it over in my mind as to whether I ought not there and then to put the thing in writing and send it up to the Attorney-General. I think now that I ought to have done so; but it was the last day before I gave up the office, and I was considerably worried and harassed in getting things into order, besides, I was rather sick of this Woolloomooloo matter. I thought finally that it was not part of my duty and that I would let it go, although I thought afterwards, and think now, that I ought to have put it in writing.
714. Did it leave the impression on your mind that there had been a private understanding between Mr. Lyne and Mr. Hill, or did you think that Mr. Lyne, as Secretary for Public Works, had promised to give Mr. Hill a high price for the land, and that he subsequently saw fit to reduce it to a lower figure, thereby causing Mr. Hill to speak of the harsh treatment which he thought he had received;—which thought remained in your mind? The impression left on my mind was that there had been a distinct agreement to give the larger sum, and that it had been departed from.
715. Is it not possible that there may have been a distinct agreement for it, and yet for Mr. Lyne, in a purely public way as Secretary for Public Works, to have gone into the matter and to have discovered that he had made a higher offer than developments justified? It may have been so.
716. You talk of Mr. Hill being excited? Yes.
717. Is his normal condition not one of excitement? He has been generally excited when I have seen him, and sometimes I do not think he quite knows what he is saying. I do not know him very well; but I have met him on a few occasions over this matter.
718. Did he give you to understand what the harsh treatment consisted of, besides the reduction of the figures? The harsh treatment I took to be the going back on the agreement which had been made. I think that was the harsh treatment Mr. Hill complained of.
719. I gather from your answers that you are not able to tell us anything about the agreement beyond what you surmise? I do not surmise anything. I know that it left a very uncomfortable impression on my mind, which I wanted to get rid of.

TUESDAY, 18 DECEMBER, 1894.

Present:—

MR. F. CLARKE, | MR. CANN.

J. MORGAN, Esq., IN THE CHAIR.

W. J. Lyne, Esq., M.P., appeared in person.

Mr. Alexander Walter Scott Gregg called in, sworn, and examined:—

720. *Chairman.*] You are a member of the firm of Richardson and Wrench? I am managing director of Mr. A. W. S. Richardson, Wrench (Limited). Gregg.
721. Did you value the Woolloomooloo Bay property of Hill's? I did.
722. On behalf of the firm? Yes, representing the company. 18 Dec., 1894.
723. Did you value it before it belonged to Mr. Hill? I did value it on a former occasion—some three or four years before.
724. What did you value it at then? I think that came out in the Court when I was giving my evidence. I believe it was £8,000 or £8,500. I ought, perhaps, to apologise to the Committee for not bringing what I might have brought under other circumstances of longer notice, the memoranda of these facts. I was preparing to go to another duty when I was summoned to come here to-day, and I hastened away without my memoranda. I may mention that I had looked up all the facts.
725. You afterwards valued this same property on behalf of the Government, when it was in the hands of George Hill and others? Yes; as disclosed in the papers.
726. Did you value the whole of Hill's land? Yes; I think there were two or three pieces altogether.
727. I refer to the land resumed by the Government? Yes. We valued all the properties resumed except McQuade's. I remember that one of the Hill properties was valued with water frontage and the other with no water frontage.
728. Do you remember how many pieces you valued belonging to Hill and others? There were certainly two, if not three. I think we valued No. 2, as shown on the plan with the papers, and also No. 6.
729. To what particular piece of property did the valuation of £8,000 apply? That would be the piece marked No. 2 on the plan.
730. You afterwards made a different valuation of that same property? Yes.
731. When did you make the first valuation to which you have referred? In 1886.
732. And when did you make the second? In 1890.

Mr. A. W. S. 733. You then valued this piece of property at what? At £53,134 7s. 6d.

Gregg. 734. At the rate of how much per foot? £175 per foot.

18 Dec., 1894. 735. Can you say what caused you in 1886 to value this property at £8,000, and in 1890 at the very much increased value of £53,134? Well, there was the altered aspect and use of the bay and the enlarged value which began to attach to wharfage land.

736. You mean to say that in 1886 there was comparatively little value attaching to property at Woolloomooloo Bay for wharfage purposes? Very little value. The bay at that time was chiefly the resort of small vessels, ketches, and timber vessels; there was hardly a barque or brig visible about the place.

737. Are there any other reasons you can mention justifying the enormous increase of value? There were many reasons. To show you how land had grown in value at that place, I may mention that I have been sufficiently long in Richardson and Wreuch's office to be acquainted with this fact—that a block without water frontage was sold for £3,500 to Dr. Morris. The identical piece of land was afterwards sold by him for £20,000 or £21,000.

738. In about what year was this? I cannot say, speaking from memory. The property is still held by the purchaser for the latter figure, who, in the year 1890, asked £27,000 for it. The land I am describing was at Cowper's Wharf, and had no water frontage. I may also mention that the sale took place in 1888 of a piece of land at Cowper's Wharf, without water frontage, for £7,000.

739. Do you know of any other property about Woolloomooloo Bay which was valued at a low price in 1886 and which had increased enormously in value about the year 1890, when this land was taken? There was a piece of land with 87½ feet to Cowper's Wharf, with a depth of 120½ feet to Dowling-street, and with 81 feet to Bland-street. I believe I am right in saying that that was sold for £2,000. The property belonged to the late Hon. S. D. Gordon, M.L.C. It was sold subsequent to his death. I believe it was again sold in a day or two, at £500 profit, to J. P. Starling, manager for Paling & Co. He bought the property, believing that it would grow into a very large value. I was endeavouring to buy it at the time of excitement here in those matters, and his widow told me that he had said it would come to be worth £200 per foot. I have no doubt that the reported offer of £160 is correct, or approximately so. The property is not a water frontage, and it is within a bow-shot of the land which was the subject of litigation. I sold, myself, in 1889, a piece of land on the eastern side of Circular Quay, at £200 per foot frontage, with a depth of only 50 odd feet, without water frontage.

740. In giving this valuation of £175 per foot for No. 2 block of Hill's property you believed that that was the correct value at the time of resumption? The figures of £8,000 and the bigger amount subsequently given were equally the value of the land in my judgment at the several times.

741. Mr. Thompson, the Government Valuator, valued this land jointly with you? Mr. Mills, Mr. Thompson, and myself were the three who met in the matter.

742. I believe that Mr. Thompson afterwards wrote a letter to the Crown Solicitor, Mr. Robert Smith, withdrawing his valuation for certain reasons? I have heard of that document, but I have not seen it. I should like to see it. * * * Having now read it, I very much question if Thompson wrote it in the sense of its being his own judgment.

743. When Mr. Thompson valued this land with you did he concur in your valuation—did he offer any objection to the valuation you placed upon it? I should not like to bind him to the extent of saying that he did not make any objection at all, but if there was any objection on his part it certainly was not a forcible objection. We all had our opinions, and probably, like the rest of us, he expressed his. Of course, he signed the document.

744. At all events, Mr. Thompson offered no serious objection to the valuation? No; not the slightest objection that I can remember; nor would I press Mr. Thompson to concur in our valuation. I had too much respect for him.

745. There is a sentence in the letter he wrote on the subject from which it would appear that he was doubtful at the time about the valuation. He says: "I concurred in this valuation, though greatly in excess of my own ideas, out of deference to the opinions of the other joint valuers"? I cannot honestly remember that he expressed any doubt; still, he may be perfectly correct in his recital of the fact. He may have kept the circumstance to himself.

746. What I want to get at is this—did Mr. Thompson, in concurring in the valuation of yourself and Mills and Pile, offer any objection to the price which at that time you put upon the land? No; I have had no knowledge since on the subject, nor had I any reason at the time to expect that Mr. Thompson would ever have resurrected the valuation or have withdrawn from it.

747. Do you think any influence was used to induce Mr. Thompson to withdraw from the valuation? I have known Mr. Thompson many years, and I know he would not write a letter like that to which you have directed my attention if left to himself. He has too much caution. There are words in this letter at which I should feel angry. For instance, he says that an admission he makes involves doubt as to the "ability, competence, and integrity of the firms he names." I can understand his using the words "ability and competence," but I do not think he should have used the word "integrity."

748. You did not use any influence to get Mr. Thompson to place any value on the land? None whatever.

749. And you are not aware whether any of the other valuers did anything of the kind? There was only Mr. Mills beside myself, and he certainly did not do so within my hearing or to my knowledge.

750. You afterwards saw Mr. Ernest Smith, the Crown Solicitor. I believe he sent for you to get your opinion as to the value of this land after it had been valued by you? I suppose that being a respected and intelligent officer of the Government, he must have had access to the papers containing the valuation of £8,000, and probably the discrepancy of the two values struck him as being so large, and the difficulty in reconciling them so great, that he sent for me with a view to asking me certain questions. Thinking, I suppose, that my replies would be of some service to him, he asked me to put them on paper. The Committee will find that I did so if they refer to my letter to him of 13th October, 1892. That letter simply puts on record what had apparently passed in our conversation of the same date.

751. You will see that the late Crown Solicitor, on page 18, says, "The explanation now attempted to be given," that is by you, "in my opinion, is wholly insufficient to account for the enormous difference in the figures of the valuation of 1886 and in the valuation of 1890"? It is all a question of local circumstances. Some of you will know that land values developed much more markedly in Victoria in 1887, 1888, and 1889, than in New South Wales. There were cases in Victoria of land being multiplied in value

value manyfold at that period, within a comparatively short space of time. So far as Sydney is concerned, I need only take the site of our office in Pitt-street. I remember when it was bought by the late Thomas Holt at £37 10s. per foot. It was afterwards bought at £40. The owner was offered £40,000, and as the buildings did not cost him £6,000,—that would mean £34,000 for the land. You will see that the value was multiplied very much in a comparatively short space of time.

Mr. A. W. S.
Gregg.
18 Dec., 1894.

752. Have you any considerable knowledge of the value of wharf property? I have a fair knowledge. Our office has dealt more largely—I think I may humbly say—than has any other office in the city with these properties, from its being the oldest surviving house. I, myself, have been in it from the first year of its existence.

753. You have had many opportunities of valuing wharf properties about the city of Sydney? I have; of course Mr. Smith, the late Crown Solicitor, was quite at liberty to write as he did. If my explanation did not seem satisfactory to him, I could not help it.

754. Your opinion of the value of Hill's property was based to some extent upon the value of similar property adjoining? Yes; the lands to which I referred without water brought so much, and in this instance we were dealing with a large area of water frontage. Improved facilities to deal with the frontage could be got in the ordinary way at a minimum charge, and large berthing accommodation could be afforded in connection with sheds, or enormous stores which might be put upon the land. I may mention that inquiries had come in for sites at the Bay for bond and store purposes, and to show you that the place had attracted to it commercial importance, there was last year an active wool dumping business going on there. Then again a railway had been spoken of. It was suggested that a branch should be taken through Hyde Park down to the waters of the bay. Then the Government themselves have spent many thousands of pounds upon wharf construction there, thereby making the place what it never was before.

755. You were asked to value blocks Nos. 5 and 6? Yes; if I remember rightly, Mr. Thompson read us a letter from the Acting Crown Solicitor, in reference to, I think, blocks 5 and 6, restricting our duties merely to the valuing of the rear shallow piece without water frontage.

756. Then you did not value it after the water frontage was allowed to Hill & Co.? I believe not.

757. You valued it at a time when it was presumed to have no water frontage, at £15 per foot? Yes.

758. And you allowed £250 for the buildings? Yes.

759. And what for forced sale? That is a matter for the Minister.

760. Had this property a water frontage you would have valued it at considerably more than £15 per foot? Very much more.

761. What would the value have been had it had a water frontage? It might have been £150 per foot. We valued the 15 feet frontage of Brown, who, I believe, put in a large claim, giving him £125 per foot. We gave to the adjoining 30 feet frontage a larger valuation, because we argued that with a 15 feet frontage, if a man put buildings on it, he would require to have two walls on his boundaries, and that those would leave him very little working space, also that the narrow frontage would not afford access by water, except by a narrow launch stern or bow on. We thought that the 30 feet frontage was worth more per foot than the 15 feet, because it would give considerably more working room. When, therefore, we came to deal with Hill's property, which was very much larger, and which was capable of so much more important uses, either as regards wharfage or stores, we increased the price per foot proportionately.

762. Had you valued the No. 6 property as with a water frontage you would have been prepared to value it at £150 per foot? I would not go to the length of saying that at this moment. The thing happened four years back, but the value certainly would have been larger than in the case of the narrow properties of Brown and Lahiff. Possibly we would not have put £175 per foot upon it. It was not as deep as the larger piece, which was the subject of litigation.

763. But on account of the great water frontage you would have been prepared to give a greater value than to Brown's, or possibly Lahiff's property? Yes.

764. Do you think that the price of £145 paid by the Government all round for the property of Hill and others was an excessive price? I do not think so. I considered £175 per foot a fair price to pass from the Government to Hill. I formed that opinion honestly, and I cannot recede from it.

765. Seeing that the Government secured 500 odd feet at £145 per foot, do you think they paid an excessive price, or that they got a bargain? I think they made a very reasonable purchase.

766. *Mr. Cann.*] In valuing land, are you in the habit of allowing additional value in consideration of probable improvements? We look at a piece of land as available for certain things. For instance, if the land costs so much, and if a structure consistent with the locality is put upon it, we argue that it would be in a position to return so much.

767. That is to say, if you thought a certain piece of land suitable for the erection of a large warehouse, you would give additional value to the land on that account, whether the warehouse was there or not? We estimate whether the land could be applied to any purpose such as you speak of. I am quite satisfied that if this particular land had been utilised by the owners by the erection of jetties and wharfs and stores and buildings of various kinds, it would have been a most active quarter.

768. Do I understand that you gave an increased value to this land on account of the improvements effected on the neighbouring land by the Government? I do not think that I said that we allowed a specific increased value to the land on that account; I merely adduced the fact as one of the reasons why my estimate of the value had increased between 1886 and 1890.

769. When you value land do you know for whom you are valuing it—do you know the owners for the time being? In 99 cases out of 100 we know.

770. If you are valuing for the Government are you informed by the department employing you to whom the land belongs? Most likely.

771. Do the owners of land ever approach you in reference to your valuations—do they offer you a commission or anything of that sort for a certain valuation, for instance? It has never been done to me. We have only one way of doing business, and that is the right way.

772. You know that this inquiry has been initiated on account of insinuations or inuendoes which have been made? I can say this—that neither by implication, by look, by gesture, directly or indirectly, has any promise been made by which our office would get one "bawbee" out of the transaction. I say that, intending to convey the full meaning of the words.

Mr. A. W. S. 773. Have you any knowledge of land valuers being approached in the way I suggest? I do not know Gregg, of any such case, and I speak from an experience extending over a long course of years. Neither by threat, force, menace, temptation, coercion, or anything of the kind, has any influence been brought to
18 Dec., 1894. bear upon us in connection with land valuation.

774. There has been nothing in the shape of bribery? Not the shadow of a shade of it.

775. You have not been approached in this matter even by Members of Parliament? No.

776. *Mr. F. Clarke.*] Do you remember whether the land resumed from Hill was specially suitable for building or storage purposes? Yes.

777. In what way was it specially suitable? From its relation to the harbour.

778. But apart from the water frontage, had it any other special advantage? I could not say that it had.

779. Do you remember the back of the property facing Victoria-street? Yes; there was not a good way of approach.

780. There was a cliff? Yes.

781. Would that not be an advantage rather than otherwise in the case of a wool store? It would in one way, and for a reason which I have in evidence sometimes had to use for and against the Crown. It is only within the last few years that hydraulic power has been made so effective in connection with lifts. If you go down to Dalton's Wharf, notably, or to Lamb's Central Wharf, you will find there lifts which raise not only a case or two, but upon which you can put a trolley loaded, and two and perhaps four horses if there were room to hold them.

782. What I mean is, would not the cliff save a certain amount of lifting by loading at the back of the building—that is, at the top of it? Yes.

783. In that case, I suppose, the land would have an increased rather than a decreased value for storage purposes? At any rate, it would not detract from the facility with which stores could be worked.

784. *Mr. Lyne.*] At whose instance did you value this property? Under instructions from the Department of Public Works.

785. You were employed by the Government? By the Government alone.

786. You have referred to the valuation of lot No. 6;—I understood you to say that the valuation was lower than it otherwise would have been, because it was understood at the time that there was no water frontage? I believe I am right in saying that our report of that was deferred for a considerable time, so that Mr. Thompson might receive instruction from the Crown Solicitor's Department as to the way the valuation should proceed, as to whether a water frontage should be included or not. Subsequently a letter was received which limited the valuation to a shallow piece in the rear-away from the water frontage.

787. The basis, according to your calculations, was the lane frontage? Yes.

788. You said that it was rumoured that the Government intended to open up and improve Woollloomooloo Bay? They had done so in the interval between 1886 and 1890.

789. You understood also that railway communication was to be made there? There was an agitation to secure it in connection with the city railway, as, I dare say, the Committee will remember.

790. Were other parts of the harbour congested so far as the traffic was concerned? Yes, and prices were getting very high around Darling Harbour. The intercolonial trade was growing apace.

791. Did you value the Erskine-street land at Darling Harbour for the Government? Yes.

792. I believe your valuation in that case of £60,000 for 3 rods 12 perches? Yes.

793. How much a foot would that be? I forget at this moment the dimensions, and whether it was £350 or £470—it might have been £470.

794. Can you tell me when the land boom ceased? I think I might say about the first half of the year 1889.

795. And this particular land was taken in 1890? I presume so—the valuation was made in 1890.

796. And, according to you, at the time the valuation was made the boom was ceasing? It had ceased in its vigour.

797. But had values gone down? Not very markedly, but there was less business doing. You can quite understand that persons who had bought at a certain price, and who had seen their neighbours selling at big prices, were not going to suddenly descend in their terms. The most marked difference at the period to which you refer was that the market was quieter.

798. The Chief Justice, in his summing up, seemed to infer that the evidence of gentlemen such as Mr. Knox and others engaged in trade was better evidence than expert evidence as to values—was better evidence, for instance, than actual sales in the vicinity. I wish to ask you whether you do not consider actual prices which can be obtained in the market the best test as to the value of land? Ordinarily it may be interpreted as such, but of course there are times when it may not be prudent to accept all that transpires in the market as a safe guide.

799. But, as a rule, you would consider the prices which can be obtained in the market as good a test as you can have? I do not see how, otherwise, you are to be guided. I may mention that I was very exercised in my mind to do my duty in this matter, not only in Hill's case, but in the other cases. I felt a great responsibility upon my shoulders. For instance, I had also the Post Office resumptions to deal with. I can assure you that the work did not sit at all lightly upon me.

800. You have been employed by the Government in the case of a great many resumptions? Yes.

801. And in connection with that very important resumption of land near the Post Office; is it not a fact that £500,000 was involved? £300,000 odd.

802. *Mr. F. Clarke.*] I should be glad if you would give the Committee any information in your power as to the cause of the difference in the amount paid for the two properties—McQuade's and Hill's. McQuade's case was settled at £85 per foot, and the Government paid for Hill's property £145 per foot. Can you give us any idea as to why there should be so great a difference between those two prices? I cannot see that there is any valid reason for the great difference. It was Mr. McQuade's own business to determine why they took £85 per foot. Of course there is this disadvantage in the case of McQuade's property,—in paying £85 a foot you are paying for a maximum frontage without the same available depth throughout. You see how the land narrows towards the rear. It is generally allowed that when a piece of land runs off narrower at the rear it does not bring as much per foot frontage as does a piece of land which gives a pretty uniform breadth. It is quite possible that the McQuade family may have receded from their first valuation. Indeed, I think I remember Mr. Thompson telling me that they desired to withdraw it and to enlarge it.

WEDNESDAY, 19 DECEMBER, 1894.

Present:-

MR. CANN,	MR. LEE,
MR. BAVISTER,	MR. O'SULLIVAN,
MR. F. CLARKE,	MR. PIDDINGTON,
MR. WALL.	

J. MORGAN, Esq., in the Chair.

W. J. Lyne, Esq., M.P., appeared in person.

Ernest Augustus Smith, Esq., recalled and further examined:—

803. *Chairman.*] When you last gave evidence to the Committee you made a statement as to the conversation which took place between yourself and Mr. Hill; do you wish to supplement what you then said in regard to the conversation? No; I think not.

E. A. Smith.
Esq.

19 Dec., 1894.

804. You repeated the conversation as far as you can remember it? I think so, substantially.

805. *Mr. Piddington.*] Were the minutes of the evidence taken at the trial in the Crown Solicitor's office before you left? We had the notes of the Judge in print; they were printed for the Full Court.806. *Chairman.*] Is there anything further you wish to state to the Committee? I desire to refer incidentally to Blue's case. You will find on page 40 of the Parliamentary papers a minute by the late Secretary for Public Works, Mr. Lyne, in which he says:—

Regarding Blue's case (the only case which shows on appearance of being now) it speaks for itself. The particulars are as under:—

Area.	John Blue.
	1 acre 3 roods $\frac{5}{100}$ perchea.
	£ s. d.
Amount claimed	14,323 8 7
,, offered	4,070 0 0
,, awarded	9,639 18 0
Verdict of Jury	7,600 0 0
Cost of Award	1,310 14 0*

* Which are exclusive of the Crown Solicitor's costs in conducting the case.

This shows but little gain, with great risk of serious loss by going to Court.

What I should like to point out is, that if these figures are looked at rightly they show a very substantial gain. The amount awarded was £9,639 18s. The costs of the award were £1,310 14s. If these two items are added together, I think you will find they amount to £11,240 12s. That would be the total amount the Crown would have had to pay had the award stood. In addition to that, there were the Crown's own costs of the arbitration proceedings, and the additional interest between the sum ultimately paid and the sum awarded. That would be 6 per cent on £2,000 for two and a half years. The costs of the arbitration were taxed at £1,223. The costs of the arbitration, I believe, would amount to about £700 or £800, so that there is about £1,000 for interest and costs to be added to the above sum of £11,240, making a total of £12,240. Upon my advice, we went on to trial before a jury. That advice was given when I heard that the Minister had decided not to appeal. I think the papers will show that that decision had been arrived at. As soon as I heard of it I went down and saw the Minister. I put the case strongly to him on the same lines as I put this case of Hill's, namely, that on the evidence the award was clearly excessive. On my urgent advice a minute was written that the appeal should go on. We went into the Court, with the result that the jury awarded £7,600. Putting that sum against the sum of £12,240, I contend that there was a very substantial reduction. That is what I meant the other day in regard to Hill's case, when I said that, notwithstanding the adverse verdict of the jury, we were in a strong position. Our evidence had worked out very clearly. We had had the experience of a former trial, enabling us to see what the evidence of the other side was, and we also had the ruling of the Supreme Court as to the deepening question, so that, notwithstanding the adverse verdict, I think we had, as in Blue's case, a very strong position, and if the advice given in Blue's case had been asked for and followed in Hill's, I believe the same satisfactory result would have followed.

807. *Mr. O'Sullivan.*] Were the circumstances surrounding Blue's case similar to those surrounding Hill's case? Of course all these cases vary in detail—there is no doubt about that. Features that exist in one case will not be found in others. But they are alike in this way—that they have all to be submitted to one test, namely, what is the weight of evidence on both sides, and applying that test, I say that Hill's case is very similar to Blue's, namely, that the Crown had the best of it so far as evidence went.

808. Did Blue's case hang upon anything like the right to deepen? There was no question of that kind. I did not intend to compare the cases as regards that feature.

