(SECOND SESSION.)

NEW SOUTH WALES.

NEW SOUTH WALES GOVERNMENT RAILWAYS AND
TRAMWAYS.

(ANNUAL REPORT OF RAILWAY COMMISSIONERS, YEAR ENDING 30TH JUNE, 1894.)

Presented to Parliament, pursuant to Act 51 Vic. No. 35.

Offices of the Railway Commissioners of New South Wales,
Sydney, 3rd August, 1894.

To THE HONORABLE THE MINISTER OF RAILWAYS,—

SIR,

In accordance with the provisions of the 45th clause of the Railways Act of 1888, 51 Vic. No. 35, we have the honor to present, for the information of Parliament, our Annual Report upon the working of the Railways and Tramways for the year ending June 30th, 1894.

GENERAL REMARKS.

The year closed by this Report has been one of exceptional difficulty, owing to the continued commercial depression, and the endeavour, whilst conserving the financial position of the property, to let the retrenchments and reductions fall as lightly as possible upon the staff.

The financial result for the year is as under:—

Total traffic, Railways and Tramways ...	£3,091,735
Total expenditure, Railways and Tramways ...	1,821,125

Net return after paying working expenses... £1,270,610

being an increase in net profit over last year of £20,511, making an accumulated increase in net profits paid into the Treasury during the past six years of £2,212,840.

From this sum must be deducted £225,000, three instalments of £75,000 each, towards paying off the £1,000,000 vote under Act 53 Vic. No. 24, for reconstruction and improvement of rolling-stock and permanent-way, which fell due up to the 31st December last; after deducting this amount the Treasury will still have received £1,987,840 increased net earnings during the past six years.

The

11—A

[1,900 copies—Approximate Cost of Printing (labour and material), £243 4s. 7d.]

2 NEW SOUTH WALES GOVERNMENT RAILWAYS AND TRAMWAYS, 1894-93.

The following tables will show the progress and result of the Railway and Tramway working for the seven years prior to our taking office, and for the period we have had the administration of the property:—

RAILWAYS.

Year.	Length of Line open 30 June, 1894.	TOTAL EARNINGS.	ACCUMULATED INCREASES. TOTAL EARNINGS.	NET EARNINGS after paying Working Expenses.	NET EARNINGS.	Capital expended on Lines open.
1882	Miles.	£		£		£
1882	1,268	1,701,016		763,661		15,843,616
1883	1,320	1,934,694		751,220		16,905,014
1884	1,618	2,089,749		786,010		20,080,138
1885	1,732	2,178,172	INCREASE ON 1882 TRAFFIC, £2,668,164.	717,555	ACCUMULATED DECREASE ON 1882 RESULT, £141,656.	21,831,276
1886	1,889	2,163,803		668,577		24,071,454
1887	2,036	2,212,718		752,375		26,532,122
1888	2,114	2,295,124		764,573		27,722,748
1889	2,171	2,538,477		903,875		29,839,167
1890	2,182	2,633,086		967,251	ACCUMULATED INCREASE	30,555,123
1891	2,182	2,974,421	INCREASE ON 1888 TRAFFIC, £3,223,133.	1,143,050	ON 1888 RESULT, £2,030,021,	31,768,617
1892	2,185	3,107,296		1,193,044	or 62·98 per cent. of the increased gross earnings.	33,312,608
1893	2,351	2,927,056		1,188,540		34,657,571
1894	2,501 $\frac{1}{4}$	2,813,541		1,221,699		35,855,271

RAILWAYS.

Since the last Annual Report was issued the following lines have been opened for traffic :—

			Date of opening.
Cootamundra to Temora	1st September, 1893.
Molong to Forbes	18th December, 1893.
Lismore to Mullumbimby...	15th May, 1894.

Making a total of 2,501½ miles at present in use.

It is expected that the Marrickville-Burwood Road Line will be opened before the end of the year, and that the line from Mullumbimby to Murwillumbah on the Tweed River will be opened about the 1st January next. The opening of these lines will complete the whole of the construction work now in hand in the Colony, and bring the total railway mileage up to 2,531½ miles.

The cost of the lines open for traffic on the 30th of June amounted to £35,855,271.

Debentures of the value of £1,248,975 have been finally paid off.

The revenue derived from working the lines during the year was £2,813,541, and the expenses amounted to £1,591,842, or 56·58 per cent. of the gross revenue, leaving a net revenue of £1,221,699 towards paying interest upon capital, or a return of 3·46 per cent. upon the total cost of the railways open for traffic.

The revenue shows a decrease of £113,515; this is entirely owing to the depression which has been affecting the whole of the Australian Colonies for the past two years, the expenses having however been reduced by £146,674, leaves the net result £33,159 better than last year.

The Coaching traffic is responsible for £68,013 of the reduced earnings, the 1st class Passenger traffic having decreased by £53,002 and the 2nd class by £8,599, and miscellaneous receipts by £6,412. The number of passenger journeys made amounted to 19,265,732, a decrease of 666,971.

The revenue derived from the Goods Department shows an aggregate decrease of £45,502, the main item of decrease being coal and other minerals, £38,380.

The train miles run were 7,169,785, being a decrease of 335,525. This is after providing the necessary train service for the new lines worked during the year.

The earnings per train mile, in the face of the heavy falling off in coaching traffic, show satisfactory results, every mile run having earned 7s. 10½d., as compared with 7s. 9½d. in the preceding year. The expenditure per train mile has decreased from 4s. 7½d. to 4s. 5½d., leaving a net earning of 3s. 5d. as against 3s. 2d. last year, and 2s. 8½d. in 1888, *an increased net profit* upon the 1888 results of 1s. 1½d. per train mile, or a total sum of £403,300 for the year.

WORKING EXPENSES.

The percentage the working expenses bear to the gross revenue shows a decrease of 10 per cent. since 1888. This result has been brought about by a gradual reduction year by year, as will be seen from the following figures:—

Year.	Percentage of working expenses to Gross Earnings.			
1888	66·69
1889	64·39
1890	63·26
1891	61·57
1892	61·60
1893	59·39
1894	56·58

The condition of the rolling-stock, permanent-way, and the property generally, has been considerably improved and increased in value at the same time.

EXCEPTIONAL EXPENDITURE.

During the time we have been in office exceptional expenditure in connection with slip and flood repairs has been incurred in consequence of the unprecedented floods which have been experienced in several districts.

For instance, the floods in the Darling River district by which the town of Bourke was inundated in April and May, 1890, was the most disastrous on record, the line being inundated and seriously damaged for 13 miles; and for over one month communication with the town of Bourke had to be maintained by a service of boats.

In May, 1889, the rainfall was abnormal, and caused serious damage in various directions. In the month of May of that year from 20 to 23 inches of rain fell in four days in many of the coastal districts through which the line passes, and on three occasions between May, 1889, and June, 1890, the traffic on the Northern line was suspended in consequence of the height of the floods in the Hunter River.

In 1893, in the month of March, 11 inches of rain fell in one day in the Hunter River Valley, again causing serious interruption to the traffic, the main Northern line being closed against through traffic for eight days. This flood rose 48 feet above the ordinary river level, and was the highest ever known since the district was settled in 1820. Again, in March of this year, the Hunter River district suffered from floods, 13 inches of rain falling in 11 hours near West Maitland.

Mr. H. C. Russell, C.M.G., Government Astronomer, states that "not only were the five years ending December 31st, 1893, the wettest on record, since rainfall observations have been made (more than 20 years), but the rain was remarkable for its heaviness, and therefore for disastrous floods, which have, in many places, never been equalled since the Colony was founded."

The expenditure incurred in repairing the damage caused by the floods, for the five years 1890-94, amounts to a sum of £140,000.

EARNINGS.

The following table, giving the earnings per mile of railway open, gross and net earnings per train mile, and the total and net earnings for all lines for the past ten years, shows that from 1888 to 1892 the improvement in the property was continuous,

continuous, and that, in spite of the great depression through which the country has been passing for the past two years, the net return to the Treasury has been maintained in those years.

Year.	Year ending	Average miles open during year.	Per Mile open.		Train Miles run.	Earnings per Train Mile.		Total Earnings.	
			Gross Earnings.	Net Earnings.		Gross Earnings.	Net Earnings.	Gross.	Net, after paying working expenses.
1885 ...	Dec..	1,663 $\frac{1}{2}$	£ 1,307	£ 481	6,638,399	s. 6 $\frac{1}{2}$	d. 2 $\frac{1}{4}$	£ 2,178,172	£ 717,555
1886 ...	"	1,790	1,207	373	6,479,265	6 8	2 0 $\frac{1}{4}$	2,163,803	668,577
1887 ...	"	1,935 $\frac{1}{2}$	1,141	388	6,472,107	6 9 $\frac{1}{4}$	2 3 $\frac{3}{4}$	2,212,718	752,875
1888 ...	June..	2,044	1,123	374	6,689,313	6 10 $\frac{1}{4}$	2 3 $\frac{1}{2}$	2,295,124	764,573
1889 ...	June..	2,128	1,193	425	7,641,769	6 7 $\frac{1}{4}$	2 4 $\frac{1}{4}$	2,538,477	903,875
1890 ...	"	2,177	1,210	444	8,008,826	6 6 $\frac{1}{4}$	2 5	2,633,086	967,251
1891 ...	"	2,182	1,363	524	8,410,421	7 1	2 8 $\frac{1}{4}$	2,974,421	1,143,050
1892 ...	"	2,182 $\frac{1}{2}$	1,423	546	8,356,096	7 5 $\frac{1}{4}$	2 10 $\frac{1}{4}$	3,107,296	1,193,044
1893 ...	"	2,316	1,264	514	7,505,310	7 9 $\frac{1}{2}$	3 2	2,927,056	1,188,540
1894 ...	"	2,427 $\frac{1}{2}$	1,159	503	7,169,785	7 10 $\frac{1}{4}$	3 5	2,813,541	1,221,699

It is interesting to note that the earnings of each mile of line open in the year just closed was £1,159, or £36 more than in 1888, yet, in consequence of the more economical administration of the property, £129 per mile additional net profit was paid into the Treasury.

SAFETY APPLIANCES.

The following return will show the progress made in extending the absolute block system of working, and the interlocking of points and signals :—

RETURN showing number of Miles of Line open for Traffic, number of Miles worked under **Absolute Block System**, also Number and Percentage of Places which have or have not Points and Signals Interlocked.

In consequence of the great necessity for economy this work is being dealt with gradually.

The

The fitting up of the goods stock with the Westinghouse quick-acting freight brake has progressed quietly during the year. About 3,000 vehicles are now fitted with the brake or pipe. This provision has added very materially to the safety of working, and has also enabled considerable economy to be effected.

We are pleased to report that the year has been exempt from any purely passenger train accident, the only mishap that has occurred to a train conveying passengers being a slight collision between the mixed train on the Cooma branch and a live stock train at Lake Bathurst watering station on the 28th April last. Slight damage was done to the rolling stock, but no passenger was injured.

RATES.

The question of the rates for the carriage of goods has been brought prominently into notice, through the Press, during the past year, and we deemed it desirable to publish an official communication upon the general question of railway rates; and, appended hereto, page 63, we give a copy of that paper, which explains clearly our views upon the whole matter.

We recognise the necessity for reducing the rates as much as possible, and much has been done in this direction, particularly in respect of the agricultural interests, the returns given on the following page showing that a large proportion of the produce of the soil is carried at about $\frac{1}{2}$ d. per ton per mile, and that 80 per cent. of the total tonnage of all descriptions of traffic carried upon the Railways paid rates varying from .45d. to .88d. per ton per mile. The average rate per ton per mile for all traffic, including merchandise, wool, and live stock, amounting to 1.62d.

Had the traffic of 1893 been carried at the same rates as were in force in 1883, the revenue would have been £300,000 in excess of that realised, and this additional income would have been contributed as follows:—

Grain, flour, &c. £44,000
Coal, coke, and shale ...	12,000
General goods ...	234,000
Miscellaneous classes ...	10,000

This is equal to a reduction of $16\frac{1}{2}$ per cent. on the total goods traffic.

New South Wales, owing to its great extent, and the consequent long distances the produce has to be carried, requires a low tariff, and for many classes of traffic we have adopted a cheap mileage scale for long distances, which practically limits the disadvantage consequent on the longer distance the goods have to be carried to reach their markets and the seaboard. For instance, the rate per ton in 6-ton lots for flour, grain, potatoes, &c., for 300 miles is 14s. per ton, but from 300 to 400 miles the additional rate is only 1s. 3d. per ton, and from 400 to 500 miles 1s. per ton additional only. A somewhat similar principle has been applied in regard to wool, a maximum rate being fixed for a certain distance, and little or no additional charge being made for distances beyond. This may be illustrated by the case of Nyngan (377 miles), the rate being £3 16s. per ton; while to Bourke, 126 miles further,

further, the rate is £4 0s. 3d. per ton, and this rate applies uniformly between that station and Girilambone, a distance of 98 miles. Again, on the Northern line, a common rate for greasy wool applies from Tamworth to Jennings, a distance of 211 miles.

In a revision of the goods rates, in May last, an important alteration in the system of charging when goods are carried in truck loads was made. Hitherto this concession has only applied in regard to general goods for long distance traffic, but the arrangement has now been made of general application to and from all stations over 100 miles, and already has proved of much benefit to storekeepers and others while being of much advantage in the Railway working.

In view of the fact of the volume of our traffic being comparatively small, it is fairly satisfactory to find so large a proportion of the business carried at about $\frac{3}{4}$ d. per ton per mile, when it is borne in mind that an annual loss of about £324,000 per annum has to be provided out of the general revenue of the Railways in connection with the unprofitable lines.

Any considerable development in business in the future will materially assist in reducing the present rates, and if some arrangement could be made for writing down the Railway capital a further opportunity would also be afforded.

The following return will give full particulars of the rates paid by all descriptions of traffic, and the distance each class was conveyed:—

Return of Ton Mileage for Year ending 31st December, 1893.

Description of Traffic.	Total Tons carried.	Total Miles carried.	Average Miles per Ton.	Earnings, exclusive of Terminal Charges.	Earnings per ton per Mile.	Percentage of each class to Total Tonnage.
	tons	miles	miles	£	d.	per cent.
Coal and Shale...	2,031,627	35,955,372	17·69	108,055	·72	57·31

The figures for 1892 shown against the Culcairn-Corowa and Nyngan-Cobar lines are for 3 months and 6 months, ending 31 December, respectively.

The lines from Dubbo to Bourke and Werris Creek to Narrabri now pay working expenses and interest upon their outlay, and are therefore withdrawn from the return.

The foregoing return shows the enormous burden of unprofitable lines which has to be provided for out of the general revenue of the Railways, and points very strongly to the necessity to act with caution in the extension of lines into districts which are unable to support them, unless provision be made for providing the capital from moneys derived from the sale of Crown lands or the districts through which the lines run be called upon to contribute towards any loss that may arise in connection therewith.

It will be observed that the traffic upon the lines in question shows scarcely any expansion ; in the majority of instances in fact a slight falling-off has taken place, the better financial result which has been brought about arising from the reduction effected in the working expenses.

A careful study of the figures will show that nearly every line provides sufficient traffic to pay working expenses ; therefore it is the capital cost that requires to be kept as low as possible, and provided from some other source than Loan moneys. By this means reduced rates could be given, which are so necessary for New South Wales, looking at the long distances over which so much of the produce has to be carried.

The first section of the Lismore-Tweed line, from Lismore to Mullumbimby, a length of 38 miles 57 chains, was opened on the 15th May. The capital expenditure incurred for this section of the line amounts to £476,108 ; but the traffic for the first eight weeks amounted to £561 only.

When reporting upon the proposal for making this line in 1889, we pointed out that it would be a considerable time before the large capital required for its construction would receive a fair return, and we therefore recommended that an exceptional course should be followed in regard to its construction, and that "the railway capital should be credited with one-half the money realised from the sale of the Crown lands sold from the time it was decided to make the railway ;" the Crown lands within a radius of 10 miles of the line aggregating no less than 622,000 acres. We also pointed out that the district, being isolated from the trunk line, could not contribute any additional traffic thereto, and that consequently we felt justified in making this proposal for consideration. This recommendation was not carried out, and the new opening will therefore be a burden of a most onerous character.

We regret that the line from Narrabri to Moree, the making of which we have urged for a number of years, has not yet been carried out. This line would be a considerable feeder to the existing lines, and we strongly recommend its construction as early as possible.

ACCOMMODATION FOR THE TRAFFIC AND CONDITION OF LINES AND ROLLING STOCK.

Ample provision exists for the traffic generally and a largely increased business could be carried without any material increase in the accommodation.

The only additional provision of any importance that will have to be made is in connection with the chilled and frozen meat trade, a considerable development of which is expected. We are taking steps to provide increased rolling stock for the traffic.

The condition of the lines is excellent and the main trunk lines have been so improved in their character that they will now bear comparison with the best lines in the world. We have paid out of Working Expenses for the renewal of 392 miles of road during the last six years as against 152 miles paid for in the fourteen years preceding our taking office, and a reduction in this expenditure will now be possible.

A large proportion of the relaying has been done with 80-lb. steel rails, and these rails have replaced 70-lb. iron rails; ironbark sleepers have been exclusively used for all renewals, and are of heavier scantling and closer spaced than formerly. All the extra cost of this work has been debited to Working Expenses.

All the new rolling stock is of excellent design and gives much increased comfort to passengers. We append to this Report a few illustrations showing the standard Engine, Carriage, and Wagon Stock adopted.

STAFF.

In consequence of the continued contraction of traffic, we decided, instead of reducing the staff to its smallest limits, to extend to other grades of the Service the plan adopted for the workshops, viz., that of placing the men on short time. A considerable proportion of the staff has therefore been working five and five and a half days per week only for some time past. The workshops men were placed on three-quarter time for nearly three months ending 30th June last; but we are pleased to state that from 1st July the shops were again opened for five days per week. The rate of pay of the Wages Staff has not been reduced and the New South Wales Railway men are the best paid in Australasia. Table showing the rates of pay is given on page 28.

The periodical increments in pay to the Adult Staff remain in abeyance, but we have granted all advances to the Junior Staff receiving less than 5s. per day on the wages lists, and less than £70 per annum on the salaried lists.

The following Comparative Statement of the staff employed in the chief offices in October, 1888, when the Commissioners took office and at the present time, will show how largely the administrative expenses have been reduced :—

Particulars.	October, 1888.		June, 1894.	
	Number employed.	Amount per annum.	Number employed.	Amount per annum.
Commissioners' office staff, including Secretary and staff..	50	£ 10,614	21	£ 4,105
Chief Accountant and staff...	48	11,520	42	10,178
Traffic Auditor and staff	67	11,644	65	9,816
Chief Traffic Manager and staff	37	8,411	18	4,203
Chief Mechanical Engineer and staff	32	7,100	23	5,180
Comptroller of Stores and staff	41	7,646	28	4,479
Engineer-in-Chief for Existing Lines and staff, and Divisional Engineer for Metropolitan Division and staff...	72	16,337	44	10,869
Totals	347	78,272	241	48,830
DECREASE	106	24,442

The following figures show the total number of persons employed on the Railways and Tramways, October, 1888, and June, 1894; and also the traffic and mileage dealt with :—

	October, 1888.	June, 1894.
Railways and Tramways (Number employed) ...	11,393	10,351
	30 June, 1888.	30 June, 1894.
Gross traffic for preceding 12 months ...	£2,531,643	£3,091,735
Net profit after paying working expenses... ...	£781,896	£1,270,610
Miles open—Railways	2,114	2,501$\frac{1}{2}$
Do Tramways	38$\frac{1}{2}$	58$\frac{1}{2}$
Total mileage	2,152$\frac{1}{2}$	2,559$\frac{1}{2}$

The Appendices to the Report will give complete information regarding the railway traffic and expenses, and the reports of the Chief Mechanical Engineer and the Engineer-in-Chief for Existing Lines will give details regarding the condition of the rolling stock and lines.

A diagram is also attached showing graphically the most interesting features of the working of the Department.

RESULTS OF THE WORKING.

RAILWAYS.

Year ending 30 June, 1894, compared with 1893 and 1888.

PARTICULARS.	1894.	1893.	1888.
Total spent in construction and equipment	£35,855,271	£34,657,571	£27,722,748

TRAMWAYS.

TRAMWAYS.

On the 30th June, 1893, 49 miles were open for traffic, and during the year the following additional sections have been opened, making a total of $58\frac{1}{2}$ miles on the 30th June, 1894.

		Miles chains.
Open 30th June, 1893	...	49 16

Extensions opened during the year :—

17 July, 1893—Ridge-street to North Sydney Road	0 60	Cable system.
1 Aug., 1893—Lyon's Road to Abbotsford, Five Dock	1 25	Steam motor system.
20 Sept., 1893—Falcon-street to Spit Road, North Sydney	2 13	Electric (overhead wire) system.
23 Dec., 1893—Hunter-street, Newcastle, to the Military Reserve	0 62	
19 Feb., 1894—Denham-street to Bondi Beach	0 45	
19 April, 1894—Union-street, Newcastle, to Mere-wether	1 69	Steam motor system.
19 , , 1894—Hannell-street, Wickham, to Tighe's Hill	1 78	
	58 48	

The cost of the lines opened for traffic is £1,248,986.

The traffic has decreased to the extent of £17,173, and the expenses have been reduced by £4,525, and the percentage return upon the capital invested has fallen from 5·51 per cent. to 4·07.

It is regretted the tramway returns show such a marked decrease. This is principally owing to the depression, which has affected all financial properties during the past year. The lack of continued employment to many who formerly had permanent engagements not only caused them to travel less to and from their work, but also necessitated greater economy by the members of their households, who contributed largely to the tram revenue by travelling during the day. The tramway expenses have been reduced in past years to almost the lowest limits, and therefore it has not been possible during the year terminated by this Report to overtake the serious loss of traffic by curtailing the expenses to a corresponding extent.

It may be mentioned that the total expenditure in connection with the city and suburban trams for the year 1894 was only £206,554, or £8,613 less than in 1884, when the total earnings were £219,942 as against £250,809 last year. The miles of tramway open in the city and suburbs in 1884 amounted to $27\frac{1}{2}$ miles, as against 40 miles 25 chains worked in the year just closed.

The difficulties in the way of continuing good financial results and in giving concessions to the public have been increased considerably by our being burdened with a number of unprofitable lines, and to this question we drew the attention of Parliament in our Report for the quarter ending December, 1892.

The competition to which the trams are exposed by the omnibuses has of late become of a very serious nature, consequent upon the low price of fodder and the low rates of pay and longer hours which obtain for the staff, as compared with those which are operative in connection with the Government Tramways. Another most serious consideration in connection with the omnibus and tramway traffic is the fact that the omnibus owners are free from all contribution towards the maintenance of the roads upon which the omnibuses run; whereas the maintenance of the tram-lines is a most costly item, particularly where the roads are wood-blocked. The expenditure upon relaying of late years has been very heavy, during the last year for 2 miles 23 chains of road (principally wood-blocked), which had to be renewed, no less a sum than £14,753 was expended thereon; and in the year 1892 the expenditure upon 3 miles 15 chains of the same class of road was £20,425; it will be therefore seen how heavily the tramways are handicapped in this respect.

The experience of the tramways, however, in regard to the traffic is not exceptional, as the Sydney Omnibus Company have found that their traffic has been reduced very considerably, and it will be well known how the traffic upon the Melbourne tram-lines has also been reduced. For instance, for the year ending 30th June, 1893, the traffic on the Melbourne trams fell off to the extent of £103,985—equal to about 20 per cent. of the whole revenue, and for the year just closed a further reduction in traffic of £48,382 has taken place.

CONDITION OF EXISTING LINES.

The lines generally are in good order, a considerable sum for relaying and wood-blocking having been spent during the past year. Additional expenditure for similar work has been authorised for the coming year.

ACCOMMODATION FOR THE TRAFFIC.

With the exception of the terminal accommodation in the city, to which we have called attention in our three last Annual Reports, the accommodation for the traffic is sufficient. This question is a most important one and should be decided without further delay.

The working of the Tram-lines in sections is as under:—

CITY AND SUBURBAN LINES.	1894.	1893.	1888.
<i>Length, 40 miles 25 chains.</i>			
Total Cost of Construction and Equipment £954,035	£947,775	£742,555

APPENDIX I.

Report upon the Condition of Lines and Works for the Year ending 30th June, 1894.

New South Wales Government Railways,
Sir, Office of Engineer-in-Chief for Existing Lines, 19 July, 1894.

I have the honor to report for the information of the Railway Commissioners that the whole of the Lines and Works have been well maintained during the past year, and the Lines generally are in excellent running order.

A distance of 60 miles 12 chains has been either completely relaid, reailed, or resleepered; and 166 miles 55 chains have been lifted and reballasted.

A considerable amount of repairs and renewals of fencing has been carried out during the year.

Additional accommodation, consisting of sidings, cattle-yards, platforms, footbridges, shelter-sheds, and other necessary works of a capital nature, has been provided and paid for out of Working Expenses during the past financial year.

Very heavy rains fell in March last, particularly on the Northern Division, where the traffic was interrupted for about two days, owing to the embankment north of Thornton having been washed away. Slight washaways and slips also occurred on the South Coast and other lines.

Improvement of Gradients and Curves.

The improvements of the grades near Glenfield and Colo Vale on the Southern Line, and near Faulconbridge on the Western Line, rendered necessary on account of the frequent breakage of draw-gear at these places, and these near Quirindi on the Northern Line, which will enable engines to haul much heavier loads, are well advanced.

The following extensions have been opened for traffic during the year:—

Railways—

Cootamundra to Temora	1st September, 1893.
Molong to Forbes	18th December, 1893.
Lismore to Mullumbimby	15th May, 1894.

Tramways—

Scott-street Extension, Newcastle	23rd December, 1893.
Newcastle to Tighe's Hill	19th April, 1894.
Newcastle to Merewether	19th April, 1894.

I have, &c.,

WILLIAM T. FOXLEE,

Engineer-in-Chief for Existing Lines.

The Secretary to the Railway Commissioners.

APPENDIX II.

Chief Mechanical Engineer's Report for the year ending June 30th, 1894.

Sir,

Eveleigh, 24 July, 1894.

I have the honor to report, for the information of the Railway Commissioners, that the rolling-stock, machinery, pumping and hydraulic plant, belonging to this Branch have been maintained in good working order. A decrease in the cost of the Branch per train mile executed has occurred.

Locomotives.

One new locomotive and 1 rebuild were constructed in the Eveleigh works, and 363 others have been repaired during the year, 200 of them at Eveleigh, 44 at Newcastle, and the remaining 119 at smaller depôts. 251 of these engines received heavy repairs, and 112 of them had general repairs of a lighter character.

Boilers.

Three new boilers were built in the Eveleigh works, 1 of them for a rebuilt engine, and 2 for new consolidation engines. 264 locomotive boilers were overhauled during the year, 196 of them at Eveleigh, 41 at Newcastle, and the remaining 27 at smaller depôts; 85 of these boilers were internally examined, heavily repaired, refilled with tubes, and returned to engines. Eighty stationary boilers were overhauled; 11 of them received heavy repairs.

Carriages

Carriages and Waggons.

Forty-three new vehicles, consisting of 36 sheep-vans, 5 heavy goods brakes, and 2 bogie horse-boxes, with 60 rebuilds, consisting of 2 bogie sleeping-cars, 6 first-class bogie carriages, 4 second-class bogie carriages, 17 sheep-vans, 13 cattle-vans, 12 goods-wagons, and 6 goods vehicles of various classes were turned out of the Eveleigh shops and charged to working expenses. 1,134 passenger vehicles were thoroughly repaired, 849 of them at the Eveleigh works and the remaining 285 at the Newcastle shops; 338 of these vehicles received heavy repairs. 7,816 wagons and vans passed through the Eveleigh and Newcastle shops during the year; 2,838 of them were heavily repaired. 117 defective axles have been withdrawn from traffic and replaced by stronger ones. 1,699 axle-boxes of defective design have been replaced by standard types.

New Locomotives.

Two imported express compound engines and one consolidation goods engine—built in the Eveleigh shops—have been added to the locomotive stock.

The following brief summary shows the mileage executed and the cost of working the Locomotive Branch during the years 1893 and 1894:—

		1894.	1893.	Increase.	Decrease.
Train miles	7,169,785	7,505,310	335,525
Engine miles	9,586,029	10,154,648	568,619
Revenue...	£2,813,541	£2,927,056	£113,515
Expenditure	£628,511	£676,125	£47,614
Do in per cents. to revenue	22·34	23·10	·76
Cost in pence per train mile	21·039	21·621	·582

The following improvements in rolling stock have been effected between the 1st January, 1889, and the 30th June, 1894:—

54 new boilers fitted to locomotives.

2,483 defective axles replaced by stronger ones.

3,469 defective axle-boxes removed and replaced by standard design.

7,325 vehicles have had stronger draw-gear put into them.

522 wagons have been strengthened and their carrying capacity increased from 4½ to 6 and 7 tons.

169 goods wagons increased in carrying capacity from 6 to 8 tons by having stronger axles put under them.

1,301 vehicles with a carrying capacity of 8,024 tons replaced by wagons capable of carrying 10,543 tons.

133 wagons with spiral springs have been altered, and laminated springs supplied, also new axle-boxes so as to increase their safety.

I have, &c.,

W. THOW,

Chief Mechanical Engineer.

To the Secretary to the Railway Commissioners.

* The differences in the 1893 schedules are owing to Capital works, gratuities to the staff on retirement, and payments to the Civil Service Fund on account of pension allowances being shown separately. The figures for 1888 have been adjusted to the same schedules as are now used for the classification of the expenditure.

A Only a portion of the cost was debited against the Department by the Government Printing Office and Government General Stores in 1888.

THOMAS HALL,
Chief Accountant.

					58	£60	£200	£113/11/-

Every servant, except salaried officers, is granted a day's leave on full pay for each proclaimed public holiday (averaging about twelve days each year). An equivalent in money is allowed if the holidays cannot be taken.

In addition to the above, engine-drivers, firemen, guards, signalmen, and gangers are allowed six good conduct holidays.

Expenses, averaging 3s. per day, are also allowed to drivers, firemen, guards, and all others, when away from their home station.

Lodging-houses, with attendants, are also provided at all the principal depôts, for drivers, firemen, and guards, free of charge.

Station-masters and Officers-in-charge are allowed free houses.

Salaried Staff allowed three weeks' holiday per annum on full pay.

Free passes are also allowed, when on leave, to each member of the staff, including wife and family, not exceeding three persons.

APPENDIX IX.

RETURN of the Total Amount paid for Wages on the different Branches of the Railways during the years ending 30th June, 1894, 1893, and 1888.

Branches.	1894.	1893.	1888.
RAILWAYS:—			
Maintenance Branch	£ 299,767	£ 340,089	£ 394,891
Locomotive	451,037	496,448	431,229
Traffic	236,521	256,145	235,269
TOTAL.....	£ 937,925	1,092,682	1,061,389

NOTE.—Includes all wages paid by the Department, whether on Maintenance or New Works.

APPENDIX X.

STATEMENT of the Staff employed on the Railways and Tramways of New South Wales in June, 1894, as compared with October, 1888.

APPENDIX XXIV.

Report of the Tramway Locomotive Superintendent.

To the Secretary to the Railway Commissioners,—

Sir,

I have the honor, for the information of the Railway Commissioners, to submit the following report of the working of the Locomotive Department, Tramways, for the year ending 30th June, 1894.

The whole of the rolling stock, workshop machinery, and plant has been maintained in thoroughly efficient condition, while, at the same time, continued effort has been made to secure economic working. That considerable success in the latter direction has been achieved will be apparent from the fact that, notwithstanding the additional train service given (56,565 train miles), the working expenses are slightly more than 2d. per train mile less than in the previous year.

SYDNEY CITY AND SUBURBAN LINES.

Locomotive Engines.

The stock has been reduced by 5 engines, transferred to Newcastle and Morpeth lines, the present total being 103. The repairing work executed in the workshops may be classified as follows:—General overhaul, 72; heavy repairs, 88; minor repairs, ranging from two to six days each, 116. Seven new boilers have been built, and 9 more are in process of construction.

Cars, Trucks, &c.

Seven cars have been transferred to Newcastle and Morpeth Lines, while 1 additional car has been received, so that the stock is now 199, as against 205 last year. The repairing work performed represents: Cars completely overhauled and repaired, 109; repaired and partially repainted, 156; while minor repairs—averaging one day each—to 704 vehicles have been executed. One new car for electric traction by accumulators was constructed during the year.

NORTH SHORE CABLE TRAMWAY.

The new engines and plant brought into operation on the opening of the extension of this line to North Sydney Road on the 17th July last, have been working well, and are now in a satisfactory condition. The cable operating the old section which commenced to run on the 4th December, 1892, continued to run smoothly and well until the 7th April of the current year, when it was replaced. This rope has given the best life so far, having been in continuous service for 490 days, during which period 104,539 train miles were run, and, although it was considered prudent to replace it on the date stated, it is intended to again use it on the extension section, where the conditions of surface running and traffic are much lighter than on the first section. It is pleasing to note that the locomotive working expenses of this system are 3d. per train mile less than in the previous year.

NEWCASTLE-PLATTSBURG TRAMWAYS.

To operate the extensions of this system to Merewether and Tighe's Hill, which were opened on the 19th April last, the rolling stock has been increased by four motors and six cars, transferred from the Sydney City and Suburban lines. The engines and cars have been maintained in good order, while the cost of working has been reduced by over 2d. per train mile.

KOGARAH TO SANS SOUCI TRAMWAY.

The rolling stock has been maintained in good order, and the traffic requirements fully met at a material decrease on the expenditure of the previous year.

MORPETH BRANCH LINE.

The Locomotive Branch of this line was placed in my charge on 1st August last, when it was arranged to work the section as a tramway for the future. One motor and one car were transferred from the Sydney lines for the purpose, and under the altered conditions the traffic has been conducted in a most satisfactory manner, notwithstanding that the wool traffic was much heavier than in the previous year, while at the same time a very large decrease in the working expenses has been effected.

MILITARY ROAD ELECTRIC TRAMWAY.

This line was opened on the 20th September, and is being operated by the trolley system, the overhead equipment and cars formerly in use on the Waverley to Randwick section being transferred to this line, while the power is supplied from the engine-house of the North Shore Cable Tramway.

This system is now working very well, but it will be necessary to make early provision for renewals of plant, &c., if the system is to be continued.

GEO. DOWNE,

Locomotive Superintendent.

Randwick, 26th July, 1894.

APPENDIX XXV.

Report of Tramway Engineer.

Tramway Department,
Office of Engineer for Tramways, July, 1894.

To the Secretary to the Railway Commissioners,—

Sir,

I have the honor to submit my annual report, for the information of the Railway Commissioners, on the condition of the Existing Tramways for the year ending 30th June, 1894.

The following extensions have been opened for traffic during the year:—Bondi Aquarium to Bondi Beach, 45 chains, double track; Five Dock to Abbotsford, 1 mile 25 chains, single track; Ridge-street, North Sydney, to Spit Road (electric), 2 miles 11 chains, single track; and the extension of the North Shore cable line from the Power House to Lane Cove Road, 60 chains.

Owing to the sandy formation through which the greater portion of the Bondi Beach line passes, difficulty is experienced in keeping the rails free from sand.

The maintenance on the North Sydney extensions will be light for many years to come, the wear on the rails from the electric and cable cars being slight as compared with the heavy steam motors on the city lines.

The roads are well macadamised throughout, and have been generally well maintained, the chief difficulty being still experienced in keeping in good order those portions which have not yet been relaid with heavier rails. A considerable length of rails on the Botany, Randwick, Waverley, and Glebe Point lines have been turned and respiked during the year.

George-street West, from Regent-street to Newtown Road Junction, a distance of 32 chains, has been relaid and repaved; also that portion of the Newtown line between Forbes-street and Cook's River Junction, a distance of 48 chains. This work has naturally been expensive, the repaving, as well as the relaying, being charged to revenue. Short lengths, aggregating 23 chains, have been relaid on the Waverley line.

The question of improving the present method of fishing the rail joint on the tramways has received special attention. As an experiment, 510 feet of track was laid in King-street, Newtown, without any allowance for expansion; all the rails abutting and held in position by specially-made fish-plates of heavy section, and secured by 1½-inch machine-turned bolts, made a driving fit. The experiment up to the present time has been entirely satisfactory, for, notwithstanding the rails were laid about the middle of November last, they experienced the hot summer months and the cold of May and June without getting out of line or altering the usual expansion allowed at each end of the length laid. It is now difficult to find where the rails butt, and not the slightest jar can be felt by the travelling public.

The North Shore Cable line is in good order, the work of strengthening the slot rails having been extended.

The buildings and waiting-sheds on the Tramways are in good order, ten of the latter having been repaired and painted during the year.

I have, &c.,

G. R. COWDERY,
Engineer for Tramways.

APPENDIX XXVI.

STATEMENT OF ACCOUNT OF THE EXPENDITURE AND REVENUE FOR YEAR 1894, WITH COMPARISONS FOR 1893 AND 1888.

* The line was opened for three and a half months only in 1879, and for part of this period was worked with horse-power.
† Up to the year 1885, 3d. cash fares and 2d. tickets were counted as single fares; from 1886, inclusive, all tickets issued were at 1d. values, and cash fares paid are in this Return calculated at same rate.

APPENDIX XXXIV.

TRAMWAYS.

RETURN of the number and nature of Accidents, and the Injuries to Life and Limb, which occurred on the Tramways from 1st July, 1893, to 30th June, 1894.

Date.	Servants of Department.		Passengers.		Other than Passengers.		Nature of Accident.
	Killed.	Injured.	Killed.	Injured.	Killed.	Injured.	
1893.							
12 July	1	Man attempted to enter a tram in motion. Child ran in front of car.
13 "	1	Man threw himself in front of motor.
26 "	1	Conductor knocked off ear by passing tram.
7 August	1	Conductor injured between car and shed.
12 "	1	Man threw himself in front of motor.
12 September	1	Driver attempted to get off the tram in motion.
19 "	1	Slightly injured—left tram in motion.
17 November	1	Foot crushed—left tram in motion.
25 "	1
1894.							
8 January	1	Cabman slightly injured; cab broke down on line.
23 March	1	Child knocked down by motor.
3 May	1	Child ran in front of motor.
31 "	1	Boy ran in front of motor.
2 June	1	Man jumped out of tram in motion.
3 "	1	Child ran in front of motor.
27 "	1	Child playing rolled under car.

APPENDIX XXXV.

NEW SOUTH WALES GOVERNMENT TRAMWAYS.

RETURN showing the Appointments of Tramway Employés from 1st July, 1893, to 30th June, 1894.

Date.	Name.	Position.	Rate.	Remarks.
1893.				
		TRANWAYS—LOCOMOTIVE BRANCH.		
14 July	Bryant, John G.	Apprentice	10d. per day	Vice E. McNamara.
17 "	Quinn, Timothy	Gripman	7/6 per day	From Permanent-way Branch.
21 "	Earkwell, John	Labourer	6/6 per day	From Railways, vice W. Miranda.
23 "	Teasdale, Charles	Fireman	7/6 per day	From Railways, vice J. Ryan.
1 Aug.	Boag, Charles	Cleaner	7/6 per day	From Railways.
22 "	Doge, Hermann	Cleaner	4/6 per day	Vice A. Timms.
22 "	Day, John	Cleaner	7/6 per day	Vice F. Miller. Exchanged with F. Miller.
7 Oct.	Hippitt, Henry J.	Boy labourer	3/- per day	Vice J. Green.
9 "	Grimble, Arthur H.	Boy labourer	4/- per day	Vice R. Walker.
13 "	Carr, William J.	Labourer	6/6 per day	Vice G. Reynolds.
1 Nov.	Weldon, Albert E.	Shop boy	2/8 per day	Vice C. Aldred.
7 Dec.	Rees, Sidney	Cleaner	5/6 per day	Vice H. W. Robinson.
14 "	Neilan, Thomas	Shop boy	2/- per day	Vice W. Weaver.
14 "	Harding, William	Shop boy	2/- per day	Vice B. Freckleton.
15 "	O'Grady, Edwin	Boy labourer	5/- per day	Vice Isaac Chambers.
1894.				
10 Mar.	Stevenson, William A.	Cleaner	6/- per day	From Railways, vice J. Dowling.
1 April	Camping, Percy	Cleaner	6/- per day	From Railways, vice W. Whitlock.
3 "	Matthews, William	Cleaner	7/6 per day	From Railways, vice E. Crowley.
23 "	Berkely, John A.	Fitter	10/- per day	From Railways, vice H. Pratt.
15 June	M'Cracken, Thomas	Cleaner	5/6 per day	Vice G. H. Weller.
26 "	Spence, John F.	Apprentice	10d. per day	Vice A. McEay.
1893.				
		TRANWAYS—TRAFFIC BRANCH.		
21 Aug.	Kelly, Phillip	Assistant conductor	6/- per day	Vice N. W. Maffey.
21 Sept.	Cockburn, William J.	Assistant conductor	5/- per day	Vice C. Pooley.
16 Dec.	Wood, Thomas A.	Assistant conductor	5/- per day	Vice H. D. Elliott.
1894.				
16 Feb.	Stock, Henry	Junior conductor	5/- per day	From Railways, vice P. Cooper.
19 "	Large, Joseph	Junior conductor	6/- per day	From Railways, vice K. Wilson.
19 "	Campsey, Henry E.	Junior conductor	5/- per day	From Railways, vice G. Scott.
10 Mar.	Mackie, Robert D.	Junior conductor	5/- per day	From Railways, vice L. Lewis.
18 April	Jones, John	Junior conductor	5/- per day	From Railways.
1 May	Clement, David	Clerk	£140 per annum	From Secretary's Branch, vice W. H. Muir.
TRANWAYS—MAINTENANCE BRANCH.				
5 Mar.	Thompson, Theodore	Labourer	7/6 per day	From Railways, vice E. Offwood.

5 Mar.	Offwood, Edward	Labourer	7/6 per day	To Railways.
2 June.	Foster, George	Ganger	12/- per day	Retirement.
11 "	Killeen, Thomas	Labourer	7/6 per day	Deceased.

APPENDIX XXXVII.

[*Paper published in the Sydney Morning Herald and Daily Telegraph on 13th September, 1893, by the Railway Commissioners of New South Wales.*]

Railway Rates.

So many letters have appeared in the press recently in regard to railway rates, and statements have been made from extreme points of the question, that it may be desirable to state generally a few absolute facts, as well as some main principles affecting railway working.

Many statements have been brought into the correspondence in regard to rates in America and the alleged satisfactory financial results to the railway companies of the exceedingly low scale of charges that generally obtain upon the lines.

In order to protect the public in various ways from the actions of individual railways, the Government of the United States created what is known as the Interstate Commerce Commission ; and it will be well to learn from this official source what the financial position of the railway interest really is.

The Commissioners deal in their Annual Reports with the railways of the United States in ten groups—1 to 5 representing all lines on the east side of the Mississippi River, and 6 to 10 representing the railways on the Pacific side of the Mississippi. In dealing with the return upon capital the Commissioners stated in their Report, dated 1st December, 1891, for the fiscal year ending 30th June, 1890 :—

“The total amount of stock issued on railways in the United States “is \$4,409,658,485 (£918,678,851 sterling), of which \$2,811,526,552 “(£585,734,698 sterling), or 63·76 per cent. paid no dividend. In the New “England States 24·58 per cent. of stock paid no dividend ; in the Middle “States 47·27 per cent. of stock paid no dividend ; in Group IX, which “comprises Louisiana, the greater part of Texas and part of New Mexico, “99·99 per cent. of stock paid no dividend ; and in Group X, which com- “prises the States bordering upon the Pacific Ocean and certain States and “Territories adjacent, 83·54 per cent. of stock paid no dividend.”

This official statement effectually disposes of the alleged profitable condition of things in connection with the American railways.

The Pennsylvania Railroad has been referred to to a considerable extent ; but the circumstances of that line are so altogether different from those surrounding New South Wales, that the comparison is of scarcely any value. For instance, the State of Pennsylvania alone in the 1890 Census contained a population of $5\frac{1}{4}$ millions of persons ; but, in addition to its own enormous local business, no less than $39\frac{1}{2}$ million tons of *through* goods traffic—or ten times the whole goods traffic of this Colony—passed over the line. This, as compared with the exceedingly small amount of goods traffic by rail between Brisbane, Melbourne, and Adelaide, is a very striking commentary upon the unwisdom of comparing railways when the local circumstances are unknown.

But now let us look at the different circumstances surrounding railway rates in America and in this Colony. America has a population of $62\frac{1}{2}$ millions of people, and the volume of trade to and from the Atlantic seaboard is immense. New South Wales, at the 1891 Census, had a population, exclusive of aborigines, of 1,123,954, and when we deduct the population of Sydney and suburbs, Newcastle and suburbs, and the purely coastal population which does not use the railways, we have eliminated 504,000 people, leaving 619,954 only, scattered throughout the land.

If we had a few cities like Philadelphia, Washington, Pittsburgh, Chicago, and St. Louis, with populations respectively of 1,046,000, 230,000, 238,000, 1,099,000, and 451,000, situated at Dubbo, Bourke, Hay, Albury, and Tenterfield, and also a considerable agricultural population, our rates could then be very materially lowered.

Again, the average haul per ton of traffic in the United States is 119·72 miles, whereas in New South Wales, for the year 1892, the average haul was 60·64 miles. In consequence of the easier grades and very much more powerful engines in general use in the United States, the average number of tons per train hauled is

175 tons, whereas in New South Wales in 1892 the average was 58 tons only, or about one-third. This tonnage, however, is a considerable improvement over 1888, consequent on the introduction of more powerful engines and other improvements in the working.

Critics of railway rates are very prone to pick out the highest class of rates, and in many instances exceptional ones, for traffic which bears an insignificant proportion to the whole business dealt with, and then, by inference or direct assertion, endeavour to lead the public to believe that the whole business is carried at these exceptional rates. The traffic carried on the New South Wales Railways, however, is worked out so as to show the actual payment made for each mile each ton of many of the classes of goods is carried, the result for 1892 being:—

RETURN of Ton Mileage for Year ending 31st December, 1892.

Description of Traffic.	Total Tons carried.	Total Miles carried.	Average Miles per Ton.	Earnings, exclusive of Terminal Charges.	Earnings per ton per Mile.	Percentage of each class to Total Tonnage.
Coal and Shale...	2,303,299	40,008,075	17·37	123,097	·74	58·63
Firewood ...	193,411	5,077,038	26·25	19,968	·94	4·92
Grain, Flour, &c. ...	184,275	21,757,420	118·07	70,130	·77	4·69
Hay, Straw, and Chaff...	70,362	10,234,835	145·46	25,964	·61	1·79
*Miscellaneous and A Class ... } 370,344	20,113,382	54·31	71,237	·85	9·43	
Wool ...	114,623	32,318,376	281·91	326,457	2·42	2·91
Live Stock ...	146,390	32,274,402	220·46	283,523	2·11	3·73
All other goods...	545,925	76,478,633	140·09	694,848	2·18	13·90
Total ...	3,928,629	238,257,161	60·64	1,615,224	·63	100

* Miscellaneous traffic consists of timber, lime, manures, fruit, vegetables, hides, tobacco leaf, bricks, gravel, drain-pipes, and traffic of a similar nature.

This table shows that the whole of the business done earned an average of 1·63d. per ton per mile, and that 79·46 per cent. of the whole paid an average of 77d. per ton per mile only; that is, out of a total of 3,928,629 tons of traffic conveyed on the lines in 1892, 3,121,691 paid an average rate of a fraction over ¾d. per ton per mile only, the remaining 806,938 tons having paid an average of 2·22d. per ton per mile.

The circumstances surrounding the American traffic are so varied that the average rates dealt with are of little value unless the local circumstances are carefully considered. As bearing upon this point, the following extract from a recent work by a most careful student of railway working—Mr. W. M. Acworth—entitled “The Railways and the Traders,” will be of considerable interest. Mr. Acworth immediately preceding the writing of his book, studied carefully in the States the whole question of rates. He writes:—

“On account of the great extent of territory through which the railways run, and the great variety of conditions, both social and industrial, to which their business must be adjusted an average taken for any class of facts reported for all the railways of the United States has but little meaning. It is typical of nothing in the sense that it is a measure with which corresponding facts for individual cases may be compared.” This very average of $\frac{1}{2}$ d. per mile, for instance, is made up out of an average charge of $\frac{1}{4}$ d. on the New York, Chicago, and St. Louis, and 21d. on the Pittsburg and Castle Shannon. But then the former line is 523 miles long, and carries 800,000,000 tons 1 mile; the latter is 9 miles long, and carries 95,000. Between these two extreme points there are all possible variations. There are roads earning 5d., 10d., and 15d. per ton per mile. Quite considerable systems even have a high average rate.”

Mr.

Mr. Aeworth in the same work gives the following rates as samples of American local charges, and it will be seen from the rates obtained for similar distances on the same class of traffic in New South Wales that, as a matter of fact, the New South Wales rates are, in the majority of instances, lower than in America:—

Miles.	Description.	From—	To—	Per ton.	N.S.W. rate for similar distances.
117	Fruit ...	Cambridge ...	Wilmington ...	s. d. 43 3	12s. 3d.
526	Potatoes ...	Philadelphia ...	Morehead City	33 6	22s. 2d., or 16s. 11d. in 6-ton lots.
40	Grain ...	New York ...	Bedford ...	9 2	4s. 1d.
	Butter ...	" ...	" ...	16 7	7s. 2d. or 15s. 3d. in small quantities.
	Tea ...	" ...	" ...	18 5	24s. 10d.
	Furniture ...	" ...	" ...	73 7	24s. 10d.

In dealing with this question of rate per ton, none of the writers to the papers have referred to, or given any credit for, the material difference between the American ton and the English ton. Are they aware of it?

In regard to the classification of goods and valuable articles of merchandise having to pay higher rates than are applied to goods of great bulk and low value, it may be stated that it has been the practice from the earliest days to make goods of high value pay heavier charges than those of low value. Had this not been the case, seeing that it would not be profitable to carry all the traffic at the minimum rates, business in articles whose bulk or weight was large as compared with their value would have been effectually stopped, and when it comes to be considered that the question of a few pence per ton has no material bearing upon the price at which silks, pictures, tea, coffee, and articles of this kind are retailed, no injustice is inflicted; but the higher rates materially assist the whole country in enabling raw materials necessary in the manufacture of the higher classes of goods and agricultural produce to be carried at rates slightly in excess of the actual cost of working.

The relative value of the service, more than the relative cost of carriage, is the main factor that should influence railway administrators in arranging rates for articles of this sort.

Again, raw materials and commodities, the production of which creates a volume of business of its own, should be given the lowest possible rates consistent with paying for its own movement and contributing something towards the general expenditure. For these reasons the rates for grain and agricultural produce have been materially lowered since the Commissioners took over the control of the railways, until now, for long distances, they are as low as they are in America. The following figures will show the rates at present in force, and the reductions made since 1888:—

AGRICULTURAL PRODUCE.

Grain, Flour, Meal, Potatoes, and other articles of the same class.

Miles.	1888. Up Journey.		1893. Up Journey.	
	Per ton.	In Truck Loads. Per ton.	Per ton.	Per ton in 6-ton Truck Loads.
100	s. d. 9 9	s. d. 9 9	s. d. 9 0	s. d. 8 4
200	16 10	14 6½	14 6	11 8
300	21 10	18 9½	18 6	14 0
500	31 10	25 8	21 6	16 3
1,000	56 10	28 2	22 11

The mining industry is also one which creates a valuable traffic, and the lower the rates for ore and coke for smelting the greater the business is likely to be. The rates for these classes of traffic have been largely reduced and stand as under:—

ORES.

In 1888 ores were carried at various rates, from miscellaneous to third class, according to value. The comparative rates per ton for ore, and also coke, are as follows :—

ORES.							COKE.	
1888.			1893. At per ton in Truck Loads.				1888.	1893.
Miles.	Miscellaneous	3rd Class.	5 Tons and over. Per ton.	20 Trucks per week.	30 Trucks per week.	Over 30 Trucks per week.	Per ton.	Per ton in Truck Loads.
100	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
	8 4	58 7	8 4	4 6	4 2	3 10	13 0	8 4
200	15 8	108 2	15 8	9 0	8 4	7 8	21 4	13 1
300	20 10	143 2	20 10	13 6	12 6	11 5	29 8	16 11

The fruit industry, also, looking at the low prices obtained for the produce, requires encouragement. Suitable vans for its conveyance have been constructed, and the traffic is carried on at the following rates :—

Miles.						Per ton. s. d.
50	6 0
100	10 10
200	18 8
300	24 2

The dairying industry also holds an important position; and here again facilities have been afforded, and the following reduced rates are in operation:—

DAIRY PRODUCE.

1888.		1893.		
Miles.	1 Ton and over. Per ton.	Small lots under 1 ton. Per ton.	1 Ton and over. Per ton.	Small lots under 1 ton. Per ton.
50	s. d. 17 8	s. d. 21 7	s. d. 8 10	s. d. 18 9
100	34 4	42 5	17 2	36 3
200	62 8	77 10	31 4	66 0
300	82 8	102 10	41 4	87 0

The rates for parcels by passenger trains have been materially reduced, as shown by the following table:—

Weight.	50 miles.		150 miles.		300 Miles.		1893. Maximum rate for any distance.
	1888.	1893.	1888.	1893.	1888.	1893.	
3 lb. and under	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
	0 4	0 3	0 9	0 6	1 5	1 0	1 6
7 to 14 lb.	0 11	0 6	2 1	1 0	3 10	1 9	2 6
28 to 56 lb.	1 7	1 0	3 5	2 6	6 8	4 0	6 0
98 to 112 lb.	2 2	1 9	5 6	5 0	9 8	7 3	11 0

These are the directions in which low rates may be expected to fructify, and it is to these objects the efforts of the Commissioners have been specially directed, as well as to making a better financial return; but in bringing about the much-improved financial position of the railways, they have not lost sight of the necessity for cheapening the means of communication, as not only have the foregoing rates been reduced, but the higher rates have also been materially lowered. Large numbers of articles have been reduced to a lower class, and the 4th class rates, which were formerly as high as 9d. per ton per mile have been abolished altogether, making the 3rd class now the maximum rate.

The suburban fares in the Sydney district have been extended, and a reduced scale of rates for suburban passenger traffic in the Newcastle district adopted. Cheap excursion trains have now for several years been run throughout the colonies at periodical intervals, and by this means passengers can travel 2nd class as far as Albury and back, a distance of 772 miles, for 25s., or to Bourke and return, a distance of 1,006 miles, for 35s.

As has been shown, the rates for agricultural produce have been made especially low in consequence of the settlement that the cultivation of the land induces, and owing to the fact that unless exceedingly low rates were adopted for the outlying districts it would be impossible to raise grain in districts at long distances from the seaboard. The following rough estimate of the value to the railways of 10,000 acres of land under cultivation, as against 10,000 acres of land employed for running sheep, will strongly illustrate this point.

A distance of 300 miles from Sydney has been adopted in each case.

Agricultural Result.

The average yield over the whole Colony for the past three years has been $12\frac{1}{3}$ bushels per acre.

	Freight.
Which gives 3,304 tons, @ 14/- per ton ...	£2,312 16 0
Carriage of wheat bags =	84 14 8
Machinery and implements of all kinds, binder twine, &c., materials for repairs, &c. ...	350 0 0
Rations, clothing, &c., for one man for every 100 acres = 100 men ...	398 0 0
[No allowance made for families, nor for travelling upon the Railways, which would be a fair additional revenue.]	
	<hr/>
	£3,145 10 8

If the crop were reaped and the straw sent to market a large additional revenue would result.

Pastoral Result.

Average for the whole Colony gives one sheep to $2\frac{1}{2}$ acres = 11 tons of wool, @ 72/- ($5\frac{1}{2}$ lb. per sheep) ...	£39 12 0
Increase of the flock to be reduced by 25% each year, by trucking to market or by boiling down (say) 600 sheep trucked, and 525 boiled down ...	44 4 4
Wool-packs, rations for one man to every 4,000 sheep continuously, and two men for 14 days per 1,000 sheep at shearing time ...	6 13 0
	<hr/>
	£90 9 4

In this instance a higher average is adopted for the stock sent by rail than is found to be the usual result. No proper estimate can be arrived at in regard to materials for improvements required in the future, as the requirements in this respect will now be comparatively small, owing to the majority of the runs having completed their fencing, &c., maintenance supplies only in future being required. Allowing £20 per annum for each 10,000 acres for material of this kind, an occasional wool-press, &c., it gives a total revenue of £110 per 10,000 acres, against £3,145 per 10,000 acres, under crop.

In

In addition to the enormous disadvantages these lines labour under owing to the great amount of severe grades, we have the very great disadvantage of a large proportion of our business being "unbalanced"—that is, empty trucks have to be hauled to a very large extent in one direction—so practically reducing the earning powers of the train mileage by one half.

One great feature in American railroad working which has had an enormous effect in enabling companies to reduce their rates has been the adoption throughout the country, to a great extent, of sending traffic in truck loads, in the same way as has been in operation for a considerable time with the competitive traffic of the Darling, Riverina, and other districts. If our customers would combine together with their fruit and other business and consign full truck loads of traffic, it would economise the working expenses of the railways and it could be made to work very much to the personal advantage of those using the railways.

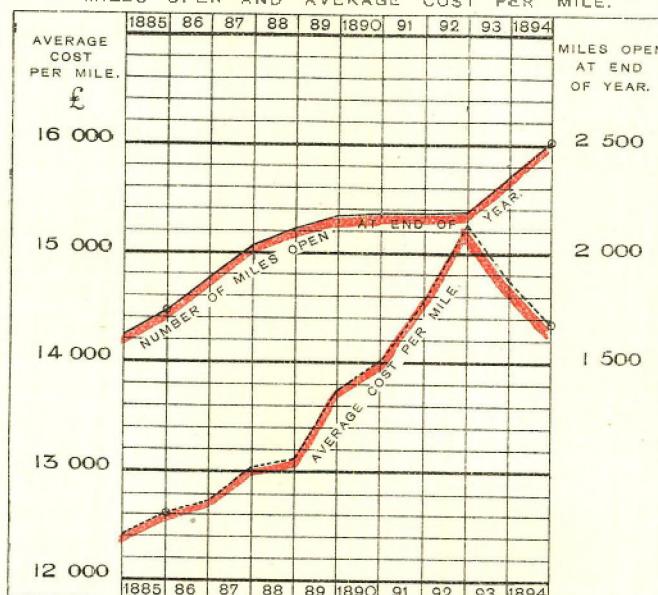

The Commissioners realise most keenly the great importance to the country of cheap railway transit, and all economies in working effected by them assist in this direction. The reduction of the working expenses from 66·69 of the gross revenue in 1888 to 59·39 for the year ending 30th June last represents a sum of £213,675, which sum would have had to be provided out of the general taxation, or by increased railway rates, had this reduced cost of working not have been effected. It must also be borne in mind that the property has been enhanced in value out of working expenses, and the services much improved during the same period.

What is wanted is volume of traffic, which can only be obtained in connection with increased population and the greater development of the land. If on a large proportion of our railway lines, instead of running trains once a day and on some only three days a week, we had trains running five or six times a day each way, even at our lowest existing rates, it would add largely to the net earnings and so assist to reduce all rates; but in reducing rates a cautious policy is required, and not a reckless one, as suggested by some of the writers to the papers; but it must be admitted from a study of the foregoing figures that the Commissioners have not been unmindful of the question of cheapening conveyance of both goods and passengers.

PULLMAN VESTIBULE SLEEPING CAR (EXTERIOR), DESIGNED 1891.—N.S.W. GOVT. RAILWAYS.

	ft. in.
Length of body	61 0
Length over platforms	67 8
Width	9 4
Height from floor to ceiling in centre of lantern roof	9 0 $\frac{1}{2}$

The interior is divided into a smoking-room, with lavatories, &c., a main sleeping compartment (in which there are 24 berths), and a ladies' saloon containing 4 berths. It accommodates during the night 28 persons in all, and during the day has seating capacity for 58 persons. These vehicles are fitted with what is known as "Vestibule" ends, through which communication is made from one car to another.

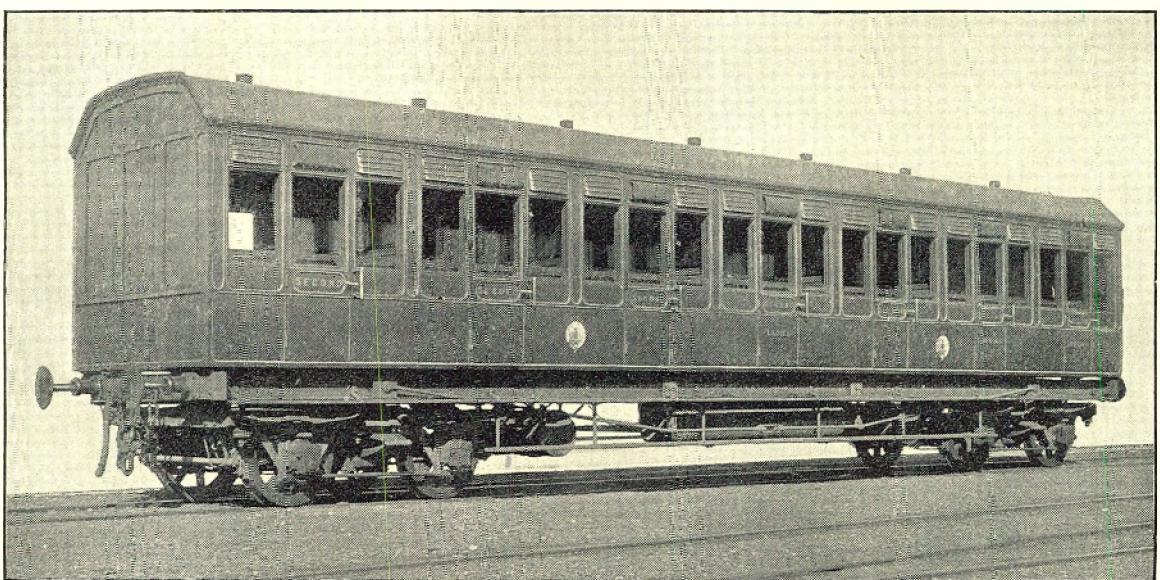

Tare, 35 tons 10 cwt.

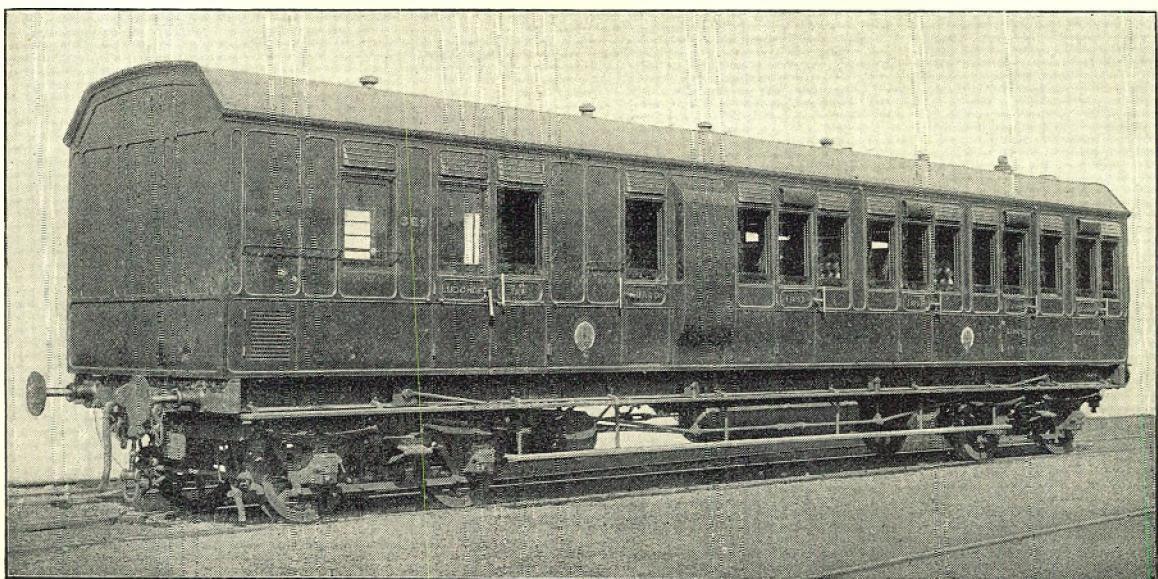

PULLMAN SLEEPING CAR (INTERIOR).—N.S.W. GOVT. RAILWAYS.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

NEW SOUTH WALES GOVERNMENT RAILWAYS AND TRAMWAYS.

(SUPPLEMENT TO THE RAILWAY COMMISSIONERS' ANNUAL REPORTS ON.)

Ordered by the Legislative Assembly to be printed, 20 November, 1894.

SUPPLEMENT to the Railway Commissioners' Annual Reports, giving a short review of the Policy adopted by the Commissioners in administering the Railways and Tramways.

Offices of the Railway Commissioners of New South Wales,
Sydney, 19th November, 1894.

To THE HONORABLE THE MINISTER FOR RAILWAYS,—

Sir,

In view of the fact that we have now entered upon the last year of the first term of office under the "Government Railways Act of 1888," we deem it right to supplement our Annual Reports with a short review of the policy adopted by us in our administration of the Railways and Tramways, and to summarise the result of the same, in order that it may be placed before Parliament and the country.

The lines and rolling stock and the organisation and discipline of the staff are such as to place the Railways of New South Wales in the first rank of the Railways of Australasia, and we have to express our appreciation of the assistance rendered by the officers and men in bringing about this high state of efficiency. We hope that the *esprit de corps*, which at present animates the whole Service, may be continued and increased, and lead to still further progress in the future.

We propose to deal, under separate heads, with the various questions of policy, and the working of the various Departments, and then show the general financial result.

MAINTENANCE

MAINTENANCE OF PERMANENT-WAY.

The policy followed by us throughout the whole period of our administration, of raising the character of the lines by using for all renewals the finest ironbark sleepers obtainable, increasing the weight per yard and length of steel rail, and ballasting with bluestone or other hard rock material, has enabled considerable economy to be effected in the fettling staff. We have supplied every ganger of fettlers with a tricycle to enable him to move speedily over his section, and also equipped the gangs over a considerable portion of the lines with a new description of light hand car, to enable them to move rapidly with their materials from point to point. By the aid of these facilities, with a largely reduced staff, equally efficient service in the maintenance has been obtained. The number of Inspectors of the permanent-way and works has been largely reduced; at the same time, it would be impossible to have a more efficient inspection than is now obtained, nor a better staff of inspecting officers. The total number of Permanent-way and Works Inspectors of all descriptions now employed is thirty-five as against fifty-eight in 1888. The total number of fettlers and labourers amounts to 1,610, at an annual cost of £187,604, as against 2,218, at an annual cost of £255,090, showing a saving of 608 men and £67,486 per annum as against the 1888 expenditure.

With regard to the renewals and improvement of the permanent-way for the *six years*, November, 1888, to October, 1894, inclusive, we have paid for 400 miles of relaying, costing £422,160, as against 123 miles, costing £135,700, for the *six previous years*. There have also been used 930,000 tons of ballast, principally blue metal.

During the past six years 720,000 of the highest class ironbark sleepers have been used. On 143 miles of line the sleepers have been respaced and brought closer together, so as to admit of the using of more powerful engines.

Many timber bridges have been renewed and replaced by iron and brick structures, and this work should be continued gradually as renewals are required, and so materially reduce the maintenance expenses, the ravages of the white ant being so serious with wooden structures in this country.

In connection with the reballasting, the work has been much cheapened in consequence of our having purchased the right to use Rodgers' Patent Hoppers and Ballast Ploughs. With single lines it is difficult at all times to obtain sufficient intervals of time for permanent-way trains to stop in the sections for work, and therefore everything that can be done to minimise the time of trains in the sections is of great importance in connection with the locomotive expenses, as well as in the saving of time of the large gang of men employed therewith. The value of the arrangement will, therefore, be seen when it is stated that 72 cubic yards of ballast can be unloaded and spread over 250 yards of railway in five minutes, by employing two men. Under the ordinary system the same work would occupy twenty-four men about $1\frac{1}{4}$ to $1\frac{1}{2}$ hours.

The acquisition of several quarries for ballasting purposes has greatly cheapened the supply of ballast, and will be of great service in the future maintenance.

CHEAPENING OF THE CONSTRUCTION OF NEW LINES.

Under clause 28 of the Government Railways Act of 1888 it is enacted that: The Commissioners shall be the authority to decide on the position, character, and suitableness of all stations, station-platforms, gate-houses, station-yards, sheds, piers, wharves, jetties, required for or in connection with any railway hereafter to be constructed, and although such railway may not be constructed by them, or of any other building, siding, platform, or work for the accommodation of the passengers, stock, or goods to be carried on such railway.

Under

Under this clause great economy has been introduced. As an illustration : The cost of station buildings for the Wagga Wagga and Albury, and Wallerawang and Mudgee Lines, covering a mileage of 162 miles, amounted to £135,336. For the following lines opened since the Commissioners controlled this class of work, viz., Cootamundra to Temora, Nyngan to Cobar, Kiama to Nowra, Culcairn to Corowa, Molong-Parkes and Forbes, a total length of 263 miles, the same class of accommodation has cost £48,656, and everything that can be reasonably required by the public has been provided. In addition to the reduction in the capital expenditure, there is also the continual after expenditure in maintaining the buildings to be considered.

For the Lismore-Tweed line we decided not to have platforms, and simple shelter accommodation for the passengers only was provided, and the same system will be adopted for the proposed Moree line.

The rates for the conveyance of materials for the construction of new lines have also been considerably reduced, and the total amount paid for carriage by the Public Works Department in connection with the construction of 350 miles of railway has been £41,000. Had the rates which were applicable for this material prior to 1888 been charged, a sum of £131,000 would have been paid for carriage, and the capital of the lines increased by £90,000.

We have for some years past urged that for new extensions in purely pastoral and level country, where the traffic would be exceedingly light, a line capable of carrying a light locomotive, with the ordinary class of rolling stock, at a speed of about 15 miles per hour, in daylight only, could be constructed, exclusive of bridges, waterways, and station accommodation—which latter should be of the most simple nature—for about £1,750 per mile. This could only be considered a "pioneer railway," and would be altogether different from a standard railway line even of light construction, such as that from Nyngan to Cobar. It would be simply a line to carry traffic with reasonable speed at a lower scale of charge than it is now carried by road. The rates for such lines, on whatever scale fixed, would bring about a material saving to the users of it as compared with what is paid for the carriage by road, and the scale of charges should be such as to avoid any material loss to the country in connection therewith. Lines of this character would avoid the great disadvantage of break of gauge ; they would cost scarcely anything more in the first instance than a narrow gauge line ; and the whole of the ordinary rolling stock, exclusive of engines, which could be selected from the lightest types existing in the service, could pass over them and thus avoid the great disadvantage and cost of creating a new class of rolling stock.

These lines, if constructed in districts warranting railway communication, should not be any great burden to the country. We have shown in our Annual Reports, in connection with a number of unprofitable lines made in the past of the expensive type, they, with scarcely an exception, supply sufficient earnings to pay all working expenses and to contribute a small amount towards the interest on the cost of construction, thus showing the great importance of keeping the capital cost as low as possible. If this is effected all the contingent advantages of the pioneer lines collecting business for the parent lines would be secured in return for a small contribution from the parent system for interest on capital. The settlers would then have the great facility of moving their produce and stock cheaply and promptly.

We would like it to be clearly understood that in making this recommendation we do not wish to see any undue extension of lines ; the altered policy is simply brought forward for the purpose of keeping down the capital cost. We would also again bring under notice the recommendations we have made from time to time regarding land required in connection with proposed new lines.

GRADES AND HAULING POWER.

The question of grades is a most important one in connection with the economical working of railways, and consequently all those who use railways are very closely interested in the subject, as well as its nearly allied neighbour, the power of the locomotive employed to work the traffic.

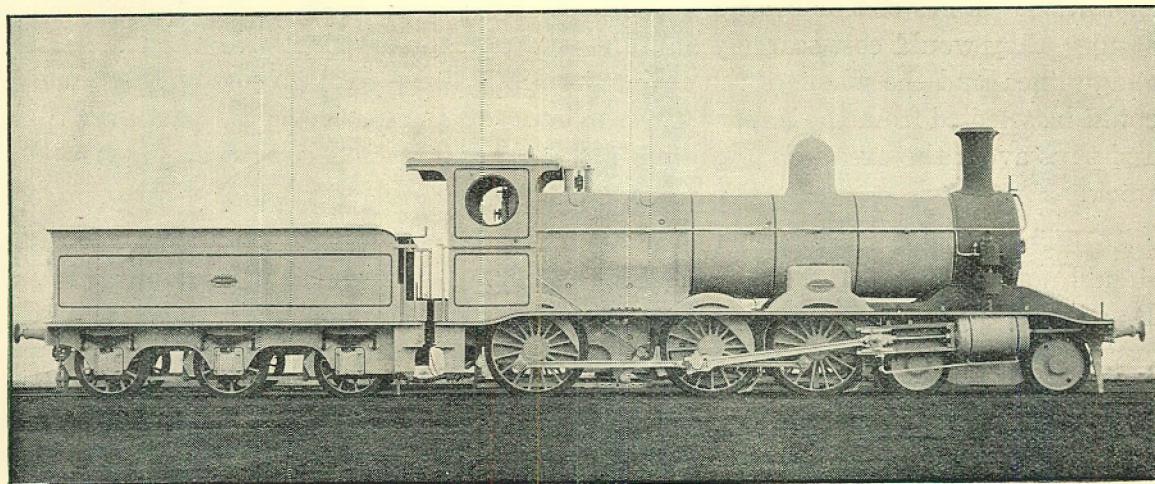

Immediately we took office, in 1888, these subjects engaged our attention, as we found the lines were most exceptional in their character, having been constructed with an enormous proportion of steep gradients (631 miles of grades, varying from 1 in 30 to 1 in 75), the worst grades being on the trunk lines, and so situated that the whole volume of traffic had to pass over them. We, therefore, decided upon reducing some of the steep gradients which interfered with the loading of trains over long sections, and also to introduce more powerful locomotives.

By these means, great economy in the working, as well as the expediting of traffic have been effected, and from a recent careful computation it is estimated that the *saving per annum* at present being realised—and which will continue for all time—is a sum of more than £100,000; and, of course, as the traffic increases in volume so will this annual saving be increased.

The saving in train and assistant engine mileage for the current year, taking the haulage power of 1888 for comparison, is 900,000 miles.

Another important point in connection with the introduction of long trains, consequent on this altered policy, seeing that nearly 2,400 miles of our railways are single lines, is that the largely reduced number of trains necessary to convey the traffic under the altered state of things will postpone for years to come the duplication of lines that would have been necessary, at an enormous expense, under the old system.

The following are illustrations of two of the most powerful types of engines we have had built, the introduction of which have been so advantageous in the carrying out of this new policy.

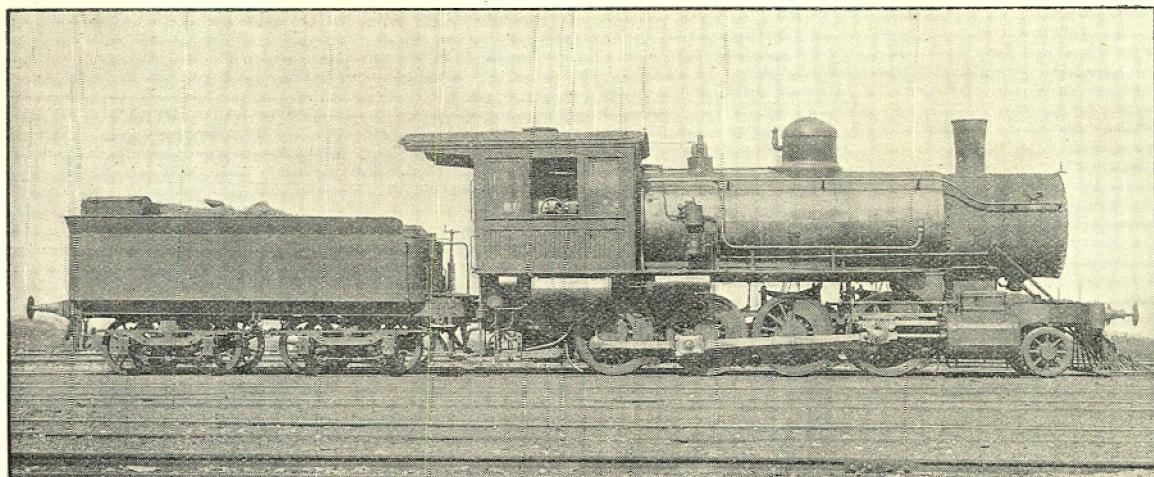

"A" EXPRESS AND MAIL TRAIN ENGINE (DESIGNED 1890)—N.S.W. GOVT. RAILWAYS.

Heating surface: Tubes	1,800 square feet.	Driving	15 9	0
Firebox	138 "	Trailing	13 15	0
Total	1,967 square feet.			
Total grate area	32 "	Water capacity, 3,650 gallons.	Total	62 12 2
Boiler pressure, 160 lb. per square inch.	"	Coal	Tender	34 10 2
			Total engine and tender	97 3 0

The illustration given below is of what we shall designate the Australian Consolidation Engine, and represents a type which has just been designed, and will, we believe, be one of the most satisfactory engines for goods train working on lines with heavy grades ever constructed, as it embodies the careful combination of all the best qualities of the American and English locomotives. We have been able to effect this result, as a large number of engines of both classes have been in use on these lines for many years, and our Locomotive Officers have consequently been able to study and appreciate the relative qualities of both types under all conditions.

AUSTRALIAN CONSOLIDATION ENGINE (DESIGNED 1894)—N.S.W. GOVT. RAILWAYS.

	ft. in.	Weight in working order:-		
		t.	c.	q.
Diameter of bogie-wheels	2 9 $\frac{1}{2}$	Bogie (two wheels)	6 0	0
Diameter of coupled wheels	4 3	Leading wheels (coupled)	13 15	0
Cylinders 21 inches diameter by 26 inches stroke.		Intermediate wheels (coupled)	14 4	0
Heating surface: Tubes	2,045 square feet.	Driving	14 12	0
Firebox	166 "	Trailing	14 4	0
Total	2,211 square feet.			
Total grate area	29 $\frac{1}{2}$	Water capacity, 3,650 gallons.	Total	62 15 0
Boiler pressure, 160lb. per square inch.	"	Coal	Tender	41 0 0
			Total engine and tender	103 15 0

The two questions of grades and hauling power will be easily understood by an examination of the following figures :—

Grade.	10-WHEELED ENGINE—ILLUSTRATION "A."				CONSOLIDATION GOODS ENGINE—ILLUSTRATION "B."	
	WORKING PASSENGER TRAINS.		WORKING GOODS TRAINS.		WORKING GOODS TRAINS.	
	Tons hauled.	Speed per hour.	Tons hauled.	Speed per hour.	Tons hauled.	Speed per hour.
1 in 40	225	20 miles	275	10 miles	350	10 miles
1 in 75	260	30 "	505	12 "	580	12 "
1 in 100	255	35 "	600	15 "	620	15 "
1 in 150	330	35 "	700	18 "	650	18 "

It will therefore be seen from the first set of figures that the same engine can work a passenger train weighing 255 tons over a grade of 1 in 100 at 35 miles per hour, or weighing 330 tons over a grade of 1 in 150 at the same speed ; whilst on a grade of 1 in 40, which is the ruling grade on the main lines of the Colony, a train of 225 tons only can be taken at the low speed of 20 miles per hour.

When this same engine is put to haul a goods or live-stock train on a grade of 1 in 40, it can only take 275 tons at 10 miles per hour ; but on a grade of 1 in 100 it can take a train of 600 tons at 15 miles per hour ; or on a grade of 1 in 150 a train of 700 tons at a speed of 18 miles per hour.

Coming to a purely goods engine the American Consolidation Engine (illustration B) can haul a train of 350 tons on a grade of 1 in 40 at 10 miles per hour, 620 tons on a grade of 1 in 100 at 15 miles per hour, and 650 tons on a grade of 1 in 150 at a speed of 18 miles per hour.

The Australian Consolidation Goods Engine will haul the following loads :—

Grades.	Tons hauled.	Speed per hour.
1 in 40	350	10 miles.
1 in 75	615	12 "
1 in 100	700	15 "
1 in 150	750	18 "

In 1891 the powerful engines first began to work, and since that date the gross and net earnings per train mile have been largely increased, as will be seen by the following figures :—

	Gross Earnings.	Net Earnings.
Year ending June, 1890 ...	6s. 6 $\frac{3}{4}$ d.	2s. 5d.
" 1894 ...	7s. 10 $\frac{1}{4}$ d.	3s. 5d.

This 1s. increased net result represents, on the mileage run in 1894, a sum of £358,489 ; and the aggregate in the net result for the years 1891, 1892, 1893, and 1894 amounts to no less a sum than £954,141. This has been also contributed to by the improved carrying power of the wagons, improved loading, and general changes in working.

A great many 8 and 10 chain reverse curves existed, particularly on the Blue Mountains, and caused much discomfort to passengers, and materially restricted the speed of trains. Some of these curves have been cut out, and easier ones substituted. Illustrations of what has been done are given on page 36. This work should be continued gradually, and so materially increase the comfort of passengers, and enable increased speed and safety to be obtained.

Diagrams of the grades which have been altered are given in the appendices, pages 32 to 35.

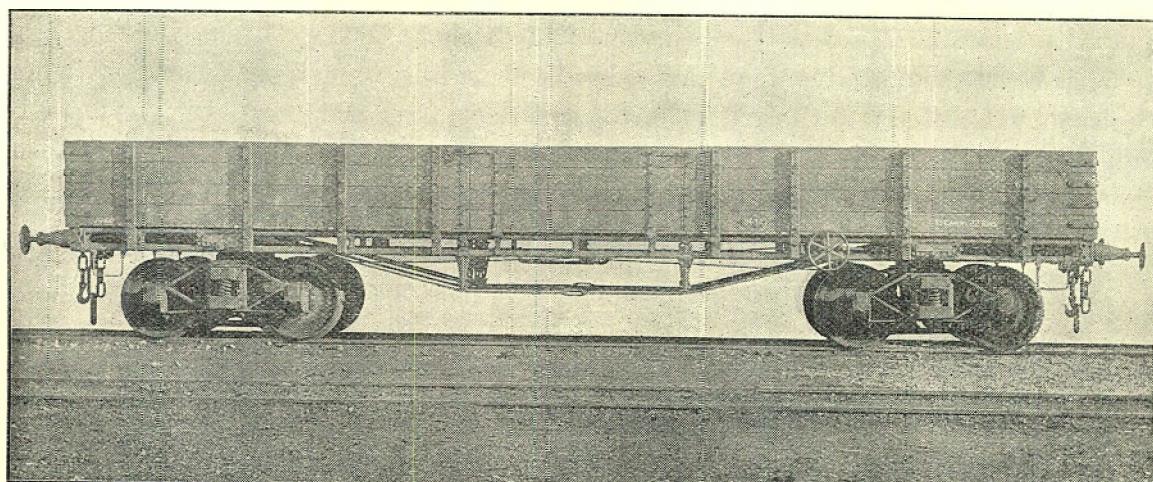

GOODS ROLLING STOCK.

We found that a very large number of wagons existed which, in consequence of having weak axles, and from other causes, were unable to carry more than $4\frac{1}{2}$, 5, and 6 tons. It became necessary therefore, for the sake of economical working, to remedy this state of things, and this was done by exchanging axles and strengthening various parts, the carrying capacity being thereby largely increased ; and we also introduced a considerable number of bogie wagons capable of carrying large quantities of goods with a minimum of dead weight.

Considerable controversy has been going on in various parts of the world regarding the use of wagons of large carrying capacity *versus* four-wheeled wagons of the ordinary kind. As a general rule the advocates of each system, without a thorough knowledge of the circumstances surrounding the opposite side of the question, have gone to extremes in advocating their views.

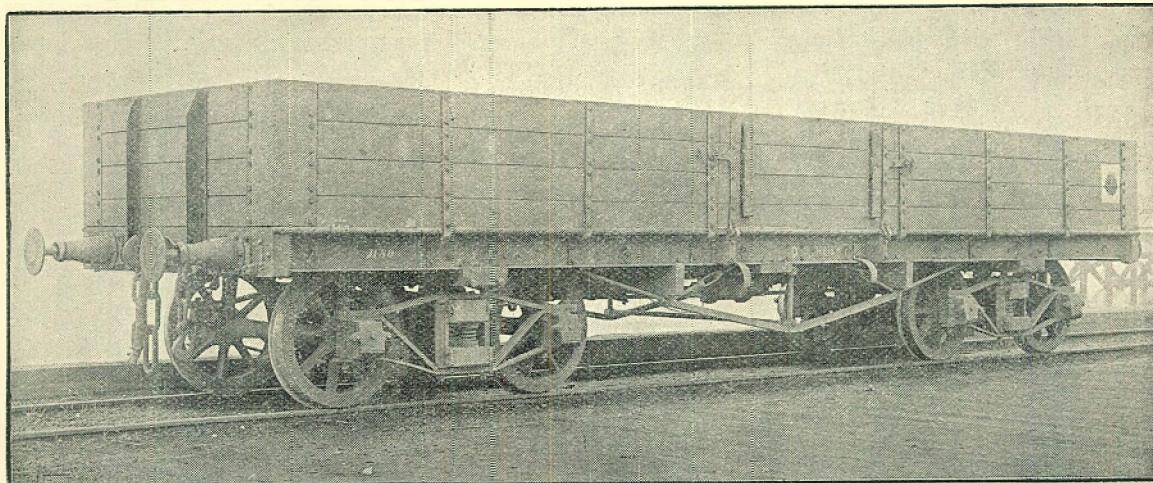

In our opinion neither system can be adopted advantageously in its entirety, but by introducing a considerable number of trucks of large carrying capacity, and increasing the carrying power of the ordinary 4-wheeled trucks, the maximum amount of economy can be obtained.

The following illustrations of standard bogie trucks which we have introduced, and the ordinary goods wagon which is now the standard for all renewals of wagons of this type, will show the direction in which we have been moving.

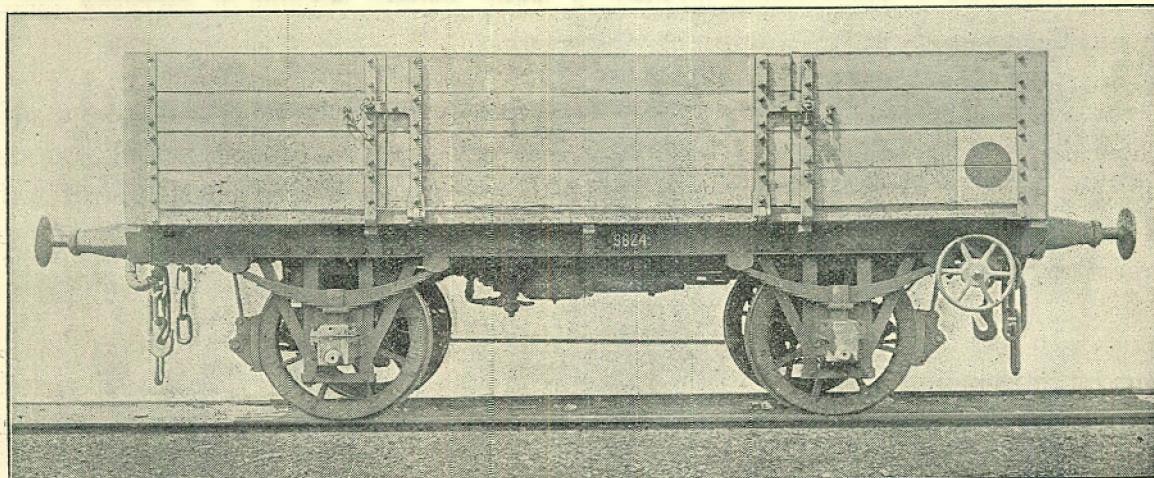

TUBULAR WAGON (DESIGNED, 1890)—N.S.W. GOVT. RAILWAYS.

	ft.	in.
Length of body (outside) ...	34	8
Length over buffers ...	33	4
Width (outside) ...	8	0
Height of body (inside) ...	2	9
Capacity ...	22	tons.
Tare ...	10	tons.

IRON UNDER FRAME BOGIE WAGON (DESIGNED, 1892)—N.S.W. GOVT. RAILWAYS.

Length of body (outside) ...	ft. in.	Width (outside) ...	ft. in.	Capacity tons.

Length of body (outside) ...	ft. in.	Width (outside) ...	ft. in.	Capacity tons.
Length over buffers ...	16 0	Height of body (inside)	8 8½	Tare ...	5 tons 16 cwt.
	19 8		9 9		

In addition to the advantages obtained of being able to convey a given quantity of traffic in fewer trucks and with less "dead" or "non-paying" weight, there is an enormous advantage gained by the economising of space at stations where the room is limited and the extension of the accommodation would be very costly, and this will be readily seen when it is stated that at the height of the wool season there are unloaded in the Sydney wool-shed from 6,000 to 10,000 bales per day.

With the old description of wagons, 175 would have been required to carry 4,725 bales; these wagons would have had a "tare" or "dead weight" of 787 tons, and required a standing space of 3,150 feet. As against this, 50 tubular wagons, requiring a standing space of 1,900 feet only, and with a tare of 500 tons, would do the whole of the same business.

The working of the two systems in conjunction, admits of the greatest advantage being obtained, as for traffic in bulk, such as wool, agricultural produce, and for running between points having large consignments of goods of various kinds, the large trucks are advantageous in every way; but for general miscellaneous working the 4-wheeled wagons, constructed to carry the largest possible load with the minimum of dead weight, is the best form of vehicle to adopt. A

A few bogie wagons have also been built for the conveyance of live stock traffic; and as it is found that the stock suffers less in transit in them than is the case in the short four-wheeled vehicles, it is proposed to increase the number when renewals are necessary.

For the repairs and renewals of locomotives, carriages, and wagons, there has been paid out of working expenses for the six years ending June last a sum of £1,749,000, as against a sum of £1,016,000 for the six previous years, being an increased sum of £733,000 in restoring the rolling stock to an efficient condition.

TRAFFIC DEPARTMENT.

The facilities for conducting the traffic have been materially improved and enlarged. The greatest improvements have been effected in connection with—

- (a) The quadrupling of the suburban lines.
- (b) The putting in of a curve from the Northern line to the main suburban line at Homebush, so as to enable the heavy stock traffic from the North to be transferred with facility to the stock-yards at Flemington.
- (c) The duplication of lines to the extent of 96 miles of single line.
- (d) The providing of a cover shed for agricultural produce at the Redfern Station, capable of holding 87 wagons; an outwards goods-shed, fitted with hydraulic cranes, at Darling Harbour, capable of accommodating 97 wagons; and a wool-shed for dealing with the wool traffic of Sydney at the same place, capable of holding 118 wagons.
- (e) The providing of extensive and convenient exchange sidings at Clyde, so as to relieve the congested yards at Darling Harbour and Redfern of exchange goods traffic that could be more advantageously dealt with at Clyde, also facilitating the exchange of traffic between the Southern, Western, Northern, and Suburban lines.

The changes in the accommodation and arrangement of business at Darling Harbour and Redfern, and in connection with the Clyde Sidings, have led to the traffic being dealt with in an eminently satisfactory manner to the public, and also enabled the Department to release wagons and sheets with much greater promptitude, and in addition have effected a saving in working expenses to the extent of £14,000 per annum.

The quadrupling of the suburban line has enabled the large suburban traffic to be carried on with the utmost regularity; the working of the passenger trains on the lines generally is also of a satisfactory character. From the reports submitted periodically to the Commissioners it would appear that for *three months* ending September last the following was the record of the running of the trains :—

TRAIN PUNCTUALITY RETURN—PERCENTAGE.

Description.	To time and not exceeding 2 minutes late.	2 to 5 minutes late.	Above 5 minutes late.
1. Main Suburban (business trains), 5 to 10 a.m.	Per cent. 97·28	Per cent. 2·35	Per cent. ·37
2. Local, 5 to 10 a.m.	95·73	2·57	1·70
3. Through Mail and Express	83·92	5·16	10·92

1. Main Suburban, covering distances up to 13 miles.

2. Local, covering distances up to 77 miles.

3. Through long-distance trains and express and mail trains, covering runs of varying distances up to 503 miles, of which, in one instance, 465 miles are single line.

The

The train services in various directions have been very considerably accelerated, and additional trains given where there was reasonable prospect of traffic being developed. We have also provided on all Express and Mail trains carriages with lavatory accommodation, and this class of accommodation is now being extended to the long distance branch lines. The ordinary sleeping cars running on the various Express and Mail trains have been replaced on the Melbourne and Sydney service by vestibule cars of the most modern description, and they have added materially to the comfort of night travelling.

The engine-shed accommodation at Newcastle and other places was of a most defective nature, and this has been remedied by providing new sheds.

The carriages, which suffer so much by exposure in a climate such as that in Australia, have also been protected to a considerable extent by the erection of carriage-sheds; but more accommodation of this description should be provided when money can be set apart for the purpose.

The question of the extension of the railway into the city, and providing better terminal accommodation, unfortunately, still remains unsettled; but the working of the present terminus at Redfern has been much relieved and simplified by:—

1. The rearrangement of the lines;
2. The widening of the Redfern tunnel; and
3. The provision of an additional Up and Down road between Redfern and the locomotive and carriage-sheds at Eveleigh.

The shunting yards at Redfern, Darling Harbour, Clyde, Newcastle, Penrith, and other important points, are well lighted, the more important places with the electric light, and by this means the safety of the working staff has been materially increased. The following figures show the relative number of fatal accidents to employés in New South Wales for the year ending June last, as compared with the United States for the year ending June, 1892, the latest date for which statistics are available, and also in Great Britain for the year ending December, 1893:—

FATAL Accidents to Employés.

Year ending.					Killed.
New South Wales, June, 1894	1 in 1,305
Great Britain, December, 1893	1 in 829
United States, June, 1892	1 in 322

Appended as Appendix, page 30, are particulars of the principal works that have been carried out during our term of office.

SAFETY APPLIANCES.

When we assumed office the interlocking of points and signals and the absolute block system of working had not made very great progress, and we determined to move forward with these important questions as quickly as possible, and the following table shows what has been done:—

Date to end of—	Number of Miles of Line open for Traffic.			Number of Miles of Line on which the Traffic is worked under the Absolute Block System.			Number and Percentage of Places which have or have not Points and Signals Interlocked.				
							Number of Places.		Percentage.		
	Quadruple and Double.	Single.	Total.	Quadruple and Double.	Single.	Total.	Interlocked.	Not Interlocked.	Total.	Interlocked.	Not Interlocked.
October, 1888	71½	2,042½	2,114	28	...	28	104	318	422	24·63	75·36
October, 1894	158	2,343½	2,501½	154½	1,014	1,168½	340	224	564	60·28	39·72

The system of block introduced for the single lines is a combination of the advantages of the "staff" system and the absolute block, known as "Tyer's Tablet System," and "Webb and Thompson's Electric Staff System." Both systems work excellently; the work and responsibility of the Staff have been much reduced, and the traffic greatly facilitated and rendered more secure. For the Express trains a system of exchanger has been adopted for the tablet, by means of which the driver can exchange the tablet when running at considerable speed, and the disadvantage of the single lines has been considerably reduced. The same system can be adopted with the Electric Staff.

For outlying country lines a modification of the Electric Train Staff has been arranged, so that if the traffic at any crossing station is too insignificant to justify having a person in charge, the guard of the train can exchange the staff without in any way interfering with the security of working.

For working at night with through Express trains this system enables staff economies to be effected by permitting of intermediate crossing stations being run through, by giving the driver a through tablet, controlling several sections.

This system of working enables intermediate sidings to be opened without the provision of fixed signals, as the most perfect security can be arranged without them.

The live-stock wagons have been fitted with the Westinghouse automatic quick-acting freight brake, and the goods wagons are being fitted with the same great security. This has enabled the trains to be considerably expedited and the number of guards with trains reduced, and it is estimated that a saving at the rate of £8,000 per annum in guards alone is being effected. This is irrespective of the saving in the Locomotive Department.

The total expenditure to date for brake materials, and fitting the brakes, &c., amounts to £64,000; so that the saving in guards alone renders a net return of $12\frac{1}{2}$ per cent.; and the whole of the advantage of the greater security is obtained without cost.

RATES.

We have recently so fully reported upon this question in our Annual Report that it will be unnecessary to enter into any amount of detail herein. We have consistently throughout reduced rates when we have found it possible to do so without interfering seriously with the improvement of the financial position of the property, and the agricultural and mining interests have received the greatest consideration. On the 22nd October last we reduced the rates for the conveyance of cattle, horses, pigs, &c., to the same rates as were applicable to the conveyance of sheep, which is practically a reduction of about 20 per cent.

As stated in our last Annual Report, had the traffic of 1893 been carried at the same rates as were in force in 1883, the revenue for the year would have been £300,000 in excess of that realised. An annual saving to this extent in goods traffic charges is of material assistance to the country.

Particulars of the rates charged for agricultural produce, cattle, coke, ores, &c., in 1888 and at the present time, are given on page 31.

The

The following Table shows the actual rates charged for each class of traffic:—

RETURN of Ton Mileage for Year ending 31st December, 1893.

Description of Traffic.	Total Tons carried.	Total Miles carried.	Average Miles per Ton.	Earnings, exclusive of Terminal Charges.	Earnings per ton per Mile.	Percentage of each class to Total Tonnage.
	tons	miles	miles	£	D.	per cent.
Coal and Shale ...	2,031,627	35,955,372	17·69	108,055	·72	57·31
Firewood ...	195,535	5,239,257	26·79	19,249	·88	5·52
Grain, Flour, &c. ...	246,214	36,446,242	148·02	95,421	·63	6·94
Hay, Straw, and Chaff	78,112	12,560,105	160·80	23,987	·45	2·20
* Miscellaneous and A Class	309,067	18,438,937	59·66	64,988	·84	8·72
Wool	121,791	38,452,570	274·67	346,277	2·48	3·44
Live Stock	157,273	37,197,711	236·51	311,387	2·00	4·43
All other goods ...	405,550	59,790,236	147·43	644,796	2·58	11·44
Total	3,545,169	239,080,430	67·44	1,614,160	Average 1·62	100·00

* Miscellaneous traffic consists of timber, lime, manures, fruit, vegetables, hides, tobacco leaf, bricks, gravel, drain-pipes, and traffic of a similar nature.

For passenger traffic the principal changes have been in the adoption of a lower scale of rates for the Newcastle suburban area, and the extension of the Sydney suburban area.

In addition, traffic has been facilitated and considerable settlement promoted by arrangements for the issue of week end tickets (Friday afternoons and Saturdays) to the convenient tourist districts, the fares charged being about 1d. first class and $\frac{1}{2}$ d. second class per mile travelled.

In addition to this specially cheap trains are run periodically from and to Sydney and all country stations at exceptionally low rates; these trains are very popular, as many as 1,600 persons coming in from one district on the same date.

The reasonableness of the fares may be illustrated by the following examples:—

Stations.	Distance each way.	Fare.		Rate per single mile.	
		1st Class Return.	2nd Class Return.	1st Class Return.	2nd Class Return.
Wagga Wagga	309	s. 40/-	s. 20/-	d. 0·77	d. 0·38
Albury	387	50/-	25/-	0·77	0·39
Hay	454	60/-	30/-	0·79	0·39
Dubbo	278	40/-	20/-	0·86	0·43
Bourke	503	70/-	35/-	0·83	0·42
Average rate per mile	...			0·80	0·40

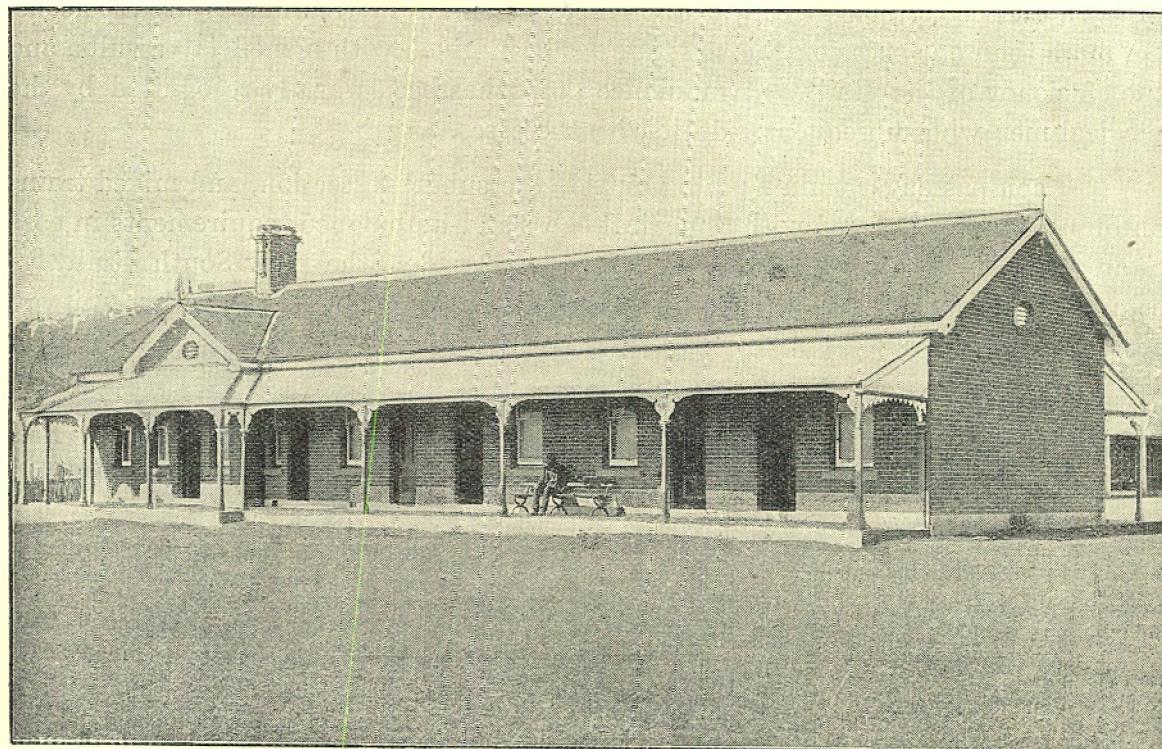

There has also been brought into force a low scale of rates for the conveyance of passenger train parcels when prepaid by stamps, as per table below :—

MILES.	3lb. and under.	3lb. to 7lb.	7lb. to 14lb.	14lb. to 28lb.	28lb. to 56lb.	56lb. to 84lb.	84lb. to 98lb.	98lb. to 112lb.	Every additional 14 lb. or part thereof.
1 to 50	0 3	0 3	0 6	0 9	1 0	1 3	1 6	1 9	0 3
51 to 150	0 6	0 9	1 0	1 6	2 6	3 6	4 3	5 0	0 9
151 to 300	1 0	1 3	1 9	2 9	4 0	5 3	6 3	7 3	1 0
Over 300	1 6	2 0	2 6	4 0	6 0	8 0	9 6	11 0	1 6

STAFF.

The general conditions in connection with the Staff, in regard to pay, privileges, and various other matters, are of the most liberal character. The rates of pay are the best in Australasia, and in the majority of instances are higher than when we took office. The Appendix, page 29, will give the actual and average rates of pay of the principal groups of employees.

The Running Staff when away from home are provided, free of expense, with excellent lodging-houses, which are in charge of caretakers, and provided with comfortable beds. The Staff also receive an average of 3s. per night as expenses.

MURRURUNDI LODGING-HOUSE.

STANDARD TYPE LODGING-HOUSE FOR ENGINEMEN, FIREMEN, AND GUARDS—N.S.W. GOVT. RAILWAYS.

Accommodation: Dining-room, kitchen and attendant's rooms, bath-room and lavatory, and bedrooms. Each bedroom is entered from the verandah, and contains 2 beds.

Holidays to the extent of about three weeks per annum are granted to the principal grades, and all public proclaimed holidays—about twelve per annum—are granted to all grades. The Salaried Staff is allowed three weeks per annum, and liberal pass concessions are granted to all grades.

We

We also contemplated, in 1890, the institution of a Provident and Pension Fund for the whole of the Weekly Staff, but in consequence of the influence of persons who posed as friends of the men, so much feeling was created against the proposal that we deemed it better to ask the Minister to withdraw the Bill from Parliament. The particulars of the main provisions of the Bill are printed as an Appendix, page 27.

In 1891, with the concurrence of the Government of the Honorable Sir Henry Parkes, G.C.M.G., the Honorable William McMillan being Colonial Treasurer and Minister for Railways, we provided a handsome Institute, with reading-room, class-rooms, library, and lecture-hall, at the Redfern Station, Sydney; and this building has been of much use in connection with technical and other classes, and affords means for the Staff to meet together for concerts, lectures, and other purposes.

THE AMBULANCE MOVEMENT.

The ambulance movement has made most satisfactory progress, and the members of the corps are now capable of rendering valuable assistance should their services be at any time required.

The circumstances of the New South Wales Railways differ materially from those in older-settled countries, where towns are close together, and medical aid is readily procurable. Here a line runs at times for 100 miles without passing a settlement of note, and should an accident occur on such a stretch of line it is of great importance that those on the spot should be able to render "first aid" to the injured, and be equipped with the appliances essential in treating injured persons. On more than one occasion this first aid has been given with beneficial results, and the efficiency of the Railway Ambulance Corps has been warmly recognised by the medical men who subsequently dealt with the cases.

Each passenger train running outside the suburban section, and mixed trains on branch lines, are fitted with a medical chest and ambulance requirements in case of an accident happening, although, it might be added, the New South Railways compare favourably in regard to freedom from accident with any other railway system.

Ambulance equipment is also in reserve at a number of railway-stations, and each break-down van is also fitted with a medical chest and equipment.

The number of members enrolled, *i.e.*, persons qualifying themselves by a course of instruction and examination, has risen from 191 in October, 1888, to about 850 at the present time.

The membership is widely distributed, 526 being country members, and 320 in the city, workshops, &c. A number of station-masters and officers-in-charge at stations have qualified themselves for membership in the corps, and in several instances have shown such aptitude and knowledge as to be enabled to form branch classes and instruct the local employees in the ambulance work.

Generally, the work of instruction is conducted by the Railway Medical Officer, who travels a considerable distance monthly in holding classes, &c.; and, in addition, it has been arranged at many centres where a number of men are employed to secure the services of local doctors, who have kindly undertaken to give a course of instruction to the Railway Staff in their own localities.

UNIFORM

UNIFORM GAUGE FOR AUSTRALIA.

This question, which was brought forward by us immediately after taking office, has, we regret to say, made very little progress in the way of giving practical effect to bringing about a settlement. We feel that the question is of vital importance to the future of Australia, and must be dealt with at some time or other, and the longer it is postponed the greater will be the cost of the change.

We would respectfully urge that the question be dealt with without further delay, and action taken somewhat on the lines suggested in a letter dated the 18th May, 1889, from the Chief Commissioner to the Honorable the Minister for Railways, which was as follows:—

Uniform Gauge for the Railways of Australia.

With reference to what has recently passed on this subject, and our conversation yesterday, I have the honor to suggest that the following should be the basis of procedure in connection with this subject:—

That the various Colonies should affirm:

1. That the adoption of an universal gauge is absolutely necessary, looking at the future growth of the country, and the annually increasing intercourse of the people and exchange of goods.
2. That the cost of adopting an uniform gauge shall be borne by the whole of the Colonies affected.
3. That it having been decided that the cost of altering the railways to an uniform gauge shall be a national one, the subject of which is the right gauge to be adopted must be approached without any bias in favour of the gauge at present in operation in any Colony, and a decision must be come to from the standpoint of which gauge—4 ft. 8½ in. or 5 ft. 3 in.—can be adopted at the least cost and inconvenience.
4. That it shall be an instruction that the whole of the railways in New South Wales, Victoria, that part of the railways of South Australia now laid to the 5-ft. 3-in. gauge, as well as the line to Cockburn (for Silverton), and all lines in Queensland south of Brisbane leading to New South Wales shall be altered to the standard gauge and the cost of altering the railway and the rolling stock necessary for working such lines shall be a national charge.
5. That the Chief Commissioner or Chairman of the Railway Board in each Colony with one colleague (to be selected by the Chief Commissioner or Chairman) to be a Commission to consider—
 1. What shall be the gauge of the future.
 2. In what proportions the cost of the change shall be borne by the respective Colonies.
 3. The probable cost of carrying out the change.
 4. The number of years the cost of the change shall be spread over, and the amount of money to be set aside each year as a sinking fund.
 5. The date on which the change of gauge shall take place.

The Commission to submit a joint report for the consideration and approval of the respective Governments.

That it be a recommendation to each of the Colonies finding it desirable for the present to make narrow-gauge lines in outlying districts to arrange its stations, tunnels, and bridges in such a way as to enable the uniform gauge at a later date to be laid down without incurring any additional expenditure in enlarging such works; the wisdom, however, of from the outset adopting the standard gauge, which may be laid down in the cheapest possible way, to be carefully considered.

We have held the view that great advantage could be obtained by all the Railways of Australasia if an annual meeting of the principal officers were held to discuss various matters of importance in connection with the working of the lines; these meetings to be followed by a meeting of the Commissioners, or by the Chairmen of the respective Boards, so as to give executive effect to any recommendations which might be made. At these meetings all questions of importance affecting the economic and efficient working of the various branches of the service could be discussed, and the whole of the Colonies would obtain the benefit of the united ability employed by the various Governments. Such meetings would also, in our opinion, bring about a broader view on all railway questions and promote harmonious working.

Beyond a special meeting in regard to the adoption of an uniform rule book and the discussion of an uniform classification of goods, nothing has been done, principally owing to the change in system of railway control in Victoria.

The question, however, is of such great importance to the whole of the Colonies that it is brought forward again in this manner in the hope that the idea may bear fruit in the future.

FINANCIAL

FINANCIAL RESULTS.

The following tables will show the progress and result of the Railway and Tramway working for the seven years prior to our taking office, and for the period we have had the administration of the property:—

RAILWAYS.

Year.	Length of Line open 30 June, 1894.	TOTAL EARNINGS.	ACCUMULATED INCREASES. TOTAL EARNINGS.	NET EARNINGS after paying Working Expenses.	NET EARNINGS.	Capital expended on Lines open.
1882	Miles.	£		£		£
1882	1,268	1,701,016		763,661		15,843,616
1883	1,320	1,934,694		751,220		16,905,014

1892	48	305,090		56,499	
1893	49	295,367		61,559	
1894	58 $\frac{1}{2}$	278,194		48,911	

It is confidently expected that for the year 1894-95 the net earnings, after paying working expenses, in connection with the Railways, will amount to £1,275,000, being an accumulated increase on the 1888 result of £2,540,000, as against an accumulated decrease for the seven preceding years on the 1882 result of £141,000.

With regard to the Tramways, it is expected that the net return for the year will be at least £50,000, making an accumulated increase of net earnings in connection with the Trams on the 1888 result of £215,000, as against an accumulated decrease for the preceding seven years on the 1882 result of £52,000.

With regard to both Railways and Tramways, the value of the property has been considerably increased by payments out of working expenses; we need say very little respecting the rolling-stock, as it comes so continually under the eyes of the public; but with regard to the Railway permanent-way we think we cannot do better than to append hereto a copy of a report made to us by Mr. Price-Williams, M. Inst. C.E., at the beginning of the present year. It will doubtless be remembered that soon after we took office we requested Mr. Price-Williams, who happened to be in the Colonies, to report to us upon the condition of the permanent-way, and, as he was again in the Colonies at the beginning of this year, we thought it desirable to request him to make an inspection of the works that had been carried out in the interval.

The working expenses have been reduced as under since 1888:—

Year.	Percentage of working expenses to Gross Earnings.			
1888	66·69
1889	64·39
1890	63·26
1891	61·57
1892	61·60
1893	59·39
1894	56·58

and for the current year the expenses will be under 55 per cent. of the gross revenue, being a decrease of 12 per cent. since 1888.

For the past four years, 1891-4, the net return upon the Railway capital, after paying all working expenses, has been £3 10s. 0d. per cent.

Upon the Tramway capital for the past five years the return has been £4 18s. per cent.

The following Comparative Statement of the staff employed in the chief offices in October, 1888, when the Commissioners took office and at the present time, will show how largely the administrative expenses have been reduced :—

Particulars.	October, 1888.		October, 1894.	
	Number employed.	Amount per annum.	Number employed.	Amount per annum.
Commissioners' office staff, including Secretary and staff...	50	£ 10,614	21	£ 4,228
Chief Accountant and staff... ...	48	11,520	42	10,435
Traffic Auditor and staff ...	67	11,644	63	9,684
Chief Traffic Manager and staff ...	37	8,411	17	3,910
Chief Mechanical Engineer and staff ...	32	7,100	23	5,499
Comptroller of Stores and staff ...	41	7,646	27	4,395
Engineer-in-Chief for Existing Lines and staff, and Divisional Engineer for Metropolitan Division and staff...	72	16,337	44	10,984
Totals ...	347	78,272	237	49,141
DECREASE	110	24,131

The following figures show the total number of persons employed on the Railways and Tramways, October, 1888, and June, 1894; and also the traffic and mileage dealt with :—

	October, 1888.	June, 1894.
Railways and Tramways (Number employed) ...	11,393	10,351
30 June, 1888.	30 June, 1894.	
Gross traffic for preceding 12 months	... £2,531,643	£3,091,735
Net profit after paying working expenses...	£781,896	£1,270,610
Miles open—Railways	2,114	2,501
Do Tramways	38½	58
Total mileage	2,152½	2,559

The figures given showing the altered financial condition of the property do not tell the whole story of its improvement.

For instance, from 1862 to 1872, under Ministerial control, no less than £71,500 was charged to capital for relaying. All charges of this nature, including the extra cost of heavier rails and sleepers, are now debited to working expenses, as well as the cost of numerous works which are properly capital charges.

When we took office we found that sums of money for relaying in previous years, clothing, water, &c., aggregating £47,960, had not been debited to working expenses; this amount has been brought into the working expenses for our term of office.

It was formerly not the practice for the stores obtained from the Government General Stores, the value of Postage Stamps, and the cost of printing and other work done in the Government Printing Office, to be debited against the Railway Accounts. Sewerage rates also were not paid. Since we have been in office £91,800 has been paid for these services—and quite properly so, too,—but the general Government expenses have been relieved to this extent.

Formerly it was the practice to relieve the working expenses of a proportion of the cost of the Head Quarters Staff by debiting it annually to the capital account for new lines. This has not been done during our term of office.

In the minor branches of expenditure considerable economy has been effected in various ways, viz., by :—

- (1) Greater economy in the amount of stores used,
 - (2) Using kerosene largely in various descriptions of lamps, instead of colza and other expensive oils,
 - (3) Using mineral oils for lubricating purposes instead of castor and other oils,
 - (4) Washing waste and sponge cloths and re-using the same,
- and many other ways of a like nature.

The Locomotive Department expenditure for oil, tallow, waste, sundry stores for cleaners, and greasing and oiling carriages and wagons (including wages of oilers) for the year ending 30th June, 1889, was £42,272 For the year ending June last this had been reduced to £19,035 and, for the current year, it is confidently expected that the cost will be under £15,000

TRAMWAYS.

The tramway property, when we took office, was in a very unsatisfactory condition, both in regard to its financial result and the maintenance of the rolling-stock and permanent-way, the return on the capital for the previous six years having amounted to £1 18s. 10d. per cent. The return on the capital for the six years ending June last has been £4 10s. 10d. per cent., whilst at the same time we have renewed and charged to working expenses the cost of seventy-six tramcars, four motors, and one water-tank, besides bringing the whole of the rolling-stock up to an efficient condition. The renewing of the tramcars constitutes about one-third of the whole of the stock existing in 1888. Relaying has also been carried out at a cost of £71,620, as against £47,421 for the preceding six years.

The

The following table is an interesting one, and shows the comparative value and importance of the Railway and Tramway property of this Colony as compared with the other Australasian Colonies :—

	Year ending.	Gross Earnings.	Net Earnings.	Capital.	Gross Earnings.	Net Earnings.
NEW SOUTH WALES ...	June, 1894...	£ 3,091,735	£ 1,270,610	£ 37,104,257	£ 3,091,735	£ 1,270,610

	(Report for 1893 not yet obtainable.)				Net Earnings of New South Wales, £26,978 in excess of the other five Colonies.	
VICTORIA	June, 1894...	2,726,159	1,090,740	37,748,563	2,726,159	1,090,740

Printed as Appendices pages 21 and 22 are statements showing the growth of the New South Wales Railway Capital Account to 30th June, 1894, and also, a statement showing the total amount expended in maintaining, working, and improving the Railways and Tramways, and the proportions spent in and out of the Colony for a period of twelve years.

E. M. G. EDDY, Chief Commissioner.

W. M. FEHON, Commissioner.

CHARLES OLIVER, Commissioner.

APPENDIX.

STATEMENT of the New South Wales Railway Capital Account to 30th June, 1894.

	£
CAPITAL SPENT TO 30TH JUNE, 1888...	27,722,748
Capital moneys subsequently paid on account of lines authorised prior to the Railway Act coming into force, principally for the following lines:—	
Illawarra Line	2,435,465
Cooma Branch	
Homebush to Waratah (including the Hawkesbury Bridge) ...	
Hornsby to St. Leonards	
ACTUAL CAPITAL INCURRED PRIOR TO THE RAILWAY COMMISSIONERS TAKING THE LINES OVER	30,158,213
CAPITAL SPENT TO 30TH JUNE, 1894...	35,855,271
(as given in the Annual Report).	
INCREASE IN CAPITAL IN SIX YEARS	5,697,058
Principally made up of the following 307 miles of new lines:—	
Kiama to Nowra...	£
Nyngan to Cobar	
Culcairn to Corowa	
Cootamundra to Temora	
Molong to Forbes	
Milson's Point Line	
Lismore to Mullumbimby	
DUPPLICATIONS—	
96 miles of single line:—	
Redfern to Flemington	1,438,529
Granville to Campbelltown and Picton	
Strathfield to Ryde	
Ryde to Hornsby	
Hurstville to Waterfall	
Adamstown to Teralba	
ROLLING STOCK AND GENERAL WORK—	
Rolling-stock to meet the increased traffic, and for 307 miles of new lines, improvements of grades and curves, additional sidings, loading banks and goods sheds, signal and interlocking apparatus, continuous brakes, houses for employees, and additional works generally	2,084,268
ALSO MILLION VOTE—	
For reconstruction and improvement of permanent-way and rolling-stock, now paid off to the extent of £225,000.	£5,697,058

R. Price-Williams, Esq., M. Inst. C.E., to The Railway Commissioners of New South Wales.

Gentlemen,

Sydney, 2 March, 1894.

In compliance with your instructions I have again, after an interval of four and a half years, examined into the condition of the permanent-way and works of the Government Railways of this Colony.

On the former occasion I found it difficult to give expression to the anxiety I felt on discovering the then unsafe and unsatisfactory condition of the permanent-way; my present difficulty, however, is, I am glad to say, of quite an opposite character, and how, without saying anything capable of being misconstrued into mere compliment—alike unbecoming the occasion as it would be distasteful to yourselves—to give fitting expression to the genuine feeling of gratification I have experienced in recognising the great improvements effected in the condition of the permanent-way during the last four and a half years.

The improved condition of the permanent-way has been accompanied by alterations and improvements of so extensive and varied a character throughout the entire railway system, more especially in connection with the suburban lines, numerous deviations, and the duplicating of lines, as to render it extremely difficult to institute any fair comparison between the present condition of the permanent-way and works and what existed at the time of my previous examination. I therefore intend to deal separately with these important matters later on, and to confine myself at present to the permanent-way.

PERMANENT-WAY.

Sydney to Granville Junction.

With a view of contrasting the past and present condition of the permanent-way on the suburban lines I would, in the first place, draw attention to the fact that four and a half years ago there were about $3\frac{1}{4}$ miles on this heavily-worked portion of the main line still laid with iron rails, and both the rails and ballast were of inferior quality and in a deplorable condition, the line also being badly drained; whereas, at the present time, I find the lines between Redfern Station and Granville Junction all steel, and where relaid 80-lb. bull-head steel rails, heavy 45-lb. cast-iron chairs laid upon ironbark sleepers of heavier scantling (9 ft. \times 10" \times 5") have replaced the 75-lb. rails, 25-lb. chairs, and smaller-sized sleepers previously used.

The line, after being thoroughly drained, has been entirely reballasted with the excellent blue metal ballast obtained from the quarries at Kiama, the site of which I inspected and approved of at the time of my previous examination.

I am glad to find that this splendid ballast, which is exceedingly heavy and of the best quality, has entirely superseded the soft sandstone ballast previously used. The best portions of the old sandstone ballast, I observed, have been replaced in the road, so as to form the foundation for the new ballast, as shown on the accompanying sketch.

In addition to this, I observe that the extensive alterations alluded to, have admitted of six lines of way being laid between Redfern and the Junction with the Illawarra line, while the four lines have been extended to Flemington, about 2 miles beyond the Junction, with the Northern line at Strathfield; and further that the double line which previously only extended to Granville Junction, has since been continued to Picton. The total present mileage of running road between Redfern and Granville is 50 miles 13 chains of single line, as compared with 28 miles 50 chains of single line in 1889, $3\frac{1}{4}$ miles of which was then laid with iron rails.

I have no hesitation in saying that the permanent-way of the whole of the Suburban lines is now in the best possible condition and will bear comparison, both as regards quality of material and the condition in which it is maintained, with that of any English railway; and there can be no question that by the adoption of a heavier description of steel rails, ironbark sleepers of heavier scantling, combined with the heavier and more durable ballast now used, the future annual cost of maintaining and renewing these heavily worked portions of the railway will not only be largely reduced, but the wear of the rolling stock also will be proportionately lessened, and the much more easy running of the trains which has resulted from the improved condition of the road and so noticeable at present, will undoubtedly largely contribute to the greater comfort of the passengers.

Granville Junction to Goulburn (121 miles).

It will be in the recollection of the Commissioners that the permanent-way on this portion of the Southern Railway was, at the time of my previous report, in a very bad condition, the whole of it, with the exception of about $17\frac{1}{2}$ * miles railed here and there with steel rails, being at that time still laid with iron rails, over 100† miles of which had been in the roads for periods varying from nineteen to thirty years, the rails, more especially in the rock cuttings on the 1 in 30 gradients between Picton and Mittagong, where the sleepers rested on the bare rock formation, being in an exceedingly critical condition, and I can only attribute the fortunate immunity from accident there to the splendid quality and durability of the ironbark sleepers. The immediate steps taken to ensure the safe working of the traffic on these and many other unsafe portions of the permanent-way on this portion of the railway were necessarily to a great extent of a temporary character; and subsequently, after making good the worst portions of the main lines, they had to be entirely renewed with new 80-lb. steel rails and ironbark sleepers of heavier scantling.

My object in drawing attention to this is to show that it would have been impossible to judge of the alterations and improvements which have been made in the state of the lines by my merely going over them, as I have just done. The accurate records, however, which have been kept since the Commissioners took office, of the actual work done in relaying, rerailing, reballasting, resleepering, &c., &c., and shown graphically on the admirable Permanent-way Progress Diagrams, have enabled me fully to realise the extent and comprehensive character of the work which has been accomplished during the last four and a-half years.

These

* 17 miles 37 chains, *vide* Report, 10th August, 1889. † 100 miles, *vide* Report, 10th August, 1889.

These records show that, irrespective of the temporary repairs and renewals required to ensure the safe working of the traffic, and irrespective of the new double line between Granville and Picton, there are at the present time 72 miles laid with steel rails, the greater portion consisting of 80-lb. rails, laid on the best ironbark sleepers of large scantling, and resting upon and boxed up with the best blue metal ballast, as already described. The other portions have been railed with 75-lb. steel rails, and with the exception of a few miles the whole line from Granville Junction has been entirely reballasted. I find there are about 48½ miles of iron rails still in the road, evidently of very good quality; and from the sound condition in which I found them, and the good quality of the ironbark sleepers and blue metal ballast upon which they are laid, I consider they will be serviceable for some time yet to come.

Altogether the permanent-way and works between Granville Junction and Goulburn are in excellent condition and well maintained; and, what is of the utmost importance in the proper maintenance of a line, the grips or side drains are well cleared out, so as to admit of the free drainage of the surface-water in the cuttings, the neglect of which on my former inspection I had so frequently to draw attention to.

I may also mention that when travelling at a speed of over 43 miles per hour over a portion of the line between Wollondilly and Cable's Siding, where the road has been entirely relaid with 80-lb. rails, the running was as steady—to quote the remark in my note-book—"as when travelling by the Irish express between Euston and Rugby," the cloud of dust, which on a former occasion followed in the wake of the train, being conspicuous by its absence. No more striking illustration could be afforded than this of one of the many benefits obtained from the substitution of the hard blue-metal for the soft sandstone and gravel ballast formerly used.

Goulburn to Cootamundra (118 miles 66 chains).

The 9½ miles of iron road on the 1 in 40 gradients on different parts of the line at Yarra, Cullerin, Binalong, Demondrille Junction, and Wallendbeen, which I found four and a-half years ago in such a deplorable condition, have, I observed, either been entirely relaid with new steel rails, resleepered, reballasted, and lifted, or railed with steel rails, and, where the steel rails were of a lighter section, the sleepers have been respaced.

At the time of my previous examination there were altogether about 9¾ miles* of detached pieces of road laid with steel rails. Since then, however, the railed portions have in some places been again reballasted, lifted, and the sleepers respaced.

The total mileage of iron rails in the road between Goulburn and Cootamundra in 1889 was about 109 miles; whereas at the present time there are only 18½ miles (18 miles 19½ chains). These rails I found in very fair condition, and with the sound ironbark sleepers and the reballasting the road has received, they will continue serviceable for some time. I observed, however, that preparations are being made at different points along this part of the line for further relaying.

It is usually the practice to make ample provision for the ballasting required from time to time for maintenance purposes, and I was surprised on my previous examination to find there were no quarries opened out from which good blue-metal or quartz ballast could be obtained for reballasting the lines. I am glad, however, to find now that any quantity of the best blue-metal, quartz, or porphyry ballast can now be, and is, obtained from quarries in the immediate neighbourhood of the railways, the perfect ballasting of lines with this class of material being essential to their safe and economical maintenance.

I avail myself of the opportunity of mentioning that whilst at Jerrawa Station I witnessed the automatic ballasting of the line with a new hopper ballasting truck and plough invented by Mr. Rodgers. The method employed is exceedingly ingenious, simple, and effective; the whole operation of unloading and spreading twelve loaded ballast trucks, each containing 6 cubic yards, occupying just 5½ minutes, as timed by my stop-watch. It is needless to say that the ordinary method of unloading and spreading the ballast would have occupied twenty-four men at least half-an-hour to unload, and a further three-quarters of an hour to trim it in the complete way the plough does. I should also mention that only two Permanent-way men were employed in the operation, and that in addition to this great saving of time, a further very considerable economy is effected by lessening the time which a large number of men and locomotive power are kept idle, and the occupation of the main lines by the ballast train—a very important consideration, especially in working single lines. There can therefore be no question but that by the adoption of this new method of ballasting the cost will be most materially reduced.

Cootamundra to Albury (133 miles 20 chains).

I observed that the iron rails I previously examined between Cootamundra and Bethungra have been entirely replaced with steel, a portion of the road being relaid with new 80-lb. rails, on ironbark sleepers of larger scantling, and entirely reballasted; while the remainder of the road has been railed, reballasted, and, for the most part, lifted, the sleepers in many places having been respaced.

Between Bethungra and Junee Junction there now remain only about 10½ miles of iron rails. These are in very fair condition, and the line has for the most part been reballasted, and in many places lifted. The remainder of the road, from about the 279th mile post to Junee, has been entirely railed with steel rails, reballasted, and the road lifted.

Altogether, the road as far as Junee Junction is in thoroughly good running order, as was amply testified by the smooth and easy running whilst travelling over it at a speed of over 46 miles an hour on my return journey to Sydney.

A good deal of rerailing, reballasting, and lifting has also, I find, been done between Junee Junction and Wagga Wagga, more especially between Bomen and Wagga Wagga, where there has been about 5 miles of continuous rerailing with steel rails.

From

m.	ch.	m.	ch.	m.	ch.
* 134	20	to	137	40	= 3 20
154	20	„	157	20	= 3 00
164	60	„	168	20	= 3 40

From Wagga Wagga to Albury, as you are well aware, the line is entirely laid with steel rails; and there is no need of my referring to this portion of the line beyond remarking that many portions of it have been reballasted and lifted since the date of my previous inspection.

The total mileage of railway between Cootamundra and Wagga Wagga laid with iron rails in 1889—and then in very bad condition—was nearly $46\frac{1}{2}$ miles (46 miles 33 chains). At present there remains only about $27\frac{1}{2}$ miles, which is well ballasted, sleepered, and in very good running order. The present mileage relaid with steel rails between Cootamundra and Wagga Wagga is $28\frac{1}{2}$ miles; so that altogether, out of the $133\frac{1}{4}$ miles between Cootamundra and Albury, $106\frac{1}{2}$ miles are now laid with steel rails.

WESTERN LINE.

Granville Junction to Bathurst (130 miles 30 chains).

The 12 miles of iron rails in the down line between Granville Junction and Penrith, which at the time of my previous inspection were in a very bad condition, and had been in the road for periods varying from twenty-two to twenty-nine years, have, I observed, been entirely renewed; and, with the exception of a length of about 6 miles of iron rails, the whole of the up and down lines are now entirely relaid with steel rails; and the iron rails still in the road, which has been lifted and reballasted, as well as the ironbark sleepers, are in good condition.

I should also mention that a great deal of road-lifting and reballasting has been done on other portions of both up and down line between these two places.

In 1889, with the exception of about 14 miles of continuous rerailing with steel rails between Penrith and Springwood, and about $18\frac{1}{2}$ miles between Springwood and Locksley, the remainder of the line to Bathurst, a distance of over 78 miles, was then entirely laid with iron rails; whereas at the present time only about 4 miles of iron rails remain in the road in detached pieces, chiefly on the down line between the bottom points of the Zig Zag and Bowenfels Station. The total mileage of iron rails in the road at the present time between Granville Junction and Bathurst only amounts to about 18 miles* of single line on 14 miles of railway, in good running order.

The ballast now used on this line consists of blue metal, quartz, or heavy slag of the best quality.

Between Bathurst and Blayney a considerable mileage of relaying with 80-lb. rails has been done, the whole distance between these two places now being laid with steel rails. Amongst other bits of bad road which have been renewed, I observed the short length between Perth and George's Plains, to which I drew particular attention on a former occasion.

NORTHERN LINE.

Strathfield to Hamilton.

I observed a great deal of reballasting and lifting has been done on the Down line between Strathfield and Hornsby Junction.

Between the Hawkesbury River and the junction at Islington (Newcastle) a great deal of work has also been done in improving the Down road by taking out the numerous soft places in the cuttings, lifting and reballasting the road with slag or blue metal, and further strengthening it by putting in additional sleepers where required.

Newcastle to Tamworth.

The whole of the iron rails in the Down line between Newcastle and West Maitland, the bad condition of which I had also on a previous occasion to draw attention to, has, I find, been entirely relaid or rerailed with steel rails, and to a great extent reballasted; while the Up road, which is also laid with steel rails, has been in many places resleepered, and the road lifted and reballasted with heavy slag ballast.

Between West Maitland and Lochinvar a continuous length of over 5 miles has been entirely relaid with 80-lb. steel rails and the road lifted, and here and there reballasted.

From Lochinvar to Branxton there are about $9\frac{1}{2}$ miles of road laid with iron rails. These, although somewhat worn, are evidently of first-rate quality, as is testified by the good top they still retain and the excellent running condition in which the road at present is maintained. This portion of the line, I understand, will shortly be relaid throughout with 80-lb. steel rails; indeed, I observed a relaying gang at work when I was there.

Between Branxton and Singleton a continuous length of about 14 miles has been entirely relaid with new 80-lb. steel rails and ironbark sleepers of the larger scantling already alluded to, reballasted and the road lifted in many places, the ballast used being partly of blue rock, quartz, or granite—the latter brought to Newcastle as ships' ballast. I was glad to notice here, and on other parts of the Government Railways, a due provision of spare rails and sleepers, the absence of which on my previous inspection I drew attention to.

From near Singleton to Murrurundi the line is laid with iron rails, except where the deviations have been made, to which I shall have occasion to refer later on, where the rails are of the heavier 80-lb. "T" steel sections now used in all renewals. The road, I observed, has been in many places reballasted and lifted, and in some places resleepered, and is now well maintained and in good running condition.

From Murrurundi to within a short distance of Willow Tree Station, a considerable amount of rerailing with steel rails, reballasting and lifting, has also been carried out, while between Braefield and Tamworth, in addition to a large amount both of relaying, rerailing, lifting, and reballasting, the road has been resleepered where it is laid with iron rails. Altogether the line between Newcastle and Tamworth is well maintained, and the stations and buildings in good repair.

GENERAL REMARKS.

It would be impossible, within the limits of this report, to give details of the many other improvements I observed in the present condition of the permanent way of the Government Railways throughout the Colony; but, briefly summarising the results of my examination, and what I have obtained from the records kept of the work done during the last four and a half years, I find that since the Commissioners took office altogether about 361½ miles of railway have been either wholly or partially relaid with steel rails and new ironbark sleepers of larger scantling; that 841* miles of way have been entirely or partially reballasted and the road lifted, while other portions have been entirely resleepered, and, where requisite and the rails are of light section, the sleepers have been respaced in order to afford the additional strength to the road to carry the heavier class of engines which I am glad to find the Commissioners are now so economically employing to work the traffic on the exceptionally heavy gradients in this Colony.

I have been much struck with the neat, tidy, and generally improved appearance of the railway lines throughout the Colony, and the striking testimony this bears to the greater care and attention now given to the proper and more economical maintenance of the permanent way. It only remains for me, in concluding this portion of my report, to refer briefly to the condition of the stations, station-buildings, platforms, sidings, bridges, and viaducts throughout the entire railway system, which I find to be in a good state of repair. The large amount of painting and other recent repairs I observed at a great many of the stations, and the uniformly neat, clean, and tidy appearance of the stations, station-buildings, platforms, &c., which I find, as a rule, to be a very good guide, bear testimony as to their being properly maintained.

It would be equally impossible within the limits of a report to refer in detail to other numerous improvements I have observed at many of the stations; but I may state that they have all been very judiciously made and have largely increased the facilities for working the existing, and meeting the requirements of the future, railway traffic of the Colony.

DEVIATIONS AND IMPROVEMENTS OF GRADIENTS AND CURVES.

Although my notice of them has been reserved for the concluding portion of this report, nothing I consider has more largely contributed to the better, safer, and more economical working of the traffic than the numerous important improvements effected by the Commissioners by the cutting out, or removal by deviation, of some of the worst grades and curves throughout the railway system, conspicuously instanced in the complete abolition of the First Zigzag, with all its dangers and hindrances to traffic, and also by the almost equally important improvement in the gradients at Wentworth Falls; the cutting out of two 1 in 33 grades north of Singleton, and the substitution of a uniform grade of 1 in 60, and at the Glen Lee cutting on the Southern line, between Granville and Picton, all of which have been most successfully accomplished without in any way interfering with the working of the traffic.

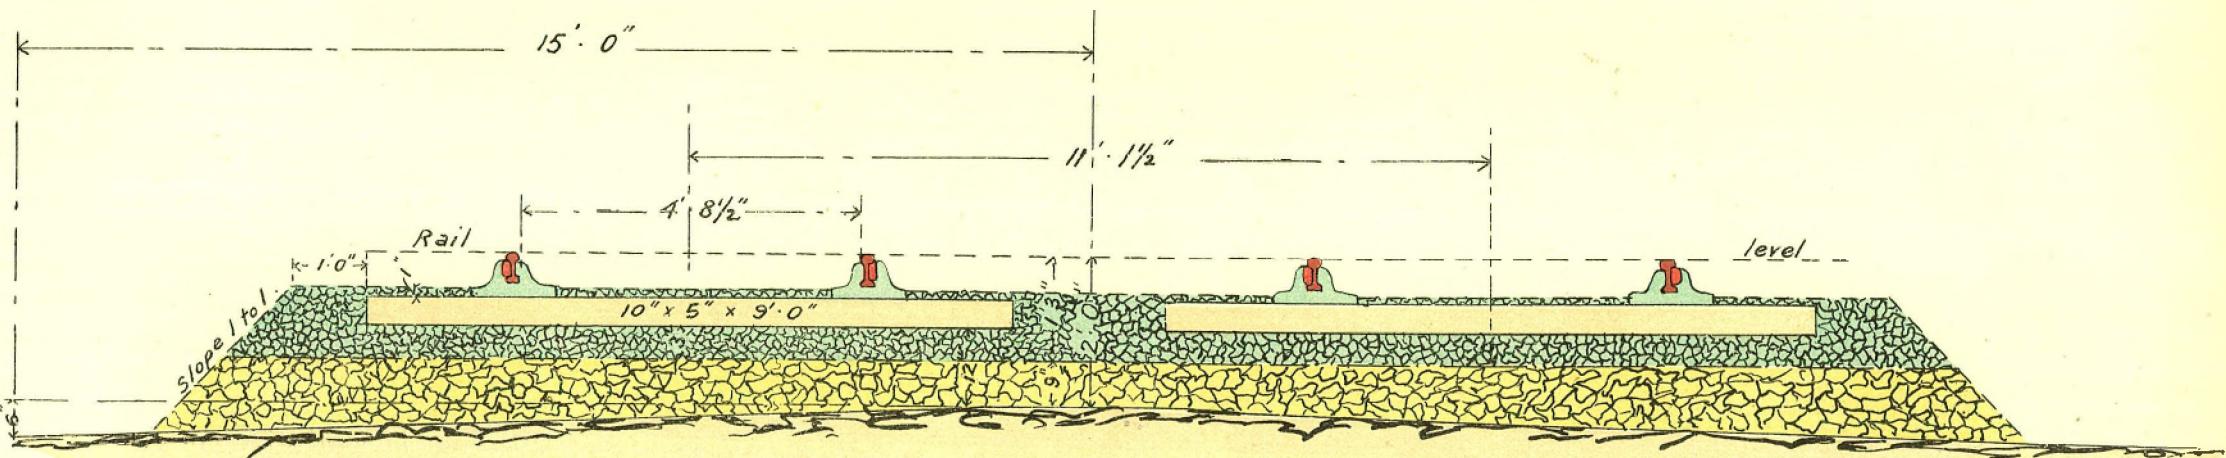

I have been particularly struck with the original and very ingenious method adopted in improving the 1 in 70 and 1 in 80 gradients against the load on either side of the Glen Lee cutting to much easier gradients of 1 in 100, the 1 in 70 and 1 in 80 gradients with the load, much reduced, however, as regards length and height, being retained for working the down grade traffic. It is scarcely necessary to say that these great improvements in the gradients against the load largely economise the tractive power and enable it to be profitably utilised in the haulage of heavier trains. The method so successfully adopted here of carrying out the work on the up and the down line separately, by slightly deviating them, has enabled a very large amount of excavation in the cuttings to be saved, and also the cost of reconstructing the existing works, which have been left untouched.

It only remains for me to add, that what has impressed and surprised me most in connection with the extensive alterations and improvements effected by the Commissioners in the reconstruction of the stations and in the re-arrangement of the lines on the suburban railways, the duplication of the lines between Granville and Picton, and between Strathfield and Hornsby, together with the numerous deviations and improvements of grades throughout the railway system, is, that all this should have been accomplished without necessitating any large resumption of land, or interfering with the working of the traffic on the busiest portions of the railway system; and further, that these most difficult and complicated works should have been completed in so short a time and at relatively so small a cost, regard being had to the great difficulties and obstacles inseparable from the carrying out of works of this kind—difficulties which can only be properly appreciated by those who had to deal with them.

I am, &c.,
R. PRICE-WILLIAMS.

Establishment of Railway Employees Provident and Pension Fund.

The Railway Commissioners had early in view the desirability, in the interests of the staff, of establishing a provident and pension fund for the relief and support in sickness, on retirement, and other contingencies, of persons employed, and a Bill was drawn up and submitted to Parliament, with the object of obtaining authority to bring the fund into existence.

The benefits to be given under the fund, and the nature of the same, are set forth in four schedules, the advantages being dominated by the amount of the weekly contributions. The schedules were as under:—

FIRST SCHEDULE.

Weekly payment.	Sickness allowance payable in case of disablement by sickness or injuries received whilst not on duty.		Casualty allowance payable in case of temporary disablement from injuries received whilst on duty.		Accident allowance payable in case of accident on duty resulting in death or total permanent disablement.	Death allowances.		Retiring allowance payable on retirement at 65.	Retiring gratuity payable on retirement if contributor is not eligible for a weekly retiring allowance.			
						On death of a contributor otherwise than from accident on duty.	On death of a contributor's wife.		Contributions paid for—			
	First 26 weeks.	Second 26 weeks.	First 26 weeks.	Second 26 weeks.		10 to 15 years.	15 to 20 years.		10 to 15 years.	15 to 20 years.	Over 20 years.	
s. d. 1 0	Per week. 25 0	Per week. 18 0	Per week. 40 0	Per week. 30 0	£ 300	£ 50	£ 20	*£ 20 0	£ 20	£ 30	£ 50	

SECOND SCHEDULE.

Weekly payment.	Sickness allowance payable in case of disablement by sickness or injuries received whilst not on duty.		Casualty allowance payable in case of temporary disablement from injuries received whilst on duty.		Accident allowance payable in case of accident on duty resulting in death or total permanent disablement.	Death allowances.		Retiring allowance payable on retirement at 65.	Retiring gratuity payable on retirement if contributor is not eligible for a weekly retiring allowance.			
						On death of a contributor otherwise than from accident on duty.	On death of a contributor's wife.		Contributions paid for—			
	First 26 weeks.	Second 26 weeks.	First 26 weeks.	Second 26 weeks.		10 to 15 years.	15 to 20 years.		10 to 15 years.	15 to 20 years.	Over 20 years.	
s. d. 0 9	Per week. 18 6	Per week. 13 6	Per week. 30 0	Per week. 22 6	£ 225	£ 37 10	£ 15	*£ 15 0	£ 15 0	£ 22 10	£ 37 10	

*Increased retiring allowance may be obtained in accordance with section 5 of this Act.

THIRD SCHEDULE.

Weekly payment.	Sickness allowance payable in case of disablement by sickness or injuries received whilst not on duty.		Casualty allowance payable in cases of temporary disablement from injuries received whilst on duty.		Accident allowance payable in case of accident on duty resulting in death or total permanent disablement.	Death allowances.		On death of a contributor otherwise than from accident on duty.	On death of a contributor's wife.	
						On death of a contributor otherwise than from accident on duty.	On death of a contributor's wife.			
	First 26 weeks.	Second 26 weeks.	First 26 weeks.	Second 26 weeks.		10 to 15 years.	15 to 20 years.			
s. d. 0 6	Per week. 12 6	Per week. 10 0	Per week. 20 0	Per week. 15 0	£ 200		£ 25		£ 12	

FOURTH SCHEDULE.

Weekly payment.	Sickness allowance payable in case of disablement by sickness or injuries received whilst not on duty.		Casualty allowance payable in case of temporary disablement from injuries received whilst on duty.		Accident allowance payable in case of accident on duty resulting in death or total permanent disablement.	Death allowances.		On death of a contributor otherwise than from accident on duty.	On death of a contributor's wife.	
						On death of a contributor otherwise than from accident on duty.	On death of a contributor's wife.			
	First 26 weeks.	Second 26 weeks.	First 26 weeks.	Second 26 weeks.		10 to 15 years.	15 to 20 years.			
s. d. 0 9	Per week. 25 0	Per week. 18 0	Per week. 40 0	Per week. 30 0	£ 300		£ 50		£ 20	

1. The membership to be optional, but any railway employee between the ages of 18 and 45 receiving not less than 25s. per week was eligible to become a contributor of the first or second class.
2. Any employee under 18 or between the ages of 18 or 35, receiving less than 25s. per week, was eligible to become a contributor in the 3rd class.
3. Any employee between the ages of 35 and 45 was eligible to become a contributor of the 3rd or 4th class.

1. A contributor of the first or second class could obtain an increased retiring allowance above the amount shown in the schedule by paying an additional contribution to the fund, i.e., if he were not above 25 years of age he would receive an additional retiring allowance of 5s. 9d. weekly for each additional 1d. per week subscribed.

2. If the contributor were above 25 years of age and not 30, the additional retiring allowance to be 2s. 10d. weekly for each additional 1d. contributed.

3. If the contributor were above 30 years of age and not 45 he was to be allowed such additional retiring allowance allowed as the Actuary to the fund should certify as a proper amount for each additional 1d. contributed.

Only persons employed by the Commissioners were to become contributors to the fund, but temporary employees might, with the permission of the Commissioners, contribute and become during the period of their employment entitled to the casualty and accident allowances, as set forth in the fourth schedule. The contribution payable being 4d. weekly.

The Government Railway Act of 1883 provides that any person being permanently employed in the Railway Service after the passing of such Railway Act shall insure his life, but the Provident Fund Bill provides that any person becoming a contributor to that fund shall be deemed to have complied with the provision of the Railway Act as regards life insurance; and no further action need be taken with regard to life insurance.

A contributor was not allowed to join the fund in more than one class, but a contributor might be allowed to transfer from a lower to a higher class of benefits if eligible. The person transferring paying such a sum as the Actuary to the fund should determine to be due to the fund under the circumstances of the transfer.

Any railway employee being a contributor to the Civil Service Superannuation Account might elect to retire from that fund and to join the railway employees Provident and Pension Fund, all privileges due to him on his retirement from the Civil Service Fund being conserved to the date of transfer.

Contributors to the fund ceasing to be in the employ of the Commissioners otherwise than by dismissal, might be allowed to continue to contribute and enjoy the advantages of the fund other than with regard to retiring allowances, the contribution payable for such advantages being fixed by the Actuary of the Fund.

1. Any person ceasing to be employed and to contribute to the fund should have claim to the benefits of the fund as might be determined.
2. Any person in receipt of a retiring allowance should be considered to be a contributor so far as the payment of the death allowance in case of his wife's death is concerned.
3. Any person whose services were dispensed with through retrenchment, and had no wish to continue a contributor, might be allowed a sum equal to half the retiring gratuity provided after ten years contribution; but any contributor dismissed from the service should forfeit all claims to the benefits of the fund.
4. The sickness allowance to be payable for a maximum period of fifty-two weeks, consecutive or otherwise, during any period of eighteen months; but any additional cases of continued sickness where the allowance has been exhausted, the Committee might grant a further sum not exceeding £10.

Any allowance payable under the provisions of the fund will be incapable of being assigned or in any way anticipated.

The amount of any contributors payment to the fund might be deducted by the Commissioners from the employees wages when due.

The Commissioners shall contribute to the fund an annual sum equal to 75 per cent. of the contributions of the employees, or such less amount as the Actuary shall certify to be sufficient to secure the stability of the fund.

The management of the fund was to be vested in a Committee of not less than nine members, two-thirds to be nominated by the delegates and one-third by the Commissioners.

The delegates to represent the contributors and to be elected from each district according to the locality in which they are for the time being employed, the number of delegates for each district to be subsequently arranged by regulation.

The Chairman of the Committee to be one of the members appointed by the Commissioners.

The Secretary and Actuary to be appointed and paid by the Commissioners.

In case the fund should be deemed by the Committee to be insufficient to meet its liabilities a levy, not to exceed two additional weekly contributions during each period of three months, might be made by the Committee.

STATEMENT showing the Average Rates of Pay made to the undermentioned class of Employees in October, 1888; as compared with June, 1894.

Occupation.	October, 1888.				June, 1894.			
	No.	From	To	Average Rates.	No.	From	To	Average Rates.

Junior clerks	170	£26	£120	£91/10/5	239	£30	£120	£78/3/6
Operators	142	£50	£250	£101/19/10	58	£60	£200	£113/11/-

Every servant, except salaried officers, is granted a day's leave on full pay for each proclaimed public holiday (averaging about twelve days each year). An equivalent in money is allowed if the holidays cannot be taken.

In addition to the above, engine-drivers, firemen, guards, signalmen, and gangers are allowed six good conduct holidays.

Expenses, averaging 3s. per day, are also allowed to drivers, firemen, guards, and all others, when away from their home station.

Lodging-houses, with attendants, are also provided at all the principal depots, for drivers, firemen, and guards, free of charge.

Station-masters and Officers-in-charge are allowed free houses.

Salaried Staff allowed three weeks' holiday per annum on full pay.

Free passes, "Station to Station," are also allowed, when on leave, to each member of the staff, including wife and family, not exceeding three persons.

PARTICULARS of the Principal Works carried out, 1889-94.

1. The number of miles for which provision has been made for the traffic to be worked under the Absolute Block System, by the introduction of new appliances, has been increased from 28 to over 1,168½ miles.
2. The number of places interlocked have increased from 104 to 340.
3. The work of fitting up the goods stock with a continuous automatic brake is being quickly proceeded with, and 3,380 vehicles have been fitted with the Westinghouse appliances.
4. The rolling stock has been increased in all departments to meet efficiently the increased traffic.
5. Rolling stock has also been created to equip 330 miles of line, authorised to be constructed since the Commissioners took office.
6. On the mountain lines a considerable sum has been spent in altering the 8-chain curves, and easing the gradients. Grades have also been improved at Mumbil and Manoa in the west, Singleton and Quirindi in the north, and Merrylands, Cabramatta, Glenfield, Glen Lee, Spaniard's Hill, and Colo Vale in the south.
7. Deviation of the line to avoid the first Zig Zag at Lapstone Hill; also an important deviation improving the grades near Wentworth Falls.
8. The line between East and West Maitland has been raised above flood-level, to avoid interruption to the Great Northern trunk line traffic in time of flood, the whole of the traffic having been stopped several times soon after the Commissioners assumed office. At Newcastle the main lines have been deviated to admit of the extension of Scott-street and the carrying of the tram lines into the city and forward to the Beach.
9. Various deviations have been made on the Mudgee line, to make travelling upon that line safer and freer from interruption by landslips.
10. A curve has been put in between the North Coast and Suburban Lines at Homebush, to facilitate the exchange of the rapidly developing traffic from the north to Flemington Cattle-yards, and the southern and western line.
11. The Mount Keira Line has been purchased, and a loop from off the Illawarra Line provided in connection therewith for the accommodation of coal traffic to be shipped at Wollongong.
12. Four large, well-equipped blue metal quarries have been acquired to enable the lines to be efficiently maintained.
13. New passenger stations have been built at Bowral, Moss Vale, Wentworth Falls, Katoomba, Lithgow, Orange, Blayney (and at the latter place convenient arrangements have been made for the exchange of goods traffic with the Blayney-Murrumburrah Line), Helensburgh, Carlton, Erskineville, Exeter, Riverstone, Cockle Creek, Greta, and Hartley Vale; also new buildings or improved accommodation at stations on the widened lines.
14. At Sydney additional roofed platforms have been provided, and roofing for the protection of passengers getting in and out of cabs and exchanging with the trams. A large new parcels office and cloak-room have also been provided.
15. New carriage-sheds have been provided at Eveleigh, Hurstville, Homebush, Moss Vale, Goulburn, Junee, Albury, Jennings, and Bourke for the protection of valuable carriage stock, and the more efficient cleaning of the same.
16. A large goods-shed for outward traffic, to accommodate 97 waggons, wool-shed for 118 waggons, and produce-shed for 87 waggons, have been provided for the largely increasing traffic of Sydney. A goods-shed has also been provided at Hamilton.
17. New shed for flour traffic, &c., Goulburn.
18. Grain-sheds at Jerilderie, Old Junee, and Coolaman, and a large number of platforms, waiting-sheds, goods-sheds, loading-banks, sidings, weighbridges, turntables, signals, and interlocking arrangements, and numerous other minor works to meet the great growth of traffic on the parent lines which has taken place since 1888.
19. New engine-sheds have been provided at Hamilton (Newcastle), Clyde, Hurstville, Homebush, Campbelltown, Harden, Werris Creek, and Orange.
20. At Eveleigh commodious gas-works have been erected to meet the increased demands for lighting carriages, yards, &c.
21. At Clyde a complete marshalling-yard for the whole of the suburban traffic and exchange traffic between the Southern and Western and Northern Lines has been provided, which has greatly facilitated and economised the working.
22. A large block of land acquired, and sidings, goods-yard, and goods-shed have been provided at Alexandria (Eveleigh).
23. For the coal traffic at Newcastle, largely increased accommodation has been provided at the Dyke.
24. Botany line tramway has been partly duplicated.
25. Sixty-two cottages have been provided for the staff in various parts of the line. Eleven new lodging-houses have been provided for the staff when away from their homes.
26. Forty-four over-bridges and subways have been provided for the greater security of life in connection with the crossing of the railway.
27. A large amount of additional flood openings provided at Clyde, Bourke, and other places.
28. The lines, facilities, and rolling stock were notoriously below the requirements of the trade when the Commissioners took office, and since that date the business has largely increased. A large expenditure was therefore necessary to bring the property up to an efficient and satisfactory state, and only a moderate expenditure per annum will be required to meet the ordinary growth of business in the future.

General Goods.—A general Truck rate was introduced in May, 1894, for distances over 90 miles, embodying considerable reductions upon the ordinary tonnage rates.

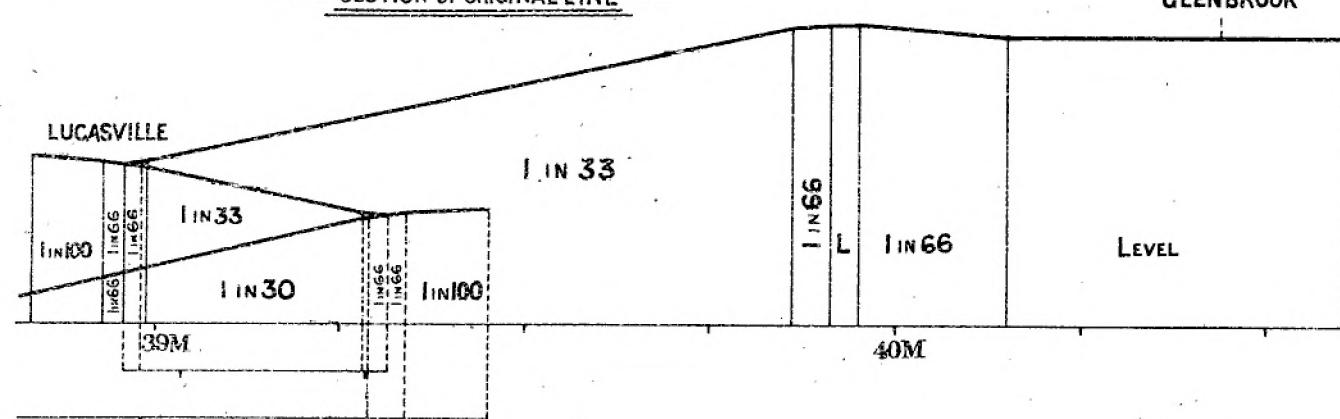

The Fourth Class rate was abolished in August, 1890, and all the articles placed in lower classes, and large numbers of articles reduced from Third, Second, First, and B and A Classes to lower classes.

Sydney : Charles Potter, Government Printer.—1894.

(SECOND SESSION.)

NEW SOUTH WALES.

RAILWAYS AND TRAMWAYS.

(REPORT OF RAILWAY COMMISSIONERS FOR THE QUARTER ENDING 30th JUNE, 1894.)

Presented to Parliament, pursuant to Act 51 Vic. No. 35, sec. 44.

Offices of the Railway Commissioners of New South Wales,
Sydney, 31st July, 1894.

To THE HONORABLE THE MINISTER OF RAILWAYS,—

Sir,

In accordance with the provisions of the 44th clause of the Railway Act of 1888, 51 Vic. No. 35, we have the honor to submit, for the information of Parliament, our Report, for the quarter ending 30th June, 1894, upon the subjects specified, viz. :—

- (i.) "The state of the traffic returns, with the approximate cost and earnings of trains per ton per train mile, in respect of goods and passengers, respectively, carried during the past quarter."
- (ii.) "The general condition of the lines, and accommodation for the traffic."
- (iii.) "The special rates (if any) which have been made, and the reasons for making such rates."
- (iv.) "The appointments and removals, with the circumstances attending each case."

I.—STATE OF THE TRAFFIC.

RAILWAYS.					Quarter ending 30th June, 1893.	Quarter ending 30th June, 1894.
Miles open		1893.	1894.		2,351	2,501½

Expenditure per train mile	2/5	2/1½
Percentage—Expenditure to earnings	79·98	86·12
Number of fares collected	16,687,215	15,502,477

RAILWAYS.

II.—CONDITION OF THE LINES.

A report as to the condition of the lines will be found as an Appendix, page 4.

III.—SPECIAL RATES.

A statement of the special rates, and the reasons for making the same, will be found attached. [Appendix, page 4.]

IV.—STAFF.

These returns are given as an Appendix, pages 5 to 8.

GENERAL REMARKS.

A further length of Railway, from Lismore to Mullumbimby, a distance of 38 miles and 57 chains, was opened for traffic on the 15th of May last; the traffic upon the line is of the most meagre description.

The traffic decreased during the quarter to the extent of £15,126, but the expenses were reduced by £47,088.

CONDITION OF THE LINES AND ACCOMMODATION FOR THE TRAFFIC.

The lines are in excellent order, and the facilities for carrying on the traffic are sufficient.

TRAMWAYS.

TRAMWAYS.

The following new lines have been opened :—

		miles. chains.
19th April, 1894	Union-street, Newcastle, to Railway-street, Merewether 1 69
Do	Hannell-street, Wickham, to Maitland Road, Tighe's Hill... 1 78

We have the honor to be,

Sir,

Your most obedient servants,

E. M. G. EDDY,
Chief Commissioner.

W. M. FEHON,
Commissioner.

CHARLES OLIVER,
Commissioner.

APPENDIX I.

NEW SOUTH WALES GOVERNMENT RAILWAYS.

REPORT upon the Condition of Lines for the quarter ending 30th June, 1894.

Sir,

Office of Engineer-in-Chief for Existing Lines, 19 July, 1894.

I have to report, for the information of the Railway Commissioners, that the whole of the lines and works have been well maintained during the past quarter.

The work of relaying has been suspended during the quarter, but the reballasting of the lines and also the resleeping has made fair progress.

The improvement of the grades at Colo Vale and Glenfield has been completed and the work in connection with the grades at Faulconbridge and Quirindi is well advanced.

A section of the Lismore-Tweed Line (between Lismore and Mullumbimby), a distance of 39 miles 20 chains, was opened for traffic on the 15th May last.

I have, &c.,

WILLIAM T. FOXLEE,

Engineer-in-Chief for Existing Lines.

The Secretary to the Railway Commissioners.

APPENDIX II.

NEW SOUTH WALES GOVERNMENT RAILWAYS.

STATEMENT, in accordance with clause No. 44 of the Railway Act, showing the Special Rates which have been made, and the reasons for making such rates, quarter ending 30th June, 1894.

Article.	Rate.	Reason for such rate.

1894.

(SECOND SESSION.)

NEW SOUTH WALES.

RAILWAYS AND TRAMWAYS.

(REPORT OF RAILWAY COMMISSIONERS, QUARTER ENDING SEPTEMBER, 1894.)

Presented to Parliament, pursuant to Act 51 Vic. No. 35, sec. 44.

Offices of the Railway Commissioners of New South Wales,

16th October, 1894.

To THE HONORABLE THE MINISTER OF RAILWAYS,—

Sir,

In accordance with the provisions of the 44th clause of the Railway Act of 1888, 51 Vic. No. 35, we have the honor to submit, for the information of Parliament, our Report, for the quarter ending 30th September, 1894, upon the subjects specified.

I.—STATE OF THE TRAFFIC.

RAILWAYS.				Quarter ending 30th Sept., 1893.	Quarter ending 30th Sept., 1894.
Miles open	1893.	1894.	2,390	2,501½
Revenue ... { Passenger ... £233,626	... { £231,011	... } } ...	£684,916	£667,892
Merchandise... £451,290	... £436,881				
Expenditure			£421,926	£371,840
Train miles run			1,800,931	1,821,247
Earnings per train mile			7 7/4	7 4/4
Expenditure per train mile			4 8/4	4 1/1
Percentage—Expenditure to earnings			61·60	55·67
Number of passengers			4,747,616	4,685,517
Tonnage of goods traffic			816,544	1,006,376
Tonnage of live stock traffic			39,679	41,521

TRAMWAYS.				Quarter ending 30th Sept., 1893.	Quarter ending 30th Sept., 1894.
Miles open	53 1/2	.61
Revenue from all sources	£68,516	£63,206
Expenditure	£59,825	£53,928
Train miles run	498,278	562,982
Earnings per train mile	2/9	2/3
Expenditure per train mile	2 4/4	1 11/11
Percentage—Expenditure to earnings	87·81	85·32
Number of fares collected	16,104,518	14,941,860

RAILWAYS.

II.—CONDITION OF THE LINES.

A report as to the condition of the lines will be found as an Appendix, page 4.

III.—SPECIAL RATES.

A statement of the special rates, and the reasons for making the same, will be found attached. [Appendix, page 4.]

IV.—STAFF.

These returns are given as an Appendix, pages 5 to 7.

GENERAL REMARKS.

The revenue for the months of July and August was practically the same as for the corresponding period of 1893, but during the month of September, in consequence of the shearing difficulties, the wool traffic did not come forward to the same extent as was the case last year, and the total revenue for the quarter therefore shows a decrease of £17,024.

We are pleased, however, to state that although considerable expenditure has been incurred and debited to working expenses, in renewing the permanent-way, and also in carrying out a number of minor works, which latter might fairly have been charged to capital, the total expenses for the quarter show the satisfactory decrease of £50,086.

The percentage the expenditure bears to the earnings stands at the low figure of 55·67 per cent., a decrease of about 6 per cent. from the cost of working for the corresponding period of 1893.

The earnings per train mile are 7s. 4d. and the expenditure 4s. 1d., leaving a net earning of 3s. 3d., an increase in profit per mile run of 4d., as compared with a year ago.

The coaching traffic has fallen off to the extent of £2,615; and the goods, mineral, and live stock traffic, £14,409.

The earnings upon the first section of the Lismore-Tweed line (38 $\frac{3}{4}$ miles) do not improve, the total revenue from the date of opening on the 15th May to the end of September amounting to £1,109 only. The line is being worked as cheaply as possible, but the earnings are only sufficient to pay about one-half of the current cost of keeping the line open.

With regard to the general position of the Railways and Tramways, and the Estimates placed before Parliament last year, for the financial year 1894, we beg to state that while the continued depression experienced in the Colonies has caused the revenue to fall short, from the 1st January to 30th September, of what was estimated by a sum of ... £167,388, the estimated working expenses have been reduced by ... £168,380, leaving the Treasury practically in the position that we promised when Parliament had the Estimates placed before it.

CONDITION OF THE LINES AND ACCOMMODATION FOR THE TRAFFIC.

The work of improving the permanent way by substituting steel rails in the main lines for iron rails, and by resleepering, has been continued, and the cost of relaying 15 miles of road has been paid for in the current quarter.

Two grades of 1 in 40 and 1 in 42 at Black Ridge, near Quirindi, on the Northern line, which interfered considerably with the loading of trains between Werris Creek and Murrurundi, have been reduced to 1 in 55, and the altered lines were brought into use on the 23rd of September. This change will materially assist the working.

TRAMWAYS.

The revenue shows a decrease of £5,310, but the expenses have been reduced to a corresponding extent.

The cable line from the foot of King-street to Ocean-street, Woollahra, a length of 2 miles 32 chains, was opened for traffic on the 19th September. The working has been fairly satisfactory looking at the difficult route the line follows and various other matters connected with the opening of a new system, but we expect shortly everything will be working smoothly. The service is a great convenience to the public.

The sale of tramway tickets by the conductors on the trams, which has been in course of introduction upon the various lines for some time past, has now been brought into operation on all lines.

We have the honor to be,

Sir,

Your most obedient servants,

E. M. G. EDDY,
Chief Commissioner.

W. M. FEHON,
Commissioner.

CHARLES OLIVER,
Commissioner.

APPENDIX I.

NEW SOUTH WALES GOVERNMENT RAILWAYS.

REPORT upon the Condition of Lines for the quarter ending 30th September, 1894.

Sir,

Office of Engineer-in-Chief for Existing Lines, 10 October, 1894.

I have to report, for the information of the Railway Commissioners, that the whole of the lines and works have been well maintained during the past quarter.

The improvement of grades and curves continues to make fair progress. The work at Black Ridge, near Quirindi, on the Northern Line, and at Faulconbridge, on the Western Line, has been completed, and similar improvement of grades is now being proceeded with near Aberdeen. Arrangements are also being made with a view to cutting down the grades at Toowong, on the Northern Line, and on the Southern Line near Moss Vale and Wingello.

The relaying, rerailing, and resleeping operations continue to make steady progress.

I have, &c.,

WILLIAM T. FOXLEE,

Engineer-in-Chief for Existing Lines.

The Secretary to the Railway Commissioners.

APPENDIX II.

NEW SOUTH WALES GOVERNMENT RAILWAYS.

STATEMENT, in accordance with clause No. 44 of the Railway Act, showing the Special Rates which have been made, and the reasons for making such rates, quarter ending 30th September, 1894.

Article.	Rate.	Reason for such rate.
Tickets	Cheap Excursion tickets to be issued on Saturdays from Redfern to Como and National Park at 1s. 6d. 1st, and 1s. 2nd class.	To induce traffic.
Goods traffic, West Wallsend Colliery.	Goods traffic, Newcastle to West Wallsend Colliery, mileage rates applicable for 20 miles.	To equalise rates.
Flour	From Murrumburrah or any station south of Demondrille to Byrock or Bourke, in 8-ton lots, to be carried an equal distance on the Down journey at the Special Up rate to that which it is carried on the Up journey, the remainder of the distance to be charged at Special "A" rate. Maximum charge, 24s. 6d. per ton; maximum to apply to any station on the Demondrille side of Blayney.	To induce traffic.
Valuable sheep and rams	Purchased at the annual sheep sales and forwarded to the country to be charged as $\frac{1}{2}$ of a truck for 20; over 20 and under 40 as $\frac{1}{2}$ truck; over 40 and under 60 as $\frac{1}{2}$ truck; and over 60 as a full truck.	do do
Sheepskins and tallow	Narrabri to Darling Harbour, in truck loads of 5 and 6 tons respectively, £2 per ton.	To encourage traffic.
Coke	Eskbank to Cobar, 16s. 1d. per ton; minimum weight, 9 tons per 10-ton truck; when smaller trucks are supplied the actual weight carried to be charged for, provided the waggons are loaded to their full carrying capacity.	do do
Sawn timber	The same conditions as to minimum weight per truck to apply to coke sent from Singleton.	
Sheepskins and tallow	In lots in one consignment of not less than 100 tons will be carried at "A" rates.	do do
Pelts	From Albury and Corowa to Darling Harbour, in mixed loads of not less than 6 tons, and sheepskins (alone), in lots of not less than 4 tons per four-wheeled truck, £2 per ton.	do do
Corn shellers	Soaked and without wool, in lots of not less than 6 tons per four-wheeled truck, "A" rates and conditions.	do do
Wire-netting	Second-class rates	do do

1894-5.

NEW SOUTH WALES.

RAILWAYS AND TRAMWAYS.

(REPORT OF RAILWAY COMMISSIONERS, QUARTER ENDING DECEMBER, 1894.)

Presented to Parliament, pursuant to Act 51 Vic. No. 35, s. 44.

Offices of the Railway Commissioners of New South Wales,
18th January, 1895.

To THE HONORABLE THE MINISTER OF RAILWAYS,—

Sir,

In accordance with the provisions of the 44th clause of the Railway Act of 1888, 51 Vic. No. 35, we have the honor to submit, for the information of Parliament, our Report, for the quarter ending 31st December, 1894, upon the subjects specified.

I.—STATE OF THE TRAFFIC.

RAILWAYS.					Quarter ending 31st Dec., 1893.	Quarter ending 31st Dec., 1894.
Miles open	2,462½	2,526
Revenue	...	{ Passenger ... £280,471		£272,480 }	£904,534	£943,101
		Merchandise ... £624,063		£670,621		
Expenditure	£453,039	£436,543
Train miles run	1,978,472	2,095,007
Earnings per train mile	9/1½	9/0
Expenditure per train mile	4/7	4/2
Percentage—Expenditure to earnings	50·08	46·29
Number of passengers	4,896,159	5,056,243
Tonnage of goods traffic	777,319	1,001,542
Tonnage of live stock traffic	40,549	41,827

TRAMWAYS.					Quarter ending 31st Dec., 1893.	Quarter ending 31st Dec., 1894.
Miles open	54½	61
Revenue	£71,048	£75,065
Expenditure	£63,706	£61,184
Train miles run	509,839	655,048
Earnings per train mile	2/9½	2/3½
Expenditure per train mile	2/6	1/10½
Percentage—Expenditure to earnings	89·66	81·51
Number of fares collected	16,743,576	17,779,806

RAILWAYS.

II.—CONDITION OF THE LINES.

A report as to the condition of the lines will be found as an Appendix, page 4.

III.—SPECIAL RATES.

A statement of the special rates, and the reasons for making the same, will be found as an Appendix, page 4.

IV.—STAFF.

These returns are given as an Appendix, pages 5 to 7.

GENERAL REMARKS.

The earnings for the quarter show an increase of £38,567, the principal increase being in wool, coal, and general merchandise; the increase under each head being—wool, £31,086; coal, £10,399; and general merchandise, £2,911.

The coaching traffic shows a decrease of £7,991, the principal falling off being in the 1st class passenger traffic, there being a decrease of £8,856 under this head.

The 2nd class passenger traffic, ordinary and season tickets, shows a fair increase.

The working expenses for the quarter have been reduced to the extent of £16,496, and the net earnings per train mile, after paying working expenses, stand at 4s. 10d., as against 4s. 6½d. last year.

The percentage of expenditure to earnings for the quarter stands at the low figure of 46·29 per cent.

