LAWSON'S ESTATE MORTGAGE ENABLING BILL.

 REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and report was referred, on 23rd September, 1896,—the “*Lawson's Estate Mortgage Enabling Bill*,”—beg to report to your Honorable House:—

That they have examined the witness named in the margin (whose evidence John Geach
Keane. will be found appended hereto); and the Preamble, as amended, having been satisfactorily proved to your Committee, they proceeded to consider the Bill, in which it was deemed necessary to make certain amendments.

Your Committee now beg to lay before your Honorable House the Bill as amended by them, with an amended Preamble.

T. WADDELL,
Chairman.

No. 1 Committee Room,
Legislative Assembly,
29th September, 1896.

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 29 SEPTEMBER, 1896.

MEMBERS PRESENT :—

Mr. Kelly,		Mr. Millen,
Mr. Nicholson,		Mr. Wood,
	Mr. Waddell.	

Mr. Waddell called to the Chair.

Entry from Votes and Proceedings appointing the Committee, *read* by the Clerk.

Printed copies of the Bill *referred*, together with original *Petition* to introduce same, before the Committee.

Present :—William Walker, Esq. (*Solicitor for the Bill*).

John Geach Keane called in, sworn, and examined.

Witness handed in statutory declaration of the Sergeant of Police at Nyngam in reference to the renewal of the publican's license in Nymagee-street, Nyngam ; also a *certificate* of death of Edward John Lawson. [*See Appendix.*]

Room cleared.

Committee deliberated.

Preamble considered and amended.

Question,—“That the Preamble, as amended, stand part of the Bill,”—put and passed.

Clause 1 read, amended,* and agreed to.

Clause 2 read and agreed to.

Title read and agreed to.

Schedule read and agreed to.

Chairman to report the Bill with amendments to the House, and an amended Preamble.

See schedule of amendments.

SCHEDULE OF AMENDMENTS.

Page 3, Preamble, line 8. *After* “hundred” *insert* “and eighty”
 ” ” ” 14. *After* “hundred” *insert* “and fifty”
 ” clause 1, ” 36. *After* “of” *omit* “one thousand” *insert* “seven hundred and fifty”

1896.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

LAWSON'S ESTATE MORTGAGE ENABLING BILL.

TUESDAY, 29 SEPTEMBER, 1896.

Present:—

MR. KELLY,	MR. MILLEN,
MR. NICHOLSON,	MR. WOOD.

THOMAS WADDELL, ESQ., IN THE CHAIR.

Mr. Walker, Solicitor, appeared for the Promoters of the Bill.

John Geach Keane sworn and examined:—

1. *Chairman.*] What is your occupation? Hotel-keeper.
2. You are one of the trustees of the Lawson Estate? Yes.
3. Will you state the reasons why you desire this Enabling Bill to be passed? The original buildings have become quite dilapidated, and the licensing inspector has demanded that a new house should be built. The revenue from the hotel is the only revenue we have for managing the estate. At the last Licensing Court we were compelled to promise that we would start the erection of a new building within three weeks. We gave the promise, and we have spent about £150 which we had in hand at the time. We were not aware at that time that under the deed we could not raise money.
4. Did you let a contract? Yes, for £480. The building is partly erected.
5. It was absolutely necessary for you to enter into that contract in order to keep the license? Yes; they would not even allow us to repair the old building. It was a very old building when it was removed to Nyngan from some other township. I know it was the intention of Mr. Lawson, when the deed was made, that we should have power to keep the building in repair. There is no other revenue for the support of the children, except from this property.
6. Unless this work is done there is no other revenue for the children to live upon? None whatever. Unless it is done they will have to go into an orphanage, or else they will have to live on charity.
7. You stated that you have let a contract for £480, but in your Bill you ask for power to borrow up to £1,000? Yes; our intention is to renew the billiard-room and four shops which are attached to the hotel. These buildings are all old and dilapidated, and we cannot get any rent from the tenants.
8. Is that on account of the buildings being in bad order? Yes; you have to take anything you can get, and after three or four weeks you cannot get anything out of them—they will slope you.
9. Have you any doubt that you would be able to let these places at remunerative rentals if rebuilt? No. I guarantee that the estate, if rebuilt, will return £6 10s. a week; a lease of the new hotel has been signed for £3 10s. a week by the old tenant. From the new building we get an increase of 30s. a week in the rental. Only £1 a week is now coming into the estate through the hotel being unbuilt. The Licensing Bench allowed us to carry on, because if the license once lapsed, under the local option vote, we would have lost it altogether. The vote was against any renewals or new licenses being granted.
10. *Mr. Wood.*] What income were you getting from the hotel before you were called upon to erect a new building? £2 a week.
11. *Chairman.*] Suppose that you did not get power to borrow money, and that you did not rebuild, the buildings are so old and dilapidated that you would practically get nothing from the estate at all? The municipal and water rates would absorb all that we got.
12. *Mr. Wood.*] What was the total value of the estate? I don't think it ever was valued. It was insured for £1,000.
13. What was the value when it was transferred by Mr. Lawson? I think the hotel would be worth about £500.
14. There were no other moneys or properties left in connection with the estate? No; Mr. Lawson was in debt when he died, and we have had to pay off his liabilities.
15. *Chairman.*] Why do you anticipate that you will want £1,000 if it will cost only £480 to rebuild the hotel? I think another £300 or £400 will do the rest.
16. Don't you think you could do with £700 in all? I think that sum was only put in as a limit. I would be quite satisfied if it was reduced to £700.
17. Do you think that you could manage to do all that is necessary with £700? Yes. We have put £150 already into the hotel.

John Geach
Keane.

26 Sept., 1896.

18.

John Geach
Keane.
26 Sept., 1896.

18. How do you account for the statements in the Preamble of the Bill that the trustees have entered into a contract for the erection of a new hotel at a cost of "£400 or thereabouts," and that the balance of the rents in the hands of the trustees amounts to "£100 or thereabouts"? I do not know why the words "or thereabouts" were inserted. It is Mr. Burns's error, and not mine. I know it is near £480. If he refers only to the main building of the hotel that would be near enough, but then there is a kitchen.
19. The exact sum would be about £480? I consider the repairs to the cellar and the erection of a kitchen and pantry would come to £480.
20. Does not the contract state a specific sum? The contract for the main building is over £400.
21. Do you remember what sum the contract stated? A contract was signed, but I have not got it with me. It was nearer £480 than £400.
22. As regards the accumulated rents which were not required for supporting the children, the statement in the preamble of the Bill is not quite correct—it should be £150? That is the exact amount we had in hand when we started to build. I did not think it would be necessary, or I would have brought the bank-book with me.
23. What is the total frontage of the allotment? It is allotment 5 of section 33, and is situated at the corner of Nymagee and Tabratong Streets. The total frontage is 200 feet. I think the hotel has a frontage of 120 feet to Nymagee-street; I think each shop must have a frontage of 10 feet to the street.
24. Is the billiard-room at the back of the shops, or does it face the street? It faces the street.
25. For the billiard-room I suppose you would want a frontage of 18 feet? The present billiard-room has a frontage of 17 or 18 feet. I think if we rebuild we will have only three shops.
26. Do you propose to add dwellings to the shops? We propose to have one room in the front and one room at the back.
27. About what size do you propose to build these shops? I could not tell you. We intend to erect a couple of rooms for dwellings at the back, because small shopkeepers cannot afford to pay two rents. Small families occupying small shops require two rooms at the back.
28. Would £500 be sufficient to enable you to build the billiard-room and the shops? More than sufficient, I think.
29. Would £400 do it? I believe it would. £100 ought to do for each building, as timber is very cheap now.
30. Don't you think you could manage to build the whole lot for £700? I think that would be quite enough.
31. Besides the sum of £150 which you mentioned, you had a sum of £25 to meet the expenses of this Bill? No; that is private money.
32. Do you think £700 will enable you to do all you want to do? I think it would.
33. Do you think you can do with less than £700? No, not considering the expenses we have been under.
34. What interest do you expect to pay for the money? They are asking 8 per cent.
35. Have you been offered the money? Yes.
36. Are you sure you could get £700 at 8 per cent.? Yes.
37. For a term of years? For five or seven years.
38. From a private individual—not from a bank? From a private individual.
39. Don't you think you could get it for less than 8 per cent.? I daresay we could, as money is getting cheaper. People at Nyngan are very fond of a high rate of interest.
40. Are you offered the money locally? A gentleman in Orange, I think, is finding the money.
41. Have you tried the local banks? They won't touch town property at all. They won't touch deeds now.
42. Do you produce a statutory declaration, signed by Alexander McDonald, Sergeant of Police and Licensing Inspector for the District of Nyngan, stating that the Licensing Court refused to license the hotel unless it is rebuilt? I do. [*Vide Appendix A.*]
43. Do you produce a statutory declaration, signed by Ann Finn, of Nyngan, maternal grandmother of Mr. Lawson's children, giving the dates on which the children were born? I do. [*Vide Appendix B.*]
44. Do you also hand in a statutory declaration, signed by yourself, in which you state that the full name of the child, Archibald Lawson, named in the deed of settlement, is Edward Archibald John Lawson? I do. [*Vide Appendix C.*]
45. How many children were named in the deed of settlement by Mr. Lawson? Three.
46. Are they all still alive? No; John Edward is dead.
47. Was he the eldest child? He was the second eldest child, and I produce a certificate of his death, at Nyngan, on the 17th June, 1895. [*Vide Appendix D.*]
48. Is the youngest child still alive? Yes. Archibald Lawson, the youngest child, is about 12 years of age.
49. The eldest child is a girl? Yes. She was 21 years of age last June.
50. *Mr. Millen.*] Is she single still? Yes.
51. *Chairman.*] Have you any proof that the girl is agreeable to this power being granted to the trustees? She is quite agreeable to the Bill being passed.
52. Will you be good enough to obtain from her a statutory declaration to that effect? I will.
53. *Mr. Millen.*] Who holds the license of the hotel? Oliver Poplin.
54. *Mr. Nicholson.*] He has agreed to lease the new building for a term? He has taken it for three years, at £3 10s. a week, with the right of renewal.
55. *Mr. Millen.*] That is exclusive of the billiard-room? Yes. When the billiard-room is rebuilt we will get a rent of £1 a week for it.
56. *Chairman.*] Where is the eldest child of Mr. Lawson now living? She is living in Dubbo with another trustee.
57. Have you had any definite offer of the money for a particular time at 8 per cent.? I think it was for five years.
58. *Mr. Nicholson.*] You have not entered into any agreement to take the money at that rate? No. If we can get the money for less than 8 per cent. we will. We have not much time to lose. We want the money badly now, to keep the thing going.

LAWSON'S ESTATE MORTGAGE ENABLING BILL.

APPENDIX.

A.

STATUTORY DECLARATION.

I, ALEXANDER M'DONALD, of Nyngan, Sergeant of Police and Licensing Inspector for the district of Nyngan, in the Colony of New South Wales, do solemnly and sincerely declare :—

1. That I am Licensing Inspector for the district of Nyngan.
2. That application was made on the 22nd day of July last, by Oliver John Poplin, for renewal of the publican's license for premises in Nymagee-street, Nyngan, known by the sign of the "Carriers' Arms," situated on allotment 5, of section 33, when I objected to the granting of the same, on the ground that the buildings were old and dilapidated and almost falling down, and were unfit to be licensed.
3. The Licensing Bench of Magistrates thereupon stated they would certainly not grant a renewal for the premises as then existing, but allowed an adjournment of the application for the purpose of giving the trustees of the property an opportunity of guaranteeing the erection of new premises.
4. On the 29th day of July last John Geach Keane, one of the trustees of the said property, attended at the Licensing Court, and gave a guarantee to erect new hotel premises in accordance with the Licensing Acts, whereupon the Licensing Bench granted a renewal of the said license.

And I make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of her present Majesty, intituled "An Act for the more effectual Abolition of Oaths and Affirmations taken and made in various Departments of the Government of New South Wales, and to substitute Declarations in lieu thereof, and for the suppression of voluntary and extra-judicial Oaths and Affidavits."

ALEX. M'DONALD,

Sergeant and District Licensing Inspector.

Declared at Nyngan, this 11th day of September, 1896, before me,—

EDWARD H. PRINCE, J.P.

B.

STATUTORY DECLARATION.

I, ANN FINN, of Nyngan, in the Colony of New South Wales, widow, do solemnly and sincerely declare :—

1. I am the maternal grandmother of Jane Ann Lawson, Edward Archibald John Lawson, and Archibald Lawson, the children of Archibald Lawson, late of Nyngan aforesaid, innkeeper, deceased, by his marriage with my daughter, Jane Emma Finn, also now deceased.
2. The said Jane Ann Lawson was born at Parkes on or about the 14th day of June, 1875.
3. The said Edward Archibald John Lawson was born at Palesthan, near Condobolin, on or about the 13th day of March, 1878, and died at Nyngan on or about the 17th day of June, 1895.
4. The said Archibald Lawson, the younger, was born at Girilambone on or about the 16th day of December, 1884.

And I make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of her present Majesty, intituled, "An Act for the more effectual Abolition of Oaths and Affirmations taken and made in various Departments of the Government of New South Wales, and to substitute Declarations in lieu thereof, and for the suppression of voluntary and extra-judicial Oaths and Affidavits."

Declared at Nyngan, this 16th day of September, 1896, before me,—

F. H. MAYGER, J.P.

ANN FINN.

C.

STATUTORY DECLARATION.

I, JOHN GEACH KEANE, of Trangie, in the Colony of New South Wales, hotel proprietor, do solemnly and sincerely declare :—

1. I am one of the trustees of the settled estate of Archibald Lawson, deceased, late of Nyngan, in the said colony, innkeeper.
2. The full name of the child of the said settler, Archibald Lawson, named in the deed of settlement of date the 28th day of November, 1890, as John Lawson, is Edward Archibald John Lawson.
3. The said child died on the 17th day of June, 1895, at the age of 17 years, and he was not married.

And I make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of her present Majesty, intituled "An Act for the more effectual Abolition of Oaths and Affirmations taken and made in various Departments of the Government of New South Wales, and to substitute Declarations in lieu thereof, and for the suppression of voluntary and extra-judicial Oaths and Affidavits."

Declared at Trangie, this 18th day of September, 1896, before me,—

S. PHILLIPS, J.P.

J. G. KEANE.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

BOROUGH OF LITHGOW VALIDATING BILL.

THURSDAY, 15 OCTOBER, 1896.

Present:—

MR. E. M. CLARK, | MR. DACEY.
MR. EDDEN.

T. BAVISTER, ESQ., IN THE CHAIR.

Horace Edward Seymour Bracey sworn and examined:—

1. *Chairman.*] You are the Mayor of Lithgow, are you not? I am the Mayor of Lithgow.
2. The Mayor of the Borough was elected on the 9th of February, 1894,—is that so? Yes, that particular year, that not being myself.
3. At a special meeting of the Council, held in April, the result of the valuation was read and received and confirmed, on the motion of Alderman Bennett? Do you not think it would be advisable to ask the Council Clerk? At that time I was not a member of the Council, and what I say is hearsay.

H. E. S.
Bracey.
15 Oct., 1896.

Jasper Gaze Wiseman sworn and examined:—

4. *Chairman.*] You are the Council Clerk of the Borough of Lithgow? I am.
5. For the year 1894, the Mayor of the Borough was elected on the 9th of February, was he not? Yes.
6. And at a special meeting of the Council, in April, the result of the valuation was read, received, and confirmed, and the estimate of the work handed in and accepted? Yes.
7. It was then carried that a general rate of 9d. in the £ be struck on all rental values, and of 1s. in the £ on capital values? Quite so.
8. That was struck in consequence of a number of vacant allotments on your main street, was it not? Yes.
9. So that a higher rate might be charged on those vacant allotments which received the greatest expenditure from the municipal moneys, for the relief of those taxed on their improvements also? Yes.
10. It was subsequently moved and carried that a lighting rate of 4d. in the £ be struck on all values? Yes.
11. Were such notices given? Such notices were duly given.
12. Were the notices duly served? Yes.
13. And is it a fact that an Appeal Court was fixed and advertised for on the 11th of June? Yes.
14. Did the Vale of Clwydd Company give notice of appeal? Yes.
15. And the case, in due course, came on for hearing? Yes.
16. Their attorney (Mr. Wallace) contended that the differential rate was bad,—did he? Yes.
17. Did the Bench decide to go on with the appeals and give no opinion on the point raised then? They said it was out of their power to give an opinion upon that point.
18. Did Mr. Wallace call the attention of the Bench to the rate notices, showing that the mine had been assessed on its capital instead of its rental value? He did.

J. G.
Wiseman.
15 Oct., 1896.

- J. G. Wiseman.
15 Oct., 1896.
19. Was the mining assessment adjourned? The whole of the Appeal Court was adjourned.
20. Did the Council in the interval hold a meeting on July the 2nd? Yes.
21. Was a resolution passed at that meeting rescinding the following resolution:—
That in order to meet the estimate of the current year, 1894–95, a rate of 1s. in the £ be levied on all capital values, and of 9d. in the £ on all rental values.
Was that moved and carried? It was moved and carried. I would not say that the dates are correct. I have the minutes books present.
22. On the 30th April? No; about the 2nd of July.
23. I ask was a meeting held in the meantime on the 2nd of July at which the resolution was submitted? I would not swear to the date, but a meeting was held in the interim and such a resolution was carried.
24. Was it subsequently moved that a rate of 9d. in the £ be struck on all ratable property in the borough? Yes.
25. And the rate-book be amended in accordance with that resolution? Yes.
26. Was the assessment on the Vale of Clwydd Mining Company struck on the basis of £455 4s., at 9d. in the £? Yes. The other mines were all altered. That is only a specimen of the manner in which all mining properties were altered.
27. At a subsequent date the Council's attorney asked for the cases to be withdrawn from the Court, did he not? Yes.
28. And Mr. Wallace objected to that being done? Yes.
29. But the Court granted the application of counsel and allowed the cases to be withdrawn? They did.
30. Were fresh notices served and advertised in the usual manner, the Appeal Court being fixed for 31st July, 1894? Yes.
31. Were any appeals from these mining companies lodged against that? No.
32. Was a proclamation issued under section 187 of the Municipalities Act? Yes.
33. For the necessary extension of time, and duly gazetted? Yes.
34. The demand for rates was made and served in the usual course? Yes.
35. And proceedings had to be taken for the recovery of those rates before Judge Docker? Yes.
36. Dr. Sly taking the following points of objection in that case: First, that the resolution of July 2 was bad? Yes.
37. No call for meeting under by-law 52, which reads as follows:—
No motion, the effect of which if carried would be to rescind any resolution, order, or decision of the Council shall be entered on the business paper unless a call of the Council has been duly made and granted for such purpose. 2. Rate may be amended—not rescinded and new rate made. 3. Amendment must be made within three months. 4. No power to amend illegal rate. 5. Appeal Court out of time as to notice of July 3rd.
were they the points taken by the counsel? Yes, by Dr. Sly, defendants' counsel.
38. Is it also true that his Honor held as follows on those points:—1. The amendment was not made within time, three months from the election of Mayor? Yes.
39. And not made in a valid way? Yes.
40. And that by-law 52 must be complied with to make a rescission of previous resolution valid? Yes.
41. Is it true that his Honor said that he was very sorry that he had to give a verdict for the defendant company as it seemed to him that they ought to pay these rates and were simply taking a legal point in order to get out of a liability, which they in all fairness ought to meet, that if he had the assurance that the defendant company would now pay the rates which they were in equity entitled to pay he would allow them expenses; if not he would in the exercise of his discretion refuse them costs; as no assurance was given a verdict was entered for defendants without costs? Yes.
42. He said those words and set the case out as strongly as is their shown? Exactly.
43. *Mr. Dacey.*] Do I understand that in the case of the Vale of Clwydd, £459 was the capital value on which was struck the rate that they have disputed? No, that was the annual value of their mine, based upon their output of coal—based upon a royalty of 6d. per ton.
44. *Mr. E. M. Clark.*] Their rate would be about £22? Yes.
45. *Mr. Dacey.*] The annual value of the coal at 6d. a ton royalty is £576 12s.; that of the slack at 3d. a ton royalty is £29 4s.; nine-tenths of the amount of these two sums is £545 4s., upon which the rate is struck; the other mines are altered accordingly? Yes.
46. *Mr. E. M. Clark.*] Your Council is really out of debt, you owe no money do you? Well, we have a loan on the gas-works.
47. But not upon the ordinary rate? No.
48. I suppose the only people objecting to pay this rate are the Vale of Clwydd Coal Mining Company? The whole of the coal mining companies. The Vale of Clwydd Mining Company we cannot validate for. We want to recover against the other companies.
49. Do you mean to say that the Vale of Clwydd Coal Mining Company will pay no rates for the year 1894? They will pay no rates.
50. *Mr. Dacey.*] Solely upon the ground that you struck the rate illegally? Illegally.
51. Then you mean to say that the Vale of Clwydd Coal Mining Company is in this happy position, that they pay you no rates for the year 1894–5? That is so.
52. They are in a better position than any ratepayer in the whole of the Colony of New South Wales? That is it.
53. Simply because of a technicality? That is it.
54. I was going to ask whether you thought that just? The Judge says he does not. He distinctly said so.
55. *Chairman.*] Then you admit in regard to this alteration of the rate that there was not a call of the Council made in terms of By-law 52 of the Council? No, there was not.
56. There was, I suppose, an Appeal Court held in connection with this amended rate? Yes; July 31st, 1894.
57. Did this Vale of Clwydd Coal Company appeal? No; they did not appeal. They ignored the notice.
58. And you have since sued them in connection with this rate? Yes.
59. *Mr. Dacey.*] After you struck the first rate was an Appeal Court held? Yes.
60. Upon that differential rate? Yes. That is when we discovered the illegality of the rate.
61. Did any of those coal miners appeal then? They all appealed.
62. In the first instance? Yes.

63. But upon a second occasion none appealed? None appealed.
64. They simply ignored it? That is it. They did not all appeal. The Vale of Clwydd and Lithgow Valley Colliery Companies only appealed.
65. That is on the differential rate? On the differential rate.
66. If Parliament does not grant you this measure of relief, what will be your loss? About £400 in rates, and then about £200 in endowments; that is £600.
67. What is your income from general rates? The usual income is £1,000. This year we have only £500. We have struck a 6d. rate. It was formerly a 1s. rate. We had a good income at the beginning of the year.
68. You say that your loss if Parliament does not grant you this relief will be about £400? That is including the lighting rate. The total lighting rate for the year is another £500. The total income from rates is between £1,500 and £1,600.
69. *Mr. E. M. Clark.*] Were any improvements carried out in and around any of these coal mines after the date of the striking of this rate? Oh, yes; streets have been formed and repaired.
70. I suppose a large sum of money has been spent? Yes; I should say altogether on the properties surrounding these coal mines some £200.
71. What would the rates that the Vale of Clwydd Mining Company, for instance, dispute amount to—at least that they absolutely decided not to pay? About £42 altogether. The figures that have already been quoted are only on the mine.
72. Although they have virtually, by a technicality in law, become exempted from paying rates for that year, you have really spent nearly £200 in and around their mines and other mines adjoining? Yes. The amount of rates a year on the Vale of Clwydd Coal Mining property was £37 2s. 7d.
73. *Chairman.*] Is it a fact that the only contention they raise is as to the neglect to comply with the rule as to giving notice or call of meeting? No; the illegality of the first assessment.
74. The first assessment is disposed of—the failure to comply with your Municipal law 52 making it necessary to have a call of the Council to rescind any previous resolution? Yes.
75. *Mr. Dacey.*] Did the whole matter break down simply because you did not have a call of the Council? No; we had no call of the Council. That is one point. Dr. Sly also raised the point that some of the ratepayers had too long a notice of appeal. The Act allows a fortnight's notice. Some of them had as much as three week's notice.
76. There is another point—putting out of the question the mining companies as companies, the people connected with them in their individual capacities, I suppose, also refuse to pay? No, they do not.
77. The manager, and so forth? Oh, yes, the managers. I should like to make a statement upon that with regard to one mine especially. The Lithgow Valley Colliery Company, after appealing, actually paid the rental value on some of their houses for their tenants. They did not pay by cheque, as usual, but in cash, through their clerk. As a rule the rates on household property let to tenants by that company are all included in the one cheque and paid by them.
78. *Mr. E. M. Clark.*] Do they pay them in the names of the tenants? In the name of the company. That year they were paid in the names of the tenants by cash.
79. *Chairman.*] Thus admitting the fairness or equity of the rate? Yes. Mr. Gell himself said it was equitable.

Horace Edward Seymour Bracey recalled:—

H. E. S.
Bracey.

80. *Chairman.*] You have heard the examination of the previous witness? Yes.
81. Can you throw any additional light on the matter by making a statement in your own words? I think not. I think you have gone into the matter so exhaustively that it has really left me no fresh ground to open up.
82. The latter portion of the last witness' evidence being very material, it would perhaps be as well to have it specially confirmed by yourself;—do you know that it is a fact that this Colliery Co., while objecting to pay the assessment on their mine, have paid exactly the same rate on property let by them to tenants? Yes.
83. And that though their custom has been in previous years to pay the whole sum in one cheque, they have this year paid cash for the property let by them to tenants? That is the Lithgow Valley Colliery Co. With reference to my knowledge I know that we are applying for a Bill to validate an amending rate which was struck illegally by the Council. We have really nothing whatever to do with the bulls made in the first rate. Our Bill is to legalise an amending rate, struck illegally by the Council.
84. The only thing you desire to remedy is the failure to give notice and make it a call of the Council? That and one or two other technicalities.
85. *Mr. Dacey.*] Over and above that there is the point that some ratepayers had longer notice than others? Yes. I would not tie myself down to one point.

15 Oct., 1896.

TUESDAY, 20 OCTOBER, 1896.

Present:—

MR. E. M. CLARK,	MR. HURLEY,
MR. DACEY,	MR. T. R. SMITH.
THOMAS BAVISTER, ESQ., IN THE CHAIR.	

William Briggs sworn and examined:—

86. *Chairman.*] You are a ratepayer in the Borough of Lithgow? Not personally; I am the representative of the Vale of Clwydd Colliery.
87. A case between your company and the borough has been before the District Court? I believe so.
88. And the Court decided that your Company cannot be sued for the recovery of the rates for the municipal year 1894-5? I would not put it quite in that way.
89. Have you seen a copy of the Bill? I have seen an extract from it.
90. Does it not contain a clause expressly exempting your company? I was not aware of that fact.

W. Briggs.
15 Oct., 1896.

- W. Briggs.
15 Oct., 1896.
91. Had you been aware of the fact, would you have considered it necessary in the interests of your company to appear before this Committee? I do not appear for my company. I am the chairman of the Coal Association, which represents seven collieries there.
92. Do the association occupy the position of ratepayers—are they on the roll? I believe all of them.
93. As individual collieries, but not as an association? As distinct individual collieries.
94. Perhaps you would prefer to make a statement to the Committee? There is a report at Lithgow that this Bill is being applied for in consequence of an accidental error on the part of the Borough Council, and my association wish me to state that it was deliberately done, that the council struck a rate for the capitalists different from the rate for the working people—a shilling rate for the capitalists and a ninepenny rate for the others.
95. Was not that withdrawn? I do not know whether it was; they tried to do so.
96. Were any legal proceedings taken to enforce that differential rate? I do not think so. The council tried to amend the rate, but it appears they did it illegally.
97. The case which your company defended was not taken to enforce that differential rate, was it? I cannot speak positively.
98. Is it not a fact those proceedings were taken to enforce an amended rate which was not a differential rate? I daresay you are right, but I cannot say positively that it was so.
99. Was not that claim decided in your favour in consequence of an informality in the amending rate? Yes; but the differential rate is in existence still.
100. Were any legal proceedings taken, or did your company appear to defend the claim made under that differential rate? The company defeated the council because the amended rate was incorrect.
101. I asked were any proceedings taken to enforce the differential rate? It is a very difficult question to answer. I believe you are correct in saying the council sued for some amended rate, but it was found that the amendment was illegal, and, therefore, if the amendment was illegal, I assume that the differential rate is in existence.
102. I want to get clearly at the fact whether your company was sued for the differential rate, or a rate which did make a difference, or for an amended rate, and whether your company or its legal representative succeeded in obtaining a verdict in consequence of the amended rate being informal? That is just what I have said.
103. As a matter of fact, you were not sued for the differential rate? I am not quite certain; but I believe you are quite correct.
104. As you are here as the representative of the associated companies, may I ask if any of the companies have paid any part of the rate which is disputed? I believe the council, as it is said up there, has compounded with its friends, and now wish to sue those who are opposed to it.
105. Have any rates been paid for which no compounding has been made by any of the collieries? I could not say that; it is quite probable.
106. If it were asserted that such had been done you would not be prepared to contradict it? Certainly not.
107. Is it contended that the amended rate, if it was properly amended without any informality, would be an unfair one? I think it would be a legal one if it was properly done.
108. *Mr. E. M. Clark.*] You believe that if rates are improperly assessed people ought not to pay rates, I suppose? I think quite the reverse.
109. You do not represent the people of Lithgow? No.
110. It is only the associated collieries whom you represent who object to pay rates? I could not say that.
111. You do not represent the ratepayers but the associated collieries? I believe that many of the ratepayers object, and have objected. I do not represent them.
112. I want to know whether you are a representative of the ratepayers? I am not.
113. Then it is only the associated collieries who object to pay rates? I must not say that, because I have heard from half a dozen that others object.
114. We have not heard that? I have.
115. The Borough of Lithgow must be a very democratic municipality; is it not composed largely of democrats? I do not quite understand the term.
116. You said that a differential rate was struck so that the capitalists might be taxed? That was the argument used by the aldermen. They were warned in council not to do it, but they said they would do it.
117. You know, or should know, that you are under municipal government at Lithgow, and that municipal government can only be carried on by the amount of rates which can be levied and collected? Quite so.
118. Surely the associated collieries do not object to pay these rates? They have no alternative; they must pay them.
119. If the rates had been struck strictly legally, you would have had to pay them? We always have.
120. If they had struck a rate of 9d., you would have had to pay? We would have had no alternative.
121. You simply, on a technicality, object to pay rates? You are asking questions which touch on the point whether we are morally bound to pay. We admit we are legally bound to pay.
122. You say you are not morally bound? No; we all feel it is very hard. We get our coal outside the municipality—where we hew the coal is outside the municipality. Legally we are bound, I acknowledge, to pay the rates.
123. It is a fact that money was spent during the year 1894-5 in and around these collieries for the making of roads? I do not know; but I take it for granted that it was.
124. You do not object to that expenditure? No; I have some ratepapers here showing the differential rates which have been demanded.
125. The whole of the trouble seems to have arisen out of the differential rates? That is all the trouble.
126. You think the democracy of the council was such as to impose on the capitalists a greater amount of rates than they should have been asked to pay? I think it was a cruel thing for them to assess the collieries on which they depended for a living, if I may use the term, for a higher rate than the rest when we did not get any benefit ourselves.
127. In or about that particular year your colliery paid the rates in the names of your tenants? We were obliged to do so.
128. You are not obliged to do so? We are.

129. You are not compelled to pay the rates in the names of your tenants? Not for our tenants, because we are the tenants. W. Briggs.
15 Oct., 1896.
130. You have men working for you? Yes.
131. The Lithgow Colliery Company did pay the rates in the names of their men? No; we do not pay for the men—we pay for the output.
132. Each colliery in the Association pays its own rates—that is to say, each tenant pays the rates? No, each colliery.
133. How do the tenants employed and residing on the Lithgow Colliery Works pay their rates? I believed they paid them.
134. *Mr. Dacey.*] The houses are tenanted? Yes.
135. Does not the colliery pay the rates on these houses? I do not think so.
136. Who would pay the rates? The tenants. I have a rate-paper here addressed to a tenant.
137. *Mr. E. M. Clark.*] The tenants' names are sure to appear on the papers? They do not.
138. These papers refer to Vale of Clwydd Colliery, but we are referring to Lithgow Colliery? I am not speaking of their tenants; I am only speaking of that one colliery.
139. I think these papers refer to unoccupied portions, except the last paper, which levies a 9d. rate? That is Mr. Broughall's.
140. You do not pay the rates at all, and you think Mr. Broughall ought to be exempted from rates for that year, because the municipality made a mistake in striking the rate? That is only one case, involving 2s. or 3s.
141. I see Mr. Broughall appears here as the occupier of some Zig Zag hotel, for which his rates amounted to £5;—you object to pay those rates too? There is some mistake here. He is not the tenant.
142. What strong objection have the associated collieries to pay the rates for this particular year? I have just stated that I do not think they are morally bound to pay any rates. Legally, of course, they acknowledge they are bound.
143. *Mr. Dacey.*] Does not the Association see that legally they are not entitled to pay, but morally they are? Yes, as regards one rate.
144. I am speaking as regards the rates generally levied? Generally we have always paid, because we are legally bound to do so.
145. But you say you are not legally bound to pay the rates for this year? Not for the year 1894–5.
146. On what grounds do you object to pay the rates for that year? I have just stated that the Council struck one rate for the capitalists and another rate for the working men.
147. *Mr. E. M. Clark.*] What is your definition of a capitalist, because the term may include those that built houses and live there? I think that is beside the question. I think the working man is the capitalist, really speaking.
148. *Mr. Dacey.*] The dispute is not now over the differential rate? It is. I believe they amended, or believed they amended, or tried to amend it, and they sued on the amended rate; but when the case was tried, it was found that the amendment was illegal, and I therefore maintain that the differential rates stand, the other being illegal.
149. *Mr. E. M. Clark.*] They abolished the differential rate? They cannot.
150. Suppose the whole difficulty was got over, the associated collieries still object to pay these rates? Because it was done illegally.
151. *Mr. Dacey.*] That is taking advantage of a technicality? We knew it was done illegally.
152. Do you know the words which the Judge used in giving his decision? I was in Sydney at the time.
153. His Honor said, "He was very sorry that he had to give a verdict for the defendant Company, as it seemed to him they ought to pay these rates, and was simply taking a legal point in order to get out of the liability which they ought in all fairness to meet";—you know that these were the words which the Judge used? I was in Sydney at the time, but I will take your word that he did.
154. The Judge cannot be charged with having a prejudice on the side of either democracy or capital? He can be charged with not knowing the whole of the case—with knowing only what was stated in Court.
155. Do I understand you to object to the Committee recommending the House to validate the last rate which was struck? I must not go as far as that. I am only here at the request of the Association to explain that the rumour which is prevalent in Lithgow, that the council is asking for the Bill because of an unintentional mistake, is not true; that the differential rate was struck intentionally and deliberately and against opposition.
156. *Mr. E. M. Clark.*] Perhaps the municipality may have struck that rate deliberately, but once the council altered that rate and made the rate equitable and just all round, what objection had the associated collieries to pay that rate? You must bear in mind that we knew they did not do it legally.
157. Did they alter the rate and make it an equitable one? We knew they did not do it legally.
158. Because they did not strictly carry out the conditions of the Municipalities Act you object to pay rates? That is to say, that the differential rate is still in existence.
159. Apart from all that, are the associated collieries prepared to pay just and equitable rates? —
160. *Chairman.*] Do your instructions enable you to answer that question? I don't know how I can answer that question.
161. *Mr. E. M. Clark.*] Do you decline to answer the question? I do not see how I can.
162. *Chairman.*] Are we to understand that the associated collieries desire to do right, but wish to retain their cash? You are asking me some very hard questions.
163. *Mr. E. M. Clark.*] The associated collieries have not objected to any expenditure in and around the collieries since that time? We have no power to do that.
164. You have been only too glad to receive that assistance from the council? The collieries do not get any benefit from municipal management. We hew our coal outside the boundaries of the municipality. I admit that there is a particle of benefit in some small portions, but I look upon the rates on the output of the collieries; the other is a mere bagatelle. What benefit are municipal improvements on streets to a colliery?
165. You do not believe in local government at all? I do, thoroughly.
166. *Chairman.*] As the representative of the associated collieries, you know what portion of their properties are situated within the borough? I do not know that I could give the information, because the underground workings go a long way from the shaft.

- W. Briggs.
15 Oct., 1896.
167. Were you speaking at random when you said that none of their coal was hewn within the municipality? I am not speaking at random. I am speaking what they informed me at the meeting. I have not been down their mines. I have been down our mine.
168. You do not know of your own knowledge? No.
169. When you speak of your own mine you mean the Vale of Clwydd. Yes.
170. Is none of that within the municipality? It is a very difficult question to answer, for they hew the coal in different parts of the mine.
171. If none of the mine is within the municipality, how can you be assessed? Because the output—that is, the shaft—is within the municipality.
172. The income from your property is produced within the municipality? I think it produced where it is hewn.
173. You think an article is produced where it is used? Where it is made.
174. That cannot apply to coal;—did you ever see coal made? Where it is separated from the earth I think it is produced.
175. It is in the earth until it comes to the surface? It is not attached to the earth.
176. Is it in the earth till it comes to the surface? It is under the earth.
177. According to your contention the assessment is properly made where the coal is landed on the surface? No; I think where it is separated from the mother earth.
178. Can you say how much of the Vale of Clwydd Colliery is outside the boundary of the municipality? A large quantity of it.
179. Can you give us any idea of the proportions? About two or three hundred acres.
180. How much within the boundaries? Perhaps the same.
181. Guessing from your own standpoint, the proportions are about equal? It is quite a guess on my part. It is hard to carry the boundaries of the municipalities down to the workings underneath.
182. *Mr. Hurley.*] The companies are just as familiar with the boundaries of the borough underneath the surface as the municipality with the boundaries of the borough on the surface? They do not give the two.
183. They know when they are on the municipal boundary and when they are off the boundary? I question whether some of them do. They are bound to know by the new Act.
184. *Mr. Clark.*] Do I understand that the associated collieries have not paid any rates for the year 1894-5? I believe that the Esk Bank Colliery compounded with the council.
195. Have you any idea what amount of rates are due by the associated collieries to the borough for that year? I could not say.
186. I understand that the associated collieries wish to be guided in the payment of rates by the decision in the case of the Lithgow Council against the Vale of Clwydd Colliery? I cannot say that. If you put it in the other way I can give you an answer. You put it in the wrong way.
187. Bar the Esk Bank Colliery, none of the associated collieries have paid their rates for that particular year? I believe so.
188. Unless these rates are legalized none of them will pay? I expect not.
189. You represent them, and you think not? Yes.
190. *Chairman.*] You have heard it stated that individual ratepayers object to pay? Yes.
191. Have you heard these objectors make that objection? No.
192. You have only heard the rumour that they have? Yes.
193. Was it also rumoured that their ground for objection was that they were poor or working men, and that unless the collieries which were well to do paid their rates it was not just that the tenants of their properties and others should be forced to pay theirs? I never heard that. I do not think it would be said in that way. I do not think the collieries are well to do.
194. Do you think it would be likely that individual ratepayers would object to pay their rates if the colliery proprietors were relieved from paying theirs? Of course they would object.
195. And that is the reason for the objections of which you heard rumours? I heard if one is excused the other expects to be excused, undoubtedly.
196. *Mr. T. R. Smith.*] What was the rate struck prior to the alteration being made? I do not know what it was in 1893-4; I have an idea floating in my mind that it was sixpence.
197. I suppose there was no objection to pay the rate, whatever it was, which was struck prior to 1894-5? We always have paid the rates.
198. *Mr. Clark.*] Now you don't want to pay any more rates? We are willing to pay if we are obliged to pay.

Jasper Gaze Wiseman recalled and further examined:—

- J. G.
Wiseman.
15 Oct., 1896.
199. *Mr. T. R. Smith.*] What rates were assessed by the borough for the year 1893-4? The general rate was 1s. and the lighting rate was 4d. For the year 1894-5 Alderman Bennett moved and Alderman Vincent seconded that a general rate of 9d. in the £ be struck on all rental values, and of 1s. in the £ on capital values.
200. That is what the coal companies refuse to pay? They refuse to pay the amended rate of 9d. in the £ all round.
201. *Mr. Dacey.*] Have these collieries who object to pay rates paid rates on the house property which they own? Yes.
202. They refuse to pay the rates on the mine? Yes.
203. *Mr. E. M. Clark.*] What colliery has paid the rates on the houses? The Lithgow Colliery.
204. It is the only one that has paid? The Esk Bank Colliery paid on the whole of their property.
205. Without any demur? Yes.
206. Without any compromise? No; they appealed, and on the appeal they paid the full amount which the friendly appeal Court decided that they should pay.
207. Did the Lithgow Colliery pay the rates in the names of the tenants? Yes; the part proprietor paid the rates on his own personal house.
208. When? In 1894.
209. They paid the rates under section 52 of the Act, in the name of the tenants, which enabled the tenants to vote? That is so.

J. G.
Wiseman.
15 Oct., 1896.

210. Had that been their custom previously? Yes.
211. Previously they paid with one cheque? Yes.
212. Afterwards they paid the rates for 1894-5 in cash for each separate place? That is so.
213. Do you know that under the Municipalities Act the rates must be paid in the name of the tenants, and in cash or by cheque drawn in that particular name. That is to say that a separate payment must be made in each case? I did not know that.
214. They did pay the rates in separate amounts? Yes.
215. *Mr. T. R. Smith.*] As regards the Vale of Clwydd Colliery, do any of the working men live on the property? Yes.
216. Have these men paid the rates? Some of them have.
217. In their own names? Yes; the tenants of the Vale of Clwydd pay their own rates.
218. I notice that one man owns a hotel—has he paid his rates? Not for that year; he is the manager of the mine.
219. He has not paid the rates for his private residence either? No.
220. *Mr. Dacey.*] He is the manager of the mine and he keeps a pub? The hotel, which belongs to the company, is without a tenant, and he was simply put in as a sort of manager till they let it.
221. *Mr. E. M. Clark.*] That is the man who does not pay rates? Yes.
222. The company ran a pub., and paid no rates for that year? No.
223. *Mr. T. R. Smith.*] Have they paid any rates since that year? Yes.
224. *Chairman.*] It has been stated that persons other than colliery proprietors object to pay rates;—can you say whether any ratepayers other than colliery proprietors paid their rates in about the same manner in that particular year as they did in previous years; has there been a very great difference in the payments? No; the half-yearly income has been on the average the same.
225. It has come in, on the average, as well as it did in previous years, omitting the colliery proprietors? Yes.
226. I wish to know whether there is a general objection on the part of the ratepayers to pay that particular year's rates, or whether the ratepayers as a whole are paying their rates as they did? The money comes in as before.
227. *Mr. E. M. Clark.*] The ordinary ratepayers do not object, but the associated collieries seem to be the only objectors? Yes.
228. *Mr. T. R. Smith.*] Have any of the ratepayers refused to pay their rates for that particular year? Yes.
229. For what reason? Because the collieries did not pay.
230. *Mr. Dacey.*] Can you state, approximately, what amount of rates is involved? I should think £60 or £70.
231. *Mr. E. M. Clark.*] What does that represent—small houses? Yes.
232. That amount represents forty or fifty small householders? Yes.
233. If that verdict had not been given the probability is that they would not object to pay? Yes.
234. How long have you been council clerk? Since October, 1893.
235. Had you been council clerk for any other municipality? No.
236. It was shortly after your appointment that this rate was struck? Yes.
237. Probably that would account for the clerical error in the assessment? Yes.
238. *Mr. T. R. Smith.*] How long has the borough been in existence? Since 1889.
239. What rates do the collieries owe for this particular year? The total amount involved is about £400, and of that sum the collieries owe over £300.
240. *Mr. E. M. Clark.*] Adverting to the proviso to clause 1, I suppose you have been advised that you could not possibly recover the rates from the Vale of Clwydd Colliery Company? Yes.
241. It follows that the Vale of Clwydd Colliery will get off for the year 1894-5 without paying rates? Yes.
242. Notwithstanding that £200 was spent by the council in and around their property for that year? Yes.
243. *Mr. Dacey.*] Did you serve the notice on the manager of the hotel on the Vale of Clwydd property separately from the other notices? The whole lot were served on the manager as the representative of the Vale of Clwydd Company. He was an alderman at the time.
244. In issuing the summons, did you issue it against the Vale of Clwydd Company or against Mr. Broughall? Against the company.

MAITLAND GASLIGHT ACT AMENDMENT BILL.

 REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and report was referred, on 14th October, 1896, the "*Maitland Gaslight Act Amendment Bill*," beg to report to your Honorable House:—

That they have examined the witnesses named in the List* (whose evidence will be found appended hereto); and the Preamble having been satisfactorily proved to your Committee, they proceeded to consider the Bill, in which it was deemed necessary to make an amendment.

Your Committee now beg to lay before your Honorable House the Bill, as amended by them.

J. GILLIES,
Chairman.

No. 2 Committee Room,
Legislative Assembly,
21st October, 1896.

PROCEEDINGS OF THE COMMITTEE.

 WEDNESDAY, 21 OCTOBER, 1896.

MEMBERS PRESENT:—

Mr. Gillies,		Mr. Gormly,
Mr. Simeon Phillips,		Mr. Watkins,
	Mr. Wheeler.	

Mr. Gillies called to the Chair.

Entry from Votes and Proceedings appointing the Committee *read* by the Clerk.

Printed copies of the Bill referred, together with original Petition to introduce same, before the Committee.

Present:—F. A. S. Bowden, Esq. (*Solicitor for the Bill*).

Edward Peter Capper (*Chairman of the Maitland Gaslight Company, Limited*) called in, sworn, and examined.

Witness produced the Company's original deed of settlement.

Witness withdrew.

Charles Edward Crutch (*Secretary of the Maitland Gaslight Company, Limited*) called in, sworn, and examined.

Witness withdrew.

George Colquhoun (*Crown Solicitor of New South Wales*) called in, sworn, and examined.

Witness withdrew.

David de Ramon Penfold called in, sworn, and examined.

Witness withdrew.

Henry Crothers (*Mayor of West Maitland*) called in, sworn, and examined.

Witness withdrew.

Alfred Johnson called in, sworn, and examined.

Witness withdrew.

Frederick Allen Shepherd Bowden sworn and examined.

Room cleared.

Preamble considered.

Question, "That this Preamble stand part of the Bill,"—put and passed.

Clauses 1 to 7 read and agreed to.

Clause 8 read, amended,* and agreed to.

Clause 9 read and agreed to.

Title read and agreed to.

Chairman to report the Bill, with an amendment, to the House.

* See Schedule of Amendment.

 SCHEDULE OF AMENDMENT.

Page 4, clause 8, lines 29 and 30. *Omit* "on the hearing of any arbitration or other matter whatsoever" *insert* "before any person having by law or by consent of parties authority to hear, receive, " or examine evidence."

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

MAITLAND GASLIGHT ACT AMENDMENT BILL.

WEDNESDAY, 21 OCTOBER, 1896.

Present:—

MR. GORMLY,
MR. WATKINS,MR. SIMEON PHILLIPS,
MR. WHEELER.

J. GILLIES, Esq., IN THE CHAIR.

F. A. S. Bowden, Esq., solicitor, appeared for the promoters of the Bill.

Edward Peter Capper sworn and examined:—

1. *Chairman.*] What position do you occupy? I am the Chairman of the Maitland Gaslight Company, E. P. Capper. Limited.
2. *Mr. Bowden.*] Do you produce the Company's original deed of settlement? I do.
3. Has it been rendered partly illegible by the flood of 1893? Yes.
4. Do you remember a general meeting of the shareholders being held on the 16th of May, 1894, at which the shareholders authorised the Directors to apply to Parliament for a Bill? Yes.
5. Which is the Bill before this Committee? Yes.
6. The Company was incorporated in 1884 by a special Act of Parliament? Yes.
7. Under that Act its powers are limited to the towns and districts of West Maitland and East Maitland? Yes.
8. Is the Company desirous that the extra powers provided in this Bill should be granted to it? Yes.
9. I understand that there is a large number of houses outside the boundaries of the town in the neighbourhood of Lorne, Holmville, and Campbell's Hill? Yes.
10. The Company is desirous of extending its mains to these places? Yes.
11. Will it be a matter of public convenience that the mains should be extended to these places? It will be a great advantage to the people. We have been applied to many times to take the gas-mains to these places.
12. Have repeated applications been made for an extension of mains to these places? Yes.
13. And the Company is unable to comply with these requests by reason of its powers being limited to the town boundaries of East Maitland and West Maitland? Yes.
14. The Company has been advised, I understand, that it is expedient to make special provision for proving the deed of settlement in any Court of Law or Arbitration, in consequence of its being rendered illegible? Yes.
15. *Chairman.*] The deed of settlement is not sufficiently legible to be brought into a Court of Law? No; it would be impossible to read it.
16. As Chairman of the Company, you know that people at Lorne and the adjacent localities outside the original town boundaries have applied to be supplied with gas? Yes.
17. And you cannot comply with their applications? No.
18. Were these applications made in writing, or verbally? I fancy we have had some applications in writing. We are all amongst one another, and they may have applied to us as we went along. We know all the people living in the district.
- 19.

21 Oct., 1896.

- E. P. Capper. 19. When you say the districts of East and West Maitland, you mean I suppose, the municipal districts of East and West Maitland? Yes.
- 21 Oct., 1896. 20. I take it that the object of this Bill is to empower you to renew your deed of settlement and to enable you to carry on your operations? We have had the deed of settlement printed in pamphlet form from the original copy, which Mr. Colquhoun had.
21. *Mr. Bowden.*] Do you know whether any houses have been erected outside the boundaries of East and West Maitland and provided with gas-fittings, in view of the possible extension of the gas-mains to those places? Yes.

Charles Edward Crutch sworn and examined :—

- C. E. Crutch. 22. *Chairman.*] You are the Secretary of the Maitland Gaslight Company (Limited)? Yes.
- 21 Oct., 1896. 23. *Mr. Bowden.*] Can you say whether your Company is desirous of carrying on its business beyond the boundaries of East and West Maitland? Yes.
24. Can you state how that desire is evidenced? A meeting of the shareholders was called on the 16th May, 1895, and authority was given to the Directors to apply for an Act, and that resolution was confirmed at a meeting held on the 21st June, 1895.
25. That is authority to apply for the Bill now before this Committee? Yes; for a Bill embodying these provisions.
26. You have seen the Company's deed of settlement now before the Committee? Yes.
27. It is partly illegible? Yes.
28. The Company has had certain copies prepared from the draft of that deed? Yes.
29. It is advised, both by its counsel and its solicitor, that it is necessary that an Act of Parliament should be obtained to facilitate proof of the deed? Yes.
30. Do you know the districts of Holmville, Lorne, Campbell's Hill, Louth Park, Oakhampton, and Bolwarra, beyond the boundaries of East and West Maitland? Yes.
31. Are these districts fairly populated now? Yes; there are about 130 tenements besides unoccupied allotments. A great number of these houses are fitted with gas-pipes ready for the gas to be laid on, and have the Company to supply them with gas.
32. Have you had any applications to supply gas to them? Yes; I have had several applications.
33. The Company is also advised by its legal adviser that it is expedient that one of the copies of the deed should be deposited with the Registrar of Joint Stock Companies? Yes.
34. There is no street lighting in any of these places? No.
35. Do you consider it is expedient that the streets in these districts should be lighted? That will rest with the inhabitants. We could not charge them a rate unless they voluntarily agreed to pay.
36. As a matter of public expediency, these places having been built over, should be lighted? I should say that it is expedient to light them with gas.
37. *Chairman.*] Have you had any written applications for a gas supply from people outside the boundaries of the towns? I have not received any letters to that effect, but several persons have made personal application to me as the Secretary of the Gas Company, and spoken to me about it in the street, and I have said that we were going to apply to Parliament for power to extend the mains to those places.
38. *Mr. Watkins.*] Can you give an idea of the area within which you would require to operate? I could not tell you exactly. At Lorne, which is a large suburb, a number of houses are going up, and a number of allotments have been sold there for building purposes. Beyond Campbell's Hill there are a large number of places sold. At Rutherford and Oakhampton, which is principally a farming district, there is a number of residences.
39. Is it possible for these places to be supplied with gas from the works of any other company within a reasonable distance? I should say it was not possible.
40. Your Company is really the most suitable one to supply them with gas? ———
41. *Mr. Bowden.*] Your Company is the only one which can supply them? It is the only company which will be able to supply them.
42. *Mr. Watkins.*] These places in themselves would not be sufficient to maintain a gas company? I think not.

George Colquhoun, Esq., Crown Solicitor, sworn and examined :—

- G. Colquhoun. 43. *Chairman.*] What position do you occupy? I am Crown Solicitor for the Colony of New South Wales.
- 1 Oct., 1896. 44. *Mr. Bowden.*] Some years ago you practised in Maitland? Yes.
45. You prepared a deed of settlement there, incorporating the Maitland Gas Lighting Company, (Limited)? I did.
46. First of all there was a draft deed of settlement prepared? There was.
47. From which draft a fair copy of the deed was made? From which draft the engrossment was made for execution.
48. The document which is lying on the table here is the engrossment? Yes.
49. Did that draft remain in your possession for many years? It was in my possession till about three or four years ago. It was in my possession till the time I left the office of Allen and Allen—that is to say, it was amongst my papers.
50. Did you take the draft away from Allen and Allen's office, or did you leave it with the firm? I feel quite certain that I left it there with the whole of my Maitland papers. I did not take a single paper away with me.
51. Can you say whether that draft had been examined with the engrossment, or whether it would in the ordinary course of business have been examined with the engrossment? In the ordinary course of business it was examined with the draft from which it was engrossed.
52. You see this printed copy of the draft bearing your certificate? Yes. The original deed, which had been destroyed in the flood in Maitland, was brought to me. It was not capable of being read, and I hunted up my papers and came across the draft. I handed out that draft to have the deed of settlement printed from it. It came back again into the office printed, and was specially examined by two gentlemen who

who signed the certificate which appears in the first page of the pamphlet on the table. After the printed copy was examined by Mr. Reginald F. Cook and Mr. D. de R. Penfold, who are clerks in the office of Allen and Allen, of which firm I was a member, I wrote the following certificate:—

G.
Colquhoun.
21 Oct., 1896.

I hereby certify that the draft deed of settlement referred to in the above certificate was prepared by me, and that it is the draft from which the original deed of settlement was engrossed.

Dated at Sydney this twenty-sixth day of April, one thousand eight hundred and ninety-four.

GEORGE COLQUHOUN,
Solicitor,
Sydney.

53. You believe that the printed copy of the deed of settlement, which was printed by Websdale, Shoemith, & Co., 117, Clarence-street, Sydney, in 1894, is an exact copy of the draft? I believe so; I should unhesitatingly take it to be so if I had to deal with it.
54. It is, therefore, an exact copy of the deed of settlement as it originally existed? I have no doubt but that if you could decipher the document on the table you would find that the printed deed would correspond with the original deed. I do not believe that there would be a dozen words in the whole of the printed deed which would not be the same as the words in the original deed which is lying on this table.
55. I suppose you mean that there would be nothing material to the deed which would be different? Yes; I referred possibly to clerical errors.

David de Ramon Penfold sworn and examined:—

56. *Chairman.*] What is your occupation? I am a clerk in the employ of Allen, Allen, and Hemsley.
57. *Mr. Bowden.*] You were formerly in the employ of Messrs. Allen and Allen? Yes.
58. Mr. George Colquhoun was a partner in that firm? Yes.
59. Do you remember Mr. Colquhoun while he was a partner of the firm handing you the draft of the deed of settlement of the Maitland Gaslight Company? Yes.
60. Can you state what you did with the draft? I had the whole control of the preparation of the certified copy of the deed of settlement and the printing of it, and part of my duty was to decipher the original deed.
61. Did you have anything to do with getting the deed printed? Yes.
62. To whom did you take the deed to be printed? To Websdale, Shoemith, & Co., printers, Clarence-street, Sydney.
63. Did they print certain copies of that draft for you? They did.
64. Do you recognise the copy which is now produced to you? Yes; this is one of the copies which were printed.
65. Is that your signature to the first certificate on the first page of the pamphlet? Yes.
66. Did you then examine that copy with the draft which Mr. Colquhoun handed to you? Not altogether with the draft. The original deed of settlement was much obliterated by flood water and partly undecipherable. With the draft and the original deed of settlement I got together the one complete copy of the deed. The small portion of the original deed which was not decipherable I obtained from the draft, and in that way I got a complete copy.
67. You examined it with the original deed as far as possible? Yes. When I was at all stuck up—there might be one solitary word which I could not make out—I examined the original with a powerful magnifying glass, and satisfied myself as to the correctness of indistinct words about which I was doubtful by comparison with the draft.
68. You believe that to be a perfect copy of the original deed as appearing by the draft and by the document on the table? I am absolutely certain that it is as good a copy as if it had been taken from the original deed.
69. Do I understand you to say that, having read the draft, you could then make out what the word was in the original deed? I mean to say that when a word in the original deed on parchment had the appearance of a word about which I was not quite certain, I made myself sure of what it was by looking at the word in the draft.
70. Having seen the draft, you could recognise and decipher the word in the original deed? Yes.
71. Is the document in front of you the original deed? It is.
72. Have you since made a search for that draft? Yes; I spent six hours this week in looking for it.
73. In the office of Allen and Allen? In both the old office and the new office.
74. Can the draft be discovered? It cannot.
75. The search you made was a diligent one? Yes; a messenger assisted me in making the search. I looked very well for the draft.
76. Can you say whether or not your firm in any way parted with that draft? I am sure they did not, for two reasons: It cannot be called our draft, because it was one of Mr. Colquhoun's old papers, and for this reason I do not think that my employers would have parted with it at all; and if it was parted with we would have a record. We never part with any document without either writing a letter with it or getting a receipt for it. I searched through all our books and examined the letter books. I made a thorough investigation of all our books, and found that we parted with other documents in this matter but not with the draft. Every document we parted with has been specially mentioned, and the draft is not amongst them.
77. Do you believe that the draft is in the office? Very probably it is there. Two years ago we moved, and in the moving the papers got disarranged, and probably it is in the office. We would have to take up every paper before we could swear that it was not there. It must be in the strong room in either the old office or the new office. In the strong room in both offices there are some 50,000 or 60,000 bundles of papers. They cover a very large amount of space.
78. It would be practically impossible to make a search? Yes; we could not find them.
79. You are positive that this printed deed is identical with the original deed? I am absolutely certain of that.
80. You recognise the certificate on the first page of the pamphlet? Yes; I prepared the certificate and signed it. I am absolutely sure that it is a good copy.

D. de R.
Penfold.
21 Oct., 1896.

Henry

Henry Crothers sworn and examined :—

- H. Crothers.
21 Oct., 1896.
81. *Chairman.*] What position do you occupy? I am the Mayor of West Maitland.
82. Do you reside in that town? Yes.
83. *Mr. Bowden.*] You know the districts of Lorne, Oakhampton, Holmville, and Louth Park? Yes; these places are situated just outside the boundaries of the town of West Maitland. Louth Park is not situated within the boundary of the municipality, but is annexed to West Maitland.
84. Are there a lot of buildings, outside the district, in the neighbourhood of Lorne and Holmville? A lot; they are going up every day.
85. Certain streets have been laid out? Yes, in Lorne and Holmville.
86. Is there any provision made for street lighting in those places? None.
87. Will it be a public convenience or otherwise that the gas-mains should be extended to these places to enable the streets as well as private houses to be lighted? Decidedly so.
88. Do you know whether the buildings which have been erected are furnished with gas-fittings? I could not tell you.
89. There is no objection, as far as you know, to this proposal on the part of the town or any of the surrounding districts? Quite the contrary.
90. Would the extension of the gas-mains interfere with the business of any other company? No.
91. Would the probable consumption of gas in these districts justify the formation of a new company at the present time? No; it could not exist.
92. *Chairman.*] Is there any objection on the part of the West Maitland Borough Council to the extension of the gas-mains? No.
93. If there was any objection you would be bound to know? I should think so.
94. Have you seen any of the advertisements in the newspapers notifying the intention of the Company to apply to Parliament for a Bill? Yes.
95. And you have heard of no objection? No; I feel confident that there is no objection.
96. *Mr. Wheeler.*] Are the shareholders of the Company, as far as you are aware, anxious that this extension should be made? As far as I am aware, they are. I know a good many of the large shareholders.
97. Are you aware of any objection on their part? No.
98. *Mr. Watkins.*] I suppose it is the only gas company you have up there? That is all.
99. The Bill simply empowers the Company to go outside the boundaries and limits of the towns of West and East Maitland;—do you think a limit to their operations should be placed in the Bill? I do not see the necessity to fix a limit.
100. Is there any likelihood of any townships other than those you have mentioned springing up? No.
101. As the Mayor of West Maitland, you have heard of no objection to the Bill? None.
102. Has it been before the Borough Council? No.
103. Have you heard whether it has been before the Borough Council of East Maitland? No; I feel convinced that it has not, because I read all the news.
104. Do you think it would be a public convenience to allow the Company to have these powers? I think it would.
105. *Mr. Bowden.*] It is not likely to interfere with the rights or privileges of anyone else? Not in the slightest degree.
106. The towns are surrounded with large tracts of land, occupied merely for pastoral purposes? Yes.
107. It would not pay the Company to go there with their mains? No.

Alfred Johnson sworn and examined :—

- A. Johnson.
21 Oct., 1896.
108. *Chairman.*] What is your occupation? I have a boot and shoe warehouse in West Maitland.
109. Where do you reside? At Lorne.
110. *Mr. Bowden.*] You have certain properties at Lorne? I have two properties there.
111. Are they houses? I have a vacant allotment and two houses.
112. Are the residents of Lorne desirous of having the gas-main extended to their houses? Yes.
113. The residents generally are desirous of having the gas-mains extended to Lorne? Yes; I saw a number of the residents of Lorne during the week, and I heard of only one objection.
114. *Mr. Watkins.*] Why did he object? He told me that he had been under a kerosene lamp for ten or twelve years. He seems to prefer kerosene to gas.
115. The Bill would not compel him to take gas from the Company? No.
116. *Chairman.*] As a matter of fact, he has no objection to the Gas Company extending their mains? He has no objection at all.
117. *Mr. Bowden.*] He simply prefers to use kerosene for lighting his own house? Yes.
118. Do you know the settlements of Holmville and Oakhampton? Yes.
119. Are there a number of houses out there? Yes; Holmville, I think, has a considerable number of houses.
120. And at Oakhampton, beyond Hall's Creek? There are a number of houses all along there.
121. Do you consider it desirable or undesirable that the gas-mains should be extended into those places in order to light the streets, and to enable private persons to take gas if they chose? I do.
122. *Chairman.*] You think that if there had been any objectors to the Bill they would have seen the notification of the Company's intention in the newspapers;—you have seen the notices in the newspapers? Yes; I do not think there would be any objectors.
123. *Mr. Wheeler.*] Are you a shareholder in the West Maitland Gaslight Company? No.

Frederick Allan Shepherd Bowden sworn and examined :—

- F. A. S. Bowden.
21 Oct., 1896.
124. *Chairman.*] You are the solicitor for the Company promoting this Bill? I am.
125. And you reside in West Maitland? I do.
126. Do you desire to make a statement to the Committee? I do. In consequence of the partial destruction of the Company's deed of settlement by the floods, it will be a very difficult, as well as very expensive, matter in

in any legal proceedings, or in any arbitration, to prove the contents of the deed. During the life of the present Crown Solicitor it may be easily effected, as he can swear to the contents of the draft, and to the fact that the original deed was a copy of such draft; but after his death it will be a difficult and probably very expensive matter.

F. A. S.
Bowden.

21 Oct., 1896.

127. Is the document lying on the table the damaged deed to which you refer? Yes; this document is the damaged deed of settlement of the Company. As regards the Bill, the powers which it takes are the usual powers taken by a company on its formation under the Company's Act. Any company can take these powers under its memorandum of association; but through this company having been incorporated before the passing of the Company's Act in this Colony, it cannot acquire these powers without a special Act amending its original Act. These are simply powers authorizing the Company to go outside the boundaries of East and West Maitland. These powers it was not considered necessary to take when the Company was formed; but, in view of the extension of the buildings, it is necessary for the public convenience that the gas-mains should be extended. There is no other company able to supply gas, and unless this company is authorized to do so it will be absolutely impossible for these people to get supplied with gas. I know of my own personal knowledge that a number of houses have been erected with gas-fittings in anticipation of an extension of the gas-mains. The other powers which the Bill takes are the usual provisions to enable the Company to provide its customers with gas stoves and fittings in precisely the same way as the Sydney Gas Company does for the convenience of its customers. I consider it necessary, in order to set at rest all questions as to the power of acquisition and disposition of the Company's property, that the Company should if possible obtain these powers, which are merely the ordinary powers usually taken by any company in its memorandum of association. These powers were omitted when the document was prepared for the Company. The law in regard to companies was not then sufficiently clear, and in view of recent decisions it is advisable that the Company should have these powers.

128. Does the Maitland Gas Act of 1874 give the Company power to go through East Maitland? It does.

129. You are seeking for a renewal of power in that respect? The Bill does not affect the East Maitland gas system in any way.

130. *Mr. Watkins.*] It will not give the Company any greater powers within the boundaries in which people are consuming their gas? None, except that it will enable the Gas Company to supply the people with gas-stoves or to hire gas-stoves in the same way as the Australian Gaslight Company does.

131. That is purely a voluntary matter on the part of the consumer? Entirely. It will enable the Company to extend to the people certain other conveniences.

132. *Chairman.*] Does the Company supply meters to the people free of cost? It does. During the last few years the business of gas companies has altered considerably. They extend to their customers a certain number of conveniences which formerly they did not. They try to enable their customers to get the best fittings, to hire gas-stoves, or to purchase gas-stoves when otherwise they could not afford to do so.

133. As a resident of West Maitland and as alderman, are you aware of any objections to this Bill? I know of no objection whatever. I am sure there can be no objection to the Bill.

134. *Mr. Wheeler.*] Do you know of any objection to the Bill on the part of any of the shareholders in the Company? None at all. There was a meeting of the shareholders called, and I was present at the meeting, and it was unanimously decided to apply for a Bill.

 SYDNEY AND NORTH SYDNEY BRIDGE AND TRAMWAY BILL.

 REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and report was referred, on 25th June, 1896,—the "*Sydney and North Sydney Bridge and Tramway Bill*,"—beg to report to your Honorable House :—

That they have examined the witnesses named in the List* (whose evidence *See List, p. 7. will be found appended hereto); and the Preamble having been satisfactorily proved to your Committee, they proceeded to consider the Bill, in which it was deemed necessary to make certain amendments.

Your Committee now beg to lay before your Honorable House the Bill as amended by them.

EDWARD M. CLARK,
Chairman.

*No. 3 Committee Room,
Legislative Assembly,
15th July, 1896.*

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 30 JUNE, 1896.

MEMBERS PRESENT:—

Mr. Bull,		Mr. E. M. Clark,
Mr. Griffith,		Mr. Hawthorne,
Mr. Howarth,		Mr. Travers Jones.

Mr. E. M. Clark called to the Chair.

Entry from Votes and Proceedings, appointing the Committee, *read* by the Clerk.

Printed copies of the Bill referred, together with original Petition to introduce same, before the Committee.

Present:—W. F. Brennan, Esq. (*Solicitor for the Bill*).

William Francis Brennan sworn and examined.

William Kenwood (*The Promoter*) sworn and examined.

Gamaliel Thompson called in, sworn, and examined.

Witness *produced* statutory declarations by the persons who collected the signatures to the Petition presented to Parliament in favour of the proposed bridge and tramway.

Witness withdrew.

[Adjourned till Thursday next at *Two* o'clock.]

THURSDAY, 2 JULY, 1896.

MEMBERS PRESENT:—

Mr. E. M. Clark in the Chair.

Mr Bull,		Mr. Griffith,
Mr. Hawthorne,		Mr. Haynes,
Mr. Howarth,		Mr. Price.

Present:—W. F. Brennan, Esq. (*Solicitor for the Bill*).The Clerk, by direction of the Chairman, read a letter which had been addressed to the Clerk of the Legislative Assembly by the Under Secretary for Public Works and Commissioner for Roads, enclosing a copy of a joint Report by the Engineer-in-Chief for Public Works, and the Engineer-in-Chief for Railway Construction, in reference to the Bill. [*See Appendix.*]*Resolved (on motion of Mr. Griffith)*,—That the Report be printed and distributed to Members of the Committee.Alexander Walter Scott Gregg (*Managing Director, Messrs. Richardson and Wrench*) called in, sworn, and examined.

Witness withdrew.

John Bede Magney called in, sworn, and examined.

Witness withdrew.

Robert Newby Kirk (*Secretary of the North Shore Steam Ferry Company, Limited*) called in, sworn, and examined.

Witness withdrew.

William Barnard Smith (*Council Clerk of the Borough of North Sydney*) called in, sworn, and examined.

Witness withdrew.

The Clerk, by direction of the Chairman, read an excerpt from another Joint Report by the Engineer-in-Chief for Railway Construction, and the Engineer-in-Chief for Public Works, in reference to the Bill. [*See Appendix.*]*Resolved (on motion of Mr. Bull)*,—That the document be printed and distributed to Members of the Committee.[Adjourned till Tuesday next at *Two* o'clock.]

TUESDAY, 7 JULY, 1896.

MEMBERS PRESENT:—

Mr. E. M. Clark in the Chair.

Mr. Bull,		Mr. Hawthorne,
Mr. Haynes,		Mr. Howarth,
		Mr. Nelson.

Present:—W. F. Brennan, Esq. (*Solicitor for the Bill*).Cecil West Darley (*Engineer-in-Chief for Public Works*) called in, sworn, and examined.

Witness withdrew.

Hugh McLachlan (*Secretary to the Railway Commissioners*) called in, sworn, and examined.

Witness withdrew.

Captain John Jackson (*Manager of Public Wharves*) called in, made an affirmation, and examined.Witness *handed in* Return giving the tonnage of certain ships, and the heights from main truck to water line. (*See Appendix.*)

Witness withdrew.

Captain James Edie (*Shipping Master*) called in, sworn, and examined.

Witness withdrew.

Robert Newby Kirk recalled and further examined.

William

William Richard Beaver (*Clerk of the Peace*), called in, sworn, and examined.
 Witness *produced* depositions in the case *Regina v. Arthur Deacon*, including the deposition of
 Robert Newby Kirk (Managing Accountant, North Shore Steam Ferry Company, Limited).
 Witness withdrew.
 Robert Newby Kirk further examined.
 Witness withdrew.
 James Anderson (*Council Clerk of the Borough of Willoughby*), called in, sworn, and examined.
 Witness withdrew.

[Adjourned till Thursday next at *Two o'clock*.]

THURSDAY, 9 JULY, 1896.

MEMBERS PRESENT :—

Mr. E. M. Clark in the Chair.
 Mr. Griffith, | Mr. Howarth.

Present :—W. F. Brennan, Esq. (*Solicitor for the Bill*).
 William Kenwood further examined.
 The Chairman at this stage left the Chair, which was taken by Mr. Griffith *pro tem*.
 Edward Mann Clark, Esq., a Member of the Committee, sworn and examined in his place.

[Adjourned till Tuesday next, at *Two o'clock*.]

TUESDAY, 14 JULY, 1896.

MEMBERS PRESENT :—

Mr. E. M. Clark in the Chair.
 Mr. Griffith, | Mr. Travers Jones.

Present :—W. F. Brennan, Esq. (*Solicitor for the Bill*).
 William Kenwood further examined.
 William Francis Brennan further examined.
 Room cleared.
 Preamble considered.
 Question,—“That this Preamble stand part of the Bill,”—put and passed.
 Parties called in and informed.

[Adjourned till To-morrow, at *Two o'clock*.]

WEDNESDAY, 15 JULY, 1896.

MEMBERS PRESENT :—

Mr. E. M. Clark in the Chair.
 Mr. Hawthorne, | Mr. Howarth.

Present :—W. F. Brennan, Esq. (*Solicitor for the Bill*).
Ordered,—That the Joint Report, and excerpt from a second Joint Report, by the Engineer-in-Chief
 for Public Works and the Engineer-in-Chief for Railway Construction, be appended. [*See Appendix B.*]
 Bill considered.

Clauses 1 to 3 read and *agreed to*.
 Clause 4 read, amended,* and *agreed to*.
 Clause 5 read and *agreed to*.
 Clause 6 read, amended,* and *agreed to*.
 Clauses 7 to 20 read and *agreed to*.
 Clause 21 read and omitted.
 Clause 22 read, amended,* and *agreed to*.
 Clauses 23 to 25 read and *agreed to*.
 Clause 26 read, amended,* and *agreed to*.
 Clauses 27 to 30 read and *agreed to*.
 Clause 31 read, amended,* and *agreed to*.
 Clause 32 read and *agreed to*.
 Clauses 33 and 34 read and omitted.
 Clause 35 read, amended,* and *agreed to*.
 Clauses 36 to 38 read and *agreed to*.
 Clause 39 read, amended,* and *agreed to*.
 Clauses 40 to 53 read and *agreed to*.
 Clause 54 read, amended,* and *agreed to*.
 Clause 55 read and *agreed to*.
 Clause 56 read, amended,* and *agreed to*.
 Clauses 57 to 66 read and *agreed to*.
 New clause to stand as clause 21 read and *agreed to*.
 New clause to follow clause 22 read and *agreed to*.
 New clause to follow clause 26 read and *agreed to*.
 New clause to follow clause 29 read and *agreed to*.
 Schedules read and *agreed to*.
 Title read and *agreed to*.
 Chairman to report the Bill with amendments to the House.

* See Schedule
 of Amendments.

SCHEDULE

SCHEDULE OF AMENDMENTS.

Pages 3 and 4, clause 4, line 55, page 3, to line 4 page 4. *Omit* " Provided that the said bridge shall be built of steel and iron, and shall have one clear span in that portion of it crossing the said waters of not less than six hundred feet, with a clear height or headway for shipping above high water-mark of not less than one hundred and fifty feet along such clear span, and shall have a clear width of not less than fifty feet, and a carrying capacity of not less than one hundred and twenty pounds to the square foot, with a wind pressure allowance calculated at a pressure of not less than fifty pounds to the square foot: " *insert* " Provided that the said bridge shall be built of steel and iron, and in that portion of it crossing the said waters shall be supported upon a set of piers placed at or about the centre of such waters and built of iron or steel upon a base of granite or trachyte masonry not exceeding one hundred feet square, and shall have two spans crossing the said waters of not less than seven hundred feet each in length with a clear height or headway for shipping of not less than one hundred and eighty feet above low water-mark for a length of at least four hundred feet along the central portion of each of such spans, and at the northern foreshore of the said waters shall be supported upon a set of piers built of iron or steel, and resting upon a base of granite or trachyte masonry not exceeding one hundred feet square built in the said waters and abutting upon the said northern foreshore thereof, and upon land shall be supported upon piers of iron and masonry, and shall have a clear width of not less than fifty feet, and a carrying capacity of not less than one hundred and thirty pounds to the square foot with a wind pressure allowance calculated at a pressure of not less than fifty pounds to the square foot. Provided also that before the said bridge shall be commenced to be built a plan or design and specifications of the same shall be submitted to and approved of by the said Minister or by the Agent-General in London for the Colony of New South Wales. Provided that if the Trinity House in England shall certify to the said Agent-General or to the said William Kenwood that a clear height or headway for shipping of any number of feet less than one hundred and eighty feet above low water-mark, but not less than one hundred and fifty feet above high water-mark, will be reasonably sufficient, then it shall be lawful for the said William Kenwood to construct the said bridge with such clear height or headway for shipping so certified as aforesaid to be sufficient."

Page 5, clause 6. At end of clause *add* " Provided that the said William Kenwood shall not commence to construct or erect any work under any of the powers contained in subsections (ii), (iii), (iv), and (v) hereof, until a plan or design of such work whenever the same is proposed to be constructed upon or in any Crown or private lands or the waters of Port Jackson shall have been submitted to and approved of by the Minister, and until a plan or design of such work whenever the same is proposed to be constructed upon or in any street shall have been submitted to and approved of by the Municipal Council of Sydney or the borough of North Sydney, as the case may be, in whom such street shall be vested."

Page 8, clause 21. *Omit* clause 21, *insert* the following new clause:—

21. The following provisions for the protection of the sewers, water-mains, and works of the Water and Sewerage Board, and of all house-services and connections in respect thereof, shall have effect, namely:—

- (i) The said William Kenwood shall comply with, and conform to all reasonable directions of the Water and Sewerage Board in the execution of the works, and shall not in any manner interfere with any of the sewers water-mains, or works of the Water and Sewerage Board, or with any house-services, or connections in respect thereof, without notice to (and the sanction of) the Water and Sewerage Board, and shall provide, to the reasonable satisfaction of the Water and Sewerage Board, for the proper protection of, and for preventing injury or impediment to any such sewers, water-mains, works, house-services, or connections, by reason of the works or any part thereof, and shall save harmless the Water and Sewerage Board and all owners of any such house-services or connections aforesaid, against all expenses to be occasioned by the works or any part thereof (and all costs, charges, and expenses which the Water and Sewerage Board, or any such owner as aforesaid, may be put to by reason of the works, whether in the supervision or inspection of the works, the examination of plans or designs, or otherwise, shall be paid on demand by the said William Kenwood to the Water and Sewerage Board or to such owner as aforesaid).
- (ii) The said William Kenwood shall be liable to make good with all reasonable despatch, and to the satisfaction of the Water and Sewerage Board, all injury or damage caused by, or resulting from any of the works to any such sewers, water-mains, works, house-services, or connections, as mentioned in subsection (i) of this section, and the Water and Sewerage Board, or any owner of any such house-service or connection sustaining injury or damage, shall from time to time have power to recover the amount thereof from the said William Kenwood in any Court of competent jurisdiction.
- (iii) The approval by the Water and Sewerage Board of any plans, or the inspection by the Water and Sewerage Board of any work under the provisions of this section, shall not exonerate the said William Kenwood from any liability or affect any claim for damages under this section or otherwise.
- (iv) If the said William Kenwood shall in any respect fail to comply with and conform to any such reasonable directions of the Water and Sewerage Board as are mentioned in subsection (i) of this section; or shall fail to provide to the reasonable satisfaction of the Water and Sewerage Board for the proper protection of and for preventing injury or impediment to any such sewers, water-mains, works, house-services, or connections as mentioned in the said subsection; or shall fail to make good with all reasonable despatch, and to the satisfaction of the Water and Sewerage Board, any such injury or damage to any sewers, water-mains, works, house-services, or connections, as is mentioned in subsection (ii) of this section, the Water and Sewerage Board, or any owner of any such house-service or connection, as the case may be, shall have full power and authority (in the case of the Water and Sewerage Board by their engineer, officers, workmen,

workmen, and servants, and in the case of any such owner by his workmen and servants) to enter upon the works of the said William Kenwood, or any part thereof, and to do all such acts and things and carry out all such works as may be necessary and proper for the protection, amendment, or repair of any such sewer, water-main, or other works, house-service, or connection, as the case may be, and any and all costs, charges, and expenses incurred by the Water and Sewerage Board, or by such owner, as the case may be, in the exercise of the powers in this subsection contained, shall be paid to the Water and Sewerage Board, or to such owner, as the case may be, by the said William Kenwood on demand, or in default may be recovered from the said William Kenwood by the Water and Sewerage Board or by such owner, as the case may be, in any Court of competent jurisdiction.

- (v) Otherwise than is herein expressly enacted the said William Kenwood shall, in the construction of the said works, observe and comply with the provisions of the Metropolitan Water and Sewerage Acts and the By-laws made by the Water and Sewerage Board under such Acts.

Pages 8 and 9, clause 22, lines 58 and 59, page 8, and 1 and 2, page 9. *Omit* "It shall be lawful for the Railway Commissioners at any time during the construction of the said tramway, or of any works in connection therewith, to appoint an engineer to enter upon and inspect the same and"

Page 9, clause 22, line 10. After "bridge" *insert* "and tramway"

Page 9, clause 22, line 16. *Omit* first word "or"

Page 9, clause 22. At end of clause *add* "or house-services or connections in respect thereof"

Page 9. *Insert* the following new clause to stand as clause 23:—

23. For the purposes of such inspection, as in the last section mentioned, the said William Kenwood shall before commencing to construct either the said bridge or the said tramway deposit with the Minister, the Municipal Council of Sydney, the borough of North Sydney, and the Water and Sewerage Board, respectively, a copy of the plan or design of the same, together with a copy of the specifications and all necessary drawings. Plans to be lodged.

Page 9, clause 26, 27, line 41. *Omit* "Railway Commissioners have" *insert* "Minister has".

Page 9, clause 26, 27, line 41. *Omit* "they" *insert* "he"

Page 9. *Insert* the following new clause to stand as clause 28:—

28. The said William Kenwood shall keep and maintain upon the said bridge in such places and at such times as the Marine Board shall from time to time prescribe, lights for the guidance of vessels navigating the harbour, and shall keep and maintain such other lights thereon as the Metropolitan Transit Commissioners for the time being may consider necessary. Lights.

Page 10. *Insert* the following new clause to stand as clause 32:—

32. The said William Kenwood shall allow the following persons and vehicles, together with the horses drawing such vehicles, free passage over the said bridge at all times, whether by day or night:— Exemptions from Tolls.

All persons on foot, mounted, or in any vehicle, wearing Her Majesty's uniform, whether of the army, of the navy, of the volunteer forces, of the police force, or of the postal or telegraphic service.

All members of fire brigades in uniform and on duty.

All vehicles and horses engaged in the military, naval, volunteer, police, or postal service; and all fire engines and other appliances connected with the extinguishment of fires, together with the horses drawing such fire engines.

Page 10, clause 34 34, line 19. *Omit* "and parcels"

Page 10. *Omit* clauses 33 and 34.

Page 10, clause 35 36, lines 50 and 51. *Omit* "or by such tug-boat" *insert* "or by any steam or other tug-boat towing or warping or attempting to tow or warp such ship under the said bridge"

Page 10, clause 35 36, lines 53 to 56. *Omit* "the written permission of the said William Kenwood for the said ship to pass under the said bridge may have been previously obtained, and notwithstanding that"

Page 11, clause 39 40, lines 35 and 36. *Omit* "and where any such penalty as aforesaid has been imposed it shall be lawful for a Stipendiary Magistrate"

Page 11, clause 39 40, line 37. *Omit* "in either case"

1896.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

SYDNEY AND NORTH SYDNEY BRIDGE AND
TRAMWAY BILL.

TUESDAY, 30 JUNE, 1896.

Present:—

MR. BULL,
MR. E. M. CLARK,
MR. GRIFFITH,MR. HAWTHORNE,
MR. HOWARTH,
MR. TRAVERS JONES.

E. M. CLARK, ESQ., IN THE CHAIR.

William Francis Brennan, Esq., appeared as Solicitor for the Bill.

William Francis Brennan sworn and examined:—

1. *Chairman.*] You are the solicitor for the Bill? Yes.

2. Have you any statement to make to the Committee? Yes. Under instructions from Mr. Kenwood I posted copies of the Bill on the 2nd May last to the Secretary to the Railway Commissioners, the Minister for Public Works, the Crown Solicitor, the Engineer-in-Chief for Railway Construction, and the Secretary for the Water and Sewerage Board. On the 8th instant I posted twelve copies of the Bill, containing certain proposed amendments, to the North Shore Bridge Committee, which embraces the Mayors and Aldermen of Sydney, North Sydney, Lane Cove, Mosman, Manly, and Willoughby. The Committee embrace all the northern portion of the harbour—the places which will be affected by the Bill. I received an acknowledgment from the Secretary to the Railway Commissioners; and I also received an announcement from the Water and Sewerage Board to the effect that certain amendments which they wished to make in the Bill would be found at their office. I thereupon sent to the office and had a copy of the amendments made. Later on Mr. Kenwood will lay a copy of the amendments before you. They relate chiefly to matters affecting the sewers with which the Water and Sewerage Board have to deal.

W. F.
Brennan.
30 June, 1896.

William Kenwood, C.E., sworn and examined:—

3. *Chairman.*] Are you the promoter of the scheme mentioned in the Bill? Yes.

4. Have you any statement to read in order to lay your scheme before the Committee? Yes; I have prepared this statement for that purpose:—I am a civil engineer and a member of the Engineering Association of New South Wales—I am applying to Parliament for a Bill to enable me to construct, erect, and maintain a high-level bridge over the waters of Port Jackson, between the City of Sydney and the Borough of North Sydney, and to construct, maintain, and work a tramway upon and over the said bridge, and between the City of Sydney and the Borough of North Sydney and its environs. The population of North Sydney and its environs, including Manly and the districts served by the North Shore Railway, numbers (according to the Government Statistician, and from information obtained from one of the aldermen of the said borough) upwards of thirty-four thousand (34,000), while the population of Sydney and its suburbs (excluding North Sydney and the other places stated) numbers between three hundred and seventy thousand (370,000) and three hundred and eighty thousand (380,000). The increase of population along the line of railway from Milson's Point to Hornsby during the past four years amounts, I am

W. Kenwood,
C.E.
30 June, 1896.

W. Kenwood,
C.E.
30 June, 1896.

credibly informed, to upwards of three thousand (3,000). Communication between Sydney and North Sydney is effected by ferry-boats for passengers, and by horse-boats for horse and vehicular traffic and live stock. These boats belong to the North Shore Steam Ferry Company (Limited). This Company has at present a fleet of large penny-ferry passenger steamers running (1) between Sydney, Milson's Point, MacMahon's Point, and Lavender Bay; (2) between Sydney and Neutral Bay; and (3) between Sydney and Mosman's Bay, while there are large horse-boats running continuously throughout the day until midnight between Fort Denison and Milson's Point. The evidence taken before the Royal Commission appointed in 1891 to inquire into the city railway extension and North Shore Bridge connection, shows that the estimated passenger traffic on the Ferry Company during the preceding year was close on 5,000,000, while 378,500 vehicles and 43,800 horsemen used the horse-ferry, and that the estimated annual revenue for this traffic was £45,000. I am of opinion that the traffic has increased from 20 to 25 per cent. since 1891. The accommodation afforded by the fleet of steamers referred to is the only means of communication and mode of traffic between Sydney, North Sydney, and the other places specified, as there is no communication by land except by a detour of a considerable number of miles. The distance across the waters of Port Jackson, between Dawes Point and Milson's Point, is approximately between 1,500 and 1,600 feet. I am applying to Parliament for authority to construct and maintain a high-level bridge between Sydney and North Sydney, in order to afford the public the means of communication and facilities for traffic between the places named that are so urgently needed and have been so long looked for. The bridge I am prepared to erect will be constructed of steel and iron of the very best quality and description obtainable, and all the material used will be subjected to the severest tests. The workmanship will be of the very best class, and everything in connection with the bridge will be of the most modern and approved character, and of the highest order that engineering science can devise. My design of the bridge in question commences on one of the curves of Cumberland-street, a few chains north of Argyle-street. It then runs in a north-easterly direction through the site of some buildings for about 7 chains. Continuing thence again in a north-easterly direction, it runs in a straight line across Cumberland-street, George-street North, Dawes Point, the waters of Port Jackson, the Government Railway premises, and on to land, partly vacant, fronting Alfred-street, North Sydney, adjoining and to the east of the said Railway premises. From thence it runs in a north-westerly direction, and well to the west of Alfred-street; over some unoccupied lands to and terminates at the north-east corner of Glen-street where that street intersects Alfred-street, at the site of the North Sydney Council Chambers. The tramway, which is inseparable from the bridge, for the public convenience, and for the construction, maintenance, and working of which I am also asking in this Bill for Parliamentary sanction, will consist of a double line of rails, and will commence in York-street, at the corner of Wynward-street, will run thence along about the centre of York-street to Cumberland-street, thence along about the centre of Cumberland-street, according to its present or proper alignments, to the bridge, and then over and along the bridge to the corner of Glen and Alfred Streets, in North Sydney. At that corner, as well as at Milson's Point, the Government tramway, running to and from Milson's Point, will receive and set down any passengers desiring to alight from or go over the bridge tramway. I may here mention that the portions of York-street and Cumberland-street along which the tram will run are not busy streets, and traffic will not be impeded by the proposed tramway. The bridge tramway and the bridge will operate to feed the Government railway at Milson's Point and the Government tramways in North Sydney. Passengers wishing to go by tram from Sydney will be carried from the centre of the city across the harbour to the railway station; from thence the tram proceeds along the bridge to the Council Chambers. At the Milson's Point portion of the bridge there will be huge lifts working continuously, as well as footways and approaches, for the convenience of the public desiring to go by train, or by the Government tramway, or otherwise. My present intention is to use the electric traction for the tramways; but to meet possible developments in motive power, I am likewise asking for authority from time to time to use cable, steam, or other motive powers, accordingly as the Railway Commissioners may sanction. The cars will be of a handsome and approved pattern, somewhat similar to those in use on the King-street cable line, in Sydney, and the number supplied from time to time will always be ample for the public accommodation. There will be waiting-rooms at convenient places along the line of route, of the pattern and style of the Government waiting-rooms in Elizabeth-street and in Liverpool-street, Sydney. Referring to that portion of the bridge which crosses the harbour, there will be one large span of 664 feet width, with a clear continuous headway for shipping, under this span, of 165 feet from low water, and 160 feet from high water. There will be two other spans in the part crossing the water, each of 532 feet in width, with an average continuous headway for shipping of 100 feet from low water, and 155 feet from high water. I have avoided in my design any construction of parts that might affect the headway for shipping, and by doing so I secure a large and continuous shipping headway all across the harbour. The water-piers supporting the bridge crossing the harbour will have a base of 80 x 80 feet, constructed on rock foundations, and will be carried up to a height of 25 feet above high-water mark. The water-piers will be faced with massive blocks of the best trachyte stone, of the character used in the Equitable Life Insurance Company's building in George-street, and will be built of concrete of the best quality. The cylinders above this base will be of cast steel, braced and finished with semi-circular brackets. These brackets are introduced for effect only. The bridge is to be 60 feet wide, and is arranged for tram, passenger, vehicular, and live stock traffic. Provision is made in the Bill I am asking for so that the whole of the works may be inspected during their progress by the Minister for Works and his engineers, and the works are to be done in a substantial and workmanlike manner, and to the satisfaction in all respects of the Minister. Provision is also made that the bridge is not to be open for traffic until the Minister or his engineers certify it is efficiently built and thoroughly safe in all respects. The Minister and his engineers are also empowered to make such periodical inspections of the works as they may elect to make, from time to time, in the public interest; and by the Bill I am compelled from time to time to do whatever works they require to be done for its maintenance and efficiency. In like manner, the Railway Commissioners and their engineers have the supervision of the tramway during its construction, and have to certify to its efficiency before it can be used. They also have power to periodically inspect and order whatever they think necessary to be done for the maintenance of the tram-lines and the maintenance and equipment of the tram-cars, and I will be obliged from time to time to comply with their directions in that behalf. The route of the bridge I have already defined, but I desire to point out that in designing it I have so contrived as that no portions of the streets in Sydney,

Sydney, or in North Sydney, are altered or diverted in any way. As I have stated, the bridge begins in one of the curves in Cumberland-street. It goes thence through the site of some buildings for about 7 chains; it then crosses Cumberland-street, leaving a clear headway for traffic of about 25 feet, and then goes over George-street North, leaving a clear headway for traffic of 35 feet. There will be four sets of piers on the Battery Reserve at Dawes Point, but in such a position as not to interfere with the use of that reserve. The grades on to and off the bridge on the Sydney side will be 1 in 31, and on the North Sydney side 1 in 45, which are grades of an exceedingly easy nature for vehicular traffic. There will be very little land resumptions required in the carrying out of my project, while proper safeguards are provided in the Bill for the payment to owners in respect of all lands required, as well as for payment for the right to bridge over such lands as may be necessary to be bridged over. In arranging the table of tolls and fares I have adhered closely to, and, in fact, have copied the fares and rates charged by the North Shore Steam Ferry Company for the conveyance of passengers and horses, vehicles, &c. The fare in the ferry-boats for passengers is 1d. each way, and the following is the reduced table of fares of the said Company in respect of their horse-boats since 1st April last:—

W. Kenwood,
— C.E.
30 June, 1896.

	s.	d.
Cart or sulky, with one horse	0	3
Cab, buggy, van, or dray, with one horse	0	6
Waggon, bus, lorry, carriage, or hearse, with two horses	1	0
(Any single load limited to 2 tons. Special rates for extra weight.)		
Each additional horse	0	3
Horse and rider	0	3
Bicycle and rider	0	2
Cattle (per head)	0	3
Sheep or pig	0	0½

All passengers, other than the person in charge of a horse or vehicle, 1d. each way.

Passengers using the bridge may go by tram, or walk, at their discretion, for the same fare as they are carried in the ferry-boats, namely, for 1d. each way, and the whole tram journey to and from the centre of the city, from and to the Council Chambers in North Sydney, is not to exceed 2d. each way, while the carriage of parcels is to be at the same rate as that charged on the Government railway for the like distance. The bridge, tramway, works, and resumptions I estimate will cost between five hundred thousand pounds (£500,000) and six hundred thousand pounds (£600,000). Taking into consideration the fact that the capital of the North Shore Steam Ferry Company is, I understand, sixty thousand pounds (£60,000), the proposition to only charge the same rates as that Company over a work involving the expenditure of over half a million of money, is one that will commend itself for its reasonableness. The entire length of the bridge will be 76½ chains, and the entire length of the tramway from Wynyard-street to its terminal point in North Sydney will be 1 mile 46 chains and 62 links. The works will be undertaken as an investment for capital, which, on a thirty years' tenure, is estimated to yield an average return of about 5 per cent. on the outlay. At the end of the thirty years' period the Crown will have power to purchase the works, &c., at any time, so it will be seen that in applying for this Bill I am not in any way seeking to obtain a monopoly. The bridge and tramway will operate to largely settle population in and around North Sydney and its environs, and along the line of Government railway from Milson's Point to Hornsby, covering a distance of about 13 miles. This line passes through a country acknowledged by everybody to be one of the sanitoriums of the Colony, and which is at present comparatively unpeopled. The passenger approaches and lifts to the bridge at Milson's Point, and the approach at near the Council Chambers, North Sydney, will convenience every person having occasion to cross the harbour. It is expected that there will be from 300 to 400 skilled and other workmen constantly employed on the works for the three years they will occupy in their construction. The bridge will be lighted at night by electricity. It will be a most graceful and substantial structure, and, from an artistic point of view, a feature to the harbour. As before stated, I have provided for a headway of 165 feet above low water in the central span, and an average headway of 160 feet above low water on the shore spans; and I append the following extract from the printed report of the Royal Commission on the city railway extension and North Shore bridge connection, furnished on 6th March, 1891 (page 68), relating to the height of any bridge between Sydney and North Sydney, and to the striking of top-gallant masts. As to height of bridge: "Presuming that there be need in the future for the construction of the bridge, the evidence seems to point to 160 feet as the proper headway to allow. This, with a 4-ft. rise and fall of tide, would give a possible passage of 164 feet. Mr. Darley, in his letter (Appendix K), suggests this height; and, he says, prior to the erection of the Forth Bridge the question was closely investigated, and the Trinity Board decided that a clear headway of 150 feet would be sufficient, and with this clearance the bridge was constructed. This is supported by Mr. Deane (Question 142), Mr. Selfe (Questions 467, 574), Mr. Spencer (Question 623), Mr. Young (Questions 920 and 1119), Mr. McCredie (Question 1207), and Mr. Mountain (Question 1289). The Secretary to this Commission, as the result of inquiry amongst nautical men, fixes the consensus of opinion as 160 feet. Captain Trouton states his opinion as 150 feet. The Commission, after considering evidence on this point, and as to the height of masts, are of opinion that, when the bridge is erected, 160 feet will be sufficient headway." As to striking top-gallant masts; the report states, at page 68: "As to striking top-gallant masts, the Marine Board estimate the costs, in large sailing ships, at £20 per mast. This statement was not questioned, as it might have been, had the evidence been given verbally. Upon this point the Secretary to this Commission reports (Appendix J) that the nautical men consulted do not attach the same importance to the operation; that as ships' crews while in port are not allowed to aid in discharge of cargo, and have only to scrape and paint, the work of striking masts could be performed without direct outlay." In designing the bridge, I have made it of sufficient strength to carry a railway, so that if the Railway Commissioners desire to utilise it as part of a railway scheme it will suffice for the purpose. In conclusion, I may add that a petition, signed by over 86,000 persons in favour of the adoption of the bridge and tramway designed by me, has been presented to and received by Parliament.

5. I understand you have consulted with the Water and Sewerage Board, and propose to consent to certain amendments which they have made in the Bill? Yes; we have crossed out those portions of their amendments with which we disagree.

6. You propose that the bridge shall be built of steel and iron, with piers on land of masonry, or masonry and

W.
Kenwood,
C.E.
30 June, 1896

and iron, and with piers in the water of trachyte masonry upon concrete in iron caissons, carrying steel cylinders supporting the bridge, or of steel cylinder filled with concrete carried down to the natural rock foundation? Yes.

7. I understand that you also propose to increase the centre span from 600 feet to 664 feet? Yes.
8. You are also willing to consent to an alteration in the Bill to provide that the height of the bridge above low-water mark shall be not less than 165 feet instead of 150 feet? Yes.
9. That height applies to the central portion of the bridge? Yes.
10. What will be the lowest height of the bridge in crossing any portion of the harbour? About 5 feet less than that.
11. You are also agreeable to keep and maintain upon the bridge, in such places and at such times as the Marine Board shall prescribe, lights for the guidance of vessels navigating the harbour, and also such other lights as the Metropolitan Transit Commissioners may consider necessary? Yes.
12. You are also prepared to make any necessary provisions so far as the Water and Sewerage Board works are concerned? Yes.
13. *Mr. Bull.*] Do I understand that the alterations in red ink show the amendments of the Water and Sewerage Board with which you disagree? Yes; we think they are asking too much.
14. *Chairman.*] In one clause of the Bill you provide that it shall not be lawful for any ships whose masts shall exceed a height of 140 feet above the water-line to pass under the bridge except at such times and upon such conditions as shall be specified in a permission in writing to be obtained for that purpose; are you willing to alter the height from 140 feet to 160 feet? Yes.
15. Are you also willing to agree to a clause which will provide that the following persons and vehicles, together with the horses drawing such vehicles, shall have free passage over the bridge at all times whether by day or night:—

All persons on foot, mounted, or in any vehicle, wearing Her Majesty's uniform, whether of the army, of the navy, of the volunteer forces, of the police force, or of the postal or telegraphic service.

All members of fire brigades in uniform and on duty.

All vehicles and horses engaged in the military, naval, volunteer, police, or postal service; and all fire-engines and other appliances connected with the extinguishment of fires, together with the horses drawing such fire-engines.

? Yes.

16. You are willing to agree to alterations and additions of that kind in the Bill? Yes.
17. With regard to the deposit—in clause 58 of the Bill you provide that you shall, within twelve months from the day on which the Act comes into force, deposit with the Colonial Treasurer the sum of £3,000? Yes.
18. I understand you are quite willing to deposit the sum of £5,000 within six months? Yes.
19. With regard to the progress of the work, the Bill provides that within three years from the day on which the Act comes into force you are to expend at least £30,000 in the actual construction of the works authorised by the Act;—I understand you are agreeable to spend £50,000? Yes.
20. *Mr. Bull.*] I understood you, when reading your statement, intimated that the width of the bridge would be 60 feet? Yes.
21. It is intended to carry foot-passengers? Yes.
22. And vehicular traffic, as well as a tramway or railway? Yes, on 60 feet.
23. Will provision be made for the protection of foot-passengers, so that they may not be interfered with? Yes; there will be a path on each side of the bridge 8 feet wide, and we propose also to put up a light handrail.
24. In other words, you will allow a width of 16 feet for passenger traffic? Yes.
25. And there will be a light barricade or some other protection? Yes, a handrail.

Mr. Gamaliel Thompson sworn and examined:—

Mr.
G. Thompson.
30 June, 1896.

26. *Chairman.*] What are you? I am managing clerk to Mr. W. S. Brennan, solicitor for the Bill.
27. You have a number of statutory declarations in connection with a petition which was presented to Parliament on the 21st May, in favour of the construction of the proposed bridge and tramway? Yes.
28. Do you produce a copy of the petition? Yes.
29. The statutory declarations are made by persons who were engaged in collecting signatures to the petition? Yes; I have counted the number of signatures, which I find is 86,266.

THURSDAY, 2 JULY, 1896.

Present:—

MR. BULL,	MR. GRIFFITH,
MR. HAWTHORNE,	MR. HAYNES,
MR. HOWARTH,	MR. PRICE.

E. M. CLARK, Esq., IN THE CHAIR.

W. F. Brennan, Esq., appeared as Solicitor for the Bill.

Alexander Walter Scott Gregg, sworn and examined:—

A. W. S.
Gregg.
2 July, 1896

30. *Chairman.*] You are a member of the firm of Richardson and Wrench (Limited)? I am managing director.
31. You know something of the district of North Sydney? Yes.
32. As well as of this side of the water? Yes.
33. I suppose you are aware that the wish has frequently been expressed that there should be better communication between Sydney and North Sydney? Yes.
34. Do you believe if we had better communication it would be of advantage to the community generally? Yes.
35. I suppose you know that the present facilities afforded passengers, so far as steam traffic is concerned, are almost inadequate to the requirements of the place? Yes. I do not think they are at all commensurate with the importance of that growing district. 36.

A. W. S.
Gregg.

2 July, 1896.

36. You know the district is on the increase? Yes.
37. I suppose of late years, since the construction of the railway, it has increased considerably in population? Yes.
38. Are you aware whether there are any available Government lands on the North Sydney side of the water? There are residues of lands.
39. *Mr. Hawthorne.*] The balance of lands, I presume, those resumed for railway purposes? No; large Government areas partly realised (portions reverted), and some not.
40. Are those lands some distance back? I am speaking of the whole of the North Sydney district, between Milson's Point and Hornsby. There are Government lands about Chatswood.
41. But the whole of the land required for bridge purposes on the North Sydney side would probably be private land necessary to be resumed? Wholly, so I believe.
42. *Mr. Griffith.*] There is no Government land on the North Sydney side, even up to Hornsby, accessible for private residences. All the land near the line is private land? At the back of Lindfield there is a fair area.
43. *Mr. Howarth.*] Do I understand you to say there is Government land in the vicinity of Chatswood? Yes; on this side near the Mowbray Road.
44. That is not in the vicinity of Chatswood? No. I should have said on this side of Mowbray Road.
45. *Chairman.*] You know something, of course, of the elevation of the land there, and of its noted position for health purposes? Yes.
46. Are you able to say anything in regard to that? I had very clear proof of that at a noted sale I had there a few weeks ago. It was a sale at Wahroongah.
47. *Mr. Griffith.*] How much an acre did it average? About £180.
48. What distance was the nearest of it from the station? About two minutes' walk. It was not in allotments, but in block areas.
49. What was the highest price obtained? £430 an acre.
50. How much did you sell? Thirty acres.
51. When? Four or five weeks ago.
52. Did you dispose of the whole of the land? Yes. I am sorry I had not two or three times as much.
53. What distance is Wahroongah from Sydney proper? About 11 miles from Milson's Point.
54. You know there are other projects for crossing the harbour—for instance, by means of a tunnel? Yes.
55. What do you think is the general public opinion in regard to this question? My preference would be for an overhead way—a bridge.
56. *Mr. Griffith.*] If a bridge were constructed, would not the bulk of the passengers still continue to travel by the ferry-boats? They might on occasions.
57. Would not the regular passengers by ferry continue to cross by ferry rather than walk or come by the tram? It depends on the fare.
58. The fare from North Sydney to the Post Office is to be 2d.? In many instances they would probably elect to travel as they do now, but if they had as much to do as some people have they would prefer to pay 2d. rather than 1d. They would be landed quicker, and they would have a more comfortable mode of transit.
59. *Chairman.*] You know something of the present vehicular traffic between Sydney and North Sydney? Yes. It is extensive and is growing.
60. What is your opinion of the present means of transporting vehicles from Sydney to North Sydney and *vice versa*? I know, as a business man, it is very annoying to me, and causes a loss of time at both ends, sometimes to the extent of twelve minutes. If I miss a steamer I have to wait sometimes fourteen minutes at each end. All that waste of time would be avoided by a direct bridge.
61. Do you think the erection of a bridge would increase settlement in that particular neighbourhood? I do not know it would do so around the terminus of the bridge itself, but I fully believe the bridge would be used by a great many people who have horses and vehicles who do not now take the steam ferry for various reasons.
62. *Mr. Griffith.*] Do you consider the proposed bridge, with its tramway, would render the present cable-tram service from Milson's Point Ferry practically unpayable;—would it not destroy traffic? No; because I take it that this only terminates a little beyond the present Milson's Point. The amount of fares earned as between the North Shore terminal station and Milson's Point is so slight that it would hardly be missed. I have heard that it is intended that the tramway should terminate at the present town-hall. The distance between Milson's Point and that is so small that the amount of fares earned now would not be thought of.
63. *Mr. Bull.*] I suppose you would go so far as to say that the fact of having a permanent structure as a means of communication from one side to the other would have the effect of expediting and materially increasing settlement? Yes, and I believe it would bring a class of residents who like to drive on a road, but do not care to go by a ferry.
64. Is not that your experience wherever a bridge has been erected? Yes.
65. Take the one at Iron Cove, in the direction of Drummoyne, is it not self-evident there? Yes.
66. *Chairman.*] And there would be a tendency on the part of those who would use carriages and vehicles to build a superior class of house? Yes.
67. *Mr. Bull.*] Have you ever known the people of North Sydney to be cut off from communication with Sydney owing to unpropitious weather? I have often noticed in the newspapers that the fogs have been so dense that there was danger in crossing by the ferry. All that would be avoided.
68. Have you ever known the weather to be so tempestuous that the North Shore steamers have ceased to run? No.
69. *Chairman.*] I suppose you know it in regard to Manly? Yes.
70. And Manly forms part of this particular district? Yes; there is a lot of land between the terminus and Manly which could be utilised for settlement.
71. *Mr. Griffith.*] They would still have to cross the spit? Yes.
72. *Chairman.*] There is another considerable and progressive district—Mosman? Yes; Mosman would be more directly affected favourably.
73. *Mr. Bull.*] We have one instance I think in that district in which a bridge which cost a large sum of money

A. W. S.
Gregg.
2 July, 1896.

money did not effect all the advantages which you are suggesting? It had not the effect of opening up or of increasing the population of the district? No; but there was a large element of speculation in that. There is no similarity between the land to which that bridge led and that to which this bridge will lead.

74. I suppose you mean that the element of speculation consisted in the erection of the bridge for the purpose of inducing settlement. The proposed bridge will not only satisfy a demand which at present exists, but will open up settlement in the future? Yes. And it provides a more satisfactory means of transit for the people.

75. *Mr. Howarth.*] What is your opinion of the increase in population along the Milson's Point line since its completion? I am not prepared to say what the proportion is, but there is a very marked increase. One cannot help noticing, in travelling over the line, that there are numerous houses of various grades and designs; and there is still an inquiry for land. Indeed, since the sale of which I have spoken, I have had a very large number of people asking me when the residue of the 300 acres is likely to be in the market.

76. *Mr. Griffith.*] Do you see any prospects of there being sufficient population there within a measurable time to support two bridges, or do you think one will be sufficient for a long time to come? What would be the object of the two bridges?

77. Do you think there is any probability in the remote future, or within a measurable space of time, of the population there being sufficient to make two bridges possible? I would hardly think so.

78. Then if the bridge is erected it means that for almost all time it will prevent the possibility of the Government having a railway bridge of their own? No; it may be that the great extension of settlement in the northern country, between this and the tablelands, may require, as I think it will, the erection of a railway bridge.

79. A great many people suppose, and I think justly, that if the bridge is built there will be no chance of the Government being able to construct another to connect the Government railways—I want your opinion upon that;—do you think in the near future there is a probability of there being sufficient traffic there to keep the proposed bridge and the Government bridge going? No; I think there will be quite enough traffic within the borders of Gordon and Willoughby to support this bridge alone without the aid of a railway.

80. *Chairman.*] You know that the railway is at present continued to Milson's Point, and you know that the cost of the railway was very considerable? Yes.

81. A bridge for railway purposes would have to connect somewhere at the top end of the district, near Bay Road or St. Leonards Station;—it would really mean that the whole of the work to Milson's Point would be a useless expenditure? Yes, as affecting the railway.

82. *Mr. Howarth.*] Have you any idea how much Government land still remains at Linfield? No. I had a most extensive sale for the Crown there in 1888. The land sold extravagantly high, and a good deal of it reverted to the Crown, but how much I am not prepared to say.

83. Have you had a sale there more lately? Yes, of a few pieces.

84. Did it realise anything like £50 an acre then? No; it was in a very inferior position. There was nothing to recommend the character of the site.

85. Did it realise £30 an acre? I think some of it realised from £30 to £40 an acre. It was inferior land. Of course there was a large shrinkage from the auction figures.

86. *Mr. Bull.*] Have you made yourself acquainted with Mr. Kenwood's scheme? Only in a cursory way—not sufficiently close to enable me to make an estimate of resumption values; but where resumption would occur the cost need not necessarily be high.

87. As a fact the scheme does not comprise lands in any neighbourhood of any material value? No. It is a weak end of the city where the bridge starts from. There are no material improvements there.

John Bede Magney sworn and examined:—

J. B. Magney.
2 July, 1896.

88. *Chairman.*] You are a member of the North Sydney Brick and Tile Company? Yes.

89. You do a very large business in North Sydney in connection with the manufacture of bricks? We do a moderate business.

90. Still it is a large brick manufactory? Yes.

91. We have called you, as a business man connected with North Sydney, to give us some information as to the connection of North Sydney with Sydney. What is your opinion as to whether bridge connection will be beneficial to the district? I believe a bridge connection would be beneficial.

92. *Mr. Bull.*] You are of opinion that connection is necessary? Yes.

93. For all purposes? Yes.

94. And you favour a bridge connection? Yes.

95. *Chairman.*] Would a connection of that kind be a great advantage to you in your business? I do not think so. It would be very small.

96. *Mr. Bull.*] You mean, I suppose, that the range of your business does not extend to this side of the water? No, and it is not likely to do so.

97. But if a bridge were erected, and people were encouraged to go to the locality, and purchase lands for the purpose of residence, necessarily your business would be benefited? Yes, in that way.

98. And that is a material way? Yes.

99. *Chairman.*] Is it a fact that, notwithstanding the fact of the existence of your business at North Sydney, bricks are brought from St. Peters to North Sydney at the present time? Yes.

100. By means of the present primitive horse-ferry service? Yes.

101. I suppose you, in your business, have experienced inconvenience in connection with the horse-ferry service? Very much so.

102. Judging from the experience you have had, are you prepared to say the service is altogether inadequate to the requirements of the district? I think it is behind the times. I also think the time is not very far distant when something more extensive will have to be provided both for vehicular and passenger traffic. We should not limit our ideas to the North Shore alone. We should look at the matter from a national point of view, and not from a local point of view alone. Some months ago I contributed a letter to the *Sydney Morning Herald*, which I have with me, and which indicates my views as to where the connection should go, and why I advocate such a connection.

103. *Mr. Bull.*] Could you not give us your reasons by referring to your letter yourself? Yes. I suggest two bridges, one to North Shore and one to Balmain, starting from Miller's Point. I say that the localities about Balmain, Leichhardt, Birkenhead, Drummoyne, Hunter's Hill, and Gladesville will be served by that connection. J. B. Magney,
2 July, 1896.

104. That is by the connection with Balmain? Yes; it should go from Miller's Point to Goat Island, from there to Balmain, and from Goat Island to Ball's Head. One reason for going that way is this: it would bring the railway to the foreshores of North Sydney, with a view to utilising a large water-frontage for shipping purposes; running on both sides of Ball's Head, notably on the western side. It will be seen at a glance that, from its elevation, a large shipping business could be done there very economically, considering the primitive method of bringing goods to a lower level. We could have it there at a higher level, and, consequently, we could ship it by gravitation. Leaving the shipping phase of the question, and going to the passenger question, we serve those districts say from Bay Road northwards as far as the borders of Queensland, perhaps inclusive of a portion of Queensland, in the facilities afforded of getting to Sydney by a quicker and a less circuitous route than that around by Homebush, saving some 9 miles. I hold that any bridge to North Sydney should be constructed in the light of the possibility of a very large population being concentrated around the Milson's Point to Hornsby Railway.

105. Am I to understand, from what you are saying, that this is one scheme and the other is an alternative scheme? No; there is no alternative scheme. This is one scheme embracing two bridges. I hold that the erection of a bridge lower down will be of very little value to people on the North Shore (say) from Alfred and Blue Streets.

106. Why do you say that? Because I believe that people will always go by steamer. They are not going to walk over a bridge, and you cannot afford to let them go over for less than 1d., and the boat will always take them for 1d.

107. *Chairman.*] What about the vehicular traffic? I do not think it would be much, seeing that you would cut off a large portion of the vehicular traffic (say) from the heights of St. Leonards about Lane Cove Road, North Sydney Road, and Mosman's, which would go by the route I have indicated.

108. Supposing your route was not adopted, and supposing a bridge was constructed to the low levels at Milson's Point, do you consider the vehicles would use that bridge in preference to the present steam-boats? Certainly I do. I hold that a portion of North Shore, out towards Mosman's, for passenger traffic, will certainly not be served by any bridge lower down, nor even by the bridge I propose, unless under very exceptional circumstances; they would still come by the boats. The Balmain scheme will serve the interests of Balmain, Leichhardt, Drummoyne, Birkenhead, Hunter's Hill, and Gladesville, either for horse traction, a railway, or a tramway. In urging the adoption of this route, I suggested it might be possible to adopt the betterment principle both for private and Crown lands. A very large area of private lands is immediately contiguous to the connection on the northern side of the harbour, and would certainly materially benefit it.

109. *Mr. Bull.*] How would you apply the principle of betterment to Government land? In this way: say the Government land at the present time is worth £1, it becomes worth £10. I have not spoken yet of this being a State railway; but if private enterprise steps in and makes this connection, and increases the value of State lands, the State should proportionately contribute as well as a private person.

110. *Mr. Price.*] Speaking roughly, what do you estimate the betterment would amount to? I have not made any computation.

111. *Mr. Bull.*] I suppose you are hardly aware of the area of Government lands which would be benefited? Not now. Some time ago I had the whole of these particulars at my fingers' ends, in order that they might be mentioned in the Upper House by the Hon. Alexander Dodds. I had a tabulated statement showing the number of acres of Crown lands which the Government held, and which would ultimately benefit by the connection with North Shore by means of a bridge. Since then the Kurrungai Chase has been taken out of it. Still, however, there is a large area of land left which would be materially benefited by this connection.

112. *Chairman.*] Have you any idea of the area of land remaining? No.

113. *Mr. Howarth.*] Can you keep pace with the demand for bricks from your yards? Not with our limited machinery.

114. Is it on account of your limited machinery, or is it on account of the great increase in population and the greater demand for building material? It is on account of the limited machinery.

115. What is the capability of your machinery? At the present it is capable of turning out a little over 200,000 bricks a week, but if we had a little more steam power and grinding power and another kiln we should turn out 400,000 a week.

116. Do you think that would be sufficient to meet the demand? Yes, at present; but within a very remote period it would not be.

117. Do you think Mr. Kenwood's scheme would be of any assistance to the people now residing along the North Shore line? Certainly.

118. Do you hold that by the construction of this bridge vehicular traffic would be increased? I do not know about that. Am I to infer that there is a railway to go over it?

119. Not as at present proposed? Then certainly it would be increased.

120. The district on the other side of the harbour is a splendid district for drives, is it not? Yes, unequalled in my opinion.

121. *Chairman.*] You say that the present means of vehicular traffic are altogether inadequate for the requirements? Yes. I would say not inadequate so much as unsuitable.

122. And anything would be really a relief? Yes.

123. Do you think relief would come better by means of a bridge or a tunnel? By means of a bridge.

Robert Newby Kirk, sworn and examined:—

124. *Chairman.*] You are secretary to the North Shore Ferry Company? Yes.

125. Will you state the number of passengers who passed through the turnstiles during the past twelve months? I am afraid I cannot do that without authority from my Board. R. N. Kirk.

126. Can you state the number of season-tickets issued by your company? No. Of course there are 2 July, 1896.
season-ticket-holders. 127.

- R. N. Kirk. 127. The charge to passengers is 1d. each way? Yes, except as regards season-ticket-holders.
 2 July, 1896. 128. What charge is made for season-ticket-holders? The present charge is 15s. per quarter.
 129. *Mr. Bull.*] In a recent prosecution I think you gave a lot of *in re* information;—had you the authority of the Board to give that information? Yes.
 130. For instance, you gave evidence as to the number of persons who passed through the turnstiles? Yes.
 131. Do you look upon this as a rival scheme which may eventually do the steam-ferry service some harm? No. I ought to explain it is not usual to give any information with regard to one's company's business without being authorised by the Board.
 132. Do you not give a great amount of information in your balance-sheets? Certainly; any information given in the balance-sheet is public property.
 133. Was no evidence of that character published by you in that sheet? No.
 134. I understand a letter was written by you on the 15th May, in reply to a letter of the 5th May from Mr. Kenwood, in which you say:—"In reply, I am directed to say that when the Bill you refer to has reached the stage of being referred to a Select Committee, your request will be considered";—were you asked for that information at that time? Yes; Mr. Kenwood wrote to the secretary.
 135. And on the 30th June you wrote again:—"I am instructed by the directors of this company to acknowledge the receipt of your letter of the 26th, and in reply to refer you to the published balance-sheets of the company"? Yes.
 136. Would that supply you with the information which Mr. Kenwood was then asking you for? I take it that was an intimation that all the information which could be given was the information as published.
 137. *Chairman.*] Can you tell us how many horse-boats the company has in use? There are two regularly running, and two others for use as may be required.
 138. Until what hour does the horse-ferry run? From 5 a.m. to midnight.
 139. And the passenger-ferry runs up to midnight also? Yes; the regular service closes then, and then there is a half-hourly service until 5 a.m.
 140. What charge do you make for the all-night service? Sixpence. It was reduced from 1s. to 6d.
 141. Do they run on Sundays at the same hours? No; on Sunday nights the all-night boats start at half-past 10.
 142. Have you seen the schedule of rates in the Bill? Yes.
 143. Can you say whether it is the same schedule of rates as charged by you? No. [*Bill produced.*] The charge for foot-passengers is the same; horse and rider, the same; bicycles, the same; horse and cart, horse not ridden or driven, the same.
 144. *Mr. Bull.*] How many passenger-boats have you in the fleet? Fourteen or fifteen.
 145. As a rule, two or three are laid up? Yes.
 146. When is the balance-sheet published? Every half-year, which ends in March and September.
 147. *Chairman.*] You gave some evidence in connection with the recent prosecution in connection with the sale of fraudulent tickets? Yes.
 148. Do you remember stating that Captain Summerbell ordered 4,300,000 tickets during 1895? Speaking from memory, I cannot say, but I know I did give some figures at that time.
 149. Do you remember that the excess of tickets for 1895 amounted to 268,000? Yes.
 150. *Mr. Bull.*] Not the excess of tickets, but the excess of persons who passed through the turnstiles without tickets for that year aggregated that amount? It was the excess of tickets received over those sold.
 151. *Chairman.*] That did not include, of course, the cash fares which had been received, nor the season-ticket-holders? No.

William Barnett Smith, sworn and examined:—

- W. B. Smith. 152. *Chairman.*] You are Council Clerk for the Borough of North Sydney? Yes.
 2 July, 1896. 153. And you have been a resident of North Sydney for a long time? Yes.
 154. Do you think a better means of communication with the city is necessary? Yes.
 155. Have you any idea of the increase of population in the district during the last four or five years? The present population of the district of North Sydney proper and Mosman is about 20,000; but the whole of the district—including the railway suburbs as far as Hornsby and Manly—has, I estimate, a population of about 34,000.
 156. You took considerable trouble in 1890 and 1891 to obtain information in connection with this particular matter for the Royal Commission which was sitting? Yes; in 1890 the population was about 24,000 in the whole of the area I have spoken of.
 157. So that the increase in six years has been about 10,000? Yes.
 158. Of this population, how many do you think would be concerned in obtaining improved transit facilities? I think the whole population is concerned. Of course some look at it in one way and some in another. I think the concern of the majority of the people about North Sydney and Manly is to obtain a traffic bridge.
 159. A traffic bridge would serve a large population? Yes; of about 20,000 to 25,000.
 160. What do you think the increase in population in North Sydney in ten years would be? The population would then, I estimate, reach 50,000, of which I should think 20,000 would be settled along the railway line. According to the last census returns the increase of population in the North Sydney district was, on an average, about 144 per cent. in ten years.
 161. Do you see any reason to think that the present ferry service will be inadequate for the requirements of the place? I think the present ferry service is a very good one as far as it goes, but as population increases I do not see how it will be possible to cope with the traffic unless it accelerates the service by making the boats run at shorter intervals, and I understand that cannot be done without causing danger to the harbour traffic.
 162. I suppose you know representations have been made from time to time for a more frequent service—for a 10-minute service? Yes, I believe so.
 163. The company have generally contended that there is an element of danger in a more frequent service? I think that is the view taken of the matter. Whilst the traffic is concentrated at one point, as it is at North Shore, there must be an element of danger.

164. *Mr. Bull.*] But is not this ferry service largely availed of by people not living there at all? To a great extent. W. B. Smith.
2 July, 1896.
165. There are 20,000 people there who are affected by the ferry service? More than that—30,000.
166. Do you happen to know what the average traffic upon the ferry is per day? Yes; I made an estimate during the time the Royal Commission was sitting. I took special pains to collect the traffic at that time. I forget the particulars of the daily traffic, but the annual traffic was then a little over 4,000,000. I think that it has now largely increased.
167. At what would you estimate the present traffic? I think it could not be much less than 6,000,000 passengers per annum.
168. What do you consider the vehicular traffic is? About 500,000 annually.
169. Can you tell us something of the annual value of ratable property in these incorporated districts? Yes; the annual value of property in the incorporated districts at the present time is about £340,000.
170. Which area is that? The incorporated districts—Manly, Mosman, Willoughby, and North Sydney. In North Sydney proper it is £188,000.
171. *Chairman.*] What is the number of dwellings within the incorporated area? About 6,000.
172. *Mr. Bull.*] Have you capitalised the value? No.
173. *Chairman.*] Some time ago you made a capitalisation in connection with North Sydney and Mosman alone? Yes; I think it was about £3,000,000.
174. Can you give us an estimate of the capital value in regard to Manly, Willoughby, and Lane Cove? In a general way. Assuming that the annual value of £340,000 is correct, I think the capital value will be about £7,000,000.
175. And outside this there is a considerable district not incorporated? Yes, a very large district.
176. That is the whole of the district from Chatswood to Hornsby, and on the other side from Manly to Pittwater? Yes; I include Pittwater with the Manly district.
177. *Mr. Bull.*] Have you considered Mr. Kenwood's scheme? Yes.
178. Do you think the present wants of North Shore would be met by a bridge built in the location suggested? I think so; and as far as I can judge, Mr. Kenwood's bridge appears to be a good one.
179. How long have you been in your present position? Ten years.
180. *Chairman.*] Have you any idea how many dwellings there are in the municipality of North Sydney itself? Three thousand seven hundred and ninety-six in the borough of North Sydney.
181. Have many new houses been erected during the last twelve months? Yes; 100 new houses have been erected during the last twelve months. In Willoughby and Mosman, I think the increased number of houses would be greater, relatively speaking.
182. Have you any idea of the percentage of unoccupied houses? In our municipality, last year, it was a little over 7 per cent.
183. *Mr. Bull.*] Would you say that that increase, not only of population but of the number of dwellings, is brought about by reason of the railway communication? Not in North Sydney. The railway communication does not benefit North Sydney.
184. *Chairman.*] With regard to the ferry traffic generally, you know that so far as the municipality itself is concerned there has been considerable difficulty in fighting with the North Shore Ferry Company to obtain concessions? The council has several times been in communication with the ferry company.
185. *Mr. Bull.*] Is not a great amount of time lost in transit by business people? Yes.
186. *Chairman.*] It is recognised, I suppose, that the present service is inadequate for the requirements of the district? That is generally recognised.
187. I understand you are the secretary of the committee representing the aldermen of the whole of these municipalities and representatives of the outside associations—unincorporated portions—now sitting to deal with this question? Yes.
188. They are making inquiries as to the best means of communication? Yes; they are inquiring into the various schemes now before the public.

TUESDAY, 7 JULY, 1896.

Present:—

MR. BULL,	MR. HAWTHORNE,
MR. HAYNES,	MR. HOWARTH,
MR. NELSON.	

E. M. CLARK, ESQ., IN THE CHAIR.

William Francis Brennan, Esq., appeared as Solicitor for the Bill.

Mr. Cecil West Darley, Engineer-in-Chief for Public Works, sworn and examined:—

189. *Chairman.*] Along with Mr. Deane you have submitted a joint report to the Committee? Yes.
190. Do you wish to supplement that report? The report was sent to the Minister, and after I left the room on the day the Committee last met I sent for the information of the Committee an extract from another report on the same subject which Mr. Deane and I had written. Mr.
C. W. Darley.
7 July, 1896.
191. Then do you wish to supplement that in any way? In any Bill of this kind it should be obligatory on the owners of the bridge to fix and keep lights upon it, as may be required by the Marine Board from time to time. Provision should be made to the effect that the owners "should be obliged to fix and keep lighted all lamps of approved description, power, and colour, necessary for safe navigation, that may be from time to time required by the Marine Board." The lights should be placed there in order to show the course ships must take. I would point out that, according to the design of the bridge, the abutment pier on the Milson's Point side is right across the Milson's Point railway station, and I do not see any provision in the Bill for diverting the railway. I may add the plan which has been produced is somewhat incorrect, the western wharf being out of position. I pointed out in my report that I have an objection to both lines of navigation—inward and outward—passing through one span. I may state that the illustration which has been put before the Committee shows a ship going out of the harbour on the wrong side.

- C. W. Darley. side. It would be a grave and serious objection to the design to force the navigation through one span in the harbour, as it is near a bend, and the result might be a collision.
- 7 July, 1896. 192. *Mr. Haynes.*] What is the extent of the spans nearest the shore? 500 feet.
193. Then there are two apertures of 500 feet each, and one of 600 feet? Yes; but there are not 500 feet available for navigation.
194. *Chairman.*] You suggest, then, that there should be one pier for inward and outward traffic, as it were? I prefer to see one pier in the centre of the harbour. It is best to have no pier at all, but the next best thing is to have one pier in the middle of the harbour.
195. *Mr. Haynes.*] Is it possible to have one pier only? Quite possible.
196. That is on the principle of the Brooklyn Bridge? Yes. One span of the Forth Bridge is 1,700 feet wide. The Brooklyn Bridge is 1,500 feet wide. There is a new bridge being designed now to go across the Hudson River at New York. A committee of experts sat and decided that no pier whatever should be in the water—either close to the water or in the water. I speak subject to correction, but I think that has forced the committee into a span of 3,250 feet.
197. *Mr. Bull.*] Would it not be an advantage to have one centre pier? I do not see much objection to one centre pier, because the inward and outward vessels have their own sides of the harbour. It is quite possible, of course, to make a bridge without a pier at all, but it would increase the expense.
198. *Mr. Haynes.*] What is the height of the Forth Bridge? 150 feet. There is no large shipping in the river above that bridge.
199. What is the height between the water and the Brooklyn Bridge? 135 feet.
200. What will be the height of the bridge over the east channel you speak of? I think it will be regulated by the existing Brooklyn Bridge; there are no lofty ships navigating above that point.
201. *Mr. Bull.*] Your great objection to the design is that it would concentrate the navigation, and lead possibly to serious collision? Yes; in the centre of the harbour.
202. *Chairman.*] And that would be got over by the substitution of a single central pier? Yes.
203. You suggest that the height of the bridge should be 180 feet? I have given the matter a good deal of consideration, and I think 180 feet ought to be obtained if possible.
204. I suppose a bridge of that height would be the highest bridge of its kind in the world? The highest bridge across navigation.
205. You have submitted a report in regard to the height of different masts;—I should like to know whether the height of those masts is from the keel or water-line? From the water-line—what we call the light-ship line, or ballast-line.
206. Could not the topmasts of all the vessels be lowered with comparatively little trouble? It would put ships to a certain amount of expense to do that.
207. With regard to the ships you have mentioned, how many have telescope masts? There is one ship at present in Newcastle Harbour with a telescope mast. She was built for passing under the Brooklyn Bridge. It is very rarely we have ships with telescope masts. That is the only one we have had on this coast.
208. Do you know that the masts of the steamer "Australian" are of steel, and can be lowered as required? I have not heard of that. Of course it is more easily done with a steamer than with sailing ships.
209. You do not know of any vessels here or in Newcastle of a height (say) of 165 feet which could not lower or telescope her masts if she required to go under a bridge? I do not think there is any ship in Newcastle at present but what could lower her masts. There are one or two, I think, with fixed iron masts in one piece, of 154 feet high. I think the mainmast of the "Orotava" is 150 feet high.
210. *Mr. Haynes.*] I suppose you have really no professional acquaintance with the maritime phase of this question. I suppose there are other officers of the Department who would be able to give more definite information on that point? In framing my report I caused a number of the masts to be measured by my officers in Newcastle and Sydney.
211. *Chairman.*] From a professional standpoint, have you any prejudice in favour of connection by bridge as opposed to connection by tunnel? I have not given the matter very much consideration.
212. Some time ago you forwarded a letter to the Royal Commission sitting in connection with this question, and you then gave an opinion rather favourable to the bridge? Yes. I may say at that time I was quite opposed to a tunnel, but I fancy a tunnel could be carried out. I have had some talk with Mr. Deane on the subject, although I have not gone into the matter from an engineering point of view. I have not seen the levels or sections until lately to see how it could be worked out. It struck me that if we had a tunnel it would be difficult to get out. Mr. Deane, however, has shown me a section which shows it is feasible, and not quite so difficult as I thought it to be.
213. You know something of the depth of water in connection with the wharfage accommodation of Woolloomooloo Bay;—would it not be possible for the few large ships which come into the harbour with masts exceeding 165 feet to be berthed there? Yes; but you would have to buy out all existing rights, and all the companies who have wharfage rights at Darling Harbour and Miller's Point.
214. The Public Works Department is spending a large amount of money in Woolloomooloo Bay? Yes. A large amount of wharfage can be provided there, but there are vested interests in wharves on both sides of the bridge.
215. You have pointed out that of ninety-three foreign trading vessels in Newcastle harbour there are only five, which is a small percentage, with masts exceeding 175 feet. It has struck me that they might be accommodated upon the wharfs at Woolloomooloo Bay, where so much money has been spent? I would point out that you could provide for those ships in Woolloomooloo Bay, but if they have a cargo to be delivered at Talbot's wharf he would decline to take delivery at Woolloomooloo Bay. Of course he would go in for a heavy claim for compensation if ships could not reach his wharf. You cannot move the trade; the trade must follow to where the ships are consigned.
216. Then you think the bridge should be 180 feet high? The nearer you can get to that the better.
217. And that one pier should be sufficient? Yes; one central pier.
218. *Mr. Haynes.*] But no pier would be better still? Yes.
219. *Mr. Bull.*] After all would not one pier be best;—might not a Marine Board regulation be made so as to make it penal for vessels to pass in or out except on one side? There is no objection to one pier. A little lower down the harbour we have Fort Denison or Pinchgut, and the ships go past on either side

side there. There is no serious objection whatever to one pier. Of course, each channel will be lighted— C. W. Darley.
on the one side for coming up and on the other side for going down the harbour.

220. *Mr. Nelson.*] What is your opinion with regard to the width of the bridge;—it is proposed to make it 60 feet wide, and to include two lines of tramway? My impression is that it is rather narrow. I should like to see it a little wider. It ought to be 70 feet wide. 7 July, 1896.

221. *Mr. Haynes.*] I suppose there will be two roadways as well as two tramways? There will be a roadway on each side of the tramway.

222. *Mr. Brennan.*] Do you know what is the width of King-street? I am not quite sure.

223. *Mr. Bull.*] Is it not less than 60 feet? I am not aware.

224. *Mr. Brennan.*] There are two footways of 12 feet each across? I think they are 10 feet each.

225. As a matter of fact, the actual road accommodation on this bridge of 60 feet will be more than is given to the public in King-street; assuming we set apart 10 feet for the passenger traffic, that will leave 50 feet clear, which is more than is available in King-street—there are only 40 feet available in King-street at present? I have not looked into the matter of width very much.

226. You have made a remark as to the expense of lowering topmasts:—what does that expense consist of? Sending the royal and topgallant yards down, and requiring the gear necessary to lower the masts.

227. Is not that done by deck-hands? It would take some time to do it.

228. But, as a matter of fact, is it not done by deck-hands? It is done by the crew, of course.

229. Then there is no actual expense? Of course there is; you would take men away from other work.

230. The ship crew is never required to discharge cargo? No; but they have painting and repairs to do.

231. How long would it take to get the masts down? It would be a day's work to lower the three.

232. At any rate, it will not involve an outlay of £ s. d.? I think shipmasters will say it costs the owners a considerable sum of money.

233. *Mr. Howarth.*] Could not you lower the three masts in one day? I daresay you could.

234. Generally speaking, a vessel lies down the harbour for a day before going to the wharf? Frequently, but not always. Very often they come direct from the sea to the private wharfs.

235. In the case of vessels, say from 150 to 170 feet in height from the water-line, it would not be necessary to lower the masts right down to the deck? No; you could strike them.

236. In the case of a vessel with double topgallant yards, the lowest topgallant yard is slung on the goose-neck on the topmost cap? Yes; the trouble would be that the upper topgallant yards would have to come down.

237. Is there any inconvenience attached to the telescope masts as against the fixed topgallant masts? I am not acquainted with the telescope masts. I suppose that only one vessel with telescope masts has been on this coast. It is now, or was recently, in Newcastle.

238. In your opinion is there any vessel in the harbour at the present time whose topmast head is more than 160 feet from the water-line? I do not think so.

Mr. Hugh McLachlan, Secretary to the Railway Commissioners, sworn and examined:—

239. *Chairman.*] Have you any statement to make with regard to the Bill before the Committee? A copy of the Bill was sent to the Commissioners by the solicitor, and they have looked through it. There are a number of points which I have marked against the different clauses. First of all, in regard to the policy of the Bill. The Commissioners wish me to say they express no opinion as to the policy of the construction of the bridge, believing that to be a matter for the Government and Parliament to determine. With regard to the bridge being of public benefit, so far as regards any increase of traffic is concerned, I may state that so far as it affects the railways and tramways it is doubtful whether it will be of any public benefit, because if there is an increase of settlement on North Shore it will be settlement which will be drawn from other places—that is to say, people that live at Waverley, and who now patronise the existing trams, will go to the Shore. The same remark applies to people living on the existing suburban lines. In other words, the Bill will not create a new population, but will bring it from one place to another. In that respect there will be no public benefit. So far as the tramways are concerned, it may also be considered to some extent as a competitor with the tramway proposed to be made, viz., the proposed electric tramway down George-street to Circular Quay. It will compete with that at a certain point, so that, so far as the public benefit is concerned in the increase of traffic, it will not be of benefit so far as the existing railways are concerned.

240. *Mr. Howarth.*] Would it be a benefit to the public residing on the other side of the water? It might be of some little benefit to them. With regard to the powers of the promoters to make approaches and other works connected with the bridge—clause 4—I would like to urge that general power to make approaches to the railway station at Milson's Point should not be given. Anything of that character should be subject to the approval of the Railway Commissioners being obtained in the first instance. The Commissioners have vested in them all railway lands, and are responsible for the efficient control and working of the railways. The concluding words of clause 4 are—

Provided always that the said William Kenwood shall not be made to adhere strictly to the hereinbefore-stated terminal points or line or route of the said bridge, but shall be at liberty to make such deviation therefrom or alterations . . . as may be approved of by the said Minister.

In the next clause—clause 5—power is also given for deviations to be made, but in that case the deviations are to be subject to the approval of the Railway Commissioners. I can see that there is some little difference between the two clauses, as the one deals with the bridge and the other with the tramway. The bridge will affect the railway very seriously—that is to say, in regard to the piers on the shore end at Milson's Point; so that no deviation or alteration should be allowed even in regard to the bridge unless it also has the approval of the Railway Commissioners, in whom, as I say, the land upon which railways are made is vested. Clause 6 provides the power to enter upon and take lands. That also, I think, requires to be made clearer. I think the power should be curtailed so far as it relates to railway land. The interpretation clause provides that private lands shall mean lands other than Crown lands belonging to or vested in the Railway Commissioners. If that is a correct interpretation, clause 6 would give the promoters power to enter upon railway lands. There should be no doubt in regard to the matter. Railway lands should be excluded from the provisions of the clause, except where the Railway Commissioners have first approved of any entry. Otherwise the promoters would probably

Mr. H.
McLachlan.
7 July, 1896.

Mr. H.
McLachlan.
7 July, 1896.

probably have power to take possession of the station at Milson's Point, because clause 9 gives them power, after serving notice, to enter upon any lands. Clause 22 deals with works to be inspected. Railway construction works are dealt with by the Public Works Department, and would be subject to the approval of the Engineer-in-Chief for Railway Construction. The clause says that it should be lawful for the Railway Commissioners at any time during the construction of the tramway, or any works in connection therewith, to appoint an engineer to enter. I think it would be better if the matter were left to the Minister for Public Works. Whilst the line or bridge is under construction it should be subject to the Engineer-in-Chief for Construction. The Commissioners only come in when the line is taken over. Clause 26 also provides for the same thing—that the tramway shall be opened when the Railway Commissioners have certified that it has been sufficiently constructed. That certificate, in regard to new railway lines, is always given by the Engineer-in-Chief for Construction, who is an officer under the Minister for Public Works; but in regard to the rolling-stock it would be well to have that certified by the Railway Commissioners. There is one point that I might mention in regard to clause 30, and it would be well to make it clear. It gives power to the promoter to charge 50 per cent. higher rates for superior classes of accommodation. I do not know whether the Committee would think it wise to provide that each train should have both classes of accommodation. The Bill provides for the line being transferred, and amongst other things it would be well to make it perfectly clear that the public shall at all times have the right to the road at the lower charge. Otherwise, if a person wished to act a little sharply, he could provide that between 8 and 10 o'clock he would only run the higher-class carriages. It might be well to safeguard the matter in the way suggested. Clause 31 provides that goods and parcels may be carried at charges not exceeding the rates or charges in force on the Government railways. That, I think, will introduce a little difficulty in this way: We have a very comprehensive system, particularly in regard to the charges for parcels, in that we have only the one charge from 1 to 86 miles. If you allow that clause to stand as it is there would be a charge for $1\frac{1}{2}$ miles the same as the railway charge for 86 miles. For goods we charge the same rate from 1 to 10 miles. I think also that clause 41 should be omitted. It provides that the by-laws shall be deemed to have been approved of by the Governor after the expiration of one month after they have been laid before him, unless the Governor shall before the expiration of that period have signified his approbation thereof. It sometimes happens that the Governor may be busy or away, and may overlook a matter of this kind. I think that it is rather a dangerous clause to have in the Bill. With regard to the clause which provides that the Governor at any time after the expiration of thirty years shall have the right to take over and purchase the line it is provided:—

It shall be lawful for the Governor . . . to give notice . . . of the intention of the Crown to purchase the said bridge and tramway, and all rights . . . acquired by the said William Kenwood under or in pursuance of this Act, or used in connection with the construction, maintenance, or working of the said bridge and tramway; and the amount of compensation to be paid to the said William Kenwood upon such purchase by the Crown shall be the actual amount of the cost by acquisition, purchase, construction, erection, and maintenance of the bridge . . .

I take it that the word "maintenance" must be a mistake, because you could never be expected to pay for the maintenance of a line if you happened to buy it. The maintenance charges on a railway does not add to its capital value in any way. With regard to that matter it might be well to insert a clause which has been introduced in most other private railway Bills giving the Government power to resume. One of the last Bills of this kind passed is the Capertee Tramway Bill. Clause 38 provides:—

At any time, after two years from the commencement of this Act, the Governor, with the advice of the Executive Council, may, if he think fit, purchase such tramway, upon giving to the said John Lang, his heirs, executors, administrators, and assigns, six months' notice, in writing, of his intention to do so. If the amount tendered for the purchase of the property be considered inadequate by the said John Lang, his heirs, executors, administrators, and assigns, the amounts shall be ascertained by assessment in terms of the Lands for Public Purposes Acquisition Act: Provided that the cost of resumption shall not exceed by 10 per centum the original cost of construction: Provided further that on such resumption taking place the lands on which the tramway has been constructed shall be held to have reverted to the Crown.

That really leaves the matter to arbitration if the parties disagree to the amount to be paid. The matter of time is one which has to be determined by the Committee.

241. *Mr. Brennan.*] That only relates to the cost of construction, and not land? Of course, it would be considered in construction. I think it would lead to difficulties to introduce a clause such as the one shown in the Bill. I suggest that you should introduce a clause similar to clause 38 of the Capertee Tramway Bill. There is also another matter which it is as well to provide for. In regard to some of these Bills where private lines have been made, and where the Government railways and tramways are concerned, it has been usual to make some conditions as to running powers. This Bill provides for no running powers; but it might be wise to provide for them, and to allow the matter to be dealt subject to the payment by the Commissioners of half the charge made to the public for the use of the section of the line owned by the promoters. The object is to give the Commissioners power to run over the line. We would pay half the fares charged to the public where, of course, the promoters carry them. We would pay half-rates for running powers. Another thing which would follow would be in regard to the gauge. I do not think the Bill provides for a gauge, and it is important that it should do so. Another clause which we have suggested has been introduced into one or two Tramway Bills of late, and that is in regard to a line not being worked. This Bill provides for the line being taken over by the Government, and the money forfeited, if it is not made within a certain period. But supposing the line were built, and the company got into difficulties, and did not work it. It would be a great obstruction to the street if it were left idle. There is not power to meet such a difficulty as that. The clause, which is introduced in other private Bills, is to the effect that if the line is not worked continuously for a year the Government can take possession of it. I would suggest to the Committee whether they should not consider the introduction of some clause to meet such a contingency.

242. *Mr. Haynes.*] What do your engineers think about the bridge? They have not considered it. As I say, the Railway Commissioners have not expressed an opinion as to the policy of the matter at all. They would rather not.

243. Have they expressed any opinion as to the engineering results of a bridge of this character? Not to my knowledge.

244. Have you any information as to the life of a bridge of the height required, and bearing the traffic such a bridge as this would bear? No; it was not considered by any of our engineers. The Engineer-in-Chief for Railway Construction is the officer who should give you information on that point.

Captain

Captain John Jackson made affirmation and was examined:—

245. *Chairman.*] What is your position? Manager of Public Wharfs.

246. You gave some evidence in May last before the Public Works Committee in connection with the proposed removal of the Pyrmont and Glebe Island Bridges? Yes.

Captain
J. Jackson.
7 July, 1896.

247. You were asked the question:—

An increase of tonnage would not lead to a very great increase in height?

That is referring to the height of masts, and your answer was:—

No; because at the present time the policy is to make masts low and square.

? That is so.

248. Are you still of the same opinion? Yes. I have a statement with me upon which I based my evidence. I hand in a statement showing the height of masts from main truck to load-line of certain vessels. [*See Appendix.*]

249. Do you hold any opinion as to the height a bridge should be—say a bridge across the harbour? My opinion is only based on what I know the height of masts to be. I should say a bridge across the harbour would require to be 200 feet high.

250. On the occasion referred to you said 180 feet? Yes; but I find that there is a ship of 187 feet to the load-mark? Of course, if she were light she would be 200 feet.

251. You were asked the question before the Public Works Committee:—

Have you seen any of the proposals for crossing Darling Harbour by means of a subway or tunnel?

Your answer was:—

I have seen the accounts of the various proposals in the newspaper, and from the little experience I have had of subways, such as that under the Thames, I do not approve of them.

Are you still of the same opinion? Yes.

252. *Mr. Bull.*] You are not in favour of this subway? No.

253. What advantage would a bridge have over this subway? The little I know of subways is in regard to London. They had to do away with the great portion of the traffic which used to go through the subway on account of leakages.

254. *Mr. Haynes.*] That was a tunnel under the Thames? Yes.

255. *Mr. Howarth.*] Was it the old Thames tunnel? No; it was above that, nearer to London Bridge—somewhere about the Tower, I think.

256. It would be possible for some of these ships with high masts to strike their topmasts? Yes.

257. Would the expense be very great? There would only be the gallant-mast which would require striking. That would only take a few hours if it were properly arranged.

258. Could the three masts easily be sent down in one day? Yes, in an hour.

259. You could ease up all stays, back-stays, and send your yards and masts down in an hour? Yes.

260. *Mr. Haynes.*] Do you think it would be more beneficial to maritime trade if there were no pier in the water? I do not think that would be any advantage.

261. *Mr. Darley* says that a centre pier would obviate any danger of collision which might occur owing to the traffic coming through a centre arch? Yes, it would.

262. Then you think no pier at all would be preferable? Yes, I do.

263. *Chairman.*] With regard to the striking of the top-gallant-masts, what would be the height which would be saved by striking? The gallant and royal masts on some vessels, with the sky-sail mast and pole, would be 60 feet on a vessel of 1,700 or 1,800 tons.

264. *Mr. Nelson.*] And the whole of that could be taken down in two hours? Yes; always assuming that everything is kept in proper order.

265. *Mr. Bull.*] It would not mean considerable expense? No; a ship's crew ought to put it down in two hours.

266. You know the delay usually occasioned in coming up the harbour? Yes.

267. It could be down during that time? Easily.

268. *Mr. Howarth.*] Have you been master of a vessel? Yes, for about twenty years.

269. Do you not consider it would be a distinct advantage to have the gallant-masts down in port in order to overhaul the gear rather than to keep them up? No; they do not want to overhaul every time they come into port.

270. With regard to the reply you gave to the Public Works Committee in reference to the proposed removal of Pyrmont and Glebe Island Bridges, you then stated that the height should be 180 feet, and you now think it should be 200 feet? Yes; of course it is a rarity, but I have a vessel of 187 feet high, which is an exceptional height. She had three sky-sail masts.

271. And carrying poles? Yes. I may state that the captain of the "Brilliant" told me half an hour ago that his vessel was about 160 feet from the water-line.

272. Would 120 feet from the water-line reach the top-mast head of that vessel? Yes.

273. Do you think there is any vessel entering the port 160 feet in height from the water-line to the top-mast head? I do not think so.

274. I hold the opinion that so long as a vessel's top-mast head has a clear headway under a bridge that bridge ought to be sufficiently high to answer all purposes? I think so, too.

275. You say that the striking of two or three top-gallant-masts occasionally, which is only the work of a few hours, ought not to compel the construction of a bridge 200 feet high? I think you are right.

Captain James Edie, Shipping Master, sworn and examined:—

276. *Chairman.*] We have called you as an authority upon shipping, by reason of your position, to ask you some question in regard to the construction of a bridge across the harbour—more particularly with regard to the height of the masts—the proposal is for a bridge 150 feet in height from high water—we want to know what your opinion is as to what the height of a bridge here should be? I think the height of 150 feet would necessitate a good many ships striking their top-gallant masts.

277. Would that be a very expensive matter? No; it is a matter of time. As a rule the ship's company can do that. They have to do it in other parts of the world—at the Brooklyn Bridge, for instance. I have

Captain
J. Edie.
7 July, 1896.

Captain
J. Edie.
7 July, 1896.

have not seen the Brooklyn Bridge, but from information I have received from shipmasters they have to strike their top-gallant masts to get through it. I will give you the heights of two or three ships in the harbour at present, which were furnished to me by the respective captains. There is the "Drumalis"; she is of 2,450 tons register, and from light-water mark—that is, what she would be if going from Circular Quay to Mort's Dock—she is 172 feet high. The "Thessalus," now lying in Neutral Bay, is 1,782 tons, and her height in similar trim would be 176 feet 6 inches. I may tell you she is one of the old-fashioned ships. The new style of ship is one of lower masts and squarer yards.

278. *Mr. Howarth.*] But she is much squarer than vessels built ten or twenty years previous? I think it has been the tendency of late years to lessen the height of masts and get it in the yards, but there is not a great deal of difference now. Then there is another ship—a four-masted one—the "Glenfinlas," of 2,148 tons, and in similar trim she would be 167 feet high. That ship, when the top-gallant mast and royal is struck, comes down to 124 feet 6 inches. There are ships coming here now and again—mostly Canadians—which have their top-gallant and royal masts divided for Brooklyn Bridge, but they are regular traders to that part of the world. The height of the Brooklyn Bridge is about 134 feet, that is over high-water mark. The Forth Bridge, which is the latest of the bridges, is 150 feet from high-water mark. I do not think there are any ships going beyond the Forth Bridge similar to those which come to Sydney.

279. *Mr. Haynes.*] Is it the ordinary duty of a ship's crew to strike the top-gallant masts? We will presume it is a four-master. There would be six or eight yards. Some of them have double top-gallant yards. That would be six top-gallant yards and three royals. It would be a good day's work on a large ship for a full ship's company.

280. *Chairman.*] A number of the steamships have telescope masts? I do not think it would affect the steamships if the bridge were of any height at all.

281. Do you think it would affect them if it were 165 feet high? I do not think it would touch any steamer which comes near the place. They are rigging steamboats less and less every day.

282. *Mr. Howarth.*] The height of the "Oratava's" masts has been given at 150 feet high;—have you any idea whether that is from the keel or water-line? The water-line, I think, when the ship is light. It will not be from the keel. That ship will be 34 feet in depth.

283. Would the top-mast head of the "Thessalus" be more than 120 feet from the water-line? Yes. The "Glenfinlas" is 167 feet. When the mast is housed it comes down to 124 feet 6 inches.

284. Does it carry sky-sails? No; I think the "Thessalus" is the only one which has sky-sails. Very few of the four-masters carry sky-sails.

285. *Mr. Haynes.*] Mr. Darley says that it would greatly facilitate the traffic on the harbour if instead of two piers there is only one. He says there would be some risk of collision if two piers were there, and vessels used the main span? If there were one pier instead of two I would make the same rule apply as applies to Pinchgut. One boat goes up one side and another down the other side.

286. I suppose it would greatly facilitate traffic if there were only one central pier? Yes; but it would be still better if there were none.

287. Judging from appearances, do you think the Forth Bridge, with no pier at all, is similar to the proposed bridge? The Forth Bridge is different from this. It is what they call a cantilever bridge.

288. *Mr. Howarth.*] Assuming that the proposed bridge will give the same headway all across the harbour, do you not think it is preferable to any single span or cantilever bridge which might be constructed? From a sailor's point of view it would be better to have no pier. I have worked a deep-draught ship in the harbour at night-time, and looking at the matter from a sailor's point of view I think it would be better to have no pier.

289. You could not approach either shore with a cantilever bridge? That would depend on how far back you would have to go to get the same amount of headway.

Robert Newby Kirk recalled and further examined:—

R. N. Kirk. 290. *Chairman.*] We asked you for some information the other day? Yes. May I refer to the evidence I gave the other day, when last before you. You asked me to prepare the rates charged on our horse-boats with a schedule in Mr. Kennedy's Bill? I said:—

The charge for foot passengers is the same; horse and rider, the same; bicycles, the same; horse and cart—horse not ridden or driven, the same.

The figures are the same, although the evidence is likely to be somewhat misleading. For foot passengers we charge one penny, but against that there are the subscribers' tickets—15s. for men, 10s. for women, and 6s. for children per quarter; that, of course, is a considerable reduction on one penny each way. Another thing is this, that we carry the passengers from one point to another.

291. *Mr. Bull.*] You mean that you carry them, and that in case a bridge is erected they will walk? Yes.

292. Have you consulted your directors with regard to the information you were asked for the other day? I think you have got pretty well all the information you asked me to get.

293. Are you in a position to say what is the amount of your traffic? I am not in a position to give any figures.

294. Are you in a position, personally, to give any information as to the approximate traffic? No.

William Richard Beaver, Clerk of the Peace, sworn and examined:—

W. R. Beaver. 295. *Chairman.*] You produce the papers in the case of Regina v. Deacon? Yes; tried at Quarter Sessions, in January last. The charge was forging tickets of the North Shore Ferry Company. I produce the deposition of Mr. Robert Newby Kirk, the managing accountant.

296. You have gone through the deposition for the purpose of gleaning what information you can as affecting this inquiry? Yes; from Mr. Kirk's deposition it appeared that the total number of tickets issued during the year 1895 was 4,074,000; that was exclusive of the people who travelled by the alleged forged tickets, which amounted to a very considerable number.

297. Was the number stated? Yes. According to the deposition, in March of last year the excess was 19,000; in April, 17,000; in May, 12,000; in June, 26,000; and in July, 35,000. That is, of course, entirely exclusive of subscribers.

298. And cash fares? I assume so.

Robert

Robert Newby Kirk further examined :—

299. *Mr. Bull.*] You are the Robert Newby Kirk who gave evidence in the case referred to by the Clerk of the Peace? Yes. R. N. Kirk.
7 July, 1896.
300. And the statements you made then were to all intents and purposes true? Yes.
301. *Mr. Haynes.*] Are you aware of the fact that the Brooklyn Bridge has not interfered with the ferry service? Mr. Bull asked me when I was here before whether I looked upon the proposed bridge as a rival scheme to the ferry service; I may say we do not. I do not anticipate this scheme will do us any harm. I do not know what effect the Brooklyn Bridge has had on the ferry traffic.

James Anderson, Council Clerk to the Borough of Willoughby, sworn and examined :—

302. *Chairman.*] You have been Council Clerk for a number of years? Twenty and a half years. J. Anderson.
7 July, 1896.
303. There has been great progress in Willoughby during the last two years? Very much so during the last two or three years.
304. What number of additional houses were built there last year? About ninety new houses were assessed. Others were in course of construction, and they are now being completed.
305. What is the present revenue of the borough? About £3,600 before a part of a ward separated recently.
306. That is in regard to the general rates? Yes.
307. Have you a lighting rate? We have not levied one for the last two or three years, because the lighting rate was to credit.
- 307½. *Mr. Haynes.*] There has been great developments all over the North Shore? Yes, all along the line. There is no doubt there would have been more settlement even before the railway if we had had a bridge. I know of two good houses which were for ten months without a tenant, because people could not get across to Sydney at night by means of the horse ferry. When I took the borough over there was not a mile of road laid in it. I was for fifteen years Council Clerk and Engineer, and I opened 33 miles of road in the borough.
308. *Chairman.*] It was for a considerable time the largest of our suburban municipalities? Yes, 12½ square miles.
309. In all something like 10,000 acres until the late separation took place? Yes.
310. Have you any idea what the increase of population at Willoughby has been since the construction of the railway? Some years ago it was only about 1,000. Our population is about 4,000.
311. Have you any idea of the increase in the value of land in that neighbourhood? Yes.
312. I suppose land has considerably increased in value in the neighbourhood of Chatswood Railway Station? Yes.
313. What is the highest price being paid for land there? £12 10s. per foot, at the corner of Victoria Avenue and Lane Cove Road.
314. *Mr. Haynes.*] I suppose the population has greatly increased also in consequence of the trams? Yes; we have a large number of stores and houses of the better class.
315. But since the tramway and railway station were built, has there been an increase? The tramway does not affect Willoughby as it does not come into it, but the railway, especially about Chatswood Ward, which the railway runs through, has brought about a large increase.
316. Is great inconvenience caused to vehicular traffic? There is no doubt of that, especially to people further on. Fruitgrowers, for instance, have to come down at all times of the night in order to catch the first boat, and they have to wait.
317. *Mr. Howarth.*] Are there not also a number of tanners who are inconvenienced? Yes; there have been no less than three fresh tanneries started during the last three years.
318. You have a large number of manufacturing businesses in the borough? Yes.
319. *Mr. Brennan.*] There is a lot of land between Milson's Point and Hornsby available for residential sites? Yes.
320. The construction of the proposed bridge will operate towards populating those lands? Yes, certainly. The last sale which was held was considered to be a very good one.

THURSDAY, 9 JULY, 1896.

Present:—

MR. GRIFFITH, | MR. HOWARTH.
E. M. CLARK, ESQ., IN THE CHAIR.

William Francis Brennan, Esq., appeared as Solicitor for the Bill.

William Kenwood, civil engineer, recalled and further examined :—

321. *Chairman.*] You made a statement to the Committee a few days ago; since then Mr. Darley has been examined, and he is of opinion that two piers in the harbour would be dangerous; he suggests that there should be one pier only, and that the height of the bridge should be 150 feet; I should be glad to know whether you feel inclined to fall in with Mr. Darley's view of the matter; and if not, why not? Mr. Darley's opinion with regard to one pier in the harbour doubtless has good reason in it, and I think that as far as navigation is concerned possibly it might be the best scheme of the two, but we have to regard the expense, and in designing this bridge I preferred the two piers as giving me a good bridge without the expense which would be incurred in one pier. W. Kenwood.
9 July, 1896.
322. *Mr. Griffith.*] If we insist on one pier, are you prepared to say whether you will throw up the scheme on that account? If one pier is insisted upon I do not think it would throw out the scheme. I think I am sufficiently supported to say it would not. Mr. Darley also said that one span would be better than one pier. Of course the cost of one span puts that out of the question.
323. But one pier would not put it out of the question? I believe it would not. Of course one pier makes that portion of the bridge very much more expensive. 324.

W. Kenwood.
9 July, 1896.

324. The ferry traffic in Sydney during the next twenty years will probably multiply ten or fifteen times, and with two separate piers it would be very difficult to manage. If there were only one pier there would be no risk. Of course, two piers might do for to-day, but they would not do ten years hence? I have amended my Bill in the plan to the intent of having one pier. I have thought the matter out carefully, and I find that one pier in the water is a very practical scheme and can be worked out. It is only a question of cost. I think Mr. Darley fixed the height at only 180 feet. I find that only fifteen ships out of the vast trade in connection with Sydney harbour in 1895 have entered the harbour which would not be able to go under a bridge at a height of 160 feet. The evidence we have had in regard to the facilities for striking masts, I think, goes to show that the expenditure and trouble incurred is very small indeed. Consequently, I see no reason why the height of the bridge should be increased beyond 165 feet. It would only advantage fifteen ships in twelve months. Certainly, in years to come there may be more than fifteen, but the chances are there will be a good many less. The tendency is to reduce and not to heighten masts. These bridges are being built all over the world, and, doubtless, shipping builders will build with the knowledge that they are increasing in number every year.

325. *Chairman.*] The evidence of Mr. Darley is to the effect that very large ships go under the Forth and Brooklyn Bridges? That may be perfectly right.

326. Do you know of any other places where ships pass under bridges of a like nature to this? There are many places where shipping had to meet with obstructions of this kind, and, of course, they are increasing it every day. The Kiel Canal, which is opening up the Baltic trade, has two bridges which have only recently been constructed. I suppose they are of latest design in high-level bridges, and their height is 130 feet.

327. *Mr. Griffith.*] But the ships need not go through the canal—they can go round through the Cattegat if they like? Yes.

328. I suppose the ships employed in the Baltic trade would be quite as large as any we have coming in here? The Baltic trade is principally a steamer trade, and, as far as sailing ships are concerned, it is not considered difficult to strike their masts—it is done with facility.

329. Do you know what is the tallest height a ship would be with her top-gallant down? 124 to 130 feet at the most. I would point out that of the fifteen vessels to which I have referred only two would have to strike their topmasts, supposing the bridge were 180 feet high. Therefore, in taking the bridge up to 180 feet you would only be studying two ships coming here in twelve months.

330. What is the amount of deposit the company propose to place in the hands of the Government? £5,000 as a guarantee that the work shall proceed.

331. Within three months? The Bill states six months, which is about as quickly, I think, as I could undertake to deposit it.

332. How much money do they bind themselves to spend in a certain time? £50,000 within three years, but a great deal more than that would really be expended.

333. *Chairman.*] How long would the work be completed in? Within three years.

334. Certainly less than five years? Yes.

335. *Mr. Griffith.*] Supposing there is only one pier and the bridge is 160 feet high, what will the bridge cost? I have not worked it out, but I should say it would make a difference of about £60,000.

336. What was your original estimate of the bridge and tramway? I gave an estimate for the newspapers which was based on the first design with a deck 50 feet wide and a height of 150 feet. That estimate was £450,000.

337. That is for bridge, tramway, and everything? Yes.

338. Did that include resumptions? No. I estimate that the bridge, such as Mr. Darley suggests, would cost £600,000.

339. That is a bridge 180 feet high? The height will increase the cost, but not very materially. It will increase the cost by means of additional wind pressures which will have to be calculated for, and also the additional height of columns, supports, and piers.

340. £50,000 in three years seems a small amount to guarantee to spend if the work is going to cost £600,000? I expect to expend the whole within that time.

341. *Chairman.*] Would you be willing to increase the amount to £50,000? I think I might say I would; still, I would like to point out that this is a commercial investment. Everything is worked on a commercial basis, and if the Bill is torn to pieces—that is, if one span is considered to be the proper design—of course I would not undertake any guarantee, for the simple reason that the venture would be out of court entirely; but if the Committee regard the venture on a commercial basis, I think I could guarantee that the work would be proceeded with within a reasonable time. I may point out that the basis we are building upon is a 5 per cent. one for thirty years. If the designs as agreed upon are such as can be carried out upon that basis, I think I can guarantee almost anything within reason.

342. *Mr. Griffith.*] Supposing the Committee or the House should agree to a height of 165 feet and to one pier, would you be prepared to put down, in place of £50,000 in three years, one-third of the whole—say, £200,000 in three years? Yes; that is to say, upon the actual construction of the bridge.

343. *Mr. Brennan.*] You have mentioned to me something about preferring to leave the question of height to people who are practically in touch with modern bridge-building? Yes. We have had many different heights suggested for this bridge, and there seems to be a good deal of difference of opinion in connection with the matter. I think a fair way to overcome the difficulty would be to submit the height (as I shall have to submit portions of my design in London) to some engineer whom the Government may please to appoint in London—the very best authority they can get, if they like. I would suggest the Trinity Board, and I am prepared to adopt the height they stipulate, the minimum being 150 feet. I am perfectly certain that the Trinity Board would never recommend a height of 180 feet. The highest steel mast in Sydney is 154 ft. 7 in. I take it that if we made provision for that one mast, seeing that it is in one length, 165 feet would be very ample. The Committee may have some idea that a bridge with one span would be the better. I would like to point out that across the harbour with one span you would have to adopt a bridge very much after the type of the Tay Bridge. A suspension bridge is not practicable. A bridge similar to the Tay Bridge is practically the only kind of bridge which could be adopted. That means that if the harbour is 1,500 feet across you will have an arm of gigantic iron construction going over land 750 feet each way. This gigantic work is obviously very expensive. That is the reason why a ne-span bridge is out of the question. The cost is altogether out of limit. It is made out of limit
by

by the ponderous construction over land. The Forth Bridge has a fall of the same kind. Engineers do not agree with that design for the same reason—that one large span is over land where much cheaper construction could have been erected. W. Kenwood,
9 July, 1896.

[The Chairman at this stage left the Chair, which was taken pro tem. by Mr. Griffith.]

Edward Mann Clark, Esq., a member of the Committee, sworn and examined:—

344. *Acting Chairman.*] Have you any statement to make to the Committee? Yes. I am a Member of the Legislative Assembly of New South Wales, and an alderman for the borough of North Sydney. I am the representative of the electorate of St. Leonards, which embraces the larger portion of North Sydney. I previously represented the electorate of Willoughby, which embraced a large portion of the borough of North Sydney, the present borough of Willoughby, Lane Cove and the adjoining district, including the Hawkesbury River, under the old Electoral Bill. I represented St. Leonards, which embraced the boroughs of North Sydney, Willoughby, Lane Cove, Mosman, and Manly with its adjoining district, which extended to Pittwater on the one side and Hornsby on the other. I have been an alderman of the borough of North Sydney for thirteen years, having held the position of mayor for two terms. From my long residence in North Sydney, and thorough knowledge of the place and the requirements of the people, I feel qualified to speak with some authority regarding the advantages that will accrue to the district as the result of its bridge connections with Sydney. I am of opinion that the construction of such a bridge—located as that of Mr. Kenwood's—would very largely increase and facilitate the means of communication and traffic between Sydney and North Sydney, and that the carrying out of such a bridge scheme as that proposed by Mr. Kenwood, coupled with the proposed tramway from Wynyard-street, would be a great public and local convenience. The bridge communication is a matter of real necessity. The want of it is greatly retarding the growth and progress of North Sydney. The Milson's Point Railway to Hornsby runs along a beautiful high level and undulating country. There are hundreds and hundreds of acres available as residential sites along this railway. In my opinion I believe that in ten years after the erection of such a bridge as that proposed by Mr. Kenwood there will be from 50,000 to 70,000 people settled in the North Sydney districts, including Manly and Pittwater, as the result of this bridge. I think the present population is about 34,000, of which 26,000 are, in my opinion, chiefly concerned in obtaining facilities for travelling and for horse and vehicular traffic. The present means of meeting, or trying to meet, the horse and vehicular traffic is very primitive. I have a pretty accurate knowledge of the passenger traffic on the North Shore ferry-boats and in the horse-boats, and I estimate that at least 6,000,000 passengers are carried in the ferry-boats every year, and the vehicular and horse traffic I estimate at between 400,000 and 500,000 vehicles, and at least 100,000 horses and horsemen per annum. As to the height of the bridge, I think that great weight should be paid to the recommendation of the Royal Commission of 1891, namely, that 160-ft. headway would be sufficient. The highest bridge in the world of this character is the Forth Bridge, which allows a headway of 150 ft., while the Brooklyn Bridge has a headway of only 134 ft. I am satisfied, from inquiries, that of all the shipping that entered this port during the past twelve months only about a dozen vessels came in who would have to strike their top-gallant masts to go under a bridge with a headway of 160 ft.; all the rest might easily have gone under. It is well recognised that the Forth Bridge, of 150 ft., is the maximum shipping headway in the world, and, having regard to the facilities with which vessels strike their top-gallant masts nowadays, and to the fact that many of the lofty American ships are so constructed as to fairly admit of lowering top-gallant masts to go under bridges, I have no hesitation in saying that 150 ft. is ample for Sydney Harbour. At any rate, I think that any headway in excess of this should be determined by the greatest living authorities in England on bridges, who, with their experience, would readily dispense of a matter of this kind in a practical way. I quite agree with Mr. Darley and Mr. Deane in their recommendation that there be only one pier in the centre of that portion of the bridge crossing the water, and there be only two spans, one for inward and one for outward traffic, in order to ensure safe navigation. In regard to conveniencing abnormally high-masted vessels, it seems to me to be absurd that the convenience of Sydney and North Sydney and suburbs, numbering nearly 500,000, should be sacrificed to the convenience of the few abnormally high-masted vessels that come here, any of whom who will not lower their top-gallant masts could easily berth at Woolloomooloo Bay, where the Government have spent hundreds of thousands of pounds for wharfs for the accommodation of shipping. E. M. Clark,
Esq., M.P.
9 July, 1896.

TUESDAY, 14 JULY, 1896.

Present:—

MR. GRIFFITH, | MR. TRAVERS JONES.
E. M. CLARK, ESQ., IN THE CHAIR.

William Francis Brennan, Esq., appeared as Solicitor for the Bill.