809. Was there any valuations of the surrounding land in Blue's case? There were any number of valuations. I confess that I am not up in the details of the case—they have gone from my mind at this moment.

810. Had any payments been made for surrounding land in Blue's case, which would make it appear that a higher price had been given for similar land than was afterwards paid for that particular land? I forgot what the evidence was on that and other points. I did not attend the arbitration myself, but Mr. Parkinson could explain it all. He had charge of Blue's case. It was on going into the evidence with him and with counsel that I formed the opinion I have indicated.

811. *Mr. Lyne.*] You just now gave two amounts—£9,639 18s. awarded, and £1,310 14s., costs of award;—do they not total about £10,950? Yes; that is so. I added the figures rather hurriedly just now. The £1,000 added to that would make the total £11,950, instead of £12,240 as stated by me just now.

812. You said that in Blue's case I decided not to appeal;—I do not remember that? I think it would appear in one of the papers in the case.

813. Do you know where the papers are? I suppose they would be with the Works Department.

814. You cannot quote the paper definitely? No; I am only speaking from memory, but if the papers are referred to, it will be shown that such a minute as I have referred to was written. There was a subsequent minute to the effect that the Minister having seen me, on my urgent advice the trial was to be proceeded with.

815.

- E. A. Smith, 815. I think you said the costs of award were something over £700? I believe so.
 Esq. 816. Are they not put down at £1,300? That would include the plaintiff's costs, which we had to pay.
 19 Dec., 1894. 817. You also said that a certain sum for legal costs was afterwards taxed? I think they were taxed at about £1,200.
 818. What does that amount include? It included the costs of arbitration and the action. I believe the total was about £1,220.
 819. We had to pay that? That is what we got from them ultimately. I think they paid us £7,600 less £1,223.
 820. Did not the verdict carry costs against us? No; we got the costs.
 821. You said just now that you came to see me when you heard that I did not desire to appeal? Yes; I think it was on the last day but one before the time of giving notice of appeal would expire.
 822. And you laid your reasons before me? Quite so.
 823. Did you do that in Hill's case? I had not the opportunity.
 824. In Blue's matter did I ask you to come down and lay the case before me? No; I do not think so.
 825. Then in Hill's case, if you had strong views, would you require me to ask you to come and see me? In Hill's case the Works Department were advised, not only by the Crown Solicitor, but also by the Attorney-General, not to settle. The Crown Solicitor prepared a case for trial, and it went to within two or three days of trial.
 826. Can you say when the notice asking us not to settle was delivered at the Works Office? I cannot say.
 827. Can you say whether or not it was just about the time the settlement took place? No; I do not remember when it was; but I know that I took care to report all through. Immediately after the verdict I reported it, and I reported from time to time the steps which were being taken with regard to a new trial, and about the holding of a consultation with counsel and so on. After getting a *rule nisi* I understood from Mr. Barton, the then Attorney-General, that the matter had been referred to him, and was in his hands.
 828. *Mr. Lee.*] Do you remember on about what date you had the conversation with Mr. Hill to which you referred at the last meeting of the Committee? If my recollection serves me it would be about the 30th March. I remember that it was on a Friday, and that Mr. Colquhoun came into the office on the Saturday. I should like, if I may be allowed, to refer for a moment or two to the general question which I raised as to the amendment of the law by making the Attorney-General the nominal defendant in these cases. If you refer to page 40 you will see that the late Secretary for Public Works, referring to it, says "It will thus be seen that the desire is to act entirely independent of the Department of Works, and practically place all power in the hands of the Crown Solicitor, when costs will be piled up at will." What I should like to suggest, if I may be allowed to do so, is that to my mind that is not a very broad way of looking at the question. It does not appear to me to be a question whether this department or that department is to have more or less power. That was not my object in making the suggestion. My object was merely to ensure steady administration in all matters of a legal nature. That was my main object. It seems to me that if this office is charged with the legal administration of the affairs of this Colony, it should have full power to carry them out, of course referring, where necessary, to the department from whom the case originally came. I think that would ensure a steadier and more business-like way of carrying out these transactions. Finally, I might be allowed to say that the fact of my having tendered my resignation had nothing whatever to do with the way in which I felt it my duty to report to the Attorney-General when called upon in this case. I had to report whether I had sent in my resignation or not. I think I may safely say that no person knew better than the late Secretary for Public Works that, had I remained permanently in office, I should have reported exactly in the same way that I did. If any evidence is required of that I would ask the Committee to refer to the papers in Rochester's case. They will see that some eighteen months or two years before this I had to take the same stand in regard to the action of this department as I took in the case of *Hill v. Lyne*.

George Hill, Esq., recalled and further examined:—

- G. Hill, Esq. 829. *Chairman.*] Shortly after your case was settled, I believe you waited on the late Crown Solicitor, Mr. Ernest Smith? Yes; I saw him at the desire of Mr. Cowper, of the firm of Stephen, Laurence, and Jaques, my solicitors.
 19 Dec., 1894. 830. I believe you made some statements to Mr. Smith on that occasion in reference to the land resumptions at Woolloomooloo Bay? Perhaps you will allow me to explain. I saw Mr. Smith at the express wish of Mr. Cowper, who asked me to request him to push the whole of his matters on as quickly as he could. Mr. Cowper said he would push his own part of the work on, and be ready for him. If I remember rightly, Mr. Smith referred me to Mr. Parkinson.
 831. Did you tell Mr. Smith that you had been very badly treated by Mr. Lyne over the matter? I told him I had been very badly treated by everybody, and particularly the Crown Solicitor.
 832. Meaning himself? I do not know whether he took it to mean himself or his predecessor, Mr. Robert Smith. I said that Mr. Lyne had always treated me in a very gentlemanly manner.
 833. Did you say that Mr. Lyne had treated you badly—that he had promised to give you more—a good deal more—than he ultimately gave you? I have no recollection of saying so. I will repeat the conversation as well as I can. In the first place I said, "I think Mr. Lyne has always treated me as a gentleman. The great fault I have to find is that you have done the legal part of the affair, and at the same time have valued my land also. I do not think you have any right to do it."
 834. Did you tell Mr. Smith that Mr. Lyne had sent for you, and that he had said, "I want you to do certain things for me, Hill"? I never told him so. If I told him so I must have told him an untruth, because Mr. Lyne never sent for me to ask me to do anything for him.
 835. Did Mr. Lyne at any time send for you and promise to settle the Woolloomooloo Bay matter on the condition that you should secure for the Government of which he was a member certain votes? I have said before that he did not. He never did so. I have already said distinctly that he never made any promise to me.
 836. Then if Mr. Smith has said that you told him that Mr. Lyne had promised to settle this matter on the condition that you would secure him votes in an important division, what can you say in reference to that statement? He either misunderstood me, or told a deliberate lie. Either he or I—one of us—must be telling a lie.

837. Is it possible that, in your excited state, you may have said anything to Mr. Smith which would leave G. Hill, Esq. that impression on his mind? I cannot tell you what impression a man might have in his mind. For instance, he has an impression on his mind that I was excited, but that is my manner. Possibly you may think I am excited now, but I am not.

838. Did you ever offer to secure for Mr. Lyne any votes for the purpose of maintaining in power the Government of which he was a member? I tell you distinctly—never. I told you so before.

839. *Mr. Lee.*] Do you deny that you told Mr. Smith that you had had a conversation with Mr. Lyne to the effect stated? I have no recollection of it. We had some hot words, myself and Mr. Smith, I remember that—we had a long conversation, and I think the hot words came from me. I thought I had been badly treated from time to time, and I thought it all rested with them up there.

840. Why had you hot words with Mr. Smith? From the treatment which I thought I had received at the Crown Solicitor's office. For instance, here was my land which had been valued at £175 per foot. Then again why was Mr. McMillan's report kept back? The report was sent to the Crown Solicitor's office to ascertain the persons to whom the valuations could be sent, and it never came back from there. Besides I was the only person from whom they took land and to whom the valuation was not given.

841. Did Mr. Lyne, on behalf of the Government, agree to give you a certain price for the land, and then afterwards withdraw his offer? No, never. If you will allow me to explain I will do so as well as I can. I offered in the first place to take £185 per foot for the land. Mr. Lyne said, "I will not submit that offer, because I do not think the land is worth it." He said further, that if I would submit an offer of £150 a foot—I think that was the price—he would submit it to the Cabinet. At the same time he told me that I must bear in mind that he would not settle the question unless it went before the Cabinet. He said it would have to be a Cabinet question.

842. Did you or did you not tell Mr. Ernest Smith, the Crown Solicitor, that Mr. Lyne had treated you badly? I believe everybody treated me badly.

843. Did you or did you not tell the Crown Solicitor that? I have no recollection of telling him that, but it is very likely that I did. I must have been badly treated when it took four years and six months to come to a settlement. My land had been valued just the same as the other land which was taken, and I could not get the Government to give me a valuation for it, although I knew that it had been valued, and that Mr. McMillan had written the minute which has been referred to.

844. Did you tell Mr. Smith that Mr. Lyne had promised to give you more—a good deal more—than he ultimately gave you for the land? No; I did not.

845. Did you tell Mr. Smith that Mr. Lyne had promised to give you more for the land before a certain division came off? No, I did not. If I did tell him so I told him what was untrue.

846. But the question is whether you did or did not tell him so? I did not.

847. You swear positively that you did not? I have already sworn it.

848. If the contrary has been sworn by Mr. Smith he must have sworn an untruth? Either he or I must have done so.

849. But you swear positively that you did not tell him this? I say distinctly that I have no recollection of telling him. But this matter, you must remember, was running on for four years and six months. I was waiting upon people every day in connection with it. I was constantly seeing Mr. Lyne, and I cannot repeat every word of what I said during the whole of that time. You must be aware of that.

850. But the conversation to which I refer is said to have happened only in March last? I tell you that I have no recollection of ever having told him so.

851. Do you recollect waiting upon Mr. Smith in the month of March last? I remember calling on Mr. Smith, as I have said before, at the instance of Mr. Cowper, who asked me to go and see him.

852. Do you remember seeing Mr. Lyne, the late Secretary for Public Works, in reference to your matter about the month of January last? I must have seen him. I saw him every month, every week nearly.

853. Do you think you saw him every week in the month of January? I could not say that, but I saw him repeatedly. I saw him so often that I was a nuisance in the office—I know I thought so myself.

854. Have you a distinct recollection of being at Mr. Lyne's office in the month of January? I have no distinct recollection of it, but I must have been there.

855. You do not remember being there on any particular date in January? No; I was there so often.

856. Have you any data which will enable you to fix the dates you were there in January? No; I do not keep a diary, and I have not kept the dates in my memory.

857. Was it after you had had an interview with Mr. Lyne that you saw Mr. Smith? Both before and after, I should think. I was there constantly. I was goaded on by the bank to make a settlement on the one hand, and I was goaded on by my co-partners to make a settlement. Every one connected with the matter was goading me on. Every one to whom I owed money was goading me on to make a settlement.

858. You and Mr. Smith were on good terms, were you not? I did not know him.

859. You were not on bad terms with him? I could not be on either good or bad terms with a man I did not know.

860. Do you know any one in the Crown Solicitor's office? I knew Mr. Smith; and I think he is the only man I knew there.

861. To which Mr. Smith do you refer? To both of them. I knew Mr. Robert Smith well.

862. You did not know Mr. Ernest Smith before you saw him in reference to this case? I do not think I knew him. I do not think I had ever spoken to him before. He was pointed out to me at the trial, and I think that was the first time I saw him.

863. You were present in this room when Mr. Smith gave his evidence? Yes.

864. You heard the evidence he gave? Partly.

865. Did you hear him give his evidence relating to the statements alleged to have been made by you? I did.

866. Are you prepared to say whether the statements he made are true or untrue? Untrue, I should say.

867. I do not want any qualification;—were they true or untrue? Untrue.

868. Absolutely untrue? Not all untrue. If you want to know all that I said the better way would be to read Mr. Smith's statement over to me.

869. I am directing your attention to the statements he made concerning yourself? Well, I say they are partly true and partly untrue.

870.

- G. Hill, Esq. 870. That is with regard to the portion of the statement which concerns yourself? I think you ought to read it over to me before asking that question.
- 19 Dec., 1894. 871. Did you see Mr. Lyne after the division on the vote of censure in January last? I must have seen him. I saw him nearly every day. Sometimes I saw him two or three times a week in reference to our case.
872. Did he show any disposition to shirk a settlement then? I did not think he did; but it is so hard to see through a man like Mr. Lyne. I could not say from his manner whether he was going to have a settlement or not.
873. You wish the Committee to understand that you had great difficulty in getting the Government to settle the claim of Hill and others? Very great difficulty.
874. Will you tell the Committee how you managed to get them to settle it at last? By taking a good deal less than I thought the value of the land.
875. Less than you thought it worth? Less than I am sure it was worth.
876. In your opinion? Not only in my opinion, but in the opinion of everybody.
877. *Mr. O'Sullivan.*] I will read over to you what Mr. Smith said the other day, and you can then say which portion of his statement you consider true, and which portion untrue;—he said “Mr. Hill was announced, and he came in to see me”? That is right.
878. He continues, “He said at first that he had come up to ask me to press on the completion of the carrying out of the settlement of this matter”? What I believe I told him was that I had come up from Mr. Cowper, of the firm of Stephen, Laurence, and Jaques, to urge on him to get the thing done as quickly as possible, and to tell him that they would have their part ready. I think that will be borne out by Mr. Cowper himself.
879. Mr. Smith goes on to say, “I told him that I was going the next day, but that I had no doubt that Mr. Parkinson, the chief clerk, would push the thing on for him, and get it completed”? That is quite right.
880. He continues, “He then went on to tell me that he had been very badly treated in the matter”? I will not deny that.
881. Mr. Smith then goes on to say, “I told him, after he had been talking a little of the bad treatment he had suffered at the hands of the Government, that it was of no use for him to talk to me in that way”? I do not think he did say that, but it would be very hard for me to say now.
882. Mr. Smith continues, “I said ‘You know it is no good talking to me like that; you know perfectly well what my opinion of the value of this land is’”? Yes; I remember saying “I do not think you have any idea of the value at all. You may understand the legal points of the case, but as to the value of the land, I think you know nothing about it.”
883. He then says you made this remark, “But you do not know that Mr. Lyne has treated me badly; he promised to give me more—a good deal more”? I never said so.
884. Mr. Smith continues—“Then he went on to tell me that this was just before the division on the previous motion of censure or want of confidence, when the Government had a majority of one”? I never said so. I have no recollection of telling him so.
885. Was that vote on the motion of censure connected in your mind with this matter? In no way whatever.
886. He goes on to say,—“He said that Mr. Lyne had sent for him then, and had said ‘I want you to do certain things for me, Hill,’ and after discussing these he said ‘I am going to settle that Woolloomooloo matter for you’”? Did you ever say that to Mr. Smith? Never.
887. Did Mr. Lyne ever make use of such any remark as this to you, “I want you to do certain things for me, Hill”? He never asked me to do anything for him in my life that I am aware of.
888. Mr. Smith continues:—“Mr. Hill said that after the division he called upon Mr. Lyne, and that Mr. Lyne then said ‘Do not come near me now; I am too busy; call again in ten days.’” Did you say that to Mr. Smith? I did not; I have no recollection whatever of saying it.
889. After the division upon the motion of censure you do not remember Mr. Lyne saying to you, “Do not come near me now; I am too busy; call again in ten days”? I do not remember his saying “Call again in ten days”; but I may have called often when he did not see me, owing to his being too busy. Then again, I have often called at the office when Mr. Lyne has not been there at all.
890. Had you sufficient political influence to save the late Government from defeat? Me?—I should say not.
891. Have you any Members of Parliament under your thumb; that is, can you influence their votes in Parliament? I certainly have none under my thumb. I do not think I have power to influence anyone.
892. I want to get at the reason why these statements should be made? Well, you are a Member of Parliament yourself. You ought to know whether I could do so or not. If you like to call through a list of Members I will tell you all that I know and all that I do not know. I do not think I know ten men in the House, and you are the only man of the ten I know at this time.
893. *Mr. Bavister.*] You knew Mr. S. E. Lees, did you not? I have certainly spoken to Mr. Lees, but I do not think I have spoken more than twenty words to him in my life.
894. *Mr. O'Sullivan.*] You say that you knew me as one of the members of the House at this particular time; is it not a fact that I was on the Government side voting with them? I do not know on which side you voted.
895. But since I was voting with the Government, there could be no occasion for you to interview me? I do not remember ever speaking to you.
896. Have you at any time at all in your long business career interfered in political matters? Yes, I have.
897. To what extent? Very little. I voted to get Mr. Cameron in and I have tried to keep some others out.
898. You mean that you have simply exercised your right as an elector? That is all.
899. You have never come down to the lobbies of Parliament House interviewing members as to their votes on certain questions? Never.
900. As a matter of fact, you have never been known as an active politician apart from the exercise of your elector's right? I am no politician at all. I do not believe in arguing upon such matters as politics.
901. You object to the statement that you get excited—you have an excited manner, have you not? There is not the slightest doubt about it.

902. And that may possibly lead persons to believe that you are excited? They may think so, but I am G. Hill, Esq. not excited. You may think I am excited now, but I am not.
903. As a matter of fact, you are in the habit of using strong language in giving vent to your feelings? 19 Dec., 1894.
Yes; I have what persons would call a blustering manner—that is how I should describe it.
904. Is it not possible that when you went to see Mr. Smith on the occasion you refer to you were in such a frame of mind? No doubt I was in a very bad temper when I saw him, and talking about Woolloomooloo Bay to me in those days was like showing a red rag to a bull.
905. You have given a specific denial to these statements of Mr. Smith;—have you anything further to say in reply to Mr. Smith's sworn statement? No; as I have told you, I simply went up to the office at the express wish of Mr. Cowper.
906. *Mr. Bavister.*] I should like to know how the property in question came into your possession;—did it come into your possession in one block, or at different times? I could explain it all to you if I had the figures with me. Mr. Sheehy, who knows more about the matter than I do, could also explain it. The property consisted of land let by a man named Charles Doyle.
907. Was any of it purchased by you? Yes.
908. What portions;—can you define them? No; I cannot. There were a number of tenants in common of the piece let by Mr. Doyle. A certain number of his relations all had shares in it. We bought their shares as they came of age, or were in a position to sell. Some persons had a life interest in the property, and we bought that also.
909. Can you say what price was given for any portion of it? Not from memory.
910. Is it not a fact that you made a mistake just now when you said that you knew no member of this Committee other than Mr. O'Sullivan? What I said was that I did not know any other member at the time of the Woolloomooloo Bay resumptions.
911. Did you not, in this Committee, speak to Mr. Lees as to his knowledge of this particular land, and challenge him with the fact that he knew it as well as anyone? I did. In a sort of a way I know Mr. Lees, but I do not speak to him, perhaps, once in five years. I may say that at the present time I know Mr. Morgan well, but at the time of the Woolloomooloo Bay resumptions I had not spoken to him. I knew him by sight, but I had never spoken to him.
912. *Mr. Piddington.*] How did it come about that these settlements were made behind your back. You say that you took a great interest in getting the matter settled, yet the final settlement seems to have been made behind your back? It was. I think Mr. Belisario settled it. It had been outstanding for so long a time, and we were so pressed for money, that he took it upon himself to go to Mr. Barling with the manager of the bank to see if they could not settle it.
913. He did not consult you at all? I did not know the case was settled at that time.
914. You did not know that it was finally settled until when? Until I went and asked myself. There were fifty reasons for a settlement. In the first place, the bank insisted upon it. They would not let us have any more money.
915. Who was the manager of the bank? Mr. Sheridan. But I think he was acting under instructions from Mr. French, the general manager. I think Mr. French wrote a letter to him.
916. So that, personally, you had nothing whatever to do with the final settlement? Nothing, except having to agree to it.
917. When did you agree to it? I do not know the exact date. We all had to agree to it. Mr. Belisario made the settlement, and we all concurred.
918. *Mr. Lyne.*] I believe the first offer you made—that is, the offer to take £185—was dated the 27th September, 1893? Yes; about then.
919. When you wrote that letter to me, did I tell you that I would not recommend that price to the Cabinet, because I thought it too much? I wrote a letter to you, asking you to take £185 per foot, and you said to me, "Hill, it is of no use your asking £185 per foot for that land. The price in my belief is exorbitant, and I would not submit such an offer to the Cabinet," or words to that effect.
920. Do you remember my mentioning at the time the price of £150 per foot paid for Lahiff's property? I think you said something like this,—"If you submit £150 a foot for your land, I will submit the offer to the Cabinet, but I will not take it on myself to settle the case—it must be a Cabinet question."
921. On the many occasions on which you saw me in reference to this matter did I ever say or insinuate in any way that I would recommend more than £150? I remember your saying you would not recommend £185.
922. But did I ever say that I would recommend more than £150 per foot? Never.
923. You wrote a letter on the 15th February last offering to take £150? I did.
924. Did I tell you at that time that I would submit that offer to the Cabinet? You said you would submit £150 to the Cabinet, but that you would not take it on yourself to make any settlement—it would have to be a Cabinet question.
925. You did not get £150? I received £145.
926. And in consequence of receiving only £145 and not £150, you felt that you had a grievance—that you had been badly treated? I am satisfied that I have been robbed.
927. What I want to know is this—I told you that I would submit the £150 per foot? You did.
928. And you did not get it? No.
929. And if you made any statement to anyone about being badly treated, and about your not getting as much money as you had anticipated, it would have reference to your receiving £145 instead of £150? I did not get nearly the price the land was valued at.
930. Did you ever expect that you would get more than £150? How could I expect more if I agreed to submit an offer of £150. If I agreed to sell this tumbler for 1s. I could not expect to receive 2s. 6d. for it.*
931. You have said that I refused to submit an offer to the Cabinet for settlement until you agreed to take £150 per foot;—I suppose that when you made that offer, and when I did submit it to the Cabinet, you expected to get £150 per foot? Of course I did. 932.

NOTE (on revision):—At one time I expected to get the same price as Challis, and afterwards the same as mine was valued at, viz., £175, and 10 per cent. added, which price was before the Cabinet, approved of by Mr. McMillan, and initialled by Mr. Barling. These papers were, I believe, sent to Crown Solicitor, so that he could communicate with the proper persons; but he did not do so—the papers were suppressed. This made a difference of nearly £30,000. At the time Mr. McMillan approved of this price I had never spoken to him.