The line from Mullumbimby to Murwillumbah was opened on the 24th December, thus completing the authorised line from Lismore to the Tweed River.

The traffic on the new section, as well as upon the Lismore section, is of the most meagre nature.

CONDITION OF THE LINES AND ACCOMMODATION FOR THE TRAFFIC.

The work of relaying and resleeping has been proceeding during the quarter, and the lines generally are in excellent order.

The accommodation for the traffic is satisfactory.

RESULTS OF THE WORKING FOR SIX MONTHS, 1ST JULY TO 31ST DECEMBER.

The revenue derived from the Railways and Tramways for the half-year just closed amounts to £1,749,264,
an increase of £20,250,
as compared with the corresponding period of 1893.

The working expenses amount to £808,383,
being a decrease of £75,001,
showing an increase of £95,251 in the net result from the half-year's working.

TRAMWAYS.

TRAMWAYS.

The Ocean-street cable line is carrying a fair traffic, and is now working satisfactorily. The cost of working is, however, heavy, owing to the exceptionally difficult route the line follows.

The revenue from all the lines during the past quarter shows an increase of £4,017, and the expenses show a decrease of £2,522.

We have the honor to be,

Sir,

Your most obedient servants,

E. M. G. EDDY,

Chief Commissioner.

W. M. FEHON,

Commissioner.

CHARLES OLIVER,

Commissioner.

APPENDIX I.

NEW SOUTH WALES GOVERNMENT RAILWAYS.

Report on the Condition of Lines for the Quarter ending 31st December, 1894.

Sir,

Office of Engineer-in-Chief for Existing Lines, 9th January, 1895.

I have to report, for the information of the Railway Commissioners, that the permanent-way and works have been maintained in a thoroughly satisfactory state during the past quarter, and that the lines generally are in first-class order.

The work in connection with the lowering of grades continues to make satisfactory progress. The improvement at Aberdeen and Toowong, on the Northern Line, are now being proceeded with, and those at Moss Vale and Wingello, on the Southern Line, will be taken in hand immediately.

Rerailing, resleeping, and other works continue to make satisfactory progress.

I have, &c.,

WILLIAM T. FOXLEE,

The Secretary to the Railway Commissioners.

Engineer-in-Chief for Existing Lines.

APPENDIX II.

NEW SOUTH WALES GOVERNMENT RAILWAYS.

RETURN of Rates approved during the Quarter ended 31st December, 1894.

Article.	Rate.	Reason for rate.
Ale	In bulk, Hay to Narrandera, in 6-ton truck loads, 30s. per ton	To meet exceptional circumstances.

1894-5.

NEW SOUTH WALES.

RAILWAYS AND TRAMWAYS.

(REPORT OF RAILWAY COMMISSIONERS, QUARTER ENDING 31ST MARCH, 1895.)

Presented to Parliament, pursuant to Act 51 Vic. No. 35, sec. 44.

Offices of the Railway Commissioners of New South Wales,
Sydney, 25th April, 1895.

To THE HONORABLE THE MINISTER OF RAILWAYS,—

Sir,

In accordance with the provisions of the 44th clause of the Railway Act of 1888, 51 Vic. No. 35, we have the honor to submit, for the information of Parliament, our Report, for the quarter ending 31st March, 1895, upon the subjects specified, viz.:—

- (i.) "The state of the traffic returns, with the approximate cost and earnings of trains per ton per train mile, in respect of goods and passengers, respectively, carried during the past quarter."
- (ii.) "The general condition of the lines, and accommodation for the traffic."
- (iii.) "The special rates (if any) which have been made, and the reasons for making such rates."
- (iv.) "The appointments and removals, with the circumstances attending each case."

I.—STATE OF THE TRAFFIC.

RAILWAYS.							Quarter ending 31st March, 1894.	Quarter ending 31st March, 1895.
Miles open	2,462½	2,531
Revenue	...	Passenger	... £280,623		1894.	1895.	£647,693	647,875
		Merchandise	... £367,070				383,135	
Expenditure	£365,314	368,959
Train miles run	1,757,413	1,867,262
Earnings per train mile	7 1/4	6 11 1/4
Expenditure per train mile	4/2	3 11 1/2
Percentage—Expenditure to earnings	56·40	56·95
Number of passengers	4,810,387	4,846,193
Tonnage of goods traffic	875,201	917,152
Tonnage of live stock traffic	37,013	40,285

TRAMWAYS.									Quarter ending 31st March, 1894.	Quarter ending 31st March, 1895.
Miles open	55	61
Revenue	£72,615	73,366
Expenditure	£48,897	54,221
Train miles run	512,810	638,930
Earnings per train mile	2/10	2/3½
Expenditure per train mile	1/11	1/8½
Percentage—Expenditure to earnings	67·83	73·90
Number of fares collected	16,994,526	17,343,232

II.—CONDITION OF THE LINES.

A report as to the condition of the lines will be found as an Appendix, page 4.

III.—SPECIAL RATES.

A statement of the special rates, and the reasons for making the same, will be found attached, page 4.

IV.—STAFF.

These returns are given as an Appendix, pages 4 to 6.

RAILWAYS.

GENERAL REMARKS.

The line from Sydenham to Belmore, a distance of 5 miles, was opened for traffic on the 1st of February last.

The total earnings for the quarter show a slight increase over the corresponding period last year.

The goods earnings have increased as follows:—Live stock, £5,431; wool, £5,057; coal and other minerals, £7,586; but grain, &c., and general merchandise have decreased £1,918, although in consequence of cheaper rates operating the weight carried has increased by 32,220 tons.

The coaching earnings have decreased £15,883, the receipts from first-class passengers having fallen off £11,688.

The expenses have been considerably increased during the quarter in consequence of a majority of the workmen having been put on full time, but by economies in other directions the total expenditure has been limited to a net increase of £3,645, notwithstanding that a larger tonnage has been carried over the railways.

CONDITION OF THE LINES AND ACCOMMODATION FOR THE TRAFFIC.

The permanent way and works have been well maintained during the past quarter. Relaying, reballasting, resleepering, rerailing, &c., have been steadily continued, the improvement of the grade at Aberdeen has been completed, and the works in connection with the lowering of grades at Toowong, on the Northern line, and Moss Vale and Wingello, on the Southern line, are well advanced.

The accommodation for the traffic is satisfactory.

TRAMWAYS.

GENERAL REMARKS.

The Tramway earnings show an increase of £751. On many of the Tram lines there was a falling off in traffic, largely contributed to by Easter occurring in April this year. The decrease in revenue was, however, more than covered by the receipts from the Ocean-street Cable Line, Sydney, and the Tighe's Hill and Merewether extensions, Newcastle, which were not open during the March quarter of last year.

The expenditure shows an increase of £5,324, accounted for by the additional cost of working consequent on Tramway extensions, and the decrease in traffic in directions which did not permit of a corresponding reduction in working expenses.

The relaying and duplicating of the Waverley line from Bondi Junction to Charing Cross are making fair progress, and will soon be completed.

We have the honor to be,

Sir,

Your most obedient servants,

CHARLES OLIVER,

Deputy Chief Commissioner.

W. M. FEHON,

Commissioner.

APPENDIX I.

NEW SOUTH WALES GOVERNMENT RAILWAYS.

REPORT on the Condition of Lines for the Quarter ending 31st March, 1895.

Sir,

Office of Engineer-in-Chief for Existing Lines, 3 April, 1895.

I have to report for the information of the Railway Commissioners that the Permanent Way and Works have been maintained in a thoroughly satisfactory state during the past quarter, and that the lines generally are in first-class order.

Steady progress has been made with necessary renewals of the Permanent Way, including relaying, reballasting, resleeping, rerailing, &c., and bridges and other important structures have received all necessary attention.

The work of lowering gradients at Aberdeen and Toowong on the Northern Line, and at Moss Vale and Wingello on the Southern Line, is proceeding rapidly; and the improvement of the 8-chain curves at Karabar and reduction of gradients between Wellington and Dubbo will shortly be taken in hand.

I have, &c.,

JAMES FRASER,

For the Engineer-in-Chief for Existing Lines.

The Secretary to the Railway Commissioners.

APPENDIX II.

NEW SOUTH WALES GOVERNMENT RAILWAYS.

RETURN of Goods Rates approved during the Quarter ending 31st March, 1895.

Article.	Rate.	Reason for rate.
Explosives	To stations on the Cobar, Corowa, and Forbes Branch Lines, to be charged at through rates.	To induce traffic.
Paraffin wax	Hartley Vale to Darling Harbour, "B" rates and conditions	To equalise rates.
Solid fillings for soap-making	1st-class rates and conditions.....	do do
Cast-iron rollers, used in flour-mills.	Rollers sent for repair to be charged ordinary rates on forwarding journey, returned to original sending station free.	Special rate.
Cream in cans and butter in cases.	Consigned as goods and loaded in louvred vans attached to the mail train at Junee and Goulburn at the convenience of the Department, to be carried at goods rates.	To encourage traffic.
Candles and kerosene	When conveyed in mixed truck-loads of not less than six tons, 1st-class rates.	do do
Willows	For basket-making, 1st-class rates and conditions	do do

1894-5.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAYS.

(REPORT BY THE ENGINEER-IN-CHIEF FOR RAILWAY CONSTRUCTION ON "SOME DIFFERENCES IN RAILWAY PRACTICE IN AUSTRALIA, ENGLAND, AND AMERICA, WITH SPECIAL REFERENCE TO ECONOMY OF CONSTRUCTION.")

Ordered by the Legislative Assembly to be printed, 19 March, 1895.

REPORT on some differences in railway practice in Australia, England, and America, with special reference to economy of construction.

In submitting the following report to the Minister, I wish to point out that it is in no way intended to be exhaustive, but is the result of observations gathered during a trip which, in the first place, was sought for merely as a relaxation after a long period of years from the labours and responsibilities of office.

The late Minister for Works, Mr. Lyne, however, happily saw the advantage which would accrue to the department if my attention could be directed, during leave of absence, specially to the subjects of economical railway construction and electric tramways, which were, so to speak, burning questions in our own Colony. Having received, therefore, instructions to investigate and report, my inquiries took a more systematic form than they otherwise would have done, and I endeavoured to make the utmost of the short time at my disposal, and select for inspection what would seem to be of the greatest interest and profit.

My leave was, in the first instance, limited to six months, and although Mr. Lyne intimated to me that the Government would certainly grant what extension of time I required to make my work as complete as possible, yet, as the chief part of the expense was to be defrayed out of my own pocket, a limit to my journeying was necessarily fixed. Nevertheless, I have no doubt that what I have seen, both in the matter of railways and tramways, as also in other matters which came under my observation, will prove of very great value to the department.

I will begin by relating in some detail my experiences in America and elsewhere.

Soon after my arrival in San Francisco, on the 7th June, 1894, I put myself into communication with the officers of the Southern Pacific Railway Company. Mr. Curtis kindly gave me facilities for travelling over their system free of cost, and instructed the local resident engineers to meet me and show me the points of interest on the various lines. Mr. Hood, the chief engineer, also gave me some very interesting information, and had it not been for certain unavoidable delays mentioned in my previous report, and my consequent anxiety to get away afterwards from San Francisco, I might have profited still more from the courtesy of the chief officials.

The southern portion of the system was the first to come under inspection. For many miles the railway traverses the San Joaquin Plains, very easy country—treeless plains of black and brown soil. The construction of this part of the line is of the cheapest description. An embankment is thrown up from the side and well drained, the crown, in most places, apparently being little more than 12 feet in width, the sides sloping off gradually at first, and afterwards steepening. Very often there was little embankment at all. No ballast, other than the earth on the spot, was used. The permanent-way was not in what we should call good condition, but rather the reverse; in spite of this, however, the design of the American rolling stock enables trains to travel at considerable speed, with comfort to the passengers and without danger. Fencing was, for the most part, erected on both sides, cattle-pits being used at the crossings. The fences are of a very cheap description, and consist of upright sawn posts and three lines of sawn rails, fixed to the posts with spikes, and battened over the joints.

Further on, the railway crosses the Tehachapi Pass, 363 miles from San Francisco, the height above sea-level being 3,964 feet.

There is here a very interesting example of mountain location. In order to reach the summit, with a limited grade, the line doubles on itself and forms a loop. The ruling grade is 116 feet per mile, or 1 in 45 $\frac{1}{2}$. The sharpest curves are of 10 degrees—that is, of 573 feet radius. All curves were at first laid out without taper; they are now, however, being altered. The rails weigh 76 lb. per yard, and are in 30 feet lengths. The sleepers are nineteen in number to each rail length. The fish-plates used—as is almost invariably the practice in America—are of the angle type, with notches near the ends, so that they may be anchored to the sleepers to prevent creeping of the rails. Six fish-bolts are used to each pair of fish-plates. The joints of the rails are not opposite to one another, but alternate. The sleepers are 8 feet long by 7 inches by 8 inches. On the curves, what are called rail braces are seen. These are castings which fit against the rail, on the outside, and are securely fixed, to prevent the spreading of the track.

This

This part of California has a very small average annual rainfall. The rain sometimes, however, comes down in torrents, and produces serious floods. A portion of the line, on the southern side of the summit, had been renewed twice, the rails first laid having been washed away. On each renewal the line was moved higher up the slope of the hill.

There are several tunnels on this section. They are invariably lined with timber, redwood—a product of the Californian forests, well known in Sydney—being generally used. This wood is very durable, and has, in the case of these tunnels, already lasted for eighteen years. Mr. Hood assured me that he prefers the use of timber for lining to that of concrete or brick, as a good deal of the country is more or less unstable in character, and, in case of any displacement occurring through movement of the ground, the position of the timber can be adjusted, whereas, if concrete or brick were used, it would mean entire reconstruction. The tunnels are almost all dry. That, however, at San Fernando—the longest of the series—is wet, and the laggings have had to be replaced since the original construction. The cost of these tunnels amounts to about £14 per lineal foot.

The bridges are all of timber. Guard-rails are laid on the inside of the permanent-way, and these are continued for a considerable distance beyond the ends of the bridge, and converge to a point, so that if a car has become derailed it may, on approaching the bridge, be brought again on to the track.

Most of the road crossings are entirely unprotected, neither cattle-pits nor gates being used; but warning-boards are erected at some distance away along the line to draw the attention of drivers of the trains to their approach to such crossings.

No signals are used on the South Pacific system excepting starting or point signals. Very long trains are run, and, as a consequence, very long sidings and loops are required at the stations. It is a general practice for three engines to be coupled together to draw a heavy train; in this way the number of trains of a single line is reduced, and the traffic rendered more manageable. Switches are, generally, of the Stubb type, in connection with which a sliding rail is used. There is no interlocking except for "grade crossings," or crossing at a level of other railways; but at these places to make the traffic safe, it has lately been decided to erect towers from which signals and safety points can be worked. There are six of these crossings on the Southern Pacific railway, and, at the time of my visit, interlocking plant was being fixed at Colton, 58 miles south of Los Angeles and 540 from San Francisco.

I next visited the line running north to Portland. Mr. Cooley, the resident engineer, met me at Red Bluff, and accompanied me as far as Ashland, 431 miles from San Francisco, from which point I returned to San Francisco, after being considerably delayed by the Pullman strike.

Redwood sleepers are used also on this line. I am told that they last twenty years in the sidings, but that they wear out in the main lines, through being cut by the rails. Lately, cedar has been introduced for sleepers, but it only lasts eight years. Pine, treated by the "Burnettising" process, is now being used; this process which is well known to engineers, consists of an application of a solution of chloride of zinc to the timber under pressure. Mr. Curtis informed that the company had a special plant for conducting this process, and that the cost was between 8 and 9 cents per sleeper. The sleepers vary in number, as many as 18 to 30 feet length being placed on the curves, where rail braces are also used, as before mentioned. On the Portland line the rail joints are all square.

The sharpest curves are of 14 degrees, or 409 feet radius. They exist on the Mount Shasta and Siskiyou inclines. The steepest gradient is on the Mount Siskiyou section, and is 3 3 per cent., or 1 in 30. On the sharper curves, namely, those between 10 and 14 degrees curvature, the gauge is widened to the extent of the three-quarters of an inch. The Siskiyou summit level is 4,130 feet above the sea.

When at Ashland, I saw two heavy locomotives which were in use for working the traffic over these curves. They had eight wheels coupled, with a bogie in front, one pair of the driving-wheels being flangeless. They were made by the Baldwin Company. They traversed the sharpest curves without difficulty, although, I understand, there is considerable wear on the rails and the flanges of the wheels. The cylinders of these engines are 19 in. by 26 in.

The so-called Oregon pine—which appears to be chiefly of the species technically known as Douglas fir—is very generally used in construction, and has the reputation of durability. Trestles are made of this timber. It is also used largely for planking, and at Ashland, the low platform which exists there, and which is about 360 feet in length, consists of planking of this timber. While referring to its use, I might mention that in San Francisco there are many miles of streets near the water in which the foot pavements are constructed of Oregon planking.

The line from Oakland, over the Sierra Nevada, has a ruling grade of 114 feet to the mile, or 1 in 46 1/2. The sharpest curves are, I understand, of 12 degrees, or 477 feet radius. The summit level is 7,017 feet above the sea, and is reached at 195 miles from San Francisco.

The northern line to Portland, and that to the east over the Sierra Nevada, both pass through Sacramento. On the way thither, about 32 miles from San Francisco, the railway traverses the Straits of Carquinez, an inlet of San Francisco Bay, and the train is conveyed across by a large ferry steamer. This ferry steamer, called the "Solano," is built of wood, and, curious to say, that although this is an inlet of the Pacific Ocean, and the water is generally salt, no teredo appears to live in it, which may be accounted for by the fact that enormous quantities of fresh water charged with silt come down here every spring from the Sacramento River. The length of the steamer on deck is 424 feet, and its width 116 feet. Four lines of rails are placed on the deck, and twenty-four long passenger cars, or forty-eight bogie freight cars, with locomotive can be carried upon it. The engines are of the vertical beam-engine type. The distance across the straits is 1 mile, and the whole time consumed in transit is frequently not more than nine minutes, including stopping and starting. When it is added that there is a tide of 9 feet to contend with, it will be seen that the arrangements are of the most admirable description. This ferry service is conducted so smoothly that a passenger, whose attention is not specially directed to it, or who might, perhaps, be engaged in reading, would notice nothing beyond the stopping or the starting of the train as it would be felt at an ordinary station. No jarring or jolting of the slightest description occurs when passing on or off the ferry.

The railway from Oakland to Ogden forms part of the Southern Pacific railway system. From the latter point the traveller going eastward has the choice of more than one route—the Union Pacific and the Denver and Rio Grande being the most noteworthy. I chose the latter, not only because it is the most interesting from a tourist's point of view, but also because it has special features, instructive to the engineer. I particularly wished to see what could be done with the standard gauge in such difficult country. Having selected this route, I started from Ogden, which is 4,286 feet above the sea, by the Rio Grande

Grande Western line. I stopped for a day at Salt Lake City, and then proceeded as far as the Grande Junction. From this point the more interesting part of the journey commences. The Denver and Rio Grande system was formerly built on the narrow-gauge type, but the main line has recently been altered to the standard gauge, most of the remainder being left as originally constructed.

The line is a most remarkable one, the climax being probably reached when it enters the Royal Gorge, a mere cleft in the mountains, through which river and railway wind along side by side.

I had the advantage of travelling over part of this line with Mr. Ridgeway, one of the general superintendents, in his inspecting car.

The heaviest grades are 3 per cent., or 1 in 33, and there are long stretches of these. Curves of 12 degrees—that is, of 477 feet radius, and of 13 degrees, or 358 feet radius—are frequent. There is one at Leadville which is at least 16 degrees, or 258 feet radius. The summit level is at Leadville, and is 10,200 feet above the sea. The altitude of Denver is 5,190 feet. The rails are of various weights—62 lb., 65 lb., and 75 lb. per yard—the latter being adopted where relaying is carried on. Sleepers are laid to the number of about 3,200 to the mile. Some are of pine, and cost 30 cents each; others of red spruce, which cost 35 cents. The latter are preferred, as being more durable, their life being seven years. The locomotives are from 62 to 65 tons in weight, without tender. They have six wheels, coupled, the centre pair being flangeless, but with a tread 7 inches wide. The curves are all tapered at the ends. Tie-plates are used on the curves, as also curve braces, with double spiking. The joints of the rails are fastened with angle fish-plates. The Stubb switch is invariably adopted for points, tongue switches being objected to on account of the difficulty experienced in keeping them clear of ice and snow in winter. The switch boxes are provided with locks, and the switches are stated to be perfectly safe. I noticed that the Denver and Rio Grande rolling stock had Miller couplings, whereas on the Pullman cars, and generally throughout America, the Janny coupler is used. As before stated, this line was originally laid to a narrow gauge, and it had a ruling grade of 4 per cent., or 1 in 25, while the sharpest curves were of 24 degrees, or 238 feet radius. The present line has been relocated and lengthened, in order to obtain the better grade now existing. On some of the branch narrow-gauge lines there are short grades of 400 feet to the mile, or 1 in 13.

At Denver the head-quarters of the Railway Company are fixed. I visited the offices, and was afforded an opportunity of inspecting the drawings. A number of blue print copies of these were furnished to me. The chief of them, as bearing on the question of cheap construction, were cross-sections of formation, with and without ballast, and timber bridge designs. The latter, of course, were designed for the use of pine timber, and would require some modification to adapt them to ironbark, but the construction of the joints appeared to me interesting. Mr. Sample, general superintendent, was, unfortunately, away, but Mr. Hamilton kindly gave me what information I desired.

When proceeding from Denver eastward, I chose the main line of the Burlington and Quincy Railway Company. This company owns about 7,000 miles of road. The first part of the route I traversed at night. In the morning we were passing over the class of country generally known as the prairies. I stopped at Lincoln to visit the engineer's offices, but found Mr. Calvert, the general superintendent, to whom I had an introduction, was away. I, however, met the chief engineer, Mr. Weekes, who kindly showed me round the station yard, and gave me much information about the methods of construction adopted by him.

The extent of the railway traffic at Lincoln may be judged when it is mentioned that there are 30 miles of road laid down in the station yard.

Tongue switches are used for the main line. The design of these is, in my opinion, superior to those we have been in the habit of using. The tongues are made out of the ordinary rail. One end of a rail is turned up and planed with proper taper, so that its flange rises over that of the stock-rail, and leaves the latter uncut. The result of this design is that not only is the weakening of the stock-rail, experienced in connection with our own switches, obviated, but the switches can be put on to any part of the road, or in any part of a rail, clear of the fish-plates, without previous preparation in the shop. The Stubb switch is used for sidings. The crossings of the turn-out on the main line have spring frogs. This is a construction very much to be recommended, as the main line trains run over the crossings without jar or jolt of any sort, the rails being rendered practically continuous. The grade crossings of the roads of the different railway companies, of which there are several, are protected with signals, and have signalmen stationed at them. The diamond crossings were, I noticed, very weak. Mr. Weekes kindly furnished me with drawings of the formation, and of the permanent-way and other illustrations.

I also ascertained the following particulars:—For piles, it is the practice to use white oak, which costs 50 cents per foot fixed, and these last fifteen years. For the superstructure of the 16 feet span—which is the usual type for small openings—local pine is used, which costs 8 dollars per thousand superficial feet, or white pine from Chicago, at 16 dollars per thousand, delivered. Fixing costs from $6\frac{1}{2}$ to 7 dollars per thousand. The joints are all sawn, the design being such that no special fitting is required. They are designed to carry engines weighing 15 tons per axle, six or eight wheels coupled.

Earthworks cost about 12 cents per cubic yard. On the mountain lines curves up to 16 degrees, or 358 feet radius, are used, but on the main and prairie lines there is, of course, no necessity for any sharp curves. The grades on the latter are, as a rule, limited to 40 feet to the mile, or 1 in 132; on branch and mountain lines to 4 per cent., or 1 in 25. However cheaply it may be intended to make a line, in the first instance, the formation is always very carefully drained. Where a line is on an embankment, the latter is drained by the trench from which the embankment is formed. The cuttings are excavated to a greater width than is the practice with us, as much as from 22 to 25 feet widths, for single line, being the dimensions adopted. The permanent-way is laid in the first instance, without ballast, earth being used between the sleepers. The substitution of earth for ballast is invariably looked upon as a makeshift, to be rectified afterwards. The kinds of ballast used are slag from Omaha, gravel, or burnt clay. The latter costs about £400 per mile. It is laid 6 inches in depth under the sleeper, and finished off flush with the top. On the plains, the height of formation is 18 inches above the surface at least. In side-lying ground, the width of the formation is the same as in the cuttings. The cost of earthworks per mile, for cheap lines, is about £450. The cross-sections of banks and cuttings on all the western lines of America are somewhat the same, slight differences in dimensions only existing.

There is now in course of construction in the north-west an extension of the Edgemont and Sheridan line. Mr. Weekes invited me to accompany him on a visit of inspection then, but the trip would have taken up about ten days, which was more time than I could spare.

Before

Before leaving the subject of the Burlington and Quincy railway, I must not omit to mention the name of Mr. W. D. Sandborn, general agent of the Company in San Francisco, to whom I am very much indebted for facilities of travel and introductions.

As the traveller proceeds eastward a marked improvement in the character of the roadway becomes noticeable. In the far west the construction is often very poor, and were it not for the design of the rolling stock, it would not be safe to travel. I doubt, indeed, whether a good deal of our rolling stock would keep the road. Many portions, indeed, were in remarkably good condition, but on the other hand the state of some parts was not what we should consider necessary even on our least important branch lines. The construction, however, of the rolling stock, the framing and the balancing of the locomotives, the bogies of the passenger and the freight cars, with the central buffers all combined, enable trains to run at a very considerable speed over the most crooked and uneven roads.

At Chicago my particular attention was directed to tramways and elevated railways, which will be dealt with in another report. I have nothing of special importance to say in connection with the subject in hand, except to notice the large number of dangerous level crossings within the city area. Attention to this danger has, for some time past, been directed, and it is certain that the evil must be coped with shortly. The lines will be raised above the street level, and the cost of this, although it must chiefly be borne by the railway companies, will, to some extent, probably be shared by the city.

I had intended, while in the neighbourhood of Chicago, to visit the Pullman Car Works and Illinois Steel Company's Works, but owing to the strike they were still closed.

At St. Louis, one of the "big things" in America is now to be seen. This is the new Union Depôt, where all the lines running into St. Louis will converge. There are twenty-two railway companies whose roads enter St. Louis, and to accommodate them, the new station has thirty roads in pairs, with low platforms between, so that it may be said that thirty platforms, from 600 to 800 feet in length, will be available for starting and arrival of trains. This station has been interlocked on the electro-pneumatic system in the most perfect manner.

At Cincinnati I called upon Mr. Harvey, the Vice-President of the Queen and Crescent Railway System, which extends from this city south to New Orleans, with several important branches. This gentleman and Colonel Nicholson, the chief engineer, gave me much interesting information. A great deal of this system has been made in a very cheap way; in this case the line goes through flat country, where low embankments, with good side drains, can be made. Ballast is used wherever obtainable. Alluvial soil packing is avoided if possible. Earth, if of a sandy character, is used in the first instance, where ballast cannot be got. The sleepers are of oak, or, in the south, of pitch pine. The latter timber is the more durable. Oak lasts from five to seven years. Curves in easy country are limited to 6 degrees, or 955 feet radius. There is a long grade running out of Cincinnati of 6 feet to the mile. This is the steepest on the main line. The rails are mostly 60 lb. to the yard. Rails of the weight of 75 lb. are, however, invariably adopted for new road. The Stubb switch is used for turn-outs off sidings only. It is the practice to use spring frogs on the main line. Cast-iron turn-tables are considered to be perfectly out of date, and have not been used for the last twelve years. Trussed wooden ones, of which I saw some samples on the Southern Pacific Railway system, formerly existed, but are not now in use. They have all been replaced by others of more modern construction. The bridges and viaducts are mostly of steel. The tunnels were originally lined with timber, but brick, or brick with part stone, is now used for the purpose. Cattle guards are used at the road crossings. Those made of wood, with pits in addition, are considered to be the most effective. Iron slats are more handy, but do not serve the purpose so well. The latter, however, allow of a good road-bed being preserved. The practice is to paint all cattle guards white, in order to render them visible at night.

A number of drawings and specifications have been kindly furnished to me by Colonel Nicholson.

From Cincinnati to Cleveland I travelled over the line known as the "Big Four," so called from the four largest cities at the termination of its various extensions, viz., Chicago, Cincinnati, Cleveland, and St. Louis. The President of the Company, Mr. Ingalls, showed me great courtesy, and when going over the line I was fortunate enough to meet one of the resident engineers. This line is interesting as being intermediate in character between the rougher lines of the west and the high-class lines of the east, of which the New York Central and the Pennsylvania are the type. The rails used are mostly of 65 lb. to the yard, but are gradually being replaced by those of 80 lb. The fish-plates are 28 lb. in weight, and have six bolts. The nuts are fastened inside the track. Sleepers number 2,600 to the mile, and are of oak, their cost being 35 cents each. Gravel ballast is used, running from 2,600 to 3,000 cubic yards to the mile. Spring frogs are always used on the turn-outs of the main line. There are some examples of the Walton switch which carry cars in from the side right over the main line rail without any cut. This railway is being altered considerably to permit of high-speed travelling. Under the new grading the steepest grades are $\frac{1}{2}$ per cent., or 1 in 200; and the sharpest curves of 2 degrees, or 2,864 feet to the mile. The old grades and curves are being gradually altered, so as to come under these new limits. Level crossings are provided at times, with pits and grills, but not in all cases, as I noticed many which seemed to be entirely unprotected. The bridges are designed for a rolling load of 4,000 lb. per lineal foot with a factor of safety of 5.

From Cleveland to Buffalo I travelled over the Lake Shore Railway. This forms a portion of the express route between New York and Chicago. The grades are gradually being altered to a maximum of $16\frac{1}{2}$ feet per mile; the curves to 2 degrees, or 2,864 feet radius. The country is, of course, very flat. Ballast is always used, and consists of gravel. The rails are mostly of 67 lb. to the yard, but a weight of 75 lb. is now being adopted where relaying goes on.

From Buffalo to New York I took the line belonging to the New York Central and Hudson River Railway Company, which is one of the best specimens of railway construction in the world. It differs from the English construction, inasmuch as the flat-bottomed rail is used as against the double-headed with chair, but it is none the less substantial and smooth to run upon. Rails of 80 lb. are used for the most part, but a certain length of 100 lb. rails has been laid down. The joints of the rails are laid alternately, and are supported by sleepers with joint plates between them and the rail. The sleepers contiguous to the rail joints are 1 ft. 9 in. from centre to centre, the rest being 25 inches from centre to centre. The fish-plates are long and of the angle type with six fish-bolts, and notches at the ends to secure them to the sleepers, to prevent creeping of the rails. The sleepers are, of course, all sawn, and are 8 feet long by 9 inches by 6 inches. It may be concluded from the above that, with the heavy rails supported

supported by close sleepers, the road is of the firmest description; and express trains are run between New York and Buffalo at speeds equal to those of the best express lines in England. For this particular service (the Empire State Express) very heavy locomotives, with four wheels coupled and bogie, are used. The newest passenger engine has a load per axle of 22 American tons, or nearly 20 English tons. The diameter of the driving wheels of locomotive No. 870 is 6 feet 9 inches. In No. 999, which is the most recent, but which I did not see the diameter, is, I am told, 7 feet 3 inches.

The traffic has grown quite beyond the capabilities of the New York terminus. The main span of this building is 240 feet, without the annex; twenty-two tracks have been crowded into the station. The platforms are very narrow indeed, some of them being only about from 6 to 8 feet wide; but there is great difficulty about acquiring more property for the proper widening of the station. The platforms are raised only slightly above the surface of the rails. For interlocking, Johnson's system of levers and rods has been adopted.

I travelled from Jersey City to Philadelphia and Washington by the Pennsylvania Railway Company's line, and also from Philadelphia to Altoona and Johnstown. The terminus at Jersey City and the dépôt at Philadelphia have both been constructed above the surface of the street. The roofs are of very fine design, in single spans 307 feet, and they have a length of 700 feet. The principle of construction adopted is similar to that of the St. Pancras Station in London, the thrust of the roof being resisted by tie beams at floor-level. At the Philadelphia Station there are sixteen roads; the platforms are 16 feet wide. The interlocking system adopted is the electro-pneumatic. The type of rail mostly used weighs 85 lb. to the yard, but a length of line has been laid with a 100-lb. rail. There are some rails only 60 lb. in weight to the yard; in this case they are anchored in the middle. Long-angle fish-plates are used, and the joints of the rails are placed alternately. The sleepers are of white oak, 8 ft. 6 in. long and 7 inches thick, having a 10-inch bearing, and cost from 50 to 55 cents each. They are placed fourteen to the 30-foot rail. The New York Central and the Pennsylvania Railways are competitors for traffic to the important centres of the west, and, in connection with other companies, run rival express trains to Chicago, St. Louis, and other cities. The car accommodation is most luxurious. The Pennsylvania railroad is under some disadvantages, in comparison with the New York Central, which passes, for the most part, through level country. The Pennsylvania railroad, on the other hand, has to cross the Alleghany Mountains. The grades from Altoona to the summit are 90 feet to the mile; between the summit and Johnstown, 40 feet to the mile. The curves are frequently of 6 degrees, or 955 feet radius; but occasionally of 8 degrees, or 716 feet radius. The altitude of Altoona is 1,180 feet; that of the summit, 2,160 feet above the level of the sea. The level of Johnstown is about the same as that of Altoona.

I was informed by Mr. Shepperd, the general superintendent at Altoona, that when the old bridges on this line are replaced, it is mostly with stone construction. The ballast is of broken stone. Sidings of extreme length have to be provided. When I was at Altoona, I noticed a train of empties passing through the station with seventy-two freight cars. This means a total length of train of nearly half a mile. I understand that as many as eighty-five cars have been taken in a single train. I am much indebted to Mr. Ely, chief of motive power, Mr. W. H. Brown, chief engineer, and others for kind assistance and information.

Before leaving the consideration of the American railroads, it would be a pity to omit mention of the Baltimore and Ohio Railway, which, while doing a very large and profitable business, is remarkable for the engineering difficulties in construction which have had to be contended with. Portions of this railroad, over which passenger traffic is run at an average speed of 30 miles an hour, including stoppages, have many curves between 600 and 650 feet radius, while the ruling grade is 120 feet to the mile on the straight, and 114 feet to the mile on the curves. I, unfortunately, had no time to go over any portion of the system, and this I much regret, especially as the Company are intending to work their traffic through some long tunnels by electric-power. One of the electric locomotives, however, I had the opportunity of seeing at the Schenectady Works of the General Electric Company.

In consequence of the loss of time which I experienced through the Pullman strike, I was unable to visit any part of Canada, or have any interview with the officers.

Of the Canadian Pacific Railway Company I obtained, however, through the kindness of Mr. Peterson, the chief engineer for the railway, some drawings showing cross-sections of the formation and the permanent-way, also a couple of pamphlets descriptive of the railway. The rails are 72 lb. in weight per lineal yard. The joints are fixed with long angle-plates, 44 inches in length, having six fish-bolts. These are notched at the ends, so that they may be anchored to the sleepers. The ruling grade on most of the sections is not more than 1 per cent., and a stipulation was formerly made with the Canadian Government to the effect that this should be the limit of the gradient for the whole line, but eventually it was found impracticable to adhere to this limit over the most difficult portion, namely, where the line crosses the Selkirk Range, and there the ruling grade will now be 2 per cent., or 1 in 50. At present the curves are, for the most part easy, but on the mountain sections curves of $11\frac{1}{2}$ degrees, or about 500 feet radius, have been adopted. The permanent line is not yet complete. The temporary line contains curves very much sharper than those mentioned; of these, one is 250 feet, and another of about 300 feet radius. With the exception of this portion the curves and grades may be considered to be extremely good. These favourable conditions have been rendered possible by the heavy subsidies of the Canadian Government. The Company have received 700 miles of finished line without any payment whatever, 25,000,000 dollars in cash, and 25,000,000 acres of selected land in the fertile belt, besides other concessions of importance.

On crossing the Atlantic the difference between the methods of construction of road and rolling stock in England and America appeared to me very striking. Used as I was, fifteen years ago, to look upon English railways as the only type worthy of wide adoption, I could not help feeling on my arrival from America that the result of the comparison was not always in favour of the English style. What is at first so noticeable is the distinct character of the rolling stock—on the one hand, the rakish American locomotive; on the other, the more sober-looking Englishman; then the long and roomy American passenger-car, as compared with the short narrow and lower compartment-car. The goods or freight trains greatly differ in appearance. In America you will find trains of fifty to seventy covered freight-cars, each from 30 to 35 feet long, drawn by, probably, two heavy engines, if not more. In England, goods trains will consist of a series of short waggons, about 20 feet long, mostly open, or at least not roofed in, but, when containing perishable goods, covered with tarpaulins. The contrast in the permanent-way is also very striking. English practice seems to require the use of the double-head or bull-headed rails and cast-iron chairs. This system has its advantages and its disadvantages. It is very heavy, and affords

affords great resistance by its inertia to displacement of the road under the oscillation of express traffic. The rails are also very readily removed when worn out, provided, of course, that the chairs are still good enough, because all that has to be done is to undo the fish-bolts, and knock out the keys, and the rail comes out. This is a great advantage when frequent renewals are necessary. On the other hand, in hot climates, keys become loose, and give much trouble. I travelled over some portions of all the lines north of the Thames except the Midland and Great Western. I had these two, of course, down in my programme, but time for departure came round before I could see them.

On the London and North-western Railway, which is the best representative of English practice, the rail at present in use for the lines is of bull-headed section, 90 lb. per yard, 60 feet long, with deep fish-plates at the joints, and large cast-iron chairs of 45 lb. weight, with holes for two spikes and two screws. The Great Northern, on the other hand, adopts 85-lb. rails, 30 feet long, with heavy chairs and sleepers, eleven to the rail length. Ballasting is an important question in English express lines. Everywhere hard stone—what we should call bluestone, or hard blast furnace slag—has been largely introduced, but it would be a mistake to suppose that these materials are of universal use, for very excellently managed lines, like the South-western, over which trains of considerable speed run, still adhere to screened gravel. English work is very substantial and strong, but the type does not lend itself to cheap construction. Indeed, under the severe inspection and the requirements of the Board of Trade, the general tendency in England is necessarily towards costliness.

In Ireland, with the exception of the Belfast and Northern Counties Railway Company, the flat-bottomed rail has been adopted. Of this construction, the Great Southern and Western Railway may be taken as a fair sample. The roads of this Company have been much improved of late years. They are in good condition, and are well suited to the traffic they have to carry. The rail, however, adopted is only 65 lb. to the yard.

While in Ireland I inspected, in company with Mr. A. D. Price, some of the so-called light lines of railway, which have lately been constructed. The first one was the West Kerry Branch of the Great Southern and Western Railway. The rails used in the construction of this line are 30 feet in length, weighing 65 lb. to the yard, and are flat-bottomed. The sleepers are eleven in number to the rail length. Gravel ballast is used 3 inches under the sleeper, and carried up flush with the top, with 9 inches in width outside, beyond the ends of the sleepers. Where the formation is soft, 6-inch pitching is used. The cost of the ballast was 2s. 6d. per lineal yard; pitching, 2s. 6d. per cubic yard; the forming of the line under 2 feet in depth, 2s. 6d. per lineal yard. Good stone masonry costs 18s. per cubic yard; and that price was also paid for platform walls. The sharpest curves are of 10 chains radius, and the steepest grades 1 in 50. The formation is made 16 feet in width, with a rounding of 6 inches. The length of the line is 12 miles to Killorglin, and 27 miles beyond to Valencia. The estimated cost from Killorglin to Valencia was £140,000. The Government gave a subsidy of £75,000, but the total cost amounted to £240,000, or nearly £9,000 per mile.

This class of railway is not of a character to which the term "light line," as generally understood in these Colonies, could be applied, being far too costly. The country is by no means easy—earthworks cost £2,000 per mile, tunnels, bridges, and retaining-walls, more than £2,000 per mile in addition. The only serious attempt, it seems to me, to lighten construction was in limiting the weight per axle of the locomotive. This has been reduced to 8 tons by the Board of Trade, but the regulation can only affect one item of cost, namely, bridges.

Interlocking is imperative at all stations where loops or sidings are concerned, Elliott's patent locks for sidings being used in such cases. Some stations are mere platforms, and signals are dispensed with. There are, however, station-masters at all the stations.

The second line visited was the Kenmare to Headford line, which is 19 miles in length. Its cost was £136,000, exclusive of rolling stock. The steepest grades thereon are 1 in 60, the sharpest curves of 12 chains radius.

The above lines have been incorporated into the system of the Great Southern Railway Company. The Belfast and Northern Counties Railway is the only one in Ireland where the chair-road is used. Mr. Wise, the Engineer-in-Chief, who kindly showed me over the line, running a special for the purpose, is very strongly in favour of this type of road, as against the flat-bottomed rail. The sleepers used are 9 feet in length by 10 in. by 5 in., and consist of pine creosoted, costing 2s. 9d. each. The creosoting alone costs 7½d. per sleeper. Bull-headed rails are used, 83 lb. to the yard, and chairs of 42 lb. each.

In connection with this railway, there are a couple of narrow-gauge lines, which I also inspected with Mr. Wise, namely, those from Balymeny to Parkmore, and Balymeny to Larne. The gauge is 3 feet. The rails weigh 50 lb. per yard. The width of the formation is 9 feet only, so that as sharp curves are allowable, construction can be carried out very cheaply. The difficulty of break in gauge is got over pretty easily, as the traffic is chiefly in minerals. Hopper waggons or side-tip waggons, with a capacity of 8 tons, are used for the conveyance of iron ore, &c.; and at Balymena, where connection with the standard gauge exists, there is an arrangement for transferring the contents to waggons of the same capacity either by hoppers or side-tipping.

I also visited the Galway and Clifden line, which is laid to the Irish standard gauge, and will be worked as an extension of the Midland and Great Western Railway. It is a line of somewhat similar construction to those in the south-west already mentioned. At the date of my visit it was still unfinished, but it was anticipated that the first section of the line, that from Galway to Oughterard, would shortly be ready. This length has since been opened for traffic.

I have not attempted to discuss the history of light railways in Ireland, as I consider it is somewhat apart from my purpose. In this matter Mr. E. B. Price has given some interesting information in his report which is attached to the Public Works Report of 1893.

I must here express my great indebtedness to the courtesy of the general manager and other chief officers of the railway companies in England, Ireland, and Scotland in giving me facilities for travelling and supplying me with much information.

Much has been done in Norway in the way of narrow-gauge light railways, but it was too far out of my way to go and see them; and I felt besides that what was of more use to us in New South Wales was the introduction of methods that could be adapted to our system without incurring the evils of a break of gauge.

Although

Although holding the latter view, I have heard so much of the Decauville system in France, that I determined to see for myself what the system was capable of. I, therefore, as mentioned in my preliminary report, visited Petit Bourg, where the establishment of the company is situated, and also inspected a tramway on the 2-foot gauge in Normandy. The system is eminently satisfactory, and suited to certain conditions, as it seems to me, of local traffic, but its consideration must be left to another report. Such narrow-gauge lines are classed more naturally under the head of tramways.

There is now in the United Kingdom a strong movement in favour of light railways. In response to the general feeling in that direction, a Commission, consisting of representative men of commerce, agriculture, manufacture, and engineering, has been appointed, at the instance of the Board of Trade, to inquire into the subject. Sir Benjamin Baker is on the Commission, as representative of the Institution of Civil Engineers. Up to the present time several meetings have been held, and a large amount of evidence taken. Whether any practical results will attend the labours of the Commission it is at present impossible to say; but what will meet the requirements at home might not prove of much advantage to us.

It appears to me, after consideration of the different methods of railway construction in America and Europe, that the country which offers the most useful experience is America; and I will now proceed to point out the most prominent features in American practice, comparing them as occasion requires with that adopted elsewhere.

Flat-bottomed rails are everywhere used. They are laid flat on the sleepers, instead of being fixed with a cant, as with us; and, as the sleepers are all sawn, this means a minimum of cost in laying. It is contended by American engineers that the resistance to traction is considerably lessened. The wheels of the rolling stock are, of course, turned cylindrically instead of conically. During the oscillation which necessarily takes place when an engine or car is travelling at speed, it is maintained that with conical wheels, as different parts of the circumference of the cone travel at different speeds, there must be considerable friction constantly going on, and this means largely increased resistance. It has been stated that experiments have shown that the resistance to traction, on an even road, is, in the American construction, only 3·5 lb. per ton; whereas with us it is usually put down at 7 lb. per ton as a minimum. There is no doubt that the conically-turned wheels are better where the lines are curved, as in this case through the effect of centrifugal force the greatest circumference of wheels comes into play on the outside rail, where the greatest distance has to be travelled; but it is not unreasonable to suppose that on straight road running there may be a slight advantage in favour of the American method. But whatever the advantage of the system may possibly be, it would, of course, be quite out of the question to adopt it in this country, as it would necessitate a complete change in the permanent-way and the wheels of the rolling stock throughout the Colony.

In America it is the general practice to lay the rails with alternate joints instead of having them square with one another; and, with the close sleepering adopted by American engineers, I can see very little objection to this practice. In England, and with us, where the sleepers are placed wider apart, it seems possible that a joint on one side of the road, without a corresponding one on the other, might produce a side oscillation of the engine, which would be unpleasant in itself, and lead to undue wear and destruction of the joints. The sleepers, under the American system, however, being laid more closely together, this objection is not of importance.

The additional sleepers make up in weight what we gain by using heavier sleepers. Moreover, they give a greater bearing surface for the rail, and there is less cutting into the soft sleeper by the rail than there would be if the load were more concentrated.

The close sleepering has also this advantage, that where the formation is somewhat weak, as it is in new lines, the weight on the embankment is better distributed.

The sawn sleepers, which are to so great an extent used, are very liable to give way under side pressure, and to counteract the tendency which exists, especially on curves, towards the spreading of the rails, what are known as rail-braces (small iron or steel castings fixed to the sleepers on the outside of the rails and supporting them) are invariably used.

Some years ago the American Society of Civil Engineers appointed a committee to report on rail sections, with a view to a selection of certain standard sections which could be recommended for general use, in order to get rid of the numerous designs, many of which were undoubtedly faulty. The report is published in volume No. 24 of the Proceedings of the Society. The committee made various recommendations as to proportion of height to width, quantity of metal in head and flange, curvature of corners, &c., but in every instance the general practice of American engineers of giving a slightly concave form to the web of the rail, so as to admit of the better flow of the material during rolling, is perpetuated. This is a point which commends itself strongly to my mind, and I consider that before further orders for rails are given the desirability of the adoption of this practice should be well weighed.

The rail-joints in America are invariably connected with angle fish-plates, the flanges of which plates are continued beyond the flange of the rail and notched, so as to allow of their being anchored to the sleepers, and thus prevent creeping. It is not a new idea in this country, as the late Engineer-in-Chief, Mr. Whitton, so long ago as July, 1886, contemplated the same thing; but, for some reason or other, an indent for a quantity of fish-plates on the type which was prepared at the time was apparently not carried into effect.

I find that not only in America, but also in England and on the Continent, attention has been directed to the strengthening of the joints by the use either of angle fish-plates or deepened ones, and to the anchoring of them to the sleeper, and I am of opinion that this should in future always be adopted. They should also be longer than our ordinary fish-plates, so as to admit of the use of six bolts instead of four. This is the practice on the New York Central Road, the Pennsylvania Railway Road, and on others of the best lines, where the joints of the rails are rendered thereby strong and satisfactory as could be fairly expected.

In the matter of avoiding curves and grades, the Americans, it would seem, have little to teach us.

There is no method by which the irregularities of difficult country can be surmounted except by the use of sharp curves and steep grades, as circumstances may require. Any flattening of the one, or lightening of the other, leads to further expense in construction, and all that can be done towards lightening the grades is, where the country is suitable, to lengthen the line by winding about, thus introducing more and, perhaps, sharper curvature than otherwise. I found that the grades in use in difficult country were quite as steep as our own. Upon the Southern Pacific grades of 1 in 30 existed; on the Denver and Rio Grande main line of 1 in 33, and on the branches of the latter line they are much steeper; while even on the branch lines of the Burlington and Quincy railroad, as Mr. Weekes informed me, it is

the

the practice to use grades as steep as 1 in 25. The curves are often very much sharper than on our lines. One curve I travelled over, near Leadville, in a Pullman car, drawn by a six-wheeled coupled locomotive of usual type, was rather less than 5½ chains in radius, while, as I have already pointed out, on the Canadian Pacific railroad, upon a portion of the incompletely built line, where there is a temporary road, curves of 3 chains radius are in use. In fact, economy in construction through rugged country is, in America, chiefly attained by the adoption of very sharp curves.

These curves are almost invariably tapered at the ends; that is to say, they have a transition portion leading gradually from the straight line into the sharp curve. It has been my practice here for some years past to adopt this method with curves under 20 chains in radius. My earliest experience of the method was between the years 1869 and 1871, on the East Hungarian railways. Transition curves were used in easing portions of the Western line between Penrith and Katoomba, the first series of which were laid out under my instructions, and the increased comfort now afforded to passengers when travelling at the higher speeds is, in a very great measure, due to their introduction.

Many new lines in America are laid without ballast, earth being substituted for packing. This practice, however, as a rule, obtains only where ballast is difficult to procure; but in all cases earth of unsuitable quality is rejected. The top is rounded over so as to throw off rain-water rapidly. The practice of close sleepering admits of ballast being dispensed with to a greater extent than with us; but there are, no doubt, many parts in New South Wales where it need not be used for cheap lines, and I propose to do without it to a large extent in the construction of the lately projected lines from Jerilderie to Berrigan, Bourke to Barrington, and Parkes to Condobolin.

Drainage of the formation is, in American work, specially attended to. On prairie and flat country lines it is effected by means of the trenches from which the earth for the embankments is obtained. The width of the cuttings is here according to our present practice 18 feet at formation level. In America it is frequently much wider, so as to admit of larger drains being used at the sides of the road.

There is one practice in America which must not be lost sight of, as it has occasionally been urged that it be adopted here. In that country it is customary in mountainous districts to grade the line higher than we should do, thus the cuttings would be lessened in depth, and the formation over the gullies raised. These gullies, instead of being filled up with earth, of which there would be a deficiency, would be bridged over with timber trestle work. This method is rapid, and in America, where timber can be got for about 3s. per 100 feet, economical. Later, as traffic increases, and the timber shows signs of decay, earth is run out cheaply along the line from a convenient spot, and the viaduct is filled round. This method is out of the question in this country; we have no cheap material to fly to, and if we used ironbark the viaducts would cost nearly ten times as much as the American ones.

Railways passing through towns cross the streets at a level, and, indeed, in many cases run along the streets themselves. This is a highly dangerous practice, especially in cities.

In Chicago such level crossings are very numerous; public feeling has been strongly roused against them, and the matter will probably very shortly be dealt with. The worst cases, however, which, I think, exist, are those where a railway on which fast trains run passes down the centre of the road, and from the nature of the case cannot be fenced off. This practice, although productive of great economy in land resumption, would not be tolerated in this country, and is one, therefore, which cannot be followed.

Another cause of cheapness in construction is the absence of platforms. Most stations in America have absolutely no platforms whatever, and except at important termini nothing is provided.

On the lines in the west no signals are used, except point and starting signals; and except at grade crossings there is no interlocking. On the more finished lines in the east, on the other hand, the question of signals and interlocking has received much attention; and the lever and rod system, the hydraulic system, and the electro-pneumatic system are largely used. But this is a development which, like many others, comes later on in the history of the American railways, and some day even the western lines may be similarly equipped.

Railways generally are commenced in a cheap way, and left to be improved and finished afterwards. The permanent-way is thus at first frequently in very poor condition indeed; so bad, in fact, sometimes, that it is doubtful whether our rolling stock would keep the road under such circumstances. But the American rolling stock is adapted for running over rough roads. The engine springs are specially designed for balancing the load. All cars, whether for passenger traffic or freight, are carried on bogies, while in place of the two buffers which our rolling stock have, a centre buffer is universally used, and this gives flexibility to the train. Our roads are none of them so poorly kept as to necessitate the use of the American style of engine. They are kept, even the least important, in fair condition; but it would be an immense advantage to us, in laying out mountain lines, to know that only bogie stock, fitted with central buffers, are expected to run over them. Such lines could be made—many of them—at half the price for which they are at present estimated, simply from the fact that curves of considerably less radius could be used, by which the earthworks would be enormously reduced.

The line lately projected, namely, the Narrabri to Moree, Jerilderie to Berrigan, Parkes to Condobolin, and others, if carried out will afford an excellent opportunity of testing the adoption in this country of the American practice of doing without ballast in first construction. There lines are in a class of country where it is possible to follow very closely to the surface; it is a pity that there should be any serious objection to the lavish use of very sharp curves in mountainous country, for if that could be done, many lines, the cost of which now appears to be prohibitive, might come under favourable consideration.

Sydney, 28 February, 1895.

H. DEANE.

1894-5.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAYS AND TRAMWAYS.

(REPORT BY ENGINEER-IN-CHIEF FOR RAILWAY CONSTRUCTION, DURING HIS VISIT TO EUROPE AND AMERICA, ON.)

*Ordered by the Legislative Assembly to be printed, 1 May, 1895.*PRELIMINARY REPORT upon Railways and Tramways of America and Europe,
submitted by the Engineer-in-Chief for Railway Construction.

Minute Paper.

Subject :—Engineer-in-Chief's visit to Europe and America.

Department of Public Works, Railway Construction Branch,

Engineer-in-Chief's Office, Sydney, 3 January, 1895.

In connection with my visit to America and Europe, with respect to which I received my instructions on the 12th May last, I have the honor to make the following preliminary report for the information of the Minister :—

As you are already aware, I left Sydney per s.s. "Mariposa" on the 14th May. I arrived in San Francisco on the 7th June.

In San Francisco I visited and examined the various systems of tramways in operation there.

In the city itself, as is probably well known, traction is mostly by cable; many of the streets are much too steep for any other method. California and Clay Streets have gradients slightly in excess of 1 in 5, and on Market-street the chief thoroughfare of San Francisco, there is so much convergence of traffic, and the cars follow one another so rapidly, that it is doubtful whether any other system could satisfactorily cope with such conditions.

There is in addition a considerable mileage of horse tram-lines on which at present the speed is slow and unsatisfactory, and it is not unlikely that within a short period these will be worked electrically with the overhead wire in spite of opposition from some quarters; in fact, some of these tramways, as for example the Third-street line, are already being converted.

Although electrical traction has not received in San Francisco the same proportionate development as in many other cities, there are some very remarkable examples of this system. The line to San Mateo has 11·2% grades (1 in 9) and the Metropolitan Company's line has 13·8% grades (1 in 7½). No difficulty is experienced in working these grades. On the opposite shore of San Francisco Bay, 60 miles of tram-line have been laid mostly on the overhead electric system. The most worthy of notice is perhaps that from Oakland to Haywards (12 miles in length), on which the speed commonly attained is 25 miles an hour, and according to speed diagrams in my possession, it has actually reached 32 miles an hour. The permanent-way is well laid and the cars well constructed, so that the journey is quite an agreeable one.

I also visited the City of Los Angeles, which lies about 350 miles to the south of San Francisco, and obtained some interesting results relating to the comparative cost of working the cable and electric systems. The heaviest grade on the electric lines in Los Angeles is 13% (1 in 7·7) and is worked without difficulty.

Through the kindness of the officials of the Southern Pacific Railway I was enabled to inspect some important portions of that system, both with regard to economy of construction and to location, grades, and curves. North, south, and east from San Francisco mountain ranges have to be passed. The line to Los Angeles traverses the Tehachapi Pass, and this was examined in company with the resident engineer. The location of this line is very interesting. Later on, under similar circumstances, I examined the Mount Shasta and Siskyou inclines on the Northern Line. The heaviest on the latter are 3·3%, and the sharpest curves are 14° (6 chains radius). These curves and grades are surmounted by means of heavy engines made by the Baldwin Company, having eight wheels coupled and a pony truck. The central wheels have flangeless tyres 1 inch wider than the others.

The eastern route over the Sierras (Central Pacific), also worked by the Southern Pacific Railway Company, presents some interesting features. Instead of making the ascent by winding up the valleys, as is the case with those previously mentioned, this line follows a spur of the main range in a similar way to that of our Western line. The curves are 14°, and the grades 104 per mile (about 1 in 50).

On my journey over the Siskyou Incline on the 26th June I was taken seriously ill, and I had to place myself in the doctor's hands at Ashland, Oregon. Immediately after this the Pullman strike intervened, and I was prevented from getting away by rail. In company, however, with some other passengers similarly situated, a team of horses and coach were hired, and we succeeded in reaching the coast at Crescent city, after a drive of 140 miles. A small lumber steamer of 300 tons conveyed us to San Francisco, where we arrived on 12th July. Soon after this notice was given by the Southern Pacific Company that trains would run on the 17th July, and on that date I was enabled to start eastward; the train had a strong military escort on board. The principal stations of Oakland, Sacramento, &c., were protected by strong bodies of marines, regulars, &c., as the case demanded.

From Ogden I took the Rio Grande Western and the Denver and Rio Grande Railway to Denver. I travelled over the last-named section in one of the Company's inspecting cars, and at Denver I was enabled to inspect the plans of the railway. This line was originally a narrow-gauge line, with 1 in 25 grades, but has now been realigned, and altered to the standard width. The ruling grade is 3% on the ascent to Leadville, and the sharpest curve at Leadville is 16°, but 14° curves are frequent. The locomotives I observed in use were six-wheeled coupled with a bogie in front, the middle pair of driving wheels being flangeless.

On the lines between Denver and Buffalo that I had the opportunity of inspecting, I must specially mention the Burlington and Quincy, the Queen and Crescent at Cincinnati, and the "Big Four," as I am particularly indebted to the officials for their assistance.

As the traveller approaches the Eastern States the increase in the solidity of the permanent way and other works is very apparent. The lines where economy of construction has come most into play are those west of Chicago and St. Louis, and in the South. Between these cities and New York much strengthening, easing of grades and curves, is going on to fit them for express traffic; but even far west, cheapness of construction is looked upon as a makeshift to be dealt with later on, for I found nearly everywhere timber bridges being replaced by steel, fir sleepers by white oak or creosoted, ballast put where none previously existed, and in other places additional quantities put on.

When a new line is laid across the prairies, or comparatively level ground, I am assured that sleepers are never laid on the surface, however flat it may be. Drainage is always attended to, and the sleepers kept off the ground by first forming a low embankment of earth out of the side drains. Ballast is at first dispensed with unless readily obtainable, but to provide more efficient bearing surface the sleepers are placed much closer together than is the practice in Australia

or England, viz., from 18 inches to 2 feet centre. This, in America, is not an expensive matter, as sleepers cost but from 14d. to 18d. each. The sleepers are sawn, but not adzed for the rails, the latter being invariably laid flat upon them. No care is taken to lay the joints of the rails square with one another, but it is preferred to break joint somewhere near the middle of the length. In heavy and mountainous country economy is obtained by the use of sharp curves and steep gradients, and although the objections to them are well known and considered, these are not allowed to have too much weight where the traffic is of limited amount. Curves of 14° (6 chains radius), and grades of 1 in 40, and even 1 in 30, are freely used.

The New York Central, which runs between Buffalo and New York, is a first-class line; so, also, is the Pennsylvania Railroad, between New Jersey and Pittsburgh. In both heavy rails, long angle fish-plates, and oak sleepers are used, and the best available grades and curves are adopted. In this latter respect the New York Central has the advantage over the Pennsylvanian main line, which has to cross the Alleghany Mountains, and considerable curves and grades are unavoidable.

I visited a number of American cities east of San Francisco, and inspected the various systems of tramways in use. They were the following:—

Salt Lake City	Electric overhead trolley.
Denver	Cable and electric overhead trolley.
Lincoln	Electric overhead trolley.
Omaha	Electric overhead trolley and cable.
Council Bluffs.....	Electric overhead trolley.
Chicago	Electric overhead trolley, cable, elevated steam, &c, and other projected lines.
St. Louis	Electric overhead trolley and cable.
Cincinnati	Electric overhead trolley (double and cable).
Buffalo	Electric overhead trolley.
New York	Cable and elevated steam.
Boston	Electric overhead trolley.
Philadelphia	Electric overhead trolley and cable.
Brooklyn	Electric overhead trolley.
Washington	Electric overhead trolley, cable, and Love's electric conduit.

The electric overhead trolley system is the one most extensively adopted. At least 6,000 miles of track have been laid, and are now worked. Every small city has its electric line, and the system seems to be the one which most generally serves the public the best. Outcries have been raised about the danger and unsightliness, but the public convenience has almost invariably outweighed these objections, which are, in my opinion, very much overrated.

The two principal competing companies for construction are the General Electric (which combines the Edison, Sprague, and Thomas Houston systems) and the Westinghouse Electric Co.; but the former does at least 75 per cent. of the work. The work now being executed by these companies is of the most excellent description. It is recognised that the most economical results are only obtainable by adopting solidity of construction, both of road and machinery.

I inspected many fine examples of cable roads and power houses, and I was pleased to see that our Ocean-street line compared most favourably with the best lines in America.

I found that it is a principle invariably recognised in new electric and cable work that ample power must be furnished in order that good and economical results may be obtained.

Several systems of conduit electric lines have been invented and experimented upon, but I only found one in successful operation; this was Love's system, and was in use in Washington. It appears to be giving thorough satisfaction to the company using it. There is nothing that can go wrong if the drainage of the streets has been efficiently carried out. The only other conduit line to compare with it is that in Budapest, which I have also examined, and which depends precisely upon the same conditions for success. Interruption of traffic would take place if the drains got so charged that the water collected in the conduit and could not be got rid of, but this can very rarely occur.

Much trouble is experienced in various cities through electrolysis, seemingly arising chiefly through the imperfections of the return conductor, and various improved methods of laying the rails have been attempted.

In Cincinnati a return conductor is suspended overhead, and each car has a double trolley, but complications and short circuiting frequently arise. Experiments are now being made in welding the rails together at the joints. In St. Louis I saw 3 miles of rails thus welded, and in Brooklyn the welding of about 30 miles of road is now being carried out.

Among other matters of railway and engineering interest I viewed the following:—

Railway Ferry at Benicia.
St. Louis new terminus, which contains thirty roads, the points and signals are interlocked on the electro-pneumatic system.
St. Louis Bridge.
Niagara Falls Power-house.
Schenectady Works of the General Electric Co.
Brooklyn Bridge and traffic arrangements.
Baldwin Company's Works, Philadelphia.
Altoona Works, P.R.R. Co.
Johnston's Works at Johnstown—rail rolling and welding.
Thomson Electric Welding Works, Lynn.

The overhead, or, as they are called, the elevated railways, of New York, Brooklyn, and Chicago are precisely similar. Where placed in the main streets, as in New York, they are, although extremely useful, intensely ugly. The Manhattan Railway Co. of New York is a well paying concern. In Chicago a new elevated line, termed the "Metropolitan," is in process of construction; the motive power is to be electricity. During my stay in America the General Electric Company succeeded in obtaining the contract for the electric power plant and motors.

The Baltimore and Ohio Railway Company are having electric locomotives built for a short section of their lines, consisting of tunnels where ventilation is extremely troublesome. At Schenectady I saw one of these locomotives, said to be 85 tons in weight. It had proved itself more powerful than a heavy steam locomotive from the New York Central Railroad which was pitted against it.

The accumulator system has not made way in America. Some experiments have been made, but success has not been achieved.

I had no opportunity of seeing the Canadian Pacific Railway, but I obtained from the Engineer-in-Chief a large amount of information with regard to it. It is essentially a land grant railway. The Company had further the present of about 700 miles of line free of cost, as well as \$25,000,000 in cash. The property handed over to the Company helps therefore to reimburse them for the cost involved in obtaining good grades and curves. It has been recently stated that the steepest grade is 1 in 120 throughout, but this is a mistake, as over the Selkirk Range the ruling grade is 1 in 50, temporarily 1 in 22, with curves of 4 chains radius, while elsewhere it is 1 in 100.

I sailed from New York on 25th August in the "Campania," and arrived in Liverpool on the evening of the 31st, and proceeded immediately to London. Nearly the whole of the time at my disposal in the United Kingdom was taken up in visiting works, interviewing engineers, and other leading men, and in travelling.

Tramways in the United Kingdom, although much less developed than in America, present many interesting features. Most of the lines are worked by horses, but there is a good cable line in South London, one at Birmingham, and others no doubt well worthy of inspection. Steam motors are used in Birmingham, Leeds, Sheffield, Worsall, and elsewhere, but there is strong antagonism to their continuance on some of the lines. On the Bristol Road, Birmingham, storage battery cars are used; the superiority of these cars over others in use in this city is very noticeable—no noisy motion or odor of horses. Different kinds of cells have been used including the E. P. S. and the Epstein, but the latest and most promising kind is the cell of the Chloride Syndicate. These cells are constructed on an entirely new principle. They are stated to be as powerful as the others, but mechanically stronger and capable of withstanding the deterioration caused by the vibration and oscillation of the car. The difficulty of the durability of the cells would thus appear to have been got over, but I think it is very doubtful whether the electric power available is sufficiently high to work the Sydney traffic. The balance-sheet of the Birmingham Tramway Company shows at present a loss in working the accumulators. The Company has recently tried to induce the Birmingham Town Council to allow them to adopt an overhead wire as used on the South Staffordshire Tramway, but approval has been refused.

The

The South Staffordshire Tramway, serving the towns of Wednesbury and Worsall, is on the overhead trolley system. The wire is carried on light poles and brackets at the side of the road, the trolley arm has a radial movement, and the trolley itself constructed so as to permit of complete rotation. The arm is thus capable of taking any position or direction with respect to the car, and follows the curves and angles of the wire in a really wonderful manner; the overhead and stay wires are almost entirely dispensed with. Some photographs in my possession show that the trolley wire and support on the side of the road are much less conspicuous than the telegraph lines on the opposite side. Most of the objections to the overhead wire are thus got over, and the system which has all the economical advantages of the American overhead system appears to me a most suitable one for adoption in Sydney.

In the Isle of Man a fine electrical line is now in operation.

At Leeds there is a trolley line carried out on the American plan with conductors over the street supported by cross wires. After seeing the South Staffordshire line there could be no doubt as to which was superior.

I did not visit the conduit lines of Blackpool and Northfleet. The former is being worked but not the latter; neither design is likely to be repeated.

I visited the Portrush and Giant's Causeway Tramway. The conductor in this case is an angle iron placed above ground, and on the side of the road. The motive power is obtained from a fall of water. The conditions under which such a construction is suitable are very special, and the above-ground conductor is very objectionable.

I inspected the City and Southwark Railway which is worked by electric power. This line does not, I believe, pay, but the system itself is an undoubted success, so much so that other lines of similar character have been projected and will be carried out. The only other line in the United Kingdom worked by electricity to which I wish to call special attention is the Liverpool overhead railway. The construction of this line, which runs the length of the docks, and, therefore, does not disfigure the main thoroughfare in the way that New York is disfigured—is well and solidly carried out. The trains are worked by electric locomotives; the conductor is an angle iron in the centre of the track. Under special circumstances this method of construction and traction might advantageously be adopted.

I inspected the Valencia and Kenmare Light Railway in Ireland, also the Galway end of the Galway and Clifden Light Railway. These lines have been made under special provisions of the Board of Trade. They are all to the standard Irish gauge. The two former have been incorporated with the system of the Great Southern and Western Railway of Ireland; the last mentioned is not yet complete, but will be worked by the Midland and Great Western.

I further inspected the Ballymena to Red Bay, and the Ballymena to Larne, narrow gauge lines in the North of Ireland. These lines have been added to the system of the Belfast and Northern Counties Railway Company. The lines are sufficiently long to be worked profitably with special rolling stock, &c., and the inconvenience of break of gauge has been got over to a certain extent by special appliances, but there is no doubt had the lines to be remade, the standard gauge would be adopted. The curves are too sharp to permit of the alteration now without considerable expense.

The Wisbeach Tramway which I could not visit, but of which I obtained some particulars, is a light railway more than a tramway, as it is constructed so that railway rolling stock will pass over it.

Through the courtesy of the General Managers and Engineers of many of the railways in England, Ireland, and Scotland, I had an opportunity of inspecting their lines and works, and inquiring into methods of construction. One work of special interest was the new underground railway work going on in Glasgow. This work has been pushed under one of the most crowded thoroughfares of Glasgow without interruption of traffic overhead in the most ingenious way. I also inspected the works of the Kilwinny to Irvine Railway in which concrete of a particular kind has been largely used in the construction of bridges.

The workshops of the London and North Eastern Railways I was by the kindness of Mr. Webb, enabled to inspect. They are most extensive, and include the rolling of rails as well as the manufacture of locomotives and other work.

The Liverpool-street terminus of the Great Eastern Railway I had an opportunity of inspecting, as also the widening works of the approach to the station. This terminus is, with the exception of the terminus of the London and North Western Railway, the largest in London, and certainly the most remarkable.

Other objects of interest I visited were:—

The Blackwell tunnel, which is being pierced with aid of a shield.	The Forth Bridge.
The Manchester canal.	The Dubs and Co. locomotive works, Glasgow.
The Mersey tunnel.	Chas. Cammell and Co.'s Works, Sheffield.
The Liverpool docks and hoists and cranes.	Parson's steam ironworks, Newcastle.
The Birkenhead docks and coaling arrangements.	Matthews and Platt's electrical, at Manchester.
The Ardross docks and coaling arrangements.	Chloride Company's works, near Manchester.

Invitations I had to visit many other works of the greatest interest, but was unable to avail myself of them through want of time.

Sir John Fowler, who was in the North of Scotland during my stay in the United Kingdom, kindly invited me to visit him at Braemore, which I did, and there had an opportunity of hearing his views, and discussing with him the question of light railways.

On Wednesday, 31st October, I left London for Paris in order to investigate the tramways said to be successfully worked there, on the accumulator system. The cars are double-decked to hold 50 passengers; the cells are of the "Laurent Cely" system, which appears to be the same as the "Chloride." I saw, however, two descriptions of positive plates, viz., some similar to those which I had seen in use at Birmingham, and at the Chloride Company's works, near Manchester, but a form in which corrugated lead plates are used pasted over with "Chloride." I was told that the latter kind was preferred, as the others do not give enough power. As the worst grades are only 1 in 26 1/2, and the speed limited to a figure much below that of the Sydney trams, it seems not a little doubtful whether the method can be made a financial success with us.

I visited the works of Messrs. Decauville, at Petit Bourg. This is the fountain of the narrow gauge railway type known under their name.

M. Paul Decauville, who received me, gave me convincing proof of the capabilities of the system with regard to the carriage of live stock and the transportation of heavy cannon. I afterwards proceeded to Caen, and inspected the tramway laid down on their system from Caen to St. Lue and Dives. The travelling I found steady, the speed very good, and the comfort all that could be desired.

From Paris I proceeded to Vienna, and called on Messrs. Siemens and Halske, who have laid down the Budapest electric conduit tramways, and I afterwards proceeded to Budapest for the purpose of seeing the said tramway. The conduit contains a double electric conductor of angle iron, insulated from the sides, but otherwise unprotected. In this way it is entirely similar to the Love's conduit at Washington, before mentioned, although in the latter case copper is used in place of iron. Contact is obtained by a sliding shoe, as against a trolley in the Love's system. The lines are subject to very occasional interruption of insulation from water if the street sewers get full, but this I am told has only occurred once, and as the drainage of the city is being improved, no more trouble is expected. The tramways are a complete success, and pay a dividend of 7 per cent., and they are in such repute that it has been decided to convert all the horse tramways of the city, the total length of which is considerable.

One line in Budapest is being worked with overhead wire. Contact is obtained by means of a rod and crossbar instead of trolley. I do not see that there is any special advantage in this, but rather the reverse.

There is an interesting piece of underground work being carried out along Andrassy-street. When completed there will be a tunnel for a double line of way. The trams will be worked by electricity.

In Florence, as recommended by the Agent-General, Sir Saul Samuel, I went to see the Fiesoli electric line. This is on the American system, and the motors of the cars are some of Sprague and others of T.H. design. The point of interest about the line is that there are long steep grades of 8 per cent. (1 in 12 1/2), which are being satisfactorily worked.

There are several interesting examples of the overhead electric tramways on the Continent, one of which, at Remscheid, has grades of 1 in 9, but I had not time to visit them. It was necessary to get to Brindisi by the 18th November, in order to catch the s.s. "Himalaya," sailing for Australia.

Mr. Samuel McKenry, farmer and grazier, Savernake	54-55
Mr. Thomas Joseph O'Dwyer, farmer, near Savernake	55

APPENDIX.

[To Evidence taken by the Committee.]

To evidence of J. Barling, Esq.— <i>Précis</i> of papers relating to the proposed Railway	A
To evidence of C. O. Burge, Esq.—Cost of Earthworks.....	B
Flood Levels and Ballast	B1
To evidence of H. McLachlan, Esq.—Suggested New Lines of Railway	C
To evidence of A. J. Stoppes, Esq.—Tenure of Lands affected by the proposed Railway	D
To evidence of R. P. Hickson, Esq.—Minute paper, Jerilderie to Berrigan Road	E
To evidence of H. Deane, Esq.—Ballast along the proposed Railway	F
Estimate of cost	F 1
A Cheap Railway in Victoria	G
Book of Reference	H

[To Evidence taken by the Sectional Committee.]

To evidence of Mr. J. T. Mawson.—Returns of wool, live stock, and wheat carried from Jerilderie by rail.....	A
To evidence of Mr. J. A. T. Rochfort.—Alphabetical list of stockowners on or within the radius of the proposed Berrigan railway, and number of stock in the sheep district of Jerilderie for the year 1894, taken between 1st and 31st December.....	B
To evidence of Mr. H. R. Lysaght.—List of holdings within 10 miles of Berrigan	C
To evidence of Mr. F. Faulkner.—Return relating to holdings adjacent to Finley, to the West, to the North, and to the East of the Travelling Stock Reserve	D
To evidence of Mr. E. D. O'Dwyer.—Area and Cultivation within 10 miles of Savernake	E
Telegram from Mr. A. C. Wilson, Berrigan, to Mr. H. R. Lysaght, with reference to giving land for the Railway.....	F
To evidence of Mr. G. B. Beere.—Cost of constructing metallised roads in the vicinity of Berrigan and Tocumwal.....	G

PLANS.

General Plan.

Parish map showing route for railway as submitted by the Department, and route recommended by the Committee.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

PROPOSED RAILWAY FROM JERILDERIE TO BERRIGAN.

REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, and the Public Works (Committees' Remuneration) Act of 1889, 53 Vic. No. 11, to whom was referred the duty of considering and reporting upon "the expediency of constructing a line of railway from Jerilderie to Berrigan," have, after due inquiry, resolved that it is expedient the railway should be constructed with a deviation recommended by the Sectional Committee, and at a cost not exceeding £2,000 per mile, to include goods and grain sheds, engineering charges, and all contingencies; and in accordance with the provision of sub-section IV, of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly:—

1. The proposal to connect Jerilderie with Berrigan by railway was first brought into public notice in April, 1888, when the residents of Berrigan petitioned the Government for a railway or a tramway. This the Engineer-in-Chief for Railways (Mr. John Whitton) opposed, on the ground that the railway or tramway would have the effect of diverting traffic from New South Wales to Victoria. In April, 1889, the residents of Berrigan again petitioned, and in 1891, a deputation, representing the Berrigan Progress Association and the Berrigan Tram League, waited upon the Minister for Works and asked for a trial survey. In the meantime, the matter had been handed over to an Examiner of Public Works Proposals, who was instructed to report upon all railways proposed for the development of the Riverina district, and he recommended railway communication with Berrigan, by means of a line from The Rock to Murray Hut, which would pass through Berrigan township. Nothing more appears from the official *précis* of the papers on the subject to have been done until February, 1892, when a deputation from the districts of Jerilderie and Berrigan, to the Minister for Works, was informed that if no absolute determination were arrived at within a reasonable time in regard to constructing a line from The Rock to Murray Hut the Minister would recommend the carrying out of the Jerilderie to Berrigan proposal. Six months afterwards Ministerial approval was given to a survey being made between Jerilderie and Berrigan, and the survey was completed in January, 1893. In May, 1894, a deputation from Berrigan urged upon the Minister for Works that the proposed railway should be referred to this Committee, and in October, 1894, it was decided by the Government that the reference of the work to the Committee should be made. The railway is proposed as a pioneer or cheaply built line, different in the manner of its construction from the existing railways of the Colony, but suited to the requirements of the district it is intended to serve.

2. The railway will be an extension of the Narrandera to Jerilderie branch line, very lightly constructed. From an engineering point of view it would be difficult to find a district more suitable for railway construction than that through which the proposed line will go, or one better fitted for the experiment of a pioneer railway. Beginning at the present terminus at Jerilderie

the

the route, as submitted to the Committee, proceeds over flat country in almost a straight line to the township of Berrigan, a distance of a little over 21 miles. Grades, curves, and works generally will be very easy. There are some water-ways to be crossed—two of them, Algudgerie Creek, near Jerilderie, and Berrigan Creek, near Berrigan—but they are inconsiderable, and in the aggregate do not cover a length of more than 200 feet. The bridge-work over the two creeks will not exceed 190 feet, or eighteen spans of 10 ft. 6 in. each, while the height of the bridge over Algudgerie Creek is 6 feet, and of the bridge over Berrigan Creek about 4 feet. The line will follow the surface as nearly as possible. As the land is flat and not subject to floods it is proposed to lay the sleepers upon a rolled formation, or embankment, from about 6 to 18 inches above the ground, and 16 feet in width, ballasted to a limited extent, or possibly without ballast, and having drain openings at suitable distances for the passage of water. Drainage will also be provided by means of drains made in scooping the earth required for forming the permanent-way embankment. The sleepers will be half round instead of the square kind ordinarily used, and more numerous than on railway lines generally, as they will be laid about 18 inches apart, and about half the rails required will be second-hand—rails that have been in use on the railways of the Colony, but still in a very fair condition and quite suitable for the requirements of this line. The other portion of the rails used will be new 60-lb. steel rails. Station buildings and platforms are designed in a new and cheap form, all of timber. At Jerilderie the present station buildings will be sufficient for the line. At Berrigan a station building will be erected, and there will be a small waiting-shed and platform at one or two intermediate stopping-places. The platforms will be similar to some constructed in connection with the railway from Lismore to the Tweed, where they are no higher than nine inches above the level of the ground, and are kerbed. Wool-loading banks and sheep-yards are provided for where necessary. Fencing will be dispensed with except where it is almost impossible to avoid it. As it is intended that the trains on the line shall run in the day-time only, and at a slow rate of speed, the absence of a continuous fence each side of the railway to prevent stock from straying on the line is not regarded as likely to affect its safe working. Cattle-stops at suitable places will considerably lessen the risk of danger to the trains or injury to stock.

Estimated cost.

3. The estimated cost of the railway as first stated to the Committee is £43,543, or £2,061 per mile, which includes everything but land and compensation; but during the course of the inquiry it was explained that by omitting all or most of the ballast, and in lieu of ballast increasing the number of sleepers, the cost could be reduced to £1,800 or £2,000 per mile. The estimate first submitted is lower than that in the case of any other railway referred to the Committee or constructed before the Public Works Act was passed. The lowest estimate of cost per mile previous to that in the present inquiry was £2,409, the cost at which it was represented the proposed railway from Narrabri to Moree could be constructed. The reasons for the low estimate in the present case are to be found in the studiously cheap manner in which the several parts of the railway are to be carried out, supplemented by special facilities given to the Railway Construction Branch of the Department of Public Works by the Railway Commissioners in the form of very low freight for the carriage of materials required for the work. Originally it was estimated that the line would cost £2,511 per mile; subsequently this amount was reduced to £2,286; and then it was brought down to £2,061, and afterwards to £2,000, per mile, or less than the cost of constructing a first-class road from Jerilderie to Berrigan, which is given as £2,060.

Railway Commissioners' report.

4. In their report upon the railway the Railway Commissioners express themselves favourable to the line, but advise that its construction should be conditional upon the owners of the land through which it will go giving the land required for it. They estimate a slight excess of annual revenue over annual cost in the working of the railway. Taking the cost of construction, exclusive of land and compensation, at £43,543, the figures of the Acting Engineer-in-Chief, they set down the interest upon the capital expenditure at $3\frac{1}{2}$ per cent as £1,523, and estimate the cost of maintaining the permanent-way and for traffic and locomotive expenses (one train per day each way, three days per week) at £1,550, which, together, make the estimated total annual cost £3,073. Against this the estimated annual revenue from

from traffic is £3,083—passengers, parcels, and mails £415, and goods, live-stock, and agricultural produce £2,668, or a difference in favour of revenue of £10. The district which will be served by the railway, the Commissioners say, “is very fertile, and, no doubt, capable of considerable development if supplied with railway communication, so as to reduce the cost of getting produce to market”; but, besides developing the district, the line should enable New South Wales to retain a good deal of traffic which, under present conditions, passes into Victoria. Subject to the condition that the land required for the railway shall be given by the owners to the Government, the Commissioners strongly advise the construction of the line, and urge that it be put in hand without delay, and completed within a period of six months.

5. It was essential in their inquiry that the Committee should satisfy themselves as to the necessity of the railway to the district, the style of line proposed to be constructed, the likelihood of the railway paying expenses, and the reasonableness or otherwise of the condition mentioned by the Railway Commissioners that the land required for the line should be given by the owners of it free of cost to the Government.

Points for the Committee to consider.

6. The evidence which the Committee have taken supplies information upon all these points. From the Under Secretary of the Department of Public Works were obtained a general statement of the proposal and the views of the Minister for Public Works respecting it. The Principal Assistant Engineer and Acting Engineer-in-Chief, and the Chief Assistant Engineer for Railway Surveys, of the Railway Construction Branch of the Works Department, were examined respecting the route surveyed for the line and the details of the Departmental plans for its construction; and later in the inquiry the Engineer-in-Chief, who at the commencement of the Committee's proceedings had not returned to the Colony from a visit to America and Europe, also gave evidence on these subjects, and on that of cheaply-constructed railways in America. His evidence will be found both interesting and instructive. The views of the Railway Commissioners with regard to the railway, and the basis of their estimate of traffic results from it, were explained at length by the Secretary to the Railway Commissioners and the Railway Goods Superintendent; and the Acting Chief Draftsman of the Department of Lands was examined in order that the Committee might have accurate information before them as to the quantity of alienated and unalienated land in the district through which the line will go. Other witnesses called were the Commissioner and Engineer-in-Chief for Roads and Bridges, with regard to the cost of constructing and maintaining roads in the Berrigan district, and the surveyor who surveyed the proposed route for the railway. This brought the inquiry by the Committee to the appointment of a Sectional Committee and their visit to the Jerilderie and Berrigan districts. On the return of the Sectional Committee and the presentation of their report, the Engineer-in-Chief for Railway Construction, an officer of the Roads and Bridges Branch of the Department of Public Works, and a representative of the Railway Commissioners, were examined with reference to a deviation from the route which the Sectional Committee recommended. The Sectional Committee examined a large number of witnesses, taking evidence at Jerilderie, Berrigan, Finley, and Savernake.

The evidence in the inquiry.

7. The report of the Sectional Committee is favourable to the construction of a railway between Jerilderie and Berrigan, but recommends a deviation from the proposed route with the object of avoiding as much as possible the severance of private land. It states that the Sectional Committee inspected the junction of the surveyed line with the present terminus at Jerilderie, in order to determine, “from personal observation, the value of the improvements upon the allotments traversed by the railway route, and to ascertain, as far as possible, the practicability of a starting point which would avoid the allotments,” and that between Jerilderie and Berrigan the route was examined as to water supply and timber reserves along it or in its vicinity, and also with regard to the questions of earthworks, ballast, and the possibility of injury to the railway from flood-water. After this examination of the route, and the taking of evidence at Berrigan, it appeared desirable to ascertain whether the route could be altered so that, while the district was afforded the required

The Sectional Committee's Report.

required means of communication, there should be less severance of private property or necessity for the resumption of land ; and a further inspection being made, it was found that, without difficulty, a route could be chosen which, while providing all the advantages in respect of construction, maintenance, and traffic, represented as obtainable in connection with the route referred to the Committee by the Legislative Assembly, would minimise the severance of private estates and very materially reduce the quantity of land it may be necessary to resume. Some of the evidence given before the Sectional Committee, and their report, refer to Finley, which lies 13 miles to the west of Berrigan, as the centre of an important agricultural district, part of which is not likely to be served by the proposed railway, and the Sectional Committee express the opinion that the construction of a cheap line of railway between Berrigan and Finley would be justifiable.

Route recommended by the Sectional Committee.

8. The route recommended by the Sectional Committee (indicated on the plan by a green line) for most of the distance approximately follows the present main public road, and by altering the position of the present road where necessary to make it contiguous to the railway the road would be adjacent to the railway for the whole length of the line. The new route is about twenty chains longer than the route referred to the Committee.

Necessity for a railway to Berrigan.

9. The evidence of witnesses examined, and the report of the inspection made by the Sectional Committee, show that the district is extensively settled, that a very large portion of it is under cultivation, and that Berrigan will eventually be the dépôt for a vast quantity of produce. The greater part of the country which will be served by the railway is in the county of Denison, the total area of which is 778,000 acres, 62,135 of this quantity being cultivated. Within a ten-mile radius of Berrigan about 35,000 acres of land are under cultivation, and the cultivated area is steadily increasing. Clearing, with a view to cultivation, is in progress throughout the district ; and there is apparent among the proprietors of the large pastoral estates a tendency to cut them up and sell or lease them in small holdings. The Sectional Committee, as will be seen from their report, ascertained "that a large area of land suitable for farming settlement extends approximately from 9 miles south of Jerilderie, passing thence in a westerly direction to within a few miles of the present surveyed line from Jerilderie to Deniliquin, thence with a southward trend to within about 12 miles of the town of Deniliquin, reaching to the Murray on the south, and to the east embracing Clear Hills and Savernake, and extending eastward to The Rock." The proposed railway will not serve all the country so described, but this statement of the farming area in which Berrigan and its district are situated indicates the importance of this portion of southern New South Wales and its claims to railway facilities for its population of producers.

Description of a pioneer railway.

10. A pioneer railway, as this line is designated, differs materially from the railways hitherto constructed in New South Wales. It is described by the Railway Commissioners on page 23, question 688, of the evidence, as a cheaply made line, suitable for level country, where the traffic will not be great, carrying a light locomotive with the ordinary rolling stock, and the trains running in daylight only at a speed not exceeding 15 miles an hour ; the permanent-way being capable of improvement to the ordinary standard at any time such improvement is warranted by an increase of traffic. The Engineer-in-Chief for Railway Construction explains it in the information he imparted to the Committee respecting cheaply-constructed railways in America. There the pioneer railway is conspicuous for the absence of ballast and fencing, the use of sleepers in larger numbers than on ballasted lines, the construction of wooden trestle bridges in place of bridge work of a permanent character, and the limited extent and inexpensiveness of the station and platform accommodation.

Pioneer railways in America.

11. The American plan of constructing one of these railways is, first to prepare an earth formation or low bank by excavating from ditches at the sides, the ditches afterwards serving for drainage purposes, as is proposed in the case of the railway to Berrigan, and then on this bank, formed only of excavated earth, to place flat sleepers, about 18 inches or 2 feet apart, and upon the sleepers the rails, which, being flat-bottomed, are laid directly on the sleepers, without a bed being previously cut for them in each sleeper as is done in New South Wales. Where bridges are necessary, small or large wooden trestle work is employed, and, except at the terminal

terminal stations, no elaborate station accommodation is provided. Platforms in most instances are merely wooden planks laid upon the ground, and at the railway termini they are raised but very little above the ground. The extra number of sleepers laid down compensates for the absence of ballast, and the use of bogies and centre buffers on the rolling stock makes the railway trains adaptable to an unevenness of surface or to sharp curves. As traffic on these cheaply made lines increases sufficiently to justify it the permanent-way is improved: ballast is put down, sleepers are renewed, heavier rails are used, and concrete or stone piers with iron or steel superstructures take the place of the wooden trestle bridges.

12. It has already been stated that the Railway Commissioners anticipate a profitable traffic upon the railway from the time of its opening. The data upon which the Commissioners base their estimate of the traffic was collected in the district by the Railway Goods Superintendent, and in his evidence before the Committee it is explained that the traffic will arise from the carriage of live-stock, wool, wheat, general goods, firewood, road-metal, passengers, parcels, and mails. The earnings are estimated on the following rates:—Live-stock, 7s. per truck; wool, 3d. per ton per mile; wheat, 2s. 6d. per ton; general goods, 3d. per ton per mile; firewood, 7s. 6d. per truck; passengers at 2s. and 3s. 6d.; and parcels, £25, mails, £242, and road-metal, £50, per annum. The area around Berrigan from which traffic will be drawn the Railway Goods Superintendent describes as between Savernake in the south-east, the border of Barooga in the south, and a point within 3 or 4 miles of Murray Hut or Finley in the west. The information collected by the Goods Superintendent appears to have been carefully obtained, with a desire to under rather than over estimate the capability of the district.

13. The quantity of land it will be necessary to acquire in connection with the railway will not be very large. On the route for the line as referred to the Committee there is very little Crown land, and what there is consists principally of roads. The remainder of the land through which the route passes is private property, most of it portions of two large pastoral holdings. The recommendation of the Railway Commissioners, that the land required for the railway should be given to the Government free of charge, has received attention from both the Sectional Committee and the Committee as a whole, and no effort has been spared first to ascertain the views of the owners of the land on this point, and then to lessen as much as possible the quantity of land requisite for the purposes of the line. A few town allotments at Jerilderie, which the railway cannot avoid, will have to be purchased, but the value set upon them by their owners is insignificant. A larger sum is represented by the land through which the route has been surveyed after leaving Jerilderie. But, as mentioned in what has been said of the Sectional Committee's report, it was found practicable by an alteration of route to very much reduce the possible expenditure upon the resumption of land. The Sectional Committee found that the owners of the large estates were not satisfied at the manner in which their land was divided, and therefore were not disposed readily to accede to the suggestion that they should give the land required from them for the railway. The owners of the largest extent of land along the route informed the Committee by letter that the line would cut through much of their best country, and put them to great inconvenience and expense; and another large estate was similarly served. The route recommended by the Sectional Committee doing away with much of this objection, parish maps with the route as first proposed and the suggested deviation were sent with explanatory letters to the land-owners principally concerned. It was pointed out to them that the altered route represented a width of 3 chains throughout, embracing both railway and road, the intention being to have them contiguous, and that for this purpose the existing road, where any deviation was necessary, would be brought close to the railway. As by the new route there would be little or no severance of the large estates, it appeared to the Committee reasonable to believe that the owners would readily give the strip of land required from them for the portion of the railway and road which would pass through their property; and, at the same time, it was evident that should they refuse the expense of resumption would be very much less than was probable in connection with the route referred to the Committee. Letters have since been received by the Committee from the landowners written to favorable to the suggestion that they should give the land required from them in connection with the altered route,

route, and consequently there should be no difficulty in having this condition to the construction of the railway carried into effect. They express a desire that their paddocks and improvements shall be interfered with as little as possible, and their wishes in this respect will doubtless receive attention from the Engineer-in-Chief for Railway Construction when the line is being located. In surveying the line efforts should be made to meet the views of the landholders in every way practicable, and care should be taken to see that the land required for the railway is promptly and legally transferred by the owners to the Government.

Recommendation of the Committee.

14. The Committee are of opinion that a railway from Jerilderie to Berrigan should be constructed without delay, at a cost not exceeding £2,000 per mile, including all charges, and recommend that the route found by the Sectional Committee be adopted. This the evidence strongly supports. The district has undeniable claims to a railway, the cost of construction will be small, and the traffic prospects are satisfactory. The only matter of any difficulty in the inquiry has been that relating to the land required for the railway, and this is dealt with advantageously by the alteration of the route. The amended route virtually removes the question of compensation for land resumption from the inquiry. In addition to this it is approved by both the Engineer-in-Chief for Railway Construction, and the Railway Commissioners. The Engineer-in-Chief describes it as a very satisfactory route—altogether an improvement on what was originally proposed. If the line can be brought alongside the road, or the road alongside the line, it is far better, he says, than to adopt a route across the country. “If it can be managed that where the line diverges from the main road the position of the main road can be altered and brought on to the line, a great deal will be gained.” That this can be managed will be seen from the evidence of the Principal Assistant-Engineer of the Roads and Bridges Branch of the Department of Public Works, who states that it may be done under the Act 4 William IV, No. 11, and that it will shorten the road by about a mile and a quarter. In his opinion the alteration in the position of the road will be much more advantageous than leaving the road as it is at present, and had he known of the existence of the bend which the Committee recommend should be done away with, he would, he states, have had the road straightened long ago. Everything else relating to the proposed work appears to be satisfactory. Cheapness of construction being new to the experience of this Colony in connection with its railways, some apprehension may be felt that the line will not be as stable and safe as it ought to be, but there is no real ground for fear in this respect. The evidence points to the belief that in ordinary weather there will be nothing in the manner in which the railway is constructed to interfere with its being worked effectively, and that in continuous or unusually wet weather all difficulty may be obviated by a little extra maintenance. Running the trains in the day-time only, and at moderate speed, will greatly diminish the risk of accident. The Engineer-in-Chief is not apprehensive of any interruption to traffic or of want of safety, for there will be nothing to prevent the line being kept to the required standard or improved at any time it should be necessary. He regards the railway, on account of its cheapness, as an experiment, but considers it one that ought to be tried in view of other lines of the kind being carried out in similar country where they are much needed.

Resolution of the Committee.

15. The resolution arrived at by the Committee was passed on 28 February, and is shown in the following extract from the Minutes of Proceedings :—

Mr. Davies moved,—“That, in the opinion of the Committee, it is expedient the proposed railway from Jerilderie to Berrigan, referred to the Committee by the Legislative Assembly, be carried out with the deviation recommended by the Sectional Committee, and at a cost not exceeding £2,000 per mile, to include goods and grain sheds, engineering charges, and all contingencies.”

Mr. Lee seconded the motion.

Mr. Chanter moved,—“That the motion be amended, so that it shall read as follows :—That, in the opinion of the Committee, it is expedient the proposed railway from Jerilderie to Berrigan, referred to the Committee by the Legislative Assembly, be carried out with a deviation *via* Finley, and at a cost not exceeding £2,000 per mile, to include goods and grain sheds, engineering charges, and all contingencies.”

The amendment, not being seconded, lapsed.

Mr. Molesworth moved,—“That the motion be amended by omitting the figures ‘£2,000’ with a view to insert ‘£1,800.’”

The amendment, not being seconded, lapsed, and the motion was then passed.

THOS. EWING,
Chairman.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

RAILWAY FROM JERILDERIE TO BERRIGAN.

WEDNESDAY, 19 DECEMBER, 1894.

Present:

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.	JAMES HAYES, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	ROBERT HENRY LEVIEU, Esq.
The Hon. JAMES HOSKINS.	JOHN MOORE CHANTER, Esq.
The Hon. JOHN DAVIES, C.M.G.	CHARLES ALFRED LEE, Esq.
The Hon. CHARLES JAMES ROBERTS, C.M.G.	JAMES GORMLY, Esq.
EDMUND WILLIAM MOLESWORTH, Esq.	

The Committee proceeded to consider the proposed Railway from Jerilderie to Berrigan.

Joseph Barling, Esq., Under Secretary, Department of Public Works, sworn, and examined:—

1. *Chairman.*] Have you a Departmental statement with regard to this railway which you would like to read to the Committee? Yes; it is as follows:—

PROPOSED RAILWAY FROM JERILDERIE TO BERRIGAN.

19 Dec., 1894.

On the 18th of this month, viz., December, 1894, Parliament referred the proposed railway from Jerilderie to Berrigan for the consideration of this Committee in the following terms:—

“That it be referred to the Parliamentary Standing Committee on Public Works to consider and report on the expediency of constructing a line of railway from Jerilderie to Berrigan.”

Before going further, I should like to explain that I have not gone very fully into the details of the history of this line, because I have hardly had the time. There are many papers on the file, such as letters from the Members of the district, petitions, and so on, to which I do not refer; but I will have a very complete *précis* prepared, which I will hand in later on. I think, however, that the statement which I am now reading will be sufficient to put the proposal before the Committee. The previous history of this proposal appears to be briefly as follows:—In January, 1891, a deputation, representing the Berrigan Progress Association and the Berrigan Tram League, was introduced to the then Minister for Works, Mr. Bruce Smith, and urged that a trial survey be made for a line between Berrigan and Jerilderie. The Minister replied that he could not give any decisive answer at that time, as the report of the Examiners of Public Works Proposals, on the question of proposed railways for Riverina, had not been received. In February, 1892, another deputation waited upon the Minister, Mr. Secretary Lyne, who had then succeeded Mr. Bruce Smith, and he informed them that he had received a protest from the Savernake and Murray Hut residents against the proposal, which showed that the people were not unanimous. He promised, however, that if no absolute determination had been arrived at within a reasonable time with regard to constructing the Rock to Murray Hut line, he would recommend that the Jerilderie to Berrigan route be adopted. The last deputation on the subject appears to be that which waited upon Mr. Secretary Lyne in May last, and the Minister then promised that if he were in office after the elections he would certainly advocate a reference of the proposal to the Public Works Committee. I should mention, however, that in the papers a notice appears of an interview with Sir Henry Parkes on the subject some years previously, but I have never seen the papers, which are not on the file. In October last the present Government came to the decision to refer the question to this honorable Committee, and the Railway Commissioners were accordingly requested to submit their report as required by the Public Works Act.

The official description of the line is as follows:—

JERILDERIE TO BERRIGAN.—Length, 21 miles 10 chains.

Estimated Cost £43,543, or £2,061 per mile exclusive of Land and Compensation.

This extension is proposed to be of very light construction, and begins at the present terminus of the branch line, Narrandera to Jerilderie, at 411 miles 75 chains from Sydney, and leads with slight divergence from a straight line to the township of Berrigan, where it ends at 433 miles 4 chains.

The line is on a dead flat throughout, so that grades, curves, and works generally, are very easy. The waterways crossed are moderate in size, and in the aggregate cover a length of 200 feet. The materials for construction, such as ballast and timber, are scarce.

J. Barling, The report of the Railway Commissioners is as follows:—
Esq.

Office of the Railway Commissioners of New South Wales, Sydney, 4 December, 1894.

19 Dec., 1894.

Proposed "Pioneer" line of Railway, Jerilderie to Berrigan, 21 miles 10 chains.

IN accordance with the provisions of the "Public Works Act, 1888," section 13, we beg to report as under:—

Cost of Construction—

The Acting Engineer-in-Chief estimates the cost of construction of the line, exclusive of land and compensation, at.....	£43,543
--	---------

Annual Cost—

Capital expenditure at 3½ per cent.....	£1,523
Estimated cost of maintaining the Permanent-way and for traffic and locomotive expenses (one train per day each way three days per week).....	1,550

Total annual cost	£3,073
-------------------------	--------

Traffic Estimate—

Passengers, parcels, and mails.....	£415
Goods, live-stock, and agricultural produce	2,668

Total revenue	£3,083
---------------------	--------

The district which would be served by the proposed line is very fertile, and no doubt capable of considerable development if supplied with railway communication, so as to reduce the cost for getting produce to market, which is now so much increased by the long cartage to the railway.

The line would also enable a good deal of traffic which now passes through Victoria to be retained to New South Wales.

We would draw attention to the following extract from our report, dated 29th December, 1888, upon suggested new lines of railways, in which we called attention to our views in regard to the free conveyance to the Government of all lands necessary for the construction of new lines of this character, viz.:—

"Looking at the fact that in nearly all cases in which reports have been made upon suggested railways the land has passed into the hands of private individuals, whose property will be largely enhanced in value by the making of the railways, and that the lines in themselves will not be self-supporting for a long time to come, we are of opinion that the land-owners in the respective districts should join together and arrange for the necessary land, free from all question of compensation of any kind, to be conveyed to the Government for the construction of the railway.

This, in our opinion, should be a *sine qua non* in connection with the making of lines of this character."

We intimated to the deputation that waited upon us at Berrigan that we should advise the Government to make this a condition in connection with the construction of the line. We were given to understand that some of the land-owners had already expressed their willingness to give the land, and that probably the whole of those concerned would adopt a similar course.

Subject to this recommendation, we would strongly advise the construction of this line, and also urge that it should be put in hand without delay, and completed within a period of six months from the time of commencing its construction.

<p>The Common Seal of the Railway Commissioners of New South Wales has been hereunto affixed by the Railway Commissioners in the presence of—</p> <p>H. M'LACHLAN.</p>	<p>E. M. G. EDDY, (L.S.) Chief Commissioner. W. M. FEHON, (L.S.) Commissioner. CHARLES OLIVER, (L.S.) Commissioner.</p>
--	---

With regard to the report of the Railway Commissioners, I may state that a preliminary report from them was received by the Minister, dated the 9th October, 1894, but as the subsequent report covers the same ground, I need not read it, but attached to that report are some interesting particulars with regard to the district to be served by the line, which, with the permission of the Committee, I will read.

The Commissioners say:—

For about 19 miles of the route of the railway the land is said to be eminently suitable for agriculture. The country too lying between Berrigan and the river Murray is also said to be very suitable for the same purpose. South of Berrigan cultivation is carried on to a large extent, no less than 16,000 acres being under crop, on the Barooga Pastoral Holding this season. The Berrigan township is small, having a population of 150 only, but the police district, which covers a radius of 8 miles, has a total population of 590.

Mixed farming is carried on, and it is found that this mode of farming enables more stock to be kept on the same area than was the case when the land was devoted exclusively to pastoral pursuits.

The figures gathered by the police during the last season indicated there were about 19,000 acres under crop within a radius of 8 miles of the township, and that the average yield was 13½ bushels per acre. It is said this year fully 27,000 acres will be under crop.

To the west of Berrigan is the town of Finley (late Murray Hut), distant 14 miles, and it is stated that within a distance of 7 miles 20,000 acres are under crop. The farmers of the district have bought freehold land at figures as high as £3 to £4 per acre.

It is stated that the construction of the railway would cause a very much larger area to be put under cultivation.

With regard to the portion of their report in which the Commissioners advise that inasmuch as the construction of this railway will largely enhance the value of private properties, that, in their opinion, it should be made a *sine qua non* that the land required should be given free, I am to say that the Minister fully concurs with this, and would make it a condition, precedent to the construction of the line, that all the necessary land should be conveyed to the Crown free of cost. This is a very important point, as I understand from Mr. Stopps, of the Lands Department, that the line will pass wholly through alienated land, except where it intersects roads and the Jerilderie Common.

This is what Mr. Stopps says:—

The proposed line of railway, Jerilderie to Berrigan, lies wholly within alienated lands except where it intersects roads and the Jerilderie Common.

That is all that I have to say at the present moment.

2. *Mr. Molesworth.*] Have you any idea whether it is intended to extend the line beyond Berrigan on to the Victorian border at any future time? I am not able to speak as to any future extension, because the Minister has given me no indication of what he proposes to do. But a proposal has been made to extend the line to Finley or Murray Hut.

3. You have no knowledge of any proposed extension to the Victorian border? Not at present.

4. *Chairman.*] *Via* Berrigan? Passing through Berrigan. If you will look at the report upon proposed railways for Riverina, laid on the Table of the House in 1891, you will see that Mr. Alexander, who was then one of the examiners of public works proposals, went into the whole question very fully. The conclusion he came to was that it would be desirable to take the railway from The Rock to Murray Hut, and he also suggested certain cross lines, of which the line to Berrigan is one. His final conclusion was that

that it would be better to construct a line from the Rock to Murray Hut, because such a line would escape certain objections which he points out to the construction of these cross lines. The distance from the Rock to Murray Hut is 98 $\frac{1}{4}$ miles, and the estimated cost of the line £291,957, or £2,953 a mile. Mr. Firth, however, with whom I had a conversation, is under the impression that the cost could be brought down to £2,700 a mile. The members of the Committee may ask why it is that that line should cost more per mile than the proposed line to Berrigan. The explanation is that although all the country is pretty level, the route which a line from the Rock to Murray Hut would traverse, is rougher than the route from Jerilderie to Berrigan and more cutting would have to be done upon it. The Minister determined to submit this line because we are not prepared to consider at present the large cost which would be involved in the construction of a line from the Rock to Murray Hut. He has been advised by the Railway Commissioners, who are the proper authorities to give advice on this subject, that a line to Berrigan would meet the circumstances of the case at present, that Berrigan is in the centre of a thickly populated district, and that a railway to that place would bring railway communication to the door of a very great number of settlers who are cultivating a large area of land there. It would have the further advantage that it would be the means of bringing in traffic to the branch line from Narrandera to Jerilderie, the loss on which line is, according to the last report of the Commissioners, something like £14,806 per annum. It was these considerations which induced the Minister to give his adherence to the proposal which has been submitted to the Committee.

J. Barling,
Esq.
19 Dec., 1894.

5. *Mr. Hoskins.*] How far is it from Berrigan to Murray Hut? About 13 $\frac{1}{4}$ miles. Questions have been brought before the Department as to whether it might not be desirable to take the line more in the direction of Murray Hut. There is a little more cultivated land to the west, but Berrigan seems to be about the centre of a district thickly populated with farmers.

6. *Mr. Davies.*] What is the annual loss on the Culcairn to Corowa railway? According to the Commissioners' report, dated 30th June, 1894, the loss on that line in the year ending December, 1893, was £7,818.

7. *Mr. Hayes.*] Proportionately, about the same as the loss on the Jerilderie line? Yes.

8. *Mr. Lee.*] Has there been any local agitation for this extension? Yes; we have had deputations and petitions, and letters, and, as I have pointed out in my statement, there have been adverse representations coming from Murray Hut on the one hand, and Saverake on the other. These people are anxious to have the Rock line carried out, because, as far as I can understand, they are afraid that, if the short line to Berrigan is constructed, it will have a detrimental effect on the proposal to carry out the Rock line.

9. Then this proposal does not emanate altogether from the Railway Commissioners? Certainly not.

10. The matter has been before your Department for some time? For some years previous to the date mentioned in my statement.

11. In fact there has been a continuous agitation for the extension of the railway into that district, some asking that it should be taken to Berrigan, some to Murray Hut, and some to other places? Yes.

12. Do the figures which you have just given us from the Commissioners' report show the total cost of constructing the line? As far as I am aware.

13. Do they cover the cost of the line, exclusive of bridges and waterways? I believe they cover everything.

14. Are you in a position to say? I should rather the engineers gave you the information; but I believe that what I state is correct. There are only two creeks of any importance to cross—the Berrigan Creek, near Berrigan, and the Algudgerie Creek, near Jerilderie. It may strike you that the cost is rather low; but I may mention that special facilities have been given to the Construction Branch by the Railway Commissioners in the way of very low freight. The Commissioners are going to supply us with over 10 miles of old flat-bottomed rails, at a cost of £3 a ton, delivered at Jerilderie. Rails for the sidings will be supplied for £2 10s. a ton, and a very low price will be charged for spikes and fastenings. For the new material which we shall have to send up—60-lb. steel rails—the Commissioners are only going to charge us 25s. a ton for carriage, and 2s. a ton for loading and unloading. Therefore, taking the cost of the rails at £4 10s. a ton, they will not cost more than £5 17s. landed on the spot. That is for the new rails. This is a very large reduction on the ordinary rate.

15. Because of the second-hand material supplied by the Commissioners, the cost of construction will be kept down? It will be considerably kept down.

16. Has the question arisen in your Department as to the policy of adopting a different gauge for the extensions of our lines? I do not know that it has been brought up lately. Of course the question of narrow gauge has been before the Department and the public for years; but I do not know that it has ever been seriously considered.

17. There has been no Departmental departure from the existing gauge? No.

18. *Chairman.*] Is there a very large supply of these old rails? I should think that what the Commissioners offered to supply would about exhaust the available stock. Otherwise I think they would have offered us more.

19. Do they belong to the Construction Branch or to the Commissioners? To the Railway Commissioners. Those that we have in stock are simply new rails.

20. Have you had any correspondence with the land-holders along the proposed route? I have heard nothing from the land-holders along the route, except that the Commissioners have said that a number of them had expressed their willingness to give their land for railway purposes, and the Minister is strongly of opinion that the work should not be carried out unless the land is given.

21. Still you have no statement from them? I have not. In the case of the Marrickville to Burwood-road line a provision was inserted in the Act of Parliament which authorised it, declaring that certain land was to be given free, and no contract was accepted until the land had been given. We have had to pay a very large sum of money for land in connection with that work; but it was for small portions which we did not expect to be given.

22. You recommend the same procedure in this case? Yes.

23. Have you any information with regard to the traffic at present going to Victoria? No; that will be dealt with by the Railway Commissioners. I have not had an opportunity of seeing them.

24. You desire to subsequently supplement your evidence? I should rather desire to subsequently put in papers giving the Committee a fuller account of the history of the line than I have given up to the present.

- J. Barling, Esq.** 25. *Mr. Davies.*] What speed is it proposed to maintain on this line? I am unable to answer that question at present; but the information will be given by the Commissioners and the engineers.
 26. Will trains running three times a week give an income of £3,000 a year? That is what the Commissioners say—"One train a day each way three days per week."
 27. The rails that you speak of are old rails which have been supplanted by more modern rails? Yes.
 28. They are not being used at the present time? I presume that they are not: but I have no particulars in regard to them beyond what I have given.
 29. The cheapness of the line is based upon the fact that these rails would be used? To a considerable extent. The original estimate was appreciably larger than the present estimate, but we were able to reduce it because of the facilities offered to us by the Commissioners.
 30. You have no information as to the probable traffic? No; Mr. Harper will give you that.
 31. *Mr. Hoskins.*] Is it your impression from the conversation that you had with Ministers that the Government will not submit the proposal to construct this railway to Parliament unless there is a provision inserted in the Bill that the consent of the land-holders should be obtained for giving the land to the Government before the work is undertaken? I think that is the opinion of the Minister, though I should not like to make an absolute statement. There may be some small town lots in Berrigan which would be excluded, but I cannot say for certain what would be done. In the main it is the opinion of the Minister that it should be made a *sine qua non* of the construction of the line that the land should be given to the Government.
 32. *Mr. Chanter.*] The Commissioners speak of this as a light line—what do they mean by that;—is it not to be of the same gauge or as heavy as the line from Narrandera to Jerilderie? Mr. Firth will give you more information about that. I suppose that what is meant is that the sleepers and ballast, and so on will be lighter.
 33. Is it called a light line because old rails are to be used upon it? The term is used in connection with the sleepers ballast, and character of the stations, &c., but Mr. Firth will give you better information on the subject than I can.

THURSDAY, 20 DECEMBER, 1894.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY.	JAMES HAYES, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	ROBERT HENRY LEVIEN, Esq.
The Hon. JAMES HOSKINS.	JOHN MOORE CHANTER, Esq.
The Hon. JOHN DAVIES, C.M.G.	CHARLES ALFRED LEE, Esq.
The Hon. CHARLES JAMES ROBERTS, C.M.G.	JAMES GORMLY, Esq.
EDMUND WILLIAM MOLESWORTH, Esq.	

The Committee further considered the proposed Railway from Jerilderie to Berrigan.

Thomas Rhodes Firth, Esq., Principal Assistant Engineer, and Acting Engineer-in-Chief, Railway Construction Branch, Department of Public Works, sworn, and examined:—

- T. R. Firth, Esq.** 34. *Chairman.*] Have you a Departmental statement to make with regard to this proposal? I have not prepared a statement, but I am ready to answer any questions which you may wish to put to me. I may say that I have not been over the country. My information has been obtained from the plans and reports which I have seen in the office.
 35. Are the tracings and book of reference produced those prepared by your Department? Yes.
 36. *Mr. Davies.*] You do not know the country? I have not been along the route of the proposed line, but I have been to Jerilderie, and round through Corowa to Deniliquin.
 37. I suppose that country is somewhat similar to the country along the route of the proposed line? I believe it is.
 38. What do you estimate the cost of the proposed line per mile? According to the revised estimate, it will cost £2,061 per mile, including station accommodation, water supply, and everything else.
 39. Except land? Of course. We do not take land into consideration in making our estimate.
 40. Do you provide for fencing? For partial fencing. We do not intend to fence the line, except where it is almost compulsory—through small paddocks, for instance, or in cases like that.
 41. And will £2,061 per mile cover the cost of such fencing as may be required? Yes. I have allowed £1,000 for fencing where required along the route. The original estimate for the line, which was made in March, 1893, was £2,511 per mile. In October last I made another estimate, revising the plans, and, having in view a lighter class of line, which came to £2,286 per mile. Since then, however, I have had two or three interviews with the Chairman of the Railway Commissioners, who has made several concessions in regard to freight and other matters. Mr. Eddy proposed to let me have 10 miles of second-hand rails—they are not worn-out rails, but rails in a very fair condition, which the Commissioners wished to replace with heavier rails, and he agreed to deliver those rails at Jerilderie for £3 per ton. In my other estimate I allowed for new rails costing about £6 4s. per ton.
 42. That is new steel rails? Yes. Of course Mr. Eddy agreed to accept these old rails when laid. This arrangement makes a considerable reduction in the cost, but he also promised to reduce the freight on the new rails which I had originally calculated would be 1d. per ton per mile.
 43. That is the rate which you have been usually charged hitherto? That rate has been charged, but it is not the rate at present in the books. It is the rate, however, at which I made out my first estimate. The Commissioners promised to reduce the rates on the 60-lb. rails from 34s. to 25s. per ton. That was another big concession. Another advantageous arrangement was made in connection with the wool loading banks at the stations, which are rather expensive when we have to put them up with new timber. Mr. Eddy offered to put them up himself at a much lower price than we could do the work, using new timber, because he would use old sleepers, which would make quite as good a job, and would not cost so much. He agreed to do this work at a stated price, which I have included in my estimate. Then again, I allowed for a large tank to hold 20,000 gallons of water. We have generally been in the habit of making

making tanks like that, because it has been found that they hold a sufficient supply; but Mr. Eddy told me that a smaller wooden tank with a small engine would do just as well, so that we can make a saving of £700 or £800 there.

T. R. Firth,
Esq.
20 Dec., 1894.

44. *Mr. Chanter.*] Where would that tank be made? At Berrigan. Those are the principal items in regard to which the Commissioners have made concessions.

45. *Mr. Davies.*] Do I understand you to state that in consequence of these concessions you have been able to reduce the cost of the line from £2,286 per mile to £2,061 per mile? Yes; they make a difference of £225 per mile.

46. Where do you propose to get your water supply from? I am told that water is to be obtained at Berrigan by sinking. I was told that there is a well there which we can get, and which will give a sufficient supply.

47. Has there been any boring to prove that? The well is now in existence, and is used by some of the townspeople. Mr. Eddy told me of it.

48. Do you know, of your own knowledge, that there would be a permanent supply? No.

49. Are the second-hand rails to which you have referred single-headed or double-headed? Single-headed 70-lb. iron rails.

50. Does £3 per ton cover the cost of chairs? There are no chairs.

51. Will that amount include the cost of all the fixings? I have made arrangements to get the fastenings, fish-plates, and bolts at a very low price.

52. Have you a detailed statement of your prices and quantities? I only had time this morning to scribble down the few figures from which I am quoting, but I could furnish the Committee with any particulars later on.

53. At what speed do you propose that engines should run over the line? There would be no objection to their running at 25 miles an hour in good weather.

54. The gange would be the same as on the existing lines? Yes.

55. How much ballast do you propose to use? Five inches under the sleepers, and 2½ inches up the sleeper. There would be 7½ inches of ballast in the middle of the road.

56. Where do you expect to get it? I am told that we can get ballast near Berrigan.

57. You have no knowledge of the place yourself? No.

58. Who could give us the information? Mr. Burge. He has been through the country, and he says that this is the only place that he is aware of where we can get ballast.

59. Did he make the survey? He was in charge of it. He has been through the country, and reported on the survey.

60. Have you anything further to communicate to the Committee in regard to the line? I suppose I should inform you that it is proposed to use half round sleepers instead of the square sleepers which we ordinarily use.

61. What are called undressed sleepers? Well, they are not squared up. There must be at least 5 inches squared on the top to carry the rail, and not less than 4 inches of solid timber, the base of the sleeper being 9 inches broad.

62. Do you know that there is a supply of good timber in the district? I expect that we shall get it most cheaply from the Murray. We cannot insist on having ironbark sleepers for the price set down. I think that red gum will be about the only timber which we can get down there that is fit for sleepers.

63. You are quite of the opinion that £2,061 per mile will cover the cost of the line, including station accommodation, water supply, and everything else? Yes; station accommodation is to be provided according to the Commissioners' requirements. We are not always in a position, when making our estimates, to know what these will be, and we have to go on precedent, averaging the cost of stations which have already been made; but in this case I went through the matter with Mr. Eddy, and he gave me a description of the buildings that he wanted, upon which we put an approximate value, so I have every reason to believe that the estimates will be pretty correct.

64. Will wooden buildings be put up? They will all be timber buildings.

65. What is the total estimated cost of buildings, platforms, and stations? We shall not erect proper platforms, but we shall do somewhat the same thing as we have done in the case of the Tweed line. There the platforms are raised only 9 inches above the level of the road, and are kerbed, American cars being used, with a lower step extended out a little further than is usual, so as to hang over the kerb, and enable the passengers to step down easily. There is a big saving by doing without platforms, especially in flat districts, where we often have to raise them nearly 5 feet above the formation. That runs into a lot of money.

66. What do you estimate the cost of the station buildings to be? I have put down £471 per mile for earthworks, box drains, and bridges, cattle stops, level crossings, and fencing. Then the rails themselves would cost £532 per mile—that is, taking the average cost of the 10 miles of old rails and the 11 miles of new rails. The cost of ballast and sleepers, and of laying the road, will be £667. To those items I have added 10 per cent., so that the estimate includes £471 for the line itself, and £1,319 for the permanent-way complete per mile, making £1,790 per mile without stations, supervision, or any extras.

67. How long would it take to construct the line? If we get American graders to do it, it ought to take about six months, but it would depend upon the weather. If American graders are used, it may reduce the cost a little; but I feel satisfied that the work can be done for the estimated amount.

68. You regard the estimate as a full one for work of this character? I do.

69. *Mr. Hoskins.*] Have the Department made detailed surveys of the route? Only a trial survey has been made.

70. How long would it take to complete the detailed surveys? We could call for tenders in about five or six months.

71. Supposing Parliamentary sanction were given to the work, tenders could not be called within a less time than five or six months? Not advantageously. I could put on more surveyors, but it would not be profitable, having regard to the ordinary cost of surveying. There is room for two men there, and if you put on four they would only be doing three men's work.

72. Therefore the Berrigan people cannot, under any circumstances, get a railway within less than twelve months? No.

73. *Mr. Molesworth.*] What do you understand by a pioneer railway? Well, I am not the godfather of the

T. R. Firth, the term, but I understand it to mean that this is the first of a light description of line made in the Esq. Colony.

20 Dec., 1894. 74. By a pioneer line you mean a light line? A lighter line in embankments and cuttings. The line will follow the surface as nearly as possible.

75. Do you propose to ballast the line fully? Not fully, only to the extent which I have already described.

76. Have you any idea of the character of the soil there? I believe that it is a clayey soil.

77. Do you consider the ballast sufficient for that class of soil? I think so. If very wet weather comes on, they will have to run the trains very slowly. I cannot guarantee this line as I could guarantee a line costing £4,000 a mile. In the latter case we should keep the embankment up so that the floods could not affect it.

78. Then on the proposed line in bad weather you will either have to reduce your speed or increase the quantity of ballast? Perhaps we shall have to do both. If the ground became very soft, the line would sink; but as the route is very straight you could run a train over it, if you did not go fast, even when the line was going down. Of course it would have to be lifted again, but there would be no real danger in going over it the first time.

79. I suppose there are a few short grades on the line? They can scarcely be called grades, they are so flat.

80. There is nothing of importance? No.

81. The line will be practically unfenced? Yes; if we find that we can run along the side of some of the existing fences, we shall do so. Of course, if a property owner insists on our fencing on the other side, there will be the question whether it is better to fence or to pay extra compensation.

82. How many stopping places do you propose to have? Two besides Berrigan. The first would be 5 miles from Jerilderie.

83. What name? I do not know that it has a name. It would be near Wunnamurra. The next stopping place would be 13 miles from Jerilderie in the parish of Mairjimmy. There is a road running through at those places.

84. The estimated cost will include everything which you can possibly allow for at the present time? Yes; so far as I know.

85. You do not think that any serious amount will have to be provided for contingencies? No.

86. What do you estimate the life of the second-hand rails which you propose to use? Well, if they are in the condition which I expect they are, trains running over them at the present time, I suppose they will be good for twenty years, with such traffic as there will be on the proposed line.

87. You feel confident that the work can be done without meeting any serious difficulty? Yes; I do not anticipate any difficulty. It is about the most favourable part of the country I know in which to make a cheap line. There are only two creeks to cross, and the rest of the country is very favourable. I expect, too, that labour will be cheaper there than in any other part of the country.

88. Will the bridges be expensive? No; though they are rather wide creeks. There will be eighteen spans, each 10 ft. 6 in., for the two bridges—190 feet of bridge-work altogether.

89. *Mr. Trickett.*] Is the proposed line of the same type as the Narrandera to Jerilderie line? No; it will be a much cheaper line. I have not been over the Jerilderie line, but I know the type—it is the old standard type.

90. Will the proposed line carry the same engines and the same traffic as the Jerilderie line? No, I do not think it will. On the Jerilderie line the rails are heavier, and I think the sleepers are a little bit closer.

91. Do you know if the heavy engines run from Narrandera to Jerilderie? No, I do not; but I think the road would carry them. I have not been over the line, and I have not seen the plans of it. I am merely judging it because of my knowledge of the description of the work which we used to do at the time that line was made.

92. Then if the Berrigan line is to be a lighter line, will not that necessitate a change of engines at Jerilderie? Not unless the Commissioners are in the habit of running very heavy engines over the Jerilderie line, and I do not think they are. The proposed line will carry the kind of engine they are now running from Orange to Forbes. I believe the Jerilderie line is capable of carrying the biggest engines; but I do not think they ever use them there.

93. It would be undesirable to have to make a change at Jerilderie? Yes; because you would require another set of engines, and an engine-shed.

94. Is there any official who could give us information in regard to this matter? Mr. Harper could tell you the size of the engines which they are running to Jerilderie now. I feel certain that there is not the traffic for the big engines there.

95. Who made the trial surveys to Berrigan? I do not remember. It is more than two years since it was made; but Mr. Burge will know who made it, and where the surveyor is now.

96. Are there any curves on the line? There is one of about 12 chains radius near Jerilderie. That is about the only curve worth calling a curve.

97. Why is it necessary? To get away from the station. The line runs almost at right angles with the direction of the station. By taking it out in this way, you will save an extra siding, and an extra set of switches.

98. Is the country through which the line will pass clear, or is it covered with scrub and trees? I think a great lot of it is clear, and a part of it is open scrub; but it is not timbered. I do not think you got any heavy timber in that part of the country, until you get right on to the river flats.

99. *Mr. Hayes.*] This is one of the first lines you propose to make on the new system—it is a cheap line for agricultural produce? The Narrabri to Moree line will be made in the same way.

100. As far as grades are concerned, was not the Jerilderie line as easy to construct as the present line? I do not know what the grades on the Jerilderie line are, but I should think there would be one or two small ranges to cross, whereas there is nothing of that kind in this case.

101. The class of engines used on the Jerilderie line could travel over the proposed line with perfect safety? Yes; I feel almost certain that the engines they use there now would run right on. I think that if it was intended to run heavy engines over the line Mr. Eddy would have pointed it out to me when we were speaking about the spacing of the sleepers.

102. This will simply be a continuation of the Jerilderie line, and the engines used on that line will run right on? Yes, I believe so. T. R. Firth, Esq.
103. You propose to have no station buildings at the intermediate stopping-places? Just small waiting-sheds and a kerbed platform, with a grain-shed at one place. 20 Dec., 1894.
104. Have you seen the American graders at work? No, I have not.
105. Do you know anything about the working of them? I have a very good idea as to how they work. They are very satisfactory where there is not much timber.
106. What is the estimated difference between the cost of forming with these graders and the cost of ordinary formation? I can hardly say. If you believe the Yankees, the graders will do it for about $\frac{1}{2}$ d. per yard, and by hand it can be done for 8d. or 9d. per yard. The cost of such work, using the graders, is anything from $\frac{1}{2}$ d. up to about 6d. per yard.
107. Do you know that there are some of these graders now at work in the Colony? I believe that they have them down there for forming the roads.
108. The Municipal Council of Jerilderie has had one in use for some time, and it works extremely satisfactorily. If they were used in the construction of this line, would the cost be reduced materially? Yes; though that would depend upon the quantity of timber and stumps there are. You must clear out the stumps before the graders can work, and sometimes the money you have to spend in getting out roots and stumps is as much as would pay for the extra cost of doing the work by hand.
109. Have you calculated whether red-gum sleepers could not be got cheaper from the coast than from the Murray? I think they could be got much more cheaply from the river. The cartage will only be about 15 or 20 miles.
110. That is from Cobram? From the banks of the Murray. You could not get them from the coast for anything like that.
111. Have you tried box for sleepers? If there were box we would take it for sleepers. It is a good timber when free from sap. The difficulty is to get the sap out of it.
112. I suppose you are aware that there is a good deal of box timber in that country? Yes; and if you can get it big enough to give three sleepers from a tree and free from sap, it does very well.
113. If you could get such sleepers there, it would help to lower the cost? I do not expect to save much on my estimate. I expect the sleepers will cost 2s. 6d. on the ground. I do not think they will cost more, but I do not expect to save much upon them.
114. You say that there is no ballast to be got except at the terminal point? I am told so.
115. That would make it rather costly? It will add to the expense. If the ballast had been closer, I should have put down about 6d. per yard less for it. I think I have allowed about enough for ballast.
116. Since this country is practically level, could not the line be permanently staked in less than six months? I am going to put on two surveyors, and I think they ought to do the survey in from three to four months. There is not only the staking of the line that has to be done, but every one of the boundaries has to be picked up and surveyed, and put on to paper. You can only put a certain number of men on at this work, and I do not think it would be safe to say that it could be done in less than six months. You would have to get your sleepers on the ground, obtain your ballast, and make a great many other arrangements.
117. This is an agricultural district, and according to your statement it would be impossible to get the line ready for the next harvest? I do not think it could be done.
118. But if it were absolutely necessary to have the line ready then, you could reduce the time considerably? Yes; I could reduce it by putting on more men. If Parliament sanctioned its construction at once, and we had fine weather, I think we could get it ready in twelve months.
119. Mr. Lee.] Can you give the Committee any evidence in reference to the provision which you have made for waterways? The waterways to be provided are box-drains. We always cover these drains in, and on the old lines we have built them of concrete right up to the top of the earthworks; but such drains are very expensive, and I am having a drawing made of a cheaper kind made of timber, which will answer the same purpose. I intend to have a slight embankment all the way along—6 inches above the surface in the middle, and tapering off to nothing. To get the material for the embankment we will make a small drain on each side of it. That will help to keep the formation dry, and we shall have drains through it from one side to the other.
120. Will you have a sufficient fall to carry the water away? Well the country is so flat that the water would have to stand; but we shall make openings in the embankment sufficiently close together to allow it to get through.
121. Will the embankment be high enough to protect the line in very wet weather? I would not guarantee it to be high enough in very wet weather.
122. The water might then be over the line in some places? I do not think that it will get over the rails, but it may get over the ballast. It may, and I expect that it will, make the embankment so soft that in very wet weather the trains will have to travel very slowly, and probably have to stop running for a day or two.
123. Have you any record in your office of the flood levels in that district, or of the fall of the water? We know the flood levels of those creeks. That is the only place where any water is seen at all; but there is no current there.
124. Are there not some swamps along the line? There is one swamp, but the water there is stationary.
125. What will be the position in wet weather? The embankment will be more than 6 inches high where the swamps are. You can scarcely tell which way the water falls there, for in point of fact it hardly runs at all.
126. Are there any permanent tanks—station tanks—along the line of route? There are some tanks, but I cannot say whether they are permanent or not. They are shown on the map.
127. Is there any danger of the large bodies of water conserved in these tanks flooding the line at any time? Not unless the dams burst, and we could not make the embankments strong enough to resist the water in that case.
128. What would be the result if the dams were to burst? The line would be washed away.
129. You make no provision against that? I do not see that we could. If some of the big dams burst they would take the line away, even though the embankment were 3 feet high.
130. Would it not be rather a costly matter to replace the line? It would not be so costly a matter to replace

T. R. Firth, Esq., replace a cheap line as to replace a good line. The water would simply carry the ballast and formation away.

20 Dec., 1894. 131. Are the wool stages you have spoken of to be erected upon the platforms? They are platforms upon which the drays can be drawn so as to bring the wool above the level of the trucks.

132. Is not all the country through which the railway will pass freehold? All except the commons.

133. And fenced? I believe it is all fenced on one side.

134. I suppose there is a lot of stock there? Yes; but I do not think the fencing will matter much where it is grazing land. We will put up cattle stops at the cross fences. It must be remembered that the line will only be worked in the daytime. It would not be safe to work an unfenced line in the dark.

135. Have you included the cost of stockyards in your estimate? I have provided for sheep-yards, but not for cattle-yards. I was told that cattle-yards would not be required.

136. I suppose that £2,061 per mile is about as low as you can bring the estimate? Yes, that is the lowest estimate that I would give.

137. What reason have you for supposing that you would get the line constructed for that? Well, take the contracts that we have had carried out recently—take the Milson's Point line.

138-9. Any other? Yes; three contracts were let on the Lismore to the Tweed Railway for less than the estimate.

140. For less than £2,061? No. What I mean is that in the case of other lines, we have had the work carried out within the estimate.

141. But it is usual to allow a margin? I have put on 10 per cent. for that. It is included in the estimate. I have put on £500 for miscellaneous requirements—I do not know what they will be, and I have put on 10 per cent. for supervision and contingencies.

142. Can the Department assure the Committee that the work can be carried out for the amount you have named? I think the Committee will be perfectly safe in recommending the construction of the line. I do not see any reason whatever why the estimate should be exceeded. If it is exceeded it will only be because of somebody ordering us to depart from the contract.

143. The cost of so small and easy a work as this ought to be calculated very readily? Yes.

144. If it were a larger work with heavy grades and bridges, you would require a larger margin? Of course we should be more liable for contingencies. It sometimes happens that slips occur in deep cuttings which we could not possibly expect or provide against.

145. Have any of the owners of property along the line offered to give the Government the land free of cost? I am not aware.

146. The last point to be considered is the time which will be occupied in the construction of the line? If it is necessary that the line should be finished by the end of next year, and we know this early, I think it could possibly be done in time; but if it is a couple of months or so before we get instructions about it, it cannot be done in time.

147. With fair weather there is a possibility of doing it within nine months? Within twelve months.

148. The Commissioners state that the work could be completed within six months? Well let them do it. They have not done any of this work yet.

149. Your opinion is that it would take about twelve months if the weather is good? Yes. I do not see why it should take longer; but I do not think it is any use promising it sooner.

150. Mr. Gormly.] The two creeks which you would have to cross would not require culverts of any considerable height? No.

151. Will you give us an idea as to what height they would have to be from the bottom of the creek? The first bridge—that over the Algudgerie Creek—would have to be about 6 feet high; that is, the under side would be about 5 feet above the ground. There is a dam over that creek, so that we shall save part of the bridging there. The bridge over the Berrigan Creek would be about 4 feet high.

152. You can easily estimate the cost of such structures? Yes, it is a very simple matter. Besides there would not be much current.

153. And it would be very easy to estimate the quantity of earth required for the embankment? Yes. We propose to adopt a new system in letting the contracts for this line. Formerly the work has been paid for by cubical measurement, the earth being taken from the sides, or from the cuttings, and used for the embankments; it has all been paid for at so much per cubic yard. In this case it is proposed to let out the work at so much per lineal yard.

154. I suppose you have seen ploughs and scoops used for such work as this? Yes.

155. From your knowledge of this class of country, could the work, if not done by graders, be done with ploughs and scoops? Yes.

156. That would be cheaper than to use drays and picks and shovels? Yes.

157. This is a class of railway of which it is easy to estimate the probable cost? Yes.

158. Where it is found necessary to erect a fence, a wire fence would do? I think so. That is what I intended.

159. For how much a mile do you think a six-wire fence could be erected in that part of the country? It might be put up for £65 per mile—it ought to be done for 4s. 6d. per rod.

160. Do you not think that it could be done for much less than that? I have heard squatters talk of getting it done for £25 per mile, but we can never get it done for less than the sum I propose.

161. A ton of No. 8 wire does about a mile of fencing. If you found it necessary to fence part of the line, the fencing would not be very expensive? I have allowed £1,000 for it. I could not form any idea as to how much would be required, so I put down that amount. There may be a balance, and, at any rate, I do not think it will be very much exceeded.

162. Do you think half the line could be fenced with a six-wire fence for £1,000? That would be £50 a mile for each fence. It could be done for that, but I feel certain that we shall not have so much to do.

163. You think you have left a sufficient margin to pay for the erection of any fencing which may be necessary? Yes; the line will follow the road for a good way at the lower end. There are fences up there now, and I will not move them.

164. Do you not think it would be safe to run trains on that line at night, even without fencing? Not if there were cattle.

165. You are not aware whether there are cattle? No; but I presume that it is all grazing country.

166. Would there be much danger in running over an unfenced line in sheep country? Yes; both cattle and sheep are very fond of leaving the grass to lie upon the ballast.

167. *Mr. Chanter.*] As far as I can understand the difference between the Jerilderie line and the proposed line consists in the difference in depth of ballast and in the quality of the sleepers? And in the height of the embankment. The waterways would also be different. There would be no concrete or brick culverts. T. R. Firth,
Esq.

20 Dec., 1894.

168. You would only require to add to this line in those particulars to make it a permanent line? Yes.

169. What is the total cost of the buildings? £5,180.

170. That would leave the cost of the rest of the line about £1,800 a mile? £1,790 a mile.

171. I notice, on looking at the map, that the proposed line does not go by the side of the paddocks. I understood that you presumed that one side would be fenced? At the Berrigan end I believe that it will be fenced for a mile or two.

172. But from Jerilderie to within 5 or 6 miles of Berrigan, you will be running through the middle of the freehold land? Yes; it is only about Berrigan that the line would be fenced. Of course in doing the permanent staking we might diverge 2 or 3 chains.

173. But that would not make much difference? Not very much. It is not worth speaking of, perhaps.

174. What width of land do you propose to resume? We generally take about 2 chains when going through private property.

175. You are not in a position to say what it is proposed to take in this case? No; but we will take about that width. We take more when going through Crown land.

176. Would you not require a bond from the owners of the land through which the line will pass, that no claim shall be brought against the Government for any injury that may be done to animals in the paddocks? I do not think so. Besides, the trains will run in the day time, and at a slow rate of speed, so that the driver will be able to see if there is anything on the line, and pull up in time. The line from Nyangan to Cobar is not fenced.

177. Cattle and sheep will camp upon the ballast in the day time as well as at night? Yes.

178. Supposing a flock of very valuable stud sheep, at lambing time, were camped on the line, they could only be frightened off with the whistle? Yes.

179. And supposing in the hurry some of them were injured or killed, would not a claim be made against the Government? Accidents happen even when a line is fenced, and the Commissioners have to pay damages.

180. But if stock trespass on a line when it is fenced, the owners are liable? The Commissioners will have to be responsible for any accidents which may occur if the line is not fenced, and they must run their trains with sufficient care to prevent accidents from occurring.

181. *Chairman.*] Is it your opinion that if a Government engine travelling over Crown land injures anything trespassing there, the Government can be held responsible? Yes; I take it that every man is supposed to fence in his land. Besides, the Government will only purchase this land by compulsion. If you could make an agreement with the owners of the land that they would take all risks, it would be another thing.

182. By whatever process the Crown obtains the land, it becomes Crown property, and anything trespassing on it has no right there? That is so.

183. How then could the Government be held blameable for any accident that might take place;—what is the position at the present time if sheep trespass upon your property? I think that as a railway is a source of danger, the Government, if it will not fence it in, will be liable for any damage it might do to stock. However, that is a legal question.

184. *Mr. Chanter.*] Did I understand you to say that if at any time it were necessary to fence in this land, it would cost £60 a mile? That is my approximate estimate for every class of fencing.

185. What class of fence would you propose? A 7-wire fence.

186. With a top rail? No.

187. You have not had any experience as to the cost of fencing in that district, except in connection with the Jerilderie line? No; and I do not know what the fencing on the Jerilderie line cost. I do not know whether those fences are 7-wire fences, or fences with two rails and four wires. That is the kind of fencing which used to be put up about the time that line was made.

188. The Department in inviting tenders for the construction of the line would include fencing? We should have a schedule of prices prepared with the different kinds of fencing. Where we cross a man's garden, which is paled in, we have to put up a paling fence, and so we provide for fences of different descriptions.

189. Would not the Department save considerably by inviting separate tenders for the construction of the roadway and for fencing? As a rule, I believe it is cheapest to include the fencing. A large contractor will probably not commence the fence until he has got his rails laid and he can then carry the fencing material along the line wherever he wants it at a fraction of what it would cost to cart it.

190. Are you aware that the maximum cost of the kind of fencing to which you have referred does not exceed £40 a mile in that district? Very probably. I should not be surprised to hear it.

191. Something over 10 miles of the road will be laid with new rails—what weight will they be? They will be 60-lb steel rails.

192. Will they be of a similar quality and design to the old rails which the Commissioners are to supply? The same type of rail exactly, but a little smaller.

193. What do you think is the difference between the life of the old rails and the life of the new rails? Probably seven or eight years.

194. What would be the increased cost of laying the road entirely with new rails? About £200 per mile.

195. Where do you propose to get your sleepers? I think we could get them from the banks of the Murray.

196. Are you aware that it is 23 or 24 miles from Berrigan to the Murray? I calculated on from 18 to 20 miles of cartage.

197. But you must remember that the sleepers would have to be got a considerable distance from the river;—is there not plenty of red gum on the Murrumbidgee at Narrandera? We might get sleepers there, but the freight would come to more unless the Commissioners gave special concessions. The freight would come to about 5½d.

198. What do you estimate the sleepers will cost each? Two shillings and sixpence delivered on the line. They would not cost more than 2s. 4d. if not delivered.

T. R. Firth, 199. Do you think that it is good economy where it is possible to get a thoroughly sound regulation Esq. sleeper of matured timber to take a cheaper sleeper of sapling timber. I suppose these sleepers would practically be saplings sawn down the middle? They would probably be split. There would be about 20 Dec., 1894. three in a tree.

200. You are aware that red-gum splits very badly? Yes; but the sleepers are generally taken from large trees.

201. The regulation sleeper is about 9 by 4? Nine by four and a half.

202. Do you not think that regulation sleepers could be supplied from the sawmills for very nearly the same price as these? I am afraid not.

203. You might get some information on the subject from some of your officers? I will try to do so. It must be remembered that sawn sleepers are very likely to split, and although you may get them delivered for 1s. 9d., when you come to put them down you may find 25 per cent. of them split.

204. There is a timber reserve about 10 miles south of Jerilderie, on which there is a considerable quantity of box. If good sleepers could be obtained there, would not that lessen the cost? It would depend upon the distance you had to cart them. If you can get them for 3d. less each, there would be a saving of about £25 per mile. I should not, however, like to alter my estimate on the chance of it.

205. Can you tell the Committee how far from Berrigan the ballast supply is of which we have spoken? I am told that it is within a mile of Berrigan. Mr. Burge has seen it; I have not.

206. How would the Department obtain it,—by running a tramline out? I think the contractor would probably find it cheapest to run a temporary line out.

207. How near to Jerilderie is ballast to be found on the Narrandera line? I do not think there is much ballast along that line, though it is nearly twenty years since I was across there. I do not remember seeing any ballast near Jerilderie.

208. There is a large quantity of ballast between Jerilderie and Narrandera, right on the line? I do not know anything about that.

209. Do you not think that coarse gravel could be used with advantage instead of costly metal ballast? We take gravel now, where we can get it.

210. Have you any knowledge of the kind of ballast used on the private line from Deniliquin to Moama? I know that when that line was first made, sand was taken up from alongside the embankment and thrown on the top.

211. It is a coarse sand obtained a few feet below the surface. Where it is very costly to obtain ballast—as in the case of the proposed line—would it not be wise economy to use sand? I am quite prepared to accept ballast inferior to that which we have used hitherto. I fully expect to be obliged to take it.

212. Perhaps Mr. Burge will be able to inform the Committee as to what tests he has made along the route in regard to ballast? I do not think that any trial holes have been sunk.

213. Are you aware that the Mines Department have endeavoured to obtain water at Berrigan by sinking in certain parts of the town, and have failed? No.

214. Supposing it were not possible to obtain water just where you require it, could the engines carry sufficient to take them from Jerilderie to Berrigan and back? Only with a light load. They could with a three-quarter load.

215. On Travelling Stock Reserve 1,111 there is a permanent well. In the event of water not being obtained at Berrigan, what would it cost the Department to put a pump there and convey the water by pipes to the line. The distance would be about a mile? It would not cost very much. A possibility that struck me was, the putting of a dam on the Berrigan Creek. There is a dam there now, just where we propose to cross, and before I heard of the water at Berrigan it was my intention to make a tank in the bed of the creek.

216. If water cannot be obtained at Berrigan you can make ample provision for obtaining it either from the creek or from the public well I spoke of? Yes.

217. In regard to the wool-loading platform, do I understand that it is simply proposed to face the earthen embankment with sleepers? [Witness showed by drawing how he proposed to construct these embankments.]

218. How high will they be? 3-ft 6-in.

219. Have you taken into consideration the question of cheapening the earthworks by using American graders? No.

220. Have you calculated upon doing the earthwork with the help of pick and barrow men, or do you propose to use scoops? The ordinary pick and barrow men.

221. You are aware that scoops are now very largely used where men were formerly employed with picks and shovels and wheelbarrows? Yes.

222. That cheapens the work considerably? Yes.

223. The work would be done more cheaply if scoops were used? There would be some money saved for any little extras, such as putting on more ballast, if it were required.

224. In the case of this line there is practically nothing to do except to form the road and lay the rails? Yes, and clear the scrub away.

225. What you call bridges are only culverts? There will be about 190 lineal feet of bridge-work over the two creeks.

226. Mr. Roberts.] Have you estimated for a single line or for a double line? For a single line.

227. Is the Jerilderie line a single line? Yes.

228. What would be the probable cost of continuing the Jerilderie line as constructed to Berrigan, exclusive of land resumption and compensation? Probably £500 or £600 a mile more.

229. So that if the line is carried out as proposed, there will be a net saving of about £12,000? Yes, about that.

230. Mr. Humphery.] What is your reason for inviting tenders for the work at so much a lineal yard, instead of at so much a cubic yard? I think the contractors will do it for less, and we have generally found some trouble in arranging the cubical measurement. Where we have provided for an embankment of 9 inches or 12 inches, there may occasionally be a few yards where the ground drops; and the contractors always charge for the extra amount of material required, and we have lot of trouble with them. Then hitherto we have generally stipulated that the material required to fill up these places shall

- shall be taken from some cutting, and that has increased the cost. But in this case we propose to let T. R. Firth, them get the stuff where they like, provided that the drains are kept clear.
231. When did it first occur to you to make this change? When getting out this scheme.
232. You have no previous experience of the system? No. With other lines, the embankments have been so high that it has seemed better to pay for the work by cubical measurement.
233. This will be an experiment? Yes.
234. Will this line be similar to the Cobar line? It will not be so good. It will be something like what the Cobar line was before it was washed away.
235. How would you describe the Cobar line? That was a surface line to a great extent, and part of the country through which it goes is undulating, though a great deal of it is flat.
236. In the depressions did you use ballast, or did you put the rails upon the surface of the ground? We used ballast throughout.
237. When the line was originally made? Yes.
238. How much ballast did you use. I am not speaking of the time when you re-made the line? The ballast was up to the usual standard. It was about $11\frac{1}{2}$ inches in the middle of the road, and 13 or 14 inches outside.
239. Was that found to be sufficient, or did you increase the quantity? No. The trouble came about because of the wet weather setting in just when we had got our earthworks made, and the water swept away mile after mile of the line.
240. *Mr. Gormly.*] Was that in the hollows? Well there did not appear to be any hollows.
241. *Mr. Humphery.*] It was before the ballast was put on? Yes.
242. You would not call it a cheap line now? No; it is not what was originally intended. There was so much damage done that we had to make it over again, and it was then thought advisable to make a good thing of it by raising the embankment 9 inches. At first the formation was laid upon the surface.
243. But this line will be an improvement upon the Cobar line as originally designed? Yes.
244. Will it with perfect safety carry the main line engines? It will carry ordinary engines up to 60 or 70 tons weight. It will carry all except the heavy American engines.
245. Do you remember expressing the opinion that no line of railway should be constructed that would not, with perfect safety, carry a main line engine? Yes.
246. *Mr. Davies.*] Baldwin engines? No, I did not refer to them. I do not put them under the head of main line engines.
247. *Mr. Humphrey.*] This line will carry with perfect safety what you consider to be main line engines? It will carry the class of engine made up to within the last ten years.
248. What did you say the total cost of the earthworks would be? £225 a mile.
249. Do you recollect that some time ago you expressed the opinion that in the most favourable country not less than £300 a mile should be expended upon earthworks? Very probably, and in making an estimate I still say that £300 would be low enough. When I gave that estimate we had not this kind of formation.
250. You pledge yourself that the cost of this earthwork will not exceed £225 a mile? As far as I can.
251. What have you allowed for clearing and grubbing? That is included.
252. Did you get a description of the country from Mr. Burge? Yes.
253. How many sleepers do you allow for each 30 feet of rail? Eleven.
254. That is in accordance with the view which you expressed some time ago? I have not changed as to that.
255. How do you get the earthworks down to £225 per mile? I do not advise the construction of this line. At the time you refer to, I was speaking of a safe line that you could work at any time, a cheap line, but not a pioneer line. In the case of this line, if the weather comes on wet, the trains can only travel very slowly, if at all. The Commissioners are satisfied to have this description of line, and I think it will meet the requirements of the traffic, but I must not lead you to understand that it will always be workable.
256. You say that you do not recommend its construction, or the construction of a line of this description? I do not know whether I could recommend it or not. I tell you what I think it will do. In ordinary weather it will carry all the traffic that there is; but if the season turns out very wet, the trains will have to be run very carefully, and probably will be stopped altogether.
257. *Mr. Hoskins.*] That happens on the Cootamundra line at times? Yes; but the trains would be stopped much sooner on this line.
258. *Mr. Lee.*] What would stop them? The ground would become so saturated that the line would probably sink.
259. *Chairman.*] Do you mean that the mud would come up through the ballast? Probably, in very wet weather.
260. *Mr. Humphery.*] Would that lead to very considerable expense in raising the line? It would always be possible to raise the line and make a good line of it. When the weather comes on wet, that will be the time to put on more ballast and make it a good line.
261. Do you think the Committee should recommend the construction of such a line as this? I think so in this particular case.
262. It is a suitable line for the district? I think so. The traffic will not be heavy during the whole year. The principal traffic will be in the grain season when, I suppose, the weather is dry.
263. Would the line be suitable for any other than the lightest locomotives? Yes; I think this line will be quite good enough for the district.
264. You will not say whether you would recommend it? I think that taking everything into consideration I could recommend it.
265. *Mr. Hoskins.*] Would not the difficulty be somewhat got over by having the sleepers closer together? Yes, very much.
266. Do you propose to use a larger number of sleepers than are used on the main line? No; I think that on the main lines, where they run the big engines, they have twelve sleepers for every 30 feet.
267. Would it not then be advisable to increase the number of sleepers on this line? Well that would increase the cost.
268. How much? Every extra sleeper per length of rail adds about £25 per mile to the cost.
269. Would it not be less expensive to increase the number of sleepers than to make up the line as the Cobar

- T. R. Firth, Cobar line was made up? I think it would take at least two extra sleepers to make very much difference.
 Esq. The question is—how much bad weather are you likely to have in a year.
- 20 Dec., 1894. 270. But you have shown that the cost of the Cobar line has been greatly increased by the damage done to it in bad weather. Could not the trouble be obviated in this case by putting in extra sleepers? I think you could hardly put in enough sleepers to obviate the difficulty. You must have a sufficient space between them to enable you to pack them with ballast. I think the cost of making up the earthwork would come to more than the cost of extra sleepers, but you could not put sleepers close enough together to avoid the trouble.
271. I suppose you are aware that in America there are hundreds of miles of line without any ballast at all? I believe that there are.
272. Mr. Hayes.] As to the ground going soft, does that not depend upon the character of the soil? Yes, I do not know what this soil is.
273. If this is a loamy sandy soil, is it likely to become soft? Not if it is loamy.
274. I suppose Mr. Burge would be able to give us information about the character of the soil? Yes.
275. Since the country is flat, there will be no current to wash the embankment away, even if heavy rain sets in? No. Then, too, we shall put in box drains to carry the water away. The Cobar line subsided because it was partly below the surface of the ground. The middle of the embankment was probably a little above the surface, but the sides were below it. But in this case we do not propose anything of that kind. The material required for the embankment would be taken from the drains, which will be about 6 feet away on each side. These drains will keep the water from flowing on to the formation, and I expect will partly drain the subsoil. The box drains will carry the water through from one side to the other.
276. Mr. Humphery.] But you have not had time to test the value of this scheme? No; but I do not think there will be any difficulty in connection with it.
277. Mr. Hayes.] You do not anticipate any danger of the line sinking if the soil is fairly good? No.
278. Traffic could be carried on in almost any weather if the soil is good? It is only in very bad weather that we should have any trouble.
279. Mr. Davies.] What would be the size of the side drains? They would vary. The width would depend upon whether they were made with a plough or scoop, or by hand. They would all have the same capacity, but the width and depth would vary.

FRIDAY, 21 DECEMBER, 1894.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.	JAMES HAYES, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	ROBERT HENRY LEVIEEN, Esq.
The Hon. JAMES HOSKINS.	JOHN MOORE CHANTER, Esq.
The Hon. JOHN DAVIES, C.M.G.	CHARLES ALFRED LEE, Esq.
The Hon. CHARLES JAMES ROBERTS, C.M.G.	JAMES GORMLY, Esq.
EDMUND WILLIAM MOLESWORTH, Esq.	

The Committee further considered the proposed Railway from Jerilderie to Berrigan.

Charles Ormsby Burge, Esq., Chief Assistant Engineer for Railway Surveys, Railway Construction Branch, Department of Public Works, sworn, and examined:—

- C. O. Burge, Esq. 280. Mr. Hoskins.] What is your name? Charles Ormsby Burge.
281. Are you an engineer employed by the Railway Department? I am an engineer employed by the Railway Construction Department.
- 21 Dec., 1894. 282. Have you had charge of trial-surveys in the South-western Division? Of railway surveys.
283. Are you acquainted with the character of the country which is proposed to be intersected by this projected railway we are now considering from Jerilderie to Berrigan? Yes.
284. Have trial-surveys been run over that country? Yes; one trial-survey.
285. Of which you had charge I presume? Yes; under the Engineer-in-Chief.
286. Is the character of the country favourable for railway construction? Very much so.
287. Is there a scarcity of water between Jerilderie and Berrigan? I fancy there would be in some seasons.
288. In the average seasons could water readily be obtained for the use of the engines? Generally I think so; but the surveyor reported to me that there was no permanent water on the length, by which he means that it could not be depended upon always; but there is a water supply at Jerilderie.
289. Where is that taken from? I do not know.
290. Then the water in the tract of country through which this railway would probably be made is water that is conserved? Yes.
291. Do you know is there any probability of there being any permanent water at Berrigan itself? I cannot say. I have only passed through the town. The surveyor reports that there would be no permanent water to be depended on.
292. Is the country above Berrigan and between Jerilderie and Berrigan well settled with population—that is to say, are there a sufficient number of producers in that locality to give something like reasonable warrant for the construction of this railway? Between Jerilderie and Berrigan the population is rather scanty. I may say that I have not been over every mile of it. I went south from Jerilderie to near Berrigan. I went over the line from Jerilderie to near Berrigan Creek.
293. In speaking of the district of Murray Hut, is that a locality or district? Murray Hut is, I think, the old name for the township, which I believe is called Finley.
294. Were you referring to the proposed line from the Rock through Berrigan to Murray Hut? I have been over the line from the Rock to Murray Hut, and stopped at Berrigan on my way. It was all the same character of country from Jerilderie to Berrigan.
295. There was a very limited number of settlers from Jerilderie towards Berrigan, as far as you went? Yes

296. You have been to Berrigan? Yes.
297. Is there a large number of settlers about Berrigan? Yes.
298. Principally graziers or agriculturists I suppose? Agriculturists principally.
299. What do they generally grow—wheat? I think so.
300. Where do they take that to at the present time? I really do not know. I went to inquire into the engineering features of the line, not with regard to its traffic. Of course when I went over the Rock to Murray Hut line there had been an examiner over it, and during the period that the examiners are examining lines the engineers do not interfere with their duties, but simply confine themselves to the engineering.
301. You travelled from Murray Hut to Berrigan? Yes.
302. How far? Thirteen or 14 miles.
303. What is the character of the country? It is quite flat.
304. Are there many settlers between Berrigan and Murray Hut? Yes, a great many.
305. I suppose you have not given any consideration to the character or description of line proposed to be made between Berrigan and Jerilderie? Yes, I made the estimate, subject of course to Mr. Firth's revision and approval.
306. It is to be a cheaply constructed line? Yes.
307. In that flat country how do you propose to get rid of the drainage, in the event of heavy rains? We propose to have a formation about 6 inches high above the ground, and the side-drains which will make up that bank must serve as the drainage. But I should not be surprised if there was a very heavy rainfall that the line would be injured.
308. And if injured by heavy rains I suppose it would necessitate reconstruction? So far as it is seriously injured.
309. How much ballast do you estimate to be required? About 1,200 cubic yards per mile.
310. Where would you get the ballast from? A mile on the southern side of Berrigan.
311. What is the nature of the ballast? Granite. It would have to be broken.
312. It is good hard stone I suppose? Yes.
313. What is the size of the sleepers you propose to use on this line? I think the usual size—8-ft. x 9-in. x $4\frac{1}{2}$ -in.
314. In your survey of the tract of country to be traversed by this line, did you observe any difficulties that are likely to be created by the crossing of creeks, which are almost dry in the summer time, but which are swollen in the wet months? No, I did not observe any unusual difficulties. We have other instances of the same sort.
315. The water used by the residents is generally conserved by them in dams, I suppose? Yes, there are dams.
316. In the construction of the line there, is much provision made for getting rid of the water during flood time;—would it not be probable, if any of these dams burst, that the line might be carried away in the same manner as another line somewhere else was? Yes; there is one place in connection with that that I may be allowed to mention, where the line would cross close to a dam, and I directed the surveyor to carry the line over the dam.
317. That is a private dam, is it not? Yes, it is on private land.
318. Would you be justified in doing so;—would not the owner of the land object? I do not think so. If we were to be below the dam we would be in danger of having it burst and coming down on the line; consequently, as it was only a short distance below, I directed the line to be carried over the top of it, for then it would be under the control of the Railway Commissioners, being within their land, and its repair would be in their hands.
319. Would that necessitate the Commissioners resuming the land? Yes.
320. While in the locality did you ever hear people express a great anxiety to have a line constructed from Jerilderie to Berrigan, and also express a willingness to give sufficient land for the construction of the line through their property? No, of course I was no time there; I just passed through.
321. You do not anticipate any difficulty in making the line? No.
322. *Mr. Trickett.*] Are you provided with details as to the probable cost of this line? Yes.
323. Could you give them to the Committee? If you will allow me to say so, after this estimate left my hands, the Acting Engineer-in-Chief had some conferences with the Railway Commissioners, which resulted in some concessions being made by them which are embodied in this detailed estimate that I now give you. (*Vide Appendix.*)
324. How much is this calculated to cost a mile? £2,061 4s. 7d.
325. Can you give us the details of how you arrived at that amount? Earth-works are estimated at £225, box-drains and timber bridges, £111; level crossings, cattle stops and fencing, £92; permanent-way materials, £532; ballasting and laying the road and sleepers are lumped together at £677 per mile, the stations are £223. Then there is an item of miscellaneous for various smaller matters, £24; contingencies allowed at 5 per cent., £94. Then there are the engineering and supervision which include the permanent surveys and the supervision of the work during the construction, at another £94, also 5 per cent. Then there is a note attached to this estimate which I do not know whether Mr. Firth gave you: "The above estimate is made after interviews with Mr. Eddy, who agrees to deliver for the main line 10 miles of second hand rails at £3 per ton—fish-plates at £2 15s. per 100, and fish-bolts at 14s. per 100—old rails for sidings delivered at £2 10s. per ton. The wool banks and grain sheds will be built by the Commissioners for the sums named—a 40-feet turn-table is to be supplied for £150. The water supply is to be by an oil engine and timber tank."
326. When was that estimate made? On December 4th.
327. Was it made by yourself? The original one was made by myself and then I was directed to make some alterations.
328. Having had considerable experience in work of this kind, do you think that the estimate you have given us would be the ultimate cost—that is to say, do you really think that the work can be done for the amount which you stated to the Committee? Yes, I think the work can be done for it, but at the same time I think it is too cheap a line.
329. In arriving at this amount have you taken into consideration the present low rate of wages in the labour market? Yes.
330. Then you are quite confident, so far as you are able to give an opinion, that the line can be built for that money? Yes, at the present rate of wages.

O. O. Burge,
Esq.
21 Dec., 1894,

- C. O. Burgo, Esq. 331. You have said that it is too light a line? I think that it would be an ultimate saving if we had a larger allowance for earth-works, in consequence of the extra cost of maintaining a line of this character.
- 21 Dec., 1894. 332. The earth-work is to be 6 inches in height according to this estimate;—what height do you think it should go to make the line a fairly substantial one? It varies right throughout. It is not exactly 6 inches. I should rather refer to it in the terms of money. There is only £225 allowed in this estimate for earth-works.
333. What is the usual charge for earth-work in country similar to that proposed to be traversed by this line? Well, I think myself that there should not be very much less than £300 spent—say £280.
334. Would that make a more substantial line? Yes. This estimate in my opinion is cut a little bit too fine. What I have just suggested would give £55 a mile extra.
- 334½. This would make the total extra cost a little over £1,000? Yes.
335. You think then that the cost of forming should be allowed at not less than £280, instead of £225? Yes.
336. Do you know of any line that has been laid at so low a cost as this—a cost that is to say of £225 per mile? No, it is quite a new departure.
337. Have you had any experience with regard to the construction of American lines? No, I have been in America but have never examined the lines.
338. Will the sleepers on this line be laid much closer than ordinarily? No.
339. If the sleepers were put a little closer would not that improve the stability of the line? Oh, yes.
340. Would you recommend placing another sleeper under each rail? If I added anything I think I would rather add to the earth-work.
341. As the Committee will be very much guided by your evidence as to this particular work, would you go so far as to say that you would not recommend a line of this kind being constructed? No, I do not go so far as that. I would say that I would prefer it to be in some respects, not quite so light.
342. But you think the Committee would be justified in recommending a light line in this country as an experiment? Yes, for the reason that it is easily improved upon afterwards.
343. But if you had to raise all the sleepers, and so on, would it not be a great extra cost? Well, it is partly a matter of conjecture.
344. As this is only a single line, how could it be raised while the traffic is running over it? It is very easy to lift a line.
345. With regard to the country—apart from the chance of a water tank bursting—do you think there would be much fear of the line being flooded in the case of heavy rains? Not very much, because the tanks are all shallow, spread out over a great surface, and if one of these tanks were to burst there would be a certain amount of damage done, but to no very large extent.
346. But apart from the chance of a tank bursting, do you think there would be any damage from a heavy rainfall? There might be.
347. The line would have to be protected from that kind of damage by little drains put across it, would it not? Yes.
348. Will they be put at very frequent intervals? We generally put them at three to a mile in that country.
349. What width are these boxes? Three feet.
350. And they would only be 6 inches high? No; 9 inches high. They are generally made with a sleeper put up on side.
351. Are they expensive to put in? No.
352. In a line in flat country such as this, would it not be possible to put a few more of these in, so as to relieve the line from flooding? Well, we were going on the example of the Culcairn to Corowa line, which has been constructed for a considerable time, and has worked satisfactorily.
353. This line will cross Berrigan Creek? Yes.
354. Will there be an expensive bridge there? No; a small bridge.
355. Do you know what will be the cost of that bridge? I have no particulars here to enable me to separate this particular work.
356. What would you allow for the cost of these bridges? About £3 per foot.
357. Will these bridges be sufficiently stable? Yes; I may say, in regard to £111 per mile allowed in the estimate, that it includes all the box-drains as well as the bridges.
358. Graders are likely to be used for this work;—have you ever seen any of them in operation? No.
359. Before they can be used, however, must not the country be all cleared and stumped? Yes; I should think so.
360. Then before they could be used on this line the whole of the stumps would have to be taken out? Yes; but a good deal of this country is plain country, and nowhere is it thickly timbered.
361. But timbered lightly or heavily the roots will have to be taken out? Yes.
362. Have you taken this into consideration in the estimate? Yes.
363. Would that be a considerable item? I do not think it would be.
364. Have you inspected the Deniliquin to Moama railway? No.
365. Is not that constructed on very shallow earth-works? I do not know beyond reading what was in the reports of the Jerilderie to Deniliquin line.
366. A little while ago you stated that this was a little too cheap a line of railway to be constructed;—is that in reference to the engine and loads that have to be taken over it? No.
367. Are you, then, of opinion that the same engines and trucks and loads that run from Narrandera to Jerilderie would be able to run on this line? Yes; but at not too high a rate of speed.
368. Would you kindly tell the Committee at what rate of speed? It is all a question of maintenance. High rates of speed involve heavy rates of maintenance, but I think that on this the speed should be limited to 20 miles per hour.
369. You think that at that speed a train could be run safely over a line of this character? Yes.
370. What sort of road is there from Jerilderie to Berrigan at the present time? It is a very bad road.
371. Is great inconvenience experienced by teams getting bogged? Yes.
372. But even if this railway were constructed, there would still exist the difficulty of getting the produce to the stations, and this difficulty would only be minimised by getting it trucked to Sydney? Yes.
373. From your experience of this locality, do you think that a line constructed from Jerilderie to Berrigan would be the means of diverting the traffic that now goes to the southern capital by way of Moama? I have not the means of judging any more than anyone else. I have only passed through the country, and have no intimate acquaintance with it.

374. There are one or two awkward curves, are there not, on this line, where it gets into Jerilderie? No; C. O. Burge,
nothing out of the way.
 Esq.
375. But there is a big curve there, is there not? Yes.
376. Cannot it be avoided in any way? There is no objection to it.
377. The Departmental tracing shows the curve going into the station at Jerilderie;—would it not be possible to start from the 413 mile point, and go straight into the station instead of taking this curve? It would be possible, but it would not be desirable.
378. For what reason would it not be desirable? On account of traffic arrangements. It would interfere with the economical working of the traffic, the train having to shunt back from the station, in order to go on to Berrigan.
379. I see that this curve here goes through a whole lot of town allotments;—would not their resumption very considerably increase the cost of constructing the line? Yes; but it seems to me unavoidable.
380. Is all that part of the town that the line is to go through built on? No.
381. Taking all things into consideration, you think it would be cheaper to go through these town allotments than to take the eastern direction? Yes; it would be cheaper as regards the working, though it would not be very much cheaper in regard to the laying of the line.
382. Are you able to tell the Committee what the cost of resuming these allotments would be? No; but I am quite certain that it would be very much better to resume them than to take the alternative route.
383. Mr. Molesworth.] Can you tell the Committee what is the nature of the soil in this district? It is loamy.
384. Do you look upon that as a good foundation for your operations? Yes.
385. Upon that, do you think you could build a very good, strong permanent way? Yes; we have a line over similar country going from Narrandera to Jerilderie.
386. You do not find it weak or troublesome? No.
387. How do you propose to provide facilities for watering the engines? By dams. There is a supply already at Jerilderie. We are providing a small amount for water supply at Berrigan, which I presume will have to be done by a dam, and pumped up into elevated tanks.
388. You speak about this being too cheap a line? Put it in this way: if I were asked my opinion I would be inclined to add a little more for earth-works.
389. That is the only point in which you think it too cheap;—you are of opinion that if an additional £50 per mile were allowed it would make a fairly satisfactory line? Yes.
390. Notwithstanding the arrangements you have made for the box-drains, if the country is comparatively level how are you to get the volume of water away—is there any fall in the country? Very little.
391. Do you think it is probable that flood-waters would remain near the line for several days? Yes; but I do not think that that country is subject to very heavy rainfalls.
392. If, in consequence of a downfall, water lodged near the roads for some days, would that not seriously affect the stability of the line? I do not think it would affect it seriously.
393. But would not the fact of the water being over the line interfere with the traffic? They would have to travel more cautiously.
394. But you do not think the line would be very seriously weakened? No.
395. Would the line then be capable of carrying as heavy loads as the main line to which it would be attached? Yes.
396. Would it be able to carry the same engines and rolling-stock as the main line? Yes; I think it would be able to, but I think that such engines as the Baldwins would be rather heavy for it. It is not likely, however, that Baldwin engines would be run on it.
397. But, exclusive of Baldwin engines, you think the line would be capable of carrying any kind of engine or rolling-stock at present in use? Yes; exclusive of Baldwin and similar engines.
398. I understand the gauge is exactly the same as on our principal lines; therefore there would not be any difficulty at the point of connection? No.
399. You said just now that if the line were made stronger in the direction which you indicate that it would be a saving in the cost of maintenance? I think it would.
400. Would it be an important saving? Well, I think it would be worth doing.
401. You think it would justify the expenditure? I think so.
402. Mr. Lee.] In making the calculations for this pioneer line, I suppose you had to depart from the regular routine of railway construction altogether? Yes; to some extent.
403. Do you regard this as an experimental line? Yes.
404. Have you not had to cut everything down to the finest possible limit to bring it out at this estimate? Yes.
405. Do you think you have paid sufficient attention to the contingencies which inevitably arise in constructing large works like these? We have always been accustomed, working on long experience, to allow 10 per cent for contingencies and supervision. We have continued that practice in this instance.
406. Do you think that this estimate is sufficient to complete the work? Yes, I do.
407. As a rule, in all proposals of this character the actual cost exceeds the estimate? Not always.
408. Can you give any instance of where they were carried out for the estimate? I think most of the recent lines constructed by the Department were very close to the estimate. I daresay Mr. Firth would be very glad to give the Committee more information on this matter.
409. In cutting down the cost of everything with the view of making the line as light as possible, have you considered that you have reached the limited speed in your proposal? I do not quite understand you.
410. What I mean to say is, could you cut the line down any more;—could you make it cheaper, consistent with speed? I do not think so.
411. Do you think there is any portion of the proposed line which could with advantage be increased or strengthened, other than the earthworks? No; I think not.
412. It is proposed that this line be not fenced except in those places where fencing is absolutely required? Yes.
413. Supposing it is found afterwards that it would be necessary to fence all this line, what would be the additional cost per mile? About £150 per mile is what we generally allow.
414. Mr. Davies.] What description of fencing will that be? A post and seven wires.
415. Mr. Lee.] There is some fencing to be done? Yes; we have allowed a lump sum for it.
416. Which is merely an estimate? Yes.