William Kenwood, C.E., recalled and further examined:—

345. *Chairman.*] I understand you wish to make some explanation in regard to the width of the proposed bridge? I am inclined to adopt Mr. Darley's suggestion of one pier in the harbour. I certainly think it would be an improvement. It will facilitate navigation; but in adopting that suggestion I increase my cost very materially. I propose to adopt Mr. Darley's suggestion, and to leave the width of the bridge at 50 feet—the original design. I find 50 feet is ample. It is wider than King-street, where the cable trams run. I have measured King-street, and I find the actual road is only 38 feet wide. W. Kenwood,
C.E.
14 July, 1896.

346. *Mr. Griffith.*] How wide is King-street with the footpaths included? It has two footpaths, and with those the street would be wider than the bridge, but we should never have the crowd on the bridge which we have in King-street. I propose to put a footpath 10 feet wide in the centre of the bridge. I take it that the passenger traffic across the bridge will use our trams. People will not walk, as a rule, because the distance is too great. Some few may walk in order to get a view of the harbour, and so on.

- W. Kenwood. I think it would be safer for foot passengers to go along the centre. Of course we could make narrow paths on either side of the bridge—as is done in connection with Pymont Bridge—but we think the other plan is the best.
C. E.
- 14 July, 1896.
347. What is the width of Pymont Bridge? It is very narrow; the footpath is only 5 feet in its widest part.
348. *Mr. Brennan.*] Your suggestion will admit of traffic going up one way and down the other? Yes.
349. Keeping to the left, in fact? Yes; that is the object of putting the footpath in the centre, so as to divide the traffic.
350. *Chairman.*] Do you know of any other bridge where that is done? Yes; Brooklyn Bridge.
351. *Mr. Travers Jones.*] Do I understand that you propose to alter your design in order to meet the views of Mr. Darley? Yes.
352. Except in regard to the width of the bridge? I may say that Mr. Darley did not specify any width. I adopt all his suggestions, and with regard to the width instead of being extravagant I give what is sufficient, and no more. With regard to the height, Mr. Darley suggested 180 feet. I have adopted that, but I reserve to myself this point: I consider 180 feet is higher than is necessary, and I reserve to myself to adopt the opinion of some engineer in London appointed by the Government. For my own part I would leave it to the Trinity Board to determine the height of the bridge. The Trinity Board have, practically, to do with the whole of the commerce of the world. They have determined the height of several bridges, and I want them to do so in this instance. If the Board determine that it should be 180 feet high, I am perfectly agreeable.
353. *Mr. Griffith.*] I think it unlikely that Parliament would leave the matter to any outside body. That being so, would you be prepared to leave the matter to the decision of the Minister for Public Works? You may say the Minister for Works if you like. I merely require some authoritative person.
354. I think Parliament would be satisfied to leave the matter in the hands of the Minister, because no Minister would sanction a bridge at a height which would injure shipping? Yes. I think the Minister would obtain the opinion of the Trinity Board, and pass his opinion upon it. I would leave it in that way.
355. Say the Minister acting on the advice of the Trinity Board in London? Exactly. If he acts on the advice of local engineers he may adopt the height of 180 feet, but I am of opinion the Trinity Board would not say that height was necessary.
356. *Mr. Travers Jones.*] If you raise the height of the bridge, would you raise the height of the approaches in proportion, or would you ease the grades? I would make the grades as easy as I possibly could. I may say, however, that a height of 180 feet would make the grade very steep on the Sydney side. It would be far better for the bridge to remain at 165 feet; then it would not be so dangerous. It would not be under the influence of very high pressures, and it would be much easier to approach. I may say that the additional cost of carrying the height to 180 feet is not a point I am combating at present. I am combating now the vehicular advantages. Of course, the higher the bridge goes the more risk there is attached to it.
357. I suppose you have not gone into the question of the extra cost of raising the bridge? No; it is a very serious item. Of course, it needs very minute calculation—that is, so far as the additional wind pressure is concerned.
358. *Mr. Griffith.*] Would not that element make it more expensive? Yes, in this regard,—the pressure being greater, the metal would have to be greater. Wind pressures are not an ascertained fact at present. There is no absolute law in regard to them.
359. It is only an easterly or westerly which will catch the bridge at right angles? I do not anticipate any serious pressure. At the same time, if you have a bridge up to that height it is as well to be prepared for what may blow. In altering the design, I may point out that I escape, to a certain extent, that which the Secretary for Railways raised with regard to the land on the North Shore side. We should take considerably less of that land than we should do by the original scheme.

William Francis Brennan recalled and further examined:—

360. *Chairman.*] You told us the other day that the Chairman of Directors of the North Shore Ferry Co. had promised to give you certain information in regard to the passenger and vehicular traffic of the North Shore Ferry Co.? Yes.
361. Have you obtained that information? On the 9th instant I wrote to Mr. Russell, the Chairman of Directors, enclosing him certain questions, and asking him to answer them, in order to save the necessity of his attendance before the Committee. I have received no answer to the questions. I intimated in my letter that the Committee could compel his attendance under the Parliamentary Evidence Act, if necessary.
362. Practically, then, he has refused to answer the questions? He has not kept his promise to answer them.

SYDNEY AND NORTH SYDNEY BRIDGE AND TRAMWAY BILL.

APPENDIX.

A.

[To Evidence of Captain J. Jackson.]

B.

[Appended by the Committee.]

Sir,

Public Works Department, Sydney, 1 July, 1896.

I am directed by the Secretary for Public Works to forward herewith, for the information of the Select Committee on the Sydney and North Sydney Bridge and Tramway Bill, a copy of a joint report on the subject by the Engineer-in-Chief for Public Works and Engineer-in-Chief for Railway Construction.

I have, &c.,

ROBT. HICKSON,

Under Secretary and Commissioner for Roads.

F. W. Webb, Esq., C.M.G., J.P.,
Clerk of the Legislative Assembly.

Public Works Department, Sydney, 10 May, 1896.

SYDNEY AND NORTH SYDNEY BRIDGES AND TRAMWAY BILL.

We have looked through the accompanying Bill, and beg to make the following observations thereon:—

Clause 4 is supposed to give some description of this scheme, but all we find stated is that a waterway 600 feet wide and 150 feet high is to be provided. The promoter would apparently otherwise have the right to block up the rest of the width of the harbour. It is evidently intended, in any case, only to provide one large span through which both inward and outward traffic must pass; this we consider an objectionable feature in the interest of safe navigation.

Clause 6. (1.) Authorises the promoter to enter upon Crown lands or private lands, or upon streets, for the purpose of survey.

(2.) To make any temporary or permanent works that he likes over any Crown or private lands or streets.

(3.) To make any alterations that he likes in the course of any of the streets, whether by diversion or by raising or sinking their level.

(4.) To construct or erect any coffer dams, floating stages, &c., that he likes in the waters of Port Jackson.

(5.) To erect any houses, workshops, machinery, &c., on Crown or private lands or streets that he likes, to assist in this work.

(6.) From time to time to alter, discontinue, and substitute others according to will.

(7.) Generally to do all other acts for constructing and repairing the said works.

The above provisions are included without any hint at any control whatever by the Government or any other authority.

Clauses 22 to 24 provide that inspection during progress may be made. This would be perfectly useless if designs had not been previously submitted. Also, the right to inspect is frequently placed in the hands of the wrong body.

Clause 33 makes it unlawful for any vessel with masts exceeding 140 feet (the bridge having 150 feet clear over H.W.) in height to pass under the bridge without authority from William Kenwood.

Clause 34 imposes penalties with master of any vessel or tug-boat passing under without the said authority in writing or "without complying with the conditions therein contained." No hint of what the conditions will be is given under the Bill. William Kenwood would have full power to insist upon any such ship's masts being wholly taken down.

To

To impose conditions on any ship is altogether unusual in Bills of this kind, seeing that the right of way belongs to the ship and not to the bridge. Should the master of any vessel, after being duly informed of the headway available, risk taking his ship under, he should be held liable for all damage done, but no more.

Clause 54 gives the promoter the right to temporarily block or obstruct any roadway affected by the works of construction, and relieves him of any control or penalties for negligence.

Clauses 58, 59, and 60 provide for inspection after construction, in order to watch the maintenance of the bridge and tramway, but they are not adequate for the purpose.

There are many other points which we do not at present think it necessary to refer to.

We would point out that this Bill, which fills up, with the Schedule, nearly seventeen pages of printed matter, and has been possibly the result of a great deal of thought, is nevertheless so full of defects and omissions that we think it would be better to oppose its entrance into Parliament altogether until it has been entirely recast. The alterations required are too extensive for a Select Committee to deal with.

We would like to suggest in connection with this matter, that no rights to use Crown lands at Milson's Point or its vicinity, or any other point or its vicinity, should be conferred upon any private person, until the whole matter has been most carefully inquired into.

We would point out as an argument in favour of this suggestion that the placing of piers on the land at Milson's Point, near the railway, might seriously interfere with future extension or enlargement of the railway accommodation there.

We think in any case that no Bill should be admitted which so crudely describes the work to be carried out.

A detailed scheme should be submitted by the promoter to which, if approved by Parliament, he should be bound, within reasonable limits of deviation, to adhere.

C. W. DARLEY,

Engineer-in-Chief for Public Works.

H. DEANE,

Engineer-in-Chief for Railway Construction.

Department of Public Works, Engineer-in-Chief's Office,

Sydney, 2 July, 1896.

Sir,

I consider it would be advisable at this stage to hand you an excerpt from another joint report by Mr. Deane and myself, which has a close bearing on the bridge now under consideration.

I think it might be advisable to let the members of the Committee have a copy, together with the joint report just now read to the Committee.

I should perhaps have handed it in before I left the room.

I have, &c.,

C. W. DARLEY,

Engineer-in-Chief for Public Works.

The Chairman of the Select Committee on the North Sydney

Bridge and Tramway Bill (Mr. Kenwood's Bill) No. 3 Committee Room.

NORTH SHORE BRIDGE BILL.

Clause 4 also fixes the headway at 150 feet over high-water mark. After careful consideration and inquiry, we think this insufficient to meet shipping requirements. There is, apparently, a tendency for the height of masts to increase over what was the practice a few years ago. During October, 1890, Mr. Darley, in a letter to the Secretary of the Royal Commission on the City Railway extension, then sitting, recommended a height of 160 feet over high-water mark, but from inquiries made we now recommend an increase in this height, and we think the minimum clear headway over high-water mark should be fixed at 180 feet.

From a return before us of the ships now lying at wharves above the bridge site, it appears that there are at least eight vessels with masts too high to pass under the bridge if only 150 feet high. The masts of one, the "Langdale" 1,899 tons register, are 184 feet high, but such a case may be exceptional. This is, however, the slack season, when but few large vessels are in port.

The Orient Coy.'s s.s. "Oratava" has pole masts in one length each, the mainmast being 154 ft. 7 in. high, so that, were the bridge constructed, this vessel could not go up to the Dock without cutting one mast at least. We understand there are other Orient steamers with pole masts of equal, if not greater, height.

In Newcastle Harbour, last week, there were 93 foreign trading vessels. Of this number 87 have masts exceeding 140 feet in height, and about 70 exceed 150 feet in height, the highest being the "John Ena," 2,568 tons register, with masts 191 feet 4 inches in height. There are five vessels in port with masts exceeding 170 feet in height.

We are aware that Forth Bridge was fixed with 150 feet clear headway, and Brooklyn Bridge with 155 feet headway, but neither of those cases compare with Sydney Harbour, as large ships have rarely to pass either bridge—the wharves on East River at New York being almost wholly below the bridge, most of the shipping being done on the Hudson River side.

C. W. DARLEY,

Engineer-in-Chief for Public Works.

H. DEANE,

Engineer-in-Chief for Railways.

CITY AND NORTH SYDNEY TUNNEL-ROADWAY BILL.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and report was referred on 1st July, 1896, the "*City and North Sydney Tunnel-roadway Bill*,"—beg to report to your Honorable House :—

That they have examined the witnesses named in the List* (whose *See List, page 4. evidence will be found appended hereto), and the Preamble having been satisfactorily proved to your Committee, they proceeded to consider the Bill, in which it was deemed necessary to make certain amendments.

Your Committee now beg to lay before your Honorable House the Bill as amended by them.

VARNEY PARKES,
Chairman.

No. 2 Committee Room,

Legislative Assembly,

9th July, 1896.

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 7 JULY, 1896.

MEMBERS PRESENT:—

Mr. Ashton,
Mr. Harris,
Mr. Parkes,Mr. Fegan,
Mr. Howarth,
Mr. W. H. B. Piddington.

Mr. Parkes called to the Chair.

Entry from Votes and Proceedings, appointing the Committee, read by the Clerk.

Printed copies of the Bill *referred*, together with original Petition to introduce same, before the Committee.Present:—E. E. Fosbery, Esq. (*Solicitor for the Bill*).

Eustace Edmund Fosbery sworn and examined.

[Adjourned till Thursday next at *Eleven o'clock*.]

THURSDAY, 9 JULY, 1896.

MEMBERS PRESENT:—

Mr. Parkes in the Chair.

Mr. Chapman,
Mr. Harris,Mr. Fegan,
Mr. Howarth.Present:—E. E. Fosbery, Esq. (*Solicitor for the Bill*).John Sulman (*the Promoter*) sworn and examined.Witness *produced* plan and section of proposed tunnel-roadway.Cecil West Darley (*Engineer-in-Chief for Public Works*) called in, sworn, and examined.

Witness withdrew.

John Moore Smail (*Engineer, Water and Sewerage Board*) called in, sworn, and examined.

Witness withdrew.

Jeremiah Roberts (*Mayor of Lane Cove*), called in, sworn, and examined.

Witness withdrew.

Eustace Edmund Fosbery further examined.

Room cleared.

Preamble considered.

Question,—“That this Preamble stand part of the Bill,”—put and passed.

Parties called in.

Clauses 1 to 18 read and *agreed to*.Clause 19 read, amended,* and *agreed to*.Clauses 20 and 21 read and *agreed to*.Clause 22 read, amended,* and *agreed to*.Clauses 23 to 48 read and *agreed to*.Schedule read and *agreed to*.Title read and *agreed to*.

Chairman to report the Bill, with amendments, to the House.

* See Schedule of Amendments.

SCHEDULE OF AMENDMENTS.

Page 9, clause 19. *Insert* the following new sub-section to stand as sub-section (vii):—

(vii.) The said John Sulman shall, in the construction of so much of the said tunnel-roadway as is under the waters of Port Jackson, provide under the bed of the road a channel or duct of such a kind as to carry water-mains or other similar mains, such channel or duct to be accessible by means of man-holes in the bed of the road at convenient distances apart, and the Water and Sewerage Board shall be at liberty, free from the payment of any rent, to enter upon the said tunnel-roadway and works, and to lay and place in the said channel or duct any water-main or water-mains of a gross total diameter of not more than 18 inches in all, and to alter or remove the same from time to time, and to conduct such water-main or water-mains to the shore on either side of Port Jackson through the ventilator shafts adjacent to each shore line. Provided that such powers of the Water and Sewerage Board shall be limited to that part of the said tunnel-roadway and works so provided as abovementioned with a right of access and connection through the ventilator shafts abovementioned. Provided also that such powers shall be exercised between the hours of midnight and five a.m., and shall be exercised in such a way as to interfere as little as possible with the public traffic, and with the enjoyment and use by the said John Sulman of the said tunnel-roadway and works. And provided further that the said Water and Sewerage Board shall, in the exercise of all of the said powers, do as little damage as possible to the said tunnel-roadway and works, and shall with all possible dispatch, and at the expense in all things of the said Water and Sewerage Board, proceed to make good whatever damage they shall so do.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

CITY AND NORTH SYDNEY TUNNEL-ROADWAY BILL.

TUESDAY, 7 JULY, 1896.

Present:—

MR. ASHTON,	MR. HARRIS,
MR. FEGAN,	MR. HOWARTH,
MR. W. H. B. PIDDINGTON.	

VARNEY PARKES, Esq., IN THE CHAIR.

E. E. Fosbery, Esq., appeared as Solicitor for the Bill.

Eustace Edmund Fosbery sworn and examined:—

1. *Chairman.*] What is your position? I am the Solicitor for this Bill.
2. Will you describe the purport of the Bill? It is a Bill to authorise Mr. John Sulman or his assigns to construct a tunnel-roadway from Milson's Point, North Sydney, by way of Macquarie Point, to a spot opposite Goldsbrough, Mort, & Co.'s wool warehouse, at Circular Quay. It has been framed on the lines of a similar Bill, of the contents and purport of which some members of this Committee have some knowledge. This Bill follows almost exactly the form of the previous Bill, which was to authorise Mr. Sulman to construct an underground railway from Milson's Point by Dawes Point, up George-street.
3. Are all the legal obligations which are necessary in the interests of the public embodied in the Bill? Yes; in fact, all the suggestions of the Select Committee which sat on the Electric Railway Bill have been embodied in this Bill so far as considered applicable.
4. Those which were proposed and carried by the last Committee? You will understand that this Bill is not exactly the same as the other Bill. The other Bill provided for set charges, but in this Bill the charges are in the nature of tolls.
5. Is it framed on the lines which are usually adopted in the interests of the public? Yes, there has been included in the Bill every safeguard for the public that occurred to me.
6. Does it embody the right of the State to resume on equitable terms? Yes. On referring to clause 45 it will be found that the Crown can resume the concern at the expiry of thirty years, on certain terms set out there.
7. Is there anything further which you would like to say? I have given notice to the Sydney Municipal Council, to the Municipal Council of North Sydney, to the Works Department, to various other departments which are usually notified, and to the Water and Sewerage Board, and forwarded to each a copy of the Bill, and asked for comment on it.
8. Have you received any objections? I have received a communication from the Water and Sewerage Board enclosing an addition to clause 19, to enable the Board to carry water-mains in the tunnel under the road-bed. I have been in communication with the Board's engineer in regard to that matter. I think before the Committee have finished their labours we shall have agreed upon a clause to carry out that object. The necessary provisions have been included in the Bill for the protection of the workmen—that is to say, as to the mode in which the works shall be carried out. This is all provided for expressly by the Bill so as to minimise the risk to the workmen employed.

E. E. Fosbery
7 July, 1896.

E. E. Fosbery. 9. On the lines of what Act of Parliament has the Bill been framed? The general scope of the Bill as regards the clauses dealing with the construction of the works is that of the Charing Cross, Euston and Hamstead Railway Act.

7 July, 1896.

10. The only work of this kind is that which has been carried on in the Continent and in Great Britain? In Great Britain.

11. You have framed your Bill on the liberal lines of such Continental or English Bills? On the lines of the English Bills. It was the only precedent which as a draftsman I had to guide me.

THURSDAY, 9 JULY, 1896.

Present:—

MR. CHAPMAN, MR. HARRIS,		MR. FEGAN, MR. HOWARTH.
-----------------------------	--	----------------------------

VARNEY PARKES, ESQ., IN THE CHAIR.

Mr. E. E. Fosbery appeared as Solicitor for the Bill.

John Sulman sworn and examined:—

J. Sulman.

12. *Chairman.*] What is your profession? I am an architect.

9 July, 1896.

13. You are the promoter of this Bill to construct a tunnel-roadway between North Sydney and the city of Sydney? Yes.

14. Have you prepared a statement to sustain your proposal? I have.

15. Will you read it to the Committee?

In submitting the plans of the proposed tunnel-roadway between Sydney and North Sydney for your consideration I may mention that this scheme was considered a long time since, but was not developed, as sufficient data had not been obtained to enable me to introduce a Bill at the same time as the North Sydney Electric Railway Bill. The present proposal is almost a copy of the tunnel under the Thames at Blackwall, which the London County Council is now constructing for vehicular traffic and communication between the thickly populated north and south banks of the Thames at that point. A bridge was considered out of the question, as it would have interfered with the shipping traffic of the river, which although great is not nearly so important as the traffic passing up our harbour, for most of the large sea-going vessels frequenting the port of London dock at Tilbury, Gravesend, or in the lower reaches of the river. If therefore considered an impediment to the traffic of the Thames how much more important is it to keep open the fairway of our harbour which, already the fourth port in the British Empire, may, if not blocked, become the third or second in the not very remote future. The route adopted for the proposed tunnel-roadway is as follows:—As the Circular Quay is the business centre of the city foreshore to which all traffic converges, it is here that the entrance to the tunnel will be made, and in a position that will not interfere with the ordinary traffic. It will be remembered that in front of Messrs. Goldsbrough, Mort, & Co.'s wool store there is a large open space practically unused on account of the quick rise of Phillip-street which bounds it on the eastern side. Now, if the slope of the roadway be commenced at the Quay and continued to the vertical face of Phillip-street, near the steps, sufficient headway will be obtained for the entrance to the tunnel. It will then continue under Albert-street as far as the Government House grounds, where it will be a considerable distance below the surface, and will then take an easy turn to the left and continue in a direct line for Macquarie Point, descending all the way till it cuts through the rock and enters the clay and silt of the harbour bottom. Here it will run at a level, and as soon as it touches rock on the other side will commence the ascent, and pass under the foreshore near Beulah-street. Here another turn to the left will be made, and following the line of Campbell-street, and passing under the tram-lines just above Milson's Point, will debouch through the vertical rocks near Western Wharf Road on to the road adjoining the Milson's Point Railway Station. From this point it is proposed to make a new road (of a very much easier grade than the Lane Cove Road, in which the tram-lines are laid), curving round the slopes of the high ground facing Lavender Bay till it reaches the intersection of Junction and Alfred Streets. The grades throughout the tunnel and roadway are so light that a heavily loaded dray can take them with ease, and are as follows:—

From Circular Quay to Harbour	1 in 27
Under the Harbour	Level
From Harbour to Milson's Point Railway Station	1 in 22
And the proposed new road	1 in 25

In order to give an idea of these grades, as compared with existing streets much used by traffic, the following are inserted, and should be carefully noted:—

Bridge-street, opposite Lands Department	1 in 22
King-street, between George and York Streets	1 in 27
Barrack-street, between George and York Streets	1 in 19

One point in favour of this tunnel, as compared with that at Blackwall, is that the subsoil is rock instead of the treacherous London clay, and although slightly more costly to excavate, yet the total outlay on the sections through the rock should be less, as the rock itself can be broken up by stone-breakers without removal, and used as a matrix for the concrete lining and floor of the tunnel. The tunnel will be concrete-lined until the clay and silt are reached, when a tunnel formed with cast-iron segments, exactly similar to that at Blackwall, will be adopted. These segments are also lined internally with cement concrete, and the tunnel will thus show a concrete face right through, and neatly covered with smooth-faced impervious cement. The inside of the iron tunnel is thus protected with cement, which adheres well to iron, and the outside, between the iron and the clay or silt, will also be protected by cement, which will thus encase the iron all round and render it so secure from corrosion, that a century hence there will be no appreciable loss of thickness or strength. The method by which the cement is got to the outside of the iron tunnel is very ingenious, and the subject of a patent by Mr. Greathead, the eminent engineer, who has carried out all the London sub-aqueous tunnels, and whose services have been secured in the present instance. For this purpose a cylindrical vessel is used, capable of withstanding a pressure of 70 or 80 lb. per square inch, and provided with paddles, internally working on a spindle operated by a handle outside. Cement grout is introduced through an opening at the top, having a lid capable of being closed air-tight, and the mixture is discharged by compressed air and the revolution of the paddles through a length of flexible hose-pipe ending in a branch and nozzle, which is inserted in holes in the tunnel lining provided for the purpose. As the space behind the tunnel lining is gradually filled, the holes through which the grouting is discharged are successively closed by screw-plugs. It has been found, in London, that this system of grouting is perfect. The tunnels were everywhere encased, and every cavity had been filled. In some cases, where nodules of septaria had been broken and moved by the cutting edge of the shield, the grout had penetrated through cracks in the stone and had filled the cavity behind the stone, the cement filling the cracks, themselves being sometimes not thicker than a sheet of paper.

Reverting now to the tunnel itself, I may state that it is 27 feet in diameter, viz., the same as the Blackwall Tunnel, giving a roadway of 20 feet, thus permitting of three lines of traffic. The clear height in the centre is 19 feet, and at the sides 16 feet. The roadway will be formed of concrete, covered with close-jointed wooden blocks, similar to those now being laid in the streets of the city, and it will be kept clean by hydrants placed at frequent intervals. The waste water will be carried off by drains under the roadway to a sump at the bottom level, whence it will be pumped up by a compressed air or electric motor and discharged into the sewers. Under the roadway a large tunnel will be formed for pipes, drains, electric lighting, telegraph and telephone wires, gas, water, and compressed air mains, &c., accessible at frequent intervals by ventilated man-holes in the roadway, thus obviating any interference with the wood-blocking, and enabling

enabling the roadway to be kept permanently open for traffic. The tunnel will be kept continuously lit by large electric lamps at frequent intervals. The most thorough ventilation will also be secured by a shaft on each side of the harbour, which, after being used in construction as a working shaft, will be retained for ventilation. The mode in which the tunnel will be excavated under the harbour itself will be by "shield." And in this connection I may add that so successful has this method proved itself in the formation of the Blackwall Tunnel that the London County Council has decided to at once construct another between Greenwich and Millwall. In conclusion, I think I may claim that everything necessary to render the work a success has thus been thought of; and as it is not a new departure, but follows closely on the lines of other successful examples, there is no element of uncertainty or risk beyond those met with every day in engineering works. The great advantage to the public of Sydney and the North Shore of a permanent low-level communication at a very much lower cost than is possible by bridge is apparent, and it is to their interest that the cheapest means of communication should be adopted, for the lower the capital outlay the lower it will be possible to reduce the tolls that must be charged to provide interest thereon. These tolls are expressly limited in the Act to somewhat less than those now charged by the North Shore Ferry Company, but as traffic increases it will be to the interest of the Company which constructs and owns the tunnel to reduce these tolls as low as possible, and so still further encourage the traffic and render competition impossible.

J. Sulman.
9 July, 1886.

16. Will you briefly describe the situation of the proposed tunnel? Between Circular Quay and Goldsbrough, Mort's warehouse is a large open space, which is unused by public traffic, because it is blocked by the vertical wall holding up Phillip-street. By commencing opposite the end of Mort's warehouse, and starting the gradient at Circular Quay, we get sufficient vertical space at Phillip-street to obtain an entrance to the tunnel. The tunnel will then pass under Albert-street, curve round under the Domain, and then follow in a perfectly straight line under Fort Macquarie to the opposite side of the harbour, near Beulah-street; there it takes a turn to the left, and generally follows the line of Campbell-street, making another slight turn to the left, until it passes under the Lane Cove Road with the tram-lines in it, and on the other side debouches on to the road by the side of the Government railway, near the Western Wharf Road, where there is another vertical face of rocks. That ends the tunnel. From the entrance to the higher ground of North Shore, in order to save the traffic the very steep slopes of Lane Cove Road which at present exist, I propose a new road right through the waste ground facing Lavender Bay, and meeting the Lane Cove Road up by Junction-street and Alfred-street. This new road would have a grade of only 1 in 25, which is very much less than the grade of Lane Cove Road, and would be of very great advantage to traffic of all kinds, especially to heavy traffic, of which a large quantity would be coming across the harbour.

17. What is your steepest grade? 1 in 25 on that new road, 1 in 27 on the Sydney side, and 1 in 22 on the North Sydney side.

18. *Mr. Chapman.*] Is it intended that the additional road shall be an entrance to the tunnel or a public road? A public road.

19. For all persons to use? No; we take that as part of our Act.

20. *Chairman.*] It is for public use? It will be for public use; persons using the tunnel will have the right to use the road.

21. *Mr. Chapman.*] It will not be used by anyone except those who use the tunnel? It may, but they will pay a toll.

22. *Chairman.*] What is the grade of Erskine-street? I do not know; but it is very steep.

23. What is the grade of Barrack-street? It is 1 in 19. Bridge-street, opposite the Lands Department, is 1 in 22, precisely the same as our steepest grade.

24. *Mr. Harris.*] What provision is made for ventilating the tunnel? The level part of the tunnel is exactly under the harbour, and the sloping part is on each side. The easiest way to excavate the tunnel is to make a vertical shaft on each side of the harbour. The spoil or excavated material will be taken up these shafts, and can be easily got rid of from the surface. These shafts will be retained for ventilating the tunnel.

25. *Mr. Chapman.*] What is the size of these shafts? I am proposing 15 feet diameter.

26. You propose to have a shaft close to the water on each side? Yes; and that is precisely the mode adopted in the Blackwall Tunnel.

27. Your steepest grade is no steeper than some grades on the railway? I think the steepest grades on the railway are 1 in 30.

28. I think we have some grades of 1 in 25? There may be.

29. Do you propose to charge persons using the road except at the tunnel entrance;—will the local people have to pay a toll to use the road even if they do not use the tunnel? I think it would be just to do so after we have gone to the expense of making the road. We would, however, be only too glad to facilitate traffic, and would do anything in reason to get traffic for the tunnel. It is purely a matter of business. I cannot say positively, but, perhaps, the people using the road only may be allowed to go free.

30. *Chairman.*] This is not a new experiment in engineering? Not at all. The Blackwall Tunnel is practically complete. This proposed tunnel is almost a copy of that tunnel.

31. Do you know if the other tunnel is a success? It is regarded by the London County Council as such a success that they are going to start another tunnel under the Thames from Greenwich to Millwall.

32. *Mr. Chapman.*] What time would it take to complete your tunnel? Three years.

33. *Mr. Howarth.*] Would such a road as you propose relieve Alfred-street of any considerable amount of traffic? I think it would.

34. What would that traffic consist of principally? Vehicular traffic.

35. What is the general grade of Alfred-street from the Western Wharf Road up to the junction with your new road? I do not know, but it is steep.

36. It is more than 1 in 25? Certainly.

37. In some places? Yes, because it rises and falls again. I have not had it surveyed, but I know it is steep.

38. It would be impossible to use that new road, perhaps, for any other purpose than that of entering the tunnel or arriving at the destination from the tunnel? No; it would be used if the Railway Commissioners would allow the traffic to go along their road. At present it is simply an approach to our tunnel.

39. You think three years will be sufficient to complete the scheme? Yes, according to the engineer.

40. Are you not asking for five years in your Bill? I think five years is asked for. There are unforeseen contingencies. For instance, in the Blackwall Tunnel they came against rock which dented the edge of the shield and caused delay. We may meet with the same difficulty, therefore it is necessary to allow a margin.

41. *Mr. Harris.*] What is the length of your tunnel? One and a quarter miles.

42.

- J. Sulman. 42. Do you think two ventilating shafts will be quite sufficient to ventilate a tunnel $1\frac{1}{4}$ mile long? Yes, I am quite satisfied. Long railway tunnels are perfectly sweet. The Mont Cenis Tunnel, I think 5 miles long, and the St. Gothard Tunnel, 7 or 8 miles long, when the trains are not passing through, are quite sweet. They are only filled by the steam and smoke. We have none of that here. This is a mere bagatelle in length compared to those tunnels.
43. *Chairman.*] That is on account of the natural draught? Yes. Wherever you get a tunnel you get a natural draught. With these shafts, in addition, I think you need have no fear.
44. *Mr. Howarth.*] What would be the width of the roadway in the tunnel? Twenty feet.
45. Are you asking for power to duplicate the roadway, if necessary. No.
46. Do you think it would be necessary? I do not. The roadway would permit of three lines of traffic, and gives rather more space for wheel traffic than that at Blackwall, which has a bigger population to serve, I believe, than this, so that it ought to be ample for all purposes.
47. *Mr. Fosbery.*] You are a resident of the North Sydney district? Yes, I reside at Turramurra.
48. Turramurra and a number of other places in North Sydney district would be benefited by better means of communication there? Undoubtedly.
49. In your opinion would a better means of communication tend to the general benefit and the increase of the residential population in the district? Yes.
50. This tunnel, as far as the harbour is concerned, will be too deep to affect dredging operations, or to interfere with ship's anchors? Yes.
51. Your tunnel on the other side of the harbour will not in any way interfere with the proper carrying out of the sewerage of Sydney or North Sydney? It will have no effect whatever on it.
52. Will the construction of these works necessitate the employment of any considerable number of workmen? A contractor has estimated that this tunnel will employ about 500 men.
53. For how long? For three years directly and indirectly a considerable number will be employed in the making of bricks and other material.
54. The carrying out of the works will necessitate the expenditure of a very large sum in the Colony? Yes. Almost the whole expenditure will be in the Colony.
55. You have no doubt whatever that if the concession is granted the money will be readily available for carrying out the works? I believe that if the Bill is granted the money will be available forthwith.
56. That is to say if the Bill contains no unreasonable provisions which a capitalist or a person putting money into the concern would object to? Certainly.

Cecil West Darley sworn and examined:—

- C. W. Darley. 57. *Chairman.*] What position do you hold under Government? I am Engineer-in-Chief for Public Works.
58. As Engineer-in-Chief for Public Works, have you had this Bill to promote a roadway-tunnel to North Sydney submitted to you? Yes.
59. What do you think of the proposal? Of course I looked at it chiefly in the interests of navigation, and as affecting the Government project. I do not see anything in the Bill to take any serious objection to.
60. Do you think a tunnel would be preferable to a bridge? In the interests of navigation it certainly would be.
61. From the point of view of jeopardising the interests of the people, do you see any objection to it? I do not think the public would appreciate it for driving through, and might prefer a bridge.
62. There is no reason why the public should take exception to it as dangerous? None whatever, if it is properly constructed. It is to be assumed that it will be properly constructed according to recent notions of construction.
63. *Mr. Fegan.*] Have you considered how it would interfere with any scheme the Government may want to lay down in reference to tram traction or anything of that sort? I left that point for the Engineer-in-Chief for Railways to consider.
64. You have not gone into that point? No, because I have not prepared any scheme for tram traffic across the harbour. That really rests with the Engineer-in-Chief for Railways. I thought it was likely that he would be called.
65. As far as you are concerned you have no objection to the tunnel being carried out? There is room for objection as regards the entrance to the tunnel, perhaps a rather serious objection, as it interferes with existing rights in front of Goldsbrough, Mort, & Co.'s store. I do not like the way it is proposed to go down, leaving a narrow entrance between the approach to the tunnel and Mort's store. I think that is open to rather serious objection. There is a storm-water sewer passing down Phillip-street which will have to be wholly diverted if this plan is adhered to. The difficulty could, however, be got over by taking it round in front of Mort's store. It could not be put underneath because it would be under low-water mark.
66. Could you suggest any better way? The same thing could be accomplished, in my opinion, by continuing on the level along Circular Quay, buying part of the Macquarie Bond stores, opposite M'Mahon's (now John Bridge's) store, taking down part of the store and passing under Macquarie-street, where there is ample head room. The store could be rebuilt over the tunnel with a frontage to Macquarie-street. If the same gradient is necessary, it may be made by taking a little detour. Practically, the tunnel would be no longer, and the same object could be obtained without interference with private rights.
67. Would not the same objection in reference to the sewer come in? No; because the approach would be on the level along Circular Quay, and would then dip down under Macquarie-street. It would pass over the sewer in Phillip-street.
68. Do you think it would make any difference as regards the expense between buying the store and altering the sewer? I do not see any serious difference at all. No doubt a claim for compensation would come in for interfering with the approach to Mort's store. I think it might be a very large claim.

John Moore Smail sworn and examined:—

- J. M. Smail. 69. *Chairman.*] You are a civil engineer? Yes; I am engineer to the Water and Sewerage Board.
70. You are in charge of the sewerage system? Yes.
71. You are aware of this proposal to connect North Sydney with Sydney by an underground vehicular tunnel? Yes.
72. Have you had this Bill submitted to you? Yes.

73. Have you given it any consideration? Full consideration.

74. Have you any objection to it? No; we raised some objections at first. These objections have all been met in the Bill by the promoter's solicitor.

J. M. Smail.

9 July, 1896.

75. You see no reason why Parliament should not authorise the construction of this tunnel? No; not as far as the Board is concerned.

76. Have you submitted your opinions to the Board? Yes; these papers go with my report to the Board, and they have approved of my report.

77. Have the promoters agreed to insert a clause in the Bill to meet your objections? The following clause was referred to our Board's solicitor, who has approved of it, and, I understand, the promoters have agreed to insert it in the Bill:—

VII. The said John Sulman shall, in the construction of so much of the said tunnel-roadway as is under the waters of Port Jackson, provide under the bed of the road a channel or duct of such a kind as to carry watermains or other similar mains, such channel or duct to be accessible by means of man-holes in the bed of the road, at convenient distances apart, and the Water and Sewerage Board shall be at liberty, free from the payment of any rent, to enter upon the said tunnel-roadway and works, and to lay and place in the said channel or duct any watermain or watermains of a gross total diameter of not more than 18 inches in all, and to alter or remove the same from time to time, and to conduct such watermain or watermains to the shore on either side of Port Jackson, through the ventilator-shafts adjacent to each shore-line. Provided that such powers of the Water and Sewerage Board shall be limited to that part of the said tunnel-roadway and works so provided as above-mentioned, with a right of access and connection through the ventilator-shafts above-mentioned. Provided also that such powers shall be exercised between the hours of midnight and 5 a. m., and shall be exercised in such a way as to interfere as little as possible with the public traffic and with the enjoyment and use by the said John Sulman of the said tunnel-roadway and works. And provided further that the said Water and Sewerage Board shall, in the exercise of all of the said powers, do as little damage as possible to the said tunnel-roadway and works, and shall with all possible dispatch, and at the expense in all things of the said Water and Sewerage Board, proceed to make good whatever damage they shall so do.

78. *Mr. Harris.*] Will the entrance to the tunnel at the Circular Quay interfere with any sewer? There is a storm-water sewer going down Phillip-street. It discharges at low water into Circular Quay. Any deviation of the sewer which may be occasioned by the construction of the tunnel will have to be carried out at the expense of the promoters of the Bill.

79. *Mr. Chapman.*] Is the entrance on the Sydney side a suitable one? Yes, it is a suitable level to enter at.

80. It has been suggested that, inasmuch as it interferes with a storm-water sewer in Phillip-street, it will, perhaps, be advisable to shift the entrance so that it will not interfere with that sewer, and will not be so close to Mort's store? The storm-water overflow before referred to is in connection with the old main sewer, which discharges at Fort Macquarie. Judging from this longitudinal section, the tunnel will intersect that. It will be a question for the promoters of the Bill to consider.

81. If they enter the tunnel at Macquarie-street? It will be clear, we have no sewer down there.

82. There can be no danger to the sewer at all? No.

83. The Bill provides that anything of that kind must be done at the expense of the promoters? It is fully provided for.

84. *Mr. Fegan.*] This matter has been before your Board? Yes.

85. You do not take any objection to it? No.

86. That is not only your opinion but also the opinion of the Board? It may be taken as the opinion of the Board, because all these matters are first submitted to the Board. All we want to do is to protect our right to lay mains, and to guard against any interference with existing works.

Jeremiah Roberts sworn and examined:—

87. *Chairman.*] What is your position? I am the Mayor of Lane Cove.

88. Have you had time and opportunity to consider this proposal to connect North Sydney with Sydney by a vehicular tunnel-roadway? I have looked over the plans.

J. Roberts.

9 July, 1896.

89. What do you think of the proposal? As there is no probability of getting a high-level bridge to carry a railway—which is really what we want—I think the next best substitute is this tunnel.

90. Is there any objection to it from a municipal point of view, or a residential point of view? None whatever that I can see.

91. Will it be a convenience to your district? A great convenience.

92. Have you discussed the proposal in your Municipal Council at all? I cannot say that we have. As a matter of fact the most thickly populated part of our municipality is got at by steamer although I get at it by the railway. It has not come before our notice at all for discussion.

93. How do you think your Council would view it? Favourably, in view of there being no probability of getting a high-level bridge.

94. Do you think you may fairly speak for your Council? Yes.

95. *Mr. Chapman.*] How do the people as a body, as far as you know, view this proposal to make a tunnel? There is a prejudice against it, but I think it is through ignorance.

96. Do they think it will depreciate the value of their property? No; they prefer to be in the air—above ground—rather than under ground.

97. If the people were quite sure that everything would be perfectly safe, you think it would be a great convenience to them? I am sure it would.

98. Would it have the effect of improving the values of properties over there? I think it would.

99. You think it would probably lead to greater settlement, and that sort of thing, there? I do, certainly.

Eustace Edmund Fosbery recalled and further examined:—

100. *Chairman.*] You wish, I understand, to give fresh evidence and to amend some evidence you gave the other day? I think I either said or implied, in my evidence the other day, that all the material and applicable recommendations of the Committee which sat on the Railway Bill had been embodied in this Bill. I want to add to that statement that clause 45 of this Bill differs in one or two points from the corresponding clause in the Railway Bill. By reason of the difference in the circumstances of the two matters two alterations of the Committee in the Railway Bill do not appear in clause 45.

E. E.

Fosbery.

NORTH SHORE BRIDGE BILL.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and report was referred on 1st July, 1896, the "*North Shore Bridge Bill*,"—beg to report to your Honorable House :—

That they have examined the witness named in the margin (whose B. C. Simpson
C.E. evidence will be found appended hereto), and the Preamble having been satisfactorily proved to your Committee, they proceeded to consider the Bill, in which it was not deemed necessary to make any amendment.

Your Committee now beg to lay before your Honorable House the Bill, without amendment.

P. H. MORTON,
Chairman.

*No. 3 Committee Room,
Legislative Assembly,
23rd July, 1896.*

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 14 JULY, 1896.

MEMBERS PRESENT:—

Mr. Hogue,
Mr. O'Sullivan,

Mr. Morton,
Mr. Nicholson.

Mr. Morton called to the Chair.

Entry from Votes and Proceedings, appointing the Committee, read by the Clerk.

Printed copies of the Bill *referred*, together with original Petition to introduce same, before the Committee.

Present:—George Rich, Esq., (*Counsel for the Promoter*).

Benjamin Crispin Simpson, called in, sworn and examined.

Witness produced plans in connection with proposed bridge.

Reassembling of Committee to be arranged by the Chairman.

[Adjourned.]

TUESDAY, 21 JULY, 1896.

MEMBERS PRESENT:—

Mr. Morton.

In the absence of a quorum, the meeting called for this day lapsed.

WEDNESDAY, 22 JULY, 1896.

MEMBERS PRESENT:—

Mr. Hogue,

Mr. Morton.

In the absence of a quorum, the meeting called for this day lapsed.

THURSDAY, 23 JULY, 1896.

MEMBERS PRESENT:—

Mr. Morton in the Chair.

Mr. Hogue,

Mr. O'Sullivan.

Present:—George Rich, Esq., (*Counsel for the Promoter*).

Room cleared.

Preamble considered.

Question, "That this Preamble stand part of the Bill," put and passed.

Clauses 1 to 46 read and agreed to.

Schedules read and agreed to.

Title read and agreed to.

Chairman to report the Bill without amendment to the House.

1896.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

NORTH SHORE BRIDGE BILL.

TUESDAY, 14 JULY, 1896.

Present:—

MR. HOGUE, | MR. NICHOLSON,
MR. O'SULLIVAN.

P. H. MORTON, ESQ., IN THE CHAIR.

George Rich, Esq., barrister-at-law, appeared for the promoter of the Bill.

Benjamin Crispin Simpson sworn and examined:—

1. *Chairman.*] You are a member of the Institute of Civil Engineers? Yes.
2. You have had a very large experience in your profession? About thirty-five years active experience.
3. You have had a large special experience in this particular kind of work? Yes; I have had a large experience in bridge designing and bridge construction.
4. In this Colony and in other countries? Yes; I designed nearly all the bridge work for the Glasgow City Union Railway, and afterwards for the Stockwell Railway, and I have done a good deal of similar work in other countries—in Turkey, America, and Australia.
5. Have you prepared a plan of a bridge between Dawes Point and Milson's Point? I have prepared a design for a bridge which I propose to carry a tramway and vehicular and pedestrian traffic between Dawes Point and Milson's Point.
6. Do you produce some drawings of the bridge? I produce a general plan showing the route from Cumberland-street to Dawes Point, and the mode of crossing the harbour. I also produce a general detailed plan showing the spans and height proposed. I also produce a plan which shows the details of the proposed work. The general principle of the bridge is a cantilever bridge, the centre part being formed of a girder. This design shows the cross-section through the centre of the bridge, also the cross-section through the piers, details of the span of, and wind bracing, and of the parapet, and details of the style of the abutments and piers it is proposed to erect on the approaches.
7. The route you propose to take is the route described in section 5 of the Bill? It is.
8. A description of the bridge is contained in clause 18? Yes, except that for reasons which I will state afterwards, I should suggest that the spans should be 550 feet instead of 500 feet, and that the headway should be 160 feet instead of 150 feet.
9. Any increase in these dimensions would of necessity add considerably to the cost, and make it practically impossible from a commercial point of view? It would.
10. That is, any increase of the proposed cost? Any important increase in the altered dimensions which I have stated. These, of course, mean extra expense, but still I think they are advisable in the public interest, and also in the interest of the work itself.
11. *Mr. Rich.*] I presume the main considerations in a Bill of this sort are convenience to the public and economy? Undoubtedly. It is, of course, important that the public convenience should be studied, but at the same time there is a limit at which a work of this character would become commercially impossible. That is to say, it would not, within any reasonable period, produce a return on the capital required for its construction.
12. And then the convenience of the public is to be looked at from two points of view—from the point of view of shipping and from the point of view of traffic? I think there are two points which must be regarded in considering the public interest. One is undoubtedly the important interest of the shipping, and the other is the interest of the many thousand passengers and vehicles which will pass over the bridge daily.
13. So far as the shipping is concerned, a height of 160 feet would allow any vessel that enters the harbour to pass under the bridge? Yes. The height I now propose would allow any vessel to go under the bridge, but a small proportion may have to strike their top-gallant masts, and that proportion will become less and less year by year, because when shipowners know the height of the bridges their ships will probably have to pass under the height of masts will be adapted to the height of the bridges.

B. C.
Simpson.
14 July, 1896.

B. C.
Simpson.
14 July, 1896.

14. I presume it would not be a very great inconvenience for ships to strike their top-gallant masts? The inconvenience would be very small, and the expense would be very small, if ship-masters know that the top-gallant masts would have to be struck before the crew is discharged.

15. Practically all the work would be done when the ships were entering the harbour? Yes; it would entail very little expense and very slight inconvenience.

16. Whereas if the height were increased beyond 160 feet it would cause very serious inconvenience to vehicular traffic along the artificial highway? It would. Every foot that is added to the height of the bridge means that that foot must be ascended and descended by every vehicle and every passenger which pass over the bridge, and as the passengers and the vehicles that pass over the bridge are probably thousands to one ship that passes under the bridge certainly more than that to one ship that would have to strike her top-gallant masts, the comparative inconvenience would be strongly against the vehicular and pedestrian traffic passing over the bridge.

17. In your opinion the minimum height, which is compatible with the public interest, is the height which ought to be adopted? I think so.

18. What is the object of having two spans? The object of having two spans instead of one, besides that of economy, is to separate the incoming and the outgoing courses, which I think will be a source of safety to navigation.

19. It is likewise a matter of economy to have two spans? A matter of great economy.

20. Is there any danger arising from the nature of the foundation? Yes; I have lately taken borings in the harbour to inform me as to the advisability of this centre pier, and the shallowest depth of rock which I obtained from my borings was really at the centre pier. I got rock at 65 feet below high water at that place. I may say that at the sites of my proposed northern and southern water piers I found deeper rock, but still within practicable depth. It is partly on that ground that I have proposed to increase the spans to 550 feet, because that will give me shallower rock for the foundation of these piers, and will still leave a passage between that pier and Milson's Point shore for the passage of North Shore steamers to Lavender Bay. But in the borings which I took at the sites of the central span of 600 or 700 feet, I found that although the foundation for the southern pier would be at a practicable depth, the foundation for the northern pier would be almost impracticable, if not quite impossible, as I failed to get rock there at a depth of 106 feet. You can only use an air lock for getting foundations in to a depth of a little over 90 feet.

21. You do not propose to provide a bridge to carry a railway as well as a road for traffic? No, I consider it is always an undesirable thing to have a railway and the ordinary road traffic passing over the same bridge. There is danger at the approaches to the bridge where the road and the railway must necessarily be very near together, and there is also the danger of horses getting frightened on the bridge. I may also say, as it would be quite necessary for any safety in the road traffic that the railway should be fenced in with a continuous fence for the whole length of the bridge, it would be exceedingly ugly, and would make the bridge a very unsightly work to cross the harbour. In this particular instance, there are special reasons why a road and railway bridge combined would be very undesirable. Railway connection across the harbour would only be necessary to connect a future city railway with the North Shore line. If the city railway is made, and connected with the North Shore line by means of a bridge, it would very materially shorten the distance to the north, and all the northern traffic must go over that bridge. In that case, you must consider that at once, and much more so in the future, there would be a very large railway traffic over any bridge connecting the city railway with the North Shore line; also the road traffic on that bridge will be exceedingly large. There will be a continual stream of vehicles and passengers passing over the bridge. Considering these two circumstances, and that both traffics would be heavy, it is, in my opinion, specially undesirable that such a double arrangement as a road and a railway, side by side on one bridge, should be adopted in this case. The economy of building one bridge for the two purposes is really very small. Such a bridge as I propose has two piers in cross-section, and it has only two main cantilevers and girders. If it were widened so as to make it a double bridge, it must have, at any rate, three piers, and the centre pier must be nearly double the two outside piers. In the same way you must have a centre cantilever, which must also be nearly double. The cost of a double bridge, therefore, would be very nearly the same as the cost of two single bridges, and the small economy which would be effected would not, in my opinion, in any way compensate for the very great disadvantages there are in having both road and railway traffic carried over one bridge under these circumstances.

22. With regard to this particular site between Dawes and Milson's Point, a railway would be hardly practicable on account of the levels? A high-level railway bridge to Milson's Point is simply an absurdity. A high-level bridge would be, at any rate, 130 feet over the level of Milson's Point station, and to connect with that station it would be necessary to reconstruct the Milson's Point line until you could effect a junction with it at an enormous expense.

23. *Chairman.*] How far back would you have to go? I do not quite know the grades of the Milson's Point line, but I should think you would have to go back nearly a mile until you could get a level where you could join, which would mean the reconstruction of the railway.

24. To the highest part at North Shore? Yes, or nearly so.

25. *Mr. Hogue.*] It would involve a complete alteration of the levels? You must construct another line until the levels of the two lines meet.

26. The grade would not be so very severe? No; it would mean that the railway would have to be reconstructed for nearly a mile.

27. *Chairman.*] The last mile of the present line would be rendered absolutely useless if a new line were put on higher ground to connect with the bridge? I should say it would be rendered useless. If the station at Milson's Point remained, it might be used for siding purposes, but for its present purpose it would be useless.

28. *Mr. Rich.*] So that the cost of reconstructing the line would be about as much as constructing the bridge? I think the cost of reconstructing the line would be more than the cost of the bridge, or as much, at any rate.

29. But you do propose to carry a tramway? The bridge is designed to carry a tramway, but as the Government work the tramways on the north side of the bridge, and as the Government propose to run a tramway along George-street, which undoubtedly will be connected over this bridge with the North Sydney tramways, the bridge is constructed so that the Government may be able to connect their tramways over the bridge.

30. *Mr. Hogue.*] Would there not be some difficulty in connecting the tramways at the point where your bridge strikes the North Shore? No; it is specially designed for that purpose.

31. *Chairman.*] On that side it gets on to the tram street? It debouches on to the tramway in Alfred-street.
32. *Mr. Hogue.*] Where do you propose to strike the tram-line? Near the Town-hall. There would be two tram-lines, nearly parallel. The continuation of the cable-tram between Milson's Point and the Town-hall would then, no doubt, only live to take the boat traffic. The Government would no doubt put a tram down Cumberland-street, coming out behind the Sydney Town-hall, where there is a broad place, and running into George-street.
33. *Chairman.*] Will you explain what the Government could do in running that tram-line? The Government could connect the George-street tramway by leaving the proposed line opposite the Town-hall, crossing into York-street, going through York-street and Cumberland-street, thence over the bridge to join the North Shore tramway in Alfred-street, near the Town-hall. But as the Government own the tramways on the north side, and will own a tramway in George-street, I think it would not be in the public interest that any private company should put an intervening link in that tramway service between these two tramways, because it would necessitate a double change of car.
34. On what conditions do you give the Government the right to run their tramway over the bridge? On terms to be arranged with the proprietors, or, if they do not agree, by arbitration.
35. The builders of the bridge could not impose prohibitory charges as regards the Government's right to run the tramway over the bridge? No; these charges would be regulated. If the Government thought that the proposed charges were exorbitant they could submit the matter to arbitration, and it could be decided under the Act.
36. Suppose the bridge was built, and the Government said, "We wish to run a tramway across the bridge; what will you charge us a year to do so?"—your company would charge the Government so much for the use of the bridge? The terms upon which the Government would be allowed to run tramways over the bridge would be subject to negotiation with the proprietors, and if that negotiation were not satisfactory to the Government it would be determined by arbitration. Under the Bill the Government would be empowered to run a tramway under these terms—that is, terms to be settled with the proprietors, or to be settled by arbitration.
37. The Government would not be at the mercy of the promoters? No; they could always submit the thing to arbitration.
38. *Mr. Rich.*] That is provided for in clause 22 of the Bill? Yes.
39. *Chairman.*] You do not propose to take any right to carry passengers over the bridge by tram? No.
40. You leave that to the general tramway system on both sides? Yes.
41. *Mr. Hogue.*] You propose to get your revenue from the passenger and vehicular traffic that cross the bridge? Yes.
42. If the Government construct a tramway over the bridge it will probably take a great proportion of your traffic? It would. In the first place, we should be quite willing to make very reasonable terms with the Government to construct a tramway, because it is by means of the tramway we should secure a great many passengers whom otherwise we probably would not secure. We do not rely on the bridge so much for pedestrian traffic as for vehicular traffic. The Government tramway would not interfere with the vehicular traffic. It would be almost impossible to name any one price at which you could allow the Government to run over the bridge. It must depend a great deal on the amount of traffic which runs over.
43. What kind of tramway service,—steam, electric, or cable? They could have steam, electric, and cable. I have not considered steam as a possibility, because I think that no new steam tramways will ever be constructed in Sydney. Steam tramways might run over, but I consider they are beyond the pale of possibility. No new steam tramways will ever be adopted here; they will be either cable or electric, probably electric.
44. *Mr. O'Sullivan.*] Do I understand that you will make no charge for passengers run over in the Government tramway? No. The charge would be a charge to be arranged under clause 22 of the Bill.
45. *Chairman.*] The Government would pay so much a year for running the tramway over the bridge? It might be arranged in that way. It must be subject to negotiation. However small or however large it may be must depend to some extent on the amount of traffic, and that is a variable quantity.
46. *Mr. Hogue.*] I presume you would ask the Government to pay you so much a head for the passengers you carry? Or probably so much a car.
47. If it is at so much a car you would not get at the amount of traffic with such correctness as you would if you charged at so much a head? No; but it would be quite correct enough for our purpose. The wear and tear of the bridge is almost as much by an unloaded car as by a loaded car.
48. The point is, the amount of traffic? Yes.
49. *Chairman.*] You are satisfied to give the Government the right to go to arbitration in the event of a disagreement? Yes, that is provided for in the Bill.
50. *Mr. Hogue.*] Have you made any estimate of the vehicular and foot traffic across the bridge, on the basis of the present population? I should say, from what I know at present, the vehicles which would pass over would be nearly 1,000 a day.
51. That is on the basis of the present population? On the basis of the present traffic, as nearly as I can gather.
52. Have you made any estimate of the foot traffic? It is very difficult to estimate the foot passenger traffic which would pass over this bridge. No doubt the ferry boats would still carry a very large number of the passengers, but, I should think, that probably at first 5,000 might pass per day.
53. That is 2,500 one way, and 2,500 the other way? Yes.
54. *Mr. Rich.*] That vehicular traffic would increase with increased facilities;—your calculations are based on the present traffic? Both would grow, no doubt, rapidly.
55. You have provided, I think, means of communicating with the railway at Milson's Point? Yes; I intend to communicate with the Milson's Point station by lift, and also to make a reverse tram line by arrangement with the Railway Commissioners, to connect with the Milson's Point line.
56. Power is given to you in the Bill to resume land for that purpose? Yes.
57. *Mr. O'Sullivan.*] I presume the space between the third pier and the Milson's Point railway station will allow the Lavender Bay ferry service to be carried on? At present there is 170 feet. If Parliament increased the spans to 550 feet there would be 120 feet. I would suggest that the Bill simply provides for a minimum of 500 feet, and if I increased the distance to 550 feet there would be then 120 feet between the Milson's Point shore and the northern side of that pier for the passage of the Lavender Bay ferry boats.

- B. C. Simpson.
4 July, 1896.
58. Would it allow two boats to pass at one time? Easily. As a matter of fact, there would be plenty of room for these boats to pass in the space between the piers.
59. *Chairman.*] In the Bill you propose to give certain Government officers the right to go over the bridge free at all times? Yes.
60. Will you name the officers to whom this right is to be given?
All persons wearing Her Majesty's uniform, whether of the army, of the navy, of the volunteer forces, of the police force, or of the postal service; all members of fire brigades, in uniform and on duty; all vehicles engaged in the military, naval, volunteer, police, or postal service; and all fire engines and other appliances connected with the extinguishment of fires.
61. *Mr. Rich.*] You also propose, in clause 23, to give the Government the power to purchase the bridge? Yes; after the expiration of 21 years.
62. You also provide, in clause 21, for the appointment of an inspector by the Government, to report on the condition of the bridge, to make inquiries as to the bridge, and you empower the inspector to enter on the bridge? Yes.
63. You also provide that certain lights shall be maintained on the bridge, in the manner indicated by the Marine Board? Yes; at our expense, in accordance with clause 19.
64. Clause 16 provides that the promoters shall, within six months of the passing of the Bill, deposit £5,000 with the Colonial Treasurer, and shall, within 18 months from the passing of the Bill, expend at least £10,000 in the actual work of construction, to the satisfaction of the Engineer-in-Chief for Public Works, and the deposit of £5,000 shall be returned to the promoters in the event of £10,000 being expended within that period;—if that £10,000 is not expended in that period, the deposit of £5,000 is forfeited? Yes.
65. Clause 17 provides as to the commencement and completion of the work? The bridge is to be commenced within one year from the passing of the Act, and completed and brought into use within 4 years from the time of its commencement.
66. You also take power to enter upon land to fix punts, lighters, and so on, for the purpose of constructing the bridge? Yes.
67. You take the usual powers? These are the usual powers which are necessary for constructing the works.
68. Clause 4 gives you power to dedicate highways? Yes.
69. Clause 6 gives you power to use and divert roads—to construct the bridge over streets and public highways? Yes.
70. Clause 8 gives you power to appropriate lands? Yes.
71. Clause 9 incorporates with the Bill the provisions of the Public Works Act as to mortgages, rent, charges, &c.? Yes.
72. Clause 10 gives you power to sell surplus lands? Yes.
73. Clause 11 authorises you to charge certain tolls to the public? Yes.
74. Clause 12 provides how the tolls are to be paid? Yes.
75. Clause 13 gives the promoters, with the sanction of the Governor, power to make by-laws and regulations, and to restrict the traffic? Yes.
76. Clauses 25 to 44, inclusive, are the usual arbitration clauses in regard to the purchase of land? Yes.
77. Where you entered into arbitration with the Government, either for the construction of a tramway or for other purposes connected with the bridge, the Arbitration Act of 1892 would apply? It would.
78. *Mr. Hogue.*] Touching clause 24 (exemption from tolls)—would not the promoters be disposed to include in the clause the members of hospital staffs and ambulance corps, in uniform? I think these might be very well included.
79. Would the promoters have any objection to include the members of the hospital staffs, in uniform, as well as hospital nurses? No; I think you might insert after the word "brigades," the words "members of hospital staffs and ambulance corps on duty."
80. Touching clause 20 as to the liability of the promoters for the safety of the bridge, according to the clause there is the same liability as extends to municipal corporations in their construction and maintenance of roads, &c.—what is your opinion as to giving a guarantee for the safety of the bridge? That is already guaranteed, for the bridge will be built to the satisfaction of the Engineer-in-Chief for Public Works, and in clause 17 it is provided that the bridge shall be inspected.
81. In clause 18 you have no objection to the two spans being increased to 550 feet each? 550 feet if deemed desirable by the House.
82. Or to the height of the bridge being increased to 160 feet? No.
83. Do you wish the Committee to make that alteration, or do you wish it to be submitted to Parliament? I must leave that to the Committee. Personally my wish would be that the Committee should introduce the height of 160 feet, and that you should leave me with elastic powers as regards the span, whether it is 500 or 550 feet. A certain amount of latitude in a work of this kind is very desirable, because a slight difference of span may very likely affect the economy of construction. Although I have had borings taken, yet before a work like this is constructed, it would be quite necessary that a series of very complete borings should be taken. If a hard and fast span were laid down, it is quite possible that in one place one might find it desirable to alter that span very slightly.
84. *Chairman.*] You wish the height of the bridge to be increased to 160 feet, and the other matter to be left open? Yes.
85. *Mr. Nicholson.*] Would the increased width of the spans in any way weaken the construction of the bridge? No, the strength of the superstructure must be adapted of course to the increased span.
86. *Mr. Hogue.*] How long do you estimate that a bridge of this design would last? I should think it would last hundreds of years. It depends so much on the maintenance.
87. Two hundred years? I should say 200 years if properly maintained.
88. *Chairman.*] Provided that it is reasonably maintained? Yes.
89. *Mr. Hogue.*] Have you any information as to the life of steel bridges? I can only estimate the life of steel bridges. It is impossible to determine them accurately, as they are comparatively modern, none of them have yet been used up to the limit of their life. It is very important that any river bridge should be properly maintained and painted. For that reason I have adopted a section of metal in this bridge which is susceptible of easy and inexpensive maintenance. The strut, instead of being circular, as in the Forth Bridge, I have made cruciform. With a circular strut it is difficult to get inside. If you adopt the cruciform shape, strengthened at the four sides, it can be painted regularly. Under these circumstances I should think the life of such a bridge would be at any rate 200 years. 90.

B. C.
Simpson.

14 July, 1896.

90. What do you estimate the cost of this bridge at? I estimate it will cost about £400,000, including land.
91. *Mr. Rich.*] What is the comparative economy between construction by private enterprise and construction by Government? Without any reflection on the very able superintendence of Government works, and referring entirely to the difference of systems, I think there is at least 10 per cent. difference between the cost of the construction of works by private enterprise and the cost of their construction under departmental management.
92. *Mr. Hogue.*] I presume you mean that the difference would be altogether in favour of private enterprise? Yes.
93. With no loss of stability? No, I mean entirely similar works. I have had a considerable amount of experience in the Government service, and also outside the Government service, and my experience is that the economy of private construction, independent altogether of the efficiency of the works, is at least 10 per cent. in favour of private enterprise.
94. *Mr. O'Sullivan.*] What do you consider would be the cause of the difference? There are many things to consider. Departmental management is more cumbrous. Type drawings are issued for various works where probably in private enterprise a special design would be used. Another thing is that by the centralisation of direction there are probably certain other real or fancied disadvantages to the contractors, which they charge for no doubt in their tenders. All restrictions placed on Government contracts must be considered by a contractor in tendering. There is no doubt that there is a certain liberal allowance made in Government contracts for contingencies which do not always apply in private work.
95. Do you propose to raise the capital in the Colony? Not entirely. I think I have a very strong financial support. I think a part of the capital would be subscribed in the Colony, but the bulk of the capital would be subscribed in England.
96. I suppose you have no doubt that it would be subscribed? None whatever.
97. You have no doubt that the scheme will not be left on your hands? None whatever.
98. *Mr. Hogue.*] I presume you have assurances on that point? I have a very strong financial support.
99. *Mr. O'Sullivan.*] As a matter of fact there is abundance of money in England available for such schemes? But only to be had for good schemes. I do not think English capital is to be had for any scheme that is proposed. I think there is plenty of money in England to be had if the scheme is properly vouched for as being a good one.
100. *Mr. Nicholson.*] Will the people of these colonies have the same privilege to subscribe capital as English people? Certainly.
101. *Mr. O'Sullivan.*] How long do you think it will take to get the bridge under weigh after the Bill is passed? I have undertaken to deposit £5,000 within six months, and to spend £10,000 within eighteen months, that is to say, my arrangements will be made in six months, and within twelve months of that time I shall be able to spend £10,000, perhaps very much more.
102. *Chairman.*] And you undertake to complete the whole work within what time of the passing of the Bill—four years? Yes.
103. *Mr. Hogue.*] What do you estimate would be the cost of the steel work? I estimate that it would be about £25 or £26 a ton. In estimating the cost of works, I always like to be full. I like to carry out my works under my estimates instead of over my estimates, and I have no doubt that the steel work for this bridge will be done under £26 a ton. I have lately done steel work on the Parramatta River at £23 a ton.
104. That is after the bridge is up? Total cost—bridge completed and painted.
105. Are you prepared to take colonial steel if it is made here and you can get it cheaper? Undoubtedly, if it is cheaper. Tenders will be called both here and at home.
106. I presume you would take the cheapest, wherever it could be got? Yes, wherever it could be got.
107. How many men do you estimate you would require to employ on the work? It is very difficult to say; the number must vary. It would be 400 or 500 men probably.
108. Four hundred or 500 men for about four years? Yes.
109. A certain number of professional men included? I should think you might say an average of 400 or 500 men. One cannot say the number exactly, but I should think you might take that average, because the works would have to be pushed on energetically.
110. *Chairman.*] In addition to a great number of other men who would get employment indirectly in manufacturing material, in shipping, and in carting? A large number of men would be employed in getting stone, carting material, getting broken stone for concrete, and possibly in the supply of cement.
111. *Mr. O'Sullivan.*] The right of the Government to resume the bridge is only to come into play at the end of twenty-one years;—suppose the Government should desire to purchase the bridge before that time arrives, what consideration would the company require? Under the Bill it could only be done by arrangement with the company. I should think that if the Government desire to resume the bridge before the end of twenty-one years, it is quite possible that terms could be made with the company for its resumption. It must be evident to the Committee that it would hardly be fair to allow private money to be employed in the construction of a work which might not be very remunerative at first, although it is a fairly remunerative scheme, but to allow private money to be employed in the construction of this bridge, and to authorise the Government directly it is remunerative to resume the work. Twenty-one years is supposed to allow a sufficient margin of dividend-paying time to recoup the company for the investment of its capital.
112. Do you recollect whether the Tasmanian Main Line Co.'s line was resumed by the Government of that colony before the end of twenty-one years? My information is not very trustworthy on that point. I do not think they had any such condition as that at all.
113. In the event of the Government requiring to purchase this bridge before the end of twenty-one years, it would be a matter of arrangement? It might be a matter of arrangement.

1896.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

REPORT FROM THE SELECT COMMITTEE
ON THE
CITY AND NORTH SYDNEY RAILWAY BILL,
THE
SYDNEY AND NORTH SYDNEY BRIDGE AND TRAMWAY BILL,
AND THE
NORTH SHORE BRIDGE BILL ;
TOGETHER WITH THE
PROCEEDINGS OF THE COMMITTEE
AND
MINUTES OF EVIDENCE.

ORDERED BY THE LEGISLATIVE ASSEMBLY TO BE PRINTED,
21 *October*, 1896.

SYDNEY : CHARLES POTTER, GOVERNMENT PRINTER.

1896.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES, No. 31. TUESDAY, 21 JULY, 1896.

11. CITY AND NORTH SYDNEY RAILWAY BILL:—The Order of the Day having been read,—Mr. Parkes moved, That this "Bill" be now read a second time.

Debate ensued.

Mr. O'Sullivan moved, That this Debate be now adjourned.

Debate ensued.

Question put,—That this Debate be now adjourned.

The House divided.

Ayes, 14.

Mr. Fegan,
Mr. Waddell,
Mr. Wright,
Mr. Hughes,
Mr. James Thomson,
Mr. E. M. Clark,
Mr. Edden,
Mr. O'Sullivan,
Mr. Wilks,
Mr. Affleck,
Mr. Howarth,
Mr. Thomas Fitzpatrick.

Tellers,

Mr. Thomas,
Mr. Watson.

Noes, 35.

<p>Mr. Crick, Mr. Lyne, Mr. Price, Mr. Perry, Mr. Garrard, Mr. Cook, Mr. Young, Mr. Brunner, Mr. McCourt, Mr. McFarlane, Dr. Ross, Mr. Hurley, Mr. Nelson, Mr. Chanter, Mr. Henry Clarke, Mr. M. T. Phillips, Mr. Anderson, Mr. Wheeler, Mr. Whiddon,</p>	<p>Mr. Bull, Mr. Greene, Mr. Neild, Mr. Haynes, Mr. Bavister, Mr. Jessep, Mr. Cotton, Mr. Lonsdale, Mr. Dick, Mr. Reid, Mr. W. H. B. Piddington, Mr. O'Reilly, Mr. Hawthorne, Mr. Parkes.</p>
---	---

Tellers,

Mr. Rigg,
Mr. J. C. L. Fitzpatrick.

And so it passed in the negative.

Debate on Main Question continued.

Mr. Crick moved, That this Debate be now adjourned.

Debate ensued.

Question put,—That this Debate be now adjourned.

The House divided.

Ayes, 22.

<p>Mr. Thomas, Mr. Fegan, Mr. Crick, Mr. Wood, Mr. Hughes, Mr. McGowen, Mr. Watson, Mr. E. M. Clark, Mr. James Thomson, Mr. Wilks, Mr. Law, Mr. Affleck, Mr. McLean, Mr. Mahony, Mr. Mackay,</p>	<p>Mr. Ferguson, Mr. Edden, Mr. A. B. Piddington, Mr. Thomas Fitzpatrick, Mr. Waddell.</p>
--	--

Tellers,

Mr. Macdonald,
Mr. Watkins.

Noes, 28.

<p>Mr. Chanter, Mr. M. T. Phillips, Mr. Lyne, Mr. Young, Mr. Jessep, Mr. Perry, Mr. Garrard, Mr. Molesworth, Mr. Brunner, Mr. Ball, Mr. McCourt, Mr. Hurley, Mr. Pyers, Mr. Nelson, Mr. McLaughlin,</p>	<p>Mr. Cook, Mr. Anderson, Mr. Parkes, Mr. Millard, Mr. Howarth, Mr. Greene, Mr. Millen, Mr. Hogue, Mr. Cotton, Mr. Newman, Mr. Hawthorne.</p>
---	--

Tellers,

Mr. Bavister,
Mr. Haynes.

And so it passed in the negative.

Debate on Main Question continued.

Mr. Millen moved, That the Question be amended by leaving out all the words after the word "Bill," and inserting the words "be referred to a Select Committee for inquiry and report.

"(2.) That such Committee consist of Mr. Young, Mr. Lyne, Mr. Crick, Mr. Greene, Mr. Waddell, Mr. Molesworth, Mr. Cann, Mr. Macdonald, Mr. Ashton, and Mr. Millen," instead thereof.

Question proposed,—That the words proposed to be left out stand part of the Question.

Debate continued.

Question,—That the words proposed to be omitted stand part of the Question,—put, and Division called for,—but there not being Tellers on the part of the *Ayes*, no Division could be had, and Mr. Speaker declared the Question to have passed in the *negative*.

Question

Question put,—That the words proposed to be inserted in the place of the words left out be so inserted.

The House divided.

Ayes, 38.		Noes, 10.	
Mr. M. T. Phillips,	Mr. Haynes,	Mr. McLean,	Mr. Hughes,
Mr. Brunner,	Mr. Smailes,	Mr. Wood,	Mr. Mackay,
Mr. Young,	Mr. Cotton,	Mr. A. B. Piddington,	Mr. Ferguson,
Mr. Garrard,	Mr. Newman,	Mr. Cann,	Mr. Watson,
Mr. Molesworth,	Mr. E. M. Clark,	Mr. Cook,	Mr. Edden,
Mr. Millen,	Mr. Lyne,	Mr. Wilks,	Mr. James Thomson,
Mr. Parkes,	Mr. Afleck,	Mr. Moore,	Mr. Watkins,
Mr. McCourt,	Mr. Bavister,	Mr. Hogue.	Mr. Fegan.
Mr. Hawthorne,	Mr. McGowen,	<i>Tellers,</i>	<i>Tellers,</i>
Mr. Thomas Fitzpatrick,	Mr. Davis,	Mr. Macdonald,	Mr. Law,
Mr. Jessep,	Mr. Pyers,	Mr. Perry.	Mr. Thomas.
Mr. J. C. L. Fitzpatrick,	Mr. Millard,		
Mr. Anderson,	Mr. Greene,		
Mr. Ball,	Mr. Howarth,		

And so it was resolved in the affirmative.

Question then,—

- (1.) That this Bill be referred to a Select Committee for inquiry and report.
- (2.) That such Committee consist of Mr. Young, Mr. Lyne, Mr. Crick, Mr. Greene, Mr. Waddell, Mr. Molesworth, Mr. Cann, Mr. Macdonald, Mr. Ashton, and Mr. Millen,—put and passed.

13. SYDNEY AND NORTH SYDNEY BRIDGE AND TRAMWAY BILL:—The Order of the Day having been read,—Mr. E. M. Clark moved, That this "Bill" be now read a second time.

Mr. Millen moved, That the Question be amended by leaving out all the words after the word "Bill," and inserting the words "be referred to a Select Committee for inquiry and report.

- (2.) That such Committee consist of Mr. Young, Mr. Lyne, Mr. Crick, Mr. Greene, Mr. Waddell, "Mr. Molesworth, Mr. Cann, Mr. Macdonald, Mr. Ashton, and Mr. Millen," instead thereof.

Question,—That the words proposed to be left out stand part of the Question,—put and negatived.

Question,—That the words proposed to be inserted in place of the words left out be so inserted,—put and passed.

Question then,—

- (1.) That this Bill be referred to a Select Committee for inquiry and report.
- (2.) That such Committee consist of Mr. Young, Mr. Lyne, Mr. Crick, Mr. Greene, Mr. Waddell, Mr. Molesworth, Mr. Cann, Mr. Macdonald, Mr. Ashton, and Mr. Millen,—put and passed.

VOTES NO. 33. THURSDAY, 30 JULY, 1896.

4. CITY AND NORTH SYDNEY RAILWAY BILL—SYDNEY AND NORTH SYDNEY BRIDGE AND TRAMWAY BILL:—Mr. Millen (*by consent*) moved, without Notice, That the Reports, Minutes of Proceedings, and Evidence of the Select Committees on the "City and North Sydney Railway Bill" and the "Sydney and North Sydney Bridge and Tramway Bill" be referred to the Select Committee now sitting on the two Bills above mentioned.

Question put and passed.

VOTES NO. 42. THURSDAY, 13 AUGUST, 1896.

13. NORTH SHORE BRIDGE BILL:—The Order of the Day having been read,—Mr. Morton moved, That this "Bill" be now read a second time.

Mr. Fegan moved, That the Question be amended by leaving out all the words after the word "Bill," and inserting the words "be referred to a Select Committee for inquiry and report.

- (2.) That such Committee consist of Mr. Young, Mr. Lyne, Mr. Crick, Mr. Greene, Mr. Waddell, "Mr. Molesworth, Mr. Cann, Mr. Macdonald, Mr. Ashton, and Mr. Millen," instead thereof.

Question,—That the words proposed to be left out stand part of the Question,—put and negatived.

Question,—That the words proposed to be inserted in the place of the words left out be so inserted,—put and passed.

Question then,—

- (1.) That this Bill be referred to a Select Committee for inquiry and report.
- (2.) That such Committee consist of Mr. Young, Mr. Lyne, Mr. Crick, Mr. Greene, Mr. Waddell, Mr. Molesworth, Mr. Cann, Mr. Macdonald, Mr. Ashton, and Mr. Millen,—put and passed.

VOTES NO. 71. WEDNESDAY, 21 OCTOBER, 1896.

11. CITY AND NORTH SYDNEY RAILWAY BILL—SYDNEY AND NORTH SYDNEY BRIDGE AND TRAMWAY BILL—NORTH SHORE BRIDGE BILL:—Mr. Millen, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before, the Select Committee for whose consideration and report these Bills were referred on 21st July and 13th August, 1896, respectively, together with copies of the Bills as referred to such Committee.

Ordered to be printed.

1896.

CITY AND NORTH SYDNEY RAILWAY BILL:
 SYDNEY AND NORTH SYDNEY BRIDGE AND TRAMWAY BILL:
 NORTH SHORE BRIDGE BILL.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, to whom was referred for inquiry and report, on 21st July, 1896,—the “*City and North Sydney Railway Bill*,” and the “*Sydney and North Sydney Bridge and Tramway Bill*,” and on 13th August, 1896,—the “*North Shore Bridge Bill*,”—and to whom was also referred, on 30th July, 1896, the Reports from the Select Committees on the “*City and North Sydney Railway Bill*,” and the “*Sydney and North Sydney Bridge and Tramway Bill*,”—beg to report to your Honorable House:—

Your Committee having examined the witnesses named in the List* * See List, p. 13. (whose evidence will be found appended hereto), and considered the Report and evidence referred, find as follows:—

1. That, from evidence given by a number of witnesses resident on or connected with the North Shore, it is evident that a very general and natural desire prevails for some improved means of communication between that portion of the metropolis and the city proper, and that generally these witnesses favour a bridge rather than a tunnel. The Committee are, however, of opinion that this preference is the result partly of a general prejudice against underground transit, with which the residents in New South Wales have as yet had no opportunity of becoming familiar, and partly of a belief that though a private corporation might undertake the construction of a passenger-tunnel it would not construct one to carry the vehicular traffic. Against the bridge proposals, however, the Committee urge two objections:—

AN IMPEDIMENT TO NAVIGATION.

- (a) Witnesses connected with shipping are unanimous that a bridge which would be commercially possible of construction would, to a greater or less extent, constitute an impediment to the navigation of that portion of the harbour lying above the line of the proposed bridge, and around the foreshores of which are gathered the wharfs, docks, and warehouses at which the bulk of the port's shipping operations are conducted. This view the Committee endorse.

A MONOPOLY OF SITE.

- (b) The prospects of North Sydney appear to point to the conclusion that, at some future date, it must be given direct communication with the main railway system of the Colony. Neither of the proposed bridges makes provision for such traffic, to provide for which, therefore, if permission be given to carry out either of the subject schemes, a second bridge would require to be erected, assuming that the railway were not an underground one. From the point of view of harbour navigation, the objections to this are so obvious that they need not be here stated. Reference, however, might be made to one fact, viz., that the evidence given by experts was to the effect that the proper course for a railway bridge is not the proposed course of the subject bridges, viz., from Dawes' Point to Milson's Point, but from Dawes' Point to M'Mahon's Point. Furthermore, the precise position of the southern end of a railway bridge must be determined by the course taken by the railway extension from the City to North Sydney, and it is therefore abundantly evident that no bridge should be constructed until the exact course of the said extension is definitely decided. Holding these views, your Committee cannot but regard any concession to private individuals of what is undoubtedly the most suitable site for a bridge abutment on the southern shore as calculated to establish a monopoly extremely dangerous to the public interest.

The objection stated in sub-paragraph (b) is, in the opinion of your Committee, an insuperable bar to the granting of any privileges to private individuals for bridge construction, while, even should the State propose to erect such a structure, the objection in sub-paragraph (a) is entitled to most serious consideration.

2. That having determined that the balance of evidence is in favour of a tunnel as against the proposed bridges, the Committee do not deem it necessary to consider the relative merits of the rival bridge proposals submitted to them.

3. That while unanimously of opinion that a tunnel promises the best means of those proposed for improved connection between the two shores, the Committee cannot recommend the specific proposals submitted in the City and North Sydney Railway Bill and the City and North Sydney Tunnel Roadway Bill without such modifications as practically amount to an entirely new scheme. The former Bill provides for the construction of a tramway tunnel (to be duplicated as traffic requires) running from King-street to Milson's Point, with an intermediate station at Circular Quay; the latter Bill for a roadway tunnel leaving the surface at Circular Quay and running from Fort Macquarie to Kirribilli Point, and then approaching the surface again on to a proposed new road leading, by easier gradients than those of existing thoroughfares, to the high land rising some distance from the shore. These two proposals, though embodied in separate Bills, can be considered as parts of one undertaking; for while the Committee would (if the work is to be carried out by private enterprise) insist upon making one contingent upon the other, Mr. Sulman (the representative of those making the two proposals) has expressed his perfect readiness to accept this condition. The necessity of thus joining the two proposals results from the fact that while the passenger-tunnel would appear to have the best financial prospects, the vehicular tunnel is more urgently required, present facilities for dealing with passenger traffic being much more perfect than those for dealing with vehicular traffic.

4. That side by side with the proposal submitted in the City and North Sydney Railway Bill, the Committee had an opportunity of considering a tramway tunnel scheme prepared some time ago by officers of the Public Works Department. This scheme provides for two tramway tunnels, accommodating the going and coming traffic respectively, 15 feet in diameter for the portion immediately under the harbour, and merging into one twenty-five feet tunnel at either end, and following
with

with one important deviation the route selected by Mr. Sulman for his roadway tunnel, already described. The deviation is at the northern end. Instead of curving to the north towards the high land, as does the roadway tunnel route, the departmental proposal is that the tunnel shall, after passing under Kirribilli Point and as it approaches the surface, gradually curve towards the termini of the North Shore Railway and Cable Tramway at Milson's Point, so as to permit of the tunnel cars running on to the lines of both. Although this route is longer than the direct one to Milson's Point, it presents so many advantages that the Committee have no hesitation in recommending it as the one that ought to be followed. These advantages may be thus summarised :—

- (a) It is more convenient for passengers, as it avoids the lifts necessary to enter and leave the tunnel as proposed in Mr. Sulman's scheme, passengers being received and landed on the surface at either end, and being placed where they can step from car to car if they arrive, or desire to proceed, by either the North Shore Railway or Tramway.
- (b) It avoids competition with the George-street Electric Tramway.
- (c) By this route it would be possible for the tunnel cars to proceed by a surface-line along Circular Quay to effect a junction with the George-street tram-line. This would presumably be the plan followed if the tunnel were under State control; and there should be no difficulty in making such an arrangement as would enable it to be adopted, even if the tunnel tram were under separate management.

Further, the Committee were very much impressed by a suggestion, evidently well matured, emanating from the Assistant Engineer for Tramway Construction, Mr. Fischer, to the effect that at a comparatively slight cost it would be possible to utilise the North Shore Railway and Cableway for electric tramway traction. If this were done, then it would be possible, by adopting the departmental scheme, for a tunnel tramway to provide for through traffic from the city to any of the points served by the lines at present in existence on the North Shore. This suggestion receives additional weight from the fact that it is intended to adopt electric traction on the city tramways, and that this system is already employed on the extension from the North Shore Cableway.

5. That your Committee having satisfied themselves that the departmental passenger-tunnel, in conjunction with the roadway-tunnel projected in the City and North Sydney Tunnel Roadway Bill, would best serve the public interest, then proceeded to consider whether, in view of the accepted policy of the country in regard to railways and tramways, there was any objection to allowing private enterprise to carry out such an undertaking. Your Committee do not feel called upon—nor would the scope of their inquiry enable them—to express an opinion whether the work does or does not justify the expenditure of public money at the present juncture. But they unhesitatingly express the opinion that if there is any intention on the part of the Government to deal with the matter within any reasonable period, no private concessions should be granted. If, however, the Government has decided against proceeding with such a project, then a public advantage will be secured by permitting private individuals who may be willing to do so to carry out the scheme now recommended.

6. That whatever decision the Government may arrive at should, the Committee would respectfully suggest, be announced as early as possible, as a matter of fairness to those who, at considerable expense and trouble, have submitted, or may be willing to submit, proposals to Parliament. For the same reason your Committee would also suggest that before the Session closes the Government—if not prepared to take up the work—should afford the Legislative Assembly an opportunity of expressing an opinion upon the various proposals dealt with in this Report. If the House, taking a different view from the Committee, holds that the public interest will be best served by the adoption of any of the schemes submitted, then it is desirable that the promoters should be authoritatively informed of the fact in the only way possible, viz., by the passing of the Bill covering the particular scheme approved. On the other

other hand, if the House approves the conclusions at which the Committee have arrived, it is equally desirable that this endorsement should be formally announced, in which case it is reasonable to suppose the promoters of other schemes would abstain from further efforts, and Parliament would have publicly announced the lines upon which it was prepared to permit private individuals to connect the north and south shores of the harbour.

E. D. MILLEN,
Chairman.

*No. 3 Committee Room, Legislative Assembly,
21st October, 1896.*

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 28 JULY, 1896.

MEMBERS PRESENT:—

Mr. Ashton,
Mr. Lyne,

Mr. Waddell.

Mr. Cann,
Mr. Millen,

Mr. Millen called to the Chair.

Entries from Votes and Proceedings appointing the Committee read by the Clerk.

Printed copies of the Bills referred before the Committee.

Resolved (*on motion of Mr. Lyne*),—That the Committee sit on Tuesday and Thursday in each week.

Resolved (*on motion of Mr. Cann*),—That the Solicitors representing the Promoters of the various schemes be allowed only to examine their own witnesses in connection with the Bills before the Committee.

The Chairman read a letter from Mr. E. M. Clark, M.P., asking to be allowed to be present at the sittings of the Committee.

Parties called in.

Present:—E. E. Fosbery, Esq. (*Solicitor for the City and North Sydney Railway Bill*); W. F. Brennan, Esq. (*Solicitor for the Sydney and North Sydney Bridge and Tramway Bill*); T. B. Dibbs, Esq. (*Messrs. Dibbs and Gibson, Solicitors for the North Shore Bridge Bill*).

The Chairman informed the parties of the resolution adopted by the Committee in connection with the examination of witnesses.

[Adjourned till Thursday next at *Eleven* o'clock.]

THURSDAY, 30 JULY, 1896.

MEMBERS PRESENT:—

Mr. Millen in the Chair.

Mr. Ashton,
Mr. Molesworth,

Mr. Cann,
Mr. Waddell.

The Clerk, by direction of the Chairman, read a Joint Minute by the Engineer-in-Chief for Public Works and the Engineer-in-Chief for Railway Construction in reference to the "City and North Sydney Railway Bill" and the "City and North Sydney Tunnel-roadway Bill."

Parties called in:—

Present—E. E. Fosbery, Esq. (*Solicitor for the City and North Sydney Railway Bill*); W. F. Brennan, Esq. (*Solicitor for the Sydney and North Sydney Bridge and Tramway Bill*); T. B. Dibbs, Esq. (*Messrs. Dibbs and Gibson, Solicitors for the North Shore Bridge Bill*).

John Sulman (the Promoter of the City and North Sydney Railway Bill) sworn and examined.

Witness withdrew.

[Adjourned till Tuesday next at *Eleven* o'clock.]

TUESDAY, 4 AUGUST, 1896.

MEMBERS PRESENT:—

Mr. Ashton,
Mr. Greene,

Mr. Waddell.

Mr. Cann,
Mr. Molesworth,

In the absence of the Chairman, Mr. Ashton called to the Chair *pro tem*.

The Clerk, by direction of the Chairman, read the entry from Votes and Proceedings referring the Reports, Minutes of Proceedings, and Evidence of the Select Committees on the "City and North Sydney Railway Bill" and the "Sydney and North Sydney Bridge and Tramway Bill" to this Committee.

Parties called in.

Present:—E. E. Fosbery, Esq. (*Solicitor for the City and North Sydney Railway Bill*); W. F. Brennan, Esq. (*Solicitor for the Sydney and North Sydney Bridge and Tramway Bill*); T. B. Dibbs, Esq. (*Messrs. Dibbs and Gibson, Solicitors for the North Shore Bridge Bill*).

William Kenwood (*the Promoter of the Sydney and North Sydney Bridge and Tramway Bill*) sworn and examined.

Witness withdrew.

Edward

Edward Mann Clark (*a Member of the Legislative Assembly*) called in, sworn, and examined.
 Witness withdrew.
 Gamaliel Thompson called in, sworn, and examined.
 Witness produced copy of a petition, signed by 86,000 or 87,000 persons, in favour of the Sydney and North Sydney Bridge and Tramway Bill (Kenwood's scheme).
 Witness withdrew.
 John Young called in, sworn, and examined.
 Witness withdrew.
 William Kenwood further examined.
 Witness withdrew.
 William Barnett Smith (*Council Clerk, North Sydney*) called in, sworn, and examined.
 Witness withdrew.
 Francis Punch called in, sworn, and examined.
 Witness withdrew.
 William Anderson (*an Alderman of the Borough of North Sydney*) called in, sworn, and examined.
 Witness withdrew.

[Adjourned till Thursday next at *Eleven* o'clock.]

THURSDAY, 6 AUGUST, 1896.

MEMBERS PRESENT:—

Mr. Ashton,		Mr. Greene,
Mr. Cann,		Mr. Molesworth,
Mr. Macdonald,		Mr. Waddell.

In the absence of the Chairman, Mr. Ashton called to the Chair *pro tem*.
 Parties called in.
 Present:—E. E. Fosbery, Esq. (*Solicitor for the City and North Sydney Railway Bill*); W. F. Brennan, Esq. (*Solicitor for the Sydney and North Sydney Bridge and Tramway Bill*); T. B. Dibbs, Esq. (*Messrs. Dibbs and Gibson, Solicitors for the North Shore Bridge Bill*).
 Isaac Ellis Ives (*Mayor of Sydney*) called in, sworn, and examined.
 Witness withdrew.
 Captain Joseph Barron called in, sworn, and examined.
 Witness withdrew.
 Edward Saunders called in, sworn, and examined.
 Witness withdrew.
 Charles Ludowici called in, sworn, and examined.
 Witness withdrew.
 James Brown Forsyth called in, sworn, and examined.
 Witness withdrew.
 Patrick MacMahon called in, sworn, and examined.
 Witness withdrew.
 George Howarth (*a Member of the Legislative Assembly*) called in, sworn, and examined.
 Witness withdrew.
 John Stuart Elliott called in, sworn, and examined.
 Witness withdrew.
 Dugald Thomson (*a Member of the Legislative Assembly*) called in, sworn, and examined.
 Witness withdrew.
 George Howarth recalled and further examined.
 Witness withdrew.

[Adjourned till Tuesday next at *Eleven* o'clock.]

TUESDAY, 11 AUGUST, 1896.

MEMBERS PRESENT:—

Mr. Ashton,		Mr. Cann,
Mr. Greene,		Mr. Macdonald,
Mr. Molesworth,		Mr. Waddell.

In the absence of the Chairman, Mr. Ashton called to the Chair *pro tem*.
 Parties called in.
 Present:—E. E. Fosbery, Esq. (*Solicitor for the City and North Sydney Railway Bill*); W. F. Brennan, Esq. (*Solicitor for the Sydney and North Sydney Bridge and Tramway Bill*); T. B. Dibbs, Esq. (*Messrs. Dibbs and Gibson, Solicitors for the North Shore Bridge Bill*).
 Benjamin Crispin Simpson (*the Promoter of the North Shore Bridge Bill*) called in, sworn, and examined.
 Witness withdrew.
 John Patterson called in, sworn, and examined.
 Witness withdrew.
 Sir William Patrick Manning, Kt., called in, sworn, and examined.
 Witness withdrew.
 Tom Rolin called in, sworn, and examined.
 Witness withdrew.
 Norman Selfe (*Civil Engineer*) called in, sworn, and examined.
 Witness withdrew.

[Adjourned till Thursday next at *Eleven* o'clock.]

THURSDAY,

THURSDAY, 13 AUGUST, 1896.

MEMBERS PRESENT:—

Mr. Ashton,		Mr. Cann,
Mr. Macdonald,		Mr. Molesworth,
	Mr. Waddell.	

In the absence of the Chairman, Mr. Ashton called to the Chair *pro tem*.

Parties called in.

Present:—E. E. Fosbery, Esq. (*Solicitor for the City and North Sydney Railway Bill*); W. F. Brennan, Esq. (*Solicitor for the Sydney and North Sydney Bridge and Tramway Bill*); T. B. Dibbs, Esq. (*Messrs. Dibbs and Gibson, Solicitors for the North Shore Bridge Bill*).

Thomas Forster Knox (*Chairman of the Wharf Association*) called in, sworn, and examined.

Witness withdrew.

John Sulman recalled and further examined.

Captain Francis Hixson (*President of the Marine Board*) called in, sworn, and examined.

Witness withdrew.

Captain Charles Percy Downes (*Marine Superintendent of the Australian United Steam Navigation Company*) called in, sworn, and examined.

Witness withdrew.

Captain Pettit (*Harbour Master*) called in, sworn, and examined.

Witness withdrew.

[Adjourned till Tuesday next at *Eleven* o'clock.]

TUESDAY, 18 AUGUST, 1896.

MEMBERS PRESENT:—

Mr. Millen in the Chair.

Mr. Ashton,		Mr. Cann,
Mr. Macdonald,		Mr. Molesworth,

Entry from Votes and Proceedings referring the North Shore Bridge Bill to the Committee read by the Clerk.

Printed copies of the Bill referred before the Committee.

Parties called in.

Present:—E. E. Fosbery, Esq. (*Solicitor for the City and North Sydney Railway Bill*); W. F. Brennan, Esq. (*Solicitor for the Sydney and North Sydney Bridge and Tramway Bill*); T. B. Dibbs, Esq. (*Messrs. Dibbs and Gibson, Solicitors for the North Shore Bridge Bill*).

Captain John Richards Andrew called in, sworn, and examined.

Witness withdrew.

Captain John Henderson called in, sworn, and examined.

Witness withdrew.

William Robson Benson (*Manager of the Wharf Association*) called in, sworn, and examined.

Witness withdrew.

Ordered.—That Major-General French; the Engineer-in-Chief for Public Works; and the Engineer-in-Chief for Railway Construction be summoned to give evidence next meeting.

[Adjourned till Tuesday next at *Eleven* o'clock.]

TUESDAY, 25 AUGUST, 1896.

MEMBERS PRESENT:—

Mr. Ashton,		Mr. Macdonald,
Mr. Molesworth,		Mr. Waddell.

In the absence of the Chairman, Mr. Ashton called to the Chair *pro tem*.

Parties called in.

Present:—E. E. Fosbery, Esq. (*Solicitor for the City and North Sydney Railway Bill*); W. F. Brennan, Esq. (*Solicitor for the Sydney and North Sydney Bridge and Tramway Bill*); L. Gibson, Esq. (*Messrs. Dibbs and Gibson, Solicitors for the North Shore Bridge Bill*).

Major-General George Arthur French (*Officer Commanding the Military Forces*) called in, sworn, and examined.

Witness withdrew.

Cecil West Darley (*Engineer-in-Chief for Public Works*) called in, sworn, and examined.

Witness withdrew.

Henry Deane (*Engineer-in-Chief for Railway Construction*) called in, sworn, and examined.

Witness withdrew.

Reassembling of the Committee to be arranged by the Chairman.

Adjourned.

TUESDAY,

TUESDAY, 1 SEPTEMBER, 1896.

MEMBERS PRESENT :—

Mr. Millen in the Chair.

Mr. Ashton,

Mr. Cann.

Parties called in.

Present:—E. E. Fosbery, Esq. (*Solicitor for the City and North Sydney Railway Bill*); W. F. Brennan, Esq. (*Solicitor for the Sydney and North Sydney Bridge and Tramway Bill*); L. Gibson, Esq. (*Messrs. Dibbs and Gibson, Solicitors for the North Shore Bridge Bill*).

Robert Henry Gordon (*Mayor of Willoughby*) called in, sworn, and examined.

Witness withdrew.

Benjamin Crispin Simpson recalled and further examined.

Witness withdrew.

William Kenwood recalled and further examined.

Witness withdrew.

Edward Mann Clark recalled and further examined.

Colonel Frederick Wells (*Civil Engineer*) called in, sworn, and examined.

Witness withdrew.

Reassembling of the Committee to be arranged by the Chairman.

Adjourned.

WEDNESDAY, 23 SEPTEMBER, 1896.

MEMBERS PRESENT :—

Mr. Millen in the Chair.

Mr. Ashton,

Mr. Cann,

Mr. Greene,

Mr. Lyne,

Mr. Macdonald,

Mr. Molesworth,

Mr. Waddell.

Committee deliberated.

[Adjourned till To-morrow at *half-past Eleven* o'clock.]

THURSDAY, 24 SEPTEMBER, 1896.

MEMBERS PRESENT :—

Mr. Millen in the Chair.

Mr. Ashton,

Mr. Cann,

Mr. Greene,

Mr. Lyne.

Present:—E. E. Fosbery, Esq. (*Solicitor for the City and North Sydney Railway Bill*).

John Sulman recalled and further examined.

Witness withdrew.

Gustave Fischer (*Assistant Engineer for Tramway Construction*) called in, sworn, and examined.

Witness withdrew.

[Adjourned till Wednesday next at *half-past Eleven* o'clock.]

WEDNESDAY, 30 SEPTEMBER, 1896.

MEMBERS PRESENT :—

Mr. Millen in the Chair.

Mr. Ashton,

Mr. Cann,

Mr. Greene,

Mr. Macdonald,

Mr. Lyne,

Mr. Waddell.

Present:—E. E. Fosbery, Esq. (*Solicitor for the City and North Sydney Railway Bill*); W. F. Brennan, Esq. (*Solicitor for the Sydney and North Sydney Bridge and Tramway Bill*); L. Gibson, Esq. (*Messrs. Dibbs and Gibson, Solicitors for the North Shore Bridge Bill*).

Gustave Fischer recalled and further examined.

Witness withdrew.

[Adjourned till Tuesday next at *half-past Eleven* o'clock.]

TUESDAY, 6 OCTOBER, 1896.

MEMBERS PRESENT :—

Mr. Millen in the Chair.

Mr. Cann,

Mr. Lyne,

Mr. Macdonald.

Present:—E. E. Fosbery, Esq. (*Solicitor for the City and North Sydney Railway Bill*).

[Adjourned till To-morrow at *half-past Two* o'clock.]

WEDNESDAY,

1

1896.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

CITY AND NORTH SYDNEY RAILWAY BILL,

THE

SYDNEY AND NORTH SYDNEY BRIDGE AND
TRAMWAY BILL,

AND THE

NORTH SHORE BRIDGE BILL.

THURSDAY, 30 JULY, 1896.

Present:—

MR. ASHTON,
MR. CANN,

MR. WADDELL.

MR. MILLEN,
MR. MOLESWORTH,

E. D. MILLEN, Esq., IN THE CHAIR.

E. E. Fosbery, Esq., appeared as solicitor for the City and North Sydney Railway Bill.
W. F. Brennan, Esq., appeared as solicitor for the Sydney and the North Sydney Bridge and Tramway Bill.
T. B. Dibbs, Esq. (Messrs. Dibbs and Gibson), appeared as solicitor for the North Shore Bridge Bill.

John Sulman, Esq., sworn and examined:—

1. *Chairman.*] What are you by profession? An architect.
2. Where is your office? At the Mutual Life Buildings, Wynyard-street.
3. You are the promoter of the scheme embodied in the City and North Sydney Railway Bill previously inquired into by a Select Committee? I am.
4. You gave evidence at that inquiry? I did.
5. Do you wish to add anything to that evidence? I should like to give some additional evidence.
6. Do you wish to read a statement? Yes; it is as follows:—

In accordance with the decision of the Committee to admit only additional information, I have the pleasure to submit the following arguments in favour of my proposals for a better means of communication than at present exists between Sydney and the North Shore, and if they appear somewhat disjointed it is only from the necessity of excluding information given in my previous statements or in evidence:—

After considering various methods of communication, I came to the conclusion that sub-aqueous tunnels were the cheapest and freest from objections, and therefore most suitable.

As they are a novelty in the Southern Hemisphere, I will ask you to allow me to describe how this comparatively new mode of communication has been developed. The first attempt at sub-aqueous tunnelling was made early in the century by the celebrated Brunel, in the so-called Thames Tunnel, but, like most first attempts, it was only a modified success, and its cost prohibitory. It is, however, still in use, and two lines of rail pass through it.

Then, in 1869, the Tower subway was constructed by Mr. Peter Barlow and Mr. J. H. Greathead. It is interesting as being the first tunnel in which a shield pushed forward as one structure was used, and for the construction of which cast iron was adopted. The external diameter of the cast-iron rings was 7 ft. 1½ in. The tunnel was driven through the London clay for its whole length; no water had to be dealt with, and no difficulties were encountered. In 1886, Mr. J. H. Greathead, who has patented many improvements in shields, commenced the City and South London Railway in London, which

J. Sulman

30 July, 1896

J. Sulman. which runs from the Monument, under the Thames, to Stockwell, a length of about 3 miles. It consists of two separate tunnels lined with cast-iron segments, 11 ft. 3 in. external diameter, and all constructed by means of shields. In this undertaking compressed air was first used to keep back soakage water.

30 July, 1896.

Success being achieved, other and larger tunnels followed, viz. :—That under the Hudson, at New York, 19 feet in diameter, and the railway tunnel under the St. Clair River, in the region of the Great Lakes, which was 21 feet in diameter. Then came the tunnel under the Mersey; that under Glasgow Harbour on the Clyde, 17 feet in diameter; the Glasgow underground cable railway, 12 feet in diameter; and the Waterloo and City Electric Railway, 12 ft. 6 in. in diameter, which will carry the large suburban population brought in by the London and South-western Railway direct to the Mansion House in the heart of the city. But more important than any of the foregoing is the Blackwall Tunnel, now being built. This great work, in which Mr. Greathead is associated with the engineer to the London County Council, is to connect the populous quarters on each side of the Thames, about 6 miles below London Bridge, where the river is a quarter of a mile wide, and the river traffic is heavy. It is much larger than any tunnel yet constructed by the methods adopted, being 27 feet in external diameter.

So satisfied is the London County Council with this work that it is already contemplating another and similar tunnel a mile or two higher up the river, between Greenwich and Millwall.

In order to show the possibilities of tunnelling, I may also refer to the two other proposed tunnels which have not yet been carried out, but from an engineering point of view were quite possible. The celebrated tunnel between England and France, under the Straits of Dover, and 22 miles in length, was actually commenced, and only stopped for political reasons. The other is the proposed tunnel between Scotland and Ireland, 11 miles in length, and no less than 900 feet below high-water mark, an undertaking which engineers regard as perfectly feasible, but which was not proceeded with, as the prospective traffic would not have rendered it financially successful.

The recent rapid development of sub-aqueous tunnelling is entirely due to the great improvements that have been made during the last few years in the shields used for driving the tunnels through water-bearing strata, and referred to above; originated by Brunel at the Thames Tunnel, they have been so improved of late years by Mr. J. H. Greathead, that all danger of water flooding the works is practically eliminated. The shield used at the Blackwall Tunnel is the best yet developed, and is difficult to describe without diagrams, but it may be likened to one end of a drum, the rim of which forms the cutting edge, and the parchment the vertical bulkhead keeping the rim in shape. The rim is pushed forward by hydraulic rams, and the earth as excavated is passed through holes in the vertical bulkhead. The most difficult portion of the whole work is now successfully completed, and without any serious hitch or accident: How great the difficulties might have been will be realised when it is known that for 350 feet the tunnel was bored only 10 feet below the level of the river in water-bearing ballast, and in one place approached to within 6 feet of the actual flowing water.

As an evidence that this new mode of city communication has already become popular, I produce a plan of the underground electric railways built or building in London, and to which I referred in my evidence before the Select Committee on the Bills. In this connection I may also mention that the traffic on the City and Stockwell line amounted in 1891, when first opened, to a little over 5,000,000, and in 1894 to nearly 7,000,000, and has since gone on increasing.

The success of sub-aqueous tunnelling where engineers accustomed to this kind of work are employed is now proved beyond any possibility of doubt, and we have now only to apply the experience thus gained.

In my previous evidence I mentioned that the internal diameter of the tunnel will be 12 ft. 6 in., but I omitted to add that this is 1 foot more than the size recommended as desirable by the Joint Committee of the Lords and Commons which dealt with similar railways in London.

I also wish to make it quite clear that the cast-iron portion of the tunnels will be protected by cement, which will encase the iron all round, and render it so secure from corrosion that a century hence there will be no appreciable loss of thickness or strength.

With regard to the terminal stations, I may say that they will have two platforms each, so as to accommodate three trains at a time, and they will be made long enough to take trains of at least four carriages or more if required.

The trains also which I described as of two carriages will, in the busy portion of the day, be of four or more carriages in length, as the traffic may require.

I may also add that the City and Stockwell line has a station at Kennington Oval, and when a great match is on as many as 15,000 or 20,000 people are present, and a large proportion of these are easily dealt with by the electric underground railway.

The question of speed is also one I wish to draw special attention to, as the saving in time to King-street over the present or any other means of communication by tram or boat will be nearly 15 minutes, and there will be no tedious waits. The line will provide for all kinds of passengers from the North Shore-district, whether they arrive by foot, in train, or on trams, and they will be transported at a much quicker rate than is possible by any surface communication.

And on the ventilation of the electric railway tunnel and the question of temperature the following quotation from a paper read by Mr. Greathead before the Institute of Civil Engineers on the City and Stockwell Electric Railway will be interesting, and conclusively proves that on a hot summer day the tunnels will be the coolest place in Sydney:—“The tunnels of the railway give considerable climatic advantages. From observations taken on a hot day in summer when the surface temperature was 85 degrees, the tunnel temperature was 60 degrees, the platforms 59 degrees, and the first car of the train 62 degrees; and on a cold winter day, with surface temperature at 22 degrees, the tunnel was 59 degrees, the platforms 50 degrees, and the first car of the train 57 degrees. In foggy weather the atmosphere below is comparatively clear, never exceeding a slight haze, even during a dense fog on the surface.”

We may therefore assume that in the hot summer time, the electric railway will be the coolest place in Sydney, while in winter it will be protected from the keen westerly winds, which make the open air passage over the water so unpleasant.

Turning now to the provision for vehicular traffic, it will be remembered that I described the entrance to the tunnel roadway as being in front of Goldsbrough, Mort, & Co.'s stores, but Mr. Darley, in his evidence, suggested the corner of Circular Quay, at the Macquarie Bond Store, as a better ingress. When the time comes for deciding this point I should be quite prepared to accept Mr. Darley's suggestion, if the levels, &c., show it to be preferable.

I was asked by a member of the Select Committee on the Tunnel Roadway Bill the grade of Alfred-street above Milson's Point. This, I find, is 1 in 14 as far as Fitzroy-street, so that the proposed new road, with a grade of 1 in 25, will be greatly superior to the present route, and will prove a public convenience.

The roadway in the tunnel will be 21 feet in clear width, thus permitting of three lines of traffic, and as some doubt has been cast on its sufficiency for the traffic, I have made the following calculation:—Assuming that there are only two lines of traffic instead of three, and that each vehicle occupies 30 feet, thus leaving ample space between vehicle and vehicle, and that the stream of vehicles travels only at 4 miles an hour, 720 vehicles would pass each way, or a total of 1,440 per hour, which is half as many again as the present transit boats carry in the whole twenty-four hours. If the vehicles travelled at trotting pace, as most of them would, the total would be largely increased. Again, the Blackwall Tunnel has a roadway of only 16 feet in width, and has to serve the thickly-populated districts of Poplar and Bromley by Bow, with the E. and W. India docks on one side, and Woolwich and the manufacturing district, extending up to Greenwich, on the other. These districts contain a population of nearly 1,000,000, whereas the whole of the North Shore district, from Manly to Hornsby, at present numbers only 34,000. It is therefore quite certain that for several generations the tunnel will be ample for all traffic that will pass through it.

With regard to the tolls proposed to be charged in the tunnel roadway, the schedule shows a slight reduction on those now charged by the Ferry Company, but I of course anticipate that severe competition by the Ferry Company will commence as soon as the tunnel roadway is opened, so that it is very unlikely the above rates will be maintained, and this is a strong argument in favour of private enterprise being allowed to compete for the traffic.

On the general question of the amount of traffic and the tolls and fares received therefrom, a good deal of misapprehension exists owing to the refusal of the Ferry Company to disclose its receipts. Early in the negotiations with financiers which preceded the introduction of my Bill into Parliament it became necessary for me to know the probable revenue, so I employed men to take a tally of the traffic, and found therefrom that the gross returns from the passenger and vehicular traffic are about £27,000 per annum, which is a small revenue to provide working expenses, maintenance, and interest on a large undertaking, particularly after allowing for the portion the North Shore Ferry Company will retain.

I may now ask your attention to the length of concession for the electric railway which in the Bill was put at twenty years, but was cut down by the Select Committee thereon to fifteen years. In view of the time lost in construction, when no revenue is derivable, and the improbability of adequate returns for several years, I would respectfully ask your favourable consideration of a concession for twenty-five years, as it is only out of the anticipated surplus profits of the later years that the losses of the earlier can be made good.

Before

Before concluding I would like to refer to two statements made in the House when the Electric Railway Bill was brought up for second reading. It was stated that this scheme was not brought forward till after Mr. Deane had published a similar scheme about the middle of 1895 for a tramway tunnel, and inferred that mine was taken from Mr. Deane's. As a matter of fact my scheme has been under consideration since the early part of 1894, and I can produce a plan by Mr. Greathead, dated the 7th December, 1894.

J. Sulman.
30 July, 1896.

It was also stated that the Tunnel-Roadway Bill would most likely be dropped as soon as the Electric Railway Bill is passed, because I declined to pledge myself before a meeting of Mayors and Aldermen of the North Shore to form one company to carry out both schemes, although I stated the same financiers would back both. In case there is any doubt in your minds on this point, I may state that I am prepared to accept one Bill for the two schemes, if the Tunnel-Roadway Bill can be incorporated with the Electric Railway Bill.

In conclusion, may I be permitted to summarise the advantages I claim for the Electric Railway and Tunnel Roadway schemes:—

- (1.) Neither interferes with public or private rights or vested interests to any appreciable extent, and less so than any other scheme.
- (2.) There is no monopoly of site as in other modes of surface communication, for fifty tunnels can, if required, be run under the harbour.
- (3.) There is absolutely no interference with the very important shipping interests of the port.
- (4.) Accident to the structure of the tunnels is a practical impossibility.
- (5.) The Electric Railway serves all kinds of passenger traffic—rail, tram, and road—and not a section only.
- (6.) It is more speedy by nearly fifteen minutes than any other mode.
- (7.) It does not compete with the Government railway and tramway services, and, in fact, will help to feed them.
- (8.) It delivers passengers at Circular Quay and King-street, in the heart of the city.
- (9.) It can be built in two years.
- (10.) The tunnel-roadway connects the foreshores at water level, at the most central points for traffic, viz.:—Circular Quay and Milson's Point.
- (11.) The foreshores on both sides will eventually be thickly packed with warehouses and wharfs to which a tunnel would give the easiest access.
- (12.) In Lavender Bay there is much Government foreshore, which would be greatly improved in value for warehouse and wharfage purposes by the tunnel-roadway which debouches right on this position.
- (13.) The cost of both tunnels will be much below that of a suitable bridge. The cost to the country, if resumed by the Government, will, therefore, be less.
- (14.) The tunnels are practically undestructable, and hence cost of maintenance low, as there is no corrosion.
- (15.) If resumed by Government they would not have appreciably deteriorated.
- (16.) The whole of the expenditure for tunnels would be in the Colony except for electric plant. Consequently the employment given would be large, viz., about 1,000 men for two years on both tunnels, and 500 men on the tunnel-roadway for a third year, besides men employed indirectly in brickmaking, &c.

7. *Mr. Ashton.*] What is your estimate of the total cost of the two railway tunnels and the roadway? For one railway tunnel and the roadway tunnel, including working capital, the total amount of money required would be £600,000.

8. Does that include the cost of land resumption? Yes; because it is very small.

9. You propose to have a central city railway station somewhere on the north side of King-street, near George-street? Yes; somewhere about there—wherever we can best purchase a property.

10. Would much land be used for the purpose? No; a very small amount—simply an exit up to the surface for two lifts and a stairway; indeed, a single good-sized shop would serve the purpose.

11. The rates you propose to charge are 1d. to Circular Quay and 2d. to King-street? Yes.

12. The steam-boat rates are 1d. each way? Yes.

13. Do the North Shore Steam Ferry Company make any concession in connection with season tickets? A very slight concession. I think the charge is 15s. a quarter. At anyrate I know that for persons travelling only once each way per day it is scarcely worth while talking about.

14. But it would be a considerable concession to people travelling more than once each way per day? Yes; to people travelling twice to the city and back each day it is a concession.

15. I suppose it is premature to ask if you propose to make such an arrangement as that? If the Bill be passed by Parliament we shall do anything that is reasonable to get business.

16. *Chairman.*] You gave particulars showing that the provision which you intended to make for the vehicle traffic would be ample;—have you made a similar calculation as to the passenger tunnel? Yes; I have calculated that, and the passenger tunnel would be ample to take all possible traffic that could come to it either now or for some time to come.

17. You stated also that you regard the two tunnels as practically part of the one scheme? Yes.

18. Do I understand from that, that if Parliament were to sanction the proposals on the understanding that they were inseparable, the promoters would still be willing to go on with them? Certainly.

19. *Mr. Ashton.*] I suppose that in the Bill there is provision for the payment of security within a certain time from the passing of the Bill in connection with each scheme? Yes.

20. *Mr. Cann.*] In reference to the capital, you say it would take about £600,000? Yes.

21. Is there any doubt as to whether if a concession be granted to the promoters, they will be capable of going on with the undertaking—there is no doubt about their being able to raise that amount? I have no doubt whatever, because I have a financier at my back whom I have known for the last twenty years, and who has financed a good many other undertakings. I have been in communication with him all the way through, and he has already gone as far as he could in paving the way to float a company directly a Bill is passed. That is the news by the last mail from London. He can do nothing further until he has the Bill in his hand. There is absolutely no doubt that if reasonable Bills are granted the capital will be found at once and the work started immediately.

22. *Chairman.*] In any case, I understand that the promoters of the scheme are willing to make a cash deposit? Certainly.

23. Which of course would be forfeited if they failed to go on with it? Yes.

24. Does the estimate of cost which you have given cover the proposed new road to avoid the steep gradient? Yes.

25. There is some land resumption there? Yes.

26. It is all covered by that estimate? It is all covered. Every possible expense has been included.

27. *Mr. Fosbery.*] Going back to a question which was put to you by a member of the Committee just now, with regard to the fares of the railway, I understand that there is an alteration which has been made by the Select Committee which sat on that Bill, by the addition of a second proviso to clause 28, which you wish to have omitted because it in reality nullifies the first proviso? Yes. In clause 28, line 49, instead the word "section," where it first occurs, I wish to substitute the words "of the two sections"—that is, 1d. for each of the two sections—and then omit the proviso added by the Select Committee.

J. Sulman. 28. I understand that you also desire to make a slight verbal amendment in clause 4? Yes.
 30 July, 1896. 29. Because you find that the tunnel for the railway will need to go under the dock which runs into Dawes' Point? Yes; that is an alteration of a technical description. In clause 4, lines 50 and 51, I wish to omit the words, "the land forming part of what is known as Dawes' Battery, and the," and to insert the words "a Government reserve adjoining Dawes' Battery, and again under the waters of Port Jackson and certain wharves or jetties, and thence under the." In clause 6, subclause 7, line 47, I wish to insert after the word "borings" the words "mentioned in subsection 4 of this section." In clause 16, line 52, after the word "building," I wish to insert the words "or an easement in respect thereof." I wish to omit clause 23, with the view of inserting a clause, at greater length, in accordance with the wish of the Water and Sewerage Board. I now tender to the Committee the proposed new clause, which reads as follows:—

For the protection of sewers, &c., of Water and Sewerage Board.

23. The following provisions for the protection of the sewers, water-mains, and works of the Water and Sewerage Board, and of all house-services and connections in respect thereof, shall have effect, namely:—

- (i) The said John Sulman shall comply with and conform to all reasonable directions of the Water and Sewerage Board in the execution of the works, and shall not in any manner interfere with any of the sewers, water-mains, or works of the Water and Sewerage Board, or with any house-services or connections in respect thereof, without notice to and the sanction of the Water and Sewerage Board, and shall provide to the reasonable satisfaction of the Water and Sewerage Board for the proper protection of and for preventing injury or impediment to any such sewers, water-mains, works, house-services or connections by reason of the works or any part thereof; and shall save harmless the Water and Sewerage Board and all owners of any such house-services or connections as aforesaid against all expenses to be occasioned by the works or any part thereof, and all costs, charges, and expenses which the Water and Sewerage Board, or any such owner as aforesaid, may be put to by reason of the works, whether in the supervision or inspection of works, the examination of plans or designs, or otherwise, shall be paid on demand by the said John Sulman to the Water and Sewerage Board, or to such owner as aforesaid.
- (ii) The said John Sulman shall be liable to make good with all reasonable despatch and to the satisfaction of the Water and Sewerage Board all injury or damage caused by or resulting from any of the works to any such sewers, water-mains, works, house-services, or connections, as mentioned in subsection (i) of this section; and the Water and Sewerage Board or any owner of any such house-service or connection sustaining injury or damage shall from time to time have power to recover the amount thereof from the said John Sulman in any Court of competent jurisdiction.
- (iii) The approval by the Water and Sewerage Board of any plans, or the inspection by the Water and Sewerage Board of any work under the provisions of this section shall not exonerate the said John Sulman from any liability, or affect any claim for damages under this section or otherwise.
- (iv) This section shall only apply to such of the works, or such part thereof, as shall be in the vicinity of any such sewers, water-mains, works, house-services, or connections as are mentioned in this section.
- (v) If the said John Sulman shall in any respect fail to comply with and conform to any such reasonable directions of the Water and Sewerage Board as are mentioned in subsection (i) of this section, or shall fail to provide to the reasonable satisfaction of the Water and Sewerage Board for the proper protection of and for preventing injury or impediment to any such sewers, water-mains, works, house-services, or connections as mentioned in the said subsection, or shall fail to make good, with all reasonable despatch and to the satisfaction of the Water and Sewerage Board, any such injury or damage to any sewers, water-mains, works, house-services, or connections as is mentioned in subsection (ii) of this section, the Water and Sewerage Board, or any owner of any such house-service or connection, as the case may be, shall have full power and authority (in the case of the Water and Sewerage Board by their engineer, officers, workmen, and servants, and in the case of any such owner by his workmen and servants) to enter upon the works of the said John Sulman, or any part thereof; and to do all such acts and things, and carry out all such works as may be necessary and proper for the protection, amendment, or repair of any such sewer, water-main, or other works, house-service, or connection, as the case may be; and any and all costs, charges, and expenses incurred by the Water and Sewerage Board, or by such owner, as the case may be in the exercise of the powers in this subsection contained, shall be paid to the Water and Sewerage Board, or to such owner, as the case may be, by the said John Sulman on demand, or in default may be recovered from the said John Sulman by the Water and Sewerage Board, or by such owner, as the case may be, in any Court of competent jurisdiction.
- (vi) Otherwise than is herein expressly enacted the said John Sulman shall, in the construction of the said works, observe and comply with the provisions of the Metropolitan Water and Sewerage Acts, and the by-laws made by the Water and Sewerage Board under such Acts.

30. That, I understand, takes the place of clause 23 and is a clause which has been framed to meet the views of the Water and Sewerage Board, and as framed has their sanction? Yes.

31. In clause 24 there is a corresponding alteration, I believe, following out that last clause, and dovetailing in with it? Yes. In line 25 I wish to omit the word "or" after the word "sewers," and to insert the word "water," and at the end of the clause I wish to insert the words "or of any house-services or connections in respect thereof."

32. That is also an alteration asked for by the Water and Sewerage Board? Yes.

33. In clause 55, line 47, you wish to omit the word "fifteen" and substitute the word "twenty-five"? Yes.

34. Clause 58, I understand, you propose to omit altogether, as being unnecessary? Yes.

35. With regard to the underground electric railway to Shepherd's Bush which you spoke of in your evidence just now, I believe that that runs almost down the centre of Oxford-street, London? Yes.

36. Oxford-street is the main artery of London, I believe, is it not? It is.

37. It may be described as the spine of London? Yes,—the great east and west artery.

38. You have some knowledge of London, I believe—you have been there recently? I know it very well.

39. Such a thing as a popular objection to underground travelling in London would be laughed at now, would it not? Absolutely. It is such a convenience that it could not be dispensed with.

40. Any idea of the sort has vanished? Quite vanished.

41. In the evidence which has already been tendered to one of the Select Committees sitting on these schemes, it is mentioned by, I think, the Superintendent of Public Wharves, that a certain tunnel he knew of, running under the Thames, was very objectionable because it was very leaky; that could not be one of these modern iron cylinder tunnels, could it? He infers that it is the Tower subway, but I have not heard of any leakage in that. I know that the old Thames tunnel, built by Brunel, was rather leaky. It would appear from the evidence of the Superintendent of Public Wharves that it is the Tower subway that is leaky, but I think he is confusing the two, because the Tower subway is perfect in construction.

42. The old Thames tunnel is on an entirely different principle? Totally different.

TUESDAY, 4 AUGUST, 1896.

Present:—

MR. CANN,
MR. MOLESWORTH,MR. GREEN,
MR. WADDELL.

J. ASHTON, Esq., IN THE CHAIR.

E. E. Fosbery, Esq., appeared as solicitor for the City and North Sydney Railway Bill.
W. F. Brennan, Esq., appeared as solicitor for the Sydney and North Sydney Bridge and Tramway Bill.
T. B. Dibbs, Esq. (Gibson & Dibbs), appeared as solicitor for the North Shore Bridge Bill.

William Kenwood sworn and examined:—

43. *Mr. Brennan.*] You desire to supplement your evidence on the Sydney and North Sydney Bridge and Tramway Bill? I do. I desire to exhibit to this Committee a plan, as well as a perspective drawing of the high-level bridge provided for in my Bill. This drawing and plan vary from my original design, and the object of the variance is to embody and adopt the suggestion of Mr. C. W. Darley, Engineer-in-Chief for Public Works, to the effect that there should be only one pier in or about the centre of the harbour, with two spans, to the end that safe navigation may be thereby ensured. By this arrangement, vessels going down the harbour will use one span, while those coming up the harbour will use the other. Mr. Darley and Mr. Henry Deane, the Engineer-in-Chief for Railways, recommend a headway for shipping of 180 feet above high-water mark, and my altered design provides for a shipping headway of 180 feet above high-water mark along 325 feet of the centre of each span, and a height of 170 feet for at least 500 feet along the centre of each span. While I am willing to construct a bridge to this great elevation of 180 feet above high water, I beg to point out that I consider this height far above actual requirements. The approaches are made unnecessarily steep in consequence; the dangers from wind pressure are greatly enhanced; and the necessary ponderous nature of the construction will tend to overwhelm the surroundings. I still adhere to the opinion given in my evidence before the Select Committee that 165 feet from low water is an ample headway allowance for all shipping. The highest bridge of this kind in the world at present is the Forth Bridge, and that is 150 feet from high water. I understand that before the construction of the Forth Bridge the determination of its height was referred to Trinity House Corporation in London, a body that has to do with the shipping interests of Great Britain, and that, after an exhaustive inquiry, the Trinity House Corporation decided that 150 feet headway was ample for all shipping. All the suggestions made by Messrs. Darley and Deane regarding the provisions of my Bill have, so far as is practicable, been given effect to in the Bill now before the House—I desire to ask the Committee to allow me to amend section 4 of my Bill, by substituting the words “three hundred and twenty-five” in place of the words “four hundred” on the twelfth line of the fourth page thereof. W. Kenwood.
4 Aug., 1896.
44. *Mr. Cann.*] Suppose the concession you ask for is granted, is there any certainty, from a financial standpoint, that you will be able to carry out the work? I have not had a definite reply with regard to that question since my original design was altered. I cannot say positively, but I have not the slightest doubt that I am still in a position to carry out the bridge. This altered arrangement has come rather quickly upon me. It has enhanced the cost, but I believe I am quite able to carry out the work.
45. *Mr. Green.*] Can you state what additional cost will result from the altered arrangement? It is close upon £100,000.
46. *Chairman.*] That is the additional cost from increasing the height of the bridge from 165 feet to 180 feet? It is in substituting two spans in the place of three. Necessarily, larger and more costly construction is involved.
47. *Mr. Green.*] There are two spans according to your present suggestion;—how many were there before? We had three spans before.
48. *Chairman.*] Is there any provision in the Bill, in the event of the failure, to proceed with the work within a certain time? There is the penalty. I am prepared at the present time to deposit £5,000, and the penalty for not proceeding with the work within a reasonable time is the forfeiture of that money.
49. *Mr. Waddell.*] You are prepared to deposit that sum immediately the Bill becomes law? I am prepared to deposit that money within a reasonable time after the Bill becomes law—certainly within six months, probably within a less period.
50. *Chairman.*] What are the advantages which you think a bridge possesses as against a tunnel? The physical nature of the country speaks sufficiently loudly, I think, for the bridge. I have no objection whatever to a railway tunnel as far as passenger traffic is concerned. I think it is a very good scheme, but in my opinion it does not meet the requirements of vehicular traffic.
51. *Mr. Brennan.*] The real difficulty which has to be contended with is the vehicular traffic? That is the point we base our principal calculations upon.
52. Do you know that the proposed roadway tunnel has a 20-foot carriage-way? The road tunnel is 21 feet, and so very long that I take it people would use the present horse-boats in preference.
53. Do you know as a matter of fact that the road tunnel has a 20-foot carriage-way? I cannot say positively, but I believe it has 21 feet.
54. What would be the result if a lorry, heavily laden with bales of greasy wool or sheep-skins protruding over the sides, meets a heavily-laden vehicle coming along in the reverse direction in the tunnel? The tunnel will be too cramped.
55. The tunnel is 1 mile 26 chains long? I believe it is that length.
56. Do you know how many miles an hour a horse drawing a load will travel? ———.
57. Can you state from your own observation at what rate of speed a horse drawing a loaded vehicle would progress along the streets? A horse is supposed to draw at a speed of from 3 to 3½ miles an hour. The speed of a horse varies according to the loading.
58. How long would a horse and vehicle be in the tunnel if it is about 1¼ mile long—nearly half an hour? Undoubtedly so.
59. A horse drawing a load at the rate of 3 miles an hour, if the tunnel was at all full with vehicles, would naturally block all the traffic behind it? It is a question of the size of the tunnel.
60. The result of this tunnel being crowded with vehicles, including some heavily-laden vehicles, will be a block? Yes. 61.

- W. Kenwood. 61. If the vehicular tunnel is made of the proposed length no one will use the tunnel—they will go over by the punts? No one will go down to climb up a great hill if possible to avoid it.
- 4 Aug., 1896. 62. Will you state your views as to the question of ventilation of the roadway tunnel? The ventilation in the road tunnel could be made satisfactory. It is simply a question of getting air-shafts down.
63. *Chairman.*] What is the estimated cost of the land resumptions in connection with the bridge? I have not gone into that question; it is a matter of valuation. We did think at one time of getting a valuation from Richardson and Wrench, but we never carried that out entirely. I do not consider myself quite competent to make these valuations. At the outside, the resumptions will be £20,000.

Edward Mann Clark, Esq., M.P., sworn and examined:—

- E. M. Clark, Esq., M.P. 64. *Mr. Brennan.*] You are a Member of the Legislative Assembly of New South Wales? Yes.
- 4 Aug., 1896. 65. You are a member of the Committee which was appointed by the City Council and all the suburban boroughs which are affected by the construction of this bridge? I am.
66. I believe the Committee has had several sittings? A number.
67. Has it considered the various schemes? Yes.
68. The tunnel, the roadway tunnel, and the various bridges? Yes; and some additional bridges.
69. What was the result of all their deliberations? The Sub-committee decided to recommend to the General Conference that after having exhaustively considered the whole of the schemes they did not feel that they could recommend a scheme, but they recommended preferably that a bridge should be constructed. There was an amendment suggested that failing a bridge a tunnel should be constructed, but that was struck out of the recommendation.
70. Was a public meeting held at North Sydney last night? Yes.
71. What was the outcome of the meeting? Last night a resolution was carried at a large meeting that the meeting should support me in my endeavours to obtain communication by bridge and by the medium of private enterprise.
72. Was the resolution unanimously arrived at? Yes.
73. Was the meeting well attended? The hall was crowded. It holds 500 or 600 people.
74. Was any enthusiasm shown? The meeting was pretty enthusiastic. Any reference to a bridge was received with cheers. They seemed to prefer a bridge to a tunnel.
75. Efforts were made to get you to take the tunnel scheme in hand? About September or October last some one came to me and asked me would I undertake to introduce a Tunnel Bridge Bill to Parliament.
76. Who was the person? Mr. Withers.
77. He is known in connection with this scheme? I do not know that he is very generally known in connection with the scheme.
78. What is his Christian name? I do not know. He told me had just returned from England, and that he had seen some eminent authority—Mr. Greathead, who is an authority on the construction of tunnels—and that he was prepared to construct a railway tunnel. I at once told him that I could not introduce a Bill for passenger traffic alone, but I considered the more necessary traffic to be dealt with was the vehicular traffic. I pointed out to him that at times it was almost impossible for the vehicles to be accommodated. I said it would be impossible for me to undertake a Bill of that kind—I had a preference to a bridge—unless he also provided for the vehicular traffic. He said then that he would consider that matter.
79. Did it appear to you to be a new matter to him? Yes; he had no idea then, as far as he expressed himself to me, of dealing with the vehicular traffic at all. He did not think it was an important matter at all.
80. Later on, I believe, he formulated a scheme for a roadway tunnel? Some months afterwards. That is virtually Mr. Sulman's scheme.
81. The roadway tunnel was before the Committee you spoke of? It was considered by the Committee.
82. Mr. Sulman was examined before the Committee? Yes; he read an exhaustive paper on the question.
83. Did he convey to you the fact that it was one company getting up the two schemes? No; he said it would probably be done by separate companies—that the roadway would be carried out by another company.
84. In the last session of Parliament the Railway Bill had passed the Select Committee stage and was set down for second reading when the prorogation took place? Yes.
85. Then at the beginning of this session a petition was received asking the House to take up the Bill at that stage? Yes.
86. The Bill was thereupon set down for second reading on a certain date? Yes.
87. They then proceeded with the Roadway Tunnel Bill? It was then in Committee.
88. They had an opportunity of setting the Roadway Tunnel Bill down for the same day as the Railway Bill was set down for? Yes.
89. Instead of embracing that opportunity, what did they do? They put it ahead three months.
90. The Bill you had charge of was finished after the Roadway Tunnel Bill in Committee? Yes.
91. As the Bills are now before the House, is it possible, according to Parliamentary usage, to embody the Roadway Tunnel Bill with the Railway Passenger Bill? I think it is impossible.
92. Have you given any consideration to the question as to the capacity of the tunnel for the ordinary traffic? Mr. Sulman, before this Committee, exhibited a very large plan of a tunnel, showing vehicles passing and re-passing each other, foot passengers, and so forth. I was struck with the appearance of the size of the tunnel on paper, and I asked Mr. Sulman what would be the width of the roadway, and he told me 20 feet. I at once concluded it would be impossible for a tunnel of that kind to suit the growing requirements of a district such as mine. With a 20-foot roadway a stream of vehicles going backward and forwards would really mean a funeral procession.
93. How long would they be in the tunnel? From information given to me, a horse with a load can go at the rate of $2\frac{1}{2}$ or 3 miles an hour.
94. You have seen some of the principal carriers in Sydney? I have seen nearly all the carriers as well as people who use the ferry, and they all told me that a tunnel of that width would be impracticable for the traffic of the place. For instance, take these large furniture vans; I should think that the head of a man perched on the top of such a van would be near the ceiling of the tunnel or the electric light.

95. *Chairman.*] Have you any knowledge of the width of the vehicular way which is proposed for the bridge? The proposal I understand is to have a roadway 42 feet wide, which is the width of the ordinary roadway.

E. M. Clark,
Esq., M.P.
4 Aug., 1896.

96. The whole width of the bridge is 60 feet? It is according to the last proposal.

97. The provision for vehicular traffic in the bridge would be about twice the amount provided in the tunnel scheme? Yes; not only that, but with the additional width there would be additional facilities for passing and re-passing.

98. Have you obtained any information from the carriers with regard to the carriage of wool or hides about the city? I have seen pretty well the whole of the carriers.

99. What did they convey to you as the result of their experience with regard to a tunnel? They say that as regards heavy loads, such as they would have to carry, virtually a tunnel would be useless to them for vehicular traffic. I have seen Sanders and Horne, and the whole of the parcel delivery people, and they poohpooh the idea of a tunnel with a 20-foot roadway. A roadway of the kind really means to them a slow procession of vehicles going backward and forwards. It would be impossible for anyone to drive through the tunnel in a hurry. It would be better for them to take the primitive means they have of going across the harbour in the horse-boats, and having to wait ten or fifteen minutes for a horse-boat, than to take the long journey of half a mile underground.

100. Is there anything else you would like to state to the Committee? I had every opportunity of gauging public opinion in my electorate, as well as the whole of the surrounding districts. Under the last Electoral Act, I represented St. Leonards, which included Waroongah and Willoughby, and under the new Electoral Act I have been returned for two electorates—St. Leonards and Willoughby. I have, therefore, a very good opportunity of gauging public opinion on the requirements of the place. I certainly think the requirements of the place will never be met by means of a roadway tunnel, and, as far as the passenger tunnel is concerned, I do not think it will meet the requirements of the district.

101. You think you are sufficiently in touch with the people to gauge public opinion? I am. The fact that I am supported by the representatives of the two adjoining districts—by Mr. Howarth on one side, and by Mr. Thomson on the other—is evidence that I have a good grip of public opinion on this particular question. The people have for years been wanting a connection with Sydney, and there is no doubt that a connection is absolutely necessary. If the Committee will go down to Circular Quay any day between 5 p.m. and 6 p.m. they will see the wharfs simply crammed with people pushing their way backwards and forwards. It is just the same with the vehicular traffic. I have seen as many as thirty-seven vehicles there only a little while ago—including some very large vehicles too—waiting to get on the horse-boat at 6 o'clock, and failing to catch that boat, they had to wait until 6:30 p.m., because after 6 p.m. the horse-boats only run every half-hour. I know the carrying capacity of the horse-boats, and I know, at the very most, with that all that can be crammed on them, the horse-boats can only accommodate from twenty-four to twenty-eight vehicles. Twenty-four vehicles is the most I have seen on the horse-boats, but some persons have told me that they have seen as many as twenty-eight on a horse-boat. I have been there before 5 a.m. to count the vehicles; and cram them as much as they possibly could, they could not, to my mind, get more than twenty-four vehicles on a horse-boat. This district, apart from being a residential district, is a large producing district. I think from 15 to 20 per cent. of the produce which is brought into our markets—vegetables and fruit—comes from that district. The want of a bridge connection is a very great inconvenience to these people bringing fruit to market. If they miss the early boat—and they have to fight to get on the early boat—they have to wait half an hour, and all the producers in the other districts have that advantage over them. The only way they can catch the market early is by coming over to Sydney on the previous night, and sleeping there all night, which is a great expense to them, considering that their products do not bring a great amount. Again, we have a number of manufactories in our district. I suppose there are seven or eight very large tanneries in the district, and these people have to experience very great difficulty, and to pay very high charges. One advantage of these Bills will be that the highest charge will be about 1s. In some cases these people have to pay 4s. or 5s.—and, I know, as much as 7s. 6d.—a load, to bring a heavy load of material over in the horse-boat. All that will be got rid of. That will be a very great advantage to people there. This morning I met a very large property-owner, Dr. John Hay, who owns very large interests at North Shore, and in congratulating me upon this step, he said that if it was absolutely necessary, we should fight for a broad roadway. I have had every opportunity of gauging public opinion, and public opinion is unanimously in favour of a bridge connection.

102. Have you had any chance of gauging the probable success of the parties who may get the concession in raising sufficient funds to carry out any scheme? Mr. Kenwood has given me every information, and from the information he has given me—I suppose he has not revealed everything to me—I am quite satisfied as to his *bonâ-fides*. I would not have undertaken the Bill had I not thought that Parliament was going to carry the Bill, and that the work was going to be proceeded with. I am not going to say a word against the *bonâ-fides* of any of them. Mr. Withers has assured me that he has the money, and I am assured that Mr. Simpson has the money.

103. *Mr. Cann.*] I suppose, as a matter of fact, none of them have the money? I cannot say that; they say they have the money.

104. I suppose they will have to promote a company before they can carry the thing out? I could not say that. I think it will be a very good thing for any company, considering that the revenue of the North Shore Ferry Company is not far short of £50,000 a year.

105. *Mr. Green.*] Does that include the transit business? Yes; the horse-boats return about £20,000 a year. They carry at the rate of 1,200 vehicles daily.

106. *Mr. Brennan.*] 6,000,000 passengers? That is the estimated number.

Gamaliel Thompson called in, sworn, and examined:—

107. *Mr. Brennan.*] You are managing clerk for Mr. W. F. Brennan, solicitor? Yes.

108. Do you produce a copy of a petition which was presented to Parliament? Yes.

109. Signed by how many people? Between 86,000 and 87,000 persons.

G. Thompson.
4 Aug., 1896.

Mr.

Mr. John Young called in, sworn, and examined:—

- J. Young. 110. *Mr. Brennan.*] You were formerly Mayor of Sydney? Yes.
 4 Aug., 1896. 111. You gave evidence in 1891 before a Royal Commission in connection with a bridge connection with North Sydney? Yes.
 112. You have given this matter some considerable attention? Yes.
 113. Will you tell the Committee the outcome of your reflections on this topic? I think, all things considered, a bridge is the best way to connect Sydney with North Sydney. A bridge has various advantages over any other method, because persons going or wishing to go from Sydney to the higher parts and down to about half-way up the hill would go almost on a level, which is a great advantage; whereas, if you go under the water, to walk would be a difficult feat, because you would have double the height to walk. Of course, it would be quite possible to have a tubular tunnel underneath, and to go by electricity. So also you could do the same thing on a bridge. They are equal on the point of conveyance, but for walking they are not equal, as you would have double the hill to go down and double the hill to go up. I should imagine that a tubular tunnel would be 140 or 150 feet below the surface at the deepest part.
 114. The roadway tunnel is 1 mile 26 chains long, and 20 feet is available for vehicular traffic;—will you state your views on that point? A width of 20 feet would not get over the difficulty of the rise, because, instead of going on a level, you would have 150 or 160 feet to go down and 300 feet to rise, in the case of pedestrians; 20 feet is very narrow.
 115. Will you express your opinion as to what the crowded state of the traffic would be in that tunnel, where you will have to contend with heavily laden vehicles? I think it will be difficult to get air down.
 116. *Chairman.*] Do you consider that a roadway of 21 feet is sufficient provision for the vehicular traffic between Sydney and North Sydney? Decidedly not; it requires double that width.
 117. *Mr. Brennan.*] Would it be an advantage to have a passage down the centre of the bridge for passenger traffic? It would be a great advantage.
 118. The bridge is provided in the middle with a road for passengers, and each division for vehicular traffic is wider than what is allowed in a roadway tunnel for the whole traffic? That is, of course, so much the better, and it should be, because I strongly believe that you would probably double the traffic the first year, perhaps treble the traffic, and it may go on increasing indefinitely.
 119. Do you think a bridge would attract residents over there? Certainly.
 120. A bridge would be in the nature of a continuous street? Certainly.
 121. There is a prejudice against a tunnel? I think there is. I do not know any example that can be shown where a tube under the water carries the vehicular traffic as well as the pedestrian traffic. There may be such tunnels, but I do not know of them.
 122. The great majority of these tunnels in London are for passenger traffic? They are for special passenger traffic; they are better suited for that—in fact, for passenger traffic, these tubes are specially suitable, and, in my opinion, for nothing else.
 123. The conditions which obtain in London are quite the reverse of the conditions that obtain here? Yes.
 124. They are as a matter of necessity in London? Yes; the air is forced through by the carriages that take you through.
 125. The carriage drives the air out, and it draws the air in as it goes on? Certainly.
 126. The London County Council have left the vehicular traffic for the streets? Yes. There is no vehicular traffic in the tubes. I think the objections to that would be the construction. I understand something about these matters, having done similar things. Up to a certain size you could put an iron tube under the harbour, but if you get the tubes too big you increase the trouble, the cost, and the expense in every shape and form. They get unwieldy. Although I do not think it is an impossibility (for almost nothing is impossible), still I think that where you get tubes sufficiently large for vehicular traffic it would be almost impossible to get them through—constructively, I am speaking of.
 127. There is a lot of danger attending the use of all these shields? Yes; and the bigger they are the more trouble they are.
 128. An accident occurred under the Yarra Yarra not long ago—it resulted in the loss of a lot of lives? Yes, because it was in drift sand. I have done a great deal of work about this harbour under water. If they meet a drift it might cost them some hundreds of thousands of pounds before they got over it with a very large tube.
 129. A large tube would correspond with a tunnel roadway? If you had a tunnel roadway you must make it in a similar manner. With a tunnel roadway you would protect your shield and then brick it. There you have precisely the same thing to contend against. With the large shield, whether it is a tunnel lined with brick for a road or a tunnel for a cylinder.
 130. Have you given any consideration as to the height which this bridge should be above the water? I would sooner leave that question to nautical men to answer.
 131. *Chairman.*] Do you know the relative grades for the tunnel roadway and the bridge? If you use it for pedestrian traffic it should be the same for one as the other.
 132. Have you any knowledge of the two rival schemes and the relative grades proposed in connection with each scheme? To tell you the truth, I do not know much about the rival schemes. I have seen a plan by Mr. Politzer and a plan by Mr. Kenwood.

Mr. William Kenwood further examined:—

- W. Kenwood. 133. *Chairman.*] Will you tell us what the grade is in connection with the bridge as proposed? The grade on the Sydney side would be 1 in 24, with the increased height of the bridge at 187 ft. 6 in., but on the North Sydney side, where the ground rises very rapidly, the grade of this bridge will be 1 in 30.
 Aug., 1896. 134. *Mr. Molesworth.*] Do you know that there are steamships with masts over 187 feet long in one piece? There is no such mast, I think, in use. The tendency is to go down, not upwards. I certainly do not know of any mast of that extreme height. The highest steel mast at the present time is 156 ft. 6 in.
 135. Are you aware that there are ships afloat with masts 187 ft. 6 in. long? Not in one length. The highest mast I can discover is 156 ft. 6 in. My studies have gone to prove that ships' masts are decreasing,
 not

not increasing, in height. Bridge obstructions are being erected almost every year in various parts of the world, and it is very obvious that a ship with a steel mast of the height you mention would be debarred from going into some of the principal ports of the world. We have had very ample evidence in regard to the height of ships' masts before the Select Committee upon my Bill. W. Kenwood.
4 Aug., 1896.

136. Have you seen a petition presented to Parliament by the shipowners and merchants of Sydney against the erection of a bridge in the harbour with piers? I have heard of the petition, but have not yet seen it.

137. Are you not aware that it is signed by nearly the whole of the principal shipping people in this port? Yes.

138. Are you aware that it is a petition against the erection of any pier in the harbour, and that it requests that the height of the bridge be not less than 200 feet above high-water mark? Yes.

139. Would it be possible to construct the bridge without the piers, as is suggested in the petition? It is possible, but still I do not think it at all likely that anyone would ever dream of doing such a thing. It would throw the cost up to such an extreme point that it would be outside the limit of all commercial transactions.

140. What is your opinion as to the request of the petitioners that the bridge should be erected 200 feet above high-water mark? I consider 200 feet is absolutely ridiculous. It makes your structure so ponderous, and your wind pressures speculative, and so increases your responsibility in every regard that I do not think that any engineer would countenance that extreme height. The grades are made unnecessarily steep, and the shipping only would be studied, to the detriment of the vehicular traffic.

141. Are you a proprietor or an architect? I am simply an engineer, appointed by my syndicate.

142. Your company, you think, would not be willing to comply with the request of the petition? I am sure they would not. I am sure they would laugh at me if I made such a suggestion to them. The thing is ridiculous.

143. You stated that your extreme height is 180 feet? I adopt that height at Mr. Darley's suggestion. I do not adopt that height for my own satisfaction, because I believe that 165 feet above low-water mark is ample for all purposes. In 1891, Mr. Darley said that he thought that 160 feet would be ample, but now he recommends 180 feet, probably having in view the prayer of the petition in your hand.

144. *Chairman.*] Does the raising of the height lessen the chance of the bridge being constructed;—you said that your company would laugh at you if you proposed that it should be 200 feet high? Simply on this ground—that the height is so great that the primary calculations on all constructions of this kind are wind pressures.

145. You think that they would not have any objection to increase the height to 180 feet? Probably not. I am inclined to think they would not.

146. That matter has not been referred to them;—the Bill was originally drawn with a view to a height of 165 feet? I am communicating with them now in regard to this altered scheme. I have not received any definite reply from them. I believe myself that they would be prepared to approve of 180 feet.

147. Is it not a certainty that they would? No; I think a height of 180 feet is too high. It makes the grades all unnecessarily steep. It throws the construction up so high that the wind pressure, at all times a speculative quantity, makes it necessary that ample provision be made, consequently your construction is so much heavier, and the more ponderous it is the much more expensive it is. In every regard it is, in my opinion, above the height necessary.

148. Do you think there is any possibility when they learn that a height of 180 feet is insisted upon they will decline to go on any further with the scheme? It is a matter of pounds, shillings, and pence. I certainly think not.

149. You are not in a position to say whether they will? Not at the present moment; but I may possibly be in a position to say before this inquiry terminates, and if I know by that time I should be very pleased to give the information to the Committee.

150. You are not prepared to say that your people would persevere with the scheme? I am not. I am absolutely confident that they would, but I have no authority to say that they would positively. Before the first Select Committee the question of the height of ships' masts was very exhaustively gone into, and it was very clearly shown then that a height of 180 feet is altogether unnecessary. It is only necessary for the Committee to refer to the evidence taken on that occasion to be satisfied on that point.

151. *Mr. Brennan.*] This bridge, with a height of 180 feet, would be the highest bridge of its kind in the world? Exactly. The Forth Bridge, with a height of 150 feet, was determined to be sufficiently high by the Trinity Board. It is true that there is a difference in the rise and fall of the tides. I allow for that difference. As it is not very great here, I allow another 10 feet.

152. *Chairman.*] It is asserted by Mr. Darley that there is not much shipping in the river above the Forth Bridge? It may be asserted, but it does not show that a large ship may not require to go above the Forth Bridge. The largest steel masts are in steamships. All sailing ships have rigged masts, consequently they can be easily housed. In steamships the rule is to make their masts in one length of steel. The highest steel masts at the present time, as far as I can ascertain, is 156 ft. 6 in. The height of these masts is tending downwards, not upwards. I think if you go to the Circular Quay you will see a very large cargo ship, "The Perthshire," and her masts certainly do not exceed 100 feet from water-line. I should take her to be a cargo boat of 5,000 or 6,000 tons.

153. *Mr. Waddell.*] Sailing vessels have higher masts than steam vessels? Yes; but they are built masts; you never find a sailing ship with her masts in one length.

154. *Mr. Molesworth.*] I think, Mr. Kenwood, you are mistaken;—I believe there are sailing ships with steel masts in one length? I believe there are four-masted American ships with steel masts in one length, but these masts are not high masts. I think they are called four-masted schooners.

155. From what point of the ship do you count the height of her masts—from the stepping or from the deck? From the water-line. All my measurements have been taken as from the water-line.

William Barnett Smith called in, sworn, and examined:—

156. *Mr. Brennan.*] You are Council Clerk of the Borough of North Sydney? I have been Council Clerk at North Sydney and St. Leonards for about ten years. W. B. Smith.

157. You have acted as Secretary of the Committee which represented Sydney, North Sydney, and all the surrounding places in connection with this movement? Yes. 4 Aug., 1896.

- W. B. Smith. 158. How many sittings did the Committee hold? Eight or nine.
- 4 Aug., 1896. 159. The various schemes which were propounded were somewhat elaborately gone into by the Committee? The promoters of the various schemes appeared before the Committee, and explained them fully.
160. Mr. Sulman appeared amongst the number? Yes.
161. He explained to the Committee that in conjunction with his railway scheme he had a tunnel railway roadway which was 20 feet wide? Twenty-three feet or 24 feet, I think, he said.
162. That is the diameter of the tunnel, the roadway proper is about 20 feet wide;—will you state your opinion as to the sufficiency of such a roadway to meet the traffic between Sydney and North Sydney? I think it would be wide enough to carry the traffic at present.
163. What would be the effect of vehicles laden with wool or hides protruding over the sides going into such a tunnel? I suppose if there was a block in the tunnel it might be a serious thing for the traffic.
164. What would be the effect of a wheel going off a vehicle or a horse falling in the tunnel. It would block the traffic. The tunnel might be divided.
165. A 20-foot roadway would not admit of three vehicles going abreast in motion? No.
166. Would it allow of two vehicles going abreast in motion? Empty vehicles might.
167. Can you tell me at what rate of speed a vehicle heavily laden and drawn by horses would progress? I should think a vehicle would go at the rate of about 3 miles an hour.
168. You know the length of the proposed tunnel roadway? No.
169. It is 1 mile 26 chains long, how long will vehicles be in the tunnel? About twenty minutes, I suppose.
170. Suppose anything were to happen to the electric light which illuminates the tunnel day and night it would result in some confusion? I suppose if the light was to go out the tunnel would be in darkness.
171. You were asked to bring some resolutions? Yes; but I find I have not got them with me.
172. Will you undertake to forward the resolutions to the Chairman of this Committee? I will. I may explain that they are resolutions passed by a sub-committee, but they have not yet been adopted by the body which appointed the committee.
173. You gave some evidence before the Royal Commission in 1891 in favour of a bridge? Yes.
174. I suppose you still maintain the same opinions? Yes.
175. You are sufficiently in touch with public feeling in North Sydney to be able to voice it somewhat? I would not like to say that I represent public opinion at North Sydney. I hear the opinions of a good many people over there on the subject.
176. What is the general feeling of the people over there? I think the majority of the people prefer a bridge to a tunnel if they can get it.

Mr. Francis Punch called in, sworn, and examined:—

- F. Punch. 177. *Mr. Brennan.*] You are an alderman of the Borough of North Sydney? Yes.
- 4 Aug., 1896. 178. You are a member of the committee to which the question of a connection with Sydney was referred and which has been sitting recently? Yes.
179. The Committee has had several sittings, and the question has been somewhat extensively gone into? Yes.
180. You are also a member of the sub-committee? Yes.
181. A set of resolutions was passed by the sub-committee, recommending a bridge in place of a tunnel? Yes.
182. On two several occasions you were Mayor of North Sydney? On three successive occasions; I was Mayor altogether about four and a half years.
183. You have given some little consideration to this question? Yes.
184. I think you have some data which would be interesting information to this Committee? Yes.
185. Would you prefer to make a statement to the Committee? The information I have here is six years old. On the 1st November, 1890, a public meeting was held in the Town Hall at North Sydney. It was called for the purpose of urging upon the Royal Commission and the Government the claims of the district to bridge communication to the metropolis. It was stated at the meeting that "the estimated annual traffic between North Shore and Sydney by ferry service was—passengers, 4,015,000; vehicles, 378,500; and horsemen, 43,800, and the annual revenue derived from the service was about £45,000.
186. Can you bring this data up to date? No; not unless we put men on. We had two men on to get this information.
187. Referring to the vehicular tunnel with a roadway 21 feet wide, which Mr. Sulman explained to your committee—would that be sufficient to meet the requirements of traffic between Sydney and North Sydney, recollecting that 21 feet is only the ordinary width of a lane in Sydney? I do not think it would even at the present time, and I am sure it would not five years hence.
188. You have seen trollies laden with sheepskins and hides, or with bales of greasy wool stacked up and extending beyond the sides of the trollies. What do you think would be the effect of such trollies meeting one another, or other large vehicles in a 20 feet wide tunnel? I suppose, with hides and wool on, the trollies would be about 9 feet wide, so that two trollies would take up about 18 feet of the tunnel.
189. From your position, I suppose you may take it upon yourself to voice somewhat the public opinion of the district as to the desirability of forming a connection with Sydney? Yes.
190. What is the general feeling over there? In favour of a bridge, indisputably. If a vote was taken I believe it would be a vote of twenty to one in favour of a bridge connection.
191. You know the difficulties they have now to contend with as regards the vehicular traffic? That is behind the times. I think they make all their expenses out of it.
192. *Mr. Waddell.*] I suppose the people over there who have come to a conclusion as to the form of the connection can only be actuated by one feeling—as to what will suit North Sydney;—they do not consider the shipping in the harbour? Yes; they do. I do not think any bridge ought to be constructed under a height of 180 feet, but when you come to look at the reports which the Premier placed before Parliament a month ago, the number of vessels which went above where the bridge is proposed to be constructed during last year was about twelve or fourteen. You know the Government are spending a lot of money now in Woolloomooloo Bay, which will be most suitable for ships with high masts. If I had a voice in the determination of the matter, I would say let it be a high-level bridge, and let it be built strong enough to carry a railway. I would not object to make one of a syndicate to construct a bridge which will carry a railway as well as the ordinary traffic. There are plenty of men able to do it.

193. *Mr. Cann.*] Have you any doubt as to the ability of the parties interested to find the money? No doubt whatever. F. Punch.
4 Aug., 1896.
194. *Mr. Brennan.*] As a commercial undertaking it commends itself? As a grand success. I believe honestly and candidly, even with the present traffic and population on that side of the harbour, leaving the people of Sydney and the other suburbs out of the question, if we deduct 15 per cent. of the traffic for the Ferry Company, or more, to pay interest on its construction, it will leave us £25,000. Six years ago, if you capitalised £25,000 at 4 per cent., you could spend £600,000 on a bridge. As a commercial undertaking, if the Government do not undertake it, private enterprise will be only too glad to jump at it.
195. *Mr. Cann.*] I suppose whoever gets the concession will have to float a company? I do not know.
196. *Chairman.*] You have no direct connection with these proposals? None whatever.
197. It does not devolve upon you to finance the company? No. At a meeting of the sub-committee I went for the betterment principle. I know that if we have a bridge, or even a tunnel, it will increase the value of property to a very considerable amount. The Government have an enormous quantity of land over there. It will open up their land as well as other people's lands. Speaking from a personal point of view, I would be only too pleased if it was placed under the municipal bodies over there to have the betterment principle introduced.

William Anderson called in, sworn, and examined:—

198. *Mr. Brennan.*] You are an alderman of the borough of North Sydney? Yes. W. Anderson.
4 Aug., 1896.
199. You were a member of the sub-committee appointed to investigate the rival schemes for connecting Sydney and North Sydney? —
200. The sub-committee has held several meetings? Yes.
201. And the outcome of their meetings was a set of resolutions recommending the construction of a bridge? Yes.
202. Were you present at the meeting when Mr. Sulman attended and explained his roadway tunnel? I was at one meeting.
203. He advocated a roadway tunnel of a certain diameter, but with a roadway of 21 feet available for vehicular traffic? Yes.
204. You have been an alderman for some time? Yes.
205. You have taken some interest in public affairs locally for many years? For five and a half years alderman.
206. Can you say, from your knowledge of the public, what the trend of popular feeling is in regard to the form of the connection with Sydney? The general opinion is that a bridge would be the most satisfactory.
207. What is your own opinion? I think a bridge would be.
208. *Chairman.*] Why? I think it would be more getatable. It is very much better to travel over a bridge than to go under the water. The objection to the tunnel is the having to go up and down by lift every time you have to go through the tunnel. I think that is a serious objection.
209. *Mr. Brennan.*] You know the present difficulty is as to the vehicular traffic? Yes.
210. There have been complaints, but, as far as their fleet enables them to do, the Ferry Company meet the requirements of the passenger traffic? They carry the passengers, but I do not think I would be justified in saying that they meet the requirements.
211. The real trouble over there is as to the vehicular traffic? Principally, I think.
212. The mode of providing for the carriage of the vehicular traffic is very primitive—old-fashioned? I think it is rather primitive.
213. It is no uncommon thing for a block to ensue on either side at the wharf? That I could not say. I know that very often the passenger-boats have to wait until the horse-boats get past, or that the horse-boats have to give way to the passenger-boats. I think the horse-ferry is in a very bad place.
214. You have no doubt that the better form of connection would be by bridge instead of by tunnel? I would give the preference to a bridge by every means.
215. *Chairman.*] I suppose you know it is proposed to use lifts in connection with the bridge at Milson's Point? I cannot say that I know that; but I should not think it is absolutely necessary they should have lifts if they can get a fair incline from a certain point on the Shore.
216. It is proposed that every person who may go down to the terminus of the railway at Milson's Point may get on to the bridge there by means of a lift? That may apply to the railway passengers.
217. *Mr. Brennan.*] The people in the locality of the Milson's Point railway-station, wishing to go across to Sydney by the bridge, would necessarily use the lift? Yes.
218. You do not know how modern lifts are worked in the old country? No. I talk to many persons in the district, and they all seem to think that a bridge would be preferable to a tunnel.

THURSDAY, 6 AUGUST, 1896.

Present:—

MR. CANN, MR. MACDONALD,		MR. GREEN, MR. MOLESWORTH,
MR. WADDELL.		

JAMES ASHTON, ESQ., IN THE CHAIR.

E. E. Fosbery, Esq., appeared as Solicitor for the City and North Sydney Railway Bill.
W. F. Brennan, Esq., appeared as Solicitor for the Sydney and North Sydney Bridge and Tramway Bill.
T. B. Dibbs, Esq. (Messrs. Dibbs and Gibson), appeared as Solicitor for the North Shore Bridge Bill.

Isaac Ellis Ives, Esq., sworn and examined:—

219. *Mr. Brennan.*] You are the Mayor of Sydney? Yes.
220. For many years you have been an Alderman of Sydney? I have been in the City Council only two and a half years. I. E. Ives,
Esq.
6 Aug., 1896.
221. You have been Mayor of North Sydney half a dozen times? I was Mayor for five years, and Alderman for six years at North Sydney. 222.

- I. E. Ives,
Esq.
6 Aug., 1896.
222. For many years you have been endeavouring to procure improved communication between Sydney and North Sydney? Since about 1874.
223. You were Chairman of the Committee appointed by the City Council, and various Municipalities concerned in this movement? Yes.
224. You held several meetings and investigated several schemes? There have been several meetings; but unfortunately they were held at a time when it was impossible for me to attend.
225. You know officially what the result of the meetings was? Yes.
226. Did the subcommittee recommend that the communication should be by bridge or by tunnel? I have not had a report from the subcommittee.
227. You know that they did recommend that the bridge should be erected? That is their idea.
228. Do you know anything of modern London? No, it is about ten years since I was there.
229. You live at North Sydney? Not at present. I lived there for seventeen or eighteen years. My property is there.
230. From your official position in Sydney, and from your connection with this movement for many years past, I suppose you may say that you voice public opinion somewhat? I think so.
231. What do you think the public would prefer as a means of communication with Sydney? I believe the balance of opinion is in favour of a bridge.
232. Can you say that it is largely in favour of a bridge? Yes. In 1885-6 I, with a number of other gentlemen, when we found that there was no possibility of getting a bridge, went into the question and had a Bill before the House to enable us to construct a tunnel; but we found that the difficulties in constructing a tunnel would be very great, and that the convenience which it would afford would be a small recompense in proportion to the outlay, and the balance of opinion at that time was absolutely dead against the tunnel on any consideration.
233. That would be a passenger tunnel only? It was intended for vehicular as well as passenger traffic. A number of us went to very great expense as far as that was concerned.
234. Having regard to the fact that the grade of the tunnel on the Sydney side is 1 in 24, and on the North Sydney side 1 in 30; that in addition to the tunnel being 85 feet below the surface of the water, they have to rise to the top of Alfred-street where the town hall is situated, that the outlet of the tunnel is just past the railway station at a street called Western Wall Road, and that they have to go 1,300 feet to get to the council chambers;—having regard to the grades of the tunnel, and having regard to the fact that the bridge has a down grade, which project commends itself to you from the standpoint of grades? The bridge would most decidedly have the preference.
235. It has a roadway tunnel 21 feet wide to accommodate horses, lorries, and vehicles of every description;—I suppose you have had some experience of trying to drive along a 20-foot lane? Yes.
236. What will be the effect of lorries heavily laden with sheepskins or wool protruding over their sides, and drawn by four horses, going through a tunnel of that description? There is barely room for two lorries laden as we see them laden in the street to pass.
237. With the tunnel roadway 80 feet below the water, and with a distance of 1,300 feet to travel to the town hall, if a heavily-laden vehicle is going up the hill, what track will it take;—will it go straight up the hill, or will it go up the hill in a zigzag fashion? It would hardly be able to go straight up the hill unless there was extra horse-power.
238. A heavily laden vehicle would want the whole of the tunnel to itself to get up that hill? I should imagine that it would want a very great portion of it.

Captain Joseph Barron sworn and examined:—

- Capt. J.
Barron.
6 Aug., 1896.
239. *Mr. Brennan.*] You are a resident of North Sydney? I am.
240. You are a business man? Yes.
241. For some very considerable time you have given attention to this matter of providing a connection between Sydney and North Sydney? Yes.
242. Which form of connection do you prefer? I prefer a bridge most decidedly.
243. Do you know the width and the grades of the tunnel? I have heard about them.
244. With that knowledge do you prefer a bridge to a tunnel? Yes.
245. You are an old ship master? Yes.
246. You have some knowledge, then, of the cost of lowering top-gallant masts? Yes.
247. Is it a very expensive process? No.
248. What height do you think would be ample for all classes of ships with a capacity for lowering their topmasts? They would not require to lower their topmasts—only the top-gallant masts. I hear the bridge is to be 180 feet high above high-water mark. I think that would be ample. Vessels would not have to lower their top-gallant masts very much to go under a bridge of that height.
249. Can you give us an idea of the height of a topmast? I could not tell you exactly; ships are much larger now than they were when I went to sea.
250. *Chairman.*] What is the cost of striking a top-gallant mast? I should not think it ought to cost anything, they should do it with their own crew. It is many years since I went to sea, and top-gallant masts are a good deal higher now than they used to be. I consulted a rigger the other day on the point. I asked him what it would cost to strike the top-gallant masts, and when the ship was ready for sea to rig them again, and he said he would be very glad to do it for £10 or £12.
251. *Mr. Cann.*] How long would it take? At the outset half a day to send the masts down, and half a day again to send them up when you are ready for sea. The boats would have to go through the process before they came up the harbour. They always lie down in Neutral Bay a day or two unbending sails, cleaning ship, and entering in.
252. It is a usage for ships to remain down the harbour a certain time before they come up to their berthing-place? Often they have not a wharf engaged; it takes time to get the wharf one wants. They have all kinds of work to do—unbending sails and cleaning up ship. The crew are all busy at this work.
253. During that time they could strike their top-gallant masts? Yes.
254. *Mr. MacDonald.*] You stated that a rigger would be glad to strike the top-gallant masts, and to send them up again, for £15—is that per mast or per ship? From £10 to £12 per ship.

Edward Sanders called in, sworn, and examined:—

255. *Mr. Brennan.*] For many years you have been a carrier? Yes.
256. You are the oldest and probably the largest carrier in Sydney? I have been a carrier for forty years.
257. You know something of these schemes for providing a connection between Sydney and North Sydney? Yes.
258. Which scheme would be the more convenient for you in your business as a carrier? From my own ideas of the matter, and from my common sense too, I should judge that a bridge would be the best.
259. *Chairman.*] Why? It seems to me that in a tunnel we should be very much confined to space, and further, the grades would be very heavy.
260. The probable width of the tunnel is 21 feet, you do not think that would be adequate? I do not.
261. *Mr. Brennan.*] Suppose that on each side of that part of the bridge which is fenced off for passenger traffic a road is provided for vehicular traffic, in each case 21 feet wide, that the elevation of the bridge is 180 feet, and that the grade on the Sydney side is 1 in 24 and on the North Sydney side it is 1 in 30; and suppose that in this roadway tunnel the roof is 19 feet clear? It seems to me that the gradients which are now very heavy to get to the high lands of North Sydney, must be very much severer still with a tunnel.
262. *The Chairman.*] The steepest grade of the tunnel is 1 in 22 on the Milson's Point side, and 1 in 25 on the Sydney side. Suppose you were going up the grade on the other side with a full load in a big furniture-van drawn by four horses, how much of this roadway tunnel, 21 feet wide, would you require? Each vehicle and driver should require a height of 13 feet, and clear in width 10 feet; that would not allow for any extra height.
263. Would you go up in a straight line, or would you adopt the ordinary course? If we had room we would adopt the zig-zag course. It would be a pull, not a steep hill.
264. The grade of Barrack-street, between George-street and York-street, is 1 in 19; if you were going up that street with a load what would you do? I would go straight up. You will notice drays zig-zagging all the way up Market-street, as they come from Sussex-street to York-street.
265. *Mr. Cann.*] That is very much steeper than 1 in 22? It must be.
266. *Chairman.*] Do you regard a gradient of 1 in 22 as a very stiff pull? Not if that is the grade of Barrack-street, from George-street to York-street.
267. It is 1 in 19 there? It is a lighter pull than that I should think any horse can pull a fair load up that street.
268. Would it be necessary to zig-zag there with a load? Not unless the horse was unfairly loaded.
269. *Mr. Cann.*] If you could take your load straight up that road, what width of the road would you require? I should only require the space necessary for the vehicle to travel in.
270. What width would that be? About 10 feet; but I should not like to be confined to 10 feet.
271. *Mr. Brennan.*] You would have to drive to keep within that space? Yes.
272. *Chairman.*] Do you think 21 feet would be adequate space for all kinds of vehicles? I do not. Suppose I was going along with one of my large waggons, I might meet another large waggon on the other side—sometimes these waggons load over the sides—and we might get jammed.
273. *Mr. Waddell.*] Your waggons, I suppose, would be the very largest waggons used in the city? They are the largest waggons of that kind in the city.
274. Do you know whether it is likely there would be any other waggons larger than or as large as yours? Yes, there are the wool trollies which might be carrying wool or sheepskins.
275. *Mr. Brennan.*] Greasy wool, as well as sheepskins, generally protrude a lot over the sides of the waggon? Yes.
276. What rate of progress will a horse drawing a load ordinarily make? You cannot reckon much more than three miles an hour.
277. This tunnel is 1 mile 26 chains long, how long will it take you to get through the tunnel with a load? I should think you would not get through that tunnel in much under 25 minutes.
278. You have had to do with 20-foot lanes in your time with loads? Yes.
279. In a 20-foot lane nothing could go faster than the vehicle in front? No.
280. There could be no quicker rate of progress in this tunnel than 3 miles an hour? No.
281. *Mr. Green.*] Unless the stream of vehicles was continuous, a hinder vehicle could, on many occasions, pass a vehicle in front going in the same direction? They could do it.
282. *Chairman.*] It has been explained to me that the width of the roadway in the tunnel is 21 feet at the bottom, and that the diameter of the tunnel is 27 feet, so that the wheels of the vehicle would be within the space of 21 feet, and any protruding part of the load would have the benefit of the extra 6 feet? That would make a difference; but even if you have the extra width you would require to have a kerb at the side of the roadway, in order to keep you from running into the sides of the tunnel. When you are driving, especially in a tunnel, you cannot gauge the position of your vehicle to an inch. A horse may swerve, and the pole of the vehicle may swerve also, and drive the horses against the side of the tunnel.
283. If there was a kerb provided at the edge of the roadway? It would protect the sides of the tunnel, but if you had to pass another vehicle you would have a space of only 10 feet at your command.