- G. Hill, Esq. 932. And you were disappointed because you did not get it? I was disappointed because I did not get £150 a foot, and I was also disappointed because I did not get what my land was valued at.
 19 Dec., 1894. 933. Mr. Smith in his statement the other day said you had told him that I sent for you, and said that I wanted you to do certain thing as for me, and that I was going to give you a good deal more for this Woolloomooloo Bay land if you did those things? You never sent for me that I am aware of; you never promised me anything.
 934. Did I not say that I would not and could not settle the matter myself? As I have already stated you said you would not settle it, that it was a Cabinet question, and that it would have to go before the Cabinet.
 935. I never promised to give you £150 per foot? No, you never promised it me, but I submitted £150 and got £145.
 936. Did I on any occasion ever promise to give you £150 per foot? No. If you had promised to give me £150 per foot, naturally I should not have taken the £145.
 937. About the time we are speaking of you were in rather bad health were you not? In very bad health.
 938. You had rather a serious illness had you not? Yes.
 939. Your health was in a bad state, and you were liable to get excited? I was in a very bad state, indeed. The doctors considered my condition very serious, although they did not tell me so at the time.
 940. I suppose you talked about this matter of the Woolloomooloo land to a great many persons? I talked to them and they talked to me. It was a constant topic all over the town.
 941. And if you conveyed the impression to anyone that I had offered more than you got for this land in consideration of your doing certain things—getting votes or anything of that kind, you now say, speaking on your oath, that that is not true? It would be an erroneous impression. I never did any such thing, and if I said so I must have said that which was not true. There is one matter I should like to refer to. When we settled this dispute it was at so much per foot, and each party had to pay their own law expenses. That, I presume, referred to the litigation at the time, but the Government now have refused to pay the transfer of the deeds, which, I think, in every other case they have paid. In every case where a man buys a property he pays this expense. I think the Government owe me that money now fairly and honestly.
 942. *Mr. O'Sullivan.*] What would it amount to? I think about £200.
 943. *Mr. Lyne.*] Is Mr. Smith's statement that you had told him you sent some persons to me to confirm your impression about my having made you certain promises true? I say, distinctly, that you never made me any promise in your life.
 944. Did you send either Mr. Batty or Mr. Sheehy or anyone else to me for this purpose? I believe Mr. Sheehy has never seen you; in fact, I am almost certain he has not; at all events not in connection with any business matter. He certainly did not have an interview with you in my presence.
 945. As a matter of fact, you did not send any person to me for the purpose indicated? I never sent anyone to you for any purpose.

Daniel Sheehy, Esq., called in, sworn, and examined.

- D. Sheehy, Esq. 946. *Chairman.*] You are one of the parties interested in the resumption of land at Woolloomooloo Bay? Yes.
 19 Dec., 1894. 947. Did you take any active part in bringing about a settlement of your case? No.
 948. Do you know anything about the settlement? No.
 949. You know that eventually you received your share of the money? That is all I know.
 950. Did you at any time go with Mr. Hill, Mr. Batty, or with anyone else to interview the late Secretary for Public Works, Mr. Lyne? No.
 951. Did you ever see Mr. Lyne at any time with regard to this case? Never in my life.
 952. Do you know Mr. Lyne? I do not.
 953. If the statement had been made that you with others went to see Mr. Lyne in reference to it, is it true? It is decidedly untrue.
 954. *Mr. O'Sullivan.*] You say that you do not know Mr. Lyne? If he were sitting at this table I should not know him.
 955. As a matter of fact he is sitting in the room now? Then I could not recognise him. I could not tell Mr. Lyne from any of the rest of you—I do not know him at all.
 956. You never at any time waited upon him in connection with this or any other matter? Never. I do not know him.
 957. *Mr. Lee.*] You had some difficulty in getting this matter settled? Mr. Hill and Mr. Belisario had everything to do with it.
 958. You were a shareholder in it? Yes.
 959. You did not take any active part in it yourself? No.
 960. Do you know any Members of Parliament? I do.
 961. Did you get any Members of Parliament to help you get the case settled? No, I never mentioned it to any Member of Parliament. I know Mr. See.
 962. When you were dividing the money received from the Government between yourselves was any deduction made from the amount? No, there was only the bank's interest.
 963. Was any deduction made to pay any persons for services rendered? No, not that I know of.
 964. As a matter of fact, did you pay any Member of Parliament to help you to get the case through? Not that I know of.
 965. Did you promise to give money to, or did you hold out any other inducement to any Members of Parliament to support the late Government? Not that I am aware of.
 966. You know nothing at all about the settlement? I know nothing at all about it.
 967. *Mr. Cann.*] Are you aware of any commission being paid to valuers in connection with the valuation of this land? No.
 968. No incentive was given to the valuers to put a certain price upon it? No. I thought we got a very low price for it. The jury awarded us £200 a foot, and that is what we ought to have got.

Edward Henry Belisario, Esq., called in, sworn, and examined :—

969. *Chairman.*] You are one of the parties interested in the resumption of land at Woolloomooloo Bay? Yes.
970. You are interested with Hill and others? Yes.
971. Did you take an active part in getting a settlement of the case? Yes.
972. I believe there were four persons interested in your land? Yes; George Hill, Daniel Sheehy, Thomas Batty, and myself. 19 Dec., 1894
973. I believe the matter of settlement was left in your hands and in Mr. Hill's—you did not all take an equal share in it? Mr. Hill and I had the whole business in our hands, the other partners took no active part whatever.
974. You are aware that the final settlement was made for £145 per foot? Yes.
975. Did you take any active part in getting the settlement? Yes; I virtually made the settlement.
976. With Mr. Hill? By myself with the bank manager.
977. What bank manager? Mr. Sheridan, the manager of the Bank of New South Wales in Bathurst-street.
978. Did you consult Mr. Hill in any way before making a settlement in this matter—had you an equal right with him to deal with it? We had equal rights.
979. Finally, I suppose, you had to submit this offer of settlement to the other partners? The other partners were perfectly agreeable to do what Mr. Hill and I agreed to.
980. *Mr. Lee.*] In bringing this matter to settlement, had you occasion to have any interviews with Mr. Lyne, the late Secretary for Public Works? I had many interviews with him.
981. Do you know him personally? Well.
982. Can you fix the date of the interview with him at which you finally fixed upon the amount you would accept? I did not see Mr. Lyne at all on that occasion. I saw Mr. Barling.
983. You cannot tell us the date? I could not say from memory. But it was during the first week in March, as far as my recollection serves me.
984. That was the final interview? The final interview.
985. What amount did you agree to accept? £145 per foot. Mr. Sheridan was present, I took him up with me.
986. What price were you asking in the month of January of this year? I could not be certain, but I fancy it was £155 per foot—something like that.
987. Did you have an interview with Mr. Lyne about this matter in January? I cannot be certain about the month. I had a good many interviews with him.
988. You do not remember any particular interview in January? I cannot speak as to any particular interview, but there is no doubt that I saw him in January and February also.
989. Did he lead you to suppose that he was going to settle this matter himself? It never entered my head that he could settle if it he wanted to.
990. Did he ever say that he could not settle the matter without submitting it to the Cabinet? Yes; he told me that the matter would have to be submitted to the Cabinet.
991. Was any pressure brought to bear upon you by Mr. Lyne to get the matter settled? By the Bank of New South Wales, you mean—
992. I am speaking of Mr. Lyne? What do you mean by pressure?
993. Any pressure? Well, there was this pressure, that he knew the bank was worrying us, and I dare say he thought it a favourable opportunity to get us to take a reduced figure, to bring it down as low as he could. It was "Hobson's" choice with us.
994. Did you and Mr. Hill, together or separately, wait upon Mr. Lyne at any time when there was a vote of censure pending against the Government of which he was a member? No, I do not think so.
995. You did not attempt to bring any pressure to bear upon Mr. Lyne, as a Minister, at that time? I should hope I had more sense; it is not very likely that I should attempt such a thing.
996. You did not do so? Most certainly not.
997. Do you know many Members of Parliament? A good many.
998. Did you require the services of any members to get this matter settled? No.
999. Did Mr. Lyne, or any other member of the Cabinet, hold out this inducement to you—that if you could secure votes for them on a certain division this question would be settled? None whatever. I never had any conversation to that effect with any one, either directly or indirectly.
1000. No such proposition was ever made to you? No.
1001. Neither did you suggest it? Never.
1002. So far as you know, the settlement was arrived at in an above-board and honourable way? Quite so.
1003. *Mr. O'Sullivan.*] There is one point I should like you to clear up, and it is this: You and Mr. Hill were partners with Batty and Sheehy, and Mr. Hill states that you settled the matter without consulting him? Yes.
1004. What reason had you for doing so? Because the Bank of New South Wales insisted on the settlement. They refused to advance us any more money to carry on law proceedings.
1005. Had you grown tired of Mr. Hill's efforts to settle the matter? His efforts and mine were combined.
1006. And you say that the pressure of the bank compelled you to make the settlement? Quite so.
1007. Did you believe in your own mind that Mr. Hill would acquiesce in the terms you offered? I thought he would agree to anything I did; in fact I was sure he would agree to it.
1008. You are not aware whether Mr. Hill interfered in any way whatever with the matter in the way of getting political influence? Not as far as I know, and I knew the whole circumstances of the case from end to end. We were frequently in conference in reference to it.
1009. Did you ever know Mr. Hill to take an active part in the political affairs of the country? Never.
1010. Did you ever know him to take any part in politics beyond exercising his vote at elections? He took very little interest in elections at all—he often did not vote.
1011. From your evidence it would appear that you were placed in such a position by the bank that you were not masters of your own actions? Quite so.
1012. You had on that account to accept a lower sum than you would otherwise have agreed to? I would not have dreamt of taking £145 but for the pressure of the bank.

E. H.
Belisario,
Esq.

E. H.
Belisario,
Esq.

19 Dec., 1894.

1013. Is it a fact that Mr. Lyne spoke at one time of submitting £150 to the Cabinet? I do not remember it. I do not think we would listen to it at one period of the negotiations. It was only the pressure of the bank which made us finally think of taking £145.

1014. In your estimation you were compelled to drop from £185 to £145 per foot? Yes. We would have gone to law again if the bank had found the sinews of war, but they refused to do so. I had to borrow an additional £500 from a man to pay the solicitors.

1015. How much did you owe the bank at the time it had such a hold upon you? I owed them about £6,000 myself, but they wanted the bulk of the money in.

1016. Was this after the depression? Yes; when all the banks were calling up their overdrafts.

1017. You were caught on a lee shore and you had to agree to the terms of the Government? It was compulsory.

1018. *Mr. Piddington.*] It was the Bank of New South Wales, was it not? Yes; I believe there was a considerable strain upon the bank at the time.

1019. *Mr. O'Sullivan.*] Coming back to the settlement—without Mr. Hill's acquiescence at the time being, I suppose you waited on the bank manager and agreed with him what you would accept? The bank manager was at me daily. He said he was getting letters from the head office to get the matter settled. I said that it was simply ruination, and that we were throwing money away, that we had got a verdict for £200, and that we should get the verdict again if they would let us have the money to go to law, but they would not advance us any.

1020. How did you come to agree upon the amount of £145 per foot;—who first suggested it? That I cannot remember. I think it was Mr. Barling who first mentioned it. I think he said it had been before the Cabinet.

1021. I presume that you and the bank manager conferred about it, and agreed to accept the amount? He said that we should have to accept it. There was no conference at all. He would not listen to reason. He simply said, "You must accept it."

1022. Upon that you went to your lawyers and authorised them to accept? I myself went up to Mr. Barling with the bank manager.

1023. And you then accepted the terms verbally? Yes.

1024. Did not the lawyers appear upon the scene afterwards? I went away. It is very likely that they were there during the following week.

1025. *Mr. Barrister.*] Inasmuch as the case was left to yourself and to Mr. Hill to settle, did you and Mr. Hill on any occasion interview Mr. Lyne together? Yes, dozens of times, I should think. I had probably seen Mr. Lyne two or three dozen times.

1026. *Mr. Piddington.*] What interest had you in this land? A quarter share.

1027. And the Bank of New South Wales advanced you £6,000 upon what? Upon different securities.

1028. Yet they were pressing you for a settlement of this particular case? Yes; they wanted their money.

1029. *Mr. Cann.*] In settling this case was any commission divided among any persons interested in the settlement? No.

1030. As far as you are aware no inducement was offered to any person to influence the settlement? Not a penny piece.

1031. You confined your negotiations for settlement to yourselves? Yes; we had no outside influence in any shape or form.

1032. Were the land valuers ever approached to fix the land value at a certain figure? I do not know any of them.

1033. *Mr. Wall.*] Can you say if any of the other parties interested in this land had obtained advances from the bank or were under obligations to it? Mr. Hill was, and very probably Mr. Sheehy, but I do not know.

1034. Do you know of your own knowledge whether equal pressure was brought to bear upon them to effect a settlement? I do not think Mr. Batty or Mr. Sheehy were interfered with in any shape or form—they never interfered with the settlement at all.

1035. You say that the bank brought pressure to bear upon you to pay up your overdraft? Yes.

1036. What I want to get at is whether, if the others were indebted to the bank, equal pressure was brought to bear upon them? Just the same in Mr. Hill's case.

1037. You cannot say to what amount they were indebted? No, I cannot.

1038. *Mr. O'Sullivan.*] You, yourself, owed £6,000 to the bank? Yes.

1039. Have you any idea how much Mr. Hill owed? No.

1040. You have spoken of your private account of £6,000;—what did the account of the firm collectively amount to? To about £30,000, I think.

1041. Then it was really to obtain the payment of £30,000, and not £6,000 that the bank was pressing you and your partners into a corner? Yes.

1042. *Mr. Piddington.*] As regards your advance of £6,000, you say that the bank had other securities? Yes; but what was the good of them—they wanted their money.

1043. *Mr. Barrister.*] Was any portion of the land affected by this claim purchased separately by yourself? None whatever.

1044. *Mr. Lyne.*] When you saw Mr. Barling did he refuse to make any written offer until you agreed to take £145 per foot? Yes; he would not put it in writing.

1045. He said you were to make the offer? Yes.

1046. And when that was done the settlement was agreed to in his office? Yes; the matter was then apparently settled.

1047. In the papers you will find a letter from the bank dated 30th September, 1893, calling upon the Works Department to pay any money due to Mr. Hill and yourself to them? Yes.

1048. That was concurrently with the pressure they brought to bear upon you? Quite so.

1049. Did Mr. Hill at any time send you to me to ascertain whether I had offered to pay a larger sum than £150 per foot for this land? No.

1050. Do you know if he sent anyone to ascertain that? I am sure he did not. Had he done so he would have told me.

1051. From the time you put in your first offer of £185 per foot in February, 1893, did I ever vary the position I took up that I would not recommend more than £150 per foot? Never.

1052. Not at any one time? Not at any one time.

1053.

1053. Did I say that I would not settle the case, and that it must be a matter for the Cabinet? You said that it must be a matter for the Cabinet. E. H.
Belisario,
Esq.
1054. Did I ever ask you to influence votes in consideration of my making a settlement? No.
1055. *Chairman.*] You will see, from a reference to the papers on page 30, that you made an offer on the 19 Dec., 1894. 15th February, 1894? Yes.
1056. You then offered to take the sum of £150 per foot? Yes.
1057. Previous to that you sent in a letter offering to take £185? Yes.
1058. Was any suggestion made to you, either by the Minister or by any Member of Parliament, that you should write either of those letters? No.
1059. Or that you should vary your offer from £185 to £150? None whatever.
1060. The letters were sent on of your own free will? I wrote them myself.

FRIDAY, 21 DECEMBER, 1894.

Present:—

MR. F. CLARKE, | MR. O'SULLIVAN,
 MR. BAVISTER.

J. MORGAN, ESQ., IN THE CHAIR.

W. J. Lyne, Esq., appeared in person.

Richard Newman Sheridan, Esq., called in, sworn, and examined:—

1061. *Chairman.*] You are manager of the Bathurst-street branch of the Bank of New South Wales? I am. R. N.
Sheridan,
Esq.
1062. You held a mortgage over some property owned by Hill and others at Woolloomooloo Bay? We did. 21 Dec., 1894.
1063. To a large extent I believe? Yes.
1064. Did you at any time see Mr. Lyne in the Works Department with a view of getting them to settle the matter with George Hill and others? The first time I ever spoke to Mr. Lyne in my life, to my knowledge, was yesterday morning down stairs when you were there.
1065. You waited upon the Works Department? Yes, upon one occasion.
1066. For what purpose? To see that the matter was settled—to confirm the acceptance of the terms.
1067. Who was present? Mr. Belisario went with me, Mr. Barling and a clerk in the office were the others present. There were four of us in the office at the time.
1068. Were you desirous of having a settlement in the matter? I was.
1069. Were you at any time pressing Hill and the other parties? I had been pressing them for a considerable time previous; in fact we insisted on a settlement. It was a matter of indifference to us whether Hill and Belisario accepted the offer of the Government or not so long as they paid us the amount due. We wanted the amount they owed the bank paid. Of course when they paid us that amount, we had no further claim on them.
1070. You were insisting upon that amount being paid? We were. We declined to allow it to go on any longer.
1071. Would you have taken any action if it had not been settled then? It would be for my board of directors to say what action should be taken. My instructions were that the matter was to be settled.
1072. From the board of directors? From the general manager.
1073. *Mr. O'Sullivan.*] You were the gentleman who waited on the Works Department with Mr. Belisario to settle the matter with Mr. Barling? To confirm the statement that Mr. Belisario had made to me. He was there, I understood, to accept the terms of the Government.
1074. Did you think Mr. Belisario was only putting you off when he made the statement he did? I had heard so many statements about settlement about one thing and another that I wished the last statement confirmed.
1075. And you attended at the Works Department to have the information direct from the Under Secretary? Yes.
1076. What did Mr. Barling say to you? He stated that the Government had offered £145 per foot, and that they would not settle on any other terms—that they would not increase it, or do anything else. Mr. Belisario said he had accepted that offer. Mr. Barling then said that he had received no official confirmation of it from them, and Mr. Belisario again stated that he accepted, on behalf of himself and partners, the terms offered.
1077. *Mr. Clarke.*] You say your bank held a mortgage over the property? Yes.
1078. Would you mind telling the amount Hill and others owed the bank? I could not say at this moment the exact amount, but I think that it was about £42,000.
1079. That was the joint account of the firm? Yes.
1080. *Mr. Lyne.*] Did you give instructions that notice should be given to the Works Department to pay to your bank any money which might be due to Hill and others? Yes.
1081. That was done through your instructions? Yes.
1082. Did you refuse money to Hill and Belisario to carry on the case further? I did.
1083. They had to get the money elsewhere? They had.

James Bamford Thompson, Esq., called in, sworn, and examined:—

1084. *Chairman.*] What are you? I am the Government Valuator. J. B.
Thompson,
Esq.
1085. Employed in the Works Department? Yes.
1086. Were you one of those who valued the property of Hill and others in Woolloomooloo Bay? Yes.
1087. You valued it with Richardson and Wrench and Mills and Pile? Yes.
1088. Did not Mr. Wilson value? No, not with us. 21 Dec., 1894.
1089. When did you value the property first? I made a preliminary estimate in December, 1889.
1090. Alone? Yes. 1091.

- J. B. Thompson, Esq.
1091. What did you value the property at then? The whole property?
1092. Yes? At £80 per foot.
1093. At that time a portion of the land was presumed to have no water frontage? Yes.
- 21 Dec., 1894. 1094. How much of the land—do you remember what portion? I think blocks 5 and 6.
1095. I believe blocks Nos. 5 and 6 were without any great depth? They had not any very great depth.
1096. What would be the average depth? It would not average more than 25 feet in depth. That is, the part cut off from the water.
1097. It was discovered afterwards that that portion had a water frontage? It was; but I have no knowledge of it. I do not think I had any personal knowledge of that.
1098. That was after you valued it. You were not aware it was afterwards discovered that it had a water frontage? I heard about it.
1099. You afterwards valued it with Mills and Pile and Richardson and Wrench? Yes, sir, I did.
1100. Did you value the whole of it then? I valued the whole of it, I think.
1101. Are you sure you valued the whole of it? No; it was irrespective of the water frontage.
1102. What property did you value with Mills and Pile and Richardson and Wrench? That part of it above the original water frontage.
1103. What block—was it No. 2? I valued the whole of the properties.
1104. You valued the whole of them? Yes. I am speaking of the Hill properties. We valued the whole of them.
1105. What value did you put upon the whole of the land per foot? £175 per foot, less 10 per cent. allowed for sale.
1106. Did you afterwards withdraw that valuation? No, it was never withdrawn to my knowledge.
1107. Did you write a letter which you will find on page 12? Yes, I did; but that was not withdrawing the value. I don't think it ever was withdrawn. I wrote that letter.
1108. In there, there is a paragraph (paragraph No. 3) as follows:—"The valuers appointed to assess the value of this and other resumptions in the same locality—Richardson and Wrench, Mills, Pile, and Wilson, and myself—agreed to a report on each of the claims mentioned in the preceding paragraph, that the value of the fee-simple of the portion of land in question was £58,447 16s. 3d. I concurred in this valuation, though so greatly in excess of my own ideas, out of deference to the opinions of the other joint valuers." What do you mean by "out of deference to the other joint valuers";—did they induce you in any way to agree with them? No, except by argument. I deferred to their long experience and practical knowledge, and my high opinion of their conscientious dealings. In fact I thought they were better able to judge wharf property than myself, being auctioneers who had been long established and men of high character.
1109. Did you know that they had long experience in wharf properties? Yes.
1110. Did you in the letter hold the opinion that £175 per foot was an excessive value? I always thought it very high, and do still. My own idea of the value is set out in this paper.
1111. In valuing property of this kind, on what basis do you start? By comparing similar properties—by comparing the valuation of similar properties and searching for the papers in the Registrar-General's Office.
1112. Did you take into consideration, in giving the value of £175 per foot, any other lands in the vicinity of the Hill and others' properties? Oh, no, not in the immediate neighbourhood. We compared it with city wharfage property.
1113. You did not take into consideration the £175 given for the Challis property? That was more valuable.
1114. Did you take into consideration the price paid for J. A. Brown's property? That was done at the same time. It was valued at the same time—I believe it was. It is so long ago that I cannot remember the facts very well, but I think it was all done at the one valuation.
1115. One valuation was made for all the properties? Yes; at the same time.
1116. What valuation did you place on J. A. Brown's property? I concurred with the other valuers.
1117. Was that £175 per foot? I don't remember. [The witness was handed a paper to refresh his memory. After examining the document the witness said, "Yes, £175 per foot."]
1118. That was Brown's property? Yes.
1119. What was the size of it? It was only 15 feet frontage.
1120. Do you remember what the depth was? About 120 feet.
1121. There were buildings on it? Yes.
1122. You valued Mrs. Lahiff's property at the same time? Yes.
1123. What value did you place upon that? £150 per foot. There were 30 feet frontage.
1124. What was the depth? About the same as Brown's. It was adjoining. The depth was about 120 feet or 130 feet.
1125. These were joint valuations made by yourself and the firms mentioned? Yes.
1126. Is the reason why you valued it first at £80 per foot all round and afterwards agreed that £175 per foot was a fair price, that they had greater experience of valuing wharf property than you had? Yes.
1127. And you thoroughly relied on them as men capable of valuing properties? Yes; I had most implicit confidence both in their ability and integrity.
1128. These original valuations of yours, and then these by you and the firms mentioned, were afterwards submitted to the Crown Solicitor? Yes; I believe they were.
1129. What for—why were they submitted? To investigate the title. They always are referred to him to investigate the title.
1130. In the fourth paragraph of your letter you say that by reason of the papers, Mr. Robert Smith came to the conclusion that the land was very much over-valued? Yes.
1131. Was Mr. Robert Smith a judge of the value of property? No. He formed his opinion on the searches he made, and a previous valuation by Richardson and Wrench.
1132. You see the sixth paragraph of your letter? Yes.
1133. You say that after consultation with Mr. Smith, and a careful examination of the proofs adduced, and the consideration of his reasons for arriving at the conclusion mentioned, you agreed therewith, and was satisfied that under the circumstances no other opinion was possible? Yes.
1134. What was the reason adduced by Mr. Robert Smith to make you agree with him? That the land in

J. B.
Thompson,
Esq.

in 1886 had been valued at £8,000, and I did not think it was possible that the value could have increased to that extent in the time that had intervened, that is, in six years, although there is no doubt it had increased very much, but I did not think to that extent.

1135. Was that the only reason why you agreed with Mr. Robert Smith in his valuation? It was not Mr. Smith's;—it was Richardson and Wrench's. 21 Dec., 1894.