- C. O. Burge, 417. I see it is proposed to use half-round sleepers,—has this kind of sleeper ever been used here before?
Esq. Not to my knowledge. They are not exactly half-round sleepers—roughly-squared rather.
- 21 Dec., 1894. 418. I want to know if the Department have used them before and with what result? I am not aware of their ever having been used before.
419. Will the cost be greater for these half-round sleepers than for the ordinary sawn sleeper? No; I do not think so.
420. You have already stated to the Committee that you think the construction of this line under the conditions proposed, as a pioneer line, could be effected with safety? Yes.
421. And from what you have said you wish it to be understood that if the Railway Department were going to make a proposal they would recommend the construction of such a line? I do not know what Mr. Firth's opinion may be. He is the representative of the Department. It is only my individual opinion that I have been giving with regard to the earthwork.
422. Now, is there any feature in regard to this line that you think ought to be brought before this Committee? No; except that I think it would be a very valuable experiment.
423. And must be treated solely as an experiment? Yes; but I think it is a sufficiently safe experiment; there would be no risk about it whatever.
424. Have you had any experience in other colonies where lines of this character have been made? Not in other Australian colonies, but I have had a great deal of experience with lines of a similar stability at the Cape, though, of course, they were of a different gauge; in fact, they were of less stability because the engines were lighter.
425. Have you had any experience with lines of this character, taking into consideration the proposed size of the earth-work, gauge, rails, and rolling-stock? Well, I do not know that I can recall anything exactly similar, but in all lines there are lengths, more or less, that run over country like this.
426. Are we correct, then, in understanding that in ordinary weather, and under ordinary circumstances, that line might fairly be expected to carry the traffic? Certainly.
427. What is likely to be the result in very bad weather? There might be interruptions.
428. In what way? Through flooding, for instance, or the lines being washed away.
429. If that is the case, would it not materially increase the cost of maintenance? Well, I should not like to say materially, but it certainly would considerably.
430. Your Department admit that there is a liability to danger? Not danger, I should say.
431. Well, that the line is exposed? Well, that it is not so substantial a line as it might be.
432. You proposed to minimise the flooding difficulty as much as possible by putting in waterways? I do not say an extra number, for we put the number here specified in any line.
433. How do you propose to carry off the water if there were a heavy fall of rain? It is very flat country, and, consequently, there would not be very much current; but if our waterways turn out to be insufficient, of course some of the line would probably be washed away, and have to be repaired.
434. *Mr. Hayes.*] In reference to flooding—this country is almost absolutely level? It is very level.
435. So there would be very little current? Very little.
436. The water practically soaks away? Yes, practically.
437. Do you think there is very much danger of the line being washed away at any time? No; I do not think so.
438. I think that you stated that you allowed £223 a mile for stations? Yes.
439. And the line is 21 miles in length, making the amount about £4,680 in all? Yes, about that.
440. Is it not the intention of the Department to have practically only one station—that is, the terminal station at Berrigan? There is to be an intermediate waiting-shed and siding, too. We provide for a passenger building at Berrigan at £250; goods shed, £200; grain shed, £250; station-master's house, £300; waiting shed, £200; wool platforms, £200; one stock-yard, £200; weigh-bridges, £552; turn-table, £400; water supply, £750; metalling, £500; and sidings, £910.
441. So you include, under the heading of station buildings, all those items you have just given? Yes.
442. In reference to the sleepers, do you propose to have half-round—were they not very much used formerly on the main lines? They may have been, but not to my knowledge.
443. What you call half-round sleepers are simply split sleepers with a space adzed off to let in the rails? Yes.
444. They are practically as good as the others? Yes.
445. With reference to water supply, a large well on the reserve has recently been constructed about half way to Jerilderie, and that being so there will be no difficulty whatever about getting water? No.
446. *Mr. Chanter.*] In reference to the question of timber, what does your Department expect to save by getting rough-dressed sleepers instead of the usual sawn sleepers? I suppose they expect to save the cost of sawing the sleepers.
447. You are aware that there are only two classes of timber in that locality, red-gum and box, and I understood from Mr. Firth yesterday, that it is intended by the Department to lay down red-gum sleepers? Yes.
448. Is it the practice of the Department to use red-gum sleepers? Hitherto we have generally had ironbark.
449. Do you think it quite possible to get full-sized sawn red-gum sleepers on the same terms as the half round? I do not know.
450. What depth in the centre of the sleeper do you propose? Four and a half inches.
451. What width? Nine inches.
452. What width of the face where the rail would lay? That would vary with the shape of the sleepers. I do not know that there is anything definitely laid down about that.
453. But would not you determine to have not less than a certain space on the face of the sleeper where the rail would lie? There ought to be some limit, no doubt.
454. In preparing the estimate for ballast, did you take into consideration the fact that no metal ballast can be obtained along the line of route? Yes.
455. Were any efforts made to ascertain if any gravel or other suitable substance could be obtained? No.
456. No trial shafts were sunk? No; we do not generally go into that sort of thing when making a trial survey.
457. You have estimated a certain sum for ballast and sleepers, and I think you propose to get this ballast from

- from some granite quarries about a mile from Berrigan? That is as far as our knowledge goes at present. C. O. Burge,
458. If it is possible to get along this line a very coarse gritty sand, which could be used for ballast, Esq.
would not that lessen your estimate for ballast very materially? Yes; to some extent.
459. In regard to the water supply, did you take that into consideration going over the line? Yes. 21 Dec., 1894.
460. I understand you to say that the only permanent water that you could look upon in times of drought would be that to be obtained from Jerilderie? That was the report of the surveyor who was for many months over the line, and would know more about it than I would.
461. Supposing no water was to be obtained at Berrigan in time of drought, what provision would you make for watering the engines? I do not know. The gradients are very flat, and an engine might, therefore, carry water sufficient to go to Berrigan and back.
462. You think it would be quite possible for the engine to take a sufficient supply of water from Jerilderie? Yes; it is only about 21 miles, and the gradients being so very easy there would not be so very much consumption of water by the engine.
463. In regard to the earthworks, I notice you estimate the cost at £225 per mile—that is calculating for a depth of earthworks to be laid on the surveys of 6 inches? Well, that is the minimum.
464. That is the average depth, is it not? No; I should not call it the average depth, but I think that is the minimum.
- 464 $\frac{1}{2}$. But the average would not be likely to exceed materially 6 inches? No.
465. What width would you lay that? Seventeen feet.
466. Might I ask you, when arriving at this estimate for the earthworks, do you base your estimate for £225 per mile, or £2 15s. per chain, on the information obtained in that locality? No; not so much as on a general experience of the cost of previous works in other parts of the Colony.
467. In assuming that estimate, you would take into consideration that on the works in other parts of the Colony? Yes; much additional labour, such as pick and shovel and barrow work, would have to be provided for.
468. Did you give any consideration to the fact that in such level country as this the American graders are used, and where not used the plough and scoop is used, and that that would minimise the cost per mile? Yes.
469. Taking into consideration that the municipal bodies in this locality are having their roads formed for ordinary wheel traffic 20 feet wide, at a cost of £1 per chain, how do you estimate £2 15s. per chain for the railway? We have a number of things to estimate for which those municipal bodies do not, such as widening at the different stations and sidings, &c., and the whole estimate rests on actual tenders by railway contractors who know their business.
470. But taking into consideration the road proper, and also taking into consideration the extra formations necessitated by these sidings and so on, do you not think a considerable saving could be made in your estimate, from the statement that the municipal bodies are getting this class of work done for less than half your estimate? I do not know. What I have given is based upon experience of open tenders.
471. You say that your estimate is based upon experience of other parts of the Colony, but are not the circumstances greatly different? There is not a very great difference.
472. Could you give the Committee the schedule price tendered for the earthworks on the line from Culcairn to Corowa? No.
473. That is very similar country, is it not? Yes; it is very similar country, as far as I know.
474. In this trial survey you propose to make a diversion at a commencing point on the Jerilderie line, at a point about midway between Wood and Kennedy streets, and then you would take your line through a large number of allotments south of that point? Yes.
475. Then, forming your curve, getting in a straight line just on the southern side of those allotments? Yes.
476. Will you explain to the Committee why the line could not be taken from a point opposite Brown-street, immediately adjoining the goods-shed at the Jerilderie railway-station and going in a south-western direction? The object in going down south is to avoid having to shunt. If we were to come out on the north side of Jerilderie, we should miss the station, or otherwise have to shunt into the station, and shunt back again, which would be a very great inconvenience and expense.
477. But do you not think that, taking the line from the point that I have already indicated, that there would be more than sufficient compensation in the amount of money that would be paid for a resumption of land than shunting back that short distance to Jerilderie station? I do not know. I only know that the Railway Commissioners would strongly object to such an arrangement as that.
478. What I desire to know is what had your Department in view in making your curve immediately from the starting point, and then making another curve at or upon allotment 23, near Berrigan Creek? The object of making the two curves was, in the first place, to avoid crossing the public road from Jerilderie to Berrigan. If we had to cross it once, we should have had to cross it twice, because we end our line on the eastern side of the road. We therefore cleared the most easterly corner of that road. Then we bent slightly to the west in order to join the road there within the last 5 miles next to Berrigan. The saving effected by this arrangement would be much greater than the slight saving in distance that would be effected by going straight from Jerilderie to Berrigan.
479. Why would it not meet the Departmental views to have a line direct from Jerilderie to Berrigan? If the line were run from the eastern side of Jerilderie station to Berrigan, it would be still further from the water supply.
480. Would it not be a wise thing to have some arrangement so that the train could approach the water at the 420-mile point? There is no reason why, if the Department thought it desirable, the railway should not be diverted nearer to the water supply. I understand that the water supply was created since the trial survey was made, and consequently it might modify our view as to the exact direction. All our trial surveys are subject to modification in the permanent survey.
481. As the lines shown by the trial survey will, for two-thirds of the whole distance, go through private property, have the Department considered the advisability of taking it along the line of road so as to save resumption? It would narrow the road very much, and the road appears to want all the width it has at present. It would also involve a number of additional curves. It does not appear to me, anyhow, that the mere resumption of land is, after all, a very large item. I may add that I know the Engineer-in-Chief is generally hostile to having public roads occupied by railway.
482. The question of the resumption of this land did not, I understand, come under your notice at all? No.

C. O. Burge, Esq. 483. In reply to Mr. Hoskins you said that no one had intimated their intention of giving land for the purposes of this line, so that your Department is not in a position to inform the Committee as to whether any of this land is likely to be granted to the Crown for railway construction? No.
21 Dec., 1894.

484. If it is found that this line cannot be constructed on the free-grant principle, do you not think it would be wise to go as nearly as possible along the line of road from Jerilderie to Berrigan. I have not gone into the question, but I doubt its wisdom very much.

485. In taking the line from a point as shown upon the plan you take it across what is called the Wonnamurra dam—that is, the diversion you speak of? Yes; it is near Berrigan Creek.

486. If the diversion is made nearer Murray Hut, would not that get away from any difficulty in regard to the cost of resumption of that dam? Of course any departure from the dam would involve a saving in the cost of it, whatever it might be.

487. From your own observation of that embankment and the large quantity of water conserved, do you not think that it would be wise to avoid any resumption of that kind by making a detour? No.

488. Does this line go close to Wunamurra Station? I do not know where the station is.

489. You are aware that it goes right close by a wool-shed. Was the Department approached any way to make that detour—which to me appears a nasty angle from the starting-point—to go out in that locality to get alongside the wool-shed, and then make another detour to get to Berrigan? Certainly not. I am responsible for the position of the line and nobody approached me in any way.

490. In regard to the fencing, you said in reply to Mr. Lee that you estimated the fencing at £150 per mile, and the class of fence to be erected was to be a post and seven wires. Is your Department in the habit of paying this excessive cost for this class of fencing? That estimate is based upon our experience of contracts of a similar nature. Of course it includes returns to all gates and culverts and other contingencies. It is in accordance with the contractors' prices which have been realised for years past.

491. The estimate given by Mr. Firth yesterday for partial fencing was £1,000. It is contemplated therefore to fence a portion of this line? Yes; but that estimate is only a guess.

492. Will you kindly explain to the Committee why if it is not necessary to fence the whole of the line it is necessary to fence a portion of it? Well, there might be some allotments near Berrigan and Jerilderie which it would be necessary to fence.

493. This service is to be a day service, is it not so? I presume so!

494. There will only be a service three times a week? I only know that, from what I heard of the Commissioners' report.

495. In your opinion is there necessity for any fencing? It may be possible to do without it.

496. In that case you will save your estimate for the fencing? Yes.

497. In your opinion would a line of 6-inch formation be able to carry a heavy load at the rate of 20 miles per hour? I think so.

498. In a locality like this where the water has to lie, could you supply the Committee with the extra cost for a 12-inch formation instead of a 6-inch? Yes, we could supply that.

499. It would not of course amount to twice the sum? I think not.

500. If the elevation were 12 inches instead of 6 inches, in your opinion as an engineer, do you think that in extraordinary seasons when there might be an excessive rainfall and perhaps an excessive quantity of water lying about, that the line would be safer? Yes.

501. You are aware that some of the seasons in this country are excessively wet? I understand from the report of Mr. Alexander, who examined the country very closely, that the rainfall over the Riverina was more evenly distributed than in most parts of the Colony.

502. But I am alluding more particularly to the excessive seasons which you would have to make provision for? Yes.

503. *Mr. Gormly.* You stated that the ballast for this line should be got from a granite formation near Berrigan? That is the only information we have at present.

504. Have you calculated the cost per cubic yard for the ballasting that could be got from that quality of stone. We have taken it out in lineal yards, 3s. 6d. per lineal yard and there are 1,200 cubic yards to the mile.

505. What cost for a cubic yard would that be, calculating 5 inches in depth? A little over 5s.

506. What gauge would it have to be broken to? Two and a half inches, which is the minimum.

507. At your estimate would the ballast have to be broken by hand or by machinery? By machinery, most likely.

508. Then if a suitable gravel or rough sand, suitable for ballasting purposes, were found close to the line, I suppose it would mean a considerable reduction in your present estimate? Yes.

509. Do you think that under those circumstances 2 yards could be done at the cost of one? Yes.

510. As much as 3 yards? Perhaps so.

511. In going over the country about Jerilderie and Berrigan did you observe any localities where, in your experience, gritty formations might exist? Well, I have not a very intimate acquaintance with that part of the country.

512. But you are of opinion that gravel pits might be discovered suitable for ballast for a line such as this? Yes.

513. You are aware of the gradients on the line from Narrandera to Jerilderie? I know it is a very easy line, but do not know the exact gradient.

514. Narrandera is the railway junction, and it is probable that the engine that would leave Narrandera would go on to Jerilderie, therefore the engine that would run on the Narrandera to Jerilderie line would be required for use on the extension to Berrigan? Yes.

515. But on the existing line from Narrandera to Jerilderie there is no need to use an excessively heavy engine? No.

516. Therefore a smaller engine would be sufficient? Yes; the lightest class, I should think.

517. The haulage would not be so great as to need a heavy engine? No.

518. Then the proposed line would be sufficiently strong to carry an engine running on the Narrandera to Jerilderie line? Yes.

519. In making the side cuttings for the drains on the proposed line, these drains would be graded wide? Yes.

520. They would carry off a fair amount of surface water, I suppose? Yes.

521. It is proposed to put some culverts on this line where the depressions exist, is it not? Yes. C. Q. Burge,
 Esq.
522. And the side drains would carry off a reasonable quantity of water to these depressions? Yes.
523. And these culverts would carry the water through? Yes.
524. In a country which is as level as that between the Billabong at Narrandera and on past Berrigan to the Murray River, if the water rose 6 inches the country would be inundated? Yes. 21 Dec., 1894.
525. But this would only be caused by an extraordinary rainfall? Yes.
526. Then if the water by chance ran over a portion of the line there would not be such a current as would cause any considerable damage? No.
527. Such a thing as washing away the line would hardly be possible, would it? Possibly, in the approaches to the two creeks, there might be something of that kind.
528. But you would have a reasonably high embankment on the rivers? No.
529. Where you found it necessary you would raise the embankment, would you not? Yes.
530. With these precautions you could provide for the safety of the line under heavy rainfalls? Yes.
531. Had you any experience in the construction of the line from Narrandera to Hay? No.
532. You have not been over that line since it was constructed? No; I have only been to Jerilderie.
533. But you have some knowledge of how that line was constructed? Yes.
534. Were you in the Department when it was constructed? No, I was not.
535. Have you seen the ploughs and scoops used in the formation of some of the railway lines? Yes.
536. They have, of course, been used by the contractors for the purpose of cheapening the cost of formations? Yes.
537. Have you any idea whether they considerably lessen the cost of forming earth-works? Well, it depends entirely upon circumstances.
538. I am speaking of plain country, where there is little difficulty with regard to stumps and trees, &c.? Well, you might have a very lengthy cutting to make, in which case they would be useful, but in the case of short lengths the turning of the whole arrangement to come back would mean a loss.
539. But it would considerably lessen the cost of the formation, as the one under consideration? Yes.
540. In such a line as the one under consideration what would be the probable cost of making the ordinary side-cuttings and lifting the earth by manual labour, including barrowmen and pick and shovel men, what would be the cost per cubic yard? I should say 1s. 6d., including all charges.
541. Have you any idea what the cost of ploughing and scooping would be per yard? I do not think I could say.
542. From your observation could you give a very good estimate as to the amount of labour that seems to be employed in it? No; I do not think I could.
543. The earth is such that it could be easily removed? Yes.
544. There is a certain amount of loam and some clay? Yes.
545. You think that, having looked at this line, a contractor would be justified in regarding the formation as favourable to be taken at a moderate cost? Fairly favourable.
546. With regard to contingencies, is the formation such that circumstances would be likely to arise which increase the cost of contingencies, chiefly with respect to the earth-works; in other words, do you think that in such a line the contingencies would be likely to exceed the estimates? No; I do not think they would go over the estimates. We have provided a certain amount for contingencies.
547. Have you seen any flood-box in the depressions? I have not particularly noticed.
548. Do you know anything as to the durability or strength of the timber that grows in the vicinity of this line? No.
549. In procuring the sleepers have you got rough sleepers in some cases, that would be heavier than an ordinary sleeper through not being dressed? They are generally lighter than the ones ordinarily used.
550. Would these sleepers, with an excessive quantity of sap, be likely to be as durable as the ordinary dressed sleeper? Nearly so.
551. You have stated to the Committee that you have not studied the matter with regard to the danger of the country being covered with water? I have not heard of it being covered with water.
552. In making the formations you would raise the depression to a corresponding level with the other portion of the line, would you not? Well, I think as the line stands at present it is a little too low.
553. *Mr. Roberts.*] When were you last in Berrigan? I think it was in 1891. It was when I was inspecting the other line.
554. Were you on a visit of inspection in connection with the trial survey of this proposed line? From the Rock to the Murray Hut. Subsequently I inspected the Jerilderie to Berrigan line, but I did not go right up to Berrigan. Having gone over the greater part of the line, I omitted that little bit, more especially as I had been at Berrigan before.
555. Were you struck with the fertility of the soil about Berrigan? Yes.
556. Is it equally fertile from Berrigan to Murray Hut and on to Clear Hill? So far as I could judge, there is a good deal of cultivation from Berrigan up to Clear Hill. Berrigan would be rather more to the west of the centre.
557. At that time did there appear to be any anxiety amongst the residents for railway communication at Jerilderie? I only stopped there for a night, but I did not see that there was any special anxiety.
558. Have any offers been made as to the giving of the land free to the Crown in the event of a railway being constructed? No; not to my knowledge.
559. Is there any such light railway in this Colony as is this branch? Not yet constructed, but the Department propose to construct several.
560. Why do you especially recommend this line as an experimental line—is it owing to the short distance, i.e., only 21 miles? That would be one reason.
561. Have you had experience of a similar line in South Africa? Not exactly similar.
562. But it passed over the same class of country? No; the country was not so flat—it was more undulating.
563. Was it equally liable to heavy rain? No; it was drought country.
564. Can you speak from experience as to the success or otherwise of light lines in South Africa similar to these? Yes. Of course, they were not exactly similar, but they have been successful.
565. In what way do they differ? Well, the gauge was different, for one thing, and the country was not so flat.

- C. O. Burge, 566. Is the ballasting the same? There are all sorts of ballast there, according to the country you go into.
 Esq. 567. Would it be lighter or heavier? I think there would not be much difference. It is rather a difficult question to answer in regard to such large country as the Cape.
 21 Dec., 1894. 568. Is this as light a line as you think might be ventured upon? Certainly, I do not think you could go beyond this.
 569. You think that the Committee would be thoroughly justified in recommending the construction of this line as an experiment, on the lines laid down in the specification? I do.
 570. *Mr. Davies.*] I understood you to say, in reply to a question put you, that you regard the earth-works as not sufficient, to your judgment, to form a stable line? I did not go as far as that.
 571. Did you not state that you regarded the earthworks at £225 per mile as insufficient? I did. It would be more economical to expend a little more on the earth-work.
 572. You stated that 6 inches is the rise above the earth and on top of that 5 inches of ballast, and on top of that a sleeper of 4½ inches, and ballast packed alongside and up to the top of the sleeper, making a total height of some 15 or 16 inches? Yes.
 573. Then you regard that as sufficient height for the proposed line on the ordinary level of the road? Generally.
 574. But if you had your own way you would sooner see it higher? Not much higher. I do not mean that any addition should be added right through to the line, but what I mean is that I should prefer to have a little more money to spend in bad places. I think it is cut a little too fine in this estimate.
 575. Would that money be spent in ballast or earthwork? In earthworks.
 576. Would there be sufficient material got from each side? Yes.
 577. That is where you propose to get the material for raising the line to its proper level? Yes.
 578. Do you know anything about the men through whose property the line will pass? No; except that I know it is nearly all private property.
 579. But have you no knowledge yourself? No.
 580. Do you know if your Department have made any application for the free grant of the land? No.
 581. *Chairman.*] There are one or two things that you might give the Committee a little more information upon. First of all, there are your flood levels—your plans show nothing with regard to those. You might also mark the main road from Jerilderie to Berrigan in sienna? Yes.
 582. It would be well for your Department to make some inquiries to see if there is any probability of finding a gravel pit?—
 583. *Mr. Hayes.*] How long will it take to make a permanent survey? It depends upon the number of surveyors which we can place upon the work.
 584. What is the shortest time it can be made in if you had sufficient? I think we could do it in two months.
 585. Is there any difficulty in getting surveyors for that purpose? We have had to retrench very considerably during the last month, but I suppose there would be no difficulty in getting the dismissed surveyors back again.
 586. *Chairman.*] Is the surveyor, Mr. Bullard, who made this survey, available, if we wanted him? He is retrenched.
 587. You might find out where he is? I do not know where he is, but I will ascertain.

WEDNESDAY, 2 JANUARY, 1895.

Present:—

THOMAS THOMSON EWING, Esq. (Chairman).

The Hon. FREDERICK THOMAS HUMPHREY.	ROBERT HENRY LEVIE, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	JOHN MOORE CHANTER, Esq.
The Hon. JAMES HOSKINS.	CHARLES ALFRED LEE, Esq.
The Hon. JOHN DAVIES, C.M.G.	JAMES GORMLY, Esq.
The Hon. CHARLES JAMES ROBERTS, C.M.G.	EDMUND WILLIAM MOLESWORTH, Esq.
JAMES HAYES, Esq.	

The Committee further considered the proposed Railway from Jerilderie to Berrigan.

Hugh M'Lachlan, Esq., Secretary to the Railway Commissioners, sworn, and examined:—

- H. M'Lachlan, Esq. 588. *Chairman.*] You are Secretary to the Railway Commissioners? Yes.
 589. You come here to give evidence with regard to the line under consideration as the representative of the Commissioners? Yes.
 2 Jan., 1895. 590. *Mr. Lee.*] Do you remember giving evidence before this Committee when it inquired into the expediency of constructing the line from Jerilderie to Deniliquin? Yes.
 591. I believe the evidence you then offered was somewhat unfavourable as regards the proposed connection? Yes.
 592. And one of the chief causes of objection, I understand, lay in the ownership of the land? I do not know whether that was made a strong point or not. I do not remember it.
 593. Was it not made a strong point that the land was in the hands of a few persons, and that it would therefore be comparatively unproductive? I do not think I made that point particularly. I do not recollect it.
 594. The estimate submitted by the Commissioners on that line showed a loss on the working? Yes.
 595. And that loss was shown in consequence of there being little or no freight to carry, through the land being so largely held by large owners? To some extent that is so.
 596. Since then the Commissioners have had the benefit of the evidence taken by the Committee and the report submitted? Yes.
 597. Could you give the Committee any clear idea as to why the Commissioners should at this juncture recommend an extension of the line from Jerilderie to Berrigan? It is in altogether a different direction. The circumstances are also largely different.

598. Can you give me any clear reason why, in your opinion, the line should take this particular direction? One reason why the other line was objectionable was that it was considered that it would be largely a feeder to the Deniliquin-Moama line. In this case there is a direct connection with Sydney, and it is thought that the traffic would come this way. There is already a large production in the district. H. M' Lachlan, Esq.
599. When you speak of the Deniliquin-Moama railway, you have in your own mind the fact that it is practically part and parcel of the Victorian railways? Yes. 2 Jan., 1895.
600. And the Commissioners did not think it desirable to divert our trade any further in that direction? I think that was one of the reasons they had in view in objecting to the line.
601. Would that argument apply to the extension of the line from Jerilderie to Berrigan? No.
602. Why? Because the connection only applies Sydneywards. Berrigan would be connected directly with Sydney, but there would be a gap across to the Victorian line. In the case of the other railway you would have had a direct connection at Moama.
603. But the connection with Sydney of Berrigan would mean a considerably greater distance from that place to Sydney than to Melbourne? The distance to be traversed would be nearer to Melbourne than to Sydney.
604. What is the nearest point of connection on the Victorian lines with Berrigan? I think it would be at Cobram.
605. What is the distance from Berrigan to Barooga? I am not personally acquainted with the district. Mr. Harper went over it, and he will be able to give you all the information you require from that point of view. I have not been over the district myself, and I cannot speak as to the actual distances.
606. You hold, I suppose, that from a railway point of view, trade is only influenced to a railway from within a certain distance? Naturally.
607. Then in calculating a certain probable traffic, you confine your estimate to within a certain radius? Circumstances alter cases a great deal. The local circumstances would affect the traffic in almost every instance.
608. Take the case of the produce raised on the New South Wales side of the Murray about Barooga, 12 or 15 miles back from the river;—do you think that that would go to Berrigan if there were a railway there? Probably the produce raised about the Murray would continue to go to Victoria, unless high duties had the effect of sending it away.
609. In submitting their estimate to the Committee, have the Commissioners taken into consideration that view of the question? The report of the Commissioners is based upon the estimates given to them as to the production likely to be influenced by the new railway. Mr. Harper, on whose figures the report of the Commissioners as to traffic is largely based, has been over the district, and would be able to give you information on that point.
610. The Commissioners estimate a certain return annually from goods, live stock, and agricultural produce;—have you any details as to the number of live stock and the number of bags of grain which it is expected would be carried on the railway? No.
611. Do you know what cost of carriage they are allowing from Berrigan to Jerilderie on bags of grain for instance? I could not say.
612. Mr. Harper will be able to tell us that, I suppose? Yes.
613. Do you happen to know anything about the earnings of the line from Jerilderie to Narrandera? It will be given in the Railway Report; I have not a report by me.
614. Do you happen to remember if much grain is carried that way? A good deal comes from Jerilderie, I believe.
615. Are there any intermediate markets? Some of it comes from Narrandera to be ground there. Some of it will then go on towards Sydney, and some of it will go back to Hay.
616. What I want to know is whether there is any intermediate market for the grain grown in this district? I think the bulk of it would come to Sydney.
617. The probable returns of this line, I suppose, are based upon the earnings from Berrigan to Jerilderie only? Yes; it would be the sectional earnings without reference to the through traffic.
618. It is estimated upon that basis that this line if constructed would earn the amount given? Yes.
619. Have you found that the extension of the line from Narrandera to Jerilderie has increased the traffic at all? There has been no great increase of grain traffic along the line itself, so far as my knowledge goes.
620. Mr. Alexander, in his report of the 20th May, speaks of Jerilderie as the chief dépôt of the wheat grown in this district? Yes.
621. And there is a large flour-mill there? Yes.
622. Is there not a large proportion of wheat grown in the immediate vicinity of Jerilderie? I have not been in the district, and I should not like to speak as to the local conditions.
623. Berrigan being only 21 miles from Jerilderie, it is not an impossible distance for the conveyance of grain by dray? Of course it is known that grain cannot stand long carting.
624. You would not call 21 miles a long distance? Every mile tells, especially in regard to traffic which will bear so small a proportion of charges.
625. There is a good deal of grain grown along Berrigan Creek, between Berrigan and Jerilderie, about half way? Yes.
626. Has not that in the past found its way to Jerilderie by dray? Speaking of my own knowledge, I could not say.
627. We have it in evidence that Jerilderie is the only dépôt there;—it would seem, therefore, that the grain would have to be carried by dray? At present the grain must go to Jerilderie, but you would open up the country, and increase grain production considerably by giving the producers a new market.
628. Do you think the farmers will be likely to use the railway instead of a dray for 10 or 12 miles? They would probably look at in this way: The grain would have ultimately to be carried by rail in either instance, and it would be a great convenience to them to put it on the trucks near their own farms. There cannot be a great consumption at Jerilderie. It is only a small place.
629. And the grain being once on the trucks the farmers would have the option of the market at Jerilderie, or any market further north? Yes; once the grain was on the trucks.
630. Can you tell me what the rate for grain would be from Berrigan to Sydney? About 18s. 6d. per ton. That would be in 6-ton lots.

- H.
M'Lachlan,
Esq.
2 Jan., 1895.
631. What would the rate to Albury be? I have not the rate-book with me, but I should think about 15s. 3d.
632. Is it on a sliding scale? It is proportionate to the distance. There are specially low rates coming towards Sydney from all country stations.
633. Of course the Commissioners have considered the probable traffic from this point of view—that the bulk of it is likely to be in the shape of grain? Yes.
634. And unless the grain can be carried at a profit to a central market it will not be carried at all? Certainly not.
635. The Commissioners have already made a differential rate to secure the carriage of grain? There is a specially low rate for grain now.
636. Will the rates on this line come under the existing low rates? The Commissioners have an idea of making local charges on this short length of new line.
637. Perhaps you will be able to tell the Committee whether the output of grain in this district has increased or decreased within the last few years? I could not say of my own knowledge.
638. In estimating the traffic from this district, have the Commissioners considered the scope of the boundaries allowed by the Victorian railway authorities for rebates? I do not think the Victorian railway authorities allow any rebate now on grain. I think it has been withdrawn.
639. Are you sure of that? That is my impression, and I think I am correct.
640. It is very important that the Committee should know. Could you supply us with the information later on? I will ascertain the facts and let Mr. Harper know;—he will be able to give you the information.
641. Do you happen to know whether the boundaries within which rebate is allowed by the Victorian railway authorities on general goods have been altered? I think there has been some slight modification, but they are generally in existence.
642. Therefore, if they have not been materially altered, Berrigan would still be within the rebate distance allowed for general goods? Yes.
643. The rebate line would be about midway between Berrigan and Jerilderie? There are a number of rebate lines, but that would be one of them.
644. Did your Department make its estimate in regard to the returns of the line with reference to the fact that at present wheat cannot find its way into Victoria for sale? It is based on the fact that Sydney would be the better market.
645. Does the estimate take into consideration the fact that the Victorian market is rendered prohibitive by the duties? That has been considered in making the estimate.
646. In what position would the earnings of the line be if, in the future, we were to have a free border? I could not say.
647. It would affect the earnings, would it not? I daresay it would affect the course of the grain traffic.
648. Can you give us any special reason why the Commissioners recommend the line from Jerilderie to Berrigan in preference to a line to Savernake, or a line by way of Coonong to Urana? No.
649. You have no special remark to make upon that point? No; but I may say at once that the Commissioners do not go into the question of alternate routes. They simply consider the route submitted to them. They do not care about recommending alternate routes.
650. Do you find the carriage of grain at present rates profitable to the Department? There is not a great deal of profit in it, but there is the return traffic in dearer goods to be considered. I believe it pays working expenses, but I do not think it has actually been worked out.
651. The Commissioners estimate a total revenue from the line of £3,083, and out of that total £2,668 is represented by goods, live stock, and agricultural produce; so that those three items of traffic would represent a very large portion of the whole? They would be considerable items.
652. If the profit upon grain is practically nil upon longer distances, what reasonable prospect would there be upon so short a distance as 21 miles of obtaining profitable carriage? The estimate of the Commissioners is based upon a careful consideration of the conditions, and they believe their estimate to be correct as regards both working expenses and revenue.
653. I am speaking of revenue now? The Commissioners think the revenue will come out at £3,083.
654. Grain being carried at practically a loss? I do not say that, although there may not be much profit in it.
655. Well, we will say at a very small profit, if any? Yes. The Commissioners propose to make local charges on this line, and proportionately they will be somewhat higher than the through charges. Ordinarily, the local charges will come to about 3s. a ton.
656. The country around Berrigan is largely under cultivation at the present time? I have not been to Berrigan, and I do not know the local circumstances.
657. Do the Commissioners view this extension as a continuous feeder to the Jerilderie line or only as a temporary feeder? They regard it as being a continuous feeder.
658. That is to say, it is a line that will probably show a return on its own whole length as well as bring additional traffic to the existing line? Yes
659. Respecting the estimate of the Commissioners, they have made several estimates in regard to the various lines in the past? Yes.
660. Have you worked them out to ascertain what difference there has been between the reality and the estimates? The figures have, I think, in one or two cases been looked at, but this line does not bear comparison with many that have preceded it. It is to be built on a new system; it is a "pioneer" line.
661. But, after all, the proposal is based upon a calculation of working expenses and probable revenue? Yes.
662. Could you give us any information with reference to the return upon the lines from Culcairn to Corowa? You will see the figures in the report. I could not give you them from memory.
663. I should like to show the Committee, through yourself, what was the Commissioners' estimate of traffic upon that line when submitted to this Committee, and what the actual returns have proved to be? I will ask that the information be prepared for you, and send it by Mr. Harper.
664. *Mr. Molesworth*] The Commissioners, I understand, have personally inspected the route of the proposed railway? Yes.
665. And they are favourably impressed with the idea of constructing the line as proposed? Under certain conditions which they mentioned.

666. The principal condition being that the land required should be given without cost to the public? Yes.
 667. Have the Commissioners any reason to suppose that that condition will be complied with on the part of the owners? They understood locally that it would be complied with. They say in their report: "We were given to understand that some of the landowners have already expressed their willingness to give the land, and that probably the whole of those concerned would adopt a similar course."

H.
M'Lachlan,
Esq.
2 Jan., 1895.

668. I understand that applies principally to the land in the vicinity of the proposed terminus at Berrigan. Are the Commissioners aware that the bulk of the land through which the proposed line will pass is in the hands of a few large owners? I understand that some of them would give the land.

669. I believe, for instance, that two-thirds of the land through which the line will pass is in the hands of Mr. Wilson? It may be so; I am not aware. Of course, in some cases the line may pass through small properties, and it would not be fair to ask a small owner to give up his land free. But what the Commissioners think is that all the landowners should combine and arrange among themselves to give the land as suggested. For instance, there is the Horsfall property, and there are other big properties which are contiguous to the line. Although the line does not actually touch them they will benefit by its construction. They would not be required to give any land from their own estates, but the Commissioners think that the landowners of the district should combine and arrange to give the whole of the land required free. It is thought that those whose land would be improved, and who would not be affected prejudicially by the line, might make some contribution to those whose land was so affected.

670. In other words, you think the betterment principle ought to be applied privately? To some extent. The Commissioners think that the landowners benefited by the construction of the line might come to some arrangement among themselves.

671. Have the Commissioners any reason to suppose that the landowners generally affected will fall in with this arrangement? The Commissioners have an idea that they will fall in with it.

672. Is it not the experience of the Commissioners that branch lines have hitherto resulted in serious losses? A number of branch lines have been unprofitable.

673. Is not the branch line from Narrandera to Jerilderie among the unprofitable branches? Yes.

674. Is not the loss serious? It has been heavy.

675. Can you tell me the amount of loss last year and the year preceding? I could not say, speaking from memory.

676. I understand that the loss for 1893 was something like £18,000;—will the loss during 1894 work out to a greater or lesser amount? The returns are not yet out for December, 1894.

677. Do you think that there is likely to be any improvement upon the returns for 1893? I could not say. It takes some little time to make out the returns—they are not prepared yet.

678. I understand that the Commissioners insist upon the gauge of this line being the same as the gauge of the main line? Yes.

679. What is about the difference of mileage between Berrigan and Sydney, and between Berrigan and Melbourne, *via* the nearest point of communication on the Victorian border;—the distance is nearly double, is it not? Yes, I suppose it would be pretty well double.

680. In the event of the border duties being removed, would not Melbourne, therefore, be the natural market for Berrigan produce? That depends upon the cartage. There are 20 miles of cartage, and that would be equal to a good many miles of railway carriage, especially at the cheap rate at which grain will be carried from Berrigan to Sydney. That will be under £1 per ton.

681. What is the rate from the border to Melbourne for the same class of goods? Mr. Harper would be able to tell you that.

682. Are the Commissioners in favour of continuing the proposed extension to the border? They have never been asked.

683. It is a matter they have not considered? No.

684. In regard to the proposed line, can you tell us whether the schedule rates would be adhered to, or whether special rates would be charged? The Commissioners' idea is to charge local rates as in the case of some other branch lines.

685. There will not be any exception made in the case of this branch line as compared with other branches? There will be no exception—local charges will be made.

686. From the Commissioners' report we understand that they are clearly favourable to the construction of this line provided the land is given free of charge? Yes.

687. Are the Commissioners responsible for the expression in their report, "Proposed pioneer line of railway"? Yes.

688. What do the Commissioners really mean by that expression? Well, it means a cheap railway. The Commissioners' views upon that point were laid before the Committee in connection with their inquiry into the Bega-Eden railway. In that case the Commissioners entered into the question of gauge and pioneer lines. At the time to which I refer the Commissioners expressed their views upon the point in the following terms:—"That the country is right in insisting on cheaper railways where it is a question of 'a railway or no railway,' there is no doubt; but it would, in our opinion, be absolutely wrong to introduce a different gauge from the standard gauge. We do not think it is practicable or desirable to construct a subsidiary trunk line, or a line likely to convey any amount of traffic upon it, on cheaper principles than that recently carried out in connection with the Cobar line, the cost of that line, including all construction charges, being about £3,300 per mile. There is no doubt, however, that for purely pastoral and level country, where the traffic would be exceedingly light, a line capable of carrying a light locomotive with the ordinary class of rolling stock, at a speed of about 15 miles per hour, in daylight only, could be constructed, exclusive of bridges, waterways, and station accommodation, which latter should be of the most simple nature, for about £1,750 per mile, money being voted later on, when the traffic had increased sufficiently to justify a better class of line, to raise the line to the ordinary standard. This could only be considered a 'Pioneer Railway,' and would be altogether different from a standard railway line even of light construction, such as that to Cobar; it would be simply a line to carry traffic with reasonable speed at a lower rate of charge than it is now carried by road. The rates for such lines on whatever scale fixed, would bring about a material saving to the users of it as compared with the rates now paid for carriage by road, and the scale of charges fixed should be such as to avoid any material loss to the country in connection therewith. Lines of this character would avoid the great disadvantage of break of gauge; they would cost scarcely anything more in the first instance than a narrow-gauge line, and the whole of the ordinary rolling stock, exclusive of engines which could be selected from the lightest types existing in the service, could pass over them."

689.

H.
McLachlan,
Esq.
2 Jan., 1895.

689. Although this would be a light line of railway it will be practicable for the traffic from and to the main line to travel through without unloading? Yes. Perhaps a light engine might be provided, but there would be no need to unload; the traffic would go through. Although the heaviest engines would not be suitable to the line, we have engines that could run over it.

690. *Mr. Chanter.*] I understood you to say in reply to Mr. Lee that the Commissioners reported against the proposed line from Jerilderie to Deniliquin principally because the land traversed by the proposed railway was owned by a few persons? I do not think I said that.

691. Is not that the interpretation you place upon the report of the Commissioners? I do not think the Commissioners' report bears that impression.

692. You are not personally acquainted with this district? No.

693. You do not know whether the land traversed by the line now before the Committee is in the hands of only a few persons? No. Mr. Harper has been through the district and he is acquainted with all the details, and I do not wish to anticipate any evidence he may be likely to give you.

694. I think I understood you to say in answer to Mr. Lee that the Commissioners were of opinion that the construction of a line from Jerilderie to Deniliquin would act as a feeder to the private company's line? I think that was the impression to some extent.

695. Are you aware of the terms in the Act of Parliament under which the company hold their charter? That they are to charge such rates as the Railway Commissioners may approve, I believe.

696. Is it not a fact that within twelve months after connection of their line with any part of the New South Wales railway system they are bound to assimilate their gauge to that of the New South Wales railways? I think the Acts say they may be required to do so. I do not think it is imperative.

697. Is not power conferred upon the railway authorities to compel them to assimilate their gauge to that of the New South Wales railways? I think they could be compelled to put down a third line, but I do not know about the total assimilation of gauge. That might help them to draw traffic away from us.

698. Assuming that the gauge were altered to the gauge of the New South Wales railways would it not absolutely prevent the drawing of traffic in that direction, seeing that there would be a break at Moama? The matter is one upon which I did not expect to be examined. I do not think, however, that the Act makes it compulsory for the company in the contingency you mention to do away with their 5 ft. 3 in. gauge. They can lay down a third rail I think.

699. I suppose the Commissioners are legally advised in such a matter as this? If necessary.

700. Would it not be possible for the Commissioners to obtain legal advice upon this point and to instruct the Committee absolutely as to what the position would be if the connection were made? It is a matter for the Commissioners to determine.

701. The Commissioners are of opinion that any connection whatever in that direction might act as a feeder to the Victorian line? I believe that was the purport of the evidence I gave upon the question, but that was three years ago, and I have not since looked it up.

702. Upon the same basis this extension from Jerilderie to Berrigan if carried further would also act as a feeder to the Victorian line? At present the circumstances are different. In the one case you have a connection with a railway, and in the other case you have not. There would be a gap in this instance to be covered by road cartage.

703. But there is no great distance between the proposed terminus at Berrigan and Cobram, the nearest point on the Victorian railway? It is no great distance.

704. Is it not about the same distance as from Berrigan to Jerilderie? I have an idea that it is about the same distance.

705. Did I understand you to say that a certain portion of the produce in the neighbourhood of the Murray would go to Victoria? I should think so from its proximity to the Victorian lines.

706. Are you acquainted with the Victorian fiscal system? Generally I am not.

707. Is it not a fact that all the produce of that part of the Colony, grain and stock for instance, would have to pay a heavy duty on entering Victoria. Would not the duty be so heavy as to render the traffic absolutely prohibitive? I believe so.

708. Is it not a fact that the duty on wheat would be equivalent to 2s. per bushel, actually more than the price of the wheat itself? I did not think it was as much as that, but grain could go there in bond.

709. What is the cost of the carriage of grain from Jerilderie to Sydney? Fifteen shillings and six-pence per ton.

710. And the Commissioners propose a charge of about 3s. a ton from Berrigan to Jerilderie? I believe so, but they have not yet definitely decided upon the charges. There will be a local rate.

711. The through rate I name would be about 6d. a bushel? About that.

712. When you spoke some time ago of the removal of duty affecting the traffic, were you referring to the New South Wales duty? No; I understood Mr. Lee to refer to the Victorian duties.

713. You are aware of course of the cost to the Berrigan people of taking their grain via Cobram to Melbourne last year? The Victorian Commissioners made a special rate of about 9s. a ton I think, but Mr. Harper will be able to give you detailed information upon that point. I know that the Victorian railway authorities made a special rate, but I believe they have since abolished it.

714. Is it not a fact that the Commissioners have been inclined to report favorably upon this line in consequence of the special rebate given to the Berrigan people last year? No; I think they looked at the matter entirely upon its merits.

715. How much grain do you suppose was lost to the New South Wales railways in consequence of this special rebate to the farmers of Berrigan? I could not say.

716. Have the Commissioners estimated it at all? Not to my knowledge.

717. They did not take it into consideration when they reported upon this line? I do not think they did—especially in view of the abolition of the rebate.

718. Has a similar rebate been given in other places? I am not sure.

719. Has it been given in the Swan Hill district? I could not say.

720. Could you supply us with information later on as to where it has been given, and also as to the amount? Yes.

721. Can you say from memory what is the cost of a cattle truck from Jerilderie to Sydney? Not from memory.

722. I notice that the Commissioners in their report express a strong opinion as to the land required for the line being conveyed to them in fee simple? Yes.

723. Has any offer been made to the Commissioners in respect of any land which would be traversed by the railway? I am not aware of any offer in writing having been made. H.
McLachlan,
Esq.
724. Has any been made verbally? Yes.
725. Has such an offer been made by the owners of Wonnamurra Station? Not that I am aware of. I 2 Jan., 1895. believe that a deputation waited upon the Commissioners at Berrigan, and gave them to understand that a certain number of persons there would give the land free.
726. Does that not apply, as far as your knowledge goes, to only a few landowners immediately around Berrigan? I could not say.
727. Has Mr. Wilson, the owner of Berrigan Station, made any offer of conveyance? No offer in writing has been made to my knowledge.
728. And in the opinion of the Commissioners, if the owners of land along the route do not convey it free of charge, the line should not be constructed? Subject to that condition, the Commissioners strongly advise the construction of the line.
729. A large quantity of grain is grown in the Finley as well as in the Berrigan district, is it not? Yes.
730. And a line taken from Jerilderie to Murray Hut or Finley as it is now called, would go through Crown land all the way? The Commissioners have not considered any alternate route. They always advise solely on the route submitted to them.
731. In the event of the land not being conveyed free of charge along this particular route, would the Commissioners be prepared to consider a line from Jerilderie to Murray Hut, seeing that there is a stock route about a mile wide the whole distance? As far as I know that route has not been considered at all by the Commissioners. In considering a proposal such as this, they do not look at alternative routes.
732. Are not the Commissioners strongly in favour of a line from the Rock to Finley? They have never reported upon it I believe.
733. Did not Mr. Alexander and Mr. Gilliat report to the Commissioners? No.
734. They reported purely to the Works Department? Yes; I think I am right in saying that that line has never been looked at by the Commissioners.
735. Have the Commissioners any information leading them to believe that the landowners will give the land free of charge along this route. Have they any definite information on that point? We have no written guarantee, but it was stated to the Commissioners by a deputation at Berrigan that the land would be given.
736. Those present at the deputation agreed to the conditions laid down by the Commissioners perhaps, but the other parties at this stage, as far as you know, are not consenting parties? So far as my knowledge goes that is so.
737. Seeing that the land between Jerilderie and Finley is all Crown land, do you not think that the Commissioners should consider that route? They would not report upon the route on their own initiative. It would be a matter entirely for the Government.
738. *Mr. Hayes.*] The Commissioners can only report upon the particular route referred to them by the Government? That is the practice.
739. They have no authority to initiate anything of the kind to themselves? No.
740. They could not express an opinion with reference to the route mentioned by Mr. Chanter unless it were submitted to them for report by the Government? That is the usual practice. It might perhaps be outside their policy to recommend the construction of lines. The Act says, I think, that before the second reading of any proposal is submitted the Commissioners shall make a report.
741. The only information with which you can supply us is that which you have received officially as Secretary for Railways? Yes.
742. Mr. Harper has been over the line and knows everything connected with the probable traffic? Yes.
743. *Mr. Gormly.*] You know the working of the line from Narrandera to Jerilderie? Yes.
744. Trains are made up at Narrandera to go to Jerilderie? Yes.
745. Would there be much additional cost arising from the trains going right on to Berrigan instead of stopping at Jerilderie? That has all been considered in the Commissioners' estimates.
746. It would not entail much additional loss? The Commissioners estimate the cost of maintaining and working the additional 20 miles of railway at £1,550.
747. Could the trains go right on with the same engines? I do not think that has been determined. The same engines might possibly go on, or there might be smaller engines for working the branch.
748. You have not sufficient knowledge of the working of the lines to know whether the same engines could go on? They could go on, certainly.
749. And they would have sufficient time to do so without interfering with the existing time-table. Yes.
750. Therefore there would not be much additional expense? No; you will see that the Commissioners estimate only £1,550 for the whole working of the line.
751. Do you think that the proposed line will bring a fairly large additional traffic on to the existing line? It would be a feeder to some extent to the existing line.
752. And in your opinion there would be some considerable return traffic in general goods? Yes.
753. And to that extent it would be the means of making the existing line more productive? It would help it.
754. That of itself would be an inducement to the Commissioners to recommend the line apart from the amount which it is expected that the new line would earn for itself? Yes; the Commissioners have laid it down already in former reports that where a line cannot be shown from their estimates to pay, it might be recommended as a feeder and as being helpful to the main line. This line would be in that position.
755. You know sufficient of the district to know that it is an agricultural district? Yes.
756. From your knowledge of the working of the Railway system of New South Wales, you are of opinion that it is desirable that lines should be taken into agricultural districts in order to bring produce on to the existing line? Yes; agricultural districts will naturally carry a bigger population than pastoral districts.
757. The existing lines are capable of carrying a large amount of increased traffic if it could be brought on to them from the outlying districts? A very much larger amount.
758. Would this line divert a portion of the traffic which now goes to Victoria? The Commissioners think it would help to do so—that we should get more of our own business.

H. McLachlan, Esq. 759. *Mr. Davies.*] In the event of the line being constructed from Jerilderie to Berrigan is it in contemplation to extend it further to the Murray? That has not come before the Commissioners—they would not anticipate that.

2 Jan., 1895. 760. Would it be necessary to continue the line, do you think? I could not say. I should not like to offer an opinion.

761. Do you think that the line would add materially to the traffic of the main line? It would be a feeder to the main line.

762. Do you not think it would be the means of carrying a portion of our traffic to Moama? No; because there would be no connection.

763. What distance would Berrigan be from the private line at Deniliquin? It is in altogether a different direction—it would be between 40 and 50 miles.

764. You will notice on the map that the proposed line makes a detour towards Berrigan rather than towards Deniliquin? Yes.

765. What is the distance between Sydney and Jerilderie? Four hundred and thirteen miles.

766. And between Jerilderie and Melbourne? About 240 miles I believe.

767. There being so great a difference in the train mileage could goods be carried more cheaply to Sydney than to Melbourne? Direct communication with Sydney would, I think, enable a certain class of goods to be carried more cheaply.

768. Does not a large proportion of our wool traffic from the Murray and Murrumbidgee already go to Melbourne? Our wool traffic from that district has been increasing; it has been much larger lately.

769. Hitherto a large portion of the traffic has gone to Victoria? By reason of the specially low rates they have been quoting. Their differential rates have been abnormally low as compared with their ordinary rates.

770. Has not the water carriage had something to do with it? It has helped them no doubt. From some of the stations their ordinary rates are 7s. and 7s. 6d., but their differential rates have been as low as 2s. 9d. This year we got a bigger quantity of wool from the district than we have had before.

771. You admit that the river carriage coupled with the differential rates imposed by the Victorian Railway Commissioners have had a large influence in diverting the produce of New South Wales into Victoria? Yes.

772. But notwithstanding that an increasing portion of the trade has come Sydneywards in the present season? Yes.

773. What would be the nature of the produce carried on the proposed line;—I suppose it would be chiefly wool and grain? Chiefly wool and grain.

774. Do you think that produce would be largely increased by reason of the extension? I think there would be a considerable increase in the carriage of grain.

775. What would you consider a reasonable railway service so far as agricultural land is concerned; what would you consider a reasonable distance, for instance, between the producer and the railway station? That would depend upon circumstances. A man might be 20 or 30 miles from a railway station and he might be only 50 miles from the consuming point. He could pay a higher carriage than the man 400 miles from the consuming point.

776. The man 400 miles away could necessarily pay only a low rate of carriage? Twenty miles of cartage has a big effect on the price of agricultural produce.

777. Would 20 miles be considered a long distance for the haulage of wool? It would for grain, but not for wool, because of the higher value.

778. Does it pay the Railway Commissioners to carry grain at the present rates? There is not much profit in it, but we have not worked out any particular item of traffic from that point of view.

779. So that the Commissioners have not taken into consideration so much the probable earnings of the line and the advantages accruing to the revenue from them, as the indirect advantages likely to accrue to the country? They have, of course, taken the whole of the circumstances into consideration. So far as this particular line is concerned they have made an estimate of the probable traffic, and they think the line will pay.

780. I believe you told the Committee on a former occasion that the average cost per train mile was £857? Possibly; but the amount given in the Commissioners' last report is £656.

781. Supposing you apply that to this distance of 22 miles? It would not apply at all.

782. What I understand you to mean is that you take the suburban traffic and the more expensive portions of the lines as a set-off against the cheaper portions? Yes, in these extensions the Commissioners consider the actual cost of the working of the lines, not debiting them with general charges, and their own administration.

783. £656 then would be the average of all the lines? Yes.

784. But taking the cheaper kind of line the cost of maintenance would be greater proportionately than on the more expensive lines, where the service would be of a more permanent character? Certainly it would be much greater where the heavy traffic exists.

785. Have the Commissioners in this estimate taken that into account? This estimate is what the Commissioners consider the actual out of pocket expenses would be for this section.

786. In giving evidence to the Committee about two and a half years ago upon the proposal to connect Jerilderie with the line running from Moama to Deniliquin, you expressed yourself strongly against the connection as a means of diverting trade to a large extent to Victoria, and you still entertain that opinion? Yes.

787. You do not think we shall suffer in any way from that point of view if this line is constructed? No, I think it would be rather the other way.

788. You think it would help to draw trade to our own railways? Yes.

789. *Mr. Trickett.*] In the Commissioners' Minute of the 4th December, 1894, the point is strongly emphasised that the landowners should give the land required for the railway free of charge? Yes.

790. Having regard to former experiences, do you not think it would be advisable that if the line is to be constructed, a section should be put in the Act making the conveyance of the land compulsory? That is a matter for the Government, but the Commissioners think that the conveyance of the land should be a condition precedent to the construction of the line.

791. As a matter of fairness to the rest of the country? Yes.

Arthur James Stopps, Esq., Acting Chief Draftsman, Department of Lands, sworn, and examined:—

A. J. Stopps,
Esq.

2 Jan., 1895.

792. *Chairman.*] You are Acting Chief Draftsman of the Department of Lands? Yes.

793. The map displayed has been prepared at your instance? Yes.

794. Have you any explanation to offer in regard to the reserved, the freehold, and the leasehold land in the vicinity of the proposed line as shown on that map? Yes. The various colours show the different holdings. The land coloured red indicates freehold land, the land coloured blue indicates conditionally purchased land, and the reserves are shown in green. The white patchy areas are the remaining Crown lands.

795. You define on the map a certain area as being affected by the proposed line? Yes; the map takes in 20 miles on both sides of the proposed line of railway, and 20 miles to the southward.

796. You take that as the area which will probably be affected by the work? Yes.

797. *Mr. Molesworth.*] In regard to the areas shown in white, I suppose the land comprised in them exists in very small quantities, and has not been taken up, because it would be almost valueless? I do not know the quality of the land.

798. Do you know the country itself? No, I do not.

799. I presume the reserves generally are for public purposes? Yes; the white dotted lines represent the divisions between the resumed and leasehold areas. I might, perhaps, explain that the whole of the unalienated Crown land at the present time within the 20 mile radius shown on the map is represented by only 12,400 acres.

800. *Mr. Chanter.*] The 20 miles extends to the south of Berrigan? Yes; I have not taken in anything to the north of Jerilderie on the supposition that it would be served by the existing railway system.

801. The proposed line runs through a great proportion of freehold land? With the exception of the Jerilderie common, it runs entirely through alienated land.

802. Is there not a stock route running from Jerilderie through Finley to Tocumwal? Yes.

803. What is the width of the route? I should think it would be a mile wide.

804. Do you know the character of the country? I cannot say.

805. It is not indicated by the plan? No.

806. I suppose it is similar to the surrounding country? I cannot say—I do not know the country personally.

807. I notice that your plan includes the pastoral holdings Momalong, Narrow Plains, and Barooga. Do you know whether the lessees of those runs have applied for a renewal under the 43rd section of the Act of 1889? I do not know.

808. *Mr. Hoskins.*] I suppose there would be no difficulty in your Department furnishing this Committee with information showing the owner of each portion of alienated land traversed by the proposed railway? I suppose the information could be ascertained. Of course the records in our office would only show the persons to whom the land was alienated in the first instance. We should have to trace the transfers to ascertain the present holders of the property. I suppose there would be no difficulty about it.

809. *Mr. Davies.*] What is the total acreage of land alienated within the 20 miles radius indicated by the map? There are 447,974 acres of freehold land, 272,783 acres of conditionally-purchased land, and 105,374 acres of reserve.

810. Is any of the land held under lease? Probably some of the areas of unalienated land are held under lease.

811. So that the whole area is occupied? Completely occupied.

812. What is the total acreage of the unalienated land? 12,400 acres.

813. Do you regard 20 miles distance from a railway as being a fair and reasonable service? I have not formed any judgment on that matter at all. I have simply taken the data employed in connection with the proposed line from Jerilderie to Deniliquin.

814. From whom did you receive instructions to prepare a map taking in this radius on each side of the line? I received no instructions at all. I prepared the plan with the idea of elucidating the matter before the Committee.

815. And not because you regarded 20 miles distance as a reasonable railway service? No; not at all.

816. *Chairman.*] Can you give us any information as to the effect of the railway on the land? I cannot.

817. You know nothing except what your books disclose? No.

818. You can give the Committee no information which it has not yet elicited? No.

819. *Mr. Chanter.*] Will you supply us with information showing the area of all the stations embraced within the 20 mile radius? Yes.

820. *Chairman.*] You, of course, lose all trace of land in your Department when it becomes freehold? Yes; but we could give you the area of freehold land on the stations, and also the area held under lease.

821. *Mr. Gormly.*] You could not say, from the information at present in your Department, who are the present holders of the land? No.

822. *Mr. Hayes.*] Practically, you could give the Committee no more information than is shown on the map you have laid before us to-day? Nothing more than that.

823. I presume the leasehold land embraced in the area shown on the map consists principally of roads? In most cases it would probably be nearly all roads. There are a few small blocks of Crown land on the leasehold areas, and some of the reserves might be under lease.

THURSDAY, 3 JANUARY, 1895.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN.)

The Hon. FREDERICK THOMAS HUMPHREY.	JAMES HAYES, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	ROBERT HENRY LEVIEEN, Esq.
The Hon. JAMES HOSKINS.	JOHN MOORE CHANTEE, Esq.
The Hon. JOHN DAVIES, C.M.G.	CHARLES ALFRED LEE, Esq.
The Hon. CHARLES JAMES ROBERTS, C.M.G.	JAMES GORMLY, Esq.
EDMUND WILLIAM MOLESWORTH, Esq.	

The Committee further considered the proposed Railway from Jerilderie to Berrigan.

John Harper, Esq., Goods Superintendent, Department of Railways, sworn, and examined:—

- J. Harper,
Esq.
824. *Chairman.*] What is your position? I am Goods Superintendent in the New South Wales Railway Department.
- 3 Jan., 1895. 825. You have made some inquiry with the Railway Commissioners in connection with the railway under consideration? Yes.
826. And you are now prepared to give the Committee full information in regard to it? Yes; I should like to say in the first instance that with regard to certain information promised yesterday by Mr. M'Lachlan in regard to the Culcairn to Corowa earnings, the information is in course of preparation, but is not yet ready. Perhaps I had better at this stage hand in my estimate of traffic, upon which the Commissioners have based their estimate in connection with the line before the Committee. My estimate was as follows:—Live stock, 400 trucks at 7s., £140; wool, 700 tons at 3d. per ton per mile, £183 15s.; wheat, 17,000 tons at 2s. 6d., £2,125; general goods, 300 tons at 3d. per ton per mile, £78 15s.; firewood at 7s. 6d. per truck, £100; road metal, £50; passengers, 800 at 2s., and 200 at 3s. 6d., £115; parcels, £25; mails, £242; total, £3,059 10s.
827. That is the only Departmental statement you now desire to put before the Committee? That is the only statement.
828. You have dealt, I presume, with the whole question of traffic? Yes.
829. And you have also considered the question of where the railway stations should be at the intermediate points between Berrigan and Jerilderie? Yes.
830. You can give us reasons for your conclusions upon these points? Yes.
831. Can you give us any information as to a line from Jerilderie to Finley—have you considered that? I can only give you information of a general character. I know the nature of the settlement on the route.
832. You have a full knowledge of the locality? Yes.
833. Have you travelled through the district yourself? Through the district between Berrigan and Murray Hut—yes.
834. Perhaps you would tell the Committee where you went? I went from Jerilderie to Berrigan, thence to Momolong, thence to Savernake, from there to Berrigan, from there to Murray Hut, from there to Barooga, Mulwala, and Yarrawonga. I have also been across the country from Corowa.
835. So that you have a full knowledge of the country from Jerilderie to Corowa, from Corowa to Tocumwal, from Tocumwal to Finley, and from Finley to Jerilderie? Yes.
836. Do you consider that the area influenced by the proposed railway? Not all of it.
837. Where does it cease? At Savernake to the south-east, the border of Barooga to the south, and at a point three or four miles from the Murray Hut to the west.
838. *Mr. Chanter.*] Your knowledge and connection with this matter are entirely confined to traffic? Yes.
839. You have no knowledge of engineering? No.
840. Have you taken into consideration in estimating the traffic on the proposed line the probability of the Victorian Railway Commissioners making further concessions to the producers in the area which you have sketched out on the plan? In connection with the general traffic, yes. We have taken that into consideration.
841. Having considered that, you are sure that the estimate of probable earnings you gave just now is not excessive? It is based upon local rates.
842. Rates which will exist purely for this line? Yes.
843. Has it ever struck you that possibly the Victorian Railway Commissioners may again offer further concessions, compelling you to reduce the rates you have now in view? I do not think that it is at all probable that they will.
844. What was the nature of the rebate given to the producers in this district by the Victorian Railway Commissioners? Four shillings per ton on grain, but I do not think they will repeat it in view of the storm which the concession brought about among their own producers.
845. Is that rebate in existence now? No.
846. Is any rebate of the Victorian Railway Commissioners in existence now in any part of the Murray district? Yes; on general goods.
847. Is it in existence in any part of the area which would be served by this railway? It does not embrace Berrigan.
848. As I understand the matter, about one-half the distance between Berrigan and Jerilderie is embraced within the present rebate line? Yes.
849. That rebate applies to general goods? Yes; and of course to wool.
850. Was the rebate given in respect of the wheat produced in this district this year a special rebate? Yes; it was altogether a special rebate.
851. Was it in consequence of the representations made by your Department that that rebate on wheat was withdrawn? No; we did not make any special representations on the subject.
852. Did you not meet the Victorian Railway Commissioners in reference to the matter? Yes; but not in reference to the wheat rebate. That did not form portion of the discussion.
853. At the meeting to which I refer was any arrangement made? No arrangement was made at all. The Victorian Railway Commissioners practically declined to make any arrangement.

854. If this line is constructed, therefore, you would still have to meet the possibility of a special rebate being again offered by the Victorian Railway Commissioners? Yes; but the position is this: We have to give a rebate in the district to meet the Victorian rebate, but the producers at the present time have 25 miles of road carriage to reach the Victorian railway, and the rate which we propose is not more than a quarter of what it would cost them to do that.

J. Harper,
Esq.
3 Jan., 1895.

855. Has it struck you in dealing with this question of rebate that if this proposed line is constructed, and the charges were exceptionally high for the 21 miles, that there would be an agitation to get them reduced to a rate similar to that charged upon the main line? There will probably be an agitation. Our experience is that there is always an agitation in these matters.

856. If that agitation were backed up by a further offer on the part of the Victorian Railway Commissioners to carry New South Wales produce on their lines at a lesser rate, what would be the position of affairs? I do not think it would affect the estimate generally, because we cannot conceive it possible that the Victorian Railway Department would still further reduce the freight on wheat, and that represents nearly four-fifths of the entire estimated traffic.

857. You are aware that the Victorian Railway Department in order to obtain trade, not only in this district, but all down the Murray, have been carrying goods absolutely at a loss? Yes.

858. Is there any means at the disposal of your Department by which that can be checked? We can only check it by competition with them.

859. If that competition commences the question is where it is to end;—I suppose if such a thing took place, that sooner than loose the trade of the district, if this line were constructed your Department would be prepared to adopt rates upon it similar to those in existence for the whole mileage between Jerilderie and Sydney? As far as wool is concerned—yes; but I do not think it would be necessary as far as grain is concerned.

860. Why would it not apply to grain? After the recent experience of the Victorian Railway Department, I do not think it is likely to repeat the rebate. They cannot afford to reduce the rate on wheat any further. If they reduce the rate to the people of New South Wales they will have to reduce it to their own farmers, and they cannot afford to do that.

861. You expect to get a larger tonnage from wheat than from wool on this line? Decidedly.

862. So that if wheat were affected by the system of rebate you would be compelled to reduce your charges if you wished to conserve the trade? If it were so affected, I dare say we should have to do it.

863. You have carried some of the produce from Tuppal Station this year? Yes.

864. By special arrangement? Yes.

865. The Victorian Railway Department had a special arrangement with them in the past? Yes.

866. A special rebate was allowed? Yes.

867. You would be prepared to retain the whole of the traffic from the Murray Hut district—that is, to conserve the trade for the Berrigan line? We should be prepared to carry at the rate at which we carried this year, with the addition of the Berrigan to Jerilderie mileage. I suppose it would be about 5s. 3d. per ton from Berrigan to Jerilderie.

868. Do you think you would find any competition with the proposed line arising out of the private line running from Deniliquin to Moama? I do not think so. We have never come directly into conflict with the directors of the Moama-Deniliquin line. Whatever movements have been made in this district have been originated by the quotations of the Victorian Railway Department.

869. As far as the district we are now discussing is concerned, the competition against you has been more particularly with the line starting from Cobram? Yes, decidedly.

870. And you expect the competition to be confined to that district still? Yes.

871. I notice a charge of 7s. per truck in your estimate of traffic—would that be for sheep and cattle? It is 4d. per truck per mile for both sheep and cattle. That is not a local rate at all.

872. What is the cost per truck at the present time from Jerilderie to Sydney? £8 0s. 11d.

873. At what do you estimate your earnings from live stock on the proposed new line? £140.

874. Do you not think that that is likely to be exceeded? I think that in view of the chilled meat industry and other things it very likely may be, still I have kept within what I have considered the safe side in making this estimate. You will also observe that in the estimate of 7s. per truck we have taken the terminal rate—it is not a local rate. Of course, if live stock is carried to Narrandera and other places where the chilled meat industry may be carried on, we should probably get 8d. per truck per mile for the whole of it, so that the earnings would be proportionately greater upon the same quantity carried.

875. Have you estimated, in connection with the probable traffic of live stock, the different market values of cattle and sheep in the Sydney and Melbourne markets? I think they are both rather controlled now by the home market for dead meat than anything else.

876. If that is the case the producers in the district would benefit to the extent of something like 12s. per head on cattle, and to a proportionate extent on sheep, by sending the stock to Sydney, instead of to Melbourne? Yes; taking into consideration the duties, that would be about it.

877. Would not that mean that your estimate of earnings would be exceeded? There are not many cattle fattened in the district.

878. But with regard to sheep? There it is a question of competition with other localities. It is a question of what the market will absorb.

879. Have you had brought under your notice any special rebate on live stock on the part of the Victorian Railway Department? We have heard of it, but we have taken no notice of it. We understand that the rebate was on account of stock intended for shipment, frozen or chilled, but we took no steps to counteract it.

880. Had the Victorian authorities not permitted sheep—I am not sure of cattle—to be passed into Victoria in bond to be boiled down there? Yes.

881. Do you think that if the present duty on wheat, imposed by ourselves, were removed it would affect the trade all along this line? I am of opinion that in this particular district a large quantity of wheat will be grown under almost any conditions. I am not quite sure that as much would be grown in the contingency you name.

882. You do not think there is any probability of the Victorian duty being removed? That I cannot say.

883. Did you take it into consideration in dealing with the question of traffic? We look upon it as being very improbable.

- J. Harper, Esq. 884. I suppose it has come to your knowledge that a certain tonnage of return goods has gone to Tuppal Station in consequence of your obtaining their wool? Yes; that is the fact.
- a Jan., 1895. 885. And you estimate that, in regard to all the produce sent from this district to Sydney, and which has previously been sent to Melbourne, there would be a return tonnage? Yes.
886. How far towards the river Murray do you expect to draw trade by this line? I do not expect to go more than 10 miles to the south; that is to the northern boundary of Barooga.
887. You have the Tuppal traffic now? Yes; but as it was a debatable matter, and as the 500 tons of wool which we obtained from that station were obtained under special circumstances, I did not include it in my estimate.
888. While present circumstances last, I suppose you will always have to make special arrangements in regard to this district? Probably.
889. And having once obtained this particular trade, do you think you can retain it? Yes.
890. You are aware that the Commissioners, in reporting upon this line, are strongly of opinion that it should only be constructed contingent upon the landowners making a grant of the land to the Government? Yes.
891. In the event of the landowners refusing to make that grant, what would you say to the construction of a line from Jerilderie to Murray Hut; do you think such a line would conserve the trade of the district equally with a line from Jerilderie to Berrigan? No; I do not think it would conserve as great a trade as the line now proposed.
892. You know that a line from Jerilderie to Finley or Murray Hut would be taken through Crown land? Yes.
893. What area would be affected by such a line, supposing the terminal point were Finley? Well, I should like to explain in the first place, that the land in that district is not nearly as suitable for cultivation as is the land to the eastward. In the Berrigan district there are fifty or sixty original selectors to whom the land belongs, but upon Mr. Faulkner's holding about midway between Berrigan and Murray Hut the cultivators are leasing the land and are paying 5s. an acre with the option of purchase. My own impression is that under existing conditions they will be unable to continue the payment of that amount, and that the land will go out of cultivation. The land along the stock route is not as good as the land to the eastward. It is important to consider that the land to the south of Berrigan is principally in the hands of freeholders who have cleared it, and who are likely to go on cultivating it. The land to the eastward of the stock route is far more suitable for agricultural purposes than is the land to the west of it.
894. Does not the system of leasing the land with the right of purchase exist on the Momolong and Barooga estates? Yes, but that does not represent one-half of the estimated traffic in grain. The estimate is made up chiefly of wheat grown upon freehold land, upon land south and eastward of Berrigan. Wheat grown in that district certainly would not come in to Murray Hut even if a line were made there from Jerilderie. It would continue to find its way into Jerilderie as it does at the present time. The Savernake produce would probably go to Corowa.
895. If a line were made to Murray Hut I gather from what you say that the traffic would not be lost, but that it would be simply diverted to other terminal points? Yes, but it would not be carried on the line you suggest.
896. Do you not think we are entitled to conclude that the 500 tons of wool from Tuppal would be carried on the proposed line? Yes, and I am also under the impression that the Barooga wool would be carried upon it.
897. Would there be any gain in distance from Tuppal by going to Berrigan instead of to Jerilderie? They would gain about 10 or 12 miles.
898. In the event of the land not being granted in fee simple by the owners for the construction of the proposed line, would you favour the construction of a line to Murray Hut sooner than loose the trade which has hitherto gone to Melbourne? No, I cannot say that I would.
899. *Mr. Hayes.*] You have a good knowledge of the whole of the district you have described? Yes.
900. Is it not a very rich agricultural district? Yes.
901. Taking a radius of 10 miles around Berrigan, I suppose it would be one of the best agricultural districts in the Colony? It is the best I have seen, and I think the Statistical Register goes to prove it. The greater part of the area proposed to be served by the line is in the county of Denison. The total area of that county is 778,000 acres, of which 62,135 acres are under cultivation. I think there are only one or two other counties in the Colony having as large an area under cultivation. To the west of the Tocumwal stock route is the county of Townsend, with an area of 2,235,000 acres, of which only 10,700 acres are under cultivation.
902. Therefore, county Denison, of which Berrigan is the centre, has six times the area under cultivation? Yes; with a total area of about a quarter as great.
903. You say that Berrigan is the centre of the county of Denison. Taking a 10-mile radius of Berrigan about what area would be under cultivation? About 35,000 acres.
904. That would be served by the proposed railway? Yes.
905. Is the whole of that land under cultivation at the present time? Yes.
906. Is cultivation in the district increasing? Yes. They were clearing the land when I was there last, and there will be a greater area under crop this year than there was last year.
907. When did you visit the district? About two months since.
908. Did you see much land then under process of being cleared? Yes; a considerable quantity.
909. What percentage was there, as far as you could judge? I could form no conception of how much was being cleared, but the clearing was going on generally throughout the whole district.
910. I suppose the land in the district generally was specially suitable for the growth of wheat? Yes.
911. And it can be cleared at a cheaper cost, I suppose, than can the land in most other districts? Yes, to a certain extent it is improved land; that is, it has been ringbarked, and it can be cleared cheaply.
912. At about what price, do you suppose? From 10s. to £1 per acre. £1 per acre is as much as I have heard of as being paid for any clearing there.
913. Is the estimate you have formed about the amount of grain likely to be brought on to the proposed line from personal observation? Yes.
914. You believe that if the line were completed by the next harvest the estimate you have already given would be considerably increased? That is my impression. I have referred to Mr. Coghlan's figures to substantiate

substantiate my own estimate. His estimates are collected in the police district. For the Deniliquin district he gives 415,000 bushels; for Tocumwal, inclusive of Denison and Townsend, and I have already pointed out in Townsend there are only 10,000 acres under cultivation—635,000 bushels. That would be over 1,000,000 bushels between the two districts.

J. Harper,
Esq.
3 Jan., 1895.

915. What would be the proportion belonging to Denison? I suppose one-fifth of the total might be credited to Townsend. I do not wish to imply that the whole of this district would be affected by the railway, or that it is included in my estimate. Although I did not include the wheat grown within a few miles of Murray Hut, I think there is reasonable ground for supposing that if a railway were taken within 10 miles of it it would come in to Berrigan instead of going 23 miles to Jerilderie. However, I did not include that wheat, because the stock route to Jerilderie being of such a favourable character for travelling, it occurred to me as being possible that the people of Finley might prefer to go to Jerilderie by road.

916. What is the difference in distance as between the two places? About 2 or 3 miles. One road is comparatively straight, and the other takes all sorts of angles. I think, however, that it is about 3 miles longer from Berrigan to Jerilderie than from Murray Hut.

917. What is the present rate of tonnage, taking Berrigan as the centre, to the Jerilderie railway station? From 1s. to 1s. 3d. per bag; from 9s. 3d. to 11s. per ton. Roughly, you may put it down at 10s. per ton.

918. And you propose to take it by railway at 2s. 6d.? Yes.

919. That is the wheat? Yes.

920. What is the present rate for other traffic? It would be about the same.

921. Could we average it all at 10s.? You would have to add 25 per cent. for the other traffic, but there is very little traffic beside the grain traffic.

922. The rates you have quoted apply to summer traffic only? Yes; in winter it is impracticable.

923. What do you suppose the rates would be in the winter? I think it would be impossible to carry wheat over the roads. I do not think anyone would attempt it.

924. You think the roads would be impassable for ordinary traffic during the winter? Between Berrigan and Jerilderie—certainly.

925. From your knowledge of the country, what should you say it would cost to make an ordinary road from Berrigan to Jerilderie? I do not know. I can form no idea. I should think it would be very expensive. It would be boggy on account of the loose character of the soil. Besides, there is no stone or material in the neighbourhood, with the exception of the granite hill adjoining Berrigan.

926. You think the road would be impassable during the winter months? Yes.

927. If the cultivators of the soil are to be served, therefore a railway of the kind proposed is an absolute necessity? I believe that if they are going to continue cultivation under existing circumstances it is an absolute necessity. I do not think the grain will bear a charge of 10s. a ton.

928. The Victorian Railway Commissioners last year made a concession of 4s. a ton for grain? Yes.

929. But that rebate has since been removed? Yes.

930. Assuming that concessions were made and that the wheat were to be shipped into steamers in the port of Melbourne for Sydney, would it be cheaper to take it *via* Victoria in bond than to bring it to Sydney at the rates you propose from Berrigan? It would be slightly in favour, under the circumstances of the carriage last year, of going *via* Melbourne; but freights were very low. The rate from Yarrawonga would be 13s. 4d. a ton. The shipping charge would be 4s. a ton, and the insurance, wharfage, and other charges would amount to another 2s., making the total 19s. 4d. Deducting the rebate of 4s., the charge would be 15s. 4d. The rate from Jerilderie to Sydney is 15s. 6d., the proposed rate on the new line is 2s. 6d., making in all 18s.

931. Showing a difference on present charges of 1s. 4d. a ton in favour of the railway? Yes.

932. From Berrigan to the Murray what would be the rate of land carriage? To Cobram it would be about 12s. 6d. a ton.

933. So that there would be a total charge of £1 11s. 10d.? Yes.

934. Taking a radius of 10 miles from Berrigan what, on the average, would be the rate of carriage to Berrigan? About 3s.

935. And the proposed rates from Berrigan to Sydney would be 18s.? Yes.

936. Supposing you took 4s. as the average charge within the 10-mile radius, the rate from Berrigan *via* the New South Wales lines would be £1 2s. a ton? Yes.

937. As against £1 11s. 10d. on the Victorian side? Yes.

938. You do not anticipate any competition from the Victorian Railway Department? No, we do not anticipate that that will take place again as regards grain.

939. Was there not a strong outcry from the Victorian farmers in connection with the rebate allowed to the producers of this Colony? Yes.

940. The Victorian farmers waited upon the Commissioners in reference to it, and the Commissioners in consequence removed the rebate? Yes.

941. Was it not stated by the Commissioners that the grain traffic was not paying at the then rates, and that it was impossible to reduce them lower? Yes.

942. I believe there is a large number of small holders around Berrigan and to the eastward? Yes.

943. Are they original selectors? Yes.

944. There are also those who have purchased land from the Momolong Estate? Yes.

945. What do you estimate as regards the future of the district;—is there not a tendency to break up the large estates and to convert them into small holdings? That is the tendency, most undoubtedly. With the exception of Wonnamurra, Nangunyah, and Berrigan they are all doing it as quickly as they can.

946. If this line were constructed to Berrigan do you think it would cause more estates to be cut up into small holdings? Certainly; if the owners could find persons willing to take up the land upon the terms they are prepared to offer it at.

947. From the observations you have made in the district, and from your knowledge of it, you think that the line will not only be of advantage to the residents, but that it will be a profitable line in itself? Yes. I am sure it will—it will be a good feeder to the main line. In 1887 we carried on that line 1,091 tons altogether. During last year we carried 17,000 tons. The increase is attributable entirely to the increased growth of cereals in the district, between the two dates.

948. Is not all the cultivation to the south of Jerilderie? Yes.

949.

- J. Harper, Esq. 949. Is there much land under cultivation between Jerilderie and Narrandera on the main line? There is a good deal close to Morundah.
- 3 Jan., 1895. 950. The principal traffic is from the east and south of Jerilderie? Yes.
951. And the tendency is for it to increase? Yes.
952. Is this a line which can be cheaply constructed from what you have seen? Yes, it is practically a surface line. Judging from the descriptions of the surveyors it is very level.
953. There are no engineering difficulties? No.
954. Have you been over the country in the winter? Yes.
955. Is there likely to be any damage to the line from flood? I should not think so. I passed over the land when the whole country was practically under water, and I did not meet with running water anywhere.
956. It was all still water? Yes.
957. Do you anticipate that in winter there will be any difficulty in running trains on the line? No; I do not know of any reason why it should not be practicable to run trains on it in the winter months.
958. Do you think the line could be easily worked as a line from Narrandera to Jerilderie? Yes, I should think so.
959. You do not anticipate any difficulty in keeping the traffic open? I cannot see that there would be any difficulty.
960. I suppose you personally examined the country in the direction of Finley? Yes.
961. Do you think that the production of that district will increase as rapidly as that of the district to the eastward of Berrigan? There is some splendid country there, and the only reason I can assign for its not being as permanent, from the point of view of cultivation, as the land to the eastward of Berrigan, is that the farmers have the land under continuous cultivation. No land would stand that. The farmers who have freeholds to the south of Berrigan carry sheep upon their land and work it year about. I do not think the cultivation of the leasehold areas near Finley can continue long. The land has been cropped three or four years. It is becoming exceedingly dirty, and there is every promise of a poor yield this year on some farms.
962. You have no doubt in your own mind that the proper course for the railway to take is from Jerilderie to Berrigan? That is my opinion.
963. *Mr. Roberts.*] Are you responsible for the figures given in the Railway Commissioners' report relating to the estimated traffic? Yes; but I notice that there is a difference of £25 between the two totals. I do not at this moment know how it came about.
964. You have had a large experience in preparing similar estimates? Yes.
965. Will your memory allow you to give the Committee any instance in which your estimate has been fully borne out? I am afraid some of my estimates have been of a negative character, but my estimate in regard to the Cobar line was borne out, and my estimate also in connection with the Temora line has been justified. I had nothing to do with the Corowa line.
966. As a rule you would under-estimate rather than over-estimate? Yes.
967. You regard Berrigan as the centre of a large agricultural district? Yes.
968. And you believe that a large amount of traffic which now goes to Victoria would be retained in this Colony if this line were constructed? Yes; the greater part of it. A great proportion of the grain and live-stock traffic would be new traffic.
969. The line from Narrandera to Jerilderie is now being worked at a heavy loss? Yes.
970. Do you think the construction of this line would tend in a marked degree to lessen that loss? Yes. I may mention what the district has already done for us. In 1892 we carried 4,672 tons of breadstuff from Jerilderie, and earned £3,400. In 1894 we increased this to 10,000 tons, earning £7,358.
971. Is that owing to the large amount of settlement which has taken place to the south of Berrigan? To the cultivation in the neighbourhood of Berrigan.
972. Are the people round about Berrigan very keen about the construction of this railway? They are very anxious about it, and especially those who are freeholders—those who settled on the land originally, and who have held it. It is rather an extraordinary thing that the stations there have never been able to buy any land from those who originally selected it. It is still in the hands of the original selectors, or has been sold by them to small *bona fide* holders.
973. Do you think they are sufficiently keen about the railway to give the land required for the line free of charge? I am quite sure that in every case the small land-owners will do so. I do not know what the larger owners will be prepared to do.
974. Do you think Petersen and Sargood will give the land required? If Sir Frederick Sargood realised what was the wise thing to do he would do it. He has some very valuable land there, and he can do better with it than grow sheep upon it. I gather from what Mr. Wilson, the owner of Berrigan told me, that he would give the land required.
975. Does Berrigan Station contain good agricultural land? It is considered the best land in the district.
976. From your knowledge of the country, and of the probable traffic, you think the Committee would be justified in recommending the construction of the line? That is my opinion.
977. *Mr. Gormly.*] Do you think the construction of the line would cause more land to go under cultivation in the neighbourhood of Berrigan? That is my impression.
978. But if agriculture there is increased there would be likely to be increased population? Yes.
979. Increased population meaning increased traffic on the line? Yes; the general traffic would increase proportionately.
980. Did you base your estimate upon the present population of the district, or did you proceed upon the assumption that there would be an increase of population? The estimate is based upon the existing population.
981. Therefore you are of opinion that the population is likely to increase, and that there would be a good return from the coaching traffic alone? Yes.
982. I suppose that in working the line the trains made up at Narrandera would be able to go right through? Yes; the same engine could run through.
983. Therefore the cost of running the additional distance would not greatly increase the working expenses of the line? No; the working expenses would be light on that account.
984. There would be no difficulty in doing the run three times a week without interfering with the existing time-table? No.

J. Harper,
Esq.
3 Jan., 1895.

985. I suppose the general rolling-stock would do? Yes.
986. Berrigan, instead of Jerilderie, would practically become the terminus of the line running from Narrandera? Yes.
987. To a great extent the same staff, with the exception of station-masters and porters, would be able to do the work? Yes; I should say that during a greater part of the year one man at Berrigan would be sufficient. During the wheat season it might be necessary to give him some assistance.
988. Have you taken into consideration the rainfall of the particular districts now under cultivation? Yes.
989. Is there a sufficient rainfall there for the production of wheat? That is the conclusion arrived at by all the farmers in the district. The rainfall is 21 inches at Mulwala. The Berrigan record is not old enough to be of value, but the Mulwala record is 17 years old.
990. Is it not a fact that the rainfall increases as you go to the eastward, and decreases as you go to the westward? Yes.
991. Therefore, there is a probability of agriculture being more permanent at Berrigan than it would be further to the westward? Yes. Another point to be considered is this: That at some time different relations may exist between these colonies, and if it then became a question of the produce of this district finding its natural outlet, there is no doubt that the proper route would be *via* Jerilderie, Berrigan, and Barooga.
992. That would be a nearer route than going round by Echuca? Yes.
993. But there is no intention of making any connection in that direction now? Not at present.
994. You have been over the country about Clear Hills and Savernake? Yes.
995. Is there a tendency there for land to go under cultivation? Yes; a good deal of land is under cultivation in the neighbourhood of Clear Hills.
996. Conditional purchasers there are inclined to retain their holdings? Yes.
997. And there are good indications of permanent settlement to the eastward of Berrigan? Yes.
998. Mr. Hoskins.] I suppose you have travelled over this district a good many times? Yes.
999. When did you first become acquainted with it? About five years ago.
1000. Have the residents of the district that will be served by this railway frequently expressed to you a wish for a line to connect them with the Jerilderie terminus? I cannot say that I ever discussed that matter with them until about two years ago. Then the Berrigan people were anxious to have a railway anywhere so long as they had not to cart their wheat.
1001. Have they not endeavoured to enter into arrangements with a private company to make a tramway? Yes; I believe one or two people have been down in the district dealing with the matter.
1002. Did not one company offer to make a tramway providing the residents would guarantee to pay 2 per cent. interest on the outlay? I do not think so. The people down there appear to have doubted very much the *bona-fides* of those making overtures to them. One representative of a company, I understand, wanted £500 advanced for preliminary expenses, and he was eventually prepared to take £50. Of course, the matter was dropped.
1003. What I want to ascertain is this: If the people were so anxious to have railway communication, do you not think they would have been prepared to incur some liability? They were prepared to accept a certain amount of liability at the time, but probably the project got into wrong hands. I think they were also discouraged by the circumstance that the policy of the country was apparently against the construction of private lines.
1004. Have you heard the residents of the district say that they would willingly give the land required for the line if the Government would undertake its construction? In every case, as I have indicated already, the small landowners have shown a disposition to do so.
1005. Do you think the large landowners would be prepared to take a similar course? I did not meet the representative of Peterson and Sargood. The manager of Wonnamurra was not in a position to say what his principal would do. I spoke to Mr. Wilson about the matter, and without saying definitely that he would give the land he indicated in an indirect manner that he would be prepared to do so.
1006. Do you think, from what you know of the people in the locality, that they would be prepared to bind themselves by an Act of Parliament to give the land required for the railway? I am sure I do not know. I do not think the small landowners would hesitate at any step which would secure for them a railway. I do not know what the feeling of the larger landowners might be if they had to bind themselves in the way you suggest. It was rather a delicate matter for me to discuss with them, because it was a departure from the policy of the country, and my mission was simply to estimate the traffic.
1007. It is admitted that the profit on the carriage of wheat is very small;—do you think that this line will be the means of diverting the carriage of wool from Melbourne? Yes, to a certain extent. I believe that the selectors of the district, who grow yearly 2,000 bales of wool between them would send it to Sydney to a man. The rates they would have to pay would be a small consideration as against getting their wheat hauled at a quarter of the rate they are now paying for it. I believe the selectors in every case would give us their wool. I have the personal assurance of Mr. Horsfall, of Momolong that his wool will be brought to Sydney, and I am sure he will keep his word, and I have received a similar assurance from the owner of Berrigan. This wool now goes to Melbourne. I have also had a promise of Mr. MacFarlane, of Barooga, that he would send his wool to Sydney if this line were constructed.
1008. If these persons send their wool to Sydney they will get stores up in return? Most undoubtedly they will get supplies back.
1009. You include in your estimate of traffic firewood;—where would you carry it to, and for what purpose? To Jerilderie. There is a forest reserve midway between Berrigan and Jerilderie, and at the present time wood is being carted from there to Jerilderie.
1010. Is there much timber on the reserve? It is a large reserve, very densely timbered.
1011. What is the timber chiefly? Box. The reserve is about 10 miles from Jerilderie.
1012. Seeing that Jerilderie is a small place, there would not be a great deal of timber required there? Mr. Wise, the miller there, would pay us nearly the amount I have estimated for his mill.
1013. You have also mentioned road-metal in your estimate;—where would you get that? Within half a mile of Berrigan—there is a hill of granite. It makes excellent road-metal. The streets of Berrigan are formed of it.
1014. As a rule, the profit on the carriage of road-metal is very small, is it not? Yes.

- J. Harper, Esq. 1015. *Mr. Humphery.*] Have you estimated the additional traffic which would be brought to the main line as the result of this extension? I should think there would be about 7,000 tons of additional traffic including wool.
- 3 Jan., 1895. 1016. *Mr. Trickett.*] Is there any profit at all made out of the grain traffic? There is a certain amount of profit under existing conditions, and that would be especially the case on a line where heavy loads could be hauled.
1017. Mr. M'Lachlan, in giving evidence as to the proposed line from Jerilderie to Deniliquin, in answer to more than one question, said the Department did not get any profit out of the grain traffic;—that was in 1892? The conditions are altered since then. We have reduced our grades, and we have heavier engines.
1018. And you say that there is a slight profit now on the grain traffic? Yes.
1019. I suppose the greatest part of the traffic on this line would be grain? Yes.
1020. In fact, the main object of the line would be to carry grain? Yes; you may say that for all practical purposes it is a grain line.
1021. Is the land in the vicinity of the proposed railway subject to flood? Not at all.
1022. Therefore you do not anticipate that any great damage would result to the proposed line by reason of heavy downfalls of rain? There is only one small running stream in the whole district, and that is Berrigan Creek. It is proposed to put an embankment across that.
1023. We had a good deal of conflicting evidence as to the line from Narrabri to Moree, that is as to where it should go, in view of the probable damage which would be done by flood waters. That line also goes through very flat country? The country is altogether very different in character. There is a range of mountains on one side of the route from Narrabri to Moree, and the line travels over creeks from that watershed. This is flat country, and there is no watershed.
1024. That would be an additional reason for constructing the line with very light ballast? Yes.
1025. Did you go into the question of what the additional cost would be if the Government had to pay for the land through which this line would have to pass? I did not go into it, but I do not suppose they would have to pay more than £5 per acre. There would be practically 18 miles of resumed land. The line for the first 3 miles passes through the Jerilderie common.
1026. In round numbers then the Government would require about 300 acres? About that. That is assuming that 2 chains were taken. I do not know that with a line of this character a width of 2 chains would be required.
1027. Assuming 300 acres were taken, what do you think would be a fair estimate for the resumption money? I do not think it should exceed £1,500.
1028. In that valuation you make no allowance for severance? No; there would not be much severance. The line does not pass through the land of many persons. There are only two persons who would be somewhat seriously affected by it. Their blocks would be cut up rather awkwardly. It is proposed, however, that it should be an unfenced line. In a similar district where a line has been proposed the landowners, although at first opposed to it, viewed it favourably on learning that it would be unfenced. That, of course, would save severance. A daylight line, such as it is proposed this should be, would be very much like a street tram.
1029. Are the landowners willing to take all the risk of damage to stock by reason of the line being unfenced? Yes; I should imagine so. The Cobar line is unfenced, and it has been in existence now four years. There has been no accident on that line necessitating compensation.
1030. One of the officials says he thinks the width of the land taken should be 2 chains;—do you think that is necessary? No; I do not think so. The only danger in country of this character would be from engine sparks, but I should imagine that the adjoining landowners would protect themselves. I think a width of from a chain to a chain and a half would be ample.
1031. Taking the station sites and such things into consideration, is not the general average about 2 chains? Yes.
1032. In a former inquiry, evidence was given as to the river coming into competition with the proposed railway, and it was then stated that the Commissioners had been in communication with the Colonial Treasurer, urging upon him the imposition of special tonnage dues on vessels using the river;—has that been followed up at all do you know? I have not heard of any result following from it.
1033. In 1892 it was stated by Mr. McLachlan that the necessity of having special tolls on vessels using the river had been urged upon the Government so as to bring revenue to the railway;—would that policy affect this line at all? No; it would not. There is no river traffic in competition with it. Practically the river traffic ceases at Moama.
1034. You spoke of the settlers on Tuppal working their land continuously year after year;—will the land stand that kind of treatment? No; it gets dirty and weedy, as well as impoverished.
1035. What will be the result of the settlers there not being able to rest a part of their land? I suppose they will have to give up cultivating it.
1036. Will not that materially affect the wheat-producing part of the country? Very little of that area is included in my estimate. It only comes slightly within the boundaries of the district likely to be affected by the line.
1037. *Mr. Davies.*] In the event of a railway being constructed from Jerilderie to Berrigan, what influence do you suppose it will have upon the value of the adjoining freehold land? It will give it an increased value no doubt.
1038. To any large extent? Not to any very great extent, in view of the contingency of Crown lands being thrown open in other districts. Under other conditions it would.
1039. But the line would surely have the effect of largely increasing the value of the lands served by it? I should think it would increase its value to some extent, but to what extent I could not say.
1040. There is very little Crown land available in the district for settlement? There are only 20,000 acres on the three runs, and I think a great deal of that is reserve.
1041. This railway will pass through the holdings of several large squatters? Yes.
1042. You visited the district with the Commissioners to make their inspection? Yes.
1043. Did you interview the large land proprietors with the view of them giving the land required for the railway? The matter was mentioned by the Commissioners, but there were no large landowners present at the time. We met only the small settlers. Mr. Horsfall, the owner of Momolong, said he would be prepared to give any land that might be required.

1044. Will the railway pass through any portion of his run? No. The large holders affected are Mr. Wilson and Peterson and Sargood. J. Harper, Esq.
 1045. And you do not know whether they will give the land or not? No, I do not.
 1046. Your estimate depends chiefly upon the production of wheat and wool? Yes.
 1047. Do you know the number of stock in the area which would be served by the line? No; but I could give you the number of bales of wool shorn on each holding.
 1048. Has there been an increase this year upon the previous year's clip? A 10 to 15 per cent. increase.
 1049. Does that arise from the good season? From the good season. Some of the smaller men are carrying more sheep than in the previous year on account of the exceptional season.
 1050. The carriage of wool pays very well? Yes.
 1051. And it would pay coming from Berrigan to Sydney? Yes.
 1052. What would be the case as regards grain? The grain leaves a small margin of direct profit, but there is a wide margin of indirect benefit.
 1053. In the way of back carriage? Yes.
 1054. What do you estimate would be the back carriage to Berrigan? I have allowed for 300 tons, but I am quite sure that that would be exceeded.
 1055. What stores find their way from Sydney to Berrigan at the present time? The great bulk of the supplies of the district at present come from Victoria through Mulwala and Toecumwal.
 1056. The people in that district at the present time are supplied for the most part from Victoria? Yes. A number of cornsacks go from Sydney to Jerilderie, but the bulk of the sacks come from Victoria.
 1057. Do you think the construction of this railway will have an influence in preventing this traffic to and from Victoria? I am sure we should get the bulk of the traffic. We have all the Jerilderie traffic now, and the Berrigan business is worked by Jerilderie storekeepers.
 1058. Is Berrigan within the Victorian rate rebate area? No. The line is 10 miles the other side of Berrigan.
 1059. You have referred to the fact that a number of settlers on Tupal are paying 5s. an acre per annum ground rent? Yes.
 1060. Does not that strike you as a very high rent? I think so, considering the present price of wheat. When they went on to the land they had an advantage for a time because it was practically cleared for them. It was very good land too.
 1061. Where would the wheat they produce go to? To Jerilderie.
 1062. You do not know what quantity is produced by the settlers who are paying this rental? Last year they grew about 35,000 bags.
 1063. Whose run are they upon? Faulkner's.
 1064. Do they combine sheep farming with wheat production? Not those particular farmers, but the freeholders do.
 1065. What would be the area these settlers have under lease? About 16,000 acres.
 1066. How many of them would there be upon that area? I do not know. Some of them hold as much as 2,000 acres.
 1067. Would it pay them to send their wheat by train through Berrigan to Sydney? It might under existing conditions, but from the way in which they are farming they would not soon be able to do so, because the yield will shortly be comparatively poor. The land will get very dirty from constant cropping.
 1068. From your general observation and inquiry you think the line would act as a feeder to the main line? Yes.
 1069. And it would pay from its inception according to your estimate? Yes.
 1070. What speed have you allowed for on the line? Fifteen miles an hour.
 1071. It is to be a day line? Yes.
 1072. No provision is made for fencing? No.
 1073. You do not think fencing is necessary? No; our experience on the Cobar line has been eminently successful in that direction.
 1074. Seeing that the line would be a greater advantage to the large owners than to the small owners, do you think it likely that they would object to give the land required for the line free of charge? I cannot say what they will do; but if I were one of them I should be prepared to give it.
 1075. Mr. Lee.] Mr. Chanter questioned you as to whether any alteration of the rebate line by the Victorian Railway Commissioners would affect your traffic estimate for this extension;—I suppose any further concession made by the Victorian Commissioners would only apply to general goods? That is all.
 1076. It will not affect wheat or wool? It might affect wool, but the reduction would be only comparatively small.
 1077. In view of grain being excluded from the Victorian market on account of the duty, any alteration in the rebate line will not affect traffic in that particular description of goods? No.
 1078. Although it might affect more or less the general goods traffic and perhaps wool? Yes; but not to so great an extent as might at first be supposed, because although Jerilderie is within the rebate line we already hold the Jerilderie traffic. Not an ounce of goods goes to Jerilderie from Victoria.
 1079. Although Jerilderie is within the rebate line its traffic is not attracted to Victoria? No.
 1080. How is that? Our rates have been more favourable.
 1081. Notwithstanding the great attractions offered by the rebate of the Victorian Commissioners you have retained the traffic? Yes.
 1082. When you were in the district collecting information from whom did you get it? I saw pretty well every one in the district who had any information to give.
 1083. Did you get your information from the farmers individually or from the Progress Committee? From the farmers individually. I suppose I was at from sixty to seventy farms.
 1084. In estimating the wheat traffic, did you take the probable returns from all the farms from Jerilderie to Berrigan within the area you have named? Yes, the whole way.
 1085. Is it not a fact that a certain area on the line would not be affected by the extension, inasmuch as it is within easy reach of Jerilderie? That is only so to a limited extent. There is no wheat grown till you get 8 miles from Jerilderie. Wheat is simply grown for fodder on Wonnamurra Station.
 1086. From which point do you reckon the charge of 2s. 6d. per ton? That would be the uniform rate—the maximum and minimum.

- J. Harper, Esq. 1087. Even for only half the distance? Yes.
- 3 Jan., 1895. 1088. If a farmer used the line for 5 miles instead of 21 miles he would still have to pay the half-crown?
1089. Would not that arrangement have the effect of bringing drays into competition with the line? I do not think so. No wheat is grown till you get within about 8 miles of Berrigan.
1090. The rate will be uniform for all those who are likely to use the railway? Yes.
1091. And you do not anticipate any dray competition? No; only on the Tocumwal stock route. Some of the farmers in the neighbourhood of Murray Hut might send their wheat along the stock route by dray.
1092. But you have not included that part of the district in your estimate? No.
1093. Will there be no dray competition going on in any other parts of the district? Not as regards wheat.
1094. Supposing a competition of that kind grew up, would it not seriously affect the traffic? Not as regards wheat. I do not think we need fear competition with 1½d. per ton per mile. No matter how good a road was the teams could not compete at 1½d. per ton a mile.
1095. How do you arrive at the quantity of wheat raised in the district? From the area under crop and the quantity we have carried. We carried 102,000 bags last year, and there is an increased area under crop this year.
1096. You estimate that there will be 17,000 tons of wheat? Yes, 153,000 bags.
1097. You expect that from the area marked by you on the map which does not include Clear Hills or Tuppal? That is so.
1098. There is a large discrepancy between your estimate and that supplied by a miller at Jerilderie to the Sectional Committee in 1891? That mill alone has quadrupled the quantity dealt with then. The miller to whom you refer told me himself that he dealt with 70,000 bags last year. The progress which has been made in cultivation is incredible to anyone who has not seen the district within the last few years.
1099. The figures formerly given were 40,000 bags, and that has been increased according to your estimate to 153,000 bags? Yes.
1100. You are quite satisfied about your figures, although they are inconsistent with those given a few years ago by a local miller? Yes. On the 5th October, 1894, the miller to whom you refer said he estimated that about 107,000 bags had come into Jerilderie from the harvest of 1893-4. My figures are also substantiated by those of the Government Statistician.
1101. When you were in the district you went into all the little centres to ascertain as clearly as possible what would be the best point to which to take the extension? Yes.
1102. And you think the extension should go to the point where the largest number of small settlers is to be found? Yes.
1103. That would be in the neighbourhood of Berrigan? Yes.
1104. That is without offering any opinion as to which direction any further extension should take? Quite so.
1105. Touching the railway war between the Victorian Commissioners and the New South Wales Commissioners, has there not been competition on both sides for many years to obtain the traffic from this particular part of the Colony? There has been competition on our own side to get our own traffic.
1106. You are offering inducements now to get traffic which you never had before? Yes.
1107. Can you foresee any alterations likely to be made by the Victorian Commissioners whereby they would be likely to checkmate us in obtaining the traffic estimated for this particular extension? No, I think they have done their best. I do not think they can do any more.
1108. Have you kept in view the desirableness or otherwise of approaching only within a certain distance of the river Murray? Yes.
1109. You think it would be wise policy not to get too close to the river? At the present time, yes.
1110. You have located your terminus at a point where it will be outside the influence of the traffic of the river, and outside the influence of any special rates on the Victorian lines? Yes.
1111. If the produce of the district is increasing so largely, is it not fair to assume that the population will also become thicker there? Yes; it has increased during the last three or four years.
1112. Do you happen to know whether the increase of produce has arisen from the fact of the farmers putting more of their holdings under cultivation, or from the fact of more land being made available for selection? The farmers have put more of their holdings under cultivation. They have been engaged for years past in clearing, and they are putting more land under cultivation every year.
1113. If a grain centre were established in the district served by this railway, would there not be a possibility of the large landowners subdividing their estates and leasing them? I think so. It has been done to a large extent already on several holdings.
1114. Is there any truth in the rumour that owing to the low price of wool the owners of land in this part of the country find it more profitable to lease it to grain-growers? Yes. The last owner of Tuppal told me that he had bought 4,000 acres from Barooga, and that he carried on it 7,000 sheep, and that he had 2,000 acres under wheat. He said he reckoned that he was a more prosperous and a happier man than when he owned Tuppal.
1115. How many flour-mills are there at Jerilderie? Only one.
1116. Does that mill deal with the whole of this large crop of wheat? No.
1117. I imagine that a large proportion of it goes along the existing line to other markets? Yes.
1118. Therefore, Jerilderie would not be the depot for all the wheat grown in the district? No; we carried over 68,000 bags of ungristled wheat last year.
1119. You took that from Jerilderie to various places along the line? Yes.
1120. It does not follow that all of it found its way along the line down to Sydney? No.
1121. Mr. Molesworth.] You know that a loss has been incurred on the line from Narrandera to Jerilderie? Yes; it is lessening, but there is still a heavy loss. It would be greater but for the large increase in the produce of breadstuffs in the district. Within the last few years the carriage of breadstuffs has doubled itself along that line.
1122. You think the construction of the proposed line would materially reduce the loss on the line between Narrandera to Jerilderie? Yes.
1123. Are you not of opinion that the natural market of this district is the port of Melbourne? Yes, assuming that it is a question of export.

1124. What would be the distance from Berrigan to Melbourne, as against the distance to Sydney? It would be 175 miles, as against 434. J. Harper, Esq.
1125. Then the distance to Sydney is more than twice the distance to Melbourne? Yes.
1126. In the event of the border duties being removed, would not the traffic you anticipate find its way to Melbourne? Not if it is intended for consumption in Sydney. 3 Jan., 1895.
1127. But if the Border duties were removed, would not Melbourne be as good a market for wheat as Sydney? Yes, certainly.
1128. And Melbourne being the nearer market, would not the wheat go there? On the other hand, you have to consider that there is land near Melbourne which is also capable of growing for the Melbourne market.
1129. What is the number of settlers likely to be served by the proposed railway? I should think about 100 or 120.
1130. You spoke about there being an inexhaustible supply of road-metal within easy distance of Berrigan? There is a large supply there; the only supply of the district.
1131. Would that not be likely to be largely required by Jerilderie and other places in the surrounding district? I have estimated that the line would earn about £50 for the carriage of metal for road-making in Jerilderie.
1132. Is not that estimate low? Well, it is a very vague thing to estimate.
1133. I understood you to say that the additional traffic to the main line, consequent upon this extension, would be about £7,000 in the course of the year? That is only an approximate estimate.
1134. Can you ascertain how much of that would be profit? It is not easy to say. So much depends upon the conditions upon which you would carry the additional traffic. Of course, if the trains were fully loaded and were running at a minimum rate of speed, the profit would be greater than under other circumstances.
1135. Do you think there would be a 10 per cent. profit? I should think so, undoubtedly.
1136. That would be so much additional profit as against the cost of working the line? It is very difficult to say what the profit would be? The Americans venture upon estimates of that kind, but we do not pretend to make them. The profit in this case might be 50 per cent., or it might be only 10 per cent.
1137. You spoke of £1,500 as being approximately the value of the land required for the railway between Jerilderie and Berrigan? Well, it was suggested to me that 300 acres would be required, and I said I thought that £1,500 would be a fair valuation of the land.
1138. Is not the betterment principle introduced in connection with the Public Works Act? I have not studied the operation of the Act at all as regards that. In this case I am simply giving an estimate of the traffic.
1139. In some cases on the line between Culcairn and Corowa, the set-off in the shape of the additional value given to the land served by the railway reduced the claims to nil, I believe? I do not know about that—I did not read the facts.
1140. In the case of this particular line, do you not think that the increased value given to the land through which it passes would equal the value of the land taken? I think it would.
1141. But you are under the impression that the land will be given free of charge? I am under that impression, as far as the small landowners are concerned.
1142. Chairman.] You regard the proposed line purely as a feeder to the main system? Yes.
1143. It does not bear any relation to any other part of the Colony except that small portion bounded on the east by Clear Hills, on the south by Savernake, and on the west by Finley. That is, roughly, the area under consideration? Yes.
1144. Do you consider that the line has any connection with the proposal to construct a line from Jerilderie to Deniliquin? No.
1145. Do you consider that it has any connection with the proposal to construct a line from The Rock, via Berrigan, to Finley? None.
1146. In the view of the Commissioners the line is simply a feeder to the main line? Yes.

TUESDAY, 8 JANUARY, 1895.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.
The Hon. WILLIAM JOSEPH TRICKETT.
The Hon. JAMES HOSKINS.
The Hon. JOHN DAVIES, C.M.G.
The Hon. CHARLES JAMES ROBERTS, C.M.G.

JAMES HAYES, Esq.
JOHN MOORE CHANTER, Esq.
CHARLES ALFRED LEE, Esq.
JAMES GORMLY, Esq.
EDMUND WILLIAM MOLESWORTH, Esq.

The Committee further considered the proposed Railway from Jerilderie to Berrigan.

Henry Deane, Esq., Engineer-in-Chief, Railway Construction Branch, Department of Public Works, sworn, and examined:—

1147. Chairman.] You are Engineer in-Chief of the Construction Branch of the New South Wales Railways? Yes. H. Deane, Esq.
1148. I understand that when you have been over the line from Jerilderie to Berrigan you desire to supplement your evidence of to-day with regard to that line? Yes; I intend to go over the line with a view to see how far the experience I have gained with regard to the American lines can be made applicable to this particular railway. 8 Jan., 1895.
1149. Therefore, you desire to give evidence to-day with regard to general principles rather than with regard to details of the investigation? I should prefer to postpone all my evidence until a later date, but as the Committee wish to examine me now, I will deal with the subject as far as I am able.
1150. There is a good deal of information which you could give us to-day? I think so.

H. Deane, Esq. 1151. One of the points which would appear to be important is the difference in construction as between America and Australia. Can you give us any information as to that? Yes, I can. There are many points of difference. I have not prepared a statement in regard to the matter, but I can briefly refer to the main points. With regard to the cheaper kind of construction, it is the practice in America, in easy country, where cheapness is required, to lay the lines without ballast. I have never seen nor heard of their laying the sleepers directly on the surface of the ground—there is always a formation. A low bank is prepared by excavating from ditches at the sides, and these serve for drainage. The bank may be very low, but there always is a bank. It is the practice in America to use a very much larger number of sleepers than we do in this country. In fact, even on the best lines in the east, I noticed that the practice was to put the sleepers pretty close to one another. It makes all the difference, especially when you have no ballast to depend upon to support the road. The absence of ballast is, of course, a very important item of economy, but to make up for it you require a great number of sleepers. The Americans can build on this system readily enough, because they can get sleepers very cheaply. Their sleepers cost from 1s. 3d. to 1s. 6d. apiece. An increase, therefore, of two or three sleepers to the rail length does not mean anything like the cost of the ballast which has been dispensed with.

1152. What would be the cost of our sleepers generally? The full-sized sleepers generally cost from 3s. 6d. to 4s. 6d. At the present time we have a contract in the Department to deliver sleepers at Narrabri at half-a-crown, and I understand that the present Secretary for Public Works has been making arrangements to get the supply of the same class of sleepers continued at 2s. 3d.

1153. Would they be ironbark sleepers? Yes; they are not squared sleepers—they are round on the top. They are very strong and durable, and will, I believe, answer every purpose. I should be inclined if anything, to put in a cheaper class of sleepers than that if we had to do without ballast, and to put in more sleepers to give proper support to the permanent-way.

1154. It would be cheaper than ballast? Yes.

1155. Are the American sleepers of fairly durable wood? They are of different classes. On the Californian coast they are always red wood, which is a very durable timber. They told me that the sleepers wore out—that they did not rot. They wear out, because the wood being somewhat soft the rails eventually cut into them, and they have to be discarded on that account. Then they have ordinary pine sleepers, a very soft wood indeed. They have only a very short life. Then they have pine sleepers, impregnated with creosote or otherwise treated with preservatives. There are also white oak sleepers, which are largely used—in the eastern States especially. A good many different kinds of timber are used for this purpose. Both the soft and hardwood timbers are always sawn. The practice in America is to lay the rails flat down on to the sleepers. The rails are laid flat down on the sleepers without any dressing for the rail-bed. Our practice is to adze a bed for the rails, inclining the surface at an inclination of 1 in 20 towards the centre of the road. That fits in with the coning of the wheels of the rolling-stock. In America the wheels are turned cylindrically, with us they are conical. That is an important difference. Apart from greater ease in travelling, the idea originally was that, in going round curves, as the centrifugal force carried the rolling-stock towards the outside of the curves there would be a larger circumference travelling on the outside of the curve, and the body of the carriage on that side would be carried further on in consequence. In America the top surface of the rail is practically level. So far as the wheels are concerned, there is a little bit of taper on the outside, but that part which bears on the rail is cylindrical.

1156. *Mr. Davies.*] Would the friction on the rails as laid in Australia be more severe than on the rails as laid in America? There is no difference.

1157. Would the rails last as long in Australia as in America? Quite as long.

1158. The friction is on the head of the rail in America, is it not? It is all on the head, except on curves.

1159. With the angle that exists in the case of the Australian rails, would not the friction be more on the side than on the head? No.

1160. Is that because the wheels are turned to meet it? Yes, the wheels are turned so as to meet it. The bearing of the wheel on the rail is normal to the surface of the rail in both cases. I mention the point because it is an important difference resulting in this—that there is less work in laying an American road than in laying our roads. There they can get their sleepers sawn from the mill, and all that they have to do is to spike their rails down on to them. Here the sleepers have to be put through an adzing machine before that is done.

1161. *Chairman.*] Before you went to America were you an advocate of the Australian system? Yes; and I would not advocate any alteration now—it could not be altered.

1162. You would not adopt the American system? No; it would be impossible to do so now. You could not do so now without altering the whole of the rails and the whole of the rolling-stock.

1163. The Baldwin engines were an American engine? Yes; but the tyres of the wheels were so turned as to meet the Australian practice.

1164. You give this as a piece of general information and not with a view to our adopting the American practice? No, it is merely to show a point in economy in American railway construction, to which I thought it worth while to direct attention.

1165. Had the American system been adopted in the first instance would it have answered quite as well as our own? They seem quite satisfied with it in America. I believe that our practice is theoretically better. These are some of the principal points of difference between the American construction and ours. Another point is the use of large quantities of timber in their bridges. We are more inclined to use stronger and more permanent structures than the Americans. They have large supplies of cheap timber which we have not, and they use trestle work for getting over gaps, and for both small and large bridges, much more largely than we do here. That all helps to cheapen construction in the first instance, although after a time the trestle work has to be replaced.

1166. Therefore, in the construction of pioneer lines, the first difference you notice as between the American system and ours is the use of more sleepers and less ballast in America? Yes.

1167. The next alteration consists in having flat sleepers with the bottom of the rail also flat, of necessity lessening the cost of construction? Yes.

1168. And the third point would be the use of trestle work instead of permanent bridge work? Yes; I think those are the principal points of difference.*

1169.

* Note (on revision):—There is also the absence of raised platforms at the stations referred to later on in the evidence.

1169. *Mr. Hayes.*] In reference to what they call pioneer lines in America, I suppose you travelled over the line from Denver to Rio Grande. I see from your report that the line has been made to the 4 ft. 8½ in. gauge? Yes.

H. Deane,
Esq.

8 Jan., 1895.

1170. It was originally a 3 ft. 6 in. gauge? Yes. It goes right through the Rocky Mountains, a very rough piece of country to go through.

1171. Did you travel from Salt Lake City to Denver? Yes.

1172. The line passes through far more difficult country than any we have in this Colony, does it not? I would not say that, but it is far more difficult taking it altogether. No doubt there is a longer stretch of difficult country than any we have here.

1173. When that line was first constructed, it was a pioneer line such as you have been referring to? No; it was always a difficult line. The lines which would come under the class of what the Railway Commissioners call pioneer lines would be those which have been made across the prairies—across level country—which you do not meet until you go east from Denver. I left Denver in the evening and took a Pullman car to Omaha. The next morning early, I found we were on the level country. From there right into Chicago there was very little in the way of rough country at all. It was very nearly a dead level. That is the class of country to which pioneer lines are suitable.

1174. Did you travel upon any of the lines you have described, where, instead of using ballast, they use a large number of sleepers? I noticed that nearly all the lines I travelled upon had been ballasted. I travelled on a part of the line running south from San Francisco to Los Angeles, over the San Joachim Plains, which was without ballast. That would be about the same class of line which it is proposed to make to Berrigan. It is a dry country, and the climatic conditions are altogether very similar to what one would find in the interior of Australia. Portions of some of the other lines were also without ballast, as between San Francisco and Portland, and the line east of Denver.

1175. From your observation, do you think a line similar to that, taking away the ballast and substituting more sleepers, might be adopted in many of our country districts as pioneer lines? Yes, I am of opinion that system might be adopted.

1176. With advantage? I should like to see the system tried. There could be no harm in doing that. I should prefer to adopt a better and more solid construction, but as there is such a demand for light lines, I would strongly recommend that this Berrigan line, and any similar lines running into the interior, should be made on the system I have described.

1177. What is the difference in cost between a lightly ballasted line and a line without ballast and more sleepers to the mile? In making what are called pioneer lines you follow the surface very closely, and you take a good deal of risk in heavy rains and floods. If you are to make a line perfectly safe there are many places where, to guard against all contingencies, you might have to make a bank of considerable height, and that would add materially to the expense of the line. In the case of the particular line before the Committee, I think it has been said that the traffic is to be slow, and that would mean, I assume, that if there were an occasional interruption no great harm would be done.

1178. But what is the difference in cost between a lightly ballasted line and one laid upon the American system with more sleepers to the mile than we have here? Well, it would be cheaper to lay it on the American plan without ballast, of course.

1179. What rate of saving would there be per mile? In the case of the Berrigan line ballast is estimated to cost about £308 per mile, and the sleepers to cost £240 a mile. If, instead of eleven sleepers, you put in fourteen, that would add about £60 to the mile in the way of sleepers. You would then have to take off the ballast. There would be a saving of about £248 per mile.

1180. That is at Australian prices? Yes. I am taking the estimate of the Berrigan line, the sleepers being estimated to cost 2s. 6d. apiece, and the ballast being estimated at 3s. 6d. per lineal yard. There would be 1,930 sleepers to the mile, at 2s. 6d. per sleeper. The estimate of 3s. 6d. per lineal yard of ballast is the same price that I allowed in the case of the Moree line. The principle is the same.

1181. What would the ballast come to altogether? £308 per mile.

1182. And you think there would be a saving of £248 per mile? Yes, nearly. There would be a little extra for platelaying, on account of the extra sleepers, but it would not amount to very much.

1183. Should you think there would be a saving of £280 per mile? I think we might say £230 a mile, by putting in more sleepers and knocking the ballast out altogether.

1184. Would you advise the adoption of that system in the case of this particular line? That is a point I would rather leave until I have seen the country. I have not even a report before me showing what sort of soil there is.

1185. From your experience in America of lines laid without ballast, are you prepared to advocate that practice here in the case of pioneer lines worked at a low rate of speed? If I recommend them, it is scarcely because I prefer them. I should feel inclined, in all cases of new lines, from what I have seen in America, to put in a couple of sleepers more than we have been in the habit of doing. I believe it would relieve the maintenance of the line very much. But where you can get ballast easily I should always recommend its use. However, if it is desired to make as cheap a line as possible—a cheap and workable line—I would say leave out the ballast and put in more sleepers. You will make a satisfactory job and you will test the method. It may be, that if it turns out a success, it will lead to the construction of a large number of lines which would not otherwise be made—lines which are really wanted.

1186. I suppose you recognise the necessity, in the case of lines running through agricultural and pastoral districts, that they should be built cheaply, so that there may be some prospect of their paying? Yes.

1187. And there would be a large saving in carrying out the system you have mentioned? Yes.

1188. From information you gathered from America, would it not appear that when they laid down the new lines in the first instance they invariably laid them down on the principle you suggest? Yes.

1189. And that as the traffic increased? They ballasted them.

1190. But in the first instance the lines were laid down on the principle you have referred to? Yes.

1191. And as far as safety and speed are concerned, are they not worked as well as the ballasted lines? I should not like to say that as to absolute safety. But there is one thing about the traffic on the American railways in which they differ considerably from us—that is the use of bogies on the rolling-stock. All the rolling-stock, all the passenger and freight cars, are provided with bogies, enabling them to work over rougher surfaces than our rolling-stock.

1192. That would not make any difference where the line is straight, would it? It might also refer to instances where lines were straight, and a settlement had taken place, and the rails got out of line. If there was any unevenness in even a straight part of it there would be much less chance of the American rolling-stock going off the line than there would be in our case.

1193.

- H. Deane,
Esq.
8 Jan., 1895.
1193. You think the American rolling-stock safer than ours? Yes.
1194. And more suitable for pioneer lines? Yes. Of course, it may not be so suitable for traffic purposes. For instance, you may not be always able to fill up the long trucks. This is an important difference in the conditions of the two countries. I believe the Railway Commissioners acknowledge that except for wool traffic and wheat traffic the long trucks on bogies are not so suitable for our requirements as is our own rolling-stock.
1195. That is from a traffic point of view alone? Yes.
1196. But as regards ease of running and safety, the rolling-stock provided with bogies is far better? Yes.
1197. The lines in America as a rule are not fenced? A great many are not.
1198. As a general rule in America new lines are not fenced? No.
1199. Take the line from Denver to Rio Grande, is there any fencing on that? Very little fencing.
1200. Although it is very rough country? I passed over no line which was absolutely devoid of fencing. Fencing in America is creeping in.
1201. Does that not refer more to the eastern lines? No; even out west a good deal of fencing is done.
1202. I suppose that the quality of the sleepers used in America is not as good as is the quality of our sleepers? No.
1203. Neither as regards durability nor hardness? No. There are none of them so hard as ours, nor are they as durable.
1204. As a matter of fact on the lines in the west do they not as a rule take the sleepers from the ordinary timber of the country through which they are passing? Well on the Californian coast they use redwood.
1205. I am speaking of the line from Salt Lake City to Denver for instance? They use various kinds of pine.
1206. Ordinarily they take the timber they get as they are passing along? No, I do not think they do that. They may do so in laying the line down in the first instance, but they soon learn to make a careful selection.
1207. Are they as particular as we are with regard to the length of the sleepers, that is about getting them all of the exact size? As to length, perhaps they are not quite so particular as we are, but as to size they are supposed all to be cut exactly to size. They must be. They are sawn by machinery, and if the saws are set right the sleepers must come out right. There is not the same chance of variation as when you depend upon a man's handiness with the adze or axe.
1208. Did you see the American grader in use in the formation of any of the lines? No.
1209. Did you hear of its use? Yes. I believe it is largely used.
1210. Is it more economical than hand labour? It is taken to be so—probably it is.
1211. What would the difference in cost be? I should say the cost of work done with the grader would be about one-half as compared with dray work or even barrow-work.
1212. Could the grader be used to-day in this country? Where the country is clear of stumps it might be used.
1213. With advantage? Yes.
1214. As to station buildings, what was your experience on the pioneer lines of America? Everywhere I went there were stations of more or less importance, but there is one great difference between their practice and ours, which I should have mentioned before, and it is this, that they make no raised platforms. In the large stations the roads are separated one from another, by perhaps a little more interval than you would have with a double line of way, but still the passengers have to thread their way out between the trains standing pretty close up against one another.
1215. That applies to American railways in all parts? Yes, except at the termini.
1216. Is not the same principle adopted at New York, at Chicago, and at the principal termini? No. There, in many cases, they have low platforms. They are not nearly so high as ours, but are simply raised a little from the surface.
1217. About a foot? Yes. They are distinct from the general surface of the station.
1218. As a rule, on the ordinary lines of railway in the country districts the stations are of a most primitive character, are they not? Yes.
1219. Take the Denver and Rio Grande road—it is 750 miles long, is it not? Yes, about that, with the Rio Grande Western included.
1220. Are there any station buildings of importance on that line? No; I do not remember that there are until you get to Denver.
1221. Do you think, speaking generally, that, if we could adopt the American system you have just been describing on our pioneer lines, it would cheapen the cost of construction to a large extent? Yes.
1222. And as far as this particular line from Berrigan to Jervilderie is concerned, if the principle were adopted in that case there would be a saving of at least £230 a mile. I should say about that.
1223. *Mr. Roberts.*] Are you familiar with the Report of the Railway Commissioners to this Committee regarding the proposed line, Jervilderie to Berrigan? I am not sure whether I have seen it yet.
1224. You will see that the estimated cost of construction is about £2,000 per mile? Yes.
1225. Do you not think that that could be reduced to a considerable extent? It could be reduced by cutting out the ballast and putting in more sleepers. That would make a difference of £230 a mile, and for the 21 miles it would represent a difference approximately of £4,830.
1226. From what you have seen of railways in America, would you be prepared to reconsider that estimate with the view of reducing it? I recommend that the system of which I have been speaking should be adopted, and that would reduce the estimate to the extent I have named.
1227. *Chairman.*] You recommend a trial of the American system of construction in the case of this line? Yes. Of course, as I have said, I should prefer to see the country before binding myself absolutely to that opinion, but I do not see why the system should not be tried on this line as well as anywhere else.
1228. *Mr. Roberts.*] I hold in my hand a memorandum from two members of a former Sectional Committee who visited the district around Berrigan, and who gave it as their opinion that a line should be constructed for £1,500 a mile—do you think that that would be practicable? I should like to know what details they give.
1229. You say that the estimated cost could be reduced by £230 a mile, making £1,830 a mile? Do you think

H. Deane,
Esq.
8 Jan., 1895.

think that estimate could be further reduced to £1,500 per mile? No, I do not think so. I do not see any other item beside that which I have mentioned upon which a reduction could take place.

1230. You are of opinion that this pioneer line might be built upon the American system, and at as low a price as possible, as an experiment, having in view the fact that when the amount of traffic upon it should be ascertained, it could, if necessary, be improved? Yes, I should like to see the American system carried out in this instance as an experiment.

1231. And you would be prepared to reduce the estimate from that point of view? Yes, to the extent I have named.

1232. *Mr. Gormly.*] I suppose the lines you travelled over in America were lines which had been constructed for some years? Yes.

1233. And I suppose they carried a large quantity of traffic? Yes.

1234. I suppose there was a considerable population not only at the termini but all along the lines? Yes, there was a great deal of traffic.

1235. There was much greater traffic on the lines to which you have referred generally than would be likely to take place upon the proposed line from Jerilderie to Berrigan for a number of years? Yes.

1236. And a much greater number of trains were run upon those lines? Yes.

1237. You will see from the report of the Railway Commissioners that they only intend to run a train three times a week over the line? Yes, I see that.

1238. Therefore the traffic would not be so considerable that the line, if not a very permanent construction, would be likely to go out of repair? It would not be subjected to the same wear and tear as the main lines, and I think it would be a very good opportunity to try the method of construction to which I have referred.

1239. It being intended to run the trains only during the daytime, there would not be much probability of an accident occurring, even if some of the sleepers did sink a little? No, not by running during the daytime.

1240. The line would go into a purely agricultural district, and probably the rate of speed would not be very high? Exactly.

1241. So that there would be no great need to adopt any very high standard of construction? There would be no chance of the sleepers settling unless there were very heavy rains, and if that had taken place greater precautions would be taken.

1242. You do not think there would be such a settlement as would be likely to cause an accident? No, I do not think so.

1243. *Mr. Hoskins.*] What has been the average cost per mile of the pioneer railways you have described in America? I did not obtain any particulars of that, because I did not think they would be of much use to the Committee, the prices in the two places being so different. For instance, I ascertained that in the case of a line being constructed in connection with the Burlington and Quincy railway in the north-west they were getting the earthwork done for 6d. per cubic yard. We have never succeeded in getting earthwork done at that price yet. They are not using graders in the case I speak of, so I suppose people there are satisfied with a less return for their labour than are people here.

1244. In your experience the labour connected with the construction of railways in America is cheaper than it is here? Yes, at the present time.

1245. Do you think the cost would be 25 per cent. lower? The actual wages of a labourer are about the same as ours, but they have longer hours. They have not the 8-hour system in America.

1246. Then you cannot give us an average estimate of the cost per mile of these pioneer lines in America? I could not at this moment, but I dare say I could reckon up the cost of the running road, because I have ascertained the cost of the rails and sleepers and everything else. As I have said, I do not think the information would be of much use to the Committee because prices in the two places are so different.

1247. The cost of the rails would be about the same as it is here, would it not? Yes; the production of the mills in America is slightly higher than it is in England; but there is the less handling and in some cases longer distances to consider.

1248. The pioneer lines or unballasted lines which you have described are on level country generally? Yes.

1249. Did you travel over any of these cheap lines constructed in rough or hilly country? No, the roughest line I travelled over was that from Denver to Rio Grande. It is a line of sharp curves and steep grades and a minimum of earthworks and ballast, but they are going on improving it—every day almost.

1250. What is the sharpest curve on that line? The sharpest curve I travelled over on that line was what they call a 16-degree curve. That was 358 feet radius or about $5\frac{1}{2}$ chains; 14 and 12 degree curves are of considerable frequency, that would mean about $6\frac{1}{2}$ chains radius.

1251. That is sharper than anything we have on our mountain lines? Yes; but there is this to be said—the American rolling stock is all provided with centre buffers, and that makes their trains much more flexible than ours.

1252. What is the steepest grade on the Denver to Rio Grande Road? 1 in 30.

1253. What was the character of the roadway on the Denver to Rio Grande line; what was the depth of the ballast and the weight per yard of the rails? The line is continually being improved. A few years ago there were some very severe grades on the line. It had a grade of 1 in 25, but the line has been considerably altered, and now I believe the steepest grade is 1 in 30. Curves of 12 and 13 degrees are of frequent occurrence. There is a curve at Leadville of 16 degrees: the rails are of three weights—52lb., 65lb., and 75lb. There would be about 3,200 sleepers to the mile. The pine sleepers would cost 30 cents. or 1s. 3d., and the red spruce sleepers, which are preferred as being more durable, would cost 35 cents or 1s. 5½d. The life of these is said to be seven years. The ballast is from 6 in. upwards under the sleepers.

1254. In view of the fact that the rails are much lighter than on our lines, and having regard to the sharp curves and steep grades, are there many accidents? No.

1255. Is there not at a place called Marshall's Pass a grade of 1 in 22? That is on the narrow gauge line.

1256. You said just now that the trains are much more flexible than ours, and that they adapt themselves to the rough roads better in consequence of the rolling stock being provided with one central buffer only. Does that practice apply to all the lines? It is the universal practice.

- H. Deane, Esq. 1257. Do you not think it would be much better on our mountain lines, where there are such steep grades and sharp curves, to have central buffers on our rolling stock? You must adopt one practice throughout. If you start with two buffers you must continue them. If you start with a single buffer you must continue it, unless you are at some time prepared to change over your whole rolling stock. You could not work a mixed lot.
- 8 Jan., 1895.
1258. Do you not think it would have been much better, having regard to our steep grades and sharp curves, to have adopted a central buffer instead of two side buffers for our rolling stock? It certainly would be much easier for working round sharp curves.
1259. Do you think the present system increases the wear and tear of the permanent way at all? No.
1260. How long has the Denver to Rio Grande line been working? On the standard gauge, four or five years.
1261. Did you notice in travelling over the American lines, they were generally of a rougher character and had not such a solid permanent way, apparently, as ours, although they contained such steep grades and sharp curves? The Denver and Rio Grande line was, perhaps, the roughest line I travelled over. The lines in the Western States in America are not kept in anything like the good condition that our lines are kept in, but I do not wish to imply that they are really in bad condition.
1262. Does not neglect to keep the permanent way in good order mean frequent outlay in relaying the lines? I made some inquiry about the cost of maintenance, and it seemed to be very little more than ours. In some cases it was about the same. On the American lines you do not get the wear and tear you might expect, and chiefly on account of the bogie rolling stock. If it were not for that the wear and tear would be very severe.
1263. Do you not think, seeing that we have got a fair proportion of rough country to go over, that it would be better to adopt the bogie system in connection with our rolling stock? As regards its effect on construction it would certainly be better, but then the Railway Commissioners would probably say that it would not pay to be running long freight cars in every case for general merchandise.
1264. Is it not a fact that our system of double buffers creates greater friction and greater grinding on the rails upon the curves than is caused in America with the use of the centre buffer? I think it is very likely. You can certainly work round sharp curves better with the central buffers.
1265. Did you travel in Belgium and France? I travelled through France. I went from Paris to Caen and back, and then to Vienna and Buda Pesth; then south.
1266. Did you observe that light railways and steam tramways laid down on ordinary roads were very much in evidence in both France and Belgium? I cannot say that I had much opportunity of observing. My time was very short.
1267. Is it not the case that in France and in Belgium especially light lines have been run into the farming districts to enable the farmers to put their produce on to the trucks at their farms. And do not these lines act as feeders to the main lines? I know that a good many narrow-gauge lines have been laid down.
1268. Did you make any inquiry about them—that is as to their cost and as to their working? I have some particulars as to the 2-ft. gauge.
1269. Your experience was that the cheap light lines which have been laid down on the Continent to act as feeders to the main lines are all narrow-gauge lines? I do not say that none of them are on the standard gauge. I did not inquire specially as to that.
1270. Did not Mr. Van de Velde and Mr. Fischer give evidence on a former occasion before this Committee respecting the light lines of railway which have been constructed in France and Belgium? Yes; I think I remember that.
1271. Did you in the course of your travelling see lines similar to those to which Mr. Van de Velde referred? Yes; that was the Decauville system.
1272. From what you saw, and in reply to your inquiries, do you think that if we were to adopt in this Colony a system of light lines running into the farming districts, and even into the squatting districts, similar to those which have been laid down in France and Belgium they would greatly reduce the cost of carriage and facilitate settlement? I would not recommend them as railways, because I consider that all railways ought to form part of one system. I think a break of gauge would be a great mistake.
1273. I suppose you know that they have got over the difficulty of the break of gauge in America, in England, and in France by a mechanical contrivance which shifts the body of the traffic from one gauge and puts it on to another? I have heard of a number of contrivances for the purpose, but I have not seen one which is an absolute success and which is generally adopted.
1274. I suppose you are aware that they are now agitating in England for the construction of light lines such as exist in France and Belgium in order to reduce the cost of conveying the produce of the farmers to market? I am not sure that what they advocate in England is similar to what they use in France and Belgium. With regard to gauge, I understood that what they advocate in England is cheap railways on the standard gauge—that is, 4 ft. 8½ in.
1275. Is it not suggested that railways of a lighter character than the ordinary lines should be laid down by the side of the road in some cases? Yes.
1276. Are you aware that the Board of Trade has acceded to the application of a large number of persons, and has decided to have a commission to inquire into the propriety of constructing light lines as feeders to the main lines of railway? Yes; when I was in Ireland and Scotland I examined some light lines of railway built under the existing special provisions of the Board of Trade, but they would not do for us.
1277. How is that? They would not be called light railways here at all. They were too costly. They cost from £5,000 to £6,000 a mile.
1278. The opinion you expressed some time ago, before you went upon your travels, as to the propriety of reducing the cost of our railways, and more especially the cost of such a line as that from Narrabri to Moree, has been fortified by what you have observed abroad? Yes.
1279. And you think that it is possible in this Colony to make cheap lines which, although the speed upon them might not be very great, would afford greater facilities than the ordinary roads for promoting settlement and for reducing the cost of conveying produce of small value to the seaboard? Yes.
1280. What is the highest rate of speed maintained on the unballasted lines you have described in America? I have not worked out the speeds, but I can easily do so.
1281. Was it 20 miles an hour? More than that. I suppose it would be from 25 to 30 miles an hour.
1282. [Mr. Humphery.] Did you observe whether in America the main line engines ran over the light lines? The lines I have been describing are really main lines; for instance, the line from Denver to Rio Grande

Grande is a main line, and the southern line from San Francisco is a main line. They have some of the heaviest engines running on them.

H. Deane,
Esq.
8 Jan., 1895.

1283. Would the proposed light line between Jerilderie and Berrigan stand the engines which are run upon the line from Narrandera to Jerilderie if the line were constructed without ballast? I am not sure what engines the Commissioners are using on the line from Narrandera to Jerilderie. The rails on that line are $71\frac{1}{2}$ lb. to the yard. The rails proposed to be used on this line are lighter. It is proposed to use some old iron rails of a heavier type, but the lighter ones which will be used to make up are only 60-lb. rails. I do not think that on a 60-lb. rail any engine heavier than 12 tons to the axle should be used. That is the opinion I expressed in regard to the Forbes line. I said that the engines should be limited to 12 tons to the axle, and I believe it is the practice of the Commissioners to use engines of about that weight on the line. Engines of that character would be used on the line now proposed. I think it would be wrong to use heavy engines on the line. Some of our locomotives run nearly 16 tons to the axle, and they might do some damage. There is one thing I should like to mention because it is interesting. When I was in London and was speaking to Sir Benjamin Baker about the loads which could be used on particular rails, he referred me to a new edition of Molesworth's pocket-book, and asked me if I had not seen his formula for the purpose. On page 223 of that book there is a table showing what weight the different rails will bear. Before coming to this Committee I worked out what weight of rails would be required for the two classes of engines I have mentioned, namely the engines of 12 tons to the axle, and the engines of 16 tons to the axle running about 20 miles an hour. The result is this—for the lighter engine a rail of 57·63 lb. to the yard would be necessary, and for the heavier engines 69·8 lb. to the yard. Those figures correspond very nearly to the weights of the two types of rails used in the country, namely, 60 lb. and $71\frac{1}{2}$ lb.

1284. But you are not sure whether the description of engines now used between Narrandera and Jerilderie could be run on this line? No, I have not inquired. But I am quite sure that the Railway Commissioners in advocating a line of this class will be prepared to use suitable locomotives.

1285. In any case if the line be constructed as proposed by you, it would be unsuitable for the main line engines? Certainly, for the heaviest engines.

1286. What is the difference between the heaviest engines and the next heaviest engines? There are many different classes.

1287. Must a special class of engine be used on the proposed line? No; it would only be necessary to keep away those engines having the severest axle-load.

1288. In giving your evidence in the inquiry into the proposed railway between Jerilderie and Deniliquin you estimated the cost of the line per mile at about £3,300, including some special provision for bridges and culverts which might be done away with to the amount of £245 per mile; in other words the amount could be brought down to about £3,000 per mile. How is it that in this case you have reduced that amount to your present estimate exclusive of ballast? The reduction has been made to meet the demand for these pioneer lines. I think what I have said will sufficiently explain the reason why the reduction has been made. The line proposed between Jerilderie and Deniliquin was of a somewhat heavier type. It was of a more permanent character than this line. The earthworks on this line are altogether lighter, and there are various ways in which a saving has been effected. The sleepers are less costly; they are rougher.

1289. Will you point out in detail how the estimated cost of £3,000 for the other line has been reduced in this instance? The earthworks in the case of the Berrigan line are estimated to cost £225 as against £300 per mile in the case of the other line.

1290. Why did you reduce the cost of the earthworks by £75 per mile? You must remember that I did not make this new estimate. I have not been over the line, but it is probably different country. It does not follow that because a line from Deniliquin to Jerilderie would require earthworks to the extent of £300 per mile, a line from Jerilderie to Berrigan would require earthworks of the same extent.

1291. Although the line in both cases is supposed to pass through exactly the same class of country? The country may be supposed to be the same, but there may be depressions on the Deniliquin line which would require more earthworks than would be required on the Berrigan line. I cannot speak from experience on this particular matter, but probably the earthworks have been cut down in order to make the line as cheap as possible.

1292. Although the country is perfectly level, and is similar to the country between Jerilderie and Deniliquin, the difference of £75 can be saved upon earthworks, you think? Yes.

1293. So that £225 per mile may be taken as a fair estimate? Yes; for the kind of line it is now proposed to make.

1294. I want you to be particularly careful, Mr. Deane, in the way in which you answer these questions, because lately it has been represented that the estimated cost of constructing railways has been largely exceeded? I am told that once or twice during my absence it has been reported that the estimated cost of railway works has been grossly exceeded. Some misapprehension seems to have occurred. Take, for instance, the much abused Milson's Point line. It so happens in regard to that particular line that my estimate has not been exceeded. The estimated cost of the land has been exceeded, but I have nothing to do with the value of the land. My estimate of the cost of the line was £127,000. Having made inquiries from the officers, I am given to understand that the whole of that sum has not actually been paid for construction, there being a balance of £1,200 still available.* If anyone can go nearer than that

in

* NOTE (on revision):—I find that these figures are not strictly correct. Mr. Firth, who was my informant as to the saving in expenditure, was taking the original estimate as being £143,000. The Committee will remember that the estimate first submitted for the Milson's Point Extension, which had a ruling grade of 1 in 40, was £127,000; but afterwards a ruling grade of 1 in 50, with sharper curves, was determined upon, and I gave the additional cost as roughly £16,000. This was before survey. When the survey was completed the earthworks proved to be so much reduced in quantity in consequence of the sharper curves used, that I reported to the Minister that the line could be made for £127,000, the amount of the first estimate. The actual cost of construction, including liabilities, amounts to £141,800, which compared with the £143,000 wrongly taken as the estimate, shows an apparent saving of £1,200. Compared, however, with the proper estimate it looks like a large excess. This amount of £141,800 includes several items which were not provided for and could not have been foreseen. These were—firstly, the cost of substitution of blue metal for white metal ballast, which the contractor should have provided, but which, owing to financial difficulties, he was unable to undertake; secondly, the extra cost of a tunnel, which was ordered in lieu of a cutting, to avoid spoiling certain land on the Berry Estate; and thirdly, an amount of nearly £8,000 spent in widening cuttings, not at present required for the railway, but carried out in order to give the unemployed work. These extras amount to £15,264, which deducted from the total previously mentioned, viz., £141,800, leaves £126,536 as the cost of the works for which the estimate of £127,000 was given.—H.D.

- H. Deane, Esq. in his estimate I think he must be very clever. At the same time I do not claim any infallibility in the matter. I know it often happens that more work, in point of quantity, is carried out than was originally estimated. Perhaps the cost of a certain portion of a work may be under-estimated. Everyone is liable to do that. For instance, it may be necessary to raise a line so as to get out of flood-waters which have never before been heard of. No engineer could be blamed for that.
- 8 Jan., 1895. 1295. Can the same thing be said with regard to the Ocean-street Tramway, for instance? Mr. Lyne took everything in regard to that matter completely upon himself. I was acting entirely under instructions in connection with that tramway, but I can assure the Committee that they have the full value in the work which has been done.
1296. I am putting these questions to you because, very frequently in Parliament attention has been called to the fact that the cost of a work as sanctioned by the Public Works Committee has been very considerably exceeded. In making an inquiry into the cost of constructing this line, I think it is just as well that we should have the cost of all the details of construction, so that hereafter it may not be charged to the Committee that they have failed to make an exhaustive inquiry in this regard? Of course the Committee are entitled to all the particulars for which they like to ask.
1297. I should like you to tell us in regard to what details the difference arises between the estimated cost of the line between Jerilderie and Deniliquin, and the estimated cost of the proposed line between Jerilderie and Berrigan? Taking each item in succession you will find that it is due to a general lowering of the class of line. For instance, the earthworks have been reduced to bring the line closer down to the level. I have already explained that I should prefer to expend more money, but in order to meet the demands for this class of line I have agreed to reduce the cost.
1298. You are of opinion that the work can be satisfactorily carried out at the reduced estimate? Yes. Where few bridges and culverts are required, there are also less earthworks. In country where little or no drainage is required the earthworks are quite sure to be less. That of itself will account for a considerable reduction in the earthworks item. The next item is in level crossings. The two amounts are nearly in the same. In the case of the Berrigan line the sum is given as £92, and in the case of the Deniliquin line £98. The £92 for the Berrigan line includes cattle-stops and fencing. The Berrigan line is to be an unfenced line, consequently there will be considerably less cost.
1299. Do you think £92 will be ample provision for this item? I think so, under the altered circumstances of the fencing being abolished. With regard to the next item, permanent-way material £582, as against £885, I think Mr. Firth has gone very fully into that and explained the difference. But I may say at this juncture that I think that it is scarcely fair to ask me questions on these points to-day, because not anticipating that the Committee would examine me in regard to them, I have not gone into them at all myself.

WEDNESDAY, 9 JANUARY, 1895.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.	JAMES HAYES, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	ROBERT HENRY LEVIEU, Esq.
The Hon. JAMES HOSKINS.	JOHN MOORE CHANTER, Esq.
The Hon. JOHN DAVIES, C.M.G.	CHARLES ALFRED LEE, Esq.
The Hon. CHARLES JAMES ROBERTS, C.M.G.	JAMES GOEMLY, Esq.
EDMUND WILLIAM MOLESWORTH, Esq.	

The Committee further considered the proposed Railway from Jerilderie to Berrigan.

Henry Deane, Esq., Engineer-in-Chief, Railway Construction Branch, Department of Public Works, sworn, and further examined:—

- H. Deane, Esq. 1300. *Mr. Humphrey.*] You were explaining to the Committee yesterday in what way you were able to reduce the estimate of £3,000 per mile, in the case of the proposed line from Jerilderie to Deniliquin, to the amount estimated for this line? I think I had proceeded some way with my estimates. The next item is permanent-way material. In the case of the Berrigan line it is set down at £532 per mile, whereas the average in the case of the estimate of a line from Jerilderie to Deniliquin was £885 per mile.
- 9 Jan., 1895. 1301. Showing a difference of £350? Yes. The present prices of material are very much lower than they were at the time the former estimate was made. Last January we received a quotation for new rails much lower than anything we have had before. The price of the new material required for this line has been reduced accordingly. It is proposed to use 11 miles 10 chains of new material, and as regards the other 10 miles, the Railway Commissioners offer to supply us with old rails from the main lines, which will certainly answer very well, and which will help to reduce the cost. They propose to let us have rails for these 10 miles at £3 per ton.
1302. What was your estimate for rails in the case of the Deniliquin and Jerilderie branch? If I remember rightly, it was about £7 per ton.
1303. Then there will be a difference as regards the particular portion of the line to which you have referred of £4 per ton? Yes; that would mean a difference of £440 per mile, or £4,400 for the 10 miles.
1304. Taking the whole length of the line, that would be about £200 per mile? Yes.
1305. That still leaves £150 to be accounted for? Yes. The rest is accounted for by the reduction in the price of new rails, which I have pointed out. We can now obtain rails in Sydney at £4 10s. per ton instead of the previous prices.
1306. What was your previous estimate? I have not brought it with me. I think it is quite clear that the reduction in the cost of rails to £3 over part of the route, and from £7 to £4 10s. as regards the other part, would account for the difference.
1307. Is there any other item in regard to which there is a difference in the two estimates? All the fastenings for the permanent-way—all the rail materials are somewhat lower, I fancy.
1308. Notwithstanding the reduction upon the former estimate, you are quite satisfied that the estimate you now give is a full one? I am absolutely certain of this—even if I made no further inquiry—that the estimate

estimate formerly made was correct. The change which has taken place in the value of rails, and the getting of a portion of the quantity we require from the Commissioners at second-hand rate, enables us to bring the figures down to the present estimate.

H. Deane,
Esq.
9 Jan., 1895.

1309. The next item, ballasting, would be omitted altogether, I suppose? Yes. But I should like to compare the estimate submitted, with the previous one. In the case of the Deniliquin line, the ballast was estimated at 4s. 3d.; here it is taken at 3s. 6d. You will see that there is a small difference. There is less ballast allowed on this line than on the Deniliquin line.

1310. I see there is an estimate of £667 for ballasting and laying sleepers as against £1,056 for the Deniliquin line;—how is the difference of £400 a mile accounted for? All the permanent-way is put down at a less cost. We are proposing to use only spikes, and to do away with the other fastenings—screws and so on. In this way the laying is done a little cheaper. There is 9d. difference in the ballast, and the sleepers are taken at 2s. 6d. instead of 5s. The 2s. 6d. sleepers are the class which I mentioned yesterday as being delivered at Narrabri at the present moment.

1311. Will the items you have referred to account for the difference of nearly 40 per cent.? I think so.

1312. You consider the allowance of £667 per mile will be ample? Yes.

1313. Notwithstanding the estimate in the case of the Deniliquin line of £1,056 per mile? Well, I can keep it down to the amount I have given. I can put in less ballasting, or I can leave out the ballast altogether if you like.

1314. You will be responsible for the railway. It is not what the Committee would like in regard to the railway? If you will excuse me, I think it is what the Committee would like to recommend Parliament to authorise. If the Committee recommend a cheaper line, such as was recommended in the case of the Jerilderie-Deniliquin proposal, they would be quite justified in doing so.

1315. I understood your estimate would combine efficiency with cheapness? A cheap line is not necessarily as good or useful a line as one which costs more money; still it may answer the purpose. It is like buying a cheap article instead of a dearer one. The cheap article does not wear as well, but it answers the purpose perhaps, and it costs less in the first instance.

1316. I understood you to say yesterday that a line suitable for this particular district might be laid without ballast? Yes.

1317. That it might be a surface line? Yes.

1318. And that you would recommend that form of construction in this case? Yes.

1319. Then, having made that recommendation, you would be responsible for the success or otherwise of the line? So far, yes.

1320. We want to ascertain the lowest cost at which such a line could be constructed? Yes; but when I recommend a line of this class to be tried, it is because you want to have a cheap line. I say that it can be done, that it is safe to do it, and that in this particular class of country it may be well to adopt the method. It does not necessarily follow that I should prefer it. I should prefer to spend more money upon the work.

1321. In the Jerilderie and Berrigan proposal, I see that the item "Miscellaneous" comes to £500, an average per mile of £24. You have also "Contingencies" 5 per cent., and "Engineering and supervision" 5 per cent. Perhaps that might make the amount equivalent to the estimate in the case of the other line? Yes; we have an average of £94 per mile for contingencies, and an average of £94 per mile for engineering and supervision.

1322. That would be included in the £328 estimated for the Deniliquin line? Yes.

1323. There would be a difference of £100 per mile? It is more than that, because the miscellaneous item of £24 would have to include signals, which is put in the other estimate as a separate item.

1324. The difference would be £140 per mile? Yes.

1325. How do you explain that difference? Only that one must get rid of all luxuries—that we must be careful to do so—that is all.

1326. You intend to be more economical in the construction of the Jerilderie and Berrigan line than you contemplated in the cost of the Deniliquin-Jerilderie line? Yes.

1327. To the extent of £140 per mile? In this particular item—yes. I expect the passengers will suffer in one way or another. The travelling public will have to put up with something a little less finished.

1328. This particular item, however, is entirely exclusive of station buildings and what might be regarded as passengers' luxuries? I am aware of that, but it would include platforms.

1329. Your explanation is that you would have to be more economical in engineering and supervision in the case of the Jerilderie and Berrigan line than you contemplated in the case of the Jerilderie-Deniliquin line? Yes.

1330. Having gone through the figures submitted in connection with the Deniliquin proposal and the figures now submitted in connection with the Berrigan proposal, are you still prepared to say that the line could be constructed for £1,830 per mile, everything included? Leaving the ballast out—yes. I have every reason to believe that the line could be constructed in that way.

1331. The way you recommend? Well, I have already explained in what way I have made the recommendation.

1332. But the Committee desire to fix you to your recommendation. Having been to America, and having seen the light lines in existence there, you have no hesitation in recommending their use in this Colony? I would recommend the adoption of the system in this case.

1333. Have you given further consideration to the weight of the engines which should be carried upon this particular line? Yes; I have a little further information to give to the Committee now. The engines which would be used on this line are those classed as C and D. They are a little heavier on the axles than I said I would limit them to, but not very much, and I think there would be no harm in using them. They are engines which are very easy on the road.

1334. Are these engines at present being used between Narrandera and Jerilderie? I believe they are—sometimes heavier engines are also used, but the rails on that line are heavier. I have no doubt that the engines running over the Berrigan line would be limited to the classes I have named.

1335. Will that necessitate a change of engines at Jerilderie? No; they would start from Narrandera and run through. The same engines would be used for the whole branch.

1336. When you speak of "surface" lines, I suppose you mean lines without ballast? There is a little ambiguity about the term. I do not mean that the rails should be laid on the surface without a certain amount

H. Deane,
Esq.
9 Jan., 1895.

amount of formation. But there is a term that is used—surface forming—it is applied to a kind of work with a low formation, not sufficient to require heavy side cuttings. When the term "surface line" is used it is understood to be a line that follows pretty closely along the surface. It does not mean that the surface is left untouched, but that the line follows pretty close to it.

1337. *Mr. Trickett.*] Seeing the importance of these light or pioneer lines of railway, are the Committee to understand that you made special inquiries while you were in America lately with regard to their construction? I made special inquiry as to the best way of laying lines in the first instance.

1338. Did you see any of these lines being constructed in America? When I was in America there were scarcely any undergoing construction.

1339. Did you examine any of those that were constructed? Yes, as I have already said I noticed that many of the lines I passed over had been laid in the first instance in the way I have described and afterwards improved. It is difficult in America to get hold of a line which is in its original state. No sooner is the line made than the improvements commence. I came across portions of lines where there was no ballast, where the country was dry and where the line was practically in its original state.

1340. Are you now able to make a comparison as to whether lines constructed in that primitive way should be suitable for the class of country which it is proposed to open up between Jerilderie and Berrigan? Yes. I think they would be suitable.

1341. You think the rails would not sink into the earth? I think the lines might be made suitable by putting in more sleepers. The traffic on the line would be lighter than the traffic on the lines I saw similarly constructed in America.

1342. You think there is no fear of the line giving way? No.

1343. Will you look at your preliminary minute of the 3rd January, 1895. Let me direct your attention to the following paragraph:—(When a new line is laid across the prairies, or comparatively level ground, I am assured that sleepers are never laid on the surface, however flat it may be. Drainage is always attended to, and the sleepers kept off the ground by first forming a low embankment of earth out of the side drains. Ballast is at first dispensed with unless readily obtainable, but to provide more efficient bearing surface the sleepers are placed much closer together than is the practice in Australia or England).

1344. If the line has to be embanked and if the drainage has to be attended to, as will be the case here, will that not entail a certain amount of expenditure over and above what is now proposed? No; the amount of £225 per mile provides for drainage.

1345. And also for the making of embankments? Yes.

1346. Did you see any scoops at work in America in the formation of tracks? No, I saw no work of the kind going on. The only line of a light character I could ascertain to be going forward was a line in the north-west, which was being pushed forward in connection with the Burlington and Quincy line, but it was a long way from my track, and I did not think it was worth while going up there. It would have taken ten days to make the visit.

1347. Did you make inquiry as to whether the system of scooping the track is satisfactory? Yes.

1348. You found that it was considered satisfactory? Yes.

1349. Is it more economical than the ordinary way of making a formation? It is stated to be more economical.

1350. Do you know whether the lines laid across the prairies or on level ground suffer from flood or in case of heavy rain? I should not think that would be the case on the prairies, but some of the level country lines no doubt do.

1351. How do you propose to avoid any damage of that kind upon the line between Jerilderie and Berrigan—I believe there is very heavy rain there occasionally. How will the water get away? This proposed particular line is pretty nearly on the watershed, I believe. I have not yet been over the route, but that is what I understand. There is very little drainage across the line, and the line is kept low so that if any very extraordinary conditions of rainfall arise, they would not do much damage. Of course it must be expected on all lines of this character that some damage will be done occasionally. But in a line of this kind it is better to let the damage be done and to replace it, instead of going in for expensive works in the first instance. That is one of the ideas involved in these cheap lines.

1352. Then I suppose the damage would be easily remedied? Very easily remedied because the bank is so low.

1353. Do you know if they travel at night in America upon these pioneer lines? Yes; they are not at all particular in America.

1354. Do you know at what rate they travel upon them? At whatever rate the engine-driver chooses, I should imagine.

1355. It is a kind of go-as-you-please? Yes; there is an amount of recklessness about travelling in America that is quite surprising.

1356. Do they have many accidents on these light lines? I do not think they do.

1357. You did not hear of any serious accidents? No.

1358. Do the trains often get derailed? They do occasionally. An American journal is sent to me periodically, and on the first page I have been rather amused to see what is called the most important accident of the week, implying that other accidents are altogether disregarded.

1359. Did you make any examination of the class of bridges and culverts in use on the American light lines, in order to compare them with those in use in this country? Yes; they are mostly of timber—soft wood.

1360. They are not as substantially built as ours? They are much less substantially built. They are built of cheap timber. On the Californian coast they use red wood for almost everything, trestles included, but further inland they use pine. The red wood lasts a long time, but the pine lasts only a few years, when it is replaced. But if they have enough money they afterwards put in more substantial bridges. I saw that going on repeatedly. I saw wooden structures being taken out, and concrete or stone piers, and steel superstructures being substituted.

1361. In the construction of these timber bridges, does the cheapness consist only in the timber used, or does it run through the whole structure? They do not build them so substantially as we do.

1362. They do not tie them so well? They do not tie them so well. Some of them are of very nice design, but some are very weak.

1363. Would it be desirable, in the line from Jerilderie to Berrigan, where culverts occur, or where there are crossings, to adopt the American plan? There is so little work of the kind on the line that I do not think

think it would be worth while adopting it. If we had any larger bridges I should go into the matter, as I intend to do with regard to the Narrabri and Moree line.

H. Deane,
Esq.
9 Jan., 1895.

1364. If we had a large amount of culvert and bridge work in this line, you would be inclined to cheapen the system of construction? I should be inclined to compare the American system with ours. I brought drawings back with me of a number of timber bridges.

1365. With regard to the distance of the sleepers apart, if you adopt the line without ballast what distance would you have between the sleepers from edge to edge? About 18 inches clear from one to the other.

1366. That would be the distance apart that it would be necessary to have them if you had a line constructed on a slight embankment without ballast? Yes.

1367. Do you think that would be a safe running line for traffic at the low rate of speed proposed? Yes.

1368. Did you make any inquiries while you were in America as to the working expenses of the light lines? No.

1369. What do they burn—wood or coal? Both wood and coal, chiefly coal, I think.

1370. A comparison would not be of any service? Not of much service, I think.

1371. *Mr. Davies.*] In the course of your investigations in America, which of the railway services there, recognised as a pioneer line, did you regard as most suitable for the kind of country through which the line referred to us would go? They all adopt pretty much the same style—nearly all the companies. I got several cross-sections of their formations, and I examined at different offices the drawings they showed me. In their system of making the banks and cuttings they are all very much the same.

1372. Is much of the country served by these lines similar in formation to that between Jerilderie and Berrigan? The lines pass through all classes of country.

1373. Did you notice whether the soil upon which the lines were laid was clayey or loamy? In the case of a line which I specially mentioned yesterday, the soil was somewhat sandy—it was pretty dry, similar to that of the interior of this Colony.

1374. It was soil which would not be affected very much by heavy rains? Just so.

1375. By omitting the ballast from the proposed line you expect to effect a saving of £230 a mile? Yes.

1376. Will it be necessary to expend more than the amount of £225 estimated for earthworks? No.

1377. You do not think that it is necessary in order to make the line sufficiently safe to carry the traffic that that estimate for earthworks per mile should be increased? No, I am quite satisfied with it.

1378. Are you aware that Mr. Burge when examined before this Committee said that he regarded the estimate of £225 for earthworks as altogether inadequate, and one which he could not endorse—how do you explain that? I was not aware that Mr. Burge had made that statement.

1379. Let me refer you to Mr. Burge's answer to Question 331. If you read his examination from that point down to Question 336 you will see that what I say is correct. In view of what you have stated do you coincide with Mr. Burge? I coincide with the last statement to which you have referred, that this is a new departure. It is on that account that I recommend it.

1380. You do not coincide with him in refusing to endorse the estimate of £225 for earthworks? No, I do not. I agree with him in probably preferring a more stable line, but I am quite satisfied in this instance to make a line of this character.

1381. Notwithstanding the fact that Mr. Burge has told the Committee that he could not recommend the line at a cost of £2,060 per mile, do you still hold to the opinion that the line could be constructed without ballast for £230 a mile less than that estimate, and that it would still be a safe line for the travelling public and for the carriage of goods? Certainly, under the conditions I have stated.

1382. I understand you to say that we can dispense with ballast? Yes, by putting in more sleepers.

1383. Having a wooden floor as it were for the laying of the rails throughout the whole length of the line? Yes.

1384. You regard the provision of additional sleepers in lieu of ballast as rendering the line perfectly safe? Yes, for the class of traffic that will run over it.

1385. Would it not be very heavy goods traffic and also passenger traffic? Yes, but not express traffic.

1386. What is the annual traffic cost per mile on our railways? I think it is about 4s. 8d. per train mile. I believe that amount was given in the report for 1893. I do not know what amount was given in the report for 1894.

1387. Do you see your way clear to reduce the estimate of £111 per mile for box drains and timber bridges? No, I would not reduce that.

1388. You think the line would be perfectly safe if it were simply provided with earthworks of the character described by Mr. Firth at the rate of £225 per mile? Yes; I think it could be worked with perfect safety.

1389. Is there not at times a very heavy rainfall in this particular part of the country? I have not been over the line, but I understand that it is the reverse of that.

1390. Are you of opinion that sufficient provision has been made to drain the line, and to prevent portions of it from being washed away in the event of storm or flood? Of course, if heavy storms came occasionally the line would have to be repaired, but it would cost less to do that than to make the line much stronger and more substantial in the first instance.

1391. If the line is constructed upon the plan you have now indicated what would be the annual cost of maintenance as compared with that of an ordinary line? It is very difficult to say.

1392. Would it not be much more expensive to maintain than a well-formed line properly ballasted? Yes; I think it would.

1393. Although you would get a cheap line in the first instance it would be a very costly line to maintain? No; I should not say that, because the traffic is so light.

1394. Would it not be much more costly to maintain a line not strongly constructed and ballasted than a line with a very strong formation? Much more costly if the traffic were heavy.

1395. Very much more costly? I would not say very much more costly. It would be very difficult to say to what extent it would be more costly. You will acknowledge, I suppose, that maintenance depends largely upon the amount of traffic going over the line. If you were going to have very heavy traffic it would be far wiser and even necessary to make a strong and substantial line in the first instance, but if the traffic is very light, there would be very little subsidence and very little giving out of the line and so forth, as the result of the traffic. There can therefore be no harm in making the construction light.

1396. I understand that after what you have seen during your visit to America and other parts of the world

- H. Deane, Esq. world in connection with pioneer lines, you are of opinion that we can safely recommend the construction of a cheap line of the character you suggest between Jerilderie and Berrigan? Yes.
- 9 Jan., 1895. 1397. You think it will be perfectly safe to try the experiment there? Yes; looking at it as an experiment no harm would be done, because if afterwards you wanted better support to the road you could ballast it. After the line is once opened you can go on improving it just as they do in America. There, as I have already explained, they lay their lines in a very primitive way in the first instance, and go on improving them from the day that the traffic starts running.
1398. You calculate your sleepers at 2s. 6d. each? Yes.
1399. And the soft-wood sleepers used in the United States I understood you to say, cost from 1s. 3d. to 1s. 7d. each, having a life of about eight years? Yes.
1400. Would not iron bark or red-gum sleepers at half a crown, with a life of, say, thirty years, be much cheaper than sleepers at 1s. 3d. or 1s. 6d. with a life of, say, eight years? Yes; in the long run.
1401. Although the capital cost of the sleepers in the first instance would be a good deal more, the road would be more permanent than if constructed of the class of sleepers used in America? There would be less expenditure in the way of renewing sleepers.
1402. If the traffic developed to such an extent as to warrant a larger expenditure hereafter upon this line it would be possible to strengthen it by ballasting it, still utilising the sleepers and other permanent way material? Yes; the sleepers would always be there, and they would answer the purpose, even if the line had to be so strengthened as to bear the heaviest of traffic.
1403. What would be the cost supposing it were necessary at some future time to strengthen the road by adding ballast? I suppose it would not cost more than is put down in the estimate at the present time.
1404. Would the estimate of £308 for ballasting be sufficient to give about 6 inches of ballast? Yes, quite that, and the ballast could be run along more cheaply by the Commissioners' trains.
1405. So there would be no additional expenditure in that respect, even if it were afterwards found necessary to strengthen the road by adding the ballast? Nothing would be lost in making the road in the way I now suggest, otherwise I should hesitate about recommending it. The advantage is that you can always raise and strengthen your line. Supposing, for instance, your banks were not high enough, you could raise them, you could strengthen the whole line gradually while the traffic was going on.
1406. And you think that the actual supply of the ballast could be carried out more cheaply with the line laid than in the first instance? I think so in this case, because it is doubtful if good ballast can be got in the locality at all.
1407. You said that very little fencing was done in connection with the pioneer lines in America? Very little.
1408. You do not propose in connection with this line to incur any large expenditure in connection with fencing? No, £1,000 is put down.
1409. That would be the fencing round stations and platforms? Yes, it would include fences across allotments or cultivation paddocks, or anything of that sort.
1410. Where do you propose to get the necessary earth to assist you to get the level? By making drains alongside the line—the draining of the line itself.
1411. You are sure you can get sufficient earth in that way to obtain the level you require? Yes, we shall want very little.
1412. The station buildings are to be of a very cheap and economical character? Yes; the accommodation is fixed by the Railway Commissioners, and they are to be very cheap.
1413. Wooden buildings I suppose? Yes.
1414. One of the reasons, I understand, for your being able to reduce your estimate for the construction of this line is that certain concessions have been made by the Railway Commissioners? Yes, in a great measure.
1415. In connection with freight charges, and in connection with handing over to the construction Department, rails at £3 per ton? Yes.
1416. Mr. Hayes.] How many tons of rails would go to the mile? About 110 tons of heavy ones, and 94½ of 60-lb. rails.
1417. Mr. Davies.] You reduce your estimate now to about £1,830 per mile by dispensing with ballast, and by substituting additional sleepers? Yes.
1418. Without any ballast at all, and with 13 or 14 sleepers to the rail you believe that a fairly permanent road could be constructed for that amount? Yes.
1419. What character of traffic would a road of that kind carry? It would depend upon the load on the axle and the kind of rolling stock.
1420. It would not depend on the road itself, but on the rolling stock? It will depend upon the engines chiefly.
1421. You would not be afraid of the road yielding to any heavy traffic in the absence of ballast? No, they would have to be careful in wet weather, and also in the matter of speed.
1422. Mr. Lee.] Was this line from Jerilderie to Berrigan contemplated before your tour in the United States? No.
1423. Had you gone into the question of pioneer lines at that time? Yes. I applied the principle in some measure to the Moree line.
1424. Has this particular line had your personal estimate and supervision? I have been through the estimate to-day.
1425. I mean as regards its initiation? The principle is exactly the same as that which I introduced into the estimate for the Moree line.
1426. At that time I suppose you were under the impression that it would be desirable to use ballast to the depth of 7½ inches? Yes.
1427. But in consequence of what you have since seen in America you think that a really good line could be constructed without ballast? I should hardly like to say that, but the principle of light lines can be extended so as to do away with ballast if we put in additional sleepers.
1428. From what you have seen you think that a perfectly safe line, so far as the carrying of traffic is concerned, can be constructed without ballast? Yes.
1429. The line you now propose is put forward in consequence of what you have seen in use in other countries? Yes; and if the Moree line were to come under my consideration again I should be prepared to cheapen the greater portion of it in the same way, but not the whole of it.

1430. This proposal is altogether a new departure in railway construction, is it not? Yes.

H. Doane,
Esq.
9 Jan., 1895.

1431. Necessarily you have to cut everything down as finely as possible to enable lines of this character to be made through country where there is cheap traffic? Yes.

1432. You think that this line could be constructed for the estimate given by your Department? I believe it can be; but I should require before the contracts were let to have everything ready, so that I could make proper and binding contracts with the contractors, and should not have to hurry on with any portion of the job, and then have afterwards to meet contractors' claims for being delayed. I must have everything complete to start with. That is the only way in which these works can be carried out cheaply. Many works have suffered as regards cost, because that condition has been neglected.

1433. Has the necessary precaution been taken in this case? The time for that has not yet arrived.

1434. Could you give me the actual cost per mile of the line from Culcairn to Corowa? I have made out a statement of the various lines which have been constructed within the last few years. The statement shows the estimated cost, the original vote, and the actual cost.

1435. [Chairman.] The estimate does not include resumption? No. The statement is as follows:—

RAILWAYS.

	Estimate.	Original Vote.	Cost.	Excess.		Decrease.
				£	£	
Culcairn to Corowa	197,300	188,765		193,817	3,483
Kiama to Nowra	381,390	381,390		316,319	65,071
Cootamundra to Temora.....	138,000					
Additional works approved by the Minister	2,900					
Bonus	1,333	142,200	124,575		154,898	12,698
Molong to Parkes—Forbes.....	397,410	397,410			357,919
Milson's Point	127,000		127,000		£126,536	39,491
Blue metal	2,500				141,800	1,977
Extra tunnel	2,500				
Unemployed	7,823	139,823				
Marrickville to Burwood Road ..	99,275		90,250			
Extra bridges	1,500			99,544		
Extra ballast.....	3,000	103,775		Marrickville bridge 2,500		
Lismore to Tweed	867,350	867,350		Extra cost of stations, bridges, &c.	121,044	17,269
Nyngan to Cobar	209,280	209,280		15,500	
Estimates for grades	20,000	229,280		Ballast	3,500	
Totals	£2,458,528	2,386,020		790,398		76,952
				215,539		
				Extra water-ways and banks	60,000	66,259
				Reduction of grades 20,000	295,539	
					2,371,734	98,203
						184,997

With reference to the line from Nyngan to Cobar in which the Committee will see there is an excess of £86,259, additional works were afterwards found to be necessary, and these were not considered when the estimate was made. For instance, floods took place on the line of which previously we had no information. It became necessary to raise the line at those points. These additional works accounted for the difference between the actual cost and the estimate. I ought, perhaps, to explain that the cost I am giving you is in some cases actually over what the lines have cost up to the present time. Certain sums have been added to bring the amounts up to what the lines will probably cost. The accounts are not closed in some cases, and the estimates are all full estimates. In the case of the Cootamundra and Temora line additional works were required at the junction to assist the traffic. This was done at the request of the Commissioners, and the amount was not included in the original estimate. It brought the total up to £142,500. The Committee, I believe, recommended the construction of that line at a certain cost, which was agreed to. With reference to the Marrickville and Burwood Road line it was originally proposed to construct a single road at a cost of £90,250, but after investigation it was found that a double line could be built for 10 per cent. more. The double line added another £9,025. Beside that there were a number of extra platforms and bridges which were not included in the original estimate. There was a bridge at Marrickville Flat which was not provided for, and there were island platforms at the stations which were not included. As the Commissioners point out, although they are more costly at the outset they decrease the cost of running the traffic. The addition of £6,000 for these extra works brings the total up to £105,275 given in the statement. The line is not yet finished, but taking the present cost, and adding the liabilities, as far as they can be added, the total of £109,294 is given. The Nyngan to Cobar line is the only line upon which there is any serious discrepancy, and I have already explained the reason for that.

1436. The proposed extension being in the first place a very short distance, the works being of a very simple character, and there being no bridges, is it fair to assume that the calculations of cost can be made as closely as in regard to some of the greater works you have named? Yes.

1437. You think there is a reasonable prospect of the Departmental estimate not being exceeded? Yes.

1438. After you have visited the locality you may find yourself in the position to recommend still further modifications? I do not think I shall be able to recommend any further reductions.

1439. When you were in the United States, did you notice whether in regard to the mineral or branch lines, a similar gauge to that of the main line was generally adopted? I noticed a great many lines running to mines, the gauges of which were narrower than those of the main lines.

1440. Did the lines belong to the same company as the main lines? They were worked in connection with them. Of course a great many lines of that character are of the standard gauge.

1441. How do they get over the difficulty of the break of gauge in the case where the gauge is different? I do not know that I can give you much information about that, so far as America is concerned, but I can tell you what I saw in the north of Ireland, where there is a narrow-gauge railway running in connection with the Belfast and northern counties line. For instance, there is a 3-feet gauge railway from Balamina to Larne, and from Balamina to Red Bay. They are mineral lines. The bodies of the small trucks carry 4 tons, and the larger trucks into which the smaller trucks are emptied carry 8 tons, so that two small trucks can be tipped into one large one. The trucks on the narrow-gauge line are run over the top of the trucks on the broad-gauge line, and the mineral falls through hoppers into the larger trucks.

1442. That system would be in use for minerals only? Yes; not for merchandise; that would have to be shifted across the platform.

H. Deane, Esq. 1443. The gauge of the main line would be what? Five feet 3 in. I find from my notes that the arrangement for transferring the mineral to the standard-gauge waggons is of a double character, either by hopping or side tipping.
 9 Jan., 1895.

1444. Would the coal run out of the hoppers? I should think so. In the Newcastle district hopper waggon are used for loading ships.

1445. *Mr. Lee.*] Of course the arrangement you have named apply only to minerals; it could not apply, for instance, to grain in bags? No; in the case of grain in bags it would be very easy to make a change if it were all in one direction, by having a slide.

1446. Did you inquire when you were in France into the Decauville system? Yes.

1447. What is the width of the gauge? Sixty centimetres. But they use a broader gauge as well. They use a metre gauge. The 60 centimetre is the favourite gauge.

1448. Is the system much in use in France? It is very largely in use, I understand.

1449. For both goods and passengers? Yes; it is used also for military purposes, I believe.

1450. Is it used for agricultural produce? Yes, it is in use in the beet districts.

1451. Did you ascertain the probable cost per mile of putting down this description of line? I have some particulars from which I think I could furnish the cost to the Committee.

1452. Do you think it would be an advantage to extend our side railways on the narrow gauge or to continue the present gauge? I am quite opposed to any change of gauge. I think the narrow-gauge system should be applied only in altogether detached parts and for special purposes.

1453. Do you think it would be possible by putting down a narrow-gauge line in this particular district to materially lessen the cost of the proposal? Of course a small-gauge railway on the Decauville system would be very much cheaper; they use such very slight rails and such small rolling-stock.

1454. The patentees of that particular form of rails supply it in sections? Yes; the rails and sleepers are riveted together.

1455. Wooden sleepers could not be used if the system were adopted here? No.

1456. You do not think it would be advisable to extend our branch lines on the narrow-gauge system? As a matter of general policy, I think it would be very unwise.

1457. So far as mineral lines are concerned, you would have no objection to the use of the narrow gauge? In the case of that class of line, where the mineral can be so easily transhipped, it would be far less objectionable.

1458. You think it might be advisable to adopt it in those cases? It might be advisable.

1459. But you think that the proposal before the Committee is not a case in which the narrow gauge should be applied? Certainly not.