Charles Ludowici called in, sworn, and examined:—

284. *Mr. Brennan.*] You are a member of a very large tanning firm whose tannery is situated at Lane Cove? Yes.
285. You have a great deal of traffic with heavy laden vehicles between Sydney and North Sydney? Yes.
286. You are acquainted with the different schemes before this Committee? I know them.
287. The roadway of the tunnel scheme is 21 feet wide with a clear height of 19 feet. What do you think of the capacity of that tunnel to meet the requirements of the traffic? I do not think it will be suitable at all. I consider a width of 21 feet is not sufficient.
288. Would a roadway of that width allow three vehicles to pass in the tunnel? No. You would require to have room enough to allow fast vehicles to overtake slow vehicles and to pass them.
289. *Chairman.*] Would there be room for three vehicles abreast? I do not consider it would be wide enough. I do not think it would meet the requirements of the case.
290. *Mr. Brennan.*] You prefer a bridge to a tunnel? Yes.

E. Sanders.

6 Aug., 1896.

C. Ludowici.

6 Aug., 1896.

291.

- C. Ludowici.
6 Aug., 1896.
291. *Mr. Cann.*] You send loads of goods and material from one side of the water to the other? Yes.
 292. What do your loads measure in width? We would want about 8 feet clear.
 293. What would you require in height? In height, about 8 feet.
 294. *Chairman.*] Would you consider that a roadway of 21 feet is ample for two lines of vehicles? That would be sufficient for two.
 295. *Mr. Brennan.*] It would require careful driving? Yes; especially in the light there would be in the tunnel.
 296. What about the uphill part of it? I do not know the grade.
 297. *Chairman.*] The grade of that part is 1 in 22? In any case it would be a much more difficult task to get goods across there with a tunnel than it would be with a bridge, because naturally a bridge would be pretty well all on the same level.
 298. The grade of the tunnel on the North Sydney side is 1 in 22; the grade of Barrack-street from the Post Office to the Central Coffee Palace is 1 in 19;—comparing a grade of 1 in 22 to the grade of 1 in 19 in Barrack-street, do you regard that grade as involving a very heavy pull? I would not.
 299. *Mr. Brennan.*] Do you not think that in matters of gradients the distance is a big factor to consider? No doubt it is.
 299½. It amounts to something very considerable? Yes.
 300. *Chairman.*] Would you regard going up the grade in Barrack-street with a load as anything serious? No; but with a tunnel you would have to go down to a low level and then come up again.
 301. *Mr. Fosbery.*] Are you aware that the grade in Bridge-street opposite the Lands Office is 1 in 22? That seems to me to be steeper than the grade in Barrack-street from the Post Office to the Coffee Palace.
 302. *Chairman.*] Do you consider that grade a very difficult one to negotiate? It entails a good pull on a horse in carrying a load if it is continued for any length.
 303. *Mr. Cann.*] What is the weight of your ordinary load? It is about 4 tons, reckoning lorry and all.
 304. How many horses would you use in drawing that load? About three horses for a 3-ton load. The lorry weighs about a ton.
 305. That is rather a heavy load for three horses to draw? Not for good horses. Ours are the very best horses. A ton is a very fair load for one horse.

James Brown Forsyth called in, sworn, and examined:—

- J. B. Forsyth.
6 Aug., 1896.
306. *Mr. Brennan.*] You are a tanner, and you are in a large way of business in North Sydney? Yes.
 307. You know something of the proposed roadway tunnel and bridge to connect Sydney and North Sydney? Yes.
 308. In the ordinary course of business you have to send large loads from North Sydney to Sydney? Yes.
 309. Will you tell the Committee the mode of connection you would prefer between Sydney and North Sydney, and why you prefer that particular mode? I prefer a bridge to a tunnel for several reasons. I think a bridge would be easier and better for the vehicular traffic, as well as the pedestrian traffic. And from what I have seen in my little travels, I prefer a bridge to a tunnel. I have ridden across bridges which have been erected across waters, and I am convinced that a bridge would be a great deal better than a tunnel.
 310. *Chairman.*] In what way do you consider a bridge would be superior to a tunnel? In the first place, it is just a question which is the simplest mode of getting on and getting off. There is no risk in the way you get on to a bridge and get off it.
 311. Do you know how it is proposed to get into the tunnel? I know you have to go under the water.
 312. Do you know anything about the grades? No.
 313. *Mr. Brennan.*] The roadway in the tunnel is only 21 feet wide; what facilities would a roadway of that width afford for vehicles heavily laden with bulk goods going backwards and forwards? If two heavily-laden vehicles, travelling in opposite directions, come in contact, and you have a light vehicle coming from either end, I do not see how it could get past.
 314. *Mr. Cann.*] Would you state the width and height of your trolley when it is loaded up? I cannot tell you the height, but the width would be about 8 feet when I am loaded with bark.
 315. Can you give an idea of the weight of the load? About 3 tons.
 316. How many horses do you put in? Three.
 317. *Mr. MacDonald.*] You have said that you have had experience of bridges in other places;—have you had any experience of tunnels? No. I know I was reared on the Tyne, and I know what facilities the bridge gives.

Patrick MacMahon sworn and examined:—

- P.
MacMahon.
6 Aug., 1896.
318. *Mr. Brennan.*] You are the proprietor of the Macquarie Bond, Circular Quay? Yes.
 319. You are an ex-alderman of the city of Sydney? Yes.
 320. Your residence is at North Sydney? Yes.
 321. You drive to and from the city? Sometimes, not always.
 322. You have occasion to use the horse-boats? Yes.
 323. You have given some little consideration to the question of connecting Sydney with North Sydney by means of a bridge or a tunnel? Yes.
 324. You know that the proposed roadway tunnel has an available roadway of 21 feet? Yes.
 325. And you know that the tunnel is a little over a mile and a quarter in length? I have seen a little of tunnels and bridges in the old country. I have crossed the Brooklyn Bridge several times. I have travelled in several tunnels in England and America, and, by all means, I give the preference to a bridge.
 326. Why do you prefer a bridge to a tunnel? I prefer a bridge from what I saw of the Brooklyn Bridge. In the Brooklyn Bridge there is a track for foot passengers in the centre. Then there is a cable-tram on each side of the passenger traffic, and on the outer side of each cable-tram there is a road for vehicular traffic. It was the most complete arrangement for dealing with the traffic that I ever saw. I was quite struck with its excellence. And as to a bridge being an impediment in this harbour and interfering with the shipping I have had forty years' experience of the port, and I really believe a bridge would be an ornament to the port if constructed like the Brooklyn Bridge.

327. Would the pier carrying the bridge in the centre of the fairway serve the same purpose as Pinchgut now serves of dividing the traffic up and down the harbour? It would. When I saw the Brooklyn Bridge lit up with electricity I thought it was the loveliest picture I had ever seen.
328. Do you consider that a track for passengers down the centre of the bridge would minimise the chances of accidents and collisions as regards the vehicular traffic? Certainly.
329. Do you consider the tunnel would be sufficient to admit of all classes of traffic passing between Sydney and North Sydney? I do not believe it would. From all I have seen and from all I have read, in my opinion, there is no comparison between a bridge and a tunnel. The comparison is entirely in favour of a bridge.

P.
MacMahon.
6 Aug., 1896.

George Howarth, Esq., M.L.A., sworn and examined:—

330. *Mr. Brennan.*] You are the representative of Willoughby in the Legislative Assembly? I am.
331. You have devoted some attention to the question of establishing a connection between Sydney and North Sydney? Yes. I have been a member of three committees sitting on the various Bills.
332. The largest committee I suppose was the committee of which the Mayor of Sydney was the chairman? I do not include that committee amongst the three. I was a member of the three Select Committees of the Legislative Assembly.
333. There has been a committee representing the municipalities and boroughs interested in this scheme? I was also a member of that committee.
334. What was the outcome of the meetings of that committee? The committee was in favour of a bridge connection.
335. You have had opportunities to see what takes place on the North Sydney side in regard to vehicular traffic? I have.
336. On that steep hill from the Milson's Point ferry up to the Council chambers? Yes.
337. You have seen the difficulties which the traffic has to encounter on that hill? Yes. I have driven over the road many times.
338. You have had practical experience of driving along that road? Yes.
339. What do you consider is the best means of communication to establish between Sydney and North Sydney? In my opinion, without any doubt, a bridge would be preferable to a tunnel.
340. *Chairman.*] Why? In the first place I am alluding to this bridge (Kenwood's) with its approaches and grades as against the proposed tunnels with their approaches and grades.
341. Do you know how they compare? I do; although the grade of the bridge is somewhat easier than the grade of the tunnel, the bridge would also lessen the length of the grade over which the horses would have to pull to the extent of at least three quarters of a mile. Whereas a tunnel will increase the length of the pull over the grades for at least a mile and a quarter.
342. Can you tell us the length of that pull? I understand from Mr. Sulman that on the Sydney side the length of the approach is 2,900 feet, and on the Milson's Point side the length of the approach is 3,200 feet. The bridge is preferable to the tunnel, because it dispenses with the heavy pull from Milson's Point up to the junction of Glen-street with Alfred-street, a distance of about three quarters of a mile.
343. Do you regard this grade as a very serious thing for the traffic to negotiate? No, I do not regard a grade of 1 in 22 as a serious grade. But taking into consideration that the grades of the bridge are so much easier than the grades of the tunnel, and that the bridge would relieve all those who travel by means of vehicles from Sydney to North Sydney of the heavy pull from Milson's Point to Glen-street, and that it would also relieve the traffic in Alfred-street to a very great extent, I think the bridge ought to be preferred to the tunnel. Alfred-street is not a very wide street. There are two lines of tramway in Alfred-street, and, of course, there are the vehicles travelling down to the ferry-boat as well as coming up from the ferry-boat. The bridge would be a great relief to the traffic in that portion of the street.
344. *Mr. Brennan.*] I think you said you think a 21 feet roadway in the tunnel would not be sufficient? I feel positive that it will not be sufficient to meet the requirements of the district at the present time, let alone in the near future. With a view to show the increased traffic in the northern suburbs I have obtained from the Railway Commissioners a return of the passenger traffic for last year, which is greatly in excess of the passenger traffic for the previous year. The influx of population on the other side of the harbour must of necessity be found in the necessaries of life, and as these necessaries are carried from Sydney, the vehicular traffic is increasing along with the passenger traffic. On the North Shore line 100,000 more tickets were issued last year than were issued in the previous year. The return reads as follows:—

G. Howarth,
Esq., M.L.A.
6 Aug., 1896.

RETURN of tickets issued at stations on the Milson's Point railway line for the year ending 30th June, 1896.

Station.	Tickets.	Amount.
Hornsby Junction.....	12,788	£ s. d. 452 0 1
Wahroonga.....	18,406	1,228 3 6
Turrumurra.....	17,046	1,087 10 6
Pymble.....	23,660	1,510 12 9
Gordon.....	14,174	644 1 1
Lindfield.....	10,960	625 0 6
Chatswood.....	59,173	2,447 1 10
St. Leonards.....	29,472	996 3 2
Bay Road.....	9,480	302 17 7
Milson's Point.....	126,672	6,498 18 0
	321,831	£15,792 9 0

Earnings on the North Shore cable tramway for year ending 30th June, 1896..... £11,340
 " " electric line " " 2,209
 £13,549

Mr.

Mr. John Stuart Elliott, sworn and examined:—

- J. S. Elliott, Esq., M.L.A.
6 Aug., 1896.
345. *Mr. Brennan.*] You are an alderman of the borough of North Sydney? Yes.
346. You are in business at North Sydney? I am.
347. You are a member of the recent committee which inquired into the question of connecting Sydney and North Sydney with a bridge or a tunnel? Yes.
348. You have frequent opportunities of seeing the traffic in the horse-boats? Continually. I am a member of the firm of Elliott Brothers, and I suppose we pay to the North Shore Ferry Company about a £100 a year.
349. You have given some consideration to the question of providing better means of communication with Sydney? A good deal.
350. Will you state to the Committee the outcome of your deliberations on this question? The conclusion I have come to is, that the present ferry company is quite inadequate to cope with the present traffic of North Sydney.
351. Which do you consider would be the better means of communication to establish with the city? A bridge by all means.
352. Why do you object to a tunnel? I prefer a bridge to a tunnel because we could go across by the bridge much more quickly than we could go across by the tunnel. It would take a considerable time to go through the tunnel.
353. How long do you think it would take? I should say from twenty-five minutes to half an hour. There would be an immense traffic with the tunnel; and it might take longer to get across the harbour because the vehicles passing to and fro would be blocked.
354. Do you know that the roadway available in the tunnel is only 21 feet wide? So I have been told.
355. Do you think that is anything like adequate? Not at all. In fact 40 feet would not be adequate for the present traffic of North Sydney.
356. *Chairman.*] The reason why you think it would take longer to go through the tunnel than to go across the bridge is on account of the narrowness of the tunnel? Yes; and then there would be the grade.
357. Do you know the difference in the grades? I do not.
358. You assume that there is a difference in the grades? I assume that there will be a great deal of difference. I am not a practical man.
359. There is a difference in the length of the grades, but not much difference in the grades themselves. The steepest grade in the tunnel is about equal to the grade in Bridge-street near the Lands Office? If there was a tunnel I think I would prefer my vehicles to go by the ferry sooner than go through the tunnel.
360. Why? Because of the length of time it would take to go through the tunnel.
361. How long would it take to go by the horse-boat? Between five and seven minutes, and when we get on the other side of the water we can go ahead again.
362. *Mr. Brennan.*] You are on the top of the hill when you go across by the bridge? Yes; I would prefer the ferry myself to a tunnel.
363. *Mr. Molesworth.*] Where is your place of business situated;—would it be nearer the approach to the bridge than the approach to the tunnel? I have an idea where it is proposed to put the bridge, but I have no idea where the tunnel is to be put.
364. The tunnel will come out close to the railway station at Milson's Point? One is just as near to me as the other.
365. There would not be any great advantage to you by reason of your contiguity? None at all.

Dugald Thomson, Esq., M.L.A., sworn and examined:—

- D. Thomson, Esq., M.L.A.
6 Aug., 1896.
366. *Mr. Brennan.*] You are the representative of Warringah, in the Legislative Assembly? I am.
367. Will you be good enough to state your views on this question to the Committee? My opinion on this matter pretty well agrees with the decision come to by the North Shore Committee. It differs to some extent from their decision. The difference is, that while they absolutely demand a bridge, and almost absolutely demand a railway bridge, I do not go that far. I hold that if they cannot get a suitable bridge, it is to the interests of the people of North Sydney to get the best other means of communication; and if they do get a bridge, but cannot, for various reasons, get a railway bridge, they ought to take the bridge without the railway provision. I think it will facilitate matters if I give my views on this question in a very few lines of print. My views are:—
1. That the Government be requested to undertake the work of providing better means of communication between North Sydney and Sydney, as being a work of a national character.
 2. That if the Government do not think fit to undertake the work, it should be asked to take the necessary steps, promptly, to ascertain the best that private enterprise throughout the world is prepared to do in the way of providing a connection between the two shores, with a view to the Government selecting and supporting the most desirable of any suitable proposals.
- As a North Shore Member, pure and simple, and representing only the interests of North Shore, I might say, "Get any bridge so long as communication is obtained." But looking at the question in a broader light, I think it is a very important matter to the Government, as representing the whole of the people of the Colony, to see that the bridge that is got—gives the best convenience, is structurally the best; that is, as regards its lasting properties; and will not interfere in any serious way with the traffic of the harbour. The bridges which are proposed, and which have had no examination hitherto, may be structurally defective. There may be no examination of the bridges in the future.
368. *Mr. Brennan.*] The Bill contains some very drastic provisions as to the examination of the bridge. The Minister for Works has to approve of every trifling thing in connection with the bridge. He has the power to see that every rivet is examined? If that provision is contained in your Bill, and it is passed, of course it is a check in that respect. I think the matter is of sufficient importance to the Government to justify a full test as to the best means of communication they can obtain. On the other hand, of course, if Parliament decide to accept one of the proposals before it, it is only a question which is the best proposal to accept. I think—
3. That in making a selection, the Government should have regard to the following considerations:—(A) That communication should be by bridge preferably.

I have seen some of the largest bridges in the world, and have gone through some of the largest tunnels both under land and under water, and I must say that I have a preference for a bridge. First of all a bridge is in the open air. Secondly, it provides better accommodation for pedestrian traffic; and, as regards this particular connection, it reduces at any rate the severity of the grade at a certain part. I understand that there is not much difference in the grades of the bridge and the tunnel, as a whole, but at a certain part there is. It is said that the grade of the whole is the same as that in Bridge-street, in front of the Lands Office; but anyone who knows the grade of the road from Milson's Point to the Town Hall, knows that it is very much more severe than that grade.

369. I think it is about 1 in 14? That grade has to be gone up. It is a difficult grade now for the vehicular traffic to negotiate. It has to be passed over by all the traffic coming out of the tunnel.

370. This bridge, you say, gets rid of that difficulty? Yes; those are my reasons for preferring a bridge to a tunnel.

371. Have you ever driven through any of these tunnels? Not driven, I have walked through tunnels. I have often gone by rail through the Mersey Tunnel, between Birkenhead and Liverpool. I have no particular objection to going through a tunnel. The objection as to travelling through a tunnel is, in most cases, more a sentimental one than anything else.

372. Do you know how long the Mersey Tunnel is? I do not know how long it is from actual knowledge, but I should say it is quite a mile in length.

373. *Mr. Cann.*] It is longer than this proposed tunnel? I do not know the figures. The river Mersey is a very much broader sheet of water than that part of Sydney Harbour lying between Milson's Point and Dawes Point, and then of course there are the approaches on each side of the harbour. There would be less objection to the proposed tunnel than to the Mersey Tunnel, the traffic in the latter is worked by steam, and of course the sulphur from the coal is felt in some degree. The motive power in the proposed tunnel is to be electricity. I am strongly in favour of a connection between Sydney and North Sydney. The necessity for the connection I believe is admitted. But the mere passing of these Bills will not give a connection. What I do not want to see is North Shore left in the lurch after one of these Bills has been selected and passed, and for certain reasons the project is not taken up by capitalists. We may then be left without any connection for many years. As the present is a very favourable time for construction, money could not be cheaper than it is to-day, and material could scarcely be cheaper than now. For that reason, I think, the tunnel ought to be in reserve and not rejected.

374. *Mr. Brennan.*] Reverting to the question of the width of the Mersey. That river is wider than our harbour is between Milson's Point and Dawes Point, but the tunnel under the Mersey is a straight one, while the proposed vehicular tunnel passes under the harbour in a curve. Standing on one side of the Mersey can you not almost see the mouth of the tunnel at the other side of the river? I do not say the Mersey Tunnel will be longer than the proposed vehicular tunnel here. I believe the Mersey Tunnel goes practically straight across.

375. Do you think a roadway of 21 feet wide in the tunnel is sufficient to carry the heavy traffic between Sydney and North Sydney. I think it is quite possible to carry that traffic with a 21-feet roadway, but it would not be as efficiently carried on as it would with a wider roadway. It would be just the same thing if the bridge was constructed with the same width of roadway.

376. In the bridge there is a roadway 20 feet wide on each side of the bridge? In a width of 20 feet there would be room for two vehicles to go the one way, and for the lighter traffic to get past the heavier traffic.

377. On either side of the track reserved for the pedestrian traffic on the bridge there will be a road. The bridge is divided in this way in order to prevent collisions and accidents? I quite admit, considering the formation of the land on each side and other matters, a bridge ought to be better than a tunnel for the vehicular traffic; but I do say, if we cannot get a suitable bridge, then if there was no vehicular traffic provided for by the tunnel; if it only provided a passenger connection we ought to try to get that much improved connection.

378. Assuming that this bridge is recommended, you would still adhere to your choice of this bridge over the proposed tunnel? I do not say this bridge; I say, a bridge. The other recommendations I have here in print practically agree with the North Shore Committee's recommendation, so I need not detail them.

379. *Chairman.*] You regard this scheme as being one of national importance? Speaking generally.

380. Still you take the view that a suitable means of communication between Sydney and North Sydney might in the future make North Sydney practically part of Sydney? Yes.

381. There is room for a good deal of expansion on the other side of the harbour? Yes, and there will be expansion.

382. You know there is a scheme on foot for the extension of the railway into the city? I do.

383. Would you consider it a very great advantage from the national point of view as well as the North Shore point of view, if the communication with North Shore formed part of the main railway system of the Colony? I would consider it a great improvement as connecting the two systems—the northern and the southern systems by the shortest route, and as carrying right into the city a very large population which is settled and will settle along the North Shore line. But I can see very great difficulties in the carrying out of that idea. The carrying of the railway line along the western side of Sydney will be a gigantic expense. The expensive large buildings on that side of Sydney may block the communication by that route. That is why I think it is folly to say there shall be a railway bridge and no other bridge. Then again the railway bridge may have to be taken in a different direction, say to Blue's Point instead of to Milson's Point.

384. *Mr. Brennan.*] Would you care to drive over a bridge of this length where you would have to meet a railway train? You would not absolutely have to meet a railway train. I would not object to drive over the bridge. If the railway is concealed from view and is well shut off I do not think it will effect the horses.

George Howarth, Esq., M.L.A., recalled and further examined:—

385. *Mr. Brennan.*] You desire to give some supplementary evidence? I do. As I understand this Committee, in taking evidence, is desirous of arriving at a conclusion which will be definite, I purpose confining my remarks within limits of reasonableness, and to avoid, if possible, going over ground already gone over by

G. Howarth, Esq., M.L.A.
6 Aug., 1896.

previous witnesses, and assuming that the Committee is satisfied that a more direct means of communication than that which obtains at present is not only desirable but necessary, I arrive at the question next in importance to this Committee, namely, What should that means of communication be—bridge or tunnel? First, I assume that the Committee having the Bills and the evidence taken before Select Committees on those Bills before it, is acquainted with the provisions of those Bills. That being so, I desire to deal with those Bills in the order in which they came before the House. First, there came the City and North Sydney Railway Bill, in which John Sulman seeks to be empowered to construct a tunnel from Milson's Point to Dawes' Point, and thence under George-street to near King-street for the purpose of running therein an electric tramway. At this juncture I must call the attention of the Committee to the fact that in September, 1895, the Engineer-in-Chief for Railway Construction presented a report on proposed development of the tramway system.

386. *Chairman.*] Could you not state your views briefly to the Committee? I desire to point out to the Committee that in December last Mr. Deane, the Engineer-in-Chief for Railway Construction, prepared a report—which has been circulated—in which he advocated an electric tramway down George-street and thence to Milson's Point by means of a tunnel. He advocated two different roads in order to get from Circular Quay to Milson's Point, namely, one from Dawes' Point and the other from Macquarie Point. Mr. Sulman's tunnel practically goes over the same ground as Mr. Deane's tunnel from Dawes' Point to Milson's Point, while the portion of the tunnel under George-street would enter into competition with the Government electric tram in George-street which has been favourably considered by the Public Works Committee. Again, the roadway tunnel goes over practically a portion of Mr. Deane's tunnel from Macquarie Point to Milson's Point—that is to say, it goes in front of Goldsbrough, Mort, & Co.'s wool warehouse to Macquarie Point, which is a portion of Mr. Deane's scheme. I think this is a matter which the Committee would do well to weigh in considering the tunnel. I wish specially to call the attention of the Committee to all the questions and answers given before the Select Committee on the Railway-Tunnel Bill from No. 82 to No. 102. Although power is asked for in the Railway-Tunnel Bill to construct a tunnel whose internal diameter is not to exceed 12 feet 6 inches, there is nothing in the Bill which would prevent the promoters from constructing a tunnel only 9 feet in diameter, which would be a mere sewer. Again, in clause 29 (tolls for goods and parcels), the promoters ask for power to charge the same rate for parcels as the Railway Commissioners charge for similar distance. The Railway Commissioners make one charge up to 86 miles, so that as a matter of fact the promoters of this Bill are asking for power to charge for carrying a parcel a mile and a half what the Railway Commissioners ask for carrying a parcel 86 miles. Mr. Deane also infers that the tunnel may deteriorate so much in twenty years as to make it almost impossible for the Government to resume it at the expiration of that time. With respect to the bridge, I may point out in the original Bill it was proposed to construct a bridge 150 feet high and that height was increased to 165 feet in order to meet the recommendations of the Railway Commission of 1891. Since then Mr. Darley has suggested that one of the piers should be taken away; that instead of the bridge having three spans and two piers in the water, it should have two spans and one pier in the centre of the harbour. That suggestion was accepted by the promoters of the scheme, and the height of the bridge was also increased to 180 feet. As a practical man, I consider that a bridge 150 feet high ought to be sufficient to meet all the requirements of the shipping in the harbour.

387. *Mr. Brennan.*] You have had to do with the sea? Yes.

388. *Mr. Molesworth.*] Are you in any way connected with shipping? Not at the present time.

389. Have you any knowledge of the height of ships' masts? Yes.

390. Are you aware that there is a ship with a mast over 180 feet in height? There was a vessel here recently with a mast 187 feet high; that is from the water-line to the mast-head.

391. Have you any idea what it costs to house a steel mast? Yes; any ordinary ship's crew could send down not only the three top-gallant masts, but the top masts in one day.

392. Of a steel mast? If it is a mast in one piece you cannot. But sailing ships carry built masts, and it is not a difficult matter to send down not only the top-gallant masts, but the top masts also.

393. *Mr. Brennan.*] Do steel masts go beyond the top masts? I have never heard of steel top-gallant masts in my life.

394. They are all rigged and telescoped? Generally speaking the first-class ships have their lower masts made of steel instead of wood, and their top masts of steel instead of wood. But I dare to say that not one vessel out of ten thousand has a steel top-gallant mast.

TUESDAY, 11 AUGUST, 1896.

Present:—

MR. CANN,	MR. GREENE,
MR. MACDONALD,	MR. MOLESWORTH,
MR. WADDELL.	

JAMES ASHTON, Esq., IN THE CHAIR.

W. F. Brennan, Esq., appeared as Solicitor for the Sydney and North Sydney Bridge and Tramway Bill.

T. B. Dibbs, Esq. (Dibbs and Gibson), appeared as Solicitor for the North Shore Bridge Bill.

E. E. Fosbery, Esq., appeared as Solicitor for the City and North Sydney Railway Bill.

Benjamin Crispin Simpson sworn and examined:—

B. C. Simpson.
11 Aug., 1896.

395. *Mr. Dibbs.*] You are a civil engineer? I am a member of the Institution of Civil Engineers.

396. You have a statement which you wish to read to the Committee? Yes.

Gentlemen,

It is hardly necessary that I should furnish any evidence as to the necessity of improved communication between the city and North Sydney, as the large and increasing population in the suburbs on the north of the harbour make that necessity evident. And, moreover, a bridge has been clamoured for for many years.

Five or six years ago, influential friends of mine asked me to promote a Bill in Parliament for this purpose, but I declined, as I did not think that the traffic to be expected would render such an enterprise commercially sound, more especially considering the expensive character of the single-span bridge then proposed.

B. C.
Simpson.

11 Aug., 1896.

Two years ago, however, this scheme was again urged on me, and I went very carefully into the probable revenue to be expected, and the necessary cost of the works. In that later consideration it occurred to me that it would be, not only much more economical, but desirable, to substitute two spans over the deepwater of Port Jackson for the one that had been before proposed, as the adoption of the two spans instead of one would be a source of safety to navigation by separating the incoming from the outgoing courses.

My second consideration of this scheme convinced me that such a bridge, economically designed, would be feasible as a commercial enterprise, and I prepared a design on the cantilever principle, which I now submit.

The lower drawing exhibited shows the general arrangements of my design, except that I now propose that the deep-water spans shall be 650 instead of 500 feet, as shown here, and that the highest shall be 160 feet above high-water mark, or such other height not exceeding 180 feet as may be required by this Committee or by Parliament, after considering the other public interests involved, as well as those of the ship-owners. The general design comprises cantilevers, each supported on a group of four piers, and carrying central girders 215 feet in length.

Each pier will be constructed in wrought-iron built cylinders, which will be sunk on the rock by means of air-locks. The portions of these cylinders between the mud-line and the rock will be filled with concrete, and will remain as the foundation for the completed pier. The upper part of the piers will then be built, and the wrought-iron cylinders above the mud-line will be removed and used in the construction of other piers.

The steel superstructure is so designed as to be easily constructed, and the larger struts of the cantilever will be cruciform in shape, to allow of repainting and maintenance.

The upper drawing shows the general details of the proposed work. For the sake of lightness the parapet will be of moulded timber, with ornamental iron brackets between the posts.

I have specially designed a new expansion arrangement, shown on this drawing, to allow for the expansion and contraction of the structure, which for a bridge of these spans will be about 8 inches. The flooring-boards at these joints will be fastened on hinged échelons, which will be attached to and carried by steel rails, sliding in these joints of the bridge, so that the maximum variation of 8 inches in length will be divided between sixteen flooring-boards, which will thus have only a maximum space of half an inch between these, in the coldest weather, and will be close together in the hottest. This arrangement is to supersede the ordinary steel arched cover-plate, which causes inconvenience and danger to horses.

In October of last year I published this design in the *Daily Telegraph*, intending to at once apply to Parliament for authority to carry out the work, but I was unable to do so before the prorogation of Parliament.

I propose to suggest to the Committee certain alterations in some details of my Bill, but before doing so I desire to lay before this Committee my reasons for advocating the particular form of road communication described in my Bill, and to do so, I must advert to the various propositions which have been brought forward, to satisfy the undoubted necessity for better communication:—

1. I will take the scheme advocated by the Royal Commission of 1891, viz., one span of about 1,500 feet, having a clear height at the centre of 160 feet.

The expense of long-span bridges increases in a far higher ratio than that of their spans, and such a bridge, with the necessary approaches, would probably cost over £1,000,000. This cost would render a bridge commercially impossible for many years, and also the extra cost is unnecessary, as a dividing pier in the centre would be an advantage instead of a disadvantage.

If the deep water of the harbour were crossed by a single span on the cantilever principle, there would still be only about 350 feet of the centre, having the full headway; and the incoming and outgoing traffic must both pass through that 350 feet, with risk of collision, whereas by the adoption of two spans these courses would be separated, and the consequent economy would be an absolute advantage to the safety of navigation.

2. With regard to a tunnel communication, which has been proposed before, and is now advocated by Mr. Sulman, I do not propose to enter on any adverse criticism of this scheme, but it is necessary for the justification of my own, that I should deal with the general principles of it.

The first scheme advocated by Mr. Sulman, for an electric railway tunnel to connect the city with North Sydney, would undoubtedly supply one want—that of communication to Milson's Point railway-station, but it is open to the objection that this tunnel would occupy the site probably wanted by the Government, should it ever be desirable to carry out Mr. Deane's scheme of a similar railway communication by tunnel.

But it is open to the further objection that it only very partially meets the requirements of the case. It neither provides for foot-passengers nor does it provide for the transit of vehicles, and anyone who uses, as I do, the present horse-ferry service to Milson's Point must realise that the improvement of vehicular communication is an absolute necessity of the near future.

When I published my design in October last I pointed out this want, and Mr. Sulman has since introduced a scheme for a second tunnel for vehicles. I can, however, only consider this proposal as a strategical move, as such a tunnel would involve over 100 feet of extra descent and ascent, and as it could only be kept dry by pumping, must be always damp and unpleasant, and the public would prefer the present ferry, in daylight and fresh air, to a mile's drive in a narrow tunnel, artificially lighted, and with the possibility that that light might fail.

Tunnel communication may be the only practicable mode of crossing a river like the Thames, with low banks, where the approaches to a high-level bridge would be enormously expensive, but it is not, in my opinion, suitable for such a crossing as Sydney Harbour, having high foreshores.

3. I have now to ask you to allow me to comment on suggestions which may possibly be brought before you—that a bridge should be constructed to McMahon's Point instead of to Milson's Point, and that it should be designed to carry a railway as well as a tramway and road.

I entirely disagree with such a proposition, and I think that the Committee will see that I have reason to do so.

It is never a desirable thing for vehicular and railway traffic to pass over the same bridge. It is undesirable, even when the road and the railway occupy separate tiers of the bridge, but in this case such an arrangement would be hardly possible, and it is specially undesirable that road and railway traffic should run over the same bridge side by side. It is hardly necessary for me to comment on the danger of fright to horses on the bridge, or the greater danger at the approaches. Such an arrangement can only be regarded as a make-shift for the sake of economy, and if sufficient width be provided for both road and railway the economy would be very small. In the bridge under consideration there must be three piers and three cantilevers laterally instead of two, and the additional centre pier and centre cantilever must be double the strength of those required for the road bridge. The cost of a joint road and railway bridge would therefore be very nearly equal to the cost of two separate bridges to serve the two purposes.

Moreover, as the railway must be screened from the road traffic, such a bridge would be unsightly and a disfigurement, instead of an ornament, to the harbour.

It must also be remembered that if a railway bridge be ever wanted across this part of the harbour, it will be to connect a future city railway extension with the North Shore railway. As such a connection would greatly shorten the road to the north, all the northern traffic, as well as the North Shore suburban traffic, would pass over this bridge. There would, therefore, be a very large railway traffic, as well as a very large road traffic, and each should certainly have a separate provision. Express trains could hardly travel, at express speed, side by side with vehicular traffic, without endangering the safety of the latter.

Economy was not my reason for the route I have selected. As a matter of fact, the crossing to McMahon's Point would not be more expensive than that to Milson's Point, as any extra cost entailed by the greater length of waterway would be compensated for by the economy of the approaches, as the ground at McMahon's Point is much higher than at Milson's Point.

My reasons for selecting Milson's Point were—(1) That Alfred-street is the main artery of approach from the harbour to the North Shore suburbs, and that a roadway taking this route would serve an area to the east not served by a road to McMahon's Point. (2) That if ever a railway bridge should be required McMahon's Point is undoubtedly its proper point of approach on the North Shore, and I preferred, therefore, to leave this course uninterfered with, and open for the purpose of such a bridge whenever it might be required.

I think, however, that it is a reversal of the proper order of things to construct a bridge to carry a railway, the route and details of which railway are not yet determined; moreover, it could hardly be expected that private enterprise should incur such an extra cost when the requirement of the extra accommodation, and consequent interest on the extra capital employed, may be matters of the distant future.

B. C.
Simpson.

11 Aug., 1896.

4. As regards the other proposal for a bridge which has been submitted before this Committee, I think it is only just to myself and to those who are supporting me in my proposals that I should inform the Committee as to the history of this scheme.

In October of last year, my proposals were published in the *Daily Telegraph*. In the early part of this year, when my notices were published for the second time, Mr. Kenwood, whom I do not know as an engineer, published notices for a very similar scheme, and I afterwards learnt from an outside source that Mr. E. M. Clark, who, as a North Shore Member, had been asked, and, I believe, had agreed to take charge of my Bill, had taken up this second scheme. I will not offer any speculation as to the cause of Mr. Clark's change of intention.

As, however, the main point of originality in Mr. Kenwood's Bill, viz., a single span of 600 feet to take the incoming and outgoing courses, was, in my opinion, its condemnation also, I did not take any trouble to express what I considered to be the other evident technical objections which appeared on the rough sketch, which purported to show his design.

As, however, I see by the alterations in his Bill that he has now abandoned the original element in his Bill, and has also adopted the principle of two spans over the deep water, first designed by me, instead of one, I am compelled to direct attention to other points in his proposal, which may show to Parliament the danger of authorising vague schemes, the details of which have not been thoroughly thought out.

Mr. Kenwood proposes in his Bill that his bridge shall carry a railway. Besides the objections previously pointed out to any joint road or railway bridge, such a bridge to Milson's Point would be an absurdity, as a bridge at the level he proposes would be more than 150 feet over the level of Milson's Point Railway Station, and to make this bridge available for the North Shore Railway, would involve the reconstruction of that railway at a higher level, and at enormous cost.

Mr. Kenwood proposes to erect this bridge on piers of a maximum size of 100 feet by 100 feet, and this maximum size would really be hardly sufficient to give stability to the bridge.

Such piers would not only be an unnecessary obstruction to the waterway, but their construction to the required depth would be so costly as to render the bridge commercially impracticable. The three piers suggested would alone cost nearly £500,000; and the difficulty of constructing such piers in deep water, and through soft material down to rock foundation, would be such as to make them nearly impracticable.

Mr. Kenwood also proposes two spans of 700 feet, each having a full headway of 180 feet for a centre length of 400 feet. To give this length of full headway would again largely increase the cost, and, in my opinion, is an unnecessary expense, which would tend to make this bridge commercially impossible. It is not possible, even with large experience, to estimate the cost of such a bridge without drawings, showing approximately the details required. From the details of my own design the cost of which has been very carefully calculated, I have no hesitation in saying that such a bridge as described in Mr. Kenwood's Bill could not be built for anything approaching to £600,000. I think it would cost £900,000 or £1,000,000. Considering the difficulty and expense of the piers, and the extra cost of the superstructure, I consider from the details obtained by me as to probable revenue that so extravagant a design would not gain financial support.

It is also proposed that the northern pier should abut on the north shore of Milson's Point. Considering the new angle of that foreshore with the line of the bridge, a 100-foot solid pier abutting on the foreshore would cause an obstruction to the steamer traffic to Lavender Bay of about 150 feet. Mr. Kenwood's Bill also provides for the construction and private ownership of a length of tramway intervening between the proposed Government tramway in George-street and the North Shore tramway. In my opinion, this is not in the public interest, as it would involve two changes of carriage. I consider that any bridge that is authorised by Parliament should be constructed so that the Government might lay over it a tramway which would connect the City and North Shore tramway systems, but I consider that it would be a source of great public inconvenience that such a connection should be owned and worked by a private company.

As regards the Bill promoted by me and now before this Committee, and concerning which a report has already been submitted to the Legislative Assembly, I do not propose to report the evidence given by me on the 14th ultimo, as I presume that that evidence is already before this Committee, but I desire to suggest the amendment of the Bill by the alteration of section 18 and the introduction of additional sections, which I now hand in, to provide for any necessary interference with sewers.

I propose to substitute the following in place of section 18:—

"The said bridge shall have two spans of not less than 650 feet clear width, and the centre portion of each of such spans, for a length of not less than 215 feet, shall have a clear headway of not less than feet over high-water mark.

"The general width of the roadways, including pathways, shall be 65 feet. The cantilevers, girders, and cross-girders for such bridge and approaches shall be of wrought steel. Each of the three groups of piers carrying the two water-spans shall be composed of four piers, having an intervening space in the direction of the bridge of not less than 80 feet, and a clear headway over such intervening space of not less than 25 feet above high-water mark. A plan showing the exact situation of the three groups shall be submitted to the Engineer-in-Chief for Public Works, or such other persons as may be appointed by the Governor for that purpose, and shall be approved by him before the commencement of the works."

I have suggested these increased spans, although I do not consider them necessary for the navigation, as they will still undoubtedly improve the bridge; and the borings lately taken by me show that the cost of the piers will be reduced thereby, although the cost of the superstructure will be increased.

I have left the headway of the water-spans of the bridge blank that it may be inserted by this Committee, but I strongly advise that no higher headway than 160 feet above high-water mark should be demanded, for the reasons adduced in my former evidence. Not only would the cost of the bridge be unnecessarily increased thereby, but the interest of the general public, in my opinion, will be best satisfied by this headway.

If the evidence lately submitted to this Committee be correct, as to the number per annum of passengers and vehicles crossing between the city and North Shore, and I believe it to be so, even if, as is unlikely, fifty ships have to strike their top-gallant masts during the year to pass under this bridge, even then, for every ship that is subjected to this slight inconvenience, 100,000 persons and about 7,000 vehicles would have to ascend and descend every extra foot of headway beyond the suggested height of 160 feet which may be required by Parliament. The gradient of the approaches, instead of being 1 in 30 would be increased to about 1 in 15, which is undesirably steep for road traffic.

397. *Mr. Cann.*] Referring to the blank which you have left for the Committee to fill in, would the increase of the height of the bridge to 180 feet involve the abandonment of the scheme? No. When I say that the alterations in the Bill might be such as to make the work so expensive that it would be commercially impossible, I mean even greater alterations than that. There is no limit to the alterations which may be made in the Bill. It may come out of Parliament in such a shape that it would be financially impossible.

398. *Chairman.*] But such an alteration as that would not be sufficiently serious to induce you to abandon the project? No. It would, of course, increase the expense, but after all the increase in the cost would not be enormous. The increase in the cost by the adoption of the extra height is really not so great as the increase in the cost by the adoption of the extra span. The arguments I have used are really more in the interests of the public than in the interests of the promoters of the Bill. I do not mean to say that my arguments are not in the interests of the promoters, for they are. But they are more in the interests of the public. I think that to make this bridge—which will for many generations be a means of communication for a very large population—in a form which would condemn that population to mount and descend an undesirable gradient would be a mistake. This will really be a main thoroughfare in the future, and it is advisable that this thoroughfare should be constructed with tolerably easy gradients.

399. *Mr. Green.*] Do you think the interests of the public are more to be considered than the interests of the owners of the ships which will have to strike their top-gallant masts? I think so. I think that while the mercantile and shipping interests should be considered they should not be considered to the exclusion of the interests of the enormous number of people who would use this bridge. Even supposing that fifty ships have to strike their top-gallant masts during the year; for every one ship that is subjected

to

B. C.
Simpson.
11 Aug., 1896.

to that very slight inconvenience—because after all it is a very slight matter if they know that it has to be done before they discharge their crews—100,000 people will have to climb up and go down an undesirable grade.

400. *Mr. Macdonald.*] And vehicles? About 7,000 vehicles. The figures I believe to be approximately correct. They are taken from the evidence which has lately been put before this Committee as regards the number of passengers and vehicles that now pass by the ferry.

401. *Mr. Cann.*] You estimate that the cost of your bridge will be £400,000; can you give us an idea what additional cost will be entailed by altering the height of the bridge? Yes; I do not think the bridge as designed on the plan on the wall would cost £400,000; I left a margin for safety; but I think the extra height would probably cost nearly £100,000.

402. *Chairman.*] As regards the distances the length of 160 feet which you mentioned in your statement is the length from pillar to pillar; the length of the clear horizontal stretch at the maximum height is only 215 feet, and consequently a vessel with a mast 160 feet high would only have about 215 feet of clear headway? That is so.

403. *Mr. Macdonald.*] I suppose a limitation of the clear headway would be not only the most economical but the safer plan in the case of a cantilever structure? Decidedly so.

404. The stipulation of an extra height of (say) 20 feet would not be so likely to affect the rejection of the measure by the promoters as the stipulation by the Committee of an extra width of span? That is so. I may say positively that any reasonable extra height which was demanded, although I think it would be not in the interests of the promoters, nor in the interests of the public, would not cause their rejection of the scheme from a financial point of view.

405. *Mr. Cann.*] Have you worked out the grades of the roadway at the extra elevation of 20 feet? It would be a little over 1 in 15.

406. Would you be surprised to learn that it has been asserted here on oath that the grades at that elevation would be 1 in 22 and 1 in 25? Well, that depends on circumstances. I should be very much surprised if the length of the bridge and approaches are limited to what I believe to be their length in any scheme which has been brought before the Committee. The gradient is a matter which is affected not only by height but by length. Therefore, it would be quite possible to give the bridge any grade almost with any height; if you can get sufficient height on the shore you are approaching, and you have length for the extension of the approach.

407. That would mean additional cost? It would. It would not be possible within the limits scheduled in my Bill, and I believe it would not be possible in the limits of the other Bill before this Committee, because you could not get down in the space. If you took more ground you would interfere with the Town Hall at North Sydney. It would be impossible for that reason. I shall be very happy to submit the elevations to the Committee, and show Honorable Members exactly what the gradients will be at any level which may be suggested.

408. *Mr. Green.*] Do the drawings on the wall accurately represent the grades? They do. They represent the grade at 150-foot headway.

409. I am looking at the lower plan? Both of them do, but the lower plan gives it generally.

410. *Mr. Cann.*] That would be slightly altered by the increased elevation of 10 feet? Yes.

411. *Mr. Green.*] On that plan how far back from the water-line on the southern side does the roadway continue to rise? On the northern side the distance from the commencement of the down gradient towards Alfred-street to its termination in Alfred-street would be about 1,500 feet. On the southern side it would be about 1,700 feet.

412. *Chairman.*] That is with a height of 150 feet? That would be the distance at any height.

413. *Mr. Waddell.*] In the event of this scheme being sanctioned by Parliament, have you any doubt about your financial ability to carry it out? None whatever. If it is authorised, in the first place a proportion of the capital will be subscribed here, and is already arranged for, and I have several assurances from London that there will be no difficulty in providing capital. It is really impossible for anyone to give a further assurance than that, because I need not tell you that, however easy money may be in London, it is quite impossible for people to enter into a contract to supply money for a scheme, the details of which are not settled. Therefore, until the Bill is actually passed by Parliament, it will be quite impossible to have any actual provision for money.

414. *Chairman.*] Can you now give us the particulars of the grades? It would about 1 in 17½.

415. *Mr. Molesworth.*] That is with 150 feet headway? No; with 180 feet headway.

416. *Chairman.*] Are these grades on the basis of a height of 150 feet? No; 180 feet.

417. On the basis of a height of 150 feet? With a headway of 160 feet, it would only give you about 1 in 23.

418. That applies to both ends? It applies approximately to both ends, because, although you get a greater length at the southern end, you have to drop to a lower level. The reduced level at the point of commencement of my southern approach is 90 feet, and a little over 100 feet on the termination of the northern approach. The gradients would be about the same on the northern and southern approaches.

419. You have touched, more or less definitely, on the possibility of the tramway which may run over the bridge being connected with two systems on the North Sydney and Sydney side? Yes. My bridge is designed so as to enable the Government to lay such a tramway over it if they think it desirable to do so.

420. Where might the connections with the Government line take place? I am afraid my small scale is not extensive enough. From the bridge the southern approach would be along Cumberland-street into York-street, which goes down as far as the Town Hall, and in the space in Druiitt-street, between the Town Hall and the new markets, the tramway might make a reverse curve to join with the proposed Government electric tram in George-street.

421. *Mr. Cann.*] And on the northern side? On the northern side the approach runs up on the side of Alfred-street, and joins Alfred-street just south of the North Shore Town Hall—by the cable-tram. I may say that if that electric tramway is made on the Sydney side, and if this bridge is built across the harbour, I have no doubt that the Government would convert that cable tramway into an electric tramway, so as to have a through traffic. I think Mr. Deane will probably support that view when he gives evidence before the Committee. It would make a through connection with the North Shore tramway system, with the probable ramifications which, under these circumstances, would be added to that system.

422. *Mr. Molesworth.*] Have you seen a petition which has been presented to Parliament by the ship-owners and wharf proprietors praying that the bridge, if constructed, should not contain a less headway than 200 feet, and that it should contain no piers? I have not seen the petition; I have heard of it.

B. C.
Simpson.
11 Aug., 1896.

423. Are you aware that the whole of the foreign and intercolonial shipping which visit this port, except the large mail boats which berth at Circular Quay, will have to pass to the westward of your bridge if it is constructed? I was not aware of that. But I do not think this bridge will offer any obstructions to their doing so.

424. Are you aware that some of the masts of the ships which pass to the westward of your bridge are of a greater height than the proposed height of your bridge? There are one or two ships, I believe, with masts over 180 feet high, but the proportion of these ships is very small, and the inconvenience they are subjected to is so very slight that I do not think that ought to have weight with honorable members against the enormous aggregated inconvenience which would be inflicted on the communities on the two sides of the harbour by having this increased height.

425. Are you also aware that all the dock accommodation of the port is to the westward of the proposed bridge, and that therefore all the ships requiring to go to the various docks will have to pass under the bridge? Yes; but I am imagine that most ships which go into dock do not go with their top-gallant masts standing.

426. What about those vessels which have their masts all in one piece? I believe there is an Orient boat with a steel mast of 134 feet, but that, you see, would not be obstructed by a bridge of 160 feet.

427. *Mr. Macdonald.*] Surely it is a telescopic mast? I do not know. I have heard that one of the Orient boats—and only one of them—has a mast of that height.

428. It has been stated that a vessel has been in this port, if she is not here now, with a mast of 180 feet all in one piece? I quite admit that there may be one such vessel with an extraordinary mast; but I think it would be a smaller interference with private rights to shorten that mast by a few feet than to cause some hundreds of pounds to be spent in building a bridge with that extra height.

429. *Chairman.*] Were you aware that there were so many vessels as are shown in this Parliamentary return with masts known or believed to be over 165 feet long? No; but I am not surprised to hear that there is this number. There are only twenty-six here.

430. *Mr. Molesworth.*] Most of these vessels are regular traders to the port;—some of them come twice and others three times a year? Some of them may come twice a year, others may not come at all.

431. This is a list of ships which were in the harbour during the past twelve months? Assuming that they were, and that the ships will come here twice a year, I have estimated a greater number. In my calculation I say that fifty times a year a ship would have to strike her top-gallant masts.

432. I understand that the clear headway of 160 feet in your proposed bridge only extends for a distance of 215 feet? Yes.

433. Then, in the event of a strong wind blowing, would there not be a liability of collision between the cantilevers of the bridge and the masts of the ships? I think 215 feet is a very large span to allow of a ship going under the bridge, more especially as the big ships are always tugged by a steamer.

434. Could not the bridge be constructed on some other principle, so as to do away with these cantilevers? It would make the bridge much more expensive.

435. Would it make the bridge commercially impossible? I think it would.

436. *Mr. Macdonald.*] I suppose the only other principle which could be used is the suspension principle? There are various other principles. I may say that before I arrived at a decision I had at least half a dozen designs prepared for the sake of determining economy, and I have no hesitation in saying that that is the most economical design which could be adopted for this bridge. It seems to me that 215 feet is an ample span of full headway to allow these ships which trade to the harbour to pass under the bridge, but you may perhaps get other evidence on this point which may be more convincing to you.

John Patterson sworn and examined:—

J. Patterson.
11 Aug., 1896.

437. *Mr. Brennan.*] You are a ship's rigger? Yes.

438. I suppose, in the ordinary course of your calling, you have occasionally to strike the top-gallant masts of ships? Yes; and sometimes I have to lift them back.

439. How long will it take you to strike the top-gallant mast of a ship of 1,500 tons, with the officers and crew of the vessel working under your direction? I should give them six hours.

440. You are dealing with the modern style of rigging ships? With wire ropes; the same as ships are usually rigged with now.

441. Will you state the greatest height from the water-line of any topmast-head you have had to do with in Sydney harbour? I will give you a ship of 2,000 tons; a ship of that tonnage is a very lofty ship, with top-gallant sails, royals, and skysails. From the deck to the truck is 166 feet. I think you will find in the case of ships of that tonnage, their average light-water free-board—that is, in shifting trim, not in sea-going ballast trim—is 18 feet. It is 184 feet from the water-line to the pole above the skysail.

442. *Chairman.*] Are there many ships of that height? That is as lofty a one as I know.

443. *Mr. Brennan.*] Are there many ships of that height which you have had to do with in Sydney Harbour? The difference in ships' top-gallant masts varies a good bit. In the lower masts and top-masts—that is, clear of the top-gallant mast you will find 106 feet is a good average.

444. *Chairman.*] What is your estimate of the cost of striking the top-gallant mast to enable the ship to get under a bridge 160 feet high? I should charge £12 for the three masts.

445. Would the work be carried out by the ship's crew under your supervision? No; I would provide all the labour.

446. What would it cost to put them back? In that estimate I include the cost of putting them back in the same position.

447. Are there any ships with masts of the height you mentioned, where it would not be possible to send the top-gallant masts up and down? No. All top-gallant masts are made to go up and down—they must be.

448. *Mr. Green.*] Could not this work be done easily by the ship's hands? Certainly.

449. In that case, what would be the cost? Suppose a ship has a crew of sixteen hands and two officers, I would give these eighteen persons five or six hours, because they would be longer than my men would be. Putting down the wages of the men at 2s. a day, that is 32s., and putting down the two officers at 5s. a day each, that is 10s.

450. *Chairman.*] I suppose, as a matter of fact, it would not entail any extra outlay on the shipowner—the crew would do the work in their ordinary time? Of course they would.

451.

451. *Mr. Brennan.*] What would you charge to supervise work of that description? If the captain supplied me with a competent crew, and the officers supplied me with the gear I required, I would charge £1 a day to supervise the work. J. Patterson.
11 Aug., 1896.
452. A ship reaching this port takes up her moorings in the vicinity of Pinchgut as a rule? At Watson's Bay, Garden Island, or somewhere down the harbour.
453. The ship has to clear the Customs? Yes.
454. A ship generally is a couple of days at her moorings? Very often; before she berths at a wharf, or before she has a berth to go to.
455. What are the deck-hands doing during that time? On a ship of that class the deck-hands have no cargo-gear to rig; it is all done by stevedores. If the ship was going to have a very long stay in port in all probability they might unbend the sails.
456. The crew are available, if required, to lower the top-gallant masts? Yes; that is their work.
457. *Mr. Green.*] Do you think, in the ordinary business in which these ships are engaged, it would put the mercantile community to any great loss if the captains were required to take down their top-gallant masts? No, I do not.
458. It would not cause any appreciable delay or loss? Nothing at all.
459. *Mr. Molesworth.*] If they were compelled to lower their topsails in the way you suggest, would it not cause a day's detention? No.
460. It would mean six hours' break into a day of eight hours;—have you any idea of the value of the demurrage if a ship of 2,000 tons is detained a day? I have an idea; but, of course, that is not my business.
461. We are trying to ascertain what is the possible loss to the owner of a ship if her captain has to lower his topgallant masts? If the ship comes up to an anchor it causes no loss of time; while the captain is getting the ship entered at the Customs-house and making arrangements with the stevedores and his agents to see what berth the ship is going to. She might unload at the Circular Quay, or she might have to go up to the top of the harbour.
462. Are you not aware that for the most part ships' berths are arranged before they leave the loading port in the United Kingdom? They cannot do that. The consignees of a ship here have another ship at a certain berth, and they cannot determine that they will have that berth clear when the other ship will arrive here.
463. *Chairman.*] Would your business be materially benefited by an increase in the number of ships which had to strike their top-gallant masts? I really do not think so; because very few ships which come here would employ riggers. I fancy they would do all the work with their own crew. They would not employ me at all.
464. *Mr. Macdonald.*] You say that a ship of 2,000 tons with a very high mast would measure 184 feet to the truck—that is, to the top of the sky-scraper? I am sure of that.
465. It would be impossible to lower the sky-scraper or the royal without having to lower the top-gallant masts? Just so.
466. You say with a 2,000-ton vessel you would have to have very high masts indeed for the truck to be 184 feet above the deck line? She would be a very lofty ship.
467. Do you know of any ship that has one mast without any break from the deck-line up to the truck—that is, a ship which has the lower mast, the topmast, the top-gallant mast, the royal and the sky-scraper all in one piece? No.

Sir William Patrick Manning, Kt., sworn and examined:—

468. *Mr. Fosbery.*] You have been a Member of Parliament as well as Mayor of Sydney? Yes.
469. You are now an alderman of Sydney? Yes.
470. You know something, I believe, of the various schemes proposed to afford better communication between Sydney and North Sydney? A little.
471. Do you know that Mr. Sulman has a scheme before the Assembly to construct an electric railway and also a vehicular tunnel? Yes.
472. Will you favour the Committee with your ideas as to the possibility of financing these two schemes? Before I went to England I was waited upon by a gentleman in Sydney, who showed me some plans connected with this scheme of tunnelling, and said it was probable that I would be seen in London about it. I did not pay much attention to that gentleman or to his plans, because I was not going to England to bother myself about this matter. I said that if I was spoken to in England I would give my advice on the question as far as I could there. In England I was waited upon by an engineer and another gentleman. They informed me that Mr. Greathead, an eminent engineer, was engaged upon the plans and specifications of a scheme of tunnelling, and that he was an engineer of very great eminence, who made a speciality of this kind of business there. I asked if Mr. Greathead had been placed in possession of full information with regard to the strata under the harbour of Port Jackson, so that whatever knowledge he might have at home would be supplemented with a knowledge of some peculiar difficulty that might exist under this harbour. I was informed that all that had been gone into. They asked me if I would interest myself in assuring people that financially the scheme would be a payable one. I declined to do so, because I had not then gone into the matter very fully. I was very much engaged on other things, and I could not give this matter consideration. I said that if the plans were submitted to me out here, and the scheme again explained to me, I would give the matter attention and advise upon it. The result of that was, that when the plans came out here they were submitted to me, and the whole scheme was explained to me. I have no hesitation in saying, having regard to the traffic across the harbour, that financially it would be a good scheme, and I do not think there would be any difficulty in getting the necessary capital to carry it through. In fact, I should not mind undertaking the matter myself.
473. *Chairman.*] It is not solely on the strength of the assurances these gentlemen in London gave you that you make that statement? Not solely. I am of opinion myself that it is likely to be an absolutely profitable adventure in the immediate future. Of course, you do not expect these things to pay straight away. I think it would undoubtedly pay, and that there would be no difficulty in getting the money.
474. *Mr. Molesworth.*] Do I understand you to say that you would have no objection to finance the scheme yourself? I would undertake the arrangements for financing it. I may say that with the advantage

Sir W. P.
Manning.
11 Aug., 1896.

Sir W. P.
Manning.
11 Aug., 1896.

- advantage of Mr. Greathead's name in London, and the recommendation of business people here competent to judge in this matter, there could not be any difficulty about the financing of the scheme.
475. *Mr. Green.*] Does this apply simply to Mr. Sulman's scheme of two tunnels or does it apply to any other scheme? It applies only to the scheme of the tunnels, because I have not interested myself in any other schemes.
476. *Chairman.*] Any other scheme would not have the assistance of Mr. Greathead's name? I do not think it would. That is a mere conjecture of mine, of course.
477. I suppose if he takes a peculiar interest in tunnelling projects that would be so? Yes.
478. *Mr. Molesworth.*] Up to the present, you are in no wise interested in the proposal, I presume? No.
479. *Mr. Fosbery.*] The mere fact that Mr. Greathead had prepared these plans and approved of the scheme would, by reason of his position at home, add very great weight to the matter, and would assist the financing? Undoubtedly; but it would not be sufficient, because the business aspect as to income and expenditure would then come in.
480. The mere fact of Mr. Greathead's name being connected with the scheme would carry great weight? It would guarantee its being accepted eagerly, I think.
481. *Mr. Cann.*] It would guarantee its being investigated? Yes; because the business aspect of the question would come in. The financiers would, say "It is all very well as regards the scientific part of the thing. We want to know if it will pay."
482. *Mr. Molesworth.*] Do you know whether Mr. Greathead had a complete estimate of the probable cost? He had not completed it when I was in England.
483. You have not heard whether he has completed his estimate of the cost since then? I heard that he had; but I do not know what the amount is.

Tom Rolin sworn and examined :—

T. Rolin.
11 Aug., 1896.

484. *Mr. Fosbery.*] You are a barrister-at-law? Yes.
485. You have been a member of the North Shore Connection Committee? Yes.
486. You know something of the four schemes before Parliament for providing a better means of communication between Sydney and North Sydney? I know something of them.
487. Will you state your ideas with regard to the merits of these schemes as affecting the population residing along the Government railway line? I should state that I reside at Lindfield, and I am President of the Progress Association in that suburb. Speaking for myself, and I think representing the feeling of the people settled along the railway line, what we want is a bridge which will give us railway communication; and if we cannot get a bridge which will give us railway communication, my own view is, that we do not want a bridge that will not give us that advantage, and which at the same time will block a chance of our ever getting a bridge which will do so, because I think we are not at all likely to get two bridges across the harbour. That is my view, and I think the view of a large number of residents along the railway line. We feel that not only the present residents, but the increase of population which will take place along the railway line are entitled to some consideration.
488. I suppose you are aware that the two bridge schemes which the Committee is dealing with do not provide for railway construction? I believe not.
489. Will you, from the point of view of convenience to the residents along the railway line, contrast this underground electric tramway with the proposed bridges, as regards rapidity and facility of approach by railway passengers? I am afraid I have hardly sufficient data to make a contrast. As far as Mr. Simpson's bridge is concerned, my knowledge is only derived from what I heard on the sub-committee appointed by the mayors and aldermen of the North Sydney boroughs. With regard to his bridge, I do not recollect hearing of any provision for lifts to meet the railway passenger traffic at Milson's Point. As far as Mr. Kenwood's scheme is concerned, I believe it made some provision for lifts. I pointed out to Mr. Kenwood, when he was good enough to wait on me and show me something of his scheme, that it did not provide, to my mind, for getting away such traffic as the railway traffic at a sufficiently quick rate. Say there is a maximum of 400 passengers in a morning train to Milson's Point railway station, Mr. Kenwood's lifts for raising the passengers to a bridge between 150 feet and 180 feet high do not seem to provide for getting away these 400 persons in less than, perhaps, ten minutes.
490. We propose to have large lifts down to our railway platform and to run without any hitch to the corner of George and King Streets in four minutes;—do you think that is a means of communication which would offer facilities to these railway passengers? I think that would be a fair facility. The main question is to get the passengers from the railway station to the tram, and you have to deal with 400 people arriving at one time.
491. I may tell you that we have already given some evidence to the Committee as to the mode in which the people coming from the Kennington Oval are dealt with by an underground railway? I have not heard of that. Taking it that a train runs in with six or seven American cars approximately full, Mr. Sulman's suggestion, as he told the sub-committee, I think, is that we should have four cars waiting to carry that train-load away at once and four cars to run five minutes afterwards.
492. *Mr. Sulman.*] Two trains of four cars each? I did not know that that was so. Then it depends on the facility for getting the people down in the lifts. It would be unsatisfactory to my mind if half the train-load had to wait between five and ten minutes on the railway station before they could get into the lifts. And it would be equally unsatisfactory if they had to wait before they could be raised to a bridge. Rather than wait five minutes, I think they would probably travel by the steam ferry. If we can get a first-class bridge, with provision for traffic as good as the suggested tunnel, I think we are all in favour of a bridge. I think we would rather be carried in the open air than in a tunnel.
493. *Mr. Molesworth.*] To sum up your evidence, I presume you prefer a bridge, if you can get a first-class bridge, and if you cannot get a first-class bridge you would rather not have a bridge, because you are afraid it would block the erection of a first-class bridge in the future? More than a tunnel would.
494. *Chairman.*] Are the people whom you represent interested very much in the vehicular traffic question? Not so much. The people I am in contact with are business men who travel to and from the city.

Norman Selfe, M.I.C.E., M.I.M.E., sworn and examined:—

495. *Mr. Fosbery.*] You are a member of the Institution of Mechanical Engineers and a member of the Institution of Civil Engineers in England? Yes.

496. You have had considerable practical experience in both branches of the profession? I have.

497. You have had an opportunity to travel round the world? In 1884 and 1885 I travelled round the world observing engineering structures in Europe and America.

498. You know something of the schemes before Parliament for providing a better means of communication between Sydney and North Sydney? I know nothing about them but what I have seen in the press. I have seen illustrations of the different bridges and tunnels proposed.

499. You know that there are two schemes for bridges, and a scheme for an underground electric railway, and a scheme for a vehicular tunnel? Yes.

500. I understand that for some years past you have taken a little interest in this question of providing a means of communication to North Sydney? I have taken an interest in the question for a great number of years—ever since Mr. Henderson made his proposal many years ago. I have only taken a very active interest in the question since the appointment of the Royal Commission on the city railway extension, when I was deputed by Sir Henry Parkes to go into the matter. I gave evidence before that Commission.

501. Will you state your views on the matter as regards the traffic and the means of dealing with the traffic? My views are very simple. I hold that in the immediate future the Government will have to connect the railway systems on the two sides of the harbour; and my attention having been more particularly directed to this railway aspect of the connection, I came to the conclusion six years ago (after a close examination of the question of a tunnel or a bridge) that for railway communication a bridge is the only thing advisable. I have, therefore, made designs for bridges—one to carry ordinary road as well as railway traffic. The ground is very high where the railway now is, above McMahon's Point on the northern side; and if we connect thence to Wynyard-square it would there be from 60 to 80 feet above sea-level. It would, therefore, require impracticable inclines to get a direct connection below the water; but a railway connection with Sydney can be made by a bridge without interfering with the ruling gradients of the North Shore railway line. I still believe that a road and railway bridge should be, and will be, carried out by the Government to McMahon's Point; but I am rather opposed to a bridge at Milson's Point being erected that would set the more important structure back for any time, and I do not think a bridge is the best means for meeting what we may call the local traffic of the "Shore"—that is, the traffic close round the Circular Quay district, and the Milson's Point district. For that particular service, what you may call the Shore traffic—as distinguished from the long-distance traffic—I think a tunnel presents many great advantages.

502. The tunnel would also benefit the people coming in by the Government railway? I come in by that railway, and, of course, it would be more convenient with the present railway arrangements to have a tunnel from Milson's Point than to have a bridge.

503. *Chairman.*] Why? Because the bridge from Milson's Point would have to start right up by the Council Chambers, and the tunnel would start from the present railway terminus. The railway bridge I spoke of may possibly go over McMahon's Point, and strike the railway at Bay Road station, so as to keep all on high ground. If arrangements are made to take the railway passengers crossing by the bridge up and down by lifts at the station, it puts the two schemes very nearly on equal terms for connection with a tramway.

504. *Mr. Fosbery.*] Except as regards the point of speed;—an underground electric railway would be able to deliver passengers more quickly at this side than a bridge? It would. I am rather an enthusiast about the appearance of the harbour. I think one bridge should not if possible clash with another. I think twenty people might put tunnels under the harbour without interfering with anyone. But if a private bridge was put across the harbour, it would interfere with the Government scheme by putting it back, and the two bridges might not harmonise with one another. That is, no doubt, a sentimental objection rather than a practical one; but still we have to study all these things.

505. You know, from experience, that underground electric railways and vehicular tunnels are being considerably availed of, particularly in London? Yes. The only one I have been through is the Tower subway, but I am thoroughly acquainted with the details of the most recent ones, right down to that at Blackwall.

506. Does that leak? I never noticed it. I do not think so. If it did they could very soon stop it. There is nothing easier than to stop leaks in these modern tubular tunnels.

507. Is it unpleasant or damp in any way? No; that was only a footway. There was no trouble taken to paint it. If these tubes are lined, as they may be, you can make them just as cheerful as you like.

508. The lighting and ventilating are matters of the greatest simplicity? Since they have taken to travelling only one way through these tunnels the ventilation problem has practically been solved. In the Metropolitan and District railway of London the ventilation is very bad. The ventilation is mixed up by the trains going in opposite directions, and in the worst places they have large fans. When the traffic runs in one direction only, and the carriage practically fills the tube, it is like a piston going through a pump-barrel, and simply sweeps the whole volume of air out before it, while a fresh volume of air comes in behind. With electric traction also there is no polluting of the air by sulphurous fumes such as are given off from coal-burning engines.

509. The two railways you speak of are driven by steam? Yes.

510. That is unpleasant? It is.

511. That would not apply to electric traction or to cable traction? That does not apply to the South London, Clapham, or Stockwell railway at all.

512. Were you invited to take part in any scheme to provide any means of communication with North Shore? I was invited to take part in a scheme, but I had an objection to anticipating the Government scheme. There was also another bridge in the field at the time.

513. Have you any objection to state who approached you in the matter? The member for the district introduced some gentlemen to me; but unless the Committee require it, I do not think I should divulge private matters here.

514. *Mr. Molesworth.*] You spoke about the means of access to the tunnel;—do you know anything about the details of the Brooklyn Bridge? I have a plan of them. I have been over the bridge a good many times.

11 Aug., 1896.

N. Selfe,
M.I.C.E.,
M.I.M.E.
11 Aug., 1896.

515. Do you know anything with regard to the working of the Brooklyn Bridge? No; only in regard to the working of the tramway. The trams practically never stop on the bridge. When they come to the end they turn round with a very large loop. The platform of the bridge is like a double-decked arrangement. The part where the tram goes through is like two tunnels.

516. It is stated that for a very long time after the bridge was built a large portion of the vehicular traffic went across the water in the steam ferry-boats? I am not quite sure on the East River how many ferry-boats there are, but I should think there were about twenty ferry-boats as well as the bridge. New York had over 2,000,000 of inhabitants, and on the Brooklyn side there was a population of over 1,200,000. The Navy yard lies over on that side. There is an immense traffic between these big cities. I am not at all surprised that there should be ferry-boats as well as the bridge.

517. As regards the district lying between the approach to the bridge and the water on either side, it is stated that a person with a loaded vehicle in any part of that district prefers to go across the East River by the ferry-boat rather than pull up the hill to the approach of the bridge, and go across by the bridge. There is a shore span of the Brooklyn Bridge which is over 100 feet high, passing above the tops of the houses. It is a span of about 900 feet.

518. Do you think that anything of the same kind would be likely to occur here;—would not a tunnel be more advantageous to a certain class of traffic than a bridge? I think that the tunnel would be much more available for the traffic immediately round Milson's Point.

519. With regard to the passenger traffic, there would be little advantage one way or the other between getting off and on to the bridge, and getting up or down to the tunnel? No; except that of course you would start right at the end of the tunnel, whereas you would start more in the middle of the bridge, practically to go up from the water's edge. I think it would introduce some serious problems to have lifts half-way up the bridge. You would have the traffic from Milson's Point joined in a long way from the commencement of the bridge.

520. Indicating a plan, do you think that the cantilevers on the bridge would interfere seriously with the traffic of the harbour? In the designs I have made I have given a great deal more head room than is shown on the plan here. I have not started to come over until the pier was 100 feet above the water. If the cantilevers project from the water-line it makes the bridge a much more economical one to build. I think the harbour there is wide enough for 100 times the traffic which now comes up. If the height under the bridge spans is sufficient in the middle, of course vessels can be steered to clear the sides, but these cantilevers, projecting booms, or struts, as they really are, would be liable to be fouled by a vessel passing. The plan I first submitted had steel piers, but I have since come to the conclusion that any bridge should have solid masonry piers right up, so that even if a 2,000 ship was to run against it, it would only be so much the worse for the ship, and the bridge would not be interfered with. I think now the bridge should be made with solid masonry piers. If a pier had 20,000 tons of stone in it, and a 2,000 tons ship collided with it, it might damage a few stones, but it would not damage the bridge; whereas a braced metallic structure would be liable to destruction with such a collision, not that I think the risk of damage in that way is very great.

THURSDAY, 13 AUGUST, 1896.

Present:—

MR. CANN,		MR. MACDONALD,
MR. MOLESWORTH,		MR. WADDELL.
JAMES ASHTON, Esq., IN THE CHAIR.		

E. Fosbery, Esq., appeared as solicitor for the Sydney and North Sydney Railway Bill.

W. F. Brennan, Esq., appeared as solicitor for the Sydney and North Sydney Bridge and Tramway Bill.

T. B. Dibbs, Esq. (Messrs. Dibbs and Gibson) appeared as solicitors for the North Shore Bridge Bill.

Thomas Forster Knox sworn and examined:—

T. F. Knox. 521. *Chairman.*] Do you hold an official position in connection with shipping? I am Managing Director of Dalgety & Co. (Limited), and Chairman of the Wharf Association.

13 Aug., 1896. 522. You understand that there are two schemes for connecting Sydney with North Sydney by a bridge? Yes.

523. What effect do you think a bridge will have on the shipping in the harbour? It depends upon where it comes from.

524. Each proposal is to construct a bridge from Dawes Point to Milson's Point, and the point on which there is most controversy is what should be the maximum headway? I think the effect it would have on the traffic of the harbour would depend on the height of the bridge.

525. How high do you think it should be? There are vessels coming here to my knowledge which would want a headway of 200 feet.

526. Are there many vessels with masts 200 feet long? There are a few which I could mention. The "S. D. Carlton's" mast is 200 feet from the water-line in ballast trim. The "Langdale's" mast is 194 feet, and then they run down to 170 feet, perhaps. All the private wharfs are to the west of the proposed bridge. Circular Quay and Woolloomooloo Bay would not be able to take the sailing vessels, if they could not get up past the bridge. Of course, they could strike their top-gallant masts, which would be an expense.

527. Would that be a serious matter? That is a question I would rather you put to some of the captains—for instance, to Captain Henderson, the master of the "Samuel Plimsoll."

528. *Mr. Molesworth.*] He has not a very long-spar ship? No; but he is a practical man.

529. *Chairman.*] With regard to the top plan of Mr. Kenwood's bridge, you do not think that the presence of a single pier would be any impediment to the traffic? I do not—not more than Pinchgut would be.

530. *Mr. Molesworth.*] The bottom plan is the plan of a bridge to be constructed on the cantilever principle at the span, 700 feet at the top from pier to pier, and a clear headway of 215 feet between the struts? I think the wider it is clear of the struts the better.

531.

T. F. Knox.
13 Aug., 1896.

531. *Chairman.*] Do you think a bridge constructed on the cantilever principle would be a serious impediment;—there would be a clear headway of 215 feet, and you can see the extent of the obstruction? My principal objection to either of the proposals is that I think the bridges should be high enough to admit of a ship coming in without having to strike her top-gallant masts. This is a most expensive port as it is. It is terribly handicapped with pilotage dues and harbour dues, and every expense you add to a ship only makes matters worse for the ship-owner.
532. *Mr. Waddell.*] What would be the probable cost of a ship striking her topmast? That I cannot say, except from hearsay.
533. *Mr. Molesworth.*] It would require a height of 200 feet to meet the requirements of vessels? Yes.
534. It is a fact that all the wharfs, except those at Circular Quay and Woolloomooloo Bay, are situated to the westward, and that all the ships would have to pass through the bridge? Yes; and every year there will be less accommodation at Circular Quay for sailing vessels.
535. It is now monopolised by the large mail-steamers? Still there are some sailing vessels there. Woolloomooloo Bay is unsuitable for sailing vessels, because cargo would have to go too far up to town. It is not near any of the bonds or storés.
536. Is it not a fact that the berthing-places of ships are fixed before they leave London? In nearly every case.
537. In most cases these berths are situated above the site of this bridge? In every instance, except Woolloomooloo and Circular Quay.
538. Is it a fact that all the docking accommodation is situated to the westward of the bridge? Yes.
539. Have you any information to give as to the effect the construction of the piers will have on navigation? I think Mr. Kenwood's scheme of bridge is preferable to the other. It provides more head-room.
540. The only information you have to give in regard to the bridge is that the height should be 200 feet, in order to enable ships to go under the structure? I think it should be at least 200 feet high.
541. And you think the piers should be so arranged as to offer the least possible impediment to shipping? Exactly.
542. If it is so built, you do not think it would be a serious obstruction? I do not think it would. As a matter of fact, the ships are all towed in and out.
543. *Chairman.*] Do you think that more than one pier would be an objection? I cannot see any objection to the pier shown in Mr. Kenwood's plan. The ships are nearly always brought in by pilots. If not, the captains are exempt.
544. This is a smaller plan of the lower bridge, showing three piers in the water? I do not see how it would be any impediment if it has two 600-foot gaps.
545. Provided that the headway was sufficient, you do not think that three piers would constitute any impediment? I do not think they would.
546. *Mr. McDonald.*] The reason why you suggest the height of the bridge ought to be 200 feet is because it would enable all the vessels you know of to pass under it? That is true.
547. And if it was only 180 feet high, do you not think it would be a very small percentage of vessels which would have to strike their topmasts compared to the number that come to the port? I think you should look a little bit ahead. The tendency is to increase the size of ships, so as to work them more cheaply. They either put four masts in the ships, or, in the case of a great many American ships, they have very long masts.
548. Do you not think that the percentage of vessels which would have to strike their top-gallant masts at a height of 180 feet is very small in comparison with the traffic in the port? Of the vessels I have mentioned the heights are 200 feet, 187 feet, 180 feet, 182 feet, and down to about 170 feet.
549. In reality you only know of six vessels which go above 180 feet? That is all I know of at present.
550. And in any case only the top-gallant mast would have to be struck on any ship to go under a height of 180 feet? So I should think.
551. *Mr. Fosbery.*] Do not the tugs sometimes have to stop, and does not a heavy ship often take command of a tug, and would there not be a danger of a ship by the sweep of the tide in that narrow fairway colliding with the pier in the middle? I do not think I am competent to give an opinion on that point. I do not think the piers would be a serious detriment to the harbour, but I could not speak of the effect of the tide.
552. If a heavy ship took charge of a tug, would not the pier in the centre of the fairway be an objectionable feature? I should not think so with that space between the piers.
553. Would not that be aggravated in the case of a bridge with struts? There is more risk with struts than without them.
554. If ships have to strike their topmasts and put them up again, would it not be likely to lead to maritime difficulties, owing to the extra labour it would throw on the crew? I feel sure it would not. It would be done in the stream before or after the ship left the wharf. If it had to be done at the wharf it might cause a little feeling, but I do not think any importance is to be attached to the work when you consider that it has to be done out in the stream prior to berthing or sailing. I am not competent to say whether the crew can or cannot do this work.
555. I suppose we may take it that, speaking as a representative of the wharf-owners, you have some knowledge of their views on this subject? I have not. I received the subpoena yesterday morning, and I have not discussed the matter with the wharf-owners.
556. As a means of communication with North Shore you think a tunnel would be preferable to a bridge from a wharf-owner's point of view? I do think it would.
557. Do you think a bridge less than 200 feet high would be prejudicial to the shipping interest? I do.
558. *Mr. Brennan.*] Is the Hon. James Dalton a member of your Board? Yes.
559. Would he be competent to speak as to the opinions of your Board? I would have very great pleasure in calling the Board together, and asking them if they would like severally to express their own opinions, or would like the Secretary or myself to attend on the Committee?

John

John Sulman sworn and further examined:—

J. Sulman.
13 Aug., 1896.

560. *Chairman.*] I understand that you desire to make a statement to the Committee? I do. In the examination of the tunnel and bridge schemes some points have arisen, on which I wish to tender further information, and I will, with your permission, summarise it in short statements under different headings. Mr. Simpson stated that the Vehicular Tunnel Bill is simply a strategic move to get the Electric Railway Bill through. This I most emphatically deny, and reiterate my offer to accept the Bills as inseparable. The width of the tunnel roadway under the water is 21 feet clear of the kerbing. This will admit of three vehicles of ordinary size, or two of the largest size, passing one another easily. The long approaches are 25 feet in width. As to numbers passing, I may instance London Bridge, where 4,000 vehicles pass every hour in four lines of traffic, so that the tunnel will carry at least 2,000 per hour, or double the number likely to pass in the whole day. The largest vehicle likely to pass is a fully loaded wool-dray, 8 feet wide by 14 feet high, or a furniture van, 8 feet wide by 10 feet high, of which I submit a drawing. There is no possibility of failure of the electric light, as stated by two witnesses, for the alternate lamps would be on two separate circuits, so that if one fails the other will serve till repairs are effected, or incandescent gas lamps can be used instead of electricity, if preferred. The question of grades has received much attention, and having again gone into this matter, I can offer a minimum grade of 1 in 25 everywhere by a slight diversion of the line of route. This is half as easy again as the 1 in 17½ given by the bridge approach. The bridge at 180 feet above high-water mark is in height double the depth of the tunnel below, which is only 90 feet, thus causing double haulage on steep grades (1 in 14 in Alfred-street) for loads (mostly heavy) from store to store at water's edge, with at least double the distance. The railway traffic is increasing rapidly, and in a short time I estimate that the population from St. Leonards to Hornsby will exceed that in St. Leonards and around the shore now served by tram. To the railway passengers a road bridge would be useless, as even the ferry would be much quicker and more accessible. Mr. Simpson professes to provide a lift, but does not show where it would be placed. Mr. Kenwood shows one, but it is 100 yards away up the steep hill from the railway station. Arrived at the top, Mr. Simpson has no means of conveying passengers across, and Mr. Kenwood only the ordinary street tram, of which at least twelve cars and dummies would be required to deal with a single full train-load of passengers. The absolute incapacity of the bridges to deal with railway traffic is thus proved. The electric railway will have two trains of four (or more) cars each in waiting, and despatch same immediately on arrival of a train, and thus afford railway travellers as well as tram passengers an adequate service, and quicker by nearly fifteen minutes than the ferry or by twenty minutes than the tram over the bridge. May I ask your attention to the fact that the electric railway has scarcely even been referred to by the advocates of a bridge, thus showing that it is unassailable. As a further testimony to the efficiency of electric railways, I beg to draw your attention to the article in the *Herald* of 5th August (extracted from the *St. James' Gazette*), describing the Central London Railway, which will have a traffic of fifty to sixty millions passengers per annum, and is capable of dealing with eighty-five millions. My proposal is, therefore, clearly ample to deal with five millions. There is only one possible site for a bridge between Sydney and Milson's Point. If that is monopolised by a road bridge only, it would prevent for all time direct railway connection between the opposite shores unless the Government resumed it, paid for it, pulled it down, and built a bridge strong enough to carry a railway as well as road traffic. If the railway bridge is built to McMahon's Point the Sydney end requires the same starting-point as a road bridge, and hence the same objection occurs. If this engineering difficulty could be got over there would still be the absolutely fatal effect of the two bridges on Sydney as a port. The tunnels, on the other hand, do not prevent a proper bridge being built, or even a number of tunnels. Both bridges have an obstruction pier near the Milson's Point railway station, which, if sanctioned by the Government, would in one case absolutely, and in the other very seriously, block the fairway to the Ferry Company's wharf, and this being freehold, would lay the Government open to a heavy claim for compensation. The estimated cost of each bridge is, I believe, quite inadequate to carry them out; and, moreover, the sums stated are for construction only, and do not represent the total capital on which interest would have to be paid, which would be considerably higher. Both bridges are of cantilever construction, hence seriously interfere with the clear headway for shipping. A proper bridge—and this only should be allowed—can be constructed on the stiffened suspension principle (as at Brooklyn), with a practically clear headway throughout. I went most thoroughly into the question of a bridge before I took up the tunnel schemes, and, in addition to the objections from the shipping point of view, I had to abandon it, as I found it could not pay interest on the outlay. Mr. Simpson depends on vehicular traffic, which, according to Mr. Russell, Chairman of the North Shore Ferry Company, amounts to less than one-third of £20,000 per annum—that is, less than £6,666 per annum (see letter in *Herald* of 7th August). Mr. Kenwood has a tram in addition, but it would not take one-tenth of the traffic, as the line would not serve railway passengers, whose destination is the business part of the city from Circular Quay to Hunter-street or eastwards thereof. A bridge, therefore, cannot possibly pay, and, consequently, no company could be formed to construct it. The Brooklyn and Forth Bridges have been frequently referred to as examples. The Brooklyn Bridge is 135 feet above high water, and about 153 feet above low water, but no large sea-going ships berth above it. They all berth on the other side of New York. It is also in one span of 1,595½ feet, and has no obstructive piers in the water. The Forth Bridge is 152 feet above high-water mark, and about 165 feet above low-water mark, but there is no large port above it, and the only traffic of any kind is by coasting vessels and steamers. There are two clear spans of 1,700 feet each. The Tay Bridge was only 92 feet in height, but on 28th December, 1879, was blown down by a gale, and seventy-five people killed. The strain on a bridge 180 feet high would be infinitely greater, and according to information supplied me by Mr. Russell, Government Astronomer, the wind in Sydney has reached 92 miles an hour, which, I believe, is considerably higher than the gale which wrecked the Tay Bridge. If a similar accident occurred here the port would be blocked, and ruinous loss incurred. It seems, therefore, desirable to ascertain, by independent opinion, whether the low-priced bridges proposed are calculated to withstand the strain. My investigations resulted in a much higher outlay being absolutely essential. In Mr. Simpson's design there is a further danger. The piers are caissons only, and the impact of a large ship would, in my opinion, wreck the bridge. I have ascertained that a ship, the "Benlarig," now at Newcastle, has pole masts 160 feet less 8 inches in height from water-line, and as these steel masts are increasing in use the height of a bridge should be such that neither now nor in the future would the free access to the wharfs and docks be hampered. Mr. Simpson has made much of the inconvenience to
people

people *versus* ships, but I must point out that if the trade of the port is seriously damaged, there would not be so many people to use the bridge. And a prejudice is easily formed. The actual lowering of top-gallant masts may not in itself be absolutely prohibitory, but ship captains and crews notoriously dislike bridges, and object to extra work in harbour. Melbourne is already proposing to make Hobson's Bay a free port, and would work such a pretext for all its worth. And if a ship happened to carry away her spars by fouling the cantilevers, it would be known all over the shipping world in a month, and irreparable damage caused to our high reputation as a port. To thus throw away our natural advantages, I venture to submit, would be the gravest of mistakes. In confirmation of this contention, as showing the opinion and practice of people elsewhere, I assert that there is no shipping port of any size in the whole world which is blocked by a bridge, no matter how high. And, in conclusion, I respectfully submit to this Committee that the interests of a great commercial port like Sydney, visited by many of the largest vessels and steamers in the world, should have the first consideration in deciding on any scheme of communication across the harbour.

561. *Chairman.*] I have received a letter from the Public Works Department in which this passage occurs:—The Orient Company's s.s. "Orizaba" has pole masts in one length each, the mainmast being 154 ft. 7 in. high, so that there were the bridge constructed this vessel could not go up to the dock without cutting one mast at least. We understand there are other Orient steamers with pole masts of equal if not greater heights? I believe my information is correct.

562. *Mr. Fosbery.*] You were present on the 4th August, and heard Mr. John Young give his evidence before the Committee? Yes.

563. You have since read his evidence? No; but I quite recollect it.

564. You desire to make a statement to the Committee in regard to his evidence? I have every respect for Mr. John Young, but it is perfectly clear to me that he does not know the development of shield tunnelling. He says that is practically impossible to run a tunnel of the large size I propose by that method, whereas the Blackwall tunnel is already executed.

565. It is apparent, too, that he cannot have had any clear knowledge of the details of your scheme? Yes.

566. With regard to loads of merchandise going between the two places, such as wool-drays, where would they be likely to go to? In my opinion only to a wharf or warehouse at the water's edge, and therefore they would use the ferry in preference to the bridge.

567. What would be the result of their having to go over the bridge? According to Mr. Simpson, they would have to go over a grade of 1 in 17, and then they would have to go down Alfred-street with a grade of 1 in 14, and return by the same way. They would go up 180 feet instead of going down 90 feet, with a grade of 1 in 25.

568. Do you know what Mr. Parkes's idea was in setting down the Vehicular Tunnel Bill for October? Simply because he could not get it first on the Order Paper for an earlier date. We were most anxious to get it on as early as possible.

569. You put it down for October so that it might take precedence for the evening? Exactly.

570. *Mr. Macdonald.*] Do I understand you to say that a waggon leaving a warehouse on the water's edge on one side of the harbour, or going to a warehouse at the water's edge on the other side would have to make a detour to get on the ontake and the offtake? Yes; it would come a much longer distance in the case of the bridge.

571. It would have to go round to negotiate the approaches? Yes.

572. *Chairman.*] What distance would a driver have to go to get at the tunnel and back again? I have roughly reckoned it at about a fourth of the distance.

573. *Mr. Molesworth.*] Would not the detour you speak of be to a certain extent a fault, and may that not exist in the tunnel scheme? I think not.

574. According to this plan they have to make a considerable detour in order to get through the tunnel? Yes.

575. Although there is a detour to the tunnel, you think it is not nearly as great as the detour to the bridge? Yes; and the vertical height to be negotiated is only one-half of that of the bridge.

Captain Francis Hixson called in, sworn, and examined:—

576. *Chairman.*] You are President of the Marine Board and Captain Commanding the Naval Forces? *Capt. Hixson.*
I am.

577. *Mr. Molesworth.*] The harbour is under the immediate control of the Marine Board? Yes.

578. You are aware that there are several proposals to connect Sydney and North Sydney with a bridge and a tunnel? Yes.

579. Will you kindly state your views as to the interference, if any, with the traffic of the harbour likely to be occasioned by a bridge constructed according to Mr. Kenwood's plan with a centre pier and two end piers? The Marine Board would like a bridge with a single span and a height of 200 feet.

580. *Chairman.*] Do you think a single pillar would be any serious impediment to the traffic? It would be a serious impediment to vessels working up or down the harbour, but it is not so serious an impediment to a vessel which is steaming or being towed.

581. Would it be any greater impediment than Pinchgut? Nature put Pinchgut where it is.

582. *Mr. Molesworth.*] Is there a wider stretch of water at Pinchgut than there is where this bridge is proposed to be erected? Certainly.

583. You think that a bridge across the harbour between these two points should be built at a height of not less than 200 feet? Yes.

584. And you think there should be no centre pier? It would be far better without one.

585. Do you think a centre pier would be a serious detriment to the shipping? It would be a serious detriment to vessels working up, but vessels with steam power would not suffer so much inconvenience.

586. Is there much working in the harbour done by sailing vessels? Not by vessels of large size.

587. Vessels of large tonnage would be under steam power of their own, or would be tugged? Yes.

588. Have you any information as to the height of the highest masts of vessels which usually trade to this port? Berthed at the Circular Quay at the present time is the "Orizaba," which has a height of 160 feet, and the "Harwood" has a height of 182 feet; and at Hoffnung's wharf the "Rathdown" has a height of 183 feet. I understand you are in possession of a list of the vessels which have visited the port during the last twelve months whose masts are known to be 165 feet and over.

589.

J. Sulman.
13 Aug., 1896

- Capt. Hixson.
13 Aug., 1896.
589. Of the vessels trading to the port, what is the greatest length of the mast in one piece from the water line? The "Orizaba" just mentioned has her masts in one piece.
590. Is it not a fact that all the private wharfs and the docking accommodation of the port lie to the westward of the proposed bridge? Yes.
591. The only wharfs to the eastward of the bridge would be the wharfs at Circular Quay and Woolloomooloo Bay? Yes.
592. Have you had any suggestions you would like to make to the Committee with a view to conserve the shipping interests of the port? The Marine Board, as the conservators of the navigable waters, would prefer to see communication with North Sydney by tunnel.
593. Have they any objection to a bridge if built with one span and without a pier? Not much.
594. In that case there would be no objection on the part of your Board? No, if the bridge had a single span with a 200-foot headway there would be no impediment to navigation to speak of.
595. How much space would you require for working a vessel under the bridge? About 100 yards in width. The navigation of the harbour is not like the navigation of a road where the course is straight—we require room.
596. *Chairman.*] Suppose that the bridge was 180 feet high, do you think much inconvenience would be caused to shipping if the the top-gallant masts have to be struck? A little inconvenience, but still I do not consider it would be an inconvenience which could not be overcome.
597. The percentage of ships you quoted would be small? Very small.
598. You think a bridge 180 feet high would be an objectionable thing from your point of view? Next to having it 200 feet high, 180 feet perhaps would not be a great inconvenience.
599. You do not think it would be a serious inconvenience? No; I do not attach very much importance to the talk about the expense of having to strike top-gallant masts.
600. *Mr. Macdonald.*] A rigger has given evidence that he was prepared to send down and up the top-gallant mast for £12, is that a fair charge to make? Yes; and perhaps it might be done with the crew.
601. Do you think you would require 100 yards of clear headway? I said "about" 100 yards. I dare say we could do with a little less.
602. The clear headway in this bridge is 215 feet? That would be sufficient.
603. *Chairman.*] You think a maximum headway for a length of 215 feet would be sufficient? Yes.
604. What would you say about a bridge having three piers? Piers are objectionable.
605. Your objection against one pier would be very much stronger against three piers? Yes.
606. The rule for the navigation of the harbour is to keep on the starboard side? Yes; so if there are two spans, of course one span will take the up harbour traffic and the other the down harbour traffic. That perhaps would be an element of safety.
607. *Mr. Fosbery.*] If a tugboat were taking a ship along, and the ship became unmanageable and took charge, would serious damage be likely to ensue? Of course if these impediments to navigation above the water are there it is possible that accidents will arise. It increases the risk of navigation.
608. *Mr. Macdonald.*] Supposing a tug is in the centre of the fairway under the bridge, do you think the vessel in tow would be likely to bump against either of the cantilevers? It is possible that such a thing might occur.
609. *Mr. Cann.*] It would depend on the length of the tow-line? There is a regulation restricting the length of the line. As a rule, vessels moving about the harbour lash a tug along side. We do not allow length of tug-rope about that part of the harbour.
610. *Chairman.*] In Mr. Simpson's bridge the limitation of the fairway by the struts would increase the danger? Yes, somewhat.
611. *Mr. Molesworth.*] You still adhere to your opinion that the bridge to be constructed should have no pier? I should prefer it. The traffic of the harbour is enormous, and it is growing rapidly. It would be a pity to obstruct the access to and from any of the wharfs if it is possible not to do so.
612. *Mr. Brennan.*] Would not a bridge of one pier add to the safe navigation of the harbour? If there is a pier in the centre of the harbour, the up harbour traffic and the down harbour traffic would necessarily take different sides of the pier; in that case it might be an element of safety.
613. It would go a long way towards counteracting the disadvantage of having an obstacle in the water? Yes; but I must not omit to mention that we have fogs sometimes; and then any impediment in the harbour is objectionable.
614. Would not the electric light, when you have a fog in the harbour, materially diminish the danger? I know nothing that can penetrate a fog. We know that the sun is sometimes shut out by a fog.
615. In the time of fog you would consider the presence of a pier in the harbour an element of danger? I consider that any impediment to navigation offers dangers in times of fog or thick squally weather.
616. *Mr. Molesworth.*] A serious element of danger in the case of a fog? Yes.
617. *Chairman.*] Do you know of any port of the size of Port Jackson which has a bridge? I know that at the Port of New York, between New York and Brooklyn, there is a very extensive bridge with a headway of, I think, 130 feet.
618. A suspension bridge of one clear span? I do not know the characteristics of the bridge.
619. Is it true that there is no large shipping above that bridge? Nothing like the amount of large shipping there is above a line drawn from Dawes' Point to Milson's Point in Port Jackson.
620. *Mr. Molesworth.*] Is it not a fact that the Government railway wharf, where all the country produce must necessarily come, is situated above the site of this bridge? Yes; heavy railway plant is also landed at the railway wharf from large sailing ships.
621. The whole of the internal connection of the metropolis is centered above the site of the bridge? Yes, pretty well.

Captain Charles Percy Downes called in, sworn, and examined:—

- Capt. Downes.
13 Aug., 1896.
622. *Chairman.*] You are the marine superintendent of the A.U.S.N. Company? Yes.
623. We want to ascertain what effect the construction of a bridge from Dawes' Point to Milson's Point would have on the shipping of the harbour. Mr. Kenwood proposes to build a bridge with a pier and with spans of 700 feet, and a headway of 180 feet;—do you think 180 feet would be sufficient? It would meet the requirements for the smaller vessels, for steamers, and even for large steamers, because many of the large steamers are very short in their masts. If you take the "Oak Branch" and these vessels

Capt. Downes.
13 Aug., 1896.

vessels which have been out here lately you will notice that they have very small masts in comparison with their large tonnage. Sailing ships will have the greatest difficulty. The larger you increase the size of a sailing vessel the higher you must put the masts. I think we can reckon safely we have reached to a period when we shall not require the mast of any steamer to exceed from 160 to 180 feet. 180 feet is, I think, about 10 feet higher than the mast of any British India steamer; they run to 170 feet in vessels which were built five or six years ago. Indeed, some of the vessels are not that height. Take the "Muttra," lying at Graton Wharf. The height of her permanent foremast is 45 feet from the deck, and a pole of about 30 feet above that. If you take the height from the water-line to the deck-line it will give another 30 feet. That vessel was built about two years ago; her tonnage is 4,600 tons. She was built for the Manchester ship canal, and can strike her topmast.

624. There are several sailing vessels with masts over 180 feet? I believe there are masts in existence 210 feet long.

625. The percentage of these is very small? The percentage is small.

626. It would be possible for all these ships to strike their top-gallant mast in order to go under the bridge? Undoubtedly it is possible, but it would cause considerable expense and delay.

627. Would it be a serious matter? It would be a matter, I suppose, of from £15 to £20 perhaps per mast. If a vessel has four masts, whether she is square-rigged or not, she would have to strike her mizzen topmast.

628. Are there many ships of that class? The majority of four-masted vessels now are square-rigged on three masts.

629. *Mr. Macdonald.*] But all the masts are not of equal height? No; the mizzen is very little different. As a rule, the mizzen goes to the height of the main top-gallant mast, which would be 17 feet less than the main and fore.

630. They may not have to strike the top-gallant mast of all the mizzen masts? On a four-masted ship nearly all the masts are of the same height; a little difference is made with the mizzen.

631. *Chairman.*] Would there be many ships' masts 180 feet? I could not say exactly the percentage of four-masted vessels to three-masted and others that come out. There is no doubt, as sailing ships are built, four-masted ships will be built in preference to three-masted ships. They are becoming so large that it is necessary to have four masts.

632. Would the percentage of ships with a fore top-gallant mast 180 feet be large where the other masts would be of equal height? If it cost £15 for striking one mast it would be a serious matter, but if they had to take down three or four masts it would be a very serious matter.

633. Three-masted and four-masted sailing-vessels would have to strike their top-gallant masts? Large three-masted and four-masted sailing vessels would.

634. In the case of every mast? In these large vessels.

635. How long would be occupied in lowering and raising the top-gallant mast;—what delay would be caused to a vessel? A four-masted sailing-vessel, without engaging any extra labour, and with men very little acquainted with that sort of work, as seamen are, I think would take pretty well a day each way. It would probably take a little longer going out, sending the masts and yards aloft again.

636. Per mast? No; for the lot.

637. *Mr. Molesworth.*] That would mean an additional expense to the ship by reason of her demurrage? Yes.

638. What would the demurrage come to in the case of a 4,000-ton steamer or vessel? About £120 per day for a steamer. In the case of a sailing ship it would be very much less.

639. What would the demurrage of a sailing ship of the same size be? About a third. That is about the lowest it would be.

640. Would the necessity of striking the top-gallant mast be calculated to entail a demurrage? Undoubtedly it would.

641. *Mr. Cann.*] Do ships usually go straight to their berthing place when they enter the harbour? I believe not. My experience is chiefly with steamers; but I understand that some of the sailing vessels that arrive here generally bring up for a short time in one of the bays until their berthing arrangements are made. There are several things which the crew have to do before they can go to their berth. They have sails to unbend, and their time is fully occupied until they take up their berth.

642. In that instance there would be no demurrage charged? It might be necessary to provide for this demurrage in the charter of a vessel. For instance, if a vessel arrived here during daylight on any day, her berthing arrangements would be made for the following morning, but if she had to strike her top-gallants, she could not possibly do it; she would have to wait and lose another day.

643. Do you think the existence of a bridge, with one pier in the centre and a headway of 180 feet, would make the harbour less attractive than it is at present;—do you think that is a fact which would weigh with ship-owners? I think it would, in the same way as the bridges of the Manchester Canal weighed with the shippers at home.

644. *Mr. Molesworth.*] What would be the effect of a centre pier in the bridge in case of fog? It would be dangerous to attempt to make a narrow opening, such as that existing between the two piers, during foggy weather. At present a vessel can crawl along during a fog, knowing there is plenty of room.

645. *Chairman.*] The distance is about 700 feet? If the weather were foggy, I do not think the master of any steamer or vessel would be justified in attempting the bridge, unless he could see both piers plainly.

646. *Mr. Macdonald.*] Do you think any master would attempt to shift about in the harbour at all in foggy weather, knowing there was a bridge there? No.

647. *Mr. Molesworth.*] That would mean a delay? It would.

648. *Mr. Macdonald.*] If the bridge were not there, do you think vessels would shift about in the harbour in very thick weather? Yes; they do so now.

649. *Mr. Brennan.*] As a matter of fact, is not traffic practically suspended during heavy fog? It is practically suspended during very heavy fogs.

650. Would not the electric light of a pier, such as that suggested, so penetrate the gloom as to admit of the obstacle being discerned by any navigator? I am afraid the electric light would be an obstruction to shipping. I rather fancy that if any master got a glare of electric light in his eyes, he would not be able to see anything else about there. I think it has been found necessary to blind one side of the South Head light on that account.

- C. P. Downes. 651. But are not the lights so regulated that it is only when you come abreast of them that you see them? I do not know how you would regulate the light on the bridge. If you want to see an opening, you would put a light upon it. You could not obscure the light in such a way as to enable you to see the end of the bridge first, unless you reflected a light upon the end of the bridge.
- 13 Aug., 1896. 652. Is it not the common practice at sea, that big ships and passing vessels obscure the port or starboard cabin lights? I do not think so; I have not known it done, and I have been in many steamers which have the electric light. Of course the lights are generally so placed that they will not interfere with the signal lights of the ship.
653. The ordinary trade of the port will not, I suppose, have occasion to use the bridge at night? I think you will find that one-fifth, if not one-third, of the ships in this port move about at night.
654. *Mr. Molesworth.*] Nearly all the intercolonial traffic is subject to night work? Yes. For instance, we always despatch our own steamers about 5 p.m., and very often it is very much later.
655. *Mr. Brennan.*] But that does not apply to sailing vessels? Sailing vessels rarely move about at night.
656. *Chairman.*] What effect do you consider a bridge like that of Simpson's would have? I think it would be the better bridge of the two during clear weather. I do not think it would hinder the navigation—certainly not of the coastal steamers.
657. Then you think three piers are less objectionable than one? There is an objection, certainly, to the third pier, but we have the benefit of the height.
658. No; the height is the same—180 feet in both cases; one bridge has one set of piers in the water, and the other has three sets, and there is a longer length of maximum headway under Mr. Kenwood's proposal than under that of Mr. Simpson;—do you think the bridge with the greater length of maximum headway would be the best? Yes.
659. Do you consider two or three piers in the water instead of one an additional objection? Yes; it would be, but I do not think the objection would be very great.
660. *Mr. Molesworth.*] You have stated that sailing vessels do not move about the harbour at night? It is very rarely that they do.
661. Are you aware that the almost invariable custom is for sailing vessels which are being towed to Newcastle for loading to leave about midnight in order to get to Newcastle about daylight? I am not aware of that.
662. *Mr. Macdonald.*] In a four-masted sailing vessel is the mast abaft the mizzen called the jigger-mast? Sometimes it is, and sometimes it is called the mizen. I have not been in a four-masted sailing vessel myself. Of course, in steamers we usually call it the jigger.
663. In a four-masted vessel it would be the bow, foremast, main, and mizzen? Yes.
664. Supposing there were five masts? It would then be the mizzen and jigger.

(Captain Henry Pettit, Harbour-master, sworn and examined :—

- Captain H. Pettit. 665. *Mr. Molesworth.*] You have been connected with the harbour navigation, both in private employment and in your official capacity, for a number of years? Yes.
- 13 Aug., 1896. 666. Have you heard of the proposals to connect Sydney with North Sydney by way of a bridge and tunnel? Yes.
667. Have you given the matter any thoughtful consideration with a view of deciding how it will affect the navigation of the port? We have often thought the matter over.
668. What is your opinion in regard to the construction of a bridge from Dawes' Point to Milson's Point as proposed? The great thing is the head room required for the class of ships going up our harbour. The principal wharfs for the large class of ships visiting the port are above Dawes' Point.
669. What is your opinion with regard to the headway which should be given to a bridge at that point? My idea is that it should not be less than 200 feet. The usual height of ships is 180 feet; that is, without striking their royals and top gallant masts.
670. Would the striking of the royal and top-gallant masts involve any serious expense or delay? Yes; both delay and expense.
671. Can you estimate the probable cost of doing this work? It depends on how it is done. If you employ rigging labour on shore, or the crew to do it, it will make a great difference in the cost of the ship, but, of course, if you employ regular riggers and men from the shore they would have the necessary appliances, and perhaps do it better than the crew.
672. Have you any idea what the riggers would charge per mast? About £15; but it may be more.
673. What delay would an ordinary vessel have to incur in taking the mast down and putting it up again? One and a half days.
674. Each way? Yes? Perhaps they might be more at times. You do not know what difficulties crop up if any of the gear breaks.
675. *Chairman.*] With a bridge of 180-foot headway, do you think the percentage of vessels which would have to strike their masts would be large? Do you mean 180 feet at low water. There is a difference of 6 feet rise and fall in spring tides. There are several ships considerably over 180 feet high.
676. Mr. Kenwood's scheme provides for 180 feet at low water, and the other provides for 180 feet at high water;—with 180 feet at low water, do you think the percentage of ships affected would be large? It would mean the detention of a good many ships.
677. Would there be many ships which would have to strike one mast? Yes; there is very little difference. The mainmast is generally the tautest, but they are rigged now in such a way that the masts of the ships are pretty much of the same height. There may be an extra pole on the mainmast of 3 or 4 feet.
678. Would the four masts have to be struck? No; perhaps the three. The mizzen-mast would, perhaps, be the smaller mast.
679. And the cost would be about £15 per mast? About that for the large vessels of 2,000 or 3,000 tons.
680. *Mr. Molesworth.*] With regard to the question of the pier, will you give us your views on the matter;—Mr. Kenwood's scheme provides for one central pier? You get the head room in the middle of the opening, and then it depresses at each end apparently. You do not want to be confined to a very small space. You want all the room you can get.

681. In the first place, do you take any objection to piers at all? I think an uninterrupted span would be the best if it could be done. H. Pettit.
682. *Chairman.*] Do you think one pier would be a serious obstruction? It would, perhaps, be a line for the purpose of enabling ships going up and down the harbour; but it confines the space. 13 Aug., 1896.
683. *Mr. Macdonald.*] It would be a bad line in a fog? Yes; a very bad line.
684. What is your opinion with regard to the existence of a pier there in foggy weather? Personally, I would not like to see a bridge there at all.
685. *Mr. Cann.*] Do you consider the electric light any security in a fog? It is very powerful, but it appears to me to blend with the fog. It is not so penetrating as some old lamps I have seen. You do not see it in a fog at any distance. There will be a great traffic through the bridge, inasmuch as our docks and private wharfs are above it. We have only one place above which would be made use of for discharging—Cowper Wharf, Woolloomooloo Bay.
686. Are you inclined to look upon a single pier as an obstruction? We want an uninterrupted span, if possible.
687. What maximum headway would you stipulate? Nothing less than 200 feet.
688. *Chairman.*] Do you think it would be a serious matter to limit it to 180 feet? I would point out that there are two ships at present in the port—one at Circular Quay and the other at Hawthorne's Wharf—one is 182 feet and the other 183 feet.
689. *Mr. Simpson's* scheme provides for three piers in the water. The distance between them is 700 feet, but the length of maximum headway is limited to 215 feet, on account of certain struts. That gives you an available opening of 215 feet, with a height of 180 feet? If there is not sufficient room to go through the ships will be liable to damage.
690. *Mr. Molesworth.*] You consider the struts a disadvantage? The bridge should be made as plain as possible.
691. *Chairman.*] Do you think the presence of extra piers an objection? Yes.
692. *Mr. Molesworth.*] Will you give the Committee the information you possess as to the extent of traffic that would go through the bridge during the night time? There is a vast traffic there, including all the intercolonial steamers. It would sometimes be difficult for them to keep clear of each other. Sometimes at night you meet between Dawes' Point and Milson's Point four or five large steamers at one time.
693. Is it not a fact that vessels going to Newcastle in ballast under tow, frequently leave the wharfs about midnight in charge of the tugs? Usually. Night is the favourite time for leaving. They leave about 8 or 9 o'clock at night, so as to be in Newcastle at peep of day in the morning.
694. Then, in a general way, the traffic underneath the bridge would be as heavy at night as during the day? Not altogether; but there is a very great traffic at night time.
695. Most of the intercolonial traffic occurs at night? Yes.
696. *Mr. Brennan.*] Is it not a rare thing for a fog of sufficient denseness to exist in the harbour to obscure the view of a bridge? It is not a rare occurrence.
697. Two or three times a year, perhaps? It varies.
698. But it is not a frequent occurrence? No; there are times in the year when you get them. Perhaps you will have three or four foggy mornings in succession.
699. *Chairman.*] Is traffic practically suspended in such a fog as that? Yes.
700. And it would be suspended even if the bridge were not there? Yes. Some people run the gauntlet through there, and get up successfully by coasting along the wharfs, but there is a certain amount of risk.
701. *Mr. Fosbery.*] The risk would be increased with the pier there? I consider it would. You cannot hit the middle of the headway as neatly as you could if you could see it distinctly.
702. *Mr. Brennan.*] In going through that channel vessels keep well to starboard. They would not go in mid-channel during such a fog as has been spoken of. You would feel your way to a certain extent along the shore line? Yes. If you managed to see Kirribilli Point, and want to hit Dawes' Point, you can make a course.
703. In any case you would avoid the mid-channel? As a rule, we try to keep to mid-channel in going through a bridge with large ships.
704. Have you ever known a collision at that particular part of Port Jackson? Yes.
705. Both vessels were in the middle of the stream at that time? Yes.
706. And there was a dispute as to the sides the vessels were on? Yes.
707. They both claimed to be on their right side, and clear of the middle of the stream? There have been several cases of that kind.
708. I suppose there is plenty of water there? Yes.
709. And what we magnify in our port is regarded as of little moment in some of the larger ports of the world? That is so.

TUESDAY, 18 AUGUST, 1896.

Present:—

MR. ASHTON, MR. MACDONALD,		MR. CANN, MR. MOLESWORTH,
E. D. MILLEN, Esq., IN THE CHAIR.		

W. F. Brennan, Esq., appeared as Solicitor for the Sydney and North Sydney Bridge and Tramway Bill.
 T. B. Dibbs, Esq. (Dibbs and Gibson), appeared as Solicitor for the North Shore Bridge Bill.
 E. E. Fosbery, Esq., appeared as Solicitor for the City and North Sydney Railway Bill.

Captain John Richards Andrew sworn and examined:—

710. *Chairman.*] What is your occupation? I am a master mariner.
711. *Mr. Ashton.*] What is the name of your ship? The "Derwent." Andrew.
Captain
712. There are two bridge proposals before this Committee to connect North Sydney and Sydney; and our object is to ascertain to what extent the proposals will constitute an impediment to the traffic in the harbour;— 18 Aug., 1896.

Captain
Andrew.
18 Aug., 1896.

harbour;—as regards Mr. Kenwood's scheme, it is proposed to have a bridge with one pier in the centre of the harbour, a pier on Dawes Point, and another pier in the water near Milson's Point, and with a space of 700 feet between the piers, and a headway of 180 feet at high water—would that constitute a serious impediment to traffic in the harbour? I think so.

713. For what reason? On account of the pier in the centre of the harbour. That would not be an obstruction in itself, because it would make two channels and the ships would pass on either side of the pier. A headway of 180 feet is not sufficient.

714. Not 180 feet? No; not for all the ships that come here. A great many of the ships are more than that height.

715. Is the percentage of the ships with masts that would not pass under a bridge 180 feet high large? I should say so; and ships are getting larger every day, especially in their tonnage.

716. Would it be a very expensive matter for these ships to strike their top-gallant mast? It would be a very expensive matter to strike the top-gallant mast in each ship. After a ship arrived she would want two or three days to strike her top-gallant mast before she could go to her berth.

717. What would the cost be? That would depend on the tonnage of the ship. There would be the demurrage of the ship. You cannot strike the top-gallant mast of each ship and send it up again without causing some expense and some renewal of material. You could hardly form an estimate of the expense.

718. *Mr. Cann.*] What is the maximum headway which you would reckon secure? I should say it ought to be 190 feet.

719. *Mr. Ashton.*] Would the traffic be interfered with by a bridge of that height? No.

720. In the case of a ship with a mast 180 feet high would it be only one mast that would be interfered with? No; if she was a four-masted ship three masts would be interfered with.

721. Almost certainly? Certainly, three masts would be interfered with.

722. There has been an estimate given that the cost would be about £15 for striking each mast, would that be a fair one? It would hardly be so much as that, I should think. I should say about £10 a mast would do it.

723. What would the demurrage amount to? 4d. per ton of her registered tonnage.

724. Per day? Per day.

725. That would be loss to the owners? Yes.

726. What is your definition of this demurrage charge;—is it an actual payment or merely lost time? It is an actual payment.

727. If a man chartered a ship he would have to pay the man from whom he chartered her 4d. per ton per day? 4d. a ton if he overran the days he chartered her for.

728. It is a fair view to take that the value of a ship under charter is 4d. per ton per day? Yes.

729. *Mr. Molesworth.*] That rate applies only to sailing vessels? Yes; the rate for steamers is very much higher. Suppose a ship is chartered to arrive to a date, and she has only few hours to save her charter, perhaps half a day, if she had to lower the top-gallant masts it would obstruct her from going up to her moorings to give notice that she was ready to discharge or to load, and, therefore, the charter-party would be cancelled at a loss, perhaps, of some thousands of pounds, or a thousand pounds.

730. As a matter of fact, if such a bridge existed, and was known to exist, the charterer would always take that fact into account? No; the ship-owner would take into account the bridge too, and he would sign the charter party, "the ship to be discharged and loaded below the bridge." Therefore, you would have all the tonnage congested at the eastern side of the harbour if you had not sufficient headway for ships to go under the bridge.

731. *Mr. Cann.*] Do ships generally go straight to their moorings? If they come in during the afternoon they generally go next morning to their moorings. They have to go and get their orders where they are to go.

732. There is always a certain amount of delay? There is a few hours' delay. I have known some ships to come straight up and go to their berths.

733. Taking an average, what do they do? They generally lie a few hours at Garden Island or Neutral Bay before they go to their discharging berth.

734. Would that give them sufficient time to lower their fore top-gallant masts? No; I commenced to strike my main top-gallant mast on Thursday afternoon, and I finished it on Saturday—that is, one mast.

735. *Mr. Ashton.*] With the crew? With my men; I have not a full crew on board. I give that as a practical illustration.

736. *Mr. Molesworth.*] Have you seen or heard of a petition from the wharf-owners and ship proprietors in reference to the proposed height of the bridge? No.

737. You are not aware that the height they set down as a minimum of safety is 200 feet? I am not aware of it at all.

738. Do you think a bridge 200 feet high would give ample accommodation for all the shipping to pass under without obstruction? There may be one ship here or there which could not pass under a bridge of that height; but in a general way that height would be ample.

739. *Mr. Macdonald.*] Evidence has been given here by a rigger that he would send down the top-gallant mast of three masts and send them up again for £12;—do you think that is an under-estimate of the cost? I wish you would send him down to my ship.

740. *Mr. Ashton.*] Assuming that a bridge existed between Dawes Point and Milson's Point, and a ship was coming out and found it necessary to strike her top-gallant mast, would she inevitably be delayed;—would not the striking of her top-gallant mast fit in with any other arrangement, or do you regard delay as inevitable? Delay is inevitable.

741. *Mr. Macdonald.*] Surely you do not say that there would be a delay in the case of a ship coming out? Not in coming out, because the masts would be already down.

742. *Mr. Ashton.*] I mean when the ship is coming into the harbour? Delay would be inevitable, and the striking of the top-gallant mast could not be made to fit in with any other of her arrangements.

743. *Mr. Macdonald.*] Would a ship have to strike her top-gallant masts at all when coming out? Provided she went up with them on end and came down light. If she went up loaded and came down light she would have to strike them when coming down.

744. What difference would it make in the height of the mast if she was loaded or unloaded? From 10 to 11 feet.

745. *Mr. Ashton.*] Assuming that the charter rate was 4d. per ton per day, you would regard any delay lost in striking her foretop-gallant mast as involving an expenditure to that amount? It might not occur as a ship might have plenty of time to do it all. It is only in case of the days being expended that it would occur.

Captain
Andrew.
18 Aug., 1896.

746. In that case there would not be an inevitable delay? It would be worth that to the shipowner in any case.

747. But it would be possible for him, I suppose, to fit in the striking of the top-gallant mast with other arrangements? Not at all.

748. *Mr. Molesworth.*] Will you make it quite clear to the Committee whether or not the striking of the top-gallant masts, and setting them up again, would be an absolute loss of time to the owner in any case? Unless the ship was going to lie idle for any time. If she was chartered for a cargo of coals to go down to Newcastle, and then run across to San Francisco, it would be a dead loss to her owner.

749. The time you generally lie down the stream could not be utilised for the purpose of scuding down or sending up a top-gallant mast? If the ship had to leave the port, she would go with them down and send them up at the port she was going to.

750. *Mr. Cann.*] I suppose your movements generally occur in the day-time? Mostly.

751. Do you ever move at night? No.

752. Going to sea? We come in in the night, and go out in the night.

753. In that case, do you think a pier in the centre of the harbour would be any impediment to you either in entering or in leaving? I do not fancy so. Ships would keep on their respective sides of the pier the same as they keep on their respective sides of Pinchgut when they are going up and down the harbour.

754. Do you consider a fog would be any impediment? In a dense fog I suppose ships could not move in the harbour.

755. I suppose you do not move at all when fogs are prevailing? No.

756. *Mr. Ashton.*] Generally speaking, suppose a bridge were erected with a headway of not more than 180 feet, what do you think the effect on the harbour would be—would it have a deterrent effect as far as ships were concerned? I should think so, rather.

757. *Mr. Cann.*] It has been estimated that a headway of 160 feet is quite sufficient—I suppose that would be a greater impediment? That would stop everything.

758. *Chairman.*] Under what headway, that is from high-water mark, could you go with your ship? 174 feet in all probability.

759. *Mr. Cann.*] For entering or leaving the port, do you think that a channel of 325 feet on either side of the centre pier would be sufficient? Yes, because there are two channels of that breadth.

760. *Mr. Ashton.*] In the case of Mr. Simpson's bridge the proposal is to build a bridge with a probable headway of 180 feet, but the maximum fairway is limited to 215 feet. The struts interfere with the maximum fairway to the extent you observe on the plan, and it is proposed to have three sets of piers in the water. Do you consider that these struts, leaving a clear fairway of only 215 feet, would be a serious obstruction? Very objectionable, I should say. Three piers would be also very objectionable.

761. With a fairway of 215 feet between pier and pier, do you think there would be much chance of an accident occurring? Yes.

762. Looking at these two plans, you consider Mr. Kenwood's plan the least objectionable one, from the mariner's point of view? Yes.

763. *Mr. Cann.*] But even that you stipulate should be 10 feet higher than it is? Yes.

764. *Mr. Molesworth.*] Will you tell the Committee if you know the highest-masted ships trading to this port? The "S.D. Carlton" is 200 feet, the "Cromdale" is a little over 190 feet; and the "Mount Stewart" is the same height. These are the only three of the very tall ships I could mention now.

765. There was or is a ship named the "Rathdown" in port, do you know the height of her mast? About 168 feet, I suppose,

766. No higher than the mast of your own ship? About the same; I should not think she was any higher.

767. *Mr. Ashton.*] I suppose the vast majority of ships could go under a bridge 180 feet high? A good number of them would go under a bridge 180 feet high. That class of ship is dying out; they are getting larger ships now.

768. The tendency is for the masts to go up? Yes.

769. *Mr. Molesworth.*] Have you had any experience of ships charters with reference to Brooklyn Bridge, in New York? Yes.

770. What is the custom in reference to the bridge clause of the charter? I was only in the Indian trade there. We always sign the charter party "to be discharged below the bridge".

771. If it is stipulated in the charter that you shall go above the bridge, does that incur an increased freight? No.

772. You simply do not go? We do not go.

773. Have you had any experience in regard to the bridge traffic at Calcutta? There is an open bridge built on pontoons; it is opened and we pass through.

774. *Mr. Brennan.*] Have you ever had any experience as the captain of a chartered ship? Yes.

775. Have you ever had any claim made upon you for demurrage under any circumstances? No.

776. You have made claims for demurrage yourself? Yes.

777. That was because your ship was delayed, I suppose? Yes.

778. Delayed by whom? By the charterer.

779. Did you ever, in all your experience, know a claim to be made against a ship for demurrage? Yes.

780. Under what circumstances? They said the ship was not in time to take in cargo. For instance, she might go an intermediate voyage and the charterer might consider that she was delayed longer in that port than was necessary, and then they would make a claim against the ship for demurrage.

781. That is when she is an unreasonable time? Yes.

782. Have you ever known vessels lie down below Pinchgut for a week after they come here? I cannot say that I have for a week.

783. What is the longest spell you have had down there? Two days, when I had power to discharge.

784. What was your crew doing during the two days? Unbending sails, and getting sea gear down, and discharging powder.

785.

Captain
Andrew.
18 Aug., 1896.

785. The same delay in discharging powder would take place if you were berthed at a wharf? No; because you are not allowed to come up with ships when you have powder.
786. I am speaking as to the question of time? Exactly so.
787. You say the men unbend the sails? I do not see any occasion for inquiring into the internal working on this point. If the men are unbending sails they cannot be sending top-gallant masts down—in fact, you cannot send them down until you unbend your sails.
788. You do not know, as a matter of fact, that it is a frequent practice to unbend sails when you are alongside your berth? Exactly so.
789. *Mr. Molesworth.*] That is when you have not had time to unbend them in the stream? Yes; that is when you come straight up.
790. *Mr. Brennan.*] When you reach port you give notice to the consignees? Yes.
791. They provide you with a berth? Yes.
792. When you get alongside the berth the time for discharging the vessel begins? Yes.
793. It is generally thirty days in this port;—what do they allow for discharging here? It depends on the tonnage of the ship.
794. Is it not the general custom to allow twenty-one days? It is about that for an 1,800 ton ship.
795. The custom of the port is to allow twenty-one days for loading according to your charter, that is subject to any special arrangement? It is not according to the charter; the charter has nothing to do with that.
796. Do you mean to say that in the charter the actual working days are not specially set out? Yes; according to the custom of the port.
797. Do you mean to say the actual working days are not set down, Sundays and Custom-house holidays excepted? In the case of a chartered ship; but many ships come here without charters.
798. You know, as an experienced captain, that there can be no custom where the charter-party specially makes a condition? Yes.
799. If the whole of the thirty days are absorbed in loading the vessel, and a longer time is taken up by the charterer in finding cargo, it is in respect to that longer time the ship makes a claim for demurrage; and that is demurrage? Yes.
800. *Mr. Molesworth.*] In reference to the number of days which are allowed to a chartered ship here, is that not absolutely fixed according to the size of the ship's tonnage;—in other words, does not a larger ship require more lay days than a small ship? As a general rule, yes.
801. They generally compute it according to the size of the ship? Yes.
802. *Mr. Macdonald.*] I understood you to say that the custom is to allow twenty-one days to a ship up to 1,800 tons? A ship does not pay wharfage while she is discharging her cargo; but if she takes longer than the usual time which is allowed for discharging cargo, the Wharf Association of Sydney charge her wharfage.
803. I understood you to say that a ship up to 1,800 tons would have twenty-one days to load according to port custom? To discharge, not to load.
804. *Chairman.*] Any vessel up to 1,800 tons would have twenty-one days to discharge her cargo? Yes.
805. A 1,000-ton vessel, for instance, would have twenty-one days? Yes.
806. Your statement as to the twenty-one days applies to the wharfage rates, and has nothing to do with the terms of the charter? Nothing whatever.
807. The terms of a charter may vary with every ship? Yes.
808. *Mr. Brennan.*] If a vessel is delayed beyond twenty-one days through the fault of the charterer the ship makes a claim for such delay, and that claim is what is called demurrage? Yes.
809. *Chairman.*] In lowering the top-gallant masts and sending them up again, apart from any question of loss of time, there is waste of material? Waste of material.

Captain John Henderson sworn and examined:—

Captain
Henderson.
18 Aug., 1896

810. *Chairman.*] What is your occupation? I am a ship-master.
811. What is the name of your ship? The "Samuel Plimsoll."
812. *Mr. Ashton.*] There are two bridge proposals before this Committee to connect North Sydney and Sydney. Mr. Kenwood proposes to build a bridge from Dawes Point to Milson's Point with a centre pier standing practically in mid-stream, with spans of 700 feet each, and with a clear headway of 180 feet from high-water to the floor of the bridge. The struts interfere with the clear fairway to a certain extent, but still there is a clear fairway of 325 feet left. What the Committee want to know is to what extent, if any, that bridge would constitute an impediment to the traffic. Do you think a bridge 180 feet high would constitute a serious impediment to traffic? I should think so, because there are many ships over 180 feet in height above high-water mark.
813. A large percentage? A large percentage, I should think.
814. I suppose the ships could get under the bridge by striking their topgallant masts? I daresay they could.
815. Would that be a very expensive matter? I should think it would take me about three days to strike my top-gallant masts.
816. How many top-gallant masts would you have to strike—three? No; I would have to strike the main one.
817. Would a ship with a mainmast of 180 feet have to strike more than one topgallant mast? No; only in the case of the mainmast.
818. There are some ships which might have to strike the topgallant masts of three masts? Yes.
819. What would the cost be in a case of that kind? I do not think a vessel coming here can strike her topgallant masts in less than three days.
820. That is, if she had to strike three? Yes; and one day if she had to strike one.
821. What would you estimate the cost at per mast? Of course all the men could not work at one mast. In the case of a vessel which had to strike three masts it would run into a matter of £10.
822. For the three masts? Yes.
823. *Mr. Molesworth.*] That is per mast? No; for wages alone. It would involve disturbing the rigging, and different things of that sort. The material is never replaceable again—not the main rigging, but much of the detail in connection with it.

824. *Mr. Ashton.*] If she had only one mast to strike, what would be a fair thing to cover the cost? I suppose £10 would cover one mast. It would take £10 for wages for three days' work to send a mast down, and then there is the value of the material which has to be replaced.

Captain
Henderson.
18 Aug., 1896.

825. £15 or £20 would cover the whole cost? Yes.

826. And in the case of one mast, what would it be? £10.

827. Do you think the delay would be a serious matter? Yes.

828. In what respect? In regard to people getting their cargoes. When we arrive in Sydney we always like to get the wharf at the end of twenty-four hours, and if we have to strike our topgallant mast we could not get there within twenty-four hours; and if the three topgallant masts would have to come down it would take us three days before we could get there. It would mean two days' detention before the consignees could get delivery of cargo, or, rather, before the ship could begin to discharge.

829. That would be unavoidable in every case where a topgallant mast would have to be struck? Yes.

830. It is not the time which would necessarily be going to waste in any other way? No.

831. Would the two or three days wasted entail an extra charge on the charterer? I do not think it. The detention of the three days would go against the ship.

832. You think that £10 or £15 would cover everything? Yes.

833. There would be no other detention? The only detention would be in regard to the consignees getting their goods from the ship.

834. *Mr. Cann.*] Would that be a charge against the ship? It would not be a loss to the ship.

835. Have they any right to make a charge against the ship for it? None whatever.

836. *Mr. Ashton.*] Suppose a delay of three days inevitably occurred in the case of a high-masted ship, that would mean that her trip would be lengthened by three days? Yes.

837. In chartering her for the trip, would not that be taken into account? In most cases ships are not chartered coming out here. We load a cargo in a berth in London; we come here and we go to our berth within twenty-four hours of our arrival, and we abide by the rules of the port—cargo to be taken out with all despatch, according to the custom of the port.

838. You think that £15 or £20 would cover all the expense? Yes, as far as the ship is concerned.

839. The other point would be merely the inconvenience caused to the consignees in getting their cargo? Yes.

840. Which might be a large matter or a small matter? Yes.

841. The maximum waterway for a ship going under this bridge is 325 feet—do you think that would be ample? Quite sufficient.

842. Do you think the centre pier would constitute an impediment to traffic? I don't think it.

843. It might be regarded as defining the ways up and down;—you would not regard it as any more impediment than Pinchgut? I should not think so.

844. In the case of *Mr. Simpson's* scheme, it is proposed to have a bridge with three sets of piers in the water;—by this plan you will observe that the struts in each span diminish the width of the waterway from 700 feet to 215 feet, and the height of the bridge from high water is 180 feet;—would you consider that the three sets of piers and the presence of the struts which limit the waterway to 215 feet would constitute any impediment? I should think much more than the other one.

845. Would you consider that there would be any danger of a high-masted ship getting tangled up with the struts;—might she become comparatively unmanageable, and with a stretch of only 215 feet of water might her masts catch against the struts? Not at that width.

846. You consider the greater width is an advantage? Almost in any case there is a certain amount of danger in going under a bridge.

847. Of course, to the extent that the water-way is narrowed the danger is increased? Yes. I have been through Pymont Bridge with my ship. There is always a risk in going through that bridge. When a ship comes to the parapet of a bridge the tug has to cast off. A ship wavers about a little, and sometimes in going through a bridge her anchor or different things about a ship may do damage, however much width she has. It is the same in going into the docks at Home.

848. *Chairman.*] The more sea-room you have the less the danger? Yes.

849. *Mr. Cann.*] What maximum height would you stipulate for a bridge? I should think 200 feet. There are very few ships over 200 feet. You may find one occasionally over that height.

850. *Mr. Ashton.*] I suppose the percentage of ships over 180 feet is not very large? I should not think so. I do not know if there is any vessel in port which exceeds 180 feet; there may be.

851. It would only be an occasional vessel which would be interfered with by the bridge? An occasional one.

852. In that case the expense would be from £10 to £20? Yes. Many of the four-masted vessels are not so "taut" as the three-masted vessels. In many cases it would not be necessary to send the topgallant masts on deck; we would house them. My top-gallant mast is 30 feet long. Suppose I had to house my top-gallant mast, I would lower it 30 feet, and I would not disturb the rigging at all.

853. Would that be possible? Yes; it is much easier than sending them down on deck.

854. In which case the expense would be reduced? Yes.

855. *Mr. Macdonald.*] And the time lessened? Yes.

856. *Mr. Ashton.*] I suppose in very many cases that practice would be resorted to? Yes, that would be adopted. It is a very inconvenient matter to strike a topgallant mast on board a ship. If I may be permitted to offer an opinion to the Committee, I think a tunnel would be better than a bridge.

857. *Mr. Molesworth.*] That is from the shipmaster's point of view? Yes. This bridge, I suppose, is intended for the convenience of vehicular traffic. Suppose you could not get a bridge of that height, and you had a bridge made to open like the Tower Bridge in London, it will be a great inconvenience to the community. The Tower Bridge opens to the very great inconvenience of the community. You have to walk up to the tower.

858. *Chairman.*] Your objection, I suppose, is from a seafaring point of view? Yes.

859. *Mr. Molesworth.*] Your ship is one of the well-known London clippers? Yes.

860. She is a very valuable vessel;—in days gone by her earnings have been considerable? Yes.

861. You say, if you were called on to lower your top-gallant-masts to go through the bridge it would cause the loss of three days to lower the top-gallant-masts? Yes.

862. Would not the loss of those three days be a matter of considerable importance to the owners of the ship? It would in one sense, but I do not see where it would be in another. For instance, a vessel comes here

Captain
Henderson.
18 Aug., 1896.

here to discharge her cargo. If she was chartered and was going to leave immediately it would make a difference to her; but in the case of a vessel which comes here the same as my vessel does, and has to lie here for months waiting for wool to come down, it would make no material difference to her owner.

863. What demurrage do you place per day on your ship? If I was chartering my vessel to go away to-morrow I would put on a value of £14 per day.

864. You would expect that to be paid for any loss of time that occurred under the charter? Yes.

865. If you were under charter you would expect to be paid that demurrage for any loss of time? Yes. There are so many lay-days in the charter, and when those lay-days are expired, the master gives a written notice to the charterer that the vessel is ready to receive her cargo, and from that date the lay-days count; so that in the event of a vessel having thirty lay-days, which would count from the date of the notice, and the charterer taking thirty-five days, there would be five days of demurrage to pay at the rate of £14 per day.

866. I understand that if you were not pressed for time you would not consider a delay of three days below the bridge as incurring a loss to the owner? I would not.

867. But if you were under a charter it would be a loss to the owner? Yes.

868. Then you estimate that loss in the case of your ship at the rate of £14 a day? Yes.

869. If I understand aright you see no objection to a bridge, provided the height is ample to allow a ship to pass under it without the delay of lowering the top-gallant mast? Not any whatever.

870. Yet, on the other hand, you think a tunnel would be preferable to a bridge? I do.

871. *Mr. Brennan.*] Instead of lowering the top-gallant masts on deck, you think it more economical to house them? Yes.

872. Instead of doing it with your crew, you think it would be still more economical to get a ship's rigger to do it? I do not think it would.

873. Not a man skilled at the work? No.

874. Do you not think he could do it in less time? He might; but the question is, would he do it for such a small amount.

875. He could do it as effectively? Probably better and more quickly.

876. *Mr. Ashton.*] I suppose if it was done by the crew it would be done in their time and would no incur any extra outlay for wages? When I say it would cost £10 or £15, I mean for wages and material. I suppose their wages would run into £8 or £10; I allow the balance for material.

877. Even if they did not strike their top-gallant-masts their wages would be accruing all the time? Yes; still there is the extra three days.

878. *Mr. Brennan.*] It is no uncommon thing when a ship is in haste to unbend sails at her berth? Very often that happens.

879. Will you give the Committee your own experience; where did you go to your moorings? In Neutral Bay.

880. How long did you stay there? For twenty-four hours.

881. You had a berth found for you? I had a berth to go to.

882. You proceeded at once to your berth? Yes; during the twenty-four hours I was lying in Neutral Bay I unbent all my sails.

883. During those twenty-four hours could you not, with the assistance of a rigger, have housed your top-gallant mast if there had been occasion for doing so? I do not think so; there is not sufficient time.

884. The men were not doing anything except unbending the sails? They were unbending sails and getting up ropes and chains.

885. All of which might have been done alongside the wharf? No; we have to get our ropes and chains up to make the ship fast to the wharf.

886. I mean the chains and ropes used for sailing the vessel? No; they are all stowed below.

887. The greater part of the work could be done alongside the wharf as well as in the stream? All the unbending of sails could. You must understand that the chains and wire ropes required to moor the ship to the wharf are kept below and must be taken up before she can come up to the wharf.

888. Do you not do all that kind of thing while you are being towed into port? We cannot do it outside. We sometimes cannot get a tow rope up outside.

889. Do you keep your ship's stores with your cargo under hatches? We do.

890. *Mr. Fosbery.*] Your estimate of the cost of striking the top-gallant masts—from £10 to £20—is independent of the cost of sending them up again? That is so.

891. There would be an additional cost of sending them up again? Yes.

892. And additional delay? Yes.

893. What would be the increased cost of sending them up again? It would be much about the same as the first.

894. So that your estimate of taking down the top-gallant masts and sending them up again would be double that which you mentioned? It would be double that.

William Robson Benson sworn and examined:—

W. R. Benson.
18 Aug., 1896.

895. *Chairman.*] What is your occupation? I am the manager of the Wharf Association.

896. *Mr. Ashton.*] You are aware that there are some proposals before the Committee for connecting Sydney and North Sydney by means of a bridge and a tunnel? Yes.

897. Mr. Kenwood proposes to build a bridge from Dawes' Point to Milson's Point with one centre pier in the middle of the harbour, with a span of 700 feet on either side of that pier, and a maximum headway of 180 feet and a clear waterway of 325 feet for a ship on either side of the centre pier;—would you consider that a bridge of that description would offer any impediment to the harbour traffic? The height, in the first place, would probably do so. We have many ships here exceeding that height. The tendency is now to build ships of larger tonnage, and necessarily they will be much loftier than the ships of the present age.

898. Would the percentage of ships coming here which would be interfered with by that bridge be large? I have a list of the ships that come here, and about a third of these ships, at least, exceed 180 feet in height.

898½. Can you give any idea of the percentage of such ships? That is very hard to say. It is not what ships

- ships are now, but what they will probably be in the future. They are bound to increase in tonnage. W.R. Benson.
Ships must be constructed of very large capacity to pay at all.
899. Have you any practical knowledge of the cost of striking top-gallant masts? I have no practical knowledge; I can only speak from what I have heard. 18 Aug., 1896.
900. You would not regard the centre pier in that bridge as constituting any impediment to the traffic in the harbour? A fairway of 315 feet is not a great space in which to take one or two ships in at the same time, as probably you would have to do.
901. That would be on very rare occasions? I have seen three or four ships abreast going through that water at one time, many small ships and large ships.
902. There will be a clear waterway of 315 feet for vessels going up the harbour, and the same width of waterway for vessels going down the harbour? Probably it would not be an impediment. It would make a channel; and possibly that would be an advantage.
903. Mr. Simpson proposes to build a bridge from Dawes' Point to Milson's Point, with three sets of piers in the water. The struts in his scheme take up a good deal more of the space between the piers than they do in the other scheme, leaving a maximum waterway of 215 feet, with a height of 180 feet at high water-mark to the floor of the bridge;—what would be your views in regard to his scheme? I should certainly prefer Mr. Kenwood's plan.
904. *Mr. Cann.*] What would you consider the maximum headway that should be allowed? If you make ships undertake the expense of striking their topgallant-masts, it would be most prejudicial to the interests of the wharf owners on the western side of the bridge, because nearly the whole of the sailing vessels are accommodated there. If the ships were required to strike their topgallant-masts before proceeding to their berthing-places, some other accommodation would have to be provided for them, and under existing conditions I do not see how they could procure it.
905. You did not mention the maximum headway which you think should be stipulated? I think about 200 feet would clear anything. We have had one ship here about 200 feet—the *S. D. Carlton*—which is likely to come again.
906. *Mr. Ashton.*] Do you think it would be necessary to raise the bridge 20 feet in order to accommodate half a dozen ships which might come here in the course of twelve months? It is not what have come, it is what will come. Ships are increasing in magnitude.
907. You think that a height of 200 feet would be ample? Yes.
908. *Mr. Molesworth.*] Is it not a fact that all the shipping from abroad, with the exception of the mail boats principally, is accommodated to the west of the site of the proposed bridge? With very few exceptions they are.
909. The only exceptions would be those which have the opportunity of berthing at Circular Quay or Cowper's Wharf? Occasionally.
910. Is it not also a fact that the whole of the docking accommodation of the port is situated to the westward of the site of the proposed bridge? Yes.
911. The railway wharves are also situated in that direction? Yes.
912. As a matter of fact, the traffic through the bridge would be very great? No doubt.
913. Will you explain to the Committee what you meant by saying that it was possible for three or four vessels to be abreast at one time in going under the bridge? All the small ships as well as large ships proceed up Darling Harbour. At times you may see three or four coastal steamers, three or four ketches or small schooners, and probably one or two over-sea ships going up there.
914. What the Committee are to infer is not that you expect three of these large high-masted ships would attempt to pass through abreast, but that the intercolonial or smaller craft might happen to meet them just as they were going through? Yes.
915. *Mr. Brennan.*] Do you mean that the vessels you spoke of in reply to Mr. Molesworth's question are not vessels requiring a height of 190 feet? Many of them;—probably a number of them would not require that height.
916. Do you know as a fact that large steamers are superseding sailing vessels? In a great measure.
917. When you informed the Committee that the carrying capacity of vessels would probably be increased, I suppose you meant to convey what might happen in reference to the construction of steamers? Not steamers alone, but sailing vessels also are increasing in tonnage.
918. *Mr. Fosbery.*] Do you think that if a bridge is put across the harbour from Dawes' Point to Milson's Point with a 180-foot headway it would have a prejudicial effect on the port as a port? On the shipping interest.
919. If it will prejudice the interest of ships, then, it will prejudice the interest of the port. Is it likely that if a bridge with a headway of only 180 feet is constructed there, any of the shipping which now comes here would drift to Melbourne? That is a question I could not venture to answer.

TUESDAY, 25 AUGUST, 1896.

Present:—

MR. WADDELL,

MR. MOLESWORTH,

MR. MACDONALD.

JAMES ASHTON, Esq., IN THE CHAIR.

E. E. Fosbery, Esq., appeared as solicitor for the City and North Sydney Railway Bill.

W. F. Brennan, Esq., appeared as solicitor for the Sydney and North Sydney Bridge and Tramway Bill.

L. Gibson, Esq. (Messrs. Dibbs and Gibson), appeared as solicitor for the North Shore Bridge Bill.

Major-General George Arthur French sworn and examined:—

920. *Chairman.*] Are you the officer commanding the Military Forces of New South Wales? Yes. Major-Gen. French.
921. There are two distinct bridge proposals before the Committee, and the plans are before you; it is proposed in both cases to give a maximum headway of 180 feet. In one case there will be three piers, and in the other case a centre pier only. The Committee would like to hear your views on the proposed work? 25 Aug., 1896.
- Of course any means of connecting Sydney and North Shore will be very valuable from a defence point of

Major-Gen.
G. A. French.
25 Aug., 1896.

of view. It would be of great importance to avoid the embarkation and disembarkation of troops, particularly mounted troops and guns, which is always a source of delay. The question as between the two bridges and a number of piers does not affect us while there is a good roadway.

922. Have you any preference for a bridge rather than for a tunnel? I should be strongly in favour of a bridge, because I assume that there would be a good roadway, which there would not be in a tunnel.

923. What are the advantages which you see from a connection of the two shores of the harbour? It would be a means of communication for troops in case of an attack on one side or the other. We could at once throw reinforcements on whichever side they were wanted, without the delay of embarking and disembarking in vessels.

924. Do you consider that that would be a very great improvement? Yes, from a defence point of view.

925. Your preference would be for a bridge as against a tunnel? Yes.

926. *Mr. Macdonald.*] As the officer commanding the troops, and responsible for the transport of troops and munitions of war, and as a means of establishing continuity of connection between the various posts of defence, do I understand you to say it is a matter of very grave importance that there should be some means of communication other than by water between the city and the north side of the harbour? Yes.

927. Do you think that a bridge, such as has been roughly described, would answer all the purposes required from every point of view, as regards the transport of troops, heavy guns, and munitions of war? Yes.

928. Do I understand you to say that a tunnel would not meet the requirements of the service in that respect? Of course a tunnel would be better than to embark and disembark troops; but I do not think a tunnel would be as good as a bridge, because I conclude that a tunnel must be a very much narrower roadway than a bridge, and probably you would have to stop traffic in one direction while we were going in the other direction. I also conclude that in order to get under the river, and to rise to the height on the other side, there would have to be a very steep grade.

929. *Chairman.*] As a matter of fact, the grades are about the same? Then there must be a very much longer distance to get over in the case of a tunnel.

930. Having the grades before you and the relative distances, do you see any strong objection to the tunnel? No, the grades in each case are quite easy.

931. There are proposals for two separate tunnels, one for a tramway, with which, I suppose, you are not particularly concerned? I do not suppose it could carry any large number of troops at one time.

932. It is supposed to cope with all the passenger traffic which goes by ferry at present, then there is a vehicular tunnel which has a clear roadway width of 21 feet;—what is your view with regard to those proposals? I do not think the tramway would help us, because I think that 1,000 or 500 men would march through the tunnel quicker than any tramway could take them.

933. What about the transport of guns? Twenty-one feet is wide enough, the width between the wheels is only about 6 feet 8 inches. Twenty-one feet will leave ample room for two lines of traffic in opposite directions, except, perhaps, when there are waggons with heavy loads of skins or bales of wool. On looking into the figures, I find that, leaving the high ground on this side to reach the high ground on the North Shore side, the bridge will be only 4,000 feet long, whereas the length by the tunnel will be 8,800 feet.

934. Having the figures before you, would you consider the tunnel offers any great objection so far as the gradients are concerned? No, the gradients are quite easy; only they must be a little longer.

935. Would it be a serious matter? No; practically it means a difference in the time in marching over that distance. It would not be very much; perhaps 20 minutes.

936. *Mr. Macdonald.*] From the point of strategics, in case the city was under siege, and there was a bombardment, do you think the bridge would be likely to be as permanent, and would it afford as effectual a means of transport as a tunnel;—in other words, do you not think the bridge would offer a mark more likely to be demolished by an enemy than a submarine tunnel? Yes, assuming that the enemy was in a position to land a large force with guns; but we do not usually consider that likely.

937. But might not great damage be done even by one gun if it got into position? Yes, it might injure the bridge.

938. Do you consider it a matter of very great importance that either the one or the other means of communication should be established? Yes, from a defence point of view.

939. *Mr. Brennan.*] Would not the defence of the city be below the bridge and down about the Heads? Yes, the water defence.

940. Do not the defences of Sydney and Botany consist mainly of the Bare Island Fort, George's Head Fort, and Middle Head Fort? Yes.

941. Did you not answer with regard to the continuity of transport in connection with those forts? A force might be landed at either side beyond the range of the guns. It is most likely that would be done. We might have to move a large body of troops to one side or the other. A hostile force might be landed beyond Manly or beyond Botany Bay. They would probably not land under the guns if they could avoid doing so. Then it would become a question of opposing them with a sufficient field force. We should like to send all the men we could spare to whichever side was necessary.

942. On the question of grades do you know something of the pull up Alfred-street, North Sydney, where the traffic goes? Yes; that is very steep and long.

943. Do you know the Council Chambers at the top of the hill? Yes.

944. That is where our bridge will come out? Yes.

945. Comparing that position with the circuitous tunnel proposed, although the grades are somewhat similar, considering that we land you on a high ground, would not the advantages be in favour of a bridge as against a tunnel? That is the point I took when I compared the tunnel with the bridge. You start in one case from high ground wanting to get to high ground, therefore the bridge will give less pull, which would be of great advantage in moving guns and so on. If you have to go down 50 or 60 feet below the water level, you will have to get up the grade on the other side.

946. Your experience has not been limited to military work? No.

947. Can you tell us anything about striking topgallant masts? As a matter of fact, I take interest in all engineering questions, and certainly I do not see the sense of making everybody ascend 30 or 40 feet extra simply in order to avoid striking topgallant masts.

948. The height of the Forth Bridge is 150 feet. Here we are asked to go 180 feet above high-water mark;—

- mark;—would you express an opinion as to the necessity for this greater height in New South Wales than at the Forth Bridge? I think 180 feet is excessive.
949. *Mr. Fosbery.*] Comparing the length of the bridge with the tunnel, would it not be more convenient to take men from any of the military depôts to a tunnel on the level of Circular Quay, rather than to take them from Dawes Point up George-street to Cumberland-street, in order to get them on to the bridge? No doubt it would, but there would be no troops at Dawes Point.
950. Does it not entirely depend upon where you are taking the men from? Yes; but the great bulk of the troops would probably be camped at Centennial Park to be moved in any direction.
951. Would it not be more convenient to take stores to the level of Circular Quay rather than to the heights of Cumberland-street? Yes, if they happened to be there.
952. Is not that where most of them are at present? Yes.

Major-Gen.
French.
25 Aug., 1896.

Cecil West Darley, Engineer-in-Chief for Public Works, sworn and examined:—

953. *Chairman.*] Are you acquainted with the proposals before the Committee? I have seen all the proposals except Mr. Kenwood's new scheme.
954. It is proposed to raise the headway of the bridge to 180 feet above high-water level, and the other alteration is to have one pier in the harbour? Putting one pier in the centre removes the objection I first raised to Mr. Kenwood's proposal which was only to have one opening for navigation, which I consider to be a fatal objection to a bridge across the harbour. Of course one pier is less objectionable.
955. Would you regard that objection as fatal in connection with the other bridge proposal, having three sets of piers? No, I do not see any objection to that, because there is a passage through for inward and outward vessels.
956. Then you do not object to three piers? No, what I object to is forcing all the navigation through one opening.
957. Will you give the Committee the benefit of your views as to the relative advantages or disadvantages of a bridge as compared with a tunnel? Of course, generally speaking, a bridge is preferable to a tunnel. It is in daylight, and you can get a broader structure, but a tunnel will not interfere with the navigation. Even if the bridge is 180 feet high, it will keep out a certain number of ships. A small number of ships would have to strike their masts to pass under. Then there will have to be a pier in the harbour; a bridge with one span would be very costly, but it would be less objectionable. There must always be an objection to a pier in the harbour. A tunnel would offer no such objection. A bridge would be pleasanter possibly for travelling over. As far as gradients are concerned for ordinary traffic a bridge would be more objectionable than a tunnel. You could enter a tunnel from a central place like Circular Quay, but in order to cross a bridge you must climb up Observatory Hill and the gradients there are rather bad unless you go right away back to the markets.
958. What do you say with regard to the accommodation that will be furnished by the two tunnel schemes, one for tramway traffic and the other for vehicular traffic? Of course the tramway tunnel would take all the passenger traffic, the vehicular tunnel would be for wheeled vehicles and it would be 21 feet wide under the water. It is narrow but properly lighted and painted white inside; I think the traffic could be safely carried through. There would be plenty of room for two vehicles to pass and that is all that can be required. Of course, at present, all the traffic is concentrated into quarter hour loads which makes it appear to be very great. With a tunnel the traffic could go through as it arrived and there would be no concentration.
959. Having the knowledge you possess of the proposals, are you prepared to say which, in your opinion, should be carried out? In the interests of navigation, I would sooner see the tunnel carried out. I do not think the bridge will take away the traffic from the ferrys. I am sure the bridge will never attract the passenger traffic.
960. What is your reason for thinking so? No one would walk up to the top of Observatory Hill, if he could get shot through the tunnel in a few minutes. All the offices are concentrated about King-street, Bridge-street, and Circular Quay. People would far sooner walk to Circular Quay on a level, and go through a tunnel. I do not know the details of the passenger scheme; but possibly there would be a station for the tunnel near Bridge-street.
961. There would be one at King-street, and one at Circular Quay? It would be far better to go through that way than to go to the top of Observatory Hill.
962. Then both from the point of view of passenger requirements and navigation you think a tunnel would be preferable? Yes; I am quite satisfied that if a bridge is constructed the steamers would still carry the bulk of the passengers.
963. If a tunnel were constructed do you think that would affect the ferry service? The steamers might still run, but stations at King-street, Bridge-street, and Circular Quay, would interfere more with the steamers than a bridge. Then again, the tunnel would carry the passengers and deliver them at different points up the hill. If you go over the bridge, all the people going to Milson's Point and the lower levels where the largest population is, will be landed on the heights of North Shore and will have to walk down hill.
964. Have you given any consideration to the question of the connection between Sydney and North Sydney in its bearing on the question of extending the city railway? I have left that to the Engineer-in-Chief for Railways.
965. *Mr. Macdonald.*] Do you think the Government should carry out the work of connecting the two sides of the harbour instead of its being left to private enterprise? I think that is very much a matter of policy. The Government policy hitherto has been to provide means of communication.
966. Do you think there would be any serious obstacle in the way of providing a scheme by the Government for a connection between the north and south sides of the city over the harbour? No.
967. Do you think it could be done just as easily by the Government officers as by private enterprise? Yes.
968. *Chairman.*] That is if you regard it only as a matter of money? Yes.
969. *Mr. Molesworth.*] Although you have left it to the Engineer-in-Chief for Railway Construction, I would like to ask you this question: Supposing this bridge were constructed, and afterwards it was necessary to construct a bridge to connect the railway at these two points, would it be a very serious matter in connection with harbour traffic to have two bridges? Yes, it would aggravate the evil.

C. W. Darley.
25 Aug., 1896.

- C. W. Darley. 970. Then, if there is to be a bridge, do you think there should be only one bridge? Yes; and the interests of railway communication should be considered in locating and designing the bridge.
- 25 Aug., 1896. 971. *Chairman.*] That is to say, no bridge should be constructed except one which provides for connecting North Shore with the main railway system of the Colony? Yes. The necessity should be considered of making the bridge a means of railway communication so as to avoid the necessity of another bridge.
972. Then, in your opinion, the bridge should not be constructed unless provision were made for that? I say it should not be designed or constructed without fully considering whether it is necessary to provide accommodation for railway traffic.
973. You would not commit yourself to the statement now that such provision should be made in any bridge that is constructed? No; I leave that to the Railway Department. A railway engineer might come in and say that he would prefer to take the railway through the tunnel.
974. *Mr. Molesworth.*] Would you see any objection to erecting a bridge with a headway of 200 feet? No; but it would aggravate the evil of gradients.
975. But would it not lessen the difficulty as to navigation? Yes, there are a few ships which exceed even that.
976. *Chairman.*] Would that not make it still more disadvantageous for passenger traffic? Yes.
977. *Mr. Molesworth.*] Do you take any exception to the erection of the pier in the centre of the harbour for the support of the bridge? No; but I would prefer to see the bridge span the harbour. The American engineers had that under consideration in connection with the New Hudson River Bridge. The authorities decided that they would never allow any pier in the river above high-water mark. They have been forced to design a bridge with a span of over 2,800 feet, which is nearly double the span of this harbour. There the engineers will not permit any bridge to go into the river. I do not go so far as that. I think communication is desirable between the two points, but I do not think the population in the Colony is sufficient to warrant the cost of a bridge without a pier in the centre. Therefore, if a bridge has to be put up and a pier has to go in the harbour, I would prefer to see that pier in the centre of the harbour rather than to have two piers making one span in the centre of the harbour.
978. At the same time, if it is possible to incur the expenditure of avoiding a pier, you would prefer to have no pier at all? Unquestionably.
979. *Chairman.*] Have you already given evidence on the Bills proposed to be passed? I did not give evidence on Mr. Simpson's bridge. I have already given evidence on Mr. Kenwood's Bill with respect to the way in which it should be amended.
980. *Mr. Brennan.*] Has it been pointed out to you that there are lifts on the bridge at Milson's Point to the street-level? No.
981. Do you know how they propose to get the passengers up from the tunnel at Milson's Point? By a tunnel at the end.
982. When a passenger train reaches Milson's Point, how do they propose to get the passengers up to the street-level? By lifts at that end.
983. I may tell you that there are corresponding lifts in the bridge at the same position; having regard to that explanation, will you say that the advantages of a bridge for the convenience of passengers are less than those provided by a tunnel? They are less at the Sydney side; but I will go so far as to say that they are equal on the North Shore side.
984. Do you also know that the bridge scheme will take people up to the corner of Wynyard-street and York-street by tramway? I did know that, but you have to get up to the tramway.
985. With that information I suppose you would like to qualify your evidence having regard to the fact that the bridge-tramway discharges passengers at the corner of York-street and Wynyard-street? It is better than I thought it was, but it is not so convenient as taking up passengers at Circular Quay and Bridge-street.
986. Still it is practically the same? No, it is not; it is much more difficult to climb up to Wynyard-street and York-street than to walk on the level.
987. Does not that depend upon where you are? The great bulk of the public offices are in the neighbourhood of Bridge-street.
988. Are not Sussex and the other streets about there very busy streets? Yes.
989. In your reply you pay no regard to that part of the population? I do not think those people would use the bridge very much. The bridge is used chiefly by business people.
990. You study only the business people? I think if you leave them out you might as well leave out the bridge.
991. *Mr. Macdonald.*] Did I understand you to say that in your opinion any bridge erected by private enterprise would be a certain impediment to the navigation of the harbour, and that if at a future day the Government had to erect a bridge for railway communication it would be an aggravation of the evil? It certainly would.
992. *Mr. Fosbery.*] Do you clearly understand that the lifts in connection with the electric railway will be quite close to the Government railway station, and that the lifts at the bridge will be about 100 yards away and on a rise? I do not see that there is much difference between the two schemes at the Milson's Point end. I would have to look closely into the designs before I gave a definite opinion.
993. Have you ever made an estimate of the cost of any kind of bridge across the harbour? No.

Henry Deane, Engineer-in-Chief for Railway Construction, sworn and examined:—

- H. Deane. 994. *Chairman.*] With the knowledge which you possess of what is proposed, and having had the advantage of hearing the points we have submitted to Mr. Darley, would you give the Committee the benefit of your views on the different proposals? Mr. Darley and I made a report on the bridges, and we objected to Mr. Kenwood's scheme on account of the single central span. I understand that this has been altered, so that the objection no longer holds. We did not object to Mr. Simpson's bridge on that account, as it had already two central spans. As to the headway, I believe the objection has been met, the promoters being prepared to undertake to make the headway of the bridge of a sufficient height. One point with regard to the bridges which I had a very strong opinion about was that if a bridge was built across the harbour from Dawes Point, it must remain the only bridge for all time, because there is not room for two bridges

H. Deane.
25 Aug., 1896.

bridges starting from Dawes' Point; moreover, I consider that even were it possible to have two bridges from Dawes' Point, they would offer a very much more serious impediment to navigation than one bridge. That being the case, I have no doubt that whatever bridge is built, it should be so constructed as to carry a railway. Not that railway connection is at present necessary, but I feel sure that if a road bridge were constructed now, the want of the railway would forcibly present itself; therefore I think that the question of railway communication should be taken into consideration at the same time in the design of the bridge.

995. That is to say, you think such provision should be made? Yes; I am sure of it. Now there is no doubt on my mind that Milson's Point is the wrong point to take it to. The proper point would be McMahon's Point. The latter is more directly in line with the road to the top of the hill, whereas Alfred-street is not in the direct line. It is a mere accident that the traffic goes up Alfred-street now, Milson's Point having been adopted for the ferry. McMahon's Point is, however, in a direct line with Miller-street, which is the direct road to the top of the hill, and it has the same advantage with regard to the Lane Cove Road, which is the main road for traffic along the northern shore to the westward, and it also leads more directly to the Military Road, which is the main road to the east. Also, if you pass over to McMahon's Point, you are in a better position to join the railway. I do not know that I need say more on the subject, except to point out that there is this other objection to crossing to Milson's Point. Supposing you connect with the railway communication from there, you have to drop down into a hollow a little distance beyond the Council Chambers, and afterwards rise again, thus losing height. Then, again, I think any pier or abutment placed on the shore near the present station would be very objectionable. I do not say that it would not be possible to arrange the position of that pier so as not to interfere with the future development of the railway; but according to Mr. Kenwood's plan shown here (I am not quite certain about Mr. Simpson's pier, but I think it is open to the same objection), it offers a very serious obstruction to the enlargement of the railway accommodation there. When the Milson's Point railway proposal was before the Public Works Committee I was asked how would it be possible to provide in future for the very large increase in traffic which might be anticipated; and I then submitted to the Committee a plan showing an enlarged railway terminus, to carry out which a complete re-arrangement at the Point is necessary. I do not see how the increased traffic could be provided for otherwise than in the way shown on that plan; but its adoption would be entirely prevented by the construction of the pier before referred to, which it is proposed to place at the corner of Campbell-street. I produce a map of the North Shore which shows in pink the area required for the future development of the station. I think it will be seen that although it does not cover the whole of the site occupied by the pier in question, it occupies a very large portion of it. The traffic on the North Shore Railway is very largely increasing; and if, as the North Shore residents like to believe, the North Shore district is going to be a future Brooklyn, there is no doubt that no permission must be given to the erection of a structure which would interfere with the enlargement of the railway terminus. I believe to a great extent in the future of North Sydney; but as to whether it will ever be a Brooklyn or not I should not like to give an opinion. I think, however, its importance will largely increase, and I should consequently be sorry to see anything that would interfere with the development of the traffic arrangements at Milson's Point. With regard to the tunnel, I have already given evidence. I think it was in November of last year when Mr. Sulman's first scheme of an electric tunnel was under consideration. I think as I stated then, that it would fairly meet the requirements of the public. The position of the terminus at Milson's Point is open to the same objections as the pier before mentioned. It would constitute an interference with the station; but it could be got rid of in future by extending the tunnel, and putting the lifts in another position. I am strongly of opinion that the best method of connecting the North Shore and Sydney is a tunnel to carry an extension of the George-street tramway right through to Milson's Point without change, where passengers could get out at the station, or be conveyed up the hill. Under this scheme, which was submitted by me about a year ago, there would be no time lost in waiting, and no trouble in going up and down lifts.

996. In connection with making provision for a railway between North Shore and the city, can that be done later on, independently of the present tunnels, if found necessary? Yes.

997. Are you free to say whether that could be done by tunnel, or would it involve the erection of a bridge? Communication could be made either by a tunnel or bridge. For a railway I think the most convenient way would be by a bridge. The only objection to the bridge proposal would be, that it would carry the railway over to the western side of the city; and railway construction on that side, on account of the interference with buildings, would probably be rather an expensive matter.

998. Have you considered the question of connecting Sydney and North Shore in its relation to the extension of the City Railway? Not very recently. When the Royal Commission was sitting in 1891, I gave some little attention to the matter then; but I have not done so since. If this question had to be considered separately from any other bridge proposal, it would be desirable to know first where the city railway is coming to; as, on the other hand, if a bridge is erected across the harbour, its position will determine the direction in which the railway connection will take.

999. Has there not been some scheme propounded for a connection by means of an underground railway all the way from Redfern to North Sydney? Yes; the Railway Commissioners suggested a scheme of that kind in 1891. It could be done by carrying a railway in a tunnel under the harbour, and bringing it up so as to join the present railway in Lavender Bay.

1000. Are you in a position to say whether they still favour that scheme? From some conversation I had with the Chief Commissioner not very long ago, I gathered that they were averse to devoting any money at all to that object. The connection was scarcely considered to be necessary at present, and not likely to be required for a long time.

1001. But there is a proposal very close at hand now for a city railway extension of a very definite character, and if that proposal to connect Redfern with North Sydney underground still remained a practicable one, part of that scheme would have been to give the city railway extension by the same means; that would provide for a connection with North Shore and a city railway extension in one scheme? I think myself they are two separate questions; because if you have to carry the railway across in a tunnel, you must necessarily keep down at a much lower level than if you were simply carrying the city railway on to, say, Circular Quay. If you carried it in the ordinary way to Circular Quay only, you could not then continue it through the tunnel, because you would be at too high a level.

1002. Then I understand that if the Railway Commissioners still adhere to the proposal to connect North Shore with the city, and then to make some provision for the extension of the city railway, they would be two separate works? They are two distinct proposals.

1003.

H. Deane.
25 Aug., 1896.

1003. Is it likely that both will ever be carried out? I do not know, but I consider them quite distinct; they each have their own merits. If we want to go under the harbour, it would be too low down for a convenient city railway to Circular Quay. Even in the case of the present proposal—to go to Hyde Park—which I have been actually working at a scheme for an extension of the railway into the city. Now, if that railway had to be continued through to Circular Quay, even apart from the question of a tunnel, it would have to be erected below the level of the station. We would have to take a couple of lines, even as it is, lower than the terminal station. I mention that because I think that if these schemes are not taken and considered in their entirety they will involve extra work and alteration afterwards.

1004. Another point bearing in some degree on that is this: it is proposed to bring a tramway, either in connection with the bridge or in connection with the tunnel, up to a point in Wynyard and York Streets, or in King-street;—would such a tramway come into competition with the proposed George-street electric tramway? I do not think it would compete, because I am quite sure people would prefer to travel over-ground instead of underground.

1005. Once they connect with the tramway at North Shore they would finish their journey, while if they came over by ferry they might take the electric tramway by George-street? Yes, that might be.

1006. Would it not divert all the North Shore traffic in the case of all those persons not going further than King-street? Yes.

1007. Would that hold good also in connection with the bridge as far as the tramway is concerned? Yes.

1008. *Mr. Macdonald.*] In view of the probable necessity in future for railway connection between the north and south sides of the harbour by bridge, and the advantages conferred as a starting-point by Dawes Point, do you think it would be wise for the Government to give up that starting-point to the promoters of any private enterprise? Not unless the promoters carried out a design which would suit the Government later on.

1009. Taking into consideration the large amount of money that has been spent in bringing the Milson's Point railway to the low-level terminus, do you not think that if railway communication were established on the high ground it would be robbing Peter to pay Paul;—would it not interfere with the present Milson's Point line? Yes, I think it would.

1010. *Mr. Molesworth.*] Do you not think the connection of two points on the north and south sides of the harbour is almost a national undertaking? I think I am scarcely in a position to give an opinion. That is really a matter of Government policy. Nearly everything that is done in connection with schemes of communication is carried out by the Government, so that this one might naturally be undertaken by them.

1011. Do you not think that means of communication like this would affect the well being of the whole community? There is not the slightest doubt that it is a very important matter—one of the most important brought forward.

1012. Is it not one of the most important public works in the Colony? Yes.

1013. Would it not affect the well-being of the whole community? The erection of a bridge would alter the character of the city.

1014. Therefore you attach very great importance to a structure of that kind? Yes.

1015. Do you think that a bridge erected over the harbour should make provision for railway connection? Yes.

1016. If a bridge were erected without that provision, and it was intended later on to connect the two points by rail, would a second bridge have to be erected? Yes; and that would be very objectionable, in fact almost impossible, because there is not room for two at Dawes Point. I may be permitted to add that objections have been made to me that to make provision for railway traffic would very seriously add to the expense of a bridge. I do not consider that it would. I cannot say exactly to what extent the expense would be increased, but without going into the matter very closely, and without making all the calculations that are necessary, I am of opinion at the present moment that the extra provision would not add to the cost of the piers, and would only add to the cost of the superstructure from 25 to 30 p. c.

1017. *Chairman.*] Supposing that a bridge company got permission to construct the bridge, and agreed to make provision for a railway, would you not consider it a great objection that a private company should practically control the way between the terminal points of two systems? I think it would be better for the Government to have the control. Of course these conditions exist in other parts of the world, in America especially. Distinct companies are frequently found to build and work the railway termini and bridges. The railway companies then pay for their use. If a bridge were erected by a private company, possibly some equitable arrangement might be entered into for the Government to run trains over it. I think it might be very easily arranged, but I do not think the Government should be called upon to pay, in the first place, for the necessary strengthening of the bridge. It has been suggested to me that if the Government insisted on such a large increase of cost as 30 per cent. on the superstructure, they should pay the increase in the cost, but I do not agree to that at all.

1018. Would you inform the Committee whether it would be possible to construct a bridge across Sydney Harbour in the space available sufficient to carry all kinds of traffic, inclusive of a railway? Yes.

1019. Would that be a very expensive bridge? No; it need not be much more expensive than the present proposed bridges. I am not quite sure as to the estimated cost of those bridges when raised to 180 feet.

1020. Do you think the proposed points of connection are the best that could be selected? No; I consider Dawes Point and McMahon's Point are the best.

1021. *Mr. Brennan.*] Have you paid regard to the fact that the railways in England and the bridges are owned by private companies, when you tell the Committee that you think this particular bridge should be constructed by the public, and not left to private enterprise? I would scarcely go so far as to say that I think it should be constructed by the Government. I do not think I put it in those words.

1022. Is there not plenty of room at Dawes Point for two bridges? There is plenty of room near the water's edge for the abutments of two bridges, but when you get a little further back there is no room.

1023. Is there not plenty of tableland up there? I am afraid there is not.

1024. As a railway man, do you not know as a matter of fact that in other parts of the world it is no uncommon thing to see railway bridges runningside by side, or nearly so—for instance, crossing the Clyde? Yes, and also in London—for instance, the London-Chatham and Dover Railway Bridge and Blackfriars Bridge over the Thames.

1025. If the Government wish to start a railway from Dawes Point to Milson's Point, is there any reason why

why another bridge could not be erected with the piers running on the same line? It would be an unsightly structure and ought not to be tolerated.

1026. I am speaking of the matter simply as one of practicability? It would be a question of lengthening the piers and widening the bridge, and it would be a great waste of expenditure.

1027. Is there not plenty of available land to the west of the present Milson's Point railway station, for lengthening the station? It is not a question of lengthening. What is wanted is to put in more platforms to widen it.

1028. Would it not be possible to reclaim more land for that purpose? There is another pier which would interfere with that.

1029. Would it not be possible to obtain more available land for the expansion of the station by excavation or reclamation? Yes, back in Lavender Bay, but it would not be suitable, we want to bring the passengers on to Milson's Point.