1136. Was that the only reason that made you agree with Mr. Robert Smith that the property had been over-valued? Yes; I think so. I always thought it was capable of explanation, although I could not understand it.

1137. You say "the price paid by Hill and others for the interests in the property is furnished by the annexed list." That appears to be one of the reasons because they had paid a low price? Yes; that is one reason, but not a very powerful one. The principal reason is that sworn valuations were put in five years before for £8,000. These were the facts that Mr. Robert Smith acquainted me with, and I thought it was my duty to bring it before the Minister.

1138. What was the boom time in land. Was that about the boom time? I think it was.

1139. It was pretty high at that time? Not at the time it was valued at £8,000. That was before the boom time.

1140. That was before the boom? The boom was best in 1888 and 1889.

1141. Are you aware of any properties that increased to any very large extent in price about that time? Oh, yes; there was one increase by very much per cent.—by hundreds per cent.

1142. Hundreds? Yes, no doubt, about that time, although it is a very difficult thing to have any accurate data upon. Even out in the suburbs land almost worthless that was bought at £10 per acre not very long before I have seen sold at £20 per foot.

1143. So it would not surprise you to find that land had gone up from £20 per foot to £150 per foot? It would not. I have seen cases as remarkable as that.

1144. In 1886, when that valuation of £8,000 was made, was land sought for about Woolloomooloo Bay? I don't think so.

1145. Was there any demand for it? I don't think so. In fact it was land there was not likely to be any demand for because of the water-frontage—the water was not sufficiently deep.

1146. In 1889 when the land was resumed was there any demand then for land in Woolloomooloo Bay? It was better certainly, but I don't think it was very great even at that time, because the water-frontage was not valuable for shipping. The soundings were very shallow.

1147. That could have been good land by dredging it? Oh, yes; but I would not say as good as land at Circular Quay, but almost as good as Darling Harbour. It could be made of immense value.

1148. Do you know of land belonging to Dr. Morris in Woolloomooloo Bay? No, I do not.

1149. Would you be surprised to hear that Dr. Morris paid £3,500 for some land which he sold in 1888 for £21,000? Not a bit surprised. I know of similar cases.

1150. Would you be surprised to know that in 1890 £27,000 was asked for it? I would not be surprised at him asking a million for it.

1151. If Mr. Hill had paid £5 per foot for his land when he purchased it would that be any reason for you to base your valuation upon the value of this property in 1889? No, it would not. It would be impossible to base it on a very low value like that; the difference of opinion would be as to the amount of increment. That there was one there is no doubt.

1152. Was an estimate made of the value of the land by the Crown Solicitor? Yes; I think so. I think I did see one.

1153. Look at paragraph 7. You see the estimate of the value of the land by the Crown Solicitor is £18,000 or less? Yes, sir.

1154. Mr. Robert Smith made that valuation himself? I think so.

1155. Upon what? I do not know.

1156. Was he a judge of the value of land? I think so. He had a great many transactions in land. I think he had something to do with Darling Harbour.

1157. Is it any part of his duties when papers come to him to estimate the value of land? No; I think that is beyond his province altogether.

1158. Mr. Bavister.] One Government officer can hardly say what are the duties of another Government officer.

1159. Chairman.] If you object to the question I will not have it put.

1160. Mr. Bavister.] No; I do not object. Let it stand.

1161. Mr. O'Sullivan (to witness).] I gather from your letter that you agreed with Richardson and Wrench at first as to the valuation placed upon the property? Yes.

1162. But then, having some misgivings, owing to information brought under your notice by Mr. Robert Smith, you changed your opinion as to the valuation? No; I brought the case before the Minister. I do not know that I changed my opinions. I thought it was an extraordinary valuation. I did all along.

1163. Richardson and Wrench and Mills and Pile are considered to be competent and reliable valuers? Yes.

1164. Do you not think that they would be aware of the price given for the land before they would give a valuation? I should think so.

1165. Your chief reason for having misgivings which you thought it proper to lay before the Minister was the one Mr. Robert Smith had brought under your notice—that the land had been valued at £8,000 only? Yes.

1166. And that was five years before? Yes.

1167. Were you aware that during that five years very great changes had taken place with regard to Woolloomooloo Bay in the matter of shipping? Yes, there had been. The 'Frisco boats used Cowper's Wharf, and there was a lot of traffic from it.

1168. Were there any large ocean cargo boats? Yes.

1169. And timber boats? I cannot say much about that, but that is my impression.

1170. The reason I ask you is that Mr. Gregg in his letter (13/10/92) says, "That until a few years ago that portion (Woolloomooloo Bay) of the city was almost neglected by capitalists—practically the whole place was dormant;—an activity arose in the way of demand for lands there under the belief that the early future would discover for it an important and valuable use; the comparative smallness of the

available

J. B. available area, its proximity to the city, and the suggested railway connection together with a measure of patronage of large ocean-going vessels and others of smaller style, all tended to awaken an interest and enhance value." Do you think that a correct statement? Yes; I think it is perfectly correct.

21 Dec., 1894. 1171. From your knowledge of the change which has taken place in regard to shipping, is he borne out by fact? I think so.

1172. I notice that you suggested to the Minister that a Board should be appointed consisting of Mr. Powell, Collector of Customs, Captain Jackson, Mr. C. W. Darley, Mr. Houston, and the Acting Crown Solicitor? Yes.

1173. You suggested that that Board should be appointed to revise the valuation? Yes.

1174. Was that Board appointed? It was approved of, but never appointed. The gentlemen consented to act, but never did.

1175. Did any change of Government take place? I do not think so. I do not think that was the cause of it.

1176. Mr. Bruce Smith approved of the suggestion, but the idea of an independent Board was never carried out? No.

1177. Did Mr. Robert Smith, late Acting Crown Solicitor, object to the Board? He suggested it.

1178. Did Mr. E. A. Smith, Crown Solicitor, object to this Board? I do not know.

1179. Then you cannot assign any reason why the Board was not appointed, and why it did not carry out the objects which had been suggested? I cannot. Mr. Robert Smith was chairman and convener of it. They never met.

1180. I would like to ask you, as an experienced valuator do you think that the land belonging to the Challis Estate, Hill, Belisario, and others, and the lands under review have been benefited largely by the shipping trade, and would they, in the course of time, be utilised as sites for wharfs? I think so. I think that inevitably the increase of wharfs must increase the value of wharfage property.

1181. You think it likely that the land now under discussion would have been brought into use as sites for a wharf? Undoubtedly. That is, by improving it, by deepening it.

1182. You think that the probability of this had some influence upon the very large increase in the value? I think it very likely. I am sure it weighed with Mr. Gregg.

1183. Mr. Gregg, who represents Richardson and Wrench, is a gentleman of long experience in valuing? Yes.

1184. Their firm has a prestige as correct valuers? Yes, very high.

1185. The same remarks apply to Mills, Pile, & Co.? Yes.

1186. Allowing for their competence, can you assign any reason why you should have had misgivings after firms like that had made their valuation, and placed their reputations at stake? I do not attach unwavering confidence to any valuations even from Richardson and Wrench's. I have seen them very far out at times. I believe they are thoroughly honest, and the most competent men to be had in the city.

1187. And yet you think that on this occasion they may have made an error of judgment? I think they took an extravagant view of the value. That is my idea.

1188. *Mr. Bavister.*] You may remember, Mr. Chairman, that I wanted to ascertain something as to the depths of the properties. I think we can get them from this witness. What is the depth of the properties described as being those of Hill and others?

1189. *Chairman.*] I understand that Mr. Rae has the whole information, having measured them. Would you not better hear Mr. Rae?

1190. *Mr. Bavister.*] I would be quite satisfied to get it from Mr. Rae.

1190½. *Witness.*] Mr. Rae would be more reliable.

1191. *Chairman.*] I would like to ask you, when you first valued this land in 1889, you say that two blocks, Nos. 5 and 6, had no water frontage, it being afterwards found that these two blocks had water frontage—do you think that the sum paid by the Government of £145 per foot was an excessive price? I would not like to give any opinion on that. I know it was enormously increased in value. It was as valuable as any other part of the property when the water frontage was secured.

1192. When the water frontage was secured for blocks Nos. 5 and 6 it became as valuable as any other? Yes; because a wharf does not want any great depth for warehouses.

1193. *Mr. Lyne.*] As to this letter on page 12, did Mr. Robert Smith bring—I scarcely like to call it pressure—but was he emphatic that you should write such a letter? No; he pointed out the facts. Of course he is always emphatic, but he did not bring any pressure to bear.

1194. He was emphatic? Yes.

1195. And he suggested the Board? Yes.

1196. That interview took place in the Under Secretary's office? No; in his own office.

John M'Elhone, Esq., called in, sworn, and examined:—

J. M'Elhone, 1197. *Chairman.*] Your name is John M'Elhone? Yes.

Esq. 1198. You desire to give some evidence before the Committee? I was subpoenaed.

21 Dec., 1894. 1199. Have you any knowledge of the resumption of this land in Woolloomooloo Bay? What do you mean?

1200. The value of it? Yes; I have known it since I was a boy.

1201. Do you know any circumstances in connection with the resumption of land in Woolloomooloo Bay which would indicate that there was any corruption in connection with this purchase of land, or anything affecting the honor and integrity of the Minister for Works, Mr. Lyne? None whatever; but I think that Mr. Hill was shamefully treated in not getting his money the same as the others.

1202. Do you know of any circumstances which would lead you to the opinion that there was any inducement held out to Mr. Lyne to pay Mr. Hill this amount? I never heard Mr. Lyne's name mentioned. I might have blamed Mr. Lyne for not giving Mr. Hill what he was honestly entitled to, but as far as corruption is concerned, I never heard Mr. Lyne's name mentioned. I may have spoken strongly. As a rule I generally do.

1203. *Mr. Bavister.*] If it has been asserted that you have at any time stated to persons that improper transactions had taken place in regard to this matter, is that true? I have never said that, or mentioned Mr. Lyne's name. I do not think I mentioned Mr. Lyne's name.

1204. I will repeat my question. If it is asserted by other persons that you said that wrong transactions took place in this matter and that improper consideration was given to Mr. Hill in this matter,—is that correct? No. I have always said, I say so now, and always will say that Mr. Hill has been robbed.

J. M'Elhone,
Esq.

1205. *Mr. Clarke.*] Do you think that the value of £145 per foot that was allowed to Mr. Hill and others for this property was too little? You have to look at all the circumstances. When Mr. Hill was paid the money he was forced to take it. You could not value it now. At the time the previous Government of Sir Henry Parkes resumed the land there was a boom on and everybody was mad in buying it. There was land sold to Dr. Morris for £3,500 by auction, and Dr. Morris sold the land for almost £25,000 for the bare land. It was the same with other land; £160 per foot was bid for a frontage round the Bay. I know of land in Castlereagh-street that brought £250 per foot, for which you could not get £50 now.

21 Dec., 1894.

1206. *Chairman.*] Was that about the time this land was resumed? Yes. At the same time Dr. Morris, who had bought land for £3,500 with a public-house and other buildings upon it, sold the bare land for £25,000 to some of the keenest business men in Sydney. Now, you could not get £25 a foot for it; it is just like buying mining shares.

1207. *Mr. O'Sullivan.*] What do you mean when you say that Mr. Lyne robbed Mr. Hill? I say the Government did—not Mr. Lyne—in not paying him the value. Mr. Hill ought to have got the valuation the Government put upon it; Challis' Estate was valued at £172 per foot, and they got their money. Mrs. Lahiff had 30 feet frontage with not half the depth, and she got £150 per foot less 10 per cent. I have heard since the inquiry that Mr. McMillian had issued an order to pay Mr. Hill the money. I think Mr. Hill ought to have got the same as Challis; I think his (Mr. Hill's) land is better; it is deeper water. Challis' land is near the sewer. There is more water at Mr. Hill's land than at the other place.

1208. You live on the heights above the land? Yes.

1209. I presume that every day you have an opportunity of seeing the progress made at the wharfs? Yes.

1210. What change has taken place during the last five or six years in the matter of shipping and trade? I have already said that the Government erected wharfs, and stores were erected by Brown & Co.; there is an enormous trade done in wool; more wool is shipped from here than from any wharf in Sydney; I know it because I trade in hides, tallow, &c.; the Government must obtain a large revenue from this source.

1211. There are other ships? Yes; the American mail steamers, and there is always one or more large sailing ships there.

1212. Has an increase of trade taken place since Hill & Co. bought land there in 1889? Certainly; because prior to that there was hardly a ship went there at all.

1213. Would the increase in the shipping trade and the larger utilisation of the wharfs justify the increase in value? You can hardly tell. There was a land boom on just like a mania.

1214. Making allowances for that, would you say that the increased shipping trade had justified the increase in the value of the land? I could not say that. People must have thought land was worth what they were giving for it or they would not have given it. I am speaking of private people. In some cases the value of land was quadrupled, and you could never tell. You cannot account for it any more than for prices given in a mining boom. People were mad at the time with a mania for buying land. I could not say now what caused the increase; but I know that Challis' land and Mr. Hill's land is much better for wool wharfs than the present wharfs. The present wharf is on the west side. Challis' and Hill's land is on the eastern side, and is at a higher level than the land on the western side, and where they have to lift the stuff at the present wharf, they could shoot it in the ships from the other place. There would not be one-half the handling. Take the case of Flood's stores. They shoot the wool in from here, but at Hill, Clark, & Co's. stores they have to lift it into the ships by machinery.

1215. Do you care to give an opinion of the land values down there? At the present time you could not value it. I forgot to say that Mr. Waller, a Government officer, came to my house to ask my opinion. I told him that the thing was dead, and to go to Mr. Lyne and tell him he was making a fool of himself. I told him that there was no valuation now. I look upon Mr. Waller's valuation as valueless, because it was made five years after the land had been resumed.

1216. *Mr. Lyne.*] That was with reference to McQuade's? Yes. I said that at the time the Government valued the land the boom was on. I thought it unfair to value the land after the demand had diminished, I pointed this out to Mr. Waller, and said, "This is a farce," because the Government made the value of the land by putting the price of £175 per foot on Challis' land and paying Mrs. Lahiff £150 per foot. I told Mr. Waller that it was no use his valuing the land after that fact. The Government made this value by giving these prices, and I said, "It is only a farce valuing it now." I built six houses some time ago and got £790 rent annually for them, but now I cannot get the rates and taxes, although I paid £11,000 to build them. Hill & Co's. land was quite as valuable as Challis', and infinitely more valuable than Mrs. Lahiff's. If they wanted to build a wool-store, as I pointed out, they should have built it where the stuff could be tumbled into the ship instead of it being necessary to lift it as now. Two men could do the work then that ten do now, as I know it is deeper water, because I have swam over it hundreds of times.

1217. *Mr. Bavister.*] In reply to a question you said that Lahiff's land had not half the depth of Hill's? I am speaking from memory.

1218. You did not state that as a positive fact? No, I only recollect the plan that Mr. Waller brought me. [*The witness then examined the plan which was handed to him.*]

1219. Do you see that Lahiff's property does back on to and have access to Victoria-street? I see it does.

1220. Then you made a mistake? I thought that was the line there [*pointing to the map*]; but it is only 30 feet. I recollect that I was a witness for Brown who had 15 feet adjoining Mrs. Lahiff's property, and he got £150 a foot for it.

1221. You made reference to wharfs? Yes.

1222. When were they constructed? In the last six or seven years.

1223. Before the end of 1889? I have not paid much attention to it. I say that there was not much use made of them. I am speaking of the time before Mailer brought the wool trade there; when he leased it they established a large trade there and shipped 50,000 or 60,000 bales of wool a year. There was the Gulf Line of steamers, and an enormous quantity of hides and tallow was shipped, but I cannot state the quantity. I should imagine that there was at least 60,000 bales of wool a year shipped.

1224. In answering that question, as to the value of the land, did you not say that the greater increase

J. M'Elhone, increase was owing to the construction of the wharfs? I cannot say that. It might have been so, though.

21 Dec., 1894. 1225. I think the evidence will prove that it is not a matter of opinion as to your having said that? It very likely would increase the value.

1226. *Mr. Lyne.*] Do you think that I made a good settlement as far as the country was concerned in McQuade's property? Well, McQuade's property is in a different position to Hill's. It is triangular.

1227. It is not triangular, but it has a long frontage? It has not the depth. You have no access to it.

1228. All I want to know is your opinion in us getting it at the price (£86 per foot)? I think so. I said I believed Mr. Hill had been robbed by the action of the Government in not paying him the same money the other people were paid.

1229. Do you think that when a case of this kind goes to the Crown Solicitor's Office, and either the Minister or the Cabinet think that the country will lose money by letting it go to Court, they should allow the Crown Solicitor to deal with it? If I had been in your place the Crown Solicitor would have gone out of his office, or I would have gone out of mine. I would not let any Crown Solicitor interfere. If any official interfered with me, he would either leave or I would. I have taken a lot of interest in this case, because Mr. Hill is one of the greatest friends I have had in the world.

1230. Do you know if any feeling existed between Mr. Robert Smith, the Acting Crown Solicitor, and Mr. Hill? I fancy there was a private matter.

1231. Do you think that a good bargain was made for the country in getting the whole of the frontage for £145 a foot? That is only a matter of opinion. If the Government wanted the land, it was because Mr. Hill had a very large shipping trade; and instead of paying the Government for accommodation, as now, he would have been better off in having a wharf of his own.

1232. I mean in comparison with the properties of Challis, Lahiff, and Brown? It would not stand argument. If he got it, I think Mr. Hill has been badly treated. Whatever Challis' is worth Mr. Hill's is worth; and by paying that money Mr. Hill's is worth as much.

1233. *Mr. Bavister.*] Reference has been made to the fact that there is better access obtainable to Hill's property than to Lahiff's and Brown's. In connection with that, does Victoria-street continue the full width along any portion of the Hill property? Yes; it does.

1234. This plan is correct? There has been a lot of filling in since the Government resumed, and I can hardly tell where the boundaries are.

1235. Perhaps I will be able to get it out of some other witness? There has been a lot of filling in, and there has been a road made since Challis' property was sold.

1236. *Mr. O'Sullivan.*] Did they ever resume any land to make it wider? I do not think so; I think they took their own land.

Mr. Frederick George Rae sworn and examined:—

Mr. Chairman.] What are you? Surveyor and draughtsman in the Works Department.

F. G. Rae. 1238. You know the measurements of the various pieces of land at Woolloomooloo Bay belonging to Hill and others, Brown, Mrs. Lahiff, and the Challis Estate? Yes, the whole of the Woolloomooloo Bay 21 Dec., 1894. resumptions.

1239. You might give us the measurements of the Hill property, beginning with No. 2, the first piece of property, and giving each of the other pieces in rotation—

1240. *Mr. Bavister* (*referring to the plan.*) I think there is some crossing of the numbers? That is only Mr. Barling's alteration.

1241. There are two No. 2 blocks? The total frontage is 303 ft. 7½ in.; and the depth on the southern, 265 feet; and on the northern, 143 feet; making a mean depth of 204 feet. The next property is Lahiff's, the frontage of which is 30 feet; depth, southern side, 143 feet; northern, 132 feet; making a mean depth of 137 ft. 6 in. The next is Brown's property, the frontage of that is 15 feet; depth on the south, 132 feet; depth on the north, 127 feet; mean depth, 129 ft. 6 in. The next property is Hill's, No. 5 block, the frontage being 123 feet; depth on the south, 127 feet; depth on the north, 90 feet; mean depth, 108 ft. 6 in. Then there is another piece of Hill's land, block No. 6, the frontage being 112 feet; depth on the south, 90 feet; depth on the north, 107 feet; the mean depth being 98 ft. 6 in. The next one is McQuade's, No. 7 block, the frontage being 503 feet.

1242. *Mr. Clarke.*] In this plan the frontage is given as 510 feet? Yes, but we adopted 503 feet afterwards; the first measurement was made by scaling, and was done in a hurry, but afterwards it was done more carefully, and 503 feet was adopted.

1243. *Chairman.*] That was what was paid for? Yes; the frontage of McQuade's land is 503 feet, depth on south, 212 feet. As to the depth on the northern side a difficulty occurs, and I do not know exactly how to give it.

1244. *Mr. Bavister.*] The best way would be to give the greatest depth.

1245. *Chairman.*] I want you to give the depth the same as in the other cases? Which do the Committee wish me to give?

1246. Whatever you think is right;—give the mean depth? [Consulting the plan] The depth at the northern extremity of the back line is 222 feet, diminishing there to a point, that northern point being 190 feet from the southern boundary. Of course that 222 feet is taken at an angle.

1247. *Mr. Bavister.*] Then diminishing to the point along the line of frontage of how much? I might say about 240 feet approximately.

1248. You took two mean measurements? Yes.

1249. Give us the mean frontage and the mean depth? The mean frontage is 346 ft. 6 in., but as to the mean depth there is a difficulty on account of its coming to this point, but I should take the mean depth to be about 200 feet as roughly as you could get it.

1250. *Chairman.*] Is that as near as you can go to the mean depth and frontage? Yes.

1251. *Mr. Bavister.*] I think it will be shown that it does not vary 2 feet. I think we should have the superficial area in conjunction with the frontages where the figures may be confusing. Can you give us the superficial area of each block in connection with each frontage? Yes. What you want is the area of the land actually resumed. The area of Challis' Estate resumed was 1 acre 2 roods 37½ perches; the area of George Hill's first block, No. 2, was 1 acre; and the second block, No. 2, was 26½ perches; Mrs. Lahiff's land had an area of 14 perches; J. A. Brown's, 7 perches; Hill and others, No. 5, block, with

123 feet frontage had an area of 1 rood 2½ perches; Hill and others No. 6 block, 1 rood 1 perch; Mr. F. G. Rao. McQuade's land had an area of 1 acre 2 roods 34 perches.

1252. *Mr. Clarke.*] With reference to the mean depth of Mr. McQuade's property, I think the fairest way to get at the mean depth is to divide the frontage into the area? Yes; that is the fairest way. The mean depth by that calculation would be 147 ft. 8 in. or about 148 feet.

1253. *Mr. Bavister.*] To clear up about Victoria-street, does it continue its full width past any portion of the Hill property? Its full width is 66 feet till it comes to the southern boundary, and then it falls to 30 feet.

1254. *Chairman.*] Can you say, taking the whole of the property as one block, what is the whole area? Yes. The total area of the whole property, allowing it to be one block instead of four, is 1 acre 2 roods 30 perches.

1255. *Mr. Bavister.*] What is the frontage? 538 ft. 7½ in., and the area 1 acre 2 roods 30 perches.

W. J. Lyne, Esq., M.P., further examined:—

1256. *Witness.*] I desire to put in a complete return of the railway contracts settled by other Ministers W. J. Lyne, and myself. The reason I put them in is that the return previously put in was not quite complete, Esq., M.P. and I desire to substitute this one for it.

1257. *Mr. Bavister.*] Does the original document contain particulars absent from this? No. But this contains particulars absent from the other. [Appendix.] Mr. Ernest Smith in his evidence made an explanation of what has been known as Blue's case, the figures in connection with which are given on page 40. In his explanation he made out that by taking the case to Court a saving of nearly £4,000 had been made. Now, his statement is inaccurate. The award is shown here as £9,639 18s. Od. When that award was given, the Land Valuer—I instructed him to make a settlement if he could—reported to me that he had offered £7,300 to settle the whole thing, and he believed he could settle it for £7,500, and that was the point at which Mr. Smith stepped in and strongly advised taking the case into Court. So that the case would have been settled for £7,500 instead of £9,639. The verdict of the jury was £7,600.

1258. *Chairman.*] So that had you carried out your own valuation —? Not my own valuation but the valuer's.