1460. Upon the line you suggest it would be perfectly safe to travel 15 miles an hour in daylight and carry an ordinary load? Perfectly safe.

1461. And you think as regards maintenance that it may afterwards become a consideration in the other branch of your Department as to whether it would be advisable to strengthen the line or to continue it as constructed, with a slight increase in the cost of maintenance over and above the cost on the ordinary lines? Yes.

1462. In that they will be guided entirely by the traffic? Yes.

1463. *Mr. Molesworth.*] Are you able to give us information to-day as to the average cost of some of the cheap lines in the United States? I have been looking up my notes. I can give you the approximate cost so far as the permanent-way and earthworks are concerned, but I could not give you such items as stations, for instance. I have no particulars in regard to them. I find from what I was told as regards the cost of earthworks in America that the proposal before the Committee is a particularly cheap one, because the average cost of earthworks in lines of this character in America is set down at about £360 a mile.

1464. Have you any idea of the lowest cost per mile for earthworks on these cheap lines? I should think it would be very similar to the amount set down for the Berrigan line.

1465. You think, then, that £225 per mile for earthworks is the lowest figure you have any record of? Yes.

1466. You are still satisfied that that amount is sufficient for the earthworks on this particular line? I believe so. That is as far as I can judge without going over the line.

1467. Before giving a decided answer, I suppose you would like to see the character of the country, and the nature of the soil? Yes.

1468. I should like to refer you to the evidence given by Mr. Burge in reply to Questions 388 and 389, and also in reply to Question 399. Mr. Burge says he would be inclined to add a little more for earthworks, and that if the line were made stronger there would be a saving in the cost of maintenance. Do you not think that in considering the cost of construction it would be well to take into consideration the probable increased cost of maintenance through the cheapening of the earthworks? I do not think it is necessary, in the case of a line of this character, where the traffic would be so light. I think you will find that what is proposed will be perfectly satisfactory.

1469. You do not agree with Mr. Burge that decreasing the cost of the earthworks will increase the cost of maintenance? I think the lowering of the cost of any line would probably make maintenance somewhat more severe. Still I would recommend that this particular line should be made in the way proposed, because the traffic would be so light that the difference in the cost of maintenance would perhaps be scarcely felt. As I have already pointed out, if the line wants strengthening, that can easily be done at any time.

1470. Will you, when you are visiting the district, consider especially the question whether the estimate for the earthworks is sufficient? Yes; I can quite understand Mr. Burge giving such an opinion. Of course he likes, as does everyone else, to be on the safe side.

1471. I suppose you have gone very carefully into all the other details of the estimate? Yes.

1472. And you are quite satisfied that the line can be constructed for about the amount named? I am quite satisfied that if I am enabled to make a proper contract, the estimate will not be materially exceeded.

1473. I presume the estimate is framed upon the assumption that the work would be done by contract? Yes.

1474. There is no intention to carry out the work by day labour? I have heard of no such suggestion up to the present time.

1475. I understood you to say that in America the trains were run as fast on the unballasted lines as on the ballasted lines? I should not say that exactly, but generally they run at a good speed over their lines. I do not think they pay so much attention to the question whether a line has been ballasted or not, as to the question whether the traffic demands quick running. The competition between the different lines is sometimes very severe, and a certain amount of traffic is required to

H. Deane,
Esq.
9 Jan., 1895.

to be carried through within a certain time. Passengers like to travel fast, and if they cannot get fast travelling from one line they will go to another. They will travel fast independently of the condition of the line. Of course, as I have said, when the traffic is increasing the companies strengthen the lines, and this is carried on to a very great extent.

1476. They do not regulate their speed according to the suitability of the lines—it is simply a question of competition? I have not heard of any limit to speed being imposed there. I do not think there is any regulation in the matter of speed.

1477. At the same time, you consider that in this case it would be well to limit the rate of speed in order to ensure safety? Yes. In New South Wales we look after the safety of the public very much more than they do in America.

1478. I suppose the unballasted lines are just as free from accident as the ballasted lines? I have seen no returns. I cannot say.

1479. You have seen the Railway Commissioners' report with reference to this line? Yes.

1480. They make an important condition—that is, that the land required for the line should be granted free to the Government? Yes.

1481. Can you give the Committee a rough estimate of the quantity of land which will be required to be used? The practice has been to resume something between 16 and 24 acres per mile, according to circumstances. If the land were valuable, and were all taken up, then for a line of this character we could probably do very well with an average of 16 acres to the mile. That would give you an average width of 2 chains. Many of our lines—the western and north-western, for instance—are made with a width of 3 chains. There were heavy earthworks in some cases, and the width had to go beyond even that. It depends upon the class of country the line passes through.

1482. *Mr. Chanter.*] As regards ballast, the estimate supposes that the ballast would be procured from Berrigan on the one hand or from near Narrandera on the other? Yes, I believe so.

1483. Could you give us some idea of what the cost of ballast per mile would be? With the quantity proposed to be used it would be £308 per mile, that is two-thirds of a yard to the yard forward, reckoned at the value of 3s. 6d. per yard.

1484. Have you ever made an inspection of the private line running from Deniliquin to Moama? Yes.

1485. You have seen the ballast used there? Yes.

1486. Mr. Whitton, in a report dated the 15th November, 1876, says that the ballast on that line is not of a quality which meets with his approval;—how long is it since you yourself saw the line? I think it would be about six years ago.

1487. What was your opinion of the class of ballast upon it? The line at the time I viewed it was in a different condition from what it was when Mr. Whitton reported upon it. It was quite evident that it had been ballasted and improved very much. It is rather fine ballast—you might call it coarse sand or fine gravel. It is not the kind of sand which would be blown away.

1488. Do you know the weight per axle of the class of engines they are running on that line? I do not remember now, but I think I made inquiries at the time.

1489. Would they not be of a heavier class than those which it is proposed to run on the line from Jerilderie to Berrigan? I do not think so—the rails are only 50 lb.

1490. The company have been in existence for twenty years, and having used no other ballast than that which I have named, and it having been found admirably adapted to their requirements, would it not be advisable to use the same class of ballast in this Colony where heavier ballast could not be obtained? It would be better to use it than none at all, or to, perhaps, go a long distance and spend a great deal of money.

1491. The cost would be materially reduced? Yes. And I suppose that in the case of the Deniliquin line they were compelled to use this particular ballast or none at all.

1491½. They would have had to get ballast along the Victorian railways at a distance of 50 miles? Yes, I suppose so.

1492. That is what you would have to do in this instance—that is, you would have to get it from Narrandera? Yes.

1493. When you visit the district will you give this question of ballast your serious consideration. I should be glad if you would have some tests made along the line of route to ascertain if a sufficient quantity could not be obtained in lieu of the more expensive ballast? You mean that it should be obtained as on the Deniliquin line—yes, I will inquire into that.

1494. There is a length of line going over similar country to that under consideration in Victoria, where the Victorian authorities have used this class of ballast;—do you not think it would be well to give it a trial here? I should not object to using it.

1495. More particularly after the experience of the company I have referred to? Yes. I should prefer stronger and coarser ballast, but if you cannot get that the other would make a very fair road.

1496. Will you also inquire into the value of the ballast I described as a preservative to the sleepers;—it is asserted that this particular ballast is impregnated with cement, and that it has a preservative effect upon the timber embedded in it? I have never heard of that.

1497. What is the average life of a red-gum sleeper? I should think a red-gum sleeper would last nearly as long, if not quite as long, as an ironbark sleeper.

1498. What is the life of an ironbark sleeper? We have had no opportunity of testing it. We have had sleepers which have worn out, and which are still sound.

1499. Are you aware that the sleepers laid down on the Deniliquin and Moama line twenty years since are still in an excellent state of preservation? I should not be surprised to hear it.

1500. The estimate provides for £225 per mile for earthworks on this line? Yes.

1501. It is principally required for the roadway itself? Yes.

1502. Not a large proportion is required for stations? I think not.

1503. What would the formation of the road, without the stations, cost? I do not think the deduction of the stations would materially affect the running cost per mile.

1504. It is proposed to make a formation on the surface 6 inches in depth with a width of 17 feet? Yes.

1505. The estimate provides for two side drains, and the earth taken out of those two drains will be wheeled on to the centre? Yes.

1506. If you can satisfy yourself that this work can be done for about £1 per chain as against your estimate of £2 15s. per chain by ploughs and scoops and horses, would it not be better to adopt that practice? I do not consider a barrow bank line is a good formation. I should have it rolled.

- H. Deane, Esq. 1507. But even a barrow bank formation after it is rolled would not be consolidated so much as a formation made by the constant tramp of the bullocks or horses drawing the scoop? No.
- 9 Jan., 1895. 1508. Are you aware that the municipal councils in this particular district are using the American graders to form their roadways? I did not know that, but I am glad to hear it, because there will be a better chance of getting them used there.
1509. Are you aware that in other cases where graders are not used ploughs and scoops are used, at a contract price of less than £1 per chain for a roadway 9 inches deep in the centre—that is, 3 inches more than you propose—and 18 feet wide as against your 17 feet, with a minimum depth of 6 inches at each side, and with two side drains? I am very glad to hear it.
1510. Would it not preserve the roadway better if, instead of the two side drains being taken out in the way proposed, you had your 6-inch level formed with a batter down to the bottom of your drains? I have not at all decided to have exactly 6 inches in the centre. What I propose to do is to give a considerable rounding to the surface, so as to provide for drainage. But I should certainly allow the contractor, having to use ploughs, scoops, or graders, to have a flat batter for the drains, so as to make it as easy as possible for him. I should not be particular about the side of the drain or embankment, that is as to its being $1\frac{1}{2}$ to 1 and so forth.
1511. After visiting the district and finding that the statements I make can be verified, you may possibly be able to materially reduce your earthwork estimate? I shall be very happy to give an opinion when I have seen the country.
1512. If you find that the municipal districts are doing road work for about one-half the cost you propose, you would take that into consideration in connection with your estimate? I should certainly take it into consideration, but I should not anticipate any reduction being made. There is a difference between a railway road and an ordinary road. In the case of an ordinary road you can alter the grade as often as you like. You have a much greater range of steepness as compared with a railway. In the making of a railway if the ground is lumpy you have to run your grade along with much higher banks, and that will add to the cost.
1513. With regard to the cost of fencing, I see there is an estimate of £75 a mile; is not that excessive for the class of fencing you require? The £75 a mile would be for whatever length might be required.
1514. But if it can be shown on inquiry that similar fencing is not costing other persons more than £40 a mile, could you not reduce your estimate from £75 to £40? I should not like to be bound down one way or the other. I can scarcely tell at present how much fencing is required, but we should probably be able to put up fencing costing less than £75. The contract price on one or two lines has been either 3s. or 3s. 3d. per rod. At 3s., it would be £48 a mile.
1515. Will you, when you are on the spot, make inquiry as to whether it is not possible to reduce the cost of fencing, as well as the cost of the earthworks? It would be a question whether a cheaper class of fencing than we have been in the habit of putting up will answer. I do not think it is desirable to cheapen the fencing very much, because you will get an insecure fence. I think it ought to be done, however, for 3s. a rod.
1516. In all cases where it can be shown that a reduction can be made in this estimate, you will feel in duty bound to make it, so as to give the country a pioneer line at as cheap a cost as possible? I should be only too anxious to keep down the expenditure.
1517. How many station-buildings do you propose to erect? I have not myself seen the Railway Commissioners in reference to that matter. You are, perhaps, aware, that under the Railway Act, they have the sole power of deciding upon the station accommodation. I see from the estimate, however, to which they agreed, that provision is made for a passenger-station and a waiting-shed. That would seem to imply a passenger-building for the terminus, and a waiting-shed for an intermediate station along the road.
1518. *Chairman.*] Your report under date of 3rd January is simply a preliminary report, and will be amplified by you at a later date? Yes; I intend to take up each subject in detail as soon as I can find time to put my notes together. I find that I cannot at the present moment obtain the price of the rails asked for by Mr. Humphery, but I will endeavour to get the particulars he requires by to-morrow.

THURSDAY, 10 JANUARY, 1895.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY.	JAMES HAYES, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	ROBERT HENRY LEVISON, Esq.
The Hon. JAMES HOSKINS.	JOHN MOORE CHANTER, Esq.
The Hon. JOHN DAVIES, C.M.G.	CHARLES ALFRED LEE, Esq.
The Hon. CHARLES JAMES ROBERTS, C.M.G.	JAMES GORMLY, Esq.
EDMUND WILLIAM MOLESWORTH, Esq.	

The Committee further considered the proposed Railway from Jerilderie to Berrigan.

Robert R. P. Hickson, Esq., Commissioner and Engineer-in-Chief for Roads and Bridges and Sewerage, sworn, and examined:—

- R. R. P. 1519. *Chairman.*] You are Commissioner and Engineer-in-Chief for Roads and Bridges, and Sewerage? Yes.
- Hickson, Esq. 1520. You have forwarded to us a minute upon the cost of road construction in the district affected by this railway? Yes; it is as follows:—
- 10 Jan., 1895.

MINUTE PAPER.—Subject:—Road, Jerilderie to Berrigan.

Approximate Cost of Construction.

Department of Public Works, Roads and Bridges and Sewerage Branch,
Sydney, 8 January, 1895.

The total length of the road is 25 miles. It is already cleared throughout.

Metal is only procurable at the two ends,—that is, brought by rail from Cudgel to Jerilderie, 52 miles, and from quarries near Berrigan.

On the trucks at Jerilderie, the cost would be, for 3-in. metal, 9s. per cubic yard; at Berrigan, for 3-in. metal, 7s. per cubic yard. Add a mean cartage of 6 miles at 9d. per cubic yard per mile = mean cost, 13s. per cubic yard.

The

The metal is of only second quality, and one and a half cubic yards to the yard run would be necessary, bringing the first cost for metal stone up to 19s. 6d. per lineal yard of road.

R. R. P.
Hickson, Esq.

10 Jan., 1895.

Formation will cost at per lineal yard.....	9d.
Side-drains (single), at per lineal yard.....	4d.
Blinding, at per lineal yard	3d.
Culverts, say 5 to the mile—per mile	£100

The cost then may be set down as follows:—

Formation—25 miles, at £66	£1,650 0 0
Side-drains—50 miles, at £30	1,500 0 0
3-in. metal, 1½ cubic yards, per lin. yard—25 miles, at £1,716	42,900 0 0
Blinding—25 miles, at £22	550 0 0
Culverting—25 miles, at £100	2,500 0 0
Supervision and contingencies	2,455 0 0
Total	£61,555 0 0

Or an average cost of £2,060 per mile for a metalled road.

The cost of proper maintenance would be not less than £150 per mile per annum, i.e., 225 cubic yards of metal per mile, at 18s. per cubic yard.

A cheaper road could be made by corduroying and forming at, say, £1,000 per mile; but this could not be looked upon as suitable for a road carrying the heavy traffic in wheat and agricultural produce this is expected to bear, and cannot be recommended. Results from this kind of road have not proved satisfactory, and it can only be looked upon as a temporary expedient.

The present annual expenditure on this road is at the rate of £1,100 per annum. For 1894 it was £1,000; for the half of 1895 £550 is voted.

The construction of a line of railway would relieve the Department of this expenditure, but possibly entail the improvement of some branch roads of access from the adjacent country right and left. What this will amount to cannot be stated with certainty beforehand; but as the land is nearly all of good quality, and fit for agriculture, there can be little doubt that considerable development will take place, necessitating expenditure on these approach roads.

ROB. HICKSON.

1521. I suppose that minute fairly well embodies your evidence? Yes.

1522. There will be an officer of your Department to advise the Sectional Committee on the spot if they should be in doubt as to details? Yes. I telegraphed last night to an officer to meet the Sectional Committee at Jerilderie on Monday morning.

1523. *Mr. Roberts.*] The document you have read shows approximately the cost of construction of the road from Jerilderie to Berrigan? Yes.

1524. Have you personally examined the figures, and can you vouch for their accuracy? Yes.

1525. Have you been over the road from Jerilderie to Berrigan? No.

1526. I see you estimate an expenditure of £2,060 per mile for a metalled road? Yes.

1527. If the proposed line were constructed would your Department be relieved of a large amount of the expenditure now incurred in road maintenance? The road would still have to be maintained to a certain extent, because portions of it would act as feeders to the different stations which might be located along the railway line.

1528. And I suppose there would be applications from other portions of the district to be connected with the railway by road? Yes. Roads would be applied for at right angles to the railway.

1529. *Mr. Gormly.*] Have you visited the town of Jerilderie and the Jerilderie district? Not Jerilderie itself.

1530. You are not aware of the existence of any material for making roads, such as gravel or anything of that sort, in that district? Not in that district. It has to come by rail, so the local officer informs me, from a considerable distance. At the other end of the proposed line there is metal.

1531. Do you know of any gravel pits in that direction? No.

1532. Are you aware of the existence in the district of any gravel similar to that found at Urana? I do not know of any.

1533. Do you know whether any attempts have been made by sinking or otherwise to find gravel? Not by sinking—the gravel is generally indicated on the surface.

1534. But your officers have not followed down the surface indications with a view to finding gravel suitable for road purposes? No.

1535. Your Department know nothing of the existence in the district of material for road formation beyond that indicated in the minute you have read to the Committee? That is all.

1536. *Mr. Humphery.*] The figures in the statement you have read are supposed to represent the ordinary cost of country roads in similar districts? They are based upon the figures actually sent me by the local officer—on the cost of material in this particular district.

1537. What would be the ordinary cost of a road through a district similar to that between Jerilderie and Berrigan? It is very difficult to say, because hardly any two of the districts are situated in exactly the same position in regard to either available gravel, or stone, or burnt clay, which is sometimes used. Anything of an average which I might give you would, I think, be misleading—it would not be of any use. This estimate is based upon the prices at which the local officer informs me he could put the material upon the road.

1538. Would a road of the character to which your estimate applies be necessary for such a district as this? This is a first-class road with 9 inches of metal, 3 inches more than we usually put.

1539. Is it customary to put such a road in such a district? It is not, because we do not get funds for it, but it should be done.

1540. You think this expenditure is necessary to make a first-class road? Yes.

1541. What is the cost of the road between Temora and Barmedman? I could not say.

1542. I suppose you know the road? Yes.

1543. Could you not say approximately? I could not say without looking up the papers.

1544. It is a gravel road, is it not? Yes.

1545. I suppose that the building of such a road as that for which you have given an estimate in this particular district would be an entirely new departure? No.

1546. Where is there a similar road to be found in any agricultural district? There is the main road from Goulburn to Cooma. That is a metalled road right through. It is a magnificent road, and it has cost a great deal of money to build it.

1547. Would this road be intended for a main road? It would be a main road in the sense of carrying a very heavy traffic, although it would not be a gazetted main road.

1518.

R. R. P. 1548. *Mr. Trickett.*] You have had a large experience in the supervision of road-making in the Colony? Hickson, Esq. Yes.

10 Jan., 1895. 1549. I understand that in the country, which would be served by the proposed railway, the soil is of a soft loamy character? There is black soil and red soil—black soil on the plains and red soil on the rises.

1550. In the construction of the proposed railway, it is proposed to put the sleepers on that soil, slightly embanked with earth taken from the side drains. It is proposed to put the sleepers down without any ballast; do you think such a road would be likely to stand the traffic over it without sinking? It all depends upon the speed.

1551. It is proposed to run at the rate of about 15 miles an hour? I think it would stand that.

1552. Without any sinking? I think so.

1553. Seeing that this road would be very level, and that it will have no ballast, do you think it would be frequently damaged by heavy rains? I do not think so.

1554. Supposing the sleepers were put at a distance of only 18 inches apart, would much damage be likely to result from rainfall? I should think not with the sleepers as close as that.

1555. From your knowledge of this kind of country, do you think the Committee would be justified in recommending a pioneer line such as I have just described without ballast, and with the sleepers only 18 inches apart? I think, speaking generally on the subject, that it would be much more economical in cases similar to this to put down light lines of railway instead of the roads we attempt to make.

1556. Lines without ballast? The class of line you suggest.

1557. You think that the experiment in this class of country can very fairly be made? Yes, so long as you keep the speed down.

1558. *Mr. Davies.*] In you estimate of 25 miles of road in this district, what would be the width? There would be 18 feet of metal.

1559. Would that width of metal with 25 miles of the road cost, in regard to metal alone, £42,900? Yes, if you lay it 9 inches deep.

1560. Would you propose to ballast the road first? No, the officer recommends that ballast should not be put in. He thinks it would be better to put the metal in without ballasting.

1561. Do you not think you could form a road of this character very much more economically by putting in ballast first and metalling on the top of it? It makes very little difference in the cost.

1562. You have assumed that blue metal will be used? Yes; the best metal we can get there.

1563. Could you not purchase ordinary ballast at a much cheaper sum than that estimated, delivered at Jerilderie? It would not be so very much cheaper than the metal, because the main cost would be in the carriage. The estimate is based on the railway charges, but I cannot tell you what they are, because I have not the particulars before me.

1564. This estimate is based upon data supplied to you by your local engineer? Yes.

1565. Can you tell me of any district in the Colony which has a road 18 feet wide costing £2,060 per mile? I am afraid not, because we never get enough money to make roads properly.

1566. If you had the necessary money voted, you would advocate the making of a road of this character in the first instance? Yes; especially for the character of the traffic which would be carried by this road.

1567. You would prefer to make a good permanent road in the first instance if the necessary money were placed at your disposal? Yes.

1568. But you cannot point to any road 18 feet wide which has cost £2,060 per mile? I am almost sure we have such roads, although I cannot tell you at this moment exactly where they are. Of course a great deal of the cost of £2,060 in this particular instance would be incurred on account of the carriage of the material.

1569. Have you hitherto had many complaints as to the state of the road in this particular district? Yes.

1570. You estimate that it costs something like £1,100 a year to maintain the road? Yes.

1571. And you think that is inadequate to maintain the road in a proper condition for traffic? It can do very little good in the case of one of these black soil roads. The only thing to do is to metal them in the first instance, but we never get money enough for that.

1572. Would you be surprised to hear that the estimate for the proposed line is about £1,830 per mile, whereas you estimate that it would cost £2,060 for a metallised road 18 feet wide? I am aware of that; but I think these light lines without ballast and laid on the surface ought to be carried out pretty cheaply.

1573. You think that if a railway can be built for £1,800 per mile it would be preferable to a road costing £2,030 per mile? Decidedly.

1574. Both as regards speed and economy of maintenance? Yes. Besides, the fact that the railway would give greater facilities, you get some return from it, whereas you get none from a road.

1575. You state that more money will have to be spent than is estimated on minor roads? Yes; to make feeders to the different railway stations.

1576. It will be a saving to your Department if the line is constructed? Yes.

1577. It will serve the district better than a road, and would give a return for the money expended? Yes; it would give some return at all events. Of course I cannot say how much.

1578. Whereas a road would give no direct return? No.

1579. *Mr. Lee.*] Roads in flat black soil country are always more costly to make than in hilly country? A great deal more costly.

1580. I suppose you could not put down a good substantial metal road in that class of country where metal is scarce under a cost of about £2,000 a mile? No.

1581. It would require a pretty good road to carry a traffic of 17,000 tons a year, would it not? Yes.

1582. If it could be shown that the proposed railway would give interest on the capital expended at 3½ per cent., and would repay the cost of maintenance—a total annual expenditure of £3,073—or £100 a year less than it would cost to maintain a road, would you not consider that a very strong reason for the building of a railway in preference to a road? I think it would be a very strong reason.

1583. It has become a question whether country of this character should not be opened by light lines of railway in preference to expensive roads? I do not think there can be any question at all on the point.

1584. But the matter has been considered by your Department? Yes.

1585. If an undoubted saving could be shown, you would not hesitate to recommend the construction of railways of this kind in preference to roads? Most unquestionably.

1586.

1586. *Mr. Molesworth.*] Could you tell us, approximately, what has been the cost of the road now in R. R. P. existence? I cannot say. No sum has been specially voted for construction. It has been maintained Hickson, Esq. in its original state by annual vote for a great number of years.

1587. I should like to ascertain what is the total sum which has been expended upon the road from Jerilderie to Berrigan? I can obtain for you the total amount which has been expended, but I cannot distinguish between maintenance and construction. 10 Jan., 1895.

1588. It takes £1,000 a year, or more, I understand, to maintain the road in an effective condition? About that.

1589. At the same time you are not satisfied with the condition of the road for the traffic it is called upon to bear? I am not.

1590. To make it a good serviceable road a large outlay would be necessary? A considerable outlay.

1591. On account, I suppose, of the peculiar nature of the soil? Yes, and from the absence of any road-making material in the neighbourhood.

1592. Although this £1,000 a year for maintenance would not be required if the railway is constructed, I understand from you that a large amount would be required to maintain the different roads which will act as feeders to the railway? Yes.

1593. I suppose that nearly the whole of that sum would be required? That is a difficult question to answer, because the making of this railway may have the effect of bringing about new settlement, then there would be the question of new roads leading to the expenditure of a certain sum of money. The probability is that the leading and branch roads would involve the expenditure of more than £1,000 a year. It would be difficult to answer your question until we saw to what extent the country was likely to be developed.

1594. You do not think there will be any great saving in the annual road vote of the district in consequence of the construction of the line? Not as regards the whole district.

1595. You think the trade of the district would be likely to increase to such an extent by means of the railway, that quite as much road expenditure would be required? Yes; but in one case we should be expending the £1,000 a year without getting any return at all, but in the other case by expending the £1,000 a year on the maintenance of branch roads to the line we should be getting a return for the railways all the time.

1596. *Mr. Chanter.*] As a matter of fact in this part of the Colony you can practically provide only for summer traffic by earthwork formations or culverts? Yes.

1597. From the absence of metal of any kind, and from the want of sufficient funds, it is impossible to give an effective road for winter traffic? Quite impossible.

1598. It is only at stated places, at good distances from each other, that any metal is obtainable? Yes.

1599. In this instance you would have to obtain the metal from near Narrandera? Yes, at one end, and at Berrigan at the other end.

1600. At the Berrigan end it is granite? Yes; but it would do for the road.

1601. With regard to your estimate for formation, you give the cost of the lineal yard at 9d., or £66 per mile—that formation would be how wide? It would be 30 feet wide.

1602. Is that from drain to drain? Yes.

1603. What would be the absolute formation of the road proper? 18 feet.

1604. What is the average depth of the earthworks in that formation before you put the metal on? About 6 inches.

1605. I suppose it would run from about 9 inches in the centre to about 6 inches at the sides? Yes.

1606. This estimate I suppose is based upon your actual experience of the cost of this class of work in the district? Yes.

1607. I suppose the same estimate would apply to the side drains? Yes. All these prices are prices which the local officer has given for similar work.

1608. Are you aware that the depth of earthworks provided for in the case of the proposed railway is only 6 inches, that is as regards the formation? I do not know what the railway proposal is.

1609. There will be less earthwork in connection with the railway than you propose to put into your road formation? Possibly.

1610. You know from your own experience in the district that road formation can be done at £66 per mile? Yes.

1611. It is usually done in this district with ploughs and scoops, is it not? Yes.

1612. In using the ploughs and scoops, I suppose there would be more consolidation in consequence of the trampling of the cattle drawing the scoops than there would be in the case of men putting the material on by barrows and planks? Yes.

1613. In your opinion such a road would be, if anything, a little more solid than a road made up with barrows? Yes.

1614. The estimate for the earthworks of this railway, 16 feet wide and 6 inches deep, is given at £225 a mile. Taking your own experience, do you not think that that is an enormous estimate? I should not like to give an opinion until I know all the circumstances of the case. It seems high, but I should not like to express an opinion with regard to a railway estimate without knowing the whole proposal. There may be drainage provided for under the heading you have given, and I do not provide for that.

1615. You are satisfied that you will succeed in getting your earthwork done for the price given in your estimate? Yes.

1616. If the earthwork can be done at that cost for road purposes, do you not think that it ought to be done at a similar cost for the Construction Branch of the Railway Department? If the circumstances are the same, certainly.

1617. Will you instruct your district officer to give evidence to the Sectional Committee with reference to the cost of formation, including side-drains? Yes.

1618. You propose a concave formation from the centre of the road to the base of the drains? Yes.

1619. Would not that be an improvement for railway purposes, instead of having two side-drains? You must have a flat surface for the sleepers.

1620. But could it not be battered down from a point at each end of the sleepers to the base of the drain? I should think so. I do not know that I would commence the slope from the very end of the sleepers—you would want a little heel as it were; but at from 6 inches to a foot from that, it might be better to slope it down.

1621.

R. R. P. 1621. *Mr. Levien.*] I suppose you do not know of any roads in the Colony that give any return? None Hickson, Esq. of the roads give any direct return.

10 Jan., 1895. 1622. And you think that if a good road were made in this district the cost would be about £2,000 per mile? About that.

1623. Has the Minister or the Under Secretary of your Department given any instructions for the curtailment of expenses so far as the road vote is concerned? No.

1624. In no way whatever? No.

1625. You have spoken of the possibility of by-roads to the railway being necessary in this particular district;—are you aware that in certain cases where persons have required similar roads they have been informed that the Department would give £1 for every £1 that is subscribed locally? I believe that suggestion was made twelve or eighteen months ago, but it has never been carried out.

1626. Have not letters been sent to different Members of Parliament telling them that if they could get so much money subscribed from various districts the Department would give a certain amount? I cannot say what letters may have been written by the Under Secretary to that effect.

1627. Has not such a letter been written in regard to roads in my own district in three or four instances? About twelve or eighteen months ago it was suggested that in the case of parish roads persons should subscribe something towards them locally.

1628. Have not such letters been sent out within the last three or four weeks from your Department? Not to my knowledge; I do not correspond with Members at all.

1629. You have given no instructions for the issue of these letters? No. I know that for a considerable time letters were sent out to that effect. In some cases the residents were asked to subscribe £1 to the £1, and in other cases 10s. and 5s. to the £1. It would depend upon the number of persons served by the road.

1630. *Chairman.*] I suppose it amounts to this—that in cases where you could not regard the road as of national importance, you asked those who were privately benefited to help you in the construction? Yes.

1631. Do you know if any such arrangement has been in existence in the Jerilderie and Berrigan district? I do not think so. I do not know of any case of the kind in that district.

William Alfred Bullard, Esq., late Temporary Surveyor, Railway Construction Branch, Department of Public Works, sworn, and examined:—

W. A. 1632. *Chairman.*] You are at present employed under the Water and Sewerage Board? Yes.

Bullard, Esq. 1633. You were formerly employed in the Construction Department of the Railways? Yes; up to 10 Jan., 1895. fifteen months ago.

1634. I believe you surveyed a line from Jerilderie to Berrigan? Yes.

1635. Have you presented an official report with reference to the line? Yes.

1636. Are the plans and specifications lying upon the table prepared in accordance with your plans? Yes.

1637. I suppose your report would embody the chief evidence you would wish to give to the Committee? Yes; it is as follows:—

JERILDERIE TO BERRIGAN.

Sir,

I have the honor to forward my report on the line of proposed railway from Jerilderie to Berrigan.

This line commences at a point at 411 miles 74 92 chains at Jerilderie, and terminates at 433 miles 3 84 chains at the village of Berrigan, the distance being 21 miles 8 92 chains. There are two creeks crossed by the line, viz., Algudgerie Creek at 412 miles 36 chains, and Berrigan Creek at 426 miles 64 chains, a timber opening being required at Algudgerie Creek, Berrigan Creek being crossed by the line by embankment of dam.

Timber for fencing purposes could be obtained, but none suitable for sleepers, &c.

Good ballast and a sufficient supply can only be obtained at Green Hill, situated 1 mile south of the village of Berrigan. There is no permanent supply of water for engine purposes along the line of route.

I have, &c.,

WILLIAM A. BULLARD.

1638. As a surveyor making a trial survey for this line, you did not get out the quantities? No.

1639. That is no part of your business? No.

1640. Therefore, you can give us no information as to quantities? No.

1641. Your work is, primarily, the location of the line? Yes.

1642. Could you tell us why you took such a sharp turn in coming out of Jerilderie? I acted upon instructions from the Department.

1643. You had instructions to survey, you came out by the easiest curve you could get, and you made straight to Berrigan? Yes.

1644. There are other curves further along the line, why are they made? On account of the crossing at Berrigan Creek, and severance along the road.

1645. By traverse of the line in the first instance, and by direct bearing, you could run it out absolutely straight from end to end? Yes; I should think that might be done.

1646. Do you think the line is properly located? Yes.

1647. It is located as well as it could be? Yes.

1648. And there your work ceases? Yes.

1649. What are the creeks on the line like—are they liable to floods? The first creek—Algudgerie Creek—is a very shallow creek.

1650. What depth of water is there? I only noticed about 2 feet of water in Algudgerie Creek.

1651. What would be the width? From 3 to 4 chains.

1652. Is the Berrigan Creek a more important creek? Perhaps it is a little deeper.

1653. The two creeks are virtually of the same class? No; the Berrigan Creek has banks, the Algudgerie Creek has not.

1654. *Mr. Gormly.*] I suppose you took out levels in making your trial survey? Yes.

1655. Have you plans of the levels? I have the sections.

1656. The sections show that the line will be constructed 6 feet over the bottom of the Algudgerie Creek? Yes. As well as the creek can be defined, the plan shows a width of from 3 to 4 chains.

1657. What waterway is provided for? The officers of the Department will fix that; I have nothing to do with it.

1658. Going on from the creek towards Berrigan, what would be the formation of the country—black soil or red soil? Loamy soil.

1659.

1659. Is there any timber in the immediate vicinity of Jerilderie? Very little till you get to Berrigan. W. A.
 1660. At what distance from Jerilderie do you get into the timbered country? I suppose at 14 or 15 miles. Bullard, Esq.
 1661. It would be chiefly black or red soil plains? Yes.
 1662. In traversing this 15 miles would there be a greater proportion of black or of red soil? I fancy it is chiefly black soil.
 1663. The red soil plains are harder and drier than the black soil plains? Yes.
 1664. What proportion of red soil plain would there be in the distance of 15 miles? Perhaps one half would be red soil.
 1665. Is there any other depression with the exception of the crook you have named in the 15 miles? Yes, there is a swamp.
 1666. What is the width of it? About 30 chains.
 1667. What is the depression in the swamp? It is on the average 2 feet from the ordinary level.
 1668. Then that 30 chains would require an embankment of 2 feet to reach the level of the ordinary ground? Yes.
 1669. There would be only that 30 chains requiring any considerable embankment, I suppose, over the whole distance of 15 miles? Yes, I think that is so.
 1670. What is the class of country after you pass the 15-mile peg; would it be timbered country? Yes.
 1671. Sandy loam? It is red soil, I think.
 1672. It is proposed to cross the Berrigan Creek on a dam? Yes.
 1673. Was that suggestion made to you by the Construction Branch? Yes; I was instructed to cross there.
 1674. Have you any decided opinion as to whether this is a desirable mode of crossing the creek, or were you simply guided by the instructions of the Department? I think it would be best to cross the creek on a dam.
 1675. Of course, some provision has to be made for the by-wash? Yes.
 1676. In crossing the creek on a dam, you would have to provide for the water running under the line on either side of it? I suppose so, but I did not consider that point—I was simply instructed to cross there.
 1677. Are your duties simply to make surveys in accordance with instructions, or do you use your own judgment in selecting suitable country upon which to construct a line? We generally use our own judgment.
 1678. But in this case you were simply carrying out instructions in crossing the Berrigan Creek on a dam? Of course, if the Department wish us to cross a creek at any particular point they instruct us to do so.
 1679. It would be 6 miles from the crossing to Berrigan? Yes.
 1680. Through what class of country? Timbered country.
 1681. Heavily or lightly timbered? Not very heavily timbered.
 1682. Would it cost anything considerable to clear the timber off the line? No.
 1683. Is it chiefly ringbarked timber or is it growing timber? It is a mixture.
 1684. Would the greater proportion be ringbarked? No; there is more growing, I think.
 1685. Is any of the timber suitable for fencing purposes? I think some of it could be used.
 1686. Was there any pine on the line? Not much pine that I can remember; I fancy that it was box—forest box.
 1687. Portion of it would do for fencing posts? I should think so. Of course there is not much of it.
 1688. Going to, say, a distance of 6 miles or to any reasonable distance from the line, would there be sufficient timber to provide posts for that portion of it? I could not say.
 1689. Did you in making your survey find any gravel formation? Here and there, but there was very little of it.
 1690. Did you gather from the indications that if pits were sunk suitable gravel might be found for road-making? I do not think so.
 1691. Have you made any other trial surveys in the Riverina country? Several.
 1692. What line? I surveyed the line from The Rock to Murray Hut.
 1693. Did you go over any gravel formation in making that survey? Yes; I think the hills were all gravelly through there.
 1694. Have you been at Urana? Yes.
 1695. You know that a quantity of gravel has been found there? Yes; about Lake Urana.
 1696. Did you, between Jerilderie and Berrigan, see any country similar to that, where there would be a prospect of getting gravel for road-making purposes? Not that I can remember.
 1697. Did you see any flood indications between Jerilderie and Berrigan? I did not.
 1698. You did not see any depression indicating that there had been floods in the neighbourhood? No.
 1699. I suppose if there had been floods there would be depressions caused by the carrying off of flood-waters? I should think so.
 1700. Do you know the annual rainfall in the district? I do not.
 1701. If there were a rainfall of 4 or 5 inches in a corresponding number of days, should you think from what you saw that there would be any possibility of water accumulating at different points along the line in sufficient quantities to damage it, or do you think it would run through the culverts and other drainage provisions on the line, without damage to the construction;—what I want to know is whether you think the water would be likely to spread out over a certain extent of country, or whether it would run away? I should think it would spread out.
 1702. You think it would not materially damage the line? No.
 1703. Have you ever heard of a rainfall of 4 or 5 inches in a week in this particular part of the country; do you think there is much probability of such a rainfall taking place? I never heard of such a fall there.
 1704. You think that for that part of the country it would be an exceedingly heavy fall? Yes.
 1705. Therefore you think that the heaviest fall which is likely to take place in the district would not be likely to damage the line? No.
 1706. You think the possibility of flood-waters damaging the line is very remote? I should think so.

10 Jan., 1895.

WEDNESDAY, 30 JANUARY, 1895.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.
 The Hon. JAMES HOSKINS.
 The Hon. JOHN DAVIES, C.M.G.
 The Hon. CHARLES JAMES ROBERTS, C.M.G.
 JAMES HAYES, Esq.

ROBERT HENRY LEVIEEN, Esq.
 JOHN MOORE CHANTER, Esq.
 CHARLES ALFRED LEE, Esq.
 JAMES GORMLY, Esq.
 EDMUND WILLIAM MOLESWORTH, Esq.

The Committee further considered the proposed Railway from Jerilderie to Berrigan.

Henry Deane, Esq., Engineer-in-Chief, Railway Construction Branch, Department of Public Works, sworn, and further examined:—

- H. Deane, Esq. 1707. *Chairman.*] You told us you desired to give evidence after having visited and inspected the route from Jerilderie to Berrigan? Yes.
- 30 Jan., 1895. 1708. Have you made that inspection? Yes; I have been over the line.
1709. The Committee propose to examine you first in regard to the new route suggested by the Sectional Committee, and afterwards to deal with the question of construction. Are you aware of the new route suggested by the Sectional Committee? Yes.
1710. Are you prepared to express an opinion with regard to it? I think it is a very satisfactory route. Altogether it is an improvement. If you can bring the line alongside the road, or the road alongside the line, it is far better than adopting a route across the country.
1711. You think it is an improvement in that the main road follows the railway? Yes.
1712. That is an advantage always if it be possible? Yes. If it can be managed that, where the line diverges from the main road, the position of the main road can be altered, and brought on to the line a great deal will be gained.
1713. Is there any engineering reason why the line should not be taken by the proposed new route? No.
1714. Is it any longer? It will be about a quarter of a mile longer, so far as I can tell at present.
1715. Is it practically about the same length? Yes.
1716. Within a quarter of a mile? I do not think the difference would be more than that.
1717. You see that the new route does away with the severance of the properties in the vicinity? Yes; on that account it is a great improvement. It would seem to me also to have two other advantages:—It goes close to Wonnamurra, and it would be possible, by putting a siding in there, to take the wool from that station, and have the carriage of it to Jerilderie; otherwise, no doubt, the owners of the station would themselves have it carted to Jerilderie. This would not be very much, but still it would be something. Then again, if the line is carried along the main road it will serve the residents in the district a great deal better because they will have roads of access.
1718. It would save the construction of roads of access? Yes.
1719. Would you have any trouble in getting out of the Jerilderie Station with the line as now suggested? No; in that respect it would be just the same as before.
1720. Therefore you view it as a satisfactory route from an engineering standpoint? Yes.
1721. *Mr. Hoskins.*] I gather from the replies you have given to the Chairman that you consider the route suggested by the Sectional Committee a better one than the original route laid down by the surveyor? Yes; on the assumption that the main road can be altered so as to follow the line.
1722. That is to say, if the Land Act provides that a portion of the road can be exchanged for another portion of land, then this new route will be much superior to the one originally laid out? Yes.
1723. What instructions were given to your surveyor when he was sent to survey the country for a line between Jerilderie and Berrigan? To take the most direct route, I expect.
1724. Did he do so? I think he took as direct a route as he could get without interfering with the roads and the properties, and in view of getting a good crossing at the creek. It was a trial survey, and therefore subject to slight modifications.
1725. If you accept the route suggested by the Sectional Committee there will be something more than slight modifications? Yes; very important modifications.
1726. Have not surveyors instructions when making trial surveys to get the best possible route for a railway to a given point, and as far as possible to avoid taking private land? Yes.
1727. Or causing the severance of private land? Yes.
1728. Would the line originally laid out by the surveyor in this instance meet that condition, having regard to the fact that there are so many persons complaining of their land being severed? There would not be much in the way of severance, even on the original route, if the line remained unfenced, because stock would be able to cross the line without impediment.
1729. Do you think that if this surveyor had exercised ordinary prudence having regard to the cost of the construction of railways and the difficulty in finding money to make these lines, he could have surveyed a better line than he did; and did he exercise the prudence and skill which might have been expected? Except the line suggested by the Committee, I do not see that anything very much better could have been obtained. The line suggested by the Committee is better than the other line, but it involves an alteration in the position of the road which was not considered before.
1730. Is it not also better in this important respect, that not so much private land will be taken, and, therefore, not so many claims for compensation for severance be made against the Government? Yes; anything that avoids compensation for the severance of the land is better. But I do not think that even in connection with the old route there would be very much liability on account of severance, because the line would remain unfenced.
1731. Supposing an agitation were made to have the line fenced, would not claims for severance then come in? Yes, if the line were fenced.
1732. Has it never struck you that the preliminary or trial surveys of railways made by some of our surveyors, have not been made with due care in regard to taking the best routes, and avoiding private land as far as possible; I refer to railways that have actually received the sanction of Parliament; and is not

not this case an illustration of the fact? I think you can scarcely judge from the trial surveys in that way. You should judge from the actual position of the permanently-staked line. A surveyor may make an error in judgment in the selection of a line, but it would not be worth while going over that line and spending another two or three months just for the sake of altering it to another position, when the cost would be practically the same.

H. Deane,
Esq.
30 Jan., 1895.

1733. But in this case, if you accept the line sketched out by the Sectional Committee, will not the cost be considerably less than would be the case if the old route were adopted, inasmuch as you will not have to take so much private land, and pay compensation for it? I believe that will be the case. But in one item the cost will be more. I was going to propose a reduction in the cost of fencing, but I cannot do that if the new route is adopted, because fences will have to be erected. Nearly the whole of the road is fenced, and these fences would have to be shifted back and re-erected so as to accommodate the new line.

1734. Still you would only use the fences that exist at the present time? It would, nevertheless be an expensive matter. It is almost as costly to shift a wire fence and re-erect it, as to erect a new one.

1735. Was the fencing at the side of the roads you are speaking of erected by the occupants of the land, or by the Government? I cannot say.

1736. You cannot say, then, whether the fence really encroaches upon the proclaimed road or not? No; I have not checked that.

1737. Having travelled over the line recommended by the Sectional Committee, you are aware that the greater portion of it is the main road from Jerilderie to Berrigan? Yes.

1738. Is not a proclaimed road of sufficient width on which to work a single line of railway, with occasional sidings at important places, as well as to work a road for dray traffic? No.

1739. How are you going to manage if you are going to lay down a railway on the road? You will have to take in more land; set the fences back, and take a strip of land—say another chain.

1740. All the way through to Berrigan? Yes.

1741. What distance will that be—it will not of course include the common? No; but practically all the way through to Berrigan. In some parts of the main road the width is 3 chains. I consider that 4 chains will be required for the railway and the road together. In other parts the road is less than that in width, and there, of course, a greater area will have to be taken.

1742. Will not purchasing another chain of land in width, and increasing the width of the road and railway, be an expensive matter, and rather increase the cost of the proposed line? I do not think so, because there, at any rate, you will have no severance to pay for. Supposing we only took a chain, that would be 8 acres to the mile. I do not suppose that on the average it would require more than a chain, because the line will go through two reserves, one at the Jerilderie end, and the other some distance down the route.

1743. *Mr. Davies.*] Did you traverse the whole length of the deviation proposed by the Sectional Committee? Yes.

1744. What is the narrowest point on the road, where the railway will run parallel with the existing road? I could not tell you at the present moment. I have given instructions to Mr. Jamieson, the surveyor, to send me the particulars of the road.

1745. You have just stated that it would require something like a chain wide the whole length of the route? Yes, an average of a chain wide.

1746. How has anything of the kind become necessary? Because a width of 3 chains is not sufficient to take both the railway and the road.

1747. You say that 3 chains is not sufficient to carry the traffic of a single line of railway, and the traffic that would be on the road? That is my opinion.

1748. What has been the customary width for roads in the country? Anything from 1 chain to 3 chains, I suppose; and in some cases where you have the travelling stock routes you get half a mile.

1749. Is there not a much larger proportion of the roads only about half a chain wide than there are 3 chains wide? I am not up in statistics, and could not tell you that.

1750. But you have had to travel through the country in your official capacity and are familiar with the roads? I do not think there are many of the country roads that are less than a chain wide. There are some, certainly, but I do not think that there are many.

1751. Do you know any public road in the Colony that has a formation more than 18 feet in width? I was not talking of the actual formation of the road.

1752. You say that 3 chains wide is necessary for the road? Yes.

1753. If a width of 3 chains is necessary how is it the Department only forms about 18 feet? In the first place I wish to correct the idea that I said 3 chains would be necessary for the road. I said that 4 chains would be necessary for the railway and the road, and that the present road in some places is 3 chains wide. At present the road is almost entirely unformed, and I think if you had been over the road on the day I went over it, after heavy rain, you would have acknowledged that 3 chains was a very narrow width for that road, because the whole of it was cut up by the teams. It is necessary in the country to have wide strips for roads, so as to give the teams fresh ground to go over, while the other portions are drying up.

1754. Will the same necessity exist for a wide road after the railway is constructed, and when the traffic will not go by teams? There will not be the same necessity for that great width, but there will necessarily be some traffic on the road, because there will be the intermediate traffic to the stations or sidings.

1755. I have already asked you if you can tell me the narrowest point where you think it necessary that the road should be widened? I have asked Mr. Jamieson to give me all particulars about the width of the roads, and their position, so that we may know exactly how to deal with them.

1756. I suppose you make a wide distinction between travelling stock routes and roads for vehicular traffic? Yes.

1757. You told the Committee that you had traversed the proposed deviation from one end to the other, and that you entirely approved of the suggestion of the Sectional Committee, as being a route as direct as the one proposed by the Department? Yes.

1758. And one which would effect a very large saving, so far as the resumption of land is concerned? It will avoid a great deal of resumption.

1759. Do you know to what extent the line proposed by the Department would pass through the property of Messrs. Peterson and Sargood? A little over 7 miles.

- H: Deane, Esq. 1760. If you took a railway through that property would not the owners make a substantial claim for severance? I do not think there would be much for severance if the line were left unfenced.
- 30 Jan., 1895. 1761. But as engineer for the construction of railways are you not aware that as soon as the land passes from the private owner to the Crown, severance takes place whether the land is fenced or not—that it passes out of the hands of the private owner and becomes the property of the Crown, and severance takes place, though the land may not be fenced? In a certain way, unless you give the people the right-of-way over it.
1762. If the land is resumed by the Crown for railway purposes does it not pass from the private owner to the Crown? Yes.
1763. Well, is there not a severance then? Yes, I say there is severance, unless the owners have a right-of-way; if they have a right-of-way there is no severance.
1764. A right-of-way by a gate? No; I mean anywhere across the line.
1765. But how could you guarantee a right-of-way of that character over a railway line? Why not?
1766. Tell me how it is possible? You remember the case of the Nyngan to Cobar line. There was a clause inserted in the Act stating that the line was to be unfenced. I suppose that if the Government, after that, wanted to fence the line throughout they would have had to get a new Act.
1767. They would have had to compensate the owners for severance? Yes; that would take place when the fencing was erected.
1768. If an action for severance were brought against the Crown where a man's property was cut in half for a distance of 7 or 8 miles, would not the compensation amount to almost as much as the cost of construction of this cheap line of railway? The question is, have you any right to assume that there would be the severance to pay for.
1769. If a man's freehold property is cut in half in the public interest, one part containing his home-stead and his woolshed, and the other part his dams, is it not only right to assume that he has a substantial claim for compensation? The occupier of land under such circumstances might put in a claim which he might not be able to justify.
1770. Has your experience been that where private property has been resumed by the Crown, and where the owners have gone to the law courts, juries have taken the view which you have just expressed; has it not been the rule that the Crown has had to pay very heavily? I have no accurate information on that point.
1771. In your experience do you know of any case since you have occupied the position of Engineer-in-Chief for Railways where the Crown has had the use of a man's property for a distance of 7 or 8 miles for the purpose of constructing a railway, and has not paid any compensation for severance? There have been such cases near Sydney.
1772. Not where the Crown has taken 7 or 8 miles for nothing? No; not 7 or 8 miles.
1773. You do not know any case in point similar to that of Messrs. Peterson and Sargood's property, or Mr. Wilson's property, that would be severed by the railway, and which has been taken without compensation? No; I do not remember any such case. I do not know that such a case has occurred. Until recently it was always assumed that the Government would pay for the land, and I do not think any overtures were made with a view to getting the land free until the Milson's Point and Burwood-road lines were undertaken.
1774. Then you admit that the recommendation of the Sectional Committee has several advantages? Yes; I acknowledge that.
1775. And it has a great advantage in regard to the resumption of land and the severance of property? Yes.
1776. And a great advantage in regard to convenience resulting from the road running parallel with the railway? Yes; I believe there will be a great advantage in that respect.
1777. Seeing that the Sectional Committee, composed of laymen, by exploring the country and paying some attention to the character of the district, were able to devise a scheme which has been adopted by your Department, how is it that your officers were unable to find out an equally eligible route to the one recommended by the Sectional Committee and approved by you? I approved of it, but I imagine that the actual adoption of the route is subject to the possibility of finding some Act which will deal with the roads in some way. I can tell you this, that we have had difficulty about the same thing before. We have tried to exchange roads, and have found the difficulties so great that we have given it up. I remember a case in connection with the Culcairn to Corowa line where we wanted to get a road altered.
1778. Had the officer who was sent to survey the line from Jerilderie to Berrigan instructions, to first of all, explore the country, or was he simply told to go and find a direct line from one point to another, regardless of the cost of land resumption? They do not have any such indiscriminate instructions as that.
1779. What is the nature of the instructions given to the surveyor? The line is generally explored by the engineer in charge of the surveys, and afterwards the surveyor receives his instructions accordingly. The engineer in charge of surveys reports to me what he recommends.
1780. But had the surveyor in this case instructions to explore the country and furnish the Department with a report or trial-survey of the most inexpensive route for a cheap line of railway, which would, as much as possible, dispense with the resumption of private lands? I do not remember exactly what his instructions were.
1781. I believe you were absent from the Colony at the time the instructions were given? I think the survey was completed in my absence, but I will not be quite sure.
1782. The surveyor was sent to Jerilderie and Berrigan during your absence from the Colony? I remember the Jerilderie to Berrigan line being proposed and a surveyor being sent there, but I do not remember the exact dates.
1783. In the event of any difficulty arising in regard to the road, the resumption of the land necessary to straighten the road to be resumed would be a very small matter? Yes.
1784. So that if the provisions of the Act were not sufficient to give the Roads Department power to alter the road and exchange one portion for another, the resumption of the land necessary to straighten the road would be a very small matter? I am afraid the resumption in that case would be worse than that necessitated by the original line.
1785. Do you know what quantity of land would be necessary to be resumed for the proposed line? I have not gone into that question yet, because I have not got the particulars ready.

1786. Speaking generally, you believe, after your investigation, that the line is a direct one, practically of the same length as the one proposed by the Department, the difference being only a $\frac{1}{4}$ of a mile, and that it will pass through very little private land as compared with the route proposed by the Department? It will pass along the road, if the road is shifted.

H. Deane,
Esq.
30 Jan., 1895.

1787. There being no municipality, the land is still in the hands of the Crown? Yes.

1788. Mr. Molesworth.] I understand that you have recently travelled over the country, and are perfectly satisfied that there are no engineering difficulties in connection with the proposed deviation? Yes.

1789. The cost of construction will not be increased by reason of the deviation, in any shape? No; I believe not. I said there was one item which would be affected, and that was the shifting of the fencing.

1790. The shifting of the fencing will be greater on the proposed deviation than on the original route? Yes.

1791. Otherwise the character of the line is exactly the same? Yes.

1792. Do you consider it absolutely necessary that there should be a width of 4 chains to cover the requirements of a road and railway? I would not like to recommend less.

1793. What width would be occupied by the railroad itself? With the side cuttings, from $1\frac{1}{2}$ to $1\frac{1}{2}$ chain. If you want to cover everything, very nearly 2 chains, and I should put down 2 chains as the width which should be given.

1794. Mr. Hayes.] Looking at the plan, is there not only one part of the road of any consequence, where it deviates from the railway, as proposed by the Sectional Committee? That is the longest part.

1795. The other is only a small portion? Yes.

1796. Are you aware that there is power under an Act of William IV to resume land along a road for railway purposes, and to give in exchange the existing road? No; I was not aware until I heard it suggested.

1797. I think, in your previous evidence, you stated that the maximum width of land required to be resumed for the railway would be $1\frac{1}{2}$ chain, and that possibly 1 chain would be sufficient? I do not think so.

1798. I think you said that $1\frac{1}{2}$ chain would be quite sufficient on a level line like this? As I said just now, it would take about $1\frac{1}{2}$ chain for the actual construction, with the side cuttings on each side.

1799. The width of the road would take more than 1 chain? Yes.

1800. Do you think $1\frac{1}{2}$ chain would be ample for a railway of this kind? I should prefer to take 2 chains.

1801. Does it not cost more for maintenance in clearing the grass, where the width is greater? That is not a serious item of cost, and you have this advantage if you have a wider strip, that if sparks fly out of the funnel of the engine there is less chance of their getting on to the neighbouring land.

1802. Therefore, on that ground, the running of the railway parallel and alongside the road would be a distinct advantage? Yes; on the one side you would be free from that danger altogether.

1803. With reference to the question of severance, you are aware that, as a rule, the cost far exceeds the cost of the land? Yes; I am aware of that.

1804. Therefore, as the line proposed by the Sectional Committee would avoid any claim whatever for severance, there would be a great gain as regards the total cost? Yes.

1805. You think that an average width of 1 chain, which is 8 acres to the mile, is all that would be required? I think it would be about that.

1806. Can you give the Committee any idea of the value of the land that would be required for this line per acre? No; I have no information to give about that.

1807. With reference to the existing road, is it not possible to utilise a portion of the 3 chains without resuming any land at all? No; I do not think 3 chains would be sufficient.

1808. Supposing you took a chain off the road, leaving 2 chains, is that not more than the average width of the traffic roads in this country? The width required would depend upon the nature of the road.

1809. For vehicular traffic? I quite think that where you have 3 chains now you could do with 2 chains with a railway.

1810. In that case, would you save land resumption by taking from the 3-chain road a width of 1 chain for railway purposes? But I do not think 1 chain sufficient.

1811. Mr. Gormly.] Looking at the plan, going away from the Jerilderie railway station, would you tell us what distance you would go on the common and stock reserve before you came to the main road that goes through the Wonnamurra Estate? Nearly 4 miles.

1812. Then you would be going that distance wholly through Crown land? Yes.

1813. Therefore, there would be no resumptions for those 4 miles? No.

1814. Then, with the exception of a corner near the travelling stock reserve, you would follow the main road for the entire distance until you came to the timber reserve? Yes.

1815. Therefore, you would entirely avoid severance through the Wonnamurra Estate, with the exception of the short distance where you enter that estate;—you would avoid severance of the Wonnamurra Estate altogether by adopting the route suggested by the Sectional Committee? Yes.

1816. Then what distance would you go through the forest reserve? About $1\frac{1}{2}$ mile.

1817. To what distance would the railway go through Crown lands? Nearly $5\frac{1}{2}$ miles.

1818. From Jerilderie to the end of the travelling stock route—to the end of the forest reserve? That would be about $9\frac{1}{2}$ miles, I should think.

1819. And for that $9\frac{1}{2}$ miles there would be no need of severance in regard to the Wonnamurra Estate which would then be passed through? Yes; it would be passed through then.

1820. Therefore, there would be no need to compensate the owners of that property for severance? No.

1821. And if there was any necessity to resume land to provide for the road and the railway, it would only be necessary to resume some land alongside the main road? Yes.

1822. Therefore, no claim could be set up for severance? Exactly.

1823. You went along the road from the reserve towards Berrigan—I suppose you did not take the trouble to chain the road across to see the width? No; some portions of the road are marked on the plan as 3 chains wide.

1824. Did it strike you from your knowledge, and from what you saw, that the road was fenced more than 3 chains wide? I think it was about 3 chains in some places and narrower in others.

1825. Then you think it is not fenced more than 3 chains wide? It did not seem to me to be wider than 3 chains.

1826. But it is 3 chains wide? I believe so for some distance.

1827.

- H. Deane,
Esq. 1827. I suppose you find that the usual width of roads between purchased lands is about $1\frac{1}{2}$ chain? I should not like to say. I have seen roads of all widths, from 1 to 3 chains.
- 30 Jan., 1895 1828. I am speaking about the usual roads that are frequently travelled on? I could not give an opinion now as to the average width. I have noticed in different parts of the country roads 1, $1\frac{1}{2}$, or 3 chains wide, but I do not remember anything with regard to the average width.
1829. Are you aware that many of the roads on which there is an extensive traffic, are only $1\frac{1}{2}$ chain wide? I think that is very likely.
1830. There might be considerable traffic on a road $1\frac{1}{2}$ chain wide? Yes.
1831. If a road were laid out parallel with the proposed railway, would the traffic from Berrigan to Jerilderie be anything approaching what it is at present? The traffic would be very much decreased.
1832. And, therefore, there would not be a necessity for as wide a road as where the traffic is heavy? No.
1833. Would you come to the conclusion then, from these facts, that there is no need to have a 3-chain road, but that a width of $1\frac{1}{2}$ chain might do? I think 2 chains would be about the right thing.
1834. You have not, I suppose, given this particular question much attention? I have; and I have come to the conclusion, as I have already explained, that 2 chains would be enough for the road.
1835. And 2 chains for the railway? Yes.
1836. Therefore it would be necessary to widen the present road by about 1 chain? Yes.
1837. Looking at the plan showing the deviation proposed by the Sectional Committee, and where it goes through private lands, about what distance is it before it comes to the main road again? About $7\frac{1}{2}$ miles.
1838. That is the only portion of the proposed deviation where there would be a necessity for severance? Yes.
1839. And if the main road were moved back to the proposed deviation, there would be no need of any severance at all? No; none whatever.
1840. The question of severance would be entirely got over if that could be done? Yes.
1841. You were asked a question with regard to the Departmental surveys. The officer who made the surveys, and I think Mr. Firth, said it was intended to cross the Berrigan Creek on an existing dam;—has that proposal come under your observation? No; I have not considered that yet.
1842. What is your opinion in regard to crossing a creek or a dam,—would it be necessary to make an artificial water-course, if you blocked up the water-course under the dam? You would have to allow for a by-wash.
1843. If you crossed the creek on a dam it would be necessary to make an artificial creek or an excavation to let the water away? The water-way of the creek might be very much greater in extent than would be necessary to carry all the water.
1844. I suppose it is usually better to utilise the water-way nature has provided than to construct a by-wash? Yes; and I am quite sure that provision is made in the estimate for a bridge or an opening at Berrigan Creek.
1845. But would it in any way lessen the cost to cross on a dam, and then make a water-way afterwards? I should like to see the proposal before expressing an opinion. It has not yet come under my notice.
1846. *Chairman.*] We will now take the question of the construction of the line;—have you any statement with regard to the various items? Yes; as the Committee have inquired into the various items making up the estimate, I should like to state what my inquiries have resulted in. With regard to sleepers it appears that the price in the estimate of 2s. 6d. a sleeper is rather low. I had to wait some time at Narrandera for a train, and I went down to the sawmills to see whether there was any chance of getting sleepers at a moderate cost, and the conclusion I came to was that we might get sleepers delivered at Jerilderie for about 2s. 8d. each of the class which would be suitable for this line. That would be not put in the road, but just delivered; and putting them in the road would bring the cost up to 3s. I saw the manager of the mills at Narrandera, and asked him to send me a quotation for sleepers, explaining to him the class of sleeper we wanted. He has since written stating that he could supply those sleepers at 3s., delivered on trucks at Narrandera. But I am quite sure that the firm could deliver them for considerably less than that, and I am sending him a copy of the specification for the sleepers we are getting at Narrabri. I believe that Narrandera will be the cheapest place to get the sleepers from, and that they will cost 3s. a piece delivered in Jerilderie. Mr. Wise, the Mayor of Jerilderie, told me at the time, that he thought we could get them cheaper from Deniliquin, but I calculated that red gum sleepers sent from Deniliquin would come to about 4s. 6d. each. I also inquired at Berrigan, and no doubt the timber could be got there cheaply, but there would be the cartage. Talking with Mr. Greggery, at Berrigan, the conclusion I came to was that they would cost about 3s. a sleeper.
1847. What was your previous estimate of the cost per sleeper? Two shillings and sixpence was the price used.
1848. And what is your present estimate? Three shillings.
1849. *Mr. Hoskins.*] In your estimate of 2s. 6d., you did not include the cost of laying the sleepers? Yes. That is the price I expected to get the work done for at Narrabri. As I remarked to the Committee, my previous estimate was subject to my going on to the ground. I inquired into the matter of ballast, and I concluded that the cheapest way of getting ballast was to procure it from Cuddell, near Narrandera. We could get it, by arrangement with the Railway Commissioners, for 5s. per cubic yard, or something less. I have obtained some particulars as to what the Jerilderie Council obtain ballast for; but I have no doubt we shall make special arrangements with the Railway Commissioners as to freight and so on, by which we can get a better class of gravel—that is, screened gravel—at a cheaper rate than the Municipality of Jerilderie pay for ballast.
1850. *Mr. Molesworth.*] Do you mean 5s. per cubic yard delivered? Yes; put on the line; delivered where required.
1851. *Chairman.*] What was your previous estimate? Three shillings and sixpence per lineal yard. I have now taken 5s. per cubic yard. If it were to ballast the whole line I should take 3s. 6d. per lineal yard as before. But I propose that only a small portion of the line shall be ballasted, and as we should possibly lose a certain quantity in sinkage, in settlement of the banks, on soft portions, I think it is wiser to allow for a cubic yard per yard forward. I inquired also at Berrigan in reference to ballast, but I do not think anything more reasonable could be done there.. At Berrigan some decomposed granite is brought from a quarry about a mile and a half out of the town, which costs about 5s. per cubic yard. It is not very good stuff. It makes first-rate roads, but it would not be so good for the line, because it would set, and would not be sufficiently porous for railway purposes. Mr. Greggery told me that in his well near his house he passed through a lot of gritty

gritty stuff, a kind of rotten granite, which comes out, I understand, freely enough, but which they say is mixed with clay or kaolin. Some of the other wells show sand too. Without sinking a number of trial holes I do not think any large supplies could be reckoned upon, such as exist on the Moama to Deniliquin line. Of course that could be proved. But I think the most satisfactory way of dealing with the ballast, if ballast has to be supplied, will be to get it from the Narrandera line at Cuddell. The Railway Commissioners would run the gravel on their line at a very low cost, although the distance is about 60 miles. They would charge probably a little more than locomotive expenses, and we should get it at a very reasonable rate.

H. Deane,
Esq.
30 Jan., 1895.

1852. Have you any knowledge as to how much stripping would be required to get this sand gravel? No; it is almost impossible to tell. I went to have a look at the gravel pits on the Moama and Deniliquin line, and there the stripping is very variable. In some places the gravel appeared to be pretty close to the surface, but in other cases there was a considerable amount of stripping. I made inquiry as to a water supply at Berrigan, and I concluded that there could be no difficulty about obtaining the small quantity of water which we should require.

1853. Would you say where you would get it? By sinking a well at the Berrigan terminus. Some of the wells at Berrigan supply hard water, and some good water. There is a shallow well there that gives very good water, and this well of Mr. Greggery's at Berrigan, which is 192 feet deep, is said to produce very good water. But the water would have to be analysed before we could tell exactly. Then I looked into the question of earthworks. I saw the American Champion road-making machine in use in Jerilderie. It is a very satisfactory machine, and does the work, no doubt, very cheaply. I think the Sectional Committee have very much the same information in regard to it that I have. Mr. Wise told me that the cost of the machine was £75, plus duty and cartage, and that it does the work for about 4d. per cubic yard. There are a great many things to be considered in making a railway bank. A railway bank has to be made in a much more careful manner than is the case with a mere road. You could form a road fairly well, and make it available for traffic in a way that would scarcely do for a railway. In order to make a railway bank satisfactorily, it has to be rolled in order to be consolidated, and even after rolling, it would not be of that smooth character, as usually required for a railway bank. Perhaps some of the members of the Committee have observed that the railway banks and cuttings are trimmed before the ballast is put on. Levels are run over the banks and along the cuttings, which are trimmed very neatly to an exact surface right across the full width—17 or 18 feet as the case may be. If that is necessary where there is ballast, it is all the more necessary for a railway where there is no ballast, where you have to lay the sleepers direct on to the bank, because otherwise you would have an uneven road, which would be difficult to deal with. Then in some parts of the line there will be clearing and grubbing. I quite think the road-making machines might be used profitably in making this railway, and the cost would certainly be cheapened. The cost of side cuttings has generally been from 7d. to 9d., and the contractor has got his profit over and above that. Therefore, if the earth-works can be made by using these road machines and rollers, and afterwards carefully trimming the bank on the top, and the cost will not exceed 6d. per cubic yard, a considerable saving will be effected.

1854. You say that 6d. per cubic yard would be the cost of using the American grader? Yes.

1855. What is your previous estimate? I think it is so much a chain. In America the cost of the earth-works is reckoned at 6d. per cubic yard, which would come to about £300 or £400 per mile. In this case, I have already cut the cost down to £225 per mile.

1856. Are you adhering to your previous estimate with regard to the cost of earthworks? Yes, practically, but I wish to give this additional information. Included in the cost of earthworks there is the item of earthworks at the stations. It is not very much. There will be the terminal station, and a small half-way station or a waiting shed, and there will probably be a couple of places where sidings will be required for taking wool or other produce. Reckoning this at about £800, and taking the extra embankments over swampy places at £1,000, that would make £1,800 for these two items alone. And reckoning £1 13s. a chain for the ordinary line, that is, 66 cubic yards per chain at 6d., as against £2 10s., and you get for the total length of the line, less the deeper banks, £2,739, which added to the £1,800 gives a total of £4,539 for the earthworks. In the estimate previously submitted the cost of the earthworks was stated at £4,754. I do not propose to make any alteration in the amount, because it is not worth while to cut out the difference.

1857. That is notwithstanding the fact that the American grader would allow the work to be done for a much cheaper rate? Yes, I have reckoned it at 6d. The American grader does not do all the work. In the first place, if the ground were very hard it would have to be ploughed up. The American grader will do the work on stiff or sandy ground that the plough will go into, but it will not work in very hard ground without ploughing. It would, in fact, be very undesirable to try it; you would only ruin your machine. When the American grader is done with, the roller has to go to work, and to go up and down the line several times. And when the ground has been rolled and consolidated, it has then to be carefully examined for the purpose of getting the levels absolutely correct. A slight undulation either longitudinally or laterally, would not matter in the case of a road, but in the case of a railway it would make a great difference, and thus more work has to be put on to this embankment for the purpose of preparing it for the sleepers and rails than is necessary in the case of a road. I wish to lay particular stress upon the point that in this respect a railway is not the same as a road. I believe the work could be done, including all operations, even clearing all the land where required, for about 6d. a cubic yard; whereas, in letting works in the ordinary way, I think the lowest cost up to the present has been about 1s. I have here a blue print showing the earthworks on one of the American lines of which I spoke the other day. It shows several cross-sections. On the left-hand side there are three methods of making and forming, and on the right-hand side three corresponding methods; and at the bottom there is a rocky excavation with ballast. I think we can leave out the cuttings, and look at the embankments. The top one shows an embankment where it is intended to use earth ballast, that is to say, no ballast at all, but to use the rubble from the banks. The second one shows gravel ballast, and the third broken stone ballast. What I particularly wish to direct the attention of the Committee to is the one with the earth ballast. It will be seen that there is a considerable rounding on the top of the bank. A level line drawn from one corner of the bank to the other crossing along the bottom of the sleepers would show a depth of 16 inches. The way it is done is this: A bank is first of all constructed to the level to which the bottom of the sleepers come, and it is made 15 feet in width and flat. The sleepers and rails are put on the top of that. The corner portions

H. Deane,
Esq. portions or triangles represent the material, which is afterwards taken off and thrown in between the sleepers and rounded off. That is the way they make their lines without ballast.

30 Jan., 1895. 1858. *Mr. Davies.*] That prevents the lodgment of the water? Yes; it throws the water off. There is a big slope on each side, and the water rapidly runs off. If it were made flat, and water were allowed to stop on the bank, the result would be ruinous to the road. In reference to the graders, or road-makers as they are called, I find that there are many of them at work in different parts of Victoria, and they seemed to give satisfaction. There are much more complicated machines than these used in America, and Mr. Mountain, the City Surveyor of Melbourne, told me he had seen one of Austin's machines, that the council gave permission for one to be tried, but that he did not consider that it was satisfactory.

1859. *Chairman.*] You mention this, I presume, to show that the road-making machine may possibly be superseded by something better? Yes; although I think at present this road-maker is sufficient. It is a much more simple machine than the others. The Austin Manufacturing Company, of Chicago, supply different classes of the machine.

1860. You say then that the American grader, such as we saw at Jerilderie, is likely to hold its own sufficiently long for it to be worth purchasing? Yes; I am quite sure that it would do satisfactory work here. These larger machines would be useful in heavier work and higher banks, but the American road-maker would answer our purpose perfectly.

1861. Would the Department object to a contractor using the graders in the work of formation? No; I should not object to their use.

1862. Would they materially reduce the cost of the work? Yes; as I stated just now, the reduction would be from 1s. to 6d. per cubic yard. I think we should be paying too much if we could not get these low banks made for 6d. a yard. At first there might be hesitation on the part of contractors to use these machines, but I think if the Government bought some of them, and also rollers and ploughs, we could get the work done for the price I have mentioned.

1863. As the grader does not form part of an ordinary contractor's plant, how would you get over that difficulty? I would suggest that the Government should buy the machines and let them out for use.

1864. You see no other way through the difficulty? No; I do not think so. I think it would be the cheapest way. If in the specification the contractor were bound to use these graders, not knowing what they were, he would put in a big price to cover risk, and there is really no risk in the matter.

1865. *Mr. Lee.*] In the event of the work being done by contract could not the contractor provide the whole of this plant, no matter what it might be, the same as for an ordinary contract? Yes; he would. But supposing our contractors here do not understand the use of these machines, and do not like to use them, then we should lose the benefit of them. I should like to have a try at this line and see how cheaply it could be done, and use the best means for getting it made cheaply.

1866. *Chairman.*] What is the next item to which you desire to refer? In the estimate submitted it seemed to me that if fencing were done without, this particular item might be reduced. But if the line suggested by the Committee is adopted, and the fencing of the road is required, it will be an item which must not be neglected. I think it must stand as it is, and for a reason which I will explain. I was inquiring into the price of local fencing, and I found that the cost complete was from £35 per mile upwards, but smaller wires and smaller posts are used than is the case in our Department. The plan that has been adopted for some time past has been to place the posts 10 feet apart, and use stronger wires—I think No. 7—than the squatters usually use. There is no doubt that a railway fence requires to be a little more secure than an ordinary squatter's fence. A cost of 3s. a rod, for which, no doubt, we could get the fencing done according to specification, means £48 per mile. Taking £50 per mile to cover the small corners and angles, and for running into road crossings or culverts, the result would be this:—If you assume that about 25 miles of fencing will be required—that is to say, the fencing along one side of the line and a little more—at £50 a mile, you get £1,250; and putting down £700 for the cost of cattle-stops, gates, small culverts, and road crossings that might be required, you get £1,950, the same amount as in the estimate submitted.

1867. *Mr. Hayes.*] One side of the line will be fenced by the road fence? That is, if the road is not widened.

1868. The present road will not be altered so far as the width is concerned? But supposing the width is not sufficient for the road and railway, but one fence will have to be altered. I am taking 25 miles—that is the length of the line, and about 3 or 4 miles in addition.

1869. In that case the line would be fenced on both sides? Yes; one fence being on the side of the railway, and the other on the outside of the road.

1870. *Chairman.*] You propose to fence the road and railway in together? Yes; I do not see any objection. With regard to the work on the permanent-way, I propose, as I mentioned before, to put down 5 miles of ballast, which, at 5s., would come to £2,200, and the laying of the road with the extra number of sleepers, would come to £132 per mile, or £2,803. The sleepers (2,500 at 3s. each) would come to £375 per mile, or a total of £7,964. This gives a total cost for the work of ballasting and laying of sleepers of £12,967, or £616 per mile.

1871-2. *Mr. Davies.*] What was your previous estimate? £667 per mile.

That shows a reduction of about £50, notwithstanding that you provide ballast for 5 miles? Yes. The estimate of cost thus altered comes to £2,000 a mile, and I strongly recommend the Committee to adopt that. If you leave out altogether the ballasting I have put in, you will knock out another £100 a mile, making £1,900 a mile. The estimate of £2,000 a mile which I recommend the Committee to adopt is really a very low estimate. I believe the line can well be carried out for that sum, and a very satisfactory job be made of it. I think it would be a pity to reduce the cost of the line, or to reduce the funds available, below that amount, because it might happen that we should require it. If we could do without ballasting over those bad places, I should be the first to try to do so. If we could get sleepers at less than 3s., laid on the road, so much the better; the country would have the benefit of it; but I think it would be unwise to limit the Department down to the other amount, because I am almost sure that a little more would be required. The Committee quite understand that if they knock out the 5 miles of ballasting which I recommend, that would bring the cost down to £1,900 a mile, but I do not consider that we should be free from risk. If we find that in the course of construction we can do without the ballasting, or any portion of it, we shall certainly do so, but I think that it ought to be provided for in the vote.

1873. *Chairman.*] In other words, you believe the minimum for a safe line is £2,000 a mile? Yes.
1874. *Mr. Hoskins.*] Do you mean to say that you feel confident you could make a stable, workable railway, on which trains could be run at the rate of 15 miles an hour between Jerilderie and Berrigan for £2,000 a mile? Yes; I can if I am left unhindered in making the contracts.
1875. What depth of ballast do you propose to use in respect of the 5 miles? I should put in a depth of about 6 inches.
1876. Of that gravel ballast? No; it is a sort of broken stone.
1877. Have you been to the locality during the recent wet weather? There had been some rain just before I got down there, and the roads were very bad.
1878. Witnesses examined before the Sectional Committee, one being a professional gentleman, said they did not believe it would be safe to make the railway without ballast, in consequence of the soft, greasy character of the soil;—what is your opinion of that? That I provide for in what I recommend to the Committee. The ballasting of 5 miles of the line will cover all dangerous spots of that kind.
1879. What would be the difference in cost if you were to put 6 inches of ballast right along the line? It would mean £350 a mile extra.
1880. Therefore, the total cost of the line would be £2,350 per mile? Yes.
1881. As Engineer-in-Chief for Railways, would you prefer to have this line ballasted 6 inches right through, at a cost of £350 a mile, rather than have it ballasted for only 5 miles? I want to see the experiment made of constructing a line without ballast.
1882. You feel no apprehension? I have no apprehension whatever, because if the banks proved a little weak they could always be ballasted up afterwards without any extra expense.
1883. And on the portion of the line which will not be ballasted, and perhaps on the portion also that will be ballasted, how many sleepers will be used per mile beyond the number usually used? The number will be about 500 per mile extra.
1884. *Mr. Davies.*] You are aware that the Mayor of Jerilderie estimated the cost of earth-works similar to the earth-works necessary for the construction of this proposed line at about 10s. a chain, with an uniform depth of 6 inches? But 6 inches is not enough.
1885. But you propose 6 inches? No; I said 6 inches as a minimum.
1886. What would the uniform depth of the earth-works be? The depth will not be very uniform. To carry out the style of work shown on the American plan to which I referred just now, you would have to make the bank a depth of about 18 inches on the average.
1887. So that with a 5 or 5½-inch sleeper the railway will stand up something like over 2 feet? Yes; about 2 feet.
1888. Was that contemplated when you gave your evidence before? I do not think I have altered my opinion in that respect.
1889. From what you have seen of the country, having passed over it, you have come to the conclusion that a height of not less than 2 feet from the surface of the earth to the top of the railway will be sufficient? I should not like to bind myself exactly to that, because in going over a mound, for instance, you would alter the depth of the earth-works. It would all depend upon the nature of the ground. If the ground was high the work would almost approach a cutting, and if the ground were low you would have a considerable bank.
1890. But you have seen the country, and know that it is almost uniformly level? I would not say that. I saw one place where a cutting would be necessary, and I saw several places where banks would be necessary.
1891. What would be the depth of the cuttings which you saw would be necessary? Perhaps 1 foot.
1892. Do you think in any part of the line it would be necessary to have a cutting of 1 foot? Yes; I think so.
1893. Coming back to the earth-works, in the estimate of the Department the cost was put down at £225 per mile—you saw some earth-works carried on in connection with road-making at a depth, on the main road, of about 18 inches or 2 feet? Yes. I saw them cutting down the side of the roadway about 6 inches.
1894. Did you see them making up the road about 2 feet or 2 feet 6 inches? No.
1895. Did you go along the road? Yes.
1896. Did you see the scoops at work? Yes.
1897. Did you see them making the road at least 2 ft. 6 in. higher than it had been originally, by taking earth from the sides, and putting it in the centre? I did not measure it; it did not look to me to be 2 ft. 6 in.
1898. How deep do you think it was? I should think when it was rolled down and consolidated, it would be about 9 inches at the most.
1899. The evidence of the road superintendent was that the road was being done for £1 0s. 4d. a chain? I am told that the men are losing money by it, and that they would not take work again at that price.
1900. If that work is done for £1 a chain, the formation being wider than that required for a railway, would not £225 a mile for your earth-works be a long way in excess, considering the character of the work necessary for this cheap kind of railway, and considering the cost of work now being done in the locality? No. In my former evidence I reckoned the cost at 33s. per chain. The estimate of £225 a mile includes a number of things not shown in the case of an ordinary road. But where the earth-works are light as in this case, and the work can be readily done by the grader, I estimate that it can be done for 33s. per chain, and this amount, even compared with £1 a chain for the road, is very moderate, because I am certainly getting 13s. more work as compared with the £1 for the road.
1901. What reduction is this compared with your previous estimate? No reduction; I propose to adopt the same.
1902. That is £225 per mile? Yes; but that includes earth-works for stations, and crossing the Berrigan Creek, and little depressions on the route. There are several depressions along the route which I could have pointed out to the Committee if I had been with them.
1903. In your previous evidence you put down £750 for stations? That was for the buildings.
1904. Did you not say just now that the sum included stations and other things? No; the 33s. a chain does not include stations, but the £225 per mile includes earthworks at stations.
1905. Do you see any difficulty in using the grader right through the whole length of the proposed line? No; I think it might be used pretty well all through.

H. Deane,
Esq.
30 Jan., 1895.

- H. Deane Esq. 1906. The character of the country is such that it can be easily operated upon by a grader? Yes.
 1907. You did not see a stone in the whole of your journey? No; I do not believe I did.
 30 Jan., 1895. 1908. So that there would be no trouble in using an American grader for the earth-works? No.
 1909. And it would certainly be much more economical than the old system of barrow and pick and shovel? Yes; very much so.
 1910. And though you say that there is some small part that wants to be cut to a depth of about 1 foot the country is uniformly level? Yes; it is a level even country.
 1911. There is no difficulty whatever? No.
 1912. And you believe the line can be constructed well within your present estimate of £2,000 a mile? Yes; I believe it could be constructed for £2,000, and when I say £2,000, I believe that would be the limit.
 1913. And that includes the cost of 5 or 6 miles of ballast which you had not reckoned in your previous estimate? Yes.
 1914. Your previous estimate was £1,835 per mile dispensing absolutely with the ballast? Yes.
 1915. After having seen the country you now think it necessary to make provision for about 5 miles of ballast? Yes.
 1916. That provision being made, you would regard the line, if constructed, as permanent, and as stable as any other line of a similar character in the Colony? We have not any other lines of a similar character in the Colony.
 1917. Well, the Cobar line? That is a ballasted line throughout.
 1918. Subsequently ballasted? No; it was ballasted at the time.
 1919. But this line will be quite stable enough to carry all the produce of the district for many years to come? Yes; it will be quite satisfactory, I believe.
 1920. How long would it take to construct a line in the event of its being authorised? I should think a line of this character, if the plans and everything else were ready, ought to be completed in about five or six months.
 1921. Quite in time to carry the produce of the present year—by the end of the year? Yes. First of all the road question must be settled.
 1922. That is a question outside of your Department? Yes; but it stops my work. Until that is settled I cannot get the line permanently staked, and consequently cannot prepare the plans.
 1923. The first thing to be done is to settle the question of the road, so as to enable you and your officers to proceed with the survey? Yes.
 1924. And in the event of authority being given to proceed with the survey, the whole of the work should be completed within six months? Not including the survey.
 1925. How long would it take to survey that short line? The easy nature of the country has nothing to do with it. The surveyors have to pick up their boundaries, and make a proper survey.
 1926. But if amateurs could pick up the boundaries, as the members of the Sectional Committee did the other day, in finding out the deviation, would it be very difficult for the surveyors to do so? I think, the Chairman, who knows something about surveying, will tell you that amateurs could not do the work of surveying.
 1927. Allowing for the survey, the preparation of plans, and the advertising, how long would it take before the work was completed? I should say it would take nine months altogether from start to finish. The line would not really be required before December.
 1928. From your investigation of the proposed deviation you are of opinion that the difficulty of construction would be no greater than in the case of the line surveyed by the Department? No; it would not.
 1929. Would it be any less? It would practically be the same.
 1930. Having now seen the country, are you satisfied that the waterways proposed will be sufficient? Yes, quite.

THURSDAY, 31 JANUARY, 1895.

Present:

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.	ROBERT HENRY LEVIEEN, Esq.
The Hon. JAMES HOSKINS.	JOHN MOORE CHANTER, Esq.
The Hon. JOHN DAVIES, C.M.G.	CHARLES ALFRED LEE, Esq.
The Hon. CHARLES JAMES ROBERTS, C.M.G.	JAMES GORMLY, Esq.
EDMUND WILLIAM MOLESWORTH, Esq.	

The Committee further considered the proposed Railway from Jerilderie to Berrigan.

Henry Deane, Esq., Engineer-in-Chief, Railway Construction Branch, Department of Public Works, sworn, and further examined:

- H. Deane, Esq. 1931. *Chairman.*] Will you continue the evidence you were giving when the Committee adjourned yesterday? I should like first to supply some information asked for by Mr. Humphrey in reference to the permanent-way materials on the Jerilderie line. Various methods were proposed for utilising the new and old permanent-way on that line. On looking over the papers, I found several different estimates, and this seems to be the right one:—2,000 tons of re-rolled rails at £5 10s., £11,000; 2,790 tons of 60 lb. rails, at £7 15s. 1d., £21,640; 440 tons of fastenings at £16, £7,040; total, £79,680.
 1932. *Mr. Humphrey.*] That explains, I suppose, why the estimate is so much greater than in the case of the proposed line from Jerilderie to Berrigan? Yes.
 1933. *Mr. Davies.*] Your estimate for the present line, using second-hand rails, and a portion new rails, is £532 per mile, is it not? Yes; it amounts to £11,237.
 1934. *Mr. Molesworth.*] In answer to a question asked yesterday by Mr. Hoskins, you said this railway work could be carried out for £2,000 per mile if you were left unhindered, in regard to your contracts; will you kindly explain what you meant? I meant that I should be allowed to have everything ready—all

all the plans and details ready at one time—and not that part of the work should be left with a promise of something extra to be placed in the contract afterwards; that, for instance, the station plans should be all ready, and the earth-works included in the contract, so that the contractor should have no claim for extra prices through delay in the delivery of the plans. On some of our lines we have had claims on that account, and in some cases have had to pay compensation. I want to avoid that. That was my chief meaning.

H. Deane,
Esq.
31 Jan., 1895.

1935. Then I understand that the only source from which such hindrance could come would be the Railway Commissioners who might be behind hand with their plans for the buildings? I do not think that would be the only source. But I think in this case there would be no delay, because it is already pretty well decided with the Railway Commissioners what the accommodation is to be.

1936. Do you fear any hindrance to your work from any other source? There might be, if we had to purchase land, and the arrangements with the owners were not completed.

1937. You do not think that there is likely to be a hindrance of any serious nature to materially delay the line? No; I do not think so.

1938. After the work of construction was placed in your hands, how long would it be before the 60-lb. rails could be imported? We have a stock of rails.

1939. *Mr. Hoskins.*] Sixty-pound rails? Yes.

1940. *Mr. Molesworth.*] How is it that you do not think it possible to construct a line with a less width than 2 chains, considering that some of our suburban lines have not anything like that width? Those suburban lines are not made up from side cutting.

1941. You have not got a full width of 2 chains all the way between Sydney and Parramatta? I could not say what the width is. I do not suppose there is that width all the way for the original line. There may be now with the duplication.

1942. I think you will find that between Sydney and Parramatta, even where there are four lines of rails, there is not, in some instances, a width of 2 chains? I would not like to say. But in this case we are making up the banks from the side. That takes up a good deal of room; and then you want extra width to allow for clearance, and for safety in case of fire. If the trains go too near the fences there will be a danger of sparks from the engines setting fire to the grass on the neighbouring property, and in that case there would be claims for damage.

1943. But does not that occur where there is a greater width allowed for the line? No; I do not think so.

1944. You could not confine sparks within 2 chains? At any rate the danger is considerably less if you have a wider strip. The width mentioned is my recommendation. One could cramp it down, but I do not think it would be wise.

1945. You still adhere to that as a recommendation? I do not think it is absolutely necessary, but it is my recommendation.

1946. To have 2 chains for the construction of the line? Yes.

1947. What is about the width of the roadway from kerb to kerb on which they run two lines of rails for tramway purposes? Generally speaking, in Sydney the width is from 33 to 36 feet between the kerbs; in parts of George-street, of course, it is much wider.

1948. Is there any serious difficulty experienced in working the two lines of tramway in Elizabeth-street in such a narrow width of road? No. It is not a question of the passing of the trains. It is not a question of the actual width required for the carriages and rolling stock. The conditions are quite different.

1949. You do not feel disposed to reduce the width in your recommendation? No; I think it would be unwise to do so.

1950. The Committee are anxious to avoid the resumption of land if it is possible;—do you not think that where the road is now 3 chains wide, it would be possible to carry the road and the railway within that limit? I do not say it would not be possible, but I do not think it would be a good plan to adopt. I think you want about 2 chains for such a road in the country. It is not a made road. You require 2 chains for the road unformed as it is now, and practically 2 chains for the railway.

1951. Is it not a fact that many of our roads in the Colony are not more than a chain wide? Yes; I know there are many roads only a chain wide, but they get cut up very badly in wet weather.

1952. You propose that the railway and the road should run side by side? Yes.

1953. I suppose you would have the road on one side of the enclosure and the railway on the other, you would not have the railway running in the centre? No; I would put the railway on one side. There is another reason why we should have a greater width. If you have the railway running alongside, and you have a wide enclosure, there is a better chance for restive horses to get away from the train. I think that is a very important point. If the railway and the road were enclosed within a width of 2 or 3 chains it might become dangerous. I do not think that a comparison with Sydney traffic and the fact of horses running alongside the trams in Sydney is at all to the point, because we know that fresh horses brought into contact with steam motors are sometimes very troublesome to manage. I have known that from my own experience.

1954. Does not the same danger exist when the horses are brought to the railway station when conveying produce or passengers? Scarcely. In that case they are separated from the line by a greater width; they are often separated by the goods platform or by the goods sheds, or by the passenger platform, or passenger buildings.

1955. But are not most of the railway yards at country stations perfectly open, and do not the drays come right alongside the trucks, the engines passing backwards and forwards occasionally? Yes; there is no division, but they do not pass alongside in the same way.

1956. With regard to the question of fencing you stated in your evidence yesterday that you thought that with the proposed deviation it would be necessary to incur a considerable cost for fencing? Yes.

1957. How does that become necessary? I explained that if it had not been for that I should have proposed a reduction in the fencing on the original estimate, but in this case if the road is made use of, and the road being now fenced, we should have to put up new fencing on one side so that a considerable mileage of fencing would be entailed which otherwise would not be required.

1958. You said the estimated cost of the fencing was £35 per mile? No; the kind of fencing I should put up would cost on the average, including all little bits and corners, and pieces running up to gates and so on, £50 per mile.

1959. What description of fence would that be? A wire fence.

1960.

- H. Deane, 1960. How many wires? Seven.
 Esq. 1961. And the posts 10 feet apart? Yes.
 1962. Ordinary split posts? Yes.
 31 Jan., 1895. 1963. Is not that rather an extravagant price? I do not think so. The squatter's fence is mostly made of smaller wire than our fence is made up of.
 1964. You propose to use No. 7 wire, do you not? Yes.
 1965. In a squatter's fence No. 8 is used as a rule? I have seen No. 10 and No. 12.
 1966. For outside boundary fencing? Yes.
 1967. But even that would not make such a difference in the cost? Yes; they put in very much smaller posts as a rule, and perhaps more crooked ones.
 1968. That estimate, I suppose, covers the cost of all material as well as labour? Yes; it covers everything. It covers the maintenance of the fence, and that is an important thing to remember—the maintenance of the fence during construction.
 1969. Will you explain what that means? Take an ordinary railway contract. The railway contractor puts up his fence as soon as he possibly can—as he can conveniently get the men and make the contracts. During the progress of the work the fence is liable to injury from various causes. If the posts are damaged or the wires cut, through the teams coming against it, the contractor is responsible, and he has to put the fence in good condition. He has also to see that the wires are strained at the end of the job before the line is handed over.
 1970-1. But is not the contractor always responsible for the condition of the work until it is taken over by the owners? Yes; that is just the point.
 1972. Then there could be no special advantage such as you indicate? Yes there would. If a contractor erects a fence on a station, as soon as it is completed, the responsibility of it is taken over by the proprietor of the station.
 1973. And as soon as the contractor finishes a railway fence it is taken over, is it not? No; it may be finished months before the line is handed over.
 1974. That is only part of his contract? But it makes a great deal of difference. These railway fences are very often damaged to a very serious extent, and the damage has to be made good before the Government take over the work.
 1975. But the contractor is not compelled to put up the fence until the last thing, unless he chooses? He does the work as it becomes convenient. According to the present Act he is obliged to fence as the work goes on. He is not allowed to run his engine past where the fence goes. That is the provision in the Act, although it is infringed to some extent.
 1976. Is it not possible for the permanent-way to be handed over? Yes.
 1977. Why does the fencing stand in a different position to the permanent-way? It does not stand in a different position. The contractor has to maintain the whole thing until it is handed over. A station fence is handed over as soon as it is finished, but a railway fence, or a portion of it, may be finished some time before the line is handed over. Supposing the contract for this proposed line takes six months to carry out, the contractor has to erect 25 miles of fencing. He does not do all that in the last fortnight. He begins straight away, and gets the stuff at once. Very likely in the first month there will be something to show, and that first portion of the fence will have to be looked after for five months, and be subject to damage from outside, and if it is damaged it will have to be put in order by the contractor before he hands the work over.
 1978. Then you do not think £50 a mile an extravagant estimate? I do not think so, but if the fencing does not cost that the country will get the benefit of the difference.
 1979. I understand that you intend to ballast the line in certain tender places? Yes.
 1980. You do not contemplate ballasting from end to end? No.
 1981. And you propose to get your ballast from Narrandera? From near Narrandera.
 1982. Would not the ballast at Berrigan be sufficiently serviceable, and cheaper? That would be at the wrong end for one thing. I do not think it would be cheaper. I think the ballast can be run cheaper along the Narrandera line, and it can be put on the road for that. You might get it at Berrigan delivered cheaper than that, but then you would have to put it into trucks, and deliver it along the road. The amount I have mentioned is the price of the ballast actually put on to the line. The ballast is put straight away from the quarry into hopper trucks, and then it is run out on to the line, and laid down through the hoppers, just where it is wanted, without any labour at all, except for spreading it.
 1983. Does your estimate for fencing include the gates that may be required for the various crossings? Yes. The total item of £1,950 includes fencing, cattle-stops, and gates.
 1984. And the necessary fencing at the platforms or waiting-sheds? Yes; everything.
 1985. You know of no further expenses likely to be incurred in connection with the construction of the line besides those already enumerated? No; I believe I have everything down, except what might be required for land, which I do not anticipate will be much.
 1986. You now bring your estimate of the cost of the line to within about £30 per mile of the original estimate? Yes; I recommend that to be done. I do not think it would be safe to leave out the ballasting altogether; but if we left out the ballasting it would make about £100 a mile difference.
 1987. You do not recommend that the line should be constructed at a cost less than £2,000 a mile? No; I recommend that £2,000 should be provided.
 1988. *Mr. Chanter.*] In your evidence yesterday you estimated that the sleepers would cost 3s. each on the trucks at Narrandera, and you estimated a similar cost for sleepers from the Murray;—did I understand you correctly that in addition to the 3s. on the trucks at Narrandera there would be the cost of carriage from Narrandera to the point on the railway? No; what I said was this: that I had an offer to supply sleepers on the trucks at Narrandera for 3s., but that I considered the price was too high, and was sending to the saw-mill owners a drawing and specification showing the kind of sleepers we want, and which will answer the purpose. I consider that these sleepers should be delivered and put in the road for 3s.
 1989. What description of sleeper have you designed? Those would be red gum sleepers; but they would not necessarily be so square, so rectangular in cross-sections, as has been the practice. They would be sound sleepers, and just as durable as the others, but they would not be quite so nice to look at.
 1990. Would there be anything gained by the saw-mill proprietor in supplying a sleeper of that kind when it has to be cut with a saw? Yes; because he can go nearer to the outside, and probably use timber which otherwise would be wasted.

1991. If the saw-mill proprietor went too near the outside, would he not take in the sap and the worst portion of the sleeper? There is very little sap in the red gum. H. Deane, Esq.
1992. Are you acquainted with the evidence given in regard to sleepers before the Committee which inquired into the proposed railway from Jerilderie to Deniliquin? Yes. 31 Jan., 1895.
1993. Did you note the evidence given by one of the saw-mill proprietors on the Murray to the effect that he could supply first-class rectangular sleepers of the size required by the Department at 2s. a sleeper, if the Government would waive the royalty? No, I do not think I saw that. I reckon that those sleepers would cost 2s. 3d. on the Murray. If you can get them for 3d. less, so much the better.
1994. I presume the difficulty in getting sleepers from the Murray, where first-class sleepers can be obtained, is in consequence of the land carriage to the Berrigan end of the line? Yes.
1995. That would make these sleepers more costly? Yes; it would bring them to about a third more, I suppose, and then, of course, they would have to be run into the trucks on to the line. Another thing is that if you deliver them at Berrigan that is the wrong end of the line. You want them really at Jerilderie, so as to advance with your rails.
1996. It would mean a land carriage of over 40 miles altogether? Yes.
1997. And that would make them too expensive? Yes.
1998. Did you notice the timber reserve about midway between Jerilderie and Deniliquin? Yes.
1999. Is there not sufficient timber there to supply sleepers for this line? No; I think it would be very difficult to get sleepers from there.
2000. It is box timber? Yes. Box is a very good, durable timber if you can get it sound enough, but most of the large trees are pipey.
2001. Then, in your opinion, it would not be possible to obtain sleepers from that reserve? I do not think you could reckon upon more than 1,000 or 2,000.
2002. How many do you estimate would be required for the whole extent of the line? A little over 50,000.
2003. Then if some sleepers were obtained from there you would still have to go to Narrandera or the Murray to obtain sufficient for the line? Yes.
2004. And you think you can get those sleepers delivered where they are to be laid at a cost of not more than 3s. each? Yes; if they can get sleepers on the Murray at 2s., I do not see why we should not get them at Narrandera for 2s. 3d., and if we can get them delivered into the trucks at Narrandera for 2s. 3d., we ought to get them carried along the railway line and put into the road for 3s.
2005. I suppose you are aware that the greater portion of the sleepers laid down upon the railway lines in Victoria have been obtained from forests on the Murray River? Yes; I know they use a great many—red gum sleepers.
2006. Did you ever endeavour to ascertain the contract prices between those saw-mill owners and the Victorian railway authorities? No; I have not inquired.
2007. You might endeavour to make an inquiry which will be useful to the Committee as well as yourself? Yes, I will.
2008. You propose altogether to ballast the railway to the extent of about 5 miles? Yes.
2009. Not continuously for 5 miles, but in parts where, in your opinion, the line requires special care? Yes.
2010. You estimate the cost of that ballast at 5s. per cubic yard? Yes.
2011. Obtained from Cuddeell, in the Narrandera district? Yes.
2012. You are of opinion that it would cost about the same if the Berrigan granite were used? I think it would cost more if the Berrigan granite were used. They tell me that the Berrigan granite costs 5s. put on to the road, but it can be more cheaply put on to the road than it could be put on to the line. The Berrigan granite would have to be put into trucks, and then run along the line, whereas the material I have been mentioning would be on the line already, and there would be no extra expense in running it where it was wanted.
2013. Is the ballast you get from Cuddeell considered satisfactory by your Department—sufficiently hard stone? Yes; there is a good deal of it used.
2014. It is of a soft powdery character, is it not? No; it did not strike me as such. There is a good deal of it that would have to be screened out—a good deal of soft stuff.
2015. You are not aware from reports, or from your own observation, that a great deal of the stone now used upon the line between Narrandera and Jerilderie is of a soft sandstone character? I saw some of this particular stone at Narrandera. I was looking at it specially, and it seemed to me quite satisfactory for the purpose.
2016. You stated yesterday in your evidence that you thought there was an objection to the Berrigan granite on account of the cementable properties, and its running together too much? Yes.
2017. Is that any great disadvantage to a railway? Well, it is in this way, that it does not admit of the moisture running through, and it keeps the sleepers in a damp state.
2018. But as this decomposed granite, as you termed it, has been proved to make first-class macadam for roads, would it not also have a protective effect upon the sleepers—a chemically preservative effect? I doubt very much whether it would. I do not think that red gum requires that, because it is in all sorts of situations a very durable timber. Ballast that cakes on the line has this disadvantage, that if the road goes down you have to use the pick to open out the road before you can pack the sleepers up.
2019. But you do not contemplate that with the class of engines and the loads that would be taken over this line when constructed there would be any very heavy traffic that would lead to the consolidation of the ballast? There would be as little damage done as with traffic anywhere.
2020. In traversing this route did you observe any appearances on the surface that would indicate a gravelly substance underneath? No. I was on the look-out, but I did not notice any.
2021. Did you give instructions for trial shafts to be sunk along the line of route with a view to test this point? No. I have not done anything of that sort.
2022. If, after test by trial shafts it were found possible to obtain a gravel similar to that used on the line from Moama to Deniliquin, and on the Victorian railway from Echuca to Toolamba would you not recommend that it should be used in preference to the other? If I could get it cheaper.
2023. Of course taking into consideration the cost? Yes.
2024. You are aware that the terminal point on the railway at Moama is only about 40 miles distant from the Victorian quarry at White Hills near Bendigo? I do not know what the distance is.

- H. Deane, Esq. 2025. The distance from Narrandera to Jerilderie is about 70 miles, is it not? Sixty-four miles I think.
2026. The contractors for the Moama line would only have to pay half the haulage on their ballast as compared with ballast brought from Narrandera to Berrigan? I do not know; I should have to inquire into the circumstances. There is this difference: The quarries in Victoria belong presumably to the Victorian Government, or at any rate are situated on the Victorian Railways. They would want full carriage rates for running the stuff, and if it is Victorian Government property they would want full rates for the value of the material. In this case, it is one Department of the Government aiding another, and there is no necessity for any profits to be considered at all. There is a saving in this case.
2027. But would there not be a much greater saving taking into consideration the fact I am about to state, that irrespective of the cost of ballasting this private line from Moama to Deniliquin, they are getting a revenue themselves for the ballast from the various municipal bodies. Would not that be a great advantage in a district like this if you had these gravel pits at points along the line from Jerilderie to Berrigan, and could use it as well for ballast on your own lines? I do not know that it would. I do not know that they would be able to deliver it at a less cost than is at present paid for the gravel supplied to the municipalities.
2028. You estimate the cost of this class of ballast at 5s. per cubic yard? The Deniliquin-Moama Railway Company provide the labour for filling the trucks, and deliver this gravel at any point on their railway at 3s. per cubic yard? That is a saving, of course.
2029. If you could obtain that class of gravel, which has had twenty years experience on the private railway, would it not be better and cheaper to ballast the line from beginning to end with this class of material than ballast only 5 miles of it with the material brought from Narrandera—as an engineer, which would you prefer? I should think that the way I propose would be the cheaper, as compared with ballasting the whole line.
2030. If the private railway company provide the labour and sell this ballast at 3s. per cubic yard, is it not fair to assume that they get a profit of 1s. a yard? Sixpence, any way.
2031. That would leave half-a-crown, which would be half the cost of the ballast you propose;—for the same amount of money that would do at least twice the distance? Yes.
2032. Would it not be a decided improvement to obtain that class of ballast and have the extra distance, than to use the broken stone and have only 5 miles? You mean to have 10 miles instead of 5 at the same price—you would have more for your money.
2033. You have no prejudice against that particular class of ballast, have you? No; not for a line of this character.
2034. When you gave your evidence before the Committee, on the proposed line from Jerilderie to Deniliquin, I believe you spoke of Mr. Whitton not having passed the private line from Moama to Deniliquin? Yes.
2035. Was that in consequence of the class of ballast? Yes; he mentioned the ballast.
2036. That was the chief feature in his opposition? It was one important feature.
2037. Has it ever been brought under your notice as an engineer that, as a matter of fact, that ballast is better than the hard ballast because it is more yielding in character, and that the life of a sleeper where it is used is estimated to be at least 50 per cent. longer than where a sleeper is laid down upon hard stone? I cannot see that it would be any better for the sleepers.
2038. What is the size of the stone ballast? It is supposed to pass through a 3-inch ring in all directions.
2039. That ballast does not consolidate, and it forms a hard, unyielding surface below the sleeper? Not altogether unyielding; it is pretty hard, of course.
2040. If the sleepers are resting upon this very hard stone broken to a size of 3 inches, and of an unyielding character, and there is a heavy load passing over the line, the pressure must be upon the bottom of the sleeper? Yes.
2041. Consequently, it wears away the sleeper to a very great extent? I do not think it does.
2042. In your opinion, it does not? No; I do not think it does, because the sleepers get set to a certain position, and there is no abrasion of the sleeper.
2043. Was it ever brought under the notice of your Department that when the Victorian authorities constructed a line of railway about 40 miles in extent from Echuca to Toolamba, some of their officers were specially deputed to report upon the ballast used on the private line from Moama to Deniliquin, and have you taken that fact into consideration? I have not heard of that.
2044. Would you undertake before the Committee finally report upon this matter to have some tests made along the route of the proposed railway in order to discover the quality of the gravel, and how much of the surface would require to be removed? Yes.
2045. I believe evidence was given before the Sectional Committee by an officer having engineering qualifications, and at present in the service of New South Wales, and who has had experience in Victoria and Queensland, and has been located in this particular district for the last four or five years, in which he asserted positively, that it is necessary to ballast the whole of this line—I refer to Mr. Beere? I do not agree with him if he said that. I propose to put in extra sleepers. I do not see that the country along this route is any less favourable than some of the country in America where they do without ballast.
2046. I suppose you are aware that it is a class of country in which, when there is an excessive rainfall, the water soaks or seeps in the surface, and that it would not carry a horse or cow over it in its natural state—that the animal would sink right through the surface on to the subsoil? That may be the case in some places. If a proper embankment is made, and the line is drained, that condition of things will not occur. The water will not be able to soak into it in that way. The rotten condition arises purely from want of drainage.
2047. In traversing the route you would have observed that there is no natural outlet, that there is no fall for the water to get away; it has either to soak through the soil or evaporate? But the embankment would be drained by the side ditches.
2048. But in that case you would only collect the drainage from the line into the side drains; there would be no outlet for the drains? The water would run either one way or the other. It is not such a dead flat as all that.
2049. What is the difference in the levels from one point to the other? There are grades nearly all the way; they are very slight, but quite sufficient for water to run on.
2050. You could only empty these drains into the natural depressions? Yes.

2051. There are no creeks or other outlets for the water to get away? I suppose there must be a fall in the country in some direction. H. Deane, Esq.
2052. Passing over Berrigan Creek, for instance, there would only be a current there after a very exceptionally heavy rainfall? Yes; but if you dug a ditch alongside, it would be quite sufficient to carry the water away—to drain the bank. 31 Jan., 1895.
2053. What size side drains do you propose for this line? I should make them according to the size of the bank to be made up.
2054. Giving them a slope from the line itself down to the bottom of the side drains? Yes.
2055. In regard to the earthworks, I understood you to say, yesterday, that from information you had gathered you now estimated the cost of the earthworks at 6d. per yard, as against your previous estimate of 1s.? Yes.
2056. As far as the earthworks are concerned, should not that decrease the cost of the construction of the line by one-half? Yes; it looks as if it might, but it was explained to me yesterday, and Mr. Firth said he took an average of 6 inches for the height of the bank. I would make it higher.
2057. Then, although the cost per cubic yard will be decreased, you now propose to make the line more stable by increasing the height? Yes; and that would meet Mr. Beere's objection.
2058. There would be no difficulty whatever in using these graders you saw at work, or the scoops, in arranging for the top-dressing of the work, so as to have as level a surface for your sleepers as if the work were done in the ordinary way? Yes; it would be fairly level. It would be trimmed off by the graders.
2059. But could you not get it as level as under the old system;—under the old system of barrow-work or trolley, is it not always the practice to keep a man there specially for levelling? Yes; but afterwards there is what is called the forming gang. They go along and trim the lines from end to end, some distance in advance of the permanent-way.
2060. Could not that be arranged for in your specification? Yes; it would be.
2061. Do you now estimate the cost of the fencing at £50 a mile, as against your previous estimate of £75? I do not think I gave an estimate per mile before.
2062. The cost in the case of the proposed line from Jerilderie to Deniliquin, where the country is similar in character, was estimated at £75 per mile? Yes; very likely.
2063. In your evidence yesterday you reduced the cost to £50 per mile? Yes; because it can be done for that.
2064. So that in the event of the line having to be fenced, your estimate would now be reduced by £25 per mile? Yes.
2065. And that would be a considerable saving? Yes, as compared with the Jerilderie line.
2066. The original estimate of the cost of this line was about £1,800 per mile? The original estimate was £2,060.
2067. And then evidence was given reducing it to £1,800? On the assumption that the prices and figures were correct, I stated that a reduction of £230 could be effected by leaving out the ballast and putting in more sleepers.
2068. And you now estimate the cost of this line at £2,000 per mile? Yes.
2069. The only increase in your previous estimate has been in connection with the item of sleepers? Sleepers and ballast.
2070. There has been a considerable reduction in regard to earthworks and fencing, although you now explain that you propose to put in more? Yes; I propose to put in more of each.
2071. Can you explain why this difference of £200 per mile is made up;—Is that wholly on account of the increased cost of sleepers? The ballasting comes to £2,200 for the 5 miles, and that is about £100 per mile. Distributed over the whole length of the line it is rather more than £100 per mile.
2072. I understand that you have never travelled over the country between Jerilderie and Deniliquin? I have not.
2073. I suppose you are prepared to accept the statement that, as a matter of fact, the country between Jerilderie and Deniliquin is similar to that between Jerilderie and Berrigan? If you say so I am quite prepared to believe it.
2074. There is such a difference between your estimate of the cost of earthworks comparing one line with the other;—For instance, you estimate the cost of the earthworks for the proposed line at £250 per mile? £225.
2075. Your estimate for similar works on the Deniliquin to Jerilderie line was £300 per mile? I do not think they were quite similar.
2076. Is not this line of the class recommended by the Railway Commissioners, called light lines? Yes.
2077. And was not the class of line proposed from Jerilderie to Deniliquin also a light line? Yes.
2078. Where old rails were to be used as in this case? Yes.
2079. Wherein lies the difference in the cost of earthworks as between this line and a similar class of line from Jerilderie to Deniliquin? It was proposed to have more earthworks on the line to Deniliquin.
2080. The country is of the same level character? There are one or two creeks, and there is the Edwards River. There would be the approaches to the Edwards River at Deniliquin.
2081. That would be the only bridge, and there would be the Tuppal Creek;—as a matter of fact, your estimate of the cost of earthworks for that line was £300 per mile? Yes.
2082. Your estimate for the line from Jerilderie to Deniliquin, practically the same class of line as this, was £3,300 per mile, and your estimate in this case is £2,000 per mile;—can you explain the difference? I have explained that in my former evidence in answer to questions by Mr. Humphery.
2083. As a matter of fact, has not your personal inspection of this country between Jerilderie and Berrigan led you to reduce your estimate, and satisfied you that a light line of railway to suit all purposes can be made there for £2,000 per mile? I think my recent experience has done a great deal towards causing the estimate to be reduced.
2084. Consequent upon your personal visit? My visit to America has enabled me to recommend a class of line which, perhaps, otherwise I should scarcely have suggested.
2085. Has not your personal inspection led considerably to that end? Yes; I believe in inspecting the lines before giving evidence on them.
2086. Then, had you made a personal inspection of the proposed line from Jerilderie to Deniliquin, you might also have been able to have reduced your estimate of the cost of that line? If I were to make a new

H. Deane, Esq., new estimate of the Jerilderie to Deniliquin line, I should make it considerably less than £3,300 per mile, but I should not reduce it down to £2,000 per mile, because the earth-works would still be in excess, I believe, and the culverts and bridges would be in excess. The level crossings and fencing would be reduced, and the permanent-way would be considerably reduced, because the prices for material have fallen.

31 Jan., 1895. 2087. The only difference in the earth-works would be in connection with the bridge over the Edwards River, would it not? Yes, I suppose so; and the other creek, the name of which I forgot—chiefly those. 2088. If it can be proved that this line from Jerilderie to Berrigan can be constructed at a cost of £2,000 per mile knowing the character of the country as you do, would it not be safe to assume that a similar line could be constructed from Jerilderie to Deniliquin at the same cost irrespective of the bridge over the Edwards River? I should prefer to see the country first and examine the levels; but it would be approximately the same I should think as far as I can tell. There would be an additional expense owing to the crossing of the Edwards River, and perhaps the other creek.

2089. You have seen the line of railway from Deniliquin to Moama? Yes.

2090. You are aware of the class of traffic it carries—heavy traffic? Yes.

2091. You are aware that on that line they use the same class of engines that are used on the main lines in Victoria—the same weight? They have so many different classes of engines on the Victorian lines. They have some very light engines which do very good work.

2092. Do you know what the cost of that line between Deniliquin and Moama was twenty years ago? Yes, I got the particulars of it when I was there.

2093. Can you say from memory what it was? The cost, including rolling-stock and everything was about £3,500 per mile.

2094. Can you state the cost without the rolling-stock? I think the rolling-stock cost about £500 per mile, and that would leave about £3,000 per mile.

2095. Including station buildings? Including everything. As regards the running line the cost no doubt would be less, but including station buildings, and everything else it would be about £3,500.

2096. Do you know the cost of the line from Echuca to Toolamba in Victoria where the country is of the same level character? No, I do not.

2097. The cost is about £2,000 per mile contract price? But that did not include the rails.

2098. Your estimate now includes the rails? Yes.

2099. Have you ever seen a line of railway—tramway it is called—from a point on the Murray River on the Victorian side called Koondrook to the town of Kerang, where there is a junction with the Victorian railway line? No, I have not.

2100. Have you made inquiry or have you any knowledge of that short line? No, I have no particulars.

2101. In your evidence yesterday I understood you to say that in your opinion it would not be wise or safe to adopt the route from Jerilderie to Berrigan recommended by the Sectional Committee unless you had a width of 4 chains for the railway and 2 chains for the road? Yes, I said I thought it would be wise to have 4 chains. I recommended that.

2102. Was one of the considerations which influenced you in recommending this great width the fact that you thought it desirable to prevent danger of fire from sparks from the engines? That was one reason.

2103. That is not a very great reason, is it? I think so.

2104. What width would you actually require for your side drains and your roads? That would vary with the height of the earth-works.

2105. Take an average width—I mean from the outside or the extremes of the side cuttings or drains, measuring over your road? If you take 24 feet for the width of the bank at the bottom,—6 feet on each side, then 20 feet on each side for the excavation of the material, and 6 feet outside again, that gives 88 feet of net width required.

2106. Is there not a much less width than that on many of your main lines—is there not a less width on the Albury line in parts? I do not think so. The general practice has been of late years to take 3 chains in width.

2107. Are not your railway lines very often confined between the fences within a space of a chain? No; I do not think so. I do not remember any place even on the suburban lines where the width is less than 99 feet. There may be some—I would not say, but not on any of the new lines.

2108. The railway to which I alluded just now, from Koondrook to Kerang is running on an open 3-chain road. The stock, the vehicles, the waggons, the railway, and everything is running within a space of 3 chains, and it is found to work well. If it can be done there, why cannot it be done here? Is the railway on the side of the road there?

2109. Yes? As I have explained, a certain width will be taken up for the railway. You yourself will agree that it is better to make an embankment all the way along to keep the rails well off the surface of the ground, and that would involve probably more width than is the case in connection with the particular tramway referred to. Perhaps the country there is firmer.

2110. If you had your regulation distance of 80 feet, would not that give your line ample accommodation, as well as give stock and vehicles sufficient width on a 2½ or 3 chain road to meet all requirements? I could make the line on a chain and a half very likely throughout except at the stations.

2111. What is the average width of the road at present recommended by the Sectional Committee for this line? It varies from between about 1½ to 3 chains.

2112. If that were made up to 2½ chains, would not that be quite sufficient in your opinion—2½ for road and railway? No; not in my opinion.

2113. There is no difficulty where the tram line and the road from Campbelltown to Camden run alongside each other? The conditions are different there. Where a road is properly formed and metalled the traffic can run on a narrow width all right, but in the country to which we are referring the roads are not metalled, and you require a considerable width to enable the teams to look for sound ground.

2114. But if the line were constructed the road running parallel with it would not be used to the same extent that it is now? No; it would not be used so much.

2115. The traffic would be more upon the roads which feed the railway, and not upon the road running parallel with the line? There would not be so much traffic on the main road.

2116. You are aware that the Railway Commissioners in their report upon this line have recommended that the railway shall be constructed contingent only upon private owners granting the land required? Yes.

2117. You are also aware that the Sectional Committee have taken evidence, and that with one exception the private owners refuse to grant the land? Yes.

2118.

H. Deane,
Esq.
31 Jan., 1895.

2118. If on the deviation proposed by the Sectional Committee, and approved by you, the width required will, in your opinion, be about 4 chains, would not that necessitate a resumption of a large area of land along the whole distance, and a large consequent payment? It would necessitate a resumption amounting to 8 acres to the mile.

2119. There would be no severance, but there would be a resumption? Yes.

2120. And you are not in a position to tell the Committee what the cost of that resumption would be? No.

2121. It would not be possible to ascertain at this stage? It would be possible, I suppose, to ascertain what is the general value of the land there. But I have generally avoided looking into land matters.

2122. But in this case it is forced upon the Committee that the line, if built at all, can only be undertaken if there is no land to be purchased—that is really the Commissioners' report? Yes.

2123. In considering the proposed deviation, would it not be possible to meet their wishes by running along the roads of the ordinary character? If they were 3 chains wide. I will say this: If I am told to occupy a chain and a half of the road I will do so, and leave the other free for road traffic.

2124. Referring to the line as surveyed, and speaking of severance, you said yesterday the stock would be able to cross the line backwards and forwards, and that unless the line were fenced, in your opinion there would be no claim for severance? Yes.

2125. Supposing this line were constructed in the centre of the road, would not the stock travelling backwards and forwards on the road be able to cross and re-cross the line just the same as if the line were taken as originally designed by your surveyor? Yes; but the road is fenced.

2126. Supposing it is fenced, cattle, sheep, and horses could cross it;—would it not be possible, at a very small additional cost, to enable heavily loaded teams to cross the line from one point to another by putting up little timber approaches? Yes.

2127. That would not materially increase the cost? Crossings would be provided and gates erected wherever they were wanted.

2128. At reasonable intervals? Yes.

2129. As a matter of fact, if the public convenience and traffic were satisfied, and you had sufficient space to run your line on this width of 80 feet, that would meet your requirements as to the railway? Not 80 feet. I think 80 feet is too little, say a chain and a half. If you divide a 3-chain road at the middle and give me half of it I will make a railway along it. I could not undertake to do that on a 2-chain road.

2130. Supposing you had a 2-chain road, and you put your line on the side of the road as nearly as possible would not that give a reasonable width for ordinary traffic? No; I do not think so.

2131. It is considerably more than is provided in many other cases? But in those cases the road is formed and metalled.

2132. Where your lines go through a township there is considerably less width, and horses and cattle are able to use the road? I think you will find that on the main roads in townships where there is much traffic, the roads are formed and metalled or gravelled.

2133. In regard to the question of fire, is it not possible to use spark-arrestors on your engines, so as to render danger from fire very remote? I do not think the danger is very great now, but still there is a danger.

2134. You are aware that the engines running on the private line from Deniliquin to Moama are fitted with spark-arrestors? I suppose they use wood as fuel.

2135. And you use wood as fuel on some of your lines—for instance, on the line from Narrandera to Jerilderie, and on other lines in remote parts of the Colony? I could not say to what extent wood is used. The American engines are always provided with an arrangement in the smoke-box for catching sparks.

2136. In countries such as that under consideration, would not the use of spark-arrestors obviate the necessity of getting so far away from the adjoining properties? You could only use these spark-arrestors on the wide funnels, where wood only is being used.

2137. I allude more particularly to the class of spark-arrestors used on the Deniliquin to Moama line? That is a point as to which I think it would be better to ask the traffic officers of the Commissioners' Department. They would give you better information than I could.

2138. You have stated that a certain width of land is required for the road and the railway, and one reason given is that it is desirable to keep the railway as far as possible from the adjoining property, to avoid any danger from fire;—would it not be wise, under those circumstances, to see if you could not remove the danger from fire, and thus be enabled to bring the railroad nearer to the private property, so as to lessen the necessity for resuming land along the route? I do not know what could be done to minimise the danger. It is not very great now.

2139. Supposing the Committee, in its wisdom, arrive at the decision that a width of 2 chains is sufficient for your railway and the ordinary road traffic, you could not work the railway on that space? Not to make the proper embankment for the line.

2140. Not on 2 chains? I think not, and have a railway and road too.

2141. If the railroad were running along the ordinary highway used by the public, and any accident happened, the Department would not be liable? No; not if the Department were protected by an Act.

2142. Then, in your opinion, the least width you could do with would be 3 chains, to make ample provision for the railway and provide for the ordinary road traffic? What I say is, that I would recommend that 4 chains be devoted to the road and the railway, but I certainly could get the railway in upon 1½ chain, leaving the other 1½ chain, or whatever the width might be, for the road.

2143. I press this point, because the Railway Commissioners have given their opinion, and although you estimate the cost at £2,000 per mile, that is exclusive of resumption, and if land has to be resumed the cost of the line will be made so great that possibly the Committee might not recommend it, or Parliament agree to it? Supposing you had to resume, the cost would not be more than £20 or £30 per mile for the land, without severance.

2144. Have you had much experience of the prices people generally ask for land? I know that sometimes they ask about ten or twenty times as much as they ought to get.

2145. I understand you to say that, in your opinion, 4 chains is required, but that you think adequate provision could be made upon 3 chains—fairly adequate, we will say? That sounds rather ambiguous.

2146. In other words, you would like to have 4 chains? I recommend 4 chains, but I could do with 3—that is to say, I could do with 1½ chain for the railway alone.

2147. Mr. Roberts.] Have you travelled over the line from Yarrawonga to Benalla, in Victoria? Yes.

H. Deane, Esq. 2148. Did you notice the style of fencing adopted along that line? I did notice the fencing when I was there, but I forget exactly what it was like.

31 Jan., 1895. 2149. It struck me as being a very inexpensive fence, and if it would answer on a line like that I should think it would answer on the projected line from Jerilderie to Berrigan. The posts were very light, and I think there were only three rows of wire, certainly not more than four. I think you said you intended putting seven rows in your fencing. Perhaps you would consider whether a cheaper fence than that contemplated might not do for this proposed line? I am afraid you would not keep sheep and other stock out with less than seven rows of wire. A fence along a railway line should be sufficient to keep sheep and other stock in the paddocks, and prevent them from getting into the paddocks.

2150. The fence of which I speak goes through similar country to that under consideration? At one time there was a great deal of discussion, and many opinions were obtained as to the style of fencing we should adopt. The present wire fence, in regard to the number of wires and the spacing of them, is the result of the experience of many. It is not an invention of the Railway Department, but it was adopted as the result of a concensus of opinion on the part of people who could speak authoritatively in various parts of the country. I should not, therefore, like to suggest any alterations.

2151. Perhaps you might ascertain particulars in regard to the fence along the line to which I have referred? Yes; I will write to the engineer.

2152. *Mr. Humphery.*] In the event of the resumption of a chain of roadway becoming necessary in order to carry out your view that a width of 4 chains should be provided for the railway and the road, would not that lead to claims on the part of the owners of property for loss of frontage? No; I think not, because they would have the frontage just the same.

2153. Do you propose to construct the railway in the middle of the road? No; on the side.

2154. By constructing the railway on the side of the road close to the fence, would you injure the property along which the railway would pass? No; because where they had openings in their fences we should construct proper crossings for them.

2155. What advantages would there be in constructing the railway close to the fence instead of in the middle of the road? The advantage would be that where stock were travelling they would not trample the line so much.

Percy Scarr, Esq., M.I.C.E., Principal Assistant Engineer, Roads and Bridges Branch, Department of Public Works, sworn, and examined:—

P. Scarr, Esq. 2156. *Chairman.*] What are you? I am Principal Assistant Engineer in the Roads and Bridges Department.

31 Jan., 1895. 2157. Have you a knowledge of the country between Jerilderie and Berrigan? Yes; a fair knowledge. I have been over it several times.

2158. A sufficiently intimate knowledge to express an opinion in regard to the roads in the vicinity? Yes; I think so.

2159. You see on the map behind you a red line indicating the present main road from Berrigan to Jerilderie? Yes.

2160. And you see also, a dotted line showing a deviation from the road? Yes.

2161. Is there any objection to the road being moved so as to take the route shown by the dotted line? I think not. From my knowledge of the country, I think it matters very little where you take the road there.

2162. You believe that position would be suitable? I think so.

2163. Is there much difference in the length of the two roads? There would be about $1\frac{1}{4}$ mile. The proposed route would be fully a mile shorter.

2164. Do you regard that as an advantage? Undoubtedly.

2165. In the cost of construction? Not only in the cost of construction, but also in the saving of time, and in maintenance.

2166. Supposing there were no consideration at all of a railway in that vicinity, and it was brought under your notice as the head of the Department, that a road through country of that kind for no engineering reason had been made as circuitous as that road has been made, would you be justified in straightening it? Certainly; and had I known there was such a bend in the road it would have been attended to before now. I knew there was a bend there when travelling over the road, but I had no idea until I looked at the map some time ago that it was so great.

2167. Have you power to close the old main road, and make a new road as suggested? The Lands Department have certain powers under one of the old Acts—4 William IV, No. 11.

2168. And they work with you? Yes.

2169. In point of fact, you make the suggestion, and the Lands Department have power to carry it out? Yes.

2170. So that if the road be made direct from point to point as suggested, there can be no doubt as to your legal power to do it? No. I think in that case there would be no difficulty at all. The land is all freehold, I think, and that being so, we could proceed under that Act. If it were conditionally-purchased land, the Lands Department would have power under the 42nd clause of the Land Act.

2171. Irrespective of any consideration as to the construction of a railway, you would regard it as an absolute benefit to adopt the route indicated by the dotted blue line? Yes; as far as my knowledge of the country goes, and certainly because of the directness of it.

2172. *Mr. Lee.*] In resuming land under such circumstances, is it usual for the Department to pay compensation? I think in this case there would not be much compensation to pay, if any, because the land is all freehold, and there are rights reserved in the grants.

2173. The right, on the part of the Crown, to take as much land as may be required for road purposes? Yes.

2174. Have any cases occurred in your Department where you have taken one road and given an old road in exchange? We do not do that—it is done by the Lands Department. There are any number of cases where it has been done by the Lands Department at our request.

2175. And, as a matter of fact, it is being done to-day? Yes; continually.

2176. There is no legal difficulty in the way that you are aware of? No.

2177. Neither as regards old purchases or recent purchases? No; I think not. In the case of some of P. Scarr, Esq. the old grants difficulties have arisen, but those have been very old grants—early in the century. 31 Jan., 1895.

2178. There are no such grants in respect of the country under consideration? No; these are later grants.

2179. So that, if it were necessary, your Department and the Lands Department together would have no difficulty in putting this road wherever you thought proper? I do not think there would be any difficulty in the case.

2180. And would that involve the State in any heavy expenditure for severance? No; I think not.

2181. Do these Departments ever pay for severance under such circumstances? Severance has been paid for in some special cases where it has been shown that special injury has been done. In some cases, where damage could not be claimed legally, it has been given, rather as a matter of equity than as a legal obligation. In this case, however, I do not think anything of the kind would arise, and I do not think there would be any legal difficulty in the matter.

2182. As a matter of law and as a matter of custom, the State has the power to take any land it thinks proper for road purposes? Yes.

2183. *Chairman.*] You told us it would be a benefit to save a mile and a quarter in the length of the road? Yes.

2184. You said, also, that had it been brought under your notice, in all probability you would have straightened the road yourself? Yes.

2185. If you had straightened it you might have had to bring the fence from the old surveyed road and put it upon your new road? Yes.

2186. And, therefore, it is reasonable to believe that your Department would pay the cost of the fencing of the new road? Yes; it has been done in a good many cases. The general rule is, that where the new road severs an enclosure—that is, land enclosed by a permanent and substantial fence,—they pay the cost of re-fencing, either the moving of the old fence or the erection of the new.

2187. Would you, speaking for the head of the Department, recommend the removal of the road and the fencing on both sides? I think so. From my knowledge of the country I think it would be a desirable alteration.

2188. *Mr. Hoskins.*] The Act under which the Roads Department are empowered to take private lands for the deviation of a road is termed 4 William IV. No. 11? Yes.

2189. Supposing the party from whom it is proposed to take the land is not disposed to give it up readily; has he not an opportunity to interpose great delay in the Government getting possession of the land? He has power to make objection. According to the Act there is a certain time given to send in objections. If the objections are not considered of sufficient force to bind the matter much delay is not caused. It is only where there is a serious objection that delay is caused. If a man sent in a frivolous objection that would not cause delay.

2190. Still, as a matter of fact, occasionally considerable delay arises in the Government acquiring legal possession of land? Only on rare occasions.

2191. *Mr. Gormly.*] Objections can only be made where there are certain improvements on the lands proposed to be resumed—where there are nurseries, homesteads, and improvements of that character? Yes; they are provided for in the Act.

2192. It is only in the case of such improvements as those that substantial objections can be made? Quite so.

2193. On looking at the map you said that the existing road was about a mile and a quarter longer than the proposed road? Yes.

2194. Therefore, there would be a greater extent of the same width in the existing road than there would be in the resumed road? Yes, taking the same width, say 1 mile, that would be 8 acres a chain wide.

2195. Therefore, in getting the new road, it could be resumed at a greater depth to contain the same quantity of land as that which would be given in exchange? Yes; in proportion.

2196. *Mr. Humphery.*] You said a chain wide in answer to Mr. Gormly? For the purpose of comparison.

2197. What is the width of the present road? Some portions of it are 3 chains wide, and other portions 2 chains.

2198. Having in view the construction of a railway, would you resume for road purposes 1 chain? No; I would not recommend a 1-chain road there under any circumstances. I only mentioned 1 chain for the purpose of comparison, to show what the difference would be in regard to the quantity of land taken.

2199. Assuming that you made a road the width of the present road what would be the increased area that would be thrown into the land through which the present road runs? It would be 8 acres for every mile, saved in length, 1 chain wide; so that if you made it 3 chains wide it would be 24 acres for every mile saved in length.

2200. As a matter of fact the owners of the land through which the new road would be made would gain 24 acres? Twenty-four acres with a 3-chain road for every mile saved in length.

John Kneeshaw, Esq., Acting Secretary to the Railway Commissioners, sworn, and examined:—

2201. *Chairman.*] What are you? I am Acting Secretary to the Railway Commissioners.

J. Kneeshaw,
Esq.

2202. Do you come here at their instance? Yes.

2203. To give us some information in regard to the new route proposed for the railway from Jerilderie to Berrigan;—have you any statement to make with regard to that matter? No; I have no statement.

31 Jan., 1895.

2204. You see the map behind you—you see the red curved line extending from Jerilderie to Berrigan? Yes.

2205. That was the proposed route—the dotted line is the route the Committee favour;—have the Commissioners any objection to the alteration of the route? No; the Commissioners have no objection to the proposed deviation.

2206. It meets their views? Yes; they think favourably of it.

WEDNESDAY, 27 FEBRUARY, 1895.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY.
 The Hon. JAMES HOSKINS.
 The Hon. JOHN DAVIES, C.M.G.
 JAMES HAYES, Esq.

JOHN MOORE CHANTER, Esq.
 CHARLES ALFRED LEE, Esq.
 JAMES GORMLY, Esq.
 EDMUND WILLIAM MOLESWORTH, Esq.

The Committee further considered the proposed Railway from Jerilderie to Berrigan.

Henry Deane, Esq., Engineer-in-Chief, Railway Construction Branch, Department of Public Works,
 sworn, and further examined:—

- H. Deane,
Esq.
27 Feb., 1895.
2207. *Chairman.*] Mr. Firth gave some evidence showing in detail the cost of various parts of the proposed railway from Jerilderie to Berrigan. Your statement appeared to vary from that a little, and I understand that you now desire to substitute another statement for it? I did not think it was necessary; but, on your suggestion, I am pleased to hand in an estimate which I revised after going over the route, and which I referred to in my previous evidence. [Vide Appendix.] In most points it is practically the same as the first estimate, though there is some difference in regard to ballasting and sleepers.
2208. There is no vital difference, but you believe that the details are more correct than in the previous statement? Yes; I now make the length 21 miles 19 chains, instead of 21 miles 10 chains.
2209. You desire this statement to take the place of Mr. Firth's? I think it would be better.
2210. According to this statement the average cost of the line would be £2,000 per mile? Yes.
2211. What will the running road cost? Deducting the cost of station buildings, ballast, earthworks at stations, and the amount put down for contingencies, engineering office, and supervision expenses, we have £1,441 a mile for the running road. That is what the Government would have to pay the contractors, including cost of permanent way.
2212. You put down £100 per mile for ballast? Yes.
2213. Is it possible to let the ballasting stand in abeyance;—may you not find that you will be able to do without ballast? I think it is possible; still, in my opinion, the money ought to be provided.
2214. Leaving it with you not to spend it unless absolutely necessary? Yes; I could undertake to do that. If, during the progress of the work, it should be found necessary, it would be very awkward not to have the money.
2215. That would make the running road £1,541 per mile? Yes.
2216. In letters which we have received from various landowners, although they acquiesce in the proposal, they point out that they should like various alterations made in the route as marked out, and the Committee would be glad if your surveyor would meet their requirements as far as possible, so long as that could be done without injury to the public interests. You realise, no doubt, how it may be possible by slight deviations to avoid improvements, wool-sheds, tanks, and so on? Yes.
2217. With regard to the cost of fencing here and in Victoria, you have sent in a plan—will you tell the Committee the difference between the cost of such works in the two colonies? The latest design for fencing which has been prepared by Mr. Rennick is, I believe, that shown on the small sheet before me.
2218. Will you describe it briefly? Yes. The posts are 3 feet 9 inches out of the ground, and 1 foot 10 inches in the ground, and are placed 10 feet apart. There are five lines of No. 10 wire, and on the top of the posts is a barbed wire, No. 12, which is fixed by means of staples, the other wires going through the posts. These posts have 21 square inches of section. There are straining-posts shown at certain intervals—probably from 4 to 5 chains. I also sent in a plan showing a fence designed by myself, with posts 4 feet 6 inches out of the ground, 7 wires of No. 6 gauge, and straining-posts every 4 chains, the ordinary posts being 10 feet apart. This design has been adopted for some years past.
2219. What is the cost of your fence? The estimate I gave to the Committee was £48 a mile.
2220. And of the Victorian fence? £45 a mile.
2221. Practically there is not much difference? No; my wires are stronger, and there are seven of them instead of six as in the Victorian fence; but Mr. Rennick's fence has a barbed wire on the top, which I have not. They are both effective fences.
2222. With regard to the samples of ballast in the four boxes before you, I understand that No. 1 was found at a depth of 11 feet, No. 2 at a depth of 15 feet, No. 3 at 11 feet, and No. 4 at 4 feet. Is not that very heavy stripping? Yes, but No. 3 is marked as having been found at a depth of 5 feet 6 inches.
2223. It is only inferior gravel at that depth? Yes; the only gravel that is really good in quality is No. 2, which has 15 feet stripping.
2224. Does 11 feet of stripping render it practically impossible to use the gravel? It is a good deal of stripping.
2225. Would it be cheap gravel? No.
2226. What about a stripping of 5 feet 6 inches? The sample found at that depth shows a very poor class of gravel. It is very dirty. I should not like to use it except as a makeshift.
2227. *Mr. Hoskins.*] When you were last here you stated in reply to a question which I put to you that you preferred to use ballast along this line in some of the soft places. There are, I believe, several places where, after heavy and continuous rains, such as we have had lately, and as we have often had previously—if heavy engines were used, although there might be a large number of sleepers upon the ground, the rails would not get their proper bearing, and the trains might run off the line? That is what I think.
2228. But I gather from your answer to the Chairman just now that you wish to have money for ballast, not with the view of actually expending it, but simply to have it at hand supposing it should be required. Before, however, you said that you would put ballast over these soft places? That was my intention. I could not tell that 5 miles of ballasting would absolutely be required—that was merely an estimate, which probably is on the safe side.
2229. Therefore, if the line is made, you intend to use ballast on those places where there is a great amount of soakage, and where the water in wet seasons cannot get away readily? Yes.
2230. This line is termed a pioneer line? Yes.
2231. The Narrabri to Moree line was also called a pioneer line? Yes.

2232.

2232. Do you not propose to use 6 inches of ballast upon that line? I did at the time intend to use 5 inches. H. Deane,
 2233. Your estimate of cost was how much per mile—£1,800? I cannot say from memory what it was; Esq.
 but I do not think that I have hitherto proposed any line costing less than £2,000 a mile.
 2234. *Chairman.*] I think it was £2,400 a mile? I think it was about that.
 2235. *Mr. Hoskins.*] That includes a large bridge, and several large culverts? Yes.
 2236. Why did you propose to ballast the whole of that line while you intend to ballast only a portion of
 this line? I think it is very likely that when we come to carry out the Moree line a large quantity of
 ballast may be dispensed with. I shall certainly do without it where I can. But there is this difference
 between the two lines, that there is a great deal more black soil between Narrabri and Moree than in the
 Berrigan district.
 2237. Then it is your opinion that you should be permitted to ballast some of the weak spots along the
 proposed route? Yes.
 2238. *Mr. Humphery.*] Have you seen an estimate of the cost of a line, somewhat similar to the proposed
 line, which is now in course of construction between Wycheproof and Sea Lake in Victoria? Yes; I
 think Mr. Rennick showed me that estimate.
 2239. The difference between your details and the details shown there would appear to lie principally in
 the fencing, bridges, and earth-works? It is not a good line to make a comparison with.
 2240. Why? It passes through mallee country where the rainfall is very small. I think Mr. Rennick
 said that the rainfall was only about 14 inches.
 2241. The rainfall is from 15 to 18 inches, which is similar to the rainfall in the Berrigan district? —
 2242. *Mr. Gormly.*] But mallee country is very porous, and the water soaks away through it? That is
 a very important point. Mr. Rennick's estimate does not differ very much from mine.
 2243. *Mr. Humphery.*] I suppose, he would be charged the full price for rails, and not get them at the
 reduced price at which you propose to purchase from the Railway Commissioners. That would increase
 the difference? That would be something.
 2244. Is there any reason why a similar line should not be made in this Colony in similar country? There
 is really not very much difference between the two estimates. Mr. Rennick has less for earth-works, but
 then the country is more suitable.
 2245. Being mallee country instead of clay? Yes; and as Mr. Gormly has pointed out, the water soaks
 away much more quickly.
 2246. You have made provision for culverts and bridges? Yes. Mr. Rennick allows only £9 a mile for
 bridges and culverts.
 2247. As against £115 allowed by you? It is £110 in the estimate which I furnished to the Committee.
 2248. Where will those bridges be placed. We were told that no bridge would be necessary except at
 Berrigan Creek? We will want openings and drains every half-mile or so. They will be absolutely
 necessary.
 2249. Speaking generally, do you think such a line as that between Wycheproof and Sea Lake would be
 suitable in similar country here? If it were modified to suit the different conditions.
 2250. But I said, in similar country—in mallee country? Supposing we had similar country—mallee
 country—here, my estimate would probably be about the same as Mr. Rennick's.
 2251. You think a pioneer line could be built which would be similar to that to which I have called
 your attention? The conditions of the country being absolutely the same.
 2252. I suppose there are some parts of New South Wales very similar to the country through which this
 line passes? Yes; I should think so, though I have never been through exactly similar country.
 2253. *Mr. Davies.*] Having visited the country, and having made a cursory investigation of the deviation
 recommended by the Committee, are you still of opinion that the line would cost £2,000 a mile to
 construct? I said that I recommended that £2,000 a mile should be available; but that I would save
 money where possible. I would not expend money on ballast if I found that it was unnecessary to do so.
 Had I stated that the line would cost £2,000 a mile, that would mean that it might cost more; but I do
 not think that this line will cost more. I think that it will cost less, and that we shall be able to make a
 saving.
 2254. Are we to understand that £2,000 would be the outside cost, including the usual 10 per cent.
 addition? Yes; unless unforeseen circumstances should render extra work necessary.
 2255. After seeing the country, do you think there is any possibility of that? I do not think so. I think
 that we shall be able to construct the line at the estimated cost.
 2256. You would not recommend that the line should be built absolutely without ballast from end to
 end? No; I consider that ballast will probably be necessary in certain places.
 2257. Have you made further inquiries with regard to the cost of sleepers since you were last before the
 Committee. Are you in a position to state whether you can get them supplied more cheaply than you
 at first thought? I wrote to the saw-mill company at Narrandera, sending a specification and sketch
 showing what was required, but I have not yet received any reply.
 2258. *Mr. Lee.*] Have you thought any more over the question as to what width of road is necessary to
 carry the proposed line? I am prepared to make it on a 3-chain road.
 2259. That is what you would prefer as an engineer? Yes; I recommended that the road should be 4
 chains wide; but if 3 chains are given, I will take care that the line is placed as close as possible to the
 fence on one side, so that the rest of the road may be left for traffic.
 2260. Considering that when the line is constructed all the heavy traffic will be taken off the road, do
 you not think that 1½ to 2 chains will be a sufficient width? It may be so.
 2261. It must be remembered that this line is a pioneer line of a cheap character, and it is therefore
 necessary, where possible, to avoid the resumption of land. Therefore, inasmuch as there is a road now
 in existence from 2 to 2½ or 3 chains wide, will it not, in your opinion, be sufficient to carry the railway
 as well as the ordinary road traffic? What width do you ask about—do you refer to a width of 1½
 chain or to a width of 2 chains.
 2262. I am speaking of that portion of the road from Jerilderie station to where you turn in to go to
 Wilson's property? As you go across Jerilderie Common you are not restricted by fences at all; but
 as soon as you get to the Peterson and Sargood property you have a road which is only 1½ chain wide.
 That I think is clearly not sufficient. You could, of course, make the railway along such a road, but the
 road traffic would have to run as it best could and it would be very dangerous. It would also be a bad thing
 for the railway, because stock going along would trample upon the line and spoil it. 2263.

You think it will be perfectly safe to try the experiment at Jerilderie? Yes; looking at it as an experiment no harm would be done, because if afterwards you wanted better support to the road you could ballast it. After the line is once opened you can go on improving it just as they do in America. Then, as I have already explained, they lay their lines in a very primitive way in the first instance, and go on improving them from the day the traffic starts running. H. Deane, Esq. 27 Feb., 1895.

* * * * *

What would be the cost supposing it were necessary at some future time to strengthen the road by adding ballast? I suppose it would not cost more than is put down in the estimate at the present time.

Would the estimate of £308 for ballasting be sufficient to give about 6 inches of ballast? Yes, quite that, and the ballast could be run along more cheaply by the Commissioners' trains.

In view of that statement, would it not be advisable to make the line in the first place wholly without ballast, adding ballast afterwards, supposing it were found to be necessary; that would not be more costly than to put the ballast down in the first instance? I have explained that my first evidence was, of course, subject to any modifications which I might think necessary after travelling through the country. I still adhere to the opinions expressed on the occasion to which you refer, with such slight modifications. I believe in doing without ballast generally, but there are one or two places where I think the line should be ballasted, and I think money should be provided for 5 miles of ballasting.

2289. Practically then, you require so much extra in case ballast may be needed? I want to have a little in hand.

2290. But it is your intention not to use ballast where you can possibly go without it? That is my intention.

2291. *Mr. Gormly.*] Are you of opinion that it would not be worth while stripping to the depth at which the samples before you were obtained, especially since the gravel when procured would be inferior? Yes.

2292. *Mr. Chanter.*] If No. 2 gravel could be obtained at intervals along the line, might it not be wise when the line is made to ballast it all along with it? It may be found near the surface somewhere or other.

2293. I believe it would be if trial-shafts were sunk, and one or two quarries would then ballast the whole line, and could be kept always open? Yes; I think it would be better to ballast the line if there should be enough money available.

2294. Then would it not be wise to try and ascertain, as early as possible, where this gravel is to be found, with a view to reserving the land for railway purposes? Yes; if the Committee will recommend that.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

Railway from Jerilderie to Berrigan.

APPENDIX.

A.

[To Evidence of J. Barling, Esq.]

PRÉCIS OF PAPERS RELATING TO THE PROPOSED RAILWAY.

AGITATION in favour of this proposal was first made in April, 1888, when the residents of Berrigan forwarded, through the Colonial Secretary, a petition urging the construction of a tramway or railway from Jerilderie to Berrigan.

The papers were referred to Mr. Whitton (Engineer-in-Chief for Railways), who reported in December of the same year that the construction of this tramway would have the effect of taking traffic from New South Wales to Victoria. The distance from Jerilderie to Berrigan, he stated, is about 28 miles, and from Berrigan to Yarrawonga, a station on the Victorian Railways, about the same. From Yarrawonga to Melbourne is 162 miles, and the total distance from Jerilderie to Melbourne 218 miles, while to Sydney it is 412 miles. Moreover, he pointed out that the construction of the proposed line from Jerilderie to Deniliquin would place Berrigan in nearly as good a position with reference to Melbourne as it would be if the tramway were made, and, therefore, he could not advise its construction.

Messrs. Chanter and Barbour, M's.P., in April, 1889, forwarded a further petition from residents of Berrigan, urging the construction of the tramway, and asking for a survey;—they also stated that in consequence of a promise made by Sir Henry Parkes, that the line would be constructed, the area under cultivation had been largely increased, the district being admirably adapted for agriculture. No record of this alleged promise can be found with the papers.

In the Legislative Assembly, Sir Henry Parkes, in reply to Mr. Chanter, on the 17th April, 1889, stated that the Engineer-in-Chief had reported adversely on this proposal; but that if any fair reasons for its construction were discovered, the work would be proceeded with. The papers were then forwarded to the Railway Commissioners for report; none, however, was received at that time,—the matter having been subsequently taken up by the Examiner of Public Works Proposals, and dealt with in his report on Riverina Railway Proposals.

No further action appears to have been taken until January, 1891, when a deputation representing the Berrigan Progress Association and the Berrigan Tram League, introduced by Messrs. Lyne, Hawken, and Creed, M's.P., waited upon Mr. Bruce Smith, and urged that a survey of the line be made. Mr. Lyne suggested that the old rolling-stock (used on the trams) be utilised for the work, and also pointed out that the output of wheat had been increased from 5,000 to 40,000 or 50,000 bags in two years. It was stated that the price of special areas in the district had been raised by the Minister for Lands from £2 to £6 (about 14,000 acres). Mr. Lyne also said that there was a proposal to have a railway from Coonong, via Urana and Daysdale, to Corowa, and he would not advocate the Berrigan one in opposition to it, because he considered the Berrigan line a very necessary one, and one work would not interfere with the other, as the whole of the country required development.

Mr. Bruce Smith, in reply, regretted he could not give the deputation a decisive answer, as the Examiner of Public Works Proposals had not yet sent in his report on the proposal. The Minister, however, was strongly impressed with the fertility and productiveness of the soil in the Berrigan district. If the facts were as stated by the deputation, and they had such a vast quantity of wheat awaiting an outlet, it was an index of what the country could do. If there were no engineering difficulties, and the Public Works Examiner's report was favourable, Mr. Bruce Smith said he would lose no time in recommending the proposal to his colleagues. He wished the deputation, however, to understand that no definite answer could be given until he considered the reasons adduced by the Tocumwal people in favour of a line in another direction, viz., from Jerilderie, via Wait-a-while, to Tocumwal.

Mr. Alexander (Examiner of Public Works Proposals), was instructed to report upon the railway proposals for the development of the Riverina district, and in his report of the 30th March, 1891, he favours the construction of a line from The Rock to Murray Hut, which passes through Berrigan township.

Mr. Lyne informed a deputation representing the districts of Jerilderie and Berrigan, which waited upon him in February, 1892, that he had received a protest from Savernake and Murray Hut against the Jerilderie-Berrigan proposal, which showed that the people were not unanimous, The Rock to Murray Hut line being favoured. He promised, however, that if no absolute determination had been arrived at within a reasonable time with regard to constructing The Rock to Murray Hut line, he would recommend that the Jerilderie-Berrigan route be carried out.

In compliance with a request from Messrs. Chanter and Barbour, the Minister (Mr. Lyne), on the 23rd August, 1892, approved of a survey being made between Jerilderie and Berrigan, and also a survey from Coonong to Urana, and on to a junction with the Culcairn-Corowa line at a point near Quat Quatta.

Mr. Burge made an examination of the latter route, and stated that the works would not be so light as might appear from the flatness of the country, as the formation must be kept well above the surface for a great part of its length (64 miles) on account of flooding. Seven wide creeks would also have to be crossed. This line would pass through Urana, Clear Hills, and Daysdale, terminating at Hopefield. The survey was never completed. Mr. Bullard completed the survey of the Jerilderie-Berrigan Railway in January, 1893. The length is 21 miles 10 chains, and the country a dead flat throughout; the land through which the line would pass is nearly all alienated; the estimated cost of a light line of railway being £43,543 9s. 9d., or £2,061 4s. 7d. per mile, exclusive of land and compensation.

The last deputation on the subject was in May, 1894, when the residents of Berrigan urged that the proposal be sent before the Public Works Committee as soon as possible, and the Minister said it would be impossible to refer the matter to the Committee that Session, but if he (Mr. Lyne) were Minister after the election he would certainly advocate the reference of the line to the Committee.

Mr. Lyne was also asked if, in the event of the Government not undertaking the work, there would be any objection to a private company carrying it out, and the Minister replied that there were sure to be objections, but he certainly would have none.

On

APPENDIX.

81

On the 4th December, 1894, the Railway Commissioners, in accordance with the provisions of the Public Works Act, forwarded their report. They strongly advise the construction of the line, and urge that it be put in hand without delay, and completed within six months from the time of commencement, on condition that all landowners give the land required, free from compensation of any kind. The Commissioners consider that the district to be served would be capable of considerable development if supplied with railway communication. The line would also enable a good deal of traffic which passes through Victoria to be retained in New South Wales. The annual cost is estimated at £3,073, and the annual revenue at £3,083.

The final action taken was on 18th December, 1894, when Mr. Secretary Young moved in the Legislative Assembly that the proposal be referred to the Parliamentary Standing Committee on Public Works; and the motion was passed.

J. B.

B.

[*To Evidence of C. O. Burge, Esq.*]

COST OF EARTHWORKS.

Department of Public Works, Railway Construction Branch,

Engineer-in-Chief's Office, Sydney, 22 December, 1894.

Dear Sir,
In reference to my evidence yesterday in reply to Mr. Chanter, I doubt if I made myself sufficiently clear regarding the apparent discrepancy brought out between actual cost of earthwork forming by municipalities and that estimated for the above line. The latter includes cost of widening out for stations and sidings, of cutting drains to and from culverts, of approaches to level crossings, all clearing of timber for two chains wide and grubbing, proportion of contractor's establishment and his risk of damage by floods, &c., and of fluctuation of wages, most of which matters do not apply to the other case.

Yours, &c.,

C. O. BURGE.

The Secretary, Public Works Committee.

B1.

FLOOD LEVELS AND BALLAST.

Department of Public Works, Railway Construction Branch,

Engineer-in-Chief's Office, Sydney, 28 December, 1894.

AFTER my evidence before the Works Committee on 21st instant the Chairman requested me to have the following information supplied to it, viz.:—

No. 1. Flood levels.

No. 2. As to any other source of supply of ballast than that mentioned near Berrigan.

No. 1. I saw Mr. Bullard who states that he did not find any reliable flood marks, but that his information while on the ground, was against the idea that there was any general flooding of the country.

No. 2. Mr. Bullard states that he could not get any information of the existence of any ballast other than that, as already reported, near Berrigan.

C. O. BURGE.

[*To Evidence of H. McLachlan, Esq.*]

SUGGESTED NEW LINES OF RAILWAY.

Office of the Railway Commissioners of New South Wales, Sydney, 29 December, 1888.

In sending forward our reports upon the various new lines of Railway we have been requested to report upon, we wish to place before the Government a few general remarks upon the whole question of the construction of branch lines.

None of the new lines that have been inspected by the Commissioners can be expected to be a commercial success from their opening, but we have been obliged to look upon the subject of constructing branch lines as a necessity for opening up the country, and the light in which we have dealt with the whole question has been to see whether working expenses can be covered by the traffic likely to accrue to the branches during the first two or three years, with a probability later on of a surplus being obtained to meet the interest on the capital outlay. We think it is only just to deal with the question in this way when only short lines are concerned, as in a new country it will not be possible (except under most peculiar circumstances) to construct any branch lines which can from the outset pay their working expenses and interest on capital; and as they will act as feeders to the parent line, we consider it will be a reasonable thing for the capital expenditure in connection with such lines to be borne by the main lines for a time as a set off against the additional traffic placed thereon.

With regard to the working expenses, we have placed these on as low a basis as possible, simply debiting against the respective branches the actual additional cost incurred to the Department by the opening, and not bringing any general charges to bear against them, such as a proportion of the expenses of the head quarters staff, traffic manager, locomotive engineer, permanent way engineer, &c., as these standing charges must be maintained whether the new lines are opened or not.

Looking at the fact that in nearly all cases in which reports have been made upon suggested railways the land has passed into the hands of private individuals whose property will be largely enhanced in value by the making of the railways, and that the lines in themselves will not be self-supporting for a long time to come, we are of opinion that the land owners in the respective districts should join together and arrange for the necessary land, free from all question of compensation of any kind, to be conveyed to the Government for the construction of the railway. This, in our opinion, should be a *sine qua non* in connection with the making of lines of this character.

E. M. G. EDDY,
Chief Commissioner.

W. M. FEHON,
Commissioner.

CHAS. OLIVER,
Commissioner.

[To Evidence of A. J. Stopps, Esq.]

TENURE OF LANDS AFFECTED BY THE PROPOSED RAILWAY.

SCHEDULE showing tenure of land within the following holdings, which are wholly within coloured diagram on map; also two holdings, viz., Boomanoomana and Jerilderie which are mostly within the coloured area.

Name of Holding.	Freehold.	Conditional Purchases and Leases.	Reserves.	Roads.	Crown Land.
Barooga.....	acres. 56,793	acres. 2,406	acres. 7,204	acres. 1,861	acres. 143
Boomanoomana, within coloured area	55,205	21,142	10,179	1,632	525
Boomanoomana, outside coloured area.....	5,630	710	2,308	123
Boreegerry	1,882	1,860	160	15
Jerilderie, within coloured area.....	58,270	1,651	14,695	863	4,361
Jerilderie, outside coloured area	6,600	980	3,000	170	100
Lalalty South	680	2,274	730	64	63
Momalong.....	88,859	57,928	10,806	3,439	1,509
Myall Plains.....	1,019	4,284	1,278	40
Murray	16,540	9,789	6,285	590	3,726
Nangunia and Warmatta	18,397	10,825	1,909	442	138
Narrow Plains	9,684	16,105	3,273	970	510
Triangular Plains.....	6,800	6,260	250	330

NOTE.—The above areas exclude all lands within town and suburban boundaries.

E.

[To Evidence of R. R. P. Hickson, Esq.]

Department of Public Works, Roads and Bridges and Sewerage Branch,
Sydney, 11 January, 1895.

MINUTE PAPER.—Subject:—Jerilderie to Berrigan Road.

THE total amount spent up to the end of 1894 on the Jerilderie to Berrigan road was £2,042 19s. 5d.

The road has only been scheduled since 1888, and for the three years—1888, 1890, and 1891—the total amount voted was £650.

The vote for 1894 was £1,000, and for the half-year of 1895, £550.

ROB. HICKSON.

[To Evidence of H. Deane, Esq.]

BALLAST ALONG THE PROPOSED RAILWAY.

EXTRACT from Report of Mr. Surveyor Jamieson, Jerilderie, 6th February, 1895.

ALSO am forwarding two (2) small boxes showing the quality of sand and gravel obtained in the district for your information, to see whether suitable for ballast. The number painted in black on the side of the boxes is to distinguish the nature and location of same:—

No. 1. Light sand, obtained at the brickyard situated in Berrigan, and about 25 chains to the west of trial line, and almost on the surveyed line to Finley (Murray Hut). This sand is obtainable at 11 feet below the surface through stiff red clay.

No. 2. Is from the same yard and of a much coarser nature, obtained 15 feet below the surface.

No. 3. Is from a shaft I had sunk in Mr. Greggery's paddock near Berrigan, and on surveyed line. The gravel is obtained at 5 ft. 6 in. As this is on private property and near the entrance which leads to his house, did not sink to ascertain the depth of gravel. I have no doubt that on the 11-feet level the gravel would be the same as Nos. 1 and 2, as it appears to be running in an easterly and westerly direction.

No. 4. Is a decomposed granite obtained from the gravel pit situated in L. Badcock's holding, about 1½ mile south of Berrigan. There is also a Government reserve there of about 30 acres, containing an unlimited supply. The only other place that ballast could be obtained from is Cuddeell, situated near Narrandera, and from which place the ballast on the line Narrandera to Jerilderie was obtained.

The gravel marked 1 and 2, which I obtained in the brickyard at Berrigan is owned by W. Grenell. He has 1½ acres, and could obtain another ½ acre adjoining. He informs me that the depth of the sand, to his knowledge, is 10 feet, and if the Department thought it would be suitable he would, for a small remuneration, sink a shaft and ascertain for certain the depth. I believe the sand becomes coarser as it descends. Also, he would require 1s. per cubic yard for same, but I feel convinced he would take considerably less.

F 1.

JERILDERIE TO BERRIGAN RAILWAY.

Estimate of Cost—Length, 21m. 19c.

		per mile.
Earthworks	£4,754	£224
Culverts and bridges	2,345	110
Fencing 25 miles, at £50	1,250	59
Cattle stops, gates, &c.	700	33
Permanent way materials	11,237	529
Ballasting 5 miles, at 6s.	£2,200	
Laying, 1s. 6d. = £132 per mile	2,803	
Sleepers, 14s. per rail..		
Say 2,500 per mile 3s. = £375 per mile	7,964	
21m. 19c., at £375 per mile

Total...	£42,475	£2,000
Average cost per mile, £2,000.		

G.

A CHEAP RAILWAY IN VICTORIA.

Board of Land and Works (Railways Construction Branch),
Spencer-street, Melbourne, 14 February, 1895.

Sir,

In compliance with your request of the 4th instant, for particulars of cost of, and information respecting, the Wycheeproof and Sea Lake Line, I have the honor to forward particulars of cost and plan and section of this line. The country through which the line runs consists of plains covered with mallee. The soil is generally sandy loam, is porous, and absorbs ordinary falls of rain. The average rainfall is 15 to 18 inches. No creeks or rivers are crossed. Sand for ballast is obtained along the line, and is answering well, and sleepers are brought from an average distance of 100 miles nearer the coast.

I have, &c.,

F. RENNICK,

Engineer-in-Chief.

The Secretary Parliamentary Standing Committee on Public Works, Sydney.

Description of works.	Cost per mile.
Land	Nil
Clearing and grubbing	£ 10
Fencing	3 unfenced
Cattle-pits at crossings	2
Earthworks (including stations and approaches)	135
Bridges	...
Culverts	9
Gravelling roads and approaches	7
Ballast (main line and sidings)	95 sand
Sleepers (red gum, ironbark, or box, main line and sidings)	333
Rails and fastenings (main line and sidings, including freight and laying)	692
Temporary station buildings (including platforms)	34
Water supply (temporary)	22
Signals	2
Telegraph	16
Engineering and surveying	105
Miscellaneous items	21
Interest on capital during construction	30
Total cost per mile	£1,516

Estimated total cost when additional works and equipment are completed—£1,800 per mile.
Office of Engineer-in-Chief, Railway Department, Melbourne, 14 February, 1895.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

SECTIONAL COMMITTEE.

RAILWAY FROM JERILDERIE TO BERRIGAN.

REPORT.

THE Sectional Committee, appointed on Tuesday, 8th January, 1895, to inspect, take evidence, and report with reference to the proposed railway from Jerilderie to Berrigan, have the honor to report to the Parliamentary Standing Committee on Public Works :—

Your Committee, consisting of the Hon. John Davies, C.M.G., Thomas Thomson Ewing, Esq., James Gormly, Esq., Charles Alfred Lee, Esq., and the Hon. Charles James Roberts, C.M.G., left Sydney at 9 p.m. on 11th January, and arrived at Jerilderie at 7 p.m. on 12th January.

The Committee opened its inquiry at 10 a.m. on 14th January, at the Court-house, Jerilderie, where, in the first instance, evidence was taken from the owners of the township allotments through which the surveyed route of the proposed railway at present passes, as to their willingness to comply with the suggestion of the Railway Commissioners as a condition precedent to the construction of the line, namely, that the required land should be handed over to the Government free of charge by the respective owners. The owners of the allotments were unanimous in their refusal to give their land. The Committee then examined Mr. Beere, the resident engineer of the Roads Department in the district of Deniliquin. This officer gave the Committee some important information as to the local contract prices of earthwork and macadamised roads. He was of opinion that the proposed 6-inch formation on the railway would be insufficient, and under no circumstances would he recommend the construction of a railway without ballast on the description of country under consideration. The Committee examined, at considerable length, Mr. W. D. Drummond, practical farmer of the Berrigan district, as to the probable grain traffic on the proposed line, and also as to the profit derived by the farmers in his district from the growth of wheat under existing conditions as to price and market.

The Committee, after hearing this evidence, proceeded to inspect the junction of the surveyed line to Berrigan with the present terminus at Jerilderie, with a view of determining, from personal observation, the value of the improvements upon the allotments traversed by the proposed railway, and to ascertain, as far as possible, the practicability of a starting point which would avoid the allotments.

The hearing of evidence was resumed at the Jerilderie Court-house on Tuesday, 15th January, at 10 a.m. The principal witness examined was the Mayor of the Municipality and the owner of the only mill in the Jerilderie district. He was in a position, from his business experience, to confirm the representations already made to the Committee regarding the immense growth in the agricultural produce of the district within the influence of the suggested railway; but speaking of the probable returns from the line, he inclined to the opinion that the departmental estimate of traffic was in some particulars excessive. He was also of opinion that the estimate of the Railway Construction Branch that the cost of the earthwork formation would

average £225 per mile would prove capable of considerable reduction; an expenditure of £50 per mile would provide a formation 6 in. in depth by 18 ft. in width. The railway station-master furnished returns showing a great increase in the carriage from Jerilderie of both wool and wheat. Mr. Rochfort, the acting inspector of stock of the district, handed in a return showing the number of sheep in the area likely to be affected by the railway.

The Committee completed the taking of evidence at Jerilderie on the morning of the 16th, and left immediately afterwards by special conveyance for Berrigan, accompanied by the Surveyor of the Constructing Branch of the Railway Department, and the District Engineer of Roads, and proceeding as nearly as possible by the route of the proposed railway. The country traversed was in the first 10 miles for the most part open plains, followed in the remaining distance by lightly timbered land. Nearing Berrigan the soil was of a loamy character, and more adapted to agricultural settlement than that a few miles to the northward. Depressions referred to by various witnesses as likely to hold sufficient water to imperil the stability of the proposed line were found to be inconsiderable. Berrigan Creek, the main water-course on the route, will not offer any engineering difficulties whatever. The Committee had practical demonstration of the difficulty of transportation of large quantities of grain along this, the only road from Berrigan to Jerilderie. The difficulty and expense of constructing a road suitable for such heavy loads did not seem to have been over-estimated by the Engineer-in-Chief for Roads. On the route, the Committee inspected a Government well on travelling stock reserve No. 10,111. The well had a double shaft to a depth of 114 feet, through sand and clay, and there was a reservoir with a capacity of 7,000 gallons. The expenditure upon the supply had been comparatively small; but there was apparently grave doubt as to whether the water would be suitable for railway purposes. The Committee were satisfied that the departmental representations as to the existence of a large supply of timber on reserve No. 2,587 were well founded. In such lightly-wooded country this valuable reserve would probably yield to the railway the anticipated revenue from the carriage of firewood. At a point a short distance on the Jerilderie side of Berrigan Creek the Committee inspected some earthworks in process of formation by the Roads Department. The width of the formation was 66 ft. from water-table to water-table, the centre being 20 in. above the natural surface; the contract price was 21s. per chain. In view of this information afforded to them by the District Road Engineer it appeared to the Committee that the departmental estimate of £225 per mile for earthwork was in excess of the necessary expenditure, that opinion being confirmed by the information already given to the Committee by the Mayor of Jerilderie in connection with the cost of municipal earthworks.

The Committee examined witnesses in the public hall, Berrigan, shortly after their arrival from Jerilderie, and also on the following day. Their testimony was entirely favourable to the construction of the railway. The chief reasons adduced were the rapidly increasing area under cultivation, the extreme difficulty in obtaining cartage to the Jerilderie terminus, and the probable increase of production generally if easier means of transit were afforded. It was explained that under existing circumstances, the whole of the cartage to Jerilderie, the only point of direct railway communication with New South Wales markets, had to be done within about four months, *i.e.*, the months of December, January, February, and March, the road at other periods of the year being practically impassable. The present means of transit frequently exposed producers to losses attendant upon an adverse market, and deprived them of the opportunity to avail themselves of a favourable one. The cost of haulage was also considerable. Possibly a fair instance of this would be that while the present freight under favourable circumstances from Berrigan to Jerilderie was 9s. a ton, the Commissioners propose to carry grain over the same distance at 2s. 6d. a ton. The saving to the agriculturist upon vast quantities of grain is at once apparent.

The whole of the witnesses expressed a desire to send their produce to and obtain their stores from their own Colony, if the rates for carriage permitted. The Committee completed at Berrigan the branch of their inquiry relating to the suggested transfer to the Government, free of charge, of the land required for the railway.

railway. Mr. Greggery, a farmer in the immediate neighbourhood of Berrigan, was the only landowner upon the route of the railway who expressed his willingness to give the required area free of charge. In connection with the leasing or sale of land for agricultural purposes, some valuable information was gathered from the Hon. Rupert Carington, who with Mr. John S. Horsfall is a joint owner of Moma-long estate, and from Mr. Patrick McFarland, the owner of Barooga. The former had already sold 8,000 acres to agriculturists at an average price of £4 2s. 6d. per acre, and had prepared a further area of 9,000 acres for sale. The wheat yield of the estate this year would be 23,000 bags. Mr. McFarland had under cultivation upon his estate 10,000 acres, partly upon the system of "halves." He intended next season to increase this area by means of leasing. It was abundantly evident to the Committee from the statements of the two witnesses referred to, that but a very small proportion of the land in the district suited to agriculture had yet been cultivated. The witnesses, generally, were of opinion that the Railway Commissioners' estimate of the traffic upon the projected railway would be realised.

During their stay at Berrigan the Committee were shown a single shaft well, 190 feet deep, with 40 feet of good water, upon the property of Mr. W. J. Greggery. The well is situated about half-a-mile from the last peg of the trial-survey. The Committee also satisfied themselves of the existence of a very extensive granite formation about a mile distant from the town upon the Mulwala road.

The Committee proceeded to Finley at an early hour on the morning of the 18th, and there examined a large number of witnesses in the public hall. They were invariably of opinion that an extension of the railway to Berrigan would be almost valueless to those farmers who regarded Finley as a centre. The Committee were furnished with a list, which is printed as an appendix to Mr. Faulkner's evidence, showing the farmers now in occupation of land who would not use Berrigan as a loading place, but would continue to make either to the Jerilderie terminus, or, in a few instances, over the border into Victoria. Mr. Faulkner also emphasized the fact that the owner of Tuppal was prepared to lease to agriculturists a large area of excellent arable land in the vicinity of the area already leased on the estate, about 15,000 acres. When questioned as to the probability of their using the railway if constructed to Berrigan, the witnesses pointed out that it would not pay them to do so, inasmuch as the cartage to Berrigan, combined with the proposed railway charges thence to Jerilderie, would be almost equal to the present heavy freight for road carriage to Jerilderie. The Committee were impressed with the general fertility of the district through which they travelled on going to and returning from Finley; the road passing through what may be fairly described as a continuous wheat-field. It is clear from the evidence brought forward, that not only is the land extending far to the west of Finley suitable for agricultural settlement, but that there is a large number of genuine settlers already in occupation there.

The Committee left Berrigan at 8 a.m. on the 21st inst., and proceeded by special conveyance to Savernake, where further evidence was taken. The evidence generally was to the effect that the settlers to the west of Savernake would be benefited by the railway, and would utilise it for the conveyance of their produce. Beyond that point, the settlers regarded the construction of the railway as a matter of little importance to them. The farmers generally expressed the opinion that, in the matter of railway construction, they would be best served by the surveyed line from the Rock to Murray Hut. Seeing that Savernake is distant about 18 miles from Berrigan, 20 miles from Yarrawonga, and about 30 miles from Corowa, it is obvious that the districts to the eastward would not be directly interested in the construction of the proposed railway.

The inquiry of the Committee terminated at Savernake, and they returned to Sydney, *via* Yarrawonga and Benalla, on the 22nd inst.

It will be seen from the evidence that a large area of land suitable for farming settlement extends approximately from 9 miles south of Jerilderie, passing thence in a westerly direction to within a few miles of the present surveyed line from Jerilderie to Deniliquin, thence with a southward trend to within about 12 miles of the town of Deniliquin, reaching to the Murray on the south, and to the east embracing Clear Hills and Savernake and extending eastward to the Rock. Although it is apparent that

that a large extent of this country would not be served by the proposed railway, still within these roughly defined boundaries a vast quantity of grain is already produced, and it may fairly be expected that in the near future, with improved means of communication, the present output from agricultural pursuits will be very largely augmented. The soil may be generally described as a red loam, the timber consisting principally of box and pine. The rainfall appears to be generally sufficient for the growth of cereals and fruits.

The question, therefore, for the Committee to decide was, whether the proposed railway would be the most suitable way of affording immediate relief to those already in occupation. Incidentally the Committee also considered the question as to whether the railway would eventually be antagonistic to a general scheme for the development of the whole wheat-growing area referred to. It will be apparent from the return which appears as an appendix to the evidence of Mr. Lysaght, the hon. secretary to the Berrigan Progress Association, that Berrigan is at present the centre of a large area of agricultural settlement, and that a very large development of cultivation is yet possible in its vicinity. Further, it will be seen from the return appearing as an appendix to the evidence of Mr. Faulkner, the manager of Tuppal Station, that Finley is also the centre of a large area of land at present under cultivation, and that there is a possibility of considerable agricultural development in that direction if proper means of communication be furnished. Considering the nature of the soil and the great weight of grain produced, the Committee are of opinion that a terminus at Berrigan would be scarcely adequate to meet the legitimate needs of that portion of the district to the westward of Finley.