1030. Why to Milson's Point in particular? That was decided some time ago by the Public Works Committee and Parliament.

1031. Why is it absolutely essential to go to Milson's Point? That point is already used for that purpose, why should we go back.

1032. I am assuming that this place may develop largely. Is there an absolute necessity to go to Milson's Point? Yes, because the traffic goes there now.

1033. Is there any other reason? It would be a very serious loss to do otherwise. When you alter a station you do not as a rule, go further back, the tendency would be to go further forward. In this case the only way to increase the accommodation is to widen it, because we have gone as far as we want to. If we went back we should go away from the tram terminus.

1034. Is not the present station large enough for many years to come? I am not sure about that. It will last for another five years, probably.

1035. Do you think the accommodation will require to be enlarged in five years? I think it will be a matter for very serious consideration then. I went up that line the other day, and I was quite surprised to see the way in which buildings were running up. The commercial success of all these schemes is based upon the future of North Soore.

1036. If you take the railway to some other point on the North Shore, will it not do away with any necessity for enlarging the Milson's Point railway station? Possibly, I believe the bridge ought to go to McMahan's Point.

1037. There are two tunnels proposed, one for a railway and the other for a roadway, what do you think of the roadway tunnel, 21 feet wide for a length of 1 mile 26 chains. What is your opinion as to the relative merits of a bridge for vehicular traffic, and a roadway tunnel under water only 21 feet wide? If I had to choose between a bridge and a tunnel, of course, I would go by a bridge if equally convenient. At the same time, the section of the tunnel seems to be quite a reasonable one. I think it is practically the same as the Blackwall Tunnel, which is now about to be completed.

1038. You have heard my question with regard to the lifts in connection with the bridge as well as the tunnels? Yes.

1039. Do you think they are pretty well the same? Yes, as far as the Milson's Point end is concerned.

TUESDAY, 1 SEPTEMBER, 1896.

Present:—

MR. ASHTON, | MR. CANN,
E. D. MILLEN, ESQ., IN THE CHAIR.

E. E. Fosbery, Esq., appeared as Solicitor for the City and North Sydney Railway Bill.

W. F. Brennan, Esq., appeared as Solicitor for the Sydney and North Sydney Bridge and Tramway Bill.

L. Gibson, Esq. (Messrs. Dibbs and Gibson), appeared as Solicitor for the North Shore Bridge Bill.

Robert Henry Gordon sworn and examined:—

1040. *Chairman.*] Where do you reside? Sydney-street, Willoughby. I am Mayor of Willoughby.

1041. Will you briefly state the purpose for which you wish to be heard? At the request of my Council I have come here in response to your invitation, to give evidence particularly with reference to provision being made in any proposed bridge at North Shore for direct communication by rail with the city. A resolution was passed unanimously that no bridge that does not provide for railway communication direct with the city should have the countenance of the Council. A resolution to the same effect was also carried at a public meeting. Our idea is that there would be only one bridge at North Shore, and if provision is not made on that bridge for a railway the railway will be blocked. We think that it is hardly likely that the Railway Commissioners themselves will build a bridge to carry the railway. Therefore, we ask that your Committee in any report that they make should urge that provision be made for carrying the railway over any bridge that may be constructed. At present the break at the ferry causes a great delay. We are anxious that the bridge should be built, and that there should be some direct communication with the city. Of course, a high-level bridge is preferable to a tunnel.

1042. *Mr. Cann.*] Do you think it is practicable to connect the railway system at its present terminus with the proposed bridge? Certainly not. Such a connection would have to be made at Bay Road, or about there. That is about $\frac{3}{4}$ of a mile up the line.

1043. Would that answer the purposes of the residents about there? Yes, all north of that. Of course, it would not serve the lower levels. To get a high-level bridge at an elevation of 165 or 170 feet, it will be necessary to go almost as high as Bay Road. It is proposed, as far as I can see, by one scheme to bring the bridge out at Alfred-street; that will meet the views of people who live at Milson's Point, but the bulk of the people would be served by a bridge to Blue's Point, which is the most direct point for people living on the Lane Cove Road or Gordon. They would be compelled to travel down Alfred-street and then cross the proposed bridge, whereas, if the bridge came out at Blue's Point, they could go direct to the city. The point in favour of Alfred-street is that it is likely to serve the lower levels at Milson's Point, but the majority of the people would be better served at Blue's Point.

1044.

H. Deane.
25 Aug., 1896.

R. H.
Gordon.
1 Sept., 1896

- R. H. Gordon. 1044. What proportion of the population would be served by each route? It would be difficult to answer that question, but I should say that an equal number of people would be served at Blue's Point as at Alfred-street. The North Shore railway suburb is only a new settlement which is progressing very rapidly, almost doubling itself every year.
- 1 Sept., 1896. 1045. Do you not think that your proposal would have the effect of sending the people by the present mode of transit—that is to say, if the bridge were to connect with the railway at Bay Road instead of at Alfred-street? Yes, undoubtedly that would be the case. All the people living at the lower level would have to be served from Milson's Point; but I maintain that only a small percentage of the population live at Milson's Point. Of course, they are an influential body of people.
1046. *Mr. Brennan.*] Do you know what the railway extension from St. Leonards to Milson's Point cost the Government? No.
1047. Would it surprise you to hear that it cost over £350,000? No, if you include unnecessary land resumptions.
1048. If this scheme of taking the bridge to Blue's Point were adopted, do you not know that the result would be that the portion of the railway from Bay Road to Milson's Point would have to be practically abandoned? So far as passenger traffic is concerned that would be the case, but no doubt the goods traffic would still go down there.
1049. You would still leave us the goods traffic for the expenditure of £350,000? Yes; but that expenditure of £350,000 includes portion of the line from St. Leonards to Bay Road and two stations, Edwards Road and Bay Road, and also the land resumptions.
1050. Do you propose to leave those stations to meet the requirements of the goods traffic? Only Milson's Point and the tunnel (Lavender Bay tunnel) would be abandoned so far as passenger traffic is concerned.
1051. Is not that a distance of $1\frac{3}{4}$ mile? No.
1052. Will you swear that it is not fully $1\frac{3}{4}$ mile, or, at any rate, over $1\frac{1}{2}$ mile? I stated at first that I cannot say positively.
1053. Will you undertake to swear that your proposal will convenience more than one-third of the present population as compared with those on the lower levels and North Sydney? I say either from Blue's Point or Bay Road. If the connection were made from Blue's Point it would serve more than two-thirds of the population at present.
1054. What is the population of Willoughby? About 3,000; but Willoughby is only one of several places.
1055. Will you tell me, approximately, the population of the parts of North Sydney which would be served by connection with Blue's Point? I cannot give you the population; but I maintain that Manly, Mosman, and the higher levels of North Sydney would be equally served by connection at Blue's Point as they would be by Alfred-street. I have not worked out the figures. I have only come here to express an opinion as it affects Willoughby.
1056. *Mr. Cann.*] With reference to the short line from Bay Road to the present terminus, whether it is $1\frac{1}{2}$ mile or three-quarters of a mile in length, do I understand that it cost £350,000 to construct it? I understand that is the total cost of the line from St. Leonards to Milson's Point. I believe it is $2\frac{3}{4}$ miles in length. The bulk of the money was spent in land resumption. I understand that £40,000 worth of land at Lavender Bay is lying idle. The Lavender Bay water frontage owned by the Railway Commissioners is a valuable asset.

Benjamin Crispin Simpson, recalled and further examined:—

- B. C. Simpson. 1057. *Mr. Gibson.*] Did you hear the evidence given by Mr. Darley and Mr. Deane? Yes.
- 1 Sept., 1896. 1058. Mr. Darley spoke of the steepness of the grades approaching the bridge from George-street;—have you prepared a plan showing the grades? Yes; I may say I was very much astonished to hear Mr. Darley's evidence, which I think he could hardly have sufficiently considered. It must be well known to members of the Committee that the gradients of the approach along York-street and Cumberland street are not steep; they are particularly easy. I have prepared a section showing the grades of the approaches from George-street. Considering first the route along York-street, there is a drop from George-street, by the side of the Town Hall, to York-street, of 1 in 22; beyond that the grades are all quite easy. I am about to quote the steepest grades, but many are nearly level—1 in 38, 1 in 36, 1 in 34; that is on the approach to the bridge; the others are practically level. Besides the direct approach to the bridge from the Town Hall, of course there are approaches to York-street from various other points in George-street. By Market-street the approach from George-street is 1 in 30. The approach by King-street from George-street is 1 in 30, and by Barrack-street 1 in 32. On the other side, in the direction of the water, the grades are easier. At Margaret-street there is a bit of a steep grade of 1 in 10. I may point out, comparing the convenience of bridge communication with that afforded by a tunnel, that all these points of access to the bridge would be open to the public, and that my bridge is designed with the object of affording an opportunity of tramway communication between the proposed George-street tramway and the North Shore system. If the Government (which I think would be very unlikely) did not avail themselves of the opportunity, the promoters of this Bill would certainly seek power to provide such a tramway themselves; but we think it is undesirable to have a link of private tramway between two Government tramways. Therefore, we simply afford facilities for such communication in the construction of the bridge.
1059. Something was said by Mr. Deane about the cost of constructing the bridge to carry both a railway and ordinary traffic being about the same as if it were made to carry only the ordinary vehicular traffic? What I think he said was that the cost of the piers would be the same, and that the cost of the superstructure would only be increased by about 30 per cent. I think Mr. Deane could not have considered the question very carefully, otherwise he would not have given such evidence. It must be evident that if you construct a bridge to carry a road and a railway on the same level, the bridge must be at least 24 feet wider than it would otherwise be, so that instead of a bridge 55 feet wide, you would require one about 80 feet wide. Then as to the details of the structure, it would be necessary to have three piers instead of two to bear the extra weight, without necessitating, such long cross-girders that the superstructure would be extravagant. But apart even from that matter of detail, it is perfectly evident that

that if you have to carry double the weight, and such a vibratory weight as that of railway traffic, you must certainly have more foundation. Either you would convict yourself of having been extravagant in your original foundations, or else you would require to provide more. I am opinion that the foundations would be actually doubled—that is to say, you must have three piers instead of two, and the central pier, as it carries twice the weight, must be twice the size of the outside piers.

B. C. Simpson.
1 Sept., 1896.

1060. *Chairman.*] What do you think would be the increased cost? Altogether it would be very nearly the cost of two separate bridges. There are small economies in detail which would be made by combining the two bridges, but it is absurd for any engineer, with all respect to Mr. Deane, to say that you can construct a bridge to do double service of road and railway traffic for a little more than you can construct a bridge to do the single service of road traffic. I must point out that a bridge for railway communication must require greater provision with regard to the foundations because of the vibratory character of the traffic.

1061. *Mr. Gibson.*] In your opinion is it advantageous or otherwise to use a bridge for the dual purposes of trains and ordinary road traffic? At any time a joint bridge for road and railway traffic is only an economical make-shift, but under these circumstances where if such a bridge were constructed, it must be done to accommodate a future city railway which would have to carry all the northern traffic and all the northern suburban traffic. It seems to me a very undesirable thing, to say the least, to construct a joint bridge.

1062. Are there any further remarks you wish to make on the evidence? I regret that I have not been able to hear all the proceedings, but I believe that strong opinions have been expressed to the effect that the arms of the cantilever in my design would interfere with the traffic. I do not think that would be the case. The central span of 215 feet would, I think, be ample for the passage of ships, considering that all large ships would be towed, but as a great deal of evidence has been placed before the Committee to the effect that the arms of the cantilever would be an obstruction, I have prepared an amendment of clause 18, so that if the Committee admit the force of the evidence given respecting that obstruction I shall be willing to adopt that amendment in place of the style of construction originally proposed. I may say that in getting out a design on paper for a bridge of that kind one most important thing to consider is the feasibility and the facility of construction. The design was prepared by me with that view—that is to say, the construction can be carried out from the piers after the piers are erected. The cantilevers can be built on each side so as to balance one another with ease, but if you increase the central span the construction of the bridge would become exceedingly expensive, if not impossible, and it would require so expensive a temporary arrangement, staging being impossible in the harbour, that I think it would be better to adopt a different principle. In fact, from an engineering point of view if the full headway portion of the span is to be much increased it would be preferable to adopt another style of construction. Therefore, if the evidence to which I have referred is approved by the Committee—that the arms of the cantilever would be an obstruction, I should propose to alter the design altogether, and to adopt the suspension principle, which would practically be necessary for so long a central girder as a temporary work for erection. By the adoption of the braced suspension principle the bridge would have the full headway right across its entire length. I, therefore, submit an amendment to the Committee which I should be willing to accept in place of clause 18, as it now stands in my Bill.

The said bridge shall have two spans of not less than 650 feet clear width, and having a clear headway through their entire length of not less than feet over high-water mark.

It will be seen that I have left the height of the headway to be determined by the Committee up to 180 feet. My previous evidence will no doubt be borne in mind.

1063. *Mr. Cann.*] Supposing the Committee went over the limit of 180 feet? Then I consider that would make it impracticable. The amended proposal goes on as follows:—

The general width of the roadway, including pathways, shall be 55 feet. The superstructure of the bridge and the approaches thereto shall be of wrought steel, each of the three groups of piers carrying the two water spans shall be composed of four piers having an intervening space in the direction of the bridge of not less than 80 feet, and a clear headway over each intervening space of not less than 25 feet above high-water mark. A plan showing the exact position of the three groups of piers shall be submitted to the Engineer-in-Chief for Public Works or such other persons as may be approved by the Governor for such purpose, and shall be approved by him before the commencement of the works. Communication by lifts shall be established between the said bridge and Milson's Point Railway Station, if approved by the Railway Commissioners of New South Wales. A plan for the proposed communication shall be submitted, and shall be approved by them before its construction.

I have here a sketch which will show the position of the piers under the amended arrangement. In proposing this amendment I am accepting the position which public opinion has apparently taken up. I still consider that the bridge which I first submitted is the best to adopt from an engineering point of view, and for public convenience, but I should be quite willing to accept the amendment I have submitted, and I think the project would be still practicable from a commercial point of view.

William Kenwood recalled and further examined:—

1064. *Mr. Brennan.*] Do you wish to supplement your evidence? Yes; I desire to submit the following statement:—

W. Kenwood.
1 Sept., 1896.

In order to furnish the Committee with the exact grades on my bridge, constructed with a headway allowance of 180 feet above high water, I have recalculated the grades, and now confirm my former evidence. The grades on the Sydney side are 1 in 22, and those on the North Sydney side are 1 in 28. I desire to amend section 4 of my Bill in page 4, line 12, by substituting the words "high water for a length of at least 325 feet," in place of the words "low-water mark for at least 400 feet."

As I am afraid I have not made myself very clear regarding the lifts of the bridge at the Milson's Point railway station, I would like to state that for commercial reasons I have so located the bridge at Milson's Point and arranged the lifts there, as that they will directly convenience persons using the Milson's Point railway. There will be four huge lifts working continuously, each of which will accommodate fifty passengers—in all, 100 up and 100 down at the same—and each lift will take half a minute to ascend and descend. The lifts are twin lifts, and will work alternately, so that as one pair ascends the other pair descends. By these means I estimate I can effectively deal with 400 passengers within five minutes. Bearing in mind that the Bridge proprietary will have to compete with the ferry steamers for the traffic, it almost goes without saying that the former will leave nothing undone to secure the safety, convenience, and comfort of their patrons, and ensure their quick transit to and fro between the Milson's Point railway station and the centre of the city, and that from time to time every conceivable method will doubtless be adopted to meet, and even anticipate the requirements

W. Kenwood. requirements of traffic. In conclusion, I beg to refer the Committee to sections 4, 22, 23, 26, 60, and 61 of my Bill, where it will be seen that provision is made for the following, namely :—

1 Sept., 1896.

- That, before the said bridge shall be commenced, a plan or design and specifications of the same shall be submitted to, and approved of by, the Minister for Works.
- That the bridge is to be built in a substantial and workmanlike manner, and to the satisfaction of the Minister for Works.
- That the Minister may appoint an engineer to inspect the works from time to time during their progress.
- That the bridge is not to be opened for public traffic until the Minister certifies it has been efficiently constructed, and may be safely used for public traffic.
- And that the Minister may from time to time cause the bridge and works to be inspected, and I am bound to execute any repairs he may deem necessary; and, failing such repairs, the Governor may prevent the use of the bridge until such repairs are satisfactorily effected.

1065. *Mr. Ashton.*] When you gave your former evidence, I think you were in doubt whether, in the event of an alteration of the headway to 180 feet, your principals would be prepared to go on with the bridge;—can you now speak with more positiveness on that point? I cannot speak with any more certainty than at that time, inasmuch as the arrangements were made upon my first scheme, and were perfectly worked out with regard to details and cost. This new scheme has been one prepared during the sitting of the Committee, and consequently I have not had time to go sufficiently into the details of the design in order to enable my principals to determine whether or not they will take up the matter. That is a question I am now going into. I have gone into it sufficiently to satisfy myself, and I certainly do not think that the bridge is outside the limit of commercial enterprise, and I think they will take it up. I can speak definitely with regard to my first scheme if it is allowed to stand. I have not received any authority yet to speak positively about the altered scheme.

1066. Is that equivalent to saying that, even if the Committee and Parliament approved of this modified scheme, you are not prepared to say that you would be in a position to go on with it? I believe I am in a position to go with it—in fact, I feel certain about it; but I cannot speak positively. My principals are not in Sydney.

Edward Mann Clark, Esq., M.P., recalled and further examined :—

E. M. Clark,
Esq., M.P.

1 Sept., 1896.

1067. *Mr. Brennan.*] You have heard the evidence given by the Mayor of Willoughby;—will you tell the Committee what it cost the Government to construct the railway to the lower level at Milson's Point from Bay Road? The cost of the railway from St. Leonards to Milson's Point was £356,796—that is, the actual capital cost. I may point out that that may be virtually said to be the cost of constructing the railway from Bay Road to Milson's Point, for the reason that the land between St. Leonards and Bay Road was given free of cost for the railway by Mr. Hay. The distance is less than a mile between St. Leonards and Bay Road. Between Bay Road and Milson's Point is 2 miles. Mr. Gordon said it was only about three-quarters of a mile. I have given the official railway distance. The great cost of land resumption occurred between Bay Road and Milson's Point. The sum of £40,000 was paid to Cliff's Estate; £20,000 was paid to the North Shore Ferry Company. I think all the other people got as much as £60 per foot for their land. Roughly speaking, the cost of the railway from Bay Road to Milson's Point might be put down at £350,000.

1068. Did you take part in the agitation to continue the railway to Milson's Point? Yes.

1069. Was it not intended to continue it by tunnel to the city? Yes; that was the general idea.

1070. Is it not a fact that Mr. Deane formulated a scheme of that kind? Yes, by tunnel, only a few years ago.

1071. If that scheme were carried out, would it not intersect the tunnel scheme now before the Committee? Yes, virtually it would intersect the vehicular tunnel, because Mr. Deane's proposal would commence at Milson's Point to go to Fort Macquarie, and to take the whole of the traffic on to Circular Quay.

1072. That was to utilise the railway from the lower level? Yes; that was something less than two years ago.

1073. How long ago did Mr. Darley advocate a bridge and not a tunnel? His evidence before the Royal Commission in 1890 was very strongly against a tunnel. He said a tunnel was altogether impracticable and impossible for vehicular and foot traffic. That will be found in the Appendix to the report of the Commission. I heard Mr. Deane's evidence with regard to the proposed bridge from Dawes' Point to Milson's Point. The whole of the railway from Bay Road to Milson's Point must become utterly useless if such a bridge as Mr. Deane proposes is constructed at Dawes' Point to carry the railway traffic.

1074. What would be the comparative convenience of the bridge as proposed by Mr. Deane to the public? The population which would be served by such a railway bridge would be simply the population of Willoughby, consisting of 3,000 persons, and an outlying population of 2,000. Against that there is the population of North Sydney, 18,000 persons, who would be served by the Milson's Point route. Then there is a population of 3,000 at Mosman's Bay, and also the population of Manly and district. These are districts which have no railway advantages. Those in favour of the railway bridge are the people living in the railway suburbs. Of course, everybody prefers a bridge to a tunnel.

Colonel Frederick Wells, C.E., sworn and examined :—

Colonel
Wells.

Sept., 1896.

1075. *Chairman.*] What is your occupation? I am a member of the Institute of Civil Engineers, and for several years I was Engineer for Roads in the service of the Government.

1076. Do you wish to make a statement to the Committee? I am told that there is a scheme before the Committee which proposes to run a railway and a road on the same structure. Such a thing is highly undesirable. In the first place, there is the objection to the consideration of a railway in connection with a crossing to the North Shore at the present time at all. It is almost an engineering axiom that a bridge is not to be the objective of a railway. The bridge should be built to suit the railway, not the railway to suit the bridge. The danger to vehicular traffic would also be very considerable, supposing a line of railway were carried across the bridge. In this instance it is a particularly long bridge—two thirds of a mile. We have experienced great difficulty in connection with other bridges at Penrith and Singleton. If a railway were constructed over such a bridge it would inevitably be the Main Northern Line, as the distance would be 8 or 9 miles shorter than the present line by Hornsby, Ryde, and Strathfield. There is no doubt the

the traffic by rail would be enormous. As in the case of the Western and Illawarra railways, the suburban traffic would in a very short time grow rapidly. Therefore, it would be very much better that the railway should be left out of consideration in connection with the bridge proposed to be built for vehicular traffic. If the railway crossed the bridge at the same level as the road it would be absolutely necessary to screen the railway by a substantial screen, which would add materially to the wind strain on the bridge. I scarcely see how any private corporation could manage to arrive at an equitable system of tolls to be paid for by the Government for the passage of trains. In a very short time it would be found absolutely necessary for the Government to take over the bridge.

Colonel
Wells.
1 Sept., 1896.

1077. *Mr. Gibson.*] Would it be desirable to construct a bridge from Dawes' Point to Blue's Point, considering that it would throw out of use a large portion of the railway to Milson's Point? If that is done it is evident that there must be a very considerable sacrifice of the present railway. It might be necessary, perhaps, to cross to McMahon's Point if a railway bridge is constructed in order to get to the higher level, but that is a question for the railway engineers. I have not gone into that question, but it is inevitable that it would involve a considerable sacrifice of the present line in any case.

1078. *Mr. Brennan.*] Like all engineers, I suppose you would say that a railway bridge should be a railway bridge pure and simple? Yes; and the control should rest with the railway authorities.

1079. *Mr. Gibson.*] Would a bridge to carry a railway as well as road traffic cost more than a bridge built merely for road traffic? It would inevitably cost more. It would require a more substantial structure on account of the vibration and wind stress.

1080. Would it not have to be wider? Yes, much wider.

1081. *Mr. Brennan.*] Would not the combination of a railway and a vehicular bridge involve a large element of danger to vehicular traffic? Yes.

1082. Have you had experience of the Singleton bridge? Yes.

1083. Have you ever driven over there? Many times. It is very risky, and I have always had to wait until the train passed over.

THURSDAY, 24 SEPTEMBER, 1896.

Present:—

MR. CANN,		MR. ASHTON,
MR. GREENE,		MR. LYNE.

E. D. MILLEN, ESQ., IN THE CHAIR.

Mr. E. E. Fosbery, solicitor, appeared for Mr. Sulman, the promoter of the City and North Sydney Railway Bill.

John Sulman recalled and further examined:—

1084. *Chairman.*] A point has been raised as to whether it would not be possible, instead of running the tramway tunnel from Dawes' Point to Milson's Point, to make that tunnel parallel with the vehicular tunnel from Fort Macquarie to Milson's Point in order that it may junction more conveniently with the tram service at Milson's Point and the tram service in George-street, if it was possible to effect such a junction? It is possible as an engineering matter; but it would involve very steep grades for the electric line, and the cost of the power would be so heavy that it would not be a paying concern. Indeed I may say that point was carefully considered and suggested by myself, and the question of giving a service on the Milson's Point side without lifts was submitted to Mr. Greathead, the engineer; but, in his opinion, it was practically and commercially impossible to make a good scheme. Moreover, it would have taken away the very essential point we were aiming at, viz., rapidity of transit. It is a longer route with steeper grades, and we could not possibly run the cars to compete favourably in time with the ferry, and that is the chief object in view.

J. Sulman.
24 Sept., 1896.

1085. *Mr. Lyne.*] It seemed to me yesterday, when I looked at this diagram, that it would be very much more convenient if possible to put the tramway-tunnel alongside the roadway-tunnel. Suppose we have a tramway down George-street, we can run it round Circular Quay and enter the tunnel at that point and come out at the other end which would give a continuous connection, and would not involve getting in and out of lifts on the other side. There is no doubt, that if the Bill is passed with a clause giving Government power to resume this scheme, it will be better for the Government, whenever it is resumed, to work it in connection with their own tramway system. The first point I wish to know is, what would be the extra cost of putting the tramway-tunnel alongside the roadway-tunnel? I cannot give you any information.

1086. First of all, is it possible to do it? Commercially impossible from our point of view.

1087. But is it possible? The engineer reported against it, on the question of grades and the much higher power required.

1088. Surely you can take an electric tramway where you can take a roadway? You can; but I wish to point out that the essential feature of our scheme is rapidity of transit from Milson's Point to the heart of the city. The Government scheme is most excellent for surface stopping traffic; but it would not suit the great majority of the people who come down both by railway and tramway to North Shore. They want to get across the water more quickly than they do now, whereas the tram which you suggest, and which is a very good thing in its own way, would not meet that need. It would be slower than, or as slow as the ferry boats. What we want to do is to run the people across much more quickly than the boats do.

1089. You would require to have three tubes? No, we propose at the present moment, one tunnel for the electric line to be duplicated in future when the traffic requires it. The vehicular tunnel is a separate one.

1090. You only propose to have one tunnel for the tramway, and one tunnel for the vehicular traffic? Yes, at present.

1091. If you put down a double line, when the traffic increases you will require to have three tunnels? Yes.

J. Sulman.
24 Sept., 1896.

1092. Would there be any possibility of danger if the tunnels were placed side by side under the harbour for that length? No, judging by London experience as there. They have in several cases two tunnels side by side, and I should say that they can put three side by side.
1093. It is possible to carry a tramway tunnel round there as far as the grades are concerned? For a slow tramway, but not for a quick electric railway? For instance, the Government tramway down George-street could be continued through our vehicular tunnel at the surface rate of travelling, viz., 8 miles an hour, because the grades on that route would permit that slow rate of progress; but on the grades in our vehicular tunnel we could not run a quick electric railway through at that speed. We must have a grade of not more than 1 in 60 for quick transit. That is what Mr. Greathead has arranged for.
1094. *Mr. Ashton.*] Are steep gradients a recognised difficulty in connection with electric traction? Yes. I am not enough of an electrician to tell you the progressive increase; but to use an old phrase, I think it increases by geometrical progression.
1095. *Mr. Lyne.*] Can you tell us at what grade you can take an electric tramway? With high power you can go at a slow rate up ordinary steep grades. They have done that in America, although they found a difficulty in carrying it up some of the steeper street grades. The flatter the grade the more easy and economical it is for electric power.
1096. Can you give an idea as to what the extra cost would be to take it by this longer route? I cannot.
1097. Can you not give the Committee an approximate estimate of the extra cost? I am depending entirely on the engineer's estimate. I do not profess to be able to estimate the cost.
1098. If it was taken by the longer route is there room at Circular Quay to get into the tunnel in front of Mort's Store if you have a double tunnel? No.
1099. I should think there was? You could not put more than one tunnel there because it would take away access to Mort's store. We must leave access to that store. Our vehicular tunnel is twice the diameter of the electric-railway-tunnel. It is 27 feet in diameter; the other is 12 feet 6 inches.
1100. Could the tramway go up to the junction at Alfred and Junction Streets at a grade of 1 in 25? A tramway; but not my proposed electric railway.
1101. A surface tramway could be brought up from the outlet of the roadway tunnel, as shown on this plan, up to the junction of Alfred-street and Junction-street, at a grade of about 1 in 25? That is so.
1102. Not at a lesser grade? No, that is the grade of the proposed new road.
1103. *Mr. Cann.*] I suppose the grade at the other end would be similar? No, it would be 1 in 22.
1104. *Mr. Lyne.*] In the year 1886 or 1887, a proposal was submitted to the Public Works Department, to construct a double tunnel under the harbour, going in somewhere about Fort Macquarie, passing a little further down the harbour, coming in at Kirribilli Point, and tunnelling in there with a larger sweep than you propose in your scheme. The plans and specifications are now in the Works Department? They started the tunnel just below Government House gates, and on the other side of the water, I think they went up the Carreening Cove side and came out at Alfred-st. I did not know of that proposal, but I may mention that that was one of the schemes which I inquired into, but I abandoned it in favour of this scheme as affording a much greater public convenience.
1105. I fancy you could get a better grade on that route, but the advantage of your scheme is that it would strike the traffic? Yes; it would strike the railway traffic and the tramway traffic, and it is a shorter route than the route you have described.
1106. I wish you could give the Committee an idea of the extra cost to place the two tunnels side by side? I cannot. I may say from our point of view it would be commercially impracticable—it would not pay. It would take just as long, perhaps longer, for people to go through as it takes to go by the present ferry—the people would not use it.
1107. Do you not think there will be a great deal of time lost with a large number of people getting up and down in the lifts in a short time? No; we have worked that out very carefully, basing our calculations on the speed at which lifts are worked, and on the size of the lifts we propose to provide. We propose to have two very large lifts at Milson's Point, taking about 125 people each, and if the traffic warrants it we will put in a third one. We have also the experience of the London electric underground railways to guide us where ten times the traffic is dealt with by smaller lifts than we propose.
1108. Some of these ferry steamers take 500 or 600 passengers on each trip? I do not think so, but the fullest steamers are those which carry the passengers by the morning and evening trains.
1109. It was stated last night in the Legislative Assembly by an hon. member that 500 and 600 passengers are taken by a steamer at times? I have counted the number of people out of the most heavily-laden trains, and they average about 330.
1110. That would be augmented by the tramway traffic coming down to meet the steamers? On the steamer, but the steamer only travels once in a quarter of an hour. Our trams would go once in three minutes, so that there would not be a rush of people from the tram at the same time as from the train.
1111. *Mr. Ashton.*] Do the steamers travel more frequently in the busy parts of the day? Yes.
1112. Every five minutes? No, but for a short time in the morning and after 5 o'clock in the evening I think they run every ten minutes. I always come into, and return from town by train.
1113. *Mr. Greene.*] Can you run electric trams once in three minutes through a single tunnel? Yes; that has been worked out. There is a passing station midway at Circular Quay.
1114. *Mr. Lyne.*] Suppose that you were making three tunnels or two tunnels side by side, with the machinery which you would use for tunnelling, could you not do the work proportionately cheaper by having a large face to work upon than a single tunnel? We work by shields, and they will all be worked separately.
1115. It will make no difference in the cost? No.
1116. The same power would not work two shields which work one shield? There would be no saving in combining them. They must have separate shields for each tunnel, and they must be circular.
1117. I thought you worked an oblong tunnel? No, it would not work under the harbour. You raised a point this morning about the advantage of a surface connection without lifts. I wish to point out to the Committee that a tramway of that kind would be quite ineffective to deal with the railway traffic. A surface tramline on the grades which are shown on the plan, would only carry a couple of carriages at a time. That would be quite insufficient to take the train load which comes down. We propose, on our flatter grades, to have trains of four carriages each. Each carriage will be as big as an American railway carriage;

carriage; and we would have two trains in waiting, and these two trains would take the whole of the passengers from the eight-carriage railway train. I have worked it out carefully, especially in connection with the bridge schemes, and it would be impossible to deal with that rush of people from a railway train by any light surface electric tram line, such as would be possible on the steeper grades going in to the vehicular tunnel. J. Sulman.
24 Sept., 1896.

1118. What greater power would you want to have? I cannot tell you the difference in power. It is purely an engineering question. I know generally that what I have stated is about the thing.

1119. *Mr. Greene.*] I suppose the capital cost would be increased in proportion to the additional distance? Yes.

1120. *Mr. Ashton.*] The passengers would descend from the railway platform by the lifts to the station underneath, and the entrance to the tram-line through the vehicular tunnel would be some distance away? I think it would be a couple of hundred yards from the railway station at Milson's Point, and up a rise too.

1121. As much as 300 yards? I think so.

1122. *Mr. Cann.*] At what rate of speed do you propose to run your electric trams? Thirty miles an hour full speed.

1123. Is it possible to run the trams at that rate with other traffic in the tunnel? Utterly impossible; 8 miles an hour is the maximum speed we could run.

1124. That is really your difficulty? Yes.

1125. *Mr. Lyne.*] How are you going to run at the rate of 30 miles an hour with a loop in the centre? We stop at the loop, and that is the maximum speed attained.

1126. That would be for about 3 minutes? Yes.

1127. I do not see how you could do that in 3 minutes with a loop in the centre? The Engineer says so and we stop at the loop because it is a station.

1128. You could not run 30 miles an hour without stopping? Not from Milson's point right through to King-street, until the second tunnel is carried out, and that is the running speed which has been estimated as obtainable.

1129. *Mr. Ashton.*] Would it be practicable to widen the roadway tunnel? Quite practicable; but the cost would be prohibitory.

1130. I mean would it be practicable from all your points of view? No, it is the maximum size which is commercially possible; it is the same size as the Blackwall Tunnel, which gives a connection to a very large population on both sides of the Thames.

1131. That is a vehicular tunnel? Yes.

1132. *Mr. Cann.*] Are we to understand that you are willing to combine the two Bills? I am quite agreeable to combine the two Bills.

1133. *Chairman.*] Is there any other evidence which you desire to give? I want to point out the reason why this proposal to run the tramway tunnel alongside the vehicular tunnel would not pay. The length of the vehicular tunnel from Milson's Point to Circular Quay is just about the same as the distance from Milson's Point to King-street, and that the cost would, therefore, be about the same. Assuming for the sake of argument, that the cost of a similar tunnel would be much about the same, on that route we could only earn a 1d. per passenger, because the steamers take people from Milson's Point to Circular Quay for a 1d., but with the same length of road continued along George or Pitt to King-street, we could earn 2d.

1134. *Mr. Lyne.*] Why? We propose to charge 1d. to Circular Quay and 2d. to King-street, because we land the people further in the heart of the City. If they want to go a further distance, or in a different direction, of course they can get out at Circular Quay, or if they want to get to any place near Circular Quay they can also get out there.

1135. *Mr. Ashton.*] They can get the service of the ferry boat now for the same money? Yes, and this proposed route would not pay at a 1d. per passenger.

1136. *Mr. Lyne.*] It would not pay at a 1d. unless the traffic increased very much beyond your estimate? I have already reckoned for a large increase in the traffic, even to make my scheme pay, and it will take some years for it to arrive at that point; but to arrive at the point of making half the revenue pay the interest on the outlay would be so many years ahead that commercially it would be impracticable.

1137. Suppose that Parliament is prepared to adopt your scheme for a direct tramway communication, and wants to insert a provision that you can only charge 1d. fare to King-street, you could not possibly carry it out? No, most certainly not.

Gustave Fischer sworn and examined:—

1138. *Chairman.*] What is your position? I am assistant engineer for tramway construction.

1139. *Mr. Lyne.*] Have you heard of any old scheme in the Department for connecting North Sydney with Sydney by means of a tunnel? I remember that there was a scheme about ten years ago, but I cannot recollect the exact route. G. Fischer.
24 Sept., 1896.

1140. You do not remember the details of the scheme? No.

1141. Do you remember where it was proposed to take it across? I remember that it started on the Sydney side under Fort Macquarie, and landed at Kirribilli on the other side, but I do not recollect the Shore approaches.

1142. Do you recollect whether it was a double or single tunnel? I do not recollect the details of the scheme.

1143. Have you investigated the schemes which are now before this Committee? The principal proposal which I have investigated is this tunnel roadway. When Mr. Sulman proposed his roadway tunnel, we had already worked out a tramway tunnel.

1144. Have you a diagram of that tunnel? I understood that it was up here when I left the office.

1145. I saw it in the House? The papers are marked off "To Parliament House," and I expected when I left the office to find them up here. It is almost similar to Mr. Sulman's proposal, so far as the direction of the tunnel is concerned; but it is arranged in such a way that it connects with the Government tramway on the other side of the Harbour. On the Sydney side, instead of putting the approach to the tunnel in front of Mort's Wool Warehouse where it would block up a great deal of traffic, we propose to resume the first of the Blackwall Wool Stores which adjoin McMahan's Bond, and to tunnel under Marquarie-street. 1146.

- G. Fischer. 1146. *Mr. Ashton.*] Are you speaking of a vehicular tunnel? No, of a tramway tunnel. It is simply to continue the proposed George-street electric tramway, and to connect it with the North Shore tramway system. The gradients on our tramway are easier than the gradients on Mr. Sulman's. The steepest grade on our tramway is 1 in 25 on the Sydney side. We come out on the other side with a grade of 1 in 30, and get out on our present level.
1147. But the grade on his tramway tunnel is only 1 in 60? I am speaking of the departmental tramway tunnel in comparison with Mr. Sulman's roadway tunnel.
1148. You are comparing the departmental tramway tunnel with his roadway tunnel? Only because the location is exactly the same. He can get the same grades as we can get.
1149. But comparing the two tramway tunnels, his grade is quite a different thing? Yes.
1150. *Mr. Cann.*] I understand that with your tramway you would not require any lifts? No.
1151. *Mr. Ashton.*] Was that scheme thoroughly worked out? Only the preliminaries. We know all the gradients, and we have all the levels and the soundings.
1152. Was it done with a view to a proposal being submitted to the House? It has simply been worked out for the Minister's information so far as these bridge and tunnel schemes have been brought forward. Mr. Deane thought it was desirable to show how the Government tramway system could be connected on both sides of the harbour.
1153. What would be the rate of speed at which a tramway would run with the grades you have described? Twenty miles an hour comfortably. If we have a clear road the tramways can run at a very great speed.
1154. Was it proposed to make a double line? Yes.
1155. Was an estimate made of the cost? Yes; it is between £270,000 and £280,000, completely equipped, including land resumptions.
1156. Would a tramway, such as that designed in the department, cater satisfactorily for the railway traffic coming down to Milson's Point? I think so, decidedly, because at North Shore the trains run very infrequently. We had an idea that by simply wiring the North Shore Railway, we could run trams right up to Hornsby if desirable, by electricity.
1157. *Mr. Cann.*] You would use the railway line instead of laying down a tramway line? I would use the present railway line, and give them a more frequent service by using tramcars instead of railway cars.
1158. *Mr. Ashton.*] You would carry out a tramway for the purpose of doing work which is now imperfectly done by the railway? Yes; you get a service sometimes two hours apart.
1159. Practically, it means the substitution of a tram service for the railway service? Yes; it would give a good service at a much less cost.
1160. *Mr. Lyne.*] That would cause a reduction in the fares? I should think it would. The goods traffic on the North Shore line is next to nothing.
- 1160½. *Mr. Cann.*] Do you propose to use electric traction to work the tramway under the harbour? It is simply a continuation of the proposed George-street electric tramway.
1161. You would continue that tramway on to the railway at Milson's Point, and go on right up to Hornsby? Yes.
1162. Is there any difficulty as to the grades you get? No, they are very much easier than we have in the city. The maximum grade, I think, over there is 1 in 40, if it is as much as that.
1163. We have it in evidence that one of the difficulties in working the electric system with heavier grades is that it would require so much increased power? They would want some more power, but the additional power is not prohibitive.
1164. It is really practicable to work an electric system as against a cable system? Up to a grade of 1 in 12, I would not hesitate to recommend an electric tramway at any time. We are now putting one down in Mossman's Bay with a grade of 1 in 12.
1165. *Mr. Lyne.*] You can take an electric tram on a grade of 1 in 12? Certainly. It is simply a question of power properly proportioned. It is not desirable, of course, to put in such heavy grades I would not recommend it, but it is not an obstacle.
1166. *Chairman.*] The departmental scheme makes no provision for vehicular traffic? None whatever; it is purely a tramway tunnel.
1167. *Mr. Lyne.*] Your estimate of £280,000 is only for a tunnel? For a tramway completely equipped ready for traffic. We do not provide any separate power-station, because we get power from the new station we are going to instal.
1168. You would not require to go to any extra expense for power? No; it would come from the power-station of the George-street tramway.
1169. *Mr. Ashton.*] What is the diameter of the proposed tunnel? The approaches are for a double tunnel. Under the harbour we propose to put in two 15-foot tubes, as we find that 12-ft. 6-in. tubes will not be sufficiently large for our tramcars.
1170. *Mr. Lyne.*] What do you mean by saying two tubes 12-ft. 6-in. each? Two tubes of that diameter side by side, and each tube to carry a tramcar.
1171. You propose to have a double tunnel from the beginning? That is to say, two 15-foot tunnels under the harbour, and an ordinary 25-foot approach on either side?
1172. Would not these be stronger in one large tunnel? It is rather difficult to construct these 25-foot tunnels. They have had enormous difficulties to contend with at Blackwall, though I would not be afraid to do one of them myself.
1173. *Mr. Ashton.*] It is desirable to run the tramcars through separate tunnels for ventilating purposes? Yes.
1174. There would be no difficulty in the way of the transshipment of passengers from the Milson's Point Railway to the Government Tramway? No.

WEDNESDAY, 30 SEPTEMBER, 1896.

Present:—

MR. ASHTON,		MR. LYNE,
MR. GREENE,		MR. MACDONALD,
MR. CANN,		MR. WADDELL.

E. D. MILLEN, Esq., IN THE CHAIR.

E. E. Fosbery, Esq., solicitor, appeared for the promoter of the City and North Sydney Railway Bill.
 W. F. Brennan, Esq., solicitor, appeared for Sydney and North Sydney Bridge and Tramway Bill.
 L. Gibson, Esq., solicitor (of Messrs. Dibbs and Gibson), appeared for the North Shore Bridge Bill.

Gustave Fischer, Assistant Engineer for Tramway Construction, recalled and further examined:—

1175. *Chairman.*] Are you prepared now to give the Committee an explanation of the Departmental scheme to which you referred in your evidence last week? I have not been able to find the original papers, but I have brought, for the information of the Committee, a copy of my report to the Engineer-in-Chief, and a copy of the plans which will show the route of the scheme.

G. Fischer.
 30 Sept., 1896.

1176. Will you be good enough to read the report which you made to the Engineer-in-Chief? It is as follows:—

Department of Public Works, Sydney, 6 July, 1896.

A SCHEME TO CONNECT THE TRAMWAY SYSTEMS OF SYDNEY AND NORTH SYDNEY BY MEANS OF A SUB-AQUEOUS TUNNEL.—
 REPORT AND ESTIMATE.

To the Engineer-in-Chief.

IN accordance with your verbal instructions, I beg to submit herewith a scheme for connecting the tramway systems of Sydney and North Sydney, by means of a sub-aqueous tunnel.

The route, which has been chosen after careful consideration of existing borings across the harbour, and also with a view of obtaining comparatively easy gradients in the approaches, so as to admit of high speeds, is shown on attached sketch map by a red line. It will be seen that it is on the Sydney side a continuation of the proposed George-street Electric Tramway, shown by a broken blue line, and it could also, if found desirable, be connected with the existing steam tramways as shown in green. By removing one of the old small wool stores, the tramway will enter a double track tunnel under Macquarie-street, at the level of Circular Quay, so as to avoid interference with existing street levels. This tunnel then descends on a gradient of 1 in 29 under Government House grounds and Fort Macquarie until soft ground is met with, when it is proposed to use two cast-iron tubes of a diameter of 15 feet, and accommodating one track each, until solid ground is again reached at North Shore, when a double track tunnel construction will again be used, rising on a gradient of 1 in 30, until the tracks emerge into the open at Walters-street, and from thence in side cutting parallel with the road approach to the Milson's Point railway goods yards, merging eventually into the North Shore Cable Tramway, at the existing level.

The total length of double track is 1 mile 32 chains, of which 1¼ mile is in tunnel.

The estimated cost of construction is £270,452, while the necessary land resumptions should not amount to more than £9,000 or £10,000, making the total cost therefore about £280,000.

GUSTAVE FISCHER,
 Assistant Engineer for Tramway Construction.

1177. Do you produce the plans showing the route of the proposed line? I do. At the last meeting of the Committee an Honorable Member said it was a pity that the Departmental scheme was not mentioned before. I may explain that it was mentioned in the joint report of Mr. Deane and Mr. Darley on Mr. Sulman's road tunnel. It says very distinctly in that report that the road tunnel of Mr. Sulman is almost entirely on the same lines as the Departmental scheme for a tramway tunnel. The matter has been before the Department for a considerable time. Although my report is dated July 6, 1896, the matter had been for more than twelve months before the Department.

1178. *Mr. Ashton.*] In the event of the Departmental scheme being carried out, would it interfere at all with the construction of a road tunnel along the same line of route? It might to a certain extent. There may be room sufficient for the two tunnels to be laid side by side; but still there might be some engineering difficulties cropping up if the two were laid in the same centre line practically.

1179. Your opinion is, that in the event of this tramway tunnel being carried out by the Department it would prejudice the roadway tunnel proposal—that it would make that proposal uncertain of accomplishment? It would prejudice it to that extent. No doubt the road tunnel would depend to a certain extent on the passenger traffic, not on the goods traffic alone.

1180. I mean from an engineering point of view? Not necessarily. If the tramway tunnel is first laid, and a private company feels inclined to risk laying down a tunnel close to that tunnel, provided that the Government Engineers have a right to see that they do not come too close, there should be no objection.

1181. You think that there will be no difficulties, from an engineering point of view, to carry a roadway tunnel along practically the same line of route? No; not if proper precautions are taken.

1182. Would there be any difficulty about the approach on the Sydney side? The roadway tunnel commences in front of Goldsborough, Mort, & Co.'s wool-store, and they can keep away from the tramway tunnel comfortably all the way through.

1183. There would be no difficulty about the approach at the terminal point? No; they come out at different points. On the other side they could swing inside. I do not think there would be any difficulty as far as that is concerned.

1184. You do not think that there will be any difficulty in finding an outlet at the other side? No; they can easily get an outlet from there.

1185. You are tolerably conversant with the details of Mr. Sulman's tramway proposal now? I would not like to say. I did not go carefully into his proposal, because it would not interfere in any way with our proposal as far as the engineering work is concerned. It is entirely separate from our surface tramway.

1186. Do you consider yourself in a position to make a comparison between the two schemes from the standpoint of the convenience to the public? I think it would be a great convenience if the public had the Departmental tramway tunnel, because you might run cars from outlying suburbs, such as Marrickville, right through to North Shore and on to the heights of St. Leonards. There would be no transshipment.

1187. *Chairman.*] That implies the substitution of electric traction for cable traction on North Shore? It could easily be done. It would not necessarily mean the substitution of one system for the other. Simply by wiring the tracks over there you could run electric cars as easily as cable cars.

1188.

- G. Fischer. 1188. *Mr. Greene.*] Could the existing tramway in Phillip-street be connected with that tramway? Yes, as the plan shows.
- 30Sept., 1896. 1189. It would be a very awkward turn to make? No.
1190. *Mr. Ashton.*] That is, in the event of electricity being substituted for steam traction in Phillip-street? Yes. Electricity overcomes a gradient like 1 in 15 or 1 in 16 comfortably.
1191. *Chairman.*] In the matter of overcoming grades, electricity is superior to steam? It is vastly superior. We would never attempt to work grades of 1 in 12 by steam traction. It is done every day by electricity. In a month you will see a tramway running on a less than 1 in 12 grade at Mosman Bay.
1192. *Mr. Greene.*] As regards the convenience to the public, how would the departmental line going by that long route compare with Mr. Sulman's line, which goes direct from Milson's Point to George-street;—it would be a much shorter line? Yes; but you have to consider the transit in the lifts at the other end, and the time occupied in changing cars. Considering the time which would be occupied in leaving the car to ascend the lift, a tram-car would run through in less time than an underground railway could. The transshipment takes up all the time.
1193. There would be the purely local traffic, which would not arrive at Milson's Point by train—the people who would go from their own houses to Milson's Point? It would open up all that traffic, because it starts on the surface; still I think that most people who walk down to Milson's Point will continue to use the ferry unless they want to go high up into the town.
1194. *Chairman.*] In your previous evidence you referred to an alteration of the North Shore railway to an electric tramway;—has that idea been considered by the department? As far as I know, nothing definite has ever been done, but it has been spoken of, and some preliminary estimates have been made by the Railway Commissioners' Department.
1195. The alteration of the railway and the alteration of the cable line could be made without incurring very much additional expense? The additional expense, as far as the wiring of the tracks is concerned, would amount to £1,500 a mile at the outside. The power would be generated from the main station, and therefore the expense would be much smaller than otherwise it would be.
1196. *Mr. Fosbery.*] Comparing the departmental scheme with Mr. Sulman's scheme for an electric railway to the city, even taking the lifts into account, do you not think the passengers would be landed by Mr. Sulman's scheme much more quickly in the centre of the city? Yes, if they want to go to the centre of the city; but if they do not want to go as far as King-street it will be much easier for them to get there by the tramway than by his proposal. I have nothing to say against his proposal. It would be a convenience, but I consider that this tramway would be a greater convenience to the travelling public. It would drop you almost at the place where you wanted to go; but with a railway run at a high speed, as Mr. Sulman proposes to do, the stations must be a considerable distance apart.
1197. *Mr. Ashton.*] One station at Circular Quay, and the other at King-street? Yes; if you wanted to get out at any point between the stations you have to go on; but the electric tramway stops at every cross-street.
1198. *Mr. Fosbery.*] For the purpose of giving quick and direct communication between North Sydney and the centre of the city Mr. Sulman's railway scheme would be quicker? It might save a minute or two at the outside.
1199. The mere fact you alluded to, that the surface tramway stops to pick up and set down, would make it slower than the other? Yes, the average speed would be less; but the transshipment from the station to the lift, and from the lift to the cars, would take up a considerable time.
1200. But the railway passengers by the North Sydney line would have to tranship in any event? Not necessarily, if, as I mentioned at the last meeting of the Committee, the tramcars were run right through on the North Shore railway line. Instead of running big trains, we could run small electric cars, and give them a quick and more frequent service.
1201. As it is at present they would have to tranship? Certainly.
1202. *Chairman.*] What time would it take by the departmental scheme to run from Milson's Point to Circular Quay? Four minutes.
1203. *Mr. Fosbery.*] How much longer would it take to go to the corner of King-street, having regard to the stoppages of the traffic in King-street? It would take about ten minutes altogether.
1204. That is, taking a fair average for the stoppages? Yes.
1205. *Mr. Ashton.*] That is, from Milson's Point to King-street? Yes; with all the stoppages that is the outside time it would take.
1206. *Mr. Lyne.*] In your report you state that "the necessary land resumptions should not amount to more than £9,000 or £10,000";—do you think they should amount to as much as that? That estimate includes a small wool-store on the Sydney side.
1207. That is the reason why you estimate the land resumptions at so large an amount? Yes; the land at North Shore is worth next to nothing.
1208. Have you brought with you the papers relating to a proposal which was made to the department about ten years ago for a submarine tunnel between Sydney and North Shore? I have here the papers relating to a scheme which was proposed ten years ago by Mr. Carson Wood, and Mr. A. Armstrong, to construct a submarine tunnel to North Shore. I have also a sketch of the proposed tunnel.
1209. It was to go somewhere near where you propose to put the departmental tunnel? Yes. On the Sydney side it runs on the same line from Fort Macquarie to the other side. It comes out at Kirribilli Point, and then it deviates a little towards the Point and goes through a tunnel over to Careening Cove and comes up Careening Cove.
1210. I think at that time the cost was estimated at £400,000 or £500,000? At £400,000, as far as I can find out from the papers.
1211. You estimate the cost of the departmental proposal at £280,000? Yes.
1212. I presume the reason for the difference between the two estimates is, viz., the reduced price of doing the work? The art of tunnelling through mud is so much better known now than it was in those days. This scheme meant more land resumptions at North Shore than our scheme means. We are nearly all in tunnel.

WEDNESDAY, 7 OCTOBER, 1896.

Present:—

MR. ASHTON,

MR. LYNE.

MR. MACDONALD,

E. D. MILLEN, ESQ., IN THE CHAIR.

Mr. E. E. Fosbery, Solicitor, appeared for the Promoter of the City and North Sydney Railway Bill.

Mr. Gustave Fischer recalled and further examined:—

1213. *Chairman.*] A question arose yesterday as to whether, instead of having two tunnels for tramway purposes and one tunnel for vehicular purposes, it would not be possible to have two tunnels carrying both the tramway and the ordinary traffic—that is, one from the north to the south shore, carrying the traffic going in that direction, and the other carrying all the traffic, both tramway and vehicular, going in the other direction. It seemed to the Committee that there would be economy in having two tunnels of a larger size rather than three tunnels, two of which would be smaller and the other larger, we wish to ascertain from you if there are any engineering difficulties in the way of carrying out that idea, or if there would be economy or otherwise in doing so? I thought that you wanted to combine the two matters, and put them all into the one tunnel. I ran out some figures and found that it is quite impracticable to put them into one tunnel. I do not think it is desirable to put them into two tunnels. I think it is cheaper, and, from an engineering point of view, better to have the tramway entirely separate from the roadway tunnel. G. Fischer.
7 Oct., 1896.

1214. There will be no difficulty whatever in building three tunnels parallel to one another? Since I was here last I have looked more into the matter, and I find there is no difficulty whatever. You will find, if you will compare my estimate for a tramway tunnel with Mr. Sulman's estimate for a roadway tunnel, that it will run out to about the same. I am certain that the two 15-ft. tubes which I propose to use can be constructed for as little as, if not for less than, the one 25-ft. tube which Mr. Sulman proposes to have. There will be much less chance of anything going wrong in the construction of a 15-ft. tunnel than in the case of a 25-ft. tunnel. The trouble is that we must have, from high water to the top of our tunnel, whatever diameter we may use, at least 65 feet, to get sufficient core, so that the roof will not break down as we tunnel through. That only gives something like 15 feet of core in the deepest water. The invert in our case is 15 feet lower, while it would be 25 feet for a big tube, which makes the grades and approaches steeper at once. Another thing is, that this 25-ft. tube, with the cover I propose for our 15-ft. tube, would get partly in rock, and partly in soft stuff. The 15-ft. tubes just skim over the top of the rock bottom. It is all in soft material under the harbour. While with the other, for about one-third of the height, you would want to cut through rock. I believe for the roadway tunnel it would be better to make two small tunnels also, the traffic in each tunnel to travel in one direction.

1215. *Mr. Ashton.*] But in the two small tunnels there would not be room for a fast vehicle to pass a slow one? No.

1216. The slowest vehicle would determine the rate of speed? Yes. You would not get 15 feet at the road level; you would have only about 10 feet 6 inches at the road level. From an engineering point of view it is much simpler to construct two 15-ft. tunnels than one 25-ft. tunnel.

1217. *Chairman.*] And the cost? It is certainly not more, more likely it is less.

1218. *Mr. Lyne.*] Will the tubes which will form your tunnel be all in the rock or above the rock? After they leave the rock they get into soft stuff—clay and shale.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CITY AND NORTH SYDNEY RAILWAY BILL ; SYDNEY
AND NORTH SYDNEY BRIDGE AND TRAMWAY
BILL ; NORTH SHORE BRIDGE BILL.

(PETITION FROM THE MUNICIPAL COUNCIL OF LANE COVE PRAYING FOR A MORE RAPID MEANS
OF TRANSIT BETWEEN SYDNEY AND NORTH SYDNEY THAN BY THE PROPOSED TRAMWAY
TUNNEL.)

Received by the Legislative Assembly, 27 October, 1896.

To the Honorable the Legislative Assembly of New South Wales in Parliament assembled.

The humble Petition of the undersigned members of the Municipal Council of the Municipality of Lane Cove,—

SHOWETH :—

1. That your Petitioners are informed that various private Bills have been introduced into your Honorable House for the purpose of establishing better means of communication for both passenger and vehicular traffic between the city of Sydney and North Sydney, and that your Honorable House some time since referred the whole matter to a Select Committee for report as to the relative merits of the various schemes propounded.

2. That your Petitioners are informed that the said Select Committee did, on the 21st day of October instant, report to your Honorable House on the subject.

3. That your Petitioners having been made aware of the contents of the said report, respectfully agree with the said Select Committee that if the Government has no intention of dealing with the matter within a reasonable period, a public advantage will be secured by permitting private individuals who may be willing to do so to carry out whatever scheme or schemes Parliament may sanction.

4. That your Petitioners observe that, with regard to the vehicular traffic, the said Select Committee have expressed their approval of one of the schemes above referred to, namely, that for a proposed tunnel-roadway from Circular Quay by way of Macquarie Point and the approximate position of Campbell-street to Milson's Point ; but that with regard to the passenger traffic, the said Select Committee suggest in effect a tramway tunnel to follow, with one deviation, the route of the tunnel-roadway above referred to.

5. That your Petitioners respectfully express the opinion that the said last-mentioned scheme for dealing with the passenger traffic would be but little improvement, if any, on the present ferry service by reason of it being so circuitous, and by reason of its not communicating direct with the centre of the city.

Your Petitioners therefore humbly pray that any Bill which your Honorable House shall sanction for affording a better means of passenger communication as aforesaid, shall provide for a more direct route and a more rapid means of reaching the centre of the city than the tramway tunnel above referred to.

And your Petitioners, as in duty bound, will ever pray, &c.

Dated this 26th day of October in the year of Our Lord one thousand eight hundred and ninety-six.

STATUTE-LAW CONSOLIDATION COMMISSION.
(REPORT RESPECTING.)

—
Printed under No. 11 Report from Printing Committee, 30 July, 1896.
—

Statute-Law Consolidation Commission,
Sydney, June 4th, 1896.

To the Honorable the Chief Secretary,—

Sir,

At a meeting of the Royal Commission for the consolidation of the Statute Law of the Colony, held in the Supreme Court, on Wednesday, the 27th May, it was resolved that I, as Chairman of that meeting, should place before you the present position of the Commission.

At the initiation of the work of this Commission, having as its President the Chief Justice, the body of members was divided into eight Committees, seven of these being presided over by a Judge of the Supreme Court, with a District Court Judge as Vice-Chairman, and one Committee presided over by the President of the Land Court, with the ex-President as Vice-Chairman. A Revising Committee, comprising the greater number of the Supreme Court and District Court Judges, with the Chief Justice as its Chairman, was also appointed, its duty being to settle questions of dispute or doubt in the Divisional Committees, and to revise the work of these sections before its final submission to the Commission as a whole.

Of the seven Judges of the Supreme Court appointed Chairmen of the Divisional Committees, two have resigned office, viz., the Chief Justice, who was President of the Commission, and Mr. Justice Stephen; and two of them are absent in England on leave. There are thus left only three members of the Supreme Court now acting as Chairmen.

The positions of Vice-Chairmen, except in the case of one Committee, have been filled by the District Court Judges, whose judicial duties necessitate frequent and long-continued absences from Sydney.

The Revising Committee, being composed of Judges of the Supreme Court, the District Court, and leading Counsel, has suffered in a similar degree to the Divisional Committees through the resignations of members and the heavy demands made upon the time of those remaining upon its list.

The only hours available for meetings of the Revising and other Committees have been after the rising of the Court or Saturday mornings, and even with regard to those times the attendance of members, has necessarily been subject to the discharge of their public and professional duties.

Under such circumstances it has been found very difficult to secure the attendance of members at meetings, or to devote sufficient time and the close attention needed to the work of efficient consolidation.

These

These matters having been fully considered at the meeting, the opinion was unanimously expressed that the Commission as at present constituted was cumbersome and inefficient. It was felt that work of the character committed to it could not be effectually carried out under conditions which did not allow of continuous attention being given to it. Not only was the intermittent attention of Committees, composed of busy men distracted by the calls of office or their professions, necessarily defective in itself, but it involved also extending the work of consolidating the Statutes over an indefinite period, and so adding considerably to the cost of the work.

The Commission also had to face a difficulty in the inability of the Government Printer, through the insufficiency of material at his command, to keep all the Bills required standing in type.

The Commission, having regard to all these circumstances, was unanimously of opinion that it would be undesirable to continue its existence in the present form, and that it was its duty to lay these matters before the Government without further delay.

At the same time, a great deal of very careful and important work has been carried out by the Commission, even under the unfavourable circumstances referred to, and it would be a serious loss if it were not utilised for the benefit of the community. Details of this work will be found set out in the Report attached hereto. From the statements contained therein it will be seen that the consolidation of the Statutes has been advanced a very considerable stage. The Statutes have all been classified and arranged under different heads or groups of subjects, and all the Statutes affecting each subject have been collected and arranged under each head, and a large number of Statutes have been consolidated by the Divisional Committees.

The Commission is of opinion that the completion of the work placed in its hands would be more efficiently, expeditiously, and economically effected if transferred to a smaller body of Commissioners. It suggests that the work at its present stage might be handed over to a Commission of one or more members, assisted by competent draftsmen, and that these gentlemen should be adequately remunerated so as to enable them to devote the whole of their time to the work. Were this done the Commission has little doubt that from the advanced point to which work has already been brought it could be carried on to completion in a comparatively short time, and without any great expense.

The Commission also considers that it would be desirable to give power to the new Commission to make such amendments as may be deemed necessary for the proper consolidation of the Statutes. Unless such power be given the errors and ambiguities of the present Statutes must be perpetuated, and it will be impossible to make the consolidated Statutes clear and harmonious as they ought to be.

A similar work—though covering a much shorter period—was carried out in Victoria by a Committee consisting of the Chief Justice and a staff of draftsmen acting under his sole control. By this means he was enabled to do the work much more quickly than could possibly have been the case with a more cumbersome body, such as our Commission. There were also, in this instance, facilities such as the purchase of special type provided, whereas in the case of our work not only has it been delayed by the circumstances already mentioned, but also by the fact that the Government Printer cannot meet the demands upon him without seriously encroaching on his stock of type.

I have the honor to be,

Sir,

Your obedient servant,

WM. OWEN,

Chairman.

STATUTE-LAW CONSOLIDATION COMMISSION.

REPORT.

At a meeting of the Revision Committee, held in the Supreme Court, on Monday, 27th April, to consider the course to be adopted in view of the resignation of the President, the Honorable the Chief Justice, it was resolved that the Secretary be directed to draw up a Report on the work of the Commission for submission to a meeting of that body, to be called by him at an early date, and that such Report should embrace suggestions for the utilisation of the material prepared by the draftsmen under the direction of their several Committees.

In accordance with the instructions contained in the above resolution, the following Report is now submitted :—

SCHEME OF WORK.

Although the Royal Commission to inquire into and consolidate the Statutes in force in the Colony was issued on December 29th, 1893, it was not till March 12th, 1894, that members were called together. At that meeting the President, the Honorable the Chief Justice, pointed out that the Commission authorised members :

- (1.) To make a diligent and full inquiry into the Statute law in force in this Colony.
- (2.) To submit proposals, in the form of Bills ready for presentation to Parliament, for the consolidation and for the amendment of the Statute law ; but, as to the amendment, only in so far as such amendment might be deemed necessary for effective and useful consolidation.

At this meeting a committee was appointed to consider and report as to the best mode of subdividing the work of the Commission, and upon the principles which should guide it in the work of consolidation. This Committee sat for the first time on the 19th March, and it was then resolved that the members of the Commission should be divided into seven (subsequently enlarged to eight) Committees, each to be presided over by a Judge of the Supreme Court, with a District Court Judge as Vice-Chairman. At the same time it was determined that a draftsman be nominated by each Committee to prepare work for its consideration ; each such draftsman to be paid at the rate of £300 per annum for his services, the engagement to be terminable at one month's notice. At a subsequent meeting, held on March 27th, it was resolved to recommend to the Commission the appointment of a Consulting and Revising Committee, consisting of two members of each Divisional Committee, to which should be referred any question upon which a Committee might require direction, and which should, in the event of any difference of opinion between two Committees upon any point arising out of their work, settle the matter in dispute, and to which also should be referred each Statute prepared by the Committees for revision and approval before submission to the whole Commission for its final approval. By this course being taken the work would pass through the hands of three bodies before being finally approved, namely, those of :—

- (1.) The Divisional Committee.
- (2.) The Revision Committee.
- (3.) The full Commission.

On

On the 11th June the Committee brought up its Report to the Commission, having held six meetings at which details of the scheme submitted were discussed. The Report made the following recommendation :—

That the work of the Commission should be confined to the consolidation of the local Statutes, and that no attempt should be made to consolidate the Statutes in force (or supposed to be in force) in the Colony by virtue of the Act 9 Geo. IV, c. 83, but that all Imperial Statutes expressly enacted to be in force in the Colony should be appended to the Consolidated Statutes bearing on the same subject-matter. In order that consolidation may not be impaired by subsequent Amending Acts, progress reports should be presented to the Government as occasion may require, suggesting Acts to be passed prior to the consolidation of any Statute.

The general scheme of work outlined by the Committee was approved, and it was resolved to confine the consolidation within the lines recommended.

In accordance with the scheme adopted by the Commission, the following draftsmen were appointed to the several Committees :—

- No. 1 Committee, dealing with Constitution, General Government, Revenue and Services, J. Meillon, Esq.
- No. 2 Committee, dealing with Local Government and Regulating Acts, A. J. Kelynack, Esq.
- No. 3 Committee, dealing with Land, Mining, and Roads, G. H. Pike, Esq.
- No. 4 Committee, dealing with Real and Personal Property, J. M. Harvey, Esq.
- No. 5 Committee, dealing with Commercial and General Law, Wilfred Blacket, Esq.
- No. 6 Committee, dealing with Criminal Law, Divorce, and Marriage, P. J. Healy, Esq. (since deceased).
- No. 7 Committee, dealing with legal principles and procedure, D. G. Ferguson, Esq.
- No. 8 Committee, dealing with Bankruptcy, District Courts, Companies, &c., F. J. Bethune, Esq.

The initial work of the Commission, the preparation of an Interpretation Bill, was entrusted to No. 5 Committee. Simultaneously each of the eight Committees set about the preparation of a list of the general Statutes of the Colony apportioned to it. A skeleton list of the Public Acts of Parliament was prepared by the Secretary, and from this each draftsman appropriated the Statutes coming within his division. The appropriation having been made, meetings of the draftsmen were held to assure themselves of the placing of every Statute upon some one or other Committee list, and steps were then taken to classify the appropriations. Each Committee drew up, through its draftsman, three lists of the Statutes assigned to it, arranged in chronological order, and showing :—

- (1.) Statutes repealed, expired, or disallowed.
- (2.) Statutes the operation of which is exhausted, or which are obsolete or inapplicable to New South Wales.
- (3.) Statutes now in force.

These lists were further subdivided according to the subject-matter of the Statutes. A list was also prepared by No. 3 Committee of all the Imperial Statutes expressly enacting that they were applicable to the British possessions or to this Colony. Another special list by No. 2 Committee collated the local and particular Statutes of the Colony under the headings of the localities and particular institutions or bodies dealt with. By instruction of the Revision Committee, each of the lists was checked for accuracy by the draftsman of a Committee other than the one compiling it. By means of these lists, with their contents grouped under subject heads, the scattered Statutes dealing with any one subject were brought together, those repealed or exhausted being eliminated. The eight sets of lists in themselves thus form the nucleus of a valuable index to our Statutes.

The compilation of the lists being completed the several Committees gave instructions to the draftsmen as to the subjects first to be dealt with in consolidation.

The Interpretation Bill was, on the 12th November, 1894, submitted to the Revision Committee, presided over by the Honorable the Chief Justice. This Bill was not rigidly confined to a consolidation of the Acts Shortening Acts, but included such provisions of the Imperial Interpretation Act (1889) as the Committee thought it desirable should be embodied in the legislation of the Colony. It was not till
after

after eleven meetings had been held that this measure was finally sent on to the Commission for approval. Having been approved, it was duly forwarded to the Honorable the Colonial Secretary, and draftsmen were instructed to draft the Consolidating Statutes in harmony with its provisions.

For the information of the Commission, the Secretary of the Statute Law Committee, House of Lords, H. C. Malkin, Esq., was communicated with, and through his courtesy a complete set of the papers and reports laid before the Imperial Parliament on the subject of the consolidation of the Statute law was obtained. The Committee, in forwarding these, stated that it would be much gratified if it should be in its power to render any further assistance to the New South Wales Commission.

As the work of the various Committees progressed numerous questions arising out of the consolidation were submitted to the Revision Committee. Among the principal of these, involving the application of a general principle, were the following:—

- (1.) The construction to be placed on the words contained in the Commission, and as applied to the Statutes to be consolidated “for the amendment thereof, in so far as amendment may be deemed necessary for effective and useful consolidation.”
- (2.) Where a section, or any words in a section, of any Act, had received a judicial interpretation, whether that interpretation ought to be embodied in the Consolidating Bill.

In connection with the first of these important points, not only did the question of substantially amending the law simultaneously with its consolidation present itself, but also the kindred one whether a draftsman might in the case of amending Acts supplement the intentions of the Legislature as therein expressed in such a way as to bring the amending provisions into line with previous legislation.

The Revision Committee having given this question its careful consideration, instructed your secretary to reply as follows:—

“This Committee is of opinion that draftsmen have no power to make the alterations they suggest in the enactments. Their proper course is to frame a Bill embodying the amendments they think desirable to make the law harmonious, and submit it to the Revision Committee in order that when it is approved of by that Committee, it may be passed by the Legislature, and be then embodied in the Consolidation Bill of the subject referred to. It is permissible to draft their Consolidation Bills on the assumption that the amendments will be passed into law.”

The second point whether the effect of a judicial interpretation of any words or part of a Statute should be embodied in the consolidating measure was brought before the Revision Committee on the following resolution, submitted by Committee No. 4, “That where a section of an Act has, or any words in a section of any Act have, received a judicial interpretation, that interpretation ought to be embodied in the Consolidating Bill.” Appended to this resolution was the following note by Mr. Justice Owen, “The attention of the Revision Committee ought to be specially directed by each draftsman to such inclusion, so that the Committee may take into consideration the nature of the decision and the circumstances under which it was given, as for example, if it were a decision given in Chambers, that of a single Judge, or the full Court, and so on.” This resolution and note were adopted by the Revision Committee, and made an instruction to draftsmen.

THE SCOPE OF CONSOLIDATION.

The scope of the work of the Commission was, in the light of the Report and resolutions quoted, confined to the consolidation of the local Statutes, such consolidation embodying any authoritative judicial interpretation that might have been placed on any section or words of any section in an Act, but excluding all amendments except such as were deemed to be absolutely “necessary for effective and useful consolidation.” Side by side with the work of consolidation was to be carried out the drafting of amending Bills for presentation to Parliament, with a view to their ultimate inclusion in the consolidating measures. As

As an additional check to those already imposed for securing the accuracy of the work, instructions were given by the Revision Committee that each Bill presented by a draftsman for the consideration of his own Committee should bear on its face a certificate from the draftsman of some other Committee that it had been checked by him. The object of the checking was not only to secure verbal accuracy, but also criticism, where a draftsman had to depart from the wording of the Acts consolidated. Should it happen that the draftsman of the Bill and the checking draftsman were not in agreement upon any point, it was provided that such point should be referred for settlement when the Bill was submitted to its Committee.

WORK COMPLETED AND IN PROGRESS.

The following tables show the work carried out, or in process of being carried out, at the date of the drafting of this Report:—

NOTE.—The letter P in brackets indicates that the Bill to which it is attached is in print.

COMMITTEE No. 1.

No.	Bills in Revision Committee.	No.	Bills in own Committee.	No.	Bills in hand.
3	Quarantine Bill (P.) Banks and Bank Holidays Bill. Stamp Duties Bill.			3	Navigation Bill. Shipping and Seamen (2 Bills).

Remarks.

The Navigation Bill and the Shipping and Seamen Bill, now in hand, together constitute a large and difficult piece of work. The former Bill consolidates five Acts, containing, in the aggregate, one hundred and ninety-five sections; and the latter, nine Acts of two hundred sections. The draftsman is working at them together, as the subjects are intimately connected; and further, because the Imperial Statutes on these subjects contain provisions binding on the whole of the British Dominions, so that care must be taken that these latter are not contravened.

COMMITTEE No. 2.

No.	Bills in Revision Committee.	No.	Bills in own Committee.	No.	Bills in hand.
4	Municipalities Bill (P.) Liquor Bill (P.) Adulteration of Food or Drink Bill (P.) Nuisances Prevention Bill (P.)	1	Distillation Bill (P.)	5	Public Entertainments Bill (<i>ready for Printer</i>). Cattle Driving Bill (<i>ready for Printer</i>). Bill to give effect to the Amendments of the Acts relating to Municipalities, suggested by this Committee (<i>ready for Printer</i>). Impounding Bill. Newspapers Bill.

Remarks.

The Municipalities Bill consolidates fourteen statutes. During the consideration of the above Bill in the No. 2 Committee it was resolved to recommend:—That the Act 19 Vic. No. 10 be repealed, and that the Act 40 Vic. No. 13 be transferred to the list of obsolete statutes. The above Bill, on being forwarded to the Revision Committee, was accompanied by a report suggesting (*inter alia*) certain amendments of the Acts consolidated by the said Bill. These suggested amendments have been put into the form of a Bill, as hereinafter mentioned.

The Acts consolidated in the Liquor Bill were:—45 Vic. No. 14, 46 Vic. No. 24, and 55 Vic. No. 5, section 25.

The Acts consolidated in the Adulteration of Food and Drink Bill were:—14 Vic. No. 14, 19 Vic. No. 19, and 42 Vic. No. 14. The No. 2 Committee did not consider the above Bill in detail, but sent forward a report thereon to the Revision Committee, suggesting that it was advisable to supersede the present Acts by fresh legislation.

The Nuisances Prevention Bill consolidates 39 Vic. No. 24 and 55 Vic. No. 20.

The Distillation Bill consolidates 13 Vic. No. 26, 13 Vic. No. 27, 14 Vic. No. 22, 16 Vic. No. 45, and 30 Vic. No. 15. This Bill is at present being revised by the No. 2 Committee.

The Acts consolidated in the Public Entertainments Bill are as follows:—14 Vic. No. 23 and 36 Vic. No. 8. This Bill has been revised, and is ready for submission to No. 2 Committee as soon as it is printed.

The Cattle Driving Bill consolidates 16 Vic. No. 23 and 24 Vic. No. 22. This Bill has been revised, and is ready for submission to No. 2 Committee as soon as it is printed.

The Acts consolidated in the Impounding Bill are the following:—29 Vic. No. 2, 32 Vic. No. 11, 42 Vic. No. 23, 45 Vic. No. 13, and 57 Vic. No. 31. This Bill is almost ready for the printer.

The Newspapers Bill consolidates 8 Geo. IV No. 2, 2 Vic. No. 20, 5 Vic. No. 19, 13 Vic. No. 47, and 16 Vic. No. 37.

COMMITTEE

COMMITTEE NO. 3.

No.	Bills in Revision Committee.	No.	Bills in own Committee.	No.	Bill in hand.
				1	Crown Lands Consolidation Bill.

Remarks.

The Crown Lands Consolidation Bill will consolidate the principal Act (48 Vic. No. 18) with twelve other Statutes.

COMMITTEE NO. 4.

No.	Bills in Revision Committee.	No.	Bills in own Committee.	No.	Bill in hand.
2	Trustee Bill (P). Registration of Deeds Bill (P).	4	Conveyancing and Law of Property Bill (P). Landlord and Tenant Bill. Married Women's Property Bill. Consolidating and Amending Equity Procedure Bill.	1	Real Property Act.

Remarks.

The Bill in hand and the Bills that remain will be little more than mere reprints of existing Statutes with verbal alterations, all the heavy work of this Committee, so far as the drafting is concerned, being now done. The draftsman has also prepared in manuscript, under instructions from the Revision Committee, an amending Trustee Bill. If this were passed by Parliament, it could be embodied in the Consolidating Bill with a few verbal alterations. The Consolidating Bills represent thirty whole Acts of Parliament and parts of eighteen Acts. The Equity Procedure Bill has been prepared under the instructions of the Chairman (the Chief Judge in Equity), although, strictly speaking, it is outside the scope of the Commission. It would, however, render any consolidation of the Equity Procedure Statutes unnecessary.

COMMITTEE NO. 5.

No.	Bills in Revision Committee.	No.	Bills in own Committee.	No.	Bills in hand.
2	Interpretation Bill (P). Employers' Liability Bill (P).	2	Contractors' Debts Bill (P). Lien on Crops ; Wool and Stock Mortgages (P).	2	Agreements Validating and Master and Servants' Bill (P). Trade Marks, Copyright, and Patents Bill.

Remarks.

The Agreements Validating and Master and Servants Bill is now being checked. The Trade Marks, &c., Bill cannot be completed pending the passing of an amending Bill introduced last Session.

COMMITTEE NO. 6.

No.	Bills in Revision Committee.	No.	Bills in own Committee.	No.	Bill in hand.
				1	Criminal Law Bill (P).

Remarks.

The work of this Committee is at a standstill, no appointment of a draftsman having been made since the death of Mr. P. J. Healy in September of last year.

COMMITTEE No. 7.

No.	Bills in Revision Committee.	No.	Bills in own Committee.	No.	Bills in hand.
				12	Supreme Court. Common Law Procedure. Evidence. Oaths. Juries. Sheriff. Legal Practitioners. Interpleader. Intercolonial Judgments. Creditors' Remedies. Arrest. Defamation.

Remarks.

The Bills in hand being intimately connected in their subject-matter are being prepared simultaneously. They embody the contents of over eighty Acts of Parliament, comprising almost all that have been allotted to this Committee.

COMMITTEE No. 8.

No.	Bills in Revision Committee.	No.	Bills in own Committee.	No.	Bills in hand.
		12	Lunacy Bill (P). Claims against Government Bill (P). Wills and Probate Bill (P). Companies Bill (P). District Courts (Amendment) Bill (P). Bankruptcy Bill. Bills of Sale Bill. Limitations Bill (2). Usury Bill. Partition Bill. Compensation to Relatives of Deceased Persons Bill.	1	District Courts (Consolidation) Bill.

Remarks.

Two District Court Bills, the one amending and the other consolidating, are being prepared. In like manner the subject of the limitation of actions and suits is being dealt with in a consolidating measure, and in an amending Bill adopting the provisions contained in certain English Acts of Parliament.

The District Court (Consolidating) Bill is completed, subject to the passing of the amending Bill, which it was thought expedient to submit first, but has not been set up in print pending the passing of the amending Bill, which contains some fifty sections. In the Bill to consolidate the law with regard to the limitation of actions and suits certain English provisions of a date prior to 9 Geo. IV, c. 83, have been inserted for the sake of completeness, and also certain sections of 19 and 20 Vic., c. 97, which have not been adopted in the Colony as yet, but which are now adopted by the amending Bill.

The draftsman has, so far, been unable to draft a Bill dealing with the law relating to Infants, as his Committee have not yet had the opportunity of considering the scope of such a Bill as distinct from Bills in preparation by the Committee dealing with Equity matters.

SUMMARY.

Number of Bills in Revision Committee.	Number of Bills in Divisional Committees.	Number of Bills in hand.	Total.
9	20	26	55

MEETINGS OF REVISION AND OTHER COMMITTEES.

It has been the course hitherto for all Bills passed by the Divisional Committees to be considered in detail by the Revision Committee. In other words, the whole of the work done by eight separate Committees will have eventually—under the present scheme—to pass through the hands of the Revision Committee for its endorsement. This, it need hardly be pointed out, will cast a burden of work upon the revising body that can only be met by almost daily meetings if the stream of work from the eight Divisional Committees is to be coped with. The summary of work in the Divisional Committees and in the hands of draftsmen indicates the pressure that will be put upon this central body. With the additional pressure must also be taken into consideration the fact that the Revision Committee is composed of the Judges of the Supreme Court and other members whose time is so fully occupied by professional duties that it is extremely difficult to secure frequent meetings. Under the present scheme, therefore, it cannot be hoped that the work of the Commission will be concluded under a very considerable time.

EXPENDITURE.

The expenditure of the Commission has been well within the Parliamentary supplies voted for its maintenance, as will be seen from the following statement:—

<i>Supplies—</i>						£	s.	d.
1894	By	Vote...	800	0	0
1895	„	Vote (6 months)	3,000	0	0
1895-6	„	Vote...	3,000	0	0
						<hr/>		
						£6,800	0	0
						<hr/>		
<i>Expenditure—</i>						£	s.	d.
1894	To	Salaries, &c....	947	9	4
1895	„	„	(6 months)	1,373	2	6
1895-6	„	„	(to April 30th, 1896)...	1,974	18	10
						<hr/>		
						£4,295	10	8
						<hr/>		
<i>Cr.—Unexpended Balance</i>						2,504	9	4
						<hr/>		
						£6,800	0	0

In addition, however, to the expenditure in draftsmen's salaries and maintenance of a Board-room, as shown by the above figures, is the cost of printing. This, in round numbers, only amounts to £300 for the whole term of the Commission's existence, a fact due to the close check kept upon outlay in this direction, copy for the printers not being accepted by the Secretary until the work is brought well up to a point where the subsequent cost of revision will not be disproportionate.

The total cost of the work of the Commission to date is therefore £4,595 10s. 8d.

It may be useful, as a means of comparison, to state here the cost in 1890 of bringing up to that date the consolidation of the Victorian Statutes.

The cost of that work—which covered a far smaller area than that to be covered by the New South Wales Commission—involved the following expenditure:—

Professional services	£3,034
Printer's expenditure (including printing and binding of complete sets)	13,483
						<hr/>
Total cost	£16,517

In the Victorian Hansard of 11th June, 1890, an expenditure of about £7,000 for special type, imported from England, for this work is referred to, and it does not appear clearly that this sum is included in the printer's expenditure given above.

The

The difficulty of locking up type in connection with the work of the New South Wales Commission has already presented itself. I am in receipt of a letter from the Government Printer directing my attention to the fact that there are about 500 pages of matter now locked up in printer's formes in connection with this work. Not only is a quantity of type thus left idle, but the printer's stock is seriously encroached upon. Mr. Potter informs me that in view of the increased strain upon his type resources during the Parliamentary Session he must either have means to purchase new type for our work, or must distribute some of the printed matter now standing.

It was hoped when the work of this Commission was undertaken that a crisis of this kind would be avoided, by sending on the Bills as they were completed to be passed through Parliament, instead of, as in Victoria, completing the whole work and passing it *in globo*. However, the completed work of eight Committees having to be passed through the one Revision Committee has necessarily tended to the accumulation of printed matter waiting its turn for revision.

In Victoria, as I have indicated, this difficulty was met by a large purchase of special type.

I might here point out how much greater the work involved in consolidating the Statutes is in the mother colony than it was in Victoria. In the latter colony the work was greatly facilitated by an existing consolidation carried out some twenty-five years before, whereas in New South Wales the whole body of our Colonial legislation had to be collated, sifted, and put in order, before any attempt at consolidation could be made. A further difficulty was encountered in giving effect to the powers of amendment entrusted to this Commission for the purpose of effective and useful consolidation. A simple compilation of the existing statutory provisions, as in Victoria, without material alteration of phraseology, would in all cases have been much easier, but in most cases less serviceable than the recasting of clauses so as to preserve the sense whilst getting rid of redundant and circuitous modes of expression.

MEETINGS.

Since the initiation of the Commission's work seventy-eight meetings have been held, of which number twenty-four are to be credited to the Revision Committee. In nearly every instance these meetings have had to be held after the rising of the Supreme Court, the only time available to their Honors the Judges.

Appended to this Report are statements kindly furnished to me by the draftsmen containing suggestions relative to the utilization of their work.

T. B. CLEGG,
Secretary.

APPENDICES.

REPORTS BY THE DRAFTSMEN OF COMMITTEES ON THE UTILISATION OF THEIR WORK.

The following Reports were prepared by the draftsmen attached to the several Committees, in reply to a request by the Secretary for suggestions as to the way in which the work accomplished in each case could be utilised in the event of the scheme of Consolidation not being carried out in its entirety.

COMMITTEE No. 1.

In the event of the Consolidation of the Statutes not being completed, it does not necessarily follow that the work done by this Committee should be altogether wasted. The Bills already passed could be taken advantage of, and, in particular, it would, in my opinion, be highly desirable to pass into law the Bill consolidating the enactments relating to Quarantine. These enactments in their present state are very unsatisfactory; the Principal Act is as early as 3 Wm. IV, and is largely characterised by the clumsiness of form, want of arrangement, and redundant verbiage found in Acts of that period. The latest amending Act is that of 58 Victoria, and it becomes an extremely difficult task to read the early Act in conjunction with this Act drafted in modern form. In the Consolidation Bill the phraseology of the Principal Act was largely retained (as this Act has always worked satisfactorily) and, consequently, the Bill lacks the conciseness of expression that should characterise a contemporary Statute, but having this Bill in hand it would be a very simple matter to prepare a Bill which would in no way alter the existing law, but would express it in a form far more concise and tangible than was possible in a Consolidation Bill in which any possibility of altering existing legislation had to be scrupulously avoided.

A valuable part of the work of this Committee (for present purposes) is the arrangement in lists of the Statutes to be dealt with by them. These Statutes embrace nearly one-third of the total legislation of New South Wales, and have been arranged in lists showing the history of each enactment. Thus an index to a large portion of our Statute law has been formed, which might, in my opinion, be profitably utilised, at least by the passing of a Statute Law Revision Act, clearing our Statute Book of the Acts which are clearly no part of existing law, but which for want of an express repeal cannot be disregarded, and which might perhaps in some cases, by the repeal of Acts superseding them, be inadvertently revived. These Acts could be included in a Schedule to the Act, and expressly repealed.

It may perhaps be acceptable if I here indicate the work yet to be done by this Committee. The list of Statutes to be dealt with numbers, as I have said before, about 230. Of these thirty-five have since been found to be exhausted, but recent legislation has added about twenty new ones. So there remain about 200. But of these 200 it has been discovered by careful analysis that some seventy-two only are susceptible of consolidation, the remainder being Acts either standing alone, or, for the most part, Acts both standing alone and undesirable of consolidation, as not being of sufficient permanency and of general public interest sufficient to warrant the undertaking, *e.g.*, Acts authorising the construction of different public works, and of railways.

The Acts susceptible and desirable of consolidation are included in the following:—Aliens, 2 Acts; Audit, 3 Acts; Banks, 4 Acts; Civil Service, 3 Acts; Constitution, 8 Acts; Defence, 7 Acts; Industrial Schools, 3 Acts; Navigation, 5 Acts; Parliamentary Elections, 3 Acts; Quarantine, 3 Acts; Shipping and Seamen (2 Bills), 9 Acts; Stamp Duties, 5 Acts; the Post Office, 2 Acts; University, 9 Acts; Weights and Measures, 2 Acts; Wharfage and Tonnage, 3 Acts, making a total of 17 Bills dealing with 72 Acts, of which 3 Bills dealing with 12 Acts are already passed, and 3 Bills dealing with 14 Acts are in hand, leaving 10 Bills dealing with 46 Acts yet to be done, and even of these, the Acts dealing with the subjects of Defence and of the University might be dropped as not being of sufficient general public utility to warrant the expense of consolidation. This course being adopted, there would remain 8 Bills dealing with 30 Acts to be drafted and considered.

J. MEILLON.

COMMITTEE No. 2.

The preliminary work of the No. 2 Committee consisted in the classification by that Committee in co-operation with the other Committees, of all Statutes passed in the Colony of New South Wales.

If the scheme for consolidating the Statute Law is not carried out in its entirety this preliminary work of classification could be utilised by passing a Statute Law Revision Act repealing the Statutes contained in the List of Statutes, the operation of which is exhausted, or which are obsolete, or inapplicable to New South Wales. There are seventy such Statutes on the lists prepared by the No. 2 Committee.

With regard to the work of actual consolidation accomplished by the No. 2 Committee, it will be seen from the progress return, that forty-two Statutes have been completely dealt with in Bills which are in various stages of revision. The Bills consolidating these forty-two Statutes could be utilised by being passed through Parliament.

The work of Consolidation has been carried out upon the assumption that the Interpretation Bill prepared under the supervision of the Revision Committee would be passed by Parliament before the passing of any Consolidating Bill. It has further been assumed that the sections of the Acts Shortening Acts which were omitted from the Interpretation Bill, *viz.*, sections 14, 15, and 16 of 16 Vic. No. 1, and sections 7 and 9 of 22 Vic. No. 12, would be dealt with in other Consolidating Bills, as mentioned in the table accompanying the Interpretation Bill. Any departure from the course above mentioned might involve alterations in the Consolidating Bills, but it is not probable that any such departure would involve any alterations which could not be readily made.

Of the 428 Statutes allotted to the No. 2 Committee, 253 Statutes have been more or less completely dealt with. A large number of the Statutes remaining to be dealt with are isolated Statutes in connection with which the work to be done is nominal, and will be dealt with last of all to avoid the expense of locking up type.

ARTHUR J. KELYNACK.

COMMITTEE

COMMITTEE No. 3.

The special duty was assigned to the Draftsman of this Committee of preparing a list of the Imperial Statutes, expressly enacting that they are applicable to the British possessions or this Colony. This list, which, apart from the work of consolidation, will be of great value, necessitated an expenditure of much care and time.

As the Crown Lands Consolidated Bill is now nearing completion, on my part I would strongly urge that it be carried forward, and when complete brought into operation, as the present state of the land laws leads to endless litigation. In the present state of the Bill I cannot suggest any scheme for its utilisation.

G. HERBERT PIKE.

COMMITTEE No. 4.

The Revision Committee has considered and passed, with certain alterations, the first twenty-eight sections of the Trustee Bill, with the exception of sections 4-8, which were left to be dealt with by an amending Bill. When the Revision Committee rose it was engaged in considering the second proviso to section 29; when this section is passed I am of opinion that there will be few matters calling for any lengthened consideration in the Bill. The amending Bill has been framed with a view of bringing the statutory law with regard to trustees in this Colony into line, so far as was practicable, with the recent legislation in England. In doing so it has appeared to me advisable to depart as little as possible from the language of the English Statutes, and discussion upon the Amending Bill would probably be limited mainly to consideration of the advisability of adopting the different provisions of the English Statutes. If it is decided to adopt any provision, the Commission would probably adopt the language of the English Statutes without alteration, except where alteration appeared imperative. If three members of the Commission could give two periods of two consecutive hours each to the Consolidating Bill and the Amending Bill, I believe they could be thoroughly dealt with. Any points upon which the three felt any doubt might be submitted to the Revision Committee. Failing this I would suggest that the Amending Bill be embodied in one draft with the Consolidating Bill, and the whole submitted to Parliament in the ordinary way.

The Registration of Deeds Bill has been passed by No. 4 Committee. This Bill also might, in my opinion, be dealt with by a sub-committee of three, of whom at least one if not two should be solicitors; any matter of doubt could be referred to the Revision Committee. It is a short Bill of eighteen sections collecting from five Statutes enactments relating to registration.

The other Bills prepared have not been before Committee No. 4; I would suggest that that Committee should consider them, and that the Revision Committee should in all cases be solely a Committee of reference to consider points submitted by the various committees.

If the Trustee Bill, and Trustee Amending Bill, the Registration of Deeds Bill, the Landlord and Tenant Bill, the Conveyancing and Law of Property Bill were passed by the Commission, the only subjects allotted to No. 4 Committee that really require consolidation will have been dealt with. I understand that the Equity Amending Bill will probably be proceeded with, whether the Commission decides to go on with the work already prepared or not.

J. M. HARVEY.

COMMITTEE No. 5.

The Interpretation Bill which has been finally passed by the Revision Committee and by the Commission is now ready to be submitted to Parliament; but if the consolidation scheme should not be carried out it would be necessary to provide in some way for the re-enactment or continuance of several sections of the Acts Shortening Acts, 16 Vic. No. 1 and 22 Vic. No. 12, omitted from the Interpretation Bill. These sections are 14, 15, and 16 of 16 Vic. No. 1, and 7 and 9 of the Act 22 Vic. No. 12. It was intended that the sections of the former Act mentioned should be included or dealt with in the Justices (Consolidation) Bill, and that section 7 of the Act 22 Vic. No. 12 should be dealt with in the Criminal Law (Consolidation) Bill, and section 9 should be included in the Common Law Procedure (Consolidation) Bill. These five sections relate respectively to the summary exercise by Justices of the Peace of their powers, the appropriation of penalties, the right to sue for penalties, the meanings of the words "statute" and "Act" in indictments and pleadings, and the plea of "not guilty" in actions against officers. It is submitted that if the work of consolidation is not completed these sections could be dealt with either (a) by limiting clause 2 of the Interpretation Bill so as to leave the sections mentioned operative in respect of all Acts; this might be done by inserting the words "except as to sections 14, 15, and 16 of the Act 16 Vic. No. 1, and sections 7 and 9 of the Act 22 Vic. No. 12," after the word "but" in the third line of that clause; or (b) by adding the sections as supplemental clauses in the last part of the Bill; or (c) by preparing a Bill to include these sections, and to be submitted to Parliament with the Interpretation Bill.

If the Interpretation Bill is passed, the Employers' Liability (Consolidation) Bill and Contractors' Debts (Consolidation) Bill could be submitted in their present form, or as passed by the Revision Committee. The Liens on Crops, Wool, and Stock Mortgages (Consolidation) Bill has been delayed pending the decision in the case of *Piper v. the Bank of New South Wales*, but that case having now been decided the Bill may be at once dealt with by my Committee. If the Interpretation Bill is not passed the other Bills mentioned will need careful revision and certain alterations before being submitted to Parliament.

Bills to repeal the Agreements Validating Act and the Masters and Servants' Act were introduced in the Legislative Assembly last Session, and, therefore, the Bill to consolidate these Acts must, I assume, be kept back for the present. Consolidation of the Copyrights, Trade Marks, and Patents Acts is also delayed pending the decision of Parliament in respect of a Bill introduced to amend the Patents Acts.

I would like to mention, further, that if the work of consolidation is not completed it is still possible that use may be made of the lists of Acts made out and checked by the draftsmen.

WILFRED BLACKET.

COMMITTEE

COMMITTEE No. 6.

The late draftsman, Mr. Healy, had the Criminal Law (Consolidation) Bill in type at the time of his death, and, I understand, a considerable quantity of material prepared for the Justices (Consolidation) Bill. The Criminal Law Bill consolidates 31 Vic. No. 25, 42 Vic. No. 9, 42 Vic. No. 13, 46 Vic. No. 17, 55 Vic. No. 5 (in part), and 57 Vic. No. 23.

The Bill, consisting of 478 clauses, is divided into twelve parts. In effect, it completes and brings up to date the Criminal Law Amendment Act of 1883, and, subject to the passing of the Interpretation Bill, could, when revised, be at once passed into law.

SECRETARY.

COMMITTEE No. 7.

An important part of the work done consists of a digest of all the Statutes allotted to the Committee, that is to say, all the Acts of the New South Wales Parliament dealing with the following subjects:—Supreme Court, The Judges, Barristers, Attorneys, The Sheriff, Common Law Procedure, Absent Defendants, Creditors' Remedies, Intercolonial Judgments, Payment of Debts out of Realty, Imprisonment for Debt, Oaths, Juries, Evidence, Trespass to Land, Defamation, Admiralty.

Over 120 Statutes have been thus treated, and the substance of them has been redistributed and put in order under the headings of the proposed new Bills, the effect of all repeals and amendments up to date being duly noted. The Bills themselves are in course of preparation.

Should it be thought desirable at any time to proceed with the consolidation of the Statutes relating to any one or more of the above subjects, the work could be taken up at its present stage.

Should an amendment of the law in any of these branches be contemplated, the digest would afford a ready guide to the provisions of the existing Statutes, and so facilitate the work of the draftsman and of the Legislature.

The mere collocation of the sections and parts of sections relating to the same subject-matter brings many of the defects of the existing law into prominence, and suggests the direction which amending legislation might usefully take. I refer here chiefly to defects in form—inconsistencies, omissions, and redundancies. There are very many obsolete and conflicting enactments which encumber the Statute Book, and which might easily be dealt with even if no comprehensive scheme of reform were undertaken. For instance, the lists prepared by this and the other Committees, of Statutes exhausted, obsolete, or inapplicable to New South Wales, supply the material for a simple repealing Act which would at once relieve the Statute Book of a great deal of useless and embarrassing matter. If to those lists were added the many parts of Statutes and single sections which come within the same category, the value of the repeal would, of course, be enormously increased.

It seems to have been the frequent practice of the Legislature in the past to adopt English Acts without taking care to ascertain whether the matters to which they related, or any of them, had already been dealt with by local Acts. This has naturally led to great confusion. Thus—to take one of many examples—there are five Acts making separate and distinct provision for the trial by a jury of questions of fact without formal pleading. One of these Acts (14 Vic. No. 9) is "An Act to amend the law concerning games and wagers," where one would hardly expect to find a section dealing with a matter purely of legal procedure. It would be easy to multiply instances of this sort. Then again, nearly all the old Statutes are full of provisions, obsolete in fact, and long displaced by the terms of later Statutes, but never expressly repealed. There is a section, for example, in an Act of 1841 (5 Vic. No. 4, s. 5) which enacts that civil cases in Circuit Courts are to be tried by a judge and two magistrates sitting as assessors. (See Oliver's Statutes, 1207.) This, of course, is no longer so. The present law requires a jury of four in such cases. Yet that section, and hundreds of other such sections, stand unrepealed, except by implication. In fact, that particular section substituted a new system for the system in force under an earlier enactment, providing for trials by a jury of twelve, which enactment itself stands also unrepealed. (See 4 Vic. No. 28, s. 1; Oliver, 1201.) Such defects as these could easily be dealt with at once by a simple measure of repeal.

If any considerable amendment of the system of procedure is to be proposed, no doubt it will be based to a large extent on the English Judicature Acts. In that case the digest of our Statutes should be of great service. It would enable the group of provisions of the local law dealing with any given branch of the subject to be readily compared with the corresponding provisions of the English law, and so help in determining whether it would be better to adopt the English procedure in that particular case, or retain our own procedure with or without modification.

DAVID G. FERGUSON.

COMMITTEE No. 8.

In my opinion it is hardly possible or necessary for the Revision Committee to go through each Bill line by line and clause by clause. Such a course would make their work interminable. If their work were confined to deciding points reserved for their consideration by the various Committees, no block would occur. That seems to me to be a matter within the powers of the Commission itself to rectify. It would be a matter of regret if the work already bestowed on the Statutes were to be thrown away, and I would suggest that the various Committees complete the Bills assigned to them, and that the work of the Revision Committee be confined to deciding points reserved. Let the various Committees then certify their work, or, if thought advisable, send the completed Bills on to certain persons to be appointed in the Commission for the purpose of checking the same. The Bills could then be returned to the Minister by the Commission, together with such report as they may think right.

With these Bills I would suggest that a short Bill be submitted, declaring the Statutes contained in the various lists of Statutes repealed, expired, &c., which have already been prepared by the Committees, to be no longer in force; such Statutes should be set out in a Schedule to the Bill. That would have the effect of clearing away a great deal of useless matter from the Statute Book.

If the course suggested be adopted, I think that the work of the Commission can be brought to a satisfactory conclusion in the near future; otherwise it will be interminable.

To stop the work now would cause great confusion in any attempt to use what has been done, and might result in many sections of Acts, which in the course of consolidation have been removed from their original context, being lost sight of.

REGULÆ GENERALES.

The 3rd day of July, 1896.

In pursuance of the several powers vested in us in that behalf we order and direct that, from and after this date, Rules 23 and 264 of the "Consolidated Equity Rules of 1891" be rescinded, and in lieu thereof the following shall be Rules 23 and 264 respectively:—

23. The Deputy Registrar or Chief Clerk may sign for the Master any process issuing out of this Court which now requires the signature of the Master. And the Chief Clerk, when directed by the Court or Master, may discharge the duties of sitting in Court as Registrar.

264. No such withdrawal or payment shall be made by the said Bank or the Colonial Treasurer without an order signed by the Master, or in his absence or illness by the Deputy Registrar, and counter-signed by the Chief Clerk or Accountant in Equity.

CORONER'S INQUEST ON DEATH OF FREDERICK HEXTER.
(INFORMATION RESPECTING.)

Printed under No. 20 Report from Printing Committee, 1 October, 1896.

[Laid upon the Table of the House in answer to Question No. 5 of 24 September, 1896.]

Question.

5. INQUEST UPON FREDERICK HEXTER:—MR. KNOX asked THE MINISTER OF JUSTICE,—
- (1.) Has his attention been directed to the newspaper reports of the Coroner's Inquest on the death of Frederick Hexter?
 - (2.) Is the report in the *Sydney Morning Herald* an accurate report of the proceedings?
 - (3.) Is it a fact that the jury agreed upon and returned a verdict of accidental death?
 - (4.) Is it a fact that after such verdict had been returned the Coroner directed the jury to reconsider the verdict returned?
 - (5.) If so, what authority had the Coroner to so direct the jury?
 - (6.) Did the Coroner refuse to take a note of the objection raised by the solicitor for Francis Paranthoienne that the verdict having been returned could not be reconsidered?
 - (7.) If so, upon what grounds?
 - (8.) Is the Coroner in the habit of refusing audience to solicitors who appear before him on behalf of persons interested, or of treating such solicitors as having no *locus standi*?
 - (9.) If so, upon what grounds does the Coroner adopt this course?

Answer.

- (1.) Yes. The Coroner has furnished the following replies to the other Questions:—
- (2.) The report in the *Sydney Morning Herald* is not a correct report of what took place.
- (3.) The foreman of the jury, upon being asked by me whether the jury had agreed upon a verdict, replied, "Yes, your worship; accidental death." I replied, "I am very much surprised at the verdict; the case is a very simple one"; and I explained the law clearly. I wish it to be noted that I did not ask the foreman for any explanation. The foreman then voluntarily made an explanation to the effect that they were satisfied both as to the law and the evidence; that the driver of the cart, Paranthoienne, was in the wrong, but they considered that there were extenuating circumstances in his favour, and for that reason they had agreed upon a verdict of accidental death. Seeing that the jury had evidently fallen into an error as to their powers, I then explained to them that a coroner's jury has no power to take into consideration any extenuating circumstances, or any contributory negligence on the part of the deceased; that their duty was simply to find whether or not a *prima facie* case of manslaughter had been made out by the evidence as laid before them, of which they alone were the judges, and, by the law as explained to them by me, that it was my duty to explain the law to them, which in this case was very clear; but, if they chose to, as it were, take the bit in their teeth and ignore the law, and go beyond their powers by considering extenuating circumstances, it was my duty, notwithstanding, to record their verdict, whatever it might be. If, however, they desired to consider it further, they were at liberty to do so. What did they wish to do—to have a verdict of accidental death recorded or to consider it further? They then elected to consider it further, and retired.

(4 and 5.) I did not direct the jury to reconsider their verdict.

(6 and 7.)

(6 and 7.) Mr. Cowper, solicitor for Paranthoienne, saw me in my room at about 2 p.m. yesterday, and wished to point out that the jury having agreed upon a verdict of accidental death, any other verdict they might return, after further consideration, would be invalid. I replied that I could not prevent the jury from retiring to further consider their verdict if they desired to do so, and was bound to record any verdict that they might agree upon. Mr. Cowper then asked me if I would allow him to address the jury. I replied that solicitors had never been allowed by the City Coroner to address the jury, and I could not allow him to do so. Upon the jury returning into Court I asked the foreman whether they had agreed upon a verdict. He replied that the verdict was accidental death. I said I would record that verdict, when two jurymen got up and said they would not agree to anything but a verdict of manslaughter. The foreman then commenced a consultation with the other jurymen, and at this point Mr. Cowper got up and commenced addressing me (his address, no doubt, being intended for the jury), and wished me to take a note of the objection he raised with respect to the verdict. I objected to hearing him in the presence of the jury while they were considering their verdict, and repeatedly requested him to discontinue and sit down; but he persisted in his address, though I told him he was committing a contempt of Court by doing so. I considered any interference by Mr. Cowper with the jury while they were considering their verdict, either by addressing them or addressing me in their presence, as improper; but if the jury had returned a verdict other than accidental, or after having failed to agree upon a verdict, Mr. Cowper had then, at the proper time, asked me to make a note of his objection to the verdict, I would have done so.

(8 and 9.) I am not in the habit of refusing audience to solicitors or of treating solicitors as having no *locus standi*.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES No. 70. TUESDAY, 20 OCTOBER, 1896.

9. CLAIM OF MR. THEOPHILUS STEPHENS—CROWN LAW DEPARTMENT:—Mr. Howarth moved, pursuant to Notice,—
- (1.) That a Select Committee be appointed to inquire into and report upon the claim of Mr. Theophilus Stephens against the Crown Law Department.
- (2.) That such Committee consist of Mr. Gould, Mr. Lee, Mr. Anderson, Mr. Whiddon, Mr. E. M. Clark, Mr. McGowen, Mr. Hughes, Mr. Bull, and the Mover.
- Debate ensued.
Question put.
The House divided.

Ayes, 34.

Mr. Travers Jones,	Mr. Harris,
Mr. Lyne,	Mr. Moore,
Mr. W. H. B. Piddington,	Mr. Howarth,
Mr. Schey,	Mr. Hurley,
Dr. Ross,	Mr. Gormly,
Mr. Dacey,	Mr. Nicholson,
Mr. Alexander Campbell,	Mr. Law,
Mr. Anderson,	Mr. Henry Clarke,
Mr. Macdonald,	Mr. Black,
Mr. Ashton,	Mr. Dick,
Mr. Cotton,	Mr. O'Reilly,
Mr. Reymond,	Mr. Ferguson,
Mr. E. M. Clark,	Mr. Fegan,
Mr. Thomas,	Mr. Price.
Mr. Hughes,	<i>Tellers,</i>
Mr. O'Sullivan,	
Mr. Watson,	Mr. Affleck,
Mr. Bavister,	Mr. Dugald Thomson.

Noes, 20.

Mr. Wright,	<i>Tellers,</i>
Mr. Cook,	
Mr. McLaughlin,	Mr. Millen,
Mr. Hogue,	Mr. Molesworth.
Mr. Willis,	
Mr. Brunker,	
Mr. Gould,

CLAIM OF MR. THEOPHILUS STEPHENS—CROWN LAW DEPARTMENT.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 20th October, 1896, “to inquire into and report upon the claim of Mr. Theophilus Stephens against the Crown Law Department,” and to whom was referred, on 10th November, 1896, the *Return to Order* “*Claims of Mr. Theophilus Stephens—Regina v. Sugarman and Fernandez, laid upon the Table on 10th September, 1896,*”—have agreed to the following Report:—

Your Committee having examined the witnesses named in the List* (whose evidence will be found appended hereto), find:—

*See List,
p. 4.

1. That the action against Mr. Stephens for £3,000 damages was the direct outcome of the Crown prosecution of Sugarman. Mr. Stephens immediately gave notice to the Attorney-General, and claimed protection from the Crown, which was refused.
2. That the Attorney-General informed Mr. Stephens by letter that he, Mr. Stephens, could not be held responsible for what the Crown did. The Crown prosecuted, and bound Mr. Stephens over to appear as a witness only.
3. That the Police took the entire responsibility of the criminal prosecution of Sugarman.
4. That the Police have no similar action against a witness following a Crown indictment where the witness had to pay the costs of such action.
5. That Mr. Stephens laid no information against Sugarman, or anyone else, but simply reported the robbery.

Your Committee therefore recommend Mr. Stephens's claim to the favourable consideration of the Government.

GEO. HOWARTH,
Chairman.

No. 3 Committee Room,
Legislative Assembly,
11th November, 1896.

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 10 NOVEMBER, 1896.

MEMBERS PRESENT :—

Mr. Anderson,		Mr. E. M. Clark,
Mr. Howarth,		Mr. Lee,
	Mr. Whiddon.	

Mr. Howarth called to the Chair.

Entry from Votes and Proceedings, appointing the Committee, *read* by the Clerk.

Theophilus Stephens called in, sworn, and examined.

Witness *handed in* copies of the correspondence between himself and the Attorney-General. (*See Appendix.*)

Witness withdrew.

Thomas Johnston (*Sergeant of Police*) called in, sworn, and examined.

Witness withdrew.

[Adjourned till To-morrow at 11 o'clock.]

WEDNESDAY, 11 NOVEMBER, 1896.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

CLAIM OF THEOPHILUS STEPHENS—CROWN LAW
DEPARTMENT.

TUESDAY, 10 NOVEMBER, 1896.

Present:—

MR. ANDERSON,		MR. E. M. CLARK,
MR. HOWARTH,		MR. LEE,
	MR. WHIDDON.	

G. HOWARTH, ESQ., IN THE CHAIR.

Theophilus Stephens called in, sworn, and examined:—

1. *Chairman.*] What are you? Woollen draper, out of business.
2. You are making a claim against the Crown Law Department for costs incurred in connection with a trial? Yes.
3. *Mr. Whiddon.*] How many years were you in business in this city? About twenty-five years.
4. *Chairman.*] You wish to make a statement in reference to your claim? Yes; I desire to make the following statement:—

T. Stephens.
10 Nov., 1896.

On December 29th, 1893, I reported a robbery to the police of a quantity of woollen goods, valued at £150, taken from my store, 120½, Liverpool-street. A month later, Detective Johnson requested me to accompany him to a small shop at the Haymarket, kept by one Louis Sugarman, to identify some of my stolen property, when about £30 worth was recovered. He then arrested Sugarman, and on the same day he also arrested one Ralph Fernandez. On February 6th, 1894, at the Central Police Court, Sugarman and Fernandez were committed to take their trial at the Criminal Court, Darlinghurst. The Crown prosecuted. On February 22nd they were tried before His Honor Mr. Justice Windeyer, when Fernandez was found guilty and sentenced to two years' imprisonment, and Sugarman eventually was discharged. On March 31st a Supreme Court writ was issued by Sugarman, and served on me, damages being laid at £3,000. On September 7th and 10th the case was heard before Mr. Justice Stephen, in No. 3 Jury Court. The only plea was not guilty, and the only question for determination, therefore, was, did I cause the arrest? This question was answered in the negative, and a verdict (which was unanimous) was given for me in the action, with costs. On September 13th, Sugarman became insolvent—assets, 15s.; Mr. W. H. Palmer, official assignee. As this action came about entirely in consequence of the Crown prosecution, as fully set out in my letters of the 4th, 8th, and 20th of June, 1894, to the Attorney-General, giving due notice of this before the trial, I beg to apply for the sum of £90 10s. 3d., amount of costs incurred in defending this action. I submit that this is clearly a matter in which the Crown should not allow me to suffer in any way. I have already lost £120 worth of property. It would have been far better for me to have suffered the loss of my goods without going to the police, thereby allowing criminals to go free. Having made me a witness, the Crown should not have deserted me, and allowed a Supreme Court action to follow. Mr. Heydon, in reply to my letter of the 4th June, 1894, said, "You are not liable for anything the Crown did," and yet I was compelled to defend an action for £3,000, which should have been brought (if at all) against the Crown. I beg to lay before you a copy of a voucher payable at the Treasury, published in the *Sydney Morning Herald*, where a Crown witness was paid the cost of his defence, and Mr. Heydon said that it became the duty of the Crown to see that he was not placed in any personal difficulty because of his being such a witness; also Mr. Wilshire's evidence that he had known a few cases in which the Government had employed an attorney to defend a prisoner other than in cases where counsel had been assigned. I am only asking for the amount of my solicitor's costs. Twice the amount would not compensate me for the time and trouble I have had over this matter. As Parliament is the highest Court of appeal, I trust, gentlemen, that you will consider my claim a just one. I hand in copies of correspondence between myself and the Attorney-General. The first letter is dated the 4th June, addressed by me to the Attorney-General, claiming the protection of the Crown in the action brought against me by Sugarman, also the reply of the Attorney-General. The second letter is dated the 20th of June, addressed by me to Mr. Heydon, and there is also the reply. The third letter is addressed to Mr. Heydon, and is dated the 29th June. The fourth letter is addressed to Mr. Simpson, and is dated the 3rd October, 1894. In the latter I applied for payment of costs.

- T. Stephens. 5. You have also I believe made a claim to the present Attorney-General for costs? I have, but strange to say I received no reply directly from Mr. Want. Mr. Clark and Mr. Lees introduced me to him in his office one day, and he read my letter very carefully, and said it was a very hard case, but there was no reply at that time, and I have had no reply since.
- 10 Nov., 1896. 6. *Mr. Whiddon.*] You say that Mr. Heydon said that you were not responsible for anything the Crown did;—was that statement of Mr. Heydon's made verbally or in writing? In writing. It was before the case came on.
7. You did not cause the arrest of Sugarman? Not at all, as the sergeant of police will tell you. I was somewhat timid in the matter, and he said you have nothing whatever to do with that Mr. Stephens, you have only to identify your property.
8. *Mr. Anderson.*] The claim you are making now is in consequence of the arrest of Sugarman by the police? It is in consequence of the action that arose from the arrest of Sugarman by the police.
9. *Mr. Whiddon.*] You did not at any time issue a warrant for the arrest of anybody? No.
10. You simply reported the robbery to the police? That is so.
11. You had no knowledge of any warrant being issued? No.
12. *Mr. Clark.*] You were only asked to identify your property prior to the arrest of Sugarman? Yes.
13. *Mr. Lee.*] And you were called as a Crown witness? Yes.
14. *Chairman.*] And bound over? Yes, and bound over to appear in the sum of £40.
15. *Mr. Anderson.*] Did you identify the goods in Sugarman's possession? I did. When I went into Sugarman's shop with the sergeant of police, having gone at his request, he said, "Do you see any of your property here?" I looked round and I could see some of the patterns, and he said, "How do you know it is your property?" And I pulled down one piece after another, and there was a little thread with a ticket attached, and I pulled it out, and there was my own writing on the goods, and I said, "That is my property." He said, "Look round," and I pulled down seven pieces. Then the constable arrested him. I called the constable on one side and said, "What are you going to do; have you a warrant?"; and he said, resting his hand on me, "Mr. Stephens, you have nothing to do with that; I shall arrest him on my own responsibility."
16. *Mr. Lee.*] What was the name of the constable? Sergeant Johnston.
17. *Mr. Whiddon.*] The police asked you to go to his place. It was not from any information you gave? No.
18. Had you expressed any suspicion of this particular man? No. The police had patterns of my stuff for more than a month, and they went round to different places examining, and I made great complaints to the sub-inspector. I said, "There has been nothing done about my lost property," and the sub-inspector said, "I will send down a good man to-morrow; give him all the information you can"; and in less than two days the police found a portion of the goods. It was only £30 worth out of £150. The police officer said, "I shall want you at 10 o'clock to-morrow morning to go down and identify your property"; and I did so.
19. He did not discover the plant as a result of anything you told him directly in connection with Sugarman? No.
20. *Mr. Anderson.*] Was Sugarman discharged on a technical point? The jury were outside till after 8 o'clock, but eventually he was discharged.
21. *Mr. Lee.*] He was not placed on his trial at your instigation? No. The following is a copy of the voucher referred to in my statement as having been published in the *Sydney Morning Herald*:—
- Head of Service, Attorney-General. Payable from vote, £2,594, item No. 212, Appropriation Act, 1895. Contingent expenses, Department of Attorney-General. Special head of Estimate—Incidental expenses of prosecutions, &c. Claimant—J. W. Gail, North Sydney, April 26. Allowance made by Attorney-General for the defence of Gail on a charge of bigamy, Newtown. Approved.—J.H.W., A.G. Signature of claimant, J. W. Gail. Amount, £5 5s. W. W. Stephen, head of department.
- The following is also the reference to Mr. Heydon's statement contained in my evidence just given. It is an extract from the summing up of the Judge in the Dean conspiracy case.
- The answer of Mr. Heydon was that this had been done because Gail was a Crown witness, and that he had been attacked as a Crown witness, and that it therefore became the duty of the Crown to see that he was not placed in any personal difficulty because of his being such a witness.
- Then, again, Mr. Wilshire, of the Crown Law Department, in his evidence in the Dean conspiracy case, said:—
- He had known a few cases in which the Government had employed an attorney to defend a prisoner other than in cases where counsel had been assigned.

Thomas Johnston called in, sworn, and examined:—

- T. Johnston. 22. *Chairman.*] What are you? Sergeant of police.
- 10 Nov., 1896. 23. Were you the arresting constable in the case of Sugarman and Fernandez? I was.
24. Did you make the arrest on behalf of the Crown, and without Mr. Stephens taking any action in the matter? I did. I made the arrest on the 29th January, 1893.
25. You received your instructions from the head of the department? Mr. Stephens, I think, a month previously, on the 29th of December, 1893, reported a robbery to the police—that his warehouse had been robbed of about £150 worth of goods, consisting of cloth, tweeds, and other materials. I had patterns of the stuffs which Mr. Stephens had lost, and on the morning of the 19th I was passing a shop kept by a man named Sugarman, in George-street, Haymarket. I saw a roll of tweed inside the door, and having a pattern of Mr. Stephens's goods I had a look at the roll of tweed, and it seemed to correspond with the stuff Mr. Stephens had lost. I went to Mr. Stephens and made an appointment with him to go down to this shop. Mr. Stephens accordingly accompanied me, and on going into the shop I saw the proprietor, Mr. Sugarman, who asked me if I wanted a suit of clothes. I told him perhaps I might. I then had a look at the roll of tweeds, and I told Mr. Stephens to have a look at it to see if it was his property. He identified it as his property by a ticket inside one of the rolls of tweed which bore his private mark. I asked Sugarman where he got it from—my memory is not quite as fresh as it was at the time—or if he bought any more stuff. He said no, that was all, that if that was Mr. Stephens's he could have it. So I told him I was not satisfied, and that I was going to search his shop, which I did. I found several half-rolls and pieces of tweed and cloth, and also three or four rolls of lining concealed under his counter—in fact,

fact, with the exception of a few overcoats, he had nothing in his shop except stolen property. Then I arrested him. I brought him to the station, and I charged him with stealing, in company with another, goods to the value of £150. I afterwards arrested a man named Fernandez, and charged him with stealing in company with Sugarman. They were brought before the Court and committed to the Criminal Court for trial. Fernandez got a sentence of two years, and Sugarman was acquitted. T. Johnston.
10 Nov., 1896.

26. *Mr. Lee.*] Would you like to say on what ground Sugarman was acquitted? I could not say. The jury were away half an hour considering their verdict.

27. Was it on a technical ground? I could not say.

28. The shop was kept by Sugarman? Yes.

29. The premises were in his name, and the stolen property was found there? Yes.

30. Was Fernandez a partner of his? No. Sugarman told me after I had taken him to the station that he bought the goods from Fernandez, but Sugarman had no receipt, and nothing to show that he bought the goods from any person, though I asked him.

31. After the discovery of the stolen property, and its identification by Mr. Stephens by means of his private mark on the ticket, you arrested Sugarman by your own authority? I did.

32. Was he, or was he not, given into your charge by Mr. Stephens? He was not. I arrested him myself, and His Honor Judge Windeyer told me I did what was quite right.

33. *Mr. Whiddon.*] Did you go to Sugarman as the result of something Mr. Stephens told you, or in consequence of information you obtained from other quarters? From my own information.

34. Mr. Stephens had nothing to do with your going to Sugarman? He had not.

35. And Fernandez was discovered to be the thief, and it was assumed that Sugarman was the receiver? Yes. Fernandez, when I arrested him, said he had bought the tweed from a man named Woods, a dealer. I made every effort to find Woods, and could find no such man. Fernandez told me that he paid him for the goods in one of the hotels, and when I asked him which hotel he could not tell me. In his statement at the Court afterwards he told His Honor and the jury that it was outside an auctioneer's shop that he got the receipt.

36. You said that with the exception of a few overcoats Sugarman had nothing in his place but stolen goods;—how did you know that? I took the whole of the things away except a few overcoats. It was all Mr. Stephens's property, and Judge Windeyer ordered it to be handed over to Mr. Stephens when the case was over.

37. You say that you charged Sugarman with stealing goods—to the value of how much? £150, in company with Fernandez.

38. *Mr. E. M. Clark.*] How did you get the suspicion of Fernandez—was it not through Sugarman? When I took him to the station, Sugarman said he had bought the goods from Fernandez; but when I asked him at the shop, Sugarman said that the one roll was all the stuff he had. He had several suits made up of Mr. Stephens's stuff, and these were handed over to Mr. Stephens. Sugarman is a man I always looked upon as a receiver of stolen property.

39. He was well known to the police in that particular line of business? He had a shop close to Mr. Stephens's place at the time, and he shifted from there to the Haymarket. He has now gone away.

40. *Chairman.*] Have you any trouble in getting information from the public who have goods stolen from them? No.

41. They are not afraid of the consequences if they give evidence? No. It is to their interest to assist us, but they are not responsible unless they give a person into custody or obtain a warrant.

42. They are not supposed to be held responsible for your action? No, I think not. If a warrant were issued, then they would be responsible.

WEDNESDAY, 11 NOVEMBER, 1896.

Present:—

MR. E. M. CLARK, | MR. LEE,
MR. WHIDDON.

G. HOWARTH, ESQ., IN THE CHAIR.

Hugh Pollock called in, sworn, and examined:—

43. *Chairman.*] What are you? Secretary to the Attorney-General.

44. We have called you in reference to the case of Theophilus Stephens;—you have the papers in connection with the case of Sugarman v. Stephens? I have not the papers in connection with the case, because they do not belong to our department; but I have all the communications that have passed between us and Mr. Stephens. The other records in that case are with the Prothonotary.

45. Have you any knowledge of the case? Nothing more than I have learnt in going through the papers. All the matters took place before I took charge.

46. Do you know if any similar case has ever come before the department—a case in which a witness for the Crown was afterwards sued for damages by one of the parties, and in which the Crown refused to protect the witness? I do not know of any case in which an application has been made to the Crown to pay the costs of a successful defendant in an action brought against him for either malicious prosecution or wrongful arrest. I do not think such a case has arisen, but I have not been through the records of the department to see.

47. You are aware that the applicant in this case was a witness for the Crown? I know from the papers only.

48. Has the department at any time allowed a sum of money for the defence of a Crown witness? With regard to a malicious prosecution?

49. In any action arising out of a case in which the applicant was a witness for the Crown? I cannot say without looking the matter up. But I should not think so. I cannot say without looking at the papers.

50. You have no knowledge of an amount having been granted to pay the expenses of a witness named Gail in the Dean case? No, I have no knowledge of that—no official knowledge.

H. Pollock.
11 Nov., 1896.

H. Pollock. 51. Is this a true copy of the voucher generally used in your department :—

11 Nov., 1896. Head of Service, Attorney-General. Payable from Vote £2,594, item No. 212, Appropriation Act, 1895. Contingent Expenses, Department of Attorney-General. Special head of Estimate—incidental expenses of prosecutions, &c. Claimant—J. W. Gail, North Sydney, 26th April. Allowance made by Attorney-General for the defence of Gail on a charge of bigamy at Newtown. Approved.—J. H. W., A.G. Signature of claimant—J. W. Gail. Amount, £5 5s.—W. W. Stephen, head of department.

That sounds to me to be in the usual form.

52. *Mr. Whiddon.*] What was the suit against Stephens based upon—wrongful arrest, or malicious prosecution? Malicious arrest and false imprisonment.

53. How long have you been in the Attorney-General's Department? Only since May.

54. Previously to that, were you officially connected with the department? No.

55. What experience have you had of criminal law? I have been a practising barrister for six years. I have defended several criminals, and have also been Crown Prosecutor on several occasions.

56. Having discovered what the case was based on, do you, of your own knowledge, know of a case in which the expenses were allowed by the Crown under similar circumstances? No; I could not have any such knowledge without looking the matter up.

57. *Mr. E. M. Clark.*] Proceedings of this kind are pretty exceptional? I think so.* I would point out that a great distinction can be drawn between Gail's case and the case of Mr. Stephens. The latter was simply a civil action, brought for personal damages, whereas the Gail matter was a criminal proceeding taken against Gail himself. One was a charge for a felony, and the other was for private gain.

58. *Chairman.*] But in both instances the defendants were Crown witnesses? Yes.

59. *Mr. Whiddon.*] But the circumstances are widely different? Yes, widely different.†

* NOTE (on revision) :—That is, proceedings to try and recover costs from the Crown, but proceedings for malicious prosecution, &c., by a person who has been accused of a crime, and acquitted, are far from uncommon.

† NOTE (on revision) :—The proceedings against Gail were taken before he had given evidence for the Crown; the proceedings against Mr. Stephens some time after the case in which he was a witness was finished.

APPENDIX.

[To Evidence of Mr. Theophilus Stephens.]

Sir,

Union-street, North Sydney, 4 June, 1894.

I have the honor to submit for your kind consideration the following :—

In December last I was robbed of over £150 worth of woollen goods. I immediately informed the police. A month later I was requested by one of the police officers to accompany him to a tailor's shop owned by one Louis Sugarman, where I easily and at once identified a quantity of my stolen goods, the tickets with my own handwriting being rolled in the centre; whereupon the police officer searched the shop and found a lot more of my property, and then forthwith arrested Louis Sugarman, the officer taking the stolen property to the police-station. He also subsequently arrested one Ralph Fernandez. These men were committed for trial, I being bound over to appear as witness, and were tried before Mr. Justice Windeyer, in February last, when Fernandez was convicted and sentenced to two years' imprisonment, and for some time the jury could not agree in Sugarman's case, and ultimately he was acquitted and discharged. The matter was throughout in the hands of Police-sergeant Johnson, then of No. 1 Station, Clarence-street. As the outcome of these proceedings Mr. Sugarman issued a writ against me, claiming £3,000 damages. I took legal advice, and was advised that I must of necessity defend the action, and accordingly this is being done, Mr. Joseph Thompson, of Vickery's Chambers, Pitt-street, acting for me, Dr. Sly being my counsel. The case is set down for hearing on the 22nd instant. As the Crown prosecuted and bound me over in the sum of £40 to appear as a witness, I desire respectfully to bring the matter and the facts under your notice, with a view of seeing whether, under the circumstances, as this was throughout a Crown prosecution, the Crown will be willing to assist me in the matter, and arrange that I should not suffer any further loss in the way of either expenses or possible damages. Thanking you in anticipation, and apologising for trespassing on your valuable time.

I have, &c.,

THEOPHILUS STEPHENS.

The Hon. the Attorney-General, Department of Justice.

Sir,

Attorney-General's Department, Sydney, 7 June, 1894.

In reference to your letter of the 4th instant, stating that in December last you laid an information against one Louis Sugarman for receiving stolen property, who was in due course placed upon his trial and acquitted, and asking that, as Sugarman has now issued a writ against you for £3,000 damages, the Crown will protect you against any further loss likely to be incurred in legal expenses, or in the event of possible damages, I am directed by the Attorney-General to inform you that this request cannot be complied with.

You are not liable, Mr. Heydon desires me to point out, for anything the Crown did, but only for what you did yourself, which he supposes was laying the information against Sugarman.

I have, &c.,

W. W. STEPHEN.

Theophilus Stephens, Esq., Union-street, North Sydney.

Sir,

Union-street, North Sydney, 8 June, 1894.

I have the honor to acknowledge the receipt of your favour of 7th (94-1,297), in reply to mine of 4th instant to the Hon. the Attorney-General. My letter would seem to have been misunderstood. Had I laid an information I should no doubt have had to put up with the consequence. I wish to make it quite clear that I never laid any information of any kind at any time against Mr. Sugarman or anyone else, and that the prosecution was in substance and fact a Crown prosecution. No information was ever laid by me against Mr. Sugarman, and it was for this reason that I desired to bring the matter under the notice of the Attorney-General.

I have, &c.,

THEOPHILUS STEPHENS.

W. W. Stephen, Esq., Attorney-General's Department, Sydney.

Sir,

Attorney-General's Department, Sydney, 15 June, 1894.

In reference to your letter of the 6th instant, respecting your application for assistance from the Crown in an action being brought against you by one Sugarman in connection with an information laid against him for having in his possession certain stolen property belonging to you, I am directed by the Attorney-General to again inform you that the Crown can do nothing in this matter. You can only, I am further to point out, be made responsible for your own acts, whatever they were.

I have, &c.,

W. W. STEPHEN.

Mr. Theophilus Stephens, Union-street, North Sydney.

Dear

Dear Sir,

Union-street, North Sydney, 20 June, 1894.

I am in receipt of yours of 15th instant, No. 94-1,323, for which I thank you. And adverting to the concluding portion thereof, what I desire to bring specially under the notice of the Hon. the Attorney-General is this, that while I can only be made responsible for my own acts, whatever they were, they, as a matter of fact, being nil. At the same time I am harassed with an action, and am obliged to incur certain liabilities in defending same, which action should never have been brought against me, inasmuch as the prosecution was entirely by the Crown; and it is in this direction, and for relief from this liability for the costs and expenses, that I have taken the liberty of addressing the learned Attorney-General. I am advised both by solicitor and counsel that so far as the action is concerned I am not, under the circumstances of the case, likely to be mulct in damages; but I was also advised that when I was served with a Supreme Court writ claiming £3,000 damages I must of necessity defend the action, although it be a matter in which the Crown prosecuted throughout, and any action in respect of the alleged grievance should have been brought (if at all) against the Crown—in fact, that I am compelled to defend what is in effect an action against the Crown.

Trusting this may have the further and favourable consideration of the learned Attorney-General.

I have, &c.,

THEOPHILUS STEPHENS.

W. W. Stephen, Esq., Attorney-General's Department, Macquarie-street, Sydney.

Sir,

Attorney-General's Department, Sydney, 29 June, 1894.

In reference to your letter of the 20th instant, asking, on the grounds therein set forth, if the Attorney-General will further consider his refusal to grant your request for Crown assistance in a suit shortly to be brought against you by one Louis Sugarman, a person who was tried and acquitted at the Criminal Court in February last on a charge of receiving stolen property, belonging to you, I am directed by Mr. Heydon to inform you that, having perused the pleadings, he can see no reason for altering his former decision.

I have, &c.,

W. W. STEPHEN.

Theophilus Stephens, Esq., Union-street, North Sydney.

Dear Sir,

Union-street, 1 July.

Referring to yours of the 29th June last, it is only necessary for me to say that the action to which I have referred in my former correspondence is not an action shortly to be brought, but was commenced some months ago, and I have necessarily been obliged to incur the expense of defending the action, which I am advised on all hands should have been brought, if at all, against the Government.

I have, &c.,

THEOPHILUS STEPHENS.

W. W. Stephen, Esq., Attorney-General's Department, Sydney.

Dear Sir,

Attorney-General's Department, 8 November, 1894.

I send you herewith, as requested, a copy of the letter addressed to you by this department on the 11th October last, which appears to have miscarried.

I have, &c.,

HERBERT MORRIS.

T. Stephens, Esq., Union-street, North Sydney.

Acknowledgment of letter of 11th August, 1894, which only reached me on 9th November, 1894, as to which I will address you at more length in a few days.

Sir,

Attorney-General's Department, Sydney, 11 October, 1894.

In reference to your letter of the 3rd instant, respecting the action brought against you by one Sugarman, for malicious prosecution, which you state has terminated in a verdict in your favour; and, further, that the plaintiff, shortly after the trial, became insolvent, thus rendering you incapable of procuring costs from him, which you now ask that the Crown will pay, I am directed by the Attorney-General to refer you to the previous correspondence which has passed between this department and yourself upon the subject of your previous applications for monetary assistance from the Crown, and to state that Mr. Simpson can see no reason whatever for granting the request contained in your letter.

I have, &c.,

HERBERT MORRIS,

(for the Secretary).

T. Stephens, Esq.

Stephens ats. Sugarman.

Union-street, North Sydney, 3 October, 1894.

Referring to a letter from the Attorney-General of the 7th June last (94-1,287), and sent to me, I have the honor to intimate that the action brought by one Louis Sugarman against me to recover £3,000 damages came on for hearing before His Honor Mr. Justice Stephen and a jury, on the 7th and 10th September, and resulted in a verdict being given in my favour. At the trial the plaintiff abandoned the claim for malicious arrest, and rested his claim on the count for false imprisonment only. The only plea was not guilty, and the only question for determination, therefore, was: Did I (the defendant) cause the arrest? This question was answered in the negative, and a verdict (which was unanimous) was given for myself (the defendant) in the action. My solicitor, Mr. Joseph Thompson, now informs me that a day or two after the termination of the trial the plaintiff became insolvent, and he, presumably having no assets, cannot be made to pay the costs of the action. As this action came about entirely in consequence of the Crown prosecution, fully set out in my letters of the 4th, 8th, and 20th of June last, I beg respectfully to apply for the sum of £90 10s. 3d., amount of costs incurred in defending this action, which was, to all intents and purposes, in consequence of the action of the Crown, as I submit that this is clearly a matter in which the Crown should not allow me to suffer in any way.

I have, &c.,

THEOPHILUS STEPHENS.

The Hon. the Attorney-General, Department of Justice.

CLAIM OF RICHARDSON, TURNER, & CO.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 21st October, 1896, "*to inquire into and report upon the claim of Richardson, Turner, & Co., for value of opal belonging to them and stolen while in possession of the police,*" have agreed to the following Report :—

Your Committee having examined the witnesses named in the List* * See List, p. 4. (whose evidence will be found appended hereto), find—

1. That the facts disclosed in the evidence referred to show that the opal stolen while in the custody of the police was the property of Richardson, Turner, & Co.
2. That Duffy was sentenced to four years imprisonment for stealing the opal from Richardson, Turner, & Co.
3. That Police Constable Arnold was sentenced to five years imprisonment for stealing the same opal, the property of the Queen.
4. That it is apparent, considering the indictment preferred against Arnold, that the Crown recognised their responsibility as custodians of the opal.
5. That no dispute exists between the police authorities and Richardson, Turner, & Co. as to the value of said opal.

In view of all the circumstances, your Committee are of opinion that the Government are responsible to Richardson, Turner, & Co. for value of opal stolen while in possession of their servants, and they therefore strongly recommend to the favourable consideration of the Government the case of Richardson, Turner, & Co.

RICHARD SLEATH,
Chairman.

No. 2 Committee Room,
Legislative Assembly,
11th November, 1896.

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 22 OCTOBER, 1896.

MEMBERS PRESENT :—

Mr. Lonsdale,		Mr. Nicholson,
Mr. Sleath,		Mr. Waddell.

Mr. Sleath called to the Chair.

Entry from Votes and Proceedings, appointing the Committee, *read* by the Clerk.

Ordered,—That the Inspector-General of Police be summoned to give evidence next meeting.

Adjourned till Tuesday next at 2 o'clock.

TUESDAY, 27 OCTOBER, 1896.

MEMBERS PRESENT :—

Mr. Sleath in the Chair.

Mr. Lonsdale,		Mr. Mackay,
Mr. Nicholson,		Mr. Moore,
Mr. O'Sullivan,		Mr. James Thomson.

Edmund Walcott Fosbery, Inspector-General of Police, called in, sworn, and examined.

Witness withdrew.

Adjourned till To-morrow at 2 o'clock.

WEDNESDAY, 28 OCTOBER, 1896.

MEMBERS PRESENT :—

Mr. Sleath in the Chair.

Mr. Lonsdale,		Mr. Mackay,
Mr. Moore,		Mr. O'Sullivan,
Mr. James Thomson,		Mr. Waddell.

Nicholas Larkin, Superintendent of Police, called in, sworn, and examined.

Witness withdrew.

Reassembling of the Committee to be arranged by the Chairman.

Adjourned.

WEDNESDAY, 11 NOVEMBER, 1896.

MEMBERS PRESENT :—

Mr. Sleath in the Chair.

Mr. Dick,		Mr. Lonsdale,
Mr. O'Sullivan,		Mr. James Thomson.

The Chairman submitted Draft Report.

Same read, amended, and *agreed to*.

Chairman to report to the House.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

APPOINTED TO INQUIRE INTO THE

CLAIM OF RICHARDSON, TURNER, & Co.

TUESDAY, 27 OCTOBER, 1896.

Present:—

MR. JAMES THOMSON,
MR. LONSDALE,
MR. MACKAY,

MR. NICHOLSON,
MR. O'SULLIVAN,
MR. MOORE.

RICHARD SLEATH, ESQ., IN THE CHAIR.

Edmund Walcott Fosbery called in, sworn, and examined:—

1. *Chairman.*] Are you Inspector-General of Police? Yes.
2. Are you in possession of the facts of the case with regard to the claim made by Richardson, Turner, & Co.? Yes; I recollect the facts.
3. Will you make a statement to the Committee? The opal in question was an exhibit in a case of 27 Oct., 1896. larceny, and was taken possession of by Sub-Inspector Goff, who was in charge of the police at Wilcannia, on the 21st May, 1893. It was his duty to retain possession of it, which he did by placing it in a safe at the police station in his own quarters; and he hung the key on a nail where he kept it. Sometime between the day mentioned and the 27th July he went to the safe and discovered that the exhibit was gone. I sent the Superintendent of Police, Mr. Larkins, who is now at Maitland, to hold an investigation. The result was that a constable, who up to that time had been held in good repute, was charged with stealing this opal. He was prosecuted and sentenced to five years' imprisonment. Mr. Goff's conduct was held to be unsatisfactory in this matter, and it was believed that, after a long life of activity, he was commencing to lose his vigour of mind, and I had to cause his examination by the police surgeon. I relieved him from duty, and he shortly afterwards died. It may be pertinent to say that he left no means. The whole of the papers connected with the matter are now out of my province, and they are in the hands of the Colonial Secretary. I would suggest that Mr. Larkins, who is thoroughly conversant with all the facts of the case, should be called as a witness. I may add that the original thief was also prosecuted and convicted.
4. I suppose there is no dispute with regard to the facts of the case? No; the whole of the facts have been laid before the Government at greater length than I have given them.
5. Was not the opal valued by the Crown? I am not aware that that is the case. The claimants valued it at £900, and as far as I know the value was not questioned.
6. I understand from the claimants that the police authorities had the opal valued by the two local authorities on the subject? I have no knowledge of that, but its value does not appear to have been questioned. I may say that I have been advised by the Crown law officers that there is no claim against the Government.
7. *Mr. Lonsdale.*] Did Sub-Inspector Goff hold the opal by virtue of his official position? It is the duty of the police, as a rule, to hold all exhibits for production at subsequent trials.
8. Therefore it was under his protection and care? Certainly.

E. W.
Fosbery.

E. W.
Fosbery.
27 Oct., 1896.

9. *Mr. J. Thomson.*] Without any responsibility? That is a legal question; but if, as we do in thousands of cases, we take possession of a stolen horse there are occasions when the horse is stolen or dies before the trial, in which case no claim has ever been entertained as far as I know, but the circumstances in this case are exceptional.

10. *Chairman.*] Has ever such a case occurred before? I have been 44 years in the police and I never knew a case where a valuable exhibit of this kind disappeared under similar circumstances.

11. *Mr. J. Thomson.*] Apart from the legal aspect of the question, I suppose you will admit there is moral liability? I do not think I should be asked that question, because the matter is out of my hands, and in the hands of the Crown law officers, who have said there is no claim against the Government. It would put me in an invidious position if I answered the question one way or the other. I think on reflection you will not press the question.

12. You will admit that it is a hard case as far as the claimants are concerned? Yes, it is remarkably hard that they should lose their property.

13. *Mr. Lonsdale.*] Had the policeman who stole the opal charge of it? No, he was one of the station police.

14. Was he on duty there? Yes.

15. *Chairman.*] Is it not a fact that the policeman in question was in charge of the station on the night when the opal was stolen? I cannot charge my memory with that, but Mr. Larkins, who went into the matter very closely, will be able to tell you.

16. *Mr. O'Sullivan.*] The man left in charge of the opal was afterwards convicted and received five years' imprisonment for stealing the opal? Yes; but he was not left in charge of the opal. It was constructively in Mr. Goff's charge the whole time. It was legally and constructively in his charge as he locked it in the safe and under ordinary circumstances probably the key would have been in his possession.

17. Do you contend that the responsibility should rest solely with the sub-inspector? Had he been a man of means and had the parties making the claim taken advantage of their civil remedy they would probably have recovered.

18. Why should there be a civil remedy against a man acting as an officer of the Government? Because a policeman has an individual responsibility. The law takes a different view with regard to a policeman as compared with an ordinary servant. For instance, if a constable makes a false arrest and puts an innocent person in the lock-up the Government is certainly not liable, but the constable is personally liable to an action at law.

19. *Mr. Nicholson.*] In a case of this kind, where property is placed in charge of a certain policeman, do you not think, on account of his negligence, the Government are directly responsible for that property? I should say that from a legal point of view the Government has no such responsibility, but the question you have opened up is a new one with regard to the question of his negligence; and it would be a matter for consideration and decision whether he took reasonable and proper precautions for the care of the property. Some people might think that the key of a safe was not safely kept when it was left upon a nail in his quarters.

20. *Mr. Lonsdale.*] Was it not part of his duty to keep the key in safe custody? I think it is manifest to the intelligence of every gentleman here that if we had charge of the key of a safe we would put it where no one but ourselves could get at it.

21. Have you said that the sub-inspector was failing mentally? Yes; that was discovered subsequently.

22. But did not that investigation take place in consequence of the loss of this opal? I do not think so, but I think that the great suffering which he endured owing to this loss accelerated the complaint from which he was suffering. It was precipitated into a very acute form. When I saw him I was convinced that he had not only failed in his intellect, but that he was in a bad way.

23. *Mr. O'Sullivan.*] Let me put this point to you: Supposing the opal had been consigned to the care of the Sydney Safe Deposit Co., that it had been placed inside the company's premises, and afterwards stolen from there, would not that company be responsible for it? That depends upon the contract they make with a depositor. I do not know the legal form of their contract, but I think in a great many cases they exclude themselves from liability for loss. Of course you must bear this in mind: it was necessary that this exhibit should remain in the hands of one person, so that upon its production in Court there should be a chain of identity; and it could not be put here, there, and everywhere. It must remain constructively in the possession of the officer to whom it is entrusted, so that he may be able to swear that it was the identical exhibit that was produced in Court.

24. *Chairman.*] As a matter of fact, did not they convict both men, although the opal was not produced at the trial? The production of the opal in the first Court, and its having been sworn to there, was held to be sufficient evidence.

25. But what about the policeman who was charged lastly? We traced a piece of the opal to Constable Arnold.

26. *Mr. J. Thomson.*] Was it assumed that that piece formed a portion of the opal contained in the bag? It was assumed that he did not go to where there were £900 of material of this kind and take only one piece; it is a natural presumption that he took the lot.

27. I suppose you had no precedent to go by so far as this case is concerned;—did you ever have any claim lodged against you for losing exhibits? Without giving a specific case, we have had claims where stock has died, but they have never been entertained.

28. *Chairman.*] Has there ever been a case similar in character to this one? No. I understand you to mean that there is no parallel case in which an employee of the Government was the means of taking away an exhibit. If it had been stolen by burglars during the night, while Mr. Goff was asleep—if the safe had been broken open or taken away—there could be no blame attached to the police officer, and the circumstances would have been quite different.

29. There is no precedent for this case? No.

30. *Mr. O'Sullivan.*] Have you a recollection of the sticking up of the Eugowra escort? Yes.

31. The gold in that case was placed in the custody of certain policemen who were riding on the coach; some of that gold was never recovered;—did the owners of that gold ever sue the Government for damages or get compensation? As far as my memory serves me the owner was never compensated, because the Government pleaded that they only had the liability of common carriers and that they had taken all reasonable precautions. That would not be a parallel case.

32. I cannot clearly see where the question of responsibility of the sub-inspector comes in;—was he not acting all the time as an officer of the Government? No; he was acting as an officer of the law. He is bound over by the Court to produce this exhibit at the trial, and it is part of his duty to keep it in as safe possession as circumstances will allow, so as to be able to produce it.

E. W.
Fosbery.
27 Oct., 1896.

33. Why? As an officer of the Court.

34. Then that Court is portion of the Government of the country, and therefore it seems that the Government are responsible in this matter? Yes; but, as regards the legal aspect of the case, it admits of no question that the constable is responsible for his own individual acts or his *laches*.

35. *Mr. Nicholson.*] Was this sub-inspector acting under a written code of rules and regulations particularly applicable to the police force? Certainly; his position demanded that he should act in accordance with the regulations under which he served.

36. Would that not render the department responsible for anything left in his charge when he was really fulfilling his duties? No, because, as explained, if he, through private spleen or ill-conduct, wrongfully made the arrest of an innocent person and incarcerated him, the remedy would not lie against the Government, but against the officer personally for his wrongful act.

37. *Mr. O'Sullivan.*] Is there not a distinction between that case and the one under consideration, because in the case you refer to the constable acts on his own judgment, but in this case the officer is commanded by the Court to retain and exhibit, and he must retain it; he is ordered by his superior power to do so;—therefore, is not he only a machine in the hands of a superior power, and must not that superior power be made responsible? No; he must do his best to preserve this exhibit from loss in any way, but it might so happen, as it has happened before now, that he would not even have been provided with a fire-proof safe. He would then have to retain the exhibit in the best way he could, so that he would be sure not to lose it even if he had to mount sentry over it. He has to do his best.

38. *Chairman.*] Has it come to your knowledge that when Sub-inspector Goff first missed the opal after he looked in the police safe, he went round to several of the banks and asked if he had left it in their charge? I have no knowledge of that, but Mr. Larkin will be able to give you information about it.

39. *Mr. Nicholson.*] Are you aware whether Richardson and Turner valued the opal at £900 themselves, or did they employ professional valuers for the purpose? I cannot say. There has been no question as to the value placed upon it.

THURSDAY, 28 OCTOBER, 1896.

Present:—

MR. MOORE,
MR. MACKAY,
MR. JAMES THOMSON,

MR. O'SULLIVAN,
MR. WADDELL,
MR. LONSDALE.

RICHARD SLEATH, ESQ., IN THE CHAIR.

Superintendent Nicholas Larkin called in, sworn, and examined:—

40. *Chairman.*] You know the subject that we want some information about, Mr. Larkin;—you went up to inquire into that case of the opal of Richardson, Turner, & Co., at Wilcannia? Yes.

Superinten-
dent
Larkin.

41. The Inspector-General was here yesterday, and he said you went up there to investigate the case;—just give us a brief statement of it? The history?

28 Oct., 1896.

42. Just the main points? It was about April, 1893, a constable who was stationed at Wilcannia, named Arnold, arrested a man named Duffy for having a quantity of opals in his possession reasonably suspected to have been stolen. The constable made his arrest near Wilcannia. I am not aware whether the constable knew of Turner and Richardson's loss when he made the arrest.

43. Are you confident of the time? No; I am only speaking from memory. I have not examined the papers. The constable charged Duffy at the police station with stealing Turner and Richardson's property. I am not quite sure when he first arrested Duffy on the coach that he knew that the opal belonged to them. I know he charged him at the station with stealing the opal, the property of Richardson, Turner, & Co. A day or two after the arrest Duffy was committed to take his trial. Sub-inspector Goff was in charge of the station at that time. Goff put the opal in the safe, and kept the keys in his office. I think Duffy had to take his trial at the Quarter Sessions held some time in August. The sub-inspector, according to what he said, placed the opal in the safe in his office, I think, a day after the trial at the Police Court, and he never saw it again. Late in July, or at the beginning of August, the sub-inspector missed the opal from his safe. At all events, three or four months after Duffy's committal it was reported to me that the opal had been stolen from the safe. I went to inquire. The result of the inquiry was that Constable Arnold was arrested and was convicted of stealing about £70 worth of opal, the property of the Queen.

44. *Mr. Moore.*] He was convicted? Yes; he was convicted, and got five years. I think he was charged with stealing some £60 or £70 worth of opal, the property of the Queen. I fancy it was about £70—at all events, not £100 worth of opal. Between £80 and £100 was traced to Constable Arnold.

45. Worth, not weight? Worth. There was one piece amongst the lot that was sworn to as being the property of Richardson, Turner, & Co., that I think was valued from £35 to £40. There was about £70 or £80 worth of opal traced to the constable, which had been disposed of in one way or another. He gave an unsatisfactory account of it, consequently it was the principal evidence against him.

46. *Chairman.*] They only traced a portion of it to him? The sub-inspector, who was in charge of the station, had two rooms—one he kept as an office, and the other he occupied as a bedroom. He was a single man, and never allowed, as far as I can understand, anyone to interfere with those rooms. He did the whole work of the rooms himself, and did not allow a constable or anyone to enter the rooms in his absence. That is all I know about it.

47. You have not got the papers showing what Constable Arnold arrested Duffy for? I was under the impression that Duffy was arrested for having the opal in his possession, but am not certain without examining the papers.

47½. Is it not a fact that Richardson, Turner, & Co. had a suspicion that Duffy had been stealing their opals for some months, and had known he had disposed of some in Melbourne and Adelaide, and believed that

Superintendent
Larkin.
28 Oct., 1896.

that he had stolen a quantity of their opals, they wished to have him arrested, and on that account Constable Arnold arrested him on the coach, Richardson following on horseback, and found a bag of opals in his possession? It is possible it might be that way. It was an ordinary case, and we did not think there was anything extraordinary about it at the time. I simply know that this man was arrested by Constable Arnold. It was the after events that of course caused me to go there, and take anything more than an ordinary interest in the case. You can have a man arrested for having property in his possession and not being able to account for it.

48. There must have been some reason in taking the man from the coach while going to Wilcannia? Of course.

49. *Mr. O'Sullivan.*] You say that this constable was prosecuted for stealing a certain amount of opal, the property of the Queen;—how did the Queen become possessed of the opal? By the police having possession of it as stolen property.

50. *Chairman.*] The property of Richardson, Turner, & Co.? He was convicted for stealing the opal that Duffy had.

51. Previously stolen from Richardson, Turner, & Co.? That was the presumption.

52. You said in your evidence before it was proved beyond a doubt that certain portions of it were traced to the constable? I said there was a piece of opal traced to Arnold that was sworn to by Richardson and Turner as being their property. Arnold said that the piece of opal referred to had been given to him by Richardson and Turner, as a reward for arresting Duffy.

53. *Mr. O'Sullivan.*] The point I want to establish is this: how this came to be the property of the Queen? As stolen property it was in possession of the Crown. It might have been the property of the sub-inspector for all I know. It might have been laid in that way. I am only speaking of the matter without examining the papers. It happened three or four years ago.

54. *Mr. Lonsdale.*] Was not the opal held by the sub-inspector in custody for the purposes of the trial? Yes; he would be the man to keep it.

55. It was in his custody as an official of the Government? Yes: an official of the Government. It had to be laid in someone's name. My theory was at the time that there was no direct evidence that the constable ever tampered with the opal in the safe. The only thing was the tracing of a certain amount of opal to his possession which he was unable to account for satisfactorily. Then I made a report that followed the papers and depositions, and I said that if the constable was indicted for stealing the opal out of the safe, the property of Richardson and Turner, that the jury might not find him guilty, and that it was possible that he had taken a certain amount of opal out of the bag between the time he arrested Duffy and the time he reached the watchhouse at Wilcannia. Arnold was indicted, in the first place, for stealing about £70 worth of opal, the property of the Queen, and, secondly, with stealing £1,000 worth of opal, the property of Richardson and Turner. The second information was not proceeded with when he was found guilty on the first.

56. *Mr. O'Sullivan.*] Still there are reasonable grounds for supposing that this opal all the time was the property of Richardson and Turner? Yes.

57. These opals in the bag were put inside the safe? The bag of opals was taken possession of at the time of the arrest by the constable. I do not know what course was pursued between the time of the arrest and the time they reached the watchhouse. I do not know whether Arnold had an opportunity of taking the opal from the bag during that time.

58. *Mr. Lonsdale.*] The keys of the safe were in the sub-inspector's possession? Yes.

59. It seems to me the whole thing hinges on that;—if you are responsible for the property, then undoubtedly the Queen and the Government are responsible to Richardson, Turner, & Co.? I am unable to answer that question. The papers in connection with the case are, no doubt, at the Crown Law Office.

60. *Mr. O'Sullivan.*] Was the constable prosecuted for stealing an opal, the property of the Queen. It simply is this: the Queen and the Government had charge of a property, and they are responsible for it? I cannot answer that question.

61. *Mr. Lonsdale.*] As a matter of fact, you had charge of it? Yes.

62. There is no doubt about it—the opal was in the custody of the police? There was a bag of opals, but whether this identical opal was in custody in the safe I cannot say.

63. *Mr. Moore.*] There is no doubt the opal that was in the custody of the police was stolen? Yes.

64. And not recovered? Yes.

65. *Mr. Thomson.*] I think you mentioned there were two charges against this Constable Arnold? Yes.

66. Had you failed with the first, I suppose you would have gone on with the second? Oh, yes. I did not make the two charges. It was within the province of the Crown to frame one or more indictments from the depositions; and I suggested, in my report, that the constable should be indicted for stealing the opal traced to his possession.

67. It was a sort of double-barrelled affair; had you failed in the first, you would still have prosecuted on the second? I presume so.

68. You had no reasonable doubt in your mind that Constable Arnold abstracted the opal from the safe? I am not prepared to answer that.

69. *Mr. Lonsdale.*] You had no reasonable doubt that there was that part of the opal found in Duffy's possession? I had no doubt that the opal traced to Arnold was the property of Turner and Richardson.

70. *Mr. Thomson.*] Did you or anybody else ascertain, or take any means of ascertaining, the value of the opal the bag contained? I think the value was sworn to be about £1,000, or something like it.

71. Did the Government officials take steps to ascertain this value? No, I do not think so. It was sworn to, I think, at the Police Court; as far as my memory serves me, when the case was heard at the Police Court. The opals were put up, weighed, and sealed. So that we had nothing at all to do with the value, whether it was £20,000 or £30,000. What we had to do was to produce it in the same state, in another Court, as it was then.

72. It was a very material point of the people who owned the opals? As far as I am personally aware I think the value of that piece of stone was £35 or £40.

73. *Chairman.*] Sold afterwards for £80? Yes. I think one piece was sold at the time for £35; it might have been sold for that. Two jewellers, watchmakers, and opal-dealers of Wilcannia valued the opal. We had nothing to do with the value; we had simply to take care of the opal. The property had to be taken care of, regardless of the value.

74. Are you satisfied, of your own knowledge and from an examination of the papers, of the value placed on the opal? I cannot say I know anything of it one way or the other. As I said before, I reported that there was a possibility of the jury not finding him guilty of stealing the opal from the safe. There was a possibility of the jury saying there was no evidence that this constable took the bag, no evidence of him having access to the place, and that he could not take this piece of opal from the bag. I thought the jury might say there was a reasonable doubt.

Superintendent
Larkin.
28 Oct., 1896.

75. *Mr. Mackay.*] The Inspector-General was asked a question yesterday by the Chairman: "Is it not a fact that the police in charge of the station at the time the opal was stolen, that this man, Constable Arnold, was in charge of the station, and he said he could not charge his memory, but that Inspector Larkins, who went into the matter very closely, would be able to tell us";—can you tell us whether Constable Arnold was in charge of the station on the night that the opal was stolen? They did not know when it was stolen. It was some time between the 29th of April and the early part of August. They could not fix any date except that it was in the early part of May—I think between the 1st and 8th or 9th. Constable Arnold had a piece of opal about that time, for which he was afterwards convicted. There was a man named Wysenbach, a jeweller, carrying on business at Wilcannia, who had some dealings with Constable Arnold about the 5th of May, and again on the 8th or 9th of May. There were three or four transactions between Arnold and Wysenbach. I found there was another piece of opal made into a brooch and worn by Mrs. Arnold. We asked Constable Arnold where he got this piece from, and he said he got it from a constable three years before that. The constable who gave him a piece of opal three years before came and put the counterpart of the piece of opal against Arnold's, and they did not correspond at all—a piece of opal given to a Mr. May by the constable in July. May was manager of a station near Wilcannia, and the constable made him a present of the opal, which was worth £6 or £7. The constable denied he ever gave it to May. That was one of the strong points against him. He did not give a satisfactory account of this opal.

76. *Mr. Thomson.*] After the termination of the case it would have been the duty of the sub-inspector or the police authorities in connection with this opal to do what;—what would you have done with it after the criminal prosecution? After the criminal prosecution it would have been for the Judge to order how the property should be disposed of. As a rule, property is handed over to the owners. In this case, of course, Richardson, Turner, & Co. were the only claimants.

77. It was only for the purposes of framing an indictment and for prosecuting in that way that I suppose it was laid in the name of the Queen;—I suppose I am correct in saying so? Yes, that is so.

78. *Chairman.*] Can you tell us whether it was customary in a station such as Wilcannia for any officers of the station to leave certain constables, or any one constable, in charge of the station during certain hours of the night? No. The evidence in this case showed that no one had access to the safe except the sub-inspector.

79. But to the police station? Of course all the police slept and lived there. Three or four men were there. There is no proof that Sub-Inspector Goff allowed anyone access to his rooms. Sub-Inspector Goff, in his evidence, said that he always left his keys on the mantelpiece in his bedroom for safety; he said they were always safer there than if he had them in his pocket. When he went up the town he locked the door, and never allowed anyone into the rooms. No one had access to the rooms except the Clerk of Petty Sessions, who was there once with Sub-Inspector Goff.

80. What did he leave the keys for safety there for? He thought they were safer there than carrying them with him in the town:

81. *Mr. Mackay.*] Do you think reasonable care was taken by leaving the keys on the mantelpiece in the other room? He always did it. I would not leave keys on the mantelpiece.

82. I suppose you will admit that it was an ordinary lock, and that it would be a very simple matter for any man who wished to get into this room to do so;—of course you know, as a rule, half-a-dozen keys will open one lock, if it is an ordinary lock;—was there a window? There was no trace of any injury to the windows, or anything of that description. There was no mark on the window or the door to show that either had been forced open.

83. I suppose you will admit that it was possible for a man determined to get in and effect an entrance to go back again without leaving any marks? It would be possible if a person had a key for the door and another for the safe.

84. *Mr. Thomson.*] The only difficulty in the way was to open the safe, and the keys were on the mantelpiece? If the keys were found, the difficulty would be removed.

85. *Mr. Moore.*] I think you said that when you went up there you found that Sub-Inspector Goff was not performing his duty satisfactorily? Oh, no, I did not say that.

86. You were sent up there specially to investigate? I was in charge of that district, and stationed at Deniliquin at the time.

87. *Mr. Lonsdale.*] Still you were sent to investigate? Yes.

88. *Mr. Moore.*] When you went to investigate at Wilcannia, is that the time you found he was not acting satisfactorily? No.

89. What I want to get at is this: At this particular time when the opal was lost, was that the time that you heard little whispers going about him not being satisfactory? No. I knew nothing of what was going on at the time the robbery was reported. When I went up there I found a sober man, who was seemingly attending to his duties in every way, but in the course of the inquiry I had some reason to believe that he was not always sober. I had never seen Sub-Inspector Goff before that time. I was only in charge of the district a short time.

90. Were any complaints made about him to you or to the Inspector-General? I am not aware if any complaints were made to the Inspector-General—certainly none were made to me.

91. *Chairman.*] You were only in charge of the district for a short time before this? It was in that year; no complaints were made against him in 1892? I was never aware that any complaints were made against him whilst I was there. At all events, none were made to me from the early part of 1893 until he left. He did not give satisfaction to me in reference to papers and reports which were due every week. It was sometimes three or four weeks before I got his reports. I had to complain of that. There was no reason to doubt his honesty.

92. *Mr. Moore.*] Can you give us some idea as to the value of the opals? I came to the conclusion from the evidence of Richardson and Turner that they were worth £1,000. There was an expert in the case,

- Superintendent
Larkin.
28 Oct., 1896.
- Mr. Wallaston, who was one of the largest buyers of opals in the Colony. Very few know anything of the value of opals.
93. You have no reason to doubt that the valuation was somewhere about the mark? No. As I said, I did not care whether they were worth £100,000 or 100 pence, as long as the opals were returned to the custody of the persons who owned them. It would be necessary to use a little more care than in an ordinary case.
94. *Mr. Moore.*] There is another point of view—that is, protecting the valuable property of a citizen of the Colony—that is the real point just now? Of course, as a custodian, I would be bound as a police officer to have every care taken of it. I would be bound to take ordinary care. If I did not take ordinary care I would undoubtedly be censured or punished.
95. *Mr. Thomson.*] Do you think ordinary care was exercised in connection with this matter? That is a matter of opinion. You have to take the Sub-Inspector's habits into consideration. He seemed to take every precaution to keep his bedroom and office strictly private, and was under the impression that the keys of the safe were more secure in his bedroom than in his pocket.
96. *Chairman.*] Was he not examined medically afterwards? I think so. I recommended towards the end of '93, when he was not giving satisfaction, that he should be sent to Sydney and examined by the Police doctor.
97. *Mr. Thomson.*] Do you think he took ordinary care when he did not have the keys of the safe in his pocket? As I said before, that is a matter of opinion, when all the surroundings are considered.
98. *Chairman.*] Suppose you were in Sub-Inspector Goff's place, and were in charge of the station, would you have left your keys lying on the mantelpiece while you went round the town? I certainly would not. I would not have done many things he did, whilst he might have been equally as careful as I am.
99. I suppose you can tell us nothing more? No; that is all I know.

1896.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PIONEER DAIRY COMPANY—CASE OF JAMES *v.* GREY.

(PETITION FROM WILLIAM GREY, HUGH S. ROBB, AND OTHERS.)

Received by the Legislative Assembly, 27 August, 1896.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned,—

RESPECTFULLY SHOWETH:—

That they, as partners with others in a concern known as the Pioneer Dairy Company, having been appointed by their co-partners as a Committee or Board of Management in connection with the working of the Pioneer Dairy Factory, were sued in the District Court, Kiama, by three of their co-partners for certain moneys alleged to be due to them, the plaintiffs in the three cases being severally George James, Robert Booth, jun., and Messrs. Fredericks and Robb.

Case cited as James *v.* Grey.

The case came on for hearing before Mr. Justice Fitzhardinge on the 30th August, 1895, when the plaintiffs' case having been stated, and *before any evidence for the defence was either called or given*, the counsel for the defendants (your Petitioners) applied for a nonsuit on the grounds that by the plaintiffs' own showing the plaintiffs were co-partners with the defendants, and consequently were not entitled to recover; also, that the 17th section of the District Courts Act, under which the defendants were sued, did not apply to a partnership. The Judge neither granted or refused the nonsuit, but stated that he would reserve his decision *on the point* and send it to the Registrar when arrived at. When the Judge's decision was received it was a *verdict* for the plaintiff, *without one tittle of evidence for the defence having been heard*, and the application for a nonsuit altogether ignored.

An application for a *rule nisi* was made to the Supreme Court, which was granted by Mr. Justice Cohen on all the points submitted by the counsel for the defendants, and the appeal heard by Messrs. Justice Stephen and Simpson on July 28, 1896, but dismissed with costs.

Your Petitioners particularly call attention to the fact that the Judge's notes are the only evidence admitted on appeal, and seeing that *no evidence for the defence had been heard* the notes referred to were doubtless of an *ex parte* nature. Their defence would have shown that they never attempted to withhold the money from the plaintiffs, but that their accounts, with cheques enclosed, were forwarded to the Commercial Bank, Kiama, where the plaintiffs could obtain the same on complying with the conditions of partnership, as all others were required to do, *viz.*, to sign a bond to the Bank for an overdraft, which had been obtained for the joint benefit of both plaintiffs and defendants alike. The plaintiffs were advised accordingly by letter, and duplicate accounts sent to them.

The Bank overdraft was obtained on the conditions that all the parties concerned should sign the bond, but through your Petitioners being deprived of the opportunity of giving evidence in defence they have been compelled to commit an act of breach of faith with the Bank. The plaintiffs have been enabled to evade their responsibility as partners. They, with others, are thus encouraged to attempt to further do so, and the only means available to your Petitioners to resist such attempts would be recourse to law. In such case they would probably come before the same Judge, and we do most respectfully point out that his former decision (without evidence for the defence being heard) would probably create a prejudice against your Petitioners to their injury and probable loss.

Your Petitioners most humbly claim the common right of all citizens to be heard before a judgment is given against them, and pray the protection of your Honorable House, desiring that you will, by Commission or other means, as you may seem expedient, make such inquiries as may be necessary to ascertain the truth or otherwise of the statements herein contained, and if found to be true, as we contend, and as shown by the Press *vide Kiama Independent* of August 4th and 11th, 1896), we humbly pray that our rights as citizens and British subjects be restored to us.

And your Petitioners, as in duty bound, will ever pray, &c.

WILLIAM GREY.
HUGH S. ROBB.
FRANCIS ALEXANDER.
ROBT. H. WALKER.
CHARLES CAMERON, JUN.
HENRY H. HONEY.

1896.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

POLICE DEPARTMENT.

(REPORT FOR 1895.)

Printed in accordance with Resolutions of both Houses of Parliament.

Printed under No. 1 Report from Printing Committee, 21 May, 1896.

The Inspector-General of Police to The Principal Under Secretary.

Sir, Police Department, Inspector-General's Office, Sydney, 9 January, 1896.

In accordance with the Police Regulations and special instructions, I have the honor to submit, for the Chief Secretary's information, the following Report for the year 1895, respecting the Department under my control, together with particulars, as usually furnished, of the strength and distribution of the Establishment.

During the year thirteen new stations have been formed at the places named hereunder:—

Berridale	Southern District.
Bibbenluke	Southern District.
Dobokin	North-Western District.
Eulowrie (re-established)	North-Western District.
Fifield	Western District.
Grong Grong	Murray District.
Humula	Murray District.
Noorooma... ..	Southern District.
Nymboida	Northern District.
Reefton	Southern District.
Warroo	Western District.
Woodstock	Western District.
Woolwich... ..	Eastern District.

The strength of the Police Force has also been increased in the Metropolitan District, and at the following places in the country:—Mount Hope, Yantabulla, Wanaaring, Oxley, Torrowangee, Dungog, Aberdeen, Wellington, Binalong, Narrabri, Berrigan, Walgett, Albury, and Narrandera.

To provide for these increases, and to fill vacancies occasioned as under, 123 appointments were made during the year:—

Resignations	39
Discharges	15
Dismissals	10
Superannuations	13
Deaths	11

The stations at the following places were discontinued:—Blick's River, Euriowie, Eurobodalla, Hatfield, Kyamba, Nine-mile, Pinnacles, and Toogong.

Fifteen Police pensioners died in 1895, who had been in receipt of pensions amounting in the aggregate to £1,533 per annum.

Thirteen members of the Force were superannuated during the year, nine receiving pensions at rates varying from £136 17s. 6d. to £325 per annum, and amounting in all to £1,646 15s. per annum, and four were granted gratuities upon their discharge, which entailed a further charge of £582 upon the Fund.

Seven widows of members of the Force were awarded gratuities from the Police Reward Fund, amounting in all to £1,506 16s. 8d.

A temporary pension of £75 per annum to a widow lapsed during the year, and a gratuity of £100 was awarded as a final payment in lieu thereof. The rate of temporary pension paid to another widow was reduced from £75 to £50 per annum.

The

The following figures taken from the station watch-house records in the Metropolitan District show an increase for the year of 103 apprehensions as compared with 1894:—

Total number of arrests during 1894	22,755
Do do 1895	22,858

There was an increase of 331 apprehensions for drunkenness, simple or accompanied, by disorderly conduct.

As regards the Colony generally, there has been some increase in homicide and other serious offences against the person during the year. Other offences maintain about the usual average.