1259. If you had carried out that it would have been settled for £100 less than the verdict of the jury? Yes.

1260. *Mr. Bavister.*] If your idea of settlement had been carried out it would have been settled for £100 less than the verdict of the jury? Yes.

1261. But were the other side willing to adopt the settlement? Yes; that is what I have just said. He told me he believed £7,500 would be accepted. At that particular time Mr. Smith stepped in, with a strong desire to take it into Court.

1262. You only had an expression of belief from the valuer: you had no assurance? Practically, he told me that, in conference, it would be accepted; but I gave him no further power in consequence of the strong desire of the Crown Solicitor that the case should go to Court. It will be seen in one paragraph on page 36, "The insinuation contained in the paragraph referring to Rochester's case is as unworthy as it is uncalled for. With just as good reason might I impugn the good faith of Mr. Smith himself in the case of Cliff v. the Crown, where he advised me most specifically that I should on no account pay more than £37,500, and then just two days afterwards, after he had seen Mr. McNamara, he as strongly advised me to pay the sum of £40,000." I wish it to be understood that in writing that, I was simply goaded to reply to insinuations he had made, because I considered he was far more open to a charge or an insinuation than I was; but I want to be clearly understood that I made no charge, nor do I think Mr. McNamara would be capable of anything improper or dishonest, because I think his instincts are as honorable as those of any man I know.

MONDAY, 14 JANUARY, 1895.

Present:—

MR. F. CLARKE,
MR. LEES,

MR. O'SULLIVAN,
MR. WALL.

JAMES MORGAN, Esq., IN THE CHAIR.

William John Lyne, Esq., M.L.A., appeared in person.

Captain John Jackson made an affirmation and examined:—

1263. *Chairman.*] What position do you hold? I am manager of Public Wharfs and resumed properties.

Capt.
J. Jackson.

1264. You have some knowledge of the income derived from the various Government wharfs? I have a full knowledge of the income derived from all of them.

14 Jan., 1895

1265. I desire you to give some information as to the revenue derived from the Government property known as Cowper Wharf, Woolloomooloo Bay? For 1894, it was £5,355 17s. 2d.

1266. Was that sum derived from all the wharfs held by the Government in Woolloomooloo Bay? Yes.

1267. Can you give the information for 1892, 1893, and 1894? I can give the information approximately for 1893; 1894 was a very bad year.

1268. How far back can you go? From my books I can give you the information for twenty years. In 1886, speaking from memory, it was about £2,000; in 1887, it increased gradually, as there was a large import trade in pipes from Glasgow.

1269. What was it in 1888? It was about £3,000; and it increased to £6,200 in 1892.

1270. What was it in 1890, when this land was resumed? It was about £4,000.

1271. It has gradually increased from 1886, and of course it had increased for many years previously? Up to last year it was gradually increasing.

1272. And last year there was a falling off? A slight falling off.

1273.

- Capt.*
J. Jackson. 1273. *Mr. O'Sullivan.*] What was that owing to? To the depression in trade; there has been so few imports, and it was partly owing to the small imports from America. We had the San Francisco line of steamers there; and last year it was very little they brought; in fact they were not worth anything.
- 14 Jan., 1895. 1274. How long is it since you took charge of the wharfs? It is ten years two months.
1275. Can you state what revenue was derived from the wharf at Woolloomooloo Bay before you took office? Yes, and I can give you the figures for three years before I took office. It was £1,200.
1276. And what was it twenty years ago? About £50 a year.
1277. The highest amount you have received since is £4,000? £6,200 in 1892.
1278. You know the property adjoining this wharf, and formerly belonging to Hill, Belisario, and others? Yes.
1279. Do you consider the property is suitable for the construction of wharfs? Yes; very suitable.
1280. Do you think it will increase in value as a slipping place just as much as the other side has done? I am perfectly sure it will. And, more than that, I am sure that if the facilities were given there now it would leave a fair interest on the cost of it.
1281. What do you mean by "facilities"? They propose, I think, four berths there. These berths for six months in the year would not pay anything; but for six months in the year the public wharfs are blocked. During the wool season, for five or six months, I have not a berth to put a lighter at; but for the other six months of the year they are empty.
1282. You think that that side of Woolloomooloo Bay will become valuable as a place for shipping wool? I am sure of it. I have partly arranged with a gentleman that he will berth his vessels over there next season, and utilise the old shed for shipping wool.
1283. To what do you attribute the increase in business in Woolloomooloo Bay during the past seven or eight years? There was a great prejudice to berthing ships there owing to a sewer; but it has since been dredged down, and there is now no difficulty in getting ships to go there. At one time there was no shed accommodation, no protection for the goods that were landed; but since the Government have erected an iron fence round the property and given a certain amount of protection there is no objection to ships going there.
1284. Am I to understand from your evidence that Woolloomooloo Bay is now much in demand for the shipment of goods, and the unloading of vessels? Yes.
1285. And that the trade is likely to increase there in the future? I have no hesitation in saying I am sure of it. I will give an instance: This year a certain firm has guaranteed to ship 70,000 bales of wool alone from Woolloomooloo Bay. The revenue from the shipment of that wool and the tonnage dues will be a large amount; and besides that the Duff line of steamers has guaranteed to berth there for the next three years; and they bring a very large cargo.
1286. The American vessels, as a rule, do berth there now? Not now; they berth now at the Market-street wharf; in fact the cargo they brought became so small that the tonnage and wharfage for a large steamer was not worth over £40.
1287. Owing to the falling off in the importation of goods from the United States, they are bringing in smaller cargoes, and find that it is more economical to berth at Market-street? Yes, at the Union Co.'s wharf.
1288. And knowing that the American steamers have left the bay there is a larger demand for accommodation there? Yes; a very large demand.
1289. *Mr. Lyne.*] Have you any idea of the frontage occupied and improved from which you received that revenue you mentioned? Yes, about 4,000 feet.
1290. From which wharf is that? From the Health Depôt right round to the south-east corner of the Challis property,—to Duke-street.
1291. Did you not receive the revenue of £6,200 in 1892 and £4,000 in 1890 from the wharf at the butt of Woolloomooloo Bay? Yes; nothing from the eastern side.
1292. From what length of wharfage which it is really practicable to use did you get that revenue? About 4,000 feet.
1293. Is it 4,000 feet round the butt of the bay? It is. The Admiralty Wharf is about 650 feet; then comes another berth of 500 feet; then come two berths at the jetty; then comes in a very large berth of about 600 feet.
1294. That brings it round to the Challis estate? Yes. There are four large sheds on it.

Mr. Frederick George Rae recalled and further examined:—

- Mr.*
F. G. Rae. 1295. *Chairman.*] We desire to know the price per acre paid for each lot of land under consideration by the Committee; can you supply that information? Yes.
- 14 Jan., 1895. 1296. Are you prepared to give the information now? I cannot get the information without going to the office.
1297. Will you at a later stage supply the information in the form of a schedule? Yes. [Vide Appendix.]
1298. Can you say now, from the information which is before you, what price was paid by Hill and others for the whole of the land which they purchased in Woolloomooloo Bay? The only evidence I have is that which was put before the Supreme Court. It is slightly different from the summing up of the Chief Justice; but of course we have to go by the deeds.
1299. *Mr. Wall.*] I think the Chief Justice includes some costs and fees? I think he does. According to the judge's notes in the case *Hill v. Lyne* the total amount was £25,649.
1300. *Chairman.*] Can you say whether it is usual for the Government, in purchasing land, to pay the cost of transfer? Yes; and I think I may say it is invariably the custom.
1301. Can you say whether in the case of Hill and others that custom was followed or whether the Government refused to pay the cost of transfer? I cannot say of my own knowledge. I believe there was some arrangement made that each side was to pay its own costs. The printed papers, I think, will disclose that.
1302. If it is the custom for the Government to pay the cost of transfer why was it not done in that case? I will find out why it was not done—I do not know that the case is settled yet—and supply the information when I send in the schedule. [Vide Appendix.]

MONDAY, 21 JANUARY, 1895.

Present:-

MR. BAVISTER, | MR. F. CLARKE,
 | MR. CANN.

E. W. O'SULLIVAN, Esq., IN THE CHAIR.

George Colquhoun, Esq., Crown Solicitor, sworn and examined:-

1303. *Chairman.*] You are now Crown Solicitor? Yes.G. Colquhoun,
Esq.

1304. You were formerly a partner in the firm of Allen and Allen? Yes.

1305. Do you know anything about the case which is referred to this Committee? No, except that at the conclusion—in fact, after it was all completed—a reference was made to me as to the interpretation of a minute with regard to the payment of some costs. The costs were claimed by the solicitors for the vendors, and it struck me on reading the minute that it covered everything—both the compensation money and the costs. I declined to allow the payment of costs without reference to the Minister. I saw the Minister, Mr. Lyne, on the subject; he said that the minute was to cover everything; I so informed my clerk, who is present; and that is all I know about it.

21 Jan., 1895.

Walter Henry Poole, Esq., sworn and examined:-

1306. *Chairman.*] What position do you hold? I am assistant managing conveyancing clerk in the W. H. Poole, Crown Solicitor's Office.

Esq.

1307. I understand that you attend here to give information bearing on this case? Yes.

1308. Will you kindly state what information you have to give? From the evidence in our office, I have prepared a statement of the amount paid by Hill and others in respect of the land resumed, and [I think it is correct. I produce a tracing [*Exhibit*] that shows the whole of the lands resumed. The properties edged blue on the tracing belonged to Charles Doyle. By his will he left Elizabeth Peisley a life interest in two-sixths, and the absolute interest in such two-sixths, subject to that life interest, he gave to Florence E. Peisley, Martha A. Peisley, and Marie L. Peisley (now Mrs. Johnson). Those persons were paid the aggregate sum of £5,000 by G. Hill for their interests, which related as well to interests in other properties under the will. John Mason was paid £5,000 by Geo. Hill for one-sixth; Charlotte Hilliard £1,350, by Thomas Batty and Daniel Sheehy, for one-sixth; Anne Elizabeth Morris was paid £1,200 by same parties for one-sixth; and Ernest Robert Peisley, for a moiety of one-sixth, was paid equal to £400, by same parties. He mortgaged, in the first place, to those people for £200, and not being, I suppose, able to pay back this sum, he then conveyed his interest to them for £200, which I take to be equivalent to £400. John Doyle conveyed his interest in the remaining moiety of one-sixth to the same parties for £500. These comprised the whole of the interests of the beneficiaries under Doyle's will. The land edged green was purchased from Edward French by Geo. Hill, Thomas Batty, Daniel Sheehy, and Edward Belisario for £5,000. The land edged red was purchased by Geo. Hill alone from Richard Rouse Terry for £4,500. The total of the various sums is £22,950. Referring to the lands edged blue and green on tracing, the purchases above mentioned were made on behalf of a syndicate, comprising Geo. Hill, Thomas Batty, Daniel Sheehy, and Edward Henry Balisario. This fact was established by a deed made between the parties, dated 19th November, 1889.1309. *Mr. Bavister.*] Does the ground which is shown on your tracing comprise the whole of the land resumed by the Government from Hill and others? Yes.

1310. Can you give the dates on which the various portions were purchased by, or came into the possession of, Hill and others? The interests under Doyle's will were bought by Hill and others at different times. From the deeds examined by me whilst investigating the titles I find, as to the two-sixths purchased from the Peisleys—the purchase money, £5,000, was paid on the 29th August, 1889. As to the one-sixth interest of John Mason, the purchase money, £5,000, was paid on 12th September, 1889. As to the one-sixth interest of Charlotte Hilliard, the purchase money, £1,350, was paid on the 18th June, 1888. As to the one-sixth interest of Anne Elizabeth Morris, the purchase money, £1,200, was paid on 12th June, 1888. As to the interest of Ernest Robert Peisley, in a moiety of one-sixth, the balance of the purchase money was paid on 3rd January, 1888, the sum of £400, comprising the mortgage debt of £200. As to John Doyle's interest in a moiety of one-sixth, the purchase money, £500, was paid on 4th May, 1887. The purchase money in respect of Edward French's land, £5,000, was paid on 19th November, 1888. As to the land of Richard Rouse Terry, the purchase money, £4,500, was paid on 24th October, 1888.

1311. *Chairman.*] I want you to make the lands marked blue, green, and red on this tracing correspond with the lands shown on the plan accompanying the printed papers in this case? The tracing differs a lot from the plan.

1312. The lot marked blue on the tracing corresponds with the lot marked 2 on the plan from B to C and D to E? As nearly as I can judge it does.

1313. The lot marked green on the tracing corresponds with lot 5 on the plan from G to J? Yes.

1314. The lot marked red on the tracing corresponds with lot 6 on the plan from J to K? Yes.

1315. In purchasing the land you have referred to in your evidence, did Hill buy the right to the water-frontage? Yes; he bought all the right, title, and interest of Doyle's trustees, whatever that was; and we found that it included the water-frontage.

1316. Whatever right and interest Doyle's trustees and the other vendors had, were purchased by Hill? Exactly.

1317. *Mr. Bavister.*] Are you, of your own knowledge, able to say whether the prices you have enumerated were the prices which were actually paid? I only go by the deeds.

1318. Of your own knowledge, you cannot say that? The deeds state that these amounts were paid—there is no doubt that the deed is the very best evidence of that fact—but, of course, not having been present to see the money paid over, I cannot say of my own knowledge.

1319. Or, not having been concerned in drawing up the agreement or completing the transfer, you cannot speak of your own knowledge? Exactly, because these conveyances to Hill and others were in the hands of other solicitors. We simply took the deed and read it; and what was stated there we assumed to be the fact.

1320.

W. H. Poole, 1820. Is it possible for a price different from the price actually paid to appear on the face of the deed?
Esq. Yes, it is just possible.

21 Jan., 1895. 1321. Is it the practice for such a state of things to take place? It is not generally the practice.
1322. But occasionally it is? There is no doubt it is done with the intent to hide the consideration, perhaps to evade the payment of the stamp duty, or for some purpose like that. It has been done, but it is a most irregular practice, and a practice which is liable to get a man into disgrace. We take the deeds, we go through the titles, we examine them, and see that the deeds are all correct, and that the consideration is there. We do not go any further. We do not make inquiries as to whether the money was actually paid. But there is no doubt that in a court of law the amount stated in a deed would be accepted as a fact.

1323. *Mr. Cann.*] Unless it could be upset? Exactly.

Arthur Charles Ebsworth, Esq., sworn and examined:—

A. C. 1324. *Chairman.*] What position do you hold? Managing clerk to Stephen, Jaques, and Stephen.
Ebsworth, Esq. 1325. You have come prepared to give the Committee information bearing on this case? So far as I am able to do so. The summons refers to certain deeds to be produced here. When I first read the notice 21 Jan., 1895. I took it to refer to the releases given by Hill and others to the Crown; but I see now that it refers to the deeds relating to the purchase by Hill and others. Those deeds are not now in our possession; they are at the Land Titles Office in connection with the bringing of some land under the Act, but, of course, they can be obtained. The deeds will not show the amount of the purchase money paid by Hill and others. For instance, take Doyle's property, which was bought by Hill and others and sold to the Government. That property was mortgaged by Doyle's trustees; the mortgage became due, and instead of being paid off by the trustees of the estate, it was paid off by Hill and others to the amount of £8,000 or £8,500. There is nothing on the deeds of purchase by Hill and others to show that that mortgage money was paid by Hill and others. There are other amounts, too, in connection with Doyle's estate which do not appear on the face of the deeds, and, therefore, the deeds, even if produced, would not show the exact sum paid by Hill and others.
1326. Are we to understand that in the case you cited, in addition to what appears on the deed as the purchase money, £8,000 was paid by Hill? Yes, in one lump; and then there were other amounts. Perhaps if I explain the matter a little you will see clearly what I mean. The various members of Hill and others at various times purchased interests in Doyle's Estate. They bought up legacies from time to time; they paid the different beneficiaries certain amounts for their shares in the estate; and having bought up the interest of everybody that was interested in it, they took over the estate with all liabilities. There were debts owing by the estate, notably this one mortgage; and there were other charges which had to be satisfied, and which Hill and others had to put their hands in their pockets to pay. So that the deeds do not show accurately what amount of money was paid by them for this land; they really bought up the estate.
1327. Why are these precise amounts mentioned in the deeds of the purchasers? For instance, one legacy of £100 is payable by the estate to one of the Doyles. Hill and others may have bought up the legacy for £80 or £85. Each deed specifies the amount that was paid on that particular transaction; but the deeds, on the face of them, do not show the sum total of the money paid.
1328. Then these deeds are not a true criterion of what has been paid by Hill and others? No; as I explained when I gave evidence in the case in the Court. Speaking from memory, I think the amounts totted up to between £20,000 and £24,000.
1329. *Mr. F. Clarke.*] That was the total of the amounts appearing on the face of the deeds? No; but taking all these things into consideration.
1330. *Mr. Bavister.*] Are you in a position to state to the Committee what payments were actually made for the various pieces of ground? No; but I think I stated in the Court—I had the papers before me then—it was about £22,000.
1331. *Chairman.*] The total of the amounts paid by Hill and others to the various parties is stated at £22,950 on this memorandum? It is about that, I think.
1332. Does that include the mortgage debt of £8,000 which Hill paid off? No; it is not specifically stated, because that is evidently a list of the payments made to the beneficiaries, and this was a subsequent transaction between Hill and others and the trustees of Doyle's Estate.

FRIDAY, 1 FEBRUARY, 1895.

Present:—

MR. BAVISTER, | MR. O'SULLIVAN,
MR. WALL.

J. MORGAN, ESQ., IN THE CHAIR.

Arthur Charles Ebsworth, Esq., recalled and further examined:—

A. C. 1333. *Mr. Bavister.*] Can you give the particulars of the prices which were actually paid for the various portions of land which were purchased by Hill and those associated with him and resumed by the Government? Yes. I may explain that the land itself was not bought, but certain interests in the estate. I turned up some old papers, and I found the original memorandum I made out in connection with the action, and which gives the various amounts. Mrs. Peisley, £2,000.
1 Feb., 1895. 1334. *Chairman.*] Was that for her life interest, or for some land owned by Mrs. Peisley? It was for her interest in the estate. This is the deed referred to, and there is her receipt for the £2,000.
1335. *Mr. Barister.*] Which Mrs. Peisley do you refer to? There are several ladies of the name of Peisley, but Mrs. Peisley was the mother of the other ladies of that name. Her name was Elizabeth. Miss Florence Elizabeth Peisley, her daughter, £1,000; Martha Australia Peisley, £1,000; Mrs. Johnson, a married daughter, £1,000. The next person was John Doyle, who received £500; this is the deed of the purchase of his interest. The next person is Mrs. Hilliard, who received £1,350; this is her deed. The

The next person is Mr. Mason, who was one of the executors, and who also had an interest in the estate. He received £5,000 for his interest; he also received another amount which I will come to afterwards. This is Mr. Mason's deed. Mrs. Morris received £1,200; this is her deed. Ernest Robert Peisley received £600 in all—that is to say, he mortgaged for £200, and there is a subsequent assignment for £400, making £600; these are the two deeds referred to. Mr. O'Donnell (who was also one of the executors) received £75 for a legacy to which he was entitled; this is the deed referred to. Mrs. Charlotte Wilson received £75 for a legacy given to her by the will; this is the deed of that.

1336. The sums which were paid to O'Donnell and Wilson were paid by Hill and those associated with him? Yes.

1337. They were not paid by the executors to whom you referred? Mr. Batty, who died just before the settlement of the matter with D. Sheehy, is the purchaser of O'Donnell's legacy and also Mrs. Wilson's. These are the amounts mentioned in the various deeds which I produce. I think you will find that tallies with what was given as evidence in the action.

1338. Were not all these matters settled through your office? Not entirely.

1339. Can you distinguish those which were settled through your office? Mrs. Peisley and the three daughters were settled through our office; Mr. Mason was settled through our office; the others were settled outside.

1340. Of the five that were settled through your office, were you the person who acted for the office? Yes.

1341. You are in a position to state, of your own knowledge, that those were the sums paid? I am.

1342. Can you state the names of the solicitors who acted for the portions of Doyle, Hilliard, Morris, E. R. Peisley, O'Donnell, and Wilson? Davis and Amess for all.

1343. In that connection some slightly different evidence has been given before the Committee. It has been testified that the £400 to E. R. Peisley comprised the £200 already advanced on mortgage? The documents speak for themselves. The first one is an indenture of the 7th September, 1887, E. P. Peisley to Thomas Batty and Sheehy, and recites that he has applied for a loan of £200. In consideration of that £200 he assigns his interest in the estate. Subsequently, by an assignment dated 3rd January, 1888, he releases to Thos. Batty and Sheehy his interest referred to absolutely for £400—quite distinct sums and quite distinct deeds. The receipts are endorsed for each sum.

1344. Who were the solicitors for the purchaser of the legacy from Mr. O'Donnell? Davis and Amess.

1345. Can you state the dates on which the transfers of the properties for which your office acted were completed? The first four persons are all included in one deed, which is dated 29th August, 1889. Mr. Mason gave his deed on the 12th September, 1889.

1346. *Mr. O'Sullivan.*] You stated in your previous evidence, "The deeds will not show the amount of the purchase money paid by Hill and others. For instance, take Doyle's property, which was bought by Hill and others and sold to the Government. That property was mortgaged by Doyle's trustees; the mortgage became due, and instead of being paid off by the trustees of the estate, it was paid off by Hill and others to the amount of £8,000 or £8,500." Have you anything further to say to the Committee in regard to that matter? Yes; I was going to refer to that matter. I wish to amend my previous evidence in a small respect. I was only speaking from memory then. With regard to that mortgage, I find that the amount was not £8,000 but £6,500. I have had an opportunity to turn up the papers since I gave my evidence, and I find the receipt for the amount in these words: "18 July, 1890. Received from Messrs. Mason and O'Donnell, through Hill and Belisario, £6,500, principal due S. A. Bayly and another." So that the £8,000 I referred to should have been £6,500 all through my previous evidence.

1347. There was no other mortgage than that? No other mortgage.

1348. Does the mortgage sum of £6,500 appear in the Judge's notes? Yes.

1349. Are the figures given by you correctly stated? Yes. The sum total of the deeds I have produced is £13,650.

1350. From the Judge's notes of your evidence, I will read the figures which you gave in the Court, and ask you if those figures are correctly stated:—

	£	s.	d.
The deeds show ...	13,600	0	0
Cheque to Counsel ...	1,250	0	0
Mortgage to Baily ...	6,500	0	0
Money paid to Executors, £250; £675	925	0	0
Costs ...	81	9	0
" ...	42	16	6
Cheque of Testator ...	100	0	0
Mr. O'Donnell ...	75	0	0
Mrs. Wilson ...	75	0	0
<hr/>			
Not received by Plaintiffs ...	<hr/>	<hr/>	<hr/>
	£22,649	5	6
	<hr/>	<hr/>	<hr/>
	3,000	0	0
	<hr/>	<hr/>	<hr/>
	£25,649	5	6

Is that correct? Subject to the addition being correct it is all right. I have on my notes a total of £25,699 5s. 6d.; but I have not had time to check the additions.

1351. The figures you gave before the Judge in the Court you still hold are correct? Yes, as far as my knowledge of the matter goes. I believe, though I am not in a position to state so as strict evidence, that other amounts were paid by the parties.

1352. What other amount is it possible were paid? Odds and ends, like rates on the different properties, and small charges one way and another.

1353. How much do you think they would amount to? That I cannot say; but probably Mr. Belisario could give the information; in fact I think he did in the Court.