Agreeably with the wish expressed by members of the full Committee, the Sectional Committee used every legitimate means to obtain evidence from the whole of the landowners along the surveyed route of the line as to their willingness to give free of charge the land required for the railway. The whole of the owners with the exception of Messrs. Petersen and Sargood, of Wonnamurra, through whose estate the survey passes for a distance of 7 miles, and Mr. A. C. Wilson, of Berrigan, appeared before the Committee. In regard to the former of these, their local representative informed the Committee that he was not in a position to afford them any information as to the intention of his principals in regard to the gift of land. Mr. Wilson was not in the district, but he informed the Committee, by telegram, that he was prepared to give the land. At the same time he thought that, as the severance involved would be such a serious matter to him, it should receive consideration. [*Vide Appendix.*] With regard to the allotment holders adjacent to Jerilderie, they were, as already pointed out, unanimous in refusing to comply with the suggestion of the Commissioners. From the termination of these allotments the route passes, for a distance of about $2\frac{1}{2}$ miles, over the Jerilderie common. From the southern boundary of the common to the southern boundary of portion 47, parish of Wonnamurra, the line passes through the property of Messrs. Petersen and Sargood, from whom, as explained, no information was forthcoming. From this point the line passes through a small portion of the property of James Connell, who refuses to give the required land. It passes thence through Berrigan Station, the property of Mr. A. C. Wilson, from whom also the Committee had no definite information as to the gift of land. Still the evidence of the hon. sec. of the Berrigan Progress Association, together with the contents of the telegram above referred to, would leave it to be inferred that no great difficulty will probably be experienced in regard to this holding. The next property owner on the route is Mr. John Dickie, who also refuses to give the required land. Mr. McDonald, the next owner, although apparently inclined to give the land required, makes some stipulation as to platform accommodation as an equivalent. The last landowner on the route, Mr. Greggery, was prepared to give the land. The difficulty the Committee experienced in obtaining any evidence of uniform compliance with the suggestion of the Railway Commissioners will be at once apparent. They have, however, arrived at the conclusion that a district so well deserving of the advantages of railway communication as is Berrigan should not have its development arrested through an illiberal spirit which might be displayed by any of the large landowners on the route of the proposed work. It was clear that although the residents of the Berrigan district had done all in their power to obtain the gift of the land in question they had

had failed, and it appears almost impossible to obtain that cohesion among them which would furnish the large sum that might be required to cover the probable large demand for resumption and severance on the part of the large landowners. In their reference to the reluctance of some of the landowners to give the required land free of charge, the Committee do not desire to include several small owners whose properties would apparently be subjected to worsement rather than betterment. As indicating the value to the large owners of railway extension, and the disposition of some of them to recognise that fact, it may be mentioned, that in giving evidence at Berrigan, the Hon. Rupert Carrington said that had the line passed through his estate he would have given the area required, but that as that was not the case he intended to send the whole of his wool and grain by the railway, although at some loss in comparison with Victorian rates.

The Committee endeavoured to devise some scheme, which, while giving the district the required means of communication, would remove the necessity for a large area of resumption. With this end in view, the Chairman of the Committee and Mr. Gormly, accompanied by an officer of the Construction Department, were deputed to inspect the suggested deviation shown by the blue line on the plan which appears as an appendix to the Committee's Report. From the plan it will be seen that this route passes from Jerilderie in a south-easterly direction till it intersects a road 1 chain wide in possession of the Crown between portions 61 and 62. Following that road in its continuation south it passes across the main road at the south-east corner of reserve 2,587, thus almost wholly avoiding resumption upon the Wonnamurra Estate; following the eastern boundaries of portions 80, 75, 74, and 93; thence by reserved roads and the main road to the point where a junction is effected with the original departmental survey near portion 98. Although the road for most of the distance is but 1 chain wide, still the Committee are of opinion that, having regard to the nature of the country and the character of the proposed work, that width would be sufficient. As a further result of the inspection, another route, shown by the dotted blue line upon the plan, was discovered, and it eventually commended itself to the Committee as the better of the two. A description of the route, and the reasons for its acceptance, will be found in the next paragraph of the Report. The Committee placed before the Engineer-in-Chief, by letter, particulars of the suggested routes and their views thereon.

The Committee, seeing that Berrigan is the centre of a very large and undoubtedly genuine settlement, and that it will eventually be the dépôt for a vast quantity of produce, are of opinion that a railway should, as soon as practicable, be constructed to the district from Jerilderie at a cost not exceeding the estimate of the Engineer-in-Chief for Railway Construction, namely, £1,830 per mile. The route recommended by the Committee, which is practically the same length as the departmental survey, would be that approximately following the road and shown upon the annexed plan by a dotted blue line from points C to D; thence by the route of the departmental survey into Berrigan. The Committee are of opinion that the main road at present in existence would be placed contiguous to the railway, thus doing away with any further severance. Such alteration would be of great benefit in the location of the road itself and of permanent benefit to the railway.

It is abundantly evident to the Committee from their investigation that a good deal of traffic which now passes through Victoria from this district will be retained to New South Wales if the proposed railway be constructed. The Committee are further of opinion that the railway can be constructed within the final estimate of the Engineer-in-Chief, engineering difficulties being totally absent; that no better district in the Colony could be selected for the construction of a pioneer line of railway; and that the work offers every prospect of furnishing a return equivalent to the estimate of the Railway Commissioners from the date of its completion.

Having regard to the fertility of the soil and the general settlement, extending from Berrigan to Finley, the Committee are of opinion that the immediate construction of a cheap line of railway between these two points would be justifiable, either by utilising the road, or upon land which would be given by the local landowners free of charge, it being apparent that such a line might eventually form part of a railway for the fuller development of the previously described agricultural area.

THOS. EWING,
Chairman.

22 January, 1895.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

RAILWAY FROM JERILDERIE TO BERRIGAN.

[TAKEN BEFORE THE SECTIONAL COMMITTEE.]

MONDAY, 14 JANUARY, 1895.

[*The Sectional Committee met at the Court-house, Jerilderie, at 10 a.m.*]

Present:

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. JOHN DAVIES, C.M.G.

The Hon. CHARLES JAMES ROBERTS, C.M.G.

CHARLES ALFRED LEE, Esq.

JAMES GORMLY, Esq.

The Sectional Committee proceeded to consider the proposed Railway from Jerilderie to Berrigan.

Mr. Gerald Butler Beere, Resident Engineer, Deniliquin Road District, sworn, and examined:

1. *Chairman.*] What position do you hold? I am resident engineer of the Deniliquin road district.
2. Have you been long in the district? Something over four years.
3. What has been your previous experience? A long course of rail-road engineering, principally in other parts of the world. I have done a good deal of work in Victoria and in New Zealand.
4. Have you carried out extensive rail-road and other works in other parts of the world? Yes; I was assistant engineer in the province of Auckland for some years.
5. And you are competent to express an opinion, not only as to the roads of the district, but also as to the railway under consideration? Yes; I consider myself competent to do so.
6. The area under consideration in connection with the proposed railway is bounded on the west by Murray Hut, on the south by a line running 6 or 8 miles from Berrigan, and on the east and north-east by Savernake and Clear Hills;—can you tell us what is your present road expenditure within that area? I could not say definitely without reference to my books, but speaking roughly I should say it would be about £3,000 a year.
7. What would be your main roads within that area? The road from Jerilderie to Clear Hills, from Jerilderie to Berrigan, from Berrigan to Corowa, from Jerilderie to Finley, from Berrigan to Cobram, from Berrigan to Mulwala, from Jerilderie towards Urana.
8. Portions of all those roads would be within the area under consideration? Yes.
9. You are aware of the line which it is proposed to construct from Jerilderie to Berrigan? Yes.
10. Would the construction of that line do away with the need for maintaining any of these roads? I do not think it would do away with the maintenance of any road, although it might diminish the maintenance expenditure upon the road from Jerilderie to Berrigan.
11. As the district became more settled would not the settlers be likely to use portions of the main road very much, in order to reach the railway stations? The road, of course, would be very serviceable for approaching the railway.
12. Therefore, the main road itself would not fall absolutely into disuse? No; I think it would be still very much used.
13. As population became denser the road might become as much used as ever? Yes; and I think there is every probability of a great increase of population within the area of which you are speaking.
14. Can you suggest any way in which your road expenditure would be affected by the construction of the proposed line? Well, it would obviate the necessity for keeping the particular road to which you refer in what might be termed first-class repair, but at the same time the railway would add materially towards the cost of other roads—that is, in making them sufficiently good for use as approaches to the railway.
15. Would the tendency of the construction of the line be to increase or lessen the road expenditure of the district? I think the expenditure would have to go on just the same. The amount which you would save on this particular road would be expended on by-roads.
16. *Mr. Davies.*] Did you furnish the data of the estimate of the Engineer-in-Chief for Roads of the cost of constructing a road from Jerilderie to Berrigan, dated 8th January, 1895? Yes.
17. What is your estimate? My estimate was pretty close to the estimate to which you direct my attention.
18. What were the details of your estimate? I see that the Engineer-in-Chief has 25 miles of formation at £66. I think my estimate was £100. There is a difference there. Then, as against that, there are 50 miles of side drains, estimated at 4d. per lineal yard.

Mr.
G. B. Beere.
14 Jan., 1895.

- Mr. G. B. Beere. 19. Did you furnish that estimate of 4d. per lineal yard? No; my estimate was nil. You can get the work done for practically nothing.
- 14 Jan., 1895. 20. You think that item could be struck out? Perhaps the better way would be to take the estimate as a whole. The Engineer-in-Chief has made reductions in some instances, and has added to my estimate in others. The total works out pretty much the same as mine.
21. What is your total estimate per mile? £2,062.
22. For what width of road? Sixty feet.
23. What is the metal formation? Eighteen feet.
24. With a depth of how much at the crown? Eight inches throughout.
25. What height will the centre of the road be? About 20 inches. The crown of the road would be altogether 4 feet above the bottom of the side drains. The formation would cost about £1 0s. 4d., and I do not think the formation required for a railway would cost more. We have let contracts for work of this kind at 20s. a chain. I think you ought to get your railway formation at that price, unless contractors generally became dearer in their prices.
26. Have you any contracts let at that price now in the vicinity of the proposed railway? Yes; at about that price.
27. What would be the average price? £1 0s. 4d. per chain is the price in one case. In another case £1 1s. 7d.; in another, £2. Those prices will give you an idea of what kind of work can be done for the money.
28. What, in your opinion, should it cost them to carry out the earthworks in connection with a cheap line of railway 22 miles long, such as that proposed? I should put it down at 30s. a chain, or £120 per mile.
29. Supposing the Construction Branch of the Railway Department had submitted for earthworks £225 per mile, would you regard it as an excessive estimate? I think it would be ample, but, of course, I do not know what basis they are working on.
30. From your experience in connection with your own contracts in the district, you are satisfied that the earthworks for the proposed railway could be carried out at £120 a mile? I am quite satisfied that the earthworks could be done at that price by contract.
31. You have come to that conclusion after having let many contracts in connection with the roads of this district? Yes.
32. Have you any road in your district costing £2,060 a mile? There are little bits of metalled road which have cost at that rate—some at Tocumwal, and some in the Berrigan streets.
33. Was that work carried out under your supervision? Some of it.
34. Could you send us the details of the expenditure? Yes; from records in the local office when I obtain them.
35. Where did you get your metal ballast? There is splendid granite metal within 7 miles of Tocumwal.
36. What gauge is it broken up to? A 3-inch gauge.
37. I suppose you use 3-inch ballast? Yes.
38. What would the 3-inch ballast cost in the case of a road of £2,060 a mile? It would cost 11s. Tocumwal, broken and spread on the road. At Berrigan we could get it broken and spread at 7s. per cubic yard. Here at Jerilderie we could get Cuddell gravel from the railway for about 11s. per cubic yard. Then there is the cost of carting, which would bring the amount up to 13s.
39. What is the cost of the blinding of a road of this character per mile? We can get sand blinding at 1s. a yard.
40. With metal so easily obtainable, how do you arrive at the expenditure of £2,060 per mile? It is not only the metal, but there are other details, to be considered. I have already explained that the total estimate works out at the amount you have given. Of course, if a railway were constructed it would not be necessary to expend £2,060 per mile, but as I pointed out to the Chairman, there will be no saving in the annual cost for maintenance.
41. Mr. Lee.] Which do you think would be the preferable work—a metal road at a cost of £2,060 per mile, or the proposed railway? My private opinion is that the road would be better.
42. Why do you arrive at that conclusion? Supposing the railway were constructed to-morrow, the farmers living 6, 7, 8, or 10 miles away from here would invariably drive their own teams. They would bring their own produce to Jerilderie. Even going down as far as Murray Hut, I do not think they would be likely to travel for 13 miles across to Berrigan.
43. How far is it from Finley to Jerilderie by the travelling stock reserve? About 24 miles.
44. Do you expend any money on that road? We have expended some. We are having a good bit of work done on that road.
45. You think that if the teamsters once had heavy produce such as wheat upon their drays, they would be more likely to come to Jerilderie than to go to Berrigan? Decidedly.
46. Is the travelling stock road available for dray traffic all the year round? It is bad in winter time; still they make use of it—they bring wagons along it at all times.
47. What are the usual loads they put on the wagons here? From 7 and 8 to 14 tons.
48. What is the width of tyre? Two and a half inches.
49. Do you manage to keep the roads in sufficiently good order to carry 14 tons on a 2½-inch tyre? No; it would be simply a waste of time.
50. I suppose the metal simply goes out of sight? Yes; until it is thoroughly bound.
51. You think there would be a chance of the farmers using their own drays in competition with any railway which might be constructed from Jerilderie to Berrigan? Yes. I do not think you would get the Murray Hut traffic to Berrigan. You might get some of the traffic to the south and to the east, because the roads to Mulwala and Corowa are not very good roads. I think that most of the trade which now goes in that direction would, if there were a railway, come towards Berrigan.
52. Do you think that if the Finley farmers could get their wheat carried from Berrigan to Jerilderie at 2s. 6d. a ton, they would bring it into Jerilderie in a dray? Yes; I think the distance and the nature of the road between Berrigan and Murray Hut would prevent their coming across with the traffic.
53. Even with the low rate I have named you think they would still bring their wheat to Jerilderie by dray? Yes.
54. The quantity of wheat grown in that locality is very great, is it not? Yes.

MINUTES OF EVIDENCE—RAILWAY FROM JERILDERIE TO BERRIGAN.

55. Supposing a main road would serve the people better than a railway, it would be necessary to metal that road from Jerilderie to Berrigan, and from Berrigan to Finley would it not? Yes.
56. And it would cost £2,060 a mile to make such a road? Yes, but the metal would last some time.
57. In your opinion either a metal road or a railway in this district will become a necessity? An absolute necessity.
58. If it could be shown that a railway could be made for about the same cost as a road, which would you suggest, having in view the benefit of the whole district? I think the railway would be the best.
59. No revenue is derived from roads? No.
60. No matter how much more money is expended upon roads no revenue is derived from them? No.
61. On the contrary, whenever a railway is made it produces a certain amount of revenue immediately it is open for use? Of course.
62. It is estimated that the cost of maintaining a road costing £2,060 per mile, would be £150 per mile per annum? That is at the first start off, but as the roads became consolidated you would not require to expend that amount in maintenance.
63. If it can be shown that the railway, taking all charges into consideration, can be maintained for a less sum than that, upon what do you rely for your argument that a metal road would be the best for the district? I think it will afford better accommodation to the public.
64. But viewing the matter as one of £ s. d.? From that point of view the railway would be best, but looking at the matter from the point of view of public convenience, I think the road would afford greater accommodation.
65. Quick communication is a great advantage to the public, is it not? Undoubtedly.
66. You know the route of the proposed railway; do you think the 6 inches of earthwork formation would be enough to carry it? Not on the average. The water lies about at different points along the route. At certain times there is an immense amount of water on the country between here and Berrigan. A great deal of water settles in basins and passes down over old water-courses. The depth will vary from a foot to 18 inches.
67. And you think that a 6-in. formation would be under water? At times.
68. And the traffic would have to be suspended for the time being? The line would be endangered.
69. After the water had subsided would there be any danger of the line sinking? There is always a danger of that, when water rises above the formation, and where embankments are subjected to its influence.
70. You think from the nature of the soil that there will be a good deal of erosion? Yes; the soil is red and blue loam, and is very sugary; water will erode it very rapidly.
71. Supposing that it were proposed to build a line with a 6-in. formation with no ballast at all, but with the sleepers laid close together, do you think there would be any danger of any portions of the line sinking? In country of this nature it does not matter how many sleepers you put down, you want ballast. An engine of 38 or 40 tons, if the sleepers were laid down without any ballast, would fairly drive them into the soil.
72. You think it would not be possible to construct the line without ballast with any degree of safety? Yes; I should not like to see it done.
73. You say that after four years of road-making in the district? Yes.
74. You know that in this particular instance there is a departure from the ordinary method of railway construction in this Colony, and that it is proposed to make the line on a cheaper principle than any heretofore constructed? I am aware of that.
75. That being so, one of the objects of the Committee is to ascertain whether ballast could be dispensed with? Of course, there would be a saving in the first instance, but I am afraid when you came to work the line you would find it very expensive. If an engine came to grief, and if lives were lost, you would very soon have to pay more than the cost of the ballast.
76. You think there is no doubt that a portion of the line would be submerged at some time or other? Yes.
77. Have you yourself seen water on the portions of the country to which you refer? Several times.
78. Do you know the proposed route? I have seen some of the pegs.
79. Is there any point you can suggest where the line should be deviated and taken along the main road? I could not say without making a personal inspection.
80. Is there much stock coming along the stock route from Finley? I do not think so. I have seen the road with cattle and flocks of sheep upon it, but not to any great extent.
81. Do you have to put many culverts in your roads? Four to the mile.
82. Third-class culverts, I suppose? Yes.
83. Do they answer the purpose? In some cases they do, and in a great number of cases they do not. I do not believe in box culverts at all in this country. Persons see the country when it is dry, and they think that a box culvert will do; but when the winter rains fall you want culverts of a much larger capacity. I would put in third-class culverts, and would keep them from 10 to 12 feet wide.
84. Has there been any current in the flood-waters to which you have referred? It depends upon the position of the water. If it is an old river-bed, of course there is a good current; if it is open country of course it is still water.
85. Where does the water come from? From the higher country. There are slight undulations. For instance, there is an overflow from the Billabong, and the Yanko floods a large extent of country.
86. Would that affect the particular country through which the railway passes? As I have already said, I have seen water lying at different points from a depth of 1 foot to a foot and a half. The water comes from various directions.
87. During flood time is the ordinary dray traffic suspended? To a great extent it is. Sometimes they flounder through, but oftener the traffic is completely stopped.
88. *Mr. Roberts.]* Where are your head-quarters? At Deniliquin.
89. What are the boundaries of your district? It extends on the east to Urana to close to Mulwala on the south-east; on the west it extends close to Swan Hill; on the north for about 20 miles, north of Wanganella; and on the south to the river Murray.
90. You have had an opportunity of acquainting yourself with the whole of that district? Yes.
91. It is pretty well all the same class of country? It varies. Some parts are far richer than others. The tract from Clear Hills to Deniliquin is rich wheat-growing country. In other parts, although the country will produce cereals, it will not produce them to the same extent.

Mr.
G. B. Beere.
14 Jan., 1895.

- Mr.
G. B. Beere.* 92. It is all level country? Fairly level all through.
- 14 Jan., 1895. 93. The present cost of the construction and maintenance of the road between Jerilderie and Berrigan amounts to £1,000 per annum? Last year was the first year we got £1,000.
94. What did you get previous to that sum? Sums varying from £200 to £500.
95. But an increased expenditure became necessary on account of the increase in the traffic on the road? I proposed that the road should be made a third-class instead of a fourth-class road so as to give us more per mile. I saw that it was absolutely necessary to have more money for the road, and to keep it in working order for the traffic.
96. What state of repair is it in now? Medium. It is very bad in parts.
97. Is it ever rendered impassable? Whenever there are heavy rains it is rendered absolutely impassable for heavy traffic.
98. During the four years you have been in this district have you noticed a constant increase in the traffic between Berrigan and Jerilderie? Yes. When I first came here Berrigan was nothing, but it is really something now. There is a good big population there, and there are good buildings in the town. It is a much more prosperous place than it was.
99. What has been the cause of the increased settlement during the last few years? The large land-owners have either sold or leased portions of their estates for agriculture. For instance, Mr. Faulkner, the proprietor of Tuppal has leased a portion of his estate with the option of purchase. The men who have taken it up appear to be doing very well. The price of wheat has been very much against them lately but still they seem to be comfortable well-to-do people.
100. From your knowledge of the production round about Berrigan you think that the Government should afford the settlers some better means of getting to market, either in the shape of a first-class road or in the shape of a railway? Yes. I may say as a man professing to be a railway engineer I do not like the idea of constructing these small cockspurs; I do not believe in them anywhere. In this instance I should prefer to see a line made from the Rock through Clear Hills and onwards through the whole wheat-producing country. A line like that would be sure to pay. Take a short line such as that which it is proposed to make to Berrigan: The Berrigan people may use it, but the outside settlers will not.
101. Do you not think there would be a large traffic on the railway? I think a good deal of the wheat in the district would come upon the line, but I do not think it would serve the radius you think. I do not think a cockspur to Berrigan would serve the Murray Hut district or the western part of the wheat-growing area.
102. Is there not a large number of farmers to the south of Berrigan? A good deal of wheat is produced there but there is nothing like the number of farmers there that you find in the west.
103. And you think the settlers there would still continue to send their produce along a very indifferent road instead of upon a railway *via* Berrigan? Yes, they would prefer to come to Jerilderie direct unless there were a good macadamised road connecting them with Berrigan.
104. And you are bearing in mind that the road from Jerilderie to Murray Hut would be in the same position that it is in now? Yes.
105. If a railway were constructed would it still be necessary to expend £1,000 a year upon the road between Jerilderie and Berrigan? I think so.
106. Do you not think there would be a certain amount of saving which might be expended upon new cross-roads? Some money might be expended in that way.
107. *Mr. Gormly.*] In regard to the contracts you have let. You have mentioned a contract price of £1 0s. 4d. per chain for earthworks;—how many cubic yards of earth per chain were used in the formation of that road? About 50 or 60 cubic yards.
108. That is not much over 4d. per cubic yard. Do you expect the contract to be completed at that price? Yes.
109. You have stated that at times there would be a good deal of water lying on the proposed route of the railway between here and Berrigan, and that it would be necessary to make more than a 6-in. formation on the proposed railway? Yes.
110. If there were only that formation, you think the line would be damaged by the water? Yes.
111. Do you know the rainfall of the district? I believe it is a little over 20 inches.
112. You know the country between here and Berrigan? Yes.
113. It is moderately level, is it not? Yes.
114. What proportion of the 20 inches of rainfall would be likely to fall in one or two months at any time of the year? There might be a fall sometimes of from 2 to 3 inches in twenty-four hours. That would be a heavy downfall in a level country, where there is no get-away.
115. If there be a fall of only 3 inches in twenty-four hours on level country, how can that cover large areas of it, as you have suggested, with flood-waters, up to 18 inches? There are slight undulations in the country, and the water runs down into basins.
116. Does any of it run away? It gets away eventually.
117. Have you travelled over the country at times when, as you say, there has been a depth of water upon it of from 12 to 18 inches? I have not been over the country when there has been that depth; but I have seen large areas covered with a depth of from 6 inches to a foot.
118. Is it not the practice, in constructing railways, to fill up the depressions so as to obtain an uniform surface? Yes; but if you can make the gradient conforming to the natural surface, so much the better; it takes away expenditure upon earth-work.
119. Supposing the formation was to be 6 inches, would not an engineer fill up the depression, so as to have an uniform surface? Yes; in this country you would fill them all up.
120. Then what makes you anticipate that there is any danger of the line being flooded? There are places where, if the line were only constructed 6 inches over the present natural surface, it would at times be flooded.
121. Where do you think the flood-waters will come from? From the Billabong and other creeks. There are ana-branches of the Billabong.
122. Do the flood-waters of the Billabong cross the route of the proposed line? I could not give you the exact details without taking the levels of the country. But take the Berrigan Creek. There is a heavy lot of water coming down in a wet season.
123. Are there any other depressions between Jerilderie and Berrigan? Yes; there is one at Wonna-murra. It extends over $\frac{1}{2}$ of a mile,

MINUTES OF EVIDENCE—RAILWAY FROM JERILDERIE TO BERRIGAN.

5)

124. What height of embankment would be necessary there? Perhaps from 3 to 4 feet. Mr.
G. B. Beere.
125. You said there was a danger of an engine coming to grief and an accident occurring if the line were flooded? I do not think the engines would be able to run over the kind of line you propose in wet weather, even if you were to double the number of sleepers. 14 Jan., 1895.
126. But even supposing engines could run over the line, would there be any danger of a serious accident? Yes; an engine might run off the line if it were higher on one side than on the other.
127. If this railway were not constructed, it would be necessary to make well-formed metal roads for the accommodation of the traffic coming into Jerilderie from Murray Hut and other places? Yes.
128. The present roads, in certain periods of the year, are almost impassable for heavy loads? Practically impassable.
129. It would cost a considerable amount of money to provide different roads in the direction of Berrigan, and also to provide a road to bring the produce from that point to Jerilderie? Yes; you would want to spend a good sum upon these roads. In some cases it would cost a little more than in others, because there would be increased cartage of the metal.
130. There would be need, I suppose, for about three good metalled roads, equal in length to the suggested road from Jerilderie to Berrigan? Two, at any rate.
131. Probably three? Probably.
132. I suppose you do not contend for a moment that a metalled road would provide the same accommodation for the traffic of a large extent of country as would be provided by a railway? If anything the railway would serve a larger extent of country than the metalled road.
133. Then does it not follow that if a railway can be constructed at a less cost than a metal road, it would be more beneficial both to the country and to the district? For heavy freight it would, but not for light freight.
134. There is also the consideration that the railway would be available for every period of the year, whereas a road might not? Yes.
135. *Chairman.*] You have been in the district four years? Yes.
136. Have you seen the country between Jerilderie and Berrigan flooded? Yes.
137. Seriously flooded? Badly flooded.
138. How much water have you seen on it? In places it has been up to the hubs of our wheels, say for 200 yards.
139. Up to 2 feet? Yes, and sometimes over. In other places it might not be more than 3 or 4 inches.
140. I suppose it would be still back water? No; running in some instances.
141. Did you see any heavy run? No serious run.
142. That is your personal experience? Yes.

Mr. Frederick Paul, carpenter and joiner, Jerilderie, sworn, and examined:—

143. *Chairman.*] What are you? I am a carpenter and joiner living at Jerilderie. Mr. F. Paul.
144. Are you the owner of allotment 14 of one acre, through which the proposed extension of the railway to Berrigan passes, at the corner of Kennedy and Coonong Streets? Yes. 14 Jan., 1895.
145. Are you aware that the Railway Commissioners have suggested that the land required for the railway should be given free of charge by the landowners? I do not know anything about that.
146. Are you prepared to allow the Government to resume, without cost, the portion of your land they require for the proposed railway? I am not prepared to do so.
147. What do you value your land at? At 5s. a foot for building allotments. I am ready to put up some cottages at the present time.
148. What is the value of the acre? £30.
149. And you have come to that conclusion because of the value of other land in the vicinity? Yes.
150. Apparently you will be left with about 2 chains frontage, with a depth of a little over a chain to Kennedy-street? The value of the land left would be a mere nothing; you might perhaps put up one cottage.
151. You would require compensation if the Government took your land? Yes.

Mrs. Ellen Horgen, Jerilderie, sworn, and examined:—

152. *Chairman.*] You reside at Jerilderie? Yes.
153. You are the owner of an acre of land adjoining Paul's allotment, and facing Kennedy-street? Yes, Mrs.
E. Horgen. I own one-half of that acre. I have sold one-half of it to Margaret Harvey.
154. You are a widow? Yes. 14 Jan., 1895.
155. Are you willing to give your land for the purposes of the proposed railway? No.
156. What do you consider your acre would be worth? I think the half acre would be worth £10.
157. All that would be left, after the land required for the construction of the railway had been taken, would be a chain frontage to Kennedy-street, running back about two chains on the south, and a chain and a half on the north? That would be of no use to me.
158. If the Government took any at all, you would expect them to take the whole of the acre, and give you £10 for it? Yes.

Mr. James Docharty, clerk, Jerilderie, sworn, and examined:—

159. *Chairman.*] What are you? I am a clerk residing at Jerilderie. Mr.
J. Docharty.
160. You are the owner of allotment numbered 17 on the village map, containing one acre and fronting Kennedy-street? Yes.
161. The extension of the railway from Jerilderie to Berrigan will pass through your land. Are you prepared to give the area required to the Government? No. 14 Jan., 1895.
162. What do you consider the land worth? £20.
163. If the Government took the land they require, your frontage to Kennedy-street would be left intact, and you would have about 2½ chains in depth; what would the area taken be worth? I think it would be worth about £10.

- Mr. J. Docharty. 164. And you would require that amount from the Government if they took the rest of your land? Yes.
 165. You would take nothing less? No.
 166. You also own block No. 13, adjoining F. Paul's allotment to the west? Yes.
 14 Jan., 1895. 167. What do you consider that worth? £20.
 168. Imagine a line going from where your allotment joins Paul's allotment in Coonong-street, passing straight across to your south-western corner where you adjoin William Clark's allotment, cutting your allotment in half, and leaving you with a triangular piece? I do not think the balance of the land would be worth anything to me if it were cut up in that way.
 169. If the Government cut up your land approximately in that way, you would require from them £20, the full value of it? Yes.
 170. You would insist upon their resuming the whole allotment if you could? Yes.

Mrs. Ellen Horgen, Jerilderie, sworn, and further examined:—

- Mrs. E. Horgen. 171. *Chairman.*] You own allotment 45, fronting Kennedy-street, with an area of $2\frac{1}{2}$ acres? Yes.
 172. What do you value it at? At £50. I would not take less than that from anyone.
 14 Jan., 1895. 173. Have you any buildings on it? No.
 174. Have you any cultivation from it, or do you get any return from it? No.
 175. Is it fenced? No; I have only had it twelve months.
 176. Did you buy it from the Crown then? Yes. I gave £32 for it, and I now value it at £50.
 177. The railway passing through your property would leave you all your frontage to Kennedy-street on your northern boundary, and where you join William Davis you will have a length of about 3 chains; on your southern boundary you will have a length of about 2 chains;—what would you value the portion taken at? At £30.
 178. You estimate that the remainder would be worth £20? Yes.

Mr. Thomas Walter Wise, Mayor of Jerilderie, sworn, and examined:—

- Mr. T. W. Wise. 179. *Chairman.*] You are Mayor of Jerilderie, and you are also a miller here? Yes.
 180. You own allotment 47, through which the proposed railway would pass? Yes.
 14 Jan., 1895. 181. What do you value it at? At £10 per acre.
 182. The railway would take off the eastern portion of your land about a chain and a half, right along the back line, leaving you, apparently, 3 chains;—what would you value that land at? I would let it go at the rate of £10 per acre.
 183. I suppose you would not be prepared to give the land for the purpose? No; not for nothing. But I would point out that if it could be arranged to keep the line to the east side of Kennedy-street, it would be a great advantage. I think the curve might be taken so as to escape Kennedy-street. If the whole of the land interfered with by the railway were resumed, and the residue, after the railway had been constructed, were re-sold, I think the Government would be recouped their resumption money.

Mr. William Douglas Drummond, farmer, Berrigan, sworn, and examined:—

- Mr. W. D. Drummond. 184. *Chairman.*] What are you? I am a farmer residing at Berrigan.
 185. Do you know the route of the proposed railway? Yes.
 14 Jan., 1895. 186. You have a good knowledge of the district? Yes.
 187. How long have you been resident at Berrigan? For about 7 years.
 188. You have a good knowledge of the products of the district? Yes.
 189. *Mr. Lee.*] Did you give evidence before the Sectional Committee which visited this district in 1892? Yes; in connection with the proposed railway from Jerilderie to Deniliquin.
 190. You supplied that Committee with certain statistics? Yes.
 191. I believe you gave the Committee among other things a list of the number of acres under cultivation? Yes.
 192. Are you prepared to give us data to-day showing whether there has since been an increase or decrease in the number of acres under cultivation? Approximately. The area extends, taking Berrigan as the centre, towards Jerilderie about 8 miles to the west, about 10 miles to the south, and about 8 or 10 miles to the east. In that area there would be about 30,000 acres under cultivation this year. Just outside that area and between Berrigan and Finley there would be about 6,000 acres more, the produce of which would come to the Berrigan line. I have not taken the land on the other side of Finley into consideration at all. You may say that the produce of 40,000 acres, approximately, would come on to the railway if it were constructed.
 193. The wheat growing country would be more directly tapped by an extension to Berrigan than by an extension to Finley on the one side, or to Savernake on the other? Yes; I consider that Berrigan is about the centre of the wheat-growing area.
 194. How does this increase of cultivation area come about? Is it due to additional land being taken up, or to the original holders increasing their area under cultivation? It has come about from the original holders increasing their area under cultivation, and also from other persons coming to the Colony and leasing land at 5s. an acre with the option of purchasing it.
 195. From whom have these persons leased or purchased their land? From the owners of Momolong, Barooga or Tuppal estates. From 7,000 to 8,000 acres are under cultivation upon what is called the "halves" system.
 196. At any rate there has been a considerable increase in the cultivation in the district since 1892? Yes.
 197. Can you assign any reason for so great an increase in so short a time? I think the increase has been caused mainly through farmers coming over from Victoria. Land was dear over there, and they could get it for so much less here. They could make a good deal more by growing wheat on this side also. Speaking for myself, I expected to see a railway made long before this. That was one of my reasons for putting in a crop there.

198. Do you wish the Committee to understand that a large proportion of the increase in the cultivated area is due to the fact that the residents of the district anticipated that a railway would be taken to it? I believe that is one reason. Another reason is that the price of wool has gone down, and many settlers saw that more was to be made out of wheat than wool. They have therefore combined wheat-growing with sheep-farming. From these causes the area under cultivation has been considerably increased. Mr. W. D.
Drummond.
14 Jan., 1895.
199. What was the price of wheat in 1892? I think it was about 4s.
200. And in 1893? About 3s. Id.
201. In 1894? From 2s. 3d. to 2s. 8d.
202. And in the present year? From 1s. 9d. to 1s. 11d. The price has gone up to 2s. in some cases.
203. To what extent has the cultivation increased since 1892 proportionately? There is about three times as much land under cultivation now.
204. Do you really think there has been an increase of from 40,000 to 170,000 bags of wheat produced in the district? Yes; there must be that increase.
205. Notwithstanding that the price of wheat now is less by one-half than it was in 1892? Yes.
206. Do you think the fact of wheat being at so low a price this year will cause a quantity of land to go out of cultivation? I hardly think so, as the cultivators at the present time cannot turn their attention to anything which will bring them in any more.
207. Can they make a living out of farming with wheat at 1s. 9d. or 1s. 11d. per bushel delivered here? I think that if they are not too much involved they can make a fair interest yet at that price.
208. Supposing there is no immediate prospect of an increase in price, do you think the acreage under wheat will continue to be what it is? If the price goes much lower than it is at the present time, I do not think there will be any increase in the area; but I think that at present prices there will be fully as large an area, if not a greater area, under crop next year. I know of several instances in which farmers have cleared more land with a view to cropping it next season.
209. There is still a large area of wheat-growing land in the district which has not yet been brought under cultivation? A considerable area.
210. Have many of the farmers in the locality sold out lately? None.
211. Does any portion of the wheat raised in the district you have named find its way to Victoria for shipment? Not of the area I have stated.
212. What is the distance from Berrigan to the nearest railway station on the Victorian side? I suppose it would be about 22 miles to Cobram.
213. Wheat grown nearer the river would naturally cross the Murray for disposal? It depends. If the millers were giving what they should give, wheat should come here this year instead of going to Victoria.
214. Is any wheat finding its way to Victoria for sale? No; the duty is too high.
215. Supposing there is no prospect of an increased price, and the quantity produced is largely increased, the only outlet would be shipment through Victoria to Great Britain? If there were a railway to Berrigan, I do not think it could go through Victoria at the present rates.
216. Supposing you had a railway to Berrigan now, and the price of wheat remained the same, would you be able to send it along our lines, and ship it from Sydney to Great Britain, or would it be cheaper to send it by way of Victoria for shipment? If there were a railway to Berrigan it would be cheaper to send it to Sydney.
217. Have you gone into the cost of carriage? I know the rates between Jerilderie and Sydney, and between Cobram and Melbourne. The rate from Jerilderie to Sydney is 15s. 6d., and from Cobram to Melbourne, 13s.
218. Is there not a decided balance in favour of the Cobram route? As against that, the wheat going to Sydney goes down to Darling Harbour, and can be shipped from there direct. In Melbourne, it costs 1s. to cart the wheat from the railway to the ship. Then there is the cartage from Berrigan to Cobram—that would be from 1s. to 1s. 3d. per bag. The price is about 10s. per ton roughly.
219. You think that would decidedly close that route? Yes. Then for the last two years the road before you reach Cobram has been in a very bad state. It is sand-hilly, and the punt there will not carry large waggons. If you had a load of 15 or 16 tons you could not get across at Cobram.
220. You know the Finley district? Yes.
221. Do you know the stock route from there to Jerilderie? Yes.
222. If the proposed line is extended to Berrigan do you think the farmers in the direction of Finley will cart their wheat, as at the present time? Those on the western side of the stock route may do so, but all those on the eastern side of the route will come in to the line—either at sidings or at the terminus.
223. Does the country on the western side of the stock route include the whole wheat-growing area of Finley? No; there are from 7,000 to 8,000 acres grown between Berrigan and Finley, but outside of the line I have already given you.
224. Once they have loaded their drays there you think they would come in direct to Jerilderie? Some of them may do so.
225. What is the rate of carriage per ton from that district to Jerilderie? About 10s.
226. Do you think they will continue to cart at 10s. per ton if by carrying it to the Berrigan terminus they can get it taken on the railway to Jerilderie for 2s. 6d. per ton? They could get it taken to a nearer point on the Berrigan line than Berrigan itself. Many farmers on the west of Finley would not be more than 12 miles to the west of the proposed railway.
227. If the price of wheat were very low do you not think there would be some danger of the farmers themselves competing with the line? None whatever.
228. You think the Government would get the whole of the produce of the district on the railway? So long as the road from Berrigan to Jerilderie is left as it is.
229. But supposing the road were improved;—it does not follow that because the railway is made the road would fall into disrepair? No. Still the rate from Berrigan to Jerilderie is from 9s. to 10s. a ton. Many farmers will not cart their grain here even now at that price, for the simple reason that it does not pay them. If the railway were constructed and they could get their wheat carried at 2s. 6d. per ton they certainly would not cart it here themselves.
230. Will the wheat stand 2s. 6d. per ton? It has to stand from 10s. to 12s. 6d. now; surely it will stand 2s. 6d.
231. Is all your wheat sold in Jerilderie at the present time? Some of it is sent on to Sydney or to Cootamundra for storage.

- Mr. W. D. 232. Is all your wheat gristed here? No; a lot of it goes to Sydney. The bulk of it goes to Brunton Drummond, and Gillespie. I think Mr. Wise himself took about 25,000 bags. The balance goes to Sydney.
- 14 Jan., 1895. 233. In 1892 the farmers offered to pay 2d. a bushel for produce from Berrigan to Jerilderie until the line paid;—how much would that be per ton? It would be 6s.
234. If you were willing to pay 6s. a ton when the price of wheat was 4s. a bushel are you prepared to pay 2s. 6d. now that the price is 1s. 11d. a bushel? We are better able to pay 2s. 6d. at the present price than we were able to pay 4s. at the price we obtained in 1892.
235. I suppose the price of wheat fluctuates from day to day and from week to week? Yes.
236. And it would be a gain to the producer to be able to take advantage of a rise in the market, if he could get cheap and safe transit by railway? Yes; at the present time we are compelled to send in our grain whatever the price may be, before the roads get bad, or it would cost us half as much more again to get it in. We are compelled at the present time to send it in and to pay for storage. If we had a railway we could hold it at home on our farms and save storage, being able at the same time to send it away with certainty when prices suited.
237. The railway would give you the advantage of all the intermediate markets between here and Sydney? Yes, as well as up Hay way.
238. What else is produced in your district besides wheat? The produce there is principally wheat. Oats, barley, and wool, of course, are produced. We could produce large quantities of fruit and butter, but the absence of a railway is a great drawback.
239. Is it suitable country for dairying? Yes.
240. Have any creameries been established there? No; on account of there being no railway.
241. On account of the warm climate you could not get your butter to market in time? Just so.
242. You will notice that the proposed railway passes through a number of selection holdings in the vicinity of Berrigan? Yes.
243. Do you think the owners of those selections would be prepared to give the land required for the railway? I do not know whether the whole of them would be prepared to give the land required, but there are other farmers who are served by the railway who would be prepared to buy the land from the others at a reasonable price. In that case, of course, it would cost the Government nothing.
- 243½. On what authority do you speak? Has there been any public meeting or organisation of which your statement is the outcome, or does it amount to merely a surmise? A good many farmers have thought the matter over, and they have arrived at the resolution of contributing towards the purchasing of the required land.
244. That is to say the farmers through whose land the line does not pass, but who would be benefited by the construction, will be prepared to contribute towards the cost of the land which is taken? Yes.
245. Is that so far as the farmers only are concerned? Of course the purchase, if it became necessary, would include the station property as well, within a reasonable distance of Berrigan.
246. What is the average value of land in the Berrigan district? From £3 10s. to £4 per acre.
247. Has any land changed hands lately at that price? Yes; it changed hands last year at £3 15s.
248. If the extension of the line is conditional upon the owners giving the land, and if neither the owners nor the farmers benefited can arrive at any arrangement, you see what a predicament you may be in? Of course, when you go to Berrigan you will be able to interview the landowners themselves and the farmers of the district, and they will tell you what they are prepared to do.
249. So far as your knowledge goes there is a disposition among the farmers to make an arrangement for the purchase of the required land, so that it may not cost the State anything? Yes; when Mr. Eddy was down here he said that that would be one of the conditions attaching to the construction of the line. There were a good many farmers present that day, and they talked the matter over. It was then understood that if the landowners along the line wanted compensation it would be contributed in shares, and made it up in that way. I understood from what was said that that was the intention.
250. Were you present at the interview between the farmers and Mr. Eddy? Yes. As it happened some of the farmers who had land along the route were in Melbourne at the time. For instance, there were Mr. Greggery, Mr. M'Donald, and Mr. Wilson, but I think you will receive their evidence at Berrigan.
251. From your knowledge of the district, do you think the best route has been selected for the proposed railway? I know where it goes at the other end, but I have not been over it at this end.
252. *Mr. Roberts.]* How long have you lived at Berrigan? About seven years.
253. What is the size of your holding? Five hundred and fifty acres. We purchased the land at from 30s. to £2 per acre about seven years ago.
254. And now you think that the land in the district is worth from £3 15s. to £4 an acre? That is the average price. Places close to the town would be worth more.
255. What has caused this increase in the value of the land? Persons who were previously on it were not putting it to purposes to which it is now put. Since farming has been started it has been found that the occupiers are able to make more out of it than they were making previously.
256. What is the average yield per acre? About 17 bushels, taking it over a number of years.
257. What is the largest yield you have obtained? The largest average yield I have obtained has been 22 bushels.
258. Where is your holding? It adjoins the township to the south-west.
259. In which direction from Berrigan is the largest number of farmers? Berrigan is surrounded by farmers.
260. You estimate fully 30,000 acres under cultivation would be served by this railway? Thirty thousand acres under crop at the present time.
261. Is the land easily cleared? It costs from 7s. to 14s. an acre, according to the timber on it.
262. Is there much clearing going on now? Generally people do clearing just after harvest, and in the winter time.
263. If this line could be constructed, you think it is likely that more of the large landed proprietors would throw land open to agriculture? Mr. Wilson himself told me that he would split his station into two, and that all the land on the west side of the line he intended to sell.
264. What is the area on the western side? Probably 10,000 acres.
265. Increased cultivation there would materially increase the traffic? Yes.
266. Supposing a first-class metalled road were constructed between Jerilderie and Berrigan, do you think it would be received with more favour by the farmers than a railway? Not at all.
267. They would much prefer a railway? Certainly.

268. Do you think it likely that the farmers living towards Murray Hut would make much use of the railway? Some of them may say that they would not, but, speaking for myself as a resident of Berrigan, I know that if a railway were taken from here to Finley I should make use of it. Mr. W. D. Drummond.
269. What is the exact distance from Berrigan to Finley? Thirteen miles. The advantage that a farmer would have as against the present state of affairs is that he would be able to leave his own home in the morning with his load of wheat and get back at night. Farmers much prefer a distance which would admit of their getting home on the same night. Speaking for myself, I know that if I lived within 14 miles of a railway I should take advantage of it, and I think most other farmers would do the same.
270. You think that a railway to Berrigan would serve a much larger number of farmers than a railway to Finley or Saverne? Yes.
271. *Mr. Davies.*] You are a practical farmer? Yes.
272. You have been following that pursuit all your life? Pretty well.
273. What does it cost to plough, sow, reap, and bag per acre? About 10s.
274. Including the seed? Yes.
275. What would be the cost of haulage from Berrigan to Sydney? About 4d. per bushel.
276. Do you think that rate of carriage, supposing wheat remains at its present price, would be sufficient to induce the agriculturist to stick to farming pursuits? I think that if the present price does not recede, the farmers will continue to increase their acreage under wheat.
277. Supposing a farmer has his holding free, and has to incur the expenditure you name, what profit would be left? He would be left with about 14s. an acre profit.
278. Taking the capital cost of his farm, and all the additional charges you have spoken of, with the present prices of wheat, you think there would be a reasonable profit? There would be a profit.
279. And you think that the farmers at present prices will continue wheat-growing? They cannot do better at anything else.
280. Could they not combine sheep-farming with wheat-growing? Nearly all the farmers combine the two things. One assists the other. Of course many farmers grow wheat alone.
281. To what extent would the railway be of benefit, if it went to Berrigan, as far as carriage is concerned? It would mean 10s. a ton to Berrigan.
282. It would also enable the farmers there to secure the best market? Yes; they would be able to send the wheat away when it suited them.
283. They would be able by direct communication with the metropolis to secure better prices for their products? Yes.
284. Do you think that would lead to a larger area being put under cultivation? If they can make wheat-growing pay at the present prices of carriage, they can surely make it pay with a railway, and that being so, it is pretty certain that more land would be cultivated. Speaking for myself, I should certainly put more wheat in.
285. Does much of the wool grown in this district go from New South Wales to Victoria? Yes.
286. Where does it cross? At Yarrawonga. Cobram is the nearest point, but there is a bridge at Yarrawonga, while there is only a punt at Cobram.
287. How near would a line to Berrigan be to the stations that send wool *via* Victoria? It would run through the property of some of them.
288. And would their wool still go to Melbourne? I do not think so. Some of the clips have already gone to Sydney by special arrangement, and I think that in other cases, even though at a slightly increased cost, the clip would go to Sydney if the railway were made.
289. But that is only a surmise on your part? Yes.
290. What would be the difference in freight? I do not know, but a man would hardly trouble to cart 25 or 30 miles with a railway at his door. Of course, the difference in railway rates is very much in favour of Victoria.
291. How far does the rebate line extend as regards wool? The line runs between Jerilderie and Berrigan.
292. Is there any wool coming from the Berrigan district to the Jerilderie railway station at the present time? The Wonnamurra wool went to Sydney this year, and the Tuppah wool also went to Sydney under special arrangement. There were 2,500 bales at a reduced rate.
293. You think that if the railway were made to Berrigan the squatters would send their wool over it to Sydney? Yes; if the charge were not higher than for taking it by team to Yarrawonga, and thence by rail to Melbourne.
294. You advocate the construction of the line as shown on the plan? I want a line from Jerilderie to Berrigan. I am not particular which way it goes, but I should advocate as straight a line as you can possibly make.

Miss Margaret Harvey, Jerilderie, sworn, and examined:—

295. *Chairman.*] You are a resident of Jerilderie? Yes.
296. You are the owner of half an acre of land, which previously belonged to E. Hogen—part of allotment 16, I think? Yes. Miss M. Harvey.
297. The Government desire to construct a railway from Jerilderie to Berrigan, which will pass through that land; do you feel inclined to give to the Government any portion of your land which may be required? No.
298. What do you think your half acre is worth? £25.
299. Are you of age? No; I am 19 years old.
300. Have you any guardians? My mother is alive, but my father is dead.
301. Supposing the Government took one-half of your land, leaving you the half fronting Kennedy-street, what do you think the portion they would take would be worth? The land is so small that if they took one half of it the remainder would be of very little use to me.
302. What do you think the half would be worth? About £18.
303. Are there any improvements on it? If you took the back half we should have to remove some improvements.
304. What did you give for the land? £10.
305. How long ago? Nine months ago.

Mr. William Davis, Jerilderie, sworn, and examined:—

- Mr. W. Davis.** 306. *Chairman.*] You are a resident of Jerilderie? Yes; at present.
14 Jan., 1895. 307. You are the owner of allotment 18, containing 1 acre, fronting Kennedy-street? Yes.
308. What do you estimate the land is worth? It will be worth very little if the railway is taken on to Berrigan.
309. Are you prepared to give a portion of it to the Government for railway purposes? No.
310. What do you consider it worth? I will take £10 for it if the railway goes through it.
311. Supposing the half fronting Kennedy-street were taken, and the other half were left to you? I will give the Government the back half for £5.

Mrs. Eliza Jane Spriggs, Jerilderie, sworn, and examined:—

- Mrs. E. J. Spriggs.** 312. *Chairman.*] You are a resident of Jerilderie? Yes.
E. J. Spriggs. 313. Are you a married woman? Yes.
14 Jan., 1895. 314. Is your husband alive? Yes.
315. Are you the owner of allotment 46, containing $2\frac{1}{2}$ acres? Yes; it is my own private estate.
316. You can dispose of it as you think fit? Yes; it is my own property.
317. Are you prepared to give the Government any land they may require for the construction of the proposed railway? No; I could not do that.
318. What do you think your $2\frac{1}{2}$ acres are worth? I gave £18 for them, and I daresay I should want about £20 if I sold them.
319. Supposing a "V" shaped piece were taken out of the back of your property, coming about a chain and a half along Mr. Wise's line, what would you want for it;—would you sell it at the same rate as that which you have put upon the whole area? Yes.

Mr. John Carroll, herdsman of Jerilderie Common, sworn, and examined:—

- Mr. J. Carroll.** 320. *Chairman.*] What are you? I am the herdsman of Jerilderie Common.
1 Jan., 1895. 321. You are the owner of allotment No. 15, of 2 acres, fronting West-street? Yes.
322. The Government have an idea of building a line from Jerilderie to Berrigan, and it appears that a portion of the back of your land will be required;—are you prepared to give the area of that land to the Government? No.
323. At what do you value the 2 acres? At £30.
324. Are you prepared on that basis, to sell the Government any portion of your land. Supposing they took $\frac{1}{4}$ of an acre at the back, would you be prepared to sell it at that rate? If they took any I should prefer to sell the lot of it.
325. How long ago did you buy it? Twelve months ago.
326. What did you give for it? £10.

TUESDAY, 15 JANUARY, 1895.

[The Sectional Committee met at the Court-house, Jerilderie, at 10 a.m.]

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. JOHN DAVIES, C.M.G.

CHARLES ALFRED LEE, Esq.

The Hon. CHARLES JAMES ROBERTS, C.M.G.

JAMES GORMLY, Esq.

The Sectional Committee further considered the proposed Railway from Jerilderie to Berrigan.

Mr. Thomas Walter Wise, Mayor of Jerilderie, sworn, and further examined:—

- Mr. T. W. Wise.** 327. *Chairman.*] What are you? I am Mayor of Jerilderie. I also own a mill in the town.
328. Have you been living in the district long? A little over ten years.
329. Have you a good knowledge of the resources of the district? Yes.
15 Jan., 1895. 330. And you have a special knowledge of its wheat trade? Yes.
331. I suppose wheat would furnish the main traffic for the railway under consideration? Yes.
332. *Mr. Roberts.*] When you first came to Jerilderie, had the railway been opened to Narrandera? I came here at the latter end of 1884, and the railway was opened early in 1885.
333. You then erected a mill here? Yes.
334. It was the fact of the railway coming to Jerilderie, I presume, which induced you to erect the mill? Yes.
335. Was there much wheat produced in the district at that time? None. In the first year I did not buy 100 bags of local wheat.
336. But you had an idea that this would become a wheat-producing district? Yes.
337. How far from here, and in what direction, do you get into the wheat-growing country? The country which is principally used for growing wheat commences about 10 or 12 miles out, in a south-easterly and south-westerly direction. It extends from that to the Murray. The country nearer—that is to say, about 4 or 5 miles out—is also fairly well adapted for wheat-growing, but the land is not available; it is held in large estates.
338. I suppose you have personally visited pretty well the whole of the wheat-growing country between here and the Murray? Yes; from Tuppah, on the west, to Clear Hills, on the east, right down to the Murray. Of course, there is wheat-growing country further out, but it is outside the reach of this district.
339. From how far would the wheat come into Jerilderie from the southward? From within about 14 miles of the Murray, it has a tendency to come this way. Further on it has a tendency to go the other way, but it depends upon local conditions—market, and so forth.
340. Have the farmers much difficulty in getting their produce to Jerilderie? They have.

341. The roads are at times impassable? Yes; the farmers commence harvesting on the 1st December, Mr. T. W. Wise and the harvest generally continues till the latter end of January. They get the wheat carted by teams at an average price of 1s. a bag. Further off nearer the Murray they have to pay 1s. 3d. The wheat has to be carted during December, January, February, and March. It must be carted within those months, because if the rain comes on at the latter end of March, the roads become so bad that the farmers cannot get it carted at all; they have to pay as much as 1s. 6d. a bag, and it is often difficult to get it carted at any price. Some are getting their carting done this year at about from 10d. to 1s. a bag; that is about 9s. a ton.

15 Jan., 1895.

342. From your knowledge of this large wheat-growing district, what locality would you put down as the centre? It would be hard to give a definite answer to that question. One part may be as central as another—anywhere between Berrigan and Finley, or either of those places would be considered central. Berrigan would be considered fairly central.

343. If you will look at the map before you, you will see that the coloured portion embraces a 20-mile radius from Berrigan. Could you tell us from that map where you think the centre would be? The bulk of the agricultural settlement is between Berrigan and Finley.

344. Is there more settlement to the west of Berrigan than to the east and south? Yes; and some of it would be affected by the railway. Of course Berrigan would be more central for Savernake.

345. You think one would be justified in speaking of Berrigan as the centre of this large wheat-producing district? Well, it is well within the mark—you might call it the centre. The conditionally-purchased land is more to the west, but then on the other hand Berrigan is more central for some of the conditionally-purchased land in the neighbourhood of Savernake.

346. Does the Berrigan district or the Finley district send most wheat to Jerilderie? I could not say. I think if anything, Berrigan sends most. The figures last year were not so good for Berrigan, because there was no water on the road. The wheat that otherwise would have come from Berrigan, went across to Victoria. The Finley road is a much better road for teams. With the facilities which exist this year, however, there will be a good deal more from Berrigan.

347. Have you in your possession any record of the increase in the production of wheat in this district during the last ten years? When we started ten years ago, there was very little wheat grown here. We imported our wheat from Coolamon and Junee. Next year from 8,000 to 10,000 bags were produced, and the yield has been gradually increasing every year with the exception of one year, when there was generally a bad harvest. We expected in the present year 150,000 bags, and but for the bad weather, that estimate would have been fully realised. I think, however, that the estimate will not be fulfilled because of the rainy weather. It is unfavourable harvesting weather.

348. From your knowledge of the requirements of the district do you think it would be a wise thing for the Government to construct a railway from Jerilderie to Berrigan? I do, certainly. I think it would do a good deal towards helping those already on the land to remain upon it, and to conduct their holdings with some profit.

349. You think it would give a further impetus to farming? Yes; it would enable the farmers to go into other things besides wheat growing. They would not be so entirely dependent on wheat. The land is suitable for other things besides wheat.

350. If this railway is constructed, do you think any of the holders of land would be inclined to either sell or lease it to persons requiring it for farming purposes? I do.

351. In other words you think the construction of the line would tend to open up the country? Yes.

352. And to the settlement of a large farming population upon the land? I do.

353. Mr. Gormly.] Is there any quantity of agricultural land about Jerilderie except in the direction of Berrigan, Savernake, and Clear Hills? There is any amount. From Deniliquin right up to Albury there is good agricultural land. The land immediately south of Jerilderie is not considered good for agriculture, but immediately you get into the timbered country you find good agricultural land.

354. Has there been a considerable quantity of this land used for wheat growing? Not a great deal, considering the whole area.

355. Are you aware of the quality of the crops produced from the land? It is very good. I think you might put down the average for the last ten years at 16 bushels to the acre.

356. That would be within a few miles of Jerilderie? Yes; we get into timbered country 4 or 5 miles away.

357. If this line is constructed do you think there is a probability of land within 5 or 6 miles from Jerilderie being used for agriculture? The railway would not influence it a bit, but the land at the same time is suitable for agriculture.

358. I presume it would bring traffic to the proposed railway if used for that purpose? A certain amount perhaps, but it is very close to the existing railway terminus.

359. Have any other crops but wheat been produced in the neighbourhood of Jerilderie? Not much has been done, but there has been sufficient to show that other things could be grown. Barley, for instance, has been grown to some extent, no finer barley is grown anywhere in the world than is produced here.

360. But at the present time there is no market for it? No.

361. That I suppose is the reason why barley has not been produced here? Yes; a few thousand bags have been produced this year, but there is no market. We import our malt from New Zealand and other places, and the growers find it impossible to sell their barley.

362. I suppose you know that barley can be harvested some time earlier than wheat? Yes.

363. If the farmers devoted some of their land to barley they would be enabled to get that crop harvested before the wheat crop came in? Yes.

364. Do you not think it would make some of the farms more profitable if the harvest were extended over a greater number of months. Would it not give the farmers much more to do in the months when they are comparatively idle? Of course the one thing necessary is a market. If all the malt in New South Wales were made from local barley, it would put thousands into the pockets of the farmers.

365. Do you know of any other crops which have been grown here besides wheat and barley? Yes; oats—Algerian oats—especially.

366. Are oats produced in quantities in such a dry climate as this? Yes; I have seen as much as 40 bushels to the acre produced.

367. Have any of the farmers grown lucerne or artificial grasses for the carrying on of dairying? To a limited extent some have gone in for lucerne.

- Mr. T. W. Wise. 368. Have the lucerne crops been found to be a success? When the crops have been put into new soil they have been a success. I know one farmer who has 20 or 30 acres of lucerne. He reared all his late lambs upon it, and they have come on so well that they are better than the earlier lambs.
- 15 Jan., 1895. 369. Do you think that dairying might be carried on here in connection with wheat-growing? Yes; mixed farming would be a great deal better.
370. Do you think that if there were greater facilities for sending produce to market the district would become more productive? Yes.
371. If this line were constructed to Berrigan would it be a means of putting more traffic on to the existing line to Narrandera and other lines extending further on to Sydney? Yes; it is bound to do that.
372. Is the population of the district to the south of Jerilderie increasing or diminishing? It is slowly increasing in the district all round.
373. Is it diminishing in any portion of the district? No; I do not think so.
374. Do you see any indication of the population located in the direction of the proposed railway becoming smaller? I see no such indication.
375. The farmers have not been leaving the district? No.
376. Do you think the area of land under grain in the district of Berrigan, Savernake, Clear Hills, and Murray Hut is likely to increase? I do.
377. I suppose you often come into contact with the farmers and know pretty well what they propose to do? Yes.
378. And you think they are likely to increase the area under cultivation? I think they are.
379. Are the farmers fairly well satisfied with the profits attaching to the cultivation of the land? Not at present prices. They are not remunerative enough. As far as I know the present price is lower than has ever been known in any of the world's markets.
380. Do you think the lower price would be likely to cause the farmers to discontinue the growth of wheat? I do not think so, unless it continued for several years. Of course the farmers are living on in the hope of a change. Some of the farmers who are in a bad way, of course, will have to go down. They cannot continue at the present prices. They may make another start under different conditions. Those who own their land and implements, and who do not owe any one 1s., may be able to keep on for a few years, but those who are in difficulties will not be able to do so at present prices.
381. Since you have been in Jerilderie has the cost of cultivating the land here increased or diminished? It has diminished.
382. Do you not think that cultivation is now carried on more cheaply than in former years? There has been very little diminution in cost during the last ten years. There has not been much improvement in that way.
383. Agricultural machinery has not improved very much? Not more than to the extent of 1s. per acre.
384. And without improved agricultural machinery wheat would not likely be produced at a cheaper price? There is no probability of its being produced more cheaply than at the present time. There is only one way, and that is to cheapen the land.
385. I suppose a farmer and his family who do most of their own work are to a great extent compelled to cultivate a portion of their land in order to find work for the members of the family? Yes.
386. And for that reason they may continue to cultivate at a small profit? Yes.
387. And be fairly satisfied with the result of their industry? They have to be. Of course many farmers are continuing in the hope that the market will improve.
388. I suppose you have a pretty intimate knowledge of the commercial and grazing pursuits of the district, and the profits attaching to them? Yes.
389. Have the profits of those industries gone down as well as the profits from farming? Not to the same extent.
390. You think farming has become more unprofitable than other occupations? Yes.
391. Will not that be the means of diminishing the yield of wheat? It will certainly check it. If the farmers knew for a certainty that wheat would be 2s. 6d. a bushel next harvest, I think the acreage under cultivation would be increased 25 per cent. Many of them would employ labour; but fearing that prices would not be better, they confine themselves to what they can do with their own hands or with as little labour as possible.
392. If the land goes back to grazing again, not only the agricultural population but the population of the towns will be likely to decrease? Decidedly it will. This part of the country will go back into the condition of the western plains.
393. Do you see any prospect, if the farmers do not continue to produce wheat as extensively as they do now, of any other agricultural industry making up for that form of production at a profit? Yes; with facilities to get to market, and to send their produce to the centres of population, such as Sydney and Goulburn, they could grow hay, and they could produce butter at a profit, to say nothing of fruit.
394. Are there any extensive orchards on the farms in the district? There are not very extensive ones here, but some in the Berrigan district have been very successful. Some of them are close to the town.
395. I suppose the fruit will be sold principally in the local market? Yes; it might be sent down to Narrandera sometimes.
396. It has not been proved that fruit could be produced here and sent to Sydney at a profit? I do not know of any being sent.
397. If there were any considerable production the local market might soon be over supplied? Easily.
398. It has not been proposed to carry on the industry of canning or drying fruit? Some of the farmers are proposing to do some drying. The apricots here are very prolific, and I have heard the farmers thought of drying some themselves; but it has not been done yet to any extent.
399. Mr. Davies.] How long have you held the office of Mayor? Three years.
400. How long has the borough been incorporated? Five years.
401. What has been the growth of your municipal revenue during the last few years? There has been no material increase. Including the subsidy, the revenue is a little over £700.
402. You get a subsidy of £1 for £1 for the amount raised within the limits of the municipality? Yes; we raise about £350 of ordinary rates.
403. How many ratepayers are there within the municipal area? I could not say. There is a population of from 730 to 750.

404. Has there been an increase in the population here? It has been increased by about 150 since I gave evidence before the last Sectional Committee which visited the district. Mr. T. W. Wise,
405. Your revenue has not increased much? No; it has increased very little. More houses have gone up, but the effect has been to reduce rents and to reduce the amount of the rates. 15 Jan., 1895.
406. What are your liabilities? We owe about £40 or £50 on the municipal account. We are trustees of the common, and we owe money on account of that.
407. You have a water supply? Yes; we have a liability to the Government in connection with that.
408. What was the cost of the works? About £6,000.
409. What revenue is derived from them? We have not struck a water rate; we are just doing so now.
410. How long have you had a water supply? It was handed over to us a few months ago.
411. You propose to strike a water rate of how much? One shilling in the £. We think that will be sufficient to pay interest and working expenses.
412. I suppose the reason the district has not progressed more is that the land is locked up in the hands of so few persons? Yes. Hundred of persons in Victoria are anxious to come over here and take up agricultural land when it is available.
413. Do you think the construction of a railway from Jerilderie to Berrigan would improve matters in that respect? It may induce some of the larger land-holders to throw their land open. They would throw it open to-morrow if they thought there was a demand for it. Until the price of land comes down, and profits increase, there will be no prospect of the large owners selling much of their land.
414. With the present price ruling for wheat, would it pay the agriculturist to take up land under the terms and conditions upon which it has been taken up at Tuppal and other places? It would not pay on the terms which have hitherto been paid to the landholders.
415. You do not think the agricultural lessees, with the present price of wheat, would be able to continue to pay the estate owners the rental they are now paying? No.
416. Even though the railway may give them better facilities for getting their produce to market? Quite so.
417. You think the whole question depends upon an alteration in the price of the produce? Yes; and in the price of the land.
418. Have you, in your long milling experience, known wheat so low in price as it is now? No.
419. What has been the increase in the production of wheat during the last two and a half years? Within the last two years the acreage has increased from 35 to 40 per cent., and the yield proportionately.
420. Where has that increase principally taken place? Due south on the Barooga country, and also on Tuppal and Momolong.
421. Is the land more suitable for the cultivation of wheat at or near Berrigan than in other parts of the district? I do not think there is a bit of difference in the land between Clear Hills on the east and Tuppal on the west. But as you get further east beyond Clear Hills I do not think the land is quite so good.
422. Will the produce from this additional area of cultivated land find its way by Jerilderie to Sydney? Some of it. The produce of all the land within a certain radius of Berrigan would go on to the proposed line. Of course, when you get a certain distance to the west it will come in by team. Any wheat on the eastern side of the travelling stock reserve would, I think, go to Berrigan, but the wheat produced on the western side of the reserve would come to Jerilderie by team. Of course, a good deal depends upon the state of the roads.
423. What would it cost, in your opinion, to haul wheat from the Berrigan district to Jerilderie? About 9s. a ton on the average.
424. From any portion of the Berrigan district? Yes. As you get further on to Finley it comes to 11s. 3d. per ton.
425. How much a bushel is it? About 3d. a bushel at 9s. per ton.
426. If the farmer can get his grain carried on the railway from Berrigan at 2s. 6d. a ton will that not be inducement to him to send it by Jerilderie and other markets? Decidedly.
427. Would that reduced carriage help to compensate farmers and producers to any large extent for the low price of wheat? It would help those who took full advantage of the rates to a very great extent.
428. How much a bushel would 2s. 6d. a ton be? About five-sixths of a penny. Of course the farmers living alongside the line would be in a better position than those further off, but within a distance of 10 or 12 miles the farmers would be able to cart themselves.
429. You think that the proposed railway to Berrigan will be a substantial advantage to the producers of the district? Yes.
430. How far on each side of the proposed railway do you consider the farmers would be served by it? Till you get out about 10 or 12 miles. As you go to the south the distance would be greater. Of course if a farmer were 5 miles from the railway and 10 miles from Jerilderie, and if we had to pay 2s. 6d. a ton on the railway, he would give cartage to Jerilderie the preference.
431. The railway would be a great advantage to those living to the extreme south of the Berrigan district? Yes.
432. Would any additional wool beyond that already sent on our railways come to them if this line were made? It would depend a good deal upon the local rates. If the Victorian rates were lower the wool would of course go via Victoria. I have seen the Yanko wool go to Deniliquin. It is entirely a question of local rates. I think the Momolong wool will go on to the railway, and a good many of the graziers from Berrigan would send there.
433. Is it not a fact that a good deal more wool has gone on to the railway from the present clip than any previous clip? A good deal more.
434. I suppose it is likely that the increased railway facilities might draw other wool on to our line? Yes.
435. I presume a good deal of the wool in the district finds its way over to Victoria? The Wonnamurra clip has always gone to Sydney. The Yanko and Coree clips also go there, but as a rule the clip from stations to the south and south-east of that go to Melbourne.
436. What would be the production of those stations which are sending their wool to Melbourne? I could hardly say, but I should imagine that it would not be less than 5,000 bales.
437. You think a portion of that wool, if liberal rates were offered, would be carried on the proposed railway? Yes.

*Mr.
T. W. Wise.* 438. Do I understand you to say that the farmers combine wool-growing with wheat-growing? To a limited extent the farmers do so. On some of the farms the wool crop is just as valuable as the wheat crop.

15 Jan., 1895. 439. What is the primary cause of so much land being put under wheat cultivation during the last few years? You see, when the farmers first go on their land they have only their stock. It takes some time to get the land ready for agriculture. After the timber has been rung for a few years it is comparatively easy to clear. Then there has been the low price of stock and wool. The farmers and graziers want to supplement their produce, and they have increased their agriculture.

440. What is the lowest price wheat should realise to leave a margin of profit to the producer? Two shillings and sixpence delivered at the railway or 2s. 3d. on the farm. That is the lowest price which would give them any fair return for their labour.

441. You know the country through which the proposed line will go to Berrigan? Yes.

442. From your general knowledge of it, you advocate the construction of the line? Yes.

443. You know the character of the railway it is proposed to construct;—do you think such a line with a speed of 15 miles an hour, and with a daylight traffic, will be sufficient to meet the requirements of the district for many years to come? Yes; thoroughly well. If the speed were only 10 miles an hour it would be enough for a great deal of the traffic which would pass over it.

444. You have had some experience in earthwork formation? Yes.

445. Take a uniform rise of 6 inches with about 18 feet in width,—what should that cost? Of course, an ordinary road formation is different from a railway formation.

446. But do you think an estimate of £225 per mile is too much for the earthworks required for the proposed railway? If it were not more than 6 inches in depth it could be done for about 10s. a chain.

447. Have you had work of this kind carried out in the municipality? Yes; we have had much heavier work done for very little more.

448. The country between here and Berrigan is pretty level? Yes.

449. Therefore, no considerable earthworks would be required? No.

450. From what distance by train do you have to bring your ballast? Fifty miles.

451. What did it cost you per cubic yard? Eight shillings. We get screened gravel at 5s., and freight and unloading are about 3s., and it makes very good ballast—much better ballast than you see on the Jerilderie line.

452. If ballast were required for the proposed railways there would be no difficulty in getting a good supply? No.

453. But it would have to come a distance of 50 miles? At this end—yes; but at the Berrigan end you could get an abundance.

454. It has been suggested that the line should be constructed without ballast, but that additional sleepers should be laid, forming practically a wooden floor;—do you think that would stand the traffic? I should think it would answer very well at the proposed speed.

455. You think such a line would be perfectly safe? Yes.

456. And not likely to cause accident? No.

457. I suppose, in your opinion, the construction of a railway from here to Berrigan would be better than the making of a macadamised road? Yes; it would take more in proportion to make a macadamised road than the benefit from its construction would be worth.

458. Do you think a macadamised road between these two points could be made for £1,800 a mile? I do not.

459. And you think that a light railway of the character proposed would be sufficient for many years to come? Yes.

460. *Mr. Lee.* You gave evidence before the Sectional Committee, in 1892, when it was inquiring into the proposed extension between Jerilderie and Deniliquin;—you then said that the quantity of wheat produced in 1891 was 29,150 bags, and that 6,000 bags went to other buyers, making a total of 35,150 bags; in 1892, you said that 35,000 bags went through your hands, and that 15,000 bags went to other buyers, making a total for the year of 50,000 bags;—those figures showed a large increase in the growth of wheat in your opinion, and you attributed the increase to the fact that the railway had been constructed;—have you seen any reason since then to alter your estimate? No. Of course, the figures I gave represented the wheat which came into Jerilderie. It did not represent all the wheat grown in the district. I suppose that about 20,000 or 30,000 bags went across the Murray through Victoria.

461. For what purpose? It was bought by Sydney millers and went into Victoria in bond, and round to Sydney by ships. The Victorian railway authorities offered special rates, which were an inducement, but they were abolished this year.

462. Mr. Harper, of the Railway Department, was in the district a few weeks ago;—did you see him? Yes.

463. Did you supply him with information? I think I did.

464. He has reported that the estimated quantity of wheat produced in the district this year is 153,000 bags;—do you think that is an exaggeration? It was not an exaggeration at the time the estimate was made—the crops promised it—but since then, on account of bad harvesting weather, I think it would be fair to reduce the estimate to 130,000. I estimate that fully 20,000 bags will be lost owing to the weather.

465. Since the season of 1892 there has been an increase in wheat production in the district of from 50,000 to at least 130,000 bags? You would have to add to the 50,000 bags the quantity which went to Victoria.

466. Mr. Harper's estimate is confined to a radius of about 20 miles of Berrigan? That would be about right.

467. You are aware that the Railway Commissioners rely almost solely on the wheat traffic to give them a return on the contemplated extension? Yes.

468. The Committee would be glad to know if there is likely to be any leakage, which would make the estimate subsequently unreliable? The only thing is this—the quantity of wheat which will pass over the line will depend upon the relative prices in Melbourne and Sydney. New South Wales, up to the present time, has not been producing enough for her own needs. The price in Sydney has been higher than the price in Melbourne per bushel, and it has paid the farmers to take this wheat a long way to the Sydney market. When New South Wales once has wheat for export the farmers within 10 miles of the Murray will send every bag of their wheat into Victoria. The cost of sending to Melbourne will be only about 18s. or 19s. a ton, including all charges, whereas to Sydney, even with a railway from Berrigan, the charge would be about 25s.

469. Under those circumstances, the contemplated traffic by the railway would be almost entirely lost? There would be a certain radius which would not be affected by the Victorian railways, and within that I think you would get the necessary revenue. Before we attain the position of an exporting country, there will be a general increase in the area under cultivation, and in this particular district that increase is more likely to take place in the area affected by the proposed railway than nearer the Murray. Mr.
T. W. Wise.
15 Jan., 1895.

470. Is there sufficient good agricultural land to produce for the extension the revenue expected from cultivation in this direction? Yes.

471. In the event of our having federation and a free border, would that be likely to divert traffic towards Victoria? If once we reach the position of an exporting Colony, whether we federate or not, it will not make a bit of difference. If the duty were off to-morrow it would not make any difference, because the farmers ship their wheat, *via* Melbourne, in bond.

472. Inasmuch as Berrigan is a wheat-growing locality, is it not likely that flour-mills will, in course of time, grow up there;—if the wheat grown in the district were thus dealt with locally, how would that affect the traffic on the line? If the flour were ground at Berrigan, it would still have to be sent this way. In fact, they are more likely to send the flour than the wheat this way.

473. You see no probability of the district finding an outlet in another way? No. Several times last year an attempt was made to send the produce to Victoria, but it has always paid better to send it this way.

474. You are aware of the rebate line fixed in this district by the Victorian Railway Commissioners? Yes.

475. What effect has that line had upon the general traffic of this place? It has caused a good deal of general merchandise to be brought to Sydney, which otherwise would have come through from Melbourne. In the case of galvanised iron and certain heavy goods it might pay to get them from Melbourne, but in the case of other goods it would be cheaper to get them from Sydney.

476. How does the rebate system affect Jerilderie as a centre for store goods? It depends upon carriage. If the storekeepers find that it costs less from Sydney, he gets the goods there. In the first place, he is not bothered by the carriage from the Murray by dray, and he gets the goods straight from the merchants into his shop. He can get the goods, *via* Sydney, at all seasons of the year, and he is not bothered by teams.

477. As Berrigan is no great distance from Cobram, do you think that any great portion of the traffic which has now the benefit of the rebate, would be diverted on to the Berrigan line? Yes; I think so.

478. Do you know whether the construction of the line as far as Jerilderie has had the effect of inducing the large landholders to throw open the land for settlement? No.

479. The landowners close to Jerilderie have taken no advantage of it? No. But it has had the effect of causing wheat to be grown at Tuppal, Momolong, and Barooga. There has been no cultivation on the line itself between here and Narrandera.

480. What is the price of wheat in Jerilderie to-day? From 1s. 9d. to 1s. 10d. per bushel delivered here. Extra good samples would bring 1s. 10d.

481. It costs 3d. a bushel to get it carried from Berrigan here? Yes.

482. So that the farmers are really receiving 1s. 6d. per bushel net? Yes.

483. Seeing that the railway depends upon the continuation of wheat production in this district, do you think that if the present prices continue wheat production will continue here? I do not.

484. Do you see any sign of improvement in the price;—in other words, do you know any outlet which will encourage the farmers to go on? It is the general opinion among people in the trade that prices will harden. Producers in other parts of the world are affected, just as we are, by the low price of wheat, and they cannot afford to grow it cheaper than we can grow it, nor so cheaply. Producers elsewhere would starve at present prices. The probability is that there will not be so much wheat grown. Then, again, wheat may be used for other purposes—stock, for instance. Wheat is the most valuable cereal grown. It is far more valuable than oats and barley, and for the last fifteen years the price has ranged higher than the prices of those things. Now, however, it is very low. Owing to the over-production it stands at present lowest on the list. Of course, when it comes to be so cheap, and when it comes to be used for the purposes for which other grain is used, its price will go up to the price of those grains.

485. You have considered the question from all points of view, and notwithstanding the extremely low price ruling at this moment, you are of opinion that the wheat industry will continue to flourish in this district where the land is suitable for it? Yes.

486. Your impression is that the price will improve? Yes.

487. And looking at it from that point of view, you think the country will be justified in undertaking the construction of a cheap pioneer line in this district? Yes.

488. I suppose the time has come when some improved means of communication must be extended to this particular district, whether by metal road or by railway? Yes.

489. Which do you think the best? A railway would be the best unquestionably from every point of view. Every man with experience of the district must admit that road-making on an extensive scale is out of the question. You might drain the roads a little, and make them better to drive over, but road-making in this district, to carry heavy traffic, is out of the question.

490. It has been estimated that the cost of a metal road in this district would be £2,060 a mile? It would cost fully that. Close to a town you might make a metal road a little under that price. But taking a road, for instance, from here to Berrigan, there is no metal along it, and even supposing they had metal at Berrigan, it would still have to be carted a distance of 20 miles to this end. One of the first things a contractor for the metal would do would be to lay down a line of tramway along the line of the road to bring the metal on to it.

491. It is estimated that it would cost at least £150 per mile per annum to maintain the road;—if it can be shown that a railway can be constructed for less money than a metal road, and that the cost of its maintenance would not be greater than that of a metal road, then there can be no doubt as to which would be the more desirable? No doubt, whatever. And even if the returns were not so favourable to the railway, still the railway would be the best. There would be the interest on the road expenditure, and that would have to be put against the interest on the railway.

492. Would you favour the construction of a light pioneer line in the first place, instead of a line like that from Narrandera to Jerilderie, for instance? Yes.

493. You think it would be sufficient for all requirements, and that this would be a good part of the country in which to make the experiment? Yes. The Government cannot afford to construct railways and run them at a loss. The farmers would be very well satisfied if the Government were to spend very much less money on their railways and to carry goods at a lower rate. 494.

T. W. Wise. 494. *Mr. Gormly.*] In the case of this particular line, do you think the estimate of 10s. a chain for earthworks would be enough to fill up the depressions? Yes; I think that on the average, £50 a mile ought to be sufficient for the whole distance between here and Berrigan.

15 Jan., 1895. 495. *Chairman.*] You have referred to the wheat-growing country on the Murray;—how far west does it go from Murray Hut;—will it run in a direct line from Jerilderie to Deniliquin? Yes; wheat can be grown right through that country.

496. Does it go beyond that? I could not say how much further than the Moama line it goes, but it goes a considerable distance. The railway surveyed line from Jerilderie to Deniliquin intercepts the timbered country 6 miles from here, and goes right through it until it enters Deniliquin. It is agricultural country all the way.

497. *Mr. Davies.*] You say the average yield per acre is 16 bushels? Yes.

498. How long would land in the district continue to produce that yield in fair ordinary seasons? Practically for ever with the system of farming which obtains in this district. The farmers fallow the land—they combine agriculture and grazing. They spell the land for a year or two at times, and run sheep upon it. In this way the quality of the land is kept up.

499. You know that the yield of wheat in South Australia has fallen off to less than one-half of what it was? Yes.

500. You do not anticipate the same result in this district from continuous cultivation? Not in this district.

501. Supposing the land were cropped year after year, how long would the farmers be able to keep it up? I suppose that generally in this district you could reckon on an average of 16 bushels for five or six years. The yield would then gradually diminish until it became absolutely necessary to rest the land.

502. *Mr. Gormly.*] An officer of the Roads Department has said that a greater portion of the distance from here to Berrigan is composed of swamps, containing from 1 foot to 18 inches of water in times of rain; do you think that is the case? There is not more than a mile of swampy country in the whole distance, and even where it does exist, I doubt whether the water would be 18 inches in depth.

503. Upon no considerable portion of the line would high embankments be necessary? No.

504. Would your estimate of 10s. per chain for earthwork formation apply to the whole line? Yes; £50 a mile would allow a margin to meet swamps and depressions.

505. That is your conclusion, after considerable experience as Mayor of the borough, in connection with earthwork formation? Yes.

506. What are the appliances you have for road-making? Up to now we have used ploughs and scoops, but we have at the present time the American patent road-forming machinery. My estimate of £50 a mile was not for the use of the American machinery, but for the use of the plough and scoop.

507. If it is necessary to fill up depressions, the earth can be removed by dray to lower portions and the cartage will not increase the cost of the line to any great extent? No.

508. With the use of the plough and scoop the earthwork formation in your borough would not cost 8d. per cubic yard? It used to, but it does not cost that now.

509. *Chairman.*] What does it cost now? Earthworks, 32 feet wide, with a 20-inch water table, would cost 12s. per chain.

510. By how much does the American machinery lessen the expenditure? We have only recently got it, but we can get formation done for about 10s. a chain where formerly the cost was £1.

511. It has lessened the cost of road-making in the district by 50 per cent.? Yes.

512. What is the cost of the grader? £75 in Melbourne.

513. It would cost about £100 here, I suppose? Yes.

514. Is there any other information you can give us? Only as to the probable traffic from firewood. I suppose about 1,000 tons of wood would come into the town, and the rates would amount to about £120 a year. There would be a great saving to people here. The wood would cost them much less than it costs them now. I reckon there would be about 80,000 bags of wheat carried on the line, giving a revenue of about £1,000. That is allowing for a reasonable increase in cultivation by the time the railway is made.

515. You consider that in making that estimate you have taken the minimum amount? Yes.

516. What area would that come from? It would include Savernake, some of the Barooga country, some of the Tocumwal country, the whole of the Berrigan district, and the Finley district, to the east of the stock route.

517. Do you think the estimate of live-stock traffic is likely to be realised? I could not speak as to that, but I should imagine that there would be about 3,000 bales of wool. I think the difference would be made up by general traffic.

518. Do you think it would be made up by wood, live stock, and other produce? Yes.

519. All that you are prepared to definitely express an opinion upon is the wheat traffic and the wood traffic? Yes.

520. Do you think the estimate of £1,522 is too much for goods, live stock, and wool? I think it is, a little.

521. What would you put the amount down at? I should be inclined to put it down at £1,000. It is hard to form an opinion, because a railway creates traffic.

522. You think the Commissioners would be nearer the mark if they estimated a revenue of £2,000 instead of £2,600? Yes.

523. *Mr. Davies.*] You will see that Mr. Harper estimates 400 trucks of live stock at 7s. a truck—do you think that is too much? Yes; I think it is, a little.

524. He also estimated 700 tons of wool at 3d. per ton per mile? I do not think there will be quite as much as that.

525. Do you think there will be 17,000 tons of wheat carried at 2s. 6d. per ton? I do not think so. I think there will not be more than about 80,000 bags.

526. But you think that the difference may be made up in the carriage of other things—in the carriage of general goods, for instance? Yes.

527. Do you think there will be 300 tons of general goods? Yes, fully that.

Mr. Joseph Thomas Mawson, Station-master, Jerilderie, sworn, and examined:—

528. *Chairman.*] What are you? I am station-master at Jerilderie. Mr.
J. T. Mawson.
529. How long have you been in charge here? Five years.
530. Can you give us information as to the traffic on the railway for the last two or three years? I have 15 Jan., 1895. prepared some returns as to the traffic in wool, wheat, and stock.
531. For what years? From 1892 up to date.
532. You hand in a return showing the live stock, wool, and wheat carried from Jerilderie by rail for the seasons ending 1892-3, 1893-4, and 1894-5? Yes. [Vide Appendix.]
533. Does the return show an increase in the railway traffic? Yes; in wool and wheat.
534. Is the traffic from Jerilderie gradually increasing? Yes.
535. The freight appears to be coming more profitable to the railway? Yes.
536. Have you any knowledge from what portions of the district the wool, wheat, and live stock included in the return come from? I think the greater portion will come from the Berrigan district.
537. Some will come from Savernake, I suppose? From Savernake and Murray Hut, and a small quantity from the direction of Deniliquin. Some also from Clear Hills.
538. Would much agricultural produce come from the northern side of the Billabong Creek? I think the greater portion of that would go to sidings between here and Narrandera.
539. Where does the general passenger traffic of the Jerilderie line come from? It is made up chiefly of Jerilderie and Deniliquin residents. Of course I could not account for a good deal of the passenger traffic, because I do not know the residents of the other districts.
540. Do you know some of the stations from which the wool comes? Yes; Coree would be one.
541. About what quantity annually? About 2,000 bales.
542. What other stations send wool to this line? Wonnamurra about 700 bales, Goolgumbla about 1,500 bales.
543. What stations on the south of the line? We had 2,700 bags from Tuppal last year; we also had Boonoke wool.
544. Can you tell us of any quantity of traffic coming from the direction of Berrigan and Clear Hills, beside that you have referred to? In addition to the wheat there would be a small quantity of wool, but a large proportion of it goes to Victoria.

Reverend John Dykes, Jerilderie, sworn, and examined:—

545. *Chairman.*] What are you? I am a Presbyterian clergyman. Rev.
J. Dykes.
546. How long have you been resident in the district? Fourteen years and six months.
547. Have you a full knowledge of it? A pretty good knowledge of it.
548. *Mr. Davies.*] Do you know the country lying between this point and Berrigan? I know it pretty well. 15 Jan., 1895.
549. Are you conversant with the surveyed route of the proposed railway? I do not know it.
550. You only know the terminal points? Yes, and the country between.
551. The country is much of the same character right through? Yes.
552. What is the general character of the country all round;—is the land in the Berrigan district within a radius of 20 miles suitable for agriculture? It is generally superior agricultural land; it is not uniformly so. There are portions on which the water lies in the winter, and which are not so suitable. Then there are portions of soft, oozy clay; that also would be unsuitable for agriculture. In winter time you could hardly cross it in a buggy.
553. Is much of the area I have spoken of unsuitable for agricultural purposes? Not a large proportion.
554. What is the greatest depth of water you have seen upon the land here? It would be, perhaps, a foot on stretches of ground for a few weeks after rain. Take the tract between Momalong Station and Berrigan. I have travelled over it in the winter when the sun has been shining and when the air has been clear, and almost one-half the whole distance would be under water.
555. Then, if it were proposed to construct a railway with an earthwork formation of not more than 6 inches, and if sleepers were placed on the top of that formation without any ballast, do you think it would be safe? I do not think so.
556. If the sleepers were laid more closely together than upon ordinary railway lines, and if the trains only ran at a speed of 15 miles—the traffic being restricted to daylight traffic; do you think that would be safe? I do not think so. I think it would be necessary to have a higher embankment in many places. In the case of red soil it would do right enough; but there are stretches of low-lying ground where water accumulates. For instance, there is a paddock when you leave Wonnamurra Station, on the road to Berrigan.
557. Whose paddock is that? It belongs to Berrigan Station. It is beyond Connell's selection. It is now enclosed in a lane. Formerly the whole country was open; I have been over it all picking my way. There is about a mile there where the horses would be above the fetlock in water for the whole way, and that for perhaps 2 or 3 months.
558. Have you, during your residence in the district, seen water 6 inches deep for months on portions of the road between Berrigan and Jerilderie? Yes; and much deeper than that in places on the country between Berrigan and Jerilderie.
559. Would it be a heavy rainfall to produce the flooded state you speak of? Somewhat exceptional perhaps.
560. Do you know the normal rainfall of the district? Sixteen or 17 inches. I have the details of the rainfall at Yanko Station from 1869 to 1884.
561. Did you observe a uniformity in rainfall there? There is a considerable variation from year to year.
562. And the flooded roads you have described existed during one of the wet seasons? Yes.
563. How long ago was it that you saw the country in the flooded state you describe near Connell's selection? About seven years ago previous to the fencing in of the road.
564. Have you any doubt as to the stability of such a line as I have described between here and Berrigan? Very grave doubts.

Rev.
J. Dykes.
15 Jan.; 1895.

565. Supposing there were side drains and that box drains were made to conduct the overflow under the line, do you think that that would be sufficient provision to carry off the water? I should be very much inclined to doubt if it would be sufficient under the circumstances. I should doubt the safety of the line unless there were a very complete system of drainage to carry the water away from the railway altogether to a lower level.

566. Is there a fall to the west? There is a general fall to the westward all over this country, but very slight.

567. Do you favour the construction of a line between Jerilderie and Berrigan? I think if a line is to be constructed into this district a better direction for it to take would be towards Finley.

568. Why do you think that? I think such a line would be more advantageous to the community at large.

569. Is not Berrigan the centre of this great wheat district? I do not know that it is—I do not think so.

570. Do you think Finley is the centre? I think it is; I think that in the near future it is likely to be the more populous and the more productive district.

571. But dealing with the present, would you not regard Berrigan as the centre of some very excellent country? Yes, on the whole.

572. Country which is likely to produce very large crops of cereals? Yes.

573. It already does so? Yes; but I fancy that part of the district has reached its maximum of production, or very nearly so.

574. Why? Because the greater portion of the available land there is already in the hands of agriculturists. That is one of the reasons why I favour a line to Finley. There is a large amount of good agricultural land in that district, which is still available for settlement.

575. You think there is more land available for agricultural purposes at Finley than at Berrigan? Yes, taking a radius of 20 miles. If you take that radius from Finley, it would take in the best part of Berrigan, and a large area of splendid agricultural land to the westward.

576. Would the line you suggest serve the district of Berrigan as well as the proposed line? Not so well, of course, as if the line were taken to Berrigan itself.

577. Would not a line to Berrigan serve a larger number of persons than a line to Finley? I question it very much. I speak from my knowledge of the country on this side of Berrigan. I am not so thoroughly acquainted with it beyond. There is no settlement on this side until you reach Berrigan, and there is no prospect of it. I do not profess, however, to speak with any degree of authority further than, perhaps, 8 miles beyond Berrigan.

578. Then, taking a radius of 20 miles, it would be difficult for you to say whether, from the point of view of serving agriculturists, it would be better for the line to go to Finley or to Berrigan? I give my opinion for what it is worth. I thought it might be a hint to the Committee to obtain more particulars as to settlement, taking the Berrigan district within a radius of 20 miles in comparison with that of Finley, within a similar radius.

579. You know the Finley district much better than the Berrigan district? I know it pretty well. I know it for a distance of 10 miles or so on the other side. In a sort of way I also know it beyond; but I do not profess to speak with any degree of authority about the localities further over.

580. You favour a line to Finley because of your better knowledge of that district? No; because of my comparative knowledge of both districts.

581. Do you think, then, that a larger number of persons would be served if a railway went to Finley? I think there is a larger area of land available for agricultural purposes on the Finley side, for instance, there is the Tuppul Estate. The owners have manifested their willingness to put it into the hands of farmers. They are prepared to make an indefinite amount of land available for agricultural purposes.

582. Do they propose to sell or to lease the land? It is understood to be a sale; it is actually a lease with the right of purchase. A good deal of land has been taken up in that way in the Finley district.

583. Do you know where the wheat brought to Jerilderie has come from during the present season? No, not as to particulars.

584. You do not know whether the bulk of it has come from Berrigan or Finley? No.

585. I suppose the district from which the bulk of the wheat came would be a good criterion as to the direction the railway should take? I daresay.

586. If the bulk of the produce has come from the Berrigan district, taking a radius of 20 miles, as against the Finley district, I suppose you would say that the railway should go where the larger amount of produce would be brought to it? I would not quite say so, because I think there are other considerations to be taken into account. For instance, the general interests of this district, and of the district to the north of the Billabong, should also be considered in connection with any line to the south. I think it would be a great mistake, and I say it advisedly, to construct such a line as proposed to Berrigan, because you could not extend that line so as to bring this large district into touch with the Victorian lines of railway. I hold very strong opinions on this point.

587. Do I understand you to say that you advocate the construction of a line from Jerilderie to Finley, with the view of bringing our railway system into touch with that of Victoria? That would be one reason. The interests of this community, of this large district, are such as to render it a matter of true statesmanship to see that it has the best access to market for its produce, which can be afforded it. To take a line down to Berrigan would be simply to run into a *cul de sac*, and the hope of this district of obtaining access to the Victorian seaboard would be indefinitely postponed.

588. When that happy time arrives the duties will have to be abolished on the Victorian side? That is a matter for the Victorians themselves to consider.

589. You advocate then that the Government of New South Wales should bring its railway system into touch with the Victorian system, in order to divert the traffic of this Colony into Victoria. You advocate that the Government of this Colony should raise loans for that purpose? I do not advocate any such thing as that the New South Wales Government should raise money for that purpose, but I think that the function of the Government is to remove as far as possible any difficulty in the way of citizens carrying out their business and their enterprise successfully and profitably to themselves, and, therefore to the Colony.

590. *Chairman.*] Do you advocate an immediate junction of the railway system of New South Wales with the railway system of Victoria? Not in advance of need.

591. *Mr. Davies.*] You are looking forward to the days of federation? Yes.

592.

Rev.
J. Dykes;
15 Jan., 1895

592. Do you think it will be wise in the meantime to saddle the Colony with large loans for the purpose of constructing railways to divert our trade to Victoria? My opinion is that the matter should not be pushed on too rapidly until federation is further advanced. We should do nothing which would interfere with a more perfect system of intercommunication between the colonies at some future time.

593. In the meantime you would sacrifice your agricultural producers; you would deny them the benefit of communication with the railway system of their own colony? I do not know that the sacrifice would be so very great.

594. Are you aware of the cost of the transit of produce from the Berrigan district, taking a radius of 20 miles to Jerilderie;—do you know that it costs from 10s. to 12s. a ton? Yes.

595. Would you be surprised to know that if a railway were constructed the cost would be reduced to 2s. 6d. a ton? That would be a big difference.

596. Would it not be a great advantage to the producer? There is no question of the advantage from the producer's point of view. I am looking to the benefit of the greatest number, and I think a railway to Finley would serve the larger number, and would be preferable even from that point of view, while it would not have the effect of interposing any barrier to a more perfect system of railway intercommunication when the Governments of these colonies have come to be more in touch with each other, and are working in a federated community.

597. Then, viewing the matter in the light of direct communication between Jerilderie and Victoria, you think Finley would be the best point to which to take the line? I think so.

598. Because you could continue the line on to the Victorian Border? Yes; that is one reason why I would be more favourable to that route.

599. Then, upon the whole, you do not think it would be an advantage to this district to construct a cheap line between Jerilderie and Berrigan? I think it would be a waste of money to construct a cheap railway such as that proposed—I do not think it would last.

600. You would not put your opinion against that of the Engineer-in-Chief for Railways, I suppose? Certainly not; but I know the country, and I know the exceedingly soft melting nature of a great deal of the soil.

601. If the Engineer-in-Chief is of opinion that a railway sufficiently strong for the traffic of the district could be constructed for £1,800 a mile, would you still hold to your opinion that such a line would be insufficient for the district? I do. I believe that an average embankment of 6 inches, without ballast would, in many parts of the country between here and Berrigan, be totally insufficient.

602. You must remember there would be 5 inches of sleeper above that and 5 inches of rails above that? But the sleepers rest on the soil, and I do not think that, generally, the soil is of a suitable character for such a purpose.

603. If it were found that the road was not sufficiently stable, it would be cheaper to ballast it afterwards, would it not, than in the first instance. You could run your ballast trucks along the line, and deliver the ballast where required? No doubt, but that will add largely to the cost of construction. It will no longer be a line at £1,800 a mile.

604. This work is suggested as a pioneer line—the first cheap railway attempted in the Colony. Do you think it is worth a trial? I think it would be an unfortunate thing to make the trial at this particular point.

605. Your idea is that a line of a more permanent character should be constructed to Finley, with a view to the ultimate connection with the Victorian system? I do not advocate the connection at once, but in the meantime I think nothing should be done to hinder the construction of such a railway.

606. *Mr. Lee.*] You described one portion of the road between here and Berrigan, which you said was very bad—can you locate it? It is 2 miles on the other side of Connell's—about 12 miles from here.

607. You do not know the proposed route of the railway? No, except generally.

608. You did not know that it was not proposed to go near that road at all—that the line will not touch the main road until within a few miles of Berrigan, so that the country spoken of will not be touched? I was speaking generally of the paddock through which the main road passes.

609. Do you not think that if there were side drains, and if suitable provision were made for the water passing under the line at various places, that that would be enough to keep the line free of water? I do not think so, unless provision were made to carry the water away from the line.

610. Supposing advantage were taken of depressions at convenient sites to let the water pass away? I daresay that would minimise the difficulty.

611. Have you seen any running water along the road? No; it is mostly still water.

612. Yet I understood you to say that it should be treated by way of drainage? I have stated that that is the difficulty. It would take a long cutting to reach a lower level.

613. You advocate a line to Finley for the ultimate purpose of getting to Victoria. Supposing that line were made, what produce would there be to send to Victoria? This district is at present mainly a pastoral district, and there would be the usual products of such a district—wool and tallow.

614. There is absolutely no wheat-growing just about here? Not a great deal.

615. The wheat-growing commences somewhere in the neighbourhood of Berrigan and Finley? No doubt—still there is a considerable area of wheat-growing country to the north.

616. If that is so, would it not be better to construct a line from Berrigan towards the Victorian border at once? I am not a partizan of Victoria, but facility of access to market tends to produce business, and there is an excellent area of agricultural land to the north of us as well as in the Berrigan district.

617. How far to the north would the agricultural land go? It is found anywhere around us almost. It is not likely to be made available for agriculture in the near future, because already, apparently, we have over-production. But on the Yanko, and spreading northwards towards the Murrumbidgee there is an immense breadth of country capable of being utilised in agriculture more or less successfully.

618. If your idea of building a trunk line to connect this district with Victoria is the right one, would it not be better to connect Jerilderie with Deniliquin at once? I think it would be a most valuable line for many reasons. To begin with, it would pass through a great deal of good agricultural land.

619. How many settlers are there between here and Deniliquin? Not a great number; but there is every reason to think that the settlers who do exist would not under certain circumstances object to have a great many neighbours.

Rev.
J. Dykes. 620. Therefore we are not to give relief to those who are already on the land, in consideration of something that might happen in the future? As I have said, I think a line to Finley would be the preferable line.
15 Jan., 1895.

621. *Mr. Roberts.*] I suppose you are fully aware of the high prices which the farmers of Berrigan have to pay to get their produce carried to Jerilderie? Yes.

622. Having regard to the settlers to the east of Berrigan, do you not think the Government would be justified in constructing this railway in the direction proposed? I question whether the farmers at Clear Hills would cart their wheat to a railway station at Berrigan.

623. Where would they send it to? I hardly think it would go to Berrigan. A railway there might be a slight advantage to them, but it would not be very great.

624. Putting aside the question of uniting our railway system with that of Victoria, from which direction do you think a railway should be taken with a view to afford immediate relief to the agriculturists to the south of this point? I suppose that most of the present agricultural settlement is to the east of Finley.

625. Towards Berrigan? It would take in Berrigan and all the agricultural communities in that direction.

626. At what period of the year did you see the water which you describe as lying between here and Berrigan? During the winter months, from May to September.

627. *Mr. Gormly.*] You are acquainted with the means adopted in level countries to carry water away from depressions? Yes.

628. If those means were adopted in connection with the proposed railway, do you not think they would prove sufficient? If there were side drains, and if advantage were taken of such opportunities as might offer to cut to some distance in order to reach a lower level, it might, perhaps, be adequate. I have noticed, however, that on the Narrandera line the side drains are not very efficient.

629. Will not the side drains be the means of carrying the water to depressions? If depressions exist.

630. Must there not be a depression when the water remains for the length of time you speak of? Certainly there are depressions. The question is whether the water can be carried away from the line.

631. You are aware that the water-courses, although shallow, tend to the westward? Where there is a water-course the water can be carried away without question.

632. In constructing a railway such as this, where depressions exist, embankments will be raised to the height of the higher portions of the country, will they not—there will be an uniform level? Yes.

633. If such an embankment were made in the depressions you have described, do you not think it would be sufficient to prevent the line at that particular point from being flooded? The line itself would be above water. What I should fear would be the erosion or subsidence of the earth upon which the line had been built.

634. Do you know of similar embankments between here and Narrandera which have not melted away? One accident—the most noted accident since the line has been constructed—occurred through that very circumstance.

635. Was not that caused by an extraordinary overflow from the Yanko Creek? No; there was simply a subsidence caused by the rain softening the embankment.

636. Do you know the point where the accident actually occurred? Yes.

637. What would be the height of the embankment? Possibly about 6 feet perpendicularly.

638. Would there be any need for an embankment of 6 feet between here and Berrigan? No.

639. Therefore such a serious accident would not be likely to occur? The mere fact of the embankments not being so high would offer no security against accident, in the case of an unballasted line.

640. Which district, Berrigan or Finley, at present has the larger area under cultivation? Berrigan, I believe, at the present moment.

641. Where is the considerable number of farmers you refer to to the west of Finley? They are mainly on the Tuppah land.

642. What is their tenure? Leasehold, with a right of purchase, also in many cases conditional purchasers.

643. What is the tenure or occupation of the landowners about Berrigan? There is a considerable number of conditional purchasers among them.

644. Is the land at Finley under occupation by conditional purchasers? A considerable area of it.

645. Is there not a considerable number of farmers in the neighbourhood of Savernake? Yes.

646. Would they send their produce to Berrigan? The railway would undoubtedly benefit some of them.

647. *Chairman.*] Your position is this, in the first place you doubt the wisdom of constructing such a line over such country? Yes.

648. Then you doubt whether Berrigan would be the true centre of the wheat-growing district to the south? Yes, distinctly.

649. Further, you doubt the wisdom of complicating the question of railway extension in this part of the country by any minor lines? Yes; at least by this line at the present moment.

WEDNESDAY, 16 JANUARY, 1895.

[The Sectional Committee met at the Royal Hotel, Jerilderie, at 8:30 a.m.]

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. JOHN DAVIES, C.M.G.

The Hon. CHARLES JAMES ROBERTS, C.M.G.

CHARLES ALFRED LEE, Esq.

JAMES GORMLY, Esq.

The Sectional Committee further considered the proposed railway from Jerilderie to Berrigan.

Mr. Joseph Augustine Thomas Rochfort, Inspector of Stock, Jerilderie, sworn, and examined:—

Mr. J. A. T. Rochfort. 650. *Chairman.*] You are acting inspector of stock in the district of Jerilderie? Yes.
16 Jan., 1895. 651. You hand in a return showing the holders, areas, and sheep in that portion of the district of Jerilderie likely to be affected by the construction of the railway under consideration? Yes. [Vide Appendix.]

WEDNESDAY,

WEDNESDAY, 16 JANUARY, 1895.

[*The Sectional Committee met at the Public Hall, Berrigan, at 2:30 p.m.]*

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. JOHN DAVIES, C.M.G.

The Hon. CHARLES JAMES ROBERTS, C.M.G.

CHARLES ALFRED LEE, Esq.

JAMES GORMLY, Esq.

The Sectional Committee further considered the proposed Railway from Jerilderie to Berrigan.

Mr. Emanuel James Gorman, auctioneer and farmer, Berrigan, sworn, and examined:—

652. *Chairman.*] You are an auctioneer and farmer? Yes; residing principally in Berrigan.

Mr.
E.J. Gorman.

653. The Committee would like you to locate exactly the position of the town of Berrigan? It is as follows:—It commences at the north-west boundary of portion 67, G. Mitchell's original portion of 40 acres, going from thence to the main road from Jerilderie to Yarrawonga, following that road down till it intersects the south boundary of Susan Macdonnell's portion 75 of 279 acres; thence along the south boundary of that portion to its south-eastern corner; thence by a line running north forming the eastern boundary of the said portion 75, and part of the eastern boundary of portion 70; thence by the northern boundary of portion 76 to the north-western corner of portion 77; thence on the east by the eastern boundaries of portions 76 and 79 to the south-east corner of 79; thence on the remainder of the north by a line forming the southern boundary of portion 78 to the road from Berrigan to Momolong; thence by that road south-westerly to the north-eastern corner of portion 20; thence by the north boundary of portion 20 to its north-west corner; thence by part of the boundary west of portion 20 to the south-eastern corner of portion 82; thence on part of the south by the south boundary of portion 82 to the road from Jerilderie to Yarrawonga; thence by that road upward to a point 10 chains south from the south-east corner of portion 86; thence by a line east almost to the east boundary line of portion 87; thence by a line north till it strikes the south boundary of portion 84; thence on the remainder of the south by the south boundary of portion 84 of 65 acres to the south-west corner of that portion; thence on the remainder of the west by a line forming the western boundary of portions 84 and 67, to the point of commencement, embracing portions 67, 84, parts of portions 85 and 86, these being private subdivisions—and embracing also portion 76, which is at present unused Crown land, and also portions 80, 79, and 82, which are the village of Berrigan.

16 Jan., 1895.

654. *Mr. Lee.*] How long have you resided in this district? I have been resident in this district for about sixteen years, that is, 10 miles to the east of here, at a place called Warmatta. I have been four years in Berrigan.

655. When did settlement first take place about Berrigan? About fifteen years ago.

656. How long is it since the township came into existence? It is between five and six years, since the subdivisional sales took place.

657. Your period of residence covers the progress of the district we now see? Yes.

658. The object of our inquiry is to ascertain from you residents what reasons you have to advance in support of the proposed railway extension from Jerilderie to Berrigan. We should like you, shortly, to offer reasons why the line should be extended here. We should like you to show us that the proposal is a reasonable one, and that it is likely to pay if carried out? In the first place, there is the suitability of the soil for intense culture, including the growth of all cereals, fruit culture, and the dairying industry, with the pastoral industry, of course, added. The district is eminently adapted to all these things. As a further reason, I might point to the large growth of population in this district within the last seven or eight years—that is, the agricultural population. These persons have expended a lot of money in opening up the country and enriching the district. Then there is the necessity for a better means of transit to market than the means at present at our command. There is also the fact that an extension from Jerilderie could be constructed so cheaply that it would not be a great tax upon the consolidated revenue. Those are the principal reasons. I have put them as clearly as I can. This part of New South Wales is capable of much greater development than already exists. We have only started so far on several new lines; but we have proved that the district is eminently adapted to this new departure. For instance, we know that fruit-growing can be carried on successfully. We know that the drying of apricots, peaches, and other fruits would pay handsomely, if we had a means of transit to market. Further, we know that the district is suited to butter factories and creameries if we had a better means of transit. We have already proved that for grain-growing the district is second to none in New South Wales.

659. Are the fruits and vegetables exhibited in this hall to-day all grown in this district? Yes; within a few miles of the township.

660. I see the exhibition includes potatoes;—is this considered a potato-growing district? There are a few sorts of potatoes which grow splendidly here—they sow them twice in the year. The Vermont and Early Rose give very good results.

661. What is the chief product? Wheat.

662. Do you remember the Railway Commissioners being here a short time ago? Yes.

663. Were you one of the deputation who waited upon them at that time? Yes.

664. Do you remember the Commissioners telling the deputation that they would advise as a condition precedent to the construction of the line that the landowners should give the necessary land? Yes.

665. What reply did the deputation give? I do not know that there was any definite reply. We said we would use our best efforts in approaching the landowners, and would see what could be done.

666. Has anything since been done? The landowners have since been approached, but nothing definite has been done pending the arrival of this Committee.

667. Inasmuch as the construction of the line will largely depend upon the settlement of the land question, are you in a position to give us any definite evidence upon the point to-day? I am not; but the landowners, with one or two exceptions, are here and can speak for themselves.

668. Have you had a public meeting with reference to the matter? The secretary of the Progress Association waited upon some landowners who expressed their willingness to be reasonable in the matter. I do not know exactly what they are going to do.

669. The line would not pass through your land? No.

**Mr.
E. J. Gorman.** 670. In the event of the landowners giving their land to the Railway Commissioners for the purpose of a railway, what do you propose to do in the case of those persons who may derive benefit from the line although it does not go through their property? Nothing definite has been arranged. It was proposed that they should contribute towards the cost of the land; but seeing that there is no law compelling them to do so, it has been thought that some might contribute and that a number might not feel disposed to do so.

671. We are to understand, then, that the residents have not done anything definite with regard to the gift of the land? Nothing further than waiting on the landowners and pointing out to them the necessity, if possible, of giving the land.

672. I suppose you are aware, in common with the rest of the residents, that the proposed line is to be a pioneer or grain line? Yes.

673. It is an experiment in this kind of line, and it is the first time it has been tried in the Colony? Yes.

674. Do you regard this as a suitable district for the experiment? Yes.

675. Do you know that the line will have to be constructed cheaply? Yes; and I think it can be.

676. One of the questions for the Committee to determine is whether the district will be able to support the line after it has been built? I think it will.

677. The Railway Commissioners, after close inquiry, have come to the conclusion that the chief and almost only source of revenue will be the carriage of wheat;—are we correct in assuming that that will be the chief freight? It will be the chief freight.

678. If there were a line running here at the present moment, there would no doubt be plenty of freight for it? Certainly.

679. What are the prospects of the district in connection with the cultivation of wheat and other cereals? During the last two years the area under agriculture has increased to a wonderful extent, and I see no reason why it should not go on increasing. There is an immense area of splendid agricultural land still uncultivated.

680. What has been the price of wheat while cultivation has been extending? It has gradually fallen from 4s. to what it is at the present time.

681. Within what years has cultivation made the most marked progress? It has made the most rapid strides within the past two years.

682. What was the price of wheat then? This time last year it was worth from 2s. 2d. to 2s. 8d. The year previous it was worth from 3s. to 3s. 2d.

683. As a farmer, you will admit that if wheat falls below a certain price it would be unprofitable to grow it? Yes.

684. Can you fix that price? It depends entirely on the conditions. At the present time wheat is apparently at as low a price as it can be consistently with growth at a profit. We thought that, however, three years ago, when the price was 3s. a bushel, but we have managed to live, notwithstanding the fall, and have gone on increasing the cultivated area.

685. What is the present price? 1s. 9d. in Jerilderie.

686. What will that be net to the growers? About 1s. 6d.

687. What do you think of the price now? I am just as hopeful as I was a few years ago.

688. Supposing wheat went down to 1s. 3d. per bushel? We can grow it at 1s. 3d., as well as it can be grown anywhere else at that price.

689. If the price goes down, will the present cultivated area continue to be placed under wheat? We shall have to put the wheat in this year in the hope of a rise. Quite as big an area will be sown this year as was sown last year, and probably more. People have embarked in agriculture. They have bought horses and machinery, and they have cleared the land. Now there is no other outlet for them. They must go on growing wheat.

690. Do you think they will continue to grow it at 1s. 6d. per bushel net? I think the bulk of them will. At the present price of wool and other products there is no other outlet.

691. What is about the average crop per acre? This year is rather an unfortunate year, and I do not know what it will be, but we consider 16 bushels a fair average crop in this district.

692. What do you actually get? It depends to some extent upon the farming. I had an average last year of 26 bushels.

693. Can you give me the average of the district;—have you any data? It is not possible to get at the exact average locally.

694. What do you think will be the yield this year? If the present weather continues the yield will be lessened very much, but I should say that it would run from 12 to 16 bushels. It will probably be about 14 bushels on the average.

695. Have you gone into figures to find out how many acres there are under crop, and what is the gross number of bags raised in the district within a radius of 20 miles of Berrigan? Not in a radius of 20 miles. I have taken the district for 10 miles round. I reckon there are about 30,000 acres under crop from 10 to 12 miles from Berrigan, going to Finley on the west, embracing portion of Barooga on the south, going a little beyond Warmatta to the east, and 10 miles to the north.

696. What do you reckon you will have from that 30,000 acres? I should say from 120,000 to 130,000 bags. There would have been considerably more, but under present circumstances I should think that it is a fair estimate.

697. How many bags to go to the ton? About nine.

698. In the event of prices improving, and there being more inducements to persons to farm, can the area of wheat cultivation be extended? Certainly; three or four fold, I should say.

699. Do you mean by taking up fresh land, or by bringing under cultivation land already held? The large landowners will, I think, lease or sell their land. There is any number of persons coming over from Victoria for farming land.

700. You mean that the holders of large areas will increase the area under cultivation by means of sale or lease? Yes. In view of the present price of wool, I think the small owners will also increase their areas.

701. Do you think it possible that the Berrigan district has reached its limit of wheat production? I think not. There is an immense quantity of virgin soil here; and there is any number of people who are ready to go on to it if the prices improve at all.

702. What is the population of the Berrigan district? I could not say exactly.

703.

MINUTES OF EVIDENCE—RAILWAY FROM JERILDERIE TO BERRIGAN.

23

703. What is the average size of the holdings? From 1,200 to 1,500 acres.
704. As a rule how much of that area would the holder cultivate? From one-fourth to one-sixth, and ^{Mr.} ~~E. J. Gorman.~~
in some cases only one-eighth. ^{16 Jan; 1895.}
705. I suppose you have a good personal knowledge of the district? Yes.
706. And the evidence you have given upon these points may be taken as approximately correct? Yes; I know every farmer personally.
707. You think that even under present conditions there is a possibility of cultivation being extended? Yes.
708. The next point to consider is that of a market. Situated as persons are at this end of the Colony, so close to the Victorian Border, which do they look upon as their natural and proper market? Sydney is the only market for wheat, because the duty of 1s. 10d. per cental on wheat entering Victoria is practically prohibitive.
709. But in the event of federation and a free border what would take place? With a railway to Berrigan I think the wheat would go to Sydney. With no railway there it would go the other way.
710. Supposing the railway were constructed, and there were at the same time a free border? I think the bulk of the wheat would go to Sydney. It would cost 4d. per bushel to take it to Melbourne from Cobram.
711. Notwithstanding that the produce is so much closer to Melbourne than to Sydney you think that it would go to the latter place? The land-carriage would make up the difference. If the railway were taken right on to Cobram I could not say how it would go.
712. If you wished to ship from Melbourne you could do so in bond? Yes.
713. Are the transit rates prohibitory now? There is a difference of 3½d. per bushel in favor of the Jerilderie to Sydney route, over Cobram to Sydney. But owing to the millers giving the same price on the Victorian border so as to prevent wheat going out of the Colony, the price is equal. The farmers, however, prefer the other road. The punt on the river at Cobram cannot take big loads.
714. What are you paying per ton for the carriage of wheat from here to Jerilderie? It averages 9s. a ton, or 3d. a bushel.
715. If you could get it carried to Jerilderie for 2s. 6d. a ton, in lieu of 9s., there would be a saving of 2d. a bushel? Yes.
716. Do you think that margin of profit would be sufficient inducement to the farmers here to continue producing wheat? I think so—it would be a great assistance to them. It is not altogether a question of rates. There is a difficulty in securing teams in certain months of the year, when the farmers want to get their produce away. We have to send all our wheat away by road between the months of December and March. It has to be done then at any cost. If the teamsters liked to organise, they could ask 1s. 6d. a bag, and we should have to give it.
717. Would not the same thing exist if there were a railway? No; the farmers could then cart their own grain. There would probably be grain-sheds built, in which the grain could be stored. The farmers would either store it at these sheds, or keep it in their own barns until the market suited.
718. At the present time have not the farmers to sell their crop as soon as they gather it? I do not find it so, and I am a buyer of grain.
719. What is the greatest inconvenience to which, as a grain producer, you are put? The want of market. At the present moment I have 4,000 bags of wheat, and I cannot get a solitary offer to cart it away. If the railway were constructed I would cart the wheat to it, choosing my own time.
720. Supposing wheat came down to 1s. 3d. per bushel, would there be any probability of the farmers carting it at their own risk, and in their own drays? No, I do not think so.
721. Drays are competing with the railways in many parts of the Colony? They cannot do it here. There is no grass, there is a scarcity of water, and the roads are not suitable for heavy traffic, except for a couple of months of the year. Farmers do not consider it pays them at the present rate to carry the grain with their own teams.
722. Have you included in your area of 30,000 acres any portion of the Finley district? I have included the district pretty well to the stock route on a level with this; but not very far towards Jerilderie. I have taken about a 10-mile radius.
723. You think that the producers within that radius will bring their wheat to Berrigan as the nearest point on the railway? I think so.
724. Do you think this the most centrally situated portion of the wheat-producing area? Yes.
725. And carrying in proportion the largest population? Yes.
726. It is not probable that there will be any leakage of traffic from this district towards Victoria? I think there will be no leakage.
727. You think that the rate of 2s. 6d. a ton from here to Jerilderie by railway will control all the wheat traffic from here? I think so; but I could not speak in regard to a point further south than 10 miles.
728. In your opinion the proposed extension will give an impetus to wheat-growing? I certainly think so.
729. You think it will afford very considerable traffic to the railway? Yes.
730. And that the estimate of traffic from this source is, if anything, likely to be exceeded? I think so. The railway will remove a number of disabilities and disadvantages from which we now suffer. We have been confined to wheat-growing so far, but I have planted 3 acres of peaches and apricots, and I hope to start in course of time a fruit-canning or fruit-drying industry. I think pigs would do splendidly here, and that bacon could be produced as cheaply as in any other part of the Colony.
731. Have you known the wheat crops to fail in this district? No; I have seen a partial failure in small and isolated cases.
732. Owing to what? The locusts on one occasion. One paddock was badly affected by rust, but these are isolated cases.
733. You are a buyer of wheat? Yes.
734. That necessitates your going among the farmers a good deal; what is your own impression;—are the farmers making a living, or are they only existing, and waiting for some persons to come along so that they may sell out? There is no disposition to sell out. People have great faith in the district. They think that if they cannot live here it is of no use their going anywhere else.
735. Do you think the railway agitation is an honest agitation, or that it has only been got up to enable the landowners to sell? It is an honest agitation, it has been in existence for ten years, and it is admitted even by our enemies, by persons who do not want to see a line constructed here, that we are deserving of railway communication.

736.

- Mr.** 736. In addition to your occupation as a land agent and auctioneer, you carry on a farm? Yes.
E. J. Gorman. 737. What is the extent of your holding? I hold at present 5,000 acres.
 738. How much of it is under cultivation? About 1,000 acres.
 16 Jan., 1895. 739. Is it all wheat? Principally.
 740. What else do you grow? Oats and barley.
 741. Do you run sheep? Yes.
 742. What quantity of wool do you obtain? I had 120 bales last year.
 743. Where do you send it? To Melbourne.
 744. If this line were constructed would you send your wool to Sydney? I think so. It would be entirely a question of rates. My place is 12 miles to the east of Berrigan, and it is only 21 miles from the Yarrawonga railway station.
 745. I presume you have sent your wool to Melbourne because the freights in that direction have been lower? There has been a prejudice against Sydney as a market up to the last year, but that prejudice is dying away, and a number of persons now think that it was a better market than Melbourne last season.
 746. You are not in a position to say which way you would send your wool? If I did not lose too much I would make an effort to send it to Sydney.
 747. Is there much wool produced within a radius of 10 miles of Berrigan? Yes.
 748. Do you think about 700 tons of wool would be sent from Berrigan if the railway were constructed? I do not think that would be an over-estimate.
 749. As a producer of wool, rates being equal, you would send the product to Sydney? Yes.
 750. I suppose almost all the wool-growers here send their produce to Melbourne? Principally.
 751. Up to what point to the south of Jerilderie does wool now go to Sydney? Wonnamurra, and most of the places within 5 miles from here send it to Sydney. Wool was sent to Sydney this year from Tuppal Station.
 752. Would much wood be carried from Berrigan? I am sure all the Jerilderie fire-wood would go on the line. It would be much cheaper than getting it hauled there as at present, especially in winter time when the roads are impassable.
 753. What quantity of live stock would be sent on the line? I could not give you a definite idea. It would depend upon several things. The Sydney market was a little better than the Melbourne market last year. Adding the duty to the Melbourne prices it paid better to send to Sydney.
 754. Do you think there would be 400 trucks? That does not seem too large an estimate. It depends very much on the season. I have known sheep to go from Momolong to be trucked at Jerilderie for the Narrandera Chilling-works. I believe a good number would go there.
 755. Respecting the carriage of wheat, up to what point to the south of Berrigan would the farmers send their wheat upon the line? I do not think you could go further south than 10 or 12 miles. It would depend upon the rates farther than that.
 756. How far is Savernake from here? About 18 miles.
 757. Is much wheat grown in that district? A good deal between here and Savernake.
 758. That would all be sent to Berrigan? The bulk of it.
 759. Does the wheat-growing country extend up to Clear Hills? Yes; but it is more irregular there.
 760. Does the country there cease to be as good as it is round about Berrigan? I would not say that, but it is more irregular. There is not the same quantity of good wheat land.
 761. Would the people of Clear Hills send their wheat here, or would it pay them to send it to Jerilderie? A portion of the Clear Hills district would be 15 or 16 miles from this point, and it would still be 25 miles from Jerilderie. A portion of the traffic would come to Berrigan, I think.
 762. And you say the farmers to the west of Berrigan would send to the line? Up to the stock route, at any rate.
 763. There is a supply of granite here suitable for road-making? Yes; it has been used in the streets. It is admitted to be very good for road-making.
 764. Probably, that would bring a certain amount of freight to the railway? Yes. The Municipal Council of Jerilderie called for tenders for 100 tons, but the freight from Berrigan was excessive, and it could not be carried.
 765. If the freight were reasonable, a lot of road metal would be carried northward? Yes; and I believe that some of the granite could be used for building purposes if it were properly dressed.
 766. *Mr. Gormly.*] The want of camping reserves and of water between here and Jerilderie increases the rate of cartage? Yes; the teamsters do not like the road between here and Jerilderie at all—they prefer almost any other route.
 767. What camping reserves are there between here and Jerilderie? There is only one.
 768. Is there any great difficulty in obtaining water? Very great difficulty. There is only one well, and at the rate of 1d. per head it comes very heavy. There is a private well which Mr. Dickie sometimes gives the use of.
 769. There is a charge for grass, and a charge for water on the camping reserves? There is no charge for grass at present, but when the area is fenced in it is intended to make a charge.
 770. What time would it take the teams within a radius of, say, 10 miles of Berrigan to go to Jerilderie? From three to four days on the average.
 771. What is the distance from Savernake to Jerilderie? About 35 miles.
 772. And the farmers there would have to cart 18 miles to the railway at Berrigan and 35 miles to Jerilderie? Yes.
 773. Are there any greater facilities for travelling on the road between Savernake and Jerilderie than on the road between Savernake and Berrigan? The facilities are not much greater. There is a slight advantage in regard to water, but as against that the sand-hills would be a great disadvantage.
 774. What facilities in the shape of water and camping reserves exist in the case of those farmers residing 8 or 10 miles to the south of Berrigan? There is a small township reserve which they use at the present time, and there is also a Government tank.
 775. How many bags of wheat have you on your farm, at present, ready for transit? 4,000. A lot of persons might have got 1s. 11d. for their wheat a week or two ago, but through not being able to put it on the market at once they lost 2d. a bushel.
 776. How will your 4,000 bags compare with the produce of the previous year? It is an increase on the previous year's produce.

777. In what proportion? It is not very great, because I have an average crop this year.
 778. What is the average? Eighteen bushels.
 779. What is your opinion of the continuous cropping of the land here;—does not the average yield per acre become considerably diminished? I propose to leave out portions each year, and to grow rape upon it. I feel sure that I will be able to keep up the average cropping then. Mr.
E. J. Gorman.
16 Jan., 1895.
 780. You will replenish your soil by running sheep on it? Yes; I do not believe in taking too much out of it.
 781. Can the average of 16 bushels per acre be maintained for any length of time, if some such course as you propose is not adopted? I think you might get it for five or six years. You might get as high an average one year as 30 bushels, and I do not think it would go below from 10 to 12.
 782. Has 30 bushels to the acre been produced anywhere here? I myself produced 30 bushels on a certain area.
 783. By resting your land in alternate seasons, you think you can make your yield from 16 to 20 bushels? Yes.
 784. How many sheep do you run? About 5,000. I shore 7,000, but I have sold some since.
 785. *Mr. Davies.*] I gather from your answers to some questions a short time ago that you send a lot of your produce to Victoria. You are a strong advocate for the construction of this line, while admitting that you send a large proportion of your produce into the other colony? We are compelled to send our wool to Victoria for the present.
 786. For financial reasons? Yes. If the Sydney people found we could deal with them, they would send their agents here, and then I have no doubt that a large proportion of wool would go that way.
 787. Do you think the proposed rate for wool reasonable? I cannot say, until I have figured it out, but I believe that if the rates quoted for Tuppah last year were quoted here, all the wool would go to Sydney. We have to pay nearly £1 a ton to cart our wool to the Victorian terminus. I think the rate you quote is a fair rate put alongside the road carriage.
 788. Do you think the estimate for wheat traffic is excessive? It may be slightly in excess, taking the present season.
 789. But it is approximately correct? Yes.
 790. If the railway were constructed, a larger area of land would be put under wheat? I think so.
 791. When you were last examined with reference to the proposed railway from Jerilderie to Deniliquin, you said that a large proportion of landowners were putting their land at the disposal of agriculturists on reasonable terms, either on sale or lease? Yes.
 792. That has been done? Yes.
 793. Has Mr. McFarland sold any of his land? He has sold some, but he found that persons preferred the "halves" system. On Momolong a considerable area has been sold. I think nearly 10,000 acres have been disposed of on that station, and a good part of it is under crop. On Booroobandilly, between here and Finley, a considerable area has also been disposed of.
 794. How far would the bulk of this land be from the proposed railway terminus? At Momolong it would not be further than 7 miles away. From Finley the distance would be from 12 to 13 miles.
 795. You know the route of the proposed railway and the number of properties through which the surveyed route passes? Yes.
 796. Who among the owners will benefit most extensively from the construction of the railway? Of course the large holders will get a greater benefit than the small holders. Every owner will be benefited in proportion to the size of his holdings.
 797. The railway will also be of advantage to the whole district? Yes.
 798. You think the Commissioners are warranted in expecting a revenue of £3,080 a year from the railway? I think that is a fair estimate.
 799. If the Engineer-in-Chief for Roads had estimated that a macadamised road from Jerilderie to Berrigan, 18 feet wide, would cost £2,060 a mile, would you consider that an excessive estimate? I do not think it could be built for that sum, unless it were rushed through in summer time. They could not do anything with it in winter time. It would take an immense amount of money to make a good road there.
 800. Coming back to the railway, what do you think of the proposal to construct a line for £1,830 a mile, dispensing with ballast, and with an earthwork formation of 6 inches? I think that estimate should be well within the mark, considering the speed at which it is proposed to work the line. I have been over the railway from Dookie to Kalamatite, in Victoria. That line seems to answer requirements, and it was constructed for about £2,000 a mile, I think.
 801. You think such a line as that contemplated would answer all the requirements of the district? At present.

Mr. William James Greggery, farmer and grazier, Berrigan, sworn, and examined:—

802. *Chairman.*] Where do you reside? At Berrigan.
 803. What are you? I am a farmer and grazier.
 804. How long have you resided here? I have been here off and on since 1881. I have resided here permanently for the last six years. Mr. W. J.
Greggery.
16 Jan., 1895.
 805. Through what portions of your holding does the surveyed route of the line run? Through portions 72, 70, and 75.
 806. You are aware that it has been suggested that the landowners should give the land required for the construction of this line? I am.
 807. How are you prepared to act in the matter? I am prepared to give most of the land required for the railway, but I think that some concession should be made in regard to a few acres—I mean the southwest corner of portion 75. Still I should not insist upon it if I found that eventually the construction of the railway would be jeopardised by any demand on my part.
 808. The products exhibited in the hall to-day have been grown in the vicinity of Berrigan? Yes.
 809. You brought them here as samples of the produce of the district? Yes.
 810. Will you state what they are? There are varieties of plums, figs, apples, oranges, grapes, peaches, nectarines, greengages, together with barley, oats, and wheat. Then there are cucumbers, potatoes, carrots, parsnips, tomatoes, water-melons, vegetable-marrows, pumpkins, onions, passion-fruit, turnips, mulberries,

Mr. W. J. Greggery. mulberries, and French beans. There is also a sample of butter made during the very hot days in November, and some specimens of sun-flower seed and flax.

16 Jan., 1895. 811. *Mr. Roberts.*] What area of land do you hold? 8,500 acres.

812. What part of it is under cultivation? About 600 acres. I produce wheat, barley, and oats, and I use the remaining portion of the land for grazing sheep, cattle, and horses.

813. Do you produce much wool? About 90 bales.

814. To which market do you send it? I have been in the habit of sending it to Victoria, but if this railway were constructed, I should, of course, send it to Sydney.

815. You know the surveyed route between Berrigan and Jerilderie? Yes.

816. How much of your land would be required? About 18 or 19 acres.

817. What frontage to the line would there be? About a mile and a half, I think.

818. Have you felt the want of a better mode of carriage to Jerilderie? Very grievously. We had to enter into an agreement with Victoria last year, owing to the dry season. We had to beg them to give us a chance to use their lines. We had nowhere else to send our produce. We could not get the teams to travel this way. Our only chance was to send through Victoria and ship round to Sydney.

819. If this railway should be constructed to what point south of Berrigan would produce be sent along it? Under present circumstances fully 12 miles to the south, and possibly more.

820. Do you think we may look for much wool in this district? I think you will get some of the wool. It is a question of sending the cheapest way, and, as far as I can hear, the cheapest way would be by the proposed railway. I think the Commissioners are quite within the mark in estimating that there would be 700 tons of wool carriage.

821. Do you consider Berrigan the centre of this fine agricultural district? I have always considered it so. It is generally acknowledged here to be the centre.

822. *Mr. Gormly.*] Have you travelled much over the agricultural portion of this district? I have.

823. You are fairly well acquainted with the different holders? Yes.

824. The coloured map before you shows a radius of 20 miles around Berrigan. From how much of that district do you think agricultural produce would be sent on to the railway at Berrigan? I think you might safely rely for a certain distance upon getting the produce from within 10 miles on each side of the railway. I daresay in some cases you would get the produce from beyond that; but 10 miles embrace the most thickly settled portions of the district.

825. What particular portions of that area would send their produce to the line? The smallest proportion of the produce would come from the north-west. The south and east are so evenly balanced that it would be hard to say which would best support the line.

826. Are there good facilities for carting produce along the route from Jerilderie to Finley? Pretty good.

827. Can they get water? Yes; but I think that so long as the farmers can go and return with their own teams, say a distance of 10 or 12 miles in the day, they will do so in preference to hiring teams. If the railway is made the farmers in the distance I have named will be able to cart their produce to the railway when it best suits them.

828. I suppose to the south of Berrigan farmers would cart to the railway from a still greater distance? Yes; because they would have the border duties to contend with.

829. And there is no other railway in the Colony to which they could send their produce? None.

830. From what distance towards Savernake do the people send their produce to Berrigan? I think the farmers of Savernake have been the strongest supporters of this railway since it was first mooted. I think they would send at a distance of from 9 to 10 miles out.

831. Will not the estates through which the line passes be materially benefited by its construction? Yes. I know that some of the large estate owners are being put to great inconvenience through their fences being cut in all directions by the teamsters.

832. I suppose cross-roads would have to be constructed through some of the estates to reach the railway; what would the owners think of that? If necessary, I suppose it would have to be done.

833. You think, nevertheless, the estates should be benefited? Yes.

834. Do you think they would be benefited to an extent equal to the value of the land taken? Up to a reasonable valuation they would at any rate; but I am not in a position to say whether the betterment would be equal to the value of the land taken. For my own part, I am willing to give the land.

835. Is any other produce besides wheat grown in any considerable quantities in the district? Yes; other things are grown. But in addition to this produce, there would be considerable timber traffic along the line for firewood. There would also be a traffic in road metal.

836. But as regards agricultural produce? Well, there might be potatoes and onions.

837. But they are not produced in tons? Yes, they are in many instances; but they cannot be sold. I myself have produced tons and tons of potatoes and onions.

838. Could you produce pumpkins? Yes; but they all rot on the ground. We cannot dispose of them.

839. Do you send fat stock from this district to the chilling works at Narrandera? Yes.

840. What area of the land round about Berrigan would it take to feed a sheep? It goes about two sheep to the acre.

841. Will your land carry that? Yes.

842. Do you know of other land in the district carrying two sheep to the acre? Yes; I expect Mr. McFarland's land will go a little more.

843. *Mr. Davies.*] You understand agriculture thoroughly? I think so.

844. What does it cost per acre to plough, sow, reap, and bag your wheat? About 12s. 6d. per acre.

845. What does it cost to cart your grain to Jerilderie? Nine shillings a ton.

846. Do you think the present selling price, 1s. 9d. a bushel, leaves a sufficient margin of profit to the farmers to induce them to continue growing wheat? I do not think the present price does.

847. What price would give a fair margin of profit? I think we could grow wheat at 2s. 6d. a bushel. The margin of profit then left would not be very great.

848. With the present charges for carriage? Yes.

849. But unless there were an increase in the price, you could not continue very long growing wheat? When you have gone to a lot of expense in buying the land and the plant you must make use of it. You go on in the hope that things will take a turn for the better. If you attempted to sell your plant you would practically have to give it away.

850. Suppose the cost of carriage from this point to Jerilderie were reduced from 9s. to 2s. 6d. per ton, would the difference of 2d. per bushel be a sufficient inducement to you to continue growing wheat? It would be a great inducement to us from the point of view of carriage. The railway would also render us independent, and we should not have to rush our produce in as we do at the present time. The conditions of the road traffic at present compel us to take our produce to market at once, but with a railway we should have barns, and could take the wheat out of our barns as it suited us. That would be a great advantage.

Mr. W. J.
Greggery.
16 Jan., 1895.

851. You think that would induce the farmers to put a larger area of land under cultivation? It would be the life of the agricultural industry. The promise of Sir Henry Parkes of a railway some six years ago infused new life into the industry. At that time you could have calculated the cultivated area by hundreds of acres, now you have to count it by thousands. We have been induced to open up the country in consequence of the promise of a railway. Every year the area under cultivation is increasing.

852. At what price can you produce potatoes per ton? I am selling at £4 per ton.

853. Would you be surprised to know that in the present season potatoes have been sold at Goulburn at 20s. per ton? No; but our potatoes are grown for the local market.

854. You think, however, that you could produce fruit and all kinds of vegetables in great abundance? Yes.

855. *Mr. Lee.*] You remember a Sectional Committee visiting this district in 1892? Yes.

856. Did you not sign a paper which was laid before that Committee to the effect that you would be prepared to pay 2d. per bushel on your wheat until the line paid, if it were extended to Berrigan? I think I did.

857. That would be about 6s. 6d. per ton? Yes.

858. You know that the rate proposed to be charged on the railway is 2s. 6d. per ton? Yes.

859. You are satisfied with that rate? I think it is reasonable, and that it will give a great impetus to agriculture in this district.

860. You think your fellow residents here will be perfectly satisfied with the rate? They seem perfectly satisfied with it.

Mr. Patrick McFarland, farmer and grazier, Barooga, sworn, and examined:—

Mr. P.
McFarland.
16 Jan., 1895.

861. *Chairman.*] What are you? A farmer and grazier.

862. Where do you reside? At Barooga, on the Murray.

863. *Mr. Gormly.*] How long have you been in the district? Thirty-five years.

864. To within what distance of Berrigan does your land extend? Six miles.

865. Is there land in that portion of your property used for agriculture? Yes.

866. Does your land extend from 6 to 12 miles from Berrigan in that direction? Yes.

867. Is much of that portion of your property under agriculture? About 10,000 acres at a distance of from 6 to 12 miles from Berrigan.

868. What proportion of the produce from that land would be sent to a railway at Berrigan if the rate for its carriage were fixed at 2s. 6d. per ton? All of it.

869. Are you aware of what quantity per acre the land has produced within the last two years? It produced five bags to the acre last year.

870. Have you any other product on your estate likely to be sent to the railway? Live stock. Of course it depends upon the rates. If the rates were favourable as compared with the rates from Cobram to Melbourne, the stock would be sent to Sydney. I have sent away as many as 20,000 fat sheep per annum.

871. The New South Wales railways would get the benefit of those sheep for the whole distance to Sydney if the rates were favourable? Yes.

872. Would you send any wool to Sydney? If I could send it that way more cheaply than by Melbourne, not otherwise.

873. You know the present charges upon the New South Wales lines? Yes.

874. Are those charges sufficiently favourable to induce you to send your wool to Sydney? No.

875. Fat stock and grain are the only products you would send to Sydney at the present rates? Yes.

876. I suppose you have a considerable knowledge of the district outside your own property? I have.

877. Do you consider it a good agricultural district? I do.

878. I suppose you know other parts of the Colony? I know the bulk of New South Wales.

879. What do you think of this district as a wheat-producing district? I think it is unequalled in any part of New South Wales.

880. There has been a considerable increase in agriculture in this district? Within the last two years it has increased rapidly, notwithstanding the fall in prices.

881. I suppose you have a good knowledge of the cost of producing wheat? Yes.

882. What do you consider the cost would be when the wheat is bagged on the farm? Fifteen shillings per acre would include everything.

883. What would be the average yield from your land? Twenty bushels.

884. Then the cost of production would be about 9d. per bushel? Yes; that includes everything but carriage.

885. What is the present price of wheat on your farm? The price is always varying. At the Cobram railway station I can get 1s. 10 $\frac{1}{2}$ d.; at Jerilderie I can get only 1s. 9d.

886. What is the cost of carriage from your farm to Jerilderie? One shilling per bag.

887. Then your wheat, delivered at Jerilderie, costs you, for production and carriage, 1s. per bushel? Yes.

888. What price would you get in Jerilderie now? 1s. 9d.

889. Therefore, there would be an actual profit over the cost of production and carriage of 9d. per bushel? Yes.

890. Would that be a sufficient inducement to you to continue the growth of wheat? Undoubtedly.

891. Inasmuch as you produce 20 bushels per acre you derive an annual profit from the use of your land of 15s. per acre per annum? When I say that wheat can be grown for 15s., I am considering that the farmer puts in his own labour, and that he does not employ outside labour. Of course, I only get one-half of the 15s. per acre—the producer gets the other half.

892. For about how many years can you so cultivate your land that it would give a return of 20 bushels to the acre? As long as you like, providing you keep sheep at the same time.

893. But could you cultivate it continuously from year to year? You can cultivate it for five years in succession, then you can throw it out of cultivation for a time.

894.

- Mr. P. McFarland. 894. The yield in the five years would amount to a considerable portion of the value of the land? Yes. Of course, I have not included any interest.
- 16 Jan., 1895. 895. Is the interest on the value of the land equal to 15s. a year? No.
896. Then, after paying interest on the value of the land and all expenses, you would be still drawing a considerable profit? Yes.
897. I suppose you have seen returns as to the average yield of wheat in New South Wales and Victoria? Yes.
898. Taking those returns into consideration, do you think your estimate is a high one or a moderate one? I think it is about right.
899. For how many years has your estate been cultivated to the extent of 10,000 acres? Only for two years.
900. Considering the length of time you have known the district, do you think your crop would be affected many seasons by drought? No; I have had as good a crop with 10 inches of rainfall as with 26 inches.
901. You have seen the effects of drought in the district;—does wheat suffer so much as grass? Not so much.
902. I suppose the soil is sufficiently deep to retain a quantity of water which will enable the crops to resist the drought? Wheat does not require so much rain.
903. Do you know what crops suffer from drought in different parts of the Colony? It depends upon when the rain comes. A moderate rainfall will grow wheat, if it falls at a certain time of the year.
904. In a year in which the rainfall would be about one half of the average, would such a drought affect this district as much as other parts of this Colony? I do not think so.
905. What is your reason for thinking so;—is the soil deep? Whatever the reason may be, I think there is no part of the Colony where a better growth can be obtained from a moderate rainfall.
906. Can timber be cheaply cleared in this district? At about 5s. per acre.
907. Does that include the removal of the stumps, making the land perfectly clear? Yes.
908. That is the cost where most of the timber has been ringbarked some time ago? Yes.
909. The timber burns away easily? Yes; that is the reason why it is so easily cleared.
910. Cannot cultivation be carried on more cheaply where the plough can travel long distances, and where the country is not broken up, so as to cause short work? I do not think it makes very much difference.
911. What are the holdings on your estate? 320 acres.
912. Have the working stock to get hay and grain while ploughing or harvesting, or do they feed on the grasses? We feed them on grass and chaff.
913. It is not costly to feed the working stock? No.
914. Is the climate suitable for ploughing and sowing in the autumn and winter months? As a rule.
915. Does the working stock need shelter when it is ploughing? No.
916. Then you think agriculture can be carried on cheaply in this district? Yes; in comparison with other districts.
917. *Mr. Davies.*] What was the primary reason of your giving up sheep-farming, and going in for wheat-growing? To get more money out of the land.
918. Does it pay better to grow wheat than to grow wool? Undoubtedly, acre per acre.
919. What profit would there be on wool-growing in a fair season, taking the cost of carriage and the present prices of wool into consideration? I do not think there will be any profit.
920. You are not likely to go back to wool-growing if you can make 15s. an acre from growing wheat? No; I think sheep return a profit of about 3s. an acre.
921. Would that be the average throughout the district? On good flocks, yes.
922. And the primary cause of the landowners in this district taking to wheat-growing is that it pays best? I think so.
923. You base your estimate on the rate of carriage you have now to pay to reach a railway station? Yes.
924. If there were a railway station at Berrigan, I suppose it would be a great advantage to you and other producers of the district to get your grain carried to Jerilderie from that place at 2s. 6d. a ton? It would.
925. It would increase your profit per acre from 15s. to 21s. 6d. f. Yes.
926. Would that be an inducement to a larger number of landholders to put their land under cultivation? Most decidedly.
927. You are content to go on growing wheat for the low prices which exist at the present time? No.
928. Not if it gives you 15s. an acre as against 3s. per acre for sheep? I have taken acre per acre wheat against wool, but if I leased a man 320 acres he could not put the whole 320 acres under wheat. There may be swamps, or green timber, and other drawbacks, and probably he will not be able to put in more than 280 acres. You would have to take the profit on 280 acres as against the profit on 320 acres, where the whole area would be grazed.
929. You initiated a system of selling a portion of your estate? Yes.
930. Are those who purchased from you cultivating the land now? Yes.
931. They are all producing wheat? Yes; and they have all paid off except one.
932. You intend to carry out that principle to a greater extent? No; not selling.
933. But you have adopted other means of putting the land under agriculture? Yes; I have leased some.
934. Do you find that plan work satisfactorily to both parties? Yes.
935. Where does the produce from the holdings go? It is in abeyance yet. There are 3,000 acres of crop within a few miles of this township which will either go to Jerilderie or Cobram—in whichever direction we can get the most money.
936. If there were a railway to Berrigan it would all come here? Undoubtedly.
937. If you had a railway passing through your land I suppose you would be prepared to give the area required for its construction? At the original cost price.
- 937½. *Mr. Roberts.*] How many acres of freehold have you? About 70,000 acres.
938. How much under cultivation? There will be prepared for cultivation next year 19,000 acres. There are about 10,000 acres under cultivation this year.
939. *Chairman.*] How far is your settlement from the proposed terminus at Berrigan? About 6 miles.
940. That is the first settlement of land which you cleared? Yes.

941. What is the area? About 3,000 acres. Mr. P.
McFarland.
942. How many purchasers are there? About four purchasers. Another settlement of 3,000 acres is held under the tenant system in "halves." Upon the next settlement of 7,600 acres there are about fifteen settlers, distant about 8 miles from the proposed terminus. They are also upon the share system. 16 Jan., 1895.
943. These are areas which have passed into the occupation of grain producers, which will be affected by the railway in question? Yes.
944. As you get further south from the third settlement, below the parish of Nangunya, it appears probable that the produce will find its way along the Victorian line? No.
945. Where will it go? If you carry wheat at 2s. 6d. a ton it will go to Berrigan. Victoria being an exporting Colony, the grain would have to go through Victoria in bond, and come round to our own Colony. The total cost would be about 1s. a bushel, whereas the total cost from Berrigan to Sydney would be about 18s. a ton.
946. But when the time comes when the produce of the district will have to be exported, what will happen? The grain would then go to Cobram, and along the Victorian line.
947. Then it follows that, although temporarily the proposed railway would get the wheat almost down to the Murray, as the produce increases in volume it is likely to seek the cheapest route to the port of shipment? Yes.
948. Does your land extend down to the Murray? Yes.
949. Which would be the shorter distance—to a railway station at Berrigan, or to the Cobram railway station? Cobram would be 5 miles from the front land, and Berrigan 6 miles from the back land.
950. As far as you individually are concerned, the railway would be no advantage to you as regards the carriage of wheat, wool, or live stock? It would be a great advantage as regards the carriage of wheat.
951. What approximately is the quantity of wool grown on your station? About 300 tons a year.
952. Does the whole of that go to Melbourne at present? Yes.
953. All things being equal, would you give the preference to New South Wales, and send it by way of Berrigan? Yes.
954. As one having a large stake in the Colony, and putting your personal advantages aside, you are of opinion that it would be the right thing to construct the proposed line to Berrigan? Yes.
955. *Mr. Lee.*] It was reported to the Government about a month ago by a very high authority indeed, that if the Jerilderie line were extended to Berrigan, it would retain for New South Wales a good deal of traffic that now passes through Victoria;—can you endorse that opinion? Yes.
956. Have you any doubt about it? No doubt whatever. Where the produce goes the stores come from. At the present time we are compelled to deal with Victoria for all our stores, and these come to an immense amount of money. If there were a railway to Berrigan I should get all my goods from Sydney.
957. Is there any further statement you desire to make to the Committee? Well, I think there will be a good deal of traffic upon the line in the shape of hay or chaff. We could grow hay at the rate of 2 or 3 tons an acre.

Mr. Andrew Rutherford Brown, farmer, Berrigan, sworn, and examined:—

958. *Chairman.*] What are you? I am a farmer.
959. How long have you been in the district? Twenty-eight years. Mr.
A. R. Brown.
960. *Mr. Davies.*] How long have you been farming? Three years.
961. I suppose you have been growing wheat in combination with sheep-farming? Yes.
962. You have heard the evidence already given;—can you give the Committee any information which has not yet been given to us? No. I think the evidence covers most of the points which ought to be considered.
963. *Chairman.*] Can you locate on the map the exact position of your holding? Yes.
964. The block adjoining the reserve shown as 108 is your holding, embracing 4,040 acres? Yes.
965. Was the land you hold, originally a part of the Bareoga Estate? Yes.
966. What do you grow? Wheat, wool, lucerne, barley, and oats. We have horses and cattle also.
967. How do you send them to market? All *via* Melbourne.
968. Why? Because we cannot get the teams to cart to Jerilderie.
969. Do you do your ordinary business with Melbourne? Yes, everything.
970. How would a railway to Berrigan benefit you? It would save me about £200 a year in duty, and it would benefit the New South Wales railways by about £500 in freight. That is what I pay the Victorian Government. I have paid them £419 in freight alone since last May.
971. That means that if you had an opportunity you would send your produce this way? Certainly—everything.
972. You strongly endorse the opinion that a great deal of the trade now going to Victoria would be conserved to New South Wales if this railway were constructed? Certainly. We are obliged to go to Victoria at the present time, very much against our will.
973. You are strongly in favour of the construction of this line? Very strongly.
974. Do you know the rate it is proposed to charge for grain? I believe 2s. 6d. a ton.
975. Will that rate suit you? Yes; we shall be able to carry a little cheaper than *via* Melbourne.
976. That would be an extra inducement to you to use the railway? Yes. It is impossible to cart 6,000 bags to Jerilderie at the present time. We have to get it either to Jerilderie or to Cobram as soon as we possibly can, on account of the state of the roads later on.
977. The same argument would apply to your neighbours? Yes; they are all of my opinion.
978. The Railway Commissioners could safely depend upon getting this traffic from your end? Certainly. I am within 7 miles of the border, and they will get the traffic to within 2 or 3 miles closer.
979. How does the present low price of wheat affect you;—will you be able to go on with its production? Yes; and do rather better than we can out of sheep. That is about all you can say.
980. But you have every hope of a slight rise? Yes. Even a rise of 2d. a bushel means a great deal to us, although at the present time we can carry on and do fairly well out of it.
981. What do you now pay per bushel from Cobram to Melbourne? 4½d.; and there is 1½d. for cartage from my farm to Cobram. Then the shipping charges are a little over 2d. It makes the cost for carriage round approximately 8d.
982. Or 24s. a ton? Yes.

- Mr. A. R. Brown.** 983. If you could get the grain carried *via* Berrigan at 18s. a ton it would certainly be a wonderful saving? Yes; we can make £1 an acre out of the land with a fair crop.
- 16 Jan., 1895. 984. There can be no doubt that when the line is made to Berrigan the Victorian Commissioners will fight to retain the trade? They will have to come down very low to get my traffic on the Victorian lines;—they will have to take it for almost nothing.
985. You think you will stick to New South Wales when the proposed railway is constructed? I can say so for my own part, and I think I can answer for a great many more.
986. Is there anything else you desire to say? It would be easy to send chaff *via* Berrigan if there were a railway, but for the next five or six years wheat will be the chief traffic.
987. *Mr. Gormly.*] Do you know the route the line will take from Berrigan to Jerilderie? Fairly well.
988. You have driven along it both on the existing road and off it? Yes.
989. Did you ever see any considerable stretch of water over that country? Only once, and that was last year. There was then a little water in the swamps. There are about three swamps between here and Jerilderie, but you could walk through them without wetting your ankles.
990. What would be the depth of water? About 8 inches in the deepest part.
991. What distance would they cover? About a mile, perhaps.
992. You do not think it would be necessary in constructing the railway to make high embankments over these swamps? There is not the least occasion for it.
993. How far back can you take your memory as regards this district? I can remember twenty years back very well. I have driven on the road you speak of for fifteen or sixteen years.
994. And during that time you have never seen such a rush of water as would be calculated to damage the railway line? I have seen no rush of water at all—it has been all stagnant water. The deepest water I ever saw there was last year, and then it was only about 8 inches in places. I drove 40 miles in four hours along the road, so that it could not have been very bad.
995. You remember the floods of 1870? Yes.
996. You know that there was a good deal of flood-water during nine months of that year on the frontages of the Edwards, the Murray, and the Billabong? Yes.
997. Did any of the flood-waters then go over the route of the proposed line? No.
998. You were over the country, I suppose, between May and December, 1870? Yes.
999. And you saw no flood-waters extending over it? No; it would be almost impossible for flood-waters from either of the rivers you name to run over it.

Mr. Patrick Connell, Spring Valley, near Jerilderie, sworn, and examined:—

- Mr. P. Connell. 1000. *Chairman.*] Where do you live? At Spring Valley, about 10 miles on this side of Jerilderie.
- 16 Jan., 1895. 1001. You own some land through which the proposed railway passes? I am part-owner of 1,100 acres.
1002. Are you prepared to give the Government the land required for the construction of the line? No. The line does not benefit me at all.
1003. You would not use it? No; I do not think so.
1004. You would continue to cart your produce 10 miles to Jerilderie? Yes.
1005. What do you think your land is worth? From £4 or £5 an acre.
1006. You would expect to get that amount for every acre taken? Yes.
1007. You have thought carefully over the matter? Yes.
1008. Do you think the people of Berrigan would be benefited by the railway? I am sure I do not know. I suppose they would.
1009. If the fact of your not giving your land prevented them from getting a railway, how would you view the matter then? I am prepared to act as reasonably as I can in the matter.
1010. Supposing all the rest of the landowners were willing to take a certain price, would you stand out for the price you have named? I suppose I would have to fall in with the view of the bulk of them.
1011. *Mr. Davies.*] Supposing the betterment principle were applied, and it were discovered that your property had been benefited to a larger extent than the value of the land taken, and that instead of giving you anything for the land you were made to pay something towards the cost of the railway, how would you like that? I would not like it at all. I do not believe in the betterment principle.
1012. Would not your property be benefited by the construction of the railway? I reckon it would decrease the value of my property. I am quite close enough to Jerilderie to cart my own produce.
1013. Would you not get a double frontage to the railway? Yes, and my property would be divided into two besides.
1014. How did you acquire your land? Partly conditional purchase, partly freehold.
1015. What was the original price? I suppose it would be about £1 per acre.
1016. Would you accept the amount you have actually paid for your land, as regards the portion which might be required for a railway, coupled, of course, with the interest you have paid on your instalments? The value of the land has been increased very largely since it was first taken up.

Mr. Robert McGeoch, farmer and grazier, near Berrigan, sworn, and examined:—

- Mr. R. McGeoch. 1017. *Chairman.*] Where do you reside? At West Kylnya between Berrigan and Mulwala.
- 16 Jan., 1895. 1018. How far from Berrigan? The homestead is 15 miles.
1019. You adjoin Mr. McFarland's property on the north? Yes.
1020. What is your holding there? 6,000 acres, on Carlyle.
1021. You have another holding? Yes, 2,560 acres, at Nangunya.
1022. What is the distance of the first holding from Berrigan? About 7 miles.
1023. *Mr. Lee.*] What are you? I am a grazier principally; I have gone into farming during the last two years.
1024. How long have you been living in the district? About twenty years.
1025. How did you acquire your property? By conditional purchase and by freehold purchase.
1026. You have grown a good deal of wheat? During the last two years.
1027. What do you do with it? I send it to Sydney *via* Yarrawonga and Mulwala in bond.
1028. If the railway were made to Berrigan you would send your produce there? Yes, of course it would be much cheaper.

1029. And you would cart it from your property to Berrigan some 13 miles? Yes.
1030. Do you get all your stores from Victoria? Yes. I should be glad to deal with the Sydney merchants, Mr.
R. McGeoch.
but it is a question of freight.
1031. Could you not get your goods round from Sydney in bond? No, there is a good deal of trouble about that.
1032. Could not the goods be sent round under a re-entry certificate? I do not know. Small holders have not done that.
1033. How much do you pay the Victorian Government for freight in the course of the year? I should think about £200.
1034. And what duty do you think you pay the New South Wales Government on goods coming on? I should think from £60 to £70 a year.
1035. Have you any particular business arrangements with Victoria; do you prefer to do your trade with her? No. I am an old Victorian, but I left it twenty years ago. I came here because I could do better.
1036. So far as the railway is concerned as a matter of abstract business it would pay you to use it, and you would use it? Yes. I have only gone into cultivation lately. If there were a railway to Berrigan, where we now have hundreds of acres under cultivation we should have thousands. The land here is superior to any other land in the Colony for wheat-growing.
1037. Could you continue to grow wheat at the present low prices? I do not think so.
1038. Being on the land, if you did not produce wheat you would have to produce something else? We could combine it with grazing.
1039. Supposing the farmers and graziers along the route of the railway refused to give the required land free of charge, would you make one to recoup them for the land taken? Yes; and if the amount was spread over a number of producers it would be infinitesimal.
1040. You think that if the line were constructed a large part of the traffic which now goes through Victoria would be retained in New South Wales? Yes.
1041. *Mr. Roberts.*] How many sheep have you? From 17,000 to 18,000.
1042. What is your annual clip of wool? From 270 to 300 bales.
1043. How much wheat do you produce? This year we shall have nearly 2,000 bags.
1044. From your success last year you were encouraged to put in a larger crop this year? Yes,
1045. And you would send all your produce to Sydney and also get your stores from there if the proposed railway were constructed? Yes.
1046. *Mr. Gormly.*] Do you also send your fat sheep to Melbourne? Yes.
1047. Do you think it would be possible to send your fat stock to Sydney instead of to Melbourne if the line were constructed? Yes.
1048. You would still have a margin of profit? Yes.
1049. Have you many fat sheep during the year? From 2,000 to 3,000.
1050. Is there any other produce you could send to Sydney? This tract of country is suited to the production of hay. I have grown 3 tons to the acre. The cost of carriage now debars us from sending it to Sydney, but I know of some producers who have cut it up into chaff and who have sent it to Sydney.
1051. Were they satisfied with the return? Yes.
1052. What would be the average per acre? From 2 to 3 tons.
1053. Have you had experience in other parts of the Colony in growing chaff? In Victoria.
1054. And have you seen that quantity produced to the acre in Victoria? Yes; I have done it myself on the Murray, both oat and wheaten chaff.
1055. *Mr. Davies.*] I suppose you have found that the growth of wheat pays better than growing wool? Yes.
1056. Does the price of wool leave you as large a margin of profit as the low price of wheat? No.
1057. Is there anything else you would produce if your district were connected with the Sydney market by railway? Pigs, perhaps, and all kinds of dairy produce.
1058. Would they pay better than sheep? Yes; but I think dairying would pay better than either at the present time.
1059. Do you think that butter could be produced abundantly? Yes.
1060. The only difficulty you have is in the matter of carriage? Yes.
1061. If you had a railway you think butter would be a source of wealth to you and other farmers? Yes.
1062. You think that, having regard to the suggested rates on the proposed line, the producers would send their produce that way instead of into Victoria? Yes.
1063. You regard this as very rich country for agriculture and grazing? Yes; and I have no hesitation in saying that if the proposed railway were made, 10 acres would be put under tillage where one exists at the present time.

THURSDAY, 17 JANUARY, 1895.

[The Sectional Committee met at the Public Hall, Berrigan, at 10 a.m.]

Present:—

THOMAS THOMSON EWING, Esq., (CHAIRMAN). .

The Hon. JOHN DAVIES, C.M.G.

CHARLES ALFRED LEE, Esq.

The Hon. CHARLES JAMES ROBERTS, C.M.G.

JAMES GORMLY, Esq.

The Sectional Committee further considered the proposed Railway from Jerilderie to Berrigan.

Mr. John Jamieson, Surveyor, Railway Construction Branch, Department of Public Works, sworn, and examined:—

1064. *Chairman.*] You are a railway surveyor? Yes.

1065. You know the location of the line under consideration? Fairly well.

Mr.
J. Jamieson.

1066. *Mr. Roberts.*] Did you make the trial survey of the proposed railway? No; Mr. Bullard made it.

17 Jan., 1895.

1067. And you have been instructed to carry out the permanent survey of the line? Yes.

1068. You are now in the locality for the purpose of carrying out that duty? Yes.

1069. Have you traversed the line from Jerilderie to Berrigan? A portion of it.

1070.

- Mr.
J. Jamieson.** 1070. You have not actually been over the whole of the trial survey? I have been over about 7 or 8 miles of the line.
- 17 Jan., 1895. 1071. You have seen sufficient of the route to give an opinion as to its suitability? Yes.
1072. The country is perfectly level? Practically. Berrigan is 28 feet higher than Jerilderie.
1073. Are there any creeks between here and Jerilderie? According to the section there are two creeks the Algudgerie and the Berrigan.
1074. Which is the deeper of the two? Algudgerie.
1075. Has the Algudgerie Creek any banks to it? No.
1076. Has the Berrigan Creek any banks? As far as I can see from the section it has not. The present survey crosses on a dam.
1077. You are aware that at times in this part of the country the water lies to some extent? I believe so.
1078. Do you think there will be any difficulty in dealing with this water;—would it exist to such an extent as to create any difficulty? There is no difficulty but could be easily dealt with by the Department.
1079. There would be no difficulty in draining the water off the land? No difficulty whatever.
1080. Are you aware of the width of the land required for the construction of the railway? I believe Mr. Firth said about 2 chains would be necessary, but I think that as it is suggested that the landowners should give the land, a chain and a half would be sufficient.
1081. Do you think 1 chain would be sufficient? I think it would be hardly wide enough.
1082. How long will it take you to make the permanent survey? If an assistant is sent to me we ought to be able to do it in two months. The actual staking of the centre line would take a very short time. It is picking up the boundaries in connection with the survey that takes the time.
1083. You are acquainted with the mode of drainage which is contemplated? Yes; I see the Engineer-in-Chief proposes a side ditch.
1084. You think that it will answer all purposes? Yes. Of course there will be box-drains independently of the side ditches.
1085. Will you make inquiries as to the supply of ballast in the district? Yes.
1086. Can you recollect a railway going through any similar country unfenced? Not on any survey on which I have been engaged; but I believe the line from Nyangan to Cobar is unfenced.
1087. You know that this line is of a purely experimental character, and that the fencing is to be done away with, if possible, with a view to keep down expense? Yes.
1088. Should you say, from your experience, that fencing could be dispensed with in this case? I think so, especially if there were only day running.
1089. *Chairman.*] Will you ascertain if the railway station cannot be brought a little closer to the town? Yes.
1090. *Mr. Roberts.*] Have you any further information to give which you think would be of service to the Committee? No; I think the Engineer-in-Chief said everything that was necessary in his evidence.
1091. *Mr. Davies.*] Do you know whether a deviation would be possible at the junction at Jerilderie? Of course it is possible, as I think Mr. Burge pointed out. I will bring the matter under the notice of the Engineer-in-Chief.
1092. After having seen this part of the country, do you think it is necessary to incur an expenditure of £225 a mile for earthworks? I think the work might be done at about £120 a mile.
1093. You think that would be ample? Yes. The clearing and grubbing of the line, of course, would have to be added to that. That would mean a little extra.
1094. That would not amount to more than 10s. an acre, I suppose? I suppose the clearing would amount to £18 a mile. Of course there is some of the line which is perfectly clear.
1095. The greater part of the line would not want any clearing? No.
1096. Then you think that the earthwork and clearing could be done for about £100 less than the estimate? Yes.
1097. How long will it be before you have finished? About two months if I get assistance. Of course there would then be the working plans to be prepared in the office; but the line might be constructed in a very short time.
1098. *Mr. Gormly.*] What proportion of the length of the line would require clearing? I suppose about one-half.
1099. You know the contract price for clearing in this district? No.
1100. Would you be prepared to endorse the statement that land here could be cleared for 10s. an acre, where the timber is ringbarked? That would be a very low price; it might be possible to do it.
1101. Have you had any experience in connection with the burning-out of box timber? I have seen trees burnt sometimes instead of being grubbed.
1102. What proportion of the line would require an embankment, and what would the height of the embankment be? I suppose about one-tenth of the line would require an embankment of from 2 to 3 feet.
1103. On the other portion you think an embankment of about 1 foot would be quite sufficient? Yes.
1104. From conversations you have had with the district road engineer, you know that he has had earthwork formations made at about 6d. per cubic yard? Yes.
1105. Would such a formation as that which the Committee saw on the road when driving down from Jerilderie be suitable for railway construction? I think so.
1106. The cost per cubic yard for railway formation would not be considerably over the cost in the case of road formation? No; not a great deal.
1107. On the formation of the road between here and Jerilderie have you observed that the formation made by the Engineer-in-Chief has been simply in depressions? Yes; chiefly.
1108. Therefore, you think that the formation in depressions, in the case of the railway, could be carried out at the same cost per cubic yard? I see no reason why it should not be.
1109. You think that the formation could be completed on the average for £120 a mile? Yes; I base that estimate on prices which the District Engineer for Roads says are given in the district.
1110. That would be the price of the complete formation upon which the sleepers could be laid? Yes.

Mr. John Curtis Drummond, farmer, Berrigan, sworn, and examined:—

1111. *Chairman.*] You are a farmer, resident in Berrigan? Yes. Mr. J. C.
Drummond.
1112. For how long? Six years.
1113. You desire to give the Committee information—first, as to the general trade and produce of the district; and secondly, with regard to your own share in it? Yes. 17 Jan., 1896.
1114. *Mr. Gormly.*] You have a fair knowledge of the number of farmers carrying on the production of wheat and other cereals, and the quantity of land under cultivation in the neighbourhood of Berrigan within a radius of (say) 20 miles? Yes.
1115. Has the quantity of land under cultivation in the district increased rapidly? Yes; it has been increased about 4 times over since I came here, chiefly in consequence of the promise of a railway.
1116. Has there been much increase in the present season? Yes; there is a large increase upon last year.
1117. In what proportion? I could not say.
1118. Has it increased one-fourth during the last year. Fully that, I should think.
1119. What is the average number of bushels produced per acre? In that respect I think I could corroborate the information given to the Committee on that point yesterday.
1120. Is it costly to clear land in the neighbourhood of Berrigan? Where there is pine scrub and the scrub has not been cut down it varies from £1 an acre downwards. It has been cleared at as low as 10s. per acre.
1121. What would the average cost be? If it is dry timber it would vary from 10s. to 15s. If there were green timber among the ringbarked timber it would run to £1 an acre.
1122. Do the settlers here appear to be permanent? Yes; cultivation has been gradually increasing ever since I have been here.
1123. Have any of the farmers allowed the land to go out of cultivation;—have they gone back to grazing? Not that I know of.
1124. Have you had any general expression of opinion from the farmers to the effect that it would not be advisable for them to continue to cultivate their land? No; most of the farmers have their machinery and horses, and they put in another crop in the hope of prices rising. They have their horses and plant, and they might as well put the crop in.
1125. Have you seen any other agricultural production besides wheat carried on in your district on a large scale? Nothing further than wool.
1126. What acreage goes to a sheep in this district? Nearly every farmer in this district is running one and a half sheep to the acre. The land has carried more since they have gone into cultivation.
1127. By cultivating a portion of the land they find that they can carry more stock than by running the whole of the land under natural grasses? Yes. Nearly every farmer cultivates in this district now.
1128. What proportion would be cultivated to enable the farmer to run as much stock as before? Well, if a man has 1,500 acres he can cultivate 500 or 600 acres and still carry the same amount of stock.
1129. So that the cultivated land, while increasing the farmer's income, does not diminish his stock? No.
1130. Cultivation has made the occupation of the land much more profitable? Yes.
1131. Are there many stock leaving the district? A good many.
1132. To what market are the fat sheep sent? In some cases they have gone to Melbourne, and I think out further some have been sent to Sydney.
1133. But in most cases to Melbourne? Yes.
1134. You would have to pay a stock tax in sending the stock over the border into Victoria? Yes.
1135. At no time has there been a considerable number of fat stock sent from the district? Not as a general rule.
1136. Are you satisfied with the profits derived from the land you have cultivated? Yes.
1137. You have made sufficient profit out of it to induce you to continue cultivating? Yes.
1138. You intend to go on wheat-growing? Yes.
1139. What area have you under cultivation? About 400 acres.
1140. What has been your yield per acre? From 25 bushels down to 10 and 12.
1141. How many years in succession have you cultivated your land? Six years.
1142. Has the yield fallen off? Yes; but I think it is due to the wet seasons we have had.
1143. You do not attribute the falling off to the land being exhausted? No; I have seen good crops in this district from land from which nine successive crops have been taken.
1144. Have you observed that the first and second crops are usually the best? Yes; the first, second, and third.
1145. Then the yield falls off to a certain extent? It keeps at from 16 to 18 bushels an acre in ordinary years. You will often find land which for five years will not go under four bags to the acre.
1146. I thought you said just now that the yield fell off after the third year? In some cases I have seen the yield in the third year go up to 30 bushels per acre.
1147. Is there any means of providing against the exhaustion of the soil here? By letting it rest a year or so.
1148. After it has had one or two years' rest, does it again produce an increased quantity? Yes.
1149. By periodically resting the land, the farmers could make it continue to return a good yield of wheat? Yes.
1150. You have not sent chaff from the district? Not in any quantity.
1151. Is the yield of hay in this district fairly good? In some cases we have a yield as high as 2 tons to the acre.
1152. There is no considerable number of milch cows kept in the district? No.
1153. Have you had experience in the growth of lucerne and other grasses in the district? No; but other farmers have gone in for lucerne and artificial grasses, and have done very well. They are grown largely at Warmatta.
1154. On hundreds of acres? 500 and 600 acres in some cases.
1155. What do the grasses consist of? Lucerne chiefly.
1156. Do those who grow lucerne cut it? They generally stock the land; in some cases they cut it.
1157. Have you observed that where the stock are kept continuously on lucerne land the lucerne is eaten out in the course of a few years? No; I have not noticed that.

- Mr. J. C. Drummond.** 1158. How long is it since the lucerne has been sown in the district? I know of one paddock at Barooga, which was sown six or seven years ago.
- 17 Jan., 1895. 1159. Does the lucerne still grow luxuriantly in that paddock? Yes; I do not think it has been sown since.
1160. Has it been continuously stocked since then? Yes; I have seen it heavily stocked.
1161. More than one sheep to the acre? Yes; I think more than twenty to the acre.
1162. Is that similar land to the land about Berrigan? Exactly the same kind of land.
1163. How far from the Murray is it? About 2 or 3 miles from the river.
1164. What is the character of the soil? Sandy loam.
1165. Are any other holdings in the neighbourhood sown with artificial grasses to any extent? Mr. Brown of Naranghi Park has sown some.
1166. To what extent has he grown lucerne? I think he has got in about 1,000 acres.
1167. How long ago did he sow it? I think it is about two years since he started.
1168. Has the lucerne come to great perfection in that instance? It is carrying a lot of stock.
1169. Is there any other produce grown in the district in considerable quantities? I think the district will compare with any in the Colony for its fruit.
1170. What are the chief varieties that can be grown here? We have about a dozen varieties of stone-fruit; grapes also grow well. A number of farmers look upon fruit-growing as one of the coming industries of the district.
1171. Have you had experience of fruit-growing in other districts? I have not.
1172. In what way could the fruit grown be used so as to render its production profitable? It could be either dried or preserved.
1173. Have you noticed any considerable drought in the district since you have been here? No.
1174. Have the crops suffered from drought during the time you have been here? No; it has been rather the other way.
1175. And have you not noticed that the stock has suffered? No.
1176. What are the chief months in the year in which you get your rainfall? From July to about November.
1177. You have not kept a rain-gauge? No.
1178. Is there any other information you would like to give to the Committee? I have made a rough calculation of what we have paid for sending grain to Jerilderie from our 400 acres during the last six years and it comes to £460.
1179. If the railway were constructed you would save a large proportion of that amount? Yes.
1180. And I suppose the agricultural produce of the whole district would be increased? Yes.
1181. You yourself would have a greater tonnage to send by railway than you have hitherto sent by team? Yes.