The following statement will serve to show the extent of the licensing business transacted in the Metropolitan District during the year:—

Applications.	Granted.	Refused.	Withdrawn.	No Parties.	Total.
For new publicans' licenses.....	3	3	1	1	8
For conditional licenses	4	3	3	10
By landlords, under section 16	20	2	1	23
For colonial wine licenses	32	1	5	5	43
For publicans' transfers	399	15	43	30	487
For colonial wine transfers	32	1	5	5	43

At the close of the year there were four less publicans' licenses in existence than twelve months back, the numbers being 797 in 1894, and 793 in 1895.

There were 279 colonial wine licenses in existence in 1895, an increase of 48 during the year; 116 spirit merchants' licenses, an increase of 10; 170 billiard licenses, an increase of 9; and 19 packet licenses, the same as in 1894.

The Superintendent of Police in charge of the Metropolitan District reports:—

- “From the scarcity of employment, and the consequent impoverishment of the people, I had hoped that there would have been a considerable decrease in the number of arrests for drunkenness, but I regret to have to return an increase of slightly over 300. There is, however, I am glad to say, a very gratifying decrease in the number of cases of serious crime, and in no previous year have the Police more satisfactorily accounted for the crime of my district, both in the city and suburbs.
- “Considerable difficulty continues to be experienced in the proper enforcement of the Sunday-closing clause of the Licensing Act, and probably it is not strictly observed by one in twenty of the licensees. The evidence necessary to warrant a prosecution is so difficult to obtain that I have little hope of any improvement, unless an amending Act is passed rendering persons found on licensed premises without lawful excuse liable to a severe penalty. A provision of this nature exists in the English Act, and I am informed the result of its operation has been fairly satisfactory. The trade, as a whole, is certainly not now remunerative. The transfers of licenses were less than in the previous year, but this is probably more largely attributable to the difficulty of obtaining suitable customers than to the desire of licensees to remain in the trade.
- “Although over 800 prosecutions were instituted between the years 1890 and 1895 for offences against the various gambling laws, in which pecuniary penalties were, with but few exceptions, imposed, they failed to have the slightest deterrent effect, and the ‘tote-shop’ evil would have continued unabated had not the Magistrates judiciously intimated to keepers of these establishments, through the Police, that after a certain date (1st October last) they intended to sentence all offenders to imprisonment without the option of a fine. The effect of this notice was the immediate closing of nearly the whole of the gambling-dens, both in the city and suburbs, thus substantiating the correctness of the opinion I had frequently expressed in my reports, that if the severer penalties provided by law were imposed the gambling nuisance would very speedily be sensibly abated. If the Magistrates adhere to their expressed intention to punish with imprisonment, I have no apprehension of a revival of the evil.
- “I should perhaps mention that since the ‘tote-shops’ were closed a larger number of persons of gambling propensities resort to the various racecourses than formerly, and that perhaps the most distressing feature in racecourse gatherings is the number of women who participate in the gambling evil. There are still various forms of gambling carried on in the city which it is very desirable in the interests of public morality should be suppressed, but unless the law is amended they cannot be dealt with effectively.”

During the year, 1,150 inquests were held on the bodies of deceased persons, being 40 more than during 1894. In 96 cases death was found to be the result of intemperance.

One hundred and sixty-one inquests on fires were held, in which 62 were returned as “wilful,” 52 as “accidental,” and 47 not specified.

Five hundred and twenty-seven cases of inquiry for missing persons, made from the Australian Colonies, Great Britain, and other countries, have been instituted, many involving considerable correspondence, and in 279 instances the persons inquired for have been traced.

Proceedings have been taken by the Police on behalf of the Public Instruction Department in 1,381 cases under the compulsory clauses of the Education Act, and cautions issued by them in 243 cases. The Minister of Public Instruction, in his report for the year 1894, in recognising the assistance rendered by the Police in this direction, states as follows:—

- “As stated in last year's report, the services of school attendance officers have been dispensed with, and their functions in the matter of inquiry and prosecution are now performed throughout the Colony by the Police. This has proved a more economical arrangement, and has so far worked satisfactorily.
- “The

“The class of children which the Department has hitherto been altogether unable to reach, through the defects in the Act before alluded to, come more readily under the notice of the Police, and are more amenable to their authority than to that of ordinary attendance officers.

“It may be mentioned that much of the work done by the Police is not represented by any action taken by this Department, for it would appear that, outside the warnings issued from this office, a considerable amount of default is prevented by the activity of the Police. There can be no doubt that the increase in the percentage of average attendance to enrolment is largely due to the interest taken by the Police authorities in this branch of their work.”

Four hundred and eighty-seven notices were served on behalf of the Land Board, and inquiries conducted in 781 cases at the instance of the Master-in-Lunacy, 452 cases for the State Children's Relief Department and the Government Asylums, and 116 cases on behalf of the Superintendent of the N.S.S. “Sobraon.” The services of the Police have also been availed of to a large extent in the preparation of reports and returns, and acting as agents for other Departments.

The undermentioned works in connection with buildings have been completed during the year on behalf of the Department:—

Berry	Erection of lock-up.
Broadwater	Erection of court and watch-house.
Dandaloo	” ” ”
Drake	” ” ”
Fernmount	” ” ”
Guy Fawkes	Erection of police station.
Katoomba	Erection of court and watch-house.
Kogarah	” ” ”
Liverpool	Erection of lock-up.
Macleay	” ” ”
Moruya	Erection of new lock-up, and conversion of old lock-up into sergeant's quarters.
Mount Drysdale	Erection of police station.
Nymboida	” ” ”
Rockdale	Erection of court and watch-house.
Rylstone	Erection of lock-up.
Sydney	Erection of dormitories at police-depôt.

The condition of the Police Reward and Superannuation Funds continues each year to become more unsatisfactory. After debiting the pensions to the 31st December last, there remains a balance to the credit of the combined funds of only £11,944 7s. 3d.

In conclusion, I am happy to be able to refer to the prompt and able assistance I have received at all times from the Superintendents and the other officers in carrying out the ordinary duties of the Department, and also in acting upon special instructions from the Chief Secretary on various matters affecting the public interests.

One Superintendent, Mr. J. D. Meares, has retired at 67 years of age, after 33 years service, and several other officers have reached an age when they are entitled to claim full-pay pensions, and although still active and assiduous in the discharge of their duties, the time cannot be distant when they must seek superannuation on the terms provided by the Act.

I desire, also, to take advantage of this opportunity to acknowledge the very cordial and prompt assistance the Police of this Colony have received from the Department in other Colonies. The means of inter-communication being now so constant, and the cost of passages so low, criminals are ever ready to take advantage of a change of scene for their operations, and without constant assistance willingly rendered throughout the Colonies, the task of the Police in coping with crime and criminals would be almost hopeless.

The conduct of the members of the Police Force, as a whole, has been exemplary during the past year. They have been extremely successful in the arrest of offenders and detection of crime, and their services have been constantly the subject of commendation by Judges, Magistrates, and the community generally.

I have, &c.,

EDMUND FOSBERY,

Inspector-General of Police.

RETURN of the Strength and Distribution of the Police Force on the 31st December, 1895.

NEW SOUTH WALES.

SENIOR-SERGEANT VAUGHAN'S REDUCTION AND REMOVAL
FROM NARRANDERA.

(PETITION FROM PATRICK LAURENCE VAUGHAN, OF SYDNEY, PRAYING TO BE REPRESENTED BY
COUNSEL, ATTORNEY, OR IN PERSON, BEFORE SELECT COMMITTEE ON.)

Received by the Legislative Assembly, 17 September, 1896.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in
Parliament assembled.

The Petition of Patrick Laurence Vaughan, of Sydney, in the Colony of New South Wales,—

HUMBLY SHOWETH:—

That, on the 8th day of September, one thousand eight hundred and ninety-six, your Honorable House appointed a Select Committee to inquire into and report on Senior-Sergeant's Vaughan's reduction and removal from Narrandera, in June, 1888.

2. That your Petitioner humbly prays that he may be represented by counsel or attorney, or in person, before the Select Committee appointed to inquire into and report upon the said matter, with the right to call witnesses and adduce evidence, and to examine and cross-examine such witnesses as may give evidence before the said Committee.

And your Petitioner, as in duty bound, will ever pray.

PATRICK LAURENCE VAUGHAN.

Sydney, 17th September, 1896.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES No. 52. TUESDAY, 8 SEPTEMBER, 1896.

13. SENIOR-SERGEANT VAUGHAN'S REDUCTION, AND REMOVAL FROM NARRANDERA:—Mr. Chanter moved, pursuant to *amended* Notice,—
- (1.) That a Select Committee be appointed to inquire into and report upon Senior-Sergeant Vaughan's reduction, and removal from Narrandera in June, 1888.
- (2.) That such Committee consist of Mr. Brunker, Mr. Gormly, Mr. Travers Jones, Mr. Barnes, Mr. McLaughlin, Mr. Gillies, Mr. Moore, Mr. Bavister, and the Mover.
- Debate ensued.
Question put and passed.
-

VOTES No. 56. WEDNESDAY, 16 SEPTEMBER, 1896.

5. SENIOR-SERGEANT VAUGHAN'S REDUCTION, AND REMOVAL FROM NARRANDERA:—Mr. Chanter (*by consent*) moved, without Notice, That the Return to Order, "Senior-Sergeant Vaughan," of Session 1894-5, and the further Return to Order, of Session 1895, on the same subject, be referred to the Select Committee now sitting on "Senior-Sergeant Vaughan's reduction and removal from Narrandera."
- Question put and passed.
-

VOTES No. 57. THURSDAY, 17 SEPTEMBER, 1896.

2. SENIOR-SERGEANT VAUGHAN'S REDUCTION, AND REMOVAL FROM NARRANDERA:—Mr. Chanter presented a Petition from Patrick Laurence Vaughan, of Sydney, stating that a Select Committee had been appointed by the House to inquire into and report upon Senior-Sergeant Vaughan's reduction, and removal from Narrandera; and praying to be represented by counsel or attorney, or in person, before the said Committee, with the right to call witnesses, and to examine and cross-examine all witnesses that may give evidence.
- Petition received.
Ordered to be referred to the Select Committee.
-

VOTES No. 75. THURSDAY, 29 OCTOBER, 1896.

2. SENIOR-SERGEANT VAUGHAN'S REDUCTION, AND REMOVAL FROM NARRANDERA:—Mr. Chanter, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before, the Select Committee for whose consideration and report this subject was referred on 8th September, 1896, together with Appendix.
- Referred by Sessional Order to the Printing Committee.

**SENIOR-SERGEANT VAUGHAN'S REDUCTION AND REMOVAL FROM
NARRANDERA.**

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly appointed on 8th September, 1896, "to inquire into and report upon Senior-Sergeant Vaughan's reduction and removal from Narrandera," and to whom was referred on 16th September, 1896, "the Return to Order of Session 1894-5, and the Further Return to Order of Session 1895, on the same subject,"—have agreed to the following Report:—

Your Committee having examined the witnesses named in the List* (whose evidence will be found appended hereto) and considered the papers referred, find as follows:—

*See List,
page 5.

1. That Senior-sergeant Vaughan was removed from Narrandera in June, 1888, on the recommendation of Superintendent Battye, then in charge of the district.

2. That during the time Vaughan was in charge of the Police Station at Narrandera he carried out his duties in a zealous and intelligent manner.

3. That the charges of neglecting to promptly furnish official returns on various occasions are not sustained.

4. That the late Inspector Harrison exhibited a strong personal animus towards Vaughan, and subjected him to many annoyances.

5. That the Acting Inspector-General of Police took action against Vaughan solely on the reports of Superintendent Battye, which were founded on inquiries by Inspector Harrison, and that although the leading citizens of Narrandera presented a petition requesting that an investigation might be held and Vaughan allowed to answer the charges made against him, no such opportunity was afforded, although he himself requested such an inquiry.

6. That the case against the aboriginal Druitt appears to your Committee to have been ably conducted, and every precaution taken by Vaughan prior to the trial and the prisoner's conviction.

Your Committee consider that Vaughan should be reinstated in the Police Force and his previous length of service recognised; and therefore beg to recommend his case to the favourable consideration of the Government.

J. M. CHANTER,
Chairman.

No. 1 Committee Room,
Legislative Assembly,
29th October, 1896.

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 8 SEPTEMBER, 1896.

MEMBERS PRESENT :—

Mr. Chanter, | Mr. Gormly,
Mr. Travers Jones.

Mr. Chanter called to the Chair.

Entry from Votes and Proceedings appointing the Committee read by the Clerk.

[Adjourned till Thursday next at *Eleven* o'clock.]

THURSDAY, 17 SEPTEMBER, 1896.

MEMBERS PRESENT :—

Mr. Chanter in the Chair.

Mr. Barnes, | Mr. Gormly,
Mr. Travers Jones.

Entry from Votes and Proceedings referring the Return to Order, "Senior-Sergeant Vaughan," of Session 1894-5, and the Further Return to Order of Session 1895 on the same subject, to the Committee read by the Clerk.

Witness withdrew.

George Lewis called in, sworn, and examined.

Witness withdrew.

Frank Elliott called in, sworn, and examined.

Witness withdrew.

John Edward East Gray called in, sworn, and examined.

Witness withdrew.

James Smith called in, sworn, and examined.

Witness withdrew.

[Adjourned till Wednesday next at *Eleven* o'clock.]

WEDNESDAY, 30 SEPTEMBER, 1896.

MEMBERS PRESENT :—

Mr. Chanter in the Chair.

Mr. Barnes, | Mr. Gormly,
Mr. Travers Jones.

Mr. P. L. Vaughan appeared on his own behalf.

Edmund Walcott Fosbery recalled and further examined.

Witness produced charge books from 8th March, 1883, to 24th September, 1892, and occurrence books from 8th June, 1883, to 5th June, 1888, and from 12th May, 1889, to 7th January, 1893, for Narrandera Station; and handed in return showing police and summons cases for years 1883 to 1891 inclusive. [*See Appendix.*]

Witness withdrew.

John Campbell called in, sworn, and examined.

Witness withdrew.

Captain Edward Montague Batty called in, sworn and examined.

[Adjourned till *Two* o'clock p.m. This Day.]

There not being a quorum at the hour named, the sitting lapsed.

THURSDAY,

THURSDAY, 1 OCTOBER, 1896.

MEMBERS PRESENT:—

Mr. Barnes, | Mr. Gormly,
Mr. Travers Jones.

In the absence of the Chairman, Mr. Gormly called to the Chair *pro tem*.

Mr. P. L. Vaughan appeared on his own behalf.

Captain Edward Montague Battye recalled and further examined.

Witness withdrew.

George Read (*Police Superintendent of the Metropolitan District*) called in, sworn, and examined.

Witness withdrew.

[Adjourned till Wednesday next at *Eleven o'clock*.]

WEDNESDAY, 7 OCTOBER, 1896.

MEMBERS PRESENT:—

Mr. Chanter in the Chair.
Mr. Barnes, | Mr. Gormly,
Mr. Travers Jones.

Mr. P. L. Vaughan appeared on his own behalf.

Constable Robert Bell called in, sworn, and examined.

Witness withdrew.

James Frederick Davison called in, sworn, and examined.

Witness withdrew.

Senior-constable Samuel Wilkin Ray called in, sworn, and examined.

Witness withdrew.

William James Fimister called in, sworn, and examined.

Witness withdrew.

Henry Grugeon (*Senior Sergeant of Police*) called in, sworn, and examined.

Witness withdrew.

Constable Robert Bell recalled and further examined.

Witness withdrew.

[Adjourned till Wednesday next at *Eleven o'clock*.]

WEDNESDAY, 14 OCTOBER, 1896.

MEMBERS PRESENT:—

Mr. Chanter in the Chair.
Mr. Barnes, | Mr. Gillies,
Mr. Gormly.

Mr. P. L. Vaughan appeared on his own behalf.

Henry Grugeon recalled and further examined.

Witness withdrew.

Samuel Wilkin Ray recalled and further examined.

Witness withdrew.

Patrick Laurence Vaughan sworn and examined.

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

THURSDAY, 29 OCTOBER, 1896.

MEMBERS PRESENT:—

Mr. Chanter in the Chair.
Mr. Barnes, | Mr. Gillies,
Mr. Gormly, | Mr. Travers Jones.

Chairman submitted draft report.

Same read, amended, and agreed to.

Chairman to report to the House.

LIST OF WITNESSES.

Smith, J.	8
Vaughan, P. L.	28

1896.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

APPOINTED TO INQUIRE INTO

SENIOR-SERGEANT VAUGHAN'S REDUCTION AND
REMOVAL FROM NARRANDERA.

THURSDAY, 17 SEPTEMBER, 1896.

Present:—

MR. GORMLY, | MR. BARNES,
MR. TRAVERS JONES.

J. M. CHANTER, ESQ., IN THE CHAIR.

Edmund Walcott Fosbery, sworn and examined:—

1. *Chairman.*] Are you Inspector-General of Police for the Colony? Yes.
2. This inquiry has been called for the purpose of examining into the circumstances connected with the E.W. Fosbery reduction and removal from the Service of Senior-sergeant Vaughan in June, 1888; did you know that officer, who was in the Service for a considerable time? Yes. He was appointed to the Service originally 17 Sept., 1896. in 1865.
3. Was he then located in Sydney? I think he went to the south-western district on his appointment, as far as my memory serves me.
4. Can you state to the Committee Senior-sergeant Vaughan's career in the police force from the date of his admission up to the time he went to Narrandera? He was appointed as senior constable in March, 1873. He was appointed sergeant of the second class in August, 1875, and he was appointed a first-class sergeant in July, 1880. He was reduced to the rank of second-class sergeant in May, 1888. He was reduced to the rank of constable of the first class in July, 1889. He was then repromoted in November of that year to the rank of senior constable. He was again promoted to the rank of sergeant of the second class in January, 1891. He was reduced again to the rank of senior constable in June, 1892. In July, 1892, he was discharged from the police force on the recommendation of Superintendent Battye.
5. Where was Senior-sergeant Vaughan transferred from? I think he was at Moama originally when I first took notice of him; then, I think, he went to head-quarters at Deniliquin, and he was subsequently transferred to the Murray district in 1883.
6. During the time he was located in or near Sydney was his conduct satisfactory? I do not remember his career in Sydney. Out of some 7,000 men who have been under my orders, I cannot recollect the career of any particular one. I know there was nothing in his disfavour during that time.
7. Was he transferred from Cockatoo Island to Deniliquin? Yes.
8. Was there anything to his discredit during the time he had charge of the Deniliquin district? There is no record in the defaulters' sheet against him for that time. There is nothing shown in the records against him.
9. Is Deniliquin rather an important district? He was not in charge of it.
10. Would the position he occupied, and the duties he had to perform, require special skill, tact, and ability? He was promoted twice while he was in that district, and that shows his duties must have been important. I think he was promoted three times during that period.
11. Would those promotions have been made by you on the report of your officers as to the conduct of the constable? Yes; they were made on the recommendation of his officers,

E.W. Fosbery. 12. Was Mr. Vaughan's next step in the force his being located at Moama? Yes. He was in charge at Moama.

17 Sept., 1896. 13. During that time, had you any records to show that his conduct was not satisfactory? I think not. I think he was a very efficient man while he was there.

14. Moama being situated on the Border, would it require what you might call a first-class officer to be in charge of the station there? Yes, it requires a careful man.

15. From Moama was Mr. Vaughan transferred to Narrandera? I cannot tell the stations at which he was successively. He was transferred to the Murray district, and was at various stations in the district. I think Narrandera was his first station.

16. Does the record which you have give the year when he left Moama? No; this is merely a record of misconduct recorded against him.

17. Do you consider that Narrandera, in comparison with the other districts of the Murray, is a very important district? Yes.

18. Is that specially caused by an influx of what may be termed the criminal classes? No; it is an isolated and populous district.

19. During the period that elapsed after the removal of Mr. Vaughan from Narrandera and the time when proceedings were taken which led to his removal, were you absent in England? I was away from the Colony during 1888, when this charge was preferred against Vaughan.

20. Who acted in your absence? The Superintendent of the Metropolitan District, Mr. Read.

21. Do you know anything personally, beyond what the papers show, as to what led up to the removal of Mr. Vaughan from Narrandera? No; I did not read the papers attentively. It was dealt with in my absence, and I cannot recall the particulars; but both Mr. Read and Captain Battye could give evidence in that regard. The officer who held the investigation, who, I must say, was a careful, dependable officer, is now dead, that is, Mr. Harrison. I should consider him a fair man.

22. *Chairman.*] Mr. Vaughan desires me to ask, with regard to a memorandum which you wrote to Sir George Dibbs, have you, amongst the papers you have produced, the reply which Vaughan wrote to that? No doubt it is amongst the papers. He wrote so many letters that I do not remember the particular one. It is sure to be amongst the papers.

23. Was it not a fact that Vaughan was twenty-two years in the service before there was one record against him in the defaulters' sheet? Yes.

24. During how many years of that period was he sergeant and senior sergeant? About fifteen years as sergeant.

25. During that period of fifteen years was there ever a charge made against him of drunkenness or intemperance? Not to my knowledge; there is nothing recorded.

26. Do you only recognise charges of that kind which come to you officially? I can only recognise the reports of the Superintendent and the official records.

27. Does any report show any charge of that kind? No; not in the defaulters' sheet.

28. Vaughan asks how could you write to Sir George Dibbs saying that since he was appointed sergeant he gave way to drink, when your statement shows that during the fifteen years he was sergeant no record can be found of any charge of intemperance against him? That is not my statement. I said that up to the time that Vaughan was a sergeant his conduct was irreproachable. The period I referred to was the last five years of his service.

29. Would that five years be subsequent to Mr. Vaughan's location at Deniliquin and Moama? Certainly.

30. When he was leaving Moama and Deniliquin did he not get flattering testimonials from the public? I know nothing of that; I have no recollection of it. That was unnecessary. Up to that time I knew his character, and I was satisfied.

31. Is it a regulation of the force that members are not allowed to receive testimonials or gifts without your sanction? They can receive no gift without the approval of the Inspector-General.

32. Then the papers would show if that was the case, I presume? Not necessarily. If such a thing did take place, no doubt it was approved.

33. If it is shown in the papers that a series of testimonials and gifts of money were given to him I assume that that would have been done with your approval? Yes, certainly.

34. If you considered that this officer's services were at that time of an unsatisfactory character, would that induce you to refuse your sanction to the reception of money or testimonials? Yes; I have refused permission in a case where an officer's services or character have not in my opinion been such as to warrant the presentation.

35. Did you write a letter to Mr. Gormly, Member for the district, with regard to Vaughan's position, stating that you considered him to be more eligible for promotion than anybody else in the district at that time? I have no recollection of such a letter. I do not think I ever wrote a letter in such terms in my life.

36. Did you ever receive the letter of which the following is a copy:—

E. Fosbery, Esq., Inspector-General of Police, N.S.W.,—
Mr. dear Fosbery—

B.W. Stores, Sydney, 21st July, 1884.

About the 7th instant I received a note from one of your officers, Senior-sergeant Vaughan, who has charge of the police in Narrandera, and who informed me that he had detained a dray-load of furniture and other effects, which a tenant had removed from a house of mine, in town of Narrandera, a little before midnight. In consequence of this information I was enabled to get a quarter's rent, of £37 10s., which, in all probability, I should have lost, had it not been for the great care and watchfulness of the above officer. I, therefore, think it desirable to inform you of the praiseworthy conduct of Senior-sergeant Vaughan.

Yours, &c.,

EDWARD FLOOD.

? I have not the slightest recollection of receiving such a letter.

37. If you received such a letter would you treat it as an official letter? I do not think I would; there is nothing in it.

38. Up to the time of the 1887 transaction, when Mr. Harrison became inspector of police, were not the reports upon his conduct most satisfactory? They were most satisfactory in every respect up to that time.

39. Up to the year 1887, when Inspector Harrison was placed in charge of that district, was the conduct of Mr. Vaughan satisfactory to you or otherwise? I would rather that that question should be asked of the Superintendent of Police, because that gentleman did not always speak to me in favourable terms of him.

40. Is there any record to show, apart from any statement that might have been made, that up to 1887 Mr. Vaughan's conduct was other than satisfactory? I do not know that there is any record. Of course it is my duty when inspecting districts to inquire of the local officers as to the capacity, character, and conduct of all the police. It is from that that I derive my personal knowledge of the claims and capacity of all the members of the police force. E.W. Fosbery.
17 Sept., 1896.
41. Can you speak from memory up to that period? I think Superintendent Brown, on more than one occasion, did not speak of Vaughan's conduct as being altogether satisfactory, owing, as I said before, to some domestic trouble which I understood he was suffering from.

Martin Brennan, sworn and examined:—

42. *Chairman.*] Are you Superintendent of Police? Yes, of the Eastern district, and I am also in charge of the depôt. M. Brennan.
17 Sept., 1896.
43. Is Senior-sergeant Vaughan known to you? Yes, he has been personally known to me since 1883.
44. Where was Senior-sergeant Vaughan located in 1883? The first time I knew him was when he was transferred from Deniliquin to Narrandera, in the Murray District in 1883. He was then immediately under me, I being in charge of the Wagga sub-district.
45. During the time he was under your supervision was the conduct of Mr. Vaughan as a police officer satisfactory to you or otherwise? It was most satisfactory.
46. At that period was Narrandera considered an important station? Yes; Narrandera was one of the most important stations in Riverina at that time. There was a large population then at Narrandera. They were constructing a railway bridge over the Murrumbidgee. There were a large number of public-houses, and a great deal of police duty had to be done. I had frequently to go to Narrandera in connection with the supervision of that station from Wagga. I invariably found the senior-sergeant active and attentive to his duties. He was a most efficient man to my mind, and probably one of the most efficient senior-sergeants in the Colony, and that was from 1883 to September, 1886. I never saw him in any way given to drink, nor had I the slightest notion that he had any weakness in that direction. I felt convinced from his efficiency then, and from the absolute impartiality of the Inspector-General, that when I left Wagga, Senior-sergeant Vaughan was in a fair way for promotion to the position of sub-inspector. I had a very high opinion of him, and I was very much surprised after this when I saw his downfall, particularly as I do not think men become bad at once without any previous indication of it. There was a murder case at Narrandera at that time, a very serious one, in which a man was sentenced to death, although he was not hanged, and Senior-sergeant Vaughan gave me very great assistance in the elucidation of that case. He knew his duty, and had an intelligent grasp of things that a man of less education could not have shown.
47. Do you remember the Killen murder case in which there was a Coroner's inquest? Yes, that was an important case.
48. Did not Senior-sergeant Vaughan take part in that case? I believe he did.
49. I gather from what you have said that during the time that Mr. Vaughan was under your supervision as a police officer, you had nothing but commendation for his conduct? Yes, the duty-book would show that I had nothing but praise to enter as to the state in which I found the station. I am quite certain I had never any occasion to say anything but what was most favourable as to the way in which things were conducted. There were two Chinese camps there at the time, and sly-grog selling was carried on to a very great extent. I had to applaud him for the success of his efforts in dealing with those evils.
50. *Mr. Gormly.*] I suppose you are aware that a great many robberies took place at Narrandera at that time, owing to bushmen getting drunk and going to those camps? Yes; if there had been fifty police stationed there, instead of four or five, the robberies would have taken place all the same.
51. Did not a large number of the cases which were tried at Wagga come from Narrandera? Yes, the principal portion of them. I consider that no man could do more than Senior-sergeant Vaughan did.
52. *Chairman.*] I gather from your answer to Mr. Gormly, that Narrandera must be looked upon as a very important district from a police point of view? Yes, it was at that time; it is not so important now. At that time, consequent upon the construction of the railway from Jerilderie and the railway bridge over the Murrumbidgee, a large number of persons were camped in various places along the bank of the Murrumbidgee. The place at that time was more prosperous, apparently, than it is at present.
53. *Mr. Gormly.*] Was Narrandera the centre of a very important district? Yes; it was the only station of importance between Hay and Wagga.
54. Did it extend back for a considerable distance to the Lachlan? Yes; more than a hundred miles.
55. *Chairman.*] What was the strength of the police force at Narrandera during the years we are speaking of? I think there were the senior-sergeant, four men, and a black-tracker.
56. Then the area of the district outside the town was immensely large? Yes, the area was large.
57. Might not cases often arise which would require the personal supervision of Mr. Vaughan or some other police officer? Yes; the officer performing the duty might have to be away for days.
58. Would that be only an occasional or a frequent occurrence? A frequent occurrence. He could not be back, perhaps, for three or five days—that is assuming he went himself.
59. During those periods when duty would demand the absence of Senior-sergeant Vaughan from Narrandera for several days, would the responsibility be thrown upon the other members of the force at Narrandera? Yes, the senior man in charge would have to undertake the responsibility.
60. Could the returns and documents required by the Police Department be completed only by Senior-sergeant Vaughan? Yes.
61. So that if any delay arose it would be in consequence of his absence? Yes, in the absence of the Senior-sergeant; no one else could do it. Everything requiring a certificate or of importance would have to be completed by the senior-sergeant.
62. It appears from the papers that neglect has been charged against Senior-sergeant Vaughan for not forwarding returns from time to time;—do I gather from your answer that returns could only be forwarded by him? I did not say the returns. I say that when he would be absent no returns of importance could be furnished without his certificate.
63. Could important returns, the responsibility for which rested entirely upon the senior sergeant, be supplied by anyone else during his absence? No; any important returns would have to come from the senior

M. Brennan,
17 Sept., 1896. senior sergeant. They could not be completed without his signature. Sometimes there might be a difficulty in getting a voucher signed—when a constable went out, the man might be absent. There might have been delay in obtaining signatures to aborigines' vouchers and others, but any delay of that kind would be easily understood by those persons who know the difficulty there is in obtaining such signatures in the country.

64. From 1883 to 1886, did not the electoral law provide that the police should personally collect and compile the rolls? Yes, and the police had to collect agricultural, live stock, and other statistical returns as well.

65. What time would that occupy in the Narrandera district? They had to complete the electoral returns in January; of course the police had to ride long distances to get the names of persons, and they sometimes had to go two or three times to get the necessary information. There is always a difficulty in getting information in sparsely populated districts.

66. Would it not necessarily follow that the compulsory absence of the senior sergeant during those periods must cause the ordinary office-work to fall into arrears? I could not say that the senior sergeant would be engaged in that work. He would be expected to do the work in the township. The mounted men would do the outer portion of the districts.

67. Would that apply equally to the collection of agricultural statistics? Yes.

68. *Mr. Gormly.*] In such a large district as Narrandera, and with the limited number of police stationed there, would it not be necessary for the senior sergeant to be frequently absent from the town? Yes, it would be imperatively necessary that he should be frequently absent.

69. Was he not licensing inspector for the Narrandera district? I believe he was.

70. Were there a large number of public-houses in the district of Narrandera at that time? Yes.

71. Were there not a large number of public-houses between Wagga and Hay, and did not that form portion of the Narrandera police district? Yes; I believe the Narrandera licensing district extended to and included Darlington Point.

72. *Chairman.*] Did you ever hear a complaint from the public with regard to Senior-sergeant Vaughan during the period you have mentioned? Never. Whenever his name was mentioned, he was always spoken of in the highest terms of praise. If a plebiscite had been held, I do not believe one man would have given a vote against him.

WEDNESDAY, 23 SEPTEMBER, 1896.

Present:—

MR. BARNES, | MR. TRAVERS JONES.

JAMES GORMLY, ESQ., IN THE CHAIR.

Mr. P. L. Vaughan appeared on his own behalf.

Walter Selway, sworn and examined:—

W. Selway. 73. *Mr. Vaughan.*] Are you a clerk in the head office of the Australian Joint Stock Bank, Sydney? Yes.

23 Sept., 1896. 74. Will you tell the Committee during what period you were manager of the bank at Narrandera? From September, 1884, until May, 1892. I knew Mr. Vaughan from 1884 to 1888.

75. During that time was I senior-sergeant of police at Narrandera? Yes.

76. What was the public opinion generally with regard to my efficiency, and the manner in which I conducted police duties at the station? As far as my experience went, you were held in very good estimation; people seemed to have a considerable amount of respect for you, and you were well liked by the inhabitants generally.

77. Did you ever hear it said that I neglected my duties in any way? No.

78. In your position as bank manager did you know pretty well the feeling of the people in the town? Yes.

79. Were you not one of the most prominent members of the Hospital Committee? Yes; I was secretary to the committee.

80. Along with yourself and Mr. Harry Adams, was I not always elected as one of the committee? Yes; you were always on the committee during my time, and before that, I think.

81. Was I also a member of the committee of the Mechanics' Institute? Yes; you were one of the promoters. I was also one of the first members of the committee.

82. This is one of the statements made by Mr. Harrison against me:—"The applicants for extra police protection alleged that the police go off duty at 11 p.m., and are not about any more until after breakfast the following day—that some of the public-houses sell nearly all night, entailing any amount of drunkenness and rowdyism, which the police make no apparent effort to check; as also the sale of liquor on a Sunday to both whites and blacks." As far as your observation went, is that true? With regard to night duty, that was rectified after I went there—that is to say, previously there was no provision for night duty, and night constables were put on in your time.

83. *Chairman.*] Do you state that neglect of police protection at night had been rectified? I do not know that it was neglect.

84. Was it neglect to provide police protection? Yes; it was rectified, and a constable put on.

85. Was there extra police protection given? Yes.

86. Was there not sufficient police protection before? That was what I surmised. There was no provision for a night constable until attention was called to it, and then it was rectified.

87. Was that because there were not sufficient police available in the town? Yes.

88. The neglect of providing sufficient police would not be attributed to the local officer? Certainly not.

89. Was it owing to the want of sufficient police for the purpose? Yes.

90. *Mr. Vaughan.*] With regard to that part of the charge about rowdyism and drunkenness, do you think that could be correct? I do not think so, any more than was the case in any of the Riverina towns. I have seen more of that kind of thing in other places than I saw at Narrandera.

91. From your general observation, were not the police there able to cope with all the crime? Yes.

92. Did you ever know any case of an important crime which went unchecked or unpunished? No.

93. Do you remember that during that time there were some very important cases at Narrandera? I do not remember any particular case; but I know there was a good deal of police work during the whole of the time.

94. Were there about seventeen or eighteen public-houses in the town? There were fourteen in my time; but I believe there were more before I went there. W. Selway
23 Sept., 1896
95. Was there not a Chinese camp there, which naturally required police supervision? Yes; it was a very difficult place to manage.
96. Was there not a large travelling population, especially at shearing-time? The migratory population was large.
97. In another report of Mr. Harrison's, dated 22nd April, 1888, he said, referring to Senior-sergeant Vaughan: "It is a well-known fact that the best part of his time is passed in public-houses, and that he is more or less constantly in a muddled state";—is that true or false? As far as I know, nothing came under my notice to show that that is true.
98. Did I come under your observation almost daily? Yes.
99. What is the result of your observation as to that alleged charge? I certainly never found you unable to attend to your duties. You were always there when you were wanted, and always quite capable of fulfilling your duties. I very often had occasion to go to the Court-house, and I always found you there or on duty.
100. In the conduct of police cases what was my general character with regard to efficiency or otherwise? Very few such cases came under my notice, but those that did come under my notice were always satisfactory. Public opinion was always favourable to you.
101. If I had always been in a muddled state would that have come under your observation? Yes, I think so.
102. Were you present at a meeting held by the inhabitants of Narrandera when I was about to leave there? Yes.
103. I now read to you the following extract from the *Narrandera Argus*, 8th June, 1888:—

A meeting of the friends of Senior-sergeant Vaughan was held at M'Mahon's Hall on Monday evening, when there was an excellent attendance. Mr. James Moulton occupied the chair. Apologies for non-attendance were received from Messrs. G. Lewis, H. D. Adams, J. Henshaw, and C. Hunt. It was decided, on the motion of Mr. Eldred, seconded by Dr. Mitchell, that Mr. N. Levoi be requested to act as secretary, and on the motion of Mr. O'Farrell, seconded by Mr. S. M. Smith, that Mr. Eldred be treasurer. Mr. Turner then moved, and Mr. J. W. Keegan seconded, that the presentation take the form of an illuminated address and a presentation to Mrs. Vaughan. It was further decided that Messrs. Keegan, Adams, Turner, and Dr. Mitchell be requested to act as a sub-committee to further the object in view. Other matters of details having been arranged, those present adjourned to the "Crown Hotel," where the health of Mr. Vaughan was drunk, and a number of those present bore cordial testimony to the esteem in which he was held, to his efficient discharge of duty and to his services, as a resident, in the advancement of the various public institutions of the town. Mr. Vaughan responded feelingly, and after other toasts had been honored, the meeting broke up. A large number of persons assembled at the railway station on Tuesday to bid Mr. Vaughan farewell. It may be mentioned that the estimation in which he is held may be gathered from the fact that the sum of over £50 was collected in the room towards the presentation to Mrs. Vaughan.

Do you think that that is a correct statement of the public feeling at Narrandera at that time? Yes; that is a very fair report of what took place.

104. Were the people mentioned there estimable residents? Yes; they were the leading townspeople.
105. *Mr. Travers Jones.*] During the time you were speaking of, was the railway being constructed through the town? No; the Jerilderie railway had been opened just before I went there.
106. Was the increase of population the reason for wanting more police protection? I knew the population had increased largely.
107. *Mr. Barnes.*] With regard to the complaint that the police went off duty at 11 o'clock at night, is it a fact that at that time there was no police protection in any of the country towns after that hour? That is the case. I knew that there was a complaint made by the townspeople, and an extra constable was put on at night on account of an attempted robbery that took place.
108. Are you aware that it is generally the case all through the Colony that if you want police protection at night it has to be asked for? Yes.
109. *Chairman.*] Did a large number of bushmen come into the town of Narrandera from the back stations? Yes.
110. Did they usually come in to have a spree? Yes, at shearing-time.
111. Did that give the police additional work? Yes.
112. *Mr. Vaughan.*] Have you been in many other country towns in Queensland, and in one or two places in New South Wales? Yes.
113. Did you find the floating population of Narrandera more extensive than it was in other places? Yes; at certain times in the year.
114. Did that give the police additional work? Yes; I think it was the floating population that caused all the trouble.
115. *Mr. Travers Jones.*] Would you know from the business of the bank that there was an increase of population through the railway being opened, and that caused more police work? The town was pretty well settled down when I went there. It went on increasing, and it improved during my residence there. There was a large increase of business, especially in connection with the country population. Settlement in the district doubled itself.

John Dowling Browne, sworn and examined:—

116. *Mr. Vaughan.*] Are you a retired Superintendent of Police? Yes.
117. Were you superintendent in charge of the South-western District at Deniliquin from 1873? Yes; I was for about eighteen years, beginning about the early part of 1873. J. D. Browne.
23 Sept., 1896
118. When you came to the district to take charge was I at Moama in charge of the station? Yes.
119. Shortly afterwards was I not promoted on your recommendation to be senior-constable? Yes.
120. And a few years afterwards, on your recommendation and while at that station, was I promoted to be sergeant? Yes.
121. Do you remember that I was transferred from Moama to Deniliquin on your recommendation, on account of a disagreement that we had with the Victorian police over the Foley and Hicken fight? Yes.
122. The result was creditable to the New South Wales police, and I was transferred to Deniliquin? Yes, by way of promotion.
123. Shortly after going to Deniliquin, was I promoted again to the rank of senior-sergeant on your recommendation? Yes.

J. D. Browne. 124. Did your absence on inspection sometimes extend over periods of weeks, and did not your district embrace Broken Hill, Silverton, and Wilcannia? My district was bounded by Queensland on the north, South Australia to the west, and Victoria to the south, and then on the east by another district only about 50 miles wide. I was sometimes absent four, five, or six weeks.

23 Sept., 1896.

125. During those periods was I the officer in charge of the town and police court business, and everything else in your absence? Yes; and to a certain extent in charge of the district with regard to minor matters.

126. In charge of everything except matters that must necessarily be brought under your notice? Yes.

127. While I was acting in that capacity did you ever find that I was guilty of any neglect of duty? I never had cause for complaint of neglect of duty on your part in any instance.

128. What was the public opinion in regard to me in the town and district? It was just the same as I always found you myself, that you were a smart, intelligent, energetic officer.

129. Was not the police court business very important there? Yes.

130. How was it conducted? As a matter of fact, I used to conduct the cases myself, but you did them so well that I left them in your hands.

131. When I left for Narrandera was it not at your suggestion, on account of some domestic private matter, about which there was no investigation? It is on the official record. I made the recommendation on that account, because I thought that going to a strange place and leaving old friends behind would be an advantage to you. It was not done by way of punishment at all. I thought it would be an advantage to you and a benefit to the Service, and I thought it better that you should be removed to Narrandera from Deniliquin.

132. Was that an important station at that time? Yes; it was always looked upon as an important station.

133. When I left Deniliquin did I get a public testimonial, which was approved of by the department? Yes; it was approved of by the Inspector-General, on my recommendation.

134. Do you know the gentleman who wrote this letter? Yes; it was written by a man I knew very well—Mr. Thomas Brown, Tuppal. The letter is as follows:—

Dear Sir,

I have much pleasure in enclosing a cheque for £5 as my subscription to Sergeant Vaughan's testimonial. A more deserving officer is not in the police.

Tuppal, 28 April, 1883.

Yours, &c.,

THOMAS BROWN.

He was a man who was universally respected in the district.

135. Is he not one of the most estimable magistrates in the district? Yes; no man in the Colony was more respected than Mr. Thomas Brown.

136. Did I have in my charge an important sheep-stealing case, in which Mr. Brown was interested, and in connection with which I rode all night? Yes.

137. Were not the prisoners defended by Mr. Purves, of Melbourne, and were they not convicted? Yes.

138. Did not the Judge compliment us on the way the evidence was got up? Yes.

139. At the time I left Narrandera had I not got all the promotion up to the rank of senior-sergeant under you? Yes.

140. Would you not be very much surprised if I was guilty of any breach of duty afterwards, especially neglect of duty in police court cases? Yes; and I was very much surprised when I heard of your reduction and removal.

George Lewis, sworn and examined:—

G. Lewis. 141. *Mr. Vaughan.*] Are you a hotel-keeper at present living at North Sydney? Yes, at the "North Shore Hotel."

23 Sept., 1896.

142. At one time did you keep the "Royal Hotel" at Narrandera? Yes; for nearly eight years.

143. During part of that time was I senior-sergeant in charge of the police, and did I live close to your hotel? Yes.

144. Was your hotel and another the two principal hotels in the town? Yes.

145. Is it a fact that I allowed publicans to infringe the law? Not to my knowledge.

146. Were not the public-houses at Narrandera at that time as well conducted as in any other country towns within your knowledge? I do not think you could find them better conducted anywhere else.

146½. Was the police supervision as good as anywhere else? Yes.

147. Would any publican in the town attempt to evade the law and think that I would condone it or overlook it? No.

148. What was your opinion of me? I found you a thoroughly efficient officer in my time.

149. This is said in an official report that "some of the public-houses sell nearly all night, entailing any amount of drunkenness and rowdiness which the police make no apparent effort to check;"—what is your opinion with regard to that? That was not the case to my knowledge; I am certain you would not allow it.

150. This is another charge: "It is a well-known fact that the best part of his time is passed in public-houses, and that he is more or less constantly in a muddled state;"—what is your opinion of that? I certainly say it is not correct. You were a thoroughly efficient officer, always doing your duty.

151. Was I not always under your observation almost daily, as the police court was opposite your hotel? Yes.

152. In what sort of estimation was I held by the public generally, so far as the people who visited your hotel were concerned? They gave you a first-class name.

153. Was your hotel patronised by people of the highest character? Yes; from the Chief Justice and other legal gentlemen of high standing right down.

154. *Chairman.*] During the time that Sergeant Vaughan was stationed at Narrandera, did the greatest number of pastoralists and large property-owners in the district stop at your hotel? Yes.

155. Did a number of magistrates likewise stop at your hotel? Nearly all of them did.

156. Then you had an opportunity of judging what that class of persons thought of Sergeant Vaughan, and the way in which the police generally conducted their business under his supervision? Yes; I had the best of opportunities.

157. Did the residents of the district, particularly magistrates, express an unfavourable opinion as to the way in which police business was conducted at Narrandera? Not one of them made the least complaint.

INTO SENIOR-SERGEANT VAUGHAN'S REDUCTION AND REMOVAL FROM NARRANDERA.

158. Would you have an opportunity of judging whether Sergeant Vaughan was in a continuously muddled state, as reported by an officer of the department? I never saw him in that condition at all. He was always thoroughly capable of performing his duty, and he was a thoroughly efficient officer.
159. Was the police court immediately opposite your hotel? Yes.
160. Therefore you had an opportunity of continually seeing Sergeant Vaughan attending to the police court business? Yes.
161. Were you of opinion that Sergeant Vaughan carried out his duties properly? Yes.
162. Were you of opinion that the police under his supervision likewise carried out their duties? Yes.
163. Therefore you thought he was an officer who was capable for and did actually perform his duty? Yes; and I am still of that opinion from my personal observations.
164. *Mr. Travers Jones.*] Did you have an opportunity of observing his conduct night and day? I saw him frequently during the day, and occasionally I saw him at night.
165. Did you always see him capable of doing his duty as a police officer? Yes.
166. How do you account for the charges contained in the following letter:—

G. Lewis.
23 Sept., 1896

The Municipal Council of Narrandera to the Inspector-General of Police.

Sir,

Narrandera, 9 June, 1887.

I have been instructed by the Narrandera Borough Council to bring before your notice the necessity for an additional police constable for night duty in this town. For some considerable time, and during the small hours of the night, numerous robberies and other offences have been committed, and being no police protection after a certain hour, this practice is carried on with impunity, and to such an extent that has caused the townspeople to solicit the custody of their property. The council therefore beg to make the foregoing application, and trust that it will receive a favourable consideration at the hands of your department, as the complaint is certainly one that should be attended to.

Yours, &c.,
P. HIGGINS,
Council Clerk.

I do not think that is correct.

167. Did you know the councillors? Yes.
168. Did you ever hear them complain? Never.

Frank Elliott, sworn and examined:—

169. *Mr. Vaughan.*] Are you a clerk in the firm of Goldsbrough, Mort, & Co.? Yes.
170. Were you overseer of Murrill Creek Station when I was senior-sergeant of police at Narrandera? Yes.
171. Did you visit Narrandera often? Yes, fairly often; when business took me there.
172. Did you often have occasion to see me? Yes.
173. Will you tell the Committee your experience of me with regard to my official duties? I always found you very obliging and painstaking in every way. As far as I was concerned, you performed your duties as well as they could possibly have been done.
174. *Chairman.*] Did Mr. Vaughan always appear to be in a fit state to perform his duties? Yes.
175. Where did you stay? At Gough's hotel.
176. Were that and Lewis's hotel the two principal hotels in the town? Yes.
177. During any time that you stayed at that hotel was the hotel conducted in a proper manner? Yes; most decidedly.
178. Was there any such thing as drunkenness, rowdyism, or selling after hours? Not that I ever saw.
179. Were you a fairly constant visitor? Yes; I always stayed there. There were a good many general boarders, bank clerks, and others. The town clerk stayed there.
180. *Mr. Vaughan.*] Did you ever see me in a muddled state or unfit to perform my duties, or did you ever hear of such a thing? No.
181. Did you hear the contrary? Always.

F. Elliott.
23 Sept., 1896.

Captain John Edward East Gray sworn and examined:—

182. *Mr. Vaughan.*] I believe you were in business in Narrandera while I was stationed there as senior-sergeant? Yes; I was in business, and also in one or two Government appointments in the Mines Department, and also the cadet corps in connection with the public school.
183. Did you see me almost daily while you were there? Yes; sometimes two or three times a day.
184. What was your opinion with regard to my efficiency? I speak as an old soldier of forty years' service, and I never met with an officer in the police force who was more efficient or a smarter man than Sergeant Vaughan. I noticed it before I knew him, when I first went to the town. I thought he was a very smart officer, and that the men under his charge did him great credit.
185. Was there a great deal of police work during the time you were at Narrandera? Yes.
186. *Chairman.*] Was Narrandera a town that threw a great deal of work on the police? Yes.
187. Was there a large floating population of bushmen who came in to spend their cheques, and who were incapable of protecting their money? Yes; at that time it was much more the case than it is now. Ten or twelve years ago things were much rougher in Narrandera than they are now.
188. From your observation of other places, did you think that Narrandera was particularly difficult to manage from a police point of view? Yes; owing to the Chinese and aboriginals having camps there; there was a great deal of work to do.
189. Did you seldom see any other place where it was so difficult for the police to keep order? Yes; the only place equal to it was Bourke, where I was editing a newspaper for some time. The two towns were very similar, and I used to call Narrandera the Bourke of the South.
190. *Mr. Vaughan.*] Did you ever see me in a muddled state or incapable of performing my duties? I cannot recall a single occasion. I had occasion to see you frequently on Government matters and other business, and I never saw you otherwise than thoroughly capable of conducting business at any time.
191. Was I always elected on the Hospital Committee and the School of Arts Committee? I may say that during ten years residence in Narrandera I have not known any man in an official capacity who was more respected than Sergeant Vaughan until he left. I was very much surprised at his being taken away, and it was felt to be a great loss to the township.
192. *Chairman.*] Were you in Narrandera at the time Sergeant Vaughan was removed? Yes.

Capt. Gray.
23 Sept., 1896

- Capt. Gray. 193. Were you in the habit of seeing him immediately before he was removed? Yes.
- 23 Sept., 1896. 194. Were you very much surprised at his removal and his being disgraced? Very much.
195. Did you see any cause for that being done? Certainly not. I am sure that, as far as the disgracing was concerned, it would not be done on account of the townspeople complaining.
196. You state that you have been a military officer for a great number of years;—from your experience, do you think Sergeant Vaughan was a man capable of conducting his duties as a police officer? Yes. I can take my memory back to the old times when we used to make the non-commissioned officers toe the line in order to prove themselves, and I never saw Sergeant Vaughan in such a condition that he could not do that.
197. From your knowledge of military discipline, did you see any reason why Sergeant Vaughan should be removed and disgraced? Certainly not.
198. Your observation did not cause you to think he deserved that treatment? Certainly not. In conversation with several townspeople afterwards they, like myself, expressed surprise, and spoke in terms of admiration and respect of his services there.
199. Do you think Sergeant Vaughan's conduct came sufficiently under your observation to enable you to give an opinion? I lived in the centre of the town for some years till he went away. I took an hotel afterwards, but that was long after he left. I certainly had as good an opportunity of observing his conduct as any man in the town. I was town inspector for some time, and that frequently brought me into contact with Sergeant Vaughan.
200. Did you frequently go through the town day and night? Yes; that was my business at the time.
201. Did you not have unusual opportunities of observing Sergeant Vaughan's conduct? Yes.
202. Did you not likewise have an opportunity of judging whether the police under Sergeant Vaughan carried out their duties properly? Yes; and I never saw anything that would lead me to any conclusion other than that they were excellently managed.
203. Did you have any cause to believe that Sergeant Vaughan was neglecting his duties? No.
204. Would you not have known if he had neglected his duties? I am sure I would. For a considerable time I must have seen Sergeant Vaughan twice or three times a day.
205. Did you see him often at night? Yes.
206. So that you had an opportunity of knowing how the police business was conducted day and night? Yes.
207. Therefore, when you heard that Sergeant Vaughan was to be removed and disgraced you were surprised? Yes.
208. And you could not account for it? I could not.
209. *Mr. Travers Jones.*] Was it the general opinion of the inhabitants that the sergeant was efficient and attentive to his duty? Yes; I took part in most of the political and social life of the place, and, therefore, I was brought into contact with most of the people.
210. Did you hear of any complaints before he was disgraced? I never heard any complaint about him. He was always spoken of in the highest terms, both whilst he was there and afterwards, accompanied with expressions of regret at his removal.
211. Could you account for his dismissal? No.
212. *Mr. Barnes.*] Were you out day and night? Yes.
213. Sergeant Vaughan was accused of allowing rowdyism and drinking in hotels late at night;—did you ever see anything of that kind? No. We were brought into frequent communication. I am not a teetotaler, and I take my glass of ale like any other man, but during the whole of the time I never saw Sergeant Vaughan more than twice or three times in a hotel, and then he came in on business. I can safely say I never had a drink with him.
214. Would you not be likely to know if there was any rowdyism after hours? Certainly. I was living in the centre of the town, in East-street, and I do not remember anything of the kind night or day. There was nothing to show that the police were inefficient or not on duty.

James Smith sworn and examined:—

- J. Smith. 215. *Mr. Vaughan.*] Are you at present living privately at Bulli? Yes.
- 23 Sept., 1896. 216. Do you remember when I was senior-sergeant of police at Narrandera? Yes.
217. Did you then keep the "Criterion Hotel" at Narrandera? Yes.
218. Did you have occasion to see me often? Yes.
219. Is it a fact that any of the public-houses at Narrandera, or your house, was allowed by the police to keep open during prohibited hours, or was not under proper supervision by the police? I never was allowed to do anything of the kind; and I always thought you were a little too hard with me.
220. It has been said that some of the public-houses "sell nearly all night, entailing any amount of rowdyism and drunkenness, which the police make no apparent effort to check; as also the sale of liquor on a Sunday to both whites and blacks";—what have you to say about that? I was never allowed to do so, and I never saw it done.
221. As a publican, would you have attempted to do such a thing? I would not run the risk.
222. Would you not know very well that I would be there? Yes; I thought too much of my license.
223. Did you keep an important hotel, which was your own property? Yes.
224. It was also stated by an officer who made the charge against me, and who visited there occasionally, that I was constantly in public-houses, and in a muddled state? I never knew that. You have been in my house, looking through it, to see that everything was right.
225. As licensing inspector? Yes.
226. Did you ever see me in a muddled state? I cannot say that I did.
227. Was I always capable of performing my duties? Yes.
228. Was there then a great deal of duty to be performed at Narrandera? Yes.
229. Did you know what the public feeling was when I left Narrandera? Most of the people thought they were losing a good man; as far as I was concerned I thought so.

WEDNESDAY,

WEDNESDAY, 30 SEPTEMBER, 1896.

Present:—

MR. GORMLY, | MR. BARNES,
MR. TRAVERS JONES.

J. M. CHANTER, ESQ., IN THE CHAIR.

Mr. P. L. Vaughan appeared on his own behalf.

Edmund Walcott Fosbery, Esq., further examined:—

230. *Chairman.*] You produce these books? Yes; they are the charge books from the 8th March, 1883, to the 24th September, 1892, and the occurrence books from the 8th June, 1883, to the 5th June, 1888, and from the 12th May, 1889, to the 7th January, 1893, for the Narrandera station; and this is a return of the police cases and summons cases for the years 1883 to 1891 inclusive. [*Return produced.*]

E. W.
Fosbery.
30 Sept., 1896.

231. *Mr. Vaughan.*] Are the criminal returns available for production covering the same period? Are they not all here?

232. There is one paper that I miss from the printed papers, an application dated from Gundagai, 19th February, 1889, with a letter from Messrs. Moran and Duval. I made application for that to you some time ago, but I have not received a copy of it? If you, Mr. Chairman, will send a notice to my office, I will have search made for the document as soon as I get back.

John Campbell sworn and examined:—

233. *Chairman.*] Your occupation is? Railway station-master.

234. *Mr. Vaughan.*] You are now at Riverstone? Yes.

235. When were you at Narrandera? I went to Narrandera in 1884.

236. I was then stationed there as sergeant of police? Yes.

237. *Chairman.*] When did you leave Narrandera? In 1889.

238. *Mr. Vaughan.*] You were there until I was removed from Narrandera? Yes.

239. During that time, were you in the habit of seeing me daily? Generally three times daily at the railway station.

240. It is said in the report against me that—

Some of the public-houses sell nearly all night, entailing any amount of drunkenness and rowdyism, which the police make no apparent effort to check, as also the sale of liquor on a Sunday to both whites and blacks.

? As far as I know, that is quite untrue.

241. And you had a very extensive knowledge of the way the work was done by the police? Yes.

242. As far as you know, were the public-houses under proper police control? Yes, as far as I know.

243. On Sundays, trains came in and went out? Four different trains on Sundays came into Narrandera and went out.

244. It was a place where the passengers had to stay for refreshments? Yes.

245. And the hotels used to run 'buses and cabs to the station to meet passengers? Yes.

246. Of course these passengers had to be entertained? Just so.

247. You know Mr. Harrison, Inspector of Police at Wagga Wagga? Yes.

248. This is another statement made by him on the 22nd April, 1888:—

It is a well-known fact that the best part of his time is passed in public-houses, and that he is more or less constantly in a muddled state.

? Well, during my time I have never seen you the worse for drink or unfit for duty.

249. Did you ever see me even in a muddled state? No.

250. Either evening or day? No. In fact I have seen you late at night, but have never seen you the worse of liquor in any way.

251. You were at Narrandera when I left? Yes.

252. There was a representative public meeting on the occasion of my leaving? Yes.

253. The best people of the town and district took part? Yes; and the clergymen of all denominations.

254. *Chairman.*] In your position as railway station-master you would have opportunities of observing whether Mr. Vaughan was present at the trains? Yes.

255. Daily? Yes; every time he came to the station he always came to my office. I have seen him sometimes six times a day. Some days he might be away from town on other duties, but, at the very least, I have seen him three times a day.

256. If he were in any such state as asserted, would it be noticeable to you? Oh, I would notice it if he were in any way under the influence or not capable of performing his duty. I have had so much experience of that with passengers that if he were really inclined that way I would notice it in an instant. Since I have known Mr. Vaughan I have never known him to be incapable for his duty.

257. Do you know, of your own knowledge, or from the feeling of the community, that the police duties were in any way neglected at Narrandera;—were there any comments by the public? I never heard of any complaints by the public, as far as I know. I think the police duties were perfect there.

258. Do you recollect a particular case of an aboriginal who was charged with having committed a rape? I was there at the time.

259. Did the feeling of the community at that particular time run high;—what was the general feeling of the community, as far as you could judge, in regard to Senior-sergeant Vaughan's conduct in that case;—was it antagonistic to him? There was no feeling, so far as I can say. I never heard any remarks about the case.

260. Did you hear the public comment unfavourably at any time in regard to Mr. Vaughan's conduct in that particular case? No; I heard no remarks at all. Mr. Vaughan was capable on that particular day, because I was with him a long time after the case.

261. I believe a banquet and presentation were tendered to Mr. Vaughan at Narrandera prior to his leaving? Yes; I was there.

262. Were the parties who attended that banquet, or took part in that presentation, including yourself, of such standing in Narrandera that they would show that mark of commendation if in their honest opinion Mr. Vaughan was not worthy of it? They thought he was worthy of it. Mr. Vaughan was a popular officer with the public. Everybody always had a kind word for him.

- J. Campbell. 263. Would that favourable opinion be formed of him in regard to the manner in which he conducted the various duties pertaining to the police, apart from his social position? Yes.
- 30 Sept., 1896. *Mr. Gormly.*] It is asserted in the report that Senior-sergeant Vaughan was often in a muddled state—continuously, I might say;—do you think you would be capable of judging, from the time you have seen Mr. Vaughan, whether he was in a muddled state or not? I am certain of it.
265. You understand what is generally meant by a muddled state? Well, when a man is not capable of knowing what he is doing from the effects of drink.
266. Do you think Mr. Vaughan was in that state? I say he was not in that state.
267. And you had frequent opportunities of judging? Yes.
268. You have seen men in a muddled state? I have.
269. You are, therefore, of opinion that such a statement would not be correct applied to Mr. Vaughan? Yes.
270. You come to that conclusion from meeting Sergeant Vaughan almost continuously for several years while you were in Narrandera? Yes.
271. You think that statement was absolutely incorrect? Yes.
272. *Mr. Vaughan.*] You remember a goods clerk you had who absconded with some money? Yes; Gamble.
273. I believe he went away during the Christmas holidays? Yes.
274. The amount of his defalcations could not be ascertained until work was resumed, and the Banks opened after the Christmas holidays? Yes; there happened to be five days' holidays.
275. Was that man traced to Brisbane and brought back through me? Yes.
276. I had that man traced, brought back, prosecuted, and convicted? Yes.

Edward Montague Battye, Esq., sworn and examined:—

- E. M. Battye. 277. *Chairman.*] You are a Superintendent of Police? I was up to the 1st of April, 1893.
- 30 Sept., 1896. 278. You were then stationed at Albury? Yes.
279. You know Mr. Vaughan, late senior sergeant? I do, well.
280. He was within your district? He was in the sub-district of Wagga Wagga, in the Wagga Wagga district.
281. You are aware of the whole of the circumstances that led to Senior-sergeant Vaughan's retirement? I am sorry to say I am.
282. And his removal from Narrandera, and subsequent retirement from the service? Yes; he had three or four moves before then.
283. *Mr. Vaughan.*] Mr. Harrison was inspector at Wagga Wagga;—I am speaking now of 1888? Yes; he was then in charge of that sub-district.
284. You remember an application by the Municipal Council of Narrandera, dated 9th June, 1887, for extra police protection? I cannot say I do—it is so long ago.
285. Well, the application is this:—

Sir,

Narrandera, 9 June, 1887.

I have been instructed by the Narrandera Borough Council to bring before your notice the necessity of an additional police constable for night duty in this town.

For some considerable time, and during the small hours of the night, numerous robberies and other offences have been committed, and being no police protection after a certain hour, this practice is carried on with impunity, and to such an extent that has caused the townspeople to solicit the custody of their property.

The Council, therefore, beg to make the foregoing application, and trust that it will receive a favourable consideration at the hands of your department, as the complaint is certainly one that should be attended to.

Yours, &c.,

P. HIGGINS,
Council Clerk.

The Inspector-General of Police.

Referred to Superintendent Battye, Albury, for report.—EDMUND FOSBERY, Inspector-General of Police, 11/6/87.

? The letter was so referred to me. I recollect it.

286. You forwarded it to Mr. Harrison for report? Decidedly.

287. Will you read Mr. Harrison's report, dated Wagga Wagga, 20th June, 1887? Yes. [*Witness reads report.*]

288. You saw my report attached to that, dated 4th July, 1887? I received it.

289. That report of mine denies the allegations in Mr. Harrison's letter;—is not that so? It does in a great measure.

290. Did you take any steps to ascertain whether my report was correct or not before you wrote your report to the Inspector-General, dated 9th July? I did not.

291. Then, you did not believe my report when you wrote your report of 9th July, which goes on the same lines as Mr. Harrison's? I was not satisfied.

292. Did you take any means to satisfy yourself? I did not then take any steps.

293. But you wrote the letter of 9th July without ascertaining for yourself whether these gross charges were true or false? On the 25th I inspected the station.

294. I want to finish with the 9th of July please? I had not inspected the station on the 9th July.

295. And you did not take any trouble, before writing that letter, to ascertain whether Mr. Harrison's charges were true or false? Not before I wrote the letter.

296. And you wrote recommending my removal from the district on Mr. Harrison's report? Yes; and from other matters besides.

297. Will you state to the Committee the other matters, and also state what steps you took to ascertain the true facts of these other matters? I merely gave it as my opinion, from what came of my knowledge, that you would be far better removed from there.

298. What came to your knowledge? Unsteadiness.

299. In any of your visits to Narrandera did you ever make an adverse entry in my occurrence book? No; I believe I did not. I may state here that when Sergeant Vaughan came to Narrandera first I had a very high opinion of him, and I believed that he would be an excellent senior-sergeant in the district. He was an able man in conversation, and so forth. I found him to be a very able man. I gave him hints, but he was ultimately removed from there. My suggestion was carried out.

300. *Chairman.*] Would you kindly explain what you mean by giving hints, hints in reference to what—
 laxity of duty in any particular form? No; it was more for tipping than anything else.

E. M. Battye.
 30 Sept., 1896.

301. What you term unsteadiness? Yes.

302. *Mr. Vaughan.*] Did anything like that come under your observation during your visits? Not particularly at Narrandera. I was generally there for only about a couple of hours in the middle of the day.

303. How would it come to your notice then;—was it not through Mr. Harrison? No, it was not. I told him.

304. Would it not be your duty as superintendent, if any person made a charge against me, to tell that person he would have to bring it before you? I would not consider it my duty, unless he made the charge positively against you.

305. So any man could say what he thought proper, and you would entertain it as Gospel truth without calling upon me to defend myself? Not at all. I think it will be found that that was not the only thing; it was neglect in sending in reports, accounts, and all sorts of things. This was an unfortunate failing. I never could get quarterly accounts from you; in fact I have sent a wire to you direct for them.

306. You recommended my removal to Corowa on the 25th July, 1887? Yes; I suggested your removal to some other station.

307. Do you see what the Inspector-General said to that—

I cannot deal so severely with an old officer who has borne a high character without some more specific charge proved against him. Senior-sergeant Vaughan should be called upon for his defence. What he has said at present is not unreasonable.

? Yes.

308. After the Inspector-General suggested in that letter that I should be called upon to answer those charges, did you instruct Mr. Harrison to prefer those charges, and bring me face to face with him? What charges?

309. The charges you state, the neglect of duty, and this tipping, as you call it? No.

310. Why not;—was it not your duty, as superintendent of the district, to do so, as suggested by the Inspector-General? I thought you were better where you were.

311. You thought it better I should be punished behind my back than be confronted with my accusers? Not punished behind your back at all.

312. *Chairman.*] On that minute of the Inspector-General there is a memorandum to this effect:—

Forwarded to Inspector Harrison for Senior-sergeant Vaughan to be called upon for his defence, and for Inspector Harrison's opinion to Senior-sergeant Vaughan's transfer to Junee.—E. M. BATTYE, Superintendent, Albury, 28/8/87.

Was Senior-sergeant Vaughan called upon for his defence? There is a minute from Inspector Harrison, dated 1st August, 1887, to this effect:—

The attached papers are forwarded to Senior-sergeant Vaughan for his information and defence.

313. *Mr. Vaughan.*] Well, read my report of 6th August, 1887:—

SENIOR-SERGEANT VAUGHAN has read these papers, and begs leave to state that he has very little to add in defence of his two reports already attached, which are true.

A series of omissions and neglects are attached by Mr. Inspector Harrison, most of them frivolous and previously explained by the senior-sergeant, which explanations might also be attached. These neglects in almost every case were due to local duty interfering, which could not be neglected; and Senior-sergeant Vaughan would again repeat that very few stations of the strength of Narrandera could show better results, and where the public are better satisfied. Senior-sergeant Vaughan regrets that Captain Battye, for whom the senior-sergeant has the highest regard as a superintendent and a gentleman, should doubt the fact of senior-sergeant's illness. The truth is that the sergeant resumed duty before fit for it, and the pressing duty during the month of July, and the worry of memos. *re* returns and accounts, which could not possibly be completed (*vide* previous report), further delayed matters.

Was there anything unreasonable in reports being delayed owing to other duties? You were invariably the last in sending in your quarterly reports. I could never get them from you; moreover, I had to wire to you direct a positive order to forward your reports. I do not recollect you being reported on sick list.

314. With regard to these returns, was Narrandera at that time an important station with regard to police duties? It was so much so that we had to increase the strength of it.

315. Did I not apply for a senior-constable at that time? I do not know; it may be so.

316. A senior-constable was afterwards sent there? I will not be certain about that; it is so long ago.

317. Do you consider that when the strength of the station was increased, after my having left there, the duties were more important when I left than during the time I was there? I cannot say. The town greatly increased after you left.

318. Can you say whether the police duty increased? Yes; the street duties were increased.

319. In the year 1887 there were 234 cases; in 1886, 317 cases; in 1885, 225 cases; and in the year I left there were 265 cases; in the year 1890 there were 322 cases; and in the year 1891 there were 311 cases;—is that such a great increase that a senior-constable should be sent after I left, but not sent when I applied for one? [*No reply.*]

320. Up to the time Mr. Harrison came to the district there was nothing at all against me, was there? I will not be certain, but I do not think there was. I did everything I possibly could for you, and you thanked me in the street.

321. Have you any recollection of the Drewitt case? Not to give evidence on.

322. Suppose I was preparing my weekly or quarterly returns, and a case of crime occurred, would you, as superintendent, expect me to go on with my returns, and let the case of crime stand? A most important case should be gone on with as a matter of course, but I could never see the slightest necessity for delay in connection with the quarterly returns. No other sergeant or senior-constable ever gave me so much trouble; all our quarterly returns were in long before yours.

323. You know I had no clerical assistance; there was not a man on the station fit to keep the duty-book for a day? There were plenty of others to perform the duty.

324. As to the Drewitt case, Mr. Harrison went to Narrandera to make inquiries? Well?

325. Did you read my explanation about that affair? No doubt I did.

326. When you forwarded the papers to Sydney did you take any trouble to ascertain whether or not I took any trouble in the case? No, I did not; not that I am aware of. I cannot recollect; I left it, I believe, to Inspector Harrison.

327. Did you read my reports in reply to the charges made by Mr. Harrison? I read them; but I have never bothered my head about them since.

328. Did you bother your head, then, to find out for yourself whether the reports against me were true or not? I am sorry to say that I knew a good deal.

- E. M. Battye. 329. But you did not inquire to see whether I was right in my reports or not? No, I did not.
 330. But you wrote, recommending my removal on the same lines as Mr. Harrison did? I strongly recommended your removal from Narrandera.
 30Sept., 1896. 331. In your report of 4th May, 1888, you said:—

My opinion is that I consider great blame is attributable to the careless and indifferent way in which Senior-sergeant Vaughan got up the case in not sifting the most important evidence of identification, or exerting himself in any way to obtain it prior to committal, apparently because offender was arrested by civilians.

What steps did you take to ascertain that blame was attachable to me in that case? I could not tell you.

332. Before writing such a memo. would you not consider it your duty, as superintendent of the district, to go there and investigate the case, to find out whether I had committed neglect or not? I felt that I could trust Mr. Harrison in a case of that kind.

333. And you followed on his lines? Followed on his lines?—unfortunately I was quite of his opinion with reference to you.

334. Did you consider that I should be reduced? I think I did, if I recollect aright.

335. But it appears you did not on your report for May, 1888? I do not see in that report where I did state it. I must have left it entirely to the Inspector-General, who decides all such matters.

336. You did not consider I should be reduced? I did not state it.

337. Although you did recommend it before, and the Inspector-General did not fall in with your views? When did I recommend it before?

338. When you recommended that I should be sent to Corowa, and reduced one step in rank, and Sergeant Jones brought to Narrandera? Very likely I did.

339. Have you any recollection of Mr. Harrison and other witnesses coming to Sydney to give evidence before the Executive Council over the Drewitt case? No.

340. There is a memo. of yours, dated 4th of May, 1888, to the following effect:—

MR. HARRISON has shown me your telegram of Wednesday; he and constables Bell and Davison will reach Sydney to-morrow morning. I shall post you important papers, statements, and reports *re* case this evening, and intend ordering Senior-sergeant Vaughan to Sydney by Monday, to answer personally for his conduct in that matter and on other occasions.

E. M. BATTYE,
 Superintendent.

Are you aware that I did not go to Sydney? I am not; I have no recollection at all.

341. And the Acting Inspector-General of Police wired to you that unless I could give evidence as to the identity of the offender, or otherwise assist the Executive Council in the inquiry, there was no necessity for my being sent to Sydney at present? Yes.

342. You know that steps were taken, and that I did not go to Sydney? I suppose so.

343. Because I could answer for myself before the Executive Council, you do not know that that was the reason, do you? No.

344. Are you aware that the witnesses with Mr. Harrison, who were brought to Sydney, threw no further light on the case? I do not know a word about it.

345. At all events, I was reduced? Yes.

346. You sent the memorandum of the Acting Inspector-General, dated 17th May, 1888, to Mr. Harrison at Narrandera, and you wrote the following memo. on the paper:—

I think it advisable for Inspector Harrison to proceed to Narrandera with these papers, and bring them back with him.

Is that so? Yes.

347. Did you not think I was capable of being entrusted with the papers? Perhaps I did.

348. Do you consider that fair treatment? Well, the papers were not to go out of Mr. Harrison's hands.

349. Why?—I was not fit to be trusted with them, I suppose? I was not going to ask you what I was to do.

350. I am asking you now why you did not forward them to me in the usual way, and I want you to tell the Committee why you did not? [*No reply.*]

351. *Chairman.*] Was there any reason why these papers should not be forwarded to Mr. Vaughan, to be noted in the ordinary way and returned to you;—was there any special reason why they should be sent to the inspector? Well, I cannot say exactly. I have no doubt in my own mind it was because so many papers had been lost, and Mr. Harrison was officer in charge of district.

352. But in the printed correspondence there is nothing to show that any charge was brought against Mr. Vaughan for the loss or non-return of papers;—is it the usual course in matters of this kind, when the officers are retained in the Service, to send them correspondence of this character with the minute to be noted and returned? To be noted and returned, yes; but in several cases Mr. Harrison could not recover the papers.

353. The statement made by Mr. Harrison was not that he could not get papers but that there was a delay in the sending them? Yes.

354. But if you can tax your memory so far back as 1888, what was the reason for this special departure of sending Inspector Harrison with this letter from the Acting Inspector-General to be shown to Senior-sergeant Vaughan, and then sent back to you by Inspector Harrison, it being the usual practice for papers to be noted and returned;—why in this case was that practice departed from? Because documents have been difficult to obtain from Senior-sergeant Vaughan.

355. You give that as your reason? Yes; at least I fancy that must have been it.

356. *Mr. Vaughan.*] Can you recall an instance when I did not return documents? Yes, certainly; when you have been away from your barracks I have gone into your room, and have seen documents all over the place. I have picked them up myself, and taken them home to Albury.

357. Where was this? At Germanton.

358. Will you tell this Committee on your oath that such a thing occurred? Of course I will, and Sergeant Barnett picked up others.

359. That was after I left Germanton? The day after you left he picked up some, and I picked up others.

360. But that did not occur when this Narrandera affair was on—that was five years afterwards? Sub-inspector Harrison complained very frequently of the difficulty of getting documents back.

361. Do you remember that after the decision of the Acting Inspector-General the papers were returned? I do not recollect it.

362. Do you remember my sending you a telegram on the 23rd of May, 1888, to this effect:—

E. M. Battye.

Before leaving Narrandera Sergeant Vaughan expects an investigation into Mr. Harrison's charges. He can find sufficient evidence to refute all the charges levelled against him by Mr. Harrison. 30 Sept., 1896.

? Yes.

363. Did you think it a reasonable request to ask for an investigation? In my telegram in reply I stated that any further investigation would have to be made in writing through the proper channel.

364. Was there time to reply through the proper channel? I cannot tell you after eight years.

365. But it is on these papers that I was under very prompt orders to leave for Wagga Wagga? Yes.

366. You did not consider I should have an investigation? I do not know what I considered then.

367. What do you think now;—was it fair not to give a man, after twenty-two years' service, an opportunity to defend his character before the proper person? What I think now is that there never was a man breathing who had more consideration given to him than you. The four removals were done partly for your own good.

368. When I was removed to Gundagai, what loss did I suffer through the reduction? I do not know what you lost.

369. Did I not lose in rank about £31 18s. 3d., besides £15 as licensing inspector—in all, about £50 a year—because of an alleged offence I was not allowed to investigate? [No reply.]

370. Do you remember whether there were sergeant's quarters at Gundagai when I went there? Yes; they are all in the same barracks.

371. Was there not a sub-inspector's house at Gundagai? I think it was finished then.

372. Also a sergeant's quarters in the barracks? There were a certain number of rooms allotted.

373. Do you remember that there was a constable occupying the sergeant's quarters, and that I had to get a house of my own and pay 11s. a week rent? I cannot remember—the sub-inspector would know all about that.

374. Do you remember the Inspector-General visiting Gundagai after I left and altering that state of things, ordering the sub-inspector into his own house, and the constable out of it, and making the sergeant of that time take the quarters? I have a recollection that the sub-inspector, Mr. Cornett, had the end rooms in that place.

375. And do you know that there was a house specially purchased for the sub-inspector which was occupied by a constable, and I had to pay 11s. a week rent;—have you any recollection of that? No; and I had no complaint either.

376. At that time I applied for leave of absence;—you did not recommend that leave? No; it was just at the time of your removal to Gundagai by order of the Inspector-General.

377. Was that not a reasonable application? Circumstances prevented it.

378. Would they not be more likely to be favourable, as I was leaving a station and finishing with it? Well, I objected.

379. And it was not granted? I do not suppose so.

380. Which I had a loss of £300 over? £300!

381. Of course you do not know anything about that. I wanted to go to Moama to protect some property I had there, which was afterwards lost to me through that application not being granted? [No reply.]

382. I shall now refer to the time when I was reduced to the position of first-class constable at Gundagai. I will read the report that was sent in against me by Sub-Inspector Cornett, dated 30th June, 1889:—

Captain Battye,

Sir,

I regret having to report the conduct of Sergeant Vaughan. On the 25th instant I instructed Sergeant Vaughan and Constable Field to proceed to Tumut on temporary duty, as all the Tumut police had to attend the Gundagai Quarter Sessions held on the 27th. The two mounted constables, Bulmer and Winch, returned to Tumut on the evening of the 27th, Sergeant Coveny and Constable Bell on the morning of the 28th. I wired to Sergeant Vaughan to return that day. He replied that they could not leave till the morning of the 29th. I heard nothing further of them till 7:30 p.m., when Constable Field returned to the station and reported to me that Sergeant Vaughan had been driven home in a buggy, not being able to ride his horse, as he, the sergeant, stated to Field that he had been hurt before leaving Tumut. Field states that they left Tumut at 10:30 a.m. The sergeant rode his horse a few miles, when they halted at the public-house for about two hours. The sergeant then walked on foot for a short distance, when he sat down and told Field he could go no further. Field then had to ride to South Gundagai for a buggy to convey him home. After Constable Field reported the matter to me I went to Sergeant Vaughan's house to see him. He came into the room to me. I asked him what had happened to him that he was not able to ride his horse home. He replied, that as he was in the act of mounting his horse in the police-yard at Tumut the horse threw him, hurting his side. I then said, "Why did you leave Tumut if you felt hurt?" He answered, "I thought you wanted me home." I am sorry to inform Captain Battye that Sergeant Vaughan appeared quite stupid, as if from drink. I may also state that this is the third time that Sergeant Vaughan has returned from bush duty in a buggy, and been driven straight to his home without reporting himself to me. This report was handed to Sergeant Vaughan to afford him an opportunity of explaining it before sending it to Captain Battye. Sergeant Vaughan will also state cause of delay in coming from Tumut to Gundagai on the 29th instant, with Constable Field.

JAMES CORNETT,

Sub-inspector.

This is a report of Constable Field's to Sub-Inspector Cornett:—

Police Station, Gundagai, 1 July, 1889.

With reference to attached memo., Constable Field, No. 5,645, most respectfully begs to report, for the information of Sub-Inspector Cornett, that he and Sergeant Vaughan left Tumut Police Station at 10 a.m. on the 29th instant. Constables Winch and Bulmer stated that they were going to Gocup, to search for a Chinaman that was drowned there, and would be along with us for 7 or 8 miles on our way to Gundagai. Constables Winch, Bulmer, and Field mounted their horses, and rode out of the yard on to the road. Constable Field turned round to see if Sergeant Vaughan was coming, and he saw the sergeant's horse rushing out of the yard, and he helped to catch him, and returned him to the sergeant. Constable Winch rode Sergeant Vaughan's horse, and the sergeant rode the constable's horse to Back's Hotel, a distance of about 5 miles from Tumut. Constable Field states that he believes the sergeant had been drinking before leaving Tumut. When the constable and the sergeant rode about 2 miles from Tumut the sergeant got incapable of riding from what appeared to the constable to be the effects of drink. Constable Field and the sergeant halted at Back's Hotel, the sergeant being then unable to ride his horse, and the sergeant lay down for about two hours. We made a start from the hotel for Gundagai, the sergeant riding his own horse, until about 5 miles from Gundagai, when the sergeant complained of being ill, and stated that he could ride no further. The constable then proceeded to South Gundagai for a conveyance to take the sergeant home, as he was still unable to ride his horse. The constable states that Sergeant Vaughan had a drink at Woodbridge's Hotel, South Gundagai, on his way going home. On my arrival at the Police Station, Gundagai, I reported the circumstances to Sub-Inspector Cornett.

MICHAEL FIELD,

Constable, No. 4,645.

Sergeant

E. M. Battye. Sergeant Coveny, who was there when I mounted, reports as follows:—

30 Sept., 1896.

SERGEANT COVENY, No. 1,848, reports for the information of his Sub-Inspector that Sergeant Vaughan, Constables Bulmer, Winch, and Field were ready to make a start, the sergeant and Constable Field from Gundagai, and Constables Bulmer and Winch to search for the Chinaman that was drowned at Gocup. The constables mounted their horses and rode out of the yard. The sergeant delayed for about a minute before he mounted, and when he did, and before he got his foot in the off stirrup-iron his horse made a jump to get away after the others, and after going about 10 yards threw the sergeant. He got up and made no complaint of being hurt, and when his horse was caught he seemed very excited, and from the way he went after he threw the sergeant, he, Sergeant Coveny, told Constable Winch to ride him for a mile or two, and let Sergeant Vaughan ride his horse, as he was going about 8 miles on the same road. Sergeant Vaughan appeared to the sergeant to have had some drink, but he could not say he was drunk, as he walked over from the hotel where he was stopping, and carried his valise, and spoke to the sergeant before and after he was thrown, and was quite capable of taking care of himself. He left with the other constable at 10 a.m. on the 29th instant.

Police Station, Tumut, 30 June, 1889.

ROBERT COVENY,
Sergeant, 1,848.

This is Constable Bulmer's report to Sub-Inspector Cornett:—

CONSTABLE BULMER, 4,313, begs to state that he and Constable Winch, after leaving the barracks, rode straight out to Gocup and waited at the hotel there for Sergeant Vaughan and Constable Field, who arrived some twenty minutes or more afterwards, and they last saw the sergeant and Field close to Gocup School some 7 or 8 miles from Tumut, as they were returning off duty about 2 p.m. Constable Field was perfectly sober, and the sergeant also appeared to be sober, and capable of managing his horse. Constables Bulmer and Winch did assist the sergeant off his horse at Back's, when he made some remark about being hurt by a fall in the barrack-yard.

Police Station, Tumut, 3 July, 1889.

FRED. W. BULMER,
First-class Constable.

Constable Winch also made a report:—

IN answer to Sub-Inspector Cornett's inquiries *re* Sergeant Vaughan, constable begs to state that he did not ride with Sergeant Vaughan and constable Field, but went ahead with Constable Bulmer as far as Beck's Hotel, where the constable waited for Sergeant Vaughan to exchange horses. On the arrival of Sergeant Vaughan and Constable Field, Constable Winch saw that Sergeant Vaughan had been drinking, and assisted him off his horse, when he said, "I feel hurt." Constable Field was strictly sober. Constable Winch and Bulmer then proceeded about 3 miles further on the road, and returning about 2 o'clock met Sergeant Vaughan and Constable Field riding their horses, Sergeant Vaughan then appearing perfectly sober, and quite capable of riding his horse.

Police Station, Tumut, 3 July, 1889.

W. WINCH,
Constable, 15,465.

This is the report I wrote in reply:—

SERGEANT VAUGHAN begs to report, in reply to Sub-Inspector Cornett's report of 30th ultimo, that shortly before the sergeant left Tumut, on Saturday, the 29th instant, he went to say good-bye to a Mr. Nestor, in business at Tumut as a hotel-keeper, who went to school with Sergeant Vaughan at Home; and meeting there Mr. Robertson, solicitor, of Tumut, having a few drinks of whisky, the morning being very cold. The sergeant felt all right, and on passing the office of Mr. Lloyd, C.P.S., said good-bye to him.

Police Station, Gundagai, 5 July, 1889.

He then went to mount his horse, which was already saddled (the other constables having just left the yard), and when doing so his horse shied, being in a hurry to follow the other horses, and the sergeant got a nasty fall on the back. Not feeling hurt at the time, the sergeant mounted Constable Winch's, a quieter horse, and when at Gocup Hotel felt sick and faint, and sore in the back, lay down for a couple of hours, and then went on riding his own horse, and had to get off again as described in Constable Field's report, hence the reason for the sergeant returning in a buggy, taken out by young Mr. Woodbridge, and when passing the latter's public-house the sergeant had a little whisky, this being the only drink the sergeant had since leaving Tumut. No doubt Mr. Cornett's statements are correct as to his belief, but the sergeant can positively say the above statement is true as substantially borne out by the statements of Sergeant Coveny and the constables. The sergeant has since felt very sore in the back, but is now nearly recovered. Sergeant Vaughan is sure Mr. Cornett will bear testimony to his efficiency and attention to duty since his being stationed at Gundagai. Since this affair has occurred the sergeant has resolved not to take any liquor at all, and he earnestly begs that Captain Battye will see fit not to send the matter any further.

P. L. VAUGHAN,
Sergeant.

I wrote another letter as follows:—

CONSTABLE VAUGHAN most respectfully begs to request that the Inspector-General will be good enough to reconsider his decision in his the constable's case, which was founded on Captain Battye's minute on the papers, and not by the evidence contained in the papers themselves. No doubt Captain Battye was actuated by the best intentions for the good of the service, but the evidence before him did not justify the severity of his remarks. In support, Constable Vaughan begs to attach statements from Mr. Robertson, solicitor, and Mr. Lloyd, C.P.S., Tumut, the gentlemen whom Sergeant Vaughan mentioned in his explanation as being the last the sergeant saw, which statement they are prepared to verify on oath, if necessary. And again Constable Vaughan most respectfully asserts that his statement and Sergeant Coveny's statement are literally correct, and that there was no drunken exhibition riding through the streets of Tumut. Sergeant Vaughan candidly admitted having a few glasses of grog under the conditions mentioned in his statement, which he hopes will not be taken as an admission that he was drunk, a charge that was never preferred against him. Sergeant Vaughan would rather be punished than charged with being a liar. The Inspector-General will no doubt recollect Sergeant Vaughan's career in the service, and so on.

Police Station, Gundagai, 23 July, 1889.

I asked for a reopening of the case, and attached the following letters:—

Dear Sir,

In reply to your question as to your condition on the 29th June last, I have to say that when I left you on that morning at 9:45 a.m., after talking over some little matter of business with you, you were perfectly sober.

Tumut, 17 July, 1889.

To Sergeant Vaughan, Gundagai.

Yours truly,

ALFRED J. ROBERTSON.

My Dear Sergeant Vaughan,

As requested by you, I have much pleasure in stating that you called at my office about 10 a.m. on the morning of the 29th June last, and were then quite sober.

Tumut, 17 July, 1889.

Yours faithfully,

CHARLES J. LLOYD, C.P.S.

I asked for an investigation of the case, which was refused me, and the present Inspector-General, no doubt from what was on the previous papers, thought this charge was correct, and I was reduced. You recommended me then to be dismissed, I believe? It occurred so many times; I do not like to say how many.

383. *Chairman.*] But in regard to this particular case, did you recommend Mr. Vaughan for dismissal on account of the alleged drunkenness at Tumut? I cannot say. I reported as follows:—

Corowa, 9 July, 1889.

IN forwarding these papers to the Inspector-General, containing grave charges against Sergeant Vaughan, I much regret that the sergeant does not deserve, neither do I recommend, any further leniency being shown him. He has so thoroughly given way to drink that he is not to be trusted on any duty; therefore I consider him totally unfit to remain in the service. I consider

consider Sergeant Coveny greatly to blame for not preventing Sergeant Vaughan from making such an exhibition of himself E. M. Battye. in riding drunk through the streets of Tumut, for he must have observed that he was unfit to proceed on his journey. Yet in his report he attempts to shelter him by saying, "He could not say he was drunk." I do not consider a sergeant who makes such a statement reliable or fit for his position. I am also much displeased with First-class Constable Bulmer in asserting in his report that Sergeant Vaughan "appeared to be sober," well knowing he was not. Such conduct as this, both on his and Sergeant Coveny's part, is totally unbecoming their rank and position in the Force. I have instructed Senior-sergeant Grugeon to forward you the defaulter sheets. 30 Sept., 1896.

E. M. BATTYE, Captain,
Superintendent.

That was my report to the Inspector-General, and the Inspector-General bears me out.
384. Where was the evidence before you? In these papers.

THURSDAY, 1 OCTOBER, 1896.

Present:—

MR. BARNES, | MR. TRAVERS JONES.
J. GORMLY, ESQ., IN THE CHAIR.

Mr. P. L. Vaughan appeared on his own behalf.
Edward Montague Battye, further examined:—

385. *Mr. Vaughan.*] In the face of the letters from Mr. Robertson and Mr. Lloyd, and of Sergeant Coveny's report, did you not think it advisable or just to me to have a personal investigation of that matter? No; I did not. I could not tell you why at the present moment. E. M. Battye. 1 Oct., 1896.

386. And you also sent Sergeant Coveny's defaulter's sheet to the Inspector-General with a view to his being punished for writing his report? I believe I did.

387. What evidence had you that Sergeant Coveny made an untruthful report? I cannot recollect every little statement made eight or nine years ago. I have no doubt whatever the statement I made in these papers is correct.

388. You held Sergeant Coveny to blame for writing a report stating I was not drunk;—was not that so? I will read an extract from my memo., dated Albury, 13th July, 1889, written to Sub-Inspector Cornett:—

It is now my disagreeable duty to point these facts out to Sergeant Coveny and First-class Constable Bulmer, both of whom were asked by their officer a certain question, viz. :—Sergeant Coveny—Was Sergeant Vaughan strictly sober when about to leave Tumut? To this he did not, or would not, give a direct answer, but stated: "Sergeant Vaughan appeared to him to have had some drink, but he could not say he was drunk." And First-class Constable Bulmer was asked: "Did Sergeant Vaughan appear to be suffering from the effects of drink?" He could or would not give a direct answer, but says: "Constable Field was perfectly sober, and the sergeant appeared to be sober." Now, why the words "perfectly sober" were applied to Constable Field and the words "appeared to be sober" applied to the sergeant I cannot understand, unless the sergeant did appear to him (Bulmer) to be suffering from the effects of drink, as asked by his officer (Mr. Cornett), which fact was clearly proved by Mr. Vaughan's own admission and the statements of Constables Field and Winch, and as the Inspector-General remarks, "It must have been observable." He (the Inspector-General), therefore desires me to express my opinion to both Sergeant Coveny and First-class Constable Bulmer "with an admonition," which I now do, trusting that no evasive answers will ever again be given, that no drunkenness (or similar drunken exhibition) will ever be passed over or screened by them, or by any member of the Force, tending thereby to bring disgrace upon it. Those who venture to do so must stand the consequences.

E. M. BATTYE, Captain.

389. In the report of mine did I admit that I was drunk? I cannot say now, it is so long ago.

390. I admitted, as I always did, taking a glass of grog; but because I told the truth, and said I had a glass of whisky, you took it as an admission that I was drunk? I am not aware of doing that kind of thing.

391. What evidence had you to rely upon in making your statement to the Inspector-General in face of the letter from Mr. Robertson and the Clerk of Petty Sessions, and of Sergeant Coveny's report? My replies are in these papers.

392. Do you remember an application of mine from Gundagai for reinstatement after the Inspector-General's return from England? I recollect receiving your memorandum, dated 14th February, 1889, on that subject. In a district like this there are only a certain number of senior-sergeants allotted to it. So, if the crown is taken from one, and there is no vacancy, he cannot be promoted till there is a vacancy in the district. He cannot be advanced in pay and rank unless there is a vacancy in the meantime. The Inspector-General might appoint him to a district where there is a vacancy, but when once a man loses his rank he cannot be reinstated unless an opportunity occurs.

393. Before you forwarded that to the Inspector-General, you forwarded it to Mr. Harrison at Wagga Wagga for his report? I dare say I did. Once a man loses his position he is done for, until a vacancy occurs, and then the most trustworthy, the one considered most fit, is appointed by the Inspector-General, not by me, and without my recommendation, or anything of the kind.

394. Why did you think it necessary to send that report to Mr. Harrison for his report, he then having no control of that sub-district? It went to Mr. Cornett.

395. It went from Mr. Cornett to you, and from you to Mr. Harrison in another sub-district? Because you had so recently come from there, I suppose. The more backers you had the better. I wrote to Mr. Harrison in these terms:—

Before I forward this application from Sergeant Vaughan to Inspector-General I will be glad of Mr. Harrison's remarks thereon, *re* case alluded to and tried before His Honor the Chief Justice, should he (Mr. Harrison) have any to make?

396. What does Mr. Harrison say in reply? This is an extract from Mr. Harrison's report:—

In returning the attached application to Captain Battye, I regret I can say nothing favourable of Sergeant Vaughan's conduct during the eighteen months he was under my orders and in charge of Narrandera. From his constant muddled state the whole of his police duties were neglected.

397. *Mr. Gormly.*] What was the reason for sending it on to Mr. Harrison? To show the Inspector-General what Mr. Harrison's opinion was of Sergeant Vaughan's ability.

398. Because of his having been under Mr. Harrison? Yes; as a matter of course.

399. *Mr. Vaughan.*] What was Mr. Cornett's opinion then—was it not favourable? Mr. Cornett stated: "During the time Sergeant Vaughan has been stationed here he has been steady and most efficient in the discharge of his police duties. Trusting Captain Battye will see fit to recommend him to the Inspector-General for reinstatement to his former rank."
400.

- E. M. Battye. 400. *Mr. Gormly.*] Sub-Inspector Cornett reported favourably from Gundagai? Yes; but I cannot reconcile this with his reports against Vaughan on 30th June, 1889.
- 1 Oct., 1896. 401. *Mr. Vaughan.*] Did you not know for a fact that ever since Mr. Harrison came to Wagga Wagga he had a personal grudge against me? Certainly I did not; I never had knowledge to that effect.
402. Did you not, on your inspection at Narrandera, tell me personally that almost by every mail there was a report against me by Mr. Harrison? Very likely I did.
403. And I said to you, "I don't care if he sends a report every day, if I have an opportunity to defend myself," and you said, "You certainly shall have that"? It is a great pity the poor fellow is dead.
404. What complaint had you from Germanton that you should recommend my reduction;—did you make any investigation? I did.
405. Examined witnesses? Do you mean civilian witnesses?
406. Yes? No, I did not. I do not approve of calling in against the head of the police at the different stations Tom, Dick, and Harry from the streets.
407. Was there any complaint from the public of Germanton of laxity of duty on my part? There were complaints in my office, and here is a list of documents that were sent to you, and that you neglected to return:—19th January, *re* delay of completing district returns; 30th January, *re* criminal statistics delay; 3rd February, for reply to queries *re* wheat crops sent on 7th January; 3rd March, for return of circular 92-945, sent you on 15th February; 15th March, for stock and crop returns, sent you December, 1891; 30th March, *re* delay in payment of accounts; and so on.
408. *Mr. Gormly.*] Your cause of complaint was that he had not sent in returns? Yes.
409. Your visit to Germanton was to make inquiry into this neglect of duty? Exactly.
410. *Mr. Vaughan.*] Were not these each explained away as they occurred? I cannot say that. Most certainly they were not; because I picked up some of the papers in your office, after which were scattered about, and Sergeant Barnett picked up some.
411. Was it not a fact that when I was sick for a week at Germanton you ordered me into Albury—took me out of a sick bed? I was not aware you were sick. I ordered you to my office because I could not get you to complete the returns. I wished you to attend at my office daily until they were completed.
412. Do you think your office the proper place in which to complete returns which should be done at the station where the questions arose? They should not be completed in a hotel bed, where I saw you at half-past 11 in the morning, whereas you should have been at my office at 9. I did not like to send a constable to the hotel with a message, so I went myself, and was told you were in bed, and not fit to come down.
413. You are not answering my question—you did not go to Germanton and make an investigation, but you brought me in to Albury, where I had not my books or anything else to answer things that I could not answer without a record of my statements;—is not that so? Decidedly not; the Police Departments records I went for. I found some kicking about in your quarters.
414. I was Clerk of Petty Sessions at Germanton, was I not? You were.
415. And mining registrar? You did not do your police duties, or could not do it, or something of the kind.
416. Did not do what? The duties as senior-constable that were required of you. Unfortunately, I sent you there in the hope that you would perform them. It would have been a stepping-stone for you.
417. You know Mr. Browne, Police Magistrate at Albury? Yes.
418. He used to visit Germanton every month? Yes.
419. Well, he is capable of forming an opinion of how the duties were done at Germanton? He has nothing to do with you, excepting in his Court.
420. Was he not Police Magistrate of my district? Exactly.
421. *Mr. Gormly.*] Sergeant Vaughan was acting Clerk of Petty Sessions at Germanton? Exactly.
422. And Mr. Browne visited there as Police Magistrate? Yes.
423. Would not Mr. Browne, therefore, be capable of judging whether Mr. Vaughan performed the duties of Clerk of Petty Sessions correctly or not? I daresay; but that has nothing to do with my office.
424. Are you of opinion that Mr. Browne would be capable of saying whether Mr. Vaughan performed his duties correctly or not? He would be capable of expressing an opinion. This is what Mr. Browne said in a letter, dated from "Petty's Hotel," Sydney, 7th January, 1893:—

Mr. P. L. Vaughan, ex-Sergeant of Police in the Albury District, has been known to me as being in charge at Germanton and Bowna. Personally I have found him highly capable in the discharge of his duties, and I am aware that his departure from the district was generally regretted.

425. Do you think Mr. Browne would be capable of telling a falsehood? Mr. Browne has nothing to do with my police office.

426. Mr. Reilly, Inspector of Public Accounts, would, of course, know how the duties were performed? Of course.

427. This is what he says in a memo., dated 16th October, 1890:—

I HAVE this day completed my inspection of the accounts of Senior-constable Vaughan, acting in the capacity of Clerk of Petty Sessions at Germanton, and have much pleasure in stating that I found the books neatly kept, and in every way satisfactory.

R. H. REILLY,
Acting Treasury Inspector.

That is what Mr. Reilly says? Of course; perfectly satisfactory.

428. Have you any reason to think that that statement of Mr. Reilly's is not correct? Most decidedly not, but that is out of the way of my department altogether, and in a different building.

429. *Mr. Jones.*] I suppose if Mr. Vaughan, as a police officer, was not capable of doing his duty as C.P.S., it would be reported to you? Most undoubtedly. Mr. Browne would have reported it to me. I always had the highest possible opinion of Sergeant Vaughan's ability, when he had not been drinking.

George Read sworn and examined:—

G. Read. 430. *Chairman.*] What is your position? I am Superintendent of the Metropolitan District.

1 Oct., 1896. 431. *Mr. Vaughan.*] I believe you were acting Inspector-General in May, 1888? Yes; I was acting from March until early in December of that year.

432. Had you up to then any recollection of me in the police? I cannot say that I had any distinct recollection.

recollection of you, but I noticed by the records that you served in the Metropolitan District for something more than a year; I think in the year 1865, and a portion of the year 1866.

433. You had to deal with a report against me by Mr. Harrison, in reference to a case of rape? Reports were made by the late Inspector Harrison, and your Superintendent, Captain Battye.

434. And you dealt with those reports? I dealt with them early in May.

435. Your decision was that I should be reduced in rank? Yes; from the rank of a senior-sergeant to that of a sergeant, and you were removed to Gundagai.

436. Do you know what loss per annum that would entail? I have not calculated it. It would entail of course the difference in pay between that of a sergeant and that of a senior-sergeant.

437. It would be about £60 per year, and I was also C.P.S.? I could not say. I only knew you as Senior-sergeant of Police. What other appointments you had, I am not aware of.

438. What evidence had you before you in coming to your decision? I relied on the reports of the late Inspector Harrison, and your Superintendent, Captain Battye. They were both men of probity; men whose evidence would be considered sufficient in any court of justice in the Colony to warrant a verdict, and, therefore, I could not reasonably discredit their statements. I had served in conjunction with Mr. Harrison in Sydney for a number of years, and I always had every confidence in his integrity. I believed him incapable of saying what was not true.

439. Did you not have my report of the 4th of May with the papers? I received a report from you in your defence to the charges preferred against you by your responsible officers.

440. You did not credit that? I did not credit it, because it was uncorroborated, and you did not even insinuate that your officers were actuated by any other than motives of duty.

441. In my report of 4th May appears this paragraph:—

Now, as to Senior-sergeant Vaughan not troubling himself about the matter, what are the facts: Middleton states, while in the chemist's I told the senior-sergeant all I knew about the case, and he told us all to be down to the Court on Monday morning. Senior-sergeant Vaughan made note of all the particulars from Middleton, Ross, and the woman Roberts, which Mr. Duval, the chemist, can prove. The statement of the latter two witnesses is not correct in this respect. Senior-sergeant Vaughan also saw Nellie, the black gin, and asked her why she left the child alone in the tent; she merely said she was lonely and could not stay. She could not give any evidence bearing on the case.

A statement of the tracker and Allen, the aboriginal, could not bear on the case unless the hat was introduced into it. Had it, the senior-sergeant would have made every inquiry in that direction. The witnesses Ross and Roberts were to blame, not mentioning the finding of the hat to Senior-sergeant Vaughan, as they could see he was trying to find out all the particulars of the case.

In conclusion, Senior-sergeant Vaughan most respectfully submits that he has done all he could in connection with the case, and that he is free from all blame in the matter.

Was not that a denial? Yes; you denied the whole statements of your two responsible officers.

442. Then, as Acting Inspector-General of Police, what steps did you take to decide whether I was right, or they were right? I took no steps, for the simple reason that if you had evidence to substantiate your denial, you could, if you had seen fit, have forwarded statements in your favour from a dozen persons with your own written defence.

443. Do you think there was sufficient evidence for you to come to your decision? I think so. I have already said that I knew Mr. Harrison as an officer on whose word I could thoroughly rely. I had not so much experience of your Superintendent, Captain Battye, but these men's statements would be relied on in any court of justice in the Colony, and I could discover no motive for untruthfulness on the part of either of them. That is why I credited their reports.

444. Is it not usual for a man of the rank of a senior-sergeant, if he appeals, to have his request granted by the Inspector-General? Yes, if he appeals in the proper form. In making appeals it is usual to state what evidence can be adduced in support of the appeal. That is the practice in my district.

445. Did this telegram from me to Superintendent Battye reach you:—

Narrandera, 23 May, 1888.

BEFORE leaving Narrandera Sergeant Vaughan expects an investigation into Mr. Harrison's charges. He can find sufficient evidence to refute all the charges levelled against him by Mr. Harrison.

Did you receive that? I probably received it, but I have no distinct recollection of it. Perhaps it is proper that I should remark that your appeal would be against my own decision. I do not know that I could entertain such an appeal, but it was competent for you, when the Inspector-General returned from Europe, to address an appeal to him, accompanied by any evidence that you might have to adduce in your defence.

446. Do you remember a petition from the people of Narrandera in these terms:—

Sir,

Narrandera, 28 May, 1888.

We, the undersigned residents of Narrandera and district, have the honor to bring under your notice the following facts, and ask you to kindly give the same your favourable consideration:—

- (1.) Senior-sergeant Vaughan has been in charge of Narrandera station for the past five years, and as far as we are aware, has satisfactorily carried out the duties of his office.
- (2.) We hear with great regret that he is under orders for transfer, and it comes on us as a surprise to hear that he is not only to be removed but also reduced in grade.
- (3.) We venture to think if Senior-sergeant Vaughan is afforded the opportunity, he can satisfactorily account for any apparent laches of duty.
- (4.) While not presuming to interfere with departmental regulations, we desire to place upon record our esteem and appreciation of Senior-sergeant Vaughan's services.

Respectfully soliciting your kind reconsideration of the matter,

We have, &c.,

BRUCE KENNEDY,

Mayor.

? Yes.

And 71 signatures following.

447. And this is your letter in reply:—

Sir,

Sydney, 30 May, 1888.

In acknowledging the receipt of your petition of the 28th instant, I beg to inform you that Sergeant Vaughan's removal from Narrandera has been decided upon after very mature consideration, and is deemed necessary in his own interests and those of the public and the department alike. He has been afforded ample opportunity of replying to the complaint made against him. I regret, therefore, that I cannot reconsider my decision.

I have, &c.,

GEO. READ,

Acting Inspector-General of Police.

B. Kennedy, Esq., and others.

Is that correct, that I had "ample opportunity"? Yes; so far as I am aware.

G. Read.
1 Oct., 1896.

448. Were you aware that I was never charged with anything, or brought to face either with Superintendent Battye or Mr. Harrison in regard to the matter? It is not usual for men in the country to be brought face to face with the officer who makes the complaint against them. Matters are replied to in writing, and when you were informed of the particulars of the complaint of your officers, Mr. Harrison and Captain Battye, you had an opportunity of saying anything you wished, and you did say a good deal in your defence. And you had an opportunity also of forwarding statements from any persons who, you thought, could assist you.
449. Did I not ask for an investigation there and then, and that the parties should be brought face to face with me? That was after the matter was decided.
450. Did you ever take the trouble to get the depositions in the Drewitt case, to see what I did in that matter? No; I relied on the reports of Mr. Harrison.
451. And punished me to the extent of £60 a year, and deprived me of the rank of sub-inspector that I was then entitled to? Not for that offence alone.
452. That is what you had to deal with? No; I had to deal with several matters. I had to deal with you, not only for your neglect in the Drewitt case, but for being in a constant state of muddle from the effects of drink. I had to deal with you for disobeying the orders of your inspector, Mr. Harrison, disregarding the admonition of your superintendent, disregarding also the censures of the Inspector-General, and for neglect in not sending in your returns. If my memory serves me, you had neglected to send in your returns, and in consequence the returns of the whole district were delayed.
453. In the face of my denying all these statements, would you convict a man after twenty-two years' service without the scratch of a pen on his defaulter's sheet? It would depend on the character of the evidence against him.
454. There could not be eye-witnesses to this thing;—would not the greatest criminal be allowed to defend himself and come face to face with his accusers? It is not usual in the Police Department in the country. You would have required to go to Albury if your superintendent was at his head station, and you would have required also to go to Wagga to confront the officer who complained against you there.
455. Is it not the usual course for an officer to go to the station where the offence occurred? I understood Mr. Harrison did go to Narrandera. He informed me that he had a conversation with the Chief Justice while the Drewitt case was being tried, and the Chief Justice concurred in his going to Narrandera to make some inquiries.
456. Do you know that although Mr. Harrison came to Narrandera and took some statements, yet I was not present, nor was I asked for a statement? I do not know.
457. Did you know that although other witnesses were brought to Sydney, that I was kept conveniently at Narrandera, and was not brought to Sydney to explain away matters before the Executive Council in the Drewitt case? In that case the witnesses who were brought to Sydney were brought solely to be examined with regard to the identity of the offender, of which there would appear to have been some doubt.
458. Would it not occur to your mind that I would be very likely to give additional evidence on that point? I was guided by the officers in the district, who knew the facts very much better than I did. I was at a distance, and could not know the facts.
459. Are you aware that the Executive Council called for me several times in Sydney? I am not.
460. Do you remember Mr. Gormly, Member for the Murrumbidgee, and Mr. Lakeman calling on you about the matter? I remember some gentleman calling. I think I remember Mr. Gormly calling on one occasion. I notice that I said I considered it would be to your advantage if you were removed to Gundagai.
461. You considered it to my advantage to be reduced £50 a year? I have served some forty-seven years in the Police Service here and in London, and I never knew an instance where such conduct as yours was dealt with by a less severe punishment.
462. And you did not consider that I should be heard in defence? You were heard in defence.
463. Before what tribunal? I got your written defence unaccompanied by a single statement in support of it. And it is very much the practice in the Police Department, as well as in other places, for men, when they are complained of for misconduct, to deny the truth of the complaint.
464. Is it not often the case when officers in the police appeal against a decision of the Inspector-General, that the Inspector-General refers the case to the Bench of Magistrates when it is a question of neglect of duty? It has been done; but you were dealt with mainly for breaches of police discipline, and it is not the practice to refer breaches of police discipline to Benches of Magistrates.
465. Would you not, at all events, think that I would be entitled to an investigation? I understood there was an investigation. The complaints of your officers were either read to you or shown to you, and you were acquainted with all the facts alleged against you.
466. The first and only possible opportunity in getting an investigation in the matter was denied by you? Denied by me? The case was investigated before ever I decided it. I received your defence before I decided the case.
467. And, of course, you did not believe my statement? I could not believe the statement of an accused person against the statements of two thoroughly reliable officers of police, who were never known to have led the department astray in any instance, so far as I am aware.
468. Mr. Harrison was down in Sydney then, I believe? Yes.
469. And, of course, he had a conversation with you about the matter? I exchanged a few words with him. I remember in substance what I said.
470. Do you remember this letter from Mr. R. H. Ferrier to Mr. G. R. Dibbs, M.P., dated Narrandera, 29th May, 1888:—

My dear Sir,

By to-day's mail a petition goes forward to Inspector-General of Police on Sergeant Vaughan's behalf, specially asking that his case should be reopened, with the object of enabling himself an opportunity of further explaining away the various departmental charges made against him.

I would deem it a favour if you would kindly wait on the Inspector-General and do what you can, as the people here deem the sergeant fully worthy of the trouble they have taken in him.

Yours, &c.,

Per R. H. FERRIER,
D.F.

Was not that asking for an investigation? I declined all applications to reopen the case, because you had been given, as I understood, ample opportunity to make your defence, and you made your defence in writing,

writing, but it was not accompanied by any statement in its support. It was open to you to send a dozen statements from persons who could assist you, if you thought fit.

471. You refused Mr. Dibbs to have the case investigated? I replied to his communication. I do not remember the reply.

472. This was your reply:—

Sir,

Sydney, 31 May, 1888.

With reference to the letter addressed to you by Mr. R. H. Ferrier, of Narrandera, respecting the transfer of Sergeant Vaughan from that place, I beg to state that the sergeant's removal had been decided upon after careful consideration, alike in his own interest and that of the public and the department. He is being sent to a better station, but does not appear to understand that the change will be to his advantage.

I have, &c.,

GEO. READ,

Acting Inspector-General of Police.

? I will tell you why I ordered you to Gundagai, if you wish.

473. I do wish? I have said that I had a short conversation with Mr. Harrison, and he informed me that although your associates at Narrandera were otherwise respectable, some of them were free drinkers, and that drink was your weakness, and that he had little hope of your improvement while you remained with your associates there, and I therefore thought it would give you a better chance if you were sent to Gundagai. That was my sole motive. I sent you to Gundagai, not as a punishment, but for your benefit.

474. And you took in these verbal statements from every source and did not allow me to defend myself? It was not a breach of discipline—it was an indiscretion. It was no breach of discipline to be intimate with men who were otherwise respectable, but were free drinkers. A man often has to be friendly with men who drink, but in your case, and with your propensity at that time, it might be a temptation that you would not be able to withstand, and it was the duty of the head of the department to try to save you if he could. I have done the same thing in several instances.

475. And you allowed not only myself but the respectable people of Narrandera to be slandered in that way? I do not think they were slandered—they were not charged with any offence. It was said some of them were free drinkers. It was not even alleged they were drunkards. It was alleged that you took so much drink as to be almost constantly in a state of muddle.

WEDNESDAY, 7 OCTOBER, 1896.

Present:—

MR. BARNES, | MR. GORMLY,

MR. TRAVERS JONES.

J. M. CHANTER, Esq., IN THE CHAIR.

Mr. P. L. Vaughan appeared on his own behalf.

Robert Bell called in, sworn, and examined:—

476. *Chairman.*] You are a constable of police? Yes; stationed at Tumut at present.

477. This is an inquiry into the removal of Senior-sergeant Vaughan from Narrandera;—were you stationed at Narrandera? I was. R. Bell.
Oct., 1896.

478. During what years? I think I went there in April, 1883, and left on the 26th November, 1887.

479. You were there the whole time that Mr. Vaughan was in charge of the police station at Narrandera? No; I was there about two or three months before he came to Narrandera, and I think I left six or seven months before he left Narrandera.

480. Upon what date did you arrive at Narrandera? I think it was either the 3rd or the 4th April, 1883. I was there about four years and nine months altogether.

481. And you remained there until the end of 1887? I left on the 26th November, 1887, when I was removed to Tumut.

482. *Mr. Vaughan.*] I believe that you were lockup-keeper during the whole of the time that you were at Narrandera? I was.

483. In the charge-book now produced do you recognise certain entries as being in your own handwriting? Yes; that is my handwriting.

484. You see the name James Drewitt? Yes; I do.

485. What was the date of his arrest? 2nd October, 1887.

486. At what hour? 12:30 a.m.

487. Who was the apprehending constable? J. F. Davison.

488. Do you remember when I came on the scene at the lock-up on that morning after the arrest? I would not be certain.

489. Do you remember either of us going to the chemist's shop that morning after the occurrence? I remember something about it.

490. Do you remember the following day my having a shirt taken from the prisoner and securing it? I do.

491. And having it produced in evidence? Yes; it was.

492. Have you any recollection as to whether Dr. Mitchell was or was not absent on that morning? I cannot remember whether he was or was not absent.

493. Do you remember how the prisoner was dressed? I think I remember that he had no hat on.

494. He was an aboriginal? Yes.

495. *Chairman.*] Was that when he was brought to the lock-up? Yes; when Constable Davison brought him.

496. *Mr. Vaughan.*] Do you remember Constable Davison bringing a hat to you at any time whilst the prisoner was in the lock-up? Yes, I think I remember Constable Davison having a hat belonging to a prisoner near the cell-door—in the passage.

497. Do you remember whether that was ever brought under my notice or anything about the hat? So far as I am aware, it was not brought under your notice—at that time, it was not.

498. Do you remember after the Circuit Court at Wagga in the following April, something turning up about a hat being in evidence, and Mr. Harrison coming to Narrandera to make some inquiries;—I believe you had left that station then? Yes; I had left the station at that time.

499. But you supplied a report from Tumut? I cannot remember.

500.

R. Bell.
7 Oct., 1896

500. Will you read this report on page 7 of the printed papers? Yes.

501. Is that your report? Yes; that is my report.

502. After refreshing your memory by looking at that report, can you carry your recollection back to anything that occurred about the hat? Yes; I think I recollect Davison fetching a hat some time after the arrest, and informing me that someone had picked up the hat near the tent where the outrage had been committed, and had given it to him.

503. But that did not come to my knowledge? Not that I am aware of.

504. As the apprehending constable, it would be Davison's business to tell me all about it? Yes, it would; it would be his business to report the matter to you.

505. Do you know, of your own knowledge, that I had the clothing worn by the child taken and kept until Dr. Mitchell's arrival the next evening? I do.

506. I did everything that I possibly could to get up a case? Yes. I remember Dr. Mitchell examining the clothing of the child, and also the prisoner's shirt.

507. With regard to cases generally while you were at Narrandera, did I not on every occasion pay the greatest possible attention to cases of arrest and to the getting up of evidence? In every case.

508. In regard to the cases that came under your notice, what was the general character of my conduct of the cases? You were always most particular in looking after the cases, getting up the evidence, and conducting them in the court. That was my experience whilst I was at Narrandera.

509. Did I always conduct important cases myself? Always. I do not remember your failing to do so.

510. Did you ever know a miscarriage of justice in any case? No.

511. Were there not a great many prosecutions for sly grog-selling and other offences committed in the Chinese camp? There were at the time you were there. There was a great deal of business at the court, and a large number of apprehensions.

512. What was the result of the cases? In nearly every case convictions took place.

513. You were brought down to Sydney to appear before the Executive Council in the Drewitt case? I was.

514. I was not brought down, was I? No. I came down with Inspector Harrison, Constable Davison, and a man of the name of Roberts.

515. They were witnesses at the trial? They were.

516. Do you know whether the Executive Council did or did not call me at the inquiry? I would not be certain, but I think you were called.

517. But I was not there? You were not there.

518. *Mr. Gormly.*] You mean that the person who was calling in the witnesses called for Senior-sergeant Vaughan? Yes; he called his name out the same as he called for Constable Bell.

519. *Mr. Vaughan.*] In Mr. Harrison's report of the 20th June, 1887, in referring to an application from the Municipal Council of Narrandera for extra Police protection, he says:—

That some of the public-houses sell nearly all night, entailing any amount of drunkenness and rowdyism, which the Police make no apparent effort to check, as also the sale of liquor on a Sunday to both whites and blacks.

Is that correct? That was not a fact.

520. Was there proper vigilance over the public-houses? Yes; there was until late. I have been out until 3 or 4 o'clock in the morning very often with yourself.

521. In the same report by Mr. Harrison he uses these words:—

I may mention that the lock-up keeper performs no town duty, even though the lock-up may be free from prisoners for more than a week at a time.

Is that correct? No; the lock-up was scarcely ever free from prisoners.

522. How was your time filled up when you were not at the lock-up? Sometimes in attending Court and at odd times in meeting the trains, and in doing various things just as I received orders from you.

523. You always had to attend the courts? I always attended every court—the land court or any other court.

524. Your duty was also to attend to the post? Yes.

525. And to be in quarters for anybody calling when you were not detailed off for any other duty? Yes; I had to be ready to attend to any calls.

526. In that way was not your time fully filled up? Yes; it was.

527. More than eight hours a day? Yes; I used to consider that I was employed more than eight hours a day.

528. Were there not frequent calls from the Chinese camp and other places at all hours of the night? Very frequently; especially at night.

529. And both you and I had to attend to them? Yes. An order was issued by Captain Battye to the effect that the lock-up keeper was not to be put on town duty when there were prisoners in the lock-up. Captain Battye was then our superintendent.

530. On page 6 of the printed papers there is a report from Mr. Harrison to Superintendent Battye, dated Wagga Wagga, 22nd April, 1888, in which Mr. Harrison, referring to me, says:—

It is a well-known fact that the best part of his time is passed in public-houses, and that he is more or less constantly in a muddled state.

Is that correct? No; that is not correct.

531. Is there any truth at all in it? No.

532. Was it not part of your duty to accompany me when, having nothing particular to do at the lock-up, I called upon you to go up town with me to see that the public-houses were properly closed or to attend to other matters? Yes; you frequently called me out of my bed to attend to town duties.

533. Did you ever see me in a state of intoxication or unfit to perform my duties? No.

534. With regard to Mr. Harrison, was it known to you personally that he had a great deal of ill-feeling towards me in every matter that occurred? Well, I considered that he had.

535. And that that feeling was apart from his anxiety for the good of the service, so far as you know? That would be my private opinion. I considered that he had some ill-feeling towards you.

536. *Mr. Gormly.*] For what reason did you arrive at that conclusion? He would sometimes make inquiries of me, and from those inquiries I formed that opinion.

537. *Chairman.*] You mean that from the tone of the inquiries you judged that there was some personal animus;—is that what you wish the Committee to understand? Yes. 538.

R. Bell.
7 Oct., 1896.

538. During your stay at Narrandera you say you never saw Mr. Vaughan in a muddled state or the worse for liquor;—did you ever hear anyone else say that they had seen him in such a state? I have heard some who have been through his hands pass such remarks.
539. You mean prisoners? Yes; persons who have been in the lock-up.
540. Did Inspector Harrison at any time ask you a question as to Mr. Vaughan's sobriety or otherwise? Yes; I remember that on one occasion he did. One morning Inspector Harrison came to the lock-up and asked me a question about Mr. Vaughan's sobriety, but I really could not tell you the exact question which he asked me.
541. And from your own knowledge, your answer to Inspector Harrison was—what? I really could not tell you now. It occurred a long time ago.
542. Can you recollect whether, in reply to a question of that kind, you said that Senior-sergeant Vaughan had or had not been in a muddled state? I recollect the time. It was one morning soon after the Municipal Council made an application for a night constable.
543. Do you recollect the answer that you gave to Inspector Harrison? No. I remember his asking me how I put in my duty when there were no prisoners in the lock-up, and also when there were prisoners in it.
544. *Mr. Gormly.*] But you have said that Inspector Harrison asked you a question as to Mr. Vaughan's sobriety? Yes.
545. Is it not probable that if you remember the question which he asked you, you would also remember what reply you made? I think he asked me if I ever saw Senior-sergeant Vaughan under the influence of drink; I think those were the words he used, but I would not be sure.
546. But can you say what answer you gave? I denied it; I said "No."
547. In regard to the prisoner Drewitt, and a report being made in regard to a hat,—are aboriginals in the habit of going about without hats? No.
548. They are not? No. Sometimes they are in the habit of going about without boots, but not without hats.
549. Have you seen any aboriginals going about without hats? In my experience, I have seen very few aboriginals going regularly about without hats.
550. If an aboriginal were brought to the lockup without a hat would it strike you as being anything unusual that the hat was absent, or would you think that the aboriginal might be in the habit of going about without a hat? I should notice it, and if he were drunk I should think that he had lost his hat through being drunk. If he were sober I might think that he had not come quietly with the constable, and had lost his hat through that.
551. *Mr. Travers Jones.*] On page 2 of the printed papers, Mr. Harrison in his report says:—
As to an additional constable being required, I do not consider that at the present time there is full employment for the men that are there.
Were the men who were there at that time fully employed? Yes; they were fully employed.
552. Some of the residents at that time applied for an additional constable,—was it necessary to have an additional constable at that time? Well, there was no one regularly out on duty at night unless Senior-sergeant Vaughan sent some of us out on special occasions. He would sometimes call me up and take one of the other constables and patrol around the Chinese camp, and different places.
553. *Chairman.*] The question is, was the work so constant there as to necessitate an additional constable? Yes; I think so, between the hours of 12 and 4 or 5 o'clock in the morning.
554. *Mr. Travers Jones.*] And if duty required it, the members of the Force had to be called out of their beds at night, and had to work extra hours? Yes.

James Frederick Davison called in, sworn, and examined:—

J. F.
Davison.
7 Oct., 1896.

555. *Chairman.*] What is your occupation? Storekeeper.
556. Where do you reside? At Jamberoo.
557. Were you at one time in the Police Force? I was.
558. Stationed where? Narrandera, Wagga Wagga, and the Rock.
559. During what period were you stationed at Narrandera? I could not exactly say.
560. Can you mention the year? I went to Narrandera at the end of 1887.
561. What length of time were you at Narrandera? I could not say.
562. Were you there twelve months? Over twelve months.
563. Were you there two years? No.
564. You were there between one and two years? Yes.
565. You know Mr. Vaughan, late senior-sergeant? Yes.
566. Was he in charge of the Narrandera Police Station when you were there? He was.
567. You had something to do with the arrest of an aboriginal named Drewitt for an offence committed upon a child? Yes.
568. Did Senior-sergeant Vaughan take any interest in that case? He took an interest in it after I had arrested the aboriginal.
569. You made the arrest? Yes.
570. Did you report the arrest to Senior-sergeant Vaughan? Yes.
571. How long after the arrest was made? About half an hour.
572. Did Mr. Vaughan take any action? He did.
573. What did he do? I could not say exactly.
574. Did he go to the tent with you? I could not say.
575. Were you present when he took the child to the doctor to be examined? I was not present, but I knew he had done so.
576. Were you present when he took the child to the chemist to undergo an examination? No, I was not.
577. Will you tell the Committee the exact facts about this hat—you made the arrest? Yes.
578. How was the prisoner dressed when you arrested him? I could not say now, but I know that he had no hat on when I arrested him.
579. Did you arrest him in the tent? No, on the road.
580. On the road away from the tent? Yes; a long way from the tent.

581.

J. F.
Davison.
7 Oct., 1896.

581. On the road to the town? Yes.
 582. And you took him to where? To the lockup.
 583. And handed him over to the lockup-keeper? Yes.
 584. You then reported the matter? Yes.
 585. Can you tell the Committee what instructions you received from Senior-sergeant Vaughan in reference to any future conduct of that case? I cannot remember.
 586. Was anything said about a hat at that stage? No, not at that stage.
 587. When did you first hear about this hat? I think it was on the following Monday, but I could not say for certain.
 588. On what day was the arrest made? On a Saturday.
 589. Did you hear about the hat prior to the prisoner being charged at the Police Court? No.
 590. It was subsequent to that? Yes, after that.
 591. Who reported this matter about the hat to you? One of the men belonging to the tent told me that a strange hat had been found.
 592. Do you remember to whom that tent belonged, or to whom it was alleged to belong? I believe it belonged to the man who shared it with a woman who was living with him.
 593. Do you recollect his name? No, I do not.
 594. When he gave you the hat, what did he say, as near as your memory serves you;—I mean the man who owned the tent? I could not say. All I can remember is that he said something about a strange hat having been found in the tent.
 595. On page 8 of the printed papers there is a statement made by Constable James F. Davison;—was that statement made by you? Yes.
 596. To whom was that statement given? Inspector Harrison.
 597. I will read it:—

Constable James F. Davison states that "the hat Ross gave me he said he found in his tent on the Sunday; I took it to the lockup, and said to Constable Bell, 'Here's a hat found there; I believe it belongs to the prisoner.'"

? That is a mistake. I may say that I said that without making inquiries, and I found out afterwards that Constable Bell was not there at the time.

598. The statement goes on to say:—

I can't say whether the prisoner was in the cell or the exercise-yard at the time I gave the hat to the prisoner.

? He was in the cell, because there was no exercise-yard there at the time.

599. The statement goes on to say:—

I cannot recollect what the prisoner said in reply, or what he did with the hat.

? I can recollect now.

600. What did he say? He owned to the hat.

601. The statement goes on to say:—

I never saw the hat to my knowledge afterwards; on the Sunday morning I went to Ross's tent, as I was going to the train.

Is Ross the name of the man who owned the tent? Yes.

602. The statement goes on to say:—

And told him and his wife to bring the child to the Police Court on Monday morning.

? Yes.

603. The statement goes on to say:—

I also told Middleten (who was there); I went to them on my own account; I was not sent; I saw Queanbeyan Nellie in town under the influence of liquor twice on the Saturday night, and I ordered her off to the camp; I think she was camped near, and on the other side of the Show-ground; I do not know where Drewitt was camped; I cannot say when Drewitt was given into my custody by Ross whether he had boots on, or how he was dressed; he had on some kind of trousers and shirt; I think he had a coat on, and no boots; he struggled all the way to the lockup; I handed him over to Constable Bell a few minutes before midnight; when I spoke about the hat in Court I meant the prisoner must have lost it up the road in the struggle, as he had none on when I arrested him; I made no inquiry as to who the hat belonged to found in Ross's tent.

Is that correct? No.

604. What do you say now? I only asked the prisoner if it belonged to him; I made no other inquiries about it.

605. The statement goes on to say:—

I only asked the prisoner; I cannot now recollect what the prisoner said; what I told you in Wagga Wagga about the conversation I had with the prisoner about the hat was incorrect; I cannot remember anything about it or what became of it; he may have worn it when removed to Wagga Wagga Gaol.

? He did wear it to Wagga Wagga gaol.

606. The statement goes on to say:—

I escorted the prisoner to Wagga Wagga; Queanbeyan Nellie was about the town till a few weeks ago; I was told by Mrs. Roberts the child was left in Nellie's care (the next morning); I do not remember speaking to her (Nellie) about it; I do not know whether any other constable spoke to Nellie about it; Nellie was not a witness; I do not know of any other making inquiry into the evidence in the case; I cannot recollect whether the prisoner claimed the hat or did not claim the hat when I took it to the lockup.

? Senior-sergeant Vaughan had the case in hand after I arrested the prisoner.

607. What do you now say in regard to the latter sentence:—

I cannot recollect whether the prisoner claimed the hat or did not claim the hat when I took it to the lockup.

? He did claim the hat when I took it to the lockup.

608. *Mr. Vaughan.*] Do you remember my sending you to take the child down to Mr. Duval, the chemist? I do now remember it. You told me to take the child to the chemist.

609. Do you remember the child being at the chemist's, and being examined by Mr. Duval? I was not there.

610. Do you remember my telling you to have the child taken to the chemist, and the woman and the two men? Yes.

611. That was done? Yes; the same night.

612. Do you know whether I went to the chemist? Yes; you did.

613. Do you remember whether Dr. Mitchell was or was not away from home that night? He was away from home. I think he returned on the Monday evening.

J. F.
Davison.

7 Oct., 1896.

614. Now about the hat;—did you tell me anything about the hat? I do not think so.
615. There was nothing said at the Police Court about the hat? No, there was not.
616. Do you remember at the Circuit Court at Wagga Wagga that the matter of the hat came up when the woman Roberts was giving her evidence? I remember something about it.
617. Do you remember that that witness's evidence was stopped, and I was called in and was asked by the Chief Justice a question about the hat? I cannot say that I remember it.
618. But you know, as a matter of fact, that you never mentioned the matter of the hat to me before the Police Court inquiry? Certainly, not before the Police Court inquiry.
619. Can you say now why you did not? Because I myself did not know anything about the hat until after the prisoner was committed.
620. The jury convicted him, did they not? Yes.
621. Can you tell the Committee why there is any discrepancy in the report;—you have pointed out some portion of the report which is not correct? I never had a chance to make any inquiries.
622. You made the report from memory? Yes; just from questions which he asked me.
623. Was I present when those statements were taken down? You were not.
624. Do you know whether I was called in to make any statement? I did not see you called in;—in fact the statement was not taken down in the office but in the side room.
625. Do you remember, from your own knowledge, what was Mr. Harrison's private feeling towards me whilst I was in the district? Everything pointed out that it was a feeling of personal enmity.
626. Over that case I believe that you were fined £2;—that was the decision of the Acting Inspector-General? Yes.
627. And you were transferred to Wagga Wagga? Yes.
628. And I was reduced to the rank of sergeant and transferred? Yes.
629. Can you say that there was any possible blame attached to me in connection with that hat business? No; certainly there was not. It was my fault.
630. I could not know anything at all about it? No, you could not.
631. This is another matter; Mr. Harrison is reported on page 1 of the printed papers to have stated—
That some of the public-houses sell nearly all night, entailing any amount of drunkenness and rowdyism, which the police make no apparent effort to check, as also the sale of liquor on a Sunday to both whites and blacks.
—is that correct? That is not true.
632. This is another statement: On page 6, referring to me, Mr. Harrison says:—
It is a well-known fact that the best part of his time is passed in public-houses, and that he is more or less constantly in a muddled state.
—is that true? No, that is not true.
633. *Chairman.*] Did you ever see Mr. Vaughan, during the time he was in charge of that town the worse for drink or in such a state that he was unfit to perform his duties? No; not incapable of performing his duties.
634. You never saw him unfit to perform his duties? No.
635. How many times would you see him during the day? I could not say.
636. You would see him every day? I would see him two or three times every day while he was in Narrandera.
637. And if he was in that state you must have noticed it? I must have noticed it.
638. And you did not notice any sign of drink upon him unfitting him for the performance of his duty? I never saw him in such a state that he could not perform his duty.

Samuel Wilkin Ray called in, sworn, and examined:—

S. W. Ray.

7 Oct., 1896.

639. *Chairman.*] You are a senior constable of police? Yes.
640. Stationed where? At Howlong.
641. Were you ever stationed at Narrandera? Yes.
642. During what period? I left Narrandera in 1887.
643. When did you commence your duty at Narrandera? I was there about three years—I think from 1884 to 1887. I know I left there in 1887.
644. Was Senior-sergeant Vaughan then in charge of the police force at Narrandera? Yes.
645. Were you in any way connected with the Drewitt case? No; not at all. I was there at the time, but I had nothing whatever to do with it. I was on other duty.
646. You know nothing whatever of that case? Only what I have heard.
647. *Mr. Vaughan.*] A report by Mr. Harrison, on page 1 of the printed papers, in reference to an application for more police protection at Narrandera, says:—
That some of the public-houses sell nearly all night, entailing any amount of drunkenness and rowdyism, which the police make no apparent effort to check, as also the sale of liquor on a Sunday to both whites and blacks.
Is that correct? No; not so far as I know.
648. This is another statement, on page 6. Referring to me, Mr. Harrison says:—
It is a well-known fact that the best part of his time is passed in public-houses, and that he is more or less constantly in a muddled state.
Is that correct? No.
649. Do you, of your own knowledge, know what was Mr. Harrison's personal feeling towards me? I know that Mr. Harrison had a "set" on the Narrandera station, and everybody at the station.
650. *Chairman.*] What do you mean by a "set"—that he had some personal animus? He had some personal ill-feeling against the police on the Narrandera station, and did everything to annoy them in every possible way.
651. Did that include Mr. Vaughan? Yes; and myself as well.
652. *Mr. Vaughan.*] Do you remember making an application for a transfer from Narrandera to Howlong? Yes; it was either in October or November of 1887 that I applied for the transfer.
653. Do you remember my recommending it? Yes, and also the reply you got.

654.

- S. W. Ray.
7 Oct., 1896.
654. Do you remember what Mr. Harrison put on that application? Yes; I remember nearly the exact words. Mr. Harrison stated that I was not a fit man to take charge of a station—that I was a tippler, and that I ought to be sent to a station where there was a strict man in charge.
655. He said that he could not recommend the application because you were a confirmed tippler? I do not know that the word “confirmed” was used, but I remember that the word tippler was used, and he said that I ought to be sent to a station under a strict man.
656. Do you remember that coming back to me from Captain Battye with a reproof for my recommending a tippler to take charge of a station? I remember its coming back from Captain Battye with a memorandum asking what you meant by recommending me for that station if I was a tippler.
657. Do you remember what I said in reply to that? You told him that I was not a tippler, and you requested that Mr. Harrison might be asked to produce his evidence to prove that I was a tippler.
658. He did not attempt to prove it? No; and I got the station.
659. Your application was granted? Yes.
660. Since then you have been promoted? Yes.
661. You are now a senior-constable and Acting Clerk of Petty Sessions? Yes.
662. What was my conduct generally in regard to Police Court cases? You were a man who was always looked upon as being a smart officer in court, and very particular about anything—anything that was put in your hands you always did see was carried out by the police under you.
663. Do you remember the case of the arrest of a man named Layton? Yes—Robert Wallace Layton, *alias* Close.
664. Do you remember when that was? In September or October, 1887, he was arrested.
665. There is an entry on the 30th September, 1887, showing that you and I were at Buckingbong station on the 30th September, 1887? Yes.
666. And that we returned to the Narrandera station at 6 p.m.? Yes.
667. We were at Buckingbong all day? Yes.
668. Do you remember that in returning to Narrandera I got some information from a person on the way? Yes; I was with you when you got the information.
669. Do you remember the instructions I gave you—to be ready to start at 8 p.m., and to feed the horses, because I had to send a telegram to Albury? Yes.
670. Do you remember you and I starting that night at 8 p.m. and riding to Mumbledool, and arresting Layton the next morning? Yes.
671. At the shearers' camp or in the paddock? Yes.
672. Do you remember the circumstance of our missing him at the camp? Yes.
673. And when searching for him you found him near a brush fence? I found him planted under a tree.
674. Do you remember the ordinary apprehension report that follows a case of that kind going in? Yes.
675. And I sent in the apprehension report respecting Senior-sergeant Vaughan and Constable Ray? Yes.
676. Do you remember Mr. Harrison noting on it that he objected to it, as the arrest was immediately made by you, and that I should not have been mentioned in the report of the arrest? Yes.
677. Was that usual? No; I have never seen it so.
678. The report was a proper one, although you had to prove the arrest? Yes.
679. I got the information for the man's arrest? Yes.
680. And he was arrested? Yes.
681. And convicted afterwards? Yes; and I think he got twenty-one years.
682. That would show Mr. Harrison's private feeling towards me? Yes.
683. Did you ever know any important case of crime to go unpunished at Narrandera while you and I were there? No.
684. You knew Constable Davison? Yes.
685. At that time was he not very inexperienced? Yes.
686. He had no police experience? No, he had not.
687. And you could understand his neglecting to report to me the finding of a hat? Yes.
688. *Chairman.*] When you arrested Layton, Senior-sergeant Vaughan and yourself were together the whole time? Not when the arrest actually took place. I went one way with a selector named O'Shannessy, of Mumbledool, and Senior-sergeant Vaughan, with another station-hand, went in another direction, and after riding about in the bush for about an hour I rode fairly on to where the man was planted. Senior-sergeant Vaughan was in the same paddock the whole time.
689. Then, you consider that the arrest was a dual arrest—made by Senior-sergeant Vaughan and yourself? Decidedly, although I actually arrested the man.
690. And under those circumstances the report should show that the arrest was made by the two officers? I should consider so.
691. *Mr. Gormly.*] You both went from Narrandera for the purpose of endeavouring to make the arrest? We both received the information when coming home from Buckingbong that Layton had gone to Mumbledool, and as soon as we had our tea we followed him.
692. *Chairman.*] You have already answered questions put to you in reference to Mr. Vaughan's sobriety or otherwise;—will you now tell the Committee whether you at any time saw Senior-sergeant Vaughan in such a state as to be unfit to perform his duties? I have seen Senior-sergeant Vaughan under the influence of drink.
693. Unfit to perform his duties? Well, I have seen him under the influence of drink, but I have never seen him drunk when he has had duty to perform.
694. When on duty he has been in a fit state to perform his duties? When he was on duty I have never seen Senior-sergeant Vaughan under the influence of drink.
695. *Mr. Travers Jones.*] When you had arrested Layton, did you and Senior-sergeant Vaughan travel in with him to the lockup? We brought him right into Narrandera.
696. From your own knowledge, do you consider that Mr. Harrison was rather severe on Senior-sergeant Vaughan? I always considered that he was severe on Senior-sergeant Vaughan, and on myself as well. He treated me worse than he treated Senior-sergeant Vaughan.
697. He was more severe on you than on any of the other constables at the station? He had a personal animosity against all the police at the Narrandera station, except Constable Bell. That was a well-known fact.

William James Fimister called in, sworn, and examined :—

698. *Chairman.*] What is your occupation? I am a publican at present.
699. Residing where? At the "Commercial Hotel," Wollongong.
700. Where you ever at Narrandera? I was.
701. During what period? I cannot exactly tell you from memory.
702. When did you leave Narrandera? About 1889 or 1890.
703. So far as your memory serves you, how many years were you at Narrandera? I was there about seven years.
704. Were you in business at Narrandera? Yes.
705. As an hotelkeeper? As a coachbuilder and an hotelkeeper.
706. Which hotel did you keep? "Tattersall's Hotel."
707. You know Mr. Vaughan—then Senior-sergeant of Police? I do.
708. Were you a resident of Narrandera during the whole of the time that Mr. Vaughan was in charge of the police station there? I was.
709. In reply to an application for extra police protection at Narrandera the statement has been made by Mr. Inspector Harrison "That some of the public-houses sell nearly all night, entailing any amount of drunkenness and rowdiness, which the police make no apparent effort to check";—is that a correct statement? Not that I know of—not while I resided there there; I can faithfully say that.
710. That statement was made in June, 1887? I was in Narrandera at that time.
711. On the 22nd April, 1888, Mr. Inspector Harrison, in a report to his Superintendent, referring to Senior-sergeant Vaughan, says, "It is a well-known fact that the best part of his time is passed in public-houses, and that he is more or less constantly in a muddled state";—is that statement correct? I can positively say that it is not true so far as I have seen personally.*
712. Would your business, either as a coachbuilder or an hotelkeeper, give you an opportunity of seeing Mr. Vaughan very often? Yes, as my place was only 300 or 400 yards from the police station, and I had more opportunity of seeing him than most of the hotelkeepers, I dare say.
713. You would have an opportunity of seeing him at least once a day, or more than once? I have seen him several times a day.
714. And that being the case, would it be possible for Mr. Vaughan to be in the state described there without your noticing it? Not very probably.
715. From your own knowledge, your reply is that you believe the statement to be untrue? Yes, as far as I know; from my own knowledge, I can say that I never saw anything wrong with Mr. Vaughan.
716. Have you any recollection of the arrest of an aboriginal named Drewitt for committing a rape on a child at Narrandera? I cannot call it to memory.
717. What was the opinion of the public when they asked for extra police accommodation at Narrandera—did they ask for this on account of the magnitude of the work or on account of the inefficiency of the service there? Well, as far as I have seen anything of the service in the Narrandera Police District, I think that while I was there it was very well managed—a great deal better than it was after Senior-sergeant Vaughan left. The people were very indignant when he left.
718. I believe that the people of Narrandera gave Mr. Vaughan a testimonial? Yes, they did.
719. From your knowledge of the people there as a whole, do you think that if Mr. Vaughan had been in the state described by his inspector at that time the people of Narrandera would have subscribed to that testimonial? I do not think so; in fact, I am sure that the people who did subscribe towards it would not have done so.
720. As to your own opinion of him as an officer, did you consider that he was attentive to his duties or otherwise? I considered that he was a very good officer—very attentive—while I knew him.
721. Do you know anything personally of the late Inspector Harrison? No; I cannot say that I know anything personally of him, but I have seen him several times, and I know him.
722. Did you ever have any conversation with him in regard to Mr. Vaughan? Not that I know of.
723. Or did he make any inquiries of you? Not that I remember.
724. *Mr. Gormly.*] Were you in the habit of occasionally speaking to Senior-sergeant Vaughan? Yes; I have often spoken to him.
725. About the time it is alleged in this report that he was in a muddled state? Yes; I have often spoken to him.
726. Do you think from your knowledge of men in general who are in the habit of drinking to excess that Senior-sergeant Vaughan was or was not in a muddled state? I should say no.
727. You think that if he were in a muddled state you would be capable of knowing he was? Most decidedly I would, and I would say so too.
728. And you think from your personal observation and your conversation with Senior-sergeant Vaughan that at the time he was reported by Mr. Harrison, Senior-sergeant Vaughan was not in a muddled state? I am quite sure, so far as I myself know personally, that it was wrong information, whoever gave it.
729. But Inspector Harrison reported to his superior officer that Senior-sergeant Vaughan was in a muddled state;—are you of opinion, from your personal observation, that Senior-sergeant Vaughan was not in a muddled state? From my personal observation, I think he was not.
730. If he was in a muddled state you think you would have known it? I would, most decidedly.
731. During the number of years that you have kept hotels you have seen other persons in a muddled state? Yes.
732. And you think you are capable of judging as to whether a man was or was not in a muddled state from the effects of drink? Yes.
733. And you are of opinion that Senior-sergeant Vaughan was not in a muddled state during the time you were acquainted with him in Narrandera? Never to my knowledge did I ever see Senior-sergeant Vaughan in any way unfit to do his duty.
734. You are of opinion, therefore, that this report of Mr. Harrison, that Senior-sergeant Vaughan was constantly in a muddled state, was not correct? So far as I know, it was not correct.
735. *Mr. Travers Jones.*] Were Senior-sergeant Vaughan and the other police in the habit of seeing that the public-houses were closed at the proper time? Yes.

W. J.
Fimister.
7 Oct., 1896.

736.

* NOTE (on revision) :—I wish to correct this part of the statement in saying that I have seen Sergeant Vaughan once or twice a little the worse, but not often.

- W. J. Fimister.
7 Oct., 1896.
736. And that there was no selling of grog on Sunday? Yes.
737. If so, is the statement of Mr. Harrison that the hotels were allowed by the police to be kept open all hours of the night selling grog, correct? Nothing of the sort, so far as I know. I was very strictly supervised all the time I was there. If my door was open a minute after 11 o'clock, or any person was in the house after 11 o'clock, I would get into trouble.
738. Mr. Harrison also states that at the public-houses on Sunday, liquor was sold to both whites and blacks without that being prevented by the police;—is that true? I do not think so; never to my knowledge.
739. So far as your house was concerned, the police looked after you and saw that you did not sell after hours? I do not know whether they were more severe on me than on other people; but I had more supervision there than in any other place, and I have been in Forbes, Nowra, and Wollongong.
740. Did you reside in Narrandera after Mr. Vaughan left? Yes; I was there for some time after he left.
741. Was the place better conducted by the police after he left? There was more liberty, if anything, after he left.
742. That is to say that Senior-sergeant Vaughan was more strict than the man who came after him? I think so, so far as I could see.
743. *Mr. Vaughan.*] You say you had a lot of hotels after that—in three or four towns? Yes.
744. Did not the supervision by the police at Narrandera compare favourably with the supervision in any of the towns you have mentioned? It did.

Henry Grugeon called in, sworn, and examined:—

- H. Grugeon.
7 Oct., 1896.
745. *Chairman.*] What is your occupation? I am Senior-sergeant of police, stationed at Albury. I am also clerk to the Superintendent of Police at Albury.
746. Were you ever stationed at Narrandera? No.
747. *Mr. Vaughan.*] You were the Superintendent's clerk at Albury whilst I was senior-sergeant of Police at Narrandera? Yes.
748. During that time there were several reports made against me by Mr. Harrison of neglect in sending in several returns? Yes.
749. If any items in those reports had not been properly explained, would I not have been liable to punishment? Certainly you would.
750. And consequently, if they were not explained properly, I should have been censured and punished in some way or other? Yes.
751. Do you know, of your own knowledge, Mr. Harrison's private feeling towards me, whilst he was in charge of the district? I think I do. I have heard him express himself in strong terms about you. He has told me that he did not consider that you should be in charge of a station—that you drank to excess, and he did not consider you were fit to be in charge of a station.
752. Do you know that Narrandera was an important station about that time? A very important station.
753. Was it not the most important station outside Wagga Wagga and Albury? I think it was the most important station outside Wagga Wagga and Albury.
754. Was there always a great deal of work there with regard to the aborigines' accounts? There was a great deal of work.
755. And would not delays naturally occur? Yes.
756. *Chairman.*] Comparing the returns sent in from the Narrandera station—the various returns that passed through your hands—with returns from other stations, how did they compare with them—favourably or otherwise? Favourably.
757. *Mr. Vaughan.*] Being the Superintendent's clerk, you could form an opinion yourself as to the way in which the returns were sent in, and the duty generally was carried out? Yes.
758. Have you any recollection of the Drewitt case? Very little.
759. Do you know, for a fact, that some witnesses were sent to Sydney to give evidence before the Executive Council? Yes.
760. Do you know that I was not sent down? I know that you did not go.
761. *Chairman.*] Do you know the reason why he did not go? I do not.
762. *Mr. Vaughan.*] Do you know it was a suggestion of Mr. Harrison that I should not go? I really cannot recollect.
763. About that time—1887 and 1888—Captain Battye was of a good age? He was.
764. And you knew Mr. Harrison? Yes; I knew him personally.
765. Do you not think that, owing to Captain Battye's age at that time, he would be a good deal influenced by what Mr. Harrison would say? I do not think so.
766. But he would be guided by his reports and statements? He would take them in consideration, of course.
767. Do you remember, after my leaving Germanton, Superintendent Battye taking you out to Germanton to examine my books? I do.
768. I was not there then? You were not.
769. It was after I had left the station that you went out to make an examination of my books? Yes.
770. Did you discover any irregularities? No.
771. *Chairman.*] Had you personally any opportunities of meeting Mr. Vaughan? Once or twice at Albury, but I have known him for years.
772. Did he ever give you the impression that he was a man giving way to drink? I was afraid that he had.
773. What was his condition when you saw him—was he sober? I have seen him under the influence of drink.
774. When on duty? Not when on actual police duty.
775. Your answer is that you have not seen him under the influence of drink when on duty? I should like to explain that once I did see him under the influence of drink when he may have been considered to be on duty. It was when he was ordered from Germanton to Albury to prepare a statement of his accounts and returns. If that was considered being on duty, then I have seen him under the influence of drink when on duty.
- 776.

776. Well, strictly speaking, would you consider that being on duty? I must say yes, to that question. H. Grugeon.
777. *Mr. Vaughan.*] Was I not subjected to a considerable amount of annoyance the week before that, and on that occasion was I not taken out of a sick-bed to go into Albury? I believe so. 7 Oct., 1896.
778. And did you consider it was proper treatment to bring a man in from his station to head-quarters to answer complaints of irregularities on the station? I see no reason why it should not have been done.
779. Would I not have to refer to accounts on the station in preparing returns? But you were brought to Albury to prepare returns that you had not prepared at your station.
780. Do you not know that I was not allowed time to prepare them at Germanton before I was ordered away? I know that you did not prepare them.
781. Do you know that I was Clerk of Petty Sessions at the time? There is no doubt that you had a good deal to do.
782. And it was as much as I possibly could do to complete my C.P.S. accounts on being ordered to go away? Very likely.
783. And I could not possibly prepare them? I cannot say positively as to that.
784. You know that at that time I did suffer considerable annoyance? You had a great deal of worry.
785. Do you produce the minute-book of the superintendent's station at Albury? Yes.
786. Covering what period? From November, 1886, to December, 1888—from the time Mr. Harrison took charge at Wagga Wagga to your removal from Narrandera.

Police Constable Robert Bell recalled and further examined:—

787. *Chairman.*] I understand that you wish to correct a statement? Yes; I was asked in one part of my evidence if I had ever seen Senior-sergeant Vaughan in a muddled state. I wish to say that I remember seeing him on two or three occasions in a muddled state, but never in a muddled state when performing duty. I remember seeing him once in that state in his own residence when off duty. R. Bell. 7 Oct., 1896.
788. *Mr. Vaughan.*] Can you particularise any instance? I can particularise two occasions. One occasion, I remember, it was about supper time, and on another I think you were with the Clerk of Petty Sessions, leaving his residence with him one night, and I noticed drink on you.
789. *Chairman.*] What do you mean by "noticed drink"? Well, I noticed it by his manner and speech.
790. Was his gait steady;—was he able to walk properly? Yes; he was able to walk all right.
791. Would he know what he was doing;—had he his senses about him? Yes; he was not incapable, but I could notice drink on him.
792. That is, he would be a little merry, would he? Yes; a little merry—that is all. But I never, on any occasion, remember seeing him incapable.
793. *Mr. Vaughan.*] That was late in the evening, and I was coming from the residence of the Clerk of Petty Sessions? Yes; about 11 or 12 o'clock one night.
794. The same gentleman is now a Police Magistrate? Yes; I think he is Police Magistrate at Tamworth now—Mr. Scott.
795. *Chairman.*] Was Mr. Scott sober? They would be both about alike.
796. *Mr. Vaughan.*] It was a private party—there were some other gentlemen there? It was. Mr. Scott, although a bachelor, had a residence of his own.

WEDNESDAY, 14 OCTOBER, 1896.

Present:—

MR. GILLIES,		MR. GORMLY,
MR. BARNES,		MR. CHANTER.

J. M. CHANTER, Esq., IN THE CHAIR.

Mr. P. L. Vaughan appeared on his own behalf.

Senior-sergeant Henry Grugeon further examined:—

797. *Mr. Vaughan.*] On looking through the minute-book I could not see any of those cases mentioned in the enclosure on page 5 of the printed report;—will you explain why they would not appear? It is not usual to make such entries in the minute-book; an error such as that is not regarded as anything serious. Trifling errors are not mentioned in the minute-book. H. Grugeon. 14 Oct., 1896.
798. They are matters of every-day occurrence? Yes.
799. No importance is attached to them? None whatever.
800. You would not keep such a record in your office? No.
801. Were my returns generally complete? They compare favourably with others.
802. In your evidence you said that you knew me at Albury;—state how long you knew me and my general character? I have known you now for sixteen or seventeen years. You were always regarded as a very smart, faithful officer, with an unusually extensive knowledge of criminal law and police duties.
803. You knew me at Deniliquin? Yes.
804. And what was the public opinion of me there? I think much the same as my own. That was the general opinion amongst the police, and I think the opinion of the public.
805. *Chairman.*] You said in reply to Mr. Vaughan that there was no entry under the item at the head of enclosure, on page 5? I could not say that none were entered. An occasional entry might be made.
806. From what book would these records be taken? From some record evidently kept at the office. The officer of the sub-district in which Mr. Vaughan was stationed was Inspector Harrison's office.
807. You had no charge of this book? No.
808. And you have no knowledge of what entries he would make? No; they would be kept at Wagga Wagga.
809. *Mr. Gillies.*] These charges in the enclosure you think are so trifling that they are not generally taken notice of? Yes.
810. And can you account for their being put in print as against Mr. Vaughan;—would there be any object in doing that? Mr. Harrison's object, I presume, would be to bring home his charge of carelessness against Mr. Vaughan.

- H. Grugeon. 811. You say that he would compare favourably with other good and efficient officers? Certainly.
 812. That is to say, that Mr. Vaughan's record will compare favourably with men who are considered good men, and who are still retained in the service? Yes.
 14 Oct., 1896. 813. *Mr. Barnes.*] Is there a record kept, as a general rule, of such things as these? Not in the superintendent's office to which I belong.
 814. Do they keep them in the up-country offices? I could not say. I have no knowledge of what they do outside our own office.
 815. They are not compelled to keep such a book? No.
 816. *Mr. Vaughan.*] Then, you presume that there would be some object in keeping such a list? Yes.
 817. *Mr. Gormly.*] Those on page 5 would be all original paper? Yes.
 818. Therefore, papers of that character are usually filed in the office? Yes, in some offices.
 819. And would be accessible at any time? Yes, most likely.

Samuel Wilkin Ray recalled and further examined:—

- [S. W. Ray. 820. *Mr. Vaughan.*] You were stationed with me at Narrandera? Yes.
 14 Oct., 1896. 821. In patrolling the back country, did any publican show you a letter which he had received? Yes; two of them.
 822. In whose handwriting were they? In Inspector Harrison's.
 823. What was the purport of the letters? It was asking what was charged for stabling at the hotels, and what the Narrandera police paid. This was at two hotels—one at Grong Grong, and the other the "Broken Down Hotel."
 824. Did that tend to bring suspicion on the police that some overcharge was made by them? That was what I thought. One publican asked me what he was to do with it, and he destroyed it.
 825. *Chairman.*] Did you read the letter? Yes.
 826. Was it your impression that Inspector Harrison had a suspicion that the police were charging more for their stabling than the hotelkeepers charged them? That was my impression.
 827. Did anything happen at any time to give rise to any suspicion of that kind? Not whilst I was stationed there. I never heard of anything of the sort. We always paid for our horses by requisition.

Patrick Laurence Vaughan sworn and examined:—

- P. L. Vaughan. 828. *Chairman.*] You were senior-sergeant of police? Yes.
 14 Oct., 1896. 829. You are Patrick Laurence Vaughan, the person in reference to whom this inquiry is held? Yes. I joined the police force of the Colony on the 4th July, 1865. After serving eighteen months in the metropolitan district, I was transferred to Deniliquin, in the south-western district. I served seven years in Deniliquin as a constable. I was transferred to Moama station in charge by Mr. Inspector Davidson, who has since retired from the service. I was shortly afterwards promoted to the rank of senior-constable, and about three years afterwards I was promoted to the rank of sergeant second-class. In 1879, whilst I was stationed at Moama, the Foley and Hicken fight took place on the border. There was some difference of opinion between myself and the sergeant on the other side as to the conduct of the Victorian police as to their vigilance in trying to prevent the fight. An investigation was held by the Victorian authorities, and I established the character of the New South Wales police in the matter that there was no blame attached to them. Strained relations existed between the police on the two sides. It was then deemed desirable that both the sergeants should be removed from the place. It was suggested by the Inspector-General that I should be sent to Wagga Wagga, and Superintendent Brown, who had charge of the district, used his influence to prevent me from leaving the district, and it was ultimately decided that I should be transferred to Deniliquin. On leaving Moama I was presented with a testimonial, and a gold watch and chain, by the inhabitants of the district, the testimonial being signed by the Magistrates and the clergymen of all denominations. Shortly after I went to Deniliquin I was promoted to the rank of senior-sergeant. That is the head-quarters of the district. I had the control of the station, the police-court work, and of the district generally, whilst the superintendent was absent, which he generally was from one to five or six weeks at a time. After I had been there about four years, I was transferred to Narrandera, then a very important station in the Murray district, Captain Battye, the Superintendent at Albury, and Mr. Superintendent Brennan, in charge at Wagga Wagga. During my time there several very important cases were heard; it was an important station; there was a large traffic, which entailed great police supervision, and the railway from Narrandera to Jerilderie brought a great many strangers into the town. Mr. Brennan gave evidence of my character whilst there until he left. Mr. Brennan was transferred to Newcastle, and Inspector Harrison took charge of Wagga Wagga. From the time that I took charge he commenced attacking me by writing insulting memoranda on small matters of detail. He was invariably wrong, and I resented it, and showed that I was right. But his enmity increased until it was proverbial in the district. A considerable portion of my time was occupied in answering his memoranda, and explaining matters which were of no importance and of no consequence to the service. I applied several times for an additional constable, but they always refused to entertain it. The Municipal Council of Narrandera at the time required a constable to do town duty later at night than the force at the station would permit. I told them I could not get an additional constable. They, without consulting me, on the 9th June, 1887, applied to the Inspector-General for an additional constable. The application was written by the council clerk, and, I suppose, to make his case better, he made an exaggerated statement of the numerous robberies, and so on. The matter was referred to Captain Battye, and from him to Mr. Harrison for report. Mr. Harrison visited the station, but did not consult me on the subject. He inspected the station, made an entry in the book, and went away. He made a report dated 20th June, 1887, in which he made a serious attack on me. One of the things he said was, "that some of the public-houses sell nearly all night, entailing any amount of drunkenness and rowdyism, which the police make no apparent effort to check, and also the sale of liquor on a Sunday to both whites and blacks." That was not true. Ultimately the papers were sent to me for a reply. I replied on the 4th July, 1887, and my letter is on page 2 of the printed papers. I set out true and honestly all the facts of the case. Amongst other things, I state that, during my first year at Narrandera, £430 was paid in fines for sly-grog selling alone, besides others convicted who went to prison, completely putting a stop to that offence

P. L.
Vaughan.
14 Oct., 1896.

offence at the Chinese camp and other places. Up to this time Captain Battye had been a personal friend of mine. He did not come out to make an inspection to find out whether what had been stated was correct, but he endorsed everything that Mr. Harrison had said in his report, and recommended my reduction. The Inspector-General, however, very properly said, "I cannot deal so severely with an old officer who has borne a high character without some more specific charge being proved against him. Senior-Sergeant Vaughan should be called upon for his defence. What he has said at present is not unreasonable." There was no charge formulated. They did not bring any charge against me. I reported on the 6th August, 1887, and the Inspector-General did not take any steps to consider my report. It was allowed to stand over. The feud between Mr. Harrison and myself went on.—Of course he was annoyed at the Inspector-General not dealing with me as he suggested, and in October, 1887, a case occurred at Narrandera in which an aboriginal named Druitt was charged with committing a rape on a little girl in a tent. Constable Davison, who was stationed with me then, arrested the prisoner on Sunday morning shortly after midnight. I went at once and gave instructions to have the child taken to the shop of Mr. Duval the chemist, for Dr. Mitchell, the only medical man in the town, being absent. I had the girl's mother and two men witnesses who were in the tent brought there. I had the child examined, and took charge of the underclothing worn by the child and also took charge of the shirt worn by the prisoner, and took statements from the three witnesses. All this was done at the chemist's shop. As soon as Dr. Mitchell returned, which was late on the Sunday afternoon, I got him to examine the child, and had the clothing of the prisoner and of the child also examined under a microscope. The case was proceeded with on Monday following, and the prisoner was committed for trial at the Wagga Wagga Circuit Court. The Circuit Court did not sit at Wagga Wagga until April in the following year. The prisoner appeared in the Police Court without hat or boots, and I did not think that strange, because I have seen aboriginals hundreds of times in that condition.

830. *Mr. Gormly.*] Is it usual for aboriginals in that district to go without hats or boots? Yes.

831. That circumstance was not likely to make you believe that they had lost them? No; it would not arouse any man's suspicion. But at the hearing of the case at the Wagga Wagga Circuit Court, a witness named Mrs. Roberts, the child's mother, then, for the first time mentioned a hat which she found in the tent, and the Chief Justice had me called in, and I was asked if I knew anything about the hat. I replied it was the first time that I had heard of a hat in the case, and I was very much astonished. I questioned Constable Davison about it, and he then had some recollection of Mrs. Roberts giving him a hat which he did not give to me. He stated that he handed it to the prisoner, which, of course, was improper.

832. *Mr. Gormly.*] Did you find that Constable Davison was an intelligent officer? He was inexperienced, and rather dull.

833. Was he a smart officer? No; he was neither smart nor intelligent.

834. He was an officer who was likely to neglect to hand over the hat, though it might be of importance? He could not see the importance of it, or he forgot it.

835. Would it be his duty to hand it over to you? Certainly.

836. You should have had all the circumstances of the case brought under your attention by this officer? Yes.

837. And Davison did not bring this hat under your notice? He did not. Mr. Harrison then wrote a report, making a violent attack upon me personally for carelessness. In that report he says:—

It is a well-known fact that the best part of his time is passed in public-houses, and that he is more or less constantly in a muddled state. When in the witness-box giving evidence on Friday it was apparent, and was noticed by the Crown Prosecutor and others.

That statement is not true. I gave evidence before the Chief Justice, and I am sure that if the Chief Justice had seen any want of decency about me, he would not have spared me any more than he would any other man in the Service. Inspector Harrison then had an interview with the Chief Justice, after which he went to Narrandera, took statements from several persons there—one statement from Constable Davison, one from Richard Weston, a black-tracker, one from George Allen, an aboriginal, and one from Joseph Ross. He did not take any statement from me, and I was not present when the statements were obtained from the others. I should like to call attention to one thing that was said in one of the statements. The black-tracker is made to say, "I believe I could have got evidence if I had been told to do so." I need hardly say that the man had no intelligence, and did not know what evidence was. Some of these witnesses were brought to Sydney with Mr. Harrison. I may state that the jury convicted the man accused of the rape; but on account of the hat being neglected, those witnesses were brought to Sydney, and gave evidence before the Executive Council. I was not brought to Sydney to explain my part of the business, although I understand that the Executive Council required my attendance. I was kept away. When these things were completed, I was called into Wagga Wagga to make another report, which I did on the 4th May, 1888, and another report of the same date on page 10 of the papers in which I set out all the facts, and what I had done in the matter. In the fourth paragraph of the letter I told exactly what I did, and no man could have done more. At this time Mr. Superintendent Read, of the city, was acting as Inspector-General of the Police, the Inspector-General being absent on leave in England. Mr. Read went into the case on the statement made by Mr. Harrison, and reduced me to the rank of a sergeant of the second-class, transferring me to Gundagai, and he fined the man Davison £2—the man who was guilty of all the wrong. The papers were brought to me by Mr. Harrison, at Narrandera, and the decision was read to me, and the papers were taken back. I was not allowed to see them. On the same date I sent a telegram to Captain Battye, at Albury, demanding an investigation into the case. I was refused it. I also sent a telegram to the Acting Inspector-General on the same subject. Those telegrams are in the printed papers, pages 14 and 15. That was refused. I wrote to Mr. Gormly, one of the Members for the district, asking him to interview the Inspector-General and demand an investigation. He did so, and he and Mr. Lakeman, the late Member for Hay, used their influence. Superintendent Read, Acting Inspector-General, told them that I was better off. That is the way in which he put them off. The people of Narrandera also sent a petition to Sir George Dibbs, who was then one of the Members for The Murrumbidgee, on the same matter, asking if I might be allowed to be heard in my defence. That was refused. I made an application also for leave of absence for three weeks, one of my objects being to go to Moama to deal with some property that I had there, on which I had a slight mortgage. I was refused leave of absence, and consequently I lost the property, that involving a loss of £300. I had to remain at Gundagai. The reduction in rank involved me in a loss of £22 16s. 2d. per annum;

P. L.
Vaughan.
14 Oct.; 1896.

annum; as licensing inspector a loss of £10 per annum; lodging allowance, rent for premises to live in, for excess of lodging allowance, £7 16s.; loss in sale of furniture and other expenses, about £40. That was a loss for the first year of £91 2s. 2d., and at that time I was entitled to rank as sub-inspector, which of course, I also lost. As soon as the Inspector-General reached home, I made an application for reinstatement, dated Gundagai, 14th February, 1889, asking him to reopen the case, or to look through the papers, as I know very well that if the matter had come before the Inspector-General personally it would not have resulted as it did. That application was forwarded to Captain Battye, superintendent for the district, and before he sent it on to the Inspector-General he sent it to Mr. Harrison, Wagga Wagga, for his opinion. Mr. Harrison wrote a most venomous letter in returning the application to Captain Battye. He said, "I regret that I can say nothing favourable of Sergeant Vaughan." After that I got a letter from Mr. Moran, who was one of the jurors in the Court at Wagga Wagga. Mr. Moran is a J.P., and one of the most respectable men in the Wagga Wagga District, I believe. He writes:—

To Sergeant Vaughan, Narrandera.—I regret to learn that the proposed intention of your officers in the matter of their deciding to remove your status as an efficient officer, particularly as I am informed that it is through no direct fault on your part, and has arisen in connection with the late case against Druitt, tried at Wagga Wagga. I was in attendance at the Court as a jurymen, and listened carefully to the evidence adduced, particularly to yours, which was most clear, distinct, careful, most intelligent, and conscientious. I remarked at the time to a fellow-townsmen that you were an able and deserving man; hence my reason for addressing a word of sympathy, as I am convinced your duty was so efficiently done in the case under notice that you deserved the approbation of your officers. Instead of that, I learn the reverse. I have known you for a number of years as a sober man, an able officer, and a gentleman in all your relations with your fellows, and I assure you I am only echoing the sentiments of every law-abiding man in this district that there will be a reconsideration of your case, and that the Acting Inspector-General of Police will withdraw his temporary decision.

I remain, &c.

P. MORAN.

I have also a letter from Mr. Duval, the chemist, to show what I actually did in the case. He says:—

Re Druitt.

Narrandera, 22 June, 1888.

I BEG to state that on the night of the 1st October last, as far as my memory serves me, Sergeant Vaughan brought to my shop a woman and child. I examined the child, and satisfied myself as to the injuries inflicted. He then went behind my counter, and I supplied him with writing materials, and he remained there for upwards of an hour, and in my presence took down in writing the whole of the evidence, the woman and the two men accompanying her. I may state it was close on to midnight, and it was past 1 o'clock on the following morning when they left.