1354. *Mr. Bavister.*] In the evidence some persons have been referred to as being interested in other properties;—can you state the value of the other properties referred to? The properties have, I think, since been sold for about £1,000 altogether, and, of course, that is a very small item.

1355. *Chairman.*] Were there any other large sums paid by Hill & Co. in any way besides these amounts you have mentioned? There may have been, but I am not in a position to say; I am giving

evidence

A. C.
Ebsworth,
Esq.
Feb., 1895.

A. C.
Ebsworth,
Esq.

evidence of the things I personally know of, distinguishing them from the things I know of indirectly. 1356. Is it the usual thing for the Government when they resume any land to pay the costs of the transfer? Yes; almost invariably.

1 Feb., 1895.

1357. Do you know whether in this case they paid the costs of transfer? No; the Government did not pay so far. Some question was raised about the costs on the settlement of the matter, and to our astonishment the Crown Solicitor stated that no costs would be paid.

1358. In the settlement of this case, was any mention made that Hill & Co. should pay the costs of transfer, or that the Government should pay the costs—was any arrangement made between the solicitor and the Government as to who should pay the cost? There was no arrangement. On the matter being mentioned in completing the details of the settlement we were surprised to hear that Hill and others would not be allowed the costs of transfers. Objection was at once taken to settle, but as the matter had been hanging over so long it was decided to leave the question in abeyance until the Crown Solicitor had an opportunity of communicating with the Minister. No agreement was made to waive the question, and it has never been waived yet.

1359. Can you state what were the costs of the transfer? The costs of the transfer have never been made up, because, of course, it would be necessary to make out a detailed bill, and to have that taxed.

1360. You cannot state about what the amount would be? I should think, roughly speaking, the actual conveyancing costs would come to about £200 or £300. The question was raised at the time in this way: The conveyancing costs would have been paid by the Crown in the ordinary course, but the point was raised by the Crown Solicitor that the settlement included all costs. We do not hold this view, because the only thing which was being done when the price was arranged for was the settlement of an action and nothing else, and the costs which you will see referred to in the memorandum of the settlement are the costs of settling "the action," and not the conveyancing costs. The one is altogether apart from the other.

1361. If the following statement has been made before this Committee, is it true—

"The costs of conveyancing in connection with the resumption, which are usually paid by the Government, were, in this case, included in the offer made to the claimants, and were therefore not paid by the Government."?

No; they were not included. It was not necessary to specify them, because we were not settling that part of the matter; an action only was being settled.

1362. Do you still maintain that the Government should have paid these costs? Certainly. There is one small matter which perhaps I may be permitted to refer to; it may throw some light on the correspondence which I see printed. It is in reference to some slight dispute between the Works Department and the Crown Solicitor. When the memorandum of the settlement was signed between our office and the then Premier, Sir G. Dibbs, our office suggested that a proper agreement containing the specific terms of settlement should be drawn out, and we asked the Crown Solicitor's Office several times to send us the draft, so that there should be no mistake about what was actually arranged; but it was stated that it was quite unnecessary, that the matter would be carried through at once, and that there could be no question about it; otherwise the question of costs and other things would have been placed on a proper footing.

1363. If that had been done by the Crown Solicitor, there could be no dispute as to the costs of transfer or any other matters? Certainly not.

1364. The neglect to make the agreement has entailed this dispute? Of course that is our view of it.

Mr. Frederick George Rae recalled and further examined:—

Mr.
F. G. Rae.

1 Feb., 1895.

1365. *Chairman.*] In the appendix to your evidence which you have handed in to the Committee you make this statement:—"With reference to the question of costs, the costs of conveyancing in connection with the resumption which are usually paid by the Government, were, in this case, included in the offer made to the claimants, and were therefore not paid by the Government." Mr. Ebsworth, from the office of Stephen, Jaques, and Stephen, has stated in his evidence that these were not included in the offer of the claimants, and that your statement therefore is incorrect. When you gave that evidence, were you speaking of your own knowledge, or from knowledge gained from some other department? I may explain that when I gave my last evidence I understood that there was to be no other meeting of the Committee. I was asked whether I could give evidence on that particular point. I said that I would get the evidence embodied in a schedule. I saw the Crown Solicitor, and he instructed me exactly what to say. I quoted his words, "There is a difference of opinion as to who should pay these costs between the Crown Solicitor's Office and the solicitor for the claimants, who naturally will not admit anything against their clients." The Minister, I see on referring to the papers, made this minute, "The minute referred to *all* costs." I consulted the Crown Solicitor in particular about that matter, because I thought it might be an important point, and I wrote down what he told me to say. Mr. Colquhoun, the Crown Solicitor, in referring this question to the Under Secretary for Public Works, says in his letter, "The minute, as you will see, reads 'each party paying their own costs.'" If it is a usual thing for the Government when they resume land to pay these costs, would it not in this case be right, according to this minute and to the evidence, that the Government should pay these costs, as they are separate from the costs of the action or the costs of the settlement. It is altogether out of my province to answer the question. I should not like to undertake to say what the Government should do.

1366. Still, hitherto it has been the custom of the Government to pay the costs of transfer? It is the invariable custom to pay the costs of transfer in the case of land resumptions.

CLAIMS FOR RESUMPTION OF LAND, WOOLLOOMOOLOO BAY.

APPENDIX.

[Handed in by Mr. Rae.]

A.

Sir,

Richardson and Wrench (Limited), 98, Pitt-street, Sydney, 13 October, 1892.

Referring to the personal interview with you this morning re Woolloomooloo Bay Resumptions, I beg to state "that until a few years ago that portion of the city was almost neglected by capitalists—practically the whole place was dormant. An activity arose in the way of demand for lands there under the belief that the early future would discover for it an important and valuable use; the comparative smallness of the available area, its proximity to the city, and the suggested railway connection, together with a measure of patronage of large Ocean-going vessels and others of smaller style, all tended to awaken an interest and enhance value."

As showing the developments of prices for lands immediately hereabouts I have knowledge of these sales:—
127½ feet to Cowper Wharf, 299 feet depth along Duke-street, 215 feet depth along Dowling-street, 97 feet depth to Harnett-lane, for £3,500, to Dr. Morris. He sold it in 1888, I think, for £21,000, and I know vendor in 1890 asked £27,000.

87½ feet to Cowper Wharf, 120½ feet depth to Dowling-street, 81 feet to Bland-street, other depth line less, for £2,000. The buyer died only a few years ago, and I understand his widow to say his value was £200 per foot frontage. My clear impression is that she was offered £160 per foot frontage.

58 feet to Cowper Wharf; part of it having a depth of 54 feet to 89 feet; other side line 112 feet; width at rear only 25 feet, for £7,000, in 1888.

27½ feet to Cowper Wharf; depth, 86 feet to 92 feet; 27 feet to rear street, for £30 per foot, adjoining, I think, the piece previously quoted for £2,000, and which 27½ feet frontage was sought for in 1888.

In September, 1888, we offered Moore's Wharf, Miller's Point, with a reserve of £96,000, and had offers at auction of £85,000 or £86,000, when it was not sold. Inquiries then set in for Cowper's Wharf frontages, as the idea was that quarter would come into active employment for wharfs and storage warehouses—the rate being less than the prices required for frontages on Darling Harbour.

To the Crown Solicitor, Sydney.

Yours, &c.,

A. W. S. GREGG.

P.S.—As explained to you the difference in the assessed prices per foot arose from the fact of the varied breadth of frontages, the narrower not having been deemed as valuable as the larger block, which latter allowed of better scope for use. May I mention that after the Crown resumed Challis' Estate block it was remarked that it was a cheap purchase, and I heard that had it gone to auction some would have competed for it and bought it at more money.—A.W.S.G.

Minute Paper.

Department of Public Works, Valuation Branch, Sydney, 30 January, 1891.
Subject:—Report and valuation on the claim of Charles Doyle's trustees, in respect of land at Woolloomooloo Bay, resumed for wharfage purposes.

Particulars of Claim.

Claimants, Jno. Mason and Geo. O'Donnell, Trustees and Executors of the will of Charles Doyle (deceased).
Area taken, about 1 a. 0 r. 26 p.; amount of claim, £151,500.

REPORT.

THIS claim is made in respect of land having a frontage of 303 ft. 7½ in. to the water of Woolloomooloo Bay, resumed for wharfage purposes, by notification in the Government Gazette of 3rd April, 1890.

The average depth from the western boundary, Woolloomooloo Bay, to Victoria-street, which is the eastern boundary, is about 190 feet, and the area taken is about 1 a. 0 r. 26 p.

This property is at present of great value. It is in two portions divided by a lane about 17 feet wide, the first of which adjoining the Challis Estate has 253 ft. 7½ in. frontage to Woolloomooloo Bay, and the other, divided from the former by the lane mentioned, has 50 feet frontage to that bay.

A claim is made by George Hill, Thomas Batty, Daniel Sheehy, and E. H. Belisario, amounting to £91,200, for the same land, but, as advised by the Crown Solicitor, we have dealt with the fee simple value of the land resumed, which, when the amount has been agreed upon, should be paid into Court.

Valuation.

	<i>Valuation.</i>	£	s.	d.
303 ft. 7½ in. frontage to bay, at £175 per foot	53,134	7	6	
Forced sale, at 10 per cent.	5,313	8	9	
				<hr/>
	£58,447 16 3			
				<hr/>
Claim	151,500	0	0	
Valuation	58,447	16	.3	

Submitted for approval.

J. B. THOMPSON.
RICHARDSON AND WRENCH (LIMITED).
MILLS, PILE, AND WILSON.

N.B.—This is not a further and separate award to that in the claim of Hill, Batty, Sheehy, and Belisario, but is identical and must be read in connection therewith.

The Under Secretary, Public Works, Sydney.

This seems to me a reasonable valuation.—W.M., 11/2/91.

NEW SOUTH WALES.

THE ANNUAL REPORT

OF

THE POSTMASTER-GENERAL,

FOR THE YEAR

1893.

Presented to Parliament by Command.

SYDNEY: CHARLES POTTER, GOVERNMENT PRINTER, PHILLIP STREET.

[2s. 6d.]

1—A

1894.

[1,255 copies—Approximate Cost of Printing (labour and material), £138 17s. 0d.]

THE POSTMASTER-GENERAL TO HIS EXCELLENCY THE GOVERNOR.

ANNUAL REPORT FOR THE YEAR 1893 ON THE POST OFFICE,
MONEY ORDER OFFICE, GOVERNMENT SAVINGS BANK, AND
ELECTRIC TELEGRAPH DEPARTMENT.

SIR,

I have the honor to transmit to your Excellency my Annual Report for the year 1893.

The year has been a remarkable one in the history of the Department, inasmuch as it has been specially characterised by two events, namely, (1) the passing of the Postage Acts Amendment Act, and (2) the complete amalgamation into one Department of the separate establishments which hitherto comprised the Departments under my Ministerial control.

For many years attempts have been made in Parliament to bring the legislation of this Colony into line with that of other countries, but no Government had hitherto succeeded in accomplishing this legislation until the present Administration introduced the Postage Acts Amendment Bill, which was successfully passed through Parliament, and was assented to on the 13th June, 1893. This Act has enabled the Department to regulate the registration and character of newspapers; to do away with a large amount of unnecessary circumlocution and expense in advertising unclaimed letters (at the same time permitting writers to secure the return of an unclaimed letter within a certain specified number of days); has enabled the system of optional prepayment of postage to be introduced; to secure a more equitable system of payment to masters of non-contract vessels for conveying mails; to establish a parcel post within the Colony and with the various Australasian Colonies; to introduce the system of postal notes; to increase the maximum amount of a money order from £10 to £20; to prohibit the carrying on of lotteries through the post; and to do away with the fee hitherto charged for redirecting letters whilst in course of post. It is a matter of great congratulation that legislation has at last been obtained to enable the Department to secure these advantages and to keep abreast of the world generally in its usefulness as a public institution.

It was the opinion of several of my predecessors that the Departments of the Post Office, Money Order Office, Government Savings Bank, and Electric Telegraphs should be amalgamated, *i.e.*, instead of being conducted by an officer at the head of each, having, to a large extent, an independent Departmental control, that they should be under one permanent head, who should be responsible for the general administration of the whole.

The fact that the late Superintendent of Telegraphs, E. C. Cracknell, was held in great esteem by the community, in consequence of his early connection with New South Wales Telegraphs, and of his identification with its administration ever since, was, it would appear, one of the reasons which operated against the amalgamation of these departments at an earlier date, more especially as the Royal Commission appointed to inquire into the public departments had made a decided recommendation to this effect when they investigated the working of the Departments under the control of the Postmaster-General.

The lamented death of Mr. Cracknell on the 14th January, 1893, afforded the opportunity of effecting this desired amalgamation, and I consequently determined to take advantage of it. Accordingly, on the 8th February, 1893, your Excellency, with the advice of the Executive Council, appointed the Postmaster-General for the time being to be the superintending officer under the second section of the Electric Telegraph Act, the effect of this being to remove the responsibility—hitherto held by the Superintendent of Telegraphs—to the Minister in charge of the Department. On the same day Mr. S. H. Lambton, Secretary to the Post Office, was appointed to take charge as permanent head of the three Departments, under the designation of Deputy Postmaster-General.

The Royal Commission, in advocating the amalgamation of the Departments, recommended the abolition of the office of both Superintendent and Assistant Superintendent of Telegraphs, and advised the creation of a second Assistant Secretary. It was, however, considered that the business would be better conducted by also abolishing the office of Assistant Secretary of the Post Office, and creating the offices of Secretary to the Postal Service, to which Mr. James Dalgarno was appointed, and of Secretary to the Telegraph Service, to which Mr. Philip Billingsley Walker was appointed.

In order to give due effect to the amalgamation in the Account and Financial branches, Mr. Andrew James Doak (the Superintendent of the Money Order Office and Government Savings Bank) was appointed as Chief Accountant and Controller of the Money Order Office and Government Savings Bank.

The following changes were also made:—Mr. Charles Smith Gregory, to be Accountant; Mr. John Thompson, to be Distributer of Stamps; Mr. David Charles Coote, to be Cashier; Mr. Charles Augustus Ord, to be First Clerk, Cash Branch; Mr. James Clark O'Hara, to be First Clerk, Stamp Branch; Mr. Thomas William Ferris, to be First Clerk, Account Branch; Mr. Michael Henry Howard, to be an Operator—the offices hitherto designated and filled as follows, viz.:—Accountant, Post Office, Mr. W. L. Carter; Accountant, Electric Telegraphs, Mr. C. S. Gregory; Cashier, Post Office, Mr. J. Thompson; Cashier, Electric Telegraphs, Mr. D. C. Coote; Book-keeper, Mr. J. C. O'Hara; Cable clerk, Mr. M. H. Howard, being consequently abolished.

I need hardly remark that the two events I have just alluded to have involved a very large amount of labour in the Department during the year, and it is satisfactory to record that the whole of the arrangements brought into operation have been found to work well. With some slight modification which the experience of the future may justify, it will doubtless be found that this great administrative change of the year 1893 will exercise a powerful influence in the future well-being and progress of the Department.

In the month of March, 1893, a Postal and Telegraphic Conference was held at Brisbane, the undermentioned gentlemen representing the respective Australasian Colonies, namely:—

New South Wales: The Hon. JOHN KIDD, M.L.A., Postmaster-General.
S. H. LAMBTON, Esq., Deputy Postmaster-General.
P. B. WALKER, Esq., Secretary Telegraph Service.

Victoria: The Hon. AGAR WINNE, M.L.C., Postmaster-General.
JAMES SMIBERT, Esq., Deputy Postmaster-General.

South Australia: CHARLES TODD, Esq., C.M.G., M.A., Postmaster-General and Superintendent of Telegraphs.

Western Australia: RICHARD A. SHOLL, Esq., Postmaster-General.

Tasmania: The Hon. AGAR WINNE, M.L.C., Acting for Postmaster-General, Tasmania.
ROBERT HENRY, Esq., Superintendent of Telegraphs.
HENRY BOYES, Esq., Secretary to the Post Office.

New Zealand: The Hon. J. G. WARD, M.H.R., Postmaster-General and Commissioner of Telegraphs.
C. LEMON, Esq., Ph.D., Superintendent of Telegraphs.

Queensland: The Hon. THEODORE UNMACK, M.L.A., Minister for Railways and Postmaster-General.
JOHN McDONNELL, Esq., Under Secretary to the Post and Telegraph Department and Superintendent of Telegraphs.

As a full report of the proceedings and debates of this Conference has already been presented to Parliament, I deem it unnecessary, in this place, to make further allusion thereto.

I may just mention, although the matter really relates to the year 1894, that a Postal and Telegraphic Conference was held in New Zealand in March last, when a large amount of business appertaining to the various colonies was transacted.

REVENUE AND EXPENDITURE.

The following Statement shows the Revenue and Expenditure for the year 1893:—

	<i>Revenue.</i>	£ s. d.	<i>Expenditure.</i>	£ s. d.
Postage	470,865 13 0			
<i>Less</i> amount transferred to Stamp Duties as the approximate value of Postage Stamps used as Duty Stamps during the year	24,000 0 0			446,865 13 0
Electric Telegraphs		160,796 7 4		
Telephones		16,819 18 7		
Money Order Commission		19,038 9 6		
Poundage on Postal Notes		548 17 10		
Interest on Savings Bank Investments		112,349 6 5		
Balance of Expenditure over Revenue		127,147 15 7		
Total		£883,066 8 3		
Salaries		406,122 6 9		
Contingencies		109,546 11 8		
Conveyance of Mails		209,792 6 2		
Cable Subsidies, &c.		33,494 18 11		
Interest allowed to Savings Bank Depositors		99,566 0 3		
Loss through frauds		2,113 4 8		
Postage Stamps repurchased from public and used as remittances by public officials		20,905 18 10		
Allowance to Railway Department for transacting public telegraph business at Railway Telegraph Offices		1,525 1 0		
Total		£883,066 8 3		

The foregoing return shows an excess of expenditure over revenue of £127,147 15s. 7d., which is £47,872 3s. 2d. more than that exhibited by the return for 1892. But included in the expenditure for 1893, are an amount of £2,113 4s. 8d., representing the loss sustained by the Department through frauds on the Government Savings Bank by an officer who is now serving a term of imprisonment, and two items (aggregating £22,430 19s. 10d.) which have not appeared in the statements furnished in previous years. The first of these two latter items represents the value of the postage stamps received by Public Departments as remittances from public officials and of those repurchased from the public (less the discount charged for this accommodation), the whole of such stamps being destroyed and not used for postage purposes at all; the second is one-half of the gross revenue received at Railway Telegraph offices, this being the consideration for which the Railway Department undertakes the transmission of public messages. There was also an increase of £19,658 16s. 2d. in the amount of cable subsidies, &c., a portion of which was properly chargeable to the previous year. These items together account for £44,203 0s. 8d. of the difference between the excess of expenditure over revenue in 1893, as compared with the year 1892, and the balance may be attributed to a contraction of the revenue consequent on the general depression and the putting into operation of the provisions of the Postage Acts Amendment Act in regard to lotteries, &c. There is a marked increase both in the "Interest on Savings Bank Investments" and the "Interest allowed to Savings Bank depositors," but this is explained by the large influx of deposits occasioned by the financial panic of last year.

The

The following are the items of expenditure paid from votes under the control of other Ministers:—

					1892.	1893.
Stores and stationery	£5,450 16 1	£7,147 18 11
Repairs and additions to buildings	8,108 13 3	9,299 4 4
Furniture (including carriage)	866 13 4	485 18 1
Printing, bookbinding, <i>Gazette</i> advertisements, <i>Gazettes</i> , &c.					11,518 16 9	8,865 6 3
Printing postage-stamps	5,426 6 7	4,568 6 9
Do postal notes		73 8 5
Municipal and other rates	2,114 16 3	2,476 15 2
Postage	1,644 5 0	837 13 11
Advertising in newspapers	703 16 6	505 16 0
Fuel and light	4,039 6 8	3,195 12 8
Total	<hr/> £39,873 10 5	<hr/> £37,456 0 6
					<hr/>	<hr/>

The interest on the cost of construction of Electric Telegraph Lines is estimated at £32,833, and the interest on the cost of buildings owned by the Government, and used as Post and Telegraph Offices in various parts of the Colony, is estimated at £30,521.

Adding the expenditure on account of the services of the Postmaster-General from the votes of other Departments, and the interest on the cost of buildings and construction of telegraph lines, the expenditure properly chargeable to the Departments under my control for the year 1893 was £983,876 8s. 9d., or £227,957 16s. 1d. in excess of the revenue for the same period.

INLAND SERVICE.

The new postal routes opened during the year 1893, as shown in the annexed return, amounted to 1,269 miles, viz.:—

Postal Line.	No. of times per week.	Postal Line.	No. of times per week.	
<i>In the Western Country.</i>				
From Byrock to Brewarrina, via Gongolgon (re-established.)	1	From Moulamein to Mallan	1

The extent of postal route traversed in the Colony up to the 31st December, 1893, was 32,792 miles, as compared with 32,300 miles traversed in 1892—

	1892.	1893.	
On horseback ...	11,616 miles	11,000 miles.	
By coach ...	17,467 ,,	18,380 ,,	
By railway ...	2,384 ,,	2,520 ,,	
By tramway ...	21 ,,	68 ,,	
By steamer ...	812 ,,	824 ,,	The

The number of miles travelled in the year 1893 was 8,784,600, being an increase of 215,900 on the mileage of the previous year.

The extension of mail route by railway during 1893 was as follows:—

Cootamundra to Temora	38 miles.
Milson's Point to St. Leonards	3	"
Molong to Forbes	73	"
North Kiama to Nowra	22	"

and by tramway—

Broken Hill to Torrington	40	"
Newcastle to Wallsend	7	"

The number of Post Offices established was 18, viz.:—Avoca, Bluey, Bomaderry, Brocklesby, Canyan Leigh, Daviesville, Gannon's Creek, Islington, Lansdale, Mitchell's Flat, Myrtle Creek, Nunnagoyt, Riley's Hill, The Gulf, The Pocket, Ulan, Wetherill Park, and Winton.

The Post Office at Balderodgery was re-established.

The number of Post Offices discontinued was 19, viz.:—Bolong, Camden Haven, Cronulla Beach, Cooney Creek, Denison Town, Dingo Creek, Greig's Flat, Hawke's Nest, Kadina, Leighwood, Milburn Creek, Mount Gipps, Newstead, Perimée, Porcupine Gap, Punkalla, Tanner's Creek, Unumgar, and Upper Myall.

It was found desirable to change the designations of the following Post Offices, viz.:—Cooplacurripa to No. 1, Doughboy Hollow to Ardglen, Dry River to Quaama, Junee Junction to Junee, Mosman's Bay to Mosman, Murray Hut to Finley, and Sandhurst to Glenhaven.

Appendix A. In the Appendix will be found a list of the 1,423 Post Offices in the Colony on the 31st December, 1893.

193 changes of Postmasters occurred during the year.

Receiving offices were established at the following places, viz.:—Allen Mount, Argalong, Back Creek, Bawden Bridge, Beloeth, Bereen, Bermagui South, Berremangra, Blanket Flat, Bocoble, Bolong, Boppy Mountain, Braemar, Burragate, Carrabolla, Cheetam's Flats, Coalbaggie, Cowra Creek, Crabbe's Creek, Cronulla Beach, Dapper, Dingo Creek, East Seaham, Euwylong, Federal, Fifield, Fladbury, Greig's Flat, Harold's Cross, Inglewood, Katoomba South, Leura, Lower Taylor's Arm, Mila, Mororo, Mosquito Island, Mount Billagoe, Mount Gipps, Payne's Crossing, Possum Power, Riley's Hill, Rossmore, South Gundurimba, Sweetbriar, Tallewang, The Pocket, Tia, Tooraweenah, Upper Burringbar, Upper Dungowan, Upper Myall, Upper Pocket, Wagonga, Wagragobilly, Wallandoor, Wattamadara, White Cliffs, Woodford, and Yalgogrin North.