The Hon. Rupert Clement George Carington, grazier, Momolong Station, sworn, and examined:—

- The Hon. R. C. G. Carington.** 1182. *Chairman.*] What are you? A grazier and part owner, with Mr. J. S. Horsfall, of Momolong Station.
1183. You have a fair knowledge of the railway under consideration? Yes.
1184. *Mr. Davies.*] How long have you been a grazier? Two years.
- 17 Jan., 1895. 1185. What is the size of your holding? I have 19,000 acres of freehold and 4,000 acres of leasehold.
1186. Will the railway pass through any portion of your property? No.
1187. How close will it pass? It will be 12 miles from our woolshed, and about 12 miles from where we shall cultivate in future.
1188. Have you much land under cultivation? This year about 900 acres.
1189. Where does the wheat grown on your station go to? To Jerilderie by team.
1190. If the railway were constructed you would send your produce to Sydney by it? Yes; we should send all our wool and all our produce to Sydney by it.
1191. Where does your wool go to now? To Melbourne.
1192. What quantity? About 80 tons, or 486 bales.
1193. That wool, if the railway were constructed, would find its way to Sydney? We should send it to Sydney even if rates were higher.
1194. No matter what the difference might be? The rates are sure to be higher, but we should send the wool that way on account of the great advantages the district would receive from the railway.
1195. You are strongly impressed with the necessity for a railway in this district? It is absolutely necessary. We paid £2 6s. 4d. last year to the Victorian railways for freight, and only £1 2s. 6d. for cartage was spent in New South Wales.
1196. That is for wool? Yes.
1197. Did you send any of your grain to Victoria? No.
1198. What quantity did you ship last year? About 6,000 bags. We bought it from persons to whom we had sold 8,000 acres of the Momolong Estate. It was delivered at the woolshed about the middle of March, and it was December before I could get it away, on account of bad roads and the want of teams, and even then we had to pay a very high rate of cartage.
1199. Is it your intention to increase the cultivated area of your estate? Yes; we have 9,000 acres available for sale now.
1200. Is all of it good agricultural land? Yes.
1201. How many purchasers have you on your estate? About twelve. The holdings vary from 1,700 to 320 acres.
1202. The men are settled upon the 8,000 acres you have sold? Yes.
1203. Can you tell us exactly how much of the area is under cultivation? 6,580 acres are actually under cultivation. When I came to Momolong two years ago the only cultivation on the Momolong Estate was our own, and that would be about 200 acres. This year we shall send away from Momolong 23,000 bags. That would include the produce of the sold land together with our own. I think the estimate of wheat traffic is very much under the mark.
1204. The quantity you mention will find its way to Jerilderie? Yes; every bag of it will go to Berrigan if the railway be made.
1205. You know that the proposal of the Department is to lay down a cheap line, costing about £1,835 a mile? Yes.
- 1206.

- 1206-7. The cheapest kind of railway ever attempted in the Colony? Quite so.
1208. You believe that such a line would benefit your district very much? Yes; it is all we want.
1209. A speed of 15 miles an hour, and a day service, would serve the district for a long time? Yes.
1210. I suppose the existence of the railway would be an inducement to property-owners to put their land at the disposal of those who were willing to take it up for cultivation? Yes. I think a large quantity would be put under cultivation on the "halves" system.
1211. You have not tried that yourself? We have a little, but only about 500 acres.
1212. Has the result been satisfactory? Yes; I think so. But we would rather sell.
1213. You know the rates proposed to be charged on the railway? Yes; I understood that 2s. 6d. a ton was to be charged for wheat, as long as the railway did not pay, and that the rates were to be gradually reduced if the line paid, until they reached a point which would give a fair rate of interest. For instance, if the line would return $3\frac{1}{2}$ per cent. at low rates, I suppose we should get the advantage of them.
1214. Do you send any live stock away? I am making arrangements to breed sheep for freezing, so that we shall probably be sending to the Narrandera works by this line.
1215. Do you send your stock to Melbourne? When we first came here we did, but what with the expense and the stock tax, we shall send no more that way. I send as little as I can to Victoria.
1216. Do you think much stock would be trucked in this district if the line were constructed? A certain amount. I think the previous witnesses have rather under-rated the probable stock traffic. I think that if prices keep up, the stock traffic will be very much above their estimate. We ourselves would freeze about 5,000 sheep a year if things turn out well. Of course a great deal depends upon the prices at home.
1217. Is it too much to estimate that there will be 700 tons of wool carried on the railway yearly, seeing that you yourselves propose to send 80 tons? I could not say as to the wool.
1218. Do you think the other large wool producers would send their wool by this line? I think it very probable that Mr. Wilson will send his wool by it. Of course, I cannot say definitely, but the line would be close to his woolshed.
1219. Do you think 170,000 bags of wheat would be carried on the line? A great deal more than that I should think. We get 23,000 bags on Momolong already. I think the wheat traffic might be put down at 200,000 bags at least.
1220. You know that wheat is regarded as the principal item of traffic to the railway? Yes.
1221. You think there will be an increase in wheat production if the railway is constructed? Yes. At the present time we are paying 1s. Id. a bag, and I have paid as much as 1s. 3d. a bag. A producer next to me is paying 1s. 3d. a bag.
1222. You think that the difference between the present prices of carriage to Jerilderie and the rates which will exist upon the railway would induce settlers to have more cultivation? Yes.
1223. The railway rates would be an advantage to them? An enormous advantage.
1224. You do not think an estimated revenue of £3,059 for the railway is too much? No; I think it is probable that the line will develop the country a great deal, and that other things will be grown if there is a chance of getting the produce away. A great deal more would be grown now if there were a chance of getting it away.
1225. Do you think dairying, and other things of that kind, would be adopted by the farmers if they saw a means of getting their produce away? Yes.
1226. The district grows fruit very well, does it not? It would grow almost anything. It is simply a question of getting the produce to market.
1227. You advocate the line as being absolutely necessary for the development of the district? Yes.
1228. Is there any further statement you wish to make to the Committee? I should like to say this:—If the line is not made we shall be driven to Victoria. I do not see how it is possible to go on paying present prices for carriage, having regard to the existing price of produce. What we should do personally if the line were not made would be to look to the English market, and to send goods, in bond, through Victoria. Of course it would be much cheaper to send to Sydney if we had a railway.
1229. It is proposed to dispense with fencing on the proposed railway; what effect do you think that would have upon stock. I have not had sufficient experience to tell you, but Mr. Wilson is a man who has had experience, and I understand he prefers that the line should not be fenced. The traffic, of course, would be run in daylight and there would be only a few trains.
1230. You do not think there would be any serious objection on the part of station owners to the line being unfenced? I should think it would be an advantage to the station owner because he would not be cut off from his tanks.
1231. What is the general value of land in this district? About £4.
1232. Would the land you are offering for sale realise £4 an acre? I think so. Of course the value of land varies in this district as in others. Some land is much better than other land. It depends whether it is fit for agriculture. A great proportion of this country is fit to grow anything. Mr. Brunskill, a well known farmer, said the crops he found here were the best he had ever seen in his life, either in England or Australia.
1233. Have you seen any better wheat crops in Australia than you have seen here? I have never seen anything like it. The average in this country last year was the highest in New South Wales.
1234. Supposing the proposed line went through your land, would you be prepared to give the Government the portion required for it? Certainly, and as we cannot give it we are sending our wool by the railway.
1235. Even at a temporary loss? Yes; but I do not suppose that the loss will be very much.
1236. You regard the railway passing through your estate as likely to improve it? Yes.
1237. Giving it an additional value? Yes.
1238. Is there anything further you wish to say? No. All that I wish to impress upon the Committee is this, that if the railway were constructed it would bring a larger traffic to the centres of New South Wales. It would be a great feeder to the main line.

The Hon.
R. C. G.
Cairington.

17 Jan., 1895.

Mr. Herbert Royston Lysaght, Manager of the Commercial Banking Company of Sydney, Berrigan,
sworn, and examined:—

1239. Chairman.] What are you? I am the manager of the Berrigan branch of the Commercial Banking Company of Sydney. Mr. H. R. Lysaght.

1240. How long have you been resident here? Rather over three years.

1241. 17 Jan., 1895.

- Mr. H. R. Lysaght. 1241. *Mr. Lee.*] You are connected with the Progress Association of Berrigan? I am the honorary secretary.
- 17 Jan., 1895. 1242. You have taken an active interest in the railway question? Yes.
1243. You remember the Railway Commissioners being here a short time ago? Yes.
1244. Were you one of the deputation which waited upon them in reference to this line? Yes.
1245. Did you make the statement to the Commissioners that in your opinion the landowners would be prepared to give the land through which the proposed railway would pass? I made no definite statement to them as to that.
1246. It was merely an expression of opinion on your part? Yes.
1247. Have you prepared any statistics which you wish to lay before the Committee? I prepared statistics for the Railway Commissioners, but I have not a copy of them with me. I can, however, give you a list of holdings within 10 mile of Berrigan [*Vide Appendix.*]
1248. Do you remember meeting Mr. Harper of the Railway Department, when he was collecting information to enable the Commissioners to form an opinion as to the probable traffic? Yes. I made up a return for him.
1249. How did you arrive at your statistics? I had by me for my own use a return of all the holders in the district. It was made two or three years ago, and I have added to it gradually. The return I have already handed in will show you the position of the holding, the description of holding, the total area and the area under crop. I have taken a great interest in the area under cultivation.
1250. The particulars you furnished to Mr. Harper may be accepted as being approximately correct? Yes.
1251. Will you tell the Committee your opinion of this district from a banker's point of view? I think it is one of the soundest districts I have been into in New South Wales. The land is good; in fact, there is a larger area of consistently good land than in any other district I have seen.
1252. What, generally, is the position of the small settlers? They are very well to do as a class.
1253. Is there a tendency on their part to dispose of their farms, and to go to other districts? None whatever. A good deal of land was thrown open here in 1879 and 1881, and since then not an acre has gone back to the big holders. Either the original selectors live here, or they have sold out to other small holders.
1254. There is a disposition on the part of the large land holders to throw their land open for cultivation? Yes.
1255. Have you observed that there has been a gradual increase every year in the production of the district? Yes.
1256. Would this year be the biggest year from the point of view of production? This year would be the largest of the four I have seen.
1257. So that you are in the happy position this year of having the largest area under crop and the lowest price? Yes.
1258. Do you think the farmers will continue to grow wheat at the present price? Not with a continuance of that price. They might continue for a year or two, but I do not think they would continue if the price extended over a series of years. They would gradually fall out, I think.
1259. Has the district agricultural possibilities outside those of wheat growing? I think it is eminently adapted for the growth of all cereals, also for fruit growing. I think also that dairying and grazing can be carried on to a far greater extent than it has been. Lucerne has been put in largely lately, and places which only carried one sheep to the acre formerly, now carry two and three.
1260. The produce sent to market from the district now is confined to wheat, wool, and stock? Yes, chiefly.
1261. But you think there would be a considerable traffic in other produce if cheap carriage could be obtained? Yes, and a market.
1262. Are you of opinion that the suggested rates are such as to permit of the farmers using the line? Yes.
1263. On the whole they are satisfied with the proposed rates? Yes; they are perfectly satisfied to pay 2s. 6d. a ton for wheat—it would give them 2d. a bushel better price.
1264. Have you seen a dry season since you have been here? No.
1265. Have you travelled round the district since you have been here? Yes; continually.
1266. As to the location of the railway, how would Berrigan stand as regards the centre of the agricultural settlement? The most central place you could pick would be in the immediate neighbourhood of Berrigan.
1267. Could that statement be verified by reference to the area of land under cultivation? There is no doubt about it.
1268. What is the distance to Finley? Fourteen miles.
1269. What is the opinion of the Berrigan people as regards the settlement of Finley;—do they think the settlers there would come to the railway terminus here? We think that all the people to the east of the stock route would use the line at some point or other. If not here, at a siding between here and Berrigan.
1270. To what distance do the farmers extend here on the northern side? About 14 miles.
1271. Do many lie back from the main road? Not a great many.
1272. Is there more settlement to the north or to the south? There is more to the south.
1273. And to the east and west? Yes.
1274. Have you known instances where wheat has been ready for market, and where there has been no means of taking it to Jerilderie? Yes; this year that has been so more than in any other year.
1275. Has the absence of carrying facilities led to a loss of produce? Yes; it has often been a great inconvenience to men wanting money. They have not been able to get their wheat into a market to obtain it.
1276. I suppose that immediately the produce is ready the farmers have to sell it? A certain proportion of them.
1277. Is that not the rule? No. I suppose there would be one-half of them who would want to get money; the others can afford to wait.
1278. If there were a railway line, you think a large number of farmers would store their wheat and await a suitable market? A large proportion would do so.
1279. Whereas at present many of them are compelled to send into Jerilderie when they can get teams—that is to say, during the dry weather? Yes.

1280. From that point of view the railway would put the producer on a fair footing with the markets of the country? Yes. Mr. H. R. Lysaght.
1281. Does anyone in the district offer any objection to the construction of the line? Not in this district. 17 Jan., 1895.
1282. The residents are unanimous on the point? Perfectly unanimous. Men who are actually outside our original returns are strongly in favour of the line.
1283. You have been agitating here for a considerable time for some sort of railway? Yes.
1284. I suppose it is due to continuous representations made by people here that the Railway Commissioners were induced to come down to the district and see it for themselves? I daresay.
1285. You have heard the evidence of previous witnesses;—if there is any point which has not been made clear, can you make it clear to us now? There is only one point which I might refer to, and that is the difference between the settlement here and at Finley. The bulk of the farmers here are men who own their land. At Finley the bulk of the settlers are leaseholders. I think that is a strong point in favour of the line coming to Berrigan.
1286. I suppose the leaseholders at Finley have a right of purchase? I think they have a right of purchase, but I have not heard of any of them purchasing.
1287. What is the rent they are supposed to be paying? Five shillings an acre; the land is valued at £4 2s. 6d. an acre.
1288. From what you have been able to see of the district, do you think there is any reasonable probability of its present output decreasing? Not unless we have a continuance of the present price of wheat for a period of years.
1289. From every other point of view you think the district ought to increase in population and production? Yes.
1290. *Mr. Gormly.*] With reference to the Government acquiring the land for the railway without cost, do you think there is likely to be any combination of local residents to provide a fund for the purchase of the necessary land in cases where the owners will not give it? I think that if it were absolutely necessary we could obtain the money; but this year has been such a bad year as regards the price of wheat, and also as regards the yield, that there might be some difficulty in obtaining it just now.
1291. Will the association, of which you are the secretary, take the matter into their consideration, and see what they can do in the event of some of the owners refusing to give their land without payment? If we found the line was in jeopardy by reason of the owners not giving the land, we would take some steps in that direction.
1292. You are acquainted with the Railway Commissioners' report? Yes.
1293. Has the Berrigan Progress Association considered that report, or is it likely to consider it? We have not considered it, because we never knew exactly what steps the landowners were prepared to take in the matter.
1294. I should have thought that if the people of this district were anxious to get the line constructed, the Commissioners' report would have been one of the first things the association would have considered? We have some difficulty in obtaining the views of the different landowners concerned.
1295. Persons owning small areas of land, a considerable area of which might be taken from them, would not have their property benefited very much by the railway? Exactly so.
1296. And it would not be reasonable to expect them to give their land? No.
1297. Do you think there is any probability of the district making some arrangement to compensate land owners in that position? I think the district would probably take steps in that direction.
1298. You think it is desirable for the Progress Association to consider the matter, and if possible to secure united action? Yes.
1299. *Chairman.*] In your opinion, in regard to any farming or pastoral property, is the betterment which comes from railway construction greater than the injury done to the property by the resumption of the land? I think so.
1300. That is beyond doubt? Yes.
1301. Therefore, the Government can depend upon the people of Berrigan and other persons interested in the railway enabling them to prove that no compensation should be given in many instances for land resumption? I think that in some cases where the small owners would have their land cut up the railway would not be of much advantage to them.
1302. But, generally speaking, men in the district would come forward and see that the Government were not looted for land resumption? Yes.
1303. As a rule, do you think the betterment quite compensates for the resumption? Yes.
1304. One of the landowners concerned, Mr. A. C. Wilson, is not here? No.
1305. Can you say what he intends to do in the matter? I have received a telegram from Mr. Wilson stating that he could not be here, but he told me that he would throw no obstacle in the way of the line.
1306. Do you think, from your knowledge of him, that he will take the view you have expressed? Yes.
1307. You think the Committee are justified in thinking that Mr. Wilson will view the matter as you do, and that he will allow the Crown to have the land? My impression is that if he does ask for any price at all it will be a very moderate one—about the first cost, perhaps.

Mr. Roderick McDonald, farmer and grazier, Berrigan, sworn, and examined:—

1308. *Chairman.*] Where do you live? Two and a half miles from here.
1309. How long have you been here? Thirteen years.
1310. What are you? A farmer and grazier.
1311. Do you know the position of the proposed railway from Jerilderie to Berrigan? Yes. Mr. B. McDonald.
1312. You are the owner of portions 79, 69, and 71? Yes.
1313. Are you aware that the railway passes either adjacent to or right through those properties? Yes.
1314. Are you prepared to give the Government the land necessary for the railway? I should like to get money for it. I had to pay for the land.
1315. How much did you give for it? I gave 30s. an acre for part of it.
1316. What did you pay the Crown for the rest? One pound per acre. If the Government would give me a small platform opposite my place, I am prepared to give the land altogether free.
1317. Is there anyone else but yourself growing wheat in the locality who would come to the platform you suggest? Yes, Mr. Jones would be one.

1818.

- Mr. R. McDonald. 1318. What quantity of wheat would be grown within say, a couple of miles of the platform? A good deal—I suppose about 5,000 bags. There would be wool besides.
- 17 Jan., 1895. 1319. You think that surrounding the platform there would be a sufficient production of wheat and wool to justify its erection? Yes.
1320. Do you know the road running along the north boundary? Yes.
1321. Would somewhere close to that point be a good place to put the platform? I think it should be a little nearer Berrigan.
1322. *Mr. Roberts.*] How many acres have you under cultivation? A little over 200.
1323. Is it all under wheat? Yes; I have 20 acres under lucerne in addition to that.
1324. The rest of your holding is devoted to grazing purposes? Yes, and I have a few dairy cattle.
1325. Where do you now send your wheat, live stock and wool? The wheat goes to Jerilderie and the wool to Melbourne.
1326. If this railway were made you would send all your wheat towards Sydney? Yes; if the rate were not too high.
1327. It is proposed to charge 2s. 6d. a ton on the new line;—do you think you would be satisfied to pay that rate to Jerilderie? Certainly.
1328. Does the wheat yield of the present year come up to that of last year? No; the weather has been bad. The wheat at the beginning was good—I believe very nearly as good as last year—but the heat and rain between them have spoilt it a good deal.
1329. You have no difficulty in getting your wheat taken to Jerilderie? No; there are plenty of teams, but I have not sent any yet.
1330. If the present low price of wheat continues, would you continue to grow it? I expect so.
1331. What amount of capital would be lying idle if you discontinued the production of wheat on your farm? It would mean a great deal, although I have not gone in very heavily for implements yet. This is only my second year of wheat-growing. Previous to settling in this district, I grew wheat in Victoria.
1332. How many bushels to the acre did you grow there? About 8. I have grown about as many as 40 to the acre here.
1333. That was on a special piece of land? Yes.
1334. Are you particularly anxious for the construction of the proposed railway? Yes; I should like to see it constructed.

Mr. John Jones, farmer and grazier, Berrigan, sworn, and examined:—

- Mr. J. Jones. 1335. *Chairman.*] What are you? A farmer and grazier.
1336. Where do you reside? Three miles from Berrigan.
- 17 Jan., 1895. 1337. What land have you? I have an interest in 1,280 acres, of which 640 acres are freehold.
1338. *Mr. Gormly.*] The other portion of your holding is leasehold land? Yes.
1339. Do you desire to give evidence as to the production of this district? Yes.
1340. You have been here how long? Six years.
1341. You have a considerable knowledge of wheat production in other districts? I have a considerable knowledge of the Goulburn Valley district.
1342. Have you a knowledge of the wheat-growing districts of New South Wales? Yes; within a radius of (say) 30 miles.
1343. How would the Berrigan district compare with the Goulburn Valley district? Very favourably.
1344. Have the farmers been successful in cultivating land in the Goulburn Valley district? Yes; a number have.
1345. Do you think the land in this district is as well suited for agriculture as the land there? Yes; rather more so. The land runs more evenly through this district than through the Goulburn Valley district.
1346. What is the difference in the cost of cultivation here and in the Goulburn Valley? It is very much the same I think.
1347. Is the land cheaply cultivated? Yes.
1348. At about what time do you usually do your ploughing? We start about April as a rule, and finish up at the end of June.
1349. Can you plough the land here before the autumn rains? We can do it, but it is not advisable to plough it when dry.
1350. Is it costly then? Yes; and if you plough the land when it is not suitable, you break it up, and you have a lot of trouble to make it mellow afterwards.
1351. You have, as a rule, to wait for the autumn rains, before you commence to plough? It is advisable.
1352. Since you have been in the district, have the autumn rains come on in sufficient time to enable you to plough large areas of land? Yes; the rain generally comes on from March to April;—you can look for them not later than April.
1353. You have tried fallowing the land I suppose now and again? Yes; there is no other way of farming well.
1354. You find that by doing that you keep the land free of weeds? Yes.
1355. How do you deal with the land which has been fallowed in the spring, when you are going to sow the grain in the next autumn? We use 6-furrow ploughs.
1356. And you turn over a good deal of land in the day with a comparatively small amount of traction? Yes.
1357. When you fallow your land, is there an increased yield? Yes.
1358. Anything considerable? Yes.
1359. If a portion of your land were fallowed, it would distribute the work for you over a greater number of months? Yes.
1360. And you would keep your men permanently employed? Yes.
1361. Do your observations apply to the radius to which you have referred? Yes; the richer the land, the greater tendency it has to grow weeds. Be as careful as you may, rich land will grow weeds. The only thing to do is to graze it heavily with sheep, and to plough it next year.
1362. Do you leave your stubble on the land? No; it is burnt. You have to burn it, for you cannot get through it with a plough.

1363. Is there any other produce beside wheat and wool which has been generally grown in the district Mr. J. Jones, since you have been here? Wheat is the principal produce, but if there were a market the district would be suitable enough for many other things. 17 Jan., 1895.
1364. Is there any considerable quantity of lucerne grown in the district? Yes; I have 22 acres.
1365. How do you find it answer? I think no farmer should be without a lucerne tract.
1366. Would you graze your lucerne, or cut it? We graze it. There is a lot of trouble in cutting it.
1367. Have you had considerable experience in growing lucerne? Not much.
1368. You do not know whether the crop would become ultimately extinct with continuous grazing? Of course you want to nurse it.
1369. You can only graze it periodically? Any stock would get tired of it after a time. You would have to give them a change for the good of their health.
1370. Do you keep sheep? Yes.
1371. Do all the moderate holders keep sheep? Yes.
1372. I suppose some have a considerable number? Yes.
1373. What are the general carrying capabilities of the district? It depends upon how the holding is improved. If there is plenty of fencing you could keep up to three sheep to the acre. If you have only one ring fence, and the stock have the run of the whole place, they trample down more than they eat.
1374. Do you know of any holdings which carry more than three sheep to the acre? Yes. Mr. Greggery's land, and Mr. McDonald's land would do it.
1375. For a number of years in succession? Yes.
1376. For how many years? Say six years.
1377. Are there many holdings carrying that number of stock? A fair number.
1378. What quantity of land in the district is generally required for a sheep? I suppose one and a half sheep or two sheep to the acre would be a fair thing.
1379. Is the district a fairly good fattening one? You cannot beat it in spring time.
1380. Is any considerable quantity of live stock sent to Sydney market for export? My own impression is that if freezing prices keep up a number of farmers will breed sheep for that purpose.
1381. Do you know of any farmers who have gone into cross-bred sheep for fattening purposes? Yes, they have just started.
1382. Are many fat sheep sent from here to Narrandera? Not from here.
1383. Has dairying been carried on to any considerable extent in the Goulburn Valley District? Yes.
1384. Has that industry paid fairly well? Yes.
1385. Are the farmers who went into dairying there satisfied with the results? Yes, there was a number of farmers there whose farms got dirty, and they were compelled to go into dairying to keep things going.
1386. Do you think this district would carry a better population if it went into the dairying industry? I think it would carry more.
1387. But there would not be the same produce sent by rail? No.
1388. The population however, would be increased? Yes. You would require more hands to do the milking.
1389. Would the district produce more wealth? At present prices I believe it would.
1390. You think the farms would produce an equal annual income? Yes.
1391. You are speaking now from your knowledge of similar country on the other side of the Murray? Yes.
1392. If the present low price of wheat continued and it no longer paid the farmers here to grow it, you think then that they would go into dairying and other industries? Yes. But you must bear in mind that if you have not been breeding a dairy herd it means a lot of expense to buy it.
1393. You think a dairy herd should be gradually worked up while you were carrying on your farming? Yes, that is the only way in which it could be done.
1394. Do you think there is any risk attaching to the construction of a line from this point of view;—that the prices of produce may become so low as to considerably lessen the production and consequent traffic? No; I think wheat can be grown as cheaply here as in any part of the world, and the general opinion is that the price must rise. I saw wheat sixteen years ago at ruinously low prices. Since then it has been much higher, and I suppose the same thing will happen again.
1395. Berrigan is further removed from centres of population than are other parts of the Colony, where wheat-growing is carried on? I think it is as favourably situated for the production of wheat as are most other places.
1396. You think from what you have seen that the growth of lucerne and other artificial grasses would increase the carrying capabilities of the land? Yes, tenfold.
1397. Have your neighbours grown lucerne and other artificial grasses extensively? Yes.
1398. Is there anything else you would like to tell the Committee? I may mention that it has cost me in freight between here and Jerilderie in six years £700. It has been paid principally on wheat, and the amount is well within the mark.
1399. If the railway were constructed, would you be frequently a passenger upon it? Yes. I may also say that I think a line costing £1,800 a mile is too expensive. I have a knowledge of the line from Numurkah to Shepparton in Victoria. It cost less than £1,000 per mile. That would include everything excepting rolling-stock. The line carried 300,000 bags in the first season. The sleepers are 2 ft. 6 in. apart, and the trains run over the line at the usual speed. There was no ballast in the first instance. The Government ballasted it a few years afterwards, because the traffic on the line warranted them in doing it.
1400. Was that country easier for construction than the country between Berrigan and Jerilderie? I think it was more difficult. There is a lot of swamp about 10 miles out of Shepparton.*
1401. Would it cost more or less to clear the line? More, because the timber was all green.

1402.

* NOTE (on revision):—I may say that the land in this district is also splendidly adapted for the growth of the peach and apricot, which have a large commercial value when dried; also for the vine, both table and wine grapes. I am also satisfied that if a line were constructed to Berrigan, it would induce a number of the farmers to go into the pig-raising industry, with a view to exporting the bacon.

Mr. J. Jones. 1402. Do you know of any reason why a line between Numurkah and Shepparton should be constructed more cheaply than a line here? No.

17 Jan., 1895. 1403. Are there any further statements you desire to make to the Committee? This year I have a paddock of 400 acres ready to cut for hay. It would have given me 800 tons of chaff. I could place it in the Sydney market, if a railway were here, at 35s. a ton. That is allowing £1 for carriage on the railway. The railway not being here, I am compelled to use it for grain. Chaff is selling in the Sydney market at £3 17s. 6d. I should therefore have a net return very much greater than the return I should receive from the land, allowing five bags of wheat to the acre. The Government would have had for the carriage of the hay £800, and for the wheat £220 making a difference of £580.

Mr. John Dickie, landowner, near Berrigan, sworn, and examined:—

Mr. J. Dickie. 1404. *Chairman.*] Where do you reside? Seven miles towards Jerilderie. 1405. You are the owner of portions 92, 78, and 63, in the parish of Berrigan, and portions of that property are affected by the railway? Yes.

17 Jan., 1895. 1406. Are you prepared to give the Government the land they require for railway purposes? Not as a gift.

1407. What do you consider the land worth? I gave £4 an acre for it.

1408. What are you prepared to take from the Government? I have not gone into that question. I could not give it to them for nothing.

1409. You would expect for your land what you gave for it? I should not like to take any less. I am not prepared to say at this moment what I would take. Of course the line does a certain amount of damage to my property by cutting me off from my tank.

1410. If the line were unfenced would it still be a great inconvenience to you? I could not say; I have no experience of trains running through my property.

1411. Would it be as injurious to your holding as if the line were fenced in on each side? I do not think so, providing it did not injure the stock. Often in hot weather milking cows and cross-bred sheep would, I am afraid, not get out of the way of the train. Besides, there may not be a fence in the first instance, but it might be fenced afterwards, and that would have to be taken into consideration.

1412. You would be prepared to act as reasonably as you could in the matter? I do not wish to be unreasonable.

1413. You desire to see a railway here? I am not very particular about it.

Mr. James Pyle, farmer, near Berrigan, sworn, and examined:—

Mr. J. Pyle. 1414. *Chairman.*] What are you? I am a farmer.

17 Jan., 1895. 1415. How long have you been resident here? Sixteen years; to be strictly correct, sixteen "harvests." 1416. How far from here? Six miles from here towards the north-west.

1417. *Mr. Davies.*] What is the size of your holding? I hold 980 acres of conditional purchase, and I rent, with the option of purchase, 625 acres.

1418. What proportion of it have you under cultivation? I have 1,260 acres principally under wheat.

1419. Where does the wheat go to? To Jerilderie by team. I paid in carriage last year £117, and I shall pay about £130 this year.*

1420. In the event of there being a railway between here and Jerilderie would you put a larger area under cultivation? Yes.

1421. Do you grow any other cereals? No, except a little oats which I am growing for my own use.

1422. Have you grown maize? I have never grown it for a crop, but I have seen splendid heads here. Maize is not grown in the district generally.

1423. Do you grow sheep on your farm? Not many. I fatten a few and send them away.

1424. Do you combine anything else with wheat production? Nothing but the sheep.

1425. If there were a railway here would you go into the raising of pigs? I have been thinking of it.

1426. You think that if there were a better means of transit by rail, you would be able to send a large number of pigs to market? Yes.

1427. Wheat would make good food for the pigs, would it not? Yes.

1428. Would you and your neighbours go in for dairying? Yes. We expect to start a creamery here by-and-bye.

1429. Your chief draw-back now is the want of communication with the metropolitan market? Yes.

1430. Have you any other information to give to the Committee? Ninety thousand bags went across the river last year. Supposing a railway were constructed here, and it were to attract one-third of that to Sydney, it would yield to the New South Wales railways, independently of what would be charged from Berrigan to Jerilderie, £2,500.

1431. How close would you be to the proposed line of railway? It would be about 1½ mile from the corner of my ground.

1432. Then I suppose you strongly advocate its construction? Yes.

Mr. George Whiting, farmer, Momolong, sworn, and examined:—

Mr. G. Whiting. 1433. *Chairman.*] You are a farmer? Yes.

17 Jan., 1895. 1434. Where do you live? At Momolong, 4 miles from Berrigan.

1435. You desire to give the Committee special information as to the production of flax and of sun-flower seed? Yes. I produce a specimen of flax. It is grown from some flax imported by the Victorian Government, and for which they are giving a bonus of £2 per acre. It is Russian flax, and gives a large proportion of linseed. I obtained the seed in August last, and planted it in September. What you see is about three months' growth. I have grown it for about ten years in Tasmania and Gippsland, having

a

* NOTE (on revision):—My crop, stripped after I gave my evidence, turned out such a failure, that my carriage, instead of being £130, will only be about £90.

a guarantee of £40 per ton for all dressed fibre, and 18s. a cwt. for seed. For seed purposes or manufacture, I have carried on an experimental plot here. I sent a supply to Melbourne, not knowing that there were any manufactories in Sydney, and I received word back that they would give £40 for it if it were properly retted and scutched. Mr.
G. Whiting.
17 Jan., 1895.

1436. You believe it would be possible for considerable quantities to be grown here? Yes.

1437. You think it would be a thriving industry, and furnish freight to the railway? Yes, besides being a good thing for the district. With reference to the specimen of sun-flower seed which you see, I have never grown it before; but I have brought this in to the Committee to show them the plant will grow here. It is very nearly 6 feet in height, and there are flowers from the base to the top. I have read that Mr. Harper, in Victoria, is getting machinery out to treat the seed, and to extract the oil. Something like £8,000,000 worth of this seed is exported from Russia annually.

1438. For what purposes is it used? For different manufacturing purposes. I may state that the fibre of flax produces largely to the acre, and there would be about 6 bushels of seed in a good crop. Flax grows wild in the district, and I gather from that that the soil is suited to it.

FRIDAY, 18 JANUARY, 1895.

[*The Sectional Committee met at the Public Hall, Finley, at 11 a.m.*]

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. JOHN DAVIES, C.M.G.

CHARLES ALFRED LEE, Esq.

The Hon. CHARLES JAMES ROBERTS, C.M.G.

JAMES GORMLY, Esq.

The Sectional Committee further considered the proposed Railway from Jerilderie to Berrigan.

Mr. William Blair, farmer, Finley, sworn, and examined:—

1438½. *Chairman.*] What are you? A farmer.

Mr. W. Blair.

1439. Where do you reside? Two miles to the east of Finley, in the direction of Berrigan.

18 Jan., 1895.

1440. What area have you? 1,874 acres.

1441. What portion of that is under crop? 1,130 acres.

1442. How do you own your land? On lease from the owner of Tuppah.

1443. Have you the right of purchase? Yes; I am paying 5s. an acre rent, with the option of purchase at the expiration of the lease at £4 per acre.

1444. How long will the lease run? Seven years.

1445. What is your yield on the average? Of wheat, from 16 to 17 bushels.

1446. Where do you take your produce? To Jerilderie.

1447. How much does it cost you? Nine shillings a ton.

1448. What is the cost to Berrigan? I cannot say; I never carted to Berrigan.

1449. What are the respective distances? It is between 12 and 13 miles from my place to Berrigan, and it is between 22 and 23 miles to Jerilderie.

1450. What do you infer that the rate of carriage would be to Berrigan from your experience? From about 6s. to 7s. a ton.

1451. Then that rate with the suggested railway rate to Jerilderie added would bring the cost up to 8s. 6d. a ton? Yes.

1452. How far does the class of country known as the Murray fringe extend in that direction? To within 8 miles of Deniliquin. It then runs north-west to within about 4 or 5 miles of the proposed line from Jerilderie to Deniliquin. There may be some slight variation here and there, but, generally speaking, that defines it.

1453. The same land extends from 10 miles south of Jerilderie right down to the Murray? Yes.

1454. That is the land where the bulk of the farming settlement will be? Yes.

1455. Can you tell us the number of settlers to the west of Finley, and their area? I could supply you with it later on.

1456. *Mr. Davies.*] How long have you resided in the district? Three years.

1457. Where were you living previously? In Tasmania.

1458. There are a large number of Tasmanians who have leased land in this district? Yes; there are about twelve altogether, I think.

1459. They are all growing wheat? Yes.

1460. Do they combine sheep farming with it? Yes.

1461. To any great extent? Until this year they have done so. But finding that sheep farming would not pay, they have put the greater part of their area under wheat.

1462. Can they make it pay at the present price of wheat? They have to put nearly the whole of their area under crop to make it pay.

1463. By that means you think they could make it pay? Yes.

1464. Would there be a small margin of profit? There would be something to live upon anyway.

1465. Do you think that if the present prices were maintained there would be sufficient inducement to you to continue cropping your land with wheat? Until the land had run out.

1466. How long would it take you to exhaust the land? About five or six years I should think, although I have known land to be cropped five years in succession and yield a fair crop.

1467. Your present year's crop, I suppose, is not equal to the first year's crop? No; although I have known some of the heaviest crops in the district come from the third year.

1468. For five or six years you think that with constant cropping the land would give a reasonable yield? Yes.

1469. What would be the annual decrease approximately? It is not always the first year that is the best. It was, in my case, because it happened to be a fine season. There would have been a fairly heavy crop this year, but the bad weather will affect the yield.

- Mr. W. Blair. 1470. What would be the difference in the yield, comparing the first year with the fifth or sixth year? There would be a difference of about 4 bushels to the acre.
- (Jan., 1895.) 1471. You think you would average 16 bushels to the acre for five years? Yes.
1472. Have you sent your wheat to Jerilderie this year? Yes.
1473. What did you have to pay for it? Nine shillings a ton.
1474. By contract? Yes.
1475. Has not a higher price obtained for the carrying of wheat this year? It depends upon where the farm is situated. I am near the stock route, and have a certain advantage.
1476. Supposing a railway were constructed to Berrigan, would that reduce the cost of haulage to you? It might, by competing with the carriers.
1477. Would it be advantageous to you in other ways;—would it not enable you to be independent of the carriers? Not by any means.
1478. Would you not have your own drays and horses? Not to cart that distance; you could not do it.
1479. You would still depend upon teamsters to carry your wheat to the railway, even if the terminus were at Berrigan? Yes.
1480. You know the surveyed route of the proposed railway? Yes, fairly well.
1481. You know to what extent it would serve the Berrigan district and a portion of this district? Yes.
1482. Do you regard Berrigan as being in a central position in the cultivated area? It is not central, although it is fairly so.
1483. Is there not more land under cultivation on the east side of Finley than on the west? Yes, I think so.
1484. Very much more? Not much more.
1485. What, approximately, would be the difference? I suppose there would be from 4,000 to 5,000 acres more on the east side, towards Berrigan.
1486. On the other side of the proposed railway there is also a large proportion of land under cultivation? I do not think so. I think if you came 7 miles this side of Berrigan you would come pretty well to the centre of the agricultural area. The proposed route passes on one side of it.
1487. Would a railway at the point you indicate serve the whole of the district of Berrigan, as well as the district of Finley? I do not think it would. It would serve Berrigan, but the farms to the east of Berrigan and the farms to the west of Finley would not be served.
1488. So that if the railway were brought 7 miles nearer this way it would be a greater advantage you think than if the terminus were at Berrigan? It would serve a greater number of farms altogether, and it would be more central.
1489. What would you regard as the central point for a railway to serve the whole of this district including Berrigan? In my opinion, no line will serve the whole district unless it touches Berrigan and Finley.
1490. Would a branch line coming from Berrigan serve this district? Certainly.
1491. Would the surveyed line from The Rock to Murray Hut suit you? Yes; that line runs right through the centre of the district.
1492. Supposing a junction were made with the Berrigan line at Berrigan, how would that do? It would do very well.
1493. In the event of that branch line being constructed, where would your produce go? While the produce of New South Wales is not up to the local demand it would go to Sydney, but if we had to export to outside markets, the nearest and cheapest route would be *via* Melbourne. It is 150 miles from the Murray to Melbourne, but from here to the Murray there are about 25 miles of cartage. If the railways were constructed here it would mean an advantage to the New South Wales railways of 9s. a ton. We have to pay the same to cart produce to the Victorian railway as to Jerilderie. If there were a railway here the Sydney market would have the advantage of the difference between the haulage by the railway from Finley to Jerilderie and the cartage to the Victorian railways.
1494. Have you hitherto sent any wheat into Victoria in bond? No.
1495. Does much wheat go to Victoria? There was a good deal last year.
1496. What was the inducement to send it there? Principally cartage.
1497. Then, if a line were constructed at Berrigan, would it not be an advantage to you? Only in the way I have explained—that the railway would be competing with the carriers.
1498. Would not fully one-half of the wheat grown between this point and Berrigan go to Berrigan, or to some point on the proposed railway? I quite believe it would.
1499. The producers themselves would have their own drays to take it? Yes.
1500. The roads are very bad between Jerilderie and this district? Yes.
1501. Especially in winter? Yes; it is almost impossible to travel along the road in winter.
1502. The railway to Berrigan will serve a large number of persons to within, say, 6 or 7 miles? Yes.
1503. It would enable those persons to be independent of the teamsters at all events? Yes; in a great measure.
1504. It would enable them to take advantage of the best market for their produce? Yes. If a railway were built, I presume the farmers would do as they have done on the Victorian side, that is, they would have sheds built near the railway for their wheat. They would not keep it at their own places, because in winter time if they had only 3 miles to cart they would not be able to do it on account of the condition of the roads.
1505. I suppose the wool grown on your place has gone to Victoria? Of course.
1506. Where would the wool go if the proposed railway were constructed? At present prices we are not likely to grow much wool. We must go in for cultivation.
1507. Do you produce anything but wheat and wool? Barley.
1508. For export? Yes; but up to the present time I have not sold it. Last year there was a fair market in New South Wales—this year there is none at all. I have sent it to store, and am holding it for a better price.
1509. It is stored in Jerilderie? Yes.
1510. If you had better means of transit do you think the farmers would go in for dairying? I could hardly say. The country, however, is just as well adapted to it as is the Goulburn Valley.
1511. Would it not pay you to grow pigs? Yes, because you can feed a great many pigs on the grain which is sometimes lost. There is more in producing bacon than in any other industry if you can get 3d. a lb. for it.

1512. If there were better means of communication you think more pigs would be grown in the district? *Mr. W. Blair.*
Yes; it has been very much spoken of lately.
1513. You know there is a good market for butter through the English market being open? Yes. *18 Jan., 1895.*
1514. With a railway in the district would not the production of butter pay? Yes.
1515. Is there any other industry which could be carried on in the district if there were improved means of transit? Yes, fruit-growing. I believe this part of the Colony could compete with any other part of it in summer fruits.
1516. Has any attempt been made to grow fruit in the district? There are small orchards for home consumption.
1517. You could grow it abundantly? Yes; apricots, peaches, and plums can be grown here splendidly.
1518. Is there any further information you would like to give the Committee? No; except that there is a great stretch of country to the west of the travelling-stock route which remains undeveloped by reason of the present road cartage.
1519. *Mr. Lee.*] What is your own candid opinion as to the route which the proposed railway should take? I believe that taking it from the standpoint of the settlers that it would make very little difference whether it came from Jerilderie to Berrigan and Berrigan to Finley, or from Jerilderie to Finley and Finley to Berrigan.
1520. Do you think the line should include both Finley and Berrigan? I do.
1521. To whichever point it may be brought in the first instance, you think that both places require it? To serve the district effectually it will require to touch both places.
1522. Supposing the line could be brought a little more to the westward than has hitherto been contemplated, would that help the Finley people? It would help them a little, but it would not serve the district.
1523. You know where the 12-mile well is in the Berrigan district—in the forest reserve? Yes.
1524. Supposing a line were to come in 2 miles to the west of that, how would that serve the farmers here? A number of them would be within 6 or 7 miles of it then, would they not? I do not think that would be of much advantage.
1525. Are there many farms to the north of Finley? There are not many on the north-east; there are more to the north-west.
1526. You understand that the railway would be a means of communication for all time, and that it will depend chiefly for its living upon wheat freight;—do you think that at the present price of wheat you would be able to continue cultivating? We hope that the present price will rise. Probably there has never been such a wave of depression affecting the whole commercial world as that which affected it recently. We have to live somehow through these times of depression, and to wait for better times.
1527. If it did not pay the farmers to grow wheat they would not grow it? No; they would have to grow something else.
1528. Supposing the growth of wheat were abandoned, what would become of the prospective freight for the railway? There would be live stock and many other things of that kind the farmers would be able to produce. In a newly-settled district you cannot produce fruit and things of that kind in any quantity at the outset.
1529. It would take you a long time to produce 17,000 tons of pork? Yes; but on the other hand the freight would not be the same for pigs as for wheat.

Mr. Walter James Burbury, hotel-keeper, Finley, sworn, and examined:—

1530. *Chairman.*] What are you? I am an hotel-keeper residing at Finley. *Mr. W.J. Burbury.*
1531. How long have you lived there? Eighteen months. I am the Secretary of the Finley Progress Association. *18 Jan., 1895.*
1532. Have you prepared any statement as to the cultivation in the district? No.
1533. Have you no detailed information to give us on that matter? Only the area under cultivation and the yield.
1534. Can you give us the information accurately? As nearly as possible.
1535. Will you describe the limits within which you have obtained the information? Yes, in a radius of about 7 miles from Finley.
1536. What is the acreage under cultivation? 20,000.
1537. It is nearly all under wheat I suppose? Yes.
1538. What would the return be? Nearly four bags to the acre.
1539. To which market does the wheat from this district go? It mostly goes to Jerilderie. Some of it goes to Tocumwal for shipment to Sydney.
1540. Supposing a railway is extended to Berrigan, will it be cheaper for the Finley farmers to send their wheat by that route to Sydney than to send it *via* Victoria to Sydney? It would be very much the same.
1541. It would be cheaper for the farmers at Berrigan to send their wheat *via* Jerilderie than *via* Victoria? Yes; because that would save cartage.
1542. And the difference between the two districts would be the cartage from Finley to Berrigan? Yes.
1543. What is the general desire of the people here as to railway extension? The people to the west of Finley, and those within 3 miles to the east of it, would like the line to come to Finley along the stock route. That would be the more convenient way for them.
1544. Supposing the line does not come further than Berrigan, what will become of the produce grown to the west of Finley? It will be still carted to Jerilderie with the exception of the bags which cross the river.
1545. You think there is no doubt about that? Not the slightest.
1546. Although the distance to Jerilderie would be longer than the distance to Berrigan? Yes; once the carriers have their loads on they are not particular to a mile or two, and they prefer a road where they can get a good supply of grass and water.
1547. Whom did Mr. Harper see when he came to the Finley district? No one that I know of.
1548. Was your Association called upon to furnish him with statistics? No.
1549. Then any information he received would be gathered from individual sources? Yes; to the east of Finley.
1550. Is not nearly all the land under cultivation here leasehold? The larger part of it.

Mr.

Mr. Frank Faulkner, Manager of Tupal Estate, sworn, and examined:—

- Mr. F. Faulkner,* 1551. *Chairman.]* What are you? The manager of Tupal Estate.
 1552. You are the son of the owner? Yes.
 1553. What area have you? 160,000 acres of freehold.
 18 Jan., 1895. 1554. You have a good knowledge of the country generally? Yes.
 1555. What do you consider the agricultural area in this part of the country starting from Deniliquin to the eastward? Starting within 12 or 13 miles of Deniliquin, it takes in part of Tongaboo, part of the back of Coree, and part of Hartwood approaching the surveyed line from Jerilderie to Deniliquin, but not passing it. It would extend to about 10 miles south from Jerilderie passing on to the east.
 1556. That in your opinion is the great wheat-growing area of this part of the country? Yes.
 1557. In your opinion great development is possible here? Yes. There is great uncertainty existing at the present time as to what the Government are going to do with the leases, whether they are going to throw them open indiscriminately at a low rate or not.
 1558. What area of Government land is there in this district suitable for agriculture? I do not know definitely.
 1559. Is there any large area on Tupal? There are 12,000 acres of leasehold, but only 3,000 acres are fit for agriculture.
 1560. You cannot give us the information with regard to the Crown lands on other runs? No.
 1561. You have had in existence for some years past an arrangement by which the farmers can obtain from you land for growing wheat? Yes.
 1562. Will you tell us the terms? Yes. A seven years' lease at 5s. an acre, with the right to purchase at £4 an acre.
 1563. Do you believe the right of purchase will be exercised? The lessees forfeit their improvements if they do not exercise it, but it depends a great deal on the price of wheat. I do not think the land will come back to the station for sheep at any rate, because, if the present lessees do not purchase it we shall release it.
 1564. You think it will be permanently devoted to agricultural purposes? Yes.
 1565. What area have you already set aside in these leases? About 15,000 acres.
 1566. Is there much more of your run suitable for such purpose? The bulk of the run is suitable for it. There is the Retreat block of 35,000 acres, immediately to the west of Finley.
 1567. Does the proprietor intend to throw open the whole of that area? Yes.
 1568. I suppose it would pay him better than anything else? It pays us better than sheep.
 1569. Do you think that land will be taken up? It depends upon what the Government do with the leases. If a man can get land from the Government at £1 an acre, with twenty years in which to pay for it, he will not take it from the squatter on the terms I have named.
 1570. You hand in a return prepared by yourself and Mr. Blair, showing the names of the holders, the position of the holdings, the area, the mode in which they are held, and the area under crop, as regards the land adjacent to Finley to the west, to the north, and to the east of the travelling stock reserve? Yes. [Vide Appendix.]
 1571. If there were a railway in this district, I suppose the settlement would increase? Yes. It would pay us better to grow grain. There are men growing grain outside the coloured portion of your map, who are paying 1s. 3d. for cartage.
 1572. If there were a good means of communication they would be prepared to extend their operations? Under a system of leasing—yes.
 1573. *Mr. Roberts.]* How long have you been manager of Tupal Station? Four years.
 1574. The area you have referred to has been put under crop within that time? Yes.
 1575. What area did you first decide to lease? 15,000 acres.
 1576. Was it all taken up? We gave the particulars in the summer time, and it was all taken up in the autumn.
 1577. How long is it since the land was taken up? On the east of the stock route three years, on the west of the stock route, two years ago.
 1578. Have the farmers done well on these leases? The smaller ones have done fairly well. Those who took up the land merely for speculative purposes went under, but the others are coming on very well now.
 1579. Have any of the leases been forfeited? Only one, and that was not the fault of the land; it was due to outside speculation.
 1580. Is there any difficulty experienced in getting wheat to market? This year there were very few teams.
 1581. The road is fairly good between here and Jerilderie? In the summer time, but not in the winter time. We carted 2,700 bales over it this year.
 1582. Do you send all your wool to Sydney? We did this year.
 1583. Would the construction of a line from Jerilderie to Berrigan be of advantage to the people in its immediate vicinity? I have never advocated a railway south from Jerilderie to Berrigan or Finley, because in a great measure it is a question of freight, but if the line should be constructed at all it should be taken to Finley, because at Berrigan you are within easy distance of the Victorian line, which taps the Murray. The settlers to the west of Finley, to get to Melbourne, have to pay all the Deniliquin and Moama railway charges additional. Beyond Berrigan the people, therefore, are in a better condition to deal with Melbourne, being within the rebate district of the Victorian lines.
 1584. How far is Berrigan from the Murray? About 20 miles.
 1585. And Finley? About 15; but I was speaking of the country to the west of Finley.
 1586. But where do the people to the west of Finley send their wheat;—is there a market to Deniliquin? Only for the local miller.
 1587. From what point to the west of Tupal does the wheat go to Jerilderie? None to the west. We run to within 12 miles of Deniliquin.
 1588. How far to the east of Berrigan might the Government look for wheat? I do not know; I have never been to Berrigan.
 1589. Do you consider Berrigan the centre of this agricultural district? I do not think so. No doubt it is the centre of a large agricultural population.
 1590. How far this way would you require to come to find the centre of the area under crop? I cannot say. I have never been to Berrigan or the other side of it. 1591.

1591. Do you think that if a line should be constructed from Jerilderie to Berrigan it would be used by the people of Finley? Within a certain distance it might. Mr.
F. Faulkner.
1592. There is a good deal of cultivation between Finley and Berrigan? Yes; but if they make a railway to Berrigan they will have to compete with only 150 miles of Victorian railway carriage. If the line goes to Finley there will be an advantage of nearly 200 miles, and the Deniliquin and Moama line charges are very heavy. 18 Jan., 1895.
1593. You know that it is proposed to make this railway a light experimental line? Yes.
1594. You do not favour the construction of the line to Berrigan? No, I do not. It is entirely a question of freight either at Berrigan or Finley. We are comparatively near to Melbourne, and the freights will determine where the produce will go, especially if there is a customs union.
1595. Do you not think, seeing that the line is an experimental line, and that it is to be a very light line, that the Government might be asked to bring it on to Finley? It might be brought on to Finley, and it still might pay us better to send to Melbourne. It is entirely a question of freight.
1596. You know that the Government has fixed 2s. 6d. as the rate per ton between Berrigan and Jerilderie? I have heard so.
1597. Does not that appear to you to be a very liberal charge compared with what you have to pay now? Yes; it is a saving of 6s. 6d. a ton at the railway station.
1598. Is there any further statement you desire to make? Well, the land to the north of Berrigan is affected by the rebate to Melbourne, whereas the land more to the westward is not so affected.

Mr. William Blair, farmer, Finley, sworn, and further examined:—

1599. *Chairman.*] In conjunction with Mr. Faulkner you prepared the return which is now before the Mr. W. Blair Committee? [*Vide Appendix.*] Yes.
1600. You believe it to be an accurate and practical explanation of the position of the farmers in this vicinity? Yes. 18 Jan., 1895

Mr. John Howe, farmer and grazier, near Finley, sworn, and examined:—

1601. *Chairman.*] What are you? I am a farmer and grazier. Mr. J. Howe.
1602. How long have you lived here? Sixteen years. I am 15 miles to the westward from here on the road to Deniliquin. 18 Jan., 1895
1603. *Mr. Gormly.*] What pursuits have you been engaged in? Farming and grazing.
1604. Have you a knowledge of any considerable extent of the country in this neighbourhood? Yes.
1605. What area have you? 640 acres on Tuppal and 640 acres on Woperana.
1606. At what distance is your land on Tuppal from Finley? Fifteen miles; the other is about 20 miles south-west from here.
1607. And what distance from the Murray? Two miles.
1608. What portion of your holdings do you devote to agriculture? On the Tuppal portion 250 acres.
1609. You know all the settlement to the west of Finley? Yes. There is a good deal of land there under agriculture.
1610. Where do you send the produce which you grow at Tuppal? It has been sent to Jerilderie since the railway came there.
1611. What direction does your neighbour's produce take? It goes to Jerilderie also.
1612. At the prices now ruling for agricultural produce do you think that you will continue to cultivate your land? I do not think we can.
1613. If the prices do not improve do you intend to let your land go out of cultivation? I do not know—we must do something. Grazing is almost as bad as cultivating.
1614. Even if prices do not improve it will be necessary for you to cultivate some of your land? Yes, we shall have to cultivate more or less.
1615. If there were an improvement in prices would you cultivate more? I do not think so.
1616. What yield do you have from your land? About four bags to the acre.
1617. How long have you cultivated it? For the last sixteen years.
1618. And by resting your land occasionally do you find it turns out as good a crop as before? I shall have about five bags to the acre this year.
1619. By fallowing the land and allowing it to rest occasionally, will it be as productive as in the first few years of its cultivation? No.
1620. The soil deteriorates from continual cultivation? Yes.
1621. Does it get over-run with weeds? There is nothing but thistle.
1622. I suppose you keep some stock? Yes.
1623. Your wool goes to Melbourne? Yes.
1624. If a railway went to Berrigan would you still continue to send your wool to Melbourne? Yes; it is too far from Berrigan to here.
1625. Would you still continue to send your wheat by team to Jerilderie? Yes.
1626. It would be no advantage to you to take it to Berrigan? Not the slightest.
1627. The construction of a line to Berrigan would not draw any wheat there from your neighbourhood? No.
1628. Are there places on the stock route where the bullocks can be turned out? Yes.
1629. Is there water on the road? Yes; by going to tanks until they get on the Billabong.
1630. You would like to see a railway constructed into the district? Yes.
1631. To what part of the district should it be constructed? If I had my way I would bring it to Finley.
1632. You think it would there serve a large number of agriculturists? Yes.
1633. You have not sent any of your agricultural produce to Victoria? No.
1634. What is the carriage to Jerilderie? It has been 1s. 6d. a bag up to this year, we are now paying 1s.
1635. What is the distance? Thirty-four or 35 miles.
1636. Has there been much increase in agriculture in the district during the last two years? There is now double the quantity there was four years ago.

Mr.

Mr. Matthew George Hamilton, selector, Finley, sworn, and examined:—

- Mr. M. G. Hamilton.** 1637. *Chairman.*] What are you? A selector.
 1638. Where do you live? About 2 miles from Finley.
 18 Jan., 1895. 1639. What area have you? Five hundred and eighty acres of my own selection—in all 1,450 acres.
 1640. What area have you under crop? Three hundred acres.
 1641. How long have you been here? About twelve years.
 1642. *Mr. Davies.*] How long have you been cultivating your 300 acres of land? About three years.
 1643. When did you first send wheat to market? I was the first to send to Jerilderie when the mill started there.
 1644. You have increased the number of acres under cultivation every year? Yes. I crop the land a few years and then let it rest awhile.
 1645. What do you grow? Wheat and barley.
 1646. How long do you allow the soil to rest? About three years. I have 600 acres cleared for cultivation and I have 300 acres under crop every year.
 1647. Have you sent your wheat to market this year? No, I have it at home stacked.
 1648. In the event of the railway being constructed to Berrigan would you still send your produce to Jerilderie? Yes.
 1649. Would a railway to Berrigan be of no advantage to you? No advantage at all. My own teams will take the produce to Jerilderie.
 1650. Would the railway if constructed between this point and Berrigan be of any advantage to your portion of the district? I do not think so.
 1651. Where is your land? It adjoins the stock route.
 1652. Where does your wool go to? To Melbourne.
 1653. I suppose if a line were brought down the stock route to Finley it would suit you? Yes.
 1654. How many sheep have you? About 1,400.
 1655. Have you increased or decreased your number of sheep during the last few years? Decreased them. It pays better to grow wheat. I cannot say whether that is so at the prices ruling this year, but at the prices ruling last year it paid me better than sheep-farming. Wheat was 2s. 5d. last year.
 1656. If wheat continues at its present low price, would you still continue your cropping? I think I would keep on with it. I do not pay much labour.
 1657. What does it cost you per acre to plough, sow, and bag your wheat? I could not tell.
 1658. Do you produce anything but wool and wheat? I have a little fruit.
 1659. Do you do anything in the dairying line? Not now; but if the railway were here I think we should go in for it. We could grow lucerne well.
 1660. Would it pay to produce butter for export if you had better means of transit? Yes.
 1661. If a line were brought even to Berrigan, would it not be an inducement to you to go in for piggeries and butter manufacturing? It would depend upon the prices, I suppose.

Mr. George Robinson Jeffries, Station Manager, Tocumwal, sworn, and examined:—

- Mr. R. Jeffries.** 1662. *Chairman.*] What are you? I am engaged in the management of the estate of the late Edward Hilston, at Tocumwal.
 18 Jan., 1895. 1663. Where do you reside? At Tocumwal.
 1664. Of what does the Hilston estate consist? It is a grazing and farming estate, combined with a storekeeper's business. I have been engaged in wheat-purchasing during the last few years at Tocumwal.
 1665. You have attended to give evidence to the Committee, well knowing that the matter under reference to them is the proposed construction of a railway from Jerilderie to Berrigan? Yes. I was about to refer to the fact that for the last three years I have been engaged in wheat-purchasing for a Melbourne firm who ship wheat to Sydney through Victoria.
 1666. How much have you purchased? The year before last I purchased only 2,000 bags. I was late in the field. Last season I purchased 8,000 bags of wheat and about 520 bags of barley, all of which crossed the river at Tocumwal for Yarraweyah.
 1667. Did the wheat come from this district? Hardly so far north as this. I should say about 8 miles north and 10 miles west, and probably about 7 miles east of Tocumwal.
 1668. Does any other produce go that way? Nothing but wool. This year I am purchasing wheat for a firm in Moama, who are having it delivered in a shed on the bank of the river. As soon as the river rises it will go down to Moama.
 1669. What are your views as to the construction of a line from Jerilderie to Berrigan? It would not affect Tocumwal beneficially in any way.
 1670. Supposing it were brought from Jerilderie to Finley? Then I should say that a great deal of the wheat which I now purchase would find its way here.
 1671. Why? Because the difference in land carriage is in favour of the shorter distance.
 1672. The farmers from whom you purchase would be resident about 10 miles from Finley? Yes.
 1673. And the object of your evidence is to show that if a line were constructed by the stock route to Finley it would take some of the produce which now goes into Tocumwal? Yes.
 1674. It would not go over the Murray, as in the past? No; the difference in freight would prevent it.
 1675. What would be the dray carriage from the point you refer to? The farmers would be in position to cart their own produce. The distance would be comparatively short. I suppose they would not have to cart more than 12 miles.
 1676. Could they do so profitably? I do not think there is any doubt about that. They cart it into Tocumwal now—12 miles—because they cannot cart it into Jerilderie.
 1677. What is the road from here to Tocumwal like? It is pretty good.
 1678. If the farmers at Tocumwal are able to cart wheat over the 12 miles here, why cannot the farmers here cart their wheat 12 miles to Finley? I do not know what the Finley farmers can do.* 1679.

* NOTE (on revision):—I should have answered this question by showing that a Tocumwal farmer, in taking his grain to Finley to be sent via Berrigan, would have to pay for the covering of that much trainage extra, whereas the direct line would bring him nearer his head market, Sydney, without such extra trainage. And, too, a Finley farmer carting his grain 13 miles to Berrigan would be no nearer his head market, Sydney, than when he started.

1679. Supposing the line were brought here by way of Berrigan how would it suit the Tocumwal people? Mr. It would not much matter where the line came from so that it went to Finley. The district would be G. R. Jeffries equally well served whether the line went from Jerilderie to Berrigan or Jerilderie to Finley.* 18 Jan., 1895.
1680. Have you considered a probable extension from Finley to Tocumwal? I have not considered that, although I think it would be a very good thing.

Mr. Charles M'Alister, farmer, near Finley, sworn, and examined:—

1681. Chairman.] What are you? I am a farmer. Mr. C. M'Alister.
 1682. Where do you live? Eight miles west of Finley.
 1683. What area have you? 4,540 acres.
 1684. How much have you under cultivation? 400 acres myself, but I am leasing a portion of my land 18 Jan., 1895. on "halves," and 1,000 acres of it are under cultivation.
 1685. Some of your land is freehold and some conditional purchase? It is mostly conditional purchase.
 1686. Mr. Roberts.] How long have you been here? About sixteen years.
 1687. How long have you been producing wheat upon your farm? Nine years.
 1688. During all that time prices have been more favourable than they are now? Yes.
 1689. How long is it since wheat has taken such a downward tendency in price? We were getting, eight or nine years ago, from 4s. to 5s. a bushel.
 1690. How long did that keep up? The price kept up fairly well till the season before last.
 1691. What does it cost you per bushel to get your wheat ready for market on the farm? Nine-pence per bushel on the farm.
 1692. Does that include bagging? Yes.
 1693. Where do you send your wheat? To Jerilderie.
 1694. Have you ever sent any wheat to Melbourne? No.
 1695. What does it cost you to Jerilderie? One shilling a bag.
 1696. Would a railway between Jerilderie and Berrigan be of any advantage to you? None whatever. I am within 2 or 3 miles as far from Berrigan as from Jerilderie.
 1697. You would still take your produce to Jerilderie? Yes; if there were no nearer railway.
 1698. I suppose the railway to Finley would suit you best? Yes; along the stock route.
 1699. Why do you advocate that in preference to any other route? I advocate it as being most beneficial to the district. Finley, I maintain, is a better centre for a railway than is Berrigan. The line might be made altogether on the stock route, and there would be no resumption, and then there would be settlement along the route to support the railway. There are 1,300 acres on the stock route between here and Jerilderie, and it is all good agricultural land.
 1700. Is it under cultivation? No; it is Crown land. The reserve is a mile wide. If the railway were constructed the reserve would not be wanted as a road, and it might be thrown open to selection.
 1701. You think the land could be taken up for farming? Yes.
 1702. How far have you been east from Finley? No further than Momolong station.
 1703. Have you been to the south-east of Berrigan at all? No.
 1704. Is it a fact that there is a large area of cultivation to the south and south-east of Berrigan? I believe there is a certain amount.
 1705. Having in view that fact, are you of opinion that Finley is really more in the centre of cultivated land than is Berrigan? That is my opinion.
 1706. Could you name a spot between both these two places which would be more central than either of them? No.
 1707. You think Finley is the very centre? I think so.
 1708. You think a line here would serve a larger number of agriculturists than a line taken to any other place in the district? I am of opinion that Finley is the most suitable place at present.
 1709. You do not view with favour the construction of a line to Berrigan? No.
 1710. If there were no idea of constructing a line to Finley, would you like to see it taken to Berrigan? No, that would be of no use to us.
 1711. You are aware that the proposed line is to be a very light line? Yes.
 1712. If the line were constructed, and turned out satisfactorily, do you not think that would be a very good basis upon which to ask the Government to bring it on to Finley? That view never struck me.
 1713. Do you grow any crops but wheat? Not to any extent.
 1714. You appear to be able to grow almost anything here? Yes; we get a satisfactory return from everything.
 1715. Is the land suitable for dairying? Yes.
 1716. Have you considered whether if the wheat fails it would not be practicable to utilise the land in some other way—for the rearing of pigs for instance? I have thought of all these things; but it is the want of a railway that keeps people from going into twenty other things, which they could go into if the railway were here.
 1717. Unless the prices went lower, you would continue to grow wheat? Yes.
 1718. Is there a large area of land available for agricultural purposes in the district? Yes; all the land about Finley could be made available under favourable circumstances.
 1719. If the railway were brought to Finley you think that every acre of land within a radius of say 12 miles would be used for agricultural purposes? Yes.
 1720. Do you produce any wool? Yes; I send it to Melbourne.
 1721. If a railway were brought to Finley, would you still send it to Melbourne? I could not say.

Mr. Charles Uphill, farmer and grazier, near Finley, sworn, and examined:—

1722. Chairman.] What are you? I am a farmer and grazier.
 1723. How long have you been in the district? Between eighteen and nineteen years.
 1724. Where do you live? Eighteen miles from here in a westerly course. Mr. C. Uphill.
 1725. 18 Jan., 1895.

* Note (on revision):—I certainly never intended to convey this; I advocate the Finley-Jerilderie line as being undoubtedly the best for Tocumwal, seeing that by Tocumwal I would include the Tuppah Creek and Woperana districts to the west of Tocumwal, and I do not think that the district would be equally served by the one, as the other.

- Mr.
C. Uphill. 1725. Is portion 125, parish of Narrima, approximately the centre of your holding? Yes.
 1726. What area have you? 4,600 acres.
 18 Jan., 1895. 1727. How much do you cultivate? I have 480 acres under cultivation this year.
 1728. *Mr. Gormly.*] What is the nearest centre of population to you? Deniliquin.
 1729. Where do you send your produce? To Jerilderie, a distance of 30 miles. Last year I paid 1s. 1d.; I have paid 1s. 6d.; this year I am paying 11d. per bag.
 1730. About what quantity of wheat does your land generally produce? From four to eight bags per acre. Different areas produce different yields owing to sowing early, and rain falling soon after sowing. I have sometimes had an average of five or six bags.
 1731. What is your average this season? I have just completed the harvesting of 250 acres, and it has averaged five bags to the acre.
 1732. What was your average last season? Four and a half bags.
 1733. Do you feel satisfied that you can continue to grow wheat at the present price? We can as far as I am concerned. I am a freeholder, and I have the plant and stock.
 1734. You think you cannot put the land to a more profitable use than by growing wheat? Not at the present time.
 1735. You must cultivate a portion of your land? Yes; to keep things going.
 1736. Do you intend to continue cultivating it? Yes; but I do not think it would be of any use increasing the plant, because at present prices I think we have about reached the maximum. To increase the area would mean an increase in the plant; but I should be likely to increase if a railway were nearer.
 1737. Where do you send your wool? To Melbourne.
 1738. Would the construction of a line from Jerilderie to Berrigan benefit you in any way? No.
 1739. Therefore you would not be likely to send any of your produce to any portion of the proposed line? Not any—I could not think of it.
 1740. To what particular point do you think the line should go in this particular district to be of benefit to you? To Finley.
 1741. It would serve a larger number of persons you think? It would serve a far larger area of country—north, south, east, and west.
 1742. Do you know whether the land is more suitable for agriculture at Finley than at Berrigan? I know it is of about the same quality—quite as good in every respect.
 1743. Is there a larger population around Finley than around Berrigan? Taking the centre to the right and left there is a larger population around Finley. A railway here, I consider, would embrace a district of 5,000 souls to the westward of the stock route including Deniliquin. To the east of the stock route between here and Corowa I do not think there would be one-half that number of souls.
 1744. To what distance would the people in this district be benefited by the construction of a line from Jerilderie to Finley? To the point from which they are sending their wheat now. The Deniliquin railway is over 20 miles from me, and people send it still 10 miles further to the west, and within 10 miles of the Deniliquin railway.
 1745. Yet they prefer sending their wheat to Jerilderie than to Deniliquin? Yes.
 1746. Is any wheat in your neighbourhood sent to Deniliquin? No; not within 10 miles of me.
 1747. You prefer to send your produce 30 miles to Jerilderie than 20 to Deniliquin? Yes.*

Mr. Frank Faulkner, Manager of Tuppal Estate, sworn, and further examined:—

- Mr.
F. Faulkner. 1748. *Chairman.*] You have a further statement you wish to make to the Committee? Yes. I heard you ask several witnesses what it costs to put in wheat. These are cases in which farmers employ their own time, and put in a lot of work themselves, but at contract prices I put in 1,400 acres, buying the seed-wheat, ploughing, sowing, reaping, and bagging, allowing interest on the money from the time I put the crop in till I took it off, and the cartage to Jerilderie at 24s. per acre estimated; it produced from three and a half to four bags, and I got 2s. a bushel in Jerilderie.

MONDAY, 21 JANUARY, 1895.

[*The Sectional Committee met at the Public Hall, Savernake, at 11 a.m.*]

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. JOHN DAVIES, C.M.G. The Hon. CHARLES JAMES ROBERTS, C.M.G.	CHARLES ALFRED LEE, Esq. JAMES GORMLY, Esq.
--	--

The Sectional Committee further considered the proposed Railway from Jerilderie to Berrigan.

Mr. William Miller, farmer and grazier, Savernake, sworn, and examined:—

- Mr.
W. Miller. 1749. *Chairman.*] Where do you live? At Savernake.
 1750. Close to the town? Within a mile of it.
 21 Jan., 1895. 1751. How long have you been here? Twelve years.
 1752. What area of land have you? 1,920 acres.
 1753. How do you hold it? It is a conditional purchase.
 1754. *Mr. Lee.*] Do you know the route of the proposed railway from Jerilderie to Berrigan? Yes.
 1755. How will the construction of the line affect you in this particular place? It will not do us any good at all.
 1756. What do you produce here chiefly? Wheat and sheep.
 1757. Where is your market for it at the present time? Sydney. 1758.

* Note (on revision):—I beg leave to point out that owing to the development that has taken place in settlement and agriculture in the Murray Valley during my residence here, viz., nineteen years, defines the stock route from Jerilderie to Tocumwal as the true and best centre south for any extension from Jerilderie, with a line nearly due east and west from Berrigan to Deniliquin, crossing the stock route at a point at or near Finley, as the national and most adjustable lines to open up the Murray Valley and so place the district in a much desired equal position for communication with Sydney.

Mr.
W. Miller.
21 Jan., 1895.

1758. By which route? We have to send now either to Jerilderie or to Corowa.
1759. Which route do you usually use? Corowa.
1760. It being the cheaper? Yes.
1761. What is the distance? About 30 miles.
1762. What is the distance to Jerilderie? About 35 miles.
1763. If a line were constructed to Berrigan, would it not bring you within 18 miles of the railway? Yes.
1764. Would not that be a great advantage to you? It would be just as cheap for us to cart from here to Jerilderie as to cart to Berrigan and put the produce on the train there.
1765. What cartage do you pay from Jerilderie? One shilling and twopence per bag.
1766. That is for the 35 miles? Yes.
1767. What would be a fair proportion to allow for carriage to Berrigan, a distance of some 18 miles? They would charge 1s. to take it to Berrigan. I do not think you could get it done for anything less.
1768. Do you know the rate proposed to be charged on the proposed line from Jerilderie to Berrigan? I do not.
1769. If it were half-a-crown a ton that would be equal to 3d. a bag? Yes.
1770. If there were a constant dray traffic from here to Berrigan, do you think they would make you a charge as high as 1s. a bag? They charge us a shilling for 18 or 20 miles—we cannot get it done for less from here.
1771. Admitting that you had to pay 1s. a bag to Berrigan, and 3d. a bag from Berrigan to Jerilderie, making 1s. 3d. in all, would not the difference of a more convenient and quick market compensate you for the extra 1d.? I do not think so.
1772. You are not favourable to the construction of the line from Jerilderie to Berrigan? No.
1773. What is your reason? My reason is that it will not benefit us here at all.
1774. Are you opposed to any railway construction into the district? No.
1775. Then you have some other route in view? Yes; from The Rock to Murray Hut.
1776. Supposing that, as a matter of policy, the country adopted that route, it would probably be three years before the line reached you, while the construction the other way would reach you in six months? We are satisfied to wait three years.
1777. You would sooner wait three years than have a railway coming via Berrigan? Yes.
1778. What is your tonnage a year in wheat? About 40 tons.
1779. You would rather continue for the next three years to drag that 40 tons 35 miles by road to Jerilderie than have railway extension within 18 miles of you in six months? Yes; in view of the ultimate benefit.
1780. Do you produce anything besides wheat? Yes; grasses.
1781. Which way do you send your wool to market? Via Melbourne.
1782. Why Melbourne way? I do not think you could get it carted the other way. The railway carriage is too much from Jerilderie to Sydney.
1783. It is cheaper to export through Victoria? At the present time.
1784. If it were cheaper to send your wheat that way, you would do that also? Yes.
1785. You always send the cheapest way? Yes; we have to do so in these times.
1786. If there were fifty railways here, and you could get your produce carried to the port of export more cheaply in Victoria you would send it that way? Yes.
1787. Could you tell me about what settlement there is about Savernake? I could not tell you. This visit is unexpected. We did not expect you.
1788. You are the president of the local Farmers' Association? Yes.
1789. Are your views upon the railway question identical with those of the majority of the farmers? The majority of the farmers in my direction.
1790. How about the farms situated to the west of Savernake? When you get 8 or 10 miles the other way some of them are in favour of the Berrigan line.
1791. Not all? Not all.
1792. What is the average size of the holdings here? I could not say.
1793. How is the land held? It is pretty well all conditional purchase.
1794. Is any land here held from station holders under lease with the right of purchase? No that I am aware of.
1795. At the present price of wheat, and the present rate of carriage, are you sending your wheat to market at a profit? No.
1796. In the event of wheat continuing at its present low price for thirty years, what would the output be for this district? If it keeps at the present price there would be nothing in growing wheat.
1797. Will you yourself continue growing wheat? If it keeps at its present price I shall have to discontinue, because there is no profit in it.
1798. Where were you living before you came here? At Deniliquin.
1799. Were you farming there? Yes.
1800. How many years were you there? Four years.
1801. You have seen the effect of railway extension on that side; was not that extension of great benefit to the farmers there? The only railway goes from Moama to Deniliquin.
1802. Did not that railway afford a convenient outlet to the produce of the district? It did.
1803. Even to those within 12 or 18 miles of it? Yes.
1804. Would it not be the same in this district if it were pierced by a railway? Yes; if there were a line from The Rock to Murray Hut.
1805. But any railway brought nearer a few miles to you than any existing line would be a great advantage to you, would it not? It would do us a certain amount of benefit.
1806. It would be impossible to construct a line into this district to any point without doing a certain amount of benefit? Yes.
1807. But the settlers here are of opinion that the railway from The Rock to Murray Hut should be made? Yes.
1808. If it were a question of having the railway from The Rock to Murray Hut or no line at all, which would you sooner have? No line at all.
1809. You would sooner remain as you are than have a line within 18 miles of you? Yes.
1810. [Chairman.] You say that you are charged 1s. a bag for the carriage of 18 miles from here to Berrigan? Yes.

- Mr. W. Miller. 1811. Supposing you were offered a contract at 1s. to carry goods for 18 miles or a contract at 2d. to carry them for 24 miles, which contract would you take? If I were a carrier, of course I would rather take the highest.
21 Jan., 1895. 1812. Yet you tell us that the carriers prefer to carry 18 miles to Berrigan for 1s., and go the next 24 miles for 2d., and that they think that both those are the same sort of contract? When they have the wheat on the waggons they would sooner take it to Jerilderie.*
1813. You think the carriers are that sort of men that when they are constantly running backward and forward from here to Berrigan, 18 miles, at 1s., that they would rather waste their time by going on to Jerilderie for the extra 2d.? When the wheat is on the wagon they would just as soon go to Jerilderie for the extra 2d. as cart the 18 miles for 1s. It does not take them so very much longer.
1814. How far are you from the proposed Rock line? Five or 6 miles.
1815. That would suit you much better than the proposed railway? Yes.
1816. If you thought that the Berrigan extension would endanger The Rock line you would rather not have the Berrigan extension made? Yes.

Mr. William Patrick O'Dwyer, farmer, near Savernake, sworn, and examined:—

- Mr. W. P. O'Dwyer. 1817. *Chairman.*] What are you? A farmer.
1818. Where do you live? On Killyana.
1819. How far from here? Eight miles.
21 Jan., 1895. 1820. In what direction? In a south-westerly direction, between Mulwala and Berrigan.
1821. Towards Barooga? Yes.
1822. What area have you? Between myself and brothers, we have 4,000 acres of land.
1823. How long have you been here? I selected in 1877, and I have resided continually on the land since.
1824. *Mr. Davies.*] Where do you send your produce to? It is about seven years ago since I started growing wheat, and five years out of the seven it has always gone to Jerilderie.
1825. Where did it go last year? To Yarrawonga, mainly owing to the Victorian railways giving us a reduction.
1826. Where will this year's crop go? I have not fully decided. It depends upon the local market price.
1827. But at the existing price? I think it would go to Yarrawonga.
1828. Would there be sufficient inducement to you to send your produce by the proposed line from Berrigan to Jerilderie if you could get it carried on that line for 2s. 6d. a ton? Judging from past experience, I should certainly patronise the Berrigan line. We cannot tell what the prospects of the future are for these things.
1829. But at the present prices would it not be a greater advantage to you to have your wheat carried from here to Berrigan, paying from there 2s. 6d. a ton, than to pay 1s. 2d. a bag from here to Jerilderie? I have always paid 2s. with the exception of last year, when I got it carted at 1s. 9d.
1830. The present rate is almost prohibitive? Yes; the carriers have to pay for water.
1831. Then you think that the proposed line would be a great advantage to you? Certainly.
1832. If the railway were constructed from Berrigan, would you in future send your produce by that line? I certainly should do so.
1833. You could not get your produce carried any similar distance in the district for 2s. 6d. a ton? No.
1834. What is the distance between your district and the Victorian border? Eighteen miles.
1835. What is the rate of cartage? It has been about 1s. a bag up to the present time.
1836. Do you employ your own horses and drays? I always employ carriers.
1837. How long have you been in the district? Eighteen years.
1838. Have you increased your sheep from year to year? No, I have not.
1839. What area have you under cultivation? We grow from 400 to 500 acres of wheat.
1840. What is your average yield? Thirteen bushels. Of course, we do not continually crop the land. After three or four years we allow it to lie fallow.
1841. If the railway were made would you also send your wool to the Sydney market? I could not speak with certainty on that point. I never tried the Sydney market.
1842. Would the proposed charge of 3d. a ton for wool be too high a charge on the proposed railway? I have not made a calculation—I cannot say.
1843. How many miles would you be from the Berrigan station? About 10 miles. I could go and come in the same day if I had a team of my own.
1844. You would use your own drays in a case of that kind? Yes.
1845. You favour the construction of the proposed line? I am in favour of The Rock line, but it is nine years since I signed a petition for the Berrigan line, and considering my experience of that agitation I reckon it would take twenty years before The Rock line would be built. I have given that line all the support I could, but I am now inclined to think that half a loaf is better than no bread.
1846. How far would you be from the surveyed route of the line from The Rock to Murray Hut? About 6½ or 7 miles.
1847. Then there is not a great deal of difference between your distance from the line from The Rock to Finley and the line from Jerilderie to Berrigan? About 4 miles difference. Of course, the rates have to be taken into consideration.
1848. You think the proposed railway would serve you fairly well? Yes.
1849. Would you regard it as a reasonable railway service to your property from the point of view of a distance? Yes; I should be satisfied with 15 miles.
1850. And you say that you would be within 10 miles of the proposed railway, and that you regard that as a very fair service? Very fair.
1850½. Have you anything further to state? When Mr. Miller was giving his evidence I heard him say that a majority of the farmers in the local union were in favour of The Rock line; that is not the case. The question was never put to the union as a test question.

* Note (on revision):—I beg to state that it is not 24 miles extra, as it is only 35 miles from my place to Jerilderie; that would leave 17 miles extra cartage. Berrigan is not in a line from my place to Jerilderie, and the carriers would as soon cart direct to Jerilderie from here for 1s. 2d. as cart to Berrigan for 1s. if they have a good few trips to make.

Mr. Edmund Daniel O'Dwyer, farmer and grazier, near Savernake, sworn, and examined:—

1851. *Chairman.*] Where do you live? About 8 miles from here, towards Barooga.
 1852. What are you? A farmer and grazier.
 1853. How long have you been here? I selected here in 1879, and I have been residing here ever since.
 1854. Are you Secretary of the Farmers' Union? Yes.
 1855. *Mr. Gormly.*] As Secretary of the Farmers' Union, I suppose you have an extensive knowledge of the country round Savernake? Fair knowledge.
 1856. Is there any considerable quantity of land under cultivation? A considerable quantity.
 1857. What is the number of holders within a radius of 10 miles, approximately? I will hand in a list, showing the holdings within a radius of 10 miles of Savernake, together with the area under cultivation in each case. [Vide Appendix.]
 1858. You have had some experience in agriculture here? I have.
 1859. What do you think of the probability of land continuing to be cultivated here, if the present price of wheat continues? I think a continuance of the present price would have a very bad effect upon cultivation.
 1860. You think the farmers will not increase the area of land they now cultivate? It all depends upon the area. Take the case of a man with a limited area—of, say, 400 or 500 acres. If he continue cropping it at the present price, he is really ruining his farm—the land will become more and more exhausted every year. Seven years' continuous cropping here leaves the land in a very poor state. It will depreciate in value fully 30 per cent.
 1861. Then there are a number of landowners who do not continually cultivate the whole of their land—who cultivate only a portion of it? Yes.
 1862. Are you of opinion that the number of landowners in the district will continue to grow wheat even at present prices? Yes; they have nothing else to do.
 1863. They find that they can put the land to more profitable use in that way than in any other way? Yes; there is only one industry—that is, the dairying industry—which will enable them to utilise the land with greater profit.
 1864. You think it would pay better to grow wheat than wool and fat stock? Yes.
 1865. You have tried both? Yes.
 1866. If a line were constructed to Berrigan, would the farmers be likely to send their wheat to that terminus, or to some other point? Speaking without the slightest prejudice, I certainly think that the wheat would go to Berrigan from the neighbourhood of Savernake.
 1867. To what distance to the south-east of Savernake would the farmers send to Berrigan? To the south-east the wheat would go to Corowa.
 1868. What is the distance from here to Corowa? About 30 miles.
 1869. And it is 18 miles to Berrigan? Yes.
 1870. How would the railway to Berrigan serve those persons residing generally to the east of Savernake? The produce of any settlement to the east of here would be divided equally between Corowa and Berrigan.
 1871. You think, then, that the proposed railway to Berrigan would serve settlers to the east and south-east of Savernake? Not to any considerable extent.
 1872. Is there a considerable quantity of wheat produced between here and Berrigan? Yes.
 1873. Is there also a considerable quantity produced going in the same direction, but more towards the Murray? Not very much is produced directly to the south of this point. It is all station property.
 1874. Produce would come chiefly from the south of Berrigan? Yes; it would be sent to Berrigan until it reached my place.

Mr. Patrick Gorman, farmer, near Savernake, sworn, and examined:—

1875. *Chairman.*] What are you? A farmer.
 1876. Where do you live? Five miles from here, to the north of Savernake.
 1877. *Mr. Roberts.*] What area do you cultivate? I am cultivating 300 acres this year.
 1878. Is it all wheat? Pretty well all. I have a little hay, and a few acres of oats.
 1879. Do you grow any lucerne? I have about 30 acres in at present.
 1880. Where do you send your produce? I sent it to Yarrawonga last year, and I am likely to send it there this year.
 1881. For what reason? It is more convenient, and I get a better price.
 1882. How far is it from Yarrawonga to your place? Twenty-four miles.
 1883. What is the cost per bag from your farm to Yarrawonga? I daresay I could get it done at 1s. a bag. I cart my own wheat, and it would not cost more than that. A few miles make very little difference. It is the loading and unloading that the carriers consider.
 1884. Do you sell at Yarrawonga? Yes.
 1885. Have you ever sent to Jerilderie? Yes.
 1886. Do you find it more expensive to send to Jerilderie? It is entirely a matter of prices;—I never send to Sydney direct.
 1887. You send to Yarrawonga on a local demand? Yes.
 1888. Have you ever sent to Corowa? Yes.
 1889. To sell in the local market? Yes.
 1890. Do you view the construction of the proposed line from Jerilderie to Berrigan with favour? No; The Rock line would suit me much better.
 1891. There has been a trial survey of the line from The Rock to Murray Hut? Yes.
 1892. How near would that trial survey be to your farm? From 3 to 4 miles.
 1893. Then it is not difficult to understand that you prefer The Rock line? No; but a line 10 or 12 miles away would suit me.
 1894. What distance would you be from the railway at Berrigan? About 17 miles.
 1895. You would be nearer to Berrigan than any other line—nearer than you would be to Yarrawonga and Corowa? Yes.
 1896. Would you use the line? I could not get the wheat carted under 1s. a bag to Berrigan, and 1s. 2d. to Jerilderie. The road between my place and Berrigan is fairly bad. I could draw more to Jerilderie than to Berrigan; that is another consideration.

Mr. E. D.
O'Dwyer.

21 Jan., 1895.

Mr.
P. Gorman.

21 Jan., 1895.

- Mr. 1897. You are a member of the local Farmers' Union? Yes.
 P. Gorman. 1898. Can you tell this Committee what is the opinion of a majority of the members of that union
 21 Jan., 1895. regarding the proposed line to Berrigan? No; because one-half of the members reside within 10 miles
 of Berrigan and the others reside 20 miles away. There must be a difference of opinion about the line in
 such a case as that.
 1899. Would it be fair to assume that any farmer within 10 miles of Berrigan would be favourable to the
 Berrigan line? I should think so. I certainly should be if I lived there.

- Mr. Alexander John MacDougall, farmer and grazier, Savernake, sworn, and examined:—
 Mr. A. J. 1900. *Chairman.*] What are you? A farmer and grazier.
 MacDougall. 1901. Where do you live? About a quarter of a mile from Savernake.
 21 Jan., 1895. 1902. Your holding adjoins Savernake? Yes.
 1903. Have you been here long? Six years.
 1904. You have been engaged in growing wheat and raising wool during that time? Yes.
 1905. Will you state briefly where your market has been, and the reason why you have adopted it? I
 have always carted to Yarrawonga. It is 30 miles from my place to Corowa, and 30 miles to Jerilderie.
 1906. I should like to know whether, in your opinion, this portion of the district would be brought under
 the influence of the proposed extension from Jerilderie to Berrigan? Well, the western portion of
 Savernake might, but to the eastward of Savernake the produce will all go the other way—to Yarrawonga
 or to Corowa.
 1907. That would be contingent on prices to a large extent? Yes.
 1908. If the rate of carriage by dray and the freight by rail to Jerilderie were cheaper than the rate to
 Yarrawonga by dray, you would adopt the cheaper route? Yes. We always go in for the best price
 and the lowest cartage.
 1909. But taking a wider view of the matter, do you not think it would be a certain advantage to the
 district to have a railway terminus within 18 miles of it? No; I do not think so. If we get the line to
 Berrigan we may never get it any closer. There may never be a chance of getting the other line. That
 is my idea. We should be left permanently at some distance from railway communication.
 1910. You will perceive that there will be so many others resident in other portions of the district who
 would be in the same position as yourself? Yes.
 1911. And it is a difficult matter to take a railway to every man's door? I do not want a railway to my
 own door, if it be for the good of the public that it should be taken further off.
 1912. Will the proposed extension to Berrigan be of no advantage to this district? No; I do not think
 it will. It would be right enough so far as those to the west are concerned, but it would be of no benefit
 to those to the east.
 1913. With an improved road to Berrigan, would it not be an inducement to you? It might be a little
 inducement, but I think the road is about as far away as the railway.
 1914. As far as you can see at the present time, the extension of the line known as the Rock line would
 be the most advantageous to the district? Yes.
 1915. Have you considered that that is rather a question to be dealt with in the distant future? No; I
 have not thought much about it.
 1916. Has it occurred to you that a line nearly 100 miles in length would have to be constructed to get
 down to the district which would be touched by the proposed extension of 20 miles? That, of course, is
 another matter.
 1917. If such a work were undertaken it would be many years before the railway was brought to your
 door;—would it not in the meanwhile be an advantage to you to have communication of some kind as
 rapidly as possible? Not to myself, speaking individually.
 1918. But to the district? I can only speak for myself on that point.
 1919. Supposing it became a question of an extension from Jerilderie to Berrigan or no railway at all,
 which would you prefer? No railway at all would be just as well.
 1920. You are so situated that it is a matter of little moment to you whether the railway is taken to
 Berrigan or not? That is about the state of the case.
 1921. *Mr. Davies.*] Do you regard Berrigan as the centre of a large agricultural district? I do not
 know that it is the centre of a large farming district.
 1922. Do you know it a little? I have not been much through it.
 1923. Do you know it sufficiently to express an opinion? I think I do. I have not been further west
 than Berrigan.
 1924. You do not know the whole of the wheat-producing country there? No.
 1925. You think that it would be better to have no line than that the railway should be constructed to
 Berrigan? Yes.
 1926. Would you have the whole of the farmers of the Berrigan district deprived of railway communica-
 tion because you prefer the line from The Rock than the line from Berrigan? The Rock line would also
 serve the Berrigan people.
 1927. You would rather wait until you could get The Rock line? Yes.
 1928. In the meantime you would deprive the farmers of the Berrigan district of any improved means of
 getting to market? I suppose that would be so. With regard to The Rock line we were led to believe
 that there was a chance of our getting it. I am not viewing the question as if there were no chance
 whatever of our getting that line.
 1929. How long have you been led to believe that you would get The Rock line? For some time.
 1930. Do you see any approach to the consummation of your desire on that subject? Not much.
 1931. How far to the eastward of Berrigan towards Savernake would the proposed railway serve the
 farmers? For a distance of 10 or 15 miles, I should say.
 1932. So that this district would be within 3 miles of being served by the Berrigan railway? This
 portion of it.
 1933. *Mr. Gormly.*] Are you acquainted with the route of the surveyed line from The Rock to Murray
 Hut, and with the centres of settlement of that route? I know the portion from here to Clear Hills.

1934. Is there a greater quantity on land under cultivation within the same radius of Savernake as of Berrigan? I do not think so. Mr. A. J. Mac Dougall.
1935. You think that there is a greater area under cultivation around Berrigan? I should think so. 21 Jan., 1895.
1936. Do you see any immediate prospect of an increased quantity of land going under cultivation at Savernake? Yes.
1937. Is the land here well suited to the growth of wheat? Yes.
1938. If the district had railway communication do you think the landowners would cultivate a greater area of land? I think so. I know that I should.
1939. Are there many landowners owning from 320 to 2,000 acres in the neighbourhood of Savernake and to the eastward of it? A good few. Very few hold over 640 acres.
1940. Does that class of holders extend considerably to the eastward along the proposed line from The Rock to Murray Hut? Yes; right along the route as far as I know it.
1941. You know the Clear Hills district? Not too well.
1942. Have you been among the holdings there? Yes.
1943. What distance is it from here to Clear Hills? From 18 to 20 miles.
1944. Is the land there well suited to agriculture? It is very good wheat growing land.
1945. You think that land would be put under cultivation if a railway were constructed from The Rock to Murray Hut? I think it would.
1946. But you yourself would derive no benefit from the construction of the proposed line from Jerilderie to Berrigan? I should rather see the line come that way than no way, but I should derive no benefit from it.
1947. You think that a more suitable line for the development of these districts could be constructed—namely, a line from The Rock to Murray Hut? Yes.

Mr. Robert Edward Young, farmer and grazier, Savernake, sworn, and examined:—

1948. *Chairman.*] What are you? I am a farmer and grazier. I am a member of the firm of Young and Killin. Our boundary is about 3 miles east from Savernake. Mr. R. E. Young.
1949. How long have you been there? Since 1880. 21 Jan., 1895.
1950. *Mr. Davies.*] Would the proposed line to Berrigan be of advantage to you? Not the slightest.
1951. How many miles are you from Berrigan? Our homestead would be about 24 miles.
1952. What is the nearest point of your property from the proposed railway? About that distance.
1953. Where do you generally send your produce? To Corowa and Yarrawonga. The wool goes to Yarrawonga. The wheat is sold in Corowa generally, but the last lot we sold went to Wagga.
1954. What acreage have you under cultivation? Two thousand three hundred acres, and we propose to increase it.
1955. That is the largest area you have ever had? Yes.
1956. Notwithstanding the bad prices you have had that area? Yes; we are farming on the "halves" system.
1957. Has the price ruling for wheat during the present season been satisfactory to you and those working with you on the "halves" system? Yes; it has been satisfactory to us. We consider that the cropping improves the land for grazing.
1958. The property owner has an advantage in that case? Yes.
1959. How much wheat do you expect from your holding this year? About 10,000 bags.
1960. What will be the yield per acre? From four or five bags down to three.
1961. Has the land, bringing in three bags, been long under cultivation? It is the first year, and it is considered to be a fair crop.
1962. And as to the land bearing five bags? That is the second year's crop. We only propose to crop the land for three years, and then to graze it.
1963. Do you run sheep? From 25,000 to 30,000.
1964. How many miles are you from the Victorian border? About 20 miles from Yarrawonga, and about 26 miles from Corowa.
1965. How far would you be from the proposed Rock line? The nearest point would be 8 miles away.
1966. A line in that direction would suit you better than the Berrigan line? Yes.

Mr. James Smart, farmer, near Savernake, sworn, and examined:—

1967. *Chairman.*] What are you? A farmer.
1968. Where do you reside? At Killyan.
1969. Where is that? About 8 miles from Savernake, towards Barooga.
1970. *Mr. Gormly.*] You have been many years cultivating land in this district? Since 1884. Mr. J. Smart.
1971. About what quantity do you hold? Five hundred odd acres.
1972. What area have you cultivated? About 170 acres altogether.
1973. What area have you under cultivation this year? About 100 acres.
1974. How many years have you cultivated that? Nine years continuously.
1975. What was your yield this season per acre? About 3½ bags.
1976. Where do you send it? To Victoria this year.
1977. If the railway were made to Berrigan would you use it? Yes; I am twelve miles from Berrigan.
1978. Have you anything more to state to the Committee? I do not care where the line goes from Jerilderie to Berrigan, or from The Rock to Berrigan. I think, from what I hear, that if a railway is constructed here there will be extensive dairying in the district.
1979. Have you seen lucerne grown successfully here? Yes.
1980. Why do you think the dairying industry would be carried on extensively? I have seen it carried on in many other districts, and this country is far better suited to it than are many other districts in which it is a success.
1981. *Mr. Lee.*] You appear to be a comparatively small cultivator? Yes; I am in heavily-timbered country, and it is a job to clear it.
1982. Do you keep sheep? A few.
1983. Have you been able to make a living off the land with your small cultivation and your sheep? Yes. 1984.

- Mr.*
J. Smart. 1984. How will you get on this year? It will take me all my time this year to make both ends meet.
 1985. If wheat does not improve in price, how will you small holders get on? We shall have to cultivate more, I suppose. The small holders will have to combine wheat-growing and dairying.
 21 Jan., 1895. 1986. As long as you can make a living off your holding you will stick to it? Yes.
 1987. Have many of the holders parted with their land to the larger men? No.
 1988. Is it a common practice in this district for the selectors to keep their farms? Yes; it has been since 1884.
 1989. Is there much dumming in the district? No.

- Mr. R.
MacFarlane.* 1990. *Chairman.*] Where do you reside? Three miles east from Savernake.
 1991. What are you? A farmer.
 21 Jan., 1895. 1992. *Mr. Roberts.*] Where do you send your wheat? To Corowa.
 1993. Do you produce anything but wheat? Wool.
 1994. Where does it go to? To Yarrawonga.
 1995. Will the proposed line to Berrigan be of any use to you? None at all.
 1996. How far would you be from the Berrigan railway? About 18 miles.
 1997. Would carriage to the Berrigan railway station be as high as it is to Corowa and Yarrawonga? Yes; quite. Yarrawonga is the cheapest. Of course it is the nearest point.
 1998. Would the surveyed line from The Rock go near your property? Within 8 or 10 miles.
 1999. That line would be much more convenient to you than any other proposed line? Yes.
 2000. What area have you under cultivation? 130 acres.
 2001. What is the extent of your holding? Eight hundred acres altogether.
 2002. How many sheep do you run? About 1,000.
 2003. Have you ever sent your wheat to Jerilderie? I did about seven or eight years ago.
 2004. It is immaterial to you whether the line is made to Berrigan or not? If The Rock line is not likely to be carried out, I am not against the Berrigan line, but The Rock line would suit me best.
 2005. Would you use the Berrigan line? I do not think so. I know the country between here and The Rock. It is grand farming land right through. When you get higher it is a little hillier than the flat country. I think the line ought to be made in that direction.
 2006. Is the country generally adapted for the cultivation of wheat? Yes; taking it right through from here to The Rock.
 2007. You favour The Rock line? Yes; because I think it suits everyone.
 2008. Have you ever travelled to Murray Hut? Yes.
 2009. Apart from the fact of the line from The Rock being of more use to you, as one knowing the country well from here to Murray Hut would you consider Berrigan the centre of this rich agricultural district? No; I would not. I think it is only one end of it. I reckon that Savernake is pretty well the centre of the district.
 2010. *Mr. Gormly.*] Have you been over the country between here and The Rock several times? Yes.
 2011. Do you know the country between Green's Gunyah and Urangeline? Yes.
 2012. Is the land from Clear Hills on to The Rock, good agricultural land? Yes.
 2013. Is it cleared? Some of it; some of it is heavily timbered.
 2014. You think that a line starting from The Rock, and coming through the districts you have named on to Savernake and Murray Hut, would serve the largest extent of country? I do.
 2015. Is there not a large number of small holders in the direction of The Rock line? Yes, holders of from 640 to 1,000 acres.
 2016. There is no considerable area of that land on the line? No.
 2017. You know the surveyed route? Yes.
 2018. And you know that there is a considerable amount of farming carried on upon it? Right through.
 2019. And you think the agricultural resources of that part of the country would be considerably increased by constructing the line? Yes.
 2020. That is the reason you advocate it? Yes.
 2021. The line would pass within a moderate distance of your holding? Yes; I think it would suit everyone.
 2022. Apart from your personal interest in the construction of the line, you think it would be a line serving an extensive agricultural country, including Berrigan and Finley, as well as other agricultural centres? Yes.
 2023. Which would be the more direct line for produce? From here to The Rock, to Sydney; or from here around by Berrigan and Jerilderie to Sydney? From here to The Rock.
 2024. That would be the most direct route? Yes.
 2025. For the reasons you have given you favour a line in that direction? Yes.
 2026. And your experience in the district extends over twenty years? Yes.

- Mr.
S. McKenry.* 2027. *Chairman.*] What are you? Farmer and grazier.
 2028. Where do you reside? Adjacent to Savernake on the north.
 21 Jan., 1895. 2029. *Mr. Lee.*] You are not favourably disposed towards the proposed extension from Jerilderie to Berrigan? No.
 2030. You think the proposed line from The Rock would be the most advantageous to the district? Yes.
 2031. Supposing notwithstanding your opinion and the opinion of so many of your neighbours, the extension should be carried out from Jerilderie to Berrigan—would you be able to use it? No, it would not benefit me much.
 2032. As a matter of fact would you use it? No. I do not think we could.
 2033. At present which way do you send your produce? Chiefly to Yarrawonga and Corowa.
 2034. You do not know where your wheat goes to after it has been sent to Corowa? It is generally all sold locally in Corowa; sometimes it goes on to Sydney.
 2035. You have the advantage of intermediate markets? Yes.

2036. And nothing more could be given you along the Berrigan line? No. Mr.
S. McKenry.
2037. You attach great importance to getting the extension from The Rock? Yes, I consider it would serve the public generally. There is good agricultural land from the Rock to Murray Hut. It would suit the people of Urangeline, Boree Creek, and Green's Gunyah. 21 Jan., 1895.
2038. Your place is situated about midway between Yarrawonga, Corowa, and Berrigan? Yes.
2039. And unless some line were brought to within a short distance of you it would make very little difference to you whether the Berrigan line were constructed or not? Very little.
2040. *Mr. Gormly.*] Have you any considerable knowledge of the country between here and The Rock? Yes. I have been through it several times.
2041. Do you think the extension of the line from The Rock to Murray Hut would serve a larger extent of agricultural country than the line from Jerilderie to Berrigan? Yes, it would cause more land to be put under cultivation. At the present price of wheat and carriage it does not pay.
2042. The Rock line would be the most direct line from the Murray wheat-producing districts to Sydney? Yes.
2043. And the produce would be carried by the shorter distance? Yes.

Mr. Thomas Joseph O'Dwyer, farmer, near Savernake, sworn, and examined:—

2044. *Chairman.*] What are you? A farmer. Mr. T. J.
O'Dwyer.
2045. Your brothers have already given evidence? Yes.
2046. Have you anything further to state to the Committee? Yes. I should like to say that there is apparently a co-operation at the present time among the firms of millers; and on account of the shippers operating at Yarrawonga, the New South Wales wheat is costing the Sydney millers 2½d. more at Yarrawonga than at Corowa or Jerilderie. If the millers were giving the price for wheat they should give at Corowa and Jerilderie, a great deal of the wheat which now goes to Yarrawonga would go to those places. 21 Jan., 1895

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

Railway from Jerilderie to Berrigan.

SECTIONAL COMMITTEE.

APPENDIX.

A.

[To Evidence of Mr. J. T. Mawson.]

RETURN of Wool carried from Jerilderie by Rail for Seasons ending 1892-93, 1893-94, and 1894-95.

APPENDIX.

57

B.

[To Evidence of Mr. J. A. T. Rochfort.]

ALPHABETICAL List of Stockowners on or within the radius of the proposed Berrigan Railway, and number of Stock in the Sheep District of Jerilderie, for the year 1894, taken between 1st and 31st December.

Names of Owners in Alphabetical Order.	Acreage.	No. of sheep.	No. of pigs.	Names of Owners in Alphabetical Order.	Acreage.	No. of sheep.	No. of pigs.
Aitken, Peter	1,320	70	38	How, E. R.	320
Badook, L.	740	384	Jones, Jno.	1,280	300
Bakie, Jas.	320	Jones, John, junr.	74
Batten, Jas.	640	90	Lapthorne Bros.	40
Batten, Geo.	732	200	Leurs Brothers	640	250
Blair, Jno.	3,500	600	Moodie, J. R.	1,280	865
Brown, Mrs.	810	90	Moulton, R. J.	1,244	460
Burwood, Ed.	320	M'Allister, Chas.	4,550	4,035
Cameron, Alex.	1,200	1,550	M'Donald, D.	320
Carter, B.	197	M'Donald, Geo.	640
Connell, Jas., Exors. of	2,420	2,873	M'Donald, Mur.	3,400	1,000
Cooper, W.	800	M'Donald, R.	3,011	3,800
Corbett, D.	640	85	M'Gee, B.	150
Corbett, Mrs. M.	1,706	1,700	3	M'Grogan, John.	800	800
Creed, W. and E. H.	3,800	3,593	M'Lellan, Mrs.	1,177	1,000	3
Dalgleish, Alex.	2,720	2,520	O'Brien, John.	6,000	5,115
Dickie, Jno.	2,800	3,100	O'Shanassy, Jno.	3,070	3,000
Drummond, Bros.	580	Pyle, Jas.	1,605	114	7
Fox Bros.	600	350	Quade, Wm.	3,000	4,012
Gillespie, David	1,280	1,327	Reynoldson & Russell.	2,370	150
Gorman, E.	2,200	1,706	Robertson, Alex.	2,231	1,960
Gorman, E. T.	5,416	5,480	Shand, Wm.	640	180
Gorman, D.	340	41	5	Union Mortgage and Agency Company.	5,284	6,000
Gorman, R. F.	2,360	1,690	Watson, T. M.	960	43
Graham, R.	1,140	900	Wilson, A. C.	21,000	28,719
Greggery, W. J.	3,500	5,817	2	Atkinson, C. M.	1,280	2,000
Harris, L.	224	Approximately returned.
Hazlewood, E. H.	640	415	GRAND TOTAL....	143,831	119,772	143
Horsfall and Cartington.	32,720	21,420				
How, G. and M.	1,300	103				

This return includes 66 holdings, 1 of which exceeds 30,000 acres ; 1, 20,000 acres ; 1, 6,000 acres ; 2, 5,000 acres ; 1, 4,000 acres ; 7, 3,000 acres ; 7, 2,000 acres ; and 12, 1,000 acres ; 24 being under 1,000 acres.

The character of the land is indicated by the fact that, notwithstanding there are fewer sheep kept now than at any other season of the year, and the great proportion of the holdings under crop, there still remains 835 sheep to the acre.

As the returns from which the results quoted are obtained are made for the purpose of assessment it is quite safe to assume they are by no means exaggerated.

J. A. T. ROCHFORT,

Acting Inspector of Sheep.

Jerilderie, 16th January, 1895.

C.

[To Evidence of Mr. G. B. Beere.]

COST OF CONSTRUCTING METALLED ROADS IN THE VICINITY OF BERRIGAN AND TOCUMWAL.

Sir,

I have the honor to enclose herewith the printed copy of evidence given by me before the Sectional Committee at Jerilderie, on the 14th January, 1895.

I have made some corrections, and attach an extract from the District contract book showing the cost of constructing metalled roads in the vicinity of Berrigan and Tocumwal.

Note that the amount of metal used is in both instances only 1 cubic yard to 1 lineal yard of road. This amount answers very well, but it would be better to use $1\frac{1}{2}$ to $1\frac{1}{3}$ cubic yards which would increase the cost considerably, and bring the total cost per mile up to nearly the estimate given to the Committee, viz., £2,060.

The Secretary, Parliamentary Standing Committee on Public Works.

I have, &c.,
G. B. BEERE, R.E.

DENILIQUIN DISTRICT.

Cost of Metalled Road at Tocumwal.

Copy of Contract 7-U.	£ s. d.
27½ chains of formation, 45 feet wide, with a convexity of 18 inches, at per chain, 30s.....	41 5 0
606 cubic yards of granite metal, 3-inch gauge, spread at the rate of 1 cubic yard to the lineal yard of road, at per cubic yard, 12s.....	363 12 0
202 cubic yards of blinding, spread at the rate of $\frac{1}{3}$ cubic yard to the lineal yard of road, at per cubic yard, 1s. 6d.....	15 3 0
	<hr/>
	£420 0 0

This constructed road is at the rate of about £1,500 per mile. Metal was carted a distance of 8 miles.

Cost of Metalled Road at Berrigan.

Copy of Contract 1-94.—Chanter-street.	£ s. d.
6 chains of formation, 45 feet wide, with a convexity of 18 inches, at per chain, 40s.....	12 0 0
132 cubic yards of metal, granite, 3-inch gauge, spread at the rate of 1 cubic yard to the lineal yard of road, at per cubic yard, 7s.....	46 4 0
195½ cubic yards rotten granite blinding, spread at the rate of $1\frac{1}{2}$ cubic yards to the lineal yard of road, at per cubic yard, 5s.....	46 15 0
	<hr/>
	£106 19 0

This constructed road is at the rate of about £1,427 per mile. Metal was carted a distance of $1\frac{1}{2}$ miles.

G. B. BEERE, R.E.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

RAILWAY FROM PARKES TO CONDOBOLIN.

REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, and the Public Works (Committees' Remuneration) Act of 1889, 53 Vic. No. 11, to whom was referred the duty of considering and reporting upon "the expediency of constructing a line of railway from Parkes to Condobolin," have, after due inquiry, resolved that it is expedient the railway should be constructed *via* Bogan Gate, but at a cost not exceeding £2,100 per mile, including the cost of land resumption; and in accordance with the provision of sub-section IV, of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly:—

1. The proposed railway, a *précis* of the official papers in connection with which will be found on pages 1 and 2 of the evidence, is 60 miles 30 chains in length, and is designed as a light or pioneer line. Starting from the west end of the present railway station at Parkes, the route has been surveyed in a direction almost due west to Bogan Gate, a gap in a range of hills running north and south, and then taking a direction slightly towards the south continues to Condobolin, where it terminates on the north side of the township. Stations or platforms will be provided at Gunningbland, Bogan Gate, Burrawang, Derrawang, and Condobolin. The country traversed is mostly level, and presents no difficulties in the form of watercourses, there being only two shallow creeks, which can be crossed by small pile bridges. No trouble will be experienced in getting a grade of 1 in 100, and the railway will be very nearly a surface line, ballasting being required only where the ground along the route is soft and in the station yards. It is intended to work the line three days a week, except during the busy season, when it may be necessary to run trains more frequently.

Description of
the proposed
railway.

2. The railway being of the light or pioneer description, economy will be observed in everything connected with its construction. The general dryness of the climate, and the immunity of the surveyed route from floods, render the absence of ballast a matter of no risk. The sleepers used will be of ironbark, but round-topped instead of rectangular, and therefore cheaper than those ordinarily laid down. The rails will be similar to those used on the extension from Molong to Forbes. This lightness of construction will not give rise to any particular disability in the use of rolling stock, as though the heaviest engines running on the railways of the Colony could not be employed the road will be quite sufficient for the engines which carry on the traffic between Molong and Parkes and Forbes. Fencing will be dispensed with except at stations and platforms.

Estimated cost.

3. The total cost, as estimated by the Engineer-in-Chief for Railway Construction, exclusive of land and compensation, is in round figures £127,000 or £2,100 per mile, the details being as follows:—

	Per mile.			
Earthworks	£300	18,112	10	0
Culverts and bridges	120	7,245	0	0
Fencing, $\frac{1}{2}$ of £100	17	1,026	7	6
Level crossings, stops, gates	60	3,622	10	0
Permanent-way materials	630	38,036	5	0
Laying, 1s. 6d.	132	7,969	10	0
Ballasting, 3s. per lin. yard ($\frac{1}{4}$ of £264)	66	3,984	15	0
Sleepers, 2s. 6d., 2,400	300	1,625*	18,112	10 0
Station works and sidings, water supply, turntables, &c. ...	213	12,890	0	0
Mileage Posts, &c., and signals	15	228	905	12 6
		<hr/>	<hr/>	<hr/>
Engineering and supervision	93	1,853	111,905	0 0
		<hr/>	<hr/>	<hr/>
Contingencies, about 8%	154	1,946	117,519	17 6
		<hr/>	<hr/>	<hr/>
	£2,100	£126,817	12	6

(Say) £127,000.

Railway Commissioners' Report.

4. The Railway Commissioners favour the construction of this line, although their report indicates a yearly loss of £2,000, the difference between an annual cost of £9,095 and a traffic estimate of £7,095. The cost comprises interest on capital expenditure £4,445, and estimated cost of working £4,650; the traffic estimate, coaching and mails, £1,972 10s., and goods £5,122 10s. The Railway Commissioners recognise that the line will pass through comparatively easy country, mostly Crown land, consisting largely of red soil specially adapted for agriculture, and that the route is one fairly free from inundation. They also regard the railway to a great extent as part of a national line, which, in due course, will be extended to serve the Lachlan district as far as Hillston, and then go on to Menindie, upon the Darling. Such a line, together with an extension of the Cobar railway to Wilcannia, the Commissioners say, would make an excellent division of the central and western districts of the Colony,—one which ultimately would be of enormous advantage to the settlers in those parts of New South Wales, and would also, to a great extent, prevent the present abstraction of New South Wales wool into Victoria. With reference to this, it is pointed out, if the pastoralists are able to put their wool on to railway lines closely adjoining their runs, a stop will be put to the cartage that now goes on to the Murrumbidgee River, in the process of sending the wool down that river to Echuca, and thence by rail to Melbourne.

Outline of the Committee's inquiry.

5. Witnesses in the inquiry have been examined by the Committee in Sydney, and by a Sectional Committee in the districts which the railway will serve. An introductory statement by the Under Secretary for Public Works was followed by some evidence from the Engineer-in-Chief for Railway Construction, the Secretary to the Railway Commissioners and the Railway Goods Superintendent, the Principal Assistant Engineer of the Roads and Bridges Branch of the Department of Public Works, an officer of the Valuation Branch of the same Department, a surveyor of the Railway Construction Branch of the Department, and a late examiner of Public Works Proposals, who, in 1892, reported upon the proposed line; and a Sectional Committee was then appointed to visit the districts through which the railway will go, inspect the route, and examine local residents. The Sectional Committee visited Parkes, Bogan Gate, Trundle, Condobolin, and Forbes, acquainting themselves with the route of the proposed railway and other suggested routes, and taking evidence at all places where population is centred.

Sectional Committee's report.

6. The Sectional Committee report that the line will not pay its way for some years to come, and that the Railway Commissioners' estimate of traffic is not likely to be realised until a much larger population than the present one is settled in the district; but they recommend the railway, *via* Bogan Gate, because the country through which the line will go is eminently suitable for the construction of a pioneer or surface railway and for agricultural settlement, because settlement will largely increase in the district when the present pastoral leases expire and the land is made available for conditional purchase, and because, the "line passing largely through Crown lands, the cost of resumption must necessarily be small, and the question of severance should be capable of easy adjustment."

. The route chosen for the railway does not meet with the approval of all the route of sections of the people in the districts interested in the line. The residents of Trundle consider that it should pass through that settlement, and the people of Forbes are of opinion that the starting-point of the railway should be at Forbes instead of at Parkes. The Sectional Committee made careful inquiry into this question, and found the advantages from adopting the Parkes to Condobolin route, *via* Bogan Gate, to be much superior to any offered by either going through Trundle or starting from Forbes. To go by way of Trundle would add about 7 miles to the length of the line, prevent its construction as a surface railway, and largely increase its cost. The cost of constructing a line from Forbes to Condobolin would be about the same as that of the line from Parkes, but a large resumption of private land would be necessary along the Forbes route, and the railway would neither serve so large a population as that which is expected to use the line from Parkes, nor attract traffic as a railway of the kind is expected to do. The Report of the Sectional Committee states that if the railway were constructed from Forbes to Condobolin "a large portion of the traffic between those two points would still be sent by the river road to Forbes, and that a large number of the stock would still continue to be driven to Forbes railway station for the purposes of trucking, as a travelling-stock route exists on both sides of the river nearly the whole distance."

8. Trundle is a well-settled district where numbers of settlers are producing large quantities of cereals, fruit, &c., as well as to some extent following the occupation of pastoralists, and many of the landholders along the route which would be of service to Trundle stated their willingness to give the land required for railway purposes free of cost as well as pay special rates of carriage for the conveyance of their produce over the line. The Sectional Committee, much impressed with the importance of this part of the district, remark in their Report that it may be worthy of consideration whether a branch line could not with advantage be made from the locality of Bogan Gate towards Trundle.

9. The traffic expected from the railway is not sufficient to make the line pay, and the Committee are of the opinion expressed by the Sectional Committee, that the railway will not pay for some years. As already stated the Report of the Railway Commissioners represents an annual loss of £2,000. The Sectional Committee, in their Report, say not only that the line will not pay its way for some years to come, but that the Railway Commissioners' estimate of revenue "is hardly likely to be realized until a much larger population is settled in the district." Though a large amount of traffic is carried on by teams within the area which should be served by the proposed line, some of the evidence given before the Sectional Committee indicates doubt as to how much of this traffic would, with the construction of the railway, be attracted to the line. Carriage by teams is very low, and once the teams are loaded a few miles extra distance by road is regarded as of little consequence, and produce in such circumstances may as well be taken to Parkes or Forbes as to any station on the railway nearer at hand. The production of wheat seems likely to increase, but the low price at present obtained for it is such as to discourage this branch of agricultural industry, and the railway freight for cereals is not sufficiently large to add much to the railway revenue. The estimate of traffic made by the Railway Commissioners does not, it should be said, include wheat. A certain return from the carriage of wheat is expected, as the district is one very suitable for wheat-growing; but in order to be secure in their traffic estimate, the Railway Commissioners have excluded wheat. With the same object they reduced the estimate of traffic made by the Railway Goods Superintendent, who visited the district for the purpose of inquiry, by £1,000. The Railway Goods Superintendent's estimate of traffic was as follows:—2,000 tons of goods, averaging 3d. per ton per mile, and earning £1,500, and 1,000 tons at 2d. per ton per mile, which will be £500; 200 tons from intermediate points on the line, practically about the Trundle district, at 3d. per ton per mile, or £55, and 300 tons at 2d. per ton per mile, £55; 5,000 tons of wool from Condobolin at 2d. per ton per mile over the whole of the distance, at 10s. a ton, or £2,500, and 1,400 tons of wool from a distance of 22 miles, which will mean £262 10s. Skins and other produce are estimated at £100; copper from Mount Hope, 200 tons at 2d. per mile, £100; live stock—1,000 trucks of sheep at 17s. 6d., the extended mileage rate, £875; 200 trucks

trucks of cattle at 17s. 6d. per truck, £175; or a total goods traffic of £6,122 10s. With regard to the coaching traffic it is estimated that from Condobolin there will be 2,000 passengers at 7s. 6d. each, £750; 500 passengers at 10s. each, £250; from the Bogan Gate, which represents the station at which the Trundle traffic should fall in, 310 passengers at 2s. 9d. each, or say £42 10s.; 50 at 4s. each, £10; horses, carriages, dogs, parcels, &c., £200; mails, £720; or a total coaching estimate of £1,972 10s.; and a grand total of £8,095, which reduced by £1,000, makes the amount stated in the Railway Commissioners' report.

Reasons apart
from traffic for
constructing
the railway.

10. But though as a revenue-producing line the railway is not likely for some years to prove satisfactory, there are special reasons advanced in support of its construction. The statement in the report of the Railway Commissioners that the railway should be looked upon to a great extent as part of a national line to be pushed on ultimately to Hillston and Menindie, thus making, with an extension of the Cobar line to Wilcannia, what they consider would be an excellent division of the central and western districts of the colony, gives to it a special importance. It at once assumes the aspect of a line essential to a policy of extending railway facilities systematically, with the twofold object of encouraging settlement and preventing trade which should come to Sydney from going elsewhere. Generally, the Railway Commissioners state, they have not been indisposed to recommend railway extensions, though the traffic estimate indicates a sum below the interest and working expenses, provided the main lines will be assisted and the country opened up for additional settlement. In the present instance they anticipate both these results will be obtained. Hillston is the point the Commissioners desire chiefly to reach, as that is the centre of a large wool-growing district in which the produce is keenly competed for by another Colony; but the line to Condobolin is expected to do something in the direction of securing traffic which under present circumstances does not benefit the railway system of New South Wales. Another reason in support of the railway is the great want felt by the settlers in the district through which it will go for better means of communication with markets than they have by roads and teams. To the Sectional Committee it was represented that the distance to the nearest railway line and the cost of sending produce there by teams are such as to seriously cripple the efforts of the farmers, and that unless better facilities for the conveyance of produce to the metropolitan market are provided some of the selectors will probably be obliged to abandon their holdings. Further, there must be borne in mind the desirableness of constructing cheap railways wherever they are likely to prove beneficial. The pioneer railway is but little more expensive in its construction than a first-class road, and no better means of opening up the interior and spreading population through the country can at present be devised. The land resumption in connection with the railway will be very small. The 10 per cent. addition to the estimated cost, allowed the constructing authority by the Public Works Act in the carrying out of the work, should not be required, as the estimate of £2,100 per mile is said by the Engineer-in-Chief to include all possible contingencies except land resumption.

Land re-
sumption in
connection
with the
railway.

11. To avoid land resumption and severance as much as possible the route of the railway is located, where practicable, on roads and Crown land. From an appendix to the evidence of the Engineer-in-Chief for Railway Construction it will be seen that the total area of land which it will be necessary to resume is 123 acres, or a length of $10\frac{1}{2}$ miles $1\frac{1}{2}$ chain wide. Twenty-four acres of this area will be resumed from Burrawang station, the owner of which informed the Sectional Committee that he will be prepared to accept Crown land in exchange for the quantity taken. Thus the area of land to be resumed will be reduced to 99 acres of practically unimproved land, 9 acres of which are town lands of little value. Under these circumstances it is apparent that the cost of land resumption should be very small.

Crown land
adjacent to
the railway.

12. A large area of Crown land is situated along the route. It is described as of good quality, very suitable for wheat growing, and when the existing leases expire this land should be made available for settlement.

The Commit-
tee's recom-
mendation.

13. The Committee recommend the construction of the line *via* Bogan Gate at a cost not exceeding £2,100 per mile, that sum to include the cost of land resumption. They consider the reasons outside the question of the line immediately paying expenses to be sufficiently strong to justify its construction. Several of these are stated in

the

the Sectional Committee's report. In any exchange of Crown land for freehold land required for the purposes of the railway, care should be taken that no Crown land in close proximity to the line should be given. All Crown land so situated, the Committee are of opinion, should be preserved in the interests of people, who, when the land becomes available for selection, will take it up in small holdings; and if the opportunity for this increased settlement and the completion of the railway could be arranged to occur at about the same time, the success of the railway would be the more assured.

14. The resolution passed by the Committee is shown in the following extract from their Minutes of Proceedings of the 10th and 14th instant :—

Resolution of
the Com-
mittee.

Mr. Trickett moved,—“That, in the opinion of the Committee, it is expedient that the proposed Railway from Parkes to Condobolin, referred to the Committee by the Legislative Assembly, be constructed *via* Bogan Gate, at a cost not exceeding £2,100 a mile, including the cost of land resumption.”

Mr. Molesworth seconded the motion.

Mr. Chanter moved,—“That the motion be amended by omitting the words ‘Bogan Gate,’ with a view to insert the word ‘Trundle.’”

The amendment was negatived on the following division upon the question,—“That the words proposed to be omitted stand part of the motion” :—

Ayes, 10.
Mr. Ewing,
Mr. Humphery,
Mr. Trickett,
Mr. Hoskins,
Mr. Davies,
Mr. Roberts,
Mr. Hayes,
Mr. Lee,
Mr. Gormly,
Mr. Molesworth.

Noes, 1.
Mr. Chanter.

Mr. Lee moved,—“That the motion be amended by the addition of the following words,—‘as soon as the Crown lands along the route have been made available.’”

The amendment was seconded by Mr. Davies, and negatived on the following division upon the question, “That the words proposed to be added be so added” :—

Ayes, 2.
Mr. Davies,
Mr. Lee.

Noes, 9.
Mr. Ewing,
Mr. Humphery,
Mr. Trickett,
Mr. Hoskins,
Mr. Roberts,
Mr. Hayes,
Mr. Chanter,
Mr. Gormly,
Mr. Molesworth.

The motion was then passed on the following division :—

Ayes, 9.
Mr. Ewing,
Mr. Humphery
Mr. Trickett,
Mr. Hoskins,
Mr. Roberts,
Mr. Hayes,
Mr. Chanter,
Mr. Gormly,
Mr. Molesworth.

Noes, 2.
Mr. Davies,
Mr. Lee.

THOS. EWING,
Chairman.

Office of the Parliamentary Standing Committee on Public Works,
Sydney, 21 May, 1895.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

RAILWAY FROM PARKES TO CONDOBOLIN.

THURSDAY, 7 MARCH, 1895.

Present:

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.
The Hon. JAMES HOSKINS.
The Hon. JOHN DAVIES, C.M.G.
JAMES HAYES, Esq.

ROBERT HENRY LEVIER, Esq.
JOHN MOORE CHANTER, Esq.
JAMES GORMLY, Esq.
EDMUND WILLIAM MOLESWORTH, Esq.

The Committee proceeded to consider the proposed Railway from Parkes to Condobolin.

Joseph Barling, Esq., Under Secretary, Department of Public Works, sworn, and examined:—

1. *Chairman.*] Have you any Departmental statement to make in regard to the line under consideration? J. Barling,
Just as the Committee wishes. Perhaps it would be well for me to make a short statement before being
examined.
2. We should like you to do so? Very well. The proposal before the Committee was referred to it by the
Legislative Assembly last night, on the following resolution, which was moved by the Secretary for
Public Works:—

7 Mar., 1895.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS (*Railway from Parkes to Condobolin*) :—Mr. Young moved,
pursuant to Notice, That it be referred to the Parliamentary Standing Committee on Public Works to consider and
report on the expediency of constructing a line of railway from Parkes to Condobolin.

Question put and passed.

It would appear from the papers that this proposal was initiated in August, 1888, when on the representation of Mr. H. Cooke, M.P., the Minister (Mr. Sutherland) verbally authorised a survey to be made from Parkes to Condobolin. The survey was completed by Messrs. Wickham and Chalmers in December, 1888, and showed the line would be 60 miles 26½ chains long, with a ruling grade of 1 in 50, which, however, the Engineer-in-Chief considered too severe. The cost was estimated at £282,900 or £4,689 per mile. The present estimate is £2,100 a mile. No further action was taken until August, 1891, when a petition was received from the residents of Trundle and district asking that the line be taken *via* Trundle. On the recommendation of Mr. Deane, Mr. Secretary Young in September, 1891, approved of an examination of the district being made with a view to comparing the probable amount of traffic that might be expected from the different routes proposed. Mr. Gilhat (Examiner of Public Works Proposals) completed the examination in August, 1892, and reported in favour of a direct line from Parkes to Condobolin, *via* the Bogan Gate, partially on account of it being the shortest, and that the best Trundle lands being south of it that district would be sufficiently well served; but mainly as this route passed through large areas of Crown lands (some 238,000 acres), the only objection being the Parkes junction, leaving the line to Forbes a short branch. I have not got the latest particulars with reference to the land to be served by the proposed line; but I have written to the Lands Department for the information, and it will no doubt be in the hands of the Committee long before the termination of the inquiry. This, however, he points out, would disappear if the Forbes-Young connection were ultimately made. The Forbes junction is condemned on account of its passing through much alienated land. The Condobolin Council in March, 1892, wrote to the Parkes Council asking that Municipality to co-operate with them in endeavouring to have the proposed extension to Condobolin started from Parkes instead of Forbes, as it would be shorter, and benefit a larger population. On the 12th August, 1892, Mr. Hutchinson, M.P., forwarded a letter from the Trundle Progress Committee asking that a trial survey be made of the line *via* Trundle. Mr. Deane recommended that the line be examined by a competent surveyor, and the Minister (4th October, 1892) approved of this being done. Mr. Stawell made the examination and reported on the engineering features of the route; he said it would be an easy line about 67 miles long, with a ruling grade of 1 in 80 and possibly 1 in 100. Again, when the Minister was at Parkes in March, 1892, it was urged that a trial survey of the route *via* Trundle be made, but Mr. Secretary Lyne decided that the matter should stand over. The Melrose and Walker's Hill Farmers' Association wrote under date of April, 1893, urging extension of the Parkes-Condobolin line, and in June of the same year, Mr. Gardiner, M.P., forwarded a protest from the Trundle Progress Committee against Mr. Gilliat's report, and they asked that further investigation be made. On the papers being submitted, the Minister marked thereon "Not at present." A deputation representing the districts of Condobolin, Melrose, and Trundle, waited upon Mr. Secretary Lyne at Forbes, in December, 1893, and asked

J. Barling, Esq., that the line be extended to Condobolin without any reference to route. The Minister, in reply, stated he would have a report, and, conditionally upon its character, a trial survey made. He referred to the desirability of tapping the rich lands of the Lachlan, and treated the Forbes or Parkes connection an open question. The matter then remained in abeyance until September, 1894, when Mr. Brown, M.P., forwarded a communication from the Council Clerk, Condobolin, asking that the proposal be submitted to the Parliamentary Standing Committee. Before this could be done, however, a fresh trial survey had to be made from Forbes station to a junction with the line already surveyed from Condobolin to Cudal, and the Minister, on 3rd October, 1894, approved of this work being done. Mr. Brown, M.P., and the Mayor of Condobolin, called about this time and urged that the Parkes to Condobolin line be sent to the Public Works Committee without any reference to route. In accordance with a request from Mr. Secretary Young that some information be given in regard to the probable traffic prospects on this line, the Railway Commissioners, on 9th October, 1894, forwarded particulars of preliminary inquiries made. They were fully convinced of the necessity and wisdom of an extension of the railway system into the Lachlan River district. The Commissioners were unable to give any rough idea as to cost, and also could not say which route, in their opinion, should be adopted, pending the result of surveys being submitted to them. They suggested, however, as a matter of national policy, that the extension suggested in the Lachlan district should be adopted as a step towards ultimately reaching Menindie. This proposed national railway, they stated, would cut through the territory that is now under the influence of the other colonies, particularly Victoria, and without imposing any tax upon the settlers and pastoralists in the district, secure to New South Wales its legitimate traffic. The Commissioners therefore, suggested for the consideration of the Government, the wisdom of considering, without delay, the further extension of the line after Condobolin is reached. On 24th October, 1894, Mr. Gardiner, M.P., introduced a deputation representing the Parkes Municipal Council, who urged that a trial survey of the proposed line from Parkes to Condobolin be made *via* Trundle. The deputation stated that although this deviation from the direct route would involve an additional length of 5 miles, it could be easily and cheaply constructed, and a thickly populated portion of the district would be better served than by the more direct line proposed. Mr. Secretary Young, in reply, said the proposal was worthy of serious consideration. If Condobolin was to be connected by railway, it was a question upon which no absolute decision could be arrived at without a thorough survey of both routes. The Minister promised he would consider the whole matter, as to whether it would be wise to have this survey made, and if the traffic promised to be large enough from such a deviation, it might possibly be done. Further investigation, however, would have to be made before he could come to a decision. The Acting Engineer-in-Chief (Mr. Firth) considered that the Trundle route, which he thought was 4 miles longer than the direct route, but which Mr. Deane, who is in possession of more correct information, says is probably more than 6 miles longer than the direct one, would be a little more costly per mile, in addition to the extra length, than the direct route. Mr. Young finally approved of the Trundle route being considered when the Forbes amended survey was completed. The amended survey—length, about 5 miles—to connect Forbes Station with the original permanently-staked line at about 270 miles, was completed in December last; but on the 18th of the same month, Mr. Eddy communicated with Mr. Young stating that the Commissioners had made careful inquiry, and had also been over the country from Forbes to Condobolin, and from Condobolin to Parkes, and they were clearly of opinion that if a line is authorised, it should be from Parkes. The Minister then directed that no further work was to be done in connection with the Forbes-Condobolin line. Mr. Burge recently made an exploration of the Parkes-Condobolin survey with a view of getting a maximum grade of 1 in 100 and other improvements if possible. The line he stated may be conveniently divided into two parts, viz.:—1st, Parkes to Bogan Gate, which is a gap through which any line between the objective points must pass; and 2nd, Bogan Gate to Condobolin. On the first part, Mr. Burge is of opinion the line as amended by him can be made a surface one throughout with 1 in 100 maximum grades, and notwithstanding these, will be half a mile shorter than the present survey. The second part of the existing survey is over easier country than the first; except for a few short lengths a surface line almost can be obtained here. There is permanent water at Bogan Gate and at other convenient places. I will now read the report of the Railway Commissioners upon the line:—

Office of the Railway Commissioners of New South Wales, Sydney, 19 February, 1895.

Proposed "Pioneer" line of Railway from Parkes to Condobolin, 60 miles 30 chains.

IN accordance with the provisions of the "Public Works Act of 1888," section 13, we beg to report as under:—

Cost of Construction—

The Engineer-in-Chief estimates the cost of constructing a "Pioneer" line of railway (exclusive of land and compensation) at about £127,000

Annual Cost—

Capital expenditure at 3½ per cent. £4,445

The estimated cost of working would be as under:—

Permanent way	£2,700
Traffic	750
Locomotive	1,200

Total working expenses..... £4,650

Total annual cost £9,095

Traffic Estimate—

Coaching and Mails £1,972 10s.

Goods 5,122 10s.

Total £7,095

After careful consideration of the routes from Parkes and Forbes to Condobolin, we consider that a direct line from Parkes to Condobolin, *via* the Bogan Gate, is the better one to adopt.

The survey traverses Crown lands for the greater part of the distance, and is bounded on the north and adjacent to the leasehold areas of Burrawan and Gunningland. The line passes through comparatively easy country, consisting largely of rich red soil, specially adapted for agriculture. The route also is fairly free from inundation, which would not be the case were the line taken from Forbes.

This line should be looked upon, to a great extent, as a part of a national line, ultimately being extended to serve the Lachlan district as far as Hillston, and later on, by a further extension to Menindie on the Darling. It will be observed by the map attached hereto that this, together with a future extension of the Cobar line to Wilcannia, would make an excellent division of the central and western districts of the Colony.

Ultimately

MINUTES OF EVIDENCE—RAILWAY FROM PARKES TO CONDOBOLIN.

8

Ultimately this will be of enormous advantage to the settlers in these districts, and will also largely influence the question of the present abstraction of New South Wales wool into Victoria, as if the pastoralists are able to put their traffic on to the railway lines closely adjoining their runs it would put a stop to the cartage that now goes on to the Murrumbidgee River, and thence via Echuca to Melbourne, particulars of which are shown in the attached paper.

J. Barling,
Esq.
7 Mar., 1895.

The Seal of the Railway Commissioners of New South Wales
was hereunto affixed this nineteenth day of February, 1895, in the presence of—
JOHN KNEESHAW.

E. M. G. EDDY,	(L.S.)
Chief Commissioner.	
W. M. FEHON,	(L.S.)
Commissioner.	
CHARLES OLIVER,	(L.S.)
Commissioner.	

With reference to the remark that the route is "fairly free from inundation," Mr. Deane says that it is altogether free from inundation, and that is one of the strong reasons in favour of adopting the proposed route. I hand in the memorandum relating to rates referred to by the Commissioners, together with a map showing the area affected by special rebates and reductions allowed in Victoria. The official description of the line is signed by Mr. Deane, and is dated 6 March, 1895. It is as follows:—

PARKES TO CONDOBOLIN RAILWAY.—Length, 60 miles 30 chains.

Estimated Cost, £127,000, or £2,100 per mile, inclusive of Station Works and Buildings, but exclusive of Land and Compensation.

This proposed light railway begins by a junction with the existing Orange to Parkes and Forbes Branch Railway at the west end of Parkes Station, and proceeds in an almost due west direction to Bogan Gate, which is a gap in a range running north and south.

The direction here becomes slightly more southerly, and this is continued to Condobolin, where the line ends at the north side of the township.

The works will be light. The ruling grade will be 1 in 100.

3. *Mr. Molesworth.*] The Commissioners in their report make no recommendation such as they made in the case of the Berrigan line? No; but I have here a preliminary report signed by the Commissioners, which I need not read in full because it is practically superseded by the report which I have just read, in which they say:—

The time at the disposal of the Commissioners has not permitted of any inquiry into the merits of the above extension on the ground, but from general inquiry made from time to time they are fully convinced of the necessity and wisdom of an extension of the railway system into the Lachlan River district.

That report is dated, 9 October, 1894. I also hand in a compilation of the parish plans, and the Book of Reference. [Vide Appendix.]

4. *Chairman.*] Are you prepared to express an opinion in regard to a westerly extension of the line? I have had a talk with Mr. Secretary Young upon the subject, and he, of course, is fully aware of the great importance of the question of such an extension; but he says that it has not yet been determined upon.

5. You express no opinion? I express no opinion. The Commissioners give it as their opinion that there should be an extension to Menindie.

6. The Commissioners make reference to a leakage of traffic down to the Murrumbidgee, and thence to the Victorian Railways; do you know what route that traffic takes? The Commissioners mentioned it in their report.

7. They only referred to it in general terms? I am afraid I cannot give you the information, though no doubt Mr. Harper when he comes before you will be able to give you all particulars. I am not acquainted with the country.

8. How far is the Lachlan navigable? I do not think that it is navigable at all. If I remember rightly it ends in reed beds and swamps.

9. *Mr. Humphery.*] I suppose you have no personal knowledge in reference to this proposal. All your information is derived from the papers? Yes.

10. *Mr. Davies.*] The Commissioners report that there will be a loss upon this line of about £2,000 a year, and they make no direct recommendation in favour of its construction? Not in their report; but they are clearly favourable to it in the memorandum which I have before me, and a portion of which I have already read to the Committee.

11. They think that the line if constructed should go from Parkes, rather than from Forbes? Yes.

12. Coming to the cost of construction, will the same rule in regard to cheapness of sleepers and rails apply here, as applied in the case of the Berrigan line? This is a line of a similar character. It is what is called a pioneer line. Mr. Deane points out that it will be almost a surface line throughout.

13. The cost of rails on the Berrigan line was estimated at £3 a ton? Yes; some old rails are to be used there; but in this case new rails will have to be used. Mr. Deane will give you fuller information.

14. You do not know what they will cost per ton? No, I have not a detailed estimate before me.

15. When a detailed statement of cost is placed before us, will it also include the probable earnings of the line? No; the Railway Commissioners will give you that information.

16. You are not in a position to say what quantity of Crown land and private land will be traversed by the line? No, except from what I have read in Mr. Gilliat's report. I have, however, asked the Lands Department to furnish the information.

17. And you do not know if the line will go close to the public road? No, but Mr. Deane will be able to tell you that.

18. *Mr. Molesworth.*] Are there many towns to be served by this line, and if so what are they? The Railway Commissioners have been carefully through the country and they will give you that information. The various towns are marked upon the maps.

19. *Mr. Chanter.*] I notice that Mr. Gilliat puts the extra length of the line *via* Trundle, at about 12 miles? That is by road.

Henry Deane, Esq., Engineer-in-Chief, Railway Construction Branch, Department of Public Works
sworn, and examined:—

20. *Chairman.*] Mr. Barling has already told us the length, and the estimated cost of this line. Perhaps you will give us a description of the country through which it passes, and a detailed estimate of cost? I have not been over the route myself, but the surveyors report that it is chiefly red-soil country free from inundation.

H. Deane,
Esq.

7 Mar., 1895.

21. Easy country? It is slightly rolling country. It is not a dead level like the country over which the Berrigan line passes. Still there will be no difficulty about getting a grade of 1 in 100, and the line will be

H. Deane, Esq., be very nearly a surface line. There will be light cuttings here and there, but to what an extent has not been exactly proved. The surveyors are still at work in the field. They have surveyed about 25 miles out of the 60, and it will probably take them about two months to finish the survey. I understand that 7 Mar., 1895. basalt or diorite can be obtained for ballast; that there is ironbark at Bogan Gate, and on some of the ridges beyond, while water can be easily got. The line, therefore, should be a fairly cheap one. I have gone into the matter of station accommodation with the Railway Commissioners very carefully, and a close estimate has been made of what is required in that direction. This amount is included in my estimate of the total cost. I do not know that the visit to the district would add very much to the knowledge which I have of the line, although, of course, it may make some difference; but I think that the work can be carried out for £2,100 per mile. While everything will be provided for that, I do not consider that the prices put down are too high. The detailed estimate of cost is as follows:—

PARKES TO CONDOBOLIN.—Length, 60m. 30 chns.

	Per mile.		
Earthworks	£300	£18,112 10 0
Culverts and bridges	120	7,245 0 0
Fencing, $\frac{1}{2}$ of £100	17	1,026 7 6
Level crossings, stops, gates	60	3,622 10 0
Permanent-way materials	630	38,036 5 0
Laying, ls. 6d.	132	7,969 10 0
Ballasting, 3s. per lin. yard ($\frac{1}{2}$ of £264)	66	3,984 15 0
Sleepers, 2s. 6d., 2,400	300	1,625	18,112 10 0
Station works and sidings, water supply, turntables, &c.	213	12,890 0 0
Mileage-posts, &c., and signals	15	228	905 12 6
Engineering and supervision	93		£1,853 £111,905 0 0
			5,614 17 6
Contingencies, about 8%	154		£1,946 £117,519 17 6
			9,297 15 0
			£2,100 £126,817 12 6
(Say) £127,000.			

22. Do you know what sort of country the dotted red line shown on the map, going from Forbes to join the Condobolin line, passes through? I have not been over that country, but I believe the route you speak of passes through some flooded land, and through more alienated land than the proposed line.

23. Could it be constructed as cheaply as the proposed line? Yes, except that you would have a certain amount of flooded country to deal with.

24. *Mr. Hoskins.*] And would have to purchase more land? Yes.

25. *Chairman.*] Have you any means of forming an approximate estimate of the cost of that line—has it ever been surveyed? Yes, there has been a survey from Forbes to Condobolin, so that I may be able to get you some information upon the point. I have here a paper showing the distance between a great many places in this district, as well as their distance from Sydne, and as I think it will be of use to the Committee, I will read it:—

Sydney to Euabalong, via Parkes	365	Forbes to Parkes	20
		Parkes to Dubbo	79

26. Have you anything else to say? I do not know that there is anything else to which I wish to particularly refer.

27. Do you know the route from Wyalong to Cudgellico? No.

28. From Barmedman to Hillston? No, I have not been further than Temora on that branch.

29. Do you know the route from Dubbo to Parkes? No, I have not been over it.

30. *Mr. Davies.*] What do you allow for rails in your estimate? I have put them down as costing £4 10s. a ton in Sydney.

31. What concessions have the Commissioners made in regard to delivering on the spot? I have assumed that they will be carried for 1d. per ton per mile.

32. That is a rate similar to that which you are to be charged for the Berrigan rails, but a little higher? Yes; the cost of carrying the rails for the Berrigan line is to be a little under 1d. per ton per mile; but the ordinary freight, as shown in the Schedule, is 2d. per ton per mile, so that we are getting them carried at half price.

33. The rails for this line will cost 30s. per ton more than the rails for the Berrigan line cost? I intend to use new rails for this extension.

ERRATA.

For distances in table on opposite page—

Sydney to Cudgellico, <i>via</i> Wyalong	330½ miles
Sydney to Euabalong	346½ ,

read

Sydney to Cudgellico, <i>via</i> Wyalong	400 ,
Sydney to Euabalong	416 ,

34. But there will be that difference in cost? There will not be that difference exactly, because lighter rails will be used. H. Deane, Esq.
35. But the cost per ton will be £4 10s., as against £3? Yes.
36. Do you make provision for using the rolling-stock now used upon the Orange and Parkes line upon the proposed line? I do not see any objection to that. 7 Mar., 1895.
37. The proposed line would be sufficiently stable to carry the ordinary rolling-stock? Yes. I think the speed should be limited to, say, 20 miles an hour; then it would be quite safe to travel over it.
38. With the same rolling-stock which is used on the other line? No; with the same rolling-stock as is used on the Forbes line.
39. Is that rolling-stock different from the rolling-stock used upon the other lines of the Colony? No; but the heaviest class of engines is not used there. The Commissioners have ordered that only engines with a weight of about 12 tons to the axle should be used there.
40. That would be engines weighing about 70 tons? About 60 tons, including the tender.
41. There would be no difficulty in obtaining sleepers in the neighbourhood of the proposed line? That is so, judging from the reports. There are bands of ironbark forest from which you can get them.
42. And they can be got more cheaply than on the Berrigan line? Yes.
43. Do you propose to fence the whole line? No; I only provide for the fencing of one-sixth of it.
44. That is at the stations and platforms? Yes.
45. What width of land do you propose to resume for the line? The line will go mostly through Crown land, which will not have to be resumed. The principle has been in dealing with land out west—and I know the Commissioners quite approve of it—to secure a width of 3 chains. Such a width is not absolutely necessary, but it is convenient.
46. And you would advise that 3 chains be reserved in this case? I do not know that it would matter so much in this case, where the line is to be unfenced, though we must resume some land, of course. Where we went through sheep runs the land would be available for pasturage right up to the line.
47. Still you will define the railway boundary by a certain resumption? Yes. I think it would be best to have 3 chains.
48. The major portion of the land through which the line will pass belongs to the Crown? Yes.
49. Do you know what the proportion of private land is? No, I cannot tell you that; but it would depend very much upon the route taken.
50. You are not in a position to give the Committee the names of the private owners along the route, or to tell us what quantity of land would have to be resumed? No, not yet.
51. Have you seen the country? No; I have not been over the country between Parkes and Condobolin, though I know the country between Parkes and Forbes.
52. *Chairman.*] Are you thinking of going to see the route of the proposed line? I should like to do so.
53. Will you see it before the inquiry terminates? I think I can easily manage that. It is much more satisfactory to see the country through which it is proposed to take a railway.
54. *Mr. Davies.*] Had you to do with the previous survey of the line from Parkes, or from Forbes to Condobolin, in 1888? The first year in which I had to do with any survey was in 1885. A line was then being staked to Forbes through Cudal and Toogong. The line beyond that point had already been surveyed, the survey going on from Condobolin to Wilcannia.
55. Do you remember what was the estimate then for the construction of a line to Condobolin? The estimated cost of the line from Forbes to Wilcannia was, I think, £1,050,000; but I cannot tell you what the portion from Forbes to Condobolin would cost. The estimate was probably a good deal higher than that which I have submitted to the Committee.
56. You do not remember an estimate of £4,689 a mile being made for the construction of a line from Forbes to Condobolin? No; I do not remember that estimate being made. It was probably for a different class of line.

TUESDAY, 12 MARCH, 1895.

Present:

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.	The Hon. WILLIAM JOSEPH TRICKETT.
The Hon. JAMES HOSKINS.	The Hon. JOHN DAVIES, C.M.G.
The Hon. CHARLES JAMES ROBERTS, C.M.G.	

JAMES HAYES, Esq.
ROBERT HENRY LEVIEU, Esq.
JOHN MOORE CHANTER, Esq.
CHARLES ALFRED LEE, Esq.
JAMES GORMLY, Esq.

EDMUND WILLIAM MOLESWORTH, Esq.

The Committee further considered the proposed Railway from Parkes to Condobolin.

Henry Deane, Esq., Engineer-in-Chief, Railway Construction Branch, Department of Public Works, sworn, and further examined:

57. *Chairman.*] Have you any further evidence to tender? No; excepting that I was asked to obtain some information about the survey from Forbes to Condobolin, as compared with that from Parkes to Condobolin. I cannot find that the cost of the work would be any greater than it would be between Parkes and Condobolin, with the exception that it might be necessary to provide for a greater amount of flooded country. H. Deane, Esq. 12 Mar., 1895.
58. *Mr. Hoskins.*] Would not more land have to be purchased? Yes; but I am speaking in regard to the engineering construction.

- H. Deane,
Esq.] 59. *Chairman.*] You say then that the cost of the two routes would be very much about the same? Yes
 60. Have you surveyed *via* Trundle? No; there has been no survey.
 12 Mar., 1895. 61. Has there been any report upon it? Yes.
 62. Is the country similar? The country is somewhat similar. If anything, it would be a little more costly there; it is not quite so flat.
 63. You can inform us more definitely later on, perhaps? I could not give you any more information than we have at present without a survey. It would not be a difficult route to survey. I mean to say, it would not be a difficult class of country to put a railway through.
 64. Your evidence amounts to this: that in addition to it being a little longer, the engineering difficulties presented are a little greater? Yes; the earth-works would probably be a little higher.
Mr. Molesworth.] 65. Have you been over this country yourself? No.
 66. You are dependent upon the reports of your subordinate officers? Yes; I intend to go over the country. I propose to go that way, and to come back *via* Wyalong; or to start by the southern line, and to come back by the western line.
 67. Do you contemplate doing so before the inquiry is likely to close? That depends on how soon it will close. I could not go this week; but I could make arrangements to go at an early date.
 68. From the information at your disposal can you tell us, generally speaking, what is the character of the surface of the ground. Is it fairly level country? It is slightly undulating country; but all easy country. It is possible to keep very close to the surface nearly all the way.
 69. What will be your deepest cutting? That I could not say at present,—we have not sufficient information.
 70. And you cannot say what will be your deepest embankments? No.
 71. You do not think they would be heavy? No; the amount put down in the estimate for earth-works will cover the cost.
 72. It will be a little more uneven country than the line from Jerilderie to Berrigan? Yes, it is quite different from that.
 73. Do you know anything about the nature of the soil? Yes, it is red soil.
 74. You look upon that as being rather soft for railway construction? No; it is very good dry country, so the surveyor reports.
 75. Will you require to ballast much of the proposed line? It would not be necessary to ballast very much. I propose to ballast chiefly about the station grounds.
 76. You only propose, I understand, to fence adjacent to the stations? Yes.
 77. Have you many culverts and bridges to provide for? I have only put down culverts and bridges at £120 per mile. There will not be very many. Probably the biggest opening will be at the creek which passes through the Bogan Gate—Gunningbland Creek.
 78. What is the width of that opening? It has not been absolutely decided.
 79. I understand that the bridging will not be extensive? No, only timber openings will be built.
 80. And it will necessarily be put up at a moderate cost? Yes, a bridge of that character, even if we had to put in 200 feet of it, divided up over the whole of the line, would not amount to very much.
 81. Do you get your ballast within easy distance of the line itself? Yes.
 82. You get it almost as you go along, I suppose, from the side of the line? There is ballast on the ridges.
 83. Without it having to be conveyed to the line any great distance? Yes, it is very handy.
 84. And the sleepers are obtainable at or near the line? Yes; we pass through timber country near Bogan Gate, and there are some little spurs beyond there, between that and Condobolin.*
 85. What class of sleepers will you get? They will be ironbark, but they will be round-topped.
 86. And split? Yes.
 87. They will be cheaper than the ordinary sleepers, of course? Yes, because with the ordinary sleepers it is stipulated for rectangular form.
 88. Do you place them at the same distance from each other as you would the others? I have allowed, for sleepers, 2,400 to the mile, which is a little closer than usual. The others are placed about 2,000 per mile.
 89. Is there any difficulty with regard to drainage upon that line? No.
 90. I suppose you propose to construct the line as near as possible on the principle of the pioneer lines? Yes, to make it as cheap as possible.
 91. You have been through the estimate yourself? Yes.
 92. And you do not think there is any necessity for it being exceeded in any way? No, I think not.
 93. You think ample provision has been made for all contingencies? Yes.
Mr. Hayes.] 94. With reference to the survey of the line *via* Trundle, I see the Minister made a statement some time ago that the work should be done. Were any instructions given you to have it done? No; we have had no instructions to make a survey.
 95. Mr. Barling makes a statement to the effect that a deputation waited on the Minister, and he stated that instructions were given to have the line *via* Trundle surveyed. You are not in a position to say anything about that matter? No actual instructions have been given to make a survey.
 96. When you visit the district will you examine the route *via* Trundle? I could do so, although I did not propose to do so. I proposed simply to go over the line from Parkes to Condobolin, and then across the country to Wyalong, or take the reverse direction.
 97. From the information you have so far with reference to the line from Parkes to Condobolin, is there any extent of flooded country on the route? No, none whatever. Of course, the Gunningbland Creek will spread out in times of flood; but I understand that when you speak of flooded country you mean country extensively flooded by a big river like the Lachlan. There will be nothing of that kind—not even near Condobolin. Care will be taken to avoid it.
 98. There are no engineering difficulties on the line from Parkes to Condobolin, as surveyed? None whatever.
Mr. Roberts.] 99. What is the amount of your estimate per mile for the line? £2,100.

100.

* NOTE (on revision):—After personal inspection I find that these answers require modification. There is no ironbark forest on the course of the survey. From inquiries I made, I learnt that ironbark grows on all the ridges in the neighbourhood of the line, and that there would be sufficient to provide the class of sleepers proposed.

100. That exceeds the estimated cost of the Jerilderie to Berrigan line by £100 per mile? Yes. H. Deane,
Esq.
101. Will you explain the difference in the two estimates. Is the increase on account of the country not being so level? Yes; £76 of it is due to earth-works, owing to the country not being level. I also have a larger amount for contingencies. I think, between the two, you would find that the difference would be made up. 12 Mar., 1895.
102. Do you think it is necessary to provide for a larger sum for contingencies on this line than on the line just mentioned? Yes, I think so; considering that the surveyors have not finished the line. I dare say I can speak more definitely on that point when I have personally inspected the ground.
-
- Hugh McLachlan, Esq., Secretary to the Railway Commissioners, sworn, and examined:—
103. *Chairman.*] You come here at the instance of the Railway Commissioners? Yes. H.
104. *Mr. Lee.*] You are aware of the report submitted by the Minister for Public Works in connection with the line? Yes. McLachlan,
Esq.
105. And the estimated total annual cost of the same, £9,095? Yes; that is interest and working expenses. 12 Mar., 1895.
106. The estimated traffic is £7,095? Yes.
107. Showing a loss of £2,000 per annum? That is, on interest and working expenses.
108. Can you give the Committee any special views of the Commissioners for extending the line into that country? Nothing more than what is stated in the report. They think it is a desirable thing to do, and probably to extend it later on to Hillston.
109. Do you at present receive any large amount of traffic from that country? Of course a good deal of it goes to the other Colonies from Hillston.
110. What kind of produce do you usually get? It is all pastoral produce about Hillston—wool and stock, and general stores going up.
111. Do the Commissioners favour this particular route in preference to any other suggested route? Yes; they prefer the Parkes to Condobolin route for reasons they have given in their report.
112. Is your Department making any special arrangements with the station-holders in that part of the country at the present time? No.
113. On the same lines as some of those made in the South Riverina country? No; none whatever.
114. And the traffic from that part of New South Wales then would drift into Victoria? From Hillston district no doubt a great deal of it would.
115. Have the Victorian Railway Commissioners a rebate margin in this portion of the Colony? Yes; a very large one.
116. Do you know how far it extends? It extends right throughout the Colony, but is divided into zones. The further the distance is away from the Victorian lines the greater is the amount of rebate. The more difficult it is to get the traffic, the greater the rebate they have allowed.
117. To which of their lines would that traffic be diverted? I am not quite certain at which point it would go in.
118. The fact remains that it passes out of our Colony into the adjoining Colony of Victoria by river or otherwise? Yes; very largely—that is from about Hillston.
119. One of the objects of this extension would be to retain that trade to New South Wales? Not so much in regard to the first section. I do not know whether the first section would affect very many of what you may call the competitive stations, but if you extended it further on to Cargellico, Euabalong, and Hillston, it would; but this is proposed as the first section of a railway going into the Lachlan country.
120. But you anticipate a certain amount of traffic even from this extension? Yes; we expect to get a limited number of stations by this first extension.
121. Is it contemplated to fix any special rate for this line? The idea, so far, is to charge the rates practically as an extension of the existing line to Parkes—to base the rate on the present rates ruling: but the amount has not yet actually been fixed. At present we have an exceptional set of rates to Parkes and Forbes. We have a through rate for wool, live stock, ores, and so on; and for the cheaper class of goods—the A and B classes—we have what are called local rates. Probably the rates on this extension would be an extension of the rates on the Parkes and Forbes line, that is, through rates would apply to all the dearer class of goods, and local rates would apply to the cheaper, such as produce. If grain were coming this way, it would all come through at the cheap rate—the through rate.
122. Is there any difference in regard to the cost of the carriage of wool on that extension, and the extension from Narrabri to Werris Creek? No, I should not think so.
123. Proportionately, would the charge be the same? You mean the cost to us?
124. No, the cost of carriage;—do you make the same charge per mile? The wool rates right throughout the country differ slightly according to the locality.
125. You have fixed certain rates to suit certain districts? Yes.
126. When the extension to Forbes was first opened, did not the drays come into competition with the line? Not to a large extent. I think there were a few teams on the road.
127. Is that traffic continuing now? I do not think the teams are on the road now from Parkes to Forbes.
128. Have you any complaints from the residents of Forbes and Parkes as to the rates you are charging? I do not recollect any lately. The rates have been cut down since the line was first opened. It was proposed to charge local rates generally, but that has been considerably amended since the line was opened, and the rates charged are as I have mentioned.
129. Are you in a position to tell the Committee how that line has paid since it was opened—that is to say as compared with the estimate which was submitted to the Public Works Committee? I think a statement was laid on the Table of the House a short time ago, giving information on that point. The earnings have considerably exceeded the estimate, and the working expenses have been practically what was estimated, so that the net result is better than was originally estimated.
130. And upon that you have confidence in submitting your present recommendation to the Committee? Yes; the Commissioners think the line will pay more than working expenses.
131. The data of which I presume has been collected by one of the officers of the Department? Yes.

H.
McLachlan,
Esq.
12 Mar., 1895

132. By whom? Mr. Harper.
133. Is there any special point you would like to lay before the Committee? No; the Commissioners' report, I think, is clear as to their recommendation.
134. It is as full as you are in a position to give? Yes.
135. That is to say, it embodies all the information, generally speaking, which can be given? Yes; it embodies the general facts.
136. Has it taken into account the time it will take to construct the line? No.
137. There is no special reason for pushing it on hurriedly? It ought to be constructed fairly quickly. It is easy country, and there are no engineering works.
138. Have you taken into consideration the fact that traffic is likely to be developed up there from sources other than pastoral? The country, I believe, is very suitable for agriculture. It may open an agricultural district.
139. It is within the dry belt, I think? They have a fairly good average rainfall, about Forbes at any rate. All through the Lachlan country it is fertile country. They have had some very good crops further down the Lachlan.
140. That country is subject to drought occasionally? Yes; of course all the country is subject to drought.
141. I think it is very severe in that part of the country? At any rate for the last seven or eight years I think they have no drought of a severe character to my knowledge.
142. But a three years' drought would seriously interfere with your calculations? Of course it would.
143. It would take a good many years to pull that up? The country recovers very quickly. We have had several droughts of the worst character on the Narrabri line, and that line has been a paying one since.
144. *Mr. Molesworth.*] I see by the report of the Railway Commissioners that they do not give the definite recommendation in this case which they did in the case of the proposed line from Jerilderie to Berrigan. Do we understand that there is to be any doubt or any difficulty in connection with it? No; they recommend the line.
145. But they do not recommend it in the same decisive tone as they do the other one. They stated in connection with the Berrigan line that they recommended that it be constructed, provided that the land was given free of cost to the Government. Do we understand that although those words are not incorporated in the present report they really recommend the construction of the line? Yes, they recommend the construction of the line.
146. Notwithstanding that the estimated loss on interest and working expenses is £2,000 per annum? Yes; I do not know whether you were a member of the Committee when the Commissioners made some preliminary remarks in regard to new extensions, in which they pointed out that although a line might not pay the whole of the interest, and the whole of the working expenses, still, if it paid the working expenses and made some contribution towards the interest, they were always prepared to recommend it in view of the assistance it would be to the main line and the opening up of the country.
147. And although there will be this loss of £2,000 per annum on the proposed extension, you think that amount will be fully made up by the general traffic on the main line? I would not say that, but it would be wiped out in part by the assistance it would give to the main line.
148. Sufficient to justify the construction of the line? That is what the Commissioners think.
149. And with the anticipation of a growing traffic? Yes.
150. I understood you to say that the Commissioners recommend this line with the view of its eventually going on as far as Hillston? Yes.
151. Is it not the proposal of the Government that the line should go to Hillston via Wyalong? Not that I am aware of. I do not think there is a proposal to that effect.
152. Have the Commissioners really considered the question of the extension to Hillston at all? They have, in regard to the Condobolin proposal.
153. And they are favourable to its going in this direction? That is their present intention—they have not been asked for any definite recommendation, but that is their view.
154. Can you give any idea as to whether the haulage will be more extensive to Hillston via Wyalong, or via Parkes? No; the distance will be about the same.
155. But on the Western Line you have a higher altitude? Yes; but the grades in each case are somewhat similar—1 in 30 to 1 in 40. The road could be limited by the grade. There is not the same extent of severe grades on the south; but you have the same grade, which would limit the load in both cases. I do not know whether that point alone would make it worth while considering the Wyalong route instead of the other. Local considerations always influence these matters.
156. *Mr. Chanter.*] Can you tell the Committee about the date when the Commissioners inspected the route? No; but Mr. Harper was with them, and he will give you the exact dates. I think they were over there about the middle of December.
157. Do you know whether they personally inspected the routes; that is, the one from Forbes to Condobolin, and the other from Parkes to Condobolin? They went from Forbes to Condobolin, and drove back to Parkes.
158. Did they inspect the route as proposed in 1892 via Trundle? Not that I am aware of.
159. Do you know anything of this country yourself? No.
160. There were some papers laid on the Table of the Assembly, and ordered to be printed, in October, 1892, as the result of a special examination by Mr. Gilliat, a special officer? Yes.
161. Are you aware that he points out very strongly that the route as proposed then, from Parkes to Condobolin via Trundle and the Bogan Gate, would go through settled country? I am not aware of his report.
162. The statement, I presume, is a current one, and accepted by the officers of the Department, that the whole of the settlement in that locality is via Trundle? I do not know anything of the local circumstances.
163. You do not know, then, whether the Commissioners traversed the route via Trundle? I know there was some consideration given to Trundle; but I should not like to say how far, without local knowledge.
164. Do you know whether they have ever given any consideration to the report of Mr. Gilliat, to which I have referred? I know it was amongst their papers; but I do not know how far it was considered by them.

H.
McLachlan,
Esq.
12 Mar., 1895.

165. He states that the whole of the route between Parkes and Condobolin goes through leasehold and pastoral properties. The Commissioners, in their report, refer to a great portion of the route going through Crown land, which, perhaps, could be easier settled by a reference to the records of the Lands Department.

166. You say it is the intention or the desire of the Commissioners to extend this line from Condobolin to Hillston, and then on to Menindie? They speak of that as the ultimate terminus of the line.

167. Would they recommend this portion of the line from Parkes to Condobolin, with a view to further extension? I could not say anything beyond what is contained in their report. Their report indicates that they think it should be part of the further extension.

168. It has been stated that the Commissioners are of opinion that the extension of the line will conserve trade to New South Wales, which is now going to Victoria? That is, more particularly if the line is extended; but, of course, not so much in regard to the first section, because there is not so much competitive country near Condobolin, although there are five or six squatting properties affected by the extension, and we would get wool from them which otherwise would go to Victoria.

169. Is it not a fact that you are now carrying the whole of the produce of that country to Sydney? From Condobolin—yes, pretty well. There are five or six station properties further on which we are likely to get by the extension. But the competitive country is more about Hillston. We would get more about Enabalong, Cargellico, and further on.

170. Do not the Commissioners think it would be better to connect Hillston with some other line? No; they prefer the connection to be through Condobolin.

171. They do not keep in view the direct need of a line from the outlying points to the markets of the metropolis. I understand their proposal is to extend the line to Hillston, and then to Menindie? Hillston really is the point which they have considered, and Hillston would really be as close to Sydney as an extension by Wyalong. I do not think there would be more than 5 miles difference in either route.

172. Are the Commissioners prepared, in the event of the extension being carried out, to meet the Victorian Railway Commissioners in any offer they may make to the producers of Hillston? I am not prepared to say.

173. Is there any way in which the Committee could obtain that information? I am afraid not at the present time.

174. Is it a fact that all along this border country, where the Victorian Railway Commissioners in the past have been getting the trade, our Commissioners are meeting the squatters with special terms? There have been cases in which the Commissioners have made special terms for stations.

175. If these railways are extended, then it is fair for the Committee to assume that the Commissioners would still do it? If the Victorian people make what you may call fighting rates, I suppose the Commissioners would have to do something similar; but we are hopeful that the Victorian Commissioners will this year do something to do away with that differential system.

176. In giving the estimate the Commissioners show an annual loss of £2,000 upon the line? Yes.

177. But they do not give any information to the Committee as to how they expect this to be relieved in the future. Do they anticipate any increased traffic? Naturally. They think the country will be developed by the railway. Their views were set forth in a memorandum handed to the Committee some years ago on suggested new lines of railway. They stated their views in regard to new railways and the opening up of the country in general terms.

178. What is your experience as to the value of the traffic, if there is a choice, and the question of route has to be determined? Agricultural produce will always give you a better traffic as against pastoral, for you would have more population in the district.

179. If it can be shown that the agricultural produce can only come by a deviation of the line *via* Trundle, would it not be wiser to take it that way than from Parkes to Condobolin? Local considerations may affect the question to a considerable extent; but speaking generally an agricultural district would give more traffic to a railway than a pastoral one.

180. It is stated in Mr. Gilliat's report that the whole of the settlement in that district is about Trundle—that there is no settlement other than pastoral from Parkes to Condobolin? Yes.

181. It is also stated that the nature of the country is entirely different—that from Parkes in the direction of Condobolin the route passes through plain country which is not suitable for agriculture, but that between Parkes and Trundle there is a very rich timber country which would be suitable for agriculture? Personally, I may say that I am not acquainted with the local considerations. Mr. Harper will be able to speak more particularly in regard to the nature of the country.

182. Mr. Gilliat states that on the route from Parkes to Condobolin there are 238,000 acres of Crown land now under lease? Yes.

183. Whereas the country has been so settled about Trundle that there are only 86,000 acres? Yes.

184. *Mr. Hayes.*] Can you state whether the Commissioners, after fully considering the route *via* Parkes to Condobolin, and *via* Wyalong to Hillston, have decided on the Condobolin route? Yes; they consider the Parkes to Condobolin route is the best.

185. They have fully considered those two questions? They have not had the advantage of going over the country between Wyalong and Hillston, but so far as they see, from information gathered, they are inclined to think that this would be the better extension.

186. One reason why I ask the question is that there will be before the Committee shortly the railway extension to Wyalong, and the possibility of the extension being continued to Hillston;—you still adhere to the answer you gave that the Commissioners are of opinion that the Parkes to Condobolin route is the best in the interests of the country? Yes.

187. Although the Commissioners do not absolutely say so in their report, are you of opinion that they would not propose this section unless there was a probability of its being extended to Hillston? I am inclined to think that they recommended the line on its merits with a view ultimately to its further extension.

188. Irrespective of the extension of the line beyond Condobolin, you think the Commissioners would recommend its construction? I think so, on its merits.

189. *Mr. Gormly.*] You stated that the proposed extension would divert some trade to Sydney which now goes to the adjoining colonies? The first extension would, to a small extent, but as it goes further on, it gets into the competitive country.

190. I see that the proposed extension to Condobolin would be 328 miles from Sydney? Yes.

H.
McLachlan,
Esq.

12 Mar., 1895.

191. Are you aware of the approximate distance from Condobolin to Melbourne by the nearest route, say by way of Hillston, Hay, Deniliquin, and Echuca? No.
192. In making those distances up, I find it is about 520 miles? Yes; from Hay you have river carriage.
193. You state that the Railway Commissioners are of opinion that the line may be ultimately extended to Hillston? Yes.
194. You have no knowledge of the country, I suppose, on that side of the river where Condobolin is situated? The Commissioners personally did not go over the route.
195. Are the Commissioners aware that there would be considerable engineering difficulties, and some moderately large bridges to construct going down on the north side of the Lachlan River? No, I am not aware.
196. There is the Willandra Billabong which would require a large bridge; and several other narrow trenches which break off from the Lachlan? Yes.
197. They have taken the two routes into consideration—by way of Wyalong, and by way of Condobolin to Hillston. I suppose you are not aware of more engineering difficulties on the one than on the other? With regard to routes I may mention we are subject to reports of examining engineers. The Commissioners do not make any suggestions as to the actual routes—that would depend on the reports of engineers.
198. But is it intended to have both routes examined before the proposed route from Parkes to Condobolin is recommended? No; the Commissioners do not propose anything further than what they have recommended in their report.
199. But the object of the recommendation is, perhaps, for a further extension? That is simply a matter for the Government. They throw it out as a suggestion.
200. But they have not caused a report and examination to be made of the two different routes, so that they might pick out the most suitable one to Hillston as yet? No; they would not do that, unless they were asked by the Government.
201. Because of the greater distance to Melbourne, you do not think there is a probability of much of the trade, even a short distance from Condobolin, going to Melbourne? No; I think the trade within a short distance from Condobolin would come to Sydney. Of course, the greater part is coming here now.
202. Is there any direct route from the neighbourhood of Condobolin going towards Hay? Not that I am aware of. I may say that I have not been over the country, and my opinion of local questions is not worth much.
203. *Mr. Davies.*] Have you seen a detailed statement of the Engineer-in-Chief for Railways as to the cost of the proposed line? Yes.
204. Do you know that he estimates the cost at something like £2,100 per mile? About that—it is 60 miles at £127,000.
205. Can you tell the Committee what concession the Commissioners are making with reference to the carriage of rails for the proposed line? I do not know the exact rate which was fixed. We have been carrying them at 1d. per ton per mile and under.
206. You are aware that they made a concession of 9s. a ton on rails to Jerilderie? Yes; 1d. per ton, or a little under. I am not sure whether any special figure has been quoted for the rails for this line.
207. Has any figure been quoted by the Commissioners for rails which has made up the estimate of the Engineer-in-Chief? Not to my knowledge. I do not know how he has worked it out—perhaps at 1d. per ton per mile.
208. I mean as to the cost of rails? Mr. Deane would make that estimate himself; but I know that rails are very cheap now.
209. You are aware that in connection with the Jerilderie to Berrigan Railway the Commissioners supply a portion of the rails at £3 a ton? Those were second-hand rails; but I recently saw a quotation of £3 12s. 6d. for new rails in London.
210. What would they cost here? The freight is as low as 7s. 6d. per ton, and you could get them out very cheaply; that is without insurance or handling.
211. They would cost somewhere about £4 a ton? Yes.
212. You are not aware that the Engineer-in-Chief, in conjunction with the Railway Commissioners, has arranged for a cheap kind of rail in connection with the proposed extension? No; I understand that there will be 60-lb. steel-rails.
213. What rate would the Commissioners charge for the carriage of the rails? I have not heard of any arrangement.
214. Would the rate, in your opinion, be the same as the rate to Jerilderie? It would be 1d. per ton per mile, or a little under.
215. You do not know of any reason at all why there should be a higher rate charged for the carriage of rails for the proposed extension than for the extension from Jerilderie to Berrigan? No, I am pretty well sure the Commissioners would charge the same proportionate rate. We have made a general rate for rails of 1d. per ton per mile. In one or two instances they have quoted a rate a little less. The ruling rate is practically 1d. per ton per mile.
216. What is the distance to Parkes from Sydney? About 270 miles.
217. And from Sydney to Jerilderie? About 400 miles.
218. The actual cost of rails would be very much less from Sydney to Parkes than from Sydney to Jerilderie? Yes, the distance is less. But as I say, the general rate fixed—there may be one or two exceptions—has been 1d. per ton per mile, which is very much lower than was charged a few years ago. That has cheapened the capital cost of new railways. On the Cobar line it made a difference of many thousands of pounds.
219. Am I to understand that the charge made by the Commissioners will be less for the carriage of rails by reason of the shorter distance for the extension from Parkes to Condobolin, than it would be from Sydney to Jerilderie and Jerilderie to Berrigan? I think to Parkes it would be £1 2s. 6d. a ton.
220. And the other? The other is 25s.
221. Being a reduction of about 5s. a ton on previous rates? The previous rates and the general rate have been 1d. per ton per mile.
222. You reduced the rate on the 60-lb. rails from 35s. to 24s. a ton on the Jerilderie line? Yes.