That showed that I did everything in my power in that case. The decision in that case, and the refusal of the Inspector-General to reopen it, caused me trouble, mental worry, and injured me in mind and body, I having no redress. Whilst I was at Narrandera the business was very heavy, entailing a great deal of clerical work, especially with regard to accounts, which took a lot of time. I doubt whether on any day there would be less than ten or twelve hours' work one way or another. These are the accounts that are said to have caused some trouble to Mr. Harrison. There were about twenty aborigines in the district getting rations from the Government, and also medical advice. Orders had to be given for each item of rations. Then, at the end of the quarter, the accounts had to be got from the storekeeper and from the doctor. The items had to be checked and vouchers prepared, entailing a great amount of clerical work. There was always considerable difficulty in getting the accounts from the storekeeper, and also from Dr. Mitchell, and it necessitated delay that I could not help. This was also made a subject of report for neglect. Other returns were sometimes delayed in the same manner. If a case of crime occurred, whilst even preparing these returns, I would certainly leave the returns to attend to the crime, because I thought it was of greater importance. There are always things occurring—coroners' inquests, fire inquests, and other things which required the sergeant in charge to give his personal attendance and observation. All these things tended, of course, to delay the returns, which, if attended to, would involve the neglect of more important business. The public duty was so well done that, on leaving Narrandera, I was presented with a testimonial and a purse of sovereigns, the testimonial being signed by the principal people of the place. Also leaving Deniliquin, I was presented with an illuminated address signed by the best people in the district, with a purse of sovereigns. When stationed at Gundagai, I was sent to Tumut on special duty about the latter end of June, 1889. I was there for two days relieving the men who were absent. I was returning to the station on Saturday, 29th June, 1889. I stayed at the hotel opposite the barracks. Before I left there, Mr. Robertson's solicitor called on me on his way to his office. We had a conversation, and my horse was standing waiting. We had a drink at the hotel, and I left, came to the Court-house yard, said good-bye to the Clerk of Petty Sessions and another man who was with him, and the other man who was with me had gone out of the yard. Whilst I was mounting my horse, the animal swerved, throwing me off, and I fell on my back on the hard ground. Sergeant Coveny was present, and saw the whole thing. I got up and felt very hurt for the moment. The horse ran away. I mounted the horse of one of the other constables and rode along the road. Whilst going along I discovered that I was more seriously hurt than I had thought, and I had to lay up at the next hotel we came to for a couple of hours. I mounted my horse again, but I was unable to ride. I then saw that I was seriously hurt in the spine. I rode and walked most of the way to near Gundagai. Then the constable got a buggy and I was driven home to Gundagai. I was laid up, for four or five days. I was reported for that, and the only thing that was said about me was that "Sergeant Vaughan looked stupid," and there was a suspicion that I was under the influence of drink. Reports were called from the constables who were there, and one was got from Constable Field. I know how the reports were got from this constable. The most he said in it was that he believed that the sergeant had been drinking. Sergeant Coveny's report is attached to the papers. He said, "Sergeant Vaughan appeared to have had some drink, but he could not say that he was drunk. As he went over from the hotel where he was stopping he carried his valise, and spoke to the sergeant before and after he was thrown, and he was quite capable of taking care of himself. He left with the other constable at 10 o'clock." The other reports are to the same effect. I stated truly what drink I had. I think I had two drinks, and it was at the very moment when I was going away. Mr. Robertson's solicitor says, "In reply to your question as to your condition on the 29th June last, when I left you on that morning at 9'45, after talking over some little matter of business, you were perfectly sober." There is also a letter from Mr. Lloyd, Clerk of Petty Sessions, who says: "My dear Sergeant Vaughan,—As requested by you, I have much pleasure in stating that you called at my office on the 29th July, and you were then perfectly sober." He was the last man I saw in Tumut, except Sergeant Coveny. In reporting me, Mr. Cornett, the Sub-Inspector, says: "He called at my place, and I found him quite stupid." I

deny

Vaughan.
14 Oct., 1896.

deny that I was quite stupid. I was quite sick, and although the doctor was seen in the meantime by Sub-Inspector Cornett, he also states in some other part "that it was the third time that Sergeant Vaughan had returned to the station from bush duty in a buggy, and has been driven straight to his home without reporting himself to me." I may state now that I was riding a horse that was broken down, and on several occasions he fell with me, on the third occasion nearly killing me. That was used to blacken the case. That can be proved by men who were on duty with me. Captain Battye on that, without coming to Tumut to satisfy himself as to the truth of this charge, wrote a very violent letter, dated from Albury, to the Inspector-General recommending my dismissal, and describing this as a drunken exhibition through the streets, the result being that I was reduced from the rank of sergeant to that of first-class constable, and sent to a place where there was only one man stationed. I suppose that hearing the repeated reports against me, the Inspector-General was getting tired of me. He admitted that he never inquired into the truth of the charges. I was sent to Gerogery, and shortly afterwards I was transferred to Germanton, where I was Acting Clerk of Petty Sessions, and I was again advanced, after some time, to the rank of sergeant. I was Acting Clerk of Petty Sessions, Mining Registrar, and other things. I was there acting for three years. Everything went on all right, and I got back to the rank of second-class sergeant. I became ill there—I was laid up with influenza—in June, 1892. I had several memoranda from Captain Battye calling me into Albury, and explaining one thing or another. He did not come out to the station. After being ill for three or four days, in very cold weather, I decided to go into Albury against the doctor's instructions. There I was put through the ordeal of answering a lot of questions which Captain Battye wrote down, and I was sick and annoyed at the way he attacked me again, having in view his former treatment of me. I had some drink taken. That is the only time that ever I appeared during the whole time of my service under the influence of drink. I was reduced again and sent to Bowna, where I decided not to remain, and did not apply myself to my duties on account of the treatment which I received. I was reported again, and discharged from the Service. I came down to Sydney and requested to see the Inspector-General, to lay the whole matter before him. He refused to see me, and said I was to write to him. I expected that then, at all events, I should get what I was entitled to—the pension which I had earned, having been twenty-seven years in the Service. I was entitled, on discharge, I consider, to three-fourths of my pay at that time. After several letters had passed between us, the Inspector-General refused to re-open the case altogether, especially the Drutt case. Through the kindness of Mr. Chanter, after some considerable trouble this Committee was appointed. That is a statement of my whole career in the Service. During that time very few men in the Service have done more good for the country or done more for the credit of the Service than I have done, with the result that at every place I was stationed at I had the confidence and respect of the public. Mr. T. A. Browne, Police Magistrate at Albury, author of "Robbery Under Arms," says: "Mr. P. L. Vaughan, sergeant of police in the Albury district, has been known to me as being in charge of Germanton and Bowna. Personally, I have found him highly capable in the discharge of his duties, and I am aware that his departure from the district is generally regretted." Mr. William Purtell, a magistrate at Germanton, wrote to me as follows:—

Mr. P. L. Vaughan,—

Germanton, 11 October, 1896.

Dear Vaughan,—Yours of the 3rd duly received. I will at once set to work and get an expression of opinion for you, signed by all the magistrates who, during your term of office, were residents of Germanton and surrounding districts. I feel that what you ask for from the magistrates of Germanton, more especially those who attended the Police Court, will be readily given to you, as from my own experience of police officers, more especially the C.P.S. work arising in this Germanton Police Court, I feel confident that you were the best officer appointed to the charge of this district. As sergeant of police there was no one more competent to perform the duties attaching to such a position, and as for C.P.S. work, no better officer could be appointed to the position to suit the Germanton Court than yourself. I have been for twenty-four years doing Police Court work in Germanton, and I always felt a pleasure to preside at this Court when you were here, as from your competency as an officer of the Court, and the able and careful manner in which you prepared the cases for the Court, no magistrate could possibly make a mistake in adjudicating or administering the law. I am very pleased to learn that you have an appointment, and hope that it will grow into something better for you.

I hand that in as evidence, and that is all the evidence that I have to give.

838. *Mr. Gillies.*] You say that in the controversy between the police of New South Wales and the police on the other side of the border, you proved indisputably that your side was correct? Yes, I proved that; and I was promoted shortly afterwards.

839. And that your police acted strictly in accordance with their duty? Yes.

840. You have several references of merit from people among whom you have served? At every place at which I have been stationed.

841. Were the heads of the department aware of those presentations? Yes; they were always made by their permission until the Narrandera one.

842. Can you conceive of anything existing that you would make Inspector Harrison or Captain Battye have a "down" on you;—have you had any private quarrel with those gentlemen? In Mr. Harrison's case it started by his writing insulting memoranda questioning the proper performance of some duty or other. I resisted his attacks, and showed that I was right, and he was wrong. Then it got into open enmity between us. After that nothing which I did was right.

843. With regard to your being in a state of muddle at the time of your fall from the horse;—did you say that you had a medical gentleman to prove that you were simply suffering from the effects of an accident? He could not diagnose anything, because I was not muddled. He only came in next morning.

844. Did the medical man say that you were not suffering from drink? He only appeared on the scene the next morning. I sent for a medical man that night, but he could not attend.

845. If you had been drunk could he not have ascertained that from your appearance? Possibly he could.

846. You are in a position to prove that neither the Chief Justice nor the Crown Prosecutor made comments upon your inability to discharge your duties when you were acting in that case? Certainly.

847. Although the heads of your department have made these strictures upon you, that is not true? That is not true.

848. Is it the practice for heads of departments to allow their subordinates to ride broken-down horses, which render them liable to accident? It is very often the case. Accidents often occur, even with sound horses.

849. Last time you were charged you pleaded guilty previous to your discharge? I did not plead guilty in answer to any charge. I said I was under the influence of drink once. On under date 16th July,

1892,

P. L.
Vaughan.
14 Oct., 1896.

1892, it is said that you pleaded guilty? It is down on the papers, but I did not plead guilty. I was not asked to plead. I was brought in, and Captain Battye took down statements.

850. Although you applied for a fair investigation, prior to dismissal, the Inspector-General refused it? Yes.

851. *Chairman.*] You say that the entry on these records, shown on page 13, the item "16th July, 1892, neglect of duty, disobedience of orders, and no longer to be trusted as a constable," with the plea of "guilty" entered, is not correct? I have never pleaded; I was never asked to plead.

852. Then that entry is a false one? That was false up to the time of the Druitt charge. No man in the district could have done more than I did. The Tumut charge was an untrue charge, and but for the violent report of Captain Battye the Inspector-General would never have put these things on the defaulter's sheet.

853. *Mr. Barnes.*] In that last case, where the plea of "guilty" is entered, that is Captain Battye's verdict? Yes.

854. *Mr. Gillies.*] In that Druitt case, as soon as you became aware of the charge, you instructed the woman to take her child to the chemist? Yes, the doctor being absent.

855. And as soon as possible you followed the parties up? I was waiting for them at the chemist's shop.

856. It was not necessary for you to accompany them as long as you were there;—I see the papers say that you ought to have taken the child? A lot of things are said.

857. You went there as soon as possible? I sent a constable to have the woman and her child brought to the chemist's shop, and I waited at the shop until they arrived, then took the statements of all the witnesses. Dr. Mitchell is now dead. I intended to have him here. It was my intention to call the Chief Justice, but I am informed that there would be some difficulty in getting the original depositions in Druitt case now, and that a motion in Parliament would have to be made on the subject. I beg to say a few words with regard to the evidence given by Mr. Superintendent Read. I would call attention to the difference between the conduct of the Inspector-General, as shown on the papers, and the conduct of Mr. Read in the Druitt case. The Inspector-General refused to deal with me in the harsh manner suggested by Captain Battye, in the 1887 papers, and said that they must formulate a charge against me, and they dropped the business. Then when the Druitt case came up, I was not brought to Sydney. Mr. Harrison, who was a very shrewd man, and a man with very extreme views with regard to people to whom he takes a dislike, carefully worked the business. He did not bring me to Sydney where I could account for myself before the Executive Council, but he came to Sydney with his witnesses. He could not prove anything more than was given in the evidence. Mr. Read himself, in his evidence the other day, said that he had a conversation with Mr. Harrison in Sydney about the case, and that he said in reply to a question that he did not take any steps to ascertain the truth or falsehood of the report against me. And when I said "Didn't I make a report" he replied "Yes, you denied everything." I said, "Did you take the trouble to see the depositions?" "No; I relied on the reports of our officer." This was an officer who had an ill-feeling against me of over two years, and an officer who was in Sydney with Mr. Read a few years ago himself. He is not satisfied with what he put on the papers, but he goes to Mr. Read and makes a statement to him—to the gentleman who is going to decide the case. I believe it is in Mr. Read's evidence that Mr. Harrison told him my associates at Narrandera, though respectable, were men who drank heavily. Imagine a gentleman listening to an informer and prosecutor in a case that was to come before him, or any magistrate listening to a man coming behind the back of the accused to make statements of that kind. I am certain that the Inspector-General, if Mr. Harrison had attempted to approach him in that way, would have sent him about his business; because, although the Inspector-General has treated me severely, he was led away by the decision in the Druitt case, which, if he had been here, would not have ended as it did. I should have had a proper hearing, and have established my character, and have got the promotion which I deserved at the time, and then none of these other things could possibly have arisen. I say that any man of any feeling, after being punished for a wrong which he never did, must feel it, and I did feel it, and do still. It has preyed on my mind ever since. I am sure that this Committee will deal with the case in a proper manner. I say again that I have nothing to say against the Inspector-General. I say that he is an honorable and just man, and would have done justice had he been left to himself. He had to depend upon the reports of his officers, and if the reports had been honest he would not have injured any man. He told Mr. Chanter that he did not go through the Druitt papers, because he would not reopen a case that had been decided by the Acting Inspector-General during his absence. Perhaps it was right, but I suffered for it; but I hope that this Committee will right the injustice. I have no ill-will against the Inspector-General. I am prepared to go back to the service, and to finish my time and do my duty with Mr. Read or any other officer, and the more strict they are the better I shall like it. I am now well able to do my duty.

858. *Chairman.*] You stated in your evidence that when Inspector Harrison visited Narrandera station he did not communicate with you personally? He did not in the Druitt inquiry.

859. He communicated with constables inferior in rank to yourself? Yes.

860. And then made certain entries in the book? Yes; he never put an adverse entry in the book. He simply put in "Visited the station," and signed it.

861. Is it not the usual practice when an inspector visits the station to put himself in personal communication with the officer in charge of the station? Yes.

862. And this in your case was not done? It was not done in the Druitt case. If a man is charged with any offence, it would be his duty to have that man present when the charge was made. Mr. Harrison never did that; Captain Battye never did it. Neither of them ever made an adverse entry in the book. Captain Battye invariably wrote, "Visited the station; found everything correct." If he did not find everything correct, it was his duty to make a statement in the book to that effect.

863. Statements have been made as to your unfitness for duty caused by intemperate habits. On the 18th June, 1892, you are charged with neglect of duty, keeping back returns, and other important documents. You were reported by Captain Battye. I understand you to say that you were on that occasion somewhat under the influence of drink? Yes, I admit that. It was the only time that I ever was so, and it was after having been taken out of a sick bed, where I had had no sleep for six days, and I had had to go to Albury, 34 miles, which was an unusual practice. The officer should have come out to the station.

864. Were you so far under the influence of drink as to prevent you from replying to any questions put to you by Captain Battye? Certainly not.

865. Then the statements made concerning your intemperate habits are not correct? No, certainly not. I was never a teetotaller in my life, and never had occasion to be. The first thing a man has to do in the country when a crime occurs is to visit public-houses to get information, and he has to spend money to do that sort of thing.

866. As licensing inspector, would it be part of your duty to constantly visit hotels? Certainly. I had to send in reports every three months. In the town it would be my duty to visit some hotels almost daily.

867. When the Druitt case was being inquired into by the Executive Council, were you requested by any of your superior officers to attend? No; that is what I complain of—not being requested to attend. I was given to understand that I should have to come to Sydney, and evidence was given the other day by ex-constable Davison that I was called by the Executive Council, expecting me to be there, and Constable Bell said he thought I was called.

868. The delay in furnishing these returns as shown in the printed papers by Inspector Harrison would be caused by a stress of duty, more important matters occupying your attention? Yes; for instance I would never allow the returns to interfere with my attention to any case of crime.

869. Was the delay of the returns so great as to interfere with the proper records? Never.

P. L.
Vaughan.
14 Oct., 1896.

APPENDIX.

[To Evidence of E. W. Fosbery, Esq., Inspector-General of Police.]

List of Police and Summons Cases dealt with by Narrandera Bench, from 1st January, 1883, to 31st December, 1891, inclusive.

Police Cases.								Summons Cases.							
1883	213	1883	102
1884	217	1884	109
1885	225	1885	104
1886	317	1886	141
1887	234	1887	73
1888	252	1888	179
1889	265	1889	107
1890	322	1890	389
1891	311	1891	156

I hereby certify that the above list of Police and Summons Cases is correct to the best of my knowledge and belief,—
GEO. BARNETT, Sergeant,
The Inspector-General of Police, Sydney. Narrandera, 28/9/93.

Handed in before the Select Committee on Senior-Sergeant Vaughan's reduction and removal from Narrandera.—
W.S.M., 30/9/96.

1896.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PRISONS.

(REPORT FOR 1895.)

Printed under No. 4 Report from Printing Committee, 11 June, 1896.

The Comptroller-General of Prisons to The Under Secretary of Justice.

Sir,
Department of Prisons, N.S.W., Comptroller-General's Office,
Sydney, 19 May, 1896.
Herewith I have the honor to forward my Report to the Minister of Justice for the year 1895.
I have, &c.,
GEORGE MILLER,
Comptroller-General.

The Comptroller-General of Prisons to The Minister of Justice.

Sir,
Department of Prisons, N.S.W., Comptroller-General's Office,
Sydney, 18 May, 1896.
I have the honor to submit my Annual Report for 1895, to which are attached the usual tabulated statistics.
There were 60 proclaimed gaols in operation during the year, comprising 23 established gaols, which are wholly occupied and controlled by this Department, and 37 police gaols, which are partly occupied by the Police and Prisons Departments respectively. The police gaol at Muswellbrook was disestablished in the month of May, thus leaving 36 police gaols in actual operation when the year closed.
The number of prisoners confined on the 31st December was 2,460 (2,221 males and 239 females), as compared with 2,604 (2,352 males and 252 females) at the end of 1894. The increase in the population of the Colony is estimated at from 1,251,450 in 1894 to 1,277,870 in 1895.
Of distinct persons received into the gaols as prisoners the number during 1895 was 11,830, being an increase of 226 on the number, 11,604, received during the previous year.
The entries and discharges of prisoners during the year were 18,552 and 18,696, respectively, as compared with 18,525 and 18,366 during 1894. Comprised in these numbers are habitual offenders, many of whom received repeated short sentences.

The deaths during the year amounted to 23, including one execution which took place at Darlinghurst.

The reconvictions at the Circuit Courts and the Courts of Quarter Sessions were as follow:—First-class prisoners, under sentences of five years and upwards—10 under second convictions, 5 under third, and 35 under four or more convictions; whereas during the previous year there were 18 under second, 3 under third, and 50 under four or more convictions. Of the second class, comprising prisoners sentenced to less than 5 years, there were—91 under second, 54 under third, and 157 under four or more convictions, as compared with 122, 51, and 127, respectively, during 1894. Of the third class, being prisoners under sentences of imprisonment only without hard labour—3 were under a second conviction, 1 under a third, and 2 under four or more convictions, as against 1, 2, and 3, respectively, in the preceding year.

The reconvictions of prisoners comprising drunkards, petty thieves, and others guilty of different minor offences during the year 1895 only, sentenced at the Police Courts were—1,040 under second convictions, 298 under third, and 328 under four or more, as against 992, 312, and 326, respectively, for 1894.

The labour returns (table B) give a net value of £51,796 13s. 6d., the amount for the previous year being £51,826 15s. 4d. These amounts do not include the work which is being done by prisoners in the construction of the Breakwater at the Intermediate Prison at Trial Bay. At the end of the year 1895 the total quantity of stone put in the Breakwater by prison labour was 169,352 tons.

During the year the whole of the regulations comprising those which were published as a complete code in February, 1867, and subsequently in the form of additions or amendments at various dates up to the 30th day of June, 1894, were arranged in proper order and submitted by me to you, with a few verbal

additions and alterations that were obviously desirable, for your approval prior to submission to the Governor in Council. They were gazetted on the 20th August last, and are now in use in pamphlet form, fully indexed, thus presenting a compact compilation, which is a great improvement on the confused manner in which the original code of regulations and all subsequent amendments have been arranged and bound together.

It having come under my notice that there was a slight absence of uniformity in the treatment of prisoners under committal for trial (fourth class) in the different gaols as regards the facilities granted to them by the officers in charge for the preparation of their defences, I prepared a code of rules for the guidance of all officers, and, after consultation with the Sheriff, by whom a few verbal amendments were suggested, I submitted them to you and obtained your approval to their adoption. They have since been issued in the form of a General Order, a copy of which is attached as Appendix G. In England committed prisoners are kept apart in separate cells, and are not placed in association in trial-yards, which is the practice in this Colony owing to the absence of sufficient cellular accommodation. This association renders it necessary to have rules such as those which are now in force under General Order 317.

In consequence of the expense which this Department had to bear for the supply of medical comforts to prisoners in the form of malt liquors, wine, brandy, whisky, gin, and rum, according to the requisitions submitted by the different medical officers, I caused returns to be prepared of the quantities used in each of the larger gaols. The return from one of the gaols appeared to me to be very excessive, and I therefore submitted the matter to you with a recommendation that the Medical Adviser to the Government be asked to cause an inquiry to be made. The result was a report from Dr. Ashburton Thompson (the Deputy Medical Adviser), which was concurred in by Professor Anderson Stuart and approved of by you. Extracts from that report were subsequently issued by me to all gaols in the form of a circular memorandum, a copy of which is attached as Appendix H. I deem it but fair to this Department to attach to my report a copy of that circular, inasmuch as certain very gross misrepresentations were publicly made as to my action in the matter of the supply of alcohol for use in gaol hospitals. Nothing is more likely to cause malingering among prisoners than the knowledge that among the medical comforts of the hospitals are included either wine, brandy, whisky, gin, or rum. Of course, in very grave cases of illness the surgeon would, if he considered it to be absolutely necessary, use his discretion as to the purchase of any form of stimulant for his patient.

As much misunderstanding still appears to exist as to the objects of the separate treatment of youthful offenders not exceeding 25 years of age, under the existing system prescribed by the seventh-class regulations, which were adopted, after careful consideration, in April, 1893, by the then Minister of Justice, I deem it advisable to here repeat the following portion of a report of mine to you, written on the 1st July last, as to the deterrent and disciplinary objects of that treatment:—

It is most essential to preserve uniformity of treatment according to classification; therefore, all youthful offenders committed to gaol for periods not exceeding twelve months should be subjected to the same regulations, so long as proper safeguards (such as those that are now in existence) are provided against injury to health, by the powers given to surgeons as to exemptions in cases of physical or mental inability to stand the full treatment, and as to alteration of diet in cases where a surgeon might deem it necessary to order such a change.

Of course, the length of the sentence, according to the gravity of the offence, is a matter which is dependent upon the good judgment and common sense of the different magistrates who preside at the Courts, to each of whom a circular, fully explaining the stringent conditions of the treatment of seventh-class prisoners was sent at the time the regulations were gazetted. The age of the offenders should weigh greatly with those magistrates in determining the length of sentence to be awarded.

Officers in charge of gaols are required by General Order 163 to report the cases of all youths under 16 years of age received into their gaols, and to furnish particulars of the same. If any of these reports disclose what may appear to be a hard case, it is forwarded by me to the Minister for his consideration.

I consider it to be most necessary that very disorderly, mischievous, or criminally-disposed youths and boys should know that certain and severe punishment will be inflicted upon them if they persist in their lawlessness. The deterrent effect of the penal discipline to be enforced upon such offenders against law and order must not be lost sight of, for, in the case of this class of offenders, when they are sent to a gaol, we must look to deterrence more than to reformation in their treatment. As far as practicable, reformatory measures are adopted, but it is hopeless to attempt to carry out full reformatory treatment in a gaol. Careful separation must be maintained so as to prevent contamination, and the treatment should be of such a character as to make the youthful offenders dread a repetition of it. This is the object of the regulations now in force. If the gaol treatment be made in any way comfortable and attractive, the effect of the imprisonment will be much worse than useless. To anyone who has carefully studied the subject this should be apparent. The punishment must be a genuine one. This is effected by the plank bed and low diet.

I am dealing with this matter as one who is responsible for the prison treatment of boys whom the Courts may sentence and commit to the custody of this Department, not as the manager of a fully-organised reformatory with ample land space, where no offenders of any other class are confined. In such an institution, under long sentences, a much milder discipline could be carried out on a progressive principle of relaxation, according to the conduct and general bearing of each inmate.

When a reformatory of this kind has been established in the Colony for the treatment of boys of criminal instincts, and those who have been corrupted by evil association in free life, I trust that the Prisons Department will be relieved by the magistrates who deal with the cases from a large number of those who are now sent to gaol as seventh-class prisoners.

The effects of separate or cellular treatment upon prisoners also formed the subject of some strong articles in the public Press, the writers assuming that such treatment was productive either of insanity or of serious permanent injury to the mental condition of prisoners. In connection with these articles, the Inspector-General of the Insane (Dr. Manning), a gentleman who has had a long and varied experience of the causes of insanity and the treatment of lunatics, made a careful inquiry, and furnished a report on the subject in September last, the following extracts from which I cannot do better than quote here:—

We have, therefore, at the present moment, only 4 prisoners who have undergone separate treatment—3 for nine and 1 for six months—under observation, and of these only 3 can be certified as insane, 1 of these having served his cellular treatment in 1882, 1 in 1891, and 2 in 1894, although an average of something like 370 prisoners undergo separate treatment annually, and have done so for some years past.

I have repeatedly examined these four prisoners, and am unable to say that the separate or cellular treatment is directly responsible for the present mental condition in either of them. One of the prisoners is a Chinaman, and I think it probable that his mental peculiarities would have been discovered before the separate treatment was commenced if he had been able to speak English more fluently. Two of them are more or less congenitally defective, and the remaining one led before admission to gaol a very dissipated life. All three of the Europeans are serving sentences for sexual offences.

These facts, I think, sufficiently disprove the somewhat random statements as to the causation of insanity by the separate or cellular treatment which have recently been made. The

The separate or cellular treatment is no doubt severe, and is made so with a definite object. Looked at from an outside point of view, it might be supposed to have a tendency to produce insanity, but such has not been shown to be the case either in England or in other countries where a similar system is carried out, or in this Colony. Much, however, must depend on this system being carried out under the safeguards of efficient medical supervision, exercised both in excusing manifestly unfit subjects altogether and watching the effect on those undergoing it. I find on examining the records of the Department of Prisons that a number of prisoners whose sentence carries with it separate or cellular treatment are exempted altogether by the Visiting Surgeons, whilst others are exempted by the gaol regulations as being over 60 years of age.

The removals from separate treatment, when once commenced, on account of symptoms indicating insanity are few, but after its termination the prisoners are sometimes found to be dull and lethargic, a condition which passes off in a short time, and which is apparently due rather to a return to the use of tobacco (which is chewed) and tea, which are given under the prison regulations on the cessation of the separate treatment, and are sometimes taken in excessive quantity, the craving for them being great, and other prisoners giving up some part of their allowance to those newly released from separate treatment.

That occasional cases of insanity occur during, and apparently by reason of, the separate treatment is not to be wondered at, but when the close alliance, hereditary and otherwise, of some forms of insanity and crime and the number of people who are on the borderland are considered—when it is clearly shown that a number of prisoners are insane at the time they committed offences, though this insanity is not apparent till a subsequent date, and when the very irregular lives led by a number of prisoners before committal is taken account of—the wonder is that the number of persons found to be insane in prison is not larger than it is.

The observation wards at Darlinghurst Gaol and Parramatta Gaol, respectively, are regularly inspected by Dr. Manning. To either of those wards all prisoners in other gaols who may show any signs of insanity are transferred for careful observation. In many cases they are found to be malingerers.

In the month of July last the installation of the electric light in Darlinghurst Gaol, referred to in my report for 1894, was completed. The engine-room, boiler-room, and chimney-shaft were constructed by prison labour. The plant in connection with the light is of sufficient power to extend it to the Darlinghurst Court-house, and also to the Receiving-house in Forbes-street, if it be thought desirable at any time to utilise it at those places. Other minor improvements have been carried out in this gaol, including the erection of a new sulphur-house and the laying down of a quantity of much-needed tar-paving.

In the early part of the year the contract for the installation of the electric light in Berrima Gaol was finished so far as to extend it to the wings and cells, the Governor's quarters, offices, engine-house, and main gate entrance. The contract did not provide for its extension to every part of the gaol, but I hope, when funds are available, that this very desirable improvement will be fully completed, and the use of kerosene-lamps and candles entirely done away with in the lighting of the gaol.

Very good progress has been made with the new wing (No. 6) in course of erection at Parramatta Gaol. The cells on the first and second landing and one cell on the third landing were completed at the close of the year. I have also obtained your authority to proceed with the work of dividing into single cells the sixty associated cells in wings Nos: 1, 2, and 3. The object of these additions and improvements is to so increase the accommodation as to enable the Department to place each prisoner in the gaol in a single cell, and thus break up the pernicious association of criminals during the night-time, which is so destructive of all discipline and reformatory effects. The new stonecutters' shed and carpenters' workshop were almost completed at the end of the year. All these works are being carried out by prison labour.

I regret to say that during the year it was discovered that two officers in charge of gaols had been guilty of very serious irregularities in their dealings with the contractor for supplies. Under the decisions of the Executive Council, one was removed to another position with a lesser salary, and the other was heavily fined and allowed to retire from the Service, he being over 60 years of age. They had both been in the service for many years. With these exceptions the conduct of the staffs of the different gaols has been very satisfactory.

A sad incident occurred in Bathurst Gaol on the 5th January, 1895, when a prisoner named James O'Connor was killed by another prisoner named John Williams, through having been struck on the head by a bass broom, with which the latter was cleaning the yard. The warder on watch saw O'Connor felled to the ground by the blow, but the assault was committed so suddenly that he had no time whatever to prevent it. An ill-feeling, it was afterwards discovered, had previously existed between the two men. Williams was tried at the Central Criminal Court, Darlinghurst, and found guilty of manslaughter. With the exception of this sad incident and a few assaults upon warders by other violent and refractory characters, the prisoners in the different gaols have behaved themselves very fairly.

I have, &c.,

GEORGE MILLER,
Comptroller-General.

Department of Prisons, Comptroller-General's Office, Sydney, 23 September, 1895.

GENERAL Order for the guidance of Officers in charge of gaols, issued by the Comptroller-General of Prisons, with the approval of the Minister of Justice and the Sheriff.

RULES AS TO FACILITIES TO BE AFFORDED TO PRISONERS AWAITING TRIAL FOR THE PREPARATION OF THEIR DEFENCE.

1. Any trial prisoner desiring to write out his defence shall be provided with the necessary accommodation for so doing in the wing, or other suitable place, but not in the yard where other prisoners are confined. If unable to write, he may have the assistance of another prisoner to act as writer.

2. After writing such defence the accused must hand it over to the warder in charge of the wing for examination and initialling, prior to being placed in a sealed cover, the object of such examination being to prevent any communications other than what are necessary for the defence being written by the prisoner for the information of his solicitor or his friends. Any warder improperly disclosing the contents of any statement of defence will be punished by dismissal.

3. Prisoners charged together with any crime will be permitted to conjointly prepare their defence.

4. Trial prisoners will be allowed to hand over to their solicitors any papers connected with their defence, such as statements, notes, &c.

5. Trial prisoners will be allowed to see their legal adviser or relations or friends assisting in the preparation of defence, out of hearing but in view of a warder, and every reasonable facility should be afforded them for an untrammelled preparation of papers for their defence.

6. Copies of depositions, or any other legal documents supplied from outside to assist in the preparation of prisoners' defence, shall be handed to the trial men under the conditions that apply to other papers connected with the defence. (See par. 2.)

7. Any trial prisoner wishing to take his written defence and papers connected therewith into his cell for the night may be permitted to do so, provided he is alone in the cell. Prisoners will not be allowed to take their written defences into their yards.

Officers in charge of gaols are specially requested to see that the above rules are carefully and strictly observed.

GEORGE MILLER,
Comptroller-General.

(H.)

Circular Memo.

Department of Prisons, Comptroller-General's Office, Sydney, 5 March, 1895.

THE following extracts from a report of the Deputy Medical Adviser (Dr. Ashburton Thompson), with which the Medical Adviser concurs, and which has also received the approval of the Minister of Justice, are forwarded for the information and future guidance of officers in charge and of surgeons of gaols:—

“It is generally acknowledged to be extremely undesirable to give alcohol in any form to prisoners. Occasionally, nevertheless, real need for it will arise.

“A fortiori, it must be undesirable that necessary alcohol should be supplied in agreeable and accustomed forms.

To this general statement an exception may, or perhaps must, be made of beer, which is either especially useful or essential in some cases of progressive loss of weight due to disease, as an aid to appetite, and sometimes to digestion.

“Spirits (and wine) should be strictly regarded as medicines within gaols. They should be prescribed solely for the sake of the alcohol they contain. They should be prescribed as other medicines are—to be taken in definite doses at different times. They should usually be prescribed in conjunction with drugs which would disguise the true character of such medicine.

“A pure and unflavoured alcohol of good quality is the form which should generally be preferred within gaols,

“I therefore recommend that the surgeons in charge of gaols in general should for the future be requested to requisition only for ale and porter, and for ‘alcohol.’

“After consultation with the Government Analyst, I have formed the opinion that the white spirit produced by the Colonial Sugar Company, diluted to 40°, should alone be furnished in response to requisitions for ‘alcohol.’ Samples from the proposed stock should be reported upon by the Government Analyst annually before purchase.

“In the case of Parramatta, I notice that during 1894 two healthy prisoners detailed to assist in attending on an offensive case of illness in hospital received brandy by order of the Government Medical Officer for several days. I do not recognise any medical necessity for alcohol (still less for brandy) in these circumstances. If it seem necessary, it might be pointed out that furnishing labour for the business of gaols, and the reward thereof, is a matter which concerns gaolers alone, who, in such a case as the one mentioned, should merely be requested by surgeons in charge to furnish it.”

The necessity for strictly observing the terms of the extracts herein given is impressed upon officers in charge and surgeons of gaols, not only on the ground of economy, but also in order to defeat the efforts of prisoners to get on the sick-list by malingering, so as to obtain either wine, brandy, whisky, rum, or gin as “medicine.”

GEORGE MILLER,
Comptroller-General.

1896.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

ADMINISTRATION OF JUSTICE.

FURTHER REPORTS RESPECTING THE SEPARATE TREATMENT OF PRISONERS.

Printed under No. 21 Report from Printing Committee, 8 October, 1896.

SCHEDULE.

NO.	PAGE.
1. Mr. J. Haynes, M.P., to the Honorable the Premier and Colonial Treasurer, with minutes thereon. 28 May, 1896	1
2. The Comptroller-General of Prisons to the Under Secretary of Justice (with enclosures), and minutes thereon. 11 June, 1896	1
3. The Inspector-General of the Insane to the Principal Under Secretary, with minutes thereon. 30 June, 1896.....	5
4. The Inspector-General of the Insane to the Under Secretary of Justice. 7 July, 1896	5
5. Minute of the Minister of Justice. 30 September, 1896,	6

No. 1.

J. Haynes, Esq., M.P., to The Hon. the Premier and Colonial Treasurer.

The Hon. G. II. Reid, Legislative Assembly, N.S.W., Sydney, 28 May, 1896.

I would like to remind you of a conversation I had with you some weeks ago with respect to abolishing the existing cruel system of solitary confinement, and substituting a system of confinement for a few days only, either on the offender being convicted or just prior to his discharge. From all I hear, the system is one of gross cruelty, and results only in the victim being made a mental wreck and placed beyond redemption.

Yours truly,
JOHN HAYNES.

The Honorable the Minister of Justice.—G.H.R., 3. The Under Secretary of Justice.—F.K.,
3/6/96. Submitted.—A.C.F., 5/6/96. C. G. of Prisons, in the first instance, for favour of report.—
A.J.G., 6/6/96.

No. 2.

The Comptroller-General of Prisons to The Under Secretary of Justice.

MR. HAYNES writes about what he terms the existing "cruel system of solitary confinement," which he says "I hear is one of gross cruelty, and results only in the victim being made a mental wreck and placed beyond redemption."

Assuming that he refers to cellular separation, or "separate treatment" as we call it, it would be difficult to imagine a more gross misrepresentation of that treatment than his description of it. Mr. Haynes is, I feel sure, acting solely under a kindly and humane impulse in writing as he has done to the Premier, and he has, I have no doubt, acted under a want of knowledge of the real facts in penning such an unfounded charge against the Prisons Department. Who his informants are he does not say, but it is not unlikely that he has been misled by certain allegations which were published in a daily newspaper in August, 1895, emanating from a person who wrote them on his discharge by special remission from Parramatta Gaol, where he had been serving a sentence of five years' hard labour for conspiracy to defraud. He escaped separate treatment under the surgeon's exemption, and spent most of his time in the gaol hospital on a liberal allowance of hospital comforts.

Mr. Haynes is also probably misled by certain statements which appeared in the Press recently as to the condition of the prisoner Butler, whose counsel stated in the Divorce Court that "Butler's mind and memory had become somewhat affected by 'solitary confinement,' as was usual in such cases."

The allegations of the ex-prisoner referred to above were completely disproved by a full and careful report, which was made in September last to the Government by Dr. Manning (the Inspector-General of Insane), and laid before Parliament, from which the following is an extract:—

We have, therefore, at the present moment, only four prisoners who have undergone separate treatment—three for nine and one for six months—under observation, and of these only three can be certified as insane, one of these having served his cellular treatment in 1882, one in 1891, and two in 1894, although an average of something like 370 prisoners undergo separate treatment annually, and have done so for some years past.

I have repeatedly examined these four prisoners, and am unable to say that the separate or cellular treatment is directly responsible for the present mental condition in either of them. One of the prisoners is a Chinaman, and I think it probable that his mental peculiarities would have been discovered before the separate treatment was commenced if he had been able to speak English more fluently. Two of them are more or less congenitally defective, and the remaining one led before admission to gaol a very dissipated life. All three of the Europeans are serving sentences for sexual offences.

These facts, I think, sufficiently disprove the somewhat random statements as to the causation of insanity by the separate or cellular treatment which have recently been made.

The separate or cellular treatment is no doubt severe, and is made so with a definite object. Looked at from an outside point of view, it might be supposed to have a tendency to produce insanity, but such has not been shown to be the case either in England or in other countries where a similar system is carried out, or in this Colony. Much, however, must depend on this system being carried out under the safeguards of efficient medical supervision, exercised both in excusing manifestly unfit subjects altogether and watching the effect on those undergoing it. I find on examining the records of the Department of Prisons that a number of prisoners whose sentence carries with it separate or cellular treatment are exempted altogether by the Visiting Surgeons, while others are exempted by the gaol regulations as being over 60 years of age.

The removals from separate treatment when once commenced, on account of symptoms indicating insanity, are few, but after its termination the prisoners are sometimes found to be dull and lethargic, a condition which passes off in a short time, and which is apparently due rather to a return to the use of tobacco (which is chewed) and tea, which are given under the prison regulations on the cessation of the separate treatment, and are sometimes taken in excessive quantity, the craving for them being great, and other prisoners giving up some part of their allowance to those newly released from separate treatment.

That occasional cases of insanity occur during and apparently by reason of the separate treatment is not to be wondered at, but when the close alliance, hereditary and otherwise, of some forms of insanity and crime, and the number of people who are on the borderland are considered—when it is clearly shown that a number of prisoners are insane at the time they committed offences, though this insanity is not apparent till a subsequent date, and when the very irregular lives led by a number of prisoners before committal is taken account of—the wonder is that the number of persons found to be insane in prison is not larger than it is.

This report must have escaped Mr. Haynes's notice; otherwise it is scarcely to be credited that he would now write as he has done.

On a previous occasion (11th September, 1894) Dr. Manning wrote a report in consequence of certain statements which were made in another newspaper as to the treatment of lunatics in gaol, and I subjoin an extract from that report as to separate treatment. Dr. Manning is a frequent visitor to and a careful observer of the system as carried out in Darlinghurst and Parramatta Gaols. He has also sometimes visited other gaols to inquire into cases of supposed lunacy, and is a practised observer of the deceitful tricks and treacherous ways of prison malingerers to obtain release or concessions of various kinds.

With regard to the system of separate treatment as at present carried out under the prison system of this Colony, I have seen nothing to induce me to believe that it is unduly severe, or calculated to produce insanity.

Perhaps the best proof of this is the extremely few patients who are placed under observation for symptoms of insanity whilst undergoing it, and the fact that there are at this time in the Hospital for the Criminal Insane, Parramatta, and in the Observation Wards at Darlinghurst and Parramatta, taken together, only seven patients who have gone through separate treatment, that three of those who are undergoing imprisonment for life passed through their separate treatment many years ago, and that in none, so far as I can discover, was the separate treatment in any way the cause of the mental failure.

I am convinced that the statements in the *Sunday Times* are gross misrepresentations.

As regards Butler's case, I attach a report [*Appendix A*] from the Visiting Surgeon at Darlinghurst Gaol, which proves that the prisoner's counsel's allegations regarding his mental condition, made in the Divorce Court, were wholly unfounded.

"Solitary confinement," as termed in our gaols, means cell punishment for a prison offence on bread and water under Section 12 or 13 of 4 Vic. No. 29, or half-rations under Regulation 69, and carries with it loss of remission according to the time passed in such seclusion, which, of course, is for varying *short* periods according to the nature of the offences. Such punishment is never imposed by the Comptroller-General, as the Minister is aware. [*See Powers of Visiting Justice, sections 12 and 13 of 4 Vic. No. 29, and Regulation 13.*]

Cellular separation, or "separate treatment," is a part of the prison system, and is the means whereby good discipline is maintained throughout the gaols of the Colony. It is the only effectual means whereby dangerous or refractory prisoners can be repressed and brought to a sense of their wrongdoing, when "solitary confinement" has failed to check or deter them from a persistent disregard of the disciplinary rules of the department, attempts to lead mutinies, continued quarrelling with their fellow-prisoners, and such like offences. It is not recognised as *punishment* in the gaols. It carries no loss of remission, and while undergoing it the prisoners have a wholesome and sustaining diet, which was fixed by a Board of medical experts, including Dr. Manning, Dr. MacLaurin, and Dr. Maurice O'Connor. They work in their cell. When not working they have books to read, and are allowed exercise from an hour to two hours daily in the open air, and even for a longer time if the surgeon thinks it advisable. They are visited daily either by prison officers, chaplains, or the surgeon, who is required by the regulations to carefully watch them, and, in the event of his perceiving any injurious effects, either physical or mental, he is empowered to at once place them in association, which is duly reported to the Comptroller-General. Their treatment is surrounded by ample safeguards, full power, as I have said, being given to the surgeons as to exemption, extra diet, and exercise. The surgeons are now very careful in the exercise of these functions. [*See Dr. Manning's report.*]

The following General Orders are also in force referring to prisoners in separate treatment:—

G.O. 57.—*Prisoners not eligible for Separate Treatment.*

It not being intended to apply the provisions of the regulations as to separate treatment to aboriginal prisoners, gaolers should report, upon conviction, any cases of aboriginals sentenced to periods of three years and upwards, in order that their destinations may be diverted. It also being desired to exclude from such treatment prisoners who by age or infirmity of body or mind are unsuited therefor, gaolers should similarly report convictions of persons sentenced as above who may be 60 years of age and upwards, affording such information as they may be able to furnish concerning them, and all cases of bodily or mental infirmity. The report in both description of cases should be accompanied by the remarks of the surgeon.

G.O. 134.—*Books, &c., for Prisoners in Separate Treatment.*

All library books and slates should be removed from prisoners in separate treatment during working-hours. The books and slates may be replaced when the work is removed for examination. A second issue of books, weekly, should be allowed all prisoners in separate treatment. The above directions are to apply to all gaols where separate treatment is carried out.

G.O. 155.—*Relaxation in Sentences of Prisoners.*

The relaxation of sentence of prisoners on medical grounds, such as release from the cellular portion of separate treatment, removal of irons, and the like, by authority of the Visiting Surgeon, should be recommended in writing, and forwarded to this office through the officer in charge of the prison. In the case of immediate requirement, the recommendation can take effect at once, although it should still be forwarded as above directed. The removal of irons can only be temporary, until sanctioned by His Excellency the Governor. In minor matters, excepting as to hospital treatment, it is desirable that the directions of the surgeon should be conveyed—without informing the prisoner—to the officer in charge, whom the surgeon might, in some instances, find it desirable to consult as to the effect of any contemplated concession.

G.O. 296.—*Issued 18th January, 1893.*

With reference to the treatment of prisoners who are in separate confinement (A division, or 7th class), or who are undergoing cell punishment for a prison offence, under sections 12 and 13 of the Prisons Regulation Act, the attention of the officers in charge of gaols is directed to Regulation 27* (paragraph 4), regulations of 15th November, 1888,† and Regulation 58‡, the clear intention of which is that such prisoners should be very frequently visited by the surgeons, in order that any symptoms of a breakdown in bodily health or in mind might be detected. The Comptroller-General further desires that the attention of the surgeons should be specially invited to those regulations, which in some gaols have been disregarded.

Our prison system is on the progressive, or Crofton, system, and in all sentences of penal servitude or hard labour of three years and upwards is divided into stages, of which the first is A Division, or "separate treatment," where the prisoner, as in England, passes nine months, which is the most penal part of his sentence. Experience has proved its disciplinary effects to be most marked. He is then placed in association on the works, and by good conduct and industry is able to earn certain indulgences and money gratuities, until he goes to Trial Bay Intermediate Prison or is discharged by remission. Sometimes prisoners are discharged on license under the 409th section of the Criminal Law Amendment Act.

Prisoners serving sentences of less than three years, not being 7th class (boys and youths), do not undergo separate treatment, but for gross or continued misconduct may be placed under that treatment for coercion, if they themselves render it necessary to do so, under section 10 of 4 Vic. No. 29. This is absolutely necessary to maintain proper discipline, and is frequently recommended by the Justices, with the best results.

It is needless for me to refer to 7th class separate treatment, which, as the Minister is aware, has been very fully dealt with in papers laid before Parliament on 24th October, 1895.

As regards ordinary separate treatment, I attach an extract from the report of the Commissioners of Convict Prisons, England, for 1888–9 [*Appendix B*], which is interesting as showing how universal the system is becoming in civilised countries. It will be seen that in English local prisons the term of separate treatment is extended to two years.

To abolish "separate treatment" in our prison system would simply be a ruinously retrogressive step, throwing the department back a century, to the time when the great prison reformer Howard became a strong advocate of it after his experience of the horrors of association of prisoners when he himself was confined in a gaol. I cannot conceive anything which would have a worse effect upon the prisoners of this Colony. It is only to be regretted that it cannot be extended for reasonable periods to all classes of prisoners, especially the short-sentenced ones, for the whole of their term; but unfortunately the necessary accommodation is not available. It is, of course, expensive; but it is infinitely superior for disciplinary and reformatory effects to the association of criminals, even under the most carefully-planned classification. To classify prisoners so as to prevent corruption and contamination is almost an impossibility. Some say separate treatment is unnatural. This may also be said of any form of confinement within prison walls. But society must be protected from criminals, and crime prevented as far as practicable. Common sense and reason are in favour of separation of criminals from each other so long as such separation is not carried out for too great a period, and is surrounded by proper safeguards such as I have already pointed out. A man who is not a criminal by nature prefers cellular separation to being placed in association with criminals. It is the real criminal, who wants to be among "pals," who hates it, and pretends that it injures him mentally and physically.

In conclusion, as weak-minded and doubtfully sane persons are often sent to our gaols, I would invite attention to certain extracts subjoined from the "Howard Association" (London) Report, published in October, 1894, as to the practice of sending insane, or doubtfully sane, offenders to prisons. They also refer to the evils of association.

SENDING THE INSANE TO GAOLS.

Of late years in England, Scotland, and Ireland there has been a mischievous tendency on the part of many magistrates to send insane, or doubtfully sane, offenders to prisons, instead of to lunatic asylums. The Prison Commissioners for all three parts of the kingdom have had to complain of this.

It is doubly injurious and unjust. It is not fair to the persons thus imprisoned, and it is also unjust to the prison officials, for it has led the public to form unwarranted conclusions respecting the treatment of prisoners. During the recent discussions in the English newspapers upon prison discipline it was evident that some persons had imbibed very mistaken ideas about the connection between prisons and the insane. The origin of these misrepresentations is largely due to the number of insane persons who, latterly, have been wrongfully sent to gaols instead of to asylums.

The Howard Association has recently made many inquiries respecting this matter, and from these it is manifest that considerable popular misapprehension exists, which is quite opposed to the actual experience of prisoners and their officers.

In visiting a certain Scotch gaol recently, Mr. Tallack was informed that last year ten insane persons were sent to that prison. Their insanity was so evident that nine of them had to be sent away immediately to an asylum. The tenth was employed at work in the open air with some other prisoners, but he also had to be sent away to an asylum in three weeks. It often takes weeks or months, however, before the insanity can be proved to the extent of warranting admission to an asylum.

Some misleading "statistics" on this subject have lately been published in certain journals. For example, it has been gravely asserted that the insanity amongst prisoners is thirty times greater than amongst the free population, or 242 to the 10,000, instead of, as in the latter, 8 per 10,000. This result was arrived at by including all the persons sent to gaol whilst insane, and also by the arithmetical error of estimating the proportion on the daily average of English prisoners, 13,178, instead of on the actual total amount for the year, 157,168 prisoners. A better informed critic of English prisons states that the insanity in them is five times greater than that outside, although it may be fairly shown to be little more than double. But even if it be five times greater, this proportion is no more necessarily indicative of its being developed in gaol than a fivefold mortality would be in a fever or cholera hospital, as compared with outside mortality. For the prisons

These remarks apply equally to New South Wales.—G.M.

prisons are truly infirmaries for both mental and physical wreckage, and constitute largely an accumulation of drunkards and prostitutes, who have ruined themselves, body and mind, by vice. But that ruin is not to be attributed to the prisons, at least not in this country.

In countries where there is no cellular separation of prisoners, where, as in France, the vilest abuses take place in gaols, even to the officially-admitted extent of constant unnatural crime, there the accusation of producing insanity may have weight. An eminent French authority, Dr. Emile Laurent, who for many years was medical officer of Paris prisons, remarks, in his recent work, entitled "Les Habitues des Prisons de Paris, 1890," that in those establishments the vilest men and boys scarcely take the trouble to evade the observation of the warder in their abominable offences, and he adds these striking words, "Of all the schools of vice the most dangerous is, without contradiction, the [non-cellular] prison. When a man has made two or three sojourns in the prisons of Paris, or the *maisons centrales*, he has nothing more to hope for. He is a gangrened member, that it is necessary to cut off permanently from the social body." Another Frenchman, M. Emile Gautier, says, in "Le Monde des Prisons, 1888," "The prison, such as it is organised" (in most French, Italian, Spanish, and American prisons in 1894) "is a veritable sewer, pouring over the community a continuous flood of rottenness and of germs of physical and moral corruption. It is at once a manufactory of consumptives, lunatics, and criminals."

These terribly true descriptions of the effect of promiscuous association in gaols have, happily, comparatively little application to the British prisons, thanks to the labours of those who, from John Howard's days to our own, have sought to bring about and maintain the essential and fundamental basis of separating criminals, whilst in prison, from mutual corruption.

Owing to the misrepresentations of certain ill-informed writers in the English Press latterly there is some danger that, unless intelligent public opinion continues to be on its guard, attempts may again be made to take a reactionary and mischievously retrogressive step in the direction of those evils from which years of wise effort have greatly purified British prison discipline. The danger is by no means imaginary at present, and the Committee of the Howard Association feel it their duty earnestly to invite attention to the matter.

HOWARD ASSOCIATION—PRISON REVOLTS, &c.—REPORT, OCTOBER, 1894.

ONE of the numerous evils of association in prison is the opportunity it affords for insubordination, escapes, and riot. During the past year many such disturbances have occurred, of which the following are a few:—

A mutiny in Boston Gaol, U.S.; the prisoners were fired upon by the guards. A prisoner's brains were beaten out by others in Nuremberg Prison, Germany. Four prisoners at Cassel, Germany, overpowered a warder and escaped. Two convicts at Borstal Prison, Kent, attacked a warder with a shovel. Considerable trouble with associated prisoners at Wormwood Scrubs, London. At Portland a convict, in a gang, attacked a warder with a pickaxe. A riot in Steyer Prison, Austria, when two prisoners were shot. A riot at Huelva Prison, Spain, when thirteen convicts escaped. At Thorn Prison, in Germany, three convicts escaped together. At Iglau Prison, Bohemia, a riot, in which three prisoners and one officer were killed. A riot at Troyes Prison, France. At Secoma State Prison, U.S.A., several prisoners conspired to poison the officers, and partially succeeded. Riots amongst Siberian convicts, &c., &c.

GEORGE MILLER,
Comptroller-General.

The Under Secretary of Justice.—B.C., 11/6/96.

[Enclosure.]

APPENDIX A.

[Extract from the "Australian Star," 19th May, 1896.]

THE BUTLER CASE—ANOTHER NOTED REVIVAL—ACTION BY THE CROWN.

To quash the rule *nisi* obtained by Butler—Issues to be tried—Butler's mental condition.

THE celebrated case of Butler *v.* Butler came before Mr. Justice Simpson in the Divorce Court this morning. It will be recollected that Butler obtained a decree *nisi* for a divorce from his wife, but in view of certain well-known developments did not apply for a rule absolute. To-day the Crown stepped in with an application that the matter should be settled on certain proposed issues. Mr. Whitfield appeared on behalf of the Crown Solicitor, who intervened, and applied that His Honor should settle the issues as follows, viz.:—Whether the petitioner acted in collusion with the co-respondent, Williams *alias* Davis; and whether material facts respecting the conduct of the petitioner and co-respondent were not before the Court.

Mr. J. Gannon appeared on behalf of the petitioner, and obtained leave to file an answer to the allegations of the Crown Solicitor. This was a denial.

Mr. Justice Simpson settled the issues as applied for, and intimated that as he had tried the conspiracy case, and formed a strong opinion about it, he would not try the issues himself; he would arrange that another Judge should take it. His Honor said he would do this because he had sentenced both the petitioner and co-respondent to seven years' penal servitude for conspiracy, and had agreed with the verdict of the jury. He would put the case down for next sitting.

Mr. Gannon made an application that the case should be set down about two months ahead, as Butler had just served his term of solitary confinement. As was usual in the case of prisoners who had been subjected to this, his mind and memory had become somewhat affected, and it took some time before contact with the other prisoners would restore him mentally.

His Honor said he would arrange for one of the other Judges to take the case, and would set it down for trial next sittings, which would not be held for some months.

I should like a report from the Visiting Surgeon as to prisoner Butler's mental and physical condition. Is he suffering from the effects of separate treatment?—G.M., 20/5/96. B.C., the Governor, Darlinghurst Gaol. The Visiting Surgeon, for favour of report.—P.H., Governor, Darlinghurst Gaol, 20/5/96. Please find report herewith from Visiting Surgeon.—Governor, Darlinghurst Gaol, 21/5/96. The Comptroller-General of Prisons.

Memorandum from The Visiting Surgeon to The Governor.

Sydney Gaol Hospital, 21 May, 1896.

I HAVE carefully examined prisoner Butler. His mental condition is normal, and he has a retentive memory; but in my opinion he will in the future endeavour to malingering. Separate treatment has not affected him in the slightest degree.

MAURICE J. O'CONNOR,

Visiting Surgeon.

Forwarded to the Comptroller-General of Prisons.—P.H., Governor, Darlinghurst Gaol, 21/5/96. For the Minister's information in connection with the attached cutting from *The Star*. This is another instance of the reckless manner in which the effects of separate treatment upon prisoners are misrepresented.—G.M., 21/5/96. The Under Secretary of Justice, B.C. Submitted.—A.C.F., 22/5/96. Seen.—A.J.G., 23/5/96.

APPENDIX B.

EXTRACT from Report of the Directors of Convict Prisons, England, for the years 1888 and 1889.

21. It would also be desirable to assimilate the practice as to the treatment of prisoners under sentence of penal servitude and of those under sentence of imprisonment in regard to the length of time during which they may be kept in separation. The former are, according to present practice, kept in separation for nine months only, while the latter may pass two years under that discipline.

22. We have discussed this subject with some fulness in our last report, but we may add that the experience of foreign countries agrees with our own in proving that there is no reason for our present limit of nine months. The new penal code of Germany and of Austria allows of the isolation of prisoners up to three years, and Holland, which at first imposed a limit of two years, has by successive laws extended it to three, four, and five years. The French have at present limited the time to nine months (probably following our example), but contemplate increasing it, though the necessity for expending a large sum of money in providing the necessary cell accommodation will probably practically delay the adoption of this improvement. Belgium, as is well known, has extended the period of separation much beyond any of these limits.

Submitted.—A.C.F., 13/6/96. These papers might be forwarded to the Inspector-General of Insane for favour of a report for the information of the Premier.—A.J.G., 18/6/96. The Principal Under Secretary.—A.C.F., B.C., 19/6/96. Refer to the Inspector-General of the Insane.—C.W., B.C., 22/6/96.

No. 3.

The Inspector-General of the Insane to The Principal Under Secretary.

Lunacy Department, Inspector-General's Office, Gladesville, 30 June, 1896.

I HAVE little to add to reports already furnished by me and embodied in the memo. submitted by the Comptroller-General of Prisons.

I have during twenty-nine years watched with some interest the working of the system under which nine months out of all sentences of three years and upwards are spent under separate treatment, in relation to its effects on the mental condition of prisoners, and have been unable to convince myself that this system as administered in this Colony tends to produce insanity.

In carrying out a system of this kind it is of course necessary to examine all prisoners carefully before subjecting them to the treatment, and to exempt all who are obviously weak-minded, or are on the boundary line 'twixt crime and insanity, and to work the system under efficient medical supervision.

No doubt an occasional case of mental disturbance occurs during the progress of separate treatment, as occasional cases occur under ordinary prison discipline, there being a close connection between insanity, in some of its forms, and crime, and many criminals showing evidence of mental as well as physical degeneration; but the sweeping statements with regard to the causation of insanity by separate treatment, which have been made here and elsewhere, do not appear to be borne out by the facts.

In the report of the Departmental Committee on Prisons, published in London in 1895, is the following:—

"We think that it cannot be denied that cases occur in which a nervous condition, agitated by remorse and by a long continuance of the separate system, may be injuriously affected by it, but from the evidence before us we have no reason to believe that such cases are of other than exceptional occurrence"; and in a memo. published as an appendix to the same report, Dr. Bridges, a member of the said Prisons Committee, and for many years an inspector under the Poor Law Board in England, points out that "strong statements have been made that the existing prison system promotes insanity, and that one of these statements will be found in the *Fortnightly Review* for April, 1894," and adds, "when carefully examined the inferences drawn by this writer seem to me not to be justified."

F. NORTON MANNING.

Dr. Manning's report may now be sent to the Department of Justice.—C.W., 5/7/96. Appd.—J.N.B., 6/7/96. The Under Secretary of Justice.—C.W., P.U.S., B.C., 7/7/96. Submitted. See also article from *British Medical Journal* herewith.—G.M., 8/7/96.

No. 4.

The Inspector-General of the Insane to The Under Secretary of Justice.

Lunacy Department, Inspector-General's Office,

Gladesville, 7 July, 1896.

My dear Miller,

I was called on the other day by Mr. Gould to make a report—supplementary to one by yourself—on insanity in prisons, and at the moment I could not lay my hand on the enclosed, with which I had provided myself to answer further objections, if made. It is an article from the *British Medical Journal*, and puts the matter so cogently, and at the same time so sensibly, that I think Mr. Gould should see it; and it might perhaps be placed with the other papers in the matter.

Sincerely yours,

F. NORTON MANNING.

[Enclosure.]

THE fallacy of attacking our present system, on the strength of mere numerical comparisons with the free community, was admitted during the examination of some of the medical witnesses called at that inquiry. The fact is that the sooner we admit that the conditions of mental and bodily health, as deduced from the statistics of a prison population compared with a free population, are not at all reliable, the better will be our chance of viewing the matter correctly. A caged bird can never exhibit precisely the same conditions and circumstances as a bird at large; and a man shut up must of necessity, owing to his peculiar environment, show some results quite different from a free man. Thus the imprisoned man will not be run over by a van when drunk; but he may pine for his accustomed intoxicant, and even fall into a condition of *delirium tremens* for the very want of his habitual stimulus. Thus here we can conceive a delirium actually consequent upon his imprisonment. But shall we therefore urge that all felons shall have the means of free drinking supplied them? Again, many natures require much amusement and excitement, if they are to maintain a high level of mental briskness; but because a man has overdone his search for excitement, and has landed himself within the clutches of the law, are we to say that prisoners shall play at baccarat and have merry-go-rounds to preserve their laughing and rollicking expressions?

The time appears to us to have come when wise men should look upon imprisonment as being an abnormal condition, brought about by the abnormal actions of abnormal persons, and as having naturally some abnormal results. Amongst these results we actually find an abnormally small amount of serious illness, no drunkenness, an abnormally small amount of the usual ailments of life; and if we were to see an abnormally large amount of mental unsteadiness, which we do not admit, it would be no more than the natural consequence of the depressing influence which any punishment must produce on the punished.

As

As long as mankind in general considers that a breach of law ought to entail punishment, so long must we see some distinctive objective results of that punishment, whatever form they may take. If the penal condition is made to entail very arduous work, which is rare now in our prisons, then the body must of necessity show results where a weak point is touched; but if the punishment assume for a generation the phase of solitary confinement, then the mental weak points will be found out, and we get depression of spirits. But for any reasoning person to suppose that the free and the incarcerated are to offer exactly similar statistics of health is, on the face of it, absurd. To take the question of insanity. A horde of lowly-educated and ill-nourished individuals come under the daily care and notice of a medical man for a certain period of their lives. A certain number are found during this period to be insane. Had these not been imprisoned, they would seldom have been seen by a doctor, and their weak points would seldom have been found out. Prison detects the weak point, and the numbers of the insane appear larger than amongst the free population. Some too, of course, exhibit the unavoidable results of a mental trial on a weak organism. If the whole population suddenly came under the notice of a body of dentists, the proportion of teeth found carious would increase suddenly among the community, but caries would not have resulted from these people being seen by the dentist. Just in the same way it is illogical to say that a prison population is lowered in mental tone because the deficiency comes under constant skilled observation. It would be puerile to imagine that imprisonment never produces insanity just as it would be obviously false to say that sudden success and wealth do not at times have the same effect, but anyone scientifically conversant with modern prison matters, and not merely judging from hearsay, is aware that, consistently with some remnant of punishment still being endured, the modern prisoner is, if anything, too well cared for in body and mind. The modern danger is really lest we should lose sight of the fact that imprisonment is meant to be deterrent.

In connection with the subject which suggested these remarks, we cannot help thinking, if one official is to be held responsible for the mental and bodily well-being of a nation's criminals, that the largest power and influence ought to be attached to such an office. The influence of the Medical Inspector should be improved to the extent of his ranking at least as high as a Commissioner of Prisons, and by his suggestions and recommendations being advanced immediately into the hands of the Secretary of State. It would then be more reasonable for the public to insist upon urgent remedies being promptly applied, when an official directly in contact with the Chief of the Home Department had cognizance and responsibility than as now, when the Medical Inspector is subordinate to and merely the servant of the Commissioners. This very matter is strongly commented upon by Doctor Bridges in his final remarks upon the prison system in connection with medical responsibility and official work, and is urged in the body of the report.

Submitted.--G.M., 8/7/96.

No. 5.

Minute by The Minister of Justice.

As much misconception appears to exist in the minds of the public as to the relative merits and demerits of the system of separate treatment (erroneously termed solitary confinement) as applied in our Colony, in common with all other civilised countries, with few if any exceptions, copies of these papers may be laid on the Table of the House. While holding strong views as to the desirability of making imprisonment deterrent as well as reformatory, I recognise that in our punishments we should carefully avoid anything that is calculated to injure either the mental or bodily health of the prisoners. Separate treatment, if we are to be guided by the practice now universally adopted, and by the reports that have from time to time been made, not only in our own Colony but in all parts of the world, has neither been found, so long as it is intelligently administered and proper precautions are adopted in its application, to injure the mental or bodily health of those who are subjected to it. That it is not acceptable to prisoners is natural, but this shows its value as a means of punishment, and if, as reported by the best medical authorities, it does not injure the prisoners' mental or bodily health, points to the system as an unobjectionable form of punishment, and one certainly far superior to the shot drill or crank system at one time so much in vogue, while having the merit of separating prisoners one from the other.

1895.

REPORT OF THE MINISTER OF PUBLIC INSTRUCTION.

To His Excellency The Right Honorable HENRY ROBERT, VISCOUNT HAMPDEN, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

May it please your Excellency,—

I have the honor to submit to your Excellency the Report of the Department of Public Instruction for the year 1895.

SCHOOLS.

In 1895 there were 2,563 schools, containing 2,776 departments, as compared with 2,508 schools and 2,725 departments open in 1894. During the year, 107 schools were established, comprising 17 Public, 54 Provisional, 27 Half-time, 3 House-to-house Schools, and 6 Evening Schools. In addition to these, 27 schools were reopened, 30 Provisional and 11 Half-time Schools were raised to the rank of Public Schools, and 21 Half-time and 3 House-to-house Schools to the rank of Provisional Schools; while 23 Public and 32 Provisional Schools were reduced to Half-time or House-to-house Schools. 79 of the schools in operation during the whole or some portion of 1894 do not appear on the list of schools open in 1895, and of those actually in operation in that year 63 were closed before the last quarter. The number of schools open at the close of 1895 was 2,500, containing 2,713 departments.

The following table shows the classification of the schools open in 1895 :—

1. <i>High Schools</i> :—						Schools.	Departments.	
Unclassed	5	...	5
2. <i>Public Schools and Half-time Schools</i> :—								
In Class	I.	39	...	117
"	II.	36	...	107
"	III.	27	...	61
"	IV.	64	...	93
"	V.	124	...	125
"	VI.	198	...	198
"	VII.	214	...	214
"	VIII.	370	...	370
"	IX.	796	...	796
"	X.	165	...	165
Unclassed	135	...	135
3. <i>Provisional Schools</i> :—								
Class	I.	}	317	...	317
"	II.							
"	III.							
4. <i>House-to-house Schools</i> :—								
Unclassed	57	...	57
5. <i>Evening Public Schools</i> :—								
Unclassed	16	...	16
	Total	2,563	...	2,776

Two hundred and twenty-seven applications for the establishment of new schools were received, namely, 31 for Public Schools, 155 for Provisional Schools, 27 for Half-time Schools, 7 for House-to-house Schools, and 7 for Evening Schools. Of these, 125 were granted, 86 were declined, and 16 remained under consideration at the close of the year. The total number of children to be accommodated in the new schools granted is 2,399.

The number of applications received and the action taken with regard to them are shown in the following table:—

Applications for the establishment of Schools.

Schools.	Number received.	Number granted.	Number declined.	Number still under consideration.
Public Schools	31	13	17	1
Provisional Schools	155	85	60	10
Half-time Schools	27	17	5	5
House-to-house Schools... ..	7	4	3	...
Evening Public Schools... ..	7	6	1	...
Total... ..	227	125	86	16

Full details respecting these applications will be found in Appendices I, II, III, IV, V.

The number of schools in operation in 1881, the first full year during which the Department was under Ministerial control, as compared with the number open in 1895, is given in the following table:—

Schools.	Number of Schools or Departments in operation.		Increase, 1881-1895.
	1881.	1895.	
High Schools	5	5
Superior Schools	58	245	187
Primary Public Schools	1,042	1,653	611
Provisional Schools	246	317	71
Half-time Schools	93	483	390
House-to-house Schools	57	57
Evening Schools	57	16	41*
Total	1,496	2,776	1,280
Seats provided	98,721	237,933	139,212

* Decrease.

In addition to the schools established and maintained under the Public Instruction Act, the following State supported or aided schools are still in operation, namely, the Sydney Grammar School, the two Industrial Schools, and the School for the Deaf and Dumb and the Blind.

School Premises and Sites.—The number of school sites acquired during the year was 84. Of these, 57 were Government grants, 13 were resumed under the Public Works Act, 51 Vic. No. 37, 12 were purchased, and 2 conveyed to the Department as free gifts. The cost of the purchased sites amounted to £2,095 5s. 1d., and the sum

sum of £15 7s. 7d. was paid on account of those resumed. In the case of 5 of the latter no claim was made by the original holders for compensation. The balance to be paid on the others, when all claims have been settled, is £271 13s. 10d. Full particulars as to the sites will be found in Appendix XX.

Buildings.—At the close of 1895, existing school premises afforded room for 237,933 pupils. Of the school-places counted in 1894, about 5,892 were lost in 1895 by the closing of schools and by the giving up of old buildings. The net increase was 6,539. Taking the building-work done in the last two years, it may be observed that, in 1895, 47 new schools and residences were erected under the Architect's supervision, as compared with 17 built in 1894; while the additions numbered 21, as compared with 8; the premises repaired, 408, as compared with 231; and the places provided, 4,244, as compared with 3,112 for the same period. The number of small school-buildings and residences erected under the Inspectors' supervision was 110, as compared with 52 put up in 1894; 32 school-buildings were enlarged, as against 14 in 1894; the number of places provided was 4,268, as compared with 1,949; and the buildings repaired numbered 1,253 in 1895, as against 748 in the previous year.

At the close of 1895 the following additional works were in progress :—27 new buildings and 7 additions, the whole to provide for about 2,507 children. Three new weather-sheds were in course of construction, as well as 8 teachers' residences. Repairs and improvements were being carried out in 128 existing buildings.

Full particulars respecting the building-work completed in the year, and that in progress at its close, are given in the following tables :—

Works completed.

	Number.	Places provided.	Total cost, not including cost of sites.	Average cost per building.	Cost per place.

The amount expended on Public School sites, buildings, furniture, repairs, rents, and rates during the last five years is shown below. The total expenditure on these items since 1880 is £2,568,048.

1891	£191,374
1892	157,679
1893	112,856
1894	73,791
1895	104,397

School Attendance.—The returns for the year show a gratifying improvement in school attendance, the gross enrolment at Primary schools being 245,904 pupils, as compared with 234,392 in 1894, an increase of 11,512. Deducting 12 per cent. on account of multiple enrolments, the number of individual pupils under instruction was 216,396, an increase over the preceding year of 10,131.

A corresponding increase is shown in the average daily attendance, which exceeds that of 1894 by 9,889. Last year the percentage of daily attendance to the average quarterly enrolment was 71·6, and was spoken of as higher than in any year in the history of the Department. In 1895, however, the average is even better by 1·2 per cent. The percentage for the March quarter is the lowest, 71·1, while in the December quarter it reached as high as 74·4. Tables dealing with the attendance are given later on in this Report.

The gross aggregate enrolment and the aggregate enrolment of distinct pupils for the last five years appear below :—

Years.	Gross Aggregate Enrolment.	Corrected Aggregate Enrolment of Distinct Pupils.	Increase.	
			Gross Enrolment.	Corrected Enrolment.
1891	233,719	205,673	11,855	10,432
1892	239,364	210,641	5,645	4,968
1893	238,951	210,277	413*	364*
1894	234,392	206,265	4,559*	4,012*
1895	245,904	216,396	11,512	10,131

* Decrease.

In addition to the 216,396 pupils enrolled in schools under the Public Instruction Act, there were 1,229 in attendance at other State-aided Schools, namely :—

The Sydney Grammar School	434
The Industrial Schools	701
The School for the Deaf and Dumb and the Blind	94
Total	1,229

Estimating the mean population of the Colony for 1895 at 1,264,660, the population between 6 and 14 years of age was 238,044. Of this number, 186,898, or 78·5 per cent., attended State Schools, and 51,146, or 21·5 per cent., received instruction in Private Schools or at home, or else remained altogether untaught. From the latest returns

returns of Private Schools' attendance it appears that the total enrolment was 52,140. As of this enrolment 38,680 pupils were between the ages of 6 and 14, it will be seen that of the total statutory school population of 238,044, 225,578, or 94·7 per cent., were enrolled at State and Private Schools, while 12,466, or 5·3 per cent., were taught at home, had left school after satisfying the standards of the Act, or remained untaught. In addition to pupils of the statutory school age, 20,354 under 6 years of age, and 23,831 over 14 years, were also enrolled for school attendance—30,725 at State Schools, and 13,460 at Private Schools. Thus, of 334,892 children in the Colony between the ages of 4 and 15 years, 217,625 attended State Schools, and 52,140 attended Private Schools; while the remainder, 65,107, received instruction at home, had completed their education, or were untaught.

The average quarterly enrolment was 192,075, and the average attendance 139,978. In the first half of the year 145,287 pupils, and in the second half 155,988 pupils, attended the ordinary day-schools 70 days or more. The percentage of the quarterly enrolment attending the compulsory number of days was, in the first half-year, 75·6 per cent., and in the second, 81·2 per cent.

The percentages of the net yearly enrolment attending 70 days or more in each half-year, since 1890, are as follow :—

Year.	70 days or more in first half-year.	70 days or more in second half-year.
1891	57·9	68·7
1892	67·7	71·5
1893	66·2	66·1
1894	69·1	75·8
1895	67·1	72·0

The enrolment and average attendance are shown in the following tables :—

(a) *Quarterly Enrolment and Average Attendance for 1894 and 1895.*

Quarters.	Number enrolled.		Average Attendance.			
			Number.		Percentages.	
	1894.	1895.	1894.	1895.	1894.	1895.
March quarter ..	181,859	191,778	123,605·0	136,526·8	67·9	71·1
June quarter ...	182,145	191,780	134,301·6	141,229·5	73·7	73·6
September quarter ...	181,847	194,113	128,237·5	140,227·5	70·5	72·2
December quarter ...	180,864	190,630	134,213·6	141,930·8	74·2	74·4
Year's average...	181,678	192,075	130,089·4	139,978·6	71·6	72·8

(b) Enrolment and Average Attendance for the last five years.

Years.	Year's Enrolment.	Quarterly Enrolment.	Average Attendance.		
			Number.	Percentage of Year's Enrolment.	Percentage of Quarterly Enrolment.
1891	205,673	178,278	122,528	59·52	68·72
1892	210,641	186,207	132,580	62·94	71·20
1893	210,277	186,327	128,322	61·02	68·86
1894	206,265	181,678	130,089	63·06	71·60
1895	216,396	192,075	139,978	64·68	72·87

The main facts relative to school attendance may be summed up thus:—225,578, or 94·7 per cent. of the statutory population, were enrolled for school attendance; 186,898, or 78·5 per cent., at State Schools; and 38,680, or 16·2 per cent., at Private Schools. Of the school population between 4 and 15 years—269,765, or 80·5 per cent., were at school; 217,625, or 64·9 per cent., at State Schools; and 52,140, or 15·6 per cent., at Private Schools. 216,396 children attended schools under the Public Instruction Act; 186,350 being of the statutory school age, and 30,046 either above or below it. The mean quarterly enrolment was 192,075, or 88·7 per cent. of the year's enrolment; and the average attendance was 139,978, or 72·8 of the quarterly enrolment. Of the average enrolment, 73 per cent. attended school 70 days or more in the first half-year, and 77·5 per cent. in the last half-year. The percentage of the population enrolled quarterly and the corresponding percentage in average attendance in 1895 were respectively 15·1 and 11, as compared with 14·6 and 10·5 in 1894.

Compulsory clauses of the Act.—54,125 children between the ages of 6 and 14 years were reported as failing to complete the minimum attendance of 70 days during the first half of the year; but in 577 cases only was the law set in motion. The parents of 3,967 were cautioned, while in the remaining cases satisfactory explanations were furnished, or the circumstances were not such as to render any action necessary.

For the second half-year, the number between the compulsory ages who did not attend 70 days was 44,386. In 591 cases legal action was taken, and cautions were sent to parents in 3,055 cases.

I take this opportunity of recognizing the assistance which the Police Department has rendered in the matter of school attendance. It has been pointed out, however, in successive annual reports that, in the present state of the law, it is practically impossible for the Education Department or the police to obtain convictions against parents whose children are not enrolled in Public Schools but attend Private Schools, or do not attend school at all.

SCHOOL FEES.

During the year leniency has been exercised throughout the Colony in dealing with arrears of school fees. It was found necessary to authorise legal action for the recovery of arrears in 364 cases, but debts to the amount of £3,546 were cancelled. Free education was granted in the case of 26,051 pupils. The amount of fees collected and paid into the Consolidated Revenue was—for Primary Schools, £70,112 18s. 1d.; and for High Schools, £3,206 14s.; making a total of £73,319 12s. 1d. These figures show an increase of £2,626 3s. 6d. upon the amount paid in 1894.

INSPECTION.

The arrangements for carrying on the work of inspection remained unchanged. The Inspectoral Staff comprises a Chief Inspector, a Deputy Chief Inspector, 9 District Inspectors, and 25 Inspectors. Out of a total of 2,771 schools, exclusive of High Schools, no fewer than 2,757 underwent the prescribed examination. Of the 14 schools not inspected, 11 were closed before the Inspectors' visits to their neighbourhood, and the remaining 3 were opened too late in the year to afford an opportunity for their inspection.

The subjoined table will show how the schools were apportioned, and the amount of inspection done in each district:—

District.	No. of Inspectors.	No. of Schools.	No. of Schools inspected.	No. of Schools not inspected.	No. of Pupils examined.
Armidale	4	333	333	...	12,257
Bathurst	3	259	257	2	10,253
Bowral	3	231	229	2	8,603
Goulburn	4	388	386	2	10,879
Grafton	3	317	317	...	11,662
Maitland	3	243	239	4	16,647
Metropolitan	4	191	190	1	42,505
Sub-Metropolitan	3	232	232	...	19,203
Wagga Wagga	4	331	330	1	12,643
Wellington	3	246	244	2	8,464
Totals	34	2,771	2,757	14	153,116

The inspected and the uninspected schools stand thus:—

	Public.	Provisional.	Half-time.	House-to-house.	Evening.	Total.
Inspected	1,897	313	477	56	14	2,757
Uninspected	5	4	2	1	2	14
Totals	1,902	317	479	57	16	2,771

The Course of Secular Instruction and Standards of Proficiency.—Constant attention has been directed to the branches constituting the prescribed school course, to the time devoted to the teaching of the several subjects, and to the standards laid down for determining the degrees of proficiency required of the various classes in schools. The working of the standards will necessarily depend on the Inspectors applying them. It cannot be expected that these officers will in all cases agree in their estimates of the pupils' work, but it is expected that they will endeavour so to conduct their examinations as to ascertain as far as practicable the true value of the teachers' labours.

The standards of proficiency remained the same as in 1894. The table given below shows the results obtained by examination:—

Subject.	Estimated Proficiency.		
	Number of Pupils examined.	Number of Pupils passed.	Percentage up to or above Standard.
Reading—			
Alphabet	11,599	8,757	75
Monosyllables	35,260	28,552	80
Easy Narrative	46,493	39,395	84
Ordinary Prose	59,764	51,937	86
Totals	153,116	128,641	84
Writing—			
On Slates... ..	61,446	50,657	82

Needlework	52,493	46,736	89
Drill	147,261	120,083	81
Natural Science	7,273	5,783	79

A comparison of some of the foregoing percentages, with the results in corresponding subjects during the previous year, is shown in the subjoined table:—

		1894.	1895.	Increase per cent.	Decrease per cent.
Total number of pupils examined		142,405	153,116	7.5	
Percentages of pupils examined in	Reading, who were tested in ordinary prose	40.2	39.0	1.2
	Writing, who wrote on paper.....	61.6	59.7	1.9
	Arithmetic, who were tested in the higher rules ...	16.5	15.69
	Grammar, who were tested in the advanced portions	51.3	52.07
	Geography, who were tested in the advanced portions	54.3	55.5	1.2	
	History	40.0	39.55
	Scripture and Moral Lessons	96.0	96.66
	Drill	95.0	96.1	1.1	
	Drawing	96.0	88.4	7.6
	Object Lessons	94.0	95.1	1.1	

While reading is taught to all pupils, over 90 per cent. of the children are instructed in writing, arithmetic, Scripture and moral lessons, object lessons, music, and drill; 88 per cent. learn drawing; 80 per cent. dictation; 40 per cent. grammar; 39 per cent. geography and history; more than 80 per cent. of the girls receive instruction in needlework. The other subjects mentioned in the table are taught in fourth and fifth classes only.

As regards the proficiency of the pupils examined the results show that the proportion of passes, as compared with the work of 1894, was 1 per cent. higher in reading, writing, Australian history, French, algebra, and needlework; 2 per cent. in arithmetic, geography, English history, and drawing; 3 per cent. in Latin. In grammar, object lessons, mensuration, and drill the percentage is the same for both years.

The following table summarises the progress in efficiency made in the different classes of schools during the past five years:—

Class of Schools.	Percentage up to or above the Standard.				
	1891.	1892.	1893.	1894.	1895.
Public	92	95	95	96	97
Provisional... ..	71	77	84	88	82
Half-time	81	81	84	87	89
House-to-house	81	76	78	80	91
Evening Schools	92	92	100	100	93
All Schools... ..	88	90	92	93	94

It will be seen that Public Schools have improved 1 per cent. as compared with 1894; Half-time by 2 per cent.; and House-to-house by 11 per cent. On the other hand the percentage satisfying the standard is smaller than in the previous year in the case of both Provisional and Evening schools.

Vocal Music.—141,758 pupils presented themselves for examination, an increase upon the figures of 1894 of more than 12,000. Of these 76 per cent. were found to be up to or above the standard. The

Superintendent of Music examined 180 school departments, and reports that, in reading at sight, including difficult passages, steady progress has been made, while in the production of purer tone and clearer enunciation improvement is noticeable. "In several of our schools, especially Fort-street Boys', Cleveland-street Boys', William-street Girls', and Manly Girls', four-part songs and glees of a much higher class than ordinary school songs have been introduced, and rendered in such a manner as to deserve special notice."

Drill.—The progress made and the proficiency shown in this important school subject are reported as satisfactory. Of 147,261 pupils examined 81 per cent. reached the standard. Last year the number examined was 136,232.

The Superintendent of Drill reports that the teachers evince great interest in drill, recognising its value as an aid to discipline, as well as its primary advantage to the pupils as regards their physical growth and health. The knowledge of drill, and the ability to teach it effectively are increasing among our teachers, many of whom keep themselves fully posted in all changes in the details of elementary drill introduced from time to time by the Imperial authorities.

All metropolitan and most of the suburban schools were regularly visited by members of the Cadet Staff, whose business it is to give model lessons in the subject. These visits are appreciated by the teachers, and are of special advantage to those of them upon whom devolves the duty of drilling the pupils from day to day.

HIGH SCHOOLS.

The total enrolment at these schools was 603, and the average daily attendance 468, as against 611 and 475 respectively for 1894. The attendance at each school is shown below:—

School.	Total enrolment.	Average quarterly enrolment.	Average daily attendance.
Sydney (Boys)...	207	158	146·2
„ (Girls) ...	208	157	144·8
Maitland (Boys) ...	91	67	62·3
„ (Girls) ...	58	56	51·1
Bathurst (Girls) ...	39	30	25·7
Totals ...	603	468	430·1
Totals for 1894 ...	611	475	435·8

The number of pupils enrolled at both the Sydney schools is lower than in 1894, but in the case of the country schools there is an increase. Each school was thoroughly examined during the year, and the examining inspectors report favourably of the discipline and of the earnestness and skill with which the work of instruction is carried on.

407 pupils, or 87 per cent. of the average quarterly enrolment, were present at examination, the percentage of results ranging from 68 per cent. upwards. The measure of success achieved by these schools at the University Examinations will be seen from the following table:—

School.	No. of Passes Junior Examination.	No. of Passes Senior Examination.	No. of Passes Matriculation Examination.
Sydney (Boys)	29	3	22
„ (Girls)	19	5	16
Maitland (Boys)	10	2	7
„ (Girls)	7	1	1
Bathurst (Girls)	8
Totals	73	11	46

Of those who matriculated, 21 qualified at the junior and 7 at the senior examination. Medals were awarded to High School pupils at the junior examination for proficiency in English history, arithmetic, and algebra.

The total expenditure on High Schools was £6,648 14s. 7d., being more than £1,400 less than in the previous year, and the amount received from fees £3,206 14s. 0d. The actual cost to the State was, therefore, £3,442 0s. 7d., or at the rate of £5 14s. 2d. per head of the total enrolment, as against £7 7s. 0d. in 1894.

State Scholarships and Bursaries.—At the examinations held under the Scholarship and Bursary scheme, 108 candidates were successful. Of these, 25 males and 32 females obtained scholarships for High Schools and Superior Schools; 18 males and 17 females, bursaries for High and Superior Schools; 6 males, bursaries for the Sydney Grammar School; and 6 males and 4 females, University Bursaries.

Of the 57 successful competitors for Scholarships, 15 boys and 16 girls have since attended the Sydney High Schools, 10 boys and 10 girls the Maitland High Schools, 5 girls the Bathurst High School, and 1 girl attends a Superior School. Of the 41 who succeeded in gaining State School Bursaries, 6 boys and 10 girls attend the Sydney High Schools, 10 boys and 5 girls the Maitland Schools, 1 girl Bathurst High School, 2 boys and 1 girl Superior Schools, and 6 boys the Sydney Grammar School.

This year the whole of the University Bursaries available were awarded. Five were obtained by High School pupils, 2 boys and 3 girls; and five by pupils of Superior Public Schools.

The total number of candidates examined for admission to the High Schools was 808; of these 770, or 95·2 per cent., were successful.

SUPERIOR SCHOOLS.

Two schools—Ballina and Broken Hill North—were added to the list of Superior Schools, thus making the total 98, comprising 245 departments. The number of pupils enrolled for the December quarter of the year was 67,910, the average attendance being 51,068.

Superior Schools were very successful at the University Examinations, having passed 245 candidates, viz., 4 seniors and 241 juniors. Other Public Schools not classed as superior obtained 49 junior passes. These give a total of 294, 30·7 per cent. of the aggregate number. If the High Schools be added, the passes from schools under the Department represent 39·5 per cent. of the whole.

EVENING PUBLIC SCHOOLS.

Seven applications for the establishment of Evening Schools were received; 6 were granted and 1 was refused. The total number of schools in operation was 16, but 4 collapsed before the end of the year. On 31st December there were only 12 schools in existence, having an enrolment of 354 with an average attendance of 197.

As stated in former reports, Evening Public Schools do not meet with public favour. Even when started under the most favourable auspices, they do not last long.

HOUSE-TO-HOUSE SCHOOLS.

Of 7 applications received for these schools, 4 were granted, 3 refused. There were 57 schools in operation during the year of which 91 per cent. were reported to be up to or above the standard. Instruction in this class of school is confined to reading, writing, dictation, and arithmetic. Although necessarily expensive, they are doing much good, and meet the wants of a large number of families which, without such provision, would be cut off from the means of school instruction.

TECHNICAL EDUCATION IN PUBLIC SCHOOLS.

Drawing.—135,386 pupils were examined in this subject, of whom 105,979, or 78 per cent., satisfied the standard. All the schools in the Metropolitan District, and five of the largest in the Sub-Metropolitan District, were visited by the Superintendent of Drawing. In these, 28,510 pupils were present at examination, namely, 8,354 boys, 7,958 girls, and 12,198 infants. 72·2 per cent. of those examined were found to reach the standard, being 3 per cent. better results than in 1894.

Detailed information in regard to this subject will be found in the Superintendent's report, Appendix XIII.

Manual Training.—The workshops in existence were the same as in 1894, and afforded means of instruction to the pupils of 11 schools. The total enrolment of these classes, including students in training, was 626. It is in contemplation to open 2 additional workshops during 1896.

Cookery.

Cookery.—The number of schools in operation in 1894 was increased by 2 in 1895. The total enrolment was 1,301, with an average attendance of 1,045. Of this number, 933, or 89·2 per cent., presented themselves for examination.

Needlework.—The number of female pupils examined in this subject was 52,493, of whom 46,736, or 89 per cent., passed the standard. In the Metropolitan District the Directress of Needlework examined and reported upon 80 schools, including Hurlstone Training School, the Sydney Girls' High School, and Randwick Asylum. Over 13,000 children were present at examination, and are reported to have exhibited satisfactory progress. The Directress states that in a large number of the schools the needlework is far above the standard required; that the work-mistresses and teachers in charge show a keen interest in the advancement of needlework, and that they are doing excellent work often under trying circumstances. It is a fact worthy of recognition, moreover, that in many instances the lady members of the Public School Boards have given encouragement to the pupils by providing prizes for proficiency in this subject. [Appendix XV.]

PUBLIC SCHOOL SAVINGS BANKS.

Seven new Banks were opened during 1895, and the total number in operation was 632. The amount deposited was £11,154, and the sum withdrawn £10,892 19s. 5d., showing, as compared with 1894, an increase of £1,515 0s. 1d. in deposits, and in withdrawals of £1,062 4s. 10d.

The total amount to the credit of the School Banks on 31st December was £6,310 1s. 6d., an increase on the previous year in the amount to the credit of children of £261 0s. 7d.

The amount withdrawn for deposit to the credit of pupils in the Government Savings Bank was £2,765 2s. 1d.

Since the establishment of these Banks in 1887 the deposits have totalled £100,081 12s. 2d., and the withdrawals £93,771 10s. 8d. Of this latter sum, £27,994 16s. 3d. was withdrawn for the purpose of being placed to the credit of children's own accounts in the Government Savings Bank.

TEACHERS.

The supply of teachers has been more than adequate for all requirements. The number of all classes actually employed at the end of 1895 was 4,477, showing an increase of 34 on the number for the corresponding quarter of 1894. 2,733 were classified teachers, 590 unclassified, but certificated for small schools, 61 were Training School students, 1,000 pupil-teachers, 67 work-mistresses, and 26 High School teachers. Of the whole number, 52·2 are males and 47·8 females; and of the teachers in charge of schools or departments, 69·7 per cent. are males and 30·3 females.

The

The following table will exhibit full information respecting the several classes into which teachers are divided :—

	I A.		I B.		II A.		II B.		III A.		III B.		III C.		Unclassified.		Totals.		Grand Total.

	Class I.		Class II.		Class III.		Class IV.		Probationers.					
	M.	F.	M.	F.	M.	F.	M.	F.	M.	F.				
Pupil-teachers	78	365	78	149	33	40	98	85	32	42	319	681	1,000
Work-mistresses	67	67
High School Teachers...	16	10	26
Total Teachers of all ranks												2,340	2,137	4,477

Of the total number of classified teachers, 7·7 per cent. are in Class I, 36·3 per cent. in Class II, and 56 per cent. in Class III. In 1894 the percentages in the three classes were respectively 8·3, 35·6, and 56·1.

Of the 183 teachers whose connection with the Department ceased during the year, 139 resigned, 27 retired under the Civil Service Act, 5 were dismissed, and 12 died.

Pupil-teachers.—The number of pupil-teachers employed on 31st December was 1,000, consisting of 319 males and 681 females. They were classed—First class, 443; second, 227; third, 73; fourth, 183; probationers, 74. During the year 195 applicants for appointment to the office of pupil-teacher were examined, of whom 65 were accepted. Of those awaiting employment, 213 were appointed to schools.

Fort-street Training School.—The number of students in training was 32. Of these, 15 held full scholarships, 10 half scholarships, and 7 attended at their own expense.

The Principal reports that the conduct of the students has been, almost without exception, highly satisfactory, and that their diligence and attention to duty have been equally praiseworthy.

An important change in the working of the Training Schools came into operation at the beginning of 1895. The arrangements under which students attended the University during their course were

were discontinued, and the period of training was limited to one year. This term is spent wholly at the Training Schools. Those students, however, who gain a classification of II A, with honors, are granted, on their passing the Matriculation examination, scholarships at the University for twelve months, subject to renewal for a second year conditionally upon their passing creditably the annual examinations and conducting themselves with propriety.

In addition to the course in professional subjects and in the principles and practice of teaching and class management, instruction in manual training was given to the students. In connection therewith special lectures were given upon the timbers of Australia and their uses. The results of the examination in manual training held at the end of the year were :—

Honours.	First Grade.	Second Grade.	Total.
8	17	5	30*

* Two students were absent from examination.

Hurlstone Training School for Female Students.—The Lady Principal reports that the health of the students, generally, was good, and their conduct excellent. The number in residence was 29, two of whom attended at their own charge.

Instruction was given in the usual professional subjects, in Needlework, Cookery, Drill and Calisthenics, and Physiology, including a knowledge of first aid to the injured.

At the end of the year Miss Everitt severed her connection with the Department, after having filled the office of Principal for more than ten years. During this period, Miss Everitt has devoted her whole energies to the faithful discharge of her duties; and while inculcating upon the students the necessity for diligence and zeal in the prosecution of their studies, has been careful to promote also their physical and moral well being.

Miss Nicoll, the Assistant Principal, has been selected to fill the position rendered vacant by Miss Everitt's resignation; and Miss Ethel Mallarky, B.A., hitherto Assistant Teacher in Croydon Park Public School, will succeed Miss Nicoll.

Teachers' Examinations.—The total number of examinees of all classes during 1895 was 2,257. The percentage of passes of teachers was 60·8, and of pupil-teachers 75. The total number of pupil-teachers reported on was 624, as against 1,061 in 1894. The male and female examinees who obtained the highest number of marks at the first class pupil-teachers' examination for admission to training, were Mr. Joseph Brown, of Grenfell Superior Public School, and Miss Edith Clements, of Marrickville Superior School. Each of them will be presented with the Jones Memorial Medal.

In

In the following table the results of the several examinations are given in detail:—

Persons examined.	Results.		
	Passed.	Failed.	Total.
Teachers and Assistant Teachers	278	189	467

High School Candidates	770	38	808

Teachers' Mutual Assurance Association.—During 1895, 8 teachers joined the Association, and 5 members died. The average annual death-rate remains at 1.2 per cent.; and for the last nine years the amount paid annually by each member, by way of premium, has averaged £1 1s. 9d., or 1 $\frac{3}{8}$ per cent. on the sum payable at death.

No alteration has taken place in the entrance fee to be paid by those joining the Association, nor in the amount payable by members on the death of any of their number. There is no legacy duty payable, nor have nominees of deceased members to wait for proof of will.

LOCAL SUPERVISION.

Four sub-districts were formed during the year, and a Public School Board appointed in the case of each. The number of persons so appointed was 21. In addition, 84 members were added to Boards already in existence. The total number of Boards in operation was 290. On 54 of these, ladies to the number of 111 held seats. The resignations of 42 members were accepted, and 9 were reported as deceased.

SCIENTIFIC AND TECHNICAL EDUCATION.

In his report, which will be found as Appendix XIX, the Superintendent states that there have been more enrolments for the classes than in 1894; a greater attendance of pupils; and a higher percentage of passes at the annual examinations. A comparison of the enrolments is given in the following table:—

	1894.	1895.
Sydney Technical College	2,956	3,458
Suburban classes	508	550
Country classes	2,500	2,252
Classes connected with Public Schools	579	811
	6,543	7,071

Deducting from the total enrolment all cases where students joined more than one class, the number of individual students was 5,458, an increase of 530 as compared with 1894. The average weekly attendance was 3,492.

The total number of classes in operation was distributed as shown below:—

	Under salaried Teachers.	Teachers paid fees only.	Total.
Sydney Technical College	70	12	82
Suburban classes	9	11	20
Classes in country towns	76	10	86
Classes from Public Schools	10	10
	165	33	198

The students examined at the close of the year numbered 2,651, of whom 1,788, or 67·4 per cent., were successful; in 1894 there were 2,457 examined, of whom 1,644, or 66·9 per cent., passed. At the technological examinations of "The City and Guild of London Institute," held in this Colony in April last, 24 candidates presented themselves, and 17 obtained certificates. Two candidates in plumbing and one in iron and steel manufacture passed in highest class honors.

The teaching staff comprises 88 persons, viz., 11 lecturers in charge of departments, 5 resident masters in charge of branch schools, 38 teachers, 15 assistant teachers, and 19 teachers in charge of classes remunerated by pupils' fees only. As in former years, lectures upon technical subjects have been delivered by the officers of the Department in the various centres of population.

The Technological Museum was visited by 249,650 persons—52,226 more than in the previous year. The appended table gives the attendance in detail.

	1894.	1895.
Technological Museum, Sydney	89,695	118,967
Branch Museum, Newcastle	52,911	56,174
„ Goulburn	16,437	28,031
„ Bathurst	23,770	27,338
„ West Maitland	14,611	19,140
	197,424	249,650

The total expenditure on technical education during 1895, including £3,838 1s. 7d. spent on the Technological Museums, amounted to £24,238 16s. 8d. Of this sum £20,296 7s. 11d. was a Parliamentary grant, and £3,942 8s. 9d. represents the fees paid by students.

PUBLIC SCHOOL CADET FORCE.

For the last quarter of 1895 the total enrolment of the force was 4,468. The amount expended for cadet purposes was £3,864 11s. 3d. as against £4,150 2s. 10d. in 1894.

Details as to the work of the year will be found in the report of the Officer Commanding. [Appendix XVIII.]

FINANCE.

The sum available for expenditure under the Public Instruction Act was £702,562 7s. 1d., made up as follows:—

	£	s.	d.
Balance from 1894	1,245	12	6
Amount received from Treasury on account of Vote for 1894	31,703	0	0
Amount received from Treasury on account of Vote for 1895	337,153	0	0
Amount received from Treasury on account of Vote for 1895-1896	330,000	0	0
Amount received from Loan Vote—(Land)	1,090	14	7
Amount of Minister's salary	1,370	0	0
	<u>£702,562</u>	<u>7</u>	<u>1</u>

The total outlay was £701,823 13s. 6d., namely, £104,397 5s. 1d. on school premises, and £597,429 8s. 5d. on maintenance of schools, administration, &c. The balance at the end of the year was £735 13s. 7d.

General

General Statement of Expenditure for 1895.

I. On School Premises :—		£	s.	d.
For sites, new buildings, additions, repairs, &c.	104,397	5	1	
II. On Maintenance of Schools, &c. :—				
1. Teachers' salaries and allowances in Primary Schools	516,399	2	4	
Other maintenance expenses in such schools	25,366	5	1	
2. High School salaries and maintenance expenses	6,648	14	7	
State Scholarships and Bursaries	2,927	14	6	
3. Administration, including Training Schools and enforcement of school attendance	46,087	11	11	
		597,429	8	5
		£701,826	13	6

The amount of school fees collected and paid into the Consolidated Revenue was £73,319 12s. 1d., namely, £70,112 18s. 1d. from Primary Schools, and £3,206 14s. from High Schools. Deducting this sum from the total expenditure, there will remain £628,507 1s. 5d. as the net school expenditure derived from State funds.

The total expenditure under the following heads during the last five years was :—

	1891. Expenditure.	Per-centage of total expen- diture.	1892. Expenditure.	Per-centage of total expen- diture.	1893. Expenditure.	Per-centage of total expen- diture.	1894. Expenditure.	Per-centage of total expen- diture.	1895. Expenditure.	Per-centage of total expen- diture.
	£ s. d.		£ s. d.		£ s. d.		£ s. d.		£ s. d.	
SCHOOL PREMISES AND ARCHITECT'S EXPENSES :— For sites, buildings, additions, &c.	191,373 17 6	24·87	157,679 6 9	20·52	112,855 12 5	15·78	73,791 13 1	11·16	104,397 5 1	14·88

Information is furnished in the following summaries respecting educational establishments connected with this Department, but not carried on under the provisions of the Public Instruction Act:—

THE SYDNEY UNIVERSITY.

506 students, including 80 women, attended lectures during 1895. The total number qualified for Matriculation was 314, of whom 117 passed the ordinary Matriculation Examination, 118 the Junior Public Examination, 24 the Law Matriculation Examination, 39 the Senior Public Examination, and 16 the Entrance Examination for Medicine and Science.

At the Senior Public Examinations, 142 candidates presented themselves, and 112 passed. At the Junior Examination, 847 were successful out of 1,398.

The degrees conferred during the year were 114, viz.:—M.A., 6; B.A., 72; LL.B., 8; M.D., 2; M.B., 9; Ch.M., 6; B.Sc., 2; B.E., 9.

The University Staff consisted of 14 Professors and 33 Lecturers, of whom 7 Professors and 6 Lecturers are paid out of the Challis Fund.

The year's expenditure was £31,671 13s., of which sum £11,500 was granted by the Government. £2,780 7s. 7d. was derived from private foundations for the payment of scholarships, bursaries, prizes, &c., and for books for the Fisher Library. The total income for the year was £31,517 9s. 7d.

THE SYDNEY GRAMMAR SCHOOL.

The total enrolment of pupils for 1895 was 434, of whom 162 were under and 272 over the statutory age of 14 years. 138 new pupils were admitted, 71 being under and 67 above 14 years of age. The mean quarterly enrolment was 368, and the average attendance 355.

The income of the School for the year amounted to £8,061 17s. 2d., comprised of—

State grants	£1,500	0	0
School fees	6,414	0	0
Other sources	147	17	2
				<hr/>		
				£8,061	17	2

The year's expenditure was £8,110 12s. 3d. The cost per pupil in average attendance was £24 1s. 2 $\frac{3}{4}$ d., of which £23 19s. 4 $\frac{3}{4}$ d. represented the cost of tuition, and 1s. 10d. of buildings, &c. The cost per pupil in 1894 was £24 18s. 11d. The expense to the State was £4 4s. 6d. per head of the average attendance, as against £6 6s. 10 $\frac{3}{4}$ d. in 1894.

THE

THE PUBLIC LIBRARY.

The total number of volumes in the Library at the end of 1895 was 110,611. During the year new books to the number of 8,743 were added, and 12,893 books sent out on loan to country libraries. 156,388 persons visited the reading rooms as against 131,531 in the previous year; 171,894 the newspaper room as compared with 121,332 in 1894; and 80,782 visits were paid to the Lending Branch, an increase of 3,214 over the number in 1894. The total number of visits, therefore, paid to the institution during the year was 409,064, being 78,633 more than were paid in 1894.

Thirty persons were employed on the staff of the institution. The expenditure for the year was:—

On buildings, repairs, &c. (under Government Architect) ...	£99	0	0
On books, periodicals, newspapers, binding ...	2,754	0	0
On salaries ...	4,661	0	0
On maintenance ...	974	0	0
	<u>£8,488</u>	<u>0</u>	<u>0</u>

THE AUSTRALIAN MUSEUM.

The number of visitors to the Museum was—On week-days, 86,353; on Sundays, 32,226; total, 118,579. Twenty persons were employed in the institution. The Trustees report that the year's expenditure was as given below:—

On salaries and allowances...	£4,198	19	10
On specimens (purchase, collection, and carriage) ...	114	5	9
On books ...	200	1	0
On catalogues ...	251	2	8
On cases and bottles ...	733	1	2
Miscellaneous ...	233	0	5
	<u>£5,730</u>	<u>10</u>	<u>10</u>

NATIONAL ART GALLERY.

During the year 226,065 visits to the Gallery were registered, being a daily average of upwards of 624. The attendance on Sundays averaged 1,634, on week-days, 458. Thirty additional students were admitted, making the total number 212. Five persons were permanently employed, with three extra assistants on Sundays and holidays.

The following is a statement of the year's expenditure:—

For works of art purchased ...	£755	9	0
For maintenance (frames, freight, repairs, insurances, &c.) ...	702	1	3
For salaries ...	1,015	9	0
	<u>£2,472</u>	<u>19</u>	<u>3</u>

NEW SOUTH WALES INSTITUTION FOR THE DEAF AND DUMB
AND THE BLIND.

The number of inmates during the year was 94 as compared with 86 for 1894. Of these 75 were under and 19 were over 14 years of age. The new admissions were 16, 15 of whom were under and 1 over 14 years. Nine inmates were discharged—1 under 14 years, and 8 over that age. The income was :—

From State grants	£450	0	0
From other sources	3,684	4	5
	<u>£4,134</u>	<u>4</u>	<u>5</u>

The expenditure for the year was as follows :—

For maintenance	£2,236	7	9
For salaries and wages	2,099	14	2
	<u>£4,336</u>	<u>1</u>	<u>11</u>

INDUSTRIAL SCHOOL FOR GIRLS, PARRAMATTA.

The enrolment for the year was 167, of whom 28 were under and 139 above the age of 14 years. There were 51 new admissions—16 under and 35 over 14 years old. Forty-seven inmates were discharged during the year, as follows :—

To Boarding-out officer... ..	5
As apprentices	13
On attaining age of 18 years	24
By order of Governor-in-Council	2
To Benevolent Society	1
Illegally sent to Institution	1
By death... ..	1
	<u>47</u>

The number remaining in the institution on 31st December was 120. Compared with 1894, there were an increase of 2 in the enrolment and a decrease of 4 and 1, respectively, in the new admissions and the discharges.

The expenditure for the year was :—

For maintenance	£1,518	7	10
For salaries	969	9	1
	<u>£2,487</u>	<u>16</u>	<u>11</u>

Calculated on the enrolment, the cost per inmate was £14 18s. 1d. A comparison with the figures of 1894 shows that a saving has been effected in the general expenditure of £309 0s. 2d., and in the cost per head of £2 0s. 11d.

The Superintendent reports: "The work done in the laundry consisted of 164,683 articles of clothing, which were washed and either ironed or mangled; 36,778 pieces were done up for the officers and students of Hurlstone Training School, at an estimated cost of £368 14s. 5d. The estimated cost of the work, which consisted of 127,905 pieces, for the officers and inmates of the Industrial School was £1,033 12s. 4d. The work of the sewing-classes, consisting of plain sewing, cutting-out, dressmaking, and darning, is valued at £145 19s. 10d.

The

The inmates have enjoyed, generally speaking, good health during the year. * * * They have been well-behaved and have given little trouble to the officers. The apprentices sent out have given satisfaction to the masters and mistresses. * * * Of the inmates discharged each one was able to earn a good living, and had no difficulty in getting a situation."

NAUTICAL SCHOOL-SHIP "SOBRAON."

In this institution, 534 boys were enrolled, 283 of these being under and 251 over 14 years of age; the new admissions numbered 185, 100 of whom were below and 85 above the age stated. The number discharged was 154, made up as follows:—

For apprenticeship	95
On attaining 18 years of age	8
Transferred to Boarding-out Officer	25
Sent to hospital	1
Drowned	1
Transferred to N.S.W. Artillery	1
Illegally sent to the ship	1
By order of the Governor-in-Council	22
	154

Three hundred and eighty boys remained on the "Sobraon" at the end of the year. As compared with 1894, an increase of 33 is shown in the enrolment, of 2 in the discharges, and a decrease of 13 in the number of new admissions.

The total expenditure was £9,921 5s. 9d., viz.:—

For maintenance	£6,928 16 3
For salaries	2,992 9 6
	£9,921 5 9
Deducting parents' contributions to the Treasury	302 9 6
	£9,618 16 3

Calculated on the net expenditure, the cost to the State per head of the enrolment was £18 0s. 3d.

The institution is reported to have worked quietly and smoothly during the year. The boys' conduct was satisfactory, and no losses occurred through absconding. The enrolment was higher than in any previous year. The ship was visited by a large number of former inmates, who all appeared to be decent, respectable members of the community.

J. GARRARD,
Minister of Public Instruction.

Department of Public Instruction,
Sydney, 30th April, 1896.

APPENDIX XII.

THE CHIEF INSPECTOR'S REPORT WITH ITS ANNEXES.

THE records for the year 1895 show a substantial increase in the number of schools and pupils. Of the 2,503 schools in operation in 1894, 79 were closed during or at the end of that year, leaving 2,424 in existence at the beginning of 1895. New schools to the number of 134 were established in 1895, making a total on the roll of 2,558 schools, representing 2,771 departments, an increase of 55 schools and 52 departments. Three infant departments whose attendance was not sufficient to warrant separate maintenance were closed and amalgamated with the primary school, the whole school being thus worked as one department instead of two. In future no distinct departments will be formed except in very large schools, and the number of those now in existence will be reduced as opportunity offers for providing for the mistresses in charge.

The new schools have been chiefly in the western and south-western districts, and on the northern rivers, and have been rendered necessary by new settlements upon the land and revived activity in mining.

The following is the return of schools for the last five years :—

Year.	Public.	Provisional.	Half-time.	House-to-house.	Evening.	Total.
1891	1,697	349	300	92	14	2,452
1892	1,708	348	341	85	15	2,497
1893	1,700	347	369	90	9	2,515
1894	1,667	302	449	71	14	2,503
1895	1,685	317	483	57	16	2,558

Arranged in classes according to the average attendance at the end of the year, they are :—

	Class I.	II.	III.	IV.	V.	VI.	VII.	VIII.	IX.	X.	Small Unclassified.	Total.
1891	35	35	20	47	118	197	200	309	668	290	533	2,452
1892	38	34	21	54	117	195	222	315	665	283	553	2,497
1893	38	37	24	53	116	205	208	322	724	227	561	2,515
1894	38	36	23	64	116	209	206	311	762	209	529	2,503
1895	39	36	27	64	124	198	214	370	796	165	525	2,558

As in 1894 the greatest increase is in the Half-time Schools.

At the close of 1894 there was accommodation for 231,370 pupils. During 1895, after providing for the loss caused by closing schools and abandoning old buildings, 6,563 additional places were supplied, raising the total accommodation to 237,933 places. As the highest quarterly enrolment of individual pupils was 194,113, it is evident that, taken as a whole, the accommodation is ample. There are always a few small schools where an unexpected increase in the number of pupils by the advent of a large family takes place, causing overcrowding for a time, but the evil is speedily remedied. Much greater difficulty is presented by the popular schools of Sydney and its suburbs, that fill up no matter what additions to the buildings are made. In these schools limitation of the enrolment is only partially effective, and gives rise to much dissatisfaction and complaint on the part of parents whose children are excluded.

The following table shows the accommodation in each district :—

District.	Number of places at end of 1895, reckoned at 8 square feet for each child.	Number of places at end of 1895, reckoned at 100 cubic feet of air space for each child.
Armidale	18,965	17,429
Bathurst	16,652	16,522
Bowral	16,452	15,184
Goulburn	19,021	16,528
Grafton	18,689	18,518
Maitland	24,940	26,612
Metropolitan.....	50,220	63,905
Sub-metropolitan	25,908	25,508
Wagga Wagga	24,128	23,724
Wellington	13,816	14,003
Total	228,791	237,933

Steady improvement is made in the character and condition of the school buildings. In the early part of the year the small ones scattered through the country were thoroughly overhauled, and made clean and comfortable.

Sometimes it is difficult to obtain a good water supply. The usual plan is to collect the rain-water from the roof in iron tanks. In most cases this is sufficient, but the long drought that prevailed through last winter exhausted the supply nearly everywhere, and the Department incurred considerable expense in purchasing water till rain fell.

The substitution of verandahs for weathersheds meets with general approval. Verandahs are not only of greater service to the children, but they are less costly than weathersheds, and protect the school-room from the weather. Great attention is paid to lighting and ventilation. For some time past the buildings erected in the hot portions of the Colony have been made exceptionally large, and furnished with wide verandahs. The school building is frequently the coolest in the town.

Several buildings were destroyed and many seriously injured by the bush-fires that ravaged the country during the drought. The teachers did their best to save the buildings from destruction, and their efforts met with success in most instances. Unfortunately in one case, Jasper's Brush, the teacher, Mr. Larcombe, lost his life in consequence of exposure in trying to keep the bush-fires away from the school. In two cases of the destruction of school buildings by fire there is no doubt that the buildings were wilfully set on fire.

The matter of teachers' residences gives a great deal of trouble. Nearly all teachers in charge of classified schools are married men, and, in accordance with the regulations, should be provided with residences, but for the 1,685 public schools there are only 1,019 residences. The population in many of the country districts is so migratory that the officers of the Department dare not recommend the expenditure to provide comfortable dwellings, as there may be no use for them in the course of a few months. The granting of an allowance for renting residences only partially gets over the difficulty. In many places no building is available, in others, only a dilapidated but—not at all suitable for a respectable family—is all that can be secured. Great hardship is at times entailed upon the teacher and his family by the distance of their home from the school, and this falls most heavily upon the teacher's wife, who has to visit the school to teach sewing. The inspectors are unanimous in commending the great majority of teachers for the care they take of the school premises. Many teachers devote no small portion of their leisure time to garden work, and not a few school playgrounds are made beautiful by the trees and flowers grown by the teachers and by pupils working under their direction.

All schools are adequately supplied with the needful working appliances, and much credit is due to the contractors for the care and attention bestowed upon the school requisitions. A

A large and rapidly-increasing expenditure is incurred in emptying water-closets. Most of the municipalities now enforce what is known as the pan system—one that, as usually carried out, is the most objectionable for schools. In many instances there is reason to fear that the municipality works this business not as a matter of sanitation, but of revenue. As will be seen from the reports of the inspectors, these officers have been called upon to attend to a large amount of work connected with buildings. A considerable saving, both of time and money, has been effected by placing the smaller country contracts in the hands of the inspector.

The work done under the supervision of the inspectors consisted of:—

102 new schools	} total cost ...	£	s.	d.
32 additions to schools		5,875	12	6
8 new residences		2,018	9	3
16 weathersheds		335	5	0
1,253 buildings repaired		16,518	18	10

The gross enrolment of pupils at all schools in 1895 was 245,904. Deducting 12 per cent. for multiple enrolments the number of individual pupils on the books of the schools was 216,396.

The following table gives the enrolment and average attendance for each quarter of 1894 and 1895, together with the rates of increase:—

Quarter.	Enrolment in 1894.	Enrolment in 1895.	Increase for 1895.	Average daily attendance for 1894.	Average daily attendance for 1895.	Increase in average attendance for 1895.	Percentage of increase of enrolment.	Percentage of increase of average attendance.
March	181,859	191,778	9,919	123,605·0	136,526·8	12,921·8	5·4	10·4
June	182,145	191,780	9,635	134,301·6	141,229·5	6,927·9	5·3	5·1
September	181,847	194,113	12,266	128,237·5	140,227·5	11,990·0	6·7	9·3
December	180,864	190,630	9,766	134,213·6	141,930·8	7,717·2	5·4	5·7
Average	181,678	192,075	10,397	130,089·4	139,978·6	9,889·2	5·7	7·6

The percentage for each quarter was:—

Quarter.	Enrolment.	Average attendance.	
		Number.	Percentage.
March	191,778	136,526·8	71·1
June	191,780	141,229·5	73·6
September	194,113	140,227·5	72·2
December	190,630	141,930·8	74·4
Year's average	192,075	139,978·6	72·8

Compared with 1894 there is an increase in the gross enrolment of 11,512 on the average quarterly enrolment of 10,397, and on the average daily attendance of 9,889·2.

Of the children who failed to attend school the seventy days as required by law during the half-year ended 30th June, 1895, it was found necessary to caution the parents or guardians of 3,967, and legal action was taken in 577 cases.

For the half-year ended 31st December, 1895, cautions were sent in 3,055 cases, and the parents or guardians of 591 were prosecuted.

It has long been realised that from certain defects in the Public Instruction Act the compulsory clauses have been productive of but little good. These defects have been previously specified, but may again be set forth. The amendments required are:—

1. To place the onus of proof of age and distance from school upon parents.
2. Provision to deal with children found idling about during school hours.
3. Authority to ascertain the names and addresses of all children of school age.
4. Power to compel teachers of all schools to furnish accurate returns of enrolment and attendance.
5. Legal definition of what constitutes a day's attendance at school.
6. Prevention of the employment of children under 14 years of age, unless they hold the certificate of being sufficiently educated.

There is no doubt that police co-operation has proved a valuable aid in the administration of this portion of the Public Instruction Act, but while the onus of proving everything in the shape of default devolves upon the Department, instead of the parents, the object of the compulsory clauses cannot be attained. Convictions can be obtained in the cases of children who are enrolled at the State schools but do not complete the required attendance, but there are thousands of children who attend at private or denominational schools, or who do not attend any school, that are completely beyond the reach of the Department.

It is noted that the plea of home instruction, to excuse non-attendance at school, is becoming common. This plea, generally a mere pretext, is too frequently accepted by magistrates without the slightest inquiry as to the *regularity* or *efficiency* of such instruction. Failure to obtain conviction in cases of this kind has seriously affected the enforcement of the law. The Department makes no distinction in instituting prosecutions, and, in the present state of the Act, has to rely probably more than it should upon the co-operation and discrimination of magistrates.

Attention may be invited to the fact that from necessity children under 14 are taken from school to assist in family maintenance. Where great poverty exists, particularly in cases of widowed mothers, children of working age are exempted from further attendance at school. If they live in the vicinity of a night-school the exemption from day-school attendance is granted conditional to a night-school being attended. The Department also endeavours to meet this phase of the situation by the issue of a certificate to the effect that a child has been educated up to the standard required for exemption from attendance at school.

That standard is as follows:—

Section 35 provides that—

When any child attending a public school is educated up to the standard of education required by this Act such child shall receive a certificate in the form of Schedule A hereto.

Schedule A.

Certificate of a Child being sufficiently Educated.

I HEREBY certify that _____ has been educated up to the standard of education required by the "Public Instruction Act of 1880."

Dated at _____ the _____ day of _____

A.D. 189 .
Inspector.
Regulation

Regulation under the 20th Section of the "Public Instruction Act of 1880."

THE standard of education required by the 20th Section of the Public Instruction Act, as a just cause for exempting any child from the obligation provided therein to attend school, shall be the following:—

1. READING.—To read the 4th Book of any series authorised for use in Public Schools, or at the option of the Inspector any other book of equal difficulty.
2. WRITING.—To write in a neat and legible hand, and without serious errors in spelling, a passage of twelve lines, to be dictated slowly from such book.
3. ARITHMETIC.—To work correctly questions of ordinary difficulty in Simple and Compound Rules, Reduction, Proportion, and Practice.

As a result of these examinations, a considerable number of children are, every year, rendered eligible to leave school before the prescribed maximum age (14) is reached.

In dealing with default, the Department is confronted with the necessity for considering domestic hardships as palliatives for the breaking of the law; as a consequence, a reasonably lenient view has always appeared preferable, and prosecutions are instituted only in really culpable cases. It has, moreover, been found that the issue of cautions has been attended by most desirable results, and many thousands of these are issued each half-year.

School Fees.

The collection of school fees represents no inconsiderable portion of a teacher's duty, assiduity and tact being constantly required to prevent arrears.

During the year free education was granted to 26,051 pupils. The numbers as regards the quarters are as follows:—Quarter ended 31st March, 14,066 pupils; Quarter ended 30th June, 2,990 pupils, 1,972 renewals; Quarter ended 30th September, 6,329 pupils, 12,063 renewals; Quarter ended 31st December, 2,666 pupils, 2,463 renewals.

In order to form a proper estimate of the full amount of free education prevailing during the year it is necessary to consider, in connection with the figures already afforded, the amount of fees cancelled. This section represents numbers of people who, for various reasons, decline to apply for free education. The amount of fees cancelled during 1895 was £3,546 12s. 2½d.

During the year legal action was taken for the recovery of fees in 364 cases, and cautions to pay were issued to 270 debtors.

The amount of fees collected in schools, exclusive of High Schools, during 1895 was £70,112 18s. 1d., against £67,107 5s. 2d. in 1894.

The total amount of fees collected and paid into the Consolidated Revenue was £73,319 12s. 1d., as compared with £70,693 8s. 7d. in the previous year.

The Inspectoral arrangements for 1894 were continued unaltered through 1895. The departments open during the year numbered 2,771, of these 2,757 were fully inspected. The uninspected schools were all small; eleven of them were closed before the Inspector could make his visit, the remainder were opened late in the year.

The number of pupils examined (153,116) exceeds by nearly 11,000 the number examined in any previous year. This large increase is not wholly caused by the opening of new schools and the natural growth of population, but is partly accounted for by the lowering of the school age to 5 years, and by the exceptionally fine weather that prevailed through the greater part of the year.

The number of schools now under each Inspector, and the number of pupils to be examined, together with the amount of building work to superintend, give very little time for second inspections. The number of second inspections has consequently fallen from 271 in 1894 to 130 in 1895.

The following are the details of inspection:—

Year.	No. of schools.	No. of schools inspected.	No. of schools not inspected.	No. of pupils examined.	No. of Inspectors.
1893	2,738	2,715	23	140,713	35
1894	2,719	2,695	24	142,405	34
1895	2,771	2,757	14	153,116	34

The particulars for each district stand thus:—

District.	No. of Inspectors.	No. of schools.	No. of schools inspected.	No. of schools not inspected.	No. of pupils examined.
Armidale	4	333	333	12,257
Bathurst	3	259	257	2	10,253
Bowral	3	231	229	2	8,603
Goulburn	4	388	386	2	10,879
Grafton	3	317	317	11,662
Maitland	3	243	239	4	16,647
Metropolitan	4	191	190	1	42,505
Sub-metropolitan	3	232	232	19,203
Wagga Wagga	4	331	330	1	12,643
Wellington	3	246	244	2	8,464
Total	34	2,771	2,757	14	153,116

The inspected and uninspected schools were:—

	Public.	Provisional.	Half-time.	House-to-house.	Evening.	Total.
Inspected	1,897	313	477	56	14	2,757
Uninspected	5	4	2	1	2	14
Totals	1,902	317	479	57	16	2,771

Of the 2,757 schools inspected, 2,587 reached the standard, or exceeded it.. This is nearly 94 per cent. of the whole, and is a slight improvement upon the results of 1894.

The

The following tables show the proficiency of all schools inspected —

	Below Standard	Up to Standard	Above Standard	Total
Public—				
1 In operation a full year at time of inspection	50	84	1,740	1,874
2 Not do do do	4	3	16	23

Natural Science	7,273	5,783	79

A careful examination of these tables will show that good all round progress has been made and that satisfactory proficiency has been reached in all the important subjects of school work. Every possible precaution is taken to secure sound work in Reading, Writing, Spelling, and Arithmetic. At the regular inspections all pupils who had been sufficiently long at school were required to undergo examination for exemption certificates. 17,380 were examined, and 8,942, or 51 per cent, passed. This result, though better than last year, is by no means satisfactory, and I shall not be satisfied until the passes reach 70 per cent. This examination has had a very good effect. It shows up conspicuously all weak points in the work of both teachers and pupils, tends to check too rapid promotions and ensures special attention to what are known as the 3 R's. In all cases where less than 50 per cent of the pupils examined succeeded in gaining certificates the teachers were called upon for explanation. The explanations were accepted, or the teachers were cautioned or censured according to the magnitude of their shortcomings.

In reporting upon a school, the Inspector notices all details of organisation, discipline, and instruction, nothing affecting the welfare of the school should be passed by. In points of organisation fault is rarely found especially in the keeping of the records and the furnishing of returns. This is very satisfactory, as the negligence or carelessness of only one teacher may cause a lot of trouble and inconvenience. It is not often found necessary to enforce the provisions of Regulation 84. Of course the records of a school may be perfect and yet the educational work be of poor quality, but incompleteness, inaccuracy, or slovenliness in connection with the records is generally indicative of something seriously wrong in the more important work of the school.

Much of the comparatively poor work shown at the examination for exemption certificates may be attributed to improper classification or to badly arranged lessons. Although the classifying of pupils calls for the exercise of much care and judgment, the standard of proficiency is so definite and explicit that no teacher of even limited experience can be excused for serious errors. Too frequently the errors are caused by the ambitious desire to have a Fifth or a Fourth class. The pupils are promoted prematurely, the teacher trusting to pull up the back work by special lessons or increased home exercises. The result is that teacher and pupils are greatly worried, and the end sought is not attained.

The construction of the Time table is a matter of greater difficulty. Even able and experienced teachers find it no easy task to construct a workable Time table that provides for a proper sequence of subjects, and for each subject receiving its due amount of time and attention. The difficulty is greatest in the small schools, where one teacher has to teach 3 classes, one or more of them in two divisions. Only extreme care, attention, and judgment will enable him to overcome the difficulty. No one Time table can possibly suit every school, each teacher must be guided by the circumstances in which he is placed, but it may safely be assumed that reading, writing, and arithmetic should be given to the first class twice a day and to each of the other classes once a day. A Time table once found suitable should be strictly followed. Alterations should be made with very great caution. Except in a newly-established school a temporary time table must be viewed with grave suspicion. The programmes of lessons are usually drawn up with marked skill and care, but some teachers, particularly those in infant schools, do not strictly observe the provisions of the standard of proficiency. This is specially evident in the list of object lessons. Some teachers, too, overlook the all important fact that the document is for the purpose of fixing before hand the lessons for the quarter, so as to ensure thorough preparation for the same. From the reports of the Inspectors, and the results of my own observation, I am satisfied that the disciplinary condition of our schools ranks high. Perhaps the least satisfactory features are punctuality and regularity as they in a large measure depend upon circumstances outside the teacher's influence. Parents who take no interest in the education of their children, taking advantage of the omission in the Public Instruction Act to prescribe the number of hours attendance at school that constitute a school day, make a practice of sending their children late to school. Others again, especially in dairying districts, demand that their children shall leave school before the regular time. The teachers, in their own interest, as well as that of the pupils, do their utmost against these evils, but are really powerless against parents who are determined to make unreasonable exactions upon the children's time. As the average quarterly attendance was 72.8 of the enrolment, the regularity may in a country with a scattered population be regarded as satisfactory.

A very important feature in school discipline is the cleanliness of the pupils. From the earliest days of the Board of National Education great attention has been paid to this matter with the result that even in poor districts where the children are poorly clad and fed, the cleanliness merits commendation.

In the report for last year I adverted to the number of children who came barefooted to school. I am sorry to have to state that the number has greatly increased. This indication of distress and destitution among our people is saddening. This distress is most in evidence in some of the coal mining districts. The teachers of these districts have special difficulty to overcome in teaching poor children who are weak and faint from want of food. It is much to the credit of not a few teachers that out of their small incomes they have contributed liberally to provide food and clothing for their destitute scholars. Whether viewed from its influence upon the formation of character, or for placing the school in the most favourable conditions for making the instruction effective, order is the most important feature of school discipline. As applied to school work, order implies not only the absence of unnecessary noise, but the absence also of listlessness, carelessness, and inattention, it means prompt and cheerful obedience to the teacher's commands, precision and uniformity in all school movements, and perfect sympathy between pupils and teacher. To secure it a teacher must be strictly just and impartial, must be earnest in his work, must possess good tact and resources as well as ability to govern. In looking over the Punishment Record of schools I have sometimes found "inattention" stated as the offence for which punishment had been inflicted, and have pointed out to the teacher that inattention on the part of the pupils is a matter for which he is most probably to blame. The common phrase "pay attention" necessarily implies that attention has been earned. If a teacher prepares his lesson thoroughly, and delivers it in an impressive and attractive manner he will have no trouble in securing attention.

It has frequently been charged against the Department that a heavy expenditure is incurred in teaching advanced subjects. As a matter of fact the pupils taught such subjects do not number 4 per cent of the enrolment, and if all the advanced subjects were at once excluded there would not be one school the less required, and the reduction in the number of teachers would be inappreciable.

The Public Schools made a creditable show at the University examinations of 1895. Without including pupils from the High Schools, our schools gained 290 Junior, 4 Senior, 12 Matriculation, and 4 Honors Matriculation passes. The schools deserving honourable mention are —

Fort-street	41	junior, 9 matric, 4 honors matric.
Newcastle Superior	19	" 1 "
Leichhardt	19	" "
Stanmore	14	" "
Wollongong	9	" "
Crown street	8	" "

Cooma	5	" "
Ulmaria	5	" "

Manual Training classes have been formed in connection with the Boys' High Schools in Sydney and East Maitland, and with the Public Schools, Fort-street, Cleveland-street, Crown-street, Blackfriars, Sussex-street, and the schools at Goulburn and Maitland. These classes have been eminently successful, and are evidently appreciated by both boys and parents. Further particulars will be found in the report of the Superintendent of Technical Education.

Early in 1896, a workshop will be opened in Newcastle for the benefit of the boys of that populous district, and later in the year it is expected that manual training will be extended to Bathurst.

The arrangements for Cookery instruction foreshadowed in last report have been carried out. The number of Cookery Schools was raised from 12 to 14 in the country; Goulburn, Lismore, Tamworth, and Wagga Wagga were substituted for Bathurst, Glen Innes, and Grafton; while in the city, Paddington and Petersham replaced Balmain and Fitzroy-street. 1,301 girls attended the cookery classes, of these 1,045 were examined at the end of a term of instruction, and 933 passed the tests applied. The following is a list of the schools in operation during the year:—

Place.	Remarks.
Hurlstone Training School	Open all the year.
Parramatta Industrial School.....	" "
Fort-street	" "
Redfern West.....	" "
Balmain	Closed April, 1895.
Blackfriars	" "
Newcastle	Open all the year.

By the new arrangements for working the Cookery classes the expenditure has been largely reduced without any sacrifice of efficiency.

Considerable activity, especially in the Lithgow section of the Bathurst district, has been manifested in forming school libraries. These libraries, placing within the reach of children, books of an instructive and interesting character, instead of those of the penny dreadful type, too common in the bush, cannot fail to be productive of mental and moral good, and deserve a more liberal support than they are likely to obtain. The movement is not a new one. As far back as 1854 several National Schools established libraries, and kept them up for three or four years. At intervals since that date the matter has been warmly taken up in other schools, but the library has been short-lived. The difficulty has not been in the starting, there is generally sufficient enthusiasm for that, but in meeting the expenditure necessary to add the new books required to sustain the interest. Now that excellent books can be procured cheaply, it is hoped that the school libraries, once established, will become permanent parts of the school machinery.

While the mental and moral well-being of the scholars is carefully watched over, the fact that a sound body is of paramount importance is not overlooked. Hence the school and its surroundings are made as healthy as possible, and exercises calculated to develop a good physique are regularly practised. Drill is taught in every school, and all the young teachers are trained to become qualified instructors of this subject. In the larger schools, physical drill (with and without arms), and practice with dumb-bells, clubs, &c., are systematically given. Calisthenic exercises with wands, clubs, and dumb-bells form a prominent feature in the work of our girls' schools, and even the infants have their action songs and physical exercises. Much has been done by the Public Schools Athletic Association to foster a taste for manly sports—cricket, football, &c.—and the influence of the Association has extended to the country, where branches are being formed. Anything that will tend to get rid of the aimless lounging about so prevalent among the youth of the country, not only deserves encouragement, but shall be regarded as a blessing to the whole community.

High Schools.

The number of High Schools in operation in 1895 was the same as for the previous year. The attendance is shown below:—

School.	Total Enrolment.	Average Quarterly Enrolment.	Average Daily Attendance.	Fees received.
Sydney (Boys).....	207	158	146·2	£ s. d. 1,212 15 0
" (Girls).....	208	157	144·8	1,187 11 0
Maitland (Boys)	91	67	62·3	368 11 0
" (Girls)	58	56	51·1	289 16 0
Bathurst (Girls)	39	30	25·7	148 1 0
Total.....	603	468	430·1	3,206 14 0
The figures for 1894 were.....	611	475	435·8	3,586 3 5

All the schools were subjected to a searching examination by several of the Department's Inspectors under my supervision, and were found to be in an efficient state.

Each school was represented at the various University examinations. The following table shows the number of passes:—

School.	Junior.	Senior.	Matriculation.

Total expenditure on High Schools during 1895, £

The number of teachers employed in the Department's service on the 31st December last was 4,477, 24 more than in 1894. It is gratifying to find that the reports upon this large body of public servants are in such commendatory terms. The teachers generally are persons of exemplary character and of studious habits; they are earnest and faithful workers who carry out to the best of their ability the instructions of the Department. The position of many teachers of our small schools is a trying one; it is isolated, the pay is small, while promotion is painfully slow. Yet, in spite of the indifference of some parents, the active opposition of others, and the almost total absence of encouragement, these men and women work steadily on, doing the best they can for the children committed to their care. Nothing but a strong sense of duty and devotedness to their work can account for the patient, uncomplaining manner in which our teachers work on from year to year.

Nearly all the teachers returned as unclassified have served for several years as pupil-teachers, and will have no difficulty in gaining a classification when they are allowed to undergo examination. Under these young teachers the small schools of the Colony have attained a high degree of efficiency.

The Training Schools were conducted on the lines laid down in my last report. Fort-street was attended by 32 (males) and Hurlstone by 29 (females). As there is now only one class in each Training School, the work of the teachers is concentrated, and therefore more effective. With the assistance of the permanent examiner, I examined the students at the end of each quarter, so as to test their progress. The results showed that they had been attentive to instruction and diligent in study, and had made satisfactory improvement in practical skill. As a reward for distinguished merit, those students who at the end of the year gain a classification of 2A with honors will be awarded a scholarship at the University, and will continue their second year of training at that institution. They will also be granted a similar training for the third year, if they are found worthy.

It is with very great regret that I have to report that at the end of the year, by the resignation of Miss M. M. Everitt, Principal of Hurlstone, the Department lost a most valuable officer. For ten and a half years Miss Everitt discharged the duties of her important office with untiring assiduity, painstaking care, and marked efficiency. Her all-round attainments, her superior skill as a teacher, and her devoted care of the students qualified Miss Everitt in a special manner for the office she has now relinquished.

Details of the work of the Training Schools will be found in the reports of the respective Principals.

The number of teachers of each grade is shown in the following table :—

	I A.		I B.		II A.		II B.		III A.		III B.		III C.		Un-classified		Totals.		Grand Totals.

Total Teachers of all ranks																	2,340	2,137	4,477

* Of the unclassified teachers, 231 have served as pupil-teachers.

The work of the Technical Education Branch has been prosecuted ably and vigorously, and with much success. Detailed information will be found in the report of the Superintendent. The following is a summary of the results of the year's operations :—

Classes in operation	198
Enrolment of students	7,071
Students examined	2,651
Students that passed examination	1,788
No. of visitors to Technological Museum	118,967
No. of visitor to Branch Museums	130,683

Appended are the usual reports.

F. BRIDGES,
Chief Inspector.

ANNEX A.

ANNEX A.

INSPECTORS ALLPASS AND DAWSON'S REPORT.

THE schools under our charge for the year 1895 were 39 Public and 6 Evening Public Schools. The Public Schools comprised 90 departments.

The quarterly enrolments and average attendances were:—March quarter, 27,318 and 19,530; June quarter, 27,057 and 19,815; September quarter, 27,539 and 20,166; December quarter, 26,778 and 19,905, respectively.

These numbers show that the prevailing enrolment has been slightly over 27,000, and the attendance has been 20,000, nearly.

The accommodation in the schools under report is 26,483 seats, *i.e.*, nearly equal to the enrolment. Considering the average attendance only, there is an excess of some 6,000 seats.

The additions to the school-buildings have been—new buildings at Albion-street (3 departments) and an extension of the boys' school-room at West Marrickville.

One school, the Evening Public School at Waterloo, closed very early in the year, and was not inspected. With this exception, the several schools under our charge have been fully inspected, and, in addition, they have received numerous incidental visits.

The number of passes gained at the annual examinations of the schools in the more important subjects was:—Reading and Writing, 78 per cent.; Dictation, 79 per cent.; Arithmetic, 65 per cent.

In our portion of the Metropolitan District there are 86 principal teachers, 219 assistant teachers, and 169 pupil-teachers. The best testimony to their worth and efficiency is for us to record that their schools are well organised, effectively disciplined, and efficiently taught.

30th December, 1895.

J. W. ALLPASS, } Inspectors.
J. DAWSON, }

ANNEX B.

INSPECTOR THOMPSON'S SECTION.

THE schools under my supervision during the year were in every respect identical with those of 1894.

Accommodation.

The provision for the accommodation of pupils in ordinary attendance was sufficient and suitable in character. The material condition may be pronounced to be in all respects satisfactory.

Attendance.

The gross enrolment of pupils during the year was 17,630. The multiple enrolment amounted to 3,296. The actual enrolment was, therefore, 14,334. The annual average attendance was 9,343·3, giving a percentage of 69 on the actual enrolment.

The several quarterly enrolments and average attendances were as follow:—March quarter—enrolment, 12,824; average attendance, 9,196·6. June quarter—enrolment, 12,915; average attendance, 9,365·5. September quarter—enrolment, 13,426; average attendance, 9,851·8. December quarter—enrolment, 12,852; average attendance, 9,487·2.

Inspection.

All schools and departments received regular inspection. The aggregate number of pupils examined was 10,288, which points to a high rate of attendance of pupils at regular inspections.

With one exception, all schools and departments were well up to and above the required 50 per cent. of maximum marks obtainable. Thus the proficiency of the pupils was of a decidedly satisfactory character on the average.

As a whole, the schools were well organised; the government judicious and effective; the teachers earnest in the discharge of the responsibilities and duties of their office.

W. F. THOMPSON,
Inspector.

ANNEX C.

INSPECTOR WILLIS'S REPORT.

DURING the year just closed the schools under my supervision numbered 23, and consisted of 20 Public Schools, 2 Evening Schools, and the school on board the training-ship "Sobraon." Each and all of these were open throughout the whole of the year.

The aggregate enrolment of pupils was 14,841, and the average attendance for the year 9,998·6. For the accommodation of these pupils the existing school-rooms afford 14,529 places. Several of the schools are not at present large enough for existing requirements. New class-rooms are being erected for the pupils attending Newtown and Darling Road Superior Schools, and the schools at Annandale and Kegworth are to be enlarged as soon as the necessary funds for the purpose are available.

Regarded generally, the school-buildings are commodious, well ventilated, suitably furnished, and in a creditable state of repair.

The 23 schools under my supervision comprise 49 departments, each of which was fully inspected, and 44 of them were visited a second time. The results of inspection show that, when tested, each school was in a satisfactory state of efficiency. None were found to be below standard, 2 schools just reached the minimum percentage of marks required, and the remaining 47 were above standard. For organisation the average mark awarded these schools was very fair to good (75 per cent.); for discipline, good (80 per cent.); and for proficiency in subjects taught, very fair (or 70 per cent.). In most of the schools the subjects for which low marks were given were—English, advanced arithmetic, mensuration, Latin, composition, and algebra.

The teachers and pupil-teachers of these schools number altogether 240, and there are 19 sewing-mistresses employed in the girls' departments. These officers, one or two only excepted, have, during the year just closed, diligently and successfully performed their school duties, and there is no doubt that the quality of their important work for the year now opening will be quite equal in merit to past efforts.

9th January, 1896.

M. WILLIS,
Inspector.

ANNEX D.

DISTRICT-INSPECTOR W. DWYER'S REPORT.

THE number of departments in operation during the past year was 232—200 Public, 11 Provisional, and 21 Half-time. Last year the number was 16 more, or 248 in all, the difference being accounted for by the transfer of 16 schools to the district of Bowral in January, 1895.

All schools open during the year, or any portion of it, were fully examined, and their condition, as compared with the standard, shows an advance on the results of the preceding year, the proportion up to or above being 98 per cent.

The number of places available for pupils according to the authorised standard of floor-space is 26,247, or, according to that of cubic measurement, 25,982, and the entire enrolment for last quarter was 22,032. The total amount of sitting accommodation is therefore adequate, and, as a whole, evenly distributed.

Four

Four (4) new schools were opened during the year, and another at South Bankstown is now in course of erection, and expected to be brought into operation at an early date.

In the tabulated returns already furnished, the subjects taught and the number of pupils examined in each are fully set forth. A general review of these returns shows the number of subjects to be about 20 for each school. The number of pupils examined in reading—which subject includes all pupils present—was 19,203, of whom 83 per cent. are up to or above the standard, and in the other subjects the proficiency varies from 69 to 82 per cent.

The full teaching staffs of the district include 485 persons, of whom 325 are teachers and assistants, 149 are pupil-teachers, and 11 are work-mistresses. 89 per cent. of teachers and assistants are classified, and about the same proportion of pupil-teachers.

It is my agreeable duty to be able to speak in laudatory terms of the great majority of teachers, assistants, and pupil-teachers. Nearly all perform their duties with intelligence, energy, skill, and reasonable success, and maintain, as far as known, in private life, respectable social relations with their neighbours.

The reports of the Inspectors acting with me are now forwarded.

Sydney, 6th January, 1896.

WM. DWYER,
District Inspector.

ANNEX E.

INSPECTOR PLITT'S REPORT.

At the end of 1894 there were in this section of the Sub-Metropolitan District 89 schools—68 Public Schools, 5 Provisional Schools, and 16 Half-time Schools. There are now under my supervision 92 schools. The Half-time School at Redbank was permanently closed during the second half of 1894, owing to the average daily attendance falling below the required minimum. A new school now established at Blood Tree as a Half-time School will meet the educational wants of Redbank locality and the Blood Tree. New schools were also established at Rouse Hill Road and Tennyson. At Wallambyne Creek a new wooden school-house on modern lines was erected to replace old buildings.

Seven applications for the establishment of schools have been received. The appended statement shows the localities from which these applications emanated, and the Department's decision in each:—

School	Department's decision.
(a) Beecroft	Public, granted.
(b) East Carlingford	Public, declined.
(c) Upper Webb's Creek	Provisional, declined.
(d) Lower Bull Ridge	Public, declined.
(e) Wilberforce Labour Settlement	Public, granted.
(f) Rouse Hill Road	Public, granted.
(g) McGrath's Hill (near Windsor)	Public, granted.

Accommodation.

The accommodation provided for the pupils in this section at the close of 1894 was 7,207 seats, but owing to the enlargement of several schools, and the erection of new school buildings at Tennyson, Rouse Hill Road, and Wallambyne Creek, the accommodation has been materially increased, and now affords ample sitting room for upwards of 7,500 pupils.

Attendance

The table hereunder sets forth the total enrolment, the average attendance, a percentage of attendance, the school fees collected, and the number of free pupils, for each quarter during the year 1895:—

Quarter.	Enrolment.	Average attendance	Percentage	School fees collected	Free pupils.
March	5,947	4,262.1	71.8	£ s. d. 517 4 3	962
June	5,908	4,503.0	74.5	545 10 9	1,023
September	5,932	4,317.8	72.7	558 11 2	1,072
December	5,699	4,384.3	76.9	534 1 8½	1,011

Inspection.

Every school in operation has been fully inspected, and incidentally visited when practicable. One school received a second inspection.

The Girls' Industrial School at Parramatta was inspected, with results of a highly pleasing character. I further wish to add that I closely observed and scrutinised the management of the institution, and I was pleased to report that its condition reflects credit on teachers, pupils, superintendent, and Mrs. Spier, the matron.

The following table shows the number of pupils examined in each subject, and the percentage of passes.

Subject	No. at Examination.	Percentages of Passes
Reading	5,714	83
Writing	5,714	87
Dictation	3,942	80
Arithmetic	5,714	82
Grammar	3,607	78
Geography	3,507	85
History (English)	3,058	83
History (Australian)	1,410	77
Scripture and Moral Lessons	5,611	83
Object Lessons	5,714	80
Drawing	5,714	76
Music	5,706	75
French	192	75
Euclid	987	77
Algebra	938	77
Mensuration	870	75
Latin	598	74
Trigonometry		
Needlework	2,147	81
Drill	5,714	85
Natural Science	1,320	75

From these results it can be seen that creditable proficiency in the majority of the schools has been attained.

The Teaching Staff.

The teachers, as a body, are respectable, intelligent, and industrious. They, with few exceptions, loyally and faithfully discharge their official duty, and in the majority of cases exercise a beneficial influence in the locality in which they labour. The pupil-teachers are well conducted and studious, and many exhibit good and promising efficiency in their work.

Their classifications are shown hereunder :—

TOTAL number of Teachers employed in the District on the 31st December, 1895.

	I A.		I B.		II A.		II B.		III A.		III B.		III C.		Un-classified.		Totals.		Grand Totals.

Total Teachers of all ranks.....																	86	51	137

Summary.

(a) Three new schools were opened during the year, and 1 Half-time School closed, due to small attendance.

(b) Substantial improvements have been effected at Parramatta South, Parramatta North under the architect's supervision, and important improvements are in progress at Freeman's Reach and Richmond North under his supervision.

(c) The works carried out during the year under the Inspector's supervision are as follows :—

	£	s.	d.
(a) Erection of teacher's residence, cost.....	182	10	0
(b) Repairs and improvements to 39 school buildings.....	669	10	0
(c) Repairs and improvements to 17 teachers' residences	321	14	0
(d) Erection of 3 school buildings	243	17	0

(d) Accommodation exists for 7,500 pupils.

(e) Every school in the section had a regular inspection, and 1 received a second inspection.

(f) The work of the year has been satisfactory, and the prospects for the incoming promising and encouraging.

CHAS. JNO. PITT,
Inspector.

Parramatta, 31st December, 1895.

ANNEX F.

INSPECTOR SKILLMAN'S REPORT.

At the end of 1894 there were in this section of the Sub-Metropolitan District 69 Public Schools in 85 departments, 2 Provisional, and 2 Half-time Schools.

In January last 14 Public Schools in 16 departments were transferred from this district to the charge of Mr. District-Inspector Johnson, of Bowral, while 7 Public Schools taken from Mr. Inspector Pitt's section were placed under my supervision.

In July the Public School at Otford, which had been closed since May, 1893, was reopened.

I have, therefore, now under my care 63 Public Schools in 77 departments, 2 Provisional, and 2 Half-time Schools. Total, 81 schools.

Applications for the establishment of new schools at Audley, Lilyvale, and Sorrento have been received during the year, but the small number of children interested and the proximity of existing schools caused the petition in each case to be refused.

During the year the Architect has erected commodious additions to the schools at Arncliffe and Auburn North.

A wooden school-room, to supply increased accommodation for the boys' department at Kogarah, is nearly completed, and the school building at Hurstville West is being enlarged.

A new school-room is to be provided at Miranda early in 1896, to replace the existing leased structure.

The teachers' residences at Arncliffe and Emu have been enlarged, and the school buildings and residences at Auburn North, Cranebrook, Erskine Park, Granville North, Hurstville, Penrith, Regentville, and Rockdale have been thoroughly renovated.

Similar work is now being effected at Castlereagh Upper.

The material condition of many schools has thus been considerably improved during 1895.

The transfer of a number of schools from the district has caused a net decrease of seats amounting to 736.

At present the schools in the district provide accommodation for 11,766 pupils.

The number of children enrolled for the year (deducting multiple enrolments) was 11,372. The accommodation, therefore, is sufficient.

In all, 81 schools have been in operation during 1895, 80 being in existence for the whole year, and 1 (Otford) for only the latter half.

The average attendance for the four quarters was :—

Quarter.	Boys.	Girls.	Total.	Enrolment.	Percentage.
March	4,117·3	3,473·1	7,590·4	10,605	71·5
June	4,331·5	3,659·7	7,991·2	10,663	74·9
September	4,241·8	3,574·8	7,816·6	10,787	72·4
December	4,396·3	3,754·9	8,151·2	10,645	76·5

All the schools in the district were regularly inspected ; 2 received a second regular inspection, and 2 an ordinary inspection.

Of the 81 schools, 58 were above standard, 22 satisfied it, and 1 failed to reach it.

Last year 9 schools out of 89 were below standard.

The

The total number of children examined was 9,065. Of these, 1,001 pupils underwent the examination for exemption certificates, and 405, or slightly over 40 per cent., passed,—a far from satisfactory result.

The cause of so many failures I attribute to :—(1) Defective classification and unduly rapid promotions ; (2) lack of intelligent and thorough grounding in elementary work ; (3) nervousness and carelessness of pupils under examination.

The attention of teachers having been called to the first two of these causes, it is to be expected that the defects will gradually be removed.

Taken as a whole, the teachers under my supervision have worked well during the year, and their conduct, almost without exception, has been exemplary.

I have reason to hope that steady progress will be made in 1896.

H. SKILLMAN,
Inspector.

Arncliffe, 27th December, 1895.

ANNEX G.

DISTRICT INSPECTOR BRADLEY'S REPORT.

DURING the year 1895 there were in operation in the Arncliffe District 333 schools, of which 207 were Public Schools, 49 Provisional, 66 Half-time, and 11 House-to-house. These numbers show a net increase of 13 schools over the record for the previous year ; and with the opening of some half-dozen others immediately after the New Year the existing educational wants of the district will be well supplied.

In all sections of the district the inspectors have been active in their efforts to provide for improvements in connection with the smaller schools so as to secure for them a greater measure of convenience and comfort, and substantial results have been accomplished. Twelve new school-houses have been erected, 3 have been enlarged, and repairs, more or less extensive, have been carried out in connection with 107 school buildings and 25 residences. The expenditure involved has been £2,400, and all works have been effected as economically as possible. The increase in the seating accommodation represents 360 places, the total accommodation now provided throughout the entire district being 18,965 places at 8 square feet per child, and 17,429 places at 100 cubic feet each. Such provision is ample for all requirements.

Every school in the district has received full inspection, and, in addition, 14 have received secondary inspections as opportunity offered. The year throughout has been exceptionally favourable for travelling, and with the large and increasing number of schools to be dealt with, it is only under the most favourable conditions that the work can now be accomplished. Of the 333 schools examined 290, or 87 per cent., rated above the requirements of the standard of proficiency ; 13, or 4 per cent., just met its requirements ; and 30, or 9 per cent., fell below. These results are, as a whole, not unsatisfactory, and the several percentages given correspond almost exactly with those of last year.

In all, 1,071 pupils of the higher classes were examined for exemption certificates, and of these, 611 (57 per cent.) passed. The results are slightly better than those of last year, but there still remains ample room for improvement.

At the regular inspections the total number of pupils present at examination reached 12,257, an increase of 1,184, and representing 83 per cent. of the ordinary enrolment.

The following table shows the estimated proficiency of the pupils in the various subjects of instruction, and also the relation of the results to those of the previous year :—

Subjects	Estimated Proficiency.			
	Total Number Examined.	Number Passed.	Percentage up to or above Standard.	Relation to Results of 1894.

The teaching strength of the district comprises 287 principal teachers and mistresses of departments, 40 assistants, 2 work-mistresses, and 66 pupil-teachers, 395 in all. Of these, 87 are unclassified, but 40 of the number have served as pupil-teachers, mostly for the full term, and have, therefore, received effective training. With but a few exceptions the teachers have given no cause of complaint, either as regards their discharge of duty or in their general character and conduct. As a body they are trustworthy, efficient, and respected.

J. D. BRADLEY,
District Inspector.

ANNEX H.

INSPECTOR BLUMER'S REPORT.

At the close of 1894 there were 76 schools under my direct supervision. Since then 11 others have been transferred from other sections, and 8 new schools established at Crow Mountain, Doctor's Creek, Wood's Reef (Provisional), Aberbaldie, Cainsborough, Central Manilla, Iryalba, and Spring Creek (Half-time). The following schools were closed during the year on account of reduced attendance, viz.:—Dinneguy, Hawarden, Moona (Public), Mount Drummond, Heslington (Provisional), Glen Arm (Half-time), and Reedy Creek (House-to-house.)

Ninety-five (95) schools have been in operation during the whole or some portion of the year, and ninety-three (93) were open during the last quarter.

Applications for establishment of schools were received and dealt with as follows:—

Place.	Kind of School applied for.	Result of Application.
Ballin Burra Creek (Moree)	Provisional	Declined.
Crow Mount (Barraba)	"	Granted.
Derra Derra (Bingara)	"	"
Doctor's Creek (Bingara)	"	"
Dungowan Upper (Tamworth)	"	Declined.
Eulowrie (Barraba)	"	"
Gulf Creek (Barraba)	"	Under consideration.
Ironbark Creek (Barraba)	"	Declined.
Sam's Flat (Walcha)	"	Granted.
Sandholes (Moree)	"	"
Spring Creek and Stanmere (Armidale)	House-to-house	Declined at present.
Toryburn and Kingstown (Kingstown)	Half-time	"
Vinter Fair (Walcha Road)	Provisional	Granted.
Wood's Reef (Barraba)	"	"
Woolomol (Tamworth)	"	Declined.

Of those granted, 3 are already in operation, and the others will probably open soon after the vacation.

The school-room at Terry-hie-hie has been enlarged, and new buildings have been erected by the inspector at Crow Mountain, Doctor's Creek, Duri, Tia, Upper Moor Creek, and Vinter Fair. Under supervision of the architect, new school-rooms have been built at Barraba and Mungindi, and a classroom at Tamworth. Necessary repairs and improvements that could no longer be postponed were effected at numerous schools.

Existing educational requirements have been fairly met by establishment of new schools and by additions to buildings; but in view of probable early selection of land in various parts of the district, it is expected that a large number of applications for schools will be received during the ensuing year.

I know of no school in which the accommodation provided is not sufficient for the pupils in ordinary attendance.

Every school has been fully inspected, 3 received ordinary inspections, and incidental visits were made as opportunities offered. The great amount of time absorbed by special visits to remote localities in connection with applications for schools prevented more ordinary inspection being made. This is much to be regretted, as by means of such inspections defects in school management can be pointed out, practical remedies applied, and better results ensured.

In regard to general efficiency, 90 per cent. of the schools were "up to" or "above" standard, as compared with 91 per cent. for the preceding year. Many of those "below" standard were necessarily classed as such solely on account of their being too short a time in operation to warrant the formation of a third class. The schools deserving special mention for highest state of efficiency are in order of merit, Tamworth Girls, Tamworth Boys, Walcha, Warialda, and Manilla.

Of 200 pupils examined for exemption certificates, 120 were successful.

The results in the various subjects of instruction are compared hereunder with those of 1894, and cannot but be regarded as generally satisfactory:—

Subjects.	Percentage "up to" or "above" Standard.		Increase (+) or decrease (—) during 1895.
	1894.	1895.	
Reading	88	89	+ 1
Writing	93	92	— 1
Dictation	74	77	+ 3
Arithmetic	75	77	+ 2
Grammar	80	83	+ 3

French	100	88	— 12
Euclid	85	77	— 8
Algebra	71	77	+ 6
Mensuration	44	60	+ 16
Natural Science	96	82	— 14
Needlework	91	91	=
Drill	75	69	— 6

The practical value of ambulance work, as taught and practised in the Public Schools at Tamworth and Nemingha, has been fully proved during the year.

A course of lessons in plain cookery was given during the latter portion of the year to girls in the Tamworth Schools. Fifty-six pupils completed the course, and all successfully passed practical examinations thereon. These lessons are applied by the girls in their homes, and the unqualified satisfaction expressed by the parents is the best criterion of the practical utility of such instruction.

Teachers continue to discharge their duties with zeal and intelligence, and to merit the respect of the general public.

In conclusion: Existing provisions fully meet present educational requirements; satisfactory work has been done in by far the greater number of schools; and there is no reason to doubt that the results for the ensuing year will be quite as creditable as those for any former period.

Tamworth, 23rd December, 1895.

L. BLUMER,
Inspector.

ANNEX I.

INSPECTOR BEAVIS' REPORT.

NINETY-SEVEN schools were in operation in the Glen Innes section at the close of 1894; of these, 9 (Wandsworth, Maybole, Tenterden, Highfield, Moredun, Brushy Creek, Briery, Ollera, and New Valley) were immediately transferred to the Armidale section, and 1 (Bolivia) did not, on account of reduced attendance, reopen after the Christmas vacation. Thus 87 schools were under my supervision in January, 1895.

At the end of the March quarter it was found practicable to reopen Airlie Brake and Bolivia as Half-time Schools by associating them, respectively, with Willow Grove and Castle Ray, where the attendances had declined; likewise Coolootai and Wallangra, House-to-house stations regarded as forming one school, were reorganised as separate Half-time Schools. In October, Eastview Half-time, the only new school established during the year, was brought into operation and conjoined with Severn, which had been temporarily closed. Altogether 91 schools have been on my list for the year; as now classified they embrace 65 Public, 16 Provisional, 10 Half-time.

Excepting the Balmain station of the Gullengutta House-to-house School, no school has been permanently discontinued; 5 full-time schools, however, were reduced to Half-time. The Kulki Provisional School has been closed since June, to allow of the building being removed to a more central site (Cherry-tree Hill); the school will reopen in January. During the year two school-buildings, Steinbrook and Black Swamp, were destroyed by fire; and as other premises were not available, the schools were perforce closed pending the erection of new schoolrooms; Steinbrook was reopened in November as a Provisional School, but Black Swamp cannot be re-established till next year.

The increased attendances at Round Mount Provisional, Swan Vale Provisional, and Wallangra Half-time, have caused those schools to be ranked as Public; likewise Gullengutta House School has become Half-time, and is now associated with Coolootai.

In January next schools will be brought into operation for the first time at Clairville, near Glen Innes, and at Glen Elgin; a new Provisional School at Weean, near Inverell, only awaits the erection of necessary buildings. Probably also Half-time Schools will shortly be established at the Gulf and Highland Home, near Emmaville. I am not aware of any other locality where a school is likely to be needed.

The accidental destruction by fire of the schoolroom and residence at Steinbrook in May, and the somewhat mysterious burning of the school-building at Black Swamp in October, represent an important loss of Departmental property; the original cost of these buildings must have been at least £800. The cost of providing requisite accommodation in lieu of that destroyed will be about £100.

Considerable expenditure has been incurred during the year in improving and repairing school-buildings. It became necessary to enlarge the schoolrooms at Deepwater and Glen. Besides works in the hands of the Architect, 5 small buildings have been erected under my supervision, and repairs or improvements more or less extensive have been effected in connection with 40 other schools. Special attention has been directed to rendering the smaller schoolrooms more convenient and comfortable; the addition of an enclosed verandah in several cases has provided at small cost lavatory, hatroom, and weather-shed, besides protecting the building.

The seating accommodation is ample; 5,000 places are provided, while the gross enrolment of pupils is 4,000 and the average attendance 3,000.

All the schools (91) were regularly inspected; in general efficiency 78 were above the standard, 5 just reached the standard, and 8 were below it. Thus 83 schools (91 per cent.) satisfied the standard—2 per cent. more than last year. It is to be noted also that in most of the schools higher marks were recorded than for 1894, and that the pupils showed improved proficiency in reading, writing, and dictation. The advance is, perhaps, to be attributed to the greater regularity of school attendance which marked the year. The pupils usually manifest great interest in the annual inspection; the number examined, 3,361 (21 more than in 1894), represents 87 per cent. of the enrolment.

Of 331 pupils examined for exemption certificates, 201 passed; this represents 61 per cent., an increase of 8 per cent. upon the results of last year. 227 pupils holding these certificates remained in the schools at the end of the year; 36 pupils under 14 years of age left school in consequence of having received certificates.

One hundred and eight teachers of all grades were employed when the school year closed. A more reputable, industrious, painstaking body of men and women it would be difficult to find.

Summary.

While only one new school has been established during the year, none has been permanently closed. The material condition of the schools is improved, the attendance has been well maintained, and a slight improvement is to be recorded in the general efficiency.

Glen Innes, 28th December, 1895.

W. BEAVIS,
Inspector.

ANNEX J.

INSPECTOR PARKINSON'S REPORT.

EIGHTY-SEVEN schools were in operation in this section at the end of 1894. Waverley House-to-house School did not reopen this year, and in January last 5 schools were transferred from my section to Mr. Inspector Blumer's. I, therefore, commenced the year with 81 schools. The school at Bullawa Creek, formerly Provisional, has reopened as a Half-time School, and during the year the following new schools have been established:—Kercargo and Nicholson's Lagoon Provisional, Bohecena Creek Half-time, and Brigalow Creek, Goolhi, and Island Holme House-to-house. There have, therefore, been in operation during the year 88 schools. The Provisional school at Gunnenbene has been raised to the rank of Public. During the year the following schools have been closed:—Bando Public, Emerald Hill and North Lynne Provisional, and Dean's Mountain and Spring Vale House-to-house. The two first named are likely to reopen. A new House-to-house School has been granted at Basin Creek, near Wallabadah, and three schools at present worked as House-to-house are likely to become Half-time. New schools will also be required near Narrabri, Gunnedah, and Werris Creek, where meat chilling and preserving works have been recently established; so that although two or three small schools now working are expected to close, I estimate the probable number of schools for next year in this section at 90.

Seats

Seats for 5,162 pupils, or spaces for 4,552, were provided at the end of 1894. By the closing of 6 schools, and the transfer of 5 others to the Tamworth section, these numbers were reduced by 408 and 290 respectively. The opening of 5 new schools, and the erection of classrooms at Wee Waa and Boggabri, added 338 seats, or 263 spaces; so that the respective numbers at the close of 1895 are 5,092 and 4,527. As the highest quarterly enrolment has been 4,089, and the average 3,063, it will be seen that more than ample accommodation is provided; and it is so evenly distributed that I know of no place where children have not sufficient room. New buildings will, however, soon be required at Gunnedah, those at present in use being old and unsuitable. Twenty-four schoolrooms and 12 residences were repaired and improved during the year, and the buildings generally are now in a good state of preservation. The grounds are being gradually improved. In spite of the trying climate and the uncertain rainfall, a number of teachers have creditable flower-gardens. Trees have been planted in most of the playgrounds which are fenced in, and in some places these are already affording welcome shade.

Each of the 88 schools in operation during the year received a regular inspection, and the Public School at Breeza was twice examined. Five ordinary inspections were made at schools to which I was called on special business; so that the total number of inspections for the year was 94. Nine schools were found to be below standard, 3 up to standard, and 76 above. The percentage of schools either up to or above requirements was, therefore, 89. This is 3 per cent. lower than for last year. The schools are not, however, in a worse condition than formerly, but the opening of 6 small schools, and the counting of schools where there is no third class as below standard, fully accounts for the apparent decrease in efficiency. Of the 88 schools examined, 9 received less than 50 per cent. of marks, 33 between 50 and 60 per cent., 36 between 60 and 70, and 10 upwards of 70. The most efficient schools were Gunnedah Superior, Quirindi Superior, Narrabri West, Narrabri Boys' Superior, Bando, Werris Creek, Currabubula, Jacob and Joseph Creek, Spring Ridge, and Boggabri.

The total number of pupils examined in the various subjects ranged from 3,468 in reading, writing, and arithmetic, to 32 in French. The percentages of passes ranged from 100 in Natural Science to 69 in dictation. In writing, object lesson, French, Euclid, needlework, and drill the passes reached between 90 and 100 per cent.; in reading, geography, Australian history, Scripture, drawing, music, algebra, Latin, and mensuration between 80 and 90; and in arithmetic, grammar, and English history between 70 and 80 per cent. I regard these results as very satisfactory, but I should be better pleased to see reading, arithmetic, and dictation ranked with writing in the highest class.

Three hundred and eighty-eight pupils were examined for exemption certificates, and 199 passed. The majority of those who failed were found deficient in arithmetic. A certificate should not be issued to a child who cannot work out an ordinary bill and a question involving calculations met with in the ordinary circumstances of life; and teachers would do well to ground their pupils in these matters before proceeding to the more abstract rules of fractions and decimals.

The number of teachers employed in this section at the end of the year was 108. Of these, 74 were in charge of schools, 10 were assistants, and 24 were pupil-teachers. Twenty-four teachers are still unclassified, but 13 of these have served as pupil-teachers, and the majority of the others are likely to present themselves for examination next June. The conduct of most of the teachers remains exemplary. A number of inquiries into various complaints have been held during the year, but in only one case has severe censure been recommended.

At the beginning of the year I initiated a movement to establish libraries at the schools under my charge. The teachers have taken the matter up in earnest, and the parents of the children have shown their appreciation of the movement by helping the teachers to raise funds. Libraries are already in operation at 14 schools, and upwards of 1,600 volumes are in circulation. At a number of other schools steps have been taken to procure money for the purchase of books, and I confidently anticipate that a library will be found by the close of 1896 at every permanent school. There is no doubt that if bush children can have access to books, containing interesting reading and good illustrations, their intelligence must be improved; and I purpose, therefore, encouraging this movement as much as possible. I am indebted to Mr. Inspector Kevin, of Lithgow, for valuable information regarding the working of libraries in his district.

In conclusion: 88 schools were in operation during the year. All were fully inspected, and 89 per cent. were up to or above standard requirements.

The buildings are in good condition generally, and afford ample accommodation for the children in attendance.

The teachers continue to work satisfactorily, and to retain the goodwill and respect of the people amongst whom they labour.

Quirindi, 19th December, 1895.

H. PARKINSON,
Inspector.

ANNEX K.

DISTRICT INSPECTOR McCREDIE'S REPORT.

The year opened with 242 schools on my general list, and closed with 253, the increase resulting from the opening of 17 new schools and the lapsing of 6 others through low attendance. The new schools include 2 Evening Public Schools, Lithgow and Orange, the latter also ranking in the number of schools closed through want of support.

Three applications for new schools in the Central section of the district were received. One of these was for an Evening Public School at Orange, another for a Provisional School at Flyer's Creek, and the third for a Provisional School at Vittoria. The first two were granted, and the last declined. Two other applications for schools, at Tallwood (near Forest Reefs) and at the Crossing Place (Ophir Road), have recently been received, and will be inquired into and reported upon early next year. It is probable also that application will shortly be made for a Provisional School by residents of Milker's Flat, on the Macquarie River, about 20 miles from Bathurst.

There were only 2 applications for new schools in the Eastern section of the district, but there were no fewer than 15 from localities in the Western section, where, as has been stated in previous reports, new settlements are springing into existence every year.

The schools are well distributed, and there are now comparatively few families in the district who do not live within a reasonable distance of some State school.

During the year, more improvements—chiefly painting and repairs—were effected to school-buildings than in any year since 1888. The whole of the works were urgently needed, and in some instances they had been postponed from year to year through lack of funds. Many of the wooden buildings have been painted and thoroughly repaired, and the material condition of a large number of the more substantial schoolrooms and residences has been improved. The bulk of these improvements were carried out by the Architect, under the efficient supervision of Mr. Gostelow, the local clerk of works. At Cullen and Deep Lead, new schoolrooms were erected to replace old ones; additions were made to the school, buildings at Lucknow, Parkes, and West Wyalong, and also to the teachers' residences at Beneree and Lucknow.

Under the supervision of the inspectorial staff, about £1,481 were expended in erecting 9 new schoolrooms, and in repairing 107 schools and 12 residences.

The organisation and discipline of the schools are as satisfactory as in past years. The prescribed lesson guides—time-tables and programmes—are generally drawn up with neatness, and in a few instances with good skill and judgment; but in a number of schools the programmes are not sufficiently full and explicit.

Of

Of the 259 schools and departments in operation during the year, all except two (Piper's Flat Public and Jenolan Caves Provisional—both closed early in the year) received a regular inspection. Thirty-one schools received an ordinary inspection, or a second regular visit, and many schools were visited incidentally as often as practicable.

The number of pupils present at inspection was 10,253, being an increase of 891 on the number examined in the previous year, and the largest aggregate attendance at inspection for the last eight years. 921 pupils were examined for exemption certificates, and 555, or 60 per cent. passed the examination successfully.

The statistics of the proficiency of the pupils examined, compared with those of the previous year, show that in dictation, history, algebra, needlework, and natural science the percentage of passes is slightly lower; in reading, arithmetic, grammar, object lessons, and drill it is the same; and in all other subjects it is higher. Ninety-five per cent. of the 257 schools inspected were either above or up to the standard in general efficiency. In 1893 the percentage was 96, and last year it was 97.

In the whole district there are 330 teachers of all ranks, viz., 211 principal teachers, 8 mistresses of departments, 48 assistants, 60 pupil-teachers, and 3 work-mistresses.

There is an increase for the year in the school accommodation, the number of seats gained being 519 at 8 square feet per pupil, and 446 at 100 cubic feet—the totals at the end of the year being 16,652 and 16,522 respectively. All statistical information for the year has been forwarded.

J. MCCREDIE,
District Inspector.

ANNEX L.

INSPECTOR KEVIN'S REPORT.

Last year ended with 98 schools, as under :—

Public	56
Provisional	7
Half-time	28
House	7
Total	98

The whole number of schools in operation during this year, or any portion thereof, was 103, and the total number in operation at the end of the year was 101.

Two small schools—Piper's Flat Public and Jenolan Caves Provisional—were closed in consequence of small attendance. An Evening Public School was opened at Lithgow, and Aliwal and Taylor's Pit Half-time were reopened.

The following changes took place during the year :—Piper's Flat Public and Jenolan Caves Provisional closed, as already mentioned; Aliwal and Taylor's Pit reopened as Half-time Schools; the teaching-station at Gingkin was closed, but amalgamated with Chatham Valley Half-time; Shorter's Hill Public was converted into Half-time, and worked in conjunction with Chatham Valley. The Half-time School at Eagle Vale was closed, but Daisy Bank was opened in its stead; Limekilns, &c., House-to-house, and Tanner's Mount, &c., House-to-house, were converted into Half-time Schools, as Limekilns and Dullabong Half-time, and Tanner's Mount and Mount Stromboli respectively. New school premises were erected at Cullen under the Architect, and a new school-house, with necessary appointments, is in course of erection at Blackheath.