The Receiving Office at Halfway Creek was re-established.

The name of the Receiving Office at Sandy Creek was changed to Dapper.

The Receiving Offices at the following places were converted into Post Offices, viz.:—Avoca, Bluey, Daviesville, Gannon's Creek, Lansdale, Mitchell's Flat, Myrtle Creek, Riley's Hill, The Gulf, The Pocket, and Ulan.

The Receiving Offices at the following places were discontinued, viz.:—Argenton, Athey's, Baldry, Barnett, Bendeela, Bloomfield, Boppy Mountain, Broombee, Burbong, Coalbaggie, Kangaroobie, Kelly's Creek, Mooculta, Mount Gipps, Mulguthrie, Nuntherungie, Nyrang, Sobraon, Umberumberka, Wallandry, Warri, and Webb's Consols.

Appendix B. In the Appendix will be found a list of the Receiving Offices in existence at the close of the year, 404 in number.

Appendix A. Appendix A contains a return of the Government Buildings for the transaction of the Postal, Money Order, Savings Bank, and Telegraph business, and particulars of the premises rented or otherwise provided for the purpose. Government Buildings at the following places were completed and occupied during 1893, viz.:—Adaminaby, Burwood, Carrathool, Cundletown, Harden, Mulgoa, Mulwala, Newtown, and Rockdale.

During the year 1893, 3 pillar letter-receivers were erected in different parts of the Colony, 6 were removed to different sites; 41 small iron letter-receivers were placed, 10 were removed to new sites, and 1 was withdrawn. One wooden newspaper receiver was erected.

On

On the 31st December the number of letter-receivers erected in the Colony (both large and small), was 1,095, and the number of newspaper-receivers, 19.

The number of licenses for the sale of postage-stamps issued in 1893 to persons other than postmasters or Receiving-Office-Keepers was 161, the number transferred 70, and the number cancelled 16. In the Appendix is given a list of the persons holding these licenses throughout the Colony.

On the 31st December, 1893, the number of locked private letter-boxes let at the General Post Office was 1,303, besides 70 allotted to Public Departments, for which no fees are paid.

The system is now in operation at the following offices, viz.:—Adelong, Albury, Armidale, Ashfield, Ballina, Balmain, Balranald, Bathurst, Bega, Bombala, Bourke, Bowral, Braidwood, Broken Hill, Burwood, Casino, Cobar, Condobolin, Coonamble, Cootamundra, Coraki, Deniliquin, Dubbo, East Maitland, Emmaville, Forbes, George-street North, Glen Innes, Goulburn, Grafton, Granville, Grenfell, Gulgong, Gunnedah, Hay, Haymarket, Hillgrove, Hillston, Inverell, Jerilderie, Junee, Kempsey, Kiama, King-street, Lismore, Maclean, Manly, Marrickville, Moree, Moruya, Moss Vale, Mount Victoria, Mudgee, Murwillumbah, Muswellbrook, Narrabri, Narrandera, Newcastle, Newtown, North Sydney, Nymagee, Orange, Pambula, Park-street, Parramatta, Queanbeyan, Silverton, Singleton, Tamworth, Taree, Temora, Tenterfield, Uralla, Urana, Wagga Wagga, Walgett, Wentworth, West Maitland, Wilcannia, Wollongong, and Young.

Four private posting boxes were constructed on private premises for the use and at the expense of the occupants, under the system introduced in August, 1886. The fee charged for the clearance of these boxes varies from £3 to £5 per annum, according to the daily number of clearances effected.

Nine additional letter-carriers were appointed during 1893. The total number of these officials employed on the 31st December was 458, of whom 98 were attached to the Head Office, the remainder being distributed throughout the Colony, as indicated in the Appendix.

Appendix A.

The number of persons employed in connection with the Postal and Electric Telegraph Department for the year 1893 was as follows:—

Principal Officers.—1 Postmaster-General, 1 Deputy Postmaster-General, 1 Secretary of the Postal Service, 1 Secretary of the Telegraph Service, 1 Chief Accountant and Controller, Money Order Office and Government Savings Bank.

Ministerial Division.—1 chief inspector, 8 inspectors, 4 senior clerks, 42 clerks, 1 clerk in charge of stores, 8 temporary clerks, 2 relieving officers, 11 indoor messengers, 1 assistant storekeeper, 3 assistants in store, 1 storeman, 1 mechanic, 1 carpenter, 1 caretaker, 1 office keeper, 1 tower attendant, 1 gatekeeper and porter, 1 detective, 4 constables, 6 cleaners, 10 female servants, 1 manager of stables, 1 farrier, 1 striker and assistant, 8 grooms, 1 foreman of mail-cart drivers, 5 mail-cart drivers.

Money Order and Government Savings Bank Division.—1 chief clerk, 1 examiner, 2 assistant examiners, 1 teller, 3 assistant tellers, 20 ledger-keepers, 26 clerks, 21 temporary clerks, 6 indoor messengers.

Account and Cash Division.—1 accountant, 1 distributor of stamps, 1 cashier, 1 receiving clerk, 1 senior clerk, 32 clerks, 3 temporary clerks.

Mail Division.—1 superintendent, 1 assistant superintendent, 5 senior clerks, 43 clerks, 1 clerk in charge of parcel post, 1 shipping clerk, 1 shipping clerk's assistant, 14 temporary clerks, 17 mail guards, 60 letter-sorters, 10 junior letter-sorters, 5 temporary letter-sorters, 1 overseer of sorters, 55 stampers and sorters, 12 junior stampers and sorters, 4 temporary stampers and sorters, 5 sorters, 1 letter-carriers' overseer, 82 letter-carriers, 13 junior letter-carriers, 3 temporary letter-carriers, 63 mail-boys, 3 packers, parcel post branch, 7 assistants, parcel post branch 2 custodians of mails, 1 custodian of mail-bags, 1 assistant in bag-room, 2 bag turners, 1 repairer of mail-bags.

Telegraph Division.—1 station manager, 3 assistant station managers, 1 clerk in charge of check branch, 1 electrician, 1 assistant electrician, 32 clerks, 22 temporary clerks, 1 assistant in store, 196 operators, 17 junior operators, 7 temporary operators, 1 messengers' overseer, 1 assistant messengers' overseer, 3 temporary messengers' overseers, 190 messengers, 7 cadets, 1 chief mechanician, 1 assistant mechanician,

mechanician, 4 instrument fitters, 1 temporary assistant (mechanical branch), 1 inspector of lines (city and suburbs), 1 assistant line repairer, 1 batteryman, 7 assistant batterymen, 2 lift attendants, 14 temporary construction overseers, 71 labourers.

Telephone Branch.—1 manager, 1 mechanician, 12 fitters, 1 exchange foreman, 1 line foreman, 3 monitors, 42 switch attendants, 1 probationer, 1 messenger.

Electric Light Branch.—1 chief engineer, 4 engineers, 7 assistant engineers, 3 assistants.

NOTE.—The classification of the staff as given in this report was made on the amalgamation of officers effected in 1893, but owing to the salaries being voted by Parliament under estimates prepared prior to this amalgamation, full effect could not be given to the greater part of the scheme until 1894, when estimates, rearranged to meet the position, were approved of by Parliament.

Branch, Suburban, and Country Offices.—1,423 postmasters, 9 telegraph station masters, 112 postal assistants, 101 junior postal assistants, 109 temporary postal assistants, 299 operators, 84 junior operators, 2 assistant operators, 15 temporary station masters and telephone operators, 19 mail-guards, 2 stampers and sorters, 2 junior stampers and sorters, 171 letter-carriers, 180 junior letter-carriers, 9 temporary letter-carriers, 47 mail-boys, 61 mail-carriers, 370 telegraph messengers, 13 cadets, 30 switch attendants, 2 telephone fitters, 3 assistant battery-men, 45 line-repairers, 404 receiving office keepers, 770 mail contractors.

Total, Head Office	1,333
„ Branch, Suburban, and Country Offices ...	4,282
Total number of persons employed	5,615

Twenty deaths occurred, viz.:—Mr. E. C. Cracknell, Superintendent of Telegraphs; J. W. Miller, receiving clerk, Telegraph Branch; H. J. Atkinson, postmaster, Carrathool; M. F. Naghten, assistant, Bathurst; P. A. Fellew, assistant, Broken Hill; A. Taylor, operator, Sydney; W. Simmons, operator, Wollongong; C. Cade, junior assistant, Armidale; T. Thompson, letter-carrier, Goulburn; W. Fairbairn and M. J. Boysen, letter-carriers, Liverpool; T. Stringfellow, stamper and sorter; J. P. J. Hinchy and J. Murray, messengers; T. Bennett, telephone fitter; H. Stevens, mail-guard; E. Baldwin, temporary letter-carrier; J. Craik, assistant in bag-room; P. O'Brien, mail-boy; and J. M. Stapleton, telegraph messenger.

Fifty-five resignations took place, and the services of 17 officials no longer required were dispensed with.

Eleven officers retired from the service, viz.:—Messrs. W. L. Carter, accountant; W. Burnett, examiner; H. Murdoch, senior clerk; and S. I. Leon, ledger-keeper, in consequence of the abolition of their offices through the amalgamation of the Postal and Telegraph Departments; Mr. W. D. Bayly, examiner, Money Order office; Mr. T. S. J. Rigg, senior clerk, Post Office, and Mr. C. Harrison, post and telegraph master, Bega; all of whom were allowed pensions under the Civil Service Act; Messrs. N. E. H. Ehrenström, clerk, and J. Whittaker, postal assistant, Bourke, who were allowed gratuities under the same Act; and Messrs. J. Caldwell, stamper and sorter, Goulburn, and W. H. Whatham, letter-carrier, Deniliquin, who, not being contributors to the Superannuation Account, and in consideration of their length of service, were each granted a small gratuity from the Consolidated Revenue.

The removals from the Service numbered 12. One, a clerk in the Money Order Office, received six years imprisonment for frauds in connection with the Government Savings Bank; a letter-carrier received three years imprisonment for stealing a letter; a junior letter-carrier received two years imprisonment for forging a signature to a registered letter receipt; another junior letter-carrier was sentenced to twelve months imprisonment for stealing a letter; and a letter-sorter received 18 months imprisonment for a similar offence.

The remainder were dismissed for the following offences:—Four letter-carriers for misappropriation of letters; a cleaner for unsatisfactory performance of duty; and two telegraph messengers for being absent without leave.

The

The Postal Inspectors in 1893 travelled a distance of 53,527 miles, and inspected the postal route appertaining thereto, visiting 773 offices, 236 of which were visited more than once during the year.

Some important amendments have been effected in the regulations relative to the employment of persons in the Postal and Telegraph Service other than "Officers" under the Civil Service Act. Previously to the introduction of these amended regulations on the 1st July, 1893, candidates for employment were not required to produce evidence of their educational fitness further than to show that they were able to read manuscript, write from dictation, and possessed a knowledge of the first four rules of arithmetic. This qualification is still retained in connection with appointments to the lower ranks of the service, viz., letter-carriers, mail-boys, stampers and sorters, mail-guards, line-repairers, switch-board attendants, and telegraph messengers; while candidates for the higher positions of letter-sorter, postal assistant, operator, and post and telegraph master, are required to produce a certificate of having passed the Civil Service Examination, preference being given to those possessing a Junior University certificate. Persons desirous of becoming operators are also required to undergo a Departmental examination in Telegraphy, a fee of £1 per quarter being charged for instruction. The first of these examinations was held in August, when fifty-eight candidates presented themselves, of whom twenty-four passed, and were appointed Junior Operators at £1 per week, as provided by the regulations.

From the 1st May the system of night in lieu of the early morning clearance of letter-boxes, already in operation in the city and adjacent suburbs, was introduced throughout the suburbs generally. This has enabled a more certain and satisfactory circulation of correspondence than heretofore, and especially in effecting a delivery of letters throughout the city and suburbs by the first morning delivery by letter-carrier.

The following amended rates of payment to masters of vessels for the carriage of mails were introduced on the 1st September:—

For conveyance in harbours and on rivers, 8d. per lb. of letters and post-cards; 1s. 6d. per cwt. of other articles, comprising packets, books, parcels, and newspapers.

For conveyance between places on the New South Wales Coast, 1s. 4d. per lb. of letters and post-cards; 3s. per cwt. of other articles (as above).

For conveyance beyond New South Wales, 2s. per lb. of letters and post-cards; 4s. 6d. per cwt. of other articles (as above).

The payments are made only on the weight of contents of mails.

FOREIGN SERVICE.

During the year 1893 a contract, the text of which is given in the Appendix, ^{Appendix D.} was concluded with Mr. James Huddart for the performance of a regular monthly steamship service between Sydney and Vancouver in the province of British Columbia, calling at Honolulu. The subsidy payable is at the rate of £10,000 per annum, and the period of the contract three years. It is provided that the duration of the voyage each way shall not exceed twenty-one days, including one day's detention at Honolulu, and that for every complete period of twenty-four hours, by which the time actually occupied in the conveyance of the mails shall exceed that limit, the sum of £30 shall be deducted from the subsidy payable to the contractor.

The performances of the vessels employed under this contract are given on pages 11 and 12.

The arrangement described in my report for the year 1892, under which this Colony agreed to pay New Zealand a lump sum of £4,000, for the conveyance of mails between Sydney and San Francisco, by the vessels of the Union Steamship Company of New Zealand, for a period of one year, from November, 1892—the Company foregoing the gratuities previously paid for the conveyance of the mails between Sydney and Auckland—was renewed for another year from November, 1893.

The following are the returns of the Mail Services performed by the Orient Steam Navigation Company during the year 1893 :—

Average time occupied in the conveyance of mails :—

From Sydney to London $38\frac{1}{4}$ days.

The amount paid by each contributing colony, on the basis of population, towards the cost of the "Federal" Ocean Mail Service, for the year 1893, was as follows, viz. :—

New South Wales	£26,727	11	8
Victoria	26,382	6	8
Queensland	9,511	3	4
South Australia	7,597	11	8
Tasmania	3,463	16	8
Western Australia	1,317	10	0
Total...	£75,000	0	0

The contribution from the United Kingdom is £95,000 per annum.

The following return shows the number of letters, packets, and newspapers despatched and received by the various ocean mail routes during the year 1893, as compared with similar information for the year 1892 :—

The following statements for the year 1893 show the approximate net cost to the Colony of the Suez, San Francisco, and Vancouver Mail Services.

Statement showing the approximate net cost to New South Wales for the year 1893 of the mail service per the vessels of the Orient and the Peninsular and Oriental Steam Navigation Companies:—

<i>Dr.</i>	£ s. d.	<i>Cr.</i>	£ s. d.
To New South Wales proportion of Colonial share of subsidy for carriage of mails	26,727 11 8		
Transit of mail-matter through European Countries, &c.	4,224 12 11		
Overland transit of mail-matter through Australian Colonies, cost of special trains, &c.	2,202 13 6		
	38,154 18 1		
By estimated share of contributions from non-contracting Colonies, &c.	600 0 0		
Estimated share of transit rates on mail-matter from European Countries, &c.	720 0 0		
Estimated postages collected in the Colony	18,680 0 0		
	20,000 0 0		
Estimated net cost to the Colony in 1893	£18,154 18 1		
The estimated net cost to the Colony in 1892 was	£18,274 8 5		

Statement showing the approximate net cost to the Colony of the San Francisco Mail Service for the year 1893 per the vessels of the Union Steamship Company of New Zealand:—

<i>Dr.</i>	£ s. d.	<i>Cr.</i>	£ s. d.
To payments to New Zealand for the carriage of mails ...	4,000 0 0		
Cost of land and sea transit of mail-matter for places beyond the United States of America ...	50 0 0		
	4,050 0 0		
By estimated postages collected in the Colony	2,000 0 0		
Estimated net cost to the Colony	£2,050 0 0		
The estimated net cost for 1892 was	£124 12 6		

Statement showing the approximate net cost to the Colony of the Vancouver Mail Service, for the period from 18th May to 31st December, 1893, per vessels of Mr. James Huddart:—

<i>Dr.</i>	£ s. d.	<i>Cr.</i>	£ s. d.
To payments to Mr. James Huddart for the carriage of mails, five and a half trips, at rate of £10,000 per annum for twelve monthly trips	4,583 6 8		
Cost of land and sea transit of mail matter to places beyond Canada	30 0 0		
	4,613 6 8		
By estimated contributions from non-contracting colonies, &c.	400 0 0		
Estimated postages collected in the Colony	450 0 0		
	850 0 0		
Estimated net cost to the Colony	£3,763 6 8		

From the 1st July the rates of postage on newspapers for the United Kingdom were amended as follows:—

For each newspaper not exceeding 4 oz.	1d.
For every additional 2 oz., or fraction thereof	$\frac{1}{2}$ d.

From the 29th August a rate of $\frac{1}{2}$ d. per 10 oz. was charged on newspapers printed abroad and posted in this Colony for transmission to the other Australasian Colonies, and also on newspapers printed and registered in this Colony and posted after seven days from the date thereof for the other Australasian Colonies.

On

On the 1st September it was notified that a rate of $\frac{1}{2}$ d. for the first 2 oz. would be charged for transmission within the Colony of packets containing wholly printed matter, but no writing whatever. In the case of circulars not printed in ordinary type—that is, circulars produced either wholly or in part by other mechanical processes, such as chromography, &c.—it was provided that at least 100 copies of such circulars must be submitted to the Post Office and posted at one time to entitle them to pass at $\frac{1}{2}$ d. each, otherwise every copy would be charged letter rate.

PARCEL POST.

Legislative authority having been obtained for the establishment of an Inland and Intercolonial Parcel Post, the needful steps were taken to introduce the system, which was extended to the whole of the Australasian Colonies, from the 1st October, 1893. Regulations were issued for the guidance of the public and officials in transacting parcel post business, and the rates of postage were fixed as follows :—

For each Inland Parcel—

For the first 2 pounds	8d.
For each additional pound	3d.

For each Intercolonial Parcel—

For the first pound	8d.
For each additional pound	6d.

The arrangement made between the Colonies was that the despatching Colony should retain 5d. for the first pound, and 4d. for each additional pound, and account for the balance to the Colony of destination, the former defraying the cost of transit.

A sum at the rate of £3,200 per annum, being one-third of the estimated postage on inland parcels and of this Colony's proportion of the postage on inter-colonial parcels, was credited to the Railway Department of New South Wales for the conveyance of parcels by railway.

It was provided that no parcel must exceed 11 lb. in weight, and as regards the Inland service, that the weight of parcels for or from places to which the mails are conveyed otherwise than by railway, coach, or steamer, must not exceed 3 lb. in weight.

Particulars of the Inland and Intercolonial as well as the Foreign Parcel Post business transacted during 1893 are appended.

Posted.

For delivery in.	Number.	Weight.	Declared value.	Postage.
New South Wales (from 1st October)	38,025	lb. 115,066	£ s. d.	£ s. d. 2,037 14 10
Australasian Colonies	3,830	10,086	4,765 19 1	309 3 8
Foreign Countries	5,353	14,860	15,587 19 1	732 17 11

Received.

From.	Number.	Weight.	Declared value.	Postage.
Australasian Colonies (from 1st October) ..	2,410	lb. 6,403	£ s. d. 2,175 11 2	199 12 2
Foreign Countries	14,084	36,479	40,444 8 9	2,242 19 7

The Parcel Post system has been extended, through the medium of the United Kingdom, to Liberia, Mashonaland, Oil Rivers (now Niger Coast) Protectorate, and Salvador.

The rates of postage on parcels to Bechuanaland Protectorate, Canada, Orange Free State, and The Point (Natal) were slightly reduced, and the rate to Japan was increased from 1s. to 1s. $2\frac{1}{2}$ d. per lb. up to 5 lb.

LETTERS,

LETTERS, NEWSPAPERS, PACKETS, AND POST-CARDS POSTED THROUGHOUT THE COLONY.

The following is a return of the estimated number of Letters, Newspapers, Packets, and Post-cards posted in the Colony during 1893, as compared with the number posted in the preceding year:—

	1892.	1893.
LETTERS.		
Posted for delivery within the Colony	65,025,800	66,924,000
" Australian Colonies and New Zealand	4,757,700	4,224,200
" Foreign despatch	1,101,000	1,089,500
Total.....	70,884,500	72,237,700
NEWSPAPERS.		
Posted for delivery within the Colony	35,991,200	35,872,300
" Australian Colonies and New Zealand	4,747,500	4,679,400
" Foreign despatch	873,100	849,800
Total.....	41,611,800	41,401,500
PACKETS.		
Posted for delivery within the Colony	9,105,800	8,773,500
" Australian Colonies and New Zealand	2,572,800	2,384,000
" Foreign despatch	194,900	203,600
Total.....	11,873,000	11,361,100
Total number of Post-cards posted	827,360	850,420

DEAD LETTER BRANCH.

The following return shows the number of Letters, Post-cards, and Packets dealt with in this Branch, either by the return to writers, discovery of persons addressed, or otherwise, during the year 1893:—

	Letters.	Post-cards.	Packets.
INLAND.			
Returned to writers, delivered, &c.....	160,000	1,050	119,940
Destroyed in accordance with Section 32 of 31 Vic. No. 4	3,030	750	21,000
Remaining undelivered	500
INTERCOLONIAL.			
Originally addressed to other Colonies :—			
Returned to writers, or otherwise disposed of	27,962	312	4,452
Destroyed in accordance with Section 32 of 31 Vic. No. 4	6,325	114	1,642
Returned to other Colonies as unclaimed	35,285	360	5,406
FOREIGN.			
Originally addressed to other Countries :—			
Returned to writers, or otherwise disposed of	5,382	16	3,376
Destroyed in accordance with Section 32 of 31 Vic. No. 4	897	10	2,000
Returned to other Countries as unclaimed	16,248	64	6,060
Total number dealt with	255,629	2,676	163,876

Included in the above return were 3,197 registered letters originating in New South Wales, which, upon being opened to obtain address prior to return to the senders, were found to contain, besides correspondence and valuable enclosures, such as gold, watches, gold rings, and jewellery, the sum of £3,114 9s. 9d. in coin, notes, and cheques. In 1,511 unregistered letters were found valuable enclosures, representing £8,712 14s. 11d.

2,265 registered letters originated in places beyond the Colony, and were returned unopened, as follows: 253 to London, 187 to other countries, and 1,825 to other Colonies.

An average of 74 insufficiently-addressed letters and packets were forwarded daily to the Dead Letter Office for treatment; the addresses of a large proportion were corrected and the letters forwarded. The remainder were returned to the writers, or otherwise dealt with as required by the Postage Acts.

Of 353 articles containing clothing, merchandise, &c., received with the addresses torn off, postage refused, &c., only 100 were applied for and delivered. The articles not otherwise disposed of are sold in accordance with legislation, and the proceeds paid into the Consolidated Revenue.

One thousand two hundred and forty-seven Chinese letters imperfectly addressed were forwarded to the intended addressees through the assistance of the Chinese interpreter.

During the six months ended 30th June (from which date pre-payment of postage became optional in accordance with the provisions of the Postage Acts Amendment

Amendment Act), 1,576 unstamped letters which could not be returned to the writers through want of name and address were delivered to the addressees, who were specially communicated with by the Department.