223. Do you know the weight of the rails proposed to be used? 60-lb. steel-rails, I believe.
224. How is the traffic estimated? It is made up by Mr. Harper.
225. Has he supplied the Commissioners with the results? Yes. He got the actual traffic coming into Parkes and Forbes, and other information, and then he made up an estimate.
226. He supplied the Commissioners with a written report? To some extent; but they discussed the matter more largely with him.
227. He has not given you any written data as to how he estimates certain traffic on the proposed line? To a certain extent he did to the Commissioners.
228. And you have not got it? No.
229. It is of no use asking them whether it is likely his estimates will be realised? No.
230. Would the Commissioners use the same rolling stock on the line as is used on the Parkes railway? I do not say that they would use the exact vehicles; but the same class. It may be that this may be worked as a branch—that is, by working between Condobolin and Parkes. We might make one journey in and out a day; but, of course, detailed arrangements have not been worked out.
231. But the trains which leave Sydney and take goods inland would be the same rolling stock? The trucks would be the same. The same trucks could run through if they were filled. There would simply be a change of engine.
232. Would it be a lighter engine? I think they would work it as a branch line from Parkes; but that, so far as I know, has not been considered by the Commissioners.
233. The coaching, of course, includes the passing of the mails? Yes.
234. You do not know how many persons Mr. Harper has estimated would travel on the line? No.
235. But you are aware that the estimate for coaching and mails is nearly £2,000 a year? Yes.
236. You cannot tell the Committee how that has been arrived at? A certain amount annually is allowed for the carriage of mails, and that is easily got at. I think we should get about £720 for the mails, and the rest is for parcels and passengers. It leaves about £1,000 for passengers.
237. Would you get £720 a year for the carriage of mails from Parkes? Yes; it is 60 miles each way—120 miles altogether, and there would be a fair amount of mails coming over that country, because there is a big back country and considerable mails to carry.
238. Can you tell us the total amount paid to the Railway Commissioners every year for the carriage of mails on our railway system? I think it is a little over £60,000.
239. I think you stated in answer to a question that it is contemplated by the Commissioners at some early date, provided that the railway is constructed to Condobolin, to extend it to Hillston? No; that is a matter entirely for the Government. But the Commissioners think it will naturally form the first section of a railway to Hillston later on.
240. The Commissioners favour an extension in that direction? They think so. So far as the proposal is concerned, of course, it would be purely a matter for Government and Parliament.
241. What traffic and trade are they likely to tap by the extension to Hillston? Principally pastoral, and a little mining from Mount Hope and other places.
242. Would there be much goods traffic in that direction? It would drain a big area of country. There would be a fairly big traffic of live stock, wool, and general stores, and some mining.
243. Have the Commissioners given any consideration to the extension of the line by way of Forbes to Condobolin? Yes; they think it best to recommend a direct line from Parkes.
244. They have investigated the other route? Yes; they went over both routes.
245. And they find that the direct line from Parkes to Condobolin is the most acceptable and the likeliest to serve the country best? Yes; and it passes principally through Crown lands. They make a point of that.
246. The Commissioners have not given the same direct recommendation for the construction of this line as they did to the Berrigan line;—do you know any reason why? No; they favour the construction of the line.
247. You remember there was a condition in connection with the Jerilderie to Berrigan line of which the Commissioners made a very strong point;—they recommended the line to be constructed, provided the land was given? Yes.
248. Have they made any condition of that kind in connection with their recommendation? So far as I am advised, this line passes largely through Crown land.
249. They do not make any strong point to the effect that the private holders would give the land through which the line passes? Not that I am aware of.
250. Has the question come before the Commissioners at all as to the probable amount of private land which it would be necessary to resume if the line is constructed? I think so; and if it is information for the Committee, I will ask the Commissioners to ask Mr. Harper to give information on the subject to-morrow.
251. If the private lands, which will be necessary to facilitate the construction of the line from Parkes to Condobolin, have to be paid for, it will increase the capital cost and the annual loss to the Commissioners beyond their present estimate? Yes; the estimate is exclusive of land.
252. Have you had any estimate made of the probable increase of trade likely to arise from the construction of the line? No.
253. Have you taken that into account in any way? It would be impossible to give an estimate of what might arise; but the Commissioners have laid down a general rule in suggesting new lines of railway, and have given their views.
254. You will not only get the traffic trade on the proposed extension, but also on the main line? Yes.
255. So that what you may lose on the short mileage of 60 miles will be more than made up by the general traffic which will flow from this extension to the main line? If there is any development of traffic that should be so.
256. So that practically there would be no loss? Probably not with any development of traffic.

H.
McLachlan,
Esq.
12 Mar., 1895.

WEDNESDAY, 13 MARCH, 1895.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.	JAMES HAYES, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	ROBERT HENRY LEVIEU, Esq.
The Hon. JAMES HOSKINS.	JOHN MOORE CHANTER, Esq.
The Hon. JOHN DAVIES, C.M.G.	CHARLES ALFRED LEE, Esq.
The Hon. CHARLES JAMES ROBERTS, C.M.G.	JAMES GORMLY, Esq.
EDMUND WILLIAM MOLESWORTH, Esq.	

The Committee further considered the proposed Railway from Parkes to Condobolin.

John Harper, Esq., Goods Superintendent, Department of Railways, sworn, and examined:—

J. Harper,
Esq.
257. *Chairman.*] Do you know the railway under consideration from Parkes to Condobolin? Yes.

258. Have you been through the country? Yes.

259. And made a full investigation? Yes.

13 Mar., 1895. 260. Would you like to make a statement, first of all, with regard to the objective points of the railway and general principles before we commence our inquiry? The object of the line is primarily to serve the Lachlan country, from which we get a large body of wool at different points, either to Parkes or Forbes, or to the southern lines. I think the Commissioners have in view its probable extension across country west in the direction of the Darling.

261. *Via* Hillston? Not necessarily *via* Hillston. Hillston can be approached by a branch line.

262. You think the line would go as far as Euabalong and then due west? Yes, with a branch line down to Hillston.

263. That is the Commissioners' idea at present? Yes. At some future time the extension may be made, but at present the idea is that a railway built to Condobolin will earn a certain revenue, which the Committee have before them, and will also tend to conserve a certain portion of trade in the north west, which at present goes to another colony. That is, practically, the reason for the construction of the line.

264. What route does this traffic, which goes to another colony, take? To the Murrumbidgee at Hay or below Hay.

265. And coming from the north of Condobolin and Euabalong? Yes, a portion of it from the north of Euabalong, but chiefly from the north-west. There is nothing north of Condobolin which goes down to the river; it is north of Euabalong.

266. When you commence to get west of Euabalong you get into a country, the produce of which finds its way down to Hay? Yes, the map which I now produce will more fully illustrate the position. The portion coloured green indicates the wool trade, which at present goes down the Murrumbidgee to Melbourne or South Australia. The portion coloured red indicates the business which comes to New South Wales.

267. You place before us a sketch showing certain localities? Yes, this map which I find has been handed in by Mr. Barling, shows the area over which Victoria gives largely reduced rates for the carriage of goods and wool. The green portion represents an area over which they give 61 per cent. rebate, and the yellow portion an area over which they give 66 per cent. against their own people. The portion coloured yellow indicates territory which will be served by this railway. The wool at the present time is carted to Hay, and shipped from there to Melbourne. Were the railway built, the wool would be carted east in the direction of the proposed line, and we think would be brought to Sydney.

268. *Mr. Molesworth.*] Have you been over this country lately? Yes.

269. With the view of inspecting and reporting upon the proposed route? Yes.

270. I suppose you know that the Commissioners have practically approved of the construction of the line? Yes.

271. Notwithstanding the fact that there will be a probable loss of £2,000 per annum? Yes.

272. Will that £2,000 estimated loss be made up by business brought to the main line? It is anticipated that it will be.

273. There is a prospect of an increase in business? Yes, decidedly.

274. So that in a short time the line may be expected to be worked at a profit? Yes.

275. What is the principal nature of the traffic you expect from that direction. Have you any details with which you can supply the Committee? Yes, I anticipate that 2,000 tons of goods averaging 3d. per ton per mile, and earning £1,500 will be carried, and 1,000 tons at 2d. per ton per mile, which will be £500. Then we expect 200 tons from intermediate points on the line, which will be, practically, about the Trundle district, at 3d. per ton per mile, £55; and 300 tons at 2d. per ton per mile, £55. Then we estimate that we shall get 5,000 tons of wool from Condobolin at 2d. per ton per mile over the whole of the distance, at 10s. a ton, or £2,500; and 1,400 tons of wool from a distance of 22 miles, which will mean £262 10s. Skins and other produce are estimated at £100; copper from Mount Hope, 200 tons at 2d. per mile, £100; live stock—1,000 trucks of sheep—17s. 6d., that is the extended mileage rate, £875; 200 trucks of cattle at 17s. 6d. per truck, £175. That means a total goods traffic of £6,122 10s. The Commissioners' estimate is £1,000 less than this. With regard to the coaching traffic we estimate that from Condobolin there will be 2,000 passengers at 17s. 6d. each, £750; 500 passengers at 10s. each, £250; from the Bogan Gate, which represents the station at which the Trundle traffic would fall in, 310 passengers at 2s. 9d. each, or say £42 10s.; 50 at 4s. each, £10; horses, carriages, dogs, parcels, &c., £200; mails, £720. Total coaching, £1,972 10s.; grand total, £7,095. I may mention in connection with this estimate that no wheat has been included.

276. Do you imagine that there is a prospect of getting wheat eventually from that district? Yes; it is a very good district. I have seen some of the best wheat crops I have seen anywhere, there.

277. And you are of opinion that the construction of this line will promote settlement, and increase the traffic? Yes.

278. How many intermediate stations do the Commissioners intend to build? Including sidings, about four or five.

279. Can you give any idea at what points they will be? I could not say at present; because, as a matter of fact, the detailed survey of the line is not yet complete. The station sites have not been definitely decided upon.

280. You spoke about the Bogan Gate? There is no objection to mentioning that as a station, because it is on a travelling-stock route a mile wide. J. Harper,
Esq.
281. There would be a station at Bogan Gate with the view of meeting the Trundle traffic? Yes. 18 Mar., 1895.
282. Have you travelled lately over the country between Condobolin and Hillston? Yes.
283. Are you aware that the Commissioners favour the continuation of the Condobolin line to Hillston? Yes.
284. Rather than meet it at any other point? Yes.
285. Do you consider that is the best way of reaching that particular part of the country? Yes.
286. The question was raised the other day as to whether the haulage up the greater elevation on the western line would not be more expensive than the haulage on the southern line; can you give any information with regard to that matter? The whole thing has been gone into departmentally. I can only answer in a general way. The traffic is being hauled at the present time in the cheapest way.
287. The conclusion at which the Department have arrived is that the best way to reach Hillston will be via Condobolin? Yes, *via* the western line.
288. Have you any knowledge as to the holdings along that particular line? Yes, I got some information from the Lands Office. Of course it is second-hand information.
289. Are there many private holdings where the line will traverse? On the south the land is almost exclusively owned by the Burrawang station. There is very little selection to the south. The principal selection is to the north, and in the neighbourhood of Condobolin, and north of Condobolin. There are 800 *bond fide* selectors on the books of the Lands Office at Condobolin.
290. Within what radius? Within a radius of 20 or 30 miles.
291. And all these selectors would necessarily use the Condobolin line? Yes.
292. With reference to that land which you said was mostly in the hands of one large station—is that a freehold or a leasehold? It is all freehold.
293. What quantity of Crown lands does the line pass through? The survey passes on the northern boundary of the leasehold area of Burrawang. There are 240,000 acres at Burrawang and Gunningland which are available; I saw the other day that the Minister had extended the lease. At all events they will be available for settlement eventually. The country which we consider will be immediately affected by the line is about 3,000,000 acres of leasehold areas, most of which is pretty good land.
294. Then I understand that you are really favourable to the construction of the line? I am.
295. And you believe it will eventually be a paying line? Yes.
296. It will not long be a non-paying line? No.
297. *Mr. Charter.* You have traversed this country yourself? Yes.
298. Did you traverse the three routes from Parkes to Condobolin, Forbes to Condobolin, and Parkes to Condobolin *via* Trundle? Yes.
299. Did you say just now that the survey, as shown on the map, is situated on the northern boundary of the Burrawang leasehold? On the northern boundary of the resumed area of Burrawang, and on the southern boundary of the leasehold area.
300. What is the nature of the country immediately south of the surveyed line and the line surveyed from Forbes to Condobolin? Is it freehold or leasehold? It is all freehold. The greater portion of it belongs to the Burrawang station. That survey extends for 40 miles through the Burrawang freehold.
301. What is the character of the soil immediately on the Lachlan? It is black soil. North of the Lachlan River, along the surveyed route from Forbes, it is chiefly black soil country; but north, on the surveyed route between Parkes and Condobolin, it is red country.
302. What is your opinion as to the capabilities for agricultural purposes of that heavy black river soil? I do not think, with the rainfall they have there, it is any good.
303. Then, you do not anticipate anything from that locality? No; I anticipate nothing south of the line. In my estimate I have simply included the Burrawang clip, about 5,000 bales.
304. What is the character of the country between the surveyed line from Parkes to Condobolin? Very good—a red soil country.
305. Is it heavily timbered? No.
306. What is the character of the timber there? Nearly 50 per cent. of it is pine. It is broken in places with low mountain ranges.
307. Will that line, as surveyed direct from Parkes to Condobolin, run through the greater part of freehold or leasehold land? Leasehold from the Crown. There are about 240,000 acres, speaking approximately, of leasehold area at Burrawang and Gunningland, and the line passes south of the boundary of that leasehold area.
308. Do you anticipate that the holders of those leases will go in for wheat-growing during the next five years? I do not know—it is very hard to say. From the inquiries I made up there, I should not think they would.
309. Then, you do not anticipate during their tenure of this land that anything will be produced beyond wool and stock? I do not think so.
310. And from that part of the country that is the whole of the traffic you depend upon? Yes.
311. Will you point out where you expect to get the additional wheat traffic to make up the estimated loss of £2,000 a year. Where is the settled country in that locality? Between Trundle and the Bogan Gate. Within 10 miles round Condobolin it is settled. There is a lot of settlement down the river to Euabalong.
312. Is there any settlement north or north-west of Trundle? Yes, of course, there is settlement on the Bogan.
313. Trundle is only 12 miles from Bogan Creek? Yes.
314. Did you explore the country north or north-west of Trundle? Not in connection with this matter, but I have been over it.
315. What is the character of the country? Good country.
316. Is it suitable for agricultural purposes? Yes; it is under heavy agriculture now.
317. As a matter of fact, a great portion of the country north of Condobolin is suitable for agricultural purposes? Yes.
318. Whereas on the south of the surveyed line it is not so good—it is heavier country? Yes, it is heavy black soil.

- J. Harper, Esq. 319. Has it not been brought under your notice in connection with your experience throughout Riverina that the plain country is not suitable for agriculture? Yes.
- 13 Mar., 1895. 320. Does not the Parkes to Condobolin line, *via* Bogan Gate, run through a great deal of plain country? No; I do not think there is a mile of plain country in the route.
321. It is all timbered country? Yes, it is plain country to the south, on what you practically might call the river flats.
322. If this line is constructed from Parkes to Condobolin, what effect will that have upon the traffic coming from Forbes to Parkes? None at all. The traffic from south of the river will still continue to come into Forbes. Practically the proposed line will not pick up any traffic to the south until it picks up the Burrawang wool clip at a distance of 30 miles from Parkes. Then, about 20 or 22 miles, it will pick up the Trundle traffic; but the whole of the south side of the line is simply one big run.
323. If the line from Parkes to Condobolin were deviated *via* Trundle, would it not put you in possession of a larger amount of settlement? No.
324. Did I not understand you to say that there was a vast settlement there? Yes; but the country to the north is already served by the western line. The greater part of the settlement in the neighbourhood of Trundle is between Trundle and the Bogan Gate.
325. What is the distance from Trundle to Bogan Gate? About 12 miles.
326. You said there was a travelling-stock route there? Yes.
327. Did you make any inquiries as to whether the land-holders would be prepared to meet the Government with a view to giving the land required for the line? No; we did not consider that question at all, because, as a matter of fact, the line passes almost entirely through Crown land. And as I have already pointed out the line itself had not been located at that time. The line, as originally surveyed, had grades of 1 in 50. The Commissioners suggested that a re-survey should be made, which I understand is now in progress.
328. Did I understand you to say there was a stock route 1 mile wide at Bogan Gate? Yes.
329. Where does it run to? Right up the Bogan, through Trundle.
330. Is there no stock route from Parkes to Condobolin? No; there is a stock route along the river. As a matter of fact, there is no road between Parkes and Condobolin at the present time. There is a practical buggy track. There is a road as far as Bogan Gate.
331. How does the stock route run? It runs almost from north-east.
332. Does it follow the course of the river, or take a more direct line? No; it intersects the river at Merungle.
333. Following up this question about settlement, you have already stated that the line as surveyed from Parkes to Condobolin runs through leasehold? Yes.
334. Then there can be no other settlement than that at present until the leasehold falls in? No.
335. You are aware that the leases are extended for a further term of five years? Yes.
336. You are also aware of the low prices ruling for wheat? Yes.
337. In your opinion, if the line were brought nearer to Trundle, *via* Bogan Gate, would it serve more wheat traffic for you? No, I do not think it would affect it one bit, for the bulk of the production about Trundle would have to be carted as far to a railway at Trundle as it would to Bogan Gate.
338. But would not Trundle be a greater centre for the wheat than at Bogan Gate? Probably it might be at present.
339. I suppose, from your large experience, you will admit that wheat will only continue to be grown if it is very close to the railway? Yes.
340. They will not continue to grow at present prices if they have any distance to carry it? Yes. There is this feature to which I should like to draw attention, namely, that there is as good, if not far better wheat growing country—and probably ten times as much—in the neighbourhood of Condobolin than in the neighbourhood of Trundle.
341. What are your rates from Parkes to Sydney per bushel now? About 4d.
342. What would be the additional rate from Condobolin to Parkes? About 1d. That would be about 5d. a bushel, but we have not included that in our estimate at all. We did not deal with the wheat aspect of the question.
343. You verify the statement that the Commissioners expect a loss of £2,000 per annum on the line? Yes.
344. Then, although you have not estimated it, you look for some outside traffic to relieve you of this annual loss? Yes. I am rather of the impression that the estimate I have given is under-stated. I am always very careful not to make any excessive estimate.
345. There is no other class of traffic from which you will expect to make up the loss, except wheat or agricultural produce? We have good hopes that there is another feature to which attention has not been drawn, and that is the mineral possibilities of the district. The estimate I have given for copper is the actual output of the Mount Hope mine at the present time, when it is working practically under the influence of depression.
346. What distance is Mount Hope from Condobolin? About 80 miles north-west of Condobolin.
347. Is there any other class of traffic which you would anticipate, beyond copper and agricultural produce? No, excepting wool and stock.
348. You have estimated for the stock? Yes.
349. You estimate the mails at £720 per annum for a distance of 60 miles? Yes; that is £12 per mile.
350. Is that the usual rate? Yes, on the first-class lines. On the main line we get more than that,—£15 per mile.
351. What is the nature of the arrangement between the Postal Department and the Railway Commissioners? I could not tell you precisely. A certain amount is allowed per annum for the conveyance of mails according to mileage.
352. Is it proposed to work the line daily? No, three days a week, excepting during the busy season when it would be necessary probably to run more frequently.
353. And the mails will be delivered three days a week? Yes.
354. Without in any way disclosing what you do not wish to disclose with regard to the arrangements now pending between the New South Wales Railway Commissioners and the Victorian Railway Commissioners, I would ask you where is the zone or rebate line,—how near would it approach Condobolin? It embraces it.

J. Harper,
Esq.

13 Mar., 1895.

355. What are the rates for wool from here to Sydney? £3 4s. 9d. per ton.
356. What are the rates from Hay to Melbourne? I never found any one who could tell me that.
357. What I want to get at is this: We have a terminal point at Hay now connected with the metropolitan market at Sydney. If we have a terminal point at Condobolin, where will this difference end? Of course the big factor in connection with the carriage of traffic from Victoria, and wool to Victoria is, I need hardly tell you, the road. That controls everything. As far as the road is concerned we are dealing with a known quantity, but the moment we get on to the river we do not know what we are doing; and if you can lessen the road transit by 50 or 100 miles, you know you have gained something.
358. Is it a fact that the Railway Commissioners of Victoria enter into negotiations with the pastoralists at Hay, and north of Hay, to take their wool from the Murrumbidgee—to cover all charges including shipping? I am sure I do not know what they are doing. I do not think they know themselves. We can only form our own opinions about it.
359. But constant overtures are being made to you, I suppose, by these people, that they can get their produce carried cheaper that way? Yes.
360. If this line extends to Condobolin, do you think they would be so keen in regard to the matter? I think there are half-a-dozen clips which must come into Condobolin by reason of the shorter road to the railway station. No matter if they carried it practically for nothing by river, the road carriage would be so much greater to Hay that it must necessarily come into Condobolin.
361. You stated in reply to Mr. Molesworth that the wool from Hillston and district, and Euabalong, is now carried to Hay? Yes.
362. You have a terminal railway point at Hay, and Victoria has not? Yes.
363. Is it not possible to serve the whole of the trade there when it gets to Hay;—are there any exceptional advantages in sending the wool down to Echuca, and then on to Melbourne? I know a clip which was carried to Melbourne for 30s. a ton, from Hay. It went by river to Echuca, and then by rail to Melbourne.
364. And that would be an arrangement made entirely with the Victorian Railway Commissioners? Yes.
365. Has it ever been stated to you that the charge to Echuca on all outward goods from Victoria, such as station stores, is about £4 a ton, and the rebate £3, or 75 per cent? Yes, that has reached me amongst other things; but you scarcely know what to think. In view of the way in which that trade is being fought for now, I am prepared to hear that 95 per cent. has been given. What I want the Committee to understand is, that our point in connection with this line is this: If a line is built to Condobolin, the most important and controlling factor is the cartage. On the road they cannot travel below a certain rate. If they have to travel 60 or 70 miles less to come in to Condobolin, and have to pay a higher freight through to Sydney than they would have from Hay, they will come in to Condobolin.
- 366-7. What is the distance from Condobolin to Hay? 235 miles.
368. You travelled over the route which goes a little north of Forbes, junctioning on to Cudal? Yes; that is an old survey. It was an original survey in connection with the extension to Parkes and Forbes. I did not travel over that in connection with this inquiry.
369. I suppose the character of the soil would be heavier than you indicated further north? The greater portion of the survey from Forbes to Condobolin is black-soil country.
370. What is the extent of the Burrawang holding? About 240,000 acres of leasehold land, and the same quantity of freehold land.
371. How much of that 240,000 acres of freehold land would be adjacent to the surveyed line from Parkes to Condobolin? The northern boundary of it is about 25 miles away.
372. This line would run right through Burrawang? Practically so; on the border of their freehold—on the leasehold area.
373. Who is the owner of Burrawang? Edols and Co.
374. The surveyed line would touch part of their freehold? I do not know exactly where the survey runs; it has not been permanently staked yet.
375. There is no other station to the west? Gunningbland.
376. What is the character of the land there? There is a good deal of leasehold land on it—very good land.
377. Does this line run through any part of that land? It is just on the border of it.
378. It would necessitate a certain amount of resumption? No; it is on the leasehold area.
379. As an expert, with a full knowledge of the traffic you expect to get, do you think the line as surveyed from Parkes to Condobolin will serve the adjacent country better than any other? Yes.
380. Taking into consideration the fact that the actual settlement is to the north and north-west? Not the actual settlement. I do not admit that. The settlement about Trundle is very limited, compared with the settlement at the other end of the line.
381. Have you seen Mr. Gilliat's report for 1892? Yes.
382. He says the whole of the resumed areas of the two runs you have mentioned are to the north of Bogan Gate, and that they have been extensively settled, and he gives the difference of area at 238,000 acres of Crown lands as against 86,000 acres, or, in other words, the line as surveyed runs through 238,000 acres of Crown lands, and there are only 86,000 acres of land about Trundle? But probably Mr. Gilliat did not deal with the matter in the same general way as we are doing. We are dealing with the extension to Condobolin. The question with him was that of going through Trundle. There are 3,000,000 acres of Crown land in the neighbourhood of Condobolin equally as good as that in the neighbourhood of Trundle. I would also point out that the bulk of the settlement is between Trundle and Bogan Gate. That is where the bulk of the selectors are. They are either there or to the north-east of Trundle, and would use Parkes even if a line were built to Trundle.
383. [Chairman.] How far is it from Trundle to Bogan Gate? About 12 miles.
384. And a good deal of the settlement referred to as Trundle settlement lies upon that? Yes.
385. Mr. Chantler.] You are quite satisfied that it is not more than 13 miles, because it has been stated already in evidence that the actual distance of deviation *via* Trundle would only be 7 miles? I do not know any one who is in a position to speak about the distances over the line at all yet. I should think 10 or 12 miles would be the difference in the length of the line, but I understood the Chairman to ask what is the distance from Trundle to Bogan Gate.

J. Harper, 386. If it were thought advisable to take the line from Parkes to Condobolin *via* Trundle, would the country be of a similar character from an engineering point of view? I should imagine that the country would, if anything, be a little more difficult when you got north. It rolls more—it is more hilly than it is to the south.

18 Mar., 1895.
387. It would require more cuttings? Yes; it is hard, however, to pronounce an opinion about that from driving over it; but it struck me that the country rolled more, and there would probably be more expensive work in connection with it.

388. From a traffic point of view, you consider the line as proposed, is the best suited for the requirements of the district? Yes.

389. Mr. Hayes.] The 240,000 acres of Crown land now under lease, are, you state, of good quality? A great deal of it is, not all.

390. And when the leases expire you believe they will be largely taken up by settlers? I think so.

391. Will that materially add to the traffic on the line? Yes.

392. If the line were only constructed as far as Condobolin with no intention of taking it further, would you still advocate its construction to that point? Yes.

393. Irrespective of any future extension? Yes.

394. Do you think the traffic and the settlement which will come in the near future will make the line a paying one? Yes, I am satisfied that Condobolin will always be an important centre.

395. How does the land north of the proposed line compare with Riverina? There is some land between Parkes and Condobolin equally as good as any I have seen in Riverina; in fact, I have seen as heavy crops up there, about Condobolin, and between Condobolin and Euabalong, as any I have seen anywhere in Riverina. As a matter of fact, they get from 30 to 38 bushels to the acre from some of it. I think the average is 20 bushels.

396. Is the soil of the same character? Yes, red soil. There is a good deal of myall country, and a lot of pine scrub country, but the red soil bears exceptionally heavy crops.

397. What is the rainfall? Twenty inches, I think.

398. Is the country up there more liable to drought than in Riverina? They have not experienced it. There were a great many Victorian farmers up there, who left Riverina, and who went up there for the purpose of securing larger areas, and they consider the country there better than Riverina. The average rainfall is 20·23 inches.

399. But as far as your observation goes, this country is particularly suitable for wheat-growing? Yes.

400. And with railway accommodation it is probable that wheat will be grown to a large extent? Yes.

401. You have not estimated anything from the wheat traffic? No.

402. But when the leases are thrown open, you think wheat will be an important factor in the traffic? I think so; of course, it will be hard to tell what conditions will exist then. But I think there will be plenty of people who would like to get on the land even now if they could.

403. You also stated that the line, if carried through to Bogan Gate, would serve the Trundle traffic as well as if it were diverted *via* Trundle to Condobolin? The whole of the farmers in the neighbourhood of Trundle would be within easy distance of railway communication, and the important consideration of extending the line 7 or 8 miles further would be obviated, and probably a better and cheaper line would be obtained. Of course, every mile eventually added to the line must be a burden upon it. The people of Trundle will not be more than 12 miles away from the line.

404. You have been to Trundle? Yes.

405. How does the land north of Trundle compare with the land immediately on the line to Forbes? There is very good land there until you get into the Gunningland Range.

406. I notice that Mr. Gilliat, in his report, states that the whole of the land is taken up there, with the exception of some leasehold on two or three runs, which he mentions? Yes; I did not go into that aspect of the question.

407. With reference to the extension—the Commissioners, in their report, referred to the desirability of extending the line from Condobolin to Hillston? Yes.

408. Have you considered the question as to which line would be most suitable, *via* Condobolin to Hillston, or *via* Wyalong? Yes. The surveyed line to Wyalong *via* Cargellico, and to Hillston, which I take it is the line you refer to, is 10 miles longer than the line from Condobolin would be. I do not think, however, it would open up as much country. A railway extended west from Parkes in the direction of Condobolin would space out that country, and provide railway communication.

409. From a traffic point of view, which line would you prefer? The Condobolin.

410. You believe that would serve a larger number of people than a line from Wyalong? Yes.

411. And from a traffic point of view the results would be more profitable? The results would be more profitable. Of course, it is rather hard to make a comparison unless it is on the net result. As far as Wyalong is concerned, it is some months since I gave evidence, and I do not know how the circumstances have altered; but I do not think that even at the time I gave evidence the prospects of a line from Temora to Wyalong was as good as a line from Condobolin to Parkes; but I am going to Wyalong again.

412. Mr. Roberts.] Is it a fact that there are a large number of selectors around Condobolin? Yes.

413. How many? About 800. I got that from a most authentic source. I can tell the Committee, too, that these selectors have the credit of being *bond fide*. In county Gipps alone there are 239 selectors who pay into the Condobolin Lands Office.

414. Chairman.] What does the land district of Condobolin embrace? Part of Dowling, part of Ashburnham, Gipps, and Cunningham.

415. Mr. Roberts.] What do these selectors principally produce? A great many of them carry on mixed farming—sheep and wheat.

416. They grow wheat? Yes; I think they have 5,000 acres at present under wheat.

417. What would be their market at present for the wheat? With the exception of the local market, they were getting, I think, 1s. 6d. a bushel in Condobolin for it. They have a fine mill in Condobolin, but they have been carting it into Forbes.

418. In your opinion, if the line is constructed the produce of wheat in the district will be considerably augmented? Yes; I think that if they can continue to grow wheat anywhere successfully they have a very good chance of growing it there.

419. What is the average yield per acre? Twenty bushels. Of course, there have been crops from which they have taken 36 and 38 bushels. J. Harper, Esq.
420. Is there much wool sent to Melbourne which was produced within a radius of 20 miles of Condobolin? No, not within 20 miles. 13 Mar., 1895.
421. In making this estimate do you base it in anticipation of getting wool which at present goes to Melbourne? Yes; I have included only five or six clips. The other is wool which we at present get which falls in at other points.
422. And you think this line should be looked upon as what I might term a national line, with a view of its ultimately reaching Menindie *via* Hillston? Yes. I should like to point out to the Committee the distances to Adelaide by the various routes:—Sydney to Adelaide—existing line, 1,059 miles; *via* Condobolin and Menindie, 1,013 miles; *via* Cobar and Wilcannia, 1,064 miles; *via* Hay, 868 miles.
423. Have you been over the various routes which have been surveyed or asked for from the Government;—you have no hesitation in recommending this as the best and most practicable? No.
424. Mr. Chanter.] Supposing this line is eventually carried on to Menindie, where will it junction on to the Victorian system? Not the Victorian system, but the South Australian system. It would go *via* Broken Hill, I suppose.
425. Mr. Gormly.] Which of the large stations in the neighbourhood of Euabalong and towards Willandra Billabong send their wool to Sydney. The Coan Downs has gone down this year for the first time for six years.
426. Would you expect, if the line were extended to Condobolin, the Roto wool and the Willandra wool would come to Sydney? Yes; I would expect the Roto wool to come in.
427. Would you expect the wool down as far as Mossiel would come to the Sydney lines? No.
428. A portion of the wool from about the country on the south side of the Lachlan goes, I suppose, to Whitton? Yes.
429. Would you expect the wool on the south side of the Lachlan below Euabalong, and as far as Lake Cargellico, and further on, to come? Yes; on the south bank of the Lachlan; Euabla is the furthest going west. I expect Euabla to come in. I have also included the Merri Merrigal.
430. Have you been down the Lachlan below Euabalong? Yes.
431. There is a bridge crossing the Lachlan there, to the west of Euabalong? Yes.
432. That would enable the traffic from that neighbourhood to go on to Condobolin? Yes; there is a very fair river road on the north side.
433. And there is a bridge over that other branch called the Booberi Creek, which would enable traffic to go up the Lachlan? Yes; there is a very good road on the northern side.
434. You know the country between the Lachlan and the source of the Willandra Billabong? Yes.
435. There would be some expense in constructing a railway down that side of the river? Yes; the only difficulty would be in crossing the river below Euabalong.
436. Would you propose to cross the river? Yes.
437. You would not propose to go on the north side? No; the idea would be to extend the main line to Euabalong, and a branch to Cargellico and Hillston.
438. With regard to the probable need of an extension from Condobolin westward to the Darling country—are you aware about what quantity of land it takes to feed a sheep in that country? I know a lot of it is worthless. I do not estimate much from that.
439. But it has been stated by the Secretary to the Railway Commissioners that this extension to Condobolin would be for the purpose of an ultimate extension over that country? Yes.
440. And you say you are aware that the country only carries a small number of stock? Yes.
441. If the land was rich, and there was a good rainfall, it would probably carry a large amount of stock? Yes; a lot of it is not very good. The rabbits are responsible for a great deal.
442. I suppose you are aware that even before that country was over-run with rabbits it only carried a small number of stock? No; it never carried much stock.
443. It was never considered a heavy-stock pastoral country? No, never.
444. I suppose you would expect a country would necessarily have to be good for pastoral purposes to be likely to be good for agriculture? Yes, generally.
445. With regard to the extension to Cobar—the country between Condobolin and the north-west would be somewhat similar country to that close to Cobar? Yes; about the same.
446. The people have not gone in extensively for agriculture on the Cobar line since it has been constructed? No.
447. Therefore, it would not be probable that that large extent of Crown land between Condobolin and Cobar would be likely in the near future to be thought favourably of for agriculture? Not to any distance from the railway line.
448. But they have not used the land near the Cobar line although that line has been constructed for two years? No.
449. Then agriculturists cannot look upon that country favourably for their pursuits? I suppose not; but they are gradually extending out in that direction on the Bogan.
450. But still it is not yet recognised as are other portions of the Colony? No.
451. From your knowledge of the Condobolin country, do you think the rainfall decreases to a large extent as you go down the Lachlan? Yes.
452. Then it will be somewhat drier at Euabalong than at Condobolin? Yes; I think there is about an inch difference. I was rather surprised to find there was not a bigger difference going west. The people I spoke to at Euabalong, who have been farming wheat and barley, are well satisfied with it.
453. There is a considerable amount of lightly-timbered good land about Euabalong? Yes.
454. And a considerable amount of dry plain? Yes—dry, open, red plain.
455. The land could be brought under cultivation at a trifling cost;—it would not cost much to clear the timber? No; it is comparatively light timber.
456. You say it is about 45 miles from Condobolin to Euabalong? Yes, and 20 miles from Euabalong to Cargellico, 60 miles from Cargellico to Hillston, and 100 miles from Hillston to Hay.
457. Then the wool which would go from the neighbourhood of Euabalong would have a considerable distance to travel to Hay before it could be shipped by steamer to Melbourne? Yes.

- J. Harper, Esq. 458. If a railway were made to Condobolin, all the wool trade and wheat, and things of that description, would go to Condobolin? A good deal of it would.
- 13 Mar., 1895. 459. It would not go the other way? No; it would stop a lot of the traffic to Hay, to which it goes by reason of the distance being shorter.
460. Do you think the wool traffic likely to increase if the line goes to Condobolin? Yes; I have explained about that. I have included about six clips in my estimate.
461. Does any wool come in from the country known as Cowal Creek? No. The Wirchellebar, I think, this year came in on the Cobar line. We had to make a special rate for that wool.
462. You do not think the Wirchellebar wool went to Victoria this year? No; it came to Sydney.
463. But you do not know whether it went on the Western line? I am inclined to think it came in on the Cobar line, because we made low rates on that line to secure it.
464. With regard to the 800 *bond fide* selectors stated to be on the books of the Condobolin Land Office—you said, I think, that you were not certain as to the boundaries of that land? No.
465. I suppose you are aware that there is a large number of selectors about the Humbug Creek? Yes; I did not include them.
466. Did you not include the Humbug Creek selectors, and those close to Wyalong? No; I did not go within 40 or 50 miles of Wyalong. As a matter of fact, in connection with these two lines, there are only eight clips of wool with which I credited the Wyalong extension which may be included in this.
467. There are a number of selectors at Bygalorie, and a number on the Humbug Creek; did you include them amongst the 800? No, I think not.
468. Were the 800 chiefly on the north side of the Lachlan? Yes; there were more at Melrose than anywhere.
469. They have not been many years in the district? No; they are chiefly Victorians who have gone to take up land.
470. Have you heard that some of the selectors there have been seriously thinking of abandoning their holdings? I do not know of any.
471. How long is it since you were there? Five or six months; of course, they were discouraged at the low rates of wheat.
472. It has been rumoured that many of the selectors were very much dissatisfied with their holdings? Yes.
473. They are chiefly men of large holdings? Yes.
474. 2,560 acres, and some families hold more than one selection? Yes.
475. You have been over the country, I suppose, about Melrose and Eremerau? Yes.
476. And those are places where some of them have gone into cultivation? Yes; at Melrose there is a good deal of cultivation.
477. Then, a substantial number of these 800 *bond fide* selections are on the north side of the river, and would have no other means of getting to market than by the proposed railway? No; as a matter of fact, they did not know what to do with their wheat or the produce of their land when I was up there. They had the prospect of a good crop, and did not know what on earth to do with it.
478. Have you been at the Mount Hope copper mines? No; I was there nine or ten years ago, but I have not been since.
479. When they have sent copper from Mount Hope, do you know where it has been sent to? It has been coming into Forbes. I based my estimate on the quantity actually sent by them—200 tons at 10s. a ton.
480. Are you of opinion that the mine might be developed to a much greater extent if we had railway communication within reasonable distance? I have no doubt it would assist them by cheapening the cost of transit.
481. If the line went down and was further extended on the north side of the river, or close to the river, it would go closer to Mount Hope? Yes.
482. The proposed line would go approximately near it? Yes.
483. And if a line were run down the river it would go much nearer Condobolin? Yes.
484. Chairman.] Is Mount Hope due north of Euabalong? No; it is further north-west.
485. How far is it from Euabalong? It will be about 35 miles, as the crow flies.
486. Mr. Hoskins.] If the line were constructed from Forbes to Condobolin, would not the Government have to purchase a much larger quantity of land than if it were taken from Parkes to Condobolin? Yes, most undoubtedly. It would pass almost exclusively through freehold land from Forbes to Condobolin.
487. I suppose you have seen the reference of the landowners on the proposed line between Parkes and Condobolin? No.
488. But it is nearly all Crown land? Yes; I judge of that from the section I had in my possession.
489. There are only seventeen private holdings? Yes.
490. Therefore, on the ground that the Crown in extending the railway to Condobolin would have to purchase so much less land on the Parkes line than they would on the Forbes line, do you think it would be better to have the line taken from Parkes? Yes. Apart from that, there is the element of increased distance from Forbes, and there is also the element that there is comparatively very little population at all on the river, except in the immediate vicinity of Forbes. Burrawang has, I suppose, 40 miles of frontage to the river. Apart from that, the river floods out for some 15 or 20 miles back. There is a good deal of flooded land.
491. Therefore, more timber viaducts or deep cuttings would be required to avoid it? They would have to make formations, or be prepared to let the river overflow.
492. Mr. Humphery.] Is it a fact that in order to obtain the New South Wales traffic the Victorian Railway Commissioners have been granting concessions up to 80 per cent.? Yes. Of course, 66 per cent., we know, is their published rate.
493. Over the charges made to their own people? Yes.
494. Have you examined the country between Wyalong and Condobolin? Not with a view to reporting upon it. I am going to Wyalong to-night.
495. Do you know anything about Lake Cowal? I have been there, but I do not know sufficient to give any evidence.

496. As a matter of fact, the New South Wales Commissioners are unfavourable to the extension of the line from Wyalong to Hillston? Yes; they consider that the Lachlan extension would be the better one. J. Harper,
Esq.
497. And should the line be constructed between Temora and Wyalong, Wyalong will remain the terminus? Yes; that is the idea. I do not think the Commissioners have considered the question of the extension from Wyalong to Hillston at all. I think they considered a more favourable extension down the Lachlan, should it be deemed necessary, would be from Condobolin. 13 Mar., 1895.

498. *Mr. Davies.*] How do you arrive at the sum of £1,972 as your estimate for the passenger traffic and the carriage of mails? I gave, I think, £720 for mails.

499. What is paid now for the carriage of mails? £12 a mile for 60 miles.

500. How often is the mail run between Parkes and Condobolin? Three times a week at present.

501. Have you an estimate of the number of people who travel by coaches? No.

502. How do you make up your estimate of the number likely to travel? From the returns we have in districts corresponding in character with this district.

503. It is only a supposition then? It is an estimate; but it is a more valuable one than you would get from coaches.

504. How did you arrive at a conclusion? We took a district which corresponds with this, and found out how many people travelled, and upon that we based our estimate.

505. Has it been usual for the Department to consider the number of passengers carried by the coaches? I have never done so.

506. Was not that done with the Glen Innes-Inverell railway? No; I did not do it. It might be used by the way, but we recognise the fact that it is of little value, because the number of people who travel by coach do not represent the number of people who travel by rail. In the first place, the fares would only be about one-fourth, and the convenience would be so much greater that you would naturally look for more people travelling by rail than by coach.

507. Then you take the basis of population in the district and compare it with other districts of equal size and arrive at a conclusion? Yes.

508. What is the population of the district which would be served from Parkes to Condobolin? About 4,000. The population of Condobolin is, I think, 1,200. The district has, I think, 3,000. There is a population altogether of between 4,000 and 5,000.

509. What would be the fare of a first-class passenger between Parkes and Condobolin? Ten shillings return; second class, 7s. 6d.

510. Then you are of opinion that your estimate will be fully realised? Yes.

511. And you think your estimate of the carriage of goods would be realised? Yes. Of course, we can tell precisely how much wool is coming in from the stations of the Colony. I have considered the number of bales of wool cut at every station.

512. And you have reason to hope that the wool will come by the railway if constructed? Yes.

513. Did you go to Trundle? Yes.

514. What would be the difference in the distance of mileage if the line was constructed *via* Parkes to Trundle, and then to Condobolin? The engineers have given it in so many different ways that I do not, as a layman, care to express an opinion—one has said 7 miles, another 12, and another 17; but I should think it would be 10 or 11 miles.

515. Would the settlers in the district of Trundle be fairly served by the direct route from Parkes to Condobolin? Yes; I think the greatest distance from them would not be more than 12 miles. Those who are within 12 miles of railway communication would, I think, be fairly served with the main road.

516. Then, after your visit to Trundle, you would not recommend the deviation in that direction to reach Condobolin? No.

517. You advocate the direct route? Yes.

518. Believing at the same time it will fairly serve Trundle? Yes.

519. Is the population and settlement in Trundle extensive? There are two public houses, a store, and three private houses. It is an open question as to whether Bogan Gate is not larger. I think there is probably a store more at Trundle than at Bogan Gate.

520. After your personal visit to the district you recommend the direct route? Yes.

521. Believing at the same time that it will serve the Trundle people? Yes.

522. Are the people in the district of Trundle principally free selectors or pastoral holders? Most of them are selectors.

523. The trade and traffic from Trundle would not be sufficient to justify a deviation of this line by way of Trundle to Condobolin? No; I cannot see any justification for it at all. I would point out that the bulk of the traffic we anticipate, and upon which our estimate is based, will come into Condobolin. It simply means saddling the people beyond Condobolin with a deviation *via* Trundle.

524. It would saddle the people at Condobolin with an additional mileage for all time? Yes.

525. Which you could not possibly advocate? No.

526. You estimate, then, that there will be an annual loss on the line of £2,000 a year? Yes.

527. That simply applies to the 60 miles of line between Parkes and Condobolin? Yes.

528. It does not take into account the earnings the main line will receive for the additional carriage of goods which will come from Parkes to Sydney and elsewhere? No.

529. So that it would be scarcely fair to charge the branch with the loss of £2,000 a year? No; the branch certainly ought to be credited with the addition to the earnings of the main line, but it is an unknown quantity.

530. From your knowledge of the country, you firmly believe your estimate of the coaching and goods traffic would be realised? Yes.

531. And you strongly, as an officer of the Department, recommend the construction of the line? Yes.

532. *Mr. Lee.*] You went to Trundle? Yes.

533. Do you remember the names of the selectors whom you met there? No.

534. Do you remember a Mr. Cusack, a Mr. Drake, or a Mr. Croft? No; as a matter of fact, I never look for these people when I make inquiries. I generally find I can get at my results better without them.

535. How far would it be from Trundle to the nearest point of the proposed line? About 12 miles.

536. If the Trundle people were satisfied to cart their produce to Parkes railway station, and could profitably do so, is it not a fair inference that they will be perfectly satisfied when they get the line within 12 miles? Yes; it is about 30 miles from Trundle to Parkes.

J. Harper, Esq. 537. So that that settles the question as to the deviation to Trundle? Yes. Then there is so much of the settlement lying between Trundle and the line. Practically, it is not 12 miles to the line for a lot of the settlement.

13 Mar., 1895. 538. In fact, to get to Trundle you would have to make the line the shape of the apex of a pyramid? Yes.

539. What is the population of Trundle? It does not appear anywhere on the records; but there are two public houses, a couple of stores, and two or three private houses.

540. According to evidence those were there in 1890? As a matter of fact, Trundle happens to be a stopping-place on the stock route I have spoken of. That has really called it into existence.

541. Has any representation been made to you by the Forbes people with reference to the line? No; I think the Forbes people are somewhat indifferent about it, and those who have sense recognise that it will be better if it does not go to Forbes at all.

542. Do you know whether the Burrawang wool is sent by the Forbes railway? Yes; it comes into Forbes.

543. You are absolutely clear about that? Yes.

544. And is there much traffic down the Lachlan coming into Forbes? Yes; as a matter of fact, there is a road passing the Burrawang wool-shed. There is a river road from Forbes which is the usual route which is pursued. There is a back road which is used when the river is in flood which passes the Burrawang wool-shed. Practically speaking, it follows the line. We had 4,980 bales from the Burrawang this year at Forbes. The Burrawang wool-sheds are 26 miles from Forbes, and from 8 or 9 miles from one of the points on the line.

545. You are basing your estimated return as to the area outside the influence of the Parkes and Forbes district? Decidedly; the first business I have anticipated is Burrawang, 36 miles from Forbes, and the Trundle traffic at Bogan Gate will be 22 or 23 miles away.

546. Apart from the considerations of traffic, I suppose the Committee must view this line from a diplomatic point of view? Yes; that is the position.

547. That enters largely into consideration? Yes.

548. Mr. Davies.] Have the Railway Commissioners carried a larger quantity of wool during the last year than any previous year? Yes.

549. Where has the large increase come from? There has been a natural increase.

550. Where has the larger proportion of the increase come from? It has been general all over the Colony. Of course, we have increased the quantity. We have gained 14,000 or 15,000 bales in Riverina.

551. Which hitherto went to Victoria? Yes.

552. Has there been any increase in the district under consideration? Yes; we got it from three stations, but a couple of them came down to Hay.

553. What gross quantity of new business had you? There is one station—Gunbower—which we got. I should think we got 1,500 bales altogether from the district which would be affected by the railway, but there is a good deal more to get yet.

THURSDAY, 14 MARCH, 1895.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.

JAMES HAYES, Esq.

The Hon. WILLIAM JOSEPH TRICKETT.

ROBERT HENRY LEVIEN, Esq.

The Hon. JAMES HOSKINS.

JOHN MOORE CHANTER, Esq.

The Hon. JOHN DAVIES, C.M.G.

CHARLES ALFRED LEE, Esq.

The Hon. CHARLES JAMES ROBERTS, C.M.G.

JAMES GORMLY, Esq.

EDMUND WILLIAM MOLESWORTH, Esq.

The Committee further considered the proposed Railway from Parkes to Condobolin.

Percy Scarr, Esq., Principal Assistant Engineer, Roads and Bridges Branch, Department of Public Works, sworn, and examined:—

P. Scarr, Esq. 554. Mr. Roberts.] You know the line of railway under consideration from Parkes to Condobolin? Yes.

555. *Via* the Bogan Gate? Yes.

14 Mar., 1895. 556. Have you been over that country at all? Not as far as Bogan Gate. I have been out as far as Mr. Lackey's station, 15 or 20 miles from Parkes, but I have not an intimate knowledge of that part of the country.

557. What is the general character of the country? So far as I went it is common to all that country about Parkes and Forbes.

558. Is the road from Parkes to Condobolin at present in good repair? I could not say.

559. Is it a first-class road? No; I should not say so. The road is very much in a state of nature.

560. Can you give any idea as to the annual expenditure upon it? At the present time it is at the rate of £800 a year—that is, from Parkes to Condobolin.

561. And what is the annual cost of maintaining the road from Forbes to Condobolin? I have not looked into that matter.

562. You are aware that the soil of the country between Forbes and Condobolin is black soil? Yes.

563. Whereas that from Parkes to Condobolin is red soil? Yes.

564. Which would be the most expensive road to make—through black soil or red soil? Through black soil.

565. Can you give the Committee an estimate as to the probable cost of making a first-class road from Parkes to Condobolin? I telegraphed to our officer at Forbes, who is in charge of that part of the district, yesterday, and his reply was £1,200 a mile, but, in my opinion, I think he has considerably underestimated it.

566. About how much more do you think it should be? I do not think you could make a first-class metal road in that part of the country for less than £1,500 or £1,600 per mile.

567. And I presume a road from Forbes to Condobolin would cost still more? I think so.

568. What do you think it would cost, going through the black-soil country? In that black-soil country you cannot construct roads much under £1,800 or £2,000 a mile.

569.

569. That being so, which would you think would be the most desirable thing to do—to construct a railway P. Scarr, Esq. at £2,000 a mile, or a first-class road to cost about £1,800 a mile? I should say a railway, by all means, because you have the maintenance of the road for ever, and more than that, a road takes two or three years before it consolidates and is fit to carry traffic, whereas the railway brings in revenue. ^{14 Mar., 1896.}

570. *Mr. Hoskins.*] And you do not get any tolls on the roads? No.

571. Have you any idea as to the settlement about Condobolin? No; I have been to Condobolin, but it was some years ago, and I do not know much about that part of the country.

572. Can you say whether the trade in and about the Condobolin district gravitates to Victoria or to Sydney? I could hardly speak on that point.

573. *Mr. Humphery.*] Does the surveyed route of the railway follow the existing road? I could not say. My information about that part of the country is very meagre, and I do not know the exact position of the road; but I find that the scheduled road goes by way of Trundle. It is called the road from Parkes, *via* Trundle, to Condobolin.

574. Even if the railway were constructed, the present annual expenditure on the road would continue? I think not.

575. Why? Because the through traffic would come on the railway. It would become merely a local road after that.

576. And it would become unnecessary to spend any money on the existing road? As a through road, certainly.

577. What would the probable expenditure be in that case, assuming the line of railway to be constructed? One could hardly say that, because it would be a matter of consideration as to what local traffic there might be. There might be a large local traffic, which would justify a large expenditure on certain parts of the road.

578. Are you not familiar at all with this particular road? No.

579. Who in the Department is? I do not think there is anyone in Sydney who is.

580. Who is in the country? The local officer there, Mr. A. E. Newton, would be able to give the Sectional Committee all information.

581. Where is his office? At Forbes.

582. *Mr. Trickett.*] You say a road would cost about £2,000 a mile? I was speaking then of the road from Forbes to Condobolin, on the black soil. The roads on the black soil could not be constructed for much less than that amount.

583. But do the roads which the Department construct cost that amount? They do before they are properly consolidated, because although you construct a road you cannot call it a road for two years at least, because it has to be maintained pretty heavily for the first couple of years with additional metal, and so on, and, as a rule, the cost on the black soil runs up to at least £2,000.

584. How many miles of road have the Government under their charge now? I think 27,000 miles—that is, roads of all classes.

585. Then, if your estimate is right, the roads would cost about £5,400,000 to construct? Remember please, I am only speaking of the black-soil roads when I place the amount down at £2,000. There are many of our roads which cost less—down to £800; and some of them cost more than £2,000 in hilly country, perhaps, where there are heavy cuttings.

586. With regard to the proposed line of railway, do you know whether there is suitable material in the locality for the purpose of constructing a railway? I think there is in that part of the country; but I have not much personal knowledge about it.

587. What kind of ballast could be obtained? I could not tell you.

588. Is there not a general kind of stone to be obtained in black-soil country? In much of the black-soil country you cannot get any stone at all; but in that part of the country, along the river and back from the river, you can generally get stone.

589. You think you could get ballast within a reasonable distance of the railway? I think so; but that information you would be able to get accurately from our local officer there.

590. Is it the practice of the Government to make roads as costly as £2,000 a mile over this character of country? We do not make any great length of road over the black-soil country anywhere.

591. Seeing that this line of railway will be about 61 miles long, it would be very unusual for the Government to construct an ordinary road over that length at a cost of £2,000 a mile? Yes; you might say that we only work piecemeal at any time. With the exception of the old main southern, northern, and western roads, I do not know that we have any long lengths of metallised road.

592. So that really comparing the railway with the road is not much of an argument after all? No; I do not think so. As a matter of fact, in that black-soil country the construction of roads is practically out of the question.

593. *Mr. Lee.*] I understand that personally you have no knowledge of this country? No.

594. And you prefer the resident engineer to give all the particulars as to what ballast there may be, and as to the length of roads and their direction? Yes.

595. Could you not examine the railway route as submitted on the parish map, and after examination show the route of your main road through the country, in order to see what relation the one bears to the other? I think we should have to refer that also to the local officer.

596. Would it not be a difficult matter for a road officer to give that information? No; he ought to be able to lay the road down quite accurately.

597. Do not your own office maps show that particular road? No; not with any great accuracy. We have not maps which show the exact position of the road; but if the Committee wish it, I could send parish maps to the local officer, and he would have the roads laid down on the maps ready for the Sectional Committee when they visit the district.

598. *Chairman.*] Is there no other route to Condobolin than *via* Trundle? I could not say.

599. *Mr. Molesworth.*] You state that in the event of the construction of the line from Parkes to Condobolin the main road as scheduled *via* Trundle will not be required to be maintained? Not as a through road.

600. What maintenance would be required on the road? I could not say, because we do not know what local traffic would arise in consequence of the construction of the railway. After a railway is constructed we always have a number of roads coming into use to serve the local traffic.

601. Have you a scheduled surveyed road between Trundle and the Bogan Gate? Yes.

602.

- P. Scarr, Esq. 602. You anticipate, in connection with the construction of the line, that that is a road which will have to be maintained as the principal road to Trundie? I should think so.
- 14 Mar., 1895. 603. *Mr. Chanter.*] Are the scheduled roads arranged in the Department? They are arranged between the resident engineers and the divisional engineers.
604. These scheduled roads are fixed in the Department on the recommendation and report of the local officer? Exactly.
605. Can you tell the Committee what the object was in taking the road, which might almost be classed as a main road—that is, in the sense that a certain sum of money is allocated for its maintenance—*via* Trundle to Condobolin, instead of in a straight line from Parkes to Condobolin? I could not tell you unless it was to serve the Trundle traffic as well as the through traffic.
606. Is there any difference in the features of the country as between the through route from Parkes to Condobolin and the route *via* Trundle? I could not tell you.
607. I suppose your local officer at all times takes into consideration in recommending a road to be scheduled, not its direct character, but its capacity to serve the greatest number of residents, or to carry the greatest proportion of traffic? Serving the greatest number of residents without taking the through traffic too much out of its way.
608. Can the Committee assume that the scheduled road from Parkes to Condobolin, *via* Trundle, was scheduled in consequence of its serving the greater number of residents, and carrying the greater amount of traffic? I think you might assume that in the absence of any other information, but you would be able to get all those particulars from the local officer.
609. You do not know anything personally as to the nature of the country? No.
610. Have you macadamised any roads in that locality at all—on the Trundle scheduled road or Forbes? Yes; there has been a considerable amount of work done there. The total expenditure on the road from Parkes to Condobolin has been £8,631.
611. From when? From the time we commenced to expend any money upon it at all. I could not tell you exactly when that was, but probably in the past ten years.
612. What is the allocation per mile? About £10 per mile at the present time. It is at the rate of £800 for 70 miles.
613. I presume, then, the metalling on the road is done on the worst places, it is not continuous? No; the worst places are always done first.
614. Then you do not know any reason why the road was scheduled from Condobolin to Parkes, *via* Trundle? No.
615. Would the local officer be able to give that information? Yes; he has been there a number of years.
616. Is there a road scheduled from Condobolin to Forbes? Yes; there are two roads, one on each side of the river.
617. Do they bear the same proportion of vote? I think not. I think the road on the left bank of the river has the largest expenditure upon it.
618. *Chairman.*] That is the more important one? Yes, I think so.
619. *Mr. Chanter.*] Which is the more costly for the Department—the maintenance on the road from Condobolin to Forbes, or the maintenance on the road from Condobolin to Parkes? I should say the maintenance on the road from Condobolin to Forbes, because of the nature of the soil.
620. Only on that account? That would be one reason.
621. Have you any personal knowledge as to the traffic from Condobolin to Forbes, and from Condobolin to Parkes? No; only in a very general sort of way which would not be of much value to the Committee.
622. *Mr. Hayes.*] Who, as a rule, locates the different roads? The Survey Department, as a rule.
623. Does your Department exercise any control whatever in locating the roads? Not at the first.
624. Looking at the plan of the road from Parkes to Condobolin, does it not seem extraordinary that a road of that kind should be taken through a country like that, which increases the length very materially? The natural features of the country may have forced it in that direction.
625. Take the part from Parkes to Bogan Gate—would it not be an advantage to remove that road, and make it part of the proposed line after the line is constructed? Possibly.
626. Would it not shorten the distance very materially? Judging by the map, it would.
627. And the same remark applies to the road between Bogan Gate and Condobolin? I should think so.
628. Then if the character of the country would permit it, do you think it would be an advantage to do that? I think so. I think it would be a great advantage to have the road near the railway.
629. To do that would shorten the distance very much, would it not? Yes.
630. What is the width of the road as shown on the parish map? Five chains all through, apparently.
631. Would there be ample room on a road of 5 chains for a road and railway? I should hardly think so. I do not know what they require for a railway—whether it is 2 or 3 chains or what.
632. We will assume the maximum to be 2 chains? I should think it would be sufficient.
633. Three chains would be all you require, including accommodation for travelling stock? Yes.
634. *Mr. Humphery.*] Touching your reply to Mr. Hayes' question as to the width of the road and the direction it takes on the map—you mention the distance by road as 70 miles? Yes.
635. That is the road *via* Trundle? I take it that the road as shown on the map is not the same one.
636. Is that the road *via* Trundle you refer to? No; I think not.
637. Can you tell from the map the direct road between Parkes and Condobolin? No; I do not understand how it is that the 5-chain road is shown on the map, and yet our road goes *via* Trundle.
638. Can you say what the length of the 5-chain road is between Parkes and Condobolin, as shown upon the map? No.
639. Therefore, you do not know whether it would be the same length of line as the proposed railway, or much longer? Taking the red line as the railway line, it is quite evident that the road is the longest. I could not tell you the relative distances.

Alfred Brown, Esq., First Clerk, Valuation Branch, Department of Public Works, sworn, and examined:—

640. *Chairman.*] What are you? First Clerk in the Valuation Branch.

A. Brown,
Esq.

641. You are next to Mr. Thompson, I presume? Yes.

642. Have you a statement with you? Yes.

643. *Mr. Gormly.*] Have you had anything to do with the valuation of the land on the railway extensions from Molong to Parkes, and from Parkes to Forbes? No.

14 Mar., 1895

644. Have you a statement in regard to the cost of land likely to be required for the construction of a line from Parkes to Condobolin? No.

645. You have, however, some knowledge of the cost of resuming land from Molong to Parkes, and from Parkes to Forbes? Yes.

646. Have you detailed statements of the suburban and country lands resumed in those particular places? I have the country lands; I have excluded the town lands.

647. Have you excluded the suburban lands? No; I have excluded those within the town boundaries only.

648. But you have a statement as to the country and suburban lands? Yes.

649. Have you a statement of the cost of the different lands which have been resumed? Yes.

STATEMENT showing area, cost, &c., of land taken for Railway purposes on the extension Molong to Forbes, exclusive of lands taken within town boundaries.

	Area taken.	Probable cost of land and buildings.		Probable cost for severance.	Total cost.	Rate per acre.
		a.	r. p.	£	s.	d.
Molong to Parkes	369 3 31	4,338	5 8	760	1 5	5,098 7 1
Parkes to Forbes	22 3 16	1,303	4 0	136	4 0	1,439 8 0

650. Have you a statement showing the cost of the lands without the buildings? No.

651. Is that the actual cost? No; because some of the claims are not adjusted.

652. What quantity of lands out of the 369 acres are suburban? I could not tell you.

653. *Chairman.*] We want to know what you really did pay in connection with the Molong and Parkes line in order to form an idea as to what we will have to pay in connection with the Parkes to Condobolin line;—we want to know what your severance was, and also the cost of your suburban and country lands? Yes.

654. Do the claims which are not complete form an important point? No, there are very few.

J. Molesworth Stawell, Esq., Supervising Engineer, Railway Construction Branch, Department of Public Works, sworn, and examined:—

655. *Chairman.*] Do you know the Trundle-Condobolin railway? Yes; I have been over it.

J. M. Stawell,
Esq.

656. *Mr. Chanter.*] Having a personal knowledge of the country between Parkes and Condobolin via Trundle, will you tell the Committee what its special characteristics are? It is undulating country until you get near to Condobolin, and then it is flat.

14 Mar., 1895.

657. Within what distance of Condobolin? About 20 miles.

658. Are you speaking now of the direct route from Parkes to Condobolin as shown on the plan, or via Trundle? Via Trundle.

659. What is the character of the route as shown on the map from Parkes to Condobolin? I have not been over that. The Trundle line I know, and the line from Forbes to Condobolin.

660. What is the character of country between Forbes and Condobolin? It is very flat.

661. Level? Yes.

662. What is the character of the soil? Red soil, lightly timbered with pine and box for a portion of the way, and the rest of it is open plain.

663. Is there any plain country on the route from Parkes to Condobolin via Trundle? Not until you get within 20 miles of Condobolin.

664. And does it continue from that point 20 miles into Condobolin? Yes; the further you get north of the Lachlan the more you get into ridgy country. The plains are on the river, and as you get back you get on to ridges.

665. What is the character of the settlement along the route via Trundle? It is taken up in small holdings nearly all the way.

666. Are the small holdings numerous? No; they are not very numerous.

667. Are they more numerous there than they are along the surveyed route, or south of the road from Parkes to Condobolin? I think they are. They are more numerous than on the Forbes to Condobolin route. I have not been over the Parkes to Condobolin route via Bogan Gate.

668. Would the line via Trundle be more costly to make or less costly to make than a line direct from Parkes to Condobolin? I should say it would be more costly per mile. The country is more undulating.

669. There would be more cutting? Yes, and probably more waterways, because you have more gullies to cross. You would have more banks.

670. I suppose you wish to convey that the country is slightly undulating, not what you would term hilly? No; it is slightly undulating, except crossing the Gunningbland Range. The direct line goes through the Bogan Gate. If you go by way of Trundle you cross it at another gap called Treeweke's Gap, and it would be rather hilly getting up there. You might get up with a 1 in 80 grade with a little work.

671. What would be the deepest cutting approximately? I suppose there has been no special survey? No; I only rode over the country.

672. Has there been any special survey of this line other than direct from Parkes to Condobolin via the Bogan Gate? No.

673. Then you are not in a position to give the Committee any direct information? No, only from what I saw whilst riding over the country. I was told to inspect the route and report upon it.

674. Which would be the nearest point at which you would obtain your timber supply for sleepers? It is very bad timber for sleepers all through there. I doubt if you could get any nearer than Parkes. You might get a little ironbark in the Gunningbland Range, but it is poor stuff.

675.

- J. M. Stawell, Esq. 675. Would there be a sufficient supply at Parkes? Not at Parkes itself. It is out of the ironbark country. You would have to go back for it.
- 14 Mar., 1895. 676. Is there plenty of red gum on the Lachlan? Yes.
677. Suitable for sleepers? Yes.
678. Could they be obtained at less cost than the ironbark sleepers from Parkes? No; I do not think so.
679. Would there be any material difference in the cost? I could not say.
680. From what point could ballast be obtained for the line? You could get ballast at different places nearly all along the line.
681. I understand you to say you have not traversed the line direct from Parkes to Condobolin? No.
682. Have you received any information as to whether any ballast could be procured along the direct route? I know from my knowledge of the country that you could get ballast pretty well all along it.
683. What character of ballast? It would be mostly sandstone. It is sandstone formation nearly all through there.
684. In this undulating country, *via* Trundle, could ballast be more easily obtained than in the river country? I doubt it very much, in constructing the line, because in that flat country you could have your ballast-pits at certain places along the line, and run the ballast down to the head of the road. I do not think that the fact of getting it at little places along the line would make much difference.
685. From the information supplied by the map itself, this route from Parkes to Condobolin direct would appear to go through flat country the whole of the distance? There are isolated hills cropping up out of the plain at different points.
686. Is there any other than the range of hills shown in the gap at Bogan Gate? No.
687. There is no defined range? There is a range called the Black Range, but it is an isolated one.
688. I suppose, if ballast were obtainable, it would be obtained on that range somewhere—it would not be on the river flats? No; there is no ballast on the river flats.
689. As supervising engineer, taking everything into consideration—the character of the country and the character of the traffic, do you think this direct line is as suitable as a line *via* Trundle? Yes; I should think so.
690. Do you think it would command as much traffic that way? Yes; I think the direct line would draw all the Trundle traffic. I doubt if you would get much more by going round.
691. Is there any considerable amount of settlement to the north and north-west of Trundle? I have never been north or north-west of Trundle. I know a good deal of the traffic north of Trundle goes to the Western line west of Dubbo.
692. Do you know anything of the immediate conditions of the surroundings of Condobolin proper in regard to settlement? No; I do not. I have been to Condobolin, but I have never been beyond it.
693. I understand you to say you have no personal knowledge of the direct route from Parkes to Condobolin? I do not know anything about the direct route.
694. *Mr. Hayes.* Practically, the survey you made was what you call a flying survey? It was not a survey at all; it was a mere inspection. I rode over the country.
695. Did you receive instructions from the Department to do so? Yes; from Mr. Deane.
696. To make a cursory inspection—to see whether there were any engineering difficulties? Yes.
697. In riding over the roads you have mentioned, you went as near as you possibly could to Trundle? I went almost direct.
698. There are no engineering difficulties crossing the Gunningbland Range? No.
699. Would it be costly to cross that range? It would add to the cost per mile.
700. To what extent? I cannot say from just riding over the route.
701. But it would add to the cost? It would, certainly.
702. In going from Trundle to Condobolin, did you follow the main road? I went through the different holdings. I used to ride to one selector, and get him to show me through his land, and then on to the next.
703. You did not take the mail road? No; I drove back by the mail road. I went pretty straight over the country.
704. Would there be any more difficulty in taking a line along the mail road than along the route which you took? The mail road is a little hilly in places. You would have to get south of it in order to get upon flat country.
705. The country is suitable for what you call a pioneer line of railway? Yes; you could make a light line. You could not make a line in the way you could make one on the Riverina Plains.
706. Would it be more costly in this part of the country? Yes.
707. How much? It might cost £300 or £400 per mile more.
708. And if it costs about £2,000 a mile in Riverina, a line from Parkes to Condobolin, *via* Trundle, would cost £300 more? Yes; I know there is more flat country on the Bogan Gate line.
709. And an easier country to construct a line in, and the line could be constructed much cheaper? Yes.
710. With regard to the line from Parkes to Condobolin *via* Bogan Gate—from your knowledge of the country, you having inspected the line *via* Trundle, would it meet all the requirements of Trundle at present, from a traffic point of view? I think so.
711. How does the settlement lie;—is it between the proposed direct line and Trundle, or to the north of Trundle? Most of the settlement is in a direct line between Trundle and Condobolin. The line by the Bogan Gate is to the south of most of the settlement.
712. Then, according to that statement, a line from Trundle to Condobolin would suit the convenience of the settlers there best? Under the present circumstances it would, I think.
713. You say the settlement lies rather to the north of the direct line? Yes.
714. How far would that settlement be from the line? An average of 6 or 7 miles.
715. Then the bulk of the settlers would not be further than 6 miles from the direct line of railway? Not unless you go out north of Trundle; but I have not been out there, and can hardly give an opinion.
716. Take the settlement which lies immediately to the north of Trundle;—if this line is made, will it not be more convenient to them, and will they not be closer to railway communication than going over to Trangie? Of course, when you get north of Trundle you get on to large stations, and you go from one large station to another.
717. Where there is hardly any traffic? Not much.

718. You consider the small settlement in the neighbourhood of Trundle would be perfectly served by J. M. Stawell, the direct railway route from Parkes to Condobolin? Yes; judging from what I have seen of the country.
 719. With regard to ballast, you say there is plenty of sandstone all through the country? It is in 14 Mar., 1895. places.
720. Quite sufficient of it? Quite sufficient to get ballast without any extraordinary difficulty.
721. Of what character is the sandstone? Some of it is very hard.
722. Suitable for railway ballast? Yes; some of it is regularly crystallised—as hard almost as quartz.
723. Can it be got cheaply? No; you would have to break it—it would have to be quarried and broken.
724. And as far as sleepers are concerned, you think there is very little suitable timber on or near that line? Very little timber of any good at all except for fencing.
725. And all the sleepers will have to come from between Molong and Parkes? Or else out towards Peak Hill. You can get very good timber out there; in fact, we used a great deal of it on the Forbes line.
726. Can you state what was the cost of the sleepers used on the Forbes and Molong line? 3s. 10d. laid on the road.
727. *Mr. Gormly.*] I think a good deal of the sandstone in that country is hard red sandstone? I did not see any.
728. Is it hard? Yes; most of it that I saw was white.
729. Would there be a necessity on portion of the line to make curves or cuttings; you could not run a straight line on the surface? No.
730. You would either make curves or cuttings? You would probably have to do both.
731. And the gullies would have to be filled by moderately large culverts? Yes.
732. A good deal of water runs between the ridges in time of rain? Yes; you would have to provide for that, but nothing extraordinary.
733. But it would be necessary to have fairly large culverts? Not very large, except in one or two instances.
734. But culverts would be required? Yes.
735. Box drains would not do? In most of the gullies you could drain with the box drains.
736. Would they be sufficiently large? Yes.
737. There would have to be some embankments in the gullies? Yes.
738. And some cuttings on the ridges? Yes.
739. Have you gone over the Gap at the Bogan Gate? No.
740. You are not aware whether there would be any necessity for making any cutting across that range? I do not know.
741. The country is timbered? In places.
742. It is mostly timbered? Yes.
743. Some portions are pine scrub? Yes, and oak scrub.
744. It would be necessary, therefore, to clear the line? Yes.
745. Would the cost of the clearance be slight or considerable? Very slight, I think.
746. Have you examined the class of timber about the Lachlan River and Condobolin? Yes.
747. Is there a considerable quantity of gum suitable for sleepers? Yes; there is some excellent gum there.
748. I suppose you have seen railway sleepers sown out of gum timber? Yes; but unless they are very carefully sown, they are not much good. They might be sown across the grain.
749. But if the trees are straight there is no need to cut them across the grain. You say you saw excellent gum on the Lachlan? Yes.
750. I suppose an excellent tree would be straight in the grain? Yes.
751. I suppose you are of opinion that a tree cut in the grain is stronger than a tree cut against the grain? Yes.
752. Therefore, the trees which you say would be good for railway sleepers would be straight? Yes.
753. And if they were straight they would not be cut against the grain? No.
754. Do you think gum sleepers could be procured about Condobolin as cheaply as ironbark sleepers could be procured? I daresay the cost would be much about the same by the time you got them on to the line, because you would have to cart the sleepers back from Condobolin.
755. Because Condobolin would be the wrong end at which to commence? Yes.
756. Therefore, you think that if ironbark sleepers are procured they might be procured cheaper even than gum? Yes.
757. But still gum sleepers could be procured if necessary? Yes.
758. And at a reasonable cost? I think so.
759. Condobolin is situated on a reasonable elevation; it is not at all subject to flood? Not the town itself.
760. It is on a high bank? Yes; it is on a little ridge.
761. Then there would be no flooded land to go over in approaching Condobolin? You can keep out of the flooded land.
762. You have stated that you have travelled on the road from Forbes to Condobolin? Yes.
763. You see the proposed railway line from Parkes to Condobolin marked on the plan? Yes.
764. Does that appear to you to go chiefly outside the flooded country? Yes.
765. It would be well outside the creeks shown on the plan? Yes.
766. And therefore would not be likely to encroach on to the flooded land? No. Just when you are getting into Condobolin it is flooded a little, but there is a bend in the line to the north which avoids the flooded land.
767. In going from Trundle to Condobolin did you come upon any portion of the proposed line before you got to Condobolin? I hit it about 4 miles from Condobolin.
768. Was the country level then? Yes, quite flat.
769. Where a line could be constructed on the surface? Yes.
770. Did you travel on the proposed line any distance from Parkes in the direction of Condobolin before you turned off in the direction of Trundle? No; I turned off straight away from Parkes. I left Parkes and went out in a north-westerly direction.

- J. M. Stawell, Esq. 771. Did you have any personal knowledge of the proposed line except within 4 miles of Condobolin? No.
- 14 Mar., 1895. 772. But were you approximately near it in going from Trundle to Condobolin? Yes; I was approximately near it, and I know the country from having run a line from Forbes to Condobolin.
773. And the country does not change suddenly there in its formation? The formation changes gradually. It is undulating country, gradually changing down into plain country.
774. But chiefly timbered? Yes; timbered more or less.
775. There is a good deal of outcrop of stone in that country, is there not? In places.
776. Sufficient to find ballast? Yes.
777. In different directions? Yes.
778. Then there would be no need to cart the ballast any considerable distance? No; I think they could run the ballast down.
779. From your observation of the Gunningbland Range, I suppose you are of opinion that ballast and metal could be procured about the Bogan Gate Gap? From what I know of the range north of the Bogan Gate Gap, I should say yes.
780. The range is of stone formation? Yes.
781. Therefore you think that stone exists there? Yes.
782. And that stone should be used if necessary all the way to Condobolin? Yes.
783. By carrying it in the trucks? Yes.
784. Would that be an economical way of conveying the stone? Yes, it would. It is the method generally adopted.
785. By the contractor? Yes; they generally open a quarry at some convenient place and run the ballast from it.
786. And you are of opinion that such a quarry could be found about the gap at the Bogan Gate? I think so.
787. Then all the material required, with the exception of the rails for the construction of the line, could be got in the neighbourhood? Yes.
788. *Mr. Hoskins.*] In performing your duties as supervising engineer, do you inspect proposed lines of railway which have been surveyed, or do you supervise preliminary surveys with a view to ascertaining the best tracks of country for making a railway from two given points? My duties are to supervise railways in course of construction.
789. Therefore you have not in any way been consulted as to the propriety of constructing a railway from Parkes to Condobolin? No.
790. And you have not been over the line? Not the direct route.
791. Can you tell us what would be the extra distance in running a railway from Parkes to Condobolin, if it went *via* Trundle? Seven or 8 miles longer.
792. *Mr. Humphery.*] What is the distance from Parkes to Trundle Lagoon? I could not tell you; but I think about 35 miles.
793. And from Trundle Lagoon to Condobolin? About 32 miles.
794. In the report prepared by Mr. Gilliat he says the distance from Parkes to Trundle Lagoon is 32 miles by road, and thence to Condobolin 40 miles;—does your surveyed line follow the road? There is no surveyed line; I simply rode over the country.
795. Then, is the line, as shown on the diagram plan attached to Mr. Gilliat's report, the route which you took on your flying survey? The line as shown here, going through Trundle, is the line I rode over and reported on.
796. Did you measure the distance in any way? No; only from the surveyed plans and county maps I made the total distance 67 miles.
797. Can you say how it comes about that in this report of Mr. Gilliat the distance is said to be 72 miles? No.
798. Do you think he is wrong? I would not say that. If you have not made a survey of the line it is very difficult to get at the exact length. I would not say he is wrong, and I would not say the direct distance is 67 miles, but that is what I estimated it at.
799. He says the proposed survey is to extend from Parkes to Trundle Lagoon, and thence on to Condobolin, and that that was under contemplation in 1892;—was that proposed survey carried out? No.
800. Can you say at what distance from Condobolin you struck the line shown upon the map from Parkes to Condobolin *via* Bogan Gate? About 4 miles from Condobolin.
801. Will you look at the diagram plan in Mr. Gilliat's report and say at what distance from Condobolin the road by way of Trundle Lagoon is shown to meet the line *via* Bogan Gate? About 5 or 6 miles, perhaps.
802. Would it not be nearer 10? It is 15 miles according to this—at least it is 15 miles to the last mileage. The line here has been deviated from the line I struck. The line since I was up there has been altered. It has been taken further north to avoid the flood waters. Therefore it strikes the direct line further from Condobolin.
803. In this report it says that there is a very large area of flooded country near the river;—did you pass over that country? Yes.
804. Can you say if that is correct? Yes, it is. I do not know what they call a very large area. I would not say a very large area of flooded country.
805. This is said to be a description of the line:—
- Passes through an almost uninhabited part of the district, leaving all the populated portion to the north and north-west; and, further, that it passes through leaseholds, station properties, and plains country, which have been almost under water during the past three seasons.
- ? That is the direct line; but I have not been over that line, and could not say whether that is right or not.
806. During the time you were in the district did you make any inquiry with reference to the route of what is called the direct line? Yes.
807. Did you gather any information while you were there, so as to be able to make a comparison of the route *via* Trundle with the route *via* Bogan Gate? I spoke to many people about it during my residence in Parkes.

808. But you did not examine the country? No; because I was not instructed to do so. They sent J. M. Stawell,
some one else.
 809. Who? I think Mr. Wickham ran the survey there.
 810. But as the distance between the two routes is so short, is it not customary in surveying for a railway
to examine the whole country? Yes. 14 Mar., 1895.
811. If one line is 67 miles, and the other 60 miles only, it would almost appear to be absolutely
necessary to examine the whole of the country between the two points? I think that has been done.
 812. But not done by the same surveyor? No; when I was sent over that direct line I was at Parkes
looking over the construction of the railway from Molong to Forbes, and they sent me on from Parkes
to report on this line *via* Trundle.
 813. Were you long in the Parkes district? I was there nearly three years.
 814. Does your general knowledge of the district lead you to think that a direct route *via* Bogan Gate is
better than a deviation *via* Trundle? Yes; I should say it was, taking everything into consideration.
I think it would serve the Trundle people.
 815. What is the distance between Trundle and the nearest point on the direct route? I could not say
exactly. I think it is about 12 miles.
 816. Is there any settlement to the north of Trundle? Yes; a little. You get all the large stations
when you get north of Trundle.
 817. There is no small settlement there? I do not know, because I have never been out there, except a
little way.
 818. During the three years you were stationed at Parkes what portion of the country did you become
familiar with? I was familiar with the country between Molong and Parkes, and Parkes and Forbes.
 819. You never went beyond the lines of railway? Never; except I was sent out to report on a line
like this.
 820. You did not go out west, except on the occasion you went direct to Trundle, and then on to
Condobolin? I went on that occasion, and in 1883 I ran a survey from Forbes on to Condobolin. I know
that country.
 821. Have you read Mr. Gilliat's report? Yes, it was sent up to me.
 822. There is a creek between Parkes and Trundle, which you would have to cross? Yes; there is a
small creek—the Gunningbland Creek.
 823. Would that be an expensive creek to cross? No.
 824. Where would be the most expensive portion of the railway? Between Parkes and the Gunningbland
Range. After you get over that you get on to flatter country.
 825. What length of line would be more costly than the remainder? From 12 to 15 miles.
 826. Are you able to form an estimate of what the additional cost of that 12 or 15 miles of railway would
be? No; not without having made a survey and taken levels of it.
 827. Are you speaking of the railway *via* Trundle or Bogan Gate? *Via* Trundle.
 828. That is not the line under consideration? No.
 829. *Mr. Trickett.*] Between Parkes and Trundle there is a range of hills marked on the map? Yes.
 830. Is that hill considerable? It is in places very steep; but there are gaps in it.
 831. If you will look at the map you will see, in the direct line from Parkes to Condobolin, that the
railway goes through a gap, whereas if it went from Parkes to Trundle, it would, apparently, have to go
right through the hill, or else make a big deviation? It would have to go over more or less of a hill. I
take it that where the direct line goes through, the range dies out.
 832. If you went direct from Parkes to Trundle, would not the cost be increased by reason of your having
to go through that hill, or over it? It would be increased, certainly.
 833. Is it a hill which would be crossed or tunneled through? You would cross over it. You could get
over it with a comparatively easy grade of 1 in 80.
 834. Would that be by a direct line, or going round a bit? You would have to contour round the hill to
a certain extent.
 835. Can you say to what extent? No.
 836. But a grade of 1 in 80 could be secured there? Yes. That was the conclusion I came to when I
went there.
 837. How far off the direct route would you have to go to get that grade round the hill. How much
would the distance be increased? I should not say it would increase it very much.
 838. How much? About half a mile.
 839. Then that matter is hardly worth taking into consideration in judging of the two lines? No; the
increase of length due to getting over the Gunningbland Range in a length of 67 miles would be a very
small proportion.
 840. And I suppose the expense would not be very much greater? No.
 841. Can you tell us what it cost to construct the Molong to Parkes line? It was let in two sections.
I had charge of the second section; that was from the Parkes end. It was about from half way between
Parkes and Molong into Forbes.
 842. Can you tell us what that cost per mile? I think about £130,000 for 41 miles.
 843. That is about £3,200 a mile? Yes.
 844. Was that irrespective of land resumption? Yes.
 845. *Mr. Gormly.*] Does that include rails? Yes; I should say it would, speaking from memory.
 846. But the contract, as let, usually does not include rails? Yes; but the contract was let for a good
deal under £130,000.
 847. *Mr. Trickett.*] As compared with the proposed line, or with that portion which you have seen, how
does the Molong to Parkes line stand in regard to engineering difficulties? The Molong to Parkes line
is very rough in places.
 848. Is it rougher than the part you saw from Parkes, *via* Trundle, to Condobolin? Much rougher.
 849. Therefore, the Committee can reasonably infer that this will be a much cheaper line? Much
cheaper even if it were built on the same principle as the Molong to Parkes line.
 850. The line from Melong to Parkes was not a pioneer line? No.
 851. What depth of ballast was put upon it? Six inches under the sleepers.
 852. And were the sleepers of first-class character? Yes, first-class ironbark sleepers.
 853. And more expensive sleepers than would be used on this railway? Yes.

J. M. Stawell, 854. What is the least thickness of ballast that would be required to make this an efficient line? I
Esq. should say 3 or 4 inches.

14 Mar., 1895. 855. Do you think it would be advisable on this red loamy soil to dispense altogether with ballast in some parts? I think it could be done provided you put in more sleepers.

856. You know the Berrigan line? I know the district.

857. Is this country somewhat similar to that? No; it is more undulating than that. It would cost more to make this line than a line in the Riverina Plains.

858. But if you dispense with ballast and have more sleepers, I suppose it is as broad as it is long with regard to expense? There are some places where you must have ballast.

859. But you think where ballast is required the country is of such a character that 3 or 4 inches thickness would suffice? I think so.

860. And there would be no fear of the line being washed away. There is a big spread for the water there? I think with the ordinary water-ways there would be no fear of the line being washed away.

861. Did you see any damage done to the line which was under your supervision from washaways during the three years you were resident in the district? No; there was no damage done there. We had the water a little way up the bank in one or two places, but nothing of a serious character.

862. Is it not usual in the Department when a gentleman is sent to report upon a projected line that the same persons should see the various lines, so that they could give us the benefit of comparison? I do not think it is. They send some men to do one line and some men to do another.

863. For instance, if you had been over the direct line, what a great advantage your evidence would have been to us for the purposes of comparison? It would have been; but I do not suppose they thought of it. I know the country pretty well, although I have not been over it.

864. *Mr. Davies.*] How long have you been in the Department of the Engineer for Railways? Since January, 1882.

865. You stated in reply to questions put to you, that you had control over the construction of the Parkes to Molong line? Of the second section of it.

866. You stated that the cost of the line was £3,200 a mile? Approximately.

867. Would you be surprised to know that the estimate of your chief was £6,000 a mile? No.

868. Can you tell the Committee whether the road was constructed within the estimate? It was. That estimate may have included the two sections. The first section was heavier than the second section; and I am only speaking of the second section.

869. I find from the report of the Public Works Committee recommending the construction of that line the following:—

The estimated cost of the proposed railway is £430,100, or something more than £6,000 per mile; but this, the Acting Engineer-in-Chief for Railways states, can, to a certain extent, be reduced. The cost of the line as far as Parkes by the Flagstone Creek route is set down at £329,700, or £6,444 per mile; and this estimate, it is represented, can be reduced by £67 a mile, which would make the total cost to Parkes £306,000. For the length from Parkes to Forbes the estimate is £100,400, or £4,950 a mile; this can be reduced to £90,450, or £4,412 per mile. In each case the estimate of cost is exclusive of land and compensation.

Do you think those figures are likely to be more correct than the statements you have made to the effect that the portion of the line over which you had supervision only cost £3,200 a mile? No; I think my statement is nearer the actual cost.

870. You do not believe it cost £4,000 a mile? Not the running road which the Committee asked me for. They asked me for the price of the earthworks, culverts, fencing, and things like that.

871. The estimate of the Engineer-in-Chief in connection with the line under consideration is £300 a mile for earthworks;—are you of opinion, from your knowledge of the country, that that is too high an estimate for earthworks? No.

872. He estimates as follows:—

Earthworks	£300
Culverts and bridges	120
Fencing, $\frac{1}{3}$ of £100	17
Level crossings, stops, gates	60
Permanent-way materials	630
Laying, 1s. 6d.	132
Ballasting, 3s. per lin. yard ($\frac{1}{3}$ of £264)	66
Sleepers, 2s. 6d., 2,400	300
	£1,625
Station works and sidings, water supply, turntables, &c.	213
Mileage-posts, &c., and signals	15
	228
Engineering and supervision.....	£1,853
Contingencies, about 8 per cent.....	93
	£1,946
	154

That is a total of something like £2,100 per mile for the construction of the line from Parkes to Condobolin. Do you think the estimate for the construction of that line is sufficiently liberal in view of the knowledge you must have acquired in connection with the construction of the line to Parkes? I am hardly in a position to answer that question, because this proposed line is altogether different from the line upon which I was engaged. I understand it is to be a pioneer line, and I really do not know what work Mr. Deane wishes this estimate to include. I have had no conversation with him on the matter, and I could not say at all.

873. But do you think his estimate is sufficiently liberal? I cannot well answer that question until I know what he includes in his estimate. I do not know, for instance, how much ballast he is going to put on or how many sleepers he would use.

874. But you gained some knowledge and experience during your three years' residence in Parkes supervising the construction of the railway to Parkes;—can you not tell us, judging from the prices which existed then and the work which was done, whether it is probable that a railway could be constructed for the sum I have just mentioned? Not unless you tell me what sort of a railway you propose to construct.

875. A railway of an ordinary character, to carry the traffic of the district, the railway to be ballasted and the sleepers to be supplied at 2s. 6d. each, which, I suppose, would be the general price? It depends on the general price. You could not get the sleepers we used on the Molong to Forbes line for 2s. 6d. each. We paid 3s. 10d. for them.

876. Is there not a great difference in the cost of labour and the productions of labour now, compared J. M. Stawell, with the cost when you were engaged in the construction of the line to Forbes? I do not think so. Esq.
877. You do not think these things can be obtained cheaper now than then? No.
878. Do you think rails can be obtained cheaper now than they used to be? Yes; the price of steel rails has fallen a little. 14 Mar., 1895.
879. But the price of sleepers has not fallen? I do not think you would get sleeper-cutters at Parkes to cut the sleepers a bit cheaper than they did a year ago. If Mr. Deane has estimated the sleepers at 2s. 6d. each, I do not think he can intend to have first-class ironbark sleepers.
880. Do you know of any portion of the line which was under your supervision between Parkes and Molong which could be built for anything like the price this line is estimated to be built for? You could not build any portion of the Molong to Forbes line for £2,000 a mile—not in the way we handed it over.
881. Do you still maintain that the portion you have control over was laid down at £3,200 per mile? I say approximately—to the best of my knowledge.
882. How far did you go when you explored this direct line? I never explored it at all.
883. What line did you explore? I explored the line by Trundle.
884. You went to Condobolin? Yes.
885. You had no survey? No; I rode over the country.
886. The country is pretty much the same after leaving Trundle, going through Condobolin? It is generally undulating, going into flat country.
887. Have you been through the Bogan Gate? No.
888. You made a trial survey between Forbes and Condobolin? Yes, nearly into Condobolin. I did not quite finish it.
889. The country is broken and subject to flood between Forbes and Condobolin? No; it is very flat, but plain country most of the way.
890. And easier for a line of railway than it is *via* Trundle? Yes.
891. How much longer would Trundle be as compared with Forbes to Condobolin? I have never measured either distance right through, but I should say from my general knowledge of the country that the Trundle route would be 7 or 8 miles longer.
892. But you have never been over the direct route as surveyed and submitted to the Committee? No.
893. You do not know very much about the country as far as the direct line is concerned? No.
894. But from your general knowledge you are able to say it is pretty much of the same character as that by way of Trundle? It is easier.
895. And consequently it would be cheaper to construct a line of railway? Yes.
896. *Mr. Molesworth.*] I understand you only made an estimate of the distance from Parkes to Condobolin, *via* Trundle;—you had no means of measuring when you made that inspection? I measured the distance off the county maps.
897. At the same time you do not think that is altogether reliable—it is only a rough estimate? I would not say it was right to 2 or 3 miles.
898. You would not be surprised to find that there was a difference of 5 miles between your rough estimate and the estimate given by Mr. Gilliat? No.
899. You think it is possible that Mr. Gilliat might be correct? I do not think he would be more correct than I am.
900. But would he not have measured it? I do not know what he did. He may never have gone over the line at all for anything I know.
901. Who was the officer who pegged out the ground of the proposed line from Parkes to Condobolin as shown on the plan? I know Mr. Wickham did some, and Mr. Chalmers did some, and there are two surveyors up there now altering the line. The direct line was run six years ago. That was staked by Mr. Wickham.
902. Now there are two surveyors altering the line? Yes; in order to cheapen the work.
903. Then they have not quite finished? No.
904. Are they altering it with a view to bringing it further northward to avoid severance of property as well? No; I think it is with a view to cutting down the grades, and cheapening the earthworks.

TUESDAY, 19 MARCH, 1895.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.
The Hon. WILLIAM JOSEPH TRICKETT.
The Hon. JAMES HOSKINS.
The Hon. JOHN DAVIES, C.M.G.
The Hon. CHARLES JAMES ROBERTS, C.M.G.

JAMES HAYES, Esq.
ROBERT HENRY LEVIEN, Esq.
JOHN MOORE CHANTER, Esq.
CHARLES ALFRED LEE, Esq.
JAMES GORMLY, Esq.
EDMUND WILLIAM MOLESWORTH, Esq.

The Committee further considered the proposed Railway from Parkes to Condobolin.

Alfred Brown, Esq., First Clerk, Valuation Branch, Department of Public Works, sworn, and further examined:—

905. *Chairman.*] You have some information in regard to the Molong-Parkes Railway and the Parkes-Forbes Railway? Yes. A. Brown, Esq.
906. What information is it? I have the area of land, and the amounts paid per acre, on the Molong-Parkes line and the Parkes-Forbes line. 19 Mar., 1895.

A. Brown, 907. Have you divided it into suburban and country lands? Yes; the information is as follows:—
Esq.

19 Mar., 1895.

AMOUNTS paid for Suburban Land.

	Area.	Land.	Buildings.	Severance.	Rate per acre for Land only.	Rate per acre for Land, Buildings, and Severance.
Molong to Parkes	a. r. p. 19 3 5	£ s. d. 900 13 8	£ s. d. 203 10 0	£ s. d. 456 1 10	£ s. d. 45 10 8	£ s. d. 78 17 6
Parkes to Forbes	9 0 35	443 6 0	5 0 0	48 2 2	48 13 0
For Country Land.						
Molong to Parkes	292 2 23	1,833 8 0	25. 0 0	1,218 4 6	6 5 3	10 10 3
Parkes to Forbes	2 0 6	6 14 6	11 4 0	3 6 0	8 15 11

PROBABLE Amounts to be paid for Suburban Land.

	Area.	Land.	Buildings.	Severance.	Rate per acre for Land only.	Rate per acre for Land, Buildings, &c.
Molong to Parkes	a. r. p. 16 3 19	£ s. d. 1,016 9 1	£ s. d.	£ s. d. 5 0 0	£ s. d. 60 5 2	£ s. d. 60 11 0

Harry A. Gilliat, Esq., late Examiner of Public Works Proposals, Department of Public Works, sworn, and examined:—

H. A. Gilliat, 908. *Chairman.*] Do you know the proposed line from Parkes to Condobolin? I made a report upon it in 1892, which was printed.

19 Mar., 1895. 909. *Mr. Hayes.*] At the time you went out to make an examination of the district there were three existing surveys? Yes.

910. The first from Parkes, *via* Bogan Gate, to Condobolin; the next from Forbes to Condobolin; and a deviation from that survey somewhere near the Lachlan River;—were those the three routes you examined? That and the line *via* Trundle.

911. You examined them all? I went over the greater part of the line from Trundle, although there was a small portion between Trundle and Condobolin which was not examined. It was a country I knew about. I had acquired sufficient information. It was all flat land, and there were no engineering difficulties.

912. With reference to settlement—where is the largest settlement, taking Trundle to the north and the river to the south? At the time of my examination, I have no doubt the largest settlement was around Trundle. Most of the land available for selection had been taken up in the immediate neighbourhood of Trundle.

913. Does the same remark apply to the Crown lands between that and the river? The Crown lands on the river had been very largely purchased by the run-holders, and where exchanges were desired to be effected on outlying purchases by the run-holders, they were trying to consolidate upon the river. The owners of Burrawang—the Edols—were attempting at the time I was there to consolidate, I think, some 30,000 acres which they owned in the back country upon the river. That, I believe, has since been carried out.

914. Is not there a very large area of leasehold land on the proposed line direct from Parkes to Condobolin? The evidence given by Mr. Sharpe, the district surveyor, showed there were 238,000 acres which, when the leases fell in, would be available for special areas. This he described to me as being land of the very highest quality.

915. When the leaseholds fall in will there, in your opinion, be a considerable settlement on these lands? Mr. Sharpe, in his evidence, stated distinctly that the 238,000 acres would probably be absorbed within eighteen months or two years, in special areas not exceeding 640 acres.

916. From your personal examination of the district, are you of opinion that this land is specially suitable for agricultural purposes? I think it is admirably adapted for wheat-growing.

917. Is there a sufficient rainfall? The rainfall tables given at the end of my report seem conclusive of that. They include some of the driest years of the drought. Mr. John Dawson's evidence—and he has resided thirteen years, I think, in Condobolin, which is still further west, with a declining rainfall—shows that he has grown wheat during the whole of the time he has been there, and after an experience of sixteen years in South Australia, and, I think, ten years near Albury, he considers the 14,000 acres of land he holds there—of which he was, cultivating 200 acres chiefly in wheat—better than either of his previous farms.

918. Is there a large settlement in the immediate neighbourhood of Condobolin, say, within a radius of 15 miles? Do you mean an agricultural settlement?

919. Small holdings? No; that is the difficulty. They can hardly be called farms—they range as high as, 14,000 acres. They run from 5,000 to 14,000 and 15,000 sheep.

920. That class of settlers, then, is not very numerous? No; the whole of the farms about Trundle are large.

921. In using the term special areas, do you use it as meaning agricultural land? Yes.

922. Then, the remaining Crown lands in the immediate neighbourhood of Trundle—within 10 miles of it—are not suitable for agricultural purposes? That is Mr. Sharpe's statement, and he is a gentleman of sixteen years' experience in the district. The other evidence I had was that as you went north from Trundle the land became inferior. As you went south from Trundle the land improved.

923. That would be practically on the Bogan Gate line? Yes.

924.

924. That is on the line from Bogan Gate to Condobolin? Yes; that is the direct survey. H. A. Gilliat,
 925. From your examination do you think there is likely to be a large increase of population if the railway Esq.
 is built in the near future *via* Bogan Gate? That, of course, would depend upon what time the leaseholds 19 Mar., 1895.
 are liberated. There are certain reserves, but the great bulk of the country to which my report refers was under lease, which, I think, was to fall in in June of this year.
926. But, as you are aware, those leases in that district have all been extended? Yes.
927. Up to five years? I am aware of that.
928. Speaking briefly, then, you recommend the construction of the line? I recommended that as, on the whole, in my opinion, the most suitable line.
929. Did you look into the question of traffic—as to whether the line would be a profitable one if constructed? I stated at the time I made the report that I thought the case was one for the construction of a pioneer line—a cheap line as suggested by Mr. Eddy in his Railway Report for 1891.
930. Do you think a cheap pioneer line of the character suggested by Mr. Eddy would obtain sufficient traffic to pay interest and working expenses? I hardly think it would.
931. Do you think the future development of the country would make the line pay? I think that if this land is to be acquired by settlers future development will make a pioneer line pay.
932. Do you know anything of the country going to the west from Condobolin? I have been through from Condobolin to Cargellico and from Cargellico to Hillston.
933. What is the character of the country going down west as far as Lake Cargellico? I think it deteriorates as you get down the river. There is some very good land in patches, but I do not think the land back from the river is equal to this special district of which we are speaking.
934. Do you think that when you go west of Condobolin you get outside the agricultural area? I should be sorry to commit myself to making a positive statement. There is no doubt the rainfall averages I obtained, and which were printed in my report, from the line from Hillston, showed that as you went to the westward the rainfall decreased very appreciably.
935. But mere rainfall is not altogether reliable as a guide to wheat-growing? I saw some very fair wheat grown at Hillston, but still I do not think it is comparable for a moment with the country we are talking about. The wheat-growers all state that if they get the rainfall at the proper time of the year they can put up with a moderately dry season for the rest of the year.
936. Having made a personal inspection of the route, do you think a line direct from Parkes *via* Bogan Gate would be the most advisable line to construct to serve the interests of all parties? I think so.
937. You are not in favour of a deviation *via* Trundle? No.
938. These large areas held by the settlers about Trundle prevent the settlements being concentrated about Trundle itself? Yes, and actually from the township or village of Trundle to the nearest point of the Bogan Gate line the distance would not be more than 10 or 12 miles.
939. Quite sufficiently near for the inhabitants? Yes.
940. Is the settlement about Trundle on the large areas held by one or two individuals? Yes; the two witnesses who presented themselves for examination at Condobolin showed that they held from 14,000 and 7,000 acres. John Dawson, I think, holds 14,000 acres, and a man named Crouch holds 6,000 acres.
941. I see you have a return giving the names of owners of land, and the quantity held by each in the vicinity of Trundle? Yes; that was collected by the Progress Committee.
942. According to that return there are not very many large landowners? No; there are a great many holding about 640 acres freehold. Walter Berry owns and manages 10,000 acres at Trundle along with his brothers. Thomas Carey, farmer and grazier, owns 7,000 acres; George Simmons owns 5,160 acres.
943. Mr. Roberts.] When you started out on your mission, was your object to report upon the proposed extension of the railway from Parkes to Condobolin *via* Trundle? Yes.
944. Is that what you were really asked to report upon? There were no previous papers in the matter; but a letter was received from a resident of Trundle, and was forwarded to me with instructions to make inquiries upon the various routes.
945. That was sent at the request of the Minister for Public Works? My instructions were received from the Minister for Public Works.
946. To report as to the desirableness of constructing a railway from Parkes to Condobolin? Yes; and upon this unsurveyed line *via* Trundle.
947. You set out with the view of reporting on the proposed line from Parkes to Condobolin *via* Trundle? Yes.
948. Am I to understand that, having visited the district, you are impressed with the fact that a more desirable route would be by way of Bogan Gate? Yes, for the reasons I state in my summary; that is, that there was a large area of land which, at that time, was expected to be thrown open from lease in the course of a year or two.
949. Is that land specially adapted for agricultural settlement? It is excellently adapted; it is very high-class land indeed.
950. And, I suppose, in making your recommendation the lesser distance would be taken into consideration? To some extent. I think the principal object which moved me in the matter was, that there were 240,000 acres of very high-class land which would be thrown open in 1895. That would all be alienated in special areas not exceeding 640 acres. The district surveyor stated that it would be all taken up within eighteen months or two years, and that would concentrate settlement along the line.
951. Do you think the people about Trundle would be sufficiently served by a line going by way of Bogan Gate? As I have just stated to Mr. Hayes, the areas alienated around Trundle are of very considerable extent, going as high as 7,000 and 10,000 acres, and, of course, the settlement is not very concentrated.
- 952-3. Is there any town at Trundle? There are three or four small buildings, that is all—a public house, a blacksmith's shop, and I think three or four buildings.
954. Trundle is surrounded by very large holdings? Yes; which diminish in quality as you extend to the north, and improve as you go to the south.
955. Is it a fact that the soil is very much better to the south of Trundle? Yes.
956. Have you been to Condobolin? Yes; I examined witnesses at Condobolin—I think in April, 1892.
957. Is it a fact that there are about 800 settlers around Condobolin? The selections, as shown by the witnesses in my report, are still of that large character. The two Dawsons, between them, I think, own something like 21,000 acres. James Dawson has 14,000 acres, John Dawson 4,000, and Hezekiah Crouch 6,000 acres.

H. A. Gilliat, 958. What is the general character of the country between Parkes and Condobolin by way of Bogan Esq.
Gate? It is generally flat and of rich red soil, differing from the black soil on the river frontage.

19 Mar., 1895. 959. You met the black soil, I think, between Forbes and Condobolin? Chiefly between Forbes and Condobolin.

960. Then, it would appear to you as being specially adapted for a light line of railway? Excellently adapted for a pioneer line, as suggested by Mr. Eddy. There appear to be no engineering difficulties at all. It was alleged that there was a creek which came down heavily at the Condobolin end; but I went out there with the stock inspector, and examined a portion of it, and he and several other witnesses assured me that there was nothing serious there at all. The engineering difficulties are greater on the Forbes line.

961. You met with a different character of country there? Yes.

962. *Mr. Davies.*] The rainfall in the district you visited in 1892 seems to be a very irregular one? It varies from year to year.

963. You stated just now it was a good district for wheat-growing? I stated that all the evidence I received was to the effect that it was a good wheat-growing year—that the different farmers who have been growing for fourteen or fifteen years, long enough to justify them in forming an opinion, succeeded in getting crops which justified them in continuing its cultivation.

964. Are you of opinion that, with a rainfall such as you have shown in your report, it will be recognised by agriculturists as a reasonably fair district for wheat-growing? I think that the average rainfall given is sufficient for wheat-growing.

965. And the evidence you obtained on your visit confirmed that impression? Yes.

966. And from your visit, after passing over the proposed line, you are strongly of opinion that it would be a line easy of construction? Yes.

967. A most inexpensive line? Yes; the Bogan Gate line. And I think there would be very little difference in the cost of a line to Trundle, the character of the country being the same in both cases.

968. You know the difference in the distance between the Trundle line and the Bogan Gate line? I think there is from 7 to 8 miles difference.

969. And you favour the line being constructed? Yes; it is the most direct line, and goes through the largest amount of unalienated Crown land of a superior quality.

970. Has there been a good deal of settlement around Condobolin? Yes, a very considerable amount of settlement in large holdings.

971. What do you call large holdings? One which Mr. James Dawson holds is 14,000 acres; another which Mr. John Dawson holds is 7,680 acres, and another which Mr. Crouch holds is 6,000 acres.

972. But there is a large population in the district of Condobolin? Upon that I was unable to get a return. The Condobolin people took so little interest in the question of the railway, that although they were written to about three months in advance to prepare a return for me, they failed to do it.

973. Is most of the land held by conditional purchasers or in selection areas? The land is held by selection with a conditional lease attached.

974. When did you visit the district? In 1892.

975. Have you been there since? No.

976. But you strongly recommend in your report that the line should take the direct route? I did not strongly recommend the railway at all; I merely left that matter open to be decided. I thought the general interest of the district would be best served by the route surveyed from Parkes via Bogan Gate.

977. And you have seen nothing since to alter your opinion? I know of nothing. Of course there is one matter which has altered very much since then, and that is the extension of the leases. If those leases are closed for the present, then the principal reason for carrying the line via Bogan Gate is also closed.

978. Do you think the wool of the district would come by this line from beyond Condobolin and around Condobolin? Yes; but I doubt very much whether the wool would justify the railway.

979. You are aware that the mails travel, at the present time, by the ordinary coach and horses between Parkes and Condobolin? Yes.

980. Would £720 a year be a large estimate for mails? I should fancy so. I have not looked into the mail contract, but I should be surprised if that amount was paid.

981. What if the Secretary for Railways states that £720 a year is the estimated earning on account of mails? I should have nothing further to say then.

982. Do you think that the sum of £5,122 10s. would be a large estimate for the railway to earn from the carriage of wool, live stock, and other commodities? That I am not prepared to say. I frequently had evidence given to me as to the probable earnings of a railway by the transport of live stock; but all the inquiries I have made from the Railway Department have shown that the transport has been very inconsiderable indeed.

983. The Commissioners estimate that they will receive £1,972 10s. from passengers and mails;—from your knowledge of the district do you think that is an excessive estimate? The Commissioners, of course, are far better able to judge as to the growth of traffic and the earnings of a railway. I should not be able to form any estimate of that character at all.

984. You would not think, then, that so large a sum would be realised from the carriage of passengers and mails? There is no doubt that the opening of a railway increases traffic, and increases it very largely.

985. Did you observe very much traffic upon the ordinary mail coaches between Parkes and Condobolin? To the best of my recollection there was no coach between Parkes, Trundle, and Condobolin. I do not think there was any mail via Bogan Gate. I think the mail went entirely by Trundle, and if I remember rightly it went by buggy in fine weather, and on horseback in wet.

986. You have no recollection, then, whether there was an ordinary mail coach? I do not know what has occurred since I was there; but I am almost confident that when I was there there was no coach running.

987. Then if there was no coach running there would be no passengers taken? People going to Parkes went in their own vehicles.

988. Have you any knowledge of the wool traffic coming from Condobolin to Parkes? I think there is a return in my report by the Mayor of Condobolin. He averages the estimate of wool in the Condobolin district at 5,104 tons, and you will see in the same return his estimate of the stock traffic between Parkes and Condobolin and Condobolin and Parkes.

MINUTES OF EVIDENCE—RAILWAY FROM PARKES TO CONDOBOLIN.

989. Was there much traffic by way of Trundle? At that time, the greater part of the settlement being H. A. Gilliat,
around Trundle, I do not think the road *via* Bogan Gate was used at all, or very rarely, by persons who Esq.
had business that way. I think the Trundle line was the one chiefly used.

19 Mar., 1895.

990. Do you think an estimate of this kind would be realised? It is estimated by the Railway Department that 2,000 tons of goods, averaging 3d. per ton per mile, and earning £1,500, will be carried, and 1000 tons at 2d. per ton per mile, which will be £500;—do you think that will be realised? Yes; I should think it will. There are 5,000 tons of wool which will come away from the district. It will all depend whether the whole of it is sent by rail or not. You are probably aware that since the line from Molong to Parkes has been completed, wool and goods are still going by road.

991. Then, if the Commissioners estimate that they will carry 5,000 tons of wool from Condobolin at 2d. per ton per mile over the whole of the distance, at 10s. a ton, or £2,500, you think it will be realised;—do you think that that would be within the mark? In the first place I should reduce the average of wool, because I doubt very much whether the sheep in the district average 5 lb. per head.

992. Do you think they would carry 1,000 trucks of sheep at 17s. 6d., or £875 a year? It is a difficult question to answer whether people will truck or not. Of course, in order to save the sheep's lives in the dry season, it is quite possible they would do so, but if there was good grass I do not think they would; I would not.

993. You could not say whether these figures are likely to be realised? I could not.

994. But you admit freely that the country is of a character in which a cheap railway should be constructed? Yes; if the land was available for selection, there would be, within a very brief period indeed, a largely and fairly concentrated settlement, which would tend to pay a revenue to a light line of railway.

995. *Mr. Lee.*] When you went to the district in 1892, had the tenders been let for the construction of the line from Molong to Parkes? That line was in course of construction at the time.

996. What was the object of your going to the district at all at that time? I went under instructions from the Minister.

997. Was it to provide for some extension in the future of the Molong to Forbes line? I fancy that the matter was initiated by letters from Trundle applying for an examination of the line that way, before any decision was arrived at with reference to the three surveys then actually in existence.

998. And that was the reason you went *via* Trundle? I think so.

999. If you had gone out unfettered, probably you would have taken the direct course from Parkes to Forbes or Condobolin? I should not have dreamt of going to Trundle—not with the evidence which was placed before me. I may say that before visiting any of these places I wrote to the principal men in the district—that is, to the Mayors of Parkes, Forbes, and Condobolin, and the Secretary or President of the Progress Association, or whatever they call it, at Trundle—stating that I would be there on a certain day, and giving them some two months in advance in which to have certain facts and figures prepared for me.

1000. Did you personally see much cultivation about Trundle? There was very little to be seen—the evidence shows it.

1001. But did you see any? No. As a matter of fact, about Trundle they said, "If we have a line of railway we will do so and so, but at present it does not pay us to do it."

1002. Trundle depends entirely, then, upon pastoral pursuits? Yes.

1003. Was that your first visit to Trundle? Yes.

1004. Did that happen to be a good season? 1892 was, if I remember rightly, a very fair season indeed.

1005. In the course of your examination there, did you discover that at times that country is extremely dry? I had the returns which were furnished to me, and I know the country around Hillston and to the westward intimately. I have been there at different times, and know exactly what it is in a dry season.

1006. It is practically abandoned in droughty seasons, is it not? I scarcely think that the Bogan Gate country is as bad as that.

1007. What special reason did the Trundle people lay before you when you got there? Simply that they had what they considered a large settlement.

1008. Trundle is about 32 miles from Parkes? Yes.

1009. If a line were constructed it would bring the Trundle people within 12 miles of railway communication? Yes; if the line goes to Bogan Gate.

1010. Amongst other witnesses you examined at Trundle was Mr. H. H. Croft? Yes.

1011. Mr. H. H. Croft told you he had resided for ten years in the district, that he owned 2,550 acres of land, and had 12 acres under crop? Yes.

1012. Christopher Francis, another witness, told you he had 15,000 acres, and had been resident five years, and had 60 acres under crop; Walter Berry, a farmer and grazier, owning and managing 10,000 acres, resident five years, had 8 acres under crop; Thomas Carey, owning 7,000 acres, and resident nine years, had no land under crop; A. Fell, farmer and grazier, resident at Trundle seven years, owning 2,570 acres, had 10 acres under the plough; therefore, whatever opinion you might have formed as to the quality of the land, there was some good reason why it was not put under crop? Yes.

1013. What was the reason? These men all assert that it does not pay them to grow where they have to carry their produce such a distance to market. My experience is that wherever you get men with these large areas, they find it cheaper to live off the grass than by farming, and they will not do it. That is one of the reasons why I considered the area about Bogan Gate which would be alienated in 640 acres would be the better one for a line.

1014. One witness, H. A. Croft, had been examined by the Sectional Committee on the Molong to Parkes railway some two years prior to your visit. He resides at Trundle, and he was asked these questions:—

How far are you from Parkes? Thirty-two miles.

Is that not too great a distance over which to cart grain to a railway? No. Usually, the settlers consider that if they are within 20 miles of a railway, and can make one day's stage with a load of wheat, they are all right.

This is the same gentleman who appeared before you, and who has 10 acres under cultivation? Yes.

1015. As a matter of fact, you happen to know that in other parts of the Colony they cart their wheat regularly 20 miles and more to the nearest railway? I was engaged on the Berrigan inquiry, and I know for how far they had to cart theirs, and I know they complained very bitterly.

1016. If it were possible in the case of Berrigan, it would be possible in the case of Trundle? Quite possible.

- H. A. Gilliat, 1017. If these people were satisfied in 1890, to draw their wheat 32 miles, do you not think they would be well served if they have only to draw it 12 miles? Unquestionably; and that is my recommendation.
- 19 Mar., 1895. 1018. Were you impressed with the settlement around Condobolin? Not particularly.
1019. Did it appear to you to be of a good character? Yes; what there was of it. Most of these men are either old Victorians or Murray River farmers. They are really farmers, a great many of them; and, as you will see, their evidence is different from that given by the Trundle people. They have a much larger area under wheat.
1020. Did it occur to you that there were 500 or 600 selectors there? That I could not get any positive evidence upon. I asked for a return, and they took so little interest in the matter that they did not make it out.
1021. In what respect does Condobolin stand, as far as the prospects of wheat-growing are concerned, as compared with Trundle? Condobolin is more to the westward. As I stated before, the rainfall average tends to decrease as you go to the west. In examining a witness, one places more or less value upon the evidence given as he recognises the personality of the man. Most of the men who gave evidence about Condobolin were men of a superior stamp. One man had been there for thirteen years, and said he had had a fair average crop during that time.
1022. Were you not surprised to find it? I was; I did not expect it. My own belief, and I will not say I have been converted yet, is that the wheat district will hardly extend to the westward of Narrandera.
1023. In any case there must be seasons occasionally when wheat crops will be an utter failure? Yes.
1024. And on the whole, the traffic for a line would largely depend upon wool and station produce? Yes; and the density of settlement.
1025. Did you go into the larger question of policy as to retaining the trade for our own country? That was a little beyond my function. My instructions were to report upon certain points, and not to deal with others.
1026. Did you touch Forbes in your inquiry? They took no interest. I spent a week there.
1027. They were dormant? Absolutely.
1028. Has anything occurred since the date of your report which caused you to alter your opinion in any way? The whole of my report in favour of that line rested upon the alienation of the 238,000 acres. If these leases are all extended, the ground for the railway going through there is to a large extent altered; there is not so much justification for it.
1029. But it will not interfere with the possible traffic from Trundle? There we come back to the old point again, and that is, that with these large areas they find it cheaper to live off of the grass than off of the cultivation.
1030. *Mr. Molesworth.*] Have you traversed the route of the proposed line direct from Parkes to Condobolin via Bogan Gate? Not the whole way. I have been from Parkes to Bogan Gate.
1031. That is only about 20 miles? Yes; and then I have also been 10 miles from Bogan Gate towards Condobolin, and from the Condobolin end I also made an examination out.
1032. About how much of the proposed route do you think you have missed? I suppose I have been over 40 miles out of the 60.
1033. Have you any knowledge of the character of the country over the 20 miles which you have not traversed? As far as I could learn, there were no engineering difficulties. I think it would be possible to run a light line of railway there.
1034. You think there would be no difficulty in running one of these pioneer lines? I do not think so. I have made careful inquiries, too, from well-known residents in the district, as to the effect produced in heavy flood time, and they state that there would be no difficulty arising from that.
1035. Would the Gunningbland Creek require a large span of bridge to cross it at Bogan Gate? No; nothing very large at all.
1036. I understand you completely examined the line between Condobolin and Parkes *via* Trundle? That I went over in the same way. I went over one end of it. I went through to Trundle, and examined it from the Condobolin end.
1037. Are you of opinion that the direct line, as now proposed, would sufficiently serve the people of Trundle? I think so.
1038. The settlement about that district is more to the south than to the north of Trundle, is it not;—there is more settlement to the south than to the north? The larger properties, I think, lie to the south. There is a greater area to the south alienated. I think the bigger properties lie there.
1039. You have no hesitation, from your knowledge of the country, in recommending the direct route *via* Bogan Gate? No.
1040. *Mr. Chanter.*] When you were requested by the Works Department to inquire into the construction of a line *via* Trundle, I suppose you gave everyone in that locality full notice of your visit? I think that I gave them two or three months' notice.
1041. And the residents of the various districts affected were fully aware of your visit? Yes, for some time beforehand. I wrote to them, arranging a convenient time to meet them.
1042. And you did, as a matter of fact, take a considerable amount of evidence from various persons in that locality? Yes, all they desired to produce.
1043. Refer to the evidence of Mr. J. A. Rose, at that time Mayor of Parkes;—would you consider him a reliable witness? He was the Mayor of Parkes. He was the head of the Borough Council, and a man who had given evidence before the Committee on the Molong-Parkes-Forbes line.
1044. He says in his evidence that there is a considerable settlement at Burraburra, extending 30 miles north of Trundle;—did you traverse it? As far as I can find out, that is very scattered, and when he said "considerable," I think he meant that there was settlement there. "Considerable" is, perhaps, a vague term. I could not find anyone who could give me information as to what actually was there.
1045. Would you consider his statement that Burraburra, extending 30 miles north of Trundle, would be the area affected by the proposed line from Parkes to Condobolin *via* Trundle? My own experience goes to show that the people will not grow much agricultural produce if they have to haul it 30 miles, where they hold these large areas, they depend more on the grass than agriculture.
1046. In his evidence he also said that there is a large settlement between Trundle and Condobolin? As far as I could learn there was not.

1047. Did you traverse the route? Not the whole of it; but I had evidence at each end. I made H. A. Gilliat, inquiries; but where these large selections are held they do not lie very closely. It is impossible. Esq.
1048. This Committee may safely assume that there is some settlement 30 miles north of Trundle? Yes. 19 Mar., 1895.
1049. And that there is also some settlement between Trundle and Condobolin? Yes.
1050. And you yourself say that there is more settlement about Trundle proper than there is further south to Bogan Gate? Yes; there is no land further south available. That is under lease.
1051. Then the settlement which has already taken place in that locality has taken place about Trundle? That was because the resumed areas were all taken up at once.
1052. And there was no possibility then of the selections being taken up along the proposed route *via* Bogan Gate? Not until the leases were vacated.
1053. You are aware now that these leases have been renewed for a further term of five years? Yes; and as I said in answer to one member of the Committee, that makes a very material change in the conditions.
1054. Do you know the Rev. F. G. Neild, incumbent of the parish of Parkes at that time? Yes.
1055. Would his position necessitate his travelling about the district very materially? Yes.
1056. And he should have become fairly well seized of the requirements of the district? Yes.
1057. In his evidence he states, "The extension of the railway from Parkes, *via* Trundle, to Condobolin would serve the larger population"? I have no doubt of that at present.
1058. I am speaking now of the evidence given before you at that time? Yes.
1059. Refer to the evidence of Mr. A. Pholeros, a resident of Parkes for fourteen years. These three people are all residents of Parkes? Yes.
1060. So that they are not likely to be influenced in favour of Trundle, Bogan Gate, or elsewhere? Yes.
1061. Mr. Pholeros corroborates by saying that a larger population will be served by a line *via* Trundle, and consequently a better revenue obtained, while at the same time the line would pass through a better class of country;—have you traversed the road from Parkes to Condobolin *via* Bogan Gate? No; only a portion of it.
1062. How far from Parkes? I went from Parkes to Bogan Gate, and I went 10 miles beyond. That would be about 30 miles altogether at that end.
1063. What part of the year was it when you made the inspection? March or April, 1892.
1064. That would be the dry season of the year? Yes.
1065. Did you make any close inspection of the natural features of the country and its liability to inundation? Of course, in the dry season, it is impossible in that country to tell much from the features. There was nothing sufficiently indicative of flood there, but the inquiries I made at each end of the line led me to believe that there was no danger from inundation.
1066. But I notice that a great many of the witnesses who appeared before you, and who appear from their positions to be reputable, state that there is a great danger of inundation at the Bogan Gate? As far as I could ascertain the weight of evidence was, that there was really no trouble there. I crossed the stream there a number of times, but could find nothing there which could lead me to anticipate any serious trouble.
1067. That is crossing at that season period of the year? Yes; but the general appearance did not show that there was anything of a serious nature. A very slight bridge and embankment would cover all the trouble.
1068. Do you know Mr. A. H. Florance, medical practitioner, resident in the Parkes district? Yes.
- 1069-70. He says the line should go *via* Trundle for the following reasons:—
(1.) The soil is well adapted for the growth of cereals, the vine and olive; considers that prairie, lucerne, and canary grasses would flourish; (2.) The line *via* Trundle will avoid all flooded country that must be touched by either of the other routes; from the Bogan Gate for 20 miles towards Condobolin along the line of the direct survey from Parkes in a wet season the country is all flooded.
1071. Do you know Mr. A. Fell, farmer and grazier, resident seven years at Trundle? Yes.
1072. In his evidence given before you he also states that during a wet season the line *via* Bogan Gate is a very heavy one; while that by Trundle would avoid the flooded land at the Condololin end? I admit that the whole of the Trundle residents took the line of argument that floods might be anticipated upon that road.
1073. Refer to the evidence of Mr. H. W. Gray-Innes, Mayor of the Borough of Condobolin, who would be a reputable man? Yes.
1074. In his evidence he not only says that a line by Trundle would be the best suited to the interests of Condobolin, but he adds: "There are no engineering difficulties on the Bogan Gate line, and by the flooded country the line will be interfered with by flood waters." He goes on to say, that by Bogan Gate would pass through 10 miles of flooded land in one place and 6 miles in another. He corroborates by saying there would be 16 miles of flooded country against another witness' 20 miles;—he would be likely, having been a resident in the district for nineteen years, and occupying the position of mayor, and being a stock and station agent, to know exactly what the nature of the country was; and when he says that for 16 miles along the Bogan Gate line there would be 10 miles of flooded ground in one place and 6 in another, and that the river line would pass through even more,—is there any reason to doubt his statement? I can only say that I inquired particularly about that 16 miles from people who reside in the district; but I could not find any justification for it. You are quoting all the Trundle evidence—all in favour of Trundle.
1075. The evidence I am quoting is from residents of Parkes and Condobolin, not from Trundle? Yes.
1076. So that, as far as the Committee are concerned, they would have no direct interest in Trundle? Yes.
1077. Do you know Mr. R. D. Jones, who was then stock inspector for the district? Yes.
1078. He, naturally, from the nature of his calling, would be constantly riding about the country, and would have a close acquaintance with it? Yes.
1079. His evidence is in favour of the line *via* Trundle, and he gives the following reasons;—he says:—"There are no engineering difficulties, and it is beyond the flood-waters affecting the other lines"? Yes.
1080. Mr. John Dawson, who resides 16 miles north-east from Condobolin, also gives evidence in favour of the line by Trundle, and he says it avoids floodwaters? Yes.
1081. He corroborates the statements of the others? Yes.

H. A. Gilliat, 1082. Mr. Bassett also gave evidence before you;—he lives 12 miles from Condobolin on the line from Trundle, and he also corroborates? Yes.

19 Mar., 1895. 1083. So that, practically, the bulk of the evidence given before you by witnesses in no way directly connected with Trundle went to show that the line by Trundle was the only one which could be made to avoid the flooded country? I am quite aware of that; but I think, in dealing with this question of flooded country, there was a great deal too much made of it. I doubt very much whether what they call flooded country would have the least effect upon the construction of a light line of railway at all. That is my opinion.

1084. Look at the map to assist your memory. You will see from the tracings on the map that as you get north from Bogan Gate, you get away from the river country? Yes.

1085. Bogan Gate, and south of that, is what is termed in Riverina, river country—it is intersected by creeks? Yes.

1086. At certain periods, in ordinary seasons, these creeks would overflow, causing, perhaps, a large area of the adjacent country to be flooded? Yes; on that flat country, but no serious overflow.

1087. That is taking the average rainfall? Yes.

1088. But you are aware that there are seasons which are exceptionally wet, and that during those exceptionally wet seasons, practically the whole of that country, from Bogan Gate to Forbes, is under water? I do not think so from my experience of the country.

1089. I am speaking of extraordinary seasons? I do not think, even in the most extraordinary seasons, that that would be the case.

1090. Do you not think that those gentlemen who have occupied public positions for nineteen and twenty years, having to traverse the country every week, would be in a better position to give evidence on that point? I am only giving my own opinion, and after carefully considering everything, I think those gentlemen have very little idea what rainfall, or what they call flood-water, would interfere with the line. I have no doubt there is a certain overflow on some of these creeks in exceptional seasons, but nothing, I think, to justify the deviation of the line.

1091. You traversed the line from Parkes to Trundle, and thence on to Condobolin altogether? Not altogether, but a greater part of it from either end; and, as far as I could see, it was absolutely free from engineering difficulties.

1092. How much of the direct line did you traverse? About 30 miles.

1093. Was that continuous? That would comprise nearly the first 30 miles from Parkes.

1094. That from Condobolin you did not cross? No; I was disappointed about horses in getting over that end.

1095. But that is the country which these witnesses assert was flooded? A portion of it is.

1096. You say that about Trundle and Condobolin the holdings are from 7,000 to 14,000 acres. I am now quoting from your own report? Yes.

1097. Grazing from 5,000 to 12,000 sheep? Yes.

1098. Mr. Arthur Sharpe, District Surveyor of the Forbes Land Board District, gave evidence before you, and you quoted him in reply to one of the other members of the Committee just now. He says that this land is suitable for special areas? Yes.

1099. What does he mean by "special area"? He says, "An area of 238,000 acres of Crown land of the very highest quality; of course a line *via* Trundle would serve this area; but the direct line will go through it."

1100. Are you not aware that the proclamation of these special areas has been an absolute failure, and that the people holding them are crying out for relief. They cannot continue to hold them without some assistance from the Crown? I have been retired from all public matters for the last two years. Of course, I am aware that there has always been a good deal of complaint about special areas. But remember that in all those cases the special areas were small, such as those upon the Murray, which are from 60 to 80 and 100 acres; but with a special area of 640 acres of good land, anyone ought to be able to make a living.

1101. From what you saw of the quality of the soil and its capabilities for wheat producing in that district, do you think it would be possible for a selector on a special area to produce wheat at 1s. 6d. a bushel, pay the Crown 1s. 6d. an acre, and pay the carriage, 328 miles, from Condobolin to Sydney, and remain upon the land? It all depends whether a man goes up there with sufficient capital to cultivate his 640 acres. I do not think a man who goes in heavily hampered with debt would.

1102. You took into consideration, when framing your report, the fact that there is a larger area of Crown lands on the road from Parkes to Condobolin than from Parkes to Condobolin, *viz* Trundle, in consequence of the settlement having taken place at Trundle, and you thought the settlement would be denser in consequence of the special areas limiting the selections to 640 acres;—under the circumstances, the low price of produce and special area limitation of price to 30s. an acre, do you think it would still be possible to retain a settlement there based upon 640 acres of land? I think these gentlemen were all very ready to take up these special areas. Mr. Sharpe stated that they would be taken up in eighteen months or two years, and they would not be taken up unless they were satisfied they could make money out of them.

1103. But that evidence was given about three years ago? I know, and I can only go by that, because I do not know how the conditions have changed. I do know that these leases have been extended.

1104. You had evidence given as to the price of produce? Yes.

1105. It was then about 3s. a bushel? 3s. or 3s. 6d.

1106. It is now 1s. 6d.;—would not that alter the circumstances? Unquestionably; and that is a point upon which I was prepared to be examined to-day, because I know that wheat is now selling at 2s. 1d. and 2s. 2d. Mr. J. G. Raymond, the miller, states, in his evidence, that he has obtained 4s. 6d. per bushel.

1107. All I want to get at is this;—taking these circumstances into consideration, if the Crown say they are not going to limit the area as special areas, and will allow selections to be taken by the direct route, the same as they did on the proposed route *via* Trundle, how would that affect the construction of the line;—where would be the greater settlement? It would simply wipe out one of my arguments altogether. I specially pointed out that the concentration of settlement was the justification for the line.

1108. In other words, except the settlement could be made dense by the Crown lands being handed over in special areas, you would not report as you have done? No; I should have reported the line as unnecessary.

1109.

1109. It was contingent upon dense settlement? Contingent upon the fact that there was a large amount H. A. Gilliat,
of settlement there—that there was a certain amount of settlement at either end—at the Condobolin and Esq.
Trundle ends—all of which would be served by the line. Do away with the 238,000 acres or increase the 19 Mar., 1895.

conditional purchases there, then the very ground I mentioned in my summary is done away with.
1110. Then taking the evidence as you did, and taking everything into consideration at the time, you were
led to believe, placing great stress upon that density of settlement, that the direct line would suit the
greatest interest? Yes.

1111. But if that density of settlement could not be obtained would your information then be in favour
of the direct line, or would it go with the settlement which already exists? I do not think the existing
settlement is sufficient to justify the construction of a line at present.

1112. There can be no further settlement for five years? Precisely; then I think the line can very well
wait for five years.

1113. Then it is your opinion that the line should not be constructed until there is sufficient settlement
upon it? Until there is sufficient settlement upon it.

1114. You have not considered the proposition of this section of the line being part of the national line
ultimately extending to Wilcannia? No.

1115. The Railway Commissioners, I understand, have in contemplation the ultimate extension of this
line from Condobolin to Menindie,—looking at it from that point of view, would you favour the construc-
tion of the line? Unless the railway survey pointed out that there were serious or any engineering
difficulties upon the direct line, I can hardly see any reason for deviating *via* Trundle, when Trundle would
be served by the line by Bogan Gate.

1116. If this line as proposed from Parkes to Condobolin is carried out, do you think agriculture would
increase in that district very much? I think so. I think even amongst the large selectors a line of
railway would increase the production of wheat, providing that the wheat market does not continue
to fall as it has done. But when we see that in February last the London wheat market reached the
lowest point that was ever known, that is not promising for wheat-growing in this Colony.

1117. Comparing the quality of the soil for agricultural purposes north of the proposed line from Parkes
to Condobolin, and south of it, which is the better? I did not go far enough to see. I merely had to go
upon the evidence I heard; and they all admitted that the land deteriorated as you went north.

Arthur James Stopps, Esq., Acting Chief Draftsman, Department of Lands, sworn, and examined:—

1118. Chairman.] The plan before us was prepared under your supervision? Yes.

A. J.
Stopps, Esq.

1119. Mr. Roberts.] You see Condobolin marked upon the map? Yes.

1220. How many miles is it to the western boundary of your map? About 20 miles.

1221. That shows the country, I presume, taking Condobolin as a centre, for an area of 20 miles? It 19 Mar., 1895.
does.

1222. Could you state to the Committee the number of acres of freehold land which might possibly be
affected by the proposed railway from Parkes to Condobolin? In round numbers the total area would
be 274,000 acres of freehold land. That is tinted red on the plan.

1223. How many acres of conditional purchases and conditional leases? 729,400 acres; that is tinted
blue on the plan.

1224. And how many acres of reserves? 284,000; tinted green on the plan.

1225. And how many acres of Crown lands would then be left? 600,000 acres; the Crown land is
untinted.

1226. Are the leasehold areas shown on the map? Yes; they are edged brown.

1227. Mr. Davies.] Do you know the location of the railway through those lands? It is approximately
shown by the black dotted line. I cannot say in detail the amount of Crown or other lands taken.

1228. You have not prepared a return showing the amount taken? No.

FRIDAY, 3 MAY, 1895.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN.)

The Hon. FREDERICK THOMAS HUMPHREY.

JAMES HATES, Esq.

The Hon. WILLIAM JOSEPH TRICKETT.

ROBERT HENRY LEVIEEN, Esq.

The Hon. JAMES HOSKINS.

JOHN MOORE CHANTER, Esq.

The Hon. JOHN DAVIES, C.M.G.

CHARLES ALFRED LEE, Esq.

The Hon. CHARLES JAMES ROBERTS, C.M.G.

JAMES GORMLEY, Esq.

EDMUND WILLIAM MOLESWORTH, Esq.

The Committee further considered the proposed Railway from Parkes to Condobolin.

Henry Deane, Esq., Engineer-in-Chief, Railway Construction Branch, Department of Public Works,
sworn, and further examined:—

1129. Mr. Trickett.] You were examined before the Committee on 12th March, and you stated on the H. Deane,
conclusion of your evidence that you would be able to speak more definitely with regard to the proposed Esq.
line when you had personally inspected the ground? Yes.

1130. Will you give the Committee the result of your visit? I went over the line at present being
surveyed, adhering as nearly as I possibly could to the route. Some parts of that route I could not follow
closely.

1131. Chairman.] Does the parish map show the route of the railway very accurately? Yes.

1132. There has been some little doubt about it? The full red line is the line which has been submitted.
It is approximately correct. The actual line taken by the survey runs very closely to it, but follows
more nearly the contour of the country. It will be seen that the line makes a slight detour leaving Parkes,
in order to avoid a ridge. I followed the line until I came to the road. Passing through Lackey's run I
kept further south than the line at that part; but the later reports from the surveyor, Mr. Kennedy,
show

3 May, 1895.

H. Deane,
Esq.
3 May, 1895. show that a surface line can be marked out satisfactorily, with no grades worse than 1 in 100. At Bogan Gate, that being a part of the proposed route, the line follows the full red line marked on the map. Further on, at about 275 miles, instead of following the full red line, which goes in a west-south-westerly direction to 305 miles, I have directed the surveyor to keep along the travelling-stock route until you get to portion 55—that is a little more to the south. The country is exactly the same. There is, however, a better crossing of the Gunningbland Creek, and it comes within the travelling-stock route. The crossing of Gunningbland Creek is very much improved. I saw the crossing of it on the line which had been run. It was very difficult to find. That means that the water spreads out several chains.

1133. It is really a very shallow creek indeed? It is; but where we shall cross it it is confined in a channel.

1134. At the time you saw it it was absolutely dry? Absolutely dry. From portion 55 the line follows a westerly direction. From 305 to 312 miles, it is a little further south than the full red line shows. We then follow more nearly the surveyed line from Forbes to Condobolin, which is shown on the map. Further west the route submitted is, with some deviations which will add a little to the length and, therefore, to the total cost, perfectly practicable.

1135. What are those deviations necessitated by? By slight hills. From the point marked 319 miles, a curve is shown on the submitted line, keeping to the north of some portions coloured yellow on the map. There is no necessity to go up there, we can keep a more direct route. There is a little bit of swampy ground, but I scarcely think it will be necessary to avoid it. I do not think it would make any difference in the estimate whether we went straight through it or a little way around it. Then I should follow a more direct east and west line. I should follow more nearly from 319 miles the line of the original direct survey, until I get nearly into Condobolin. I should follow, the whole of the distance, until I get close to Condobolin the public road or travelling-stock route. There will be no deviations, so far as I can see, on the private property. I have sent to the Committee a map of Condobolin, which shows a road coming into Condobolin from Forbes 5 or 6 chains wide. The red line shown upon it is the course of the line proposed to be adopted. It cuts off a corner of private property just outside Condobolin, but it would appear that the owner of this ground, a Mr. Rodgers, has a conditional purchase. There was a condition ceded in his agreement by which he was precluded from getting compensation from the Government if the railway went through his property. Then the line crosses the 3-chain road, and follows a course parallel to the approach road to Condobolin. I looked at two sites for a terminal station. There seemed to be a good site on the straight parallel to the 3-chain road which I have just mentioned, and another one beyond the curve shown on the map almost opposite the hospital reserve. I inquired of the Railway Commissioners who went over the line some time previously, and they expressed themselves in favour of the first site. No doubt it will be a shortening of the line, and I think that that site will prove suitable.

1136. Mr. Molesworth.] How far is that from the centre of the town? The centre of the business part of the town is at the south-west corner.

1137. Mr. Trickett.] How far is the site likely to be adopted from there? It would be about three-quarters of a mile from the passenger station to the post-office, and it would be more from the goods station. I think the passenger station would have to be at the end nearest Condobolin, because the ground being rougher it would be cheaper to put that building there. Where you make the goods station you want a greater extent of fairly level ground. It would be better, therefore, to go further back. Stockyards could be made near the show-ground. After entering the town boundaries, nearly the whole of the land traversed has been reserved from sale; but there are some portions on the station site which have been alienated. They are not shown on the town map, but I will get them marked upon it. It is proposed to locate the station between lots 32 and 37, and to place it more to the southward than the original staked line so as to avoid going through purchased land as much as possible.

1138. What is your opinion of the line as regards facility of construction? The line is an easy one for construction. The country is not so absolutely level as the Berrigan line. There are plenty of undulations on the ground which necessitate careful survey and contouring; but I believe the estimate which I have given of £2,100 per mile, fairly represents what the maximum cost of the line should be.

1139. Will that not include the cost of land resumptions? No.

1140. But there will be very little land resumed? Very little.

1141. Will the slight deviation you have indicated necessitate some slight alteration of the book of reference? It will make a difference, and I will have that corrected for the information of the Committee.

1142. Will you describe the creek crossings which have to be encountered;—what will be the character of the embankments or culverts required to cross the Gunningbland and Yarrabundi Creeks? By crossing the Gunningbland at the point I have indicated, the length of opening or waterway will not be more than 2 chains.

1143. How will the crossings be constructed? They will be timber openings, probably, of 14 feet each. There will be piers of three piles each with three rows of 12-inch girders. They are very inexpensive and come to about £3 a lineal foot.

1144. What height will they have to be above the bed of the creek? I have not gone into that yet. Where we propose to cross I could not tell you the depth before taking levels, but it is a very shallow water-course.

1145. Would this be a kind of trestle bridge? It would be a bridge on piles, with plain wooden girders resting upon them. You cannot call it a trestle bridge; it is a pile bridge.

1146. What will be the length of the crossing over the Yarrabundi Creek? There is nothing of any importance there.

1147. It would be the same character of bridge as the one over the other creek? Yes.

1148. In your previous evidence you allowed £7,245 for culverts and bridges;—will that be ample for that purpose? Yes.

1149. After having seen the route, what conclusion did you come to with reference to this being a surface line of railway without ballast? That it could be done very well.

1150. You are sure of that? Yes; I would like to have a little ballast in reserve. I have shown in the estimate, £3,984 15s. for ballasting where the ground happened to be soft; but there are not many places, and in the station-yards it is desirable to put some ballast. The general character of the ground is hard.

1151. And if it were scooped out at the sides, and formed for the purpose of putting sleepers and rails there, do you think it would consolidate? Yes; I am sure it would.

H. Deane,
Esq.,

3 May, 1895.

1152. Do you think it is a kind of country where the permanent-way would be liable to be washed away in the heavy rainfalls? No. There is a good deal of that reddish soil in some parts which gets very soft when the water stands upon it; but where you bank it up, and the water drains away, and has no chance of soaking in, I think the earth of the embankment will be sure to remain thoroughly sound.

1153. What average distance apart would you put the box-drains so as to allow the water to pass away? I should think from a quarter to half-a-mile. Of course there would be more or larger openings where there happened to be depressions.

1154. Do you think, excepting in particular spots, a quarter of a mile apart will be sufficient? Yes; that has generally been found to answer.

1155. Some evidence has been given as to this country being liable to be flooded;—did you see anything of the effects of floods which would be likely in any way to injure the line? No, none whatever. The only really swampy place I came across was that on each side of the Burrawang Gate, and there is very little of it.

1156. And in places of that kind you would possibly make a little detour? Yes.

1157. There is very little of that character of country on the whole of the line? Yes.

1158. Has not the Department, with the view of getting away from any possibility of flooding, kept the line as much to the north as possible? Yes; the line from Parkes is much more free from liability to flood than the more southern line from Forbes.

1159. The further you get up towards the line which the Department recommend, the further you get away from any possibility of danger of flood-waters? Yes; I think we are very safe where we are now.

1160. Did you go over the proposed deviation in the direction of Trundle? No. After getting to Condobolin I pushed on to Euabalong, I crossed the Lachlan and made for Wyalong, in order to look over the Temora and Wyalong route.

1161. Did you have a look at the suggested line between Forbes and Condobolin? No.

1162. As far as your information goes, is there sufficient timber about the locality for the purposes of sleepers and the viaducts which will be required? I could not see any myself, but I was told that there was. I thought I should see some ironbark forests, but except a small tree or two of ironbark, I did not see anything which would be of any use. I ascertained, however, from Mr. William Todd, at Bogan Gate, that on all the ridges there is plenty of timber for sleepers. There is not enough, he said, for rectangular ones, but there is plenty for the class of sleeper which it is proposed to put on the line. I expect, if it turned out that we require longer squared timber or piles, we should have to get them from another district, but there will be no great lengths required for bridge construction; therefore, I think it is quite possible that all the timber may be obtained locally.

1163. It has been stated by the engineers who are at work on the line that the viaducts would not require to be more than 4 or 5 feet at the creek crossings? That would be about it.

1164. And these creeks, from your observation, are really merely little water tracks on a level surface? Yes.

1165. They are not deep creeks? No, not where we cross. They are mere depressions. At Bogan Gate the Gunningbland Creek has a watercourse of some size, but we do not cross it there. Where we cross there is just a shallow depression. The ground gradually drops down 18 inches or a couple of feet.

1166. Then your visit confirms the idea that this is a suitable country for attempting to form an experimental surface railway? Yes.

1167. Are you prepared to give the Committee any evidence contrasting the direct line with the suggested diversion by way of Trundle or the line from Forbes to Condobolin? I have no further information to offer with regard to the other lines. I could have gone over them, but I scarcely thought it would be worth while to do so for this reason, that with the line under discussion I have something to go by and work upon, whereas I have nothing as regards the others.

1168. In what way? There is the survey of the first direct line, and the survey which has been more or less worked up on the new adopted route. On the Trundle line we have nothing whatever, but we might go over the country and say that a class of line could be made to cost between £2,000 and £2,500 a mile, or between £2,500 and £3,000 a mile; but it would be impossible, without actual survey, to fix it down to £50 or £100 a mile one way or the other. Therefore, I thought, although I should have liked to go over that route, that it would not pay to do so. There is this to be remarked, however: that the opinion seems to be, from Mr. Stawell's examination, that that line would not be quite so cheaply constructed as this. The difference in length would be about 6 miles, so that if that line cost £2,100 per mile like the proposed line, there would be a difference in total cost of £12,600; and if it cost £100 per mile more, that would mean another £6,000 to add to it, or there would be a difference in total cost of £18,600.

1169. And of course the additional distance for haulage? Yes.

1170. [Chairman.] You say that supposing it is the same class of line, at the same cost, even then it would cost £12,000 more? Yes, by reasons of extra distance. Supposing it were £100 a mile more, it would mean a further additional expense of £6,000.

1171. Is that assumption a reasonable one? I think so.

1172. [Mr. Trickett.] Mr. Kennedy was asked the following questions:—

What conclusion did your inspection and observations lead you to, in reference to crossing the Gunningbland Hill, at a point known as Treweek's Gap? It showed a rise from the plain country of 100 feet in about a mile, and the grade of 1 in 100 gives a rise of 52 feet, so that to run straight up to the Gap would require a cutting of 50 feet; but this could be avoided by contouring the country, and very likely the cutting would not exceed 25 to 30 feet.

Would that cause any considerable curving? It would require an additional length. Curves would be required to get additional lengths to reduce the cuttings.

I do not think you have stated before what time a line of this kind ought to take to construct? I should think about fifteen months.

1173. Do you think the ordinary rolling-stock could be used on the line? Yes; rolling-stock of about 12 tons to the axle.

1174. And up to a rate of 15 miles an hour? Fifteen to 20 miles.

1175. I see that the estimated cost of the permanent way is £2,700;—does that mean repairs of the permanent way? Yes; that is the Commissioners' estimate. I have not gone into the matter. I dare say it will be done for that.

1176. Does the country strike you as being of a character in which there would not be likely to be damage done to the line? There is really nothing to hurt it as far as one can see.

- H. Deane, Esq. 1177. There would not be constant traffic over it to begin with, and the damage by water is not likely to be great? No; I think the maintenance ought to be cheap.
- 3 May, 1895. 1178. *Mr. Molesworth.*] You have stated that the only soft country you came across was on either side of Burrawang Gate;—was it not the intention of the local surveyors to take the line a mile or more back, with the view to escape that part? There has been a proposition to alter it. I may say that I had Mr. Burge with me when I went through. It was he who made the first exploration, and the conclusion he came to with me was that it would be scarcely necessary to deviate the line there. Of course, if the road came to be deviated, we would follow the road; but if the road were not detoured we would go straight through, because I do not think it worth while, just for the sake of that bit of country, to deviate the line. It was pretty dry when we went through, and I do not think the water could stand there any height, even in extreme flood. When Mr. Thornbury gets on to that point, the matter will be thoroughly investigated. Mr. Thornbury has been working recently about 13 miles from Condobolin.
1179. You are satisfied that that soft piece of country is not a serious matter, nor likely to lead to additional cost? I think not; it is not anything like a lagoon. It is damp and soppy, even in ordinary weather, for a road; but if the railway were carried through, and it were properly drained, no ill effects need be anticipated.
1180. Is there any part of the country over which the proposed line would run which you could term flooded country? That is the only part which had the appearance of it.
1181. And you think the water will only rest there a short time after heavy rain? I think so.
1182. You have no hesitation in fully recommending the line after examining the route? None whatever.
1183. You believe it could be constructed as a surface or a pioneer line? Yes.
1184. *Mr. Gormly.*] Are the surveys made by Mr. Kennedy and Mr. Thornbury so far advanced as to enable you to judge whether your estimate can be carried out? Yes.
1185. You think the line can be carried out at the estimated cost? I am satisfied it is a proper estimate.
1186. And there is no chance, in constructing a surface line, of the estimate being exceeded? I do not see any chance of any material alteration which would affect the estimate.
1187. The water-ways do not exceed the estimate? No.
1188. You have considerable knowledge of the services of Mr. Kennedy as a railway surveyor? Yes; he is a very good surveyor.
1189. He states that crossing the Gunningbland and Yarrabundi Creeks it will not be necessary to have culverts raised more than 4 or 5 feet;—do you agree with that? Yes.
1190. Would there be any necessity to have long piles? I do not think so.
1191. Where the piles would be only 4 or 5 feet over the surface it would not be necessary to drive them a great distance in? It is a question of foundation. Of course, if it were found that the ground were unsound we would put more piles in.
1192. I suppose you would use some ballast? Yes.
1193. Could it be easily procured? Yes; some of the stone near Bogan Gate would answer very well.
1194. And it could be carried wherever required by the contractors? Yes.
1195. It would not be a costly article if it were required? No.
1196. Then the cost of the material required would not exceed the ordinary cost of material used on other lines? No; there is nothing exceptional in the price of it.
1197. There is nothing in the formation of the country which would lead you to think that the cost of construction would be higher than usual? No; the amount in the estimates would certainly cover what was required.
1198. There would be no need of side-cuttings to any extent? Nothing of importance. We might have some small cuttings starting out of Parkes, but not sufficient to add materially to the cost of the line. They would not be more than from 2 to 4 feet.
1199. I suppose that would be cheaper than making an extensive deviation? Going out of Parkes, you are pretty well bound in the matter of direction. You cannot vary it very much. In order to get the grade you have to stick to one route. If you deviate a chain one way or the other you get heavy banks or heavy cuttings.
1200. Is there undulating country between Parkes and Bogan Gate? There are three bits of undulating country, one just getting out of Parkes—a piece near Bogan Gate, and a piece past Burrawang. Those undulations are not considerable. We have to curve there, however, in order to get a surface line.
1201. Is the surface on the undulating country reasonably hard? Yes.
1202. It would be suitable for the formation of an embankment? Yes.
1203. And the grade of the line would not be more than 1 in 100? No.
1204. To get that it would not be necessary to make considerable cuttings or embankments? No.
1205. What would the approximate height of the embankment be? I do not suppose there would be anything above 5 feet.
1206. Would that be only approaching the creeks? I refer to the undulating parts of the country, but I doubt very much whether there will be any banks as high as that.
1207. Mr. Kennedy gives it as his opinion that they will be only 3 feet approaching the creeks;—do you think it is correct? I would not like to limit it, but they would not be more than 3 feet approaching the creeks.
1208. *Mr. Molesworth.*] You have referred to the question of the station site of Condobolin;—were you made aware of an offer by the owners of Condobolin Station, which is immediately adjoining the town, of 10 acres of land for station purposes three quarters of a mile from the post office? No.

WEDNESDAY, 8 MAY, 1895.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.
 The Hon. WILLIAM JOSEPH TRICKETT.
 The Hon. JAMES HOSKINS.
 The Hon. JOHN DAVIES, C.M.G.
 The Hon. CHARLES JAMES ROBERTS, C.M.G.

EDMUND WILLIAM MOLESWORTH, Esq.

JAMES HAYES, Esq.
 ROBERT HENRY LEVIEN, Esq.
 JOHN MOORE CHANTER, Esq.
 CHARLES ALFRED LEE, Esq.
 JAMES GORMLY, Esq.

The Committee further considered the proposed Railway from Parkes to Condobolin.

Henry Deane, Esq., Engineer-in-Chief, Railway Construction Branch, Department of Public Works, sworn, and further examined:—

1209. *Chairman.*] You wish to make some statement with regard to the evidence of Mr. Kennedy? Yes. *H. Deane, Esq.*
 I wish to mention that I have read Mr. Thornbury's evidence and Mr. Kennedy's evidence. I would like to make one or two remarks with regard to their evidence. I have also seen what Mr. Officer, the manager of the Condobolin Station, says. I sent a telegram to the surveyor at Condobolin, to get particulars from him as to the site which Mr. Officer offers for station purposes. I expected to receive a reply yesterday, but it has not come. I told him to get particulars at once and send them by the outgoing mail.

8 May, 1895.

1210. *Mr. Hayes.*] Have you read the evidence of Mr. Kennedy, railway surveyor, with reference to the route *via* Trundle? Yes.

1211. He states that it will be very difficult to get a grade of 1 in 100 on that route? Yes.

1212. Do you agree with that statement? I think Mr. Kennedy is the best judge of that matter. I have not been over the Trundle route myself. I think Mr. Kennedy, however, is inclined to be a little too positive in his evidence; but he is a man whose opinions are certainly worth having.

1213. Could he approximately decide on the grades by roughly going over the country? I think he could get a very good idea whether 1 in 100 grades were obtainable or not.

1214. You think, then, that his evidence to the effect that a line *via* Trundle would be more costly to construct than a line *via* Bogan Gate is correct? Yes; I should have no hesitation in accepting that opinion.

1215. You are of opinion that the cost of a line *via* Trundle would be greater than the cost of a line *via* Bogan Gate? Yes, I think so, after reading his evidence.

1216. *Chairman.*] Do you desire to make any other statement? I would like to refer to question 2323, Mr. Thornbury's evidence:—

Can you tell us what length of line at this particular place will have to be raised about 3 feet? Not more than a quarter of a mile. The line could be altered a little there, perhaps, and taken down to a more defined channel of the creek, and then the opening would not be so great.

I think, when Mr. Thornbury stated that, he had forgotten that that alteration had already been ordered. When I went over the proposed line I gave him instructions, and the position of the line has been altered since, and the crossing of the creek is made at a better place. With regard to the line beyond the Burrawang Gate, I should like the Committee to thoroughly understand this: Mr. Kennedy, in his evidence, evidently put that swampy land in a slightly inaccurate position. It is nearer Burrawang Gate—the boundary gate—than sketched by him on the map. A little beyond that gate the line goes through a wet place, as I mentioned in my evidence. Mr. Kennedy thought it would be necessary to divert the line there; but my observations, when Mr. Burge and Mr. Thornbury were with me, showed that it would not be necessary to do that for the purposes of the railway alone, as there could be only a few inches more or less of water to contend with; and if it were only the construction of a line, and not of a road, we could carry the line straight through there without making a deviation. It might be a good thing to deviate the road to get round the damp place—because that is really what it is—but there is no necessity to deviate the railway to get round a merely damp place, because you can raise it and drain it. We came to the conclusion that there was really no water to contend with near Condobolin, on the Condobolin Run. I notice that Mr. Officer, in his evidence, states that the only water to be contended with will be rain-water. I thought I might place these facts more clearly before the Committee. That practically removes all chance of the line encountering floods.

1217. *Mr. Lee.*] With reference to the land—could you tell the Committee the number of miles of land which will have to be resumed? I have had a tabular statement made out of the alienated land we go through; and the total length of alienated land traversed by the railway in the revised position is, as near as can be ascertained at the present moment—and I think it is very nearly correct—842 chains and 80 links.

1218. *Mr. Trickett.*] What will that be in miles? Ten and a half miles.

1219. *Chairman.*] How wide? I suppose, where the line is in forming, we ought to reckon upon 1½ chains as the minimum.

1220-1. *Mr. Lee.*] At this stage I would direct your attention to the evidence of Mr. Kennedy, who says that the area to be resumed would only be 7 miles. I will refer you to question 3967, as follows:—

Therefore, the line could be constructed at about the same cost, with the exception of the crossing at Goobang Creek? Yes, about the same, with this exception: From Forbes, almost the whole of the way to Burrawang, you would go through alienated land, and on the other line you would only have about 7 miles to resume.

Again, question 4008 is as follows:—

And you are equally satisfied there will only be 7 miles of alienated land through which the direct line would have to pass? Approximately.

? With regard to that matter I would point out that we have a great deal more information in the office now than Mr. Kennedy had at his disposal. Mr. Kennedy was giving evidence to the Sectional Committee on the results of an exploration he made with Mr. Burge. There have been a few alterations necessary since then. I do not know how he made out his 7 miles; but possibly there are some deviations which carry the line through more private property.

- H. Deane, Esq. 1222. Is the estimate you now have a correct one, or an approximate one? I think it might be taken as being very close to the mark.
- 8 May, 1895. 1223-4. Will you tell us how much of the land is freehold and how much of it conditional purchase land? I am afraid I shall have to supplement my evidence on that point.
1225. *Chairman.*] Is it possible for your Department to locate, in detail, your land from Parkes to Condobolin? Yes; I think it is now.
1226. *Mr. Lee.*] And to state how much of the 800 chains runs over the roads, or is it alienated land only? I have given you the alienated land. The Crown land, which includes roads, is 4,236 chains in length—that is, taking the line right through the town of Condobolin.
1227. It includes town allotments? Yes.
1228. The return you have handed in shows a total distance of 840 chains 80 links as being the length of land which will be resumed? Yes.
1229. Will you be good enough to put that into acres? It would be about 126 acres.
1230. *Mr. Humphery.*] Is 1½ chains to be the width right through? Yes. Assuming 1½ chains where the line is in forming, I think we might do with 1½ chains all the way, except where stations are required.
1231. *Mr. Lee.*] There is a length of 10½ miles? Yes; but it is only 126 acres.
1232. Although the length given is 842 chains and 80 links, the acreage amounts to only 126 acres? Yes; if a width of 1½ chains is taken.
1233. I want to know how much of that 126 acres will be freehold and how much conditional purchase;—would you be able to furnish that information? I can easily obtain it.
1234. Meanwhile, have you made any estimate as to what the probable cost of resumption will be? No; I have not touched that.
1235. Is any portion of the land to be resumed adjacent to existing roads, and if so, could the roads be used? No; I have followed roads wherever possible. I paid thorough attention to that.
1236. The desire of the Department has been to utilise the road wherever they could? Yes.
1237. And having done so, it will still be necessary to resume at least 126 acres? Yes.
1238. *Mr. Davies.*] You have stated, in reply to Mr. Humphery, that there will be 10½ miles of private property through which the proposed railway will pass? Yes.
1239. Have you made any calculation of the value of the land and the effect of the severance? No.
1240. You are aware that it is estimated that there will be an annual loss on the railway, after allowing interest on the capital expenditure, of £2,000? Yes.
1241. That is without the cost of land which may be resumed? Yes.
1242. Have you, since visiting the locality, come to any determination as to the actual estimate you have given for the construction of the line—whether it can be reduced, or whether it is likely to cost more? I adhere to the estimate of £2,100 per mile.
1243. Are the earthworks of a character which will require an expenditure of £300 per mile? It is not quite all a surface line.
1244. Is there much of it which will require deep excavations? No, not deep excavations; but that £300 per mile includes station earthworks, besides excavations in cuttings where they may occur. There will be some cuttings soon after starting out at Parkes—shallow ones.
1245. But have you not already provided in your estimates for station works and sidings, water supply, turn-tables, &c., £213 per mile, in addition to £300 per mile for earthworks? Earthworks at stations are included in the first item. Station buildings and sidings are not included in it.
1246. How many stations will you have on the line of railway? Six altogether, including the terminal stations. I am including Parkes, where there will have to be a little extra work done. After leaving Parkes there will be five stations. Those are what the Railway Commissioners have decided upon.
1247. There is a station already at Parkes? Yes; but we have to make junction arrangements there.
1248. Do you propose to make a larger station there? Nothing will be done at Parkes, probably, except to run out an additional road with a turn-table.
1249. Of what do you propose to build your stations? Wood.
1250. What will the station buildings cost? I can tell you what has been put down for each station. There is put down for Parkes—turn-tables, £600, and junction arrangements, £500—total, £1,100; at Gunningbland, £195; at Bogan Gate, £1,920; at Burrawang, £125; at Derrawang, £625; and at Condobolin, £4,625; besides which there will be some sidings at Condobolin, £800; water supply on the whole line, £2,500; and metalling station yards, £1,000—a total of £12,890, which is the sum placed on the estimates. All these figures have been very carefully gone into, both as regards station accommodation and buildings, with the Railway Commissioners' Department.
1251. There is an item of £3,622 for level crossings, stops, and gates? Yes.
1252. Does that not appear to be an excessive item on a line like that? I do not think so. I could not say at the present moment what would be required in regard to that item; but it is a very fair amount to put down. Each stop at a dividing fence—if the line is not fenced in—costs a good deal. It costs, perhaps, £45; and if there was one of those for every mile it would be £45 per mile for that alone, without putting down any other expense. I do not think that item should be reduced by any means.
1253. What proportion of fencing do you intend to apply to the line? I have stated it in the estimate. I have taken the cost of fencing both sides of the line at £100 a mile, and I have taken one-sixth of that—assuming that one-sixth might have to be fenced.
1254. Only one-sixth will require to be fenced? That is the estimate; I think that will be quite sufficient. Of course, the station-ground will have to be fenced.
1255. Then you propose to ballast a portion of the line? Yes; I have estimated the ballasting at one-quarter of the whole length.
1256. After your visit of inspection, do you consider the line will require any ballast? Yes; but the greater part of it can be dispensed with.
1257. Do you think a saving could be effected in that respect? No; I would not recommend any further cutting-down of ballast.
1258. Are you of opinion that the £2,100 will be the full estimate for the carrying out of this work, as far as the Department for Construction is concerned? Yes.
1259. Exclusive of land? Yes.
1260. Do you believe, then, that it will take fully £2,100 a mile to construct this 60 miles and 30 chains of railway? No, I believe it will cost less; but I consider £2,100 a fair estimate. I think that amount should be provided.

1261. How much less do you think it will cost? I could not say to a pound or two.
1262. Will it cost £50 a mile less? No; when I put down £2,100 a mile, I put it down as being what I considered a fair estimate. I do not expect, of course, that it will exceed that.
1263. But you believe it will cost all that? I do not say that; I believe £2,100 will be the maximum. I would not put the estimate any lower than £2,100; at the same time, I believe £2,100 is enough.
1264. *Mr. Hayes.*] In addition to your estimate of £2,100 a mile, you allow £9,297 15s. for contingencies? No; that is included.
1265. You include that in the £2,100 a mile? Yes.
1266. And it is therefore probable that you may be able to reduce the cost if the contingencies do not come to what you expect? Yes.
1267. And you are quite satisfied it will not exceed the amount you have stated—£2,100 a mile? I am quite satisfied that it should not exceed that.
1268. Will it be necessary to provide a further 10 per cent., as is usually done in connection with these works? No.
1269. You have already allowed for that? Yes; I have allowed 8 per cent.
1270. And you believe that will be ample to cover any possible contingencies in the construction of the line? Yes; I believe so. It is my firm belief it is sufficient.
1271. *Mr. Humphery.*] Referring to your reply to Mr. Hayes as to your provision of £2,100 per mile, covering the 10 per cent. provided by the Act, is that what you mean? I meant to say I had already provided for contingencies over the previous prices put in the body of the estimate. It is usual to do so. Of course, I could have raised each item by 10 per cent. or 8 per cent., as the case might be; but in this case it has been added on afterwards.
1272. Shall you require the additional 10 per cent. provided in all cases by the Public Works Act? I think not.
1273. In other words, have you anticipated in your estimate the 10 per cent. provided by the Public Works Act? Perhaps I might put it in this way—that I am not reckoning at all on the 10 per cent. provided by the Public Works Act. I am not reckoning on being able to draw on that 10 per cent. at all. My estimate includes what I believe to be all possible contingencies. Therefore, I believe £2,100 a mile for this line will be quite sufficient to cover all cost, with any contingencies which may reasonably arise.
1274. *Mr. Davies.*] In your estimate you have the following:—"Engineering and supervision, £93 per mile, £5,614 17s. 6d." Then you have contingencies, about 8 per cent., £154 per mile, £9,297 15s.? Yes.
1275. Then you have practically, by these items, anticipated the provision which is made in the Public Works Act with regard to 10 per cent.? I have not taken that into account at all. I never do in making my estimates. I always leave that question out altogether. I make my estimates up to an amount which I think can fairly be considered to cover the cost of the line. I do not reckon to have any right whatever to draw upon that 10 per cent., unless some special circumstances occur under which application will be made; but I do not reckon that it is really any loop-hole to an under-estimate.
1276. You have £15,000 down for supervision and contingencies;—would you be prepared to carry out the work, striking out the contingencies? No.
1277. And allowing the matter to come under the Public Works Act with the usual provision? No; I cannot consent to lower my estimate. As I stated in connection with the Berrigan line, if the line costs less so much the better. Every effort will be made to make the line cost less. The money will not be spent simply because it is available.
1278. Would you be able to carry out the Parkes to Condobolin railway for £2,100 a mile, including the cost of land which will be necessary for resumption? I do not know what the cost of land will be. I should think it would be very desirable for the Committee to have an estimate of the cost of the land.
1279. *Mr. Chanter.*] I notice that in detailing the estimate for the construction of railway station buildings, you have stated that the cost of the railway station at Bogan Gate will be three or four times as much as any of the others;—can you give the Committee the reasons why it requires a more expensive station? I will tell you what is proposed, but of course the Railway Commissioners decide. There is to be a waiting-shed, a station-master's house, a wool-loading bank, a goods-shed, an uncovered platform, a weigh-bridge—which will cost £275—small sheep-yards, and sidings for twenty-five trucks. It is an important point.
1280. Why is it a more important point than any other points on the line? The junction with the roads comes in there.
1281. *Chairman.*] The Trundle goods will come in there? Yes.
1282. *Mr. Chanter.*] Is it really to make provision for the traffic you expect from Trundle that this excessive cost of buildings will be incurred at Bogan Gate? I can only say what I believe. I made out the estimates, but the Railway Commissioners gave me the requirements.
1283. You only deal with the construction? Yes.
1284. Therefore, you are not in a position to say why they have arrived at the conclusion that this expense is necessary? No; Mr. Harper would be able to say.
1285. But you believe it is in expectation of a large traffic from Trundle that these buildings are to be put there? Yes.
1286. You would not observe, in passing through Bogan Gate, any settlement in the immediate neighbourhood? No; it is not so much on account of local settlement, but on account of traffic coming into the place from the outside.
1287. You saw no signs of local produce between Parkes and Bogan Gate and Condobolin? No; there is nothing locally, I should say, to justify an expenditure like that. It must be because it is a converging point from outside districts.

H. Deane,
Esq.
8 May, 1895.

FRIDAY, 10 MAY, 1895.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.	JAMES HAYES, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	ROBERT HENRY LEVIEEN, Esq.
The Hon. JAMES HOSKINS.	JOHN MOORE CHANTER, Esq.
The Hon. JOHN DAVIES, C.M.G.	CHARLES ALFRED LEE, Esq.
The Hon. CHARLES JAMES ROBERTS, C.M.G.	JAMES GORMLY, Esq.
	EDMUND WILLIAM MOLESWORTH, Esq.

The Committee further considered the proposed Railway from Parkes to Condobolin.

Henry Deane, Esq., Engineer-in-Chief, Railway Construction Branch, Department of Public Works, sworn, and further examined:—

- H. Deane, Esq. 1288. *Chairman.*] You have some information with regard to the different titles to the land through which the proposed railway will pass? Yes.
- 10 May, 1895. 1289. *Mr. Trickett.*] Have you that information in the shape of a return? I have added it to the table which I handed in previously. The quantity of land is slightly less than what I mentioned the other day. I produce a book of reference in connection with it.
1290. You hand in a statement showing the amount of freehold and conditional purchase land through which the proposed line of railway will pass? Yes. (*Vide Appendix.*)
1291. And that shows a total of what? Of 123 acres 3 roods 38 perches.
1292. Out of which 33 acres 2 roods are absolute freehold, and the difference, 90 acres 1 rood 38 perches are conditional purchases? Yes. Opposite the various conditional purchases are the dates on which the lands were taken up. I have not the valuations, as I have not been able to get them.
1293. You have referred to the "Railways Act," have you not? Yes.
1294. In that Act it is provided, with regard to conditional purchase land, that where that land is resumed for railway purposes the amount of compensation and severance money shall not exceed double the amount which has been paid? Yes, if within five years.
1295. So that with regard to that 91 acres of conditional purchase land the compensation paid cannot exceed £182? Yes; I think that is correct.
1296. Even if they have paid up all their instalments it cannot exceed that amount? Yes.
1297. That leaves the valuation of the remaining 30 odd acres of freehold somewhat uncertain? Yes.
1298. *Mr. Gormly.*] Can you tell the Committee what distance the line will go through the 33 acres and 32 roods? It will be about 2 miles and 34 chains.
1299. *Mr. Trickett.*] That exactly agrees with what Mr. Kennedy stated? Yes.
1300. *Mr. Gormly.*] Is that land situated on the Burrawang Estate? Yes, chiefly. There are 160 chains—that is 2 miles—on the Burrawang Estate. The rest is beyond.
1301. *Chairman.*] Is that all you desire to state? I have had placed on the map of the town of Condobolin the situation of the land offered by the owners of the Condobolin Station for a railway station site. The Committee will see how it is situated with regard to the town. The population within the town area is chiefly concentrated to the south-west portion, consequently this area would be very close to the railway station there. Of course it would leave out the rest. An easy approach could be obtained, as shown by the dotted blue line on the plan, but it would have to go through a number of private allotments.
1302. *Mr. Trickett.*] Instead of being on the east of the town it is really on the west? Yes. The site recommended by the Railway Commissioners is on the north-east side of the town. There is another remark I would like to make with regard to the list which I have put in. It will be seen that 2 acres 3 roods 20 perches are shown to be resumed from Mr. Tasker. I will explain that. The red line shown on the map of the town of Condobolin shows a continuation of the railway northward, and it then bends round so as to avoid that property marked as John Macnamara's, but which belongs to Mr. Tasker now. It is perhaps the easiest way out of the town, but it goes through some purchased allotments belonging to Mr. Tasker in the north-west corner. I think it is very likely that a line could be taken out through a road running directly west from the recreation reserve marked 6 on the plan.
1303. *Chairman.*] That deals with future extension? Yes.
1304. *Mr. Molesworth.*] It has nothing to do with the present proposal? I propose to deal with the line until it gets right clear of Condobolin. There is no doubt it is the proper thing, when we bring the railway into Condobolin, to see that we get a clear way out of it again.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

Railway from Parkes to Condobolin.

APPENDIX.

A.

[To Evidence of H. McLachlan, Esq.]

COST OF HAULING A TRAIN FROM SYDNEY TO ORANGE, AND FROM SYDNEY TO YOUNG.

Dear Sir,

Government Railways of New South Wales, Secretary's Office, Sydney, 15 March, 1895.

With reference to inquiry made by the Public Works Committee, relative to the cost of hauling a train from Sydney to Orange, and from Sydney to Young, I am directed to inform you that the matter has had inquiry, but I am to regret that the cost of working on sections of the main lines is not kept separately in detail, and I am unable, therefore, to furnish the information.

Yours, &c.,

H. McLACHLAN,
Secretary.

The Secretary, Parliamentary Standing Committee on Public Works, Sydney.

A1.

LAND REQUIRED FOR THE PROPOSED RAILWAY.

Dear Sir,

Government Railways of New South Wales, Secretary's Office, Sydney, 14 March, 1895.

With reference to the inquiry made at the Public Works Committee, relative to the absence of recommendation in the Commissioners' report, with reference to the land required for railway extension from Parkes to Condobolin, I am directed to inform you that the Commissioners when considering the extension referred to understood that comparatively little private land would be taken for railway purposes, and, therefore, they did not make it a condition, as in the case of the Jerilderie-Berrigan line, that their recommendation was conditional upon the land required being given free. At the same time, they think steps should be taken to obtain from those owners who will be benefited by the construction of the railway the land that will be required for the construction of the line.

Yours, &c.,

H. McLACHLAN,
Secretary.

The Secretary, Parliamentary Standing Committee on Public Works, Sydney.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

SECTIONAL COMMITTEE.

RAILWAY FROM PARKES TO CONDOBOLIN.

REPORT.