With these exceptions, matters remain as they were last year.

Buildings.

With the exception of the new premises at Cullen, no other new buildings were erected, but a large number of schools and residences were repaired (including fencing, &c.), and three of the latter were enlarged—all under my own supervision, and at a total cost of £675. In addition, the Architect has had several improvements of a more important character carried out. The expenditure for this year has been larger in this direction than for a very considerable time.

Many of the buildings are still in need of attention (especially in the way of painting), but little more can be done at present in consequence of the state of the building fund. The condition generally, however, is fair.

Organisation.

This is generally satisfactory. The accommodation is more than adequate, and is comfortable; the buildings are, with few exceptions, well lighted and well ventilated; the supply of materials is sufficient and well cared for, and of good quality.

The lesson-guides are complete, and in about 70 per cent. of the schools are skilfully and neatly drawn. The records are, on the whole, accurate, but occasionally provoking blanks are met with, and evidence of a want of taste and care, particularly in the class-rolls and lesson-registers.

The enrolment for the year shows an increase over that of last year by 329 pupils, with a corresponding average.

A large number of pupils were examined for exemption certificates, and about 80 per cent. of these passed, the majority leaving school for good.

Discipline.

This is generally healthy. As in former years, the pupils are well conducted, obedient, and respectful, and have seldom to be punished corporally. No case of excessive or undeserved punishment has been reported to me during the year. Drill, which is such an aid to correct discipline, is well taught in a few of the best schools, but in the remainder is only of a nominal character.

Inspection.

All schools under my supervision (103) for the year underwent a regular inspection, except Piper's Flat Public and Jenolan Caves Provisional, which were closed early in the year on account of small attendance. Two schools were reinspected, and fifteen (15) received an ordinary inspection, while a large number were visited incidentally. With the exception of four (4), all were above or up to the required standard in attainments.

Instruction.

This has gone on steadily, and, on the whole, satisfactorily. The course of instruction has been complete, and the work has been carried on earnestly and industriously and with fair average skill.

The school libraries established by me upwards of four years ago continue to flourish, and now begin to give tangible evidence of their moral and intellectual usefulness and influence. There are altogether ninety-three (93) of them, with between seven and eight thousand volumes, and the interest of the parents, scholars, and teachers increases each year. I look forward hopefully to noble results from these institutions in time.

The usual half-yearly examinations of teachers and pupil-teachers took place, and a fair percentage of passes has been, or will be, recorded. The pupil-teachers have given entire satisfaction, and no case of inattention to duty or misconduct has been recorded.

Summary

Summary.

To sum up :—

- (a) The means of education are sufficient and wisely distributed.
 (b) The organisation and discipline are satisfactory ; and
 (c) The instruction is skilfully regulated, complete, and carried on industriously.

I consider, therefore, that the prospects for the coming year are hopeful and encouraging. The usual statistics have already been forwarded.

Lithgow, 28 December, 1895.

JOHN KEVIN,
Inspector.

ANNEX M.

INSPECTOR THOMAS'S REPORT.

At the close of 1894, 78 schools were in operation in this section of the Bathurst District, viz. :—

Public	47
Provisional	7
Half-time	20
House-to-house	4

During the vacation changes were made whereby Fair Hill Public and Wangan Vale and Yamma Provisional became Half-time, and Erasa House-to-house became Provisional. With the new year, new Provisional Schools opened at Mugincoble, Sparling Swamp, and Tom's Lagoon; and Cave Creek Half-time, which had been closed since 1893, was revived.

I commenced the work of 1895, therefore, with 82 schools on my list, viz. —

Public	46
Provisional	9
Half-time	24
House-to-house	3

During the year the following new schools were opened :—

Daroobalgie	Provisional.
Wongajong	„
Yalgogrin	„
Gosper's Downs	„
Cugong	„
Double Peak	„

And the following schools were closed .—

Erasa	Provisional.
Carraboblin	Half-time.
Nanima	„

Lockwood, Sparling Swamp, and Tom's Lagoon Provisional Schools became Public, and Kangaroooby Creek Provisional became Half-time.

Thus the year closes with 85 schools in operation, viz. :—

Public	49
Provisional	10
Half-time	23
House-to-house	3

Ten of these are schools newly established in places previously without means of education.

The following applications for the establishment of new schools were dealt with during the year :—

Daroobalgie	Provisional	Granted.
Wongajong	„	„
Gosper's Downs	„	„
Cugong	„	„
Double Peak	„	„
Yalgogrin	„	„
Billy's Look-out	„	„
Gilgunna	Public	„
Platina	„	Half-time granted.
Elswick	Provisional	Declined.
Carraboblin	„	Half-time offered, but not accepted.
Bangaroo, North	„	Declined.
Vale Farm	„	Under consideration.
Ridgery Creek	„	„
Wooyeo	„	Granted under certain conditions ; no yet accepted.

The application for a school at Yalgogrin was dealt with by Mr. District-Inspector Lawford, but, when established, it was put under my supervision.

The first six on the foregoing list are already in operation, and the next three will open very early in the new year.

Eighty-eight schools were in operation during some part of the year, and all received a regular inspection. Seven of the more important schools received an ordinary inspection, and a considerable number of incidental visits in connection with repairs, investigations, &c., were made.

Of the 88 schools fully inspected, 81 were above standard requirements, 1 was up to standard, and 6 were below, so that 93 per cent. satisfied the standard. This result compares favourably with the results achieved in the three preceding years, in each of which the corresponding percentage was 92 per cent.

The total number of pupils examined at the 88 regular inspections was 3,006, as compared with 2,605 in 1894. The numbers examined in the more important subjects were :—

Reading	3,006, of whom 89 per cent. passed.
Writing	2,955, „ 91 „ „
Arithmetic	2,884, „ 81 „ „
Dictation	2,328, „ 77 „ „
Grammar	974, „ 78 „ „
Geography	974, „ 77 „ „
History	966, „ 67 „ „

The

The percentages in these subjects for 1894 and 1895 are :—

	1895.	1894.	
Reading	89	88,	a gain of 1 per cent.
Writing	91	88,	„ 3 „
Arithmetic	81	78,	„ 3 „
Dictation	77	77
Grammar	78	81,	a loss of 3 per cent.
Geography	77	75,	a gain of 2 „
History	67	75,	a loss of 8 „

233 pupils presented themselves for exemption certificates, and 143 of them passed the required test.

The organisation in the great majority of the schools is complete, the buildings being roomy and in satisfactory repair, neatly kept, and replete with necessary working material; the instruction is regulated by suitable programmes and time-tables, and the records are neatly and accurately compiled.

The discipline maintained in most schools is thorough and effective. Punctuality in attendance, cleanliness of person, correct behaviour, and methodical habits are points aimed at by most teachers, and attained with more or less success.

Eighty-seven teachers and 11 pupil-teachers are employed under my supervision, the numbers last year being respectively 75 and 15. The number of unclassified teachers is 21, but 15 of these are ex-pupil teachers who have not gone into the Training Colleges. Their employment as teachers of small schools has rendered it unnecessary to recruit the service from outside, and has materially raised the quality of the instruction and the general efficiency of the schools in which they are employed.

The number of pupil-teachers has diminished, as most of the vacancies were filled, during the year, by ex-pupil teachers or temporary assistants. With one exception, all gained promotion during the year.

The funds at the disposal of the Department enabled me to recommend and carry out repairs and improvements wherever necessary. Under my supervision, 8 new buildings were erected at a total cost of £395 1s. 3d.; 27 school-buildings were repaired, improved, and provided where necessary with tanks and spouting, at a cost of £174 2s. 8d.; and 2 residences were improved at a cost of £44 2s.

Under the Architect's supervision, a new school-building was erected at Deep Lead, to replace the old one, and class-rooms were erected at Parkes and West Wyalong. The general repair of the premises at Cadia, Garra, Goobang, Manildra, Marsden, Peak Hill, Toogong, and Waldegrave has also been effected by the Architect.

That officer has also in hand the erection of additional class-rooms at Wyalong and West Wyalong and material alterations to the teacher's residence at Forbes.

At the close of 1894 accommodation was provided in the schools then in operation for 4,877 pupils on the basis of 8 square feet per pupil, or for 4,693 on the basis of 100 cubic feet per pupil.

The additional buildings and class-rooms erected during the year have added accommodation for 471 on the former and 369 on the latter basis of calculation, while the seats lost by closing of schools, &c., totalled 143 and 105.

There are thus 5,205 available seats on the floor-space basis, or 4,957 on the cubic space basis, numbers more than sufficient to meet the requirements of the coming year.

Summary.

Number of schools in operation during 1895	88
„ „ fully inspected	88
Percentage satisfying standard	92 per cent.
Number of pupils examined	3,006
Enrolment, December quarter	4,048
Average attendance, December quarter	2,895.7
Accommodation provided	5,205
Number of teachers and pupil-teachers	98
Total fees for the year	£1,461 2s. 9d.
Amount of fees in arrear	£72 10s. 9d.
Number of free pupils, December quarter	368

The full statistics upon which this report is based have already been supplied.

In conclusion, I have to express my full satisfaction with the work done during the past year, and I see no reason to doubt that equally gratifying results will be forthcoming during the year about to dawn upon us.

Forbes, 31st December, 1895.

W. GEO. THOMAS,
Inspector.

ANNEX N.

DISTRICT INSPECTOR JOHNSON'S REPORT.

THERE were 231 schools in operation in the Bowral District during the year, 15 of which were transferred from the Sub-Metropolitan District in January last, and 10 others are new schools. Four small schools were closed on account of the attendance having fallen below the required number. Of the 227 schools now in operation, 162 are Public, 25 Provisional, 33 Half-time, and 8 House-to-house Schools. Eighty-four are in the Nowra Section of the district, 58 in the Crookwell Section, and 85 in Bowral Section.

Eleven new school-rooms were erected during the year, two school-rooms were enlarged, and 81 school-rooms and 39 residences were repaired. These works were carried out under the Inspectors' supervision at a total cost to the Department of £2,160 18s. 11d., and other similar works are in progress, which when completed, will have cost a further sum of £241 13s. 5d., making a total of £2,402 13s. 5d. There were also 5 new school-rooms and one class-room erected, and one school-room enlarged, under the supervision of the Architect. The teacher's residence at Moss Vale is being enlarged and otherwise improved.

The school-rooms of the district provide accommodation for 16,452 pupils, allowing 8 square-feet of floor space for each, and for 15,184 pupils, allowing 100 cubic feet of air space for each. As the highest quarterly enrolment for the year was 10,896 the accommodation provided is greater than that actually required.

Two Half-time Schools in the Burragarang Valley were not inspected during the year. I had arranged to inspect the schools in that locality during the month of September, and the teacher was removed from those two schools in July, and they have since remained closed, but will be reopened at the end of the vacation. The remaining 229 schools were fully inspected once, and 6 of them a second time.

In most schools, satisfactory progress has been made since their inspection in 1894. Only 9 schools were found to be below the standard, 5 reached it, and 215 exceeded it. Of those which failed to reach the standard, 2 are Public Schools, 4 Provisional, and 3 Half-time schools. Six schools obtained the mark "Good," for "General Efficiency," and one (Nowra Primary) "Good to Very Good." The smaller schools are steadily improving in efficiency, owing chiefly to the fact that, as vacancies occur, they are placed in charge of ex-pupil teachers, who, having been trained for four or five years

in the larger Public Schools, bring considerable experience and skill to bear on their work. The most serious defect in the management by inexperienced teachers is lax discipline, and in consequence much of their labour in teaching is lost. This defect is not often met with in schools under the control of those who previously served as pupil-teachers, and hence the more satisfactory work done by them.

8,600 pupils were examined in the schools of this district. In Reading, Euclid, Latin, and Natural Science, the passes exceeded 90 per cent.; in Writing, Geography, Object Lessons, French, and Algebra they exceeded 80 per cent.; and in Dictation, Arithmetic, Grammar, English History, Scripture History, Drawing, and Mensuration, they exceeded 70 per cent. These results are, on the whole, satisfactory.

969 pupils were examined for exemption certificates, but only 552, or 57 per cent., passed. Most of the failures were in arithmetic, and it appears to me that teachers, as a rule, confine the work of their pupils to certain set questions in this subject, which can be worked by rule, and also that they largely neglect thorough and intelligent instruction in mental arithmetic.

Teachers are now seized of the fact that good results are not to be secured, no matter what amount of labour and skill may be spent in actual teaching, unless proper discipline be maintained, and therefore the schools, with few exceptions, have attained a satisfactory standard in this respect.

The teachers in charge of the various schools in this district are classified as under:—

First-class	5
Second-class	45
Third-class	117
Unclassified	47

Twenty-one of the unclassified teachers are ex-pupil teachers who have not yet served the required time as teachers to warrant their being examined for classification.

There are 26 assistant teachers, 2 of whom are in class II, 21 in class III, and 3 are unclassified.

There are also 38 pupil-teachers, 15 of whom are in class I, 12 in class II, 4 in class III, and 7 in class IV.

The teachers of this district fully appreciate the responsibilities of their position, and use their best endeavours to perform their onerous duties to the satisfaction of the Department.

Good work has been done during the past year, and equally satisfactory results may be looked for during the year now entered upon.

W. H. JOHNSON,

District Inspector.

Bowral, 7th January, 1895.

ANNEX O.

INSPECTOR McLELLAND'S REPORT.

At the end of 1894 there were 81 schools open in the Nowra section. During the present year the schools at Budjong and Yerriyong have been closed on account of failing attendance; new schools have been established at Kangaroo River, Nerrindillah, and Yerriyong Vale, and the schools at Bombo and Brooman have been reopened. Thus at the close of the year there are 84 schools in operation, classified as follows:—73 Public, 5 Provisional, 6 Half-time, total 84. These schools fully meet existing requirements in so far as they place the means of education within reach of all parts of the district able to comply with the conditions imposed by the Public Instruction Act.

New buildings have been erected at Brooman, Druwalla, Mount Marray, Nerrindillah and Yerriyong Vale, under the supervision of the inspector, and at Robertson under that of the Architect, who also attended to the enlargement of the class-room at Milton. New residences have been completed at Jerrara, Robertson, and Yarrawah, the last named under my own supervision. New school buildings at Jerrara, and a new residence at Kiama, will be ready for occupation early in the new year. Miscellaneous repairs and improvements have been carried out under the direction of the Inspector, in connection with 46 schools and 24 residences, at a total cost of £792 18s. 2d. The existing schools provide sitting accommodation for 7,207, and air space for 6,425 pupils. In two or three instances where the buildings are still too small for present necessities, special circumstances have prevented the Department from taking immediate steps for their enlargement.

All the schools in operation during the year were fully inspected, and of these, 80 exceeded, 1 was up to, and 5 fell below standard requirements. These results are an improvement upon those of last year, when only 74 out of 86 schools were above standard. A comparison of the percentages of passes for the two years also show a substantial improvement for this year in almost every subject. This improvement may be attributed to two causes, viz., more thorough instruction on the part of the teachers, and a somewhat more regular attendance on the part of the pupils. I am glad to be able to report such a solid advance in the efficiency of the schools generally, and I hope that a closer regard for the true principles of teaching, in those whose work is still unsatisfactory, will be shown in the coming year.

The examinations for exemption certificates were only fairly satisfactory. Out of 492 pupils examined 266 passed, but some of these already held certificates. The failures were almost exclusively due to bad spelling and bad arithmetic. The proportion of passes should be higher. Teachers must remember that these examinations are a not unimportant test of the practical nature of the education they are giving their pupils. Complaint is often made that success in obtaining exemption certificates means the withdrawal of the best pupils in the smaller schools. This is doubtless true; but it is also true that these pupils, even if they remained another year at such schools, would not go much beyond the ground covered by the exemption tests, and it is not therefore a matter of very great regret that they should begin a little sooner to earn their own living.

A general survey of the year's work gives cause for satisfaction. The schools are on the whole in a more efficient condition than they were last year, and the teachers, with few exceptions, are honest and painstaking in the discharge of their duties. These are encouraging indications of a good record for the ensuing year.

H. D. McLELLAND,

Inspector.

Nowra, 23rd December, 1895.

ANNEX P.

INSPECTOR SMITH'S REPORT.

At the close of 1894 there were in the Crookwell section of the Bowral District 58 schools, comprising 25 Public, 7 Provisional, 20 Half-time, and 6 House-to-house schools.

During 1895 the following changes in the classification of schools were made—Curran's Creek Half-time was made Public, and Kentgrove, with which it had been worked, House-to-house; Middle Arm Half-time Provisional, and Claremont, with which it had been worked, closed; Diamond Swamp and Redground Half-time House-to-house in conjunction with Kentgrove; Flowerburn Half-time closed, and Limerick, where no school existed before, opened in lieu thereof; Marmont's Ford Provisional Half-time in conjunction with Irishtown.

Gurrundah Provisional and Wheeo House-to-house schools which had been closed for some time were reopened, the latter in conjunction with Whindualla. Meglo Provisional was permanently closed.

A

A new Provisional School was built at Forest Creek, near Frogmoor, where no school existed before, and is now ready for occupation.

At the close of 1895 there are, therefore, in this section of the Bowral district 59 schools, without reckoning Forest Creek—26 Public, 9 Provisional, 16 Half-time, and 8 House-to-house Schools.

	Reckoning 8 sq. ft. per child.	Reckoning 100 cubic ft. per child.
Accommodation provided at close of 1894	3,110	2,701
Lost seats by closing of schools.....	45	35
Seats gained by new schools opened.....	75	65
Increase of places	30	30
Accommodation provided at close of 1895	3,140	2,731

The enrolment of pupils at the end of the December quarter was 1,678, so that the accommodation is more than sufficient for the number of children attending the State Schools in this section.

Repairs and improvements were carried out at the teacher's residence, Taralga, under the direct supervision of the clerk of works; a new kitchen was built at the teacher's residence, Cottawalla, under my own supervision, and some minor repairs to five small schools either under my own or local supervision. The enlargement of Middle Arm Provisional School has been sanctioned, but the work is incomplete.

Petitions for the establishment of new schools at the following places were received :—Junction Point, Redbank, and Scabbing Flat, but were refused by the Minister on the grounds that they were not needed, or not a sufficient number of children likely to attend.

The average attendance for the four quarters of the year was :—

Quarter.	Enrolment.	Average daily attendance.
March.....	1,703	1,211.2
June	1,700	1,222.0
September.....	1,672	1,161.6
December	1,678	1,230.1

All the schools in this section received one regular inspection, *i.e.*, 62 inspections were made—59 of the schools at present in existence, and 2 of schools closed, and 1 of the second teaching-station attached to Merryvale House-to-house School.

The discipline of the schools, generally speaking, is decidedly good, while the organisation may be considered fair. The school material and furniture are all in very fair order, and quite sufficient to meet the requirements of each particular case. In very few of the playgrounds are there any ornamental trees or shrubs or gardens, and this deficiency, so noticeable, may perhaps be attributed to the severity of the climate in this district.

With regard to the general efficiency of the schools, 4 were discovered at the time of inspection to be below standard—Pejar Public, the Junction Provisional, Meglo Provisional, and Byalla Half-time,—none up to or which obtained exactly 50 per cent. of the possible marks, and 56 above standard.

The number of pupils examined in the various subjects and the percentages up to or above standard are expressed hereunder :—

Subject.	No. of pupils examined.	Percentages.
Reading	1,294	96
Writing	1,294	94
Dictation	988	70
Arithmetic.....	1,294	75
Grammar	371	32
Geography.....	371	82
English History	363	71
Scripture	1,099	77
Object Lesson	1,167	78
Drawing.....	1,175	66
Music	1,036	66
Euclid	5	100
Needlework	409	95
Drill	1,187	72

Satisfactory progress has been made during the past year.

Forty-three out of 103 candidates examined for the usual certificates of being sufficiently educated were successful.

One teacher was dismissed from the service for a most serious offence; but, with this exception, the work of the year 1895 has been effectually and faithfully performed.

The number and the classification of the teachers and pupil-teachers employed are stated below :—

Class I A.....	0
„ I B.....	0
„ II A.....	1
„ II B.....	0
„ III A.....	17
„ III B.....	7
„ III C.....	6
Unclassified.....	19 = 50

Pupil-teachers—

Class I	3
„ II	1 = 4
Total	4

Forms of Statistics A, B, C, D were compiled and forwarded in due course.

Crookwell, 30th December, 1895.

JOHN LESLIE SMITH,
Inspector.

ANNEX Q.

DISTRICT-INSPECTOR COOPER'S REPORT.

THE schools existing in this district at the end of 1894 numbered 358. During 1895, 17 of these were closed on account of small attendance, and the Half-time Schools at Canberra and Duntroon were merged into one Public School, in a central position. In January last 10 schools were transferred from the Bowral district. By this addition, and the establishment of schools in places where none previously existed, and the reopening of schools formerly closed, the total number of schools on the list has been raised to 372, a net increase of 14 schools. These are distributed as follows in the four sections of the district:—

Section of District.	Schools or Departments.		No. of places, allowing for each pupil—		Highest quarterly enrolment.
	1894.	1895.	8 square feet.	100 cubic feet.	
Goulburn	88	98	5,315	4,846	4,168
Braidwood	97	94	4,324	3,525	2,733
Bega	95	99	5,271	4,515	3,717
Yass	78	81	4,111	3,642	2,069
Totals	358	372	19,021	16,528	12,687

As shown by this table, the prescribed space is provided for 16,528 children, while the highest quarterly enrolment during the year was 12,687. The present accommodation is therefore ample, and is well distributed. Fourteen new schools, designed to hold 441 pupils, have been erected, under the supervision of myself and the Inspectors stationed at Braidwood, Bega, and Yass, respectively, at a cost of £748. In the Goulburn section, Public Schools were built at Bywong and Jacqua—the latter to replace a building which was destroyed by a bush-fire—and Provisional Schools were built at Canyan, Leigh, and William's Creek. These 4 schools will accommodate 140 children. The expenditure upon them was £246.

The material organisation of the existing schools has been greatly improved during the year by the erection of verandahs where needed, the execution of general repairs, and the repainting of the woodwork. Improvements in these respects have been effected in connection with 139 schools and 33 residences, at a total cost of £2,403. Of the premises improved, 36 schools and 15 residences are in the Goulburn section. Upon them a sum of £989 14s. 8d. was expended. With very few exceptions, the schools are now comfortable and in an excellent state of repair. Many teachers continue to manifest a praiseworthy interest in the planting of trees and the formation of flower-beds in the school-grounds, but there are some who fail to realise fully the importance of this feature of the material organisation.

Attendance of Pupils and Payment of School Fees.

	Totals { 1895...	13,390	9,327	70	1,166 11 5	210 18 3	1,602
	Totals { 1894...	12,747	8,803	69	1,115 11 7	168 3 10	1,284
December	Goulburn	4,094	3,075	75	337 9 4	45 8 6	574
	Braidwood	2,629	1,970	75	240 15 9	32 2 0	258
	Bega	3,686	2,795	75	346 1 9	70 6 3	385
	Yass	2,958	2,120	71	272 6 7	26 2 10	448
	Totals { 1895...	13,367	9,960	74	1,196 13 5	173 19 7	1,665
	Totals { 1894...	12,764	9,301	72	1,129 17 7	150 19 3	1,361

Apart from the increase of pupils caused by the transfer of 10 schools from another district, this table indicates a substantial augmentation of the children brought under instruction, and shows gratifying improvement in respect to the regularity of the attendance.

Inspection.

• During the whole of the year, or some part of it, there were 358 schools in operation. All of these were inspected regularly, excepting 2 small schools in the Bega section, which were not open when the Inspector visited their neighbourhood. For reasons given in former reports, the holding of ordinary inspections has been, for the most part, suspended. The inspection work of each officer appears thus:—

	1895.		1894.	
	Regular.	Ordinary. Totals.	Regular.	Ordinary. Totals.
Goulburn section	102 + 5 =	107	93 + 12 =	105
Braidwood „	99 + 11 =	110	103 + 2 =	105
Bega „	100 + 8 =	108	99 + 8 =	107
Yass „	85 + 0 =	85	79 + 1 =	80
Totals	386 + 24 =	410	374 + 23 =	397

The

The general efficiency of the schools inspected is exhibited in the following table :—

Section of District.	Class of School.	Above Standard.	Up to Standard.	Below Standard.	Totals.	Percentage up to or above Standard.	
						1895.	1894.
Goulburn	Public	52	2	1	55	98	100
	Provisional	11	0	0	11	100	100
	Half-time	31	3	1	35	97	93
	House-to-house	1	0	0	1	100	100
	Totals.....	95	5	2	102	98	98
Braidwood.....	Public	30	0	2	32	93	97
	Provisional	11	0	2	13	84	88
	Half-time.....	50	0	4	54	92	83
	Totals.....	91	0	8	99	92	88
Bega	Public	51	14	4	69	94	94
	Provisional	4	3	2	9	77	100
	Half-time.....	16	5	1	22	95	87
	Totals.....	71	22	7	100	93	93
Yass	Public	48	1	2	51	96	97
	Provisional	21	1	0	22	100	100
	Half-time.....	9	1	2	12	83	100
	Totals.....	78	3	4	85	95	98
Grand Totals.....		335	30	21	386	94	94

It will thus be seen that the high state of efficiency reported for 1894 has been sustained in the district for the past year.

Natural Science	151	81	69	100	62	92	88	89

The attainments of the children examined, as evidenced by these figures, are, on the whole, very satisfactory, and point to skilful work and sustained effort on the part of the teachers. Examinations for exemption certificates were held at the regular inspections, with results as shown hereunder :—

	Examined.	Passed.	Percentage of Passes.	
			1895.	1894.
Goulburn section	333	229	68	65
Braidwood ,,	200	117	58	56
Bega ,,	286	167	58	68
Yass ,,	233	110	47	45
	1,052	623	59	60

Improvement in the percentage of passes is manifested in the Goulburn and Braidwood sections, while the average results for the whole district are about the same as those obtained in 1894. It may be noted that of the pupils present at the usual inspections, 182 in the Goulburn section and 141 in the Bega section had previously gained certificates. The continuance of these children at school is, in my judgment, a good feature, and deserving of recognition.

Superior Schools.

I am pleased to be able to say that the good reports on the management of these schools furnished for former years may be repeated here. During 1895 the pupils of the fifth classes of the schools in the City of Goulburn enjoyed the benefits of lessons on experimental physics given by Mr. A. J. Sach, F.C.S., Resident Science and Art Master. As in the case of the lessons on chemistry in previous years the regular teachers attended with their pupils, and subsequently revised the substance of the instruction given in the lecture room. By the combined labours of Mr. Sach and the teachers very satisfactory results were obtained, as evidenced at the written examinations held in June and November.

Cookery Class.

In January a cookery class, under the charge of Miss F. Dawson, was opened in Goulburn, and remained in operation for two terms, ending on 23rd August. Instruction on cookery was given to 60 girls during each term, or 120 in all. Much interest was taken in the subject by the pupils, and the results of Miss Dawson's labours proved very gratifying, as indicated by the results of the theoretical and practical tests to which the girls were subjected after each term.

School Libraries.

During the year the question of forming school libraries has received some attention, and, although there is a disinclination on the part of many teachers to undertake the *optional* labour and trouble incidental to the successful establishment of these very useful aids to education, there are hopeful signs that a more zealous spirit, and a clearer appreciation of the benefits derivable from these institutions will lead, shortly, to satisfactory results. In some of the smaller schools, where the difficulties in a matter of this kind are the greatest, the teachers have willingly taken up the subject, and their efforts will, doubtless, soon be crowned with success. To the zeal and self-denying labour of the mistress—Miss E. J. Rushforth—the pupils of the girls' department of the Goulburn Superior Public School are indebted for the advantages of access to an excellent collection of books, and they have eagerly availed themselves of the boon conferred upon them. In other schools, too, of the larger size, a good beginning has been made in this direction, and the time is, I hope, not far distant when a pupils' library will form an essential part of the organization of every school in this district.

Discipline.

The high character which the schools have obtained for sound discipline has been fully maintained throughout the year.

Teachers.

At the close of 1895 the teachers of all ranks employed numbered 382, distributed as under :—

Section	Teachers.		Mistresses.	Assistants.		Classified.	Unclassified.	Pupil-teachers.		Totals.
	Males.	Females.		Males.	Females.			Males.	Females.	
Goulburn	49	25	6	3	8	71	20	6	11	108
Braidwood	52	19	0	1	3	54	21	1	6	82
Bega	75	12	1	1	4	75	18	1	8	102
Yass	44	31	0	0	6	52	29	3	4	88
Totals.....	220	87	7	5	21	252	88	11	29	380

Of the teachers and assistants returned as unclassified, 43 are ex-pupil teachers whose previous training has fairly well qualified them for the duties devolving upon them as teachers of small schools or temporary assistants in the larger schools. In general the teachers of the district have performed their important duties in a satisfactory manner. The cases have been rare in which it has been found necessary to censure for inefficiency or misconduct.

Summary.

The results of the year's work may be deemed satisfactory, and the outlook for 1896 is encouraging.

Detailed reports from the inspectors stationed at Braidwood, Bega, and Yass are forwarded herewith.

Goulburn, 3rd January, 1896.

D. J. COOPER,
District Inspector.

ANNEX R.

ANNEX R.

INSPECTOR NOLAN'S REPORT.

Of the 97 schools on my list at the end of 1894, 1 was not re-opened and 2 were transferred to the Goulburn Section at the beginning of the present year; during the current year, 5 small schools were closed on account of small attendance, and 5 new schools were established in places previously without the means of education; thus, though there were 99 schools in operation during the whole or some portion of this year, there now remain but 94, viz., Public 32, Provisional 13, and Half-time 49.

Early in the coming year 2 small schools will be opened to meet the requirements of new settlements; on the other hand, the closing of a few of the existing schools on account of small attendance may be expected. The population of the greater part of this section is sparse and unsettled; schools are frequently established, which, after a brief existence, collapse, as the persons for whom they were originally intended remove elsewhere. In such cases the buildings are of a makeshift character, and their cost is defrayed by the residents. Taking the district throughout, it may be said that there is no scarcity of schools, that they are well distributed, and that they afford ample and suitable accommodation.

During the year 2 new school buildings were provided, at a cost of £117 9s., and 23 buildings were improved, at a cost of £167 13s. 3d., under inspectorial supervision. Substantial additions and improvements were effected, under the Architect, in connection with 5 schools, at a cost of £1,784 5s. 6d.; 1 small building was provided by the residents; and aid to the extent of £5, for furniture, was granted to another. Active steps are being taken to provide verandahs for shade and lavatory purposes where found necessary. The material condition of the school buildings is being gradually improved.

All of my schools were regularly inspected, 1 was re-inspected, and 11 received ordinary inspection; 2,211 pupils were present at examination; exemption certificates were awarded to 117 pupils. Ninety-one schools were *above* and 8 *below* standard requirements; for 1894 the corresponding numbers were 91 and 12, and for 1893 they were 84 and 22. In regard to the character of the education given, it may be said that reasonably satisfactory work is being done; a few teachers were censured during the year for the defective condition of their schools; on the whole, however, honest, substantial work has been done. The appointment of ex-pupil-teachers to the charge of small schools is having a very beneficial effect, inasmuch as their labours are of an intelligent character, and in marked contrast to the mechanical work formerly done by untrained teachers. The instruction, which usually accords with the Standards of Proficiency, is properly regulated; the methods employed are modern and skilful, and the results achieved may be regarded as satisfactory. The low results shown in a few schools are mainly attributable to defective lesson-guides and to lax discipline. With few exceptions, the schools are sufficiently found in educational appliances, and the several teachers are careful tenants; the ornamentation of play-grounds still needs, and should receive, more attention.

In point of general efficiency the following Public Schools, given in order of merit, deserve honorable mention:—Araluen, Braidwood, and Cooma.

The undermentioned schools were represented at the junior examination:—Braidwood Public, 6 passes; Cooma Public, 5 passes; Adaminaby Public, 4 passes; and Araluen Public, 1 pass.

Cadet Corps are attached to 3 schools, but for various reasons they are not so successful as they might be.

Owing mainly to the prevailing depression, and to the consequent lack of employment, applications for free education have been numerous during the year, and in several cases cancellation of debts had to be sanctioned.

Schools Savings Banks are in active operation at 4 schools with fair results.

The present staff comprises 71 teachers, 4 assistants, and 7 pupil-teachers, most of whom have discharged their responsible duties with marked satisfaction.

W. NOLAN,
Inspector.

Braidwood, 30th December, 1895.

ANNEX S.

INSPECTOR SHEEHY'S REPORT.

THE schools with which the year's work commenced in this section of the Goulburn District comprised:—

Public	50
Provisional	19
Half-time	12
House-to-house	1
Total.....	82

Three of these, Breadalbane, Cullarin, and Parkesbourne Public, were transferred to my list from the Central Section; and 2 others, Blakney Creek and Mountjoy Provisional, had previously been closed on account of small attendance. Waggallalah Public, which was in a languishing condition at the close of 1894, was not opened this year. In the December half-year the Provisional School at Boambolo, which had been discontinued for over twelve months, was re-opened, and a new school was brought into operation at Garangula, a gold-mining locality. In the course of the year the following schools were closed, as the attendance did not warrant their continuance:—Euralie and Yumburra West Public, and Congera and Burnt Hut Creek Provisional. Nearly all the residents left the localities in which the two latter schools are situated. The two stations which formed the House-to-house School designated Cavan and Warham were converted into Half-time Schools, and the Half-time Schools at Jeir and Griffith's Flat into Provisional Schools. Hence, at the end of the year, there were 81 schools in operation, classified as follows:—

Public	49
Provisional	20
Half-time	12

After the Christmas vacation a new school will be opened at Godfrey's Creek. The building has been completed, and is fit for occupation.

At the close of 1894 three applications for the establishment of new schools were under consideration. The decision on each case is given hereunder:—

Place.	School applied for.	Decision.
Boggy Creek	Half-time	Granted conditionally.
Uriara.....	Provisional.....	Declined.
Warroo Road	„	Half-time granted conditionally.

This year ten applications for new schools were received, and after inquiry were dealt with as follows :—

Place.	School applied for	Decision
Godfrey's Creek	Provisional School	Granted.
Reedy Creek	"	Declined.
Carangula	Public School	Granted.
Davy's Creek	Provisional School	Declined.
Grassy Creek	Half-time School	Granted conditionally.
Kenney's Creek	"	"
Spring Flat	Provisional School	Declined.
Stony Point	"	"
Cade's Creek	"	"
Uriara	Half-time School	"

At Lerida and Nurung suitable sites have been selected, and the erection of new buildings to replace the old ones at these places is in progress.

Inspection.

There were 85 schools open during the year or some portion thereof. All received a regular inspection. The number below, up to, and above the standard (50 per cent. of possible marks) is given below :—

Schools.	Below Standard		Up to Standard.		Above Standard.		Total.	
	1895	1894	1895	1894.	1895.	1894.	1895.	1894.
Public	2	1	1	0	48	48	51	49
Provisional	0	0	1	1	21	15	22	16
Half-time	2	0	1	1	9	12	12	13
House-to-house	0	0	0	0	0	1	0	1
Total	4	1	3	2	78	76	85	79

The percentage this year below the standard is 4·7; up to it, 3·5; and above its requirements, 91·8.

Organisation.

During the year much has been done in improving the material condition of the schools. Several have been painted and ceiled, 2 have been enlarged, and repairs have been effected in every case where they were required. With a few exceptions the school-rooms are comfortable and well lighted, and the organisation for which the teachers are responsible is reasonably satisfactory.

Discipline

The government is, on the whole, mild but firm, and the school-work is, generally speaking, conducted with quietness and order. In 35 per cent. of the schools all the pupils are punctual; in the rest, most of the late pupils have to do some sort of work in the morning—to milk, &c.—or to travel long distances to school. It is to be regretted that in several schools irregularity is a noticeable defect. The teachers, as a rule, make earnest efforts to remedy it; some, however, are, I think, too easily satisfied with the excuses given for absence, and regular attendance, so indispensable to progress, is not secured.

Proficiency.

The subjects of examination, the number examined, the number that satisfied the standard, and the percentages of passes, are given in the subjoined table :—

Subjects	Number Examined	Number Passed	Percentages	
			1895.	1894.
Reading	2,371	1,903	80·2	78·4
Writing	2,249	2,111	93·8	94·6
Dictation	1,948	1,373	70·4	64·5
Arithmetic	2,279	1,838	80·6	81·3
Grammar	913	536	58·7	66·2
Geography	916	609	66·4	63·4
History—English	921	501	54·4	54·5
" Australian	108	108	100·0	80·2
Scripture	2,370	1,483	62·5	51·0
Object Lessons	2,371	2,078	87·6	90·4
Drawing	2,199	1,920	87·3	84·6
Music	2,371	1,190	50·1	58·9
Euclid	52	52	100·0	60·2
Algebra	14	14	100·0	100·0
Mensuration	19	13	68·4
Latin	19	19	100·0
Needlework	992	984	99·2	100·0
Drill	2,371	1,792	75·5	76·7

As compared with last year, there is an improvement in the percentages of passes in reading, dictation, geography, Australian history, Scripture, drawing, and Euclid. In writing, arithmetic, English history, algebra, and needlework the percentages are nearly the same for both years, and there is a retrogression varying from 1 to 9 per cent. in drill, object lessons, grammar, and music.

The number of pupils examined for exemption certificates was 233. Of these, 110 passed the prescribed test. The failure of the remainder was chiefly due to incorrectness in arithmetic and dictation.

Teachers.

Teachers.

There were 83 teachers of all ranks on the staff at the end of the year, classified as under :—

	II A.		II B.		III A.		III B.		III C.		Un-classified.		Totals.		Grand Total.
	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	
Teachers in charge	6	0	4	0	14	4	8	8	4	1	8	18	44	31	75
Assistants	0	0	0	1	0	1	0	0	0	1	0	3	0	6	6
Totals	6	0	4	1	14	5	8	8	4	2	8	21	44	37	81

Of the unclassified teachers, 14 in charge of schools and 2 assistants have served as pupil-teachers.

Pupil-teachers.

Class I.		Class II.		Class III.		Class IV.		Probationers.		Total.		Grand Total.
Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	
0	1	1	1	0	0	2	1	0	1	3	4	7

In the course of the year several changes occurred in the teaching staff owing to resignations and removals. Four inquiries into complaints were held, and it was found that the accusations were either vexatious or unfounded. The teachers as a body are deservedly respected, and, except in a few cases in which suitable action was taken, have performed their duties with zeal and efficiency.

Accommodation.

The sitting accommodation at the end of last year, allowing 100 cubic feet of air-space for each pupil, consisted of 3,447 places. Though 148 of these were lost by the closing of five schools, and the giving up of one old building, the increase in the number of seats for the year was 195. This was gained by the erection of three new buildings, the reopening of three schools, the conversion of a House-to-house station to a Half-time school, the additions made to two schools, and the transfer of three others to my list. Hence at the end of the year the number of places provided for scholars was 3,642. Except in the case of one small school which requires to be enlarged, the accommodation is sufficient for existing requirements.

Information respecting the buildings erected during the year is furnished hereunder :—

School.	Cost.	Places provided.	Supervised by.	Remarks.
Brooklands Provisional.....	£ s. d. 83 15 0	32	Inspector ...	Erected to replace old building.
Garangula Public	77 5 0	47	„ ...	Erected where no school existed before.
Godfrey's Creek Provisional	65 15 0	23	„ ...	„ „

Under the supervision of the inspector, Cunningham Creek Public and Galong Provisional have been enlarged, and repairs and improvements have been effected to 43 schools and 11 teachers' residences, at a total cost of £619 17s. 6d. The liberality of the Department has therefore been largely availed of in providing for the comfort of both teachers and pupils in this district.

There are 10 schoolrooms and 3 teachers' residences undergoing repairs, which will cost £78 19s., and 2 new buildings, to cost £129 17s., are in course of erection.

Under the Architect, additions are being made to the teachers' residences at Gunning and Gundagai, and repairs and improvements, including the provision of a laundry and bathroom, have been carried out at Yass.

Summary.

Three school-buildings have been erected, and 2 others are in progress; the means of education have been extended to localities hitherto unprovided for. All the schools in operation during the year, or any portion of it, were fully inspected; 3½ per cent. were up to the standard, and 92 per cent. above its requirements. The results of inspection compare favourably with those for last year, and the prospects for 1896 are encouraging.

P. F. SHEEHY,

Yass, 31 December, 1895.

Inspector.

ANNEX T.

INSPECTOR DURIE'S REPORT.

THERE were 95 schools in existence in the Bega Section of the Goulburn District at the close of 1894, viz., 67 Public, 8 Provisional, and 20 Half-time Schools. During 1895 the following schools were closed on account of small attendance :—Buckajo Provisional and Corrowong and Snodgrass Half-time. The Provisional School at Ooranook was burnt down by bush-fire during September quarter, and has been closed since. It will, however, be reopened in a new building in January next. New Provisional Schools at Glenview and Woodglen were opened, and a Half-time School at McLaughlin River, while the following old schools were reopened: Kydra and Killarney Swamp Provisional and Timbery Range and Cuttagee Half-time. In addition to these changes, the Provisional Schools at Corunna and Millingandi were raised to the rank of Public, and Wapengo Half-time School became Provisional. The schools in operation at the close of 1895 consisted of 69 Public, 9 Provisional, and 20 Half-time; total, 98.

During the year small school-buildings at Curia Creek, Glen View, and Cooper's Glen have been erected, and the buildings at Tarragandah and Burragate have been enlarged. Weather-sheds at Bodalla and Corunna Public Schools were built. The total seats available for pupils at the close of 1895, allowing 8 square feet for each pupil, are 5,271.

Attendance

Attendance.

During the year there were 102 schools in operation, having a total enrolment of 4,583, and an average attendance of 2,639 2. A comparison of the attendance for 1894 and 1895 is shown in the following table :—

Quarter	Enrolment		Attendance		Percentage	
	1894.	1895.	1894.	1895.	1894.	1895
March	3,447	3,717	2,121·4	2,507·8	61·5	67·4
June	3,552	3,698	2,568·1	2,603·5	72·3	70·4
September .. .	3,551	3,658	2,468·8	2,461·2	69·5	67·4
December . . .	3,592	3,686	2,625·4	2,795·3	73·0	75·8

It will be seen by these figures that the enrolment has increased during the year, and that the attendance is much higher than in 1894.

Inspection.

During the year 100 regular and 8 ordinary inspections were made. Two schools were not regularly inspected, viz., Ooranook and Glenview Provisional. The former was burnt down by bush-fire the morning prior to my intended visit for inspection, and the latter was opened on 2nd December, too late for me to visit it. At these inspections 286 children were examined for exemption certificates, and 167 passed satisfactorily. Of the pupils who obtained certificates in previous years, 141 were present at inspection this year.

The condition of the various schools inspected, as compared with 1894, is shown in the following table .—

Schools	Below Standard		Up to Standard.		Above Standard	
	1894	1895	1894	1895	1894	1895
	per cent.	per cent.	per cent.	per cent.	per cent.	per cent.
Public	6	6	6	20	88	74
Provisional		22	12	33	88	45
Half-time . . .	12	4	16	23	72	73
All	7	7	9	22	84	71

On the whole, the schools have maintained the high standard of efficiency of previous years. The only noticeable falling off is in Provisional Schools, where, of the 9 schools inspected of this rank, 2 were below standard. The schools, moreover, have upheld their good character for discipline and organisation.

Teachers.

At the close of the year there were employed in all schools in this district 102 teachers, viz., 77 males and 25 females. These were classified as follows .—

Teachers and assistants .—

Class 1 B	1
„ 2 A	12
„ 2 B	3
„ 3 A	44
„ 3 B	9
„ 3 C	6
Unclassified	18
Total	93
Pupil-teachers :—	
Class 1	3
„ 2	1
„ 3	3
„ 4	2
Total	9
Grand total	102

The teachers, taken as a whole, are industrious, steady, and trustworthy, and are held in high esteem by the parents and the pupils.

Summary.

1. The efficiency of the schools is satisfactory.
2. The educational requirements of the district are well provided for.
3. The outlook for 1896 is hopeful.

Bega, 26 December, 1895.

P. DURIE,
Inspector.

ANNEX U.

DISTRICT-INSPECTOR LOBBAN'S REPORT.

THE year 1894 closed with 296 schools or departments in operation, viz., 102 in the Grafton section, 89 in the Lismore section, and 105 in the Port Macquarie section. During 1895 there were 4 new schools opened in the Grafton section, and 7 others were closed; 10 schools were opened or resuscitated in the Lismore section, and 3 were closed; and 10 were opened in the Port Macquarie section, and 3 were closed. The list at the end of the year thus contained 307 schools or departments, viz., 99 in the Grafton section, 96 in the Lismore section; and 112 in the Port Macquarie section.

At the end of 1894 seats were available for 17,955 pupils. Now there is ample accommodation for 18,248. Works of considerable magnitude were carried out under the supervision of the Architect in the Lismore and Port Macquarie sections. Nothing was done by that office in the Grafton section.

Extensive repairs and improvements, as well as the erection of excellent school-buildings at Swan Creek, and residences at Copmanhurst and Lower Lawrence, were carried out under inspectional supervision. The total amount thus spent was £4,984 16s. 3d., of which £2,929 4s. went to the Grafton section.

The

The school premises throughout the district present a clean and pleasing appearance. New verandahs have added to the comfort of several school-rooms, and painting and repairs were effected wherever they were found necessary. New residences were erected where practicable, and old ones were renovated. Tanks were supplied to several schools, and sanitary matters were not neglected.

Although Arbor Day was not generally celebrated, arboriculture and horticulture received some attention. In many school-grounds the shade trees and flower-beds are objects of admiration; and Chatsworth Island and Copmanhurst deserve special mention in this connection. Some schools which obtained bonuses in former years for their gardens made a poor show, but this was chiefly due to the extremely dry weather in the latter half of the year. As a rule, the Department's property is well looked after, but occasionally one sees loose palings, gate-fastenings out of gear, locks out of order, and window cords broken. These are all indications of careless tenants.

Throughout the year the attendance was good. The highest enrolments were in September quarter, when 4,876 were enrolled in the Grafton section; 5,029 in the Lismore section; and 4,565 in the Port Macquarie section. The highest average daily attendance was in the December quarter—the figures being 3,703·7, 3,777·0, and 3,376·0 respectively, or Grafton 78 per cent., Lismore 76 per cent., and Port Macquarie, 74 per cent. These figures show that on every school day in the quarter 22 out of every 100 pupils enrolled in the Grafton section were absent; 24 out of every 100 in Lismore section; and 26 out of every 100 in the Port Macquarie section. Both in enrolment and average daily attendance the Lismore section now leads; but in point of regularity of attendance the Grafton section still stands first.

All the schools in operation during any portion of the year received a regular inspection, and 18 of them underwent an ordinary inspection also. The results obtained showed that 23 schools were below, 3 up to, and 291 above the standard. Of those below the standard, several were new schools or schools in which a third class had not been formed. There were 11,662 pupils present at examination, as against 10,634 in 1894. There were 3,959 examined in the Grafton section, 4,030 in the Lismore section, and 3,673 in the Port Macquarie section. The following table gives the percentages:—

Subjects.	Numbers Examined in		Percentage of Passes.				Per-centage of Passes in 1894.
	1895.	1894.	Grafton.	Lismore.	Port Macquarie	Total.

Considering that a "Pass" means only 50 per cent.—that is to say, half the possible number of marks for any subject—the results shown in this table are not fully satisfactory. Thus in arithmetic, 74 per cent. of passes shows that 26 out of every 100 pupils examined did less than half of the sums set; while 81 per cent. in dictation indicates that 19 out of every 100 examined made more than three mistakes in spelling in the written exercise. In reading, arithmetic, dictation, grammar, geography, object lessons, and mensuration, improvement upon last year's work is noted. In other subjects the percentage is either the same or lower than that of 1894. All pupils entitled to be examined for exemption certificates underwent the test, and about 60 per cent. passed. The issuing of these certificates has led teachers to give increased attention to the solid branches of school-work, especially arithmetic.

The total amount collected for school-fees during the year was £5,337 19s., viz., Grafton, £1,787 14s. 9d.; Lismore, £1,930 18s. 6d.; and Port Macquarie, £1,619 5s. 9d. There were 1,805 free pupils on the rolls at the end of the year—674 in Grafton section, 480 in Lismore section, and 651 in Port Macquarie section. The school-fees in arrear amounted to £168 2s. 6d. Grafton section, £26 10s. 6d.; Lismore section, £70 9s. 9d.; and Port Macquarie section, £71 3s. 3d. A large proportion of these debts will have to be cancelled.

The School Banks are progressing fairly. They are attached to nearly all schools that have ranked or do now rank in sixth class or upwards. In the Grafton section there are 21 Banks, with 654 depositors, who have £142 3s. 1d. at their credit.

Comparatively few prosecutions for short attendance were instituted during the year. As a rule parents are anxious to send their children to school, and seldom keep them at home without a reasonable excuse.

Two years ago the Clarence River Caledonian Society offered a prize worth £3 3s. for the best essay on the Battle of Culloden, written by a *bonâ fide* pupil of any public school on the Clarence. Miss Price, of Maclean Superior Public School, won the prize. Last year the Society determined that the essays should all be written at the same time, under supervision, and gave five subjects for study, one of which was to be selected on the day of competition. The steam-boat proprietors granted free passages to Grafton to the competitors, and the essays were written in the Grafton Superior Public School. The subject drawn was "Holyrood Palace," and twenty essays were written by pupils from various schools in different parts of the Clarence District. The examiners appointed by the Society were the Venerable Archdeacon Flower, M.A., and the Revs. A. Barron, M.A., and J. McKay. The prize was awarded to Master Alfred Pollack, of the Grafton Superior Public School, and Master H. Turnbull, of Ulmarra Public School, was second. The examiners pronounced all the essays creditable to both teachers and pupils. So satisfied is the Caledonian Society with this year's results that arrangements have been made to give three prizes in 1896.

The Public School Boards have taken a lively interest in the schools under their supervision; and in the Grafton section have afforded valuable assistance in supervising works in progress in connection with school buildings in their neighbourhood.

There

There are 574 teachers and pupil-teachers of all ranks employed in the district, viz., 282 teachers, 4 mistresses, 1 work-mistress, 25 assistants, and 62 pupil-teachers, classified as follows :—

Teachers.							Pupil-teachers.				
IB	IIA	IIB	IIIA	IIIB	IIIC	Nil.	Class I.	Class II.	Class III.	Class IV.	Probationers.
3	52	19	109	36	15	78	18	11	5	23	5

Of the 78 unclassified, 40 are ex-pupil teachers.

The teachers as a body continue to merit the good character they have hitherto borne of faithful public servants and worthy citizens. The pupil-teachers have, without exception, won the approbation of all charged with their training and oversight.

Settlement continues in outlying quarters, and hence new schools are needed from time to time in places not thought of until the applications come in. So far, however, as forethought and careful inquiry can suggest, all known centres of population are now provided with the means of education, or steps are being taken to secure that object.

Solid progress has been made during the year, and on each section a large number of schools passed creditable examinations; but the following stand out prominently as having attained marked efficiency :—

Grafton section.—Grafton Superior Public; boys and infants.

Lismore section.—Ballina Superior Public.

Port Macquarie section.—Wingham Public.

The reports of Messrs. Board and Wright are forwarded herewith.

Grafton, 9th January, 1896.

A. LOBBAN,
District Inspector.

ANNEX V.

INSPECTOR WRIGHT'S REPORT.

DURING the year 1895 there were 115 schools in operation under my supervision, 105 of these being schools which were working during 1894, and 10 schools opened during 1895, viz., Telegraph Point Public, The Hatch Provisional, Landsdowne Upper Provisional, Lorne Provisional, Taylor's Arm Upper Provisional, Thone Creek Provisional, Warneton Provisional, Caffrey's Flat Half-time, Kauthi Half-time, and Moparrabah Half-time.

Three schools were closed during the year, viz., Belmore River Upper Public, Dondingalong Public, and Camden Haven Upper Provisional, but of these the two latter will be reopened early in 1896.

At the end of the year there were in operation 112 schools, viz. :—

Public	76
Provisional	16
Half-time	20

A few small schools will probably be required in isolated places during 1896, but as a whole the educational requirements of this section are adequately met by the existing schools.

Accommodation.

Accommodation is provided in the schools in operation for 6,771 pupils, allowing 100 cubic feet for each child, or for 6,878 pupils, allowing to each one 8 sq. ft. of floor space. As the gross enrolment for the year was only 5,568, and the highest quarterly enrolment 4,565, it will be seen that ample provision has been made.

Inspection.

Every school open during any portion of the year received a regular inspection, but it was found possible to make ordinary inspections of only 2 schools. The efficiency of the schools is shown in the following table :—

Schools.	Below Standard.	Up to Standard.	Above Standard.
Public	2	2	74
Provisional	8	0	9
Half-time	6	0	14
Totals	16	2	97

Thus 86 per cent. of the schools are up to or above standard requirements. These results are 4 per cent. below those obtained in the previous year, a falling-off due principally to the fact that of the 16 schools which failed to reach the standard, 8 (50 per cent.) were newly opened, and the pupils therein had been under instruction for a very limited time only.

In a very large number of the schools the work done has been of a highly satisfactory character; the schools which obtained the best results being Wingham Public, Taree Superior Public, Smihtown Public, West Kempsey Superior Public, Port Macquarie Superior Public, and Gladstone Public.

Candidates from four (4) schools were successful at the Junior University Examination, viz., 3 from West Kempsey Superior, 2 from Wingham Public, 1 from Cundletown Public, and 1 from Port Macquarie Superior. The medal for proficiency in physiology was obtained by a pupil from the Wingham Public School.

Teaching Staff.

At the end of the year the total number of teachers employed was 124, viz., 102 principal teachers, 6 assistants, and 16 pupil-teachers. Of the principal teachers, 72 have classifications ranging from 1B to 3C, and 30 are unclassified, but 17 of these unclassified teachers are ex-pupil teachers, who have therefore received systematic training for years under experienced masters. The success which has attended the appointment of these ex-pupil teachers to the charge of small schools has been very pronounced, for in nearly every instance the work done has been of a most satisfactory kind.

Very few complaints against teachers were made during the year, and most of them were of a trivial nature. It was, however, found necessary to dismiss one teacher for misconduct; but as a body the teachers are capable, zealous, and of good moral character.

School

School Property.

Necessary repairs have been executed to a large number of buildings, and most of the school-houses, residences, &c., are now in good order. The grounds are neat and tidy, but horticulture and arboriculture have not received the same attention as in previous years, though in some instances, notably at Oxley Island Public, Mitchell Island Public, and Euroka Public, the work done is deserving of very high commendation.

Summary.

There are sufficient schools, ample accommodation has been provided, the teachers are earnest and efficient, and the buildings are in good repair. Viewed in every way, the outlook for 1896 is encouraging.

Port Macquarie, 2nd January, 1896.

STEWART WRIGHT,
Inspector.

ANNEX W.

INSPECTOR BOARD'S REPORT.

THE schools which have been in operation in this section during the whole or portion of the past year are classified as follows:—Public, 69; Provisional, 20; Half-time, 8; total, 97. Owing to reduced attendances the schools at Cabbage Tree Island and Riley were not reopened after last Christmas vacation, and the Public School at Tucki Tucki was closed in June last. On the other hand, new Provisional Schools have been established at Crystal Creek, Fairy Hill, Tyagarah, Teven, Cave Point, and Dunbible; Half-time Schools at Kyogle, Rowland's Creek, and Blindmouth; and the Half-time School at Drighlington, closed last year, has been reopened. The year therefore closes with 96 schools in operation, showing an increase of 7 schools for the year. A new school will be opened at Jasper in January, and an application for a school at Norton's Gap has been granted conditionally. Although the development of the district will render necessary the establishment of new schools for some time to come, at present a school is in operation wherever there is a reasonable prospect of the minimum attendance being maintained.

The school buildings in this section provide accommodation for 5,734 pupils, while the maximum quarterly enrolment has been 5,029. By the erection of new schools and class-rooms, and the enlargement of existing buildings, additional space for 591 pupils has been provided, while the enrolment shows an increase of 419 for the year. Repairs, in some instances of an extensive character, have been carried out as they were found to be necessary. Excepting two or three buildings which will require attention during the coming year, the school premises are in good condition.

All the schools in operation during any portion of the year received a regular inspection, 1 was inspected a second time, and 7 received an ordinary inspection. The total number of pupils examined was 4,030; of these, 340 were examined for exemption certificates, and 192 passed. In general efficiency 94 schools were found to be above standard, 1 up to standard, and 2 below standard. The percentages of passes in the various subjects show only slight variations from those obtained last year. Among the more important subjects a slight decrease is seen in writing and dictation, and a small increase in arithmetic, grammar, and geography. The organisation and discipline of the schools continue to be of a satisfactory character. In spite of the exceptionally dry weather which has prevailed, praiseworthy efforts have been made by many teachers to keep the surroundings of their schools neat and attractive.

The Public School at Ballina was raised in May last to the rank of a Superior Public School; this school deserves to be specially mentioned, both for the good results obtained at the University examinations of the year and for the high general efficiency which it maintains.

The number of teachers of all grades employed in this section is 119; they are classified as follows:—Class I, 1; Class II, 21; Class III, 55; unclassified, 24; pupil-teachers, 18. Of the unclassified teachers, 11 have been trained as pupil-teachers. As a body, the teachers are energetic and faithful, and are generally respected.

Lismore, 28th December, 1895.

P. BOARD,
Inspector.

ANNEX X.

DISTRICT INSPECTOR T. DWYER'S REPORT.

THE number of schools in operation in the Maitland district during some portion of 1895 was 243, comprising 194 Public Schools and departments, 20 Provisional, 23 Half-time, 4 House-to-house, and 2 Evening Public; total, 243.

The Maitland section embraces 69 Public Schools and departments, 9 Provisional, 13 Half-time, 1 House-to-house, and 2 Evening Public; total, 94.

The Newcastle section had 63 Public Schools and departments, and 1 Provisional; total, 64.

The Dungog section contained 62 Public, 10 Provisional, 10 Half-time, 3 House-to-house; total, 85.

New vested school buildings, including weather-sheds, were completed and occupied at Horneville, near West Maitland, during the year. Provisional Schools were established at Baerami and Budden, and the school at Owendale was reopened. Putty was raised to Provisional rank. Howe's Valley was reduced to Half-time, and worked with Springfield. Half-time Schools were started at Doyle's Creek and Redman Vale in the beginning of the year. Evening Public Schools were established at Bulga and West Maitland in the second half of the year. Arrangements for opening a Provisional School at Barnet, at the head of the Manning River, are complete, and a teacher will be appointed this month. Provisional Schools will shortly be established at Luskintyre and Maison de Dieu. The Public Schools at Gungal and Sparkes' Creek were closed for want of attendance in the second half of the year. The Half-time School building at Upper Middle Creek was burnt last May, and the children of that locality have been without the means of instruction since that time. The sum of £283 5s. 2d. was expended under my supervision in improving 32 schools in Maitland section, and the sum of £262 5s. was similarly spent in improving 18 residences of that section. Existing schools are well placed on the whole, and give more than sufficient floor-space for the highest average attendance during the year. The total floor-space for the whole district for 1895 is 24,940, and of cubic spaces 26,612, as against 24,482 and 26,190 respectively for 1894.

The work of inspection for the year is shown hereunder:—

Section of District.	Regular Inspections.	Ordinary Inspections.	Total Inspections.	Number of Pupils examined.
Maitland	90	10	100	4,731
Newcastle	64	64	9,238
Dungog.....	85	2	87	2,678
Total.....	239	12	251	16,647

Four small schools in my section, viz., Gungal, Sparkes' Creek, Rosemount, and Bulga Evening Public did not receive inspection, inasmuch as they were not in operation when I was working in their respective localities.

Of the inspected schools, 98 per cent. of those in Maitland section succeeded in satisfying or exceeding the standard, 100 per cent. in Newcastle section, and 88 per cent. in Dungog, making an average of 94 per cent. nearly, as against 98 per cent. for the year 1894. There is thus a slight falling off of 4 per cent. for 1895, which is due to irregularity of attendance of pupils nearly all over the district, caused by the prevalence of juvenile epidemics for several months.

The schools of this district that sent up successful pupils for the University Junior Examination in 1895 are: Newcastle Superior Public, 19; Singleton Superior Public, 4; West Maitland Superior Public, 2; Wallsend, 2; Hamilton, 1; total, 28 from 5 schools. In 1894, 23 successful applicants passed from 5 schools.

The proficiency of the pupils examined in each subject of instruction, and the percentage of those who satisfied or exceeded the standard, are shown in the following table:—

Subjects.	Number Examined.	Percentage.	Subjects.	Number Examined.	Percentage.
Reading—			Grammar—		
Alphabet	1,743	74	Elementary	3,739	78
Monosyllables	2,924	80	Advanced	3,039	72
Easy narrative	5,467	86	Total	6,778	75
Ordinary prose	6,513	88	Geography—		
Total	16,647	85	Elementary	3,460	79
			Advanced	3,194	76
Writing—			Total	6,654	77
On slates	6,645	83	History—		
On paper	10,002	84	English	6,651	76
Total	16,647	84	Australian	1,537	70
			Scripture and moral lessons	16,171	78
Arithmetic—			Object lessons	16,417	81
Simple rules	10,391	75	Drawing	16,795	79
Compound rules	3,764	69	Music	15,795	82
Higher rules	2,463	65	French	212	68
Total	16,618	72	Euclid	1,052	68
			Algebra	184	76
			Mensuration	311	74
			Latin	193	74
			Trigonometry	5	80
			Needlework	5,789	85
			Drill	16,117	78
			Natural science	123	88

Compared with last year, natural science is better by 3 per cent.; ordinary prose and simple rules of arithmetic have advanced 2 per cent.; easy narrative, compound rules, algebra have improved by 1 per cent.; in all other branches but two there is a falling off ranging from 1 to 10 per cent. This decrease in the percentage of pupils that exceeded or satisfied the standard is owing to the prevalence of juvenile epidemics all over the district during a considerable portion of the year.

The number of pupils examined for exemption certificates was 1,870, of which number 989 passed.

The number of teachers, assistants, work-mistresses, and pupil-teachers employed in Maitland district amounts to 469. With few exceptions, they have worked well, and have given little trouble to the Department during the year. A fair proportion of them were promoted by examination and under Article 103 of the Regulations. Their classification at the close of the year is indicated in the following table:—

	I A.		I B.		II A.		II B.		III A.		III B.		III C.		Unclassified.		Total.		Grand Total.
	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	
	Principal teachers	7	2	13	5	23	23	16	1	49	8	12	8	10	8	15	18	145	
Mistresses of departments	23	35	35
Assistants	5	..	14	23	8	15	2	27	..	5	9	29	79	108
Total	7	2	18	5	37	51	24	16	51	35	12	13	10	8	15	27	174	157	331
	I.		II.		III.		IV.		Probationers.										
	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.									
Pupil-teachers	10	40	9	24	5	5	22	9	1	3							47	81	128
Work-mistresses	10	10	10
Total teachers of all ranks																	221	248	469

Summary.

Ten new schools were opened during the year. The sum of £1,716 17s. 2d. was expended in improving schools and residences by the Inspectors. Accommodation exists for 24,940 pupils. With the exception of 4 small schools which were not in operation when the Inspector in whose section they are was working in their respective localities, every school in the district had a regular inspection, and 12 had ordinary inspections. The Department's property is well cared for. The condition of the primary schools of this district continues to be satisfactory.

East Maitland, 6th January, 1896.

T. DWYER,
District Inspector.

ANNEX Y.

INSPECTOR FLASHMAN'S REPORT.

DURING the year the Infants' Departments at Jesmond, Newcastle East, and Hanbury were closed, so that there now remains in this section 33 Public Schools in 60 departments, and 1 Provisional School.

The enrolment of pupils has been as follows:—

March quarter	12,296.
June quarter	12,091.
September quarter	12,158.
December quarter.....	11,776.

The accommodation provided in the schools is for 13,924 pupils.

A weather-shed has been erected in connection with the Superior Public School, Newcastle, and important additions and improvements have been made to the teachers' residences at Waratah, New Lambton, Hexham, Stockton, Carrington, Newcastle South, and Hanbury, while extensive repairs have been carried out to the school buildings at Newcastle, Carrington, Islington, Newcastle South, Hanbury, Hamilton, Belmont, Mosquito Island, Barnsley, Minmi, Cook's Hill, and Wallsend. The water supply has been improved at the schools at Minmi, New Lambton, Newcastle Superior, Belmont, and Tremarton.

The school property in this district, viewed as a whole, may be said to be in a very satisfactory condition.

All the schools in this section were inspected during the year. I found most of them in a satisfactory condition as regards organisation, discipline, and instruction. The defects in organisation I noticed last year have in nearly every case been removed. A few schools have not been kept as neat and attractive as desirable. All the schools were found to satisfy the "standard" requirements, and a large number produced results far beyond the "standard."

The introduction to the Infants' Departments of musical drill and a more intelligent method of teaching drawing, form, and arithmetic, has produced good results.

I have not always been quite satisfied with the results obtained in teaching Object lessons. Frequently these lessons as given to the junior pupils, are most unsuitable, and entirely miss the end intended. Laboured lessons on the whale, elephant, camel, and such like subjects might with profit give place to intelligent training of the eyes and ears of the pupils, which would prove not only more profitable but far more interesting to all concerned.

There were 1,077 pupils examined for "Exemption certificates," but 557 only succeeded in satisfying the required tests.

The only schools which were successful at the University Junior Examination this year were:—

Newcastle Superior	18 boys, 1 girl.
Wallsend ,,	2 boys.
Hamilton ,,	1 boy.

At the close of the year there were employed in this section 34 principal teachers, 27 mistresses of departments, 73 assistants, 92 pupil-teachers, and 8 work-mistresses, making a total of 234 teachers of all grades.

All the teachers appear to be hard-working, conscientious, loyal servants of the Department. Of the pupil-teachers I cannot report too highly; many of these young people do excellent work, and are likely to develop into exceedingly useful teachers.

During the year the Cookery Class has been in active operation:—180 girls have received instruction and been subjected to examination at the close of their course of instruction. The reports upon this class have been of a highly satisfactory character and indicate that the teacher is not only industrious but painstaking and efficient.

In all its aspects the educational work of the past year affords good ground for expecting still further advance during next year.

C. O. FLASHMAN,
Inspector.

Newcastle, 24th December, 1895.

ANNEX Z.

INSPECTOR WATERHOUSE'S REPORT.

THE 82 schools in operation at the close of the year 1894 resumed work after the midsummer vacation. During the present year 3 schools were established, viz., Greswick Public, Topi Topi Public, and Wallaringa Provisional, all being in localities where no schools previously existed, whilst Binglebrah Provisional was closed in consequence of the diminished attendance. In the classification of the schools the following changes were made:—Carrabolla, Glen Martin, Halton, and Limeburners' Creek Half-time were raised to Provisional, and Crawford River Public, Carrow Brook Provisional, Girvan Provisional, and Tea Tree Provisional were reduced to Half-time rank. The number of schools in operation at the close of the year was 84, apportioned thus:—

Public	62
Provisional	9
Half-time	10
House-to-house	3

Ten applications for new schools were received, viz.:—

Dunkirk, Provisional	Granted conditionally.
Greswick, Public	Granted.
Invergordon, Provisional	Granted.
Karuah River, Provisional.....	Declined.
Strathisla, Provisional.....	Granted.
Swan Bay, Provisional	Under consideration.
Topi Topi, Public.....	Granted.
Upper Monkerai, Provisional	Declined.
Wallaringa, Provisional.....	Granted.
Weismantel's, Provisional.....	Declined.

The average quarterly attendance fluctuated between 67 and 74 per cent. of the enrolment. The highest enrolment during any quarter of the year was 3,330. As there is regulation space in the schools for 4,582 pupils, the accommodation is ample for present requirements.

The buildings, as a whole, are in a very fair state of repair, and the teachers take reasonable care of the property of the Department. Under the Architect's supervision, Greswick Public School was erected, Euwylyong Public and Nelson's Plains Public were enlarged, and several important improvements were effected. The Inspector supervised the erection of Glen Martin Provisional, Wallaringa Provisional, and Topi Topi Public, this latter building being leased by the Department. Three other buildings are in course of erection. Three wide verandahs were constructed to act as weathersheds,

ANNEX Z 2.

INSPECTOR FRIEND'S REPORT.

THERE were 90 schools under my supervision at the beginning of this year. Four new ones came into operation during the year, 3 were reopened, and 4, which failed to maintain the requisite average, lapsed in consequence. There are, therefore, 93 schools in this inspectorate. It is probable that 2 of these will close forthwith, and that 1 or 2 new schools will be established at an early date.

Under the Inspector's supervision 48 school buildings were improved, 4 erected, and 13 residences renovated. Substantial additions are being made at Cootamundra Public by the Architect. The same officer carried out important improvements at Grenfell, Cowra, Nubba, Calap, and Wallaroo.

Allowing 8 square feet per child, there is accommodation for 5,864 children in the schools of this district. The enrolment for the year was 5,028, and the average attendance 3,027.6. There is, hence, liberal sitting room for the pupils.

In all, there were 97 schools in existence here for the whole year, or for some part of it. Every school received a regular, and 6 an ordinary inspection. Of the 97 schools, 90, when tested, were found above standard, and 7 below. The summary of the "Estimated Proficiency of Pupils" examined shows clearly that profitable work has been done this year, for 75 per cent. of the subjects have been more successfully treated than during 1894. Still there are unmistakable indications in certain schools that the pupils have not been trained to be exact, or to properly exercise their thinking powers (and sometimes their energies). I do not refer merely to the manipulation of figures or to the solution of mathematical problems, &c, but to a training which, if intelligently and vigorously applied, would prove an immense factor in rendering the pupils watchful, accurate, clear-sighted, self-reliant, and prompt in a large variety of ways, both in and out of school. When the full force and importance of the adage, "That which is worth doing at all is worth doing well" are duly recognised by teachers who are at fault in these matters, higher percentages in most, if not all, school subjects will be secured; and the instructors will have the gratification of knowing that their pupils on leaving school will face the world better equipped for the exigencies of life.

Four schools were represented in the University Junior examinations this year, viz. :—Cootamundra, 4 passes; Cowra, 1; Tipperary Gully, 1; and Young, 4.

It is satisfactory to report that, in the matter of organisation, there is a perceptible advance. The classification of pupils is in many cases better, and the programmes of lessons and the time-tables are of a more practical nature than formerly.

Speaking generally, the discipline has always been a good feature, and continues to maintain its high character.

The teachers (all grades) of the district number 115. They are classified thus:—

1 B	3
2 A	10
2 B	8
3 A		32
3 B		8
3 C		6
Unclassified (of these, 19 are ex-pupil-teachers)		28
		<hr/>
		95
Pupil teachers		19
Sewing-mistress		1
		<hr/>
Total		115

As a whole, they are competent, dutiful, and exert a healthy influence in their respective localities. Such as have not shown the possession of these qualifications have been suitably dealt with by loss or reduction of classification, removal to less important positions, &c., according to the seriousness of the cases.

There are some very promising pupil teachers in the district.

Summary.

- (a) All schools received a regular inspection.
- (b) The instructional results are higher than last year
- (c) The schools are well distributed throughout the district, and afford accommodation in excess of present requirements.
- (d) The outlook is encouraging.

CHAS. J. W. FRIEND,
Inspector.

Young, 27th December, 1895.

ANNEX Z 3.

INSPECTOR PEARSON'S REPORT.

At the close of 1894, 83 schools were in operation in this section.

This year commenced with the same number, classified as—Public, 53; Provisional, 11; Half-time, 18; House-to-house, 1.

During the year Blowering West Provisional and Keajura Creek Public were closed.

Boomanomana, Finley, Lower Bago, Mount Gwyne, Upper Bago Provisionals, Felton Wood Half-time, and Benambra House-to-house were established.

Redlands Public and Burrumbuttock East Half time were reopened as Provisional. Savernake Provisional was also reopened after having been closed about twelve months.

Clear Hills Provisional was raised to the rank of Public, and Jubilee Downs Provisional was converted to Half-time, to be worked in conjunction with the new Half-time School at Felton Wood.

At the close of 1895 the schools, therefore, were.—Public, 53; Provisional, 16; Half-time, 20; House-to-house, 2. Total, 91.

When the 2 schools promised at Barooga and Bulgandra are established it may be said the means of education, both as regards amount and distribution, will be adequate.

The total number of schools and departments open during 1895, or any portion thereof, was 93. All of these but 1 received a regular inspection. The exception was Keajura Creek, which was closed early in the year on account of diminished attendance and before it could be visited.

In addition, 2 ordinary inspections were made, making a total of 94 inspections for the year.

Of the 92 schools inspected, 78, or 85 per cent, exceeded standard limits, and 14 were below.

Last year only 82 per cent. were considered above standard.

Half of these 14 failures were newly-established schools, several having been in operation only a few days at time of inspection.

The percentages of proficiency of the various subjects are well maintained, in many cases exceeding those of last year.

A substantial improvement in both organisation and discipline has been noted in almost every school, thus giving proof that the observations and directions given at inspection have been closely observed and conscientiously carried out.

The

The government generally is judicious and sympathetic, and the methods modern and suitable. In many schools horticulture or arboriculture receives attention, in some cases with very good results, Shepardstown Public deserving special mention.

The teaching staff at end of the year consisted of:—Principal teachers, 79; mistresses, 2; assistants, 5; pupil-teachers, 13; work-mistress, 1—total, 100.

As a whole, the teachers are sober, painstaking, conscientious, and studious, and appear to exert a beneficial influence in their respective centres.

School accommodation, allowing 8 square feet per child:—

Accommodation existing at commencement of 1895.....	5,278
Additional accommodation provided	431
Accommodation lost by closing, &c.	66
Accommodation existing at end of 1895	5,643

This is considerably more than sufficient, as the December enrolment shows only 3,408.

No new school buildings have been erected by the Architect, but one is building at Tocumwal, which will afford a total accommodation for 152, being an addition of 80 on old building. This, with the teacher's residence, will cost £1,270.

At Jindera, a neat and comfortable residence was erected by the Architect, at a cost of £396 10s.

New buildings erected by Inspector or supplied by residents during the year:—

Names.	If new.	Seats.	Cost.
Bulgandra	New	21	£ s. d. 45 0 0
Boomanoomana	„	21	45 0 0
Mount Gwynne	„	21	45 0 0
Barooga	„	30	57 19 6
Upper Bago	„	31	20 0 0
Lower Bago	„	35 supplied by residents.	
			£212 19 6

Bulgandra and Barooga have not yet been opened.

The sum of £364 16s. 7d. has been expended in connection with repairs to 32 schools, and £178 13s. 6d. in repairing 9 residences.

No new school buildings under the Inspector's supervision are in progress, but the work of extending Berrigan school is now in hand. This will provide additional accommodation for 20.

Summary.

The efficiency of the schools is slightly higher than last year.

The means of education are ample and well distributed.

The outlook for 1896 is favourable.

Albury, 27th December, 1895.

T. PEARSON,
Inspector.

ANNEX Z 4.

INSPECTOR MCKENZIE'S REPORT.

At the end of the year 1894 there were 61 schools and departments in operation in Hay section. One school has since been closed and 7 new schools opened; so that there have been, in all, 68 schools and departments in operation during the year 1895, including 49 Public, 7 Provisional, 6 Half-time, and 6 House-to-house Schools.

New schools were established at Burke Ward, Burtundy, Conorgie, Colinroobie, Gordon's Point, Tareena, and White Cliffs. Schools were conditionally promised at Lynwood, Hill Plain, Pamamaroo, and Tomara, and applications from Elimdale and Brassi were declined.

The existing schools are well distributed, fully staffed, and satisfactorily meet the requirements of the great majority of the residents. In this scattered district, where the blocks of land are so large, there will always be isolated families; but in many localities settlement is steadily progressing, and the establishment of new schools must follow.

All schools received a regular inspection, and, as a rule, were found to be in a satisfactory condition as regards organisation, discipline, and instruction. Of 68 schools inspected, 59 were above, 1 up to, and 8 below standard, but of the last mentioned only 4 had been any considerable time in operation. The efficiency of the schools has been maintained, any apparent falling-off being caused by the number of new schools. The schools taking highest rank for general efficiency are Alma, Broken Hill, Broken Hill North, Deniliquin, Hay, and Silverton.

The school buildings are mostly in good repair. During the year repairs and improvements were effected in 31 schools and 11 residences, at a cost of £776 3s. 6d., and further repairs are nearing completion in 5 schools and 3 residences, at an additional cost of £118 17s.

Ample provision has been made for the accommodation of the pupils. The total enrolment for the year is 7,326, and the average attendance is 4,022, while existing buildings provide floor space for 6,798 pupils, which gives an increase of 450 places on last year's accommodation.

In addition to the buildings now in use, a new classroom at Hillston and a new school and residence at Mossiel are almost ready for occupation; it has been decided to enlarge the schoolroom and build a new residence at Booligal, and a residence and classroom are to be erected at Mathoura. A comfortable residence was erected at Carrathool early in the year.

Savings banks continue in operation in the more important schools; two schools possess cadet corps; and arboriculture receives a fair amount of attention. The trees and flower-garden at Hay and the vegetable garden at Balranald merit special mention.

There are 121 teachers of all ranks employed in this section. And, as a rule, they are diligent and conscientious in the discharge of their duties, exhibit a deep interest in their school work, and possess the confidence and respect of the people.

A. D. MCKENZIE,
Inspector.

Marrickville, 31st December, 1895.

ANNEX Z 5.

DISTRICT INSPECTOR LONG'S REPORT.

At the close of the former year there were 238 schools in my district. Owing to insufficient attendance 3 were not reopened, and, for the same reason, 11 others were closed during the year, while the same number of new schools were established. The whole number in operation during the year, or some portion of it, was 246, and of these 235 remained in existence at its close, 93 being in the Mudgee, 64 in the Dubbo, and 78 in the Wellington section.

The buildings in which these schools are conducted are, with one or two exceptions, in the most suitable positions, and in good condition. During the year, under inspectors' supervision, 10 school buildings and 1 weathershed have been erected, 78 school-rooms and 23 residences repaired, and 4 school-rooms enlarged, at a total cost of £1,824 5s. 4d. Similar works of a more extensive nature have been completed under the Department's architect.

The buildings suffice for 13,816 pupils at the regulation allowance of floor-space, being an increase of 390 places. The total number of pupils, allowing for those who attended more than one school, was 11,817, and the average daily attendance 7,572·5. The accommodation provided by the school buildings is, therefore, ample.

All the schools in existence during the year, viz., 246, were fully inspected, excepting 2 which were in operation for a portion of the year only. Nine schools received a second or ordinary inspection, and 1 a second regular inspection. Of the 245 regular inspections, 99 were made by Mr. Inspector Rooney, 55 by Mr. Inspector Baillie, and 83 by myself. Owing to serious injuries by a coach accident the former officer was unable to complete his inspections, and 5 in his section were taken by Mr. Inspector M'Lelland and 3 by myself.

Of the schools inspected, 232, or 95 per cent., were in a creditable condition in regard to general efficiency. The 12 schools which failed to satisfy standard requirements—8 in my own section and 2 in each of the others—included some in operation but a short time, and others in which such failure was traceable to causes beyond a teacher's control. The action necessary for the remedy of the defective condition has been taken or initiated in the few cases in which it was found to result from some default on the part of the staff. That 95 per cent. of the schools should reach or exceed standard shows that they are, with few exceptions, under competent and successful management.

The discipline and organisation continue to be pleasing features. The pupils are almost invariably attentive, well behaved, and of very neat appearance, and these results appear to be achieved by appropriate and intelligent methods. Some few cases are met with in which harsh coercion is ignorantly regarded as the necessary basis for efficiency in teaching and government, and in these a more intelligent and humane theory has been suggested. Details of organisation are nearly always found to afford evidence of careful effort to comply with prescribed rules and of due appreciation of the educative effect of neat and cheerful surroundings. At many schools much attention is bestowed on the improvement of the grounds by tree-planting and flower-culture, in which the pupils are encouraged to take a beneficial interest.

There were 8,464 pupils present at the inspections of the year, the number in the preceding year being 7,799. The following table shows the number examined in each subject and the percentage of passes:—

Subject.	Number of Pupils Examined.	Percentage of Passes.	Subject.	No. of Pupils Examined.	Percentage of Passes.
Reading	8,464	85·5	Music	6,389	69·3
Writing.....	8,426	84·1	French.....	74	87·8
Dictation	6,835	78·5	Euclid	277	78·7
Arithmetic	8,134	79·7	Algebra	59	81·3
Grammar	2,991	76·0	Mensuration	350	65·6
Geography	2,981	80·8	Latin	61	82·0
History.....	3,006	73·4	Needlework	3,017	87·0
Scripture	7,941	74·8	Drill.....	7,656	76·0
Object Lesson	7,874	79·4	Natural Science.....	144	91·6
Drawing	7,928	79·6			

The above results are higher in the four most important subjects, and in seven others than those of last year, and afford evidence that the general result of the year's work is satisfactory.

The number of teachers employed in the district at the end of the year was 274, including 33 pupil-teachers. Their classifications and positions are given in the statistical returns already sent in. With few exceptions they show that they possess the qualifications necessary for the efficient discharge of their honourable and responsible duties, and occupy satisfactory positions in public estimation. In certain cases there is observed a carelessness in regard to details of general deportment which must prejudicially affect a teacher's usefulness, and which may possibly be, to some extent, attributable to the influences prevalent in many rural localities. Such cases are, however, it is satisfactory to state, exceptional.

The pupil-teachers have displayed satisfactory aptitude, diligence, and usefulness, and have, in every instance, obtained a favourable report.

In conclusion, it may be stated that the schools of the district are sufficient for its present requirements, and that the general result of the year's work is satisfactory.

GEORGE ED. LONG,
District Inspector.

Waverley, 7th January, 1896.

ANNEX Z 6.

INSPECTOR ROONEY'S REPORT.

At the end of 1894 there were 97 schools in the Mudgee section of the Wellington district.

Three small schools, M'Donald's Creek Public, Leaning Oak Provisional, and Campbell's Creek Half-time, did not reopen at the commencement of the year 1895.

During the year the following schools were closed owing to diminished attendance:—Rawdon, Pinnacle Swamp, and Tong Bong Half-time; Dun Dun and Nile House-to-house.

Schools established.

Breakfast Creek Public, Pinnacle Swamp Provisional, and Upper Meroo Provisional.

Schools converted.

Avisford Half-time to Public; Ulan Public to Half-time; Murragamba Provisional to Half-time; Oakborough Half-time to Provisional; and Warburton House-to-house into two Half-time

At the close of 1895 there were in operation in this section 54 Public, 8 Provisional, 28 Half-time, and 3 House-to-house schools. An application for a Provisional school at Dexter Springs was under consideration at the end of the year.

New schools, taking the places of old and unsuitable buildings, were erected at Dungaree and Wagoribel. At

At Breakfast Creek, Pinnacle Swamp, and Upper Meroo, buildings were erected in places where hitherto there had been no schools

The schools at Breakfast Creek, Lawson's Creek, and Mullamuddy were enlarged
Twenty schools and 19 residences received substantial repairs.

The architect carried out the work of repairs at 1 school and 1 residence. All the others were done under my supervision. A weathershed was erected at Windeyer, and one is in course of construction at Pinnacle Swamp. With the exception of 1 Public and 2 Half-time, all the schools and residences are in a fair state of repair, and are suitable for educational purposes.

Omitting Menah Public, Collingwood Provisional, and Munmurra Provisional, all the Public and Provisional schools are vested in the Department. Fifteen of the Half-time schools are also vested. There are 15 Public schools not provided with residences for teachers.

Accommodation.

The schools in this section give accommodation sufficient for 3,906 pupils or 384 more than were enrolled for any quarter of the year.

In 18 school playgrounds the ornamental trees planted during the previous five years are doing well, and are properly cared by the teachers. At Hill End and Tambaroora nearly all the trees have died out, owing to either the barren nature of the soil or to the indifference of the teachers.

Enrolment and Attendance.

The total enrolment for the year was 4,231. Of this number, 413 were returned as pupils of more than 1 school. The average daily attendance was 2,631.5, being a slight increase on that of 1894. The compulsory clauses of the Public Instruction Act have been duly administered.

The amount of school-fees received for the year was £1,240 10s. 4½d., and the fees in arrear at the end of December amounted to £37 12s. 6d.

There were at the end of the year 342 free pupils in the schools of the section, an increase of 51 on the previous year.

Inspection.

All schools in this section received a regular inspection in 1895. Seven schools received ordinary inspection. Hill End Public was regularly inspected a second time. 2,991 pupils were examined during the year.

The attainments of the pupils show improvement in all subjects but one—algebra. A decided advance has been made in the teaching of drill.

Efficiency of Schools.

One Public and 1 Half-time, both in operation for only a portion of the year, were below standard; 8 Public, 4 Provisional, and 7 Half-time reached it; while 45 Public, 4 Provisional, 23 Half-time, and 5 House-to-house schools exceeded it. Thus, over 97 per cent. of the schools either satisfied or exceeded the requirements of the standard.

Teachers.

There are in this section of the district 85 teachers and 10 pupil teachers. Of the teachers, 2 are in the first class, 19 in the second, 56 in the third-class, and 8 unclassified. Of the last named, 6 served as pupil teachers.

The teachers have given satisfaction in the discharge of their duties; with few exceptions they have gained the respect and goodwill of the people whose children they educate. There are a few, however, who fail to see that smoking in the streets and carelessness in dress tend to lower a teacher in public estimation.

Summary.

(a) This section is well provided with the means of education. (b) The material condition of the schools is good. (c) The organisation and discipline are satisfactory. The results indicate that good work has been done during the past year.

Mudgee, 28th December, 1895.

JOHN P. ROONEY,
Inspector.

ANNEX Z 7

INSPECTOR BAILLIE'S REPORT

THERE were in operation in the Dubbo section of the Wellington district during the year 1895, 42 Public, 11 Provisional, 6 Half-time, and 8 House-to-house schools; total, 67 schools.

Three schools, viz., Belair Creek Provisional, Ironbarks Provisional, and Tenandra and Boundary Gate House-to-house were closed through insufficient attendance.

New schools were opened at Bourke Meat works, Boogle Guble Creek, Carinda, and Raby. A Half-time school is in course of erection at Mobla, which will be opened in conjunction with Belair Creek at the beginning of the year. Boogaldie Public School, closed in 1888, is to be opened as a Provisional school immediately after the Xmas vacation. A House school at Gidgeewane and Greenwood Vale has been granted, and the buildings should soon be ready for occupation. A new school building to replace the old one, which is now used as a weathershed, was erected at Beni.

Applications for Provisional schools at the following places, viz., Goonoo, Wairumbungul, and Yantabulla, are under consideration.

The number of schools in operation at the end of the year was:—

Public Schools	42
Provisional	9
Half-time	6
House-to-house	7
Total	64

The material condition of the schools is, on the whole, fairly good. Improvements, including additions and repairs, have been effected at 28 schools under the inspector's supervision, at a cost of £418 1s. 6d., and 4 schools, viz., Bourke, Byrock, Tomingley, and Warren, under the architect's, at a cost of £698 10s. 4d.

New schools were erected at Bourke Meat-works, Beni, and Boogle Guble Creek, at an outlay of £449 15s.

The water from the town bore at Coonamble has been laid on to the Public School and teacher's residence at a small outlay of only £23 16s. 8d., which, considering the extreme heat and dryness of the climate, will be of inestimable value.

The residences at Goodooga, Coonamble, and Bourke underwent necessary repairs.

The works that have been authorised are—A new residence at Gulargambone, additions to the Public School, Angledool, and to the Superior Public School, Dubbo, and painting and repairs to Baradine Public School and teacher's residence.

The accommodation at the end of 1894 provided floor-space for 5,283 pupils. At the end of 1895 there was accommodation for 5,400 pupils, giving an increase of 117 seats.

Enrolment

Enrolment and Average Attendance.

The enrolment and average attendance for the four quarters ending March, June, September, and December, as compared with last year, show a marked increase in both the enrolment and attendance —

	1894		1895	
	Enrolment	Av Attendance	Enrolment.	Av Attendance
First Quarter	3,553	2,392 2	3,665	2,543 8
Second „	3,531	2,472 5	3,682	2,618 1
Third „	3,457	2,419 7	3,760	2,600 6
Fourth „	3,431	2,469 4	3,672	2,623 5

The total amount of school fees received for the year was £1,424 3s. 9d.

Inspection, Instruction, and Discipline.

Sixty six schools received a regular inspection, and several an incidental inspection.

The new Public School at Bourke Meat-works, opened late in the year, was not inspected.

Of the 66 schools inspected, 64 were above standard and 2 below.

During the first week in October the Chief Inspector paid a visit to Dubbo, and inspected the fourth and fifth classes in the boys' department of the Superior Public School

I wish here to acknowledge the services rendered me by Mr District-Inspector Long and Mr. Inspector M'Lelland, who inspected eight of my schools during November, when I was incapacitated from active work through injuries received by the upsetting of the Quambone coach.

Of the 2,913 pupils examined, 249 were presented for exemption certificates. Of these only 131 passed. The great number of failures may be attributed to want of revision and a thorough grounding in practical questions in arithmetic. Dictation, also, is a weak subject, and especially is it so where parents have not the means of providing necessary books for children's home use.

At the Junior Public Examination, held in June last, the Dubbo Superior Public School was successful in passing four pupils, one of whom matriculated

The order and discipline have been well maintained, and the demeanour and appearance of the pupils very gratifying.

Teaching Staff.

As a rule, the teachers are zealous, industrious, and earnest in their work. In some instances, however, great inconvenience is caused by want of punctuality in furnishing returns.

It is with regret I have to add that one teacher was removed from the service through intemperance, and another resigned, fearing dismissal, from the same cause.

The pupil-teachers are doing good work. They are smart, intelligent, and bear excellent characters

Classification of Teaching Staff

Teachers—	
1 B	2
2 A	9
2 B	6
3 A	18
3 B	12
3 C	8
Unclassified	19
Total	74

Of the unclassified teachers five are ex-pupil teachers.

Pupil-teachers—	
Class 1	4
„ 2	4
„ 3	1
„ 4	2
Probationer	1
Total	12

There is a work mistress at the Superior Public School, Dubbo. Total of all grades, 87.

The work done in 1895, and the progress made, have been highly satisfactory.

There is reason to believe that even better results will be obtained in 1896.

J. W. E. BAILLIE,
Inspector.

Dubbo, 30th December, 1895.

ANNEX Z 8.

REPORT OF THE PRINCIPAL OF THE TRAINING SCHOOL, FORT STREET.

THE enrolment of students for the year 1895 was 32, classified as under —

15	who held full Scholarships
10	„ half „
7	„ non „

Included in the 7 who held non-scholarships was the student who had been granted exemption from the 1894 session, owing to serious illness

Attendance

Early in 1894 the Minister decided that attendance at University lectures should be discontinued during the student's first year's course, and directed that during the usual hours of study students should be employed in the Training School. The new scheme came into operation in January, 1895.

Course of Study.

Latin.—Livy, Book XXI; Arnold's Composition

French.—First and Second French Course, First French Reader (Macmillan); Récits des Temps Mérovingiens I.

English.—Meiklejohn's Book of English; Richard III, Shakespeare's Histories and the Elizabethan Historical Drama; Smith's Specimens of English Literature.

English History.—From 1066 to 1603.

Mathematics.—

Mathematics.—The work prescribed for Honour Papers, Matriculation Examination, but omitting Conic Sections.

School Management.—Theory and History of Education; Public Instruction Act and Regulations; Practical School Management; the Kindergarten Principle.

Music.—Sutton's Theory of Music; Four-part Songs; Stainer's Harmony; Voice Training.

Drawing.—Practical, Plane, and Solid Geometry; Perspective.

Drill.—Squad, Company, and Battalion Drill; Manual and Firing Exercise; Physical Drill, with and without Rifle; Single-stick Practice.

Practical Training.

Greater facilities for practical training are given under the new arrangements. During the year just ended each student was employed for about five weeks of the period in actual teaching. A complete course of lectures on the Principles and Practice of Teaching and Class Management was delivered during the session, and Specimen, Test, and Criticism Lessons were regularly given.

Staff.

The staff for the year 1895 consisted of the Principal, J. D. St. Clair Maclardy, Esq., M.A., Lecturer in Languages and Mathematics; J. Finney, Esq., B.A., Lecturer in English and English History; Hugo Alpen, Esq., Music Master; F. W. Woodhouse, Esq., Drawing Master; W. Powrie, Esq., Teacher of Manual Training; Q.M.S. Smith, Teacher of Drill.

Manual Training.

The students were divided into two groups for manual training, and each group received two hours instruction each week. Occasionally the whole class received special lectures on the timbers of Australia and their uses. This branch of student's work was never more popular than at present, and the excellent results just published and given below show how successfully the subject has been taught.

Honors.	First Grade.	Second Grade.	Total.
8	17	5	30

Two students, non-scholars, did not present themselves for examination.

Examinations.

Quarterly examinations were held by the Chief Inspector throughout the year. The examination at which each student's practical skill was tested took place early in December. The annual examination commenced on Monday, 16th December. The results are given below.

II A with Honors.	II A.	II B.	III A.	Total.
1	5	15	3	24

Six non-scholars did not compete.

Drill.

A very high standard has been maintained in the drill of the students. A well-graded course of instruction, ranging from the simplest turnings of a second-class to the more extended and complex movements of a fifth-class, was drawn up and successfully carried out by Q.M.S. Smith. A majority of the students joined the Public Schools' A. A. A. Rifle Club, and took regular practice with its members. The examination in drill was held in December, when 30 passed.

Health and Conduct.

The health of the students has been good except during the months of September and October, when influenza was prevalent, and their conduct, with two exceptions, has been very satisfactory.

J. W. TURNER.

Training College, Fort-street, 21st January, 1896.

ANNEX Z 9.

REPORT OF PRINCIPAL OF HURLSTONE TRAINING SCHOOL.

THE teaching staff is the same as that of last year, but there is a difference in the number of the students and in the disposition of the studies.

Instead of 51 students, and 2, or even 3, classes, only 29 students, forming one class, were in residence, as none of those in the Training School last year were admitted for a second year's course. Twenty-five students entered at the beginning of the session. Four others entered early in March, under special conditions, which allowed their training to be precisely that of their fellow students, but debarred them from undergoing the classification examination-current during the present week. They proved to be promising teachers and very diligent students.

No students were sent up for the Matriculation Examination this year.

The health of the students, with one exception, has been good, and their conduct excellent.

The course of study for the year has consisted of:—

English.—Meiklejohn's Book of English; Composition, Parsing, Analysis, and Prosody; special study, Richard III.

French.—Macmillan's French Course, Third Year; "Recits des Temps Mérovingiens," by Thierry.

Latin.—Smith's Grammar; Arnold's Composition; Livy, Book XXI.

Arithmetic.—Barnard Smith and Hamblin Smith; Theory and Practice.

Geometry.—Euclid, Book I, with deductions.

Algebra.—Smith's Algebra, as far as L.C.M.

Natural Science.—Physiology (Murché); Chemistry and Physics.

Reading.—Macaulay's Essays and Richard III.

School Management.—Organisation, Method, and Discipline; Compilation of School Records, Time-tables, and Lesson Programmes; Public Schools Act and Regulations; Kindergarten.

History.—English History, the Shakesperian Kings, John, Richard II, Henry IV, Henry V, Henry VI, Richard III.

English Literature.—Smith's Literature, Chapters 9 to 13 inclusive.

Domestic Economy.—Needlework, Cookery.

Vocal Music.—Sutton's Class Book, Stainer's "Harmony," Staff Notation, Tonic Sol-fa.

Drawing.—Blackboard, Freehand, Model, Geometrical, and Elementary Perspective.

Drill.—Calisthenics and School Drill.

History

History and Geography, dismissed from the syllabus more than six years ago to make room for Latin, Algebra, and Geometry, were reintroduced this year, but only on a very small scale, Geography being represented only by mapping and blackboard map-drawing during the first half-year. A small portion of History was selected, and that exclusively English. There was no time for the express study of Australian History, although special criticism lessons and special assistance in obtaining the matter have aroused the interest of the present session of students in the story of Australia to a degree not approached hitherto in Hurlstone.

The subjects, Latin, Algebra, and Geometry, were retained in the curriculum, although no longer required for the purpose for which they were introduced, *i.e.*, to enable the students to matriculate and to attend the first-year lectures at the University. Whether these subjects should be again replaced by History, Geography, and a wider range of Literature is a subject to be discussed. The students cannot take all. It has seemed to me that Latin and Mathematics must form the best mental training, and that I, in a student's place, would be glad to learn them. On the other hand, there is undeniable need for greater proficiency in the knowledge of Physical Geography, in the Natural Sciences generally, especially the Natural History of Australasia, of general Reading, and, finally, of Elocution.

In Physiology it is the aim of the instructor, Dr. Roth, to blend with the mere technical knowledge of the subject instruction in the practical application of it; hence the teachers take away with them such elementary knowledge of first aid to the injured as is sure to be of use to them as teachers.

The lessons in Elementary Chemistry and Physics have been very useful in object lessons.

The students had needlework during the first half-year only, and all passed the examination held in June.

In Geometrical Drawing, a special examination was held in June, the students, at their own wish, being examined at the end of the half-year, on what was properly the full year's work. Seventeen were successful in passing.

Cookery was taught throughout the year, the students being examined in groups as each group finished the prescribed course of lessons. All the students but one passed.

The duties of teaching Drill and Calisthenics were successfully undertaken this year by Colonel Paul, and consisted of exercises and the word of command to be used in schools.

The premises are in fairly good order, but the flower-garden does not look so well since the discontinuance, from the beginning of the year, of the regular monthly visits of a gardener. Owing to the increasing population in the neighbourhood, a small water-course, flowing through the Training School grounds, has at last become an offensive drain, and demands attention.

On resigning the Principalship of this Institution, after ten and a half years' service, I may be permitted to express my appreciation of the courtesy with which I have invariably been treated by the Administrative and Inspecting Branches of the Department. The onerous character of my work here has been greatly lightened by the ready and cordial assistance and counsel extended to me by the gentlemen in authority.

To Miss S. H. Nicholls, Head-mistress of the Practising School, is also due my grateful acknowledgment of her highly intelligent and sympathetic co-operation in the responsibility attached to training work. If I am not proceeding beyond my province, in venturing the remark, I may say that could the Department see its way to erect and furnish adequately a new building for the Practising School the usefulness of that indispensable auxiliary to this Institution would be immeasurably increased.

In conclusion, it is a source of no ordinary satisfaction to me to know that of the several hundred students who passed through Hurlstone during my term of office the large majority still remain in connection with the Department, and that all, with rare exceptions, have approved themselves as efficient and conscientious teachers.

MARY M. EVERITT.

Hurlstone Training School, 20th December, 1895.

APPENDIX XIII.

REPORT ON DRAWING.

THE results of my inspections for the past year are shown in the following tables, the number of passes being compared with that of 1894. During the third quarter of the year illness prevented my attending to my duties. This accounts for the reduced number of those examined. During the last few weeks of the year I made an effort to make incidental inspections of all those schools omitted, and with few exceptions this was done.

	Up to Standard.	Below Standard.	Total.	Passes, 1895.	Passes, 1894.	Average Class-mark, 1895.	Average Class-mark, 1894.
Boys	5,464	2,230	7,694	71·0	68·1	7·07	6·89
Girls	5,111	2,308	7,419	68·9	64·4	6·91	6·89
Infants	8,572	2,701	11,273	76·0	72·9	7·23	7·26
	19,147	7,239	26,386	72·1	69·2	7·07	7·01

At Easter I arranged to inspect the drawing at 10 of the largest schools of the Sub-Metropolitan district. Two had been already examined, and 3 were examined during my absence; these I visited and gave model lessons. The results of the other 5 are appended. The average mark is quite as good as that of the Metropolitan district, but it must be borne in mind that the schools visited are the largest in the Sub-Metropolitan district.

Schools.	Departments.	Classes.	Boys.	Girls.	Infants.	Total.
5	13	68	660	539	925	2,124
Percentage of passes...	71·5	70·0	73·8	72·2

The examinations of pupil-teachers and teachers show that too great reliance is placed on the inspiration of the moment rather than on previous study. It is also overlooked by candidates that their work should show the use of a sound method if it is to profit them as teachers of the subject. In model drawing there is distinct improvement in the size of the drawings done, but there the improvement ends. Mistakes in absolutely vital matters, and in matters of everyday observation and knowledge are still the rule, implying a total inability to instruct a class. There is no reason why this should be the case, as there are excellent and cheap manuals on the subject. During

During the year I have revised the papers of 180 applicant pupil-teachers, 815 pupil-teachers, and 342 teachers. In freehand and model drawing the results were as follows:—

	Freehand.		Model.	
	Number examined.	Passes.	Number examined.	Passes.
Applicant pupil-teachers	180	44·4
Pupil-teachers.....	123	49·3	526	50·7
Teachers	122	51·6	58	50·0

In nearly all cases country candidates showed better results than those of the Metropolitan District.

Training Schools.

The work done at Hurlstone is excellent, and the results in examination are very satisfactory. The work of the male students has not shown like good results, owing to a want of application and to a foolish impression that the study of the subject might be shelved to a more convenient season. I am much indebted to Mr. Powrie for help during my illness.

High School for Girls.

In consequence of the removal of Miss Ellis, the work now devolves entirely on one teacher, who has more on her hands than she, although most thorough and intelligent, can properly attend to. The difficulty is increased by the fact that many of the pupils have had no previous systematic (or, indeed, any) instruction, and the teaching has to be largely individual.

Practical Geometry.

There is still much misunderstanding on the subject of ruler-drawing, and few teachers recognise its value as a connecting link between the geometrical knowledge of the Infant School and the practice of plane geometry (scale-drawing, &c.) in the upper classes. It is apt to be regarded exclusively as an aid to freehand rather than as itself a distinct and important branch of drawing.

Speaking generally, there is certainly improvement, but there are still many points calling for reform, and to these I intend to give special attention in the coming year.

FREDERIC W. WOODHOUSE,
Superintendent of Drawing

Sydney, 17th January, 1896.

APPENDIX XIV.

REPORT ON SINGING.

I VISITED and examined all the schools in the Metropolitan District in singing and the theory of music, besides giving the regular lessons in the Training Colleges, and also assisting to teach in such schools that seemed to require my assistance.

The work done is of a fairly satisfactory character. In reading at sight, including difficult passages, steady progress has been made, while in the production of purer tone and clearer enunciation, improvement is noticeable; yet much remains to be done, and I have kept this specially under the notice of the teachers. In several of our schools, especially Fort-street (Boys), Cleveland-street (Boys), William-street (Girls), and Manly (Girls), four part songs and glees of a much higher class than ordinary school songs have been introduced and rendered in such a manner as to deserve special notice.

The number of schools visited is 80, comprising 180 departments.

The general results range from fair to very fair, and the examinations have been both searching and severe.

HUGO ALPEN,
Superintendent of Music.

APPENDIX XV.

REPORT ON NEEDLEWORK.

DURING the past year I have examined and reported upon 80 (eighty) schools in and about the Metropolitan District. This number includes Hurlstone Training College, the High School, Castlereagh-street, and the Randwick Asylum, in all 13,000 (thirteen thousand) pupils present at examination. The above numbers do not include the examinations of needlework I have attended for Public School exhibitions, or for prizes and awards at public competitions, both of which have this year again been very numerous.

The work of this large industrial branch of the Department has made the same good progress as in former years, the results at examinations being from very fair to excellent.

At Public School exhibitions and at bazaars a greater display and variety of plain and ornamental needlework has been in evidence, and the high encomiums passed on exhibits and the awards gained by pupils of Public Schools give convincing proof that needlework, as taught under the Department, is an essential subject, and appreciated as a useful and necessary adjunct to a girl's education.

Mixed Schools.

During the past year, mistresses, teachers' wives, infant school mistresses, and assistants in charge of needlework in Mixed Schools have obtained excellent results; many of these schools being far above the standard required. It is a fact worthy of recognition that in many cases the ladies of the local Boards have given stimulus and encouragement to this subject by offering prizes and awards for needlework.

The dressmaking lessons given in these Mixed Schools continue to give satisfaction to parents, who often comment favourably upon the advantages gained by this branch of instruction.

The introduction of specimen pieces with coloured cotton in lower classes continue to be a success, this being an easy method of grounding a progressive lesson for young children in their first attempts at sewing. The desire to improve and to proceed from one stage of stitch to another is very noticeable, and the pleasure the little ones experience in this lesson is productive of the highest results, and a happy change from mental study.

Pupil

Pupil-teachers.

I may again state, as in my last annual report, that the pupil-teachers give evidence of an anxious desire to excel, are earnest and attentive to instruction, and evince the same proficiency in needlework and design as formerly. In many schools the pupil-teachers receive their sewing lesson from the work-mistresses at the usual needlework lesson. This is a decided advantage, as much varied and useful experience is gained in cutting and setting, also in the management and control of sewing-classes, which experience proves of good service at the termination of their pupil-teachership.

Dressmaking.

In all Metropolitan Schools this subject continues to receive special attention from work-mistresses, and is carried out and made general in all schools where practicable.

I may add that the work-mistresses have acquired the practical knowledge necessary to enable them to impart this branch of industry.

Method and Discipline.

The same orderly method and discipline in sewing-classes still prevail, and time is economised in the distribution and receiving of needlework. The qualities of independence and self-reliance are inculcated among pupils of the Upper Classes by teaching them to cut out and set their work. Though noticeable depression still exists among the working classes, it is rare to find pupils unprovided with sewing materials according to their attainments.

Work-mistresses and Teachers in Charge.

Of the work-mistresses and teachers in charge it may be said that they exhibit a keen interest in the success and advancement of needlework, are painstaking and conscientious in the discharge of their duties, and are doing excellent work, often under trying circumstances.

ANNIE DADLEY,
Directress of Needlework.

APPENDIX XVI.

THE ARCHITECT'S REPORT.

THE undermentioned Public School Buildings, &c., were completed and handed to the Department during the year ended 31st December, 1895.

No	Nature of Work.	Accommodation.	Cost.
28	School buildings	3,056	£ s. d. 13,435 14 0
19	Residences	7,406 18 5
9	Weathersheds	462 10 6
21	Additions	1,188	4,105 3 6
408	Additions, not providing accommodation, and repairs, &c.	..	24,695 0 2

The school accommodation has been increased by 4,244 seats, at a cost of £17,540 17s. 6d., or an average cost of £4 2s. 8d. per seat. Last year the cost per seat was £4 3s. 10d., and no doubt the keenness of competition in the building trade which then existed has also this year been a factor in keeping the cost at such a low rate.

The cost of a residence is also included in one of the contracts for school building, and of course slightly increases the general rate per seat.

Thirteen contracts were also completed at the Technical Colleges at Newcastle and Ultimo, at a cost of £5,882 13s. 9d.

On the 31st December, 1895, the following works were in progress.

No.	Nature of Work	Accommodation.	Cost.
12	School buildings	1,331	£ s. d. 7,877 3 0
8	Residences	2,025 17 0
1	Weathershed	12 0 0
5	Additions, providing accommodation	726	2,458 14 0
16	Additions and repairs, &c., not providing accommodation	..	5,042 0 4
87	Totals	2,057	17,405 14 4

In addition to the above works one contract is in progress at Newcastle Technical College, at a cost of £495 10s.

In four of the contracts for school buildings teacher's residences are also included.

The total outlay for works certified for by me during the year is £61,475 18s. 8d. in 1950 certificates.

The number of papers received and dealt with numbered about 7,350, and the letters and reports, &c., written and despatched is 4,164. The contracts entered into, and for which contract documents had to be prepared, numbered 585, besides which small authorised works were carried out, and for which contracts were not entered into.

222 orders for furniture were also issued.

During the year 862 plans and 711 specifications were prepared.

The cost of the office salaries was £4,438 10s., and travelling expenses £1,190 4s. 2d., making a total of £5,628 14s. 2d.

Omitting travelling expenses, which are always an extra charge on Architect's commission, this makes the actual cost £7 4s. 4½d. per cent., and if a fair allowance is made for the large amount of work done, which does not lead to any expenditure, the percentage would be below that usually charged for this kind of work. In most cases in private practice clerks of works are not paid out of commission, but are an extra charge, and if this course was pursued in this case the cost would be only £4 6s. 6d. per cent., without any allowance for preparation of plans for postponed work, and the large number of reports not leading to expenditure.

The

The staff consisted of four draftsmen, three junior draftsmen, three clerks, and six clerks of works, the same as in the previous year, and the officers all continued to do their work in a satisfactory manner.

The clerks of works are not sufficient in number, and at least one more should be appointed, as with the present strength it is not possible to give such supervision to the works in the North Coast district as is necessary to ensure the work being properly and expeditiously carried out and contractors paid without unreasonable delay.

WM L KEMP,
Architect for Public Schools

APPENDIX XVII.

BOARD OF EXAMINERS' REPORT

THE number of reports on individual examinations during the year 1895 was 2,497, while the number in 1894 was 2,508. The following details show how this total is made up—

1 Applicant Pupil teachers	206
2. Pupil teachers	824
3. Training Students	131
4 Teachers	530
5 High School Candidates	806
Applicant Pupil teachers—	
Passed	64
Failed	129
Examined in Drawing or Music only	13

" (half)	10
Maitland (full)	10
Girls—	
Sydney (full)	4
" (half)	5
Maitland (full)	5
Bathurst (full)	4

In the case of applicant pupil teachers there was a decrease of 22 8 per cent in the passes, as compared with 1894. Several circumstances combine to account for this. In consequence of the large number applying, in comparison with the number of vacancies, it has been necessary to raise the standard, and to a small extent this has accordingly been done. Furthermore, these examinations have now been made competitive. It is ascertained how many vacancies exist, and only a corresponding number of applicants are recommended as eligible for appointment, those recommended being, of course, the ones who secure the best places in the competition. Again, many of those examined during the year had left school for some time, and failing to keep up their study had become rusty.

No change in the personnel of the Board was made in the course of the past year.

R. N. MORRIS,
Examiner.

APPENDIX XVIII

REPORT ON PUBLIC SCHOOLS CADET FORCE

At the close of 1894 the Cadet Force numbered 3,819, while at the end of 1895 the enrolment was 4,468, showing an increase of 649.

The need for strict economy has of late limited the attractions of the Cadet movement, notwithstanding which many lads take great interest in the work.

The big Cadet Camps of 1890, 1891, and 1892 did much to popularise the movement in these years, and afforded a means of bringing town and country cadets together in large numbers for continuous and useful training.

Beyond

Beyond the monthly battalion parades of metropolitan and sub-metropolitan Cadets, which are supplemental to their weekly drills at their schools, and the opportunities afforded for target practice, the only attraction is the Annual Rifle Meeting, in December, at the close of the school year, at which all corps, city and country, which have made the necessary preparation by regular target practice, are invited to compete for the Cadet Challenge Shield presented by the Department of Public Instruction, as well as to take part in collateral matches, which latter are restricted to members of teams entered for the Challenge Shield competition.

It is necessary, for reasons of economy, to restrict the attendance at the annual meeting to those corps which have qualified.

The 1895 meeting took place at Randwick on Friday, the 13th, and Saturday, the 14th December, and proved very successful.

Forty school teams entered, 480 cadets taking part in matches.

The shooting generally was good; in some instances excellent.

The arm used was the Braendlin carbine, and the range selected 200 and 300 yards. The Cadet Challenge Shield was won by the Orange Superior Public School Cadet Corps, which has held it without a break since 1889.

The individual championship of the Cadet Force, for which Messrs. Anthony Hordern and Sons presented a 5-guinea gold medal and 5 guineas in money, was won by Cadet P. Gardner, of Orange.

In addition to the Challenge Shield, nearly £60 in money and trophies were competed for.

A number of the country Cadets stayed with their friends, but 120 of them were camped during the meeting at the Royal Agricultural Society's Grounds, Moore Park, kindly placed at their disposal, as in former years, the Military Department supplying blankets, &c., to make the lads comfortable.

The camping arrangements were under the control of Quartermaster-Sergeant Smith, of the Cadet Staff.

The conduct of the cadets, both in the camp and at the meeting, was of a most satisfactory character.

The results of the meeting go to prove that a large number of lads, who, without the facilities afforded by the Cadet movement, would have no opportunity of handling fire-arms, are by its aid taught the use of the rifle, and are acquiring a taste for rifle-shooting at a very small cost to the State. It is quite possible that the country may directly benefit by the training thus given.

I believe it would be sound policy to encourage our boys in larger numbers to acquire the art of rifle-shooting.

Complaints are continually being received that the amount of ammunition supplied to corps is too small, and in several instances friends have come to the assistance of corps and purchased ammunition for the lads, in order to increase their chances at the annual rifle meeting, in which great interest is taken.

The training given to Cadets is improving year by year, and every effort is being made to improve the quality and extend the range of drill in our schools.

The system of school drill aims at teaching our boys those portions of military drill which can, with advantage, be taught under school conditions, the latest military drill-book being taken as the guide. This book is supplied to all schools on application.

Thus squad drill in single rank and in two ranks and company drill (omitting attack and defence drill) are worked into the school standards and made compulsory.

In several of the large schools the attack and defence drill is included in order to add variety to the drill work of the upper classes. All the large schools are supplied with "drill rifles."

It can with truth be said, that while the Department has always recognised the value of drill as a school subject, at no period in our school history has the knowledge of drill been so widely diffused, and the quality and range of the drill taught been so satisfactory as at present.

The large number of schools successfully represented at the Public Schools Athletic Association Annual Sports meeting at the Sydney Cricket Ground on the 20th and 21st September last, in drill competitions of various kinds, drill displays, and attack and defence movements by Cadets is one of the evidences of the extent and quality of the drill work done in the metropolitan and sub-metropolitan schools.

At similar meetings in country districts, at such places as Glen Innes, Tamworth, Inverell, and Newcastle, drill events were interesting features.

The practice of sending members of the Cadet Staff into the metropolitan and the larger sub-metropolitan schools to give model lessons on drill before the teachers was continued throughout the year with satisfactory results.

Drill Inspection.

I was able to fully inspect in drill all the metropolitan and a number of sub-metropolitan schools and departments, and furnished through the school inspectors detailed reports on the results of inspection.

Many teachers manifest great interest in drill, and in many instances are very successful in teaching it.

Sydney High Schools.

These received regular weekly visits from Quartermaster-sergeant Smith, who pursued a suitable course of instruction in each case, the boys being fully instructed in company drill with arms, and in "physical training" with and without arms, and the girls in a complete course of calisthenics, the school being properly graded for the purpose.

Both schools were fully inspected at the close of the year.

Fort-street and Hurlstone Training College Students.

As in previous years, these students were fully instructed in the requirements of the school standards, and were afforded regular opportunities for teaching drill to the pupils attending the practising schools.

They were examined in drill at the end of the year, and showed that they had been carefully taught.

In conclusion, I feel justified in saying that the subject of drill and physical training generally is receiving proper attention in our Public Schools, that a knowledge of drill principles and methods is increasing among our teachers, and that the character of the drill taught will best meet the ends aimed at, namely, improved discipline in our schools, the physical improvement in the pupils, and in the case of our boys the inculcation of the elements of military drill, which, acquired as they are in the most plastic period of life, will always remain with them, and may in the future prove of service to their country.

JOHN DETTMANN, Major,
Commanding the Public Schools Cadet Force and Superintendent of Drill.

A. E. BASSAN,
Accountant.

APPENDIX XIX.

TECHNICAL EDUCATION, WITH ANNEX.

THE work of the Technical Education Branch has made considerable progress during the year. There have been more enrolments for the classes than in 1894, a greater attendance of pupils, and a higher percentage of passes at the annual examinations. At the Technological Museums also the attendance of visitors shows an increase of over 25 per cent. on the figures for 1894. The fact that close on a quarter of a million of people visited during 1895 the Technological Museums in Sydney, West Maitland, Newcastle, Goulburn, and Bathurst is proof of the popularity of these educational institutions.

The enrolments of students for the year are shown in the following table. The numbers for 1894 are given for purposes of comparison —

	1894	1895
Sydney Technical College	2,956	3,458
Suburban Classes	508	550
Country Classes	2,500	2,252
Classes connected with Public Schools	579	811
Totals . . .	6,543	7,071

Deducting from the total enrolment all cases where students have joined more than one class, the number of individuals entered on our books was 5,458, an increase of 530 individuals as compared with the previous year. The weekly attendance of individual students throughout the year was 3,492.3.

Teaching Staff.

The teaching staff consists of 88 persons, distributed as follows .—

11 Lecturers in charge of Departments
5 Resident Master in charge of Branch Schools.
38 Teachers.
15 Assistant Teachers
19 Teachers in charge of classes and remunerated by fees of pupils only.
—
88

The following changes took place in the teaching staff during the year:—Mr. R. Oxlade and Mr. S. H. Barraclough, B.E., M.M.E., were appointed lecturers in Electrical Engineering and Physics respectively, in place of Mr. Webb, who taught both subjects. Mr. John Jones was appointed Teacher of Blacksmithing in lieu of Mr. Schofield, deceased. Mr. J. A. Peach was appointed Teacher of China Painting. Salary was granted to the following teachers who for a time had taught for fees only:—Mrs. Wicken, Cookery; Mr. W. C. Quinnell, Veterinary Science and Farriery. The classes closed temporarily on account of small attendance were, Bricklaying and Stone and Marble Carving. Mr. T. A. Wilkie was appointed Instructor in Manual Training and Carpentry at Goulburn, *vice* Mr. W. Morgan. Mr. J. J. Copeman was appointed additional Art Teacher at Bathurst. The Chemistry class at Granville and the Art classes at Uralla were closed on account of small attendance.

Exhibition of Students' Work.

Carrying out the arrangement made early in 1894, it was decided to hold an exhibition of the works executed by students at the Technical College during that year. This exhibition was held at the end of January, 1895, and remained open six days. It was opened by the Minister, and was largely attended. Besides this display of students' work, visitors had the opportunity of observing the appliances provided for teaching, and also the buildings in which work is carried on. The general public responded so well to the invitation to see the results of the year's work, that it has been decided to hold these displays annually. It is believed that such exhibitions act as incentives to students to produce something worthy of being shown before their fellow-craftsmen (generally a very critical assemblage) and other visitors.

Prizes for Students.

The Minister decided in February, 1895, that the system of giving prizes to deserving students, which had been in abeyance since 1893 on account of the urgent necessity for retrenchment, should be revived. Prizes were therefore given to those students who, in addition to obtaining honors at the annual examination, had attended the class in which they gained the prize for the three terms of the College year. These prizes took the form of books, which the students were allowed to select for themselves, subject to the approval of the Superintendent. The prize winners were asked to consult their teachers as to obtaining books that would be of service to them in their special pursuits.

The reinstatement of the system of prize-giving helps to retain our advanced students, who are really those who have profited most by the instruction given in the classes, and who are consequently those who will do most credit to the institution in their various walks of life.

Private

Private Benefactions.

Amongst the donors of special prizes for the year 1894 were Messrs. John Danks and Son, gold medal and book, Advanced Plumbing; the teacher of Plumbing, gold medal for second-year students; the Examiners in Plumbing, book prize for first-year students; John Harris, Esq., gold medal for Iron-founding (advanced); a medal offered by Alderman A. J. Brown, for Iron-founding (elementary), was held over until 1895, as no students of the 1894 session were eligible. Prizes were given by the teacher of Geology, Mineralogy, and Mining for competition amongst his students. In Fitting and Turning, prizes were given by the Chief Inspector of Schools and the teacher and assistant teacher of the class. In all our branch schools, in the suburbs and in the country districts, great interest is shown in the work, and many prizes, some of them of considerable value, are given by local residents. A pleasing feature in this respect was the receipt of a letter by the resident master at Bathurst, from a former student of the local Technical College, of which the following is an extract:—"Herewith you will please find cheque for £2 2s. as students' prizes, the subject I leave entirely to you. I hope to be able to supplement it next year, for I always feel that much of my success since I left Bathurst is largely due to the instruction I received at the Technical College."

It is possible that in the course of a few years the private donations to the Prize Fund will partly or altogether obviate the necessity for a special State prize fund.

The Prizes promised for 1895 are as follow:—

Hon. S. E. Lees, M.L.C.	Gold Medal for Carpentry class.
(Mayor of Sydney, 1895.)	
Ald. J. Buckle	Gold Medal for Iron-founding class.
A. J. Brown, Esq.	Silver Medal, Iron-founding, first year's work.
Mrs. George Harris.....	Prizes value £5 for Art Department, to be distributed amongst the following classes:—Life Drawing, Still Life Drawing, Geometrical Drawing, Perspective Drawing, and Modelling.
John Danks and Son	Gold Medal for highest honors in Plumbing.
Mr. F. Camroux	Prize value £1 10s. for best pieces of second year's work, Fitting and Turning class.
Mr. J. Hanley	Prize value £1 1s. for best piece of first year's work, Fitting and Turning class.
Angus Mackay, Esq.	Prizes value £4 10s., Agricultural class—Advanced, 3 prizes, value £1 each; Elementary, 2 prizes, value 15s. each.
J. L. Bruce, Esq.....	Prizes value £3 for Sanitary Engineering, Practical Plumbing, and Building Construction.
W. E. Kemp, Esq.	Prizes value £3, also special prize, £2, for Architecture classes.

Annual Meeting.

The annual meeting of the Technical College was held in the vestibule of the Sydney Town Hall on 1st April last. Like the giving of prizes, the holding of an annual meeting had lapsed for several years. The vestibule was crowded on this occasion by students and their friends. After an interesting address by the Chairman (the Hon. Jacob Garrard) the prizes were distributed to the successful students. The Minister for Lands (the Hon. J. H. Carruthers) and the Mayor of Sydney (Alderman S. E. Lees, M.P.) also spoke words of encouragement to the teachers and students. The meeting was a most successful one, and no doubt helped to increase the enrolment of students.

Improved Enrolment.

The classes which show a greater enrolment than in 1894 are—Physics, Geology, Mineralogy, Mining, Chemistry, Mechanical Drawing, Applied Mechanics, Fitting and Turning, Boiler-making, Pattern-making, Plumbing, Pharmacy, Sheep and Wool Training, Wool-sorting, Lithography, Veterinary Science, all the Art classes, Graining and Marbling, Art Decoration, Cookery, and Scientific Dress-cutting. These classes are all held at the Sydney Technical College. The greatest improvement noticeable at the Branch Schools are in the under-mentioned classes:—*Bathurst*—Applied Mechanics, Physics, Geology, and Art; *Goulburn*—Art, Physics, Chemistry (Public School classes), evening Carpentry; *Granville*—Mechanical Drawing and Agriculture; *Newcastle*—Mechanical Drawing, Art, and Coal-mining; *Wallsend (West)*—Coal-mining; *Maitland*—Mechanical and Architectural Drawing, Building Construction. In Manual Training there were increased numbers at Goulburn and Maitland; also in Sydney at the Crown-street, Cleveland-street, and Blackfriars Schools.

How the Students are distributed.

Over 500 students enrolled last year for what might be called the Agricultural and Pastoral Group of subjects, viz., Agriculture, Wool-classing (day classes), Wool-sorting (evening class), Veterinary Science, and principles of Farriery. This is a very important section of our work, and one that should be productive of much good to the Colony at large. There are few persons in Australia who at some time or other would not have been benefited by even an elementary knowledge of some of the subjects dealt with in these classes.

A large number of our students are enrolled in the Art Group. There are no less than 1,800 entries in this section. This does not mean individuals, since in Drawing several subjects are interdependent on each other, and, consequently, one student will take up several subjects. Students taking up Freehand or Model Drawing, for instance, are recommended to enter also for Geometrical and Perspective Drawing; those entering for Still Life are required to have passed in Freehand and Model Drawing, or to be studying those subjects concurrently with Still Life. The Art Group includes the following subjects:—Freehand and Model Drawing, Geometrical and Perspective Drawing, Modelling Ornament, Drawing and Modelling from the Antique, Plant Drawing, Still Life, and Drawing from Life. China Painting has been added this year, and should be of use in enabling local students to apply their art knowledge to the decoration of pottery—the subjects chosen being Australian wherever considered desirable.

Trade and professional subjects are naturally much in demand by students in the city and suburbs, and in some country centres. About 1,500 students are enrolled in the classes in this section. The subjects include Carpentry, Building Construction, Architectural History and Drawing, Electrical Engineering, House-painting, Graining and Marbling, Sign-writing, Art Decoration, Mining, Mechanical Drawing, Pattern-making, Iron-founding, Fitting and Turning, Boiler-making, Blacksmithing, Plumbing, Sanitary Engineering, Pharmacy, Lithography, Coal-mining, Slide Rule. Nearly 700 boys were instructed in Manual Training.

In subjects purely scientific, we had last year 1,085 enrolments for such classes as Chemistry, Geology, Physics, Mineralogy, Mathematics, &c.

In the Domestic group are included classes in Cookery, Domestic Economy, Scientific Dress-cutting and Dressmaking, Starching and Ironing. There were nearly 400 enrolments in this section, which is of course attended exclusively by women. These are not, however, the only classes in which there are female students, as they are to be found studying in all the Art classes, and in those for Lithography, Photography, Agriculture, Geology, Chemistry, Physics, Architectural Drawing, &c., as well as in the Commercial classes conducted for fees only, viz., Shorthand, Bookkeeping, Mathematics.

The classes in the Commercial group are not regarded as an integral part of the system of Technical Education, and the teachers are not paid salaries, but derive their remuneration solely from the fees paid by their pupils. The subjects are Shorthand, Bookkeeping, Caligraphy, and Correspondence, &c. The enrolments for these subjects during 1895 were 700, but in many cases students had entered for several of the classes.

Improved Accommodation.

With a view to providing better and more suitable accommodation for some of the classes, it was found necessary during the year to effect a number of alterations and additions to various class-rooms. The Cookery class was transferred to rooms in the Technical High School, and the rooms vacated afforded better class-rooms and workshops for the Electrical Engineering department, as well as increased accommodation for the carpentry classes. A wool-washing shed was erected in the College grounds early in the year, so that better instruction might be given in the washing and scouring of wool, but more ample rooms must shortly be provided for this growing and important class. An additional room was added to the plumbing workshop to accommodate advanced students.

The branch schools continue in the same buildings, but the new Technical College and Museum at Newcastle will be ready for occupation early in 1896. Plans are also in progress for the erection of a new College and Museum building at Bathurst, on the central site purchased some time ago.

Manual Training.

Progress has been made in the work of manual training during the year. A number of the instructors met together, and a more uniform system of instruction has been decided upon, together with a progressive course of practical exercises extending over three years. Each instructor has been required to make a complete set of these models from the photographs supplied to him of the original set made by the instructor at the Training College (Mr. Powrie).

Mr. Powrie has also made sets of the articles required to be made by manual-training pupils, taught under the following systems:—Llojd (Swedish), London School Board, and Pennsylvania State College (United States).

It is believed that the exercises through which pupils of our own system are required to pass will compare very favourably with either of the other systems above referred to.

Since the appointment of the new teacher at Goulburn great progress is noticeable, not only in point of numbers but also in the character of the work done by the boys.

In the new building for the Newcastle Technical College provision is made for instruction in manual training being given to pupils attending the Public Schools in the surrounding district.

Considerable economy is exercised by having in the country districts one central workshop to accommodate the pupils of the various schools instead of a small workshop at each school. Each school would otherwise require separate benches, a separate stock of timber, and principal tools, and much of the instructor's time would be occupied in going from school to school to give the lessons. Under the present system the pupils are taken in detachments from their respective schools to the local Technical Colleges and receive instruction, the instructor's time being thereby fully taken up.

Agriculture.

The session of 1895, so far as enrolments and attendances of students are concerned, has been the most successful since the commencement of the classes.

During the session, in addition to the regular class-work, 24 field lessons have been given. By means of these field lessons practical instruction is afforded in soil formation and treatment, native vegetation and grasses, live stock on the farm, tree-planting, budding, pruning, vegetable gardening, irrigation, poultry, bee-keeping, &c., and thus, so far, we have overcome the most serious defect in the college system—that is, lack of instruction in manual work.

In addition to the work of the College and branch classes, 5 lectures have been given by request in country districts, as well as advice concerning many diseases of plants, &c., while a report has been prepared regarding the suitability of the women's silk-farm at Wyee.

A special class for the analysis of milk, butter, salt, and other matters of dairying importance has been in operation during the third term of the session. Men from several of the milk and dairying companies have attended, in addition to the ordinary students, who, with the others, quickly master the more technical details so necessary for the work of the present day.

As during previous years, numbers of the students entered for 1895 left the classes to settle on the land, and many others have attended for a short time only, in order to acquire experience in some special subject.

Sheep and Wool Training.

On the first day of the term, 42 students commenced work, which number increased to 59 during the term, and many applications for admission had to be refused. The class was much crowded, and it will be necessary to have either more room or fewer students during the coming year. The work was practical, and students, according to their capacity, worked at the various branches of the trade, from opening, skirting, rolling, and classing all kinds of fleeces produced in New South Wales. The advanced students were taught wool-sorting—wool-scouring also received great attention, pupils taking turns two days per week in batches of 5 at this work.

Many students availed themselves of the opportunities of attending shows, where the lecturer acted as judge, and practical instruction in judging was given. At the New South Wales Sheep Breeders' Association Show, held in Sydney, the Committee applied for 32 students to hold sheep for the judges, and those selected were complimented for the ready, easy, and careful manner in which the sheep were handled. Several judges frankly acknowledged having properly learned how to turn up a sheep from watching the students. The Hon. G. W. Cox, the President, and other members of the Committee, took great interest in the students, and openly asked the judges to discuss the different points aloud for the benefit of the students. F. B. Sattor, Esq., was also very kind to the students at Bathurst and Sydney, in explaining the different points, &c., of a sheep.

The sheep sales were also used for sheep instruction. There were many applications from wool-growers for young men to work in their sheds at shearing time, from skirting and rolling to piece sorting and classing.

Fifty-two students were sent away to different stations at current wages, and all (excepting one) gave satisfaction, and were invited to return next year, whilst in several instances bonuses were given.

Wool-growers are evidently finding out the value of these trained students, as they are asking for more next year, stating that they are more reliable and faster than the ordinary bush hands. Several wool-brokers are also engaging wool-classers from amongst our students.

The Longreach Wool-scouring Company, Queensland, applied for 6 students to sort wool, at £3 per week, board found, and fare one way. All gave great satisfaction, and got good references. The secretary of the company was so pleased that he intends in future to engage no other wool-sorters than those from the College.

Chemistry.

The lecture classes began with an enrolment of 26. Of these students the greater number remained in attendance throughout the year.

In the evening practical Chemistry classes, 21 students joined at the beginning, only 2 of whom had attended during the previous year, and the number increased to 28 in the third term. Of these students, 2 in the first term, 3 in the second, and 5 in the third, attended two evenings per week, whilst 1 attended two evenings for the last half term.

One

One student only has attended in the daytime throughout the year, and another has lately joined, whilst 4 have attended for short periods for instruction in the methods of testing the products which they handle in their different businesses.

Mr. G. Blakemore, formerly a student of this class, is now assistant manager to the Smelting Company of Australia, the works of which are being erected near Wollongong.

Geology, &c.

The attendance shows an increase in the number of both male and female students, and this has been so marked that application for increased accommodation has had to be made.

The Mineralogy classes, which entail a large amount of individual practical work on the part of students, disseminate a great deal of useful knowledge, not only to the regular students but also to those who come for short periods. The same remarks apply to the Mining class, where students become skilled in many practical mining operations previous to entering mining occupations.

Whenever desired, information concerning mining and other matters has been given to inquirers, either personally or by correspondence. Information regarding minerals submitted for determination has also been furnished to prospectors and others.

The field work in connection with the classes has been more successful this year than during any previous year, and this is undoubtedly proved to be, whatever the results of theoretical examinations may show, the most powerful means of imparting geological and mining knowledge both in town and country. Facts acquired in this way are so impressed that they become of lasting benefit to the students.

The Travelling Lecturer in Geology reports:—

“I have during the past year delivered forty-four lectures in various mining centres throughout the Colony. Besides this special work, I have been kept busy in the various localities identifying minerals, giving information as to their value and method of treatment, &c. The lectures were well attended, and the extensive correspondence that follows each lecture leads me to think that much useful knowledge is being diffused, and that the lectures evoke some interest. The most notable work of the year was done at Wyalong. This gold-field was a new one, and up to the date of my visit no geologist had expressed any opinion as to its value or permanence. Numbers of men were working here who had never seen a gold-field before. The recent commercial depression sent hundreds of men of this class to Wyalong. To meet the peculiar wants of the place, a complete assay plant was taken to the field. I was thus enabled to value the reefs on the spot, and at the same time afford instruction in prospecting, that could be checked by assay. The results of this new departure were most gratifying in their practical effects.

“During the year, as time permitted, original research was continued on minerals, rocks, &c., collected at various places. The results were communicated to local scientific societies. I have taken every opportunity of collecting minerals and rocks for the museums, when in mining districts. At the same time I make photographs of all suitable geological subjects. A complete set of these pictures, forming a unique collection, will shortly be on exhibition at the Technical Museum. During the greater part of the year I have not had the help of an assistant, and on this account my work was retarded considerably. I should like to place on record my indebtedness to the organisers of the lecture tours in the country districts. Guides, horses, and conveyances are invariably provided for my use without charge on the Department.”

Mechanical Engineering.

Applied Mechanics.—This class is larger than in previous years; the students have been extremely attentive and studious, not only in class, but in their home work, bringing results of questions set them. The system of getting the students to pass through the Physics class before joining this, will eventually prove a great benefit.

Mechanical Drawing.—This class has reached its limit in numbers. There is accommodation for 52 only, and with 75 on the roll the room is extremely limited. The students have done some excellent work. By means of the newly-arranged syllabus the students pass on to machine design in the third year. This class contains some very good draftsmen. Applications have been received for junior draftsmen from this class.

Fitting and Turning.—This class has exceeded its limit of students for the whole year, and many applicants have been refused both for day and night classes—a matter for regret—but it is at present impossible to increase either the teaching staff or the accommodation for this section. Some excellent work has been turned out; the great difficulty is to obtain work and material to retain the interest in certain sections.

The Blacksmithing and Ironfounding classes both supply portions of the requirements of the department, whilst a number of students provide their own material.

Ironfounding.—The number of students in this class is still small, but those who are now attending prove the advantage derived from the course of instruction by the progress they have made in their work. Some excellent castings have been made this year, not only as class-work, but for the use of other classes. In time, and with an improvement in the iron trade, an increase in the number of students may be expected.

Pattern-making.—This class has had a fair attendance for the year; but on the whole it has not come up to the standard of the other sections of the department. The students are always steady at their work, and some of them have achieved good results, but disappointment was felt with the few who presented themselves for examination.

Blacksmithing.—This class has greatly improved under the present teacher, and next year a further improvement is expected. Some very good work has been done for the use of the Fitting and Turning class.

Boiler-making.—This class still maintains its average, and good progress has been made by the students; some excellent practical work is on view as the result of the year's work. The theoretical class has been exceptionally well attended, and numbers have been benefited by the instruction given.

Electrical Engineering.

In the practical classes the students have followed various experiments set out for them in the laboratory and the dynamo room for the purpose of teaching the principles of electrical engineering through their practical application.

The apparatus for this purpose has been added to, and the arrangement of the machines has been much improved.

Lessons in the jointing of cables and wires have also been given continuously during the three terms, and as new students join the practical class they are put to this work. This is the first time that jointing of electric-light cables and wires has been taught in Australia. It is important practical work, and admits of extensions being introduced.

A number of lantern slides, illustrating the latest types of apparatus and machinery used in electrical engineering, have been added.

This department has recently been transferred to more commodious premises, and improvements are being made in the arrangement of the apparatus and machines.

Owing to the vibration of the (old) laboratory floor the experiments were frequently interrupted; this defect has now been prevented by supporting the tables on brick pillars in the new premises, in accordance with the best practice.

Physics.

Physics.

The number of students enrolled at the beginning of the first term was 30 in the college classes and 64 in the High School classes. At the conclusion of the term these numbers were 44 and 71 respectively, showing a satisfactory increase during the year. The attendance at the various college classes has been uniformly good.

The lecturer has endeavoured, as far as possible, to follow the course of instruction which had already been published in the Calendar. The course is, if anything, too extensive, the students, as a rule, being not sufficiently advanced to accomplish so much work in one year.

The sometimes almost entire absence of preparation on the part of the students is one of the greatest difficulties to contend with. The majority of them are especially deficient in mathematical training, which is, of course, an essential aid to the study of physics. As a means of partially overcoming this difficulty, it is proposed to start a tutorial class next year, in which numerical and other examples will be solved, bearing upon matters treated of in the various lecture courses. This class will give an opportunity of dealing with the students individually.

The various classes held this year will be continued during the coming year, and an effort will be made to put the recently-inaugurated laboratory classes on a firm footing.

An effort will be made to hold at least one course of advanced lectures.

Sanitary Engineering.

The lecturer in Sanitary Engineering states that he has to record the uniform good conduct of the students under his charge. The teacher of Practical Plumbing also bears ample testimony to the good conduct, attention to instruction, and regular attendance of the students taught by him. The recent severe time of depression has, to some extent, reduced the number enrolled; yet those who attended evidently did so with the intention and determination to learn.

During the session the enrolment in the Sanitary Engineering and Architectural Sanitation classes has been fairly well maintained.

The practical Saturday afternoon extra lessons in field work were continued and were well attended, enabling the students to understand the work in a way which would be impossible by class lectures, and the same remark applies to the Saturday afternoon visits to places of interest and instruction. One of the students has obtained a permanent position in connection with sewerage construction and four others have been promoted.

The classes in Practical Plumbing have done good work. Six lectures on Sanitary Plumbing were given at Newcastle and Maitland to students of the Plumbing classes, and were well attended. In Practical Plumbing advance continues to be made in the character of the work, and the workmanship in all grades is creditable both to teachers and students.

The accommodation provided in the advanced class-room has been of great benefit and has enabled instruction to be given as to the putting together of the work done during the session, in the form and under the conditions required in every-day work.

The development of the practical work in the direction of ornamental plumbing has been well attended to, and several creditable specimens of plumbing art craft are on view in the class-room. Next session it is intended to pursue this class of work still further, and to introduce specimens to the notice of the Sydney architects in the direction of making lead sanitary fittings architectural features.

The Plumbing students have again been pre-eminent in the College in regard to their passes for the City and Guilds of London Institute examinations. This year 14 passes came to the College, and of these 8 were to the Plumbing classes, including two highest honors, two honors grade, and two ordinary grade passes, besides two passes in practical work only.

Since the inception of the examinations for Master Plumbers' diplomas, &c., conducted by the Sanitary Department Examining Board, 145 candidates have been tested, distributed as follows:—Master Plumbers' diploma 46 candidates examined and 28 passed; of these 6 passed during last session, one obtaining "Honors" diploma, making the third pass in this grade since the examinations were instituted. This "Honors" diploma is looked upon as the "blue ribbon" of the trade, and is highly valued.

Dramers' Certificates.—Eighty-one candidates have been examined, of whom 76 passed, 11 of them during the past session.

Water Filters (Country) Certificates.—Eighteen candidates have been examined, and 16 have passed; 3 during the past session. These numbers are exclusive of students in advanced plumbing, who may have obtained the necessary percentage of marks at the college examinations to qualify them for a diploma. The Board has granted a diploma to a Brisbane plumber, whom they examined there by commission.

Visits of instruction were made to the Pyrmont Quarries, The Observatory, Messrs. Bakewell's Brick and Sewerage-ware Works, The Gas Works at Mortlake, Botany Sewage Farm, Crown-street Pumping Station and Testing Rooms, The Hydraulic Power Co.'s Pumping Station, and the Cooling Rooms, &c., at the Woolloomooloo Markets. Four special outdoor lessons were given in surveying, levelling, contouring, and the setting out of works, and two special lessons were given in the Technological Museum, one on sanitary appliances, and one on timbers.

The lecturer in sanitary engineering has made the following among other reports and plans:—On the working of the incandescent gas-lights in the Art Department of the College, which were installed according to his plans, and are effecting a saving, as well as giving a better light. On a complete system of ventilation for the College buildings, which has since been carried out on the lines of his design. On the gas-lighting and general fittings of the New Technical School Buildings, at Newcastle, now complete according to his designs and suggestions. On the lighting of the Technical School Building at Bathurst.

Architecture. 2

Lectures have been given and classes held in History and Drawing, Building Construction, and Carpentry.

On the whole, the attendance in all the classes has been fairly regular, and the improvement, especially in the case of some students, has been very good.

The liberality of Mr. W. E. Kemp, Architect for Public Schools, has provided prizes for the students in the Architectural History and Drawing classes, which have brought forward some very good specimens of original design by the students.

Several much needed alterations have been made in the class-rooms, which will greatly assist the work of teaching in future.

The students, accompanied by Mr. Bruce, Teacher of Building Construction, have made several visits to objects of architectural interest. Mr. Vernon, Government Architect, delivered, at the College, a very instructive address, which was thoroughly appreciated by an audience of about sixty teachers and students.

The reversion at the beginning of the year to the syllabus which was in use at the College prior to the appointment of the late Lecturer in Architecture has been successful. By this alteration, it has been possible to give lectures weekly instead of fortnightly to students in each year, and also a course embodying Quantity Surveying.

The great advantage gained is, however, that the association between the practical and and theoretical classes in the Department is closer, and there is less overlapping in the subjects taught.

A terra cotta mural tablet, in memory of the late Lecturer in Architecture, Mr. W. Wright Campbell, has been erected in the Drawing Class-room. The design is by a former student, modelled by Mr. Macintosh, Teacher of Modelling at the College.

The Carpentry Class has made fair progress during the year.

A 17

Art Department

The Art Department has obtained an increased measure of success during the year. There was a substantial increase in numbers, and, further, a desire was shown on the part of most of the students to continue their courses of study, thus proving the wisdom of the formation of advanced classes

By referring to the classes in the following list the progress made will readily be seen —

	Total enrolments	
Freehand Drawing	1895	1894
Model	313	280
Geometrical "	175	129
Perspective "	57	47
Modelling	50	43
Drawing from Life	73	61
Drawing from Antique	35	18
Still Life Drawing	44	36
Plant Drawing	26	17
China Painting	14	5
	800	636

One class has been added to the list this year, viz., China Painting, from which good results are anticipated, not only by itself, but also as an adjunct to Plant Drawing and Modelling

The introduction of the incandescent light into the Freehand and Model Drawing rooms has been a great improvement

Although the number of students is more than double what it was a few years ago, their conduct continues satisfactory

The Model Drawing class has greatly increased, and further assistance for this division will be necessary

The afternoon Freehand Drawing class is so largely attended that a section of the students had to be drafted into the Still Life room

The Life classes have turned out highly satisfactory in every way. An extra class for ladies was held during the year, the room being too small for all the students who wish to attend. The evening class had to be made into a mixed class, as there was no possibility of setting apart a second night. This will be obviated in next year's arrangements

China Painting —The work of this class is progressing very satisfactorily. Commencing in July with 1 student, the number increased to 12, which it is expected will be further added to next year. The progress made by the students has been gratifying

Freehand Drawing —The evening classes are numerically in a sound condition, whilst the standard of the work done during the year has been higher than that of the previous one. This is less noticeable in the number of highly finished drawings than in the general average merit of the work. The average number of the students attending the Saturday morning class has been less than that of the evening class. It is satisfactory to report that all the series of Freehand Drawing casts have been completed, and are now in general use

Plant Drawing —The class has been well attended, and a gratifying interest has been taken by the students in the subject. In addition to the class studies, much useful work has been done at home

Modelling —This class has steadily improved, not only in enrolments, but especially in the quality and range of work. Works of students are exhibited in the class-room. These works consist of simple geometrical forms, fruit, flowers, birds, and ornamentation of all kinds, to modelling from the antique, from photos, and from life. An effort has been made to get the students to apply the knowledge gained in copying to some practical use, such as the decoration of vases, trusses, spaniels, &c., and filling in spaces of any given geometrical form. The students have done a large amount of home work, thus cultivating a spirit of self reliance and supplementing the class work considerably. The class consists largely of students who are engaged in the following callings —Potters, masons, jewellers, stone-carvers, wood carvers, &c.

It is worthy of note that an old student, Mr George Inglis Muir, has been appointed as instructor in Plane and Solid Geometry, and Carpentry and Joinery, at the Technical School, Auckland, N Z

Industrial and Decorative Art Department

The attendance at the classes has been steady and good throughout the three terms, and shows a gradual increase from the commencement of the first term

House painting class —The course of instruction has been the same as given in previous years. The students are taught the mixing and use of colours in water, spirit, and oil, the names and uses of the various brushes and materials used in house painting. An important item in this course of instruction is the mixing of colours from a given list of pigments. The various processes and methods of painting 1st, 2nd, and 3rd coats are explained to the student, and the application of colours in an elementary form to houses, &c., has been practically carried out. The applications of stencils for general purposes are also shown, and the examples of work practically executed

Grainging and Marbling —In this class the students are taught the different processes for the production of specimens of wood and marble. The various methods of grainging in oil and in water colour are practically taught, and in marbling all the various stages and means of production are thoroughly explained

Signwriting —The students are first taught the proper formation of letters on a blackboard with chalk. The alphabets used are specially prepared and divided into square, angle, and combination letters. When sufficient progress has been made in the forms of the letter, instruction is given in setting out and combination for various purposes

There is an advanced class of the foregoing subject, in which the student is instructed how to set out his former work to scale and make measured sketches, drawings, and plans for particular purposes. The higher branches of his craft are also executed in practical examples of shields, ribbons, labels, and other designs needed in signwriting

Good specimens of workmanship have been produced by the students during the past year

Art Decoration —Commencing with charcoal and brush, the student is shown how to produce ornament in a free and bold manner. A system of design is begun in the first lessons, and from a given scroll, or irregular ornament, the student is taught how symmetrical designs can be produced, suitable for corners, breaks, panels, pilasters, borders, &c., suitable for decorative purposes

The advanced work consists of drawing and colouring plans of decoration to scale, and making enlarged working drawings from small plan. The student is then instructed in the practical working out of portions of his decorative plan, and panels, friezes, and other parts are executed in proper class on prepared grounds

Design —The class has been commenced this year, and the system of instruction as laid down in the syllabus carried out as far as possible. Commencing with simple and elementary lines and forms, the student is taught to combine them for the production of designs for specified purposes. The course will consist of the application of designs produced in the class to decorative art, furniture, stained glass, carpets, hangings, ironwork, &c.

Appliances, &c —These are in good order. Several new appliances and apparatus for teaching and illustrating lessons in the classes have been procured during the year, and have proved of great value to the students

Cookery,

Cookery, &c.

The attendance at the Cookery classes has been well maintained, and the advantages of the new class-rooms are fully appreciated by the students.

The students have made good progress, considering that many of them were entirely ignorant of the art of cookery when they joined. During the year there have been several students from country districts who have attended the classes every day during their visit, being anxious to learn as much as possible during a short time.

With one or two exceptions the Sydney students have taken two lessons per week, one in demonstration and one in practice, which is the course recommended.

Twenty-two students in plain cookery and 4 in advanced went up for examination.

The Starching and Ironing class commenced in June, and proved very popular, some students learning in a few lessons, others requiring a longer time, but in nearly every case the result was satisfactory.

Dresscutting.

Dressdrafting.—This is done by first taking the correct measurements from any person, no matter what figure, and drafting the pattern on paper to the measurements taken, thus enabling the dress to fit perfectly.

Dresscutting in all its branches.—In this class the students are taught first to cut out the bodices and sleeves from the drafting, and to fit them on each other. They are also shown to make alterations, if necessary, how and where to do so, skirts, and how to make them set and hang properly. Princess robes and wrappers are also dealt with.

Dressmaking.—In this class they are taught to make dresses properly in every detail, how they should be put together and finished, also the right way of cutting the material and trimmings.

The attendance in all the sections has been good.

Lithography, &c.

The students have gone through a complete course of lithography, finishing this year with zincography.

This is a very important industry just now, as zinc-plates are rapidly superseding stone for purposes of reproduction. The students have been very successful with the imported plates, and also with the plates prepared in class. Zinc-plates and proofs will be available for inspection at the exhibition next year.

During the year the photo-lithography class has been re-established. There has been a very good class of students, bright and intelligent, and the standard of work done is surprising when one takes into consideration the fact that some of the students had not used a camera six months before.

Manual Training.

Fort-street.—Regarding the students in training the work has been quite equal, if not superior, to that of former years. The attendance has been good, and the majority of students have evinced great interest in the course of instruction, many of them having attended in the workshop during their lunch hour.

With few exceptions all students have been through the full course prescribed in the syllabus. Some have advanced beyond this, and have been employed in preparing models to illustrate the test object lessons given to pupils practising at school. In drawing there is every reason to believe that a decided improvement has resulted on the work of previous years.

With the boys' classes matters have not been quite so satisfactory. The attendance has been anything but good. Those who have attended have made good progress, but many of them did not present themselves for examination.

In addition to ordinary class-work some useful work has been done in repairing school furniture, &c., &c.

Blackfriars, Sussex-street, and Crown-street S.P. Schools.—The attendance this year has been exceptionally good. The young students have shown great interest in their studies, and have carried out their tasks very satisfactorily. The work, embracing Joinery and Cabinet-making, has been regulated according to the courses prescribed in the calendar.

Goulburn and Maitland.—The classes in Maitland have shown progress. Excellent specimens of work were sent to Sydney for the annual examination.

COUNTRY AND SUBURBAN BRANCH SCHOOLS.

WEST MAITLAND DISTRICT.

Art.—The attendances, conduct, and progress of students compare favourably with former years. During last term, in the Art section, the day attendances (Tuesday afternoon and Saturday morning and afternoon) outnumbered those of the night. The excessive heat of the class-rooms is, no doubt, partly accountable for this change. The subjects taught include Freehand and Model Drawing, Modelling, Still Life and Antique, Perspective and Plane and Solid Geometry.

As many of the students have expressed their intention of continuing their studies, there is every prospect of a successful year's work for 1896.

Manual Training.—Early in the year arrangements were made for boys from the High and Public Schools to receive two hours' instruction per week, instead of one as formerly. This alteration has been very beneficial. The students' evening and Saturday morning classes have been well attended, and altogether this section has been very successful.

Carpentry and Joinery, &c., &c.—The other woodworking classes (Carpentry and Joinery, &c.) could do with a little more encouragement, similar to that accorded to other branches by tradesmen of the town. Every year, however, sees an improvement, and in time it is believed that most of the apprentices engaged in these occupations will join the classes.

Plumbing.—The work of this class has been carried out energetically and enthusiastically. The attendances were rather low in the beginning of the year, not from want of interest, but apparently from hard times. Trade has improved since, and the attendances have increased accordingly.

Mechanical, Architectural Drawing, and Building Construction.—The attendances at these classes were not satisfactory during part of the year, but improved somewhat during the last term. The students evince great interest in the work, and are countenanced and encouraged by employers, &c. In view of a more promising industrial year, it is hoped that they will regain their old positions.

Phonography.—This class was restarted during the last term under a new teacher. This subject has been in request all along, and only the increased fee, consequent on no salary being paid to the teacher, can retard its progress.

Scientific Dressmaking, &c.—For several reasons—high fees, illness of teacher, &c.—this class was not very successful this year. It has, however, been extremely useful to the district.

Cookery.—This class for the instruction of Public School children in the day-time, and technical students at night, was very successful, and its removal in the middle of the year to Tamworth was regretted by many adults who had been dilatory in taking advantage of the lessons, and by a number of schoolgirls.

District

District Art Classes.—Classes have been in operation at Singleton, Raymond Terrace, Clarence Town, Morpeth, Hinton, Seaham, and East Maitland. Practically the same routine has been followed as in previous years. In some cases the attendances have fallen off somewhat, for it is a difficult matter to keep up the enrolments in small centres. The subjects taught were Freehand Drawing, Model Drawing, Perspective and Plane and Solid Geometry.

The Freehand Drawing is always appreciated, the other subjects less so, an unpopular subject, of course, spoiling the average.

The interest taken in the work of the school by the townspeople is apparently increasing. Several allusions have been made at meetings to the work of the school, and to the employment of the leisure time of young men who might not otherwise use it to the best advantage.

As an instance of how the knowledge gained at the classes is utilised, it may be mentioned that a student attending the modelling class, whose husband is a schoolmaster, accurately modelled and assisted in the casting of a set of simple first-year designs for use in his school.

BATHURST.

The total enrolment of students in all classes was 491.

The enrolment in separate classes was as follows :—Agriculture, 8 ; Botany, 17 ; Bookkeeping, 47 ; Chemistry (theory), 25 ; Chemistry (practical), 6 ; Chemistry (junior course), 146 ; Geology, 49 ; Mineralogy, 7 ; Mathematics (including Arithmetic, Algebra, Geometry, and Trigonometry), 66 ; Physics (mechanics' course), 16 ; Physics (electricity course), 18 ; Freehand and Model Drawing, 45 ; Geometrical and Perspective Drawing, 27 ; Shorthand, 14.

All the above classes have met regularly throughout the year.

Art Classes.—The Art classes, which were re-established in October, 1894, have been well supported, the enrolment being large, and the attendance of students very regular. A considerable number of additional plaster casts were sent to Bathurst during the year, and have proved very useful, some of the more advanced students having taken up the study of drawing from the Antique. The introduction of improved arrangements for lighting the Art class-room is also a great advantage.

Works executed by students of these classes were accepted for exhibition by the Sydney Art Society, and took prizes at the show of the Bathurst Agricultural Society and Bathurst Art Society.

At the beginning of the year applications were received for the formation of a class in Geometrical Drawing. The class was sanctioned, and an ex-student of the Technical School was appointed teacher. It was arranged that he should also teach Perspective.

These classes have also been well attended, and the students have taken numerous prizes for Geometrical and Machine Drawing at local shows.

Shorthand.—The attendance at the Shorthand class has been fair, the higher fees charged in this class deterring many students from joining.

Science Classes.—The other classes meeting at the school, all of which are taught by the resident master, have been, on the whole, fully as well attended as in former years. In some, notably Mineralogy and Agriculture, the enrolment has been small ; but even in these there have always been some regular and diligent students. In each class good work has been done, and several students have shown exceptional ability.

Public School Class.—In the class for senior pupils of the Superior Public School, Chemistry was taken this year, and great interest was taken in the lessons, which were fully illustrated by experiments. Test examinations were held periodically. At each of these about sixty papers were worked, many of them being very good indeed. In order to encourage the Public School pupils in preparing for the Junior Public Examination, junior classes in Geology and Botany were formed.

The success of the Public School classes is largely due to the cordial co-operation of the head master and mistress of the school, who have encouraged their pupils in every way, and have carefully revised the lessons given.

Examinations.—A fair number of students presented themselves for examination in each of the subjects taught.

Apparatus.—The apparatus and fittings of the school are, for the most part, in a satisfactory condition, although some of it has been in use for nearly ten years.

One of our students, who had obtained his mathematical training at the school, passed the matriculation examination at Sydney University during the year. Another student, Mr. E. Bray, who was for several years a student of the Chemistry, Botany, and Physics classes, took the degree of M.B. and Ch.M. at Edinburgh University. Mr. W. E. George, another student of Chemistry and Botany, has passed the final examination of the Pharmaceutical Society of New South Wales. An ex-student, Mr. C. Mills, has established a very successful business as a druggist at Moree. Mr. Mills also sends a cheque for £2 2s. as students' prizes. Other instances of success might be cited. It is also a satisfaction to find that old students revisiting Bathurst generally come to the school, are interested in its progress, and regard it in some sort as an *Alma Mater*.

NEWCASTLE DISTRICT.

Considering the great depression in the coal-mining districts, and the consequent emigration to other localities, the technical classes have been well attended, and satisfactory work has been done.

Art Classes.—The attendance of students, their attention to the instruction given, and their general progress have been very satisfactory, while the results of the year's work have been most encouraging.

Coal-mining.—These classes have felt the depressing influence of trade stagnation, and the strained relations between capital and labour. Over a thousand of the best workmen have left for Western Australia and elsewhere.

The Plumbing class has been well attended, owing to the fact that the Water and Sewerage Board grants no licenses to plumbers until they have passed the examination of the Technical College.

The Mine Surveying class has received practical instruction in the field, as well as theoretical lessons in the class-room.

At Minmi the Mechanical Drawing class is steadily progressing, and if there are no trade disputes during the next year an increased attendance is anticipated.

The teachers of the Boilermaking and Steam and Steam Engine classes complain of the depressed state of trade as affecting the numbers. Mention should be made of the good behaviour, steady work, regular attendance, and satisfactory progress of the students.

The Mechanical Drawing class at Newcastle appears to be too large for efficient instruction to be given to all the students during the course of the lesson. An additional evening may be allotted to this subject in 1896.

The students attending the Shorthand classes have been regular in attendance and diligent. During the year one pupil obtained, by examination, a position in the Railway Department, whilst others succeeded in securing positions in mercantile offices.

Some of the pupils of the Dresscutting class have become proficient, and have started in business as dressmakers, through instruction gained at the class.

GOULBURN.

The condition of this branch school for the year may be considered to have fully equalled, and in some respects, to have excelled that of the preceding year. The want of prosperity still afflicting this district is reflected upon all its institutions, and the unsettled state of the population has had its effect upon the attendance of students at the various classes. It has been difficult to keep a class together

together for the entire year; the members enrolled for the first term being replaced by others, so that the class at the end of the year was composed of comparatively new members. The total enrolment of individuals (exclusive of Public School classes) in classes conducted by the Resident Master has been 112, and the attendance for the three terms has been—1st term, 69; 2nd term, 81; 3rd term, 81. These individuals account for 183 enrolments in twelve separate classes. The appointment in the first term of the year of a new teacher of the Wood-working classes led to the enrolment of 65 individuals attending four separate classes. The accommodation provided for these trade classes has been taxed to its utmost capacity. The enrolments for Carpentry, Fretwork, Wood-turning, and Wood-carving have been 40, 8, 16, and 8 respectively. The providing of power in the shape of a gas or oil engine would greatly assist this class. A separate small room for the accommodation of such an engine is available. The Turning and Wood-carving classes have made a good start, and some very creditable specimens of work have been produced. Two students in particular have distinguished themselves by carving the head-piece for the book-case of one of the public school libraries. During a full evening the shop presents a busy appearance; and, indeed, the accompaniments of hammering, sawing, &c., have proved somewhat trying to students simultaneously engaged in quiet occupations. This drawback will, however, be modified by a readjustment of time-tables.

The Shorthand classes are responsible for 15 individuals. The attendance at lessons has been very irregular and intermittent.

The enrolment for Chemistry has been 23 and 6, for theory and practice respectively; a considerable proportion of the "theory" students joined for special preparation for the University Public Examinations, and thus only a small proportion faced our own ordeal in December.

The enrolment for Physics was 18; the courses treated were those dealing with Heat, Light, and Sound, and Electricity and Magnetism respectively. Several of the students showed such appreciation of the teaching as to lead them to manufacture apparatus of their own.

The enrolment for Geology and Mineralogy was 24. Students become thoroughly interested in the former subject, and readily join expeditions to investigate the local formations.

The enrolments for Drawing were as follows:—Geometrical Drawing, 13; Mechanical and Perspective Drawing, 8; Model Drawing, 10; Freehand Drawing, 49. The students have assiduously worked through the books and sets of plaster models provided for the different courses.

The enrolments for Arithmetic and Book-keeping have been 19 and 13 respectively. These classes have proved very useful in affording instruction to young lads just entering business pursuits.

Public School Classes.—Physics, enrolment 196. The average enrolment per term has been 151. The class attends in two divisions, namely, boys and girls of the fifth classes from the Goulburn Public Schools. Seventy-five lessons have been delivered during the year, each being illustrated by experiments. The boys and girls show a gratifying interest in the subject, and the results of examinations show that an intelligent grasp of the subject has been obtained.

Manual Training.—Enrolment, 61. When the present teacher took charge of the class in April last, 32 boys shared the advantages of the class. This number has now been increased to 55, the additions being partly due to the extra accommodation provided by the manufacture of new benches by the teacher. The boys have worked well, and the appreciation of the class is shown by the numerous applications for vacancies.

GRANVILLE.

The year's work has been seriously interfered with by the disagreement between Messrs. Hudson Bros. and their employees regarding the rate of wages, which resulted in the works being practically closed for several weeks early in the year. During this time little interest was taken in anything else besides the various developments of the dispute, and even when a settlement was come to the feeling of uncertainty which followed deterred many from joining the classes, while others who had been or intended becoming students had gone to seek employment elsewhere.

At the beginning of the year classes were held in the following subjects:—Agriculture, Applied Mechanics, Chemistry, Dresscutting, Geometrical Drawing, Mathematics, Mechanical Drawing, and Model Drawing; at the end of the first term the class in Chemistry was discontinued, but at the beginning of the second term a class in Shorthand was commenced, and has been continued since, so that the year closed with the same number of classes as at the beginning.

The enrolment for the year has been as follows:—Agriculture, 59; Applied Mechanics, 8; Chemistry, 12; Dresscutting, 9; Geometrical Drawing, 15; Mathematics, 15; Mechanical Drawing, 25; Model Drawing, 14; and Shorthand, 20; total 177. Total number of individual students 146, as compared with 121 last year.

During the year parties of students have, accompanied by the resident teacher, visited the following places of interest:—The Ocean-street tramway power station, the Technical College, the electric light installation at the residence of Geo. M'Creë, Esq., Guildford, the Hydraulic Power Company's pumping station, and the Observatory. These excursions were in all cases largely attended, and much was seen which gave an increased interest to the work in the class-room.

At the beginning of the first term an exhibition was held in the School of Arts by the Committee of that institution, having special reference to technical education; at the beginning of the second term the prizes and certificates won by the students at the examinations in December, 1894, were presented by G. W. Smailes, Esq., M.L.A., at a public meeting held in the School of Arts, and presided over by the President; and at the beginning of the third term a lecture was delivered by the Rev. J. Milne Curran on "Ancient Australia." All of these meetings were largely attended, and were the means of bringing prominently before the people the advantages of technical education.

As to the advantages gained by the students from the knowledge acquired at the classes, mention may be made of the following classes:—One of the first students to join the classes here, over eleven years ago, went to Western Australia in search of employment this year. He was a pattern maker employed in Hudson Bros. works. He obtained employment as a mechanical draftsman in the Harbours and Rivers Department, Fremantle, within ten days of reaching that town. This success was very largely due to the certificates won at the examinations here. Another ex-student who passed the examinations with great distinction has gone to California this year to acquire a more intimate practical knowledge of the methods of refrigeration and food preservation as practised in that State. He got employment immediately on landing. The student who passed so well in the City and Guilds of London Institute's examination in "Oils and Fats," 1894, obtained an appointment in the laboratory of one of the leading oil merchants in Sydney, through the manager of that establishment seeing his name in the pass list. His power to retain the position is largely due, he assures me, to knowledge obtained in the classes. Another young student who attended several classes here for about a year has entered as a student at the Hawkesbury Agricultural College, and is making good progress there. Several others are steadily working their way upward in their trades or professions, as the result of their study in the classes here.

Agriculture.—The total enrolments in the classes for this year was 59, as compared with 55 last year. The course of study was the same as in the Sydney classes, with some slight modifications in favour of subjects of local interest, or of special interest to the students. The students in these classes accompanied the Sydney students in their 26 "outings" to gardens, orchards, bee-farms, poultry farms, the Government sewage irrigation farm at Botany, the Royal Agricultural Society's Show at Moore Park, &c., &c. Besides the above, five other "outings" were made by the Granville students, four of which were to the orchards, bee-farms, &c., of local students. At several of these outings the students did a large amount of practical work, such as pruning, grafting, budding, handling bees, &c. One of these outings was made to the residence, at Granville, of Mr. Symonds, a student of these classes, who having kindly placed a horse at the disposal of the teacher, the students were shown by the teacher in a practical way how to break in and train a horse for the saddle, harness, or plough.

The

The progress made by the students has been very marked. As an illustration of the practical value of these classes, it may be mentioned that the prize given by the National Pomological Society for the best cottage garden was won by a student in the classes. The same student also won the prize given by the Western Suburbs Horticultural Society for the best cottage garden (from eight other competitors).

This year the above student (Mr. David Rumble), a signalman in the railway service, at various shows at Thornleigh, Hornsby, Granville, Castle Hill, Sydney, Balmain, Auburn, Rookwood, &c., carried off over 50 prizes for garden produce; 26 being first prizes for various vegetables, and 10 being first prizes for best collection of vegetables grown by exhibitor. This student joined the class in 1893. During this year, as in previous years, several students and ex-students have settled on the land.

An ex-student, a pattern-maker, aged 43, and his son aged 13 (who was in the class for one term this year), removed from Auburn in June last to take up their home at Baulkham Hills, on a 10-acre orchard of mixed fruits. Four brothers, three of whom were students in this class last year (an architect, a bank clerk, and the third without a profession, aged respectively 31, 22, and 19) have settled on a 327-acre farm on the Richmond River at Wyrallah, near Lismore, where they are going in for mixed farming, including dairying, pig-breeding, orcharding, bee-keeping, &c. Another ex-student (a pattern-maker, aged 25) has within the last few months settled at Mulgoa, where he has 9 acres of assorted vines, 10 acres of oranges, lemons, and mandarins, 4 acres of summer fruits, 10 acres of cultivation paddock, and 11 stocks of bees, &c.

The students who join these classes are mostly tradesmen and mechanics, adults who, wishing to settle on the land on their own account, come for the agricultural information to enable them to do so, and not for any certificate; hence the small percentage of them who sit for examination.

The average age of the students for this year is over 29 years.

Shorthand.—This class was started during the 2nd term, and has been fairly well attended. The pupils are mostly young lads, whose progress is necessarily slow. There were 19 pupils on the class-roll at the end of the year.

PETERSHAM.

Art Classes.—The aggregate total attendance is higher than that of the past two years. The attendance in the Freehand Drawing section has been remarkably good, and the general work and progress highly satisfactory. In the Model Drawing the pupils attended regularly, and the progress and efficiency proved creditable, as seen by the results of the examinations.

The sets of wire and solid models are in good order, and are adequate for present requirements.

Practical Plane and Solid Geometry and Perspective are still subjects which do not tempt the average student; they require more than ordinary attention and time, consequently very few have taken up these courses of instruction, which is much to be regretted.

The class in *Mechanical and Architectural Drawing* is small, although the attendance is regular, and the general work up to the average.

Scientific Dresscutting and Making.—The good average attendance in this subject continues, the only cause for complaint being that the class clashes with the Public School Cookery class on Tuesday afternoons.

Shorthand.—The enrolment and attendance at this class have been well maintained throughout the year.

General Summary.—In all the classes the conduct of the students has been excellent.

Prizes have been offered by various gentlemen in the district as an inducement to further progress in the several subjects; the last annual prize distribution was the means of much help in this direction.

NEWTOWN.

Freehand and Model Drawing.—The classes have not been so well attended as during the previous year, the number of new students enrolled during the latter part of the course being unprecedentedly small. That the classes are not locally known is probably the reason of this, as many drawing students residing in Newtown obtain their instruction at the Sydney College. A large proportion of those who attended this year are in the advanced stages, and may reasonably be expected to go to Sydney next year for the still higher subjects taught there.