Ninety-three letters were posted without addresses, 40 of which (including 8 containing valuable enclosures) were returned to the writers, the remainder bearing no indication of the sender.

About 552 per cent. of the total number of letters posted in the Colony during 1893 were unclaimed.

The following regulations in regard to unclaimed letters, &c., came into force on the 1st July when the Postage Acts Amendment Act came into operation:—

Letters, packets, and newspapers posted in New South Wales addressed to places within the Colony shall remain at the address waiting delivery for a period of one month.

Letters, &c., posted in any of the Australasian Colonies or any Foreign Country shall remain at the post-office mentioned in the address in New South Wales for a period of three and six months respectively, provided such post-office is an official one; but if such post-office is a non-official one, i.e., in charge of a storekeeper or other tradesman, then the letter shall be sent to Sydney as unclaimed after a period of one month, where it will be kept for the remainder of the period of three or six months, as the case may be.

The period for which Intercolonial and Foreign newspapers are to remain at any post-office waiting delivery was subsequently reduced to one month.

DELIVERY BY LETTER-CARRIERS.

The number of letters, &c., delivered by the Letter-carriers attached to the head office during the years 1892 and 1893 was as follows:—

			1892.	1893.
Unregistered letters	10,027,552	8,352,734
Registered letters	536,496	269,160
Books, &c.	144,150	149,149
Newspapers	1,675,234	1,444,397

The growing requirements of the Department rendered the removal of a number of suburban carriers from the head office to branch offices necessary, and the decrease in the quantity of mail matter delivered from the head office may be attributed to this circumstance, and also to the great falling off in the number of Christmas and New Year cards posted. The drop in registered letters is, of course, to a large extent, explained by the stoppage of consultation letters.

REGISTRATION BRANCH.

The number of Registered Letters which passed through the General Post Office in 1893 was 812,036, against 1,075,241 in 1892, the decrease in number being 263,205.

MAILS RECEIVED AND DESPATCHED.

The following return shows the number of Mails received at and despatched from the General Post Office during the years 1892 and 1893.

Year.	Received.		Despatched.		Total number of Mails which passed through the office.
	Inland.	Foreign.	Inland.	Foreign.	
1892	202,536	26,317	192,526	10,660	432,039
1893	214,030	26,139	203,455	10,529	454,553
Increase	11,494	10,929	269	22,514
Decrease	178

RECORD BRANCH.

The number of written communications received from the public during 1893, intimating changes of address, or requesting letters, &c., to be forwarded, was 27,226, against 26,278 in 1892.

The number of communications addressed to the Department relating to the extension and improvement of the service, to irregularities connected with the performance of mail contracts, and to the transmission of letters, telegrams, &c., and recorded in the year 1893, was 40,854, against 38,442 in 1892. The figures given for 1892, however, do not include all of the correspondence relating to the Telegraph service during that year, much of which was recorded in the Telegraph Department alone.

POSTAGE

POSTAGE STAMPS, STAMPED ENVELOPES, &c.

The following return shows the number, description, and value of Postage Stamps, &c., issued at the General Post Office during the years 1892 and 1893:—

Number. 1892.	Description.	Value. 1892. 1893.		Increase in issue for 1893. Number. Value.		Decrease in issue for 1893. Number. Value.

		Total amount of increase	£7,607 2 0

NOTE.—Sets of specimen and reprint postage stamps, value £1 per set, were first issued on the 1st August, 1892.

" Sets of the "postage due" stamps, obliterated with the Sydney post-mark, value 10s. per set, were first issued on the 1st February, 1893.

The following return shows the number, description, and value of Postage Stamps purchased from the public for cash, less the usual discount, during the year 1893:—

Number.	Description.	Value.
		£ s. d.
4,772	Halfpenny	9 18 10
335,870	One-penny	1,399 9 2
661,375	Two-penny	5,511 9 2

33	" "	2d. reply post-cards "
1,440	" "	1d. newspaper wrappers "
		6 0 0
		£49 0 0
	Less 10 per cent.	4 18 0
		£44 2 0

Stamps, &c., repurchased in this way are not reissued, but are destroyed together with those used as remittances by public officials, the value of which, during 1893, was £14,052 14s. 4d.

With a view to meet the desire of stamp collectors and others to obtain specimens of the "Postage due" stamps in use by this Department, it was notified on the 21st January that such stamps would be sold at the General Post Office, after being obliterated with the Sydney postmark, at 10s. per set.

INLAND MAIL CONVEYANCE.

In the year 1893 the average cost per mile of the Inland mail conveyance was about 4 $\frac{2}{3}$ d. against 4 $\frac{1}{7}$ d. the price per mile paid during the previous year.

MONEY ORDERS.

Money Order Offices were established during the year 1893 at the following places, viz. :—Allynbrook, Conargo, Hungerford, Myrtle Creek, Quaama, Rolland's Plains, Tea Gardens, and Wild's Meadows (afterwards changed to Myra Vale).

The offices at Camden Haven, Colly Blue, Denison Town, Emu, Guyong, Hawke's Nest, Kurrajong, Marshall McMahon's Reef, Mount Gipps, and Prospect Reservoir were abolished.

The number of Money Order Offices in the Colony on 31st December, 1893, was 603.

The number of Money Orders issued was 530,546 (exclusive of 15,152 certificates of transfer used by Postmasters in connection with their requisitions for Postage Stamps) and the value £1,615,885 against 522,805 of the value of £1,762,713 in 1892, the difference showing an increase of 7,741 in the number and a decrease of £146,828 in the amount. The decrease in the amount is due, principally, to a change in the method of adjustment of Postmasters' accounts, greatly curtailing the use of certificates of transfer which often represented large amounts.

The number of Money Orders paid was 523,747 and the value £1,556,238 against 561,164 of the value of £1,739,812 in 1892, being a decrease of 37,417 in the number and £183,574 in the amount. The amount of revenue received as commission on Money Orders issued was £19,038 9s. 6d., being £270 17s. 6d. less than the amount collected in 1892.

A comparative return showing the various countries where the Money Orders issued in New South Wales were made payable, and also the Money Order issues of Appendix E. other countries payable in New South Wales, will be found in the Appendix.

Appendix A. In the information contained in Appendix A will be found a detailed statement of the business transacted and revenue collected at each office in the Colony.

An agreement was entered into for a direct exchange of Money Orders between this Colony and Germany, to come into effect on the 1st January, 1894.
Appendix F. The text of this agreement is given in the Appendix.

POSTAL NOTES.

The Postal Note system was introduced on 1st October, 1893; the design of the Notes, which seems to have met with general approval, being the work of an officer of the Department, Mr. W. A. Moir, of the Money Order Branch.

The following tabulated statement shows that during the last quarter of the year 54,896 Postal Notes were issued and paid in New South Wales, having a value of £23,139 9s. 9d.; that 3,707 Notes, value £1,486 16s., of other Colonies were also paid, making a grand total of 58,603, of the value of £24,626 5s. 9d., paid in the Colony in 1893. The number of Notes issued in New South Wales and paid in other Colonies was 5,709, of the value of £2,339 8s. 1d.

The amount of revenue collected as poundage on the issue of New South Wales Postal Notes was £548 17s. 10d.

Table showing particulars of Postal Notes paid in New South Wales from 1st October to 31st December, 1893:—

GOVERNMENT SAVINGS BANK.

The following branches were opened during the year 1893, viz.:—Alstonville, Blackville, Booligal, Cambewarra, Coolah, Delegate, Dora Creek, Ford's Bridge, Goolagong, Gulgambone, Hungerford, Lucknow, Newbridge, Obley, Shellharbour, Tea Gardens, Walbundrie, Yamba, Yerong Creek; and the following were closed, viz.:—Denison Town, Hawkes' Nest, Kurrajong, and Prospect Reservoir.

During the year 47,145 new accounts were opened, and 34,743 accounts were closed. The number of accounts remaining open at the close of the year was 114,070.

The number of deposits received was 296,077, and the amount £2,816,084 13s. 9d. being an increase of 17,499 in the number and £1,185,886 17s. in the amount on the business of the previous year. The interest added to depositors' accounts was £99,566 0s. 3d.

The number of withdrawals was 182,003, and the amount £2,038,561 3s. 4d., being an increase of 25,846 in the number and £527,205 6s. 11d. in the amount on the business of the previous year.

The balance at the credit of depositors at the close of the year was £3,233,288 16s. 10d., being an increase of £879,202 15s. 4d. on the previous year.

The average amount of each deposit was £9 10s. 2½d., and of each withdrawal £11 4s.

The average balance at the credit of each depositor at the close of the year was £28 6s. 10½d.

The following return will show the annual progress of the Government Savings Bank system, from 1st January, 1884, to 31st December, 1893:—

Year.	Number of Deposits.	Interest added to Depositors' Accounts.	Amount of Deposits.	Number of Withdrawals.	Amount of Withdrawals.	Balance at Credit of Depositors.
		£ s. d.	£ s. d.		£ s. d.	£ s. d.

The following return will show the business of the Government Savings Bank for the year 1893, compared with the transactions of the year 1892:—

Year.	Number of Government Savings Banks in the Colony.	Number of Accounts opened.	Number of Accounts closed.	Number of Accounts remaining open on 31st Dec.	Total Deposits, including interest.		Total Withdrawals.		Balance at credit of Depositors on 31st Dec.
					Number.	Amount.	Number.	Amount.	
1892	450	39,721	32,573	101,668	278,578	£ 1,711,978 17 0	156,157	£ 1,511,355 16 5	2,354,086 1 6
1893	465	47,145	34,743	114,070	296,077	2,915,650 14 0	182,003	2,038,561 3 4	3,233,288 16 10
Increase...	15	7,424	2,170	12,402	17,499	1,203,671 17 0	25,846	527,205 6 11	879,202 15 4

The foregoing returns show large increases both in the deposits and withdrawals, which may be considered as one of the effects of the late panic that affected the monetary institutions of the Colony.

In the information contained in Appendix A is given a detailed statement Appendix A. showing the business transacted at each Branch in the Colony. A statement of the Liabilities and Assets, with the Auditor-General's certificate thereon, will be found in the Appendix.

Appendix G.

ELECTRIC

ELECTRIC TELEGRAPHS.

The following return shows the lines of Electric Telegraph constructed and the cost of construction, also the lines dismantled, during the year 1893:—

			£ 18,904 1 2	

The total cost of the whole extent of Telegraphic communication in the Colony on the 31st December, 1893—27,326 miles 4 chains—was £820,821 14s. 7d.

The only Telegraph line in course of construction, but not completed, during the year 1893, was that between Gunnedah and Mullaley, a distance of 22½ miles.

The number and value of telegrams which passed over the lines of the Colony, and the amount of revenue due to New South Wales on each class of business during the year 1893, are shown in the following return:—

					2,465,503	156,739 15 8

A Telegraph Office was opened at Brocklesby (Railway Station).

The offices at Denison Town and Mullengudgery were closed.

The names of the Telephone offices opened are given under the heading of Telephone Branch.

The total number of offices in existence at the close of the year (including Telephone offices) was 724.

On the 1st October the system of prepayment of telegrams by postage stamps was introduced. The system applies to all telegrams for transmission within New South Wales, or to any of the other Australasian Colonies except New Zealand.

In connection with this system, telegram forms impressed with 6d. or 1s. stamps are now in use.

The following amended Regulation in regard to cypher telegrams was brought into operation on the 1st January:—

Every message consisting, wholly or in part, of words in secret language, or of words in any admitted language (English, French, German, Italian, Dutch, Portuguese, Spanish, and Latin) having no connective meaning, groups of letters or figures, shall be regarded as a cypher message, and every cypher word in such message shall be counted as two words, and the extra charge be added to the minimum rate for a message, provided that such extra charge shall not in any case exceed 50 per centum on the ordinary rate which would be payable on account of the said telegram. Groups of five letters or five figures shall count as one cypher word.

The fee for registration of cypher addresses for cablegrams was reduced from £1 to 10s. 6d. per annum from the 1st April.

By a Regulation brought into force on the 15th May, receipts are given for telegrams lodged at any Telegraph office for transmission over the Telegraph lines of the Colony, showing the amount paid for such telegrams. Forms of receipt are to be filled in by senders, and handed with the messages for the initials of the Receiving clerk, and impression of the office date stamp thereon. A charge of 1d. is made for each receipt.

CABLE SUBSIDIES AND GUARANTEES.

Under an agreement made between the respective Governments of the Colonies of New South Wales and Victoria and the Eastern Extension, Australasia, and China Telegraph Company (Limited), dated the 6th May, 1879, a subsidy of £32,400 a year became payable by the Colonies to the Company from the date of the establishment of communication by the duplicate cable between Port Darwin and Banjoewangie (1st November, 1879), for a period of twenty years.

The question of a reduction of the rates charged for the transmission of messages under this agreement having been considered at the Postal and Telegraph Conference held in Sydney in February and March, 1891, it was resolved to accept the offer made by the Company to reduce the rates for European messages (those for other countries being proportionately reduced) from—

per word for ordinary messages ;
Government messages ;
Press , ,

in consideration of the Australian Colonies agreeing to contribute one moiety of the sum by which the receipts of the Company in respect of the Australasian traffic under the reduced tariff should fall short of the receipts for the year 1889, which amounted to £237,736.

The Colonies of New South Wales, Victoria, South Australia, Tasmania, and Western Australia joined in this guarantee, and the reduced rates were brought into operation on 1st May, 1891. An agreement was subsequently entered into between the Colonies named under which the population according to the latest census was made the basis for calculating the proportion of the guarantee to be paid by each Colony.

This

This agreement also provided—

That each of the contracting Colonies shall contribute towards such sum (if any) as shall in each year be required to bring the revenue derived by the Province of South Australia on international telegrams up to the sum of thirty-seven thousand five hundred and fifty-two pounds in the event of the revenue of the said Province derived from such international telegrams in any year not reaching that amount;

and that the whole of such Colonies should, from the 1st May, 1891, become joint contributors to the annual subsidies of £32,400 payable to the Company under the agreement of the 6th May, 1879, before alluded to, and £4,200 payable under an agreement dated 14th March, 1889, between the Company and the Government of Tasmania.

As the result of the first year's business at the reduced rates involved the Colonies in a heavy loss, a conference of delegates from New South Wales, South Australia, and Victoria met at Melbourne in August, 1892, when it was agreed, subject to the concurrence of the Company and the approval of the respective Governments, to increase the rate for ordinary messages from 4s. to 4s. 9d. per word, the extra cost being apportioned as follows, viz. :—

To Cable Company	7d.
To South Australia	2d.

At this Conference the following proposal, submitted by New Zealand, was also agreed to, viz., that in consideration of the Company reducing the rates between Australia and New Zealand to 3d. per word for international, and 2s. for the first ten words and 3d. for each additional word for intercolonial messages, and sharing with New Zealand one-half of the loss based on the average traffic of the previous three years (£26,258), and of the other Colonies sharing with New Zealand the remaining half of such loss, New Zealand would become a contributor on the same terms as the other Colonies towards the guarantees to the Company and South Australia in connection with the reduction in the international rates.

This arrangement came into operation on the 1st January, 1893, concurrently with the 4s. 9d. per word rate to Europe; and a copy of the agreement in connection with the therewith will be found in the Appendix.

Returns showing the amounts payable by each of the Colonies under the foregoing arrangements for the year ended 30th April, 1894, are given below:—

Colony.	Population on 5 April, 1891	Contribution to—					Total Contribution.

CABLE RATES TO NEW ZEALAND.

In accordance with the agreement before alluded to, the following reduced rates for the transmission of cablegrams to New Zealand were brought into operation on the 1st January, 1893 :—

GOVERNMENT AND ORDINARY MESSAGES.		s. d.
For the first ten words (address and signature included) 3 0
For every additional word 0 5
PRESS MESSAGES.		
<i>New South Wales Charges.</i>		
For ten words or under 0 6
Every additional word up to thirty-four words 0 0½
Over thirty-four and up to 100 words 1 6
Every additional fifty words or portion thereof 0 6
<i>New Zealand Charges.</i>		
For every 100 words or portion thereof 0 6
<i>Cable Company's Charge.</i>		
For every word 0 1

NEW CALEDONIA CABLE.

An agreement was entered into in April, 1892, between this Colony and the Societe Francaise des Telegraphes Sous-marins, under which the latter undertook to lay down a submarine cable for the purpose of establishing telegraphic communication between Queensland and New Caledonia, in consideration of the payment by New South Wales (Queensland having agreed to contribute a like amount) of an annual sum for a period of thirty years, at the rate of £2,000 a year, or such smaller sum as shall, together with one-sixth of the net sum received by the Company for messages passing over the cable during the year, after deducting working expenses, which are not to exceed £2,400 a year, amount to £2,000. It was provided that the Government should have the free use of the cable for Government messages up to a maximum value of £2,000 in each year.

Communication with New Caledonia was established on the 19th October, the following being the rates charged, viz. :—

For Ordinary Messages.		
To Gomen.		s. d.
For the first ten words (including address and signature) 8 0
For each additional word 0 8
To Noumea.		
2d. per word in addition to the above rates.		
For Press Messages.		
To Gomen.		
For a message of ten words or under, including address and signature		5 0
For each additional word up to sixteen words 0 5
Over sixteen and up to one hundred words 3 0
(In addition to the Cable Company's charge of 3d. per word.)		
Each additional hundred words or portion thereof 3 0
(In addition to the Cable Company's charge of 3d. per word.)		
To Noumea.		
2d. per word in addition to the above rates.		

The Company is credited with 6s. for the first ten words and 6d. for each additional word in respect of ordinary, and half these rates in respect of Press messages, the balance (except in the case of messages for Noumea, the extra charge of 2d. per word for which is credited to New Caledonia) being divided equally between New South Wales and Queensland.

TELEPHONE BRANCH.

Amended regulations in connection with the telephone system were introduced on the 1st March, and a large increase in the number of subscribers has been the result. Formerly, under what was called the "purchase" system, the cost of the line and instruments had to be paid by the subscriber, together with an annual fee for

for maintenance. Under the new system, all lines (except private lines) are erected at the cost of the Department, and the following fees are payable for the use of the lines, including instruments and service at the Exchange:—

For connection with the Central Exchange.

For a line of 1 mile or under £12 per annum.
For each additional $\frac{1}{4}$ mile 1 "

For local connection with Suburban or Country Exchanges.

For a line of 1 mile or under:—
For a business establishment £10 per annum.
For a private house 6 "
For each additional $\frac{1}{4}$ mile 1 "

An additional fee of 10s. per mile per annum (with a minimum fee of £2) is charged for use of trunk wires connecting suburban exchanges with the Central Exchange, and service at the latter.

During the year there were added to the number of subscribers:—

To the Central Exchange 259
Do Branch Suburban Exchanges 192
Do Country Exchanges 37
Total 488

The following return shows the number of lines connected with the telephone system at the close of the year:—

<i>Exchanges, &c.</i>	No. of Lines.
Central, Sydney 1,630	
Branch, Suburban 288	
Country 220	
Telephone Bureaux 9	
Extension Lines, City and Suburbs 380	
Country 27	
Public Telephone Lines 159	
Private Telephone Lines, City and Suburbs 145	
" " Country 99	
Total 2,957	

The length of lines opened during the year was 539 miles 52 chains, the cost of construction being £9,607 6s. 11d.

Exchanges are now open in the following suburbs, viz.:—Ashfield, Balmain, Burwood, Edgecliff, Hunter's Hill, Newtown, North Sydney, Parramatta, Petersham, Randwick, and Waverley, and in the country at Broken Hill, Goulburn, Newcastle, Wagga Wagga, and West Maitland.

Telephone bureaux for the use of the public on payment of a small fee have been established at the General Post Office, Sydney, and at Ashfield, Balmain, Burwood, Edgecliff, Hunter's Hill, Newtown, North Sydney, and Waverley.

Public telephone offices were established during the year at Bayview, Booral, Bugilbone, Chatswood (Railway Station), Coff's Harbour Jetty, Craigie, Dunbible Creek, Glenoak, Gordon (Railway Station), Guy Fawkes, Hexham, Jingellic, Mortlake, Mount Kembla, Narellan, Pipeclay Creek, Riley's Hill, The Bulga, Wagra, and Warden's Head (Lighthouse).

The office at North Bourke was closed.

ELECTRIC LIGHT BRANCH.

The Electric Lighting plant at the Circular Quay, Parliament House, Cowper Wharf, and the General Post Office has given entire satisfaction during the year, the lights having been maintained throughout with scarcely any interruption.

At the General Post Office the steam plant alluded to in my report for the year 1892 was brought into operation on 15th December last, upon which date the contract with the Electrical Material Company for supplying current to the lamps in Martin-place and the Tower Clock expired.

The engine and boilers, which were manufactured in the Colony, have been constructed and erected in a thoroughly complete manner, in a substantial building (designed and built under the supervision of the Government Architect) at the rear of

of the General Post Office. The engine is of fifty indicated horse-power, compound non-condensing type, fitted with modern valve gear and governor, and is coupled direct to the dynamo, thereby obviating the use of belting, and economising space in the engine-room.

The boilers (2) are of fifty horse-power each, fitted with "Acme feed heater and purifier," also necessary steam pumps and injectors, and are complete in every particular.

The dynamo (built by the Oerlikon Works, Zurich) is of 30,000 Watts capacity, and the main leads from it to the switchboard will be laid underground in a suitable conduit. The switchboard, for the supply of which, including switches, voltmeters, and all other appurtenances, the tender of the Electrical Material Company has been accepted, will be manufactured of marble, and will meet all requirements.

During the year the electric light has been extended to many of the principal rooms in the General Post Office, and the Department has also provided lights at Government House on different occasions. The whole of the lighting of the grounds of the Royal Agricultural Society, Moore Park, for the military tournament held in the month of October, with the object of raising funds in aid of the hospitals, was carried out by the Electric Light Staff of the Telegraph Branch.

Jenolan Caves.

The electric lighting of the Caves has been satisfactory during the year, and further extensions, which will necessitate additions to the existing plant, are being arranged for.

Hydraulic Lifts.

These lifts, since connection was made with the Sydney and Suburban Hydraulic Power Company's high-pressure water supply, have worked well, and are in good condition.

PNEUMATIC TUBES AND AIR COMPRESSOR, &c.

These have been maintained in good order throughout the year. An electric ventilating-fan has been placed in the despatch-room of the Telegraph Branch to improve the defective ventilation, and maintain an even temperature in that portion of the building, which is occupied by a large staff of messengers.

In my Report for the year 1892 I had occasion to allude to the financial depression that had affected New South Wales in common with almost every part of the civilised world. It is to be regretted that the effects of this depression continued to be manifested in the year 1893, as is apparent in the slight decrease of postal revenue and the larger diminution in the electric telegraph receipts. The increased telephonic business and the success of the new features that have only recently been added, such as the parcels post and postal note systems, may be indications of a betterment of conditions of national prosperity being at hand, and I trust that the next Annual Report of the Postmaster-General will contain a full realisation of this anticipation.

I have the honor to be,

Sir,

Your Excellency's most obedient servant,

JOHN KIDD,

Postmaster-General.

Postal and Electric Telegraph Department,
General Post Office, Sydney, 10th July, 1894.

APPENDIX A.

RETURN showing names of Post Offices and Telegraph Stations, Salaries paid, number of Letters posted, Telegrams transmitted, Money Orders issued and paid, Savings Bank Deposits and Withdrawals, Revenue received from each Office, and arrangements regarding premises during the year 1893.