THE Sectional Committee appointed on the 19th March, 1895, to inspect, take evidence, and report on the proposed Railway from Parkes to Condobolin, have the honor to report to the Parliamentary Standing Committee on Public Works as follows :—

The Committee left Sydney by train at 8 p.m., on Thursday, the 21st of March, and arrived at Parkes at 10·30 on the following morning, commencing their inquiry at the Court-house at 2 p.m. the same day, and sitting until 6·15 p.m. On the following morning the Committee resumed at 10 o'clock, sitting until 5·30 p.m. On Monday, March 25th, the Committee, accompanied by Mr. Kennedy, railway surveyor, and Mr. Newton, resident engineer for roads, left Parkes by special vehicle for Bogan Gate. A slight detour was made on leaving Parkes, in order to avoid a hill which the railway will skirt. The road was then found to be level for about 16 miles, and very suitable for the construction of a surface line of railway, the country to the west on the direct route to Trundle appearing to be somewhat ridgy and elevated. The last few miles of the country to Bogan Gate were fairly level, and although part was somewhat uneven, no engineering difficulties presented themselves, and the land was free from indications of flood. The Committee arrived at Bogan Gate at 1·30 p.m., and there examined the only witness who presented himself, and continuing their journey to Trundle, reached that place at 6·30 p.m. on the same day. Starting at 9 a.m. on March 26th, three of the Committee were closely engaged at Trundle in taking evidence until 4 p.m. Mr. Gormly, one of the members of the Committee, along with Mr. Kennedy, railway surveyor, and Mr. Gilchrist, who was specially deputed by the Trundle residents to accompany them, went for about 17 miles along the direct Trundle road, beyond Treweek's Gap, so as to examine and report upon the character of the country on that route. At Trundle various fine specimens of the growth of the district were submitted for the inspection of the Committee, consisting of fruit, wheat, barley, oats, maize, &c. Leaving Trundle at 4·15 p.m., the Committee returned to Bogan Gate, *en route* for Condobolin. On Wednesday, March 27th, the Committee left Bogan Gate, and inspected the character of the country along the direct line to Condobolin, reaching Thornbury's railway-survey camp, about 18 miles from Condobolin, at 1 o'clock. Continuing their journey shortly afterwards, the Committee arrived at Condobolin at 5·40 p.m. The observations of the Committee showed that the country was quite level, and, with the exception of the Gunningbland and Yarrabundi Creeks, appeared to be eminently suitable for a surface line of railway. At these creek-crossings, the height of the culverts and approaches thereto would certainly not require to be more than 4 to 5 feet. On the evening of March 27th the evidence of Mr. E. B. Thornbury, railway surveyor, was taken, and tended to show that the country was of a level character, and very suitable for the class of line contemplated. At Condobolin, on Thursday, the 28th of March, the Committee were engaged all day in examining local witnesses, chiefly with the view of ascertaining the character of the country, its capabilities and resources, and the volume of freight and traffic which would be likely to feed the railway. At 9·30 on the following morning the Committee left Condobolin, driving as far as Burrawang Station, where the evidence of Messrs. F. A. Edols, C. Pluis, and H. A. Inglis was taken. Leaving

there, the Committee, at 4·30 p.m., proceeded along the direct route as far as Bogan Gate, where they arrived at 6·30 p.m., and remained for the night. At 6 a.m. on Saturday, March 30th, Messrs. Trickett, Chanter, and Gormly, accompanied by Mr. Kennedy, railway surveyor, left Bogan Gate for Forbes, *via* Parkes, inspecting a portion of the suggested line to Trundle, *via* Treweek's Gap, *en route*. Mr. Molesworth, in order to see the character of that part of the country to the south, drove, in company with Mr. Newton, resident engineer for roads, and inspected several miles of the surveyed route to Forbes, which was reached about noon. The Committee commenced taking evidence at the Town Hall, Forbes, at 2·30 p.m., sitting, with a short interval, until 9·15 p.m. On Monday, April 1st, the Committee resumed their sitting at the Town Hall, Forbes, and heard all the evidence tendered at that town; Tuesday and Wednesday, the 2nd and 3rd of April, being devoted to a thorough examination of the whole project and evidence and the preparation of this Report. It will be seen by the ground covered, and the numerous witnesses examined (eighty-two in all), that the Committee devoted the whole of the time of their visit to a continuous and careful examination of the important work referred to them.

The Committee have arrived at the determination to recommend that a line of railway be constructed to connect Parkes with Condobolin, but it will be hereafter observed that they do so with some qualifications, and, having in view that portion of the Public Works Act which says that,—

Where any work purports to be of a reproductive or revenue-producing character, the Committee shall have regard to the amount of revenue which such work may reasonably be expected to produce, and to the present and prospective value of such work,—

they feel called upon to state that, in their opinion, the line will not pay its way for some years to come, and further consider that the estimate of revenue (£7,095 a year) mentioned by the Railway Commissioners is hardly likely to be realised until a much larger population is settled in the district.

After recommending the construction of a line, the next question presenting itself is necessarily that of route, and on that subject there is a diversity of opinion, one of the members of the Committee favouring a diversion by way of Trundle. The majority of the Committee, however, support the Government proposal. It is the shortest connection between Parkes and Condobolin; it seems to present fewer engineering difficulties and less cost of construction; it will pass the whole distance through good agricultural land, and through more Crown lands than either of the alternative routes; it will bring the settlers upon the north and south of the line within easy reach of railway communication, and the weight of evidence at Parkes and Condobolin was in favour of the direct route as being a saving in the cost of haulage for all time.

In consequence of the professional evidence of the railway surveyor clearly showing that a surface line of railway, as intended by the reference to the Committee, cannot be constructed by way of Trundle, and that by such construction there would be an additional distance of about 7 miles, materially increasing the cost of construction, the Committee feel that it is inadvisable to recommend a deviation in that direction. In coming to this decision, the Committee fully recognise the weighty claims advanced by the residents of Trundle and surrounding districts, namely, that a line *via* Trundle would at once pass through a close settlement of agriculturists, who are at present engaged in producing large quantities of cereals, fruit, &c.; that many of the holders of land along that route said they would give the land required for railway purposes free of cost, and that they would pay special rates of carriage; and it may be worthy of further consideration whether a branch line could not with advantage be made from the locality of Bogan Gate towards Trundle.

With regard to the surveyed route from Forbes to Condobolin, the Committee arrived at the conclusion that a line between those two places could not be constructed as cheaply as a direct line from Parkes; that such line would necessitate a heavy resumption of private land, would not serve as large a population as the more direct route, and would necessitate an additional cost for extra haulage on those using it. The evidence also showed that if a railway were constructed from Forbes to Condobolin, a large portion of the traffic between those two points would still be sent

sent by the river road to Forbes, and that a large number of the stock would still continue to be driven to Forbes Railway Station for the purposes of trucking, as a travelling-stock route exists on both sides of the river nearly the whole distance.

In recommending the construction of the direct line from Parkes to Condobolin, the evident facilities for construction had much weight with the Committee, it being apparent that the soil was of such a character as to be capable of carrying ordinary rolling-stock with average-weight engines, on sleepers placed on a light formation without ballast; that by far the greater portion of the route was level; that in no case would the grade exceed 1 in 100; and that the cost of bridging the small waterways or creeks already mentioned would be a matter of small moment, there being only two creeks to cross in the entire distance. The evidence shows that there is no danger of injury to the line by flood or surface waters, that there is ample timber in the neighbourhood suitable for railway-sleepers, and that where ballast is needed it is easily procurable.

As to the probable earnings of the line, the Committee were unable to obtain absolute facts on that point, the bulk of the evidence being necessarily conjecture on the part of the witnesses who referred to that matter. There is doubtless a large quantity of tonnage conveyed by teams within the area covered by a distance of 20 miles on the north, west, and south sides of the proposed railway-line; but some of the evidence will be found to be anything but promising as to how much of this would be conveyed to the line, carriage by waggon being now so very low, and many witnesses testifying that, when once the teams are loaded, a few miles extra distance by road does not make much difference, and they might as well come on to Parkes or Forbes. There is no doubt that the general character of the country is very rich, and suitable for the growth of cereals, &c.; but whilst the evidence shows that promises of wheat-growing are advanced on all hands, two matters for consideration present themselves, namely, whether at the present low price of wheat (2s. a bushel) it will pay growers to continue cropping; and also whether, at the low rates of railway freight for cereals, the quantity grown and brought to the railway would add largely to the railway revenue. It is also worthy of note that the evidence of the owner of Burrawang Station is to the effect that, although the proposed railway would be run within 12 miles of his woolshed, and for about 30 miles through his property, he would continue to convey his wool by team direct to the Forbes Railway Station, except in fair weather.

The principal reasons that weigh with the Committee in recommending the line may be summarised as follows:—

In the first place, the character of the country is eminently suitable for the construction of a pioneer or surface line of railway.

Judging by the class of settlers in the district, the excellent produce submitted to the Committee, and the evidence of expert witnesses, the soil and climate seem most suitable for agricultural settlement, all available Crown lands in the district, excepting small portions of an inferior character, having been eagerly taken up and settled upon.

Numerous witnesses predicted that, as soon as the present pastoral leases expire and the land is made available for conditional purchase, it will be speedily selected and occupied; closer settlement will follow, and will yield a better revenue to the State than is at present obtained.

A considerable quantity of evidence was obtained proving that agriculture had largely increased in the district, the farmers finding that wheat-growing, at moderate prices, was more remunerative at per acre than grazing sheep; but at the same time it was urged that the distance to the nearest railway-line, and the cost of land-carriage by team, were such as to seriously cripple their efforts, and in many cases there seemed to be serious doubts whether some of the selectors would not be compelled to abandon their holdings, unless better facilities for the conveyance of their produce to the metropolitan market were secured.

Owing to the line passing so largely through Crown lands, the cost of resumption must necessarily be small, and the question of severance should be capable of easy adjustment.

A number of the witnesses examined expressed their willingness to pay special rates of carriage over the proposed line. It was also stated that goods conveyed along the line would increase the volume of traffic upon the main line.

The Committee agreed to the following resolution :—

“That it is expedient that a line of railway, as proposed by the Government from Parkes to Condobolin, *via* Bogan Gate, be constructed at a cost not exceeding £2,100 a mile, including the cost of land resumption.”

W. J. TRICKETT,

April 3, 1895.

Chairman, Sectional Committee.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

RAILWAY FROM PARKES TO CONDOBOLIN.

[TAKEN BEFORE THE SECTIONAL COMMITTEE.]

FRIDAY, 22 MARCH, 1895.

[*The Sectional Committee met at the Court-house, Parkes, at 2 p.m.*]

Present:—

THE HON. WILLIAM JOSEPH TRICKETT (CHAIRMAN).

JOHN MOORE CHANTER, Esq.		EDMUND WILLIAM MOLESWORTH, Esq.
		JAMES GORMLY, Esq.

The Sectional Committee proceeded to consider the proposed Railway from Parkes to Condobolin.

Mr. Sydney Ephraim Close, Mayor of Parkes, sworn, and examined:—

1. *Chairman.*] I believe you are Mayor of Parkes? Yes.
2. Have you occupied that position before? Yes, once.
3. How long have you been an alderman? Some years.
4. How long have you been a resident of Parkes? Thirteen years.
5. Then you have a fair knowledge of the district? Yes; I have been over twenty years in the district, including thirteen years in the town.
6. Can you give us any information as to the growth of Parkes, with regard to its population, products, and trade? It has considerably improved during the last five years. Some years ago there was a larger population than there is at present, but that was at the time of the gold-fields rush.
7. What is the population of the municipality? Its estimated population is 3,500.
8. Can you give us any evidence as to the progress of the population during the last five years? In 1890 there were 690 ratable properties in the municipality; in 1891 there were 785; in 1892 there were 912; in 1893 there were 931; and in 1894 there were 1,089.
9. Showing a gradual progress since the year 1890? Yes.
10. How long is it since Parkes was incorporated? Twelve or thirteen years.
11. And prior to the five years you have specified was the progress made also considerable? Yes.
12. When the railway to Parkes was advocated did you give evidence? I did.
13. What was the tenor of that evidence—was it favourable to the extension to Parkes? Yes.
14. Do you remember what reasons you then gave for urging the construction of the railway? I thought the district was advancing sufficiently to justify the railway coming here. I thought it would be likely to be a paying line; and the products here were so difficult to get away. Of course it is far different now. For instance, farmers would not go in then for wheat growing; they only grew sufficient to supply local wants. Since then wheat growing has increased considerably, because where a man only had 30 or 40 acres under crop he has hundreds under crop now.
15. At that time one of your strong reasons for advocating the construction of the line to Parkes was that you believed it would promote the agricultural industries of the district? Yes.
16. Are you in a position to give us any figures to prove the progress of the district from an agricultural point of view? I can bring a witness who will prove that—Mr. Bowditch. He can produce figures to prove the advance of the district since the railway was constructed to Parkes.
17. Do you know whether the passenger traffic has increased much since the railway came to Parkes? I do not know, but the station-master should be able to prove that.
18. Do you know the country between Parkes and Condobolin as indicated on the wall map? Yes.
19. Will you give us a general description of the character of that country? From here to Bogan Gate it is pretty well level. It is slightly undulating, but an easy country over which to run a line; very little work will be attached to it. On the other side of Bogan Gate it is liable to be under water occasionally—it is low-lying ground.
20. Have you ever seen it under water? I have seen a lot of water about it. I have not been along where the line runs, and I am not quite clear as to whether it will miss that watercourse or not.
21. Would the flooding, so far as you have seen it, be of any extent? No, not a great deal of it. The chances are that the line will be outside the flood water—that is, it will be on the northern side of it.
22. What I want to direct your evidence to is the character of the country along the proposed route of railway so far as its capacity for pastoral or agricultural purposes is concerned? I should think that most of the country along the line is fit for agriculture.
23. As compared with the country that we have traversed this morning between Molong and Parkes, how does it compare? It is different country altogether.
24. Will you tell us in what way? This country is all fit for the plough, or nearly so. That which you have travelled over this morning was all mountainous country, and not very fit for the plough—that is, within sight of the railway line.

Mr.
S. E. Close.
22 Mar., 1895.

- Mr.
S. E. Close. 25. I ask this question because on looking through some of the former evidence I find that that country was painted in glowing terms which were not apparent to us coming along the line;—and you say that this is a different character of country altogether? Yes.
- 22 Mar., 1895. 26. More like the country in close proximity to Parkes? Yes.
27. On which side of the projected line is the greater amount of agricultural land under cultivation at the present time, taking the Lachlan on one side and Trundle on the other? I think there is more of it on the Trundle side. It is principally grazing land in towards the Lachlan. There are plains and such like towards the Lachlan.
28. And liable, I suppose, to be occasionally flooded? Yes; a good deal of it.
29. What has been your observation of the settlement between Parkes and Trundle during the last four or five years? Of course it is all valuable land there, taken up by selectors.
30. It is taken up at the present time? Yes; all that is available. There is no land there which could be selected at present.
31. Seeing that it is taken up by selectors, what is the average holding? They are principally full blocks of 2,560 acres.
32. Seeing that they are taken up in blocks averaging 2,560 acres, what use are they applied to—to agriculture or pastoral purposes? They are nearly all going in for agriculture. Of course they use it for pastoral purposes as well, but the selectors now find it is necessary to have something else as well as wool to keep them going, and they are going in for wheat along with it. There has been a good deal of wheat grown in the Trundle district this year.
33. How much do you think a man would put under crop out of a holding of 2,560 acres? The largest I know of is about 300 acres. There are many who have a lot more land prepared ready for the coming season—in fact I have been informed that one man has close upon 1,000 acres ready for the plough next year.
34. Do you know what it costs to produce wheat per acre? No, I do not. I have heard them say that it would pay them at the present price better than sheep.
35. Do you know a gentleman named J. B. Raymond, of Nicholas and Raymond, at Forbes? Yes.
36. He was examined two or three years ago about this land, and about holdings such as those I have just mentioned, and he is reported to have said that money is made so easy out of grass that many people prefer the smaller returns in order to avoid the hard work necessary in farming;—do you endorse that view? At that time people were able to get from 8d. to 11d. for their wool; now we get from 4½d. to 7½d. for it.
37. So that, although that remark may have had some truth in it at the time it was made, the altered circumstances and price of wool now make it more profitable to produce crops than to breed sheep? Yes; and it is necessary now to turn the land to some better use than just leaving it for sheep alone, because a man could not live off the land now by producing wool alone. He must have something else.
38. I suppose the selectors combine a little sheep farming with their agriculture? All of them—all that have any quantity of land. A man told me yesterday that he had cleared £150 off 100 acres, and he said, "I could not do that off sheep."
39. Off 100 acres of agricultural land? Yes.
40. Is the growing of wheat a comparatively recent development? Yes.
41. Where is the market for the locally grown wheat? Sydney.
42. So that it all comes by way of Parkes? All that is grown here.
43. Between here and Condobolin? A good deal of wheat comes here from Condobolin, from Melrose, and that way.
44. Have you, in your experience as a commercial agent, heard many of the farmers and sheep growers say what they consider a fair distance to cart their produce to a railway, so as not to hamper them with heavy cartage? I have heard them say that as long as they could get in and unload their wheat and get home again the same day they would be satisfied, but they would not get a great way in and out in a day.
45. In fair weather? I suppose they would go 12 miles—12 in, and 12 out, and unload. That would be as much as they would do, but there has been wheat carted here this season over 150 miles.
46. Where would that be from? From the other side of Melrose, due north of Condobolin.
47. I suppose you, as a resident here, have been a keen observer of the result of the extension of the railway to Parkes;—what effect has it had upon the district generally? It has caused a great quantity of land to be put under cultivation which would not be if the railway had not been extended to Parkes. People who have had 20 or 30 acres under cultivation have hundreds of acres under cultivation now.
48. Within what radius of Parkes or of the railway line would you say that has taken place? Within 30 miles.
49. Do you think it has had any beneficial effect upon Parkes and district with regard to the stability of trade? I think so.
50. Is trade in a fairly stable condition in Parkes at present? It is a little dull.
51. Are people paying their way well? Yes, most of them. It is like most other places—there are some failures.
52. With regard to the produce, so much of which finds its way into Parkes since the railway was constructed, do you find a ready market for it? Yes.
53. Is there much local consumption? No; I do not think there is any more local consumption than before. It is saleable the moment they bring it here.
54. Have you any mills here? Yes, we have a mill here, but it is full. I believe it is as full as it can hold at the present time.
55. Does that mill produce flour only for local consumption, or does it send flour away? It sends flour back—out Condobolin way; it does not send it forward.
56. It does not send it down to the sea? No; I have not known of any going.
57. Can you tell us the names of one or two buyers of wheat here who ship it to Sydney? There is Mr. Wise, Mr. Seaborne, and myself.
58. Can you tell us what amount you have sent to Sydney which has been brought through by yourself? 2,137 bags of wheat is the amount of wheat which has passed through my hands this year—since the middle of January to present time—or 8,548 bushels.
59. When was the railway to Parkes opened? December, 1893.

60. Then you have only had a little more than one year's experience of it? Yes.
61. You think the growth of wheat would be considerably extended if the railway were sent further out amongst the growers? I think so.
62. What kind of country is this to travel over with teams in wet weather? It is very soft.
63. Very difficult to travel over? Yes, very difficult. There has been a good deal of delay this season in the wheat coming forward on account of the softness of the ground.
64. That of course increases the cost of carriage? Yes.
65. Can you tell us whether you get fair average crops of wheat here? Yes, we get very good crops around here. Of course there are failures the same as in other parts of the world. The farmer who gets his wheat in early generally gets a good crop.
66. What kind of rainfall have you here;—is it at regular periods? We have had it very regular during the last five or six years.
67. That is since the big drought? Yes.
68. From where does the wheat traffic come to Parkes? It comes in pretty well from all round.
69. Can you tell us from which side of the projected line the bulk of it comes? I think that the greater part which comes here comes from Trundle.
70. That is north of the projected line? Most of it is on the northern side. There is a good deal of it coming from Peak Hill way.
71. I suppose you know the country well between here and Trundle? Yes.
72. You will see from the wall map that the projected line goes through a gap in the ridges? Yes.
73. If a line went to Condobolin *via* Trundle would it still have to go through that gap, or are the hills of so little consequence that they could be got over? The line could get over the hills.
74. They are not high hills? No, they are nothing like the hills on the Molong to Parkes line.
75. They could be easily got over by a railway? Yes.
76. It is contemplated if this line is constructed that it should be of a light character—not nearly so substantial as the one between Molong and Parkes—in fact that there should be very little ballast, and that the sleepers should be placed almost on the ground. From your knowledge of the country about here, for a considerable number of years, do you think it is a country of such a character that it would carry a railway built under those conditions? I think it would.
77. A kind of surface railway? I think a light line of railway would carry everything that would come here. There is no rough ground at all. The only bit is where the ridges are marked, where it is a little soft. It might require a little expense crossing the ridges; it is of a spewy nature there.
78. *Mr. Gormly.*] I suppose you are acquainted pretty well with the country extending for a considerable distance west and north of Parkes? Yes.
79. Can you tell us what distance, extending towards the lower Lachlan and towards the Darling, the trade now comes to Parkes;—does the Melrose trade come here? A good deal of it. The selectors come in here from there a good deal.
80. And does any of the wool come in from there? I am not sure about it, but I think so.
81. Your business arrangements enable you to possess a general knowledge of the trade which comes to Parkes from that portion of the country? A good deal of it, such as wool and so on. Of course it does not come to the agents here, but goes straight through. We have no control over it.
82. But you know to what extent the persons who reside in those parts do business here with their produce? I think the outlying places do their business direct with Sydney.
83. But do they go to Sydney by way of Parkes? I think so.
84. Do the Eremeran people come by way of Parkes to Sydney? I am not sure of it.
85. Do you know the country extending out to Gilgumnia, Bedooba, and Witchellebar? No.
86. Are you aware whether they go to Sydney by way of Parkes, or whether they go in any other direction? I think they go in by way of Cobar and Nyngan.
87. How about Eremeran and Witchellebar? I think they do, but I am not sure.
88. Do you know whether the people about Cowan Downs come this way or go towards Hay? I do not know, I think they go to Hay.
89. You are not aware whether their trade comes here at present or not? I do not know.
90. Can you give us a general outline of the character of the country from which produce does come into Parkes;—about what distance does it come in from the proposed line? From 130 to 150 miles.
91. Is there a numerous population between the Lachlan and the Darling? Between the Lachlan and the Bogan.
92. The stations I mentioned are more from Condobolin to Cobar. Do you think the people in that direction come here to go to Sydney? No; I do not think those outside people come here at present. If the railway goes on to Condobolin the chances are that they would.
93. It would be 40 or 50 miles nearer to them? Yes.
94. Does the Mount Hope trade come this way? I do not think so—not now; it used to come here in former days.
95. I suppose you are well acquainted with the quantity of the land on each side of the proposed railway? Yes.
96. Is the land good on the south side after you pass the Gap at Bogan Gate? I would not say it was as good for agriculture as it is on the northern side. It is much wetter land.
97. There are patches of myall plain? Yes.
98. Is there any considerable quantity of cultivation between Bogan Gate and Trundle, or is it on the north side of Trundle? It is principally from Trundle north, east, and west.
99. Is there any considerable quantity of it on the south side of Trundle? Not a great deal.
100. It is chiefly on the north, east, and west? Yes.
101. Is there any considerable quantity of land under cultivation between here and Bogan Gate? Yes. On the Gunningbland Station there was a great quantity under cultivation last year. I have already stated that 300 acres is the largest quantity I know of, but on the Gunningbland they have well on to 1,000 acres under cultivation.
102. That is cultivated by the station owner? Yes.
103. That would be on the north of the proposed line from Parkes? The line would go very close to it.
104. But still it would be on the north? I think there would be some on both sides of it.

Mr.
S. E. Close.
22 Mar., 1895.

- Mr. S. E. Close.** 105. Is there any land cultivated other than that on the Gunningbland Station? Yes; between here and there they all cultivate some land.
- 22 Mar., 1895. 106. Is there some cultivated on each side of the line? Not much on the south.
107. You are acquainted with the country right down to Condobolin? Yes.
108. You are of opinion that the chief part of the cultivated land is in the neighbourhood of Trundle? Yes.
109. Is there any considerable amount of cultivation close to the river before you get to Condobolin—between the river and the proposed line? I have not been down there recently, but there was none at all when I was there last.
110. The land has chiefly come under cultivation during the last wheat season? Yes, and I have not been down there since then, and there is no wheat coming here from there this season for sale.
111. Is a considerable quantity of the wheat produced in the district converted into flour at the local mill? There is sufficient for local use.
112. Is it a considerable distance back to the different stations? Yes.
113. You say the whole of the flour ground here is consumed in the district? Yes.
114. *Mr. Chanter.* From the nature of your occupation you must, of necessity, have travelled very largely? I have.
115. And you have an intimate knowledge of the characteristics of the country north, south, and west of the proposed line? Yes.
116. I understood you to say that that part of the country between Parkes and Bogan Gate was good agricultural country? Yes; very good.
117. How do you describe good agricultural country;—what is the nature of the soil? There are two classes. There are red soil and chocolate soil; they are both good for wheat growing.
118. Is that soil of a loamy character;—is it light? Yes, it is light.
119. Easily worked? Yes; of course, there are some parts which grow good wheat on the bad soil, but it depends on the season. If the season is too wet or too dry it will not do it.
120. Does the character of the soil, travelling northwards, vary at all;—is it of a uniform description? North of the line it is pretty near of one character for a considerable distance.
121. What distance is Trundle from Parkes? About 31 miles.
122. And taking a triangle from the base and on to Bogan Gate, and then to Trundle, would the whole of the soil embraced within that triangle be of the same character? Very nearly the same.
123. Suitable for agriculture? Yes; except so far as regards the ridge marked on the plan. It is more ridgy than is shown on the plan.
124. Is there any great area of that ridge, shown on the map as hills? No.
125. Are they of a stony, rocky character? Stony and sandy.
126. Therefore the area covered by the hills would not be suitable for agriculture? No.
127. But would that be in any way greater in proportion to the surrounding country? It would be only a small bit in proportion to the surrounding country.
128. What is the character of the country travelling westward from that point, taking another triangle from Bogan Gate to Condobolin, and thence through Condobolin? That would not be quite as good for wheat growing as that embraced within the other triangle.
129. In what way would the soil differ? There is a lot of little myall plains there, and such like. The country is more of a clayey nature.
130. From that point, how far north of the line altogether from Parkes to Condobolin, would you consider good agricultural land suitable for the growth of cereals? I could hardly estimate the distance. It is nearly all good land that way. Of course you come to places where there are little pieces of stony hills and so forth, but it is nearly all fit for agriculture—as far back as 60 or 70 miles.
131. I will put the question in another way. In reply to a question by Mr. Gormly I understood you to say that the commerce of the district was embraced within about 100 miles from Parkes—that is the present trade? Yes.
132. Are we to understand that within that distance, north of the line, the country is suitable for agriculture? Yes, it is—that is running out in the direction of Melrose.
133. Will you describe the characteristics of the country and the nature of the soil south of the line towards Forbes and the Lachlan River and Condobolin? On the southern side of the proposed line there is a good deal of myall country.
134. Is that open plain country? There is a good deal of myall growing upon it, or dead myall at any rate, and a good deal of plain country as well. Of course there are forest patches in between, cutting the one plain off from the other.
135. Then it differs in its characteristics in comparison with the soil north, inasmuch as it is broken up by plain? Yes. There is more plain country on the south of the line. On the north there is little or no plain at all—it is all forest country.
136. And the soil is of a loamy character, red or chocolate in colour? Yes.
137. What is the description of the soil on the Myall Plains? It is black, sticky stuff.
138. Is it heavy? Yes.
139. As you approach the Lachlan River, does it become lighter or heavier in character? It is lighter as you get near the river. It is a dark-coloured soil there, but it is much lighter in character—it does not stick in the way the other does.
140. It is not so tenacious? No.
141. What is your opinion as to the value of what are termed timbered lands, in comparison with plain lands, for agricultural purposes? You cannot depend upon a crop off the plain lands at all. You might get a good crop off them, but you cannot depend upon it. From the timbered land you are almost sure to get a fair crop.
142. Would the plain lands be more or less difficult to work than what are termed timbered lands? It would be more difficult to work. It is so much heavier to work, because it sticks to the plough, to the horses feet, and to the men who are there likewise, whereas in the loamy land the plough cleans itself.
143. Therefore, you assume that an agriculturist, if he had a choice, would take the chocolate soil in the timber country in preference to the plain or clayey soil? Yes, if he is going for agriculture alone; but of course it has to be cleared, and many take that into consideration and say, "I can put the plough into this at once."

144. Have you had any experience in regard to the cost of clearing in the Parkes district? Yes; during the last year or two the average cost per acre has been very low. It has been as low as 13s. per acre. But clearing is not as it used to be in former days, where they used to take the roots out below the surface. Mr. S. E. Close. Now, if it is left level it is all that is wanted. 22 Mar., 1895.

145. Taking the prices paid in the past for clearing, and considering those paid at present, what would be a reasonable average—would £1 per acre cover it? You can get almost any land cleared now for £1 an acre.

146. I understand you to say that at present land is cleared for 13s. an acre? I know it has been done.

147. That is consequent upon the severe depression and the number of people who are out of work? Yes; and they have not to be so particular over the clearing.

148. I suppose they burn out a good deal? Yes; the timber is principally rung and it burns well. If it has been rung a few years it burns out and they clear the land easily.

149. Would 15s. an acre be a reasonable average price for settlers to clear their land ready for the plough? From 15s. to £1—that is taking all timbered lands.

150. Have you any particulars showing the difference in a crop grown upon timbered land and upon plain land? Yes.

151. How many more bushels to the acre would there be upon the timbered land than upon the plain? I can hardly answer that question. I have grown crops upon plain land myself where it has not returned me a bag, and I have grown crops the same season within 1½ miles of it on timbered land, and have got 6 or 7 bags to the acre.

152. Could you draw any line as to the difference in the annual yield upon one class of land as against the other? No.

153. Would there be a bag to the acre difference, that is 4 bushels? If the season were suitable, the chances are you would get just as much off the plain as off the other, that is if it were a fair season so that the ground never got caked. But if it were a really wet season, or a dry one, you would get nothing at all off the plain land.

154. I want you to give us the average of the seasons, taking the good and the bad together. I want you to state what, in your opinion, would be a fair average increase of wheat grown upon the timbered land as against that grown upon the plain? I think there would be double grown on the timbered land.

155. Can you state the number of bushels or pecks as the case may be? I can give evidence of what I really know. I know of two selections which are close together. In the one instance the farmer put his seed in the plain land. He got a return of nothing excepting straw, and very little of that. His neighbour got six bags to the acre. His was all timbered land.

156. My object in putting the question was to ascertain whether the settlement in the future would tend towards the country which is timbered, or towards the country which is plain? If people go in for agriculture I think they should go in for the timbered country, but, if there were a clear piece of land open and a timbered piece close to it the first man who came along would take the cleared piece, because there is less work connected with it.

157. Would an experienced man do that? I believe he would. He would go for the cleared land, saying "There is less labour upon it; it is ready to yield something at once."

158. Do you think the farmer would be recouped in one season for clearing, by the increase in his crop? I believe he would.

159. And then for all time his conditions would be equal, or more than equal, to those of the man who selected the plain land? Yes; but the selector or farmer has not the capital to go on. That is why he would take the lighter timbered ground, because the outlay is not required.

160. Are any of the farms situated upon the class of country you have been describing north of the line between Parkes and Trundle. Have they been cropped for a few years, and then let out to graze? No; they have only been cropped this season. The people may have had a few acres before; but where they had 10 or 20 acres, now they have 100 or 50 acres.

161. There has been a considerable increase? Yes.

162. And you have already said that that is consequent on the extension of the line from Molong to Parkes? Yes.

163. Looking at it from a grazing point of view, when this class of soil, that is timbered country, is ring-barked, scrubbed, and properly cleared, and has had a period of two years in which to develop, how would it compare, as against the plain country, in carrying stock? It will carry more stock than the plain country.

164. Then in your opinion the persons settling upon that class of country, either from an agricultural or grazing point of view—that is if they intend to settle permanently—would be better settled upon it than upon open plain country? Yes; if they had means to improve the land.

165. Do you know Condobolin? Yes.

166. Is there any extent of settlement around Condobolin? I have not been there recently.

167. You have stated that the district near to Bogan Gate is subject to inundation from the Gunning bland Creek? Yes.

168. How far does the flood go out? I could hardly say. I have seen it on both sides of me—a great width of water. I have ridden there when the water has been up to the saddle flap.

169. How near to the creek itself does the road over which you travelled go? Pretty nearly all the way.

170. Would those floods extend out a mile from the creek? I do not think they would go more.

171. Then you might safely take that as an average? Yes.

172. Is it within your knowledge that at any period trade round about Condobolin has gone to Melbourne via Hay or any other point on the river? Not to my knowledge.

173. Do you think if the proposed line of railway were extended beyond Condobolin it would bring trade to Sydney which is now going to Melbourne? I think so; that is, if it were extended right on.

174. But at present, as far as you are aware, none of the trade of the Condobolin district goes to Melbourne? Not to my knowledge.

175. What is the nearest point of the Murrumbidgee River going from Condobolin, which would be reached by wool or any other produce? About Hay.

176. Is not there a settlement 20 or 30 miles north of Trundle called Burra Burra? Yes.

177. Is there a considerable amount of agriculture there at present? They are only just starting—they are

- Mr.
S. E. Close. are just clearing the ground. There is not much open ground, but there is a good number of selectors about there preparing to get crops in this wheat season.
- 22 Mar., 1895. 178. If the proposed line were constructed, do you think the farmers at present settled about Trundle and Burra Burra would increase the area under wheat? I feel sure they would.
179. Your interests I presume are entirely in Parkes? Yes.
180. And you have no personal interest in the line going one way any more than another? None, whatever.
181. Will you give the Committee your opinion as to whether, from your knowledge of the district, the line should be constructed from Parkes to Condobolin *via* Bogan Gate, or from Parkes to Condobolin *via* Trundle;—which in your opinion would serve the greater interests? In my opinion the line should be run as straight as possible, because I do not believe in people living beyond having to pay the extra haulage which they would have to pay if detours were made here and there. They would have so much extra to pay for all time.
182. Then the line as shown on the plan would be as straight as possible? Yes. But whether Trundle is sufficiently close to cause it to deviate that way I do not know.
183. Do you know the quantity of Crown lands which will become available when the present leases in the Trundle district expire? No.
184. The information is supplied by an official who was specially deputed to inquire into the matter in 1892 as 83,000 acres of Crown lands at Trundle, that is Crown lands held under lease? Yes.
185. He puts the Crown lands held under lease between Parkes and Condobolin at 280,000 acres, and he in his evidence and in his report was inclined to support the direct line as shown on the plan in consequence of the close settlement in special areas which would be produced when the leases fell in. Do you consider if the Crown lands along Gunningbland and the neighbouring run were made available for selection to-morrow in special areas they would produce permanent settlement. Is that a sufficient area? I do not think it is, and I do not think it would be fair either for men to come in and pay 30s. an acre there whilst their neighbours get the land at £1.
186. What I want to ascertain is whether, in view of the altered circumstances, including the low price of produce a special area of 640 acres, at a special price, would not produce legitimate and permanent settlement? I do not think the area is large enough, and I think the price too high.
187. And you think that when these lands do become available they will have to be selected in areas similar to those selected in other parts of the district? I think so.
188. Do you think an area of that description is sufficient, by a mixed system of farming and grazing combined, to produce a permanent home? I do.
189. Because it is only from the permanent homes of the people that we can expect the railways to pay, no matter where we take them;—the settlement you say is at present at Trundle and north of Trundle? Yes.
190. That is that there is a greater settlement there than on the south? Yes.
191. If the people have to wait five years for the Crown lands on Gunningbland and the adjoining area to be made available for selection, and with settlement already in existence at Trundle, how would that affect your opinion as to where the railway should go? It would seem hard to run the railway where there is no settlement, and where there is not likely to be any for five years, when, with a slight deviation, it could be brought to where settlement is already.
192. You are aware, I suppose, that these leases have been renewed for a further term of five years? Yes.
193. Therefore, there can be no settlement there for five years? No.
194. And that would affect your opinion if a line were to be constructed at present? Yes, it has to run where there is unoccupied land for five years.
195. I suppose the residents and property holders of Parkes are not very anxious about this railway at all? I cannot say.
196. They would be just as well pleased, I suppose, if it were not constructed. Has there been any public movement in favour of, or against it? No, not in Parkes.
197. Do you know the country between Forbes and Condobolin? Yes.
198. What kind of country is it? Most of it is low-lying land.
199. Are there more engineering difficulties there than there would be further northward? I do not think a light line would do further than the present line by Bogan Gate.
200. You have no doubt, however, that a light line could be carried on the direct route from Parkes to Condobolin? Yes.
201. If the line is constructed at a cost of about £2,000 per mile, do you think it would return a revenue sufficient to pay the interest on the capital and working expenses? Do you mean according to the present state of affairs?
202. Yes? No, I do not think so.
203. Do you think the construction of the line would increase production sufficiently, with a reasonable time, to pay the interest upon the cost of construction? I think possibly it would.
204. You are of opinion then, that notwithstanding the low price of agricultural produce, the farmers consider they can get more profit from it than from wool? Yes.
205. And there is a market for it other than the local market? Yes.
206. So that the line would get the benefit of whatever was grown? Yes.
207. In regard to what may come to the line in the future, do you think it would be wise on the part of Parliament to recommend its construction? I think so.
208. Mr. Molesworth.] You mentioned a short time ago that the progress of Parkes since the advent of the railway had been marked? Yes.
209. You believe there is every season to anticipate a growth of that prosperity? Yes.
210. Do you believe that the continuance of the line to Condobolin would materially add to the growth of trade and population? I do not think so.
211. Not to Parkes itself? No.
212. But it would be an advantage to the outlying district? Yes.

Mr. John Perks, farmer, Cook's Myalls, near Parkes, sworn, and examined:—

213. *Chairman.*] Where do you reside? At Cook's Myalls. Mr.
J. Perks.
214. How far is that from Parkes? About 12 miles to the north-west.
215. *Mr. Molesworth.*] Is the locality in which you reside on the way to Bogan Gate? It is on the 22 Mar., 1895. Trundle mail road.
216. The Trundle mail road is not *via* Bogan Gate, is it? No.
217. Have you been farming there for many years? Yes.
218. How many? About eighteen years.
219. What is the size of your holding? Over 2,000 acres.
220. How much have you had under crop during the last year? About 100 acres.
221. Is the remainder used for grazing purposes? Yes.
222. Have you always had that quantity under crop since you have had a farm? No.
223. How much increase have you had under crop since the railway was extended to Parkes? About 80 acres.
224. Then, in round figures, you have increased your cultivation threefold since the railway was extended to Parkes? Yes.
225. Will you explain the nature of the settlement between Parkes and Trundle in the direction of your farm;—is the land held by settlers or station-holders, or what? There are a number of farmers to the north of Trundle. There is one squatter, but the rest of the country is nearly all peopled by a farming population.
226. And does that continue all the way to Trundle? Yes.
227. Do you know much of the country to the north of Trundle? I am not very well acquainted with it.
228. Have the other farmers you have spoken of increased the cultivation of their lands since the advent of the railway to Parkes? Yes.
229. Considerably? Yes.
230. Then the railway has offered an inducement to go in for cultivation to a greater extent than they did before? Yes.
231. Do you think the extension of the railway would further increase that cultivation? I think it ought to do.
232. Do you know much of the country to the north of Trundle? No; I know more of it to the west of Trundle.
233. That will be partly on the road to Condobolin? No; more in the direction of Melrose.
234. Is that well settled upon? I have not been there lately, but there were not many settlers there when I was there.
235. Taking Trundle as a centre, where is the greatest number of settlers located—north, south, east, or west of Trundle? I think the majority of the selectors are on the north and east of Trundle.
236. But you say you do not know much about the north of Trundle? No; but I think they are there, by hearing what people who are settled there say.
237. Do you know much of the country about Bogan Gate? I know all the country at the Bogan Gate.
238. You know the country in the vicinity of the Bogan Gate well? Yes.
239. Is there any settlement of any extent in that direction? I do not think there is. There are not many selectors, unless they have gone there of late years.
240. Is not all the land between Bogan Gate and Trundle fully occupied by farmers? Yes; not Condobolin way.
241. I am speaking of the district where the proposed line passes through the Gap, known as Bogan Gate, and going northward to Trundle;—is not the whole of the country between those two points fully taken up with farming people? I think most on the north side of it is settled upon.
242. Have you any knowledge of the settlement below the proposed line southward? No.
243. As you are only a short distance from Parkes, the railway will scarcely be of any benefit to yourself? No.
244. And unless it came pretty close to your place, when you had gone to the trouble of loading, you would almost as soon bring your produce to Parkes and save the haulage? That is about 5 miles from my residence.
245. But supposing a deviation were made *via* Trundle, would the line go very near your property? Yes; it would bring it close to my land, or perhaps right through it.
246. Supposing the line were constructed as marked on the plan, would the Trundle people be within fair and reasonable access of it? Yes.
247. Do you think that, although it would not be quite so convenient as it would be if it went direct to Trundle, they would still utilise it? Yes.
248. About what distance would you call it from Trundle to Bogan Gate? Fifteen miles.
249. Is there a fairly direct road between those two points? Yes.
250. Do you know the country between Trundle and Condobolin? Yes, I was through it years ago.
251. Is it all settled upon? I have not been through it during the last four or six years.
252. Which do you personally think would be the proper thing for the Government to do—to construct the line as proposed, or to take it *via* Trundle, and incur the larger haulage to all the people beyond that point? I could not form any idea.
253. Do you think if the line were constructed there would be an increase in cultivation? I think there would.
254. Sufficient to justify the hope that by-and-bye the line might be made profitable? Yes.
255. *Chairman.*] When you farmed 25 acres of land did you have any surplus produce to sell? Yes.
256. Where did you take it for a market? To Parkes.
257. And did you sell it locally in Parkes? Yes.
258. Are you induced to go in for more agriculture now in consequence of the reduced price of wool or in consequence of communication giving you a market for your wheat? Because of the railway communication.
259. That has been of such advantage to you that you can always get a ready market? Yes.
260. Can you tell the Committee what it costs per bushel to raise wheat and deliver it at the railway station? No.

Mr.
J. Perks.
22 Mar., 1895.

261. Can you tell us what profit, on an average, you make per bushel out of your wheat which is sold, after paying all expenses? No; I know I can do very well at wheat-growing.
262. And make a good profit, a profit which satisfies you? Yes.
263. Do you employ any labour on your holding? I always keep some men.
264. And you and your family work as well, I suppose? Yes.
265. How many members of your family work on the farm? Two besides myself.
266. And how many men do you employ? I have employed four lately.
267. That is at harvest time? No, they have contracted for clearing, and so on.
268. Can you tell us how many you have on an average in a year, besides the members of your family? There have been four for the last three months, and two for longer than that.
269. Then you might say three all the year round? Yes.
270. Are you able to give them fair wages? Yes.
271. *Mr. Gormly.*] Are you preparing any more land for cultivation this season than you cultivated last season? Yes, 100 acres more.
272. Then you intend to cultivate 200 acres in the coming season? Yes.
273. Have you ploughed all your land for the next season? Yes, between 50 and 60 acres ready for sowing when the rain comes.
274. Can you tell us what quantity of bushels or bags of wheat per acre you had last season? I think about three bags. That is the worst crop I made for some years.
275. That would be 12 bushels? Yes.
276. Formerly, when you cultivated a lesser quantity of land, did you go in chiefly for grain or hay? For grain.
277. What quantity per acre have you on an average? I have grown nine and a half bags to the acre; but I think my average would be five or six bags to the acre.
278. *Mr. Chanter.*] You have had a lengthened experience in farming? Yes.
279. As a wheat-grower? Yes.
280. Have you had any experience in growing wheat in any other part of the Colony? Yes.
281. What part? Burrowa.
282. How does this district which you have been describing compare for agricultural purposes with Burrowa? This is superior.
283. That is taking the seasons right through? Yes.
284. What kind of machinery do you use for the production of wheat? The stripper.
285. Do you plough with a single or double-furrow? A double-furrow and a three-furrow.
286. And do you harvest with the stripper? Yes.
287. The ordinary stripper? Yes.
288. And you winnow the grain after it has left the stripper? Yes.
289. Did you sell wheat this year? Yes.
290. What price did you get for it in Parkes? Two shillings a bushel.
291. If you can continue to get 2s. a bushel, with your present appliances and machinery, would you increase your area? Yes.
292. If this line of railway were nearer your property than it is proposed to bring it, would that induce you to still further increase your area? I think it would.
293. You say you would be about 5 miles, as near as you could judge, from the line? Yes.
294. If a railway station, then, were so placed that you were no nearer to it than you are now to Parkes, would you still go on increasing your area of wheat? Yes.
295. And do you think your neighbours around you would profit by the same experience and would grow more wheat than they have done in the past? Yes.
296. Has that been brought about by the sudden fall in the price of wool and stock? It might have had a little to do with it, but I think the appliances have more to do with it than anything else.
297. It has had a certain effect? Yes; I think it has had a slight effect.
298. And with machinery of an improved character and less in cost you would be prepared to grow wheat even if the price were reduced a little? Yes.
299. Have you had any experience of the combined harvester? No.
300. Are there any in the district? Yes.
301. As far as your knowledge extends, have they given satisfaction? I think so.
302. Then the introduction of that class of machinery will be calculated to increase the area under wheat? Yes.
303. Having had experience in the Burrowa district and in the district of Parkes, I would ask you where you anticipate the future agricultural settlement is going to be—north or south of the proposed line. Before you answer I want you to take into consideration the fact that five years hence a larger area of Crown lands will be available south of the line than north of the line;—where do you think the greater settlement will be in the future? I think it will still be on the north of the line.
304. What is the greatest distance under existing circumstances from a railway line at which farmers, like yourself, would continue to grow wheat at a profit? They could go up to 20 or 25 miles; some would have to go further than that.
305. What is your opinion of the chocolate soil for agricultural and grazing purposes combined, as compared with the myall plain country? The timbered land is quite as good, I think, as the plain—that is, what is termed the plain. There are small portions of land which have box growing upon them, which are superior, but what is termed the real plain is what is called clay, but for general farming I think the timbered land is as good as any.
306. Do you think that the two lessees who occupy over 300,000 acres of Crown land would devote any of their land to agricultural pursuits if the line were constructed? I think they would. The Gunningbland people have started farming.
307. Then, as far as you are aware, there would only be the same class of produce carried from that locality as that which is carried over the existing line? That is all.
308. We have had it in evidence that the greater portion of the land between Parkes and Condobolin is held by two pastoral lessees of the Crown. They will hold that land for five years yet;—do you think that if the line were constructed almost immediately, they would utilise any land they hold under lease, or their own freeholds,

- freeholds, for the growth of wheat? I could not form any idea. I think it is quite likely that they would. Most of the leaseholders are going in for growing wheat.
309. Do you know whether these two lessees are sub-letting any of their land for agricultural purposes? 22 Mar., 1895.
Not that I am aware of.
310. Are there any lands held in this district under lease from the pastoral lessees for the purpose of growing wheat? Not that I know of.
311. Then, as far as you are aware, they are held for pastoral purposes only? That is all.

Mr. Thomas Hamilton, selector, near Parkes, sworn, and examined:—

312. *Chairman.*] Where do you reside? About 10 miles to the north of west from Parkes.
313. *Mr. Gormly.*] What quantity of land do you hold? 1,475 acres.
314. Do you devote any of it to agriculture? Yes.
315. What quantity? About 100 acres under cultivation.
316. Do you keep stock on the land besides? Yes.
317. About what quantity of stock have you? A sheep and a half to the acre on land which has been improved from time to time by ring-barking, scrubbing, sucker-cutting, &c.
318. What quantity of land did you cultivate previous to last year? Forty acres. I have cultivated from 10 acres up to the present amount.
319. What was your yield per acre during last season? Twelve bushels.
320. What was your average yield in previous years—was it better or worse? Better. About 16 bushels, I should think.
321. Have you devoted your agricultural land chiefly to producing wheat? Yes.
322. Are you preparing any more land for cultivation this season than you did last season? Yes; about 90 acres more.
323. Then how much do you propose to put under cultivation this season? One hundred and ninety acres, weather permitting.
324. Have you already ploughed in all your land for sowing? About 75 acres.
325. Where did you sell your wheat last season? At the Parkes mill.
326. Have you kept a separate account as to the cost of the different processes of producing wheat? No.
327. Have you been satisfied with the profit you have made from your cultivation? Not this last year.
328. Then you think 12 bushels an acre at last year's prices will not pay? Barely, under the circumstances.
329. What price do you get per bushel? Two shillings.
330. I suppose you have devoted your own labour to cultivating the land? Yes.
331. Have you any family to assist you? No.
332. Then you have to employ labour? Yes.
333. And owing to the cost of the employment of labour during the last year there has been a bare profit? A very bare profit for me.
334. It has only returned about the cost of production? I should think about that.
335. Was there any return for the use of the land over the cost of production? There might have been some slight profit, but not very much.
336. But still from your experience of cultivating your land you intend to increase the quantity of land under cultivation? Yes, certainly.
337. In the hope of getting a better yield? Yes, and a better price.
338. Have you cultivated any of your land continuously for any number of years? Six years.
339. I suppose the greatest portion of your agricultural land last season was new land? Yes.
340. Does your experience lead you to believe that new land will give a better return than land which has been cultivated for some years? It depends upon circumstances. Some of my land, the first year I cultivated it, gave a heavier crop perhaps than the second.
341. Have you any experience of three or four years of continuous cultivation? Yes.
342. Does the yield per acre fall off? Not on some of my land.
343. Does it on any land? Not under ordinary circumstances, but my land is heavy clay land.
344. Is it rich land then? It is limestone heavy clay land.
345. Have you any knowledge of the cultivation of the general quality of land. A small quantity of the land in this district is red loam? It is red and chocolate, but a great deal of it towards Parkes is lighter than mine.
346. Have you any experience of your neighbours cultivating with lighter land? Yes.
347. From your experience are you led to believe that the yield per acre will fall off if the land is continuously cultivated for some years? Last season the crop was low.
348. But I am speaking of ordinary seasons. Last season was an excessively wet one? Part of the time.
349. Was it an excessive moisture which caused the crops to be low? On my land it was.
350. Then you suffer as much from excessive rainfall, as perhaps from a deficiency? We did not get the rainfall at the time we thought it necessary for that kind of land.
351. You had no rain in November? No.
352. Do you want rain in November? We had heavy rain previous to that, and the clayey land formed hard on the top.
353. Have you had experience in cultivating land in other districts of the Colony? A little.
354. Have you come to the conclusion that this district is suitable to the growth of wheat? Yes.
355. Can the land be cleared moderately cheap? That depends upon the land.
356. I am speaking of the general quantity of land? Yes; I think it can.
357. Can the land be cultivated cheaply? Yes; with the stump jumper.
358. And harvested cheaply? Yes.
359. With the stripper? Yes.
360. Do you use the stripper? Yes.
361. Do you keep sheep on the stubble, after taking the crop off? Yes, for a time; and then I burn it.
362. About what month of the year do you burn it? This year I burnt it in February.
363. Would all the straw burn off the land? The greater portion of it.
364. *Chairman.*] You say you live 10 miles west of Parkes? Yes.
365. How long does it take you to load up your wheat, to bring it into Parkes, and to go back again in ordinary weather? I do the trip in the day, but I load on the previous evening.

Mr.
T. Hamilton.
22 Mar., 1895.

- Mr.* 366. How much do you bring in at a time? I only bring in a small quantity. I have my wheat carried by contract—so much a bag.
- 22 Mar., 1895. 367. How much do you pay per bag? Sixpence last season.
368. And how much is that per ton? Four shillings and sixpence.
369. Would you be prepared to pay that rate to the railway? I would have to cart it to the railway. I could not pay the rate and cart it to the railway.
370. How much would you be prepared to pay? That would depend on where the station was, because, once loaded, if the station were any number of miles from my place, it would be just as cheap for me to proceed to Parkes.
371. If the station were within 5 miles of your place, would it be worth your while to take it by railway? Perhaps it would,
372. The projected line runs almost due west from Parkes;—do you know whether it will come near your place or not? It will be about 4 miles off, I think.
373. Then if it came within 4 miles it would be worth your while to send it in by train? Yes, that is if the road is not too wet.
374. Could you say what you could afford to pay per ton? About 3s., and cart it 5 miles.*
375. *Mr. Chanter.*] Is your land freehold or conditional purchase? Part conditional purchase and part conditional lease—a selection.
376. Is the soil black clay? No; it is a dark red or chocolate.
377. I understood you to say it was heavy? Generally speaking, the portion I am cultivating is very heavy clay land.
378. Your yield last year was three bags to the acre? Yes.
379. And your average previous to that was about four bags? Yes, quite that.
380. Do you know the land belonging to the previous witness, Mr. Perks? Yes.
381. What is the difference between your land and his? Part of his cultivating is a darker soil.
382. Is it not so tenacious? I think it is a little. There is not much difference in that respect, though.
383. You heard the evidence Mr. Perks gave? Yes.
384. Did you notice the great difference between the yield from his farm and yours? Yes.
385. Do you attribute that to the character of the soil? Yes; that is the portions he is cultivating, to some extent.
386. What time do you sow? From the middle of April until June.
387. Right through June? This last year I sowed right through June.
388. What was the result of your June sowing? Two bags to the acre.
389. What was the result of your April sowing? Four bags.
390. According to your experience is it not a mistake in a district like this, where the rainfall is slight, to attempt to sow much after the middle of May? I think it is.
391. I suppose the sowing from April to June in Mr. Perks' district would be similar to yours. Is it a general thing amongst farmers here to sow so late? Yes; not from choice but from circumstances.
392. What are the circumstances? Preparing the land—getting it ready for cultivation.
393. Do you fallow any land which has once been broken up? Yes, I have done, but not since May.
394. Do any of your neighbours fallow land? I believe Mr. Skinner, last year, fallowed some.
395. When are the autumn rains obtained in this district? About February.
396. Are they continued? No.
397. What break is there then? March is generally a dry month and part of April too.
398. Which part of April? The first part.
399. What about the latter part of April? We get showers.
400. Would that be sufficient to germinate seed? Yes.
401. Then if the seed were in the ground prior to the latter part of April it would germinate? Yes.
402. You say you have no knowledge of the country more than 16 miles west of Parkes? Sixteen miles west.
403. And how far north? I have been 20 or 30 miles further north towards the head of the Bogan.
404. What distance south have you been towards Forbes? To Forbes and Grenfell.
405. What is your opinion of that country, right through, for agricultural purposes? Supposing you wanted to take up a selection or obtain a farm in any other place to-morrow, what part of the whole district would you prefer for a permanent home? Gunningbland.
406. What direction is that? North-west.
407. Is that between Bogan Gate and Trundle? Between Parkes and Bogan Gate.
408. *Mr. Molesworth.*] Have you any idea as to the average rainfall in the district in which you are settled? I should say about 18 inches, but there is no record.
409. You say your crop was worse than usual last season. I suppose that is on account of the light rainfall? On account of the rainfall not coming at the proper time—it came too late.
410. Are you acquainted with much of the country to the west of your own holding? Yes.
411. How far out? About 6 miles.
412. Do you know the country as far as Bogan Gate? No; I have not been there.
413. What distance have you been towards the Bogan Gate? About 10 miles.
414. Is all the country between Parkes and that point well settled? The Gunningbland holding comes in there.
415. But to the north of the Gunningbland holding there are certain settlers, are there not? Yes.
416. Is all the available land occupied? I think it is.
417. Is it your opinion that when those two large leaseholds fall in they are likely to be settled by bona fide farmers? Yes; if the areas are sufficiently large.
418. Do you think they would be settled upon as special areas? Not very much.
419. How would they be principally settled? Large enough to combine agriculture with grazing.
420. And how many acres do you think that would require in a district such as this? 1,500 to 2,500.
421. *Chairman.*] You have been an observer of selectors and farmers around you since the railway to Parkes was opened? Yes.
422. Has agriculture increased much since the opening of the Parkes railway? It is only a short time since it was opened, but there is no doubt that it has increased.
423. Considerably? Yes.

Mr.

* NOTE (on revision):—After more mature deliberation I find I have placed the amount too high, as it would be much cheaper to cart to Parkes at 4s. 6d. a ton than pay 3s. a ton by rail from supposed platform, as I would have to pay the same price for loading and unloading for the shorter distance.

Mr. Alfred Wise, commision agent, Parkes, sworn, and examined:—

424. *Mr. Chanter.*] How long have you resided in the district? Four years. Mr. A. Wise.
425. I suppose the nature of your business causes you to make wheat purchases? Yes.
426. Will you tell the Committee the extent to which you have purchased for traffic along the line from Parkes to Sydney, or to any other point? The wheat I have purchased has been sent away to Orange, Bathurst, and Sydney. 22 Mar., 1895.
427. Can you tell the Committee the amount you have received for this season? From 12,000 to 13,000 bags.
428. Did you make any purchases last year? Yes.
429. What was the number of bags you purchased last year? It was not very great. I did not buy until about August.
430. You were not in the market as a buyer the whole of the season? It would be about 3,000 or 4,000 bags.
431. Have you any knowledge of what was purchased by others prior to your entering the market? I do not think there would be more than 6,000 or 7,000 bags purchased altogether.
432. And this season you have purchased about 12,000 bags? About 12,500 bags.
433. Then the traffic coming to the railway from Parkes to Sydney has increased? Yes.
434. Twofold during the present year, in comparison with last year? Yes; there are two other large buyers besides myself.
435. Have you any knowledge of what has been purchased altogether? No.
436. Then you can only give information as to what you yourself have done? That is all.
437. As far as your own business is concerned it has been doubled? Yes.
438. Has that been consequent upon the construction of the railway? Yes.
439. How long has the railway been opened? About twelve months.
440. So that this is the first season in which the farmers could get an opportunity of conveying their stuff by rail from Parkes? Yes. The railway only opened about the time the wheat came in, and it did not get the full benefit of the season.
441. As a purchaser you must have had many conversations with agriculturists with regard to their intentions in the future? Yes.
442. Can you tell us whether they intend to increase their area under crop? I think they are going to increase it. They are getting more ploughs. Ploughs are being brought every day by the trains.
443. You act as agent for them in that respect? Yes.
444. Is any considerable number of agricultural implements being supplied? Yes; a good number are coming up every day.
445. Are these being supplied to farmers to replace the old ones? No; they are additions.
446. Are they being supplied to farmers who have not had them before, and who intend to devote them to agricultural purposes? Some of them have had them before, and some of them are increasing their supplies.
447. Then you assume that they are purchasing them for use, and that the increase in agriculture will be considerable? Yes.
448. Do you farm land yourself? Yes.
449. What is the extent of your holding? Six hundred and forty acres conditional purchase.
450. Is any part of it conditional lease? No; special area.
451. At what price per acre? £1 10s.
452. How long is it since you selected it? Four years.
453. How much crop do you grow yourself? About 90 acres last year.
454. Do you intend to increase? Very little.
455. How much stock could you keep on your 640 acres? About 1,000 sheep.
456. That is practically one and a-half sheep to the acre? Yes.
457. What profit would you get from 1,000 sheep, taking the ruling market price? I never shear sheep. I could not tell you what I would get out of them.
458. Do you buy them in the market as stores? I buy them as stores and fatten them.
459. What profit do you get in that way? I have had 1s. per head.
460. Could you repeat that three times during the year? No.
461. Could you repeat it twice? I have not done so.
462. Supposing you did, that would be £100 a year? Yes.
463. That is the profit you would get from 1,000 sheep? Yes.
464. How many bags of wheat did you get from the 90 acres? I cut it all for hay.
465. Have you sold any for hay? Yes.
466. Locally? No; I sent it to Sydney.
467. What profit did you realise from it? £2 a ton.
468. Is that the gross or net profit? Net.
469. How many tons did you send to Sydney? About 100 tons of my own.
470. Then you got £200? Yes.
471. You got £200 for your hay, and you would only get £100 for keeping 1000 sheep;—which is the better? I can make more money out of crop.
472. I suppose it is safe to assume that, being engaged in business as a commission agent, you do not care to bother so much personally about crops;—do you attend to it yourself? I have to pay labour.
473. If you were not engaged in business as a commission agent, and were seeking a living from your holding altogether, what would you do? I would go in for more farming.
474. I suppose the results you have had would be fairly obtainable by other selectors occupying land similar to your own? I think so.
475. Where is your holding situated? About 4 miles south of the proposed railway, and 4 miles from Tichbourne.
476. And how far from Parkes? About 7 miles.
477. Then it is practically within the suburban district of Parkes? Yes.
478. Do you know the country between the Burrawang holding and Condobolin? I was never to Condobolin. I was never 20 miles further than Trundle. 479.

- Mr. A. Wise.** 479. From your own holding towards Condobolin how much country do you know personally? About 30 or 40 miles travelling westward.
22 Mar., 1895. 480. What is the character of the country? Good agricultural land.
 481. The whole of the distance? There are some plains.
 482. You do not think they are so good as the timbered land? No.
 483. What is the proportion of the plain land to the timbered land? I have not seen as good wheat grown on the plain as can be grown on the timbered land.
 484. Can you describe the character of the country within 16 miles of Condobolin; I understand you to say it is similar to your own, with the exception that some of it is plain, which is not so good;—what is the proportion of the plain which is not so good to the land similar to your own—one half? No; not so much.
 485. One quarter? It might be a quarter.
 486. Then three-fourths of it would be land similar to your own? Yes.
 487. If that land were made available for selection in special areas, at 30s. an acre, would it be taken up by persons intending to settle upon it permanently and *bona fide*? I think it would be taken up, but I do not think the settlers would be successful if they had to pay 30s. an acre.
 488. Then do I understand your opinion to be that to induce permanent settlement along the line of route when the Crown lands are made available the area must be increased? No; the price lowered.
 489. If the lands were ordinary lands, and were restricted to 640 acres, would that induce a permanent settlement? I think so.
 490. What, in your opinion, if the land were allotted in 640-acre lots would be done with it;—would the people graze or cultivate it? Cultivate and graze a little.
 491. They would be compelled to cultivate it? Yes.
 492. But the area would be too small for grazing? Yes.
 493. Do you know the Trundle country? Yes.
 494. Is there any difference between the land in the Trundle district and the land which you have just described? I think the Trundle land is the better agricultural land.
 495. Better in what sense—does it produce more to the acre? Yes.
 496. You have held your land about four years? Yes.
 497. You know the country south of your own holding towards Forbes? Yes.
 498. What is the character of that country? Some plains and scrubby land.
 499. Generally speaking, is it suitable for agriculture? Yes.
 500. As suitable as the land north towards Trundle? I like the Trundle land better.
 501. Which, in your opinion, is the better? The Trundle land.
 502. If you had your choice, where would you take up your land? In the Trundle district.
 503. Then I can assume from your evidence that produce has increased consequent upon the railway extension to Parkes, that your business constituents intend to still further increase the area under crop, and that if the line were extended from Parkes to Condobolin there would be a still further increase? I think so.
 504. Along the line itself, by those who hold the land? Yes.
 505. And that when the land which fell into the hands of the Crown was made available for settlement an agricultural settlement would be induced? Yes.
 506. *Mr. Molesworth.*] What is the direction of your farm from Parkes? South-west.
 507. Do I understand that you are south of the proposed line, as marked upon the plan? Yes.
 508. Is that part of the district fairly well settled upon? Yes; but the line would not be of any benefit, because we are close to the Tichbourne station.
 509. Then, being an independent witness, which would you say was the proper way to take the proposed line, *via* Bogan Gate or Trundle? I would take it by Cook's Myalls to Trundle.
 510. What are your reasons for recommending that route? There is already a good settlement and well-improved farms on Cook's Myalls, and from there through to Trundle.
 511. You recommend it, then, on account of the settlement? Yes.
 512. Notwithstanding that there would be an increased haulage for others beyond Trundle—that is to say, people at and beyond Trundle would have to pay additional haulage; in fact, you are recommending it more in favour of the settled districts beyond it? Yes; and a station at Trundle would be an additional assistance to the people at Melrose, who have now to come to Parkes with their wheat.
 513. But if a line were constructed from Parkes to Condobolin, as shown on the plan, would not the people of Melrose have to meet it at some point and utilise it;—where would be their nearest point of connection? Some would be nearer to Condobolin.
 514. Then if the line were constructed to Condobolin, no matter what route it took, the Melrose people might connect at Condobolin? Perhaps—not all of them.
 515. Where would any of them be likely to connect other than at Condobolin? I think some of them would go to Trundle.
 516. But I am supposing that the line were constructed direct to Condobolin, where would they connect? I think at Condobolin.
 517. Then, under any circumstances, if the line were constructed to Condobolin, the Melrose people would use it; but if it were constructed *via* Trundle you think they would take their produce to Trundle? Some of them, but not all.
 518. Would one-half of them connect at Trundle? I am not sure about that. I think some of them would. They would come in with wheat.
 519. Is that the principal product of the Melrose district? Yes.
 520. Are there any station properties out in that direction? Yes; there would be wool too.
 521. Where would the wool be likely to come to from the Melrose district? People always go to the nearest station.
 522. But what would be the nearest station for them? I do not know the country sufficiently well to determine.
 523. The evidence which has been taken prior to to-day is in the direction of the Melrose country being served *via* Condobolin;—you think in the main the large bulk of the traffic would go to Condobolin from that direction? Yes.

524. *Mr. Gormly.*] You have stated that you had 90 acres under crop, and that you cut it for hay? Yes. *Mr. A. Wise.*
 525. Did you cut it for chaff and send it to Sydney? Yes.
 526. How much did you get per ton for it? £4 in Sydney.
 527. *Chairman.*] You do business with other people besides wheat-growers;—do you do any wool business? No.
 528. Are you in a position to say whether, as the wheat-growing has so largely increased, sheep-breeding has decreased in proportion? I do not think it has.
 529. The one has not interfered with the other? No; I think there are just as many sheep now.
 530. But if a man takes 100 acres or more out of his holding for the purposes of agriculture, that diminishes his area for sheep-growing, does it not? He has the use of it for half the year. It is impossible to carry just the same number of sheep.
 531. They eat up the stubble of the wheat? Yes.

22 Mar., 1895.

Mr. John Medlyn, hotel-keeper, Parkes, sworn, and examined:—

532. *Chairman.*] How long have you resided in the Parkes district? A little over twenty years. *Mr. J. Medlyn.*
 533. What has been your chief occupation during that time? Chiefly mining.
 534. Is that industry in a prosperous condition at the present time? Yes; fairly prosperous.
 535. In which direction does the mining principally lie? Chiefly round Parkes. But I was in Condobolin a fortnight ago, and I think there will be a large gold-field there.
 536. What kind of mining is it about Condobolin? Quartz.
 537. Is that a new development? Yes.
 538. When did it first crop up? They have been prospecting there for about two years, but there has never been much mining.
 539. What prospects have they got which enable you to speak with such confidence? Around Condobolin there are large reefs, 3, 4, and 5 feet long, some of them showing half an ounce to the ton, some more, and some less. I think there will be a large gold-field there in a very short time.
 540. How many people were there when you were there? Thirty miles below Condobolin there would be about 100 people on the new rush.
 541. At more places than one? Yes; 3 miles from Condobolin there were a good many men working, and there is a company in formation to erect a battery.
 542. At present there is only prospecting? Yes; but I have great belief that it will be a very large gold-field.
 543. What depth have they gone down? In Condobolin the little shaft is a little over 80 feet.
 544. Have they struck out any branches from that? No; there are four or five shafts there from 25 to 80 feet.
 545. Have they had any report on the district from the Mines Department or any scientific opinion? I do not know that they have. One of the representatives of the Mines Department was there a week before I was there, but I have never seen any report from him.
 546. Is the field so good that you have taken an interest in it? Yes, I am taking an interest in it, in assisting to put a crushing plant there.
 547. Will that involve the expenditure of much money? Yes, about £1,000.
 548. The prospects are so good that you feel justified in going in for part of that expenditure? Yes.
 549. I suppose there is water there? It will only be about 3 miles from Condobolin to where it is proposed to put the battery on the river. At the new rush there are some reefs—some with a 3 feet and some with a 6 feet seam. There was a trial-crushing there last week and 1 oz. 2 dwt. to the ton was realised.
 550. *Mr. Gormly.*] What quantity of stone was crushed? Ten tons.
 551. *Chairman.*] A fair test? Yes, so I consider.
 552. As an hotel-keeper for many years you must have observed the advance or otherwise of Parkes;—what has been your experience during the last five years? It has advanced a good deal. There are more people.
 553. Is yours a residential hotel? Yes.
 554. Do you find many people coming to the district? Yes, farmers are always coming and going—more than they did a few years ago.
 555. Are you pretty well acquainted with the state of trade in and about Parkes? Yes, it is in a pretty fair condition.
 556. You do not hear of many farmers failing? No, I think they are in a pretty fair way, as far as I can judge.
 557. Do you know anything about the proposed line of railway from Parkes to Condobolin? I have been to Condobolin on the Forbes River. I have been down to Trundle, and I have been down to what they call the Middle Road. The last time I went to Condobolin I went on the Burrawang Road, that is on the low road on the low lands down towards the river.
 558. As a public man you must have heard a great many expressions of opinion as to connecting Parkes with Condobolin; will you tell us what you have heard as to the best route? I think the opinion is that the direct line through Bogan Gate is the best route. Of course there is not much settlement there at present, but my opinion is that the line should go as direct as possible.
 559. Will you tell us as far as you can, how, in arriving at that opinion you are guided by the opinions of people at Condobolin, Trundle, or Bogan Gate? People at Trundle will tell you that the line ought to go to Trundle, because there is more settlement there; but my opinion, derived from driving about the country on the four roads, is that Bogan Gate is the better and the more direct route, and will be better settled in the course of time. When the line is constructed most of the land about there will fall in.
 560. If the land does fall in in a reasonable time, will it be suitable for selection and small holdings? Between Trundle and Bogan Gate there is splendid country—all open box country. When you get further towards the river it is also splendid country.
 561. What about the land between Parkes and Bogan Gate? Most of it is settled upon, and it is good land.
 562. Supposing it were not intended to extend the line beyond Condobolin, do you think it would be worth the while of the Government to construct it? It would cross a lot of settled and wheat-growing country, and

Mr. J. Medlyn. and I think it would be worth the while of the Government to construct it, even if it were not taken on further. A railway always opens up a lot of country and creates settlement. I also think that mining will be opened up, and we always get more men into a mining district when there is an easy way of getting to it.

22 Mar., 1895. 563. *Mr. Gormly.*] Do you know anything about the mines which have been worked about Mount Hope? No.

564. The mines you speak of will be about 30 miles below Condobolin? The last new find is 30 miles below Condobolin.

565. You say you have travelled on the road from Condobolin to Forbes? Yes.

566. What is the character of the land on the old coast road? It is low flat land—a kind of sandy soil and swampy land.

567. Portions of it are dry, are they not? Yes.

568. *Mr. Molesworth.*] You advise the construction of the line on the direct route from Parkes to Condobolin, rather than going north by way of Trundle on the one side, or tapping the Forbes to Condobolin route on the other? Yes.

569. You think that would be conducive to the interests of Condobolin? Yes; it would serve the river and it would serve Condobolin, and I think it would only be 9 or 10 miles from Trundle.

570. I suppose you are aware that nearly the whole of the road passes through Crown lands? Yes.

571. So that, in the course of a few years you think a general settlement would be likely to take place? Yes.

572. For what purposes would it take place? Mostly for agriculture.

573. Do you think it would act as a feeder to the main line if constructed? Yes.

574. And although it might not pay at the outset you think it might be made payable before long? Yes; I think so.

575. You are aware that the line is only intended to be what is known as a light or pioneer line? Yes.

576. And although it would carry trucks and rolling stock, which would come to Sydney if necessary, and the ordinary engines, except the Baldwins, the speed would be limited upon it to about 15 miles an hour, do you think the low rate of speed would interfere with the success of a line like that? I do not think it would. People who grow wheat would send it all the same, and they would also send their stock.

577. And you think that even a line like that would be a boon to the district? Yes; it would open up a good country, and would, in the end, become a good paying line.

578. *Mr. Chanter.*] I understood you to tell Mr. Gormly that the country along what you termed the old track was of a sandy character? Yes; and in some places it is stiff and sticky.

579. You have given your opinion of the country north of the line? Yes.

580. Give us your opinion of the country immediately south of the line? I have not been on that country much—no further than going down the river and on the Burrawang Road.

581. Then you have a greater knowledge of the north than of the south of the line? Yes.

582. So you know what difference in the distance it would make if the line, instead of being taken from Parkes to Condobolin direct, were taken *via* Trundle? About 10 or 12 miles.

583. Do you think, taking the present settlement into consideration and the prospect of an increased settlement at Condobolin as the result of mining, that if the line is constructed at a cost of £2,000 a mile, exclusive of anything which may be paid for land resumption, it will return to the State a fair interest on the capital? I do not think it will at first, but it will after a short time.

584. What would be your limit when the lands fall in in five or six years' time? Of course, the population will increase as the line goes on. The wheat crops will also increase, but it will take a little time for the people to settle.

585. I understand you to say that you expected a considerable increase at Condobolin proper in consequence of mining? Yes.

586. The opening up of the intervening land between Parkes and Condobolin would not affect that? No.

587. Do you think the present trade which would come from the Trundle district to the line, and the increased trade at Condobolin would warrant Parliament in authorising the construction of the railway? I think it would.

588. And you think the traffic would so increase year by year as to give greater earnings to the revenue? Yes, and if that line does not pay it will feed the main line.

589. Do you know anything of the country around Condobolin proper? I have been 30 miles west to the new rush, but not far out.

590. Is there any farming settlement about Condobolin? Yes; there is a lot about 15 miles before you come into Condobolin.

591. On the line of railway? Near to it. There were large paddocks of wheat when I went there.

592. Is it in the hands of small settlers? I cannot say how it is grown there. I think there are small as well as large settlers.

Mr. Harry Bowditch, Journalist and Secretary to the Parkes Farmers' Association, sworn, and examined.

Mr. H. Bowditch. 593. *Mr. Gormly.*] I presume you are pretty well acquainted with the farmers who reside in the Parkes district? Yes.

22 Mar., 1895. 594. Can you tell the Committee where the chief concentration of settlement for farming purposes, likely to be served by the proposed line of railway, is situated? The evidence I can give is touching the area under crop.

595. And can you locate the area under crop? Yes. We applied some months ago to the Railway Commissioners to have a grain shed erected at Parkes, and it was necessary to obtain some statistics. A circular was sent to the farmers who would be served by a grain shed. These farmers lived principally to the north and north-west of Parkes. The area which was returned in reply to these circulars was 6,666 acres. There were a few circulars sent to those lying to the east, but very few. The principal number lie to the north and north-west.

596. *Mr. Chanter.*] What radius would that take in? About 30 or 35 miles to the north or north-west, and not more than 5 miles to the east in any direction. I should add, with regard to the area of 6,666 acres, that there was no compulsion to reply to the circulars sent out. As a matter of fact, some of the larger holders did not reply. Mr. Beazley had 750 acres under crop. Mr. Foy, of Trundle, had 800 acres under

under crop ; Mr. Ewan, of Gunningbland had a very large area, approaching 1,000 acres, under crop. I estimate that the area under crop lying to the north and north-west of Parkes could not have been less than 10,000 acres last year, all portions to the east being left out.

Mr.
H. Bowditch.
22 Mar., 1895.

597. *Mr. Gormly.*] And that would be served by the proposed extension. Can you give us an idea as to the quantity of this 10,000 acres which would come to the proposed line, irrespective of that portion which would be likely to be carted if the line were constructed to the Parkes railway station ? I should imagine about three-fourths.

598. About 7,500 acres ? Yes.

599. Have you any idea what quantity of grain or other produce this 7,500 acres produces ? Yes ; the circular asked for the yield per acre. Some of the yields returned were small, and some were very high. Some were set down at 6 bushels, some at 8 bushels, and some at 25 bushels to the acre. The average was about 16½ bushels, that is about the average of the district.

600. Then the yield from the 7,500 acres was about 16 bushels per acre ? Yes.

601. Was there any other produce, such as chaff or hay ? We made no inquiries.

602. Have you any knowledge of any other produce apart from the grain on those particular lands ? Yes ; there was a large acreage cut for hay last year.

603. Was that sent to the market in the form of chaff ? Yes ; it was sent to Sydney chiefly.

604. What was the yield per acre ? About ½ to 2½ tons.

605. What was the average ? About 1 ton to the acre.

606. Have you any knowledge as to the quantity of fat stock likely to be raised in the district ? No.

607. Have you any information to give in regard to the agricultural produce of the district ? I might say that last year a sufficient number of ploughs was brought into the district to increase the area by 4,000 acres. I ascertained the number of ploughs brought to the various storekeepers and agents, and gave them a fair average amount of work to do, and I found that they would increase the area by about 4,000 acres. The area under crop has been very largely increased indeed since the railway came here. With regard to what would pay, I might state that I have had many conversations with farmers at various times, and have a slight knowledge of the matter myself, having been brought up amongst farmers, and 2s. a bushel, which we are now getting in Parkes for wheat, will give a very slight profit. It will pay farmers to produce, in that it finds them constant employment for the owner and his sons during the year.

608. Do you find much inquiry by persons outside the district in regard to acquiring Crown lands by the usual mode of settlement by conditional purchase and conditional lease ? A gentleman from Kadina said that if the land was thrown open, in a short space of time indeed it would all be selected.

609. Do you find an inclination on the part of persons outside this district to come in and settle as conditional purchasers ? Yes ; that gentleman comes from Victoria, and it would be his friends and relatives who would come here and take up the land.

610. *Mr. Chanter.*] Where is Kadina ? On the direct road to Peak Hill.

611. *Mr. Gormly.*] Are many of the farmers endeavouring to part with their holdings ? I do not think so ; of course farms are always in the market. A number of persons take up land with the intention of making what they can out of it ; but they are always in the market at a pretty good price.

612. There are persons who wish to sell, but are there any buyers ? I could not say that ; I know that lands have been sold recently.

613. But not to any considerable extent ? I do not know much about that subject. I have not heard of many farms changing hands.

614. Do you find persons coming into the district endeavouring to get Crown lands ? Yes ; there are quite a number who come here to inspect the leasehold areas which they think will fall in.

615. Have you any knowledge of the country which the proposed line from Parkes to Condobolin will traverse ? Not any further than Gunningbland.

616. You are of opinion, however, judging of the number of persons inquiring for land, that if the Crown lands are available they will be taken up under ordinary conditional purchase and conditional lease ? Yes ; very quickly.

617. Under the terms under which persons can acquire land at the present time ? Whether they would be taken up at special area prices I do not know ; but at ordinary prices there is not the slightest doubt that the land will be taken up very quickly.

618. As Secretary of the Farmers' Association you come into contact with the farmers a good deal ? Yes.

619. And you hear them express their opinion as to whether they are satisfied or dissatisfied with their occupation of the land in the district ? Those who have got their holdings on reasonable terms are all delighted with them.

620. Do they express the opinion that they wish to permanently hold them and make permanent homes ? Yes.

621. They are fairly well satisfied ? I do not know of any bona-fide farmer who would care to sell out unless it was made worth his while.

622. Have the farmers expressed an opinion that they would go in for cultivation more extensively if the railway were brought near to their holdings ? Yes ; the area, I think, must have increased last year by fully 100 per cent.

623. You do not know anything from personal observation as to the quantity of land which has been prepared this year ? From inquiries I have made I should say that a considerable area has been already prepared.

624. And you say that a number of agricultural implements have been brought in ? Quite enough ploughs have been brought into the district, to my knowledge, to turn over last year 4,000 additional acres. Of course many came, and many were made which I knew nothing about.

625. Does that refer to the present sowing season ? To the last one.

626. Do you find agricultural implements are coming in for the coming season ? I have not made inquiries.

627. Would it come under your observation in the same way as it did last year ? It is scarcely late enough in the season to make inquiry with respect to the matter.

628. But the ploughing season should commence during the present and the next two months ? Yes.

629. Are you aware whether preparations have been made for sowing this season ? Yes ; a considerable area has already been turned over, but the dry time we have had has largely interfered with operations. If there had been rain we should have had more soil turned over.

630.

- Mr. H. Bowditch.** 630. You have heard the opinion expressed by farmers that they intend to increase their area under cultivation? Yes. I might say that one farmer gave his experience, extending over fourteen years in this district, and his average return was 16 bushels to the acre. Another one with whom I had a conversation, who kept accounts, had an average of 19 bushels to the acre. With reference to the first-mentioned farmer, I am positive that I could take his word for anything he might say. With reference to the rainfall I may state that I have been looking through the records. It never falls below 25 inches in this district, and it reaches 32 inches. The average in Parkes is from 29 to 30 inches.
631. Have you taken the figures from Mr. Russell's observation of rainfalls? The mining registrar keeps a sheet, and it is from his sheet I took the record, and it has been verified by other records which have been kept.
632. Was it taken from rain gauges kept at Parkes? Yes.
633. I am very doubtful about the figures, because they are not in accord with the rain gauge as kept in this district? Mr. Black, of Goobang, has also kept a record, and confirms it.
634. *Mr. Chanter.*] I presume the Farmers' Association often holds meetings? Yes—once in three months, usually.
635. How many farmers does your association embrace? Not a very large number.
636. How far do they extend? Some as far as Trundle and within 10 or 15 miles of Parkes.
637. Any beyond that? No.
638. Have they held any meetings to consider the proposal before the Committee? No.
639. Then you are not giving the opinions of the Farmers' Association of Parkes, but your own? The Mayor waited on me to-day, and asked me whether I could give evidence.
640. But you are not committing the association as an association to your views on the matter? Not at all. The railway, as a matter of fact, does not much concern the farmers residing in the immediate vicinity of Parkes.
641. Have you any settlers resident at Trundle in your association? Yes.
642. Have they made no sign? I received a letter on Wednesday asking the Farmers' Association at Parkes to co-operate with the Trundle Railway League; but it was received too late to call a meeting.
643. With regard to the ploughs—how do you arrive at your calculations as to area? There are a certain number of ploughing days in the season, and we calculated how much each plough would turn over, deducting a fair average for lost time. I estimated that the ploughs which came into town last season, after making deductions for lost time, would turn over 4,000 acres.
- 644-5. Is not that rather a rough way of arriving at it? It is, decidedly.
646. Did these ploughs go direct to the farmers' hands? Yes.
647. You do not know what the views of the Farmers' Association are? No; I only mentioned that I was the secretary to the Farmers' Association, in order to show that I was in a position to express an opinion as to the area under crop.
648. In your opinion that area will be increased? Yes.
649. Whether the line is extended or not? Yes.
650. Then as far as your Association is concerned, this railway line does not affect their position at all? Not so far as I can tell. I do not consider it a matter for us to interfere with.
651. As a journalist, having an interest in Parkes, do you think the residents or property holders care whether the line goes on to Condobolin or not? There is a division of opinion on the subject.
652. Is it so equally divided that the people are afraid to say—yes, or no? I was asked to express an opinion by one gentleman who was here before, and I said the people were, to a large extent, apathetic. Still more recently interest has been taken in the matter, and a number of people can see that their interests will be conserved by the railway being constructed.
653. What is your opinion, and the opinion of the public generally, as to whether the line shall go direct to Condobolin, or to the south, or to the north, *via* Trundle? That is a matter upon which I am not prepared to express an opinion. The matter has been discussed very little here. I have not sufficiently studied the matter to express an opinion as to which way the line should go. Although I know of reasons why the line should be constructed to Condobolin, and personally I would be in favour of it going there, still the public have not taken any deep interest in the matter. We are served by a railway; we do not feel the want of it; and the further extension is a secondary consideration.

Mr. John Alexander Rose, Commission Agent, Parkes, sworn, and examined:—

- Mr. J. A. Rose.** 654. *Chairman.*] How long have you been a commission agent? About twenty years.
655. You know the object of the inquiry of the Committee? Yes.
656. You wish to make a statement in connection with the proposed line? The line should go direct.
- 22 Mar., 1895. 657. For what reason? All the settlement which has taken place since I gave my evidence in connection with the extension of the railway to Parkes has been to the west.
658. What has been the nature of that settlement? Selection.
659. Have you any other reason? Yes; the country where the existing selection has taken place, and where it is possible to take place, is altogether good and free from inundation.
660. That is the portion to the north? Yes.
661. Is there any other reason? I think the line should go due west for the reason that it will serve a greater number of people and a better country, and I feel sure that the revenue will be greater.
662. Do you think it is desirable to extend the line beyond Parkes? I do; and I think it should be extended due west.
663. You know there is an agitation in favour of its going by way of Trundle? Yes. I should like to see the Trundle people supplied with a railway, but I do not think they should be supplied with it at the expense of the country—for this reason, that they can have their goods and themselves brought to the railway from a distance at the outside of 13 miles.
664. Is there any other reason you wish to advance why the line should not go by way of Trundle? I think the line from Parkes should go as near west as possible to Wilcannia, and by going to Trundle you cannot do that. When the country constructs railways we should not only take into consideration the present population, but the future population. I am one of those who think there will be a large population on the straight line to Wilcannia.
665. How far do you call it, from Condobolin to Wilcannia? I cannot tell you exactly.

Mr.

Mr. George Washington Seaborn, commission agent, Parkes, sworn, and examined:—

666. *Chairman.*] How long have you been in the district? I was part owner and manager of Gunningbland Station for ten years. I have been in the district for twelve years.
667. You have been an observer of the progress of the district? Yes.
668. What has been your experience? The progress of the district has been very great since 1885—since the passage of the 1884 Land Act—until there was no more land to take up.
669. Then all the available land in the Parkes district is pretty well taken up? Yes.
670. Does that apply to all the country between here and Condobolin? Yes; all the resumed areas.
671. Is it being used? Yes, by a good class of men who principally came over from the border of Victoria. They have spent a lot of money.
672. They were men who came to stay? Yes; and they have made very great improvements. In fact land which was practically useless they have made available for fully one sheep to the acre.
673. One argument in favour of the construction of the railway to Parkes was that the agricultural prospects of the district would be largely increased. Are you able to tell us whether that has taken place or not? I know it has.
674. Can you tell us how? I know that many selectors from here to 40 miles down to the Bogan, and from there right away to Woodlands and Melrose, and all over that country, have gone in for clearing to some extent, and they are prepared to clear large areas. I know that many of them have 300, 400, and 500 acres cleared, and I know that many of them this year had 300 or 400 acres under wheat.
675. Is that an increase of cultivation to what existed before the railway was constructed? There was, comparatively, little or none before the railway was mooted. The only crops which were grown then were simply for hay and home consumption.
676. And since the railway was opened there has been a large production of wheat? Yes.
677. Has any of that wheat passed through your hands as a commission agent? Yes; something like 3,000 bags this year.
678. How many bushels would that be? About 12,000.
679. Where did it chiefly find a market? Most of it went to Sydney.
680. And, went, I suppose, by the Parkes railway? Yes.
681. What is the freight to Sydney? 13s. 6d. per ton. That will be about 4½d. per bushel.
682. Before the railway was extended from Molong to Parkes, did the haulage prohibit the sending of wheat to Sydney, to a great degree? Yes; some went from about Parkes; but not to any great extent; in fact I think they sold most of it locally, and if it went away at all it went away in flour.
683. Was the reason because of the carriage between here and Molong being too great? I think so. I know the carriage was something like £4 a ton from here to Molong.
684. Are you able to give us any information as to whether the district has advanced in ways other than wheat-growing by reason of the railway extension? No; excepting that the railway has saved men a good deal of money for carriage, and they have had more income in consequence.
685. Has it been the means of bringing more people to Parkes as a place of residence? No; I do not think it has had much effect in that way.
686. Has it brought more visitors to Parkes? Yes; we have had some Members of Parliament whom we never saw before.
687. What is the general opinion as to the route of the railway from Parkes to Condobolin? As far as my individual opinion goes, it ought certainly to go by way of Trundle.
688. That is your individual opinion—based on what? On knowledge of the country. I know that the country is sound; it is all good wheat-growing country, and there are a number of men on the north and west who are suffering from want of means of transit for their produce. I know that, if a railway were taken there, these men would put a lot more land under cultivation.
689. Do you know what the greatest distance will be from Trundle to the line if it goes by the direct route? To Bogan Gate from Trundle, the nearest point would be about 15 miles. I think it would serve Trundle itself fairly well; but when I speak of Trundle I refer to people on the north, east and west of Trundle. There are people 40 miles to the north and the west in equally good country, except that there may be a little less rainfall.
690. Are there many people to the north of Trundle who would be immediately benefited by the railway, if it went that way? Yes; there is a mass of selections. They are all close together. They all join wherever the land is available. Some leasehold land comes in between Trundle and some of the selectors, but that would be all taken up when the lands are resumed.
691. But if the line were taken by way of Trundle, would it not seriously inconvenience the settlers, and population situated between the proposed direct line and the Lachlan River? No; there are few settlers on the south of the line. It is nearly all the leasehold and purchased land of Burrawang run, and from there it goes on to Condobolin run. The settlers are on the river right away from this altogether. Most of the river frontage belongs to the large holdings, that is, it is purchased.
692. How do they manage at the present time to get their produce to market? They go directly down the river.
693. To Forbes? Yes.
694. Is there not a considerable population between the Lachlan River and the proposed direct route, which would be able to use the railway, if constructed as proposed by the Government? No; it is nearly all land alienated by the Burrawang, Condobolin, and other runs.
695. And does not compare in point of agricultural settlement with the settlement north of the direct line? Nothing like it. It may be an agricultural country, but it is not as good a wheat-growing country as the red soil.
696. But if the line went by way of Trundle, would it not be a great inconvenience to people coming from Condobolin to have to take that bend in the line to get to Parkes, and then send their produce to the metropolis? It would only be a very small bend—5 or 6 miles, and I think it would be justified by "the greater good for the greater number."
697. Would you take the same view if it were proposed to extend the line beyond Condobolin? I should think, from what I know of the country, that it should go north of Condobolin. It is all rich pastoral country down the river, but it is not good agricultural country. The hard red country, suitable for wheat, is all to the north of that.
698. Do you think if the line were not extended by way of Trundle it would lose the Trundle traffic? I think that there would be a danger of bringing their produce straight to Parkes? I think when they get

Mr. G. W.
Seaborn.

22 Mar., 1895.

Mr. G. W. Seaborn. get the wheat on the waggon they might as well come into Parkes as go to Bogan Gate; but I do not think the people of Trundle are so much to be considered as the people who are away to the north, east, and west of it.

22 Mar., 1895. 699. Is there any stock route from Parkes to Trundle? Not direct, but by Bogan Gate. The direct road to Condobolin passes through flooded country.

700. Which part of the road? Between Bogan Gate and Condobolin—within 20 miles of Bogan Gate. At that point it is very swampy. I have seen miles of water in wet seasons.

701. What is the distance which it is convenient for growers to take their produce to a railway? They say that if they are within 20 miles of a railway they are perfectly satisfied; but some of these men have carted wheat this year 50 and 60 miles simply because they could not help themselves.

702. If it were within 20 miles then it would suit the people north of Trundle to bring their produce in a direct line to Bogan Gate? I am speaking of people 25 miles to the north of Trundle. There is a dense population near Bullock Creek running into the Bogan—men who are good settlers and who have spent up to £3,000 and £4,000 in improvements.

703. If your contention has any weight, then it seems a question whether it would not be desirable to take a railway up to Trundle and to the north of Trundle rather than to Parkes and Condobolin? It would bring these people 15 miles nearer the railway, and that would be a great help to them.

704. Has the district about Trundle been a rapidly progressive one lately? Very much so; only the men have spent most of their money in developing the country, and wool being low and wheat being low, their finances are very low too.

705. Do they bring their wheat into Parkes at the present time? Yes; they did this season. One man had something like 2,000 bags—that was near Trundle.

706. What price did they get for their wheat? On an average about 2s.

707. Can you tell us what it cost these farmers to bring their produce from their holdings into Parkes? I know some who came from 20 or 30 miles paid 3d. a bushel, or 1s. a bag, to get it to the railway station.

708. Mr. Gormly.] What number of settlers are there about Bullock Creek? I daresay there are between fifty and sixty; some of them have as much as 5,000 or 7,000 acres.

709. Is there any other centre of population to the north-west of Trundle besides Bullock Creek? Two or three runs come in there. There is a run about 10 miles from Trundle, and on the other side of that towards Fifield, which is a gold-digging country.

710. Is that in the direction of the Bogan? West of the Bogan.

711. What distance would it be to go straight across to the line—not to the Bogan Gate, but further down to Condobolin? About 45 miles.

712. About what number of persons would there be there? They extend right out for 60 or 70 miles.

713. In speaking of the number of persons at Bullock Creek, do you mean that there are sixty or seventy landholders, or a population of sixty or seventy? I do not mean Bullock Creek, but between Bullock Creek and Trundle, and towards the Bogan.

714. Is there a population of sixty or seventy, or are there sixty or seventy different holdings? Sixty or seventy different landholders.

715. Over what extent of country are they spread? They run from near the Bogan River over to the north-west of Trundle.

716. That is a distance of 50 or 60 miles? I daresay it would be 40 miles in length, occupying over 200,000 acres.

SATURDAY, 23 MARCH, 1895.

[The Sectional Committee met at the Court-house, Parkes, at 10 a.m.]

Present:—

The HON. WILLIAM JOSEPH TRICKETT (CHAIRMAN).

JOHN MOORE CHANTER, Esq. | JAMES GORMLY, Esq.

EDMUND WILLIAM MOLESWORTH, Esq.

The Sectional Committee further considered the proposed Railway from Parkes to Condobolin.

Mr. Herbert Sturge Harwood, land and mining agent, Parkes, sworn, and examined:—

Mr. H. S. Harwood. 717. Chairman.] What are you? Land and mining agent at Parkes.

718. How long have you been in this district? I have lived twenty-two years in the Forbes and Parkes district.

23 Mar., 1895. 719. Chiefly in the same line of business? I have been grazing as well.

720. The Committee wish to obtain evidence as to the advance of Parkes, and to the west and north of Parkes during the last three or four years;—will you give us your views in that direction? There has been a very considerable advance in the town itself in the last few years. The population of the municipality must have increased from about 1,500 to nearly 4,000. The country of the district has been almost entirely settled in the last six years. There was hardly any settlement six years ago—that would be to the north and to the west. Condobolin has also very largely increased during that period, and a very large area of land around it has been alienated.

721. Do you remember when the extension of the line to Parkes was first commenced? Yes.

722. From that time to the present covers a period of how many years? About three years.

723. Have you noticed any advance in population and general prosperity during that time? The town has certainly increased considerably.

724. What about the surrounding district? In the district for the last few years it has been impossible to get a full area of 2,560 acres anywhere within 60 or 80 miles of the town, consequently not so much land has been alienated; but those who have land have put it to very much better use in the shape of agriculture.

725. What do you think has caused them to go in for agriculture to a larger extent lately? The facilities the railway offers for getting the produce away.

726. Have you noticed whether the population on the agricultural holdings is stable, or whether it is a shifting population? It is very stable indeed—very different from what it used to be under the old Acts. There are very few sales made, and almost all the selections are taken up genuinely.

727. Do these people seem satisfied with their lot? The great bulk of them.
 728. Are they doing fairly well? Many of them are doing very well indeed.
 729. Do you hear of any or many sales with these holdings by mortgagees or people getting into debt and being unable to go on? We hear of one occasionally, but very few.
 730. Do you do anything in the way of advances on wool? Yes.
 731. How have the sheep sales and the wool clip stood during the last four or five years? I think on the whole there has been a considerable increase. There are many more stock in the district than there used to be. In the old days, of course, the runs were not ringbarked. Now the selectors have them all ring-barked, and they carry more stock.
 732. Can you tell us what is the average carrying power of the country per acre? Taking it roughly, one season with the other, it is about one sheep to the acre when the land is ringbarked and improved.
 733. Is the country a fairly watered country? Not away from the creeks. It is all artificial.
 734. Has the construction of dams gone on to any considerable extent upon the holdings? Yes; a considerable amount of money has been expended in dams.
 735. Are the dams substantial and of a good character? Yes; the selectors seldom put down any smaller tanks than 2,000 yards excavation.
 736. You say that pretty nearly the whole of the available country has been taken up by selectors? I do not know of a single full area that is to be obtained within 50 or 60 miles of Parkes.
 737. There will be, within a few years at any rate, a considerable area of other land available; judging by present prospects, what do you think will be the result with regard to selection? I think if the whole of the land along the proposed line of railway, *via* the Bogan Gate to Condobolin were thrown open, amounting to something like 230,000 acres, in one fortnight the whole area would be taken if thrown open to ordinary conditional purchase at £1 an acre; and if the best parts were reserved in 640-acre blocks at 30s. an acre, I believe within three months every block would be taken.
 738. What do you think is the smallest holding out of which a man could make a fair living? If he farms and carries a few sheep as well, and understands his work and works well and has a family to assist him, he can make a good living out of 320 acres—that is, when everything is paid for, but of course that area is of no use for grazing purposes only.
 739. But the evidence we have had so far is, that there is a tendency to agriculture rather than to grazing as it is found that it pays better? A great many people are now clearing their land, and taking a couple of crops of wheat off it with the intention of putting it into lucerne. That is being done to a large extent in the district.
 740. Have you heard whether present holders are likely to increase their agricultural areas; can you give us the names of a few people who are likely to go in for that? I might mention Mr. Beazley; he has 1,100 acres under crop.
 741. Where is he? About 30 miles from here.
 742. In the direction of Trundle? More in the Peak Hill direction. Then there is Mr. Foy at Trundle. He is clearing 1,000 acres to put into lucerne.
 743. Do you know of any others? There are many others from 150 to 300 acres, Mr. Ewan has about 1,000 acres which he is clearing for crop. That is on the road from here to Gunningbland, pretty near to Bogan Gate.
 744. And I suppose there are many others? Yes.
 745. With regard to the future taking up of land, have you had applications, or have you known of applications for land, which have had to be refused? Never a week passes but two or three men come from the southern parts of the Colony trying to obtain land.
 746. What class of men are they—are they men who have money ready to invest? They seem chiefly to be men with £400 or £500 capital.
 747. And who have heard of the favourable character of the district? Yes.
 748. I suppose you know of the character of the country between here and Trundle fairly well? Yes.
 749. And around Trundle? Yes; I know all this district.
 750. You are aware that the people of Trundle advocate that the line should go in the direction of Trundle? Yes.
 751. Can you give us your views in that respect as compared with the direct line surveyed by the Department? I do not think it would pay for the extra deviation and the extra haulage to take the line *via* Trundle.
 752. Will you explain how it will not pay;—will the people still carry their produce along the direct line to Parkes? There is not a large population around Trundle. The country is all taken-up, but it is in big blocks—some families holding up to 10,000 acres,—so that there is not a large settlement. Then again, on the banks of the Lachlan there is a considerable amount of settlement, and a line from Bogan Gate to Condobolin would accommodate them as well as the Trundle people.
 753. And if it went by way of Trundle, would those people cart their produce into Forbes? Yes; they would still take it to Forbes.
 754. We had evidence here yesterday that in and around Trundle about sixty people would take advantage of the line if it went to that place, or that they would be directly benefited by it;—do you think that that is a fair statement? Yes; I should think that would be about the number.
 755. Where do the settlers to the north of Trundle take their produce to at the present time? To Narramine; that is settlers living 20 miles north of Trundle.
 756. How far do they have to take it to Narramine? One may have to take it 40 miles and another 50 miles.
 757. And if a line were constructed direct from Parkes to Condobolin, would it not suit them better to come right upon that direct line than to go 40 or 50 miles to Narramine? For some distance north of Trundle, it would still come to the Condobolin line.
 758. But Narramine is a station managed by the New South Wales railways? Yes; and from there the main line rates are charged.
 759. Then, wherever they go, as far as the railway is concerned, it will only be a case of taking the money out of one pocket and putting it into another? Yes.
 760. If they go to Narramine, they will not come to the proposed line if constructed, and *vice versa*? Some may change their route.
 761. So that in that way it will not make any difference to the revenue? No.
 762. It is only a question of convenience for these people? Yes.

Mr. H. S.
Harwood.
23 Mar., 1895.

- Mr. H. S. Harwood. 763. Can you tell us what you would do with your produce if you were living 20 miles to the north of Trundle, and if a line were constructed from Parkes to Condobolin direct? I should think that from 20 miles north of Trundle it would come in at the Bogan Gate.
- 23 Mar., 1895. 764. How many miles would that be if there were a station pretty well opposite Trundle at Bogan Gate? About 36 miles.
765. Can you give the Committee any information as to the progress or otherwise of Condobolin? In the last six years it must have more than doubled in size. I should say that it has nearly trebled in size.
766. That is the town? Yes; and the old wooden buildings have been replaced by good buildings.
767. What feeds Condobolin;—what is the nature of the population which supplies Condobolin? It is almost entirely pastoral, because it is so far from the railway that it does not pay the selectors to grow wheat or any other crop.
768. Is the character of the country there such that it can be converted into agricultural holdings? All on the north side of the river is good red light ridges, excepting just on the banks of the Lachlan; but on the south bank the plains extend out much further.
769. Can you give us any information as to the flooding of that country within a distance which you may name? The whole of the country between the Billabong and the Lachlan is more or less subject to floods. The low-lying portions get covered. There are channels here and there. I had a black boy drowned in crossing one of them in flood time.
770. Has not that had the effect of retarding agriculture in the district? No; I do not think so. The only country there which is suited for agriculture is the black soil along the river. That, of course, cannot be beaten.
771. And that is liable to flood? Yes; the angles are.
772. Do they cultivate those angles? They put in lucerne wherever they can, and a certain amount of corn is grown.
773. I suppose that is chiefly for local consumption? Yes; none is sent away.
774. Comparing the land north of the proposed Government line with the land south between it and the river, which do you consider more favourable to thick and permanent agricultural settlement? For the first 20 miles out from here there is not a great deal of advantage on either side of the line. After that the north side is best.
775. To a very marked extent? Yes; the character of the country is quite different. On the one side it is dead flat country with hardly a rise in the whole of the 40 miles from the Bogan Gate to Condobolin. On the other side it is all undulating red soil country.
776. You have no direct interest, I suppose, in Forbes, Parkes, Trundle, or Condobolin, except as a business man doing business with them all? Yes; I have lived in Forbes and have done business in both places.
777. Can you tell the Committee which you think would be the better way for the railway to go, taking it only as a railway connecting Parkes with Condobolin? I think undoubtedly that the best line will be the one *via* Bogan Gate, as proposed.
778. *Mr. Chanter.* You have stated that the settlement has not increased of late years because the land has not been available for selection in suitable areas? Yes.
779. Does that apply to the whole of the district? Yes; to the whole of this land district.
780. As a land agent, are you aware what amount of land which would be served by the proposed line could ultimately be made available for selection? I believe about 234,000 acres.
781. Are you aware, what land would be made available for settlement if the line were taken in a more northerly direction *via* Trundle, or even further north than that? A certain amount of the Troff's run would be available. The Burrawang run goes right out to Trundle.
782. What amount of settlement, approximately speaking, has taken place south of the proposed line from Parkes to Condobolin, between that and the Lachlan River? Not a great deal, because it has been nearly all leasehold area.
783. What amount of settlement has taken place north of that—say, within 15 miles north of Trundle? I could not give you the acreage.
784. Making a comparison one with the other, which is the greater? The greater amount thrown open?
785. No; which is already settled? Far more to the north is settled.
786. What proportion? I should say about 4 to 1.
787. There is four times greater settlement north of the proposed line than south of it? Yes, on the south, Burrawang has over 100,000 acres of freehold land locked up.
788. As a land agent, you are aware that none of this land can be made available for selection until the pastoral leases expire? Yes.
789. Are you aware of the length of the extension of the leases between Parkes and Condobolin? I think, on appeal, they are all recommended for five years.
790. Then there can be no further settlement there for five years? Not unless a new Land Act gets through—not unless legislation takes place.
791. Is there any land available for selection north of Trundle? The whole of the resumed areas are taken up. Of course there are some small patches here and there, but you cannot get a full area.
792. There are about 86,000 acres of leaseholds in the Trundle district;—this is given in evidence by one of the Departmental officers? Yes.
793. Presuming that this land is made available by legislation, what area do you really think, from your lengthened experience of the district, is necessary for a man to make a living on—I do not mean to merely exist? If the land is close to a town, and a man can avail himself of the markets, he ought to be able to do it on 640 acres.
794. Of course you are aware that there is only a certain amount of produce for local consumption; the surplus has to go to the metropolitan market? Yes.
795. The proportion a man would sell for local consumption would be very small in comparison to the amount which would be sent away to the markets of the world? Yes.
796. And you think under those circumstances that 640 acres of land would be sufficient upon which to maintain a family? I know there are men who are doing it here, and who are living very comfortably, that is, as long as they are not too far away from the town.
797. I am not speaking particularly about those who are close to a town or railway, but in regard to the whole extent of area which would be affected by the railway? I think a man requires his full 2,560 acres if he is not close to a station or town.

798. Take for instance your statement in reply to the Chairman, that some people were making a living out of 320 acres, and that you thought the settlers 30 miles north of Trundle would cart their produce to Bogan Gate? If a man has to cart 30 miles to market I think he requires the full area of 2,560 acres, so that he can carry a fair number of sheep.

Mr. H. S.
Harwood.
23 Mar., 1895.

799. I understood you to say that the land north of the proposed line, in comparison to that south of the proposed line, is infinitely superior? For agricultural purposes.

800. Then the settlement for agricultural purposes must eventually go north of the line? Yes.

801. All the food for the railway, in the shape of agricultural produce, would be drawn from the north? Yes.

802. Even if the lands were thrown open for selection along the direct route, all that portion of the land south of the proposed line would be still held for pastoral purposes? Yes.

803. In consequence of the broken and flooded country? Yes; it is magnificent grazing land.

804. Taking that view of the case, do you think it would be wise to run a line of railway just on one side of where food is to be drawn from;—would it not be wiser to deviate it more to the north and make it more central? I do not think it would pay to make the deviation—there is the extra cost, because the grades would be steeper, and there would be a difficulty in getting through the range, which would affect the haulage for all time.

805. The official statement as to the difference in the extent of the line as surveyed shows it will be 7 miles shorter than it will, if it goes by way of Trundle. Would that 7 miles, in a length of 60 miles, make a very material difference? Perhaps not in itself; but I think, from the nature of the country you have to go over, that the cost of the last 40 miles would be increased. Of course, that is a matter for the engineers.

806. You know the country between Parkes and Condobolin direct, and between Parkes and Condobolin, *via* Trundle? Yes.

807. Do you know whether any engineering difficulties would be encountered if the line were taken further north? It is undulating country, and the hills are rather higher.

808. What would be the extent of the hills you would have to cross? I should say about 40 miles—when I say hills I mean undulating ridges.

809. Would they require cuttings of any consequence? No; but they would affect the grades.

810. Very materially? I should think not very materially.

811. Can you tell me how many farmers have attempted to grow lucerne? I know of at least a dozen who have made a start last year, and a large number are going in for it next year. They take off two crops of wheat, properly break up the ground, get rid of the weeds, and follow it up with lucerne.

812. What has been the result in regard to the growth of lucerne? It is hard to say, so far as those who have recently gone into it are concerned; but lucerne certainly does very well in this district.

813. That is your experience? Yes.

814. Is it grown upon the red soil or upon the river country? Upon the red soil, where there is any depth of it.

815. Do you purchase any wheat? No.

816. Do you know the price of wheat? Yes.

817. It has been stated in evidence that it is 2s. a bushel? They are getting 2s. 1 $\frac{1}{2}$ d.

818. If these prices are maintained do you think any settlers north of Trundle would continue to grow if they had to cart their wheat 40 or 50 miles to market? I do not think they would.

819. Supposing the line is constructed as proposed, how far north of it do you think the settlers would continue to grow wheat at 2s. a bushel? I should think for 25 miles. It would only give them two days haulage then.

820. I believe it is the practice of farmers who do not cart their own grain to hire teams to cart it? Yes.

821. What would be the haulage per bag for a distance of 30 miles? At the present time prices are exceptionally low, and they are hauling wheat from Condobolin to Forbes—65 miles—at 25s. a ton.

822. Then it is only fair to assume that as prices for wheat are low the prices of cartage are low? Yes.

823. That would leave as a result to the farmer, to cover all expenditure, about 1s. 2d. a bushel; do you think they could continue under those circumstances? It is one of those doubtful matters about which one cannot answer.

824. What the Committee has to consider is not whether, if a line is constructed, it will find food for one or two years, but for all time. It is for you to state whether, under existing circumstances—prices and everything else being taken into consideration—you think wheat or other agricultural produce requiring land carriage would continue to be grown and carted extreme distances? I do not think it would be beyond 30 miles.

825. You think it would be grown then at a distance of 30 miles from the railway? I think it would, because some of the farmers tell me they are making it pay even at the present low prices.

826. Are they carting their own wheat? Yes.

827. Is there any other class of produce in this district besides wheat and hay? There is a certain amount of hay near the town.

828. What are the capabilities of the district for fruit? Very good indeed.

829. Of what classes? Almost all varieties do very well here, including oranges, lemons, apples, and peaches.

830. Is there a considerable demand for fruit at present? I believe it pays fairly well. They send a good deal of it from here to Sydney.

831. With profitable results? One grower of grapes gets as much as 7d. a lb. in Sydney. In fact, the Department of Agriculture bought all his grapes and gave him 6d. a lb.

832. What is the nature of the country immediately where the line passes on the Gunningbland Creek;—Is it dry or liable to flood? Gunningbland Creek runs pretty hard occasionally, but I have never known it so that I could not get across in a buggy.

833. Does it overflow the banks to any extent? It does.

834. For about what distance? I have never myself seen it over from $\frac{1}{2}$ to $\frac{1}{2}$ a mile wide, where it meets the overflow from the Billabong. It is really the overflow from the Billabong which backs up the Gunningbland Creek.

835. Would that be avoided if the line were taken further north? I think the proposed line does avoid it as it is.

836.

- Mr. H. S. Harwood. 836. How far from the proposed line is it that you come across the undulating country? Within about a mile north you come upon a high steep ridge—that is, after you leave the Bogan Gate—running a considerable distance parallel with the line.
- 23 Mar., 1895. 837. Which, in your opinion, taking all the circumstances into consideration, would be the wisest course for the Government to pursue—to recommend the construction of the line as proposed or to take it where the settlement is at present? I certainly think as proposed.
838. Right along the direct route *via* Bogan Gate? Yes.
839. Notwithstanding your opinion that all the lands south of the line must for all time remain as pastoral country? Yes.
840. Are you aware whether the present holders of those lands have been or would be willing to let any of the lands for agricultural purposes if the line were constructed? I have not heard of it.
841. Is there any sub-leasing in this district by the pastoral lessees? Not that I am aware of.
842. Then your opinion is that the line if constructed should go direct from Parkes to Condobolin? Yes.
843. *Mr. Molesworth.* You referred, just now, to the fact that Condobolin has made rapid progress during the last five or six years;—will you give us an idea as to the cause of such progress? The settlement around by selection.
844. Do you look upon that settlement as being of an absolutely permanent character? Yes, it is all taken up by genuine selectors—by people who intend to live and settle on the land.
845. Is there any opportunity of further extension of settlement there? Not until the leases fall in.
846. Is much Crown land likely to fall in within the next five or six years in the direction of Condobolin? Speaking roughly there will be something like 400,000 acres.
847. And is the bulk of that land suitable for the settlement of a farming or small grazing population? The great bulk of it is; only the rainfall is not so regular there.
848. What is the average rainfall in the Condobolin district? For the last six years it has been about 24 inches; in Parkes it has been about 27 inches.
849. Is that a material difference in the course of twelve months? No; but of course the last six years have been exceptional years; but taking an average of twelve years, I doubt if the rainfall would be over 20 inches.
850. What would be a sufficient annual rainfall in that district to satisfy farmers? If it would come at the right time 15 inches would be sufficient. It all depends on when it falls.
851. Is much mining going on at Condobolin at the present time? There is a very good field indeed, which will be developed as soon as there is railway communication.
852. Do you think that it is of such a class as is likely to create a permanent field? Yes; a considerable number of reefs have been found, 3 miles from the town, containing gold; and as you go north you get galena, carbonate of lead, copper, and other minerals.
853. In what way will the extension of the railway facilitate the extension of mining? Just the same as it did here. Before the railway was extended here no mining man would come up; he would not face the coach journey. Since the railway has been extended we have had a considerable amount of capital brought to the field.
854. Then you think the extension of a line to Condobolin would lead to capitalists venturing there with a view to investing? Yes.
855. Thus developing the mineral resources of the district? Yes.
856. Do you think the Condobolin people would favour the direct line from Parkes *via* Bogan Gate, or from Parkes *via* Truudle? The direct route *via* Bogan Gate.
857. That would be because there would be less haulage for them? Yes.
858. You have stated that there is a greater amount of settlement to the north of the proposed line than to the south of it? Yes.
859. Is not the southern portion capable of great development of settlement? Every acre of it would be taken up for grazing as soon as it was thrown open. There is a tremendous amount of freehold land about there. Burrawang has 110,000 acres, Carrawobbity has 16,000 acres.
860. Although the owners of these hold such large portions, would there not be a possibility of their eventually leasing out the lands? Only the river frontages. The rest is not adapted for farming; it is stiff clay, myall plains.
861. Do you think the river frontages are suitable for farming settlement? Yes; there is magnificent soil along the river frontage.
862. But it is hardly likely that they would cut off the river frontages in consequence of the stock requiring the water? A big run could easily arrange for that. Burrawang has a frontage of 40 miles, and it could easily lease 20 miles of that for farming, and still have plenty of water for the stock.
863. You think that even with the private lands there is a prospect of future settlement by way of leasing? On the frontages, but not on that country along the Billabong.
864. Have you any idea what would be the additional mileage along the line by taking it to Trundle instead of by the direct route? I have seen it stated in the papers that the difference would be 7 miles.
865. What is the distance from Bogan Gate to Trundle? About 18 miles.
866. That is to the township? Yes; it has only three or four buildings.
867. Are there many settlers between Trundle and Bogan Gate? On each side of the road. It is a travelling stock reserve.
868. What is the route of the travelling stock reserve? It is on the road from Forbes to Dandaloo.
869. Is that *via* Bogan Gate? Yes.
870. Have you any idea what it would cost to cultivate the land and prepare it for wheat-growing at per acre? The country which was ringbarked three or four years ago has been cleared and burnt off at as low as 7s. 6d. per acre. From that it varies from 12s. 6d. to 15s.
871. What does it cost to plough and sow including cost of seed wheat, at per acre? I could hardly say.
872. Do you think it could be done at as low as 15s. an acre? I have heard from the farmers that that is what it cost them. They use stump-jumping machinery now, and do it much cheaper than they used to do it.
873. Have you any idea whether the proposed line passes over any country liable to flood? There may be a little backwash here and there from the Gunningbland Creek; but it certainly will not be deeper than from 6 inches to 1 foot.

874. You do not look upon it as a serious difficulty to overcome? No; it might only happen once in five years.

Mr. H. S.
Harwood.

875. Then you have no hesitation in recommending the direct route? Not the least.

23 Mar., 1895.

876. Mr. Gormly.] You have stated that the population within the municipality of Parkes is about 4,000—can you state what is the area of the municipality? Fourteen square miles.

877. With regard to the land on the frontage of each side of the Lachlan River, what portion of the country on the south side of the Lachlan River, as you get within 20 or 30 miles of Condobolin, would be served by the direct line of railway? Probably from about 20 miles east of Condobolin on the south side they might send their goods to the railway at Condobolin; but I think, above that they would send to Forbes. There is no bridge between.

878. And it would not be easy to construct bridges over the Lachlan River and the Billabong Creek; they could not be constructed cheaply? Not over the Lachlan.

879. The valley of the Lachlan is moderately wide? Yes.

880. There are some rich pasturages? Yes.

881. Do they carry a large amount of crop? The plains would carry three sheep to 4 acres.

882. Is there any considerable population on the south side of the river between Forbes and Condobolin? Not a great deal.

883. Much the same as on the north side? Not quite so much I think.

884. Held by large station holders? Yes.

885. All the land is good for pasture? It is beautiful pasture land.

886. Would a considerable quantity of land between the creeks running into the Lachlan be suitable for agriculture? Not away from the river.

887. But I mean close to the river—the river frontage? Practically, all the river frontage is suitable.

888. And the frontage is of considerable width? It might average about a mile out on each side—that is, the land suitable for agriculture.

889. Would it be suitable to carry a large population on small holdings? A man would want 640 acres.

890. Can they grow lucerne there? Yes, where it is not flooded.

891. Partial flooding does not kill it? As far as my experience goes, lucerne is destroyed if covered with water three days. When once the Lachlan is in flood it keeps up for weeks before the water drains off.

892. But that is not applicable to the whole of the depth of the frontage? No; it is only in the angles.

893. I suppose there is not any considerable depth of frontage flooded for any number of days in succession? No.

894. I should like to ascertain, if the line is constructed, about what quantity of the existing traffic in wool and stock in the direction of Cobaz would be likely to come towards Condobolin—for instance, would the traffic from the Melrose station come in? Yes.

895. And there is a considerable number of selectors there? Yes.

896. Would the Eremeran traffic come in? That is only 60 miles from Cobar.

897. The traffic from the direction of Gilgunnia would not come in? It would come in to Condobolin I think.

898. But Eremeran is nearer to Condobolin than Gilgunnia? It is nearer to Cobar too.

899. Are there many selectors on Melrose? Yes.

900. Have any of them gone in for wheat growing? They have; but I cannot give any names.

901. Have they sent all their wheat from there to Parkes? There is a mill at Condobolin to which it goes.

902. And they send their produce from Melrose to Condobolin? Yes.

903. Which way does the Witchellebar wool go? Into Carrathool.

904. From what extent of country west and north of Condobolin would the trade be likely to come to Condobolin if the railway were constructed? I should think about 70 to 80 miles north, until it competed with the Cobar line, and from 80 to 90 miles west; and from north-west it would come even further than that.

905. But, with the exception of the selectors at Melrose, only wool and stock would come in at present? It is the Western Division after you get 20 miles below Condobolin, and there are few homestead leases taken.

906. There would not be any traffic in that direction? Only in wool.

907. Is there a number of fat stock in the district of Condobolin? A very large number.

908. Do you think there would be many fat stock likely to travel on the line to Condobolin? Yes.

909. Would they be sent by the travelling-stock routes, or by rail? They are nearly always sent by rail now from the nearest stations.

910. Do you think the number of fat stock would be sufficient to materially assist the revenue derived from the line? I think so. At the present time a stock train goes from Forbes almost every week, and sometimes there are two and three.

911. Is the country on the frontage of the Lachlan River about Condobolin, considered good fattening country? On the south side it is.

912. And it is a considerable width, extending 6 or 7 miles out? More than that; 12 to 13 miles in places.

913. And there is a large number of fat stock produced on that country? Yes; it is very fattening.

914. Therefore you think fat stock might materially assist the revenue of the line? I am sure it would.

915. There are no freezing works in this district? No.

916. Any boiling-down works? Yes; about 4 miles from here.

917. Would there be likely to be any stock sent by rail to the boiling-down works? There would be.

918. Is any copper produced now at Mount Hope? Yes.

919. In considerable quantities? It has been very slack of late years.

920. Where is the copper likely to go if there is any considerable output? It will all come in at Condobolin.

921. Are the gold-mines around Mount Hope progressing, or are they at a stand-still? They are looking very well just now, only they are short of water.

922. They are not producing gold in any quantity at present? They have had to knock off crushing recently only for want of water.

923. Have you visited that locality? I have been there, but not for some years.

924. You are not aware whether they are likely to establish a permanent supply of water or not? They could easily do so, but they have not done so yet.

Mr. William Beeston Smith, railway station-master, Parkes, sworn, and examined:—

Mr. W. B. Smith. 925. *Chairman.*] Have you been here since the line was opened? Yes; the 18th December, 1893.

926. Where were you before that? At Goulburn.

23 Mar., 1895. 927. So that you did not know anything about the traffic in this direction until you came here as station-master? No.

928. Can you give the Committee any information as to the amount of traffic there has been since you have been here? Yes; I have prepared the following statement:—

COMPARATIVE Statement of Traffic and Revenue for Year ending 31st December, 1894, Parkes Station.

Goods.			Live Stock.								Wool.		Coaching.	
Inwards.	Outwards.	Revenue.	Inwards.			Outwards.			Revenue.	Bales.		No. of Passengers.	Revenue.	
			Horses.	Cattle.	Sheep.	Pigs.	Horses.	Cattle.	Sheep.	Pigs.	Inwards.	Outwards.		
Tons. cwt. qr.	Tons cwt. qr.	£ s. d.											No.	£ s. d.
4,586 4 0	4,048 4 2	12,930 8 3	32	6	652	...	81	222	17,628	30	68 4 5	...	13,005 6042	4,463 1 3

929. With regard to the inwards goods traffic—can you tell us what the bulk of the tonnage consisted of? The general goods would be about two-thirds, one-third being the special class—that is the inward.

930. *Mr. Chanter.*] Inwards means arriving at Parkes?

931. Can you tell us whether there has been a large quantity of agricultural implements brought into the district? There has been since I have been here. We have had a lot of agricultural implements in the shape of strippers, reapers, binders, ploughs, and harrows.

932. Has that been continuous? Yes; only the other day we had three ploughs through. Every month there is something of the kind coming in.

933. We want, particularly, evidence as to the outward traffic—what it chiefly consisted of? These figures are taken from returns. This is the description of goods:—General goods, 942 tons; wool, 2,192 tons; grain, &c., 415 tons; chaff, 467 tons; minerals, which would mean quartz, and so forth, 33 tons; total, 4,048 tons. From the first year there have been 16,025 bags of wheat—from January 1st to March 20th, 1895—sent away; bran, 450 bags; and 55 trucks of chaff.

934. *Chairman.*] In 1894, then, 415 tons of grain were sent away? Yes.

935. There are nine bags to the ton? Yes; and that would represent about 3,700 bags.

936. Was the 1894 trade for the grain of one season? Yes; it would form part of the season which is divided between the years.

937. During what months were the 415 tons sent down? I could not say.

938. *Mr. Molesworth.*] Was any portion of it this season's growth? I should think so.

939. *Chairman.*] I suppose there is no special rate for goods from here to Sydney? We have had hitherto what are called the local rates—that is, the rate added on from here to Molong, and then added beyond.

940. Is that only on goods sent from Parkes to Molong? No; there would be no special rate on the goods from Parkes to Molong.

941. But if goods are sent right through from Parkes to Sydney, you add something for the portion conveyed from Parkes to Molong? Yes; from here to Molong it is 53 miles. We take that mileage rate, and then begin again. Special Class A goods from here to Molong would be 6s. 3d. a ton. Then we start again, and for the whole distance from Darling Harbour £1 5s. 10d. a ton would be charged.

942. *Chairman.*] It really means that the people of Parkes are charged a little more by reason of their goods going to Molong? That is only on the special-class goods; but on the first, second, and third class they have through rates.

943. I suppose grain is subject to a special rate? Yes.

944. Has there been any complaint about that since the line was opened? No; I do not think so.

945. Can you tell us where the bulk of that produce comes from? No.

946. Is the bulk of the produce brought to the railway station conveyed there by the producers themselves, or by carriers? Carriers; and by many of the farmers themselves. Most of it is brought by carriers.

947. And who are the big carriers here? I do not know. This work is done through an agency.

948. I suppose Wright, Heaton, & Co. are the men who employ the carriers? Yes; I do not deal with the carriers, but with the agents.

949. During the time you have been station-master here you must have observed whether the traffic, both goods and passengers, has increased or gone backwards? I think it has increased; not a great deal, but it has increased, although I could not tell to what extent until I get into next season. I noticed there was an increase in January this year as compared with January of last year, but not much. It was a general all-round increase.

950. Both in regard to passengers and goods? Yes.

Mr. John Alexander Rose, commission agent, Parkes, sworn, and further examined:—

Mr. J. A. Rose. 951. *Chairman.*] I understand you wish to make an explanation in regard to the evidence you gave yesterday? I wish to remark that, knowing the country so well from the starting point, and that the terminal point of the line as projected, in my mind there is no question of doubt as to which line should be constructed. With regard to purely pastoral country, it is very hard to say what is purely pastoral country, for this reason, that I know of land that has been taken up in this district which, some years ago, we would not consider worth anything at all, but for which men now ask a certain price. I make this statement as a practical man who has been mixed up with pastoral pursuits for the last thirty-seven years. There has been country taken up in this district which is now doing fairly well, which, twenty years ago, we would not give 1s. an acre for—in fact, there was no value placed upon it.

952. Was that for pastoral or agricultural purposes? It has been taken up by the selectors, both for pastoral and agricultural purposes. Mr.
J. A. Rose.
 953. What you wish to convey is, that you must not judge by the present state of certain land as to what its ultimate benefit will be? What I wish to convey is, that lands which were considered worthless years ago are now of a certain value to the Crown. 23 Mar., 1895.
 954. That is in this particular district? Yes. I think the extension from Parkes to Condobolin via Bogan Gate is the proper one in the interests of the country.

- Reverend Frank Greenwood Neild, Incumbent, Church of England, Parkes, sworn, and examined:—
 955. *Chairman.*] Do you remember making a statement in December, 1891, to Mr. Gilliat, who visited the district at that time for the purpose of collecting evidence with regard to the construction of a railway from Parkes to Condobolin? Yes. Rev.
F. G. Neild.
23 Mar., 1895.
 956. Will you tell the Committee whether you still agree with that statement? I think I stated the population to be served by the line would be not less than 1,000—I did not mean the Trundle district, but from Parkes to Condobolin.
 957. Otherwise you agree with the statements you then made? Yes.
 958. You then predicted that settlement and agriculture would go on to a considerable extent in the district? Yes.
 959. Have your predictions been fulfilled? Settlement may have slightly increased. The areas which can be taken up, however, are very small, but agriculture has, decidedly, very largely increased.
 960. You are aware that there is a diversity of opinion as to the route of the proposed line—whether it should go direct, or be diverted in the direction of Trundle. Will you give us your views on that matter? Judging from the present population, I think a line taken in the direction of Trundle would serve the greatest number. The settlement is nearly all north and north-west of the proposed line.
 961. Do you go to Trundle occasionally? I used to go constantly. I know the district well.
 962. How long is it since you were there? About five months.
 963. What is the population of Trundle, and within 10 or 20 miles of it? About 300 or 400.
 964. And you think the line should go in the direction of Trundle? I think it should.
 965. Do you mean that it should actually go to Trundle? No; I think a detour of a few miles in the direction of Trundle ought to serve the purpose. At present it skirts the country—a low-lying country subject more or less to floods; and I think a few miles further to the north would place it within easy communication of the Trundle settlers—a distance of about (say) 8 miles. I understand that already it goes within 12 miles; that is on the edge of the low country and the red soil.
 966. Would the slight divergence you speak of enable the line to go direct as far as Bogan Gate? It could go direct to Bogan Gate.
 967. And then take a slight detour of about 4 miles? Yes.
 968. Forming a kind of elbow opposite Trundle? There is a slight elbow near Condobolin.
 969. I suppose that is to avoid the flooded country? Yes; the Billabong Creek waters.
 970. Judging from the map, the projected line is 2 to 3 miles from that creek? Yes.
 971. Judging from your knowledge of the country, is that within a portion of the land which would be occasionally flooded? I should think that would just about miss it.
 972. Then there would not be much force in your objection about the line being liable to flood? No.
 973. It has been suggested by other witnesses that we should not only help to serve Trundle, but the settlers considerably to the north of Trundle. If your suggestions were carried out, the settlers to the north of Trundle would not be served? I think if the line were brought within 8 miles of Trundle more traffic would come to it. There are a number of selectors north of Trundle who are at present using the Narromine Station.
 973½. Is your opinion backed up by persons whom you have met? A number of selectors in the neighbourhood of Trundle, and to the north of Trundle, seem very anxious that the line should go within reasonable distance of them.
 974. And from your knowledge of the district generally, you think that would be not only in their interests but in the interests of the State, by feeding the railway better? I think it would feed the railway. Of course there is another matter to look at, and that is the increase of distance. It would mean increased rates to the selectors and townspeople of Condobolin.
 975. Have you heard the Trundle people say that if the line does not go in their direction they will still cart their goods to Parkes or Narramine? I think it is very probable that a number would; a large number of these men cart their own produce.
 976. If they have to go 10 or 12 miles, would it be worth their while continuing for 30 miles? They would save about 20 miles haulage on the railway then. The distance between Bogan Gate and Parkes is about 22 miles.
 977. I understand your evidence is in the direction of the convenience of the settlers about Trundle? Yes.
 978. And looked at from that point of view, you think it would be advisable to construct a railway in that direction? Yes.

Mr. Robert Thornbury, grazier, Parkes, sworn, and examined:—

979. *Mr. Gormly.*] Have you any land in the neighbourhood of Parkes? Yes; about 3 miles away. Mr.
R. Thornbury.
 980. What quantity? Nearly 600 acres.
 981. What use do you put it to? Grazing.
 982. What quantity of stock do you keep upon it permanently? Between 200 and 300 head of cattle 23 Mar., 1895.
 the whole of the year.
 983. Do you keep fat stock? Yes.
 984. Do you sell it in the local market? Yes.
 985. What evidence do you wish to give in regard to the proposed line of railway? I have known the whole of the country for the last thirty years.
 986. Is it suitable for the construction of a line without engineering difficulties? The line from Parkes to Condobolin is one which could be very easily constructed. As far as I know, there are no engineering difficulties whatever.

- Mr. R. Thornbury.** 987. Have you been along the surveyed route? No; but I know pretty well the direction the line will take.
- 23 Mar., 1895. 988. Would any portion of the line be likely to be flooded? The line is outside the flooded country.
989. What would be the cause of the flood waters;—would it be the Gunningbland or the Billabong Creek? The flood waters extend out from the Lachlan to Burrawang.
990. Near to the proposed line? Yes.
991. Could the low country be avoided by the route which the line proposes to take? Yes; I believe the line has avoided most of the low country.
992. Are you well acquainted with the district? Yes; I know every mile of it.
993. Is the population increasing? Yes.
994. Do you know whether any of the farmers are preparing more land this season than last season for cultivation? Yes; they have been increasing the quantity of their agricultural land for the last two or three years—some of them largely.
995. Have you seen wheat and other crops grown? Yes.
996. Is the land suitable for wheat? Yes.
997. Can the land be cleared and cultivated cheaply? Yes.
998. Have you been acquainted with agriculture in any other districts? Yes; in New England and other districts.
999. Is this as favourable to the production of wheat as any other district with which you are acquainted? Yes.
1000. To cultivate the land cheaply and get a good yield? Yes.
1001. Is there any other statement you wish to make as to any advantages the inhabitants would derive from the line, which have not yet been stated? I think Mr. Harwood gave correct evidence with regard to the proposed line; I think it will be the most beneficial to the greater portion of the population. It will serve both Trundle, and those on the south side of the Lachlan River. The line from Bogan Gate to Condobolin, will only be a few miles from Trundle. The population at Condobolin is very scattered.
1002. You are acquainted with the formation of the country on the proposed line? I am.
1003. Do you think that is the most suitable route along which to construct a cheap line? I do.
1004. Less engineering difficulties would be met with there? Yes.
1005. Would it serve any number of persons on the north and south sides of the river? Yes; they would not be more than 8 miles from the line.
1006. There is not a great number of people there? No.
1007. And those on the south side would not be able to cross in flood time? No, there are no bridges.
1008. Then it could not serve them to any great extent? No; not in flood time.
1009. There are, of course, roads up and down the river, and the inhabitants would go to Condobolin or Forbes with their produce? Yes.
1010. Can you tell us of any other resources besides agriculture and stock which would be likely to be developed by the construction of the line? I think gold-mining would be likely to be developed.
1011. In what particular situation? To the north of the proposed line. It is all auriferous country in that direction. Not a great distance from Trundle they are getting gold now.
1012. Are there many men working at those mines? I have not been out there lately, but I think there must be a fair population. The line *via* Trundle to Condobolin would be a more expensive one than that *via* Bogan Gate. It is nearly all hilly country leaving Trundle until you get to Condobolin.
1013. Is there much water coming down along the depressions between the Hills? Not a great deal.
1014. Then it would not be necessary to make a large number of culverts? You would have to make a great number of culverts on the Trundle line.
1015. *Mr. Molesworth.*] Do you think, from your knowledge of the district, that there is sufficient justification for the construction of a line from Parkes to Condobolin? Yes.
1016. Do you think the line would pay within a short time of its construction? It will when the lands are thrown open. No doubt a large quantity of land will be taken up when the leasehold areas are thrown open. I know a large number of people would be likely to live on the land at the present time.
1017. You are quite satisfied that the direct line will be the most desirable in the interests of railway construction generally? Yes.
1018. And I presume that the people at the other end would strongly advocate the direct route with a view of saving haulage? Yes.
1019. How would the Trundle people be affected in the event of the line going direct;—would many of them be prevented utilising it by reason of its distance from them. I do not think so. They would only have 20 miles to cart their stuff to Bogan Gate.
1020. What is the distance by road from Parkes to Trundle across the hills? I think about 35 miles.
1021. What is the distance from Trundle to Bogan Gate? About 15 miles.
1022. And all the settlers, or those who are likely to utilise the railway at all, would be within 20 miles from that point? Yes.
1023. You think all within 20 miles of Bogan Gate would utilise the proposed line at that point? Yes.
1024. *Mr. Chanter.*] I understand your holding is close to Parkes? Yes.
1025. So that personally this line will not affect you, no matter where it goes? No.
1026. You stated that you were carrying 200 head of cattle on 600 acres, and you also said that you had a leasehold;—what is the extent of the leasehold? I leased different farms at times. Sometimes I had more than 200 head of cattle, and then I leased different places from selectors round about.
1027. You deal in stock? Yes.
1028. You do not farm? No; I have a lucerne paddock—that is all.
1029. Have you grown lucerne with success? Yes.
1030. How long is it since you planted? About four years.
1031. Does it hold? Yes; very well.
1032. Do you cut or graze it? I graze it. It will carry about one beast to the acre.
1033. You believe that a line can be constructed more cheaply, as proposed, than if it is taken in a northerly direction by way of Trundle? Yes.
1034. Do you anticipate, at any future time, the land, when made available for selection south of the line, will be used for agricultural purposes? Not for agricultural, but for pastoral purposes.

1035. As a matter of fact, if agriculture extends in the district it must extend to the north of the line? Yes.

Mr. R.
Thornbury.

1036. And not to the south? No.

23 Mar., 1895.

1037. If your farm of 600 acres were situated 20 miles north of Bogan Gate, and you were not dealing in stock, but had to obtain a living from that 600 acres of land, do you think you could do it? No.

1038. Then, if you could not do it, it is fair to assume that others could not do it? They might make a living, but it would be a very small one.

1039. How many days would a cartage of 20 miles involve. It would take two days—one to come in and one to go out.

1040. You have heard the evidence of Mr. Neild, who expressed the opinion that the line should be detoured 4 or 5 miles to the north? Yes.

1041. That would put the settlers in the Trundle district 15 miles from Bogan Gate? Yes.

1042. Would not that be sufficient for them? If there were a detour of 4 or 5 miles the line would run into hilly country.

1043. Is the country very hilly there? It is undulating; some of the hills are pretty rough.

1044. Where does the road traffic from Condobolin to Parkes go now? It goes by the Bogan Gate and on to Burrawang.

1045. As nearly as possible along the route of the proposed line? Yes. I think the line is a little to the north of the road.

1046. Then, if the general traffic can go there, of course the railway can go? Yes; it is always high and dry, even in large floods. I have had to go from Condobolin in heavy floods. It was impossible to get to Forbes, but I have come up to Parkes and been dry all the way.

1047. You are aware that there can be no land made available for settlement along the direct route, except for special legislation, for the next five years? Yes.

1048. That being the case, are there any other reasons to suppose settlement will increase by any other means;—could any leases be obtained from the large holders? I do not think so.

1049. Would they themselves be induced to produce other than stock or wool? I do not know.

1050. You know that in some other districts of the Colony the pastoralists are subletting their holdings for agricultural purposes? Yes.

1051. Have you had any conversation with anyone who has shown a disposition to obtain a lease or give one? Not in the district.

1052. You think matters will remain as they are until a settlement can be obtained by the occupation of the Crown lands? I think so.

1053. Evidence was given before a Government official in 1892 to the effect that this land should be made available for settlement in special areas of 640 acres? Yes.

1054. From your own knowledge of that country, and more particularly of the south—because the north, with the exception of some 76,000 acres is already taken up;—do you think anyone could get a living there upon 600 acres of land? They might live upon it, but it would be a bare living. I do not think that anyone could make a living on less than 2,560 acres; they must run stock as well as go in for agriculture. They must combine the two industries.

1055. Therefore the opinion given that the lands when made available should be made available in special areas is not a sound one? No; the area should be increased.

1056. What is the value of land per acre in that locality? I could not say.

1057. The selections about Trundle are mostly taken up under ordinary conditions at £1 per acre? I believe some have been sold at 12s. 6d. an acre.

1058. Is the land along the line of route worth more or less? More, I think.

1059. Would that be in consequence of its being close to a railway, or because of the nature of the soil? Both, I think.

1060. And if the Crown were to offer that land at 30s. per acre, with a reasonable area, on deferred payments, would the whole of it be taken? I believe every acre would be taken if it were offered on reasonable terms.

1061. And held permanently? Yes.

1062. Do you know anything about the settlement around Condobolin proper? Yes.

1063. How many settlers will there be in the neighbourhood of Condobolin proper? I could not say; I know a large number of people have taken up land there within the last few years.

1064. Are many of them at present growing wheat? A number are. I know a large quantity of wheat came to Parkes from Condobolin this season, and from Melrose also.

1065. I suppose the greater portion of the wheat grown at Condobolin is used for home consumption? Yes.

1066. Is there a flour mill at Condobolin? Yes.

1067. Do you think, if the line is extended to Condobolin, agriculture will increase very much in that district? Yes.

1068. You think the soil is suitable for it? Splendid soil—red chocolate loam.

1069. Then you are of opinion that the interests of the whole community would be best served by constructing the line as proposed? Yes.

1070. [Chairman.] You seem to have a general knowledge of the land along the Lachlan River? Yes.

1071. To what distance along the river do the floods extend? Seven or eight miles, in places.

1072. Have you heard of any serious result from flooding? Yes; there have been frequent floods.

1073. What kind of country would that be through which to construct a railway? Very bad. The line would have to be constructed on piles for 8 or 10 miles.

1074. Where is the market for your stock? I sell locally.

Mr. Harry Bowditch, journalist, Parkes, sworn, and further examined :—

Mr. H. Bowditch 1075. *Chairman.*] I understand you have some details as to the rainfall of the district? Yes. Mr. James Millar, the Mining Registrar, who supplies Mr. Russell with his information, gave me this :—

23 Mar., 1895.

Rainfall for 1894.

(Parkes Examiner, 9th January, 1895.)		Points.
January, 11 days.....		330
February, 4 "		253
March, 14 "		530
April, 6 "		443
May, 4 "		145
June, 12 "		226
July, 14 "		280
August, 11 "		183
Sept., 9 "		266
October, 9 "		191
November, 2 "		44
December, 9 "		342
Total, 105		3,233

The heaviest fall in one day was 208 points, on the 19th April.

Following is the rainfall extending over a period of five years :—

	Points.
1890 ... 114 days	3,117
1891 ... 120 "	3,631
1892 ... 110 "	2,796
1893 ... 115 "	2,478
1894 ... 105 "	3,233

The rainfall is taken in points, of which 100 make an inch. The fall for the year just closed was, therefore, 32½ inches. The average fall per year over a period of five years was 30½ inches.

There was an average for five years of 30½ inches. Besides that an entirely independent record kept by Mr. F. H. Black, of Goobang Creek, gives the rainfall from 1887 to 1892 :—

Rainfall at Parkes.

(Parkes Independent, 3rd January, 1893).		Points.
1887		3,479
1888		1,360
1889		2,525
1890		3,149
1891		3,254
1892		3,092

Average rainfall for the six years given, 2,799 points.

That shows an average for six years of 27.99 inches.

Mr. Amable Mazoudier, storekeeper, Parkes, sworn, and examined :—

- Mr. 1076. *Mr. Molesworth.*] How long have you resided in the district? About twenty-one years.
 A. Mazoudier 1077. When you first came where was the nearest point of railway communication? Blackheath, I think; a long way down the line.
 23 Mar., 1895. 1078. Have you been in business as a storekeeper the whole of that time? Yes.
 1079. You have had an opportunity of noticing the development of the district? Yes.
 1080. Do you consider the progress of the district has been particularly marked during the last five years? The town itself has progressed, but not business.
 1081. Do you mean your own particular business? I mean all business. I do not think it is half so good as it used to be.
 1082. But if the population has increased to such a large extent there must necessarily have been a larger extent of business done? Yes.
 1083. At one time, I suppose, there were not so many people amongst whom to divide the business done? No.
 1084. Then, business is done, but it is divided? Yes.
 1085. Do you think the business done is of a stable and firm character? Yes.
 1086. Do you consider the people in and around the district are fairly prosperous? Some of them.
 1087. Do you find the settlers are doing fairly well with their holdings? I think a good many are hard up.
 1088. At the same time, they raise a large quantity of produce? Yes; but the price is low.
 1089. You have not heard of many of them being so far pressed as to be obliged to part with their holdings? Very near.
 1090. Do you know anything of the country through which the proposed line would pass? I travelled it thirty-five or thirty-six years ago.
 1091. Have you not been along it more recently than that? Not since 1877.
 1092. Do you know anything about the Bogan Gate district? Yes.
 1093. How long is it since you were there? About the same length of time ago.
 1094. Have you not been outside the immediate vicinity of Parkes of late years? Not much.
 1095. What do you think has been the effect of the construction of the railway from Molong to Parkes—has it improved matters? I am sorry to say I do not think it has improved matters.
 1096. You think you would have been as well off without the railway? Better.
 1097. Then you do not advocate the construction of railways? I do not. I think a line to Condobolin will be a failure.

Mr. William Metcalfe, hotelkeeper, Parkes, sworn, and examined :—

- Mr. 1098. *Mr. Gormly.*] How long have you been in the district? About twenty years.
 W. Metcalfe 1099. Do you know the district intimately outside the town? Yes; I am pretty well acquainted with it.
 23 Mar., 1895. 1100. Do you know anything as to the progress of agriculture in the district? It is progressing favourably.
 1101. Have you an intimate knowledge as to how agriculture is being carried on? I think it is carried on pretty successfully.
 1102.

1102. What evidence can you give in regard to the proposed construction of the line? My evidence corroborates that of Mr. Thornbury, except in regard to the Trundle portion of the line. He states that there would be great engineering difficulties if the line were brought to Trundle, but I cannot see that at all. Mr.
W. Metcalfe.
23 Mar., 1895.

1103. Are you acquainted with the country between Parkes and Trundle, and Parkes and Condobolin? Yes; intimately.

1104. Have you been over the country many times? Yes; several times.

1105. Have you been over the proposed route of railway? Not since it was surveyed.

1106. Do you think there will be more engineering difficulties to be encountered on the route *via* Trundle or on the direct route? I think there are less engineering difficulties on the direct route. As a matter of fact, you could scarcely say there are any engineering difficulties on either route. I think a line could be constructed almost as cheaply *via* Trundle as *via* the direct route.

1107. *Mr. Chanter.*] Has trade and agriculture increased, consequent on the construction of the line from Molong to Parkes? It has, and it is likely to increase. The squatters have gone in for clearing large tracts of country, such as 1,000-acre blocks. I know of squatters who have men clearing 2,000 acres. Mr. Ewan is going to clear large blocks on Gunningbland.

1108. Then there is a disposition on the part of landholders to go in for agriculture? Yes.

1109. Do you think that if the line is extended to Condobolin, there will be a further disposition on their part to go in for it? I think so. Wool is cheap, and they are going in for agricultural pursuits.

1110. Do you know whether the construction of the line to Parkes has had a very beneficial effect upon trade and agricultural and pastoral pursuits? I think it has had a great deal to do with increasing the farming, but there is a universal depression, and of course Parkes is feeling it.

1111. From your knowledge of the district do you think the cost of the line would be materially increased if it were taken further north? No.

1112. Where is the greatest settlement now? From Parkes to Fifield.

1113. In what direction? It lies to the north-west of Parkes.

1114. That is in the direction of Trundle? Yes; and west of Trundle.

1115. You have bad conversations, I suppose, with the farmers as to their position;—what is their opinion about throwing open the lands in this district for special areas? They are all on for having the land thrown open to take up free selections.

1116. Have there been any special areas selected in the district? Not to my knowledge.

1117. They are nearly all large holders here? Yes.

1118. And notwithstanding the depressed times and the low price of produce they are fighting on bravely? I think they are in a solvent state.

1119. Do you look upon them as permanent settlers? A great many of them.

1120. One witness stated yesterday that possibly some of them had taken up the land for speculative purposes to sell again—are there many of that class? That is more than I could swear to. I have not the opportunity of knowing. I have heard several of them speaking, and they seem to be well satisfied with their position.

1121. Are any inquiries made of you as to whether land can be taken up in this district? Yes; I have had letters from Victoria.

1122. Numerous inquiries? Yes.

1123. If any special legislation took place to make the land available for settlement along the line of route, there would be plenty of *bona-fide* settlers to take it up? In my opinion there would be any amount.

1124. Is there any disposition on the part of young men, farmers' sons, or sons of tradesmen in Parkes, to enter into farming pursuits? Yes; farmers' sons more so than townspeople.

1125. What area of land do you think should be given to a selector from which to make a reasonable living? I should say about 1,500 acres.

1126. Do you think permanent homes would be founded upon it? Yes; I think they could make a comfortable living on 1,500 acres with agriculture and grazing combined.

1127. If you were going to construct a line yourself, as a commercial venture, where would you take it—as proposed from Parkes to Condobolin, or where? If I were one of a syndicate to construct a line I would construct it *via* Trundle.

1128. Would you take it right through the village of Trundle? No; I would take it as close as I could get to it.

1129. What is the nature of the country from Parkes to Trundle? It is all good.

1130. Is it very hilly? No.

1131. What is the nature of the country between Trundle and Condobolin? Good country; much the same.

1132. Is it hilly? No; although it is more so than by Bogan Gate.

1133. If you were one of a syndicate, then, making the line, how much further north would you take it? About 8 miles from Bogan Gate and 4 from Trundle.

1134. Then, on the whole, you are satisfied with the progress trade has already made here, and do you think it would be improved if the line were carried forward? Yes. Of course, when you get to Condobolin, there are the Mount Hope copper mines not very far away, and I have no doubt that if they had cheap carriage there would be a great many men employed there.

1135. How far would they be from the nearest point of the proposed line? About 65 miles.

1136. And they would have to cart their produce that distance? Yes.

1137. Would this line in any way contribute to their success? I think so.

1138. Have you any particular knowledge of the settlement around Condobolin proper? No; but I know they are getting gold from the districts, and if it turns out a reefing district of course there will be a large population there.

1139. *Mr. Molesworth.*] You advocate the construction of the line within easy distance of Trundle? Yes; about 4 miles.

1140. Do you know the country well between Parkes and Trundle? Yes.

1141. Have you ever travelled from Parkes to Trundle? I know the country thoroughly, and I have travelled in it; I was the contractor for the Parkes to Trundle telegraph line, and erected the same.

1142. When you have gone to Condobolin, what road have you taken? The river road, and that by Bogan Gate.

1143.

Mr. W. Metcalfe. 1143. Then you have no actual knowledge of the features of the country between Bogan and Condobolin ? Yes ; I have travelled it backwards and forwards.

23 Mar., 1895. 1144. Have you travelled the country backwards and forwards between Trundle and Condobolin in a direct line ? No ; but I have been across the direct line.

1145. Then you are hardly in a position to state what the engineering features are ? From what I have seen, I should not think they were great.

1146. Do you think the increased cost of construction and the increased mileage would justify the line being taken *via* Trundle ? The greatest obstacle in the way is the extra carriage on the people of Condobolin and the people down the river.

1147. Do you think, if the line went by Bogan Gate, that when the Crown lands at present under leasehold were thrown open that would be a centre of population too ? No doubt it would.

1148. But you are under the impression that the line should deviate by way of Trundle or thereabouts ? Yes ; there is never likely to be much settlement on the south of the line—that is, the line by Bogan Gate. It is all flooded marshy country.

Mr. Walter Alfred Lorking, postmaster, Parkes, sworn, and examined :—

Mr. W. A. Lorking. 1149. *Chairman.*] How long have you been here ? Twenty years.

23 Mar., 1895. 1150. You supplied certain information on postal matters to the then Mayor at the time the Sectional Committee visited Parkes in connection with the construction of the Molong to Parkes railway ? Yes.

1151. Can you tell us whether, since you furnished particulars in 1890, there has been a material increase in the revenue of your Department ? Yes ; the telegraph revenue has about trebled, and the postal revenue and the money order revenue has increased too.

1152. How about the Savings Bank business ? That has increased too ; but I may state that this year there may be a slight decrease. The railway year, of course, was the largest year we had.

1153. During the railway year there were a number of employees here, who were not permanent residents, and who have gone away, who use the Savings Bank ? —

1154. Independent of that year, has the increase in business from 1890 up to the present time been very large ? Yes.

1155. Have your Savings Bank accounts been increasing lately ? Yes ; decidedly. They have increased greatly since the bank suspensions.

1156. Have you any large amounts over £200 ? No ; people do not receive interest on amounts over £200. I may state that for the three months—November and December, 1893, and January, 1894—the revenue was from stamps £578 16s. 6d., or an average of £2,315 6s. per annum. In 1893-4, the postal notes for the corresponding quarter amounted to £108 1s. 3d., or an average of £432 5s. per annum. In November and December, 1894, and January, 1895, the total stamps sold amounted to £556 19s. 6d., or an average of £2,227 18s. per annum.

1157. You must have observed generally what the state of the town has been since the opening of the railway ;—do you think it has improved or otherwise ? I think it has increased, but the town has suffered under the general depression. Comparing my office with those of most other towns, I should say it shows a less decrease than most of them.

1158. The Report of the Postmaster-General will prove that Parkes post-office compares favourably with the offices of other inland towns, and shows a better state of business ? Yes.

Mr. John Lohan, manager for Wright, Heaton, & Co., Parkes, sworn, and examined :—

Mr. J. Lohan. 1159. *Chairman.*] To where does your district extend ? Sometimes as far as Condobolin, but principally on the Peak Hill Road down the Bogan way. I heard a statement made this morning by the stationmaster which may have left a wrong impression with regard to the rate for grain. I spoke to him afterwards in the Court, and, I understood, that grain going on would cost something like 16s. 5d. a ton.

1160. With 6s. 3d. added ? That is not so with the grain. He quoted the "A" class, which is carried at the through rate. All the farming produce of the district is carried at the through rate. The Commissioners have made that arrangement. He has quoted the "A" rate, and that is for 1 ton of any ordinary class of stuff under that rate going down ; but any farming produce, such as wheat, is carried at truck rates, and they have a through rate for it. It only really amounts to 12s. 6d. a ton right through to Sydney.

1161. And that does away with the local rates ? Yes. From 251 to 275 miles it is 12s. 6d. a ton, and our distance from Sydney is 270 miles.

1162. How long has that been in existence ? From the year the line opened.

1163. How long have you been here ? From 8 months before the line opened until now. The contractors were running the railway, and we were managing the traffic for them.

1164. *Mr. Chanter.*] That was before it was officially taken over ? Yes.

1165. Is the wheat carried by actual weight, or so many bags to the ton ? By actual weight. It is really nine bags to the ton, but, of course, it all depends whether the wheat is stripped or not, and whether the wheat is good or bad.

1166. That will work out at 4d. a bushel ? Yes, at 4d. per bushel.

1167. *Chairman.*] You know the projected line, as shown on the wall map ;—can you give the Committee some evidence as to the extent of your business in a westerly line from Parkes, taking in Trundle on the way to Condobolin ? As far as the Condobolin traffic is concerned, there is really nothing going from here. In fact, in twelve months only 30 tons have gone forward from here.

1168. That is of general goods ? Yes.

1169. That is a very small quantity ? It is.

1170. Where do they get the goods from ? Mostly from Forbes. It is really only on special occasions that they get goods from here. The reason of that is, that the recognised road, from the time the railway was at Orange, was through Forbes to Condobolin ; and at the time the railway was constructed to Molong, and the line was taken across through Cowra, the latter was the principal station which fed the Lachlan. Both roads go through Forbes—it is the one from Orange and one from Boreenore.

1171. Which is the shorter road—from Forbes to Condobolin or from Parkes to Condobolin ? From what I can understand they are about the same distance.

1172.

1172. Which do you consider the better road? I consider the Forbes road the better road for carriers Mr. J. Lohan. to travel on.

1173. For what reason? They state that in travelling on the road from Parkes they are shut up, and in travelling on the other road they have plenty of country upon which to turn their horses. In a wet season they come up the back road to Parkes.

1174. Is the lower road often affected by floods? It is only supposed to be about once a year, and probably not that. It was so last year.

1175. I suppose one road is as good as the other for travelling upon? Yes; weather permitting.

1176. Is there a stock route from Forbes to Condobolin? I could not say, but I should think there is.

1177. Without looking at the matter from an engineering point of view, but from an ordinary person's point of view, do you think it would be easier to construct a railway from Parkes to Condobolin, or from Forbes to Condobolin? I should not think there would be much difference, but I should think that a line constructed from Parkes to Condobolin would cut off about 20 miles of railway from Sydney. That would catch goods from a radius of 25 or 30 miles, which might probably go to other places. There is a difference of about 7s. 6d. a ton for 20 miles in the ordinary class of traffic, which will permit a carrier to carry it about 25 miles for the same money.

1178. Seeing that the road along the Lachlan is subject to floods, would not that make it awkward to construct what is called a surface railway? I should think so; but I think the question was put to me in regard to the distance.

1179. No; in regard to the character of the country for constructing a cheap surface line of railway;—which would be the better road to take it? I certainly think from Parkes to Condobolin.

1180. You have told us that within twelve months, only 30 tons of general goods were sent from Condobolin to Parkes; have you any information as to what quantity of goods have been sent in the same period from Forbes to Condobolin? No.

1181. Will you give us some information as to the inwards traffic which came through your firm, from the westward, from Condobolin, from Trundle, and from intermediate places during the twelve months the railway to Parkes has been opened? From Condobolin there has not been more than about 5 tons of ordinary goods that have come through. There have been about 2,000 bales of wool from the Condobolin district.

1182. Has there been any agricultural produce from Condobolin? Yes. There has not been more than about 1,000 bags of wheat which have come through from there. I might add that there is plenty of wheat at the present time lying idle at Condobolin, but they cannot get it through at the present low price.

1183. That means, that it is not worth their while to pay the carriage to bring it through? Yes; notwithstanding that they are carrying it from Condobolin from 10s. to 12s. 6d. a ton.

1184. Then, if the railway were constructed between the two places, they would not be able to pay the railway rate if they charged 7s. 6d. a ton from Parkes to Forbes? That is on the ordinary class of goods. There is a lot of difference between the ordinary class going through and the special class coming back. For instance, for goods coming from Sydney we are paying, for general merchandise, £7 a ton. We are returning the farming produce for 12s. 6d. a ton; so that it will make a small difference more from Condobolin than it does from Parkes.

1185. *Mr. Chanter.*] What would it amount to for 328 miles? From 326 to 350 miles the charge is 13s. 3d. a ton—that is, 9d. a ton more from Condobolin than from Parkes, provided a through rate is given.

1186. *Mr. Molesworth.*] Would there be no special charge for a local rate? No, not on the existing lines.

1187. *Chairman.*] Then we can say 9d. a ton would be the extra freight from Condobolin to Parkes for agricultural produce? Yes, provided a through rate is given:

1188. When you said just now that there was a lot of stuff lying there, which they could not afford to pay carriage for, you did not give us any idea as to the quantity? I only know it from hearsay. I was informed that one farmer at Melrose had 2,000 bags of wheat lying there; in fact, he asked me if I would try and arrange teams to bring it for him. But at the price offered—1s. 6d. a bag—no teams would accept.

1189. Other farmers also have wheat lying there? Yes; I believe so.

1190. Is that exceptional, or has it only occurred this season? It is only this season that I know it has happened, and I believe it is the first time. It is only since the line came through to Parkes that the farmers have gone in for wheat-growing.

1191. What has been the quantity of stuff brought in by your firm, between Condobolin and Parkes? Wool is really the only article which has been passed through us.

1192. I am speaking of the direct line now, within 10 or 15 miles on either side? Would that embrace Trundle?

1193. No; I want to get Trundle separately if I can? I could not tell you.

1194. I suppose the bulk of what you bring in on the direct line is wool? Yes.

1195. Do you bring in much grain from the west to the Parkes railway station—from the west of Parkes? Yes; a great deal comes in, but we do not really treat with it. The grain is scarcely in our line. It is bought by the agents in Parkes, and the teams which take out the general goods bring it back and deliver it, and the agents pay them.

1196. And they are not chartered by you? No. We send them out with the goods, and on their return they bring wheat back, but it does not come to us.

1197. Is the wool dealt with by you through chartered waggons? Yes; principally.

1198. But the grain crops, I suppose, are carried by independent carriers, or by the producers themselves? Quite so.

1199. Is any brought through your firm? No; there have been very few lots which have come through from Condobolin where we have paid carriage on it.

1200. Is there anyone here, or in Trundle, who could give us evidence in that direction. Is there any firm of carriers, or do they all work on their own account? I think the man who would be able to give best evidence on that point is *Mr. Wise.*

1201. Can you tell us what quantity of wool has been brought in from the west of Parkes to the railway station during the last twelve months, through your firm? I should say a fair estimate would be about 6,000 or 7,000 bales.

1202. What is the charge per ton for bringing it in? The charge from Trundle, which is, I think, about 35 miles, is £1 to £1 5s. per ton.

1203.

Mr. J. Lohan. 1203. And how much is it from Bogan Gate? £1. I could give you the prices of some of the stations. There is Gunningbland, for instance, which, I think, falls in somewhere near the Bogan Gate, which has been brought in for 10s. a ton; and wool from Condobolin has been brought here for £1 7s. 6d. per ton. 1204. What would be the rate for that kind of freight from Condobolin to Parkes by railway? The stations are mentioned in the Government rate book, and, by finding a station on the west the same distance as Condobolin is from Sydney, would enable us to arrive at the rate which they would charge. I may state that we have a local rate here, but it is only on the special class of goods. I will give you the through rate on the first, second, and third-class goods. They are charging the local rate on the special class—that is, the special A and B.

1205. What kind of goods are they? Sheepskins and produce of any description in small quantities—that is, going back; and coming up there is rock-salt and grain of every description. That travels in the A and B class.

1206. I suppose there is very little going? Very little. I find that Trangie is 322 miles, and Nevertire 342 miles from Sydney. The charge for the carriage of greasy wool from Nevertire is £3 15s. 7d., and washed wool £5 a ton. From Trangie the greasy wool is carried at £3 13s. 11d., and the washed wool at £4 16s. 8d. I understand that Condobolin will be about 328 miles from Sydney, and the Trangie rate would be about the amount which would be charged for the carriage of wool from Condobolin if the railway were constructed there. The rate from Parkes to Sydney for greasy wool is £3 7s. 8d., and for scoured wool, £4 8s. 8d., leaving a difference of 6s. 3d. for the carriage between Parkes and Condobolin—say 6s. 6d., allowing 3d. for the extra 3 miles.

1207. Then, if the line were extended from Parkes to Condobolin, the extra railway freight on greasy wool between those two places would be 6s. 6d. a ton, and on scoured wool 8s. 6d. a ton? Provided they do not add a local rate to it.

1208. And as far as you know, during the last twelve months 2,000 bales of wool have been brought in from Condobolin to Parkes? Yes.

1209. And the intermediate traffic is in wool as well? I should say the intermediate traffic would be about 6,000 or 7,000 bales.

1210. Then, of course, in regard to the intermediate traffic the freight would also be reduced gradually? Yes. Of course the further they go with the railway the less the freight becomes in proportion to the distance.

1211. Although you have not had much grain brought in direct to your firm from the west and north-west of Parkes, I dare say you have heard a good deal of comment amongst carriers as to the proposed railway? Yes.

1212. What appears to be their opinion as to the route the railway should take—direct, or by way of Trundle? They have expressed the opinion that it ought to go direct, in order to make the route shorter. Their argument is that the Trundle people, and those within a radius of 10 or 12 miles of the line, are just as well off as if they were right upon the line itself.

1213. Seeing that the Condobolin people will not bring grain to Parkes, the distance being so great, can you tell us what distance will, under ordinary circumstances, compensate a grower to cart his produce to a railway station? It all depends on the price.

1214. Of course the grower must take the good with the bad, he does not regulate the prices? For instance, if a man receives 3s. a bushel one year for his wheat, and 2s. the next, it really does not pay him to cart for 2s. any distance at all.

1215. But wheat is only fetching about that price now? Yes; that is the reason why it is remaining at Condobolin.

1216. My question was—What distance, taking good seasons with bad seasons, do you think it would pay a wheat-grower to cart his produce to a railway station? I do not think it would pay him outside 10 or 15 miles.

1217. As far as you know, has all the grain which has been brought into Parkes found a ready market locally, or has it had to be shifted by railway? There have always been buyers here at the price.

1218. Do you know any that has had to be stored here, because it could not be sold? I know of none. I know of a few loads which have been sent to Sydney, and which have been stored. They were not satisfied with the price here.

1219. Was that exceptional? It was.

1220. Have you travelled the country west of Parkes? No, I have not done so. I heard mention made this morning of machinery coming to the district. At the time the contractors were running the line here a great many strippers, binders, and ploughs came forward, and since then they have been coming very constantly every season.

1221. You have observed that? I have. I have had a great deal to do with them. The station-master in his evidence this morning made it appear that the wheat received at the railway station was for two seasons. I think, if he refers to his books, he will find that it is only for one season. Of course there may be some farmers who held part of their crops from one year to the other, but that would not be known. The wheat which may come forward in January or February, 1894, would be really 1893 wheat.

1222. He was not able to separate them? No; very little went through in the beginning of the year. They did not appear to be prepared for it. It was really taken in the last part of the season. Of the 3,700 bags of grain, which went by railway from Parkes, and the 467 tons of hay which went at the same time, the greater portion went in November, 1894.

1223. Therefore, that would really be only one season's crop? Yes.

1224. Are there any other industries of which you are aware which have latterly conduced to increase the trade of the railway, such as mining? No; I have had two loads of quartz brought from Condobolin to the battery to be tested here, but that is really all that has come from the district, and, I think, in connection with that matter, that if they found that it was good paying stone, they would erect a battery at Condobolin; so that really no revenue would come to the railway from quartz in that district.

1225. Has much machinery been sent to the Parkes mines since the railway has been opened? Not a great deal.

1226. You had some experience of running goods into Parkes before the line was completed? Yes.

1227. Did you get heavy tonnage with the contractors? I got special rates, higher than the Government charge in some instances, and lower in others. On the railway they have various classes, the average of which would be lower than what the contractors generally charged; but for the higher class of goods, the contractors charge less than the Government.

1228.

1228. Have you to make an arrangement of that kind with the sanction of the Government? The Mr. J. Lohan contractors arranged to pay the Government one-third of the amount for the use of their rolling stock, and in connection with this line they arranged the rate at 7d. per ton per mile. That was found too high, 23 Mar., 1895. and they reduced it to 5d.

1229. Did it pay you better to bring the stuff in that way than to enter into the ordinary contract with teams? It was the same to us.

1230. The same margin of profit? Yes; with the exception that we had a little more work at this end to remove the goods to the stores, whereas the teams delivered.

1231. Mr. Chanter.] The Chairman has asked you a question as to the opinion of the carriers, with whom you do business, as to which route the line should follow. I think, as a matter of fact, they would prefer to see no railway at all? I do not think the carriers would care a great deal for it at the present time. The carriage is a mere nothing from here to Condobolin. Certainly it would put them out of some employment. I believe they would prefer to see matters remain as they are, for what little work there may be between the two places they will get, although it is not a livelihood for them.

1232. In answer to the Chairman you stated you had offered, on behalf of your firm, Is. 6d. a bag carriage from Condobolin to Parkes, which they declined to take;—did they make any statement as to what they would carry it for? They stated that they would take it at 2s., and at that time wheat was being brought from 20 to 30 miles below Condobolin for 2s., but the teams only made one trip of it.

1233. Can you give any information in regard to the present passenger traffic between Condobolin and Parkes or otherwise? There is really no coach run between the two places. The coaches run from Forbes, and passengers wishing to go to Condobolin from here, have to go to Forbes or Trundle and remain there until the coach leaves for Condobolin.

1234. If the line were constructed it would be fair to presume that what coach traffic there is now between Condobolin and Forbes would be transferred to the railway? Certainly.

Mr. John Dodd, produce dealer, Parkes, sworn, and examined:—

1235. Mr. Gormly.] Do you purchase wheat? Not largely.

Mr. J. Dodd.

1236. What sort of produce do you buy? Oats and corn, and wheat in small quantities.

23 Mar., 1895.

1237. Have you sent any large quantity by rail from here? No.

1238. Have you a knowledge of the productions of the district? Yes.

1239. Are you aware whether maize is produced in any quantity in the district? Yes; within 30 miles round, great quantities are at times produced.

1240. On the forest land? Yes; on cleared land.

1241. Are you aware what quantity of land is under maize? No.

1242. Have you any knowledge of the greatest quantity sent in to Parkes for sale? Quantities which are grown in the district, amounting to something like 2,000 or 3,000 bushels, come to Parkes for consumption.

1243. You are not aware whether any considerable quantity is sent away by rail? I am not aware. There has been some sent to Sydney this season for the first time.

1244. And you think there are 2,000 bushels produced in the district? Yes; more than that.

1245. Are you aware what is the yield per acre? Forty, 50, and 75 bushels per acre.

1246. Is a considerable quantity of oats produced? Not much. It is not a suitable locality for them, and it is rather too hot.

1247. Can you tell us what portion of the district maize is produced in? From here towards Molong.

1248. Is any produced towards Condobolin? Yes; at Bogan Gate, and towards Trundle and Peak Hill.

1249. Are any of the farmers preparing land for growing maize? Yes.

1250. I suppose there is no great quantity of root crops grown here? No; only for local consumption. I think people are going in for grape-growing.

1251. Where fruit has been grown has it been grown successfully? Yes.

1252. Have you any considerable knowledge of the agriculture of the district? Yes.

1253. Are you a practical agriculturist yourself? Yes; I know good land when I see it, and I have cultivated land.

1254. What do you think the district is chiefly producing? Chiefly corn and wheat, and I think they could go in for any sort of fruit, and particularly raisin-growing. This part of the country is very suitable for raisin growing.

1255. Do you know the land in the district of Condobolin? Yes; and from there to Mount Hope.

1256. Generally to the north and to the west? Yes.

1257. What portion of that land has been settled during the last three years in the direction of Melrose? I could not say, but I am informed that there is considerable settlement around there.

1258. Can you tell us of any fresh development of mining in the district? Immediately below Condobolin gold has been found. Near Mount Hope a payable mine has been found. The Mount Alan Mine is also a successful mine.

1259. Are they working it now? Yes.

1260. How many men are employed? I do not know, but I know they produced 300 oz. of gold or more lately.

1261. Before the railway was extended here, most of the Mount Hope copper went by way of Hillston? Yes; and it was brought this way too.

1262. Have you any other statement to make? I consider that, by the extension of the railway to Condobolin, you would get a lot of trade which goes by way of Melbourne. I know that Coan Downs sends to Melbourne.

1263. Mr. Chanter.] Can potatoes be grown in this district? They can, but not to send them to market at Sydney. They can be grown if there is sufficient rainfall.

1264. We have had evidence to the effect that the average rainfall is 23 inches? I understood that it was only 15 inches.

1265. What attempts have been made to produce potatoes? Several attempts have been made. Five or 10 acres have been put in, and they have nearly all been a failure. There is a worm which gets into the potato here. Dryness sets in and stops the growth, and the worm goes through them.

1266. Is that worm peculiar to this district? Not that I am aware of. I think it is to be found in other districts, but not to such an extent as it is here.

- Mr. J. Dodd.** 1267. Because in other districts, where the soil is similar to this, and where the rainfall is lighter, they are growing potatoes successfully? But it is a cooler climate.
23 Mar., 1895. 1268. No—it is the same kind of soil? Then there must be something peculiar about the soil here.
 1269. You have stated that the district is not favourable to the growth of oats? Not immediately around here.
 1270. I am speaking of the country which will be affected by the extension of the railway? I do not think it will grow oats.
 1271. What attempts have been made here to grow them? They have often been tried. After the oats are fairly under way the heads come out, and the sun closes them. There does not appear to be sufficient moisture in the ground to fill them out.
 1272. Have the farmers made themselves acquainted with the different kinds of oats suitable for dry districts? I think so.
 1273. Have they tried the Calcutta oat? I think so. We have had several kinds, but they have been failures, so far as sending the produce to market is concerned.
 1274. What has been the result of the attempts to produce lucerne? It will grow provided it has suitable soil. There is very little lime in the soil around here, and it wants a good deal of lime.
 1275. Would it be costly to get lime about here? No; there is lime within 8 or 12 miles.
 1276. Then you think the production of lucerne could be made profitable? Yes, provided there is sufficient rain to make it grow.
 1277. You spoke of raisin production;—what attempts have been made in that direction? Very little, if any. Only one or two vines have been put in, and they turned out fairly well. Mr. Cook, I think, has some acres in now.
 1278. Then there is some disposition on the part of settlers to cultivate it? Yes; they must do so to find a means of living.
 1279. Is there any disposition on the part of farmers to go in for dairy products? Yes.
 1280. You have heard that the southern side of the line is more suitable for agricultural than for pastoral purposes? Yes.
 1281. Do you think, if the land were taken up, people would use it for dairying purposes instead of for ordinary grazing? Yes; and it would grow lucerne right enough.
 1282. You know the country between Parkes and Condobolin? Yes.
 1283. And between Parkes and Trundle? No; not very well.
 1284. And between Parkes and Forbes? Yes.
 1285. Do you think the proposed line is the correct one, or should it go in any other direction? I think by constructing it straight it will serve the interests of every one. A deviation would cause considerable extra haulage.
 1286. On the whole you think the district is capable of large production? It is capable of producing largely many things which people have not gone in for up to the present, such as lucerne, and so on.
 1287. If the proposed line is constructed, do you think it will return any interest on the cost of construction? I have no doubt it will pay. A lot of the trade which goes to Melbourne from Mount Hope could be obtained if the line went to Condobolin.
 1288. What goods, which now go to Melbourne, do you think the line would attract? Wool; and it would attract the machinery which has been going to Mount Hope from Melbourne.
 1289. You heard Mr. Lohan give evidence in regard to the rates? Yes.
 1290. Are you aware that there are competitive rates in Victoria? Yes.
 1291. And that there is water carriage along the Murrumbidgee to Echuca and on to Melbourne? We could not compete with them on land.