Geometrical, Perspective, Architectural, Mechanical Drawing.—Regarding the teaching, it may be pointed out that the work has embraced the stages of the various years in each subject, and generally has been in complete accord with the syllabus. Mechanical Drawing has been confined almost entirely to work from dimensioned rough sketches and models, with apparently the best results. The students in the Geometrical Drawing have been, as far as possible, required to study with independence and self-reliance. Careful instruction as to principles has been given. A large amount of home work has been done. The results of last year's examination indicate very clearly that the teaching at Newtown has not been below the standard. It is worthy of remark that the only third-year student who was examined, and passed in Geometrical Drawing last year, was from this school.

Shorthand.—The attendances have been steadily increasing throughout the year. The third term was the most satisfactory, not merely as regards the improvement of the roll and attendances, but in progress made. A certain amount of non-application (due in cases to the long working hours of many of the students, precluding them from practising sufficiently) had to be contended against.

The annual exhibition of students' work and prize presentation was held during the year in the Town Hall, and was opened in the presence of a large number of people by the Mayor of Newtown. The exhibits embraced works from each of the classes.

It is satisfactory to note the merit of the exhibition and the unanimous opinions of approval expressed by the visitors. Such functions as these are in a high degree beneficial to the cause of Technical Education, for they offer a medium of instructing the public as to the character and merit of the teaching offered by the College, and viewed in this light it is proposed to continue the holding of the exhibition.

Teachers' and Students' Societies.

At the Sydney Technical College there are two such Societies, one in the Engineering and one in the Art sections.

(1.) *The Engineering Society of the Technical College.*—This is a Society that has been formed amongst teachers and students for the purpose of creating and fostering research amongst its members in matters relating to engineering, and also for discussion of engineering subjects.

Though not started until late in the year the Society has already about 120 members, and a great deal of good is expected from it. The first meeting of the Society was held in October, and nearly all the members attended to hear the inaugural address by Mr. Norman Selfe, M.I.C.E., &c., Acting President of the late Board of Technical Education.

(2.) *Sketching and Design Club.*—This society was begun early in the year, and a large number of the best students in the Art section belong to it. General meetings are held once a month for transacting such business as the election of new members, &c., criticising the past month's drawings and paintings, and deciding on the work to be attempted by members during the following month.

On one or two Saturday afternoons in the month the members have outings for sketching purposes, and the remaining Saturdays are devoted to portrait painting.

There are "Scientific Societies" in connection with the local Technical Schools at Bathurst and Goulburn, and each of these organisations is doing good work amongst its members, which include both past and present students and teachers.

Examinations.

Examinations.

The results of the examinations of the Technical classes show that the total number of students examined was 2,651, an increase of 194 on the numbers for 1894. The number who passed was 1,788, or 144 more than for the previous year. The percentage of passes for this year was 67·4, as against 66·9 for last year.

The Technological examinations of the City and Guilds of London Institute were held in April at the Sydney Technical College, and at the branch schools at Granville, Newcastle, and West Maitland. Twenty-four candidates attended for examination in the various subjects, of whom 17 satisfied the examiners. Two candidates in Plumbing and 1 in Iron and Steel Manufacture passed in highest class honors.

The following are the subjects in which passes were obtained :—Plumbing, Iron and Steel Manufacture, Mine-surveying, Brickwork and Masonry, Photography, Electric Lighting, and Carpentry and Joinery.

Lectures in Country Districts.

The Travelling Lecturer in Geology, &c., the Rev. J. Milne Curran, has delivered 40 lectures on matters connected with mining during the year. The average attendance at each lecture was 282. He also gave 13 open-air demonstrations, the average attendance being 115.

Mr. Albert Gale delivered 72 lectures on Bee-keeping, and also gave 20 open-air demonstrations. The attendance at each lecture averaged 118, and at each demonstration 55.

Mr. Angus Mackay delivered 4 lectures on Agriculture in country towns in addition to instructing students in the subject in Sydney and at Hornsby and Hunter's Hill. The average attendance at lectures was 53.

TECHNOLOGICAL MUSEUMS.

DURING 1894 a number of valuable exhibits were received from kindred institutions and foreign Governments, and this year I have taken the opportunity of forwarding representative collections of our raw products in return.

The attendance returns show a satisfactory increase over the previous year, but at the same time I do not think that too much emphasis should be placed on the number of casual visitors in judging the utility of commercial and educational institutions such as these, but stress should rather be laid on the number of verbal and written requests for information, and on the volume of reports on very many subjects which have been furnished to correspondents during the year. A larger number of letters have been received this year than during any previous one. Over 300 have been recorded in excess of those of 1894.

Vegetable Products.

Further classification and rearrangement of specimens have been made during the year.

In view of the opening of the Canadian route to England, and the probable increase of trade with the Dominion, the Canadian and American timbers, &c., received in 1894, have been added to and displayed to better advantage. The whole of the New South Wales timbers have also received an overhaul, and a number of commercial timbers, the botanical origin of which has been long in doubt, have been definitely determined. The fibres have been removed from the table cases and placed in vertical ones, which I find particularly suited for this class of exhibit. The steady increase in the carpological collection necessitated an alteration in arrangement for storing them; the whole have been gone through, and now occupy three pyramidal and six wall cases. The gums, resins, and kinos, occupying several cases, have been reclassified.

The principal donations for the year in vegetable products are as follows :—

- Grey ironbark, from piles taken from wharf at Circular Quay, after being in use for fifty years, presented by Captain Jackson.
- Timbers presented by Mr. J. Breckenridge, J.P., Mr. A. W. Farquhar, and other gentlemen.
- Collection of timbers and herbarium specimens, presented by Mr. R. T. Baker.

The Botanical Collector, W. Bauerlen, has continued to do good work in the field, and has obtained during the year :—

- 84 logs of timber.
- 85 pieces of timber, all furnished with corresponding herbarium specimens.
- 25 samples of gums, resins, and kinos.
- 7 bundles of bark, and several hundreds of herbarium specimens.

During the year much work has been done on "B" floor (Mineral and Geological Collections, Pottery, &c.), in the rearrangement of the specimens after the hurried placing in position on removal from the old building, and also in the determination and classification of new specimens. Several sets and separate collections have been arranged in wall cases, among which may be mentioned the stalactites, sulphur specimens, crystal models, sets to illustrate the manufacture of files, locks, knives, &c., substances to illustrate the manufacture of pottery, glass, &c. The exhibit of large tested iron specimens has been rearranged and renovated. The rock collection has been increased during the year, also the collection of phenomenal geology; these collections are now becoming of great educational value. Much of the available wall space has been covered by framed diagrams, illustrations, maps, photographs, &c., of subjects identified with the collections on this floor.

A representative collection of calcite with associated rocks and fossils from the Mudgee district was forwarded by Mr. E. J. L. Avdall.

The following donations were also received :—An interesting set of terra-cotta medallions, art flower and fern pots, &c., made and presented by Mr. Nelson Illingworth; a fine collection of alluvial and lode tin from the Emmaville district, presented by Mr. T. Chandler, J.P.; and a collection representative of the tin deposits at Tingha, presented by Mr. W. Litchfield, J.P.

With respect to animal products, the Australian Gall collection which has been added to during the last twelve months, and which contains a large number of type specimens, has been placed in a set of wall cases in the miscellaneous insect products court, each specimen being mounted on a card and named. The fur collection has been taken out of the table case and displayed to much greater advantage in a set of wall cases in the leather court. A collection of whalebone, oil, and other articles connected with the whale-fishing industry at Eden, New South Wales, was obtained and sent to the museum by Mr. Albert Gale. The collection of coins, medals, &c., have been set out in table cases, and now take one side of the central court; they have been all arranged in order; the country, date, and other obtainable information concerning each being printed and placed below them; since this has been done a much greater interest has been taken in the collection, and many inquiries and the loan of several fine coins have resulted. A large number of zoological specimens has been obtained by collection and by exchanges, most of which have been sent to our branch museums.

In the Wool Section, Mr. Alfred Hawkesworth reports having been fully occupied, both with the reception and display of donations, reporting on same, and supplying school-teachers and others with sets for purposes of instruction. There has been a great demand from foreign countries for collections, and over twenty have been made up and sent away. The entire collection has been rearranged; the wools from different countries are shown in different courts, which are divided into districts.

districts. There are 590 fleeces and samples from the highest class stud and ordinary flock sheep. The models of the Lincoln and South Down stud rams have been added to the collection. Eleven photos of high-class sheep of various types have been purchased, and help to furnish the various courts.

In addition to the ordinary work, a large amount of original work has been placed on record in the Proceedings of the Royal and Linnean Societies by myself and other members of the scientific staff. In this connection I may mention the recording of a new Gigantic Acacia from the Brunswick River, and in conjunction with Mr. R. T. Baker, the Assistant Curator, I have read the following papers before the Linnean Society :—

1. Description of a new species of Acacia from New South Wales.
2. On a new species of *Elaeocarpus* from Northern New South Wales.
3. Descriptions of seven new species of plants from New South Wales.
4. Botanical Notes from the Technological Museum, No. IV.

Mr. Baker has also read original papers before this Society.

The chemical work in connection with the determination from the vegetable kingdom has been, I trust, successful. Mr. Smith and I have succeeded in isolating two new organic substances, one of which, *Eudesmin* (C.H.O—26·30·S) has been worked out, a simple announcement of the discovery of the other, *Aromalendrin*, having been made at the same time in a paper read before the Royal Society of New South Wales on the 5th June.

Besides this paper, the following original researches have been published :—

2. Preliminary notes on the bark of *Carissa ovata*, R.Br., var. *stolonifera*, Bail., read before the Australasian Association for the Advancement of Science, Brisbane, 1895.
3. Contributions to a knowledge of Australian Vegetable Exudations, No. 1, Royal Society of New South Wales.
4. On a natural deposit of *Aluminium succinate* in the timber of *Grevillea robusta*, R.Br., Royal Society of New South Wales.

A work on "Gems and Precious Stones, their distinctive properties and methods for determining them," has been prepared by Mr. H. G. Smith, Mineralogist to the Museum, and is now in the hands of the Government Printer.

The following papers upon scientific subjects have been written during the year by W. W. Froggatt, Assistant in charge of Animal Products :—

1. Notes on the sub-family *Brachyscelidae*, with descriptions of new species.
2. Life Histories of Australian Coleoptera, Part III.
3. Notes on Cicadas.
4. Australian Termitidae, Part I.

Papers 1-4 in Proceedings of the Linnean Society of New South Wales, 1895.

5. Honey Ants, descriptions of new species obtained by the Horn Exploring Expedition in Central Australia. "Zoology, Horn Expedition." Edited by Professor Baldwin Spencer.

The number of visitors for the year was 118,967, being an increase over the previous year of 29,272. This includes special visits (for purposes of instruction) of pupils of the following public schools :—

Glebe Public School.
University Public School.
Darling Road (Balmain) Public School.
Cleveland-street Public School.
Bourke-street Public School.

Pupils in the Bathurst and Goulburn districts have also visited the local museums.

I would like to see the museums increasingly used by our public schools, and I would point out in this connection that a number of School Boards in England allow a certain time weekly, spent in a museum under requisite supervision, to count as school attendance.

A number of schools other than those under the Department of Public Instruction have supplied detachments of pupils, accompanied by their teachers.

I am glad to report that the students of Hurlstone and Fort-street Training Colleges have continued to use the museum specimens freely to illustrate their object lessons.

BRANCH MUSEUMS.

I have inspected the Goulburn, Bathurst, West Maitland, and Newcastle Museums during the year, and Mr. Froggatt has also visited them with the view of rearranging the exhibits wherever it was considered necessary to do so.

To the Goulburn and Bathurst Museums important collections of pictures have been lent by the trustees of the National Art Gallery and by the members of the Art Society. Such displays as these have been appreciated in the centres named, and may prove the pioneers of art galleries in some of our principal country towns—following, in this respect, the example of the neighbouring Colony of Victoria.

Mr. F. B. Suttor has very kindly lent a valuable collection of oil paintings, proof engravings, and choice photographs to the Bathurst Technological Museum, and it is to be hoped that this example may be followed, not only at Bathurst, but at other centres.

The donations to the Bathurst Museum have not been so numerous this year as in some former years, but include a fine series of stream tin given by Mr. McPhillamy, and a collection of pulse from the Wagga Experimental Farm, presented by the Minister for Mines and Agriculture. The collection of birds and mammals, which is one of the most popular features of the Bathurst Museum, has been increased by some specimens sent from Sydney and others lent locally. Several new snakes have also been received, and some fine specimens of fossil fish from Talbragar.

At the Goulburn Museum there is an increasing interest taken in the mineral specimens, especially gold. The museum is in close proximity to the Dungog and Barrington gold-fields, and many industrious men whose occupation has become precarious would turn their attention to these gold-fields if they could win sufficient gold to keep them going.

Expenditure,

Expenditure.

The amount expended on Technical Education during the year was £20,296 7s. 11d. Of this sum, £16,388 4s. 11d. was spent on the Technical College and Branch Schools, and £3,908 3s. on the Technological Museums. The cost to the State is at the rate of £3 4s. 9d. for each student enrolled, calculated on the average enrolment each term. The cost is, therefore, 2s. 1d. less per student than in 1894. The cost for each individual student is, however, only £2 14s. 8d.

Summary of Statistics.

Number of classes	198
Number of enrolment of students	7,071
Number of individual students	5,456
Average weekly attendance of individual students	3,942.3
Number of students examined	2,651
Number of students passed	1,788
Amount of fees received from students	£3,899
Number of visitors to Technological Museum	118,967
Number of visitors to Branch Museums in country	130,683

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

SYDNEY GRAMMAR SCHOOL.
(REPORT FOR 1895.)

Presented to Parliament pursuant to Sydney Grammar School Act of 1854, secs. 10 and 16.

Printed under No. 1 Report from Printing Committee, 21 May, 1896.

The Vice-Chairman of Board of Trustees to The Minister of Public Instruction.

Sir,

Sydney Grammar School, 1 April, 1896.

I have the honor to submit this Report of the proceedings of the Trustees and the progress of the School during the year 1895, in order that the same may be laid before His Excellency the Governor and the Executive Council, in accordance with the provisions of "The Sydney Grammar School Act."

Sir W. C. Windeyer was again elected Chairman of the Board, and acted in this capacity during the year, Mr. A. J. Cape being Vice-Chairman.

Two vacancies have occurred in the Board during the year—the first through Sir William Windeyer's appointment as Chancellor of the University, the other through the death of the Honorable Edward Combes, C.M.G. Dr. James Graham, M.L.A., was elected a Trustee in the place of Sir William Windeyer, who retains his seat *ex-officio*, and the second vacancy has been filled this year by the appointment of Mr. J. Russell French.

The average number of boys attending the School has been 368, the increase of the fees rendered necessary by the withdrawal of the special votes which the School has for many years received having probably been the cause of the reduction of the numbers of scholars.

The fees now charged are £4 per quarter for the Lower School, and £5 for the Upper School; these charges embracing the subscriptions needed for keeping up the athletic sports of the School.

Despite the addition to the funds thus obtained, it was found necessary to make a percentage reduction in the salaries of the masters, which was cheerfully accepted by the staff.

One master resigned his office in December, but no other changes have taken place.

The Trustees are pleased to be again able to express their satisfaction at the zeal and energy displayed by the Head Master and his colleagues, and at the success obtained by boys from the Grammar School at the University Examination held during the past year.

The Morehead Scholarship has been awarded to Mr. N. S. Pilcher.

The statement of the Income and Expenditure of the School for the past year is submitted herewith.

I have, &c.,

EDW. W. KNOX,
Vice-Chairman.

REPORT UPON THE SCHOOL EXAMINATIONS, DECEMBER, 1895.

UPPER SCHOOL.

A.—LANGUAGES.—The Upper School has been examined—on the classical side throughout in French, German, Latin, Greek, and in two special forms in English history; on the commercial side in English, history, geography, French, shorthand, handwriting, and book-keeping. The most noticeable feature on the classical side is the continuous decrease in the number of boys who study Greek, though the standard of knowledge, especially in the lower divisions, has been well maintained. As a compensation, there has been distinct and consistent improvement in the teaching of modern languages, notably in the teaching of German. In French the lower divisions have acquired a sound knowledge of the inflections, and the higher divisions of the syntax and vocabulary of the language. On the commercial side the handwriting and shorthand have received favourable comment, while in the upper division the English composition is undoubtedly better. There is more intelligence and more general interest in English literature.

B.—MATHEMATICS.—The Upper School has been examined throughout in arithmetic, geometry, and algebra. Division I has, in addition, been examined in trigonometry, mechanics, and geometrical conic sections. In the higher subjects the success of Waterhouse and Teece in the Senior Public Examinations is sufficient evidence of the quality of the work done. The geometry and trigonometry of the former and the algebra of the latter, shown in the School Examination, were unusually good.

The arithmetic throughout the School appears sound and methodical, though there is a tendency to sacrifice habit of thought to mechanical accuracy. In geometry the teaching of the text of Euclid has been thorough, while in the higher divisions some excellent work was shown in the riders. In the lower half of the School the valuable training in consecutive reasoning that original geometry gives is not sufficiently recognised, and it is urged that at least one-half of the time given to Euclid should in future be spent in easy deductions and variations of the propositions themselves.

The algebra is, perhaps, the weakest subject, as it is the most difficult. The questions were too often dealt with as individual "sums," and *not* as involving "principles"; the lessons of generalising, of dealing with abstractions, and of symmetrical arrangement of expressions were frequently missed, while in some divisions there was a great lack of mental alertness in deducting facts from statements correctly and even ingeniously arrived at. The book-work of the subject, moreover, is often neglected. On the principle that "conference maketh the ready man," more *oral* teaching should be done by way of inducing quickness of thought and habit of deductive reasoning, while a greater familiarity with the use of symbols may be the more readily inculcated.

LOWER SCHOOL.

In this School an attempt has been made during the year to reach the traditional standard, the existing one having been lowered by large promotions to the Upper School. The examinations have shown that this attempt has been too ambitious, and this School will have to be content next year with less but more thorough work.

The results obtained in Latin grammar, geography, history and arithmetic, and algebra have been good; but those in Euclid, Latin composition, and English were, on the whole, not so satisfactory. In the last subject, though the mechanical work was good throughout, and notably good in the lower forms, the need of more suggestive teaching was, in some of the forms, very apparent.

1896.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

UNIVERSITY OF SYDNEY.

(REPORT FOR 1895.)

Presented to Parliament pursuant to Act 14 Vic. No. 31, sec. 22.

Printed under No. 1 Report from Printing Committee, 21 May, 1896.

REPORT of the Senate of the University of Sydney for the year ended 31st December, 1895.

1. The Senate of the University of Sydney, in pursuance of the provisions of section 22 of the Act of Incorporation, 14 Victoria No. 31, has the honor to transmit the account of its proceedings during the year 1895, for the information of His Excellency the Governor and the Executive Council.

Matriculation.

2. The number of students admitted to Matriculation during the year was 103. The number of those who qualified themselves for Matriculation by passing the requisite examination was 314. Of these 117 passed the ordinary Matriculation Examination, 118 the Junior Public Examination, and 24 the Law Matriculation Examination, while 39 passed the Senior Public Examination, and 16 the Entrance Examination for Medicine and Science.

Annual University Examinations.

3. The numbers of students who attended and passed the annual examinations in December, 1894, and March, 1895, are shown in the following tables:—

Faculty of Arts.

	Candidates.	Passed.
First year examination	133	95
Second year examination	77	60
Third year examination	77	72

51 evening students and students of special subjects also passed in individual subjects.

Faculty of Law.

	Candidates.	Passed.
Intermediate examination	16	12
Final examination... ..	10	7

Faculty of Medicine.

First year examination	29	23
Second year examination	16	15
Third year examination	25	19
Fourth year examination	17	16
Fifth year examination	13	9

Faculty of Science.

First year examination	2	1
Second year examination	1	1

Department of Engineering.

First year examination	10	9
Second year examination	8	7
Third year examination	8	8

Attendance at Lectures.

4. The following table shows the numbers of students attending lectures during the year in the various faculties:—

Faculty of Arts (day), 199; (evening), 105; total	304
Faculty of Law	42
Faculty of Medicine	127
Faculty of Science	6
Department of Engineering	27
Total	506

Included are 80 women who attended in the Faculty of Arts, 8 in Medicine, and 3 in Science.

Degrees conferred.

5. The following degrees were conferred after examination:—

Master of Arts (M.A.):—Ruth Bowmaker, B.A.; Frederic Kellett, B.A.; John Macpherson, B.A.; Ella Wilson, B.A.; Clive Tennyson Lionel Yarrington, B.A.

Bachelor of Arts (B.A.):—Edith Jeannie Allen, Isabella Armstrong, Francis Egerton Barracough, Robert Henry Beardsmore, Isabella Esther Brodie, Walter Fitzmaurice John Burfitt, Jane Frances Combes, Thomas John Connor, John Aloysius Cullinane, George Synnott D'Arcy, Lizzie Dalmas, May Edith Daly, James Dennis, Alexander John Doig, John William Dunlop, Jane Eames, Jonathan Bevan Elkin, Millicent Violet Elliott, Ada Emily Evans, William George Finn, Charlotte Finney, Katherine Elizabeth Fletcher, George Acheson Gordon, Gavin Greenlees, James Shaw Griffith, Constance Elizabeth Harker, Revina Harvey, Robert Newburn Henderson, Evelyn M. Hill, Ernest Arthur Hodge, Amy Alice Hodgkins, Arthur Christian Holt, John Bruton Howard, Digby St. Clair Winder Hunt, Mary Alison Miles Hunter, Thomas Jones, Emily Clara Kennedy, Philip Kennedy, Frederick George Lane, Adam Stuart McCook, Fannie Elizabeth McDonald, John Gilbert McLaren, Arthur Joseph McNevin, Ethel May Mallarky, Henry Francis Maxwell, William David Mitchell Merewether, John James Morris, Duncan John Nelson, Edward Nettleship, Agnes Gertrude O'Brien, John Patrick Markham O'Donohue, James Bernard O'Neill, Joseph Charles Pepper, Alice Pritchard, Winnifred Dalton Purcell, George Redshaw, Norman de Horne Rowland, Gertrude Amy Roseby, Minnie Roseby, Lillie Agnes Rourke, David Scoular, John Bolt Sherlock, Kathleen Stonham, Alexander Thompson, Alfred James Lovell Vivers, Annie Waddell, Richard Arthur Wearne, Harold Walter Weigall, Charles Alfred White, Eleanor Madeline Whitfield, Joseph Whiting, William Williams.

Bachelor of Law (LL.B.):—Wyndham John Edward Davies, Alfred Chalmers Gill, Percy Reginald Higgins, John Barton Holme, Daniel Levy, Lewis Ormsby Martin, Broughton Barnabas O'Conor, Thomas Walker King Waldron.

Doctor of Medicine (M.D.):—Cyril Ernest Corlette, M.B., Ch.M.; Grafton Elliott Smith, M.B., Ch.M.

Bachelor of Medicine (M.B.):—Frederick Henry Cox, Henry St. Clair Fordyce, Joseph Albert Goldsmid, George Reginald Percy Hall, Michael O'Gorman Hughes, John William Jackson, Graham Ford Rutter, Ernest James Twemlow Spark, William Bradridge Studdy.

Master of Surgery (Ch.M.):—Henry St. Clair Fordyce, George Reginald Percy Hall, John William Jackson, Graham Ford Rutter, Ernest James Twemlow Spark, William Bradridge Studdy.

Bachelor of Science (B.Sc.):—Albert George Corbin, Norman John Dunlop.

Bachelor of Engineering (B.E.):—Civil Engineering—Robert Fleming Arnott, Joseph Henry Draper Brearley, Alexander Donald Craig, Walter James Doak, Clements Frederick Vivian Jackson, James Patrick Wood. Mining Engineering—James Thompson Dixon, Charles Warren Bowen Jenkins, Edward Sydney Simpson.

*Ad eundem Degree.*6. The following *ad eundem* degree was conferred in accordance with the provisions of the "*Ad Eundem* Degrees Act," 44 Vic. No. 22:—

Master of Arts (M.A.):—Archibald Henry Simpson, M.A., Christ's College, Cambridge.

Number of Degrees conferred.

7. The total number of degrees conferred during the year was thus 114, divided as follows:—M.A., 6; B.A., 72; LL.B., 8; M.D., 2; M.B., 9; Ch.M., 6; B.Sc., 2; B.E., 9.

8. The degrees conferred by the University from its foundation to the end of 1895 are:—M.A., 250; B.A., 793; LL.D., 23; LL.B., 50; M.D., 35; M.B., 91; Ch.M., 64; B.Sc., 23; M.E., 2; B.E., 32. Total, 1,363.

Honours at Degree Examinations.

9. The following honours were awarded at Degree Examinations:—

Faculty of Arts—B.A. Examination.

Latin—Class II:—Eleanor M. Whitfeld, N. de H. Rowland, D. J. Nelson, J. S. Griffith.

Class III:—Fannie Macdonald, D. Scoular.

Greek—Class I:—J. S. Griffith, N. de H. Rowland.

Mathematics—Class II:—W. F. J. Burfitt.

English—Class I:—Constance E. Harker, Minnie Roseby. Class III:—R. A. Wearne.

French—Class I:—Kathleen Stonham, Mary A. M. Hunter. Class II:—Fannie Macdonald, Ethel M. Mallarky.

German—Class II:—Kathleen Stonham, Mary A. M. Hunter.

Logic and Mental Philosophy—Class I:—N. de H. Rowland and Eleanor M. Whitfeld, *æq.*

Class II:—C. A. White, Gertrude Roseby, and Minnie Roseby, *æq.*

History—Class I:—J. Dennis, J. S. Griffith, Eleanor M. Whitfeld, Constance E. Harker, J. B. Elkin. Class III:—Mary A. M. Hunter, Minnie Roseby.

Geology and Palæontology—Class I:—W. F. J. Burfitt. Class II:—Millicent V. Elliott.

M.A. Examination.

Latin and Modern French Language and Literature—Class II:—Ruth Bowmaker, B.A.

Faculty of Law—LL.B. Examination.

Class II:—D. Levy, B.A.; L. O. Martin, B.A.; J. B. Holme, B.A.

Faculty of Medicine—M.B. and Ch.M. Examinations.

Class II:—G. R. P. Hall, B.Sc.; M. O'Gorman Hughes, B.A., B.Sc.; J. W. Jackson.

M.D. Examination.

Anatomy—Class I:—G. E. Smith, M.B., Ch.M.

Faculty

Faculty of Science, Department of Engineering—B.E. Examinations.

Civil Engineering—Class I:—C. F. V. Jackson and W. J. Doak, *æq.*, J. P. Wood. Class II:—R. F. Arnott.
Mining Engineering—Class II:—E. S. Simpson, J. T. Dixon.

Scholarships.

10. Scholarships were awarded as follows:—

- (a) At the Matriculation Examination.
Aitken Scholarship for General Proficiency—F. G. Griffiths.
Cooper Scholarship, No. II, for Classics—D. P. Evans-Jones.
Barker Scholarship, No. II, for Mathematics—F. G. Griffiths.
Lithgow Scholarship for Modern Languages—N. G. Pilcher.
Horner Exhibition for Mathematics—Gained by F. G. Griffiths, but awarded to W. G. Forsyth, F. G. Griffiths being the holder of two Scholarships.
- (b) At the First Year Examination in Arts.
Cooper Scholarship, No. III, for Classics—H. E. Whitfeld.
George Allen Scholarship for Mathematics—S. D. Chalmers.
- (c) At the Second Year Examination in Arts.
Cooper Scholarship, No. I, for Classics—G. W. Waddell.
Barker Scholarship, No. I, for Mathematics—D. G. Stewart.
- (d) At the B.A. Examination.
Frazer Scholarship for History—J. Dennis, J. S. Griffith, *prox acc.*
- (e) At the Intermediate Examination in Law.
G. Wigram Allen Scholarship for General Proficiency—T. R. Bavin.
- (f) At the First Year Examination in Medicine.
Renwick Scholarship for General Proficiency—F. P. Sandes.
- (g) At the Third Year Examination in Medicine.
John Harris Scholarship for Anatomy and Physiology—G. P. Dixon.
- (h) At the First Year Examination in Science.
Levey Scholarship for Chemistry and Physics—F. P. Sandes.
- (i) At the Second Year Examination in Science and Engineering.
Deas-Thomson Scholarship for Physics—T. P. Strickland.
- (j) Science Scholarship offered by Her Majesty's Commissioners for the Exhibition of 1851—J. A. Watt, M.A. (Geology).

Prize Compositions.

11. The awards made for Prize Compositions were:—

Wentworth Medals for English Essays—subject: "Popularity as a test of literary excellence."
Prize for Graduates—F. V. Pratt, B.A.; Prize for Undergraduates—J. S. Griffith.
Professor Anderson's Medal for the best essay on a philosophical subject—subject: "The meaning and validity of the rights of property"—J. Barron, B.A.

First Classes at Annual Examinations.

12. The following students were placed in the first class in Honours at the annual examinations, other than the final examinations for degrees:—

Faculty of Arts.

First Year Examination:—Latin—H. E. Whitfeld, H. S. Dettmann. Greek—H. E. Whitfeld, H. S. Dettmann, E. Hobbs. German—H. S. Dettmann. Mathematics—S. D. Chalmers, H. S. Dettmann and W. W. Monahan *æq.*, H. E. Whitfeld, B. Jarvie, E. Warren. Chemistry—E. Warren. Physics—E. Warren.
Second Year Examination:—Latin—G. W. Waddell, E. M. Mitchell. Greek—G. W. Waddell, E. M. Mitchell. French—Edith A. Bunting, Florence J. Murray, Hortense H. Montefiore. English—Ada Beardmore. Mathematics—D. G. Stewart, K. ff. Swanwick. Logic and Mental Philosophy—Elizabeth I. Taylor and K. ff. Swanwick, *æq.* History—Edith L. Doust, Florence J. Murray, A. H. Yarnold.

Faculty of Medicine.

First Year Examination:—Chemistry—F. P. Sandes, E. Ludowici. Physics—F. P. Sandes.
Second Year Examination:—Passed with high distinction—J. Macpherson, B.A.

Faculty of Science.

First Year Examination:—Inorganic Chemistry—J. M. Petrie (unmatriculated).

Department of Engineering.

First Year Examination:—Applied Mechanics—W. A. Shortland. Geometrical and Mechanical Drawing—W. A. Shortland.
Second Year Examination:—Geology—J. H. D. Brearley. Physics—T. P. Strickland.

Annual Prizes.

13. Annual Prizes were awarded as follows:—

University Prize for Physiography—D. P. Evans-Jones. Norbert Quirk Prize for Mathematics (Second Year)—D. G. Stewart. Professor Anderson's Prizes for Logic and Mental Philosophy—Second Year, Elizabeth I. Taylor and K. ff. Swanwick, *æq.*; Third Year—N. de H. Rowland and Eleanor M. Whitfeld, *æq.* Professor Haswell's Prize for Zoology—W. G. Woolnough, *prox acc.* W. F. J. Burfitt. Collie Prize for Botany—W. F. J. Burfitt. Smith Prize for Physics—W. F. J. Burfitt. Slade Prize for Practical Chemistry—N. Reid. Slade Prize for Practical Physics—W. G. Woolnough. Professor David's Prize for Physiography—F. G. Griffiths, Mabel Graham.

Bursaries.

Bursaries.

13. The following were awarded, each consisting of a payment to the student of £50 per annum, or in the case of a half-bursary £25 per annum, for three years, together with exemption from the payment of lecture fees :—

Burdekin Bursary (one half).
 Hunter Baillie Bursary No. 1.
 J. B. Watt Exhibition.
 Walker Bursary No. 1 (one half).
 Walker Bursary No. 2 (one half).
 Walker Bursary No. 3 (one half).
 Walker Bursary No. 5.

The number of students permitted to attend lectures without paying fees was 82, including 25 State bursars and 24 holders of University bursaries. The payment to bursars amounted to £845, and to scholars £1,003.

Forty-one students of State training schools attended at a reduced scale of fees.

Public Examinations.

14. The Junior Public Examination was held in June in Sydney and at the following local centres :—

New South Wales.—Adelong, Albury, Araluen, Armidale, Ballina, Bathurst, Bega, Berrima, Boggabri, Bourke, Bowral, Braidwood, Broken Hill, Camden, Condobolin, Cooma, Cootamundra, Cowra, Deniliquin, Dubbo, Dungog, Glen Innes, Goulburn, Grafton, Grenfell, Hay, Inverell, Katoomba, West Kempsey, Kiama, Kurrajong Heights, Lismore, Lithgow, Maclean, West Maitland, Mittagong, Moree, Mount Victoria, Mudgee, Newcastle, Nowra, Orange, Parkes, Parramatta, Picton, Plattsburg, Port Macquarie, Queanbeyan, Richmond, Scone, Singleton, Sunny Corner, Tamworth, Taree, Tenterfield, Ulmarra, Wagga Wagga, Wentworth, Windsor, Wingham, Wiseman's Ferry, Wollongong, and Young.

Queensland.—Brisbane, Bundaberg, Ipswich, Maryborough, Rockhampton, Toowoomba, and Townsville.

There were 1,398 candidates, and 847 were successful.

15. The Senior Public Examination was held in November, concurrently with an examination for Matriculation Honors and Scholarships in Sydney and at the following local centres :—

New South Wales.—Armidale, Ballina, Bathurst, Bega, Goulburn, Grafton, East Maitland, Mudgee, and Parramatta.

Queensland.—Brisbane, Ipswich, Maryborough, and Toowoomba.

There were 142 candidates, of whom 112 were successful.

16. The prizes for general proficiency in the Senior and Junior Examinations were awarded as follows :—

Seniors.

John West Medal and Grahame Prize Medal—

Richard Clive Teece, Sydney Grammar School.

Fairfax Prize for female candidates—

Ethel Jane Lane-Latham, "Ascham," Darling Point.

Juniors.

University Prize for boys—

Claude Seccombe Browne, Sydney Grammar School; *prox. acc.* George Napoleon Woodd, Rockhampton Grammar School.

Fairfax Prize for girls—

Theodora Joanna Emilie Copas, Maryborough Girls' Grammar School; Florence Gardiner Middleton, Miss E. C. Baxter's School; equal.

17. Three examinations of candidates for the Civil Service were held during the year. At these there were 216 candidates, of whom 91 passed.

18. Three Law Examinations were held, similar and equal to that prescribed for Matriculation, for candidates for Articles of Clerkship with Solicitors. At these there were 37 candidates, and 24 passed.

Meetings of Senate.

19. The Senate held eleven ordinary meetings, one adjourned meeting, and three special meetings, in addition to the annual commemoration, and three meetings of the Conjoint Board consisting of the Senate of the University and the Board of Directors of the Prince Alfred Hospital.

The attendances of the various Fellows were as follows :—

Windeyer, the Hon. Sir William C., Kt., M.A., LL.D., Chancellor	...	13
MacLaurin, the Hon. H. N., M.A., M.D., LL.D., M.L.C., Vice-Chancellor	...	17
*Anderson, H. C. L., M.A.	10
Backhouse, His Honor Judge, M.A.	19
Barton, Edmund, M.A.	6
Butler, Professor, B.A.	16
Cobbett, Professor, M.A., D.C.L.	16
Gurney, Professor, M.A.	18
Jones, P. Sydney, M.D.	15
Knox, Edward W.	17
Liversidge, Professor, M.A.	14
†Manning, the Hon. Mr. Justice, M.A.	3
O'Connor, the Hon. R. E., M.A., M.L.C.	7
†Oliver, Alexander, M.A.	5
Renwick, the Hon. Sir Arthur, B.A., M.D., M.L.C.	16
Rogers, F. E., M.A., LL.B., Q.C.	4
Russell, H. C., B.A., C.M.G., F.R.S.	13
Stephen, Cecil B., M.A.	15
Stuart, Professor T. P. Anderson, M.D.	16
Teece, Richard, F.I.A.	9

* Elected April 27, 1895.

† Absent on leave.

Chancellor.

Chancellor.

20. The Senate has to record, with deep regret, the death, in the month of February, of the Hon. Sir William Montagu Manning, Kt., LL.D., K.C.M.G. Sir William Manning was the senior Fellow of the Senate at the time of his death, having been elected in 1861 in the room of William Charles Wentworth. He held the office of Chancellor for seventeen years, having been originally elected to that office in 1878, and re-elected at intervals of three years subsequently. The following resolution was unanimously passed by the Senate on the 4th March:—

“That the Senate places on record its deep sense of the loss it has sustained by the death of the Chancellor, the late Sir William Montagu Manning, Kt., K.C.M.G., LL.D., M.L.C., and expresses its full recognition of the exceptional service rendered to the University by him during the thirty-four years he was a Member of the Senate, and its Chancellor continuously for the last seventeen years of that period.”

21. At a meeting held on the 11th March, Sir William Charles Windeyer, M.A., LL.D., Kt., was unanimously elected Chancellor of the University in the room of the late Sir William Montagu Manning, for a period of three years.

Vice-Chancellor.

22. The annual election to the office of Vice-Chancellor took place in the month of April, and resulted in the election of the Hon. Henry Norman MacLaurin, M.A., LL.D., M.D., M.L.C.

Election to vacancy in Senate.

23. In order to fill the vacancy on the Senate caused by the death of Sir William Montagu Manning, a convocation of electors was held on Thursday, the 11th of April, at the University, a ballot being taken on Saturday, the 27th of April, at the University Chambers, Phillip-street, which resulted in the election of Henry Charles Lennox Anderson, Esquire, M.A.

Leave of Absence.

24. Leave of absence from the meetings of the Senate was granted as follows:—

To Mr. Alexander Oliver for a period of three months, and to Mr. Justice Manning for a similar period, in consequence of ill health.

25. Leave of absence from his duties for the year 1896, has been granted to Professor Liversidge, Professor of Chemistry, to enable him to visit the principal centres of scientific thought, and to observe new methods of instruction. During his absence, the lectures on chemistry will be delivered by Mr. F. B. Guthrie, F.C.S., with the title of “Acting Professor of Chemistry,” Mr. J. A. Schofield, F.C.S., A.R.S.M., the Senior Demonstrator in Chemistry, being in charge of the Laboratory.

26. Leave of absence for the first two terms of 1896 has also been granted to Professor Scott, Professor of Greek, on account of illness resulting from overwork, which rendered it necessary that he should have leisure from his duties for a period. During his absence the lectures in Greek will be delivered by Mr. F. Lloyd, B.A., LL.B., at present Assistant Lecturer in Latin, while Mr. Lloyd’s duties will be performed by Mr. J. B. Peden, B.A., Vice-Warden and Tutor at St. Paul’s College.

Endowment.

27. The annual additional endowment granted by Parliament was further reduced for the year 1895 by the sum of £1,000.

Women’s College.

28. By the election of Sir William Windeyer to the office of Chancellor of the University, he became ex-officio Visitor of the Women’s College within the University, and consequently his membership of the Women’s College Council as a nominee of the Senate became vacant. Sir Arthur Renwick, Kt., B.A., M.D., M.L.C., was elected a member of the Women’s College Council for the unexpired term of Sir William Windeyer’s office.

29. In the month of July the period of election of Sir Arthur Renwick and Mr. C. B. Stephen, M.A., as Members of the Women’s College Council expired, and those gentlemen were re-elected for a period of two years from July 17th.

Staff Appointments, &c.

30. In April, Mr. E. F. Pittman was reappointed Lecturer in Mining for the year 1895, and in December, 1895, he was appointed to the same office for the year 1896.

31. In May, Dr. G. E. Twynam resigned the office of Lecturer in Clinical Surgery, in consequence of his intention to leave the Colony, and of his resignation as Honorary Surgeon at the Prince Alfred Hospital. Dr. Charles P. B. Clubbe, who had been appointed Honorary Surgeon to the Prince Alfred Hospital in the place of Dr. Twynam, was elected to the office of Lecturer in Clinical Surgery in his stead.

Macleay Bequest for Bacteriology.

32. The Senate having carefully considered the information supplied by the principal Universities of Europe and America on the position of Bacteriology in their Curricula, and having ascertained that the subject of Bacteriology does not exist as a separate compulsory course in any of the Universities sending information, and having regard to the inexpediency of burdening the students with additional compulsory courses, and to the cost of maintenance and first equipment of a Bacteriological Laboratory, decided to return the sum of Sir William Macleay’s bequest, £11,600, with accrued interest, to the executors of his will.

This has been done, and it is understood that the executors, under an order of the Court of Equity, have handed the bequest to the Linnean Society, in accordance with the wishes of the testator in the event of the University declining the bequest.

Dalton Bequest.

33. Mr. Samuel Yardley, C.M.G., Secretary to the Agent-General for New South Wales in London, has been appointed to act with the existing Trustee, Mr. E. C. Haddon, as a Trustee of the Dalton Bequest for Scholarships, in memory of the Rev. Dr. Woolley, first Professor of Classics in the University. The estate is at present subject to an annuity of £75 per annum, but the balance of income will be paid to the University, and regulations will be made for the award of the scholarships.

St.

St. Andrew's College.

34. The Vice-Chancellor of the University (the Hon. Dr. H. N. MacLaurin), and H. C. L. Anderson, Esq., M.A., have been nominated by the Senate to act as Trustees of the sub-grant of land to St. Andrew's College, with two other Trustees nominated by the Council of the College, and a fifth Trustee to be elected by the four so nominated.

St. Paul's College.

35. The Chancellor of the University (the Hon. Sir William C. Windeyer) and C. B. Stephen, Esq., M.A., have been nominated by the Senate to act as trustees of the sub-grant of land to St. Paul's College with the Hon. Dr. Norton and the Rev. Canon Kemmis, who have been nominated by the Council of St. Paul's College, and F. B. Wilkinson, Esq., M.A., who has been appointed by the four trustees so nominated.

Medical Classes.

36. The University of Edinburgh has granted an application from this University for the recognition of its classes in the case of men and women students who desire to graduate in the University of Edinburgh.

Queensland Examinations.

37. At the request of the Queensland Department of Public Instruction, the University conducted an examination of candidates for exhibitions to Universities granted by the Government of Queensland, and also an examination of teachers seeking admission into Class I under that Department.

University Extension.

38. The report of the University Extension Board, presented to the Senate in the month of December, contains the following statistics of work done in New South Wales:—

Number of centres at which lectures were delivered	14
Number of new centres	7
Number of courses	14
Lectures	89
Total attendance	578
Number of students examined	63
Number of certificates issued	49

39. The annual statements of receipts and expenditure, and of the position of the various trust funds of the University at the 31st of December, duly certified by the Auditor, Mr. J. C. Dibbs, are appended to this report.

H. E. BARFF,
Registrar.

RECEIPTS and EXPENDITURE of the University of Sydney for year ending 31st December, 1895.

1896.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

EDUCATION.

(REPORT OF THE NAUTICAL SCHOOL-SHIP "SOBRAON" FOR THE YEAR ENDED 30 APRIL, 1896.)

Printed under No. 10 Report from Printing Committee, 23 July, 1896.

The Commander and Superintendent, N.S.S. "Sobraon," to The Under Secretary of
Public Instruction.

Sir, Nautical School-ship "Sobraon," Sydney, New South Wales, 18 June, 1896.

In accordance with the 14th clause of the Regulations, I beg to submit my Annual Report upon the N.S.S. "Sobraon" for the year ended the 30th April last, for the information of the Minister of Public Instruction. This will probably be my last Report, and I therefore venture to extend it beyond the usual limits in order to explain more fully than hitherto the nature of the work done by the Institution.

PART I.

FIRST STAGE—THE BOYS ON THE SHIP.

2. The period under review comprised the twenty-ninth year since the establishment's inauguration in 1867. The Institution is the oldest established reformatory in Australasia. The twelve months just passed formed a busy time in the ship's history, the admissions numbering 197 and the discharges 153, while the total enrolment rose to 560, the highest number yet reached. On the other hand the cost per head was lower than that of any preceding year, being £21 7s. calculated on the daily average on board—a substantial reduction on the previous year's cost of £3 3s. 9d. per boy. Full particulars of the expenditure will be found in Table H. Twenty-one years ago the cost was £41 2s. 11d., or nearly double the present charge. Notwithstanding this large reduction the boys are infinitely healthier, better fed, better clothed, and enjoy more advantages than was formerly the case.

3. There has been no serious illness, and no deaths among the 560 enrolled. Some skin complaints and other maladies, peculiar to the badly nourished and neglected class we receive, occurred, but at the close of the year there was no one in hospital. In twenty-nine years there have been only twelve deaths amongst over 3,400 inmates. The following report from the receiving officer gives an idea of the condition in which many new comers are received:—"Body covered with spots; filthy dirty and neglected; sickly appearance; clothes ragged and dirty; bruises caused by being kicked and beaten at home."

4. The antecedents of new comers were distinctly worse than usual. No less than 110 had been at least twice before the Police Courts; twenty-nine had been ineffectually subjected to institutional treatment elsewhere; twenty-seven had been three times before the Courts, while fifteen had four, and two had six previous convictions. Of the remainder, the greater number owned to pilfering and other objectionable habits. The care of over 400 such youths, both by day and by night, naturally entails much anxiety and constant watchfulness. It is however only fair to the youngsters to report that their general conduct during the year was good. They proved readily amenable to discipline, appreciated the arrangements made for their comfort and training, and maintained a healthy public opinion amongst themselves, which promptly checked disorder and enabled punishment to be reduced to a minimum. No abscondings took place, and no one even attempted to run away, although the lads enjoy a large amount of liberty. In its freedom from abscondings the "Sobraon" holds an unique position amongst reformatories and kindred institutions.

5.

5. The boys have been kept busily occupied, and the following is a fair estimate of the industrial labour performed:—

	£	s.	d.
Sailmaker's Work.—Making 120 hammocks, at 3s.	18	0	0
„ 20 clothes-bags, at 4s.	4	0	0
„ Quarter-deck awning	14	0	0
„ 72 large pudding bags, at 1s.	3	12	0
„ 2 mast coats, at 15s.	1	10	0
„ 1 poop awning	10	0	0
„ hammock clues, lashings, &c.	8	8	0
General repairs to awnings, sails, hammocks, bags, tents, screens, covers, hose, fenders, &c.	200	0	0
Carpentry.—General repairs decks, boats, pumps, ship	120	0	0
Glazing, sash repairs	10	0	0
Tailoring.—Making and repairing clothes, lanyards, &c.	120	0	0
Painting.—Painting ship and boats	180	0	0
„ masts, yards, booms... ..	20	0	0
„ works on island	10	10	0
Riggers' Work.—Tarring, scraping, setting up rigging, repairs to boats' gear, and general seamen's work	200	0	0
Gardening.—Planting, cutting grass, keeping trees, plants, flowers in order... ..	50	0	0
Cooking.—Preparation of meals, stewarding, waiting, &c.	250	0	0
Musician's Department.—Work in connection with keeping instruments clean and in order; copying music; services of band when playing out of the ship			
Laundry.—All this work done by the boys, each of whom washes his own clothing (8 pieces) weekly; besides blankets, serge clothes, hospital clothes, &c., 180,000 pieces, at 1d.	750	0	0
General Work.—Coaling ship weekly	52	0	0
Washing and cleaning decks daily	150	0	0
Lamp trimming and cleaning	60	0	0
Cleaning and keeping in order boats, play-grounds, dormitory, sheds, swimming baths, ship's hull, rifles, swords, aviaries, landing places, hold, store-rooms, &c.	150	0	0
Work on steam launch, and in connection with supplying fresh water	100	0	0
Total value of industrial labour (apart from value of school work, drill, keeping watch, and other training)	£2,622	0	0

6. It will be seen, therefore, that there is much work done by these lads, who come aboard for the most part unused to exertion and opposed to cleanliness or labour of any kind. But, in addition, a great deal is done in other ways, so that there is not much idling between getting up at 5 a.m. (half-hour later in winter) and retiring to bed at 8 p.m. School work is conducted so that every boy spends alternate days under the teachers. Many lads come aboard quite ignorant, a large proportion not being able to sign their names. Amongst these latter were, last year, overgrown fellows of 15. Added to this difficulty were the numerous changes caused by almost daily changes through boys admitted and discharged. In spite of these disadvantages good work has been done by Mr. Stayner, the chief schoolmaster, and his two competent assistants, Messrs. Leer and Humphries. The last inspection by Mr. Willis, Metropolitan Inspector of Public Schools, which extended over three days, produced the following gratifying results:—“Organization, very good; order, faultless; discipline, excellent; drill, excellent; methods of instruction, appropriate and effectively applied; general management, very satisfactory.—(Signed) M. WILLIS, Inspector.”

7. Drill, in its various branches, has been vigorously carried out, and has produced good results both morally and physically. As shown above drill was characterised as “excellent” by the Inspector. Swimming has been systematically taught in the capacious, well-filled swimming bath, situated on the ship's play grounds, and every boy who left apprenticed was able to swim. This was turned to good account by a young man who had been apprenticed from the ship to Mr. Crick, and who, at considerable risk, succeeded in rescuing a man from drowning under circumstances of much bravery. Mr. Crick has taken steps to bring the matter under the notice of the Government and of the Royal Humane Society. He writes:—“The young man, Edward Shannon, referred to in the newspapers, was apprenticed to my father at Wellington four years ago and is still there. He gave great satisfaction all through. It is to your training of this lad that James owes his life, and it is indeed a case which should be brought under the notice of the Royal Humane Society. It would also be an incentive to all the other lads to follow in his footsteps; and also a gratification to you to know that the lad has turned out a brave, manly, and hard-working young man.” Shannon's letter to me says:—“I can only thank you for the position I am in to-day. When I first went to the N.S.S. ‘Vernon’ I could not swim but soon learned. I must not forget to thank you for the good home you got me. . . I hope all the boys will take my advice, and I am sure that you will make men of them the same as you did of me.”

8. The mark and classification system continues to work well. Deserving boys soon earn positions of trust, and become of use in assisting the officers to preserve discipline and preventing misconduct. We are thus enabled to dispense with a large staff, and the numerical strength of officers is small as compared with that elsewhere. We have twenty-three officers to control the 407 boys on the ship; this is one officer to eighteen boys. In Great Britain, the largest reformatory is at Red Hill, where there are thirty-three officers to 291 boys, a proportion of one to nine; while according to the latest returns of Home reformatories, there were 440 officers to 4,076 boys, a proportion of one officer to nine boys. It will be seen therefore we only have one-half the number of officers deemed necessary in the old country.

9. Recreation has been carefully carried out. It has formed quite as important a part in our reformatory scheme as any other portion of it. Rewards for good conduct, and deprivation of privileges for bad, form our principal disciplinary methods, and corporal or cellular punishment is reduced to insignificant

insignificant proportions. The Glee and Athletic Clubs go on improving. The Swimming and Cricket Clubs also make good progress. The latter played against some ten outside clubs during the season and were successful in nearly every match. The picture gallery and museum specimens have been added to, and the reading room has been kept well stocked with magazines, illustrated papers, and the daily newspapers. Several additions have been made to the library which now contains over 1,000 volumes. The aviaries and garden are well stocked, and the boys have many birds and animals entrusted to their keeping. These comprise dogs, parrots, pigeons, canaries, and other birds, guinea pigs, an emu, a kangaroo, &c. In not one single instance has cruelty been shown by the boys to their dumb companions. Frequent trips ashore and harbour excursions take place, and the "Sobraon" "blue jackets" are no strangers to the Art Gallery, parks, Museum, and other public places of interest.

PART II.

THE SECOND STAGE.—APPRENTICESHIP.

10. Although all boys committed are under my legal guardianship until they attain the age of eighteen, it does not follow that they are confined to the ship for the whole of the time. The Act very wisely gives power to apprentice them to some useful occupation after a fair measure of reform has been attained by the reformatory treatment aboard. By this the country is relieved of the cost of their maintenance for the major portion of the period for which they are under State control, while at the same time a wholesome period of modified restraint intervenes between absolute confinement and unrestricted liberty. Moreover, the boys acquire the knowledge of some useful occupation, which will enable them to earn their livelihood when they become free from control at the age of eighteen. The wages paid by the employers is banked until that age, so that when their apprenticeship terminates they have sums to their credit ranging from £40 downwards to give them a start in life.

11. During the past six years nearly £11,000 has been paid in this way, representing the earnings of boys who have got into the second stage of the ship's system. Probably over six times that amount represents the value of clothes, board and lodging, also earned by them and provided by their masters. At the close of the year there were 390 boys in the apprenticeship stage, many of whom had been several years in their situations. The daily average of apprentices amounted to 380 during the twelve months, and every one has been kept under supervision. It could not, of course, be expected that all should have turned out well. As a matter of fact, some did very badly, and some had to be brought back to the ship for a further period of discipline. But the great majority showed that substantial reform had taken place, and the "good reports" reached the most satisfactory percentage of 93 of the whole. Amongst these latter were several lads who, prior to committal to the ship, had experienced, four, five, and even more convictions.

12. Perhaps I might be allowed to quote from amongst the more recent reports in my possession, omitting the boys' names for obvious reasons.

Mr. J. Boyd, of Bathurst, writes of two apprentices:—"They are very good lads; in fact, I do not know lads in the district like them. They are a pronounced success, and it would, I assure you, be difficult to find more industrious or better conducted boys. They have not cost me a moment's trouble or anxiety since they came." These lads have substantial sums to their credit.

Mr. Ogilvie, J.P., of Devlin Siding, says:—"I am very well satisfied with him; he has behaved himself really well. Wages paid to his account, £9 8s. 6d."

Mr. Fenwick, J.P., of Narrabri, states that his apprentice "is one of the hardest working, honest, cleanly lads" he has ever come across.

Mr. Rosler, J.P., of Henty, writes:—"He has conducted himself entirely to my satisfaction. He is an honest, obedient, and useful boy, and, judging from his behaviour, I do not hesitate to say that the 'Sobraon' system is all that could be desired. If there is a possibility of reforming a boy he will be reformed."

Mr. J. Kelly, of Shellharbour:—"He is in good health and doing well. He is very attentive and obedient, and I have no complaints to make. I do not hear complaints about any of your boys about here. He has £33 to his credit."

Mrs. Foley writes from Candelo:—"He is conducting himself properly and has £37 10s. paid into the bank for him."

Mr. Hickey, J.P., of Coonamble:—"I have nothing to complain of P.'s conduct in any way; he has conducted himself satisfactorily."

Mr. P. Brady, of Manilla:—"He is a very useful lad and I am well satisfied with him. His bank account amounts to £19 18s. 3d. Will you kindly pick out another boy for me."

Mr. G. Cooke, of Alstonville:—"Well satisfied with his conduct. He has grown into a very strong lad. There is now £7 10s. to his and your credit."

Mr. F. Jensen, of Exeter, gives his apprentice a good character, and reports £26 9s. to the lad's credit.

Mr. M. O'Neill, of Calderwood, writes:—"He has conducted himself well. £16 2s. 9d. has been paid to his and your credit."

Mr. H. Love, of Holly Mount:—"A very good boy in every way. I have no fault to find with him. £2 10s. to his credit."

Mr. Mooney, of Fig Tree:—"My apprentice has behaved himself in every way to my satisfaction."

Mr. Mitchell, of Milfield:—"I am well satisfied with him. £20 wages."

Mr. J. Kelly, of Popran:—"Is doing very well and is conducting himself. There is £15 6s. in the bank for him."

Mr. Thurgood, of Erskineville:—"He has been of excellent character, and has been very obedient and of no trouble in any way whatever. He has £13 8s. to his credit."

Mr. H. H. Cooke, J.P., of Parkes:—"Has conducted himself very well. I am quite satisfied with him. The lad R., apprenticed 4 miles from me, is also getting on very well. His master expresses himself quite satisfied with the boy, who seems happy and comfortable."

Mr. J. Walker, of Wattamolla:—"He is a good, useful lad, obedient, and does his work well £28 in the bank."

Mr.

Mr. Parker, of Mittagong :—"D. has been a good boy and it has been the making of him. He is now out of his time. I should like to get another boy, and I would get D. to take him. £14 6s. to his credit."

Mr. J. Byrne, of Attunga :—"He is a first-class lad. You could not wish to get a better anywhere."

Mr. G. Curry, J.P., Cootamundra :—"I have much pleasure in informing you that the boy has conducted himself well—a real good boy."

Mr. Burnside, of the Union Club, Sydney :—"He has conducted himself very well indeed; he does his work well and willingly. £8 11s. to his and your credit."

Mr. A. M'Intyre, of Wardell, writes :—"He attends to his duties in a most honest and intelligent manner. I have no complaints to make against him whatever. £4 17s. to his account."

Mr. M'Reynolds, of Yass, who has been very successful with numbers of our boys during the past eighteen years, writes :—"He is doing well and giving every satisfaction. Wages, £9 10s. banked."

Mr. J. Selwin, of Winton :—"The lad has enjoyed excellent health and his conduct has been good."

Mr. Robinson, of Black Ranges :—"I am very well satisfied with him; he is doing very well, and seems very contented."

Mr. Weingarth, of Hickey's Creek :—"He is getting on very well, and seems very willing to do anything required."

Mrs. Boxsell, of Sea View :—"Behaved himself very well; he has been all that I could desire him to be."

Mr. Chittick, of Mount Brandon :—"He has been very good. £4 10s. is now to his credit."

Mr. Carey, of Blandford :—"I am happy to state that he has conducted himself. £6 to his credit."

Mr. Bryen, of Byron Bay :—"Is a splendid lad. I do not think you could have sent me a better boy. £7 11s. to his credit."

Mr. Chase, J.P., Walgett :—"Pleased to report that he has conducted himself well. £18 in bank."

Mr. Hemsford, of Leichhardt :—"He is behaving very well and gives every satisfaction."

Mr. Folbigg, of Chatsworth :—"Conducts himself well. £12 in the bank."

Mr. Barber, of Kiandra :—"He is a very good boy. I have no fault to find with him."

Mr. Bayliss, of Bathurst :—"Has conducted himself very well."

Mr. Wettren, of Henty :—"He has behaved to my satisfaction."

Mr. Beach, of Ballina :—"I cannot complain of him in any way."

Mr. Noble, of Tintenbar :—"He has conducted himself very well."

Mr. Wilson, of Sherbrooke :—"Has conducted himself to my satisfaction."

Mr. Tatton, of Robertson :—"I have no fault to find or complaint to lay against him."

Mr. Ellis, of Vere :—"Both boys are doing well and are obedient; never cause to be strict with them."

Mr. Heffernan, J.P., Moggendowra :—"Conduct good. £34 to his credit."

Mr. Somerville, of Jasper's Brush :—"He has been with us for three years; we have always found him a truthful, honest, obedient, and good-natured boy."

Mr. Phelan, of Attunga :—"He is a very obedient, good boy. There is another very good boy near me."

Mr. Cantwell, of Tintenhull :—"I like him very well; he is very obedient and anxious to learn."

Mr. Killen, of Dunoon :—"He is very well conducted and is getting along well."

Mr. Grey, of Terrara :—"I have no fault to find with him, and he seems quite contented and happy. Hughes' and Spinks' boys are all right, and are in very good homes."

Mr. North, of Big Hill :—"He is trying his best and I have nothing to complain about."

Mr. H. Wilson, of Wiseman's :—"The boy's conduct good. £36 to his credit, which his father was very anxious to get."

Mrs. Sands, of Grafton :—"He is a very good boy. I never heard any complaint of him yet. He seems very happy, and sings and whistles all day long. Other boys about here are—J.S., a very good, hardworking boy; J.M'C., a good, honest boy; J.G., a good boy; T.L., a good boy. So far as I know about 'Vernon' or 'Sobraon' boys, they are far better brought up than some living with their own parents,—they all have good manners."

Mr. Mackie, of Rockley :—"He is a very willing and well-behaved boy and takes an interest in everything about the place. I am more than satisfied with him."

Mr. Kempton, of Dapto :—"A very good boy. £3 14s."

Mr. Binney, of Moss Vale :—"He has conducted himself satisfactorily. £2 2s. in the Government Savings' Bank."

Mrs. Egan, of Warren :—"A very good lad, well-behaved and obedient. £16 in bank."

Mr. Taulor, of Gulargambone :—"I am very proud to inform you he is everything that could be desired,—obedient, trustworthy, and always anxious to make improvement. He has to his credit £9 16s. in the Savings' Bank."

Mr. Eddy, of Inverell :—"He is getting on very well and he will be an able man. £7 16s."

Mr. M'Cartney, of Corowa :—"Has conducted himself very well; attentive to his work, and gives satisfaction."

Mr. Bennett, of North Creek :—"He has conducted himself in a most satisfactory manner. £2 2s. in the bank."

Captain Sale, of s.s. "Macgregor," writing from Esperance :—"I am glad to be able to report favourably upon his behaviour since he came under my charge."

Mr. Lyons, of Mudgee :—"He has conducted himself very well. I have paid into the bank £8 8s. 4d."

Mr. Stockman, of Burrumbuttock :—"The boy has behaved himself very well."

Mr. Bourke, of Cobbora :—"He has proved very obedient and willing and is growing very strong. £3 to his and your credit."

Mr. Jenkins, J.P., of Buckinbong :—"The lad is giving every satisfaction I am pleased to say."

Mr. Travers, of Brodie's Plains :—"He has conducted himself in a satisfactory manner."

Mr. Summerfield, of Kiama :—"He has conducted himself well. Amount banked for him £6. The only other boy in our immediate neighbourhood is F., who seems very content and comfortable."

Mr. Batt, Hill Top :—"Behaved very well. £5 14s. to credit."

Mr. Jones, of Parkes :—"Has behaved very well. £3 8s. in bank."

Mr.

Mr. Palmer, of Lismore:—"I am very glad to be able to report that he has given me every satisfaction."

Mr. Ditchfield, of Eida Vale:—"I must say that I am very well pleased with him. He has £2 2s. banked."

Mr. Caldwell, of Wagga Wagga:—"The boy has been behaving very satisfactorily. £3 7s. in the local Savings Bank."

Mr. Farming, of Casino:—"He has conducted himself well. £9 to his and your credit in the bank."

Senior-sergeant M'Donald reports of four apprentices:—"Their masters give them a good character. They have a fine healthy appearance and are well treated. The wages to their credit in the Government Savings Bank is:—R., £11 10s. 9d.; C., £3 2s.; E., £12 0s. 6d.; and H. £9 14s. 4d."

Sergeant Draper, of Casino:—"P. is giving every satisfaction and seems perfectly happy. £9 paid."

Constable Kritsch, of Nyngan:—"W. is well satisfied with his position and has no complaints. Mr. Hodge says the boy conducts himself exceedingly well."

Constable Evans, of Cootamundra:—"F. is well satisfied with his master, who gives him a good character and is satisfied with him. F. has every appearance of being well treated."

Constable M'Laughlin, of Grong Grong:—"M'A. is conducting himself well and is contented. £10 to his credit."

Sergeant Netterfield, of Port Macquarie:—"W. bears a good character, he is comfortably housed and is well treated."

Constable O'Connor, of Chatsworth:—"G.'s character and condition are good and he is well treated. Wages account £15 0s. 6d."

Constable Danks, of Cessnock:—"B. bears a good character and has been properly cared for."

Sergeant Preston, of Dungog:—"P. and W. look well and bear good characters."

Constable Matthews, of Singleton:—"R. and E. bear good characters, appear to be well treated, and say they are satisfied."

Constable Stein, of Bellbrook:—"S. bears a good character and is well looked after."

Constable Fraser, of Somerton:—"No complaints from either boy or master. T. is in good condition and well treated. £3 13s. 10d. to credit."

Constable Danks, of Cessnock:—"L. bears a good character and is well cared for."

Constable Hammill, of Gladstone:—"S. is well satisfied and well treated, conduct good. Wages account £13 4s."

Senior-constable Jordan, of Bellingen:—"G.S. conducts himself well. £13 saved."

Senior-constable Aggett, of Gosford:—"L.'s character good; condition good; well treated. Wages £22 11s. 6d."

Senior-constable Mayo, of Wollombi:—"C.'s conduct good; no complaints on either side. Wages £31 4s."

Constable Clarke, of Fig Tree, reports of three boys:—"That their masters all speak highly of them and that they are well treated."

Constable Grigor, of Riverstone:—"G. is in good health; treatment and conduct satisfactory. Wages £2 4s."

Constable Whitfield, of Appin:—"G. bears a good character and is well treated. £4 11s. 4d. to credit."

Senior-sergeant Prior, of Burrowa:—"C.'s character is good and he is well treated. Wages put in bank £11 14s."

Sergeant Bragg, of Moruya:—"M'C. is well cared for; character good. Amount to credit £31 8s."

Senior-constable Scott, of Kiandra:—"S.'s character is good and he is well treated. £9 to credit."

Senior-constable Smyth, of Candelo:—"N. bears a very good character and is well treated. Wages to his credit, £38."

Senior-constable Willis, of Yass:—"C. has a first-class character, is healthy, happy, and says his master is very good to him. £16 7s. 7d. to credit."

Sergeant Nelson, of Queanbeyan:—"B. is well conducted and well treated."

Senior-constable Ross, of Bulli:—"L. is very favourably spoken of and is well cared for."

Senior-constable Slack, of Cobbora:—"H. is well treated and satisfied. His employer has never had any occasion to find any fault with him."

Senior-constable Smith, of Dubbo:—"S. is well treated and well dressed. His master speaks very highly of him as being most willing, obliging, and trustworthy. £10 he has in the bank."

Senior-sergeant Francis, of Coonamble, reports in the most favourable way respecting our five apprentices in and about Coonamble. All the boys are well liked and have good homes.

Sergeant MacDonnell, of Bathurst, furnishes favourable reports of the boys in his district. They are all well, treated kindly, behaving satisfactorily, and have fair sums to their account in the Government Savings Bank.

Senior-constable Ranford, of Parkes:—"N. is a good lad and gives every satisfaction. He has a very good home."

Sergeant O'Brien, of Peak Hill:—"R.'s conduct is good; £3 3s. to his credit, and he is well satisfied with his place."

Respecting three other apprentices in the Parkes district, Senior-constable Ranford reports that they are all doing well, have kind treatment, and receive their wages.

Constable Cameron, of Coolabah:—"E.'s character is excellent, he is well treated, wages paid."

Constable Keating, of Tatalla:—"S. is very well treated and his master is well pleased."

Constable Scannell, of Moree:—"S. is clean, tidy, and everything in connection with his apprenticeship was found satisfactory. £8 7s. 1d."

Constable Moroney, of Garah:—"R. is well, and well dressed, pleased with his place, and his master had no fault to find."

Senior-constable King, of Boggabri, reports favourably concerning the seven boys under his supervision. He describes their conduct as very good, and their treatment also as very good. The amounts to their credit range from £8 downwards.

Mr. Inspector Smith, of Narrabri, furnishes a report on F., which states:—"He has a very good character—an exceptional good boy. £18 11s. 9d. to his credit."

Sergeant Brennan, of Murrurundi:—"S. is in good health, contented, and likes his employer, to whom he is giving satisfaction. £12 in bank." Senior

Senior-constable Sewell, of Manilla, reports favourably of the boys in his district. They behave well, have good homes, and have substantial sums to their credit. One boy, B., has £41 6s., another, McL., £19 7s.

Senior-sergeant Brayne, of Kiama, reports favourably of the sixteen boys in the vicinity of that town. They all have good homes, and fair sums to their credit.

Constable Graham, of Culcairn, reports:—"The lads are doing well, are industrious, honest, and intelligent."

Senior-constable Reid, of Wardell:—"D. is a well-conducted boy in every respect."

Constable Corbett, of Brunswick:—"No complaints. His apprenticeship expires on the 14th, when he will continue in his master's service. £20."

Senior-constable Thompson, of Ballina, reports in favourable terms of the six boys in his district.

Constable Brennan, of Lismore, gives our boys in his district first-class characters; all in good homes earning fair wages.

Of two apprentices at Narrandera, Sergeant Barnett reports:—"Their characters are good and they have no complaints. Amounts to credit—N., £24 14s.; and D., £5 18s."

Senior-constable Norris, of Carrathool:—"Boy has a good home and is very comfortable; character good. £14 10s. 2d. to credit."

In favourably reporting of C., Senior-sergeant Cavan mentions that he remains in the service of his old master, and has £31 4s. saved.

Constable Armstrong, of Narrabri:—"M'D. is well treated and is always well conducted. £17 18s. to credit."

Senior-sergeant Sykes, of Berrima, reports of the sixteen apprentices under his supervision that every one bears a good character, and all have good homes and substantial sums to their credit in the Savings Bank.

Constable Beatty, of Shellharbour, concerning the conduct and treatment of our apprentices in his district:—"One boy has £17 to his credit, another £7 10s., while another has £37 15s. 11d."

13. Very many other similar reports could be quoted, but the foregoing are fair specimens of the whole, and represent all the districts wherein our apprentices are scattered. It will be seen that the boys are in good homes, are well looked after, are earning good characters, and putting by substantial sums of money. A very large correspondence is maintained with these youngsters amounting to many hundreds of letters in the course of the year. Every letter from a boy is at once answered, and every possible encouragement is held out to them to aid them to keep on the right track.

14. Mr. Inspector-General Fosbery and the police under his control have always taken the greatest interest in our apprentices. Last year more work was done by the force in visiting and committing the boys than in any former period. Whatever success this institution has accomplished in the way of reform has been largely due to the benevolent and tactful way it has been assisted by the police.

PART III.

THE THIRD STAGE.—EX-APPRENTICES.

15. At the age of 18 the boys who have been for some time being prepared to run alone become entirely free from legal control. In very many cases it has been found that they have lost their taste for city life, and have settled down permanently in the districts to which they were apprenticed. Quite recently two former city boys came on board to see me who had settled down in the country with the masters to whom they had been apprenticed from the ship. One (C.M.) had been twenty years in one situation, the other (W.S.) 15 years.

16. The institution completed its twenty-ninth year on the 30th April last. During its existence it has dealt with 3,430 boys, most of whom had, prior to committal on board, been in serious danger of growing up to form part of the criminal class. Very many had suffered several convictions for thieving and other offences. Very many had been brought up in a home life awful in its surroundings. As a rule only as a last resource have they been packed off to the ship. No wonder then that non-success has resulted in some cases.

17. The failures have undoubtedly been very few in number. Last year the Prisons Department forwarded me a return showing forty-three ex-training-ship boys had been convicted during the twelve months. Included in this were men discharged twenty-five years ago, and a large proportion of boys who were released on petition to their friends, and who consequently did not undergo the whole course of reform treatment. Still, the number is very small as compared with the 4,000 or so who have left the ship. No doubt other old ship boys, besides those actually going to gaol, are not leading desirable lives, but the percentage of permanent reformations is a very high one.

18. Since the 1st January last year to the date of writing this Report we have received 558 visits or letters from "old boys," exclusive of many hundreds from apprentices. One of these had left the ship as long back as 1873. He has got on well in business, and has a very lucrative occupation. He has had two of our boys as apprentices, both turning out well. One young man, who left the ship nearly 22 years ago, frequently sees me, and is always glad to have a friendly talk about old times. He has been in his present responsible post for many years and is deservedly respected. His home is a happy home, and his wife and children patterns of neatness and respectability. As he often tells us here he owes his present position entirely to our efforts. Another worthy fellow, who was apprenticed 11 years ago, is in business for himself, and is a thriving tradesman in a western town, employing several men. Recently he got married, and took a holiday trip to Sydney with his wife, almost the first place they visited being the training ship. It was evident that he looked back with friendly feelings to his old school. He told me of two other "old boys" living in his district—P., who went away from the "Vernon" in 1885, and K., who left somewhat later. Both were prospering, and charged him with friendly messages to us. Last week they wrote to me.

E. was apprenticed by me to sea 18 years ago. He became a first-class sailor, and always received V.G. discharges. I was fortunate enough to obtain for him a situation in Sydney, where his professional knowledge and general handiness have rapidly pushed him along. A day or two ago he expressed himself very gratefully for the benefits he had received through the ship's influence, and announced a well-deserved promotion. I see him almost daily, and he is a frequent visitor. He is the sole support of his widowed mother and of his sister, whom he cheerfully maintains in comfort. A

A frequent correspondent is W., who left in 1833—13 years back. When he completed his apprenticeship he had £100 in the bank. Having gained a high reputation in the Tamworth district for steadiness, honesty, and shrewdness, he had no difficulty in obtaining the loan of sufficient money to take up a selection and buy stock. A few weeks back a letter informed me that his well-stocked property was unencumbered, and that he was doing well. Prior to being sent to the ship he had not been out of Sydney.

C.M. was apprenticed by me to the Walcha district 20 years ago. He has remained in the service of the same family ever since. He always visits the ship when down in Sydney for stock sales, and is an excellent fellow in every way. Last month he wrote me:—"I am still here at Y., and am pleased to say doing well. I saw S. the other day, and he told me he was taking his wife to Sydney, and would see you. Trusting you are well, and with best wishes to yourself and all on board, &c., &c." The person referred to is also an "old boy," who has been in the employ to which he was apprenticed 14 years. Both of these have been transformed from city boys into prosperous pastoral workers. Another respectable man, M'G., was apprenticed 18 years ago, and is still in the district to which he was sent from the ship. A fortnight ago he wrote:—"I should be very sorry if you thought I had forgotten you and all on board—that I never will as long as I live. You were always kind to me. I have not written very regularly, having to do a lot of travelling, but I will try to write regularly in the future. I am doing better for some time. This place is now getting a very important place, and the Railway Commissioners have just been here. I hope you are all well, &c.

In the ships of war on the station there are several of our lads, and I hear good accounts of them.

19. They certainly look clean, smart fellows, and all agree that they like the life, and that their training here has been very useful to them. I have now several of our "old boys" applying to me to assist them in getting into H.M. ships, and it is a pity that there are not at present greater facilities to enable this being done. We have also a number of former members of the crew in the local military forces where they bear first-class characters. Some of the more prominent musicians in the Artillery band were trained, and it is hoped that a couple more of our band boys will soon join the force. The senior of those referred to, nearly ten years away, writes:—"I was pleased indeed to hear from you and your kind wishes concerning myself. We have been so busy of late that I have not had a suitable opportunity of going aboard as I would have liked. I do not forget the old times spent on the ship, and your kindness to myself. Thanking you for your kind wishes regarding my welfare, and trusting this will find you and Mrs. Neitenstein enjoying the best of health, I remain, Yours respectfully." Another "old boy," M'G., twenty-eight years away, holds an important position in the Government service. A recent *Gazette* announces an honourably gained promotion. J.L., also many years in the public service, writes me from the west:—"I received your kind and welcome letter this morning. I have been longing for a trip to Sydney, and you may depend I won't forget to come aboard. M. (another 'old boy,' who left February, 1879) is at the same work as myself. He is married, and has two children. We often talk about the good old times we used to have on the old 'Vernon.' I enjoyed myself the day I went on the new 'Sobraon.' I think the boys have fine times, although they don't get the fine fishing the same as in my day. Dear Captain, I must also thank you for your kindness to the friend I had with me. He often talks of the boys who got our dinners for us, so good they were. The little chap to whom I gave sixpence I hope to see again as soon as I can get him a good home. I would like to attend the concerts aboard sometimes. I wish all on board well, not forgetting Mr. Mason and all of our men. Remember me kindly to Mrs. Neitenstein and the little one, not forgetting yourself. Yours respectfully, J.L." He left us seventeen years ago. G.C. who was apprenticed in July, 1880, recently visited us. He wrote me a day or so ago, that "I have taken a farm on the Valley, although I am not doing as well as I would like, but I am in good health, and hope you are the same." He was a city boy who has permanently settled down to country life. Another young man, aboard the other day, was apprenticed to Mr. H. Brown, M.P., has now been in his service for fifteen years, and a very nice manly chap he is.

N. writing from Maitland, writes:—"I feel it my duty to ask you to excuse me for my long silence. I am getting along splendid here, and am still at the same place. I see a good few of my shipmates, and they are getting along very well. They intend to write to you shortly by my desire. I trust you are still successful in carrying on your duties as you have always done." Writing from Narrandera, a gentleman says:—"H. is still in the employ of Mr. R., who speaks well of him as being both honest and straightforward. When I last saw H. he had £50 saved. At one time a Sydney idler; he is now an industrious, steady farmer."

Another "old boy," who left a long time back, writes:—"You will no doubt be greatly surprised at receiving a letter from a student of ——— College, but the fact is, I succeeded in passing my examination, and accordingly entered. I have been studying hard to fit myself for the profession I have adopted. * * * It is to you I owe most of my good fortune. But for your kindness and consideration I would perhaps now be roaming the streets. Thanks to you, and also to the officers under your command, who were very lenient to me, all fear of this has passed away, and I can feel myself a gentleman, in spite of the past. * * * I must conclude, but believe me I will never forget your great kindness. I can well imagine the trouble you must have had with the boys, but you can look back with pride and think that many of the lads once under your charge are all at the present time men of good social position, bearing unblemished characters, excepting those stains of their boyhood."

Mr. Kelly, of Shellharbour, on calling to take another apprentice from here, delivered a friendly message from O'S., still in his service, who was formerly apprenticed to him. Mr. Kelly described him as being a first-class worker, civil, truthful, and obedient; and he hopes he will never leave him. He often converses with him about the ship, and S. always says he was glad he was placed aboard.

Another instance of a Sydney boy losing all taste for city life is that of J.J., who left thirteen years ago. He writes:—"I am still here working for Mr. McD., although I have been offered work in different places. This year work is more in demand. * * I have never been in Sydney since I saw you last. If I go there I will call to see you. R.D. (another of our lads, fifteen years away) is still working at B."

W.H. writes:—"I am well, and doing well. It is some time since I wrote last to you, and I may tell you that I am still with Mr. T. I think it is over eight years now I have been with him, and I have not been in Sydney since. All the old boys are doing well."

T.S. was apprenticed over fifteen years ago. He is very steady and industrious, and often writes and visits. He is married and lives on his own property. He writes:—"I started a market garden for myself and fenced all the ground in. I have recently put in 300 fruit trees, and have just spent £200 on the ground."

An old protégé, in forwarding me papers in connection with his taking a second apprentice from us into his service, writes cordially about the days when he was a Vernon boy, some twenty years ago, and heartily wishes us all success in our work.

Another former resident aboard, now many years away, writes :—"I should like to know if I could bring my wife aboard to see the boys, as she takes an interest in them on account of my having been there at one time." He and his wife spent the day aboard. He maintains his old father and mother, and only returned from Coolgardie on their account. He had acquired a good deal of money on the fields, and presented me with a small nugget which he specially put by for that purpose on discovering it at Norseman.

A.B. who left a long time ago, wrote :—"I take the liberty of writing to you on behalf of some of the old ship's boys, to ask if you would kindly allow us to play a match against the ship's team. Yours truly, A.B., an ex-Vernon boy." This was, of course, agreed to, and several matches have been played, numbers of "old boys" renewing their acquaintance with us. They all appeared pleasant, respectable young fellows, who, in a marked degree, retained their old habits of cheerful respect and friendship towards us.

20. The foregoing are taken from a very small number of the records in my possession. There are many hundreds of similar documents. Those quoted will, however, give some idea of the measure of reform accomplished by the Institution. One great thing is the large proportion of Sydney lads who have been rescued from the streets, placed in good country situations, and who, on becoming free from legal control, have permanently settled down in the country. It may seem somewhat harsh to take them away from their parents for a long time, but to do the work of reform effectually, must be to do it thoroughly. Parents, who wilfully or ignorantly allow their sons to fall into such ways, must not complain if the State, in order to protect its citizens, steps in and takes up the abandoned parental obligations. Complete removal from old surroundings for lengthened periods is absolutely necessary.

21. I am frequently consulted by fathers and mothers about children who are unmanageable, and I invariably dissuade them from the extreme step of allowing their boys to be sent here excepting as a very last resource. Sometimes the boys receive a wholesome shock by having a letter from me read to them. In this way many have been induced to draw back in time. A very respectable man engaged in business all day wrote, "I regret to have to address you in a matter which is giving me much anxiety. I have a son who has got into the company of lads who are leading him astray. I am unable (owing to my occupation) to look after him, and his mother cannot control him. He will *not* go to school, and is so given to telling lies, *without any reason*, that I want you to be good enough to let me know if you could arrange to take him under your control, for which, I am of course, willing to pay." I considered this step should not be taken until other measures were tried, and so advised the father. A couple of warning letters, with a little different treatment to what the boy had been accustomed to, led to the best results, and last week the father told me that he had no trouble now and that the boy was behaving well.

22. Not the least satisfactory matter is the fact that very many parents finding the reform accomplished by the Institution in their boys, gratefully acknowledge the work done. A few days ago a father came to the ship specially to offer his thanks. He said that his son who had been the associate of thieves and blackguards, and who had been committed for breaking and entering prior to coming to the ship, had now been four years in his present situation, and was quite an altered lad. The ship had quite reformed him, and he was now a steady, well-conducted, industrious man. Another father writes to me concerning a formerly incorrigible lad and petty larcenist. "You would like to hear how S. has been getting along since he left your care. He is in the employ of ——, who says he is far and away the best lad he has ever had. I have no trouble with him, and find him his old self again, a quiet, well-behaved fellow. He keeps clear of all his old mates. I thank you for your past kindness, and am, yours respectfully, ——"

PART IV.

MISCELLANEOUS.

23. Religious instruction has been conducted on board by the Reverend W. Charlton, Reverend Dean Hanley, Reverend J. Fitzpatrick, assisted by Mrs. Ford and the Misses Hughes and Maguire. The boys have very much valued the services so kindly rendered them by all of these ladies and gentlemen, to whom our best acknowledgments are due, for the material assistance rendered to our reformatory work. Prayers have been conducted night and morning by the ship's officers, who have also conducted service and school on Sundays. When the weather has permitted, the lads landed and marched to their respective churches in Balmain.

24. The Institution has been largely visited during the year, not only by residents of Sydney, but by various public officers from the other colonies specially charged with the duty of observing and reporting upon the reformatory methods pursued. Strong recommendations have been made to establish similar systems in at least two of the neighbouring colonies. At the invitation of the Minister of Public Instruction (the Hon. J. Garrard, M.P.), who has been a frequent visitor, numbers of Members of Parliament have, at different times, inspected the ship and boys. The Under-Secretary (J. C. Maynard, Esq.) invited the principal Public School teachers, and personally conducted very many of these ladies and gentlemen over the vessel. These numerous visits have, undoubtedly, effected much good, and caused considerable public interest and sympathy for the work. A clearer understanding has been gained respecting the methods pursued; and the boys, when going out as apprentices in various parts of the country, will find friends and kindly advisers amongst those ladies and gentlemen before referred to, who have so kindly visited the ship and proffered their generous and benevolent assistance.

25. Numerous presents of books, pet animals, donations to the recreation fund, &c., have been made, and our thanks are due to the following gentlemen who have in various ways contributed towards the boys' enjoyment during the year :—The Hon. J. Garrard, M.P., Minister of Public Instruction; his Honor Judge Fitzhardinge, Hon. R. E. O'Connor, M.L.C., J. C. Maynard, Esq., J.P., Under Secretary of Public Instruction; J. C. Thom, Esq., Solicitor for Railways; W. F. Parker, Esq., P.M., Dr. Burne and the Committee of the Brassey Regatta, the Committee of Balmain, N.S.W. Yacht Club, Drummoyne and Anniversary Regattas, T. Jobson, Esq., of Ermington, and others. Lord Jersey maintains his kindly interest in our boys, and his recent friendly letter was much appreciated by them. With lively recollections of his kindness to them they liked to hear of his entertaining the "Arethusa" boys.

26. I once more have much pleasure in inviting attention to the able and loyal assistance rendered by my officers, who have worked cheerfully and well. They have all been here for long periods—some for nearly twenty years or upwards,—and their experience and tact have made the institution work for so lengthened a period smoothly, quietly, and without friction. I commend their conduct to your favourable attention.

27. I have on so many occasions drawn attention to needed alterations in existing Acts and procedure, to enable reforms to be accomplished in the light of experience gained, that it is only necessary for me to beg to refer you to my previous communications. Much could be done by a more scientific arrangement of existing institutions, by legally authorising transfers, by grading the various establishments, so as to admit of a better classification of children when committed, and so forth. An extension of the age of control is also wanted; the application of the apprenticeship system to reformatory children; the establishment of a special institution for feeble-minded children, and for vicious, crippled, infirm, and diseased youths; the regulation and licensing of news-boys, and other juvenile hawkers; and, most certainly, special day industrial and truant schools should be instituted forthwith. I have already submitted a comprehensive scheme for their establishment. After nearly a quarter of a century's experience, and after dealing with some thousands of boys, I am impressed with the fact that *truancy is the most prolific cause of juvenile crime*; nine out of every ten who come here owe their fall to this great evil. Stamp truancy out and you will ultimately largely reduce crime and empty the reformatories and gaols. The neglected boy, if not taken in hand at a proper age, too often takes a fearful revenge on society by ultimately growing up into criminal manhood. A comparatively few pounds spent now on preventive methods would effect a large saving ultimately. Economy as well as humanity would gain.

28. Having been promoted to the office of Comptroller-General of Prisons, I necessarily have to vacate the position which I have held for so many years, but I shall always take the greatest interest in the boys and the ship, and will do all in my power to serve their interests.

29. In conclusion I respectfully beg to thank the Minister, the Under-Secretary, the Chief Clerk, and the staff generally for the great kindness and sympathetic assistance extended to me during the many years I have been under their control.

I have, &c.,

FREDK. W. NEITENSTEIN,

Commander and Superintendent.

GEO. E. LAYTON, *Secretary.*

REPORT to The Honorable the Minister of Public Instruction.

National Art Gallery of New South Wales, 15 January, 1896.

THE Trustees have special satisfaction in presenting their Annual Report for the year just passed, as affording them the occasion to acknowledge the gratifying action of the Honorable the Minister of Public Instruction, which will have for results the early enlargement of the Gallery, and the commencement of a more appropriate exterior, under plans prepared by the Government Architect, and mutually approved by the Honorable the Minister and the Trustees.

The attendance of visitors during the year numbered 226,065, the daily average on week-days (311) being 458, and on Sundays (51) 1,634. The average daily attendance throughout the year was 624.

The purchases during 1895 are detailed below, the most notable acquisitions being a collection of fine Black and White drawings—originals—designed for the Picturesque Atlas of Australia, also some good examples of Colonial Art in Oil paintings, Water Colour drawings, and Modelling.

The presentations include a valuable Oil painting, the gift of the Rev. Dr. Harris, King's School; and a Water Colour drawing presented by the family of the late Hon. E. Combes, C.M.G.

Interest in the pictures on view from the Southern Galleries continues unabated. The second interchanges with the National Galleries of Victoria and South Australia were effected in June last, and the third interchanges are proposed for March or April next.

The first "Country Loan Collection" of pictures contributed by the Trustees, and supplemented by Members of the Art Society of New South Wales (under the auspices of the Minister of Public Instruction), was officially opened at Bathurst on 15th July last, by the Honorable Sydney Smith, Minister for Mines, &c., assisted by the President of Trustees, Mr. E. Du Faur.

The second "Collection," similarly contributed, was officially opened at Goulburn by the Honorable Jacob Garrard, Minister of Public Instruction, on 3rd August last, Mr. Du Faur also being present.

A further similar "Collection" has been prepared for Newcastle, to be despatched as soon as the building is ready for its reception.

Thirty (30) additional Students have been registered during the year, making a total of 212 recorded.

The Trustees have to deplore the loss of their late colleague, the Honorable E. Combes, C.M.G., who was appointed to the Trust in March 1881, and who, for fourteen years, devoted himself to the interests of the Gallery.

E. DU FAUR,
President.

List of Works purchased by the Trustees in 1895, at a cost of £755 9s.

OIL PAINTINGS.

"Flood in the Darling, 1890," by W. C. Piquenit. "Cremorne Pastoral," by A. Streeton. "Study of Grapes," by E. Meston. "The Cockatoo," by M. Fleming.

WATER COLOURS.

"Portsmouth Harbour," by T. B. Hardy. "A Westerly, Circular Quay," by C. E. S. Tindall. "Study of Waratahs," by M. L. Flockton. "Stony Creek," by J. Mather.

BLACK AND WHITE.

Collection of fifty drawings—originals—designed for Picturesque Atlas of Australia.

MODELING.

Bronzed Plaster Casts, "Laughing Gin," "Aboriginal Warrior Chief," by Nelson Illingworth.

SUNDRIES—CERAMICS AND IVORY.

Old Wedgewood Vase. Oriental Ivory carving, Elephant with Howdah, carrying Musicians.

PRESENTATIONS to the Gallery in 1895.

"De Witt" silver commemoration Medal, 1672.

Antique Iron Key, with Monogram. Presented by the Rev. Coles Child.

Oil painting, "The Samian Sibyl," believed to be a "replica" of the picture by Guercino, at Florence. Presented by the Rev. Dr. Harris, King's School.

Water Colour drawing, "La Pérouse," by the late Hon. E. Combes, C.M.G. Presented by the Artist's family.

ADDENDA.

Five persons were permanently employed, with three extra assistants on Sundays and holidays. The Gallery was open on 362 days in the year.

Year's Expenditure.

For works of Art purchased	£755	9	0
For salaries and wages	1,015	9	0
For maintenance—frames, freights, insurance, repairs, &c.	702	1	3
						<u>£2,472</u>	<u>19</u>	<u>3</u>

1896.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

THE PUBLIC LIBRARY OF NEW SOUTH WALES.
(REPORT FROM TRUSTEES FOR 1895.)

Printed under No. 1 Report from Printing Committee, 21 May, 1896.

The Trustees of the Public Library of New South Wales to The Minister for
Public Instruction.

Sir,

Sydney, 12 February, 1896.

The Trustees have the honor to submit their Report for the year 1895, being the Twenty-fifth Annual Report.

1. The name of the Institution has been altered, with the authority of the Executive Council, to "The Public Library of New South Wales," in order to indicate more exactly the scope of the Library's operations, and its national character. Good results are confidently expected in the matter of valuable exchanges and donations from foreign countries.

2. There have been eleven meetings of the Board during the year, the average attendance of Trustees being 6.

3. The general collection of books has been increased by 8,902 volumes, and there have been struck off the Reference Library stock 2,029 pamphlets and duplicates of no value, and from the Lending Branch stock 159 volumes worn out or lost, leaving the total number of volumes now in the Library at 110,611, details of the classification of which are given in Appendix A.

4. The Reference Library was open for 355 days, and the attendance rose from 131,531 in 1894 to 156,388 in 1895. The Lending Branch was open for 342 days, and the individual visits increased from 77,568 to 80,782. The accommodation of the Newspaper Room has been taxed to the utmost, and the attendance has risen from 121,332 (for ten and a half months) to 171,894. Full particulars are given in Appendix B.

5. In the Lending Branch the number of borrowers has risen from 5,986 to 6,150, and the number of volumes borrowed from 89,217 to 90,820. Appendix C comprises details of the classes of books borrowed, showing for each class—(a) The number of volumes available, (b) the number issued, (c) the daily average of volumes issued, (d) the ratio between volumes and issues.

From these figures it will be seen that fiction comprises only 11·33 per cent. of the volumes in the Lending Branch and 29·2 per cent. of the total issues; and that on an average each volume of fiction is borrowed 9·5 times during the year. These figures are interesting in view of the fact that in most of the popular Libraries in Great Britain and America the works of fiction comprise from 40 to 80 per cent. of the volumes contained in them, and often as high as 80 to 90 per cent. of the total issues. The comparative lowness of the foregoing figures is due to the fact that the Trustees have exercised special care in the selection of works of fiction, admitting only those of the best authors, and generally
excluding

excluding current novels and those of merely ephemeral interest. Readers borrowing from the Lending Branch are of a superior class, and can fully appreciate the works of such authors as Scott, Lytton, Thackeray, Dickens, and George Eliot.

6. Some figures are given in Appendix D to show to what extent and in what directions the public avail themselves of the contents of the Library on Sundays.

7. The number of Country Libraries applying for the loan of boxes of books has increased from 84 to 91; and 164 boxes, containing 12,893 volumes, have been sent out, as against 155 boxes, with 12,380 volumes, in 1894. The number of boxes available is 72, containing 5,948 volumes, and, as applicants are much more numerous than the boxes, it unfortunately happens that a good deal of delay necessarily occurs in supplying the demands of Libraries in country districts. It may be mentioned that the Trustees have expended over £4,200 already in connection with the supply of books to such Libraries. During the year 272 old and comparatively uninteresting books were removed from the boxes and replaced by 402 new and valuable works. The Trustees are well satisfied with the results of this branch of their educational work, which is fully appreciated by the 91 Schools of Arts, Municipal Libraries, and Free Public Libraries which are thus supplied with a class of literature not usually found on the shelves of young Libraries. Full details are given in Appendix E.

8. The donations for 1895 comprise 1,449 volumes and pamphlets, of the value of £171 15s., as well as 65 newspapers from the other Australasian Colonies and Great Britain, presented to the Newspaper Room. Appendix G contains the names of the principal donors. Under the Copyright Act, 203 volumes and pamphlets of the value of £35 11s. 6d. have been received, and also 253 newspapers and periodicals published in New South Wales.

9. The Newspaper Room is now supplied with 340 newspapers from the Australasian Colonies, Great Britain, United States, South Africa, and Japan, and is daily thronged by respectable men, principally of the working classes. The accommodation is quite inadequate for the numbers who wish to refer to the papers, and many are often unable to gain admission. The building is very uncomfortable, being more like a large oven than a library reading room. The temperature during the past year has ranged from 42° to 108° F., the maximum for the past month ranging between 81° and 108° F., and the average being 92·6° F. If a suitable building for the Lending Library and the Newspaper Room could be secured in a central part of the city, the usefulness of the Institution and the comfort of the readers and the officers would be largely increased.

10. The usefulness of the Library has been extended by the loan of special boxes of books to circles of students in country districts, more especially to those attending University Extension Courses of Lectures. A selection of the best text-books to illustrate courses of lectures on Darwinism, Elizabethan Literature, Teachers of Modern Thought, and The British Empire, has been made, and they have been lent to groups of students at Goulburn, Nowra, Camden, Cootamundra, Junee, Tamworth, Berry, and East Maitland. A selection of valuable text-books on Astronomy and Geology has been made for the use of a class of private students at Young Wallsend. A number of individual students throughout the country, who are studying for University examinations or pursuing special lines of research, under the disadvantages incidental to isolation in country districts, have been assisted with the loan of parcels of books, whenever practicable.

11. Satisfactory progress has been made with the preparation and publication of catalogues. The General Author Catalogue (1869–1887) after being set up by the staff of this Library has been printed by the Government Printer, and forms a large volume of 833 quarto pages. The Supplement for the years 1888–1892 has been issued in a volume of 250 quarto pages. All the books received in 1895 have been catalogued and the titles printed on slips, which are cut up and pasted into a current catalogue, as promptly as possible, so that the whole of the books received up to December, 1895, are now in printed catalogues available to the public. The index of the books received during 1893–1895 has been kept up to date. The staff is now occupied with a general Dictionary Index for the main Author Catalogue of 1869–1887 and the Supplement 1888–1892, and this index will be ready for the Printer in
another

another year. To expedite this very important and urgent work, a qualified gentleman was specially engaged for one year from October 14th, 1895. A Guide to the catalogues of the Library has also been issued, giving all the classes, sub-classes, and sections (about 5,000) now used in classifying and indexing the books for the General Dictionary Index, and showing by cross-references how the sections are related to each other, and to the sub-classes. By means of this Guide the whole of the Cataloguing Staff are enabled to work on a common plan without confusion or loss of time, and Students can find at once what sections of literature are represented in the Library. The Supplementary Catalogue of the Lending Branch for 1895 is now in the Printer's hands.

12. The classes instituted by the Principal Librarian for the instruction of the Junior Officers, and held on two afternoons in each week, have been attended by ten of the assistants and attendants, and the results have been very satisfactory, as evinced by increased intelligence and determination to fit themselves for higher duties. The officers on the staff are generally efficient in their respective duties, and show a commendable desire to learn the higher branches of Library work.

13. The whole of the necessary binding has been done by the Government Printer, in a style quite equal to that previously received from London, and with no increase of cost.

14. At the instance of the Melbourne Public Library steps have been taken to form a Library Association of Australasia, which may be expected to advance the usefulness of Libraries throughout the Colonies. The Trustees have consented to allow this Library to be represented at the preliminary Conference to be held in Melbourne on 14th April, 1896.

15. *Expenditure for 1895.*

From the Parliamentary Votes for the half-year ending June 30th, 1895 (£4,231), and the current financial year ending June 30th, 1896 (£7,490).

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

AUSTRALIAN MUSEUM.
(REPORT OF TRUSTEES FOR THE YEAR 1895.)

Printed under No. 8 Report from the Printing Committee, 9 July, 1896.

TO HIS EXCELLENCY THE GOVERNOR AND EXECUTIVE COUNCIL,—

The Trustees of the Australian Museum have the honour to submit to Your Excellency their Forty-second Annual Report.

1. There have been no changes in the membership of the Board during the year.
2. The Museum continued open to visitors during the usual hours, viz., from 2 to 5 p.m. on Sundays and from 10 a.m. to 5 p.m. on all week days except Mondays, which were reserved for cleaning purposes; but on Monday afternoons the collections have been accessible to students and schools for teaching purposes, on application being made to the Curator. The total number of visits recorded was 86,353 on week-days, and 32,226 on Sundays, being an average of 325 and 632 respectively, which figures differ but slightly from those of the previous year.
3. The Trustees have been prevented by want of funds from acquiring many specimens by purchase. A few isolated purchases have been made, but several opportunities of obtaining articles much needed in the Museum have been lost, which is the more to be regretted, as some of these opportunities are not likely to recur. The same difficulty has applied to collecting, and consequently the Trustees have been unable to continue systematic exchanges with other institutions from which they have been accustomed to receive specimens.
4. The more important acquisitions during the year were:—A fine collection of mounted Sheep, Goats, and Dogs, from the Museum at Florence, in exchange; a large native drum from the Bismarck Archipelago, presented by Mrs. Forsayth; one of Captain Cook's original MS. Journals, or Log of H.M.S. "Endeavour," which was kept by him in triplicate, presented by F. H. Dangar, Esq.
5. The new Geological Hall and Galleries have been completed and opened to visitors. From scarcity of hands to clean and watch it was only possible to open the floor and gallery in alternate weeks; but arrangements have been made through which the whole will be thrown open daily in future.
6. A sum of £6,000 having been voted by Parliament for the further extension of the Museum buildings it is contemplated to proceed with the basement of an additional portion of the main building, which will be roofed and used as workrooms, fitted with all modern appliances. The present wooden workrooms, which are old and ant-infested, will then be removed.
7. An accident to the plaster revealed the astounding fact that the entire roof over the central part of the main building had been destroyed by white ants. The destruction was so complete that it is surprising that the portion affected did not collapse. It has been temporarily supported under the direction of the Government Architect, and funds are available for the erection of a new roof.

8. Owing to the rearrangement of the cases and the removal of second specimens from exhibition the duplicate collections are in a somewhat better condition than during last year.

9. No further Catalogues have been issued during the year, although the work of preparation goes on. Number VI, Vol. II, of the "Records" was published on 16th September, 1896, and another number is in the press.

10. Full information with respect to the Museum will be found in the Appendices attached to this Report, viz. :—

- I.—Curator's Report.
- II.—Reports of Scientific Assistants.
- III.—Secretary's Report.
- IV.—Statement of Receipts and Expenditure.
- V.—Attendance of the Trustees.
- VI.—Attendance of Visitors and summary for fifteen years.
- VII.—Return of Specimens acquired during 1895.
- VIII.—Donations.
- IX.—Exchanges.
- X.—Return of information supplied to the Public.
- XI.—Additions to the Library.
- XII.—Publications of the Australian Museum.
- XIII.—Museum staff.

The Common Seal of the Museum was hereunto affixed by order of the Board, this 5th day of May, 1896.

(L.S.) JAMES C. COX, M.D.,
Chairman.

S. SINCLAIR,
Secretary.

APPENDIX I.

CURATOR'S REPORT FOR 1895.

To the Trustees of the Australian Museum,—

Sydney, 20th January, 1896.

Gentlemen,

I have the honour to hand you the following Report dealing with the work of the Australian Museum during the past year, and the condition of the Collections in your charge.

General Condition.—With regard to the general condition of the Museum and its contents, I can, with but one exception, report in the same favourable terms as in my Report for last year (1894). The exception referred to was the discovery of the "White Ant" in the woodwork of the main central roof, which will be referred to in detail later on.

Staff Duties, &c.—The attention to their duties, and willingness to aid me in every way, on the part of the entire Staff, has been very gratifying, and on more than one occasion my duties have been lightened thereby.

It is with feelings of great regret that I have to remind you of the death of our esteemed Clerk (Mr. W. H. Hill), which took place in November last.

Two additions to the staff were made—one, that of a boy-messenger; the other, that of a gentleman (Mr. John Jennings) who acted as an Assistant in a voluntary capacity for some months, and rendered most valuable help in the Conchological and Ethnological Sections.

I again desire to call your attention to the want of two additional tradesmen in the terms of the fourth paragraph of the 1894 Report. I also strongly urge the appointment of a couple of competent mechanical assistants to aid in the preparatory work of the various collections, over and above that performed in the workshops.

Care of the Collections.—The specimens, both those on exhibition and in store, have received their full share of attention. The Taxidermist (Mr. J. A. Thorpe), with the occasional assistance of Attendant^t R. Grant, continued the supervision of the whole of the Skin, and the Articulators (Messrs. H. Barnes and H. Barnes, Junr.) the Osteological Collections, in addition to performing their ordinary duties. The work of overlooking the immense number of skins now in the Museum is too much for one hand with other duties as well, and the preservation of these from insect pests, in a climate like ours, at times causes me no little anxiety.

With the view of distinguishing the Australian species in cases where it has been found impossible to separate them from the Foreign examples, I have caused the former to be denoted by a magenta-coloured dot placed on a conspicuous part of the specimen stands.

In a similar manner all figured types are rendered conspicuous by a bright orange-coloured dot attached to them.

Cleaning Duties.—The general cleaning duties have remained in the hands of two male and two female Attendants, much too few hands for the amount of the work. In consequence, however, of the interest manifested by the Secretary for Public Instruction (Hon. Jacob Garrard, M.L.A.), an additional appropriation has been secured for the appointment of two further male Attendants, and although this will primarily entail the opening of additional galleries, it will, to a small extent, ease the duties of those previously referred to.

Space.—In the sections of Mammalian Zoology, Osteology, and Ethnology, the same absence of room for expansion practically exists as reported last year, although by a careful elimination of duplicates, more particularly in the first of these sections, and the general rearrangement sanctioned by you, which is slowly although satisfactorily progressing, this has to a slight extent at least been overcome. Now, however, with the erection of two further wall cases in the Lower Main Hall, still to be taken in hand, expansion in the above sections will absolutely come to an end. The same remark applies equally to the Invertebrate Gallery, with the exception of the cases allotted to the Australian Insecta, where space has been reserved for additional typical specimens. These facts I earnestly commend to your attention.

Duplicates.—These are in a somewhat more satisfactory condition than when last reported on, particularly amongst the Mammalia, Fish, and Reptiles; in the case of the two latter sections, through the satisfactory progress made in sorting the Spirit Collections. Still, amongst the Insecta and Mollusca, many of the commoner species are much desired, and the same remark applies to the Australian Minerals and Fossils. This state of things must continue until funds are available to enable collectors to be sent out. All duplicates placed in store as such, have been marked with a duplicate-tag for ready recognition in the future.

Printing.—The question of label printing will be on a much more satisfactory footing during the current year than it has been in the past. A "Pearl Platen Printing Press," with all working plant, has been ordered, and will be in full working order during the current year. This will enable the whole of our labels to be printed on the premises.

Structural matters.—I have already referred to the presence of "White Ant" in the high roof facing College-street. On survey it was found that an entirely new roof was required, but to render the present one temporarily safe to life and property, shoring-up was energetically taken in hand by the Government Architect, pending the placing of a sum of money on the Estimates to provide a new roof. In consequence of representations on this matter, and the general question of extending the building, made by you to the Secretary for Public Instruction, the sums of £1,400 and £6,000 respectively were placed on the 1895-96 Estimates, to provide a new Roof and new Spirit-room and Workshops for the mechanical staff, the latter to be built so as to form a basal portion of the future south wing of the main building. In connection with this work you were pleased to approve of the following suggestions from me:—(1) The present Carpenter's Shop, being a comparatively new structure, and sound, to be transferred bodily to another position in the grounds, and after undergoing some alterations, to be fitted partly as a study and laboratory for the Mineralogist, and partly as a store-room. (2) The Photographic Studio, being also sound, to remain in its present position for a further period. (3) Sundry fittings in the existing Taxidermist and Articulator's shops, about to be pulled down, to remain on the premises for future use.

(4)

(4) In addition to the macerating tanks and crematorium already shown on the interim plans, two copper boilers and a fumigating chamber to be erected. (5) The new Spirit-room, instead of being a two-storied building as at first proposed, 35 ft. x 20 ft., to be one storied, not less than 45 ft. x 45 ft., raised on brick piles, and with good drains leading therefrom.

Through repairs to the ceiling of the vestibule of the Upper Main Hall in May last, it was found that the whole of the woodwork of this portion of the roof was infested with "White Ant," hardly a timber, from the rafters to the principals, except the Baltic-pine joists, having escaped. The Report of the Government Architect clearly indicated that the entire central roof must be removed, and a new iron roof substituted. From want of funds this could not then be accomplished, and all that could be done was to shore up the affected portion, and render it safe for a time. Funds are now available, and it is to be sincerely hoped that the Government will take the matter in hand early in the current year.

The Mineralogist's store-room, mentioned in my 1894 Report as in progress, was completed, and an additional Osteological store-room was divided off in the main basement. Both of these were much required, and the work has been efficiently executed by your own carpenters.

The corridor formerly screened off from the Ethnological Hall has, after repainting, &c., been thrown into the latter, thus giving an extra 30 ft. x 15 ft. of floor space. Similarly, the gallery surrounding this hall has been enlarged, by throwing into it a room attached and formerly used by the Conchologist, giving an additional floor space of 34 ft. x 13 ft. The first was opened to the public during the past year, the latter will be during the early part of this year.

The Geological Hall and attached galleries were opened on 23rd July last.

I am glad to be able to report that the new roof down-pipes, and the new double glass roof referred to in my Report for 1894, have given every satisfaction.

New Cases.—On the Estimates for 1895-6 appeared an appropriation of £800, to be devoted to this service. In consequence of the late passing of the Appropriation Bill, the expenditure was much delayed, but notwithstanding this, good progress was made in the erection and supply of cases. Of the four wall cases to be erected, two on either side the main staircase, two were completed and are now in course of occupation. The alteration and renovation of the old Mammalian wall-cases was completed in terms of the 1894 Report, and the enlargement of one of them to the extent of 27 square feet has proved a great success. A large table case was provided for the magnificent cartilaginous skeleton of the Ray (*Trygon pastinaca*, Linn.); a second for a fine group of *Cuscus*; a third for the group of *Dendrolagus bennettianus*; whilst a large temporary case on the centre of the hall floor was made from old material in stock for the reception of Sheep and Goats. Ebonised frames to support a fine set of English polished marbles were erected in the Mineral Gallery.

Collecting.—No Collecting worth referring to was effected in consequence of the lack of funds. I am of opinion that this is a matter deeply affecting the prestige of the Australian Museum. Whilst the Continent is being overrun by the collectors and agents of Foreign Museums, dealers, and wealthy dilettanti, the opportunity of acquiring new and valuable specimens from the less known portions of North, Central, and West Australia is totally lost to us. This subject will be found more fully referred to in Mr. A. J. North's Report.

Exchanges.—The principal exchanges effected during the year were,—Finely mounted Sheep, Goats, and Dogs from the Florence Museum, and to that institution mounted and spirit Marsupials, and Ethnological specimens; European Bird-skins and eggs from the Athens Museum; Australian Minerals and ores to the Noumea Museum, through the Governor of New Caledonia; casts of Meteorites and Aboriginal food substances from the Technological Museum, Sydney, and to the latter mounted Australian Birds; co-types of Professor Haswell's Crustacea to the British Museum; and De Vis' co-types of fossil Macropodidæ from the Queensland Museum.

Presentations.—A large number of friends of our Institution have favoured us with gifts during the past year. Foremost amongst these is the enrichment of the "Cook-relics" by Mr. F. H. Dangar's present of one of the triplicate copies of Captain Cook's "Journal of the Proceedings of H.M. Bark 'Endeavour.'" It is believed to be the copy forwarded by Cook to the Admiralty from Batavia. Mrs. Forsayth presented a large valuable "native-drum" from the Bismarck Archipelago. On behalf of Mr. W. Horn, Professor R. Tate presented a set of the land-shells collected in Central Australia by the "Horn Expedition." Aboriginal implements from the Richmond River were kindly given by Miss Bundock; examples of Australian Ethno-Botany by Baron F. von Mueller and Mr. Chas. Moore; shells from the Great Barrier Reef by Mr. A. U. Henn; and ores from Broken Hill by the Broken Hill Proprietary Co.

Purchases.—Somewhat improved means have enabled you to authorise the purchase of desirable specimens on a rather more liberal scale than in 1894. Notwithstanding this, many collections and objects that should have found a resting-place in the Australian Museum have had, of necessity to be declined. The more important purchases were:—(1) "White" Tiger, from the Adelaide Zoological Gardens; (2) Precious Opal from White Cliffs, New South Wales; (3) Aboriginal glass knives and spear-heads from North Australia; (4) Implements from Batavia River, Cape York; (5) Rock specimens from Antarctica.

Publications.—It is with very great satisfaction that I refer to the reappearance of our modest publication, the "Records." No. 6, Vol. II, has been issued, and No. 7, the concluding part of this volume will be so early in the current year. I hope that funds will now be available to continue the "Records" at intervals. Mrs. Helena Forde and the late Mr. A. S. Olliff discontinued their preparation of Scott's "Lepidoptera" for the press in March last, and the work has since remained in abeyance. No Catalogues were published during 1894, a fact in my opinion not to be regretted, as it enabled undivided time to be given to the far more important work of collection arrangement.

Information and Assistance Disseminated.—The training-ship "Sobraon" was supplied with a number of duplicates to form the nucleus of a small Museum for the boys' education. With the view of giving expression to the utility of the Australian Museum I caused a record to be kept during the year of the information supplied to inquiring members of the public; this will be found in Appendix X. A similar return will now be kept throughout each year.

Spirit-room.—

Spirit-room.—In August the task of overhauling the Spirit Collection was commenced by Mr. T. Whitelegge, assisted to some extent by Messrs. Waite and North, and excellent progress has so far been made. The new tanks referred to in the 1894 Report are now almost filled, and have proved of great service. Mammals, Birds, Amphibia, Reptiles, and Fish, to the number of 6,179, were examined and catalogued, so that it is now "possible to select any particular species from any tank at very short notice." This only accounts for the bulk or tank specimens, and does not include those contained in bottles and jars. The work was arduous, and I am fully sensible of the excellent results attained by Mr. Whitelegge.

Taxidermist.—Taxidermy made remarkably good progress during last year. The Taxidermist (Mr. J. A. Thorpe) prepared 24 mammals and mounted 8. Amongst birds 43 were mounted, and 110 skins prepared and placed in the cabinets; 4 fish were mounted, and 6 other skins prepared and added to the reserve collection. The very gratifying addition of 16 nest groups was made, in themselves representing a large amount of labour. A group of tree Kangaroos (*Dendrolagus bennettianus*) was completed, whilst others of Platypus and Dasyures were practically remade. The foregoing work is exclusive of the ordinary supervision of the whole skin collection that now devolves on the Taxidermist, and the special cleaning, restoring, and in some cases remaking of 337 mounted Marsupials and 346 non-Marsupials for the exhibited collection. The whole of the Seals and Crocodiles were also cleaned and in some cases remounted.

Articulators.—In the early part of the year the Articulator (Mr. H. Barnes) was for a long time engaged in conjunction with the Carpenters in preparing for the removal of the Sperm-whale skeleton. In addition to the ordinary welfare of the Osteological Collection, the Articulator (who is also Photographer, Formator, and Lapidary) and his assistant prepared 19 articulated and 11 disarticulated skeletons; 37 negatives; 163 photo-prints; 36 moulds; 64 casts; and 30 micro-slides.

Carpenters.—The Carpenters (Messrs. R. Barnes and B. Lucas) were kept fully occupied in preparing material for the use of the officers throughout the year, including the removal of the Whale skeleton, already referred to, that entailed some very heavy work. Thirty-seven cases from store, some of them large, were either repaired, refitted, or repainted for use in various parts of the Museum.

Mammalia.—By careful weeding eighty-four mounted marsupials were passed into the duplicate series, and space equal to two wall-cases was thus rendered available for some of the higher Mammals. The whole of the Marsupial and non-Marsupial Mammals have been relabelled and rearranged, and are now in systematic order up to and inclusive of the Insectivora. The Carnivora and Chiroptera are now in process of arrangement. The Seals are now for the first time arranged together, and a temporary display of a number of Sheep and Goats has also been made. One of the most important additions of the year was a series of spirit specimens illustrating immature Marsupials from the fœtus to the condition of maturity. The number of specimens registered was ninety-two.

Aves.—In the report for 1894 I referred to the expansion of the birds in consequence of the completion of new cases. Those at the north end of the hall are now occupied by the Australian Game birds and Psittaci, the latter forming an exceedingly interesting and instructive series. Through the addition of sixteen nest-groups, this attractive series has now reached a total of sixty-one groups. These are always an object of inquiry on the part of visitors. A number of foreign birds previously imperfectly named, engaged a good deal of Mr. North's attention during the year. He was also occupied at home in unofficial hours in the elaboration of the "Horn Expedition" birds, and I have to congratulate you on the acquisition thereby of the types, through the liberality of Mr. W. A. Horn. The number of birds, nests, and eggs registered during 1894 was 442.

Reptilia and Batrachia.—Early in the year, in pursuance of the approved scheme of rearrangement, and through the setting free of several cases by the transfer of their contents to the new Invertebrate Gallery, these classes were massed in the Upper Main Hall. Many of the older specimens of Lizards and Frogs were replaced by better material, and by the addition of fresh examples the series may be regarded as almost new. In view of the prospective closing of this part of the Museum for repairs to the roof, already referred to, it appeared to me unwise to proceed further with permanent work until such time as these repairs are completed. In one order (Ophidia), however, excellent progress has been made by the continued preparation of the snake models, the series now numbering twenty-five casts. The heterogeneous assemblage of Alligators, Turtles, and Seals formerly existing in this hall has been abolished, the reptiles rearranged, and the Seals dealt with as previously mentioned. The registrations numbered 266.

Pisces.—I refrained from inaugurating much new work in this class for the reason already advanced in the previous section. Descriptive labels and diagrams were prepared by Mr. Waite for three previously arranged large cases. The wall case removed from the ground floor was re-erected in the Upper Main Hall, and will receive during the current year the Ganoids and smaller Sharks. The registrations numbered 119.

Osteology.—Very satisfactory progress has been made both in adding to our fine Osteological Collection and in preparation for the rearrangement of the whole. The space formerly occupied by four table cases of Post-Tertiary bones has been utilised for the erection of three small Whale Skeletons, and special cases for the smaller Lacertilia, Ophidia, and Chelonia. Sixteen duplicate Bird Skeletons were withdrawn and placed in store. By far the most important operation in this section, if not in the whole year's proceedings, was the removal in February of the Sperm-whale skeleton, 55 feet long. This was transferred without disarticulation from its then position at the north end of the Main Hall to the space between the staircase and public entrance. After a considerable amount of labour, this was carried out without a hitch. The registrations were 31.

Insecta, &c.—The Australian collection has now been laid out to the fullest extent that the limited space allotted to it will allow, 2,000 specimens having been added since my last Report. Both these and the Foreign Insects must be regarded more as an index collection than anything approaching a complete series, for which exhibition space does not exist. The illustration of the life history of many local forms was effected, and amongst the Lepidoptera numerous caterpillars were preserved and placed on view. The number of specimens registered was 2,290.

Mollusca.—

Mollusca.—The arrangement of the Australasian Shells is complete, but I report this with the same reservation, only as far as the space will permit. No further extension can possibly take place, except in the form of unexhibited cabinet space, and that is one entirely dependent on our annual vote for cases. The general collection of Mollusca still retains its old position in the Upper Main Hall, and it is much to be regretted that it cannot be placed in closer contiguity to the Australasian Shells, and thus bring the whole Conchological series together; it was, however, partially rearranged and somewhat added to during the year,—the total number of additions to the exhibited collection during that period being 2,000. An important addition was made by a set of the Mollusca collected by the “Horn Expedition,” presented by Mr. W. A. Horn, through the good offices of Prof. R. Tate, of Adelaide. The registrations were 899 entries of 2,231 specimens.

Invertebrata (exclusive of Insecta, &c., and Mollusca).—Notwithstanding the direction of Mr. Whitelegge’s attention to other important work, satisfactory progress was made in this branch also. The detailed arrangement of the cases was completed during the first half of the year, to the extent of 2,052 specimens, but as Mr. Whitelegge remarks,—“the material for exhibition is by no means exhausted.” Here, again, the trouble is not lack of material, but want of space. However, I hope soon to furnish these cases with an additional shelf, and then several hundreds more specimens can be shown. Some excellent photographs of Rhizopoda were prepared by Mr. Whitelegge, and will be introduced to represent the microscopic members of this group. In Mr. Whitelegge’s Report some interesting details of the use of formol in place of alcohol will be found. The result of numerous experiments carried on here is that a 2½-per cent. solution is sufficient to preserve many delicate organisms, and that for most others a 5-per cent. solution is ample. Its retention of colour has also been found to be satisfactory. The number of registrations was 420.

Ethnology.—The extra space allotted to the Ethnological Hall was occupied by a case to contain mediæval and modern weapons; a second, Egyptian and other ancient Archæology; a third, Mexican and Peruvian pottery; a fourth, pottery from the burial mounds of Arkansas; a fifth, Egyptian and Aboriginal mummy remains; and three small cases are reserved to receive an ethno-conchological collection. The room added to the gallery was utilised for the fine series of 20 carved trees, and the Australian stone and glass weapons and implements. In my last year’s Report I foreshadowed the formation of an Australian Ethno-botanical series, *i.e.*, a collection exemplifying the vegetable substances used by our Blacks in their daily life. I am glad to say that now, through the assistance of several friends of the Institution, I have succeeded, so far, in bringing together 140 interesting specimens, and I am in receipt of further promises of gifts in this direction. The preparation of these for exhibition will shortly be taken in hand. I have also issued instructions for the formation of what may be termed an Ethno-conchological collection, with the view of showing the use of molluscan shells by “savage” peoples. As this is not to be confined merely to the Australian Aborigines, it must be looked upon as of a somewhat more ambitious nature than the preceding, and will take some time to carry out. The most important donation in this section was a native drum, from the Bismarck Archipelago, measuring 7 feet x 3 feet 6 inches (diameter), presented by Mrs. Forsayth. The number of registrations was 404.

Historical.—Previous to the deposition of the “Cook Relics” in the Museum, you possessed a few articles that had been in the possession of Captain Cook, R.N. These were added to the former, thus bringing these valuable series together. The relics have been still further enriched by the gift of Cook’s “Journal” or “Log,” received from Mr. F. H. Dangar, of London. There is every reason to believe that this is the first or “Batavia” copy of the “Journal of the Proceedings of His Majesty’s Bark ‘Endeavour,’ on a voyage round the World, by Lieutenant James Cook, &c.” There is satisfactory evidence to show that it is the copy spoken of by Captain W. J. L. Wharton, R.N., F.R.S., in the introduction to his “Transcription” of the above log (4-to. London, 1893, p. viii), as the “Batavia duplicate.” The registrations were 186.

Numismatics.—Hitherto the science of Numismatics has not been strongly represented in our collections, but it is one that I shall endeavour to push on in the future. You possess a number of unassorted coins, chiefly in copper, and some fine medals in bronze and silver, the latter being the only hitherto exhibited specimens. It is my intention to have the whole of these systematically worked over during the current year, should time permit. A beginning will be made with the Australian Tokens through the kindly tendered assistance of Mr. Coleman P. Hyman. The specimens registered numbered 9.

Mineralogy, &c.—The chief work in this section was the interpolation of specimens in the exhibited collection, and the preparation of labels. The gold specimens and precious stones were arranged, in the case erected for that purpose. The mineral store-room was also completed by our carpenters. Foremost amongst the additions was the series of English marbles placed in a framework on the gallery wall; a series of ores presented by the Broken Hill Proprietary Co.; and reproductions of large Foreign meteorites. The registrations numbered 864.

Palæontology.—It affords me much pleasure to record a very satisfactory amount of work in my own section. The Australasian Invertebrate fossils have all been tabletted and arranged to the number of 5,000, chiefly with the assistance of one of my sons (R. J. Etheridge). As foreshadowed in my last year’s Report five table-cases were removed from the Main Hall, and three of them are destined to receive the Australian Post-Tertiary Vertebrates. The large plaster reproductions were also moved to the same hall and mounted on pedestals. I have also transferred the Irish Elk skeleton, and the imperfect remains of the *Rhytina*. Many of the larger Post-Tertiary Marsupial remains were mounted on appropriate stands and placed in the wall-cases allotted to them. The most important presentations were Perno-Carboniferous fossils by Mr. W. S. Dun, and Silurian fossils by Mr. R. A. Barber. Exchanges were numerous and important—French Tertiary Mollusca from Mr. L. Vignal; Australian fossils (various) from Mr. B. Dunstan; Macropod Jaws from the Queensland Museum; and a very large series of European and New Zealand Tertiary fossils from the Canterbury Museum, Christchurch.

The registrations were as follows:—New specimens acquired by purchase, donation, exchange, and collection...	4,597
From old collection	461
Total...	5,058

Library.—

Library.—Through the exercise of rigorous economy in other directions, you were able during the latter half of last year to resume the purchase of books, a boon that was greatly appreciated by the Librarian and Scientific Staff. Two additional book-cases were placed in the library, and in consequence some rearrangement of the books took place. The maps have also been brought together, and arranged in a separate case.

I submit herewith details of the work done in the various sections by the officers in charge, with their remarks on the same.

I have, &c.,
R. ETHERIDGE, JUNR.,
Curator.

APPENDIX II.

REPORTS OF SCIENTIFIC ASSISTANTS.

To the Curator,—

Sir,

I have the honour of submitting to you the Report for 1895.

Mammals.

The rebuilding of the cases during the year, and the removal of the skeleton of the Sperm-whale to the Osteological Gallery, rendered it possible to greatly improve the condition of the Mammal Collection, and a considerable amount of time has been devoted to the work.

The Marsupials are now in thorough order, and with the exception of a few species are fully represented. The whole collection has been entirely rearranged, fresh examples added, and during the progress of the work two species were discovered which had not been previously recognised in the collection; duplicates have been weeded out and are available for exchange, some of which have already been negotiated.

Attractive groups have been fitted up to represent the animals in their natural state and surroundings, among the more important may be mentioned the Tree-Kangaroos, Native Cats, and Platypus. As far as relates to Mammals, the Taxidermist has been chiefly employed in preparing animals for the Marsupial cases, and in making skins of new material.

The latest addition to the Mammalian Gallery is a case containing immature Marsupials of many species, in stages from the fœtus to that of independence. The descriptive label attached aims at correcting some of the very common notions of Marsupial development.

Some other orders have also been dealt with, and the families mentioned in the last Report as having been temporarily cased, have, for the most part, been assigned to their correct places in the series.

A large temporary case has been built out of old material to house a fine collection of domestic Sheep and Goats received in exchange from the Florence Museum. The large table in the centre of the Mammalian Gallery has been devoted to the Seals, where for the first time they are really well displayed.

A small collection of duplicates has been supplied for the Museum of the reformatory ship "Sobraon," to which objects from other Departments were also added.

One of the two unrecognised species, above referred to, was found to be of the Tree-kangaroo (*Dendrolagus dorianus*, Rams), enabling the writer to contribute the short article published in the "Records" of the Museum, Vol. II, pt. 6, p. 85.

The number of Mammals acquired during the year was...	88
Re-registered from old collection	4
Total...	92

Reptiles and Batrachians.

Many of the Lizards and Frogs have been remounted, while a still larger number of old and faded examples have been replaced by fresh specimens. Descriptive labels and diagrams have been prepared, and work in this Section was being pushed on when the disastrous condition of the roof of the gallery was detected. At much waste of time all the exhibits had to be withdrawn for several weeks; they have since been reinstated, but as the repairs are of a temporary nature only, further work in this direction is not encouraged, leaving a large amount of material still to be dealt with.

In the last Report it was stated that a series of coloured casts of snakes had been commenced; this had been added to during the year, and already forms a very useful exhibit. While thanking all those who, in response to my request, brought snakes to the Museum, it may be mentioned that comparatively few were sufficiently perfect for the purpose.

By way of experiment some of the Lizards, smaller Snakes, Frogs, &c., have been preserved in formol, and the results appear to be more satisfactory than those obtained by using spirit. Green colours, as found in some of our beautiful tree frogs and labroid fishes, are still fugitive under its action, but it is possible that the 5-per cent. solution used is stronger than necessary for their preservation. The writer hopes to make further trials before recommending its more general use in the Museum.

The duplicate spirit specimens have been transferred to the new tanks by Mr. Whitelegge, and the worthless material, accumulations of many years, having been eliminated, the duplicates are now in a very satisfactory condition.

The following is the number of new acquisitions received	262
From old collection...	4
Total...	266

Fishes.

Fishes.

Partly owing to the fact that attention has been chiefly devoted to the Mammal Gallery, but mainly to the damage to the roof of the Fish and Reptile Gallery already referred to, but little work has been attempted in this Section. A few more mounted specimens have been added to the "Food Fishes," and descriptive labels and diagrams have been prepared. The collection of Sharks withdrawn from exhibition owing to the removal of the case from the ground-floor to the Fish Gallery will shortly be reinstated, but no work of magnitude is proposed until the roof has been permanently repaired.

The accessions to the collection were 119.

Skeletons.

The removal of a number of fossil remains from the Osteological Gallery somewhat increased the accommodation for "recent" skeletons. The extra space thus obtained was devoted to the exhibition of skeletons of two small Whales, of a Crocodile prepared to show the dermal scutes in relation to the endoskeleton, and of table cases assigned to reptilian skeletons. The skeleton of the Sperm-whale was removed to the central hall early in the year.

The number of skeletons prepared is shown below:—

I am, &c.,

EDGAR R. WAITE.

Sir,

I have the honour to herewith hand you the Annual Report of the Sections Aves, Ethnology, History, and Numismatics, detailing the work performed during 1895, and the state of the collections under my charge.

Birds.

The Birds, Nests, and Eggs determined and registered during 1895 were as follows:—

Received by purchase, collection, exchange, and presentation	399
From old collection...	43
Total...	442

For the reason pointed out in my last Annual Report, the acquisitions to the Ornithological Collections are very small again this year. It is much to be regretted that funds are not available for continuing the formation of a thoroughly representative collection of the birds of Australia. At present we have but an imperfect knowledge of the avi-fauna of Central and North-western Australia; only a few patches on the sea-board of the latter portion of the Continent have been systematically worked, and next to nothing has been recorded of the habits and economy of its birds. That many new species still remain to be discovered is proved by the highly satisfactory results obtained by the members of the Horn Scientific Expedition during their brief and hurried journey to Central Australia, the whole of the cost of which was generously defrayed by Mr. W. A. Horn, a gentleman connected with pastoral pursuits in South Australia, and whose name will for ever be perpetuated with the Colony's intellectual and scientific progress. While, however, little is being done by Australians to systematically collect specimens, with a view to work out the fauna of their own Continent, Foreign collectors are assiduously engaged in the collecting and despatch of specimens from Australia to various European and private museums; consequently many types are being sent out of the country, which can only be regarded by Australian zoologists as a national calamity. British ornithologists have never ceased to regret the loss to the nation of the collection of birds and eggs made by Gould in Australia in 1838-9, and Dr. R. Bowdler Sharpe, one of the Senior Assistants of the British Museum, refers to it as "nothing less than a national disaster, and one which unfortunately was irreparable."

The principal acquisitions consist of specimens of *Ara macao* and *A. ararauna*, presented by the Trustees of the Zoological Society, Moore Park; *Mita tuberosa* from Charles Moore, Esq., F.L.S., the Director of the Botanic Gardens; *Diomedea culminata*, from Bare Island, Botany Bay, presented by Colour-Sergeant Woollams, and a bower of *Ptilonorhynchus violaceus*, from Mr. J. C. Wiburd of the Jenolan Caves. The unusually long and severe drought has also been the means of securing for the Museum several species of inland birds that have been driven to the coast in search of food. Chief among them are *Falco hypoleucas*, *Lophoictinia isura*, and *Artamus superciliosus*; it is twenty years since the latter species visited the neighbourhood of Sydney. Another donation, a live specimen of *Haliastur sphenurus*, a bird by no means uncommon in the county of Cumberland, but rarely found close to Sydney, was captured while engaged in devouring the inmates of a pigeon-house at Paddington. A young live specimen of *Attagen aquila*, which is seldom recorded so far south, that had been caught on board the s.s. "Hauroto," about 300 miles east of Sydney Heads, after following the steamer for two days, was also presented by Mr. George Fairbairn. A small collection of birds and eggs in a good state of preservation has been received, in exchange, from the Athens Museum, Greece. The year was also marked by an irruption upon our sea-beaches of numbers of specimens of *Nectris brevicaudus*, a comparative stranger in New South Wales waters. Many dead specimens were washed on shore, and I saw their bodies strewn on the beaches at a distance of 50 miles apart.

At

At the present time the whole of the care of the collection of Mammals and Birds in the Museum devolves upon the Taxidermist, in addition to his usual work; consequently, owing to the limited attention that could be paid to the collection, assistance had to be procured to thoroughly examine it, and keep down the depredations of injurious insects. A permanent assistant to the Taxidermist is still much required to take the entire charge of the Mounted and Skin Collections. The Taxidermist has prepared the following interesting additions to the Group Collection illustrative of the life-histories of our birds:—*Artamus sordidus*, *Podargus strigoides*, *Pachycephala gutturalis*, *Gerygone fusca*, *Petroica leggii*, *Melanodryas bicolor*, *Cisticola exilis*, *Myiagra rubecula*, *Smicronnis brevirostris*, *Sericornis citreogularis*, *Mirafrans horsfieldi*, *Ptilotis leucotis*, *P. chrysops*, *Tropidorhynchus corniculatus*, *Melithreptus brevirostris*, and *Aegintha temporalis*. The total number now represented in the Group Collection is sixty-one species. For nests *in situ* the thanks of the Trustees are chiefly due to Mr. Alfred E. Ivatt and Mr. Joseph Gabriel, F.L.S. During the year I made an examination of the Ornithological Collection in the Spirit-room. One hundred specimens were condemned as useless, destroyed, and written off the registers. In addition to this number, 140 unregistered and damaged specimens were ordered to be destroyed.

Both in the Foreign and Australian Collections many specimens have been determined and labelled, and the Psittaci and Group Collection rearranged. During my investigations I found several types mounted; these have since been reduced to skins, and are now carefully preserved with their original labels in the Reference Collection. A small collection of mounted birds has been sent in exchange to the Technological Museum, Ultimo, for Branch Museums in the country, and several exchanges of eggs have been made with private individuals.

Many inquiries relative to our avi-fauna have been answered during the year, either personally or by letter, and judging from the increasing number of birds sent for identification by our agriculturists and orchardists there is a keener interest taken in obtaining a knowledge of the useful or destructive nature of each species.

In addition to the work performed in this section, my time has, to a great extent, been taken up with the charge of the sections Ethnology and Historic Relics.

The following papers have been published in the "Records":—

Note on a Semi-albino Specimen of *Dacelo gigas*, BODD.

Note on a Nest of *Petræca leggii*, SHARPE.

Also "Preliminary Descriptions of a new genus and of five species of Central Australian Birds" in the July number of "The Ibis."

Coloured plates have been prepared for the paper referred to in my last year's Report on "The Insectivorous Birds of New South Wales," written at the request of the Under Secretary for Mines and Agriculture, and it will shortly be published.

From a collection of Central Australian bird-skins, made by the members of the Horn Scientific Expedition, and since received from Professor W. Baldwin Spencer, of the University of Melbourne, a paper of a semi-official nature (inasmuch as the types of the new species described are to be placed in this Museum) has also been prepared by me during the year.

Ethnology.

The acquisitions registered during 1895 were as follows:—

New specimens	383
From old collection	21
Total	404

Many interesting additions have been made to the Ethnological Collection, principally by donation. Among the most important is an exceedingly fine specimen of a large Native Drum, from Ralum, Bismarck Archipelago, presented by Mrs. Forsayth; a number of aboriginal weapons from the Richmond River, received from Miss Bundoock; stone tomahawks and flint and glass serrated spear-heads, from H. Y. L. Brown, Esq., the Government Geologist of South Australia; an aboriginal shield, from Angledool, N.S.W., presented by Dr. James C. Cox; and echidna spine and kangaroo teeth head-bands, dilly-bags, &c., from Alligator River, North Australia, presented by yourself. A number of flint arrow-heads, from various parts of England, were received in exchange from Mr. S. H. Hewlett; also a miscellaneous collection from the Wanganui Museum, New Zealand. A small but valuable collection of stone knives has also been sent in exchange to Professor Giglioli, of the Zoological Museum, Florence. The principal acquisition by purchase consists of a number of glass spear-heads and surgical knives, obtained in the neighbourhood of the overland telegraph stations in North Australia.

During the year many donations of food and other substances used by the Aborigines of Australia have been added to the collection, the principal donors being W. S. Campbell, Esq., Chief Clerk of the Department of Agriculture, New South Wales; T. Worsnop, Esq., Town Clerk of Adelaide; Baron Ferdinand von Mueller, Government Botanist, Melbourne; and Charles Moore, Esq., F.L.S., Director of the Botanic Garden, Sydney. Similar specimens were received in exchange from J. H. Maiden, Esq., Curator of the Technological Museum, Ultimo.

The overcrowded state of the collection referred to in my reports for many years past rendered it absolutely necessary to absorb into the Ethnological Hall a temporary private passage made from the yard into the Main Hall. This space has been utilised for the proper display in cases of examples of ancient pottery from Mexico, Peru, and the burial mounds of Arkansas; of mummy heads from Egypt, and of early colonial historic relics. Under the immediate supervision of yourself many specimens of stone axes, urns, and vases have been properly mounted and exhibited; the nucleus of an Ethno-Conchological collection has been formed, and the specimens in the store-room have been thoroughly examined, cleaned, and arranged.

Numismatical and Historical.

Nine Numismatical specimens have been registered during the year, viz.:—4 presented, 3 received in exchange, 2 from the old collection. The most important acquisitions are an old London cheque, dated June 7th, 1774, drawn on Messrs. Boldero, Carter, Barnston, Smaith, and Carter, ordering to pay Mr. M. Forster, or bearer, the sum of thirty pounds, presented by Henry M'Dowell, Esq.; and a silver dollar, current in Eastern Asia, presented by Captain W. M'Arthur. In exchange, 3 bronze tokens have been received from Mr. Coleman P. Hyman.

To the Historical collection 186 specimens have been added, all acquired by presentation. An exceedingly valuable donation, consisting of one of the logs kept in triplicate by Captain Cook during his voyage in the "Endeavour," was received from F. H. Dangar, Esq.; a second collection of purported "Cook Relics," through the Hon. the Premier and Chief Secretary, from the Government of New South Wales, and an old document, dated December 8th, 1837, pertaining to the early history of South Australia, from Mr. Perceival E. Hoare. Donations were also received of copies of the *Sydney Herald* dated November 30th, 1835, from Mr. B. Allison, and the *Liverpool Mercury*, of July 5th, 1811, from Mr. J. H. Rainbow.

I am, &c.,

ALFRED J. NORTH.

To the Curator,—

Sir,

Herewith I have the honour to present to you the Annual Report of my Section for 1895.

Insects.

The additions to the Entomological collection acquired during the last twelve months have been duly registered, and amount to a total of 2,290.

The presentations include many valuable additions from collections made by yourself in the vicinity of the Jenolan Caves and elsewhere. Collections from the Technological Museum and from Mr. W. W. Froggatt of that Institution, type specimens of Australian Spiders from Mr. W. J. Rainbow, and numerous Lepidoptera from Mr. J. M. Cantle, and Mr. D. A. Porter, of Tamworth, have also largely contributed to our cabinets. It would occupy too much space to particularise here the remaining generous donors.

Owing to the limited accommodation at command for the vast array of Insects which could be placed on exhibition in the Invertebrate Gallery, much time and discretion has consequently been employed in selecting typical forms, in order that the public might form some idea of the prevailing and most interesting and important phases of insect life existing here and abroad. In all, several thousands of specimens (besides about 3,000 specially prepared) have been placed in the gallery, which now only await the printing of descriptive labels. Many typical examples of Australian Insects have been omitted, for the reason that no time could be allowed for collecting specimens of them, and in consequence gaps have been left in the Exhibition Collection rather than insert repetitions of genera already represented. The display of a collection of numerous species of a few genera has been considered to be of less importance than the presence of typical forms, when the space at command is so limited.

Much attention has been given to the preservation of the young stages of the local Lepidoptera, and a fairly large collection of caterpillars has been permanently mounted by an effective method, but a large number of these cannot be placed in the Gallery Collection for want of exhibition space.

Insects, generally, though occupying little space individually, outnumber by far the members of the lower classes of the Invertebrata, and perhaps their study is really of more economic value in an essentially agricultural country; thus, it is to be regretted that more scope is not available for the benefit of those numerous toilers who seek information regarding the indigenous insect-foes, and friends, which affect their agricultural produce in a practical manner. This has hitherto been largely attended to by letters in reply to inquiries of, sometimes, a very vague and dubious nature.

Owing to the limited space at our disposal, it has been my endeavour to make the Exhibition Collection as far as possible an index to the genera of the more typical of the insect fauna of this and other countries; and it has been our object to illustrate the life-histories of as many local insects as the material available would permit.

A great amount of time has been employed in dispensing information, naming specimens and exhibiting the Cabinet Collections to visitors, demonstrating the several experiments which have proved effectual for the preservation of insects, and assisting generally in the arrangement of the Invertebrate gallery.

A fairly representative display of the more important types of local Lepidoptera has been placed on exhibition as far as the Cabinet Collections would permit, omitting a considerable number of unique or rare specimens, which have been carefully retained in the close cabinets, and are at all times available to students desiring to consult them. The Foreign Collection of Butterflies contains most of the more beautiful and interesting forms not before placed on exhibition to the public. The large collection of Foreign Beetles from its former resting-place is now exhibited in the new gallery, but awaits considerable revision and relabelling. Cases of Economic Insects, examples of Insect Architecture, and Spiders have also been arranged as far as accommodation would allow and time would admit.

Considerable application and strict attention have been bestowed upon the Cabinet Collections, which are in good condition, and have not suffered depreciation from pests.

An article "On a Case of presumed Protective Imitation" has been published in the "Records," of the Museum, Vol. II, No. 6, 1895.

I am, &c.,

F. A. A. SKUSE.

To

To the Curator,—

Sir,

I have the honour to herewith submit my Report for the past year.

Marine Invertebrata.

The acquisitions to this Section were slightly in excess of those received last year, and are as follows:—

Vermes	42
Polyzoa	5
Crustacea	215
Echinodermata	133
Coelenterata	6
Photographs and miscellaneous	19
Total	420

The most notable specimens received during the year were a small collection of Starfishes from Mr. H. Farquhar, of Wellington, New Zealand, including examples of several new species recently described by himself, also some very choice specimens of Echinodermata from Norway, both being acquired by exchange and proving valuable additions to the collection.

During the first half of the year the work of fitting up the new gallery was continued and completed, as far as filling the available space is concerned, but the material for exhibition is by no means exhausted in certain groups. Owing to the want of space, selections had to be made and confined to the representatives of genera only, and until additional space is provided many valuable exhibits will have to remain in storage: this refers more particularly to the smaller Crustacea and parasitic Worms.

The work of preparing the new exhibits has been arduous; and the sorting out, cleaning, determining, mounting, labelling, and spacing of over 2,000 specimens has of course prolonged the completion of the arrangement of the gallery.

The following is a detailed list of specimens mounted for exhibition:—

	Species.	Specimens.
Zoophytes, in spirit	66	66
Actinidæ	12	12
Echinoidea, dry	142	601
" in spirit	13	13
Asteroidea, dry	155	519
" in spirit	20	20
Ophiuroidea, dry	52	142
" in spirit...	76	76
Crinoidea, in spirit	25	25
Holothurioidea, in spirit	44	44
Medusæ and Siphonophora, in spirit	21	21
Polyzoa, in spirit	33	33
Vermes,	20	20
Crustacea, dry...	118	235
" in spirit	203	225
Total	1,000	2,052

The specimens enumerated above consist for the most part of examples not hitherto on exhibition, whilst the old collection of spirit specimens has been thoroughly revised, relabelled, and mounted on black stands.

In consequence of my lengthened experience and knowledge of the contents of the immense collection of spirit specimens, it was allotted to me to undertake a thorough overhauling, classifying, and listing of the whole of the Spirit Collection. Considerable progress has been made in this direction, and the Mammals, Birds, Lizards, Snakes, and Fishes, in the greater part, have been dealt with. These have hitherto been stored in casks, which proved very inconvenient and difficult of access to their contents. A new and vastly improved method of storage has been instituted in the shape of oblong wooden tanks, and in transferring the specimens from the casks to the tanks great care has been exercised to eliminate all utterly worthless examples, palpably unfit for any purpose, which have been accumulating since the foundation of the Institution. These have been condemned and destroyed. All the specimens of value have been washed, carefully packed away, and their registered numbers duly catalogued. Each tank is now numbered, and a complete list of its contents available, thus rendering the collection easy of access and making it possible to select any particular species from any tank at very short notice.

The following list gives the number of specimens contained in the new tanks up to date:—

Mammals	129
Birds	100
Reptiles	825
Fishes	5,125
Total	6,179

In accordance with your instructions a number of experiments have been conducted with a view of testing formol as a preservative, and so far the results have proved highly satisfactory, more especially in regard to delicate marine organisms. Numerous specimens of *Doliolum*, *Salpa*, *Sagitta*, Medusæ, Ctenophora, and Siphonophora have been specially collected and treated successfully with formol. The specimens of *Sagitta*, Medusæ, Ctenophora, and Siphonophora present a life-like appearance, and are far superior to those preserved by other methods. Some *Physalia* and *Velella* have been in formol since March last, and only exhibit a slight fading of the typical blue colour. Those preserved in sea water, with a minimum quantity of formol, appear to have retained their colouration to a greater extent. The solutions used have been varied from 1 to 10 per cent. of the commercial formol, but experience proves that solutions of from 2 to 5 per cent. are best for museum specimens.

THOMAS WHITELEGGE.

To

To the Curator,—

Sir,

Australian Museum, 30 December, 1895.

I have the honour to hand you herewith my Report on the Conchological Section for the year 1895.

Mollusca.

No collecting and little original research were attempted during the year. After disposing of current acquisitions the work, continued from preceding years, of reducing stored collections to order absorbed all time and strength available.

The accessions of the year were both numerous and important. One of the most valuable was received from Mr. A. U. Henn, who presented a portion of the mud brought up on the flukes of a steamer's anchor from the neighbourhood of the Great Barrier Reef. A couple of pints of this material yielded the astonishing number of 175 species of shells. To emphasize the wealth of molluscan life at this anchorage it may be remarked that at no single station did the "Challenger" expedition take as many species. A large number of these were new to the Collection and several new to science. Mr. T. Whitelegge presented examples of an interesting genus, *Pterosoma*, which had been lost to view for seventy years, and had even been discarded from the Molluscan Sub-kingdom; these specimens furnished an opportunity for correctly classifying the Mollusc in an official paper. Another article was prompted by a new genus, *Pugnus*, discovered in the well-searched waters of Port Jackson, and presented by Mr. A. U. Henn. Through Professor R. Tate a duplicate series of the Mollusca, found by the Horn Exploring Expedition to Central Australia, was received from Mr. W. A. Horn. Some rare New Zealand Land Shells were forwarded by Mr. H. B. Preston. Dr. Cox, Mrs. Waterhouse, Mr. Jennings, and other staunch friends of the Institution have from time to time generously denuded their own cabinets to fill gaps in the public collection. By exchange from the Technological Museum, a collection of Japanese and other shells, once the property of the late Rev. J. E. Tenison Woods, and containing some of his types, was obtained. A series of rare Australasian Shells was purchased from Mr. J. Brazier.

The exhibit of Australasian Shells was largely augmented during the year, and has expanded to the furthest limit permitted by space, without, however, exhausting much material which still awaits study and incorporation. The rapid growth of this series called for frequent revision and rearrangement, and will in the future press heavily on space allowance. A few hundred—some exhibited, some not—of Foreign Shells were dealt with. Every mounted type has been distinguished as such by a coloured label. Altogether the named and mounted species were increased by two thousand. Several experiments with formol as a preservative medium for soft molluscs, their eggs, &c., were very successful, and demonstrated the superiority of this article, for this purpose, to alcohol. Numerous Australian Mollusca, new to science, continue to await an opportunity for publication. A series of named shells was forwarded to the Museum on board the training ship "Sobraon."

For four months my Section benefited by the zealous and efficient aid rendered by a volunteer assistant, Mr. J. Jennings, who unpacked, sorted, rearranged, and labelled a great body of foreign and duplicate material.

A new collection, that of Ethno-Conchology, treating of the use of Mollusca by semi-civilised man, has been inaugurated under your supervision, specimens set aside and notes accumulated thereon. During the coming year, acting on your suggestion, attention will chiefly be given to the sorting of stores and examination of the spirit collection.

The literary contributions from this section are represented by,—

- (1) "*Pterosoma*, Lesson, claimed as a Heteropod." Proc. Malacological Soc. I. pp. 333-5 figs. in text.
- (2) "*Dendrotrochus*, Pilsbry, assigned to *Trochomorpha*." Records, Aust. Mus., II, p. 90. Plate XXI.
- (3) "Notes on Mollusca from the Alpine Zone of Mount Kosciusko. Records, Aust. Mus., II, pp. 101-105. Plate XXIII.
- (4) "Description of *Pugnus*, a new genus of Ringiculidæ from Sydney Harbour." Records, Aust. Mus., II, pp. 105-106. Plate XXIII, fig. 1.

The additions to the collection during 1895 were 2,231 specimens registered under 899 numbers of species.

I have, &c.,

CHARLES HEDLEY.

To the Curator,—

Sir,

I have the honour of submitting to you the Report of my Section for 1895.

Minerals.

Satisfactory progress still continues to be made in the gallery devoted to the exhibition of Rocks and Minerals, and, during the year, a considerable number of specimens has been interpolated. The remainder of the older labels has been replaced by freshly written ones, so that now all have a uniform appearance. The gold specimens have been displayed in one half of the upright centre case on the ground floor, the other half being devoted to the gems. Type specimens have been distinguished by affixing an orange dot to them; there are, however, very few of these.

The store for minerals is now completely enclosed, and gas-jets have been fixed in the centre, greatly increasing the convenience of the room.

A number of analyses and microscopic sections have been prepared, to assist in the correct determination of specimens, and considerable time has been expended in giving information to and naming specimens for inquirers.

At

At the end of the year the collection of Marbles and Serpentine (38 in number) from Derbyshire, Devonshire, and Cornwall were placed in the frame provided for them, on the gallery wall by the staircase. They look extremely well, and besides being a valuable and useful exhibit, greatly help to furnish that side of the gallery. A similar collection of Australian Marbles and Ornamental-rocks is much needed, and would greatly enhance the instructive value of the collection.

The analyses of, and work in connection with, the so-called "Mount Morgan bones" were carried out towards the end of the year, and will appear in the next number of the Museum Records. (See Vol. II, No. 7).

The number of specimens acquired shows a marked increase on that of the preceding year; this is more especially seen in the donations. Amongst the latter a collection of characteristic ores, presented by the Broken Hill Proprietary Co., is worthy of especial mention; some of these are very fine examples, and will greatly help to fill a gap in the Australian typical collection. A small collection of rocks from Antarctica, collected by Mr. C. Borchgrevink, is the most interesting among the purchases. Other good specimens so acquired are: large octahedral crystals of gold from New South Wales, and a splendid crystal of felspar doubly twinned on the Manebach and Baveno types, said to be also from this Colony (I am, however, rather doubtful as to the correctness of this locality), and a number of small but well-formed enhydros, all of which were purchased from Mr. A. H. F. Stephen. A large pebble completely encrusted with precious opal was purchased with other specimens from Mr. Crofts, of White Cliffs.

Perhaps the most valuable addition to the Collection is that of ten casts of Australian and Foreign Meteorites, mostly of large size, obtained by exchange from the Technological Museum of this city. These have been placed in the wall-case with the other meteorites and casts already in our possession. Forty-nine minerals have been received from the Noumea Museum, and a collection of New South Wales specimens sent in exchange.

A number of specimens of rocks and minerals were collected by yourself from the Jenolan Caves and district, and are still under determination.

The specimens registered during the year have been obtained as follows:—

By donation, exchange, purchase, and collection ...	484
From old collection	380
Total... ..	864

The following paper was written and published in the Museum Records, Vol. II, No. 6:—"Some Suggestions regarding the formation of Enhydros or Water Stones."

I have, &c.,
T. COOKSEY.

APPENDIX III.

SECRETARY'S REPORT FOR THE YEAR 1895.

To the Trustees of the Australian Museum,—

Gentlemen,

1 February, 1896.

The work pertaining to my office has been carried on during the year under some difficulty, owing to being unusually shorthanded. Mr. Hill, clerk, who had been in your service for ten years, was incapacitated for some months from illness, and died on 11th November. The vacant post was not filled up to the end of the year, although his successor had been engaged to commence work on 1st January, 1896.

The papers and documents which pass through my hands are very considerably more in number and importance than they were a few years ago, and they are constantly increasing. The current office work connected with these has been kept fully up to date, notwithstanding the difficulty above mentioned. If it were allowed to fall into arrears, endless confusion and trouble would result. For the present the office staff suffices; but later on it will probably be necessary to ask for the reappointment of a Junior Clerk, or an Assistant Librarian.

Part of the work connected with the Library has necessarily been allowed to stand over, but is now being overtaken. The registering and rendering available of periodicals and such books as are urgently wanted has, however, been promptly attended to.

An attempt was made to get a further portion of the Library Catalogue ready for the press, but it had to be suspended until further assistance was available. A sum of £50 has been authorised for this work, and I hope to have it carried out early in 1896. Books and periodicals in current use have been bound, as far as funds permitted; but there is an accumulation of those not so urgently needed to be bound as soon as the opportunity occurs.

The Library is rapidly increasing in bulk, and the work of registering, listing, and cataloguing the books as they come in is of considerable importance. Two additional bookcases have been placed in position, and a slight rearrangement made to accommodate the rapidly-increasing series in the Australian and American sections. An alteration has also been made to the map-case, and all the loose maps brought together and arranged. Particulars of these will be included in the Catalogue when it is being printed. The books and complete volumes of periodicals received during 1895 number 425, besides many pamphlets and separate parts. The expenditure for purchase and binding has been £200.

I have, &c.,

S. SINCLAIR,
Secretary and Librarian.

APPENDIX IV.

ABSTRACT OF RECEIPTS AND EXPENDITURE FOR THE YEAR 1895.

RETURN OF INFORMATION SUPPLIED TO THE PUBLIC.*

Name.	Details.	Name.	Details.
Mr. H. J. Ackland ...	Information regarding names of Quail and Turnix.	Mr. R. Helms	(a) Determining Birds collected by him in the Clarence River district; (b) Information regarding Mammals, Reptiles, Mollusca, and Insects, from Mount Kosciusko, to assist him in writing an account for the Geographical Society; (c) Determining Lizards (<i>Egernia whitii</i> , <i>Lygosoma entrecasteauxii</i>).
Mr. Baker	Information and determining Bird-eating Caterpillar of the Vine-moth (<i>Agarista glycine</i>).	Dr. Hurst	(a) Determining Egg of <i>Porzana palustris</i> sent for identification; (b) Diagnosis of <i>Corone australis</i> and <i>Corvus coronoides</i> .
Mr. James S. Bray ...	(a) Showing and giving him information about specimens of wood destroyed by White Ants from the roof of the Museum; (b) Naming and giving information about red-spotted poisonous Spider of Australia (<i>Latrodectus sejerio</i>); (c) Information about Pilchard (<i>Clupea sagax</i>); (d) (<i>Pterois volitans</i>); (e) "Stone Lifter" (<i>Kathetostoma laevis</i>); (f) "Fortescue" (<i>Centropogon australis</i>); (g) and "Star Gazer" (<i>Ichthyoscopus inermis</i>).	Mr. T. R. Icely and Friends.	Giving information on Group Collection and exhibiting Reference Collection (<i>Paradiseidæ</i>).
Dr. R. Broom.....	(a) Determining Mammals and Reptiles; (b) Determining Lizards, &c.	Mr. A. E. Ivatt	Giving information on Group Collection.
Mr. H. Y. L. Brown...	Determining (a) Cretaceous Fossils from Northern Territory of South Australia; (b) Permo-Carboniferous ditto; (c) Cretaceous Fossils from Mount Eba, S.A.; (d) Cambrian Trilobite from Camooweal, S.A., and Queensland Border; (e) Cretaceous Fossils in general from South Australia.	Mr. R. L. Jack	Determining supposed Bone from Mount Morgan, Queensland.
Dr. N. A. Cobb and Friend.	Information re <i>Grallina australis</i> and <i>Ardea nova-hollandia</i> .	Mr. A. P. Kemp	Determining Lizards and Snakes.
Constable in charge of Centennial Park.	Determining species (birds) shot in Centennial Park, and giving information whether same were included in "Birds Protection Act."	Hon. P. G. King, M.L.C.	Names and References to Gould, &c., &c., of <i>Eupodotis australis</i> and <i>Edicnemus gal-larius</i> .
Mr. G. A. Dixon	(a) Determining Lizards; (b) Determining Birds and Eggs.	Mr. D. Le Souef	Examining and determining Ornithological specimens collected by him on the Bloomfield River, Queensland.
Mr. Hugh Dixon	Examination of "Leather Jackets" (<i>Mona-canthus ayraudi</i>), with reference to <i>Sapro-legnia</i> .	Mr. H. J. M'Cooley ...	(a) Information re Emus, and description of Riflebird; (b) Information re Prospective Trade to be done in the Colonies and elsewhere by rearing and selling Emus; (c) A full description of the male Riflebird (<i>Ptilorhis paradisæ</i>); (d) Information relative to a Fly presented by him (infesting <i>Aprosmictus</i>).
Mr. S. H. Drew	Information re Museum matters in general, and collecting localities in New South Wales.	Mr. Metcalfe, M.A. ...	Information re Tree Kangaroos (<i>Dendrolagus lumholtzi</i> and <i>D. bennettianus</i>) for Handbook on Australian Zoology. (Published.)
Mr. B. Dunstan	Determining Triassic Plants, Insects, and Fish, from Wianamatta Shales, Sydney.	Mr. J. C. H. Mingaye..	Reporting on a Wasp (<i>Vespidæ</i>).
Fisheries Department, N.S.W.	Determining:—(a) Salmon Trout (<i>Salmo trutta</i>); (b) Crucian Carp (<i>Carassius carassius</i>); (c) Pilchard (<i>Clupea sagax</i>); (d) and Galaxias (<i>Galaxias coxi</i>); (e) Examination of Tallegalane (<i>Myxus elongatus</i>); and (f) Murray Cod (<i>Oligorus macquariensis</i>), with reference to <i>Sapro-legnia</i> ; (g) Naming Photographs of Fishes.	N. S. W. Zoological Society.	Determining Australian Boa (<i>Aspidites ram-sayi</i>).
Mr. Charles French ...	Determination (by letter) of Egg of <i>Eurostopus albigularis</i> from description sent.	Mr. Alfred Randall ...	Information re <i>Threskiornis strictipennis</i> and <i>Grus australasianus</i> .
Mr. W. W. Froggatt ..	(a) Information and names of specimens; (b) Engaged showing collection of, and giving information upon, Australian Butterflies (<i>Fam. Lycaenidæ</i>) and other groups for the <i>Educational Gazette</i> (Department of Public Instruction); (c) Determining Lizards, Snakes, and Frogs.	Royal Commission on Fisheries.	(a) Examining Macquarie Perch (<i>Macquaria australasica</i>), with reference to <i>Sapro-legnia</i> ; (b) Naming, &c., Drawings of Fishes by Mr. L. S. Podmore; (c) Determining Pilchard (<i>Clupea sagax</i>); and (d) Australian Perch (<i>Percalates colonorum</i>).
Mr. A. Hamilton	Determining Fern from Upper Coal-measures, Mount Kembla.	Mr. Thos. Shine.....	Information, Drawings, and Specimens, for illustration of "Venomous Snakes of Australia." (Published.)
		Professor W. Baldwin Spencer.	Determining <i>Typhlopida</i> .
		Technological Museum.	Determining Lizards and Snakes.
		Mr. C. W. de Vis	Information for Directory.
		Mr. H. P. Woodward..	Giving opinion on Coal from Colley Coal-field, W.A.
		Visitors	Much information daily supplied in all departments too numerous to particularise.

* This Return is incomplete, having been kept for a part of the year only.

APPENDIX XI.
ADDITIONS TO THE LIBRARY.

Reg. No.	Book.	How acquired.	Reg. No.	Book.	How acquired.
PART I.—BOOKS.			PART I.—BOOKS— <i>continued.</i>		
7655	ACKLAND (Sir Henry W.). The Unveiling of the Statue of Sydenham in the Oxford Museum, August 9th, 1894, by the Marquess of Salisbury, with an address by Sir Henry W. Acland 1 vol. 8vo. Oxford, 1894.	Presented	7719-21	BROWN (Thos.) Manual of New Zealand Coleoptera. Part 1, 1880; parts 3, 4, 1886; parts 5, 6, 7, 1893. 3 vols. 8vo. Wellington, N.Z., 1880-93.	{ 2 Purchased 1 Presented

— Etude sur les Mollusques de Rauracien inferior du Jura Bernois.	Presented	— Uebersicht der Geologie Daghestans und des Terek-Gebietes. (<i>Ib.</i> , 1889. XXXIX, 1-2.) Wien., 1889.	Presented
LUCAS (A. H. S.) The Lizards indigenous to Victoria.	Presented	— Ueber das diluviale, aralokaspische Meer und die nordeuropäische Vereisung. (<i>Ib.</i> , 1890. XL, 1.)	Presented
— Preliminary Notice of certain new species of Lizards from Central Australia.	Presented	— Bericht über einen Ausflug in den südöstlichen Theil des Kaukasus, Oct.-Nov., 1889. (<i>Mitt. K. K. Geogr. Ges. Wien.</i> , 1890, 7.) Wien., 1890, 7.	Presented
LUNDSTRÖM (Axel N.) Kritische Bemerkungen ueber die Weiden Nowaja Semljas und ihre genetischen Zusammenhang. [<i>Mit. Kon. Ges. d. Wiss. Upsala</i> , 1877.] Upsala, 1877.	Presented	SMITH (Edgar A.) On a collection of Land Shells from Sarawak, British North Borneo, and other neighbouring Islands. (<i>Proc. Zool. Soc.</i> , 1895.)	Presented
— Carl Linnæi resa till Lappland, 1732. Upsala, 1878.	Presented	— Natural History Notes from H. M. Marine Survey Steamer "Investigator," Series II. No. 10, Report upon some Mollusca dredged in the Bay of Bengal and the Arabian Sea; No. 19, Report upon some Mollusca dredged in the Bay of Bengal and the Arabian Sea during 1893-94. (<i>An. and Mag. Nat. Hist.</i> , 6, XVI, 1894; XVI, 1895.)	Presented
MORTON (Alex.) Extract: Notes on the Occurrence in Tasmania of the Southern Stone Plover.	Presented	— List of the Bornean Species of the Genus <i>Opisthostoma</i> , and descriptions of four new Species. (<i>Ib.</i> , 6, XIV, 1894.)	Presented
NORTH (A. J.) Preliminary Descriptions of a new genus and five new species of Central Australian Birds.	Presented	— Descriptions of new Species of Land Shells from New Guinea. (<i>Ib.</i> , 6, XV, 1895.)	Presented
— Note on the Occurrence of <i>Spatula clypeata</i> and <i>Urodynamis taitensis</i> .	Presented	— List of the recent Species of the Genus <i>Pirula</i> , Lamarek, with notes respecting the Synonymy. (<i>Journ. Malacology</i> , III, 4, 1894.)	Presented
PETERSEN (Gustav Walfred). Studier Over Gadolinit. Stockholm, 1890.	Presented	— On a small collection of Land and Fresh Water Shells from Oman, Arabia. (<i>Proc. Malacol. Soc.</i> , I, 4, 1894.)	Presented
PAJJKULL (C. W.) Undersökningar on Granater.	Presented	— List of the Land and Fresh Water Mollusca collected by Dr. J. W. Gregory in East Africa during his Expedition to Mount Kenia, with descriptions of a few new Species. (<i>Ib.</i>)	Presented
— Om fyndet af en människoskalle i Fyris-åns fordna utloppsbassin.	Presented	SMITT (F. A.) Bidrag till kännedomen om Hafs-Bryozoenas utveckling.	Presented
PEAL (S. E.) Sheet of Comparison of Words and Numerals, Apr., 1895.	Presented	SOCIÉTÉ ZOOLOGIQUE DE FRANCE. Regles de la Nomenclature des Êtres Organismes adoptées par les Congres Internationaux de Zoologie, 1892. (10 copies.)	Presented
PRITCHARD (G. B.) Note on the Occurrence of Fossil Bones at Werribee.	Presented	STENSTROM (K. O. E.) Värmländska Archieracier Anteckningar till Skandinaviens Hieracium-Flora. Upsala, 1890.	Presented
— The Older Tertiaries of Maude by T. S. Hall and G. B. Pritchard.	Presented	THALEN (Rob.) Sur la Recherche des Mines de Fer a l'aide des Mesures magnétiques. (<i>Soc. Roy. Sci. Upsal</i> , 1877.) Upsal, 1877.	Presented
— Contributions to the Palæontology of the Older Tertiary of Victoria.	Presented	THEEL (Hj.) Note sur quelques Holothurics des Mers de la Nouvelle Zemble. (<i>Soc. Roy. Sci. Upsala</i> , 1877.) Upsal, 1877.	Presented
PORTER (E. G.) The Aborigines of Australia.	Presented	TULLBERG (Tycho.) Ueber die Byssus des <i>Mytilus Edulis</i> . (<i>Mit. Kon. Ges. d. Wiss. Upsala</i> , 1877.) Upsala, 1877.	Presented
RAINBOW (W. J.) Descriptions of some New Species of Araneidæ of New South Wales. No. 5.	Presented	VALLEE (Léon). Essai d'un Bibliographie de la Nouvelle-Calédonie et Dépendances. Paris, 1882.	Purchased
RAMOND (G.) Étude de Géologie sur le Bassin de Paris.	Presented	VOSSMAER (A.) Beschryving eener nicuwe soort van Kleenen Hartebok, by de Hollandsche Volksplanting aan de Kaap de Goede Hoop bekend, onder de benaaming van Prongbok. Amsterdam, 1784.	Purchased
— Note sommaire sur l'Aqueduc-Egout de Clichy-Achères.	Presented	WAITE (Edgar R.) Lapwing near Garstang, by J. H. Jackson.	Presented
— Asie et Oceanie.	Presented	— The Story of a Clifden Calling.	Presented
— et DOLLFUS (G.) Géologie du Spitzberg.	Presented	WILSON (J. T.) Description of a Young Ornithorhynchus.	Presented
SACCO (FEDERICO). Essai sur l'Orogénie de la Terre. Turin, 1895.	Presented	— Further Observations on Anatomy of Muzzle of Ornithorhynchus.	Presented
SARS (G. O.) Descriptions of some Australian Phyllopora.	Presented	WIMAN (Carl). Ueber die Silurformation in Jemtland.	Presented
— Contributions to the Knowledge of the Fresh Water Ent mostraca of New Zealand, as shown by artificial hatching from dried mud.	Presented	WOODS (J. F. Tenison). Not quite as Old as the Hills: Lecture on Evidences of Man's Antiquity.	Purchased
SAUSSURE (Henri de.) Revision de la Tribu des Pan-Esthiens. Geneva, 1895.	Presented	ZOOLOGISCHE SAMMLUNG, KÖNIGLICHES MUSEUM, BERLIN. Naturwissenschaftliche Wochenschrift Bd. x. Nos. 8, 26, 27.	Presented
— Coup d'Œil sur L'Hydrologie du Mexique.	Presented	— Sitzungs-Berichte der Gesellschaft naturforschender Freunde zu Berlin, 1894, Nos. 1, 2, 4, 7.	Presented
— Revision de la Tribu des Perisphaeriens, par H. de Saussure et Leo Zehntner.	Presented	— 27 Pamphlets.	Presented
SECQUES (François). Deux Monstres Gasteropages, adultes et salmonides.	Presented		
SIMPSON (B. C.) Chairman's Address to Engineering Section, Royal Society of N.S.W.	Presented		
SINCLAIR (S.) Notes on Erromanga.	Presented		
SKUSE (F. A. A.) The Banded Mosquito of Bengal.	Presented		
SJOGREN (Hjalmar). Beiträge zur Geologie des Berges Savelan im nördlichen Persien.			
— Ueber die Thätigkeit der Schlammvulkane in der Kaspischen Region während der Jahre, 1886-87.	Presented		
— Beiträge zur Kenntniss der Erzlagerstätten von Moravica und Dognacka im Banat. (<i>Jahrb. K. K. Geol. Reichs</i> , 1886. XXXVI, 7.)	Presented		
— Ueber die petrographischen Beschaffenheit des eruptiven Schlammes von den Schlammvulkanen der Kaspischen Region. (<i>Ib.</i> , 1887. XXXVII, 2.)	Presented		
— Der Ausbruch des Schlammvulcans Lok-Botan am Kaspischen Meere vom. 5, Jan., 1887. (<i>Ib.</i> , 1887. XXXVII, 2.)	Presented		

APPENDIX XII.

PUBLICATIONS OF THE AUSTRALIAN MUSEUM UP TO THE END OF 1895.

I.—CATALOGUES.

1. Catalogue of the Specimens of Natural History and Miscellaneous Curiosities in the Australian Museum, by G. Bennett. 1837. 8vo. pp. 71. (Out of print.)
2. Catalogue of Mammalia in the Collection of the Australian Museum, by G. Krefft. 1864. 12mo. pp. 133. (Out of print.)
3. Catalogue of the Minerals and Rocks in the Collection of the Australian Museum, by G. Krefft. 1873. 8vo. pp. xvii-115. (Out of print.)
4. Catalogue of the Australian Birds in the Australian Museum, by E. P. Ramsay, Part I, Accipitres, 1876. 8vo. pp. viii-64, and Supplement, 1890. Part II, Striges, 1890. 8vo. pp. 35. Part III, Psittaci, 1891. 8vo. pp. viii-110. Part IV, Halcyones, 1894. 8vo. pp. viii-24.
